It will be seen from the foregoing that the principle of vicarious responsibility, if applied in practice, would not tend to the repression of crime. Nevertheless, it is vehemently insisted on at street corners, in the pulpit, and in the press, while the dramatic possibilities of it are exploited in sensational drama. Many good and benevolently-minded people seem to get periodically conscience-stricken on behalf of the criminal as a victim of circumstances; but, to mention only one of the peculiarities the burden of their own small vices, but also, in their emotional fervour, to take up his larger ones,
and condone his crimes, however heinous. They almost apologize to him for his existence as being a victim of heredity, and palliate his misdeeds on the grounds of his bringing up, so that every vulgar fiction can be in truth he is implicitly a victim of ill-nature.

Criminals are consequently quite ready to adopt the extenuations and excuses which are urged in their behalf, not only by their legal advocates, but also by theorists in criminology. In the world's recollection, forty to thirty years ago, 'poverty' and 'drink' were the two main causes given by prisoners for their downfall; but now these pleas have gone out of fashion, in favour of unemployment, parental neglect, slim-life, and liberty. Much more light-hearted are the others who have snapped the conditions, and he is not generally gifted with the staying or enterprise characteristics of the old hand. It is much more probable that the genesis and development of the latter type are traceable to the encourangling characteristics of his class. In his spells of freedom the race-conceve is the special scene of his recreation. Familiarity with risks breeds contempt, and he gambles with liberty much more light-heartedly than others do with stocks and shares. But the curse of social evils which are so wide-spread is of necessity a very slow process. Their total extinction, if such a thing were possible, would unquestionably tend to the prevention of much crime and human suffering; but there would still be left a substantial residue of crime unconnected with these social evils, and society would be compelled to protect itself from this by the infliction of some kind of punishment. Even the Social Ideal of a community of the future, when it gets into working order, this problem is not unlikely to crop up, and compel attention; but meantime what are we to do with the persistent offender?

Another argument which is promulgated by the apologists of the criminal, and which bears on the ethics of punishment, has a somewhat captivating effect on short-sighted reformers. There is, we are told, something immoral, or unfair, or at least inconsistent in, inflicting punishment on a guilty person in order to deter others from crime. Except on the grounds that the guilty person is punished with excessive severity, or beyond his deserts, this specious theory cannot be sustained. If we lay this part of the question as is often done for the purposes of the argument, the immoral and unjustifiable nature of the proceeding is clear enough. Otherwise the practice is both rational and equitable. The actual criminal suffers no wrong, the strictly non-criminal person is totally unaffected, while the person with dormant criminal propensities, who is tottering on the verge of criminality, is provided with a strong and valuable incentive to virtue. 'Encouraging the others' cannot be considered an immoral expedient in dealing with crime. The deterrent principle, which has always been recognized by law, is in reality a double-edged weapon of the highest value. Its effect on the actual offender may be, and often is, absolutely negative; but on others its force is incalculable, and invariably many times greater and more far-reaching than on the individual. This fact is too often ignored by those who criticize and under-value the deterrent value of measures and systems which do not absolutely disclose superficially the indirect effects which they really produce. Statistics show clearly enough that our penal system deter occasional and first offenders, though it often fails the deterrent effect on habituals. Present-day conditions of imprisonment are not real punishment to this latter class at all, but merely a form of restraint which removes them from temptation for the time being. The most recent device, the before, which has been adopted for dealing with them in the Prevention of Crime Act of 1908—that is to say, preventive detention for long periods—is really a measure of inhibition and restraint, adopted primarily in the interests that will be at the disposal of the authorities for effecting moral improvement in the prisoners themselves is also expected to yield more encouraging results.

In regard to the principle of deterrence, the only practical one by which the deterrent effect can be put, until he renders himself more amenable to reformatory influence, would appear to be to make him a warning to other people for whom prison has more terrors. This, after all, is a trilling reparation for him to make to a community on which he persistently preys for a living, whether he be in or out of prison.

But these various doctrines which tend to the extenuation, or, it might be said not unfairly, to the justification of the criminal, are overwhelmed by the much wider and more comprehensive one that we have no right to punish, and no moral justification for punishing, our fellow-creatures at all. Count Tolstoi was the leading exponent in recent years of this impossible creed, and he gained many disciples, who have been attracted, apparently, by the magnetism of his genius. In his novel Resurrection he makes his hero Nihilof, who is really a replica of himself and his theories, ask the question, 'By what right do some people punish others? Why, and by what right, do some people lock up, torment, exile, flog, and kill others, while they are themselves just like those whom the law calls criminal? It is obvious to plain people that the latter part of this question embodies the underlying fallacy of the whole theory. The greater part of society is law-abiding; or at all events non-criminal in conduct; but another actual member is permitted to flog, or kill another individual member with impunity, why should society collectively be denied the same right? Every State or community has an inherent moral right to make laws and regulations for the maintenance of social order. If social laws are merely optional in character, and no penalties are attached to their violation, they cease to have any force outside Utopia, so that every man's hand is against his neighbour. The mind of this gifted philosopher, when he attempts to reflect the state of chaos and anarchy to which his teaching led him, so that at the last he was utterly weary of the world and its problems. Theories denying the right of society to punish, which have no foundation whatever in the Moral Law (on which the regulations of all civilized States ultimately rest), have no more than an academic interest for practical rulers. However suitable they may be for the land of dreams in which Tolstoi's spirit seemed to dwell, they are quite unfit for a practical world, in which a mere touch of the actual suffices to shatter them to pieces.

It may be regarded, then, as axiomatic that punishment in some form is essential for the cor-
rection of persons who infict wrong on society; that the right to punish is in no sense immoral; and that every system of correction should have in it a penal element. It is true that these principles are strenuously denied by theorists who hold that prison treatment should be purely reformatory; but no one pretends to have devised a working scheme for carrying out this beneficent intention with full-grown criminals. All prison treatment must be, in the nature of things, to some extent penal, since it deprives persons of their liberty. Even Emira imposes this restraint. To a large number of criminals, moreover, deprivation of liberty is itself the greatest punishment. It cannot be contemplated that the ideal prison is to abolish these restrictions on liberty under any coming régime. It is already on record that a prison without work existed some years ago under a local authority, and the results were found to be neither reformatory nor determinate. It came to be known as a 'Reading-Reading Gaol,' and one prisoner explained his return to it by saying he had come back to finish his time. Any vague idea is ready to assume in this connexion that a kind of "Free-Library" treatment, combined with musical entertainments, will alter the nature and habits of even hardened criminals; but those who live outside do not know the sort of life that is brought into the prison and that spiritual influences are needed for those who persistently covet and desire other men's goods. At the present time it is the fashion to decry, or to ignore, much of the silent work of prison chaplains. This work is very much under the most disheartening of conditions, especially amongst the habituals. The writer knows, however, that prisoners themselves, who show any wish to do better, get an enormous amount of encouragement, guidance, and help. It is not in the punishment, but in the exercise of the correctional powers of the prison, that the future of prison work lies; and that the appreciation of the unadvertised work of his department much more highly than do the general public, or those who write on prison reforms.

§ Penalties a Necessity.—Although reformatory treatment is an essential element of every good prison system, it is nevertheless lacking in two important respects. It is applicable in practice to the prisoners with very short sentences, who constitute the majority of the whole prison population, and it embodies none of that deterrent principle which is necessary not only for the repression, but also for the prevention, of crime. It is obvious, therefore, that pains and penalties of some kind must be resorted to in order to check or restrain the habits of crime; and it is very important that these penalties should bear some proper and adequate relation to the nature of the offence, the character of the offender, and the general sense of public justice as between injurer and injuree. No longer is it necessary to brand, or mutilate, or inflict permanent injury on those whom it is our interest to cure. Society has, however, the right to seek redress (not revenge) at the hands of wrongdoers, and it is compelled to take this course if it would prevent the substitution of private vengeance for public justice. Now, the only medium through which this redress can be exacted at present is the person or the person of the offender, so that in the last resort we are driven either to the infliction of capital punishment or to some form of imprisonment. The offender, in fact, is confronted with the footpad's usual alternative, 'Your money or your life,' or at least a part of it. If any one could invent a less objectionable form of punishment which would restrain the criminal, and at the same time reform him, and deter him and others from the committing of crime, he would merit public gratitude, and lay our penal code less open to even a suspicion of inhumanity. But, as this is merely a visionary possibility, we can only look meantime for such a mitigation of the conditions under which these two measures are ordered, or for carriers of the minds of those who hold that prison punishment is cruel and degrading, humane and just. Much has already been done in this direction. Capital punishment is now practically reserved for the worst cases of wilful murder, though it is still on the code for a few other offences, such as treason, setting fire to public arsenals, etc.

6. Capital punishment.—Without entering into the merits or demerits of capital punishment, we shall note those respects with the subject which tend to justify us in the use of it. A return laid before the House of Commons in 1907 shows that most of the chief European States, and most of the States in America, retain the death penalty in their codes, though many of them use it sparingly. Baron Garofalo, the President of the Appeal Court at Naples, in his book on Criminology (see Lit. at end of art.) tells us that in Italy, where, since 1878, there have been no executions except in cases under military law, homicides average 2,814 a year, compared with about 300 in England. He notes similar results in Belgium and Prussia, where few executions take place. In Switzerland, when the death penalty was abolished, murders increased; but it was re-introduced in 1875 per cent. Higher moral standards have, since its re-introduction, much more common. In America, Mr. Hugh C. Weir tells us (in The World To-Day, in regard to a recent census of American crime) that 'in only 1-5 per cent of our homicides do we secure a conviction.' Further, he states that Chicago averages 115 murders a year. London, which has four times the population of Chicago, has only 20. It is notorious that the death penalty is seldom carried out in the United States by law, though the convicting of the death penalty is carried out. In 1868, abolition has been discussed eight times in the House of Commons, and negatived on each occasion by large majorities. Several committees and commissions have decided in the same sense. The opinion of the Scottish Judges at one of the inquiries was:

"It would not be for the interests of humanity that the well-conducted and useful members of the community should be more exposed to deprivation of life by murder in order that the lives of the murderers may be saved."

A French Professor of Law put the same idea bluntly, when he said that if abolition were sanctioned it should be announced that 'benevolently the law in France will guarantee the lives of none but murderers.' An incidental justification of the death penalty would seem to be that, under it, the newspaper hero of a sensational crime passes quickly into oblivion; whereas, if he is left in prison, his career furnishes endless opportunities for the dissemination of unauthentic, unwholesome and false gossip in the press, which makes a direct appeal to the perverse imitative faculty of other criminals. Lastly, it is the opinion of Laennec, and many other observers, that the English statistics of crime are probably the most satisfactory in Europe.

With a view to securing a fair trial, and to preventing mistakes in capital cases, both law and custom in England provide elaborate safeguards. An accused person, after having the charge against
him investigated successively by coroner, magistrate, and Grand Jury, is tried by Judge and Jury, when he has the option of giving evidence in his own behalf. After conviction he can take his case to the Court of Criminal Appeal. If unsuccessful there, he can lay before the Home Secretary, either in petition or through his legal advisers, and it is understood that may not have been forthcoming at his trial. Every scrap of evidence in his favour is most carefully examined, and, if there is the slightest suspicion of any mental deficiency, medical experts in criminal cases, report to the Secretary of State before a final decision is made to carry out the sentence of the law.

**7. Penal servitude.—**Criminal offenders, other than those who pay the penalty of death, are sentenced in this country either to 'penal servitude,' which is mainly served in convict prisons, the sentences ranging from three years to life; or to 'imprisonment,' which is carried out in local prisons only, the sentences ranging from three days to two years. Death sentences are carried out at local prisons. Convicts—that is to say, those sentenced to penal servitude—generally undergo the first part of their sentences in local prisons in Scotland, and the remainder is served in a convict prison, where they work in association, for the most part out of doors, though some work in shops. The length of the period of separation varies at present from three months to one, according to the nature of the case of the convict. This part of the sentence is most criticized by reformers, as being inhumane and likely to lead to mental troubles, moral introversion, irritation, and misconduct. As a matter of fact, results do not bear out this a priori reasoning, for no treatment so severe as is commonly supposed. The Stage is responsible for a good deal of misconception on the subject. Although 'separate' confinement is, for controversial purposes, called 'solitary,' the two are quite different. Solitary, in the strict sense, is a cell; it is called legally, 'close confinement,' is never resorted to except as a punishment for offences committed in prison, and it is ordered solely by the Governor or superior authority. Under separate confinement a man works in his cell for the greater part of the day, but he gets many reliefs. He is allowed at least one hour's exercise daily, attendance at one chapel service on week days, and generally two on Sundays; he is also allowed for various sanitary purposes, such as shaving, and he is frequently visited during the day by officials—governor, chief warder, officers serving him with work, meals, etc. Further, he is under careful medical supervision, with a view to preventing mental or physical injury. The period of separate confinement, nevertheless, is one of the vexed questions of prison treatment at present. Its effect is penal, in so far as the average convict dislikes it; on the other hand, it does not seem to be without advantages in the direction of reformation of character for those who wish to profit by them. Introspection is not necessarily all morbid, and a period of seclusion gives time for reflection and for a kind of self-examination; the prisoner may find opportunities to the chaplain for influencing the mind of the prisoner, away from the distractions of association with fellow-prisoners who too often urge him in wrong directions.

When this part of his sentence is over, a convict is drafted to a convict prison, where he works on the land—at reclaiming, tillimg, gardening, quarrying, etc.; or at building, with allied industries; or in shops—at tailoring, shoemaking, carpentering, printing, book-binding, moulding, fitting or other useful employments. He sleeps and takes his meals in a separate cell, which is well warmed, lighted, and ventilated. He is warmly clad, and has a very good, if not a ample, place of his own. After conviction he can take his case to the Court of Criminal Appeal. If unsuccessful there, he can lay before the Home Secretary, either in petition or through his legal advisers, and it is understood that may not have been forthcoming at his trial. Every scrap of evidence in his favour is most carefully examined, and, if there is the slightest suspicion of any mental deficiency, medical experts in criminal cases, report to the Secretary of State before a final decision is made to carry out the sentence of the law. The Prevention of Crime Act (1908) gives power to declare a man who has been leading a persistently criminal life to be an 'habitual criminal.' Such a person is to be sent in the first instance to penal servitude for three years and may be kept for a further period of not less than five, or more than ten, years in a state of preventive detention by order of the Court. A special place for detention is to be provided for the protection of society, though hopes are entertained that he, too, may benefit under the new conditions, with more time available for effecting cures. Preventive detention does not come actually into force till 1911, but responsible authorities expect great results from it, though they have not advocated for years some means of imposing a more permanent kind of restraint on this intractable class of offender. In the United States the indeterminate sentence and the release on parole are worked on such liberal lines that many thoughtful Americans say serious crime is triled with, under the guise of reclamation; while our Legislature hesitates to entrust the liberty of the subject, even though he be a confirmed criminal, to the discretion of prison authorities, who might keep him for life. Mr. Grubb tells us that the average term of actual detention at Elmira is about one and a half years.
It certainly seems strange to us that a dangerous burglar, or a coiner, or even a murderer of 30 years of age should be set free, cured in so short a time, when we require a year, or two years, to cure boys of 10 to 16, and unless we have a system very similar to that of Elmira. If such things can be done in America, we must either have much to learn from them, or their reputed success must be doubtful, or the subject must be a very different one from the British specimen. Unfortunately, the statistics on the question are not capable of verification, although unquestionably good results are obtained in many cases. Meantime we adopt such parts of the American system as seem suitable to our national requirements.

8. Imprisonment.—In regard to punishment by imprisonment, as distinguished from penal servitude, local prisoners now enjoy many more advantages in the matter of associated labour than they did when the “separate” system was established by law in 1865. Associated work in shops or working parties, under strict supervision, is now carried out at all local prisons, but out-door employment, except in the grounds, or at officers’ quarters, is limited to about 140 prisoners in the United States. In near large towns does not give much scope for actual labour on the land. The term of separate confinement for local prisoners, which had been fixed at three months by the Prison Act of 1865, was increased to six months by the Act 93. This, and now commonly reduced to a still shorter period. Very large numbers of local prisoners are unskilled workers, and are under such short sentences that cell employment of some kind is necessary, unless the little in the way of training can be accomplished in short periods. The low diet of the short sentence has a like effect, the object being to make the lesson for a petty or occasional offender short and sharp, so that he may not come back. A spell of less than a month is not likely to form an ideal preparation. Local prisoners are housed in comfortable and sanitary cells of 700 to 900 cubic feet, kept at a proper temperature, and well lighted and ventilated. Daily exercise and chapel service relieve the monotony of the cells, and is on so liberal a scale as that of convicts, is graduated according to length of sentence, and is carefully adjusted to the physical requirements of the prisoners, while medical officers have a free hand in ordering extra food in special cases. Like the convict, the local prisoner works his way through the stages of a progressive system, earning privileges for industry and good conduct, and forfeiting them by the slightest breach of the rules. He can also earn remission of part of his sentence if it is more than a month; but this, too, is liable to forfeiture. Severe instruction is given him under the direction of 18. The local prisons are provided for by them and by the clergy of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out within the limits of the terms of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out within the limits of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out within the limits of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out within the limits of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out within the limits of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out within the limits of the different denominations to which the prisoners belong.

9. Borstal treatment.—The tendency of recent legislation has been to make the Borstal treatment, especially of the young and of first offenders. The Prolongation of Offenders Act gives power to the Courts to release the latter, and order them to come up for judgment if called upon. The Children Act prohibits offenders under 14, and practically all young persons under 16, from being sent to prison at all; and the Prevention of Crime Act establishes a new form of sentence and a new type of Institution for offenders between the ages of 16 and 21. The sentence is detention under penal discipline in a Borstal Institution for not less than one and not more than three years. This is intended for those whom, by reason of criminal habit or tendency, it is expedient to detain for long periods under such instruction and discipline as appear most conducive to reformation and the repression of crime. The treatment adopted in these Borstal Institutions closely resembles that of Elmira, already described. It is based on a vocational element, and is progressive, including training, combined with specific instruction in some trade or skilled industry designed to fit the inmates for honest living. Rewards are given for industry and good conduct; penalties are inflicted chiefly by a short period of detention in the Borstal. The sentence is extended to those who are deserting; and work is also found for them on discharge; and an After-Care Association of benevolent workers supervises them, and gives not only encouragement, but moral and material aid to the inmates, which is utterly demoralizing.

10. Habituals and vagrants.—From the outline given of our penal system, as bearing on the general subject of crime and its punishment, candid readers will see that for this class, although the Act of 1865 does not sacrifice the interests of the criminal to those of the community. The general principles on which it is based would seem to be that it should be penal without being vindictive, reformatory without being demoralizing, and deterrent without being inhumane. Administrators who keep a watchful eye on statistics, are quite alive to its weak points, in so far as it fails to reform or deter certain classes of prisoners. It is notorious that it does not reform individuals professional criminals, who come back time after time to prison, though it reduces the numbers of this class very considerably by cutting off the recruits. It is idle to expect that they will ever be totally eliminated; but it is highly probable that the new remit of preventive detention will considerably limit their depredations, and deter many from entering their ranks. The system, again, seems to be ineffective with vagrants, who have been increasing lately at the rate of 4000 a year. Prison life sits lightly on an idle class, and measures of indulgence in the nature of physical comfort, dictated by an exaggerated sentimentalism, are not likely to check idle habits. Unfortunately, most generally with our liberal friends, they are bent on encouraging this evil. ‘To labour truly to get one’s own living’ has become for many persons a very disagreeable obligation; and State Aid, which is a popular panacea for social evils, is
CRIMINOLOGY

too often invoked where energy and self-reliance would be the more manly remedy; while Society is too often called upon to saddle itself with the vices and follies of individuals. To a large extent these doctrines would seem to be responsible for an idle spirit in our lower ranks. According to the last official returns, no fewer than 33,766 persons found their way to prison in 1910 for offences against the Vagrancy Acts. When it is borne in mind that several more thousands of this idle class are in workhouses and at large, it will be obvious that the question of dealing with them is becoming very urgent. No economic remedy for mere welfare and employment will meet their case, since the work-habit in practically all of them has been lost. A Committee appointed in 1905 to investigate the subject made recommendations that such persons should be treated, not as criminals, but as persons requiring detention on account of their mode of life. The object aimed at is to train and compel them to some kind of work, so as to aid the solution of the problem which they themselves present. Legislation is now urgently wanted to carry these recommendations into effect.

11. General results of our penal system.—Recent enactments in reference to inebriates, first offenders, habituals, and youthful delinquents, together with the recommendations of committees for further legislation for weak-minded prisoners and vagrants, suffice to show that our penal system has by no means reached perfection or finality. But how far has it served its purpose in the repression of crime? Some general considerations have to be taken into account in deciding this question. We have no trustworthy data for estimating with any approach to accuracy the sum total of crime committed in the country. Undetected and unproven crime still flourishes, and we can judge the proportion it bears to detected crime only by general indications. We know that our methods of detection and identification of criminals have improved, so that it is at least probable that less crime goes undetected now than in former years. Further, we know that life and property are as secure with us as elsewhere, and that respect for human life is certainly greater in this country than in most civilized countries. But, although we can base no conclusions on figures representing the total criminality of our population, we have ten large categories of our prisoners, a statistical basis for estimating comparative progress or retrogression. The figures are simple; they have been arranged on the same lines since the local prisons were handed over to the State in 1878; and we may infer that within the last thirty years, the general shortening of sentences, which followed on the passing of the Summary Jurisdiction Act in 1879, accounts for a certain proportion of this decrease, but cannot altogether explain it away, since the missing convicts are not found in the local prison population, which has also declined considerably, despite the addition of many minor offences to the statute book since 1880. If we take the two sets of offences and add the prisoners—together, and place beside them the increase of ten millions in the general population, it will be seen that the criminality of the country must have declined very substantially to show such results; and although we look forward to better things in the future, it must be admitted that our penal system has, on the whole, served us well. It would, however, be very erroneous to infer that the decrease of crime is due solely to our methods of repression. It is only of many doubtful whether such marked decrease could take place under an inefficient penal system. Social progress, of course, accounts for much of it. The training and discipline of the schools are conducive to moral improvement; self-control and self-sabbling habits; while the steady progress of temperance is probably one of the most important factors of all. Bank holidays have long ceased to be carnivals of drunkenness, and the statistics of crime show a steady decline in this offence.

12. Drink.—The latest returns show that in 1910 the total number of prisoners, male and female, received in the prisons for drunkenness had been less than the total of 1909 by 53,522 cases. These figures are satisfactory as showing progress, but there is still room for much improvement in a list which reaches the enormous total of 57,418. Without any desire to minimize these figures, which represent an appalling amount of human misery and degradation, we would point out that much misconception prevails as to the actual connexion between drink and crime. Exaggerated statements that 80 or 90 per cent of crime is caused by drink are without foundation. A few criminals in each case, which do not justify such sweeping conclusions. Many thousands of offences tried summarily have no connexion with drink. It should be remembered that the relation of cause and effect existing between drunkenness and crime, is the result of the combination of the most trivial cause of crime, which entails a long sentence, is by no means so direct or clear as it is in the case of minor crime, since drunkenness is in itself one of the minor crimes, and one which figures most prominently in the population of our prisons, a statistical basis for estimating comparative progress or retrogression. The figures are simple; they have been arranged on the same lines since the local prisons were handed over to the State in 1878; and we may infer that within the last thirty years, the general shortening of sentences, which followed on the passing of the Summary Jurisdiction Act in 1879, accounts for a certain proportion of this decrease, but cannot altogether explain it away, since the missing convicts are not found in the local prison population, which has also declined considerably, despite the addition of many minor offences to the statute book since 1880. Bank holidays have long ceased to be carnivals of drunkenness, and the statistics of crime show a steady decline in this offence.

The outstanding feature of these statistics is the very conspicuous decrease in serious crime indicated by the fall in the convict population, in the proportion of ten to three, during the last thirty years. The general shortening of sentences, which
much in the light of social 'sports,' instead of anti-social offenders and public nuisances. An attempt was made by the Inebriates Act to stem the evil by applying curative treatment to cases of inebriety, and placing them under control and medical care for prolonged periods. The intention of the law was commendable, and its influence on scientific teaching, but, unfortunately, it did not work well in practice. No legal obligation had been placed on the local authorities, who were expected to co-operate in the scheme, to provide accommodation and food for patients. The Courts were reluctant to deprive of liberty, for the long periods necessary for cure, any persons except the most confirmed inebriates. These, as might have been expected, quickly relapsed into their former habits or committed new offenses. For those who were less confirmed in drinking habits, and who might have gained benefit from the Act, it became a dead letter. The liberty of the subject in his case amounted to liberty to ruin himself; and without danger, anxiety, or expense on their friends. Further, disputes arose between the local authorities and the Treasury as to the cost of maintaining the Homes, which led to further deadlock. A Committee of Inquiry has already been appointed in order to meet these difficulties. The State should take over the control of the Homes. Whether or not this proposal be carried out, the Act requires stiffening in some way. As it is, it is a failure. The occasional drunkard also needs more attention. If he is to be restrained from drifting into the habitual before his will-power disappears under continued indulgence, cumulative penalties must be dealt out to him more freely, and the risk of becoming an inebriate under the Act must be constantly kept before his eyes.

CRIOBOLIUM.—Like the *taurobolium* (wh. see) the *criobolium* was a sacrifice performed in connexion with the worship of the Great Mother of the Gods and Attis, with the difference that the victim was a ram instead of a bull, and was slain in honour of Attis. When the *criobolium* was given in conjunction with the *taurobolium*, the altar was, with rare exceptions, inscribed to both deities; whereas, when the *criobolium* alone was given, the inscription was usually to the Mother only, though symbolic decorations on the altar even then often indicated the participation of Attis.

Unlike the *taurobolium*, which, if not an original feature of the worship of the Great Mother in Asia, was borrowed by her priesthood at Rome from the Cappadocian religions which were brought there in the early 2nd cent. A.D., the *criobolium* seems to have been a special sacrifice instituted after the rise, and on the analogy, of the *taurobolium*, for the purpose of giving fuller recognition to the duality of the Great Mother and Attis, which had recently become more prominent, through the rise of Attis to greater importance. There is nothing to indicate its existence either in Asia or in Italy before its first celebration in honour of the Mother and Attis.

In the absence of direct evidence, we may suppose the *criobolium* to have been similar to the *taurobolium* both in details of ceremony and in spiritual effect. Its celebration was widespread, and Attis was worshipped in connection with the *criobolium* and the Christian doctrine of redemption through the blood of the Lamb (Firmicus Maternus, de Error, 27–28).

LITERATURE.—See references under *Taurobolium*.

CRITICISM (Old Test.).—Criticism is the art of estimating the qualities of literary or artistic work. M. Arnold defined it as a 'disinterested endeavour to learn and propagate the best that is known and thought in the world' (Ess. Crit., i. 58). It is not to be mistaken for censure or disapprobation—the expression of hostile or unfavourable opinions. Realizing that the word verges on this adverse significance, writer and others he preferred to speak of literary 'appraisal'; and certainly the true Bible critic desires chiefly to share his admiration with his reader. But 'criticism' and the allied terms should be used without prejudice, to signify the effort of the mind to see things as they are, to appraise literature at its true worth, to judge the records of men's thoughts and deeds impartially, without obstruction of personal likes or dislikes. In distinction from 'lower' (a term seldom used), or textual criticism, which aims at ascertaining the genuine text and meaning of an author, 'higher' (a term apparently first used by Eichhorn), or historical, criticism seeks to answer a series of questions affecting the composition, editing, and collection of the Sacred Books.

The higher critic's task is to show how the ideas of any particular writing are related to the environment in which they grew, to the spirit of the age, to the life of the people, to the march of events, and to the kindred literary productions of other times or places, if it may be, of other lands. It is a scientific method of 'searching the Scriptures.' It substitutes the inductive for the a priori mode of inquiry, observation and experiment for tradition and dogma. It is a new appreciation of the Scriptures, or an unexamined life—of man or book—is not worth living.

The critical movement, which has shed a flood of light on the OT, and given the Church a new and more human conception of the mode of revelation, did not begin till the middle of the 18th century. The traditional view of the composition of the Sacred Scriptures was a bequest from the Jewish to the Christian Church, which no one ever thought of closely examined to be or not to be, indeed, few sporadic attempts at literary criticism, which ran counter to the received opinion. Theodore of Mopsuestia relegated some of the *Psalms of David*—such as the 51st, 65th, and 127th—to the period of the Exile. Phil. Ezra, the most noted Jewish scholar of the Middle Ages (1070–1138), detected a number of anachronisms in the Pentateuch, but advised the reader who understood these things to be discreet and hold his tongue. Luther was a fearless critic of both the Old and the New Testament; it would matter if Moses was not the author of the Pentateuch; he saw that the Book of Kings was more credible than that of Chronicles; he surmised that some of the Prophetic books received their final form from redactors; and he would have preferred if the First Book of Maccabees instead of Esther had been included in the Canon. Spinoza's
CRITICISM (Old Testament) 315

philosophical acumen anticipated not a few of the modern critical results. 'Ex his omnibus,' he says, 'luce meridiana clarus apparat, Pentateuchum non a Mose, sed ab alio et qui a Mose multis post scriptum vixit, scribendum fuisset' (Tit. 3, cited. p. 38).

Richard Simon, the French Oratorian, observed some double accounts of events in the Pentateuch, and suggested a diversity of authorship. But the critical opinions of these and other gifted writers were in this obiter dictum, which made little impression upon the mind of the Church, and never disturbed her dogmatic slumber. They inaugurated no critical movement.

It was reserved for one who was neither a scholar nor a theologian, but a man of science, the Frenchman and court-physician Jean Astruc, to discover the critical secret, and to forge the novum organon which was 'to destroy and to overthrow, to build and to plant.' His study of the Pentateuch was the paragon of a busy life chiefly devoted to the writing of books in his own special department, and his supreme merit was that he brought to the search of the Scriptures a mind thoroughly trained in those methods of criticism which had been anticipated—and pioneer work which had left a perfect example for the imitation of all his followers. As a devout Catholic believer—he takes his readers into his confidence in a beautiful preface—he refrained for a while from publishing his discoveries, on the ground that his work, if put to the test, would put a weapon into the hands of the free-thinkers; les esprits forts—of his time. He could not doubt, however, that his discovery would serve to remove some serious difficulties from the pages of ancient writers, and in his sixtieth year he was constrained to give his book to the world (1753).

The very title of the work at once gave expression to the characteristic modesty of a true seeker after truth. He merely offered Conjectures sur les Textes, ouvrant a manier de secret, le texte de la Genes, a book s'est servi pour composer le livre de la Genes. He did not know whether they would be accepted or rejected, but in either case nothing could ever alter his love of Truth and of Religion. It is worth while to state his argument in his own words—here slightly abridged.

In the Hebrew text of Genesis, God is designated by two different names. The first is Elohim, for which other meanings in Hebrew, it is especially applied to the Supreme Being. The other is Jehovah, הוהי, the great name of God. Now, if we suppose that the two names were used indiscriminately as synonymous terms, merely to lend variety to the style. This, however, would be contrary to the greatest care, as there are whole chapters, or large parts of chapters, in which God is always called Elohim, and others, at least as numerous, in which he is always called Jehovah. If, then, we are to believe the composition of Genesis, we should have to ascribe this strange and haphazard variation to himself. But can we conceive such negligence in the composition of so short a book as Genesis? Shall we impute to Moses a fault such as no other writer has committed? Is it not more natural to explain this variation by supposing that Genesis was composed of two or three memoirs, the authors of which gave different names to God, one using that of Elohim, another that of Jehovah or Jehovah Elohim?

That Astruc was conscious of leading the students of Scripture into untrodden paths is proved by the motto from Lucretius (i. 926 f.), which he put on his title-page:

Avisa Pierdum perdere loca, nullius ante Trito sola.

In the first pages of his book he carried his critical analysis to the whole of Genesis and the beginning of Exodus, as far as the point where the distinction of Divine names appears to cease (Ex 6). He discovered some passages which he could not attribute either to the Elohist or the Jahwist. He displayed his results by the whole of the text in four parallel columns. His attempt had the inevitable defects of all pioneer work, and he was far from dogmatizing as to the details of his criticism. But, with a true scientist's confidence at once in the precision of his methods and in the general accuracy of his conclusions, he wrote at the end of his prolegomena:

'So we must either renounce all pretense of ever proving anything in any criticism, or else abandon the idea that the combination of these facts affords a means to a complete demonstration of the theory of the composition of Genesis which I have proposed."

Astruc's Conjectures received but a cold welcome in his own Catholic communion. No single opponent of his initiated the critical mantle, and it was destined to be the work of a long succession of patient German scientific theologians to continue and complete the process of literary analysis which the brilliant Frenchman had begun. The great Hebraist Eichhorn came to know Astruc's theory at second-hand, and deliberately refrained from reading the book till he had independently, and still more thoroughly, gone over the same ground, with the same general results. He had no difficulty in finding a good criteria besides the Divine names to differentiate the two oracles; and, instead of pausing at the beginning of Exodus, he carried his investigations to the end of the Pentateuch, expressing the opinion—long since disregarded—that the last four books (1762), followed by a separate work entitled Critical Remarks on the Hebrew Scriptures (1800), gives vigorous expression to his views. He was a remarkable man and no mean scholar, who certainly deserves to be remembered among the pioneers of criticism; but by excess of zeal—the perseverid ingenium Sociorum—he led criticism astray, and tended on the whole to discredit the movement. Sooring the timid theory of Astruc and Eichhorn,—that Moses used two sources, the only work which had been attempted to discover the true authorship of Genesis,—he launched the hypothesis that the whole Pentateuch was nothing but a collection of loose scraps, of various age and worth, probably compiled in the time of Solomon. He had no difficulty in pointing out an immense number of these originally independent fragments, in the conjunction of which he saw no orderly plan or leading motive. He thus became the author of the Fragment Hypothesis, which was introduced into Germany by Vater, who translated or paraphrased a large part of Geddes's Critical Remarks. Vater thought the Book of Genesis was composed of thirty-nine fragments. The theory made much noise for a time, but received its death-blow at the hands of the greatest OT scholar of last century, Heinrich Ewald of Göttingen, in his Die Composition der Genesis kritisch untersucht, which he wrote when he was a youth of nineteen (1823). Geddes's opinions cost him his priestly office. Aberdeen consigned him with a doctorate of laws.

Meanwhile a real and important advance, from which there have been nulla vestigia retrorsum, was made by Igen, Eichhorn's successor at Jena. His fine study of the whole of Genesis afterwards acquired a scholastic fame similar to that of the Appendix of 1655—detected the presence of two writers in Genesis, each with an unmistakable style of his own, who habitually use the Divine name Elohim. This discovery did not receive much attention at the
time of its publication (1798), and it was not till it was independently made again by Hupfeld, more than half a century afterwards, that its significance was recognized by the foremost scholars of Germany. It is now accepted as one of the assured results of criticism. As the second Elohist is devoted to ideas and institutions of the Levitical system, he is known as the 'Priestly Writer,' while the name 'Elohist' is reserved for the earlier author, who, like the Jahwist, is more akin to the prophets.

In 1792, Geidt had joined it to the Pentateuch, regarding it as 'copied by the same author.' Careful and minute investigation convinced de Wette and Bleek that this procedure was correct. The real affinities of Joshua are with the writer of the 'Six Books' ( שלושת ספרי יהושע) of the Alexandrian Greek for a book), instead of the Pentateuch.

For the next half century there was one inspiring name which dominated the study of the OT, wellhausen, who dedicated his Prolegomena ' to my unforgetting teacher, Heinrich Ewald, with gratitude and honour,' was one out of many who felt the spell of this scholar's genius. It must be admitted, however, that Ewald lent his authority to a hypothesis which for a considerable time retarded rather than furthered the progress of criticism. He began where Astur and Eichhorn left off, and neglected Igen's discovery of the two Elohist. Regarding an undivided Elohist document, which he called the 'Book of Origins,' as the 'groundwork' of the Hexateuch, and finding its unmistakable ideals and formula giving order and unity to the whole structure, he maintained that the Jahwist sections were merely added to supplement the Elohist. He thus was the famous 'Supplement Hypothesis.' Defended by Bleek, Schrader, and many other scholars, it was viewed for long as the citadel of criticism; but it could not permanently stand the cross-fire to which it was subjected, and it has now no more than a historical interest.

In 1834, Eduard Reuss was lecturing on OT theology at Strassburg, and applying his strong, keen intelligence to the critical problem, which he approached from the historical rather than from the literary side. He found it psychologically inconceivable that a nation should begin its history with a fully developed code of laws. He thought it inexplicable to know as any nation should ignore their country's laws, which they of all men ought to have reverence. How was he to solve the enigma? The critical movement, at the point which it had then reached, did not help him much, for Deuteronomy was still not set apart from the OT; but the Prophets, which had yet been replaced in the historical environment out of which it grew. Reuss's problem was to determine the age and original of the 'Law of Moses' and the 'Psalms of David.' The answer of 1834, as he told long afterwards, rather as an intuition than as the result of a careful and exhaustive investigation. It was this—that in the true historical sequence the Prophets are earlier than the Law, and the Psalms later than both. In the following year (1835) practically the same theory was independently propounded by vatke in his Bibl. Theol. wissenschaftlich dargestellt, and by George in his Die alttestamentlichen Psalmen. These books commanded any great attention, the reason was that they were too theoretical. They did not present a thorough analysis of the language and ideas of the Books of Scripture. Vatke's work was, indeed, a very remarkable instance of the successful application of Hegelian principles to the study of a national and literary development. But it was intended only for the initiated, who were sealed of the tribe of Helg. The author warned off the very threshold of his book, and advised the reader to approach it only if they understood the master's terminology. Reuss, who tried to read it and failed, deferred the publication of his own conclusions for nearly half a century. His L'Histoire sainte et la loi appeared only in 1873, and his Geschichte der Weisheit in 1881. As one of his most brilliant pupils, K. H. Graf, professor at Leipzig, had forestalled him by a dozen years in his Geschicht Bcher des AT (1866), and consequently the theory is known to all the world as the 'Grafian and Rheinhardt hypothesis'.

Hupfeld, one of the eminent Hebrewists of Halle, where he was the successor of Gesenius, brought a fresh mind to the problem of the literary composition of Genesis, and was rewarded with more success than almost any of his predecessors. Six Books, as he was the most nearly read the riddle of the sphinx, and it is a remarkable fact that his book, Die Quellen der Genesis (1853), was published exactly a century after the famous Conjectures of astruc. Having shaken off the obsession of Ewald's 'Supplement Hypothesis,' he had the good fortune to repeat Igen's almost forgotten discovery of the two distinct Elohist writers in the Pentateuch. He laid bare the work of the Priestly Writer (the second Elohist). He demonstrated the close affinity of the first Elohist to the Jahwist, and the wide difference between both and the writer of the Grundschri. Under his spell each of these ancient writers seemed to come forth a living personality, with a style which revealed the man. He showed that the additions which J was alleged to have supplemented P were often entirely out of harmony with the latter's circle of ideas. His own theory was that the productions of three original writers, one was the famous 'Supplement Hypothesis,' as J, E, and P were at length combined by an editor, who—fortunately for us—left his sources much as he found them, being content to establish a merely superficial unity. The literary problem of the authorship of the Hexateuch was thus solved. But the vitaly im-

WELLHAUSEN'S GESCH. ISRAELS APPEARED IN 1878, AND OF ITS RECESSION IN GERMANY PFEIDERER SAYS:

'THE ARGUMENTS FOR THE NEW HYPOTHESIS, DERIVED FROM THE PARALLEL DEVELOPMENT OF LAW, RELIGION, AND LITERATURE, WERE EXHIBITED WITH SUCH VIVACITY THAT THE IMPRESSION PRODUCED ON GERMAN THEOLOGIANS (ESPECIALLY OF THE YOUNGER GENERATION) WAS IRRESISTIBLE. ... IT WAS A SPECIAL MERIT OF WELLHAUSEN'S BOOK TO HAVE EXCITED INTEREST IN THESE QUESTIONS NEGLECTED BY CERTAIN GROUPS OF SPECIALISTS BY ITS SKILLFUL HANDLING OF THE MATERIALS AND ITS ALMOST PERFECT COMBINATION OF WIDE HISTORICAL CONSIDERATIONS WITH THE CAREFUL AND FORTHRIGHT REMOVAL OF CRITICISM FROM THE ARMS OF THE CRITICAL DISCUSSION' (DEVELOPMENT OF THEOLOGY, ENG. TR. 1890, P. 250).

FOR, WHILE THE TIRED WAVES, VALIANTLY BREAKING,

CONQUEST, FLOATING IN, THE NOBILITY (H. CLAIGHT).

WELLHAUSEN'S GESCH. ISRAELS APPEARED IN 1878, AND OF ITS RECESSION IN GERMANY PFEIDERER SAYS:
CRITICISM (Old Testament)

Canaan; while it has found in Hammurabi a law-giver far older than Moses; it has not hitherto appreciably affected a single critical conception of the several elements of the ancient

Bible. 'Archaeology has refined only the argument which Prof. Sayce, in his 'Religion of the Uses which they really use, with, of course, the entire position, which depends upon them, it has left absolutely untouched. (Br. Arch. Cornwall, Eng. ed.) Winckler has rendered splendid service as archaeological specialists, and every discovery they have made has been welcomed; but science would be in a worse plight than it is just now of having to diutate with cheap anti-criticism. (Prof. Orr is the ablest critic who has written about this country, but he has not, as he must, in the long run be a more decisive choice between them. (C. M. Taylor, 1887, 125), he is methodically comparing the issues of the of criticism has been slow. The labour has been spread over a century and a half. Every critical theory that has ever been advanced has been severely tested and strenuously contested. Criticism is bound to be self-critical, proving all things and holding fast that which is good. It is not to be imagined that finality has been reached on every minor detail of criticism. All along the line there are matters that still await adjustment. In the improvements which it is receiving at the hands of a new generation, the Graeco theory resembles the Darwinian.

Allusions can be made to only a very few points. (1) The Yahwist and Elohist have often been called 'prophetic' writers, and (2) the so-called 'sacred history' of the Old Testament.

In the 'Book of Genesis' and 'Exodus' and 'Leviticus' and 'Numbers' and 'Deuteronomy' (Freiburg, 1907, p. 190), but, the other hand, much that must needs have been

The idea of the Book of Proverbs is, that the wisdom a person of wisdom, besides the wisdom of the rabbis, has been discovered. (4) The Psalter as a whole is probably post-exilic, but it is in the nature of things scarcely possible to determine the precise date of its composition, with any degree of accuracy. (5) The Wisdom literature and the relation of its later developments to Greek thought still need much attention. While Job is recognized as post-exilic, and Ecclesiastes is dated later than Daniel (which belongs to the great age of Apocalyptic) as it remains probable that the Book of Proverbs represents the oral wisdom of Israel in the time of the monarchy.

Some gains obtained by the criticism of the Old Testament may be mentioned. It has established the fact that the OT was not written to any soul that was not exactly fitted to the occasion and the man'; and that 'separate... from this context... it is no longer the same perfect Wool'. (Robertson Smith, O. J., 1862, p. 101.) It has reconstructed the history of Israel in the light of that other modern principle—there is no history but critical history. For the incredible dogmas of verbal inspiration and the equal divinity of all parts of Scripture, it has substituted a credible conception of the Bible as the sublime record of the Divine education of the human race. It has traced the development of the religious conceptions and institutions of Israel in a rational order. Moving the OT's centre of gravity from the temporal, it has proved that the history of Israel is fundamentally and essentially the history of Prophecy. It has made a sharp and clear distinction between historical and imaginative writing in the OT, and so enhanced the real value of both. The OT has been described as the Bible of Israel, the Bible of the people, and the spirit of the earliest prophets, and used by them to transmute the devotion of a higher faith into the veins of the people. It has thrown light—as Astruc saw that it was—on the many duplicitous, and even contradictory, accounts of the same events that are found in close juxtaposition. It has explained the moral and theological crudities of the Bible as the early phase of a development which has taken centuries. It has denuded the desert pilgrimage of literary glory, only in order to enrich the Exile. For the 'Psalms of David' it has substituted the 'Hymn-book of the Second Temple,' into which are gathered the fruits of the whole OT's development of the Mishnaic centuries. To the legendary wisdom of one crowned head it has preferred the popular philosophy of many generations. For a religious history which looked like an inverted pyramid, it has given us one which is a pyramid on a flat stream—the record of a winding but unwavering progress in the moral and religious consciousness of a people. Instead of crowding the most complex institutions and ideals into the infancy of the nation, it has placed the sword at the blade, then the car, then the full corn in the car.'

Prof. B. D. Eerdmanas, Kueen's pupil and successor, is re.

...a reaction. He begins his Allttet. Studien (Giessen, 3 parts, 1908-10) by announcing that he has 'criticized the Graeco-Catholic-Kueenian' because he claims to have been wrong from the start. 'Astruc led her into false tracks' (p. 94). The 'theory which uses the Divine names as a guide through the pyramid of the phenomena is an error, astral names are the names' (p. 94). Instead of taking these names as literary criteria, let us have an historical-religious investigation of their meaning. (Ex. 20:23-24) These names have been interpreted to refer to the God of Israel. It is a real plural. The 'judges' (Ex 21:23) as a rule, have been taken as two persons, or two names for two separate phases in the history of Israel. But the critical school has been victorious. Polytheism is to be found not only in the "Book of the Covenant," but in the narratives of Genesis. 'For the arrogance of the patriarchs must be excused: it is a great importance to see clearly that the legends which have been received gradually absorbed a monotheistic' (Richard, p. 190). The figures of the patriarchs are many and varied. The patriarchs have been gathered in (1) stories in which the polytheism is undisturbed, (2) stories in which the Yahwism has been developed, (3) stories in which the polytheism has been adapted to monothestic. Some parts of the OT—names of the patriarchs—carry much older than the Exile, and round all the ancient legends there have gradually accumulated many additions and reductions, dating from the earliest to the latest times.

Eerdmanas has failed to take account of the fact that for the recognition of Je and El in the Hexateuch there are many other important critical criteria. Style, point of view, religious tendency—besides the Divine names. It will be found that the difference between him and his master is after all not very great. His vigorous and suggestive criticism is a trumpet-call to all OT scholars to re-examine their position, and they are cheerfully responding; but it does not appear that the solid walls of P have been shaken.

J. STEACHAN.
CRITICISM (New Testament)—The criticism of the NT may be treated in two divisions—that of the Gospels and Acts, and that of the remaining books. In the Gospels and Acts we are dealing with narrative material, which may, therefore, be approached from the standpoints and methods of (a) literary, (b) historical, (c) textual. But in the Epistles and the Apocalypse we have to do with books where the historical element is subordinate and the literary predominant. Consequently, literary methods stand in the foreground, and further scope than historical methods, and there is likely to be less divergence of opinion on the results obtained.

1. CRITICISM OF THE GOSPELS AND ACTS.—To the dispassionate inquirer the present state of this department of investigation must be strangely bewildering. This is not due to variation of opinion in the region of literary criticism, for there it has long been seen that the possibility of obtaining sure results is very limited in scope, and agreement has hitherto largely reached on all points where agreement is possible. But, in the region of historical inquiry, results are surprisingly contradictory, and there seems at present to be no likelihood of agreement being reached.

(a) Literary criticism.—So far as the Synoptic Gospels are concerned, important results have been reached by the methods of literary criticism. These may be briefly summarized as follows. (a) It has been shown that the Second Gospel was used in the compilation of the Third Gospel. (b) It has been further shown that behind the First and Third Gospels lies a compilation of the Lord's Sayings (= Q) which directly, or after passing through intermediate stages, was used by the editors of the Synoptic Gospels. (c) It has been made probable that the editor of the Third Gospel used, in addition to Mark and Q, at least a third written source; but no agreement has been reached as to its scope. (d) Some recent attempts to analyze the Second Gospel into two or more documents which are originally distinct rely more upon historical considerations than upon purely literary methods, and are too recent to have been fully considered.

In the Fourth Gospel literary methods have recently found much play. Wellhausen has attempted to find traces of composite authorship, and he has been followed by Spitta, who endeavors to distinguish between a "Herausdruck," to which he assigns very high historical value, and a "Bearbeitung." But it may be questioned whether the unity of the book is not too apparent to be lightly shaken.

The attempt to analyze the Acts into its original sources finds ever new disciples. The latest is Harnack, who finds in Ac 2-15 a compilation of three documents. But the grounds alleged do not seem adequate to support the conclusions. On the other hand, the identity of the editor of the Acts with the writer of the 'We' sections and with the editor of the Third Gospel has received the weighty support of Harnack himself, and on purely literary grounds is hardly deniable. Those who dislike this conclusion have to fall back upon historical considerations.

So far we have been dealing with literary criticism in its efforts to determine or to detect underlying sources in the narrative literature of the NT. It will be seen that the most important and assured results have been reached in those cases where the editors have not used the original material. The union of Mark in Matthew and Luke has been rather observed than discovered; and, if Mark did not exist, literary analysis certainly could not reconstruct it out of the later Gospels. For that very reason, attempts to reconstruct Q can be at the best but tentative. The attempted analysis of these books into sources which are not now extant is a matter of great difficulty, arising from the fact that the writers have so re- east any sources which they may have used that reconstruction of them is now almost impossible. It is for that reason that attempts on purely literary grounds to re-discover source used in the Acts are little likely to succeed.

(b) Historical criticism.—It is, however, in the region of historical criticism that the variety of opinion spoken of above chiefly exists. And the reason of it is not far to seek. Inquirers into the Gospels and Acts are divided, broadly speaking, into two classes, according to the right method of approaching the narratives, and consequently employing different standards or criteria in estimating their value as historical material.

(1) Investigators of the first class start from the assumption that the facts of history which lie behind the narratives are purely natural facts, similar in nature to other facts known to us. In particular, they take it for granted that Jesus was a man, whose personality underwent the normal process of gradual development, so that the growth of His intellectual conceptions can be traced on psychological lines. Inquirers who are guided by principles like these are, of course, bound to apply to the material before them such criteria as the following. (a) Does a writer state as fact an event which lies outside the range of the known laws of Nature? Then, not only did the alleged event not happen, but some account must be given of the nature of the evidence that has led the writer to state fact what is incredible. Under this head the whole of the so-called miraculous element in the Gospels and Acts is removed from the sphere of history, and translated into the realm of myth, legend, popular exaggeration, symbolism, allegory, or transference of the miraculous from other departments of tradition into the life of Jesus. In the early days of criticism this generally led to the transference of the Gospels into the 2nd cent., in order to allow for the growth of legend rather than for the few traditional facts of the life of Jesus. More recently it has been argued that such growth may have been very rapid, and is consistent with a later date for the Gospels. (b) The mental development of Jesus must be similar to our own, and it

6 The Second Synoptic Gospel is generally assigned to a.d. 60-70, the Third to the a.d. 80, and the First to varying dates between the publication of Mark and the end of the century. The tendency nowadays is to push the dates of the Acts backwards rather than forwards. This is illustrated by Harnack's admission that the Acts - have been written 'in early as the beginning of the seventh decade of the first century' (Acts, p. 267).

7 Harnack now (Neue Untersuchung, zur Apostelgeschichte, Leipzig, 1911) places Acts before the death of St. Paul, St. Mark and St. Luke earlier, and St. Matthew shortly before or after a.d. 70. The present writer has used for a date about a.d. 50 for St. Matthew (Eph., July 1910).
is not possible that He could have taught doctrines which appear to us to be logically inconsistent. This has been applied in particular, in recent times, to the problem of the eschatological teaching in the Gospels as compared with the moral teachings. Of the two opposite views, both have been held by some unclouded thinker of the moral sayings and the apocalyptic fanatic of the eschatological passages. We must, therefore, give up one of the two as historical, and the teaching generally chosen as most conveniently to be got rid of is the eschatological, which is then regarded as an intrusion into Christ's teaching of elements derived from Jewish Apocalyptic writings, remodelled in Christian circles. Of course, on the other side, one of the lines of explaining away the evidence which, at first sight, the Gospels set before us as to the facts of Christ's life.

It would be impossible to give here an exhaustive list of all the ways in which criticism attempts to do this, but the following are some of them:

Adaptation of Christ's life to the narrative and prophecies of the Virgin conception, and of the flight into Egypt, etc.) Adaptation to His life of heathen mythology (for adaptation to the present life of Christ). The historical doctrine of the Messiah. The attribution to Him of sayings prophecies of later events, e.g., the manner of His death, or the fact of Jesus being crucified in certain facts of words spoken by Him in allegory or metaphor.

The main difficulties which many will feel with criticisms of this kind are these:

(1) It starts from presuppositions with which the evidence of the narratives immediately conflicts. (2) Its methods of explaining away consist in the fact that these are conjectured and fanciful—not the application of scientific principle, but an appeal to any or every supposed cause that might have given rise to the circumstances of evidence. (3) Its results are hopeless precautions. The Jesus who emerges from its labours is sometimes a simple-minded lover of God, who is crushed between the ethical and the apocalyptic wheels of His day; sometimes an ethical teacher of high value; sometimes a dreamy enthusiast, who died because He declared Himself to be the Messiah. (4) It is argued, cannot be substantiated. The Gospels, as manipulated by the uncertain methods of this sort of criticism, seem capable of yielding a picture of any sort of Jesus that the critics desire.

(2) Investigators of the second class approach the subject from a very much wider and more liberal historical background. They argue that a cursory reading of the Gospels gives us at once a consistent picture of One whose personality, which is truly human, yet transcends the limits of human personality as elsewhere known to us. They, further, argue that the same kind of evidence which is given to us in the Gospels is also given, with continuity of personality, in the history of the Christian Church; so that the Gospels are only a first stage in a continuous stream of evidence to a Person, dead yet living, human yet more than human. In view of this deepest and most profound fact of human experience, we cannot, they urge, apply to the Gospel evidence those rough and ready tests of the historical which critics of the first class are so eager to use. Christ is reported to have worked a miracle. The critics of the first class say at once: (a) 'This miracle did not happen'; therefore (b) 'the narrative is very late,' or (c) 'it is to be explained as due to one of the causes summarized above,' and (d) 'it is worthless as evidence of historical fact.' Christ is reported to have worked a miracle. The critics of the second class will say at once, 'Why not?' 'What does this mean save that from the inexhaustable treasure-house of the Personality of Jesus flowed some influence or power which so dazzled the minds of the witnesses that they recorded their impression in the simple words that have come down to us?' Or, again: Christ is reported as having taught moral principles which presuppose

30 CRITICISM (New Testament)

the continuance of human society, and as having spoken about the Kingdom of heaven as something which was to be men. He is also reported as having announced the near approach of the Kingdom, and His own identity as the 'Son of Man' coming on 'out of the clouds of heaven.' Critics of the first class say at once: 'Christ cannot have spoken these two divergent lines of teaching. We must choose between them.' Critics of the second class will rather argue that we are dealing with two types of teaching which are ultimately harmonious; that difficulties arise if we unduly press, or too literally interpret, sayings of the one or the other type; and, in criticizing, that believing that prophetic and apocalyptic utterances are statements of profound truth as to the future of the world, and of the relation of Christ to humanity, which are essential for a right understanding of His being.

So long as NT critics start from different assumptions, and employ different methods, it is obvious that they will arrive at different conclusions. It is clear that sooner or later some agreement must be reached, if possible, as to the truly scientific method of approaching the Gospels and Acts, and as to the principles or criteria by which we are to test their historical value. In other words, are we or are we not to look upon them as isolated records which can be examined in and for themselves, regardless of the corroboration in history of the more than human Personality to which they bear witness? Or, is the representation of Jesus as given in the Gospels as a whole one which the experience of the Christian Church in later history has proved to be substantially true? If the latter be the true alternative, we shall be bound to approach the Gospel with some such canons of criticism as these—

(1) We are dealing with a record of One whose personality and force of character transcends, as is proved by the witness of history, all human knowledge. We cannot, therefore, rule out as evidence statements which ascribe to Him power and influence which are not found in normal experience of life. (2) There is, therefore, a general probability in favour of the credibility of the Gospel narratives. The area of uncertainty arises later in the attempt to reconstruct from them the original facts as they occurred. For instance, the narrative of the raising of Lazarus (a daughter of which we leave with the certainty that an impression was made on the minds of the witnesses of that event that a dead person had been brought back again to life. 'What death and life' are never to be known to us. The substantial fact is that the force and power of the Personality of Jesus effected this astonishing thing that the girl, who otherwise would have been numbered with the dead, took her place, through His influence, once more in the world of living men and women.

The question of the necessity of approaching the Gospels as historical witnesses, with some sort of presuppositions in favour of, or against, the Gospels, has not yet been treated in a serious scientific manner. Yet nothing is more certain than the fact that historians approach all ancient documents with certain presuppositions. These are, in large part, inferred from known facts. The historian who answers No will necessarily approach the Gospels with a presupposition against their evidence. And this presupposition seems to be due to a denial on his part of an element in life which
others affirm, and which causes them to say Yes. This element is the sustained witness of the Christian sources of the Gospels and from setting up human life, of which they find the first account in the Gospel history. It has always claimed to be not merely witness to the powerful influence exerted by the life of Jesus as recorded in the Gospels, but witness to the influence of Jesus Himself, exerted on individuals, not merely through the record of His life, as a memory of a dead friend may influence one living, but immediately as living Spirit upon living spirit. This sustained witness is a psychological fact which is deserving of more serious treatment than has hitherto been accorded to it. If it is in any sense true as a phenomenon of consciousness, then it necessarily becomes a presupposition with which the inquirer must approach the Gospel evidence. If the spontaneous acts upon consciousness through the whole period of history since His death in a way in which no other personality known to us has ever acted, then it will be clearly unscientific to apply to the record of His life the same axiomatic conclusion, as to what is or is not probable, that we are tempted to apply to the evidence as to the personality of ordinary individuals. This does not make any investigation into the life of Jesus useless, or lead us to accept as literally true anything that has been recorded about Him. The ordinary rules of historical investigation will apply in large part to the Gospels as to other ancient literature. But it will cause us to exercise caution in ruling out evidence that is not in line of resources of power over psychical and natural phenomena which we should reject in other cases.

What has been said above applies mainly to the Gospels, yet it also concerns the Acts. For there, too, the same question arises. When we read anything that is of a non-natural kind, are we on that ground to relegate it to a position of late date and historical valuelessness? This is what Harnack does, e.g., with Ac 1. He speaks of the narrative of the Ascension which it contains as probably the latest tradition in the Book. The only reason apparently for that judgment is the nature of the event recorded. But what if behind the narrative lies the tradition of the primitive Church that the phenomenon can only be dimly surmised behind the strong colours in which it has been painted? Christ had left the disciples finally; that they knew. No more would He appear to them as at the Galilean Lake. They could imagine Him to them in a new way, in another sense. And He was to come again. What if some strange experience of fact lies behind this narrative? Need it then be so late in date? What prevents it from being one of the earliest traditions of the Christian Church? St. Paul is witness to such a tradition.

Criticism of the Gospels and Acts which is based on quite unscientific presuppositions—that is the point. The same axiomatic conclusion as to what is or is not probable, that we are tempted to apply to the evidence as to the personality of ordinary individuals, is condemned offhand certain narratives as fictions, and then invents the most improbable causes to account for their genesis and growth. This is not criticism based on principle, but arbitrary rejection of evidence. We want, if possible, some sort of scientific method or principle, and this can be reached only by a preliminary investigation of all the facts. Christ as presented in the Gospels, Christ as experienced in history, Christ as experienced in modern life,—is this all of a piece, one long consecutively witness to a supernatral Christ? If so, whatever other method may be wrong, nothing can be more fundamentally unsound than the attempt to go to the Gospels and from setting up human life, of which they find the first account in the Gospel history. It has always claimed to be not merely witness to the powerful influence exerted by the life of Jesus as recorded in the Gospels, but witness to the influence of Jesus Himself, exerted on individuals, not merely through the record of His life, as a memory of a dead friend may influence one living, but immediately as living Spirit upon living spirit. This sustained witness is a psychological fact which is deserving of more serious treatment than has hitherto been accorded to it. If it is in any sense true as a phenomenon of consciousness, then it necessarily becomes a presupposition with which the inquirer must approach the Gospel evidence. If the spontaneous acts upon consciousness through the whole period of history since His death in a way in which no other personality known to us has ever acted, then it will be clearly unscientific to apply to the record of His life the same axiomatic conclusion, as to what is or is not probable, that we are tempted to apply to the evidence as to the personality of ordinary individuals. This does not make any investigation into the life of Jesus useless, or lead us to accept as literally true anything that has been recorded about Him. The ordinary rules of historical investigation will apply in large part to the Gospels as to other ancient literature. But it will cause us to exercise caution in ruling out evidence that is not in line of resources of power over psychical and natural phenomena which we should reject in other cases.

What has been said above applies mainly to the Gospels, yet it also concerns the Acts. For there, too, the same question arises. When we read anything that is of a non-natural kind, are we on that ground to relegate it to a position of late date and historical valuelessness? This is what Harnack does, e.g., with Ac 1. He speaks of the narrative of the Ascension which it contains as probably the latest tradition in the Book. The only reason apparently for that judgment is the nature of the event recorded. But what if behind the narrative lies the tradition of the primitive Church that the phenomenon can only be dimly surmised behind the strong colours in which it has been painted? Christ had left the disciples finally; that they knew. No more would He appear to them as at the Galilean Lake. They could imagine Him to them in a new way, in another sense. And He was to come again. What if some strange experience of fact lies behind this narrative? Need it then be so late in date? What prevents it from being one of the earliest traditions of the Christian Church? St. Paul is witness to such a tradition.

Criticism of the Gospels and Acts which is based on quite unscientific presuppositions—that is the point. The same axiomatic conclusion as to what is or is not probable, that we are tempted to apply to the evidence as to the personality of ordinary individuals, is condemned offhand certain narratives as fictions, and then invents the most improbable causes to account for their genesis and growth. If so, whatever other
II. CRITICISM OF THE EPISTLES AND APOCALYPSE.—1. The Pauline Epistles.—The movement of criticism in recent years with regard to the Pauline Epistles has been in the direction of a return to tradition. With few exceptions, critical writers have returned to the Pauline Epistles, Gal., 1 and 2 Cor., Romans, Philippians, and Philemon. Of these, 2 Thess. is the most doubted. It is argued that, viewed as literature, it reads like an imitation of the First Epistle, whilst from a theological point of view the second chapter presents us with an eschatology different from that found elsewhere in St. Paul. Harnack\(^1\) has recently attempted to meet this second objection, and to preserve the letter for St. Paul by the novel argument that the First Epistle was written to the Gentiles converts at Thessalonica, whilst the Second was written for the Jewish converts there.

The Epistle to the Galatians has been the subject of much controversy with respect to the date of writing and the people addressed. The theory revived and advocated by Ramsay, that the Churches addressed are to be found in the southern part of the Roman province of Galatia, would make it possible to date the letter at any time after St. Paul's visit to these Churches on his second journey. Thus Zahn\(^2\) dates it from Corinth on the second journey. Ramsay\(^3\) himself prefers a somewhat later date, from Antioch, between the second and third journeys. But, if genuine at all, the letter cannot be urged that St. Paul would probably have preferred to make a personal visit from a place so near to Southern Galatia as Antioch, instead of writing a letter. Others still prefer the older chronology, and place the letter in close connexion with 1 and 2 Cor. and Romans. A comparison of Ac 16\(^4\) with 18\(^5\) favours the view that the editor of the Acts believed that St. Paul visited the old kingdom of Galatia; but that does not, of course, settle the question of the locality of the churches to which the letter was written. The strongest argument in favour of the later date is the close resemblance in tone between Galatians and Romans.

The return to a traditional position spoken of above is illustrated by the present state of critical opinion with regard to the Epistle to the Colossians. A generation ago it was assigned to the 2nd cent. by a majority of critical writers, the arguments alleged being that the Epistle contained a Christian theology too developed for the age of St. Paul, and that the false teaching was a 2nd cent. form of Gnosticism. But, although some of the more advanced critical writers still believe it to be post-Pauline, the view is gaining ground\(^6\) that the Christology is not necessarily un-Pauline, and that the teaching, if in any sense Gnostic, is an early form of Gnosticism, which has no reason to place outside the life of St. Paul.

The authenticity of Ephesians is more widespread. Its theology is said to be too advanced for St. Paul, especially in respect of the Person of Christ, and the doctrine of the Church; whilst the difficulty of reconciling the address to Ephesus with the entire lack of local colour has never been quite satisfactorily explained. But, if Colossians be admitted to be Pauline, these arguments lose their force. In view of the fact that all the elements of the Christology of these letters can be found in St. Paul's undoubted Epistles, it is quite arbitrary to argue that he would not have written them, if the circumstances necessary to the writing of his letter had not these lines had arisen. And to argue that they could not have arisen is mere dogmatism about the unknown.\(^7\)

1 The Pastoral Epistles are regarded as post-Pauline by a number of critical writers, on the following grounds:

(i) The style and language are not those of St. Paul. This is true if stated in the form that style and language differ from those of the other Epistles. But, if genuine at all, the letters clearly date from a later period of St. Paul's life than any other of his extant writings. It is not at all clear why changed circumstances should not have caused a corresponding change in the Apostle's expression of his thought.

(ii) The nature of the false teaching combated is said to be that of a period which lies outside the probable limits of St. Paul's life. This is pure conjecture. There can be no evidence that teaching of the kind presupposed, whether it be an early form of Gnosticism or a debased Judaism, had not begun to affect the Churches at a very early date.

(iii) The Church, as described in these letters, has developed an organization. The main point here is the status of the 

2. The Catholic Epistles.—Here, too, opinion is divided into two main classes. On the one hand there are the writers who defend the authorship of most of these documents, on the ground that they can find no reason for rejecting it. On the other are the critics who seem to be possessed at the outset by the feeling that it would be treasonable to admit that tradition can ever be right in its ascription of these writings to Apostolic authors. And yet, how little probable it is that none of the earliest Apostles except St. Paul should have left behind them any written record! How very probable it is that other historians besides St. Paul should have written letters! How improbable it

1 The authenticity of Ephesians is denied by the majority of German writers and by Moffatt, but is asserted by Abbott and Peake; Harnack and Juliuscher think the question an open one.

3 German, p. 17.

4 An intermediate position is taken by those who believe that genuine Pauline fragments have been combined with more genuine Epistles by a later writer. So Harnack, Meiffert, Moffatt, Knox, Peake.

5 De Paulin. 20. So recently Weiss, Bartlet, Ayres, and Dibelius (Der Verfasser der Herricksbriefe, Strassburg, 1910), who regard the Epistles as originally a Scornus, not an Epistle.

6 Ewarr. in Gen. 46, 39.

is that the Church should have failed to preserve some such writings and should rather have let them slip into oblivion, and preserved instead 2nd cent. writings which went by false names! There is an *a priori* probability in favour of the traditional authority, and something approaching to over-whelming evidence from literature which is required before it can be set aside. From the perusal of the objections repeated, with as much certainty as though they were axioms of Euclid, by successive critics of the advanced type, the candid reader rises with the feeling that the argument is based on dogma, and that from evidence which is capable of more than one interpretation, 'If there were no tradition as to authorship,' he will say, 'I could only conclude that these writings were composed within the first 150 years of the existence of the Christian Church. But within that period I find no reason why some of these writings should not have been written by the men to whom tradition assigns them. On the other hand, I do see reason to suppose that the early Church would have preserved Apostolic rather than later documents.'

Apart from 2 Peter, where the argument from literary dependence on Jude seems fatal to the Petrine authorship, the arguments against the authenticity of the other members of this group seem insufficient to outweigh the tradition in their favour. They are of the following nature:

(a) Against James. — The writer is arguing against St. Paul's teaching as laid down by Jude, and is not a corrigenda in his form of it; the Greek of the letter is too good for St. James; the writer does not refer to early controversies such as that about the adiaphorism of Matthias into the Christian Church; he makes no reference to, or use of, cardinal doctrines of the primitive Church, such as the Messiahship of Jesus, His death and resurrection; the reference to healing through the 'elders' is a mark of late date; the condition of the Christians addressed is quite that of Christianity.

(b) Against Peter. — The chief question here has turned on the nature of the persecution implied in the letter and the bearing of that upon the date of the authorship. Ramsay has tried to show that the references to persecution imply a date about A.D. 80. Others place the reign of Trajan (?) on the ground that the references to persecution in the Epistle accord well with the account given by Pliny to Trajan. But there is really no ground for so pressing the language of the letter as to make it impossible to suppose that it was written during the Roman persecution. Thus, as afterwards, there may have been reason to urge Christian converts to let it be known that they were suffering as Christians, and not for money, from the persecutors; and we might perhaps even discover a group which has been incensed against the pagan profession. The other main ground for rejecting the Petrine authorship of the letter is its alleged Paulinism. But we may adopt a certain amount of Pauline influence in the writer of this letter without necessarily denying that St. Peter can have been the author of the Epistles. That there is a certain amount of his and other letters seem to be capitole and arbitrary, such as 'This is unlikely,' or 'That is improbable in the case of St. Peter.' After all, there is too little evidence of the Apostolic life after A.D. 44. And how are we to determine what he may or may not have written, or how much, after he may have seen of St. Paul in the later years of his life?

(c) Against 2 Peter. — The dependence of the writer upon Jude is really fatal to the authenticity of the letter. The case is parallel with that of the First Gospel. The composer of that book has carefully worked over the Second Gospel in such a way that it is little likely that Matthew or any other Apostle can have written it. So in the case of 2 Peter; if it is dependent on Jude, it is improbable that Peter or his companions can have penned it. (Attempts have been made to save the rest of the letter by supposing ch. 2 to be an interpolation dependent on Jude.) Further arguments against the authenticity of the Epistle are found in its late attestation, and in its reference to St. Paul's Epistles.

(d) Against Jude. — The reference to the Apostles; the reference to 'the Father;' the supposed similarity between the teaching of the Epistle and the teaching of the 2nd cent. Corporation.

(e) The question of the authenticity of the Johannine Epistles

is so closely connected with the complicated question of the authorship of the Fourth Gospel that it is best to pass them over in a cursory survey of NT criticism as the present. They are widely regarded as among the most critical writings altho. some would separate the Second and Third Epistles from the First, and attribute them to a different author.

These arguments may be divided into two classes:

(1) literary, and is required before it can be set aside.

(2) The date. Was the book written in the reign of Nero, or of Domitian? The majority of recent writers favour the later date.

(3) Dependence upon earlier literature. Attempts have been made to show that the book in its present form is a Jewish Apocalypse re-edited by a Christian, or a composite work into which fragments of Jewish Apocalypses have been loosely incorporated. These attempts at analysis are very few, and have not been unsuccessful. The unity of purpose and idea is too obvious. No doubt, the writer was deeply read in the OT, and very probably also in current Jewish Apocalyptic literature. But the book is no mere combination of fragments of earlier writings. In another form, however, attempts to prove dependence of the writer upon the past have met with success. Since the publication of Gunkel's *Scho£yling und Chana* (1896) it has become increasingly clear that the writer has made very large use of ancient myth, and of language and symbol long current in Apocalyptic writings. Not, of course, that such borrowing is peculiar to him. The long stream of Prophetic and Apocalyptic authors and writers from Isaiah onwards, not excluding our Lord Himself, have this in common, that they do not entirely create a new language as the vehicle of their teaching, but largely adopt and borrow the words and symbols of an earlier age.

To take a simple example against an earlier date are equally balanced. He suggests that the Epistle may have been written by St. James, but that it was originally a great deal shorter than now is.

2 Church in the Roman Empire, Lond. 1897, p. 285.
3 See Thackeray, Anti-Osee, and other works.
4 See von Soden, Haseck, and recently Gunkel (Die Schriften des NT, 1909).
5 1st cent. 150 years later.
6 The latest commentator, Oesterley (Expositor's Gr. Text, iv. 1912), and the same, earlier commentator, with whom I agree, supposing that the 4th and 5th members of the group of writing Jews are equally balanced. He suggests that the Epistle may have been written by St. James, but that it was originally a great deal shorter than now is.

8 That the author may have employed and worked into the scheme of his book various sources of earlier writings, is, of course, quite probable, but difficult to prove.
CROSS

from Daniel. That, of course, will be readily admitted. But modern investigation has penetrated behind this simple handing on of phrase and symbol from writer to writer, and has sought to show that much of the common symbolism so transmitted goes back to a primitive mythology, the origin of which is hidden in the speculation of peoples whose history lies on the border line where history fades into the obscurity of legend. This is, no doubt, largely true, and, if true, is of great importance for the right interpretation of the Apocalypse. If the author is making use of an ancient myth, which has passed through a long course of transmission, it is probable that much of the detail which forms part of it will be repeated by him because it is already there, and therefore, it has no particular significance for him. We shall, therefore, look for the outstanding ideas behind his pictures, and not seek to press a historical allusion, or a forecast of some detail of future history, out of every phrase and symbol.

Summary.—If we turn now from this survey to a forecast of the future, there is reason to think that the NT criticism of the days to come will, if we may judge from the general tendency of the more recent writings, more and more emancipate itself from those prejudices which have made it a byword in the past. There is much that is hopeful. On the one hand, there is a readiness to admit that the larger part of the NT writings have quite correctly been assigned by tradition to the 1st century. On the other, there is not the same eagerness to maintain the correctness of tradition in all its details that once inspired writers of the conservative school. Such a popular Introduction as that of Peake (1869) may be taken as a good example of the newer spirit, which is anxious neither to affirm nor to deny traditional positions, but only to come to the conclusions to which the evidence points, and to keep an open mind where the evidence is inconclusive. Of course, prejudices die hard, and the determination to keep the Catholic Epistles out of the 1st cent. has still much life in it in Germany. But, speaking generally, there seems to be growing up a school of critical writers who are freeing themselves from the axiomatic dogmatism, whether theological or anti-traditional, of the past century. As this school increases, it may be hoped that, even with regard to the Gospels, something like a really scientific method of inquiry may be reached. At present, it must be said, that the Prolegomena for such an inquiry have yet to be written.

Literature.—This is given in the footnotes. J. Moffatt’s Introduction to the Literature of the New Testament (Edinburgh, 1911), which appeared too late to be used in this article, should be specially referred to, as the most complete survey of the field of NT criticism. See also reviews of the book by the present writer in Exegetical Literature, May and June, 1911.

W. C. ALLEN.

CROMLECH.—See Death and Disposal of the Dead (European).

CROSS.—The cross (Lat. crux) is the figure produced by two lines intersecting one another, usually at right angles. This figure gives rise to numerous variations according to the direction of the limbs and the form of their extremities. W. Berry in his Encyclopedia Heraldica mentions no fewer than 385 different crosses, but the greater number have scarcely any interest except for decorative art and the science of heraldry. From the point of view of religious symbolism the only important types are the following: the equilateral cross, called also the Greek cross (a in illustration); the so-called Latin cross (crux truncata or capitata), in which the lower limb is longer than the three others (b); the Tau-shaped (paternoster or commissa) cross (c); the crux anastata or handled cross (d); the crux decussata or St. Andrew’s cross (e); the gammate cross (f); the Maltese or rayed cross (g); the Lorraine cross, with double or triple traverse (h); the cross perpendiculée, that is to say, mounted on steps (i).

I. Non-Christian crosses. — 1. The equilateral cross.—The equilateral cross, like the straight line, the curve, the circle, the crescent, the triangle, etc., forms so simple and natural a geometrical figure that in many instances it could not fail to present itself spontaneously to the imagination in quest of a sign to indicate anything that extends in the principal directions of space—the sky, the earth, rays of light, the wind-rose, etc.—and, by an extension of meaning, to stand for the abstract notion of space itself. It is easy to understand how, in the symbolism of some peoples, the cross may have served as a conventional representation of certain material objects whose contour it suggests—birds on the wing, men with outstretched arms, a double-headed hammer, the bow and drill apparatus for producing fire, etc.; and, everywhere, it may be said to have been used, above all, to represent radiation or space.

Thus we find that the equilateral cross was adopted by the Chaldeo-Assyrians as the symbol of the sky and of its god Anu (see fig. 2, a). The same peoples represented the sun and its eight regions by a circle from which eight rays pro-

ceeded (2, b). By coupling these rays in pairs there was produced the radiated cross which the king of

At the same time it must not be forgotten that the cross, like the triangle and other geometric figures, is sometimes merely ornamental in origin, with no symbolic significance whatever.

2 See Parrot-Chipiez, i. 308; cf. Layard, Monuments of Nineveh, 1849-53, pl. iv.

Digitized by Microsoft®
Assyria wore suspended round his neck, like the cross worn by a Commander in our orders of knighthood (see fig. 3).

Schliemann has noted the presence of the cross upon the pottery and the wheel of the Trojans. The solar meaning of this symbol is attested by its alternating with the rayed disk. At times the two emblems appear in juxtaposition (see fig. 4, a).

Among the Greeks the sceptre of Apollo assumes at times the form of a cross (cf. coin of Gallienus reproduced in Victor Duruy's Hist. des Romains, Paris, 1885, vol. viii. p. 42), fig. 4, b. The cross is associated with the representation of Castor and Pollux, perhaps in order to emphasize their stellar character (so on coin of Caracalla).

In India likewise the equilateral cross alternates with the rayed disk. On an ancient coin reproduced by General Cunningham (Bhilsa Topes, 1854, pl. xxxi.) the branches of the cross terminate in arrow-heads (see fig. 5).

Among the Gauls, as well as among the peoples belonging to the Bronze period, the cross appears frequently on pottery, jewels, and coins (see G. de Mortillet, Le signe de la croix avant le christianisme, Paris, 1866, p. 44 ff.). Here again the emblem is clearly solar (see fig. 6). On the statuette of a Gaulish deity, discovered in France in the department of Côte d'Or, we see the tunic covered all over with crosses. The god, who is Sucellus (on whom cf. Renel, Religions de la Gaule avant le christianisme, Paris, 1906, pp. 252-257), holds in one hand the mallet which symbolizes the thunderbolt, and in the other a jar or olla (see fig. 7).

The cross is found in like manner in Mexico, in Peru, and above all in Central America, where its presence upon religious monuments did not fail to astonish the companions and the successors of Columbus, who saw in it a trace of a visit paid by St. Thomas, the apostle of the Indies (see Congrès international des américanistes, vol. 1, Brussels, 1879, p. 301 ff.). We know nowadays that these crosses are designed in allusion to the four quarters from which rain comes, and consequently to the winds that blow from the four cardinal points (see G. Mallery, in 10 Revue, 1893). The cross of pre-Columbian America is a veritable 'wind-rose,' and we can perceive how it thus became, among the Toltecs, the symbol of the god who dispenses the celestial waters, Tlahoé (see A. Réville, Religions du Mexique, Paris, 1885, p. 91 [also in Eng. tr.]). According to Réville, the Mexican cross was called the 'tree of fecundity' or the 'tree of life.' There has been found in the ruins of Palenqué a bas-relief representing persons in the act of adoration before a cross, on which rests a fantastic bird, more or less resembling a parrot. Perhaps this was the symbol of the god Quetzacoatl (the feathered serpent), who himself also, according to Réville, stands for a god of the wind (op. cit. p. 82; see also Thomas Wilson, The Securitika, 1896, p. 333 ff.). For a cross, representing the four winds, as thought of by the Dakotas, see fig. 8.

The arrow at the top of this cross marks the piercing blast of the north wind. Once the north wind is located at the head of the cross, the east wind will be symbolized by the heart, which in the human body is placed under the left arm. The south wind is pictured by the sun, as it shines from the region of light and warmth, and the west wind by a star, as it blows from the region of the night.

But the American cross may have assumed also a solar or stellar character, if one may judge from

The above figure (9), which has been met with on shells found in the mounds of New Mexico; and from those, not less significant (10), which have been found among the Dakota pictographs. See, further, following article.

Among the Chinese, the equilateral cross inscribed within a square, \[ \begin{array}{c} \hline \\ \hline \end{array} \], stands for the earth.

According to Samuel Beal (Indian Antiquity, 1881, p. 67), it is found in China even the dicum God fashioned the earth in the form of a cross. It is curious to meet with an analogous symbolism in a Church Father. 'The aspect of the cross,' writes Jerome (Con. in Marcem), 'what is it but the form of the world in its four directions? [Apud species crucis, quid est nis forma quadrata mundi?]. The cross is represented by the top, the north by the right limb (looking from the cross), the south by the left, the west by the.

2. The handled cross and the cross potencée.—The potencée form \[ T \] produced by suppressing the upper limb of the Latin cross, is called also the Tau cross, because it reproduces the form of the Greek letter \[ \tau \]. The magical virtue which down to our day has been attributed to this sign owes its origin unquestionably to the veneration paid by the Egyptians from their pre-historic days to the handled cross, or key of life, represented by a cross potencée surmounted by a handle (see fig. 11). This cross, which is met with on the most ancient monuments of the Egyptian monarchy, is frequently to be seen in the hand of a god, a priest, or a king. Archeologists have maintained by turns that it represents a Nilometer (Pharaoh), the key of a canal-lock (Zeus), a jar upon an altar (Ungarelli), a degenerate form of the winged globe (Layard), a phallic (Jablonski), the loin-cloth worn by the Egyptians (Sayce). In the paintings on the tombs it appears to be employed by the divinities to awaken the dead to a new life. The following inscription may be read upon a bas-relief of the 12th dynasty, where the goddess Anukit is seen holding the extremity of the handled cross to the nostrils of the king Pepy II: 'I give thee life, stability, purity, like Ra, eternally.' Elsewhere the ideogram formed by the handled cross in the hieroglyphic script \[ \top \] (pronounced ankh), signifies 'life,' 'living' (E. M. Coemans, Manuel de langue égyptienne, Ghent, 1887, pt. 1, p. 40). Whatever may be the material object of which the handled cross is the representation, its abstract sense is not doubtful: it is a symbol of life, of the vital germ, and it is not without reason that it has been called the key of life.\[1\]

From Egypt the key of life, now become a magical and propitiatory sign, spread to the Phenicians and then to the whole Semitic world.

In a Maya manuscript two persons appear to be in the act of adoration before a tree which affects the form T, and where a parrot-like bird has taken the place of the upper arm of the cross (see fig. 16).

3. The gammaate cross, or gammation. — This cross derives its name from the fact that it can be resolved into four gammaes joined at right angles (see fig. 17). In spite of its apparently complicated structure, it is, next to the equilateral cross, the form most widely diffused throughout all antiquity. It has been met with on terra-cotta articles at Hissarlik, from the tomb of the second or burnt city. In Greece proper and the islands of the Archipelago it makes its appearance first upon articles of pottery with geometrical ornaments, which form the second period of Greek ceramics. It is frequent upon the ancient vases of Cyprus, Rhodes, and Athens. Upon an Athenian vase, in a burial scene, it appears thrice repeated before the funeral car. Upon a vase of Thera it accompanies the image of the Persian Artemis. Elsewhere it adorns the statue of an Asiatic goddess. Upon a vase now at Vienna it appears as an ornament on the breast of an Apollo standing upon a quadriga (cf. Goblet d’Alviella, The Migration of Symbols, London, 1894, pl. 1). It became a favourite symbol on coins, and passed along with the other monetary symbols of the Greeks into the numismatic art of all the Mediterranean peoples.

This cross is also found engraved upon those hut-shaped funeral urns which have been dug up in the terrasses of N. Italy. It likewise appears on the jewels and the weapons, not only of Gallic, but also of German and Scandinavian peoples. In company with the wheel and the thunderbolt, it adorns the votive altars of the Gallico-Roman period, from Aquitaine to Great Britain. In the Caesars it has been noted upon weapons and jewels which go back to the Bronze period. In Lycaonia, on a Hittite monument, it is introduced as an ornament on the border of the robe of a person engaged in offering sacrifices.

In India, where it bears the name of swastika (from svu, 'well,' and asti, 'it is') when the limbs are bent towards the right (fig. 17, a), and savastika when they are turned to the left (fig. 17, b), it is already found upon the domino-shaped ingots of silver which preceded the use of coins, and then upon the coins themselves. The Buddhists employed it largely. A notable instance of its use, along with other symbols, is in the classical representation of the Buddha (see fig. 19), among the bas-reliefs of the famous stūpa of Amaravati. It passed, with no doubt, along with Buddhism, into the iconography of China and Japan, where it occupies a pre-eminent place on the pedestal of Buddhist statues, and even at times adorns the breast of Buddha and the Bodhisattvas.1 In China, moreover, the swastika found a place among the written characters, where it conveys the notion of 'plurality,' and, by extension, of 'abundance,' 'prosperity,' 'long life' (Thomas Wilson, The Swastika, p. 799). The same is the case in Japan, where, according to de Milloné, it represents the number 10,000, and consequently the idea of abundance and prosperity (BS:L, 1881, p. 191). The Empress Wu (684-704) of the Tang dynasty decreed that it should be used as a sign for the sun (Yang y Yu, in Wilson’s Swastika, pl. 2).

Even at the present day the Hindus make frequent use of this figure, which they may trace in their account books and, on certain occasions, on the threshold of their houses. According to Sir George Birdwood,2 they distinguish clearly between the swastika and the saumadika, the first representing the male principle and the god Ganesa, the second the female principle and the goddess Kôtì. In an extended sense, the first stands for the sun in his diurnal course, or for light and life; the second for night and destruction. The sect of the Jains in India has chosen the swastika as the emblem of the seventh of their twenty-four saints, or Tirthankaras (Colebrooke, On the Jaines, in Asiatic Researches, Calcutta, 1788-1836, p. 308).

The gammate cross has been met with sporadically also on bronze articles among the Ashantis of Africa; and also on native implements from Paraguay, Costa Rica, and Yucatan. In the ancient Maya city of Mayapan it adorned a stone slab which bore also the image of the solar disk, exactly as in Gaul, India, Asia Minor, East India. In N. America it is seen among the crosses engraved on shell and copper ornaments from the mounds, and the Pueblo Indians still use it to decorate their trinkets, bead necklaces, baskets, and rugs.3

From the circumstances in which the gammate cross has been traced or employed, it follows that, in every instance in which a symmetrical meaning has been attributed to it, it is a sign of good omen.

1 See J. REEW, 1884, p. 32.
2 See Wilson’s Swastika, pl. 1.
3 See d’Alviella, À travers le Far West, Brussels, 1896, p. 160.
of propitiation and benediction, an emblem of prosperity, of life, of safety (the stouwostika, where a distinction is drawn between the two forms of the gamma-cross, is an exception which proves the rule). But whence comes this general function of luck-bringer and talisman? There is scarcely a symbol which has given rise to so diverse interpretations. Men have seen in it, e.g., running water (Waring), the air or the god of the air (R. P. Greg), fire or the bow and drill apparatus for producing fire (Emile Burnouf), the lightning (W. Schwartz), the female sex (George Birdwood), the union of the two sexes (J. Hoffman), a Futhark monogram (General Cunningham), the reminiscence of the four castes of India (Fred. Pictet), the nautillus [Gr. ναυτης, cf. the fylfot] (Frederick Hossayy), cranes flying (Karl von den Steinen), the primitive god of the Indo-Europeans (de Zmigrodzki), the sun in its course round the heavens (Ludwig Müller, Percy Gardner, Edw. B. Thomas, Max Müller, Henri Gaidoz, Goblet d'Alviella).

It might even be maintained, on the strength of the monuments, that, after having served as a symbol of the sun in motion, the gammate cross came to symbolize astronomical motion in general, and thus to be applied to the moon, the stars, the sky itself, and to everything that appears to move of itself—water, wind, lightning, fire, etc. In this way it would readily become a sign of prosperity, fertility, blessing, or the apparence of such deities as secured the development of man and of Nature (see figs. 20, 21).

The question may be asked whether the gammate cross can be assigned to a single birthplace. Its two most ancient known habitats are: the one in the burnt city of the ruins at Hissarlik, the other among the accounts of N. I. It can hardly be supposed that both of these districts borrowed it from the valley of the Danube during the Bronze age. From these two centres it may have spread—while retaining its double significance as a solar symbol and as a sign of life or of blessing—on the one hand, towards the west, to the extremities of the Celtic and German world; on the other, towards the east, by way of the Caucasus, India, China, and Japan.

Again, has the gammate cross of the New World an independent origin? The supposition is by no means inadmissible that it arose spontaneously. But the answer to this question depends in some measure upon whether infiltrations of Asiatic iconography did not make their way across the ocean during the era of pre-Columbian civilization. And this is a problem which appears to be yet far from being solved.

II. The Christian cross.—The cross in the Christian sense is the χρισματις or хрисма инфилиз, a wooden post surmounted by a cross-beam, to which the Romans, following the example of the Greeks and the Easterns, nailed or attached certain classes of condemned criminals till they died. The fact that Jesus suffered death on the cross has converted this innocuous figure into a symbol of resurrection and salvation. ‘I determined to know among you nothing save Jesus Christ and him crucified,’ writes St. Paul (1 Co 2). The early Christians saw the cross as the all the intersecting lines which presented themselves to their view in ordinary life, in art, in Nature. The ‘sign of the cross’ was their favourite symbol. ‘At every step, at every movement, at every coming in and going out,’ wrote Pertinian at the beginning of the 3rd cent., (de Corona, 3), ‘in putting on our clothes and our shoes, in the bath, at table in the evening, lying down or sitting, whatever attitude we assume, we mark our foreheads with this sign of the cross.’ Moreover, Christians had to defend themselves against the charge of pagans that they paid adoration to the cross like an idol. ‘Crucis non collimus nec optamus,’ wrote Minucius Felix. ‘But it is plain that the great mass of Christian people received a new, and a magical value to this sign. At all events they used it as a form of exorcism, a means of warding off unclean spirits. One of the most ancient portable crosses, found in a Christian tomb at Rome, bears the inscription: ‘Crux est vita mia; mortis iniqua tua.’ (The cross is my life; death, O enemy [the devil], to thee).’ Soon the cross came to work miracles of itself. People went the length of marking cattle with it to protect them from disease.

The cross has been called the ‘cross of Christ’ by Roman Catholic archaeologist, P. Didron, more than a figure of Christ; it is in iconography Christ Himself or His symbol. ‘Thus a legend has been created around it as if it were a living being; thus it has been made the hero of an intrigue germinating in the Apocalypse, growing in the Golden Legend; unfolding and completing itself in the works of sculpture and painting from the 14th to the 16th century.’ This is an allusion to the celebration of the mystical period of Giacomo da Varaggio (13th century), where it is related how, after the death of Adam, Seth planted upon his tomb a branch taken from the tree of life. When the slip had grown into a tree, Moses obtained from it his magick wand; he took from it the wood for his temple. Finally, the executioners of Jesus cut from it the materials for fashioning the cross. This cross, buried upon Golgotha, was disinterred in the time of the empress Helena; and the Church spread its discovery commemorating the 3rd of May (13th Sept. in the Eastern Church) as the annual festival of the Inventio Crucis. Carried off by Chosroes, it was miraculously recovered by Heraclius fourteen years later, in honour of which the Church instituted another annual festival on the 14th of Sept., the Exaltatio Crucis. Lost once more after the Muslim invasion, it is to reappear finally in the sky at the end of the world.

The Holy Cross had its special churches as it had its festivals; not a few cities even were named in its honour. Thus Roman Catholic writers admit that the cross has become the object of a veritable cult. ‘The cross,’ writes Didron (loc. cit.), ‘has received a worship similar, if not equal, to that of Christ; this sacred wood is adored almost equally with God Himself.’ Many churches possess, amongst their miraculous relics, alleged fragments of the cross. A legend, intended to explain their abundance, relates that these fragments had the miraculous prerogative not only of healing diseases, but even of reproducing and multiplying themselves indefinitely.

Strangely enough, the early Christians, in spite of the importance they attached to the cross, refrained from reproducing it in their iconography.

3 P. Didron, Histoire de Dieu, 1843, p. 561.
During the first three centuries (with possibly a single exception, that of the equilateral cross cut on a sepulchral inscription, which de Rossi believes may have been assigned to the end of the 2nd or the beginning of the 3rd; see also the cross of Christ is invariably to be associated with an object which recalls its image: a trident, an anchor (see figs. 22, 23), a ship with rigging; or under the forms of the cross already employed by other cults, the cross potent and the gammate cross. The cross potent, according to certain archeologists, is, by the way, the form which most accurately recalls the instrument of crucifixion employed by the Romans.

At the dawn of the 3rd cent. the Christians designated Jesus Christ by a monogram composed of the first two letters of *Iwov χριστός*, or of *XP*XPotos, R. The addition of a transverse bar, χ or ρ, exhibits the cross or, better still, Christ upon the cross, especially when, by an after process of simplification, the chi-rho becomes χ or ρ. Further, the Latin cross already appears upon certain coins of Constantine, although this emperor, i.e., in this policy of religious eclecticism, shows no scruple about introducing on the same coins representations of Mars or Apollo as gods. Julian, of course, suppressed both cross and chi-rho. But, after his time, the cross finally takes its place upon coins and even upon the Imperial diadem. At the same time it asserts itself under its proper form in funeral inscriptions, upon altars, reliquaries, lamps, jewels, and even upon the façades of houses and the tops of basilicas, where it takes the place of the monogram; and before long it may be seen furnishing the ground plan of churches. In the 5th cent. the employment of the cross potent becomes rare except in Celtic countries, where it continues to show itself in inscriptions. In like manner the policy of religious eclecticism, the cross now appears only sporadically, in the west and the north of Europe, upon tombstones and sepulchral vestments.

The so-called Latin cross and the equilateral crosses were at first employed without discrimination. Only gradually did the equilateral come to be the specialty of the East, and the form with unequal limbs that of the West.

As to the crucifix, i.e., a cross with the body of Jesus nailed to it, this representation does not make its appearance till the 7th century. The art of the Middle Ages was not slow to heighten its realism still more. But at the same time a distinction was drawn between the cross of the Passion, which is accompanied by all the implements of crucifixion, and the cross of the Resurrection, with which Jesus ascends to heaven.

The first is painted sometimes green, because it was seen on the ground, sometimes red, because it was stained with the blood of Christ. The second is painted sometimes blue, the colour of the sky; sometimes white, as symbolizing the invisible Divinity. It is this last which is carried at the head of processions.

The cross became a hierarchal symbol in the Church. Thus the Pope has the privilege of having carried before him a cross with three bars, while cardinals and archbishops have to be content with two, and bishops with one.

Finally, the cross served as a symbol in the primitive of the Middle Ages as a symbol of certain religious rights. Such were the market crosses in Germany, which implied the municipal jurisdiction; the perrons, or crosses mounted upon a column, which in certain towns of Belgium and Germany were regarded as an emblem of jurisdiction, and even as the palladium of local liberties. When Charles the Bold wished to punish the inhabitants of Liége, he carried away their perron and set it up for six years at Bruges. For a number of centuries the phrase 'to take the cross' meant to devote oneself to fight the infidels. Hence the orders of knighthood and the crosses of honour, the bestowal of which has now nothing to do with religion.

After all that we have said, it is needless to stop to examine theories, ancient or modern, which seek to claim a pagan origin for the Christian cross, on the ground that earlier cults had cruciform signs among their symbolism, while others would discover points of analogy between the crosses of ancient civilizations and the votations of the Crucifixion. We must content ourselves with referring the reader to the respective supporters of these theories (e.g. Emile Burnouf, Gabriel de Mortillet, Mourant Brock, Abbé Ansaull, etc.).

**Goblet d'Alviella.**

**Cross (American).**—The appearance of the cross symbol among the semi-civilized and savage peoples of America in all probability admits of a genuine two-fold interpretation. It amalgamates in all likelihood two cognitive ideas: (1) that of the cross as a symbol of the Passion, or emanating from the four cardinal points; (2) that of the 'world tree,' 'tree of life,' or 'tree of our flesh' (Mexican *Teonagualquihuitl*), analogous in some ways to the Scandinavian *Yggdrasill*, or cosmic tree, whose roots surrounded the universe. The first, in its pictorial and mural form, was probably evolved from the second as an art convention. There can be no question of the genuine aboriginal character of the cross symbol as found in America. Its origin appears to have to do with the adoption in use in the Old World—evolution from a symbol of the four cardinal points; but any hypothesis of its importation from Europe

---

or Asia would require much weightier proof of European or Asiatic colonization than has yet been advanced, and is easily discounted by the unanswerable signs of its widespread aboriginal use throughout the American continent.

On the discovery of Yucatan, where the lieutenants of Cortes found crosses at Cuzamul and elsewhere, the wildest theories were propounded to account for their appearance in the New World. These crosses were about 3 ft. in height, and were usually found in an enclosure called teopen, or the buildings surrounding a temple. The Spanish missionaries believed that they had been introduced by the apostle St. Thomas; or that early Spanish colonists, driven out by the Moors, had sought refuge in America, and had brought with them the sacred symbol. The missionaries then proceeded to inquire after representations of the Cross in Mexico, and it was discovered that one had existed in pictorial form on a manuscript which had been buried to prevent its destruction by the invaders, but which had subsequently rotted underground. This figure undoubtedly represents an ancient symbol of the Sun, always intended in Mexico when the word ‘God’ (Teotl) was employed, as in the present instance, without any indication of the particular deity which the figure represented. Thus it was that the Aztec goddess of rains, Chalchihuitlicue, bore a cross in her hand, as most of the principal deities of Egyptian mythology carry a cognate symbol, the hand, at the foot of the pyramid. It was a fact well known to the Aztec, that the feast celebrated in her honour in the early spring, victims were nailed to a cross and shot with arrows.

2. As a symbol of the four winds.—As a symbol of the four cardinal points from which the winds, and therefore the rains, came, the cross was well entitled to the designation of ‘tree of our life’ in the arid climate of Yucatan. To each quarter of the heavens a quarter of the ritual year belonged. The Aztec goddess of rains, Chalchihuitlicue, bore a cross in her hand, as most of the principal deities of Egyptian mythology carry a cognate symbol, the hand, at the foot of the pyramid. It was a fact well known to the Aztec, that the feast celebrated in her honour in the early spring, victims were nailed to a cross and shot with arrows.

The Mayan designation of the cross was indeed Vahom che, ‘the tree erected or set up.’ In the Palenque cross, at the ends of the branches, which are probably intended to indicate leaves or fruit, on the summit is perched a bird, probably a turkey, decked out in the brilliant plumage of more brightly-feathered fowl. The cross in question was probably regarded as in some measure the pedestal of the quivering turkey-feast. The flesh of the turkey was a staple of Mexican diet, and in this way, it may be, the bird had become associated with the idea of subsistence and the ‘tree of life’ itself. In any case the cross of Palenque was known as teqnoqualtun che, or ‘tree of the plumed turkey.’ A priest stands on the proper right of the base-relief, offering as a sacrifice a small human figure made from maize paste, and not a newly-born child, as some authorities state. On the proper left stands an acolyte, offering up a stalk of maize. At the roots of the cross a hideous head appears. It is that of Chichamocahuatl (female serpent), or Tonantzin (our Mother), to give her her Mexican designation—the earth-goddess, the mother of the earth people, extending ropes across a lake, thus forming a gigantic cross, at the point of intersection of which they cast in offerings of precious stones, gold, and odorous ols. In the State of Wisconsin many low cultic mounds are found, exactly of this form. These were probably altars to the four winds. In the mythology of the Dakotas the winds were always conceived as birds; and the name of the cross in the Dakota language signifies the mosquito-blown spread out.

2. As the ‘world tree.’—In those Mexican and Mayan pictures which deal with cosmology the world tree is depicted as standing in the centre of the universe, with its roots deep in the earth, its branches among the clouds, as if in search of rain. The Mexicans worshipped the tree as Tota (our Father), whom they further described as ‘god of the waters and of vegetation,’ although he also appears to have been the god of fertility, the tree of life, the source of the waters of the Kiche (or Quiché) of Guatemala, women desirous of children sought out a tree overhanging a pool, to which they prayed as the emblem of fertility; and this indicates the possible phallic origin of the tree of life. The root, or trunk, of this tree, is still an object of veneration in many hamlets of Central America. The sacred pole of the Omahas typifies the cosmic tree, the centre of the four winds, and the dwelling of the thunder-bird; and tree-burial and the celebration of the funeral of an American is the custom of Mexico. There are many other tree myths, and the sacred tree also appears symbolically throughout America in the form of the poles and stakes which surround the prayer-houses and kivas of many American tribes.

Lewis Spence.

CROSS-ROADS.—Cross-roads are very generally regarded as the dwelling-place or resort of evil spirits, ghosts, etc., and have been considered unlucky or even dangerous, while various precautions are resorted to in order to ward off their dangers. On the other hand, they are sometimes associated with a divinity—probably, in the first instance, because images of the divinity were placed there to counteract the powers of evil, and a cult of the divinity was observed at the cross-ways. Or they may be regarded as sacred in themselves. Thus in the Avesta a formula reads: ‘We sacrifice to the divinity of the meeting of the roads’ (SBE xxvi. [1887] 290). In ancient India they were not to be defiled or obstructed (ib. xxii. [1884] 182, xxxii. [1889] 158). But the reverence for such a divinity of cross-roads was soon mingled with the fear of the demonin-
CROSS-ROADS

influences, and we find the divinity often regarded as sharing in the characteristic evil and horrible traits of the very demoniac beings which he or she was supposed to hold at bay. The association of the beings or of a divinity with cross-roads is an extension of their association with roads in general, and is already found among some lower tribes in connexion with the rough paths leading through forests. The association is likely to be widespread.

1. Burial at cross-roads.—(a) There is evidence that the dead were sometimes buried at cross-roads, and this would be one reason for their being regarded as particularly ghost-haunted places—a belief which, with certain exceptions, is held by many people. Among the ancient Hindus there was a practice of erecting a dāgoba or stūpa (a mound in which bones and ashes were placed) at cross-roads. These were to be erected there in honour of the divinity, with a stake driven through his body. nibbāna Sutta, v. 26, vi. 53—SBE xi. [1881] 93, 125 ; cf. Oldenberg's remarks, Col. des Veda, Berlin, 1894, p. 562.

In Slavie lands, caims and tumuli are often found at cross-roads, and the older literature on burial refers to a cult of the dead there (Grimm, Kleines Schriften, Berlin, 1865, ii. p. 283). Other instances are reported among the Greeks, Germans, etc. (Lippert, Ed. der europ. Culturphänom. p. 100). Winternitz, Deutsche Volkenkgr. der Gegenwart, Berlin, 1900, § 105 ; Winternitz, Denkshr. der kais. Akad. der Wissensch., Vienna, xi. [1892] 68).

In Hungary, persons believed to have succumbed to the malice of a witch or demon were sometimes buried at cross-roads, to deliver them from this influence, as witches had no power there—an unusual belief (FLJ ii. [1894] 101). This is an instance of the riddance of evil at cross-roads (see § 5). It is not improbable that certain places were holy burial places at cross-roads was the desire for reincarnation. Among the Mongols, among many N. American tribes, and in W. Africa, children are often buried by the side of a path or road, in order that the ghost may be enabled to follow them. FLJ v. viii. 93—SBE xxx. [1892] 40. Among the Muhammedan peoples, cross-roads are one of the numerous resorts of the jinn (Lane, Arabian Society, 1885, p. 37).

(b) But in the case of persons whose ghosts are malicious, e.g. witches, it is held that they must be buried at cross-roads must be sought. Among such persons are those who have committed suicide, and occasionally murder. Custom and law in England prescribed that the suicide should be buried at a cross-road; or if no such place could be found in the county, at the middle of the grave should be covered with a stone (Stephen, Hist. of Crim. Law, 1883, iii. 105 ; FL vii. [1897] 199). The custom was abolished in 1823. Criminals also were executed at cross-roads, e.g. Tyburn, the most frequented place of execution in England. Stake and stone were intended to prevent the restless ghost from wandering and troubling the neighbourhood. It has also been suggested that the constant traffic over the grave would help to keep the ghost down, or that the number of roads would confuse it, and so prevent its finding its way home, or that the cross would act as a disperser of the evil energy concentrated in the body or the ghost, or that sacrificial victims, killed with their hands upon the cross, were formerly slain on the altars at cross-roads, which were therefore regarded as fitting places for the execution and burial of criminals, after the introduction of Christianity (FL viii. 264 ; Westermarck, MII, 1908, ii. 298 ; EHR vii. viii. 510). To this it should be added that suicides were generally buried in out-of-the-way places; and the cross-roads, being a place of evil repute, would naturally be selected for the grave of such people. The underlying thought is that riddance of the contamination of evil, and in no better place could this be effected than at the cross-roads (see § 5). A parallel custom of burying at the cross-roads the bodies of children still-born or born deformed, and criminals considered unlucky is found in Uganda, where also the bodies of suicides, with the tree on which they hanged themselves or the hill in which they took their lives, were burned at cross-roads. And it is noticeable that women who pass that way throw a stone or, stones, on the grave to prevent the spirits from entering them and being re-born (Roscoe, Manners and Customs of the Baganda, JAI xxxxi. [1902] 30, and Frazer, Totemism and Exogamy, 1910, ii. 567, iii. 125). In America, the mother, brother, or child were slain at a place outside the walls where three roads met, and their bodies were exposed naked (Plato, Leg. ix. 873).

2. Ghosts, spirits, and demons at cross-roads. —Cross-roads are places of evil, or evil sources, and the common resort of evil spirits. As places of burial, cross-roads would naturally be haunted by the ghosts of the dead; but also, as ghosts would be often passing along the roads, the crossing of them by burial at their former homes, they would be more numerous at cross-roads. The ghostly train is often seen on roads, but more particularly at their intersections; hence, to see them one would naturally go there, as in the Abruzzi, where at the festival of the dead, the thronging ghosts can be seen at the cross-ways by any one standing there with his chin resting on a forked stick (Finamore, Credenze, usi, e costumi abruzzesi, Palermo, 1890, pp. 150-2).

But, besides ghosts, they must be regarded on the cross-ways. This is a wide-spread belief in India, one particular class of demoniac beings—bhuts—being usually found at cross-roads, while other 'waylayers' lurk there also (Oldenberg, 267 ; Crooke, F E v. 1890, 269—SBE xxx. [1892] 49).

Among the Muhammedan peoples, cross-roads are one of the numerous resorts of the jinn (Lane, Arabian Society, 1885, p. 37). In Russia, vampires are thought to lurk by night at cross-roads, ready to attack the passer-by (Russ. Folk-Tales, 1753, p. 311). In Europe generally, witches were associated with the cross-ways. There they gathered up money scattered by the devil; there, too, they met, and, in some cases, the devil himself took part in the meeting, i.e. the witch was betrayed on Walpurgis night, when they might be seen by him who put on his clothes inside out and crept backwards to the place; while the ringing of consecrated bells on that night hindered their dancing with the devil at cross-roads (Grimm, Tent. Myth. [Eng. tr. 1880-8], 1074, 1115, 1799, 1805, 1824 ; Stewart, Superstitions of Witchcraft, 1865, p. 128). On the other hand, witches are occasionally regarded as having no power at cross-roads. In Naples it is held that witches cannot go round them on their way to a meeting, as they cannot pass them; and in Hungary cross-roads are believed to neutralize their evil powers (FL viii. 3 ; FLJ ii. 101). Here, probably, the form of the cross acts as a prophylactic. Sprites, kobolds, and fairies are also sporadically associated with cross-roads (Grimm, 838, 1115 ; Geethe, Feust, iii. i. 40). In medieval superstition there was no better place than a cross-road for the purpose of evoking evil spirits, especially the devil (Pliny), who (with a devilish or unholy) is found with them. The magical treaties then current explicitly set this forth ; thus the Clavicula Solomonis says : ' For magical operations a secret, remote, deserted, and uninhabited place is necessary, but best of all are the cross-ways.'
The origin of the belief in the presence of evil agencies at cross-roads may be found in the simple fact that, as people were more numerous at cross-roads, so naturally would all evil powers be, such as any misused habit or vice. The same is true of roads leading to cross-roads. Men always fear demons and spirits which they believe lurk on the edge of the forest path or rude roadway, ready to pounce on the belated traveller, and in many cases roads are believed to be infested by them (Mommsen, WILLIAMS, 1863, i. 94). For these reasons they take precautions at cross-roads. In India, mantras must be said; e.g. at a bridal procession the bridegroom had to say, 'May no wayfarers meet us!' They should not be stopped at, and the traveller should pass with his right hand turned to them (SBE ii. 229, vii. 350, xxv. 135, 150, xxx. 49). Similarly, in Sweden, no bridegroom will stand near a cross-road on his wedding-day—a precaution against 'envy and malice' (Chambers, Book of Days, 1893, i. 45). See also § 5.

The cross-roads is found in the 6th cent. story of Theophilus, and in the old tradition it was a cross-road near Wittberg that Faust sold himself into immortality to. The custom was to go to the cross-way by night, and there make a magic circle in which cases for them were inscribed, and then to call up the dead. Similarly, witches made their compact with Satan at cross-roads. In the case of the Swedish witches in the 17th cent., they first put on a pair of suspects and danced round a cross-road. Then, going to the cross-road, they thrice called on the devil to come, and when the latter was about to appear, they promised to serve him body and soul, and he then conveyed them to the Seaborg (Grimm, 1874; Faring-Gouria, Curious Myths, 1888, p. 25). This custom still lurks in the trees of the cross-ways. In India, mantras must be said; e.g. at a bridal procession the bridegroom had to say, 'May no wayfarers meet us!'

'Whenever from the Root-country, the Bottom-country (= Hades), there may come savage and unkindly beings, commit not and partake with them, but, if they go below, keep watch above; if they go above, keep watch below, protecting you against pollution with a night guarding.'

'Three of these are mentioned in 1 norte—Yachimata-hiko, the Eight-road fork princess, Yachimata hiko, the Eight-road fork princess, and Kurando, whose name, 'Come-not-place,' is suggestive of his functions as a repeller of evil beings. The first two are represented as huge naked figures with sexual organs. The last is as a simple phantom. Another phantom god, Sakuta hiko, dwells at the eight cross-roads of Heaven, and is said to have acted as guide to Ninkiku on his coming to earth. He is also called Dassibi, or 'Road-ancestor deity,' and is found at cross-roads for the securing of his benediction. His abdomen is stretched a rope supported by bamboo sticks. Jizo, the Buddhist children's god, now occupies his place at cross-ways (Aston, Shinto, 1890, pp. 130, 197, 198, 199, 219, 250).

The phallic origin of these gods, in accordance with the well-known property ascribed to the sexual organs as warders of evil spirits, their protective powers; and as instigators of devital influences, and their ultimate position as gods of travellers recall the position of the Greek Hermes and the Hermaphrodite (cf. p. 333).

Among the Teutonic peoples occurred a yearly procession of the image of a god or goddess (Frey,
Nerthus, Holda, Berchta, etc.) round each district, for the purpose of promoting fertility (Tac. Germ. 40; Grimm, 213, 251, 256, 257). The roundABOUT of this procession was mingled with the myth of the FuRious Host or the witches' jaunt, headed by one of those divinities—a myth which in pagan times told of an aerial course of the god or goddess with a large retinue, spending part of the course of their images followed by the jubilant crowd on earth. It was connected with the latter, and perhaps in part originated from it, as an archetypal myth (cf. Grimm, 1655-56). At cross-roads, the waggon surrounded the boundaries, and the divinity would then be associated with boundaries, and so with roads and cross-ways. In some of the later traditions, cross-roads appear to be unlucky to these wandering hosts, now become demoniac and associated with sorcery, with the devil and witches. Berchta's waggon breaks down at the cross-roads, so also does that of Frau Gauden, and the help of a mortal is necessary to repair it (see the traditional tales in Grimm, 273, 926). Perhaps there is here a distorted reminiscence of a halting of the procession of the image and waggon at cross-roads, either for a sacrifice to the divinity, or for the performance of some rite by which his or her protection would be secured against the sway of demons. Later, when the divinity became a more or less demoniac being, the folk-memory of the halting of the waggon produced the story that the waggon broke down. The divinity no longer repelled evil influences at cross-roads, but was powerless to influence the cross-roads being unlucky to him or her, as in the case of witches (cf. § 2). On the other hand, it is not impossible that offerings were laid at cross-roads for the divinities to partake of in their aerial waggon. The divinity of Hekataeus also, as her images stood there, so probably images of some of these Teutonic divinities may have been set up at cross-roads. This is suggested by traces of a cult to gods or ghosts of the dead at cross-roads (the haunt of souls), santhematinc, i.e. in the Church. Prayers, offerings, and the consumption of such offerings, votive offerings (vota; pedum similitudines quas per biennium ponunt), and the ritual lighting of candles and torches at cross-ways (biesta, triewa) are all recorded; they are probably applied to Celtic as well as to Teutonic custom (S. Eligius and Burchard, in Grimm, 1738, 1744; de la Saussaye, Religion of the Teutons, Boston, 1902, p. 290; Grimm, Kleinere Schriften ii. 298). Sitting on a bull's hide at night is a newly born god (in order to console himself, according to Arist. Plut. 50 f.; Lucian, Dial. Mort. i. 1; Athenaeus, viii. 123, xvii. 57, xiv. 53; Porphyrius de Abstin. ii. 25). Travellers also deposited offerings at cross-roads. An etiological myth told how Hecate, as a newly born infant, lived in danger and was rescued and brought up by shepherds (schol. on Lycophron, 1189). This probably points to an actual custom of exposure at cross-roads (found also in Chaldea), made use of to explain Hecate's connection with them.

Hermes, as god of roads and boundaries, and of travellers, was also associated with the cross-ways as an averter of ill. On roads and boundaries, but especially at cross-roads, stood a heap of stones with a pillar, a rude shape of Zeus (Hermes). The passer-by added a stone to the heap, as a rite of riddance and in order to avert the evil influences associated with the place. These became the more sacred as more boundary and mile and direction posts, and placed at cross-roads as well as on streets, roads, and at doors. The phallos was a prominent object among them (Herod. ii. 51), in accordance with the belief in phallic emblems as averters of ill. As in the case of the Hokatai, these Hermes had often several heads, and for the same reason. Offerings were made to them, and were sometimes eaten by hungry wayfarers. Theophrastus in his Charact. describes the pious man pouring oil on the sacred stones (Hermes) at cross-roads, falling on

Christianity replaced the divine images at cross-roads by frescoes or images and shrines of the Madonna. At the latter, especially, flowers and candles are offered and prayers said, exactly as in the case of the Hermas and Hekataios (Tredo, *Das Heidenthum in der rom. Kirche*, Gotla, 1891, i. 334, 398).

An example of a cult of a divinity at cross-roads from a lower level of civilization is found among the Yos of the Shire Highlands who, when on a journey, call little shrines to the god Mulungu, a place where two ways meet, exactly as in the case of Greek and Roman travellers, to Hecate, Hermes, or the Lares (see vol. ii. p. 358). 4. Omens at cross-roads.—The connexion of omens, divine or demoniac, with cross-roads caused these to be regarded as places where omens might be sought. In East Central Africa a traveller who comes to a cross-way lays two stones for the purpose of divination, against the blade of a knife laid horizontally. He points to one saying, 'Shall I take this one?' If the roots remain still, he takes it. If they fall, he takes the other (Macdonald, *Africa*, 1852, i. 215). The deliberate making of cross-ways in India is probably to discover whether he should proceed on the way to Jerusalem to attack it. He 'stood at the parting of the way, at the head of the two ways, to use divination: he shook the arrows to and fro, he consulted the teraphim, he looked in the liver' (Ezk. 21). In Germany it was a custom to listen at a cross-way on Christmas or New-Year at midnight. In this way the seeker heard or saw what would befall him during the year. Or, if he heard leaves shake or saw a man go barefoot, then on the cross-way, he went back to his home, (Grimm, 1113, 1812, 1819). The listening was intended to catch what the spirits were saying as to coming events. In Japan a method of cross-way divination (tenji-umi) was used by women and lovers, is to place a stick over the ground, and to interpret the words spoken by passers-by as an answer to the question put by the inquirer. Another method is to sound a comb three times at a cross-way by day or night, and whipping the back of the comb, sahit-no-kami, to say thrice, 'O thou god of the cross-ways-divination, grant me a true response.' The answer is found in the words spoken by the next or the third passer-by (Aston, 346). With this method of Peking divination, there would be a way to cross-ways by night and applying to oneself as an omen of good or evil all that is said by passers (J. Atkinson, *Women of Persia*, 1882, p. 11). In Germany a girl went to a cross-way to discover whether she would be married during the year, or she shook out a table-cloth there. Then a man appeared and saluted her. The future husband would be of the same height and appearance (Grimm, 1115, 1757). An old Hindu custom for a man to discover whether his wife will give a good or bad child, is to let her choose one of several clods taken from lucky and unlucky places, one of the latter being a cross-way (Oldenberg, 510). In India the balance for ordeals was erected at a temple or in a cross-way—a favourite abide of Dhammaraja, the god of justice, when he appears on earth (SBE xxxiii. [1889] 104).

5. Magical rites at cross-roads.—The sinister character of cross-roads made them particularly common ground for magical rites, especially of aversion or riddance or demoniac influences (cf. p. 331, bottom: 'best of all are the cross-ways'). 1 Evil powers, or perhaps the divini-

---

1 Kosma is of the opinion that the use of the sign of the cross in charms has no reference to Christianity, but to the form of ways whose images stood there, lent their influence to the success of the rite. A few examples of general magical rites first be cited for the working spells at cross-ways was used among the Teutons as an evil kind of magic, for raising tempests, etc. The details are not known (Vig-fusson-Powell, *Corpus P. t. B. Oxon.*, 1883, 415). In India a Hindu girl goes on a cross-way at twilight, lighting a fire there, offering rice and repeating charms, together with other ritual observances, is recommended to those who desire gold, or companions, or a long life, or who wish to be rich, etc. (SBE xxix. 431, xxx. 119, 124, 125). A charm for recovering lost property is addressed to Pushan, the son, who watches over the ways, and the rite includes placing 21 pebbles at a cross-way. They are symbolical of the lost property, and counteract its loss condition (Atharva-Veda [SBE xlii. 159, 542]). In Kuna, to cause rain to cease, a harrow is fixed perpendicularly at a cross-way. The god of rain, seeing it in this unusual condition at such a place, learns that injustice is being done, and makes the rain cease. Or sugar, rice, and other objects used in ritual are placed at a cross-way and defiled, till the rain is ashamed to fall on them (PB. i. 75-77). At Naples, to detach a husband from his mistress, a wife goes barefoot, and there throws a pebble (Muller, *Grimm*). There she takes a pebble, places it under her left armpit, and repeats an incantation. This is done at a second cross-way, with the pebble under the right arm, and at a third, having it between the chin and breast. In the latter case, she throws it into a cesspool (Andrews, *Fl. viii. 7*). This is an example of the belief that all things at cross-ways are charged with the magic or evil energy concentrated there, or are unlucky. Plants growing on boundaries or by cross-ways are believed to possess magical power (see Reiss, 'Aberglaube,' in Pauly-Wissowa, i. 47). In Bombay a charm against the evil eye is to carry seven pebbles picked up at the meeting of three ways (Campbell, *Spirit Basis of Belief and Custom*, Bombay, 1885, p. 208). In the case of rites of riddance and aversion the underlying idea is that the evil powers lurking at the cross-ways are compelled to take over the evil (disease, ill-luck, or misfortune) and so possess the one or is impure and a source of danger. In some of these cases the powers of the cross-way are propitiated by an offering. Or the rite takes place there, because the place is one where the contagion of evil is more likely to settle (see Oldenberg). The latter, however, he throws it into another, while Oldenberg suggests (p. 287) that the cross-way was used because, after the rite, the performer would go one way, the evil or unlucky influence the other. A simple example of riddance of fatigue is found among the Guatemalan Indians, who, on passing the usual pile of stones at a cross-way, gather grass, rub their legs with it, spit on it, and then lay it with a stone on the pile, thus recovering their strength (Frazer, *GP* i. 4). Rites for riddance of disease at cross-ways are believed to be widespread. To rid themselves of any disease of demoniac origin, hill-natives of N. India plant a stake in the ground at a cross-way and bury some rice below it. The rice (prob. the rite of transference) is dispersed and eaten by crows (PB. ii. 290). In Bihar, during sickness, certain articles are placed in a saucer and set at a cross-way (Grierson, *Bihar Peasant Life*, Calcutta, 1855, p. 467). Similarly, in ancient India, such rites were commonly performed at cross-ways, as specific instances in the sacred books show. A patient possessed by demons was to be anointed with the cross-ways (FLJ. ii. 101). It would thus be used as an act of imitative magic, producing the effect obtained by the cross-way itself. 2
remains of a sacrifice of ghṛ and fragrant substances (probably because the latter are obnoxious even to demons) and placed on a cross-roads. A wicker basket with a cool-pot was set on his head, and some of the sacrifice was sprinkled on the coals (Ath. Veda (SBE xli. 32, 519)). In another charm for riddance from hereditary disease, the patient is laid on a cross-road and the toasts and the spirit is sprinkled. The charm includes the words, 'May the four quarters of heaven be auspicious to thee!' (ib. 292). In other cases not only riddance but the transference of disease to another person is effected. Thus to rid one village of smallpox, a pot of the image of the goddess of smallpox, are offered to the cross-roads of two villages connected. Any one touching these or meeting the priest who carries them out will take the disease and die at once. The goddess receiving the offering passes on to the next village. Here offering and vehicle of aversion are combined, and the thrice called mūṣṭi, 'averters.' Probably the poor, in eating Śākra ḍabīras,—at once an offering and a vehicle of aversion,—ran the risk of transference of evil to themselves rather than starve. In Bohemia, to get rid of fever, an empty pot was carried by the patient to a cross-road, and thrown down. He then fled. The first passer who kicked it would get the fever, and the patient would be cured ( GB p. 22). In Sinfolk a cure for plague is to lay by night to a cross-way, turn round thrice as the clock strikes twelve, drive a tompenny nail up to the head in the ground, and then retire backwards before the clock is done striking. The next person passing over the nail will be the aggressor. (Country Folk. Custom, 1905, p. 14). For other European instances, see Uttke, op. cit. passim.

Lustral rites of riddance at cross-ways are also common. In India one who had committed a crime an ancient Hindu ritualist would go to a cross-way and repeat the formula, Śaṅkhe maṇyeśu. Then he was free from all crime (SBE xiv. 230). In E. Africa, when a child is able to speak, it is taken to a cross-way, washed and rubbed with oil, and given to the father, who may then, but not till then, cohabit with his wife, else the child will die (FLR [1882] v. 168). Riddance of the contagion of death is also effected at cross-roads, by carrying there the thing or things which have suffered impurity. In India, at a death, the fire became impure, and with the receptacle was carried out and placed on a cross-way with the words, 'I send far away the flesh-devouring Ágni.' The bearer then walked round it three times, keeping his left side towards it, beating his left thigh with his crook, and his right hand, and his left hand may be turning home without looking back (SBE xxix. 247). In the orthodox death-rites of modern Brahmins, lamps are set at cross-ways (Colebrooke, Life and Essays, 1873, iii. 180). All over E. Africa, at a death, the water used in washing the body, the ashes of the fire, the thatch of the hut, and the remains of the dead man's food, are buried at a cross-way (mālakone), or deposited there with broken pots, egg-shells, etc. (Macdonald, Africana, i. 109; FLR v. 168). Other rites of riddance or purification also occur at cross-roads. In Siberia, the Siberian plague is kept off by stakes driven into the ground at a cross-way (Rabston, Songs, 395). In Bali, at the periodical expulsion of devils, offerings of food are placed at a cross-road for the devils, who are summoned to the road, and then go out of the houses to this feast (GP iii. 80). In Bohemia, in order to get rid of witches, youths meet on Walpurgis night at a cross-way and crack whips in unison. The witches are thus driven off (ib. ii. 92).—Richter. The monthly purification cruades in Greece (§ 3) may be compared a custom in Gujarāt of sweeping houses and laying the refuse at a cross-road as a rite of riddance of evil (Campbell, 329). For other rites at birth among the Chames, see vol. iii. 347, 590.

The custom of burying suicides at a cross-way has thus in all probability some connexion with rites of riddance at cross-roads. The danger brought to the community was in this way got rid of. Images of diseased limbs hung at cross-ways were perhaps less votive offerings than magical means of ridding the limb of the disease by transferring it to the spirits of the cross-way or to a passer-by.

6. Cross-roads and the four quarters.—Not improbable the cross-roads are connected in some cases with that of the four winds, coming from the four quarters of the heavens or the four corners of the earth, which were worshipped as gods and creators, and gave a sanctity to the cross-ways. The names of the points are often connected in North America (see art. AIR). Hence ceremonies for scaring evil spirits were efficacious at cross-ways, because they looked approximately to the four sacred quarters. Thus, in the Gujarāt marriage-rite, the four corners are hung to the four quarters as a charm to frighten off evil spirits (BG ix. (1901) i. 290). In Peru a yearly rite of riddance in connexion with the four quarters took place at the square of each town, out of which ran four roads leading to the four cardinal points. Four Insects of the blood royal, with lance and girded mantle, stood in the great square, till another ran down from the temple of the Sun, carrying a message that the Sun bade them as his messengers drive all evils from the city. They separated and ran down the four roads to the four quarters of the world. Relays of runners received the lances from them, and finally set them up at a boundary, which the evils might not pass (Gare, de la Vega, Bogotá, 1825, ii. 175).—Cross-ways and Laws of the Yacans, Hakuyt Soc., 1873, p. 206; cf. vol. iii. p. 308). The Yorubas have a cult of the four winds, and a figure with four heads called Olori merin is usually found on a mound near the centre of the town, so that each head faces one of the four points. Thus he protects the town, and no pestilence brought by the four winds or hostile force arriving by the four roads can attack it. Formerly these roads passed out of the city by the four chief gates of the side (Dennett, African Studies, 1910, pp. 70, 55). This connexion of cross-ways with the four quarters does not universally hold good, more especially in the case of the meeting of three roads, and only forms one of many reasons for the superstitious connexion with cross-roads.

LITERATURE.—This is mentioned throughout the article. There is no special work on the subject.

CROSS-ROADS (Roman).—It was a custom of the Roman peasant, in order to ensure the prosperity of his crops, to make a procession round the marches of his land, praying the while to Mars for protection against visible and invisible disease, raving, and storm (Cato, de Agricult. 141). In ancient times these various evils were regarded as
demons who gloated over suffering, and this explains why Fever (Fèbris) was worshipped in Rome as a goddess (G. Wissowa, Rel. u. Cult. d. Römer, Munich, 1882, p. 197). But, if suchinous spirits were prevented by the invocation of Mars from intruding upon the tilled land, they would tend to haunt the boundaries; and, as the latter were often formed by roads, it came to be believed that they were traversed, at least, by ghostly beings. Now, the place where several roads converged—whether by the bifurcation of one thoroughfare (ambivium, biuviu., or by the intersection of two quadrivium or trivium, according as the way was quadrivium, trivium, or triuviu—was counted or not; see H. Usener, *Dreiheit*, in *Reihau, Mus.* viii. [1903] 339)—was naturally a focus of human intercourse; as every one must pass the trivium, *trivialis* came to mean ‘common,’ known to all. For governed by the road Codes as the special resorts of demons. The Romans believed that things connected with the cross-ways had magical powers, and this superstition doubtless rests upon the idea that demons haunted the spot, and infected the surroundings with their supernatural influence. Thus, for instance, frogs boiled at the cross-way were a cure for fever (Pliny, *H.N.* xxxii. 113); a person who by night had mistaken one road for another was thereby bewitched (Pothinus, 134); while the porosity and anxiety which fall upon the traveller in a strange district as he comes to the cross-roads, and hesitates as to the way he should take (Ovid, *Fasti*, v. 2; Minucius Felix, *Octavius*, xvi. 2), would be ascribed to the haunts of demons, as would also the actual choice of the wrong way (Roscher, vol. i. p. 1890). Again, the cross-way was occasionally the site of the special object revered by the fetich-worshipper; more travelled cross-roads were in trivio florda sertis lapis. The fetish was decorated with wreaths; and by such homage, as also by prayers and votive offerings, it was hoped that the demonic powers would be induced to refrain from preventing the devotees from acting as the dispensers of grace and sure guidance.

Anthropomorphic deities of this character had likewise a place in the Roman religion, but the cult was not indigenous. Some of the deities were single from its sources, others, while of native origin, became the tutelary spirits of cross-roads only at a later period. To the former group belongs the goddess Trivia, who, from the time of Ennius (Scol. 121 [Vahlen]), is often mentioned in Latin inscriptions. More travelled cross-roads are inscriptions (CIL x. 3759 [Capua]: *Diana* Tifatinae *Triviae sacrum*). She was in reality the Hecate Trioditis of Greek mythology, and, like the *trivium*, was of triplu form (Usener, loc. cit. pp. 167, 183). Hecate was gloomy and malicious goddess, and, in order to propitiate her, recourse was had *Graco ritu* to every possible expedient, such as loud nocturnal invocations (Virgil, *En*. iv. 690; *nocturnisque Hecate trivialis ultrala*) and offerings of food at the cross-roads. One fact explains why the *trivium* was a resort of dogs (Ovid, *Fasti*, v. 140) and famished people (Tibullus, i. v. 56, with the comments of Dissen). In the Imperial period we find quite a system of goddesses of the cross-way, all of non-Roman origin, and for the most part linked together in groups as Bivie, Trivia, or Quadrivia, especially in Upper Germany. They were apparently indigenous to that region, and their cult forced its way thence into Lower Germany. The women of the Danube (M. Huin, in Roscher, i. 1ff). In some districts we find also male deities of the cross-way (CIL xii. 5621 [Gaul]; *deijs dea/bus Bivis Trivis Quadrivis*; vili. 163 [Britain]; *Deo Trivii Bellus* Ronavit aram).

Our knowledge of these deities is derived from votive offerings, principally small altars with inscriptions, which throw no light, however, upon the character of the unainted cult. In many cases the dedication was made in fulfillment of a vow, and the donors were mostly soldiers. The vow would, no doubt, be made for the purpose of winning the protection of the deity during a journey, or for other reasons as well. But for this purpose the deities were regarded, not merely as local guardians of particular cross-ways, but as divine patrons of all roads. Similar ideas were prevalent regarding the genuinely Roman deities to whom the hedges and cross-ways belonged; the tutelage of the cross-roads. These were known as the ‘Lares compitales,’ and were worshipped mainly at the place ‘ubi vile competunt’ (Varro, *De Ling.* Lat. vi. 25; G. Wissowa, in *Pauly-Wissowa*, iv. 792 ff.), i.e. the cross-way. But the word *compita* must have had a further meaning, for Cicero (de *Lege Agr.* i. 7) explicitly distinguishes between it and *trivium*; as is rightly observed by Wissowa (Rel. u. Cult. d. Römer, p. 148 f.), it also signifies the precinct or the point at which the boundaries of the fields converged. The worship offered to the Lare at the *compita* was an expression of the belief that they were the guardians of the soil (Tibullus, i. 809): *agnosco viam: 'nomenque vitae, alvorum* (Ambintus, 71). The Lares were invoked as patrons of field-boundaries, while their association with cross-roads was a later development, due to the circumstance that boundary and path frequently coincided. In this acquired character they had been known to us from such dedications as are found in CIL xi. 3079 (Falerii): ‘*Laribus compitales vivulis semitubulis,*’ and xiii. 6731 (Mainz): ‘*Laribus compitibus vivulis quadrivialibus saecrum.*’ The next stage was that the *Lares* became the gods of roads in general, as likewise of travellers, who therefore made to them the same kind of dedications as were offered *Decabus Quadriviris.* The dedicated objects were placed in shrines, and, as these shrines of the Lare were set up at the cross-ways, they too bore the name *Compita* (Persius, iv. 25).

We must not confound such erctions at the cross-way with fabrics reared over the cross-way. The rectangular towers which we find surrounding the cross-roads are simply wayside shrines, the thought that they were originally built over cross-ways. Of such towers, nine in all are known (Baumsteiger, *Denkmäler d. klass. Alterthums*, iii. [Munich, 1889] 1867). The most famous of them is the *Janus Quadri* in the *H. Jordan*, *Topographie der Stadt Rom im Alterthum*, i. ii. [Berlin, 1853] 471; but its original purpose was that of a monument of honour, and it is impossible to say whether the ancient Roman ideas regarding cross-roads were present to the minds of its builders. In any case, these ideas were by no means extinct at that time, for, even as late as the Middle Ages, it was still frequently necessary for the preacher to castigate the sinners in the cross-ways. The latter were some of the stations on the circuits at the cross-roads (see, e.g., C. P. Cäsar, *Kirchenhist. Anecdota*, Christiania, 1883, i. 172, 175, 199)—a practice which is undoubtedly a vestige of heathen, in some cases perhaps of Roman, ritual. Even at the present day, in Italy, the cross-way is the favourite site for the churches of patron saints (Th. Trede, *Das Heidenthum in der römischen Kirche*, Gothu, 1891, iv. 260).

**Literature.**—This has been given throughout the article.

**CROWN.**—As a preliminary to this article it may be advisable to cite Selden’s words distinguishing between ‘diadem’ and ‘crown’:

> However those names have been from ancient times confused, yet the diadem strictly was a very different thing from
CROWN

what a crown now is or was; and it was no other than only a fillet of silk, linen, or some such thing. Nor appears it that any other kind of royalty, than that—which is so commonly, in some kingdoms of Asia, but this kind of fillet, until the beginning of Christianity in the Roman Empire (Titules of the Empire, vol. iv. c. 5). The Gr. δακτυλια, Lat. diademum, was a fillet of linen or silk, sometimes adorned with precious stones, or occasionally a flexible band of gold. This was the true emblem of royalty, the dariekits ywepmna (I. Kings, ii. 19, 35), or tēgum regium (Tac. Ann. xv. 29). On the other hand, the Gr. στέφανος, Lat. corona, a wreath or garland of real or artificial (usually gold) leaves, was not a distinctive royal emblem, and was applied to the vertex of the bride’s, or the bride’s, the festal ‘crown’ (see also Trench, Synopsis of the NT, s.v. στέφανος, δακτυλιος). The same distinction occurs in other languages, e.g. German Krone, the royal crown, Krone, a garland. The English word ‘crown’ is old, and comprises all kinds of coronal head-dresses, royal and other.

1. Coronal head-dresses.—A distinctive head-dress of persons of high degree, but especially of kings and princes, originated from the custom of wearing various kinds of head-dresses, coronal, etc., on festal or other occasions, or by particular classes of people—men as contrasted with women, or, vice versa, as contrasted with priests, medicine-men, members of a mystery society, and the lowest and of a superior class (cf. Abbott, Macedonian Folklore, Camb. 1903, p. 31), or, again, from royal personages wearing a more ornate and valuable form of the customary head-dress. The crown, therefore, might be traced back to very early times. Following upon elaborate methods of dressing the head, such as are found among Polynesians and African tribes, the next step is to decorate the hair with flowers, feathers, shells, etc. (see § 2), or other ornaments. Or a band or fillet of fibre, skin, leather, ivory, or metal serves to prevent the hair from falling over the face. This is found among the lowest tribes (Andamanese, Bushmen, Fuegians, etc.), but, from being merely useful, it soon becomes also ornamental or has ornaments of various kinds affixed to it—tufts of feathers, fur, or wood shavings, teeth, shells, etc.; or it may be worn only on particular occasions, holidays, etc., or bound or worn on the forehead and nape of the neck by Makamba youths at dances (JAI xxiv. [1904] 134). The fillet, thus widely worn, would have a distinctive character, or would have more decorative or festive value, when worn by persons of higher rank; and it is a direct forerunner of the royal fillet or diadem worn by kings as an emblem of sovereignty, either with or without some other distinctive head-dress. The gold tīcūwē with the characteristic chevron decoration of the Bronze Age, found in the Celtic area, may be classed with ornaments of this kind, and were perhaps worn by chiefs (Déchelette, Man, d'arch. pré-hist. coll., Paris, 1910, p. 353; Homilly Allen, Celtic Art, London, 1894, p. 39 f.). More elaborate crowns are derived from the simple fillet or diadem by the addition of decorations around its circumference, as, e.g., by fixing upright feathers in it (Fuegians, American Indian, etc.), or by forming a diadem, combining the fillet and crown, or evolved from the former, are often worn by special classes or at special times.

Thus a Tibetan female head-dress (chief’s wife) consists of a crown-like diadem, in each of which is a coral band with similar ornaments on saline bands, holding the hair plates together (Kockelhini, Land of the Lamas, 1894, p. 184). Among the Tiv, a richly adorned crown, combining the fillet and diadem, of the highest permanent court of the head-dress of highly ornamental open metal work, with numerous pendent ornaments and chains; and a female head-dress in Java consists of a richly adorned head-band with star-like ornaments stuck round the upper edge (Hutchinson, Living Races of Mankind, vol. iv. 22, n.d. i 78, ii. 393-4, 399). A circle of jewelled gold, the upper edge heightened to four or more points, forming a jewelled crown, was formerly the head-dress of the Akkadian high rank (Lamb, Arab. Society, 1888, p. 218). A Samoan head-dress worn by chiefs, and by young girls at certain ceremonies, consists of a bronze band with fearers, of fish teeth, or dog’s teeth corolets, or the dōn, a fan-shaped arrangement of the white feathers (Abercrombie 339). Among the tribes of Brazil the men at feasts wear a crown of bright red and yellow toucan’s feathers, disposed in regular rows and attached to a head-band, or diadem, of gold. These feathers, being specially prepared, are very rare, and the corolets are never parted with (Wallace, Monkeys, &c., 221). Chiefs in Egypt wore a gold girdle similarly decorated (Stech, Geschlechtsleben in der Völkerwych, Leipzig, 1883, p. 457; and, for a similar head-dress worn by chiefs among the Lacandones, NR. n. 701).

As an emblem of royalty such a crown was worn by the Persians. It consisted of a turban with a tasseled fringe, in which were set upright two feathers of a very rare bird, the peculiar emblems of the Inca, which no one else might wear. This head-dress was buried with him, and two new feathers had to be procured for each coronation. The heir-apparent wore a similar crown, of a yellow colour as his insignia (Trescot, Peru, 1890, p. 111; Stoth, 407). Among the Mayas the king’s crown was a golden diadem worn in front, surmounted by a plume of feathers which no one else might wear under pain of death (NR. ii. 635). Mexican kings were crowned by the king of Tocona with a diadem, or head-dress, in gold, and surmounted by a gold torus. In Peru, the diadem was made of thin gold plates or woven gold thread, and is hung down behind the neck. Notwithstanding the name of it, the diadem consists of many head-dresses of set in gold fillets (ib. ii. 188, 375-6, 465, 441). All such crowns are followed by the emblem which has produced the European crown from the diadem (§ 8). For savage head-dresses, see Spencer-Gillen’, 651; E. Grasse, Anleitung der Kunde der Völker, 1894, ch. 6, who says that the Ugandas Proheritance, 1902, pp. 729, 787, 843, 888, 896; Deniker, Races de Man, 1900, pp. 178, 371, 562, 571; Mary Kingsley, Travels in W. Africa, 1897, p. 597; and for the head-dresses peculiar to the higher classes in Bab, Assiya, and Persia, see Basilion, Ann. Anthr. Soc. London, 1872, pp. 593-4, 597.

The huge or elaborate masks and head-dresses worn at the performance of tribal ceremonies or in mystery-dances by Australians, Melanesians, Africans, etc., sometimes assuming a form more or less coronal, need only be referred to here as decorations reserved for certain periods or on special occasions, at no other time. They are insignia of office, or form part of the necessary costume, sometimes symbolic or representative. See Spencer-Gillen’, 651; Deniker, 179; Brown, 607; JAI xlix. [1898-99] 260).

2. Chaplets.—From the custom of decorating the hair with flowers on festive occasions as a method of showing the use of chaplets or wreaths (στέφανος, corone), though these may be also connected with the simple fillet or hair-band into which flowers are sometimes stumped. Among savages, it is with Polynesians, especially those of the Melanesians, that the general wearing of flowers or regular chaplets is found most extensively. Among the former, at dances wore wreaths interwoven with their hair, and garlands and wreaths on forehead and arms. It has been largely brought up since the introduction of Christianity (Elli, Polynesides, Researches, 1831, i. 134, 216; cf. also Brown, 317; Hutchinson, i. 6, 9, 11, 17, 18; and, for a similar practice of wearing wreaths of grass and leaves among the Naskis, ib. 18). The custom was sporadic in America; thus the Nahua wore garlands at banquets and dances (VR ii. 284, 290). Among peoples of antiquity the wearing of wreaths on festive occasions was widespread. In Greece, and perhaps in Egypt, the (much) of lotus, myrtle, etc., were worn by the guests at banquets (Wilkinson, ii. 38, 330), and the custom was also in use among the Greeks and Romans. Perhaps under the influence of Greek usage it spread to the other nations, and was taken up as a common practice at times of rejoicing, especially in the Apocryphal books (Wilis 24; Let us crown ourselves with rosebuds’; Ezek 25, 6, Caesar 3, 7; Jih 55, Sir 32, 2 Mac 6; 3 Mac 24; cf. Acts of Thomas, crowns of myrrh and incense, recorded by Reade, in W. Wright, Apoc. Acts, Lond. 1871, i. 149). Wreaths and crowns were also worn ritual at festivals of the gods and at sacrifices (see next art.; cf. 2 Hen 4, 2 Mac 6).

Fertulian writes that, besides the wreaths offered to the gods or their
images, 'the very doors, victims, altars, servants, and priests are crowned' (de Cor. 10). The sacrificer wore them (cf. the wreaths worn by Persians over their ears at sacrifices [Herod. 1. 192]), and they were placed on the heads of the victims (Teistons [de la Saussaye, Rel. of the Teintos, Boston, 1902, pp. 368, 377]). Hindus [Monier-Williams, Rel. Thought and Life, 1883, p. 247], Mexicans [Xer. iii. 338]; and, in both instances, see Tert. de Carth. 67. Garlanded, diadems, crowns or chaplets (Frazer, Adonis, 1907, p. 229); and in the Mathritic initiations one of the rites was the presenting of a crown on the point of a sword to the candidate, who put it on, on which the head was transferred to his shoulder with the words, 'Mithras is my crown' (Tert. de Cor. 15, de Præsc. Herr. 40). Wreaths were also worn by those initiated into the mysteries of Isis (Apul. Mela, xi. 24). In the baptismal ceremnies, as do also the May or Witches' queen, and the May king or Jack-in-the-Green, besides being dressed in or adorned with leaves, these chaplets are an important part of the symbolic wreath fared in anthranean representations of the vegetation spirit (Fl. XI. [1909] 210; Wilde, Anc. Cars, Charms, etc., 1890, p. 101f.; Frazer, G.P. i. 1906, p. 213f.; Early Hist. of the Kingship, 1905, p. 166f.).

The Bridal chaplets and crowns.—These are already found in antiquity worn by the bride or bridegroom, or by both (Tert. de Cor. 13). They marked an occasion of joy, but may in some cases have had a magical purpose, in warding off evils from the head. Being used by pagans, they were at first rejected by the Church, as it rejected generally all wearing of flowers on the head. But the custom was already found among the Jews, the bridegroom wearing a garland of flowers and a crown of laurel in Ca 3rd), the bride a 'beautiful crown' (Ezk 16). The custom was in abeyance from the time of Vespasian, but was resumed later. Among Christians also it became usual, the bridegroom wearing a garland of flowers and a crown of laurel with that of the Virgin (Stl. Apoll. Carm. 2, 'Aud Animam'; and it was regarded as improper for the unchaste to wear them (Chrysos. Hom. 9 in 1 Tim.). The wearing of bridal garlands and crowns is still customary over a great part of Europe—Switzerland, Germany, Russia, and in the north.

In the Greek Church ritual of marriage the bridegroom crowns the bride as Nomion, and the bride the bridegroom, while the priest blesses them, and says, 'O Lord, crown them with glory and honour.' The service is hence called ονομαντία τον νυμφόδοτον. In Macedonia the bridal wreaths are made of red or artificial flowers, or are silver garlands belonging to the church (νυμφόδοτον). They are exchanged in church at the crowning ceremony (ονομαντία) applied to the whole wedding rite (Abbott, op. cit. p. 168, 173). Ralston (op. cit. p. 279) describes a local ceremony in Russia. In church, over the heads of the bride and groom, a wreath is placed on the forehead of each, while in the church, a wreath is placed on the forehead of each, while the bridal wreath is held by the bridegroom. The wreath is of the old ritual of the 'death-wedding' (Ralston, 310; see O. Schrader, Totenhochzeit, Jena, 1904, and Artsk. Religion, vol. 12, p. 272). Ralston and Neuwirth (1903) hold that the whole arrangement of myrtle is made by the bridesmaids, but occasionally elsewhere more elaborate crowns are worn, formed, for instance, of diminishing circles, one above the other, to which are fixed flowers, beads, figures, in metal, some of which are probably intended as amulets to ward off evil spirits. The wreath, as already existente (see Stoll, 453f.; 458f.; Kossmann-Weiss, Mamm. and Vogel, Stuttgart, 1890, 6, 184, 185). Among the Leits the bride wears a crown of gold paper and silver wire and postcard. She receives it from an honourable matron, who0 and who is thought to act for the use of a mummy (ib. 6. 100). The elaborate Norwegian bridal crown is handed down as a heirloom in well-to-do families, but in each village it, as well as a set of bridal ornaments, is kept for the poor bride's temporary use (Chamber, Book of Days, 1853, p. 739, 732; Hutchinson, op. cit. 779). Among the Hindus, from Vedic times, the custom of wearing garlands or crowns of precious metal or tissued at marriage has been common, and they are also to have a protective efficacy against evil spirits which might enter by the head. They are worn both by Hindus and Muhammadans (Crooke, JR. 1: 230; Kossmann-Weiss, 6, 184, 187; ERE iii. 463). Among the Mahomedans of Egypt the bride wears a postcard crown, and at the decease, the deceased, the deceased is crowned. For Chinese bridal crowns, see Hutchinson, i. 140; and for Persian and Indian bridal crowns, ib. 1, 19, and Letourneau, Evol. of Man, p. 134.

4. Funeral chaplets and crowns.—Among the Greeks and Romans the dead were crowned with chaplets, or these were placed as offerings on tombs (Lucian, de Leucta, 11; Tert. de Cor. 10; see next art. 2). In Egypt it was customary to place chaplets of flowers or leaves on the head of theummy at the funeral ceremony, and these sometimnes remained on the head in the coffin. They were called 'the crown of the true vole,' and referred to the deceased, the deceased, the deceased of Thoth, the right intonation, without which the magic formula were useless, or perhaps signified that he would be crowned triumphant and justified in the other world. Special gardens were set aside for the flowers used for the purpose. The statue which represented the mummy was raised with flowers, and the funeral ritual concluded with a prayer in which it was said of the deceased, 'Thou art nearest the crown among the gods.' Paul wrote, 'Therefore the ritual also concluded with placing the archikon over the statue, and repeating a formula, part of which ran: 'Nut has raised this head; Horus has taken his diadem and his powers, Set has taken his diadem and his powers, then the diadem has come out of thy head and has brought
the gods to thee.' This referred to the myth of Nut raising the head of Osiris, and the gods Horus and Set placing the crown of the dead on the south, upholding it. This was done to the dead, and the magic virtue in these crowns, or in the wreathe which adorned them, would bring the gods into his power. Garlands and wreaths decked the tombs, just as the tomb of Osiris was said to have been entered with wreaths; and wreaths were also worn by guests at feasts in honour of the dead before the final burial (Maspero, Études de myth. et d'arch. Égypt., Paris, 1895, 218, 306, 316, 318, 355 ff.; Fiey, La Couronne de Justice, Inverse et Comme, 1884, pl. vi. 1—30; Wilkinson, i. 403, iii. 396, 430, 432; Plut. de Isid. 21; see CHARMS AND AMULETS [Egypty.], vol. iii. p. 431, on models of diadems of Osiris buried with the dead, which assimilated to the god, would wear those crowns in the other world. 166. Flowers and garlands are also carried to the graves in modern Egypt.

In the Brāhmānic funeral ritual the bodies of the dead are decked with wreaths and flowers. Wreaths are also offered in the funeral rites and given to Brāhmans (Colebrook, Life and Essays, 1873, ii. 175, 175, 193; cf. SBE xii. [1900] 137, xi. [1900] 95, 122—3). Among the Nahuas, a statue was placed beside the body of a dead king, with a garland and a crown. Garlands and crowns also were used in Polynesia and Melanesia to decorate the dead, or the altars in the houses used as depositories of their bodies (Brown, 387; Ellis, i. 404). The early Christians refused to make use of funeral chaplets (Tert. de Car. 10; Min. Felix, 12, 37; Clem. Alex. Paed. ii. 8), but it was not long before the prejudice against them was overcome. As a symbol of the martyr's death a crown is found among the emblems on tombs, and chaplets or wreaths took the place of such chaplets as adornment of Christian funerals. In modern Greece dead maidens and children even are crowned with flowers (Abbott, 198).

5. Crowns and chaplets as offerings. — Crowns and garlands being so intimately connected with cult, they are a common species of sacrificial offering, besides being placed on the heads of victors (see next art.). Pausan. ii. 17, 6, v. 12, 8; Lucian, de Deo Syr. At the feast of Ceres women gave garlands as offerings of firstfruits to her (Ovid, Met. x. 431 ff.). In India, wreaths, garlands, and flowers are offered in most sacrifices. The Egyptians offered chaplets and wreaths to the gods and laid them on the altars of Isis, and chaplets or wreaths were the crowns of the gods, assigned also to the gods, or a second kind of mitre, or occasionally a horned cap. The head is usually represented veiled in sacred clothing in the art of the Greeks (cf. ii. 438). Among the Hebrews the priests' mitre or head-dress, הַנּוֹקָרָה (nokhrah), AV 'bonnet,' RV 'head-tire,' Ex xix 29 299, I.e. 299, was made of white linen embroidered with the name of God embroidered thereon, and bordered with a crown of fine linen, and sat on the head of the high priest. It was embroidered with the sacred characters of the crooked cross, and bound by a blue ribbon. The description suggests a headdress like the royal Persian khohtaran, a crown swelling outwards above the eyes, and extending over the forehead. Possibly it resembled the Assy. and Babylonian royal crown, or the one worn by the high-priest of the Syrian goddess at Baalbec, or the Greek diadem of a crowned god (cf. ii. 438).

The high-priest of the Syrian goddess at Baalbec wore a golden tiara, the lesser priests a hat (�לך, lukan, de Deo Syr. 43). The ancient Assyrians wore a headdress composed of the three species of native corn (or barley), and a mitre of imposing appearance, or sometimes a richly ornamented fillet (Hawkins, ii. 28). The priests wore an elaborate hat, the mitre, assigned also to the gods, or a second kind of mitre, or occasionally a horned cap. The head is usually represented veiled in sacred clothing in the art of the Greeks (cf. ii. 438). Among the Hebrews the priests' mitre or head-dress, הַנּוֹקָרָה (nokhrah), AV 'bonnet,' RV 'head-tire,' Ex xix 29 299, I.e. 299, was made of white linen embroidered with the name of God embroidered thereon, and bordered with a crown of fine linen, and sat on the head of the high priest. It was embroidered with the sacred characters of the crooked cross, and bound by a blue ribbon. The description suggests a headdress like the royal Persian khohtaran, a crown swelling outwards above the eyes, and extending over the forehead. Possibly it resembled the Assy. and Babylonian royal crown, or the one worn by the high-priest of the Syrian goddess at Baalbec, or the Greek diadem of a crowned god (cf. ii. 438).

6. Priestly crowns. — The practice of special head-dresses being used to mark off certain classes led to the use of those by medicine-men or priests, and not infrequently they took a coronal form, or, as in Greek and Roman ritual, chaplets were worn by priests.

Among the Buruts the shaman formerly wore a crown consisting of an iron ring with two iron convex arches crossing it at right angles—an elaboration of the simple fillet or band (ERE 169). In Mexico the chief priest of the gods wore a crown of green and yellow feathers, his assistants merely having their hair platted and wound with handkerths. The priest of Tula in the festival of the dead wore a crown of closely fitting bird and spreading out above, with many garlands of flowers. From this climax the sacrifice to the Mother-goddess, had a square crown, wide above, with banners at the corners and in the middle (Mod. Ger. Reichsmitte, iii. 314, 556). In the reliefs part of the Shinto priest is a black cap (toshii) round head the round head with a broad white fillet (Ashton, Shinoto, 280, 288). Among the Teotonos the Golden Head-dress of the goddess, the priestess, those wearing a cap, as compared with the common people, the capitelli, with yellow hair; garlands being tied with ribbons (McEwan, 360; Grimm, Tent. Myth., 1890—91, pp. 91, 90). Tibetan priests at their ceremonies wear a species of helmet mitre, fitting over the head and crossed with a red or yellow color, according as the wearer belongs to the one or the other great Buddhist sect (Rockhill, op. cit. p. 854.). Sculptures in Cappadocia show the ancient priest or priest-king of that region wearing a round high head-dress encircled with fillets and ornamented in front with a rosette or bunch of jewels; the god beside him wears a high pointed head-dress (Frazier, Atlantis, 140 ff.). The priests of Sandro (Hermes) at Yamna were called 'crown-wearers' and were dedicated to that office. One of them, Lyndas, wore a golden laurel wreath (Atben. v. 54; Frazier, 111). The high-priest of the Syrian goddess at Baalbec wore a golden tiara, the lesser priests a hat (יוֹם, lakan, de Deo Syr. 43). The ancient Assyrians wore a headdress composed of the three species of native corn (or barley), and a mitre of imposing appearance, or sometimes a richly ornamented fillet (Hawkins, ii. 28). The priests wore an elaborate hat, the mitre, assigned also to the gods, or a second kind of mitre, or occasionally a horned cap. The head is usually represented veiled in sacred clothing in the art of the Greeks (cf. ii. 438). Among the Hebrews the priests' mitre or head-dress, הַנּוֹקָרָה (nokhrah), AV 'bonnet,' RV 'head-tire,' Ex xix 29 299, I.e. 299, was made of white linen embroidered with the name of God embroidered thereon, and bordered with a crown of fine linen, and sat on the head of the high priest. It was embroidered with the sacred characters of the crooked cross, and bound by a blue ribbon. The description suggests a headdress like the royal Persian khohtaran, a crown swelling outwards above the eyes, and extending over the forehead. Possibly it resembled the Assy. and Babylonian royal crown, or the one worn by the high-priest of the Syrian goddess at Baalbec, or the Greek diadem of a crowned god (cf. ii. 438).
CROWN

was at first an Eastern head-dress, especially characteristic of Thyrsus, and hence formerly called ‘Thryginn.’ It is rarely alluded to before A.D. 1000, but in 1049 Leo IX. placed a mitre on the head of the Pope, in the form of the Thryginn (P.L. cxliii. 300). From this time the references become much more common, showing that the use was spreading. The mitre is usually made of fine or rich material, embroidered, and often studded with gems. From the back depend two fringed bands hanging over the nape of the neck. It is unknown in the Eastern Church, but is worn by all Roman Catholic bishops and by abbots exempt from Episcopal jurisdiction and others privileged to wear it. Its use is denied to all other members of the Anglican Church, but it is now commonly worn by bishops, and has always been a symbol of their office (see W. H. Marriott, Festäctorium Christianum, Lond. 1805, p. 239 ff.; Hefele, ‘Inful, Mitra, and Chaplets to the Kirchenrecht.’ Tub. 1864, ii. 292 f.; DCA, s.v. ‘Mitre’). In the earlier centuries, virgins assuming the veil wore a head-dress called a mitre (Bingham, Ant. vii. iv. 6; Isidore, de Eccl. offic. ii. xviii. 11). The Papal tiara (a word of Punic origin, signifying ‘a head-dress’ is a swelling pointed and closed head-dress, which has varied much in shape (in the 14th cent. it was dome-shaped and oval). To this was added, at some date unknown, a single crown (symbolizing the divinity of the Popes) encircling the lower part, and, probably, in the 12th cent., a second crown was set above this. The third crown was added by Urban v. (1359-70). At the top is fixed a small ball and cross of gold, and, as in the case of N. Didron, two bands hang down behind (Hefele, op. cit.).

7. Divine crowns and chaplets.—As various plants were sacred to the gods, chaplets of such plants were often associated with them. Tertullian (de Cor. 7) cites a work on crowns by Claudius Saturninus, which described how every flower, branch, or shoot was dedicated to the head of some divinity. Hence the custom of offering chaplets to the gods, of crowning their images with them, or of representing them wearing chaplets. They also wore crowns (Pansanii. ii. 17, 4, 6, v. 11. 1; Granger, 251, 305; see next art.). In many cases the crowns with which images are represented are replicas of the earthly crown, or, where a king was held to be divine, the head-dress peculiar to the god with whom he was identified. The god was naturally regarded as a heavenly king who wore the royal insignia; and conversely, the divine king wore the insignia of the god.

In Mexico, at the festival of Huitzilopochtli his image was crowned with a paper crown, wide at the top and set with plumes. Many other Mexican images were crowned, or were adorned with them at festivals, and crowns were also worn by their human representatives (Av. II. 322, 337, iii. 34, 392, 328, 334). The images of the snake-goddess found in the Aztec area wear a high tiara, over which a snake roars its head (see fig. in vol. i. p. 143). On the head of the god sculptured on the rocks at Tzintzin is a high pointed cap adorned with a fillet and several pairs of horns, and the goddess of the Huitzli sculptures at Tezcaloa has a flat round head-dress with ribbed sides; this is also worn by her female worshipers (Frazer, Ethnol. 100, 106). The goddess Cybele wore a turreted crown, and so also did the Syrian goddess, Artemis (Luce, Ad Theor. xi. 31). Persian divinities wear a tiara like that of the kings or that worn by court officials (Ravavin, iv. 335), and on the monuments of the Mitanni it is frequently represented wearing an Oriental tiara (Tontani, ‘La Legende de M.’, Etudes de la mythe, 1904, p. 223 f.). The crown of gold and precious stones which David captured and placed on his head belonged to an image of the Ammonites (2 Sam. 12. 30). This, and Assyry, divinities are usually represented wearing the characteristic head-dress of the monarch—a rounded cap with parallel horns enclosing it from behind, and curving upward towards the front (see fig. in Ethnol. 100, 106). This head-dress frequently symbolizes a crown on the astrological tablets (Ravavin, ii. 244, iv. 334; Monier-Williams, Babylon, 1904, p. 89). Bab. divinities are also said to have been crowned with golden crowns (Sp. Jer. 2). In the Decret of Hier at the first gate of Hades the keeper
depives Litor of ‘the mighty crown of her head.’ In Egypt the statues of the gods were often crowned with chaplets and ornaments, but, unless this, they are adorned with some symbolic head-dress—the sun, horns, or plumes, or the ureus and disk, etc. But they frequently wear the crowns and chaplets characteristic of their origin, or are crowned with the red crown of the north, or both together, enclosed or side by side, just as the kings wore their own crowns. As Ammon wore the tall hat, with long plumes, of the god. Osiris is frequently represented, e.g. in the small golden images of the god as a mummy used in the festival of the mummy ships, with the judgment scenes, wearing the white crown flanked by two plumes, or with the ureus, worn also on the crown of the sun. The crown is also worn by some of the sacred dancers of the Budge, Gods of the Egyptians, 1903, passim. Book of the dead, ivii. 21. Images and pictures usually show them wearing simple or elaborate crowns or tiaras, sometimes with a nimbus. Or separate crowns form part of the decoration and are not considered distinct. These are often of great value and are encrusted with precious gems—diamonds, pearls, rubies, etc. The myths and sacred books of ancient Egypt refer to these crowns of the gods (Wilkins, Hindu Myth. 2, Camden, 1632; Monier-Williams, 219, 449). In Buddhism the figures of Budhha, of Bodhisattva, and (in Tibet) of the divinities of the Buddhist pantheon are frequently represented with crowns or coronal head-dresses or tiara-like structures (Wilkins, 225; Rockhill, 103, 129, 225, 228). In later Hellenic art, God the Father is represented with the current regal or imperial crowns, or with the Papal tiara encircled, according to the case, with a cross, a crown, or a diadem. They are sometimes, as if to show His superiority to the Pope, with five crowns. In later art, Christ is sometimes represented with the brow encircled by a diadem, and later with the regal or imperial crown or with the tiara, as when the head of the Virgin is crowned with the crown of thorns, which, by itself, is figured in many other representations, especially of the Crucifixion. Where the Trinity is represented as one Person with three faces, the head is often adorned with a single crown or tiara (A. N. Didron, Chr. Iconography, Lond. 1886, passim). The Virgin is also represented with a crown, or is depicted in the act of being crowned by the Father of the Son or the Trinity with the crown of a queen or empress, as in the case of the crowning of the Son by the Father after the Ascension. This was in accordance with the legend of the Virgin’s coronation in heaven after her Assumption. Angels and Christian virtues, and even the Judge of Death, are often represented with a crown (Didron, passim). Some of the Gnostics crowned their sacred images (the Car- porcations [Iren. adv. Haer. i. 25. 6]), and from this or from the similar pagan practice the custom may have passed into the modern Christian Church. Many pictures were crowned with special ceremonies when they were dedicated (Trede, Das Heidenthum in der rom. Kirche, Goth., 1891, i. 283, ii. 343 ff., iv. 145-48, etc.) for the modern Roman image, see Cath. Imag. vii. 675. In the image of the Madonna on waysides are also crowned with chaplets (Trede, iv. 208).

8. Royal crowns.—We have seen (§ 1) that the royal crown originated from the wearing of a special head-dress by special classes, or it is a specialized form of the ordinary head-dress. Among the higher savages, some such head-dress is worn by chiefs, like the band of cloth worn round the temples as a kind of crown by some chiefs in E. Africa, or the frontlet or crown with a wig of woman’s hair worn by chiefs in Samoa (Macaulay, Africiana, i. 16; Brown, 316; cf. also the other instances in § 1). We turn now to the higher nations of antiquity.

In Assyry, the king’s crown sometimes adorned itself; of felt or cloth, shaped as a cone rising in a gracefully curved line, and truncated at the apex. The upper part receded into the lower, so that the top alone was visible and projected above the forehead. It was ornamented with broad bands with embroidery or plates of gold. Round the lower edge was a band or diadem rising in front with a large rossette, with the ends hanging down behind the ears to the shoulders. Sometimes such
a fillet, higher in front or uniform in width, is worn alone, and in the earlier sculptures the tiara is lower than in the later. The queen wore a diadem with turrets like the crown of Cybele (Rawlinson, ii. 106, 108; Stoll, 210, 459, 463). In Babylon the king was crowned with diadems—called tiaras (Khirbatatir (= Elekhatar)). a kind of rounded cone with a double pair of horns surrounding the sides and front, or a tower- shaped head-dress with or without these horns, terminating in a crown of feathers. The lower part was ornamented with green fillet, which was made of richly coloured felt or cloth. The higher classes, both in Assyria and in Babylonia, wore a distinctive head-dress (Rawlinson, i. 133, iii. 433; Maspero, 719; Stoll, 459). The royal crown of Persia, the Elekhatar, was a cap of bright coloured felt or cloth, swelling out slightly towards the flat top, and terminating in a projecting ring. Round the bottom ran a fillet or ‘band of blue’ spotted with white—the diadem strictly so called. It was adopted by Alexander and his successors.

In some cases the kings are represented wearing more or less ornamental diadems or radiated crowns, or a head-dress resembling that of the Medes—a high-crowned hat with rounded sides, called tiara (Khirbatatir (= Elekhatar)), the latter word being applied to the royal tiara (Rawlinson, iii. 86, iv. 155). In Egypt, diadems were worn by priestly personages, but that peculiarly symbolic of royal authority was the crown, whether of metal or gilded wood, the coiled body forming the diadem, and the head poised above the forehead of the monarch. It was also affixed to other head-dresses worn by the king in common with the gods. Of the diadems of Upper Egypt, a tall conical head-dress swelling out slightly in front and terminating in a rounded knob; and the red crown of Lower Egypt, cylindrical in form but widening out upward, and with the back part carried higher than the front. The crown was probably not a diadem, though the white wool worn within the red was called phahet. They were put on at the coronation, and on bas-reliefs, female figures symbolical of the two Egyptians, each crowned with the respective crown of her district, stand on either side of a king wearing the phahet. In other cases, Nubi or Setos crown the king, and goddesses invest the queen with her tiara—two long feathers and the globe and horns of Hathor. These crowns were also worn in battle and on other occasions, and they, with other forms, were common to gods and kings. Thus the king is described as ‘son of the Sun, decked with the solar crowns’ (Wilkinson, ii. 257, iii. 361; Maspero, 203; M. Brinemer, Egypt, Camb. U.S.A., 1890, p. 152; A. Moret, Du Caractere rel. de la royauté pharaonique, Paris, 1892, p. 310).

In funereal ceremonies the king wore a striped linen head-dress, descending in front over the breast, and terminating in a queue fastened by a ribbon. Filllets of gold and, occasionally, radiated crowns were worn, and also, as in the case of the diadems, phant. In Greek and Roman, the crown is of silk (the latter finally disappearing in the time of Justinian (Latarte, ii. 39)). The diadem is sometimes worn alone, or it surrounds a cupola or jewelled cap, the combination of cap or tiara and diadem resembling that of the Persian kings. In antiquity the diadem was formed by adding over it, upon a crown, by the addition of a row of ornaments or symbols to the upper edge of the circumference of a metal diadem. This is already seen in the corona muralis, muralis, corona muralis, etc., or in the radiate or crescent crowns of the Persian kings, those of the Ptolemys, Nero and later Roman emperors. The form of these radiate crowns is also connected probably with the radiate nimbus with which kings were often represented and which was the symbol of the sun-god as well as of other divinities in art. Such crowns were thus a symbol of the monarch’s divinity (Dietrich, Nektaria, Leipzig, 1893, p. 419; Diod, i. 34 ff.). Crowns, as distinct from diadems, appear in early medieval Egypt. In England the diadem soon gave place to the crown. William the Conqueror and other Norman kings wore diadems ornamented on the upper edge with trefoil uprights, and the crown form soon became more elaborate. The English crown, diadem, first arch crowned with the crown dates from the reign of Henry iv.

The coronets of English peers are circles of gold, variously ornamented according to rank (like the crowns of Continental nobles), and enclosing a crimson, velveteen ring. The most important is the ducal coronet, 1362; the latest that of barons, 1690 (see Legge, English Coronation Records, 1901).

9. Sacred and magical aspects of the crown.

We find, sporadically, medical or magical virtues ascribed to wreaths and chaplets (Athen. xv. 16, and cf. the magical efficacy attributed to bridals and to funeral wreaths in Egypt, §§ 3, 4). This would be a natural result where garlands were made of the flowers or leaves of sacred plants or trees. Wherever the king is honoured as divine, the crown, as the peculiar symbol of royalty, will have a magical character, more particularly as it is so frequently worn also by the gods.

The golden wreaths and chaplets of oak leaves worn by early Greek and Italian kings, as well as by other persons in later times, are supposed to have originated the wreath as vice-gerent of a god of whom the oak was the sacred tree, and in which as well as in the wreath of the wreath he was supposed to be incarnate (Cook, P.G., xlii. 1900, p. 190, n. 13). The emperor Hadrian’s wreath is probably a Roman modification of the Greek form. The emperor Constantine’s wreath, worn by the emperor Constantine, is probably that of a Roman emperor, and the emperor Constantine’s wreath is probably that of a Roman emperor. The emperor Constantine’s wreath is probably that of a Roman emperor. The emperor Constantine’s wreath is probably that of a Roman emperor. The emperor Constantine’s wreath is probably that of a Roman emperor. The emperor Constantine’s wreath is probably that of a Roman emperor. The emperor Constantine’s wreath is probably that of a Roman emperor.

The regalia of kings tend always to be regarded as peculiarly sacred. In some quarters possession of them ‘carries with it the right to the throne,’ and they have wonder-working properties, as among the Malays (Frazer, Kingship, 121, 124; Sket, Malay Magic, 1909, pp. 23, 59). Generally speaking, the word ‘crown’ comes to be used figuratively for all that the monarchy implies. In Egypt the crown, emblem, symbol of sovereignty, has a magical power, and could execute the king’s secret purposes or inflict vengeance. It is said to ‘burn his enemies with its flames’; it throw itself upon those who approached it, and drive them into the earth.

The supernatural virtues thus communicated to the crown gave it an irresistible force, and the royal crown was also regarded as having divine power (Ermahn, Die mytholog. Rel., Berlin, 1905, p. 40; Maspero, 205; Etudes, i. 78; cf. also Etudes, ii. 134, for other magical crowns; and for the magical powers of the crowns of the dead, see §§ 4). Crowns may have been occasionally used as instruments of divination, e.g. in the choice of a king. In a Transylvanian folk-tale the crown is
laid before the assembly on a hillock. It rises, floats in the air, and lights on the head of the destined king (J. Halftich, Deutsche Volkszsurnen, Vienna, 1885, p. 195). The Yorubas of W. Africa look upon the royal crown as possessing magical powers, and are said to have sacrificed to it by the king himself (MacGregor, Jour. Afr. Soc., no. 12 [1894], p. 472). Crowns are sometimes mythically said to have descended from heaven upon the king’s head (Bousset, Gnosis, Göttingen, 1907, p. 137). The Greek also have another idea that the life of a king depended on the safety of his crown. In the Mandaean myths of the conquest of the dark powers Ur and Ruhā by Manda d’Hajji and by Hīlīd Ziwa, Ur is deprived by both heroes of his crown “of living fire,” in which his strength lies, and in this way he loses all his might (W. Brandt, Mandaitsche Schriften, Göttingen, 1893, pp. 131, 175, 178). These myths are certainly based on some current belief in the magical virtue of the crown.

10. The crown in early Christian thought. In the NT the victor’s crown at the games (στέφανος) is used symbolically of the reward of a faithful Christian courser, the incorruptible στέφανος being contrasted with the corona and the circlet (cf. Rev. 2:10; 3:18). It is a “crown of righteousness” (2 Th. 2:10), the “immortal crown of glory” (1 Cor. 9:24; 2 Cor. 10:4), the “crown of life” (Jas. 1:12, Rev. 2:10; cf. 3:11). Hence in visions of heaven the crowns are prominent. The elder of the seven received crowns (στέφανος) of gold; in the Ascension of Isaiah the prophet sees crowns laid up in the highest heaven for the saints; in Barlaam and Josaphat, Josaphat sees the people of the heavenly city with crowns in their hands (J. F. Robson, Ancient Greece, Paris, 1829–31, iv. 360). Christ has on His head “many diadems” (διαδήματα τῶν ἁγίων στέφανος, 1 Pet. 5:1), one fillet bound above the other, signifying different sovereignties (cf. 13:12, where the dragon has ten diadems). This conception is already found in later Judaism; the faithful receive crowns and palns (2 Es 26:1–5). The wearing of garlands and crowns on earth being obnoxious to the early Christians on account of pagan associations, stress was therefore laid on the worth of the symbolic heavenly garland (στέφανος), and especially the immortal crown of martyrdom (Mart. of S. Polycarp, 17; Tert. de Cor. 15, 1 “Why do you condemn to a little chaplet, or a twisted head-band, the brow destined for a diadem?”). Laactantius (De mort. bestr. 46) describes the martyr’s garland of victory as “an unfaiding crown laid up in the kingdom of the Lord.” In Hermes (Sin. viii. 2) the angel commands garlands of palms to be brought out for those in whose rods he found branches with fruit (cf. also Euseb. HE v. 1 [Letter of the Churches of Vienne and Lyons]). Such references to the crown of immortality or joy or to the martyr’s crown are copious in early Christian literature, and the symbol of the crown also appears in Christian archeology. Hands stretched out in heaven presented crowns to the martyrs, or angels descend and crown them (Didron, i. 95). The crown by itself, or with a palm branch or other symbols, is also symbol of the eternal reward in heaven offered to the victor.

J. A. MACCULLOCH.

CROWN (Greek and Roman).—The words στέφανος, corona, and their variants are used by Greeks and Romans of circular ornaments that could be placed on the head, carried in the hand, or hung up as decorations; or decorative, either made of, or artificially representing, or by their decoration more or less remotely suggesting, flowers, leaves, or fruits of the field. The origin of the custom of wearing such ornaments lay probably in the mere instinct of decoration rather than in any notion of a symbolical significance in the plants used. Such decorations are a natural expression of the love of adornment, found among all primitive worshippers. Attributes to his deity feelings like his own, they would be considered acceptable to the gods. As expressing joyfulness, they would in time become customary or de rev名叫on or all festal occasions. Under sacred or profane, the use of crowns for religious purposes is not mentioned in Homer; nevertheless the use of crowns for dedication purposes seems to have prevailed very early in the Egyptian; at Croesus was found a spray of foliage hung on thin gold plate and wire in a flat bowl (BSA viii. (1891–92) 25), and the employment of natural sprays probably preceded that of metal imitations by long ages. Now the most convenient and decorative way of carrying and flowers or instead of wreaths, to cultus-figures, was to twine them into wreaths, which could be worn on the head of the worshiper or placed on the figure of the deity.

As early as the 7th cent. such garlands as essential in practical life were carried (cf. J. d’Hajje, op. cit., plate 29). In Aristophanes (Thesm. 446 ff.), a widow who had supported her five children by sacrificing wreaths considered that, since her business has gone since Euripides persuaded people that there are no gods.

Being part of the furniture of cultus, the wreath imparted a joyfulness to the wearer for the time being; the slave in Aristophanes considers that, while wearing a wreath, he cannot be beaten by his master (Plaut. 201). The essentially joyous associations of the wreath are given by the fact that mourner did not wear them at funerals. Xenophon, while sacrificing, heard of the death of his son; in sign of mourning he took off the crown that he was wearing. When he heard that his wife had died like a brave man, he resumed his crown and proceeded with the sacrifice (Val. Max. v. 10). At mournful ceremonies, such as the Spartan Hydrainthia (Athen. iv. 139), the crown was not worn; the Sicelians girded flowers instead of wreaths, in sacrificing to the Eumenides at Titane (Paus. ii. 4). Where we see wreaths, fillets, etc., deposited at a tomb, these are brought as offerings to the spirit of the deceased, not as tokens of mourning. Such crowns the Christians used as essentially offerings to a deity, and therefore to be condemned (cf. Justin Mart. Apol. i. 24: ‘The Christians do not worship the same gods as the heathen, or offer up libations or incense, or bring them crowns; but sacrifice;’ see supra, Minucius Felix, p. 43, ed. Onzel, 1652, ‘see mortuos coronatum.’) Typical of the Greek custom is the beautiful Attic lekythos (JHS xix. (1889) pl. 2), showing a taoic tied round the tombstone, oil-flasks and wine-jugs, some with wreaths laid over them, ranged on the steps, and a woman bringing a tray full of wreaths and taoic. Sometimes tombstones were made with a receptacle suited for holding a crown of leaves (Arch. Zbl. 1871, pl. 49). The body itself was crowned (στρεφεῖν τὸν κεφαλὰς, Eur. Phæ. 1632), as part of the last honours, in keeping with the washing and anointing of it, and dressing it for its last journey (Lucian, de Lucta, 11). Members of some associations, such as the Iolani, were entitled to a crown at their death, provided out of the common funds (F. S. Roberts, Intron. Gr. Epigr. ii. Cambridge, 1905, pp. 91, 160). Inscriptions of the Phrygian Hierapolis often mention the στρεφεῖν τριατος, a sun left by the deceased. The interest on which was devoted to the annual renewal of wreaths on his tomb (Hummel, etc., Altertumk. Hieropilis, Berlin, 1898, p. 129). At a Roman funeral there
were carried not merely crowns offered by the mourners, but such as the dead might have won by his own deeds. In later times, the idea of the possession of the dead gradually dying out, the wreath came to be laid on the tomb merely as a mark of honour; but it would be hard to say where the primitive significance of the usage merged into the modern. By far the greater number of crowns now observed could be traced back from tombs; but this is only because the conditions in tombs are more favourable than elsewhere for the preservation of them, as of other antiquities.

3. In ritual the use of wreaths was manifold. They were worn, as terata, to decorate the image of the god (see Schreiber-Anderson, Atlas of Classical Antiquities, London, 1894, xiv. 3). They could be worn by those who performed the sacrifices. They could be offered up (Daremberg-Saglio, fig. 1884). They could be used to decorate the victims (Lucian, de Streer, 12); thus was Iphigenia decorated (Eur. Iph. in Aul. 1477). The garlands brought by the priest of Zeus at Lystra of the kind sacred to the deity served, offerings to them or decorations for the oxen which he proposed to sacrifice. Garlands were used to decorate the shrine, the altar, sacred trees, and all sorts of instruments and vessels employed. The wreath of the latter feature was made of rushes, flowers or vegetable produce, the objects so adorned being brought into intimate relation with the god. Woolen fillets served the same purpose, whether made up into circular form, or merely hung on the victim or object, or throughout the life of the deceased.

The lover's practice of hanging garlands on the door of the object of his affections is explained by Athenaeus (xiv. 670b) as inspired by his desire either to honour the beloved one (just as the doors of temples were garlanded), or to honour Eros (the beloved being regarded as his image, and the house therefore as his temple), or as a symbol of the affection of his soul, to give to the robber his body's ornament in addition. In speculations such as these we see the idea that these garlands were, at any rate, a semi-religious kind of offering.

Probably the most important crowns from a ritual point of view were the 'priestly coronets' (cf. above, p. 339) worn by the officiating persons, whether professional priests or not. When the crowns were made of flowers or leaves, these were used to decorate the shrine, altar, sacred trees, and all sorts of instruments and vessels employed. The wreath of the latter feature was made of rushes, flowers or vegetable produce, the objects so adorned being brought into intimate relation with the god. surround. One of the most widely distributed forms of crown in art is the crown of rays, which, like the nimbus, represents the divine light emanating from the deity's head. Such a halo was probably not represented by a concrete crown until comparatively late times.

5. The giving of crowns as prizes probably had a religious origin. The material rewards offered in heroic times seem to have been replaced at a fairly early date—in the 6th cent. at latest—by crowns of leaves, etc. (Paus. x. vii. 3, of the Pythian; Marmor. Par. 35 = 583 B.C.; note that the palm, being unsuitable for a crown, was carried as a branch). The crowns thus given were under the special patronage of the local deity, and the material for the crown would be gathered from the local sacred enclosure, although in the ease of the Pythia the laurel was brought all the way from Tempe (Fraser in Pauly). It was worn in later days that the crown of foliage—olive, laurel, pine, etc.—was replaced by a metal crown, so that in the 2nd and 3rd cent. of our era the decoration carried by the victorious athlete was an empty shell, studded with leaves or flowers in the bottom than anything else (Dressel in CIL xxv. 2, no. 7045). The crowns thus won were often dedicated in the temple; in the ease of a tie, which was for this reason called lopid, the crown remained the property of the procto (ib. 949). But the rewards might also be carried away by the winners, and the entry of such a winner into his native city was a solemn function, as when Pausamachus brought home to the Carian Antioch the crown of the Olympic victor (Ditzenberger, Gr. Gymnas. 234, 31). At Elea in Asia Minor, when Attalus III. (158-133 B.C.) was received in state by the citizens, he was met by all the state officials and by the winners in sacred festivals carrying their crowns in their own hands. (ib. 253, 12).

6. From the use of crowns as rewards in actual athletic and other contests, such as musical or literary (an ordinary term for being victorious with a tragedy is θρασδόρατος, e.g. Bacchylides, frag. 83, Jelle), is probably derived their use as marks of honour generally. They could be given as rewards for good service to the community; and decrees of Greek communities rewarding their officials or private members are among the commonest of extant inscriptions.

Thus the Athenian council and people in 151 B.C. vote a laurel crown to Ptolemaios the priest of Asklepios for his services to the shrine of the god (ib. 1046); at Leuce in Asia Minor in the 3rd cent. B.C. a similar crown is voted to Menesktes for his services to the city (ib. 288); at Athens in the 1st century B.C. to Frontius, son of Mnesikles, the artificer (ib. 34); at Leuce in Egypt the artist of the gold of Dionysus and the Brother Gods grants a crown of ivy, to be given at the Dionysia, to their life-president Dionysius, son of Museus (ib. 50). At Delphi services to the shrine and State are rewarded with a crown of laurel from the god's grove, according to the traditional Delphic custom (ib. 346; Sygoff's Leips. 1398, p. 210). An Athenian decree of 100 B.C. records the crowns conferred on the ephebi and their koretes by the Council and Assembly, and by the Salaminian demos, and on their kometes by the ephebi (Klosteri, Epigr. ii. 65). A list of the eighteen crowns (of gold or laurel) conferred on Casander, son of Menestheus, was inscribed on a marble slab in the temple of the koretes at the Dionysia (ib. 192).

Such honorific crowns in art, to which the term 'crown' is not merely to individuals or associations, but to a whole people or their official representatives; thus the Athenian people received crowns from various States, such as Caria, Andros, Kos, and others (IG ii. 700, 701). The mural, relief, and civic crowns of the Romans were special developments of the crown as reward for services to the State.

7. From employing the crown as a reward, it was but a step to presenting it as a tribute, often with a semio-secular or ceremonial function. Thus the crown of the emperor was given as a sign of alliance with Rome (Pint. Lucull. ii. 34), Simon the Hasmonean received a golden crown on being called to the Persians (4 Macc. 135), and Antiochus IV. was given a golden crown when he conquered the city of Gaza (1 Macc. 10). The crown of 'divine honor' was adopted to symbolize the king's sovereignty.

8. Thus the crown became the symbol of victory, even more than the palm-branched. It is the most common attribute of Victory in art; and Christian symbolism, in spite of certain protests (cf. Tert. de Corv. 34), adopted it wholeheartedly as a symbol of spiritual victory.

9. The crowns received as civic rewards or honours were, like athletic decorations, frequently used for the festal occasions (Rouse, Gr. Vot. Offerings, Camb. 1902, p. 266). At Athens those conferred by a foreign State had to be dedicated in the Parthenon, perhaps to prevent εφαρ (Eschin. i. cit. 46). Crowns of less importance were usually kept by the recipients. When the semi-barbarian princes Spartacus and Parisisades of Bosporus were voted golden crowns by the Athenians, the decree laid down the very form of words which was to be inscribed on the crown when dedicated (Hicks, Gr. Hist. ii. 2, 901, p. 140). To judge by the lists in inscriptions, vast quantities of such crowns must have been in the temples. Sometimes the lists record the terms of the dedication; e.g. from the Delian treasure-list (Dittenberger, Syg. 2588) the inscription:

'Publius son of Publins Cornelius consul of the Romans' (i.e. Scipio Africanus, who probably made the dedication in 194 B.C.).

9. The crown, being part of the apparatus of religious service, was worn not only at sacrifices, but also at other ceremonies, such as nuptial or literary contests, which were under the patronage of a deity. Such were the sacred contests at which Pindar says it was originally the custom to wear crowns of laurel, and the natural development of the use of crowns variegated with flowers being later, and the use of artificial crowns later still. Demosthenes (in Mid. 16) describes golden crowns among the 'sacred vestments' worn by the choras which he provided at the Dionysia. Musicians are often represented wearing crowns (Schreiber-Anderson, Atlas, vii. 9, Ixxviii. 7; Baumeister, Denkm., fig. 594). The use of crowns at bridal official was doubtless religious, and therefore condemned by Tertullian (de Corona, 1), where the bridal crown that is carried or worn by Eros and Hyomenes. Religious also must have been the origin of the decoration hung outside the house-door at Athens after the birth of a child: an olive-wreath for a girl, a golden one for a boy. On the other hand, we may well hesitate to see any direct religious significance in the use of crowns at banquets. They were connected especially with drinking, and were probably first used to promote cheerfulness. It may be doubted whether the theory that they mitigated headache (an ancient theory mentioned by Aristotle ap. Athen. xv. 674) was more than make-believe. Whatever may have been the original significance of the use of crowns on such occasions, it was doubtless included in the general condemnation of the custom of wearing crowns on the head which was uttered by more than one Christian apologist (Minucius Felix, Tertullian). The Christians used flowers both loose and in garlands, but not on their heads, doubtless because the wearing of them was so intimately associated with pagan cultus.

10. The diadem worn by monarchs, though possibly its resemblance to the τιματον with which the heads of deities were often crowned, suggested it was given a suggestion of Divine significance, was probably not religious in origin. In any case it was adopted by Alexander the Great from the Persian king, so that its original significance must
CRUSADES

be sought in the East. The plain round decoration seen, e.g., on the portrait-head in the Louvre called Antiochus the Great (Bevan, House of Seleucia, Lond. 1902, frontisp.), or on heads of Seleucids and Philiberus on early Pergamene coins, is probably not a diadem, but a sacred fillet. The laurel crown, on the other hand, represented on the portraits of living Greek kings worn by the dead and divinized Philiberus, sometimes interwoven with a diadem, on coins of Pergamum.

It was worn by Julius Caesar and by practically all the Emperors from Augustus onwards, while, until the time of Constantine, they concealed the royal diadem. It was a symbol, despite its origin, of honour, but not of divinity. Even the crown that is being placed on the head of Augustus by a female figure, herself wearing a walled crown and veil, on the famous Vienna cameo (A. Furtwangler, Ant. Gemmen, 1900, pl. 56) representing the Emperor's apotheosis, is a sign of honour merely, not of divinization. This crown is of oak leaves, when the early Emperors wished to express divinity by a crown, it took the radiate form. The sun-god could be expressed by placing a star over the Emperor's head. On coins struck after his death, Divus Augustus is frequently represented wearing a crown. By the use of coins, this radiant crown, properly the head-dress of the sun-god, is found on coins representing Ptolemy III. of Egypt (247-222 B.C.). In Syria it appears first on coins struck by Antiochus Epiphanes (175-161 B.C.), who preserved his godhead thus, as well as by placing a star over his head. It may be doubted whether this radiation, so far, represents any concrete crown, and not merely an imaginary halo. Nero was the first living Roman Emperor to wear it; but it was not until the time of Caracalla, who introduced a silver coin called the antoninianus, on which the Emperor's head is radiate, that the radiate crown became common in representations of menarchs. It was apparently not worn by the Emperors after Constantine the Great, obviously because of its religious significance.

CRUELTY.—See Humanitarianism.

CRUSADES.—I. CAUSES OF THE CRUSADES.

The Crusades may be defined as the technical name given to certain special events in the long struggle between the Muslim and the Christian. For the immediate or special causes of any particular Crusade, see below. Of general causes, whether political or religious and ethical, the following may be noted.

1. THE DECAY OF THE EASTERN EMPIRE.—The reader even of liberal culture is often ignorant of the fortunes of the great Empire that continued at Constantinople after the fall of Rome. He fails, therefore, to recognize the debt which the common civilization and Christianity of Europe owe to it (cf. F. Harrison, Meaning of History, 1901, chs. 11 and 12). Charles Martel saved the West at Tours (Oct. 732) from the Saracen invaders, but his efforts would have been fruitless if not Constantinople for centuries presented a secure barrier against all attacks from the side of Asia. The East, indeed, was recovered by the Franks. Historians may speak of the Crusades, as the Eastern Empire recovered its strength (First Saracen siege of Constantinople, 674-8; 2nd siege, 716-8; deliverance chiefly through 'Greek fire'); but under the great Emperor Leo the Syrian (718, often mistakenly called the Fool) these wounds were sapped by the Byzantine minstrelsy of the Saracen. (749), the Eastern Empire recovered its strength (J. B. Bury, Later Roman Empire, London, 1889, vol. i. bk. 6). As part of his general programme for driving back the Saracens, Leo endeavoured to abolish the 'cicones' and tried to develop a strong vociferous by reforming the land laws and emancipating the serfs. As a result, the Basidian dynasty (807-1067) regained much lost territory in both Asia and Europe, through the conquests especially of John Zimianes (965-75; Antioch recovered, 969). But, with the close of the 11th century, the powers of resistance of the Eastern Empire were becoming exhausted. The Iconoclastic controversy and, above all, centuries of pernicious land laws had sapped its vitality. The provinces of Asia Minor consisted of vast domains cultivated by serfs under absentee landlords at Constantinople, or belonging to ecclesiastical corporations exempt from military burdens. Thus the Iwan the Great, the provinces which had hitherto been held by the Muslim succumbed. The respite which Constantinople had provided had been invaluable. The Greek Empire had saved Europe in her hour of weakness. But now the emperors had subdued the barbarians, and under Charles the Great had welded Europe, in idea at least, into one great Christian commonwealth, under one leader of the faithful at Rome (Xinas Day, 500). Whatever its internal weakness, the idea of the Holy Roman Empire was of tremendous power for defense against the Christian foe. The conflict between Crescent and Cross was bound to be renewed under a new form, with a new champion of Christendom, and in a wider arena, no longer as a frontier war, but one of inter-continental character. Thus the Crusades (upon the seven or nine divisions of which strength should not be laid) must be regarded as a new form of the old struggle. A clear recognition of this fact, and on the belief that fashionable the Crusades were in the 12th cent. outbreak of madness or chivalry, lies at the root of a right understanding of history.

2. THE RISE OF THE SELJUK TURKS.—In the 9th and 10th centuries, the powers of resistance of Constantinople had been protected by the Empire of the Seljuk Turks. There were rival Khalifates of East and West (Western Khalifate inaugurated by 'Abd al-Rahmân III., in 929); the struggles of Sunnites and Shi'ites (g.v.), and of the dynasties of the Abbasids, 'Abbasids, Fatimidg, Idries, etc. (see, for complete lists, S. Lane-Poole, Mahommedan Dynasties, 1894); and the revolts of the 'Carmathians' (g.v.) at Kufa under Hamân ibn Ashat or Qarad, and the pillage of Mecca by the Mahdís in 722. But, with the rapid rise of the Seljuk Turks, all this was changed, and Constantinople was separated from the Muslim merely by the Dardanelles, and threatened by a Turkish fleet constructed of Greek captives. So, in the spring of 1088, Alexius Comnenus put together by (Recueil, iv. 131 f., or, better, Hagenmeyer, Kreuzvögelbriefe, Innsbruck, 1901, p. 12) to Robert of Flinders besought the aid of the Latin.1

In 1089 the Turks defeated Fatimi, the Chamsaraz, at Damascus, subdued Persia, and elected as their head Aghk-Tughrul Beg, the grandson of Seljuk b. Takek of Samarqand

1 For the controversy over the genuineness of this letter, see Bury's Gibbon, vi. 361 n., or, more fully, Hagenmeyer, op. cit. pp. 10-44. The date is from Hagenmeyer, whose defence of its genuineness (against P. E. D. Rant, Alex. Com. Ep. Spuria, Geneva, 1879) may be accepted.
The Crusades

The pilgrims and the Holy Places. — The influence of the Holy Places upon the Middle Ages was not due to historic but religious and psychological sentiment. The Middle Ages were powerless to realize an idea without turning it into the concrete. Of Christ and His Church there were visible images. By a sort of logical inversion they went one step further. Where the image was, there was the spirit. Thus the image, or material realization, became the vehicle of grace, possessing not only sanctity but life, while the historical constant was changing, assuming form and colour. Hence, to the medieval mind the Holy Places were far more than religious or historical memorials. They were themselves spiritual and essential parts of the spiritual provision of the age. The earliest pilgrim of the pilgrimage to Jerusalem is seen in the journey of Helena in 326, the foundation by her son Constantine of the Church of the Holy Sepulchre (Socrates, HE i. 17; Euseb. Vit. Const. iii. 30, 34-40), and the record in 333 of the Bordeaux pilgrim (see Hist. Anon. Burgundice, in CSEL xxxix. 1 ff.; Eng. tr. A. Stewart (London, 1857)). On the conquest of Jerusalem by Omar (638), the Crusaders were assured of their religion. A quarter was assigned to the patriarch and his people and the Holy Places were left in their hands. The Abassid Khalil Harun-al-Rashid even presented Charles the Great (23rd Dec. 800) with the keys to the sepulchre (Eginhard, de Carol. Mag. ch. 10). On Jerusalem laying to the Fatimid Khalifs of Egypt (969-1076), special concessions were granted to the republic of Amalfi for the transport of pilgrims. But the era of tolerance was over for the Crusaders (al-Hakim, Ab-‘Ali-al-Mansur), the Fatimid Khalif (996-1020), burnt the Church of the Resurrection and destroyed the Holy Sepulchre (27th Sept. 1010; for date, see Röhrich, op. cit. 9 n.). On his assumption of the crown as this new hated dynasty of the Muslim al-Hakim once more granted toleration, and the pilgrimages recommenced, greatly stimulated by the new outbreak of piety in Europe which marked the 11th cent. and by the re-opening (see Röhrich, in Hist. Teutoburcbach, Leipzig, 1875, v. 5), though the conversion of Stephen of Hungary (907-1038), of the old land-route which was followed as early as 933 by the Bordeaux pilgrim. But under the rule of Orak the cruelties inflicted upon, and the exactions from, pilgrims, heightened at two gold pieces a head, became excessive (William of Tyre, Hist. i. ch. 10; Urban ii. at Clermont in Guibert, Gesta Dei per Francos, ii. 4 (Recueil, iv. 140)). Either a way of redress must be found, or the pilgrimages must cease.

The new Europe. — The wrongs of previous ages, including the desecration by al-Hakim, had appealed to a distracted Europe in vain. But by the close of the 11th cent. a new Europe had arisen, instinct with religious chivalry, conscious of its spiritual unity, no longer hampered by the heathen Huns and Northmen. By the recital of the wrongs of the pilgrims a nerve was touched of exquisite feeling; and the sensation vibrated to the heart of Europe (Gibbon, vi. 258). Politically Europe was re-united, and the papacy had arisen, the result of the continuing weakness and divisions, the Seljuk Selim Khan won Anatolia and Antioch, the Seljuk Sultanate of Iraq being established at Niessa (1077-1300). Moreover, in 1070-1, Jerusalem had been taken by a lieutenant of Malik Shah, Aliya bin Ark the Khwarazmian, who had taken the Seljuk Khalifs of Egypt, and its government handed over to the exactions of the Turkish Oktar b. Askab (see below). The Turks were expelled 30th May, 1099, by the Fatimids, and retired to the Euphrates.

3. The pilgrims and the Holy Places. — The influence of the Holy Places upon the Middle Ages was not due to historic but religious and psychological sentiment. The Middle Ages were powerless to realize an idea without turning it into the concrete. Of Christ and His Church there were visible images. By a sort of logical inversion they went one step further. Where the image was, there was the spirit. Thus the image, or material realization, became the vehicle of grace, possessing not only sanctity but life, while the historic constant was changing, assuming form and colour. Hence, to the medieval mind the Holy Places were far more than religious or historical memorials. They were themselves spiritual and essential parts of the spiritual provision of the age. The earliest pilgrim of the pilgrimage to Jerusalem is seen in the journey of Helena in 326, the foundation by her son Constantine of the Church of the Holy Sepulchre (Socrates, HE i. 17; Euseb. Vit. Const. iii. 30, 34-40), and the record in 333 of the Bordeaux pilgrim (see Hist. Anon. Burgundice, in CSEL xxxix. 1 ff.; Eng. tr. A. Stewart (London, 1857)). On the conquest of Jerusalem by Omar (638), the Crusaders were assured of their religion. A quarter was assigned to the patriarch and his people and the Holy Places were left in their hands. The Abassid Khalil Harun-al-Rashid even presented Charles the Great (23rd Dec. 800) with the keys to the sepulchre (Eginhard, de Carol. Mag. ch. 10). On Jerusalem laying to the Fatimid Khalifs of Egypt (969-1076), special concessions were granted to the republic of Amalfi for the transport of pilgrims. But the era of tolerance was over for the Crusaders (al-Hakim, Ab-‘Ali-al-Mansur), the Fatimid Khalif (996-1020), burnt the Church of the Resurrection and destroyed the Holy Sepulchre (27th Sept. 1010; for date, see Röhrich, op. cit. 9 n.). On his assumption of the crown as this new hated dynasty of the Muslim al-Hakim once more granted toleration, and the pilgrimages recommenced, greatly stimulated by the new outbreak of piety in Europe which marked the 11th cent. and by the re-opening (see Röhrich, in Hist. Teutoburcbach, Leipzig, 1875, v. 5), though the conversion of Stephen of Hungary (907-1038), of the old land-route which was followed as early as 933 by the Bordeaux pilgrim. But under the rule of Orak the cruelties inflicted upon, and the exactions from, pilgrims, heightened at two gold pieces a head, became excessive (William of Tyre, Hist. i. ch. 10; Urban ii. at Clermont in Guibert, Gesta Dei per Francos, ii. 4 (Recueil, iv. 140)). Either a way of redress must be found, or the pilgrimages must cease.

4. The new Europe. — The wrongs of previous

CRUSADES

1869, Peter is not mentioned by Guilbert or others as present at Clermont. Of Peter's preaching in Flanders and Flanders after Clermont, little doubt is possible. Guilbert, op. cit. ii. 8, Anna Comn. Lea., but Urban ii., a disciple of Gregory vi., would use rather than follow his preaching. For Peter, see the critical edition by Hageney, Peter Eremite (Leipzig, 1879), which traces the genealogy of the myth.

At the Council of Clermont (7th March 1095) the ambassador of Alexis Comnens perjured the peril of Constantinople (Mansi, xx. 802; Guilbert, op. cit. ii. 1), but Urban ii. postponed the decision until after a second Council at Clermont (18th-27th Nov. 1095; Mansi, xxx. 821ff.). There, amid cries of 'Deus vult,' the undertaking was commenced, a red cross (hence the 'Crusade') being sewn on the breast or shoulders. So far as the Muslim world was concerned, the times were opportune, the great Seljuk Empire of Malik Shah having broken up, at his death (1092), into four warring portions. Egyptians and Greeks, and in 1096 the Latin visier Aschël conquered Jerusalem from Ortuk. While the main expedition was preparing, a vast mob, chiefl y from the Rhine districts, under Peter, Walter the Flemish, and Walter de Poix, with a garrison at their head (Alb. Q. i. 30; Guilbert, op. cit.; Recueil, iv. 251), after massacring (May 1096) the Jews in Spires and Worms (Salomo bar Simeon, in Neubauer and Stern's Quellen zur Gesch. der Juden in Deutsch., Detmold, 1877, 1. 41), cut off the Rhine crossings, and, having reached Constantinople (30th July 1096). On crossing into Asia, they were overwhelmed (21st Oct. 1096), near the river Drac on and at Civitao, by Kilih Arsclan, the son and successor of Temur redan (see lists in Alb. Q. ii. 22. 3), with a vast host of barons, etc. Marching through Hungary, the various forces converging on Constantinople (Godfrey, 22nd Dec. 1097; Bohemond, 16th April 1097), and were carried over the Bozorus by the anxious Greeks. After Alexis had secured their homaage (Alb. Q. ii. 14, 15, 18), Peter reviewed the hosts (of whom Fulcher of Chartres enumerates seventeen nations, or about 60,000 armed horsemen [see Alb. Q. ii. 41] plus a vast mob of pilgrims and camp followers), they captured Nicaea, the capital of Asia Minor (29th July 1097), the town of Doryleum (Eeiki-Scheh, 1st July 1097), crossed the desert in a burning summer, captured Antioch after an exhausting siege of nine months (21st Oct. 1097-3rd June 1098), during the dire famine of which many deserted for home (Alb. ib. passim. 50-52, iv. 34) until stopped by the discovery of a Holy Lance, and defeated the vast relief forces of Kerbogha of Mosul (28th June). After ten months' delay, the remnant of the crusaders, reduced now to less than 40,000 all told (Kohrth, op. cit., 289), disbanding the proffered terms of the Egyptians, marched on Jerusalem (13th May-6th June 1099), the capture of which (15th July 1099) was followed by the massacre of 70,000 Muslims and Jews, which was witnessed by Peter of Prizien (Alb. Q. vi. 29-30). Eight days later Godfrey was elected king (real title, 'advocate of the Holy Sepulchre') of Jerusalem (22nd July 1099; William of Tyre, op. cit. ix. chs. 1-12). His overthrow of the Egyptians at Antioch (19th Aug. 1098) was followed by his death of his disaster of his death (18th July 1100). The two

1 For critical examination of this Council, see Röhrich, Erst. Kreuz., 225-3. For Urban's other Councils after Clermont, at which also he preached the Crusade (see Recueil, iv. 11), are 12th May 1082, 22nd Dec. 1097, 16th April 1097, and 3rd June 1098, each of which was followed by the death of his disaster of his death (18th July 1100). The two

2 On this incident, see Raynund of Agiles, Hist. Francorum, in Recueil, iii.
briefs (1058-1100), Innsbruck, 1901, with complete bibliography of all minor sources, magazines, etc.; R. Röhrich, Gesch. des Kreuz. Kreuz. in L. Hinsch, Innerkreuzz. (1903) (perhaps the best single work), and Bettelley z. Gesch. d. Kreuzz., 2 vols., Berlin, 1874, 1878. For the first edition of many of these works, they have done good work (cf. Renouf, v.). His Invent. crit. der lettres (668-719), Paris, 1880, is of value for advanced work.

2. The fall of Acre. — For many years the Latin kingdom had been threatened by the growing power of the Atabeg amir of Mosul, 'Imād-ad-Dīn Zengi, or Zanghis, thwarted by the Latins into Sanguinaires (1127-14th Sept. 1146), to whom must be ascribed the first stemming of the tide of the Latin conquest. His capture and massacre of Edessa (25th Dec. 1144) was followed by the successive marriages of his great sons, Nar-al-Din and Mahmod. The fall of Acre aroused the West, chiefly through the preaching of St. Bernard (see art. BERHNARD, vol. ii. p. 589), first at Vézelay before Louis VII. (31st March 1146), then later in the Rhine valley, where the persecution of the Jews which usually attended a Crusade had broken out. As a result of his meeting with Bernard at Spires (27th Dec. 1146), the Emperor Conrad III., with reluctance, took the cross (E. Canandard, S. Bernard, Paris, 1895, ii. 288 ff.). Conrad started from Bamberg (May 1147) by the overland route, with about 100,000 followers (London, many women, and after a disordered journey, reached Constantinople, followed closely by Louis, who set out from Metz (11th June 1147). An attempt of Conrad to push on was thwarted by the loss of 30,000 Germans, and he was forced back upon Nicea. The great Louis, from there the armies marched, though in two divisions, to Ephesus, whence the wounded Conrad returned, after Christmas, to winter at Constantinople. Meanwhile Louis, however, and a part of the Germans under Otto of Friesingen, continued their march. Otto's force was cut to pieces near Laudice, and Louis was disastrously defeated in the defiles of Phrygia (Odo, op. cit. vi.: a remarkable story), but the rout was that the diminished forces to reach Antioch (19th March 1148). Meanwhile Conrad set sail from Constantinople (10th March 1148), and reached Acre in April. The two armies mustered at Palma, near Acre (23rd June 1148). But the attempt was a failure (Bernhardi, op. cit. 563-78), and Conrad sailed home (8th Sept. 1148), followed by Louis (Easter 1149). Bernard and Suger thereupon planned a second expedition, and at a Council at Chartres (7th May 1150) Bernard suggested that his majesty was elected commander-in-chief—an office which he refused (Sieg. i. 236). The miserable termination of the crusade led to a reaction of anger against St. Bernard (de Consid. ii. 1). As an important episode in the Crusade we may note the undesignated conquest, by an English fleet, of Lisbon from the Moors (Bernhardi, op. cit. 579-90).

Literature.—For the Second Crusade the chief sources, in addition to William of Tyre (see below), are Odo de Deoğlu (Deuil, and de Profections Ind., vii. De Smyne, P., cx.xxx. 1220 ff.), and two anonymous writers, Gesta Ind. vii. For Conrad, see Otto of Freising, de gest. Fred., iv. 54-59, 43-50, 58-59 (in Parti, MGH xxxi). Of Greek writers, Nicetas Cenomanus continues the work of Anna Comnena from 1121 to 1139; Michael Psellos and John of Requesens (see Renouf, Geschichte, Paris, 1875). Of modern works, B. Kugler, Analekten z. Gesch. des zweiten Kreuzz., Tübingen, 1878, 1881, and Neur Analekten, Tübingen, 1885; W. Büsch, Gesch. der Ind. 3 Vols., Leipsic, 1883 (esp. pp. 591-684).

3. Third Crusade. —In 1161 and 1167 the Turkish Amir Shirkuh (Asad-ad-Din Abul-'l-Mirahim Shirkuh) attacked the Fatimids of Egypt and their Frank allies. But the treacherous designs of the advisers of Amalric of Jerusalem (1161-73) to seize Egypt led the Fatimids to turn the Turks for help. After the battle of Solothurn (Hist. H. F. Wallerstein, 12th Nov. 1165), Amalric was forced to return; but Saladin, at the command of Nar-al-Din, destroyed the Fatimid dynasty (Sept. 1171), restoring Egypt to the allegiance of the Abyduss (Khalif of Babylon) (William of Tyre, xiii. 5-7, 12-31, xx. 5-12). On the death of Shirkuh (23rd March 1169), his nephew the Kurid Saladin (Salah-al-Din; b. 1137) without delay (26th March) was recognized as his successor as vizier of Egypt. The dismemberment due to the death of the Sultan Nar-al-Din (16th May 1174) was not taken advantage of by the Latins, who allowed Saladin to extend and consolidate his dominions (Syria, 1174-6).

The inglorious expedition of Philip of Flanders (Aug. 1177-Easter 1178), and the great defeat of Saladin at Ramleh by 575 knights under Reginald of Châtillon (25th Nov. 1177), led in 1180 to a truce for two years. The violation of the truce by Reginald of Chatillon's seizure of Karak, and subsequent plunder of Alaraph, in 1180 (1186), and the rapid decay of the kingdom of Jerusalem through dissensions, finally issued in a determined attack by Saladin, whose soldiers were now trained in Frank methods. His great victory at Hittin or Haratun (4th July 1187) was followed by the siege (20th Sept.) and capitulation of Jerusalem on 2nd Oct. 1187. Saladin's siege of Tyre (Nov. and Dec. 1187) was thwarted by Conrad of Montferrat, but for the rest of the country was over-run, and a conditional promise was made of the surrender of Antioch if not relieved within seven months.

Meanwhile Europe once more armed, being terrified by the news which reached them from Jerusalem (20th Oct. 1187-91) (Giraud, Camb. de Princ. Instr., 2599) of the loss of Jerusalem. The first to move was the great Emperor, Frederick Barbarossa, who as a young man had taken part in the Second Crusade. Starting from Regensburg (11th May 1189), Frederick crossed Hungary and Bulgaria, and wintered at Adrianople, sore harried, as usual, by the treachery of the Greeks. Soon after Easter 1190 he crossed the Bosporus, avoiding Constantinople, and struggled through the desert to Jerusalem, but on the 10th June 1190 in the Saleph (Genk Su or Calycedun, Hisc. Ric. s8), the Germans made their way in, part, to Antioch (June 21st), in part to Tripoli.

Richard of England (Nov. 1187) and Philip Augustus of France (Jan. 1188) had been the first to take the cross. But, owing to their quarrels, they did not start from Vézelay until June 1199. They journeyed together to Marseilles, and by separate fleets (Genoese and English) to Messina (23rd Sept.), where they wintered. Sailing in the spring, and on the way, they were carrying in Cyprus a fortnight (Hisc. Ric. 183 ff.). Richard arrived at Acre (5th June 1191), which Guy de Lusignan had sat down to besiege (25th Aug. 1191) and Saladin to defend, both sides passing through the extreme of pestilence. Before Richard's arrival, Philip (15th July) was preceded by Philip (20th June), and on 3rd July a united assault was made on the town, which surrendered on the 12th of the same month. The quarrels of Philip and Richard were, however, of no importance, for interesting narration. For the events of the years 1187-9, see R. Röhrich, Beiträge z. Gesch. d. Kreuzz. i. 115-286.
disastrous, and, on 31st July, Philip set sail home. Richard with 100,000 men marched down the coast to Jaffa, protected by his fleet, and on 7th Sept. in person led the main body of the Crusaders on a great drive upon Saladin's capital, Cairo (good narrative in Itin. R. p. 259). After six weeks' delay in re-fortifying Jaffa, Richard twice marched within sight of Jerusalem (Jan. and June 1192), but was forced to fall back on Ascalon. In the meantime, Saladin had already made a moray treaty with his chief (good narrative in Itin. R. pp. 254-5) among the crusaders, and trouble at home (ib. p. 334), led Richard to come to terms with Saladin (2nd Sept.). The Christians were to retain the coast from Tyre to Jaffa, and to have an annual respite of three months thereon. On 10th Oct. 1192, Richard left Palestine. Such small successes as this Crusade had accomplished were wholly due to his marvellous skill and daring (of the latter the most remarkable illustration is in Ralph Coggeshall, Chron. Rolls Ser. 1875, pp. 41-51). On the death of Saladin at Damascus (14th March 1193) his dominions were divided, and the Christians obtained a respite, a great victory being won by Germain crusaders in 1197, which led to the recovery of the coast towns.

LITERATURE.—For Richard's Crusade the following are the chief sources. (1) The anonymous Itin. Roris Ricardi (ed. by W. Stubbs, Rolls Ser. 1875, 2 vols.), a 13th-century Latin old ascension (due to Galis's ed. 1087) to Geoffrey Villeain is incorrect. Stubbs (latrod. opt. cit. ii. 16) authorizes the authorship of the poem of the knight of the Holy Blood in Athens, where it was published 1230-50 (ib. l. ixx). It is now generally agreed that it was a false Chronicle, i.e. p. xviii. (12) It is a free Latin translation of a French poem of a Norman knight called Aimbroise, the minister of Richard (ed. by F. Liebermann and K. Pauli in Paris, 1855, 2 vols.; ed. Canisius, Lugd. 1868, 2 vols.; ed. Stubbs, in Rolls Ser., 2 vols. 1875-77). (1) Matthew of Paris (ed. H. E. Liard in Rolls Ser. 7 vols. 1872-83) and Ralph de Diceto (ed. Stubbs in Rolls Ser., 2 vols. 1875). (2) Two contemporaneous narratives: the anonymous Libellum de expugnatione Terrae Sanctae (printed, with the Chronicle of Ralph Coggeshall, in Rolls Ser., 2 vols. 1873, p. 334) and also in Martine (Ampliss. Coll. v. 344, 1719), and the crusader's journal (Stubbs, Itin. R., intro. p. xxviii) in Benedict of Petrobrughe's Gesta Henrici II. et Ric. I. (ed. Stubbs, in Rolls Ser. 1877). (4) The great Arabic work of Bohadam (Bahá-d-dm, b. 1146, d. 1214), the friend of Saladin (ed. Canisius, Lugd. 1855, 2 vols.) with much tr. under the title 'La Vie du Sultan Yusuf' (i.e. Saladin), in Recueil des hst. des croisades [Hist. crit.] iii. (Paris, 1846); see also Schulten, Leyden, 1732. The tr. of C. W. Wilson, published by the Palestine Pilgrims' Text Society (London, 1857), is said by Lane-Poole to be unsuccessful. (4) Of modern works, S. Lane-Poole, Saladin, New York, 1898, is of special value. Lane-Poole speaks in high terms of F. L. C. Martini's Hist. de Saladin, 2 vols. Paris, 1875. G. L. Schimmel, Renard de Chatillon, Paris, 1896, may also be consulted.

4. Fourth Crusade.—As the so-called Fourth Crusade, in spite of Innocent III.'s intention, never became at all, but was only a succession of attempts by the Latins to seize Constantinople and the Eastern Empire, for our present purpose it may be dismissed. Note should, however, be taken of the ancient hatred thus accentuated between Greek and Latin; of the evidence the Crusade affords of the fatal disunion between the Eastern and Western Churches, the existence of which was one great cause of the failure of the Crusades (cf. below, p. 339) of the indifference of the great trading nations of Italy, especially Venice, to all motives except gain; and of the terrible weakening in powers of defence of Constantinople which the Latin conquest and pillage (12th-13th Apr. 1204) and the subsequent Latin rule (1204-61) produced.

For the Crusade, see the Introd. to the Crusades, ed. by T. Ernoul, 1240) by Richard, earl of Cornwall, who had taken the cross at Winchester (June 1236), and Simon de Montfort. Richard reached Acre on 11th Oct. (Matt. Paris, iv. 71), and by purchase secured the release of many captives (ib. iv. 143-3). Nothing, however, was accomplished, and on 3rd May 1241 he returned home (ib. iv. 144). In 1243, by negotiation, Jerusalem was once more restored. But the calling in of the Emperor Frederick II. by his absence during his crusade against him, Frederick returned from Acre and landed at Brindisi (10th June 1229).

In August 1229, on the appeal of Gregory IX., an abortive French Crusade, under Theobald, king of Navarre, set sail from Marseilles; followed (June 1240) by Richard, earl of Cornwall, who had taken the cross at Winchester (June 1236), and Simon de Montfort. Richard reached Acre on 11th Oct. (Matt. Paris, iv. 71), and by purchase secured the release of many captives (ib. iv. 141-3). Nothing, however, was accomplished, and on 3rd May 1241 he returned home (ib. iv. 144). In 1243, by negotiation, Jerusalem was once more restored. But the calling in of the Emperor Frederick II. by his absence during his crusade against him, Frederick returned from Acre and landed at Brindisi (10th June 1229).

LITERATURE.—For the Fifth Crusade, in addition to Ernoul, we have as special sources: (1) James of Vitry, Hist. Hierosolimitanorum; (2) T. Ernoul, Collection of stories (ed. T. Ernoul, 1838, Eng. Hist. by Contemp. Writers' series). (The Crusaders' poems can be corrected by the works of the Abu-Salih (1100-1225), History of the Ababqs (the enemies of Saladin) and Al-Kamil, or the Perfection of History (both in Recueil [Hist. crit.], ii. l. Paris, 1573-57).

1. The treaty is hinted at by Ernoul (Recueil, ii. 250).

2. There is an Eng. tr. by A. Stewart, London, 1896.
6. Sixth Crusade.—The fall of Jerusalem before the Crusaders led St. Louis IX. to take the cross. He sailed from Aigues-Mortes (25th Aug. 1248) with 1800 ships and at least 50,000 men, wintered in Cyprus, and reached (5th June) Damietta, which the Saracens abandoned. After six months' delay the French pushed on towards Cairo, but were almost annihilated (8th Feb. 1249) at Mansurah (see Oman, op. cit. 519-520). Compelled to retreat, Louis was captured (15th Apr.-6th May 1250), but secured his freedom from the Mamluks by a ransom of 400,000 livres and the surrender of Damietta. About 12,000 French and Provençal soldiers, spoiled by the fortification of the seaports, Louis departed without having reached Jerusalem, arriving home 11th July 1254.

Literature.—For this Crusade, see the narrative of the eyewitness J. de Joinville, Histoire de St. Louis IX. (most convenient ed. is that of Natalis de Waddyl with Fr. tr. (1839, 1874), or the Parkes, ed. (1874)); for Frederick II., we have Richard de Germano, Cronica (1190-1243), in Muratori, op. cit. v. 1005-13; Fertz, MGH xiv. 225 E. Of modern writers, for the Crusade of Alexander II., see H. B. de la Rue, Die Kreuzzfahrt, Stettin (1879).—For the Crusade of Louis IX., see W. B. de la Rue, Gesch. d. franzöf. Kreuzz., Innsbruck, 1891, ch. 2. For Frederick II., see C. R. von Stein, Die Kreuzzfahrten, IV. (1872) (printed also in his Beiträge zur Gesch. d. Kreuzz., 1874).

7. Seventh Crusade.—In 1263 the sultan B¯bars (Beybars al-Bundukdh¯ar) of Egypt began the systematic conquest of Palestine (1264), capturing Acre (1265), Safad (1266), Jaffa (1268), and Antioch (12th June 1268). In July 1270, Louis IX., provoked by the loss of Antioch, set out from Aigues-Mortes with 30,000 troops, but was induced to turn aside to Tunis, in the siege of which he died (25th Aug. 1270). Edward of England (afterwards Edward I.) reached Tunis (9th Oct.), and, after wintering there, reached Acre (9th May 1271) just in time to save the city from the Muslims. Owing to his father's failing health, Edward was driven to patch up a ten years' truce, and return (14th Sept. 1272). Throughout his life he, however, cherished the hope of further Crusades. Meanwhile the growing quarrels of the Military Orders, and the rivalry of Genoa and Venice, and the desperate measures of the Crusaders, in the strip of the Latin kingdom still left—by the capture of Tripoli (1289), and finally of Acre (18th May 1291), when the massacre of 60,000 Christians closed the 'World's Debate.'

In the Crusades, as in the other Crusades, as the struggle between Muslim and Christian, may be said to have been continued by the slow conquest of Spain from the Moors, by the wars of Sigismund with the Turks (1296), by Muhammad II.'s capture of Constantinople (1453), by the great naval victory of Don John at Lepanto (1571), and of John Sobieski at Vienna (Sept. 1683). But all motive of rescue of the Holy Sepulchre, etc., was now lost, and the sole idea was political—to roll back the invasion of the Turks from Europe.

Literature.—For the Seventh Crusade, the expedition of St. Louis is in William de Nangis (ed. H. Gérard, 2 vols., Paris, 1828-29), and for Edward we have T. Carroll, ed. in Armorial Monastici (Rolls Ser.) ed. Lord, vol. iv. (1890); and the Chronicon of Walter Gisburn or Henningsburgh (ed. H. C. Hamilton, 1846, vol. i. pp. 237-377). For the siege of Acre see the anonymous ed. Excidium urbis Aconis, in Mariana, Amphilochus, Chronicon, 265-524; and Abé-Fidé's account in Recueil (Hist. Fr.) vol. i.

III. CAUSES OF FAILURE OF THE CRUSADES.—I. Lack of sea-power.—This applied especially to the early Crusades. The long march overland from Germany or France through Hungary, the Eastern Empire, then across the deserts and mountains of Asia Minor, would have tried the ability of Alexander or Napoleon at the head of their seasoned legions. It was fatal to Godfrey of Bouillon, and Louis IX., and, of course, to the undisciplined thousands who followed Walter the Penniless.1 But sea-power, Barbarossa might have won. On the field of battle the crusaders were irresistible. But entangled among mountains and deserts their numbers became their ruin. The lack of sea-power, the possession of which would have led to success, was the effect of a still deeper cause—sea-power in the Mediterranean, in the hands of the Greek-Orthodox, or of the cities of Italy—Venice, Genoa, and Pisa. Of these, Venice, once the subject, was now the ally of Constantinople (see Burn's note, Gibbon, vi. 381), and Genoa was too entirely intent on guarding her trade with the Crimea. The sea-power of England and North Europe was used advantageously at Jaffa in 1102 and 1107, but was not available for the transport of the Continental crusaders. After the First Crusade the West woke up to the advantages of a sea-power. But the Greek Empire had now become bitterly antagonistic to all Crusades (see below, § 2), and so sea-power was denied by the Greeks and Venetians, except on exorbitant terms (cf. above, 'Fourth Crusade').

2. The division of Christendom.—But the chief cause of failure was undoubtedly the disunion of the crusaders, and the deep hatred between the Greek and Latin Churches. A united Christendom would have been invincible; it is now dispirited by its own divisions. The disunion was of a double nature—national and religious. Of the national dissensions the Third Crusade will serve as an example; or, better, the fact that at Acre, when the Greek was 'sick', there were more than seventeen independent commands. From the first the Crusades were a French rather than a German movement; and the Germans—the Empire, in fact—in consequence did little. Of the religious dissensions—largely also national—the antagonism between the Greek and Latin Churches and Empires was even more fatal. The Greeks after the First Crusade rarely did anything to assist the Crusaders, and often secretly thwarted them.

3. The bad organization of the Latin kingdom.—The conquests achieved by the First Crusade were organized on a feudal basis. Latin in character, by over-taxation and intolerance it hopelessly estranged the natives (H. G. Frucht, Kulturgesch. d. Kreuzz., p. 167), especially the native Churches (Nestorians, etc.). There is some evidence that Jerusalem was betrayed to Saladin by Christian Melchites (Recueil, ii. 85 n.). One result of the feudal system, when worked in connexion with a country of inhospitable climate, and in the climate of cross-country warfare, was the number of lieutenants, and, in consequence, of disputed and changing successions.2 The only sound element in the country in this matter was the organization of the Military Orders, with their constant succession of new blood from Europe.

IV. RESULTS OF THE CRUSADES.—I. Political.

—The immediate political effects have been dealt with under the several Crusades. Other consequences were:

(1) Increased importance of the Papacy, as the embodiment of the unity of Christendom, and the leader in the call to war, in spite of the fact that Urban II. (2) In his sermons left out those great ideas of military method and political-eclesiastical conquest upon which Gregory had impressed the stamp of his character. But the crusaders were the soldiers of the Pope, who, from his papacy began to re-establish the power of the Papal collars. The increased importance attached to

1 Oman (op. cit. 283) points out the geographical ignorance shown in these land routes.
indulgences through the Crusades, and the effect on the Papacy must not be overlooked. How completely the Papacy was identified with the conception of Crusades is seen in the disastrous extension of the idea to all the wars engineered or encouraged by the Papacy against its enemies, e.g., the armies of Frederick, and Manfred, or against the Hussites. In the long run this power of inaugurating a Crusade told by its misuse against the Papacy, and was one cause of its fall.

(2) 

Weakness of the Eastern Empire.—Unfortunately, the Western influence, especially after the fall of the Third Crusade, was the weakening of Constantinople,—this altogether apart from the fatal Fourth Crusade,—and thus of the barrier of Europe against the Muslim (see Pears, op. cit. ch. 2). Among the dominant assets of the Byzantine Empire, especially in the commercial field, the great ship-plaques at an early but unknown date.† On the institution of the Templars the hospital was turned into a Military Order. (b) The famous Order of the Temple was instituted about 1118. But its real status was not until Bernard the Stoudite of Troyes (Jan. 1128) lent it his advocacy. To Bernard was assigned the composition of its Rule, the greater part of which, however, is by a later hand.‡

(c) The Teutonic Order of Knights was founded in 1101 at the same time, but Crusading importance for European history by its conquest of Prussia from the heathen must not be forgotten. (d) There was a fourth Order, Knights of St. Thomas of Acre, of interest as almost purely English.†

1 The expenses of the crusaders led to the sale of estates, advowsons, town-rights, manorial rights, etc., to merchants, beggars, and others; and so to the growth of liberty. The sales to the Jews led by reaction to an outbreak against them (W. Cunningham, Growth of Eng. Industry and Commerce, vol. i. [5th ed., Cambridge, 1910] p. 265). In commerce we see the opening up of the East to the West (H. G. Prinz, Kulturgesch. d. Kreuzzugs, 1. A. 1897). For Venice and maritime trade (Cunningham, op. cit. 147, 198). As the monks did not go on crusade, the sales of estates ministered much to their wealth, and to that of the Church generally.

(2) 

Introduction of Aristotle to Europe.—The conquest of the East by Venice and the Fourth Crusade (Cunningham, op. cit. 147, 198). As the monks did not go on crusade, the sales of estates ministered much to their wealth, and to that of the Church generally.

(3) 

Theological.—Through the realization of the sufferings of the Saviour—powerfully aided by the Crusades the Saviour, 'Salvator caput cruciatum'—the idea of the historical but dying Jesus was formed side by side with the growing mediaval conception of the sacramental and eternal Christ. 'The primitive Christian intuitions were restored. The sacred places stirred the imagination, and led it to the Christ of the Gospels' (Harnack, Hist. Dogm., Eng. tr. vi. [1890] 9).

Literate—Original Sources.—The particular sources for the several Crusades have already been noted under each. It remains to add the more general works. The best work covering the whole period is William of Tyre. His intimate acquaintance with Palestine was supplemented by a knowledge of Marcellus' Hist. rerum gestarum transmittit gestarum (Recueil [Hist. occid.], i. [1844] is one of the great works of medieval history, and should be studied even by those who cannot afford to read it, of which there are many. The basis is of all histories dealing with the Crusades. Book 6, (to 1144) are indebted to earlier writers, esp. Albert of Aachen; XVI., xxi. (to 1160) is the only original observation in French by Ernoul, who was present at the battle of Hattin and the capitulation of Jerusalem, down to 1229. In the same history from 1099-1100 was found in Recueil [Hist. occid., i. 1988]

Modern Authorities.—Special monographs, including the valuable works of Hageney and Rohr, have been published under the general title of Crusades. The following may be noted: E. Gibbon (ed. Eury [new ed. in prep. 1911], with apparatus and corrections, and in the new edition of the work is valuable for the first Crusade, poor for the others, and misleading for the Fourth, on which, however, the main stress is correctly, and is full and good. As the general reader is T. A. Archer and C. L. Kingsford, The Crusades, London, 1898, but without notes. Complete surveys are found in Eng. by J. King, G. and the new ed. of the latter, London, 1899, and B. B., and the new ed. of the latter, Paris, 1899, and B. B., and a useful summary of the same year by L. Brehier, L'Essai et le moyen âge, Paris, 1917. The oldest and still the most important for European history by its conquest of Prussia from the heathen must not be forgotten. (d) There was a fourth Order, Knights of St. Thomas of Acre, of interest as almost purely English.†

CRYSTAL-GAZING

not he or she has the faculty of seeing 'crystal visions.' The gaze should not be prolonged when the eye is looking for眼前的, or if it in a sense of soundness appears to be approaching. Solitude is here recommended, because the mind, though it may follow any train of thought, is not the better, in the experiment, for the irresponsible chatter of the frivolous. In the present writer's experience, it is very rare to find anyone who has the leisure and the resolution to make solitary experiments of the duration of ten minutes on four or five occasions. None the less, in spite of the scarcity of time, and the insatiable demands of society, it is now admitted, even by a number of orthodox students of experimental psychology, that hallucinations of sight really are provoked in some sane and honourable and educated persons, by gazing into a clear glass in the sun. These people see 'crystal visions' representing persons, events, and places, known or unknown, familiar or unfamiliar, to the gazer, and not summoned up by any conscious attempt to 'visualize.'

This set of facts is quite as certainly authentic as the coloured visions of arithmetic figures, which, as Sir F. Galton has convinced science, arise before the 'mind's eye' of many persons on the mention of numbers. In both cases, so far, the 'visions' are limited only by the numbers and personal character of the 'seers.'

A third kind of visionary experience is perhaps less common than we might suppose. Many persons are unacquainted with illusions hypnagogiques—distorted visions of faces, places, persons, and landscapes, usually unfamiliar, which flit before the closed eyes in moments between sleeping and waking. These pictures, like those of crystal vision, come unsummoned, and often repeat or persist, for which we do not remember ever to have seen. People who have no experience of these illusions are apt to disbelieve that other people have it. In short, all kinds of experiences of visions of numbers, of the mind's eye, illusions hypnagogiques, and crystal visions—are 'automatisms,' and are not produced by the action of the conscious intelligence.

Before the experiments of the Society for Psychological Research, in the epoch of 1890-1910, most persons believed that the faculty for seeing such hallucinations was a mere faculty of romance-writers, or a delusion of peasants. But, when many experiments had made it certain that the faculty is not so rare among members of both sexes, young or old, in all ranks and all degrees of education, attention was drawn to the use of crystal-gazing in many ages and lands as a form of divination. It was found that the pictures seen by the 'seer,' or gazer, were supposed to be sent by spirits, and to indicate events distant in space or destined to occur in the future; or they revealed persons guilty of theft or other crimes. Thus crystal-gazing got a bad name, and was associated with invocation of evil spirits, and even now the average man or woman thinks crystal-gazing synonymous with divination. 'Tell me what horse will win the Derby,' says the average man, 'and if you succeed I'll give you a thousand.' Another criticism is, 'What is the use of it?' Savage peoples, almost everywhere, and the people of Greece, Rome, Egypt, the subjects of the Incas in South America, and the magicians of the Middle Ages and later thought they found the 'use of it' to be the gaining of knowledge not accessible by any normal means.

Thus, in Polynesia, when any object has been stolen, the priest, after praying, has a hole dug in the floor of the house and filled with water. Then he gazed into the water, on which the god is supposed to place the spirit of the thief. 'The image of the spirit ... was, according to their account, reflected in the water, and being perceived by the priest, he named the individual, or the persons, who had committed the theft.' 1

1 From Lejeune, S.J., 1849, who has described the use of it.

In ancient times, and for at least a thousand years, the Indians of the New World were accustomed to invoke the spirits of the dead by means of visions, which, according to the belief of the tribes, were caused by the taking of lichens, or crystals or polished stones. 6

It is manifest, then, that the production of visual hallucinations by various modes of crystal-gazing is of world-wide diffusion and unknown antiquity; and that the 'use' of the practice has been the discovery of knowledge not ordinarily new to man, though knowledge of the future has not perhaps been much sought in this fashion, except in modern Europe, and in a well-known anecdote of the Régent d’Orléans told by Saint Simon.

Miss Goodrich, who may already have been cited, was (after W. Gregory [Animal Magnetism, London, 1851], and H. Mayo [Truths in Popular Superstitions, Frankfurt, 1849]) the first author to examine seriously the question of crystal-gazing. She herself performed experiments, and published the phenomena she observed in her own experience. She found that the visions represented (1) lost memories which thus arose into her upper consciousness; (2) ideas or images which might or might not be present in her normal consciousness; (3) visions, possibly telepathic or clairvoyant, implying acquisition of knowledge 'by supernatural means.' The examples of this last class which the author gave were not very striking; but the present writer has known her to have been far more successful.

It has been the writer's fortune to meet a large number of very normal persons of both sexes, and often of high intelligence and education, who, in making experiments upon them, exhibited the faculty in various degrees. In its lowest form figures of persons and objects were seen in black and white; not in the colours of nature. Letters in the printed Roman alphabet were also seen; but now and then the beholding of figures in the costumes of various nations, engaged in various ways, some of them romantic; in other cases they appear to represent some unknown incident in history. Personages known or unknown to the gazer very frequently occur. The figures, wearing the colours of nature, move about in a free natural way, and often remain long in view, even when the crystal, after being laid down, has been taken up again. In some well-attested cases two persons see the same vision simultaneously, or one after the other. But, in the second category, the writer has only once known the vision—novel to the gazer—to be fitted later with a real objective counterpart, discovered

6 De Flacourt, Hist. de Madagascar, Paris, 1691, ch. 76.

accidentally. What he saw actually existed in all its details, unknown to him and to the writer, who was looking on at the experiment, made in his smoking-room. In 1897, the writer met at St. Andrews a young lady who was visiting the place for the most countries and had heard saying she was a crystal-gazer. Being presented with a glass ball, she made a number of experiments. The method was that any one who pleased (and all were but very recent acquaintances of the gazer) thought of anything or anybody that he or she chose. The lady then looked into the glass ball and described what she saw. A dozen cases of her success (which included seeing persons unheard of by her, in places unknown to her, persons dressed and occupied as infancy might say that they had been clad and engaged at, or shortly before, the hour of the experiments) are published in the writer's The Making of Religion, pp. 90-112, from signed and attested recollections. Many other successful cases are known to the writer, and many of the writer's experiments already mentioned, it very rarely occurred that the gazer saw nothing, or something not consciously present either to the sitter's mind, or not by the giver of the crystal gazer of a spectator-looker-on, not the sitter. It hardly be the cause of such occurrences, they illustrate the casual and incautious quality of that agency. For example, in some experiments a lady in the sitter's presence has seen burial-places of evidences belonging to a gazer, who had never heard of her, in the north of Scotland. The message, of a very simple kind, did not arrive; what arrived was a vivid picture of certain singular incidents of a private nature which had much impressed the distant communicator, but which she had no intention of transmitting. As fortuitous coincidence could not explain so many successes in the experiments of 1897—the crystal pictures being full of minute details—the writer was unable to resist to transmit telepathy as usually defined, was at work. Many other curious examples of the possession of the faculty, apparently accompanied by telepathy, have occurred in experiments by friends and kinsmen of the writer, healthy, normal men and women. The gazers have never shown any traces of drowsiness or dissociation, or even any tendency to form theories about their experiences, except in one instance, when experiments designed the theory. In the writer's opinion experiments of the kind described are more trustworthy than investigations into the hallucinations of professional and trained female hysterical patients in French hospitals. Pierre Janet has published such experiments with professional neurotics at the Salpêtrière in his Névroses et idées fixes (Paris, 1898). His account of the experiences of Miss Goodrich Freer in her paper, already cited, is of the most fantastic character, as becoming manifest when her narrative is compared with the document which, in addition to his own imagination, is his source. In affairs of this sort few people who have not personal experience of unaccountable successes can be expected to believe in them; while few who have been present at such successes, and have had their own thoughts read (of course without physical contact—"nurse-reading"—between the sitter and the crystal-gazer), can persist in scepticism. It is plain that in most countries and ages crystal-gazing in one form or another has been practised, and successes would greatly increase the hold of priest, or witch, or medicine-man, over his patrons. Fraud would doubtless be made use of, wherever it was possible; knowledge normally acquired would be presented as of supernatural origin. When fraud is excluded, successful crystal-gazing offers a problem even more difficult than success with other automatisms such as the so-called "divining-rod" and the tilting table. These automatisms appear to present to the normal consciousness knowledge within the range of the sub-conscious mind, though we cannot tell how the sub-conscious mind in many cases obtains its information.

LITERATURE.—As this subject has attracted attention only in recent years, the literature of it is very scanty, and most of it has been cited by Miss Goodrich Freer (as "Miss X") in Proceedings of the Society for Psychical Research, vol. iv., pp. 306-315, vol. viii, pp. 456-462, that reference should also be made to A. Lang, F. R. G. S., "Psychical Research," vii. 1897, and to his later editions, pp. 90-131; N. W. Thomas, Crystal-gazing, its History and Practice, London, 1896; E. W. Lane, Modern Egyptology, London, 1905; Le Handle, Commentaire, Paris, 1841; F. W. H. Myers, Human Personality, London, 1903.

CUCHULAINN CYCLE.—I. Cuchulainn, the chief hero of the Ulster cycle of romance, is regarded as a re-incarnation, or ascetic, of Lug Lainfhata, "the long-handed," the solar deity of the ancient Irish; he is considered in his birth-stories sometimes as son of Lug, sometimes as Lug himself re-born. His mother was Deichtir, sister of King Conor (Cnocbhabhar) of Ulster; and she and forty young maidens, her companions, were transformed into a flock of birds that disappeared for three years from the king's court, and were found in the neighbourhood of Brugh on the Boyne, where are tumuli traditionally believed to be the sepulchres of Deichtir and her companions. Here Deichtir gave birth to a babe; in one version of the tale it is revealed to Deichtir by Lug that he himself is her little child (i.e. that the child is a re-incarnation of himself); in another, Lug is the noble young warrior whom she has produced. The idea of re-incarnation is not unfamiliar in Irish literature. In the tale called "The Wooling of Emer" it is stated that the men of Ulster wished to provide a wife for a hero, knowing that his re-birth would be of himself, i.e. that only from himself could another such as he have origin; and in the tale of "The Generation of the Swions," which explains the origin of the Bulls who take part in the great mythological warfare of the Tain Bo Cuailnge, we find that these prodigious kine have gone through a series of incarnations before their final appearance as bulls.

Throughout his career, Cuchulainn is watched over by his divine kinsearch, Lug, and he points proudly to his connexion with Lug when questioned as to his origin. He has also a father, Sualtach or Sualltan (variously spelt Sualtainn, Soolta, etc.), to whom, according to one of the birth-stories, Deichtir was married by King Conor after her connexion with Lug. The stories are, however, confused, and there are suggestions in one of them of an incestuous connexion between Deichtir and her brother the king himself. The child is named Seianta by Lug's command. Little is known of Sualtach; though usually regarded as a human being, he is more than once called in Old Irish literature Sualtach sidi or Sualltan sidhe, i.e. "Sualltan of the fairy haunts"; and he is spoken of as possessing through his mother, who was an elf woman, the magical might of an elf (cf. Book of Leinster [LL], S. 24; Cuir Annmann, Tr. Texts, iii. sect. 282). Like all the personages of the cycle, he is clearly regarded as a mythological being. His name has become curiously mingled with the genealogies of Finn mac Cumhail (cf. Brit. Mus. MS Egerton, 1782, in which he appears as Finn's grandfather). In the Tain Bo Cuailnge he comes to his son's aid when he is exhausted by the labours of the war, and the battle of Bricriu; for his aid assistance. He is there called "Sualltan or Sualltan, son of Bealtach (Becofaltach) mac Mordaltach, father of Cuchulainn mac Sualltan" (LL. 938). He was killed by falling accidentally upon the rim of his own shield.

Although Cuchulainn is the prime hero of Ulster, and his feats of heroism are performed and his wars undertaken in defence of that province, he is
CUCHULAINN CYCLE

nevertheless said in MS Harl. 5280, fol. 53 B. (P. Mus.) not 'to belong to Ulster' and when the whole of the male inhabitants of that province were overtaken by the physical weakness which reared among them at intervals, and which seems to have been the result of some sort of geis, or 'tuban', Cuchulainn and his family vanished without a trace and able to fight. Though usually and officially described as of splendid appearance and with ruddy and golden hair, Cuchulainn is sometimes spoken of as 'a dark sad man' ('Wooing of Elenne, [Annals Co. L. 793]), or 'a black-browed man' (Mesca Ulad, p. 29), which would not suggest descent from the Ultonians; in connexion with Cuchulainn's original name, Setanta, Rhiys points out that there was a district between the Mersey and Morecambe Bay then inhabited by a people called Setantii, and refers to Ptolemy's mention (II. iii. 2) of a harbour of the Setantii, the position of which corresponds with the mouth of the Rib (Ctes. Heopt. 435 and note). An obscure Irish poem relating to Cuchulainn alludes to a Setantian stream (curoch fri sruth Setinti, 'a cornade against the stream of Setanta') (Leabhar na hUidhre [L.U. 1256]).

Cuchulainn's precocity is abnormal; already at the age of seven years he performs his first feats, and can fight with and destroy warriors of renown; his lengthened war of the Tain Bo Cuailnge, sustained single-handed in defence of Ulster, was the climax of the combined efforts of Munster, Leinster, and Connaught, and continued during an entire winter, from before Samhain, or Halloween (Oct. 31st), till after St. Bridget's Festival (Feb. 1), is represented as having taken place when the hero was only seventeen and still a boy, and he is said to have died at the age of twenty-seven (Ann. Tighernach). Among his feats performed when he was a mere child is that from which he received his heroic title of Cuchulainn. (Cf. gloss Lic.) Baco was a title often bestowed to denote a hero of renown, in reference to the use of large hounds in battle and the bravery shown by them. Cuchulainn says of himself: 'I was a bound strong for combat, I was a bound who is near to the troops, I was a bound to guard Emain.'

He received this name from his combat with a fierce dog; said to have been brought from Spain (gloss in Lic.), which guarded the fort of Cualnge, smith of Ulster, and which was slain by the boy when he was scarcely six years old. The child himself took the office of the watch-dog until one of the dog's whelps was sufficiently grown to replace him. Henceforth the name of Connaught, 'Hound of Cualnge,' clung to him.

It is said in Mesca Ulad that a district extending from Usnech in Meath northward along the coast to Dún Diubh (Downland), and called Cosaille Muirthime and Ciúlaing, belonged personally to Cuchulainn (Todd Lecture Series, 1888, i. 2). It embraced the present county of Louth and parts of Meath and Westmeath. At that time the province of Meath, with its overkingship of Tara, had not come into existence, and Ulster extended southwestward to the province of Leinster and Munster at the Hill of Usnech in Westmeath. Thus Cuchulainn was owed on the hero by king Conor, and was not by his inheritance, but Cuchulainn's own forte was Dún Diubh (now Dundalk).

His wife was Euchar, daughter of Forgall the Wily, a landowner near Lusk, in the present county of Dublin. A special tale relates his wooing of Euchar. Though she appears to have been his only real wife, she had numerous mistresses, of whom the most formidable was Fand, wife of Manannán mac Lir, a goddess who jealously guarded the treasures of the man of the sea into which he was transformed.

3. The Red Branch.—Cuchulainn is the central figure of a group of champions commonly known as the 'Champions of the Red Branch,' so called from one of the three halls in the kingly palace of Emain Macha or Emain (now Navan Fort, S.W. of Armagh), which is reckoned to be the present day.

The history and feats of these heroes are described in a series of over a hundred distinct tales. There are, besides these longer tales, numerous detached episodes which fill up gaps, so that the career of each hero of importance can be traced from birth to death in a very complete manner. They form a connected whole in the mind of the story-teller and reader, much as the originally isolated tales referring to each of the Ulstermen and Súilchenn were, and I hope to form it into a complete cycle of stories. The three most prominent champions, who are frequently exposed to tests of strength or prowess against each other, are Conall gorm, the Victorians, and Cuchulainn; but Cuchulainn invariably proves himself to be the greatest hero of the three.

These tales seem to have originated in, and deal largely with, that eastern portion of Ulster which was evidently a late one and is west and the sea on the east. The capital was Emain Macha, and within this area lay the forts and dwelling-places of most of the chief heroes of the Ulster cycle. The king who appears in the tales as associated with these heroes is Aileach, Later Conchobhair, and his death is synchronized with that of our Lord in Jerusalem. The reign of Conchobhair and the exploits of the heroes are thus traditionally laid in the first century. Though King Conchobhair and all the characters are associated by R. O'Flaherty (Ogygia, Dublin, 1793, pt. iii. c. xlvii.—xlviii) as historical personages, there is no place found for them in the Annals, though Conchobhair, who is variously described as Fingiach, of Fachtna fathach, 'the Wise,' who, according to the Annals of the Four Masters, ascended the throne of Ulster in the year of the world 5042 (152 B.C.).

The entry runs:—'A.M. 5042, The first year of Fachtna fathach in the sovereignty of Ireland;' and fifteen years later we have the entry of his death: 'A.M. 5057. Fachtna fathach, son of Rossa, of Rondheigh, after which the sovereignty of Ireland, was slain by Eochaid fheidheach (i.e. the constant sithing).

But this attempt to connect king Conchobhair with a king of all Ireland was evidently a late one, and is the least to be taken into account as there is no sign in these tales that the central province of Meath, with its capital at Tara, had at this time been erected into a separate division, or that any other kings called Ireland Aileach, or High King, had as yet reigned over Ireland. Ulster is represented as haughtily independent, and each of the other provinces had its own king, who acted with perfect freedom independently of any central authority. The province of Connaught, or 'Four Great Kingdoms' were, at the time of which we speak, Ulster, Leinster, Connaught, and East and West Munster, Meath, the future central royal province, created for the support of the High Kings of Ireland who ruled from Tara did not then exist. Nor, considering that Fachtna died 137 B.C., could he have been father to Conchobhair, who reigned in the beginning of the 1st century. Another and probably older version makes king Conchobhair son to the druid and poet Cauthach by Nessa his wife, a woman warrior.

Though Conchobhair's death is synchronized with the moment of our Lord's crucifixion, the Annals of Tighernach date his death at 45 B.C. O'Flaherty, probably guessing some of these obscure sesticies, says that 'the king came near committing suicide, but lived fifteen years after.'

We may regard these attempts to fit the career of king Conchobhair and of the Champions of the Red Branch cycle into the actual history of Ireland in much the same light as the connexion of the heroes of the Nibelungen with the early history of the Teutonic peoples or of king Arthur in the Arthurian history of Britain. The tales sprang up at a time when the power of eastern Ulster was still a living tradition among the literary class in Ireland. The raths at many of the sites of the traditional forts, such as Erne, which have been named, is now dwelling in Ulster, and Rath Cruachan or Rathcroghan (Co. Roscommon), the fortress of Queen...
Meave of Connought, show that the legends were connected with known historical sites, but it is unnecessary on that account to consider the actual personages of the cycle or their correct historical placement. They are primarily regarded as mythological, and the chief events and wars in which they were engaged bear a mythological interpretation.

The tales have a close relationship to the legends of the race of gods known as the Tuatha Dé Danann; a few of them, indeed, both in style and subject, belong equally to both cycles. Such are 'The Wooing of Etain' and 'The Dispute of the Swineherds.' The pedigrees of the heroes of the Romances furnish the materials of the Tuatha Dé Danann, although, according to the Annals, there is a lapse of 1500 years between the two epochs. Rudhragh, or Rory, is the head of the house, and from him and from the goddess Maga, daughter of Angus na Bragh, by her marriage with Rury, come the Tuatha Dé Danann, the Red, and Cathbad the druid, all the chief heroes are descended (see genealogies in E. Hull's Cucullin Saga, Intro. p. Iv). The extraordinary feats and prowess of the champions are not a little enhanced by the placing of the Tuatha Dé Danann in the Isle of Man, and denies the statement that he 'was not of Ulster.' His father, the Hurrai, was merely an effort of the story-tellers to explain what they could not otherwise understand, viz. why Cúchulainn and his mortal father Sualtach or Sualtam were exempt from the curse which proscribed the whole male population of Ulster in sickness at a critical moment in the history of their province.

4. Cúchulainn as a sun-hero.—Cúchulainn was therefore, on the one side, directly connected with Lug, the sun-god, and, on the maternal side, with Maga, a Tuatha Dé Danann goddess. King Conor also is called a den talamde, or terrestrial god, in LU 1016; and Dechtire, his sister, the mother of Cúchulainn, is called a goddess: Cúchulainn son of den Dechtire, 'the son of the goddess Dechtire' (LL 125b).

The two marvellous Bulls for the possession of which the great war of the Tain Bó Cuailnge was undertaken and fought by the Ulstermen and the Connachtmen, and had existed under many different forms before they were re-born as bulls; they had been first swineherds of the gods of the under world, then ravens, warriors, sea-monsters, and insects. Under each of them the full sunshine of the past period of time; out of them they had come after a terrific struggle which shook the borders of Ireland, only to pass again through some new transformation (Irish Texte, III. i. 230-278). These struggles proved to be preludes to the war of the Tain, in which all Ireland was destined to engage, and to the gigantic struggle at its close between the two Bulls themselves, in which both were torn to pieces. The mythological warfare of these Bulls, the Fionn bennach, or 'White horned,' and the Dorn, or 'Dark' or 'Brown Bull,' belonging respectively to the East and West of Ireland (Cuilnge in Co. Down, and Rath Cruachan in Connaught), seems to symbolize the struggle between summer and winter or the struggle probably in day and night. The Dorn is a terrific creature in strength and in size. On his back fifty little boys could play their games. He moves about accompanied by fifteen (or fifty) heifers. His ferocity and violence are so great that, when he is driven into a narrow pass, he revenges himself by trampling his keeper to death and treading his body thirty feet into the earth. His bellowings strike terror into all who hear him, and those who meet him after his final conflict with the Fionn bennach are trampled and gored to death. This conflict, which lasted a day and a night, and during which the Bulls traversed the whole of Ireland, was ended by the Dorn tearing his adversary and returning, head in air, to his native home in Cúchulainn's province. In his madness of his frenzy, he placed his back to a hillock and 'vomited his heart up through his mouth with black mountains of dark-red gore,' and so expired. In like manner Cúchulainn is in every way abnormal. His rapid development and his prodigious strength and powers are everywhere insisted upon. When he is about to perform any special prodigy of valour, his whole person expands and undergoes several transmutations; so, too, do the monstrous, terrible, so that his own friends cannot recognize him; he is known as 'The Distorted' (riatserthach), or 'The Madman' from Emain Maela. When he puts forth his strength, his appearance is so terrific that to behold him; his very look destroys his foes, not by two or three but by hundreds; a stream like dusky blood, representing his energy, rises upward from his forehead, and over his head his 'bird of valor' and runners (cf. the drooping of the leaves caused by Athene, ll. xvii. 205 (Lutcher-Lang's tr. p. 372 f.)). His body gives off a heat which melts the snow around him, or raises to boiling-point three vats of water in which he is successively plunged. Yet Cúchulainn is insensible to all pain and injury. He is frequently derided by his enemies for the boyness and insignificance of his usual appearance. Prime heroes, until they experience his hidden powers, refuse to fight with him; Queen Meave is visibly disappointed when she meets the figure of the champion who has been holding her forces at bay through weeks of combat, and killing them by the hundred merely by his look; on one occasion he has to blacken a moustache with blackberry juice in order to present a more manly appearance.

If we regard Cúchulainn as the sun-hero, these indications of his unimposing appearance at ordinary times, succeeded on occasions by strange distortions and manifestations, seem aptly to represent the impression which might be produced on the savage mind by the contrast between the orb of the sun on ordinary occasions and its appearance in eclipse or eclipse. The head of Cúchulainn has the threefold hues of his hair, and the account of his splendour when he appears before the forces of Meave to display his person in its natural beauty, seem designed to illustrate the glory of the sun. Indeed, the 'sun-hero' is often personified as the sun himself, generated in his person, the energy of his movements, his wandering habits, and the destructive power of his look. We may also note that 'blindness befell all women who loved him'—which may possibly have reference to the difficulty of gazing directly on the sun. It is possible that Cúchulainn's fight, from which he so hardly escaped, with the twenty-seven sons of Calatin, hideous and crooked beings, who formed armies out of puff-balls and out of the foliage of the oak, and came furiously riding on the 'wind's swift clouds,' may symbolize the hiding of the sun's face before the 'armies of the storm,' i.e. the massive clouds, formed, as it might seem, almost out of nothing. (Cf. a similar sort of incantation in the poems of the Cúchulainn cycle. Eren, 'ROD xxii. (1902); the 'Battle of Kat Goden,' Skene, Four Ane, Books of Wales, i. 277 f., ii. 138; and 'The Mabinogion of Math, son of Mathwen,' Lady C. Guest's Mab., Lond. 1877, p. 410.) A remarkable 'tablet, or gae, of Cúchulainn' was to 'see the horses of Manannán mac Lir' (i.e. the billows of the ocean-god), which might be a reference to the apparent extinction of the sun's rays when he sinks down at night beneath the ocean waves.

Cuchulainn possesses two magic steeds which rise out of the Grey Loch of Sneive Fhual and Loch Dubh Saingleann respectively, and which he tames by springing unawares upon their backs and wrestling with them. For a whole day they bear around the circuit of Ireland, the horses encouraging them to go lower and lower, till the minds of their riders are affected and they are obedient chariot-horses, a grey and a black, possibly symbolizing day and night. After his death they return into their respective lakes again (G. Henderson, Feast of Briocna, London, 1809, sec. 31, 32 [f])

5. The stories relating to Cuchulainn are of different ages, and often vary in different versions, the long tale of the Táin Bó Cuailnge, in particular, having come down to us in two (some critics would say many) forms—one set under the name of Conor Mais, the Táin Bó Cúalnge of Connacht (Ed. Codley), i.e. of Cuchulainn's country in Co. Louth and Down, and short stories describing the efforts of Queen Meave of Connacht to collect cattle and other property from Ulster. The former is characterized by the peculiarities of the epics and finally rises to that grandeur which makes it the_Táin Bó Cúalnge of Ulster_ (Ed. Conolly), giving a brief outline of the main epic. A brief outline of this composite tale is as follows:

The war was undertaken by the united provinces of Ireland, under the leadership of the Ancient Queen Meave (Meithe). Connacht, and the guidance of Fergus mac Ros (or Roe), a younger brother of Cuchulainn, who, after his birth was destined to possess, but which had been refused her. The romance takes the form of a number of separate episodes—usually combats undertaken by warriors from Meave's army contending with Cuchulainn, who, alone and single-handed, guards the borders of Ulster during the entire winter. The warriors and men of Ulster are all disabled from flight through a mysterious sickness brought upon them by the curse of Macha, one of the goddesses of war: and it is not until the close of the Táin that they arise from their lethargy and come down in force to fight the final battle. Meave is finally defeated and forced to flee into Connacht with her son Atholl, but the Bull, though captured by her and driven westward, finally goes to Bricriu's house, to the great distress of the latter. Meave is driven out of revenge, to lead the foe against her own people.

The main object of the war was the desire of the Ulstermen to take the capture of the Down, or Brown Bull of Cúalnge, which Meave desired to possess, but which had been refused her. The romance takes the form of a number of separate episodes—usually combats undertaken by warriors from Meave's army contending with Cuchulainn, who, alone and single-handed, guards the borders of Ulster during the entire winter. CULDEES

destroy them by persuading them to enter an iron house encased in wood, which had beneath it a subterranean chamber filled with inflammable materials (c.t. Ermen, daughter of Lir, in the Mahonethis, cit. to the Destruction of Deirg Righ, ed. Whitby Stokes in EcP iii.). The warriors escape by Cuchulain's impossible means, as he can apparently lift them out of the ground (Meana Udá, ed. W. M. Hennessy, Roy. Tr. Acad., Todd Lecture Series, i. London, 1859).

See further, E. H. Blair, CELTS AND ETHICS (Celtic).

LITERATURE.—A large number of the tales will be found with text and Eng. or Ger. tr. in Windisch-Stokes, Irische Texte, Leipzig, 1888 i., ii.; and in the Journal of the Royal Irish Academy, vol. xiv. A.D. 1866. H. O'Curry, in the Kilkenny Archery Journal, which contains some tales edited by O'Beirne Crowe; Proc. Royal Ir. Acad., Irish Series, vol. xi. 1889. The following are全文版的 sources, and lists them only as 'Irland.

The Tilis Beo Cuilthe, which has been from the Book of Leinster version by E. Windisch, with Germ. tr., Leipzig, 1906; text (only) of version by the Yellow Book of Lecan and Lethard on Beo Cuilthe, in Ern., vol. i. pts. 2 and 3, ed. by Strachan and O'Keefe, Dublin, 1901, etc.; tr. (only) from MS by W. O'Kelly, in The Celtic Raids of Cashel, London, 1901; Eng. tr. from Add. Ms 18748, Brit. Mus., by S. O’Grady in Eleanor Hull’s The Cuchulain Saga, London, 1885, 366 p.-227.

ELEANOR HULL.

CULDEES.—The Culdees belong to the later history of the ancient British Church (see art. CILDEES, vol. ii. p. 621), more especially in Ireland and Scotland. The mystery in which they were enveloped has been to a great degree removed through the researches of Dr. William Reeves, published as an Essay 'On the Célde, commonly called Culdees' (Trans. Roy. Ir. Acad. xxv. 1873). The term 'Culdees' has grown out of the form Cúchulainn, first coined by Hector Boece in his Scotorum Historiarum, 1526 (for word 'Culdees', see O'Dr., etc.). The name of the Irish name corresponds with the probably Irish origin of the Culdees. The primary meaning of the common word céile is 'companion', from which secondary meanings are derived, such as 'husband', 'sacred Céile', 'Céile Coire', or Cùchulainn, found in the texts of the old heroic tales of Ireland, mean 'faithful follower or personal attendant of Conchobhar, or Cúchulainn' (see H. Zimmer, Celtic Church, Eng. tr., London, 1902, p. 289 ff.). This, therefore, will mean 'companion or faithful servant of God.'

The special difficulty is to account for the restriction of a term having this meaning, and obviously applicable to all monks and anchorites as servants of God, to the institution only this is found.

There is no mention of the céile de in the historians Adamnan, Cumin, Eddi, or Bede; and the inference is that the use of the term was unknown to them. Reeves says we may safely regard céile de as meaning 'a member of the Order de,' which came to be an ordinary term in Church writers for monks, and became known to the Irish through the writings of Gregory the Great, who was a favourable author in Ireland. Scène (Celtic Scott. iv. 1905) endorses this view to prove that Dalcud had the express meaning of an 'anchorite, that the céile de were anchorites, and consequently

that the Irish name was the direct derivation of Deicolae or Cúilede. The objection to both of these theories is the specialized use of the term céile de; had it been applicable to monks and anchorites, why is it only found in the pages of the 8th cent. historians, whose concern was with a monastic Church?

There is no contemporary account preserved of the rise of the Culdees, or sources are incidental and of late date.1 According to the Books of Leinster and Lismore, St. Moling, who founded the monastery of Tech Moling in County Carlow, entered a society of Culdees. He died c. A.D. 700; and, if we credit the Culdees, we have in St. Mocheods, among the earliest whose names are on record. In the manner of the Iro-Scottish Church, the Culdees societies were often composed of thirteen members—the Prior, or Head (O'Beó), or Abbot, with twelve others, on the analogy of Cîthreid and his disciples. In very late times we find in Armagh a Prior and nine brethren (probably a diminution in number, due to hostile pressure).

The Culdees, throughout their history, are connected with the CéliDé of the Celts, their analogous civilization, in spite of some evidence the mere mention of the name in the charterology of a monastery. At first taking the marks of anchorites, they gradually take on the appearance of secular canons. The Rule of Maelbran, or the Rule of the Cæled (Cúile de), here begins the Rule of the Cæle de. It is preserved in the Leabhar Bracan. As it stands, its orthography and grammar prove it to be centuries later than the 8th cent., but its original may go back to Macluir's or Mell. Canons (see i. A.D. 747), Chrodegang composed at Metz the Rule which formed his clergy into canons; and this Rule may have been brought into Ireland from Irish establishments on the Continent, such as Hosian in Cluni. The Culdees certainly develop the appearance of secular canons; we find them filling a subordinate 'Levitical' position in cathedral establishments, chiefly engaged in the choral parts of the worship; they became especially known also with charitable care of the sick and poor, and the distribution of alms. The latter seems to have been one of their earliest and most characteristic traits.2 The endowments for these purposes may have proved a means of their later acceptance. Their affinity to the regular monastics enabled the latter, with the support of powerful patrons, to outstrip them from their positions. Finally, they disappeared; in St. Andrews, e.g., they are named for the last time in 1532.

The only mention of the Culdees in England is in connexion with Athelstan's visit to York in A.D. 936 (Codicel); there is also a possible reference in the cultes clerici of a Privilege by King Ethelred granted to Canterbury (Cotton MSS). In Wales they presumably appear once in a reference by Giraldus Cambrensis to the 'Corieles vel Culdeies' of the Isle of Bardsey in the 12th cent. (Gir. camb. vol. iv. p. 124, Rolls Series).

Reeves sees in the Culdees the disapppearing Celtic Church; the Culdees are the drooping remnant in which that ancient Church finally succumbs. The present writer prefers to see in them not an inert residue, but a renaissance, a burst into flame of the ancient Church spirit, stimu-

1 The earliest known instance of the combination céile de; (though not in its technical sense of 'Cúchulainn') is in the gloss to the commentary on the Psalms ascribed to Columban of Bobbio, preserved in the Old Irish Cod. Mediolanensis (about 900 A.D., ed. Aedon, Codices Irlandiaci dell. Antiquins, Rome, 1575, vol. 30 c. p. 39). Here the text, exist (lit. 'cúile de' is first explained as equivalent to 'iste ad illum pertinert,' and then glossed: 'natural equivalent is cerc de uile de ríman.' It is said, "This man is a servant of God.")

2 You Flinn-Hartung (the 'Dichter' in Ziehr, f. Kirchen- geschichten, xiv. 1895) previously said that the 'céile de' is a boy; dui is for the older duit, genitive of dus, modern Welsh dwin, 'God.'
CULT, CULTUS.—See Religion, Worship.

CULTURE.—To Bacon the world is indebted for the term, as well as for the philosophy of, culture (Adv. of Learning, 1605). While the term itself the notion of culture may be broad enough to express all forms of spiritual life in man,—intellectual, religious, ethical,—it is best understood intensively, as humanity's effort to assert its inner and independence. This effort is observed in a series of contrasts, due to the division of man's functions into intellectual and activist. The most general contrast is that between nature and spirit, with its dualism of animality and humanity. With the development, man is led to life a life of contemplation rather than one of conquest, while his attention is directed towards the remote rather than towards the immediate. Viewed socially, culture is conceived with intensively ethereal, the two differing in their valuation of work. From the social standpoint, again, the culturist inclines towards egoism, as in a 'culte du moi' (Maurice Barrès), instead of altruism. In estimating the value of culture, the culturist selects the eudaimonistic: one is asked whether the life of thinking or the life of doing is better calculated to give man happiness, or to satisfy the desires of the soul.

The treatment of the culture-problem is to be conducted in connection with the culture-consciousness of an individual or a nation, rather than by means of any objective memorial, like an order of architecture, a type of sculpture, or a school of poetry or painting. Such an inverting method is qualified to express the essence of Classicism and Romanticism,—the two types of Western culture-activity,—just as it is sufficient to discern the culture-motive in a man of genius, like Michelangelo or Goethe. The idea of culture seeks its depiction in the relationships of the strivings and ideals of a favoured nation and a gifted soul.

1. HISTORY OF CULTURE-CONSCIOUSNESS.—Not until the dawn of modern times was the supremacy of intellect called in question, or the practice of culture raised. Brähmanism postulated enlightenment as the means of salvation; Paganism looked to the intellect to give man happiness; Scholasticism pledged its belief in conceptual doctrines to the infallible word of the Old Testament. Bacon inquired much study and the endless making of books, in the fear that the increase of knowledge was the increase of sorrow (Ec 1:9), while Stoicism sought to turn from dialectics to ethics. The unique character of culture laid the foundation of modern times before it directly repudiated its intellectual life. Although the term modernus was introduced in the 6th cent. by Cassiodorus (Varrarum, v. 51), and used effectually by Hegel to express the highest stage of man's intellectual activity, the perfect 'globe of knowledge' (II. xxv.), he prepared the way for this by arguments drawn from sources sacred and secular.

Political tradition informs us that the day on which God rested and 'contemplated his own works' was blessed above the six days of labour, while the primary work of man in the Garden of Eden was intellectual, in that it consisted in viewing and naming God's creatures. Moses was praised for his Egyptian learning by Solomon for his wisdom; while the advent of the Saviour witnessed the subliming of ignorance among the sects of the world, and the descent of the Promised One, in the form of tongues, 'which are but veneration scientiae.' With Apollos and Fathers the same intellectualism prevailed (ib. vi.). As to human pre-eminence: the host founders of States were but demi-gods, while inventors of new arts were among the gods of the Renaissance; moreover, the superiority of such thinkers as Socrates, Aristotle, Cicero, over their contemporaries Xenophon, Alexander, Caesar (ib. viii.). Bacon's own estimate of culture, while often expressed so as to show the greater 'dignity' of thought, seems to consist of eudaimonism, insinuating at times that culture, for its power to promote, indeed, the interests of the suavisitia vita (ib. viii., 2, etc.). The Novum Organum (1620) asserts, not 'Knowledge is pleasure,' but 'Scientia est potentia'; its aim was to indicate man's ability to rule by means of knowledge, so that instead of emphasizing the aesthetic in culture, it tended to surrender the latter to industrialism. With such a presentation of the culture-problem, and the accompanying emphasis upon the 'work of contemplation,' Bacon, who was a Renaissance thinker, made possible the three-fold development of modern intellectual life in the ages of Enlightenment (1625-1759), of Romanticism (1781-1857), of Realism (1857—present day).

1. The Enlightenment.—On an intellectual and aesthetic side, the Enlightenment fostered Classicism, although its own rationalistic spirit, political earnestness, and relentless criticism of religion removed it from the influences of the Graces. In its way, the Enlightenment developed the natural system of nature, of natural rights (Grotius), as also a naturalistic system of ethics (Hobbes) and of knowledge (Locke). Spinoza expressed the spirit of the age when he declared the highest native in man to be the rational and disinterested love of God ('amor Dei intellectualis' ['Ethica', 1677, V. xxxii.]).

This blind rationalism, however, was destined to undergo repudiation, and in the Country the name of Rousseau, Vico, Lessing, and Herder the culture-problem was rehabilitated. Where Bacon had had behind him the free aestheticism of the Renaissance, Rousseau was confronted by the formal culture of Classicism, whose adherents he felt called upon to denounce. Taking a stand at once eudemian and socialistic, he declared that unhappiness and injustice were attributable to man's departure from nature. This was the theme of his Discours sur l'origine et les fondements de l'Inequality parmi les hommes (1753), his view is social rather than eudaimonistic, insinuating as he attributes injustice to the intellectualistic programme, which, involving the more rapid advance of some beyond others, had brought about inequality even where it had furthered the progress of impersonal science and art. Hence the maxim, 'Retournons à la nature.' La nouvelle Heloise (1761) breathes a yearning for the 'lybique' —the deep of the pure life, while Emile (1762) deduces a system of education which, recognizing that man cannot return to nature and abide there, advises a natural method of mental development, a restoration of nature to man rather than a return of man to nature.

Where Bacon and Rousseau had considered the practical worth of culture for individual happiness and social well-being, Vico and Herder sought to show how essential to humanity is an ever-enlarging mental life which, if based upon nature,
advances beyond it. Vico's *Scienza nuova* (1725)—
a work at least half a century in advance of its age—postulated an idea of a unified humanity, whose organic nature, as conceived by Vico, contrasted strikingly and pleasantly with the mechanical views of society peculiar to the En-
lightenment. Vico, who discovered that primitive language expresses universals, describes the developing culture-consciousness of the race by distinguishing three periods—mythological, heroic, human—wherein are found three kinds of language, as also three ideals of social life and human freedom. In a world of spirits, human nature—its mechanical, spiritual, and spiritualistic—was isolated from its environment; in our world of men, human nature—its conceptual, aesthetic, and spiritualistic—has evolved. The rationalism of the Enlightenment, relaxed sufficiently to produce its booklet, *Erziehung des Menschengeschlechts* (1780, tr. Robertson, 1806), wherein the religious consciousness is conceived of as a divine revelation, unfolding its intellectual nature in such a way as to evince the ideas of God as a unity, and the soul as immortal. While Lessing carries on his discussion in a humanistic fashion, he does not fail to emphasize the rationalistic element cheered on in the revelation of God and the soul as ideas. Herder's *Ideen zur Philosophie der Geschicht der Menschheit* (1790-1792) involves Lessing's ideas of progress and Vico's ideal of humanity as one, while itself incorporating, in an entirely different manner, the peculiarity of Herder's work is that in it the culture-concept operates in a naturalistic manner, involving the notion of a continuity of, rather than a conflict between, the natural and the supernatural. The humanistic spirit of humanity is developed from the outer order of things. Herder introduces certain stages of development from nature-peoples to culture-peoples, and thus tends to make his plan more plausible. The rationalism of the early Enlightenment was reproduced in the ideals of Classicism, although the organization of esthetic consciousness by Burke and Baumgarten tended to soften its conceptalism. The significance of Classicism was apprehended by Winckelmann, who found in it the exaltation of reason and the idealization of beauty; and, in his mind, classic consciousness expressed the free rather than the characteristic, the static rather than the dynamic. In this spirit, he frames his memorable definition of beauty: 'According to this notion, beauty should be like the purest water, which, the less taste it has, is regarded as the most healthful because it appears to be so clear.' (Wegener, *Dresden, 1808-25*, bk. iv. ch. ii. §23.) Winckelmann thus seeks to express the classic ideal as a purely intellectual and formal one, which will appear in connexion with two other utterances almost as famous as his, to have a universal character. In the one he praises the simplicity of classic beauty as a rare wine drunk from a transparent glass (ib. §19); in the other he likens the antique ideal of beauty to a spirit drawn from the material order as by fire (ib. §22). Lessing's *Laokoon* (1766)—its very title pledging it to Classicism—exalts the ideal of Apollo by limiting art and culture to the beautiful. This aesthetic reason is given to explain why Laokoon does not scream, although the idea of a man crying in the limits of poetry and painting,' was aware that in plastic the idea of the temporal and changing is out of place. With the appearance of Kant's *Critique of Pure Reason* (1781) and the French Revolution (1789) there entered into the universal the virtual end, although its effect did not at once pass away.

2. Romanticism.—The age of culture began as Kant emerged from rationalism, and by means of philosophic criticism transcended the conceptal views of the Enlightenment. In the *Critique*, Kant used the term 'culture' when he said: 'Metaphysics is the completion of the whole culture of reason' (Müller's tr., *New York*, 1866, p. 760); yet it was the *Critique of Judgment* (1790) which, by means of its new aesthetic norms, was destined to take its place in the history of culture. Kant's theory of beauty and taste, as that which has pleasure, pleasure postulated, or requiring a concept' (Bernard's tr. 1892, p. 67), expresses the nature of culture as the intellectual life of man apprehended intuitively. Kant's intellectualism, far more original and valuable than his moralism, is thus expressed in a system of aesthetic and ethical forms; and it was this transcendental element that affected the romantic school of philosophy and poetry. Schiller, alive to the intellectualism in Kant, was not unaffected by his heroic and relentless moralism, which he glorified in his essay *Ueber Anmuth und Würde* (1790), although here he seeks to transcend both Goethean grace of sense and Kantian dignity of ethics, by means of the ideal of humanity as the *Zusammenstimung* zwischen dem Goethe'schen ideal and Kant's aesthetic ideals, a system of aesthetic and ethical forms (Lett. xii. xiii.), and discusses the practical value of culture (Let. xxi.). Believing that the end of human existence is to be con-
ceived ethically, and yet realizing that man is by nature a creative being, Schiller seeks to express for the culture, or aesthetic education, of mankind by distinguishing three stages—physical, esthetic-
al, and moral (Let. xiv.). Thus, in achieving his moral destiny, man uses the aesthetic as the mean and middle stage between the physical and the ethical, urges Schiller, just as Lessing had sought to account for the rational education of man by means of religion. Schiller's confidence in culture, as expressed in the *Aufsatz zur Bildung*, seems to abate somewhat in his Essay *Ueber naive und sentimentale Dichtung* (1796), where, like Rousseau, whom he mentions appro-
vingly (Werke, *New York*, 1896), he signalizes a return to nature, or the naive—term of special signi-
ficance with the French (ib. 487). 'Sentimental' is borrowed from the English of Sterne, whom also Schiller does not fail to mention (ib. 490). The evils, rather than the benefits, of culture are dis-
cussed in this essay, and Schiller objects to the whole essay, praising antiquity for its objective *naivität*, values the sentimental only as it sincerely seeks nature. The distinction between naive and sentimental forms of culture is based upon nature; hence Schiller's doctrine: 'The poet who seeks one, makes a naive poet, the other a sentimental one' (ib. 492). Genius consists in *naivität*, and only as the genus is naive can he exist (ib. 478). Homer among the ancients and Shakespeare among moderns are esteemed naive poets, because they apprehended nature immediately (ib. 488). Upon the cultural basis of naive and sentimental, Schiller distinguishes three forms of poetry—lyric, satirical, and elegiac. Idyllic poetry is of the naive—can essay in the limits of poetry and painting,' was aware that in plastic the idea of the temporal and changing is out of place. Where the appearance of Kant's *Critique of Pure Reason* (1781) and the French Revolution (1789) there entered into the universal the virtual end, although its effect did not at once pass away.
shall have power to restore to humanuty its lost unity (ib. 492 f.).

At the root of the Romantine School, Friedrich Schlegel felt the force of Kant’s transcendentalism, but was more inclined to base his culture upon the Ego of Fichte, and, while he appreciated Schiller’s aesthetics of the naive, he himself showed a disposition to be realism or romanticism, the culture of the infinite. In Schlegel’s mind, Goethe’s Wilhelm Meister, the French Revolution, and Fichte’s Wissenschaftslehre were the three greatest tendencies of the age (Jugendschriften, ed. J. Minor, 1889; Athenaeum, § 216); from them may be traced a triple Romantik—poetical, political, philosophical, in form. Fichte himself was an ardent believer in culture; coming after the French Revolution and postulating constructive material culture, he contrasts strikingly with Rousseau. In his Beiträge zur Berichtigung über die französis. Revolution, 1785, the term ‘Cultur’ is of frequent occurrence; it is identified with the inner freedom and rationality of Kantianism. No human sensation or impulse, no action or passion, is esteemed of value unless it makes for culture, or the exercise of all man’s powers towards complete freedom as a goal (Werke, Leipzig, 1846–47, vi. 86). In the State, the culture of freedom should be the aim, declares Fichte (ib. 110). The faith, carried into the future, is the most highly cultured (ib. vii. 212). Such was Fichte’s own culture-philosophy, Yet the Fichtean element that appealed to the Romantist was the Ego, whose free activity was for Fichte that triple of all culture. Schlegel, however, develops romantic culture by emphasizing the esthetical activity of the Ego, whence he derives his doctrine of Ironie, the watchword of Romanticism. In essence, Ironie consists in a withering of the constructive, due to the Ego’s striving for an impossible world (Athenaeum, § 51). In poetry, this subjectivism is called transcendental when it begins as satire with its contrast between ideal and real, changes to the sadness of elegy, and in latter half when it identifies the two (ib. § 228). Where Schiller used ‘sentimental,’ Schlegel employs ‘transcendental,’ of which style he considers Dante the prophet, Shakespeare the centre, and Goethe the climax—‘der einzig dichtende derPoet’ (ib. § 247). In thus styling Shakespeare transcendental, Schlegel invests Schiller’s ‘naive’ and ‘sentimental’ with the historical sense of ancient and modern—an idea carried out systematically in Die Götterzeit (1797). Schlegel, who declares Schlegel, begins with nature and aims to reach beauty through culture (p. 10); modern poetry aims at subjective esthetic power rather than objective beauty (p. 79), whereas a striving after the poetical as something transcendental, a ‘Schmuscht’ which is destined to remain unsatisfied (p. 103). This type of poetry contrasts strikingly with the compact culture-consciousness of Classicism, wherein ‘Kunstpflege’ and ‘Naturpoesie’ are in coordinate harmony (Athenaeum, § 252). Thus, as the culture-consciousness of the Enlightenment had arisen in England, that of Romanticism has been seen to have originated in Germany. Thence, perhaps, lies the root of the French Romanticism, but perhaps the most direct contribution to culture that France was to make is found in the third period—that of Realism.

3. Realism.—The inception of the Realistic, or Naturalistic, movement may be noted as early as 1831, when Henri Beyle (de Stendhal) published his Le Rouge et le noir. This Naturalism, or ‘Beyhime,’ as its author styled it, involved a direct egoism and an indirect nihilism, destined to open the modern mind to new views and values in the intellectual world. Beyle was analyzed and classified by the aid of Taine in 1857, Zola in 1880, and Paul Bourget in 1885 (Huneke, Egoism, 1895, p. 4 f.). Another root of this may be traced in the work of Madame Flaubert, whose Madame Bovary (1857) resulted in a culture-philosophy called ‘Bovarism,’ or Illusionism, hardly in keeping with the acknowledged realism of Flaubert. Another frank attempt to be realism or Romanticism, the culture of the infinite. Bovary, in Vol. VI. 360

Our dear mother, says he, ‘Orthodox Russia, might sink down to the nethermost hell, and not a single soul, not a single soul in Russia would be saved, unless because a few Frenchmen—women of gentle birth, most cultivated, most tender—were not saved by us’ (Smirke, tr. Haigpe, 1897, p. 63.)

In Norway, Ibsen used egoism and nihilism to
arouse his country to a sense of intellectual self-respect. In Brand (1855) he idealizes the Norwegian; inPeer Gynt (1867) he satirizes him; while inEmperor and Galilean (1878) he seeks to indicate the coming of a 'third empire' of selfhood, destined to replace theWittgensteine empire of truth of the spirit,' as that had overthrown the 'pagan empire of the flesh' (Pt. ii. Act iii. Sc. iv.). In America, where the national consciousness was absorbed by activity and weighed down by Puritanism and Philistineism, the call to culture had sounded long ago by the free spirit of Emerson. His address, TheAmerican Scholar (1837), contains an ideal programme for the promotion of national culture; and in a spirit at once Athenian and American, he discusses the influences of nature, literature, and activity, which promote the culture of 'Man Thinking,' while he also emphasizes the scholar's duty toward his age, which, in Emerson's mind, was no longer the classic or romantic, but the practical. Thus he fully emerged from the Apollonian and Socratic sanctity of Emerson. Poe emphasized the Dionysiac in the form of the morbid and mysterious with their inherent sense of contradiction. The significance of Poe was really the rebirth of the essence that was to regenerate Realism. This was to come about through Baudelaire, but was not to become effectual until the end of the 19th century, with Verlaine, Mallarmé, Villiers de l'Isle-Adam, Huysmans, and Maeterlinck, as well as Swinburne. This was the decadence, dissatisfied with the limitations of Realism, made use of the morbid, the vicious, and the mysterious in order to sound the depths of the soul. By means of symbolism, it sought to find something objective to express the psychological profundity that it affected. In the north, this symbolism was developed systematically by Ibsen.

The far most systematic culturalist critique of national life was carried on by Matthew Arnold, who was sufficiently nihilistic and egoist in spirit to entitle his workCulture and Anarchy (1869), and who was sufficiently radical to direct it against Protestantism and 'Hebraism.' Arnold's method was that of a free Socratism, in the course of whose application he found it expedient to praise Plato and St. Paul for their intellectualism (ch. iv.), and Lessing and Herder for their spirit of national culture. It was himself who, without a philosophy, Arnold was possessed of sufficient conceptualism to treat culture as an analysis of its four-fold root, whence he regards it: (1) as an internal condition of humanity rather than an individual and enquiring quality; (2) as a resting and a having; (3) while it was so general as to advance mankind rather than the mere individual, within whom (4) it consisted of an expansion of all his powers, instead of some one in particular, as the religious (ch. i.). This broad humanistic culture Arnold identifies with something suggestive of Schiller's 'grace and dignity,' by calling it 'sweetness and light'—an expression which he borrows from Swift, as Schiller had borrowed from Sterne. In contrast with his nation's 'faith in machinery,' Arnold exercises a faith in culture, by means of which he is led to say that the England of his own day was little in comparison with the England of Elizabeth (ib.). This aesthetic reflection upon the industrial age of coal was accompanied by a critique of the moralistic, or Puritanical, carried on in connection with the distinction between Hel lenism, with its 'spontaneity of consciousness,' and Heb raism, with its 'strictness of conscience'—one of the principles of thinking other of doing (ch. iv.). Arnold's philosophy of history, observing that Europe has been subjected to a double treatment of culture and civilization, places Hellenism at the head of spiritual development in the West, while it accounts for its failure to rule by calling it 'premature,' whence Hebraism was enabled to govern the world. With the supremacy of Hebraism, which Arnold treats more kindly than Quick's, he credits the transcultural and transcivilizational spirit, the 'transvaluation of pagan values,' there comes a Renaissance revival of Hellenism, which, like original Hellenism, so suffered from lax morals that Hebraism, in the form of Puritanism, was once again called upon to rule by means of strict science (ib.). Believing that Hellenic sweetness and light is the one thing needful, Arnold believes also that it may further the cause of Hebraism, which can only gain from an infusion of Socratics' interest in the limitations of Socrates, and the Hebraists seems never to have relinquished its hold upon Arnold, who, inLiterature and Dogma (1875), esteemed 'conduct as three-fourths of human life'; hence we may speak of his Hellenizing culture as 'moralistic, the interior and contemplative character of culture assumes the form of an intense problem of values, especially in an age where naturalism is exalted by science and where industrialism defeats the ear to the 'Know thyself' of the sage without a philosophy.' Arnold was possessed of sufficient conceptualism to treat culture as an analysis of its four-fold root, whence he regards it: (1) as an internal condition of humanity rather than an individual and enquiring quality; (2) as a resting and a having; (3) while it was so general as to advance mankind rather than the mere individual, within whom (4) it consisted of an expansion of all his powers, instead of some one in particular, as the religious (ch. i.). This broad humanistic culture Arnold identifies with something suggestive of Schiller's 'grace and dignity,' by calling it 'sweetness and light'—an expression which he borrows from Swift, as Schiller had borrowed from Sterne. In contrast with his nation's 'faith in machinery,' Arnold exercises a faith in culture, by means of which he is led to say that the England of his own day was little in comparison with the England of Elizabeth (ib.). This aesthetic reflection upon the industrial age of coal was accompanied by a critique of the moralistic, or Puritanical, carried on in connection with the distinction between Hellenism, with its 'spontaneity of consciousness,' and Hebraism, with its 'strictness of conscience'—one of the principles of thinking other of doing (ch. iv.). Arnold's philosophy of history, observing that Europe has been subjected to a double treatment of culture and civilization, places Hellenism

\[ CULTURE \]
nous assagir' ('Apologie de Raymond Secondon,' Essais, Lyons, 1585, bk. ii. ch. xii.).

But the classic example of the genius who sought peace by harmonizing inner with outer life is Goethe, with his Torquato Tasso (1789) and Faust. Developed in Italy, where Goethe came into living contact with Hel lenism, Tasso was submitted to the tragic creed; while Faust was harmonized with the instincts, fitted for the strivings of the unhappy hero with his Werther temperament. The display of soul-stuff, with its conflict between intellectualism and artistic instinct, is in the comparison between Tasso and Antonio, the man (the affair); for, even when crowned with the wreath taken from the bust of Virgil, as a sign of his success in completing his Jerusalem Delivered, the poet is envious of the practical man, who has just returned from an important mission. In the course of this drama of the inner culture-consciousness, Goethe takes the opportunity of introducing certain maxims which have become famous. Thus in his jealously of Antonio, Tasso exclaims, 'I feel myself more than ever of double soul' (Act ii. Sc. i.), referring to the duality of soul embodied in Faust (i. 759). The poet's incompleteness is celebrated in the words, 'Talent is formed in solitude, character in the society of men!' (Act i. Sc. iii.)--while it is declared that self-knowledge comes not from within, but rather out in the world among men (Act ii. Sc. iii.).

Where the Princess celebrates the poet's sorrow by calling it 'charming' (Act i. Sc. i.), Tasso at last acknowledges the profundity of his inner contemplative consciousness, in the memorable Goetheanism, 'Some god gave me power to tell how I suffer' (Act v. Sc. v.). This Goethean nostalgia for activity has recently received brilliant recognition in Paul's passage ('The poet, in the figure of a soul...' a sense of two souls within expresses the conflict more profoundly, while it solves the problem more decisively as the victory of the active altruist over the thinking egoist, or the merging of the two in the unity of life, the consciousness of which led Faust to bid the holy moment stay: 'Verwirre doch, du bist so schön' (ii. 6553).

The culturist, however, will object to this activist treatment of the problem, and persists, however painful it may be for him. Moreover, intellectualism claims that action stands in need of the thought-principle, inasmuch as the will comes to consciousness only in ideation, as was confessed by the arch-voluntarist, Schopenhauer, who thought with the will and not with the reason. This Platonic ideas (World as Will and Idea, tr. Hal dane and Kemp, 1883-6, §25). Apart from thought, activity defeats its own humanistic claims, for, 'where there is no vision, the people perish' ('Pr 29:18').

The recent aesthetic movement in literature reacts favourably upon culture, which is so interior in its nature as to make most difficult any social interpretation of the contemplative. Thus Maurice Barrès stands for a 'culte du moi' in the 'tour d'ivoire' of selfhood (cf. H. Hambek, Epochs, in loc.). In the same spirit, Anatole France, although apparently a believer in collectivism, is not without egoistic and intellectualistic traits. These appear brilliantly in The Red Lily, where Paul Verne's opinion of Napoleon seems to express the author's view of activists in general:

'A poet, he knew no poetry but that of action. His great desire for the life of his thoughts was to have a self that was free, or rather his sublime adolescence, endured to the end, because all the days of his life were powerless to form in him a conscious maturity. Such is the condition of the artist. They are entirely for the moment, and their genius is concentrated on the single act, which does not grow. The scope of their lives are not bound together by any chain of grave disinterested reflexion. They do not develop; one condition merely succeeds another in a series of deeds. Thus they have no inner life. The absence of any inner life is particularly noticeable in Napoleon. ... He lived outside himself' (Stephen's tr., 1908, ch. ii. p. 461).

Where the culturist grants the validity of activism, he yet sees its limits, if not its dangers; or, as Bergson, a pronounced activist, has expressed it: 'It is presumable that, without language, intelligence would have been riveted to material objects that its interests led it to consider. It would have lived in a state of somnambulism, exterior to everything, even to his own body' (L'Evolution créatrice, 1910, p. 172). Such a condition of exteriority, observed by both France and Bergson, would seem to be the unhappy state of mankind, apart from that intellectual deliverance that comes through culture. The man of culture, whose above nature, is enabled to transform the energy of action into the work of contemplation, as Flaubert's principle of violence in art resulted in rhetoric.

2. Culture and humanity.—While it goes without saying that man was meant for humanity, or for the perfection that belongs to the species, it does not follow that this perfection must be intellectualistic. For Bacon it was easy to identify veritas with bonitas (Adv. of Learn., i. viii. 2); but the modern notion of humanity's realization of the good is often elaborated in defiance of the intellectually true. In ancient thought, Plato's Eupubic banished poetry and the drama from the State; but art as the acute sense of the human soul, as man's chief work (bk. x. 565-665). In modern times, Tolstoi has opposed decadent culture, because, like Rousseau, he thinks that progress in intellectualism has brought about inequality, as also for Plato it does for moderns: 'The aim of art is to yield truth.' Tolstoi opposes the notion that art belongs to superior souls alone (What is Art? tr. Munde, 1898, ch. viii.). 'Art,' says Tolstoi, 'should unite men with God and with one another'; whence he arraigns, as illegitimate, the 'esthetic' and 'philosophical' art, all that is superstitious, patriotic, and sensual (ib. ch. xviii.). With a condemnation of modern art almost universal, Tolstoi surrenders to the genre and sympathetic, as represented by Dickens, Hugo, Dostoievsky, Millet, Breton, etc. His attack upon Shakespeare was provoked by the perception that the poet slighted the labouring classes. Ernest Crosby having made such a socialistic criticism of Shakespeare, Tolstoi proceeded to criticize his dramas, upon aesthetic and philosophical grounds (A Critical Essay on Shakespeare, tr. Teichertoff, 1906, pt. ii., Crosby's article). In addition to this social scruple against culture, there is also an ethical detent, based upon the thought that intellectual superiority is implicit in a pyramidical arrangement of the social order, where the enlightened few are supported by the mass of labouring people, whereby justice arises. The failure of the aesthetic to redeem mankind urged Schopenhauer to put ethics in its place, with the idea that, since not all can be artists, they should all be moralists, and that even in the cultured person the aesthetic moment is so transitory that it necessitates the permanent moral treatment of life in the complete denial of the will-to-live (World as Will and Idea, tr. Hal dane and Kemp, 1896, §§ 27, 52; also bks. iii. iv.); culture, however desirable, does not seem to be imperative like morality, activity, and the like; but the argument expounded is not really one of physical necessity, but of spiritual value; for, inasmuch as 'the earth is the planet of hunger, or the planet where one eats' (A. France), it might be argued that through necessity food is as important as the art vices, toward the ethical. The question is one of values, as also one of psychological fitness; whence the culturist concludes that morality and social life stand in need of the enlightenment and education of those who are purposed for their own sake. The most perfect conception of social life seems to have found ex-
pression in ancient times, when it was said, 'Many shall run to and fro, and knowledge shall be increased' (Isa. 2). In the endeavour to promote the interests of an enlightened State, it is not out of place to commend culture and foster genius, for it must not be forgotten that humanity is in part to be conceived in humanistic fashion, which involves the exaltation of letters and arts, or the 'humanities.'

3. Culture and happiness.—Where culture is challenged by activism and socialism, it is finally criticized by eudemonism, on the ground that it fails to satisfy the soul. Here more occurs the contemplation of activist and socialist, who will assert that the disinterestedness demanded by culture can result only in diverting man's attention from immediate necessities, which, like eating, drinking, clothing, shelter, are imperative instances of the 'sorrows of Martha' to consider. Both nature and natural society point to the place man is supposed to occupy in the actual world; hence the interior life of culture can only omit him for his vocation as a living being, so great is the preoccupation which culture demands. Hence, with the physical and social struggle for existence, the contemplator is likely to be left stranded in the onward flux of events, so that all that may be fostered in the culture tends the well-being of man. Modern educational systems have long been realizing this utilitarian principle, with the result that 'humanity' now, instead of contenting culture, stands for social efficiency; while 'culture' or culturelicens are included among the non-essentials. To this argument against disinterested enlightenment, the culturist may reply by stating that these practical interests will take care of themselves in connexion with mankind, and in many varying life, ever assenting themselves in human education as demands made by the inquiring interested mind. But the cultural interest in remote ideals may safely be furthered in the life and education of man, who is necessarily predisposed in favour of humanistic study. With regard to culture as a means of promoting happiness, the central question is one of the possession or pursuit of knowledge. Classicism, which had culture without the culture-problem, upheld the possession of knowledge as affording the highest enjoyment; hence Aristotle said: 'It is reasonable to suppose that the employment (of wisdom) is more pleasant to those who have mastered it than to others who are yet seeking' (Nic. Eth. x. vi.). Medieval Rosicrucian, with this identification of knower and knowledge, as when the Troubadour, or Trouvère (under), suggested that the search after that which could be found without true happiness. The culture of Modernism is not wanting in instances of representatives individuals who have protested that the search after truth is more satisfying than the securing of knowledge itself. Thus it was that the Carthusian, Pere Malebranche, said: 'If I held truth captive in the hand, I would open it in order to pursue it again' (Mazure, Course de la philosophie, p. 20); while Butler declared: 'Knowledge is not our proper happiness ... it is the gaining, not the seeking after, which is the improvement of the mind' (Sermons, xvi.). More brilliantly and more forcefully Lessing said: 'If God were to hold in his right hand all truth, and in his left the rings of truth, if he in one impulse to give me, I would humbly fall before his left hand, and say, "What more truth is, after Thee alone!"' (Hollstein, Life of Lessing, 1855, ch. xvii.).

While significant of the remoteness inherent in the culture-ideal, such utterances are not normal expressions of the culture-motive, which is more akin, like the Troubadour, or finding, instinct in the human mind. Finally, our modern psychology, like that of Wundt, by showing how similar are intellect and volition, tends to do away with the conflict between the idealistic and the realistic, of promoting human happiness, and to postulate a unity of thinking and doing, of inner life and outer existence.

CUP-AND-RING-MARKINGS.—1. Description.—The name 'cup- and ring-markings' is given to certain signs—they cannot be called drawings or sculptures—which are found on rock-surfaces and articles of use in all parts of the world, from pre-historic times down to the primitive peoples of the present day. They are a form of ornament distinguished by the same characteristics with great variety in details. In all cases there is the central cup, hollow, or depression, surrounded by one or more concentric circles or rings. These rings take various forms, such as simple circles; sometimes they are only semi-circles at the top or bottom of the cup; sometimes they take the form of spirals. At times—and this is very usual when they are found in any number—sets of cup- and ring-markings are united by lines or duets making a variety of figures; and again, at times, the outermost circle has a number of rays issuing from it and converging towards the central depression or cup. Wherever they have been observed, they are the work of peoples in the Neolithic stage of culture, whether in the actual Neolithic Age of the pre-historic past, or among peoples who at the present time exist at that stage of culture.

The localities where archaic cup- and ring-markings are now found show a somewhat far-reaching distribution. Some of the finest examples are in the British Islands. It was in the year 1859 that Sir J. Gardner Wilkinson first called attention to them in a paper in the Journal of the British Archaeological Association, in the course of which he refers to cup- and ring-markings on the rocks in Northumberland, and claims to have been the first to note such markings as far back as 1835. In 1867, Sir James Simpson published his book entitled Archeic Sculptures of Cups, Circles, etc., on Rocks, in which he described all those that were then known in Scotland, Northumberland, Cumberland, and Yorkshire, and in a series of beautifully illustrated plates he illustrated every variety of form. In the report of the Archaeological Association, it is now known that archaic cup- and ring-markings exist in all parts of our own country, not only on scarps of rock, but on the stones of so-called 'Druid' circles, from Inverness-shire to Lancashire, in Scotland, England, and Ireland; on great stones forming avenues; on cromlechs; on the stones of chambered tombs in Yorkshire; on stone cists or collars in Scotland, Ireland, and Dorset; on pre-historic obeliaks, or solitary standing-stones in Argyll; on walls in subterranean 'Picts' houses' in the Orkneys and Forfarshire; in pre-historic Scottish forts; near old camps; and
on isolated rocks, scarps, and stones. They are found in the Cheviot Hills, on the moor near Chatton Park in Northumberland; there engraved on a smooth face is a cup-like depression surrounded by incised concentric circles. Some of the finest examples in the British Islands are at or near Ilkley in Yorkshire. In Ireland precisely analogous markings, or 'rock-scribings,' as Wakeman calls them, are found at Megavagh, Co. Donegal, on the sides of Knockmore Cave, near Derrynollanly, Co. Fermanagh, as well as the magnificent series of double spirals at Newgrange, Dowth, and Lough Creag, Co. Meath, which belong to a somewhat later stage of ornamentation.

Outside the British Islands, other archaic examples, besides those in the Morbihan, may be noted at Malta, where, in the spring of 1916, the writer saw the very fine series—painted, not incised—in the hypogeum at Gozo; on the rock on which the great Cathedral of Seville is built; on the steps of the Forum at Rome; on the pebbles of a stone from Athens; in Scandinavia, in Cuba, in India, and in North and South America. Present-day instances in which a precisely similar scheme of ornamentation may be observed are found among the natives of Central Australia (whence they were particularly described when we come to discuss the meaning to be assigned to them), in Fiji, in Easter Island, and other parts of the Pacific Ocean, as well as in certain parts of Africa. Further, among races who tatoo, particularly in the eastern parts of New Zealand, a very similar set of designs may be observed.

2. Theories as to significance.—It is an axiom of Anthropology that primitive man never gave, nor does he give, himself trouble or care for an aesthetic purpose, but always had some practical object in view. Hence the theories proposed in explanation of cup- and ring-markings fall into two groups. The first would explain them by (a) religion, or (b) magic; the second (c) primitive star-maps, or (d) rude maps of the neighbour- hood, showing the position of hut-circles, or (e) a primitive method of writing, or at least of communicating ideas.

(a) Religion.—Sir James Simpson, after mentioning, only to reject, the Swedish archaeologist Nilsson's conjecture that these markings were Phoenician in their origin, came to the conclusion that they are archaeological engravings, but he went on to add: 'They are often ornamental and possibly religious,' adding that, 'though in the first instance probably decorative, they were also emblems or symbols, connected in some way with the religious thought and doctrines of those who carved them' (op. cit., pp. 92, 115, 117).

In 1872, Phéné, in a paper read before the British Archaeological Association, argued that the purpose of cup- and ring-markings was a religious one, and that it was connected with sun-worship.

In 1878, Romilly Allen, an acknowledged authority in all that pertains to early Christian art, read before the British Archaeological Association an exhaustive paper on the remarkable series of 'Pre-historic Rock-sculptures at Ilkley.' After giving with the motives in which pre-historic rock-sculptures were then known to exist, followed by a detailed account of those at Ilkley, he proceeded to notice various theories as to their origin and meaning. It may be observed that among the markings at Ilkley there is one set of cups and lines arranged in the form of the swastika, a pattern of universal prevalence from the Mycenean age onwards, which is noted by Schliemann to have been found on a very large number of spindle-whorls discovered at Troy, and is found in India as a religious symbol, and survives among ourselves as the arms of the Isle of Man. Its occurrence here would seem to carry back its use as a symbol of some sort of pre-historic times. Allen's own theory is that cup- and ring-markings were most probably used as religious symbols, and were connected, as Nilsson suggested, with sun- and Earth-worship. He also thinks, with Nilsson, that the pre-historic sculptures belong to the Bronze Age.

In the following year C. W. Dydmoon read an interesting paper before the same Association on some rock-markings in the same locality, with copious reference to Schliemann's discoveries at Troy and Mycena. In this he makes a special point of that discoverer's theory that the cups surrounded by complete circles represent the sun, and those surrounded by incomplete or semi-circles, with or without rays, i.e. ducts, represent the rising or setting sun. In this connexion it may be noted that among the rock-paintings of the native Australians described by K. H. Mathews in J.A.I. xxv. [1890] 145 is one which almost certainly represents, along with a figure of two hands joined at the wrist, the sun rising or setting. The significance of this will appear later (see below, p. 369). Dydmoon also notes one stone containing a most remarkable arrangement, which he says he first took for a rude representation of the planetary system, but which he afterwards thought might be an allegorical or symbolical representation of a goose (Journ. Brit. Arch. Assoc. xxvii. 86).

As recently as 1900, H. G. M. Murray-Aynsley, in her book on Symbolism of the East and West, describes the cup- and ring-markings which she observed in the course of her travels in India, and compares them with similar stone-drawings or rock-markings in Egypt, and as to their significance she assigns all alike to sun- and star-worship.

In his recent book Ancient Britain and the Invasions of Julius Cæsar (London, 1907), Rice Holmes ranges his discussion as regards those who would see in these markings some religious significance, though he is hopelessly wrong in assigning them, as he does, to the Bronze Age.

Still keeping to the theory of their religious significance, it may be noted that Col. Bissett-Carnac, who has made a special study of the archaic rock-markings of India, particularly as they occur among the Kumaun Hills, suggested, that they are connected with tising-worship; the central marks in the ornamentation being the sun, or the circle the yoni. The rich, he supposed, put up a monument, the poor merely carved a symbol.

In his Pre-historic Times, 1900, Lord Avebury comes to the conclusion that 'we have as yet no satisfactory clue to the meaning of these engravings' (p. 158), and he assigns the ruder, and therefore evidently more primitive, engravings, i.e. the simple cup- and ring-marks in all their variety, to the Neolithic Age, or, as we prefer to say, at any rate to the Neolithic stage of culture. As regards the meaning to be attached to the symbols, R. Munro says:

'Although much has been written on the subject, none of the theories advanced to explain their meaning has met with general acceptance. That they had a symbolic meaning in the religious conceptions of the people is evident from the frequency with which they are found on sepulchral monuments, but any interpretation hitherto advanced on the subject, beyond the general religious idea, seems to be pure conjecture' (Prehistoric Scotland, p. 317.)

(b) Magic.—In 1892, and again in 1896, Miss Russell proposed, with a wealth of argument and illustration, before the same Association, the theory that simple cups and circles are intended to represent eyes, and that those having a line or duct through them represent eyes transfixed with a
javelin, and that accordingly the solution of the problem as to the meaning of these signs is to be found in regarding them as charms against the Evil Eye. The prevalence of this superstition among primitive races is the world over unquestionable, and it survives to-day, with more intensity than anywhere else among civilized peoples, in Italy, as Elworthy has conclusively shown in his books, _The Evil Eye_ (London, 1885), and _Horae of Heaves_ (London, 1890), while, had it not been for later discoveries, this might have stood as a good working hypothesis; and it may even be held to have some share in the meaning which we shall assign to them. Magic is not only the science, but it is very root of the religious and social arrangements, of primitive folk, and it may well have its part in the explanation to be advanced for the universal prevalence of these mysterious signs.

ii. (a) It has been held that cup- and ring-markings were intended for rude maps or plans of the steller and planctory heavens. This theory need not detain us, as it could not by any possibility apply except to a very few cases, in which the design may seem to be arranged in a sort of definite order having some resemblance to the position of the constellations in the sky, or some appearance of being intended to represent the sun, moon, and planets.

(c) There is also the view that they were intended for maps of the locality, marking the position of the neighbouring raths, or oppida, for the benefit of wayfarers, whether the inhabitants themselves or strangers. This theory is associated with the names of Greenwell and of Graves in Ireland, and was definitely applied by the latter to the Irish examples.

(e) There is also the view that they were a primitive mode of writing, or at least of communicating ideas. This theory the designs may seem to be suggested by the relations of the churinga, or rather the cup, and of Graves in Ireland, and was definitely applied by the latter to the Irish examples.

In discussing our own theory we shall see how these two ideas may be combined, by a reference not only to the evidence from Australia, but also to that from the Pyrenees, with a belief in the symbol of the crescent, which Fechter discovered in the cave of Mas d’Azil in the Pyrenees, and which belong to the Palaeolithic Age, and to the similar signs found on and in dolmens in Portugal in the same year, down to those of the religious device of the cup and tree, which was used by the Egyptians, and by modern potteries in civilized lands. It may be noted here that Wood-Martin also had already suggested that cup- and ring-markings ‘might be the first step made by primitive man towards writing’ (Pagan Ireland, p. 571). E. Cartailhac had made the same suggestion in 1889 in his _La France préhistorique d'après les sépultures et les monuments_ (p. 241).

3. Cup- and ring-markings, in the light thrown upon them by recent research and discoveries among the native races of Northern and Central Australia.—In the year 1899, Spencer-Gillen’s _Apeckshoo_ book on _The Native Tribes of Central Australia_ was published. It was the first book of its kind to be followed in 1900 by the same authors’ _Tribes of Central Australia_, and in the same year A. W. Howitt’s _Native Tribes of South-East Australia_ was published. These, with K. Langloh Parker’s _The Baskervill Tribe_ (London, 1889), and the researches of K. H. Mathews and other travellers and observers, are our authorities on the tribal and social arrangements and customs of the Australian aborigines.

The characteristic feature of all these tribes is that society is organized on a basis of totemism (q.r., in relation to which cup- and ring-markings are found to have a living and definite significance.

Some few years ago, the theorizing regarding ancient totemism has been included under those which would give a religious significance to cup- and ring-markings, but recent research has made that interpretation impossible.

J. G. Frazer, in his great work on _Totemism and Exogamy_ (1915), has proved that the theory of totemism is attached to the category of religion, but is altogether of social significance, and this was the opinion of many students before the publication of his book. It is matter of common knowledge that religion can exist without religion, because religion implies reverence and worship, and the totem is never worshipped, though it is treated with respect. It is the brother, or the god, or of his husband, it is certainly not to be looked upon as a religious being, but as a social unit.

Before we can exhibit the relationship between cup- and ring-marking and totemism, however, we must first deal, as briefly as possible, with totemism as it exists in Australia, especially among the Arunta.

The Arunta rule by male descent, but their totemism is special and peculiar in that it is reckoned by locality and not by parentage at all, i.e. every child, no matter what the totem of its parents may be, belongs to the totem of the district in which it may happen to be born. The Arunta system is based on the following beliefs. They hold that each living Arunta is descended from, or rather is the reincarnation of, an ancestor who arrived in what is now called the Central Australia district. These ancestors are represented as carrying about with them or her one of the markings called by the Arunta _churinga_. Each of these _churinga_ is closely associated with the spirit part of some individual. In the place where this person originated or stayed for a time, the Churinga of the Witchetty Grub people, or where they camped in their wanderings, there were found what the natives call _embalkilla_, i.e. local totems. At each of these places the number of the Alcheringa ancestors went into the ground, each carrying his _churinga_ with him. His _churinga_ was a natural feature, such as a tree or rock, rose to mark the spot, while his spirit part remained in the _churinga_. Thus the country is defined by the _churinga_, and the spirit moves about in them. The Arunta is distinguished from the Warlu by the fact that a woman never knows when a spirit-child may enter her womb; and, as a result, wherever she may become aware that she has conceived a child it belongs to the totem of that locality irrespective of the totem to which she or her husband may belong. Hence, among the Arunta the census classes are the local totem, and the _churinga_. The child inherits the _churinga_ (man of his ancestral spirit, and consequently belongs to his own ancestral totem. In some cases the spirit-spiritualists to whom others are more oblique, but the result is the same in all cases—when the spirit-child enters a society, it is dropped. When the child is born, the mother tells the father the position of the tree or rock near to which she supposes the child to have entered with her, and he and his friends then search for the dropped _churinga_. This is usually, but not always, supposed to be a stone one marked with the device peculiar to the totem of the spot, and therefore of the newborn child. It should not be found, as is sometimes the case, a wooden one is made from the tree nearest to the _churinga_, and the device peculiar to the totem is carved upon it.

In each _embalkilla_, or local totem, centre, there is a spot known as the _etotuulanga_. This is the sacred stone, usually some cove or crevice in some unfrequented spot among the boulders carefully concealed. In these numbers of the children, often carefully kept up in bundles. (With this custom and the ideas connected with it, Frazer ‘Folklore in the Old Testament’ in _Anthropology and Essays presented to Radcliffe Taylor, 1902_ compares the phrase used in 1 S. 20:1.) The name _churinga_ should be noted, means a sacred and secret emblem. This word, under the law of death, may never enter into the secrets of the _etotuulanga_; boys on initiation at puberty are allowed to see and handle them. At the time of admission to the mysteries of the totem—but only a part. Another and very important part is the painting on face and body of the man who has successfully undergone these ceremonies of initiation, and is considered worthy of the honour, with the device peculiar to his totem. In the _etotuulanga_ a man knows that he has been there, though they know nothing of the ceremonies. To the younger women it is a sign of the deepest mystery, a device to approach the gap in which is the sacred rock-painting, and near to which lies the _etotuulanga_.

The above description of the beliefs and ceremonies of the Arunta was necessary to the full
understanding of our subject, and it has brought us at last to rock-paintings (these are not peculiar to the Arunta; they have been noted all over Australia. But those previously described are not of the special type which concerns our purpose, which are found among the Arunta. These rock paintings fall into two groups: (a) ordinary rock-drawings similar to those already known, and corresponding with the drawings of the Palaeolithic cave-people, the primitive Egyptians, Italians, and others, in many parts of the world, and the Beaucamps, modern engravers; and (b) certain other drawings which belong to a class of designs called *churinga iklinia*, and regarded as sacred, or secret, mysteries, because they are associated with the totems. Each local totemic group has certain of these belonging to the *herg*, and preserved on rock surfaces which are strictly taboo to the women, children, and uninitiated men. The designs on these *churinga iklinia*, as on the *churinga nanja*, are each distinctive of some special totem, and are so understood by the natives. Now these special totemic designs of the Arunta consist of precisely the same patterns as the rock sculptures or paintings which are the subject of this article. They may all be classed as cup- and ring-markings. They are drawn on the surface of a rock, and surrounded by concentric circles or semi-circles, and arranged in varying patterns, sometimes joined by lines which run through and connect them, exactly as the ducks do in the sculptures, and each design has an inner line, the ring-marking, which the native at once recognizes. One pattern belongs to the Witchetty Grub totem, while others belong to the Emu, Kangaroo, Plum-tree, Snake, Sun, Moon, etc., totems, as the case may be.

Considering, then, that primitive man may be held to have everywhere, though with local modifications, passed through the same or similar stages in his evolution from the lower to the higher plane of social organization, we may hold that we are justified in assuming that in these Arunta drawings and designs, with their well-known and recognized significance, we have, as Wood-Martin suggested (*Pagan Ireland*, p. 47, note), the solution of our problem, and may with confidence assert that the basic meaning of cup- and ring-markings, wherever found, whether belonging to pre-historic primitive man in Europe or Asia, or to modern primitive man in Australia, is not religious, but social; that, with the development of the relationship of the totem, and are connected with magic but not with religion.

Thus these mysterious signs may with justice be said to constitute the 'allegory of primitive man,' and they would be known and understood by all whom it might concern, even as the Arunta understand them to-day, just as the followers of a medieval knight, his squires and men-at-arms, recognized him on the shield of their lord, or the crest on his helmet in battle or joust, or the pennon fluttering from his castle keep, and as the flag is recognized among civilized nations at the present day.

To trace the central dot corresponding to the cup-child, beside some sacred rock or tree, becomes the more difficult, as it were, to trace the possible connection between the now discovered totemic significance of cup- and ring-markings and the *ringam*-cult or Nature-worship of a later stage of culture, but we may note the primitive phase of this in the standing-spirits of the rock-drawing or spirit-child, concepted beside some sacred rock or tree. This similar notion meets us, as Rivett-Carnac points out, in Switzerland and Italy, and probably further research would find it elsewhere also. The

spirit-child belongs to the totem of the locality in which it is depicted, the *wanga*, the portable stone or stick, and the *tilkina*, the rock-drawing, each sacred and secret—is the totem-badge, bearing the special design peculiar to that totem. Here we have its living and present significance. Among rocks and stones inscribed with cup- and ring-markings are in many parts of Europe associated with ideas belonging to the worship of the generative powers. Menhirs and monoliths not only have those marks, but are themselves symbols of the mystery of the reproduction of life. In Switzerland they are still known as 'the babies' stone,' and, bearing this primitive notion in mind, we may see a justification for describing simple cup-markings on standing stones as representing inverted female breasts, as is done in art. *Canaanites* (vol. iii. p. 178).

With the same association of ideas in Brittany and other Celtic districts, childless women bring offerings to the menhir, and more than one standing-stone has been crowned by the placing of a cross upon its summit.

Finally, it is quite possible that in cup- and ring-markings we also behold one of the earliest efforts of mankind to convey ideas by means of signs, and in such a primitive manner of writing. The Arunta read their meaning both in the rock-paintings, the *churinga iklinia*, and upon the sacred sticks or stones, the *churinga nanja*, and indeed have been known on occasion to employ these in the latter as primitive messengers or heralds, in their case the *churinga* is more in the nature of a safe-conduct, rendering the bearer talb, than an actual means of conveying ideas. Other tribes, as the Itelamundi, employ real message-sticks, but they are merely a kind of tally to hand over the message, and the markings have no special meaning as conventional signs to convey a definite announcement. Still these signs, and such as the Palaeolithic folk inscribed on the pebbles at Mas d’Azil, or such as are found on Neolithic dolmens in Portugal and in certain parts of Scotland, may lie at the root of the alphabets of the *Mycæan* and the germ of our European alphabets. But, if cup- and ring-markings are to be taken at all as a method of writing, and the latter as a primitive method of writing, it can only be of the very rudest, compared with which oghams and runes are finished alphabets. It is better to take them simply as totemic signs, having regard to their Arunta relationship, and to the fact that modern potters’ marks as being tribal and family badges and marks of ownership.

The primal fluid of nervous life. It will be noticed that, if terms like 'concrete' and 'material' are employed, we must admit that the half-civilized and highly organized Moor is more 'primitive' than the lowest savage.

It also seems to the writer an unnecessary and illegitimate proceeding to draw a sharp division between the magical and the religious blessing or curse, or to assign priority to the former type. A savage Ancestor is far more than a magical entity, whether spoken or verbally, in a form as far removed from magic as profane swearing among civilized men is from religion. Or, again, if he has a god, he may invoke him to execute his spoken wish. On the other hand, we find the use of magic in the act of conjuring a magical form; and we can sometimes trace the religious forms passing into the magical. The distinction, in fact, between magic and religion, as the form of man's relation to his environment, in terms of this process, is a case of shifting in the direction of time. Two types certainly exist for curing and blessing, and they will be fully discussed below; here it is premised that we have no right to assume the priority of the magical type, or even to determine which is the more ancient. There are, moreover, many neutral cases.

2. General character.—A curse or blessing is a wish, expressed in words, that evil or good may befall a certain person. The wish may be expressed by a god or other supernatural being, as a prayer, or by a supernatural person to execute it; or accomplished by one, who, in assimilating to, or identifying himself to, the person referred to, throws into word, will, and fact in one. It may be expressed for the speaker's own good or ill. It may be, again, a mere wish or will; or an appeal to another (usu-

Curse, by power—such, or as a symbol of contempt or insult. So the Maori spelt while curing. "If a man while curing spits in his cured part, he is supposed to follow.7 The Sakai are believed to be able to do 2.

injury by 'sneerings' and 'pointings.' Among the Flort of West Africa, the property becomes complete when the seller has 'blessed' the article sold. He raises his hands to his arms and pronounces the words 'God bless,' while the buyer then breathes or blows over the article. This ceremony is called 'the curse,' 'giving the breath,' and is equivalent, says Dennett, to the breath of life. It appears rather to be a personal imposition of the speaker's good-will upon both buyer and thing bought, without any supernatural reference. There is here, perhaps, similar to the 'breath of life,' the interest is immediate. Examples of symbolism might be multiplied indefinitely. The characteristic use of the hand is the exhaling of the feet is a magical gesture. In Mohammedism, a suppliant at the sight of a saint will call down misfortune upon an enemy by sweeping his floor with his cloak, praying that the enemy may be likewise, 'at once.' It is still necessary to point out that mere impulsive action, deliberate magic, and symbolism share a common center.

Among the Hebrews, a blessing was imparted by the imposition of hands. In blessing a multitude, the hands were uplifted. Refinements are inevitable; thus, in the Greek Church, the gesture of benediction is made with the right hand, the thumb touching the tip of the ring-finger, the other fingers being erected. In the Latin use, the thumb, fore, and middle fingers are erected, the others being doubled on the palm of the hand. In the Rabbinical blessing, the priest places the fingers of both hands in pairs—the forefinger with the middle, the ring with the little finger, the tips of the thumbs, and the tips of the forefingers, respectively, coming together; thus there are ten fingers in six divisions.

Expressing the wish, as it becomes a ritual, may also undergo differentiation. Thus the Talmud holds that the mere power of the spoken word is efficacious. The priest pronounces the words 'bless.' In Islam, the important details of the benediction are the audibility of the benediction. The Talmud also speaks of cursing by an angry look. This needs to be fixed. Such a curse has been called as a 'mental curse.' The Talmud has a remarkable dualistic personification—the curse 'thinking' of the victim, and the speech of the word. The curse, opposing two, in the shape of a boar, a sharpened bow, a sharpened arrow, that kites at one stroke, pursuing, wounding, seeking out a man, with objects fixed in its teeth, crossing all around. On the other hand is the personification of 'the curse and blessing.' The word is twofold—by thought and by words. It is notable that the blessing by words is the more powerful; but the curse (upanana) by thought is more powerful than that by words.

The indeterminate character of primitive thought makes interchange easy between thought, idea, word, and act, and also between mechanical, physical, and verbal force. Thus a curse or blessing may be regarded now as a spirit, now as a thing, now as a word, but in each case it is charged with energy. Or, again, it may be regarded as acting along a material or psychological conductor, or as embodied in a material object, its energy lying in potential, ready to be aimed at, and discharged. It is important to note that these early views are held in comparatively late culture, especially in religion, and there show every sign of being living beliefs, not survivals. By remembering the emotions laid in all but the latest culture on words and names, we can appreciate the confusion, or rather the shifting, between the material and the verbal notion of a curse or blessing. Thus, in whatever form it is expressed, the curse or blessing, like all expressions of an idea enforced by strong emotion, has a dynamical certainty. Irish folklore has it that a curse once uttered must alight on something; it will float in the air seven years, and may descend any not being prevented, ready to be aimed at. Our guardian angel but fearsome, it takes forthwith the shape of a small misfortune, sickness, or temptation, and strikes his devoted head.

The ancient Teutonic proverbs 'operate quickly'; they are not to be delayed. While Grimm describes as the 'savagish heartiness' of the curses which he records the emotional force which has so much to do with making an impression, 18 E. and J. Ellen, Fugan Races of the Malay Peninsulas, London, 1899, p. 199.

4 Gn 43:7, Mt 12:15. 5 F. 23:2, Lk 24:19.
6 Jer 4:6, Lev 26:20. 7 C. Levin, in JB, s.v. 'Cursing.'
8 SBE xiii. ('Zond-Avesta,' I.) 12, 153.

whether in the direction of 'suggestion' to the victim or, generally, of the ascription of 'power' to the words, the name, or the body of the buyer. Many have been the cases where religion and magic have been seen as factors in the making both of magic and of religion deserve recognition. It is well illustrated by blessings and cursings in their growth; when their forms are fixed, naturally the form is everything, and a curse or a blessing is as much a fixed form as a billet doux is a fixed form. The earliest magic, in its being efficacious, to the priestly blessing in the synagogue magical powers were ascribed, and the OT states that the word once pronounced is irrevocable. 1 The Talmud warns against looking at the priest while he is pronouncing the blessing, with the idea that the glory of God is on him. 2 It is a natural process of suggestion working through strength of emotion, fear of ill-will and enmity, and reinforced by a complex of associated ideas relating to the essence of words and the energy of souls, that gives to the curse or blessing its independent 'power.' As it is put by Westermarck, this 'purely magical power, independent of any superstition will be affected by every sight of the priest's face, and more particularly the spoken wish, and the idea of its fulfilment. The wish is looked upon, as the light of energy which must be transferred—by material contact, or by the eye, or by means of speech—to the person concerned, and then becomes a fact. The priest has been known to make it a matter of course; there is always some mystery about it. 3

Just as sin 'is looked upon as a substance charged with injuries, energy,' so the curse 'is a benediction or a misfortune, a materialization of the mental objectification. To illustrate this last we may compare the precisely identical method, used in science, of conceiving of a force as a graphic straight line.

This conception is characteristic of the curse and blessing in their social and religious history.

Arabs when being cursed will lie on the ground that the curse may fly over them. Among the Nandi, 'if a son refuses to obey his father in any serious matter, the father solemnly strikes the son with his fur mantle. This is equivalent to a most serious curse, and is supposed to be fatal to the son unless he obtains forgiveness, which he can only do by sacrificing a goat before his father.' Others strip before taking an oath, to prevent it from clinging to their body. People recognize the kinetic when the curse is discharged. It is important to note that these early views are held in comparatively late culture, especially in religion, and there show every sign of being living beliefs, not survivals. By remembering the emotions laid in all but the latest culture on words and names, we can appreciate the confusion, or rather the shifting, between the material and the verbal notion of a curse or blessing. Thus, in whatever form it is expressed, the curse or blessing, like all expressions of an idea enforced by strong emotion, has a dynamical certainty. Irish folklore has it that a curse once uttered must alight on something; it will float in the air seven years, and may descend any not being prevented, ready to be aimed at. Our guardian angel but fearsome, it takes forthwith the shape of some misfortune, sickness, or temptation, and strikes his devoted head.

A saying of old Teutonic proverbs 'operate quickly'; they are not to be delayed. While Grimm describes as the 'savagish heartiness' of the curses which he records the emotional force which has so much to do with making an impression.

15 R. Shorthand, 'Maori Religion,' London, 1855, p. 35.
The Todas have a curious ceremony for anticipating mischief to the sacred cattle. The point of the rite is that the assistant in the act of boiling milk, is cured, and the curse is once removed. The dairy-priest, the paol, pours milk and charred butter into the outstretched hands of the kallmon, who is supposed to receive it through the medium of the curse: 'Die may be; tiger catch him; snake bite him; steep hill fall down on him; river tear him; or fire late him; etc. Rivers inferals that the kallmon is being made responsible for any offence which may have been committed against the dairies, and that Toda having been cured, and so made responsible, the curse is then removed in order to avoid the evil consequences which would befall the boy if this were not done. Toda sorcerers, to prevent infectious diseases by cursing-priests, and remove them with some such formula as, 'May this be well; disease, sickness, and a blessing may be a curse. Mutch's mother cursed her son for his theft; when he confessed, she rendered the curse ineffectual by a blessing.'

As Irish folklore puts it, 'it must alight on something.' Plato speaks of it tainting everything with which it comes in contact. The Bedawin will not take an oath within or near the camp, 'because the magical nature of the oath might prove pernicious to the general body of Arabs, were it to be placed in the vicinity.' The Moors hold that it is 'bad even to be present when an oath is being sworn.' A remarkable detail is very commonly found, namely, that a curse may return to the man who uttered it. 'Curses, like chickens, come home to roost;' 'they turn home as birds to their nest.'

The story is thus described, in the form of a curse:

'There was a man who had ten children, and he cursed one of his brethren, who had done him no injury; but the curse did the man no harm, and he did not then the curse returned to the man who sent it, and all his ten children died.'

Here there is a moral valuation, but the earlier notion of the conception of the intrinsic energy of the curse constitutes the point of the story. With it may be compared the Roman notion that certain imprecations were so awful that even the utterer suffered as well as his victim. The idea of taboo and similar concepts, physical contact is the most efficacious means of 'transmission.' If we regard the curse or blessing as being the mental idea of a desired material result, then, like all ideas in an impulsive brain, it reduces motor energy in the form both of words and of action. Thus, besides the uttered form, we have, by association, paths of realization by means of symbolic or symbolic action. Examples have been cited of such 'assisting' of the wish, by gestures, direct or indirect. We have also, by association, the more highly differentiated method of sympathetic or symbolic creation. A material model or symbol of the result is desiderated as a pre-embodiment of it. Later this becomes a curse and a guarantee of the result. The simplest form of this method is the use of the 'wax image.' In this model, and symbol shade into one another. The image represents the recipient, and the utterer of the wish either utters it over the image, or works upon it, and we take upon the image the material result wished for.

4. Eccehuis, Evoraideas, 324 ff; Herod. vi. 86 (the case of Oedipus and family sue don).
5. Taylor, Te Iau a Mauta, 1879, p. 94.
6. Burckhardt, p. 73.
7. Grimm, p. 166.

So far, we have cases in which the curse or blessing preserves its mental or verbal character, 'mental' being taken to include artistic materialization, as in sympathetic magic. For the curse or blessing, as for a charm, is charged with some injury or physical benefit precisely because it stops short of physical action by the subject upon the object. But the two were bound to be combined; the mixed type of curse and blessing is as common as the one. This culture is considered to be the more efficacious. The bestowal of a blessing is more efficacious when the man who confers it touches the man who receives it. When dealing with 'vehicles' and 'media' of curses and blessings, we are entitled to suppose that even in their highest development the mind is conscious of a process of 'conduction.' To us it appears obvious that, when a supplicant holds one end of a string to the other end, it will be more logical to credit them with a correct, than an incorrect, application of a physical law, and to argue that the string, which will be conducted by any other rather than by the wire. It seems more consistent with the evidence to regard these 'conductors' as being merely the nearest thing to physical contact. The sense of touch is brought up with all the direct physical action upon an object, well-doing and ill-doing, and colours all ideas of it. Similarly, when we read of curses acting at a distance—in the case of the Australian sorcerer at a hundred miles—we are not entitled to credit the belief with a reasoned or even unconscious substratum of a quasi-scientific theory of the velocity and displacement of an imprecatory particle. It is quite possible that in the case of 'conductors' of various 'mystical' forces, or as foalakers, we are forced to deal as much with the associative idea of property as with that of kinship, or of contagion. With this proviso, such metaphors may be employed.

Westmacott writes: 'The efficacy of a wish or a curse depends not only upon the potency which it possesses from the beginning, owing to certain qualities in the person from whom it originates, but also on the vehicle by which it is conducted; just as the strength of an electric shock depends both on the original intensity of the current and on the resistance of the conductor. Hence, efficient conductors are regarded blood, hody contact, food, and drink.',

As early types of the ideas, referred to above, which are connected with that of the fulfilment of a wish, we may cite the following:

A Moir would say to a stone: 'If this were your (his) stone; you would swell.' As the stone was to be used in a curse, he might call any object by the name of his enemy, and then proceed to strike or insult it. This process was a 'curse,' tasp tupa, or tups tupa. Here is the material for the development of the image-method and the symbol-method. In the Toda, the recipient apparently has it rubbed into his body with suck and butter. It is quite legitimate to regard this as a sign of respect, where the sound and the breath 'touch' the food, and hence the recipient. The Moro transmits his 'conditional curse' to the man appealed to for protection by grasping him with his hands, or by touching him with his turban or a fold of his dress, even by grasping his child or his horse. 'In such a case the mode of contact with the other person.' 1 Psychologically it is a case of displacement rather than the condition of a curse whose fulfilment is only contingent. Similarly the Moors might slay an animal at the door of the man. If the latter steps over the blood, or merely sees it, he incurs a conditional curse. Such a curse may be involved in the food eaten at a seal to a compact. The phrase runs that the food will repay him who breaks it. The eaten food 'embodies a conditional curse.' 2 Conversely, for, as Westmacott puts it, 'the magic wire may convey imprecations in either direction,' if a Moro gives food or drink to another, 'it is considered dangerous, not only for the recipient to receive it without saying, “In the name of God,” but also for the giver to give it, for it involves giving the same formula by way of precaution.' 3 In the case of a stranger receiving milk, it is lef that, should be misbehaved, 'the drink would cause his limbs to swell.'

Cursing and Blessing

On similar principles a curse may be applied to something that has belonged to the recipient, or to someone who may come in his way.

The aborigines of Victoria believe that if an enemy gets possession of anything that has belonged to them, even such trifles as a stick or a pebble which they have catched, broken weapons, feathers, portions of dress, pieces of skin, or refuse of any kind, he can employ it to curse the person to whom it belonged. They are, therefore, very careful to burn up all rubbish or uncleanness before leaving a camp; for anything belonging to an unclean tribe is found at any time, it is given to the chief, who preserves it as a means of injuring the enemy. This custom is said to have come to the very end of the universe in every case belonging to the unclean tribe. When used as a charm, the words are spoken softly, over an arm freshly painted with red clay, and tied to the point of a spear thrower, which is stuck upright in the ground before the camp fire. The company sit round watching it, but at such a distance that their shadows cannot fall on it. They keep chanting imprecations on the enemy till the spear thrower turns round and falls in his direction.

This example contains in solution a good many of the principles connected with cursing. There is also the buried curse.

In Tenemone one can make a man ill by boring in his path such objects as sharp stones or those that break in the burial. These articles are extracted later from the victim by some similar process. In the neighbouring islands of Leti, Mos, and Laker, the buried articles are pieces of steel from the victim’s own box, or a scrap of his hair. The curing acompaniments are buried, but there is no need to place an ‘embodied curse’ in the man’s path. Burial is enough, for here the object buried is a part of the man.3

Again, in connexion with tabu upon property, Codrington observes that in Melanesia a tamau approaches to a curse, when it is a prohibition resting on an unclean person, that is, on one who is tiadalo.4 In Ceraan a transgressor incurs the sickness wished or determined by the owner who embodied it in a tabau-mark.5 In Samoan the “silent hieroglyphic taboo,” or tapui, contains a curse; thus, the white shark tabu, a coco-palm leaf cut to resemble a shark, contains the wish: ‘May the thief be eaten by a white shark!’ 6

Even before the ethical stage of the curse or blessing is reached, their force varies, chiefly according to the character of the wish. That is, of course, to begin with, the mere ‘power of the word’ or of the wish; and the curse of any one, ‘however ignorant’ he may be, is not to be disregarded.7 But, as a rule, superiority of personal power or position increases the power of the blessing or curse, especially among the Tongans.

Among the Tongans the curser of a superior possessed great efficacy; ‘if the party who curses is considerably lower in rank than the person cursed, the curse has no effect.’8 Without doubt, the greater the disparity the less is the blessed of the better.9 The principle of the second proposition is that a curse will yet be performed before the name of a man who can summon a more powerful aid than that of the original curser.10

The importance and influence of parents, especially of fathers, have an enormous effect. The Nandi regard a father’s curse as being ‘most serious.’11 Among the Mpongwe ‘there is nothing which a young person so much despises as the curse of an aged person, and especially that of a revered father.’12 The Moorish proverb has it that ‘if the saints curse you the parents will cure you, but if the parents curse you the saints will not cure you.’13 The Hebrew belief in the inevitable efficacy of a father’s blessing or curse was remarkable. The blessing was regarded as an invaluable heritage. ‘In deed and word honour thy father, that a blessing may come upon thee from him. For the blessing of the father establisheth the house, but the curse of the mother rooth out the foundations.’14 From this passage it appears that a blessing given by a priest, which is in the Psalms Commandment is held out to expectant children was originally a result of parental blessings.15 The Scott proverb is similar: ‘A mother’s blessing can do no harm.’

In Greek such relics were less strong. Plato puts it that ‘the curses of parents are, as they ought to be, mighty against their children, as no other are.’ And he instances the curse of his own father, Ocyipus, Aegisthus, and Thyestes. The man who assaulted his parent was polluted by a curse.16 According to the Koreans, ‘curses and disgrace in this life and the hottest hell in the world hereafter are the penalties of the disobedient or neglectful of his parents.’

The last two cases show the automatic production of a curse by the sin itself—a notion distinctly tending towards the ethical development of these relations.

The Enara and Kumána believe that the blessing of the old people is necessary for the success of any undertaking, and that their curse is efficacious. The belief in witches and their works is general. Among the Greeks they had the preponderance in this respect over the younger; ‘the Enarines always follow the elder-born.’17

The curse or blessing of the dying is particularly strong.8

The Ova-Herero chief, when about to die, ‘gives them his benediction,’ a wish for ‘an abundance of the good things of this world.’9 Similarly among the Hebrews and the Arabs.10

Among the Bogos the blessing of a father or a master is essential before taking an employs, lest he gain nothing, engaging in a business, or contracting a marriage.11 The Moors say that ‘the curse of a husband is as potent as that of a father.’12 Westermarck points out that ‘where the father was invented with succedaneous functions—as was the case among the ancient nations of culture—his blessings and curses would for that reason be more efficacious in an exceptional degree.13

Obviously the wishes of one who is professionally in touch with the magical or the supernatural are more efficacious than those of ordinary men.

The analogous belief is quite widespread, and is underlaid that an enemy cannot escape.14 A Æthiopian ‘may punish his foes by his own power alone,’ viz. by his word.15 A Rajput ‘saja, being cursed by Brahman, was rendered useless by communication’ even among his friends.16 There is a story that the curse of a Brahman girl brought a swollen boil and his kindred.17 According to the Talmud, the curse of a scholar never fails.18 The Gallies dread the dying curse of a priest or warden, and in that country the curses of priests or scholars are particularly feared.19

The belief in the power of curses and blessings has a striking and widely extended application in the relations of the well-to-do with the poor and needy, and of the host with the guest. In the former case the idea that the blessing of those who have nothing else to give, or the curse of those who have no other remedy, is therefore efficacious, may have some connexion with the practice of cursing. In the latter case may perhaps be seen a naturally regarded attitude towards the unkind and therefore mysterious.

He that giveth unto the poor shall not lack; but he that hideth his curse shall have many curses.10 ‘Turn not away thine eyes from one that asketh of thee, and give none occasion a man to curse thee; for if he curse thee in his heart, his curse shall return upon his head.’11 The Greek beggar had his Erinys.20 The Damascans ‘would not think of eating in public without having their meal with all comers, for fear of being visited by a curse from their former owners (or deris) and bearing impotency and barrenness with them.’ In Morocco, itinerant scribes go from house to house, ‘receiving presents and invoking blessings’ upon the donors. For the latter it is a profitable bargain, since they would be tenfold repaid for their gifts through the blessings of the scribes.21 A Moor starting on a journey gives a coin to a beggar at the gate ‘so as to receive his blessings.’22 The Navajos of New Mexico invoke, in their prayers, blessings upon the higher castes who give them alms.23 Among the Ova-Herero ‘no curse is regarded as heavier than that which one who has been hospitably treated would hurl at those who have driven him from the heart.’24 An offended guest ‘might burn the house with the flames of his anger.’25 Guest and suppliants had their Erinys.26

Cursing and Blessing

the case of hospitality Westmarck applies the principle of the 'conditional curse,' which will be discussed below.

Parallel with the case of the poor and needy is that of the rich and the wife.

In West Africa the authority which a master exercises over a slave is very much modified by his constitutional dread of a revolt; and the master, lest he curse thee.13 Thou shalt not command thy manservant or thy maidservant, neither shalt thou say, What hast thou done? for they hate thee, and if thou shalt be witty upon them, they will be wrathful against thee, and will smite thee with their rod from God.14 In Morocco it is considered even a greater calamity to be cursed by a Sheik than to be cursed by the Sebastui.15 16 The utterer of a Sheik's curse is said to be greater than the Sebastui, but than to be cursed by a Sheeret.15 The hounds, says Mann, on which female relations, not being duly honored, pronounce a curse, prescribe complete death.15

3. Special applications.—The circumstances in which blessings or curses are uttered, and the persons upon whom they are directed, are obviously both numerous and various, and the helpless cases may be cited, which have a bearing upon the nature of the uttered wish. Children, in particular, are the recipients of the blessings of parents.15

The blessing Ephraim and Manasseh by Jacob became among the Jews the regular formula by which parents blessed their children. Among the Malagays, at a circumcision, the godfather pronounced a blessing and pronounced blessings upon them, such as 'May they prosper!'16 Among the Maoris, when a child was a month old, the ceremony of tutu was celebrated, in which the tutu family pronounced a karakia of blessing: 'Breathe quietly, thy lung,' etc. Jewish teachers to-day bless the children when they are born, and in Fiji all prayers are concluded with malignant requests against the enemy: 'Let us live, and let our enemy perish.'

The curse is particularly the weapon of the wronged and oppressed against their more powerful enemies, and of zealots against their bigoted opponents. In the Bible it is especially forbidden to curse God, parents, authorities, and the helpless dead.11 To bless God is to praise Him. Yet Oriental has a tendency to curse God, even on the slightest provocation in daily life.12 Blessing the king is implied or explicit in ceremonies of coronation, and on solemn occasions.

The gods of Egypt bestowed a blessing on the Pharaoh, when they presented him with the symbol of life.13 The akhibika of the raja included a blessing, embodied in the consecrated water 'O water, thou art naturally a giver of kings, grant a kingdom to my Yajamana.' 'O honeyed and divine ones, mix with each other for the strength and vigour of your Yajamana.'14 The ceremonies of anointing and the like often involve a blessing.15 In the last example, the vehicle is personified. A Jewish author records a Roman custom of gagging prisoners, when condemned to death, to prevent them from cursing the king.16

In the Banks Island an 'invocation of the dead,' the tutarou, is celebrated. Food is thrown for the souls of the dead with such words as these: They who have charmed your food, have chanced you . . . drag them away to hell, let them be dead.12 In connexion with this is a practice of cursing a man's eating: if an accident befalls the recipient of such a curse, the utterer says: My curse in eating has worked upon him, and he is dead.17 Among the Maoris, what was almost a sense of modesty and a principle of harmony grew up about the idea of food and its preparation. A typical formula for the counter-curse is:

'Let the head of the cursers be broken in the oven. Served up for food for me, Dead, and gone to Night.'18

To curse, kanga, was in effect to apply to another man any word which 'had reference to food.' It is recorded that a young man, seeming in a cup of bread, remarked that 'the vapour rose from his head like steam from an oven; and that this remark caused a tribal war.19 The regular term for food, kai, was at times translated at home into the name of a chief. To use the term kai would in that case have been equivalent to a serious curse against the chief.20

Down to a late period in the history of Christianity, marriage was a personal 'arrangement'; the Church only stepped in to pronounce its blessing upon the union. The Hebrews had a benediction both for betrothal and for marriage.21 The old Roman marriage-blessing conferred included a benedic- tio, formula for which are extant. When St. Ambrose says that marriage is sanctified by the benediction,22 he refers to one case only of a general practice, lasting through the Middle Ages, of concluding matrimony with a blessing. Thus all sales of goods and property were blessed.

The application of the curse as a protection of property and as a method of punishing theft has been incidentally noted. In Fiji the thief is cursed the chief in order to recover the stolen goods.4 The method is conspicuous in Samoa. Tabu is 'a prohibition with a curse expressed or implied.'2 The embodiment of the wish in leaf or wooden block, is termed iku rauku or rauvi, but we cannot always infer even the implied wish in prohibitory tabu.22 Allied principles inevitably shade into each other. The ancient Babylonian landmarks appear to have been inscribed with the word of God, while the Latin carcer is a landmark.4 Taken over by Christianity, the practice survived, for example, in the English custom of 'beating the bounds,' in which the priest invoked curses on him who transgressed, and blessings on him who regarded the landmarks.23

Some details may be put together which illustrate usages and developments. In Melanesia, the practice of swearing or 'sounding off,' is instructive for comparison with that found in civilization. A man will say, with a gesture towards a tree, vavovo aru!—which is equivalent to telling his enemy to be hanged thereon.24

The limits of the blessing and curse are well preserved in the Catholic distinctions between benedic- tixs and panis concorsatus, and between benedic- tio vocans and benedictio constitutionis. The earlier principles, as we have seen, was to connect blessing and consecration, cursing and excommunication. It is in accordance with the extension of this principle that the curse is embodied in the "cursed thing," and the transgressor of the

prohibition himself becomes the 'accursed thing' or the curse. This was the case with Achan, and when devoted to destruction. On the same principle a blessed man is a 'blessing.'

In the OT 'accursed' (AV), hērem, should be 'devoted' (RV)—devoted to God, not accursed from God. 5 Similarly with the Greek translation δικαιότατον. Such a thing is withdraw from union use, either as 'vowed' to God, or as put under a ban, in which case it has a species of holiness. 6 As a rule, a thing devoted to destruction is under a curse. In Canon Law the development of anathema into excommunication is incomplete.

Here we arrive at the curses and blessings of the community. In early culture a headman or body of 'old men' may represent the community in this function.

The State officials of Athens prayed for 'the health and safety of the people.' Greek State-hugetures included a 'communion service,' in which curses were invoked upon offenders. 8 Mediaval and modern Christianity combine a service of communion with the Luten penance. This has historical connexion with the early Hebrew rite, celebrated on Kad and Gerizim. The sacrifices stood on Mount Ebal to curse those who disobeyed the Law, and six stood on Mount Gerizim to pronounce the corresponding blessings. On the same principle, the priests and Levites stood in the valley betoo, and on turning their faces to Gerizim, they pronounced a curse, and turning them to Ebal, pronounced a curse. 5 The Talmudic idea that a curse has especial efficacy when pronounced three hours after sunrise is not without connexion with such festalized conditions as 'in the sight of God and of this congregation.'

Throughout their history, private cursing and blessing preponderate over public, and unofficious over officious. As the moral stage in religion supersedes the magical, the 'mere power of the word' is confined to private practice, and perhaps becomes more sinister with scarcity. The enormous collections of private dīvīre and impressiones which have been drawn from Greek and Roman literature, in the form of leaden tablets or symbolic nails, inscribed with curses consigning an enemy to the infernal powers, testify to the hold retained by the primitive theory of the curse, just as the prevalence of profane swearing in modern civilization shows the convenience of the mere form, emptied of all content except vague resentment, for the satisfaction of a particular emotion. The hold exerted by the simple mystery of magic upon the people of ancient Egypt, Greece, and Rome, is not to be compared to the appeal: 'I am under the protection of God, and for his sake you are obliged to help me.' But the word Latar is also used to denote the act by means of which a person places himself in the said relationship to another. Had Latar dīkā, 'This is dīkā you on,' is the phrase in common use when an act of this kind is performed. If the person so appealed to is unwilling to grant the request, he answers, Had Latar ḍiḥrat, 'May this dīkā occur upon you.' The constraining character of Latar due to the fact that it implies the transcendence of a conditional curse:—If you do not do what I wish you to do, then may you die, or may your children die, or may some other evil happen to you. That Latar implicitly contains a conditional curse is explicitly stated by the people themselves, although in some cases this notion may be somewhat vague, or possibly have almost faded away. 7

The various acts which establish ʿādār all serve as outward conductors of conditional curses. ʿAr may be made by taking the son and giving him to the father, saying, 'This is ʿādār for you.' Another method is to present food. If the man accepts it, he is bound to do what is asked of him. Refugees enter a tent or merely grasp the tent-pole, saying, 'I am in God's ʿādār and your ʿādār.' 10 An injured husband may put ʿādār upon the governor, to get redress, by going to him with a piece of his tent-cloth over his head; or he may leave seven tufts of hair on his head, and appeal to another tribe.

The conditional curse is obviously supposed to be seated in the tent-cloth or tufts of hair, and 'from there to be transferred to the person 'invoked.' It may also be made by men making an appointment, and one failing to appear, the other makes a cairn at the spot, and takes the breaker of faith to it. The latter is then obliged to 'give him a nice entertainment.' Similarly, with ordinary curses, ʿādār is used. A malefactor lays a new nucleus, his comrade asks him to treat them. If he refuses, they...

make a cairn, asking God to send misfortune on the mule. By way of revenge on a naggingly
stubborn animal, one erects a cairn, and such takes a stone therefrom, and, as he throws it away, says: "As
we dispersed this heap of stones, so may God dispurse for him that which makes him happy." The
sacrifice of an animal on the threshold is the usual method of expiation. To secure the blood is
sufficient. Over such an animal the biṣaṃīllāḥ, "in the name of God," is not pronounced; and it cannot
be eaten by the sacrificer or the person invoked, but only by the poor. The prayer
is resorted to for a variety of purposes: to obtain pardon from the government; or to induce the relatives of a person who has been
ekilled to desist from taking revenge, to appease the heart against an enemy or mediation in the case of trouble. It
plays a very important part in the social life of the people. It
It is also employed to put pressure upon jinns and domestic animals to compel the assistance of the latter. Making cairns, or tying rags, near a sīyid is 'arū upon the saint. The
rag is knotted, and the nun says: 'I promised that I will not untie you until I have attended to my business,"[12] Here we come to another
form of the conditional blessing. Another, man, invoking revenge, strews burnt corn on the floor of the sīyid,
saying: 'I throw, O saint, so-and-so as I throw this, O saint,' as Westernmark points out, "but at the same time it is an
act of symbolic magic."[13]
Forms of ordeal, and the whole theory of the oath, as well as its practice up to the latest state of civilization, depend on the principle of the conditional curse, often embodied in symbolic
action.
The curse as an engine of law well exemplified in Samoa. A theft has taken place; the injured party presents the 'priest' to curse the thief and make him sick. If the thief falls ill, he
restores the stolen property, and the 'priest' prays for a re-
vered of the curse. Again, in some cases, suspected persons are summoned to the
grace. Grass is laid on the sacred stone, the village-god, and each person places the hand thereon, saying: 'I lay hand on the stone. If I do the thing, I may speedily die.' The
use of grass is said to refer to the impure curse: 'May grass grow on my house and family.' So, in ordinary disputes, the nun will say: 'Touch your eyes if what you say is true.'[14] In the same way, European boys' touch wood' as a guarantee of truth.
An oath may be regarded as essentially a conditional self-imprecation, a curse by which a person
calls down upon himself some evil in the event of what he says not being true. All the resources of
deliberative magic are drawn upon in the multitudinous examples of this principle.
In Teheran the swearer prays for his own death if what he
says proves wrong; he drinks his own blood, in which a sword has been dipped. The Malay drinks water which daggars, spears, or bullets have been dipped, saying: 'If I turn traitor, may I be eaten by this dagger or spear.'[15] The
Sumatran oath is still more explicit: 'What I now declare is truly and really so, may I be freed and cleansed from my oath; what I express is nothing but a cry to my oath in the curse of de-
struction!'[16] The Greek swear, was, at an early period, the object sworn by. The Ostyaek swear on the nose of a bear, which animal is held to have supernatural power.[17] Hindu
swear on the Sankrit hrudya, or on water of the Ganges, or touch the legs of a Brahman; Muhammadans, on the Qur'an; Christians, on the Bible.[18]

The Calabar drinks a juju drink called abuhu, and repeats these words: "If I have been guilty of this crime... then, I swear, this man will deal with me."[19] Eating the flesh of the sacred animal, drinking water of curan, are prominent forms of the ordeal in Africa and elsewhere. The Hindu ayapthya
denotes both oath and ordeal. The medieval 'trial by combat'
was preceded by an oath, and this defeat was tantamount to
perjury. The formula of the ordeal of the Ezechian rite: 'I
swear to God that... the sacrificial animal,' and the
Christi corpus non perturus gemine guttis, and laurate in
facialia mea, stragante me aequifuerat me statim in
momenta.1
In the contract and covenant a mutual conditional curse is largely used.
Thus the sīyid of the Moors is the mutual form of 'arū. Chiefs exchang cuacks or jasus;" and 'if any of
them should break the covenant, he would be punished with some grave misfortune.'[20] Recompense is effected, among the same
people, by joining hands; the holy man who superintends
wraps the hands in his cloak, saying: 'This is sīyid between you.'[21] A conditional oath ratifies a bond of alliance. If one of them breaks faith, it is said: 'God and the food will repay him.'[22] In the pulse rite of Ceram, celebrated to settle a quarrel or to
make peace, both parties attend a feast, end each say that any
drops of their blood are let fall and swords dripped. This
they alternately repeat. Reconciliation of the terms of a
band of Leti, Moi, and Lakor, one man having cursed the other, is
effected by the men eating together.[23] To ratify a bond of fra-
ternity in Madagascar between two parties, a bowl has its head
cut off, and is left bleeding during the rite. The parties pro-
nounce a long mutual impression over the blood: 'O this
miserable foul wounding in its blood! Thy liver do we eat...
. Should either of us retract from the terms of this oath, let
this covenant presently and hastily become blind, let this covenant prove a curse to him.'[24]
The mutual conditional curse, it must be noticed, allows the curse proper to be more or less lost in
the material symbolism of union. Since, moreover, all these analogous principles are common to
another so inevitably and gradually, we do not seem
entitled to press the principle of the curse too far.
In reconciliation ceremonies, for instance, it is possible
that the same principle of the curse may adhere to it, but not essentially.
The oath carries with it the punishment for perjury.
According to Roman legal theory, the sanctio of a statute is the penalty attached for breaking it. Both the
ancient law and the modern criminal law are
accompanied by a curse upon the transgressor.[25]
True to its mission of serving where other methods fail, the curse reeded as police efficiency increased.
In the earliest culture, however, as that of the Australians, the personal efforts of the magicians work
\together with the impersonal energy of the supernatural
elements they employ.
5. The blessing and the curse as invocations.
The distinction between the 'magical' and the 'religious' curse or blessing is not to be over-emphasized. The two forms merge into one
other, and either is as 'magical' or 'religious' as the other, while neither is the more efficacious.
A god draws together in his own person the various threads of supernatural forces; in this respect, a
blessing is accompanied by a curse upon the transgressor.
Their inherent mystery of power still depends on the will of the utterer.
His invocation of the god to execute for him his heart's expressed desire is rather a long circuiting than a guarantee of the results. The bare force of the wish, in fact, tends to remain even
when the wish is merged in prayer. The personal quality of the utterer is still the characteristic of his wish. Psychologically, it is difficult to limit a desire by making it an invocation; to divide the attention between the object of the desire and the expression of the desire on the one hand, and an
intervening divinity on the other, is a matter of training. Thus it is rarely the case that, when a
man says 'God, the wish you!' he is conscious of the reference to God, any more than when he says
'Bless you!'
Further, there is the tendency for the principle of the curse, not of the blessing, to become itself
personified. This result is found as far back as the
stage of culture represented by the Maoris. The 'cursing thought' is personified in the Avesta;
so is the 'poison and good blessing.' The Greeks
personified these ideas as Erinyes, and behind this there may be the notion of a persecuting ghost, whose

anger or curses in later times were personified as an independent spirit. Allegorical figures of curses were included by painters in pictures of the wicked in hell. Subsequently the Egyptians became associated with passages of Zoroastrianism. The steps by which a curse or blessing becomes a appeal to a god, a prayer that he will injure or benefit the person intended, are not indistinct. The Melanesian curses in the name of a god, a powerful spirit. His connexion with the blessings given or adds efficacy to his curse. The efficacy of the mere word naturally is increased, not by the will of the spirit invoked, but by the use of his power. The Talmud and the OT supply examples of 'the ancient custom of the Lord might be used with advantage in any curse.' Among the Hebrews the 'Name' had peculiar importance. In the next place, the appeal may take the form of a conditional blessing upon the god. In the Yajur Veda the formulas, addressed to Surya: 'Smithe such a one, and I will give you an offering.' This method is clearly more efficacious. Vagina in the Banks Islands is the most serious of curses. It consists in procuring the intervention of a supernatural power, as in the Balams (Nu 22-24) to induce a belief that the Divine power can be moved to effect the injury desired. A further step is taken when the moving is in the form of compulsion. As curses may develop into prayers, so prayers may develop into curses. Brahmana is the energy of the gods, but it is also the prayer, and 'governs them.' Ap is both 'prayer' and 'curse'; so is the Manx word gnce. Prayer is often possessed of magical power just as the Toda spell is in the hands of the invoker. Even in Greek religion the deity is constrained to effect a curse or a blessing:11 even the personified curse, the Erinyes, works by a spell-song which binds the victim. Thus the phrases, 'by,' 'for the sake of,' and the like, are used for the purpose of compulsion, though they are not origination of compulsion, of another kind.

6. Connexion with morality.—Law gradually takes over the function of the curse, as a form of retribution; while prayer may still retain its use in cases where human intervention fails, or even as a spiritual replica of human intervention. The moralizing of the curse and the blessing within these limits follows the course of ethical evolution. In the OT the undeserved curse has no effect, unless the turn of God to a blessing. The justice of the wish is left to the decision of God; while it follows that an unjust curse or blessing is a sin against the All-Just. The Greeks modified their theory of the hereditary transmission of a curse by arguing that each generation commits new sins.1 At one end of the process we have an invocation to the gods, as in the Sarpy of the Chaldeans, asking for relief from the effects of a curse, or the Evens: 'or the thief involves God while he breaks into the house,' the bandit the Virgin.2 At the other, the god rewards or punishes independently of human invocation, and with absolute justice. According to Aquinas,3 a metaphysical is efficacious only if the invoker does not fail, In the month of man, however uttered or however desired, it is per se inefficaciously. But, when this stage is reached, cursing or blessing has become a contradiction in terms.

LITERATURE.—The literature has been given fully in the footnotes.

A. E. CRAWLEY.

CUSTOM.—In the course of his discussion on 'Custom and the Moral Life,' Wundt writes as follows (Ethics, Eng. tr., i. 131 ff., 151: for an unfavorable criticism, see Laid, Philosophy of Conduct, New York, 1902, p. 27 f.):

'1 A custom is a form of voluntary action that has been developed in a national or tribal community. However rigorously individual conduct may be prescribed by custom, it never has left free the activity of a supernatural power. And it is custom, too, that transfers the principle of freedom, which in the animal community does not exist, to man, to the habit, to the general consciousness of society. . . . In custom the settled habits of the human race and of its subdivisions still remain the channel of consciously and voluntarily active motives. The principle of freedom in custom is the principle of voluntary action, is therefore a voluntary action; and yet it is possible to say that the principle of custom, that is, habitual conduct that has become mechanical; custom, habitual conduct that has become mechanical upon the means of compulsion. But these, like custom itself, are never of the obligatory kind. They consist neither in mere habits, conscious as the moral laws, nor in objective measures like the laws of the state.

Custom is closely connected both with habit and with usage, the distinction of each from the other, thus well set forth by Wundt (op. cit. p. 156 f.):

Habit covers all and every form of voluntary action that, for whatever reason, we have made habitual. It is the individual law of conduct. If the acts of the individual accord with the habitual action of the community to which he belongs, habit becomes a law. . . . Custom forms a smaller circle within this general field of usage. Custom is habit: it is marked by the regular recurrence of voluntary actions. Custom is usage; it is always the custom of some community. It has, further, that usage lacks—a normative character. Conformity to custom is not, like conformity to usage, a matter of individual choice; custom has the sanction of a moral constraint, which the individual cannot disregard without personal disadvantage. . . . While, therefore, individual habit is absolutely and entirely to choice, provided only that it does not conflict with the more comprehensive social fact, usage exercises a practical compulsion through the example that it sets, and custom raises this compulsion to the dignity of a constitutional law.'

On the other hand, custom, with its social basis, tends to become habit in the individual, producing, it may be, an impression of oddity when he moves in a circle where the custom is different, so that in countless cases custom and habit may stand in sharp antithesis. But if custom, in the main, produces habit, habit in its turn, if the individual possessing it, whether as a result of previous environment or in virtue of personal idiosyncrasy, be strong enough to impress his own particular habit on his fellows, may influence custom, or even give rise to a new custom of greater or less extent (for some interesting specific instances, see JE iv. 396; 101 f.); or, 'it would be the custom of the NK to bathe his face, hands, and feet in warm water before Sabbath began. This also was adopted by the Jewish community.' This, by the very nature of every social organism, is comparatively rare, and, if custom is thus in the main real, even though perhaps hitherto unfelt, need of society, either in whole or in part. Otherwise we have, not custom in its true sense, but the more

evanescent 'fashion' or 'vogue.' For custom is concerned with the constant needs of society, and is 'subject to change only with changes in conditions of life or the more potent factor, and yet custom has on the power of individuals, but change has in the former. Custom is as truly a picture of the moral consciousness of the community as a man's habits are the expression of his individual character. Habits can consistently be formed anew, because new individuals, whose habits they are, are constantly coming into existence. But customs, on the other hand, are the social inheritance prevailing longer than the individual. It is, therefore, the nation endures' (Wundt, op. cit. p. 160).

We have seen that custom and habit are mutually active. Under conditions now prevailing, even amongst primitive peoples, custom is by far the more potent factor, and yet it would seem that this was not always the case. There must have been a time when no form of organized society existed, and when men were so widely scattered because of the fewness of their numbers that each individualism must have prevailed far more than it now does. Then it was that habit, not custom, was the leading factor; and it would seem that, as individual habit met individual habit, each modifying and being modified by the other, a code was crystallized as custom; while custom meeting with custom—perhaps even affected now and again by the individual habit of some specially strong individuality—was in its turn blended into an amalgam of customs of different influence, until at last there was evolved one of the great determinants of society as a whole. At the same time it must be borne in mind that such a reconstruction is entirely hypothetically and incapable of historical proof. Custom is at the earliest historical time and in the most primitive modern social conditions of which we have any knowledge, and, in view of the fact that all members of any primitive society are, and doubtless always were, on approximately the same scale, it would seem that, as Wundt says (op. cit. p. 161),

'one man may contribute one thing to a custom, and another another; but the custom as a whole is a common creation, which cannot be analyzed into individual elements, for the simple reason that the various individual factors are all operative at one and the same time, and that it is consequently impossible for the individual to separate his own particular contribution from the contributions made by others' (cf. Wundt's criticism of this entire scheme of reconstruction, p. 159 ff., summarized thus [p. 164]: 'Custom has, so far as we know, no development, and no development that is from preparatory custom of kindred contents. Usage, fashion, and habits, on the other hand, constitute a mixed medley of new formation and relics of a long dead past. Transformation and new formation are here often enough difficult of discrimination; but there is no such thing as an entirely new custom').

The custom, however, is the origin of custom seldom arises. For him it is his sole explanation, if one be sought from him, is that, as the Kairns say (Leslie, Among the Zulus and Amatungas, Edin. 1876, p. 146), 'it was so done by my father,' or, as the Narrinery have it, that it was so commanded by Narunidere, the 'All father' (Taplin, in Woods, Nat. Tribes of S. Australia, Adelaide, 1879, p. 33). In this connection, however, it is necessary to note that a custom may persist after its original cause has ceased to be operative, and that in such a case it may have an entirely different reason and motive assigned it (cf. Wundt, op. cit. p. 139 ff.). At the same time, for practical reasons, it is important, or, for particularly remarkable natural phenomena, etiological myths may be invented with the most honest intentions imaginable, so that custom comes to be one of the factors, as Lang well points out in his Custom and Myth, in the genesis of the myth.

In view of the homogeneity and lack of sharp distinction which characterize the more primitive stages of the human race, custom may be said to permeate and to control well-nigh every phase of man's mental and moral activity; and, although impaired in part by the rise of the more potent factor of individualism, it still exercises this potent power to a very great extent over the most highly civilized peoples. In the domain of religion it is custom which has largely influenced ritual and belief in possibilities for the individual. To the extent that a custom in the last resort, that is the chief factor in the evolution of law, which, to primitive man, is inextricably interwoven with, and inseparable from, religion; custom conditioned the law, and yet common law has existed, even in the most highly civilized communities, from the hour of his birth to that of his death. Indeed, the most daring radicalism and the most pronounced individualism have their own customs; for without custom there can be no type of human thought or of human activity.

Such being the case, it is but natural that in the earlier stages of civilization custom should be held to be Divinely sanctioned, and that any breach of it should result with it. In consequence, as we see it, the Indians of India, the Kamekhtans, and the pagan Greenlanders hold the breaking of an old custom to be one of the greatest of sins (Hopkins, Religions of India, London, 1885, p. 321; see also a paragraph in the appendix to Religions of India, by C. A. Seligman and T. W. Rhys Davids, London, 1874, p. 274; Rink, Tales and Traditions of the Eskimo, London, 1875, p. 214.) while violation of custom provokes the wrath of the deified ancestors amongst the Basuto (Casalis, Trans. Brit. Assoc., London, 1861, p. 254); disaster and harm follow such infringement amongst the Ewe and Alents (Ellis, Ewe-speaking Peoples, London, 1890, p. 233; Elliot, Alaska and the Seal Islands, New York, 1886, p. 170); and the Ainn, in such an event, fear the wrath of the gods (Batchelor, Ann. of Japan, London, 1892, p. 243.). Whether, however, Wundt is right in saying (op. cit. p. 134) that 'custom was at first an act of worship' seems open to question.

With the evolution of a specific concept of law, a distinction may be drawn between law and custom, as when Plautus (Trin. 1033, 1037) makes Stasinius say:

'Ambitio iam more sancta, liberat a legibus, ... Moras longum perpetuum iam in postestate sanat; ...

and a few lines further on he utters the profound truth, valid even when taken in the cynical spirit of its speaker:

'Leges omnium serviorum'—a phrase which, like the Talmudic maxim, 'Custom always precedes law' (Soferim, xiv. 18), might well serve as the motto for almost any treatise on the origin of law; while in like manner Justinian expressly says that 'long prevailing customs, being sanctioned by the consent of those who use them, assume the nature of laws' (Instat. i. ii. 9).

When it becomes possible to draw such a distinction between custom and law, infringement of the former, unless distinctly coincident with and protected by law, no longer constitutes an offence of which legal cognizance must be taken, although so advanced a code as the Jerusalem Talmud (Pos. iv. 5) only authorizes the transgression of custom equally with transgression of law—a survival of some such stage as that of the African Wanika, amongst whom, 'if a man dares to improve the style of his hut, to make a larger doorway through his huts he is to be punished, even if he should wear a finer or different style of dress to that of his neighbor.'

The strictly legal distinction between lex, mor, and comitutudo is thus illustrated by Isidor of Seville (Etymol. v. iii. 24.)

Lex est constitution scripta. Morium est ratio principiorum, lex non scripta. Comitutudo est antem ista constitutionum, quae non leg sucepta, cum legem ratio committit.

1 The strictly legal distinction between lex, mor, and comitutudo is thus illustrated by Isidor of Seville (Etymol. v. iii. 24.)

Lex est constitution scripta. Morium est ratio principiorum, lex non scripta. Comitutudo est antem ista constitutionum, quae non leg sucepta, cum legem ratio committit.
read many pages of a book dealing, say, with the peoples of Africa or of Polynesia, he will find mention of customs that seem to him ridiculous, disgusting, or immoral—all of which judgments, from the point of view of his own civilisation, may be perfectly true. And yet, in the words of Wundt (op. cit. p. 284),

"the moral value of the personality is relative; it varies with the stage of development to which moral ideals have attained."

Judgment of the moral value, whether of the individual or of society, depends upon the absolute value of its opposition and action, but upon the relation of these to the stage of moral evolution already achieved.

And yet, the separation between custom and law is by no means complete, even from the legal point of view; for it is custom, as is well known, that forms the basis of the vast body of common law in England, whence it was adopted in N. America. And advanced ideas, of the kind of the letter, are the nearest of all to the ideas that we may be postulated to have here. Suffice it to say that a custom, to be enforceable at common law, must be both definite and reasonable, and that it must have been used uninterruptedly and undisputedly so long that the courts can with reasonable certainty, in the contradiction of this latter phrase being understood to mean from the accession of Richard I. in 1189 (whence the rejection of particular customs in the United States, since none such could there possibly date from before that period).

Law, being normally derived from custom, is for the most part in harmony with it; so that in practically every affair of everyday life one avoids all conflict with law if one simply follows custom. And the law is just as closely in line with the custom as in the contrast, such may be its relation to law.

In this case the law in question—whether as being due to the caprice of the ruler or to the more advanced ideas of the governing classes—is not, as is usually the case of a law, derived from custom, but from the weaker source of individual, class, or other minority requirements. Under these conditions law usually accords to custom and remains a mere dead letter, so that, for instance, "under the Hindu system of law, clear proof of usage will outweigh the written text of the law" (Mayne, Treatise on Hindu Law and Usage, Madras, 1875, p. 41); while the Roman jurists (Instit. I. ii. 11; Digest, I. 44) laid down the maxim that a law may be abrogated by deserting it for contrary usage. Nay, law being even more conservative than custom, the change of custom may be such that a law—even one which initially may have been given the most just ground by its necessity—becomes to be so much behind and below the altered custom that it is resolved, for this very reason, into a mere dead letter, and must either fall into oblivion or be amended to meet the changed conditions of the social organism. In general it may be postulated that no law can be enforced against the prevailing custom; even chiefs and kings, with the apparently despotic powers that attach to them in primitive society, prove unequal to the task (cf. the examples quoted by Westermarck, op. cit. p. 362); and the lamentable failure of many laws designed for the highest benefit to society and drafted by men of unimpeachable ethical character proves—were proof necessary—that custom is really supreme over law in the highest as well as in the lowest stages of civilization.

As has already been noted, custom is subject to the most complete transformations, both in motive and in manifestation. Before the average man has any notion of the起源 of a particular custom, the custom may have been long established. A practice of common law formerly prevalent in France, as in the custom of Normandy, of Paris, etc., and the same was true of Germany almost until the close of the Middle Ages.
shall be either performed or omitted, and, provided that this demand is fulfilled, it takes no notice of the motive of the agent or the expectation of future reward. If the course of conduct prescribed by the custom is not observed, the mental facts connected with the transgression, if regarded at all, are dealt with in a rough and ready manner, according to general rules which hardly admit of individualisation.'

This brings up the difficult problem of how far one ought to conform to a custom which he deems not merely unmoral and incorrect, but immoral and wrong. To adopt an indifferent custom no one, unless he be finically hyper-ethical or—as is here more usually the case—wantonly iconoclastic (i.e. delighting in beating custom as custom), should object to accord with its ethical end, especially if he be not other than merely to avoid disturbing social amenities or to avert unfavourable comment on the score of oddity and 'crankiness.' 'If,' writes the great Apostle of the Gentiles, 'meat maketh my brother to stumble, I will eat no flesh for evermore, that I make not my brother to stumble.'

CUSTOM (Hindu).—The Sanskrit word is ऐकारण, 'religious custom,' establishep usage. The binding force of custom is fully recognized in the Sanskrit law books. Thus it is stated in the Code of Manu (i. 106) that ऐकारण is transcendental law, and that, therefore, a twice-born (i.e. high-caste) man should always be careful to follow it. The whole body of the sacred law (ahara), according to a favourite scheme, is divided into three parts—ahara (rules of conduct), agnivarna (rules of government and judicature), and pranagishtkita (penance and expiation). The well-known Code of Yajñavalkya comprises the following subjects under the head of ऐकारण: purificatory rites (śraukṣa); rules of conduct for young students of the Veda; marriage and duties of women; the four principal classes and the mixed castes; duties of a Brahman household; miscellaneous rules for one who has completed his studenthood; rules of lawful and forbidden diet; religious purification of things; śradhās, or oblations to the manes; worship of the deity Gānapati; propitiatory rites for planets; duties of a king. See Dharma and Law (Hindu).

CUSTOM (Muslim).—See Law (Muslim).

CUTTING.—See Mutilation.

CYBELE (Kybēle).—The Great Mother Deity of the Phrygians, known also, almost exclusively, in the cult language of the Romans, as the Great Mother of the Gods, or the Great Idean Mother of the Gods (Magna Deae Mater, Mater Deae Magna Ideae). Her worship had its origin in Asia Minor in pre-historic times, possibly prior to the advent of the Phrygians, which is placed at about 900 B.C.; became prominent in early historic times in Galatia, Lydia, and Phrygia, where the various forms of the Cybele legend agree in localizing the worship of the godess, which was most strongly centralized in Phrygia. Its most sacred seat in the East was at Pessinus, a Galatian city near the borders of Phrygia, but once a part of the great Phrygian Empire, where the symbol of the goddess, a small meteoric stone, was preserved. From Asia Minor the cult spread to Thrace and the islands, and finally reached Greece, though it never became popular there owing to its un-Hellenic nature. In 294 B.C., in response to an oracle to the effect that Hamilcar could be driven from Italy if the Idean Mother were brought from Pessinus, the sacred stone was transferred to Rome, and the cult was adopted by the State and located on the Palatine (Livy, xxix. 10-14). It first became of great importance during the reign of the Roman Empire, when it spread from Rome as a centre to all the provinces. Like the cults of Mithra and Isis, it was one of the most obstinate antagonists of Christianity, and disappeared only after the long struggle between the two, in which the influence of the goddess, in the victory of Theodosius over Eugenius in A.D. 394, is known of her in Greek and Roman times. She was identified by the Greeks with Rhea, Ge, and Demeter, and by the Romans with Tellus, Ceres, Ops, and Main. She was known as the universal mother—of gods and men, as well as of the lower creation—though her character as the mother of wild Nature was especially prominent, as was manifested by the orichaloric vigour of her worship, her sanctuaries on the wooded mountains, and her festivals, the Adonis and Attis, which were connected with the world of plant life (see ADONIS). The priests of Cybele in historic times were eunuchs called Galli, who first appear in Alexandrian literature about the 3rd cent. B.C. Clad in female garb, they wore their hair long and fragrant with ointment, and celebrated rites to the accompaniment of flutes, cymbals, tambourines, and castanets, yelling and dancing themselves into a frenzy until their excitement culminated in self-sorcing, self-incororation, and exhaustion. Their consecration to the service of the goddess sometimes consisted in self-emasculation. Priestesses also took part in the cult.

Like Venus and Adonis, Isis and Osiris, etc., Cybele and Attis were worshiped in the Roman world, and formed a duality symbolizing the relations of Mother Earth to her fruitlete, the birth, growth, self-castration, and death of Attis, the son and lover of Cybele, signified the springing, growth, and death of plant life (see ATTIS). A celebration corresponding to the annual spring festival at Rome, which extended over the period March 15-27, thus including the equinox, consisted in a kind of sacred union of Cybele and Attis, and no doubt existed in Phrygia also.
CYNICS

Cynics usually appear in art seated on a throne, draped, with laurel crown and veil, accompanied by lions. The tympanum, cymbals, patera, scepter, garlands, and fruits, and Attis with his attributes, the Phrygian cap, peon, syrinx, and the pine, also appear with her. The so-called Niobe on Mycenaean Sigillo is a Cynic, and the Cynic of Permeia, now in Copenhagen, is one of the best sculptural representations of her. She inspired no piece of art of the first class. In literature no important work except Catoineus xiii. is devoted to her. Tragedy, the Cynic was frequently mentioned in the literature of the Empire. Her religious importance lay in her mysticism and in the closeness of her contact with the common people, and was very great in spite of the gross practices which grew up around her cult.

LITERATURE.—See references under art. Great Mother and Attis. GRANT SHOWMAN.

CYCLE.—See CALENDAR, ARTHUR, CUCULAINN CYCLE, etc.

CYCLOPS.—See GIANTS.

CYNICS.—The name is derived from κύς, 'dog,' with which it was connected in several ways. (a) To the east of Athens, beyond the Diomede gate, on a spur of Lycabettus, was a gymnasion kept by the Cynics. (b) Antisthenes, the founder of the Cynic school, was a pupil of Socrates, his second son Kynosarges is compounded of κύς and ἰχθύς, lit. 'white dog.' The story ran that the gymnasion stood on or near the site of an ancient sanctuary of Heracles (the Cynic tutelary, cf. Wicke, Die mythologischen Salons von Berlin, 1885, ii. 102 f., 130), and that, on the first occasion of sacrifice to the hero, a dog rushed in and seized a portion of the offering. The designation refers, possibly, not to the colour of the dog, but to the flash-like effect of its speed upon the spectator. (b) The epithet 'dog' was soon adopted by Cynic teachers—Antisthenes, the 'downright dog,' Diogenes, the 'royal dog'—doubtless as a symbol of their return to the 'simplicity' of animal nature, of their renunciation of artifices, and handlings (cf. Plato, Rep. ii. 375 f., v. 415 f.). It was also applied to them by their opponents for less flattering reasons, connected with displays of asceticism, coarseness, and immoderacy (cf. Winckelmann, Antiath. Fragn., 1842, p. 8 f.). (c) Eventually the epithet became so associated with the sect in the popular mind that the Corinthians placed a marble dog upon the pillar erected by them over the grave of Diogenes.

1. History.—(a) Personal.—The Cynics flourished prosperously for about a century after the death of Socrates (399-299 B.C.). As their teaching contemplated a way of life rather than a philosophical system, and as their works are lost, or known only in fragments and by late reports or second-hand, we are not informed in detail about the history of the sect. Indeed, Antisthenes, Diogenes, and Crates excepted, many representatives are little more than names to us. Antisthenes of Athens (c. 444-374 B.C.), at first a pupil of Gorgias the Sophist, and a 'late learner' (cf. Plato, Soph. 251) with Socrates.—Plato implies too old to learn,—founded the Cynic sect (c. 380 B.C.). He was his master's most notable, most popular, and most powerful follower. He appears to have won many disciples, not only of the sect principally, where he was sold as a slave to Xenides, whose son he taught. Among them were Menippus, a slave from Syracuse, an admirer of the youthful Diogenes, and his disciple who wrote a Dialogue with Indian wisdom and the Cynics (cf. U. Grote, Plato and the Other Companions of Sokrates), 1853, i. 158); his sons, Phulius and Androcrates; Alexander Drynnus, and Hegesippus Chusus of Sinope. More distinguished associates, eminent for other reasons than their more close connexions with Cynicism, were possibly, perhaps, the 'Good' (c. 402-317), the Athenian statesman whom Demosthenes describes as being with Alexander the Great. Among the recent, the orator, rhetorician, and teacher, c. 310), the influential Megarian (see Megarians), whose combination of Cynic moralism with genuine devotion to metaphysical speculation had paved the way for this new type of the 'wandering philosopher,' who, for the wandering philosopher overcame the opposition of her parents to the unproportioned union; her brother, Metrocles, whose social influence seems to have had a profoundly conservative influence. Unlike her, the Cynics were governed by the general convictions to the Cynic. Plato's Diogenes, the Athenian, taught his inflated (cf. Diogenes Laert. ii. 9, 35). Crates counted among his followers his wife Hyparrhenia of Maroneia, a woman of good family, who renewed the Cynic spirit through the wandering philosopher; to the wandering philosopher overcame the opposition of her parents to the unproportioned union; her brother, Metrocles, whose social influence seems to have had a profoundly conservative influence. Unlike her, the Cynics were governed by the general convictions to the Cynic. Plato's Diogenes, the Athenian, taught his inflated (cf. Diogenes Laert. ii. 9, 35). Crates counted among his followers his wife Hyparrhenia of Maroneia, a woman of good family, who renewed the Cynic spirit through/s.
CYNICS

(490-43 B.C.). The difficulty was to adjust the 
πολιτεία to empire, the particularism of the Greek
citizen to the universalism of mankind; and it
took shape in the lengthy controversy about 
φιλοκλήρον and φιλοκοιμᾶτος (see Castiglione), the
Cynics playing the respective role (cf. Dewey-Tattus, 
Ethics, 1908, pt. i. ch. vii.). Very briefly, the
development of the Hellenic municipal societies
had been as follows. The corporate family was
an outgrowth of the chief religion, and shared in
religious sanctions (cf. Solon, frag. 12). Thus,
domestic law and the rule of the family-group
were integral parts of the 'Divine favouring fate'
within a man (cf. Findar. Of. ii. 94, lx. 28, 109,
Andokid. iv. 135, 158, 160, 161, vii. 18). While
the civic law and municipal government were evolved
gradually on this basis (cf. Fuscel de Coulanges,
La Cité antique, Paris, 1895, bk. iii. ch. xvii.;
bk. vi. ch. i.). Local customs, conventions, and
laws thus acquired great authority, and overrode
private life to such an extent that it hardly existed
in the modern sense. The State claimed the
citizen's time, intelligence, service,—his whole life
even,—in return for the inestimable advantages
beneath the civic state. Plato and his friends, with
them could a man enjoy a worthy human
career (cf. S. H. Butcher, Some Aspects of the Greek
Genius, 1904, p. 47 f.). Accordingly, individual
independence did not flourish—the man had not
emerged from citizenship. So the opposition
between old norms and new experiences remained
latent, more or less, till the Sophists (q.v.) broached
it with their pupils, and Aristophanes and Euripides,
each in his characteristic way, ventilated it before
the public as an important issue. The Hellenic side of
the controversy most probably reached the Cynics
through the influence of Gorgias upon Antisthenes;
the practical or social deductions through Socrates,
to whom, in his last years, Antisthenes resorted.
But the Cynics were 'imperfect' Socrates, who
interpreted the Athenian sage in a fashion of their
own, and it must be confessed that Socratic
'irony' and contemporary socio-political changes
gave colour to their anarchism.

The social conditions are perplexing, because
they oscillated in a twofold movement. On the
one hand, and negatively, the decay of age-old
beliefs (cf. Aristophanes, Nub. 306 f., 1690 f., 1420 f.;
Plato, Rep. ii. 338-353) sapped confidence in the
absolute and immutability in the individual,
justifying its pervasive interference with the individual,
by rendering sufficient return? This question—
its terms becoming clearer gradually—provoked
inquiry; the sequel was reflective ethics. And,
as relexion bodies search for a stable principle, the
possibility that this had not been found was
implied. Hence a critical movement in thought.
The Peloponnesian War (431-405) forced similar
issues upon the average man in daily life (cf.
Thucyd. III. 40-44, 52, v. 89). The general
assurance of high vocation that nurtured Pindar,
Themistocles, Ἀθηνάος, Sophocles, Pericles, and,
as a glorious consummation, Plato, beat feebler,
and feebler. On the other hand, and positively,
new men broke into the ancient race, bringing
new associations. Traditional civic usages bore
less meaning for them, because they did not share
the compensation to the full. Necessarily, they
felt other aspirations, and gravitated towards
other standards. The strains of war drove the
rural population upon Athens, just as, during
prosperous peace, strangers had flocked to her
gates. Inaction and demoralization bred a pro-
letariat, neither citizen nor slave, which strangled
the ordinary resources of government. In addition,
the marvellous instances of individual development,
the glory of the Periclean epoch, set a potent
example. And the energies and personalized
nais here manifested had to find fresh channels.
Pericles could say: 'We [Athenians] alone regard
a man who takes no interest in public affairs, not
as a harmless, but as a useless, member of society'
(Thucyd. ii. 60). If a citizen was drunk or gone,
this social unity lost its power to charm.
Accordingly, what more natural than that
'social reform' should attract many?

What more natural than that they should concentrate upon
the personal ideal, αιρετικ                       
Dornker, 1903 [Eng. tr. 1895], vol. ii. bk. iv. chs.
i—iii.?' The 'honest man is Nature's noble'
(Eurip. frag. 336). But, what may 'honest' mean?
The Cynics were to extract their answer from
Socrates (q.v.).

Plato makes Socrates speak as follows, in his
famous speech of defence:

'If you say to me, "Socrates, this time... we will let you off,
but upon one condition, that you are not to inquire and
speculate in this way any more." ... I should reply: "Men of
Athens, I honour and love you; but I shall obey God rather
(useful relation for the citizen). In practice, man
ceased from the practice and teaching of philosophy, esteeming
any one whom I meet after my manner, and convincing him,
saying: "O my friend, why do you see me, or why do you
look at me, as a great and mighty and wise city of Athens,
care so much about laying up the greatest endowment
its reputation, and so little about wisdom and truth and the
greatest improvement of the soul, which you never regard or
heed at all? Are you ashamed of this?"

This represents the Socratic spirit admirably.

But Socrates left no methodical system, nor did he
prescribe specifics for social ills. Devotion to the
Athenian State, and respect for the higher personal
life, were the poles of his character and teaching.
He could say of the State:

'Our country is... higher and holier far than mother or
father. Whomever they punish by the law, ... the punishment
is to be endured in silence. Whether in court or in any other place, he [the citizen] must do what his city
and his country order him... This is the voice which
to see murmuring in our ears, like the sound of the flute
in the ears of the mystic' (Plato, Crito, 41, 54; cf. J. Adam,
Eurip., 1888, Introd. p. xiv f.).

That is, Socrates preserved intact the old Greek
consecration to the κίθαρις of the City-State, with its
subordination of the individual to the community
as the will of the gods, and as the most valuable
and, in this view, he identified himself completely with Athens, whose
vicinity he seldom left (cf. Plato, Crito, 52). But,
at the same time, touched by the ampler experience
of the new age, he strove to universalize the individual, and
broaden the old civic law into a court of
rather a teleological system or no, becomes thus for
Socrates a secondary question; and what he is
mainly interested to maintain is that each man for
himself should work out such a system in his own
life' (Th. Gomperz, Evolution of Theology in the Gr.
Philosophers, 1904, i. 70). Socrates could, there-
fore, declare to Antiphon: 'To have no wants at
all is, to my mind, an attribute of godhead;
to have as few wants as possible, the nearest approach
to godhead' (Xenoph. Mem. i. 6). That is, his
asceticism was no end in itself, but necessary to
the desire to secure due scope for the higher
activities of manhood. The positive purpose thus
involved a negative, and was not satisfied, or
enforced, by anything. Now Socrates lived
all this, but left no authoritative exposition of it.
Accordingly, his 'imperfect' followers seized upon
one particular aspect of his personality, and pushed
it, to the exclusion of the compensating factors.

The Cynics are the vanguard of that belief
that they placed freedom in actual renunciation
of so-called superfluities' (Hegel, Writings, 1842,
xiv. 139, Eng. tr. Hist. of Phil., 1892, i. 490-81).

Historical circumstances occasioned their revolt
from the community, and the ideal of the 'wise
man' will not govern himself according to
enacted laws, but by the law of virtue (Antisthenes,
ap. Diog. Laert. vi. 11). The sole authentic
citizen is citizenship of the world (Diogenes, ib. vi.

63). In short, under stress of social exigency, the Cynics abstracted Socratic independence from the church and cloistered it. The freedom and relevance of the doctrine of virtue, and identified virtue with unbridled protest against social relations. ‘Bury me on my face,’ said Diogenes to Xenides, ‘for, ere long, everything will be turned upside down’ (Diog. Laert. vii. 31–32). The Cynics lost, recollection that the Socratic dialectic was an incident means to disclose of the fundamental principles of morality. They could think only of the barefooted old man, indefinitely disputing in the open streets, and setting himself against wealth (Grant, Ethics of Aristotle, 1874, i. 171). Thus minded, they turned upon contemporary norms and, holding nothing holy, flouted human ties scornfully, violently, and coarsely.

21staching.—(a) Theoretical.—A venlyy the Cynics were bent upon a practical end. Indeed, it is often asserted that they repudiated scientific training and mental culture, with no little estentation. This is probably an over-statement. It would be easy, owing to the fact of their super-ordinated scientific inquiries to the attainment of virtue, regarding intellectual discipline as indifferent in itself. Thus, while they combated men of the Plato type, and held aloof from the contemporary schools, there seemed no escape the theoretical problems of their age. Logic and epistemology, it is true, had not reached clear definition; this had to await Aristotle. Never-theless, with the Sophists, if not earlier, the ques-tion of the relation between logic and thought had asserted itself, sometimes in logomachies that seem trilling to us. And, in this connexion, a distinct negative or critical movement became manifest in the writings of Antisthenes, for example (cf. K. Prantl, Gesch. d. Logik, Leipzig, 1855, i. 331; G. Grote, op. cit. i. 122 f.), with whom the Cynics had some affinities, revolved in ‘eristic’ gymnastics. The Cynic leaders, Antisthenes and, probably, Diogenes, evinced kindred tendencies, as their fragmentary remains, scattered references in Plato and Aristotle, and the reports of later writers indicate. Possibly the same was true of Crates, Moninus, and their followers. In other words, the philosophy of the Cynics, for example (cf. Tisiast, Tisias, and his companions of one of his chief exponents, Tisias, had impressed the Athenians with it, on the occasion of the Leontine embassy (427 B.C.), when Antisthenes was leader of the embassy. The future Cynic leader became a pupil of Gorgias, and then taught rhetoric before joining the Socratic circle. And, while it is likely that the epideictic ‘display,’ entitled the Controversy between Ajwax and Oeudoxas for the Athenian orator (Plato, Gorgias), list the writings of Antisthenes preserved by Diog. Laert. (vi. 155 f.) proves that he was a prac-titioner, not only of rhetoric, but also of dialectic, with its more or less subtle and verbal treatment of terms. In addition, one must recall that Cynics, orator, as a practical art, employing both rhetoric and dialectic, dates from Gorgias (cf. F. Blass, Die attische Beredenskiit v. Gorgias bis zu Lykias, Leipzig, 1868, p. 1 f.), and that, as a result of the be repaired to Socrates at least, Antisthenes must be a master of the stone on the Pyx’ master of Athens (cf. E. A. Freeman, Historical Essays, 2nd series, 1873, p. 125 f.), rhetoric and dialectic came to be of extreme utilitarian consequence to the Athenians (cf. Diog. Laert. xi. 257). Language was now a potent weapon, and the study of terms indispensable. Accordingly, we are forced to conclude that, whatever slight Antisthenes and his followers may have put upon ‘rhetoric,’ and did not escape the theoretical problems of their age. Logic and epistemology, it is true, had not reached clear definition; this had to await Aristotle. Never-theless, with the Sophists, if not earlier, the ques-tion of the relation between logic and thought had asserted itself, sometimes in logomachies that seem trilling to us. And, in this connexion, a distinct negative or critical movement became manifest in the writings of Antisthenes, for example (cf. K. Prantl, Gesch. d. Logik, Leipzig, 1855, i. 331; G. Grote, op. cit. i. 122 f.), with whom the Cynics had some affinities, revolved in ‘eristic’ gymnastics. The Cynic leaders, Antisthenes and, probably, Diogenes, evinced kindred tendencies, as their fragmentary remains, scattered references in Plato and Aristotle, and the reports of later writers indicate. Possibly the same was true of Crates, Moninus, and their followers. In other words, the philosophy of the Cynics, for example (cf. Tisiast, Tisias, and his companions of one of his chief exponents, Tisias, had impressed the Athenians with it, on the occasion of the Leontine embassy (427 B.C.), when Antisthenes was leader of the embassy. The future Cynic leader became a pupil of Gorgias, and then taught rhetoric before joining the Socratic circle. And, while it is likely that the epideictic ‘display,’ entitled the Controversy between Ajwax and Oeudoxas for the Athenian orator (Plato, Gorgias), list the writings of Antisthenes preserved by Diog. Laert. (vi. 155 f.) proves that he was a prac-titioner, not only of rhetoric, but also of dialectic, with its more or less subtle and verbal treatment of terms. In addition, one must recall that Cynics, orator, as a practical art, employing both rhetoric and dialectic, dates from Gorgias (cf. F. Blass, Die attische Beredenskiit v. Gorgias bis zu Lykias, Leipzig, 1868, p. 1 f.), and that, as a result of the be repaired to Socrates at least, Antisthenes must have been carried away by it. The fibes of Plato (Phaedo, 101 D f.; Rep. ii. 372 D, v. 454 A f.; Theaet. 155 E; Soph. 231 B, 230 D; Philol. 14 D f.), Aristotle (Met. iii. 29 f., iv. 29, v. 5; Rep. i. 11), and other (e.g. Philo’s references of Atticus.) indicate, that Antisthenes and the rest either re-launched into ‘sophistic’ quibbling in theory, or failed to keep step with the contemporary advance of scientific inquiry. For, even if Xenophon’s tes-timony to the contrary, to think that the Megarians (e.g. Xen. Rep. iv. 41 f.) be suspect on account of his evident Cynic leavings, the references of Plato (Crotul. 389 f.; Philol. 44 C f.; cf. K. Barlem, Antisthenes u. Platon, 1881; K. Urban, Uber d. Erwaungungen d. Philos. d. Antisthenes in d. plato. Schriften, 1852; F. Dümmler, Akademiker, Giessen, 1889, p. 148 f.), the partial admission of Aristotle (Met. v. 29), his serious refutations (clo Soph. Eth.; xx.; Isth. ii. 24), and the remark of Cicero (de Nat. Deor. i. 13) warrant the probable conclusion that Antisthenes had once known better, and still posied as a disciple of Socrates (this would be Plato’s view), he had reverted to the empiricism of Gorgias, and had fallen thence into theoretical skepticism, regarding ‘science’ as negligible except for purposes of direct utility, as with Hippas—had become, in short, a ‘barbarian.’ In a word, although they started from the Socratic insistence upon definition, the Cynics never reached theoretical solutions; in fact, they regarded them as impossible, perhaps even as worthless.

Remembering, then, that Logic had no inde-pendent existence, the little that we know of Cynic logie may be traced to Socrates, for its primary impulse, and to the Sophists, especially Gorgias and Hippias, for its content. The effort of Socrates
to define the ideal Good, to replace a physical or cosmological by a logical ethos, had not reached complete success (cf. Nicom. Mem. iii. 9, 11, li. 8, 3, i. 3. 2). It was an aspiration rather than a final achievement. The problems therefore were: (1) to formulate a definition carrying universal validity; (2) to state its content; (3) to explain how it is realized. If the Sophists and Cynics were in the fragmentary state of Cynic logic as we have are remnants of a theoretical effort connected with the first problem; Cynic ethics, a practical reply to the second and third. The former represents a reversion to the Sophic conception, the latter reflection of a new emphasis upon, and isolation of, one aspect of the person of Socrates, filled out probably, as regards its inconsistent universalism (cosmopolitanism), by elements drawn chiefly from the teaching of Hippias.

Turning to the logical side, then, we find that for Antisthenes a satisfactory definition must be the statement of the essence of a thing. But, seeing that things consist of parts, the only definition possible must be the enumeration of the parts as actual components of a whole (cf. Plato, Soph. 251 f). Accordingly, the thing itself, being simple, is indefinable; it may be named, but the name tells nothing of the essential reality (cf. Aristotle, Met. iii. 4). The defect Plato would have pointed out in the Sophism he had, said, when Plato was talking to him about 'ideas' and using the terms 'tableness' and 'cupness', "I see a table and a cup, but I see no 'tableness' or 'cupness'" (Diog. Laert. vi. 55; cf. Plato, Parm. 152 B). That is, according to Cynic epistemology, general ideas exist solely in the mind, individual things alone are real. This is the earliest distinct expression of Nominalism. Logically, it results in the conclusion that a proposition is permissible except judgments of identity. 'Man' and 'good' are different from one another. You cannot predicate 'good' of 'man'; you can say merely, 'man is man', 'good is good' (cf. Plato [7], Hipp. Maj. 304 A; Grote, op. cit. ii. 47). Turning to the assertion, put into the mouth of Dionysodorus by Plato (Enthydus. 286 B), that contradiction (or error) cannot occur. If so, the paradox issues that false and contradictory propositions are impossible is not a mere and unanswerable theory. That is, as question of logical 'form', to which such reasoning might apply, in the sense that 'form' does not guarantee truth, had not yet been considered independently, the Cynics meant, perhaps, that an applicable logico-mathematical system of many subjects, could not be attached more exclusively to one than to another. But we are able only to conjecture as to this (cf. Plutarch, aed. Colot. 1119 C f. [ed. Bernardakis, vol. v. p. 45 f]; Plato, Parmen. 150 f.). In any event, however, it is evident that the conclusion of the matter is in the Sophistic vein. Objects, when 'composed' of single factors, may be defined. Simple objects ('ultimates'), being perceptible only to sense, are susceptible of no further analysis but are only known as such. The distinction here raised—really between concepts and concepts—is valid enough. But the inference of Verbalism, instead of carrying out a logical and cosmological analysis, leads back to Sophistic scepticism which, once more, is hardly distinguishable from Sensationalism (cf. Aristotle, Met. iii. 5). The Cynics thus seize the negative element in the Socratic dialectic process towards definition, but omit the positive. As a consequence, they entangle themselves in a paradoxical inquiry, such as that typified by Alfred de Musset's question:—Le cœur humain de qui, le cœur humain de quoi? (cf. A. Ed. Chaingnet, Hist. de la psych. des Grecs, i. Paris, 1887, p. 189 f., note 4; Grote, op. cit. i. 168 f., note 1).

(b) Practical.—The ethical doctrines of the Cynics may be traced to the coalescence of several elements; and very probably this is more evident now than it was in the days of the Cynics themselves in their period of transition. But the numerous stories related about their leaders (for the sake of the story), and the scantiness of the documentary evidence, render a dispassionate account very difficult. Still, it is not difficult to recognize fragments at least, can be traced with some certainty: (1) Socrates, the plain, 'common' man, sturdy and independent; (2) the Eleaticism of Antisthenes' teacher, Gorgias; (3) the 'return to nature' of Hippias and Euthydorus; and (4) the momentary exiguities of daily life in Athens and in Hellas.

(1) The Cynics descend from the Xenophontic, not the Platonic, Socrates (cf. S. Ribbing, Ueber d. Verhalt, zwischen d. Xenoph. u. Platon. Herrnhuter, Upsala, 1570; F. Dümmler, loc. cit., and Antiathentika, Halle, 1882). This is the Socrates who, as we saw above, made independence an attribute of godhead (cf. Xenoph. Mem. i. 6). Yet, for him, the restriction of the parts as actual components of a whole (cf. Plato, Soph. 251 f.) accordingly, the thing itself, being simple, is indefinable; it may be named, but the name tells nothing of the essential reality (cf. Aristotle, Met. iii. 4). The defect Plato would have pointed out in the Sophism he had, said, when Plato was talking to him about 'ideas' and using the terms 'tableness' and 'cupness', 'I see a table and a cup, but I see no 'tableness' or 'cupness' (Diog. Laert. vi. 55; cf. Plato, Parmen. 152 B). That is, according to Cynic epistemology, general ideas exist solely in the mind, individual things alone are real. This is the earliest distinct expression of Nominalism. Logically, it results in the conclusion that a proposition is permissible except judgments of identity. 'Man' and 'good' are different from one another. You cannot predicate 'good' of 'man'; you can say merely, 'man is man', 'good is good' (cf. Plato [7], Hipp. Maj. 304 A; Grote, op. cit. ii. 47). Turning to the assertion, put into the mouth of Dionysodorus by Plato (Enthydus. 286 B), that contradiction (or error) cannot occur. If so, the paradox issues that false and contradictory propositions are impossible is not a mere and unanswerable theory. That is, as question of logical 'form', to which such reasoning might apply, in the sense that 'form' does not guarantee truth, had not yet been considered independently, the Cynics meant, perhaps, that an applicable logico-mathematical system of many subjects, could not be attached more exclusively to one than to another. But we are able only to conjecture as to this (cf. Plutarch, aed. Colot. 1119 C f. [ed. Bernardakis, vol. v. p. 45 f]; Plato, Parmen. 150 f.). In any event, however, it is evident that the conclusion of the matter is in the Sophistic vein. Objects, when 'composed' of single factors, may be defined. Simple objects ('ultimates'), being perceptible only to sense, are susceptible of no further analysis but are only known as such. The distinction here raised—really between concepts and concepts—is valid enough. But the inference of Verbalism, instead of carrying out a logical and cosmological analysis, leads back to Sophistic scepticism which, once more, is hardly distinguishable from Sensationalism (cf. Aristotle, Met. iii. 5). The Cynics thus seize the negative element in the Socratic dialectic process towards definition, but omit the positive. As a consequence, they entangle themselves in a paradoxical inquiry, such as that typified by Alfred de Musset's question:—Le cœur humain de qui, le cœur humain de quoi? (cf. A. Ed. Chaingnet, Hist. de la psych. des Grecs, i. Paris, 1887, p. 189 f., note 4; Grote, op. cit. i. 168 f., note 1).
this that there is a human 'nature,' beyond the accidents of citizenship, language, and even race (Eurip. frag. 1050), and that civil institutions are unjustifiable because they interfere with the cultivation of this common possession. As Hippias said, where I reckon to be kinsmen and friends and fellow-citizens by nature, and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature' (Plato, Protag. 337); or, as Isocrates put it: 'Athens... has brought it to pass that the name “Greek” should be thought no longer a matter of race but a matter of intelligence' (Or. iv. 50). Hence Cynic cosmopolitanism. The Cynics proposed to realize this unitary 'nature' by denuding themselves of wants, by eschewing obligation to the 'resources of civilization.' Simplicity, temperance, ability to fend for self, were to be the means to this end. Hence their anarchism.

(4) Even before the Peloponnesian War, the Hellenic world had grown conscious of new displacements, and the course of the struggle accentuated this condition. The polis lacked the flexibility needed to meet the transition. Consequently, men became aware increasingly of a separation between the organized State and transient society (cf. G. A. and W. H. Simcox, Demosthenes and 'Exchines 'On the Crown,' 1872, p. 141). As soon as this was recognized, the gulf between rich and poor widened; the itch for personal recognition brought disregard of social responsibility; and numerous men 'without a country' roamed over all Greece (cf. Isocrates, Ep. ix. 10). The system of education needed to meet this situation afforded the conditions for a new supremacy, the unifying power of the Cynic 'mission.'

The immediate consequence of the semiclubbing of the Cynic 'mission' was the conflict between the organized State and the transient society (cf. Isocrates, Or. xii. 291 f., x. 201 f., xv. 84 f., 239 f.), while, on the other hand, the people were untouched by the things of the spirit (cf. Isocrates, Or. xi. 299, ii. 370 f., xv. 181 f., xvi. 185 f., xx. 97 f.). Indeed, Aristotle asserted later (Eth. Nic. i. 5. 3). Every one was finding fault with his neighbour; the efficiency of democratic government was in doubt. These grave matters were at once the incentives to, and the objects of, the Cynic 'mission.' Unfortunately, hindered doubtless by the temper of the time, the Cynics, who surpassed all in fearlessness, appear to have employed no weapon more potent than contentious abuse, and to have prescribed no remedy more practicable than an impossible renunciation. Better known to the masses than any other teachers, their extravagance and licence rendered them easy marks for ridicule and resentment, so that the seriousness of the evils which they attacked legitimately was overshadowed by the bizarre conduct of the critics. Few, if any, constructive results were accomplished in the 4th cent. as the state of affairs under Eubulus (354-338 B.C.) serves to show (cf. Isocrates [c. 233 B.C.], Or. xv. 270 f.; J. Beloch, Die attische Politik seit Perikles, Leipzig, 1884, p. 173 f.). These influences, then, probably along with others, now irrecoverable, moulded the Cynic ethic.

Although the Sophist was a ἀντιθέτος, the teacher of a practical 'art'—and Gorgias belonged very distinctly to this type—a man of Antithenes' quality, when defection by Sokrates, could easily pick holes in Sophistic practice (cf. Plato, Soph. 269 f.). Moreover, his following, the Diogenes, might retain portions of the Gorgian method (cf. Aristotle, Rhet. iii. 17. 7), the temper never. Seeking reputation and gain, the Sophists could not be entirely disinterested (cf. Xenoph. Cyn. xiii.). Perforce they had to adapt themselves to popular tastes; and Gorgias, consciously, seems to have conformed himself to current prejudices; he certainly had consulted with Sokrates and accepted some of his doctrine. When the time appeared to call for sterner stuff. It was not enough to suggest moral notions by elegant discourses; prosody must be secured. Independence was needed above all else; and this could be justified on condition that it served their ideal purposes within himself (cf. Eurip. Troad. 988; Plato, Rep. ii. 306 E). Thus the Cynics came to regard virtue, not as good, but as the Good, and this as an implicit quality inherent in manhood, made explicit in the 'wise man' (i.e. Sokrates universalized by Cynic pragmatism); for without a universal there could be no philosophy (cf. Plato, Parmen. 136). No matter at what cost, the 'sage' must lead this good good life (cf. Cicero, de Off. i. 41), for on it depended the one great issue of life—self-sufficiency. Everything must be sacrificed for it; indeed, this complete sacrifice was regarded as the essence of virtue. On the other hand, the Cynics, too, the citizens, no longer found absorbing vocations in his citizenship—loyalty was on the wane. Besides, the war produced effects of its own. The unity of Hellenas and the independence of the rival cities proved to be incompatible with the gulf between the rich and poor; new wider; the itch for personal recognition brought disregard of social responsibility; and numerous men 'without a country' roamed over all Greece (cf. Isocrates, Ep. ix. 10). The system of education needed to meet this situation afforded the conditions for a new supremacy, the unifying power of the Cynic 'mission.'
course, to antinomianism (cf. Diog. Laert. vi. 12). Curiously enough, however, they did not advocate quietism (cf. F. W. Rassoul, Marcus Aurelius and the Later Stoics, 1910, p. 511) as a result of their nonconformity and repudiation. The Cynic 'misionary' became a familiar figure, and he lived in face of the public. Like Crates, he was a 'door-opener' (Diog. Laert. vi. 80) but the Cynics set out with a rule, to have been taken more piously than seriously. Nor is this wonderful. Strange as it may appear, the besetting sins of Athenian character—vanity and self-sufficiency—found a new incarnation in the person of Epictetus. The Cynics, no doubt, could idealize even Diogenes (Diog. ii. 24). An overwhelming personality like Socrates transmuted the fluid tendencies of his epoch, and outpaced the average man. No doubt, Socrates was of his age, and could not escape its limitations. Antisthenes and his followers started from this temporary factor, and, by confining the Cynic doctrine to it, impressed the ordinary mind. Rudey enough, perhaps, they proved that Greece still had a conscience. They exercised the magisterial and reproving function (cf. Epictetus, Disc. ii. 21), emphasizing the force and conviction, though not the dignity and sublimity, of the master; yet this very thing freed them from the way of the conclusion on the problem, as the Cynics did in relation to Athenian economic conditions, for example, and—\textit{you have solved it!} 'Vanity of vanities,' saith the preacher, 'all is vanity'; whereas the greatest of the Cynics himself would not accept this as a truth.

It is possible, and too easy perhaps, to judge Cynicism as the temporary exaggeration of a quene. But, after all, it dealt with the immortal things of life, and in later times led to a mark epoch and a system. Epictetus could idealize even Diogenes (Disc. iii. 24). An overwhelming personality like Socrates transmuted the fluid tendencies of his epoch, and outpaced the average man. No doubt, Socrates was of his age, and could not escape its limitations. pleasures, parallel to that between true and false opinions, is in all probability written with an eye to the Cyrenaic position. It is of great interest also to note that this initial scepticism of theirs led the Cyrenaics to turn aside from scientific inquiry into nature, as from useless speculation (Diog. ii. 92).

The anecdotes told of Aristippus and his biting wit give a vivid commentary on his theory. He seems to have been one of the great experimenters in life: that the Greek philosophers were not afraid to make. Resolute, daring, and self-controlled, on one side it recalls the great Socratic tradition of unsparing obedience in practice to that argument which seemed the best, and even the Socratic scorn for non-essentials; it was better to be a beggar than a duchess; if the first had no money, the second never had manhood (ib. 70). But there is a sinister side as well. Aristippus will take anything he can get from Diogenes, the tyrant of Syracuse. 'I went to Socrates when I wanted knowledge, I come to you when I want money' (ib. 78). He does not demand constancy from his mistresses: what did it matter to him if others sailed in his ship (ib. 74)? Money and what money could get are not to be shunned, but used, and used freely. The evil lies in being bound by our pleasures, not in enjoying them (ib. 75; Stobaeus, Florid, 17, 18). Let them be as vivid as possible, but call it so near indifference, after the four words advocated by the Epicureans, is sooned as nothing better than sleep (Diog. ii, 89)—but let them not defeat their own object by fettering the mind (ib. 66, 67). The 'smooth motion' of ethical pleasure, the rippling motion, the great sea which should never be roused into storm. Though circumstances may prevent the wise man from obtaining this always, yet he will be able to attain more of it, and in a more intense form, than any one else (ib. 90, 91). Aristippus himself was always famous for his easy mastery over all circumstances, prosperous and adverse alike; and the line of Horace (Ep. i. xvii. 24) that pictures him 'at peace in the present, yet striving for greater things' (Tendantem mortuo, fere presentium aquam), gives us Cyrenaicism at its best.

The pressure of the practical problem, how to attain the maximum of individual pleasure, is shown in the divergencies of his successors. Hegesias felt the inevitable pain of life so keenly as to disbelieve in the possibility of anything deserving the name of happiness (Diog. ii. 94). The most that could be hoped for by the wise man, acting for his own interest alone, as a wise man should, was to escape from suffering, and this could be attained best by indifference to external things (ib. 95, 96). Here we reach a strange likeness to the Stotes and Cynics, and, stranger still, we find this leader of what purported to be the school of vivid personal life called by the name of Death's Advocate, and accused of luring men to suicide (ib. 86; Cic. Tusq. i. 83).

Annikaros, at the cost of consistency, gave a gentler touch to the whole system. It is plain that the question between what might be called individualistic and altruistic hedonism, between the pleasure of oneself and the pleasure of others, was coming to the front and pressing for solution. According to Annikaros, there is such a thing as genuine worth as friendship and patriotism (which Hegesias had denied). The wise man would suffer for his country and still be equally happy, although he got little pleasure from it, and pleasure alone was the end of life, and not the means of an reasonable object of choice, yet the wise man would endure for the sake of his friend (Diog. ii. 96, 97).

Theodorus, called the 'Atheist,' seems to have been the closest, both in keenness of intellect and in hardness of temper, to the original founder. Friendship he dispensed with; the foolish could not use friends, and the wise man had no need of them (ib. 98). There was nothing to be ashamed of in theft and adultery and sacrilege, provided one escaped the penalties (ib. 99). He seems to have differed slightly from Aristippus in that he felt the need of laying more stress on the attitude of the mind, and less on the external goods of abundance and pleasure. Thus he was led to say that the vital matters were not 'pleasure' and 'pain,' these in themselves being indifferent, but 'joy' and 'grief,' which in their turn depended on prudence and justice. The best is the interpretation suggested by Zeller for a somewhat obscure passage in Diog. ii. 98, and it is certainly probable.

About the time of the later Cyrenaics, Epicurus was developing a more subtle and elaborate form of the doctrine, and after the 3rd cent. B.C. we do not hear of Cyrenaics as distinguished from Epicureans. See also artt. HEDONISM and PHILOSOPHY (Greek).

LITERATURE.—No writings, other than fragmentary, of the Cyrenaics themselves are in existence. The chief ancient authorities are: Diogenes Laertius, de Clarorvm Philosophorum Vite, bk. ii. 65-204, c. 8, Aristippus (for the ethical doctrines of the school and the character of Aristippus, Paris, 1878; Sextus Empiricus, apud Mathematicum, bk. vii. 190-200) (for the metaphysical position), Leipzig, 1840. See also F. W. A. Mullach, Fragmenta Philosophorum Graeciorum, ii. 397, 407, Paris, 1867, H. Ritter and L. Preller, Historia Philosophica Graecae, Cyrenaici, 324-318 B. C. Goda, 1888, F. Uberweg, Grundzüge der Geschichte der Philos., Berlin, 1840-48, 1890, Frankfort, 1890; E. Zeller, Die Cyrene und die Socratic Schule (in Kiepert), ch. iv. (very clear and thorough, with copious quotations and references) London, 1888; J. E. Erdmann, Grundriss der Gesch. der Philosophie, Berlin, 1850-56 (Eng. tr., London, 1885, 3 vols.); H. Sidgwick, History of Ethics, i. c. §§ 2-4 (brief, but illuminating), London, 1886; G. F. W. Hegel, Geschichte der Philosophie, ii. 1. c. 2.3.2 (the work of a master), Berlin, 1834, W. Peter, in Marius the Epicurean, London, 1856, gives incidentally a vivid though somewhat rose-colored sketch of the system.

D

Dacoity.—This term, which is derived from Hindī dākāit, 'robbery belonging to an armed band,' probably from dákān, 'to short,' is now usually employed as an equivalent for brigandage (or, technically, the conspiracy of five or more men to engage in an act of robbery, or the actual commission of such an offence) arising from, or at least existing in, an unsettled condition of some of the administrative districts in India. It is in this sense that it is used with regard to Burna.

Originally, however, it referred to a much more definite and curious condition of society, in which robbery with violence was not only an occupation but a religious and caste duty. Robbery was a hereditary and caste duty, although the ranks of the Dacoits were continually augmented from the outside. The system reached its greatest development in the Native State of Oudh (shortly before its incorporation within the British Dominion in India), owing to the incapacity of its native rulers,
But it was also prevalent in nearly every Native State, and was encouraged by the rulers, who shared in the proceeds of the robberies and the plunder of the Dacoits. The Dacoits rarely committed their depredations near their native haunts, or even within the State which harboured them. As their victims were usually strangers, the Dacoits were not the objects of fear and hatred on the part of their neighbours, who were not, therefore, anxious to betray them to the authorities. Their raids were carefully planned, and the members of an expedition made their way to their rendezvous singly or in smaller forays, the robbers either as water-carriers or as bullock-drivers. After carrying out their plans, they made their way back to their jungle fastnesses with almost incredible rapidity. As a rule, they preferred to avoid bloodshed, but on occasion they did not scruple to take life.

The Dacoits were usually of low caste, and their social and religious customs were of a totemistic character, exogamous marriage being the practice. Reformers, and especially those who planned the destruction of the Dacoits, were favourable, and after the exercises of religion. The deities of most of the Dacoit clans or sopts were Kail or Devi (an axe sacred to her being carried by Dacoit leaders in Central India) and Shri Ambe (the Corn-god).

The British authorities in India made great efforts in the decades preceding the middle of last century to stamp out the practice, but, as it was rooted in religion and social custom as well as encouraged by people in Native States, the task was very severe; and the evil came to life again when it had been apparently stamped out. But, with the final annexation of Oudh, its great stronghold, no longer proved a shelter for the robbers, and since the Mutiny has been indistinguishable from local brigandage, to the suppression of which the police are adequate.

The attitude of the British authorities to Dacoity, as in the similar case of Tagore (Tagh), affords an instance of interference with native religions and customs; but it brings out clearly the rationale of such action in that the custom must be recognizable of an anti-social and criminal character.

JOHN DAVISON.

DADU, DADUPANTHIS

DADU (A.D. 1544 to 1603) was born in Ahmadabad, of Brahman parents. His father, Lodh Kaim, had left his Shastras and temple services for trade with foreign parts. About the time of the Reformation in Europe and a little before Dadu's birth, a Reformation of Hinduism had spread over all northern India, from Bengal to the Punjab, and southwards to Bombay. Kahir, the founder of the Kabirpanthis (q.v.), had very thoroughly done a reformer's work among the Brahmins, and from whom, under his ninth successor, came the Sikhs, had fought idolatry and superstition in the Punjab. The influence of these two spread far and wide, and hundreds of earnest souls were protesting against superstitions in Hinduism.

Dadu was early affected, and his religious convictions led him to spend his life in preaching the Reformation doctrines over the midlands, between Ahmadabad and Delhi. He lived for a time in Sambhar, where his monument is, and where his coat and sandals are kept as relics and worshipped. Amber, the old capital of Jaipur, was Dadu's home for a time, where a house of his followers still flourishes, and in the modern capital we have the headquarters of the Naga. Dadu visited Delhi, and had an interview with the famous Akbar.

Thereafter he turned his face towards the south, making new disciples and strengthening his old ones, among whom were some nobles. After a year in Amber he went to Naraina, a village about 30 miles S.W. from the capital and 8 from Sambhar, and there died in A.D. 1603.

Dadu left 152 discipies to continue the work among his own and hatred of the outlaws; his teachings are embodied in the Band, a poetic work of 5000 verses. In its 37 chapters various religious subjects are treated, such as: The Divine Teacher, Remembrance, Separation, The Meeting; The Mind, True, False; The Front, the Back; the appendices are set to music, and are suitable for public and private worship.

2. From the Band it appears that Dadu condemned and rejected much that was false and false in Hinduism, and that he re-discovered and taught much truth about God, man, and salvation.

He rejected: (1) The Veda and Quran as ultimate truth; (2) the Vedantic philosophy; (3) ritualism and formalism; (4) the corrupt priesthood; (5) caste and the Brahmins; (6) idolatry; (7) the use of the rosary; (8) pilgrimages and ceremonial ablutions. (9) He threw new light on the transmigration of the soul, holding that all possible to births happen to man's own sense of right and wrong. (10) He taught that the gods Siva, Vishnu, and Brahma were only men who had been canonized. Their pictures and statues had not been made and preserved as object-lessons, to teach men their history. (11) Major, the world, matter, was not evil in itself. The bad man made it evil by using it lead his mind away from God. Wordless words and nothing as all. (12) He again and again says: 'I am not a Hindu, nor a Musulman. I belong to none of the six schools of philosophy. I love the merciful God.'

His doctrines about God, man, and salvation included the following:

'Forsake not the One God. Forsake all evil.' I have found that God is the unchangeable, the immortal, the fearless, the joy-giving, the best, the self-existent, the almighty, the beautiful, the glory-of-all, the pure, the unimaged, the unseen, the incomprehensible, the infinite, the kingly One. He is brightness, ever bright, Blinding, incandescent. He has made all things teach me of God, and I know that He is immanent in the universe, in all its properties and elements.'

God in the Creator.

'So powerful is the Lord, that by one word He created all.'

'His works are wonderful, and cannot be fully understood.

'He alone does to his servants all His servants and is not proud.'

'He created as after a model He had formed; of the Deity, His wisdom, His word, He can see the limit.'

'Where nothing was, He made all; and when He wills it becomes nothing. Become as nothing before Him, and love Him alone.'

God is the Preserver of all.

'I meditate on Him, who preservs all.' I adore the Paramatma, the unapproachable. My God is the Holy One. I worship the pure and unimagined one.'

Man is a creature, and made to worship God.

'Who is so wretched as the man who persuades you to serve other gods?' Not for a moment even let God's name depart from your heart. 'My soul, if now thou knowest not that God's name is the holy name, then shall I repeat and say, What a God I was.'

'The world is an ocean of pain, God is an ocean of joy. Go to this ocean and forsake the useless world.'

Conscience spoke clearly in Dadu.

'I have done very wickedly; be not angry, O Lord. Thou art the God of patience. To Thy servant all the blame belongs. I have forsaken Thy service. I am a sinful servant. There is no other like me so vile. 'I sin in everything. I sin against Thee every moment. O God, forgive me.'

'I am a sinner, O God. My sins are infinite and countless.' From the beginning to the end of my life I have done good; ignorance, the love of the world, false pleasures, unrighteousness have all lived in me. 'I have lived in lust, anger, suspicion, and have not called on Thy name. I have spent my life in hypocrisy and the vain, and my soul is helpless. I cannot deliver myself. My beloved alone can.'

'I am a prisoner. Thou art my deliverer. Save me, O God most merciful.' The evil is in my soul, my heart is full of passion; reveal Thyself and slay all.
DAGAN, DAGAN

mine enemies.' 'My soul is sorely afflicted, because I have forgotten Thee, O God. I cannot endure the pain; deliver me.'

Dādān knows that it is sin which separates the soul from God. The longest period in the Bānī is called the Nārāna (Jaipur). Here Dādān died, and here lives his successor, the head of all the Dādānīs. They all contribute something to keep up the dignity of their head; and here, once a year, a great festival (Mela) is held.

(2) The Nāgās (soldier monks).—Their name, from nāga (naked), refers to the simplicity of their dress when they go to war. Their founder was Sunāra Dās, a Rajput of Bīkānīr, who, seeing the valuable land filled up with stones and the land, trained his followers to serve as mercenaries. There are at present about 20,000 of them, in 9 camps, near the Jaipur borders, which they defend. They have fallen far behind in the modern arms and the drill and arms. They have only the sword, the shield, and the match-lock. They were faithful to England in the Mutiny. They are a fine class of men, and their training to read the Bānī and to arms prevents them from falling into dissipation.

(3) The Utraida.—These have come from a great and prosperous school in the Panjāb. The founder was Bābā Banwarī Dān. These Dādānīs take to medicine and money-lending, and many of them are very rich.

(4) The Vīrakt.—These may not touch money, but have to live on the alms they get. They wear salmon-coloured clothes, and devote themselves to study. They seldom stay long in any place, but are guided by grain and water (i.e., food) in their movements. 'The Master' has with him from one or two to many disciples—boys whom he has adopted and whom he trains. The present writer has seen them travel about in as large a school as 150. They teach not only the Bānī, but also difficult Sanskrit books relating to Literature, Philosophy, and Religion.

(5) The present condition of the Dādānīs.—Hinduism, against which Dādān protested, has, in a modified form, found its way amongst them again. It has come in by way of the intellect, and many are Vedāntins, or followers of the school of Brahma. It also comes by way of the heart, and many use the rosary, worship the Bānī as an idol, and prostrate themselves before the sandals and old clothes of Dādān.

JOHN TRAILL

DAGAN, DAGAN.—I. The Babylonian Dāgan.

In Bab. and Assy. texts a god appears whose name is written with the syllable signs DA-GA-N. The objection of Jensen (Kassoniq, 449ff.) to the phonetic reading of these signs has been set aside by the discovery of new texts in which gan receives a phonetic complement, e.g., Da-gan-na (Vorderas. Bibl. i. 1907 231), and, in the Tell el-Amarna tablets (Winkler, JEA. 1914 251), Da-gan-na (without the determinative for 'god'). We meet also Da-gan-ni, with a different sign for gan (Jensen, op. cit. 419; Jastrow, fcd. Bab. 137); and in one case Da-ga-ru (Vezold, Catalogue 1889-90, iv. 1429).

In Babylonia, Dāgan first appears in personal names on the obelisk of Manishtusu (c. 2400 B.C., Meyer), namely, Kūrub (?) Dāgan (A. v. 8), Gimil-Dāgan (A. xi. 15), and Hi-Dāgan (A. xvi. 7). The 37th year of Dānu, king of Ur, took its name from the building of the temple of Dāgan (Vorderas. Bibl. i. 231). A king of Isin (2145 B.C., Meyer) bore the name of Išū-Dirān, and his son was Išú-Dirān. In the prologue to the Code of Hammurabi (Jb. 27) the king describes himself as 'warrior of Dāgan, his begetter.' Dāgan is mentioned in several other early Bab. inscriptions (Jensen, op. cit. 449). A seal-cylinder published by de Clercq (Cylindres orientaux, 1888, no. 247) bears the name Thalqimu 'Dāgan-abt, servant of Dāgan,' and in the Ira-myths he is mentioned along with Anu (KIB vi. [1900] 60, line 25).

In Assyria this god first appears in the name of the king Ishkān-Dāgan (c. 1900 B.C.). Itti-Marduk-balatu, an Assyrian ruler whose date cannot be determined, calls himself 'the chosen of Anu and Dāgan' (Winkler, Unters., 1889, p. 139). Ashur-
DAGAN, DAGÔN

naṣîrpad (885–560 B.C.) calls himself 'Darling of Anu and Dagûn' (Layard, Pl. I, line 1; W. A. XVII, 181). The cuneiform text of the year 787 B.C. was named Dagân-bel-mûšar (KIB i, 1899). Shamsh-Adad (825–812 B.C.) and Sargon (722–705 B.C.) also mention Dagûn in connexion with Anu (KIB i, 175, ii, [1896] 39, 41). Dagûn is not found in personification of the Sumerian Dagan, but his worship seems to have died out in the later days of the Assyrian empire. Sargon's reference to him is an archaism.

In tablets from the kingdom of Ea, on the lower Euphrates and Sumerland, Dagûn is mentioned in oaths along with Shamash (PSBA xx. [1907] 177 ff., xxxi. [1910] 292; Ungnad, BASS vi. [1909] 5, p. 29; Vorderas, Schriftdenkmler, vii. [1910] 204), and in one of these the personal name of Dagûn occurs. Dagûn is the name of two Tell el-Amarna letters bears the name Da-ya-an-talaka (Winckler, nos. 215, 216). It appears, accordingly, that the cult of Dagûn extended all the way from Babylon to the shores of the Mediterranean.

On the basis of a derivation of Dagûn from dug, 'fish,' many writers have assumed that he was a fish-god, and have appealed to the legend narrated by Berossus (Muller, FHG ii. [1855] 496 ff.; Lecomte, Comptes rendus, 1872, p. 64 ff.; Hirzny, MVG viii. [1903] 292 ff.), that seven beings, half-fish and half-man, came out of the Persian Gulf and taught the primitive inhabitants of Babylon the arts of civilization. The first of these was called Oannes; the second, Amelu; and the last, Odkôn. The last is supposed to be the same as Dagûn; and, on the strength of this identification, the numerous fish-men depicted in Bab.-Assyr. art (Ward, Scul-Glyptiker, 1916, pp. 97, 282. 355 f., 385, 410) have been supposed to be representations of Dagûn (e.g. Layard, Nineveh, 1849, ii. 333 and pl. at end of book; Schrader, Katep., 1852, p. 182; and in Riehm, WHB, i, 1874, p. 250; Menant, BIB xi. [1859] 290 ff.; and most of the later supplements). However, Odkôn is nothing to do with Dagûn, but is the Sumerian fish-god U-du-ki, or Udi-ia-kî, who is associated with the fish-god Šum-zi, the prototype of Onnights (Reissner, Hymn., 1886, pp. 91, 137; Hirnony, MVG viii. [1903] 288). The god of the sea, Ea, the god of the sea, and his attendants; but with these Dagûn is never identified (Jensen, op. cit. 451; Zimmern, Katep., p. 388; Hirzny, op. cit. 261; A. Jeremias, Das AT im Lichte d. alt. Orientes, i, 1915, p. 368; 21 ed.) the identity of the older god of the sea is equated with En-ki, or Eâl, the god of the earth.

In the passages cited above he is associated with Onu, the sky-god, in the manner in which Bêl is ordinarily associated, and in V. A. T. (l. 4, no. 15, line 6 ff., iii. 68, 21 ed.) the identity of the older god of the sea is equated with En-il, or Eâl, the god of the earth.

In the passages cited above he is associated with Anu, the sky-god, in the manner in which Bêl is ordinarily associated, and in V. A. T. (l. 4, no. 15, line 6 ff., iii. 68, 21 ed.) the identity of the older god of the sea is equated with En-il, or Eâl, the god of the earth.

It is not known why Dagûn should have had the same form as his spouse. The Sumerian fish-god Udakî has, as wife the corn-goddess Nisaba (MVG viii. [1903] 219).
263), and similarly the fish-goddess Atargatis may have had as consort the corn-god Dagân. (4) Coins of Arados and of Askalon dating from about 330 B.C. depict a triton-like figure holding a trident in his right hand and a fish in his left (head, Hist. Nova, 1887, p. 666; Hoffmann, Zf 211, [1886] 279 t.); Lagrange, Rel. Shom. 131). These are supposed to be Dagân, but there is no proof. They are in pure Greek style, and far more probably depict Neptune. Accordingly, there is no better evidence that Dagân was a fish-god than there is in the case of Dagô. From the seal referred to above we learn that he was one of the ḫâliqa, who in Canaan were pre-dominatingly agricultural deities (Hos 2° 8), and on the basis of coin depictions. According to 1 S 5, Dagân was dispossessed by Jehovah of sending manes which destroyed the crops. This looks like an agricultural divinity. Dagôn must also have been a water-god of disease, since he was attacked by Jehovah's sending famines upon the Philistines (1 S 5° 2). He was also the leader of his people in war, who delivered their enemy into their hands (Jdg 16° 21) and in whose presence they set the ark as a trophy (1 S 5°). He was worshipped in joyful festivals with alebhe sports (Jdg 15° 35). The rite of his cult that is known to us is his priests' avoidance of treading upon the threshold of his sanctuary (1 S 5° 39, Zeph 1° 9).

3. The identity of Dagân and Dagôn.—This is discussed by C. Hesekiel (Kosinol. 19° 18), and by Moore, EB 1° 835); but is accepted by Schrader, Baehogn, Baudissin, Sayce, Bezdôl, Zimmern, Jastrow, Hrozny, and Lagrange. It is probable for the following reasons:—(1) The two names are precisely etymologically identical. Hagôn is a modification of an original ă and is represented in Assyry, either by ā or by ū; e.g. Ammûn, Assyry. Ammûnâ: Ashkîn, Assyry. Ashkînâ. Hence Heb. Dagôn is rightly reproduced by Assyry. Dagôn, or Daingôn (Bezdôl, Catalogue, 1° 1489). The occurrence of the two forms shows that the resemblance is not accidental. (2) The Canaanite Daingôn-tâlûk appears in the annals of Sennacherib as Bit-Daganna. (4) The combination Dagôn-ēlal on the seal referred to above is analogous to the combinations Dagan-Dagon at Babylon, and Dagan-Damna at Tyre. (5) The statement of Philo Byblus (Fiqm 3° 567 1.) that Dagôn was the son of Ouranos and Gê points to his identity with Bêl-Dagôn, the earth-god of the Bab. 1°. (6) The character of Dagôn, so far as we know it, as a national god of agriculture and of war, corresponds to the character of the Bab, Dagôn.

4. The origin of Dagôn-Dagôn. Schrader, KAT, p. 181, 1811, says, Dagôn-Bôṣmam Parnon 1811, p. 139, Sayce (Higher Crit. p. 325) on the basis of the association with Anti, regard Dagôn as a Sumerian deity whose cult was adopted by the Semitic Babylonians, and by them passed on to Mesopotamia and Palestine. This occurs before 2500 B.C. and then only in the inscriptions of Sumerian kings. All the personal names compounded with Dagôn are Semitic, and many of them show the West Semitic type that is frequent in the inscriptions of Hammurabi. Now that it is known that Babylon was invaded by the Amorites about 2500 B.C. and that the first dynasty of Babylon was Amorite (Meyer, Gesch. 2° 1, [1909] 463 ff.), the theory has become exceedingly probable that Dagôn was a god of the Amorites, whose worship was brought by them from their original home into both Babylonia and Palestine; so Bezdôl (Z. A. xxii. 1908 254); Meyer (op. cit. 457), Jastrow (Rel. Bib. 229), Clay (Amunr. p. 147), Cook (Rel. Anc. Palestine, 1908, p. 92). This theory is favoured by the fact that Hammurabi in the prologue to his Code (4. 28) speaks as though Dagôn were the ancestral god of his race.

If Dagôn-Dagôn was originally the god of a people speaking a similar tongue, the most probable etymology for his name is the one given by Philo Byblus (Fiqm iii. 567), and suggested as an alternate by Jerome, that it is the same as Can.-Heb. Amôn, = corn. This agrees with the facts of the case. Jerome notes that Hammurabi in Canaan he was a god of the earth and of agriculture, and that on a seal he is called baal and has the emblem of an ear of corn (so Movers, L. Müller, Schrader, Hrozny, and H. Seid.) and is also represented as the god of crops. Dagôn was amalgamated with a number of other deities, and seems to have had in Canaan a wide sphere of influence. His name, which, as we have seen, is of Egyptian origin, was transferred to the Babylonian country. It is true that he never gained the ascendency over his new patrons, but he seems to have kept his influence as a beneficent and powerful god, who, like the other gods of Canaan, was a god of crops. Nevertheless, he is not regarded by the Babylonians as a god of war, and is not mentioned in their records as such. His festival is the same as that of the Babylonian god, and is celebrated at the same time of the year. The name Dagôn is also found in the Annals of Sennacherib, as Bit-Dagôn, and is also used in the Bible, as Dagôn.

DAIBUTSU (Great Buddha).—The name has been given to several colossal images found in Japan. These vary in size, posture, material, etc.; some indeed are not much larger than the ordinary size of the human body, and scarcely deserve the title of daibutsu, which is properly applied only to those of them are of wood, but the majority are of bronze; some are in a sitting posture, others in a standing one; recumbent figures, such as are seen in Ceylon or Burma, are never found in Japan. The Buddhas represented are those of the First, Second, and Third Dynasties, Avalokîtesvara (Kannon), Ksitigarbha (Jizo), and Sakyanuni, but there are also representations of other Buddhas and Bodhisattvas. For the purposes of this article, three daibutsu only will be considered, the two at Nara, Kokufu-ji, and Kofu-ku. These are the daibutsu that are properly so called.

r. Daibutsu at Nara.—This was erected under the auspices of the Emperor Shomu Tenmô (A.D. 724-749), and was the first great Buddha image in Japan. It is of especial interest to the student of the religious history of Japan, as being connected with Shomû's ambiguous and unsuccessful plan of converting Buddhist Empire firmly on the soil of Japan by proclaiming its essential identity with the Shintoism indigenous to the country. In this plan the Emperor was ably assisted by a Korean priest of the name of Gyôgi, who must be considered the true parent of the Ryôba, or amalgamated Buddha-Shintoism, which continued in force until the Meiji era. Gyôgi's plan was to impress the native mind with the dignity of Buddhism by the erection of a colossai statue. The name of her priestly family could not be done without the sanction of the Shinto priesthood, and the instruments chosen to

4. Gyôgi, the descendant of a Korean king, was born in A.D. 659 in Korea, where his family had been domiciled for some time. Oranied to the priesthood at 18, he soon distinguished himself by his practical schemes for the improvement of the country—educational, etc. He became the head of the power of the Emperor Shomù and his consort Komyo, and inaugurated the movement the amalgamation of the Shintoism and Buddhism which was existing in Japan—unoubtedly with the best of intentions. He died in 749, just before the completion of the daibutsu.
secure their assent were Gyogi himself and the Udaijin Taichiba no Moroye. According to the Daibutsu-engi, Gyogi was sent to Ise, nominally for the purpose of prayer, but actually, it would seem, to confer with the authorities at the Ise shrine. A similar messenger was dispatched to the Hachiman shrine at Usa in Kyushu. The results of these preliminary meetings having been found satisfactory, a formal embassy was sent, with Taichiba no Moroye at its head, to propitiate the deified divinities in a formal reply, conveyed first in a dream to Shōnun, and then in a definite message, that the Great Sun-goddess was pleased to identify herself with Dainichi (‘great sun’) Nyorai, whose true essence was contained in the foundation of that great system which taught the Japanese to see in the gods of Shinto manifestations of the deities of Buddhism, and enabled them to become Buddhists without ceasing to be Shintoists. This act as such was the perpetual memorial of the alliance thus cemented. The casting was completed in 749, the inauguration ceremony was held forthwith, and the whole work was abed in favour of their daughter Hie. Gyogi, feeling the approach of death, then designated a fit person to take his place—an Indian monk of the name of Bodhisena, known in Japan as Baramon Sojo, or the Brahman archbishop. (Japan was at the time feeling the effects of the Muhammadan upheaval. Babooses fuge India, Persia, and Central Europe, gathering at the court of the Tang in Sinaem, had continued their wanderings as far as Japan, and in the reigns of Shōnun and Kōken we find not only Bud- dhist monks from India, but Mahimahams, and even a Nestorian Christian doctor, at the court of Nara.)

When the day for the inauguration of the statue came, Bodhisena mounted the platform and opened its eyes with a brush dipped in water. The whole congregation had its part in the ceremony, for a long string, fastened to the brush, passed among them for those who would take in their lands. The congregation comprised the ex-Emperor Shōnun and the Empress, the reigning Empress Kōken, and all the mag- nates of the court. It was an imposing congregation in another sense, for, in the parlance of the day, Shōnun was an incarnation of Kwannon; Ryōben, who was considered to be the founder of the temple, was looked upon as an incarnation of Maitreya; Gyogi, of Mīrōjin; and Bodhisena, of Samantabhadra. The Buddhist doctrines that were at that point most in vogue in Japan were those known as Kegon, contained in the mystic Scriptures of the Avatamsaka.

The Nara daibutsu has experienced many vicissitudes. In 555 its head fell off and was with difli- culty restored to its position; in 1190, during the civil wars, the temple was burnt, and the head melted. The image remained headless until 1195, when it was restored, through the efforts mainly of Jagen, a disciple of Honen, who had been in China, and who travelled through Japan on a wheelbarrow collecting money. In 1567, the temple was burnt, but the daibutsu remained uninjured. Time, however, has necessitated many repairs from generation to generation. Very little, probably, is left of the Kegon now rem-ains, yet the daibutsu has retained its identity throughout all its changes.

2. Daibutsu at Kyoto.—We have seen that the temple enclosing the daibutsu at Nara was burnt during the civil disorders in 1190. The temple remained in a ruinous condition for many years, and this suggested to Hideyoshi, who became Kwannon in 1553, the idea of reconstructing it on some other site, and of placing in it a colossal image which Hideyoshi's magnanimity but even than the one at Nara, and which should also be a perpetual memorial of himself. In 1586 he selected a site on the Amida-zaka at Kyoto, and commenced the erection of his temple. It did not become Daibutsu (of Lochna-Buddha), 190 ft. in height. The statue, which is in a sitting posture, is 53 ft. in height, 7 ft. higher than the similar image at Kamakura. It stands in the Daibutsu den, or 'Hall of the Daibutsu,' in the Todaiji Temple at Nara, the building for which, in 672, had been commenced by the命题 to erect, and, Hideyoshi being by this time dead, no immediate attempt was made to repair the disaster.

A year or two later, however, Tokugawa Ieyasu, being anxious to reduce the family of Hideyoshi to impotence, suggested to Hideyoshi that the completion of the daibutsu and temple would form a very fitting tribute to the memory of his great father. Hideyoshi and his mother fell into the trap, and ruined themselves financially with the carrying out of this colossal and extravagant design. Hideyoshi's structure was 190 ft. in height, 272 ft. in length, 167 ft. in depth. The roof was supported by 92 pillars, with an average diameter of 3 ft., and the sitting figure of Lochna-Buddha was 53 ft. in height. When the whole was finished, Ieyasu picked a quarrel with Hideyoshi over an insult, real or pret- tended, supposed to be conveyed to him in the inscriptions on the bells. The dedication cere- monies were prepared when it was not long before Ieyasu took up arms against the family of Hide- yoshi and crushed it for ever.

Hideyoshi's daibutsu was destroyed by earthquake in 1602, and the copper used for coinage. No interest attaches to its successors. The present Kyoto daibutsu dates from 1801.

3. Daibutsu at Kamakura.—This image, though smaller than the one at Nara, is much better known. It stands in the open, amidst beautiful surroundings, and is constantly being pho- tographed. No illustrated description of Japan would be complete without it. It is an image of Amida, 49 ft. 7 in. in height, and may be taken as marking an era in Japanese Buddhism. The daibutsu at Kyoto had no real spiritual significa- tion: it was erected by men devoid of religious faith, for purposes of self-glorification. That at Nara symbolizes that union of Buddhism and Shintoism which was made possible by an accep- tance of the principal tenets of the Kegon school, with Vairocana as its chief Buddha. The Kamakura daibutsu is an image of Amida, and marks the period when Vairocana was going out of fashion in Japan, with the sects devoted to his worship, was coming to the front.

It is said that the idea of having a daibutsu at Kamakura first occurred to Minamoto Yoritomo in A.D. 1195, when he was assisting at the cere-
monies of the re-dedication of the Nara image after its restoration. Yoritomo, dying in 1195, did not live to see the completion of his design. It was not, however, suffered to fall to the ground, Ita no Tsunoe, one of the ladies of Yoritomo's court, undertaking to collect funds for the purpose. Its no Tsunoe's efforts were supplemented, by a priest named Dōkō, who was also active in collecting contributions. The image was erected in 1231, the bronze one in 1252. The first was dedicated to Amida, the second apparently to Sākyamuni. But the present image, representing Amida, is said to be the very image erected in 1252, in which case we have an image with a double dedication—to Sākyamuni and to Amida. This, however, presents no difficulty. *Ni son ichi* ('two blessed ones with one personality') is a common doctrine of the Jodo sects, Sākyamuni and Amītābha being looked upon as identical in essence whilst distinct in personality and name. Like the *daiibutsu* at Nara, this image was originally enclosed within a temple. But the temple was destroyed by tidal waves in the year 1369 and again in the year 1494, and no attempt has been made since the last catastrophe to rebuild it. Strange to say, the metal does not seem to have suffered at all from the inclemencies of the weather.

A. LLOYD.

**DAITYA.**—The word *daitya*, the formation of which is explained by Panini (iv. 1, 85), etymologically means 'descendant of Diti,' just like *danava* and *danavas*. If occurring at the beginning of Sanskrit literature from the Epics downwards, and is there synonymous with *asura* and *dānava*, which are already found in Vedic literature. This article must, therefore, treat of all three—Asuras, Dānavas, and Daityas—as denoting one kind of demons or enemies of the gods.

The word *asura* originally had not an altogether evil meaning, and it is still used in the Rigveda as an epithet of the higher gods, especially of Varuna; but even there it has in other places the meaning 'imetical to the gods.' In the Brāhmaṇas and Upaniṣads the latter meaning is exclusively given to the word *asura*, which is the common name of demons as enemies of the gods. Both the Asuras and Danavas are the children of Prajapati. According to the Satapatha Brāhmaṇa, the Asuras were created from the downward breathing of Prajapati, and entered the earth; they had darkness in magic (mokṣyit) assigned to them by him, and had to untruth. Originally they had divided the world with the gods, and once built three strongholds, one in each world. But they continually contended against the gods, and, though they were more numerous or more powerful than the latter, they were in the end always defeated by them. Frequently they were put to flight by Indra, with or without the assistance of Bhṛṣṇapati. Thus at last they were driven from the earth and the heavens above.

From these statements it appears that the authors of the Brāhmaṇas and Upaniṣads regarded the Asuras as the pre-eminent evil ones; once it is even said that their alleged battles with the gods and their subsequent destruction degraded through their own wickedness. It is, however, to be noted that they are enemies only of gods, not of men; some peoples (the Easterns and others) are even said to be of Asura-nature, and it is added that they make their burial-places round and line them with stones.1 This seems to imply that some peoples were supposed to worship Asuras.2

As regards the second synonym of Daitya, mentioned also in the Satapatha Broahmaṇa, and translated as 'later as dānava, from which it is derived, used in the Rigveda very much in the same sense as the later *asura*. A female dānava is mentioned (i. xxiii. 9) as the mother of Vṛtra (*ätryaputṛ).* She came in later times to be the object of the Daityas, and dānava as well as dānava might be taken as a metonymic from dānava, and mythologists, of course, gladly availed themselves of this etymology in drawing up their legendary genealogies. The word dānava is derived from Diti, as the Dānavas from Dānu; but there is this difference, that dānava was an ancient name for demons which gave rise to a myth of their descent, while daitya is a name derived, after the Vedic period, from a word which was originally not popular, dānava. She is mentioned thrice in the Rigveda3 and several times in the Atharvaveda, almost always in conjunction with the well-known great goddess Aditi, apparently as her sister, and in whom she must have once existed, through a popular etymology which regarded *aditi* as formed by a privative and *diti*, just as *asura* was derived from *sura*. Diti, a product of priestly speculation, would scarcely have given rise to the popular name Dānavas, and it was apparently formed as a 'pendant' of Aditya—a name which already in the Rigveda denoted a class of deities including some of the highest gods, and at the same time had been regarded as a metonymic from the Divine Mother.4

The only myth related of Diti in the Bhārata-yantra (i. 46) and the Purāṇas5 betrays a similar tendency. It is to the following effect:

In the battle between the gods and the Daityas, which ensued on the chartering of the ocean, the latter were worsted and slain. Diti then performed austerities, and asked the gods for a boon, viz. that she might give birth to a son who should vanquish Indra. Kāśyapa granted the boon on condition that she should remain entirely pure for a thousand years. During her pregnancy Indra watched her closely, and at last found her in an impure position. Thereupon he entered her womb, and divided the embryo into seven parts, which became the seven lords of the Murtras, or the Daityas.

The present writer is of opinion that this myth was invented in order to explain that the Daityas are the elder brothers of the gods. For *marut* is also used at least in classical Sanskrit literature as a synonym of *deva*, 'god.' The motive of the myth lies, obviously, in an etymology which derives *diti* from the root *dā*, 'to cut.' The myth itself is evidently not an old one, for it rests on the assumption that the Daityas are the children of Diti, and that they were killed in battle by the gods.

In epic and classical Sanskrit literature, where Asura, Dānava, and Daitya are interchanged in terms, the Daityas continue to be represented as rivals, and, occasionally, as deadly foes, of the gods; but the attitude of the writers has decidedly changed since the composition of the Brāhmaṇas. Thus, the historical epic contains several stories in which the Asuras—Vṛtra, Bali, Sambhara, Namuchi, and others—are spoken of as virtuous and wise;1

1. *Asura* (adv. and subst.) in the Rigveda refers to gods, and not to demons.

2. *Xi. 1. 6, 8.*

3. *Ii. 3. 5, 6.

4. *Ii. 5. 1, 12.*

5. *Ii. 5. 12.*

6. *Irjha Aranyaka, i. 3. 1.*

7. *Satapatha Brāhmaṇa, xiii. 3. 1, 5.*

8. *Iv. xii. 1. 6, 9.*

9. According to Boehtlingk-Roth (*Stb. Wörterb.* St. Petersb., 1879, i, 'Diti'), the Diti of the Rigveda is different from the Diti of the Atharvaveda.

11. It may be mentioned that the word *maru* (iv. 38, 82 евр.) contains an entirely different account of the origin of the Murtras; they were formed from the vital seed of the ṛṣi Mahā-kayapā falling into the river Saravati.
and some Asuras are acknowledged by gods as their friends and protectors, e.g. Prahlāda by Viṣṇu, and Kṛṣṇa by Viṣṇu. Moreover, they were not believed to lead a life of wickedness, but to conform to the precepts of the Veda. They had a teacher and priest of their own, a purāṇa, in whose person of the six Vedas, Uṇāsas, a descendant of the great āśīṣa Bṛgūna.

Finally, the abode of the Asuras, Pātāla, is described not as a dwelling-place of demons, but as an equalizing, and even surpassing, abode of the heavens. Dakṣa, king of the Daityas, of whose sons, had these most skilled of all the Vedic authors, is described by his will a son, Kaśyapa, a prajapati, or secondary creator. He married thirteen daughters (putrīkās) of Dakṣa, who was also a prajapati. The first place in the list of these thirteen daughters of Dakṣa is always given to Aditi, who was devoted to Diti; but the latter was the eldest, as is expressly stated in Mahāb. xii. 297, 298. Diti had but one son, Hironyakāśipu, the ruler of the Asuras. He had five sons, Prahlāda, etc.; Viṣṇa had three sons, Virochana, etc.; and Kaśyapa’s son was Bāla, whose son was Rāma. These Asuras and their progeny are, properly speaking, the Daityas; but popular usage takes no account of this genealogy, and regards all enemies of the gods as sons of Diti.

By Dakṣa, the father of Dakṣa, Kaśyapa had 33 or 40 sons, among whom are enumerated the most famous Asuras. The sons and grandsons of these are said to be becomest; they are the Daityas proper, and the above account of the Daityas applies therefore to Kaśyapa’s son by the fourth daughter of Dakṣa, Śimhikā, the famous Asura, Rāhu, whose head was cut off by Viṣṇu, and who ever since persecutes sun and moon, and occasionally swallows them (mythological cause of eclipses), Daityas, the fifth wife of Kaśyapa, became the mother of Bāla and Vṛtra, the Asuras who were killed by Indra; and Kāla, the sixth wife of Kaśyapa, gave birth to the Kālakaṇyas, a class of Asuras. Accordingly, for Mahābhārata v. 62, describing the whole race of Asuras from five daughters of Dakṣa.

According to the Viṣṇu Purāṇa, Śimhikā was the sister of Hironyakāśipu, and wife of Vṛtra, cñitti, a son of Diti. The same source does not mention the above-named wives of Kaśyapa, or at least does not make them the ancestresses of separate Asura families, there are practically only two races of Asuras acknowledged by the Purāṇa, viz. Daityas, and Asuras.

1 May be mentioned in this connexion that Indra, by killing Bala, Vṛtra, Nāmauchi, Trisūras, Jambha, and Pūka were slain by Indra; Madhu, Kaiṭabha, Bāli, Mura, and Nākika by Viṣṇu (who is thence called Dattāyī, foe of the Daityas) or Kaśa; Praalamba by Balarāma; Sambhala by Pradvyumnas; Andhaka by Siva, who also destroyed Trisūras, Sūmbha, Nāmauchi, and Madhu; Tāraka and Rāma by Kārttikeya; and Ivala and Vatāpya by Agastya.

2 Not enumerated in the Viṣṇu Purāṇa, but in some others, e.g., Viṣṇu Purāṇa (Bihāl. Ind.), u. 744.

3 See Wilson, op. cit. ii. 69.

The Purāṇas, however, have another account of the origin of the Asuras at the first creation of the world. Bṛhat, being desirous of creating the four orders of being—gods, demons, progenitors, and men, collected his mind into itself. Whence, it is said, the qualities of promotion perverted his body, and hence the Asuras were first born, issuing from his thigh. Bṛhat then abandoned that form which was composed of the radiance of darkness, and which, being deserted by him, became night.

Wilson says in a note: "These recounted, and not always very congruous, accounts of the creation are explained by the Purāṇas as referring to different kalpas, or revolutions of the world, and therefore avoiding no combination of the former reason for their appearance is the probability that they have been borrowed from different original authorities."

As regards the origin of the Asuras, it is probable that the myth described above has been developed from the statement in the Brahmaṇas mentioned at the beginning of this article. The genealogy of the Asuras is of later growth, and introduces a new element of confusion into all Indian sects. Thus, however, could Hiranyakāśipu, the first-born of all Daityas and Danavas, rule over the whole race of Daityas and Danavas, who, according to the Pauranic theory, sprang from his children and grandchildren.

It has been said above that the Asuras reside in Pātāla, and the Satapatha Brāhmaṇa already states that they entered the earth. Yet they are not restricted to Pātāla, but may have their towns and castles in heaven. Thus it is in the Mahābhārata that three sons of Tāraka possessed three towns, which, united into one, became the famous Tripura, which Siva reduced to ashes with his mythical arrow. The Paulomans and Kalakaras inhabited the Tripura town Hiranyakāśipu, which was destroyed by Arjuna (Mahāb. viii. 33 f., xii. 173). Another tribe of the Danavas, the Nīvatākavas, live on the shore of the ocean, where Arjuna vanquishes them (ib. xii. 168 f.). In most stories, the scene is laid in the upper regions, where they acquire power even over the three worlds, till some god slays them.

The belief that the Asuras dwell in the regions below has been common to all Indian sects. According to the northern Buddhists, the world of the Asuras, who, besides the Daityas, comprise the Rākṣasas, Yaksas, and similar demons, is the uppermost of the four Ayādalokas, or worlds of suffering; and it is situated above that of the Daityas, as the world of Indra is above it. Among the Asuras the foremost rank is held by Rāhu, the demon who causes eclipses of the sun and moon. The Jains reckon the Asuras, as, or, as they call them, the Asurasukāmāras, as the lowest class of the Bhayavānas or Bhayameyaka gods, and assign them the uppermost part of Rasaprabhā, the highest hell-region, as their residence.

A great many names of Asuras are given in epic and classical Sanskrit literature, some of which have already been mentioned. We add the names of a few more who are frequently mentioned in connection with the god who slew or overcame them: Bala, Vṛtra, Nāmauchi, Trisūras, Jambha, and Pūka were slain by Indra; Madhu, Kaiṭabha, Bāli, Mura, and Nākika by Viṣṇu (who is thence called Dattāyī, foe of the Daityas) or Kaśa; Praalamba by Balarāma; Sambhala by Pradvyumnas; Andhaka by Siva, who also destroyed Trisūras, Sūmbha, Nāmauchi, and Madhu; Tāraka and Rāma by Kārttikeya; and Ivala and Vatāpya by Agastya.

1 Wilson, op. cit., in his notes to pp. 26, 28 ff. It may be mentioned that the Viṣṇu Purāṇa gives the progeny of Danavas (C. 1, 20 f.).

DANAIDS

The Asuras (Daityas, Dānavaš) constitute the highest class of demons, they are the enemies of the gods, and not of mankind; indeed, men seem, as a rule, excluded from their sphere of action. This is the principal point in which they differ from the remaining classes of demons, such as Rākṣasas, Yākṣas, Yāgīs, etc., who sustain hostile or friendly relations with men. See art. BRAHMANISM.

In conclusion, an opinion must be noticed which has been put forward by some writers—most recently by the Danish scholar V. Frensdorff 1—viz., that the wars of the Suras and Asuras are put in a mythological account of what originally was a strife between the Aryans and the aboriginal inhabitants of India. Frensdorff includes among the Asuras other classes of demons, Rākṣasas, and an ascription of the springs. With regard to this, it should also be noted that the springs themselves are given to the Asuras, Dānavaš, or Dānavaš.

LITTERATURE.—This has been sufficiently indicated in the course of the article. HERMANN J. JACOB.

DAKHIMA.—See DEATH AND DESTRUCTION OF THE DEAD (Parsi).

DANAIDS.—The Danaids (Dānavīā) were the daughters of Danaus. Their number is variously given; Hecataeus (schol. on Eurip. Orest. 572) enumerates twenty; and Heriod (ap. Hecateus, loc. cit.) fifty; the latter figure has won general acceptance. Their fame is enshrined in two legends— the one telling how they murdered their bridegrooms during their wedding night; the other, how, after death, they were condoned to pour water into vessels full of holes.

1. The standard form of the first legend is that given to it by Aeschylus; it forms the basis of the story as found in the Bibliotheca of Apollodorus, (iii. 12 f., ed. cit.); and in Hyginus’s Fabulae, 168 (cf. schol. on Stat. Thb. ii. 522); schol. Strizz. on German. Arata, p. 172, ed. Creyssig). We find part of it in the extant Isthros of Aeschylus—the first portion of his Danaides, which served as the opening myth of the Prometheus in Prom. Vinct. 535 ff. The story is as follows. The fifty Danaids flee, under their father’s direction, from Egypt to Argos, in order to escape from the unwelcome suit of their cousins, the fifty sons of Phryxus; they were condemned to pour water into vessels full of holes, and, by mere superiority of force, compel the maidens to marry them. Danaus, however, commands his daughters to kill their respective husbands, and all of them obey save one, Hypsipyle, who betrays herself to her father. These, Hypermena, saved from her father’s vengeance, and at length reconciled to him, continues the lineage of the family, and by inheritance secures for her acknowledged husband the over-lordship of Argos. The scene of the myth is thus Argos, and, indeed, the mere name of the father and his daughters indicates this locality, as in Homer the Argives are most frequently referred to as Asōi. Since the publication of Preller’s Griechische Mythologie (cf. ii. 251 [Berlin, 1861] 45 ff.) the myth has been commonly interpreted as relating to the scarcity of water in ‘thirsty Argos’; the slaying of the bridegrooms is taken to mean the drying up of the springs. This hypothesis is still adhered to by (1. Meyer (Pfänderungen zur alten Gesch. i. (Halle, 1898) 74) and Waser (in Pauly-Wissowa, iv. 2089),

but its lack of evidence is on a level with its failure in lucidity (cf. F. Frieslander, Argolica, Berlin, 1905, p. 24). It is certainly true that the full, though not identical, lists of the Danaids given by Apollodorus, ii. 16, and Hyginus, Fab. 170, contain at least one name, Anymone, which is also the name of a Syrian race which would be another here and there which could be appositely applied to a spring, this cannot be said of the majority. Anymone, moreover, is the subject of a special myth, which bears the name of the Ambassadors. But it can be another here and there which could be appositely applied to a spring, this cannot be said of the majority. Anymone, moreover, is the subject of a special myth, which bears the name of the Ambassadors. But it can be another here and there which could be appositely applied to a spring, this cannot be said of

the earliest traditional antagonist of the Amazons in Lycia, came originally from Argos (II. vi. 186). Now, as we find Amazon-like women—the Danaids, namely—in Argos, it is natural to suppose that the Danaids, had they taken the same journey as Hellephoros—had come, that is, from Argos to Lycia. As a matter of fact, the Danaids bear the name of a pre-Hellenic tribe. For, since the Cauntulite Philistines have been identified with the Athlaios mentioned in the documents of Ramesses III. (1200-1175 B.C.)—one of the tribes which worshipped Minos and brought their civilization to its highest development in Crete during the 2nd cent. B.C. (cf. Bethe, in Hell. u. Philol. [v. 119 (1903)] 200 ft., with its and proofs—we can no longer doubt that the Argive Danaoi and the Danuoi mentioned in Egyptian documents as early as the 11th cent. B.C. were one and the same people (Ed. Meyer, Gesch. d. Alterthums, I. [Stuttgart, 1899] 226).

A word or two must be added regarding Hyper- mnestra, the only one of the Danaids who spared her bridegroom, and the mother of the royal race of Argos. Her story, even more than that of Amy- nesus, and the specific bearing of the Danaid myth. Account must also be taken of two additional facts. (1) Of all the Danaids, Hypermnestra alone had a cult in Argos (cf. Hygin. Fob. 168 = schol. Strozz. on German, Aratus (172, ed. Meyer), 21, 5. According to this passage which, after the tomb of Hypermnestra and her husband in the city of Argos. (2) Lynkeus, again, is a standing figure in Peloponnesian legend, while the other sons of Egyptus are but empty names. No may, however, equally reasonable to suppose that Hyper- mnestra, like Amymone, was a later addition to the group of the Danaids, designed to bring each of them into the imposing genealogical fabric of Argive mythology. This is confirmed by the legend that Lynkeus killed his sisters-in-law and their father (schol. on Eurip. Hekuba, 886). According to Archilochos (fr. 150, in Malalas, Chronogr. iv. 68), Lynkeus was depicted as a conqueror who robbed Danaus of both his dominion and his daughter.

The process of reducing the originally Amazon-like Danaids to human proportions, as we find it, already consummated in Aeschylus, led at length to the complete obliteration of their characteristic quality of womanhood. After the murder of the Egyptians they all marry again. Their father gives them, without a price, as rewards to the victors in the games (Pindar, Pyth. ix. 162 ft.)—a story which had originally no connexion with the Danaids (R. Friedlander, op. cit. p. 177). The scene of the man-slaying was laid among the streams of Lerna (Pausan. ii. 24. 2; Paracroniographi, i. 108), but also in Argos itself—on the acropolis, where, as noted by Panasias (loc. cit.), there stood some memorial of the sons of Egyptians.

2. The earliest literary record of the tradition that after death the Danaids were doomed to the endless and aimless labour of pouring water into vessels with holes in them is the pseudo-Platoan Axiouchus (3rd cent. B.C.), 371 E. In the 5th cent. B.C. Polydorus, in its pictures of the under- world, had portrayed men and women—characterized as "unconsecrated"—engaged in a like task (Hipp., ii. x. 31. 9; cf. Plat. Gorgias, 433 B. Rep. 363 D). Accordingly, Wilamowitz-Molendoff (Homer. Untersuchungen, Berlin, 1884, p. 202) and Rohde (Psyche, Tübingen, 1891-94, pp. 292-297) have advanced the hypothesis that this penalty of fruitless labour forms a part of the tradition of the Danaid myth. But Rohde's assertion that the Danaids were άραξι, i.e. that they had not attained their σάξα by marriage, suggests that the conception of the Danaids as aimless water-drawers in Hades may possibly be older than he believes.

This drudgery, in fact, was regarded among the Greeks, and is regarded even to-day, e.g., in the Tyrol, as the lot of the unmarried in the under world (Wasner, K. der Schurw. iv. 2087, 69 ff.; P. Friedlander, op. cit. p. 28).

The relative antiquity of this element in the story is likewise borne out by a further remark of Rohde, viz. that the Danaids could be associated with the task of pouring water only at a time when they were still thought of as unmarried. Even in Pindar's day (Pyth. ix. 112), however, this was no longer the case; while, according to Aeschylus, at least two of them, Amymone and Hypermnestra, also became mothers during their life time, we may perhaps think that the Danaid myth, which, as made known to us by the surviving verse of the epic ἄραξι, represented the Danaids as Amazon-like women hostile to men, we are thus brought to a date not later than the 6th cent. B.C. It must, therefore, have been about that time that the lot of the unmarried in Hades—the unending labour of drawing water—was first ascribed to the Danaids.

Once this feature had been added to their story, however, and had become effectually grafted on to it, the Danaids would come quite naturally to be regarded as drawers of water even in their lifetime. In this way they would then be brought into connexion with Lerna in Argos—perhaps originally the district limited by the waterless, and in later times, the water-nymph Amymone would be numbered with them. It accords with all this that Danaus was extolled as the hero who provided Argos with water: so Hesiod, fr. 24 (ed. Rtsch.), a verse given by Strabo, viii. 2. 9, by a later rendering, which, however, is of special interest, as it states that it was not Danaus, but the Danaids, who made Argos, once waterless, a well-watered land.

DANGI ('highlanders,' Hindi धाँगी, 'a hill').—A tribe of Dravidian origin, which at the Census of 1901 numbered 97,422, almost entirely confined to Central India, Râjputâna, and the Central Provinces, in which last they are described as originally robbers and freebooters, whose home was in the Vindiyah range. They are doubtless ethnologically connected with the Gond and Bhil tribes which occupy the adjoining hills; but they are rapidly becoming Hinduized, and have now gone so far as to call themselves Râjputs, and to claim descent from a mythical Râjâ Dâng of the Raghunânti sept. In the Jhânsi District, from which we have the most complete account of the religion of the tribe, they rank as low-caste Hindus; they cremate their adult dead, and perform the śraddha, or mind-rite, through Brâhmans. Like all castes on their promotion to a higher social rank, they are particularly careful to avoid ceremonial pollution. This results in its most serious form from the killing of a cow. In this case the offender, in order to procure restoration to caste rights, must make a pilgrimage to the Ganges, feed his tribesmen and Brâhmans, or perform the mock marriage with the tâlā or holy basil tree. This rite, of course, necessitates the payment of liberal fees to Brâhmans. If the offender prefers to do so, he may purchase restoration to caste by paying the marriage expenses of two poor children of the
DANTE.

1. Life.—Dante Alighieri was born at Florence, some time between June 5 and July 26, 1265. His father, Cenni di Nottura di Cen

nucci Alighieri, a notary who attended to the Guild of the Flee
ters, was a member of the great family of the Comune. Dante was the

son of Guido Alighieri, a poet and satirist of note, who had written

in Latin and Italian. Dante's mother, Beatrice Cenci da Bardi, was a

member of an influential family. Dante was born in a period of war

and treachery, with the Church and the State in opposition to each

other. At the age of four, Dante's father was exiled and Dante was

brought up by his mother and his aunt, Caterina Giunti. His edu-

cation was in the hands of his uncle, Guido Cavalcanti, a poet and

humanist. Dante studied with the best scholars of the time, includ-

ing the famous poet and scholar, Giovanni Boccaccio.

Dante's early life was marked by the political turmoil of Florence,

which was ruled by the Guelfs and the Ghibellines. The Guelfs

were opposed to the power of the papal Curia and sought to

establish a Florentine republic. The Ghibellines, on the other hand,

supported the papal authority and the imperial power. Dante was

drawn into the political conflict and was exiled from Florence in

1302.

2. Works.—Dante's works fall into three periods: (a) the period of his youthful love and putting, which is represented by the Vita Nuova; (b) the period of the Rime, his later

lyrics, his linguistic and philosophical studies and researches, bearing fruit in the Italian prose of the Convivio, the Latin prose of the de Vulgar Elo

cutia, and the revival of the pastoral mode of Vergil in the Vita Nuova of Dante Alighieri. (1) The Vita Nuova, Dante's first book, which is dedicated to Guido Cavalcanti, tells the story of his love for Beatrice in thirty-one lyrical poems, symmetrically arranged, and connected by a prose narrative. (2) The Rime, which include the Bucolica, three canzoni, and two shorter poems in the canzone mould, written from 1283 to 1292, cover a period of nine years, while the prose com-

mentsary, composed between 1292 and 1295, weaves the whole into unity. Its essential theme is the influence of the Provençal troubadours, together with the philosophical re-handling of their themes of chivalrous love which we find in

trite. They now worship the holy Imita
defies, Ranaeandra, Kypp, Siva, Durgā,

des, and others. Special regard is paid to the minor gods

of the village, especially to those who remove cause

disease, such as Sitala, the goddess of smallpox,

and Hardaul Lāl, the deity hero who

cured children of smallpox (June 6, 1896; 1, 138 f.). Bhumiyā, the god of the soil, is

represented by an old snake, which is worshipped in

June—July. At marriages they perform a rite to

propitiate their "santa mother's gods;" but they have no definite idea of

their nature or functions. Their sacred trees are

the pīpal (Ficus religiosa) and the chhonkar (Pro-

sopis spicigera). The cows of the household, as

emblems of Lakṣmi, the goddess of fortune, are

worshipped at the Divali, or feast of lamps; and

horses at the Dashāra.

Provinces Gazetteer, 1870, p. 290; Census Report Central Pro-

dinces, 1901, i, 160. W. Crooke.

DANTE.
the poetry of Guido Guinizelli of Bologna, whom Dante elsewhere claims as his father in the "sweet and gracious rhymes of love" (Purg. xxvi, 93). The first of the three *canzoni*, "Donne ch'avevete intelletto d'amor," marks an epoch in Italian poetry. The later portions of the book are already strongly coloured with the Christian mysticism which inspires the *Divina Commedia*. There is much sheet allegory in the details and episodes, but the word is, in the main, not to be taken in an allegorical sense. It is a mystical reconstruction of the poet's early life, in which earthly love becomes spiritual, but, being thus exalted above itself, fails to earth again when its sustenance is removed. Although earthly love is no more than a remembrance in repentance and humility to a clearer vision and a larger hope, with the resolution to turn to the daily work of life until such time as the soul may become less unworthy to attain the ideal which it has received.

(2) Besides the pieces inserted in the *Vita Nuova*, there exists a large body of lyrical poetry from Dante's hand, known collectively as the *Rime* (or), less correctly, the *Ballate*, occasional verse in the *ballata* and sonnet form, composed at various times in Dante's life, which have not yet been satisfactorily collected or freed from spurious pieces; (b) a series of fifteen *canzoni*, which Dante elaborates and projects into a complete work, arranged in a definite order to form a complete work. Two of these *canzoni* seem to belong to the period of the *Vita Nuova*; the rest represent the period in Dante's life between the death of Beatrice and the inception of the *Divina Commedia*. They give variety, dignity, and technical perfection to the metrical form which the early Italians had received and developed from the Provencals, and introduce, partly from the Provencal, two entirely new varieties of verse, only to be measured, only to rise once more in the grace and power of its construction. This love-song matter is partly philosophical, in which the seeker after wisdom depicts his quest with all the imagery of an earthly lover's pursuit of an adored woman; partly, it would seem, more tangible human passion; partly, ethical and didactic themes. One of the noblest of the series is the *canzone* of the three ladies: 'Trem donne intorno al cor mi son venute' (probably written c. 1294); in this the legend told by Thomas of Celano and St. Bonaventure, the Penitent Host, is transformed into an allegory of Dante's own impassioned worship of Justice, which contains the *Divina Commedia* in germ.

(3) The *Convivio*, Dante's chief work in Italian prose, is an attempt to put the general reader of the epoch into possession of an abstract of the entire field of human learning, as attainable at the beginning of the 14th century, in the form of an allegorical commentary upon fourteen of the poet's own *canzoni*. Its basis is the saying attributed to Pythagoras, to the effect that the philosopher should not be called the wise man, but the lover of wisdom—a conception which Dante elaborates in the terms of the chivalrous love poetry of his age, personifying Philosophy as a noble lady whose soul is love and whose body is wisdom, and identifying love with the study which is 'the application of the art of love' and an action, a thing of which it is enamoured.' The work shows the influence of the *de Consolatione Philosophiae* of Boethius (its professed starting-point), Isidore of Seville, the *Dissertation* of Hugh of St. Victor, the *Trésor* of Brunetto Latini, and the *Summa contra Gentiles* of St. Thomas Aquinas. Dante's aim is to make the medieval encyclopaedia a thing of artistic beauty, by wedding it to the highest poetry, and to show that the world that the Italian vernacular was no less efficient than Latin as a literary medium. At the same time, it was to be his *apologia pro vita sua*, justifying his own conduct as a man and as a citizen, and, incidentally, explaining certain of his stanzas of earthly love as inspired purely by philosophical devotion. Internal evidence shows that it was composed between 1306 and 1308. It was left unfinished, only the introductory treatise and the commentaries upon three *canzoni* having been written. In the first book, starting from the origin of language, Dante considers the rival claims for pre-eminence of the three romance vernaculars—French, Provencal, and Italian—and proceeds to examine in detail all the various dialects of the last, none of which he finds identical with the ideal language of Italy:

'The illustrious, cardinal, courtly, and curial vulgar tongue in Italy is that which belongs to every Italian city, and yet seems to belong to none, and by which all the local dialects of the Italiots are measured.'

As Mazzini well said, Dante's purpose here is 'to found a language common to all Italy, to create a form worthy of representing the national idea'—the purpose which he was ultimately to fulfill by writing the Latin *Divina Commedia*. In the first book, he defines the highest form of Italian lyrical poetry, the *canzone*; distinguishes the three subjects alone worthy of treatment therein—Arms, Love, and Virtue; and elaborates the poetical art of its construction. The whole body of the *Convivio*, in the great dialects of Dante, is a variation of the *Provençal troubadours* (Bertran de Born, Arnaut Daniel, Girart de Bornel, Folquet de Marseilles, Aimeric de Bélequy, Aimeric de Peglihan, together with the French poet, king Thibaut of Navarre), the poets of the Sicilian School (Toscanelle Colonne and Rinaldo d'Aquino), and the poets of the *dolce stil nuovo* (Guido Guinizelli, Guido Cavalcanti, Cino da Pistoia, and himself). Dante refers to his own *canzoni* as those of the friend of Cino da Pistoia, and it is possible that he intended to dedicate the work, when completed, to Cino, as he had done the *Vita Nuova* to Cavalcanti.

(4) The election of Henry of Luxemburg to the Empire, in November 1308, drew the poet back from these philosophical and linguistic studies to the political strife that was about to convulse Italy. Confronted with this new situation, of apparently unassailable position, and with the hand of the imperial power already on the city of Rome, he felt that all that he had hitherto written was fruitless and insignificant. It was probably about 1309, in anticipation of Henry's coming to Italy, that Dante composed the *de Monarchia*, fearing lest he 'should one day be convicted of the charge of the buried talent.' For Dante, the purpose of temporal monarchy or empire, the single prince over men in temporal things, is to establish liberty and universal peace, in order that the whole body of Christ's race, for thought and for action, may be realized. In the first book he shows that this universal monarchy, thus conceived, is necessary for the well-being of the world; in the second he attempts to prove, first, that the Inquisition is a necessary reason and then from arguments based on Christian faith, that the Roman people acquired the dignity of empire by Divine right. It is a cardinal point in Dante's reading of history that the history of the Jews and the history of the Fratres and Profratres and *Divina Commedia* on parallel lines, the one race being entrusted with the preparation for the Gospel, the other with the promulgation of Roman law. For him, as for mediæval political theorists in general, the Emperor of his own day, when duly elected and
crowned, is the successor of Julius and Augustus no less than of Charlemagne and Otto. The third book proves that the authority of such an Emperor does not come to him from the Pope (the coronation of Charlemagne being an act of usurpa-
tion), but depends immediately upon God, 'descending upon him without any mean, from the fountain of universal author-
ity.' Divine Providence has ordained man for two ends; blessedness of this life, which consists in the exercise of his natural powers; and is figured in the
Earthly Paradise; and blessedness of life eternal, which consists in the fruition of the Beatific Vision in the Celestial Paradise. To these two diverse ends, indicated by reason and revelation respective-
vies, by the diverse means of philosophy and spiritual teaching, and, because of human cupidity, he must be checked and directed:

'Wherefore man had need of a twofold directive power ac-
cording to resistance to the Sovereign Pontiff to the human race to eternal life in accordance with things revealed;
and the Emperor, to direct the human race to temporal felicity in accordance with philosophical teaching.'

This, then, is the purpose of Church and State, each independent in its own field, a certain superiority pertaining to the former in that 
 perishable life is ordained for immortality. We here find 'in its full maturity the general conception of the nature of man, of government, and of human destiny,' by the diverse means of 
intransfigured, without being transformed, into the framework of the Sacred Poem' (Wickshead).

(6) Dante's political letters are a pendant to the de Monarchia, but coloured by the realities, and finally embittered by the circumstances of the Emperor's expedition. From the Messianic fervour of his appeal on Henry's behalf to the princes and peoples of Italy (Ep. v. ["Oxford Dante"], written in 1306, after the destructive fury and acer

seggio indignato of his address to "the most wicked Florentines within" (Ep. vi., March 31, 1311), and his rebuke to the Emperor himself (Ep. vii., April 16, 1311), when the former were organizing the nation to the Imperial power, and the latter seemed to tarry. To the latter part of 1314 belongs the eloquent letter to the Italian cardinals in conclave at Carpentras after the death of Clement v. (Ep. vii.), urging the elec-
tions of the Italian Pope to return to Rome and reform the Church. Of Dante's private and personal correspon-
dence, the only specimen that can be unhesitatingly accepted as authentic is the famous letter to a Florentine friend refusing the amnesty in 1316 (Ep. x.); but two others, ap-
parently accompanying two of his lyrical poems, addressed to Cino da Pistoia (Ep. iii., c. 1305) and Morcello Malaspina (Ep. iv., c. 1306 or 1311), are probably genuine.

(7) The authenticity of the letter to Can Grande della Scala, though much disputed, is gradually becoming generally recognized. Written appar-
tently between 1318 and 1329, it dedicates the Paradiso to Can Grande, interprets the opening lines of its first canto, and explains the allegory, subject, and purpose of the whole poem. It is the

starting-point for the study of the mystical aspect of the Divina Commedia, alike in its appeal to the authority of St. Augustine, St. Bernard, and St. Bernardino. Vergerio had failed to discover the measure of humanity, and in its unmistakable claim for the poet himself that he has been the personal recipient of a religious experience too sublime and overwhelming to be adequately ex-
pressed in words.

(8) Dante's first Elegy, a pastoral poem in Latin hexameters, was written about 1319, in

answer to a Latin poem from Giovanni del Virgilio, a lecturer at Bologna, who had urged him to write a Latin poem and come to that city to receive the

laurel crown. It is a beautiful and gracious poem, in which the Vergilian elegy becomes a picture of the poet's life at Ravenna in the com-
parative peace and calm of his latest years.

(9) The Quasidio de Aqua et Terra professes to be a philosophical question concerning the relative position of water and earth on the surface of the globe, publicly discussed by Dante at Verona on January 20, 1320. Its authenticity has of late been regarded as highly problematical.

(10) It is impossible to decide at what date the

Divina Commedia was actually begun. According to Boccaccio, the first seven cantos of the Inferno

were composed before the poet's exile, and he was induced to take up the work again in consequence of

his recovery of the manuscript in 1306 or 1307. Although this seems contradicted by internal evi-
dence, yet there are something, which were originally conceived on a different plan from that

ultimately adopted in the poem. It is possible that the poem, as we now have it, was begun about 1308, interrupted by the Italian enterprise of Henry of Luxemburg and resumed in the years

after the latter's death. While there are no certain and definite allusions in the Purgatorio to events later than 1308, there are references in the

Inferno, by way of prophecy, to occurrences of 1312, and a consequence of the last (or second question) of 1314, while the Paradiso (xii. 120)

contains what appears to be an echo of a Papal bull of 1318. An allusion in the first Elegy shows that, by 1319, the Inferno and the Purga-

torio ('mirum circumcursa corpora astrolaque') and we learn from Boccaccio that the

last thirteen cantos had not yet been made known to the world at the time of the poet's

death. In any case, it seems clear that the Divina Commedia as a whole, whenever it may have been begun, although the action is relegated by a poetic

fiction to the assumed date of 1309, should be regarded as the period of the last years of the poet's career, when the failure of his earthly hopes with

Henry of Luxemburg had transferred his gaze from time to eternity, and, himself purified in the fires of experience and adversity, he might

lawfully come forward as ver prediscus justitiam, 'to remove those living in this life from their state of misery, and to lead them to the state of felicity.'

Dante's primary source of inspiration for the

Divina Commedia is the actual life of his own times which he saw around him, interpreted by the story of his own inner life. His aim is to

reform the world by a poem which should present man and Nature in the mirror of eternity. But he

had, inevitably, his literary sources. While the

sixth book of the Aeneid may be called his starting-

point, Dante was probably acquainted with some of the many medieval accounts of visits of a living

man, 'whether in the bosom or out of the bosom,' to the other world, the transcendent idea of the

Visio Saneti Pauli and those recorded in the Dialogues of St. Gregory the

Great, became especially abundant in the latter part of the 12th cent.; though the only one that has

left any trace is the Visio Tungdali of the Irish Benedictine

Marcus (1149). Of the Latin poets, next to Vergil,
he was most influenced by Ievi, while Ovid and Statius are his main sources for classical mythology, and Livy and Orosius for classical history. Cicero was familiar to him from his early manhood; but he shows surprisingly little acquaintance with Terence and Horace. The Latin versions of the Greek of Augustine, of which the Augustinian de Genesi ad litteram and the Dionysian writings (either in the translation of Secundus Erigena or through the medium of Aquinas), were a constant companion of Dante's. Certain eleventh century treatises of Bonaventura are a constant companion of Dante's. Indeed, the Neoplatonic mysticism of the whole poem is largely based upon the de Preparatio eneae ad Contemplationem and the de Contemplatione of the last named writer. Of the poet's own works, the Vita Nuova and the Monorchia, is entirely Dante's achievement.

There is a certain element of Joachism in the Divina Commedia, but Dante was probably acquainted with the doctrines of the Abbot of Flora only at second hand, in the Arbor Vite Crucifae of Ubertino da Casale (1303), which is chronologically before Dante's acquaintance with the mystical treatises of Mechtild of Magdeburg and Mechthild of Hackeborn, though it is questionable whether either of them can be identified with the Matelda of the Earthly Paradise.

Above and around the material universe is the celestial rose of Divine Beauty, flowering in the rays of the sun of Divine Love, still to be completed by man's correspondence with Divine Grace; while on earth—the throning floor of mortality—by use or abuse of free-will, character is formed, and human drama is played out. The dual scheme of the de Monarchia is transplanted from the sphere of Church and Empire to the field of the individual soul. Man, in the person of Dante, vainly attempts to escape from the dark wood of alienation from truth, and is barred by his own vices from the ascent of the delectable mountain (fidelity, or, perhaps, knowledge of self); but Vergil, representing human philosophy inspired by reason, guides him to the nine circles of Hell (realization of the nature of sin and error), and up the seven terraces of Purgatory (setting love, the soul's natural tendency to what is apprehended as good, in order, and purifying the soul from the stains still left after conversion) to the Earthly Paradise, which in one sense is the happy state of a good conscience, and in another the life of Eden regained by the purgatorial pains. This life is personified in Matelda, the realization of Leah, who, in the mystical system of Richard of St. Victor, symbolizes 'affection inflamed by Divine inspiration, and composing herself to the norm of justice.' Then the soul can rightly comprehend the history of Church and State, as represented in the allegorical pageant, and the works of St. Gregory, St. Augustinian de Genesi ad litteram and the Dionysian writings (either in the translation of Secundus Erigena or through the medium of Aquinas). Certain eleventh century treatises of Bonaventura are a constant companion of Dante's. Indeed, the Neoplatonic mysticism of the whole poem is largely based upon the de Preparatio eneae ad Contemplationem and the de Contemplatione of the last named writer. Of the poet's own works, the Vita Nuova and the Monorchia, is entirely Dante's achievement.

In describing the 'spiritual lives' of Hell, Purgatory, and Paradise, Dante has given a summary, looking into the human and Christian sphere of all that is permanently significant in the life and thought of the Middle Ages. He is throughout lacking back to a primitive ideal of Christianity, freed from the corruptions and accretions of the subsequent centuries. He has the Church, the Empire renovated by the power of the Cross, Revelation seated on the bare ground as guardian of the chariot of the Church, with no attendants save the theological and moral virtues, which are the companions of the Holy Spirit. But the ideal is never realized, because, side by side with the conquest of the world by Christianity, had come the conquest of the Church by the world. The alleged donation by Constantine of wealth and territory to the Papacy is for Dante the turning-point in history, and the primal cause of the failure of Christianity, which was bearing such bitter fruit in the corruption of mankind. The supreme significant event of his own century is thus the rise of St. Francis, and his marriage with Lady Poverty, as the first attempted return to the ideal of Christianity that Christ had left. This, in its turn, having proved but a passing episode, the poet can only look forward to the coming of the Eternal City, by which the Church shall be 'Five Hundred Ten and Five,' to be sent from God to renovate the Empire and to reform the Church by other methods. For the rest, men at all times 'are masters of their fate,' through the supreme gift of free-will, to put violence upon which, as Richard of St. Victor had said, 'neither buts the Creator nor is in the power of the creature.' The soul of man works out its own salvation or damnation; and the tragic fact consists simply in the soul's deliberate choice of one path.

The Inferno departs less than the other two canticles from medieval tradition in its structure and machinery; but it is here that the dramatic side of Dante's genius is especially displayed. The tragic impression is intensified, on the one hand, by the wasted virtues of the lost (the patriotism of Farinata degli Uberti, the fidelity of Piero delle Vigne, the scientific devotion of Brunetto Latini, the high conception of man's origin and nature that impels the poet to Dante), and on the other, by frequent and effective use of dramatic contrasts between the souls in Hell and those in Purgatory or Paradise (Francesca da Rimini and Ficorona Donati; St. Peter Celestine and King Manfred; Guido and Buonconte da Montefeltro). In the Purgatorio, with its sunsets and starshine, its angel ministers, its allegorical quest of liberty,
DANTE

in which the souls find the very purgatorial pains a solace to be willingly undergone, Dante breaks almost completely from legend and theological tradition, and plunges him in a realm which is entirely his own. The Purgatorio depends less than the Inferno upon the splendor of certain episodes, though many of these are among the most beautiful in the poem. It is in its sustained harmony and all-pervading tenderness that it makes immediate and universal appeal to heart and mind. The noblest passages of the Paradiso are lyrical rather than dramatic, and there is naturally less action and less individualization of character. With the exception of St. Bernard, who is a singularly vivid character, the human aspect of the souls in bliss is somewhat lost in the glory of their state since they have become 'semipaternal flames'—the suggestion of humanity being held in abeyance after the third sphere where the stretch of the earth's shadow is passed, until it reappears in celestial splendour in the tenth heaven. Notwithstanding this, we are sensible of no monotony in the passage through the paradisiacal sphere; there are youthful, without being of great variety, but subtle differences in the possession of it, in which the previous life has been a factor. As Wicksteed puts it, 'the tone and colour, so to speak, of the heavenly fruition of the blessed is affected by the manner in which the moral want through which they rose to spiritual victory.' The human interest in the Paradiso seems concentrated in such episodes as the appearance of Piacenza Donati and Dante's colloquy with Caccagnola, or the exquisite passage where Beatrice, her allegorical office completed, resumes her place, in the unveiled glory of her human personality, in the celestial rose. The mystical poetry of the Paradiso is unsurpassable; above all, in the closing canto it reaches a height of spiritual ecstasy for which it would be hard to find a parallel elsewhere in modern literature. Shelley wrote of the Paradiso that it is 'a perpetual hymn of everlasting love'; and Manning, "Dantis paradisum nihil restat nisi visio Dei.'

The metre in which the Divina Commedia is written, the terza rima, seems to have been created by Dante from the sirventes, the Italian form for which there have been quite different solutions in troubadour for political or satirical compositions in contrast to the steller conso or canzone, of love. His style has the highest qualities of terseness, condensation, variety of imagery, passion, vividness. The closely packed imagery is hard, even for its own sake, but to exemplify and clarify his meaning. Even at the heights of the Paradiso, he does not shrink from uncompromising realism in his smiles and images. The beauty and fidelity of his transcriptions from Nature are likewise unapproachable. He can render a complete scene in a few lines, sometimes in a single line, whether it be the flight of birds, the tumbling of the sea at dawn, or the first appearance of the shore, yet there are only gradations of light and shade, no great peaks, the open sea and external nature in a degree new among poets. ... But light in general is his special and chosen source of poetic beauty (Church, Dante, 1901, pp. 149, 165). Dante's fidelity to Nature has been well expressed with touching words by Wordsworth. And, when he turns from Nature to the mind of man, 'his haunt, and the main region of his song,' no such revealer of the hidden things of the spirit, save Shakespeare, has ever found utterance in poetry.

3. Position and character.—Dante is the last poet of the Middle Ages, and the first of the modern world. He has given perfect poetical utterance to what would be the condition of the second millennium, and has proved the most influential interpreter of medieval thought to the present day. If it can no longer be said, without considerable reservation, that he created the Italian language, or that he founded Italian literature, it is certainly true that he is the poet of Italian authority, but no less enkindled with prophetic fire against the abuse and corruption of that authority, whether in Church or State, and absolutely fearless in his returning zeal; relentless in his hatred of baseness and wickedness, above all in high places, but with a capacity for boundless tenderness and compassion; liable to be carried to excess, both in speech and in action, by his impassioned hunger and thirst after righteousness; conscious of his own greatness, but not of his own infirmities; an artist of the utmost subtlety and discriminating skill, insisting on a detached and overwhelming that it came upon him with the force of a personal and special revelation; but this was not all; we gather from the letter to Can Grande that the poet himself experienced one of those ecstatic contacts with the Divine attributed to the great saints and mysteries of all creeds—in which, as George Tyrrell puts it, the mind touches the smooth universe of the infinite, but is unable to lay hold of it.

LITERATURE.—I. BIOGRAPHY.—Our earliest sources for the life of Dante, in addition to his own works and a few extant documents, are a chapter in the Istoria Fiorentina of Giovanni Villani (1340), Il Vite di Dante e Boccaccio (1370), the indescribable sketch by Filippo Villani (c. 1405), the most authoritative and critical treatise of Leonardo Bruni (1144), and the recent commentators. The contemporary commentators upon or the whole of the Divina Commedia, including both Dante's sons and the author of the so-called Ottimo Commento, who profess to be personally. The most important is Benvenuto Rambaldi da Imola (1491), edited by Verner. In the last 60 years Among recent publications should be especially mentioned: G. Biagi-Passerini, Odoio diplomatico dantesco (documents, 1916); C. Baracchi, Dante in Alighieri, Milan, 1891; M. Scherillo, L'Integrale della vita di Dante, Turin, 1886; various volumes of Iacopo del Lungo; P. Trescony, A Dante Dictionary, Oxford, 1898, also Alighieri, his Life and Works, London, 1919; N. Zingaretti, Dante, Milan, 1896 (a work on an extensive scale with full bibliographies). For the disputed story of the letter of Frode Iano, cf. Wicksteed-Gardner, Dante and Giovanni del Verdel, London, 1899; Raggi, in Dante e la Linguistica, Milan, 1909; V. Biagi, Un episodio celebre nella vita di Dante, Modena, 1910.

II. Minor Work.—A critical edition is gradually being produced by the Societé Danteasca Italiana, of which the del Fogliano Echevraut (Florence, 1850), F. Pilet (Rome, 1866), and F. Pilet (ed. Bard, Florence, 1897) have appeared. The Rime are incomplete and unsatisfactory even in L. Moore's Tutti le opere di Dante, 1894 (the 'Oxford Dante,' which is of the highest authority for the text of all the other works). A more recent edition, F. N. Moriz (Frascati, 1897), and a modern translation of Rimes by Richard Moon, with critical introduction, is much desired. There are critical editions of the Folger by Wicksteed (In Dante, 1900, 1901, 1904) and L. C. G. Alinari (Florence and London, 1896), and of the translation of the Latin works (Honewart and Wicksteed) and of the metrical language (Wicksteed) in the Temple Classics, with full critical commentaries; a more recent version of the Commedia is by W. W. Jackson (Oxford, 1909). For the problem of the book andTerza, see Moore's Dante and his Works, series, Oxford, 1899, and V. Biagi's ed., Modena, 1907.

III. DIVINA COMMEDIA.—The best modern editions with commentaries are those of Scrignazzani (edi. Bard, Florence, 1874, and now a little out of date), Casini, and Terrossa: of the text with English translations and notes, by A. J. Butler, the Temple Classics
DAFHLÀ—DARDS

editors (Wicksteed, Oelner, Okky), and W. W. Vernou (Readings... chiefly based on the Commentary of Benvenuto da Imola, new ed. Lond. 1866–69).

Descriptive Ethnology of Bengal, 399

The reader must be referred to Toynbee's Dante Dictionary and the bibliographies included in Dallmayr. Recent literature has, happily of late years, assumed collegiate proportions. Among English works stand pre-eminent the three volumes of Moore's Studies in Dante, Toynbee, D'Urso and Researches, and Perkins and Stein, and Dinsdale in English Literature, Lond. 1909. Church's well-known essay still occupies a place as a suggestive introduction to the divine pool. The Floricced quarterly publication, Il bollettino della Societa Dantesca Italiana, is indispensable to students.

DAPHLÀ (Dafià, Dalià, Dophlià).—A tribe occupying a section of the Himalaya lying N. of the Darrang and Lakhimpur Districts, Eastern Bengal, and Assam. They numbered 594 at the Census of 1901, but the greater part of the tribe is found in independent territory beyond the British frontier, whence, driven by famine or oppression of the Abors, they have recently shown a tendency to migrate into the Darrang and Lakhimpur Districts. They call themselves Niso, Nising, or Bangui, the last name meaning 'men.' According to Mackenzie (Hist. of the Relations of the Government with the Hill Tribes of the N.E. Frontier of Bengal, 541), Miri, Daphia, and Abor (see p. 322) are given by the Assamese to three sections of the same tribe inhabiting the mountains between Assam and Tibet. Their principal crops are summer rice and mustard, maize, and wheat. They live in villages, or in the jungles, and cultivate a certain kind of rice or hote in the forest or in the jheels of their villages. Their villages, usually placed on hilltops, are occasionally surrounded by houses built on platforms raised above the naked surface of the plain, presenting a strong contrast to the ordinary Assamese village... Under the houses live the fowls and pigs which furnish out the village feasts, and the more prosperous villages keep herds of buffaloes also, though these people, like so many of the non-Assamese, are as a rule 'uncleaned' (Mackenzie, op. cit. 541).

1. Ethnology. —The Daphias are probably connected with the great Bodo (q.v.) or Bara race, which includes the Kachái, Rabá, Mech, Garo, and Tipperá tribes, and they are said to have migrated from Tibet. Bumrains, who followed the Mon-Anam from N.W. China between the waters of the Yang-tze-kiang and the Ho-ang-ho (Census Report Assam, 1901, i. 120). Their language is closely related to that of the Aká, Abor-Miri, and Mishmi tribes.

1 We know a good deal about Abor-Miri and Dapha. Robinson (J.R.A.S., 1864) gave the language and vocabularies of both in the middle of the last century, and, to omit mention of less trusted times, Mr. Hamilton has given a grammar of the former, and Mr. Hamilton one of the latter (G. A. Grierson, Census Report India, 1901, i. 262; and see E. C. Allen, Cessors of the Lakhimpur and Darrang Districts, Calcutta, 1905).

2. Relations with the British Government.—The independent portion of the tribe has long been accustomed to make raids in British territory. Even in 1811, when it was first formally met, they carried off a boy. They were a warlike, pillaging, and wandering race (Mackenzie, 31).

3. Religious beliefs.—Much information regarding their religion has been collected since, in 1872, E. T. Dalton gave the first account of them (Descriptive Ethnology of Bengal, 36).

The Daphias have a priest, but what he says have priests who pretend to a knowledge of divination, and by inspection of chickens' entrails and eggs declare the nature of the future. They are the writers of sacred formulas and the spirit to whom it is to be offered. The office, however, is not hereditary, and it is taken up by those who care for it. It is, in fact, a priestly office which engenders and it is, in fact, a priestly office which engenders. The religion consists of invocations to the spirits for protection, prophecies, the cattle, and sacrifices and thank-offerings of pigs and fowls. They acknowledge

1 The origin of the name, which, as pronounced in the Lakhimpur District, would be written Demphiola, is unknown.

2 The tribe, however, do not worship, one Supreme Being, which, I conceive, meant that they have been told of such a Being, but know nothing about him.

During the census of 1891 (Report, 297 590), E. A. Gait (Census Report Assam, 1901, i. 120) gives an account of similar beliefs among the Mikirs and Daphia, worship Yapun and Orom, the latter the malignant spirit of the dead, the former a sylvan deity or demon, who suffices for the needs of the dead. He says that when a family has been really divided, and conjunctures some great god has to be gained over by the sacrifice of a mithom or gauyil (bea frontalis).

'The mountain I see to me he had once, while a boy, actually seen in Yapun, a kind of spirit in the character of a great tree, and all the beasts of the forest obey him. My informant was throwing stones in a thicket by the side of a road, and suddenly became aware that he had hit the Yapun, who was sitting at the foot of a tree in the guise of an old grey-bearded man. A dangerous illness was the consequence, from which the boy was saved by an offering of a dog and four fowls made by his parents to the offended Yapun, who has since visited him in dreams.' (Mackenzie, 540.

They also count the Sun among their deities; but their great god, who must be propitiated by the sacrifice of a mithom, is Us or Wi, of whom no one knows the name, which Daphia cares to speak much for fear of incurring his displeasure. His character may be guessed from the Assamese equivalent of his name, Yom or Yoma, the Hindu god of death (ib. 544). E. A. Gait (Census Report Assam, 1901, i. 120).

1 The general name for God is Us, but there are also special names for each particular deity. Most of their gods are either causal to men or require to be propitiated. Most of the chief gods are Solok, the god of heaven; Siki, who presides over the delivery of the harvest; and Anglu, the god of households; and Yequ, who injures children. The most feared of the Daphia gods is the god of trees, who frightens to madness people who go into the forest. Chil, the god of water; Iren, the god of diseases; Sotu, the god of dumbness; and numerous others. There are a few beneficent deities, such as Pepkong, the god of breath, and Yedan, the goddess of wealth. To all these gods, sacrifices are offered. When a person is ill, a sorcerer (deenda) is called to his house, and chants an incantation which is often to make use of his name, and he sometimes keeps up till he works himself up into a frenzy of excitement. The Daphia believe in a future life, but cannot say much about it, except that they expect to meet their parents and near relations there. The dead are buried in a sitting position, and a small mound is put up at the grave; in it rice and drink are placed, and a fire is kept burning for five days. The mourners sacrifice fowls, pigs, and sometimes mitham, the blood of which is sprinkled over the grave; the flesh they eat themselves.

B. C. Allen (Census Report Assam, 1901, i. 146 ff.) gives an account of similar beliefs among the allied tribes of this group—the creation legends of the Mikirs and Garos, and the conception of the other world held by the Miris, Mikirs, and Garos.

Literature.—E. T. Dalton, Descriptive Ethnology of Bengal, Calcutta, 1872; A. Mackenzie, Hist. of the Relations of the Government with the Hill Tribes of the Assam Frontier, Calcutta, 1884; Reports of the Census of Assam, 1891, 1901, 1911; and W. Crooke, Allen, Cessors of the Lakhimpur and Darrang Districts, Calcutta, 1905.

W. Crooke.

DARDS.—The Dards are an Aryan race inhabiting the country round Gilgit, between the Kashaub and the Hindit Kush, and down the course of the Indus to near which it debouches on the plains. Colonies of the tribe are also found farther east in Baltistan, where they are known as Drupos, or Highlanders. Along with the Khos of Chaldr and the Hindit Kush Kafirs of Kafiristan, Dards are classed by the present writer as descendants of the Pashkas, or Zoogdies of Sanskrit writers. This is not accepted by all scholars, but no alternative has hitherto been suggested. Although of Aryan origin, their language cannot be classed as either Indian or Iranian, having issued from the parent stock after the former branch had emigrated towards the valley of the Indus. It has therefore the typical characteristics of Iranian speech which had become fully developed. They are mentioned by Herodotus (iii. 102-105), though not referred to by their present name. On the other hand, Sanskrit writers knew them as Drupos, and they are mentioned by Megasthenes and Strabo, the Dalurdos of Tolomey, and the Dardos of Pliny and Nonnus. Most of the Dards belong to the tribe of Shins, whose headquarters may be taken as Gilgit, and their

ledge, but do not worship, one Supreme Being, which, I conceive, meant that they have been told of such a Being, but know nothing about him.
language is either Shina or some closely allied form of speech. By religion, the Dards of the present day are nearly all Musalmans, but the Brokpas of Central Baltistan profess the Buddhist faith and hold their neighbours. It is not known at what period the Muhammedan Dards were converted to Islam, but, down to the middle of last century, when a reformation was carried out by Nāthā Shah, the Governor of Gilgit, on behalf of the Sikhs, it held but a nominal sway. Even after Nāthā Shah's time remains of the old pre-Islamic beliefs have survived, so that many Dard practices are very different from those enjoined upon the followers of the Qurān. For instance, until about a dozen years ago the dead were burnt and not buried, and this custom lingered on sporadically down to the last recorded instance in 1577. A memory of it still survives in the lighting of a fire by the grave after burial. Instead of considering the marriage of cousins, which is frequent among true Musalmans, is looked upon with horror by the pure tribes of Shina as an incestuous union. At present, the Muhammedan calendar has been introduced, an ancient solar computation, based on the signs of the zodiac, still exists. According to Biddulph, 'Islam has not yet [1880] brought about the seclusion of women, who mingle freely with men on all occasions. Young men and maidens of different families eat and converse together without restraint. The levirate custom has a strong hold, and this often leads to two sisters being the wives of the same man simultaneously. Yet, this is a practice forbidden by Muhammedan law.

The Dards received Muhammedanism from three directions. From the south (i.e. Afghanistan) came the Shina language, and at branch of Islam is now prevalent in Chilas. From the Pasirs in the north came the Maulāi sect (famous for its wine-bibbers), and this doctrine is now commonly held north of Gilgit. On the other hand, the people round Gilgit to the south are mostly Shāhīs converted from Baltāstān.

On the Buddhist Dards, or Brokpas, of East Baltāstān their nominal religion sits even more lightly than on their Musalmān fellow-tribesmen to the south. The only exception to this, which they have adopted seem to be the dress of the men and the custom of polyandry. The religious ideas of the Brokpas were examined by Shaw in 1876, and of late years by A. H. Francke, who researches into the ancient customs and religion of the neighbouring Ladakh are well known. The information gathered from these two sources agrees closely with the traces of the ancient Shina religion observable in other portions of the Dard area, and from the whole we get a fairly clear, if incomplete, idea of its general character.

According to Francke, the origin of the world is believed by the Brokpas to be as follows: 1. 'Out of the Ocean grew a meadow. On the meadow grew three mountains. One of them is called "the White-jewel Hill," the second "the Red-jewel Hill," and the third "the Blue-jewel Hill." On the three mountains three trees grew. The first is called "the White Sandal-tree," and the second "the Blue Sandal-tree," and the third "the Blue Sandal-tree." On each of the trees grew a bird, "the Wild King of Birds," "the House-hen," and "the Black Bird," respectively. Francke adds: "as regards the system of colours, we are decidedly reminded of the gling cho, or pre-Buddhist religion of Tibet (see Dzocho case). I am inclined to believe that the three colours were thought to exist in the top of the tree: the lowest being the blue mountain and tree forming the Under-world, the red mountain and tree being in the middle and representing the present world, and the uppermost being the white mountain and tree forming the Land of the Gods. But in other cases, the three colours are thought of as the Tree of Life and death, according to which the world is framed out of the body of a giant, while it grows out of the water, as in Buddhism."

Nothing like this cosmogony has been noted in other Shīn tracts, and it may be that it has been partly borrowed from Tibet. At the same time it may be noted that the Kuson or Ngīnas, who are prominent characters in this, are probably met, under the form of snakes, in Gilgit tradition, and, according to Leitner, the earth is there known as the 'Serpent World.'

From the hymn from which Francke has culled the preceding account he also extracts the following two names of deities, Vandring and Mandelde Mandeschen. These names are, at any rate, not Tibetan, and are therefore probably Dard. In another prayer, the name Shina occurs as that of the race, who also honours almost like a god. Francke mentions water, milk, butter, and flower offerings as sacrifices and also burnt offerings of the pencil-cedar (see below). Sheep and goats are also offered to the gods, and in one song—that of the ibex-hunter—the hunter carries all the necessary provisions along with him when going to his quarry, and after the lucky shot they are at once offered to the gods.

Further west, we also come across traces of Buddhism. A rock-cut figure of the Buddha is still to be seen in a defile near the village of Shanktso, and about the Gilgit and Astor valleys, as well as elsewhere, there can be found ruined chortens (q.v.), whose forms can even now be distinctly traced. One of the Shin festivals, the Toleai, which commemorates the destruction of an ancient king who devoted himself to his subjects, seems to have a connexion with a similar festival among the Iranian fire-worshippers of the Pasirs. In neither case, however, can we consider such remains as part of the true ancient Dard religion. They are just as probably as Islam.

The practical side of Dard religion, as distinct from speculative theories regarding cosmogony and the like, is best described by Shaw in his account of the Brokpas (p. 29 ff.), which fully sets forth the ancient customs and beliefs of the people. The real worship is that of local spirits or demons, much like the cult of similar beings in the neighbouring Ladakh. Closely connected with this is the custom of the, a great tree (Jingkong) called the Shina' shal, and by the Brokpas shaluka. In every village in which Shina's are in a majority there is a sacred chūlī stone, dedicated to the tree, which is still more or less the object of reverence. Each village has its own name for the stone, and an oath taken or an engagement made over it is often more binding than when the Qurān is used. Shaw's account of the local Brokpa goddess of the village of Dāh may be taken as a sample:

'Her name is Shring-mao. A certain family in the village supplies the hereditary officiating priest. This person has to purify himself for the annual ceremony by washing and fasting for the space of seven days, during which he sits apart, not even members of his own family being allowed to approach him, although, as he washes, these consecrate drink from onions, salt, chung (a sort of beer), and other unclean food. At the end of this period he goes up alone to the rocky point above the village, and, after worshipping in the name of the community the deity who dwells there in a small cairn, he removes the branch of the "shingma" (Jingkong) that was placed there the previous year, the old branch being carefully stowed away under a rock and covered up with stones.'

1 Sandal-tree, or gling cho, is a well-known term in Tibet, signifying the tree of the world, and representing the human body. It is a common belief that the doctrine of the gling cho is very ancient and is derived from China, and that it was introduced into Tibet by the Buddha and the followers of the pre-Buddhist religion of Tibet. The gling cho is described as a tree divided into three parts: the lower part representing the Under-world, the middle part the present world, and the upper part the Land of the Gods. The three colours of the gling cho are red, blue, and white, corresponding to the three worlds of India, China, and Japan, respectively. The gling cho is also regarded as the symbol of the human body, with the trunk representing the spine, the branches the arms and legs, and the leaves the hair. The gling cho is also used as a symbol of the tree of life and death, with the trunk symbolizing the tree of life and the branches the tree of death.

2 It is an interesting fact that all over the Pancha region there are traditions pointing to ancient cannibal customs which were put a stop to by some hero or god. The Sanskrit word Pancha means 'eater of raw flesh.'
by the demon, and in that state to dance a devil-dance, giving forth inspired oracles at the same time; but these manifestations have ceased for the last twelve or fifteen years [written in 1856]. The worship is now simply one of propitiation inspired by fear, the demon seeming to be regarded as an impersonation of the forces of nature adverse to man in this wild mountainous country. Sacrifices of goats (not sheep) are occasionally offered at all seasons below the rock, by the priest only, on behalf of pious persons. They take a deer's head, which has a garden containing only one tree composed entirely of pearls and coral. Although they are capable of forming love-attachments with men, like Lokhirmun they have a secret, and they never forgive the human being who discovers it. 1 They play night and day, and used to rule over the mountains and oppose the cultivation of the soil by man. They often dragged people away into their recesses, but, since the adoption of the Muhammadan religion, they have lost their possessions, and only occasionally trouble the believers. Their oath is by the sun and moon, and they are not invariably malevolent. On the occasion of their weddings the foremen of the property of the thakur was instructed to send [for rejoicings, and restore it faithfully, without the lender being aware of the loan. On such occasions they have kindly feelings towards the human race. The shadow of a demon falling on a person causes madness.

Fairies, known as Barai, are also common. They are as handsome as the demons are hideous, and are stronger than they. They have a castle of crystal on the top of the mighty mountain of Nanga Parbat (supposed, in spirit, to be the roof of Mahamandamoo.) The diviner, or Dringuel, is one on whom the shadow of a fairy has fallen in sleep. When performing his or her office, the diviner is made to inhale the smoke of burning juniper wood till he becomes drunk. Then, with the neck of a newly slaughtered goat is presented to him, and he sucks the blood till not a drop remains. He then rushes about in a state of ecstasy, uttering unintelligible sounds. The fairy appears and sings to him, he alone being able to bear. He then explains her words in a song to one of the attendant musicians, who translates its meaning to the crowd of spectators.

Among miscellaneous customs, we must first of all mention the remarkable abhorrence entertained for everything connected with a cow (we have already remarked the fondness for dogs). The touch of the animal contaminates, and, though they are not afraid to milk bullocks in laughing tones, the Dards scarcely handle them at all. They employ a forked stick to remove a calf from its mother. They will not drink milk or touch any of its products in any form, and believe that to do so causes madness. There is nothing in this, for they look upon the cow as bad, not good, and base their abhorrence on the will of the local gods. Marriages are celebrated with much ceremony, for an account of which the reader is referred to Biddulph (p. 78 ff.). We trace a survival of marriage by capture in the bridegroom setting out for the bride's home, surrounded by his friends and equipped with weapons. A red-hot axe-head, as an essential part of the dress of a Shin bride is a fillet of cowrie shells bound round her head. When the bride and bridegroom take their first meal together, there is a scramble for the first morsel, as whenever eating, they all have the mystery during the future wedded life. After the birth of a child the mother is uncleane for seven days, and no one will eat from her hand during that period. Ordinarily fire is still practised. Seven paces are measured, and a red-hot axe-head has been referred to in the foregoing pages. In former years the worship of this tree was performed with much ceremony, and hymns were sung in its honour. In prayers to it for the fullfillment of any desire, it was addressed as 'The Dreadful King, son of the fairies, who has come from far.' The chilli stone, at the entrance of every Shin village, has already been mentioned. On it offerings to the chillies were placed, and from it omens were deduced. A full account of the ceremonies connected with its worship will be found in Biddulph (p. 106 ff.).

To sum up, the present writer has met in none of the authorities on the Dard religion any reference to a Supreme Deity, corresponding to the Kahir Iwari. In short, there is nothing in the literature, the Musalmān word Huḍa has to be used for 'God.' The centre of the worship seems to be the chilli tree, a mighty son of the fairies; and the whole mountain region in which the Dards dwell is peopled by spirits, some benevolent, some malevolent, probably personifications of the powers of Nature, who exercise a constant influence on the lives of the human beings who dwell under

1 So also in India. Compare the hoods of the European devil and the Diable boitier. Whitley Stokes tells of an Irish legend, according to which the devil could not kneel to pray, as his knees were turned the wrong way.
DARSANA—DARWINISM

their way. Most of the worship is in the form of the malevolent spirits, though we occasional spirits and demons are deduced to the benevolent "chilis." Over the whole is spread a complex mist. We see traces of the Magian religion of Iran; of Buddhism, left behind on its way to Central Asia; and, in modern times, Islam, in strong possession. The Utter Dard religion has nothing in common with any of them. Attempts have been made, but in the opinion of the present writer entirely without any justification, to connect it with the religions of India, and (with better reason) with the ancient religion. It is a pure Nature religion of an agricultural and pastoral people, dwelling in a barren land, amidst the highest mountain ranges in the world. The languages of the Pishach people, of which the Dard languages form an important group, are, as has been stated, something between Indian and Iranian, and one of their most characteristic marks is the wonderful way in which they have preserved ancient Aryan forms of speech almost unchanged down to the present day. The same may be said of the Dard religion. It retains many of the characteristics of the oldest form of Aryan religion with which we are acquainted. There is the same adoration of a special plant (in the Vedas the soma, and among the Dard the chilis), and the same worship, mixed with terror, of the personified powers of Nature.

DARKNESS.—See LIGHT AND DARKNESS.

DARSANA.—The term darsana, the literal meaning of which is 'seeing,' 'sight,' is more usually employed in Sanskrit literature with a derivative or metaphorical significance, as 'insight,' 'perception,' i.e. mental or spiritual vision. It is the once known expressive of one of the most characteristic and fundamental thoughts of Indian philosophy—the meditative and mystical attitude of mind which frames for itself an idealistic conception of the universe; e.g. Manu, vi. 74:

"He who is possessed of true insight (darsanaamamam) is not bound by deeds, but by the act of insight (darsana vikara) it involved in the cycle of existence.

The word is also used of the vision of sleep, a dream or dreaming, wherein the mind perceives and learns independently of the exercise of the bodily senses.

Thus darsana is thought, perception in general, the application of the mental faculties to abstract conditions and problems; and ultimately denotes thought as crystallized and formulated in doctrine or teaching—the formal and authoritative utterance of the results to which the mind has attained. In this sense it is practically equivalent to sikhsa.

As a technical term, darsana is applied to the six recognised systems of Indian philosophy, which give many-sided expression to Indian thought in its widest and most far-reaching developments. These form the six darsanas, systems of thought and doctrine properly so called, viz. the Purav and Nyaya (the former more usually known as the Vedanta); the Sthitikya and Yoga; the Nyaya and Vaiśiṣṭikya. Of these, the first consists mainly of explanation and comment on the ritual texts of the Vedas, while the second expounds the widely known speculative system of the Vedanta.

sophy of India. The third and fourth are nearly related to one another; and of these the ancient Sāṅkhya is primarily a materialistic theory of the universe, which the Ṭrāyop—its essential elements equally ancient—then takes up and interprets in a theistic sense. The Nyāya and Vaiśeṣika are not systems of philosophy at all in the ordinary acceptation of the term; the former treats largely of materialistic and literary criticism, the latter of natural philosophy and the physical constitution of the universe. The precise date at which these systems originated or were first reduced to order and writing is unknown; they represent, however, the outworn thought and final residue of Indian thought and speculation, extending probably over many centuries.

There is no reason to believe that the six darsanas contain all that the mind of ancient India conceived; or to which the early thinkers endeavoured to give expression. It would seem probable, however, that, while much has been lost, and the extent treatises are often fragmentary, enigmatic, highly figurative, and difficult of interpretation, there has been preserved in these systems, in the traditional and literary sources upon which they have drawn, the best that India had to give of speculation and thought upon the problems and conditions of life.

A somewhat similar word is tertha, 'investigation,' 'inquiry,' 'discussion,' which also in course of time was used to denote the science or system which was its outcome and fruit. It was then later employed in the same manner as darsana, as a designation of the recognized philosophies.

The former term, however, seems never to have obtained the same degree of acceptance or currency as the latter, which in the usage of writers of all periods was the ordinary and appropriate designation of the six systems to which alone orthodox rights and authority are ascribed.

At first sight the Origin of Species accomplished nothing in itself very remarkable. The theory of evolution had long been in the air. While the conception of continuous development in the universe had come down to us from the Greeks, the neutralized and scientific theory had become commonplace of knowledge by the middle of the 19th century. Kant's nebular hypothesis, further developed by Laplace and Herschel, had familiarized the world with the idea of development as applied to the physical universe. In Geology, workers like Murchison and Lyell had brought home to men's minds the same conception in connection with the history of the earth. Even in the biological sciences the idea of continuous development by the modification of existing forms was strongly represented by Lamarck and many other distinguished scientists. But before Darwin all these separate developments lacked vitality. In the last resort they rested largely on theory.

1 For the literature and detailed expositions of the six systems see the separate articles VEDANTA, etc.
In particular, the idea of the evolution of life by gradual modification was unsupported by any convincing argument drawn from facts and evidence of the existing conditions of life. The most characteristic position was that which had been reached in biology. Controversy turned upon the meaning of species. These were held to be permanent and immutable. While it was admitted that there might be a certain amount of small variation of forms, species were considered to represent special acts of creation at various times in the past history of the earth. Among the leading representatives of the biological sciences, permanence of species was the accepted view. Down to the publication of the Origin of Species, said Darwin, all the most eminent living naturalists and geologists disbelieved in the mutability of species. I occasionally sounded not a few naturalists, and never happened to cross a single individual who seemed to doubt about the permanence of species (Life and Letters, ch. vi)

Lamarck's theory, by which he accounted for divergence of types by the accumulation of the inherited effects of use and disuse of organs, was rejected by the doctrine of prevailing opinion, according to which the past history of life was one of constant cataclysms and of constantly recurring creations. Finally, this scientific view was powerfully reinforced by all the inductive and scientific opinion of the day, which took its stand on a literal interpretation of the Hebrew account of creation in six days, contained in the first chapter of Genesis.

It was into these intellectual conditions that the doctrine of organic evolution by Natural Selection was launched by Darwin in 1859. The distinctive feature of the doctrine of development which it put forward was that it accounted for the evolution of life by the agency of causes of exactly the same kind as are at work in progress. It exhibited modifi-

The theory of the mechanism by which the transmission of species is effected, and then by supposing in the Origin of Species an enormous and well-organized body of facts and evidence in support of it, that Darwin instantly converted scientific opinion and succeeded in carry-

This tendency to increase beyond the conditions of existence is accompanied by an inherent tendency in every part, organ, and function of life to vary. As many more individuals of each species are born than can possibly survive, and as, consequently, there is a frequent struggle for existence, it follows that any being, if it vary, in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be naturally selected. From the strong principle of self-preservation it tends to pass its new and modified form (ib. Introductory p. 5 in 1860 ed.)

This is the Darwinian doctrine of the survival of the fittest. It presented the whole modern success of life as a theory derived from simpler forms, under the stress of the process of competition for the conditions of existence.

The far-reaching effect produced by the publication of the Origin of Species and by Darwin's theory of Natural Selection was undoubtedly due to two main causes. The first of these was the immediate illumination which it threw on some of the most difficult problems of the special sciences which were most closely concerned. This has been often discussed, and the views on intellectual tendencies are now well understood. The second cause was the character of the impression which the doctrines produced on the general mind. The nature of this impression is much less clearly understood. It is, however, in this second relationship that the full and more lasting significance of Darwinism has to be appreciated.

The general mind almost from the beginning perceived with sure instinct, and far more distinctly than the representatives of the special sciences concerned, the bearing of the theories to the estab-

The accumulated tension of scientific progress burst upon the mind, not only of the nation, but of the whole intelligent world, with a suddenness and an overwhelming force for which the strongest material metaphors are poor and inadequate. Twice the bolt fell, and twice, in a way to which history furnishes no parallel, the opinions of mankind may be said to have been changed in a day. Changed, not on some minor points standing alone, but each time on a fundamental position which, like a keystone, brought down with it an arch of connected beliefs resting on long-cherished ideas and prejudices. What took place was not merely the acceptance by millions of new opinions, but complete inversions of former beliefs involving the rejection of views which had grown sacred by long inheritance.

The new doctrine seemed, in short, to gather up into a focus the meaning of a number of developments long in progress and revolutionary in their nature, the recognition of which in their dependence and importance had long been resisted in Western thought. It seemed to give cumulative expression to intellectual tendencies which, since the period of the Renaissance, had been urged against the overwhelming power of accepted and often intolerant religious beliefs. The first condition, therefore, was a kind of intellectual Saturnalia. The effects were felt far and wide, at almost every centre of learning, and in almost every department of thought,
philosophy, and religion. Huxley in England, Renan in France, Haeckel in Germany, were representatives of one aspect of movement in which Darwin in biology, Tyndall in physics, and Grant Allen in popular science represented another.

Most extravagant conceptions became current even in circles of sober and reasoned opinion. Religious beliefs were said to have been so far shaken that their future survival was assumed as the object of pious hope rather than of reasoned judgment. They were, according to Renan, destined to die slowly out, undermined by primary instinct and by the predominance of a scientific education over a literary education, or, more certainly still, according to Grant Allen, to be entirely discredited as grotesque fungoid growths which had clustered round the thread of primitive ancestor-worship.

The deepest effects of the movement were felt in England and the United States, and this for reasons to which still other causes contributed. When Darwin published the Origin of Species, the reaction to which the doctrine of Natural Selection, making for progress through the struggle for existence, bore to the doctrines which had come to prevail in business and political life was recognized. Almost every argument of the Origin of Species appeared to present a general far-reaching effectiveness of competition. Darwin lifted the veil from life and disclosed to the gaze of his time, as prevailing throughout Nature, a picture of the self-centred struggle of things in nature, ruthlessly pursuing their own interests to the exclusion in his own mind of all other interests; and yet unconsciously so pursuing them—as it was the teaching of the economics of the day that the individual pursued them in business—not only to his own well-being, but to the progress and order of the world.

It soon became apparent that the crudities of conception which prevailed in such inflamed and excited conditions of thought were carrying men altogether beyond the positions which the doctrine of evolution involved. It also became gradually evident, as these first impressions were lived through, that the acceptance of the evolutionary faith implied conclusions which were not only different, in kind, but more striking, and even more revolutionary—although in quite a different sense—than those which the first Darwinians contemplated.

Those who had realized the depth and reality of the doctrine held of religion in the human mind perceived from the beginning how superficial were judgments like that quoted from Renan, to the effect that religious systems had no place in the future development of the race. But it was when the subject came to be approached in the light of the evolutionary doctrine itself that the true nature of the situation became apparent.

The Darwinian doctrine of biological evolution had its roots in the principle of utility. Every part, organ, and function had its meaning in the stress out of which types and races had come. Nothing had come into existence by chance, or without correspondence with environment. The existence of each of all the first Darwinians had been to give prominence to the necessity for the establishment and reinforcement of this—the central arch of the doctrine of evolution by Natural Selection. It was evident, therefore, that while, on the one hand, the sanctions of faith and experience must remain exacting and essential in the religious life, the concept of revolutionary nature was the explanation which the doctrine of evolution would be itself bound to give of the phenomena of religion in the light of its own central principle. What was the meaning of these systems of religious belief which had filled such a commanding place in the social evolution of man? To dismiss the phenomena as merely mechanical and functionless was, the present writer pointed out, impossible and futile, in the face of the teaching of the doctrine of evolution. They must have some significance to correspond with the magnitude and the universality of the scale on which the facts represented themselves.

As observation was carried from primitive man to the most advanced civilization, the importance of the subject was not diminished but increased. The history of the several phases of this race—largely the history of a group of Western peoples which had been for many centuries the most active and progressive nations of the world. The civilization of these peoples was the most important manifestation of this kind to us; first in effect on the nations included in it, and now, to an increasing degree, through its influence on the development of other peoples in the world. This group of Western peoples had been held for thousands of years in a system of belief, giving rise to ideas which have profoundly modified their social consciousness, and the influence of which has saturated every detail of their lives. These ideas had affected the development of the Western civilization, they had influenced the conception of human society, and of the intellectual and political conflicts to which they had given rise. They had deeply influenced standards of conduct, habits, ideas, social institutions, and laws. They had created the distinctive ways of Western society and culture and direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. Civilization). How could it be possible to dismiss from consideration the enormous phase of human history of which this was an example, giving rise to ideas which have profoundly modified their social consciousness, and the influence of which had saturated every detail of their lives, these ideas which had affected the development of the Western civilization, which had influenced the conception of human society, and of the intellectual and political conflicts to which they had given rise. They had deeply influenced standards of conduct, habits, ideas, social institutions, and laws. They had created the distinctive ways of Western society and culture and direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. Civilization).

Further consideration, therefore, made it evident that, if the theory of organic evolution by Natural Selection was to be accepted in human society, it would have to be accepted, like any other principle in Nature, without any reservation whatever. It would be necessary, accordingly, to seek for the religious function of other religions and direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. Civilization). How could it be possible to dismiss from consideration the enormous phase of human history of which this was an example, giving rise to ideas which have profoundly modified their social consciousness, and the influence of which had saturated every detail of their lives, these ideas which had affected the development of the Western civilization, which had influenced the conception of human society, and of the intellectual and political conflicts to which they had given rise. They had deeply influenced standards of conduct, habits, ideas, social institutions, and laws. They had created the distinctive ways of Western society and culture and direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. Civilization).

Throughout the forms of life below human society, the stress through which Natural Selection operated was that of the struggle between individuals. But in human history the fact upon which attention had to be concentrated was that we were watching the integration of a social type. It was the more organic social type which was always winning. The central feature of the process was that it rested ultimately upon mind, and implied the subordination of the individual, ever long tracts of time, to ends which fell far beyond the limits of the individual's consciousness. Correspondence with environment in the case of human evolution, therefore, involved projected efficiency. It was a process of mind. If we were to hold the process of evolution as a mechanical one with no spiritual meaning in it, there would be no rational sanction whatever for the individual to subordinate himself to it. The race was destined, therefore, under the process of Natural Selection, to grow more and more religious. The ethical, philosophical, religious, and spiritual sanctions which were subordinating man to the larger meaning of his own evolution constituted the principal feature of the world's history, to which all others stood in subordinate relationship.

As the early Darwinians continued to struggle with the laws and principles of the stress
of existence between individuals enunciated in the *Origin of Species*, and as it has become increasingly evident that the application of the law of Natural Selection to human society involves a first-hand consideration of all the problems of mind and philosophy, a remarkable feature of the situation has presented itself. This has consisted in the extremely limited number of minds of sufficient scope of view and comprehending nature of the other evolutionary considerations, and the intellectual ability of the Darwinians. He put forward claims for a new science, *Ethics*, which he has defined as a science which would deal with all the influences that improve the inborn qualities of the race, and would make them the third advantage of man as a *scientific breeding.* The list of qualities which Galton proposed to breed from included health, energy, ability, mindliness, and the special aptitudes required for various professions. Mores he proposed to leave out of the question altogether 'as involving too many hopeless difficulties.' Here once more we see the difficulty with which the naturalist is confronted in attempting to apply the merely stand-book principles of the individual struggle for existence as it is waged among plants and animals. The entire range of the problems of morality and mind are necessarily ignored. The higher claim of the race, that all the absolutely characteristic phenomena contributing to the highest organic social efficiency, remain outside his vision.

We are as yet only at the beginning of this phase of our consideration. The remarkable situation, here of necessity only lightly referred to, in which the biologists and the philosophers remain organized in isolated camps, each with the most restricted conception of the nature and importance of the struggle, and the bearing of the conclusions of the bearing on its own conclusions, cannot be expected to continue. One of the most urgent needs of the present time is a class of minds of sufficient scope and training to be able to cover the relations of the conclusions of the study of the individual, with each of these sets of workers to those of the other and to the larger science of society. See also art. EVOLUTION.

**DASNĀMĪS.**—See SALVEMU.

**DAWŪD B. 'ALĪ B. KHALAF.**—Dawūd b. 'Alī b. Khalaf, called al-Zahīrī (with the khwās Abū Sulaimān), a jurist celebrated as the originator of the Zahirīyya school in Muslim theology, was born in Kāfā, A.H. 209 (=A.D. 254), according to other authorities, A.H. 192 (=A.D. 817), of a family belonging to Isfahān. Among the many eminent teachers under whom he studied in his youthful travels were two of the leading theologians of Islam, viz., Ibn b. Rāhwawī (†A.H. 353 [=A.D. 847]) of Nisabūr, with whom he enjoyed personal relations of the most intimate character, and Abū Thaur (Ibrāhīm b. Khālid) of Baghdad (†A.H. 240 [=A.D. 854]). Having completed his course of study, he settled in Baghdad, where he soon established a great reputation, and began to attract pupils in large numbers. His audience, in fact, commonly numbered about 400, and included even scholars of established repute. At this time his teacher, al-Hasan b. Ḫanṣāl, the Nestor of ultra-conservative orthodoxy, whose name is borne by the Ḫanṣālite party, Dāwūd sought to come into friendly relations with and met with, and he lay under the suspicion of having affirmed, while at Nisabūr, that the Qur'ān was a created work—a doctrine which Ahmad b. Ḫanṣāl had attacked with great vigour and at heavy personal cost. It was even said that Dāwūd had been punished for his error by Isḥāq b. Rāhwawī. Though Dāwūd met
these allegiations with a distinct denial, Ahmad still refused to receive him; nor was the enmity relieved by the fact that the system promulgated by Dâwûd coincided in many respects with that of Ahmad, and was even fitted to lend it support. Indeed, Dâwûd, in his travels as a student, had applied himself eagerly to the study of the hadîth, 'prophetic tradition,' he has no outstanding reputation as an authority on that subject. In point of fact, he is said to have given currency to only one Taphetic dictum of note, which cannot be associated with his name through the instrumentality of his son, Abû Bakr Muhâmmad, a well-known hadîth of his day. The saying is as follows: 'He who loves pines and hides (his torment), and dies the more, is to be regarded a martyr.' As a teacher of jurisprudence, on the other hand, Dâwûd's influence was enormous, and here he ranks as the founder of a distinct school. He allied himself with the system of the Imâm al-Shâlî'î, juristic the speculative, which, according to the prevailing doctrine, the least juristic deduction were (1) the ordinances attested by the Qur'ân; (2) those which had the support of tradition; (3) the consensus (ijmâ') of recognized authorities; and (4) the conclusions established by analogy from precedent cases (iqâ'âs). And by deduction of the ratio legis (illât al-sharî'î) from given ordinances. In cases where positive injunctions derived from the first three sources proved too refined to be religion insight (vela', qiyas prudential) involved in the fourth was regarded as valid for juristic reasoning. Dâwûd, however, denied the legitimacy of this last-mentioned source, i.e. the vela', and all that it involved as justifying the reasons of the Divine laws and the analogical arguments founded thereon. The only sources of juristic deduction which he recognized in the positive, or, as he calls them, the 'evident' (zikîrî), i.e. the Qur'ân and the Sunnah, and admitted it restricted it to the demonstrable agreement of the companions of the prophet (ijmân al shâbâh), assigning no more precise limits to the scope of this factor. In thus running counter to the procedure of the dominant schools, Dâwûd found himself in alliance with the extreme section of the party known as the ashâb al-khâtîtâh (traditionalists)—in contrast to the ashâb al-râ'y (speculative jurists)—and became the founder of the Zabîrîyya school, which is accordingly also called the movement Dâwûd. It is true that he brought himself to the point of conceding the admissibility of the 'obvious analogy' (iqnas jaldi) plainly indicated by positive injunctions, but only as a last resource. As a discipline of sacred judgment, moreover, he demanded an independent investigation of tradition, and deprecated a mechanical adherence to the established doctrine of a master or a school (taglî'). The automatic repetition of the teaching of one who is not infallible, he argued, as pernicious, he showed blindness of judgment. 'Out upon him who, having a torch (i.e. tradition) wherewith he may light his own way, extinguishes his torch, and moves only by another's help. Men should not blindly follow any human authority, but should examine the sources for themselves.

Of Dâwûd's writings, a list of which is given in the Kitâb al-Fâhrist, nothing is now extant, but it would be possible to reconstruct his doctrines from quotations in later literature. Biographical writers are at one in extolling the piety and sincerity of his character, and his abstemious mode of life. His fame spread far beyond the confines of his travels, and (from the further limits of the Muhammedan world those who were perplexed with theological problems came to him for light. He died in Baghdad in A.H. 270 (=A.D. 883). Vast as his influence was, however, his system, which and criticized (its defects), and did not adequately meet the requirements of juristic practice, failed to gain a firm footing in public life. Numerous Muslim scholars associated themselves with it, but their adherence was largely personal and theoretical, and, except in a single instance, the system never attained an authoritative position in the official administration of justice. Its solitary success in this respect was achieved in the empire of the Almohads in Spain and North-West Africa, the founders of which, repudiating all adherence (taglî') to particular schools, held that the appeal to the traditional sources was the only permissible procedure. The history of Muslim learning long, the Almohad authority, and, of the 9th of famous adherents of the Zâhirî method in principle in many different countries. The most important, and, in a literary sense, the most eminent, of these was the valiant Andalusian, Ibn Hazm, the Alh. Ali b. Ahmad, a devout follower of the Zâhirî method in his works, and applied it not only to the jurisprudence of Islam, but to its dogmatic theology as well.

DEAD.—See ANCESTOR-WORSHIP, DEATH AND DISPOSAL OF THE DEAD, STATE OF THE DEAD.

DEAE MATRES.—The Deæ Matres are divinities of uncertain character and function, whose worship was a matter of tradition among the peoples of the Roman Empire (cf. art. CELTS, vol. iii, pp. 290, 296, and passim). How far they are to be identified or associated with so-called 'Mother-goddesses' among other peoples is a matter of dispute and will be discussed later. But there is evidence on Celtic and Germanic territory, and to some extent outside these limits, of a fairly definite cult of goddesses called usually Matres or Matronae, and depicted in accordance with well-established conventions. Knowledge of them is derived entirely from inscriptions and monuments, of which a large number (over four hundred inscriptions) have been preserved; apparent survivals of their worship have been detected in the beliefs and traditions of the Celts and Germans of later ages; but no certain reference to them has been found in ancient literature. There is no reason for applying to them, as is sometimes done, a passage cited from a source in the Dei Augustini (vii. 3, 'Unde dicit etiam ipsa Varro, quod diis quibusdam patribus et deabus matribus, sancti hominibus, ignobilis acceidisset'). Varro's reference is probably general, and certainly the context in St. Augustine does not suggest an application to any particular divinities in question.

The inscriptions discovered up to the year 1857 were published and classified by him in his very important monograph on the Matres, which is cited here by this shortened abridgment (for the recent references, see the Literature at end of article). Additional material
Matres and Matrona. Matrona, however, offspring, women cultus, dative perhaps singular are be discovered forms • rtanea it. Thurneysen, at is of 3\textsuperscript{rd} judgment, no. (RCel, in the five inscription of inscription, which is generally held to show a Celtic (Gaulish) form of the name. This is preserved in the Museum at Nimes and reads, in Greek letters, Ματρόνα Ναςακοῦσαντα βασιλεύει. The epithet Ναςακοῖον is almost certainly local — to the Neronian Mothers, and the dative of basileus is more doubtful. If it contains the root of the Ir. brath, ‘judgment,’ it may well mean \textit{ex judicio}, and be equivalent to the common formula \textit{ex imperio}.

Matres and Matrona appear to be synonymous, though their geographical distribution, as will be seen later, is somewhat different. They even occur as equivalents on a single inscription: \textit{Matribus sive Matronibus doméstisis} (\textit{Matronenkultus}, no. 207); and the same epithet is sometimes found in combination with both terms (cf. \textit{Matribus [\textit{V}a]calit]\textit{michin}} [ib. no. 213] with \textit{Matronis Vactalihein}} [ib. nos. 224, 225, 227]). But such close association of the two is exceptional, and certain distinctions have been pointed out in their use. Ihm (Roscher, p. 2465) shows that Matres is accompanied by epithets of greater elevation (’saugstae,’ ‘deae’). Hild (Daremberg-Sauvage) tries to make out a difference in the fact that men pray often to Matres, and women to Matrona; but his figures can hardly be regarded as significant. Roach-Smith (in his \textit{Collectanea Antiqua}, vii. [1875–80] 215) argues that the two contrapose each other with the feminine principle in Nature, with maternity and offspring, while the Matres presided over the fruits of the earth and, in general, over public and private business. None of these distinctions, however, is really established as valid. It is perhaps a significant fact, which is pointed out by Haverfield (\textit{Arch.\ El.}, xv. 320), that Matrona does not occur in any land where the cult is demonstrably imported; and the name may therefore be really the Celtic Matrona, which survives in the name in Borneo and in a few other names of places, rather than the Latin Matrona. Since there is no evidence outside of

\begin{itemize}
  \item \textit{Matres}, see Hirschfeld, \textit{CIL} xiii. 4575; among the \textit{Matres}, see ibid. 4569.
  \item See Haverfield, \textit{Arch.\ El.}, xiv. [1923] 82. Sommer, \textit{Handbuch der lateinischen Laut- u. Formenlehre}, Heidelberg, 1902, p. 369, explains such forms by the analogy of dealing. Matronaba also occurs (see \textit{Notizie degli scavi di palest.}, 1897, p. 6).
  \item There is one record from Germany; see \textit{Weltdeutsche Zeitschrift}, 1938, p. 125, and Bonner Jahrbiicher, ev. [1900] 56.
  \item See Thurneysen, \textit{Handbuch des Alt-Frischen}, Heidelberg, 1906, p. 10, and Bliss, ‘Kelt. Inschr. of France and Italy,’ Proc. Brit. Acad. 6, [1906–6] 291. It should be said that some scholars do not treat \textit{Matres} as an inscription to the Celtic Dard of Juveinville (\textit{RCel}, 1906, p. 2924) explains it as \textit{mater} Latin; and Bliss, ib. [1906–7] 291, \textit{et sic} it. The latter scholar translates \textit{Matrona} by \textit{matrona} of \textit{mater matrona}. Inscriptions, the quantity of the \(o\) must be regarded as uncertain; and, if it was pronounced long, as is likely enough, this might simply mean that the familiar Latin word had been substituted for the Celtic. The substitution was not entirely natural, and the two words would have come to be regarded as identical. The fact that \textit{Matrona} appears regularly in the singular, whereas the \textit{Matronae} are named in the plural and depicted in groups, might be a convenient device of the two cults, but would not preclude a common origin. Moreover, there is some doubt, as will be shown later, whether the \textit{Matres} or \textit{Matrona} were not sometimes conceived and represented singly. Even if the identification of \textit{Matrona} with \textit{Matrona} should be accepted, it would not become any easier to make a distinction between \textit{Matres} and \textit{Matrona}, for the Celtic (or possibly pre-Celtic) \textit{Matrona}, like the Latin, appears to be the derivative of the inscription \textit{Matres Patriae}. The characteristic of the divinities bearing the name \textit{Matrona} is also quite uncertain. On the whole, then, \textit{Matres} and \textit{Matrona} seem to be equivalent in sense, and neither of them is probably Roman in origin. In conclusion we can only say that, if the two words will be used interchangeably, except where a distinction is explicitly made between them.

The dates of the monuments to the \textit{Matres} or \textit{Matrona} range all the way from the time of Caligula (\textit{Matronenkultus}, no. 237) and the Neronian \textit{Matronae} (ib. no. 361). They are found chiefly in Cisalpine Gaul, Gallia Narbonensis, Gaul proper, and Lower Germany, and to a limited extent at Rome itself, in Britain, and in Spain. Those at Rome and in Britain are apparently due to soldiers or tradesmen, and do not prove the local existence of the cult; and the same may be true of the few inscriptions preserved on the Spanish peninsula. The latter, however, are taken by Arbois de Jubainville as evidence that the Celts had the worship in common with the Gauls; and the epithet ‘Galliaci’ favours the supposition. Still more remote provinces are brought into relation with the cult by the inscription \textit{Matres Patriae} at Delmaratum, preserved at Lyons (\textit{Matronenkultus}, no. 394), and \textit{Matres Afric. Ital. Gallae}, preserved at York (ib. no. 318). But no inscription to \textit{Matres} or \textit{Matrona} has yet been found in other Africa, or on the two sides of the Danube, and it seems probable that the names indicate simply military service in those regions on the part of the dedicants or of their soldiers. Monuments are commonest on the west bank of the Rhine and in the vicinity of Lyons; and the tribes among whom the worship chiefly flourished appear to have been the Vocontii, Arecomici, Allobroges, Sequani, Lignenses, and Ubii. There are almost no traces of it in Aquitania or western Narbonensis, and few in the region east of the Rhine. The geographical distribution of the names is, in general, as follows: \textit{Matrona} seems to be the only form in Cisalpine Gaul, though some abbreviations are doubtful, and it is the prevailing form in Germany; \textit{Matres} occurs chiefly near Lyons.

\begin{enumerate}
  \item The comparison between \textit{Matrona} and \textit{Matrona} is old. See, for example, Pictet in \textit{RCel}, ii. 8. On the occurrences of \textit{Matrona}, see Hölder, \textit{Alldeut. Sprachschatz}, s.v. For the view that it is Ligurian, not Celtic, compare H. d'Arbois de Jubainville, \textit{Premiers habitants de l'Europe}, Paris, 1897, p. 49. G. Dottin, \textit{Manuel pour servir à l'étude de l'antiq. celtique}, Paris, 1896, p. 237.
  \item For a map showing their distribution, see Haverfield's art. in \textit{Arch.\ El.}, xv. \textit{RCel} xiv. [1900] 376; also J. Leite de Vasconcellos, \textit{Religiões de Lusitânia}, ii. [1905] 176 ff. See Ihm, \textit{RCel}, p. 259; \textit{Weltdeutsche Zeitschrift}, 1906, p. 229, for inscriptions to ‘Campestres,’ ‘Divinae,’ etc., in Africa and the Danube provinces.
  \item On certain coins of the region for such worship in the Palatinate, see Grinewald, \textit{Weltdeutsche Zeitschrift}, 1906, p. 235 ff.
\end{enumerate}
and in Gallia Narbonensis; and Matres is common in Gaul proper and in Britain.

Since we have direct evidence, then, concerning the worship, it belongs to the Celtic and Germanic provinces of the Roman Empire, the chief points of radiation being Gaul and Lower Germany. With regard to its origin and early history there is difference of opinion. The theory that it was a general Indo-Germanic institution (set forth most fully by Becker, Kuhn's Beitrag, iv. [1868] 146 ff.) is rejected by most recent investigators, though the relation of this to other cults of Mother-goddesses among various peoples presents obscure problems which are not by any means to be summarily dismissed. This subject will receive further mention, but in the meantime clearness will be undoubtedly served by confining the discussion, as Ihm has wisely done, to the narrower range of forms which are evidently related. These are common to Celts and Germans, and both peoples have been held to be the original possessors of the worship. The problem is rather in favour of the view that the Celts first developed it and that the Germans borrowed it from them. The oldest dated monument (Matronenkultus, no. 35, of the age of Caligula) has been found in northern Italy, and it is not certain that was not an imported native also of southern Gaul. It is unlikely that the Celtic population of either of those regions derived it from the Germans, and all that is known of the relations of Germans and Celts down to the beginning of the Christian era favours the theory that the Germans, in such matters, were the borrowers or imitators. It is possible, of course, that both peoples possessed the worship equally from the beginning (cf. Sieburg, op. cit. p. 97; also Maehl, 39 f.), or that they derived it independently from older populations which preceded them in the occupation of western Europe. Attention has already been called to the uncertainty concerning the history of the names Matres and Matronae themselves.

The Mother-goddesses, in the restricted sense in which they are now being considered, were apparently conceived in triads. Only one inscription (Matribus tribus Campestribus, CIL vii. 510, preserved in Britain) designates three goddesses; the others are either Matribus alone or Matronae without the 408

It is doubtful how far monuments representing groups larger or smaller than five are to be associated with the worship of the Matres. Five women on a relief at Avignon probably do not themselves represent the goddesses, though the monument is inscribed 'Matronis' (see Matronenkultus, p. 35, fig. 2). The monument of two figures on a relief at Poitiers, holding cornucopias and baskets of fruit, has also been taken to represent Matres. But the existence of other goddesses known to have been worshipped in pairs renders the identification of this as Matronae doubtful. The single dancing figure of a goddess riding a horse, often referred to in the past as an 'equestrian Matrona', are now held to be Epona, a divinity of distinct character, whose worship appears, however, in the same regions as that of the Matres. Occasionally, in Epona and the Mother-goddesses are associated on the same monument. It is, of course, possible that Epona was originally, as Renel (Les Religions de la Gaule avant le christianisme, Paris, 1906, p. 251) suggests, only a Matrona with specialized function (mère spécialisée).

Of dubious connexion with the Matres, likewise, are numerous statuettes of single figures, without names, more or less resembling the inscribed representations of the goddesses. Some of these figures carry fruit or cornucopias, and have the head-dress as appears on the larger monuments; others represent women with babies—a conception in itself suitable enough to Matres or Matronae. According to Becker, many of these figures are found in the usual convention. Ihm rejects all such figures, insisting upon the triadic group as characteristic of the cult (Matronenkultus, p. 53 ff.); and the existence of statuettes of the regular triad rather counts in his favour, making it more difficult, as Sieburg has argued, to identify single figures as Matronae. It is even doubted whether the numerous statuettes of women with babies or fruits represent goddesses at all. They may be merely votive offerings or talismanic images; but in the case of many of them the symbolism appears to indicate local or personal divinities similar in function to the Matres. The most reasonable conclusion, perhaps, is to recognize the probable existence of the number; other interpretations are in the present state of knowledge a mere matter of hypothesis. In any case, it does not seem wise to extend them by the inclusion of doubtful monuments. The term 'Mother-goddesses,' which is applied, especially by French archaeologists, to a great number of these statuettes of various types, is sometimes used very

1 Cf., for example, the inscription, *Deus Verumseae et Nemetanae, at Trevae: and see, for other references, Matronenkultus, p. 53 f., and Sieburg, Bonner Jahrb. cr. 98 ff. Becker's 'reitende Matrona,' Bonner Jahrb. xxvi. [1858] 21 ff.
2 See Matronenkultus, p. 55 ff.; S. Reimach, RA, 1895, p. 163 ff. Reimach gives a number of the distributions of the goddesses, and it is with the present state of knowledge that it does not seem wise to extend them by the inclusion of doubtful monuments. The term 'Mother-goddesses,' which is applied, especially by French archaeologists, to a great number of these statuettes of various types, is sometimes used very

1 Cf., for example, the inscription, *Deus Verumseae et Nemetanae, at Trevae: and see, for other references, Matronenkultus, p. 53 f., and Sieburg, Bonner Jahrb. cr. 98 ff. Becker's 'reitende Matrona,' Bonner Jahrb. xxvi. [1858] 21 ff.
2 See Matronenkultus, p. 55 ff.; S. Reimach, RA, 1895, p. 163 ff. Reimach gives a number of the distributions of the goddesses, and it is with the present state of knowledge that it does not seem wise to extend them by the inclusion of doubtful monuments. The term 'Mother-goddesses,' which is applied, especially by French archaeologists, to a great number of these statuettes of various types, is sometimes used very
loosely. Thus Gassies, pleading against the restriction of the Mother-worship to Gaul and Germany, cites Venus, Juno, and Deucetius as "des ses mères;" and other writers (see, for example, A. Wirth, Danae, Vienna and Prague, 1892, p. 95) have compared the Matres with the Semitic Aratria. Statutes, moreover, of the sorts just referred to will often be found in semi-separate regions outside of Gaul: for example, in Greece, Italy, and Northern Africa.1

The difficulty, if not the impossibility, of keeping the worship of Matres and Matrona distinct from all other cults in lands and cities in the case of inscribed than in that of uninscribed monuments. For the ancients themselves associated, and doubtless to some extent identified, these divinities with others. Just as in the case of the Celts and Germans, so with regard to the Matres, the modern investigator is puzzled by the uncertain meaning of the interpretatio Romana. Roman conquerors and romanized provinces alike were at once given the title of to a northern barbarians with those of the old classical pantheon, and the resulting equations are neither consistent with themselves nor easy to understand.2 The Matres are not, it may be said, associated with the Parcae, on the evidence of a few inscriptions "Matriss Parcis." But it is not clear that an identification of the two groups was intended by the dedicants in question. Moreover, the modes of representing the Matres and the Parcae are quite different, and their fundamental characters appear to have been dissimilar (see below, p. 410, and cf. Matronenkultus, p. 66 ff., and Haverfield, Arch. Âl. xxv. 230). The association of the Fates with the Matres is also doubtful, and finds no positive support in the inscriptions.3 In the case of the Nymphe, whom some investigators have brought into relation with the Matres, there is little reason for the comparison, beyond the fact that both kinds of divinities have numerous monuments inscribed with local epithets.4 Evidence is slightly better, as Hm has shown, for connecting the Matres with the goddesses of the cross-roads (q.v.) named on various monuments as McCruorates, etc., and in connexion with Matrona or Matrona, and it is hard to say whether they stand for goddesses originally distinct and later identified with the Matres, or whether they were originally mere epithets of the Matres and after-wards came to be used indiscriminately. At all events the divinities concerned were closely associated in the end with the Mother-goddesses. The Junones, in the sense now under consideration, should probably be distinguished from the Roman Juno, even when given the title of the goddess of women. They are very likely only Matrona worshipped under another name, and the chief seat of their cult appears to have been Caisaline Gaul.5

The Comptostes have sometimes been described as goddesses of the fields, but it is more probable that they were the special protectors of a military camp, or rather that their name was the epithet applied to the Matrone when conceived as exercising this function.6 In the case of the Sulover it is more probable that we have divinities originally of a widely separate regions from the Matres, though of closely similar character and function. Inscriptions to them are far less numerous than those to the Matres or Matrona, but their geographical distribution is similar. The origin and meaning of the name is less apparent, and it is tempting to compare the British Des Sul, worshipped at Bath (Aqua Sulis), and to seek an etymology in the Celtic root sul (O. Ir. sul, "eye"). If this theory is right, the meaning of the word would be similar to that of Tydeus.7

In the absence of all ancient literary treatment of the Mother-goddesses, the only evidences of their divine functions are those furnished by the artistic representations of the divinities, and by the epithets applied to them. Of the Matres, though the identity of the goddesses is not always clear, the application of this to the Matres is not certain.3 "Nemites" is possibly equivalent to "sanctae," but seems rather to be connected with the tribal name of the Nemeta or Nemetae, "omnium gentium," "Nemite" or "Nemeta," ". . . indigentes." By far the greater number contain the names of nations, tribes, or localities, such as "Aurelia Galle," "Italic Gallic Germano Britannia," "Omnium gentium," "Norice," "Traveller," "Thor," and the numerous non-Latin or half-Latinized names, which though largely unexplained, are held to belong chiefly to this class. A few of the latter have been brought into relation with definite place-names like "Julii Placentii," "Africani," "Germani," "Iberi," etc., and it is possible that the matter is by no means certain.6 But the divinities who may with most probability be identified with the Matres are those who were called "Campestres," "Junones," and "Sulevic." All these names appear both on monuments and in connexion with Matrona or Matrona, and it is hard to say whether they stand for goddesses originally distinct and later identified with the Matres, or whether they were originally mere epithets of the Matres and afterwards came to be used indiscriminately. At all events the divinities concerned were closely associated in the end with the Mother-goddesses. The Junones, in the sense now under consideration, should probably be distinguished from the Roman Juno, even when given the title of the goddess of women. They are very likely only Matrona worshipped under another name, and the chief seat of their cult appears to have been Caisaline Gaul.5

1 See Siegburg, de Sallarda Campestres Fatti, Bonn, 1886; Ihm, Matronenkultus, p. 76 ff., and Roscher, etc. v. Matres, p. 2475.
2 See Siegburg, de Sallarda, etc., and Bonner Jahrb. cr. [1900] 80 ff.; and Ihm, Matronenkultus, p. 79 ff.
3 See Matronenkultus, p. 95, and Ihm, Celtic Heathendom, 1892, p. 102 ff., the latter comparing the Gaulish Compenda. Even this is not beyond dispute, an its meaning is not particularly individualizing at least. It is generally translated the "Givers," the "All-Givers" (et Pan- dona)—a name which is quite consistent with the representations of the goddesses. The etymology is easy in Germanic (cf. geben, "give," etc.), where

6 On this peculiar "hmn's name, "Junoni II." in Roscher. The Prozenose, sometimes identified with the Matres, seem to correspond rather to the regular Roman Junone (cf. Matronenkultus, p. 67).
several other divine names are perhaps to be derived from the same root; \( \text{gab} \) in the Celtic languages, in which the root \( \text{gab} \) usually means 'take,' rather than 'give,' the explanation is more difficult. It is possible, therefore, that the epithet is Germanic in origin, and that the form 'Olo-
gabias,' in which the prefix has a Celtic appearance, is simply a case of the Celtic adoption of the Ger-
manic 'Alagabias.' The interpretation proposed for Gabies is supported by several divine names in Lithuanian ('Matergabia,' 'Polegabia') which have the same root and meaning.\(^1\)

With regard to the nature and function of the goddesses, various theories have been held. According to older views, now generally abandoned, they were defined druidesses of the ancient Celts, or prophetesses of the Gauls or of the three seasons.\(^2\) The occa-
sional association of the Matres with the Parce has led to their interpretation as divinities of destiny; but the evidence for this has already (p. 405) been shown to be very slender. And the repre-
sentations of the goddesses, together with the few epithets that seem to bear on the question ('Indulgentes,' 'Gabae,' etc.), indicate that they were primarily friendly local divinities of wealth and fertility. As such, their functions would resemble those of Fortuna or Pomena rather than those of the Fates, though the two concepts would be naturally associated, and occasional equations between Matres and Parce might be expected to appear in the course of time.

At the same time, the sphere of the goddesses should not, on the evidence of the reliefs, be too narrowly restricted to the care of lands and flocks. The conventional representation of them, which was doubtless of classical origin, may have been purely artistic in purpose and in no sense a complete expression of the cult. Even the number three, which is also characteristic of monuments of Proserum, Parce, and Nymphs, may be a formal device for represent-
ing the usual number and have no literal significance. Certainly the distribution of the worship, the occa-
sional association of the Matres with Mars, and such epithets as 'campestres' and 'victrices,' all connect the goddesses with a considerable extension of their powers in one direction; and various dedications by women imply their influence over still other phases of life. Their functions were undoubtedly vague and confused by the worshippers, and ought not to be narrowly defined. As the tutelary genii of tribes or localities, they presided over all the interests of the people, and gave success to all kinds of undertakings. They belong, in short, to a stage of religion in which all determinate duties were regarded as not clearly defined, and their cult doubtless survived, with slight alteration, even after the development of gods with specialized functions.\(^4\)

Although the cult of the Matres was widespread and in a sense universal, as is shown by the numerous monuments and also by occasional references \( ^5 \) to the goddesses on ancient coins, in literature, etc., it is not probable that they ever became the object of popular worship, as the goddesses of the Roman period, from which our evidence comes, does not appear to have belonged to the higher social classes. All the dedicants, so far as can be determined, are persons of low rank, except perhaps the triobulsum militum of a single inscription (Matronae vulgares, no. 394), and it is possible that he is offering on behalf of his soldiers. The fact, too, that the worship is not mentioned in literature is further evidence that it belonged mainly to the humbler classes.\(^6\)

So popular a worship can hardly have failed to leave traces of itself in later ages in the regions where it flourished, and apparent survivals of the ancient cult have been detected in the beliefs of both Celts and Germans in medieval and modern times. There can be little doubt that the fairies of western European folklore, particularly in the Celtic countries, correspond in part to the Matres. It is hard to speak precisely of the history of the lower mythology, which is the three Marys own distinctions; and one cannot expect to keep by themselves the descendants of a single group of minor divinities. The modern fairies undeniably derive some of their characteristics from the ancient Fates, and perhaps from the Pomena. But the Matres also, in their character of divinities of wealth and good fortune, have much in common with the benignant fairy; they were associated in antiquity, as has been seen, with the Parce; and they may have been introduced into the modern mythology of the fairy as a goddess of destiny in the later development of fairy mythology.\(^2\) The identification of Matres and fairies, moreover, is occasionally supported by definite evidence, such as the existence of an ancient incantation monument in the neighbourhood of a fairy mound or dwelling.\(^2\) Possibly, too, one of the modern Welsh names of the fairies, Y Manau ('The Mothers'), may point back to the old relation.

In some peculiar instances the worship of the Mother-goddesses appears to have survived in a quasi-Christian form. The representations of the Matres at Metz are said to have been venerated until the 18th century, and the Matrona, or Matergabia, is reasonably believed to have corresponded to the Conception of the Virgin.\(^2\) Similarly, at Thum, near Nideggom, the worship of three maidens representing Faith, Hope, and Charity has been brought into connexion with traces of the Mother-cult, and the same is said of an account of the 'Drei Merjen,' Belmarsh, Schwelmarsh, and Krieschemar, who are worshipped at Dürboslar, near Jüllich, as protectors of infants.\(^5\) It is possible that the images of the Matres may have started such cults even after the actual worship of the goddesses had been entirely forgotten. Thus various local dedications to the Madonna are probably due to the discovery of old statues which were conceived by the worshippers as belonging to some other deity, possibly as the goddesses of Roman and medieval mythology, but these statues, in so far as they represent single figures, have been seen to be of doubtful connexion with the cult of the Matres in the restricted sense of the present discussion.\(^1\)

DEATH AND DISPOSAL OF THE DEAD.

I. Introduction.

The horror of death is universal among mankind. It depends not so much on the pain that often accompanies dissolution as upon the mystery of it and the results to the subject and to the survivors—the cessation of the old familiar relations between them, and the decomposition of the body. This horror has given rise to an obstinate disbelief in the necessity of death, and to attempts, continually repeated in spite of invariably disastrous experience of failure, to escape it. Even the most natural and inevitable decrease is persistently ascribed to causes not beyond human control; and, on the other hand, legends of the origin of death are familiar and wide-spread. The picture thus presented of the desperate refusal of mankind to accept the conditions of existence is one of the most pathetic in the history of the race.

II. Origin of death.

The best-known type of the story of the origin of death is that contained in Goethe's Faust. There, according to the Germanic divinities, the soul can only enter the body through the natural means of conception. The corpse is the substitute for the living body, and is therefore filled with the most painful sensations. In the old Germanic religion, the heavenly world is the realm of the dead, and the dead are supposed to be happy and free from pain.

Among various tribes of New South Wales it is said that the people were meant to live for ever. But they were forbidden to approach a certain tree below the sky. The wild bees made a nest in the tree, and the women covered the honey. In spite of warnings by the men, a woman attacked the tree with her tomahawk, and cut down a tree which was henceforth free to roam the world and claim all that it could touch with its wings (A. Langlois Parker, The Enchanting Tribes, London, 1905, p. 98; R. Brong Smyth, The Aborigines of Victoria, London, 1875, 1. 425). The story told by the Egyptians of Central Africa is to the effect that Kintu, the first man, after undergoing various tests well known in folk-tales, is allowed to marry Namib, one of the daughters of Muguhi (Heaven, or the Above). Her father sends them down to the earth with gifts, which include a horn, telling them to hurry lest they meet with Namib's brother Warumbe (death), at the moment he is about to marry her, and forbidding them to return to fetch anything that they may have forgotten. On the way Namib remembers that it is time to feed the horns, and consents to Kintu's immediate return for the milk she has forgotten. Muguhi is angry at the disobedience, and the result is that Warumbe uses his horns to go with Kintu It is vain to object. Warumbe accordingly goes and dwells with Kintu and Namib on the earth. Namib gives birth to their children. When Namib is about to die, Kintu puts off her hand. In course of time many more children are born; but, when Warumbe reports his request, Kintu again postpones. Out of patience, he threatens to carry them all off; and the children begin to die. On appeal to Muguhi, another of his sons, Kuizui (the Digger), is sent to bring back Warumbe. Warumbe, however, sinks into the earth. General silence is proclaimed, and Kuizui goes into the earth to pursue him. He forces Warumbe out; but some of the Diggers feeding goats at the place, and seeing him, cry out. The cries break the spell; Warumbe returns into the ground, and by Muguhi's command he is allowed to stay (Johnston, Uganda Prot., Lond. 1902, ii. 700). According to the Masai of the Uganda Province, a superior being is absent, and Muguhi, when a child is dead, throws away the body, uttering a spell, 'Man, die and come back again to this place of man away.' But, when a child that was not his died, the Masai disobeyed and reversed the spell. Afterwards, when he tried the spell on one of his own children, he found that it had come back, and now, when the moon dies, it comes back, but man does not return (Hollis, Masai, Oxford, 1916, p. 71).

In the legend of the Ojibway, death is the result of a god's curse unconnected with an act of disobedience.

The Batak of Pahawang in the Philippine islands relate that their god used the earth as the dead to his place. But they received him once with a shark wrapped up like a corpse. When he had discovered the laws, he caused them to refrain from suffering and deaths (Ethnol. Survey, Phil. Islands, 1895, 185). More poetical is the Japanese tale of Prince Ninigi, who fell in love with Princess Hisakoi, the Flowers-dwelling like-the-Flowers. Her father, the god of the Great Mountain, consented to her marriage, and sent with her her elder sister, Long-as-the-Books. This

DEATH AND DISPOSAL OF THE DEAD (Introductory) 411

Mother-goddesses, the familiar passage on 'Die Mutter' in the second part of Goethe's Faust, has been sometimes associated with the Celtic and Germanic divinities in question. But Eckermann (Gespräche mit Goethe, Jan. 10, 1830) testifies that Goethe himself acknowledged no source except a passage in Plutarch which said that the ancient Greeks spoke of 'Mothers' as divinities. The reference seems to be to Plutarch's Morcellus, cap. 20, where the Sicilian Matrona, worshipped at Enogyon, are mentioned. Very little is known of their cult or nature, and what little does not indicate any close resemblance between them and the Matres of the Celts and Germans.
lady, however, was frightfully ugly, and the bridegroom met her hand with a shudder, declaring that her posterity should be shunned as the flowers (Ritu, 1900, 292). But the Hindus have another legend, according to which men were made by the Brahmins, and that there should be no inferior. The death of the hero was conveyed by the Brahmins under their grave-seafools (Joseph, 1900, 218, 255). The Kurnames of British Columbia, where Eagle and Raven are the joint authors of things as the gods, attest the present day that men die and come to life again. Raven, however, opposes this, and has his way. He regrets it when his own daughter dies and cannot be restored to life. However, he has been too late (op. cit. 11).

The eminence or the weakness of all of the lower animals is regarded by many people as the cause of death.

A story very wide-spread in Africa among Negroes, Basuto, and Hottentots alike, is found in two forms. The Hottentot version is that the hare was charged by the moon with the necessity of a new life to men, and to life again, so you also shall die and rise to life again. But the hare conveyed the message thus: "Like as I die and do not rise to life again, so you also shall die and not rise to life again." The angry moon split the hare's lip with a blow; but the mischief was done and was irreparable. Hence the hare is a talisman to the Hottentots. Among the Basuto the melaneron is the moon; the messenger. But he is a slow creature, and after his departure the moon changed shape and dispatched the likeness with the message of death. The lizard overtook the melaneron and arrived first. When afterwards the melaneron delivered his message, the next day too; the discoverable devil had transmitted (Bleek, "Elmgard the Fox," 1861, pp. 71, 74). In China the story is that the spider is the messenger; and it is through the fault of the dog that we die (Journ. Afr. Soc. vii. [1900] 194). The ill-will of the antelope is alleged by a tribe on the Ivory Coast, as the reason for death. A man was sent to the great fetish of Cavalla for a charm against death. He was given a stone to block the path by which it came. But the antelope, mistaking it for a thing to eat, bit the stone and was killed. The seed of the stone rooted the stone to the spot (Journ. Afr. Soc. vii. [1901] 77).

The Melanesians of New Pomerania tell the story of the message wrongly transmitted. TheWarowi say that the spider is the messenger; and it is through the fault of the dog that we die (Journ. Afr. Soc. vii. [1900] 308). In the Shorland Islands the people (also Melanesians) relate that the great hermaphrodite snake, whose skin is valued for its value at intervals and remained eternally young. The catastrophine of her death occurred because she was once disturbed in the operation by the screaming of her child, who was unheeded by her. The child too, was disturbed by its sleep, and men should shun her skins and live for ever. His brother, the Churl, reversed the decree (A.B.W. x. [1907] 508).

In the Balbina, on the borders of the Congo State; but there the operation is interrupted by the woman's husband (Globus, lxxxvii. [1906] 103). According to the Umpa of California, people used to renew their youth, when they grew old, by sleeping in the sweat-house. But this happy condition came to an end, when they learned to perform a ceremony, a form of it being the lightning bird, in which, in revenge, they took the two children they had borne him, and buried them alive. When the children came up again, they put them back, declaring that henceforward everyone should do that way (Godard, "Hupa Texts," Umpa, California, i. [1903-4] 57, 306). The Eskimo of Greenland relate that the first woman brought death by saying: "Let these die to make room for their posterity" (Crantz, "Greenland," 1820, 289).

In these stories, death is the result of curse or spell. Another Eskimo tale accounts for it as the issue of a dispute between two men, one of whom desires men to be immortal, the other to be mortal; their words are probably also spells (Ink, Folk, Eberges, 1875, 11, citing Egede). A tale widely known in North America relates that, when the first death occurred, an attempt was made to bring the soul back from the land of the dead. But some prohibition was broken, the returned soul was greeted too soon, and it vanished; wherefore there is no return for mankind from the spirit-land (the

Czechote stories [19 RBEW, 1900, pp. 252, 436] may be taken as typical).

Similar tales, though not cited are some Australian stories. The Kaitish and Umatarras say that formerly, when men were new created, the same to life again in three days; and the Kaitish declare that permanent death is a recent event. The man was dispersed with this arrangement and wanted men to die once for all. He secured this effect by the body of one of his who had just died and been temporarily buried (Spencer-Gillen, 515). So also the Wolofaehi story runs that, when he dies, the deceased used to say, "You up again!" and an old man said, 'Let them remain dead,' and since then none has ever come to life again except the possessed.

The phases of the moon naturally suggest death and restoration to life. It is, therefore, not wonderful to find that among the Australians, as among the Hottentots, the moon plays a considerable part in the legends. We have space to mention only one more.

The Arunta relate that, before there was any moon in the sky, a man died and was buried. Shortly afterwards he rose from the grave in the form of a boy. When the people ran away for fear, he followed them, shooting that if they fled they would die altogether, while he would die but rise again in the sky. He failed to induce them to return. When he died, he re-appeared as the moon, periodically dying and coming to life again; but the people who ran away died altogether (Spencer-Gillen, 301). The Chansu of Further India see a female figure in the moon. She was a great sky-god, tired of this interference with the eternal laws, transported her to the moon (Cabanon, "Nouvelles Recherches sur les Chansu," 1901, p. 19). Many other nations connect the moon with death.

Once more. The Todas of the Nilgiri Hills say that at first no Todas died. After a time a man died, and at his funeral, instead of weeping bitterly, were taking the body to the funeral place when the goddess Teikirizi took pity on them and came to bring him back to life. But she found that, though some of the people wept, others seemed quite happy. She therefore closed her mind, and, in the dead man, ordained the funeral ceremonies (Rivers, Todas, Lond. 1906, p. 400). When in the Scandinavian mythology Baldur was slain, the goddess Hel promised to release him if all things were for his death. This, too, though not in its present form an etiological story, possibly arose to account for the permanence of death.

The foregoing are but specimens of the sagas told in the lower culture concerning the origin of death, that they exhibit the extraordinary antiquity of mankind as to its naturalness and necessity.

III. Death believed to be unnatural.—1. The escape of the soul.—In practice, among the races of the lower culture, death, if not caused by violence, is generally described to the ascendant human beings, as gods or spirits, or to witchcraft. In a few cases, as among the Wadjagga of Central Africa, the weakness of old age may be reckoned among its causes (Globus, lxxxix. [1906] 185). Sometimes sickness and death are ascribed to the escape of the soul from the body. Thus, among the Hareksins of Canada, sickness is believed to be due to this cause, and it is the task of the medicine-men to capture the errant soul and oblige Etsina, the supernatural being, by perhaps a personification of death, to enter the patient for the purpose of replacing it (Petiot, "Trav. ind.," Paris, 1886, p. 278, cf. p. 334). The details of the belief in the soul, its escape and restoration, cannot here be discussed. It will be sufficient to say that from Siberia to Australia, from Puget Sound to the islands of the Eastern Archipelago, means are taken to prevent the soul from wandering, and to bring it back if from any cause it departs; for the permanent loss of the soul means nothing less than death.

Some peoples have developed the theory that the soul is not single but multiple, and that some, or one only, of these souls reside in or about the body.

Thus, according to the Balog of the Cameron, one soul is housed in the body of the man himself, a second may be chambered in an elephant, a third in a wild hog, a fourth in a
leopard, and so on. This seems to multiply a man's chances of personal disposal. For every mishapness suffered by one of the secondary souls—more strictly of the body in which it is imured—reads on the person concerned, and is able to draw after death a different result. If, for example, one person goes home from hunting, or from the field in the evening, and says: 'I shall soon die,' then death really occurs. It is clear that one of his 'outside souls' has been killed by a hunter through the slaughter of a wild hog or a leopard or some other animal in the vicinity. The Warramunga's view of death is the natural consequence (Globus, bix. [1896] 277).

2. The act of a supernatural being.—The act of a god or of the spirits of the dead is also an act of death known widely in the lower culture. Death by lightning is an obvious instance of the former. But it is by no means the only one. Death by accident is due either to a supernatural being or to witchcraft.

On the island of Keisar, one of the Mochuca, sickness is sometimes ascribed to the malignant spirit Lintanwul, or to the god who protects the dead. They have variously disposed of Negroes who have died on the island, the act of a fetish, and that of a deceased relative are equally assigned. In the Andamanese (Société des Sciences du Feu, Paris, 1906, p. 363; Spith, Eew-Stamme, Berlin, 1906, p. 256). The Andamanese attribute 'almost all deaths, sickness, and misfortunes' to the machinations of the spirits; and all undue deaths are ascribed to the malign influence of the evil spirit of the wood, or to that of the evil spirit of the sea (JAFI. xix. [1906] 254, 256). In the northwest of Australia every illness is ascribed to the djuma, an evil spirit otherwise known as warrawa or warrawi (Internat. Archiv., xvi. [1904] 5).

3. Witchcraft.—But by far the most usual cause assigned for a death is witchcraft—the malicious act of some open or secret foe, performed not by the obvious means of violence, but by the subtle arts of magic. This does not exclude the action of angry or envious spirits, for they are frequently held to inspire the evil-doer; or his ill intentions may be accomplished by their aid. The Mission Indians of California, indeed, in the ordinary religious rite of disposing of a deceased, have assigned the first death in the world to witchcraft. No one had died before; but, with the success of the first practitioners of witchcraft, death came into the world (JAFI. xix. [1906] 55). Witchcraft, in fact, is the ordinary reason given by savage and barbarous peoples for a death. On such an occasion, one of the foremost duties of the survivors is to discover the exact cause of death, and to ascertain and punish the author of the mischief. For this purpose, the dead body is opened, and the spirits are questioned—just as slaves, if detected, the unfortunate wretches were executed with fire and all sorts of torture (Cesar, de Bell. Gall, vi. 19). Peoples as far apart as the Balang already mentioned and the Kowais of Sikoria make a post-mortem examination. In the Wimmern district of Victoria (Australia) the clever old men and relatives of the deceased watch the corpse through the night. They see the path of the slayer approaching with stealthy steps to view the result of its machinations. Having apparently satisfied itself, it disappears in the direction of the hunting grounds of its own people, and the relatives of the deceased are satisfied, and put to rest. So far toThi, a man on the New South Wales the Tharumba repeatedly rub the body with a mixture of burnt bark and grease. Some of the old men scrape a portion of it off when dry, and throw a few pinches of it on the end of a stick, kindled with a boomerang. This way the smoke rises they judge the direction of the murderer's camp. A party is sent out to avenge the death. After identifying the murderer by a repetition of the process, this is accomplished, but by mutilations and terrifying the victim, so that he really believes he must die (Mathews, Ethnol. Notes, 1905, pp. 145, 72).

Among the Warramunga the divination is accomplished differently. A little mound of earth is raised on the exact spot where a man has died. A ceremonial visit is paid to it within a day or two after the occurrence, and a search is made for tracks of any living creature. According to the tracks found, conclusions are drawn as to the nature of the crime. For the Warramunga commit the body not to the earth but to a tree. Similar ceremonial visits are paid to the tree for the discovery of something which the person who has caused the death. If unable to identify the person or his relation, the relatives may at length find a kind of supposed tree, and by killing it may ensure the death of the enemy, whoever he may be. When everything else fails, they pay a further visit and thrust a fire-stick into the body, in which it is customary, and certain cases, an assumed voice believed to be that of the ghost (Spith, Eew-Stamme, 258, 260, 266, 542, 536, 752). So in Europe it has been believed, up to certain times, that the ghost of a murdered man (though not through the medium of any popular or religious rites) will communicate the fact of his murder and call for vengeance on the slayer.

Other Negroes draw the information from the corpse. The Aga of Indigenous has carried through the villages on the heads of two men, who are made by the priest to run and turn round in all directions, until by some movement or arrest of the bearers it points out the guilty person. The ceremony practised by the Ngunguru is not so laborious. Three stakes are fixed in the earth, one representing the fetish (god), another a deceased relative, and the third a living inhabitant of the village, presumably suspected beforehand. If the corpse touches the stake representing the fetish, a sacrifice of a few fowls is offered, and there is an end of the matter. If, on the other hand, the supposed guilty person is, or in case of avowal, he is led away to the bush to execute (Chaoz and Villanum, op. cit. 1906, p. 144). In Africa the ordeal is usually by means of some sort of poison, and, frequently, in the case of chiefs and important persons, all the relations are compelled to undergo the test. Among the Wadjagga, a Bantu people on the Eastern side of the continent, however, it takes the form of an oath upon the ashes of the fire at which the funeral feast is cooked (Globus, lxxxix. 1918). Ordeals, it need hardly be said, were for ages applied to persons in Europe and states of a criminal character by means of witchcraft. A common method was that of the ordeal by water, reported, so early as the 3rd cent. B.C., by Phylarchus, of the Theli (Phylarchus, 277), who travelled through the country about Trebizon (see Ordeals, Witchcraft).

Elsewhere it is deemed enough to convey to a wise man some relics of the deceased. Among the Shi of the northwest of Brazil on the occasion of a death no amount of clothing, together with the alleged 'poison' conjured by the witch-doctor out of the body of the person, were sent after his death to a distant tribe, which included practitioners of renown. They inquired into the matter, performed their conjurations over the relics, calling the medicine and relating how the deceased was believed, according to a well-known principle of witchcraft, that at the instant 'the poison' fell into ashes the enemy, whoever he was, died (Globus, xc. [1900] 252).

In general, throughout South America, it would
seem that it is the duty of the medicine-man to put himself into communication with the spirit-world and discover the culprit, who, at all events among some tribes, is thereupon put to death, and buried alone in his family cabin. If this work were omitted the deceased would himself avenge his death on his relatives (Internat. Archiv., xiii. [1900], Suppl. 70; Anthropos, i. [1906] 380).

Pied Bushmen were held to be in the hands of the gods (atsa), either of their own motion or because they had been bribed by an enemy. It was the business of the priest to ascertain to which of the gods the death might be attributed. We took a canoe and paddled slowly near the house in which the corpse was carried for the flight of the soul, which it was believed he could see. Frederick implied by the smile which he gave in departing he judged of the cause of death (Ellis, Polyn. Res., Lond. 1853, ii. 299). 414

IV. Abandonment and premature burial.—I. Abandonment of the dying.—Among many savage peoples it is customary to abandon the dying to their fate.

The Yoruba of Dahomey, when death approaches, leave the dying person alone, as comfortably as possible, near a fire, and quit the neighbourhood, not returning for a considerable time (Howitt, 440). The Bushmen of the French Sudan with loud cries abandon a dying man, for fear that he may take the place among them (Steinmann, Rocheblaves, Berlin, 1853, p. 191). The fear lest the eyes of the dying man will fasten on them, and his ghost then molest and curse them, comes in some kindred among savages of the Ho in German Togo (Spiegl, 635). The Selung of the Mendi, thinking to restore the patient, take the patient across to a desert island, and leave him there (L'Anthrop., xxv. [1904] 434). The Dorosche of Central Africa led a dying person away from the house, and left them, with some cane scissors or ears of cora and a gourd of water, to his fate (L'EBW 115).

2. Burial before death.—As an alternative to leaving the sick or the aged to die, they may be burnt while still living.

The Indians of the Paraguay Chaco, oppressed by the feeling of hopelessness and by superstition, when hope of recovery is gone, have the patient eat any food that he may desire, lest he should die in the village during the night, he is removed to the open and there left to die, in solitude, or death is hastened by premature burial (Grubb, Among the Indians of the Par. Choc., 1904, pp. 41, 45). The tribes of Navitejuve, Fij, place the dying man in the grave, with food and water. As long as he can make use of them, the grave remains open; when he ceases to do so, the earth is filled in and the grave closed (JAI i. [1883] 144). In the Guazil Peninsula of New Panama one, who is too long in dying is wrapped in pandanc leaves and carried out to the dead-house (JAI x. [1907] 309).

Among the Northern Maidu, persons who were long sick were securely tied up, in a squatting position, in a bear-skin, with美术 objects described as pecuniary use (the usual case of preparing a bed for the grave), and buried before death (Bull. Am. Mus. Nat. Hist., xlvi. [1896] 249). The Hottentots used either to bury old and sick persons alive, or to carry them away to the cleft in the mountains, and leave them with provisions for a few days, and then to fasted to death or starved by some wild beast (Tambung, Travels, Lond. 1795-6, ii. 191). The various Bantu tribes of South Africa either abandoned the dying or burnt them to death (Campbell, Afr. Travers, Lond. 1835, pp. 445, 515; Rieud, Essential Kafir, Lond. 1904, p. 247).

Practices like these may have had more than one origin. Economic causes doubtless played their part. The care of the living was more pernicious than that of the dying; and, where conflict arose between these two duties (as it often must in savagery), customs would grow up out of and necessity, which would be continued, when the necessity had ceased. Such causes have been adduced by the beliefs current in the lower stages of culture. In West Africa it is not uncommon that a prostrated sickness wearies the attendants. "They decide that the body, though not habitually inarticulate words and aimlessly fingering with its arms, is no longer occupied by its personal soul; that has emerged. 'He is dead'; and they proceed to burn him alive. Yet they deny that they have done so. They insist that he was not alive; only his body is going moving." (Nunnan, Pathogenesis in W. Africa, Lond. 1904, p. 54).

More potent, perhaps, is the universal dread of death and horror of a corpse. This horror is very lively in the Yakuts. Among them old people hurriedly put down their children to put an end to their life. The funeral feast was held for three days; neighbours and friends were invited to it, and the dying person received the place of honour and the choicest morsels. Then he was led out into the forest, thrust into a grave dug beforehand, and buried alive, with his arms, utensils, provisions, and horses (EHR xlvi. [1902] 212).

3. Removal from house or bed.—Where it is not customary to go to the length of burial alive, horror of the corpse leads very generally to the removal of the dying from among the living.

It is a common practice, e.g., of the North American tribes to carry a dying person out of the house or camp (L'EBW 122, 104, 137, 201; FI RBBW [1887] 457). The Sinhalas frequently take a person dangerously ill from the house and place him in an adjoining temporary building, in case the patient may escape pollution (Davy, Ceylon, Lond. 1821, p. 490). The house burnt down by the snow in departing he judged of the cause of death (Ellis, Polyn. Res., Lond. 1853, ii. 299).

The motive of the procedure in all these cases would seem to be the same—the horror of the corpse and the fear of pollution of the dwelling by its presence. A description is given by the Geologist of the Palestine Exploration Fund for 1902 of a Samaritan assembly to celebrate the Feast of the Passover in 1898, at which a woman became very ill and a cry was raised to remove her to a tent outside the camp, lest the camp should be defiled by a dead body—a ritual ban perhaps derived from some passages in the Hebrew law. In this case the defilement would extend to the whole congregation.

There are, however, some cases of removal of the motive of which is different. In the Reef Islands there are certain houses called 'holy houses,' which, if we may trust the report, seem to be connected with the cult of, or at all events with the belief in, the female spirit (van der Burgt, Warwari, 1904, art. 'Temple'). There is an account of the ceremony by the Cossacks and a custom has been described by the Ottoman Jews for one in extreme cases. It is to carry him to the cemetery and lay him down dead for twenty-four hours. 'He may die there; but, if he has the good luck to live, he will quickly make a complete recovery' (Melusine, viii. [1896-7] 278).

In Europe a very wide-spread custom is to take a dying man out of bed, and to lay him down on the earth or on straw. This is practised from Ireland to the Caspian Sea. In the Malay Peninsula a dying man's mosquito-curtains are opened, and in some cases, at all events, he is taken out of his bed and laid upon the floor, thus taking the place of an 'Huis'-grass (van der Burgt, Warwari, 1904, art. 'Temple').
be the regular incantations of an expert, similar to those in uncleaning sickness, as among the Dayaks of Borneo (Furness, Home-Life of Borneo Head-hunters, Philad. 1902, p. 50). A survival of some such custom may be found in Europe, on the death of a Pope or of a king of Spain. In these cases and local customs historians sometimes relate how, with a loud voice three times the name of the deceased, and, receiving no reply, he certifies the death.

VI. Before the funeral.—Death having occurred, a number of religious customs are observed only some of which can be enumerated here. Others will be reserved for a subsequent section.

1. Opening of doors and windows.—In the British Islands and all over Europe it is usual to open all doors and windows of the house of the deceased, all water-vessels are emptied. Various reasons are assigned for this custom, the most usual being perhaps a desire to prevent the ghost from drowning itself. The ghost is certainly conceived in many places as thirsty or needing a bath; and a special jar or bowl of water is provided for its use. In Greece, bread and water are placed in the death-chamber (J.A.I xxxiii. [1903] 103); and this used to be the practice of the Basuto wherever a man died within the hut (Journ. Afr. Soc. iv. [1903] 204).

2. Observances in the house.—Throughout Europe it is a common practice to keep all clocks in the house, and to cover all mirrors, or to turn them with their faces to the wall, immediately after a death. It may be conjectured that the latter was done to avoid puzzling and misleading the ghost in its efforts to quit the house. But water-vessels are emptied. Various reasons are assigned for this custom, the usual one being perhaps a desire to prevent the ghost from drowning itself. The ghost is certainly conceived in many places as thirsty or needing a bath; and a special jar or bowl of water is provided for its use. In Greece, bread and water are placed in the death-chamber (J.A.I xxxiii. [1894] 37). In some parts of France a jar of water is placed beside the corpse (ITF iv. [1890] 245), and a dish filled with water under the bench on which the corpse is laid out, for which a sanitary reason is now given (von Schelenburg, op. cit. 112). The Morvids put a cup of water on the window-sill of a dying man’s house, for, on quitting its corpse, the envelope, the spirit must wash (Smirnov, i. 357). Hindu rites require the heir (but apparently not until after cremation) to place in the habituation of the deceased a small vessel full of water, over which he has to fill a jar of water, and let it hang down as a sort of ladder for the pranava (life-breath, spirit) to descend and slake its thirst during the ten days following; and a handful of rice is placed as food every morning beside the vessel (Dabbs, London, Hindu Cremations, Oct, 1906, p. 488). It is probable, therefore, that the object of throwing away water standing in any vessels for household use is to prevent the death-pollution conceived as contamination by the touch of the ghost. This custom is observed in some districts of the Landes in the south-west of France where, after the death of the father or mother, for a whole year the cooking vessels are covered with old cloth and the provisions order reversed, though the reason now alleged for the practice is to recall the memory of the deceased and renew the grief (Cuzacq, Naissance, mariage,
DEATH AND DISPOSAL OF THE DEAD (Introductory)

3. Telling the bees.—Another custom is that of "telling the bees." When a Dyaak dies, as soon as the body is removed the head of the household calls upon all the members of the household to prevent the soul of the dead from hurrying their souls away, in which case they would die. This ceremony is repeated on the return from the funeral (Int. Arch., v. [1892], 4, 235). The catastrophic story to be prevented here is exactly that which it is desired to prevent by the practice common in Europe of telling the bees of the death of their owner. Some one goes to the hive, knocks, and whispers the fact to the tenants, some time before the new owner is foreseen. A humming inside the hive is taken as an indication that they will remain. If the ceremony be not performed, they will all die or go away. Sometimes they are put into mourning by their means; they are killed by the story, the hive, or the hive is turned round or removed, or a piece of turf laid on it. These are all expedients against the attempt of the ghost to lure the bees away, though other interpretations have been given by the people who practice them and who have lost the real reason. The precaution is by no means confined to bees. In Cornwall the bird-cages and outdoor plants are put into black. In various parts of France all the domestic animals must be in mourning, and cattle must be attached to the pigsties and the cat. Even the trees must be told, and sometimes put into mourning. Elsewhere similar customs obtain (Choice Notes, FL, 1829, pp. 65, 98, 139, 210; Schlob, Feldl. Forsch. de France, Paris, 1804-iiii, 103, 375; Lloyd, Posts Life in Sweden, Lond., 1870, p. 131). Among the Chemis the people even avoid watching a funeral procession from the window, for fear that the dead man may take them with him (Smirnow, 1837). The reason against watching a funeral procession from a window is not uncommon.

4. Wailing and dirges.—The custom of wailing is universal. The wailing frequently begins before death, as among the Nootkans, who are said to surround a dying person, and "set up such a terrible howling as were enough, one would think, to fright the soul out of the body." But this is nothing to what succeeds the death. The kral shades under the dead, and the bear they have killed is placed by their heads. The mourning is renewed at certain intervals of time—on the anniversary of death, or at certain feasts, or on the occasion of the exhumation of the bones. Elsewhere, among the Kaffirs, a son away at a distance, when his father dies, must wait on his return every time he enters the kraal during the next six months (Kidd, 250 f.). In many cases the men join in the wailing, while in others, perhaps among related peoples, it is left chiefly or entirely to the women. Sometimes it is not interrupted (at first, at all events) by the wildest demonstrations of grief, amounting to temporary insanity. At a stage less than that, Dr. Junker describes the conduct of the women and slaves of a ruler of the A-Kande of the Sudan. Six women went round the dying man, turning the somnambulists, rolling in the dust, pretending to search in every corner, crying out, "Oh my lord! Where is Fallul Allah?" Lie! Lie! Tidings of joy had been announced under the projecting roofs, constantly howling and lancunting. In the even-
that excessive demonstrations of grief may, in some cases, be traced to the desire to avoid suspicion of having been accessory to the death. Bentley expressly asserts that in the Congo basin, where the belief in witchcraft is so powerful and so cruel, an ostentatious exhibition of grief is to avoid the charge of witchcraft (Pioneering on the Congo, Lond. 1861, p. 27). An interesting case is supposed 'to drive away the spirits' (JALF ix. [1896] 16). Similarly, it is believed by the Klamath Indians of the north-west coast of the United States that for three days during the funeral ceremonies the dead person is supposed to leave the body of the deceased (Whitney, Am. Anthropologist, 1903, p. 12). In some of the Moluccas the wailing is intended to affect the departed, to bring the spirit to its senses, or to render it conscious of its new condition (Riedel, op. cit. 465).

This is the belief that affects the departed in some way seems to follow from the contents of the dirges, and from the fact that they are in many cases (perhaps usually) addressed directly to him. The sorrow expressed, the praises, the appeals to return—indeed, the whole spirit of the dirge is supposed to have an effect on the spirit, which is believed to be hovering near and to partake in the ceremonies performed. A wide and careful comparison of the customs of the South American Indians has led Theodor Koch to infer that it is believed the dirges are understood by the deceased; and he suggests that the chief motive is conciliation—the placation of one whose natural disposition would be hostile (Int. Arch. xiii., Suppl. 114, 117). That this motive does operate seems certain. A striking example is furnished by the Ja-Lue of East Africa. When a person dies, the whole village wails with great fervor for days, if not for months, and at stated intervals, according to the conventions laid down for the case. Where a barefoot woman dies, the wailing is commenced in the usual way. The brothers and sisters of the deceased hasten to the place; and the first who arrives takes a sharp stone from the bliss and breaks off the corner of the sole of his shoe. Immediately all wailing ceases, and it is never renewed (JAJI xxi., 344). Hobley, who reports this ceremony, could obtain no account of its object. There cannot, however, be much doubt that the woman is intended to prevent the deceased from walking after death and troubling the survivors. (A similar case is reported from the Moluccas by Riedel, op. cit. 81; see also § XI. 2 below.) A childless woman would naturally be envied and malicious, and would have no descendants over whose well-being she might be supposed to watch. Released, therefore, from the fear that she would leave the grave for hostilistic purposes, they would have no further motive for continuing the wailing.

But it cannot be admitted that fear is the only reason for wailing. There is abundant evidence that the dead are believed to regard their surviving relatives—in particular, their descendants—with a measure of anxiety (at least of friendly interest), not unmixed indeed with caprices, that they are often dependent on them for the sacrifices and other means of rendering comfortable their existence in the world of the departed, and that they grant them favours and good fortune if satisfied with their treatment and general conduct. In these circumstances, it seems inevitable to con-
DEATH

6. Mummification.—The process of mummifying, or drying up the body, either with or without embalment, is widely practised. In Egypt (see OP, p. 440, and 'Egyptian' art. below, p. 458). Where other peoples set up images of the deceased, those who practised desiccation or embalment were enabled to keep the bodies intact. Thus, the ancient Macroboid put the body, after drying it and covering it with plaster and painting it like the living man, in a large coffin, and set it either in the house for a year, or offered sacrifices to it, afterwards removing it and setting it up, with similar blocks, round the city (Herod, iii. 54). The aborigines of Virginia and Carolina placed the bodies of their kings and rulers in a large hut under the care of priests or medicine-men, apparently for a similar purpose (Reeves, 1801). Elsewhere, as among the Bangala of the Upper Congo (JAI xxxix. [1900] 451) and other African tribes, and in the South Sea Islands, mummification is a means of preserving the body until a convenient time for the funeral, which is frequently postponed for many years, sometimes for over months or even years. But this object does not of necessity exclude the former.

7. Feeding the dead.—Many other observations may be made, but we must not describe here. Two, however, may be referred to. The sitting in state of the dead, in the Aaru Archipelago of the Moluccas, has already been mentioned. While he so sits, food is offered him by the members of his family; offerings of food and drink to the dead before burial are frequent in the lower culture; sometimes, as among the Tho of Northern Tongking, they are even placed in his mouth. These offerings are found in both hemispheres, even among the European tribes they are not unknown. In the Department of Loir-et-Cher, France, everything in the house that is eatable is thrown into the death-chamber (ATP xxi. [1900] 322). De la Martinère reports, in the 17th cent., that, in Russia, after death, it was usual to bring a basin of hot water to the dead, and to pour it over the corpse's head, that he might not die of hunger on the long journey before him (ZV f. 85). On account of the probability that the corpse will put his fingers into his mouth, the watchers of the corpse about Königsberg, in the East of Prussia, avoid drinking brandy.

A different explanation was taken in the north-east of Scotland, where, 'immediately on death, a piece of iron, such as a knitting-needle, is thrust into the mouth to prevent evil spirits from entering the corpse' (Greger, s. v. 360). Although it is said that corruption followed the omission of this precaution, it is probable that it was an earlier custom to destroy the corpse so as to make it unattractive to them. Iron is a well-known preservative against the attacks of supernatural beings.

8. The wake.—A formal announcement of the death, and an invitation to the kindred and others whom it may concern to come and perform the funeral rites, are given by messenger or by drum, or, at the present day in many communities in low civilization, by firing the gun. Knowledge of the interval between the death of the individual and the final disposal it was watched—a ceremony known in this country as the wake, because it involves one or more all-night sittings.

The custom of watching an Australian of the Wimmera district of Victoria is watched by the clever old men and relatives, for the purpose of gaining a hint as to the future of the dead. (Mathews, p. 143). It is described by Cuzacq as a gorgeous assembly, which the object is to guard the corpse 'from the spirits' (Parky, op. cit. 55). It was probably, the real reason is to frighten away the ghost or other evil spirits and spirits (Fleming, 1901). Among the Gares of Assam the watchers are kept awake by the young men of the village, who dance, and play cards, and carry lighted torches in the face of the corpse and this is thought to prevent its being disturbed. Among the tribes of the north-east of America, the watchers are kept awake by the young men of the village, who dance, and play cards, and carry lighted torches in the face of the corpse. The reason is thought to prevent its being disturbed. Among the Zulu, children watch the dead in a separate apartment, and sing and dance. The watchers are kept awake by the 'spirits' (Howitt, P. 408). In the Zulu tribe, if they hold the funeral, they do not let the body be disturbed. As the body is intended to be buried in the ground, the spirit of the dead person is supposed to remain in the ground, as in the case of the Zulus. Among the Zulu, children watch the dead in a separate apartment, and sing and dance. The watchers are kept awake by the 'spirits' (Howitt, 1901). In the Zulu tribe, if they hold the funeral, they do not let the body be disturbed. As the body is intended to be buried in the ground, the spirit of the dead person is supposed to remain in the ground, as in the case of the Zulus.

9. Tabu at death.—The horror of the dead has already been mentioned. Everywhere, contact with a corpse entails a condition for the adequate expression of which we must have recourse to the Polynesian word tapu, or the Gr. word ἄπειρον. In English we use the word universally current 'defiled.' Since, however, neither of these words, nor any other in the language, conveys the full force of the Polynesian or the Greek, we have in modern times been fain to borrow the word tapu or tabu from the former tongue, for the condition
of a person or thing set apart and shunned for a religious or quasi-religious reason, including not only objects to be regarded with sanctity and invest with terror on (that account (as the Ark among the ancient Hebrews), but also such as excite (at least in our minds) horror, disgust, and execration.

A corpse is always taboo. And, as one of the most readily defined taboos, or the corpse is its

The rule observed among widely sunned peoples, that everyone who kills another—even a warrior who has slain an enemy in battle—must undergo purification, perhaps points to the earliest taboos. In consequence, from the contagious nature of taboos, the prohibitions consequent on a death reach far beyond the persons who have been compelled to perform the last offices about a corpse. They extend to the whole house, the whole family, the whole clan, the whole village, nay, to the very fields, and even sometimes to the heavens.

An unburied body fills the Yakute with horror and fear. All Natives are told to drive away, as though some is found, strange noise, mysterious cries, are heard; and, if it be a shaman who is dead, these manifestations are such as are produced by the spirits of the dead, which are considered to be able to do serious harm. This notion of the mysterious sympathy of the various elements is that no work is ever performed in the house of a shaman who has died (Jespersen, cit. p. 257). Among the Eskimos, singing and dancing are forbidden during the first days after a death. Moreover, for three days no one is allowed to work on iron, wood, bone, stone, ice, snow, lether, to empty the oil-drip- ping lamps of the dead, and no new head dress may be worn by the body; and all sexual intercourse is forbidden. It is believed that the soul stays with the body for three days after death. During that time any violation of the taboo affects it so much with pain that by way of retaliation it brings heavy snow-falls, sickness, and death (Bunz, Editions of Far East, 1891, pp. 131, 144). Among the Burens and Kunans of Abyssinia there is neither ploughing, nor sowing, nor grinding until the corpse is buried (Menzinger, cit. p. 258). In many of the Molucca islands all work is forbidden in a village while the corpse is unburied (Kieck, 168, 177, 235, 341).

At Athens, according to Cicero, after the burial the grave was sunk or plented as a kind of expiation, that the fruits might hereafter be of good crop. So is it in the South China (Jespersen, cit. p. 258). In many of the Molucca islands all work is forbidden in a village while the corpse is unburied (Kieck, 168, 177, 235, 341).

The corpses and the fulfilment of all the rites and customs in connexion therewith are to free the living from the dread of death and the guilt of the deceased. Until they are all ended, the soul is not finally dismissed to its place in the other world, it is not united to the company of the fathers, it is not elevated to its due position in the exalted and eternal, and it continues to haunt the survivors unpleasently. This belief is little short of universal in the lower culture, and might be illustrated from all quarters of the globe. The significance of the ancient Greeks and Egyptians is a commonplace of anthropology. In modern Europe the prejudice in favour of Christian burial in consecrated earth, with the full rites of the Church, may be traced to the same cause.

2. Denial of rites.—Yet for special reasons these rites are everywhere denied to certain classes of the dead.

(a) Babes and children under the age of puberty, or uninitiated in the trites.

In India, where the practice of burning the dead is prevalent, children are generally buried. In some cases at least, and possibly in all, this is done with a view to securing the birth, for the common practice is to bury in or quite close to the house, often under the threshold. Similar practices for the same reason prevail among the Kafirs of Natal and Zululand, the Am.Com., the New Worlds (Hartland, Prim. Pat., 1900-19, i. 227). Funeral honours are denied by the Thib of Tangking and the Buddhist sects of India. They are simply put into the tier and taken by the priest alone to the grave (Tongking, op. cit. 187). Among the Chinese, the Burman, the Annamese, and the Japanese, common burial is the rule. In Europe the custom is very general that those who have been at all initiated and have partaken of the rites of the Church are entitled to receive the dominical burial, with the full rites of the Church, and are permitted to have their bodies prepared for burial in ecclesiastical quality.

(b) Slaves and common people.—Among the Haida in Massed, slaves are thrown into the sea (Jespersen, v. 1900-54). To the Oregon they were thrown out into the woods or left wherever convenient (Mun. Amb. Anthro. Soc. 1, 1906). Very widely in Africa and Asia, and especially poor people, slave and indents are simply flung away and left to the wild beasts. Common people in the Marshall Islands used to be sent to a hut and put by the sea (Stebnegs, op. cit. 438). The Aths of Vancouver Island wrap old women and men and boys of no rank in the tribe in old blankets and throw them over the cliff after a short farewell. The Wadjanga throw children men and women into the forest (Globus, xxxix. 300).

The foregoing causes are probably regarded as sufficient for good reason, and if the death is not due to such cause as has been taken during life, and therefore needing no consideration. In other cases, however, this reason will not apply.

(e) Those who die a ‘bad death.’—The manner of death frequently determines the death rites to be performed, because it determines the fate of the deceased in the other world. The list of deaths regarded as ‘good’ is not identical all over the world, but a wholesome horror of suicide generally prevails. Christian Europe agrees with the pagan Africa in performing only maimed rites, or denying them altogether, in the case of such as have taken their own life.

Suicides are held by the Ewe of Togoland to have been driven mad, either by lightning or by the work in all lands, public and private offices, all business and market gatherings, and especially of weddings are forbidden to put on their jewellery, and neither men nor women may wear new apparel. All clothes refrain from amusements and public enterlains, and eat neither fish or meat, and are forbidden to enter public and private offices, all business and market gatherings, and especially of weddings. The suicides must therefore be fed. A state is driven through the body, which is dragged into the bush and there huddled into a hastily excava- ted hole. The left hand is always preserved, as the sign of love-making. No drum is heard, no dances are executed, no fire is lighted in the street, no sacrifices made. The marriage ceremony and ceremonies of festivity, and undertake no journeys to a distance (Chandra Das, Journal to Lest, 1907, p. 256). We may sup- pose that the suicides or of any sort of relation, or important person in the neighbourhood or the State, to be due to the same origin as those on the death of a king (Jespersen, vi. 224-25).

VII. Disposal of the corpse.—1. Object of rites.

—The chief objects of the proper disposal of the corpse and the fulfilment of all the rites and customs in connexion therewith are to free the living from the dread of death and the guilt of the deceased. Until they are all ended, the soul is not finally dismissed to its place in the other world, it is not united to the company of the fathers, it is not elevated to its due position in the exalted and eternal, and it continues to haunt the survivors unpleasently. This belief is little short of universal in the lower culture, and might be illustrated from all quarters of the globe. The significance of the ancient Greeks and Egyptians is a commonplace of anthropology. In modern Europe the prejudice in favour of Christian burial in consecrated earth, with the full rites of the Church, may be traced to the same cause.
DEATH AND DISPOSAL OF THE DEAD (Introductory)

Among the Bechuana, if a thunderbolt kills a man, no one complains, none weeps; all unite in saying that the Lord has done it, and wish to suppose the victim to have been guilty of some crime, probably stealing, for which the judgment of Heaven has fallen upon him. The beliefs of their neighbours, the Basutos and Zulus, are somewhat similar (Arbour, Excursions, p. 43). Dennett, Globus, 186, 1871, p. 131. But the Zulu, who have no religion, allow the body to fall in the bush, and if it falls on the remains of some one who has been killed, the body is left there, and the bush is set on fire.

Death by drowning is often regarded as the seizure by the water-spirit of a victim; hence no effort is made to save him.

Persons drowned, or shot, killed by wild beasts or by falling from a tree, are held in the Fabar Archipelago to be slain by the messengers of the dead, and the spirits, in order that they may feed on their souls. Their bodies may not be laid out in the house or seen by children; they are left naked. They are put in the grave with a red linen thrown over them. Sacrifices of pigs are offered to Upularo, who is invoked on the spot as a god. The pigs, however, are not eaten, for fear of misfortune. Utmost the body is laid on the ground in a spot set apart for such as have been slain by Kalawolli (Kabulu). In the northern peninsula of Balabera, the body of a king is sometimes buried, but is afterward disinterred and eaten. The pig is offered as a sacrifice. It is not eaten, but thrown into the grave, where it falls in battle (Int. Arch. ii. 209).

Everywhere those who die from the effects of the poison-ordal, so commonly administered in Africa to discover a witch, are held to be slain by the 'fetich.' For the body is not buried, but is denied sepulture, and is thrown into the bush. To die of certain diseases is to be struck by a god, or at all events tabued. Such diseases are choler and smallpox, commonly in India, smallpox or leprosy in the island of Nossi-Dé near Madagascar (Steinmetz, 378), consumption in Corein-China (Amonyolle, Excursions et Reconnaissances, xvi. [1883] 171). Among the Agni of the Ivory Coast, when by means of divination (§ 111) the corpse obstinately refuses to disclose whose witchcraft has caused the death, it is concluded that the deceased has offended some spirit, and he is denied burial as a punishment for the offence (Clozel and Villaman, op. cit. p. 120), or perhaps, we may conjecture, because of his fear of the enraged spirit. Greek executed criminals, though buried, were denied the customary rites; traitors and those guilty of sacrilege were refused burial at home (Rohde, Psichtr, Freib. 1808, i. 217). On Nossi-Dé executed criminals and outcasts from the family are not buried in the family grave; wherefore in the other world they are condemned to find no rest (Steinmetz, loc. cit.) and the Ewe bury them without rites (Globus, lxxii. 42). Down to quite modern times in Europe, and in ancient Greece, a criminal was buried without rites and without any funeral ceremony (Diodot. vii. 46). It was supposed that it was the fate of certain classes of executed criminals to have their remains exposed on gateways and other places of public resort, until they rotted away. Robbery, horror, dread, whether caused by the infliction of some penalty or by the anathema of supernatural beings, are doubtless the cause in all these cases of exceptional treatment and denial of the customary rites.

In ancient Rome, where vengeance are also under anantheia or tabu. Their sacred qualities set them apart from mankind.

The Maasai, whose reason for not burying ordinary persons is said to be, that the bodies would poison the soil, bury their medicine-men and rich men (Hollis, 305). The inhabitants of Corisco Island, off the West Coast of Africa, by their great men and women, placed their dead under a sacred tree (Nussan, 4). The Sea Dayaks expose their priests on a raised platform—a perilous place, which other men avoid, if they desire to keep their spirits. The rest are buried, except such as die in battle, who are left where they fall, surrounded with a paling to keep away the wild hogs (TSS, new ser. ii. [1850] 236). By way of special honour, the Papuans of the Sontal Purganas do not bury their priests, but lay them under the shade of a banyan (Brady, Hist. Indian Upland, 1895, p. 303). The Cuddoos of North America leave unburied the warrior slain in battle (Introductory, p. 60). Some of the African tribes bury their slain unburied, but in Africa, the dead warrior is buried. But among the Badjugga the reason is said to be that to bury him would draw a similar fate on others (Parr, 1841; Cunningham, 285; Globus, lxxii. 150).

(c) Women dying in childbirth are buried in Africa, both East and West, apart, and deprived of all ordinary rites. The belief that women thus dying is under a curse, and becomes a malignant ghost or vampire, is widely distributed. Special precautions are, therefore, taken against her depredations. A special rite in the shape of a sacrificial offering is made to the gods and vulture brackets. The custom is in Yunnan (Anderson, Report on Exp. to W. Yunnan, Calcutta, 1871, p. 131). A different expidient is mentioned below (§ XI. 2).

(f) Lastly, in the progress of civilization it has been held that burial cannot be accorded to the corpse of a man who has died in debt, until his creditors have been satisfied. This barbarous denial of rites necessary to future happiness seems to have been the law in medieval Europe. A corpse that was executed or guillotined, was immediately disinterred and buried in a spot known as 'Shoreditch' as lately as 1811; and, though damages were recovered against the creditors by the representatives of the deceased, the fact witnesses to the late survival in England of the belief that the corpse of the debtor could legally be distributed among the creditors (NQ, 7th ser. ix. [1896] 214; cf. 19, 336 and x. 63). Yet even in many places—the island of Celebes and West Africa, for example (L'Anthropologie, iv. [1893] 626; Globus, lxxii. 42; Dennett, Black Women, p. 330)—the corpse may be left unburied until his debts are paid; and among the Fantis, at all events, he who has the temerity to bury a man becomes liable for his debts (Crnkossack, Eighteen Years on the Gold Coast, Lond, 1853, ii. 221). The incident is the foundation of a number of folk-tales, from India to Ireland, and has repeatedly formed part of a literary plot.

3. Mode of disposal.—The modes of disposing of the corpse may be enumerated as (a) cannibalism, (b) sub-aerial deposit, (c) cave deposit, (d) water burial, (e) earth burial, (f) preservation in hut, (g) cremation.

(a) Cannibalism.—See art. CANNIBALISM, vol. iii. p. 194, and below, §§ XV, XVI.

(b) Sub-aerial deposit. To leave the body on the ground was probably the earliest, as it is the simplest and most savage, form of disposal of the dead. Ordinary people are still by many tribes, as we have seen, simply flung aside. Among the Maasai, burial is a honour conferred only on a man of wealth or a medicine-man. All medicine-men are descendants of one family of supernatural origin. We may conjecture that the meaning of the tradition of supernatural origin is that their ancestors were a race of beings to a tribe on a somewhat higher level of civilization, where burial was customary (Hollis, 305, 325). Burial is, however, not necessarily a mark of advancing civilization. The Dan, for instance, who are among the lowest of known savages, bury their dead (RBEW 284). On the other hand, the religion of Zoroaster seems to have imposed the rite of exposure of the corpse, to be devoured by dogs and vultures, in comparatively recent times by a reluctant people, who were previously in the habit of burying their dead. It appears, in contrast, with the rite of the Maasai medicine-men, to have been at first only the practice of the sacred caste, and to have been enforced by them on all believers under the most awful sanctions, both temporal and spiritual. A thousand stripes are denounced in the Zend-Avesta on him who shall bury in the earth the corpse of a dog or of a man, and not disinter
it before the end of the second year; but, if he delay beyond that time, there is no atonement for ever and ever. Death and damnation are his fate. Indeed, merely to omit the exposure of the corpse within a year, though the corpse be not in contact with, is to be liable to the same penalty as the murder of one of the faithful (SHE iv. xlv. 8, 31, 52). We may perhaps measure the difficulty of securing uniformity by the violence of the language and the severity of the threatened consequences, which have been almost as uncomformable to be a heretic in Persia as in mediæval and post-mediaeval Europe. Nor have the Parsees of India, in spite of their high civilization, abandoned this distinguishing characteristic of their faith. See 'Parsi' art. on present subject (p. 502).

Among the Australian tribes and those of Tasman the most varied methods of disposal are found, and they are all cremation. Where exposure was practised, it was usually on a rude platform of boughs, or in the branches of a tree. The latter is regarded by the farmers as having been applied to the very old and infirm, and to such as have violated tribal customs (Brough Smyth, i. 108-121; Howitt, 436-417; Spencer-Gillen, 560). The first, in New South Wales, is the best known (Gnomic, 1898, p. 190; Roth, Report of Tasmanian Commissioners, Lond. 1899, pp. 128-139). The same honour is also paid by the Andamanese to the most esteemed warriors (Ind. Cent. Roy. 1903, ill. 65). In fact the exposure of the dead on stages, or by suspension from the branches of a tree, or from cross-bows supported on poles, is very widely spread in the Eastern Archipelago, and is practised by some of the tribes of Assam.

On the American continent, deposit on scaffolds, or in the branches of trees, was extensively practised. In the greater part of North America it was the common mode of disposal, the object being to keep the body out of the way of carnivorous beasts and to facilitate desecration. The Hurons and some other tribes put the corpse into a coffin or box of bark or wood (often a hollowed log) - a custom also followed in British Columbia, where the 'grave-box' was frequently deposited on the ground and covered with leaves (C RBEW 1866-186, 188, 189, 190; 5 RBEW [1887] 111). The various Reports on the N.-W. Tribes in the Brit. Assoc. Repts deal with the custom of the Indians of British Columbia. See also Journ Expd. v. 54, x. [1906]143. Ruder than these was the custom of the Blackfeet. 'They think it a horrible practice,' writes Mr. Denby, 'and resemble them in the grave, or live in the ground.' So they leave it for the wild beasts and birds, above ground, on a level ground, with trees around it (B.A. Roy. Tract. Ind. du Canada Nord-ouest, Paris, 1856, p. 622). The Eskimos often leave the dead on the ground, 'though in some cases' reports the 'grave-box,' or 'corps-box' (11 RBEW, 175, 185; 15 RBEW [1899] 325). The Kamchatchiaks used to throw away their dead to be devoured by dogs. The Chukchi, Gilyaks, and other Siberian tribes followed the same practice, or else disposed of the corpse by cremation; the Yakuts, however, used to put them in boxes and suspend them from the trees or put them on rough scaffolds in the forest (Journ Expd. vi. 104; RHR vii. 211; Amer. Anthr. viii. [1900] 299). In New Caledonia the dead are placed on the summit of a cliff, on a bed of leaves or dried grass (L'Anthrop. xii. [1902] 547).

The necessity of sub-aerial deposit either on the ground or on scaffolds or in the branches of trees has been, in some measure, rendered all the less painful, forced upon the survivors by the condition of the soil. In the higher latitudes of the Northern Hemisphere the ground is often frozen for months, and it is impossible during that period (especially with the raising of the branches of the trees) to bring the body above ground. The necessity of sub-aerial deposit either on the ground or on scaffolds or in the branches of trees has been, in some measure, rendered all the less painful, forced upon the survivors by the condition of the soil. In the higher latitudes of the Northern Hemisphere the ground is often frozen for months, and it is impossible during that period (especially with the raising of the branches of the trees) to bring the body above ground. The

(c) Cave burial.—An archaic and widely distributed mode of burial is in caves.

Human bones, remains of sepulture of the Neolithic people formerly inhabited by our ancestors, have been found in caves at various points along the Riviera, notably under a subterranean floor of the base of the cliffs (L'Anthrop. xii. [1901] 2). Among examples of a much more recent date, but still very ancient, is that of the Hebrews (e.g. the cave of Machpelah, Gen. 23, 19, 20). The custom is not yet wholly extinct in Palestine. In the Moluccas, the Philippines, the Sandwich islands, as well as in the coral islands of the South Sea (both anciently and of late), the practice prevailed of depositing the bodies, or, after desiccation, the bones, in caves or crevices or in the recesses of the cliffs. In some of the islands the custom is now restricted to the remains of chiefs, and the motive is said to be to prevent desecration of the bodies, that it was at one time more general (Ellis, Polyn. Res. i. 406; JAF x. 141). Similarly, among the Natives of Madagascar the chiefs are deposited in caves (Mad. ou xxe siècle, 290, 291). In Africa it is found sporadically from north to south; as well as in the Alcucite and West Indian islands. Among some of the Pueblo peoples of Arizona and New Mexico the practice seems a relic of the former habitation of the caves. When they were occupied as dwellings, the dead were frequently buried in the same caves or in the furthest recesses, and the same caves or other cliffs and shelters of the rocks have been retained by a few remaining tribes as the most suitable dwelling-places of the dead (13 RBEW 346, 355; An. Anthr. vi., new ser., 660).

This method of disposing of the corpse, rude as it seems, has been capable, as in ancient Egypt, of developing grandiose sepulchres, by artificial excavation and the provision of pompous doorways, and thus of influencing the development of a national architecture. Even in such a result as Nubian, artificial excavation was frequently practised. Numerous numbers of such tombs, attributed to the Siculi, have been explored in the mountain of Pantalica near Syracuse (L'Anthr. xii. 190). A cave burial, such as was practised in Nubia, was found in other parts of the globe is that of sinking a perpendicular shaft in the soil and excavating, at or near the bottom, a side-vault in which the body is placed. These graves have lent themselves to the suggestion that their form is the result of an extremely primitive form of cave burial. They are actually found in some of the Fiji Islands concurrently with burial in caves (JAF x. 144). Ordinary chamber-tombs excavated in the rock are found in Ceylon, and the burial caves them were also provided with shaft and side-vaults; and though all three types of grave had diverged from one common original, and that original a natural cave. The conclusion, so far as regards the last-named type, is perhaps rendered all the more probable by the great number of several burial caves in the Mediterranean, where burial in natural or artificial caves was practised (Archaeol. xix. [1865] 391 ff.).

(d) Water burial.—To fling a body into the sea, or into a river or lake, is the earliest way of getting rid of it. That doubtless is the reason for thus disposing of the corpses of slaves or common people (see above, VII. 2 (b)), in various places. But it does not account for every case of the act of water burial. With the object of merely to get rid of the body, but to prevent the deceased from returning to plague survivors, probably few more effectual means are known to peoples in the lower culture than to throw the corpse into the water; for water is usually esteemed a barrier
DEATH AND DISPOSAL OF THE DEAD (Introductory)

to malevolent spirits, and particularly to the dead.

The corpses of pregnant and barren women (who are naturally evi-disdosed), and of keepers, are regarded in Tibet as specially taboo. They are, accordingly, either thrown beyond the walls of the city, or packed in boxes and thrown into the waters of the great Tsang-po River (Chandra Das, op. cit., 255). The Gondwana of Paraguay and the Cherokees consider their dead to the waters of the nearest pond; the Greeks use of salt in springs, probably for fear of the demons of the dead (Griswold, op. cit., 350).

This may have been one of the reasons for the occasional practice of water burial found in various parts of the world, as among the sect of Bhagar Pansis in the Panjau (Rep. Omins. India, 1901, xvi. 187). The use of the West African tribes (Nassau, 263). On the other hand, water burial is sometimes regarded as an honour.

One who is specially beloved or beautiful is, in the Bismark Archipelago, not buried but is speeded on a boat pulled far out to sea, and there the boat and its passenger sink. Thus the body is swept away by the tide (Ovisko). To bring the dead into the sea was quite common in Polynesia. The Chibchas of New Granada were reported by Ovisko to lay their chiefs in golden coffins and sink them in the water (Int. Arch. xiv. 189). In the latter, however, bury in secret, from which we may probably infer that the object is to leave no clue to the burial-place lest it be violated by wizards (JAI xxiii. 84; Bégain, Mel-Esot, 1906, p. 113). In some of the Mofotas, graves are scattered everywhere outside the villages (Riedel, 81, 225). The Chilcotin are said to bury wherever the death occurs (Jenep. Expd. ii. 1900-8, 778). Among the Chinese and other nations in the Extreme East the situation is different. The grave of the dead is formed for a cult; its religious, whose art is called in Chinese fung-shui, defined by de Groot (iii. 935) as 'a quasi-scientific system, supposed to teach men where and how to build graves, temples, and dwellings, in order that the dead souls shall not commit the living may be located therein exclusively, or as far as possible, under the auspicious influences of Nature.' The practice is, therefore, founded on the conviction that the dead dwell in the grave exactly as living dwell in a house. This conviction is by no means confined to China and the surrounding countries; it is explicit or implicit everywhere in the lower culture. The imagination clings to it; and mankind has found it extremely difficult to get rid of the notion, though it has continually come into collision with the teachings of the higher philosophies and religions. Accordingly, the dying man's own wishes are often consulted as to the place of burial, or it is determined after his death, as in the Esker Archipelago (see ibid., 256) or by supposed movements of the coffin in answer to questions put to the corpse. This is, of course, a species of divination. It is more commonly decided by the manner in which the dead is regarded, that is to say, whether fear, on the one hand, or affection and hope for future benefits, on the other hand, predominate in the minds of the survivors.

But see § XIX.

(2.) Children—As an illustration of the latter motive may be taken the wide-spread custom of burying children in, or at the door of, their mother's hut. A comparison of the reasons alleged for so doing, and of other practices and beliefs, leads to the conclusion that the object is to obtain a re-birth of the child.

The custom is found in Africa East and West, in the Panjab, and among the Naga tribes (see H. H. von den Steinen, Notes on the Andaman Islands, among the Karo-Batak, the Creeks, the Seminole, the Chosa of Southern Mexico, and in several of the Andaman Islands). In the West the North American Indians bury their dead children in the house; and to this day the Russian peasant buries a still-born child under the floor (Harland, Prin. Patern. 157, 149; JAI xvi. 397, 1906; Euchel, Histoire 1874; Staatsber. S. Mex., III. 1902, 74; Riedel, 421, 267; Chandras Das, 220).

(i.) Others than young children. —Burial or sub-aerial deposition is a practice found among the African tribes and among the Negroes and Bantu.

It is, however, far from being the universal practice among either the Bantu or the Bantu. Among the head of the household is frequently buried within his own settlement or compound, or, as among the Kabuts of South Africa, in the cattle kraal. The chief is buried near his former dwelling house; in other words, the chief is buried in his village. On the Ivory Coast several bury under the hut (Eiseler note, Rabot, 119, 127, 221, 232, 365; Wreden, 279, 1902). In the case of these, as well as the West African Bantu, burial under the floor of the house, or in the kitchen-garden adjoining, is a dis-crimination reserved for the females only. In others the custom seems more general, and the head of the household at least is usually buried near his own house (Eiseler, 121; Leonard, Hist. Spitt., 256, 261, 351, 782, 785; JAI i. 171).

The same rule applies to the Ntchic and Bantu tribes on the other side of the continent (Johnston, 904, 905, 751, 749, 779, 789, 880; Castati, Ten Years in Equatoria, London, and N.Y., 1909, i. 365; Geschi, Seven Years in the Soudan, London, 1892, 26; JAI xix. 305; von der Gegen, op. cit., 'Enterrerment'; Werner, 157, 163, 165).

In Madagascar the practice differs with the tribe. The Kandivamirakasa, Betsileo, and Betsileo, and other tribes bury at a distance in solitary places, and their graves are greatly feared, while the Betsileo and Hovas bury on the roadside and even between the dwellings (Mad. au xve siècle, 278).

A similar diversity is found among the forest and pampas tribes of South America, some of which bury under the hut. The Cumans bury on small islands in the river (water is notoriously difficult for the dead to cross) or else in the hut occupied by the deceased. But in the latter case the hut is deserted (Int. Arch. xiii., Suppl. 85). The motive in both is obviously fear. In North America tribes like those of the Northern and Western Cheer, Nez Perce, Shoshap, and Thompson Indians, to mention only a few, bury either by dividing a grave or setting it up as a monument. Some, like the Creeks and Seminole, bury them under the house. Others, such as the Nambial of California, buried them at a distance. The Zunis, who do not practice these customs, probably in former times buried their dead in their caves, or under the dwellings, or at the graves of the ancestors (see RIEB, 336, 346, 356). Many of the inhabitants of the Eastern Archipelago and the Pacific Ocean bury in the dwelling of the deceased; but there is no uniform practice. In the interior of Fiji (De) Fiji, for instance, in the province of the, many persons were buried before the threshold of the house, or in case of men under the clan dormitory; elsewhere the dead are buried at a distance because they are feared (Annette, liv. 1909, 38, 90). In Assam the grave is dug in front of the house (JAI xxi. 1906, 80). In ancient Assyria and Babylonia the ordinary dead were buried under the floor of the house (ABV xvi. 106). What looks like a relic of the same custom is found among the Lolas of Western China; the day after the funeral a hole is dug in the dead-chamber, and a fragment of the corpse is offered that the star of the deceased may descend and be buried in that hole. It is believed that if this were not done the star would fall and possibly burn some one (JAI xxi. 103).

The burial-place is frequently in a grave or thicket, afterwards shunned as sacred. Chiefs or other high-born die in their own houses, and the chief shammans, are, in particular, recipients of this honour. Chiefs and priests on the island of Rotuma are buried on the hill-tops (JAI xxvii. 1898, 431, 432). A similar custom is found on a hill near the coast of Java, where it is usual to have his house or barrow. The Arapahos, the Wichitas, and other North American tribes lay their dead commonly on hills or bluffs.

Among many peoples each family or each clan has its own place of burial, whether the mode of disposed of the dead be by cave burial, in-
DEATH AND DISPOSAL OF THE DEAD (Introductory)

Inhumation, sub-aerial deposit, or cremation. This was the custom of the ancient Greeks (Rohde, i. 255) in the west, and the Egyptians; and it is believed to have continued to this day in the Holy Land (Wilson, "Peasant Life," 158). Nor is it confined to a comparatively high stage of civilization. It is a natural and by no means uncommon outgrowth of the funeral custom; and, where ancestor-worship exists in a developed form, it adds strength to its cult by concentrating the cult about one spot.

The Chinese custom dates from barbarism; and the practice of depositing the body in the open air (de Groot, iii. 329). Every clan of the Baganda, and even of the Muham- madans, or the chiefs of the Buquidnones (Veltzoe, Sitten und Gebräuche, 1963, p. 259). Every family of the Chechens in the Caucasus and of the Barea and Kurnama in Abyssinia has its vault (Anthrop., iii. [188] 734; Munzinger, 622). On the Gold Coast, among the Tanim of Madagascar, the Nicobarese, or some of the British Cblonian tribes the families have common burial-gronds (J.A.I. xxxvi. 183; Globosa, ixxxix. 361; Int. Arch. vi. 31; Jassop Exk. i. 236, v. 64). The Urals of Southern India have a common burial-ground at Narsingdi, in which all are finally laid to rest; but each sepulchre has its own burial-ground close to its village, where the preliminary observations are celebrated (Castor and Tribe, vii. 256). The Chams of Further India and the Kheos of Assam practice cremation; their ashes are deposited in the family sepulchre (Cahaton, Chans, 45; Gurdon, Kheis, 1907, pp. 135, 149). As society becomes more highly organized, the custom of sepulchring is abandoned by the farthest tribe, and it is then accompanied by kings and nobles. The kings of ancient Society, the Philip, the Katong chief and English peers, agree in displaying the same veneration.

Where, strictly speaking, there is no family sepulchre, sometimes, at least, the body is buried upon the land of the tribe or family.

The ancient Norseman's house was upon his own land. The Quiche of Central America buried in their maize fields (Int. Arch. i. [188], Suppl. 72). The Burjans of the Philipines and the Moctes of West Africa are laid in their own cultivated fields (sawyer, 317; L'Anthropo. xv. [1904] 667); and the Chaus have their family cemetery close to their richest cornfield (Cahaton, loc.). In these cases probably the deceased is thought to have an influence on the fields and enhance their fertility. Among the Igorots, however, where the dead man is buried in his own cleared land, unless he has selected some other spot, the place is afterwards held sacred (Saint-Gr., p. 413). The modern Philippine lay his dead in the earth or in a little building called a chapel on his house lot (R.T.P. vii. [1891] 225).

Other distinctions, as has already been noted, are often made between the dead. On the island of Keiser, one of the Moluccas, a great nunu-tree stands in an open square in the centre of every village. It is thus sacred, and places of public assemblies are held there (Kiedel, 422). The same character attaches to the Men's House, or Bachelors' House, necessary to a village of the tribes of New Guinea. It is often, if not every man, at least an important man, is buried, and his bones are preserved after the final rites (cf. Globosa, xcvii. [1908] 106, 168).

(7) Preservation in house. Many peoples preserve the body above ground in the house, either with or without previous desiccation or mummification. This practice originates in a rude and archaic condition of society, and is frequently abandoned, as civilization advances, in favour of temporary or permanent burial.

Thus in Tahiti, a native tradition, which doubtless represents something like the subsequent deposit of custom, speaks of a period when the dead were allowed to remain on a kind of stage in the house in which they had lived, and which continued to be occupied by them by means of separate houses which were built for the dead—small temporary buildings, where they were led, and whence they were drawn out to be exposed to the rays of the sun. The corpse was visited from time to time by the relatives, and was washed every day with aromatic oils. The flesh was slowly desiccated in a family oven, or temple, or else buried, except the skull, which was wrapped in native cloth and preserved, often suspended from the roof of the temple, ep. cit. 1. 499.

Notwithstanding all reverence for the dead, and all precautions in the shape of desiccation and perfumes, the custom of keeping the body in the house during the period of decay must have been found intolerable. Tribes to which this immediate burial was repugnant therefore usually adopted one of two courses: they abandoned the hut to the corpse, or they removed the corpse until dissolution had been carried far enough to render it no longer offensive.

So the Waggo of East Africa keep the corpse of a man of rank in the hut until it putridity, while they mourn and drink poison. It is then placed on a scaffold in the open air, and when they have left, when they last are buried (Steinmetz, 211). The Attilans (ithun or warrawara), or the dead are kept by the body in the house "until the stench became intolerable." It was then placed on a scaffold in the open air, that the work of decay might be more completely accomplished. The remaining skull was then placed in the hut, the latter afterwards arranged on the sides of the cabinet in full view of the inmates until the Feast of the Dead, the great day of the festival. To the people of Ikogolo, the bones, the latter were afterwards arranged on the sides of the calbets in full view of the inmates until the Feast of the Dead (Steinmetz, 211). The Mungo or Mon of Tongking kept the corpse in a coffin for three years in the presence of the family of ancestors; but they palliated the results of dissolution to some extent by using a bamboo tube in the lid of the coffin, and putting up the roof (Letet, 359). In West Africa the Baulde embalm and preserve the corpse in the hut for months or years. In spite of embalming, the odour for three weeks is horrible. It then gradually diminishes, and by the end of two months the corpse presents the appearance of an Egyptian mummy. In this state it is kept until the convenient time for the final rites, with which it is laid in a grave under the hut (Closs and Villamar, 115, 116). The Yumbos of South America also mummify their dead, and hang them up in the house under the thatch (Int. Arch. vii., Suppl. 79). TheGilbert Islanders placed their dead in a box or trunk, and they have a public ceremony for the dead in a room over their house (cf. Lass, iii. [1883] 285). The practice of exhuming the hut to the dead is followed in many other places. Its motive—whether of the death-pollution or of the ghost is probably no more than a question of teresom—subsides.

(g) Cremation is a mode of disposal of the dead that has been adopted from time to time by nations widely scattered over the earth. It is the ordinary mode in India among the aboriginal peoples, as well as among the Benares Indians; and has passed from India to Tongking, and has obtained a footing by Hindo influence on some of the East Indian islands. It is practised by many tribes of Siberia and of the Pacific slope of North America. In ancient times it was also practised widely in the eastern, and (exclusively) by the tribes of the North American plains and of the Mississippi basin and Atlantic shores. It is customary among some of the northern tribes of South America, and among the Melanesians of North New Mecklenburg and New Hanover, two of the islands of the Bismark Archipelago. The funeral mounds of Europe witness to its use in pre-historic times, from the south of Russia to the British Isles. The practice seems to have begun in the islands of the North, and with the Roman Empire the fashionable mode of disposing of the dead, among the official and wealthier classes. It is sporadic or occasional in many other parts of the world.

More than one reason may have conduced to the practice of cremation:

(1) Tribes without a settled abode may have found it convenient, if they desired to carry about the remains of their dead, or to remove such remains beyond the possibility of desecration by their enemies.

Some such motives perhaps operated in the case of the Cocopa Indians, who occupy the lower valley of the Colorado River. By the annual floods of the river they are driven from the bottom lands to the higher grounds. The annual irrigations are of
DEATH AND DISPOSAL OF THE DEAD (Introductory)

great regularity, and have affected the habits of the tribes in various ways. On the death of an adult, his effects are collected for his children rather than his kin. The body is laid on a pyre beside his hut; and, after all the kinematics have been satisfied, the corpse and the rest of his goods are burnt, together with the hut and any neighborly gifts belonging to the clan that may happen to catch fire. The survivors then abandon the hut and the field where the body was burnt, and formerly burnt the land.

The Zulu and Mfengu are an immigrant people of Northern Tonga; and, though they have been settled as cultivators of the soil in the mountainous country for many generations, their villagizations are still constantly removed from place to place, to suit their requirement. There is no place to which the Zulu will not formerly burn the dead, and carry the ashes with them in their migrations. But the custom has been generally given up, because the accumulations that were required to be disposed of became an intolerable burden. The ashes were, however, in the west of the Red River basin, where the bodies, after incineration, are placed in earthen jars (Lamet, 239, 240). Among the Kaffirs, the previous cremation of those who died by violence has not been observed; and in such cases the ashes were taken home and burned (Bell, Ann. Mus. Nat. Hist. xvi. 242).

(i) Another very powerful motive for cremation is the desire to be quit of the ghost. Various means are adopted for this purpose (see XI.). Cremation by burying the dead is, however, not the less potent. This is best observed where cremation is exceptional, as on the continent of Africa.

Among the Yaos and Manganja a woman who was accused of witchcraft was condemned to death by the mode of interment, was burnt (Macdonald, Africana, 1852, i. 104). In West Africa burning is especially the mode of disposing of bodies of criminals, by which are usually accused of witchcraft or of poisoning some of whom are also burnt to death (Nassau, 224). The Lukwile and other tribes in the neighborhood of Lake Tanganyika believe that a month or two after the death of the body, the bodies of drunken Pagans brings back the bones to life. A mysterious being called Nkina animates them; and it is believed that in these cases probably too great, and the custom may have been in decay for some time. The procedure, however, seems to have been neglected with regard to friends killed in war at a distance from home—contrary to their practice in other cases. The practical difficulties were considerable (Jas. Anderson, 1. 108). The great body of the inhabitants was burnt: otherwise they would be refused admission. The practice was, however, very rare. It was probably too great, and the custom may have been in decay for some time.

(ii) This cremation is an effectual protection of the survivors against haunting the dead. It is more than this: it thoroughly frees the ghost from the bonds of this life, and fits it for union with the society of the departed in the life beyond.

The Wanns and Guiana burn their dead, 'that the soul might fly to heaven on the smoke' (Int. Arch., xiii., Suppl. 87). Among the Lurians of Further India the higher classes are cremated in a papyrus representing a mythical bird called Hasting. It is said that, in order to obtain Nirvana, the bird must be killed. Accordingly, a woman ceremonially shoots an arrow at it; and then the bird is killed. In places where the custom has been observed, a mythological tale of the slaughter of the bird in the persons instance of a hero who was an incarnation of the goddess and the woman who shoots the ceremonial arrow pretends to be a descendant of the goddess. But there can be little doubt that this story is a later and more recent development of an old tradition, and that the bamboo bird really conveys to the other world the soul whose cremation has been practised (Ar. Ind. R. 375). In this case the shooting would be the ritual slaughter of the bird, in order to put it into the same condition as the Pagans the Hals of Massel, persons killed in battle or by violent means, were believed to go, after death, to the abode of a supernatural being named Tzex, which was suspended in the air. To enable them to do their work by their own means, it was necessary to put them in the hands of the Deity. When the configuration came to an end and nothing was left, it was believed that the king had returned to heaven, whence, according to the tribal legends, his ancestors had been exiled, and whether this was the prescribed method of returning (An-
tropo, xvi. 6). But the ghost is often conceived of as inhabiting the charred bones, and not completely disposed of until some further ceremony has been performed. The rites at the cremation of the body of the chief of the Atdla plate are described by H. 
Among the tribes of India which have been influenced by Brah- 
manism to throw the ashes into some sacred water, as a means of uniting the dead and the living, the ashes are sometimes thrown into an urn or other receptacle, and buried, or kept in the house. In this custom, the ashes are placed in an urn, and the vessel of the urns was sometimes removable, in order to place the spirit of the dead by periodically pouring libations upon the ashes.

VIII. THE GRAVE.—I. Shape of the grave.—On this subject something has been said above in dealing with grave burial. The grave is the residence of the departed; and efforts are not wanting in various parts of the world to render it as comfortable as circumstances permit. As already pointed out, the Chinese practice of fang-shui is traceable to this motive. It is possible also, that the widespread practice of abandoning the hut to the dead, whether burned or exposed in a grave, may have the same motive, in addition to that of escaping the infection of the death. The destruction of the hut above the corpse, which frequently takes place, need not preclude it, since it is a common principle of fang-shui to destroy the dead that must themselves be killed by breakage, or even burning. Where burial does not take place in the hut, a hut or shelter is often erected over the grave.
DEATH AND DISPOSAL OF THE DEAD (Introductory)

ment; and this hut, as the abode of the deceased, becomes his abode forever. The huts are recumbent on the face, which is supposed to remain seated on the grave for two months after burial (Cunningham, 357). Elsewhere, as in New Guinea, the shelter is in the form of a recess in the mountain, the ngoro, who go thither to weep, as of the departed (Chalmers, 110).

The underground resting-places of the dead are also provided with regard to their comfort, often to magnificence. The Ewhe of West Africa bury beneath their huts. Rich people have their huts prolonged and held high above the ground, and for them is a large as a room (Spiegl, 634). The prehistoric graves of Crete, circular chambers of stones covered with mounds of earth, in which the bodies were deposited, and they are generally surrounded with a trench from which the earth for the barrow has been taken, sometimes also with circles of stones. Where an elaborate structure of this kind is not usual, it is common to cover the grave with a heap of stones, or with a simple mound of earth. Where, as among many tribes, the grave is shallow, the stones, or often (according to the nature of the country) a pile of branches, may be intended chiefly to protect the body against wild animals. Against human beings they are more often defended by fences, or smoothed and levelled down so as to remove the traces of burial, as is the practice of various South American tribes (Int. Arch. xiii. Suppl. 92, 97; Globes, x. 305). Where mounds or barrows are erected over graves, they become, with growing civilization, pyramids of wrought stone and mausoleums.

2. Position of the corpse.—It is a very general custom in the lower culture to bury the dead in a crouching or squatting position. This is the natural position of rest during life for peoples who have not the civilized appliances of chairs, tables, and beds. It is accentuated in the case of the dead by binding or cloths, and skins or bones, even breaking the bones for that purpose. The body thus prepared is usually laid on one side in the grave, just as the skeletons in Neolithic and later graves in this country are found. Sometimes, however, it is placed seated or lying on the back.

Examples of both have been described among the West Australian natives (Calvert, 41, 42). Extended burials (lying full length) are so common. At Kunnum, bodies have been found both flexed and extended. Extended burials were customary among the Maoris of New Zealand, the Goths of North America (Burck, Wheatley, 1894, p. 15), the Brimmans of the Ivory Coast (Closed and Villanour, 407), and the Yanquis of Southern India bury in the same attitude, but the last with the face downwards (Thornton, vii. 436).

The direction in which the body lies in the grave differs among different peoples, and even among the same people. In the pre-historic graves of this country, as well as of other countries, skeletons have been found quite differently orientated, though sometimes in the same barrow; and the explanation of the variations is still to seek. The Wotjolans and Nadjabs of New Guinea, the Tiwi of the Northern Territory, and the tribes of the South and Central Coast of Australia, have the body in an extended position, facing the east or west (Jaladja, 1907, 173). The body of the Amur coast Eskimo is often laid in a flexed position, but the face towards the north (Tokuz, 251). The body of the Carankas of the Andes is laid with the face towards the south (Jaladja, 1907, 174), and sometimes with the feet towards the east (Jaladja, 1907, 173). The body of the Inatek among the Amur tribes of Siberia is laid with the feet towards the north (Tokuz, 251). The body of the Amur tribes of Siberia is laid with the feet towards the north (Tokuz, 251).

Thus the Ngemba of New South Wales bury the head towards sunrise (Mathews, 72); the Awemba of Central Africa (JAI xxvi. 157) bury the head towards the north (Chalmers, Nat. Hist. xvi. 243), and the Wamba of the Ivory Coast bury the head turned to the east. On the other hand, the Yoruba (Jap. Expd. li. 269), the Mangucus of Scegge (JAI xxvii. 163), and the Brimmans (Closed and Villanour, &c.) agree with the Christian population of Europe in burying the head towards the west. Tribes which preserve the custom of interment of the head, or bury the heads with their back, frequently bury with reference to the direction from which they believe the soul has come, and in which it passes in the future. Among the Some of the Ewhe tribes of South Africa bury so as to face the North (Dempert, § 23; Kidd, 243). This practice seems to be connected with a belief that after death the soul journeys back, as among the Miso of the Chinese province of Kwei-chow (Anthropos, iii. 109), to the ancestral seats of the race. Among the Wanyamwezi of East Africa a man who dies in a strange place is buried with his face to his mother's village (Horton, Lake Regions of C. A. After Land, 338). In the Muhammadan peoples bury so that the dead may face Mecca.

3. Coffins.—The corpse is further defended against external influences by a case or coffin. In the early stages of culture a coffin was intended merely to contain the body, and if it is deemed desirable to protect the body from the earth, this is done by means of the niche or recess at the bottom of the grave: a shaft so common in Africa, or a covering of boughs is laid over it before the earth is thrown in. In some peoples in a comparatively high stage of civilization protect a coffin. Wood is the usual material for a coffin. Originally, probably a hollowed tree-trunk, as still among the Niinnamm (Probenius, 103), it has evolved many forms, painted, as among the Ibonzo on the Niger (Anthropos, i. 1907) 102, or carved, as among the Eskimo and Indian tribes of the North-West of America, and the Dayaks of Borneo. These carved coffins or grave-boxes, however, are not intended to be put under ground. In this connexion the richly carved sarcophagi of late Roman and early medieval times will be recalled.

A very general custom prevails in South America, where the art of pottery is developed, of putting the dead into large urns. In pre-historic Crete it was a well-known practice to enclose the body in a terra-cotta chest called a baranitza (Arkeologisa, li. 306-400). In Japan, bodies were often buried in sarcophagi of wood, stone, or terra-cotta (Archaeologia, iv. 1927, 474). The barrows, when, as often happens, especially among the rich, the dead are interred to be buried elsewhere in sarcophagi, among the farmers, especially in the large barrows in Japan (de Groot, i. 158; Leun, 97). The Tagamans of the Philippines bury children in jars (Sawyer, 313). Under these circumstances the bones are disinterred and cut up into the smaller bones are cut up, put into the jaws, and erected a cairn of stones over it (Iodol. Sic. v. 18). The bones, after being desolated of their flesh, were buried in urns by many of the tribes inhabited what is now the United States (Amer. Antar. vii., now ser. 1904), 660. A similar practice is recorded by a widoe traveller in Tibet (ZGFH xx. 1927, 115). And the Kukis of Assam, after the body has undergone preliminary decomposition, clean and preserve the bones in a vase, which is then buried. Some tribes are said to build a temple to the dead in the same way (ibid. 1904), 115. The cremated bones in urns has been common wherever cremation was practised by peoples acquainted with the art of pottery. Burial in ships or boats has already been referred to. Sometimes, in the gold mining districts of Brazil, a coffin is fashioned out of the canoe of the deceased by cutting it in two and placing the body between the two halves (Globes, x. 327). Lighter materials are often employed for the coffin. On the Gold Coast an oblong casket of barks is employed (Jour. Afr. Soc. vii. 1908, 302). On the other hand, more than one coffin is sometimes employed in the case of a wealthy or important personage. In this wasteful practice African barbarians agree with the cultured peoples of Europe.
DEATH AND DISPOSAL OF THE DEAD (Introductory)

Nora is the object of a coffin always, or entirely, to be (possibly even) leatherlike. The initial intention was to protect the living from the visits of the dead.

This was expressly alleged to Nelson by one of the western murderers. He showed the grave-box in which the dead were deposited on the shores of Bering Strait. "It was better," he said, "to keep the dead in grave-boxes, for it kept their shades from the living."

Although, however, we may suspect the desire of imprisoning the deceased to have been a primary motive in the provision of a coffin, the desire to provide for his comfort in the grave was probably also—perhaps equally—present. That the intention of a coffin is not always to bottle up the soul with the body is clear in such cases as that of the Siusi just referred to, where a hole is left expressly to enable the ghost to go and come, and thus preserve its temporary connexion with the bones until the time for final severance arrives.

IX. Funeral ceremonies.—1. Time of funeral.—The length of time required to elapse between death and the funeral varies from a few hours to many months. In the west as in Africa and the Solomon Islands, it may extend for years, while the preparations for duly honouring the deceased slowly proceed. At length, however, the time comes when the solemn ceremony which is to sever the bonds from the living is appointed to take place. The night is not infequently reckoned the appropriate time.

The Hopi of North America conduct their funerals at night (Zoeth, Ethn. xxxiv. [1896]356), the Zulus of S. Africa at early dawn (Anthrop. I. 169). The Manann of South Africa and the Negros of the Lower Niger bury in the evening (Molok, Seven Years in S. Africa, Lond. 1851, i. 210; Leonard, 1901), while the Basuto dig the grave after dark, but defer the actual burial until the following day. This is said to be performed before the children wake, for they must not see the body (Martin, 1899; Journ. Afr. Soc. v. [1896] 257).

The reason for the selection of the darkness as the season for burial seems to be that the survivors then cast no shadow, which is often confused with the soul, and hence that the deceased, or any evil-disposed spirit, would have more difficulty in capturing and retaining souls. The souls of children, particularly, are liable to attack, and the Southern Nicobar Islands, burial takes place at sundown, before midnight or early dawn, expressly in order to prevent the shadows—that is, the souls—of the attendants from falling into the grave and being buried with the corpse (Ind. Curr. 1901, iii. 209).

2. Touching the dead.—Throughout the rites and observances attendant on death, two motives—two principles—are found struggling for the mastery. On the one hand, there is the fear of death and of the dead, which produces the horror of the corpse, the fear of defilement, and the overwhelming desire to ban the ghost. On the other hand, there is the affection, real or simulated, for the deceased, which behoves the closest relations to be unwilling to let him go. Thus, though the touch or even the neighbourhood of the corpse causes defilement, there are not wanting peoples with whom it is a ritual necessity for mourners to touch the corpse.

The islanders of Maraling, Torres Straits, and the Negroes of Jamaica agree with the people of the British Isles and the neighbouring Oceania in this requirement. In Europe the reason usually assigned is that it prevents being haunted by the deceased. The German-speaking population of Iryan in the hills of western Russia, and Moravia, are of the opinion that they may not be afraid, which we may interpret in the same sense (Z'V Yr. vi. [1896] 483); while in Montenegro every one must kiss the corpse (Jal. xxii. 94). Among the Bulgarians all relatives kiss the right hand of the deceased, while members of the family in addition, each one who has been in the same month bends over it to breathe and touches its head with his own head (Stranz, Die Ber. v. [1896], p. 450).

3. Circumambulation.—Another ceremony is that of walking round the corpse.

When the Argonauts in the poem of Apollonius Rhodius buried their dead conrade Mopsus, they marched round him thrice, in their warrior gear. So among the populations of India in those regions, the mourners, after several acts of尊崇, light the frye first walks thrice round it. The custom of walking round the corpse, or the grave, is observed by a number of people as far as apart in space and in culture as the Central Eskimo, the Russian Lappis, the Burials, the Shaas, and the Burials of East Africa. It has even been used in the6 burial of Somnus (France), after placing the coffin in the grave the mourner go thrice round the grave backwards (Guerin, vi. 164).

The direction of the procession is probably wisely, though it is rarely recorded; and it is usually performed thrice. There can be little doubt that the rite is magical, intended to keep the dead in the grave and prevent him from molesting the survivors. Cf. art. CIRCUMAMBULATIO

4. Carrying out the corpse.—More widely spread still is the custom of taking the corpse out of the house by some other way than the ordinary door. Among peoples in the lower culture, from South Africa to Greenland, from Alaska to the farthest limits of Asia, the East Indian Archipelago, and the islands of the Southern Ocean, where the huts are not provided with windows the dead are not likely to be put by the side-door, or a hole left open for or side of the hut specially broken for the purpose, or, as among the Koryaks, by raising a corner of the tent. Where a window exists it is often utilized for the purpose. The hole is closed immediately after the passage out of the corpse, the object being to prevent the deceased from finding his way back. As civilization progresses, the custom is gradually confined to the corpses of those who have died evil deaths.

A Neapolitan, who, by his character or the circumstances of his death, was deemed, like Thesel in the Bythygge Saga, likely to give trouble after death, was buried as an outcast. On the first occasion he was to be attacked, the Southern Nicobar Islands, burial takes place at sundown, before midnight or early dawn, expressly in order to prevent the shadows—that is, the souls—of the attendants from falling into the grave and being buried with the corpse (Ind. Curr. 1901, iii. 209).

5. Other instructions against return.—To prevent the return of the dead, it is not enough to take out the corpse by an unusual way. The dead man must be prevented from seeking access by the back door, or other means by which he may enter the house. Thus, when the corpse is carried to the grave, it is not placed straightforward on the ground, but is made to walk round in a circle (Feilberg, 1895, 1897). His head is turned back (Eyrbyggia, p. 264, 265). Here, perhaps, the successive children dying are regarded as the same child returned and re-born (Hartland, Prin. Pat. i. 200). In that case the object is to prevent access to the dead infant to its mother, that she may not see it again.

5. Other instructions against return.—To prevent the return of the dead, it is not enough to take out the corpse by an unusual way. The dead man must be prevented from seeking access by the back door, or other means by which he may enter the house. Thus, when the corpse is carried to the grave, it is not placed straightforward on the ground, but is made to walk round in a circle (Feilberg, 1895, 1897). His head is turned back (Eyrbyggia, p. 264, 265). Here, perhaps, the successive children dying are regarded as the same child returned and re-born (Hartland, Prin. Pat. i. 200). In that case the object is to prevent access to the dead infant to its mother, that she may not see it again.

Among the Masurs of East Prussia and in Bulgaria, when parents lose a succession of children, the last to die is taken out through the window (Toppen, Aberg. aus Masuren, 127; ZTV xi. 283). Here, perhaps, the successive children dying are regarded as the same child returned and re-born (Hartland, Prin. Pat. i. 200). In that case the object is to prevent access to the dead infant to the child of the corpse (Spitzu, 765).

The Kalmucks remove the corpse of a childless woman through a hole in the side of the hut opposite to the door (Globus, 1894, 1895). On the other hand, they put the corpse of an impotent woman by the outer wall (Krujt, Animismus, Hamburg, 1896, pp. 264, 265). These three deaths are formidable, either from the manner of death or from channelled position.

Among the Masurs of East Prussia and in Bulgaria, when parents lose a succession of children, the last to die is taken out through the window (Toppen, Aberg. aus Masuren, 127; ZTV xi. 283). Here, perhaps, the successive children dying are regarded as the same child returned and re-born (Hartland, Prin. Pat. i. 200). In that case the object is to prevent access to the dead infant to its mother, that she may not see it again.
practices are found in Europe. In Leitzim the longest possible road is taken to the churchyard (EVL vi. 211.) and it is probable that both in Ireland and in Germany the corpse is carried three hours through the church.

In various places in Europe a number of pre-established benches on which the coffin has rested are thrown down (East Prussia; Igla.) The coffin is lifted three hours over the threshold and thence rested upon it—an indication to the deceased that this is a solemn and holy place. With the axe (Wops; Sp.) an axe is laid on the threshold or hung over the door as soon as the corpse has passed (East Prussia; Sweden).

Water (in some places the water used in washing the corpse) is thrown out with or without the vessel containing it, after the funeral procession has passed (JAF xxiii. 35; Ridd, Cust. Mod. Greece, Lond. 1892, p. 124.) More than one motive has probably gone to form this custom. Purification may be intended; but the object also is to disperse the corpse. If the corpse be like other supernatural beings, they have a difficulty in crossing water. In Greece, indeed, the custom of flinging out water is said to ease the burning pains of the dead—a later and probably Christian interpretation.

In Brittany the dead of the commune of Plouguel are carried across a small arm of the sea called the Passage d'Enter, immediately after the funeral procession leaves the cemetery (KTP v. 651. In the same way the Hakid carry a shaman to his burial by water, even though the burial-place is not far from the edge of the cemetery; the taboo is that they do not fear a dead shaman like other dead people, but they want to handle his things, and hence, we may infer, to keep him off so that he cannot return to interfere with them (Jexp. v. 53.) In Sweden, it seems to be through the feet of the bearers to prevent the corpse from falling over. The effect of the custom is to prevent the corpse from being taken by the devil (Jexp. xxv.) In the Solomons Islands the return from the funeral is by another road than that along which the corpse was carried, lest the ghost should follow (Cuddington, 26.)—the practice likewise followed in Corfu (Ridd, 122.) Many peoples erect barriers against the ghost in returning. Thus the Korays (who cremate the body) strew twigs around the pyre, representing a dense forest which is supposed to surround the burning-place. An attempt is made to obscure the tracks of the officiant, and a line is drawn across the road, over which the mourners jump and shake themselves. This line is supposed to represent a river. The Chokhi customs are similar. A small cup and the bunch of grass used in washing the corpse are hidden separately on the grave, so that the grave is empty till it reaches the sea and is joined by another dense forest (Jexp. vi. 112, vii. 555.) It should be pointed out that it is by such means that the mourner is supposed to beahunting the incident of the Magical Flight from the pursuit of the Urgre, and that the grass and twigs are only used in cases of defence familiar to them in their traditions.

These specimens of the various methods of preventing the return of the dead will suffice for the present. Reference will be made to others below.

6. (The corpse is thrown out.) A dead man is often supposed to be reluctant to quit his home. Among the Navar, or Eastern Gypsies, as well as among other Arab tribes, he goes the length of forcible resistance, compelling the bearers even to return to their home for two or three days buried—to the great detriment of the public health (Jasson. Coutumes des Arabes au pays de Moro, Paris, 1898, pp. 100, 105.) The Negroes of Jamaica aver that, when a dead body wishes to go forward, it is easily carried, but when it does not wish to go, it gives great trouble (EVL xxv. 453.)

A ceremony is performed on Car Nicobar which is perhaps a dramatic representation of the unwillingness of the dead to be buried. The funeral procession is met by another band of men who drive the bearers by force, struggling over the corpse, some dragging it towards the grave, others holding up the village, until it often falls to the ground. An eye-witness on one occasion tells us that the women and children, who stood at a distance, began to cry out that the corpse should forcibly enter the village. In the end, however, it was pushed up and thrown into the grave, the body having been sacrificed accordingly (JAF xxiii. 215, 211.) The ceremony was said to be performed only in the case of men of the highest repute (Id. 223.)

7. Farewell speeches.—Men, however, have not been content with such broad hints to the dead and defences against their return as described in previous paragraphs. They have told them in plain terms that they are not to come back, that the separation is definitive; and a considerable part of the funeral ceremony is often devoted to this purpose, enforced both by speech and symbol.

A ceremony is performed by the Bakuts of Sumatra, prior to the burial of the bago (son or individual who has died) is met by a Shannahistic ceremony that it belongs no more to the living, and must not communicate with them. The corpse is carried with djiargua (a specific against the bago) is carried round. Some of the parts of the body are rubbed with a piece of it, and it is thrown over the corpse with the bago, brother (or mother, or other relative) will converse with them no more (JAF vi. 565.) During this ceremony the corpse is wrapped in the Chans, a man, who bears the significant title of Master of Regrets, is left behind at the house. His business is to curse it and then to adjure it to return not to his family, but to his family (Calab., 45.) The Mung or Men of Eastern Tongling perform an elaborate series of rites with this object. They begin on the line of the corpse, that the dead man should come and recite invocations, accompanied by a bell to drive away evil spirits, and then to ascend to the heavens, separated from the other world and find relatives who have preceded him on earth. In order to guide him in his journey he enunciates these recitations by his relatives, and then to die as a witch-doctor. These are prayed to show the deceased the way to the dwelling of the superior genii, with whom he will find help; and the witch-doctor again casts lots to ascertain if he has been understood. The third night the ceremonies and offerings are repeated. The fourth, especially in honor of the ancestors, and the fifth, a separate offering to the witch-doctors, who is requested to conduct the soul to the grave where the body will lie, and which has been dug during the day. Before the offerings are disposed of he has to have the corpse again cast lots to satisfy himself that the soul knows the way to the tomb. At the grave two altars have been improvised, one in honor of the deceased, the other dedicated to the genius of the earth. Amidst the railing, the witch-doctor throws the body, which the survivors, and the genius of the earth to keep him in peace (Juenet, 530.)

The Jelles of Western China give the deceased specific instructions as to the route he is to take. On the way to the grave the priest recites the Song, or Road Ritual, and he accompanies the coffin a hundred paces from the house. This ritual begins by stating that, as in life the father teaches the son, and the husband, the wife, it is only the priest who can teach the dead man the road that his soul must travel after death. The threshold of the house is first mentioned, then the various places on the road and grave, and, beyond that, all the towns and rivers and mountains that must be traversed by the soul before it reaches the road which is the way to the race. Here the priest says that he himself must return, and the priest who is the road, the other road, the Thought Tree and the Tree of Talk, and there he thinks of the dead once left behind and weeps bitterly. After the meal is read, the priest returns to the house, the coffin goes on to the grave (JAF xxiii. 103.) On the island of Surong in the Moluccas the priest prays that the soul may do him no harm to the soul, but cordially to receive it, winding up with a prayer to the Lord Heaven and the Lord Earth to let all sickness go from the soul and in return the soul of the deceased (Riedel, 141.) On the Western Continent similar intimations are given to the deceased. Hapa was lowered into the grave, he was addressed: 'Don't be lonesome for what you have left. While you were living time came. Now the time has come, and so long as you live!' This, we are told, is to prevent the ghost's return and consequent misfortunes to the family (Godward, 70.) More closely among the Greenlanders a woman waves a lighted
DEATH chip to and floor behind the corpse when it is taken out of the house. There is nothing to hope to be had hereafter (Crantz, l. 257). In Central Africa, likewise, as among the Awemba, a speech is made over a man's grave, promising that the spirits will take care of his children and grandchildren, expressing the hope that he will become a good spirit in the next world. (Proc. Amer. Anthorp. Soc. xvi. 430.)

8. Death at a distance from home.—The desire to find one's last resting-place at home, among one's kindred and friends, is natural to man; and it has been translated into a number of ceremonial prescriptions which emphasize the necessity of such a burial.

Sometimes, as among the Lillooet of British Columbia, the deceased is buried in a temporary manner where he dies, and the bones of his body are left to be burnt away with his kindred. If this is impossible, the body is burnt and the ashes carried home (Jomp. Exped. ii. 270). Sometimes only a single bone is brought home, as in the case of Roman soldiers. Among the Ho of Togoland, when a man of importance is killed in war, he is buried on the spot; but later the grave is opened, his bones, hair, and nails are taken out, put into a coffin, and carried home, or at least his brothers on the maternal side must bring home his finger and toe-nails and his hair (Spith., 277). A large proportion of the modern Africans (at least of the south and east) carry their dead home, owing to their migratory habits. Their bones are collected and sent home; or at any rate the skull or a single bone is brought back (Heron, vi. p. 208). When a Norwegian king was killed in war, an image was buried in his place (Hered. vi. 55). In some of the villages of the Urali in western Siberia, a great number of a family dying away from home, laid on his bed, and the rest of the family standing around bewailing him (Dvor., Usci e nelle case, 4. iv. 283). At Chateaudun, a French sailor died at sea, a cross was taken to the house and made to represent the corpse. In the isle of Soio his portrait was laid on his bed. The corpse, it seems, had been moved to a churchyard. The clergy attended, and a funeral procession and service took place over this representative of the body (Rcp. vi. 192 [193] 106, iv. 316). When a man belonging to the Man Tiem of Northern Torgong dies at a distance from his home, the priest calls back his soul by means of a bell. Two inlets into the river are waded with a plurality of souls, and causes them to enter a doll made for the purpose, to which funeral honours have been accorded (Jomp. Exped. ii. 105). In Monto negro a dummy body is made with the clothing of the deceased; wailing and all other rites except actual burial are performed over this doll, and incense is made to rise from the dummy. Among the Ibo of Nigeria a few of the relations go a little way from home, cut a twig, wrap it up in bark-cloth and treat it in all respects as the corpse, all the ceremonies being performed upon it, including burial (Cunningham, 115).

Proceedings like these are doubtless much more than mere make-believe to the people who indulge in them. Probably in the first instance a relief to the feelings of the survivors, they must be held to be of real value and importance to the deceased, who attains by their means his due place in the other world and the rest which can come only by means of the proper ceremonies. See, further, xi.

X. Grave furniture and food.—The dead must be gratified with food, and with some or all of his near relatives, mostly by gratifying their love.
The practice of depositing these, either in the grave or upon it, is literally world-wide. Both fear of the dead and affection for him have combined to carry it very to extravagant lengths. Few examples will be required of a rite so well known.

1. Food and drink.—In Tsimshab and Tsimorlont, two of the Mohaves, when children under two years of age die, the mother milks her breast into their mouths before burial (Richtel, 390). So, when a child dies in the Urali of the Dzhambur jangies is about to be buried, a cow bull is killed and the bull's blood is poured down the arms and mouth of the corpse (Thurston, vii. 285). The practice of placing food and water on the grave is general among several of the Australian tribes; it is sometimes continued for many days (Howitt, pp. 448, 456, 467, 474). Among some of the Hill Tribes of Assam, these offerings to the dead are placed on the grave for a year or more (Stoll, l. 455). Some of the Papuan tribes plant taro beside the grave (J.R.W. xix. 103). The Tchagh␣танц (see also sub-ceremonial, deposit with the dead a sack of flour, flesh, mutton, his spoon, and generally whatever may be necessary for one who has to take a long journey (I. D. de la Rivière, 206). The Indians of California placed with the body quantities of food consisting of dried fish, roots, herbs, etc. (ib. 151). In Guatemala, provisions for the dead were given in amounts which were generally large and wide (Carrion, Die Ethnographie der Inlander von Guatemala, 1879, p. 71). The Wasek in Washington State, a sub-tribe of the Cowlitz, buried with the dead a bundle of roots, branches, and dry fish (Int. Arch. 1913, Spnm. 65). And it may be said generally that similar practices are recorded of all the tribes on the American Anal. of West Africa provide the deceased with blood (reminuiling, for instance, to the hope of the future), food, and drink (Clozel and Vilain, 23). Of drink, brandy, pony, or rum is commonly given among the Negroes. On the upper Niger Negroes, for instance, are careful to supply the grave to the departed with spirit to entertain his friends in the next world. (Germany, l. 430.)

The Baganda in the north bring food and pour beer over the grave. But it is not only in the islands of the Indian and Pacific Oceans, and among the Cherokees of America, and the Bushmen of South Africa, that the practice of providing food and drink obtains. The civilized Karez of the Amur, one of the Hill Tribes of Travancore, in putting into the mouth of the corpse offerings of the deceased, give it nothing but rice and drink. The Agni of Assam place bread and rum near the grave; the Kanowas of the Khasia tribe in Assam lay a portion of boiled rice and fish beside the grave; the Baganda in the north bring food and pour beer over the grave; but it is not, as the custom is to leave the grave to the fewest possible, so that the clothing of the dead may be clearly visible from the earth of the departed. The priests repeat these offerings a great many times, and a hole is dug in it, into which he pours water and buries some of the food. Nor is this all. On every commemorative festival for the dead, the deceased is remembered. In Brittany, when a sailor dies at sea, a cross was taken to the house and made to represent the corpse, which was then buried. The corpse of a king was buried in the isle of Soio, and the corpse of a chief in the churchyard, and on every festival the cross was taken from the churchyard and brought home, and laid upon the grave (Jal. xxix. 93). Elsewhere, some of the kith and kin are known to pour black coffee daily into an opening in the grave, which is kept continually filled with new coffee (Stolz, Die Finsternis, 1880, pp. 421-23). In Macedonia, an apple, a quince, or some other fruit is thrust between the feet of the corpse before the funeral (Abbott, Macedonien Fl., 1905, p. 107). In Montana, apples are thrown into the grave; and, in some parts, oranges and bits of bread are among the objects thrown in (ib. 108, 109). In Crete there is a widespread custom of setting eggs, apples, and bread on the newly made grave for the hungry specters, and offerings of food are brought at every Halloweens (globes, ixxxv. [1904] 59).

The Bulgarian priest, as we have seen, digs a hole in the grave, more or less purposely to pour down into it the last food for the dead. At Tronsi, in ancient Phocis, was the grave of the hero-founder, with the daily worshipped food of the spirits. There was a permanent hole communicating with the interior of the tomb, through which the blood of the victims was poured, while the worshiper, placing the food on a heap of stones (Phons. 2. 7. 3. Frazer, commenting on the passage, has added a number of cases of Greek and Roman tombs in which a permanent passage for food and libations has been found, and parallels from various parts of Africa, Peru, the East and West Indies, and elsewhere.)

These examples might without difficulty be added to; but a more or less permanent communication between the living world and the interior of the grave was sometimes, as we shall find hereafter, made for other purposes than the supply of food.

2. Wines and dependants.—Another custom, almost too well known to need illustration, is that of killing, or burying alive with the corpse, his wives, his slaves, and other dependents or friends. This custom attains its greatest extension, of course, at the funeral of a chief or king. Its object is to provide for his comfort and his dignity in the other world, by giving him suitable companions. The Agni of Assam, for instance, holds it is that of self (g.v.), by which the Hindu widow was burnt alive on her husband's pyre—a rite abolished in British India in 1829, but still surviving in the native State of Nepal. The rite was probably common among the pastoral-tribal, food-gathering races of savagery, but abandoned as they progressed in
civilization, and re-introduced, after centuries of disuse, by the Aryan conquerors of Upper India, for reasons that can now only be the subject of conjecture, and perpetuated under the ecclesiastical influence of the Brahmanas. Several of the non-Aryan tribes of India practised, until quite recent times, the warning of their living slaves, or making a raid for heads to adorn the tomb (Crooke, *Things Indian*, Lond. 1906, p. 446, also *Anthrop., iv. 473*).

We need not follow the custom throughout the world. But, among the very ancient peoples, and amongst people who may be of interest to recall that it is recorded by Caesar and Mohan that the practice of cremation was previously prevalent. *Bell, Hist. Ill. 19, Mohan, iii. 2*, and the Brahmanas (Mohan, ii. 2); that it is known in the Irish legends (O’Curry, *Manners and Cust., Dublin, 1873, cxxv.), and that the slaughter and cremation by Achilles of the twelve valiant Trojanseven on the pyre of Patroclus are only to be thus explained, though the fashion had changed before Homer’s day. Among the Sultanates of the Volga it was found by the Arab traveller, Ibn Fadlan, in the year 921 or 922, when he witnessed the immersion, on a young chief’s funeral pyre, of a girl, who seems to have been formally wedded to the dead youth before being thus sacrificed (Rahl, iii. 1005, 325). The Old Slavas likewise have a story of a warrior, his companions, and slaves at the funeral of a person of importance; and, when they were murdered, the woman, a wedding scene was enacted during the ceremonies—an obvious relic of such incidents as that recorded by Ibn Fadlan.

Such are the beliefs that have beenCurrents in the Transvaal, a virginy boy dies, a girl is sent after him into the other world to be his bride there. She is not actually present when the body is incinerated, but the doctor knows of a ceremony which is quite as effectual for the benefit of the dead boy as her death (Rahl, i. 165). When a woman of a Bantu tribe of Central Africa, another series of ceremonies is appointed for each of the widows, whereby she ‘flies herself from death’—possibly here is the connection (Goldschmidt, 186). The followers of the Quichua, with whom cremation is the rule, force the widow on the third or fifth day; but though they scour her never or less severely, they do not burn her to death (R. E. W. 145).

It is, for obvious reasons, rarer to find a husband put to death with a wife than the converse. But probably the story told in the *Arabian Nights* of Sinbad the Sailor, who was married with his dead wife, was founded on a barbarous custom really practised by some tribe in the East.

The husband of a woman of the royal blood of the Natches was required to submit to that most painful of deaths (R. E. W. 185). To Assanti, with the king’s permission, any of his sisters may marry a man who is pre-eminent in handsome, no matter how low his rank and position may be. But a man of low rank who may have thus married one of the king’s sisters is expected to commit suicide when his line comes to an end. However, in making child, and a man to be used is promptly detected, (Ellis, *Tahoe-Speaking Peoples*, Lond. 1857, 587).

After the abandonment of the custom of putting to death relatives, the relics continue to exist for ages. Centuries ago it was abolished in Japan, China, and Korea; but the living slaves once sacrificed were for long, and indeed still are in places, represented by figures in the shape of noseringless men, and the wooden poles of the wealth or lavishness of the survivors. To the same origin are due the statues and statuettes of servants and family found in Egyptian tombs. The Men Quang Trang, of the province of Hung Hoa in Northern Tongking, builds a small hut beside the narrow, and place near it a doll representing a man or a woman, to be the companion of the deceased. Sinking the doll, they bid it look well after him (Lunet, op. cit. 275).

It is perhaps necessary to add that many of our accounts of the immolation of human victims on the occasion of a death represent some, at all events, of the victims as dying willingly, or even committing suicide. This is certainly the case in many, if not in a certain number of cases, be the result of intense grief. The vast number, however, of deaths apparently voluntary are, as in the case of the Hindu widow or the dependents of a Greek slave, explained by custom and the knowledge that refusal, while it destroys the religious merit of the act, will entail compulsion, or at least that life will be speedily rendered intolerable.

3. Property.—It is probable that in the begin-

nings of human civilization, when a man died, his entire property was destroyed, or left with the body, whether buried or simply exposed. This, in fact, is still done by many tribes in various parts of the world (see § XIX.). Its primitive purpose may have been to ensure that the soul would attach to everything closely associated with the deceased. His meagre property would be in a sense identified with him, and must therefore be put away from the living. Such a procedure is obviously inconsistent in must have prevented that accumulation of wealth which has rendered progress in the arts of life possible. Consequently, most peoples have learnt to cut it down to comparatively small dimensions, giving only a few objects, behind the deceased, or reducing their gifts to a mere symbol.

(a) Domestic animals.—In a comparatively early stage, domesticated animals were often the chief wealth. Such animals were slaughtered not merely as food, but to accompany their owner into the other world. When a Herero died, certain of his favourite cattle were killed, and his skin and other personal belongings were placed on his body, and the ghost from returning and molesting the survivors. On the following day the rest of his favourite cattle were slain as a sacrifice to the dead, and the horses were driven to the grave (Dampert, 49). The Abipones of South America, who bury with their dead their entire household goods, including their grandmother, when a chief or a notable warrior dies, ceremonially stab the horses that were dearest to him, and fix them on stakes around the grave. Any horse of the husband of a Maukiu kill a buffalo, in order that the creature may go with the dead into the other world (Iv. 92). The custom of Maniwaru is, which are kept shut against him (JAI, xxxi. 307). Here the buffalo officiates as psychopomp; in other countries it is the dog. Whether it be a horse or a dog, the hunters’ dogs were killed does not appear. Their bodies were suspended from the four poles usually erected over the grave to contain the remains, weapons, tools, other varieties of the deceased, or such of these objects as were not buried with him (Jesp. Exp. 186). In pre-historic times animal bones are frequently found. Where they are not of accidental occurrence, however, they are usually the remains of food deposited there. The dog which the dead victim, at least, the skeletons of horses have been found with the remains of a charioteer (Greenwell, *Brit. Arch. J.*, 1877, p. 160).

In Prussia, in graves of the Neolithic age, the war-horse has been found buried with the warrior. In Russia, what are called Scythian horns and korzuny (prehistoric grave-mounds) frequently yield the remains of horses; and similar relics are recorded of Franklin graves on the Rhine, as well as of Magyar and Polish graves dating from heathendom, and of the various heathen tribes of Siberia. Some, like the Poles, buried also the falcon and the dog with their master the ghost from returning and molesting the survivors. On the following day the rest of his favourite cattle were slain as a sacrifice to the dead, and the horses were driven to the grave (Dampert, 49). The Abipones of South America, who bury with their dead their entire household goods, including their grandmother, when a chief or a notable warrior dies, ceremonially stab the horses that were dearest to him, and fix them on stakes around the grave. Any horse of the husband of a Maukiu kill a buffalo, in order that the creature may go with the dead into the other world (Iv. 92). The custom of Maniwaru is, which are kept shut against him (JAI, xxxi. 307). Here the buffalo officiates as psychopomp; in other countries it is the dog. Whether it be a horse or a dog, the hunters’ dogs were killed does not appear. Their bodies were suspended from the four poles usually erected over the grave to contain the remains, weapons, tools, other varieties of the deceased, or such of these objects as were not buried with him (Jesp. Exp. 186). In pre-historic times animal bones are frequently found. Where they are not of accidental occurrence, however, they are usually the remains of food deposited there. The dog which the dead victim, at least, the skeletons of horses have been found with the remains of a charioteer (Greenwell, *Brit. Arch. J.*, 1877, p. 160).

In Prussia, in graves of the Neolithic age, the war-horse has been found buried with the warrior. In Russia, what are called Scythian horns and korzuny (prehistoric grave-mounds) frequently yield the remains of horses; and similar relics are recorded of Franklin graves on the Rhine, as well as of Magyar and Polish graves dating from heathendom, and of the various heathen tribes of Siberia. Some, like the Poles, buried also the falcon and the dog with their master the generally been covered with corresponding gifts. In some districts of France, if the deceased could read, his Book of Hours was placed by his side which is to put the rose on his arm. A twig of box blessed on Palm Sunday was often placed between his fingers; and, both in France and Spain, it is the custom to at the same time, the blossom every year in the tomb if he found worthy of entering heaven (Lamartine de la Salle, *Croyances et traditions de la France*, Paris, 1874, i. 381). Among the Wendes of the Spree Valley and Lusatia, among the Masurs, and in Pomerania, a hymn-book is cut into the crosses of the grave stones (Toppen, 105; Knoopp, *Volksglauben... aus dem osts. Hinterland*; Posen, 1856, p. 164). In the 17th cent. it seems to

(AzV xii 434, 436). The anxiety shown may be due to the discomfort endured by the victim as the dead man was removed to avoid any such misfortune (Zingerle, *Sitten des Tir. Volkes*, Innsbruck, 1871, p. 49).

The objects buried or left on the grave are often broken and rendered useless. This is said to have been done in order to prevent them from being used among the natives of British Central Africa, ivory and beads are first ground to powder, in order, we are told, to make them useless to witches and robbers (Werner, *Natives of Brit. Cent. Afr.*, 159).

The real significance of the burial rites lies deeper. In the eyes of the people who practise it the breaking of the object is the equivalent of the death of the human being to whose service it is dedicated. It is thus killed in order that its ghost may follow the ghost of the dead into the spirit-world, there to serve the purposes which it served in this world when whole. Thus the Ho of Togoland lay broken cooking-pots on the grave, expressly to serve the deceased for cooking-pots in the other world (Spith, 634). The Hupa of California lay in the grave, with the corpse, his clothing, weapons, and other property, shell-money and dance-regalia—all first destroyed by breaking. On the grave are placed dishes and utensils, four large bunches of fresh flowers, and a stake bored into the bottom and a stone driven through it. Clothes, torn into strips, are hung on the poles laid across the grave. The reason for destroying the articles buried is said to be to prevent grave-robbing. But the same people tell us that all the objects accompany the spirit to the under world (Goddard, 71).

We are, doubtless, justified in believing that the prevention of grave-robbing is a secondary reason.

An interesting case is reported from Lincolnsire, in which a widow put her dead husband in a coffin, having first broken them. She told the rector: 'I was that mordered with crying that I could not forget to put 'em in a coffin... So I goes and don't next best. I 'eads 'em both over his grave, and says I to myself, my old man, he set a vast of store, he did, by your good madding, and just as that 'eads me, and I was on the holler ent, 'Yon's mine, hand 'em over to me,' and I'd like to see them a-goin' and stoppin' a-sharin' on them no'at.' (PL ix. 1808) 157. Thus the anxiety to destroy the dead with an outfit for the other world, which is the real intention of the customs just passed review, whatever secondary motives may be brought in are of secondary importance.

4. Objects used in the funeral rites.—We have now reached a class of objects put in, or upon, the grave for a different reason. They are not necessarily intended to serve as personal property. These objects are used in the funeral rites, they are contaminated with death, and are no longer fit for the service of the living, lest they spread the infection further.
DEATH AND DISPOSAL OF THE DEAD (Introductory) 481

Hence the Yakuts break and throw on the ground around the shroud, and then to shake the hair, which is sometimes used in the funeral (Riikli, xiv. 311). The Apache also leave the shovell on the grave of the dead, with a few silent tears, new sect, vii. (Dobson 1903). The Melbournes of Ireland throw it into the sea (Reps. Austr. Ind. iv. 727). The Wariandi, in Central Africa, throw on the tomb the door of the dead, and a stick of the wood which has been taken out of the grave (van der Burg, 39). Among the Bugandu, all who have taken part in the burial ceremony, have their hands washed in red-stained water. The Aborigines of Australia, however, put on the grave (JAI xxii. 47). The Negroes in Jamaica, as we have seen, wash the grave with water which the corpse was washed (1 vi. 5). In Europe similar practices are found. In France the bowl which has contained the holy water used for sprinkling the corpse is buried with the tomb; but formerly in Brittany the incense brazier was buried with the coffin (Lavater, Säule ii. 79). In Central Africa, Silsiva every thing used for the toilet of the corpse—the comb, sponge, rags, soap, and so forth—is put into the coffin. Even the needle and thread used for sewing the shroud must not be removed, but left hanging to it (21 v iii. 151). But economy sometimes prevails. In some parts of France, when the horse remains only for a few days on the grave (XVI. 1909) 437). It is if the infection were then at an end. Another motive may, however, be present: they may be placed there to keep the dead man down as long as there is any chance of his returning, and be removed when this is over. The author cited adduces in favour of this suggestion the fear of the dead betrayed in the haste with which the relatives left behind in the house, when the funeral procession has started, that the door in order that the dead may not fetch any one else. But this is a wide-spread custom.

5. Blood and Hair.—A long many peoples, the dellof grief, more often perhaps (in accordance with well-established custom) the desire to divert suspicion of having caused the death by witchcraft, and the fear of the deceased himself, lead the mourners frantically to cut and wound, and their hair, themselves.

The practice was forbidden to the ancient Hebrews by the Deuteronomical legislation (141); hence we may conclude that it was always known, in use among these people as among their neighbours. It is universal among the Australian Black-fellows, and is reported from Polynesia, Melanesia, the East Indies, and North and South America. In many of these cases the custom is to let the blood drip over the corpse. They regard the blood as an informing fluid. If the body was placed in the ground the mourners stood or knelt over it in turn, and were struck by a large boomerang on the head until the blood flowed over the corpse. In other cases the blood drips upon the grave after it has been filled in (JAI xxii. 1856) 187. Curr, Austr. Naturalists, p. 13 and Land. 1886 (197) 172; Spencer-Gillett 4, 1897; PL xiv. (1893) 330.

Among the Grak Sakei of Sumatra the kindred, making a cross-cut with a knife on their foreheads, drop the blood on the face of the corpse (Wilken, Hanoverer . . . bei den Volieren Indo-

namischen. Amsterdam, 1868-1887, p. 19). Four North American Indians tried to murder a murderess, who was executed for murdering Helena, on the head-waters of the Missouri, in December 1890, were mourned by the dogs. One of the dogs cut off two of her fingers and threw them into the grave. The other gashed her face. Both caused the blood to flow into the grave.

We may assume, without much risk of mistake, that the rite in its complete and undegraded form included the dropping of the blood upon the dead body, and where this is not done the rite is in decay. Probably also it is only persons standing in certain specific relations with the dead who are commonly expected to perform it. This is certainly the rule with some of the Australian tribes. We may suspect it of other peoples also. If it has not been recorded, that may be the reason that let the blood pass the point would be likely to escape not merely the casual traveller, but any one whose attention has not been specially drawn to it. But it is by no means invariable (c.g. the Arawaks mentioned above). The blood, however, is the most prominent of the objects that have been the subject of much discussion. It is not merely a propitiatory offering; it may be this, but it is much more. A comparison of the blood-covenant and other religious objects shows that it is certain that one object, at least, is that of effecting a corporal union with the dead. But is that the only object? First of all, there can be no question that the intention is to cause suffering to the survivors. To this point the discussion will come to this section on 'Mourning' (xvIII). Further, human blood is frequently given for medical purposes, or to strengthen the recipient (Strack, Das Blut, 1900, 27 ff.; Spencer-Gillett 4, 461). It is, therefore, not impossible that the object of letting the mourners' blood drip over the corpse may be to strengthen the dead man for his life in the next world. This would be quite consistent with the avoided intention of expressing sorrow or pity (Theophr. In Eropl. vi. 15, 5). But it is, so far as the present writer is aware, no evidence pointing decisively to this interpretation. Moreover it is always necessary to remember that rites different in intention are often similar in expression—a fact which makes their interpretation a matter of peculiar difficulty.

Parallel with the rite of dropping blood on the corpse is another mourning rite—that of cutting or tearing the hair and burying it with the corpse, or dedicating it to the dead. It is even more widely diffused than the former.

At the cremation of Patroclus his comrades cut off their hair and heaped it on the body; and Achilles, cutting off the golden lock that his father had vowed to offer at his return home to the river Spercheios, put it into the dead body to bear away (II. xxxii. 135-141). So mourned among the Sioux the hair and hair locks of their hair, and ring them on the body; and these locks are found bound up with it (Rem. 61). It is pitiful to observe how, even among the Raji of the United Provinces of India 'the children of the deceased and his younger brothers get their heads, beards, and the hair of their hair, and hair locks, and hair rings, and lock of soft human hair was found beneath the head of an infant (JEP. Bodley Mus. xi. 1878) 262 ff. Arab women cut their hair off and bury it in the grave of a dead, or of a grave. They sometimes place it in a box, or in a casket, and spread the tresses on the tomb, or hang them on stakes or cords (Amer. Ind. J. 1872; Janssen, 44). In Caucasia, it is among the Chetas, in Asia Minor, among the lock on the grave (Crooke, TO iv. 215). Among the Chechenes of the Caucasus the long queue of hair of the widow of the deceased is cut off and thrown into the grave; down to the middle of the 17th cent., it is said, her ear used to be thus sacrificed (adagios, ii. 73). The practice is not yet entirely unknown in Europe among the Montenegrin women. Not long ago, indeed, when the men habitually shaved their heads and suffered only one long lock of hair to grow, that was cut off, and thrown into the grave (JAI xxii. 35).

But as with the dropping of blood, it is by no means everywhere that the hair is dedicated in this way. It is often burnt.

The Bilqia of British Columbia, and some of the Central Tribes of Australia, e.g., dispose of it thus (Univ. Ass'me. Report, 1901, p. 419; Spencer-Gillett 4, 187, 320). The latter, indeed, sometimes mix it with some of the hair of the deceased and make it up into a grave which is worn by the women, or by the dead in the funereal procession (Spencer-Gillett 4, 543; cf. p. 54).

More usually, however, we are not told what is done with the hair. In some instances this may be due to omission to observe, or forgetfulness to record, on the part of the reporter. But that it is a rite that is of importance. In the majority of cases we are probably right in assuming that the disposal of the hair is not an integral portion of the rite—that, in fact, the rite has ended with the cutting of the hair. Whether the dedication of the locks at or in the grave, or by burning, has in such cases ceased by natural decay, or by untold, has in such cases ceased by ritual decay, or whether the dedication never took place, it is difficult to say. One object, at all events, of the dedication of the hair is for the purpose of securing the unity of the dead. The converse rite of taking a lock of hair of the dead may be said to be world-wide. Nor is it confined to a lock of hair: it extends in some cases to the whole of the garments. In the West Indian island of St. Croix the persons who wash the corpse prior to burial always take a lock of hair, or a garment, or at least a fragment of a garment, in order to present the spirit with clothing; but this is not always the case (LP ii. 319). It must be borne in mind that, according to the theory of sympathetic magic, any portion of a human being, such as nails, skin, bones, and so forth, which has become detached, is still to hold union with the body of which it once formed part; for the personality inheres in every part of the body. The doctrine extended to the effigy, the
DEATH AND DISPOSAL OF THE DEAD (Introductory)

The practice of lighting fires at the grave is widespread. In many cultures, it is believed that the fire serves to guide the spirit of the deceased to the afterlife. The practice is often associated with various beliefs and traditions, such as the Yurok Indians in the Pacific Northwest of North America, who light fires at the burial site to help the spirit of the deceased journey to the afterlife.

In some cultures, such as the Yurok, fire is believed to have powerful spiritual properties. It is used to purify and cleanse the spirits of the deceased, and to protect them from harm. The practice of lighting fires is also believed to provide a source of warmth and comfort for the spirit of the deceased, and to help it transition to the afterlife.

However, the practice of lighting fires at the grave is not universally accepted. In some cultures, such as the Maori of New Zealand, fire is not used in this way. Instead, they believe that the spirit of the deceased is guided to the afterlife by the use of smoke, rather than fire.

Despite these differences, the practice of lighting fires at the grave is a significant part of many cultural traditions, and is an important way of honoring and remembering the deceased.
who have remained at home, they proceed to the place in the bush where the unfortunate man has been buried. They set the body down on the hearthstone; it contains the soul (Spiech, 290; cf. 194, 290). Among the Brassean of the Lower Niger a man dies with unsealed souls (herefore 'soul ' includes the spiritual and the material); it contains the body. But his soul is afterwards evoked, and with an elaborate cere- mony, enclosed in a wooden figure and buried in the proper place (Leonard, 168).

2. Binding and mutilating the body.—The in- tention of burying the soul is to prevent its wandering over the earth, and causing mischief, and perhaps eventually causing them mischief or death. This is, of course, by no means the only precaution. We have already met with many, and there are some others whose object is also twofold, or even more so, the burial or cremation of the body in the attitude proper to burial (see § VIII. 2) has this at least for one of its objects. It is indeed often expressly reported as the object (e.g. JAI x. 145). It is said in Lincolnshire that ' when the corpse is placed in the coffin you must never forget to tie the feet, else the dead may return, or some other spirit may take possession of the body for his own purposes' (Gutch and Peacock, Lines, County FL, 1905, p. 240). The practice of tying the legs (foot) together, to this end, is, in fact, not uncommon in Europe. But binding is not enough. We saw that the sins and the backbone were sometimes cut out.

These only are not all; besides these practices; they are found in other African peoples. The customs of Australia are even more revolting. The Herbert River tribe here for instance, often so violently as to break the bones; and incisions are made in the stomach, on the shoulders, and the fore-arms. The Ojibwa tribe in Western Australia, as has been mentioned, burns the head and breaks up the charred bones, for the express purpose of breaking the soul (Ruggles, L'anthrop., xii. 665). It is well known throughout Europe in the case of the enthusiastic (see as the year 1892 among the Lithuanian population of Somenisky in the Government of Kovno (Jopnelli, v. 1894 87), in the latter case the soul is not only not prevented in a condition to ' walk ' and injure the fields; for suicides are believed to ' go everywhere. ' (v. 1904, 64). In the case of suicides, to mutilate the waverers, or with the weapon or cord in their hands with which they have taken their lives. They injure the fields by various modes and in various parts of the earth; hence they are buried in waste places (Jopnelli, xiii. 1893 50, 52, 53).

The cremation of vultures has already been mentioned (§ VII. 3 (6)). A dead man who gave trouble among the ancient Norse by hanging was often taken up and burned. Sometimes milder measures were successful, as in the case of Thorolf Hall-ford, who was removed to another grave with a wall so high that none but foul flying could cross it (Merris, Engadines, 1892, p. 103). The length of graves is by no means always to protect the dead; probably it is quite as much for the protection of the living. Thus the Chereniess fence the grave with stakes that the dead may not get out and walk the fields (Shinnor, Plap. Insularies, ii. 136). Among the Anasazi the same tribe stamp down the earth upon the corpse; and the Achanas even cover the body with stones. They thus prevent any accurs or cracks that may have taken place (Int. Arch. xiii. Supp. 85, 90). Cuts, rents, coffins, and grave-boxes also serve the pur- pose of the protection of the grave. Thus a child in a Dutch country was fastened to the ground and nailed fast between the coffin and its lid. These elaborate pre- cautions are intended to prevent the deceased from getting out of the coffin and thus reviving or haunting the living men and pregnant women. Even if she succeeded in getting out, it is believed that she would not form the eggs (Kiled, 81).

It should, however, he said that the corpse is sometimes wounded with quite a different intention to the usual custom; a pecu- liarity. The Puri of South America open the breast to let out the soul (Int. Arch. xvi. 1908, p. 260). Within the casket, the Leagua of the Paraguay Chaco, in accordance with a well-known principle of sympathetic magic, cut open the breast of one who was dead they attempt to insert a stone and some charred boxes. This is supposed to revenge the death of a fellow (JAI xxv. 236; cf. JAI xvi. 1907). Some of the Nagas were reported to put the corpse on the head, that the deceased may be received as an example among the infidels. But this is a much exaggerated account, and in this distinction among the other world (JAI xvi. 1907; ARW xii. 454).

XII. From the funeral.—The deceased was thus comfortably provided for and abashed by word and deed to stay where he has been put, or to go into the other world, and in any case not to meddle with the living; the mourners return from the grave. What they have to dread is that, in spite of these and other precautions, the ghost may attach himself to them and thus again be getting in among the living again. For, as is obvious from what has already been said, the dead man is regarded as by no means willing to be deprived of the society to which he has been accustom to. The burial is often conducted with the greatest haste.

Thus among the Bonto Igoet of Lamon, when the corpse has been put into the coffin, it is rushed away with the help of many willing hands; no time is wasted at graveyards; the filling up of the grave is done in the shortest possible time—probably, in the case of suicides, in the shortest possible time—after which they drive the deceased to the place where the deceased was previously buried, and the graves are surrounded, fared down, and the sides of the mound raised. In Rome, it is there laid among the living. Here, however, it is not so; and a half; and away the mourners hurry, most of them at a dog-trot, to wash themselves in the river (A. E. Jenks, Bonto Igoet, 1906, p. 345). The objects, therefore, the deed of the members of the family considered by the Papuan peoples and some other places, are burning the dead, or placing them in the grave, and thus to preserve the "ghost, that they erect a butt on the grave and there camp for six weeks or more, and the widows in particular huddled in one corner away from the rest, invisible and unwashed (ARW r. 345). The Ojibwa widow springs over the grave and then sits again behind the coffin if she were sitting from some one. She thus doles the ghost of her husband, that it may not haunt her (Jones, Ojibway Indians, 1901, p. 99).

Specimen of the obstacles put in the way of the ghost have already been given. Without going over the same ground, a few examples may here be noted of the methods of preventing the ghost from attaching itself to those who have taken part in the last rites.

The Rute priest, as the grave is being closed, blows the air with a stick to drive away the souls of the living men (ARW vii. 345). In Northern Rhodesia all spit on the grave when it is filled up, and return to the village without looking back. This is now said to be a precaution against giving a clue to some watchful hyena to dig up the body; it is more likely that the custom originated in a precaution of a different sort (Journ. Afr. Soc. v. 456). The Mauses of Eastern Prussia held that the deceased accompanied the dead, whereupon the latter asks him: 'Have I made my bed properly? if not, I will make it better.' Only then is the ghost appeased and goes back to the grave (Toppenh., 1909). The Morovian mourners stop a little distance from the graveyard, and one of the graveledgers, with the same object in view, to the same object in view, and circle round them. This is repeated twice. When they reach the notch, the oldest graveledger turns, if he is female turns them a way and a curless, over which they step. The intention of the curless is to frighten the deceased, who, according to popular belief, is as their perfect term ' one woman ; -the pelago staves with cross-beans are set up over the grave and a piece of coarse red cotton stuff stretched across them in the form of a cross. The souls of the dead are without any doubts to keep the ghost within (JAI viii. 1870 393) a similar custom is practised by the Mauses in Prussia. The inhabitants of Nia bind not only the fingers and toes, but also the jaws, and puts stoppers in the nostrils in to keep the scent (JAI xi. 1879). Among the Anasazi, the same object is to keep the staves, and one end of it is held by the villagers present. The roatan being buried, the Magic, p. 70). On the other hand, two staves are laid from one to seven, cuts in two with one blow of his parang. The end left in the hands of the survivors is brought back by the one end of the kiria to the kiria. After the firing of guns and heating of drums, so used at a funeral in various parts of Africa, is probably intended to drive away the ghost. Elsewhere, as in Burundi, it is assessed handed away.
DEATH AND DISPOSAL OF THE DEAD (Introductory)

XIII. Lingering of the soul.—The unwillingness of the soul to sever its earthly ties is not easily overcome. Sooner or later it is drawn into the other world when the last breath has left the body, it habitually lingers at the place of death, or with the corpse.

The Horon ghost walks in front of the funeral procession, and there is a custom in the cemetery until the feast of the dead; by night, however, it stalks through the village and eats the leftover food that has been left in the hills (Bernhard cling in 415).

In a Negro funeral in Jamaica the ghost sits on the coffin (FZ lx. 1891 268). The Korean ghost, more luxurious, rides in a special chariot, which it finds in the graveside house, which it leaves when it is attacked and struggles to get out, leaving the corpse lying dead in the grave.

In the belief of peoples in every part of the world it haunts the grave for a period variously stated from a few days to many months, or even an indefinite period. Indeed, as already indicated, the grave is often conceived as a place of abode and not merely of the body, but of the soul.

Where the belief in a world of the dead is developed, the ghost usually departs at last after the performance of certain rites to be discussed hereafter (§ XXI). Meanwhile it is necessary to attend to its wants by the placing of food and sometimes a shelter on the grave.

The tribes of Central Nigeria considerably leave a small hole in the grave-mound, where it may go in and out (Laudenbach, Die Toten, Paris, 1907, pp. 249, 257, 262). It even sets at defiance the precautions taken to prevent it from returning to its earthly home.

A common superstition in Europe is that a mother who dies leaving a sucking baby returns for six weeks after the funeral to suckle her little one. According to the Bulgarians, the ghost lingers for forty days in the house, and returns again on the first Easter Day until the first Whitsunday after the funeral (Strantz, 481, 485). The Minangkabau Malays of the Padang Harbor, however, leave the body in bed of the covered clean and unopened grave, for a hundred days, lest the ghost be offended; for it haunts this period (Hedge, p. 85).

Among the Yakots the casket or the body, in order to prevent any work having been done up, is swept with a whirling broom, sweeping the rooms, tying the granary or the chest, sighing and whispering the while. The survivors may sometimes even see them sitting tranquilly in the fire, as the walking or about the house (BRKB xiv. 1909 234).

The funerals of the survivors.—When the funeral is ended, all who have taken part in it must commonly be purified. As the necessity for purification attaches also to all mourners, and is sometimes deferred until, or perhaps more frequently, after the conclusion of the death rites, the examples following are, in order to avoid repetition, not confined to the immediate return from the funeral. The most usual methods of purification are by fumigation and bathing.

The family of New South Wales fumigate themselves beside the grave at and after a burial. A widow covers herself with a towel and shroud beside a smoldering fire all night. Three days afterwards she and her sisters (who might have been her husband’s wives) are chased down to the creek, where a fire has previously been constructed, and all of the smoke is put in the smoke-bush; putting it under the arm she jumps into the creek with it and extinguishes it in the water. As it goes out, she drinks some of the water. The smoke is supposed not to enter the smoke-bush, not to wash with the smoke or the smoke-bush.

The Nagas of Assam, on the completion of the funeral rites, the examples following are, in order to avoid repetition, not confined to the immediate return from the funeral. The most usual methods of purification are by fumigation and bathing.

In the Greek funeral, the body is surrounded by a circle of lights, and the mourners are fumigated with new fresh plants, and the body is placed in a circle of fire for purification (JAI xxxv. 111).

The Magyars paint their bodies not only before, but also after the burial, with ‘medicine-water’ (Bartay, Some Folklore Stories and Songs in Chupunya, 1807, p. 90). The ancient Hebrews surrounded every one who touched a dead body or a grave, or who came into the house where a corpse lay, unclothed for seven days, and he was barred from all religious rites. He was sprinkled on the third and again on the seventh day with the ‘water of separation,’ which was the urine of the ashes on the third day. The corpse’s contigous was his uncleanness or that it attached to everything he touched, and even to the clean person who sprinkled him. Moreover, the unclean man after the sprinkling on the seventh day was required to bathe, and both he and the unclean person were ordered to live apart (Lev. 14:3). In the burial house of Tom Texture we look for the lighter and, often near it, for the lighter (Jenkins, 79).

Among the Indians of the Paraguayan Chaco they drink hot water and bathe the corpse in the grave. They bathe him in his grave, or in the grave, for one time and are excluded from the village. Before re-entering it they purify themselves by washing in hot water and putting aside the tokens of uncleanness, Among the Indians, p. 49). The Lillooets of British Columbia hold the funeral feast immediately on returning from the grave. The members of the household of the deceased pass the next four days in fasting, lamentations, and ceremonial ablations. Their hair is then cut, they are painted red, and the hair is tied up, and they hold a second feast with more cheerful condescensions. A young widow often goes into the forest alone for a year, holds herself a sweat-house, and drives the ‘bad medicine’ of her dead wife out of her body by repeated sweating or boiling her body in hot water. In no period of mourning undergoes continuous ceremonial washings or cleansings, for the double purpose of lengthening her own life and rendering herself immune to such forms of contagion which would otherwise be short-lived (JAI xxxv. 137 f.). Among the Thompsons it lasts the whole year (Gray, The Death of the Indian, 1907 191).

In the funeral of the dead, the widow and her own hat and girdle. After the death, goes out and passes through a patch of rose bushes four times. Among other ceremonies, a widow washes in the creek and ties herself with fresh grass for a year. It is significant that any grass or branches on which a widow or widower sits lies down will wither up (Jeph Espe, p. 133).

The meaning of these ceremonies is probably expressed in the belief of the Pima of California, who hold that ghosts about those living and liable to touch sleeping persons, which is a summons to accompany the ghost back to the shades (26 REBE 1908 194). Hence the Lillooets widow unfast free herself from the ghost, both for her own sake and for that of her husband. And the contagious character of the death-pollution is shown by the custom of the Hupa which requires every one who has touched a corpse to cover his head until purification, ‘lest the world be spoiled’ (Goldsmith, Hupa Ceremony, 1934, p. 224 f.).

In European similar beliefs and practices have prevailed throughout historic times.

The ancient Greeks put at the door of the death-chamber a vessel full of hot water obtained from the fountain which all who came out might purify themselves (Rohde, Psyche, i. 219). It is still a very widespread custom on the Continent to meet the funeral party, on returning from the house, by sponging them and towel, that all who have taken part may wash their hands before entering. Among the Jews and Arabs water is thrown on the body of the dead (Globens, xxii. 1907 88). In Central France, two generations ago, the members of the funeral party used to hasten to the nearest brook or pool. In some of the villages so contaminated was the pollution held that, if the funeral procession passed any clothes hanging out to dry, the clothes were always washed again (Laubert de la Salle, ii. 79, 80). In the Tyrol all inhabitants of the house are assembled and fumigated by the house-father before the corpse leaves the house; to be absent from this ceremony is to run the risk of a speedy death. In another district when a dead body is carried out, every one must forbear washing clothes for four days. A second corpse will soon be borne out (von Zingerle, pp. 49, 50).

XV. Funeral feasts.—A feast is usually in the lower cult of the dead, in the form of death feasts.

Frequently, indeed, a feast is partaken of in the presence of the corpse, another (sometimes kept up for days, or repeated at stated intervals) on the return from the funeral, and a third when the rites are prolonged by lires or re-burial of the bones (§ XXI), and the mourning comes to an end.

1. Before the funeral.—

Among the Gilbert Islanders, when the corpse’s toilet is completed, the relatives of the deceased meet in the meeting-house, a feast is provided within the hut where the body lies, and every one in turn takes food, goes and joins the feast, which lasts for three days before the interment takes place (Int. Arch. ii. 1889 42). In the Canca Valley, Colombia, the funeral feast lasts two months before burial, and during the whole of that period.
DEATH AND DISPOSAL OF THE DEAD (Introductory)

drinking-beats, dirges, and singing-contests took place in honour of the departed (Globalis, xx. 385). The relatives and friends of the deceased place the corpse on the bare ground and weep for a while. Others, weeping, bring food and drink, of which all partake (Int. Arch. viii. Suppl. 105). At the same time a large cake is made and a cake of unction, water or wine, is placed by the head of the corpse after it has been laid in the coffin. On the following day, in a farewell speech, and invited to partake, before he quite leaves the survivors, of food and drink such as he loved, 'for this is our good night, and we shall not see each other for a long time.' After the food has been consumed by the corpse for some time, it is taken and reverently divided among the nearest relations. Millet cakes and sake are also made and distributed among all present. After every one, before drinking, offering two or three drops to the spirit of the dead, a small piece of the moist corpse is eaten, and the remainder buried in the ashes of the hearth, a little piece by each person. After the burial these pieces are collected and carried to the grave. The ashes (or rice) (Rice, 1913, p. 560). Among the ancient Persian Franks the body was dressed and placed upright on a bench. The nearest relations then laid the body beside it, and sang with beer and wine (PL xiii. 304; Tzetzer, 22). The ceremony among the Masurs is more elaborate. A passenger is sent through the village to summon to the burial, and the company is usually numerous. On one side of the room where the corpse lies is a little table, the middle of which is covered by the corpse, while all around it are seats for the men. The women sit at another table on the other side of the room. After two tedious funeral songs have been sung, schnapps and curr-cakes are served. The schnapps for the men is served in bowls of silver, and for the women in bowls of pewter; for all, when she is served in a bowl with a spoon, and every woman takes the spoon in her hand and makes a circular movement around the table. The curr-cakes are handed round in a white upon or a basket (Toppes, 103).

In general drinking and the presence of the dead is widespread in Europe as elsewhere; further examples will be adduced hereafter.

2. After the funeral.—A feast follows the disposal of the body. The Ainu mourners return to the hut; the men make sacred willow emblems, called ico, pray, eat, drink, and get helpless drunk. The women, the Uryas of Origins, and the feast occupies several days (Rice, Occasional Essays, London, 1913, p. 86). So the pagan Norsemen feasted for three nights. The ceremony is described in detail in Friel, and it has just been described, on returning find the tables and benches so arranged that men and women, who had previously sat apart, can sit together; and the schnapps is mixed with honey and served in bottles. Sometimes it is burnt before being mixed, and is then called a special name. Another meal of flower, fish, and grains thickened with honey is served. All day the men remain in the house comforting the bereaved, and like the Ainu, eat, drink, and with the remains of the food and drink; nor do they separate until the evening (Toppes, 103). There is a place for the corpse before removal, covered with a table-cloth, and the same table-cloth is put on the table at the subsequent funeral meal (Globus, xxi. 111). In Life-Cycle Rituals of a Ciderside (Liesel, p. 294). A great contrast is afforded by the Frisian population of the marsons on the right bank of the lower Weser. They have no customs for houses. They feasts for the dead, and the cemetery is at the church on the house, and the piles of cakes, long rows of wine-bottles, clay pipes, plates of tobacco, matches, and cigars await the guests, and the feast begins. Hiltleroistlness and whispering have reigned in the house. Now eating and drinking know no bounds; soon the tobacco-smoke fills the house, until it is impossible to see three places ahead; all tongues are loosened; chattering and jesting, laughing and drinking, the clinking of glasses and the general good humour increase from hour to hour (ZZF, ii. 155) 53. In various parts of Europe it has become necessary to put a limit by statute or local custom to the expenditure on the funeral feast and the other abuses connected with it.

Among many peoples the feast is held at, or even upon, the grave. The Old English custom of their dead on the ground and cover them with a light roofing of poles and bale, as soon as this is finished, sit in a circle at the head of the grave and pretending to be the corpse of the deceased, or "farcie," or "farcie," etc. This, except a certain quantity kept for a burnt-offering, is consumed by the mourners (P. Jones, loc. cit.). In the Nicolaar Islands, the day after the funeral a feast is held at the grave "in the presence of the dead," at which the relatives and friends kiss and eat; the corpse is covered with the dead, to abstain from certain food, drink, and enjoyment for a longer or shorter period, the longest terminating with the grave; when the graves are closed ceremonies are concluded; and in some cases the body is guarded by members of his wife's class, and the members of his own class give them a feast, and partake of the food and drink while he lived, and the dead is pronounced, and a little of the food is put into the fire. By this means he is believed to receive it (66, 841; cf. 843). This may probably come to rest at Argentiere in the Department of the Hautes Alpes, France; and the corpse and the family of the deceased sat at a table upon the table of the deceased and in the presence of every one, led by the next-of-kin, drank to the health of the deceased (Laisner, 23). The ceremony is, therefore, widespread; it descends demonstrably from a great antiquity. Neolithic graves are often found containing remnants of a feast, in the shape of broken bones of animals and traces of fire.

As already mentioned, the feast following the funeral is by no means always concluded at one seating.

The ancient Norse were, and the Uryas are, however, quite abstemious in this respect as compared with the other peoples. In the Moluccas, the island of Belara, the kinian collection lasts for twenty days in the house of the dead, and, after enjoying all sorts of delicacies, wind up the solemnity with dog's flesh. The Taneseur and Timorese Islanders enjoy from ten to a hundred days festivities (Hiedel, 421, 398). The Leper Islanders go on eating the dead for a hundred days (Cordignan, 287); while the Malagasy outdo them all. The length and M of their feasts are, of course, proportioned to the wealth of the deceased. Rumi Sowa from stilt from morning to night; and every one present is more or less plunged in drunkenness. As long as there is anything to eat and drink the feast goes on, and nobody thinks of going away. The funeral feasts of high and noble persons have been known to last for months. On the other hand, the feast may be renewed at stated intervals. The ancient Frusian custom was, after the feast of the third, ninth, and fourth days (Toppes, ii. 111 n.). The Muhammadan Mals dead on the day of the funeral, and on the third, seventh, and fourteenth months. Maisek, Malay Club, 1913, p. 130. The Chinese, on the 7th, 15th, and 23rd days. Among the Northern Tonging feasts every seven days for a month (Luwet, 115). On the death of the deceased, the burial takes place at the burning-place, and repeated on the third day, when his cremated bones are collected and deposited in a hole hewn in the trunk of a big fir, and the ribs are cut out for the time (GAZ xxv. 139). This simplicity may be contrasted with the Egyptian custom, which requires that meat and provision should be provided for four days after the death. On the fourth day a feast is held, and it is followed by others on the thirtieth, thirteenth, and fortieth day (Weber, ii. 311). The custom of giving the deceased to the dead is not merely under the same stimulating influences, and closed at the end of a year with a three days' celebration (Int. Arch. xiii., Suppl. 105).

A feast is often held at the completion of the funeral ceremonies or of the period of mourning (see § XXII).

3. Object of funeral feasts.—The object of these feasts is not simply hospitality to the invited guests; they indeed very often contribute their full share in kind. Nor is the object merely the enjoyment of the materials of the feast. It is a natural reaction from sorrow, or ostentation on the part of those who provide them. Doubtless some or all of these impulses do enter into the motives for the frequently repeated and usually extra- gant displays of such feasts, the gratification of the pleasures and amusements under the same stimulating influences, and closed at the end of a year with a three days' celebration (Int. Arch. xiii., Suppl. 105).

A feast is often held at the completion of the funeral ceremonies or of the period of mourning (see § XXII).

In the German districts of Prussia a feast is left for the dead man, and food and drink are placed for him. The old Prussians were used to throw the bones in the fire, and in the presence of the dead, dogs kill and partake of the flesh of the dogs killed there and then at the burning-place to accompany the soul of the deceased. They eat a portion of it at this time, and the rest is fed to the dogs. The old Prussians were used to throw the bones in the fire, and in the presence of the dead, dogs kill and partake of the flesh of the dogs killed there and then at the burning-place to accompany the soul of the deceased. They eat a portion of it at this time, and the rest is fed to the dogs. The ancient Romans used to offer to the men on the ninth day after the funeral at the grave; and the feast was taken there. The funeral meal is said to have been invented by Caius (Globus, xx. 365). The old Prussians were used to throw the bones in the fire, and in the presence of the dead, dogs kill and partake of the flesh of the dogs killed there and then at the burning-place to accompany the soul of the deceased. They eat a portion of it at this time, and the rest is fed to the dogs. The ancient Romans used to offer to the men on the ninth day after the funeral at the grave; and the feast was taken there. The funeral meal is said to have been invented by Caius (Globus, xx. 365).
DEATH AND DISPOSITION OF THE DEAD (Introductory)

of the food in his hand says expressly, 'This is for you,' and throws it on the ground. (Rice, 959.) Among the Chichewa (Rice, 228), a portion of the bread and the blood of the slaughtered ox is given to the deceased for the purpose (JAI xxiii. 421). The Veddas make an offering to the deified dead of food and drinks consumed by themselves (Rice, Oxford Cong. Hist. Rel. I. 67). On some of the Moluccas the soul after burial is believed to haunt the neighbourhood of the house, and they offer them cakes, bread, and—after digging a round hole, they lay the deceased at his full length; when, opening the body, they take out the lungs and heart, and lay it open under the body. (JAI xxvii. 9.) 

There are similar burial customs in other parts of the world. The Cherokees, on the fortieth day, go to the cemetery to invite the dead man to join the feast and bring him back. In one district one of the convives impersonates him dressed in his best clothes. He is seated in the place of honour, and is treated as the master; the widow of the deceased addresses him as husband, the children as father. 

All night he eats, drinks, and dances with the rest. In the intervals of the dances he relates his life in the other world and his pleasure at meeting again those who have predeceased him; he begs them not to sorrow on his account (for he has been an officer and acts the feast of commemoration (Smirnow, I. 143). So the Kof of Chota Nagpur provide a meal in the dead man's house, to which they summon a line from the Mahals, a neighboring mongrel tribe with whom they never otherwise eat. He comes to the banquet, and it is considered bad luck if the meal has been eaten. Such a meal can be eaten in the house. When the meal is finished he departs, and the house is thereafterward sacred, and no longer has the owner any right as regards the food, or the provision of the service. (Strasen.) There is a similar practice among some of the North American tribes (M. A. Owen, Publ. of Mosquitu Indians, Lond. 1843, p. 63).

The ritual character of the meal is rendered obvious by the fact that it is often held, wholly or in part, of a special kind of food. Pulse was partaken of by the Romans, and it figures prominently in the funeral feasts of many parts of modern Europe. Cakes and biscuit were used for the purpose. In early times, when the Vanwe, after the death of a man, went to the Volga and the Greek islands. It is probable that this ritual food represents the flesh of the corpe, and is a long-descended relic of funeral cannibalism.

The Abbé Dubois, describing the custom of the Europeans at the coronation of the king of Tanjore, who died in 1801, and two of his wives, informs us that some of the bodies which had escaped complete destruction were ground to powder, mixed with bread and eaten by the Brahminés. The object of this rite was the expiation of the sins of the deceased; for these sins, according to popular opinion, were transmitted into the bodies of those who ate the ashes (Dubois-Beauchamp, 360). 

The custom of "sin-eating," as it is variously called in "sin-eating," as it is variously called in

the old Weelands, was known as the custom of "sin-eating," whereby, when the corpse was brought out of the house and laid on the bier, a woman was found whose profession it was to perform the ceremony. A leaf of bread was handed to him over the corpse before the funeral procession started, and a mazer-bowl full of beer with a piece of money (in John Aubrey's time sixpence), in consideration whereof he took upon him (ipso facto) all the Sins of the Deceased, and freed him (and them) from walking after they were dead. (Aubrey, Remains, ed. 1851, p. 55.) In the Bavarian Highlands a different interpretation was put upon a similar practice. Formerly, when the corpse had been laid on the bier and the room carefully washed and cleansed, a man known as the Leichenschneider, or corpse-cakes. Having kneaded the dough, she placed it to rise on the dead body before baking. Cakes so prepared were believed to contain the virtues and advantages of the deceased, and whenever any misfortune occurred the priest assumed them his living strength, which thus was retained within the kin (Am Uruquhy, ii. 101). Perhaps we may interpret in the same way an obscure rite at the funeral feast of the Mac Coe in Ireland, at which the widow, or any other relative, presents to all the relatives in turn a piece of flesh to be smelt. At the meal each of the guests receives a piece of flesh, and the priest is paid with a leg of pork (Lam. ii. 135) for the deceased.

Similarly, in the 18th cent., preserved in the British Museum, is a relation of the tribes about Delagoa Bay that they generally kill the deceased, and, digging a round hole, they lay the deceased at his full length; when, opening the body, they take out the lungs and heart, and lay it open under the body. (JAI xxvii. 9.) 

Ritual food with another meaning is found among the Baganda, where food is a rule. The reason they assign for this tabu is that death came into the world by the disobedience of a woman, who insisted on returning to heaven for food for a fowl (see § II). 

At the burial of a man, or when any one is dead, and each of his widows eats of it prior to the distribution of his widows and effects (JAI xxxii. 48).

The distribution of articles of food to persons, whether relatives, friends, or the poor, who do not share in a formal meal is an extension of the feast.

In Surinam, on the seventh or ninth day after death savoury cakes are prepared and sent to friends and relatives, and to all who have joined in the funeral ceremonies; but the funeral supper is confined to the immediate family only. (JAI xxxiii. 263.) In Goa, according to Rice, the first seven days after death are the most important, and the whole of the castings at the funeral reception passes (Rice, 55). On the island of Mahagon, the feast of the dead is held by the pagans in the houses of the deceased, and it is distributed among the children at the funeral (Strasen, 416). Among the Urighas, on the death of a rich man, copper coals and fried rice are scattered at the funeral procession passes (Rice, 55). In Bulgaria the village women spring a special feast for the departure of the soul of the deceased, and it is distributed among the children at the funeral (Am Uruquhy, ii. 101). 

The analogous customs in India and elsewhere may be set down to the same cause. Doubtless, however, all have been affected by ecclesiastical influences. The fact that the gifts frequently include lavish foods and entertainments to cocktails, both in Europe and in Asia, is evidence very difficult to gainsay.

Often the feast is merely a farewell banquet— a semi-off of one who is unwilling to go to the termination which the deceased is formally and firmly shown the door.

Thus about Königsberg, in Prussia, a place is set for the dead man at the feast, in order that he may share it; and, when it is over, the hearers open all doors, that the ghost may depart. Am Uruquhy, ii. 99. The ancient Prussians used to drive the ghost out, saying: 'Be off! you have eaten and drunk (Tolmner, 23). Among some of the Brazilian tribes, at the end of the feast, the widow, accompanied by the other women, and weeping used ceremoniously to thank the men for the presence and help, and in the name of the deceased to call for a parting drink, which his husband enter on his journey; for he could not set out while his friends tarried with him (Furt. Arch. xii, Sulp. 112). The Tarahumares of Mexico hold the feast of a dead man's ghost (see XVIII). These begin within a fortnight after the death, and are increased, elaborate, each year. All the mourners talk to the departed. He is told to take away all they have given him, and not to come and disturb the survivors. The second feast is given half a year after the first, the third and lastest later still. The sacred cakes, hifted, is thought to be very powerful in chasing away the dead, driving them to the end of the world, where they join the other departed. Hence it is steeped in water and the water sprinkled over the people who are to partake of it. The mourners in the present part in all festivities. At these feasts for the dead other dances also take place; tessio, the national stimulant, is drunk; and the various drinks which are given are mixed together. Each feast a large earthen bowl full of water is the subject of a ceremony by the presiding priest, at which the men wash his hands; the priest pours out the water in the air. It falls shattered to pieces, and the people dance and trample on the fragments. The function concludes with races by the young people. The next day they scatter ashes to the four cardinal points to
DEATH AND DISPOSAL OF THE DEAD (Introductory)

437

cover the tracks of the dead. They return rejoicing, manifesting their delight by throwing up their blankets, tunics, and hats, because now they are dead and unafraid of death. Not until the last function will a widow or a widow marry again, 'because the dead are amongst the living, and the living amongst the dead.' (Josephus, "Antiquities of the Jews," 4.348.)

Elsewhere the motive is stated to be the rest of the happiness of the deceased—often, however, with somewhat more than a hint at the benefit of the survivors.

Thus, among the Bulgarians of Hungary, before the burial a meal takes place, at which each one receives a leaf of bread and a cup of wine, and a piece of bacon and a cloth. The table is kindled in the house, and then extinguished. The bread is then eaten, and it is believed that the soul is now saved. In a room adjoining where the guests are sitting, the bride and bridegroom go forward, 'for the well-being of those who are left behind and that he may sing songs in his honor.' (Géza von Hevesy, "The Funeral," 282.) The funeral dead in Lusaca is admonished not to come and make the survivors sick, but to protect them from other souls (marí). He is reminded that, when they make a feast and invite them, they want him to come, but that, if another spirit kills off all his relatives, there will be no one to serve him in the afterworld. Many ancient and modern beliefs are founded on fear of death; it is said that death makes no difference in this respect: consequently this last argument is considered very weighty (Géza von Hevesy, "The Funeral," 282). During the meal the guests round the table killed for the feast are ridden or driven by the dead to the other world, and so add to his comfort or his state (AFLUX IV, 165). They no longer fear to kill slaves, but they kill and eat the oxen, which will secure to the dead man a better place at the resurrection than that of his ancestors (Boquin, "Les Macoutes," 116). Again, the Melanesian population of Aurora think that, if they do not kill many pigs, 'the dead man has no longer any claims; he is of no use to the living, and they can throw him to the dogs.' (AFLUX IV, 165).

In the Dinka are other, less favourable results. An immediate relative is accompany at the funeral, especially a betrothed, person, and of rendering the funeral meal a ceremony for the dead (Géza von Hevesy, "The Funeral," 282). The immediate relatives, mourners, and bearers are invited (ZIY IV, 152). Sometimes a more direct spiritual and univalent motive is expressed in Bulgaria at the funeral: the dead are taken before the funeral, every one, before drinking, pour a few drops of wine on the ground before the corpse and say to 'God for the size of N.N.' After the burial the priest enters the room, and then takes his place at the top of the table, saying: 'God for you, N.N., and the soul of the dead, that of the living, and the soul of the dead.' The whole family then sits round the table, he from time to time says: 'Eat and drink and say "God for you, N.N."' and the guests accordingly respond in chorus (Cromer, "The Dinka," 152). Among the Christian population, a ritual food of boiled wheat, flavoured with blood, and gloved with hazel-nuts, walnuts, or pine-seed, is distributed among the relatives, and especially to priests, often at the exit-door of the church. As they take it in passing, they say: 'May God be with you, N.N.' and so on. The same formula is used when it is eaten in the house of mourning (Puchstein, "Religion in the Highlands of New Guinea," 224).

XVI. Funeral games and dances.—Funeral games, familiar to us in classic literature, are of very widespread distribution. They cannot be separated from dances, for there is no hard and fast line between the two. Many stories are told concerning the games, and the ceremonies are by some observers reported as dances and by others as games. Whether dances or games, however, it would appear that the object is the same, viz. to drive away either the dead or the evil spirits to whom the influence belongs, and to free the living from the resulting fear—a purpose which in process of time first becomes divination as to the state of the deceased, and then is explained more simply as for the mere amusement of the deceased or the survivors. Naturally this object is not clear in every reported instance. Insignificant attention on the part of the reporter is sometimes the reason for this; but perhaps quite as often the delay of the ceremonies themselves, and the loss of those who know them of their real meaning, are as much to blame.

Among the Bongo of the Egyptian Sudan a large heap of stones is erected over a grave, and upon it a number of votive poles are erected, adorned with nooses and incisions, with their forked tops made to resemble horns. The meaning of these poles or stakes is said to have passed from the memory of the inhabitants; at all events Schweinfurth ("Heart of Africa," Loud. 1874, 164) believes that during his twelve months' stay in the country, failed to obtain any information on the subject. There is, however, no doubt as to what is done. The entire village takes part in the digging of the grave, and covering it in planting the votive poles; and, when this is finished, they all equally shoot at the poles with arrows, which are left where they strike. The Yandis of Southern India perform, on the sixteenth or some other day after death, a cere- mony called the "dead man's wife." In place of the latter, it is squeezed into a conical mass representing the soul of the deceased, and stuck up on a platform where the eldest son spreads cooked rice before it, lights a lamp, and burns incense. It is then taken with the rest of the kindling a glimpse of the effigy of a man is made close to the water with the feet to the north. This effigy is anointed with shikai (fruit of the Amla or "Bael""); and red powder. The conical image is set up at its head; there is a plate filled with nuts is placed near its hands and feet, together with betel and money, and the son salutes it. The guests then sit themselves in a row between the effigy and the water, with their hands behind their backs so that they cannot reach the plate for nuts. They throw the nuts towards the water, into which it finally falls and becomes disintegrated (Thurston, vii. 428). These two customs of widely differing peoples are manifestly directed against the deceased.

A Sioux practice known as the 'ghost-gamble' presents the deceased as engaged in the contest. Its effects are divided into many small piles. A man is selected to represent the ghost, and he plays for these piles of goods against all the other players. The players is paid with all the stones, which are marked like dice. When the deceased is a man, only men play; when a woman, only women play ("Ewers," 165). Of the real meaning of a contest of this kind we get a glimpse in the custom of the Bulgarians of Hungary, who while away the tedious hours of the wake with games, among others with card-playing to divine whether the soul of the deceased is saved or not. At an earlier stage it played a decided part in determining, the fate of the soul, or its relations with the survivors (Géza von Hevesy, "The Funeral," 282). In the south of Ireland, formerly, on a similar occasion songs and stories, blindman's buff, hunt the slipper, and dancing were among the amusements. It is told also that 'four or five young men will sometimes, for the diversion of the party, blacken their faces and go through a regular series of gestures with sticks, not unlike those of the English Morris-dancers.' This disguise and these evolutions in the presence or immediate neighbourhood of the corpse, there can be little doubt, were mere more diversion. Comparison with other customs suggests that the players represented supernatural personages—ghosts or devils (Croker, "Researches," 170).

This is certainly the case with savage dances in which masked and disguised figures appear. The assumption of the disguise is, according to the almost universal view of savage peoples, enough to cause the performer not merely to represent, but actually to be for the time, the supernatural being represented; and the appearance of such figures is quite common at death-dances.

Thus in the western islands of Torres Straits the performers personify the ghosts of persons recently dead, and in the dance the characteristic gait and actions of the persons so personified. 'The idea,' wrote Hume, 'is evidently this convey to the mourners the assurance that the ghost was alive and that in the person of the dancer he visited his friends; the assurance of his life after death comforted the bereaved ones.'
DEATH

(Torres Str. Rep. v. 156). In conformity, probably, with this object, a buffalo is provided, also disguised, whose antics as he follows the other performers are provocative of mirth. But this is a rule that has not been observed in all savage nations. Among the Balaka the dance seems to be performed by the gnaw alone. The performer for the dance is a woman; the business is to protect the living against ghosts. She dances both before and after the burial. As the grave is filled in, she says about her writing, 'I am not to器, to drive away the ghost, but the souls of living persons—obviously to prevent their getting into the grave, or into the undesirable society of the dead (J.R.W v. 600).

Among the Beni Amer of Abyssinia, in spite of Islam, women occasionally performed with a sacred incantation. It is the women who perform the funeral-dance; and one of the sisters of the deceased, having dressed her hair in a masquerade fashion, personifies the holy dead and shield what is supposed to be a prayer is sung (Munzingen, 257). The sex of the performers renders it probable that the dance is really magical, and the appearance of a personification of the deceased is intended to do more than give assurance to the relatives of his continued life; it is to modify him by singing his praise, so that he may do no harm to the survivors. So to ward off evil influences (probably to drive away the ghost) is the object of the dance practised by the Danumans and performed backward and forward over the grave (Kid, Ess. Koar, 251). On the burial of a chief among the Juh on an incantation to the winds they set six days' bales, 'hunting the bow.' The young men clad in short drawers and wearing caps of monkey-skin, cover the town, brandishing shields and clashed tom-tom, if they were not singing on a warlike expedition. With an urgent air and panting as they go they offer a dance. The chief ranked ranks that brandish the cutlasses over another one's hands, and the dash of the weapons is heard afar. From time to time they strike the hand till all are driven to flee or change the evil spirits before them (Aethropus, i. 160).

But there is another kind of dance sometimes performed on these occasions, of which we have hitherto seen in some of the foregoing—the comic or burlesque.

Among the Indians of the Paraguayan Chaco a woman who has lost a child joins in a procession in circle round a fire made outside the village. Young men appear dressed up as dragonflies, and 'fly to and fro, provoking laughter by their antics and the constant variations of the rhythm they maintain' (Greas, 49). We are not told here the nature of the dance (if played); but in many cases they are certainly of a priapic and what we should call the satirical character. Thus among the Chiquitos of the province of Loango in the nineteenth decade of the 18th century report performances of this kind carried out by players who were clad in feathers and masked with the heads of birds. Simple oratorical dances are performed on the island of Yap on various (not necessarily funeral) occasions, especially on the death of a young girl (Tobolos, lxxxvi, [1904] 361); and in the Arau Archipelago they are presented at the termination of the mourning, as an anathema and warning. They then proceed (Greas, 49), and the deceased cut his widow's hair short, and the widows aid their dressing. Some months later a drinking-feast is held, at which, as the men of the village reconquered one another with whips made of the fibres of a climbing plant, until the blood ran in streams, and strips of cloth and much shouting. These convulsive and somnambulistic ceremonies were also observed among the Yuc people of Mexico (Chih). The Yucatán, 37, 70, 71). Among the Charrus of the state of the marriage ceremony, and the marriage itself is that of a man each cut a finger-joint off and inflicted other wounds on themselves. They also remain shut up alone in their dwellings for two full months, fasting and abstaining. The husband, the other band, does not mourn for his wife; nor, in fact, for his child. Grown-up sons, however, remain for two days entirely naked in their huts, and almost without food. Then having suffered the infliction of certain painful wounds on the arm, the mourner goes forth quite naked into the wilderness, where he rests all night up to the breast in a hole previously dug in the earth, over which he builds himself a little hut, and stays there for six days without eating or sitting down. The third day his friends bring him food and by it, hastening away without saying a word. It is usual for the person to remain of ten or twelve days that he may return to the village (Int. Arch. xii., Suppl. 72).

In South America are in many other places, the women especially were made to wear the weight of the mourning observances. Among the Goua, another kind of hair was also said (among some tribes even the women went stark naked) and retired into solitude. The women in paritcular concealed themselves, and appeared only each morning to dress late in the evening to weep at the grave. Among the Mayas and Guaycuri the women and slaves were forbidden to speak for three or four days. Among the Charrus the mourning was only a vegetable diet; among the latter general fasting and abstinence were imposed on the death of a child (Ch. 73, 74, 75). The Warramunga women in Central Australia fight with one another and cut one another's scalp; and all who stand in any way intimate with the deceased, receive the classification of 'villainous, and their own scalp cut open with yam-sticks besides, the archetypal widows even being called red-hot fire-breathing.' A strict ban of silence is also imposed on women who reckon as wives, mothers, sisters, daughters, or
DEATH AND DISPOSAL OF THE DEAD (Introductory) 439

mothers-in-law of the deceased. They are not released from this work until they are felt to be sufficiently detached—which period may cover one or even two years (Spencer-Gillies, 221, 225). Among the Ewe of Togo, and those of the same tribe who have immigrated to the Gold Coast, they are taken by the deceased to reach the kingdom of the dead. He is buried beneath the hut; and the widow, who is the chief mourner, must stand in the same hut concealed, only leaving it to bathe and for other absolutely necessary purposes. When she looks out she is concealed by nails driven into her eyes bent down, and arms crossed over her breast, "that no mischief may befall her from the dead man." In fact, she is looked upon as so far as the deceased. She carries a club to drive him away, for he may wish to renew marital relations with her, and that would be contrary to the law. For greater security she sleeps upon the club. She must not answer any call. Beans, fish, palm-wine, and rum are forbidden to her; and when she asks for food she must be sprinkled with ashes, to prevent her deceased husband from sharing the meal, in which case she would die. By the light of further pre
gur. —Everywhere mourning garb is an essential part of the observances. Primarily it is intended to distinguish those who are under the tabu. For this reason it is usually the reverse of the garb of ordinary life. Peoples who wear their hair long cut or shave it; those who habitually cut or shave it, and those who permit the painting. Those who braid their hair unbind it and wear it loose. Those who wear clothing go naked, or wear scanty, coarse, or old worn-out clothes. Ornaments are laid aside or covered up, and clothing put on colourless—black or white—garments. Ainu mourners at a funeral wear their coats inside out or upside down (Batchelor, 106). Among the Bangala a man sometimes wears a woman's dress (cf. O'Neill, 433). Peoples who ordinarily cover their heads uncover them, and vice versa. Women, especially widows, cover themselves with a veil, and hide in the house—a practice pointing probably to the479
are very imperfect, and accurate statistics are not available. All that can here be done is to note a few examples showing how it is reckoned in some typical cases.

In the Bahar Archipelago mourning lasts to the next new moon; in the same Coast, 3 months, except for the widows, who must always mourn the full time; and in the New-Horribles the mourning lasts for 10 days (Cordiner, 531). A year is supposed to be the period of mourning among the Agni of Dhadol on the Ivory Coast; but very often it is reduced to 3 months, except for the widows, who must always mourn the full time. General ceremonies are proceeding during this period, the actual burial may be postponed for years (Cloezel and Villanum, 113). In Korea the length of mourning depends on the degree of kinship. For father, mother, husband, adoptive parents, or first-born son, it is 27 months, though non-kin by marriage under 15 years of age it may be as little as 3 months (JAF X, 342). Among the Ewe the survivors mourn in the hot for eight months. A fast is then held and the food eaten is thrown away, and the mourning is over; *they say they have today seen the 'go into the Ant-hill' their brothers—those who have gone before* (Spleth, 258). Among the Dayaks all the kindred are 'unclean' for a short period, from 3 to 7 days; they can pay no visit to or receive guests from the dead, and so on. The house also is 'unclean.' Then fires are slaughtered, the mourners and the entourage of the house are dined with the blood, and so on. But in the immediate relatives—husband, wife, and children—the taboo lasts much longer; nor are they released until they have held the *tiowk*, or final feast for the dead, which gives the soul of the deceased admittance into the city of the dead, and is a sort of consecrated ground for the burial of his relatives, and at the time of the summer ceremonies, a ceremonial dance takes place there. The mourning is over (Spencer-Gillen, 530 ff.). Among the Biri, who held that the deceased haunted the grave, the woman, who no longer had to be purified, and the surviving spouse washed away the ashes from his or her countenance, remains fair and potent, and is free to marry again (Globus, xvi. [1904] 57).

4. No mourning.—Attention has been drawn to the common rule that the mourning tabus weigh more heavily on the women than on the men. The necessity of the labour and vigilance demanded from the latter for the provision of food, and for protection from wild animals and human foes, may probably form at least an excuse for their comparative exemption. Instances of total exemption are not quite unknown. In ancient Greece it is said the men of Keos wore no mourning garb (Rohde, *Psyche*, i. 257 n.); and the same statement is made of the inhabitants of some of the Malouines (Rohde, 205). Where there are no outward signs there is probably no tabu. In the district of Kita (French Sudan), however, we are told, mourning is almost unknown for either sex. When a married woman dies, her husband is held to be *unclean*; however, even before the funeral is over; and the widower of a married woman marries again in eight days, though some wait longer—a month or two months; while others take a concubine at once. If a man dies, his widow may not marry again until she is pregnant, when she must wait until the child is born (Steinmetz, 150). In Seguela, on the Ivory Coast, the burial and funeral dances take place the same day, and there is an end of the matter: mourning is quite unknown (Clozel and Villanum, 357). Among the Mee of Northern Tongking the funeral rites last for three days, during which the only sign of mourning is that the hair is untied and allowed to hang down upon the shoulders. There is no injury to the mourners and apparently no tabus. For a day or two after the burial, the grave of the deceased, and then he is forgotten (Lamet, 318).

XVIII. Purification of house and village.—In spite of the elaborate precautions the dead man from returning after the actual disposal of the corpse (§ XIII.). Accordingly, either after the body has been removed or at the completion of the ceremonies (which may be long subsequent), measures must be taken to purify the place and remove the tabu. This is accomplished by driving away the ghost.

At the last of the funeral feasts of the Tarbhumares the deceased, as we have seen, is driven away. Three feasts are required to get rid of a man, but four to get rid of a woman, because she cannot run so fast, and it is therefore harder to chase her off (Lamonts, i. 387). Noise is a potent means of driving away the taboo tabus, as it is convenient and hostile spirits. For, though often dangerous, they are all fortunately not only easily deceived, but possessed of very weak nerves. In these ceremonies there is often no clear distinction drawn between the male and female. Different kinds of women are alike being liable to be buffed and tricked and frightened by the same means. It is impossible to say whether the guns universally fired in West Africa at Negro funerals are directed against the ghost or against the mourners. The custom is, that the Macaus fire before the hot in which the corpse is lying, to scare off both the ghost and the evil spirit that has caused the death (Int. Archi., xiii., Suppl. 88). Drums, trumpets, musical instruments of all kinds, shouts, and yells are all very commonly employed. Among the ancient Greeks, brass was bought to drive away spirits (Rohde, *Psyche*, ii. 77). In the Tyrol an approved method to banish a ghost is for the household to collect his keys and jingle them. He cannot drive away the taboo tabsu of his property. Over the boundary, however, he must not step on peril of being torn to pieces (Zingerle, 57). Many of the funeral dances, as already mentioned, have the character of purification.

In various parts of Europe, especially among Slav populations, the house is solemnly swept out after the funeral. Among the Slavs, after the *tiowk* or final feast for the dead, the priests take a besom made of the leaves of certain plants, moisten it with blood and rice-water, and superer all who have been taken part in the feast and everything in the house, 'to sweep away the pollution.' The priests then start in procession for the river. As they set out, the others beat the walls and floor, and the priests invite all causes of ill-hum to mount on them; they pretend to totter beneath the weight; and arrived at the river they load little boats with the misfortunes thus cleared out, and send them to the great sea in the middle of the sea, where the king of the small-pox dwells (Int. Archi., ii. 211). When a death occurs among the Tofalins on the confines of British Columbia took place in a winter house, it was purified with water in which blood and juniper had been mixed, and the bowels were spread on the floor every morning, and tobacco and juniper placed in various parts of the house. But, if more than one death occurred at one time, the purification of the house and its walls and juniper are required. At the time of the juniper the kindred are called upon to pay special compensation for the defilement and the risk of drought (Spleth, 274, 278; see § VII. z. 9).

XIX. Destruction or abandonment of house and property.—The purification of house and village presupposes a settled life and the want of any such civilisation. At the lowest stratum of culture, where the huts are of little value and easily erected, or where economic, defensive, or sentimental reasons have not as yet rooted the population to one spot,
the house is destroyed or abandoned, or the whole stock, if not slain and the site chosen.

In many such cases, it may be noted, the deceased is either buried beneath the hut, or left unburied within it.

The Nguni native commonly remove the camp when a death occurs. Among the Bantu it is usual only to burn or pull down the hut of an ordinary person; but if a chief dies the relatives either remove the body at all events or burn it; among some tribes it is burnt down. The reason given by the Nguni for abandoning the house is not that the ghost of the deceased and his former hands haunts it, but that the new owner and his former hands haunt it (Elmslie, Among the Wild Nguni, Edin. and Lond. 1890, p. 74). Similar customs are reported of various tribes of Negroes, North and South American Indians, the Aborigines, the Kaffirs, the Votiaks and the Wairs. Under various names tribes that are not a part of the property, like the widows, remains under tabu.

At an early stage of culture all the property of the deceased was buried with him or destroyed at his death. Either the custom or relics of it are reported from every quarter of the globe. Its object seems to have been not merely to give the property to the deceased, that he might enter the spirit-world with all his earthly possessions and comforts, but to prevent his retaining them in the discomfiture of the survivors. Originally, no doubt, it was to get rid of the death-pollution, for the practice often extends beyond his property to all objects associated with him. On the Melanesian island of Bongainville it is main work, and its produce are regarded as the supreme manifestation of his personality, inseparably linked with their author (TIRW xxiii. [1901] 385). Doubtless the same was once the case elsewhere, and we may account for the destruction of his crops and fruit-trees so constantly reported from the East Indies and Melanesia. Naturally his garments and bedding, where such things are in use, are impregnated with his personality, and require a part of him. The superstitions connected with witch-craft afford abundant evidence of this.

In Europe the Vedas throw away in the forest or into a lake all property of the deceased (ZTRIV w. 1890) 254). In Worcestershire it is ominously said: 'The clothes of the dead will not wear long' (PL xx. 1890) 256). In Lincolnshire it is believed that, even though they be put away, they will not rot as the bodies decay in the grave (Autumny, xxxi. [1890] 322). In the French Department of Ille-et-Vilaine it is believed that everything belonging to the departed will soon disappear: his clothes, despite all that can be done to preserve them, will be promptly eaten by his relatives, or by accident: his figures, if not sold to the butcher (Orrain, ii. 250). From the Whiteheath Iroquois to the Eskimo the food on which death took place is burnt or thrown away (see § 42).

A custom so hostile to the growth of civilization and to the individual greed of survivors could not maintain its ground. Hence all sorts of compromises, with the consequences, the fears, the affection, and the avarice of the survivors. Among the Hareseks of North America part of the clothing is distributed among the relations, part interred with the body, and part left in the property, to prevent it from being burnt or otherwise destroyed. In some of the villages of Serang a part of the property of the deceased is destroyed, and some others a tabu is merely laid upon it, redeemable by a third person on payment of a large gong, a song, and ten dishes. His relatives then turn the body into the camp, and put back at it all the blood-relations (Riedel, 132, 143). In others of the Moluccas the dead must pass the share of the deceased on to kinds in plantations, and these are cut down; the rest remain to the survivors (49, 250, 394). A similar practice prevails on the Tami islands. There the canoes are too valuable to be destroyed; accordingly a few chips are cut off them, and a figure-head carved (ZIRW iv. [1900] 237). The same principle is applied in Malo, where gongs are not cut off, but are merely left on the funeral garment, and are later thrust in the ground, and remain there for ever. The Zams are said to make a pot to receive all the dead in, and amount to a kind of hallowed place, which is taken away by the sorcerer, and burned or kept away from the village.

Several of the tribes in the Lower Nile region, such as the Bedouins of the Sudan, and the Nubians, destroy their deceased on the very spot of their death, and afterwards bury them. The Sudanese, who are generally Christianized, believe in a kind of spirit world, and consequently the dead are only protected from attack on the spot. The Nubians are said to hide the corpse in a hole, and burn it afterwards, because the dead are supposed to be devoured by devils. The Nubians also place small stones on the grave, to prevent the dead from turning to the evil side (Riedel, 250, 394). The result is that the country is studded with the tombs of the dead, and is known as the 'land of the dead' (TIRW iv. 237).

In some cases the intention seems to be to forget the deceased. This is expressly stated among the Inuit, the Navarre, Salivas, and other South American tribes. But the intention to forget probably arises from fear.

The Inland Caribs feared the souls of their forefathers as evil spirits, and never named them. The Guaycurus and Lenguas not only never mentioned the name of the deceased, but on the occasion of a death the survivors changed their own names so as to baffalo the dead man (or death, or the evil spirit which caused the death) when he came again to find them. Among the Guajara, if the name of the dead was mentioned in the family but the penalty was death by cutting him a heavy gong (Int. Arch. xii., Suppl. 89). The Yabim of New Guinea avoid mentioning the names of the dead, and any one who does may be disturbed at their occupation in the forest of eating otherwise inedible fruits, and their anger be thus incurred (ZIRW iv. 256). Among the Bushmen and Hottentots it is not to be uttered for a year or more, 'not so much out of regard to the feeling of the surviving relations in consequence of the mystic connection which is supposed to exist between names and their owners. To utter or use the name of a dead person is to affect and mix it with his ghost or spirit, and thus to touch the earthly haunts. It is inimical both to the ghost itself and to the person using its name, and thus attracting the ghostly influence.' But time removes the taboo, so that the water once thrown over the name, etc., is passed to the nextTABU. — Many people avoid mentioning the dead by name, or even prohibit it in some cases the intention seems to be to forget the deceased. This is expressly stated among the Inuit, the Navarre, Salivas, and other South American tribes. But the intention to forget probably arises from fear.

The Inland Caribs feared the souls of their forefathers as evil spirits, and never named them. It is inimical both to the ghost itself and to the person using its name, and thus attracting the ghostly influence.' But time removes the taboo, so that the water once thrown over the name, etc., is passed to the next...
among many Lekutu tribes, where ancestor-worship is the religion, the name of the dead and all similar sounds are tabooed—a custom that frequently leads to considerable, though usually not permanent, changes in the vocabulary. Even this is, however, not unknown to the Lekutu: it is found in other parts of the world.

The tale of the name of the dead is very well known, and need not be further illustrated here. If widely spread, it is not universal. Among the ancient Greeks the opposite rule prevailed. The great desire of an Egyptian was to continue his ghostly existence. To be remembered by the living was one means to this. Accordingly the statue of a high official,例如 Thothmes I., in the Egyptian Museum, bears the following remarkable sentences in the course of its inscription: 'May the gods of this temple recompense you if you pronounce my name! He whose name is pronounced lives, and if another shows that you act the wrong way and he will do the same for you' (Collis, ix. (1909) 155). There is in the contemplation of many peoples more than a mystical con-

... of the dead is accelerated. Some of the South American tribes wait no more than ten to fourteen days. After the lapse of that time they disinter the body, strip the flesh from the bones, and after an elaborate ceremony re-bury the latter (von den Steinen, 458; 465; JFAL. xv. (1929) 290). The Chatoaes of North West Africa have a set of venerable traditions, with very long names, whose business it was to tear the flesh off the bones and burn it with the entrails projected to the devil, as a final consecration in the house of the deceased (I RBEW 168, 169). So in South Teton, on the island of Timor, a few days after the death of a king the bones are separated from the flesh and other sacred objects, and not until nothing but the skeleton remains does the waiting begin, for it is only then that a ceremony is performed and the skeleton is accorded a funeral service. The dead are then buried in a grave (Kraus, 339).

Where the decay of the flesh is left to natural means, the length of delay between burial and the final disposal of bodies varies widely among different peoples in different climates.

The Kukule of Madagascar are satisfied with the decomposition of a 'month or so'; they only strip and re-bury it (JFAL. xv. (1925) 265). Fifty or a hundred days' suffice in the Buns Islands (Codrington, 267). Few tribes elsewhere observe a similar rule. Many wait two years or more. The Chinese of Tongkong after three years take the bones from the coffin, enclose them in jars, and re-bury them in the grave, over whose site a small mound is erected, or in cemeteries on the hillsides (Lancet, 30). There is some evidence that a similar custom formerly existed in China itself (de Groot, iii. 1670). Among the Bulgarians the parents of a dead child after three—some say as long as nine—years' waiting bury the bones, after they have been covered with earth for a whole year in the church before they are again buried (Strusse, 458). Throughout Europe it was customary during the Middle Ages and later to suspend the bones in the church and then place them in a charnel-house. This custom is usually ascribed to the want of room in the church. The custom, however, is by no means sufficient; the origin of the custom is more likely due to causes considered here.

Feast of the Dead.—The tendency to postpose the final ceremonies, where it involves the collection and exposure of bones or ashes, is accentuated among small but closely organized communities by making a common ceremony, often called the Feast of the Dead, for a number of the departed. Even among the Bororo of Brazil, where the exhumation is so speedy, the relic of one person cannot be disposed of alone; one dead man must wait for a second, and the two leave the village in company (von den Steinen, 510). In these cases the corpse is usually simply a place of deposit. The stock example is that of the Iburus, who every twelve years used to dig up the bones of those who had died since the last Feast of the Dead. The bones were first of all cleaned. If corruption had not finished its work, all the remaining flesh was stripped off and burned, unless the body was so newly buried as to be practically whole. The bones were then wrapped in sacks or blankets, covered with rich robes of beaver-skin, taken severally into the burial-chambers, where they were afterwards brought together, and a feast was held in their presence, with funeral games. On a subsequent day they were taken to a large pit, where they were all buried together, with much

---

This conversation was not intended to be a part of a conversation but rather a discussion on the implications of death and burial practices across cultures. It highlights the variations in the ways communities honor the dead, from naturalistic processes like decomposition and burial to deliberate and organized practices such as exhumation ceremonies. The text underscores the importance of cultural context in understanding these practices, as well as the potential for both continuity and change in mortuary traditions across different societies and times.
cemetery and the distribution of gifts (§ REEW 112). We need not determine whether these rites are more elaborate than those of other nations, or whether the rudiments of the ancestral ceremonies described above may be traced back to a common source. It is certain that similar rites take place elsewhere. The Khans, who burn their dead, deposit the ashes in small cairns. Their bodies are removed from the graves and left lying, where the remains of all the departed members of the clan eventually rest (Gordon, 140). Corresponding ceremonies are observed elsewhere in India, and are common in the East Indian islands. The relics of the ancestors, and concentrates on them on one occasion; but their chief value is to bring home to the members of the clan or community their common life, with its common sorrows and joys—in a word, their unity among themselves and with their dead.

3. Destination of the remains.—The final destination of the remains, like the preliminary disposal, is by no means the same everywhere. This will be more clearly seen from the following examples.

Various Australian tribes, after carrying the bodies or the bones about with them for a time, either bury or deposit them in their permanent dwelling-place (Heinret, 67, 471). The Cherokees of Carolina had a common bone-house (§ REEW 160), which doubtless was regarded as a sacred building. The name of the deceased is written by other writers to the repositories of the dead Indians of Louisiana and Virginia, where religious rites were accordingly performed, at all events to departed chiefs (§ REEW 124). Of the natives of Socah, in S.E. Africa, it was reported by the old Portuguese writer, João de Barros: 'After the feast of the bones, or when the deceased came to the bones of the ancestors or descendants, or of the wife of his many children, and thought that every sign of his aged work they belonged to him, and every seven days in the place where they keep these bones, as in a garden, they spread cloths and lay with bread and boiled meat, as if they were eating it, to their memory, to which they pray, afterwards eating the food thus offered (Rec. S.E. Afr. vi. [1900] 115, 299).'

Proceeding along the channel of their descent, a basket is brought from the rafters of their dwellings (Boyle, Arched. Rep., 1863, 142) and in the Banks Islands, while the bones of a favourite son were hidden in the bush, some of them would be hung up in the house (Coddington, 367). Among the Andaman Islanders the relatives weep over the bones, each of them offering a bundle of leaves, the edge of which is tied with a piece of cloth and lower and jaw, and carrying them about for months suspended near the deceased. They went to the coast of the dead (Trans. Ethnol. Soc., new ser., ii. [1861] 37).

4. Object of the practices.—The rite of exhuming and collecting the bones and making a permanent disposition of them is generally connected with, or has for its object, the definitive secession of the dead from the society of the living, and their union with the fathers in the life beyond. The ceremonies for this purpose, however, are not always connected with the burial remains.

On the Timor and Tanambar Islands, ten days after the burial of a warrior who has fallen in battle, the people of the village assemble on the shore, the men armed and the women in a festival array. An old woman calls to the soul with singing. A bamboo with all its leaves is then erected in the ground, a long stick on the top. This bamboo is regarded as a ladder, by which the soul climbs to its destination. The scrotum (a sort of petticoat) of the deceased is thrown over the bones, punctuated by the applause of the audience. When from the movement of the bamboo it is judged that the soul has climbed to the top, the bamboo is cut, the corpse is hidden in a diggirtkuru, and a meal is given to prevent the soul from subsequently wandering about or causing mischief. A dish containing rice, and an egg, previously prepared for the ceremony, are also broken to pieces. Appended in this way, the soul betakes itself to the little island of Nusmuti, off the north-west coast of Sunda, one of the islands of the group which is believed to be the dwelling place of souls. The bones, it would seem, are dispersed at a later time (Rasel, 307). The Chamorro nation, who live in the western part of the Solomons, have a similar custom.

In the Solomon Islands the skull is regarded as hot with spiritual power; and by its exhumation it is supposed to be raised to heaven. At Santa Cruz it is kept in the house in a chest, and food is set before it, for 'Great power' is in the man himself. In other parts of the archipelago, Similarly, a Fijian chief in West Africa keeps in a chest the heads of his ancestors, and invokes its contents on the eve of great events, such as war or the chase (Boche, de l'Indie du Pacifique, 1901, p. 90).

It is this belief in the spiritual power associated with the head even of an enemy that forms the foundation of the practice, common in the East Indies, of head-hunting. The head is not a mere trophy; 'it is an object of heart-felt veneration, an earnest of blessing to the whole community.' Those who were once our enemies hereby become our guardians, our friends, our benefactors' (Farnes, op. cit. 65, 59). They are addressed, soothed, and propitiated on all proper occasions; and it is to them that the happy owner ascribes his plentiful harvests, and his immunity from sickness and pain.

XIII. Epitaph and Tombs.—Many peoples complete their funeral ceremonies by the erection of an effigy of the dead. Thus the Kâris of the Hindustan, one year after the death of an adult, set up a coarsely carved wooden statue, and inaugurate it by feeding it with cakes and drinks, and offering it the honour done to the deceased is measured by the drunkenness. Before it is over the four nearest graves which have taken part are consecrated—the horse which has won the first prize to the deceased in whose honour the feast is held, and the owners to three of his ancestors by marriage. The ceremony does not involve the entire loss of the animals by their owners, but only permission to the dead to whom they are consecrated to ride them whether they wish or not. The pedestal of the statue is, however, not held for two years, when it is given by the widow. She then takes it inside her mother's house, when another brother or some other relative of the deceased (Anthropos, iii. 739).

As to the races and other communities at the Belt-precocious forms, see § XVI. They are expressly intended to affect the condition of the deceased in the other world. Pre-historic remains in various parts of both the Old World and the New point to the great antiquity of practices of exhumation and re-burial of the bones comparable with those discussed above.

5. Disposal of the skull.—Among the practices which we have just considered, special mention has several times been made of the skull of the deceased. It is sometimes worn or carried about for a time, most frequently that of a man by his widow. In such a case it is perhaps merely a dear memorial of the deceased, or at most an amulet. Thus in the Andaman Islands, where the bones are broken up and made into bones, or even a skull, it is worn down the back tied round the neck, usually, but not always, by the widow, widower, or nearest relative, not only great but also disrespectful. There are, however, practices which it is 'believed to stop pain and cure diseases by simple application to the diseased part' (Ind. Cons. Rep., 1901, iii. 65). But amulets are on their way to become objects of cult. Accordingly, wherever we find in any societies, specially skulls, preserved in the house or in a special shrine, whether common or not to other similar relics of the family, or clan, or even of a larger community, we may suspect a more or less developed cult, though it may not be recorded by our authorities. In many instances, however, this cult is recorded.

Folk-tales of the western islands of Torres Straits, in accord with the practices which obtain in those islands, describe the hero picking sacred leaves, and offering some of which to the skull of his father and mother, and on others of which he fed them. The skull is sometimes worn or carried about and inquiry as to the future. They tell the resnoed of his bones, and the success which attended his following their directions and observing their warnings (Forere. Rep. v. [1911] 41 ff., 47; cf. 250, 251, 257, 258, 301, 305). In the Solomon Islands the skull is regarded as hot with spiritual power; and by its exhumation it is supposed to be raised to heaven. At Santa Cruz it is kept in the house in a chest, and food is set before it, for 'Great power' is in the man himself. Similarly, a Fijian chief in West Africa keeps in a chest the heads of his ancestors, and invokes its contents on the eve of great events, such as war or the chase (Boche, de l'Indie du Pacifique, 1901, p. 90).

It is this belief in the spiritual power associated with the head even of an enemy that forms the foundation of the practice, common in the East Indies, of head-hunting. The head is not a mere trophy; 'it is an object of heart-felt veneration, an earnest of blessing to the whole community.' Those who were once our enemies hereby become our guardians, our friends, our benefactors' (Farnes, op. cit. 65, 59). They are addressed, soothed, and propitiated on all proper occasions; and it is to them that the happy owner ascribes his plentiful harvests, and his immunity from sickness and pain.

XIII. Epitaph and Tombs.—Many peoples complete their funeral ceremonies by the erection of an effigy of the dead. Thus the Kâris of the Hindustan, one year after the death of an adult, set up a coarsely carved wooden statue, and inaugurate it by feeding it with cakes and drinks, and offering it the honour done to the deceased is measured by the drunkenness. Before it is over the four nearest graves which have taken part are consecrated—the horse which has won the first
DEATH AND DISPOSAL OF THE DEAD (Babylonian) — In common with other Semitic races, the Babylonians regarded the present life as incomparably superior to that beyond the grave. It is not likely that the Semarians, whose religious forms the principal element in the religious ideas of the Babylonians, differed from this pessimistic view of death so universal in antiquity. For the Sumerian period we have no direct statement concerning death; the evidence concerning their burial customs, their sacrifices to the dead, their communion meals with the souls of the dead, etc., is abundant. The word employed by them for the soul is 2a6, lit. "the rush of wind," and is associated with the name of the Mesopotamian god Enki, or Ea, "breath," which may also mean "throat and organs of respiration." The dread of death is revealed in the expressions for dying. In Sumerian the word is dig, lit. "to seize away." The early Bab. expression, gathered in the 1st or 2nd millennium B.C., is yet found only for women in the phrase, "when her god gathers her" (see Cuneiform Texts of the Br. Mus., ii. 24, 27; viii. 51, 17; 12, 18; 17, 18; Meissner, Asyr. Stud. iii. [Berlin, 1905] 53; Schorr, Altdav. Grabworte [Vienna, 1907] 85, who compares Gn 25:17; or "she has gone to her fate" (Gen 31:27; [C.T. vi. 417, 13f.]; Matt 9:25; [Codex of Hanno'oibab, viii. 51, and pers.], or "fate has carried him away" [bintu aabib-3u]). Ashurbanipal, describing the death of Tarššš, says that "the fate of his night came upon him."

The life of man is fleeting and determined by the decrees of the gods of the lower world, says the poet:

"Build we an house for ever: seal we our tablets for ever! Do not destroy what we have built and is free to marry again (Jones, Oph. Ind. p. 101). Among the Maiido in California, the custom of burning gifts is halted at the death of the dead of the tribe or village takes place. On the first such occasion after the death of a person an image representing him is often made of skins, stuffed, and burned, along with the gifts (Full. Am. Mus. Nat. Hist. xvii. [1902] 50). In a certain Tartar tribe a wooden image of every dead man is laid in his grave (Ariz. v. 21). How far such an image could be identified with the departed may be questioned. In any case, they are only of temporary use, or entitled to a very limited period. Elsewhere, however, images are expressly made as an embellishment for the spirit. Among the Bantu people of Bondel on the east coast of Africa, where he dies is washed and shared by his maternal uncle. His hair, finger-nails, and toe-nails are taken and incorporated in the image, which then becomes a masu, the object of religious rites paid to the dead (JAI xcv. 206). On the islands of Leti, Mo, and Lakor, in the Marshall group, special songwood is cut for funerary purposes. On the fifth day after burial one of these statues is prepared, and the soul of the deceased is thought of as an offering of food, entered into for its temporary sepulcher. It is implored to eat and drink, and to watch over the security of the household, and is buried with the deceased, and the family follows (Ibid., 336). Among the Loino of the Lowa Tongking, with a walk of a kind of ochre and some wags of paper a figure of the deceased, about 10 centimeters high, is made. It is placed in the house between the wall and the roof, or turned over to a theater or to a shelter. It is a sort of image of an ancestral tablet, such as the Chinese dedicate (Laoc. 321). Examples might be multiplied, for the practice is widespread. But at this point funereal ceremonies merge into cult of the dead (see ANCESTOR WORSHIP).

LITERATURE. — On death and death rites in general, see E. B. Tylor, Primitive Culture, London, 1871, vol. i. ch. xii., vol. ii. ch. xii.; J. G. Frazer, On certain Burial Customs as Illustrative of the Primitive Theory of the Soul, in JAI xcv. [1886] 64-104, R. Hertz, "Contribution à une étude sur la representation collective de la mort," in Afro. x. [1905] 43-137; A. van Genap, Les Rites de pannage, Paris, 1906, ch. viii.; E. S. Hartland, Legend of Personae, L. (London, 1890) ch. xiii. The death rites of a particular people and its ideas on the subject of the spirit are more aptly be studied in the ethnographic records of that people. Many have been cited in the foregoing article. Detailed studies relating to special areas have been made by Theodor Koch, "Anthropomorphism and Animism among the Semitic and Turanian Tribes of India," forming the Supplement to Internat. Archiv für Ethnographie, xii. [1899], ac- cording to the Dravidians and other Non-Aryan Tribes of India, in Anthropos, iv. [1909]. See also the following series of articles, C. E. Sihvola, MARDUK.
DEATH AND DISPOSAL OF THE DEAD (Babylonian)

...thless both Sumerian and Semite exercised much care in this respect. At Ur brick vaults of considerable size containing several skeletons were excavated by the Babylonian archaeologists, accompanied by jars, platters for bread and food, the deceased's seal, combs, and, in case of women, even brushes (for colouring the eyes?). The cheaper method of interment consisted in placing the body upon a slightly raised platform of bricks, which was first covered with a reed mat. Over the body was fitted a large cover, made of one or two pieces of baked clay, and large enough to admit both the body and the articles of food and raiment. Taylor found many such tombs, in which case the body lay with knees drawn towards the chest. 1 Still more economical method of burial consisted of a clay or porcelain coffin of capsule form, made by fusing together two huge bowls, which were luted and crushed into a huge vase, accompanied in all cases by food and drink. Common in later times is the bath-tub-shaped coffin, deep but not long, in which the body sits upright, with the back against one end, and the limbs stretched out along the bottom, the whole being, of course, protected with a clay covering. The flask-shaped coffin, bulging towards the base, is common in the late period. The excavators of Assur found many elaborate tombs of kings and priestly families. To each of these an opening at the west end, closed by a stone not too difficult to be moved, made access to the vault possible. Stone staircases led down to these openings. At the Assyrian burial vaults at Assur usually contain a small niche for a lamp. The Assyrians employed such vaults both for body burials, the skeletons being found in orderly rows side by side on the pavement, and for cinerary urns. The latter are cone-shaped and made of baked clay.

Thus we see that cremation was practised at all periods—probably for sanitary reasons. The earliest graves are found in the temple courts, but these sacred spots must have proved altogether inadequate for the vast populations of Sumer, Babylonia, and Assyria. The only practical method would be to set aside certain parts of the city (as at Ur), or whole districts (as at Nippur).

1 The word for the deceased soul is gilitum, 'creation of darkness' (gitig-dim), which, by apocope of the initial letter, became tidum, edum, and passed into Semitic as edimmu. 2 There is a Babylonian name for the 'spirits of the dead' as minor deities, capable of interfering for good and evil in the affairs of men. Whether, in fact, the entire conception of divinity rests ultimately upon the notion of ancestor-worship cannot be determined from our sources. We can no longer doubt that the Bab. conception of the devils, spirits of disease and misfortune, rests absolutely upon the notion of evil ghosts which rise from hell to torment humanity. See DEMONS AND SPIRITS (Assyr.-Bab.).

Although the souls of those whose bodies were improperly buried, or whose memories were not cherished at the parentalia, return to the earth and must be driven back to the nether world by incantations, and ultimately, yet the great majority of souls lead a shadowy existence in the dreary land of the dead. See STATE OF THE DEAD (Assyr. Bab.).

We come now to that significant part of Bab. religion—the communion with the souls of the dead. We have seen that the kinship of the dead provided the soul with food and raiment in the grave. These are remnants of an ancient belief that the soul actually consumed the elements and wore the ramment left for his use. Although the Sumerians and the Babylonians continued to use these symbols of the material needs of man in the graves of the dead, they soon rose to a more spiritual interpretation, in which, behind the symbolic bread and drink, lay the mystery of communion with the defiled souls and with Divine life itself. Each family seems to have made monthly offerings to the shades of its ancestors, which consisted in a communion meal at which images of the departed were present. In official accounts of the early period we find frequent reference to offerings to the king to the statues of deceased persons. 1 A list of official sacrifices in the period of Sargon of Agade mentions a lamb offered to the statue of an ancient Sumerian king; Entemenas; 2 and Gudea, a later priest-king (c. 221). It is evident that it was probably customary to make offerings to the statues of deceased persons. 2 Entries in official documents occur, stating the items of the monthly sacrifice for the souls of deceased persons whose service to the State had been great. This is especially true of kings and priests. More frequently the documents mention the mortuary sacrifices for all the souls who have died, a Feast of All Souls, occurring monthly and performed by the priests in various temples. The word ordinarily employed is the Sumerian kianag, 'place where one gives to drink'; but the notion of 'place' is often lost, and the idea of drinking is made to cover sacrifices of animals, bread, cakes, etc., as well as of liquors. That these sacrifices to the shades of the departed mortuary meal is made evident from one inscription which states expressly that the kianag was eaten.

Another word—also Sumerian, and employed for the parentalia less frequently in the early period, but by the Semites for the Semitic—kis, 'breaking of bread,' where the emphasis is laid upon the eating of bread at a common meal (kisya kastupu). The word occurs in the most ancient name of the fourth month as sig-ba, and later as kisya-minusz, or month of the breaking of bread to Ninazu, god of the lower world. This month was followed (in the calendar of Nippur) by the month of the feast of Ninazu. These two months correspond with our December and January, or the period of greatest darkness, when the gods of the under world, as deities of the shades, whether the sun-god and the god of vegetation had descended, were particularly honoured. We fortunately possess a letter in the archives of the first Semitic dynasty, concerning the feast of the breaking of bread for the fourth month (December):

3 Unto Sumu-ili, son of Nin-Marduk, say, Thus saith Ammi-ditta: 'I milk and butter for the kisya of the month of Nenacig are withheld. As soon as thou readest this tablet, may thy superintendent take 20 cows and 60 lbs of butter and come to Babylon. Until the kisya is finished, may he supply milk.'

Here we have direct evidence for a communion meal, 'breaking of bread,' for the souls of the dead, permanently adopted by the Semites at an early period. At Eski Harran an inscription has recently been found containing the autobiography of the high priest of the temple of the moon-god of Harran. In col. iii, he refers to the monthly sacrifices which he performed for the souls of the departed. After a reference to the raiment which he wore for the service he says:

4 Fox, sheep, date, wine, oil, fruit of the garden. . . . I break 4 unto them. As incense offering, the priest is known to have offered incense as a regular offering I fixed for them and placed before them.

The high priest here performs for the kinsmen

2 Quatremère, 1841, see 1. 2 Gebel Statuas, B. 7, 55.
the sacred ceremony of breaking bread for the souls of the dead. The expression 'pouring incense before them' refers to the statues of the departed, whose souls are thus represented at the communion meal, and whose portion is the incense. In an incantation service against evil souls, stools are brought to show that the dead soul sits at the service of breaking bread. But when Cusma, for he, for 11 refers to a priest who performed the ceremony, as appears from another passage: 'The regulations of the day of offerings the king gave not, but the high priest gave.' The practice of pouring water to the soul in connexion with the common meal gave rise to the title 'pounder of water,' applied to one of the king's earliest interpreters. This appears in the terrible curse so common in the Semitic period, 'My God deprive him of an heir and a pounder of water.'

The repose of the soul, we may say even its immortality, depends upon the communion sacrifice performed monthly for it by its kinsmen. Here we find another degree in leaving male descendants; and the prayers of kings seldom fail to plead with the god for male lineage. In actual practice the family paid the priests for performing the ceremony of the breaking of bread, and consequently both the incantation and the incense, or bit losap kišša, were built for this purpose. It is highly probable that the State had a regular fund to provide for the Feast of All Souls, for we find official accounts containing entries for this fund at all periods.

Concerning the wailing for the dead our sources are meagre. In an ancient Sumerian inscription there is a probable reference to an official wailer, whose pay is mentioned along with the food placed in the tomb. Wailing at the death of a king is described in a letter of the period of Ashurbanipal. The chief great men clothe themselves in garments of mourning, and wear rings of gold, and the official singer sings. The burial of an official (fūtu) is important to the time in the history of Babylonia. The tomb was made; he and the woman of his palace rest in peace; the psalms (ʁū) are chanted; they have wept at the grave of the man who has been born; for the priest and the mourners (al) performed; those of rising in the house of washing and the house of baptism, ceremonies of incantation, penitential processions, and sacrifices were performed. Gilgames wailed for his departed comrade Enlil six days and nights. When the mother of Nabonidus, king of Babylon, died, the king's son and all his troops put on mourning and wailed three days. The following month was entirely devoted to official mourning for the king's son. Traces of embalming have not been found, but Herodotus says that the Babylonians embalmed in honey.13 and a text has been cited which mentions embalming with cedar oil. At any rate, embalming is not characteristic of Bab. burials, and the custom may be due to Egyptian influence. Lord's translation of the Akkad text of the 'Lament of Eabani' is based on the MS. We refer the reader to this text for more details.

DEATH AND DISPOSAL OF THE DEAD (Buddhist).—1. Death inevitable and painful. There are certain questions that must have an absolute and definite answer (ekdosaoyeyaran). As a type of these the commentators cite: 'Will all beings (vatta) die? Buddha said: 'Short, O monks, is the life of man... we must do good; if it is impossible that what is born should not die.' In other words, 'Life, inseed, ends in death.'

2. All men fear death. For death is accompanied by physical and moral suffering; the formulae of dependent origination enumerates 'sorrow, lamentation, misery, grief, despair' as the companions of death, and the breaking of the spirit of a new existence for the punishment of sins: death and punishment (duña) are almost synonymous. It is in order to avoid death, and the consequent second death—in order to gain immortality—that the Buddha taught the doctrine of the life, the holy behaviour (brahmanaschariya) which enables one to pass above the sun, which is death (bhrakamayasa).

If death inspires fear, it also generates that salutary emotion (sāmaya) which ends in a distaste for pleasure and existence. Death must be thought of. Visits to the 'cemetery,' the place of cremation, or the place where dead bodies are left, and meditation upon the corpse and the various aspects of decomposition, play an important part in the spiritual hygiene of the Buddhist monk, be he a beginner (maganā) a more advanced disciple (britikā), or a perfect disciple. They even become absorbing forms, which are called 'cemetery monks' (see TANTRIC MEDITATION). We find a number of details regarding the treatment of the dead8 in the Buddhist texts. To know that 'life ends in death, and to be resigned to this law, is, as we have noted, one of the conversion-stories, and to know the essentials of Buddhist doctrine and to escape from the fear and the control of death. To detach oneself from the things of which death will deprive one, to detach oneself from the body itself, is to abolish pain; thus a man suffers when he sees a woman whom he loves in the possession of another man; he ceases to suffer

6 On this subject see the 'Chaitanya Prabhu' on art of DEATH AND DISPOSAL OF THE DEAD; and cf. R. Frissen, Buddhiṣṭ India, A.T.S.I. London, 1903; p. 78 ff., and sources cited, esp. Dīgha, ii. 230; Osanna, tr. n. 8. Translat. et. Exégèse du Kondog, A.M.G. i. (Lyons, 1881) 194; A.K.1, ed. 243: 'When a man has fulfilled his time, when a man has died, his friends burn his honored body with fire, or submerge it in the sea, or bury it in the ground, or leave it to dry, or wither, or disappear with wind and heat. But what is called thought, mind, intellect, being saturated (or 'infected,' pralabdhi) with faith, morality, indifference, religious instruction, does not go up to the mountain, attains to a privi- leged state (śvapā), goes into the heavens.'
DEATH AND DISPOSAL OF THE DEAD (Buddhist)

whenever he ceases to love (Marjhim, ii. 223). Thus the saint (arhat) has no fear of death (Adhatara, ii. 173); he awaits his time without desire and without fear (Theragathâ, 156, 703). Since men are free in their desire, he knows that this existence is the last existence for him (Therigatha, 705; Dhammapada, 39). For others death is only a passing; for the saint it is 'interruption' or 'annihilation' (lausûkâkakho.

If he [the Buddha] is asked, 'Who are those gods, though certain texts say that the gods are perfectly happy (Adhatara, v. 291)? It is not death that they are accompanied by the sufferings of other death; for they usually die without suffering (A.K.V., p. 2454). But, the greater the enjoyment one gets by the sight of them, the more is wanted for them to give them; 'the death for them is not suffering consisting in suffering,' 'suffering of death' (Mahâvagottariyâ, § 112, 4), but it causes 'suffering consisting in the change' to be accomplished at death (see H. C. Warren, Buddhism, Cambridge, Mass., 1886, p. 183). The Brahmanic views are all alike, or very similar, e.g., Vibhga Parâja, vi. 6, in Pâli, West, London, 1870, p. 292.

2. Definition of death.—The Buddhist doctrine is opposed to that of the 'nbelievers' (deniers [of the other life], according to whom the intellect (vijñâna) separates itself from the material elements (dhamma) of the body return to the mass of the earth, etc. (cf. Digha, i. 55; Sontyutta, iii. 247); it is also opposed to the popular idea of the transmission of the soul, well expressed by connecting the bird fitting a stone to tree to tree (Samanagala-elissinâ, p. 114; S. Hardy, Manual of Buddhism, London, 1880, p. 290). Death is the end of life—the end of a life or of an existence (see below, § 3); or, more exactly, death is the dissociation of the organism into its elements, as was experienced by the saint for himself in his 'dying death' (cf. Warren, Buddhism, p. 252; Madhyauanâkkhyâ, p. 174, n. 4); but death marks the end of this homogeneous renewing; it is the separation of the constituent elements of the pseudo-individual, the dissociation of the elements (dhammas), i.e. of the gross elements (kancapahalaya, rûpakâya) and of the vijñâna, or intellect. 3

We must consider for a little this idea of vijñâna. There is nothing permanent or individual in the complex union of the skandhâs, which lasts from birth to birth. When men retire, to regard it as 'individualized,' like a town with the vijñâna as master. The later works of Abhidhamma teach that, from the origin of an existence, the first thought, the thought which gives rise to the formation of the jivitendriya, which is the 'conception intellect,' gives birth to certain thought, which is the master part of the existence, and is called bhavanga, or bhavangasamjaddi, 'existence-limb,' 'existence-limb-series,' because it is the limb of existence. 4 This thought evolves into an uninterrupted and relatively homogeneous mental series, like the flow of a river. To look at it in a somewhat different way, this thought constitutes what we might call the foundation of the soul, the support and origin of particular thoughts, which interrupt it. At the end of life, at death, it disappears by being transformed into 'thought in a dying state,' 'dying thought,' 'dying thought of existence, i.e., one existence in the series of existences, is ended at the disappearance of the bhavangas; a new existence commences, in a new status, since the 'thought in a dying state' is not say conceived as 'thought in a state of being born.' Death, then, is the transformation of this 'fundamental thought' called bhavanga, 'limb of existence,' into 'emigrating thought' (candhatutta). 2

When the death man is laid upon his bed of death, the sinful action for which he is responsible, or the motive (or sign) of this action, becomes itself at the death of the gods (devas), though certain texts say that the gods are perfectly happy (Adhatara, v. 291). It is not death that they are accompanied by the sufferings of other death; for they usually die without suffering (A.K.V., p. 2454). But, the greater the enjoyment one gets by the sight of them, the more is wanted for them to give them; 'the death for them is not suffering consisting in suffering,' 'suffering of death' (Mahâvagottariyâ, § 112, 4), but it causes 'suffering consisting in the change' to be accomplished at death (see H. C. Warren, Buddhism, Cambridge, Mass., 1886, p. 183). The Brahmanic views are all alike, or very similar, e.g., Vibhga Parâja, vi. 6, in Pâli, West, London, 1870, p. 292.

2. Definition of death.—The Buddhist doctrine is opposed to that of the 'nbelievers' (deniers [of the other life], according to whom the intellect (vijñâna) separates itself from the material elements (dhamma) of the body return to the mass of the earth, etc. (cf. Digha, i. 55; Sontyutta, iii. 247); it is also opposed to the popular idea of the transmission of the soul, well expressed by connecting the bird fitting a stone to tree to tree (Samanagala-elissinâ, p. 114; S. Hardy, Manual of Buddhism, London, 1880, p. 290). Death is the end of life—the end of a life or of an existence (see below, § 3); or, more exactly, death is the dissociation of the organism into its elements, as was experienced by the saint for himself in his 'dying death' (cf. We must consider for a little this idea of vijñâna. There is nothing permanent or individual in the complex union of the skandhâs, which lasts from birth to birth. When men retire, to regard it as 'individualized,' like a town with the vijñâna as master. The later works of Abhidhamma teach that, from the origin of an existence, the first thought, the thought which gives rise to the formation of the jivitendriya, which is the 'conception intellect,' gives birth to certain thought, which is the master part of the existence, and is called bhavanga, or bhavangasamjaddi, 'existence-limb,' 'existence-limb-series,' because it is the limb of existence. 4 This thought evolves into an uninterrupted and relatively homogeneous mental series, like the flow of a river. To look at it in a somewhat different way, this thought constitutes what we might call the foundation of the soul, the support and origin of particular thoughts, which interrupt it. At the end of life, at death, it disappears by being transformed into 'thought in a dying state,' 'dying thought,' 'dying thought of existence, i.e., one existence in the series of existences, is ended

DEATH AND DISPOSAL OF THE DEAD (Buddhist)

of heat (Mahāyānapatti, § 245, 53). An ancient saying is: 'The body (jīva) is an excerpt of the vital principle (vijñāna) and non-existent' (see apyjñākaranena). The Dīghanikāya school defines death as the destruction of the vijñāna, the organ, and of life,' and claims authority from this definition to deny (in opposition to the Jains) that trees trees 'die.'

In the old version of the 'last days of the Buddha' (Dīgha, II. 106; SBE xi. 44), it is said: 'The Blessed One accepted the rejoicing (of the bhikkhus) and the jest of Eryo Davipāka and the rest of the 'allotted sum of life'). In the Saṁyutta Nikāya (Divyadānasūtra, p. 228; Mahāyānapatti, § 253, 52) we have: 'The Blessed One cried aloud in grief, exclaiming: 'the activity virtualities' (jīvāsanāsārānahāraḥ), and he began to control his vitality virtualities (jīvāsanāsārānakāraḥ)."

The plural (‘co-efficients of life’) indicates, according to a commentator, that death is not one thing but a collectivity.

The Sautrāntikas say that apyjñā, 'life,' means the multiple saṃkāra, which co-exist (having for nature the four or five skandhas), and is nothing beyond the making (A.K.V., fol. 74). The Mahāvīra (p. 256) enumerates the apyjñā as follows: apyjñā, heat, and intact senses, which disappear at death, but persist in his life even when plunged into the deepest ecstasies (see Warren, p. 289).

As to the vital breath (prāṇa), it is a wind (vīyāna) which depends by the body and the thought— for it disappears during the so-called 'cessation trance'—cassay (Sarvāstivādin Abhidharmaśāstra, quoted A.K.V., § 312; see Rhy's Davipā, Dialogues of the Buddha, i. 71, London, 1890–1910 (= Sacred Books of the East, vol. 4)). Although the Buddhists deny the existence of a physical immortal, 'being endowed with breath,' they use this expression; but, for them, to kill a prāṇin is only to stop the future production of the prāṇa.

According to the Sautrāntikas (A.K.V., Banyan MS, fol. 74), the saint says: 'May the actions that are to ripen for me in enjoyment ripen in life!' By its nature, life (or the vital organ) is 'ripening' (vīyāna), and it can replace any enjoyment which, normally, one may enjoy in the heaven of the gods which the saint no longer desires and has escaped by his saṁsāra. By this process, 'vanishing death,' the Buddha prolonged his life three months for the salvation of men, and the disciples employed this to assure the devolution of the law.

4. The last thought and re-birth—Most of the Hindu theologians teach that the last thought, the thinking of the dying, is of prime importance with regard to the future lot. This doctrine is particularly dear to the devotional religion of the Kṣapa on the death-bed assures salvation. The Brāhmans everywhere believe as a rule that the Lord (lāvara) establishes the moral balance-sheet of the whole life, in order that the agent may be re-born into the world at the proper stage. In conformity with their psychology and their metaphysics, the Buddhists have to assign capital importance to the last thought. For not only do they refuse to admit a Lord, judge of all the

1 See Abhidhammakoṭtagaha, v. 12 (JPTS, 1894, p. 25); Viññānadeva, in Warren, p. 289; Sumati-palaśāstra, p. 120.

2 The Śvātik Buddhists have made a deity of 'premature death' (Wilson, Works, ii. 24).

3 See, e.g., Bhagavagīti, viii. 6 et al. (A. Barth, Religions of India, London, 1913, p. 237; R. G. Barke, Bhagavadgītā übersetzt..., Leipzig, 1893, p. 52). 'Remembering whatever form of death he may have, the leaves this body behind and forever perishes, assimilated to its being' (Thibaw, Vedaśastra, i. 123=ŚBE xii. 100); 'Whatever he is doing at his end leaving his body forever, to that same when he always goes, inspired to being there' (L. D. Barnett, The Lord's Song, London, 1905, p. 159). See also the Saivite Vedaśastra, tr. cit., and Cowell, tr. of Aphonīrion of Śākīṇa, Calcutta, 1875, i. 50, and for the Jain sect, see Majumdar, i. 230. Folklore is abundant on this subject; see, e.g., Katha-sāṃskāra, tr. Tayyuray, 1890, i. 242, and passim. Rhy's Davipā comprises Plaint, Theebe, and Lamp (Indian Buddhist, London, 1881, App. viii., Dialogues of the Buddha, § 238).

4 Cf. the apyjñākarana of the Jains (SBE xii. 105, 102).
DEATH AND DISPOSAL OF THE DEAD (Buddhist)

actions of a life, but they do not even admit of a permanent soul which would be responsible for all the actions. At the time of death, all that exists is the 'dying thought' (chyutichitta) and the actions. The past, present and future thoughts may be re-born among the gods, . . . and thus do they also say: "By one case of destruction of life a man may be re-born in purgatory." When asked if this was not a sin, the sutra replies: 'Would even a tiny stone float on the water without a boat? Would not a hundred cart-loads of stone float on the water if they were loaded in a boat?' . . . Well, good deeds are like the boat (Milinda, p. 86, tr. Rhys Davids, SBE xxxv 157)."

Mahaniddhakīna sees a poor wretch, condemned to death, to whom the compassionata Sūla has just offered some cakes. He thinks: 'This man, with no merits, a sinner, will be re-born in hell; if he gives these cakes, he will be re-born among the terrestrial deities.' He presents himself before the condemned man, who thinks, 'What is the good of eating these cakes? If I give them away, they will serve me as a ransom for the other world. But with affection, I will give them to Sūla: 'It is through Sūla's kindness that I was possessed of this shala, this gandha, and I am saved from a hell and soul by this affection, causes him to be re-born as a tree-deity (inferior deity) (Pavatathā, Commentaries, p. 5).

The deities of the Gardens, the women, the dogs and plants crowd around the master of the house, Chita, who is very ill: 'Make your recitation, utter your hāravali (charakavin king in a next existence)' (Sangyātā, iv 302; et. Rhys Davids, Early Buddhism, London, 1906, p. 77).

A man is stained (adgaya); he acknowledges his sin and doa his utmost by prayer, effort, and exertion to wipe it out; he will die free from attachment, from hate, from error, and from sin, with utmost thought (sattva). A man free from stain: he knows it; he be then conducive complacency, and, through this, attenuation extends itself to his thoughts; he will be reborn in attachment, hate, error, stain, with impure thought (Mañjuśrī, i. 29).

The Buddhists began early to think of preparation for death. Asoka grants three days for this purpose to the daṇḍin (Pillar-Edit, iv; see V. A. Smith, Asoka, Oxford, 1901, p. 165). The Mahāyana commands the monks to attend, even during the rainy season, at the bed of a sick layman (Tr. 5, 9; SBE xiii. 304). The Visuddhimagga (xvii. line 1190) explains the ceremonies performed for the dying. The friends say to him: 'We are about to perform the pājī (suit) of Buddha for you, quiet your spirit (in B.; the Tibetan and Chinese say: 'You have flowers, etc., (pāja, 'form' or 'colour').

'See this offering we are making for you,' they say to the sick man—the recitation of texts and music (audha, 'sound') . . . , perfumes (prada, 'smell') , homa etc. (pañca, 'the five') (padhabha, 'tangible') —Touch this offering.' Thus by the five senses the impressions penetrate will be the object of the last thought.

Spence Hardy (Menon, 493) tells the story of a fisher who was made to recite the five precepts by a monk ('I renounce murder', . . . , and this wins a heavenly re-birth for him; and, when he recites them again in his last moments, he obtains re-birth among the higher gods.

Motzau's subjoined formulae are abracadabra for the 'thought of the Buddha' and the repetition of precepts: the om mani padme hum plays a great part (see C. F. Riepen, Die Religion des Buddha, p. 9). The Indianische Heilkunde (Borkart, p. 59); the cults of Amītabha substitute the repetition of ejaculatory invocations to Avadhūtika or Amīta: 'Whoever shall have the name of Buddha Bhaisajyaguru, to him will eight Bodhisattvas come at the moment of death to show him the way to paradise' (Bīja). In Kagyardsagpa (Calcutta, 1879), pp. 23, 95, twelve Buddhadasa surround the dying; in Sakdhpurī (Oxford, 1883), p. 47 (et. SBE xiii. 45) the singer of the Bīja mantra, at death, will be a saṃsāra of the 'ten [magick] monks.' 38 Seeing Bhagavat, their thought is quieted, and, falling from the Bīja, passes into the delights of the Bīja (Sanāthakīvra, iv. at the end). In Sarvatathāgata, iv 395, it is the forest-deities who care for the dying man and suggest to him the wish for such a paradise.'

LITERATURE.—This is given throughout the article.

L. DE LA VALLÉE POUSIN.
DEATH AND DISPOSITION OF THE DEAD (Chinese).—The Chinese discriminate between premature death and the inevitable ending of the termed natural life. That death is composed of the radical denoting 'evil' (originally depicting the cutting up of bones) and that for 'man,' the combination being interpreted by E. Wells Williams (SYLLOGIC DECK, Shanghai, 1899, p. 930) as 'the evil which parts men.' The character thus formed is explained as conveying the idea of 'the running out of the vital issues,' 'the emptying out of the breath'; whilst that for normal death, i.e., in old age, represents the end of life. In the case of silk cloth, the symbol of death is generally avoided, the Chinese preferring to employ some euphemistic phrase such as 'passed away,' 'returned to Heaven,' 'no more,' etc., or sometimes an expressive gesture—the hands tightly clenched, and the head thrown slightly back.

The customs which prevail in different parts of China in connexion with the treatment of the dying and the disposal of the dead are so diverse that a complete survey of them would be impossible; it will be sufficient to describe the observances which may be regarded as fairly characteristic. The details which follow do not apply in all cases of children and unmarried persons. In those instances, if the corpse is disposed of with as little ceremony as possible; in many cases the bodies of infants are simply rolled up in a coarse wrapper of matting, and deposited in a convenient spot of open ground, perhaps in a 'baby tower' specially intended for the purpose.

The conduct of funeral rites is described as early as the Chow dynasty (1122-255 B.C.), and it is evident that burial has always been the mode adopted for the disposal of the dead. In the Chinese sense this does not consist in the lowering of the remains into a dug-out grave, but in the placing of them in a sarcophagus upon the surface of the ground, and the piling up of earth in the form of a mound, as a result of the annual visits to the place of interment. It was usual in early times to place in the coffin certain articles which the deceased valued during life; and specimens of jade, chess-men, etc., are frequently discovered in and near the mounds. In the case of the royal corpse it was often difficult to ascertain where the royal corpse was actually buried, as sometimes a number of separate coffins were interred in different places, each nominally containing the 'remains' of the late monarch, to render the more remote the possibility of riling the tomb.

The custom of immolating a number of slaves or relatives of the deceased was sometimes practised in China. Cases are quoted as early as the 10th century B.C., as, e.g., that of the Duke Muh, at whose funeral some 177 persons were buried alive. References to the practice are found in the time of Confucius (551-475 B.C.), and even as late as the present dynasty an instance is quoted in connexion with the death of the Empress Dowager (1873-1895). The burning of paper effigies of servants and attendants at the present day may be a survival of this barbarous custom.

1. Importance of the subject.—The importance of the subject may conceivably be evident when we consider that there is, perhaps, no event in the 'pilgrimage' of the 'Chinaman' which demands so great attention, such scrupulous observance of immemorial custom, and such lavish expenditure of labour and capital, as the carrying out of a 'decent funeral.'

2. The dictum of Confucius.—Confucius lays down no rules with regard to the treatment of the dead, beyond the admonition that all things should be done 'decently and in season'; that the family circumstances should be taken into account, and that the various classes of society should be guided by the precedents which obtain in each class. The tradesman should not seek to emulate the magnificence of the officials, and so on, giving as one general principle which should govern the conduct of the entire affair: 'In mourning it is better to be sorrowful than punctilious.

It is hardly necessary to say that the observance of the ceremony is in them worthless unless it is inseparably connected with the extraordinary development of the idea of filial piety, and the ancestral worship of which it is the inspiration and the key.

3. Treatment of the dying.—All remedies have failed to turn dead men into living spirit, the dying man is prepared for entering the presence chamber of the gods, before whom he must appear: the god of the local temple, the god of the city walls and moats, and the god of Hades. His head is shaved; his body and extremities are washed; the nails of his hands and feet are cut, the hairings being carefully preserved; and his underclothing is changed. When in articulo mortis he is supported, and a three-watt lantern, obtained from a Buddhist temple, and already used in the worship of Heaven, is placed in his hand, and he is advised to hold it fast, as the way before him will be dark. If the family can afford it, a sedan-chair is hired, and all of paper and bamboo, is purchased. To die in the early morning is in some places considered felicitous, because there are three meals left for the dead man's posterity to enjoy; but to die after the consummation of the evening meal is considered to be ill-omened, for then, by implication, there is nothing left for his successors. It is important that the sons of the dying man and other relatives should be present to attend the deathbed; and, as from the 12th to the 16th century, the burning of paper effigies of servants and attendants

The practice of cremation is repugnant to the Chinese view of the necessity of preserving the body intact as far as possible, and is employed only in the case of Buddhist monks and nuns, though historically it is cited in proof of its frequency in certain periods, probably as a result of foreign influences.

4. First duties of mourners.—As soon as death takes place, an elder conducts the proceedings, and orders the scenes of the sons to be unravelled, and the candles to be lighted before the ancestral shrine and the god of the earth, because the warrant for the capture of the departed soul is supposed to have arrived from the god of Hades, and it must be counter-signed by the ancestral spirits, or their representatives, and by the god of the earth.
5. The dread messengers.—The messengers of the god of Hades are said to be two, viz. the living Wu-ch'ang and the dead Wu-ch'ang, the word wu-ch'ang meaning 'uncertain,' and being explained by the uncertainty of the summons of death. The living Wu-ch'ang is not a demon, but the soul of a living man who is employed by the Wu-ch'ang to guide him to the house of his victim. The true 'Uncertain,' as coming from the hidden world, is unable to find his way in the light of day, and accordingly his features are generally explained by the death of a great spirit. Some say that these two characters represent, not individual agents of the god of Hades, but only the two souls (the animal and the spiritual, i.e. the psyche and the pneuma) the hun and the po, as they are called in Chinese. The first of these is written in Chinese with a character which means 'black' attached to the word for 'spirit' or 'demon,' and hence represents 'black spirit,' and the latter is written for 'white' prefixed to the same word meaning 'spirit,' and hence represents 'white spirit.' These have been personified, by the ignorant, as the kitesers who come to carry off the soul; whereas the hun and the po represent merely the soul, in which its own accord is about to leave its tenement. The hun, in conformity with its nature, soars aloft and is dissipated; the po descends into the element of earth and haunts its old neighborhood.

6. Post-mortem illustration.—The matting on which the deceased is lying is given a pull, with the idea that this will prevent a lingering illness in the next incarnation. The chief mourner, generally the eldest son, invests himself in the clothes which are eventually to be put upon the corpse, and, holding a bucket in one hand and a bundle of incense in the other, walks, or, in the case of an infant's corpse by way of a bath, proceeds with umbrella being held over his head all the time, as he is impersonating the dead and must be screened from the eye of heaven. In some cases he is escorted with music and fireworks. Paper money of different kinds is burned; a coin, with a large nail fastened in the centre, is thrown into the water; and the water is thus supposed to be bought, and is drawn up and taken to the house. Here it is warmed, and a few rice is given to the chest of the corpse by way of a bath, and the hair of the dead man is next combed by the daughters and daughters-in-law, each taking a turn, kneeling and weeping at the same time; and then it is rolled up into a kind of knot on the forehead, some kind of hair being worn by the Chinese of the Ming dynasty, thus exemplifying the popular proverb, 'The living submit [to the Manchus], the dead do not.' After this perfunctory washing the dead man is removed from his bed and supported on a chair; and the matting and straw on which he has been lying are burned in the open street. It is of the utmost importance that the feet of the corpse should not touch the ground, and they are generally covered with a cloth and supported in the lap of the daughter-in-law. A small table is spread before the body, holding two bowls—one of rice, and the other containing vegetables with long stalks, tea, and a sieve. A fragrant life and burn root in the next stage of existence.

7. Announcement of the death.—The sons of the deceased, with the braid removed from their queues, wearing white gowns, aprons, and white fillets round their heads, and supported on their shoulders by the sandals, take candles and paper money of two kinds, and proceed to the temple of the god of agriculture. On arrival at the temple, the eldest son, as chief mournor, lights the candles, makes his prostrations, and burns the paper money; this money is supposed to act as a guardian to the god of agriculture, who is represented as the agent of the god of Hades in the arrest of the soul, and hence requires remuneration. The whole process is described as pin ling, or 'strewing the hall:'—a phrase applied in no sense to the act of throwing the officiants at a Yamen in order to be assured of 'justice'; and it is fairly inferred that the officiants in the nether world are equally amenable to a 'consideration.'

8. Removal of the corpse.—On returning to the house, they now remove the matting and place the dead to the middle hall, which is reserved for special occasions, and which also contains the ancestral shrine. The position of the corpse is at first reversed, indicating the hope that the dead man may return from the hidden world, and this is illustrated by the transposition of the footstool before birth. A meal is laid out on a large sieve and placed before the dead, with wine and candles, and is then carried in procession to the front of the house and laid outside the door; the members of the family, in white clothing, kneel on a piece of coir matting, weeping and prostrating themselves alternately. The body is next carefully secured to a chair by leathern bands, and a cloth, and then selected to convey it to the state apartment; the head is supported by the eldest son, and the feet by the daughter-in-law. The burden must be no larger than the dead man could lie on, and it being laid down until its destination; a full would be considered a frightful calamity. An umbrella is held over the chair as it moves, to hide one who is now a denizen of the shades from the light of heaven, and handfuls of rice are thrown upon it, with the idea of expelling all evil influences. The corpse is then placed on the bed and a coverlet spread over it. A sheet of white paper is laid upon the face, and the feet are placed close together and propped in position; to allow them to fall slowly involves the death of the nuptial partner shortly after.

9. The public announcement.—A messenger is then sent to a Taoist priest to inform him of the date of the deceased's first attack of illness, the time of his death, and the number of his years. The priest writes a large sheet of yellow paper mentioning these particulars, and the date on which the spirit may be expected to return, together with the classes of persons, born under certain auspicious years, whose absence is considered a frightful calamity. A large sheet is hung to the view of people crossing the door, and a rude lamp, consisting of a bowl of oil with a wick in it, contained in a basket of lime, is kept constantly alight, day and night, so that the deceased may have 'a lamp to his feet' wherever he journeys.

10. Ceremonies connected with death in old age. —If the deceased happens to be aged, say seventy years old and over, and the feet of the bed are red in colour, to show that death, in his case, should not be considered an occasion of sorrow; and no word of consolation is spoken or sign of grief shown by the visitors; on the contrary, nothing but the sentiments of sympathetic grief are exchanged. A happy consummation has been reached, full of years and in the midst of a numerus posterity. Wine-drinking, the 'Moria,' etc., are all the rule, and any one would be laughed at who were present. It is to be noted that, until the actual coffin is placed in the coffin, the candles used are of the usual red variety; white candles are not employed until all hope of revival has departed, and the body is already in the coffin. The head and feet of the corpse are
supported on specially-made pillows of yellow cotton, stuffed with paper waste, or, in country districts where cotton is manufactured, a reel on which all large rolls are wound instead. It is fastened at one side with tapes.

Notifying the relatives.—A swift messenger is dispatched to inform the relatives, who are expected to send gifts to the bereaved family. The presents consist of small quilts, about three feet long and a little more than a foot wide, which are carefully marked and reserved for placing in the coffin in due course; they are thus marked to ensure that these furnished by important members of the family shall have a first place.

12. Visits to the house of mourning.—Notice of the arrival of visitors is given by the gatesman, who beats three times on a drum; a trumpet is sounded and a hand-cannon discharged. The musicians then strike up, and the mourners are warned of the approach. The chief mourners kneel at the side of the spirit table; the stewards escort the visitor to the curtain, where he kneels four times and bows four times.

13. Coffins.—The style of the coffin varies throughout the empire. In some places it represents the trunk of a tree; in the north the lid projects considerably over the head. The quality is determined by the circumstances of the family. We often see quite large coffins placed beforehand and kept there stored either in an out-house or in a temple. Some buy the planks, keep them till seasoned, and then employ carpenters to make the coffin when required; whilst others buy the coffins in the coffin-shops of the Celestial Societies. At the end of the coffin a lotus flower is carved, expressing the hope that the deceased may become a Buddha and take his stand on a lotus, as Buddha is represented doing.

14. Preparation of coffins. The time for coffin-making in some places is at full tide, and preferably after dinner, so that the deceased may not be put hungry to his 'narrow bed'; but in others it must be before day-light in the morning, or in the dark of evening, or on a day bearing an odd number, 3, 5, 7, etc., for fear of another death taking place if an even day should be selected. The floor of the coffin is covered with a layer of fine sifted lime or charcoal; then five large squares of coarse paper, half a yard square, are sometimes manufactured of special material like charcoal, is placed, and upon the top of all a cotton mattress. The garments for the dead are specially made for the occasion, if the family can afford it, and are fashioned after the backs of two chairs and performed or aired, by means of a brazier, containing fragrant herbs, placed underneath. Furs and leather of any kind whatever are carefully excluded, lest the dead should be turned into an animal in his incarnation. The clothes are laid out on the inverted lid of the coffin, and the dead man is carefully placed in position for convenience of dressing; his arms are drawn through the sleeves; a long cord, which runs through the sleeves, is then fastened in a 'hukka' in the neck, and the clothes are carefully smoothed into position. The hands are placed crosswise over the lower part of the body, the left hand uppermost in the case of males, and the right in the case of females. A pair of cheap shoes are placed under his feet, and an official hat with a red tassel is put on his head. In upper-class families a winding sheet of deep red is used, sometimes of satin and elaborately embroidered, forming a sort of large bag like a sleeping-bag, in which all the parts of the head is enclosed. It is fastened at one side with tapes. A tattered containing paper money, a piece of silver, and the Taoist placard is put on his shoulder; and a piece of silver is placed under his tongue. A small pearl, called 'tranquilizing the heart pearl,' is placed on his breast; and, in the case of a woman, a small pearl is inserted in the toe of each shoe.

The corpse is now lifted and placed carefully in the coffin, the son supporting the head, the daughter-in-law the feet, with others assisting at the sides. It is important that it should rest exactly in the centre. Small bags of lime are then inserted to keep the head and feet in position; the pipe, fan, and handkerchief of the deceased are also inserted, and five small bags of different colours, containing nail-parings, old teeth which have fallen out from time to time, tea, and rice; a small casket containing a rosary, and the under-cap and 'riding-jacket' are also added; for the garments which the dead is at present wearing are his ceremonial clothes, required for his audience with the gods; these others will wear on his journey. Then each person present takes from his breast a small piece of silk, having their own coffin-cloth, or 'cotton,' and, rolling it up into a small ball, throws it into the coffin; the relatives are invited to take a last look, and care must be taken that no tears are allowed to drop in, lest the corpse should be found in tears of the Chancellors of the Chancellors of the respective Societies. Then the various coverlets are laid on in regular order, those presented by near relatives being given first place, and so on in order of precedence, until the coffin is quite full; whatever quilts are unused the mourners find a place for in the coffin, and then the coffin are burned. Before the lid is put on, all who are regarded as representing astral influences inimical to the deceased are requested to withdraw, and are allowed to return only when the lid has been put in place. The lid is smeared with crude varnish, to make it air-tight, or sometimes a cement made of rice, vinegar, and flour is used. Usually four large nails are employed to fasten the lid; but sometimes a sort of double wedge, fitting into a socket in the bottom, is used. An ordinary coffin is used instead. The nails are driven in by a senior, the sons and, in some cases, the daughters meanwhile crouching under the trestles on which the coffin rests, lest the eyes of the departed should start out at the handkerchief which is put on his face.

Preparation for removal.—When the lid is fixed in position, the mourners are allowed to plait their queues with hemp-cord, and wear coarse shoes instead of the straw sandals they have been wearing, and they are permitted to eat. Food is now placed at the side of the coffin, and the dead and his gauzer are invited to partake; the friends and relatives kneel to pay their last respects, and the chief mourner returns the compliment on behalf of the departed. Two pieces of paper money are burnt, one for the dead and the other for his guardian.

Meals served before the coffin.—The 'filial curtain,' made of white cotton and with a rope tied around it, is drawn partially back at both sides, with a table and chair placed at the opening, a white cover like an altar-cloth draping the table. Regular meals are served to the deceased on this table every day, and 'knot's' at the end, and when a meal is served, the server is expected to weep and cry. This continues until the funeral.

The fairy guides.—On each side of the chair are placed tall paper structures representing hills, one called the 'golden,' and one the 'silver' hill, intended to indicate the vast amounts which the fond
relatives have provided for the voyager, and behind these are tall figures of the 'Golden Youth' and the 'Jade Maiden,' bearing streamers to guide him across the Fairy Bridge. The portrait of the deceased is usually a long, thin, white face, supported on each side by scrolls bearing deified inscriptions, and with white candles placed in front. The chair is occupied by the ancestral tablet, mounted on an inverted table, and covered with red silk fastened with red cord. The wording of the tablet reads: 'Ch'ing (dynasty) of the Rank of such-and-such, Master so-and-so's Spirit Chief.'

18. Untying the knots.—The day before the funeral, Bonzes and Taoists have to conduct solemn ceremonies and transgressions committed during his life. In the afternoon a bowl containing rice, and a thread rope consisting of seven strands, on which are threaded and tied twenty-four copper coins, is presented to a Bonze, who places it on a table in front of the table already referred to, and, as he recites the virtues of Buddha in releasing souls from pain and trial, is substituted, on which a priest takes his seat.

The ceremony which has been performed is to conduct masses, called the 'Water Mass,' the object of which is to cleanse the departed of all sins and transgressions committed during his life. In the afternoon a bowl containing rice, and a thread rope consisting of seven strands, on which are threaded and tied twenty-four copper coins, is presented to a Bonze, who places it on a table in front of the table already referred to, and, as he recites the virtues of Buddha in releasing souls from pain and trial, is substituted, on which a priest takes his seat.

The journey is divided into seven periods of seven days, or 'weeks,' which correspond with the various stages of the spirit's wandering in the infernal regions. These stages are described in detail, with a variety of humorous illustrative and elaborating legends, and the moral of all the various stages is the importance of repentance for having spent one's days in vegetation and the repetition of Buddha's all-potent name, in order to avoid such horrors as have been related. When this long discourse is finished, a space is cleared in front of the spirit table, and a large square with ornamental borders is mapped out on the floor with chalk; twelve oil lamps, provided by the Taoist priests, are disposed round the side of the space, and the whole is illuminated with the light of the lamps.

19. The journey through the 'shades.'—A Taoist table is placed on the floor, with a large square with ornamental borders, and on it are placed the twelve oil lamps, which are to guide the departed on his journey to Hades. The journey is divided into seven periods of seven days, or 'weeks,' which correspond with the various stages of the spirit's wandering in the infernal regions. These stages are described in detail, with a variety of humorous illustrative and elaborating legends, and the moral of all the various stages is the importance of repentance for having spent one's days in vegetation and the repetition of Buddha's all-potent name, in order to avoid such horrors as have been related. When this long discourse is finished, a space is cleared in front of the spirit table, and a large square with ornamental borders is mapped out on the floor with chalk; twelve oil lamps, provided by the Taoist priests, are disposed round the side of the space, and the whole is illuminated with the light of the lamps.

20. Funeral frivolities.—A table is placed at which a Bonze and six Taoists sit, each performing an act on a different instrument. In the intervals they sing ribald or humorous songs, with the intention of exciting laughter. They also sing the 'Flower Song of the 12 Moons,' describing the different flowers which bloom in the different months, and other compositions which have apparently very little funereal reference.

21. Offerings to the spirits.—After supper the ceremony known as 'Fang Yen-kow' takes place. The spirit table and chair are removed; another chair, supported on four bamboo rods, is placed in the centre. Two tables, supporting two large candles and twenty-four bowls of vegetable food, are placed at a little distance in front, intended for the delectation of the various gods. Four other tables are disposed in a line, in the rear, intended for the sacrifice to the family ancestors; a small table a little lower down contains the offerings intended for the dead person; and the spirit table sits at this table in the chair as before, attended on each side by a mourner. Bowls of rice, which the priests have finished their reciting, a quantity of paper garments and money are burned outside the house.

22. Sacrifice to the dead.—The apartment is now re-arranged, and preparations for the sacrifice to the dead are made; musicians are requisitioned; large quantities of dry and bowls are laid out; lamps are hung all over the room, and the chief mourner appears behind the curtain, leaning upon the 'filial spirit,' supported on each side by straws bearing deified inscriptions, and with white candles placed in front. The chair is occupied by the ancestral tablet, mounted on an inverted table, and covered with red silk fastened with red cord. The wording of the tablet reads: 'Ch'ing (dynasty) of the Rank of such-and-such, Master so-and-so's Spirit Chief.'

23. The funeral procession.—In some places the funeral takes place in the fifth watch, i.e. between 4 and 5 in the morning, perhaps in the fifth week, or as late as one hundred days after death, sometimes even later, and in cases of poverty the coffin is left in the house, or put in a mortuary chamber for the time being. Every one is therefore, putting the coins one by one into his vest. This untwisting of knots is meant to illustrate the release from all tightness and difficulties in the next world.

24. The entombment.—When the place of burial is reached, the coffin is temporarily supported by a couple of blocks, whilst the exact location is being considered, with especial reference to orientation. In wealthy families, a stone receptacle is prepared beforehand, and the coffin laid very carefully in the exact centre. A meal is laid out, to which the descendents each send an offering of money, whilst the nearest relatives and friends present follow him in his ginnelaxes. When all is ready to conduct the funeral, the present is made, and the temporary fittings are removed, and preparations are made for the funeral.
25. Return of the ancestral tablet.—The procession returns in the same order as before, escorting the ancestral tablet to the house, with crying and burnings. On arrival at the house a great bonfire is made outside the door, and all who have attended the funeral are expected to step across it before gaining the threshold; no one is permitted to enter the house before the spirit of each person is spirited over each person by the Taoist priests. The son, in (lighter) mourning garments of blue, kneels and offers the viands prepared, and burns a quantity of paper money. He next climbs by a ladder to the ancestral shrine over the central partition; lights candles before each shrine, and then carries up the new tablet and places it in position. All present are invited to partake of the feast which follows. On the third day a visit is paid to the shrine, and offerings of food, etc., are presented. Those who are present join hands, forming a ring round the grave, and circle round in one direction three times and then reverse three times; this is with the idea of confining the spirit in his proper habitat.

26. The seven 'weeks.'—On the seventh day a number of Taoists are hired, seven in all, to 'open the road,' and a great variety of ceremonies take place, as the feast day-dawns in the evening. In the evening the hall is again arranged, with a table and chair, and a portrait of the deceased hanging behind the chair. Two cups of tea are put on the table, and two bowls of light food, together with a chair. The daughter-in-law weeps before the picture, as she 'invites' the spirit to partake of refreshment, and a quantity of paper money is also burned. At daylight, tea, etc., is laid as before. At breakfast-time, food of different kinds is offered and candles are lighted. The performance is repeated at noon, with this difference, that the viands are more elaborate. This takes place every 'week' until the seventh, the only exception being that in the fifth week a further meal is laid in the death chamber. In the fifth 'week,' Taoists are called to 'force the city,' or 'force the gate of hell.' A paper city with men, horses, etc., is set up, and, when night comes, a Taoist priest in full robes has been 'sent forth' to 'familiarize' the city with the dead, and liberates the imprisoned soul; afterwards a great bonfire is made in the open air, and three or four priests take their stand around it, holding long bamboo, to which are attached elaborate flags of different kinds. These are expected to provide a feast for the dead, and they are given a share in the divisions of the clothing which he has left. At the end of the seventh 'week' the chief mourner is allowed to shave his hair for the first time, but, if the coffin has not yet been removed, he is not permitted to do so until one hundred days have expired. The next year the mourners, wearing white garments, pay their first annual visit to the grave on the day known as 'clear bright,' and on this day the sounds of wailing may be heard in all directions. A further visit is sometimes paid in the ninth month; and at the winter solstice paper garments, representing warm winter clothes, are presented and burned.

27. The spirit's homecoming.—On the night appointed for the return of the spirit, a table of edibles is laid in the death chamber, which is then evacuated by the relatives. In the kitchen a quantity of lime is placed beneath and around the door, and the body is washed by the Taoist priest, a procession is formed, the priest leading, and all enter the chamber. The kitchen is then visited and the lime examined, the traces of the spirit's presence being discovered by the marks, as of the feet of a horse, upon it. A white cock is caught and carried in one hand in front of a basket, and, as the lid is struck by a measure held in the other hand, the cock crows; he is then escorted outside, and paper money burnt. This represents the sending off of the spirit's escort. A white cock is said to be a protection against baneful astral influences, and to be the only capable guide of transient spirits.

DEATH AND DISPOSAL OF THE DEAD (Coptic).—When the decaying religion of ancient Egypt gradually gave place before the advance of Christianity, many of the beliefs, and much of the symbolism that had been so dear to the Egyptians for over three thousand years, survived the change of religion for some considerable time, and, as was to be expected from a people by whom burial rites had been magnified into a great and complicated mystical system, the old customs were given up only gradually and reluctantly. To the Egyptians, Christianity presented itself in a somewhat different light from that in which it appeared to the other civilizations of the ancient world. From the dawn of history there was a belief in the continuation of life after death, in a future existence that was well defined; and in order to secure this existence for the soul of man they had elaborated countless magical rites which were performed at the burial ceremonies of the deceased. The Egyptians believed in a god who had once lived an earthly life, who had been slain by the power of Evil, and who by certain magical ceremonies had come to life again, and ruled as King of the under world. It was thus that in Osiris his hope of living again, and with him they considered the dead identified. The Christian belief in a resurrection was therefore not, in certain aspects, a new one to them, and the doctrine that the dead in Christ shall live in Christ was strangely familiar to all who had been reared in the Osirian creed. Thus it is not strange that, when Christianity began to be accepted in Egypt, the early believers continued to practise the ancient funeral rites, only slightly modified to meet the requirements of the new religion.

The chief concern of the pagan Egyptians had been the preservation of the bodies of the dead by embalming, so that the spirit of the deceased might pass to and fro between the kingdom of Osiris and that of the departed, and the early Christians of Egypt saw no reason to alter the custom of their forefathers, more especially since the Christian and pagan doctrines of the resurrection had so much in common. Mummification of the dead, therefore, continued to be practised by the Christians until the beginning of the 5th cent., and only died out after that owing to the general opposition of the Church.1 Mummies of anchorites and holy men and women have been found in various parts of Egypt, one of the most notable cemeteries containing Christian dead being the recently excavated burying-ground at Antinoe. The bodies are usually well preserved, the head being sometimes adorned with a garland. In the case of the men, the beard was allowed to grow, contrary to the ancient usage, and when the face is thin or emaciated it represents very much the type of the Good Shepherd as depicted in later iconography, but unlike the ephoric figures in the catacombs, which are sometimes painted in half length in langadiges, usually intercrossed, and sometimes

1 Anthony, the founder of Christian asceticism, had so great a dislike to it that he desired to be buried secretly, in order that his body might not be subject to the curse of the dead. It was probably his opposition that led to the suppression of the practice.

2 Goyet, AM 66 x.
the face was covered with a painted plaster mask, as was the pagan custom of the time. In the case of a non-Christian, the bones, if not wrapped in cloth at Deir el-Bahari, the outer wrapping was painted to represent the deceased holding the Eucharistic cup in his hand. On his left shoulder was the symbol of Christianity, which was much adopted in early Christian times, and which the lower part of his robe bore a representation of the boat of Isis.

But it was not only the belief in the efficacy of embalming that survived the change brought about by Christianity, for many of the other old funeral customs lingered on, and it is difficult to decide how far their import was understood by the Christians. There is some evidence to show that offerings of food continued to be made to the dead. In the Christian cemetery in the oasis of el-Kharga, the tombs followed the ancient design, the body being laid at the end of a long shaft, at the opening of which is a chamber containing niches for offerings. Wine-jars and baskets for food were sometimes buried with the dead, and in a will made by a Christian at Antinoe the deceased requested that the holy offerings may be made for the reposes of his soul. This, however, may refer to nepos, or a kind of mass said for the dead. It is interesting to note that at the Synod held at Hippo in A.D. 393, at which Augustine was present, the habit of placing the host in the mouth of the dead, which had become general amongst Oriental Christians, was strongly condemned. It was apparently also the custom to enclose some of the holy elements in the coffin. This and other pagan usages seem to have continued. As the dead were formerly buried with amulets and little figures of protecting gods, so the pious Christian was buried with figures of St. George and the Evangelists. In one case, at least, at Antinoe, in a tomb of ivory praying-machine, a kind of primitive rosary, appears to take the place of the papyrius inscribed with prayers and magical formulae. There was also found in the hands of this body, a flower of Jericho similar to the mystic rose which was supposed to be the emblem of immortality, and to flourish every year on the day Christ was born. This was not considered to have been employed by the Crusaders, who were buried in the cemetery of Antinoe points to its use in very early times. It is interesting also to note that the body of a monk named Serapion, from the same sarcophagus, was encircled by an iron band from which hung in cases the paupers of Antinoe, whose bodies were painted on the outer coverings of the body, the ancient sign for life, the ankhs. This symbol is very frequent in Egyptian iconography, and was often employed where the cross would have been expected. Its use was so persistent that it afterwards became identified with the cross, and was known as the croux anastate. See art. Cross.

As the influence of the Bishop of Alexandria increased over the remoter parts of Egypt, many customs which appeared semi-pagan died out, and the funeral rites were performed more in accordance with orthodoxy. After the Council of Chalcedon (A.D. 451), when the Coptic Church was definitely separated from the orthodox body, there could be but few remaining. From descriptions in the Coptic writings, it would appear that the dead, wrapped in a winding sheet, were immediately thrown into the desert and buried. Persons of peculiar sanctity it was the custom to bury in a reliquary. The Coptic Life of Shmole states that he was buried in a reliquary pierced with holes, probably in order that pilgrims might have the benefit of gazing on the holy remains. As these relics are usually described as bones, it is evident that embalming had by then been abandoned. A Mass, or offering of the Eucharist, was sometimes performed before the funeral, but Masses for the repose of the dead in the Roman sense seem to have been unknown in the Coptic Church. The use of tomstones at this period was almost universal. There is usually contained the words: 'One God who helpeth,' and the date on which the deceased 'fell asleep' or 'entered into rest.' Occasionally they contain pious ejaculations and quotations from Scripture, or offerings which are conceived in a more pagan spirit, with such phrases as 'Grieve not, no one is immortal,' an especially good instance of this being a tombstone in the British Museum (no. 400) which runs: 'O how dreadful is this separation! O how far the departure to the strange land which removes one for all time! O condition of Hades, how do we come to thy gate! O Death, name bitter in the mouth! . . . Let all who love to weep for their dead come to this place and mourn greatly.' This recalls the ancient Egyptian funeral prayer to the passer-by: 'O ye who love life and hate death . . . pray for the deceased.'

The Copts have undergone centuries of oppression under Moslem rule, but they still observe these rites, and the following is a description of what has survived them on all sides for so long a period, the funeral rites of the Copts to-day have become very similar to those of their Muhammadan fellow-countrymen. The corpse is borne to the cemetery on an open goat. At first of ivory, to women of the house wailing and mourning. At the burial-ground a sheep is often killed by the more well-to-do, and its flesh given to the poor; the poorer give bread alone. Professional mourning women are hired to wail in the house for three days after death—a survival, perhaps, of the ancient Egyptian custom, or possibly only a ceremony borrowed from the Muslims. The laments are renewed on the seventh and fourteenth days after death. Some of the Copts sometimes for the eye of the festivals of al-Malad, al-Chites, and al-Kiyanak (i.e. the Nativity, the Baptism of Christ, and Easter), it is the custom of the Copts to visit the cemeteries and spend the night there, many of the richer having hovels under the tomstones for these occasions. The women spend the night in the upper rooms, the men below. Next day an ox or sheep is killed, and the flesh distributed among the poor. Lane (Modern Egyptians, p. 296) states that the Copts say that these visits to the tombs are merely for the sake of religious refection. This custom, however, together with the practice of slaughtering animals for food, possibly goes back to pre-Christian times in Egypt, when the relatives of the dead made periodic journeys to the tombs, and brought food-offerings for the kai of the deceased to refresh him in the under world. The funeral services of the Copts are according to the liturgy of theMor. Mon. One in use for ordinary periods of the year, and a special one is employed during Easter (Tuki, Edit. Copt. Archiv. p. 525).

P. B. Scott-Moncrieff.
DEATH AND DISPOSAL OF THE DEAD (Early Christian).

1. During the earlier years the Christians followed in general the burial customs of the Jews. But a livelier hope in the resurrection robbed death and the grave of many of their terrors. This gradually modified inherited funeral rites. To the followers of Jesus death was a sleep, and the grave a resting-place (εὐανεύεσθαι) for those who had died in the faith (Jn 11:25, Ac 7:8, 1 Th 4:13, 1 Co 15:51f). Not less but more respect was accordingly paid to the mortal remains of the departed, for their body had been 'Temples of the Holy Ghost,' and were to rise and be glorified (1 Co 3:16, 6:19, 15:23). When death ensued, the eyes were closed, the body washed, the limbs swathed, the whole body wrapped in a linen sheet with myrrh and aloes, and laid upon a stone or brick room (Ac 9:2; cf. Mk 15:10, 11, Jn 11:19f, 20). These acts were performed by the elder women—kindred and friends of the family. Relatives and intimates were admitted to view the face of the deceased for an interval of eight or more hours was required before burial. The younger men carried the bier to the place of interment, followed by the relatives and friends (Ac 5:34; cf. Lk 7:13). flute-players, hired mourners, and noisy demons-saters, were not altogether unknown. The funeral was followed (Mt 9:8, Lk 8:40, Ac 8:1, Co 15:39f). The place of burial was outside the city or village, in a natural cave, or in a tomb cut out of the rocky hill-side, or in a subterranean chamber, or simple grave. Later, when Christianity became State-religion, the burial-place was determined by the tradition in the Gospel of John of the tomb of Lazarus and of that of Jesus will hold for the early Christian Palestinian place and form of burial (Jn 11:11, 12). In the earlier forms of Christian interment there was a noticeable influence of the burial customs of the Jews. In fact, the formal character of Jesus' entombment influenced all subsequent Christian practice (1 Co 15:52f). Tombs were, as a rule, private family possessions (Mt 27:60f), and were large enough to receive several bodies, which were laid upon the ledges or in the niches cut in the sides. The brotherhood, however, from the beginning undoubtedly provided for the burial of its own poor (Ac 2:45f; Acts of the Apostles, Συγκρότημα. Ταυτόσενδα, Ταξινομία των Συνεργών του Αγίου Σπυρίδωνος). A large slab stone, rolling in a rabbet, closed the door of the hill-side sepulchre, and prevented beasts and robbers (Mc 16:13). It is altogether probable that the Jewish Christians whitewashed their tombs, as did their compatriots (Mt 23:27). In Rome and in general, the sepulchres consisted of three chambers: in Egypt and North Africa, the Jews had already adapted the Palestinian form of interment to local conditions, and the early Christians modified this still further to meet their own peculiar requirements. Of course they borrowed this and that local practice from the current pagan usage. The wide-spread development of 'cataphracts' (q.v.), places of Christian burial was but a re-adaptation of Jewish and pagan burial customs. Simplicity and even plainness more marked and characterized the later forms of Christian entombment in all lands, partly on account of the poverty of the brotherhood, and also because of the hope of a speedy resurrection. A brief inscription expressing the hope of immortality (εἰπέ ὅτι ζωή εἰσιν ἐν πάση καὶ πᾶσα ἐν ἀληθείᾳ ἑστήκεται μετὰ πάσης πολλῆς χρόνου τετελεσμένος), accompanied by a consacred symbol (a palm-branch or anchor, fish or dove), was the final tribute to those who had died 'in the Lord' (Bingham, Antig. of Chr. Church, ed. 1870, bk. xxii.; Jahn, Ath. Ort. Quart. Rev., 1891, xlvi. 501 f; Kneussel, Rossello, d. chr. Arch., 1905, pp. 74 f., 111 f., 295 f., 277 f.; art. 'Koiμητεριον,' in PEPX.).

2. But changing conditions produced manifold developments. The wide-spread and increasing acceptance of Early Christian doctrine in the earlier decades must often have suggested, if it did not compel, separate burial arrangements. And the rapid increase of the Gentile element in the various churches throughout the Empire naturally tended strongly in the same direction. The Jewish cemeteries, indeed, would hardly have been open for the interment of deceased Christians with pronounced pagan antecedents. Our sources, it is true, are practically silent as to the practice of this development, but it is safe to say that separation between Jews and Christians as regards ceremonial requirements had taken place before the close of the first century, especially in prevailingly Gentile Christian communities. A further formal separation must have been going on as between pagans and Christians. Hostility between them became marked towards the close of the 1st century (Ac 8th, 15th), 1 Co 7:39, 2 Co 6:6, Col 2, 1 Jn 2:5, 5 Rev. 16:19, 18:5, and martyrdom was not uncommon ( Clem. Rom. ad Cor. 5:7; Tac. Ann. xx. 44; Suetonius, Nerva, 16; Melito ap. Euseb. HS IV. 26, i. 17; Philo, Ap. ad Tramp. x. 69, 96; Ign. Ep. ad Rom. 5, ad Phil. x. 2; Polye. ad Phil. 1). The Church would naturally wish to secure the sanctity of the graves of their martyred dead, but in order to do so they had to provide separate cemeteries. That this began to be done in Rome by the opening of the Severan Catacombs 1864-77, i. 341 f., iii. 386 f. ; Bull. 1855, p. 236 f., 1886, p. 136; Nov. Bull. 1901, p. 71 f., 1902, p. 217 f.; Bosio, Roma Sott. 1650, p. 141 f.; Arnellini, Oli Antiche Civilt., 1893; V. Schlüter, Kato Kolonies, 1883, p. 307; Kaufmann, l.c. 111 ff. But that it did not come to pass throughout the Empire is abundantly proved (Ramsay, Cities and Bishops of Thrace, 1897, i. 500 ff.; 717 f.). Influences other than hostility would often operate to hasten the formation of separate Christian cemeteries. In some lands, such as Syria and Asia Minor, it took even centuries to accomplish the separation of Christians on the one hand, and Jews and pagans on the other, as regards burial accommodation (Ramsay, l.c.).

3. The earliest distinctly Christian cemeteries of which we have any knowledge are to be found in the neighbourhood of Rome. The Neronian persecution, probably by that of Augustus, was doubtless constrained the Christian brotherhood to provide separate resting-places for their honoured heroes who had 'fallen asleep.' And, as martyrs to the faith multiplied, such cemeteries became necessary. But it is possible that the earliest Christian catacombs were ore places of public meditation and devotions. In certain communities this often necessitated chapels, where the brethren could gather without imminent danger of molestation. Then funeral rites and ceremonies were developed in the general development, and these in turn reacted powerfully upon the whole manner and mode of burial. The entire catacomb development at Rome, Naples, Syracuse, Alexandria, Trèves, and elsewhere, was not adequately explained only on such presuppositions. Instead of family tombs and brief temporary resting-places for the dead, the Church, especially in the West, gradually made provision for the burial of all its deceased members (by A.D. 250). There accordingly arose, in the suburbs of every considerable Occidental city, Christian burying-grounds. And, where the remains of noted martyrs were laid, chapels were erected, and the brethren gathered to observe the Holy Eucharist and to hold their devotions. One of these catacombs had gone before. The chapel was named after the martyr; often the title was given to the whole cemetery; more frequently the cemetery bore the name of the patron who had provided the ground; occasionally the site of a martyr was sanctified by consecrating it. Instances of each are the cemetery of the martyr Praxedas, of the patron Priscilla, and
DEATH AND DISPOSAL OF THE DEAD (Early Christian) 457

of the bishop Caixtus—all in the neighbourhood of Rome. In the Orient, developments were different. Palestine is rich in rock-tombs, and so is the whole of Syria. In Egypt also, the catacomb or underground tomb has largely superseded the open grave. In the northern parts of Asia Minor there is a type of burial-ground that has left but little trace, and has been but dimly known, viz., the hypogeum or subterranean chamber-like sepulchres of the Carpi, the inhabitants of a tribe living in the Danubian territory. In the western parts of Asia Minor, the CELTS—through their connexion with Rome—had introduced the practise of burying their dead in tombs (fossores =xoxas). In the western provinces, where the CELTS—through their connexion with Rome—had introduced the practise of burying their dead in tombs (fossores =xoxas),

The Christians did not fear cremation, though they preferred 'the ancient and better cemeterial rites of the early Church, and the worship of the dead. The ante-Nicene development of burial customs is, however, quite amply reflected also in the current development (Euseb. Hist. v. 2; August. de Civ. cael. ii. 1. 2. 13). Simplex prevailed throughout the 2nd cent. (Min. Felix, oct. xii. and xiii.), but by the opening of the 4th cent., everything had become elaborated. Associations had been formed in the West to hold the obsequies of the deceased and sold in the cemeteries; gravelpaders (passores = xoxas) had become a separate class, and there were artists, stonecutters, painters, sculptors, and architects. The anniversary festival had been extended so that the third, seventh, and thirtieth and fourthtieth days after burial were celebrated (Apost. Const. viii. 41 and 42). Prayers were made at the tomb, psalms sung, and the Eucharist celebrated as fellowshiping with the dead; lighted tapers were placed at the grave; personal ornaments,
toilet articles, bottles, vases, etc., were interred with the corpse (Synod of Elvira, can. 34; of Laodica, can. 9; of Gaugra, can. 29; Euseb. HE vii. 16, Vit. vir. xxviii. 5; Iren. lib. viii. 4; Eus. HE ii. 11, 36). These were few ancient

4. With the recognition of Christianity by Constantine a new era opened. Recent martyrs and those who had multiplied the number of Christian churches were beginning to be commemorated by the laying of their bodies with more or less elaborate ceremonial. In this all there is little that was distinctly Christian (Ramsay, op. cit. 1. 500 f.; 717 f.). But in the West the pre-Constantinian development may be traced on the hill-side, with or without buildings erected beside them; the Jewish or pagan type of family tomb, the Christian churches soon provided cemeteries for all their dead (Aristides, xv. 8, 11; Tert. Apol. xxxix.),

The most common form of these was that which was later known as 'catacomb'. The same is also true of the development of the liturgical and sacerdotal rites in the early Church, and the worship of the dead. As often as the anniversary comes round, we make offerings for the dead (cf. Tertullian, De Res. Car. xxii.; Orig. c. Cels. v. 23, vii. 30; Lactantius, Div. Inst. vi. 12; Euseb. HE ii. 2; Augustine, De Civ. cael. i. 12, 13). Simplicity prevailed throughout the 2nd cent. (Min. Felix, oct. xii. and xiii.), but by the opening of the 4th cent., everything had become elaborated. Associations had been formed in the West to hold the obsequies of the deceased and sold in the cemeteries; gravelpaders (passores = xoxas) had become a separate class, and there were artists, stonecutters, painters, sculptors, and architects. The anniversary festival had been extended so that the third, seventh, and thirtieth and fourthtieth days after burial were celebrated (Apost. Const. viii. 41 and 42). Prayers were made at the tomb, psalms sung, and the Eucharist celebrated as fellowshiping with the dead; lighted tapers were placed at the grave; personal ornaments,
DEATH AND DISPOSAL OF THE DEAD (Egyptian)

August, Conf. ix. 12; Jerome, Epp. lxi, etc. The annual commemoration is always observed in Egypt for elaborate discourses on their virtues. And their tombs now became the resort of pilgrims from far and near. The relics of martyrs and saints were frequently disinterred and sent to important churches in the land or to shrines in which they were erected and services held. The Synod of Gangra (c. 358 A.D.) declares: 'If any one shall, from a presumptuous disposition, condemn and abhor the assemblies (in honour) of martyrs, or the sacred places consecrated to the celebration of their memorials, let him be anathema' (can. 29). Yet the Synod of Laodicea (before A.D. 381) announced that 'members of the Church shall not be allowed to frequent cemeteries or so-called martyries of heretics for prayer or worship.' Many councils in Spain, France, and Germany during the 6th cent. tried to stop burials in martyrdom and churches. Pelagius ii. (A.D. 578) protested against the growing custom, but with slight effect. Burial in churches or in porches, vestries, and cloisters, soon became universal. Gregory the Great (c. 600 A.D.) complains about exactions of cemetery officials as a price of burial, but says: 'If parents or others wish to offer anything for lights, we shall not hinder (ib. in Ep. iii.), Jerome and Chrysostom had spoken approvingly of giving alms at funerals, for the relief of the souls of the dead.

6. A summary of the theme in hand may be given in the following heads. (1) The simple funeral rites and burial customs of the early days gradually gave way to more and more elaborate ceremonies and practices. (2) These developments were different in different lands, but they all tended in the same general direction. (3) Two universal influences at work to produce these manifold changes: one arising out of the persistent faith and life of the Church, the other pressing in from the universal pagan environment. (4) Funeral rites were extended so as to include the elaborate ceremonials which have been described above, most of which were drawn more or less unconsciously from the surrounding pagan practices, although the Christians never lost the primitive faith in the raising back to life during the burial ceremonies. (5) The manner and forms of entombment were also steadily influenced by the various pagan practices, and yet to the Christians the grave remained the 'sleeping-place' for those who were to arise to 'newness of life.'

DEATH AND DISPOSAL OF THE DEAD (Egyptian).—Of no other country in the world have the burial customs always attracted so much attention as have those of ancient Egypt. The artificial preservation of the body, the elaborate care with which it was provided with covering and ornament, the monumental nature of the tombs which were built or excavated to contain it, struck the earliest foreign observers with astonishment, and are still the theme of wonder and admiration in our own day. Moreover, a tomb is not only a place in which nothing is destroyed by the disintegrating action of the atmosphere or the attacks of burelli, but has helped the artificial aids of mumification and carefully-sealed burial to preserve the human body and its appendages intact just as they were placed in the tomb. Even if removed from its wrappings, it is but rarely that a mummy is allowed an opportunity for elaborate discourses on their virtues. And their tombs now became the resort of pilgrims from far and near. The relics of martyrs and saints were frequently disinterred and sent to important churches in the land or to shrines in which they were erected and services held. The Synod of Gangra (c. 358 A.D.) declares: 'If any one shall, from a presumptuous disposition, condemn and abhor the assemblies (in honour) of martyrs, or the sacred places consecrated to the celebration of their memorials, let him be anathema' (can. 29). Yet the Synod of Laodicea (before A.D. 381) announced that 'members of the Church shall not be allowed to frequent cemeteries or so-called martyries of heretics for prayer or worship.' Many councils in Spain, France, and Germany during the 6th cent. tried to stop burials in martyrdom and churches. Pelagius ii. (A.D. 578) protested against the growing custom, but with slight effect. Burial in churches or in porches, vestries, and cloisters, soon became universal. Gregory the Great (c. 600 A.D.) complains about exactions of cemetery officials as a price of burial, but says: 'If parents or others wish to offer anything for lights, we shall not hinder (ib. in Ep. iii.)'. Jerome and Chrysostom had spoken approvingly of giving alms at funerals, for the relief of the souls of the dead.

EDWIN KNOX MITCHELL
before the burial; as we find it now, we see the wheat which grew up and withered in the darkness. The two different ways of regarding the sahu probably arose from two different ideas of the dead. It is possible that it was a mere dead thing, not different from a dead fish—the khet of a man like the khet of a fish—and was expressed in the hieroglyphic writing by the figure of a dead fish. But in another it was a fact, and wonderful things the heart, and the name, ever regarded with awe by primitive races. So the sahu is represented as the human mummy lying on its bier. The two ideas were combined in later times by regarding the sahu as a spiritual body (which - of course one thought one prayed to the gods to allow the ba to re-enter the saka and re-vivify it, so that it could feed upon the offerings which its descendants brought to it. It was probably out of this idea that the conception of a spiritual posthumous spirit or of the actual man grew. The real origin of mumification is to be found in a simple desire to preserve the dead man to his family. In the dry soil of Egypt bodies were found by experience not to decay, and they were buried in shallow graves, and the simple expedient of smoking or scorching was no doubt resorted to in order to stave off putrefaction ever more. How far smoking is responsible for the crouched and dried up appearance of the the Egyptian bodies is very doubtful. Real mumification was not known to the oldest Egyptians, but that it was introduced before the close of the Neolithic period is shown by the hieratic use, even in the very latest time, of a Flail knife in order to make the incision through which the entrails were removed. Herodotus records for us this use of 'an Ethiopian stone' (see below). The ancient and holy stone knife alone could be used for this act; the newfangled mumification desired by the Egyptians to preserve the dead as long as possible to those on earth who love life and hate death,' in the words of the Egyptian funeral-prayer, we may find a proof in the custom of keeping the mummy alone in a special corpse, in its own home, before it was finally committed to the tomb (see below, p. 462).

Wiedemann regards this custom, which we shall discuss further later on, as a survival of what he calls 'secondary' interment. In the most ancient days he considers that the primitive Egyptians buried the body first in ground near or under the house till it had partially decayed, and then transferred it to its final resting-place in the desert necropolis. In this way he explains, too, the fact of the disturbed condition of the bones in most of the Neolithic graves, which Flinders Petrie explains as due to a ceremonial cannibalism. Wiedemann thinks that the body was intentionally cut up after putrefaction had set in during the first burial in order to clean the bones before the second interment. He finds confirmation of this view in many texts of the Book of the Dead, in which the cutting off of the limbs of the dead is referred to, and in which decrees of the dead are restored to him, and that he may be whole. There is also the legend of the cutting up of the body of Osiris. That these passages are rightly interpreted as referring to a primitive custom of cutting up the body is possible. At Delphi, Flinders Petrie found a document (deposited in the British Museum) in which he could read with his body, safe from the prowling jackal or hyena, and with his precious amulets and funeral furniture, often made of precious materials, guarded from the impious hands of human robbers. For in Egypt,

as elsewhere, lust of gold drove men to theft; and even in Egypt, the most pious of lands, many could at all times be found to murder, to murder the very gods, priests, and the outraged dead themselves to obtain riches. Many tombs were violated within a century of the burial of their owners, in spite of all the precautions taken in order to hide them. That of Thothmes iv, was already violated during the troubles of the reign of the heretic Ikhnaten, and the royal burial was "restored" in the reign of Horemheb. The knowledge shown of the precise position of the carefully-hidden tombs makes it evident that the thieves, who came from among the ranks of the priests and guardians of the necropolises themselves; and in the reign of Rameses IX, the scandal had become so great that a royal inquisition into the robberies of tombs was held, which resulted in the conviction and punishment of many offenders. But tomb-robbery went on gaily; the prizes were worth having; and fifty years later all the royal mummies at Thebes had to be taken out of their original tombs and hidden in remote hiding-places, where they remained till discovered in our own time, and placed in the Museum of Cairo. The primitive Egyptian, however, had no fear of tomb-robbers, or of any disturbance beyond that of a storm-flood which might wash out the tombs; but his home was bare to the winds, or of the prowling jackal. This last was a very real danger, and a naive way of forestalling it was devised by regarding the magie-working beast who lived among the tombs as their protector and watchman, and asking him to take care of the resting-places of the dead and to allow the offerings of the living to remain in peace, and himself to give funerary offerings of the very best ('a kingly offering'), of the proper kind and quality. As the king was the patron and guardian of the souls, and the soul was supposed by some to live very much as the man who had lived on earth: there were rivers and lakes to be navigated and fields to be tilled there, and the dead might be called upon to do work as he had done well and good upon earth. Rest was the guardian of a man who had lived a laborious life, so that with the dead were buried boxes full of little Osiris figures called ukhabtis, or 'answerers,' because, as the sixth chapter of the 'Book of the Dead' inscribed upon many of them said, 'If one calleth Osiris at any time to do any works which are to be done there in the underworld, to plough the fields, to fill the canals with water, to carry sand from east to west, or what service ye will in the place of the dead; they shall answer for the dead man. There is little doubt that these ukhabtis were the descendants of very real 'answerers' in the shape of dead slaves, who in very ancient times were strangled and buried with their lords in order to serve them in the other world as they had done in this. Growing humanity and culture substituted wooden and stone slaves for real ones; but it may be that the custom of giving real 'answerers' was continued in the case of the kings till quite a late date. It may even be that the dead bodies found lying by the wooden boat in the tomb of Amenhetep ii. (1450 B.C.) were murdered slaves. In the earlier days of Mentu- hetep ii. (2300 B.C.) priests or Horthy, who seemed to have been killed and buried in the precincts of his tomb-tule at Deir el-Bahari in order to accompany him to the next world. And naturally enough we find the bodies of slaves in the tombs of the 1st dynasty kings at Abydos.

Although in later times the Egyptians were certainly more humane than either the Greeks or the Assyrians, it would be a mistake to suppose that they had always been so. In earlier days they had been very cruel to all semi-civilized races, more or less children, and a child has no idea of the sanctity of life. Certainly the Egyptians had originally no conception of the sanctity of human life as distinct from other life. The slaves followed their masters

1 Some have merely the inscription ' Illuminate the Osiris N N.'
to the tomb as the food did, or the caskets, or the jewellery.

In the tombs, if they are tombs, of the kings of the 6th and 7th Dynasties, the riper, as the Egyptians called it, before they were embalmed, was called the balbalot of the journey to the next world. There were stacks of great vases of wine, corn, and other food, covered up with masses of fat to preserve the contents, and corked with a pottery stopper, which was protected by a conical clay coating, stamped with the impress of the royal cylinder-seal. There were bins of corn, joints of oxen, pottery dishes, copper pans, and other things which might be useful for the ghostly cuisine of the dead. All these were brought along with the body of the deceased; no doubt, by the dead monarch during life, which he would be pleased to see again in the next world—a carved ivory box, little slabs for grinding eye-paint, golden buttons, model tools, model vases with tops, ivory and pottery figurines, and other objets d'art, the golden royal seal of judgement of the king Den in its ivory casket, and so forth. There were memorials of the royal victories in peace and war, little ivory plaques with inscriptions commemorating the founding of certain buildings, like institution of new religious festivals in honour of the gods, the bringing of the captives of the royal bow and spear to the palace, and the discomfiture of the peoples of the North and South. All these things, which have already been so much to illustrate for us in the history of the earliest period of the Egyptian monarchy, were placed under the care of the dead slaves whose bodies were buried round the tomb-chamber or their royal master at Abydos.

Passing over a space of two hundred years, we see the burial of Iuau and Tuyu, father and mother of Queen Ti, the consort of Amenophis III., at Thebes. Here we have the same balbalot for the king's body, much smaller, and it is roofed over with curved chairs and beds, boxes for wigs and garments, and even a chariot, besides all the regular appurtenances of the dead as now prescribed by religion. But the place of the dead slaves is taken by the stone and wooden ushabtis. All this funerary furniture and circumstance grew up from the simple burial of the Neolithic Egyptian with his mat, his pots, and his flints. What kind of religious services were celebrated at the grave in the earliest period we do not know; but we may suppose that they contained the germs of the later ritual as it was carried out in Pharaonic times. The descriptions given by Herodotus and Diodorus of the different processes of mummification and the funeral ceremonies are with very few exceptions of which they describe; and their descriptions, with exceptions in the case of Diodorus, tally entirely with what we know from the monuments and inscriptions.

The account of Herodotus (ii. 55) is as follows:

When in a house a man of any importance dies, all the women in that house besmear their heads and faces with mud, and then, leaving the body in the house, they wander about the city, and best themselves, with their clothes girt up and their breasts exposed, and all their relations accompany them. And on their part they themselves girt up the body in like manner. After they have done this, they carry out the body to be embalmed. There are those who are appointed for this purpose and practise this art: these, when the body has been brought to them, show to the bearers wooden models of dead men, and then quit the house (they show) the finest style of embalming, which they say is His [i.e. Osiris] whose name I do not think it right to mention in connexion with this matter. And they show the second style, which is inferior and cheaper; and the third, which is cheapest. Having explained how they learn from this the way to prepare the body to be embalmed, then the relations, whom they have previously agreed to the proposal, depart; and the embalmers remaining in the house, they make incisions in the best manner. First they draw out the brain through the nostrils, using a mixture of resin, myrrh, vinegar, and various other things; then they wash the body, and supposing that the stomach is already empty from all the liquid, they next sprinkle it with pounded incense. Then, having filled the belly with pure myrrh pounded, and cassia, and other perfumes, with the exception of frankincense, they sew it up again; and, when they have done this, they gird it in, as if it were a living body, and wrap the whole body in bandages of flax cloth, smearing it with gum, which the Egyptians ordinarily use instead of glue. Then the relations, having taken the heads, which were in a wooden case in the shape of a man, and, when it is made, they enclose the body in it; and then, having fastened it up, they store it in a sepulchral chamber, setting it in a niche in the wall. Then they embalm bodies in the finest manner.

Those who went to the second method, in order to avoid great expense, they prepare in the following way: when they have charged their syringes with oil made from cedar, they fill the abdomen of the body with this oil without any difficulty; and then they take out the bowels, injecting it at the fundament; and, having prevented the body from moving, and then placed it in the body in matron for the prescribed number of days, and on the last day they let out from the abdomen the oil of cedar which they had before injected; and it has such a strong effect away the intestines and vitals in a state of dissolution, while the mummy dissolves the flesh, and nothing of the body is left but the bones. Was, like his contemporaries, the body without any further operation.

The third method of embalming is this, which is used only for the poorer people: having thoroughly rinsed the abdomen with a purge (expulsion), they pickle it in matron for seventy days, and then deliver it to be carried away.

Diodorus gives much the same account; he adds that the first method cost one talent of silver (about £150), the second twenty minae (about £30), the third nothing. He gives us a curious account about the morning, saying that during the interval between the death and the burial the relatives abstained from the baths and from wine, ate the simplest food, and wore no fine clothes; and also with regard to the embalming, he adds the picturesque detail of the stoning and flight of the paraschistes, which is of considerable religious interest.

He says (i. 99) that, after the "scribe" had made the mark on the body indicating the place where the head should be made by the paraschistes, or "ripper," the latter performed his duty with the "Egyptian stone" (like our stone ax), and then, immediately fled away, pursued by a valley of stones and imprecations from the other embalmers, for the Egyptians held in abomination anyone who was accused of having committed any act of violence on the human body. We can see that this reason was not quite the correct one. The ceremonial stoning and fleeing away of the paraschistes was, in order to put the soul to flight, to make it desist from all thoughts of vengeance against the rest of the living which it so much feared. There is little doubt that this is rather a misunderstanding than an exaggeration: the most Egyptian chambers can hardly be other than the real tombs, in which the Egyptians could always, if they were disposed, see the sarcophagi which contained the bodies of their ancestors. In all probability the tombs of private persons were entirely covered up and hidden away, as those of the kings were, for many years after their deaths.

We have one instance in the tomb of Ashmunein, son of Alan, the admiral of king Amenehe in the war against the Hyksos, at el-Kab. In it we see a portrait of his grandson, the well-known Paheri, and an inscription which says: 'Lo! here is the son of his daughter, the director of the works of this tomb as mayor, to live the name and his father's name, the scribe of the reckonings of Amen, Paheri, deceased.' From this we know that he embellished his grandfather's tomb as well as constructed it. There is no information about him could be inserted on the walls of the earlier tomb after his death even, which shows that at least the hall of offerings in a tomb usually remained accessible to the relatives for generations after his death. Thus, indeed,
may the Egyptians well have felt satisfaction in seeing the coffins which contained their dead, and have regarded the dead, to a certain extent, as contemporaries, as Diodorus says they did, though we know that they never looked upon the actual bodies of their dead as the dead to think. Yet that the dead were actually kept in the houses for some time before their burial seems certain, and Lucian gives his personal testimony to the fact: ταρκήνους δὲ οἱ Αιγύπτιοι μόνον μένει—λέγει δ’ ὁ Λυκίανος τὸν ἀρνητήτον καὶ φαντάσματον εὐθυγ-

...nary, and we cannot doubt that Diodorus’ account is due to a misunderstanding. The ‘storehouse’ in which Herodotus says the body was kept (θηρίζωροι ὁδὲ οἰκονύμοι) may either be a place for the temporary storage of the mummy, or the actual tomb. The detail as to the position of the coffin might seem to point to the former alternative, as the proper thing for the corpse was to be placed on the ground; but in later times it would seem that the coffin was often actually placed on end in the tomb, probably to economize space. Diodorus gives the same detail about placing the coffin on end, but says that this was done in a chamber which those who had not private tombs built on to their houses, in order to contain the mummy. Now it seems very probable that something of this sort was done by poorer Egyptians. Children are often found buried under floors of the ancient houses, and during his recent examinations among the brick ruins of the ancient Thebes burnt by the generals of Easraddhon in 668 B.C., Legrain found a burial chamber containing a mummy with ushabtis of the 7th century B.C. This was a judge’s chamber built on to a house. Perhaps this may be the explanation of Herodotus’ οἰκονύμοι, and of Diodorus’ apparent statement as to the retention of the body for a long period after burial.. The same practice of building a new chamber for a mummy has been kept in different periods as from three to ten months. According to Gn 50th, the embalming occupied forty days, and the period of mourning seventy days.

With regard to the actual funeral ceremonies Herodotus (1, 93) gives some details which are not borne out by the monuments, and are evidently due to misunderstanding. His description of the exag-

...nated mourners at the death of a king is probably correct, but the details about the funeral procession were probably true, and the liberty allowed to the people to express their disapproval of a bad king and so prevent his proper burial, have no actual authority to back them up, and seem highly improbable. Yet we have a curious sentence in the inscription describing the battle of Memonphis, in which Amasis says that he gave Apries proper burial, ‘in order to establish him as a king possessing virtue, for His Majesty is the god’s son. If the gods should be removed from him’—which seems to tally somewhat with Diodorus’ statement. Evi-

dently a king not considered to be neb menkh, ‘possessing virtue,’ could be debarred proper burial as an Osiarian. But the judge would doubtless be a successful rival or usurper, not the common people. No doubt all usurpers had not always been so politic as Amasis was, and we know that the bodies of rival kings were often torn from their tombs and cast with their enemies, whether usurpers or ‘usurpares’. Anomyma, of the XIXth Dynasty, is an instance in point.

A funerary ceremony of very peculiar character which was actually carried out in the case of the kings of Egypt was described by Diodorus. This is the remarkable ‘Festival of the End’ (liter-

...ially, ‘Of the Tail’). It would seem that in primitive times, as has been suggested by many among scholars, the Egyptian god was not allowed to live beyond a certain term. He was then killed, and another took his place. Both were only to be killed himself eventually unless he died or was killed before his term had expired. The term was one of thirty years; but the end of his reign was assumed to be that year. So the humanity of later days, and doubtless the growing reluctance of the kings to let themselves be slaughtered, brought about a compromise. The king was no longer killed, but all the paraphernalia of the ceremony of his end’ were preserved; he him-

tself celebrated his own funeral ceremony, and performed mystic ceremonies before his own image as Osiris beneath the standard of the funerary wolf-god of Shut, Upuat (sometimes called Seh, the god ‘with the tail’). At the same time his eldest son or other heir-apparent was usually associated with him on the throne, so that a new king appeared in fact as well as in theory. We have surviving hymnography of the Festival of the End of the time of king Den, or Udinum, of the Ist Dynasty; well-known later repre-

...of it are taken from the temple of Ammenhotep ut. at Soh in Nubia and the ‘Festival Hall’ of Osorkon ii. at Bubastis. In later times the festival lost all significance, and became a mere formality, and other festivals of shorter duration were substituted. In the old days, even so late as the time of the Middle Kingdom, so far did the prevention of killing and burying the old king go, that very probably an actual sacrifice was offered for his supposed dead body, a statue which was ferried over the Nile and carried in procession to the sacred lake. It may well be that the funerary temple of king Menthehtetep Neb-

...etep-Hi, of the XIXth Dynasty, discovered by Naville and the present writer at Gebel el-Halabi in Bubastis, was dedicated to a temple: the great hypogeum beneath its western wall, which they called a ‘k-sanctuary’ or a ‘sanctuary house’; if it is not the actual tomb, he the heb-sed tomb of the king, and the neighboring tomb called the Heb-het-Boin may be the heb-sed tomb of another king, or another house.

Connected with Diodorus’ statement as to the popular judgment of the virtue of a deceased king is his remarkable description of the carrying of the body of every man to a certain lake, where it was judged by the god Apis. This was a necessary part of a good man’s life, for to do person would be buried in a tomb when the period of mourning was over and the tomb ready, till which time it was, no doubt, kept in a special chamber in the house. The time between the death of the deceased and the burial was allowed by different authorities as from three to ten months. According to Gn 50th, the embalming occupied forty days, and the period of mourning seventy days.

With regard to the actual funeral ceremonies Di-

...ostrich, or bust, and buried opposite the lake to the place of burial. There is no doubt whatever that nothing of this kind actually took place, and that Diodorus or his informants were misled into think-

...the Book of the Dead’. A full description of what is known to us from Egyptian sources as to the real proceedings at the funeral of an Egyptian of high rank will be found in Wallis Budge’s book The Mummy, p. 153 ff. This account is based largely upon the evidence of the well-known ‘Papyrus of Ani,’ in the British Museum.

In accordance with Egyptian conservation in religious matters, the bier and the various chests containing canopic jars, etc., which were borne to the tomb, were not till a comparatively late period placed upon wheels. The ancient sledge-runners of the days before the terracotta figures were probably still used when the funerary ones were elaborated, and, when, at a later period, wheeled carriages were introduced for the funerary procession, the old sledge-runners were still used, and the wheels were placed beneath them. Oxen were used to drag the carriages to the tomb. The chief priestly participants in the procession and in the rites performed at the tomb were the kher-heb, or ‘charteror,’ as the Greeks still call him, and the an-nut-f. The kher-heb seems to have acted as a sort of general director of the funeral; he was often a relative of the deceased.
He read the appointed prayers and spells. The friars then the mummiTF read the spell. He seems to have represented the god Osiris, and walked in the procession, bearing the crook and flail, the emblems of the god. The sem had very peculiar duties. On the night before final burial, after the procession, he used to seat himself down to sleep, covered with the mystic cow-skin, before the upright coffin containing the mummy. During his sleep he was supposed to see all the transformations of the god, i.e., the god himself as Osiris in all his phases and the four, three persons preceded the procession and solemnly adorned the sem, who then took part with the kher-hob in a sort of antiphonal service, in which the two took the parts of Horus and Isis, that of the latter being, as was often the case, a mere figure. Finally the sem donned the skin of a leopard, and performed the very important ceremony of opening of the mouth and eyes, in order that the dead man might be able to see and eat the offerings near his tomb and so be safe in the afterworld. The children touching the mouth and eyes of the mummy with a model adze or chisel of antique form. The ordinary ceremonies of offering at the grave were performed by the 'sequ-ka, or servant of the ghost,' in the case of a private burial or that of the king a regularly appointed priest. The funerary chapels of the kings had broad lands assigned to them for their maintenance, and in the time of the XIXth Dynasty developed into huge temples. Of these the Ramsesian and Medinet Habu at Thebes are examples. These, like the royal tombs, were decorated with funerary subjects taken from the Theban 'Books of the Under World,' already mentioned; but in the royal temples scenes of the ordinary life of the monarch were also introduced. The private tombs are almost exclusively decorated with such scenes, as they had been in earlier days.

An interesting custom existing in connexion with the funerary chapels and tombs may be mentioned here. Since Osiris had become, in succession to Anubis, pre-eminently the god of Abydos, the necropolis of that place became, so to speak, the metropolis of the Thrice-Blessed, which all ghosts, who were not its rightful citizens would come from afar to pay their court to their ruler. So the man of substance would have a monumental tablet put up to himself at Abydos as a sort of pied-a-terre, even if he lived in a private burial place. In the case of the king, who, for reasons chiefly connected with local patriotism, was buried near the city of his earthly abode, a second tomb would be erected, a stately mansion in the city of Osiris, in which his ghost could reside when it came to Abydos. We know that both Semenst III. and Aahmes I. had second tombs, which they never occupied, made for them at Abydos; queen Teta-sheba, grandmother of Aahmes, had an imitation pyramid made for her there (cf. Chapter on Egyptian Worship [Egyptian], B); and it is by no means improbable that the so-called royal 'tombs of the kings of the lst Dynasty, the contents of which have already been described, were in reality cenotaphs, also, the monarchs being buried not where, but near where, they would be in a sort the regular service of the dead. As was often the case, a mummiTF was always an amulet, typifying entrance into being' or 're-birth,' expressing the hope that the 'members' of a man would ultimately re-unite in a new life.

From the time of the Theban domination onwards, papyri containing chapters of the 'Book of the Dead' were always buried with the mummy, so that he could have with him his guide to the next world and its dangers. In earlier times this was not done; only in the case of kings were the older series of spells, out of which 'The Book of Coming Forth from the Day,' developed, inscribed upon the walls of their tombs. These are known to us as the 'Pyramid Texts,' and they are a most interesting monument of the archaic stage of the Kingdom language. Later such kings, as we have seen, had the spells of 'The Book of the Gates' and 'The Book of That-which-is-in-the-Underworld' similarly painted on the walls of their tombs.

The style of mummification and the coffin were at different periods: the great rectangular coffins and sarcophagi of the early period are very different from the gaily painted cartonnage coverings and coffins in the human shape which were usual in the Period of the Saite and Its Successors. Coffins of the Roman period: it is of faience, but very rude in style, and bears in Greek letters the simple inscription Σατερ ραφει — 'Soter, a sailor.' By this time the Egyptian mummies and funerary ceremonies had become the theme of the half-desire of the rest of the world, and indeed we need hardly be surprised at the decision, for the whole spirit and practice of the ancient rites had degenerated utterly and they became mere ridiculous ceremonies; the dead were supposed to express the sources of religious charlatanism and more or less humbugging 'philosophies.' So Egypt 'expired,' a drivel and a show.'

DEATH AND DISPOSAL OF THE DEAD (Europe, Pre-historic).—1. Palaeolithic period.—Owing to the negative evidence of archaeological researches, there are no data with which to combat the supposition that during the earlier stages of the evolution of humanity little or no attention was paid to the disposal of the dead, the deceased members of a family or community being simply abandoned by the way, like those of the lower animals. Nor is it known in what precise phase of social culture the custom of burial became re-established. It is difficult to give a satisfactory answer to this problem, as there is still a debatable problem among archaeologists whether the reindeer hunters of the Palaeolithic period, who frequented the caves and rock-shelters of the Dordogne and other parts of Western Europe, were in the habit of systematically burying their dead. The few humans remains hitherto encountered in the débris of these inhabited sites, which are accepted without cavil as belonging to the people of that period, are held by some archeologists to be those of persons who had been accidentally killed by the fall of materials from overhanging rocks, and their skeletons are now occasionally met with under circumstances which clearly establish the above sequence of events. On the other hand, those few remains which are inherent evidence that they had been intentionally deposited in the Palaeolithic débris and attended with sepulchral rites are still regarded by some anthropologists as interments of later times. The theory that the shelter of Cro-Magnon has long been regarded as representing the people of the later Palaeolithic period; but, as they were lying on the surface of the culture strata of the shelter, in a small open space, it is unlikely that they had been recovered by a subsequent talus, as they are now often regarded as belonging to the Neolithic period.

That Neolithic people were in the habit of burying their dead in caves formerly inhabited by Palaeolithic races has been frequently noticed and recorded by explorers. Thus, in the upper strata of the débris in the Schweizersbild rock-shelter, a Neolithic civilization was attested, not only by a characteristic assortment of relics, but also by the fact that the shelter had been contemporaneously used as a cemetery which contained no fewer than 22 interments. The graves were dug into the underlying Palaeolithic deposits, and ten of them contained the remains of children, as well as those of adults. Fourteen adult skeletons reported on by Kollmann belonged to two very different races, one of a fair size (5 ft. 3 in.), and the other so small as to be characterized as a race of pygmies. Dr. Nieuwesch, the explorer of this rock-shelter, thought the remains belonged to a distinctly different time (viz. only for the purpose of burying, or perhaps cremating, the dead—an idea suggested to him by the large quantity of ashes in the upper strata). It would appear, from the facts disclosed during the exploration of this cave, that the inhabitants had no discontinuity in the human habitation of this part of Switzerland since the reindeer hunters made this rock-shelter their rendezvous up to the Bronze Age; but no evidence of systematic burial had been detected till the true forest fauna of the Neolithic period had taken possession of the land.

The celebrated station of Solonstré (Saône-et-Loire), which has been given its name to one of the intermediate phases of Palaeolithic civilization in the north of France, has been hitherto regarded as having been subsequently utilized as a cemetery up to, if not beyond, Roman times; but, although some of the graves were clearly shown by their contents to be of greater antiquity than others, it was impossible to assign any of them with certainty to the Solonstré period. Moreover, the cephalic indices of 18 cranial submitted to Broca varied from 58:34 to 88:26—an extent of variability which could be better accounted for by a post- than by a pre-

Palaeolithic population.

Palaeolithic burials.—Formerly it was commonly held among anthropologists that the Palaeolithic people had no religion. But a fresh examination of old materials and some more recent discoveries have compelled the archeologist to acknowledge the existence of religious ideas, although they do not prove the contrary. It is difficult to epitomize the facts and arguments thus raised, but the effort must be made, as otherwise our evidence would resolve itself into a series of bare assertions.

The sepulchral remains of the human skeletons disinterred in the Montene caves (Balzi-Rossi), notably those known under the names of Barma Grande and La Grotte des Enfants, leave no doubt that the bodies had been intentionally buried with their personal ornaments, such as necklets, pendants, etc., made of perforated shells, teeth, fish vertebrae, pieces of ivory, etc. Among the grave-goods discovered along with some of these skeletons, were one or two well-formed implements of flint, which are in themselves inherent evidence that they had been intentionally deposited in the Palaeolithic débris and attended with sepulchral rites. But these remains are still regarded by some anthropologists as interments of later times. The discovery of two skeletons, of a negroid type, in the Grotte de la Mouthe, near the Montene caves, confers an additional importance to human palæontology. The Chauvadele skeleton, found in the small rock-shelter of the cave, and described as that of a man of about 60 years of age, lay at a depth of 5 ft. from the surface, in Magdalenian débris, on the left side, with the hands and knees strongly bent towards the face.

The Hominus eruditus de Langerie Basse (Dordogne) is here noted, because the evidence is conclusive that during life this individual had been crushed, probably while asleep, by a fall of rock from the roof, and that consequently the victim must have lain in a horizontal position, whereas the remains were found as belonging to a new race, intermediate between those of Neanderthal and Cro-Magnon, marks an important addition to human palæontology.

A remarkable contrast to the skeletons of Chauvadele and Langerie Basse is that recently found in a small grotto at La Chapelle-aux-Saints (Corrèze). It is described as that of an aged man, about 6 ft. 3 in. in height, who had been buried in a prepared grave beneath a bed of undisturbed Magdalenian débris, 12 to 16 in. thick. The grave measured 4 ft. 8 in. in length, 3 ft. 3 in. in breadth, and 1 ft. 6 in. in depth. The body lay on its back, the head bent downwards, the right hand flexed under the head, and the
DEATH AND DISPOSITION OF THE DEAD (Europe, pre-historic)

465

left extended. Around the body were bones of various animals broken for their marrow, together with a few flint scrapers and bone points—jewelry to be the remains of a funeral feast (J. Anthropology, xii, 619).

Another skeleton, which has a striking resemblance to that just described, was recently found in the upper strata of the rock-shelter of Le Mouster, in the upper valley of the Vezère.

It is described as having been buried intentionally in the attitude of sleep, beneath undisturbed strata of Mousterian age. The skeleton was that of a male, 5 ft. 7 in. in height, whose wisdom teeth had not yet been fully developed. Bones of various animals, some of them being described as partially calcined, were close to the body. Both the discoverers and Dr. Klaatsch, who examined this skeleton, formed the opinion that it had been intentionally buried with sepulchral rites (ZfB, 1880, p. 537).

A further discovery of a portion of a human skull has been announced, at a place called Combe-Capelle, near the town of Montferrand-du-Périgord. From its inconceivable characters and associated relics this individual is regarded as occupying a chronological horizon intermediate between the Mousterian and Magdalenian periods.

It is of some significance that all the traces hitherto recognized as coming within the Palaeolithic range of Western Europe are dolichocephalic, and that brachycephalic skulls are rarely found outside Neolithic burials, and then only in deposits of the transition period, to which reference will now be made.

2. Transition period.—Outside the haunts of these highly skilled hunters, artists, and workers in stone and bone, there existed, in certain parts of Western Europe, a transition culture between the stone age and the bronze age. The bearer of this culture, probably by emanating from the same stock, who, owing to the exigencies of a changing climate and the gradual disappearance of wild animals from the plains, began to exploit new sources of food, which, in the course of time, caused a considerable divergence in their domestic economy. Thus, while the Chellean and Mousterian culture relics can be more or less paralleled throughout the whole of Southern Europe, the artistic phases of the later civilization of the neanderthal types are found to vary in a limited area, mostly in Southern France. Implements of Mousterian types have been found in the Mentone caves, but not a trace of the relics characteristic of the Magdalenian stations of France; and yet both sets of cave-dwellers may have been contemporary.

Perhaps the most interesting feature of the investigation of the 'kitchen middens' of Maglem, in the valley of the Tagus, was the discovery of upwards of a hundred interments at various depths in the shell-mounds; but it does not appear that any special grave-goods had been associated with them.

From the data at our disposal the point of most importance to the present inquiry is that the recently discovered skeletons at Mouster and Chapelle -aux -Saints, which undoubtedly were survivals of the earlier types of humanity, appear to have been buried in the same rites, so circumstantially carried out as to suggest that they were founded on an already established cult of the dead. But, however this may be, it cannot be gainsaid that, during the Neolithic civilization, there is unmistakable evidence to show that the disposal of the dead had become a sacred obligation on the surviving relatives and friends. By this time the sepulchral remains are overwhelmingly conclusive in support of the doctrine that religion is a belief in a future life were the dominating factors in the social organizations of the period.

3. Neolithic period.—During the Neolithic period the cult of the dead prevalent among the peoples of Western Europe was accompanied by a series of psychological ideas which linked human affairs with the souls of men, animals, and things in the spirit world. The writer agrees with the animistic theory of Tyler, which represents man as first attaining to the idea of spirit by reflection on various physical, psychological, and psychic experiences, such as sleep, dreams, trances, shadows, hallucinations, breath, and death, and so gradually extending the conception of soul or ghost till all Nature is peopled with spirits. It may be, therefore, that there can be no doubt that the religion of these pre-historic peoples, as disclosed by their sepulchral remains, involved a belief in intercommunications between mankind and the supernatural world. When a prominent chief died, his weapons, ornaments, and other cherished objects were placed in the tomb along with suitable viands for his supposed journey to the Unseen World; and, indeed, the various characters and associated relics found in the graves of distinguished men, women, and children are readily recognizable. Such facts undoubtedly suggest that the people of those times did not regard life beyond the grave as differing widely from that from which death was the portal to the community of departed heroes and friends, to which they looked forward, across the span of human life, with hopeful anticipation of a more perfect state of existence. Hence, the exhumations, which are considered of greater importance than those of the living. Constricted of the most durable materials, and generally placed on a commanding eminence so as to be seen from afar, the tomb became an enduring memorial for many generations, till eventually its actual purpose and meaning became lost amidst the changing vistas of succeeding ages. One of the most common and effective methods of perpetuating the memory of the dead was by rearing a mound of stones or earth over the grave. To this custom we owe some of the grandest monuments in the world's history—the Pyramids of Egypt, the topos and dagoba of India, the mighty mounds of Silbury and New Grange. In the megalithic circles of Stonehenge and Avebury, together with the numberless rude stone monuments known as dolmens, cromlechs, menhirs, etc., scattered along the western coasts of Europe and extending into Africa. To comprehend fully the motives which underlay the construction of ancient sepulchral monuments, it would be necessary to examine not only their structural peculiarities and contents, but also their surface accessories, such as stone mounds, mounds, earthen ditches, etc. Although a strong family likeness permeates the whole series in Western Europe, they differ so widely in certain districts that to deal with their local peculiarities in Europe is equivalent to deal at least as many chapters as the number of countries within that area. Then the attention paid to the dead before, at, and subsequent to, the burial disclose a wide field of speculative research, involving us in a failure to solve the most mystic problems of religion, ancestor-worship, and general cult of the dead.

(1) Inhumation and cremation. — Pre-historic sepulchres varied so much in form, structure, position, and contents that to make a systematic classification of them on the lines of their chrono-
DEATH AND DISPOSAL OF THE DEAD (Europe, pre-historic)

Logical development is almost an impossibility. One special element which complicates such an inquiry was the custom of cremating the dead, with the bones removed, and to have spread westwards, reaching the British Isles towards the close of the Stone Age. This practice, of course, introduced various innovations on the sepulchral customs previously in vogue. Burial by inhumation, which belonging to Greenwell, was much more common in the Yorkshire Wolds, is thus described by that veteran explorer:

The unburnt body is almost always found to have lain upon the site, in a contracted position, that is, with the knees drawn up towards the head, which is generally more or less bent forward; the back, however, is sometimes quite straight. So invariably is this the case, that out of 301 burials of unburnt bodies, which I have examined in the barrows of the Wolds, I have only met with four instances where the body had been laid at full length! (British Barrows, p. 22).

On the other hand, when the body was cremated the incinerated remains were carefully collected and usually placed in an urn, and then buried. When these urns were buried, the remains were laid in a little heap, either in the grave, or upon the site of the mound was subsequently raised, or in a hole in earth already consecrated to the dead, as a former barrow. The corpse, thus reduced to a few handfuls of ashes and burnt bone, required no great space for its preservation either in a public cemetery or in a family burying-ground. Hence sprang up a tendency to diminish the size of the grave, and thus megalithic chambers gave place to cists containing the body placed in a contracted position.

Simple inhumation, i.e. placing the body in a hole in the earth and covering it with the excavated earth, was probably the earliest method of disposing of the dead, and at the site of the cemetery the survivors naturally raised over the spot a mound of earth or stones. Among a sedentary population the next step in advance would be to protect the body from the pressure of the surrounding earth, and to bury it in a suitable chamber, lined with flagstones set on edge, over which a large one was placed as a cover, thus forming the well-known cist; sometimes, instead of flagstones, wooden planks were used in the shape of a rude cist. The simplest method used was to burn the body, and at a distance from the site of the mound, and to place the ashes in a well-kept stone, or in a box made of wood; if this was the case, the box was sometimes treated with pitch or bitumen. The burial, however, was not necessarily a final disposition of the body, but was the means of preserving it for a future use, in which case the body might be wrapped up in various ways, and placed in the tomb, which was usually a chamber, or cist, sometimes built of stone, and sometimes formed of wattle and daub. The body might be interred in a cist, or a plain grave, with or without additional ornaments, such as a stone or wooden lid, and a few grave goods, such as weapons, tools, ornaments, &c. These were often placed with the body, and were sometimes found in the same position as when they were in use. The most common grave goods were a bronze sword in its wooden sheath, and a stone knife, and a bronze sword in its wooden sheath. The whole of the deposit in the grave was wrapped up in a cloth which probably served as the warrior's outer cloak (Worsaae, Danish Arts, London, 1885, p. 53).

The stone-laid cist, or burial chamber, the most widely distributed type of early grave known, from the megalithic chamber, with its sepulchral compartments, entrance passage, and superincumbent cairn, was an easy transition. But the chronological sequence thus suggested is of little value in dating these monuments throughout the British Isles, as there is evidence to show that some of the chambered cairns and long barrows were constructed before the introduction of cremation. Thus, in the counties of Argyll, Caithness, Ross and Cromarty, and some surrounding localities, there are chambered cairns in which the primary burials were by inhumation, and the human skulls found in them belonged to a dolichocephalic race. Similar chambered cairns, containing remains of a dolichocephalic race, have been found in the Island of Arran; but as regards the analogues groups of sepulchral monuments further north, such as those in the counties of Argyll, Inverness, Sutherland, Caithness, and the Orkneys, it is conclusively proved that cremation and inhumation were contemporary from the very beginning, and the same remarks apply to the dolmens of Ireland. It would thus appear that, subsequent to the cremation of the burials in the Stone Age in Britain, there was a period of degradation in this kind of sepulchral architecture, during which the well-known barrows of the Bronze Age became the prevailing mode of burial. In Scandinavia, and in the Giant Mound of the Stone Age in Britain, but gave place during the Bronze Age to large stone-lined cists, suitable for more than one corpse. Finally, in the early Iron Age, both these monuments were discarded, and simple burial, either by cremation or after cremation, and there were then raised huge earthen tumuli, such as the mounds of Thor, Odin, and Freya at Gaula Upsala, and the ship barrow at Gokstad. The dolmens of the Iberian Peninsula, known as aiztu in Portugal, belonged to the Stone Age, and their interments, which were almost exclusively of unburnt bodies, showed that the people who constructed them were a dolichocephalic race—a remark which also applies to the cairn barrows of the northern part of Spain, which were older than the dolmens. Cremation appeared at a comparatively late period in the Bronze Age, probably owing to the distance of the Iberian Peninsula from the seat of its supposed origin. The primary object of inhumation might have been nothing more than protection of the corpse from enemies and wild beasts; but, in the evolution of the grave from a mere hole in the earth up to the elaborately constructed chambered cairn, we must seek for a higher motive than a pious act of respect to the memory of a departed friend. The general idea entertained by archaeologists on the subject is that the grave was looked upon as also the temporary home of the departed, and that the body was placed in the grave till the natural decay of the latter had been completed—"a process which took some time, and entailed on the ghost the irksome ordeal of passing through a sort of purgatory, or internment, between this life and the next, in the spirit-world. It is now surmised that the effect of fire had long been known as a means of purifying not only the body, but also the soul, from the pollution which death brings with it—"an opinion which may account for the finding of so large a number of partially burnt bodies in graves, even before cremation was generally adopted. As soon as it became generally realized that burning was merely a speedy method of accomplishing the dissolution of the
DEATH AND DISPOSAL OF THE DEAD (Europe, pre-historic)

body,—now regarded as nothing more than a mass of corrupt matter,—cremation became the culminating point of a religious cult, which taught that it was a most desirable object to set free the soul from its association with the corpse as speedily as possible.

But, whatever were the motives which led to the adoption of cremation, whether religious or sanitary, there can be little doubt that burial by inhumation was associated with religious rites and ceremonies long before its introduction into Western Europe. Subsequently both methods were practised concurrently during the whole of the Bronze Age, and down to the time when Christianity superseded paganism. According to classical writers, the Greeks and Romans practised both methods, but in fluctuating proportions, probably under the influence of fashion or current religious opinions. That cremation was more prevalent among the richer classes was partly due to its being an expensive process, and, therefore, beyond the means of the common people. But one has to be cautious in drawing deductions founded on motives, as the predominating belief in one or other of these burial customs varied in separate districts, even within such a limited area as the Wolds of Yorkshire. On this point Greenwells writes (op. cit., p. 21):

In some localities on the Wolds it has been seen that cremation prevailed, though inhumation was the general custom throughout the whole district. In part of Yorkshire, however, cremation was all but universal; as, for instance, in Cleveland, where Mr. Atkinson's very extensive investigations show that cremation was a single instance of an unburied body; and near Castle Howard, there was a large series of barrows contained nothing but burnt bodies.

Burial mounds are called 'earns' when their construction material consists of small stones, and 'barrows' when the mound is formed of a great deal of earth, though both substances were used in the same mound—a small earm being often included within earthen barrow. Their great diversity in external form gave rise to a number of qualifying epithets, such as 'long,' 'round,' 'ovate,' 'lenticular,' 'square,' 'round-sharped,' etc. Sometimes the mound was surrounded by a ditch, or a stone circle, or both; and instances are on record in which one or both of these features were found within the area covered by the mound, whether by inhumation or after cremation, may be found beneath the natural surface without any superincumbent mound, or any such surface indication whatever. At other times, when the mound or earm consists of a standing stone, or a circle of stones or of earth, or a ditch may indicate the site of a burial. Sometimes the mound may be raised over an interment, whether burnt or unburnt, which had been simply laid on the surface of the ground. At other times a mound, more or less circular, of earth, and covered with vegetation, may contain a megalithic chamber with an entrance passage, and sometimes divided into sepulchral compartiments of the latter kind, which were evidently family vaults. The mounds contained the ossuary remains of several generations. As the abodes of the dead, specially adapted for the burial of unburnt bodies, were continued after cremation began to be practised, it often happens that both burnt and unburnt remains are found in the same barrow. We have already seen that the earliest interments in the chambered cairns in the North of Scotland were burnt bodies.

(2) Megalithic monuments. They are the sepulchral monuments still extant in Europe, that are known as 'dolmens,' take the first place, not only for the wealth of evidential materials which they have supplied, but also on account of their great number, imposing appearance, and wide geographical distribution. A dolmen, in its simplest form, may be defined as a rude stone monument, consisting of at least 3 or 4 stones, standing a few feet apart, and so placed as to be covered over by one megalith, called a capstone or table.

A well-known example of this kind in England is Ruts Cotyl House, near Midlothian, which in its present condition consists of three large megalithic stones supporting a capstone measuring 11 ft. by 8 ft. Originally the space between the supports had been filled up by smaller stones, so that as to enclose a small sepulchral chamber, and after the capstone had then covered over by a mound of earth, but without an entrance passage.

Between this simplest form and the so-called Giants' Graves, Grottes des Fées, Altesse couvertes, Hunnebedden, etc., there is an endless but regular gradation of structures in proportion to the number of supports and capstones used.

The well-known Altesse couverte de Haguen, near the town of Sumur, measures 18 metres in length, 6'50 in breadth, and 1'50 in height. It is constructed of thirty supports and eight capstones, including the west end, and 1'50 in height. Another, near Ene (Ile-et-Vilaine), called La Roche aux Fées, and about the same length, is constructed of thirty supports and eight capstones, including the west end, and 1'50 in height.

Although many of these free-standing dolmens show no signs of having been at any time embedded in a cairn or mound, some archaeologists maintain that that was the original condition of all of them, and that the theory which derives some support from their present dislocated condition, for the destruction of them may be seen throughout the whole area of their distribution in all stages of denudation. Were the materials which compose the tumulus of New Grange, in Ireland, removed, leaving only the large stones of which its entrance passage and central chamber are constructed, there would be expected to view a rude stone monument similar in all essentials to that at Callenish in the Island of Lewis.

The covers of these dolmens vary in shape and appearance, owing to vegetation, and other natural surface changes; and, as to size, they range from that of an ordinary barrel—a few yards in diameter—up to that of New Grange, which, in the form of a truncated cone, has been measured to a height of 70 ft., with a diameter at the base of 215 ft., and of 120 ft. at the top. Silbury Hill is 170 ft. in height, and over 500 ft. in diameter at the base.

There is no rule as to the position of the entrance gallery, it being many times to the side, as in the Giant's Grave at Oen, near Roskilde, in Denmark, and sometimes to the end, as in the tumulus of Gavrinis (Morbihan). The Drentche Hunnebedden, which in the present day are all unheaved, had both entrance closed and the entrance passage on the side facing the sun, as was the case in all the dolmens.

Ruin dolmens are abundantly met with in the provinces of Hanover, Oldenburg, and Mecklenburg. According to Bonsdorff, there are more than 300 distributed over the three provinces of Lüneburg, Oeselbruck, and Stade; but the most gigantic specimes are to be found in Oldenburg. In Holland they are confined, with one or two exceptions, to the province of the Drente, where between 50 and 60 still exist. The Drente Hunnebedden, the largest of the group, is 79 ft. 8 ft. 14 ft. wide, and in its primitive condition contained 45 stones, ten of which were capstones.

In Scandinavia the dolmens are confined to Danish lands and a few provinces in the South of Sweden. In the former country, in addition to the great chambered tumuli, free-standing dolmens may be seen situated on the tops of artificial mounds, and surrounded by enclosures of stones, either in the form of a circle (Randueisen) or oval (Lau unwers).

Only one dolmen has been recorded in Belgium, but in France their number amounts to close upon 400, irregularly distributed over 73 Departments, of which no fewer than 618 are in Brittany. From the Pyrenees they are sparsely traced along the north and west coast of Spain, through Portugal and Andalusia, where they occur in considerable numbers. The most remarkable sepulchral dolmen we have in the province of Antequera, situated a little to the north of Malaga. The chamber is slightly oval in shape, and measures 21 metres long, 6'15 metres wide, and from 2'7 metres to 3'3 metres high. The entire structure comprises 31 monoliths—ten on each side, one at the end and four on the roof. The stones are made of the Jurassic limestone of the district, and, like those of Stonehenge, appear to have been more or less dressed. The
DEATH AND DISPOSAL OF THE DEAD (Europe, pre-historic)

entire structure, now partially exposed, was originally covered with earth forming a mound 100 ft. in diameter. In Africa, dolmens are met with in large groups throughout Morocco, Algeria, and Tunis. According to General Faucher, who has examined them there, they are quite analogous to those on the European Continent, with the exception that, in his opinion, none of them had been covered with a mound. (De Mortillet, 1873, p. 496.)

Near the center of the mound, one of several known to have formerly stood there. It is more probable that such enclosures were, like our modern churches, used not only as cemeteries, but for the performance of religious ceremonies in connexion with the cult of the dead.

(4) Sepulchral caves.—The custom of burying the dead in natural caves, to which we have already referred as having been met with in the Paleolithic period, was continued throughout the Neolithic and Bronze Ages. Discoveries of this character have been recorded in numerous localities throughout Europe, and especially in France. Professor Boyd Dawkins informs us that the most remarkable of these in Britain are to be found in a group clustering round a refuse-heap at Perthis-chware, a farm high up in the Welsh hills, in Denbighshire:

The human remains belong for the most part to very young or adolescent individuals, from the small infants to youths of 21. Some, however, belong to men in the prime of life. All the teeth that been found were greatly worn, and the skulls belong to that type which Professor Huxley terms the river-mouth skull. All the human remains had been buried in the cave, since the bones were in the main perfect, or only broken by the large stones which had subse-

questly fallen from the ceiling. The shape of the skull is a skull to a pelvis, and the vertical position of one of the femurs, as well as the fact that the bones lay in confused heaps, it is clear that the corpse had been buried in the contracted posture, as is usually the case in Neolithic interments. And, since the area was insufficient for the accommodation of many bodies at one time, it is certain that the cave had been used as a cemetery at different times. The stones blocking up the entrance were probably placed as a barrier against the incursions of wild beasts. . . . The Neolithic age of these interments is proved, not only by the presence of the flint-blades, but by the burial in a contracted posture, and the fact that the skulls are identical with those obtained from chambered tombs in the South of England proved to be Neolithic by Dr. Thorun (Cave-Hunting, pp. 125-135).

The same writer describes similar remains from caves in the limestone cliffs of the beautiful valleys of the Clywyr and the Clwyd near Clwyd. He has also shown that the people who buried their dead in these caves were of the same race as the builders of the neighbouring chambered tomb of Cefn, just then explored. The crania and limb bones of the skeletons were identical, and in both the tombs and caves the dead were buried in a contracted position.

In Scotland, human remains regarded as sepulchral have been found in some caves at Olaven, which had been explored in 1838, and also in the channel between the foot of the cliff overhanging the ancient raised beach on which part of the town is built. In one of these caves (M'Arthur Cave), along with some fragmentary skeletons, were two skulls sufficiently preserved to enable Sir William Turner to take correct measurements of their special character, from which it appears that their owners belonged to a dolichocephalic race, their cephalic indices being 70.2 and 75.4. Although no grave-goods are known to have been associated with these bones, there is sufficient evidence from collateral phenomena to show that the chronological horizon to which they must be assigned is the Neolithic period.

Of all the countries of Western Europe, France has yielded by far the largest number of burials under this category. De Mortillet, writing in 1883 (Le Prehistorique, p. 598), states that he could count 117 in France distributed over 36 Departments, 24 in the Alpes, and only 1 or 2 specimens in each of the other countries.

The following epitomized notices of one or two examples will give the reader some general idea of the importance attached to this class of sepulchral remains:

---

468
In the course of exploring the natural cave of Casa da Mourel, near Lisbon, a large quantity of human bones, representing some 160 individuals, was discovered. It appears that the Neolithic inhabitants had converted the grotto into a cemetery—so far indicating a dolmenic feature. The most interesting feature of these skulls is of exceptional interest, inasmuch as it furnishes positive evidence of having been partially trepanned, thus disclosing the original position of the brain-case. The remains of the interment (Cartailhac, *Les Ages préhistoriques de l'Espagne*, p. 81) in this particular specimen contained log skulls, the two most remarkable being those of L'Homme Mort and Baumes-Chaudes, both in the Department of Lozère. In the former were numerous tools and instruments to furnish the necessary implements of these of the ephialtic indices of several dolmenic remains. Among these, indeed, and in the same dolmenic remains, there were other two were 78*5 and 78*8. There were, therefore, no brachycephalic skulls in this sepulchre, so that the race appears to have been composed of dolicocephalic individuals. Amongst these, however, there is one of mesaticephalic, and another, a dolichocephalic, which, though at first overlooked, subsequently became the subject of much interest to anthropologists. The animal remains were those of the Neolithic epoch, but among them were none of the reindeer, horse, ox, or stag. Among the relics were a lance-head, and a portion of a polished stone axe. Drs. Broca and Prunieres were of opinion that the individuals whose remains had been contained in this cavern belonged to an intermediate race, the Neolithic dolmenic remains of which had been discovered. In one of these caves only chipped stone implements were found, and even the latter were very rare, but in the other there were a few arrow-points, a head, some roundlets of deer-bone, etc., which are supposed to have been executed in culture. The crania measured and classified in M. Salomon's list from the Baumes-Chaudes cave, the average height of which was calculated to be about 5 ft. 3 in.

Examples of sepulchral caverns in which brachycephalic crania formed the majority, a series of caverns at Hautières and Foyert in Belgium may be cited. Of 92 skulls from the former measured by Professor Houze, 62 are dolichocephalic, eleven mesaticephalic, and sixteen brachycephalic. The well-known cave of Foyert (Fou de Foyert) was actually a rock-shelter, with a projecting cavity extending inwards for some 20 metres, and about one metre in height and one metre in breadth, and closed in front by a large slab. This cavity was filled with human bones mixed with earth and stones, but none of the bones had been buried, and bore signs of INTERMENT. The remains of these bones were in perfect preservation, and the rest of the skeleton, so that disembowelling must have taken place before their final deposition in the cave. From the number of lower jaws and similar remains, it was supposed that this sepulchre contained 16 individuals, of whom 5 were children. The crania measured were 111. A distinguishing element in the conclusions suggested by this discovery was the presence of fragments of pottery among the contents of the cave, which is not the case at Hautières. The accumulation of debris and refuse, which, judging from the fauna represented by these ossaceous remains, belonged to the Palaeolithic period. Hence, at the time, the human remains of Foyert were regarded as belonging to that period—an opinion which is no longer held, as the sepulchre is now admitted to be of the Neolithic age (Rev. de l'École d'Ant. 1895, p. 155). Artificial caves used for sepulchral purposes have also been discovered in certain Departments of France, more especially those with chalky formations, like the Marne district. Here upwards of a hundred dolmenic cairns have been excavated, and a number of artificial caves excavated in the flanks of low hillocks, have been most successfully explored by Baron de Baye (see his *Archeologie préhistorique*, 1889). Among some hundreds of interments, over 100 individuals, including crania and cranial amphules, have been collected and are now preserved in the Château de Baye. Associated with them were a number of implements, weapons, and ornaments of Neolithic types, and these axes, trampled bones, teeth, and so on. Of the crania, 41 were submitted to Dr. Broca for examination, and are thus classified:—dolichocephalic (71 to 70677), 13; mesaticephalic, 17; and brachycephalic (80 to 8873), 12.

Dr. Broca recognized in these human remains the unmixed dolmenic people of L'Homme Mort and Baumes-Chaudes.

Some of these dolmens, especially those of Petit-Morin, are supposed to have been constructed in imitation of the dolmens, as they were preceded by an entrance passage and occasionally a vestibule, from which a low door, closed with a stone slab, was added to the dolmenic chamber. Dr. Broca thinks that some of them had been used as habitations for the living before being appropriated to the dead, as they had sometimes niches and shelves cut out of the solid chalk walls, on which various objects of metal had been deposited. A rudely executed human figure with a bird-like nose, two eyes, a necklet, and breasts, together with the form of a stone axe in its handle, was sculptured in relief on the wall of the vestibule of one of the larger caves, and a funnel-shaped vessel, having been frequently, as the threshold was greatly trodden down by the feet of visitors. M. Cartailhac explains this peculiarity by supposing that it was a place for temporarily depositing the dead before finally transferring them to the sepulchres. Of these caves contained abundance of relics characteristic of an advanced Neolithic civilization, but without any trace of metals, and the surrounding neighbourhood is rich in flint objects of that period.

Finally, Mr. Houze has observed that analogous phenomena and grave-goods associated with the artificial caves of France are precisely of the same character as those of the neighbouring dolmens and natural caves, thus conclusively showing that all these monuments belonged to the same epoch and the same civilization. Their relationship to the rock-cut tombs of Egypt, Ethiopia, Palestine, and other countries, we must leave to readers to work out for themselves.

(3) GRAVE-GOODS. The gifts to the dead, as already mentioned, bear some relationship to the social position among the community in which the deceased lived. They include all manner of things—ornaments, weapons, tools, utensils, pet animals, and even the owner himself—preserved for the use of the deceased in the other world. When a departed friend appeared in a dream dressed in his usual garments and armed with his favourite weapons, it was natural to suppose that these objects had belonged to that same epoch and the same civilization. Their relationship to the rock-cut tombs of Egypt, Ethiopia, Palestine, and other countries, we must leave to readers to work out for themselves.
DEATH AND DISPOSAL OF THE DEAD (Europe, pre-historic)

positated in the earth without a urn, it has been argued that such objects had been used for binding the body. In which case, the bones were wrapped up. From the quantity of objects sometimes deposited in the grave, it has been surmised that, when a person was possessed of property of rare and exceptional value, it was customary to bury it along with him, evidently with the intention of its being utilized in the world of spirits.

As an illustration of this the following notice of a remarkable discovery of axes made of jade and other materials will be of interest:

The cist of Mont-Saint-Michel, which occupies a conspicuous position among the Carnac group of antiquities, rises to the height of 10 metres, on an elongated base measuring 125 metres in length by 65 metres in breadth. In recent times the top of the mound was flattened, and the eastern third is now occupied by a chapel, while at the other extremity there is the ruin of a modern observatory. In 1862 a small metallic chamber, some two metres square and rather less than one metre high, had been removed, and parts of jade and turquoise, supposed to have formed a necklet; also a number of very small, small, or roughly made of crystal. After these had been removed, the floor of this small chamber, there were found, under a flagstone, remains of an interment, and a space between the floor, and the natural rock (Réné Galles, Bull. de la soc. polygr. du Morbihan, 1863).

(6) Pottery.—The pottery found with pre-historic burials consists of a variety of vessels collectively called 'urns'; but, as they are found in graves containing either burnt or unburnt bodies, they could not all have been intended for cinerary purposes, so that they have to be classified according to their associated functions. Vessels associated with inhumed bodies are supposed to have contained food and drink—hence they are called 'food-vessels,' and 'drinking-cups' or 'beakers.' The cinerary urns, used exclusively for the purpose of preserving the cremated remains of the corpse, vary considerably in size, form, and ornamentation, being generally 10 to 18 inches in height. They are narrow-based and wide-mouthed, with a broad overhanging rim to which the ornamentation is commonly confined. The flanged rim is ornamented by one or two transverse ridges. The food-vessel, which is considerably smaller, more globular, and more highly ornamented than the cinerary urn, is also wide-mouthed and narrow-based. It was placed with an unburnt burial in the vicinity of the head of the corpse.

Drinking-cups, or beakers, are tall, highly ornamented vessels, narrowing from the mouth to near the middle, then bulging out and again narrowing at the base. A few specimens have been found with a handle like a jug. Beakers are almost invariably associated with unburnt burials—only two out of 24 having been found by Greenwell in the Wiltshire barrows, with cremated burials. Very small cup-shaped vessels that were placed with two or more holes in the side, and generally found inside a large cinerary vessel, are known under the name of 'income cups'; but there is no evidence to support the suggested use of them, and they are now regarded as cinerary urns for infants.

The Hon. John Abercrombie holds that the beaker is the oldest Bronze Age ceramic in the British isles, but also an imported ware from the Rhine Valley (JAI xxxii. 373ff.). As an interesting corollary to Mr. Abercrombie's views, it has been observed that, in almost all the instances in which the beaker has been found associated with human remains, the skull was brachycephalic.

That cephalic form of the beaker type have rarely, if at all, been found in Ireland may be accounted for in the superhuman, the Continental brachycephals were later in penetrating as far as Ireland; or, perhaps, that the few who did find their way to that country did so by a different route. This is doubtless the case on the upper way of the Rhine Valley. Anyhow, the rarity of both beakers and brachycephalic skulls in the pre-historic burials of Ireland is a suggestive fact to the student of Irish ethnology.

(7) Cemeteries.—As population increased and the influence of religion became more powerful as a governing factor in social organizations, the isolated and sporadic graves of the earlier people gave place to their aggregation in the form of cemeteries in certain selected localities, which were thus, as it were, consecrated as common burying-grounds for the disposal of the dead. The remains of such cemeteries may be found dispersed throughout the whole of Europe. There is documentary evidence that in pagan times the Irish Mss., and in it reference is made to the cemetery of Tailltun, which Mr. Eugene Conwell of Trim has identified as a group of chambered cairns near the town of Oldcastle, Co. Meath. Mr. Conwell also quotes the following stanza, among others, from a poem in the same old MS., viz. Leabhar na hUidhre:

On the ridge of this range of hills, which extends for a distance of about two miles, are situated from 25 to 30 chambered cairns, some measuring as much as 180 ft. in diameter, while others are much smaller and nearly obliterated. They were examined in 1873 by E. A. Le Strange, and an account of his discoveries was published in 1873 under the title of Discovery of the Tomb of Ollamh Fodha. An analogous group of dilapidated chambered cairns, with settings of stone circles, may be seen at Clava, near Inverness, and other localities in Scotland. Stonehenge, a flower-pot-shaped mound, is in the centre of a vast burying-ground consisting of barrows in groups over the downs.

Urns cemeteries, without any external markings to indicate that the burial of the burials, are frequently met with in the British isles, being exposed by agricultural operations, and especially by the removal of clay beds for the making of bricks. As the underlying clay slides from under the covering soil to a lower level, urns are frequently seen sticking in the broken margin of the surface soil.

A small urn cemetery was recently discovered at the digging of the foundation of a villa in the town of Largs. The site was a low gravelly mound, and the cemetery disclosed an unique feature in the finding of a stone-lined cist covered over with a large flagstone and containing seven flower-pot-shaped urns, all having more or less calcined bones in them (Archeologia, lxii. 239-250).

In 1886, in the course of removing the surface-earth above a gravel-and-sand-pit at Ayesford-in-Kent, the following relics were discovered: a wooden pail or situla, with a bronze band ornamented with late Celtic designs; a bronze jug (oomochet); a large handled pan and two fibula, also of bronze, together with calcined bones and fragments of pottery. These objects were discovered in what had been a round burial-pit, about 31 ft. deep, the sides and bottom of which had been contorted with a kind of chalky compound. The bronze situla contained burnt bones, and the fibula,
DEATH AND DISPOSAL OF THE DEAD (Europe, pre-historic)

the bronze vase and pan lying outside it, while around were the remains of several earthenware urns, some of which had been used as cineraries. This circumstance, coupled with the notice of Dr. A. J. Evans, who lost no time in making a full inquiry into the circumstances. The result of his researches was a paper, 'On a Late Celtic Urn-Field at Aylesford,' which appeared in 1846.

The conclusions to which Dr. Evans comes, after a wide comparison of Continental ceramic, is that the Aylesford urns are the derivatives of North Italian, and in a marked degree old Venetian prototypes.

A most instructive cemetery in Europe is that of Hallstatt, of which the present writer has elsewhere given the following brief account:

'...The ancient necropolis, known as Hallstatt, lies in a narrow glen in the Nördle Alpe, about an hour's walk from the town of Hallstatt, situated on the lake of the same name. Discovered in 1816, and systematically explored for several years under the superintendence of Dr. Brünnow, the subject is published by Baron von Sacken in 1825, in a quarto volume with twenty-six plates of illustrations. One of the peculiarities of this cemetery was that it contained inhumation by incineration indiscriminately dispersed over the entire sepulchral area, and, however, belonging to the same period, as was clearly proved from the perfect similarity of their respective grave-goods. The graves were thickly placed over an irregular area of about 2000 yards in length and about that in breadth, but there were no indications above ground to mark their positions, which were discovered by the depth of the clay...'

Out of 933 tombs described in von Sacken's work, 255 contained simple interments; 450 had inhumed human remains; and in only 180 were inhumed interments before being cremated. The inhumed bodies lay, generally, from east to west, with the head towards the south, and a head occasionally resting on a stone. At other times the body lay on a prepared bed, or coarse casing, of hardened clay. In two instances traces of a second coffin were observed. Sometimes two or more skeletons were found in the same grave, while, at other times, some portion of a skeleton often wanting. The skeletons were not scientifically examined as could be desired, but, according to Dr. Hoernes, they belonged to a well-developed dolichocephalic race, of medium height (5 ft. 6 in. to 8 in.), with a prominent occiput, long and slightly prognathic face, and a straight or gently receding forehead. The ashes and charred bones were carefully collected and deposited in the natural soil, sometimes laid over a flat stone, and sometimes in a roughly burnt trough of clay. Only twice were burnt bones found in a bronze vase, and once in a clay urn when the cremated remains had been deposited the grave-goods were placed over them which the coarser pieces of charcoal were heaped over the whole.

An analysis of the contents of the graves gave the following results: 407 persons, after inhumation contained: bronze — 18 objects of armour, 1834 articles of toilet, 57 utensils, and 31 vases; iron — 90 objects of armour, as well as 49 objects of tin; and 61 other objects (spindle-throwers, sharpening stones, etc.).

Similar results were obtained after incineration, as follows: bronze — 95 objects of armour, 1735 of toilet, 55 utensils, and 179 vessels; iron — 345 objects of armour, and 81 utensils; gold — 59 articles of gold, 106 of amber, and 35 of gold; 925 clay vessels; and 102 diverse objects.

From these statistics it would appear that the burials after cremation were richer in articles of luxury, such as bronze vases and flasks, beads of glass, gold cloth stuffs, etc., with the exception of objects of amber, which were more abundant with inhumed bodies' (Rambles and Studies in Romana, p. 399ff.).

Baron von Sacken assigned the Hallstatt cemetery to the second half of the millennium immediately preceding the Christian era, but it must be remarked that in the continuous and continuous till the advent of the Romans into that part of Europe. But, according to the grave-goods, to be exterminated further back by several centuries, even to 1000 B.C. Owing to commercial currents from Eastern lands, especially by way of the Adriatic, no doubt, to be attributed to a skilful, we might expect a considerable variation in the technique of the Hallstatt relics, even on the Sacken's hypothesis of the lowest of the cemetery. The collection as a whole is thus a mere jumble together of an assortment of objects, influenced not only by a rapidly progressing civilisation, but also by a continuous importation of new materials; hence the difficulty of classifying them into a more precise division than earlier and later.

In the cemetery of S. Lucia, near Tolmino, above the head of the Adriatic, in which inhumation was almost exclusively the mode of sepulture—there being only three interments by incineration out of 2000 tombs examined by Dr. Marchesetti—the warlike element was represented by only one sword, two spears, and seven lances (all of iron). The sword is distinctly the La Tène type—thus suggesting that the peaceful ways of the people had been disturbed only in later times, probably during one of the marauding excursions of the Gauls into Italy. On the other hand, the fibula numbered 1029 of bronze and 108 of iron; of which 248 were of the 'Cerossa' type—i.e. not much earlier than 400 B.C.—and 5 of the La Tène type. Of metallic vases there were eighty of bronze and one of iron, among the former being six eiste a cordone. A few of these bronze vessels were decorated with dots, circles, and perpendicular fluting, but rarely with animal figures. The necropolis of the high-mixed population now inhabiting the British Isles, on account of their swarthy complexion and curled hair (Agricola, xi.), the inference that these Silures were the direct descendants of the primitive long-headed people was not unreasonable, more especially as by that time the eastern parts of Britain had been taken possession of by successive waves of Gaulish and Belgian immigrants from the Continent—thus causing the earlier inhabitants to recede more and more westwards. And, if this reason of the long-headed man of the chambered cairns of Britain, Ireland, and France, as well as many other parts of the Continent, had a swarthy complexion, with dark hair and eyes, like so many people still inhabiting the more secluded parts of these localities.

The incoming brachycephali were taller than the dolichocephali already in possession of the country—a statement which is proved by actual measurements of skeletons (average height 5 ft. 6 in.). Although they have been described by many modern writers as 'light in hair and complexion' (Greenwell, op. cit. p. 636), there does not appear to be any archaeological evidence to support this assertion. We might speculate on inadvertently applying to the Bronze Age brachycephali qualities which were undoubtedly applicable at a later period to the Celts of history. The former buried their dead in short cists and round barrows, and carved with them a knowledge of bronze. While these two early races (the dolichocephali and brachycephali) were living together, apparently in harmony, the custom of disposing of the dead by cremation spread over the land—a custom which was introduced from the Continent, and had its origin probably in the strong religious
DEATH AND DISPOSAL OF THE DEAD (Greek).

Burial was the method of disposing of the dead followed by all the Mediterranean peoples during the entire epoch at least as far as is known obtained in Greece, and was continued without intermission at least until the Homic period. That the Greeks of the pre-Mycenaean and Mycenaean civilization buried their dead is evident from the tombs and chamber-tombs excavated by Evans at Mycenae, Orchomenus, and Vaphio. It has also been shown that Schliemann was mistaken in believing that he found in the Mycenaean tombs indications of a partial cremation of the dead. In the island of Crete chamber tombs and shaft-tombs, which discoveries many tombs of the Mycenaean epoch and others of different periods, found burial to be the invariable custom without any sign of cremation, either partial or total.

Apparently, then, the first notice of cremation occurs in Homer; it is described with grim vividness, especially in the account of the obsequies of Patroclus (II. xxi. 110 ff.). Homer also offers an explanation of this new funerary custom, which appears to be contrary to the beliefs of the Greek people. He makes Nestor say that it is necessary to burn the bodies of those who died in battle, in order that the bones might be carried back to their native land to the sons of the dead (II. xvi. 331 f.). But this reason is inadequate to account for so profound a change of custom. The change from burial to cremation must already have taken place in the Homeric age, just as it had previously been made in Central and, in part, in Southern Europe. It was then introduced into Greece as it had been into Italy, and very probably by the same races who were afterwards known under the name of Aryan, and who originated many other changes in the customs of the peoples subdued by them.

While in some regions of Europe there was a period during which cremation prevailed (and among these regions must be included Northern Italy, the Balearic Islands, and also, in part, Southern Europe), it is evident from time immemorial—possibly the descendants of the Neanderthaloid races of Paleolithic times. There is no reference made here to the Homeric occupation as a factor in the British etymology, because the Romans were more fully historical, and, though they introduced new arts, industries, and customs into the country, kept themselves aloof from the natives, and did not, as a rule, intermarry with them. Hence, when they finally absorbed these tribes, they left their habits racially unaffected, much as would be the case with India if the British were now to retire from it. To-day we hunt for remains of military roads, camps, accoutrements of war, and other relics of their civilization, but of their skeletons we know very little, and of their British offspring nothing at all.

R. MUNIO.
DEATH AND DISPOSAL OF THE DEAD (Greek)

covered with either rough or squared slabs of stone. In these graves the body was usually placed in a sitting position, and sometimes curled up, and

The pit-tombs consist of a kind of well which was almost always excavated in the rock, with steps descending into it; at the bottom an arched aperture is found which gives access to the sepulchral cell. The cell is generally supported by a double wall of rude blocks, and is sufficiently long to contain a skeleton stretched out at full length. But Evans remarks that this type of tomb, although it has different characteristics, resembles in its cell the large prehistoric tombs that were discovered in the Cres.

In the island of Crete no dome-tombs have been discovered like those of Mycenae or of Orchomenus; but the royal tomb of Isopates described by Evans and re-constructed by Fyfe (Evans, op. cit.) fills up the lacuna.

It appears to have been the primitive custom of the Greeks to bury their dead in the village where they dwelt, and sometimes in the houses themselves. It is certain that at Mycenae tombs have been found in the houses, and in graves in the graves of the deceased. But Evans remarks that this custom, although it has been abandoned in graves of five, or even of twenty, among the remains of habitations. At Athens, also, houses with tombs have been discovered. Plato makes mention of this custom, and calls it barbarous (Min. 316). It seems to have been abandoned by the laws of Solon. The agora also appears to have been used for burying: Mycenae supplies an example of this. Further, it is well known that in the classic epoch many Greek cities had, or believed that they had, in the agora, some burial-place of their more renowned heroes.

It appears, further, that the Greeks in primitive times offered human sacrifices at funerals. This seems certain not only from the Homeric account of the funeral of Patroclus, but also from some indications in the tombs of Mycenae. In the dromos of the rock-tombs, human bones have often been found, and in front of one sepulchre there were discovered six human skulls, placed crosswise and mingled with the bones of animals and broken pieces of common utensils. From this it has been suspected that the bodies were those of victims sacrificed to the dead (Perrot-Chipiez, Histoire de l'art, vi. 584). Further, Plato says (l.c.) that human sacrifices were offered in Lykaia (Aeolis), and also by the descendants of Athanor, although they were Greeks and not barbarians.

From the most remote antiquity, as we gather from the prehistoric tombs of Mycenae, the Greeks had a religious cult for their dead. They considered the right of sepulture as sacred, and consequently as a law. This sentiment was handed down to the historic Greeks, the true "Evaπερ. It was also a duty and a kind of Pan-Hellenic law (Ιαν.Διεκατον πλαγα, Eurip. Suppl. 524) to give sepulture to enemies who died in battle. The law of Solon, which exempted a son from the obligation to support a father who had rendered himself unworthy, imposed upon him the duty of burying him with all due honours (Esch. in Timor. 13; the very words ἐκλείω, ἑμηγα, affirm the right of the dead to sepulture). In the classic epoch, religious belief was permeated with the notion that the spirit of the dead could not enter into the subterranean realm if the body had not received burial—the soul (ψυχή) would wander about without a resting-place, and would not be able to pass over the fatal river in order to enter Hades.

We do not know how the primitive Greeks conducted themselves between the death and the burial of the deceased; but from what we know of the historical epoch we may infer without any doubt what were their customs in primitive times. In the prehistoric tombs of Knossos the corpse was buried in a grave, or else was laid on the pavement of the sepulchral chamber, or in a sarcophagus in a "κουρανσ" of clay. It was usually placed in a sitting position, and sometimes curled up, either in the grave or in the sarcophagus. There was no fixed direction or orientation of the position of the dead. In tombs of every type, objects belonging to the deceased were found, according to sex and condition: weapons, swords, knives, arrows, razors, ornaments of gold and of bronze, rings, seals, lamps, and so on. Tombs like those of Mycenae and Vaphio have furnished objects of great value both as to their material and as to their artistic value. Objects which were most dear to the deceased, and which he had possessed when living, were placed with him in the tomb. This usage continued without interruption to the historic epoch, together with other usages which were gradually abolished by various successive laws, because they were held to be barbarous. We have proof of this in the Homeric period, which may be regarded as an intermediate one between the pre-historic and the historic. The custom of sacrifices, as is seen, being still found which were no longer practised in the period which followed, as well as others which were retained.

In order to give an idea of this, it will be sufficient to relate in full what was done at the funeral of Patroclus, so admirably described by Homer (Il. xviii., xxiii.). We shall follow the poet's order:

The corpse of Patroclus was washed with hot water (Il. xviii. 349 f.), then anointed with unguent, laid on a bier from head to foot with a thin linen cloth. It was laid in state on a bed (εν ἄργει, 354), and was swept over with great lamentation by Achilles and the Myrmidons (255 f.). On the return from the fight in which Hector was slain, Achilles and his men cleaned the Myrmidons' arms and weapons, as if they were about to return to the camp. Weeping is an honouring of the dead (δύο γῆλα πέραν θάνατον, xxii. 9). A funeral meal follows the weeping. The corpse is to be cremated, and accordingly an immense pyre is prepared which is to receive the body of Patroclus. When the pyre is ready, the transportation of the body takes place in the midst of the ceremonies of a great ceremonial funeral; Achilles supports the head of his deceased friend, while the Myrmidons cut off their locks and cast them upon the corpse, thus covering it. Achilles also sacrifices his hair, which he puts into the hand of his dead friend. During the night those who attend to the preparation of the funeral (λειπον, xxiii. 163) remains with Achilles. On the following day the body of the deceased is placed in the midst of the pyre, and says (εἰς τὸ ἐν τῷ πυρι) is taken from the oxen and sheep which have been sacrificed; alongside are placed the dead animals, and amputated hands of the dead, and all such objects. The funeral rites do not end here: Achilles orders funeral games, and distributes rewards to the victors (258 f.).

In the classic period the dead body was washed, anointed with unguents and oil, and wrapped in a white garment. It appears, however, that the garment was not always white; it might be black. The eyes were closed, and the jaw was bound to the head in order that the mouth might remain shut when rigidity came on. The care of the dead was the business of the people of the house, especially the relatives, and among these the women. Further, a garland was placed on the head of the deceased. Afterwards the corpse was laid on an ordinary bed (νεκροσ), and was exposed to the view. This exposing of the tomb (νεκροσ) took place in the house, the feet of the dead being turned towards the door; a law of Solon prohibited an exposing before the door, as seems to have been done at first. This exposing of the corpse was, again, the practice the days after the death. An offering of an ox was prohibited in order, naturally, that there might be assurance that
DEATH AND DISPOSAL OF THE DEAD (Greek)

actual death had taken place; and, on the other hand, a too prolonged exposing was not allowed. According to Greek beliefs, the dead must be buried relatively soon in order that the soul might be made ready to pass to the heaven, and might not wander about. Patroclus, whose body, on account of the solemn funeral rites, was exposed for twelve days after his death, says to Achilles, to whom he appears in a dream, ἄφθετη μὲ ὅπλι τἀγών, πάνω Μάκαρ τὰρταύρα (Iliad. xxii. 71). When such seems to be a late period, a piece of money was placed in the mouth of the deceased as a ναπελόν to pay the ferryman who transported him to the further side of the river into the realm of the dead. A boy (μέλασσα) was buried with him, as an appropriate offering to the guardian of the doors of the infernal regions (Aristoph. Lys. 599). The scholiast on Aristophanes adds that the cake serves for Cerberus (q.v.), the piece of money for the ferryman, and the dead man’s garland is for the struggle which he has undergone in issuing from life.

Upon the bier was placed a vessel of earth, usually a λεγκοβ, which contained an unguent. On this, or the bronze casket, or the simple keratos form, were depicted appropriate funeral scenes; and, in fact, it represented the deceased. At the door of ingress was placed an earthen vessel (τάρταυρα) containing spring water (Aristoph. Eccl. 4250), which was used for purification. The biers of those who had been in contact with the dead, and in general all those who were in the house.

The exposing of the body was followed by its being carried (ὑπόπεφα) from the house to the place of sepulture. sepulchres could be done only by lay; criminals alone were buried by night (Eurip. Troed. 446), when sepulture was granted them at all. The dead person was carried on the bed upon which he had been exposed to view, but it is not easy to say exactly who were the bearers, although there are expressions like τεραρμομικα, τεραρμικα, τεραρμικα, which imply persons specially employed in this duty of carrying and of burial. However, we gather from Plato, Plutarch, Lucian, and others that these bearers were young men who lent themselves to this pious duty. Plato speaks of young men of the gymnasiurn (Legg. xii. 947). When the conveyance of the body took place, it was attended by a cortège which accompanied the bier as it moved on its way. According to the laws of Solon, the men must go first, the women must follow; the latter, moreover, must not be less than sixteen years of age (Demosth. Arist. i.). Plato describes at length (Legg. xii. 947) how the funeral cortége was to be formed, and he also notes that the women who took part in it must not be younger than the child-bearing age. The sepulchre (θήμη) must be excavated underground, of conical shape, and must be constructed of stone. But the dead were not always laid in a tomb of stone without a coffin (σφόν, λάθρως). When the latter was used, it was made of cypress or other wood.

This vessel was removed at the next stage, and the body was laid in a stone sarcophagus. The sepulchre was then covered with earth, and the mound was raised (νάεως). When the latter was used, it was made of cypress or other wood.

But the dead were not always laid in a tomb of stone without a coffin (σφόν, λάθρως). When the latter was used, it was made of cypress or other wood.

When the body was laid in its sarcophagus, it was usually accompanied by weeping and lamentation on the part of the relatives and friends, and of other persons who visited the dead when exposed to view and attended him to the sepulchre. These manifestations of grief were generally not excessive, and not different from those we have met with in Homer. They were prohibited by legislators like Solon and Charondas, who desired to restrain what appeared to many Greek writers to be chthonous and barbaric forms of grief. Plato describes other indecorous the weeping for the dead, and would have liked to prohibit lamentations (ὄπροια) outside the house (Legg. xii. 960). It is true that Ἁσέχυλος (Oorph. 201.) and Euripides (Iloc. 642 f.) describe displays of grief such as striking the breast, tearing and laceraing the face and garments, and pulling out the hair; but probably these two authors wished to reproduce primitive customs which were no longer in practice in their day. In spite of legislative prohibitions, however, there was no cessation at funerals of more or less exaggerated manifestations of grief; the bier was certainly accompanied by funeral singers (ὕποροιακ). Plato himself speaks of them (Legg. vii. 900) in the masculine only. This duty, however, was carried out also by women (κυρία, ὕποροιακ, μούσακα, probably, as is supposed, from their Carian origin, whence came the employment of the term for those women who sang over the dead, just as a kind of flute was called Pyrignon as having been invented by the Pyrignians, e.g. αὐλός ὕποροιακες (Poll. iv. 75). While in pre-historic times the places of sepulture were either the houses or the streets of the city or village, or even the gardens, the houses of the deceased the Greeks had fixed places outside the city, cemeteries in the common and broad signification of the term; or else they made use of the roads outside of the city, as may still be seen in Italy, e.g. at Pompeii. The tombs which had been in contact with the dead, and were objects which had belonged to him. Thus there have been found objects for the toilet, weapons, little figures of earth or of bronze, and, especially, bronze or earthen vessels. The sepulchres themselves contained animals, among which were those of the horse. In the ideas and beliefs of the Greeks there was the conviction that the dead person must have for his journey to the subterranean world the same objects of use and of ornament which when living, he shared, and also utensils and vessels which were proper for eating and drinking from, and containing food and drink. This usage did not cease in classic Greece, as has been proved by the vessels and other objects which have been found in the sepulchres of this epoch.

The burial was followed by the funeral meal (μεσθένσιον), already met with in the Homeric period, though not by the games, which had been abolished; and also by the purification (εὐποριαν). But solitute for the deceased did not end here; on the third day after the burial, sacrifices (called τερφα) were offered upon the tomb, especially on the stele or other object placed on it; these sacrifices were repeated on the ninth day (ἀράκες); and in the meanwhile the mourning began. This, in the majority of cases, lasted thirty days; the shortest period was twelve (Plut. Lyce. 27). As to external signs, mourning was shown by abstinence from everything which might cause joy and pleasure, and also by putting on a black garment, or clothing which was only in part black. According to Plutarch (Quest. Rom. xiv.), it was a custom with the Greeks that during the mourning the women should shave off their hair, and the men should let theirs grow, if the regular usage was for the men to shave off the hair, and the women to let theirs grow. Euripides makes mention (Iphig. Ant. 1437 f.) of the cutting off of the hair
DEATH AND DISPOSAL OF THE DEAD (Hindu)

and the putting on of a black peplos for mourning. The Argive custom of wearing a white garment for mourning instead of a black one (Plut. op. cit. xi.) seems to have been an exception.

It was also the usury of the dead called by Herodotus (iv. 26) γεροσκόπιον, a funeral feast, during which sacrifices were offered to the earth (τοῦ γῆς)—a commemoration called by others γεροσκόπιον or ἱερά. It is to be supposed that such a custom was chiefly followed in the case of men well known and highly thought of, notwithstanding that no distinction of persons or classes is made by Greek writers. But a general feeling of respect for tombs, and especially for ancestors, may be supposed to have proved that one reads of the place of sepulture (Persepolis 401 ff.) concerning the tombs of forfathers (θισσα ἐν προγενεσί).

Just as in the commemoration on the third and ninth days after burial, so at the annual commemorations, there were sacrifices, offerings and liturgies (εὐτραπέλια) to the dead, who was supposed to be already in the subterranean world; whence such libations took also the name of χοάδα, and of χοάδας λειψάνων.

The inhumation of the dead alone was denied sepulture and a funeral. In Athens the bodies of criminals were thrown behind the tower Mehta and along by the northern walls of the city (Plut. Them. xxii.; Plato, Repub. iv. 430). The suicide's right hand was understood to be thrown behind Mehta. Plato would have the suicide buried in silence and without any sign of sepulture (Long. ix. 873). Finally, to those whose bodies could not be obtained, cenotaphs or empty monuments were erected. Euphorbus (Hdt. 1241) says that there was a law of the Greeks that he who died by drowning in the sea should be 'buried in a tissue of empty robes' (εὔφαντας ἐν πλέγμα διάφωνο).

G. SERGI.

DEATH AND DISPOSAL OF THE DEAD (Hindu).—Life and death stand in perpetual contrast. To give expression to this fact is the aim of Hindu ritual in all its processions, down to the minutest details. In the case of offerings to the gods the participants circumambulate the fire with their right side turned towards it, and in a direction from left to right; in offerings to the menes the surcharged is facing the fire; in offerings to the left—to the opposite of the sun's course (see CIRCUMAMBULATION); in the former case the fire is bowed, in the latter the fire; in the one case the fire is offered in the right hand to the left (under the left arm); in the other from right to left (under the left arm); ropes are twisted from right to left; even numbers are assigned to the gods, odd ones to the menes; to the former belongs everything that is young, healthy, and strong to the latter what is old, weak, or deformed. Everything that is bright-coloured—the forenoon, the ascending half of the month or the year—is assigned to the gods; everything that is black—the menes, the race of the dead, is allotted the descending half of the month or the year. Even in the course of a human life the 50th year marks a boundary, those who have not reached it belonging to the gods, those who have passed it to the menes.

Dread of the evil influence of the dead, their impurity, their return, and their interference with the living is another characteristic of the ritual. Fire-brands and jets of water serve to ward off this influence; stones and flames are used between the village and the place of cremation; on the way home from the latter, care is taken to obliterate footprints in order to prevent the dead from finding the way, or perhaps to save the footprint, which is a possible subject of magic, from being exposed to the influence of hostile spirits; at the funeral ceremonies plants are selected whose names—such as upārya, avakā, yeda—have a protective sense.

The living are bound to prepare the way for the dead in the other world, to provide them with food for their great journey into Yama's realm, and to supply them with means for crossing the rivers. These ends are served by the utkranti or vañavarti cow, which is led along in the funeral train, and whose members are finally laid in a coffin. The cow is sacred and the Greeks that he who died by drowning in the sea should be 'buried in a tissue of empty robes' (εὐφαντας ἐν πλέγμα διάφωνο).
DEATH

There is no interment, but cast away, also appears to point to the independence of the Brāhma-
ṇa in the matter of the disposal of the dead.

The data as to burial are found in the Vedic
hymns, and especially in the Sūtras—the Gṛhya
and Pitṛmedha and kindred texts—and in the
records of modern usages. It is not without
interest that many of the regulations of the Sūtras
find parallels at the present day among Indian
tribes.

As we find the injunction that those returning
from the place of cremation are to deposit stones or other objects between the dead man and his
village, so the Māngars of Nepal obstruct the
road leading from the grave with a barricade of
thorns, through which the soul, conceived of as
a miniature man, very tender and fragile, is unable
to force its way (Census of India, 1901, i. 355).

On the other hand, our Sūtras do not contain an
account of all the customs that existed or may
have existed, and do not coincide with the ritual
known to the Rigveda.

An interesting illustration of this is supplied by Dr. Bloch (Annual Report of the
Archaeol. Survey of India, circle, for the year en-
dering April 1905, Calcutta, 1905 [ZDMG IX. 227 ff.]),
who opened some burial-mounds at Lauria,
and found in the midst of them remains of a wooden post (sthāna), which recalls the post mentioned in
Rigveda, of whose meaning the Sūtra ritual
gives us no idea.

It would be quite out of place here to treat even
superficially of the huge mass of prescriptions to
be found in published and unpublished texts, or of
the numerous ideas attached to different
schools and families. Cālāṇa divides the whole
ceremonial into 114 acts, not to speak of the varia-
tions found in each of these. It is equally impossible to discuss the numerous verses which accompany
those, as he does here and remains, and of the
throws not always clear; or, more especially, the
circumstantial casuistry with which the highly
ingenious spirit of Brāhmaṇism has sought, in
manner that is far from uninteresting, to provide
for all possibilities. Like the ceremonies connected
with birth, those attending on death are a saṁ-
skāra. 'It is well known,' says the Brhadāyana
Pitṛmedha, iii. 1. 4, 'that through the saṁskāra
after birth one conquers earth; through the saṁskāra
death, which, if measured, is a remarkable figure, and
therefore easier to have this saṁskāra performed
with care and with regard to all circumstances.

It may happen, for instance, that the Hindu dies in
a foreign land and must be brought home, or
that he dies there and remains, and the latter case cremation is performed in effigy upon
a human figure composed of palāta stems. Should
it chance, however, that after all the man returns
alive to the ritual provides even for this, and ordains
that he must be born anew—i.e., undergo all the
rites of jātakarṇam, in which he sits speechless and
with elenchus fists, like an embryo in the womb
(Cālāṇa, § 44). When a prostitute dies, she must
not be cremated, according to some teachers, with
ordinary fire, but with that of the cremation of
the corpse; and this thing is accomplished in the
rites of a bājākarnam (or, a bājākarnam), in
which it is more slight vanities of cult going back to primeval times. If
ggats are not used, many take 'black rice-grains,'
of which are three rice-paps are made.

A cow is brought, the servants of the deceased have each to throw three handfuls of dust over their shoulders.

At the head of the procession (according to the
Rigveda) is a man with a bier and on which is the
knighted at the domestic fire; he is followed by the sacrificial fires of the deceased and the aparatus for the cremation ceremony, including
the above-mentioned amśutarṇi cow; next in order is the dead man on his couch, which is placed
on a mat or on the before-mentioned bier, carried
by servants, old people, sons, or relatives near and
remote, according as the custom may be. In
many circles it is the practice—still followed in certain circumstances in India—to lead a man with a bier and
on which is the corpse a waggon drawn by black oxen, and to place it upon also the fires and sacri
cials utensils of the deceased. Behind the corpse come the servants, the lower ones first and the
latter with loose dishevelled hair and their shoulders besprinkled with dust. [In points of
detail we meet with many variations.] When the
corpse is lifted, the invocation, 'May Puṣān bring
success to thee from here to thence,' which was
to Puṣān, who in the whole ceremonial appears as jjuṣnevā, the
role already assigned him in the Rigveda. When
a third or a fourth of the way has been covered, one
of the goats is killed, or one of the paps of rice (or,
if there be only one, a third of it) is poured upon a
dish of earth thrown to the south. Thereupon the
company, with the younger ones in front, thrice circumambulate the corpse and the ced from right to left, with their hair loose on the left side and bound up on the right, at the same time striking their right thighs with the right stick, and then proceed with the corpse with the extremity of their garments. Then comes a thrice-repeated circumambulation from left to right, with the hair loose on the right side and bound up on the left, with a stick of the left hand, and according to the view of certain scholars, without another fanning of the corpse. The same procedure is repeated at the second third of the journey and at its termination. The rice-vessel is finally dashed on the ground, and its frame is taken away. Anustarana, the cremation, is performed with the flames of the three or five fires kept up by him. Note is taken of which fire Sentence, and it is aed wherefrom whether the deceased has entered the world of the gods or of the menes, or into some other world. To the north-east of the ahuuvayya a knee-deep trench is dug in which a certain place is chosen—a clearly an ancient superstition—in order to cool the heat of the fire. The traditional explanation of the custom is that the dead man rises from the trench and ascends along with the smoke to heaven. Behind the pyre a goat is fastened, but in such a manner that it is possible for it to break away, and, if it does so, nothing is done to prevent it. The cremation is accompanied by a number of verses or songs by the officiant, a time each of the deceased belonged. While the pyre continues to blaze, the relatives move off without looking round. The officiant gives them seven pebbles, which on their way home they scatter with the left hand turned downwards. According to the tradition of another school, three trenches are dug behind the pyre; they are then filled with water from an uneven number of pitchers, and gravel is thrown in. The relatives enter the trenches, touch the water, and then fill their pitcher, which is placed on the ground, and bound together by a rope made of darbha-straw. The last to creep through tears the branches apart. Gautama directs a thorny branch, Vaikathanna a grass snare, to be held in the front of their mouth which they must creep. The company, as they leave the place of cremation, must restrain themselves from any exhibition of mourning, and go forward with heads bent down, entertaining one another with well-omened speeches and virtuous verses. Behind the corpse, and in the course of the road to the dead (cf. Bhojhwana, viii. 56). Yudhishthira is rebuked by Vyasa for bewailing the death of his nephew. Story-tellers (pavarnikas, etc.) are therefore engaged in order to drive away by their skill the sorrows of the relatives (Lüders, ZDME 1706 § 6).

3. Udakakarmman. — The offering of water to the deceased which follows is carried out in a variety of ways. According to one view, all the relatives—down to the sixth or tenth generation—must enter the water. They wear only a single garment, and the sacrificial cord hangs over the right shoulder; many also direct that the hair must be dishevelled and dust thrown upon the body. They turn their faces towards the south, plunge under the water, call upon the dead by name, and offer him a handful of water. Then they emerge, bow the left knee, and wring their dripping garment.

An interesting usage prevails at the present day. Immediately after the bath a quantity of boiled rice and prayer is set out for the crows (Caland, p. 78). This recalls the primitive notion that the dead appear as birds, and the comparison of the Karmas with birds, for the birds are an offshoot from the root of the dead. Scarcely anything connected with the history of cults can be seen more intolerable or more strongly reminiscent of the earlier times than an enormous Pipal tree—not the one sacred to the Buddhist community on the western side of the Akṣa—growing on the north of the Buddha’s stupa on the slopes of which offerings to the menes are continuously presented, while blackbirds fly to and fro amongst its branches.

After the bath the relatives seat themselves
upon a clean grassy spot, where they are regaled with stories or Yama-songs. They do not return to the village till dusk, for themselves, or the sun is partly set, or the herd come home. At the door of the house they chew leaves of the *pickhunanda* (*Azadirachta indica*), rinse their mouth, touch water, fire, cow-dung, etc., or inhale the smoke of a certain species of wood, tread upon a stone, and then enter.

4. *Āsauca* (uncleanness).—The occurrence of death renders those associated with it unclean—a condition which lasts from 1 to 10 days, and is variously regulated according to circumstances and the usages of particular schools. ‘After ten days’ the mourning ceremonies for Indumati are ended (*Raghavaśiṣa*, viii. 73). The prescriptions to be attended to during the *āsauca* are partly negative—in so far as they forbid certain things, such as the cutting of the hair and beard, study of the Vedas, *Gṛhya* offerings; and partly positive—e.g. the enjoining of certain offerings. The first night a rice-ball is offered to the dead, before and after which water for washing is poured out for him, and he is called on by name. Milk and water are set out for him in the open air. Many set out perfumes and drinks for him, as well as a lamp to facilitate his progress through the terrible darkness of the nights. From this time the city is not visited by Yama. Others cause a trench to be dug, into which perfumes and flowers are cast, while a pot suspended by a noose is hung over it. Even to-day the notion is to be met with that a thread secreted in a shady nook will enable one to reach the drink suspended by it (Caland, p. 88).

5. *Sānīchayana*—The collecting of the bones after cremation is usually carried out on an uneven day; according to some, during the dark half of the month and the waning constellations. For the bones of a man a plain urn is employed; for those of a woman, a ‘female’ one, i.e. one adorned with breasts. The bones are picked up one by one, with the thumb and ring-finger, and are laid without noise in the urn. Among the Taṭṭiriyas this duty is performed by women, regarding the selection of whom the prescriptions vary. According to the rules of Baidyāyana they must attach a fruit of the *bhrītī* or *guptī* (*Bṛha* 1, 5) or any other berries with a red thread, mount upon a stone, wipe their hands once with an *apāmaṅgula*-plant, and with closed eyes collect the bones with the left hand. The urn, which is closed with a lid, is placed in a trench prepared in the same manner as the place of cremation, and having no flow to it except rainwater; or it may be laid under the root of a tree. Others place grass and a yellow cloth in a trench, and then throw in the bones. From the latest period we have an account of how one ‘puts [the remains] into a little new barrel, and throws them into the water, if there be any at hand, or, if not, into some desert and lonely place.’ The Kapola-Banias tie up the bones in a piece of silk or linen cloth, and the bundle so made is laid in a trench dug in the earth. A piece of a tree in the burning-ground’ (*JAS* iii. 8, p. 489; Caland, 105.239). Many schools enjoin a second cremation, in which the bones that have survived the first process are pulverized, mixed with butter, and then offered in the fire.

6. *Śāntikarman*—This is another important department of the death ritual. [In many ceremonies it comes at the point at which we have now reached, in many not till after the *śāntikarman*]. The ceremonies which immediately follow are the *śāntikarman* and the *bhumikarman* were originally parallel usages, which were only afterwards brought into connexion, and the *śāntikarman* continued in several schools to hold the place which belonged to it at first.] According to Āvalayana, the ceremony is to be held on the day of new moon. The same authority directs that a fire, with ashes and fireplaces, shall be made, and the anthill is put down at a cross-road or elsewhere; then the participants are to circumambulate it thrice, striking the left thigh with the left hand. [Others kindle an ordinary fire at a spot between the village and the *śāntikarman* ground.] Then they return without looking round, touch water, and furnish themselves with a number of new articles—jugs, jars, fire-sticks of *śānti*, wood, etc. The fire is kindled afresh, and they sit till nightfall around it, entertaining one another with inquisitive stories. When the stillness of night reigns, an uninterrupted stream of water is poured around the house from the south to the north side of the door, and then the participants take their places on an ox-skin that is spread for them. The funeral uttered during this and other parts of the ceremony have regard to life and the averting of death. A stone is laid down to the north of the fire, ‘to keep off death.’ The young women anoint their eyes with fresh butter. Many texts speak also of the leading around of an ox, of which the company take hold and walk behind it: the one who closes the procession has to obliterate the footmarks. A strange notion entertained by certain Indian tribes is cited by Caland (*Ind. Myth. ii. 109 sqq.*), to the effect that, at an assembly held on the 12th day, the dead man takes possession of one of the company and intimates what his friends are to do for him, or takes leave of his relatives.

The funda—i.e. the foundation of the funeral—decision to take effective measures to ward off evil and to return to ordinary life. Hence even the fire that served the deceased is removed—not, however, by the door—and extinguished outside. Its ashes are placed on a mound of bones and are used, the mound being set down on a saliferous, and therefore unfruitful, piece of ground (Caland, 114). The new fire is kindled by the eldest son, after (or, sometimes, before) the removal of the old. The Rigveda is acquainted with a similar ceremonial, but the details of the ritual are considerably different (Hillebrandt, *Fed. Myth.* ii. 108 ff.).

Many of the ceremonies prescribed by the ritual literature for the *śāntikarman* to the dead are depicted by the hymns of the *śāmaśa*: e.g. the digging of seven trenches to represent the seven rivers: sometimes with something in each, sometimes in the other; but for the general interest of the subject it is a matter of no great importance what part of the death-ritual was worked upon particular schools.

7. *Pitṛmedha* or *śmaśāna*.—The questions for whom and at what time the *śmaśāna* is to be performed have given rise to ritual discussion, and have been variously answered by the different schools. The season of the year and the reigning constellations are of significance; on the whole, a preference seems to have been given to the day of the new moon. On the preceding day certain plants are rooted up at the spot destined for the *śmaśāna*, to the north of which earth is dug up, and around the horizon, the heads of bricks which serve for the structure, besides the number (not precisely defined) employed for packing. The urn with the ashes is brought and laid between three *polūda*-stakes driven into the ground inside a butt which must be between the village and the *śmaśāna* spot. If the bones are not to be found in the trench mentioned above, dust is taken from this spot, or the dead man is called upon from the bank of a river, and then any small animal (for this being taken to be the *tvāra* or *tvārakha*) is made to spring upon an outspread cloth and is treated as if it were the bones. Upon the three stakes is placed a perforated vessel containing sour milk and whey, which trickles through the numerous holes upon the urn below. To trumpet blast and the sound
of the late company circumscribe and delimit the spot after the fashion already described (striking the left thigh with the hand, etc.), and fan the urn with the extremities of their garments. [Many ritual authorities speak also of song and dance and female dancers: some do not mention the latter, but depicting an instrumentality with various ejaculations of the above. The variations are great, indeed: e.g. some.} place an empty kettle in the hut, and beat it with an old shoe.

The circumstances take place during the first, middle, and last parts of the night. The company repays quite early to the śākānāśa spot, regarding whose extent there are widely deviating prescriptions. It must be out of sight of the vil-

lage, in a hidden situation, yet visited by the rays of the midday sun. The spot must be staked off and surrounded with a rope, and—as in the case of the agničharyana, with whose ritual the śākānāśa has many points of contact—its surface must be covered with small stones. Puppests must be opened with a plough drawn by six or more oxen, and various seeds cast into them. In the middle of the ground a hole is made, into which gravel, sandstone, etc., are cast. Milk from a cow whose calf died is poured into half of a large jar, which is filled up with goats in a kind of drink; and this, or some-

thing else, is set out as food for the dead. [Towards the south (according to some) two crooked trenches are to be opened, and filled with milk and water. It was mentioned, as one of the numerous and frequently characteristic details, that in the śākānāśa a piece of reed is immersed, apparently to serve the purpose of a boat to the deceased (cf. above, p. 477).] The bones are laid down upon a bed of sarchāgrass, arranged in the figure of a man, covered with an old cloth, and asperged. The urn is destroyed. Over the remains ere the monument, which conforms to a definitely prescribed plan, and in which the present writer sees the precursor of that of the pitaras.

When the structure has reached a certain height, food for the dead is walled in. After its completion, the śākānāśa is covered with earth, and water is poured over it from pitchers which it is the task of nine of the deceased's relatives to fence up with arakā-plants and ektā-grass. Much is done also to separate the world of the living from that of the dead: the boundary betwixt them is marked by bumps of earth, stones, and branches; and the fence groove is served by the uttering of certain formulas.

The soul of the deceased does not pass at once into the world of the Pitaras; it remains separate from them for a time as a prāta, or 'spirit,' and has special offerings presented to it. But, after the lapse of a certain period, or when some fortunate circumstance occurs, the dead man reaches the circle of the manes through the instrumentality of the āpāitakāraṇa. The grandfather now drops out, since at this stage the rule, on one hand presented; but, as one of the manes, he receives his place in the ancestor-cult. This cult has struck its roots deep in Indian life. To feed the ancestors, to propitiate or keep them away, and to summon their aid, are the purposes served by the śādādhās described in ritual- and law-books. The śādādhās are offered either on special occasions, when fortunate occurrences take place, or regularly at certain periods of time. To the fire and dharma, a son, father, mother, wānaka-pragāraṇa, and other festivals, when the manes are spoken of as 'cheerful,' and are honoured in the same way as the gods: to the second belong the daily worship of the manes, that on the day of the new month, the giving offering to the manes at the four months' sacrifi-
cies, at the soma-sacrifices, and the agnāvāja cele-

briation with the ānapāitakāraṇa, which coincide with the close of the year (see, for details, the present writer's sketch in GIAI iii. 2).

LITERATURE.—Bloomfield, 'Women as Mourners in the Athr-

DEATH AND DISPOSAL OF THE DEAD (Indian, non-Aryan)—1. Conception of death: not due to natural causes.—The conception of death among the non-Aryan tribes of India does not materialize out of the many and varied, and the like, which seem to indicate action by some indwelling spirit. This belief is naturally extended to accidents caused by wild animals, and deaths due to epidemic diseases, each of which is attributed to the working of an evil spirit. Hence many of these tribes use special means to identify the spirit, and the methods usually partake of the nature of Shamanism. The soul, again, is regarded as a little man or animal occupying the individual, which causes him to move. It leaves the body through the skull- sutures or other pure orifices of the body, in the case of persons who have lived virtuous lives; in the case of the wicked, by one or other of the many impure exits between the body and the mouth or the head from the body—a theory which explains to those who hold it the nature of dreams and the danger of waking a sleeper. There may be more souls than one, and these may have separate abodes—a belief accounting for the performance among some tribes of funeral rites at the place of death, at the grave, or at some other spot, where offerings are made to appease the spirit, and explaining much of the vagueness which characterizes their funeral ceremonies.

It is believed that a soul, the sarva, or the tān, is mortal; and with their lack of interest in their national history, and their imperfect recollection of past events, these people, after a time, regard their deceased ancestors as mere spirits, as devoid of reverence or fear, and the attention of the survi-

vors is concentrated on the more recently dead. The soul, when it leaves the body, is figured as a
naked, feeble mannikin, exposed to all kinds of injury until, by the pious care of its friends, a new body is provided for it. This often takes the form of a temporary refuge—a hat, a stone, a tree, or a hollow of the earth; and may be found among animal or insect; and this temporary refuge, or, among tribes who accept the theory of metempsychosis, this form of re-birth, may be identified by laying out ashes or flour at the scene of death. These, when properly examined, often show the footmarks of the creature by which the soul has been occupied. Among the jungle tribes the soul is commonly supposed to abide in a tree—a belief which perhaps has its origin among the sentiments suggested by the habit of tree-burial (see § 4 (b)). In W. India a common refuge of the soul is the jekhóda, or 'life-stone,' which is selected at the time of the funeral rites, and to which offerings and libations are made. This naturally leads to further development, when a rude image of the deceased is made, placed among the household gods, and honoured with gifts of food and drink. In some cases, as among the Kachins of Upper Burma, an attempt is made to ensnare the soul within a barrier of bamboos, from which it is solemnly released at the termination of the funeral rites (Gazetteer Upper Burma, i. 1. 409). Sometimes, again, during this intermediate period, the soul is believed to have entered the earth, to die in the bone, and abide in the grave or at the cremation-ground. When beliefs such as these are current among the people, it is obviously of supreme importance that the funeral rites should be duly performed. No infraction of this is more damnable than that which proceeds from a corpse unpurified by the customary rites; and perhaps no people in the world devote more anxious care than the Hindus to placating the friendly, and repressing or scaring away the unpropitious soul.

2. Spirits friendly and malignant.—The line between these two classes of spirits is clearly drawn, and it is based on the close family- and clan-organization of the non-Aryan tribes. The souls of the family dead, unless they are irritated by neglect, are generally benevolent; the souls of strangers are, as a rule, malevolent and hostile. In the case of the former no means of placation are neglected. Some tribes, after the soul has left the corpse, do not dare to defile it, but invite it to abide with them as a house-guardian; others make a miniature bridge to enable it, as it returns, to cross a stream, and thus evade the water-spirit (cf. art. BRIDGE, ii. 2, e); others, again, make a pretence of capturing the soul and bringing it back to its home. The provision of fire and light for the soul, either in the house itself or at the grave, is more general. Sometimes rites are performed to guide the soul to its longed-for place of rest; or it is solemnly invited to leave the grave and ascend to the other world, where it is welcomed by the friends who have gone before—a conception of the realm of theainted dead which may have been independently arrived at by the non-Aryan tribes, though the details may be due to Hindu influence. To secure the peaceful departure of the soul, it is essential that the due egress should be provided for it by removing the dying person into the open air or into an upper chamber—a precaution in Asia as in the west, advantage being taken of the custom of relieving the house from the death-tabu. With the same object, the skull is often broken at the time of cremation. When death occurs, the soul is placated by the wailing of its relatives; or, as among the Gonds, by the wailing of friends; or, if the soul appears to employ its time in working in the other world, and not to transform itself into a tiger and plague its friends (Risley, TC i. 408). More remarkable is the procedure of the Nagas of Assam, who enose the evil spirit which has removed their friend, and threaten to attack it with their spears (JAI xxv. 195, xxvii. 34; Dalton, 40). This custom apparently does not prevail among the Manipur tribes (Thurston, The Naga Tribes of Manipur, 1911, p. 146 ff.)

After death, the wants of the dead are provided for by gifts of food and drink (see art. FOOD FOR THE DEAD). Among some tribes the feeling prevails that the ghost or soul of the dead man should be appropriated to his use, and not taken by his friends, lest the envious spirit may return and claim them (Dalton, 21, 205; cf. Crawley, Mystic Rose, Lond. 1896, p. 94). The body is washed and dressed in its shape of a coin or some article of value, is placed with the corpse to support it on its way to the other world, as among the Paharias (Hosten, 'Pahuriah Burial Customs,' Anthropos, iv. 670, 672). But people in this grade of culture, while strictly governed by a regard for precedents, contrive to evade the duty by placing worthless representations of the dead man's effects in the grave, or by merely waving them over his pyre (Rivers, The Todas, 302 f.). The arms and ornaments which are often buried with the corpse, or placed upon the grave, are obviously intended for the protection or use of the dead; and these are sometimes intentionally broken, either in the belief that, if left intact, they render them unavailable, and thus prevent the riUing of the tomb. Special clothing is also sometimes provided for the soul, and, as the garments of the dead man are supposed to be infected by his glance, they are generally replaced by some menial priest, whose sanctity guards him from danger in using them. Ornaments are sometimes placed in the grave; a set of dindems, for instance, like those of Mycenae, having been found in a S. Indian grave (Obert, Notes, 1892). The dead were probably deposited as amulets to protect the soul from evil spirits (Thurston, Notes, 149 f.). Some deposit with the dead a prayer written by the tribal priest; others, like the Gáros of Assam, nail a dog at the grave to guide the soul to Chilkatng, the tribal paradise; or, as among the Gonds, clay images of horses, on which the soul may ride to heaven, are placed on the tomb (A. Playfair, The Gáros, 1900, p. 109; Oppert, 84 f.). CloseUy connected with this belief is the cutting of the victims at the funeral, in order that they may accompany and serve the soul. Some of the wilder Assam and Burma tribes, down to quite recent times, killed slaves with this object (Gazetteer Upper Burma, 1. i. 533; F. Mason, Burma, 1869, p. 92 f.). Blood being the favourite form of refreshment for the dead, it is provided by animal sacrifices. The victim is often slain at the grave, and its blood is poured upon it. The Andamanese mother places a shell full of her milk on the grave of her child, and the Dosald of the United Provinces pours blood into a pit, so that it may reach the soul (JAI xii. 184; Crooke, TC ii. 334). With the same intention water is poured on the grave, or dropped into the mouth of the dead or dying man. Many articles of food placed with the dead serve the additional purpose of scaring evil spirits. Rites such as these, performed at the grave, naturally develop into a periodical feast held in the house or in some advantageous spot, leading to a rude image representing the dead. The final stage is reached when it comes to be believed that, by feeding the tribal priest or a Brahman, the food passes on for the use of the soul.

3. Rites performed by the evil spirits.—The rites performed in the case of the malignant dead assume another form. Such spirits are the souls of those who have been removed from this world by an untimely or tragic death—those of the
DEATH AND DISPOSAL OF THE DEAD (Indian, non-Aryan) 481

murdered, the unburied, the unmarried, childless women, robbers, men of evil life, and strangers. These are included under the general title of bhūt (Skr. bhūta, 'formed,' 'produced')—a term which does not necessarily connote malignity, but is not negatived by any circumstances. They tip the cherished feelings of envy and malignity towards the living, and it is necessary to placate or, more generally, to repress and coerce them. The souls of the unmarried dead are often precipitated by a nervous fit the demons may take in what — a court of law represents the dead youth or maiden. For the unburied dead a mock funeral is performed over such relics of the dead as may have been recovered, or over an image representing the deceased. The soul of a dead bandit, as among some of the robber tribes of N. India, is sometimes defiled and worshipped. The most common example of the discontented spirit is the churn of N. India, or, as she is called in the S., the aleuttin, the spirit of a dead woman. The dead woman lies within the period of sexual impurity. Like demons in other countries, she has her feet turned backwards, and is much dreaded. She is repelled by scattering grain on the road from her grave. When she rises, she carries the remains of her former dwelling or the cock forces her to return—a practice extended even to the benignant dead by the Fahürías of British Sikkim, who drive a nail through each finger and toe of a prospective churn, to prevent her from entering the house. The 'walking' (though Hosten, 679, records, without having been able to obtain any explanation for it, the custom of the Yakshas of British Sikkim, who, 'walking a man's dead, ploughs his hands from the middle knuckles to the wrist.') Spirits of this description of the malignant dead are repelled in various ways. Some tribes have an annual ghost-hunt, by which the evil spirits are scared from the home and village. Garuda, who has died within the house-ladder, is beaten, and rockets are exploded. Dances and other revels, in which the rules of morality are disregarded—indecency being a mode of scaring evil spirits—are performed. Sometimes the rites take place by carrying out the corpse and placing it up with stones or thorns; or, as among many of the wilder tribes, the body is buried face downwards—a practice adopted by the Thugs. In Upper India the ghosts of menial tribes, such as sweepers, are so much dreaded that masts have followed an attempt to bury their dead in the usual way with the face turned to the sky. Sometimes the grave is enclosed by a fence too high for the ghost to 'take it,' particularly without a 'run.' Such an encirclement is usual in the case of marking the place as taba, and was the origin of the stone circles, erected round cairns, which subsequently developed into the artistic railings of Buddhist stupas. Another common method is to deceive the spirit into believing or imagining that he is in a troot, and to change places on the road. Special precautions are taken not to name the dead, at least for some time after death, lest the soul may consider it an invitation to return.

4. Methods of disposal of the dead. — (a) Conni-
salvation.—Of all the most archaic method of disposal of the dead, the funeral burning is nothing less than the corpse of the departed kinsman (Hartland, L.P. ii. 278), India has so far supplied no clear examples. There are, however, numerous texts of the ancient producing the virtues or the powers of the departed, as among the Lusahis of Assam, and the Chingpaws and Was of Upper Burma (Lewin, Hill Tracts, 107; Gaetztrer Uper Bum,mathrm, p. 436, 496). But this custom is confined to the most isolated and savage tribes, and the similar tradition recorded by Dalton (229f), of the Birhors of Chotá Náagar is probably quite baseless—possibly an echo of a story told of tribes much further east.

(b) Dolmens and other stone monuments.—The earliest form of corpse-disposal of which physical evidence exists is that in dolmens, kistvaens, and other forms of stone monuments, of which India furnishes numerous examples. Though sporadic survivals, and one example, the curious monoliths of the many parts of N. India, the assertion of Ferguson (Rude Stone Monuments, 475 f.) may be accepted as generally correct, that they are peculiar to the country south of the Vindhyan Hills, and are numerous in the tracts surrounding the province of the Kistna, in the districts of the commuter, or on the side of the Ghats, through Coochbhum to the coast, and especially in the neighbourhood of Cossimbar, where the custom is said to be very old. These stone monuments is that of Brecks, who describes them under three heads—cairns, or rather mounds enclosed by a stone circle; barrows; and kistvaens. In the cairns have been discovered earthen jars containing fragments of burnt bones, and some beautiful bronze vessels, probably imported from Babylonia or some other foreign country. Questions connected with the origin, purpose, and date of this series of monuments have given rise to much controversy. The chief arguments of a form analogous to that of the ancient monuments, are used by the modern Todas has led to the inference that the members of this tribe are the successors of the lval, and the theories of the ancient builders. The character of the remains discovered does not, as a rule, suggest a date earlier than the Iron Age, which, if the analogy of Europe be accepted (though there are no materials for such a comparison), need not imply a date earlier than 850-600 B.C. But V. A. Smith (IGI, new ed., 1908, ii. 98) supposes that the Iron Age in N. India may go back to 1500 or even 2000 B.C. The difficulty of fixing an approximate date for these structures largely depends upon the fact that modern tribes, like the Kols and their kinfolk in Chotá Náagar, as well as the Nágas and Khásias of Assam, still erect stone monuments of a type closely resembling the pre-historic examples. The modern funeral monuments of the Khásias in India has been fully described by Gurdon (The Khásias, 144 f.), who divides them into three classes—those intended as seats for the souls of the dead while their bones are being conveyed to the tribal ossuary; memorial stones erected for indicating the site of a grave; and stones which mark tanks used for purifying the mourners from the death tath. Many monuments in Madras and among the tribes of the E. frontier take the form of ossuaries, into which the bones are removed after disinterment.

(c) Exposure to beasts and birds of prey.—Among other modes of disposal of the dead the most crude is that of exposure of the remains to beasts and
DEATH AND DISPOSAL OF THE DEAD (Indian, non-Aryan)

birds of prey. This custom still prevails among the Tibetans and certain tribes of the N. frontier, where it probably originated from the difficulty of providing wood for cremation, or excavating graves during the severe winter of these regions. At a later date it was adopted by Persia and the Parsis. Among the non-Aryan tribes of the Peninsula this method is occasionally employed for those dying in a state of taboo, as is the case with the Pahārias of Bengal, the Nāgas of Assam, and some other tribes living on the eastern Ganges (Dalton, 274; JAI xii. 203; Rice, Essays, 69; Crooke, TC ii. 92, i. 7, iii. 144).

(d) Cremation.—The idea of protecting the corpse from violation, and the desire to prevent the decomposition, or that the spirit may be saved from the remains of the attacks of wild animals, and partly on the fact that the tree is the haunt of spirits. It is found among the Andamanese, Nāgas, and in Indonesia (JAI xii. 141, xi. 204; Kerslake, 199; Dalton, 43; Census Report Assam, 1891, i. 246; Hislop, App. xvii.). Among the Khāsis of Assam the corpse is placed in a hollow tree, and the next development is the use of a tree-trunk as a coffin, as among the Nāgas and some tribes of Burmah (Dalton, 56; Gazetteer Upper Burmah, i. 525; JAI xxvi. 199).

(e) Ceylon.—Ceylon bears the same marks as the rest of India, and is found at the present time among the Bihls of Bombay (BG xii. 87), the Kuchins of Upper Burmah (Gazetteer Upper Burmah, i. 386, 409), and among some of the Assam tribes (Dalton; Risley, TC i. 112). From such cauris the stūpas of the Buddhists have been developed.

(f) Cave-burial.—Cave-burial, common in other regions, is not observed in India, doubtless because it has prevailed widely in India. But it must be remembered that many caves have been occupied continuously even to the present day, and thus the evidence may have become obliterated, and numbers of them may still remain unexplored. In Malabar, however, sepulchral chambers excavated in the interine and containing clay vessels and iron implemments have been discovered; and in the same class are the pāndā-kuti, the name of which is based on the bird being there the abodes of the Pāndava heroes of the Mahābhārata (JAI xxv. 3711; Thurston, Notes, 148). See also the account of cave-burials in 'Anterior India,' a region not capable of identification, by Nicolo Conti (Indica, the 16th Cent., ed. R. H. Major, Hakluyt Soc., 1857).

(g) House-burial.—House-burial naturally leads to house-burial, and the examples of this practice are abundant. More than one reason probably led to the adoption of the custom, to retain the corpse in the house in the hope of its revival; the dead lest the relics might be used for purposes of black magic; or the hope that the soul of the ancestor thus buried might be re-incarnated in the present or in the future generation. This last belief seems to be most general, and the custom, sometimes with this explanation, has been recorded among the Andamanese (JAI xii. 141, 144; Temple, Census Report, 1901, p. 63), the Nāgas of Assam (JAI xvi. 200, 203; Wad and allied Burman tribes (Scott, Burman, 408), and some Māras and Pānjiab tribes (Thurston, Notes, 155; PNQ i. 123).

(h) Disposal in water.—The custom of consigning the dead to the river is more common among orthodox Hindus, the bones and ashes after cremation are deposited in a river or tank at some sacred place. Among the lower tribes, in most parts of the country, the corpse is often flung into the nearest river, sometimes after a perfunctory attempt at cremation by singing the face and beard. It has been suggested that this method of disposal is in some cases based upon the desire to free the bones rapidly from the products of decomposition, thus to placate the spirit; but more usually the intention is simply to get rid as quickly as possible of the corpse and the taboo which emanates from it. Hence it is frequently adopted in the case of those dying in a state of spiritual sleep, and those perishing from epidemic disease; and the bodies of tānavas and other holy men are frequently consigned to running water. Sometimes, again, the rite is in the nature of sympathetic magic, as when in Bengal those dying of leprosy, on the principle of water to water, are flung into the Ganges (Asiat. Res. iv. 69; Buchanan, E. India, i. 114).

(i) Tree-burial.—The practice of tree-burial in India seems to have been partly on the desire to placate the spirit by saving the remains from the attacks of wild animals, and partly on the fact that the tree is the haunt of spirits. It is found among the Andamanese, Nāgas, and in Indonesia (JAI xii. 141, xi. 204; Kerslake, 199; Dalton, 43; Census Report Assam, 1891, i. 246; Hislop, App. xvii.). Among the Khāsis of Assam the corpse is placed in a hollow tree, and the next development is the use of a tree-trunk as a coffin, as among the Nāgas and some tribes of Burmah (Dalton, 56; Gazetteer Upper Burmah, i. 525; JAI xxvi. 199).

(j) Platform-burial.—This rite further develops into the custom of platform-burial, which prevails among the Andamanese and some tribes on the E. frontier (JAI xii. 144; Census Report Andaman, 1901, 65; Lewin, Hill Tribes, 109). Among the E. tribes the custom of smoking the corpse is frequently combined with this.

(k) Jar-burial.—Jar-burial is to have been carried out in an earthenware vessel, does not appear to prevail at present among the non-Aryan tribes; but instances of corpses placed in large mortuary jars have been discovered in prehistoric S. Indian interments (JAI xxv. 3714); and some of these terracotta cisterns closely resemble those found in Babylonia. At present, among most tribes which practise cremation, the ashes and bones are deposited in an earthen jar before burial, or consignment to the river, or at some prominent place.

(l) Contracted burials.—Besides the ordinary mode of burial in a recumbent posture, there are other methods which deserve special mention. First comes what is known as contracted burial, when the corpse is interred with the knees closely pressed against the breast. The tribal distribution of this practice does not throw much light upon its origin or significance. It is found among some of the more savage tribes, such as the Andamanese, and is more prevalent in southern India, and in the Lushai and Kuki of the E. frontier (Lewin, Hill Tribes, 109; Wild Races, 246). Among such people it has been suggested that it represents an attempt to save the body from the attacks of the famished bears. In other cases, among various races, the thumbs and toes of the dead are bound, apparently with this intention. Another theory is that it symbolizes the postural position of the child in its mother's womb. In some instances it may be due to the practical difficulty of digging a grave of the shape and size in which the body may rest in a recumbent posture; in others it may represent the position of a savage sleeping beside a camp fire. It has been adopted by some of the religious orders, like the sāvāṇajas of N. India and the Shenvi Brāhmans and Lingayats of the south. Here it probably represents the posture of the guru engaged in meditation, or lecturing to his pupils, because some of these sects place the bodies of their gurus in this posture after death, and worship them (BG xv. i. 149).

(m) Shelf or niche-burial.—Shelf- or niche-burial, in which the corpse is deposited in a chamber or cavity excavated in the side of some perpendicular face, is also found among the Mīrīs of Assam (Dalton, 143). It is found among some of the E. S. tribes, like the Kauṇāis of Manipur and the Pāniyas of Malabar (JAI xvi. 355f.; Thurston, Notes, 144); it has been adopted by some religious or semi-religious orders,
like the Jugs of Bengal, and the Râvala or Lingayats (Risley, T. I. 350; Crooke, T.C. ii. 19; BG XVIII. i. 361); and it is the orthodox method among Muhammadans, who place the corpse in a niche (bâhâ) high enough to allow the spirit to rise when the dread angels, Munkar and Nakir, come to question it. Otherwise regarding its belief in the Prophet and his religion.

(m) Concealed burial.—Concealed burial and the obliterating of all marks of the grave appear generally to be due to a desire to get rid of the spirit. It is perhaps a custom among the Mudras and Burma (Oppert, 199; Scott, Burma, 408).

5. Disinterment of the remains.—The practice of disinterment of the remains after decomposition has ceased probably rests upon the belief that the soul is inimical in the body. The Andamanese and the Nicobarese disinter their dead, wash the bones, and, after wrapping them in cloth or leaves, re-bury them, or fling them into the jungle, or sink them in the sea (JAL xxxii. 209, 2191., xii. 143, iv. 405, xi. 235 f.). Among the Khasis of Assam those who die from infectious diseases are buried, the remains being dug up and cremated when danger from infection is over (Gordon, 137). This custom leads, among some tribes, to the provision of ossuaries in which the dry bones are stored. Such structures are found in E. and S. India (JAL v. 40, vii. 211 f.). The same belief in the continued, though mysterious, oneness of the body with the soul, and the sacred character of the site and tracts of cemeteries, to which, often from long distances, as among the Chimbons of Upper Burma and some tribes in the central hills, the bones of tribesmen are removed (Gazetteer Upper Burma, t. 467; Dutt, 201).

6. Immediate and deferred burial.—In most cases climatic conditions necessitate the immediate disposal of the remains by cremation or burial. The custom of deferred burial, in which the remains are retained in the huts, causes trouble from a distance to pay their last tribute of respect to the dead, is less common, and is found chiefly among the tribes like the Khasis, Nagas, or Lushais (Gordon, 133; JAL xxvi. 195; Lewin, Hill Tribes).

7. Embalming the dead.—Customs of this kind naturally develop into the practice of embalming the dead, which is not common in India. In the form of preservation of the remains in honey or by smearing them with oil, there is no such custom found among some of the E. and Burman tribes (Hooker, Himalayan Journals, ed. London, 1891, 480 f.; Shwe Yoe [Scott], The Burman, ii. 330 f.)

8. Inhumation and cremation.—The methods of disposal of the dead which have been considered hitherto are all more or less abnormal. The modes now generally adopted are either simple burial in a recumbent position or cremation. We may, perhaps, in consideration of the Indian evidence, assume that the most primitive form was exposure of the corpse, followed by inhumation, and then by cremation. It has often been asserted that cremation was specially an Aryan practice, but the evidence from India monuments indicates that possibly it was only in the case of persons of rank that cremation prevailed (cf. art. Aryan Religion in vol. ii. p. 16). At the same time, the facts at our disposal do not enable us definitely to settle why inhumation and cremation followed in succession. It appears, however, that after the belief in an abode in the sky where the soul joined the pîtri, or sainted dead, had become generally established; and, if it arose, as he argues (ib. i. 539 f.), in a forest country, where the hat was consumed with the corpse to avoid taboo, there seems no reason why it may not have been independently discovered by the non-Aryan tribes.

At present it is only the most primitive non-Aryan tribes and some ascetic orders who still maintain the practice of cremation. On the other hand, many tribes in a low state of culture who now cremate their dead may have adopted the practice under Hindu influence. No literary evidence exists by which the historical development of this custom can be traced. In this transition, however, between the two forms of disposal, is in many instances clearly indicated. For example, among some tribes the ordinary dead are buried, while those under tabu are cremated; or the rich are cremated, while the poor are buried. The question which mode is to be adopted depends upon the season of the year in which the death occurs. Among some tribes we find more than one method in use. One clan of the Nagas combines platform-burial with cremation, placing the dead in open coffins raised several feet above ground, whereas the remains are subsequently removed and burned close by (JAI xi. 209, 213). The Khasis of Assam place the corpse into water, as may be convenient at the time (Risley, i. 365). The Hâburas of the United Provinces either cremate or expose their dead in the jungle, as best suits their nomadic habits (Crooke, T. C. ii. 476). While many other tribes combine the two modes of disposal, among the Nagas, who bury, expose on a platform or in a tree, and sometimes cremate the corpse after placing it on a platform (JAI xli. 293, 213; Hudson, 146 f.). After cremation the bones and ashes are usually deposited in a sacred vessel while in process of removal to the sacred place being hung in a tree so that the spirit, when so disposed, may revisit the bones.

9. The death-tabu.—As among all races in the same grade of culture, the infective tabu arising from the corpse is specially dreaded. All who come in contact with the dead are considered to be infected. The corpse-bearers, for instance, as among the tribes of the central hill tract, have their shoulders rubbed with oil and smeared by the women of the mourning family, while they are sprinkled with cow's urine from twigs of the sacred Nîm tree (Melia azadarachta). The dread of the death-tabu appears throughout the rites of mourning, while the variety of practice appears among the Parsis, who bury, expose on a platform or in a tree, and sometimes cremate the corpse after placing it on a platform. As among all races in the same grade of culture, the infective tabu arising from the corpse is specially dreaded. All who come in contact with the dead are considered to be infected. The corpse-bearers, for instance, as among the tribes of the central hill tract, have their shoulders rubbed with oil and smeared by the women of the mourning family, while they are sprinkled with cow's urine from twigs of the sacred Nîm tree (Melia azadarachta). Maclean, Gazetteer Upper Burma, 1900-1, passim, also Burm. as it was, as it is, and as it will be, 1901. A. R. McMahen, The Korsos of the Golden Chersonese, 1876.

W. Crooke.

DEATH AND DISPOSAL OF THE DEAD (Jain).—The Jains agree, on the whole, with the Brâhmins in their notions on death. The soul of every living being—the highest gods included—must be re-born as long as it possesses karma, i.e. merit or demerit; but, when the karma has been annihilated, then the soul, on death, will enter on its innate state of purity, and will be released for ever from the cycle of births. But on some points the Jains have developed peculiar notions.

1. Re-incarnation and liberation of the soul.—According to the Jains, the effect produced on the soul by its deeds during life, consists of extremely subtle matter, which pours or infiltrates into the soul when worldly actions make, as it were, an opening into it (larsana). This karma-matter, as we may call it, is filled a bag, and acts on it like a weight. The soul by itself has an upward gravity (ardhavaratvat), and is kept down, during its worldly state, by the karma-matter, which, like all matter, has a downward gravity (ruparatvat). On the death of all karmas, the soul, on leaving the body, will rise in a straight line to the top of the universe, where the liberated souls reside for ever (see above, p. 160, 'Jain cosmography')—just as a pumpkin coated with very small grains to the bottom of the sea, but rises to the surface of the water when the clay has fallen off. But, if the soul is burdened with karmas, it will, on leaving the body, move in any direction—upwards, sideways, or downwards. It does not travel on a straight line, but makes one, two, or three angles or turns, and thus gets, in two, three, or four movements, to the place where it is to be reincarnated. There it attracts gross matter, in order to build up a new body according to its karmas.

2. Voluntary death or euthanasia.—It is a well-known fact that religious suicide is occasionally committed by the Hindus: under a vow to some deity they starve themselves to death, eat poison, drown themselves in a river, etc. In the Jains, usually the hair is shaved after the mourning period begins, or at its close. The shaving is usually confined to the immediate relatives or kinsmen; but in some cases the whole population shave their heads and bear the hair of a Kâja, e.g. in Kashmir and other parts of the Himalaya (VINAYA iv. 15, 48; Drew, Jummao, 54).

DEATH AND DISPOSAL OF THE DEAD (Japanese).—I. GENERAL. The oldest traditions respecting burial speak of a mogyu ("husband"), in which the body of the deceased was kept, often for a very long time (e.g. that of Jinmu Temu is said to have been kept for 19 months in the mogyu); of religious dances and music; of an elegy or elegy (shimabi-kobo) pronounced by the head of the family; and of a funeral feast or wake. They also tell of the practice of the self-immolation of wives, retainers, and servants at the grave of a husband or master. The advent of Buddhism in the 6th cent. A.D. brought in certain limitations and modifications. Cremation was introduced in A.D. 703; from that date to 1644 all the Emperors were cremated. Funeral regulations concerning, e.g., periods of mourning, etc., have existed since the 16th cent.; the self-immolation of retainers began to lose favour in the 14th cent., and was prohibited by Ieyasum, though it still continued sporadically for some time. During the whole of the Tokugawa period only members of the Imperial House were buried with Shinto rites, and even then the present forms of Shinto funerals date from the same period.

We will suppose the patient to have been given up by his medical attendant. Relatives and friends stand around his bed, watching his last struggles. Some of them moisten his lips with drops of water conveyed on a feather (matsumo no mizu), water of the last moment); others gently rub his eyelids and lips with their hands, so that nothing and even the slightest movement of the body may be followed. When death has taken place in the province of Iyo, in Shikoku (a district in which there are many quaint survivals), efforts are sometimes made to retain the dying soul, especially when there still remained trusted retainers, and servants to guard the man at the point of death. Three men clinch to the roof of the house, sit astride on the roof-ridge, and cry aloud: ‘Come back, So and So, come back once more.’ Nobody inside the house is supposed to have heard the cry, but the dying man will revive for a little, and his spirit will linger for an hour or two before finally departing.

After death, the corpse, which is washed by all Buddhist sects, but not universally by the Shinto (some sects apparently being contented with rubbing with a wet cloth), is laid out, with its face covered with his gaf, whereupon the spiritual master, who will test him in various ways before he gives him his permission. Then, for a period of twelve years, the monk has to exert himself by every means to overcome all passions, worldly feelings, desires, etc., and to annihilate his karma by austerity—trying, however, to ward off a premature death. At the end of this period he should abstain from all food till his soul parts from the body. There are three different methods by which this end is brought about; they are called bhaktayatriyagamana, thatamana, and padoparaman—a of which the last two are distinguished by the restriction of the movement of the person, and the motion of his head. The ritualistic suicide figures on the subject of three canonical books—Chausarana, Atreypachakha, and Bhaddatarpana.

LITERATURE.—This has been sufficiently indicated in the article.

H. JACOBI.

DEATH AND DISPOSAL OF THE DEAD (Japanese).—II. DISPOSAL. The last distinguished modifications.

The monk. Prakrit master. Hoernle, a German, has kept and studied the Buddhistic books, and has shown whether the Buddha himself or his disciples actually delivered the following instructions, as preserved by the Dutch Consul General for the Netherländische Oost-Indische Gesellschafts fur Nahr- und Volkskunde, in the Deutscher Gesellschaft fur Nahr- und Volkskunde, in the winter of 1909-10.

2 Horne, op. cit. p. 47.
3 Prakrit pachamana, for which the correct Sanskrit is prapamana (see SBE xxvi. 74 ff.).
4 A pachamana under great obligation to Dr. Obrt. of the German Embassy in Tokyo, for permission to consult the Buddhist manuscripts delivered by the Deutsche Gesellschaft fur Natur- und Volkskunde Oost-Tokio, during the winter of 1909-10.
DEATH AND DISPOSITION

OF THE DEAD (Japanese)

potent protectors of the soul. In addition to the other garments, the Buddhists dress their corpses in slipper sandals (gegari) and socks (tobu), the sandals being put on behind the corpse. The corpse is also provided with a dzudabukuro, or bag, containing the rokumonsen, or six pieces of money required for the ferry across the Sandunogawa, or Japanese Styx. The serval of these six pieces of money is the same as, or nearly the same as, 6, 12, 18, 49, according to circumstances; and the dzudabukuro, which is really an ascetic pilgrim's bag, contains all manner of things necessary for the long journey now commencing—the first holy book, the image of the true god of the village, a threepiece garment, and a towel; but there must not be ten pieces of money. When a husband dies, a wife cuts off her hair and puts it into the bag; when a father dies, the children cut their nails and put the parings into the bag.

In some houses, when a death occurs, a notice—kichi ('period of mourning')—is posted at the entrance as a notification to visitors. In one of the busiest thoroughfares of Tokyo the present writer recently observed an expansion of this idea. In addition to the kichi notification, there was a little white table standing in the street, with a white cloth over it, a bowl, and a flower vase containing a single branch of shiki or. One of the first things to be done after a death is the notification to the authorities. This is made, first of all, to the headman or mayor of the village or urban district, while in the case of the Shinto it is also made to the priest of the nijujuni shrine (the shrine of the local god of the village or family). Should that shrine be at an inconvenient distance from the deceased's residence, some other temple near by is selected. The Shinto clergy do not, however, have much to do with the arrangements, as a matter of course, they have a voice in the selection of the day for the funeral obsequies.

In Buddhist funerals the priests play a larger part, and in former days their role was more important even than today. This is in the fact that in some very ancient temples there may still be found a yubanka ('bath-room'), in which the ceremony of washing the dead (yukan) was carried on under their directions. (The washing ceremony takes place after midnight in a wash-tub, pal, dipper, and towel are used, and, after the washing is over, all these utensils, together with any hair, nails, etc., taken from the body, are buried in some secluded spot.) The intervention of the priests is also necessary for the ceremonial shaving of the corpse, since shaving is the sign of ordination, and it is the theory of all Buddhist sects that the Buddhist layman passes his death into the Order of Monks. When the shaving ceremony is over, the priests prepare a kekib-imagubu, (lit. 'letters of orders,' i.e. 'certificate of ordina-
tion'), which, as we saw above, is placed in the dzudabukuro for use during the soul's pilgrimage in the realms of the dead.

A post-mortem is also attended about the selection of a day suitable for the funeral, and about the posthumous name to be given to the deceased. Government regulations and sanitary requirements interfere somewhat (not much) with the absolute freedom of choice of a post Mortem day, and attempts are made to get the funeral fixed for some time within 24 hours after death. But these regulations are more frequently honored in the breach than in the observance, and an ultra-urgent name, sometimes occurs. (The difficulty is occasionally got over by postponing the formal announcement of the death until all the necessary arrangements for the funeral have been made.) In addition to the ordinary cycle of actual names for the seven days of the week, there is another cycle of six days (generally to be found in the almshouses), according to which the propitious and unpropitious days are selected. The names of these six days are sensho, tonbaki, san, sanka, rotsu, and tomoki. A tomoki day is never selected for a funeral. The posthumous name is always one with a religious meaning, and it is also so formed as to mark the sect to which the deceased belonged. Thus we always, given by the priests; and the honou, Jodo believer, and nichig and zen in those of Nichiren and Zen believers respectively, but it is not always the case with the latter. Appended to the post-

humin name is a designation of the deceased's

status: koji ('landlord') and dachi ('landlady') for a gentleman and lady of high rank; shoji ('layman') and shinnj ('laywoman') for ordinary men and women; dai ('lad') for a boy; daino ('lady') for a girl. The posthumous name is desig-ned by the shisi, which is executed in duplicate, one being retained in the house, while the other goes to the funeral and is deposited in the temple. At the end of 100 days after death, launcered thasi take the place of the plain wooden ones first used. In the same way, in Shinto rites, the tawsifon is at first placed in a 'temporary soul-receptacle' (kezirimitsumon); at the end of 50 days it is placed in a 'permanent soul-receptacle' (butsumon). In both cases, there is a list on which the names of all the deceased members are inscribed, 100 days after death. It should be noticed that some Buddhist sects, e.g., the Shinshu, speak of two kinds of posthumous names: the kekib, given by the priests; and the honou, given to the soul in Paradise by Amida himself—a kind of 'new name which no man knoweth saving he receiveth it.'

Notice is now sent, post-card or otherwise, to friends and relatives, as a matter of course, it is customary to pay visits of condolence, and to send presents to the house of the deceased. The nature and manner of presenting these gifts are fixed by custom, but it is very common at the present-day to present in Japanese denominations, of the kindling of the memorial fire, a kindly tribute which is always very acceptable in view of the heavy expenses which a Japanese funeral entails. 1

1 The cycle of six days (see the talismanic tables in books on magic, e.g. Barrett's Magnus, 1863) depends on the six elements common to Kabbalism, Gnosticism, and Shintoism, which are symbolized by the term Abazabubak, to which reference is made in this article. It is one of the many links connecting the Mahayana with the Judaeo-Gnostic thought of the New Testament times.

The days are: (i.) Sensho, 'first half good.' A sensho day is good for pressing and urgent business during the foam, but not after noon. (ii.) Sensho is urgent business, lawsuits, petitions, etc., are, meant. (iii.) Tomoki, 'drawing friendship.' These days are good in the foam or evening, but not in the after-

noon. There is no debate about any other gift of its own luck, and no amount of human striving will alter it. (iv.) Sensho, 'first half bad.' No urgent business should be undertaken on such a day. The afternoon is, however, lucky.

(v.) Butsumon, 'destruction of Buddha.' A sort of unlucky day. Nothing is to be done on such a day, a large stone (v.) Butsumon, 'great peace.' Very lucky for anything, especially removals or journeys; e.g. the old scound's superstition about starting on a journey on Shinto. (vl.) Sensho, 'hell.' The exception of the noontide hour, the whole of this day is unlucky. In the cheap Japanese calendars (yoyog) each day is marked according to this sixfold cycle.

2 E. Schiller, 'Japan, Geschenkealten', in vol. viii. of the Mitteil. der deutschen Gesellschaft für ethische Altertumswissenschaft; or also A. H. L. Lay, 'Funeral Customs of the Japanese,' in TAJI, vol. xiv. p. 36. The subject is a very large one, and beyond the limits of this article.
DEATH AND DISPOSAL OF THE DEAD (Japanese) 487

In due course the body is placed in the coffin. Coffins (hitogagi or kawa, the former distinctively Shintōist) are of two kinds—nekowam (‘sleeping coffin’) and zakkwam (‘sitting coffin’). In the latter the corpse is placed in a praying posture; in the former, in a recumbent one. At the bottom of the coffin is placed a piece of white cotton cloth, 4 ft. wide and 6 ft. long (shakus) (dup. feet), one half

length; over this, a white futon and fukumo (‘quilt’ and ‘coverlet’), and a pillow. Then the corpse is put in, together with any objects, e.g., an inskind or photographs, prized by the deceased, and the living; (4) fresh figs, (5) pinwheels, and (6) bunches of wildflowers are also carried up with backwheels to keep the body from moving. No metal object may be put into the coffin. The interval between the encoffinment and the funeral is the most important period of the watching by the deceased. It was a period of festivity in the old Shinto, but is now generally passed in silence; in the Buddhist shōge (‘wake’) the silence is broken by the voices of the priests who are summoned on the last night to read Sūtras by the side of the deceased and for his benefit. This is known as shakusan'yō, or ‘pillow-Sūtric,’ and is accompanied by much burning of incense. Entertainments are provided for the guests. The lawfulness of the officiating priests partaking in them has been frequently discussed in Buddhist magazines. Very often the priest is provided with his meal apart from the laity, who do not begin until the clergy have finished; and an attempt is sometimes made to save appearances by drinking the sake out of tea-cups.

There are several strange old customs with regard to the choice of a location for the grave. Thus, in some of the remote mountain-villages in Tosa, while the corpse is still lying outstretched on the rush mat, the near relative, with the pillow, if under his care, puts it on a cart, and leaves it, but keeps a watch over it. 'I lay seven square feet of ground from the god of the earth.' Another old custom, still surviving in remote districts, is for a person not connected with the deceased by blood, and therefore free from death pollution, to sweep the ground selected for the grave, to spread a rush-mat on it, and on a table placed on the mat to erect a hinurōji (‘temporary tabernacle’) for the earth-god. This is done by setting up saki branches with little paper flags, etc., and putting maki offering of rice, fish, vegetables, seaweed, and fruit. Then he offers the following prayer:

1. Address the great god who is the lord of this locality. A new grave is here to be made for N. (name, office, rank). With an offering of wine, boiled rice, and meat, I pray thee to grant that he may lie in this grave for ever, free from affliction and in peace. I speak with all respect and humility.

Then he clasps his hands and bows twice.

When the preparations for the funeral are all complete, the coffin is carried into the front chamber, and incense, lights, and a single flower are again offered before it. A set of zen is also provided. In this case, the zen consists of a bowl of unhulled boiled rice (kurogome no maki), soup, raw miso (‘bacon’, or unseasoned salt), and a pair of chopsticks, one of which is made of wood and the other of bamboo. Everything is now in readiness for the funeral ceremony. From this point sectarian differences become more marked, and it will be well to treat of Japanese funerals in detail according to the various sects.

I. Certain Buddhist sects—Thursday, the body is placed in the coffin. In the Zen sect it is Tukyo (Eka-Sutra); in the Shingon, Rokushō (Buddhi-Sutra). These Sutras, which do not exist in Sanskrit or Pali, are said to have been preached by Sikyamuni shortly before his entry into Nirvāṇa. They are classified under the Nehangyō or Nirvāṇa Sutras.

II. Shinbutsu—A purely Shinbutsu funeral is divided into five distinct portions: (a) the initial numbering of the tama-bashira (b) shakkwam, or taking the coffin out of the house; (c) sōko, or funeral procession; (d) naio, or communal offerings to the deity of the earth; and (e) the subsequent purification. The various ceremonies are conducted by the mosho (‘chief mourner’), who is generally the eldest, oldest son, or other near relative. Relatives in the ascending line are generally excluded. Recently, when H.H. Prince Arisugawa lost his son, the mosho was the boy dressed in the dress of some dark colour, over which is worn a white hitate (‘surplice’) and an eboh (‘mitre’). In the middle classes, however, the ordinary hōari (‘upper garment’) and hakama (‘lower garment’) are frequently worn.

(a) The milamatsushki takes place apparently as soon as the tama-shiro is provided. The masu (sometimes a kammashki, ‘priest’) sits down before the tama-shiro, bows twice, clasps his hands, and announces that the spirit (tama) of the deceased has taken up its abode in the tama-shiro. This is known as the zokuyi, and the following norito (‘prayer’ [Shinto]) is used (tr. by Oishi): 2

This norito is frequently repeated, as well as the invitation to the soul to participate in the feast. The tama-shiro is then placed on the kami, or ‘god-shell,’ used in Shinto houses.

(b) Shakkawam—Before the bier is taken out of the house, offerings of boiled rice, saké, etc., are again made. Then the celebrant seats himself before the bier, bows, clasps his hands, and, presenting a tama-shiroki, addresses the spirit with the following norito:

This day, as the sun sets, we shall reverently celebrate thy obsequies. We pray thee to behold us in peace and without anxiety, as we set out on our journey and pursue our way (to the cemetery). I speak with deep reverence and humility.

Then he bows twice, clasps his hands, and retires. All relatives present do the same. After this, four men, dressed in white, carry the coffin into the court-yard, where a fire is burning (on the theory of a midnight funeral), and the procession is formed in the following order: (1) coffin (maki), (2) coolies carrying torches or lanterns (still on the theory of the midnight funeral); (3) servant with a brol (relic of the old custom mentioned above); (4) white banner, 15 in. in width by 8 or 9 ft. in length, carried on a pole, and inscribed with the name and title of the deceased; (5) bearers with consecrated branches of the sakaki tree; (6) chest with offerings; (7) bearers with torches and lanterns; (8) the coffin (if a zak Kwam, it is carried in a kaga, ‘litter’); if a nekowam, on a bier of white wood; it is carried on the shoulders of bearers in white surplices; (9) bohyō, a post, inscribed with the name, to be set up as a temporary mark for the grave; and (10) the chief and other mourners, on foot, as a gesture of humility. Treaties (boshita), a table for offerings, hangings, and a wooden pall and pillow also form part of the paraphernalia, but are now more generally found at the place of interment.

The saki no shiki is generally celebrated within a curtained enclosure, though in Tokyo and other large places there are mortuary chapels to serve the purpose. The enclosure, or chapel, is invariably arranged in accordance with the annexed plan. The ritual observances in the chapel differing very slightly from that in the enclosure.

As the funeral procession arrives, the musicians take their seats and begin to play. During this

1. I.e. a consecrated branch adorned with numerous pendants and streamers of paper.
time the bier is placed in its proper place, the flower-standards are arranged, and a high stand is erected, from which a pendant will later be suspended. When every one is seated, the celebrant, with his assistant, advances before the bier and bows. During this ceremony the music has ceased, but it begins again as soon as the priests return to their places.

The assistant now takes his place before the bier, but a little to the right of it. Acolytes bring a banner for the stand, and offerings to be placed on the table—goke, boiled rice, fresh fish, vegetables, seaweed, cakes, fruit, etc. Again the music ceases, while the chief celebrant advances once more, and, with his mace on his left hip, commences the repetition of certain prayers, which contain a recital of the dead man's birth, lineage, school-life, and career, official or otherwise, and conclude with words much to this effect:

"Our honoured N. has passed away to our great regret; to our sorrow he has given up the ghost. The prayer of our utmost

heart was that he might live to very great age, but it is the way of the fleeting world that he should come to this. Our prayer is that he will regard with tranquil eyes the obsequies we are now performing, and lie down to rest in his grave, leaving his spirit behind him to guard the house. Reverently and with humility I make this prayer."

This prayer is known as the maai-no-kotoba (words of committal). Everybody stands while it is being offered. When the music begins again, the chief mourner, habited in black with a white surplice, and wearing a black boshi ('mitre') and straw sandals, comes forward and offers a branch of sakaki as a tamagushi. All the celebrants, and the relatives and friends follow this example, the attendent priests having a large number in readiness for the needs of the visitors. Funeral offerings are delivered, sometimes before and sometimes after the offering of the tamagushi.

(d) Maai.—The coffin is now carried to the grave, and lowered into it, with few or no ceremonies. A few handfuls of earth are thrown upon it, and a boshi, 'plate,' inscribed with the name, age, rank, etc., of the deceased, is put on the coffin—then the grave is filled up, and on the new-made mound is planted the bokyo, a few lanterns, and banns. An open shed resting on four pillars is sometimes built over it, and generally it is surrounded with a magoké ('bamboo fence'), and a shime ('cord') of rice-straw string.

The Shinto ritual does not contemplate cremation, but it is sometimes adopted. In that case the maai-no-kotoba and the ritual that follows are used at the time of the interment of the ashes.

(e) The purificatory rites are of two kinds—of the house and of the mourners. The house is purified, immediately after the corpse has been taken out, by a Shinto priest, who comes in and waves a tamagushi in every direction, though sometimes the purification is accomplished by the priest's rinsing his mouth with water and throwing salt over his head.

The mourners are purified on their return from the funeral. (The return journey is always by a different road from that taken when going to the funeral.) There are apparently three methods of purifying persons, viz. (1 and 2) the methods observed in purifying a house, and (3) a slightly more elaborate one. Offerings are placed before the tamashiro, and in front of them a branch of sakaki. The priest (or the mochita) recites the following motto:

"I thus address the spirit of (my father) who has now become a god. I prayed day and night that thou mightest live to be a hundred years old, and now I can but weep and lament that thou hast left this beautiful world, and gone to the dark land beyond. I beseech thee, listen in peace to thy relatives assembled here, as we celebrate the worship of the dead with all manner of food."

Then the offerings are removed.

The first fifty days after death are observed according to the Shinto rituals with daily offerings before the tamashiro. Special emphasis is laid on the 10th, 20th, 30th, etc. On the fiftieth day, the tamashiro is removed from its temporary shrine to the mitanaya or bokyo ('spirit-house'), and henceforth the worship of the spirit is performed along with that of the other ancestors. On this occasion,
DEATH AND DISPOSAL OF THE DEAD (Japanese) 489

the meshi no-kotoba are used—prayers asking the spirit of the deceased to take up his abode in the kubō, and beseeching the whole body of the deceased to receive the body into their company. Similar prayers are offered on the 100th day after death. On that day the temporary post should be removed from the grave, and a stone monument set up. The first anniversary is observed; after that, the anniversary dates from the 3rd, 5th, 10th, 20th, 30th, 40th, 50th, and 100th years. After that, there is a commemoration every 100 years. The reader will understand that it is only in very exalted families that such minitute can be attended to, but the Shinto burial is in any case almost entirely confined to the highest classes.

311. BUDDHIST.—Something has already been said about customs observed in Buddhist houses in the care of the dead. These are somewhat as follows (it is more striking to the eye by reason of the greater splendor of vestments, etc.): (1) bearers with natural flowers (seikirō); (2) bearers with artificial flowers (tsubuki-banai); (3) (sometimes two) paper dragons on poles (yato), these being evidently connected with the friendly Nāgas of Indian Buddhism; (4) banner (meiki), with the personal name of the deceased; (5) the officiant priest (dōshi), with his assistant (shōshoku), white paper lamp (nuki kē); (7) incense (kōrō); (9) the coffin on a bier, borne on men's shoulders, and with a few friends of the deceased walking beside it; and (10) the mourners (generally in jinrikisha). A few days are generally laid at the grave-side, and a stupa or atibō, actually a post, notched near the top, and inscribed with Sanskrit characters, often form portions of the procession.

1. Ceremonies of the Zen.1—(1) The service in the temple that is sung on this occasion, generally called the indōshi, because a large part of his duty is supposed to be to guide (indo suru) the soul of the deceased on its voyage through the realms of the dead. The indōshi begins by laying his bowse (čherow), a brush made of long white hair) on the lid of the coffin, as a sign of authority. Then he takes up the razor that has been used to shave the deceased. This is followed by the words:

Beten sanjōkū Onnai funshōkan Kion nyūkiyō Shinshū Kion shha: 'Whilst transmigrating through the Three Worlds, ties of kindness and affection cannot be cut off. He who has cut off this tie, and entered the realm of the unconditioned, is truly a grateful man.'

Now follows an exhortation to the deceased to confess his sins:

Young man of good birth (it will be remembered that the deceased is supposed to have received the tonsure), 'if thou wert to stand at the Refuges to observe the commandments, thou shouldest first confess all thy sins. There are two forms of penitence; there is also the form of confession which is practiced by the laity, and has been handed down by successive patriarchs.' All thy sins will be pardoned. Reite these words after me.

Then the priest recites the confession, with the sound of clappers (kisshakē) once at the end of each line, and twice at the end of the stanzas. The spirit of the deceased is supposed to join him in his recitation:

All the evil karma, which I have accumulated in the past, has had its origin in desire, hatred, or ignorance, in a series of previous existences, which has had no beginning. It is due to the body, the tongue, and the mind. All this I confess.'

2. The priest continues:

Thou hast confessed thy evil deeds of body, tongue, and mind, and hast obtained the perfect purification. Now, therefore, thou must stand first in the Three Refuges, in Buddha, in the Law, and in the Author. The Three Treasures have a threshold virtue, the threshold absolute virtue, the threshold virtue as it was in Buddha's time, the threshold virtue as it is in time when there is no Buddha. (čhāntamagha, samādhi samādhi.) When thou hast taken refuge in them, thy virtues shall be completed.'

Recitation of the ninefold Creed follows:

Nanmoku Butsin, 'Glory to Buddha in whom I take refuge.'
Namūbō Hī, 'Glory to the Law in which I take refuge.'
Namūbō Shō, 'Glory to the Author in whom I take refuge.'
Kite-buten-undou-son, 'I take refuge in Buddha, the super-manent.'
Kite-bōtō-son, 'I take refuge in the Law, the undefiled.'
Kite-čk-kō-šyō, 'I take refuge in Author, the honor of the one.'
Kite-čk-čk-čk, 'I have finished taking refuge in Buddha.'
Kite-čk-čk-čk, 'I have finished taking refuge in the Law.'
Kite-čk-čk-čk, 'I have finished taking refuge in Author.' (After each sentence the clapper sounds once; at the end it sounded twice.)

The officiant goes on:

'After this we have now conferred on thee the Refuges. Henceforth, the Taithāgata [the Buddha], the Truest, the Perfectly Enlightened, in the Teacher. For those that follow the holy path, whether in any heretical teachers, but have respect to the great Righteousness, Deliverance, and Compassion that have been vouchsafed thee. Now will I recite for thee the ten grave commandments. They are these:

1. Jecchō, 'You shall not destroy life.'
2. Jucchō, 'You shall not take away what is not given.'
3. Jucchō, 'You shall not commit fornication or adultery.'
4. Yumma, 'You shall not lie.'
5. Jucchō, 'You shall not sell intoxicating liquors.'
6. Jucchō, 'You shall not use tobacco.'
7. Jucchō, 'You shall not use opium or such-like drugs.'
8. Jucchō, 'You shall not steal.'
9. Jucchō, 'You shall not speak evil of the Three Treasures.'

These ten grave commandments have been formulated by previous Buddhas and handed down by successive Patriarchs. I have now entrusted them to thee. Keep them well in thy existence, until thou attain to the Buddhahood. [This formula may be repeated at the discretion of the celebrant.] Sentient beings that follow the commandments of the Buddhas are placed in the same rank with him. He that is in the same rank as the Perfectly Enlightened one is truly a son of Buddha.'

(Wooden clappers are struck twice, handclaps three times.)

The priests present now chant a stanza known as the daichikō. When it is finished, a priest (not the one who led the service before) takes up his word:

'After this wise has been sung the daichikō. The merits arising therefrom are to be transferred to N, there insert the name of the deceased, not the name of the person who is speaking. We pray that when we place his body in the coffin the Saṁbhoga land may receive him.'

Then all together:

'All the Buddhas in the Ten Directions and in the Three Worlds, all the Honorable Bodhisattvas and Mahāsattvas, and Mahāprajñaparamitās, the land of the Saṁbhoga Kāya.'

The same priest continues:

'If we meditate deeply on these things, lotus birth and death succeed each other as fast as follows come. They come like the lightning flashes over the sea, the waves move and are gone like the waves of water on the great sea. The newly deceased N has this day suddenly come to the end of his life, by reason of the exhaustion of all seeds of existence. He understands that all composite objects must be dissolved, and is convinced that the extinction of the seeds of existence is bliss. The holy existence, the land of the Saṁbhoga Kāya.

Vairochana, the Buddha of the Holy Dharmakāya.
Buddha, the Buddha of the Perfect Saṁbhoga Kāya.
Sakya, the Buddha, whose Nirmāṇakāya Incarnations are hundreds upon hundreds of millions.
Honorable and most higharya Buddha, for the coming day at the coming time. All Buddhas in the Ten Directions and the Three Worlds, Mahāvyūha-Saṁdhikāpārahāra Simha (personified).

Mahāprajñaparamitā Bodhisattva.'
When the body has been lowered into the coffin, the funeral ceremonies begin. The coffin is placed on a bier which is usually illuminated with candles. The coffin is then taken to the temple or to the cemetery, and the procession begins. The coffin is carried on the shoulders of the mourners, and bells and cymbals are rung to accompany the procession. The coffin is then placed in a grave, which is usually prepared in advance. The grave is filled with earth, and the coffin is sealed. The mourners then gather around the grave and perform various rituals, such as reciting prayers and offerings.

The coffin is then left in the grave for a period of time, usually ranging from a few days to several weeks, depending on the beliefs and customs of the family. During this time, the mourners continue to perform rituals and offer prayers for the deceased. At the end of this period, the coffin is opened, and the body is either cremated or buried.

After the funeral, the family and friends gather together to mourn the loss and to healing. The mourning period may last for several days or weeks, depending on the cultural and religious traditions of the family. During this time, the family may hold memorial services, light candles, and offer prayers for the deceased.

When the mourning period is over, the family may choose to hold a memorial service to remember and honor the life of the deceased. This service may include reciting prayers, offering flowers, and sharing memories of the deceased. The service may be private or open to the public, and it may be held in a temple, church, or other place of worship.

The funeral and mourning rituals are an important part of the Buddhist tradition, and they help to provide comfort and support to the family and friends of the deceased. By following these rituals, the family can honor the memory of the deceased and find comfort in the belief that the soul of the deceased has moved on to a higher plane of existence.
DEATH AND DISPOSAL OF THE DEAD (Japanese)

491

The universe impersonal he passes to that of the Universe personal, to the Five Buddhas, to Amitabha, the giver of immortality, and to Amitabha with his attendants Avalokitesvara and Mahaveera, the great protector, to which the body goes to the funeral ceremony. The officiant invites the deceased to enter the bliss of Paradise. After each of these invocations, the komyōshingen, or invocation of the Five Dhyāni-buddhas, is chanted three times. Then, coming lower in the scale of dignity, we have the invocation of Ksitigarbha, the sextoif protecting angel of the dead (Bokub Jizō), and that of Fudō-myō-ō (Akiyamagirōja) and the other great vishvayānas—Mahatājas, Vajrayāsa, Kumāral, and Tridhāvajiva. Then the mantras of Ksitigarbha is Kōbakū shōnomi abiramakan sonota; that of Fudō-myō-ō, which is chanted three times, is Nōmon kā**********************************************************************************amanabara senda mokurai kaitō sonota youzai ru soman. The meaning of this Sanskrit formula is wholly lost.

We now get three mūdrās, representing the 'preaching' of Vairocana of the three Kāyas—the Dharmakāya (Nama A), the Sambhogakāya (Nama Vam), and the Nirmanakāya (Nama On). The first gesture, an A-sūnu, resembling Skt. or =an+mu represents the 'Trinity' of Vairocana. Then the stūpa is figuratively opened and shut—an evident allusion to the Suddhārāmapundārika Sūtra; next, a mūdrā (or manual gesture) figuring the stūpa of Fudō-myō-ō, with Vajra and ōhōq repeated three times; next, three representing respectively the Dharmakāya, Sambhogakāya, and Nirmanakāya (possibly of Fudō-myō-ō), with mantras respectively—A manran kaen kou, Abhirvānak, and an Fudo ku sonota kiseragikara, is sixfold in his operations in the six spheres of sentient existence, and we consequently have a suitable gesture, imparted to Kōbō Daishi by his Chinese tutor Kēikyō, for which the mantra is Abhirvānak, together with a secret formula which may not be written down, but which may be attained by means of a proper 'meditation on the Fire.'

Thus, the whole celestial hierarchy of the Shingon having been invoked, it remains only to procure for the deceased, on whose behalf all these celestial beings have been summoned, a suitable understanding of what it all means. This is effected by means of four more formal manuals and mantras, signifying the attainment of the perfect knowledge of rupadhārma and cittadhārma, of chittadhārma ('objects conceivable, but without form'), of rupadhārma and cittadhārma together, which are not two, but one; and, finally, a meditation on the dhāraṇī for which the dhāraṇī is Om Maityra Śeśhā. The Shingon are firm believers in Maityra, more so than any other of the Buddhist sects. It is their conviction that the body of Kōbō Daishi, which never decays, is awaiting the advent of Maityra in his tomb at Kōya San, and Shingonists often send the bones of their dead, after cremation, to Kōya San, so as to be near to Kōbō at the resurrection, which will take place when Maityra makes his appearance.

The officiant now prostrates himself three times before the assembled deities, offers incense, strikes the bell three times, and recites a sort of creed:

'With deep respect for all the Buddhas here assembled, I take my refuge in Buddha. May all my actions be excellent, O Maityra! I take my refuge in Buddha. May all my actions be excellent, O Maityra! I take my refuge in Buddha. May all my actions be excellent, O Maityra!'

With deepest reverence I address the great Vairocana, the Tathāgata, the Master of Shingon Buddhism, and all the beings and sounds of the two assemblies (i.e., the Vajradhātu and Garbhadhātu); and especially Amitabha, the master and teacher of the Land of Bliss, the Merotai Maityra whose coming is the holy Hope Kongō (i.e., Kōbō Daishi), who sits cross-legged in deep meditation; all the great Bodhisattvas, the transcendental beings in three countries (India, China, Japan), and also in the lands illumined by the eye of Buddha, and pitied by the Three Gems.

If we meditate deeply thereon, the moonlight of "Opportunity which is born where the desire-throes are extinguished." (Ei mond ki okobō suraawāt skin) shines in the sky of the tranquil spiritual Nature. The colour of the flower of "The Cause—being-exhausted—presently-disappears." "Blossoms in the garden of unbounded Adornment."

Appearance is as non-appearance, disappearance as non-disappearance. Both appearance and disappearance are unattainable. They cannot be reached.

The deceased N., his causes of life having been exhausted, has gone to another world. He has left his body in Jambudvipa, and has been transferred to the intermediate state (Skt. antarabharana, Jap. chō-ō). Therefore, now, in accordance with the testament of this human king, who has departed in the ten merits (kēren), we will with tears celebrate the ceremonies of funeral rites and cremation. Having adored the Sacred Altar upon which the body has been placed, with the sound of the symbols we will pray for the favourable acceptance of his soul by the Venerable Ones, and for its deliverance. We will kindle the funeral fire, which reaches through all the six elements (kokusha mu-ō), and so cremate the body which from the beginning has had no true phenomenal appearance (jikō-ōshin). We pray that all the Buddhas may certify for him, that all the saints may pray for him, and that they may receive him to a lotus-stand of superior merit. May the living and the dead, reason and wisdom (Vairocana [?] Amitabha [?] Ei mond) endow him with the highest Buddha-fruit! ... And may all sentient beings in the Dharma-bhūtis be equally benefited! ... I speak this with all respect.'

This ends that portion of the service which is known as hyōka, 'the expression of belief.' Next follows the singing or chanting of the Jibun shin'yō, i.e., the Mahāyāna-jāramāramaitadhyā Sūtra, for the purpose of giving pleasure to the assembled spirits, in order that they may make their appearance upon the altar. After this a priest says:

'In the yard where funeral services are being conducted (for a deceased person), it is generally the case that his sins all pass, and that he enters the next existence only as the result of his ascension to the land of Bliss, and we may consequently expect that Yasaka no Shingon is the true form, of the other realms of existence, will make their appearance. We pray, therefore, to the thirteen great Buddhas, to the infernal officers, to all the rest of the universe; may they aid him to lay aside his karma, and attain Supreme Enlightenment.'

Ch. 'Hal, Mahāyānasamādhistā Sūtra!' (one bell).

That the departed soul may ascend to the secretly adorned sphere of flowers of rupa-kō (rūpa-kō), we invoke—

Ch. 'The Name of the great Buddha Vairocana!' (one bell).

That he may ascend to the world whose inhabitants hunger not, neither thirst (gōsojō), we invoke—

Ch. 'The Name of Amitabha' (one bell);

Ch. 'The Sūtra on the Netherworld' (one bell).

That he may be re-born in the inner palace of Togitakura, we invoke—

Ch. 'The Name of the Buddha Maityra' (one bell);

Ch. 'The Name of all the Saints in its inner and outer palaces' (one bell).

That the Buddha-field may be accessible to all times at which desire it, we invoke—

Ch. 'The Three Treasures' (one bell).

That all sentient Beings in the Dharma-bhūtis may be benefited equally (with him whose obeisances we celebrate), we invoke—

Ch. 'The Name of Maitreya' (one bell).

The Name of Vajrapāja' (one bell).

(Here the officiant lays down his corner and takes upon his nō-ō, or mace.)

Jōma (homage).

Kōya chō ka Ōnohegusa,
Shōretindo Ōjōgokuraki,

It is a common fiction amongst Japanese Buddhists that Jambudvipa, which is, of course, Hindustan, comprises China and Japan as well as the principal seats of Buddhism in Nichiren Sect books it is Ichi-embudai, which comes nearer to the sound of Janabudiva.
Buddhas and Bodhisattvas, whom I worship with bowed head, and profound devotion, may this holy soul be led to, and be reborn in, the land of Bliss!

It is by the adornment and honouring of the Altar of the Twenty-Two Boddhisattvas, by the recitation of the Sūtras, and by offering of flowers, etc., that the Boddhisattvas may be obtained as in a moment. It is by the proclamation of the teaching, or the manifestation of the material body is identified with what Buddha, that the Boddhisattvas will themselves develop enlightenment in the doctrine that phenomenon is itself reality.

Next follows an ekō ("prayer of transference"). The officiant lays down his ugo-ko, and resumes his censor.

1. I respectfully pay homage to the Three Eternal Treasures, and call the names of the Bodhisattvas of the Buddha, who has realized Nirvāṇa and passed beyond birth and death. If any man will listen to Him with all his heart, that man's soul shall be exalted with unhappiness. All composite things are impermanent; they are possessed of the necessity of growth and decay. They spring into existence; again they perish; their extinction is blest.

Then the Risshūkyō (Buddhi Sutra) is read, and the ceremonies in the house are closed. On the road from the house to the temple, the priests meditate upon Fudo, and chant his mantra (see above).

2. Ceremonies in the temple.—Near the entrance to every Shingon graveyard or temple will be found the six images of Ksitigarbha (Boku-Jizo), the friend and protector of the dead. These must first be worshipped, as also the corresponding set of six Avalokiteśvara (Boku-Kwannon), then the officiant, entering, walks three times round the sacred ground, which is found in every Shingon temple, with manual gestures and formule representing the five elementary colours, the putting on of spiritual armour, the breaking of hell, the raising of the mind to the contemplation of Buddha, and the meditations on Sumeru (Fugen), the special patron of truth. The last of these dhāraṇīs is Om-sam-ma-nu-sa-tobowan, which we have mentioned above (p. 490).

All this leads up to what appears to be the central portion of this temple-service, the ceremony of abhiṣeka (Jap., kōbō, "baptising"), a kind of baptism mystically performed, and transferred by a subsequent ekō to the credit of the deceased. The abhiṣeka is threefold, and followed by an indō, "greeting words," very much the same as that used in the Zen ceremonies. But the Shingon indō, which is traditionally attributed to Kōbō Daishi, is not in writing, neither are the dhāraṇīs used in this, the most sacred part of the service, are all handed down orally from teacher to disciple, and it is not every Shingon priest that knows them. Next follows a passage from the Dainihkōkyō (Mahāvairochana-nabhisambodhi Sutra), also with a secret accompanying mantra:

Without leaving this physical body, man may attain to the supernatural power of jinkō (Skr. śakti, "means of attaining magic power"), and, walking treulously about in great space, may comprehend the secret of the body.

Then come: abhiruken (five times); the mantra and gesture of the eye of Budhha (not committed to writing); a list of the succession of teachers, with the kōmyō, of the deceased inserted at the end; separate mantras and gestures for all the six elements composing the enlarged Abhraks, earth, water, fire, wind, emptiness, consciousness; the

It is an essential feature in Shingon teaching that all material objects—stones, trees, the human body, etc.—partake of the Budhha nature.

3. Ceremonies of the Tendai.—The Tendai has always been a sect with strongly developed Eschatological tendencies. In the days of its initiation in China, it was the ally of the Sui and Tang Governments in their efforts to control the heterogeneous mass of teaching calling itself Buddhist, which was flooding China in the 6th cent. A.D. Introduced into Japan about A.D. 800, it served the same ends. And, when Ieyasu was to embark peace to Japan in the 16th cent., the Tendai played a considerable part in the spiritual policing of the country, which was carried on during the whole of the Tokugawa period. The Tendai rite which we are about to describe were those observed at the obsequies of Viscount Takamatsu (August 1904).

1. Ceremonies in the house: the otoji, or ʻwake, —The ceremonies begin with the adoration of the Three Precious Things. The celebrant (indōshī) thus begins:

1. I take my refuge in Buddha. May all sentient beings comprehend the great Path, and raise their thoughts towards the Supreme Object!

2. I take my refuge in the Law. May all sentient beings (follow my example, and), plunging deep into the Treasure House of the Scriptures, acquire knowledge as vast as the sea!

3. I take my refuge in the Orders. May all sentient beings (following my example) attain to positions of rule in the great assembly!'

Then follows what is called the instructive stanza, as taught by the previous Buddhas, the predecessors of Sakyamuni:

1. It is our prayer that all sentient beings may refrain from the commissions of sin, that they may do good, and purify their own minds. This is the teaching of all the Buddhas. We worship the assemblage of the Sakyas."

The Stanzas of Evening:

1. Harken to the Stanzas of Impermanency under the similitude of evening. When this little day is over, our lives will end and we shall disappear. We see by the dim light of dawn orally from teacher to disciple, and it is not every Shingon priest that knows them. Next follows a passage from the Dainihkōkyō (Mahāvairochana-nabhisambodhi Sutra), also with a secret accompanying mantra:

2. All composite things are impermanent, for they are liable to growth and decay. They spring up into existence, and perish. Their extinction is blest. The Lord Buddha has realized Nirvāṇa and banished for ever birth and death. He that wills to listen to this teaching with his whole heart shall gain inestimable happiness."

The Six ʻFors' 1:

1. For all believers in the Ten Quarters, let us meditate on the Tathāgata Sakyamuni. (One bell.)

2. For His Majesty our Emperor, let us meditate on Yakushi Ririkō Nyorai. (One bell.)

3. For the four "benefactions" 4 in the Three Worlds, let us meditate on Amida Nyorai. (One bell.)

4. For our Great Teacher, Domyō Daishō, and all the Venerable

The Ten Dō is one of those sects which profess to base their tenets on the whole vast Canon of the Mahāyāna.

2. The Jap. word is daini-dai (Skr. dārayāna, "generosity"). Giving is the first duty of a layman. The word has come to mean "householder," "kōmyō" and is commonly used by servants, etc., in addressing their master.

3. See above, for the connection of Tendai with the State. Yakushi (Dainihkōkyō) is the man who cured his own sickness and had twelve disciples. He was a very famous god during the Nara period.

4. The abhiṣeka represents the great formula by which we owe for the benefactions we receive from (1) our parents, (2) our rulers and the State, (3) sentient creatures in general, and (4) the Three Precious Things of religion.

DEATH AND DISPOSAL OF THE DEAD (Japanese) 493

Omit, let us meditate on the Saddharmapundarika Sutra. (One bell.) For all the gods, let us meditate on the Mahaprajnaparamita Sutra. (One bell.) For all sentient beings in the DHARMA, let us meditate on the Bodhisattva Mahayana. (One bell.)

The Dwelling and Revolving: 2

1. There is delight in the scattering of flowers (bis).
2. We reverently invite all the Tathagatas in the Ten Quarters to alight on this altar, and reverently invite Sakyamuni the Tathagata to alight on the sacred altar, there is etc.
3. We reverently invite Amithaba the Tathagata, there is etc.

The reading of the Sukhāvatīvyahāra (Amida Kyō)

Naamu Amida butsu, Amida butsu, Amida butsu.

Prayer of Transference (ekā): 3

1. All the benefits arising from the invocations we have just made, we transfer to the Lord Amithaba in the Land of Bliss. May we be graciously accepted in the great seat of His Vow, may our wishes be fulfilled, and may we realize amashī (‘supernatural tranquillity’)? May the Devas and deities of the Ten Worlds experience an increase of their dignities, and may the gods (Shin) be assembled in this place take pleasure in what we do! May the Great Teachers who have passed away, the Enlightened One, accept the incense, and may all souls, noble and mean, attain to Buddhahood, seated on a lotus-seat of high degree! May the Court of Our Wise Emperor be preserved from harm, and may the reign of His Majesty be long drawn out. May the country be peaceful, and may religion prosper! May the laymen in the Ten Quarters be free from evil and sorrow, and may the freemasons of monks who invoke the names of the Buddhas accomplish perfection! When they come to the end of their lives, may they not fear the descent to the Land of Bliss, and may they meet Amithaba and his attendant hosts face to face! May their destinies be safe! May they never fall, and may they be the leaders of all sentient beings in the Three Worlds and in Dharma Ниta? May they all, partaking, as they do, of the same spiritual nature, alight (tō) to bodhi?

The post-ekā hymn:

‘May we, living in this world, be as though we lived in the heavens, like the lotus untarnished by the water! Prostrate on the ground, according to the pre-eminent One, with hearts purer than the lotus.’

Adoration of the Three Precious Things.

The Instructive Stanzaas preached by the Seven Previous Buddhas.

The Confession of Sins:

1. May the three obstacles (passion, karma, and the secondary results of karma, Jap., kha) be removed absolutely and universally, of the three obstacles (note 4 above), and for beings in all spheres of existence and throughout the different cycles of time, the bodies, the souls, and the minds, from the bottom of our hearts, in the presence of all the Buddhas in the Ten Quarters.’
2. Gonenmon, or meditation on the Five Gates of praising Amida, by which men enter into the Pure Land. These are all taken from Vaishnavamūnī’s treatise on the Pure Land (Jīlovam). They are: (1) Raikōmon (the Gate of Worship); (2) Senmon (the Gate of Praise); (3) Sakyamunmon (the Gate of Prayer); (4) Kekōmon (the Gate of Observation); and (5) Ekkōmon (the Gate of Transference). The following is an abbreviated form of the Gonenmon, as recited at a Tendai funeral.

With my head touching the ground I adore Amithāba the Sage, the noblest of two-footed beings, whom gods and men

1. i.e. the Shin deities of Japan, adopted into the Budhhist pantheon.
2. These forms will be found in the sects of Jedo and Shinshū, which, originating in the Tendai, developed the doctrine of the Nichiren, which rejects Amida, they are not found. The Zen derived either doctrines nor ritual from Tendai, nor did the Shinshū.
3. From this that Geshhin (Jap. n. 942-1017), the first Japanese Patriarch of the Shinshū, derived his teaching about the Kōhō-Paranirvāna, in which the names of the ‘mean souls’ are prepared, and Bōdo, in which noble and mean alike attain to Perfection. This is brought out in Shinshū’s poem Shinso, in Tendai.
4. Jikaku, the second Patriarch of the Tendai (A.D. 794-861).

delight to honour, who dwells in the choice Paradise of case and bliss, surrounded by an innumerable host of the Sons of Buddha. The pure golden body of the Buddha is like the king of Mountains, and his footsteps, when he walketh in tran- quillity, are like those of the still-treading elephant. His eyes are as pure as the lotus. I, therefore, with my head touching the ground, adore the venerable Amithaba. His face, good, round, and pure, is as that of the moon at her full. His majestic brilliance shines as if that of thousands of suns and moons. His voice is as mighty as that of the celestial drum (thunder) and as soft as the voice of the Karishma bird. Therefore I, placing my hand on the ground, adore the venerable Ami- thāba... Thus I worship the Buddha and praise his merits. May the dharma that be adored (with many virtues)! May sentient beings, arriving at the term of their lives, go to the Western Land, and, mingling with Ami, they accomplish Buddhahood! May sentient beings go and be reborn in the Paradise of bliss.

May they go and meet with Amithaba, the Venerable One?

Next follow the burning of incense and the presentation of oblations (cakes, tea, hot water sweetened with sugar, boiled rice). The chief mourner, the family, and relatives offer incense. Then are read passages from the Saddharmapundarika Sutra, illustrating the various ‘gates’ of the Gonenmon, and the thus the oti (ceremony (which is supposed to take place on the day of death) is brought to a close.

(2) Ceremonies in the house: the first part of the actual funeral. — This is conducted by the bhūdā (‘second celebrant’), with a choir of six assistants, the first celebrant (chōkō) awaiting the cortege at the temple.

The Four Invitations (as in the oti).

Stanza of Repentance.

‘All the evil karma,’ etc. (see above, ‘Ceremonies of the Zen,’ p. 489).

The three Refugees:

‘Hail to me, and I take refuge in, Buddha. Hail to me, and I take refuge in, Dharma. Hail to me, and I take refuge in, Candrasākya (Japanese)’

I take refuge in Sakyamuni, chief of two-footed beings.

I accept, with two-footed beings.

I take refuge in Amida, chief of bodhisattvas.

I have finished taking refuge in Buddha.

Dharma.

Candrasākya.

The General Vows (adōmon):

‘Sentient beings are numberless. May I make them all traverse the sea of samsāra (‘eternal death’). Evil passions are numberless. May I help sentient beings to destroy them.’

The gates of the Law (Scriptures) are infinite. May I cause sentient beings to understand them)

Supreme Buddhahood is ineffable. May I make sentient beings attain to it.’

Hyōhōka (see under ‘Shingon,’ above, p. 491).

Chanting of a Sutra; either the Sukhāvatīvyahāra or the Saddharmapundarika. Preface (as in the oti above).

Burning of incense and offering of oblations (as above).

Chief mourner, family, and relatives burn incense.

The Invocation of the Buddhas in the Ten Quarters.

‘Hail to the Buddhas in the Ten Quarters.

Dharma.

Candrasākya.

Hail to the Buddha Prabhutaratna (mentioned in Sūtra), Hail to Sakyamuni, whose body is divided into the Ten Directions.

Hail to the Saddharmapundarika Sutra.

Maitreya, the Bodhisattva (Mandara).

Samantabhadra the Boddhisattva (Pugen).

This ends the ceremonies in the house.

(3) The ceremonies in the temple. — On arrival at the temple, the bell is tolled, and the choir of clergy take their seats, followed by the celebrant

1. In the Tendai very generally identity Sakyamuni with Amithaba. Hence the application of the same epitaph to both. In the Shinshū, which derives much of its terminology from Tendai, this identification is known as ni-ei-ō (‘the identity of the two Blessed Ones’).
DEATH AND DISPOSAL OF THE DEAD (Japanese)

and his assistant. The choir recite, in debased Sanskrit, the fourfold hymn of Wisdom:

On hesaramata shikyagana.
hasaramatanamadakura.
hesaramata-karukawara.

The celebrant now goes up to the High Altar, and there makes a mudrā ('manual gesture') known as 'Kongo-gi.'

An introit is sung, the 'Hymn of taking the seat.'

Indo, 'guiding words,' spoken by the celebrant.

The praise of the shakūji, 'pilgrim's staff':

I judge that my hand (does) so. May all sentient beings follow my example!

The whole choir say with the celebrant:

'Give a feast of charity, and, showing the true Way, make offerings to the Three Precious Things (bō). With a pure mind make offerings to the Three Precious Things (bō). Striving to raise a pure mind, I make offerings to the three gods (shakes the shakūji twice); may all sentient beings follow my example! May I become the Teacher of Devan and men; may I fill the Heavens with my vows; may I acquire my being in the reverse of the cause of业, and, guarded by spiritual beings, to make offerings to the Three Precious Things! May they make offerings on our behalf to the Buddha (Amida), to the Bodhisattvas, to the Buddha, to the Buddha. (Shakes the shakūji twice.) May all sentient beings learn the ascendent Truth? (shakūji): may they treat their fellow-beings with respect and sympathy, and make offerings to the Three Precious Things! May they learn the doctrine of the vehicle, and treat their fellow-beings with respect and sympathy; may they respectfully make offerings to the Three Precious Things— to Buddha, to Bodhisattva, to Buddha, and to Buddha—(shakes the shakūji twice.) All sentient beings practice Silaparamitā (the perfection of charity), ... Panaparamitā (the perfection of generosity), Kundayamāna-paramitā (the perfection of perpetual, ... Vīryaparamitā (the perfection of fortitude), as a note to an interesting point; ... Prajñāparamita (the perfection of wisdom), ... and may they treat their fellow-beings with respect and sympathy! (The shakūji is shaken twice.) Buddhists in the past have taken up the pilgrim's staff and have been enlightened. Buddha he who has taken up the staff, may he be enlightened. Buddhists in the future will take up the staff and be enlightened. I therefore take up the staff and make offerings to the Three Precious Things (shakūji).'

The celebrant comes down from the High Altar and burns incense.

Offerings of tea and hot water with sugar. Lifting the collar off the neck and closing it.

The assistant (fukudōshi) reads the Funeral Oration.

Chanting of a Sūtra.

Chief mourner, family, and relatives burn incense.

General congregation follow their example.

When all who have burned incense come to the celebrant and choir leave the temple.

So end the funeral ceremonies of the Tendai.

4. Ceremonies of the Jodo.—The Jodo sect, founded by Hōnen Shinōn in A.D. 1174, is an

offshoot of the Tendai, or rather an attempt to call back the Tendai to that sole Faith in Amītābha which the Jodo sects maintain to be the essential feature of the whole Mahāyāna.

(1) The ceremony of the house (Gongyō-shiki).

Opening verse of the regular service:

'May our minds be purified as the incense-flower! May our minds be bright and clear as the fire of Wisdom.

Turning the incense of morality and tranquility, thought by thought, make offerings to the Buddhas in the Ten Quarters, in the Three Worlds.'

Sanbōri, or worship of the Three Precious Things:

'With all our hearts we pay supreme honors to the Supreme Buddha in the Ten Quarters.

With all our hearts we pay supreme honors to the Supreme Dharmas in the Ten Quarters. . . .

With all our hearts we pay supreme honors to the Supreme Saññas in the Ten Quarters.'

Shikūjō, or fourfold Invocation, as in the ceremonies of the Tendai: (1) Al the Buddhas, (2) Ōra, (3) Amītābha, (4) Kwanwo, Seishi, and the other Mahābodhisattvas.

Tambutsu no ge, or hymn of praise for all the Buddhas:

'The handsome physical bodies of the Tathāgatas are unparalleled in the Universe. They are incomparable beyond conception.

Therefore, behold, I worship them. The physical bodies of the Tathāgatas and spiritual beings are the same, their Wisdom is as their bodies. Dharmas are infinite. Therefore I take refuge in them.'

Ryūkubansu, or abbreviated form of confession:

'All the evil karmas, etc., as in the Zen and Tendai.

Senkiki, or the threefold Taking of Refuge:

'Take refuge in Buddha . . . Dharmas . . . Saññas.'

The ceremony of the corpse is being prepared for burial, the name of Amītābha is being repeated ten times. This is known as Jūn. The number of repetitions shows that the shaving occurs only a short time. It is a ceremony called Kuri-ma, 'head-shaving,' roughly corresponding to Christian confirmation, which implies a formal acceptance of admission into the sect. It is administered by the head of the sect only, and consequently largely over the head of the candidates as they kneel before him. The ceremonial shaving of the dead is very often nothing more than this.

Rakkyōs or hymn introductory to the reading of the Scriptures:

'The Law, which is pre-eminent, profound, and sought out, can rarely be met with, scarcely once in a thousand kalpas or ages of the world. But we have seen and heard, and do accept it. May we understand the true meaning of the teaching of Amītābha.'

Reading of a Sūtra—generally a chapter from the Amitayurdhyāna Sūtra, or the Aparimitāyins Sūtra. Sometimes also the Amitābhatāṇḍāga-muladhārān is read.

In accordance with the Original Vow of the Buddha we pray that we may hear His Name, and be reborn in the Land of Bliss. On being re-born in that land, we must do the work of the Buddha, and not waste time. We must, in the meantime, be born in the Sixfold Supernatural Power (rōkujin-dei), which shall enable us to assume visible forms, and to secure happiness in the Worlds of the Ten Quarters for the Salvation of mankind. The Sky and the Law are infinite in extent; our vows are boundless.'

Not in the Buddhist sense of 'sought out of them that have pleasure therein.' The allusion is to the Vow of Amītābha, which was framed after a careful survey and examination of all the Buddha-śāstras.

2 The doctrines of Buddhism.

Digitized by Microsoft®
DEATH AND DISPOSAL OF THE DEAD (Japanese) 495

definitely under Amitābha's protection. Immense
crowds of worshippers from every part of Japan
came to worship.

(2) The funeral to the corpse.—This took place
on the following day. Three short ceremonies
were observed, the first in the apartment where
the coffin had been lying in state since the previous
day. It was then removed to the daishidō, or hall
set apart for the worship of Shinran Shōnin, the
founder of the sect, and from there to the Amidō, or
Hall of Amida. In each of these places a ser-
vice was held, consisting very largely of repetitions
of the Namu Amida butsu1 and the burning of
incense. Not unnaturally the third service was
resented the most dignified. Notons, blood rela-
tions, but proxies representing the princes of
the blood, and the heads of other subdivisions of
the Shinshu, came forward to burn incense, and, im-
nediately after this last ceremony was over, the
procession was formed and the funeral cortège
started for Uchina, where the main obsequies were
to take place.

(3) The procession need not delay us. It was on
the same general lines as the procession mentioned
at the beginning of this section (p. 492). On
Only, as befitting a personage who, in addition to
being the hereditary head of one of the largest
of the Buddhist sects in Japan, was a peer of the
realm, and a collateral descendant of the great
Fujiwara family. But it was, of course, imposing
procession, more than a mile in length.

(4) The service at Uchina.—Uchina was in
former days the cremation-place connected with
the Eastern Hongwannji temple. But the growth
of the city has rendered it unsuitable for the
purpose. In the case, however, of the funeral
of an Abbot, there are historical reasons why a
part of the service should still be held there.
An open space had therefore been curtained off, large
enough to sent the great number of invited guests,
and it was here that that part of the service took
place which in ordinary cases would be held in
the temple. (The farewell to the corpse, thrice re-
ported, corresponded to the service in the house
at ordinary funerals. It followed, then, almost
exactly the same order as is observed in Jodo
funerals.) A temporary crematorium had been
erected for the symbolic cremation to be held here.
The chief mourners were the new Abbot and his
wife (the urabata). The actual cremation took
place later at Kwazan, where the regular crema-
torium is situated.

The service, which was of the regular type,3
followed the usual order:

The Four Invitations.
The Shōshingō,3
Nembutsu wo nusan,4 or hyōn in praise of Buddha,
followed by invocations of Amida's name.

Eko, as in Jodo sect, with the following addition:

2. Oo arukobake.

We pray that the merit of this service may be given equally
to all sentient beings, that they may cross the river and ascend
forth with re-birth in the Land of Ease and Comfort.\footnote{1}{It is to be noted that the common interpretation given to
these words is \textit{Buddhism} and \textit{Buddhist} instead of \textit{Buddhism} and \textit{Buddhism}. This
meaning, which has been read into, not out of, the Sanskrit
words, is interesting.}

2. In the memorial service held by the Shinshu in Tokyo
in honour of King Edward vii., the form approximated much
more closely to the usual English rite. The explanation of this will
be found in the Tendai origin of the Shinshu, and also in the
fact that it was not a funeral service proper.

3. This is a poem by Shinran Shōnin giving an account of the
transmission of the Amida doctrine.

4. Wazn are hyōn of praise composed in Japanese. The
Shinshu sect, which, to its credit, has always used the vernacular
whenever possible. They are particularly rich in these hyōn, some
of which are of very great interest.}
Symbal cremation. The Abbot entered the temporary crematorium and lighted some straw, and, as the smoke issued from the building, it was accepted as an actual cremation. This was, of course, a special feature of this particular funeral.

Shokage again.

Burning of incense by mourners, etc.

The coffin was now removed for the actual cremation.

(5) The cremation.—This was carried out semi-privately at Kwanzan, only the new abbot, near relatives, old body-servants, and the superintendent of the crematorium being admitted into the curtained-off space around the furnace. The pyre was made of pine logs and adorned with a white robe, and was attended to by four master-carpenters in white robes, overlooked by two priests in black.

The Abbot, as chief mourner, having already, as we have seen, symbolically lighted the fire, it was apparently not necessary for him to do it actually on the occasion; though in ordinary funerals this is a duty which always falls upon the chief mourner. It must be a "pure" fire (no sulphur or brimstone to be used in the kindling), and when kindled must not be allowed to burn with additional fuel, but also by constant libations of mutane abura ("rape-seed oil"). It is desirable that the coffin, as in this case, should be so thick that the body inside may be completely consumed before the sides of the coffin fall in, but this is, of course, merely a counsel of perfection not applicable in all cases.

When the cremation was over, the remains were reverently collected, with a short service (not used in ordinary cases), put into a small box, covered with a white silk cloth, and carried back to the late Abbot's residence, where they were privately disposed of in a suitable manner. A certain amount of secrecy was observed on this occasion. The Shingon is a highly conservative and monastic sect, and many centuries ago a bitter feud between the parent sect of the Tendai and her more prosperous but rebellious daughter, the Shinshu, when Renyō Shōnin, the greatest of all the successors of Shinran, died in A.D. 1609, the jealous Tendai monks made an assault on the procession that was carrying home the sacred relics, and tried to seize and dishonour them. Since that time it has been customary, at the cremation of a Hongwani Abbot, to bring the ashes home in secret, along a circuitous route, and under guard.

In collecting the bones, etc., after a cremation, it is customary to pick them up with chopsticks, one of wood, and one of bamboo. Hence, in ordinary life it is deemed most unhygienic to use chopsticks of different materials, e.g. one of wood and one of bone. Shingon believers send the bones to Kōya-san; amongst the Shinshūists in Echigo and Shinshu they are often preserved in the house.

In most cases, however, they are interred. Great efficacy is sometimes attributed to these roles (shari).

6. Ceremonies of the Nichiren sect.—The Nichiren sect, founded in A.D. 1253, differs from all other sects of Buddhism in that it concentrates the whole of its attention on the Suddharmapundarika Sūtra, which it almost personifies. This Sūtra consists of two parts, known as Shakaṃno (chs. i.-xiv.) and Homon (chs. xv.-xvi.), and the peculiar position of the Nichiren School is that for all the latter part of the work of religion, not of the Sūtra, while all other Japanese sects lay special stress on the former. Nichiren himself claimed to be the first of the Four Great Bodhisattvas mentioned in the latter part of that Sūtra as rising out of the earth at the head of a large company of believers. The services are very long; but they admit of condensed statement, because they consist almost entirely of readings from the Suddharmapundarika Sūtra.

(1) The house ceremonies.—a) Mukurugyo, entrusted to a minor priest (shokage).

Kōwajin, or words of Invocation:

"We humbly invite Jūryō, the homon (principal deity) of the True Teaching, to be present.

Glory to the Suddharmapundarika Sūtra, in which are contained the Three Treasures of the True Teaching.

Glory to Sakyamuni-Buddha, who is the great benefactor of sentient beings, who accomplished enlightenment before innumerable ages, and who alone is the master of the teachings.

Glory to the Buddha Tathā, who certified to the teachings of the Suddharmapundarika Sūtra.

Glory to the homon mentioned in the Homon (Real Teaching)—see above, as also to those spoken of in the Shakasūtra (Temporary Teaching), in this and in other worlds.

Glory to the Great Bodhisattvas in the thousand worlds, who were taught by the Buddhas of the Homon, and who issued forth in troops out of the earth, when the Kramādāna was being preached.

Glory to the Three Everlasting Precious Things mentioned in the Suddha, Sutra, in which the Temporal Buddhas are secreted (swallowed up) and the True Buddha revealed.

Glory to Nichiren, the Great Tathā, the founder of the sect, our mighty leader, who has been entrusted by Sakyamuni with the Secrets of the True Doctrine.

Glory to the supreme Buddha (Nichiren).

May all the Devas and good gods, the protectors of the True Faith, descend upon the altar and give a hearing.

Reading of Hōhebon, sect. 2 of Saddha. Saddha."

Jūryōshō, sect. 10.

Much repetition of the Dainichiyo, or the true standard of faith and worship (Nyanmohākārakagyo, "Glory to the Lotus-Scripture of the Wonderful Law").

Ekō, or prayer of transference. The gist of the prayer is that, by the virtue of the Sutra, sentient beings may attain to Buddhahood in their bodies and be born as Bodhisattvas of a Kūto-waza. The service may be performed before or after death, or may be entirely omitted. It is of great importance to the student, as giving the doctrinal position of the Nichiren body.

(b) The wake (otogi). This is also entrusted to a minor priest.

The whole of the Suddharmapundarika is chanted once, or sect, in thirty-six times. Sermons are delivered at intervals—for the elucidation both of the living and of the dead.

The tounre (a leaf of a palm or bamboo) is cut with a razor over the head of the deceased.

(c) The home funeral service, by one or more minor priests. Five banners are prepared and set up, inscribed as follows:

1. Glory to Kosho, to the Suddha, Saddha, to Sakyamuni, to Nichiren, the Great Superior Teacher of the Latter Days.

2. Glory to Jōgyō-kenzan, i.e. to the Nichiren, first of the Four Great Bodhisattvas.

5. Glory to Amurugyo-kenzan, fourth of the Four Great Bodhisattvas.

Four smaller banners are also prepared and set up, and inscribed as follows:

1. Jūryō is a portion of the Saddha, Saddha personified (sect. 20), and treated as the embodiment of the False (Gintoku).

2. Nichirenists maintain that there are three stages of Buddhist Teaching—the Smaller Vehicle, the Larger, and the Grand Vehicle (Gintoku). The Three Mysteries are: (1) The revelation of the true object of human life, the Messiah in the center of the establishment of the true standard of faith and worship, (2) the true teachings of morality.

3. Observe that the Sakyamuni of Nichirenism is only incidentally the historical Gautama.

4. Tahe (Skr. Mahāyāna) may be traced back to a Bodhisattva, previously to Sakyamuni, who, in the Saddha, is seen descending upon the latter as he teaches, in a diva; who is dep, then revives, and, after commending the teachings which Sakyamuni is giving in the Saddha, becomes in some mysterious way identified with him. This account appears in the Kramādāna, the 10th section of the Saddha, Saddha."

Nichiren is supposed to have had as his teaching committed to him by virtue of his being a reincarnation of the first of the Four Great Bodhisattvas.
DEATH AND DISPOSAL OF THE DEAD (Jewish).

1. Conception of death.—Although there is uniformly, in a sense, in the physical phenomena of death, its characteristic and circum-
stances and the impression which it makes vary in different times and places. In ancient Israel, death, like life, was more a matter of the family than it is now; it was not so much an occasion when an external professional element, repre-
sented by priests, lawyers, doctors, nurses, and hospitals, broke in upon or set aside the family. Again, violent deaths were more common; and the last illness of a dying man was not prolonged as it is now, by the resources of medical science. In all probability the death-rate was much higher than it is with us, so that death was more common and familiar.

The impression made by death depends partly on belief as to its cause and as to the future of the individual after death. The modern mind is occupied with the physical cause of death, the particular disease, and the failure of remedial treat-
ment. The Israelite and the Jew thought of death as an act of God; more especially a death in early years, or in the prime of life, or under exceptionally distressing circumstances, was often regarded as a judgment upon sin.

Death was not the annihilation of the indi-
vidual—at any rate, according to the ordinary Hebrew view. A feeble ghost of the dead man maintained a dim, shadowy existence in Sheol, the under world or Hades. But probably in early times other beliefs supplemented or replaced this view. There are traces of ancestor-worship and necro-
nancy in ancient Israel, and these imply that the spirits of the dead could manifest themselves to the living, and could exercise some influence upon their fortunes. Samuel, for instance, appeared at the call of the witch of Endor and foretold the death of Saul (I S 28). Although there is little positive evidence, it is probable that the popular belief in ghosts prevailed earlier as in later times. In Lk 24:52 the Apostles take the risen Lord for a ghost.

In a sense, the Israelite looked forward to re-
union after death, so far as this may be implied in such phrases as 'buried with his fathers' (2 K 12), 'slept with his fathers' (J K 2); but there is nothing to suggest that he looked forward to any satisfying fellowship with his deceased brethren in a future life. Thus, for all practical purposes, death was a final parting.

As regards what happened to the individual when he breathed his last, death was thought of as the departure of the neshph, or vital principle; that, curiously enough, neshph is some-
times used in the sense of 'corps' (Lk 15:21; Zcc 12:10, [all Hi], Nu 5:11:40 [all P], Hagg 2:9).

Probably various primitive views prevailed in ancient Israel as to death and the individual after death, and these views were connected with general Semitic mythology; but the editors of the OT eliminated accounts of such crude superstitions, in the interests of orthodoxy and estheism, so that only a few traces remain. A familiar myth is the death and resurrection of a god. Traces of this are found in the women weeping for Tammuz (Ezk 8:4). According to Gessmann,² the account of the death and resurrection of the Servant of Jehovah in Is 53 is based on some such myth; of this possibly other traces are found in the references to 1177:528, "mourning for an only son.³

The later books of the OT contain hints of a resurrection, which develop in the later literature, especially in the Wisdom of Solomon and the Apocalypses, into an express doctrine, so that for later Judaism and for Christianity—following Judaism—death became the portal to a future life. When Judaism evolved a hierarchy of angels, with proper perquisites and special functions, there appeared among the rest, Sammael, the Angel of Death. See DEMONS AND SPIRITS (Heb.) and (Jewish).

Later Judaism inherited or developed many curious fancies as to the hour of death; as, for instance, that the dying soul has a vision of the Shekinah just before its departure. Ben Kaphra, a Rabbi of the early Christian centuries, is quoted as saying:¹

'For three days the spirit hovers above the tomb, if perchance it may return to the body. But, when it sees the fashion of the countenance changed, it retires and abandons the body' (cf. Eun. in. Oc. Fas. [1901] on 21:13).

2. Disposal of the dead.—The regular and legiti-
mate mode of dealing with a corpse in ancient Israel was burial, and this has always remained the general custom of the Jews. Embalming was not an Israelite practice; when we read that Jacob and Joseph were embalmed (Gn 50:26), we must clearly understand that they were treated as Egyptians, amongst whom embalming was the regular custom. In later times we are told that the body of Aristobulus was embalmed in honey (Jos. Ant. XIV. vii. 4). Embalming in the strict sense must be distinguished from the Jewish custom referred to in 2 Ch 16:15 and in NT (Jn 1196, etc.) of wallowing the dead body and placing it in or wrapping it up in spices. Cremona, amongst the Israelites, was exceptional. According to I S 312, the men of Jabesh-Gilead burned the bodies of Saul and his sons, probably to pre-
vent their falling into the hands of the Philistines. The fact that 1 Ch 10:22 omits the burning, and that Josephus (VI. xiv. 8) states that the bodies were buried, is probably evidence of the repug-

¹ W. J. Bennett, Sp. cit. 155 ff.

DEATH AND DISPOSAL OF THE DEAD (Jewish)

The Jews, at any rate in later times, to the cremation of the dead. The EV of Am 6:6 speaks of ‘he that burneth ’ a corpse; but the reference to burning the corpse is due to corruption or to impiancy on the part of Jews in some cases, however, criminals were burnt alive (Gn 38:4, Lv 20:14, 21), or their corpses were burnt (Jos 7:15-17). The picture in Is 66:24 of the corpses of sinners consumed by fire may have been suggested by the actual treatment of dead criminals. According to Kimchi1 there were perpetual fires in the Valley of Hinnom for consuming dead bodies of criminals and animals. In Am 2:2 the burning of the bones of the king of Edom is an outrage which calls for punishment hereafter by the Edomites in the Doeh. 

Expose without burial was a disgrace and a misfortune. Criminals or their representatives might be so treated (2 S 21:16), but, according to Dt 21:22, even their corpses were to be buried. Sometimes this was done to avoid the judgment of God (1 K 11:17, Jer 7:35, Ezk 29:9, Ps 79:7). To bury relatives, and even strangers, was a supreme duty; it is specially insisted on in To 1, 2, and is illustrated by the story of Birelah (2 S 3:31), that the corpse of a wicked man was to have an honourable burial (Job 21:15). The desecration of a grave was a kind of posthumous punishment (2 K 12:13, Jer 49:1).

There is no such evidence in the OT of graves dug and sealed, and therefore in doubt as to the use of graves, only as to the discovery of tombs. The tombs of the various Palestine Exploration Societies show that rock-hewn tombs were exceedingly common; they usually occur in groups. A space for a single corpse, the chambers and even the tombs with a stone slab; this space was called a kîk, 32 (Jastrow, Dict. of the Targumim, 1886-1903, s.v.), by the Jews in later times. These are found gathered in some places in chambers in natural or artificial caves. One of the most interesting examples of such a burying-place is the cave of Machpelah, where Sarah, Abraham, Isaac, Rebekah, Leah, and Jacob are said to have been buried (Gen 25:9, 35:29, 49:30). Other tombs with groups of kîkîm are also found; and sometimes monuments were erected over tombs; for instance, Simon the Maccabee built an elaborate mausoleum at Modin for his father and brother (1 Mac 13:29-30), and this may be the dead and buried in the garden of Uzza (2 K 21:19). But usually the kings of Judah were buried in a royal burying-place in the city of David: e.g. Josiah (2 K 23:20), apparently near the Temple (Ezk 43:18), the Temple being in ancient times an adjunct of the royal palace. Obviously dwellers in towns, who had not extensive gardens, would be required, as in later times, to bury their dead outside the walls. Poorer people would have no family burying-place, and we read of a public cemetery on the outskirts of the city of the dead (Am 6:19) (2 K 23:18, Jer 22:25). Apparently a measure of disgrace attached to burial there, in a pauper’s grave, so to speak.

The family desired to be together in death as in life, and men were anxious to ‘sleep with their fathers,’ i.e. to be buried in the family tomb. It is part of the punishment of Pashhur that he is to be buried in Mahlah (Jer 26:20); and the Chronicler, in contradiction to the Book of Kings, states that certain wicked kings of Judah—Deborah and Josiah—were not buried in the sepulchres of the kings (2 Ch 23:20). In post Biblical times the Jews have had their own cemeteries. They still retain their anxiety to be buried with their own people. Jews who are lax in many religious matters will keep the Day of Atonement in order that they may be buried in a Jewish cemetery.

A certain number of graves of ancient saints and heroes, and probably, as amongst the Muhammadans, such tombs became shrines; e.g. the tomb of Joseph at Shechem (Jos 24:32), and the tomb of the patriarchs at Machpelah. Necro-mancy and similar superstitious were often connected with (Is 64:14).

On the other hand, the grave is unclean. In later times, at least, cemeteries were supposed to be special haunts of evil spirits; and the spirits of the dead lingered there, at any rate, till the corpse had been as imitated to the soil. This belief, that the spirits of the dead inhabit the tombs, is found in most primitive religions, and was probably prevalent amongst the Israelites in early times.

3. Mourning and other observances.—Numerous passages illustrate the distress caused to the Jews by bereavement; the mourning of Jacob over the supposed death of Joseph (Gn 50:24) of David over Absalom (2 S 18:33). In later times, there is the mourning of the death of Solomon (1 K 2:14), and the mourning of the death of the Israelites in Egypt (Ex 13:15), their sorrow and complaint prevailing, so that Rabbi Hamnìli ordained that corpses should be buried in a simple white dress. We read of Ananias, that they ‘wrapped him round,’ apparently in the clothes he was wearing, and carried him out, and buried him (Ac 22:19).

Later on, the use of a shroud or special grave-clothes or wrappings for the dead became universal; but it is not clear when this custom was first introduced amongst the Jews. In Jn 11:4 Lazarus’ hands and feet were bound with linen bandages (ερυμασίας), and his face with a napkin (στίγματα). The body of our Lord was wrapped in strips of linen (δημίου) We have already referred to the use of spices.

Collins were not used by the Jews in ancient times, except in the case of Joseph (Gn 50:26), whose remains were placed in an ουράς, or chest; but this, like his embalming, was an Egyptian custom. The Jews laid their dead on a bier (OT mîṣatta, נבי), the couch (2 S 3:31); NT ερυμασίας (Lk 23:40), as is the custom amongst Eastern Jews now. They use this bier to carry the corpse to the grave, and do not bury it.

The exigencies of the climate of Palestine called for burial soon after death, on the same day, or within 24 hours. As often, a natural necessity hardened into a sacred custom, which was long maintained amongst Jews in Western countries, where the same necessity did not exist; but after

a while it fell into disuse, and a longer interval is allowed in the West.

The carrying of the corpse to the burying-place was the work of friends of the deceased, and was the occasion for public lamentation, which, at any rate in the early centuries of our era, was partly performed by hired mourners and musicians. There does not seem to have been any formal burial service, or public character in Biblical times, but then and in the funeral oration were sometimes delivered. According to JE (s.v. 'Funeral Rites,' v. 529), the mourners recited Is. 91 on their way to the cemetery; in the ceremony, other funeral, conclusion, concluding with the Kaddish, or doxology; and on their return, the services from Lamentations. Women attended funerals in ancient times, and still do amongst the foreign Ashkenazim, but not amongst the Sephardim or the English Ashkenazim.

We may also quote the following description of modern Samaritan rites, which probably preserves many of the customs of Palestinian Jews in early times:

'Upon death the corpse is carefully and ceremoniously washed, it is not forbidden to the Samaritans, as has been frequently stated, to handle their dead, except in the case of the high-priest. Candles are burnt at the head and foot of the corpse, before which the Talmud Collins are used—an exception in modern Palestinian custom. The mourners, and the clergy also, wait until the following Sabbath, the community going each day to the tomb, where they read and pray. On the Sabbath the community again visit the tomb, where they partake of a meal while forwards all proper services are held in the synagogue.'

The duration of mourning, as it has always varied, according to the rank of the deceased and his relation to the mourner. Seven days was a very common period. The men of Jabez-Gilead fasted seven days for Soul and Jonathan (I Sam. 1312); Joseph mourned seven days for Jacob (Gen. 33); Jacob was mourned seven days (Jeh 16); Judith was mourning seven days (Jeh 17). In later Judaism the period of strict mourning, the Noah or first seven days; mourning of a less severe character lasts another thirty days, and in the case of children to the end of the yahrzeit. As to mourning-dress, the ‘skirt of sackcloth’ was customary in Gn 37 and extra of the mourning garments and the wearing of sackcloth are mentioned in Gn 37 and in Ps. 119. The mourning dress of a woman was worn by the widow throughout her life, and consisted of, or included, sackcloth. Modern Jews usually wear black mourning, except in Russia, Poland, and Galicia, where it is worn. Mourners garnish their garments at the time of death, and wear the outer garment cut and unbuttoned during the thirty days of mourning.

The presence of numerous guests at a funeral necessitated a funeral meal, 'funeral beaked meats,' which, in spite of the character of the occasion, was apt to become a feast. This is not a custom which is found in time of the OT as lechem 'omnim, 'bread of mourners.' (Hos 9), and was provided for the mourners by their friends at the close of the fast, which occupied the day of the funeral (2 S 3, Jer 16)—a custom which seems to have prevailed ever since.

Other acts of mourning were fasting (1 S 31), beating the breast (Is 37:3, cf. Lk 18:14), sitting in ashes (Jon 3:6), sprinkling ashes on the head (Est 9:2). Ezek 24:17 implies that mourners were wont to cover the lip with new, to begreek and bereaved. According to Jer 16, mourners incantated themselves, and plucked out or shaved off the hair; but such practices are forbidden in Lv 19:14, Dt 14.

Traces remain in the OT of the worship of the dead, of sacrifices offered to them, and of furnishing them with food. Probably at such funerals was partly a survival of such practices. The worship of the dead was closely connected with necromancy, which was prevalent in Israel (e.g. Is 59). The graves of ancient worthies seem often to have been shrines, or 'mother shrines. Thus there was a maggedah, or sacred pillar, at the grave of Rachel (Gn 35:20), and the important sanctuary at Shechem may have been connected with the grave of Joseph (Jos 23, 34). Ancient traditions of Dt 26:5 is a little doubtful. The Targum says, 'I have not given food for the dead,' but the reference probably is to offering food to the dead in the temples of the Dead, and not to the dead themselves. The practice was condemned by official Judaism; but the whole army, in such a name as 'mourners to the tomb of the righteous,' and Sir 30:2 refers to the custom. In some quarters necromancy and its allied customs survived among the Jews in later periods.

In Rabbinical times and among the stricter modern Jews, during the Shabbat, or seven days of strict mourning, the relatives abstain from work and remain at home, sitting on the floor or on a low bench, reading the Haggadah of the receiving visits of condolence. Bereaved children should abstain for a year from music and recreation.

A special feature of Jewish mourning is the repetition of the Kaddish by a bereaved son. According to the Jewish Prayers-book, this is to be repeated by sons for eleven months after the death of a parent, and also on the Yahrzeit, or anniversary of the death. It is a special form of Kaddish which runs thus:

'May his great Name be magnified and hallowed in the world which He created according to His will! May He establish His kingdom speedily in our days and in the lifetime of all Israel!' May his Name be blessed for ever; may it be blessed for ever and ever. May the Name of the Holy One (Blessed be He) be blessed and praised and glorified and exalted and set on high and honored and uplifted and sung above all blessings and hymns and praises and consolations that are repeated in the world! May the Name of the Lord He blessed from now even for ever-more! May there be great peace from heaven and life upon us and upon all Israel, and say ye Amen. My help is from the Lord that made heaven and earth. May He who maketh peace in His high places make peace for us and for all Israel! And say ye Amen.'

This is publicly recited in the synagogue, but according to Oesterley and Box it is recited in the house as a prayer for the dead, but the public recitation of it in this fashion by a son is regarded as a proof of the piety of the dead, as represented by a pioun survivors. This no doubt is the light of the enlightened Jews; but others belong to the petition of the Kaddish by the son shortens the purgatorial period which the father must spend in Gehenna or exalts him to a higher sphere in Paradise. The repetition terminates on the anniversary of the death, because it would be unprofitable to suppose that a father’s sins would require more than a

year's purgatory. In the Ashkenazic synagogues prayers are said four times a year for the souls of the deceased.

Priests were forbidden to mourn except in the case of the nearest relationships (Lv 21:14, Ezk 44:19).

4. Significance of death and of funeral customs. —Some scholars see in many of the funeral rites, notably cutting of the hair, self-mutilation, etc., which were forbidden by the more advanced Judaism, traces of an animistic stage of the degenerate Israel, of the worship of ancestors, and of the allied ideas of the continued life of the dead, of the possibility of communion with them, of the necessity of providing for their needs and protecting them from evil spirits; or, on the other hand, of the need of protecting the living from injury by the spirits of the dead. No doubt the Semitic peoples passed through a stage of religious development when such ideas were current; and these ideas persisted and do persist when they have been outgrown by the purer forms of religion; but they do not belong to Jahwism or to Judaism so far as either was or is dominated by revelation. Nevertheless, the great importance attached to burial in the post-exilic period of the Tanh. era suggests that the condition of the spirit of the deceased was supposed to be influenced by the treatment of the corpse. Later on, in some districts the habit prevailed of visiting cemeteries in order to obtain the help or intercession of the dead.

Another quasi-animistic explanation of mourning rites which involve disfigurement, unattractive dress, covering the head, etc., is that they were intended to guard the dead man from recognizing the mourner, and so to protect the latter from any injury the spirit might wish to inflict upon him. Similarly, the mourners' shrieks were intended to drive the spirit away; and satisfactory burial was a condition that the dead might find their way to Sheol and stay there. The suggestion that many mourning rites were due to the anxiety of the mourner to humble himself before God hardly seems probable. The most probable explanation is that the expression and out of a natural desire to express the emotions caused by bereavement. Such distress gives rise to wailing, frantic gestures, neglect of the dress and person, an aversion to the pleasures of life. Acts which originally were spontaneous would soon harden into a fixed etiquette or ritual. Many customs might easily be thus explained; and it is possible that this may be the true explanation, even in cases where a mourning custom does not seem to us a natural expression of grief. A man distraught by sorrow may seek relief in any unexpected, strange, unusual act; such an act may appeal to the imagination of spectators by its very strangeness, and be imitated till it becomes a custom.

The contagious uncleanness of a corpse (Nu 5, Lv 21:11) might be suggested in many ways: by the fear of the spirit of the dead man mentioned above; centuries of the asking from an object so changed from the living friend or kinsman, and even by sanitary reasons. The uncleanness of the corpse would naturally be extended to the tomb. In the same way an unburied corpse defiled the land, as is laid down a curse on it (Lv 21:14). It would be a mistake to try to explain all the mourning customs, even of one people, by the consistent application of a single principle. Bereavement affects men in many ways, so that natural affections and considerations, superstition, and religion all contribute to give rise to the ritual connected with death. Moreover, a rite changes its significance and value from time to time, so that the meaning attached to it in later times may be quite different from that which it had originally; and the popular explanation of it may throw no light on its origin.

According to Gn 3, death was a consequence of the sin of Adam and Eve (cf. Ro 5:12); it would be natural to draw the conclusion arrived at in the latter passage, that because each man died because of his own sin (a view perhaps implied by Na 2:4). But the narrative in Genesis stands apart from the general course of OT thought, which regards death as the natural end of life. The righteous man, according to a widely prevalent view, enjoys a long and happy life, and is gathered to his fathers in a good old age. Some passages of the Wisdom Literature, even apart from any belief in a real future life, regard life as a burden and death as a boon (Job 7:4, Ec 6:10).

In some passages of OT, death is personified (e.g. Job 28:22, Is 28:17, Hab 2:4). In others the term is extended to mean spiritual death; it doubtless includes physical death, but only as a part of a wider judgment which includes guilt and condemnation, and exclusion from the Kingdom. In such passages, as Schultz said, 'death includes everything which is a result of sin.' This usage of the term is extended and developed in the later literature.

Thus Philo: 'The death of the soul is the decay of virtue, the taking up of evil.'

In later Judaism, death is regarded as atoning for the sin of the deceased. According to a popular superstition, the dead man suffers pain while his body is decaying in the grave, and this pain has an atoning value. But, apart from such ideas, we find the doctrine taught by Rabbinical and other authorities. Thus the Sephardic ritual for a dying man includes the following:

Let my death be a atonement for all my sins, iniquities, and transgressions, wherein I have sinned, offended, and transgressed against Thee, from the day of my first existence; and let my portion be in the Garden of Eden. Again we read: 'The Day of Atonement and death make atonement when accompanied with sincere repentance.'

W. II. BENNETT.

DEATH AND DISPOSAL OF THE DEAD

(Manhannadan).—According to the Qur'an, 'every soul must taste of death' (iii. 182); the difficulty as to those who may be alive at the Last Day is got over by the explanation that on the blast of the trumpet all shall expire, except those whom God pleases (xxix. 68), the exempted being possibly some of the greater angels (Babawli, etc., in loc.). This is also laid down in the Koran: 'the hour of each person's death is foreordained (xvi.

1. Kähler, Sünde und Gnade, 244; but probably the passage regards Zealophoge as involved in the sin of Israel in refusing to enter Canaan, not Judah. Schodt.

2. (AT Theol., tr. ii., p. 310, 314; cf. Bennett, 283; and see Eck 260.)

5. Mish. Tanna, 29, quoted by Bender, JQR VI. (1904) 666.
In the traditions, men are forbidden by the Prophet to wish for death, though to a believer it will be desirable. Whoose last words are the Kalima (profession of faith, 'There is no god but God') will enter into praising the glorious and eternal name of God, until that this should be recited in the presence of the dying, and the Sura 71 Sin (Qur. xxxvi.) should be said over the dead. A fantastic tradition, given on the authority of Abu-Ja'far, relates what Muhammad is supposed to have said about it: 'O you who on the passing of the soul! In the case of a believer, angels of mercy clad in white come and invite the soul to the rest which is with God, and the soul comes out with a delicious smell of musk, which the angels sniff with satisfaction, and it reaches the souls of the faithful, who rejoice and question it about those left behind on earth. But angels of wrath come to the dying infidel, and his soul departs with a bad smell, which disgusts the angels till it reaches the souls of the faithful, who rejoice and question it about those left behind on earth. This idea is elaborated in other traditions, in which the soul of the righteous is said to issue forth like water from a skin, and the angel of death seizes it; but the angels in white snatch it from him and write his deeds on a book with an odor of musk, and convey it on and on to the seventh heaven, where the believer's name is registered, after which it is returned to its body on the earth, to undergo the questioning of its deeds. It is then visited by black-faced angels, and the soul is drawn out like a hot spit out of wet wool which sticks to it, and is wrapped in sakkeloth, smelling fetidly; and its name is written in hell (stijin); and it is violently thrown down upon the earth, to be examined by the angels of the grave, as will be described later.

Meanwhile the body is treated with a ceremonial which varies little in different parts of the Muslim world, and is nearly the same for men and women. Practica for most of the ritual are traced to traditions of the Prophet; but two customs—the wailing of women and the recital of praises of the dead—are observed in direct defiance of his command. The dying man is turned to face the gilda, or direction of Mecca, and, as soon his eyes are closed in death, the surrounding men ejaculate pious formulas and the women raise cries of lamentation (waulata), the family calling upon their servants, 'O my misfortune!' 'O my misfortune! The clothes of the deceased are instantly changed, his jaw bound, and his legs tied; and he is covered with a sheet. Women, friends, and sometimes professional mourners (qadiqat, dabbur), join the mourners and cry, 'Alas for him!' If he was one of the 'ulama of Cairo or some man of mark, his death would be announced from the minarets in the call known as the Aqdis (from Qur. xxvii. 5-9). The lamentations go on all night, if the death occurred in the evening, and a recitation of the Qur'an by hired figis takes place; but, if the death occurred in the morning, the burial follows on the same day, as, in addition to the rapid decomposition of bodies in hot climates, there is often a superstitions dread of keeping a corpse all night in the house. The washing of the dead is done by a professional washer (muhassal or ghassal), male or female according to the case, who brings a bench and bier, and does the work, often in a courtyard, with much reverence and decency, and with care in the disposal of the water, which people fear to touch; while the figis continue chanting in the next room. After a very elaborate washing, the nose and other orifices are stuffed with cotton, and the corpse is sprinkled with camphor, rosewater, and loti leaves (nale), the feet tied together and hands laid on breast, and the grave clothes (kafan) put on according to precise rules. Those vary from two or three pieces of cotton (or five for a woman), or a mere sack, in the case of the poor, to a series of layers of muslin, cotton, silk, and a kaffan of shawl, amongst the wealthy and the rich, and vary in different hands. Women usually have a long shift (yatal) added, and in India a cowl (demani). White and green are the favourite colours for the kafan, or any colour but black, but white alone is allowed in India. A shawl is thrown over the body when placed on the bier (jannah or sana). There is no coffin, and, of course, no priest.

The funeral or procession varies in different countries. In Asia, women do not attend as a rule, but they do in Bukhara. In Egypt the cortège is often preceded by half a dozen poor men (yamaniya), blind by preference, walking in pairs and chanting the Kalima. After them come the male friends and relations, and perhaps some darwishes, especially if the deceased belonged to a darwish order. A few schoolboys follow, carrying a Qur'an on a desk, and chanting lively verses on the Day of Judgment and similar topics. This is known as the 'ulama. Then comes the bier which the women and children has a post (shahid) at the head, covered with a shawl, and often adorned with gold ornaments, or, in the case of a boy, surmounted by a turban, carried head foremost at a brisk pace by friends, who relieve each other in transferring the bier from one passer-by to lend a hand or to follow the bier; and the Prophet made a point of always standing up when a bier was passing, and saying a prayer. The women walk behind the bier, with dishevelled hair, and relations, and perhaps some darwishes, especially if the deceased belonged to a darwish order. Rich people add camels to the procession, and hire figis to chant chapters of the Qur'an on the march, or members of religious orders carrying flags, and also sacrifice (al-kuffa) a buffalo at the tomb for the benefit of the poor; whilst ladies riding the high ass often follow their female relations. If it be a saint (wali) who is being buried, the women raise joy-cries (yanhratir) instead of the wailings, and, if the Boyd stops too; for saints are believed to be willful and able to stop their bearers, and even to direct them to where they prefer to be buried. It is said to be useless to try to rush a saint's bier in a direction he does not like, but the somewhat by-passing device of turning the bier round rapidly several times has been found successful in confusing the corpse's sense of orientation (Lane, Mod. Eg. p. 518).

The ceremony at the mosque consists in laying the bier on the floor, right side towards Mecca, when a service of prayer is recited by an imam and his attendant musallah in the presence of the congregation of mourners and all who choose to attend, ranged in a prescribed order, ending with an appeal to the audience: 'Give your testimony concerning him,' and their reply: 'He was of the righteou's.' The figis may then recite the Fikhia, etc., and the funeral goes on to the graveyard.

There a tomb has been prepared, of ample size, with an arched roof, so that the corpse may sit up at ease to answer the interrogation of the examining angels, Munkar and Nakir, who will enter the tomb to ask him as to his orthodoxy. If the replies are satisfactory, the grave will be enlarged to him, and a man with a beautiful countenance will appear to tell him: 'I am thy good deeds'; otherwise, a hideous face comes to represent
his evil deeds, and painful experiences ensue. The fear of 'the torment of the grave' is very real among Muslims.

The construction of tombs varies in different places, and no one pattern can be indicated. In Egypt, the entrance is at the foot, the side furthest from Mecca, and the tomb is often made to hold several bodies; but, if they are of opposite sexes, a partition is set up. Over the tomb is an oblong stone slab or brick monument (turkīya), with an upright stone (shahidī) at head and foot. The inscription is on that at the head, which is often carved with a turban. A small chapel covered with a cupola is frequently built over the tombs of saints and other distinguished people, while the tomb-mosques of sultans and amirs are often beautiful examples of Saracenic art.

The body is lifted out of the bier and laid in the tomb, on its right side, with the face towards Mecca, propped in that position by bricks. Its hands are usually placed in a Khandar or revel rent, lest it should tempt grave-robbers, a little earth is sprinkled, ch. ex., of the Qur'ān, or xx. 55, is recited (but this was forbidden by the Wāhilīṣ and others), and the entrance is closed. There is no second funeral, but the shroud is spread over the deceased (unless the burial be of a Mālikī), a figia, in the character of μαλώτγην, or tutor of the dead, sits before the tomb and tells the defunct the five correct answers to be given to the examining angels that night (the 'Ma'ât of Desolation,' Lawlat al-wundūla) when they come and ask him his catechism: he must reply that his God is Allāh, his prophet Muhammad, his religion Islām, his Bible the Qur'ān, and his gībga the Ka'ba.

The grave is left in solitude and the mourners depart, leaving a defunct and another for all the dead in the cemetery. Some figia take a repast in the room where the deceased died and recite ch. lvii. of the Qur'ān, or perform the more elaborate ritual called the Subba, 'Rosary,' in which a virgin thousand heads is used to count the thousands of repetitions of the Kālimah and the hundreds of other formule repeated. This performance ends with one of the figia asking the others: 'Have ye transferred [the merit of what ye have recited to the deceased?'] and their answer: 'We have transferred it.'

Wailing is resumed by the women on the Thursdays of the first three weeks after the burial, and the men receive friends of the deceased in the home of the bereaved and here to perform a Duty of the Qur'ān; and on the Fridays following these three Thursdays the women visit the tomb and go through various rites, including the plucking of a broken palm branch on the tomb and giving food to the poor; and the same is done on the Thursdays and Friday completing or following the forty days after the funeral. Men do not display mourning in their dress, but women dye their veils and other garments are done and sometimes smearing the walls of their rooms, and even stain their hands and arms with the same indigo dye. They also disarray their hair, and the furniture and carpets are upset in mourning for the head of the house.

DEATH AND DISPOSAL OF THE DEAD (Parsi).—1. Before death.—When death approaches, one or two priests are summoned to make the dying person confess his sins. The Paṭet, or confession of sins, is recited for his benefit, and it is a meritorious act if he is able to join the priest in repeating the confession. According to the Süd Dār (xiv.), the man who accomplishes repentance does not go to hell, but, having received his punishment at the end of the Chinvat bridge, is led to his place in heaven.

In a case of urgency the short Ashem-Vohū (Ys. xxvii. 14) formula may suffice, and the Hākhtī Naak fragment (xxi. 14) attributes a special value to the recital of Ashem-Vohū in the last moments of life. The Süd Dār adds (lxxix. 11) that it brings one who has deserved hell to the Hannistolān (the 'ever stationary' region between heaven and hell) of which is reserved the Hannistolān to heaven; and one who has deserved heaven to the highest paradise. The tāwās-perētha, after whose death the spnaman, 'waiting,' 'mourniNG,' of the relatives must be prolonged beyond the usual period of time (unless the deceased has been devoted as one who has died without Paṭet and without Ashem-Vohū. Sometimes a few drops of the consecrated kumāna juice mingled with water are poured, if possible, into the mouth of the dying person, and the corpse is kept in irons, or kept for a time in an ironed tomb, in order to bring it nearer immortality. Formerly this custom was more common; and it was also usual to drop into the mouth of the dying person a few grains of pomegranate, belonging to the holy ceremonies of the Parsi sacrifice.

2. Death.—According to Vend. v. 10, the ancient Zarathushtrians had special chambers or buildings (katā) for the dead—one for men, one for women, and one for children—in every house or in every village, and the common mortuary still exists amongst the Zarathushtrians of Persia and in the Mofussil towns of Gujārāt. In Bombay and other parts of India a special place in the house is prepared beforehand, and washed, before the defunct receive the dead body. The body is bathed all over and covered with a clean, but worn-out, white suit of cotton clothes, which must be destroyed and never used again after having served for this purpose (et. Vend. vii. 12), and the Soul is carried by a man to the Vampire of the Vampire of the ch. 88: 23-25). The corpse is placed on the ground on a clean white sheet. Two relatives sit by his side keeping themselves in contact with him—a custom probably derived, like the painna (see below) held by the watchers and the bearers of the corpse, from the idea of forming a bridge or a way for the soul. An Ashem-Vohū is recited close to the dead man's ear.

3. Impurity of the corpse.—The corpse is now supposed to be assailed by the corpse-omen, the Druj Naam. According to Vend. vii. 1—5, the druj of the corpse rushes on the body from the north, in the shape of a fly, before the death in a case of natural death. But in a case of violent death (by dogs, or by the wolf, by the sorcerer, by an enemy, or by the hand of man, by falling from a mountain, by strangling oneself, or by treachery), the demon comes only in the qah (one of the five divisions of the day) that follows after death. Only special despised officials, set apart for that purpose, are allowed actually to touch the body, and they must scrupulously observe certain precautions. If the corpse happens to touch it, the contagion spreads to him, and he must undergo the great purification, barr-
askim, for nine days (being washed with the urine of the cow, etc. [Vend. ix.]). The glance of a dog (see below) or other animal is considered to be particularly effective for driving away the corpse-demon.

In theory the old tabu ideas concerning the dead have been modified in a characteristic manner by the Avestan dualism. Thus, since the death of a Mazdaian implies a victory of the Evil Power, his body is unclean, but the corpse of an unbeliever, sacer, because his death favours the cause of Ahura Mazda, and a wicked man defiles only during his life, not after his death (Vend. v. 36-38).

4. Isolation of the corpse.—The place of the two relatives waiting on the body is next taken by the naus-khahs of the Avesta, now called khāndhya (‘shoulder-men’) by the Parsis of India. Two of those funeral-servants prepare themselves by washing and by putting on clean suits of clothes and themselves ritually separated citing the Sōsh-bāy (on which see Darmesteter, Le Zend-Avesta, ii. 686-688) up to the word ashak̄e. They then enter the room where the dead body is placed, keeping between them a piece of cloth or cotton tape—wāriservand—and cover the body with cloth except the face—which, however, in some parts of Gujarāt is also covered—with a padān (the patidāna of the Avesta, a piece of white cotton stuff which the Parsi priest holds between his mouth and nose, not to defile the sacred fire and the other pure things). Then the two khāndhyas lift the corpse on to slabs of stone placed in a corner of the room, its arms being folded across the chest. The face must not be turned to the north, while the demons proceed. In some districts of Gujarāt the old Avestan rule (Vend. viii. 8) is still observed of laying the body on a thin layer of sand in a cavity dug in the ground five inches deep, while in Zend the corpse, after being lifted from the bier in the common mortuary, is placed on a raised platform of mud paved with stone, about nine feet long and four feet wide (Jackson, Persia, p. 391). The place in which the body is deposited is ritually separated from connexion with the living by three deep circles, kosha, drawn with a metallic bar or nail by one of the two khāndhyas, who afterwards leave the house, still making paivand, and finish the Sōsh-bāy.

5. The sag-did.—If possible, ‘a four-eyed’ (catu-rinācaka) dog, i.e. a dog with two eye-like spots above the eyes, is now brought near the corpse in order to frighten the drū by his look, i.e. the sag-did (‘dog gaze’) is arranged. According to Zend, viii. 14-18 seem not to be observed nowadays, namely, that a yellow four-eyed or a white dog with yellow ears must be led three times if he walks willingly, six or nine times if he is unwilling, along the road where a man or a dog is carried, in order to scare away the corpse-demon. In Zend the ordinary street-dog is used, and ‘morsels of bread are strewn around the corpse, or, according to the older usage, laid on the bosom of the dead, and then the corpse’ (Jackson, op. cit. p. 381). Immediately before entering the dakhma (‘tower of silence’), the dead body is once more exposed to the sag-did. The demon-expelling glance is attributed by Zend. vii. 3, 28 ff., viii. 36, not only to the dog, but to ‘the flesh-eating birds’ as well as to ‘the flesh-eating dogs.’

These passages evidently refer to the moment when the animals, to which the body is exposed, rush on it to devour it; but the eminent Parsi scholar J. J. Modi, to whom we principally owe our knowledge of the actual funeral ceremonies of the Parsis, interprets Zend. viii. 3 in the following way: ‘It is enjoined that a dog is not permitted and frankincense and of flesh-devouring birds like the crows and vultures should be allowed, that is to say, it will do if a dog should happen to pass and see the corpse from above or if the flesh-eating birds fly in that direction’ (JASB ii. 414).

6. Demon-frightening fire.—We return to the mortuary room, where, after the first sag-did, the demon-killing fire (Vend. viii. 80) is brought and fed with fragments of grease and frankincense, and where, until the body is removed, a priest recites the Avesta, keeping himself, as well as every other person, at least three paces from the dead body (Vend. ii. 7).

7. Time of removal.—The removal of the body must take place in the daytime, in order to expose it to the sun (Vend. v. 13). In ancient times the corpse might lie in the special mortuaries as long as one month or even until the next spring (Vend. viii. 12). Now in India, the body is removed the next morning, if death takes place early in the night; if a person dies late at night or early in the morning, the body is removed in the evening. In case of death by accident the body may wait longer.

8. Removal. Two ‘corpse-bearers’ (naus-sibis), clothed in white, with ‘hand-cover’ (dustān) on their hands, and making paivand, enter the house (without one hand touching the sacred fire and the other pure things) Then the two khāndhyas lift the corpse on to slabs of stone placed in a corner of the room, its arms being folded across the chest. The face must not be turned to the north, while the demons proceed. In some districts of Gujarāt the old Avestan rule (Vend. viii. 8) is still observed of laying the body on a thin layer of sand in a cavity dug in the ground five inches deep, while in Zend the corpse, after being lifted from the bier in the common mortuary, is placed on a raised platform of mud paved with stone, about nine feet long and four feet wide (Jackson, Persia, p. 391). The place in which the body is deposited is ritually separated from connexion with the living by three deep circles, kosha, drawn with a metallic bar or nail by one of the two khāndhyas, who afterwards leave the house, still making paivand, and finish the Sōsh-bāy.

5. The sag-did.—If possible, ‘a four-eyed’ (catu-rinācaka) dog, i.e. a dog with two eye-like spots above the eyes, is now brought near the corpse in order to frighten the drū by his look, i.e. the sag-did (‘dog gaze’) is arranged. According to Zend, viii. 14-18 seem not to be observed nowadays, namely, that a yellow four-eyed or a white dog with yellow ears must be led three times if he walks willingly, six or nine times if he is unwilling, along the road where a man or a dog is carried, in order to scare away the corpse-demon. In Zend the ordinary street-dog is used, and ‘morsels of bread are strewn around the corpse, or, according to the older usage, laid on the bosom of the dead, and then the corpse’ (Jackson, op. cit. p. 381). Immediately before entering the dakhma (‘tower of silence’), the dead body is once more exposed to the sag-did. The demon-expelling glance is attributed by Zend. vii. 3, 28 ff., viii. 36, not only to the dog, but to ‘the flesh-eating birds’ as well as to ‘the flesh-eating dogs.’

These passages evidently refer to the moment when the animals, to which the body is exposed, rush on it to devour
DEATH AND DISPOSAL OF THE DEAD (Parsi)

11. Dakhimas.—Special constructions or towers (dakhimas), for exposing the corpses, are well known to the Avesta. They constitute the most awful and impure spots on the earth, and if possible it is one of the greatest merits to demolish them when they have served their purpose, and thus restore the ground to cultivation (Vend. iii. 13, vii. 40–58). The construction of the actual 'towers of silence' used to be accompanied by a series of religious ceremonies, the consecration lasting three days (Menant, Les Parsis, Paris, 1898, pp. 206–235, with plans and illustrations).

12. Dispersion of processions.—At every dakhma a kind of chapter (sūrah) is read over the impure corpses. The priests then carry them with painted faces, dressed in their usual clothes (Vend. viii. 10), but the so-called 'clothes of dakhma', open its gate, which is closed with an iron lock, lift the body, carry it into the tower, place the bones in the sarcophagus (the auspicious quarter) on one of the beds of stone (keš) arranged in concentric circles, rising like an amphitheatre, which are intended for receiving the bodies. These circles are separated by canals (a word which seems to be used of the sections divided by the canals). They remove the clothes from the corpse, leaving it naked (Vend. vi. 51), and cast them into the central well, forming the middle of the tower, and surrounded by the amphitheatre-like circles of stone beds. The naked corpse may be left 'on the earth, on clay, bricks, and stone and mortar.' They bury their dead in the earth, but, if there is none, the corpse is left in the clay or is exposed on a stone bed.

13. Ceremonies at home.—At home, immediately after the removal of the body, urine of the cow (nirang) is sprinkled over the shroud of stone or earth which the corpse was covered with. It is customary to open the doors into the house by which it was carried out of the house. All clothes, utensils, and other articles of furniture must be cleansed, principally by the same means—gōmez (urine of the cow) and water—or rejected altogether. If they have come into contact with the dead body, after the removal of the body, all the members of the family are required to take a bath.

In an ancient Iranian province, Harōva (Harat), the present residence of the Parsees, a passage in Le voyage en Perse, Amst. 1755, iii. 109, of abandoning the house to the dead, seems to have prevailed according to the vih-khrazēna of Vend. i. 9 (cf. N. Soderblom, RHE xxix. [1899] 256 ff.). The Great Bundahshah, according to the following Avesta text (pp. 234–35, note 34): 'They abandon the house and go away during nine days or a month' (Darmesteter, op. cit. p. 9, note 28). It may be that upamnā, 'waiting' (Vend. v. 41) originally meant a temporary abandoning of the house. At present, in Bombay, all the members of the family have to take a bath after the removal of the body, and fragrant fire is burnt on the spot where the corpse was laid. During nine days in winter and one month in summer a lamp is kept burning on the same spot, and no one is allowed to go near it during that period. After its expiry the whole room is washed. The members of the family and also near friends abstain from meat during three days after the death.

14. Recent opposition.—In some circles of Parsis society the question of introducing a more hygienic
and less savage manner of disposing of the dead has of late been very eagerly agitated. Both burning and burying being prohibited because of the purity of fire and earth, it has been proposed to consume the corpse by electricity, and the excessive cost has been discussed. Whether such a method can be considered as burning or not. No change has been officially permitted as yet in the disposal of the dead, which shows the tenacity of customs, and maintains continuity with an inmemorial antiquity.

NATHAN SÖDERBLOM.

15. Ancient Persian rites.—In ancient Persia, before the spread of Zoroastrianism, the means of disposal of the dead were quite different from those observed by the adherents of the great Iranian religious leader. Attention has already been called, in § 10, to the Baetican custom of leaving the sick and the aged to be devoured by dogs or to be burned (see secs. 21, 22). The Persians interred the dead body after coating it with wax (εκπλήκτων ὁ δὲ τῶν ἀνθρώπων γι' κρύσταλλο). It was, therefore, rank blasphemy (οὐκ εἰσία) when Cambyses ordered the corpse of Ammisad to be cremated (Herodotus, 11. 16). It is very doubtful whether any credence can be given to Xenophon's account (Cyr. p. 25) of the request of the dying Cyrus.—Put my body, my children, when I die, neither in gold nor in silver nor in anything else, but cast it to the earth, as soon as may be (τῇ γῇ ὡς τῇ ἀκλανθίᾳ). What for more is blessed than this, to be mingled with the earth (γῆ μεθοδεύσα)?—since this last phrase would seem to exclude any coating of the body with wax. Equal suspicion seems to attach to Xenophon's story (ib. vii. 3) of the death of Abra- dates, for whom a grave was prepared, and whose dead head was held on her lap by her wife, whose corpse, after her suicide, and his were both exposed by a course held in the household. Ctesias, however, who is much more reliable than his ancient contemporaries would allow, may be right when he states (Pers. 59) that Parysatis buried the head and right hand of Cyrus the Younger, for here the wax coating may perhaps have been employed.

Unfortunately, our sole information on this subject must thus far be gleaned from the meagre statements of the classics. If we may judge from the tombs of the Achemenians, their bodies were not exposed as Zoroastrianism dictated; but it is by no means impossible that they were coated with wax, or even, as Jackson suggests (Persis Past and Present, p. 285), 'perhaps enamel, clothed the Egyptian of Egypt unlikewise, their bodies. According to Arrian (Anab. vi. xxix. 4-11), the body (νῦμα) of Cyrus was laid in a coffin of gold (πλατίναν χρυσήν; cf. Jackson, loc. cit. and p. 304 f., for further references).

Cyrus goes through a change, when Persia, definitely became Zoroastrian. In his account of the obsequies of Memeretes (v J.D. 554), Agathias (Hist. i. xix. 22) recognizes only the usage of the Avesta (with the addition of the exposure of the sick while still living), and he expressly says that the Persians could not place the dead in a coffin (θήκη) or urn (δομα), or bury in the earth (τῇ γῇ κατανυκτονον; and the 5th cent. Sasanian monarch Kavad demanded, though without success, that the Christian Iberian ruler Gurgesh should adopt the Persian custom of exposing the dead to birds and dogs, instead of burying them (Procopius, de Bell. Pers. i. 42).

DEATH AND DISPOSAL OF THE DEAD (Roman).—As in other lands and in other times, so also among the ancient Romans the customs attendant upon death and burial varied so considerably according to wealth, rank, occupation, nationality, religion, place, and period that no single succession of circumstances may be taken as typical, and great caution must be exercised in dealing with the scattered and fragmentary evidence upon the subject, in order to avoid confusing the particular with the universal. Even confining to one period the customs peculiar to another.

The greater part of our evidence having to do with the upper classes during the late Republic and early Empire, it will be best to speak of it as a nucleus upon which to build up an account of burial customs in general, a typical instance of the death and burial of a Roman grandee of the 1st cent. of the Empire.

As the months passed he, the assembled relatives loudly and repeatedly called out his name in the conlamentatio—a more or less formal expression of grief which is probably reminiscent of primitive attempts to wake the dead back to life; and perhaps the next day a kiss of kisses is exchanged and preserved in the family line the last breath. After the formal announcement 'conlamentum est,' the eyes are closed, and the usual bathing and anointing, perhaps embalming, take place, performed by a priest of the household, or by the professional libitinarius or pollutrix. The body is composed, arrayed in the toga—the full dress of antiquity—ornamented with all the insignia won during the dead man's career, and placed in state on the lectus funeris in the atrium, or main chamber of the house, with the feet towards the street-door. There are also flowers, coronam of honour, and burning censers supported on cande- labra. Near by are attendants, among them being sometimes the ancestors as masks, who hasten to keep the funeral wall. These details may be seen in the Lateran Museum on the tomb relief of the Haterii, a family of considerable importance during the latter part of the 1st century.) Possibly a coin is placed in the mouth as passage-money across the Styx—a custom always in vogue to some extent. A wax impression of the face is then taken, afterwards to occupy its niche in the aed, a state room of the atrium, along with the masks (imagines) of the ancestral line, and to be supplied with the appropriate inscription, or titulus, recording the name, years, offices, and deeds of the dead. Outside, the fact of death is made known, and the proper safeguard taken against chance religious or social impurity, by the hanging of a express or pine-branch at the entrance of the house.

In due time, which in ordinary cases is as soon as arrangements can be made, and in funerals of state from three to seven days, the last ceremonies take place. The dead man's ghost, as he wanders through the streets announcing its coming occurrence in the ancient formula: 'Olius Quiris leti datus. Esecquius, quibus est commandum, irdam tempus est. Olius ex aestulis effertur' ('This citizen has been given over to his death. His ghost as the one who is to eat may now attend. He is being carried forth from his dwelling'). Under the supervision of the signarius and his attendant lectores, the stately
funeral-train takes form and moves: musicians, and perhaps paid singers; dancers and pantomimists, who jest freely, sometimes impersonating in the isis and ancesence of ears, at times amounting to hundreds (six hundred at the funeral of Marcellus), on which sit actors dressed to impersonate the long line of the dead man's ancestors, wearing their death-masks, now taken from the niches in the cenotaphs and accompanied by lictors, as in life—symbolically conducting the most recent of the family line to take his place with his forefathers in the lower world; a display of the dead man's memorials—trophies, household furnishings, the things of life, of his exploits—after the manner of a triumph; more lictors, with down-pointed fasces, reminiscent of old-time burial by night; and then, high on a funeral ear, the dead himself, with face exposed to the sky, or enclosed in a casket and represented by a realistic figure clad in his clothes and death-mask; the immediate mourners—sons with veiled heads, daughters bareheaded with flowing hair; and finally the general public, not without demonstration. On both sides, as the procession passest in the Roman populace, pressing to the line, and climbing up

To towers and windows, yes, to chimney tops,
to witness what must have been one of the greatest spectacles of all time.

Arrived at the forum, the great centre of civic life, the dead is carried to the Rostra, on which, surrounded by his ghostly ancestry, he lies while his nearest relative delivers over him the laudatio, a formal and often extravagant glorification of the deceased and his family, preserved among the family archives, and whose uncritical use will do so much to falsify or distort Roman history. The procession then forms again, resumes its way, and passes through the city-gate to the tomb, on the outskirts, the starting point at one of the great mausolea, such as that of Augustus, at the north end of the Campus Martius, or in one of the long lines of lots which border the high road. Here the dead, with ornaments, weapons, and other possessions dear in life, together with many memorials brought by friends and relatives, is placed upon an elaborately pyre, to which, with averted face, the nearest relative or friend, or some civic dignitary, applies the torch. As the flames rise to a height and begin to fall, they liberate from his lightly fastened censer an eagle, which soars aloft—the symbol of the spirit of the dead setting out for its home among the immortals. The embers are quenched with water or wine, the final farewell (another consuetudo) is uttered, and all return to the city except the immediate relatives, who collect the ashes of the departed in a napkin, bury the ossuaenum (see below) to preserve the form of earth-burial, perform a purification sacrifice, and partake of the funeral-meal in the family tomb-chapel.

There follow nine days of mourning, on one of which the now dry ashes are enclosed in an urn of marble or metal, and carried by a member of the family, barefooted and unshod, to their final resting-place in the tomb-chamber. At the end of this period, the sacrum novendiale, a feast to the dead, is celebrated at the tomb, and a funeral-banquet is held at the home. Mourning continues ten days from the disposal of the body, and thenceforward the sons and daughters, eight months for other adult relatives, and in the case of children for as many months as they have years. Memorial festivals, which partake of the nature of a communion, are celebrated on the anniversary of the P. Funeris, of All-Souls' Day; again on the birth or burial anniversary; and again at the end of March and May, the Violae and Rosarum, when violets and roses are profusely distributed, lamp lighted in the tomb-chambers, funeral-banquets held, and offerings made to the gods and to the manses, or spirits of the dead.

Such a funeral, though not unfamiliar to the Roman people, is perhaps rather than the rule. The imposing nature of the whole—splendour of its appointments, the dignity of the participants, the impressiveness of the stately train, with its hundreds of impersonated personages and consules, traveling the streets in chariots through offices and thence-far may be compared with the funerals of Italian royalty in modern times, though the latter probably fall short of the magnificence of the ancient ceremony.

The funerals of the Roman nobility were, on the whole, less ostentatious, and most of the upper class, were less ostentatious, and unaccompanied by the laudatio, the display of death-masks, and the paraphernalia of wealth. Children, citizens of the lowest class, and slaves were carried to their last rest without public procession, and with few formalities.

Unlike modern burial-places, the Roman cemeteries were not public communal enclosures set apart by themselves, but were situated along the great highways that led from the city-gates, and took the form of a very long and narrow series of private holdings, whose front, occupied by imposing monuments, bordered immediately on the road. All streets leading from Rome had their tombs, and the bosco sacro, sanctuary also, on the country also, on landed estates, was frequent. Most prominent among the highway cemeteries at Rome were the Via Flaminia and the Via Salaria on the north, the Tiburtina and the Praenestina on the east, the Capua on the south, and the Aurelia on the west. Most magnificent of all was the Appian Way, Regina Vieram, which still displays almost unbroken lines of tomb-runs from its issue at the old Servian Porta Capena to the cenotaph at the Tomb of M. Aemilius, fourteen miles away. Among its two hundred or more larger monuments, displaying great variety of architecture and ornamentation, are to be seen most of the types of the Roman tomb: the mausoleum, round, and probably once with conical summit, copied and named after the tomb of Mausolus, the king of Caria, who died about 351 B.C.; the tumulus, a conical mound heaped over the body or ashes of the dead, also reminiscent of Asia; the tomb above ground; the tomb excavated in rock, and the combination of both, with tomb below and chamber above; the columbarium, for the reception of the cremated dead of burial-associations; the chariots in series called catacombs (q.v.). Burial-lots were marked by boundary stones, inserted with measurements: e.g., 'in fronte p. xvi, in agro p. xxii.' ('frontage, 16 ft., depth, 22 ft.'). Threats and curses were frequently added to safeguard the area and monuments against violation or profanation. The more pretentious areas were great family burial-places, where were laid to rest all the members of a gens, or branch of a gens, including its freedmen and slaves, and sometimes even clients and friends. Such a burial-place might include a generative plot of ground, with an area before the tomb, a garden behind, an atrium, or commemorative, adicule, or shrines with statues of the dead, banquet-room for anniversaries, pavilion, well, and custodian's quarters. The epitaphs, inscribed upon slabs, at the feet of the monument, or on tombstones at the graves of individuals, or near the remains inside the vault, are characterized by great variety of content and expression. Name, parentage, public offices, and an accurate statement of lands and possessions, were given in most of them, without dates of death and birth. A type may be seen in that of Minucia, the daughter of Fundanus, whose death is the subject of Pliny's Ep. v. 10:

M. F. C. M. C. T. M. A. Q. Q. Q. Q. Q.
DEATH AND DISPOSAL OF THE DEAD (Roman)

[To the Departed Spirit [Dis Manibus] of Minucia Marculla, the Daughter of Fundatus, who lived 12 years, 11 months and three days (CIL vii. 1663).]"

A portrait-bust sometimes accompanied the epitaph, and it was not infrequent for the inscription to be in the form of an address to the pass-by from the mouth of the departed, as the quaint archaistic one of Marcellus Collins, which lies by the Appian Way (CIL i. 1906):"

'Hoc est factum monumentum Marcelli Caelicio. Hospe, gratum est eum simulatem et poderalem semen. Bone rem gerante sese; dormine sine qua.'

(This monument is erected to Marcus Caelicilus. Stranger, it gives you hospitality if you have stopped for a resting place. Good fortune attend you, and fare you well; may you sleep without care.)"

Such appeals as this upon stones, the use of portrait-sculpture, and the custom of roadside burial illustrate the Roman yearning for continued participation in the affairs of the living, and an instinctive conviction as to future existence.

Among the lower classes, especially freedmen and the labouring part of the population, a most popular form of tomb was the columbarium, so named because of its resemblance to a dove-cot. Long narrow vaults were either built above ground or excavated in the face of the cliffs, and in these were formed numerous compact rows of niches, each of a size barely large enough to receive an urn containing the ashes of one person, whose identity was made known by a titulus upon a slab below the arch or on the urn itself, sometimes erected by a small portrait-bust. One of these columbaria on the Via Appia, from which three hundred tituli have been preserved, was for the use of the freedmen of Augustus and Livius. Such tombs were sometimes given as benevolences, and sometimes erected by speculators, but it was more usual for them to be constructed, or at least managed, by collegia funeraticia, co-operative funeral associations, which sold stock, assessed regular dues, and paid benefits, thus making their members proper disposition after death. They were administered by curatores, who divided and assigned the space by lot to the shareholders, who might in turn sell their holdings.

The lot of the ordinary slave and the very poorest class of citizens was less fortunate. Outside the line of the Servian Wall, where it crossed the plateau of the Esquiline, there existed, down to the time of Horace (when it was capped with chalk and placed in the Gardens of Macceneius), a great burial-ground which might be called the 'potter's field' of Rome. Here, as shown by excavations made from 1872 onwards, was an area of irregular dimensions extending a mile or more along the wall, from near the present railway-station on the north-east to the Lateran on the south-east, which had served as a necropolis from time immemorial, and was the burial-ground to which Horace made reference in Sat. i. viii. 8-16:

"Hinc prius auguris electa cadaver cellis
Conservus vix portanda locatam in area:
Hinc postrema plaes stabat communem sepulchrum,
Pantalochea severa Nemenosaeque repetit.
Hinc melius fuisset si favebat in agrum
Hic datat, heredes monumentum se superans.
Nunc lectum Esquiliar habebant subrubris, atque
Accres in apice saevi, quo modis tristes
Aliae informas spectabant ossibus agrum!"

('Ubi prius auguris electa cella communis, to carry in their cheap coffins the dead sent forth from their narrow dwellings; here lay the common sepulchre of the wretched palaes, for Pantalochea was a Nemenosae Severa and the walls of her city were but a mile and a half distant; the three hundred feet deep were the limits; the monument not to follow the hearse. To-day you may dwell on a healthy Esquiline, and take walks on the sunny slope, where but now your and gaze rested upon a field ugly with whitening tombs.

The reference in the above lines to the cheap coffins, the slave hireling, the contrast between the gloomy bone-strewed Esquiline of former days and the healthful gardens of the present, and the sarcophagus allusion to the cippus as the one monument of a whole city of wretched poor constitute an eloquent comment on the mortuary destiny of the lowest-class, though to interpret literally the poet's mention of whitening tombs is unnecessary. Excavations have revealed pit-graves 13 to 16 ft. square and of great depth, in which the bodies of the criminal and otherwise unfortunate were deposed one above the other, unbarred, and with little regard massed.

Cremation and inhumation existed side by side throughout the pagan period. The earliest cemeteries—the lowest stratum of that on the Esquiline, and the necropolis recently (1902) excavated on the Sacred Way near the Forum—contain both ordinary urns and sarcophagi, the latter being sometimes made of hollowed tree-trunks. The later strata on the Esquiline also contain both. The Cornelian gens led to earth-burial until Sulla chose cremation as a measure of safety. The tomb-chambers of the Scipios, a branch of the Cornelian gens, on the Appian Way inside the Wall of Aurelianus, were filled with sarcophagi containing unburned dead; and in many large tombs the heads of the families were laid away in sarcophagi, while the cremated remains of their freedmen and the humbler members of the household were deposited about them in the same chamber. Inhumation, as the cheaper and more natural method, seems to have been accompanied by cremation; even in Augustan times, when cremation was as nearly universal as it ever became, it was the custom to perform at least a symbolic burial of the body by the interment of a small part of it, the ossa resecta, usually a joint of the little finger.

The foregoing account of death and burial has to do principally with the 1st cent. A.D. and with the city of Rome. Naturally, there were variations in detail before and after this period; e.g. burial by night was the rule of earlier times, and was prescribed again by Julian, on the ground of inconvenience to urban business caused by diurnal rites; the cemeteries of the earliest times were less distant from the heart of the city, by reason of the lesser care of the primitive city, whose each successive fortification carrying the line of tombs farther out because of the law forbidding burial within the city limit; there was less of both display and poverty before the rise of the Empire; cenotaphs were the normal practice of governing the city from the first centuries of the city; the employment of chambers and galleries excavated in the bed of the Campagna, long known on a small scale, grew much more general and extensive after the rise of Christian Rome, developing into the great communal burying places called catacombs; cremation died out because of its expensiveness and the influence of belief in the resurrection. As to other cities, practice there was essentially the same as at Rome; and in small towns of the country a great deal of conservatism no doubt obtained, manifest in the retention of customs long after they had gone out in the capital.

All periods of Roman burial, however, are united by the belief in the continued existence of the dead, and in their ghostly participation in the life of the family and community, and by the consequent scrupulous care about proper burial, and the maintenance of relics and niches for the spirits of dead ancestors. The quick and the dead of ancient Rome were in a more than usually intimate communion.

DEATH AND DISPOSAL OF THE DEAD (Slavic).—The subject of death and the disposal of the dead, so far as the Slavic peoples are concerned, was discussed with considerable fulness in the art. ARYAN RELIGION, vol. ii. p. 113 ff. It cannot be doubted that the primitive conditions in this particular phase of human life, though modified somewhat by the extent to which primitive thought and practice, have been maintained most faithfully among the peoples in question, and it was therefore quite natural that the writer of that article should begin his discussion from the east, in that, namely, that, by comparing these with the corresponding phenomena among the linguistically allied races, viz. the Indian, Iranian, Greek, Roman, Celtic, Teutonic, and Lithuanian, he might carry his investigation back to the so-called Aryan period. There is consequently no need to cover the same ground again, but it may not be out of place to record here such facts as have emerged, or have come to the writer's knowledge, since the appearance of that article referred to above, which was written in 1913. We shall arrange these fresh data under five heads.

1. Burial and burning of the corpse (cf. ARYAN RELIGION, vol. ii. p. 161.).—In the early historical period, as was shown in the passage cited, both of these methods were in use simultaneously—among the Slavs, and, as recent archaeological investigations show, they prevailed also in the pre-historic age. With reference to burial, there has recently come to light a most remarkable case, which was discovered over the chest, among the skeletons of the southern Russian in regard to the practice of constructing the tomb in the form of a hut. At Leubingen, a station on the railway from Erfurt (Thuringia) to Sangerhausen, and not far from Sommersdorf, there is a now celebrated square mounded mound, which has been excavated by Prof. Klopilewich, a long-recognized pioneer in the study of primitive history. Near Helmsdorf, again, a village at no great distance from Leubingen, in the so-called Mansfeld Seekreis, another mound, similar in many respects to that at Leubingen, was recently opened (cf. P. Hörner, in Jahnschr. f. d. Vorgesch. d. sachs.-thüring. Landes, v. [Halle, 1908]; and H. Grosser, ib. vi. [1907]). In each case the bodies lay upon a flooring of wood, and in that near Helmsdorf in a bed-shaped chest of hewn timber) had been placed over a natural wooden hut of excellent workmanship, with a steep roof, the posts fixed in roundish holes at the head and feet of the skeleton, but outside the box in which it lay. The post supported a beam, which had branches leaning against it on either side, so forming a kind of shelf or table. In each case again, were covered with reeds. Upon the roof-beam stood a number of pots upside down, and also a badly-weathered quartz of sandstone. Above these was a layer of ashes, containing a cow's head, four cow's legs, a large pot with a dimpled ornamentation at its neck and a perforated bottom, incinerated bones, and a whetstone. As bearing upon the primitive history of Russia, and even of Europe, however, these discoveries are not now unsuperseded in importance. A more surprising, almost identical creations are found in great profusion in the Russian kurgans, i.e., the sepulchral mounds which lend a picturesque variety to the monotonous picture of the Steppes in the districts to the north of the Black Sea. These creations are met with, moreover, not only in the kurgans con-
DEATH AND DISPOSAL OF THE DEAD (Tibetan).—In Tibet, death is regarded as the work of the death-demon, who has accordingly to be exorcised from the house and locality. The ceremonies at death and the methods of disposal of the body are almost entirely of a pre-Buddhist or Bon character, although now conducted for the most part by modern Buddhist priests. Besides the Tibetans believe that the soul lives after the death of the body, but the future life desired by the people is not the Buddhist one of a higher earthly re-birth or the arhat-ship of Nirvana or 'Buddhidelight' (Buddhistic salvation). They desire the new life to be in an everlasting paradise, which is now identified with the Western Paradise of Buddha Amitabha of the later Indian Buddhists. The object of the death-rival, therefore, is, firstly, to secure the due passage of the body into the paradise of the deceased and, secondly, to safeguard the earthly survivors against harm from the death-demon, as well as from the spirit of the deceased in the event of its failing to reach paradise and so becoming a malignant ghost.

Formerly, so late as the 8th cent. A.D., human sacrifices were made on the death of kings and nobles. Five or six chosen friends from amongst their officers were styled 'companions,' and killed themselves on the death of their master, so as to accompany him to paradise, and their bodies were buried alongside of his. The crests of the hills were crowned by such sepulchral mounds, as in China and amongst the Turkei tribes. Beside the body were buried the clothes and valuables of the deceased, his bow, sword, and other weapons, and his favourite horse; and a tumulus of earth was thrown up over all. Animal-sacrifice seems also to have been practised, as is shown by dough-efigies of animals which are offered as part of the sacrificial rites by the hands of Buddhist monks, who now perform the popular death-rites, and by their religion are prohibited from taking life (J. A. Waddell, The Legends of Tibet, p. 518).

r. Extraction of the soul.—On the physical death of a person, Tibetans believe that the spirit does not depart forthwith, but continues to linger within the corpse for a varying period, which may extend to four days, after the cessation of the heart and
breath. In order to secure the release of the spirit in that direction in which it has the greatest chance of reaching paradise, the services of an expert priest are necessary.

When death occurs, no layman is allowed to touch the body. A white cloth is thrown over the face of the corpse, and a priest is sent for to extract the soul in the orthodox manner. This priest is one of the higher monks, and bears the title of The Mover or Shifter (prâ-a-bo). On his arrival in the death-chamber, all relatives and others are excluded, and the priest, closing the doors and windows, sits near the head of the corpse and chants the directions for the soul to find its way to the Way and Paradise. As the thumb of the priest is pressed through the pores of the dead body, he pronounces it in scriptural language, as in deep meditation.

2. Handling the corpse.—All persons are tabooed from touching a corpse (ro), except those who belong to the father's family or those indicated by the astrologer-lama as proper persons to perform the rite. This document also prescribes the most auspicious date for the funeral and the mode and place of disposal of the body, as well as the worship to be performed for the soul of the deceased and for the welfare of the surviving relatives.

The persons who may ordinarily handle a corpse must be children by the same father as deceased (p'ra-spons), though in Lhasa and large towns with many strangers the professional scavengers may do this work. In rural communities, when a man has no paternal relatives of his own, he procures admission into the family of a friend for such funeral purposes as official mourner by giving a dinner to announce the fact. The persons so authorized then approach the newly-dead, who cast up into a crouching attitude, tie it in this posture, with the face between the knees and the hands under the legs. If rigor mortis be present, bones may be broken during the process. The attitude of the body resembles that found in some of the early sepultures, and is probably a survival of the prehistoric period. It ensures portability of the corpse.

When tied up in the proper attitude, the body is covered with some of the clothes of the deceased, put inside a sack made of hide, tent-cloth, or blanket, and removed from the room to the chapel of the house (where there is one) as a mortuary, and placed in a court yard. A sheet or curtain is stretched in front of the sack as a screen, and all laymen retire. Where the body has to be kept a long time for climatic or other reasons, it may be slung up to the rafters.

3. Pre-funeral rites.—Priests remain in relays during the night chanting services near the corpse until it is removed. The head priest sits near the screen, with his back to the corpse; the other priests face him, and all read extracts from the Buddhist scriptures, often from different books at the same time. Libations (from 5 to 108, according to the means of the deceased), are poured by the relatives in another room, and offerings of food and drink to the deceased. His bowl is kept filled with tea or beer, and he is offered a share of whatever food is going; and such drink and food as are offered are afterwards thrown away, as it is believed that their essence has been abstracted by the soul of the departed, during the chanting of the funeral rite and in the Indian Buddhist practice of evakramana, based upon the Brahmanical rite of śrāddha.

Before the funeral the guests, after libations, partake in solemn silence of cake and wine within the house in which the corpse is lying; but after the latter is removed, no one will eat or drink in that house for a month.

4. Funeral procession.—This occurs on the auspicious day and hour fixed for it by the astrologer. The relation of the soul to its body is now quitted and the body given up to its earthly property, the priest seizes with his forefinger and thumb a few hairs on the crown of the corpse, and, jerking these forcibly, is supposed thereby to make way for the soul of the deceased through the pores of the roots of these hairs, as though actual perforation of the skull had been effected. If, in the process, blood oozes from the nostrils, it is an auspicious sign. The soul is then directed to avoid the fact of death, and on its way, it is said, is hidden God-speed. This ceremony lasts about an hour. When, through accident or otherwise, the body is not forthcoming and the fourth day is expiring, this rite is performed in absentia by the priest blowing it up in spirit whilst seated in deep meditation.

5. Disposal of the body.—The particular mode in which the body is to be disposed of is prescribed by the astrologer-lama. Of the various modes, one only, namely cremation, presents Buddhist features. The methods may be said to be five in number:

1. Consumption of flesh by animals and burial of bones. This, the so-called 'terrestrial method,' is the commonest and obviously the most ancient. It was a custom of the ancient Scythians known to Herodotus; and its practice by the Persians at the present day may also be derived from such a source or from the Turkic tribes. There seems no reason to ascribe it, as has been conjectured, to the influence of those Jataka tales which relate that Sakyamuni in his former births offered his body to feed famished tigers and other animals. Such a practice of disposal of the dead is not recorded in Indian Buddhism, and its present-day practice in Siam and Korea, as well as in Tibet, is obviously a survival of the ancient Scythic and Mongolian custom.

At the cemetery the body is placed face downwards on the rock or slab of stone, divested of its clothes, and tied to a stake. The priest, chanting mantras, scores with a corpse-cutter's knife the flesh and throw it to the vultures and other animals of prey which frequent these cemeteries. In Lhasa dogs and even pigs assist in devouring the corpse. As, however, the cadavers are exposed to the most auspicious, the attendants for a small sum engage to keep off the other less desirable beasts of prey. The rapidity with which the body is devoured is considered of good
omen, and the skull of such a corpse is prized as an auspicious libation-bowl.

The bones of the stripped and dismembered body are then buried, and, if the person be wealthy, a mound or tower is erected over them.

3. Total consumption of flesh and bones by natural animals.—This, the so-called method of the Dead, is much less common, though not infrequent with the richer classes. The bones, stripped of their flesh as above, are not buried, but pounded and mixed with meal, and given to dogs and vultures to consume.

4. Throwing into rivers or without places.—This, the most ignoble method, is the fate of the poorest, as burying entails considerable expense. The body is dragged by a rope like a dead beast. In this way are also disposed the bodies of criminals, those killed by accident, lepers, and sometimes barren women. The skulls of enemies slain in battle are deemed auspicious for drinking goblets.

Cremação.—This mode of disposal of a quasi-Buddhist kind is reserved in Tibet for the bodies of the higher lamas, though, in those districts where wood fuel is more available, it is also used for the laity.

The body is placed on the pyre, seated erect in a devotional attitude, cross-armed like Buddha's image. The soles of the feet are turned upwards, the right hand with palm upwards resting on the flexed thigh, and the left hand is raised in front of the chest with a 'blessing' attitude. In the case of the laity, the face seems customarily to be placed downwards. When the wood is lighted, melted butter is poured over the body, and, when the first limb or bone drops from the body after a few hours, the fire is salted, though some of the relatives remain till the cremation is over. The body is seldom completely reduced to ashes. The ashes and unconsumed relics are removed by the priests to the house of the deceased, and there are divided and mixed with clay to form in a mound miniature votive chaitya medallions called tu's-ta, the dharma kuria relics of Indian Buddhists. These are placed in the niches of the funeral towers known as chatsam, or, if the deceased be rich, a special tower may be erected over them (see art. CHORTEN).

5. Preserving the entire body by embalming.—This mode seems to be restricted to the sovereign Grand Lamas of Lhasa and Tashilhunpo. The body is embalmed, and placed in the robes of the deceased and surrounded by his personal implements of worship, is placed, in the attitude of a seated Buddha, within a gilded copper sarcophagus in one of the rooms of the palace; it is then worshipped in one of the compartments of an altar, and food and water are offered, and lights are kept burning. Eventually it is enclosed in a great gilded chaten, surmounted by a gilt dome, and becomes one of the recognized objects of worship to pilgrims.

With the disposal of the body, the relatives and guests disperse, after a feast given in the open air.

6. Post-funeral obsequies.—The funeral does not end with the cremation. The soul of the deceased is not effectively disposed of until forty-nine days after the death, and the death-demon is also to be expelled from the locality. This latter exorcism is an indigenous Bon rite, and must be performed within a week after the funeral. It is termed the 'Turning away of the Spirit of the Devouring Devil (Za'dre). The demon is represented as of human form, riding upon a tiger; and, in laying the evil spirits, figures of animals moulded in dough are used in the sacrifice. For the final disposal of the soul of the deceased, further priestly services are required weekly until forty-nine days after death. During this period (i.e. 7 x 7 days)

the soul is believed to remain in a purgatory or intermediate stage (bar-do) between death and regeneration, and is assisted onwards by the prayers of the priests. For this a lay effigy of the deceased is made in the house, on the day on which the corpse was removed, by dressing up a bench or box with the clothes of the deceased, and for a face a paper mask is inserted bearing a print of a dead Tibetan. On the fortieth day this service is completed, the paper mask burned, and the clothes given away. The priests receive as presents some valuable articles from the property of the deceased, and a feast concludes the ceremonies.

Mourning is practised chiefly for young people; the old are less lamented. The full term of mourning is about a year, but three or four months is more usual. During this time no coloured clothes are worn, nor is the face of such persons combed; men may shave their heads, and women leave off their jewellery and rosaries. For Grand Lamas the general mourning of the people lasts from a week to a month.

All the places where the bodies are buried or otherwise disposed of are esteemed sacred.

DEATH OF THE GODS.—See Deicide.

DEBAUCHERY (French debauché, 'de, from'; and old Fr. bauche, 'a course', 'a row'), to lead from the straight course; hence 'seduction from duty, 'excessive intemperance, 'habitual lewdness'.—Although individuals who habitually indulge in reckless dissipation are justly regarded as defective in ordinary self-control, and although it might be shown on incontrovertible evidence that no inconceivable proportion of such persons are insane or mentally defective, it would still be preferable to approach this subject from the standpoint of normal psychology in order to trace the nature of the impulses which impel men in the direction of excessive intemperance and lewdness.

to be carried off by his companions. This method of seeking artificial physical excitement bears a singular resemblance to the practices of the heathen races outside of Africa.

Not only are the reunions of savage peoples characterized by intoxication and induced physical and mental excitement, but their religious ceremonials of veneration largely depend upon the induced mental fervour of the minions and audiences. Partridge (A.I.P., Apr. 1900, p. 368) goes so far as to hold that intoxication is one of the most important parts of the religious and social life of primitive man. He says:

"The use of alcoholic beverages arose in connection with the religious social life in the effort to heighten the religious self-consciousness of the initiated as a preparation for the subsequent use of the hallucinogenic drug. The reunions of savage and barbarous peoples are characterized not only by intoxication, but also, frequently, by sexual orgies of a revolting character. Bancroft (Native Races, i. 531) says (quoting Kendall):

"Once a year the Keres have a great feast, prepared for three successive days, during which time is spent in eating, drinking, and dancing... To this case, after dark, repair grown persons of every age and sex, who pass the night in indulgences of the most gross and scandalous description."

The ravenously appetite of certain savages justifies the accusation of gluttny which has been ascribed to them by various authors. The enormous development of the jaw muscles, as well as the protuberance of the alimentary system, is a sufficient indication of their profound and insatiable craving for enormous quantities of food when opportunity offers. A Yakut child, according to Cochrane, devoured at a sitting three cakes, several pounds of sour frozen butter, and a large piece of yellow sheep fat, with the equivalent of twenty-five to forty pounds of meat in a day. Wrangle says each of the Yakuts ate in a day six times as many fish as he could. The Comanches, according to Schoolcraft, eat voraciously after long abstinence, and without any apparent inconvenience (quoted from Spencer's Sociology, i. 45). That debauches are restricted solely through the want of opportunities for prolonging and repeating them is only too apparent from the histories of those savage or barbarous races which entitles them to be included among the remnant of the more unscrupulous representatives of civilization.

Long as alcohol and pleasurable excitement were obtainable, no price was grudged for them until, as a consequence of reckless self-abandonment, the wretched hodonists stood stripped of their possessions, and incapable of resuming their previous methods of life. The wildness of savages, in the majority of instances, for regular or sustained employment of any other kind than that which satisfies their self-centered and selfish appetites, it might be objected that such a generalization is too sweeping, and, moreover, that war and the chase are the only careers open to primitive man. It may be admitted that many members of the so-called inferior races have shown exceptional aptitude for commerce, agriculture, and industry of various kinds; but the history of the emancipated Negroes and of the native Indians in the Reserve Territory of the United States is conclusive proof of the inadaptability of these races, as a whole, for the role of civilization in which sustained and regular labour is the active and most important element. In these races labour is lifeful and distasteful, and alternates with long spells of inactivity and unproductiveness.

From the foregoing statements it is evident that among the members of uncivilized communities certain anti-social defects, which are hostile to the progress of civilization, are extremely prevalent. These defects may be summed up as: (1) a craving for intense mental states, which is most easily gratified by induced excitement, by alcohol or other drugs, by sexual excitement, or by the appetite for food; (2) an inability or, at any rate, a strong disinclination for sustained mental or physical exertion. The representative anti-social elements in a modern civilized community may be regarded as the legitimate survivals of that of their ancestors. They all manifest the same strong craving for intense mental states, which can be fully gratified only by the greater forms of dissipation, while they also exhibit the natural disinclination for sustained mental and physical exertion. The prostitute, the gambler, the drunkard, the criminal, and the idle have this in common, that they desire the grosser forms of excitement, that they are prodigal of their means, and unproductive in their methods of supplying their wants.

The view which regards the pronounced anti-social members of a community as the survivals of a period when the race as a whole was comparatively primitive in its social development is the only scientific and rational one, and enables us to comprehend in the extent the older views of deliberate sinning and moral responsibility; for a little consideration will enable us to see that a person who is constitutionally anti-social cannot be also at the same time immoral. Such a statement must not be taken to imply a disbelief in individual moral responsibility, for it must be recognized that persistent immoral conduct may depend upon opportunity and the absence, for any reason, of public opinion. It follows that a person who is disposed to take part in immoral conduct under the influence of any ordinary deterrent must be, more or less, responsible for his conduct in the absence of these deterrents. In the development of society, as of the individual, there are two factors at work, the development of the environment is never constant but is always changing, while the development of a society depends upon the development of its units, subject to the influence of the environment. Physically as well as mentally, the individual must be in harmony with his surroundings or he cannot exist. In every established race of living beings the majority of the individuals present an average mean of certain qualities the products of which entitles them to be included among normal representatives of their race; but there is in every such race a large minority of individuals who vary to a greater or less extent from this mean of any given quality. Some of these differences in quality in excess of the mean, others in defect. The majority of the members of a civilized community subordinate their desires for the grosser pleasures to the duty of sustained effort and the dictates of morality. Through a long process of natural selection this standard of character has been attained; but, just as a race of men present marked divergencies in stature or mental ability, so do they manifest throughout their composing units the greatest differences in respect to social qualities, varying from the highest manifestations of altruism to an absence of the
there is more to show their high station. When
Moses brought the stones down from the mountain,
and saw Israel's apostasy, he dashed the stones
to the ground and spat upon them. The
mountain could not be lost; however, nor could Moses,
who may be presumed to have known them by heart,
be trusted to reproduce them. He was directed to
prepare two new tablets of stone, and take them
up to the mountain again, that the original text
might be restored by the same finger which en-
graved the first copy. Finally, that there might
be no further chance of breakage, Moses by com-
mand made an ark of acacia wood for their safe
keeping (De 31:16). Their social background and
what this document is, and to test the statements
accounting for its origin.

1. The two forms of the Decalogue.—The
Decalogue has come down to us in two versions
which differ to a considerable extent, one (in com-
mon use) being in Ex 20:1-17, the other (unfortu-
ately almost ignored) in Dt 5:1-21. Some of the
variations in the Decalogue may be due to acci-
dents in the transmission of the text, but the most
of them are clearly a result of the different
process of development did not stop with our
present Heb. text, as the LXX shows still further
modifications, few if any of which can be fairly
attributed to the editorial work of St Jerome.

In the case of the Fourth Commandment,
the important differences are indicated in the follow-
ing parallel renderings, italics showing variations:

Ex 20:8-11 (RSV)

Remember the sabbath day to sanctify it. Six days shalt
thou labour, and do all thy work; but the seventh day
is a sabbath to Jehovah thy God. Thou shalt not do any
work: thou and thy son and thy daughter, thy manservant
and thy maidservant, and thy ox and thy ass, and thy
cattle, and thy guest who is within thy gates. For in six
days Jehovah made the heavens and the earth, the sea
and all that is in them, and they rested on the seventh
day. Therefore Jehovah blessed the sabbath day and
sanctified it.

Dt 5:12 (RSV)

Guard the sabbath day to sanctify it, as Jehovah thy God
commanded thee, four days shalt thou labour, and do all
thy work; but the seventh day is a sabbath to Jehovah thy
God. Thou shalt not do any work: thou and thy son and
thy daughter, thy manservant and thy maidservant, and thy
ox and thy ass, and thy cattle, and thy guest who is within thy gates; in order that thy manservant and thy maid-
servant, and thy ox and thy ass, and all thy cattle, and thy
translated text.

1. There are many other instances of duplicates in Holy Scrip-
ture: Ps 18 has been incorporated in the history of David
(2 Sam 22), on the supposition that it is an account of an episode
in his life; but a more striking parallel for our purpose, because
of the importance of the material, is the Lord's Prayer (Mt 6:9-
13; Lk 11:2-4).

2. LXX adds 'a fold,' so in Dt 5:4a EXP, 'but on the seventh
day there is a sabbath (or rest).' LXX adds is wai, so in Dt 5:4a-
12, a necessary correction, followed by Lat, and Eng. versions.
This reading is found in the Papyrus Nash (see Peters, op. cit. infra).

3. LXX reads: 'thy ox and thy ass and all thy cattle,' in
agreement with Dt 5:4. The translator would scarcely have
inserted this phrase for the sake of harmony when he leaves so
much else divergent. But perhaps the early Hebrew must have
differed from each other in the same code.

4. LXX reads: 'they that dwell with thee,' so in Dt 5:4.
In spite of its more primitive appearance (cf. below), this read-
ing can hardly be original, for the Heb. phrase would not have
been changed at all. The Greek version is more likely to be
expression is more comprehensive, and may be a free render-
ing, though all else is intrinsically literal.

5. LXX has 'the sea'; perhaps it is a later addition.

6. LXX reads: 'in six days the Lord made the heaven and the
earth and all that is therein.' The verse is a manifest harmonising gloss, as is shown by the
impossible connection with the following clause: 'and do all thy
man-servant and thy maid-servant that may rest as well as you.'
In the case of the Fourth Commandment, the important dif-
finitions are indicated in the following parallel renderings, italics showing variations:

Ex 20:8-11 (RSV)

Remember the sabbath day to sanctify it. Six days shalt
thou labour, and do all thy work; but the seventh day
is a sabbath to Jehovah thy God. Thou shalt not do any
work: thou and thy son and thy daughter, thy manservant
and thy maidservant, and thy cattle, and thy guest who is
within thy gates. For in six days Jehovah made the heavens
and the earth, the sea and all that is in them, and they
rested on the seventh day. Therefore Jehovah blessed the
sabbath day and sanctified it.

Dt 5:12 (RSV)

Guard the sabbath day to sanctify it, as Jehovah thy God
commanded thee, four days shalt thou labour, and do all
thy work; but the seventh day is a sabbath to Jehovah thy
God. Thou shalt not do any work: thou and thy son and
thy daughter, thy manservant and thy maidservant, and thy
ox and thy ass, and thy cattle, and thy guest who is within thy gates; in order that thy manservant and thy maid-
servant, and thy ox and thy ass, and all thy cattle, and thy

The peculiar phrases in the Deuteronomic edition are characteristic of the author; they are unmistakable, for there is no other OT writer whose style is so readily detected (see Driver's Deut., in loc.). It will be noted that we have here a commandment, and the reasons for its observance. The two versions have no important divergence in the commandment, but separate absolutely on the reasons. Beyond question Deut. is the older. The sanction on humane grounds is original with him, for it accords with his spirit through and through. There seems to be a time when grounds of humanity were not strong enough. Another editor, perhaps the one who constructed the Creation story in Gn 1-2 for this purpose, put it on a basis which is to him distinctly higher—that man should follow that law. That much is quite possible in the midst of the land. The LXX, on the other hand, says it is due to the people by the story of Nahob's vineyard, and of other instances which gave occasion to Is 5. It was understood that the people should learn the law, and come to know what the law is about. It is unfortunate that this version, with its sanction on a ground which nobody believes now, is the one in general Christian use.

In the Fifth Commandment, Dt 5:16 has two clauses which do not appear in Ex 20:12. The former version runs: 'Honour thy father and thy mother, as Jehovah thy God commanded thee, that thy days may be long; and thou mayest be well with thee, upon the land which Jehovah thy God is giving thee.' These are common Deuteronomistic phrases, and are plainly editorial additions. The latter obviously overlooks the fact that Jehovah made it a commandment for His own mouth. The second is found in the best Greek texts of Exodus, but preceding the clause about long days. The words may have got into some of the Heb. editions, but not into those which have kept down false testimony, and the commandment of Deut. and Ex. agree verbatim et litteratim, showing a careful comparison, which ignores the difference in our present Heb. text. The proper rendering of the Hebrew is: 'Thou shalt not testify falsely against thy neighbour, nor shalt thou bear false witness against thy neighbour.' By a slight change of the text (vay for yar) we get 'testimony,' as LXX. But the Heb. seems to mean that a man shall not bring a false witness to testify against his neighbour, as Jezebel did against Naboth. This view makes the mandate much more clearly stated, laying the stress of the wrong on the procuer of false testimony rather than on the witness.

In the Tenth Commandment we have a considerable variation in Dt 5:21. Thou shalt not covet the house of thy neighbour; thou shalt not covet the wife of thy neighbour; nor his manservant, nor his maidservant, nor his ox nor his ass, nor anything which is thy neighbour's. The use of 'desire' instead of repventing 'covet' sanctify this. This could scarcely be a rendering of the present text. In the text above, instead of 'make' we might render 'steal.'

1 The LXX order is 'wife,' 'house,' 'as' in Deuteronomy.
2 LXX adds: 'nor his field,' as in Deuteronomy.
3 LXX adds: 'his field,' as in Deuteronomy.
4 LXX adds: 'nor his field,' as in Deuteronomy.

is presumably for rhetorical elegance. The translation of 'wife' and 'house' is not so easily explained. It may be due to the greater importance of the wife in the time of Deut., taking the wife out of the property class (so E. 1.1049, s.v. 'Decalogue'); it may be a copyist's error; it may be an effort to secure a more logical sequence, the wife not belonging so strictly to the category of property as the other objects enumerated; or it may be due to the influence of such facts as David's marriage with Bathseba. The interpretation of 'field' seems to be the same. That 'mouth' is by common consent on the mouth, and of other instances which gave occasion to Is 5. "We unto them that join house to house, that lay field to field, till there be no room, and ye be made to dwell alone. That the mouth of the land." Cf. Mic 2. In, there are a few other variations, but they practically consist of the addition of conjunctuons in Deut. to connect the clauses for greater rhetorical effect.

A few of the more important readings of the Greek text may be noted besides those already cited. In Ex 20:14 reads: 'And the Lord spake to Moses all these words, saying, 4a Here we have an explanation of the singularity which has been noted in the Decalogue. The words are in the first instance commands to Moses. This interpretation is scarcely possible in the text of Deut. But in the text of Moses, that they were first inscribed upon stone tablets by the finger of God. Deut. reconciles the two ideas by saying that Jehovah first put the words upon the stone and then repeated them in a great voice, and then wrote them upon the stone (2:17). In v. 19, instead of 'house of slaves,' LXX has 'house of a prophetess' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt. In Ex 4:31 the LXX has 'a change in the land' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 4 the LXX has 'any house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt. In Ex 4:31 the LXX has 'a change in the land' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 5 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 6 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 7 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 8 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 9 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 10 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 11 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.

In v. 12 the LXX has 'a house which is in the heavens' (nay רודפס אב), is a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt.
as appears at first sight. In the first part we have 'visiting the sins of the fathers'; in the second, 'showing the unbelief of God.' In the one case God brings the consequences of paternal sins upon the sons, in the other He displays His own mercy to thousands. It appears, therefore, that 'thousands' is contrasted with 'sons,' not with 'third and fourth generations,' as a thousand years or a thousand sand generations; it has two distinct meanings: a 'thousand' as a numeral, and a body of a thousand people, such as a regiment. In the latter connexion the word is used to indicate a subdivision of a tribe, and it is therefore used in almost every tribe. The word here must either be a numeral, 'thousand,' or it must = 'clans.' The extension of mercy is therefore outward not downward. The sin goes down to the sons, the mercy goes outward to the whole family or clan.

'There's a wideness in God's mercy
Like the wideness of the sea.'

The meaning is illustrated in Abraham's plea for Sodom, and it is contrasted with, if there had been ten righteous men in the city, the whole population might have been saved.

The Third Commandment is the vaguest of all; 'Thou shalt not take the name of Jehovah thy God in vain'; it is a phrase having no firm import in the word. The vagueness appears in the usual interpretation that is an injunction against profanity, Weiss (in loc.) says that 'not only false swearing, but also sensual sin, seems to be included, and every frivolous word is included.' And yet it is a little difficult to discover that sense in the original. We should expect the Ten Words to deal with vital matters. There is no evidence that profanity was specially an evil to the Hebrews. This is the view taken, and that they regarded it as a serious offence. From the concluding clause, 'Jahweh will not hold innocent,' the one who commits this wrong, it is clear that we are dealing with a serious evil; in fact, with the unpardonable sin of the OT. Indeed, we might well render 'Jahweh will not forgive,' etc. It is at least a step in clearing up the matter to note $\frac{\pi}{\varphi} \text{ means 'speak.'}$ First there was the full expression, 'he lifted up his voice and spoke,' then 'he lifted his voice,' finally, 'he lifted,' and with the meaning 'spoke.' $\frac{\pi}{\varphi} \text{ means 'in vain,' i.e. without result (cf. Jer 20:8).}$ We therefore have: 'Thou shalt not speak the name of Jehovah thy God without result,' i.e. without doing what was visibly connected with it. This shows the force of what is otherwise a pure redundancy, for Jehovah will not deem innocent him who speaks his name without result. Now, if there was a principle cherished by the Hebrews above any other, it was the obligation to carry out a vow made in the name of Jehovah. We may note the case of Jephthah, who felt bound by his vow to sacrifice his daughter (Jg 11). Other essences will occur to the reader, and we find the principle strongly urged in Ec 5:4. It may be remarked that, so far as internal indications go, this command may be early. At all events the obligation was recognized in the primitive ages. It was the misuse of the command as an excuse for our Lord sought to correct (cf. Mt 5:33; 23:14). The Jews held that only a vow in Jehovah's name was binding; Jesus teaches that a man's personal word should be as strong an obligation as any oath.

of the Original of the Decalogue—It is apparent from a comparison of the texts that the Decalogue has not come down to us in its original form. Many attempts have been made to determine what that original form was. For the most part it is a matter of pure conjecture. But it has been noted that there is a persistent tradition that there were 'Ten Words,' and that they were inscribed on two tables of stone. It has been assumed that there would be practically an even division of the commandments into the two tablets. The Decalogue divides into two parts, but Commandments 1–4 deal with man's relation to God, and 5–10 with his relations to men—not therefore an even division. In the Heb. text of Exodus, Comm. 3–5 contain 131 words, 6–10 contain 39 words. Taking the division by subject, 1–4 have 131 words, 6–10 have 41 words. Comm. 1–3 contain 56 words, 4–10 contain 96 words. This is the nearest approach to an even spatial division. Hence it is assumed that the commandments must be of sufficient even length. The growth is easily explained. The images were hard to get rid of, as all religious usages are hard to change. To reinforce the law and to prevent its falsification, it was necessary that the dire consequences of disobedience must be added. Down to the time of Nehemiah the rule for cessation of labour on the Sabbath day was disregarded (cf. Neh 13:22). Reasons were appended to the law to secure a stricter conformity.

While all this is very probable, the reason urged on the ground of an even division on the two tables is not convincing; for we have many ancient inscriptions on stone and clay, and there is no evidence of an attempt to make the contents to the size of the material used for the inscription. The size of the characters and of the tablet is determined by the amount to be written. The commandments must have taken shape originally according to their substance, and could hardly have been framed with reference to two tables of stone. The only reason for using two stones was that there was not room enough on one, just as a correspondent takes up a second sheet when one does not suffice.

4. How far Mosaic. A still more baffling problem is found in the origin of the Decalogue. In both codes it is attributed to Moses, i.e., Moses is the mouthpiece of Jehovah. In Dt 9:10 there is an unusual passage describing the first writing, the breaking of the stones, the second writing, and the care for the preservation of the final record. The Covenant and the Decalogue are certainly identified in the story, but then, of course, due to the author of Deut., who lived long after Moses' day. His identification may be correct, but is not necessarily so.

We are obliged to face the question as to the value of this evidence. Now, we know that in the OT all Hebrew law is attributed to Moses, as practically all Hebrew psalmody was ascribed to David, and all wisdom to Solomon. There is, therefore, a presumption against this testimony; for it would be extraordinary if the whole body of a nation's laws were enacted by a single individual,
and that before there was any nation at all. The
evidence, therefore, that Moses produced the
Decalogue is no greater than that he produced the
governing the fringe on the priest's cloak.
The persistent tradition proves, in the opinion of
the present writer, that Moses was a truly great
lawgiver, to some extent, by suggesting to the
public, but, full light upon us the necessity of determining as best we can
his connexion with any particular law. We are compelled, therefore, to consider whether the
Decalogue could have come from so early a date as
that of Moses.

Some of the prohibitions are of such a general
class that they might belong to any period;
such is the case with Comm. 3, 5–9. Others seem
to have a closer relation to the development of
religion, and thus to be formulated accordingly.
Comm. 1 is monothestic, though perhaps not so sharply so as has generally been
assumed; for the meaning may certainly be that
no other god is to be set above Jehovah, and this
possibility must have full weight (see above).
So far as we know, the victory of monothelism was
won by the prophets, one of the great battles being
fought by Elijah. But it is certainly true that
theism swept down from the earliest days,
such as Deborah, Gideon, and even the freethinker
Jephthah. This law may have been as early as
Moses for anything we know to the contrary.
The law against images does not belong to the
same category. Image-worship was certainly
drafted down to the Exile, and as late as
Hezekiah's time (2 K 18), without rebuke. The
war against it appears to have had as its main-
stream the effort to centralize the worship at the
temple in Jerusalem. As a means of destroying the
cult at the local shrines, where images abounded,
they were forbidden, for there appear to have been
no sacred images in Solomon's temple. It is true
that disobedience to a law does not prove its
non-existence. The teaching of Jesus of the
peril of wealth has not made a very profound impression on the
world even yet. But there was no strong
motive for images, and it is difficult to think that
David would have defied so fundamental a law
(1 S 26) that is interpreted as images
(195). This command, therefore, appears
not to have been formulated long before the time of Deuteronomy.

In its present form, Comm. 4 cannot be Moses. The
sabbath day of rest is not of urgent necessity for him.
Moreover, such work as he does is necessary on every
day of the week. Further, in the time of Moses
there were no guests (gerim, 'protected strangers')
within the gates. Sufficient emphasis does not
appear to have been laid upon the term 'gates,'
disclosing as it does urban life, and therefore
belonging at the earliest to the period after the
conquest. It is true that so acute a scholar as
Wellhausen holds that 'gates' may mean the gates of the
Frontier as well as of the city, and he thinks, there-
fore, that this term does not presuppose the settlement
in Palestine. But the only instance of this meaning that occurs to the present writer is Ex 3258,
where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates.
Moreover, the expression 'within thy gates' is a characteristic Deuteronomistic expression,
occurring some twenty times in Deut., and
not found elsewhere in the Pent. save in Ex 2010. The
solicitude for the stranger or guest is also Deuteronomistic.
The silence about the sabbath day in the records
of the early days is truly remarkable from any
point of view. In Jos 614, 23 we read of the
army's marching around Jericho on seven successive
days, one of which must have been the sabbath.
That looks very like 'any kind of work,' and was
certainly unnecessary. There are, however, two
references to the sabbath, but it is hardly
light on the situation. In 2 K 42 the Shumannite
asks his wife why she is going to the prophet
Elisha, and gives as the reason for his question
'the sabbath is not new moon and it is not sabbath.'
It would be easy to draw too large a conclusion
from this statement, but one thing is certain, viz. that
there is no objection to a journey from Shunem to
Carmel (30–40 kilometres, 20–30 miles; see Kittel,
Bücher der Könige, 1906, in loc.) on the sabbath
day; further, there is no reason to suppose that the sabbath was a day for religious rites, but that
cessation of labour was not a part of its observance.
Something like half a century later Amos makes
the people say: 'When will the new moon be over
that we may set up dry bones in the sabbath that we
may open up corn.' (85). It is clear that we have
an advance from Elisha's time, in that trade is not
permitted on the sabbath—precisely the conditions
which Nehemiah so earnestly desired. The new
moon is not mentioned in the Decalogue, but it is
here, as in Elisha's time, on the same plane as the
sabbath. There is hardly evidence, therefore, to
support the existence of the Fourth Commandment.

The passage may seem to imply that the sabbath
had already come to be a mere form (Marti,
Dodekakpropheton, 1905, in loc.). But it is more
likely that the prevention of trade was a new feature,
not approved by the merchants; hence their
impatience at the loss of trading days. It appears
that under the prophetic influence a movement
was making for a stricter regulation of both these
festivals. The effort finally centred on the sabbath,
and by Joshua's time all labour as well as trade
was forbidden, but the period of wealth had not made a
very profound impression on the world even yet. But there was no strong
motive for images, and it is difficult to think that
David would have defied so fundamental a law
(1 S 26) that is interpreted as images
(195). This command, therefore, appears
not to have been formulated long before the time of Deuteronomy.

In its present form, Comm. 4 cannot be Moses. The
sabbath day of rest is not of urgent necessity for him.
Moreover, such work as he does is necessary on every
day of the week. Further, in the time of Moses
there were no guests (gerim, 'protected strangers')
within the gates. Sufficient emphasis does not
appear to have been laid upon the term 'gates,'
disclosing as it does urban life, and therefore
belonging at the earliest to the period after the
conquest. It is true that so acute a scholar as
Wellhausen holds that 'gates' may mean the gates of the
Frontier as well as of the city, and he thinks, there-
fore, that this term does not presuppose the settlement
in Palestine. But the only instance of this meaning that occurs to the present writer is Ex 3258,
where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates.
Moreover, the expression 'within thy gates' is a characteristic Deuteronomistic expression,
occurring some twenty times in Deut., and
not found elsewhere in the Pent. save in Ex 2010. The
solicitude for the stranger or guest is also Deuteronomistic.
The silence about the sabbath day in the records

1. Wellhausen holds that the early Hebrews would object to a
70'7, 'image' (the word used in the Decalogue), but not to a 70'27, 'piller' (Gen 2, 16, 1.2R, pp. 104, 111). It is difficult to see
sufficient ground for this distinction.
2. See the Hebrew lexicons.
DECISION 517

of the time. Among a rude people it is always possible for one to rise head and shoulders above the rest, not only in stature, like Saul, but in moral insight, as Moses certainly did.

In a word, if we strip the Decalogue of the known later accretions, and the probable additions to meet new conditions, the Commandments may all be traced back to the Middle Ages, and almost certainly the Second. This is contesently very far from affirning that they did come from the hand of the great lawgiver. Indeed, it is not unlikely that the Decalogue itself may be a growth covering a period of several centuries before the last addition was made. Various men may have tried their hand at putting the great principles of the Law into a terse and comprehensive form. All that we can say positively is that the Decalogue was produced, as far as we know, by the addition of Ps. 18; 4 and no one was permitted to bolster up a bad case against his neighbour by the introduction of false witnesses. Kilgour and stealing are fairly common vices among undeveloped races, and are far too prevalent even among the most advanced peoples. But the clear terse laws on the two tables, without any qualifications whatever, doubtless saved many a life in Israel, and helped to maintain personal property inviolate. The forbidding of coveting reaches the evangelical note (cf. Mt. 5:28). It is hardly necessary to assume that coveting is as great a vice as stealing, or that a lustful desire of another’s goods before the last addition was made. Even in the early ages it must have been apparent that coveting heads to vicious action.

Abimelech coveted the throne, and the murder of his seventy brothers resulted (Jg 9). Abish coveted the land of Nauh and was attacked by the confiscation of his land was the consequence (1 K 21). David’s passions were aroused by the sight of a beautiful woman, and there followed the criminal death of Uriah and the unholy marriage with his widow Bathsheba (2 S 11).

The ethical standards of the world are still far too low, but it is certain that they would be even lower but for the great influence of the Ten Commandments. It is very desirable that they be stripped of later accretions; they are no more original form continue to be read to the people in the churches and taught to the children in the Sunday schools.

LITERATURE.—The student will naturally consult the various commentaries and handbooks, and the larger systems, and the historical and geographical works. The most important are:

L. W. BATTEN.

DECISION.—The term ‘decision’ may be used (1) concretely, of the judgment which is affirmed at the conclusion of a period of deliberation (q.v.); or (2) abstractly, of the ability to ‘come to a decision,’ i.e. to bring deliberation to a conclusion.

1. There are three main reasons why a judgment is rendered: (1) the%majORITY of the people in the world is influenced by certain religious conceptions or beliefs, and acts accordingly in the world; (2) a development in the world takes place, arising from the influence of the religious conceptions or beliefs on the people; and (3) a development in the world takes place, arising from the influence of the religious conceptions or beliefs on the people. There are three main reasons why a judgment is rendered: (1) the%majORITY of the people in the world is influenced by certain religious conceptions or beliefs, and acts accordingly in the world; (2) a development in the world takes place, arising from the influence of the religious conceptions or beliefs on the people; and (3) a development in the world takes place, arising from the influence of the religious conceptions or beliefs on the people. DECOLLATI.—The full expression is le anime dei corpi decollati, the souls of executed criminals. These souls are the object of a popular cult in Sicily. It is spread throughout the island; but its most famous shrine is the Church of the Decollati, near the Porta Palermo. It seems to have arisen out of the sympathetic naturally felt in an oppressed community for sufferers at the hands of a ruling caste. For many centuries Sicily was subject to rulers who were either foreigners, or at any rate divided by a sharp and impassable line from the mass of the people. The latter were ignorant, and more or less passively hostile to the governing class. They regarded all who were put to death under the forms of law as heroes; nor did they distinguish between the moral or political crimes—between acts directed against the rulers and acts directed against society at large.—If, in deed, these two categories were always distinguishable. The priests were for the most part drawn from the 'folk' and naturally showed to a great extent their ignorance, their superstitions, and their feeling towards the government. The executions were public. The condemned man (called l'affitto, the afflicted), having been reconciled to the Church and having received his consolations, was regarded as a martyr; and his death-scene was a species of triumph. He passed, it was true, into purgatory; but his prayers on behalf of others, even from purgatory, were deemed to have great intercessional value by virtue of his sufferings.

Formerly at Palermo several of the priests witnessed the cult of the Decollati. During recent centuries, however, it has become the custom to bury the Oreti in the little church beside the Oreti such bodies of criminals as were not given to their friends, or reserved to adorn the galleries in chains. Accordingly, the cult has been transferred to the grave-yard of the side-chapel of the Orto dei Decollati. According to custom, every year on Ascension Day, the Oreti are brought by the priests to the grave-yard of the church, and there performed the invocations and other prayers that the cult requires. The pilgrims are frequent; and the pilgrim having performed his devotions at the altar of St. John the Baptist, adjourns to the chapel and prays at the Decollati, listening for an answer to the prayer. The invocations are taken up by the assembly; and Invocations, however, may be addressed to them elsewhere by suppliants who cannot undertake the pilgrimage.

The objects for which intercession is sought are primarily protection from violence or accidents, and the cure of sufferers from either. For the Decollati, however much they may in their lifetime have been guilty of violence, now having suffered and been reconciled to the Church, hate violence and punish it, or at least protect those who have been victims. By an extension of the idea, they are invoked against diseases, especially hemoptysis, of which bleeding is the manifestation. Two long cases of nude water-colour drawings on the churchyard walls record with ghastly detail many examples of vows made and benefits received, where violence, accident, or disease of the kinds indicated was concerned. But, in fact, the good offices of the Decollati are not limited to these. They are employed for the benefit of the sick, throughout Sicily on all sorts of occasions, and for all sorts of purposes. They have their prayer-formulae, which are extensively used; and many stories of miracles performed by them in person are current. The ordinary vehicles of the cult are the churches, and the beautiful paintings with scenes from the history and traditions of the island. Many of these are adorned with paintings of the Decollati.

DEGENERATION.—1. Application of the term. ‘Mental degeneracy’ is a term which is applied to a group of conditions representing the speech, behaviour, or productive activity of individuals, and generally held to be symptomatic of defect in the central nervous system. The nervous defect in question may be either congenital or acquired through accident or disease; in either case, it may be organic or functional. Savill (Neuroasthenia, 17) defines a functional nervous disease negatively, as one in which ‘no anatomical changes can be found after death, either with the naked eye or with the microscope, which can account for the symptoms during life’. It may really be due to some structural change, which available means cannot determine, to the presence of toxic materials in the blood (of either organic or exogenous origin), or to deficient quantity or quality of blood, or to exhaustion of the nerve tissues from excessive use, etc.

The term also implies that the individual falls markedly below the mental level attained by the average or normal member of the race, sex, age, and period of civilization; but, since the number of degrees of defect is potentially infinite, and the defect may be either general or special (in the former case involving all the mental capacities, in the latter such special functions as sensation, memory, emotion, etc.), the actual usage of the term is extremely indefinite. Thus it is employed to denote (1) actual insanity, including amnesia, imbecility, dementia, mania, and melancholia; (2) persistent criminality; (3) mental instability, excitability, excessive irritability, or mere eccentricity; and (4) the neuroses of hysteria, psychasthenia, and others: to the last two groups belong those who I am inclined to term the 'denizens of the borderland' (Edin. Med. Journ. 1901). It would seem that strictly the word should apply only to those who have some congenital defect in mental capacity, excluding those in whom the defect has been due either to accidental injury, or to lesions of the brain arising from toxic influences, subsequent to the birth of the individual (for example, alcoholic insanity, or insanity sequent upon typhus fever). It is impossible, however, to draw a hard and fast line between the congenital and the acquired, as many cases of insanity would not have occurred had not the individual been already predisposed to the disease by physiological or mental weakness. On the other hand, the term is also frequently applied to an acquired defect, especially when it is of the progressive type.

In popular usage the word ‘degenerate’ means one whose tastes are lower than those of the society in which he has been educated, e.g. a clergyman’s son who associates with gaming-houses, light-carts, or other denizens of the island. Many of these are painted with scenes from the history and traditions of the island. Many of these are adorned with paintings of the Decollati.
mind will avoid these things as topics of thought or imagination, except with the object of removing them or lessening their effect. But not only the diseased mind will seek to dwell upon disease, or take a pleasure in its contemplation.

To the biologist, the degenerate appears as a reversion to an older type of the race, as one who has been born with a physical nature in which some primitive human or even pre-human stage of cerebral development is reproduced. He is a primitive being set in a civilized environment, unable to adapt himself to it, and hence coming into conflict with its conditions.

The only common feature underlying these three different applications of the term is a marked 'deviation from type' either in quantity (energy, rate, etc.), or in quality, of thought and action.

2. Physical and mental conditions of degeneration may be grouped in three classes: (1) an originally defective physical and mental capacity, or defective development; (2) physical accident or injury, disease, privation, etc., by which the central nervous system is weakened locally or generally; and (3) social conditions, such as family life, educational disadvantages, poverty, occupation, etc. (Ferri, Criminal Sociology, Eng. tr., London, 1895, ch. 2.)

The brain may be said to be the central organ of man, because it is the seat of memory, thought, and volition; because it depends for its energy upon the brain, and because its function is to regulate the muscular movements of the body. The physical stigma of the 'congenital criminal'—deformity of skull, sloping forehead, prominent cheekbones and projecting jaws, small eyes, unstable eyes, scarring, deviation, cleft palate, stammering, etc.—are not now so seriously taken, and, according to Lago (p. 17), the anthropological theory, whether applied to insanity or to crime, is 'a thing of the past.' It is true that both the criminal and the idiot are more liable to diseases, such as phthisis, etc., than the normal individual, and have many other physiological deficiencies; while statistics have been frequently compiled to show the apparent transmission from parent to child of the 'criminal temperament,' and its hereditary relationship with imbecility and insanity. From such data, however, even if we exclude the immeasurable influence of environment, physical and social, it can be argued only that some nervous deficiency is transmitted, which disposes, under 'favourable' conditions, to insanity, crime, or mental instability.

Against the physical theory of degeneracy (as an all-sufficient account), there is the general fact that the frequency with which mental causes produce, or at least initiate, a change of intellectual or moral character, e.g. emotional shock, disappointment, loss of occupation or of means, death of husband, widowhood, social degeneracy, school strain, privation, prolonged worry, etc. It is by no means necessary that a hereditary or congenital physical predisposition should exist in all cases; thus, a shock coming closely upon an infant or during an illness or exhaustion, or a period of insomnia, may give all the conditions necessary for the outbreak of insanity. The influence of the mind upon the production of insanity was fully recognized by Finkel in 1891, and by others after him. The evolutionary theory gave, however, a stronger hold to the organic theory of mental disease, and its connexion with heredity, so that this view is now practically universal. It is clear that such disease is always a product of two factors—a predisposition in the one hand, physical or mental; and, on the other, a shock or a stress leading to the actual appearance of the insanity or mental defect. Thus the physiological critical periods of life are those at which outbreaks of insanity are most frequent: infancy and childhood, adolescence, the climacteric, etc. Of course, if we assume from the first that mind is never an agent of bodily changes, but always their mere concomitant or their effect, then mental degeneracy cannot but be the sign or symptom of physical degeneration, which is the
proved also that, while the subject is unaware of the existence of such anaesthesias, and therefore does not, of course, notice the impressions which are made on the insensitive organs, these are nevertheless recorded, and may be later brought to bear on the patient's consciousness, either by modifying the temporary disposition which arises in connexion with bodily states—fatigue, exhaustion, illness, etc. A shock or stress will disturb the mind more or less, according to its fundamental and temporary disposition at the period when the strain comes. Without prejudice to any theory of the relation of body to mind, it may be admitted that actions are the outcome of the dominant feeling or emotion, which in its turn is mainly a product of perceptions and reproductions or memories; hence in human conduct the mental life predominates over the physiological: and this is especially the case after the child has become able to appreciate moral ideas. It is not denied that the physical nature was an immense influence in the causation of insanity.¹ But it is claimed (1) that this physical nature may be largely modified by education and by suggestion; (2) that it may itself be of a mental origin either in the ancestors or in the individual himself; (3) that it is only one of these pathohistic ideas that insanity is almost invariably caused by mental factors, including, for example, emotional shock or mental contagion (as in imitative insanity); and (4) that the insanity may be cured by suggestion and the use of hypnotic and anaesthetic hygiene (Dubois, in Archives de psychologie, x. [1910] 1: 'Psychological Conception of the Origin of Psychopathies').

1. Insensibility.

The mental degeneracy in which mental degeneracy expresses itself may be illustrated from the two most important 'functional' diseases—hysteria and psychasthenia.

(1) Hysteria has been defined as a 'morbid mental condition in which ideas control the body and produce morbid changes in its functions' (Dunn, Journal of Abnormal Psychol., Feb. 1907). Its most prominent features are anesthesia, amnesia, loss of control over the attention, paralysis of certain muscles. (1) The anesthesia may be partial, even local, without any injurious effect either to the sense-organ or to the conducting nerve-fibres; or it may be partial (monocular blindness; narrowing of the field of vision; temporary loss of smell; colour-blindness, or systemic (loss of power to perceive certain persons or classes of objects, while the insensibility is otherwise intact). A historical illustration is the 'devil's marks' on the skin, by the insensibility of which a woman's guilt in trials for witchcraft was often determined. The insensibility differs from that which is due to nerve-injury, in that it is not permanent, but varies; it is, for example, sometimes removed during sleep, or under the influence of chloroform, or in the hypnotic trance, while mental excitement of any kind is said to intensify it. Also the insensibility does not correspond to the distribution of a particular nerve or group of nerves; many of the reflexes are preserved in connexion with the sense-organ, while the insensible limb is not liable to accident or to injury, as is the case with insensibility arising from a severed nerve. It has been

---

¹ Cf. Lugares, p. 22: 'The functional insufficiency of a shock consists in the inability of the brain to maintain a state of cranium. Slight but chronic lesions of the kidneys can determine conditions of stupidity, temporary loss of speech, and violent attacks of convulsion and asphyxia.' A febrile malady occurring in infancy, though transient, attracting little notice, and passing away almost unnoticed, can ruin the brain later on and repair. The effects of this may either manifest themselves as moral and intellectual defects of every degree, or as epileptic convulsions. They appear after many years, and by their repetition progressively destroy the mind.
sensations or simple associative images rather than by systematized tendencies built upon experience; or unity and autonomy are replaced by lamynathy or by automatism.

(4) On the motor side, there is frequently paralysis, or *paraesia*, inability or weakness in the use of the limbs on one side of the body, or of a particular group of muscles, or of a particular muscle; and (5) usually also disturbances of 'nervous' origin, in the circulatory and other functions of the body—asthma, vertigo, palpitation, fainting, congestion, etc. Sometimes a feeling of weakness or exhaustion over these functions, in the normal individual appears impossible: e.g., control of the heart, or of the digestive processes, ability to hasten or retard them at will. Both the muscular and the organic defects or abnormalities are, like the anesthesias, of purely central origin; i.e., they spring directly from some temporary and local change in the cerebral system—a change which, however, has probably a mental origin.

The different phenomena in a particular case may usually be traced to a single system of ideas, which has obtained an undue control over the personality—for example, the memory, conscious or suppressed, of some emotionally exciting event or experience. Careful scrutiny usually discloses the, link which strengthens the power of the personality over the ideas, sometimes by a shock or accident calling up the dormant energies of the individual: thus in one case (Donaldson, *Growth of Brain*, London, 1857, p. 304) a lady recovered from a hysterical paralysis on the sudden death of her husband; in another, a cure resulted from the elopement of a daughter. For the most part, however, almost any stimulus strong enough to excite the dominent idea, and to determine thought and action according to it. Thus a man who had been lost in the Australian Bush, and in whose case thirst had frequently plunged into imaginary pools of water, used, long after his return, under the slightest dose of alcohol, to go automatically through the actions of divining, regardless of the surroundings or of the position in which he was. There is, for the most part, some such absorption by, or fixation of the mind upon, the dominent idea, with entire failure to corelate it with the immediately given sensations and impressions, or to criticize it by them.

Epidemics of hysteria or insanity are common among peoples or races at a low level of development who exhibit continuous fixation (J. M. Clarke, 'On Hysteria,' *Brain*, xx. [1892] 526).

A well-known case is that of Haute-Savole, 1857, in which a young girl saw a companion taken out of a stream half-drowned; the girl fell down in unconsciousness, and a few days later a friend who was with her became similarly affected. Other hysterical phenomena followed. Within four years there were 125 persons in the same neighbourhood affected in the same way, and this is in spite of the fact that public exorcisms were held by the priest. The epidemic was stopped by the Government sending a force of gens d'armes to the district, removing the priest, isolating the patients, and sending the word to cases to distant hospitals' (Clarke, loc. cit.). Here it is the force of suggestion acting on an unstable nervous organism, and securing an influence over the internal organs of the body even as is not possessed, or is possessed only to a very slight degree, by healthy and normal. See also art. Exorcism.

(ii.) A different complex of symptoms is presented by that which is now called *psychasthenia*, or 'obsessive insanity' (Janet), although at some points it is closely related to hysteria. Whereas in the latter the morbid ideas are specific or particular, in obsessive insanity they are vague and general ideas, entering into relation with every possible action or thought of the subject, for example, the idea that one is a criminal, or has committed some unpardonable sin. The idea is involuntarily, continuously, and painfully present to the mind, if not in the centre, at least on the verge, of consciousness, so that to escape from it is impossible.

The morbid ideas most commonly met with are those of (a) crime, including homicide, suicide, dipomania, sacrilege, etc., and there are two forms—the obsession of committing the crime, and the obsession of remorse for a crime already committed, the latter much more frequently exaggerated in the mind (what was really a mere thought or passing idea being transformed into an actual deed); (b) *physical or mental defect*, again in two forms—obsession of being, and obsession of becoming, thus, a lady who is distressed at her actual stoutness may refuse food, or take insufficient rest in consequence, while a lady at present of moderate dimensions may adopt the same tactics from fear of becoming unduly stout. Other instances are the fear of approaching old age, of approaching madness, of approaching death.

The common qualities, as regards the content of the obsessive ideas, are: (1) they regard acts or states of the subject himself, not primarily of any external object; (2) the acts or states are socially disreputable, wicked, or ridiculous, or in general undesirable; (3) and in this is the fundamental difference from hysteria they are endogenous, self-suggested, whereas in hysteria the morbid idea is artificial, or is suggested by or is excited from without. Accordingly, we find that in the early stages there is full consciousness of the absurdity or folly of the obsession; and also that, except in rare cases, the morbid action is not completely realized. Thus, a kleptomaniac was in no way preoccupied with his when he went shopping, to watch and afterwards return the stolen articles; in another case, a youth, after taking poison, telephoned to his mother to inform her of the fact, with the (expected) result of a surgeon's arrival. Again, the hallucinations have not the same definiteness or 'body' as those of hysteria; they lack details, and hence the slightest effort of the attention destroys them, as is the case in dreams; they are seldom completely externalized, or defined, and in this they are contrary to the idee fixe.

On the volitional side, there are almost invariably automatisms, that is, actions which occur independently of thought, and are not under the control of the subject. These Janet classifies into three groups, in each of which the disturbance is either systematic or diffuse. (1) Mental agitations, including the systematic forms—manias of irritation, of worry; and the diffuse form—the mania of rumination or reverie. The essential character of all is a movement of the mind which is incapable of arresting itself upon any one fact or thought, but is compelled to pass beyond it, to add something to it, and then something more, and something more, without end—'idees either revolving in a circle, or branching out endlessly, but in any case never reaching an end, a definite conclusion' ('Les Obsessions', 1897). Familiar cases are those in which a patient deliberates for hours about carrying out some simple and, normally, habitual action: e.g., that of putting on a sock, choosing a necklace, stepping over an object in the roadway. (2) On the motor side, what are called 'tics,' that is, automatic actions, twitchings, movements of the lips, etc., these being in nearly all cases symbols or traces of complete actions as suggested by the ideas—'psychic short-cuts.' (3) The emotional side there are the autonomic or governamental ideas, entering into relation with every possible action or thought of the subject, for example, the idea that one is a criminal, or has committed some unpardonable sin. The idea is involuntarily, continuously, and painfully present to the mind, if not in the centre, at least on the verge, of consciousness, so that to escape from it is impossible.
a generalized expectation or dread of some untoward event happening.

4. Explanation of the symptoms.—The explanation of these phenomena is found first in a weakening of the psychic processes, and thence of the finer mechanism, alike of association and of voluntary movement, is relaxed and ultimately destroyed. The contrast with the normal individual is the same as that which occurs, within an individual life, between bodily health and sickness or fatigue—"in the former case the greater activity, co-ordinate power, effectiveness of movement, ability to recollect at will, and to direct the thoughts; in the latter state the weakening or failure of these powers. Obsessional insanity is an exaggeration of this relatively healthy state, having its centre or point of support in some actual psychical experience of the subject. In hysteria, the general symptoms may most simply be referred to a dis- aggregation of the personality: some group or groups of memories, or of habits, or of other acquired activities, separate off from the controlling consciousness with which the normal individual identifies his self or ego. Thus, in the automatic writing and other extraneous movements of hysterics or neurasthenic patients (Binet, Janet, etc.), the subject is entirely unaware of the actions done, although they would normally imply consciousness both to initiate and to carry out. So, the hypnotized subject or the conscious or unconscious states apparently involved deliberate consciousness, and, on awakening, show complete ignorance of them; and there are familiar cases in which a patient leads, for a short or longer period of time, a different life from that of his normal condition, in which he is unconscious, or at least has no memory, of his previous state, while afterwards, on recovery, he has forgotten the temporary abnormal state (Ansel Bourne, etc.). Morton Prince gives a remarkable instance of such a case of double or multiple personality in his Dissociation of a Personality. Normally all our experiences, or at least those which are important to us, are synthesized, unified in the single dominant consciousness or personality; abnormally, some handles of experience, more or less large, are detached from this unifying consciousness, and form secondary personalities, which may make use of the general fund of memories, habits, etc., organized in our experience, and representing in the latter case structures in the fabric of the brain. It is not necessary here to discuss how far these self-realizing ideas deserve the name of 'separate consciousnesses' or 'separate personalities.' There are all degrees of disaggregation between the simple hearing and answering of a question by an absorbed reader, without subsequent awareness on his part of the action, and the extreme form found in Ansel Bourne, Janet's 'Leonid,' or Prince's 'Miss Bouzagl.' There is a close parallelism between such cases and insanity—for example, the insanity of fixed ideas, or of delusions, etc. Freud argues that many of these secondary personalities, as is the case in insanity, represent the realizations of certain wishes, desires, ambitions, which the subject has been prevented from successfully carrying out, or which he has voluntarily repressed (Neurosenetche, ed. E. Hitzelmann, Leipzig, 1911, p. 54). On the one hand, according to Janet's view, of tension or tonus in the central nervous system or some part of it, and on the other a 'psychic misery,' a disorganization of the mental life, in which images and ideas tend to realize themselves as a whole, the control usually exercised by the self on the basis of past experience being replaced according to the claims of the social environment. (On mental dissociation, see also J. Macpherson, Mental Afections, London, 1899.)

Corresponding to this disorganization of the mind is the existence of what may be called a floating mass of emotion, dread, or anxiety, ready to attach itself to any idea that may arise, and leading to actions that may be out of all proportion to the motive-ideas, taken by itself. This emotion is really the mass of feeling that springs from the altered bodily constitution, and the altered organic and other sensations which form the basis of the feeling of self. Since the alterations consist largely in an increase of bodily and especially of painful sensations, the emotion as a whole is of the depressive type. Such an emotion necessarily alters the whole mental tone; and especially the real character: the subject becomes timid, secretive, cunning, superstitious, selfish, and cruel. In originally higher types there is a tendency to pessimism; the patient is unable to carry out the ideas, frequently extravagant, which he sets before himself; hence doubt and distrust of himself and others; his life is suffused with pain; slight motives cause him distress and anxiety; this 'psychois' he projects into others, and believes life to be predominantly painted. Obsessions and fixed ideas are for the most part the result of a logical attempt to account for the emotion of which,—although not of its cause—the subject is conscious. In other cases the system of ideas may be developed first from the unconscious— and the dread or anxiety is built upon it or attached to it afterwards (see Williams, in Journ. Abn. Psychol. v. [1910] 2).

The same features—disaggregation, depressive emotional-tone, or both—may occur in mental degeneration at all its levels. Thus in the imbecile, there is failure to co-ordinate experiences, to take more than the first few steps in the synthesis of personality: the result is an incapacity to concentrate the attention, motivation only by the simplest ideas, and these only in isolation from one another, no coherent or sustained activity either of thought or of action. Where depression itself is also present, the imbecile may become the criminal, with homicidal or other socially dangerous tendencies. In the paranoiac, there is failure to form, or the lapse of, the highest mental synthesis—the recognition of the 'social self'—on which the possibility of the social life depends: hence the primary self-consciousness has the field to itself; there is an unrestrained assertion of individual wishes and desires, and a total disregard for the convenience, wishes, or claims of others. The encephaloma leads to delusions of unlimited power, wealth, or high rank (megalomania), or, where depression is present, to mania of persecution, etc. The nearest parallel that we have in normal life is to be found in dreams (p. 4), the analogy of which with insanity has been frequently pointed out (Moreau-de-Tours, Maury, Sir Arthur Mitchell, etc.). The higher systems are out of function, for the time being; the will is at rest; each idea, suggested by present sensory impressions, or by recent experiences, has the field of consciousness to itself: hence it takes on an illusory objectivity, and appears as a real experience or perception, while it tends to call up associate ideas which, however, are bound to it only by the lowest, purely mechanical, bonds (habit-associations, associations of sensory similarity). Thus, Maury (Le Sommeil et les rêves, Paris, 1865, ch. vi.) describes a dream in which the main incidents were connected together through the words 'Kilbusta,' 'Eloa,' 'Lobelia,' 'Lopez,' 'Loty.' Simultaneous dissociation of personality is also a common feature of the dream; we appear to be debating with another person, who questions us and answers us; both dis-
putants, however, are ourselves. Jauray (loc. cit.) mentions that the apparent revelations of dreams may sometimes be traced to forgotten memories of our own, and that the dream may be the dream of another person, in our dream. In general, however, the thoughts of the dream are trivial, absurd, meaningless, as any one may prove for himself by writing down, immediately on waking, the words he has just been uttering in his dream. The same defect, and the same lack of power to criticize what passes through the subject's own mind, we have found to be common in mental degeneracy. The hallucinations of the insane, and their emotional or anxious symptoms, have also an analogy in dream-life. All these phenomena of degeneracy appear also in normal life during fatigue, exhaustion, illness, senility, and in the temporary insanity of intoxication by alcohol or other drugs (nicotine, opium, hashish, etc.; see, for example, R. Menneic, Le Herich, Paris, 1909).

5. Progressive mental degeneration.—When degeneration attacks a well-developed mind, the symptoms are more obvious and more evident. According to Ribot's Law of Regression or Inversion (see his Discours de la Mémoire), the more unstable forms of experience or acquirement are the first to lapse, i.e., (1) the most recently acquired; (2) the largest, frequently repeated, the least habitual or automatic powers. Thus, in senile insanity, or in the beginnings of alcoholic insanity, it is the power to meet new situations, to face difficulties, to create, invent, or to fail at that fails first; habit situations are met, adequately perhaps, in habitual ways, but the bloom of individuality is gone. There follows the delicate appreciation of moral values—there is an increase of selflessness, and of conscience, along with a failure of higher ambitions; then the more complex intellectual acquisitions, professional skill, scientific interests; then the memory for recent events, the recollection of the less familiar complexes of experience. With the narrowing of intellectual life, the emotional life occupies a larger space; the patient becomes irritable, and irritating, discontented, malicious, neglectful of the ordinary conventions of life; his thoughts and his speech become less coherent, more vulgar, less petty, until, finally, dementia leaves no powers in function except the primitive instincts and reflexes, with at the most a few of the more ingrained habits of mind and body. In a general way also, although all these stages have their parallels in the different concrete forms of degeneracy found in different individuals—from the morally deficient 'intellectual' down to the congenital imbecile or idiot.

DEGRADATION.—See Discipline.

DEHRA.—A town, the capital of Dehra Dan, a valley projecting from the Plains of Northern India like a triangle towards the source of the Jamna river and the main range of the Himalaya, lat. 29° 19' 50" N.; long. 78° 2' 57" E. From a religious point of view, the place was considered as the seat of a strong body of Udasis, a Sikh order of Hindu ascetics, who are said to owe their establishment to the son of Guru Nanak, the founder of Sikhism. Their gurdwāra, or temple, the work of their leader dying Bay, was erected in A.D. 1889. The central block, in which the bed of the gurā is preserved, was built on the model of the Emperor Jahangir's tomb at Lahore. At the corners are smaller monuments in honour of the gurā's four wives. The building has a large well, and a sanitarium and, the gurā, who has the revenues at his disposal, is the richest man in the Dan valley. Formerly the appointment of each new gurā, who was selected from among the disciples of the deceased, was in the hands of the Sikh chiefs of the Punjab, who, at each new installation, made a gift to the British Government and received in return the complimentary present of a pair of shawls. This practice is now discontinued. The Tukah, of which the seat is a cup of red cloth shaped like a sugar loaf, worked over with coloured thread, and adorned with a black silk fringe round the edge. The mabhānt, or gurā, enjoys life in this isolation in style, and large numbers of devotees, drawn from all classes of Hindus, attend the shrine. But the most enthusiastic worshippers naturally come from the Gāz-Sutlej Sikh States. The annual ceremonies, which last ten days, are performed at the Hindu feast of the Holi in spring.

DEICIDE.—This term, though not new, has been used in the past with such restricted meaning, and so seldom, that there is an imperative need to enlarge its definition before it can be of service in that branch of scientific research in which it is increasingly used. The following definition, taken from Ogilvie's Imperial Dict. of the Eng. Lang., will show this: Diecide= (1) The act of putting to death Jesus Christ our Saviour. "Earth, protoned, yet blessed with diecide" (Price). (2) One concerned in putting Christ to death (Craig). (Rare in both senses.)

Another quite recent dictionary defines the word thus: 'The killing of God; especially the crucifixion of Christ.' Though there is here a definition more in accord with modern requirements, the student of religions, acquainted with facts which seem to show how denizens and objects of a certain custom of putting to death both men and animals thought to be gods incarnate, must set aside everything that so narrows the word as to make it unfit for his purpose. Doing this, one is left with what is, after all, a mere translation of the Latin term, viz., 'the killing of a god,' or, more briefly, 'god-slaughter.' It is in this last sense that the word is to be here used. For obvious reasons, there will be few, if any, references to what was at one time known as the sole instance of diecide—the Crucifixion.

None of the phenomena which the scientific study of religions has made known has aroused more interest than those obscure rites and ceremonies, those strange customs, which seem best explained by the theory that diecide, once supposed to find its only example in the Crucifixion, has been, in fact, a wide-spread custom, which has left a deep impress on the religious thought of the race. Before giving the few instances of diecide, which space limits allow, it will be well to make some kind of classification, which will enable the student to understand more fully their nature and extent. It is suggested that instances of god-slaughter may be placed in one or other of two
main classes, as being (1) real, (2) mimetic or symbolic. A noticeable variety of the former is, on one theory at least, traceable in certain solemn expiatory sacrifices, and may therefore be termed 'expiatory' or 'piacular.' Again, in many of these instances for which the name 'mimetic' or 'symbolic' has been suggested, the effort 'to keep in remembrance' seems so prominent that they may well be termed 'commemorative.' The following is therefore suggested as a working classification for these instances of god-slaughter which seem to have been enacted.

1. Real (with sub-class 'piacular' or 'expiatory').—Cases of real god-slaughter may be seen in the strange custom, at one time wide-spread though now well-nigh extinct, of putting to death kings and chief men at set times, or when they showed some sign of approaching decay and death. There is evidence to show that originally these high-placed victims were looked upon as Divine in a very real sense—gods incarnate. Such Divine honours are still ascribed by savage people to their king or ruler. The existence of these Divine beings in full vigour was deemed necessary to the welfare of all their people. It was a proof that their god could still safeguard their interests. The reason for these gods coming to death was believed to have been the dread lest, through disease or decay of strength, they might be unable any longer to help and keep in safety those who looked to them for these blessings. It was necessary, therefore, that a fresh and vigorous incarnation should be sought for, to take the place of that which was ready to vanish away.

Africa and India furnish the best attested examples of such decide, though traces of it are supposed to have been discovered in the accounts of old-world rites handed down by classical writers. Three centuries ago it was the practice to put to death the king of Sotho, an African State, when even slight doubt of his ascendancy became manifest; whilst the King of Eyo, also in Africa, was expected to commit suicide should his headmen think it demanded by the needs of the State.

Again, in one of the kingdoms of Southern India the king was put to death or compelled to self-immolation in the event of its becoming necessary. Many of these customs seem to have obtained in others of the Indian States. It is not surprising to find that, in course of time, means of evading this disagreeable necessity were discovered; one method, that of providing a substitute, human or animal, having a special interest as being the possible beginning of vicarious sacrifice.

An interesting variety of these customs may be seen in cases where an original totem has developed into a deity worshipped by the members of the totem clan. It has been observed that at certain times, when the deity seems to be estranged from his worshippers, or for some other reason the clan-bond needs renewing or cementing, recourse has been had to sacrifices of species highly sympathetic in efficacy. In these the victim has been an animal of the same species as the original totem. In other words, the very deity constitutes the sacrifice which is to heal their estrangement with himself and his worshippers. It is not difficult to see in these solemn renewals of covenants the beginning of expiatory or piacular sacrifice. There seems to be a sufficient reason for thinking them to be cases of piaced on the answer, and to the other hand, the solemn putting to death, by his own price, of the sacred Apis bull of Egypt, after the lapse of a certain number of years, seems rather to be an instance of the endeavour to secure a renewal of the Divine life of an broken vote in cases where the evidence for and against a certain view seems evenly balanced. Yet, not-
withstanding all this, no part of the great study of religions is fuller of suggestion than this, more especially in the strange parallels noticeable between pagan and Christian thought and ritual. It is only natural to regard 'the Constantinian,' 'Crucifixion,' 'Sacrifice,' 'Bucharist,' etc., to show this. What influence the recognition of such analogies may have, in the future, on Christian speculation it is impossible to say.

T. STENNER MACEY.

DEIFICATION (Greek and Roman).—I. The Greeks.—The deification of actual men and women among the Greeks is a natural development of that view of the gods which their early literary documents show already prevalent. The Greek was not satisfied with the presence he divined in the operations of Nature, and whose legends he learnt as a child, in a mystical haze, as vast powers of shadowy and uncertain outlines; his mind loved the light of day; he could know the real in these bent, what definite things they had done, in what relations of kinship they stood to each other and himself. Hence it was that the gods of the Greek came to be anthropomorphized in a peculiar sense. Homer knew the gods, and the Athenians, who actually trod the hills and fields familiar to himself; the Athenian could look at the very mark which the trident of Poseidon had left upon the rocks of the Acropolis; the Spartan knew from a child the thrax of Hyacinthus, whose Apollo had slain with the darts.

From one origin are begetted gods and mortal men," says a line attributed to Herod (Works and Days, 163); and Phidias echoes it in the opening of Ness. v.: 'There is one self-same race of man and gods; and from one single Mother have we both the breath of life; only families altogether diverse distinguish us; since man is a thing of nought, and those have been born in a sure abiding home. And yet we have some likenesses, either by greatness of soul or by fashion of body, to the Deathless Ones.'

Yet more, the gods had begotten human children in intercourse with men; the families of the legendary chieftains, and such families of a later day as could make out a descent from the heroes of legend, were literally and physically their issue. The ancient heroes, as Homer tells us, by a number of real or traditional mothers, were very much like gods to look at. And not only could the Divine thus come to earth, but the legends knew of men becoming gods (Ev. Andr. 1255, etc.).

The god-like line between the worship of the dead and that of the gods hard to draw, for the rites offered generally to the dead implied the belief that the deceased had some power of action in the living world; only the scope of such power was greater in the case of those worshipped as heroes, whilst the distinction, again, between the rites proper to heroes and to gods respectively tended in practice to become blurred (Daneke, col. 2256, note). A difference was, indeed, recognized in the first instance being paid to the dead, 'heroic' honours, and divine honours (see Arr. iv. 11. 3); but, when we try to draw a hard-and-fast line, the difference appears rather one of degree.

Of these the heroes worshipped by the Greeks were mythical figures imagined in a remote past, especially the legendary founders of cities, the eponymous ancestors of clans, or the patrons of local and particular professions. How some cases occurred in which actual men were assimilated after their death to these heroes of the imagination we cannot say, but it seems to have happened early in certain parts of the Greek world (esp. Thrace and Sicily) that the founders of cities receiving sacrifices which the cities as such offered to the legendary heroes (Tuesius in the 7th c. B.C. (Hdt. i. 163; Mal. 4. 8); Thrasymedes, Thassus, Thracus (passim); Dion, Theron, Thracos in the 5th c. (Diod. l. xi. 38, 65); Hagenos and Brundisius in the same century (Thuc. v. 11)); or that the spirits of those who had been violently slain under circumstances which made some community dread their vengeance were placated with 'heroic' honours (on the impulse of Creon in the case of Polyneices, king of Thebes, in the 5th c. (Hdt. v. 114)).

It was thus natural that, when the emotions of reverence for the divine or enthusiasm with regard to some actual man were raised to a high degree, they should be felt as almost identical with those which had the gods for their object (εἰς ἃν γὰρ σὲ ἐπὶ πάντων 'Αχιλλος [Hom. Il. xi. 603]; θὰ φάν τοίς τε δίκαιοι [ib. vii. 78, etc.]). The case is not unlike that of which it even seem proper to express such feelings in the same ritual performances as those used for the gods. 'Ὄσῳ παντὸς ἀγάπησεν εὐαγγέλιος χρήσις, θὰ πάντων τὰ GitHub χρησιμοποιήσῃτι' (Hist. of Ancient Greece, pp. 389, 390). Hence, it is of course, of a rhetorical exaggeration; but, when the notion, even as an extravagance, was present to the mind, it was a short step, in days when the old awe of the gods had declined and novel dramatic days of Eschylus, the religious sentiment which was abroad had, no doubt, for many minds emptied the traditional forms of worship of their content of awe and devotion, and in proportion as they had become mere formalities there was less restraint from the old gods remained as figures for the imagination, anthropomorphism had gone a step further, as may be seen in the contrast of Praxiteles with Phidias. Scepticism had in fact brought anthropomorphism to its ultimate conclusion by assuming roundly that the gods were men, as was done by the popular Euhemerism. The gods, according to this theory, were kings and great men of old, who had come to be worshipped after their death in gratitude for the benefits they had conferred (see EUGHEMERISM). On this view, there was nothing monstrous in using the same forms to express gratitude to a living benefactor. In so far as the worship of living men arose from these conditions, it was a product of the ordinary superstition, but of rationalism. It shows, not how exalted an idea was held of the object of worship, but how depreciated in meaning the forms of worship had become. If this is so, Frazer (Early Hist. of Kingship, 1905, p. 137) errs in confusing it with primitive superstition, of which it is really the antithesis. At the same time, the development of religious feeling, which revolted against the traditional anthropomorphism, was not altogether unfavourable to such cults. The tendency to merge the gods and divine virtues in the conception of One pervading Divine power (Schmidt, Ethik d. alt. Griechen, 1852, i. 52) would make it easier to see manifestations of this power in human personalities which asserted themselves.
strongly. A special kind of deification was that which we find in connexion with the mystic sects dispersed through the Greek communities and the philosophies which borrowed from them. If deathlessness had been all along the distinguishing characteristic of the gods, those who laid stress upon the deathlessness of the individual soul thereby came near the making it divine. As we see, the idea that the human soul is a divine being imprisoned for some pre-natal offence in the mortal body. The notion, current among the Orphics, passed goods to Alexander the Great for this reason. (Hollein, *Psychē*, ii. 121 f., 161 f.). So, too, Empedocles declared that, if a divine being sinned, he was incarcerated for punishment till he had worked out his salvation in a number of successive lives, and was restored to fellowship with the gods (frag. 146, 147 (Dielis)). Empedocles himself was already reaching that consummation, and claimed divine honours: ἐγὼ δ' ὤμοις ἥθη διαβρόσας, ἵκιτα ἱπτήσας, σαλεὲ μετὰ πᾶις τεταμώνων, ὥσπερ θεὸν, παρ' ἐπικτήσεως στῆξας τὴν τε θεόν (frag. 112 (Dielis)). He is also called, Ἐπεδεκάτων, *Psychē*, ii. 171 f.). So, again, on the funeral tables discovered at Thurii, the dead man declares to the gods that he is of their kindred, and is saluted as one who has passed from mortality to deity: Ὑπὲρ ἀλα ἀλακαρθηροῖς, ὥσπερ θεοῖς ἀλακαρθηροῖς (Michel, *Icosia*, 1896-1900, nos. 1320, 1331; Harrisson, *Prolegomena zu Gr. Relg.* i. 1908, p. 666 f.).

If any one had the right to divine honours, Alexander, after feats of conquest to which Greek story gave no parallel, and the philosophical triumphs of Dionysus and Herakles, obviously had a pre-eminent claim. Already his father, Philip, had in his own kingdom caused his own statue to be carried in procession, together with those of the twelve gods (Diod. xvi. 92 f., 61); it is held to call for the influence of the 'East' to account for what followed so inevitably from the prevalent disposition of the Greek world. As a matter of fact, the Achaemenian kings were apparently not worshipped as gods (Evsch. Pera. 157 is cited by Beurlier and others to prove that they were, but the evidence of the native monuments is against it, and the Greek notion represented by *Epichynus* seems to rest upon a misapprehension of the formality of his insignia. That, to the New Empire, the reigning king had been so worshipped, and it was natural that Alexander should here be saluted as the son of Amen (Ammon). But we may safely say that, even without this, the Greeks were now as far from the false gods of Strabo, xvii. 814. In 323, on Alexander's return from India, embassies arrived at Babylon from Greece, wearing and bringing crowns such as indicated that they were *θεόποι,* approaching a god (Arr. vii. 23). There was still, indeed, in Greece a party of old-fashioned piety who opposed the extravagant flattery as profane. The question provoked stormy debates in the Athenian assembly. The divine honours were defended on the other side with flippant sarcasm as a form too empty to matter. 'By all means,' exclaimed Demosthenes, 'let Alexander, if he wish it, be the son of Zeus and Poseidon both together' (Hyper. (Blass) 31, 17; cf. ps.-Plut. Vit. X. Oreg. vii. 22; Valer. Max. vii. 2, 13; Dimarch. in Demosth. i. 94). The expression shows that Alexander was understood himself to demand such honours. According to an account preserved by Antimachus of Rhodes, 253, 8 (323). For, if the god was employed to propose divine honours to Alexander in the circle which surrounded the king's person, the *propation* which Alexander demanded was regarded by the Greeks as an acknowledgment of deity, and Amazorhnes is represented as defending Alexander's deity on purely rationalistic euhemeristic grounds (Arr. iv. 10). For Hesiod, at any rate, Alexander demanded worship after his favourite's death. The worship was 'heroic' in kind; Arrian gives under reserve the story that Alexander had wished to make it properly divine, but had been forbidden by the oracle of Ammon (Arr. vii. 14, 7; but cf. Diod. xvii. 119). If worship offered to the living Alexander had offended the more conservative Greek feeling, worship offered to the dead Alexander as a hero was in accordance with Ammon's opinion. The former worship chosen would show numberless local variations which we cannot now trace. The Ionia Confederacy maintained a cult of Alexander centred in a sanctuary near Teos (Strabo, xiv. 644) till the days of the Roman Empire. Under the Roman Empire itself the cult of Alexander flourished (Lamprid. *Alex. Sev.* v. 1.; Herodian, iv. 8; Dio Cass. lxx.vii. 7).

Naturally, the Macedonian chiefs who entered upon Alexander's inheritance saw their interest in publicly recognizing his divinity. In what forms they severally did so is not recorded. Eumenes had a 'tent of Alexander' in his camp, with a throne before which the officers offered a sacrifice as to a present god. (Diod. iv. 21, 3; Strabo, xv. 4, 13; Polyen. iv. 8, 2). The appearance of Alexander's head, with the horns of Ammon, upon the royal coinages is an assertion of his assimilation to the gods.

Antipater was an exception; in him the old feeling which condemned these practices as impious (καταθέσεις (Suidas)) still found a representative. The official worship of Alexander at Alexandria as god of the city cannot be traced further back than Ptolemy I., who was initiated by his uncle Alexander from Memphis to the new temple called the *Sēmis* in Alexandria. (It is curious that Diod. speaks of the honours offered to Alexander in Alexandria as *συμπερασμένοι* (xviii. 24, 4). Probably the expression is used loosely, because in his honour (Dittenberger, *Inscr. Orient.*, i. 6). In 307 Athens exhausted all forms of adoration in regard to the same two princes. They were addressed as *θεὸς στράτηγος*; a regular priesthood was established for them; and changes, ostensibly permanent, were made in the calendar and religious organization of the people. In 290, a hymn, which has been preserved, was composed for the reception of Demetrius. In it Demetrius is hailed as the son of Poseidon and Aphrodite; he and Demetrius are the 'greatest and friendliest of the gods,' and so on (Diod. xx. 46; Plut. Dem. 10 f.; Athen. vi. 253, xvi. 978 f.). It is important to observe that the really religious people still protested against these perversions, and saw in the failure of the 'African' system the repudiation of the true gods (Philippides, *op. Plut. Dem.* 12). The first Greek State to offer divine honours to Ptolemy was apparently the Confederation of the Cyclades (τηγανήμενος πρεσβέα τον συναστήν Πτολεμαίον του σόλων της Δωρίας [Ditt. Syll. 2, 202]; Rhodes in 304, or soon after, conferred upon him the divine surname of
serving the group of divinities; the cult of the ἥθη συρίπες remained for the time distinct. When Ptolemy II. was succeeded by Ptolemy III. Euergetes, the ἥθη συρίπες (i.e. Euergetes and his wife Berenice II.) were added to Alexandria, and Ptolemy IV., Soter, added to the king’s list the temple of All-Sovereign Kings. Under Ptolemy IV. Philopator (between 220 and 215) the cult of the ἥθη συρίπες ceased to be distinct; their name now appears in the official registers after that of Alexander. The seat of this official cult seems to have been the Ἐναταζά of Alexander, to which a Ἱερόμιαχος (a mausoleum of the Ptolemies) was joined (Otto, Priester und Tempel, i. 139). Some of the Ptolemaic queens also had shrines, such as Arsinoe Philadelphus a καρυάφος, Berenice II. an ἄδορφος, Arsinoë, sister-wife of Ptolemy IV., a ἡρεία, and Cleopatra III. (daughter of Ptolemy Philometor), wife of Ptolemy Euergetes II., a variety of ministers, a στέφανηφόρα, a πυρσοφόρα, a ἡρεία, and a male priest styled ἱερός τέλος (Otto, p. 411). The priestesses of the queens may have performed their rites at separate shrines in Alexandria. Distinct, of course, from this system of Greek worship were the shrines controlled by the Egyptians, on the lines of their national tradition, to their foreign kings and queens; though the influence of the Egyptian forms of worship upon the Greek may be seen, e.g. in the king himself becoming, on his Bourbonian accession, a king of the Jews by the Egyptians, and in the Alexandrian (Otto, p. 182, note 6). Cyprus, a Ptolemaic dependency, had a high priest (ἀρχιερεύς τῆς νύρας ο ὑπὸ τοῦ κατὰ τὴν νύραν ἱερᾶς) of its own, in whom we may see the president of the provincial cult of the kings (Strack, Dynastie der Ptolemaier, no. 76, etc.).

In the Seleucid realm, when Seleucus was murdered in 251, his son Antiochus I. was forward to do as much for his father as Ptolemy II. had done for his. The tomb of the old king at Seleucia was constituted a temple, a Ναυτεμενος, and a cult was officially instituted for him as a god (App. Syr. 63). With him each of the following kings was in his turn associated; one priest served the founder and his defined successors, and one the reigning king (Ditt. Orient. 245). How soon it came about in the Seleucid realm that the living sovereign was the object of worship instituted by the court we do not know. The important inscription which gives the creation of the religious city (201–210 B.C.) (Ditt. Orient. 234) shows us such already existing. It is a worship of the king organized by provinces, each province having a high priest. The rescript is issued in order to associate the queen Laodike in the cult, instituting provincial high priests for her, side by side with those of the king. Incidental mention of provincial high priests in later reigns shows us the system still in continuance (Michel, 1289), and they present an obvious parallel to the high priests of Cyprus in the Ptolemaic realm.

Although a difference is rightly insisted upon between the cults instituted by the central government and those offered by the Greek communities as independent agents, the dividing line between the two is not easy to draw. This is due to the ambiguous position of the Hellenistic kings, who wished, while retaining Greek cities under their control, to leave them the semblance of autonomy. Cults offered independently by a city such as Rhodes might be framed at a suggestion from the court which it was impossible to disobey. In what class, for instance, are we to put the cults offered to the Ptolemaic kings at Ptolemais, to the Seleucid kings at Seleucia, to the Attalids at Pergamum? All these cities had the forms of municipal autonomy, but were entirely subject to royal dictation. The nucleus of the cult at
Ptolemais is that of the founder Ptolemy I. Soter, and to him the later kings (at any rate after the θεός φαλαχητήρος) became attached. The cult of Seleucia founded under Antiochus I. we have already mentioned. At Pergamum a sheep was sacrificed annually on the altar of Ennius Eumeus, that is to say, even before the rulers of Pergamum had acquired the title of kings (Ditt. Inschr. Orient. ii. 267). An inscription of the time of the last king of Pergamum, Attalus III., shows us sacrifices offered to the names of Attalus III., his brother Philocrates, and the reigning king (Mitt. Ath., 1904, p. 153).

In connexion with the assumption of deity by the kings themselves, we must reckon the appearance of their effigy on coins struck by royal authority. The official surnames, again, which they bear have been thought to have religious significance. This is difficult to prove, because the king would naturally be addressed in worship by his full titles, and if, therefore, we find the surname used in the cult, it would not necessarily show a religious origin. In favour of the hypothesis are: (1) the fact that some of the surnames, e.g. σωρή, επαφάνη, have undoubted religious significance; (2) the practice of the Greeks of attaching surnames to the names of deities—Athene Promachos, Zeus Melichios, etc.; cf. also the title of εὐεργέτης conferred on Diogenes (see below).

The title of θεός does not seem usually to have been assumed by kings during their lifetime. For the Greeks of Egypt, as we have seen, their living king was a god from the time when Ptolemy II. associated himself with his dead and deified sister. But whilst the living king and queen were, after Ptolemy II., regularly worshipped together as θεοί εὐεργέται, etc., the kings do not seem to have had themselves called θεοί in the protocol of State documents till the time of Euergetes II. (Strack, Dynamis, p. 129). In the Seleucid dynasty also it is to be noted that Antiochus IV. Epiphanes is the first king under whom θεός is attached to the royal name upon the coinage, and Antiochus is exactly the same title as that in the Ptolemaic dynasty (Ditt. Inschr. Orient. ii. 154). The usage of the Pergamene kingdom also appears to have confined the title of θεός to deceased sovereigns. A king or queen at death seems to have joined the number of the gods. (Cardinali, ‘Regno di Pergamo,’ p. 153, note 4). This did not exclude the offering of rites of sacrifice, etc., to the living sovereign. Whether, in the case of acts which were understood to be ceremonial flattery, any attempt was made to reconcile the inconsistency of worshipping some one whose apotheosis was still future we do not know.

It remains to consider the relations to the older gods in which these cults in theory placed the men worshipped. These were of three kinds.

(1) Descent.—Those Greek families which professed to trace back their family tree to heroic times had, of course, no difficulty in making out their descent from some god. It can hardly, therefore, have been the peculiar prerogative of the royal dynasties in Hellenistic times to possess this sort of link with divinity. They seem, nevertheless, to have thought it worth while to emphasize the descent of the family of Ptolemy at the Egyptian court was traced back to Herakles and Dionysos, the latter deity after the reign of Philopator being given prominence over the former. Possibly the family of the gods claimed descent in the same way from Apollo. The Attalids, like the Ptolemies, apparently took Herakles and Dionysos for the founders of their race (Cardinali, op. cit. 117).

(2) Immediate worship.—Dignity of family was not enough. If possible, the person worshipped had to be himself the offspring of a god. Already, in the times before Alexander, Apollo was worshipped at the Syrian court of Dionysus (Plut. de Alex. virit. ii. 5). Alexander claimed that his mother had conceived him of Zeus Ammon. The real father of Seleucus, it was asserted at the Seleucid court, was Heracles (Just. x., 4). Apollo was ἐνθριφθαι ἐν γένεσιν (CIG 3595). So, too, we saw that the Athenians in 308 hailed Demetrius as the son of Poseidon and Aphrodite.

(3) Identification.—For this, again, we have a precedent before Alexander in Clearchus of Hieralea (FHG iii. 526). The first instance we can trace after Alexander is that of Seleucus, who was worshipped at Seleucia as Zeus Nicator. His son at the same place was Antiochus Apollo Soter (Ditt. Inschr. Or. i. 215). In Egypt, Arsinos at her apotheosis was identified with Aphrodithe (Strabo, xvii. 800; Athen. vii. 318d, xi. 497d), and so was Stratonic at Smyrna. Antiochus Epiphanes probably identified himself with Zeus (JHS xx. 1900, 26 E.C.). Ptolemy I. practised the custom of the Greeks of attaching surnames to the names of deities—Athene Promachos, Zeus Melichios, etc.; cf. also the title of εὐεργέτης conferred on Diogenes (see below).

The Greeks had no idea of any divinity in kingship per se. The proffer of divine honours in the 4th cent. B.C. was the recognition simply of a personality mighty to impress and unify the world. The Greeks, as a matter of fact, who approached Alexander with worship did not regard him as their king (he was king of the Macedonians and Persians). Naturally the Macedonian chiefs who made the Alexanders after Alexander attained thereby a position which gave them pre-eminent power upon the world, and the proffer of divine honours expressed a desire to secure their good-will and protection. We have here further evidence of the possibility of assimilating the Greek worship of kings with a worship of the king as such, like that which had existed recently in Egypt and, centuries before, in Babylonia. Naturally, too, when the new kingdoms had failed to better the courts found in the cult of the sovereigns a useful means of imposing upon the popular imagination and securing an expression of loyalty. And, as Kaerst has pointed out, it was not easy to find a formal expression for dominion over a number of Greek States which were, by Greek political theory, independent sovereign communities. Over the authorities of the city had been, in olden days, only the gods, and the assumption of deity gave a sort of legitimacy to the relation of the king with the subject Greek States. Antiochus IV. turned his deity to further account by representing himself as the divine husband of the goddess of a rich temple like that of Hierapolis, and claiming the temple treasure in that capacity (Gran. Lieben, 29).

The Greek practice passed to the new dynasties which arose in the East. The Greek kings of Bactria, Agathocles and Antimachus (c. 190-160), are styled ‘god’ upon the coins. The Arsacid kings of Persia, and the Onkoi, in the time of the Zoroastrians, they recognized only One Supreme God, found no difficulty in giving the name of ‘god’ to subordinate powers, and in classing them...
selves among the number. Here, too, on some of the coins the name of the king is accompanied by the epithet θεός or θεσαύρως (Wrotch, Coins of Ptolemy, 1903, p. xxvii). So too, the Susanian kings (after A.D. 224) continued to bear the title of θεός (Perr. boy); but, whilst the Greek was ambiguous, in the native language the distinction between the lower divinity of the human deity and that of the gods proper was made plain by another word (yazdaian) being reserved for these last (Ditt. Inscr. Orient. i. 432, 433). So far, then, from its being the case that the deity of the human ruler was an idea borrowed by the Greeks from the East, the borrowing was the other way; the Orientals took it from the Greeks.

Even the minor dynasties of the East came to claim divinity for their kings. Antiochus I. of Commagene describes himself as θεός in the same breath with which he professes piety to be the rule of his life, on the monument where his body rests after his soul has gone to the ‘heavenly seats of Zeus Ormios’ (Cass. ii. 2628). The honorary titles of Antiochus were worshipped as θεοί (lines 48, 118, 125), from the cult of the greater gods. His own image is σώφρονας with that of Zeus-Ormouses, Mithra, Artagnes, and Commagene (Mommsen, Ditt. Inscr. Orient. i. 389), an ambiguous epithet for the Jewish Herod Agrippa I. received from heathens the now banal ascription of deity (Ac 12:2; Jos. Ant. xix. 8, 2). When the power began to pass from the hands of kings to that of Rome, the Greeks, in transferring their homage, continued the forms of reverence and piety which replaced that of the Hellenistic kings was that of the gods-honour. Smyrna was the first Greek city to erect a temple to Rome in 195 B.C. (Tac. Ann. iv. 56), and the cult later became general. The Roman general Titus Flamininus a few years later was receiving divine honours in Greece (Plut. Flamininus, 10). In the last cent. B.C. it seems to have become the usual thing for Roman governors to be worshipped by the provincials under their rule (Civ. ad q. Frat. 1, 21; Suet. Aug. 32). The notorious Verres in Sicily had games (Verria) celebrated in honour of his divinity (Cic. Verr., Orat. ii. 2, 21). Of the numerous temples erected to Pompey (πομπαγὸς θεὸς στὰ τούτα καὶ τὸ γαλείον), his epitaph, no one from the island of Carthaea, show the sort of worship offered to Julius Cesar by the Greeks in his day of power. The first (CIG 2661) describes him as ‘peer of the gods’ and ‘deified’ (yazdaian); and the second (CIG 2669), as ‘God and Emperor and Saviour of the world.’ But now the ruling race itself was prepared to follow the Greek fashion.

2. Deification under the Roman Empire.—For the old Romans the gap between gods and men was not bridged as it was for the Greeks. They had indeed, like other primitive peoples, rites for placating the spirits of the dead (di manes), but such spirit-worship did not pass into regular cult. There was no intermediate class of heroes. The offering of divine honours to living men would have seemed to them highly shocking. As, however, the Greek element grew in Rome, new ideas found entrance. Scipio Africanus was not worshipped, but there was believed to be something supernatural about him, and stories were told of his divine birth (Liv. xxvi. 19). In the last century of the Republic, rites proper to divine worship were offered to Metellus Pius (Macrob. Sat. iii. 13. 7) and Marius Gratidianus (Cic. Off. iii. § 80; Seneca, de Ira, iii. 18); but in the former case by private friends, members of a Hellenized aristocracy; in the latter, by the Roman populace; in neither case, with official authorization.

The note of that Empire which Julius Cesar conceived was an assimilation in which the old Roman tradition lost its prerogative. Under his rule the achievements of former generations who had brought glory to their cities, like Theagenes, who was worshipped as a god at Thessos (Paus. vi. ii. 5); Oebotas of Dyne (Paus. vi. ii. 5. 5 and 6), and Diogenes the Cretan (Plut. Hecat. ap. Plat. Diot. p. 151a, 20). Other conscriptions were the act of guilds or associations, who worshipped their founders or distinguished members. So we find a guild of Dionysiacs in the city of the Isthmos, ‘honouring’ a certain Dionysius (ἐποιείων διονυσίας θεόν) (Mith. Ath. ix. [1884] 279f., 288f.), and something like a heroic cult of their founder was maintained in the philosophical schools created in the form of religious guilds by Pythagoras and Euphorus. In the case of Plato, the story of a miraculous birth was again circulated; he was the son of Apollo (Diog. Laer. iii. 1. 2; Olymp. Vit. Plat.). So, too, Hippocrates seems to have been worshipped in schools of medicine, not in Cos only, but in the Greek world generally (Luc. Philop. 8. 2). Sometimes the conscription took place according to testamentary dispositions, which founded an association for the cult of the testator, as in the case of a family of Theophrastus. Herion is the subject of the will of Epictetus (CIG 2448), and in the case of Euphorus,

Greek divinity.

But first three sorts of cults offered to the Emperor must be distinguished: (1) the pro-
vincial cults, maintained by the king himself in each province as a whole at one of the provincial centres; (2) the municipal cults, maintained by the separate cities; (3) the private cults, maintained by individuals or voluntary associations. The first were far more completely controlled (in each province) by the Imperial Government; and to them alone strictly applies the rule laid down by Augustus, that he was not to be worshipped save in association with the goddess Rome. Asia and Bithynia were the only provinces in which this rule was observed in all cases. But the provinces of Asia and Rome were reared at Pergamum and Nicoedia. This permission did not extend to resident Roman citizens; they were to worship, not the 'divus Augustus', but Augustus Julianus, the divine temple of their own at Ephesus and Nicea (Dio Cass. li. 29; cf. Tac. Ann. iv. 57). In the West the first provincial cult seems to have been instituted in 10 B.C., when an altar was consecrated to Rome and Augustus at Langium (Lyons) for the province of the Three Gauls. A few years later a similar altar was consecrated for Germania at Oppidum Ubiorum (Cologne). To the municipal and private cults much greater licence was allowed. In ordinary practice, however, the cities were under the early Empire to have combined the name of Augustus with that of Rome. The cult instituted in A.D. 11 by the colony of Narbo is an instance of the honours of Augustus alone (CIL xii. 4333). Or, again, the municipal and private cults might emphasize the Emperor's deity by giving him the name and attributes of some traditional god. In Egypt and Caria, Augustus is Zeus Ictinos, as he is in the colony of Narbo (Tac. Ann. iv. 39). In a still higher form of such an association, the temple of Zeus Ictinos was built. Evidently the *provincial cult* of the emperor is the more important, and is only due to his resolution that we do not today say 'Tibery' for September or October, as we say 'Jull' and 'August' in memory of the first two diei. The Greeks, indeed, were permitted as before the Emperors at their birthday to worship the *divus Augustus* as a god, but only by this concession to himself and his mother Livina, while the merely figurative character of the worship was emphasized even more than before by the 'God-Son' (thei ágygos) taking the place of the god-
ness Rome in the cults maintained with Imperial sanction by the provincial centres (Tac. Ann. iv. 15).

Municipal priests of Tiberius are found in one or two Italian towns (Venetia, Surrentum).
(Hirschfeld, p. 812), but in Rome itself no such cult was tolerated, nor would Tiberius entertain the request of the province (Legio) to be allowed to build a temple to him and his mother (Tac. Ann. iv. 37, 38). The worship of Divus Augustus, on the other hand, Tiberius piously furthered. A temple was begun to him in Rome; and, whereas other altars and temples to him in the Western provinces, Tarracon was allowed in A.D. 15 to build him a temple (Tac. Ann. i. 78). In the east, Cyzicus was even punished for slackness in this cult (Tac. Ann. iv. 36). The senator Callistus, with which this temple was connected, was so far from objecting to the claim that he claimed the honours which Tiberius had repelled. No munificence was too extravagant for this wretched mania. A temple was built for him on the Palatine; he made himself the equal of Jupiter, and the Roman aristocracy compelled on pain of death to offer him all the forms of religious homage. Upon his assassination in 41, the Senate refused him also divinity; his reign was a mad episode; but under Claudius we register further developments of a lasting kind in the worship of the Emperors. Caligula had already caused his sister Drusilla to be consecrated by the Senate as the first diva. Claudius had his grandmother Livia associated as diva with her husband Divus Augustus (Tac. Ann. ii. 11; Doss Cass. ix. 5); and he permitted (between A.D. 50 and 54) a temple (not an altar) to be erected to himself in Britain at Caenodunum (Tac. Ann. xiv. 31; Sen. Apocol. 8; cf. Kornemann, p. 102, note 27; Tours, Ciuitas Galliarum, p. 38). Claudius' death (54) became the third divus by decree of the Senate; his elevation provoked the lampoon called Apokolokythos, which has come down to us among the works of Seneca.

The precedent set by the elevation of Claudius, consecration became a normal formality at the decease of every Emperor, unless it was desired to affix a stigma to his reign. The outlines of the worship of the Emperors remained very much as they had come to shape themselves in the reigns of Augustus, Tiberius, and Claudius, i.e., in the Greek East various local cults of the reigning Emperor, whilst at the provincial headquarters the cult of Rome and Augustus became, after the apolitheia of Claudius, a new local cult of Rome and Augustus. Thus, the temple of the reigning Emperor was included; in the Western provinces, the cult of Rome and (the first) Augustus; a cult of Rome and (the reigning) Augustus or Rome et Augustorum. The temple of Divus Augustus (Kornemann, p. 109) also remained common for other members of the Imperial family to be consecrated on their decease (Poppea and her daughter under Nero, Domitilla, the wife of Vespasian, the infant son of Domitian, the father of Trajan, etc.), although after Hadrian the privileges generally seem to have been restricted to the Empresses (see list of divi in Buerfler, p. 325 f.). And, although the worship of the living Emperor was not usually conterminous in Rome, the worship of his numen or genius was part of the official religious system. The oath generally recognized in the business of the Empire was by the genius of the Emperor (c.f. Epitom. Metham. xix. 41). In the case of consecration to him, the formula for swearing, inserts, between Jupiter and the penates, first the list of consecrated divi, and then the genius of the reigning Emperor.

None but the worst Emperors, as for example Caligula, refused to accept the divine honours during their lifetime. Nero did so, and a temple to him as divus would have been erected in Rome but for its ill omen, 'for the honour of the gods is not conferred upon the ruler before he has ceased to reign'. (Tac. Ann. xvi. 74.) Domitian established a worship of himself, and was addressed at court as 'dominus et deus' (Dio Cass. lxxvi. 13; Suet. Dom. 13; Martial, v. 8). Commodus had himself worshipped as Hercules, and was fond of presenting himself in a club and lion-skin (Lamprid. Contin. 8, 9; Herodian. i. 14, 9, 15. 2-5). Aurelian (A.D. 270-275) was the first Emperor of sound understanding who took to himself the titles of divinity ('Divus', 'Augustus', 'Divus') as part of the pomp of the person himself, and conceived the idea of giving the Roman autocracy an expression no less ceremonial than that of Oriental monarchy. What Aurelian conceived Diocletian (A.D. 284-305) carried out. Among his measures was one to introduce the custom of prostration, and to take for himself and his colleagues the names of Jovius and Herculeus. When Christianity became dominant with Constantine, worship of the earthly sovereign had, of course, to cease. To the form, however, of the old worship a political or social value had come to attach which made it difficult to abolish them absolutely. The Christian Emperors as late as Valerian I. (A.D. 256-260) were officially consecrated after their death (Tact. Hist. i. 11; Doss et Cass. xix. 5); but the use of the term divus, in common parlance, of a deceased Emperor continued for centuries (Gregory of Tours, Hist. Franc. ii. 8; Cod. Just. v. 27, 3, etc.). The provincial temples of the Emperor had become so much a centre of paganism that Constantine allowed them to continue, stipulating, however, that no rites of pagan sacrifice should be performed in them (Wilhanna, Exempul Inser. Latins. [1873] 2843, l. 45 f.). These temples were no longer dedicated to any Emperor in particular, but to the Imperial Family (gens Flavia) in the abstract. The priests of the Imperial cult and the sacrorotales (ex-priests) had come to form an important element in the cities of the Empire, discharging secular as well as religious functions. These, therefore, the Christian Empire allowed to subsist. Since, however, they still bore the insignia of old pagan coronati or sacrorotales, there was a feeling against them among the religious (Synos of Elvira, Canon 55). Christians did, indeed, accept the office (CIL viii. 5839, but Pope Innocent 1. [Mansi, iii. 1069] pronounced that all who had done so after baptism were disqualified for the Christian priesthood. The imperial cult was thus locally as secular officials with the old name as late as Justinian (CIL viii. 10516; cf. Synod of Elvira, canons 2 and 3).

We have seen that the offering of divine honours to men arose among the Greeks in a formality...
DEIFICATION (Greek and Roman)

whose religious significance was mainly that it showed how empty religion generally had become. Can we say the same of the mass of organized cults we have just surveyed—cults which endured throughout the Graeco-Roman world for more than three centuries? It is obvious that to some extent we can. Among the Roman aristocracy, among the better educated people everywhere, the ascension of deity to the living Emperor, if not mere flattery, as in the case of the Augustan poets, was no doubt understood in a metaphorical sense which embarrassed the proper propitiatory worship. Better, after all, for the Emperors, as we saw, repelled such homage, and Vespasian jested on his death-bed at the court fiction (Vae, puto, deus fio, Suet. Vesp. 23).

But how, if these practices had so little meaning in so far as they reposed upon a genuine sentiment, if not, strictly speaking, a religious one. Octavius Caesar thought the world into his power, and for the following centuries order and peace around the Mediterranean were felt to be bound up with the Imperial government. Real feelings of loyalty to the head of the world-State may, therefore, have sought symbolic expression, and the symbol, according to the conditions of the ancient world, could be nothing but a religious formality.1 The Christians appeared rebels to the civil power when they refused to throw incense upon the altar of Augustus. (2) Among the masses of the people, among those to whom the Emperor was a distant and unseen power, some real belief in his deity may have existed. The natural dislike of the human mind insensibly, and in the sphere of belief there are notoriously many half-shades that cannot give a clear logical account of themselves. The common oath by the genius of the Emperor must have acted continually to suggest his deity. The exclamation ὁ Καίσαρ seems to have been the one which naturally sprang to the lips of an over-driven menial (Luc. Lucius, 10). Especially where the personality of an Emperor had impressed itself upon the popular mind to form societies of a friendly or convivial kind could be gratified under cover of Cesar-worship, just as they had been gratified by quasi-religious associations under the Ptolemies (cf. the clubs of Cultores Augusti, φιλαρκονες, etc., in Beirer, p. 228 f.). The cosmopolitan gift of dramatic artists thought it politic to set the name of Hadrian as ποιητης Δαιμονος alongside of the old Dionysos who was their patron deity. So, too, the social ambitions of the freemen, the opportunity of gratification in the institution of the Augustales in the Latin cities of the Empire (Boissier, Religion romaine, i. 162 f.).

Deification, we have seen, had not been among

1 If the Empire was one, some universal religion was needed to extend over its confused variety of national, tribal, and civic gods. Cf. art. Cæsarean.

2 Sometimes the dead was represented in the guise of some god, especially Dionysos or Hermes.
DEISM.—1. HISTORICAL.—The movement of religious thought known as ‘Deism’ was of comparatively brief duration. Its rapid rise into notoriety, its short-lived prevalence, and its gradual settling down, with which it is associated in the last quarter of the 18th century. Roughly speaking, the beginning of the movement was contemporaneous with the Revolutions of 1688. Its epiphan was pronounced in 1790, when Burke could speak of the Deistic writers as if there were yet come into vogue, and to specify the interest difficult to explain. The conditions which combined to direct men’s attention to the Deistic problem were transient; and the whole dispute was too trifling to attract the yearning spirit of society, and the real life of the then world. The deeper currents of religious thought. Superficially, much excitement was stimulated, until the air was thick with controversial writings. But, with a few exceptions, the writers were no match for the literary men—disputants, nor did their arguments penetrate far into the secrets of the spiritual life. This serves to explain why the religious disputes of the 18th century were, if faded from the common memory, more completely lost than those of earlier periods. On the other hand, to the student Deism presents special points of interest. English religion would never have reached its present condition if it had not passed through the stage of Deism. If the movement is to be understood in relation to the general development of theological thought, it will be necessary to seek for an explanation of its origin in a period when the name ‘Deism’ had not yet come into vogue, and in specification of the true issue of which was not anticipated by their own authors. Halyburton, in his book entitled Natural Religion Insufficient (1714), was the first to name Lord Herbert of Cherbury as the parent of Deism. He was followed by a number of French writers, whose View of the Dissoluted Writers (1754) contains much carefully amassed material, very useful to later students. Since then Herbert’s responsibility, whether to his credit or discredit, has been controverted, and the fact is well known that his famous book de Veritate was composed with a purpose quite different from that to which its arguments subsequently contributed. The book deserves an epitaph often applied in cases where there is little justification for so strong a term. It was, without exaggeration, ‘epoch-making.’ It initiated a line of thought and a method of religious speculation pregnant with results, the full measure of which has not even as yet been exhausted. No better introduction to the study of Deism can be provided than a brief analysis of the main theses which Lord Herbert sets out to establish. The title of the book, given in full, clearly indicates the writer’s purpose: De Veritate, rerum illustrandarum, veritatis, probabilium, et a Falso (Paris, 1624). At the basis of the author’s theory is his belief in the existence of notitia communis, or innate principles. These he explains in his chapter ‘de Instinctu Naturali,’ to be distinguished by six marks, viz. Priority, Independence, Universality, Certainty, Practical Necessity, and Immediate Cogency. Ideas to which these marks belong are imprinted on the mind by God. They are axioms, neither requiring nor admitting proof. When dealing with the subject of religion, he distinguishes five principles as exhibiting this primary character, and consequently independent of all tradition, whether written or oral. The first is Liberty, the obligation to repent of his sins, and (5) that there will be rewards and punishments after death. The axiomatic character claimed on behalf of principles such as these is open to debate, and Lord Herbert’s theory of the Deistic philosopher was attacked with scathing criticism by Locke. But, whatever opinion be held as to the validity of Lord Herbert’s assumptions, it remains true that in his works we are brought face to face with the principles which lie at the root of Deism. Here we find a clear presentation of the competence of human reason to attain certainty with regard to fundamental religious truths, and to choose among the infinite variety of religious systems. By the Deists as it was denied by their opponents.

Much misunderstanding will be avoided if it be remembered from the outset that the Deistic controversy was in the main a philosophical rather than a religious question. It would have been incorrect to indicate a metaphysician like Lord Herbert of Cherbury as the foremost Deist. His disappointment awaits those who expect to find in the writings of this period any searching analysis of a living spiritual experience. The Deists were not the first to attempt to free the soul to explain itself to its own joys and fears in the presence of God, but from the desire of the thinkers to make his theory of the world inconsistencies of which he was continually becoming more uncomfortably conscious. The details of the controversy will show that the chief impulsion came from the wish to find a way of reconciliation between the then commonly accepted philosophic view of the Divine nature and the facts of experience. And new facts were the order of the day. It was a period of discovery and of the rapid acquisition of all kinds of knowledge. Information was increasing in regard to the religious systems of other parts of the earth. It was no longer possible to live in a religious world limited by the horizon of Western Europe. Writers were bringing to light newly discovered, or re-discovered, countries reports of imposing facts. Even those who were deeply religious were embittered by religions of the most diverse in origin and character. In this way materials for the study of comparative religion began to be collected, and it was not long before there was some conception of the bewildering multiplicity of religious customs, ceremonies, and doctrines throughout the world. No one philosophical explanation of man and man’s religious faculties could claim to be adequate which left out this mass of new material out of account.

At the same time, other more subtle influences were at work stimulating man’s natural desire to unify his knowledge. In the domain of physical science the process of unification was advancing with unparalleled rapidity. The so-called ‘natural philosophers,’ among whom were numbered the greatest intellects of the day, were engaged in establishing those widespread generalizations which have formed the basis of modern science. The visible success thus achieved, deserving and receiving the applause of the world, prompted the philosophic student of religion to search for some wide formula that would cover his facts as satisfactorily as the formula of Newton covered the phenomena of the physical world.

1. Forerunners of Deism.—It is far from easy to form any estimate of the phase of intellectual thought which developed at the time when it was disposed to accept, or at all events to discuss, the novel theory of religion which the Deists proposed. English philosophy has never flowed in a very wide of deep stream. It is a common experience that what has been the case in the past, and remains to the present day, strangely insusceptible to the influence of abstract ideas. It is difficult to deny the truth of the criticism. Even the controversies of the Reformations, the codification of English doctrine to a great extent upon practical considerations. Little atten-
DEISM

At first sight it might appear paradoxical to maintain that two systems so consciously and directly opposed to one another as those of Hobbes and the Cambridge Platonists both helped to prepare the ground for the growth of Deism. But it will be remembered that the effect of the writings of Hobbes has been described as being peculiarly the sceptical tendency of the Renaissance. It was, indeed, chiefly as an exponent of political philosophy that he made his mark and arrested the attention of his contemporaries. With the political theories which he defended, and with the controversies which ensued, we are not concerned. His importance in relation to the course of religious speculation lies rather in the temper which he contributed to produce than in the acceptance of his speculations by any large body of adherents satisfying self-sufficiency, his obvious one-sidedness, his disregard of necessary qualifications, and his rigorous insistence on the most paradoxical conclusions from his premises aroused an angry opposition. Hobbes was not surprising to conclude that the statement that, while he had innumerable opponents, his supporters numbered but one. It was a true instinct which made the men of his time feel that the mask of Zoroaster was in reality that of a thoroughgoing infidelity. The literature of the Restoration bears witness to the existence of a general opinion that danger was to be apprehended from the spread of his influence. Though Hobbes himself was utterly opposed to that kind of natural religion which afterwards formulated itself as Deism, yet he was, in fact, one of the pioneers of the movement. As much as any other single writer he gave the impulse to religious speculation by helping to shake the old confidence in tradition, contributed to the removal of one of the main obstacles to the introduction of Deism.

Another and a very different element at work in the spiritual life of the nation was derived from the influence of the Cambridge Platonists (q.v.). They were a small body standing much aloof from the general life of the country, who from the vantage ground of academic seclusion surveyed the troubled course of criticism and the contentions of the warring sects. For themselves, they desired to establish on rational grounds a Christian philosophy, leaving to others the barren victories in the field of popular controversy. In them the genuine spirit of Platonic Platonism, the contention for ultimate truth was unmistakably present. It was their dominant motive. Influenced by the wide-spread reaction against the Aristotelianism of the Middle Ages, they discovered, in a modified form of Platonism, a theory of self-sufficient, self-satisfying Deism akin to their religious and to their intellectual requirements. In the forefront of their system they placed the conception of the human reason as receptive of illumination from the Divine Source. From the elevation of the same point they set out—so it seemed to them—the questions at issue between the sects were reduced to their true dimensions, and lost the exaggerated importance which had been conventionally attached to them. In the speculations of these students the ethical motive is markedly prominent. They insisted on the immutability of the moral law and on its independence of any positive commandments, an ethical position which had been conventionally attached to them. For, in the main, they were inclined to abstain from controversy. But some of them found it expedient to meet the theories of Hobbes with an explicit refutation. Against his materialism, and his speciously simple reduction of all human motives to various manifestations of self-love, they opposed their Platonic Idealism and their belief in the existence of moral principles to which an inviolable obligation essentially belonged.

At first sight it might appear paradoxical to maintain that two systems so consciously and directly opposed to one another as those of Hobbes and the Cambridge Platonists both helped to prepare the ground for the growth of Deism. But it will be remembered that the effect of the writings of Hobbes has been described as being peculiarly the sceptical tendency of the Renaissance. Against his materialism, and his speciously simple reduction of all human motives to various manifestations of self-love, they opposed their Platonic Idealism and their belief in the existence of moral principles to which an inviolable obligation essentially belonged.
he pushed forward the argument. Where Locke had urged the 'reasonableness of Christianity,' Toland would interpret the word 'reasonable' as equivalent to 'not mysterious.' This is not in the least what Locke meant. It is a long step further forward along a road which led to the rejection of Christian belief.

The book was of no particular merit, but, owing to the highly charged nature of the controversy, its publication caused a considerable expense of indignation. It was condemned by the Irish Parliament and ordered to be burnt. The Lower House of the Convention of Consistory took cognizance of it, and would have proceeded further, but not the Bishops of Ireland, who, at the point of burning the book, withdrew. Though the ecclesiastical authorities did not move, there was a general feeling that it was an abuse of the recently acceded freedom of the press which religion was exploited by a young author put forward such crude and visionary writings as that 'neither God Himself nor any of His attributes are mysteries to us for want of adequate ideas,' and that as far as any Church allows of mysteries it is anti-Christian (cf. Wilkins, Consilium, 1737, iv. 6 d.). Toland desired to change the juridical of reason as to make it co-extensive with the contents of revelation. In deliberate opposition to the principle of earlier writers, he refused to acknowledge the validity of the distinction between apprehension and comprehension. What man could not comprehend was on that account to be rejected as false. Not content with merely stating this general principle, he attempted to give a historical account of the process by which mystery had been acceded to by the Church, and to emphasize the role of the Book. He pointed out, correctly enough, that in the language of the NT the word 'mystery' was employed not solely in the sense of 'speechless' but also in the sense of 'that which is revealed to the initiated.' Hence he inferred that the conception of mystery in the sense of the unutterable was alien from the spirit of original Christianity, and he endeavored to show that a gradual assimilation of the new faith to Jewish and pagan religions, the influence of Platonic philosophy, and the ambitions projects of unappreciated persons were responsible for the deterioration.

Although Toland cannot be credited with any large measure of originality, yet his book marks a critical point in the gradual change of men's views, with regard to the comparative authority of reason and revelation. A revival of the ancient assertion of the superior of reason was now substituted for that deference which had hitherto been considered the fitting attitude of the human mind in the presence of knowledge communicated from above. This contention, more or less recognized, formed part of his speculations was connected with his theories as to the course of early Church history. The discussion of the views which he set forth stimulated a lively inquiry into the nature and value of the evidences on which the historian of that period depend. In a book entitled Anymon, which was published in 1699, Toland, himself, taking part in the discussion, endeavored (or so it was supposed—all the more so as the large majority of early Christian literature, and by suggesting covertly that canonical and uncritical writings alike were the offspring of superstition and credulity)

A later work by the same writer is significant of the transition to yet another phase of the controversy. In An Enquiry Concerning the Evidence of the Reasonable and Unreasonable Elements of the Christian Religion (1724), Collins forges the question of the relative reasonableness or unreasonableness of the contents of the Christian Revelation, and turns to an inquiry into the credibility of prophecy and miracle. It had been a recognized mode of traditional Christian apology to rest the case for Christianity on two main supports—the correspondence of NT facts with OT prophecies, and the miraculous powers displayed by Christ and the Apostles. Such an historical record remained unchallenged and unassailed. But, now that the spirit of criticism had begun to throw suspicion upon the authenticity and the genuineness of the NT, the serious weaknesses in this line of defence revealed themselves, of which the innovators were quick to take logical advantage. If the facts were doubtful, what became of the argument from correspondence with prophecy and miracle? So began the long debate over the external evidences of Christianity. It was a descent from the comparatively lower level of an inquiry into the fundamental truths of religion to undefined and often vituperative dispute over the veracity of the Apostles and the other NT writers. But, although the tendency to substitute this less important issue showed itself as early as the third decade of the century, it was not till some years later that the change became general.

Christianity as Old as the Creation, or the Gospel a Repudiation of the Religion of Nature, was published in the year 1730. Its author, Matthew Tindal, Fellow of All Souls' College, Oxford, passed through the various stages of religious belief, and did not bring out this, his best-known work, till near the end of a long life. It was at once recognized as a noteworthy contribution to the controversy. It was sober and restrained in tone, and
on the whole was free from the personalities which disfigure so much of the contemporary literature. Tindal collected, arranged, and shaped with considerable discrimination all that he could find in the Deist literature, and presented their case in a compact intelligible form. His book marks the culmination of Deism, when the movement had reached the height of its development, and was not yet affected by the decay of original enthusiasm, but no good purpose would be served by taking part in an obsolete controversy. It will, however, be useful now to point out some general weaknesses, which are not peculiar to Tindal, but are integral parts of the Deistic scheme of religious philosophy.

(a) In the first place, it will be noticed that every religious truth is measured against the standard of an imaginary Golden Age. Whatever truth Christianity possesses it retains from an original revelation to humanity, a part of the Creation.

In Deistic literature references of this kind to the beginning of the world must be interpreted in a conventional rather than in any literal sense. For, though the Deists professed to look to the far past, their eyes were fixed on the present. It was the reason of their own day to which they appealed. Not until later was any attempt made to discover by historical methods of examination what the earlier intellectual and moral condition of the human race had actually been.

(b) Secondly, it is remarkable how, in estimating the value of the Christian religion, and distinguishing between its truths and its errors, the Deists maintain a consistent regard for the Person of its Founder. He has practically nothing to say about the present operation of the influence of Christ in the world. And even stranger than his silence is his apparently complete unconsciousness that the operation of so fundamental a consideration might vitiate his results. So oblivious were the Deists, and many of their orthodox opponents likewise, of the mystical elements in Christianity, that the very conception of a personal union between the believer and Christ would have been forthwith dismissed as 'enthusiastic,' and to the reproach of enthusiasm the temper of the age was morbidly sensitive.

(c) Thirdly, the whole supercilious superiority is assumed whenever the question of miracles arises. The Biblical records are not rejected on a priori grounds as in themselves impossible. Abstract metaphysical arguments have strangely little influence upon the course of the Deistic controversy. But, from the point of view of the Deist, miracles were beneath the notice of the man who claimed to be guided by his reason only. At best they might serve to arrest the attention of the vulgar herd. Religion being regarded as essentially the practice of duties, miracles were superfluous. For 'duties neither need, nor can receive, any stronger proof from miracles than they have already from the evidence of right reason' (p. 574).

(d) Lastly, Tindal, like other Deists, exhibits an extraordinary incapacity to estimate fairly the strength of evil tendencies in human nature. It seemed to them as though all would be well if only some artificial obstacles in the way of moral progress could be removed. The adoption of the principle of Ludditarianism—the universal recognition of sincerity as the one and only thing needful—would not only put an end to all persecution, but would set free an amount of moral energy sufficient to reproduce the world. In Tindal's own words, 'this principle, and this alone, would cause universal love and benevolence among the whole race of mankind; and, if it prevail, must soon produce a new and glorious face of things, or, in Scripture phrase, a new heaven and a new earth.'
DEISM

(p. 413). Verily, this was a flimsy optimism, out of all relation with the stern facts of the world's condition.

The time has now come to pass on to the consideration of the last stage of the controversy, when the pivot of the dispute had become the genuine reality of Christianity. It was the beginning of the end, and yet, when the current of controversy first turned into this channel, the public excitement rose to a higher pitch than it had hitherto reached. Nor is it difficult to discern the kind of interest in this movement. Up to this point the controversy, though not very profound, had yet concerned itself in some measure with the first principles of religious philosophy. In so doing it had moved in a region where the minds of men did not follow freely or with comfort. But now, in the place of these reconcile and elusive questions concerning the adequacy or insufficiency of human reason, far plainer issues were raised that lay seemingly well within the compass of the ordinary understanding. Was the fulfillment of prophecy a fact or a delusion? Did the Resurrection of Christ really occur, or was it a false, easily explicable upon the supposition of enthusiasm or fraud on the part of the apostles? Here were two alternatives out of which the book-writers and the pamphleteers could join issue. They hastened to avail themselves of the opportunity.

Notice has already been called to the fact that Collins's book, A Discourse on the Gospels (1727), contained criticism with regard to the commonly received views as to prophecy and miracle. Professing (with reference to Hume in particular) to be a follower of that school of Christian he sought to convict earlier apologists of a serious misrepresentation of the true relation between prophecy and fulfillment. The difficulty was the lack of correspondence between the two; and he endeavored to prove the impossibility of a just and satisfactory reconciliation of the historical and critical views of the prophecies. Historically the predictions did not bear the meaning which the apologists required. If, therefore, the argument from correspondence were to be preserved, it could only be by giving to the prophecies in question a mythical and allegorical interpretation. Such, Collins argued, had in fact been the method of procedure adopted by the writers of the OT. In accordance with this general attitude towards the OT, he defined Christianity as a mystical Judaism. It was a plausible phrase, but not likely to command Christianity to an age which regarded mysticism with a mixture of contempt and horror. This novel representation of the relation between Judaism and Christianity, couched in an argument for a genuine historical development, was at first received with enthusiasm. For the most part it was reverently rebuked by the defenders of orthodoxy. But, weak as Collins's arguments may have been, and somewhat inconclusive as the interpretation of historical Judaism is, it must be admitted that his attack on the traditional and mechanical conception of prophecy gave an impetus to a fruitful investigation of the historical and critical conditions out of which the writings of the OT took their rise. It was, in fact, an antecedent, however poorly equipped with linguistic and archaeological knowledge, of the Biblical criticism which has been so rich in results during the last half century.

Naturally enough, the attempt to apply the allegorical method of interpretation was extended from prophecy to miracle. The best known name in connexion with this further development of the controversy is that of Woolston. It is strange that writings which should properly have been disregarded as the ravings of a disorderly mind should have received the serious attention which was actually accorded them. If the author could have accounted responsible, then there would be no possible defense for his opinions. As it is, in the case of the Miracles of our Saviour (1727-29). He has recourse to suggestions such as are made for the narrative of the resurrection and he finds in the Gospels nothing but an emblematic representation of the mystical life of Christ in the souls of men. That Woolston was not honest, it is evident from his manner of disposing of the question, and he is guilty of a gross, obvious, and incurable insincerity is obvious. With the manifest purpose of underlining the common belief in God, he attributes his prevalence among the nations to one cause, and to the operation of a contrivance by which he either set his readers or he is inclined to think that it has own its success to the prevalent force of those invincible reasons which have favored the question of the existence of a supreme Deity, the author of nature, is very ancient, has spread itself over great and populous nations, and among them has been embraced with excessive reverence by the emperors and kings of the East; and one thinks that he has made its way to the present age by the agency of one of the Apostles, which is a subject, therefore, the public opinion of the world, as is the case with the propositions of God, as the social sentiments on the stage of the world. This, as far as it goes, is an absence from the ideas of the age, and Hume advocates a escape from the contamination of discordant superstitions into the calm regions of philosophy. In this way Hume makes short work of the whole controversy. Deists set each store. Not only had he the best of the argument.
in contending for the probability of progress from crude to refined types of religion, but, in the face of the evidence which it has procured by these views, we may conclude with regard to
this kind of religion in earlier times and among the uncivilized nations of the
world, it was impossible for the fiction of a religion as old as

In passing it should be noticed that the strength and the weakness of Hume's
thesis that a 'Miracle' can be properly supported
only when it is remembered that, throughout the Deistic
controversy, miracle was treated as the chief evidence of the
Deist antithesis to the claims of revelation. From that point of view, the
more startling the event the greater will be the stupor which
it produces, and the higher its value as a credential. Uncon-
scious of the fallacies involved in their procedure, many of the
apologists degraded miracle to the level of portent. It was a
blot on the Deist system, Karaman was quick to take advantage of. If this
was to make the apologists a willing to treat miracle as a naked sign of arbitrary power, it was not for the common enemy of
Deism and Christianity, but for the Deists themselves. He was only taking
up the ordinary position of the time when he defined miracle as a
violation of nature; and, when it is so defined, with every
adequate cause for its occurrence discarded from consideration, it is
undeniably plain to contend that no amount of external evidence can
outweigh the inherent improbability.

3. Writers with relations to Deism, but not proper Deists.—Some writers, commonly reckoned among the Deists, have been intentionally
passed over in silence. It will be well, therefore, to deal with a few of the
men and their ideas of this curious period, before closing the
subject. One is no doubt
true, that there are certain points which he and
the Deists have in common, but the superficial
resemblances are more than counterbalanced by
fundamental differences. He displays the same
antipathy to priest, and employs the same kind of
argument as the poisonous influence of superstition; but, while he thus
directs his attack upon the same objective, the principles on which he
bases his criticisms are very far from being those of the
Deists. Their characteristic conception of a
law of nature imposed upon His creatures
by the Creator, and enforced by means of rewards and
punishments, is absolutely alien from his
system of thought. For him, the ethical standard
is determined by the dictates of his own
moral faculty, forming part of the essential endow-
ment of human nature. Of this moral faculty
the effectiveness would indeed be reinforced by
theistic belief, but is not dependent on it, whereas
in the Deist system, in the sense of the
Deists, it is derived from the recognition by man of
his
relation to his Maker.

Since the existence of God was of comparatively little moment
in Lord Shaftesbury's system, he cannot properly be styled a
Deist; and in some ways he exhibited a positive antagonism to
their mode of thought. For example, he raised a much needed
protest against the undue prominence given to religious con-
siderations by both parties in the controversy. He found an
appropriate object for his wit in exposing the shallowness
of the conception by which ethics was degraded into an elaborate
calculus of pains and pleasures. The pointed weapon of
relicide is effectively used in his hands. Unquestionably, in his
references to religion his satire frequently degenerates into a
smug and dogmatic reiteration of religious views under his
sacrifice, and retailed by calling him a Deist. But there was little
justification for the charge. The word 'Deism' would cease to
have any definite meaning or application if it were to
serve merely as a cloak to serve variously
so radically divergent as those of Shaftesbury and Tindal.

If there is little justification for ranking
Shaftesbury among the Deists, there is even less for
placing Mandeville to their number.
The Deist may not have been remarkable for any particular moral excellence, but at least he was eminently respectable. There is no reason
to question the sincerity of his desire to further the
cause of mankind, and he was in raising a
barrier against the encroaching tide of moral laxity. Such was not the purpose of Mandeville.
He is cynical enough to set out on the title-page
of the Fable of the Bees (1714) the thesis that
private vices are public benefits, and in his opening
inquiry into the nature of moral virtue adopts the
conclusion that it is the political offspring which
Clartley has laid upon Pridham. Intrinsically the
book is as worthless as it is paradoxical, but it
raised a laugh, and its sophisticated arguments in
favor of self-indulgence ensured its popularity in
circles where every moral restraint was regarded with contemptuous indifference.

Leland, the contemporary historian and critic of Deism, devotes as much as a third of his work on the
Deistical writers to a consideration of the works of Lord Bolingbroke. It is a clear indication
of the high importance of the transition to the new
kind of attraction that the ideas to which the English
Deists had first given expression were taken up by French
writers, new elements were introduced which gave to the resultant product a very different
quality. The Deism that had been so sharply
condemned in France became another movement, with a
character and history of its own, which cannot
properly be handled in this article. At the same
time the history of Deism is not complete unless
account be taken of the fact that it was the parent
stock from which sprang the French movement of
reaction against traditional belief.

It is significant that both Voltaire (1717) and
Rousseau were largely indebted to English sources
for their inspiration. During the years which the
former passed in England (1726-1729), he gathered
impressions which he afterwards systematized and
elaborated into a philosophy of religion. As a
friend of Lord Bolingbroke he naturally came into
close contact with men who were openly sympathized with the
Deists. The ideas which he derived from this intercourse were
in keeping with the bent of his mind. Moreover, his peculiar abilities enabled him to give
them a keener edge and a wider range than they had
in the hands of the English writers. In
France the conceptions characteristic of Deism
found a soil more favourable to their rapid
development than England had ever afforded them. The logical force of his mind, impelled
by a species of undying natural piety and
qualifications, insisted rigidly on the necessary
consequences of abstract principles, where English
conclusions had been influenced by numberless practical considerations. And, further, the con-

itions of social, political, and ecclesiastical life in France were such as to accentuate the criticism of those who were opposed to it. The prevalent order. The view, that Deism became almost at once identifies itself with an anti-critical and the transformation of the old theology into another pattern, as had been the object of the earlier English Deists, the French representatives of the movement advocated a general repudiation of theism and the substitution of an undogmatic religion in place of Roman Catholicism. To this end Voltaire applied the weapons of his caustic satire, and the Encyclopedists added the weight of their accumulated knowledge. Indeed, Diderot to (1748) and the book represent a further stage in the downward transition from Deism to Materialism. With him even that residue of natural religion which Voltaire would have retained became a mere superfluous, resting on no secure foundation. The new rationalism, and the effect which he produced must not be overestimated. Whatever may have been the result of his political speculations in hastening the crisis of the Revolution, his influence upon religious thought was not more than evanescent. Though his genius galvanized for a time into fresh activity some of those ideas which had been the stock-in-trade of the Deistic writers, he could not restore to English theological thought. It is almost a matter of surprise to find on examination how comparatively scanty is the residuum which has stood the test of time. But something no doubt has survived. To some extent the Deists were successful in establishing the appeal of the Deist against the ordinary man, and, as witness, the trained skill of the expert. Obviously, the critical questions which were raised could not be settled without thorough investigation by men who had devoted years of study to the data of these problems. A new class of Bible students arose who professed to approach their tasks with minds entirely unbiased by any dogmatic considerations. Whether they were as free from prejudice as they themselves supposed, is open to question. At any rate the Deists gave an impulse to Biblical criticism, the benefit of which still makes itself felt. It has not been forgotten that the same methods of scientific inquiry must be applied to sacred as to profane history. What he now believed a commonplace literature is insisted upon by the Deists. That they should have led the way in this direction is so much to their credit.

Again, the appeal to the common sense of those who make no profession of religious orthodoxy of theology has remained a characteristic of English religion. The religious public, as it is called, is disinclined to divest itself of responsibility by seeking shelter behind the pronouncements of authority. Conscious of inability itself to undertake in detail the processes of criticism, it insists on seeing the results openly displayed. The debate between the champions of tradition and of innovation is not carried on behind closed doors, but in open court. The public desire to follow the argument and form for themselves an intelligent estimate of the issue. This feature also of our religious life is in great measure the outcome of the Deistic movement.

The Deists have left no more important legacy behind it than the apologetic method of Bp. Butler († 1752). The Analogy (1736) may always be read with profit, but its true greatness cannot be rightly appreciated unless the argument be viewed in its connection and its corresponding Deist attack on Christianity. What calls for remark is Butler's careful and guarded exposition of the principles of religious evidence in opposition to the exaggerated insistence by the Deists on certain aspects of the Deist movement's argument and form for themselves an intelligent estimate of the issue. This feature also of our religious life is in great measure the outcome of the Deistic movement.

To see the Deists as they were, we must go back to the 18th century. There, in the midst of a great intellectual awakening, the Deists were a notable force. They were the critics of the established churches, the advocates of toleration, the champions of freedom of thought and expression. Their ideas were reflected in the works of many of the great philosophers of the time, such as Voltaire, Diderot, and D'Alembert. The Deists were not a single group, but a movement that included a wide range of thinkers, from the radical to the moderate. They were not all men of science, but they were all men who believed in the power of reason to improve the world. Their ideas were influential in the development of the Enlightenment, and they left a lasting legacy in the areas of science, philosophy, and politics.
criticism against the half-developed Materialism, which was the orthodox metaphysic of the day. His rejection of Locke's conception of the real existence of extended matter was accounted paradoxical, and on that account chiefly attracted attention. Paradoxical, too, is the fact that it is sometimes forgotten that this Immaterialism of Berkeley was only part of his system. It was the foundation on which he built. It led on to his conception of the world as the perpetual manifestation of the spiritual presence of God. Thus he delivered a powerful protest against the view that the evidence for the existence of God can be disclosed only through a long and intricate process of inference. In opposition to the commonly accepted cold mechanical outlook on the universe, he preached the doctrine of a continuous communication between the Divine and the human spirit through the medium of sensible experience. To him the material world was the language of God addressed to the spiritual ear, and charged with an infinite significance for those who would address themselves to the task of its interpretation. It was too high a conception to commend itself to the temper of the 18th century. Nevertheless, the influence of Berkeley on the Deists initiated has not been altogether without effect. His teaching, which originated in opposition to Deism, has remained to this day part of our theological heritage. See, further, Art. Berkeley.

DEISM.

In the Case of Reason (1724), Law appealed without scruple to the logic of intellect; moreover, he possessed the power of marshalling his arguments with skill and clothing them in apt language. Before him, the inscrutable mystery of the infinite was prostrated himself in silent submission, and with a feeling of profound reverence yielded a willing obedience to the message of revelation. It was a strange fate for Law at this point to refer to miracles as the proof of revelation. A little later he discovered a method of statement more congenial to his natural temperamental bent. In the process of various assertions of controversial argument he substituted the positive affirmations of the mystic's experience. In opposition to Tindal he takes a low view of the doctrine of revealed reason, and this position he consistently maintained, but in the writings of the mystics he found it stated that man possessed a faculty of spiritual intuition incomparably more efficacious than reason in the attainment of Divine wisdom. In Christian mysticism, Law discovered a system which afforded satisfaction to his religious instincts; and he strove to influence others in the same direction, by means of writings which are a strange compound of deep spiritual insight and fanciful imaginations. But in the 18th century, the message of the mystics was received with distrust, and the distinction now made between the Deists and Theism has remained. Law founded no school of English mysticism. Though there were many who, like himself, receded from the rigourousness of Deism, there were few ready to follow him in the way. He was before his time, and has perhaps more disciples at the present day than he had in his own lifetime.

The same recoil from Deism, but under yet another aspect, is illustrated by the life and work of John Wesley. In this age it is necessary to consider the Law's example and ethical teaching, he differed widely from him in temperament, and was alike ignorant and impatient of the mystical tendencies to which the older man resigned himself. Emotionally a man of action, he gave way to the protest of the practical religious consciousness against the religious impotence of Rationalism. It mattered little whether the Rationalism was of the type preached by Tillotson or of that preached by Tindal. In either case it had proved miserably ineffective in stemming the tide of infidelity and immoralit.

Thus the rise of Wesleyanism coincided with the extinction of Deism. Not that Deism disappeared because the problems which it had raised had received final and conclusive answers. On the contrary, many of these problems involve mysteries which it is probably difficult to render capable of the finite mind. It is no discredit to the apologists of the 18th cent. that in such cases they had no solution to offer. They had done all that could be expected of them. They had shown the alternative course by which the Deist was to be weighed with difficulties as great as those which he hoped to escape by his rejection of Christianity. They had pointed to a way of reconciliation between the rights of reason and the claims of faith. It was not until this work had been accomplished that the Evangelical Revival could exhibit the undiminished spiritual energy latent in authoritative and traditional religion. Then began another stage of religious history, a period even more distracted with disputes over the recovery of truths which have been passing in review. But the struggle was over new issues. Deism was forgotten.

II. PHILOSOPHICAL. — I. View of God's relation to the material and the moral world.— The word 'Deism,' besides serving as the designation of an historical religious movement, has been commonly used to describe a particular view of God's nature and of the dependence of the world upon Him. Between the two uses of the word a connexion exists, of which some notice will presently be taken, but it would be a mistake to suppose that philosophic Deism was necessarily the accepted creed of the Deists of the 18th century. Indeed, some who bore the name would at the present day be called Theists. The distinction now made between Deism and Theism did not then exist. The two expressions were used indiscriminately. It is only in later times, since the study of the philosophy of religion has been prosecuted with greater attention, that the word 'Deism' has been attached a more defined and exact connotation. We proceed to ask, What is the meaning conveyed by the word in this later and more abstract sense? The great question concerning the relation of God to the world presupposes different answers. To classify into distinct groups the various solutions proposed is no easy matter. It is difficult to draw lines of division, when the
gradations are almost imperceptible, though at the two extremities members of the same series may stand in conspicuous opposition to one another. But, since some form of classification is necessary, it has been found convenient to separate views as to the being of God into two, as they approximate to Pantheism on the one hand, or to Deism on the other. With the second only are we here concerned. Let it be born in mind that our subject of study is not a definite school of thought shared by intelligent historical and philosophical systems. It is rather a vague inclination or bent of mind, in which varying degrees is continuously present in human thought, and occasionally, coming prominently to the front, becomes the dominant factor in religious and philosophical systems.

Deism approaches the ultimate problem of the universe with a self-satisfied confidence painfully out of proportion to the difficulty of the task of finding a solution. With little sense of reverence for the mystery that lies behind all outward appearances, it accepts an answer suggested by anthropomorphic analogies, and framed in accordance with unarticulated prepossessions. Common sense does not then refuse the hypothesis of an independent existence of the external world, nor does it care to inquire too curiously what may be the real character of human freedom. It rests content with the common assumptions of daily life. To make the Deist's theory an adequate starting-point, finds comparatively little difficulty in constructing his theory of God and the world, He is ready to acknowledge a Creator. In order to account for the existence of the material world, it is necessary to assume the existence of a First Cause, at whose command creation took effect and the cosmos entered on its life. But the Deist's conception of creation is essentially restricted. The fabric of the universe is supposed to stand to God in the relation which the instrument bears to its maker. The heavens are the work of His hands, just as the watch is the work of the watchmaker. As the craftsman determines the characteristic properties of his machine, so the correlation of its parts, their positions and their functions, so is God conceived to have dealt with the world. He brought it into being and ordained its laws. He imparted to it once for all the energy which serves as the driving force of the universe's mechanism. The Deist recognizes in God the ultimate source of matter and motion, and, consistently with this conception, admits the possibility of occasional interferences on the part of the Deity. But, though the probability of such interference is granted, the question is called in question. It seems more in accordance with the principles of Deism that Nature should be left to work itself out in obedience to laws originally given. Any suggestion of a deviation from the established order is resisted, as though to admit it were to be wanting in due respect for the inviolable majesty of God's unchangeableness and the original perfection of His work. A perfect machine, it is supposed, would move without any obstacle from its maker; nor would the Unchangeable introduce any later corrections into a creation which from the first reflected His omniscience and omnipotence.

Similarly based on anthropomorphic analogies, and in contrast to the Deistic conception of the relation of God to the moral world, He is the supreme Governor, the author of moral as of physical law, but as remote in the one region as in the other from the particular cases exhibiting the working of His laws. He is thought of as filling the part of legislator and judge to the universe of moral beings; and these analogies, derived from the organization of human society, are treated as though they were entirely adequate not only to illustrate, but even to explain, His supreme authority. The moral law is assumed to be sufficiently well known by all for the practical purposes of life. Fains and pleasures which are opposed to it are held to be abhorrent to its infringement and its observance. Men are automatically punished and rewarded, in strict accordance with their deserts. In the moral as in the physical world there is neither need nor room for the special interposition of the Supreme Governor. Whatever shortcomings such a view of the nature of God may have,—and they are both obvious and important,—yet in some respects it tallies with the promptings of the religious instincts of men. It is opposed to Materialism, avoiding the desperate necessity of ascribing to matter an independent eternal existence of its own. Nor is God reduced, as in Pantheism, to a mere abstraction, an impersonal rule his teaching, matter is not a real person, standing over against the world and man. Human personality also is preserved. Man retains his freedom, and justice is done to his responsibility. As he sows so shall he reap, according to laws that admit of no exceptions as to time and place. Upon the Deist, therefore, there is much that is true, and the truth is of that positive kind to which appeal must be made in practical exhortation and the enforcement of ethical teaching. But with the truth is mingled much error. The Deists who hold the correctness of Deism are both theoretical and practical.

2. Defects in conceptions of Creation and Finite Existence.—Deism labours under the disadvantage of being a dualistic explanation of the world. Not only because that is the essence of a First Cause, at whose command creation took effect and the cosmos entered on its life, but the Deist's conception of creation is essentially restricted. The fabric of the universe is supposed to stand to God in the relation which the instrument bears to its maker. The heavens are the work of His hands, just as the watch is the work of the watchmaker. As the craftsman determines the characteristic properties of his machine, so the correlation of its parts, their positions and their functions, so is God conceived to have dealt with the world. He brought it into being and ordained its laws. He imparted to it once for all the energy which serves as the driving force of the universe's mechanism. The Deist recognizes in God the ultimate source of matter and motion, and, consistently with this conception, admits the possibility of occasional interferences on the part of the Deity. But, though the probability of such interference is granted, the question is called in question. It seems more in accordance with the principles of Deism that Nature should be left to work itself out in obedience to laws originally given. Any suggestion of a deviation from the established order is resisted, as though to admit it were to be wanting in due respect for the inviolable majesty of God's unchangeableness and the original perfection of His work. A perfect machine, it is supposed, would move without any obstacle from its maker; nor would the Unchangeable introduce any later corrections into a creation which from the first reflected His omniscience and omnipotence.

Similarly based on anthropomorphic analogies, and in contrast to the Deistic conception of the relation of God to the moral world, He is the supreme Governor, the author of moral as of physical law, but as remote in the one region as in the other from the particular cases exhibiting the working of His laws. He is thought of as filling the part of legislator and judge to the universe of moral beings; and these analogies, derived from the organization of human society, are treated as though they were entirely adequate not only to illustrate, but even to explain, His supreme authority. The moral law is assumed to be sufficiently well known by all for the practical purposes of life. Fains and pleasures which are opposed to it are held to be abhorrent to its infringement and its observance. Men are automatically punished and rewarded, in strict accordance with their deserts. In the moral as in the physical world there is neither need nor room for the special interposition of the Supreme Governor. Whatever shortcomings such a view of the nature of God may have,—and they are both obvious and important,—yet in some respects it tallies with the promptings of the religious instincts of men. It is opposed to Materialism, avoiding the desperate necessity of ascribing to matter an independent eternal existence of its own. Nor is God reduced, as in Pantheism, to a mere abstraction, an impersonal rule his teaching, matter is not a real person, standing over against the world and man. Human personality also is preserved. Man retains his freedom, and justice is done to his responsibility. As he sows so shall he reap, according to laws that admit of no exceptions as to time and place. Upon the Deist, therefore, there is much that is true, and the truth is of that positive kind to which appeal must be made in practical exhortation and the enforcement of ethical teaching. But with the truth is mingled much error. The Deists who hold the correctness of Deism are both theoretical and practical.
will and pleasure. Its necessity or inevitableness, seemingly disappears. On the other hand, if the judicial function of the Supreme Governor be put in the forefront, and the moral law be regarded as an essential and required one, it only to be enforced by the Divine power, then it would seem as though the freedom of God's action were limited by a rule superior to Himself. From this dilemma the principles of Deism offer no way of escape, if the externality of God in relation to the world, physical or moral, be assumed, then in some way or other limitations and restrictions are placed upon the Divine nature. In the one case, God is left confronted by an independent material world; in the other case, by an insuppressible law of right and wrong. And the very essence of Deism lies in its assumption of God's externality.

Theologic unsoundess is attended with practical deficiencies. Deism has not been without injurious effect on those who have adopted it as their creed. If it be admitted that man's highest spiritual life is attained in proportion as he rises to communion with God, then it must be confessed that Deism can never carry the soul up into this region. The appeal to a world of religious design and prodigal of beauty, convey to the heart no message significant of the indwelling presence of God. The most that the Deist may legitimately do is to follow back a many-linked chain of inference or evidence, to a point of religious origin or creation, to the heart; no moment of creation, was in contact with His world. In a universe so conceived, man feels himself left to his own resources. A cold tribute of perfunctory worship is all that he is likely to offer to a God who has withdrawn. His prayer, whose ear is never open to the supplication of the penitent. Man learns to think that his welfare depends entirely upon the accuracy of his knowledge of those general laws by which the course of the world is determined, and upon his skill in adapting himself to them. There is stimulated in him a spirit of self-sufficiency and self-assertion as towards God, and a certain hardness and lack of sympathy towards his fellow-men.

Deistic premisses do not positively exclude the possibility of revelation, but create a strong prejudice against it. For revelation is a species of miracle, and open to all the objections which, in the mind of the Deist, bear against the miraculous. If there be a gulf between the world, and God, it is a gulf of an infinite distance. In some forms of Deism the idea of a Divine interposition is accepted without hesitation or sense of incongruity. But further consideration is likely to suggest the thought that the need for interference with the world is due to its original weakness of construction; and the Deist, in his anxiety to uphold the credit of the First Cause, is led to deny first the need for, and then the fact of, revelation.

Deism is a curiously unstable system of belief. It could hardly be otherwise, considering that the premisses from which it sets out are wanting in consistency and in definiteness. Beginning by assuming an unqualified correctness of a few of the truths which appeal to any religious instinct, it reaches at length a position in flagrant contradiction to fundamental religious beliefs. The utility of prayer and the possibility of communication with the Deity, are the central ideas which have always found a home in the unregulated religious consciousness; yet these are the ideas which Deism finally discovers to be incompatible with its teaching about the Divine nature. And, when these ideas have been rejected, there follows the gradual encroachment of an irreligious temper, and the elimination from life of the effective power of religion. Though nominally belief in God be retained, it becomes wholly inoperative—the furniture of the mind rather than the inspiration of the heart.

3. Examples of Deistic systems.—Deism in the sense which we are now investigating we have continued to be an irreligious and unorganized system; there is a tendency which for the most part has been counteracted by stronger forces. But occasional examples in the history of religion and philosophy prove that it is capable of gaining the ascendency. Apart from the influence of revelation, the drift of all religions has been in the direction of Polytheism and Pantheism rather than towards the opposite extreme of Deism. For men are swayed more easily by their emotions than by their reason, and to the feelings the Deist system of belief is far more attractive than these other forms of error. The most conspicuous example of a religion in which Deistic forms of thought are paramount is Conspicuous, which exhibits a characteristic combination of qualities and defects. In particular, there is a decorous recognition of heaven as the source from which man derives his nature, although, for the attainment of virtue, little importance is attached to the communication between God and man. Its treatment of the moral code, other than the one Deist, is the working of the same tendency. The insistence on the law of nature, and on the universal order extending through the world, is a thoroughly "Deistic" idea. So also, in several respects, are the ethical notions on which the Deist answers the question of the power of the will, and their doctrine of man's self-sufficiency. These are facts on points which they set precedents followed in later times. For the 18th cent. Deists, familiarized through a classical education with the writings of the ancient Stoics, drew much of their inspiration from this source. On the other hand, Stoicism contained ideas irreconcilable with pure Deism. Its Pantheism, though far from being consistently developed to its logical issues, is sufficient to differentiate it from any system in which God is assumed to be personally distinct from the world. In ethics, its rejection of all utilitarian considerations is opposed to the characteristic temper of Deism. Thus, though there is a close contact between Stoicism and English Deism, the offspring differed in some essential features from the parent.

Its marked preference for the Deistic explanation of the universe accounts in large measure alike for the strength and the weakness of Muhammadanism. No one will deny that the effect of the teaching of Islam is to produce in its adherents a very real and deep reverence for God, the all-powerful Creator and Ruler of the world. At the same time the suppressive sense of a great and unbridged gulf between God and man checks and thwarts the natural action of man's religious instincts. Great is as the regularity with which the prescribed forms of devotion are observed, this is the supercilious attitude towards, rather than to God. The degradation of prayer is remarkable evidence of the obstacle which Deism opposes to the exercise of man's highest spiritual function, communion with his Maker.

After all, the classical example of the Deistic tendency is to be found in the 18th cent. Deists; and herein lies the justification for attaching to the same word an historical and an abstract sense.
In the writings of Toland, Collins, Tindal, and other historical Deists is contained the exposition of a plan which was much injured by an unfortunate combination to make up Deism in the abstract. Not, indeed, that in any single one of these writers is Deism logically rounded off and cleared from all inconsistencies. Men seldom press their principles to the uttermost, nor were the Deists, with their lack of philosophical acumen, likely to be exceptions to the rule. Side by side with arguments which in effect exclude God's direct action on the world, they placed statements of belief which the most excelling theorems of modern philosophy are incapable of gradually disclosing the true implications of their principles, with the result that Deism was either repudiated in favour of a return to historic Christianity, or exchanged for avowed infidelity. Secularism.

DELI.—The name applied specially to the modern city of Shahjahānābād on the right bank of the Jumna (lat. 28° 35' 55" N.; long. 77° 16' 30" E.), and generally to a collection of ruined cities, covering an area of about 45 square miles, in the neighbourhood. Classifying these cities from N. to S., we have (1) Firozābad of Firoz Šah Tughhrall (c. A.D. 1339), adjoining modern Delhi on the south; (2) Indrapāt or Indrāprastha, associated with the earliest legends of the Aryan occupation of the Jumna valley, the foundation of which by Yudhisthira and his brothers, the five Pandavas, is recorded in the Mahābhārata; the site was reoccupied by Humayūn and Šer Šah (c. 1540); (3) Jahanānūnā, the space between old Delhi and Sīri, which was gradually occupied and ultimately connected with the cities N. and S. of it (c. 1530); (4) Old Delhi, or the Port of Rīk Pulhora, the original Delhi of the Pathan invaders in the 12th century; (5) Tughlaqābād, built by Muhammad bin Tughhrall (c. 1290). 'Modern Delhi, or Shahjahānābād, named after the Emperor Šahjahān (1628-58), may be said to date from about 1650, the famous palace being first erected in 1638-48, and forming the nucleus of the new city. The cities thus enumerated contain a vast variety of architectural remains, some of the greatest interest and beauty. Here it is possible to name only a few of those most closely connected with the religious beliefs of the successive occupants of this historic site.

In the first place, Delhi contains two of the famous inscribed pillars of the Emperor Aśoka (p. 85), erected about 250 B.C. The inscriptions contain the code of moral and religious precepts pronounced by this great ruler. These pillars, one of which stands on the historic ridge, the other in the ruined city of Firozābad, were removed to Delhi in A.D. 1534 by Firoz Šah Tughhrall, the founder from Meervat in the United Provinces, the other from Toprés in the Umbīla district of the Panjab. The pillar on the ridge was much injured by an explosion early in the 18th cent.; that at Firozābad is in an excellent state of preservation, and is the most interesting of all the Ašoka pillars, inasmuch as it is the only one on which the invaluable Seventh Edict is inscribed. Another interesting relic connected with the beach of the Hindu metallurgists of the time. Close by, the mosque of Qutb-ud-din was rebuilt out of the materials of one or more Jain temples. One cloister, with rows of finely carved pillars, remains in good preservation. The innermost court of this mosque, with its corridors and west end, was built in A.D. 1191, and the screen of arches, the glory of the building, was erected six years later. The splendid tower, the Qutb or Kutab Minār, named after its founder, was completed by Šams-ud-din Altānsh (1211-30), who also extended the great mosque. Much controversy has arisen regarding the purpose for which this tower was erected. Ferguson (p. 506) denies that it has any connexion with the mamluk tower by the same government (c. 1233-35), and he cites several examples of early mosques which have but one minār each. The inscriptions also prove that this was the purpose of its erection.

The lovely Alai Darwāza, or gate of Ali, was built by Ali-ud-din Khiilī (1235-1315). Close by is the beautiful tomb of Šams-ud-din.

'Though small,' writes Ferguson, 'it is one of the richest examples of Indo-Arabic art applied to Maḥammadan purposes that Old Delhi affords, and is extremely beautiful, though the builders still display a certain incapacity in fitting the details to their new purposes. . . . In addition to the beauty of its details, it is interesting as being the oldest tomb known to exist in India. He [Šams-ud-din] died a.m. 522."

Among the other interesting and beautiful mosques, of which Delhi possesses such a large number, the following may be mentioned: the Kāla or Kaleshwar (c. 1330); that of Šer Šah, built in A.D. 1380, is interesting as an example of the early so-called Patishen style. The façade of the mosque of Šer Šah in the Purana Qila is, says Fanshawe (p. 228), 'quite the most striking blot of coloured decoration at Delhi, and has been satisfactorily restored. . . . The interior is extremely fine, the pattern in the pendentives below the dome being very effective.' The Jami Masjid, or cathedral mosque of Šabīhān, built in 1648–50, is, says Ferguson (p. 600), 'not unlike, in plan, the Moti Masjid of Agra (q.v.), though built on a much larger scale, and adorned with two noble minarets, which are wanting in the Agra example; while, from the somewhat capricious admixture of red sandstone with white marble, it is far from possessing the same elegance and purity of effect. It is, however, one of the few mosques, either in India or elsewhere, that are designed to produce a pleasing effect externally.' This great mosque, built close to the valued park of the palace, could be walled in and enclosed, so as to erect a private court chapel within its walls. When a Moti Masjid was added by Auranzhīb, the building was small, and, though pretty, quite unworthy of the place, and illustrates the rapid decadence of the Muhummadan ecclesiastical architecture after the time of Šabīhān.
Delhi is equally rich in the number and variety of its sepulchres. Hunayun, the second Moghul Emperor, lies in a stately tomb. 'In mere beauty,' says Fantham (p. 290), 'it cannot, of course, compare with the Taj at Agra, but there is a force of effect about it which becomes the last resting-place of a Moghul warrior whose life was marked by many struggles and vicissitudes; and most people will probably prefer its greater simplicity to either the son's [Akbar's] tomb at Sikandara, near Agra, or the grandson's [Jahangir's] tomb at Shadara, near Lahore.' The dargah, or shrine, of Shahid Nizam-ud-din Aniyya and the other Chishti shrines of the Raj is in the Khat, and the places most revered in all India by Musalmans. His story is fully given by Fantham (p. 230), who believes that there is no ground for the popular legend which attributes the origin of Thuggee to him. He died at Delhi in A.D. 1324, and the buildings—the gate of which bears the date 1378—are mostly due to the Emperor Firuz Shah Tughlaq. Round the resting-place of the saint a beautiful and interesting monument. That of Jahangir, the third daughter of the Emperor Shahjahan, bears the touching epitaph: 'Let green grass only conceal my grave; grass is the best covering of the grave of those who think well of the unfortunate Emperor Muhammad Shah, who died in 1748, in whose time Delhi was captured and sacked by the ruthless Persian, Nadir Shah. If not a triumph of design, its beautiful pierced marble minaret is at least a fine timepiece. These are the earlier tombs of the poet Amir Khusrau, who died in 1324, and of the historian Khondamir—the latter not being now identifiable.

In his Mental Development, Baldwin, in his mental stage, until one alternative dominates attention and is selected, though throughout life conscious deliberation is only rarely necessary. Organized, i.e., of its greater simplicity to either the son's [Akbar's] tomb at Sikandara, near Agra, or the grandson's [Jahangir's] tomb at Shadara, near Lahore. classification. Usage, due to historical accident and variety of jurisdiction, has excluded from the English term cases which in principle fall under it. The definition of 'delict' in General Jurisprudence ought to give the person the principle underlying the technicalities of particular legal systems. Moyle (Justitiae Institutiones, lib. iv. pt. 1, note) says: 'A delict is usually defined as a violation of a jus in eos which generates an obligation incapable of the private individual who is wronged.' He finds fault with this definition, as admitting cases where the party injured is only entitled to recover damages. According to Moyle (ibid.), true delicts possess three peculiaries: they give rise to independent distinguishing characteristics, which are always involved delitos or culpa; and the remedies by which they are redressed are penal. Solln (Institutes, Eng. tr., 1901, p. 432), on the other hand, includes such non-penal actions under actions arising from delicts.

The term 'delict' has been used as generating an obligation remissible by the private individual, from 'crime.' This is to adopt Austin's distinction between civil and criminal injuries; for he holds that the distinction consists merely in a mere difference of process, viz., whether the injury is pursued at the discretion of the injured party or at that of the State (Lectures on Jurisprudence, p. 405). Blackstone (iv. 5), followed by Holland (Elements of Jurisprudence, p. 320), regards the distinction as lying between the wrong done against individuals as individuals, or affects the whole community as a community. Again, some have regarded the very circumstance whether mere re-dress is given for loss suffered, or whether, on the other hand, a penalty is inflicted for wrong done, as the distinguishing feature between civil and criminal injuries. If the latter line of distinction be adopted, what Moyle considers an essential of all delicts would render the distinguishing characteristic of crimes as contrasted with delicts.

In English law, wrongs to property to which no ethical censure attaches are included among 'torts.' Pollock (Law of Torts, p. 18), in order to maintain intact the features of dolus ('wrongful intention') or culpa ('negligence'), and consequent penal culpability, as essential ingredients in those torts that are delicts, regards the torts from which these features are absent as obligations arising, not ex delito, but quasi delicto. This distinction leads to the distinction between delicts and quasi-delicts. By some there is said to be no distinction in principle, delicts being those wrongs which were made actionable by the old civil law of Rome, quasi-delicts those which are rendered actionable by the legislation of the praetor. If, however, we take the instances given in the Institutes of Justinian,—a judge who, corruptly or through ignorance of law, has made a suit his own, and an innkeeper who is responsible for the loss of property of his guests,—we see a distinction perfectly analogous to that between contracts and quasi-contracts. As in some cases the law establishes a tie or obligation between the parties, the same as though one of the parties had attended to another, so, in other cases, it establishes an obligation similar to that which would have arisen, had a delict been committed. The point of difference between a contract and a quasi-contract is that one is formed voluntarily by the person bound, the other is formed involuntarily. In like manner, in the case of a delict, there is voluntary action—action from which it is possible to abstain; in the case of a quasi-delict, the obligation arises from an act or position in regard to which the party has no alternative. The judge must decide the suit. The innkeeper is bound by the act of the thief. There may or may not be dolus or culpa. It is true that, in the case of the corruptly decided suit, a voluntary element is present. The involuntary element arises from the law which forces on the judge the position of having to decide the suit. Yet this case shows that dolus or culpa may be present in quasi-delicts. If this is the true point of distinction between delict and quasi-delict, it justifies the profound comment of Austin (styled by Pollock [op. cit. p. 18] 'perverse and unintelligent criticism'), which implies that there is no essential distinction between delict and quasi-delict. Austin, op. cit. p. 914). The only possible distinction must be that stated by Austin: that, in the one, the obligation arises from services rendered; in the other, from setting down theories as part of the natural law, while the other delicts are aimed at some certain personal injury. This is the decision of the American Law Institute on the point of view of legal classification between quasi-contract and quasi-delict (Austin, op. cit. p. 914).

DELOS.—See Amphictyony.

DEPHI.—See Amphictyony, Oracles (Gr.).

DELUCE.—I. Meaning of the term.—The word 'Deluge' (Lat. deluvium, Fr. deluge, 'a great flood') has been very generally used to denote the Biblical Flood (Heb. 'deluge') recorded in Gen 6-9. It is commonly held to be identical with the Noachian Flood, as the narrative naturally suggests, covered the surface of the whole world, and that all men and all terrestrial animals perished, except those providentially saved in the Ark (see esp. Gen 6:13-23, Gen 7).

II. Supposed confirmation of the Biblical Deluge.—So considered, the Deluge formed, it was once believed, a very important epoch in the world's history.

1. Attention was called to the marked difference between the extinct species of animals which lived before the Deluge, and whose fossil remains are found in various geological strata, and those in existence at the present day; nor does it seem always to have been realized that this difference is in itself an argument against the literal truth of the Biblical narrative, according to which all species of animals should have survived, or God's purpose must have failed.

2. A more recent and more evident proof of the general truth of the Bible story seemed to lie in the fact that Deluge stories, or stories in which a great Flood forms a more or less prominent part, are remarkably frequent in the folklore of the ancient literatures of peoples otherwise unconnected with each other, save that all are connected with the world. It has been confidently argued that these all originated in the great universal Deluge, of which they were more or less obscure traditions handed down from their ancestors—Shem, Ham, and Japheth. Moreover, the belief that the Flood was a universal event was very widely spread among the ancients, and there is even record of a Flood of similar extent having happened in America.
impossible, unless we may postulate a period in which the surface of the earth was so even that all the water possible at any given time could have covered it as one thin film. But even if this were so, a Deluge would find its analogue, not in the Bible Flood, but in the 'deep' (tethem) of Gn 1:7.

(31) Zoologists and comparative Zoologists have generally proved that there is no definitely marked division between extinct species and animals of those of the present day which could be accounted for by a break in the history of the animal world. In fact, the extinct species, as, e.g., the trilobite, ammonite, and lethoceras, are those that are best accounted for by human appearance on the earth, and by the operation of natural laws which still prevail.

(32) The same also is true of plant life and its history. And in this connexion it may be observed that the Bible story, in contradiction to the Akkadian (see below, V. 4. 3. 6), is evidently not based on the formation of vegetation. The greater part of which must have perished had the Flood lasted a year.

3. To the unscientific mind, however, the most striking difficulties are those which arise from the obvious improbabilities, or rather impossibilities, of the story of Genesis itself.

Most of us have from childhood, through the influence of pictures and toys, been accustomed to imagine Noah's Ark as a great vessel with a huge raised hold in the middle. But there is nothing in the Hebrew 725 or in the Bible narrative to suggest anything of the kind. The Ark was rather a huge box with a closed door and dark windows, which had to be opened for its inmates to look out. There were no tails or ears, no ordinary mode of locomotion. Noah was entirely unprepared for the box which we wished to know. The box, nevertheless, floated safely across the world and has never been found since, and no one has ever suspected a Noah or been able to describe him.

This is obviously the case with all clean animals, and pairs of unclean animals, as we now know them. But this is what the story requires, unless we are to consider the Flood as an improbable invention, and even opposed to geological records—that there has been a very large evolution of species since that, geologically speaking, recent period. These animals, thus huddled together, are tender and preserved for a whole year with necessarily huge supplies of food of various kinds and with a boat, four stalls and four women were able to do, under such conditions, without, it is evident, manner or skill and ingenuity of zoologists with such space and under such conditions as are possible in our Zoological Gardens. Imagine, for example, the Tropics, or the Tropics, the whole year without food, or the polar bear cooped up for a single year in the vitiated atmosphere of a 'room' in the Ark! But even these difficulties are hardly so bewildering to the imagination as those connected with collecting the animals and getting them into the Ark. If we attempt to real the journey necessary to the Tropics and the Arctic regions, to islands and continents, to marshes and mountains and seas, the difficulty of capturing all these animals alive, bringing them back and getting them into the Ark, we are forced to the conclusion that it was absolutely impossible, except by a series of miracles, of which the story in the Bible gives no name, and much less a narrative, in a simple and straightforward way by those, who evidently did not see the difficulties, and obviously could not have foreseen them, as we see them.

4. A further ground for not accepting as literally true the Bible Deluge story will be found by comparing it with parallel stories of similar origin which will presently be discussed. It will be sufficient to observe here that diverging accounts of any supposed event tend of themselves to cast suspicion on any one of them, unless that is obviously the source of the rest, which certainly cannot be proved of the Bible story.

5. To these difficulties may be added, in conclusion, the general difficulties in accepting as historically and literally the early chapters of Genesis, of which the Deluge story forms a part. One who on scientific grounds rejects the literal or on mythical grounds that of Gn 2, 3., would very naturally feel some hesitation in accepting the Deluge story, even if it presented no serious difficulties of its own.

IV. Explanations of Deluge stories discussed. — But if the Deluge story is impossible, at least without a series of improbable miracles, how else explain the prevalence of that belief among so many and so far-separated peoples? An attempt to answer this question will form the subject of this article. This article involves a complicated inquiry. The Deluge, or Flood, stories in question vary so greatly that a really adequate discussion would carry us beyond the necessary limits. The reader will grasp the full force of the arguments given only if he studies for himself the stories as given by Andree and in other sources here referred to. The course now proposed is first to give the answers which have already been suggested, with such illustrations and comments as may help to set the problem towards a satisfactory solution, and then to discuss separately some of the more important stories or groups of stories on mainly ethnological or geographical lines.

Speaking generally, there are four main explanations of the Deluge stories, given the prevalence of Deluge, or Flood, stories among different races of mankind: that they are (A) traditions of the Bible Deluge; (B) traditions of independent, generally local, floods; the Deluge is a great atonement; (C) pseudo-scientific explanations of natural phenomena or the like; (D) parts of cosmological systems; (E) myths. In point of fact, comparatively few writers have adopted any one of these theories exclusively. Cheyne, for example, in his article ('Deluge,' in Ebd.), made a marked distinction between a Deluge proper—a supposed submersion of the whole world—and partial floods, which may have given rise to Deluge stories. Certainly few, if any, have supposed otherwise. Those who may hold, would fail to recognize that the Chinese story, at any rate, is based on the tradition of a local flood.

A. The traditional origin of Deluge stories.—Is the belief that there are many and various Deluge stories of different parts of the world had their common origin in the Flood described in the Bible, borne out by the stories themselves in detail and by what we may reasonably infer as to their history?

1. Andree has gone so far as to assert, in the face of the facts that there are many parts of the world where no Deluge story has yet been discovered, such as Egypt and Japan. There are others, such as Africa, where they are very rare. It is therefore, so far as our present knowledge goes, an exaggeration to say, with some writers, that the tradition of a Deluge of some sort is practically universal, or even, as Lenormant maintained (Orig. 1. 489), among all except black races. On the other hand, it must frankly be recognized that Flood stories are very numerous, and that they are found among nations scattered far and wide over the world.

2. Exceptions must be made of a large number of stories which have evidently a local origin.

3. Accounts must be taken of the evidence of missionaries in unconsciously, or even consciously, changing and developing folklore, and of the difficulty which the savage mind has in distinguishing clearly between old and new, and its frequent tendency to paint the old in new colours. It was the avowed policy of many missionaries to make Bible stories more acceptable by combining them with ideas with which their converts were already familiar. Moreover, the missionary, through whom the Deluge stories were in many cases originally communicated, was a prejudiced witness. He had a very natural wish to find confirmation of an event which he believed to be unfoldingly true or only true, and which he strove to deny. No wonder if, without the least wish to deceive, he encouraged his hearers convert to give him the kind of information he desired, and, in reporting it, unconsciously assimilated it still more with the familiar tale. Andree, in the study of which there is given an interesting example of the way in which natives were sometimes asked leading questions.

4. That many of the Deluge stories current among uncivilized tribes were actually coloured by Christian influence becomes evident on examination of the traditions of the stories themselves. For it will be found that—

(a) Those Biblical details on which so much stress is sometimes laid are often attached to a
story entirely unlike the Bible Deluge narrative, both in character and in purpose.

Thus the sending out of the raven and the dove by the old man who had found refuge from the Deluge in a boat on one of the Rocky Mountains (Peruvian Indians) is another example, and yet, according to Petitto, it is almost exactly similar to the Biblical Deluge. It is in the branch of that tree which grew into the sea for the unknown olive-branch. A still more interesting variation is found in a story told by the South-American Macusi tribe, in which the Deluge is represented as the result of the investigatory movement of some old woman (see below, IV. 6).

(b) The Deluge stories which thus resemble the Biblical narrative in some of its details often betray their Biblical colouring by mixing up other familiar Biblical stories, such as the creation of woman and the Tower of Babel.

When we read in the story of the Macusi just referred to that, the Good Spirit created the first man, the latter fell into a deep sleep, and on waking found a woman standing by, we are not surprised to hear the incident of the rat and the ear of maize. In a story of the Papagos, in Arizona, it is the hero of the Deluge, Mozezuma, whom, disregarding the warning of the Great Spirit, builds a house that should reach to heaven, which is destroyed before its completion by lightning from heaven. In the story of the Washo, a California tribe, the shaman performs a ceremony to build up a temple as a place of refuge from any future Flood. When the shaman went down into the temple with a terrible rain of fire occurs, and the temple sinks up to its doors. When the temple falls, the rain stops, and from the top, from whence they are hurled by the angry god, Andree remarks here that the building of the temple is evidently a national symbolic feature also to the customs of the tribe, and certainly the destroyed temple is not a very ancient feature. That the purpose of the shaman’s symbolic action, but escape from the Flood, was to seem to suggest an adaptation of the Tower of Babel story.

It would thus be a parallel to the story of the neighbouring Papagos, and to that of the Mandans (see IV. 6. (c)).

(c) Speaking generally, what have the appearance of traits due to Christian influence are found most frequently in those countries where Christian influence has been longest at work, especially on the American continent.

v. The argument from Biblical details in Flood stories is in any case hazardous, as it proves too much. We find details not given in the Biblical narrative also repeating themselves in a most remarkable way in the legends of localities far removed from each other.

(1) The boat or raft of safety is frequently described as moored by a rope. A new element is sometimes introduced by some of the ropes not being long enough and the occupants of the boats being drowned (Finns (Lemerond, Origines, l. 455)). In the same legend, of the Pekel Islands, such was the fate even of the one surviving old woman, until the oldest of the ghosts came down and pushed them overboard.

(2) Again, in the story of Delkunian and Pyrris and the stones, there is an exact similarity in the story of the Maipuri, in which the coca-root throws the man over his head when he escapes from the flood, and it is thrown by the woman. In the legend of other tribes on the Orinoco, as also of the Macusi, stones were thrown over by the surviving man. In a Lithuanian story a rainbow was thrown from the old couple to comfort them, and to advise them, if they would have offspring, to leap over ‘the bones of the earth.’

(3) The miraculous growth of the fish, a conspicuous feature of the Indian legend (see V. B. I.), has its counterpart in the cuttle-fish of the Thimkis, which grew so large as to fill the whole boat.

(4) It is by no means easy to say how far features of this kind are actually borrowed from other stories, and how far they are the result of imagination and reason acting in similar fashion on different peoples. There is certainly no difficulty in supposing that the tying of the boat was introduced as the most natural thing for the survivors to do. On the other hand, the enigmatic phase ‘the place where the earth combined with the consolidation of the rainbow (Lithuanians), and a specific combination of the stones story with the rat and the maize-ear (Macusi, see above, IV. B.) suggest that both elements in either case were due originally to the influence of Christian teachers. We can readily understand how well-educated missionaries might, in drawing attention to the prevalence of these stories, have instanced that of Delkunian, and so have such a picturesque incident embodied in the story of the fish to run away with a popular tale.

VI. The extraordinary interest of the variation in the different Deluge stories makes it improbable that all originated from one traditional story, as will be best realised by taking what might be regarded as the central type and pointing out some of the variations which we may: may have found in (a) stories of god or gods, angry with the Antediluvians (b) usually on some specific ground, (c) determine to send a Deluge, and (d) give warning of it to some one or more beings. (e) The latter, usually following Divine directions, construct some kind of boat or box, or adopt some other means of escape. (f) In this structure they preserve also the necessary of life, including domestic animals, more rarely pairs of animals generally. (g) Shorty afterward, (h) the box is opened, and (i) the Deluge. (j) When the Deluge subsides, (k) they land on some mountain or island, and (l) sometimes offer a sacrifice. (m) Future descendants of men (and sometimes of animals also) are reproduced, often in a miraculous way. (n) The former or the chief of them are translated to heaven.

This imaginary norm, from which, or from something like it, all the stories might naturally be supposed to have come, is obtained by putting together the features which are most certain that have found. No story, in fact, gives them all. Even the Bible story has no translation of Noah (but see Antediluvians). The Greek legends have no post-diluvian sacrifice, and the Indian story in its earliest forms gives no reason at all for the Deluge. But, apart from such omissions, we find variations, under each head, of almost every conceivable kind.

(4) The Deluge, though almost always the work of some god, is occasionally, among the North American Indians, ascribed to a malignant being, as the Black Serpent (Algonquins), an eagle (Pimas), or a raven (Hare Indians).

(b) (1) The Deluge is a punishment for sin, not only in the Bible, but among the Finns, the Gipsy and Society Islanders, the Algonquins, and some others. (2) More particularly it results from the resentment of a god for some act of violence or personal injury, such as, rather, frequently, the refusal of hospitality (Greek Deluge story) or the slaying of a favourite. Thus, according to a Greek Flood story preserved by Nonnus, it was sent to put out a conflagration caused by Zeus for the murder of Dionysos by the Titans (Usener, p. 49). In a story of the Fiji Islanders it is the anger of the god for the slaughter of his favourite bird. The Dayaks of Borneo attribute a great Flood to the destruction and cooking of a boa-constrictor. With the Hare Indians (N. America) it is the raven who brings about the Deluge to punish the Wise Man for having thrown him into the fire, though, curiously enough, the raven escapes with him on the raft. Even more original is the cause of the Deluge as reported from the Leeward Islanders. In the story of fishing in sacred waters caught the hair of the sea-god as the latter was having a map (Ellis, Polynesian Researches, ii. 58). (3) In the Transylvanian Gipsy story it is the punishment for the disobedience of a woman in eating a forbidden fish—a motive which may have originated from the Biblical story of the Fall. In both these last stories the Deluge appears singularly unreasonable. In the latter the woman herself, who is alone responsible for the crime, is slain by the first flash of lightning; in the former, more unfairly still, the fisherman, his wife, and, according to some versions of the story, a few friends, are alone alive.

(c) The warning of the Deluge is generally made by revelation, sometimes directly (Genesis), sometimes by another god than the author of the Deluge (Akkadian), often through the medium of some which have foretold rain. The warning may be a story regarded as an incarnation of Visnu (Indian), by a wounded dog (Cherokee), or by llamas to a shepherd (Peru). The last two cases seem to have arisen out of the observed faculty that some domestic animals have of foretelling rain. The motive of the Indian story seems connected with an ancient mythological conception, which attached a peculiar sanctity to the fish. In a story of the
Finns a warning is given three times in vain by an eagle (himself the cause of the Flood) to a prophet (Bancroft, *N. B.iii. 78*). (d) Those who are permitted to escape vary very largely. Frequently it is one person only, as the old woman or her daughter (cf. *cf. the man and his wife* (Darijung, Himalayanas), a brother and sister (Kolarians, East India), or two pairs (Andamanese). Less frequently a few friends or slaves are also saved, as in the Bible and in the Leeward Islands stories, where, however, accounts differ. Rarely we find a considerable number, including slaves (Akkadian). In a highly original story of Kabadi, in New Guinea, all the men escape by getting up into the peak of a mountain and waiting till the Deluge has subsided. In other stories they are all destroyed, and the Deluge is followed by a new creation (Kashmir). Especially was this the case where the purpose of the Deluge was the destruction of monstrous beings (see *Antediluvians*). In some American Indian stories it is an animal only that survives, such as the coyote (Wappo, etc., California); in one of the legends of the Indian Nagas (Karens in Burma), it is the coyote and the demi-god Montezuma, while the Thlinkits make the raven and his mother the sole survivors. (e) While by far the most usual means of escape is by boats or rafts, there are a few legends outside the Bible story in which a larger or smaller box or ark serves the purpose, as with the Banar of Cambodia and in some forms of the Greek Deluge legend. Possibly this is the origin of the Australian Canoe legend, which forms the centre of extremely curious ceremonies among the N. American Mandans, which are certainly connected with some old Deluge story (see *G. Catlin, O-Kee-pa, London, 1866*). Very frequently all the refugees escape to a mountain, either by means of a boat or directly, and some very curious and graphic accounts are given of the straits to which the survivors were reduced, as the water came higher and higher. Thus in a legend of the Ojibwa, Mamantcho, when the waters have reached the mountain peak, sets up on the topmost branch of a fir-tree, where the waters gradually rise to his mouth, in which he becomes drowned. In yet another it is by a canoe which the survivor makes out of a piece of the sky (Sae and Fox Indians). In not a few stories the survivors escape by climbing up into a fruit-tree (fruits in Borneo, Tree in Brasil, Acaucas in British Guiana), or, more curiously still, by climbing up a chimney (Makah or Kwakiutl in British Columbia). In some Peruvian stories the mountain of refuge itself floats on the Deluge like a boat. Caves are, singularly enough, the place of refuge in a legend of the Mexican Chichas and of the Arawaks of British Guiana, and the hole of a monstrous land-crab serves the purpose in the story of the Urans, a tribe of the ignorant Indians. From a translation of a very remarkable bark picture of a tribe of the Algonquins, it would appear that the place of refuge was a turtle's back, which became identified with an island. But quaintest of all is the story of the Cree, in which the one surviving girl saves herself by catching hold of the foot of a bee which carries her up to the top of a hollow mountain. In the Thlinkkit story the raven and his mother escape; in that of the Paracat it is the Pagupag the coyote saves himself in a bamboo sealed with rain. (f) Speaking generally, food for the future is provided in one of two ways, either by the survivors taking it with them, as in the Bible story, or by its being produced in some marvellous way afterwards. The preservation of animals, apart from their use for food and sacrifice, is very rare, not being found even in the Akkadian version, and is probably derived from the Bible version. Food is miraculously produced in the stories of the coyote, whose brothers have by two primeval parrots in a Peruvian story (cf. Elijah and the ravens); in another the survivors feed on fish, which they warm under their arm-pits (Tolowa in California). (g) The Deluge in many stories comes without warning, as, it would appear, the necessary consequence of crime, *e.g.* the cooking of the fish and the serpent respectively in the Gipay and Dayak stories already referred to. More frequently it is caused after a short period of preparation, the whole of the earth being covered with water at some time before- hand. The 7th day of the Bible (Gen. 7: 10), and probably of the Akkadian story also, has its parallel in a late version of the Indian story (see below, v. Deluge). (h) The physical causes to which the Deluge is assigned in different legends are numerous. Naturally enough it is generally rain, often with thunder and lightning. In a Sac and Fox Indian story the earth is said to be made of wax, as large as a wigwam. Less frequently it is the incursion of a wave (Washo, California), or the pouring in of the water of the sea on to the land (Makah Indians of Cape Flattery). Sometimes it is the sudden melting of the winter snow, as when a monkey grasped through the bag containing the heat and let it out (Chippewa). Sometimes the cause ascribed is very fantastic. A man accidentally lets fall and breaks the jar containing the water of the ocean (New Guinea), or it is made of wax (Tolowa, California) and it is the same motive, with the same fatal consequences, that tempts the ape to remove the mat which covered the waters in a hollow tree through which they communicated with the ocean (Acawo). (i) In a Finnish story the Deluge is of hot water. According to a legend of the Quiché Indians, a deluge of resin followed one of water, and in some cases fire may be said to take the place of water, the conflagration for story being the Akkadian flood, of which the account is analogous to the more usual deluge of water (Yuracarés of Bolivia, Mundari of East India; cf. *artt. Ages of the World*). In extent the Deluge varies from an obviously local flood to a universal deluge. Very frequently everything is covered except a few lofty ranges such as the Rocky Mountains (Déné Indians). In one Australian legend the low island of refuge alone remained uncovered, when the lofty mountain on the mainland, on which the people had taken refuge, was submerged, this idea probably arising from a not uncommon notion that islands float. (j) The duration of the Deluge is very seldom given, and, as the two Bible narratives differ both as to its duration from one another (Akkadian), and in yet another it is by a canoe which the survivor makes out of a piece of the sky (Sae and Fox Indians). In not a few stories the survivors escape by climbing up into a fruit-tree (fruits in Borneo, Tree in Brasil, Acaucas in British Guiana), or, more curiously still, by climbing up a chimney (Makah or Kwakiutl in British Columbia). In some Peruvian stories the mountain of refuge itself floats on the Deluge like a boat. Caves are, singularly enough, the place of refuge in a legend of the Mexican Chichas and of the Arawaks of British Guiana, and the hole of a monstrous land-crab serves the purpose in the story of the Urans, a tribe of the ignorant Indians. From a translation of a very remarkable bark picture of a tribe of the Algonquins, it would appear that the place of refuge was a turtle's back, which became identified with an island. But quaintest of all is the story of the Cree, in which the one surviving girl saves herself by catching hold of the foot of a bee which carries her up to the top of a hollow mountain. In the Thlinkkit story the raven and his mother escape; in that of the Paracat it is the Pagupag the coyote saves himself in a bamboo sealed with rain. (k) See under (e). (l) This is an uncommon feature almost confined to the Semitic legends and some forms of the Deluge story. In the most important Indian story the Deluge leads up to a very complicated and intricately intelligible religious ceremony; but this belongs rather to the next head. (m) The most striking example of this is the story of Deluge in some myth of Tyria; but, as already pointed out (V. A. v. 21), it has an antecedent possibly its derivatives in a Lithuanian and in certain S. American Indian stories. A more remarkable proceeding is that of the surviving coyote, who, according to the Wappo Indians, planted feathers wherever the wigwams used to stand and they grew into men and women. A similar story is told by Bancroft (iii. 57) of some Californian tribes who relate that men were created
by the coyote and a feather which became an eagle. The Déé Indians sometimes identify that as the god animals take into men, but it is not explained where the animals came from. In a story of the Pinus Szeats, the surviving son of a god, having slain the eagle which had caused the Deluge, rolls the dead bird (Huang-ruo-ching, chap. iii., 78). The Indian post-diluvian rite was a complicated sacrificial ceremony by which Man was apparently directed to produce both men and animals by an offering of clarified butter. But it is possible here to distinguish the primitive legend from later ritual and mystic acretions.

Where there is a single survivor, or only survivors of one sex, the re-peoning of the earth is frequently effected by union with some god or animal.

We have an example of the former in a story of the Pelew Islanders. In the story of the Crees the surviving maiden forms an alliance with the great eagle, through whom she has effected her escape. In a Persian story one of the surviving brothers eats the parrot which has brought him food and she becomes his wife. In the Alaskan story the preservation of seed is almost a unique feature. The necessity of re-planting the earth, or at any rate of re-filling it with cereals and vegetables, does not generally seem to have suggested itself.

(a) The apotheosis of the chief survivors is an important feature of the Babylonian story. There may be a trace of it also in Gn 6:2 (P; cf. Gn 5:2; see ANTIDELUVIANS).

If, then, the argument from the many existing Deluge stories were pressed, the most that it could with any reason be supposed to prove would be a rather colourless tradition of a Deluge or great Flood of some sort; but any such argument would have to be largely discounted, if not altogether neutralized, by facts to be considered under the next head.

(ii) Deluge inundations.—That this supposition will account for a very large number of Flood stories is obvious.

i. The Chinese Deluge story is merely an early tradition, though highly coloured, of such an inundation as has frequently taken place in the valley of the Hwang Ho (see V. E. ii., iii.).

ii. Such stories are especially frequent in volcanic districts subject to earthquakes and seismic waves, as in the Prince of Wales Peninsula (Hersting St. John), the later Lake Winnipiseogee, or the Bay near Hervey Bay in Queensland. In a legend connected with the last-named place the inundation is expressly ascribed to a monster wave which burst over the land. In the story of Cape Flattery, the prairie which was flooded was once submerged, and has an alluvial deposit of about a foot, as Swan argues, who gave the story in Smithsonian Contributions to Knowledge, vol. xvi. (quoted by Eells in Amer. Antiquarian, i, 70-72).

In northern districts the Deluge is sometimes assigned to the melting of the snow (e.g. Chipewyas), and very probably originated in a reminiscence of an exceptional inundation from such a cause. The same may be said of the Deluge stories of island peoples. The experience of high tides occasioned by storms would naturally make an impression upon the active imagination of a savage race, and occasion, or at any rate give a certain colour to, stories of this kind. Such tides are still a matter of great interest in the American coast and among the Eskimo, where the tide for a time may be several feet above the highest level reached by the sea; and the normal savage is like a clever child only half awake. A more potent cause might be found in the submergence or appearance of islands through volcanic action.

In many Deluge stories obviously originated in purely local events makes it highly probable that this is the true explanation of many others, where the local cause has been obscured as a tradition, has then become a legend, and has finally passed into a myth, the tendency of the imagination being towards making the story more and more wonderful. Thus, what was originally a local flood may become a universal Deluge, the surviving anecdote, the survivor of a violent inundation is ascribed to the direct, and often quite miraculous, action of Divine Beings. How far any particular story can be thus explained must be considered on its own merits.

C. Explanations of natural phenomena.—How far did Deluge and Flood stories arise as a hypothetical explanation of observed facts or racial conditions?

(iii) They often appear as a pseudo-scientific explanation of natural phenomena. The savage mind would naturally ask, How came the sea and land, mountains and valleys, and lakes and islands to be where they are and what they are? Whence the differences of water, land, and climate? How came the fossils which are found upon the hills? To these questions they found an answer in the hypothesis of a great Deluge which left the fish turned into stone on the land (Eskimo [see Hall, Life with the Esquimaux, London, 1864, ii. 318]. Lecward Islanders, Samoan Islanders); or formed a large lake (such as the Tahoe in California, or the Dihlo Lake on the southern border of the Congo State); or caused men to seek refuge in distant lands, to discover and lend aid to the survivors of the Deluge (Ranawans [Washington, Makah Indians of Cape Flattery, Thlinikits, Bella-Coolas]; or left the red colouring on the Islanders' skin (Crees). Sometimes the Deluge plays quite a subordinate part in a story which is essentially of a different kind.

A Deluge story of the Pelew Islanders is connected with a picturesque account of the origin of the red stripe on the head of the bird called the tarit (Callipeplis lutea). In the Pelew Deluge myth, among other motives, explains the saltness of the sea. In an interesting myth connected with Mangias (Cook Islands), the great purpose of which is to explain the origin of the many fish in the sea, and of the coco-nut, the Flood is merely required to bring up the coco-nut, out of which the human child grows, to the door of the house, but whose pious duty it was to say him. In fact, there is another version of the same myth in which there is no flood at all (Hall, Myth, p. 281). Gill, who was 22 years a missionary in the Hervey Group, had specially favourable opportunities of collecting stories uninfluenced by Christian teaching; as he obtained them directly from Tesevala, the last priest of the god Tialo, who took the double form of a shark and an eagle. Incidentally also the Flood story given above accounts for the passage by which the water drains into the sea. In another legend, told by Gill, the chief object of the Flood was to put out the furnaces of Riolith, the earth being designed to cook Nguru. The Flood puts out the furnace and permits Nguru to effect his escape.

It is very probable that to the same intelligent curiosity we must refer those many stories which seem to lead up to the origin of land, or at least of islands.

There is an old Indian legend according to which Vigoo in his creation as a boy brings up land from the bottom of the ocean (Muir, Original Sanskrit Texts, vol. iv. [Lond. 1873], ch. i. and ii.). With this we may compare the legend that Queru pulled up the island of Mangaia out of the nether world. But there are several apparently analogous stories among the American Indians connected with a Deluge which occurs as an event, not as a primordial condition. In such stories some animal, a duck or beaver or fish, more often a small rat, dives down for earth and brings it up between its feet or in its mouth (See and Fox Indians, Chipewyas, Ohjivas). Some have compared the curious episode to the sending out of birds by Noah in the later Babylonian story. But there the clay on the feet of the birds is a proof of the re-appearance of ground, on which, though still wet, the birds could walk; whereas in the Indian legend the cause is a real variant of the dove and the olive branch. It is very unlikely that, as Andree remarks, the sending out of animals in the American Indian stories has any connection with that Bible incident. More probably it is an ancient myth accounting for the origin of land, and among an originally coastal people has become mixed up with later inundation traditions of a more local character.

It seems probable that in some cases, among island and coast-land peoples, the Deluge story originated in the tradition of the early migration of the people. In such cases the ocean is itself the Deluge, and the island or coast-land the home to which they escaped. In some such way the Bunna account for their settlement in the Malay Peninsula. How easily traditions of such a kind could
pass into myths may be seen in many of those Deluge stories, in which comparatively recent events have become interwoven with them.

Thus a Deluge myth of Western Australia is connected with a story of an earthquake and "white" rain, and can have originated or taken its present shape only after the first English settlements in the country. In a Deluge myth of the Papago Indians, a white-spirited, indigible to tame Mio-

tetana's rebellious temper, sent an insect into the unknown land, the Spacituras, which destroyed Montezuma, and people no longer worshipped him as god. Here Montezuma, an Aztec ruler, who was actually killed by the Spanish in 1520, has become the demigod-hero of an ancient Flood myth.

D. Deluge stories explained as part of a definite cosmological system.—This has been incidentally touched upon in the account of Noah, the sun-god. The life of a myth is history, and a myth may be explained in any number of ways, but such conceptions are hardly of a kind to account for the general prevalence of Deluge stories. Moreover, the savage mind, at any rate, was essentially local and limited in its range, and compared with the world at large, the horizon of its ordinary experience.

E. Deluge stories explained as Nature myths.—In this view some forms of the Deluge story, especially those of Palestine, Babylon, Greece, and India, are considered representations of some ordinary natural phenomenon of constant recurrence. Noah in his Ark is generally regarded by its ex-

ponents as a sun myth, but as regards the interpretation of the story there is a wide divergence of opinion.

1. Cheyne, for example (see art. 'Deluge,' in E.B.Y), following Schirren and Gerland, suggests that the Deluge has been trans-

formed into the sun myth. According to the Jewish legend, the pre-emp 

tory of Noah in the Ark, like that of Zeus in his chariot, is a mythical interpretation of the course of the sun. But this would imply an incredible twist of the primitive imagination.

2. Usser, on the other hand, who has written on the subject at very great length, makes the whole point of the myth lie in the finding of the Deluge hero, which represents the rising sun. He derives his argument partly from philology, but chiefly from the comparative mythology. He explains Denuskion as the 'Little Zeus'—a suitable name for the newborn sun, and he compares the many stories, such as those of Perseus and Oedipus, in which a child is thrown into the sea in a chest or otherwise, and whose landing gives rise to some cult, which he connects sometimes, rather curiously, with that of the sun. In fact, almost every legend which has a sun in it (and there is one to be found almost anywhere) is explained in this marvellous manner, from Arion on his dolphin to the legend of Dionysus and Erato.

3. Usser finds developments of the same idea in fairy tales, Christian legends, and many myths and religious customs, coins, etc., representing the sun god, like Thoth, Horus, Osiris, or Eternity. Strangest of all are the illustrations drawn from the legend of St. Christopher, the river-god, and, according to Usser, the pictures of the Christian baptism. He lays great stress on the fact that the season of baptism was called Epiphanie, an emblem of rising light, and even directs attention to the fact that the water is de-

scribed as stormy, seeing in this the idea that the water was con-

ceived as lifting up the soul in the Ark, preparatory to its landing, i.e. rising. Such arguments as these hardly need serious discussion.

F. General conclusion.—Speaking generally, the comparative study of Deluge legends tends to make it more and more evident that, while a very large proportion of them certainly arose originally out of local events, these have always been highly colored and frequently transformed by the imagination, which among more uncivilized races saw all Nature teeming with conscious life in manifold forms. Either in conjunction with such traditions, or sometimes independently of them, Deluge stories have been taken as the out of an inventive creative imagination, which is the natural wonder of the present by even greater wonders in the past, and by a process of repetition changed the guesses of an earlier into the traditions of a later age. In this way, such stories have a living interest to the student of psychology, but are of far less importance in the comparative study of religion. It should be added that, though the common derivation of Deluge stories from the Bible Deluge can no longer be maintained, the Bible story and those related to it have had in various ways a wide and important influence upon a large number of these.

V. Groups of Deluge stories.—A. SEMITIC.—

The Semitic Deluge story is found in three forms: (i.) that of the Akkad tablets, (ii.) the Bible Deluge, and (iii.) the story as narrated by later Babylonian historians, e.g. Berossus. It is now generally recognized by scholars of different schools that (i.) represents the most ancient form of the story, of which (ii.) is merely a variant, while (ii.) is a very different version of the old story adapted to an altogether different conception. The grounds on which this opinion is based are: (1) that the belief, though the date of the inscription upon the Akkad tablets is probably about 2000 B.C., it is a copy of a poem dating from about 2200 B.C., as it is confirmed by the mutilated fragment of another Babylonian Deluge story, discovered by Schell at Abū Habba (Sippara), the colophon of which points to a date for the inscription of 2290-2150 B.C. (see Ball, ii.); (2) that the story, as drawn, may have been brought by the Israelite people migrated; (3) that the story itself, in both its Biblical and Akkadian forms, is connected more nearly with the same region of the world than with the mountains of Nizir [Akkadian], Arrarat [Bible]; (4) that the Akkad story is based upon the religious ideas of that country and the worship of the ancient gods of Babylonia, while that of Genesis is conceived in the spirit of the high morality and monothecism of the Jews.

i. The Akkad Deluge story.—The Akkad Deluge story, discovered by George Smith in 1872 among some monuments in the British Museum, was inscribed on the eleventh of twelve tablets, each containing one canto of an ancient epic poem. Each tablet is connected with a sign of the zodiac, and, as the eleventh is that corre-

sponding to Aquarius, the Deluge story is particu-

larly suitable. The epic relates the adventures of a certain Gilgames, who is frequently identified by scholars with the Ninurta of Genesis. In order to seek a remedy for sickness, he pays a visit to his mother, who in the month of the river Euphrates, and Sinutäsi gives him an account of the Deluge and of his own translation, of which the following is an abstract:

The gods in Sutinäsi's absence, determined to send a Deluge. Ea, the lord of wisdom, reveals their purpose to Sutinäsi, and bids him build a ship of certain dimensions, there being the seed of life, and launch it. Sinutäsi carries out these instructions, building it 120 cubits (7) high, of six stoen, and divided into seven parts, pouring over it several measures of 'pitch' both inside and out, and providing it with oars. Having celebrated a great sacrificial feast with oxen and sheep, beer, wine, oil, and grapes, he brings into the Ark stores of gold and silver, beasts of the field, man-

servants and maid-servants, and the sons of his people [call " the craftsmen" (Hall)]. Having done so, Sinutäsi is bid to enter and shut the door, and to await the Deluge that night. He appoints Dumuzi, king of the 'land of Thera,' (Buzur and Ball) his pilot, and waits in dread for the storm, which burst forth next morning. The description of the storm and the conflagration of the earth are thus graphically and forcibly described (57-111):

When the first light of dawn appeared,

There arose from the fountain of heaven a black cloud;

Rimmon in the heart of it thunders, and

Nabu and Marduk march ahead

The Throne-bearers march over mountain and plain.

The mighty Æthibar (or Girta) wrenches away the helm;

Ninib goes on pouring out rain;

The Annunaki (earth-spirits) lifted torches;

With their shen they lighten the world.

Rimmon's violeat torcheth to heaven,

Whatever is bright he turneth to darkness.

One day the Southern blast

Hard it blew, and...
DELUGE

Like a battle-charge upon mankind rush the [waters].
One no longer sees another; No more are discerned in (described) from heaven.
The gods cried aloud, Sought refuge in ascending highest heavens (lit. the heavens of Anu); The gods cowered like dogs; on the battlements [of heaven] they crouched.

...screams like a woman in travail...
The loud-voiced Lady of the gods explains: "You generation is turned again to clay! All and every one of the gods forebode the evil. A tempest for the destruction of my people I foretold. But I will give birth to my people [again], though Lady Babylon rises through the sea." The gods, because of the Anunnaki went with her; The gods were distressed, they gave warning.
Closed were their lips (Ball, p. 281).

For 6 days and nights the storm races, and shakes on the 7th, when the waters begin to subside. Štipnāṣti weeps at the sight of the corpse; he opens the window, however, and discovers distant land. Thither the ship steers, and grounds on Mt. Nimr. Here, after another 7 days' interval, Štipnāṣti sees forth a dove, which finds no resting place, and returns.
He then sends forth a raven, which, when it sees that the waters have subsided, returns. Then he sends forth the animals to the four winds of heaven, builds an altar, and offers sacrifices with libations of wine, at which the gods collect like flies (3), while the great goddess Enlil fights up the mighty bow (3). The account goes on to describe how, when Bel sees the ship, he is filled with anger, and commands the gods that no one shall step forth again alive. He also declares that for having caused a Deluge, and suggests it is future other punishments, such as when the sun revolved about the world, that he did not. Hereafter he reveals the counsel of the gods, but only sent a dream to Atra-Hasis. His pleas are so successful that Bel takes Štipnāṣti's hand and invites him and his wife, and bids them be as gods, and dwell at the mouth of the rivers.

Unfortunately, there are a large number of lacunae, and in many other passages the language is very obscure; but the above may be taken as fairly representing the general drift.

There can be little doubt that the text as we have it is composite (see Sayce, Higher Crit. and Mon. ch. iii.). The Deluge is ascribed first to the gods collectively, then to the sun-god (Šamaš), and, lastly, exclusively to Bel. The hero of the Deluge is twice called Atra-Hasis instead of Štipnāṣti. Moreover, a double version of Ea's warning speech is given, and, lastly, Bel's counsel to Štipnāṣti is omitted—consists of 57 lines. It represents some god as calling upon Šannu to bring a flood on the earth, and Ea as interposing to save Atra-Hasis (see Driver, Genesis, in loco: Ball, p. 43).

Before passing on to consider the Bible Deluge, we must call attention to a few passages in the Akkadian story. (1) The recurrence of periods of seven days' duration. The preparations appear to have taken 7 days (cf. Gn 7:3), the ship being completed on the 5th, and 2 days more being required for the furnishing and emboating. The storm itself lasted 7 days, and there was another interval of 7 days, while the Deluge was abating, before sending out the birds, which were sent out consecutively, apparently on the 7th day, or, at any rate, at the great interval (the story of Berossus, 'after some days').

...the ship are uncertain. There are lacunae in the direction where the directions are first given, but, at any rate, the height and breadth are the same. In describing the actual building of the ship, the height (and, therefore, the breadth also) is 10 sars (150 cubits [Sayce, Hommel]), but the length is not given. It seems, therefore, enormously larger than the Bible Ark 4 times the height and 3½ times the breadth (cf. Gn 6:10').—(3) These saved in the ship included Štipnāṣti, his wife and slaves (male and female), and the pilot and all his people; but the mention of other relatives at least doubtful. (4) Most important of all: Atra-Hasis and his wife (but no others) are translated.

i. THE BIBLE DELUGE STORY.—I. Analysis.—The Bible Deluge story, like the Akkadian, is certainly composite, parts belonging to the comparatively late Priestly Code (P), and parts, speaking generally, to the ancient Jahweh source (J).

The parts usually assigned to J are: 6:7-17, 7:10 (in part) [see below].
The parts usually assigned to P are: 6:18-23, 7:8, 10-15a, 16-18, 21-22, 24, 28a, 30c. Isa. 14:19-20, 21-22.

2. The J Deluge story.—(a) Its date.—Though the composition of J as a whole can hardly be earlier than the 9th cent. B.C., it seems probable that the Deluge story here is taken from the 12th or 15th, there is clearly a distinction between certain domestic animals that were sacrificed and wild game (i.e. clean animals) which it had been the custom to eat, but which could not be sacrificed—a distinction which is also implied in the story of the deception of Isaac (Gn 27:1-3).

On the other hand, the Deluge was not a universal tradition among the Israelites, or, at any rate, did not form part of a generally recognized historical system; the tradition concerning Lamech's sons (Gn 4:22) implies an unbroken history of civilization; and, if the writer of this last section was aware of the Flood tradition, he certainly did not regard it as a universal Deluge. Many critics, therefore, regard the Deluge story as a comparatively late insertion into the original cycle of J traditions (see Of Ben, loc. cit.).

(6) A relation of some kind between J and the Akkadian story is evident. The points of similarity are the Divine decision to bring a Flood (Gn 6:7) in consequence of man's sin (this is implied in Ea's expostulation with Bel in the Akkadian story); the warning by Divine agency that the Flood was coming (7); the command to build an Ark, implied in 6:15; the periods of 7 days, though not so connectedly as in the Akkadian story (7:10, 8:9, 20); the sending out of birds at intervals; the sacrifice after the Deluge, and the delight shown in it by Jahweh (8:22); On the other hand, it differs in the monothestic character of the whole story, and the necessary omission of the petty quarrels of the gods; and in its infinitely higher religious and moral tone (the occasion of the Flood, Jahweh's wrath against man, and the emphasis which we do not find in the Akkadian story); the means of preservation, an ark or chest, instead of a ship; the Flood's duration of 40 days instead of 7; the birds sent out—raven, dove, dove, dove, instead of a proper swallow, raven; the incidence of the olive branch (but cf. Berossus); and the omission of the apostheosis of Noah.

* For full analysis, see Oxford Hex; Kautzsch and Sohn (quoted in Ussher, pp. 17-23). Driver, Genesis, 1892.

** Note added, v. (afterwards corrected by revisor) to P.

† Ball argues from the dimensions that the Akkadian ship was really a chest; but it had ears and a stern, and was launched and navigated.
(c) At this point two important questions arise. 
(1) Is the Bible story derived from the Akkadian, as we find it in the tablets? Probably not. That there were several versions of the story current in Babylon is clear from the evidence of two stories contained in the Akkadian, as well as the evidence of the other mutilated fragments, as well as by the account of Berossus, which differs in some important particulars. The olive branch in the dove's mouth is the kind of picturesque detail which looks very ancient, and may have been original, and is to some extent confirmed by Berossus (see below, V. A. iii. 1, b. c). It has been suggested that the sending out of birds may have originated in the well-attested ancient custom of letting birds loose to ascertain the direction of land; but, while this is not altogether improbable, it must be admitted that such a purpose is not very evident in the Akkadian story, and is quite inadmissible in that of the Bible. On the whole, it would appear that the Bible story is derived from one that did not differ essentially from the Akkadian as we know it.

(2) Is the story of J a deliberate paraphrase of whatever form it was derived from, or was it the result of a gradual process of omission? Such a subject is hardly capable of positive proof, but the probability seems in favour of the latter alternative. (a) If the story was, as seems likely, derived from Babylonian at an early date (note its anthropomorphic details), and that of J's is a later one still (9), it would probably, in all probability, have been handed on by oral tradition many centuries before it was written down, and, if so, would naturally have become gradually changed in the telling, as religious ideas developed from time to time. (b) We can thus find best account for one of the most characteristic differences—the chest of the Bible left to drift by chance or at the Divine will, in the place of the purposely navigated boat of the Akkadian story. No doubt Lenormant was right in saying that the latter is a feature suitable to the story told by a maritime people, such as the inhabitants of the Persian Gulf, whereas the Bible Ark points to a people ignorant of navigation (Orig. i. 45, quoted by André, p. 8); but it seems unlikely that a writer in comparatively late times would have deliberately altered the ship into an ark, whereas such a change might naturally come about later. If writers have made this difference as a proof of the priority of the Bible, and even Cheyne, while very far from admitting such a view, suggested that possibly this particular feature may be more primitive—the conversion of the chest into a ship being due, if this be the case, to a rationalizing tendency (art. 'Deluge,' in EB)—such an argument cannot be considered as to any extent outweighing the strong grounds for the priority of the Akkadian story; and, after all, that the Bible Deluge should be in this, as it is in other respects, more marvellous than an early form of the story, is what we might naturally expect in a later stage of tradition.

(d) Conclusion.—We probably have in the J story a mere compilation, either brought with the people from Babylon at their first immigration, or obtained from that country through the frequent intercourse which we know to have existed from early times between the two peoples, but modified as the link in the gradual course of transmission, a suitable vehicle for enforcing those great moral and religious truths which became the distinguishing features of the Israelites.

3. The P Version of the Deluge.—(e) Compared with that of J, P has in addition the description and the dimensions of the Ark, the description of the Deluge as due to the breaking up of all the fountains of the great deep, as well as the opening of the windows of heaven (71 8), the stranding of the Ark on Mt. Ararat (88), and the rainbow (9 18), together with statistical references to Noah's age, etc. P omits the sending out of animals and the ark, and substitutes the elaborate covenant connected with the rainbow (9 17) and laws of blood for the simple promise of J; and, on the other hand, may have simplified and omitted all 356 days instead of 61, and substitutes the elaborate covenant connected with the rainbow (9 17) and laws of blood for the simple promise of J; and, on the other hand, may have simplified and omitted all.

(b) The comparison with J and with the Akkadian Deluge raises a somewhat difficult question. Was P's story derived independently from Babylon during or shortly after the Exile, or was it, on the other hand, merely a revision of J's Deluge story? or, again, was it in some respects an independent version of the ancient story, belonging, like J's account, to ancient religious traditions?

Those who adopt either the first or third of these alternatives lay stress on the fact that so much of what is peculiar to P has its parallels in the Akkadian story, in which we find certain dimensions of the ship, its being tarred with pitch, the Deluge ascribed apparently to the sea as well as the rainstorm, and the promise that all the creatures of the earth shall be destroyed. On the other hand, it may be observed (a) that, as already pointed out, the actual dimensions of the Akkadian ship are enormously greater than those of P's ark, and, moreover, that the insertion of exact dimensions in the account of the Deluge is not at all in accordance with the method of P, as, e.g., in the dimensions of the Tabernacle and all its furniture; the resemblance, therefore, on this point, such as it is, may be merely accidental; (b) that the reference to the rainbow in the Akkadian story is not the idea of its being the sign of a covenant made with the earth, but of a sign warning of the coming of the Deluge; and (c) that, on the other hand, P's story does not resemble the Babylonian story, as Quatremère de Quincy, Houdin, and other later writers have been led to think; and, furthermore, that the omission of the sacrifice of Noah accords with the omission of all the Patriarchal sacrifices—an omission which certainly suggests the inference that P disbelieved in or held the accounts of sacrifice altogether. Lastly, the omission of such an anthropomorphism as 'Jahwh shut him in' in 7th is quite in character with P's usual practice. (c) As the present combined account of the Deluge is based on P's story, which apparently has been preserved almost intact, whereas some parts of J are obviously omitted (those, for instance, giving the warning of the Deluge and directions for building the Ark), it is quite possible that some general statement of the Ark's dimensions, a description of the pitch, the covering, the placing of animals, etc., the account of the rain no longer considered in its place, and the incident of the rainbow, may originally have had a place in J's story. If this be so, P must have retained the latter, not because of its picturesque, but as the basis for a favourite theme, as a Divine covering for the gradual unfolding of the story, and effectually with the change of Gl to 365 days, the number of days in the solar year, though it does not agree with the three weeks of the Akkadian story, appears to be based upon some astronomical theory, and may be due to Babylonian influence of some kind. It may also be reasonably urged that the reference to the fountains of the great deep really corresponds with P's idea of nomenclature (cf. G. N. P.), and finds a
paralled in the post-exilic Is 24:1. It is not likely, therefore, that it was originally derived from J. This view may be considered not improbable, that in addition to J, P may have had access to some other version of the Akkadian story, but, if so, and as far as it is derived quite uncertain.

iii. The Deluge according to Later Babylonian Tradition. —The Deluge as given by Berossus. —Berossus was a priest of Bel in Babylon about 300 B.C., who wrote a history of Babylonia (see art. BEROSUS). He claims to have copied out MSS of several authors who had been previously written on the Babylonian flood for 15 centuries. Unfortunately, only a few fragments of his work have been preserved, which were copied by later authors. His Deluge story is given or referred to by several sources:

(a) It was copied by Alexander Polyhistor (a Milesian writer of the 1st cent. B.C.), whose work is also lost. Thence it was copied by Eusebius in his Chronicon; and, though the original of the Chronicon is also lost, it still exists in an Armenian tr., and it was also reproduced, probably verbatim, by Syncellus in his Chronographia.

(b) A Latin translation, based partly on the Armenian version, with the various readings of the Syriac and Persian versions, is added to the work of Eusebius by the Chronicon of Eusebius (i. vii., also in Prep. Evan. ix. 12, p. 414) and in the Chronography of Syncellus (p. 70).

It differs, however, (1) in making a double interval of three days before and between the sending of the birds, and (2) in the birds being sent out only twice. Mige's attempt to get out of the text of Syncellus a third sending of the birds is not quite successful; it would require that it took place after they had returned with the clay.

5. References to Berossus's Deluge story in Josephus. —Josephus's account of the Deluge (Ant. 1. iii. 5, 6) differs slightly from that of the Bible. He mentions that Noah, when the Ark rested on the top of a certain mountain of Armenia, opened it and saw a small piece of land. The dove was sent out 7 days after the rain, and only came returned, covered with mud and bringing an olive-branch. After waiting 7 days more, he sent forth the living creatures. These differences may be partly due to the fact that in the Greek text of the Deluge, and therefore the reference to the clay, at any rate, is taken from the account of Berossus, which he had seen, and probably other accounts also, for he goes on to say: 'All writers of barbarian history make mention of this Flood and this Ark among whom is Berossus the Chaldaean,' and he quotes from him the statement about the remains of the ship on the Kordyaeans, and the use made of the pitch, in the same words as those used by Eusebius and Syncellus, who themselves refer to Polyhistor as their authority. This proves beyond a doubt that Polyhistor's story was derived from Berossus.

Josephus's statement about the universality of the Deluge story may be taken as showing that his Deluge story was a common theme among ancient historians.

iv. Origin of the Semitic Deluge Story. —(a) There is nothing to suggest in this case that it formed part of a consistent mythological system. (b) Being one of the oldest stories, the subject was clearly suitable for treatment in the Akkadian Epic in connexion with the rainy month; nor need we suppose it, therefore, connected with any special astronomical theories. (c) It is not possible to assign to it any particular status in Semitic mythology, though the Deluge stories of the Canaanites and the Phoenicians do play their part, finds its analogies in many Deluge and other stories throughout the world, in which natural events form the basis of, or become mixed up with, mythological details (see above, IV. C. (b)). (d) The frequency of Deluge stories arising out of natural inundations gives a prima facie probability that such an event was the origin of the tradition in this instance. (e) In both the Bible story and the Akkadian the Deluge is ascribed to natural causes: (1) an excessive rainfall; (2) somewhat more indefinitely, the rising of the sea. The first is obvious in both accounts. The second is definitely stated in P in the words 'all the fountains of the great deep were broken up' (Gen 7:11). The deep being regarded as being under the earth, such language would very naturally suggest an earthquake breaking up the ground and letting the deep burst forth. It seems implied also in the Akkadian story, which, if it does not, at least indicates in the characteristic phrases which speak of the earth trembling, and the floods breaking out below the earth, at least describes such a terrific storm and tempest and invasion of waters as to imply a cyclonic wave rather than a mere overflowing of rivers if. The traditional resting-places of the ark, Ararat = Armenia (Bible
DEULGE

and Berossus), and Nizir = Rowandiz in the North-East of Babylonia (Akkadim), point to a definite region of the world. (g) Siiss has pointed out with great force that the necessary conditions are fulfilled by supposing that the shores of the Persian Gulf were given in detail by ancient writers, accompanied by a tremendous cyclone. The very great distance which such waves travel, and the fearful destruction of life and property which is often involved, have frequently been pointed out.

Thus the wave associated with the backgarden cyclone in the delta of the Ganges reached a height of 45 ft. and destroyed nearly 100,000 lives (CBS viii. 22, 11); the wave caused by the eruption of Krakatoa (30th-31st Aug. 1883) reached 50 ft. (cf. the 15 cubits of P. Gr 779) and destroyed more than 30,000 lives. One wave reached as far as Cape Horn, 9,510 geographical miles distant (CBS xxvii. 239).

It can hardly be deemed improbable that a phenomenon of such a kind occurred on the coast of the Persian Gulf, then probably lying much further north than now, and that but few survivors escaped in boats to the more hilly regions, with what effects they could secure. We have, in an event like this, all that is needed for the growth of such stories as are preserved in the Akkadian Epic and the Bible Deluge.

It need hardly be added that the religious value of the Bible story does not lie in its improbable details, which are sometimes among the least, but rather in the religious and moral lessons, of which the ancient tradition was made the vehicle, viz. that Jehovah hated and would punish sin, but would save those who were faithful and obedient, while the further thought is suggested in P, at least, that His mercy is a more abiding motive than His wrath.

B. THE GREK DELUGE STORIES.—I. Story of Deukalion and Pyrrha.—This is by far the most important of the Greek Deluge, or flood, stories.

(a) Its most typical form is that given by Apollodorus (140 B.C.) in his Bibliotheca, i. vii. 2: When Zeus determined to destroy the men of the age of copper, Deukalion, at the suggestion of Pyrrha his father, constructed a chest (ἀναρακτή), into which, having placed therein the necessary of life, he entered with his wife Pyrrha. Zeus sent a great rain, which flooded most parts of Greece, and destroyed all except those who escaped to the neighbouring hill-tops. The pair, after drifting in the chest for 9 days and nights, reached Parnassus, and the flood having somewhat abated, disembarked, whereupon Deukalion sacrificed to Zeus, and Zeus, and in gratitude, caused the chest to be transformed into a mountain, in which Deukalion and Pyrrha became men, and those which Pyrrha threw, women. Then follows a derivation of the word Aede (Ἄδει) from ἀαράκτη (ποτίνος) [chest].

(b) This story evidently originated in a confusion of a myth with what may have been an ancient tradition. If Pandora, as Apollodorus had just asserted, was the first woman, and Prometheus first made men of earth and water, how could Deukalion be, as Apollodorus likewise states, king of Phthia, and who were the men who were nearly all destroyed? How, again, is the survival of any consistent with the story of the stones?

(c) (1) There seems to be an allusion to the story of the stones in Hesiod ('Hesiod, fr. 141, ed. Rauch; see Usener, p. 32). (2) The earliest complete reference, however, to Deukalion’s Flood is in Pindar, O. xiii, 63-67, where the situations between Pyrrha and Deukalion descended from Parmassus and founded of stones a race like themselves, and how the mighty waters which had overflowed the earth had been suddenly stopped by Zeus. Pindar especially speaks of a comic story; otherwise, much of what he says would have been quite unintelligible to his readers.

(3) The best-known form of the story, however, is that given by Ovid, Met. i. 155-415, the most curious feature of which is the fact that Ovid interwove with the special mythological features, such as the opening of the Vale of Tempe All are local in character, and that one of them, from its antiquity and picturesque scenes, should have found a permanent place, though often mixed with others, in Greek myth, is a curious story; or, it may be, the reason why it too may have originated from a local inundation, the story remaining such recreations of the picturesque and marvelous as are common in similar cases.

The occurrence of Deukalion instead of a boat is interesting in view of the same variation in the Semitic story, and might suggest the possibility that the Greek legend, as we find it in Apollodorus, was founded in some ancient Hebrew narrative. But there is a great difference between a chest,
DELUGE

holding only a couple of persons and such food as they required for 9 days, and the monster bible 'Ark.' with all its arrangements and inmates. Moreover, the chest was not an uncommon feature in the wild stories of Greek legend.

iv. The mixed Deluge story of the pseudo-Lucanian.
—We have a real mixture of the Greek and Semitic Deluge stories in the de Judaicis Syriac (Lucian, ed. Jacobitz, Leipzig, 1881, ii. 344 f.). This version was connected with a hole in the ground over which the temple was built and into which the Deluge was said to have subsided.

According to account, Deukalion and his wife and children, were saved in a great chest (λίβαντα). As he entered it, there came all kinds of animals, wild and tame, cows, horses, serpents, fish, and birds, to which he gave names, and there was great friendship between them, and they all sailed in one ship. He directed them that four of every species should be sent from the water preserve. When the water had disappeared through the hole, Deukalion built an altar and the temple over it.

Usener certainly goes too far in saying that this is the Babylonian Deluge story with only the name Deukalion inserted from Greek legend. It contains several features from both, and, except that to Deukalion it gives a second name Σκέδων (which, according to Buxton, is a corruption of Σφίδων, and is intended for Susithro, the Noah of Berosus), it bears a far closer resemblance to the Biblical than to the other forms of the Babylonian Deluge legend, e.g. the wild animals are preserved as well as tame; all in pairs; only Deukalion and his family escape; in a chest, not a boat (the last perhaps from the Greek story). That traditions of the Deluge ultimately derived from the Bible, was current in Syria long enough, and there seems also evidence, in another tradition that the people was founded by Semiarnis, of early intercourse with Babylon.

C. PERSIAN DELUGE STORIES.—i. A curious legend is contained in two fragments of the Yima songs preserved in Vendidad (SBE iv. 10 ff.). It is given in full by Usener, pp. 205-212, from the critical tr. of Geldner.1

A council was held by the gods, in which Ahura Manda decreed that a terribly severe winter would be followed by a great Deluge from the melting of the snow. Yima was directed to build an enormous fort foursquare, and to stock it with men and animals of all kinds. Yima carried out these instructions, but it is not actually said that the Deluge came.

Usener regards the whole story as an ideal picture of the future, the eternal city where men are to live in harmony and righteousness a life free from moral and physical evil, when the world is destroyed by the Deluge; but the passages which seem most correct are another tradition, which Geldner regards as later insertions. It seems more probable that we have here also an example of the tendency to idealize what was originally a natural event.

ii. A second story is found in Bundahish, viii. (tr. by E. W. West in SBE v. 25-28). Tistar, in the three forms of a man, a horse, and a bull, sends successive Deluges each of ten days' duration, and destroys all the noxious creatures on the earth. This is part of what is clearly an astrological myth describing the contest between good and evil, and accounting for lightning and thunder, the salt sea, and the origin of lakes and seas.

II. INDIAN STORIES.—i. The Fish Legend.—(1) The oldest form of this typical Deluge story of India is preserved in the Satapatha Brähmana, i. 8. 1 (SBE xii. 216, tr. by J. E. Gelling; for other translations see A. Weber, Indol. Stud., 1886, i. 9, Indol. Stud., 1886, i. 161; Max Müller, Hell. Lit., vol. 1, 1859, 425; J. Muir, Orig. Sbr. Texts, i. 1857) 181 ff.1:

In the morning, Manu, when water was brought to him for washing, found his basin full of fish. The fish foretold the coming Deluge, and prevailed to save him if he would preserve it, first in a jar, then in a pit, and, when it had continued to increase, he put it into the sea. Manu was to build a ship, and enter it, and look out for his preserved. Manu did

1 For a divergent interpretation of this Indian material, see art. Bl AGREES, ABUSE OF THE (Persian).

as directed, and finally "took the fish, which had then grown to an enormous size, to the sea. Then Manu entered the ship, and the Deluge came, which destroyed all living creatures. Meanwhile the fish approached Manu, who fastened the ship to his horn, and was so conveyed up to [over] the Northern Mountains. Manu was directed to tie the ship to a tree, and gradually to descend as the waters abate.

The rest of the story is concerned with a complicated and very unmixed narrative, which is not quite consistent, in which a woman was first produced, and, by her means, offspring of men and cattle.

According to Weber, the final reduction of the Satapatha is only a little before the Christian era; but, as Edding shows, it is a compilation of earlier treatises, and this particular story gives the impression in its main features, of being ancient.

One special interest in the story lies in its curious points of resemblance and contrast to other Deluge stories. The warning of the Deluge by an animal, the fastening of the ship by a rope, the post-deluvian sacrifice, and the miraculous reproduction of men, have all their analogies; but they are not found, as here, in combination, and the loving of the ship by a fish is quite unique. The probability is, therefore, that this legend is of natural growth.

Weber and, to a less extent, Muir see in the story a tradition of an original immigration of the race from across the Himalayas. They base their opinion on a comparison of the words of the Hindoos, 'over the Northern Mountains.' Edding, however, renders 'up to,' and some writers suppose the story to have originated in an exceptional overflung of the Ganges. The question is primarily one of texture. Edding, the chief exponent of this view, in his pseudo-Lucian. (or Edding) and ati-dudrava (Weber, etc.). The chief argument against an originally mythical origin of the story is that here also the tendency is to become more and more mythical, and if we regard the story as we can easily explain the story as having grown out of a natural inundation.

(2) A second version of the Indian story is that given in the Mahabharata (quoted from tr. by H. Jacobi in Usener, p. 29; see also Muir, op. cit. i. 186 ff.). The story has here assumed a more elaborate and marvellous form.

Manu is a prince among monks, renowned for his asceticism 'standing on one leg with his arms raised on high, with head bent down and never blinking an eye, he practised terrible austerities,' etc. The fish appeared to him as he was practising austerities by the forest, and persuaded him to enter the fish because many miles long, and yet Manu could carry it quite easily. The fish then becomes very grateful to him, and when the end the fish reveals himself as Brahma, and appoints Manu as creator of all things.

In this version there appears to be a confusion, not uncommon in similar myths, in the character of Manu as himself a descendant of former ancestors, and as the founder and creator of men and all things. In the older form of the story he is the first man, and never more than a man.

(3) A third version is found in the Bṛhadāranyaka Purāṇa, viii. 24. 7 ff. (for Eng. tr. see Hardwick, Christ and other Masters, new ed., London, 1863, vol. i. pt. ii. ch. iii. pp. 312-315; Muir, op. cit. i. 208 ff. 2).

According to Cheyne, this book cannot be earlier than the 12th cent. A.D. The story itself is mainly a development of that of the Satapatha Brähmana, with a mixture of the mythical and quasi-philosophical elements characteristic of the Purāṇa.

The Deluge took place during a sleep of Brähma, when the strong demon Hāyagriva stole the Vedas. Hāri took the form of a monstrous fish, and, in his form revealed himself as Brahmavarta, a devout king who lived only on water. The gradual growth of the fish is like that in the earlier legends, except that he could not swim by his legs, incapable of swimming of longues prolongs. The ark in this case was miraculously brought to Satyavrata, who occupied by the priests of the Brahman, spent his time therein singing hymns of praise and receiving divine revelations. Finally, Hāri slew Hāyagriva and recovered the Vedas. Satyavrata, instructed in the ancient knowledge, was appointed the 7th Manu. But, after all, the
appearance of the horned fish was medug, or delusion, and 'he who shall devoutly hear this important allegorical narrative will be delivered from the delusions of the Deluge.

It is interesting to note that this version has several points of contact with the Bible story. (1) The Deluge is caused by rain as well as by the snow and hail of the sun. (2) The story begins with the Deluge, and the ark is saved. (3) It is sent because of the depravity of man. (4) Animals are preserved in the ark, and these in pairs. Of these (3) is inconsistent with the beginning of the story, and is evidently a later addition. The most probable explanation of them all is that they were due to Christian influence. Their appearance only in the latest version of the myth makes it impossible to use them as arguments to prove that the story itself is derived from the Bible story, or originated in the event which that story describes.

ii. The Door Legend.—Another Deluge myth is given in Muir, op. cit. 1. 2501. It is one of the most interesting narratives in <i>Vingham Purana</i>.

It tells how the Divine Brahma, awakening from his night slumber, and perceiving that the earth lay within the waters of the universal ocean, assumed the form of a boa, plunged into the ocean, and raised up the earth and placed it on the surface. This is a creation myth, and has a curious analogy with some of the American Indian stories (see IV. C (v)).

E. CHINESE FLOOD STORY.—Accounts of this are found in the <i>Shu King</i> (especially ii. 4. 1) and in the <i>Shih King</i> (iv. 3. 4. 1), and the writings of Meng-tse (iii. 1. 4. 7. 9. 3ff.).

i. According to the <i>Canon of Yao</i> (<i>Shu King</i>, i. 3. 11; tr. Legge, <i>SBE</i> iii. 314).

"Yao, the Holy President of the Four Mountains, destructive in their overflow are the waters of the inundation. In their vast extent they embrace the hills and overlap the great heights, threatening the heavens with their flood, so that the lower people grieve and murmur! Is there a capable monarch who can prevent the inundation?" Khwan was appointed, and laboured unsuccessfully for nine years. The <i>Yi</i> afterwards resigned his throne to Yi, who had coped successfully with the inundation.

ii. The <i>Shu King</i> (ii. 4. 1) gives the account of Yi’s work as follows (in Legge’s translation):

The inundating waters seemed to assail the heavens, and in their vast extent embraced the mountains and overtopped the hills, so that people were bewildered and overwhelmed. I [Yi] mounted a vessel (four canoes) [carts, boats, canoes, and speaking shoes] and all along the hills heaved down the woods, at the same time, along with I, showing the multitude how to get food to eat, and how to make houses and wasps’ nests free from the nine provinces, and conducted them to the sea. I deepened the canals, and conducted them to the streams, at the same time, along with Chi, sewing grain, and showing the multitude how to procure the food of toil in addition to flesh meat. I urged them further to examine what they did for what they had not, and to dispose of their accumulated substance and grain to eat, and all the States began to come under good rules.

Elsewhere in the <i>Shu King</i>, Yi is repeatedly described as having determined the relations of land and water, and the <i>Shih King</i> declares that, ‘when the waters of the flood had become widespread, Yi caused the various regions of the earth world to appear; the great outlying realms received their limitations.’

According to these accounts, all these works were accomplished during a single journey. In fact, the accounts probably describe work gradually carried out through many ages, though possibly commenced by Yi. They were evidently intended to aver a constantly repeated and widespread disaster.

iii. Origin of the story.—Legge believed that (the occasion of Yi’s special work was an actual inundation of an alarming kind of the Hwang-Ho (‘the sources of China’), which he puts in the 21st cent. B.C., whereas he ascribes it to the 12th.

According to Meng-tse (b. 372 B.C.), however, the tasks of Yi were carried out under far more difficult conditions.

‘In the time of Yao, when the earth was not yet in ordered state, the masses of water flowed unchecked and flooded the earth. Flora was consequently destroyed, and birds and living creatures went about in enormous quantities. Grain could not grow. Animals pressed hard on man... Yao alone concerned himself about this matter and developed an ordering activity and gave Yi control of fire. Yi caused devastating floods and rain upon the mountains and in the marshes, so that the animals fled and sought shelter. Yi divided the nine rivers. ... Then it became possible for the Nine Provinces to build canals, and the people of the Middle Kingdom to support themselves’ (ib. 1. 4. 7). At this same period, moreover, serpents and dragons destroyed the deluge with rain, but Yi, while drying up the courses, chased these monsters, the animals that had oppressed man vanished, and the plains of China became habitable for the human race’ (pp. 2, 34).

It is by no means impossible that, as Legge held, these accounts all had their rise in a tradition of an extraordinary inundation by the Hwang-Ho; and in this connexion it is worthy of note that the great flood of 1531-33 is said to have cost some millions of lives, while it took 15 years to repair the damage and to reclaim the river within embankments. At the same time, it should not be forgotten that Legend, in his ‘Zur chinesischen Flutsage’ (<i>Postgrijs</i> an <i>Rot</i>, Stuttgart, 1803, pp. 9-14), maintains that the story is based on a cosmogonic myth, devoid of connexion, even in its basal ideas, with the Bible account, and associated in form with experience of the frequent inundations of the Hwang-Ho; and, like von Gutschmid (<i>ZDMG</i> xxiv. 186), it holds that the story denies any actual existence in history, was essentially a sort of demiurge, who helped to establish civilization on earth. It is open to question, therefore, at least on the basis of Meng-tse’s statements, whether this whole story is not to be regarded as a cosmogonic rather than as a Deluge story.

F. FOLKLORE DELUGE STORIES.—Under this general heading are included the numerous stories of peoples, more or less stereotyped, not included under previous headings. It is not necessary for the present purpose to make any general classification of them on either geographical or ethnological lines. It will be sufficient to point out a few facts bearing on the subject of this article.

i. One of the essential characters of these stories arises out of the fact that they are folklore. In the Deluge stories of Babylon, Greece, and India we have well-defined legends that have been traced out more or less distinctly in their developments and ramifications. Though a few of the stories now under consideration have come to us in a written form more or less ancient, they are not literature in the same sense, but only stereotyped folk-tales. By far the greater number of these stories, however, are still, or were till recent years, in a fluid and formative condition. The imagination which has produced them is, or was till recently, still at work, and has been continually modifying them. It has already been noticed how both historical events and fancy-striking anecdotes, such as Bible stories, have in many cases become mixed with the early tale, nor is it possible to separate them with scientific accuracy. Not infrequently what is essentially the same story is differently told on different occasions, or at any rate is differently reported (leeward Islands; see IV. A. vi. (d)).

There are many difficulties in the way of getting trustworthy evidence. As already pointed out, the missionaries, by whom most of these stories have been reported, were frequently prejudiced witnesses (see IV. A. iii.), and, moreover, the stories in several cases collected at a time after the conversion of the people with whom they originated. These missionaries had to depend on their own memory or that of their converts, and it was only in quite exceptional cases that the
opportunity afforded to Gill was offered (see above, IV. C. (v)), of reporting from the occurrence of one whose knowledge of heathen lore was both fresh and complete.

iii. Another striking fact is the irregularity in the distribution of these stories. For example, there are very few of the incidents reported from Africa, a considerable number from the islands of the Pacific, and an extraordinarily large number from the continent of America. This is accounted for negatively by Andree on the ground that Deluge stories do not readily take refuge elsewhere, as in Africa, the inundation of the great rivers is an annual occurrence, which does not therefore impress the imagination. It may be noticed in this connection that one of the most important exceptions is connected with a special local feature—the formation of the Dilo-lo Lake on the southern border of the Congo State (see Andree, p. 49). Again, the Deluge legend of the Masai in Uganda, to which attention has been lately called by Merker (see Guerard, 1906, p. 945), is so obviously parallel with the Bible Deluge that it cannot be regarded as independent. We find here the Ark, pairs of animals, birds sent out (a pigeon and a vulture [cf. the crow of the Lummi Indians and the humming-bird of a Mexican story]), and four (1) rainbows.

iv. It would appear that there must be some positive reason for the frequency of Deluge stories among the American Indians. George Catlin, in his A.H. (p. 24), stated that he did not find one which there was not one which did not relate some distinct or vague tradition of a Flood, and, in fact, a very considerable number of these stories have been preserved. It certainly must be admitted that the Deluge impressed itself very readily on the Indian tribes, but how far this was due to their past experience as an island people, and how far to the psychological character of the race, is a question for the ethnologist or anthropologist rather than the student of comparative religion. This much at least can be said, that there is some reason for believing that several of these stories are of comparatively ancient origin.

(c) In the first place, there is abundant evidence to show that Deluge stories were current in Central and Southern America at the time of the Spanish occupation. (2) The common elements in the stories of neighboring and related tribes in some of these tribes, and the frequent occurrence of certain characteristic features have become rooted in the imagination. (a) Several of the tribes about Peru, though their Deluge stories differ widely in other respects, have the common feature of a floating mountain—a combination, it would seem, of the ark and the mountain of refuge. (b) In more than one Mexican legend men were turned by the Deluge into fish. (c) We have noticed that several tribes about the Orinoco and its neighbourhood have the common features of stories (or coco-nuts) thrown to produce men (see IV. J. v. (2)). (d) Of still greater interest is the curious feature already mentioned (IV. C. (a)) that land was sent down at the Deluge, not by the waters subsiding, but out of scattered grains of sand or earth springing up and growing like seeds. Thus in the story of the Ojibwas, after the hoon has dived several times in vain, it is the musk-rat restored to life by the surging Manahozo whom (who was standing up to his neck in water on the summit of a high tree) that dives and brings up the grains of sand between its toes. These Manahozo throws into the waters, and they grow into islands, which unite into mainland. In a story of the Sac and Fox Indians, another branch of the Algonquins, the survivor, seeing that the Deluge would soon overwhelm the mountain on which his family had built a house, now filled it out of a piece of the blue sky. After sailing about some days, he sent out one of the largest fishes, which returned with its monster mouth full of earth, out of which he formed the dry land. In the story of the Deluge, all tribes, or related group, it is the northern diver that eventually returns to the canoe with clay on his webbed feet, after the beaver, otter, and musk-rat have failed. This old man breathed upon the earth, and it became the surface, and it finally happened in certain groups of tribes that a particular animal plays a prominent part, as the coyote among the Californians (Wappo, Papagos, etc.), the raven among those on the north-west seaboard of N. America (Thilukits and Bella Coolas).

v. This prominence of animals is a very characteristic feature of the American Indian stories, and is by some believed to be connected ultimately with totem-worship, whereas in the stories of some other groups, such as those of Hausa-speaking Islanders, a greater prominence is given relatively to what we should call the wonders or powers of Nature. Thus, according to Bancroft (iii. 87), the Californians describe themselves as having originated from the sea.

Among the Algonquin tribes the black serpent is the enemy of man and of created beings, and sends the Deluge. Manahozo, in more than one story of this people, was sent down to the turtle's back. In the stories of the Ojibwas his helper is usually the diver or the musk-rat. With the Thore Indians it is the eagle which throws the Deluge diver being blown into the fire; and it is the white owl who befriends the wise man by letting out the cattle which the ravens had imprisoned. With the Cherokee it is a dog which foretells the Deluge; with the Peruvians the Huanae reveals it to a shepherd. The Creees have it that the eagle reared the Deluge, and became by her the father of the new race. In a very original story of the Pimas (California), the god of the Sun, being angry with a raven for having corrupted the Deluge, killed it up to its eye, slays it, and restores to life those whom it had killed (Bancroft, iii. 79).

vi. The general inference from a study of these folk-tale Deluge stories is that we have not to deal with mythological or cosmological systems, in which a Deluge occupied a part, but rather that these stories were the result of experience, tradition, imagination, and nature of curiosity, being sometimes separately, but more often in combination in different ways and different degrees.

LITERATURE.—The best general book, esp. for Deluge folklore, is R. Andre, Die Flutgeschichten, Braunsw. (1860), a large and interesting collection of Deluge stories. Among the most important books referred to by Andree are H. H. Bancroft, Narrative of the F decorations of the Pacific, 1875-76; A. Humboldt, Sites des Cordillères et monuments des peuples indigènes du Nevada, Paris, 1860; W. Ellis, An account of the Pacific, 1829; W. W. Gill, Myths and Songs from the S. Pacific, London, 1876; R. S. Suss, Das Amszt der Erde, 3 vols., Leipzig, 1882-83; F. Lenormant, Les Origines de l'histoire d'apres la Bible, Paris, 1880. For a careful tabulation of Deluge stories, see M. Wernertanz, Die Flutgeschichten der Altertums und der Naturvolker, in Mitteil. der anthrop. Gesellschaft, 19th Ser., xxxi. (1901) 305-333. Translations and comments upon the Pima Deluge story are given in KIB vi. 206ff.; P. Hamps, Der keltischen Staatsherricht, Leipzig, 1851; A. H. Sayce, Higher Criticism and the Monuments, London 1884, ch. III.; C. T. Ball, Light from the Pacific, London, 1889, pp. 34-44. The most important Indian, Chinese, and Persian Deluge legends are given in SEE, esp. in M. Muller (see also references in this article). For Greek Deluge stories, apart from theories about them, the best work is H. Usener, Die Staatsherricht, Bonn, 1869.

DELUSION.—Delusion in the popular sense simply means a mistaken belief. In the technical sense, however, it means a wrong belief which is maintained despite a defect in thinking. And that is the meaning which the word should always have; for there is manifestly an important difference, for example, between a mistaken opinion which may be held because of wrong information supplied or facts withheld, and one which is maintained owing to an error in reasoning. A delusion is a belief falsely believed—that is, believed be
cause of a faulty mind. To stretch the point, an opinion, even if it is a good opinion, is delusional if it is not supported by facts. And that brings us to a distinction which is of some value—that there are beliefs which are demonstrably untrue and which are delusions, and there are beliefs which we cannot prove to be untrue, which may even be correct, yet are arrived at by a delusional process.

The delusional state of mind—the kind of thinking which is prone to delusion—very often results from some disease, of greater or less degree, acquired in adolescent or adult life, which warps the judgment by tampering with the brain’s mechanism. Upon which depends, in the development of a mind to the level of a mature judgment, an enormous mass of experience contributes, and a very great part of our thinking rests upon obvious opinions which we never take the trouble to test. It is part of the misfortune of a delusional mind that it may begin to question such standard opinions—opinions which ought to be regarded as axioms, and upon which the whole fabric of our thought is based. For example, a man may be led to believe what he has occurred, and much writing has been wasted in the exposition of it) as to whether two and two really do make four. Scepticism of this sort, when it goes far, is an exhausting mental process, and there are increasing instances in which, associated with suffering and further trouble. It is a form of illness which may be called a wasting disease of the mind, as if a man were to consume his own skeleton and have neither backbone nor leg by which to stand steady. On the other hand, that a good deal of delusion can be traced to a vice at the opposite extreme—a kind of mental indolence. A large number of people who have wits enough to think if they had energy to use them, believe things which they have no right to believe, and entertain opinions which do not harmonize with those which they have earned a right to entertain. In these cases, again, there is what we may call a sore spot in the mind—a place where friction occurs when the rational process is checked by superstition. It is always a source of mental weakness in a thoughtful man to reserve certain subjects and to neglect or refuse to discuss them. That, however, is not to say that there is no place in good thinking for a man who is convinced that his opinions will not continue in mystery. On the contrary, the essence of delusion is the being too certain, too quick to seize and hold a definite opinion. This is illustrated by a very constant quality of delusion—that it refuses to be guided by facts or modified by argument. There are some people whose minds are very hard to move; once they have formed an opinion—and such people form opinions about many things—they will not give up or even be shaken in their belief; and the reason is that it is one of their mental characteristics, due in part to brain conditions, to find changes irksome. We must also observe that there are certain beliefs which are essentially learned, and it is tempting to hold an opinion which seems fitting and good, and it is easy to retain, as convictions, some comfortable beliefs which have never been subjected to criticism; perhaps the majority of the delusions common in the insane are of this character, which people like to believe and refuse to disturb, not on grounds of reason, but on grounds of feeling.

In insane delusions—by which we mean delusions which occur in insanity, and which are due to actual brain disease—the quality of unreasonableness is very marked. If an insane person insists that he is made of glass, he will not be dissuaded by a demonstration of the fragile nature of glass and of his own resistance to fracture; he will only retort that the kind of glass of which he is made is not the ordinary breaking kind; hence the common practice with such people on the part of those who have the cure of them. And it is the best method for all delusional people, whether sane or insane; there is no use trying to argue with them; therefore change the subject, encourage reasonableness in general, and trust that in time, after a development of other parts of the mind, the ‘patient’ on coming back to the vexed question again will see it in a new light.

It need hardly be said that the subjects concerning which people are prone to express delusions are often mystifying even to the most expert thinker—electrical phenomena, space, time, the mechanism of the body. They are delusions of a sort of telepathism or hypnotism, insanity, occult religions facts, and all sorts of novelties and new inventions.

From what has been said concerning the nature of delusion, it becomes clear that the subject is an important one, both in a theory of mind and in practical affairs; and it is instructive to try to determine the extent and the province of delusion in normal thought. To do so exhaustively is impossible; but it is easy to cite a few examples which will suggest, and it has occurred, and much writing has been wasted in the exposition of it) as to whether two and two really do make four. Scepticism of this sort, when it goes far, is an exhausting mental process, and there are increasing instances in which, associated with suffering and further trouble. It is a form of illness which may be called a wasting disease of the mind, as if a man were to consume his own skeleton and have neither backbone nor leg by which to stand steady. On the other hand, that a good deal of delusion can be traced to a vice at the opposite extreme—a kind of mental indolence. A large number of people who have wits enough to think if they had energy to use them, believe things which they have no right to believe, and entertain opinions which do not harmonize with those which they have earned a right to entertain. In these cases, again, there is what we may call a sore spot in the mind—a place where friction occurs when the rational process is checked by superstition. It is always a source of mental weakness in a thoughtful man to reserve certain subjects and to neglect or refuse to discuss them. That, however, is not to say that there is no place in good thinking for a man who is convinced that his opinions will not continue in mystery. On the contrary, the essence of delusion is the being too certain, too quick to seize and hold a definite opinion. This is illustrated by a very constant quality of delusion—that it refuses to be guided by facts or modified by argument. There are some people whose minds are very hard to move; once they have formed an opinion—and such people form opinions about many things—they will not give up or even be shaken in their belief; and the reason is that it is one of their mental characteristics, due in part to brain conditions, to find changes irksome. We must also observe that there are certain beliefs which are essentially learned, and it is tempting to hold an opinion which seems fitting and good, and it is easy to retain, as convictions, some comfortable beliefs which have never been subjected to criticism; perhaps the majority of the delusions common in the insane are of this character, which people like to believe and refuse to disturb, not on grounds of reason, but on grounds of feeling.

And it is the best method for all delusional people, whether sane or insane; there is no use trying to argue with them; therefore change the subject, encourage reasonableness in general, and trust that in time, after a development of other parts of the mind, the ‘patient’ on coming back to the vexed question again will see it in a new light.
to advert to hallucination (q.v.). A hallucination, like an illusion, is a wrong sense-perception, but differs from it in that there is no outward object for the hallucination. A hallucination is a perception—most commonly of the eye or ear—which is accepted without question by the mind that accepts this fiction of the senses, there is obviously delusion. Hallucinations do not bulk largely in normal thinking; but they are frequent and important in mental disease. In such cases we may refer briefly to common forms of delusion more in the sphere of thought. Perhaps the best example of all but universal delusion is the common belief in an absolutely free will. It would be entirely logical to regard the sublunar philosophy. Suffice it to say that it is obvious that sometimes one’s will is not wholly free in the ordinary sense. Yet people invariably think and speak as if choices were always of their own making. This delusion is clearly necessary and salutary; without it both thinking and doing would come to a standstill. Another delusion, equally inevitable and necessary, is one which besets every thinking man, that is, the belief in an organic unity which works correctly. Give two men exactly the same data and let them think out a conclusion: each believes, is bound to believe, that he is thinking correctly; yet in many cases the conclusions will not be the same. If someone were somewhere, finally, we may cite the very prevalent delusion that any thought can reach a final conclusion. Nearly every one feels, and a great many people believe, that a subject can be finished, that thought can come to a conclusion. And, while it is obvious that no subject can be exhausted and no statement final, this delusion is also inevitable. These examples will suffice to show us that, to the wise mind will take note of the inevitable margin of error in its own operations and perhaps discount it, yet not be daunted by it.

DEMOCRITUS.—See Government.

DEMOCRITUS.—A Greek philosopher (c. 460–c. 350 B.C.) whose importance lies in his being the pioneer of Materialism and the mechanical explanation of the universe.

1. Life and writings.—The birthplace of Democritus was Abdera in Thrace, a flourishing colony founded by the Ionian city of Teos. He must have been a fellow-citizen, and, if the received dates are approximately correct, a younger contemporary, of Protagoras. The accounts of his life which have come down to us are open to suspicion on various grounds. They dwell on his insatiable scientific curiosity, which impelled him to spend years in foreign travel. He is said to have visited Egypt in order to learn geometry from the priests, and to have held personal intercourse with Magi and Chaldeans in Persia and Babylonia. What amount of truth there is in these tales it is hard to say. Like Pythagoras, Democritus became to later ages a legendary figure, whose real attainments are open to question.

2. Leucippus.—Democritus can hardly claim to have originated the system which he taught. There seems no valid ground for doubting the statement that Leucippus preceded him in laying the foundations of Atomism, which they both afterwards developed in common:

The metaphysics of Democritus's doctrine, as stated by Aristotle, presumed the Eleatic paradox that reality or real being is One, not Many, immutable and eternal, not transient and diverse: whence the Eleatics deduced that our world of matter had a substratum of mathematical physics, and astronomy appeared less remarkable than his supposed skill in alchemy and magic. The list of his writings that survives shows him to have been a prolific author. The grammarians

Thrasylus, in the time of Tiberius, arranged the collection in tetralogies, or sets of four—the same arrangement which he had adopted for the Dialogues of Plato. The lucidity and simplicity of Democritus's style are praised in antiquity by competent critics like Timon, Cicero, and Dionysius of Halicarnassus. He wrote in the Ionic dialect, hitherto almost exclusively employed by prose writers, although in his own lifetime it was being gradually superseded by Attic. The works treated were, to judge by their titles, chiefly Mathematics, Physics, Astronomy, Anthropology, and Ethics. We have fragments definitely stated to come from the Kámov and the Krátomis, both dealing with social and place science, and from the περὶ ἔθιμον, an ethical treatise.

To his mathematical achievements there is unimpeachable testimony. Three of the thirteen tetralogies consisted of treatises on Geometry and kindred subjects, including Optics and Astronomy. From the title of one of them, 'On irrational straight lines and solids' (περὶ ἀδελεγμένων γεωμετρίας καὶ μετρών), it may be inferred that Democritus preceded Euclid in the investigation of irrationals—a problem which the mathematicians of the 4th cent. B.C. Similarly, Archimedes in his περὶ τῶν μηχανικῶν θεωρητικῶν πρὸς ἐραστήθην ἔρευς (lately discovered at Constantinople, and published by Heiberg, Archimedes, do. 1896) gives a small part of the credit for two important theorems, namely, that the cone is one-third part of the cylinder, and the pyramid one-third part of the prism, having the same base and equal height.

Democritus was 'father of mechanical methods'; Archimedes afterwards supplied a rigorous geometrical proof. The investigation by means of mechanics involved a partial anticipation of the infinitesimal calculus (see Heath's The Thirteen Books of Euclid's Elements, Cambridge, 1908, iii. 366–368, 4, ii. 40).

It is not, however, from the meagre fragments remaining that we derive our best information as to the doctrines Democritus taught, but rather from the criticism of opponents, especially Aristotle and Theophrastus, who gave to his works the attention they deserved. Aristotle in his scientific treatises is evidently much indebted to Democritus, and, though he often dissects from his conclusions, invariably speaks of him with respect and admiration. Plato, it is true, never mentions him by name, yet from various passages in the Dialogues it is obvious that not only was he acquainted with the system of the Atomists, but that Democritus was the type and representative of all those tendencies which he himself most actively combated.

The metaphysics of Democritus's doctrine, as stated by Aristotle, presumed the Eleatic paradox that reality or real being is One, not Many, immutable and eternal, not transient and diverse: whence the Eleatics deduced that our world of matter had a substratum of mathematical physics, and astronomy appeared less remarkable than his supposed skill in alchemy and magic. The list of his writings that survives shows him to have been a prolific author. The grammarians
non-existent; the world is a continuous indivisible plenum. Leucippus, if he is to be credited with originating the Atomistic doctrine, altered this conception by opposing extension to mass as the fundamental postulate. The extended as empty, the plenum and the vacuum, or matter occupying space and space unoccupied by matter, were in his view equally real. Eleatics were right in asserting the one, but wrong in denying the other. By introducing real space and the geometrical forms of bodies as spatially determined, Leucippus destroyed the Eleatic One and reverted to pluralism. But we may still meet the subtle argument from infinite divisibility, by which Zeno of Elean had disproved the possibility of motion and of multiplicity. Since these arguments could not be refuted, nothing remained but to postulate indivisibles (έτανος, έττων) as the ultimate constituents of corporeal reality—things in space (Ar. Phys. i. 3, 187a, 1-3). The sum of existence, then, includes empty space as well as the atoms or indivisible particles of matter in space. Both matter and space are eternal, infinite and homogenous throughout. The only differences which single atoms present are differences of shape, from which must follow differences of magnitude. But fresh differences are introduced when single atoms come to contact and are changed into individual things. There then arise differences of order and position of the atoms in space; for, to use a familiar illustration, A differs from B in shape; AN is not the same as NA, the order is different, nor is the position different. Aristotle (Metaph. i. 4, 9836, 13ff.) in giving this account admits that he is substituting, for the precise ionic terms βρῶμα (fashion), διάκρισις (inter-contact), τροχή (turning), his own equivalent, διάρμα (diversity, difference of order), θέσις (position). It will be obvious, upon reflexion, that these three kinds of difference are merely spatial relations posited and presupposed by the very conception of space as extended in three dimensions.

Here seems the proper place to deal with a controversial question of great difficulty: of the three differences between atoms (shape, order, position), only one (shape) relates to single atoms. That some property of one single atom seems certain: e.g. atoms of fire are described as the smallest as well as the most mobile. But no good authority attributes to Leucippus or Democritus any utterance implying that weight was a fundamental property of the atom, although Epicurus, when he revised the original doctrine of the Atomists, expressly derived weight as well as magnitude from shape, and, as is well known, deduced from their weight the tendency of free atoms to fall. Later authorities not unnaturally confused the Atomic doctrine of Leucippus and the revised version of Epicurus. But the opinion has now gained ground that Leucippus and Democritus put forward no positive views as to weight being a fundamental property of a free or isolated atom, or as to the direction and force of the motion originally inherent in a free atom.

3. Developments of Atomism.—(a) Relativity of sensible qualities.—We have given in outline the theory which Democritus adopted and developed. When compared with the rival systems of Empedocles and Anaxagoras, it is seen to be decidedly superior in simplicity and logical coherence. These other systems, as some contents of motion; but, in the resolution proposed by the Atomists, qualitative changes in things result from quantitative changes in their constituent elements, and all proceeds uniformly by a law of natural necessity. Each of these two positions calls for further elucidation. The conception of a permanent substratum, or primary matter, to the early Greek thinkers, involved the notion of one indestructible and immutable; in other words, the sum of matter in the universe remains quantitatively and qualitatively constant amid all the change and variety of nature. Hence this result was secured by the Eleatics has already been shown. Empedocles and Anaxagoras took another way, maintaining a plurality of elements qualitatively constant. The four elements of Empedocles—earth, water, air, fire—and the deities assumed by Anaxagoras are alike in this, that they possess as fundamental and inalienable the qualities perceptible to sense. But these attempts to shape the conception of matter were attended by insuperable difficulties, so long as the sensible qualities of derivative bodies were ascribed to the original elements (whether four or an infinite number) out of which these bodies were compounded. In fact, on the theory of Anaxagoras, the distinction between original and derivative forms of matter vanished for there must be as many primary substances as there are varieties of sensible qualities.

This difficulty the Atomists solved by distinguishing the fundamental properties of matter as such from such qualities as are derived properties. Simple the distinction is the same as that made by Locke between primary and secondary qualities. The changing qualities of sensible things, such as colour, flavour, odour, temperature, cease then to be attributes of the essence of the thing itself but are expressed this by saying: 'By custom there is bitter and sweet, hot and cold, and colour; in reality nothing but atoms and void' (Sext. Adv. Math. v. 75; Diels, 55 B, 9 [1.2 585]). It would, however, be certain effect of all other similar bodies, including the human organs of taste. That effect, again, must partly depend upon the constitution of those organs, and on their permanent or temporary, common or individual, qualities.

But, whereas Protagoras emphasized the divergence of the effects under different conditions, and left out of sight its possible causes, the Atomistic theory took account of both. It allowed a relative value to the divergent perceptions, while at the same time it maintained the objective validity of that which produced them—in other words, the structure of perceptible material bodies and the essential properties of the matter out of which they were constituted. Viewed in this light, an enigmatical utterance attributed to Democritus by the Epicurean Colotes becomes perfectly intelligible. If Democritus said that an object does not possess one kind of quality more than another (τὸν πρῶτον δυνάμει τὰς τινὰς μὲν ἄλλας ἤτοι τῶν ἄλλων—Plut. de Nat. Rel. i. 1106 F; Diels, 55 B, 156 [v. 413]), we may be sure that he was speaking of the secondary qualities, and not of the properties of matter as such. The atoms have no secondary qualities. Thus colours, flavours, odours, temper
Democritus, having no objective existence per se; they, at all events when perceived, are relative to the perceiver. To one who held this view the task of science was immensely enlarged, at the same time that it became more definite. The problem was to determine precisely how the motion of atoms in the void produced the totality of changes, and the variety of changing qualities perceived by sense. No wonder that, unaided by the apparatus of modern science, the ancient philosophers, from time to time, regretted the futility of results attained, and confessed with a sigh:

'Truth lies in the deep' (Diog. Laert. ix. 72; Diels, 56 B, 117 [1.2 673]). We are, of course, not omniscient, but such things only as change with the state of our body, and of that which this impression of it (Sec. ada. Math. vii. 130; Diels, 56 B, 9 [1.2 383]).

No less important is the part played in the system by the conception of causation. A fragment of Leucippus lays down the axiom that 'nothing occurs by accident, but everything from a cause and under stress of necessity' (Act. i. 35; 4; Diels, 54 B, 2 [1.2 350]). In such unequivocal terms did he state the universal law of causation, and to this principle his successors consistently adhered. For all that, the natural explanation furnished by kinematics and mechanics; there was then no need of any supplementary hypothesis, whether of design on the one hand or of arbitrary spontaneity on the other, to which to assume a motion as an inherent attribute of matter—an ultimate fact for which no derivation was required. The motions of the atoms were as eternal as the atoms themselves, and were necessary; that is, in the ascending series of movements each followed upon and was determined by definite antecedents. Granted that atoms moving in space come into collision, the whole history of the universe becomes an application of mechanical laws. Colliding atoms suffice to produce impact, unity in groups, and break away from such unions; and thus arises all change, the succession of all events: the birth and destruction alike of particular things and of the infinite worlds are but moments in this scheme.

(b) Cosmogony.—The direct outcome of Atomic motion must be the production of our world and of all the individual things in it, for these are given in experience. As to the process by which this produces the universe, certain, as I think, is it not defective. Of one thing we are certain—that Leucippus and Democritus had no recourse to external forces, such as the attraction and repulsion which Empedocles personified as Love and Strife, or the forces of Anaxagoras. A late epistemist writes of Leucippus:

'The worlds arise when many atoms are collected together into the mighty void from the surrounding space and rush together. They come into collision, and those which are of similar shape and like form become entangled, and from their entanglement the heavenly bodies arising' (Ref. i. 12; Diels, 54 A, 10 [1.2 345]). Another account gives fuller details: 'Many atoms of manifold shapes cut off from the infinite are borne into a void, and there collecting set up a single vortex movement, in which they collide and are whirled in all directions. To this collision and the like atoms come together. And, as they become too numerous to revolve with equal velocity, those which are light, so to speak, lifted out, and fly off towards the outer void; and the rest remain together, and, becoming entangled, join their orbits with one another, and form in the first place a spherical mass. This becomes a sort of shell, including in itself atoms of all kinds; and, as these through repulsion from the centre are made to revolve as well as to be hurled outward. At last the adjacent atoms being attracted as soon as the vortex overtake them. In this way the earth was formed as the portions bore to the equator and enclosed. And, on the contrary, the outer shell grows larger by the influx of atoms from outside, and increases in density. Thus at the end of this world, portions are locked together and form a mass which was at first damp and grey, then dried as it revolved with the universal vortex, and finally took the substance of the stars' (Diog. Laert. ix. 32; Diels, 54 A, 7 [1.2 345]).

In this effort of the scientific imagination several points deserve notice. The doctrine of innumerable worlds or cosmical systems becomes clearer when we consider that matter and space are supposed to be infinite, and any place where atoms meet may become the kernel or nucleus of a world, so long as there is an unknown, and in consequence a sufficient agglomeration of matter crystallizes, so to speak, around a centre. As, moreover, the atoms are infinitely various in shape, the worlds formed from them will display the greatest diversity: each itself is infinitely vast, and some of them are absolutely alike. Again, the principle of 'like to like,' common to most of the Greek physicists, receives some sort of explanation from the assumption of a vortex. As, on the other hand, the revolutions of Anaxagoras and of Democritus, who postulated a rotary movement to effect separation of unlike and aggregation of like, Democritus can hardly be credited with original contributions to astronomy; but he welcomed the heliocentric hypothesis, and so startled his contemporaries. He held the sun to be a red-hot mass, but regarded it and also the moon as originally the nucleus of a separate system, which had been entangled in the vortex-motion of our world and subsequently ignited. The oceanic earth, when, under the influence of wind and solar heat, the smaller particles were forced out of the earth, and ran together as water into the hollows. In relative size the central earth exceeds the sun, the moon, and stars together, and are accorded considerable dimensions if Democritus accepted the Anaxagorean assumption of plains, mountains, and ravines upon the moon's face (Act. ii. 25; 9; Diels, 55 A, 90 [1.2 367]).

This cosmology is vitiated through and through by the undue importance it gives to our planet. The geocentric hypothesis still retained its sway over the philosophers, who tells us:

'There are infinite worlds, differing in size; and in some of them there is no sun and moon, in others the sun and moon are larger than in our world, or there are several suns and moons. The worlds are mutually distributed in space, so that there are more, there fewer; some are waxing, some are in their prime, some waning; coming into being in one part of the universe, ceasing to be elsewhere. The菀or of the sphere is collision with one another. And there are some worlds completely destitute of motion and of living creatures. In our world the earth was born before the stars; the moon is nearest to the earth, the sun comes next, fixed stars are furthest off. The planets themselves are not equal distances from us. A world is in its prime so long as it is able to absorb fresh matter from without' (Dippel. Ref. i. 13; Diels, 56 A, 8 [1.2 365]).

In the work of a Greek mathematician and deductive admirer (Gomperz, Griechische Denker, i. 235), we seem to be listening to a modern astronomer who has seen the moons of Jupiter, has recognized the lack of motion in that which we call the moon, and has even caught a glimpse of nebulae.

(c) Psychology.—All particular things, and amongst them the four so-called elements—earth, water, fire, air—are aggregates or atom-complexes;
and their character is determined by the shape, order, and position of their component atoms. Atmospheric air plays its part, but the most important is fire, because the most mobile, being composed of atoms exceedingly fine, smooth, and round, consists of matter of the same kind as organic bodies, the soul being a sort of fire or heat, while mental activity is identical with the motion of these fiery particles. Upon this foundation is constructed a materialistic psychology, which in turn determines the atomistic theory and ethics of Democritus. Such a doctrine invites comparison with the speculations of Heraclitus and Anaxagoras, the former of whom regarded soul as an exhalation fed by vapours from the warm earth, and which, according to him, fiery soul-atoms are taken in from outside. Owing to their great mobility, they are constantly liable to escape from the animate body, and it is this tendency is counteracted by the process of respiration, which checks the escape of imprisoned soul-atoms by a current of air, and continually renews them. In sleep or in a swoon there is less resistance: more of the fiery atoms escape and mental activity is consequently diminished; while death itself is the result of their entire dispersion in the surrounding air. Since all qualitative change in things is reduced to, and explained by, quantitative changes of atoms and atom-complexes, no exception can be made in dealing with psychical activities and the phenomena of mental life. Sensation, thought, and all other functions of the soul are in reality movements of the soul-atoms, produced in accordance with the mechanics of space, time, and pressure. This principle is rigorously carried out, and its consistent application is a characteristic feature of Atomistic psychology. It is most obvious in the theory of sensation, which Democritus in part inherited from Empedocles. Critical analysis of sense-perception and the psychology of sensation, so that all the various senses are in the last resort modes of one—viz. touch (Ar. de Sens., iv. 442a, 42). In the case of sight, hearing, and smell, the perceptible object is at a distance, Democritus, like Empedocles, supposed that particles of external things found their way into the pores of the sensory organs. It is true that, according to Empedocles, the pores or passages through which the particles travelled were never absolutely empty, for, on his view, the universe was a plexum; whereas Democritus supposed the particles thrown off move, like all atoms, through empty space; but this merely affects the general likeness between the two theories. The introduction of atoms in certain ways, through the organs, to the soul answers to the introduction of effluxes through the pores, which Empedocles maintained. The atom-complexes thus given off resemble the external objects themselves. Democritus called them ἔκλεια—an Ionic term for which Aristotle substituted εὐκλεία. What we perceive, then, is in a manner in the soul; but the soul itself must include matter which, being affected mechanically by it, that is, capable of the impact, reaction, movement, ᾠδηλον, which is the essence of perception.

The sensory organs thus become passages for incoming impressions. Take vision. There is a moist porous organ—seeing results when the image of an object is mirrored in the pupil. So much we are told on excellent authority; but how it comes about that the pupil receives, or, if it is a mirror, reflects, this image, is a point on which neither the criticisms of Aristotle and Theophrastus nor the later accounts of Aetius and Alexander Aphrodisiænus throw much light. In fact, it remains doubly difficult and even impossible to explain the emanation from the visible object or the air which has received a certain impression, comparable to that of a seal upon wax, from this emanation. The suggestion that in seeing nearer objects the former, in seeing distant objects the latter, is the prevailing agent, although ingenious, lacks all authority. Colour, the proper object of vision, as explained above, is not a primary quality of bodies, but is relative to the perceptor. The visible thing is reconstituted of colourless atom-complexes, given shape and arranged in a certain order and position, and, when it is said to have colour in virtue of its atomic structure and the movements of its atoms, this really means that it is capable of exciting a leading coloration. Democritus agreed in the main with his contemporaries. As emanations (ἐκλίψεις) from visible bodies are the stimulus of vision, so the sounds (φωναί) which stimulate the organ of hearing are particles or atom-complexes thrown off by the somant body, and conveyed by the air to the ear, and through it to the soul. The stream of atoms given off by a somant body sets the atoms of the air in motion, and, joining itself with these according to similarity of shapes and sizes, makes its way into the body. The gristle of the ear is the chief, but not the sole, entrance for such a current. In making the current affect not the ear alone, but other organs of the body, Democritus showed decided originality. He may have meant no more than that the whole body is sympathetic to the operation of hearing. Probably the purity of sound was made to depend on the similarity, the pitch and volume on the magnitude, of their constituent atoms. The process by which the sound-atoms themselves and the air borne up by them are, as it were, sorted so that similar shapes and sizes come together must be understood as purely mechanical.

If a theory of emanations from bodies at a distance be desired to explain seeing and hearing, no difficulty will be encountered in applying it to the sense of smelling. The rapid diffusion of perfume is a familiar fact, and it is easily inferred that a finer matter is given off by more dense bodies in the form of an attenuated cloud of atoms, which reaches the nostrils. Theophrastus complains of the omission to connect a distinctive quality of the various odours with the atomic
configuration of their particles; but Democritus probably regarded this connexion as easily deducible from the similar connexion between atomic configuration and distinctive quality in the kindred region of tastes, with which he dealt very fully. Thus, refer to shapes which are angular, winding, small, and thin; the sweet to shapes which are spherical and not too small; the astringent to shapes large and with many angles. The bitter is composed of shapes small, smooth, and spherical, with hooks attached to the spherical surface; the saline of large shapes, in many cases not spherical, but in some cases also not scalene, and therefore without many flexures; the pungent is small, spherical, and angular, but not scalene.

With this the theory of sensation is complete. All senses have been resolved into modes of touch, which must, therefore, have been for Democritus the primary sense, as it was for Aristotle. But of the external sense-perception there is no detailed investigation. Pressure, impact, and motion—purely physical conceptions—are employed by the Atomists without misgiving, as if they had not realized the true nature of the shaped, small, smooth, and spherical, with hooks attached to the spherical surface; the saline of large shapes, in many cases not spherical, but in some cases also not scalene, and therefore without many flexures; the pungent is small, spherical, and angular, but not scalene.

The question arises whether this ethical teaching (of which, after all, we know so little) is intimately connected with the philosophical system of Democritus. As a disciple of Epicurus, he was an atomist, and his system differs from that of the other philosophers of the School of Athens by his belief in the immortality of the soul.

The views of Democritus about religion are very imperfectly known. A fortunate accident has preserved the pages of Sextus Empiricus (Adv. Math. ix. 19; Diels, B 5, 166 [i. 415]) his curious belief in superhuman beings, and from other sources he is known to maintain the possibility of divination from dreams and from the inspection of the liver and other organs of the sacrificial victim. There is nothing in these beliefs which is not in harmony with the principles of atomistic physics, and it is very possible that Democritus was at the same time a man of wealth and position, and that the belief of Democritus, to natural causes. Dreams, whether of the ordinary or of the prophetic kind, were, on the atomistic hypothesis, due to imaginations or dæmons presented in sleep. Emanations from all possible objects flit about continually; amongst them there may be some which reflect the mental condition or even the opinions and designs of other men. Information thus obtained in dreams of this sort is a matter of inference, just as when in waking hours the condition and intentions of others are inferred from their looks. The data, however, are less trustworthy, and hence the interpretation of dreams is open to many objections. Yet it would seem, can thus be satisfactorily employed to explain what is unusual and abnormal.

As to the popular theology, it could not be accepted by any of the early Greek thinkers, least of all by Democritus. The interference of Homer's deities in the course of natural events was utterly at variance with speculations which, if they agreed in nothing else, all tended to establish the reign of law and the inevitable sequence of phenomena. It being exists but atoms moving in void, it is evident, if every event is inexorably determined by natural necessity, Divine agency and design in Nature are alike excluded. Democritus was true to this principle, and incurred the censure of Aristotle because he refused to see in the beauty and order of the universe, and more especially in the adaptation of meanstends in the structure of animals and plants, any evidence of design. It remains, however, for the philosopher to explain how the belief in gods agrees with his theory that the universe is the result of a series of causes, and to make the terror at the awe-inspiring phenomena of Nature—thunder and lightning, eclipses of the sun and moon, comets, earthquakes, and the like. In the popular belief the gods were certainly regarded as the causes of these greater phenomena, who dispense their energy over a multitude of subjects, and lay the foundation of separate universes, and hence it is probable that the temptation of an infinite universal impressed Democritus with a just sense of the pettiness of man and the futility of the ends which ordinary men pursue. But this conception is just as improbable as the popular conception of him as the 'Laughing philosopher.' It is provoked to murmurment by the incongruity of all around him. Others, taking the distinction between genuine and obscure knowledge as their text, draw a parallel between the power of dreams and the power of senses, and the similar presence of tranquility over violent and exciting pleasure. As sensations are atomic movements, so also are feelings, whether pleasant or unpleasant, and the means of obtaining a smooth, and pain a rough or violent motion. To sensations as atomic movements, as qua antecedent; it is in minute and delicate movements of the finest matter, which are imperceptible to sense, that thought and the joys of thought consist.

The atomistic doctrine which, as mentioned above, supposed an entire dispersion of soul-atoms to take place at death, left no ground for inferring the survival of individual existence. The instinctive fear of death is once or twice referred to in the fragments, and grief about death is admitted, but there is no trace of the belief in a life hereafter. With the interest of a modern man of science, Democritus appears to have investigated cases of resuscitation of persons apparently dead, and to have decided that, however violent the injury received, life could not be restored; the conditions of life had been altogether extinct (Proc. in Remp. ii. 113, 6 [Kroll]; Diels, B 3, [1. 384]). We have no evidence that he or any of his school were active in denouncing and opposing superstition. One of his works bears the title Προς τον Άδαν, but the sole reference extant to belief in a future life is the passing allusion:

Some men do not understand that a mortal nature is subject to dissolution, and, being conscious of the evil in life, painfully spend all their days in troubles and fears, inventing lies about the time after death.

4. Historical importance.—The doctrine here presented in outline was never popular in antiquity, or rather it may be said to have fallen into disrepute. This was due in part to the fact that the philosophy of Democritus and his followers are not dear to the Greeks from the time of the Sophists. Yet Aristotle, his keenest critic, praised him for his empirical method of research, and agreed that it was better to deal with things in the concrete (συγκεκριμένα) than to reason from vague abstract premises to conclusions which did not exactly fit the facts of the case (λογικός γράμματες). The great prominence given after the time of Socrates to ethics and the practical side of life was another reason why Atomism failed to attract public attention. Few names of adherents have come down to us, hardly enough to be called a school. Epicurus (q.e.) absorbed in his own system what he thought fit, leaving one fundamental doctrine—that of natural necessity—to his rivals, the Stoics. Here the genuine doctrine of Democritus vanishes, or re-appears only in those criticisms of Aristotle's which, as Lasswitz has shown, formed, to some of the keener intellects among the schoolmen, a rallying point to question or even ultimately to undermine the authority of the Stagirite. The loss of Democritus' writings was, in Bacon's opinion, the greatest which antiquity had sustained; and, after Galileo's experiments had opened a new era in physical research, this appreciation of empirical methods was triumphantly vindicated.

The chief service which Democritus rendered to

SOUL, ANCESTOR-WORSHIP, and the ‘EGYPTIAN’ section below). This comes out very clearly among the Melanesians, with whom

1 It is most important to distinguish between two kinds of soul or spirit: one that is embodied in a human body (a soul), and the disembodied spirits of men, which have become in the vulgar sense of the word ghosts. ... they [the Melanesians] themselves make a clear distinction between the two kinds, and the disembodied spirits of the dead, and other spiritual beings that have never been men at all' (Cordrington, Melanesians, Oxford, 1899, p. 1207).

The evi, or spirit, thus contrasted with the tindalo, or ghost, was defined as follows to Cordrington by a native of the Banks Islands:

"It lives, thinks, feels; it is more intelligent than a man; knows things which are secret without seeing; is supernaturally powerful with men; has no form to be seen; has no soul, because itself is like a soul; and in Omba, Lepers Island, the deftn of evi is as follows:

'2 Spirits are immortal; have bodies, but invisible; are like men, but do not eat and drink, and can be seen only by the dead' (Cordrington, 123, 179).

That, despite this assignment of a purely spiritual nature to the evi, they should often be regarded practically as in human form, and even as times dimly visible (ib. 131 f.), is by no means surprising when we remember that it is well-nigh impossible for a man at any stage of civilization to escape entirely from anthropomorphism (q.v.).

This distinction between spirits and ghosts is, however, much easier to make in theory than in practice, and the "Ts'ylor's words regarding the New Zealanders (Te A, Mew", London, 1870, p. 108)

A very similar distinction may be found in Greek between deus, daimon, and égaze, the two latter classes corresponding respectively to the Melanesian evi and tindalo (cf. Usener, Götternamen, Bonn, 1890, p. 246f.).
DEMONS AND SPIRITS

(Metaphysics)

Maori gods are so mixed up with the spirits of ancestors, whose worship entered largely into their religion, that it is difficult to distinguish one from the other—may be applied to more than one people (cf. also, for Africa, Schneider, 

But, if demons and spirits must be distinguished from ghosts or souls, an equally clear line must be drawn between them and gods—although it is true that confusion of demons and spirits with gods is frequent, exactly as demons and spirits are often confounded with souls or ghosts. There is, nevertheless, this difference between the two kinds of confusion, that, whereas demons and spirits are, strictly speaking, distinct from souls and ghosts in that the evil 'we never have, and have not the bodily nature of a man' (Codrington, 124), the difference between demons and spirits as contrasted with gods appears to be one degree rather than of kind, so that demons and spirits may be, and very often are, elevated to the rank of gods. On this point Jevons writes as follows (Intro. to the Hist. of Religion, London, 1901, pp. 175, 176):

'For the savage, supernatural beings are divided into three classes: spirits of their own kind, spirits of other tribes, and spirits which, unlike the first two classes, have never obtained a definite existence; the gods offer to sacrifice to them and in return receive protection from them. This last class, never having been taken into alliance by any clan, have never been consecrated into gods. On the one hand, the communistic tribes originally drew its god from the ranks of the immemorial spiritual beings by which primitive man was surrounded; and, on the other hand, the more splendid, unattached spirits, who were not at first taken into alliance, and so raised to the status of gods, had, until the gods were, so to speak, and make regular members of a pantheon.

The relations of demons and spirits to that phase of primitive religion properly known as Animism (q.v.) are peculiarly close, so that Tylor (1. 426) declares:

'It is habitually found that the theory of Animism divides into two great classes, forming parts of one consistent doctrine; first, concerning souls of individuals, human and animal; the second, concerning other spirits, upward to the rank of powerful deities.'

Whether, however, Animism actually furnishes, as was once fondly supposed, a complete explanation of the origin of religion, or whether it was even the earliest form of religion, seems open to grave doubts (cf. the views of various native races recorded by Schmidt, 'L'Origine de l'idée de Dieu, in Anthropos, iii. [1908]); and the theory is scarcely supported in Melanesia, where so accurate an observer as Codrington can say (p. 123):

'There does not seem to be anywhere in Melanesia a belief in a spirit which animates any natural object, a tree, waterfall, storm, or rock, so as to be to it what the soul is believed to be to the body of a man. Europeans, it is true, speak of the spirits of the sea or of the storm or of the forest; but the native idea which they represent is that ghosts haunt the sea and the forest, having power to raise storms and to strike a traveller with disease, or that supernatural beings, never men, do the same.'

It must also be borne in mind that, while spirits are very frequently believed to inhabit trees, rivers, rocks, and the like, there are many spirits to which no such specific habitat is assigned. In other cases the abode, even in a tree, river, or rock, may be but temporary—a phenomenon which is especially characteristic of dream-demons, disease-demons, and the like.

There is, furthermore, a close connexion of demons and spirits with the great type of religion known as 'fetishism,' of which may roughly be defined, with Tylor (ii. 141), as 'the doctrine of spirits embodied in, or attached to, or conveying influence through, certain material objects;' the fetish itself being a material, or even animal (e.g. serpent, beast, etc.), or natural (river, tree, etc.), object in which the spirit is believed to take up its abode, either temporarily or permanently. To quote Tylor (ii. 145) again:

'To class an object as a fetish, demands explicit statement that a spirit is considered as embodied in it or acting through it or communicating by it, or at least that the people it belongs to do habitually think of such objects; or it must be shown that the object is treated as having personal consciousness and power, is talked to, worshiped, prayed to, petted or ill-treated with reference to its past or future behavior to its votaries.'

On the other hand, the well-founded objection of Jevons, (ib., p. 109, to the use of the term 'fetish' at all, since it 'may mean one thing to one person and another to another, because it has no generally accepted scientific definition.

Nevertheless, however vague the term 'fetish' may be, it is at least clear that the idea of spirit-habitation which it conveys is closely connected, in its development, with the forms of religion associated with amulets (see CHARMS AND AMULETS, vol. iii. p. 389) and idols (see IMAGES AND IDOLS).

Generally speaking, a spirit is regarded, unless properly propitiated, as malevolent and maleficent more often than as benevolent and beneficent; in other words, to revert to the common, though lax, phraseology, demons are more numerous than spirits. At first sight this state of belief is analogous to that which gives more prominence to malignant than to benignant deities, because the benevolent gods are already good and need no propitiation, whereas the malevolent deities must appear to be well outlined by Jevons (p. 177), who finds the explanation in the fact, already noted, that the spirit is unattached to any clan or community, whereas a god is connected with one or another clan. The spirit is, therefore, placed in the position of an unattached ghost; and, as to the primitive mind, with its intense concept of kinship—who real or artificial—all that is not akin is hostile, a spirit thus unattached, and consequently unakin, would tend to be regarded as hostile and malevolent. It must be remembered, too, that the qualities ascribed to the spirits reflect in great measure the qualities of their worshipers (cf. Schneider, 108); for instance, the Kioko of the Portuguese West Africa, it is said, may have a spirit which is a kind of god, or possesses the attributes of a god, and which has its own district, which he jealously guards, being deeply alarmed by the intrusion of any neighboring spirit (ib. 150). Spirits also possess other traits still more human, such as, among the Aborigines of N. America, the belief that black-spirits take revenge on the black-spirits' names are the people who has passed among all those who have passed through the bank of the creek (Spencer-Gillen, p. 162, also p. 301).

It is comparatively seldom that the primitive mind makes a clear discrimination between good and evil spirits so far as to distinguish them by special epithets, as do the Africans of Benguela (Schneider, 153); and the very fact that the names applied by the Malays of Pasama Lobar to good spirits (debo) and to evil spirits (juh) are Skr. and Arah. (cf. also W. de Groot, Anthrop., der Naturvolker, Leipzig, 1835-70, v. i. 106) betrays the late date of this nomenclature (cf. also Tylor, ii. 319).

In the region under consideration, belief in demons and spirits is especially characteristic of Africa (as is shown at once by the fact that 'fetishism' is par excellence the type of African
spirits; see ANIMALS, vol. i, pp. 509 f., 520 f., and among the Mandingo the reverence is paid to spirits of the dead (cf. Tylor, ii, 194-200, and SETHI, Totemism). Yet here, too, as just noted, the difficulty of accurate distinction between spirits and ghosts confronts us, and the animal is more usually treated as the true animal-worship. (c) Water-spirits.—Attention has been called in art. BRIDGE to the wide-spread belief in deities and spirits believed to be resident in rivers, and the theory of the sacredness of streams is, of course, already noted; but a similar belief prevails in Melanesia (Cordinong, 186 f.)—"In the East, among the Wanika, every spring has its spirit, which obtains food for the villages. The walls, lakes, ponds, and rivers received worship as local deities. In the South, among the Kafrs, streams are regarded as personal beings, or the abodes of personal deities, as when a man crossing a river will ask leave of its spirit, or having crossed will throw in a stone; or when the dwellers by a stream will sacrifice a beast to it in time of drought, or, warned by illness in the tribe that their river is angry, will cast into it a few handfuls of millet or the entrails of a slaughtered ox."

(d) Mountains.—The African Melanite believe that the mountains are inhabited by the spirits of the dead (Brun, loc. cit.), and throughout Oceania there was an abundance of mountain- and rock-spirits, some of which must, however, be reckoned as ghosts (see Waitz-Gerland, vi, 265-267), where may be found a general survey of Nature-spirits in the Pacific islands). The extent to which mountain-spirits may be specialized is well illustrated in the list of the dread deities of the volcano Kiluan, in Hawaii, thus recorded by Ellis (i, 248 f.).

Kamehame-a ("King Moho") or "king vole", Termes-thablers ("explosion in the place of life"), Te-au-te-poe ("rain of night"), Hane-nitehi ("blindness of thunder"), Te-aft-aftana-taua ("fire-breathing child of wind")—all these belong to Makore-wawahi-awa ("fiery-eyed cance-breaker"), Hita-wawahi-lani ("fiery-eye of thunder-reader"). Hita-wawahi ("fire-eyed cloud-breaker"), Hita-tea-tea ("cloud-dwelling cloud-holder"), Hita-tea-tea ("cloud-dwelling cloud-breaker"), Hita-tea-tea ("cloud-dwelling cloud-breaker")—all these being sisters of the great goddess Pele. The prominence among the distinct good spirits are those whose special function it is to act as guardians. From this class we must, of course, exclude the "soul", such as the okena, or Eru, of the Tahi and the kereu of the Eve, which is the second soul, created together with the individual, whom it is to guard throughout his lifetime (see art. SOUL); and we must also once more essay the farther
DEMONS AND SPIRITS (Assyr.-Bab.)

LESS EASY TASK OF DISTINGUISHING GUARDIAN SPIRITS FROM GHOSTS.

To the latter class seems to belong such supernatural guardians as the Zulu ama-tonjwa, the Kamba mati, and the gubbi of the Congo (Schröder, 139 ff.; 152); Hartland, art. Bantu, vol. ii. p. 360), and the Tahitian oramataua (Waitz-Gerland, vi. 316); yet there are also cases where the guardian is believed to be a spirit in the strict sense of the term. Such apparitions are the case in the Gold and Slave Coasts (Jeffons, 165 f.; see also his whole ch. xiv.), and in Samoa and other Polynesian islands the guardian spirit was expressly declared to be a god (a'itu), not a ghost (see especially the examples of Tylor, in Anthropos, vi. 131 ff.). For further details, see art. TOTEMISM, TUTELARY GODS.

Another important class of spirits is formed by those of prophecy, their functions being to a large extent that of diviners. As examples of this kind of beings we may refer to a spirit dwelling in an enormous stone near Kita (Brun, loc. cit.), the Mataheke Makalaka (Schneider, 144), and the seal of Blanche Bay (Meier, in Anthropos, v. 96 f.; cf. also Tylor, ii. 131 f.). These spirits may simply be consulted, as at Kita, or they may enter into an individual, producing a state of ecstasy, as at Blanche Bay (see art. POSSESSION). Again, it is to the agency of such spirits that primitive man attributes a large proportion of his dreams (Tylor, i. 189-191; see also art. DREAMS), especially those of an erotic or nightmare character, while ordinary dreams of persons, animals, and things would normally be ascribed rather to the action of souls, whether of the living or of the dead. That demons and spirits are important factors in causing disease has already been noted (above, p. 567).

The presences of demons and spirits is normally revealed solely by intangible manifestations which the primitive mode of thought can explain only through the agency of such supernatural beings, as in the case of disease, dreams, many natural phenomena, and the like; but a demon or spirit is also often regarded as sufficiently tangible to leave footprints in ashes or similar substances strewn where it may be thought likely that he will come; and animals are frequently believed to be able to perceive both the dullest vistas of men or to discern (Tylor, ii. 196-198). Beneficent spirits, when present, are, of course, gladly entertained, and are even constrained to remain; but there is, naturally enough, a determined effort to get rid of unbeneficent demons. All these processes of invitation or of expulsion are part of magic (q.v.), and come to the front especially in case of disease (see art. DISEASE AND MEDICINE), or, from the more ethical and ritual side, in the ceremonies associated, for example, with the sacrifices in ethnic religions (see AZEEL AND SCAPE ANIMALS).

There is one class of beings that may perhaps be regarded as on the border-line between spirits and ghosts, though inclining rather to the latter category. These are the lusus, which are the last remains of great primitive communities, and who have conquered their present territory by invasion and subjugation of a former tribe of entirely different nature, and are convinced that this vanquished tribe still survives in spirit form. It is generally held that we have here one of the sources of the folk-belief in fairies, brownies, kobolds, dwarfs, giants, and the like (cf. Tylor, i. 335 f.; cf. pp. 21 f., 429). To this class belong the Maori pukaha or pukeko, who lived chiefly on the tops of lofty hills, while the karearea or hedges in river-holes or under cliffs, etc., where they caused such calamities as land-slips and the like (Tylor, pp. 153-157). Similar beings, explicitly called ru, or spirits, are believed to dwell in the New Hebrides and Banks Islands, where they have been seen of late in human form, smaller than the native people, darker, and with long straight hair (Coddington, 152 f.).

The cult referred to demons and spirits may be discussed very briefly, for it differs in no matter of principle from that of the gods themselves. As Jeffons (p. 175 f.) says, 'The method by which the negro of Western Africa obtains a suhman [-a tutelary deity of an individual] is an exact copy of the legitimate ritual by which a family obtains a family god.'

All over the world these private cults are modelled on, derived from, and later than, the established worship of the gods of the community. The differences between the private cult of one of these following, unattached spirits and the domestic worship of the community's gods does not lie in the external acts and rites, for these are the same in both cases, or as nearly the same as the imitator can make them. . . . The difference lies first in the division which this species of private enterprise implies and encourages between the interests of the individual and of the community, at a time when identity of interest is essential to the maintenance of social order and the ultimate equilibrium of the small community requires the devotion of every member to prevent it from falling.' (For a detailed study of the spirit-cult of a specific African tribe, see Henry, 'Le Culte des esprits chez les Bambara,' in Anthropos, iii. 702-717.)

LITERATURE.—There seems to be no special treatise on this subject, so that the statements derived from the writings of missionaries and travellers in Africa and Oceania (in the older works much care is needed in distinguishing, where such distinction is possible, between spirits and ghosts) and those works on the regions under consideration (such as those of Waitz-Gerland and Schneider, quoted above) form the general studies on Comparative Religion. Particular interest still attaches to the chapters (xi.-xvii.) on 'Animism' in Tylor, although the animistic theory is subjected to criticism by many scholars of eminence.

LOUIS H. GRAY.

DEMONS AND SPIRITS (Assyr.-Bab.),—Among the ancient Assyrians and Babylonians, as among the modern Arabs of Mesopotamia, superstition was rife, and a firm belief in all kinds of demons and jinn was current in every class of society. The apocalyptic element, when it entered Babylon, took over from the Semitic much of their folk-lore, and it is for this reason that so many of the Assyr. words for ghosts, hobgoblins, and vampires bear their Semitic origin patently; and out of this amalgamation sprang the ultimately developed system of magic in vogue during the later Assyr. and Bab. empires. This art provides the magician with all possible means for combating hostile devils and spirits.

The unseen spirits of mankind fall naturally into three classes. The simplest form—that of the disembodied spirit or ghost—is probably universal. The second—always supernatural—differs from gods by reason of its low order, and, as Robertson Smith says of the jinn, 'is merely an invasion of its class and not by a personal name, save in such cases as Namtar and the like, who are properly gods. Lastly, there is the half-human, half-supernatural creature, born of human and ghostly parentage, i.e., some awful monstrous fiend from a Succuba or Incubus. These, too, are known by a class-name and have no individual title, whereas the higher order of this element in religion, the demi-god, is always a personality.

r. Ghosts.—What may be examples of this, first in order the disembodied spirit, the ghost of a man or woman, which for some reason or other returns to this world. The Assyr. word in use is colinuma. 2

This colinuma was supposed to come back to earth for many reasons; it became hungry and restless, if its descendants ceased to pay it due rites or offer sacrifices on which it might feed; or it obtained no resting-place in the world of shades underground, if its earthly body remained unburied. The colinuma had the ideas of a person, and it was the same as those of the ancient Hebrews. When a man died, his body was duly buried in the earth, and the spirit then inhabited the under-world, the House of Darkness, the seat of the

1 Rot. Scat. 5, 1; 129, 12.
2 See Hunger, Bekehrungswesen bei den Babylonern, Leipzig, 1883.
gods Irkalla... the house from which none who enter come forth again. 1 Here its food was dust and mud, doubtless ejected by the libations and offerings which percolated through the earth from the mourners' sacrifices. The blood of animals slaughtered at the great sun-trickles through to reach the hungry spirit in the under world, and hence the belief in such sacrifices. But, if the attentions of descendants towards an ancestor should cease on earth, and the spirit thus was deprived of its food, it was then driven by stress of hunger to come back to earth to demand its due. How it succeeded in breaking loose from that bourn whence no traveller returns is difficult to understand, unless we suppose that there was a dual conception of ideas arising from a confusion between the grave as the actual habitation of the dead man, and Sheol as the place of shades; probably the primitive beliefs of savages in regard to spirits were never very definite in details, and ideas of such incorporate and invisible beings must necessarily have been indeterminate. For example, Ishtar, when she descends to the under world, threatens to break down the door of Hades:

'If open ye the door, I will shatter the arch.'

I will smite the threshold and tear down the doors,
I will raise up the dead, that they may devour the living,
And will destroy the descendants those as are after men.

Yet in another Assy. tablet the return of spirits from the grave is thus described:

'The dead men seizes (upon male) have come forth from the grave,
The evil vapours have come forth from the grave...'

The word 'vapours' or 'winds' here requires some explanation. The reference is probably to the transparency of the spirits: when the spirit of Ea-bar is raised from Hades at the instance of his friend, the Babylon hero Gilgamesh, his shade rises 'like the wind' through an opening in the earth made by the god Nergal.

Similarly, another incantation, although it confuses ghosts with demons, refers to the return of hostile spirits:

'The evil spirit, the evil demon, the evil ghost, the evil devil, from the earth have come forth; from the pure abode unto the earth they have come forth; in heaven they are unknown, on earth they are not understood.'

In the instance of the stutku-wraith of Ea-bar being raised, the Ev经过 death, the Ev comes up...

The text continues with a speech of the ghost, describing the under world to Gilgamesh:

'The man whose corpse lieth in the desert (thou and I have observed the corpse, but not the earth) the man whose spirit lieth none to care for (thou and I have often seen such an one), the dregs of the vessel, the leavings of the table, lieth. The feast passes out of the hand where his food.

The name of the necromancer in Assyrian—mušša adumma, 'raiser of the ghost'—is pertinent here, to show that the belief in such wizardry was accepted.

Besides the uncared ghost, however, there was also the spirit of the unburied body to haunt mankind. According to Assy. ideas, which tally in great measure with those of modern savages, if the bodies of the dead were not removed from the tombs, the spirit at once became restless, and was compelled to roam about the world. Ashurbanipal, giving full credence to this belief, in his invasion of Elam carries away the bones of the kings of Elam from the tombs, and causes the rites paid to them to cease, that their spirits may have no rest.

Furthermore, unless the body was buried, the spirit of the dead man never reached its resting-place in the under world; and there are long catalogues of all possible classes of ghosts to be exorcised, identified by the reason of their return to earth:

'Whether thou art a ghost that hath come from the earth... or that lieth dead in the desert, or one that lieth dead in the desert uncovered with earth... or a ghost unburiad, or a ghost that smite food, or a ghost that wilt make offerings (to it), or a ghost with none to pour libations (to it), or a ghost that hath no posterity' (or, 'that hath no name').

Or, if through some accident the man had died an untimely death and had not been given due burial, the same thing would happen:

'He that lieth in a ditch... be that no grave covered... be that lieth dead in the desert or in the ruins (or waste place), the hero whom they have slain with the sword. 2

Those who died prematurely became ghosts also, those who perished of hunger or thirst in prison, or had not 'smelt the smell of food,' dying of want, or had fallen into a river and been drowned, or had been overcome by storm in the plains, 3 those who died as virgins or bachelors of marriagable age, 4 and women who died in travail, or while their babies were yet at the breast.

This last ghost, 'in the breach of the mother dying in childbirth, is universal. Doughty relates that the Arab women explained the host of an owl as the cry of a woman seeking her lost child, she having been thrust into this bird. 

Alas, a woman who dies thus becomes a langursu, or flying demon, which the rest of the tribe prevent from wandering by putting grass beads in the mouth of the corpse, a horn set under the arm-pits, and needles in the palms of the hands. 5

The original drangur was said to be a kind of bird, according to the Like the Lillith of fabulous tradition, and is therefore similar to the ghost of which Doughty speaks.

Now, if any one of these disembodied spirits returned to earth, it was likely to attack any mortal who had been in some way connected with it on earth. To have shared food, water,235

urants, or clothes with any one in this world rendered a person 'liable to a visitation from the ghost of his dead beneficary, demanding similar attentions after death; nay, even to have eaten, drunk, anointed oneself, or dressed in company with another was reason enough for such a ghostly operation.

The living exorcist, through his priest, all these forms of ghost in the Assy. incantations, threatening them that no rites shall be paid them until they depart:

'Whatever spirit thou may be,' until they are removed,

Until thou departest from the man, the son of his god,

Thou shall have no food to eat,

Thou shall have no water to drink.'

Many of the medical tablets give elaborate prescriptions of drugs and ceremonies to be employed when a ghost seizes on a man. Others give the ritual for laying a ghost: the magician performs in these cases long formularies of all possible ghosts, thereby showing, as is necessary in this magic, that he knows the description of this spirit with which he is dealing:

'With a spirit of one's own, one is unable to visit the rites, or one slain by the sword, or one that hath died by fate of god or sin of king.'

The fear of the obsessed man is apparently that the ghost will draw him from this world to the other, for he states in his incantation:

'O ye-dead folk, whose eyes are keepe of earth, whose... pierce sobbing, why are you appear amongst my people? I will not come to Kutha the under world! Ye are a crowd of ghosts; why do ye cast your enchantments upon me?'

5 Tablet 'CO'.

6 For other and parallel instances, see Thompson, Semitic Magic, p. 10 ff.
2. Unhuman spirits.—The second kind of demons, those entirely mnhuman, for whose creation mortals are not directly responsible, existed among the Assyrians, as among other Semites, in innumerable hordes.

The first of them is the utakku. This word is used, once at least, for the wraith of the dead man returning to earth (in the incident of Ea-lami quoted above from the Gilgamesh Epic), but elsewhere it applied to something more sinister than a simple ghost, and we shall probably not be far wrong in considering it for the most part as the equivalent for a devil. It lurked in the desert, the common home of many Semitic devils, lying in wait for the unwary mortal it might have as its home in the mountains, sea, or graveyard; and evil would befall him on whom it merely cast its eye. Another, less well known, is the gailit, apparently sexless,2 and this is used as a term of abuse in classical Assyrian, referring to the hostile Babylonians by such a name.3 The ralisu is a lurking demon, which sets the hair of the body on end.4 The labarta, labasi, and abhazu are a trio frequently found together, the first-named having a wife, the last a nest of female devils. She was a female demon, the daughter of Ann,6 making her home in the mountains or cane-brakes of the marshes; and children were particularly exposed to her attacks. To guard them from her, the tables inscribed with incantations against her include an amulet to be written on a stone and hung round their necks, and the inscription runs:

**"Labarta, [daughter of] Ann," is her first name;**

The second, "Sister, of the [gods of the] desert,"

The third, "Sword that spliteth the head;"

The fourth, "Wood-sinder;"

The fifth, "God of ass;"

The sixth, "The trusted and accepted of Irina,"

The seventh, "By the great gods mayst thou be exorcised; with the kind of heaven mayst thou be exorcised."7

Of the other two of this trial the abhazu is apparently combated in the medical texts.8 Of the labasi practically nothing is known.

Two others are mentioned in the caneform tablets—the ilû and the lamesa, the former being the name for either a guardian deity or an evil spirit. As evil, it is found in an exorcism which begins: Spirit [âûû] that misineth heaven and earth, that misineth the land, that spirit, of giant strength, of giant strength and giant tread.9 In this quality the demon surrounding Semitic nations borrowed the word from Assyria—the Hebrews under the form shelihan, the Aramaeans shel-hun, but it had also its import as thus approximating to the idea of a guardian angel. With the lamesa, which appears always as a kindly spirit, it is appealed to at the end of invocations, both being frequently called upon to be present after the evil spirit has been cast out.1

In addition to the Assyrian demons specified by separate class-names, there are the ‘Seven Spirits,’ now well known from the following incantation:

1. Seven are they: Seven are they!
   In the Ocean Deep, seven are they!
   Batting in heaven, seven are they!
   Brod in the depths of the Ocean;
   Nor male nor female are they,
   But as the running wind-blust,
   No wife have they, so no son can they beget.
   Knowing neither mercy nor pity,
   They hear not prayer or supplication.
   They are as horses reared amid the hills,
   The Evil One of Ea;
   Gisitu to the gods are they.
   They stand in the highway to bend the path.

   Evil are they, evil are they!
   Seven are they, seven are they,
   Twice seven are they.12

1. From land to land they roam,
   Driving the maid from her chamber,
   Sending the young girl forth from her home,
   Expelling the son from the house of his father,
   Making the devotions from their cave,
   Driving the bird from its nest,
   Making the swallow by forth from its hole,
   Shooting both man and sheep.
   They are the evil spirits that chase the great storms,
   Bringing a blight on the land.

   They creep like a snake on their bellies,
   They make the chamber to sink like mice,
   They give tongue like a pack of hounds.9

These seven spirits are undoubtedly the same as those mentioned in Lk 11:24, and in a Syriac charm. They are exorcized under the name of seven accursed brothers. They are described in this charm as saying: ‘We go on our hands, so that we may eat flesh, and we crawl along upon our hands and we may drink blood.’ Their predilection for blood is shown in the Assyrian incantation:

1. Knowing no mercy, they rage against mankind,
   They spill their blood like rain,
   Devouring their flesh (and) sucking their veins.6

   To them eclipses were due; just as the modern Semite believes that he must frighten away the evil spirits from the darkening sun or moon, so did the ancient Assyrian ascribe such a phenomenon to spirit influence. These seven spirits are said to have attacked the moon-god; and Bel, hearing that they had done so, sent his servant Nuzku to take counsel with Ea against them:

   ‘O my minister, Nuzku!
   Take me to the Ocean Deep.
   Tell unto Ea in the Ocean Deep
   The tidings of my son Sin, the Moon-god,
   Who in heaven hath been grievously damned.’

Ea heard the message which Nuzku brought, and bit his lip in grief; he summoned his son Marduk and conveyed to him the tidings of the moon-god. [After this the tablet becomes mutilated.] When an eclipse did occur, it was held that man might be susceptible to its concomitant evils; many, indeed, are the prayers made to avert the baneful influence.

’tis in the evil of an eclipse of the moon which in such and such a month on such and such a day has taken place, in the evil of the powers, of the portents, evil and not good, which are in my palace and in that region.

3. Semi-human demons.—The third class of spirit—a golem of semi-human parentage—must be reckoned the most interesting of the three; and the evidence for belief in such a monster is well

DEMONS AND SPIRITS (Buddhist).—

Demon-worship enters largely into the daily life of Eastern peoples. In India, where Buddhism and Brahmanism, the popular religions, both Buddhism and Brahmanism, in common with that of Easterns generally, has concerned itself less with the prospects of happiness in a future life and the ‘higher truths’ of the religion than with the troubles in the present life supposed to arise from evil spirits, who everywhere infest the atmosphere and dwellings, and are regarded as the cause of all sickness and misfortune. The higher dogmatic religion and the popular arrangements for the future life are based over largely to the priests; but the people themselves take an active and anxious part in counteracting the machinations of the evil spirits, of whom they live in perpetual dread.

Buddhism from its very commencement appears to have accepted the Hindu mythology, with its evil and good spirits, as part of its theory of the universe. Sakymuni himself seems to have taken over from the Brahmanical teachers of his time, amongst other tenets, the current belief in evil gods and demons of the Indian pantheon, and he is represented in the more authentic early texts as referring to these beings as objects of fixed belief. He also accepted the current Brahmanical view that, like all other beings possessing happiness, the gods and demons were permanent and ultimately subject to death and endless re-birth, many of them having in previous existences been men. Thus, the gods and demons, being incapable of saving themselves from death and the misery of re-birth, might not be expected to save mankind; and so Buddha declared that their worship was one of the things which are not profitable and therefore unnecessary, and that he himself as ‘the Perfectly Enlightened One,’ or the Buddha, was superior to all deities. Nevertheless, as these gods and demons were still believed to be capable of doing harm as well as good to man, though they could not effect his spiritual salvation, they continued more or less to be objects of popular worship even in early Buddhism, as is seen in the most ancient monuments.

Whether Buddha himself seriously believed in these deities may be doubted. Yet the earliest texts agree in ascribing to him the statement that he descended to the abode of the beasts and demons in order to save mankind. Moreover, in the early Jātaka tales of his imaginary previous existences, he is said to have been one or other of the gods in former times, mentioning himself 4 times as Brahmā (the great Brahmā who is the creator of the world), 20 times as Sakra or Indra, 45 times as a tree-god, and once as a fairy. In his sūtras, or sermons, the god Brahmā is referred to as one of the most frequent of his auditors. And the culminating episode of Sakymuni’s career—the attainment of Buddhahood at Gaya—is universally represented as a personal struggle with Mara, the Satan of the Buddhist world, and his daughters, Desire, Unrest, and Pleasure. This event is regarded by Buddhists as an allegory, but as an actual bodily temptation and a conflict with manifested evil spirits.

The Buddhist pantheon thus had for its nucleus the polytheistic Brahmanical one, which embodied a physoiary, or worship of the personified forces of Nature. It soon, however, became much more extensive: (1) by the creation of new deities and spirits of a special Buddhist type, personifying abstract conceptions of that religion; and (2) by the wholesale incorporation of much of the contents of the aboriginal pantheons of those peoples outside India over which Buddhism extended its conquests as a ‘world-religion.’ In this way the Buddhist pantheon has become the largest in the world, especially in its array of demons and spirits.
The distinctively Buddhist demons and spirits of Indian Buddhism, while generally modelled on the type of the Brahmanical, are specifically different from these in their functions, in their appearance as pictured and sculptured, and in their outward symbols. They range from the modes of their presentation in the early Buddhist texts or figured in later Buddhist art. Some of these supernatural beings, although unknown to Brahmanical texts, may have been local Indian spirits, not necessarily Buddhist, e.g. the famous sky-ogre Hariti. In the course of the introduction of Buddhist texts, these names and figures entered later Buddhist art, and eventually were assimilated to the Brahmanical ideas with the result that they assumed the form already characteristic of the Brahmanical deities. The general rule was that the evil spirits were placed at the earliest stage of the evolution, but in the later Hindu texts they were assimilated to the Brahmanical deities.

A. Spirits—Demonolatry. The term roughly called *däkäs* (from *raksasas* and *pišchachas*, the most malignant fiends) may be illustrated by the statements that the raksasas, or ogres, were the antagonists of Buddha’s life and death. The most famous is the ogre of Kapilavastu, a mountainous region, which Buddha are said to have crossed on his way to Bodh Gaya. The ogre gave his name to the region, and later, when Mahavira and the Buddha were both born in the same month and in the same year, the Buddha’s name was taken as symbolic of the evil that the Later Buddha and his followers were to encounter. The ogre figure became a common symbol in the iconography of the Mahayana schools.

B. Human—Animal—Deity—Vegetal. This transformation of local superstition into worship is illustrated by the case of the evil god Mara, who was regarded as the demon of Mara, who was regarded as the demon of death, and who was later translated into its symbolic function in the Bhakti cult to the Buddha-god.

C. Asuras. They were the enemy of the Brahmanical gods, and throughout the early Buddhist developments, certain sections of the Buddhists kept pace with these by parallel movements which added to the Buddhist pantheon.

D. Demonolatry. Many of these beings are said to be carnivorous, and some of them to have the appearance of animals—bears, tigers, or dragons. These names and figures entered the Buddhist texts, and in later Buddhist art were assimilated to the Brahmanical deities, and eventually were assimilated to the Brahmanical deities.

Buddhism extended its range outside its original home of India, and the Brahmanical cults were greatly influenced by the introduction of Buddhist ideas. Thus, the Brahmanical deities were assimilated to the Buddhist religion, and the latter became the vehicle for the introduction of Buddhist ideas.

The introduction of Buddhism into the Indian subcontinent is a complex and multifaceted process. Buddhism spread from India to various regions, each of which developed its own unique form of Buddhism. This spread is evident in the diversity of Buddhist art and literature, which reflect the influence of indigenous cultures.

The distinctly Buddhist demons and spirits of Indian Buddhism, while generally modelled on the type of the Brahmanical, are specifically different from these in their functions, in their appearance as pictured and sculptured, and in their outward symbols. They range from the modes of their presentation in the early Buddhist texts or figured in later Buddhist art. Some of these supernatural beings, although unknown to Brahmanical texts, may have been local Indian spirits, not necessarily Buddhist, e.g. the famous sky-ogre Hariti. In the course of the introduction of Buddhist texts, these names and figures entered later Buddhist art, and eventually were assimilated to the Brahmanical ideas with the result that they assumed the form already characteristic of the Brahmanical deities. The general rule was that the evil spirits were placed at the earliest stage of the evolution, but in the later Hindu texts they were assimilated to the Brahmanical deities.

A. Spirits—Demonolatry. The term roughly called *däkäs* (from *raksasas* and *pišchachas*, the most malignant fiends) may be illustrated by the statements that the raksasas, or ogres, were the antagonists of Buddha’s life and death. The most famous is the ogre of Kapilavastu, a mountainous region, which Buddha are said to have crossed on his way to Bodh Gaya. The ogre gave his name to the region, and later, when Mahavira and the Buddha were both born in the same month and in the same year, the Buddha’s name was taken as symbolic of the evil that the Later Buddha and his followers were to encounter. The ogre figure became a common symbol in the iconography of the Mahayana schools.

B. Human—Animal—Deity—Vegetal. This transformation of local superstition into worship is illustrated by the case of the evil god Mara, who was regarded as the demon of Mara, who was regarded as the demon of death, and who was later translated into its symbolic function in the Bhakti cult to the Buddha-god.

C. Asuras. They were the enemy of the Brahmanical gods, and throughout the early Buddhist developments, certain sections of the Buddhists kept pace with these by parallel movements which added to the Buddhist pantheon.

D. Demonolatry. Many of these beings are said to be carnivorous, and some of them to have the appearance of animals—bears, tigers, or dragons. These names and figures entered the Buddhist texts, and in later Buddhist art were assimilated to the Brahmanical deities, and eventually were assimilated to the Brahmanical deities.

Buddhism extended its range outside its original home of India, and the Brahmanical cults were greatly influenced by the introduction of Buddhist ideas. Thus, the Brahmanical deities were assimilated to the Buddhist religion, and the latter became the vehicle for the introduction of Buddhist ideas.

Buddhism spread from India to various regions, each of which developed its own unique form of Buddhism. This spread is evident in the diversity of Buddhist art and literature, which reflect the influence of indigenous cultures.
imaginary), or in some wild and inaccessible tract of land, or in the depths of a great forest. Further, the lives and actions of these imaginary beings are pictured as being governed by conditions that may be summarily described as normal—conditions such as are held to prevail for human experience, but which have, none the less, occasional points of resemblance to those of ordinary existence. Moreover, the beings which are imagined as living under these abnormal conditions are thought of as endowed, with a certain degree of freedom, in the Celtic world, they are viewed as equipped with various forms of magic skill, and are thereby specially associated with those human beings who are thought to have similar endowments. Nor is it always possible to note these beings of the Celtic Other-world, (a) those which may be regarded as survivals from primitive Animism, such as the animate 'spirits' of inanimate things; (b) those which are ancient spirits of vegetation; (c) those which are specially endowed with the power of persistence, necessary as dwellers in a hypothetical Other-world; and (d) those which are exclusively regarded as the souls of departed human beings. In all parts of the Celtic world, and in all countries, there are survivals of the views as to the nature and disposition of these beings, but very often the relationship of a ghost to an individual man or woman, whose soul it was, sinks into the background of the story, and the ghost is made to act like an ordinary supernatural being. The various types, both in form and character, often merge into one another. Again, one of the characteristics of the Other-world of the Celts, which may be said to follow as a natural from these circumstances of the world, is that the beings supposed to people it do not, like those of the actual world, keep their own forms, but undergo various transformations. Hence it is that we speak of 'being turned into a cat' by between those of animal and those of human form, inasmuch as those of one form may pass into a form that is usually characteristic of the other, and, along with the change of form, there may also be a change of character of the person. Consequently a being which might appear as a demon, in the English sense of the term, at one time, might at another conceivably be represented in some other form as a benign spirit. In some degrees,则在第十一种。Celtic character\(^1\) in question may be the reflection in Celtic folk-lore of certain human types, which are not unknown in Celtic experience, where qualities that are in the highest degree laudable are combined with others that are glaringly out of harmony with them, as, for example, the combination of a highly temperate and devout life with constant un punctuality or frequent in the keeping of promises and engagements. The inhabitants of Celtic society have not, as a rule, been sorted out, during a process of severe and relentless moral drilling, into distinct and fixed ethical classes to the same extent as the inhabitants of some Teutonic lands; and the prevalent ethical conditions in Celtic society are naturally in some degree reflected even in Celtic folk-lore.

Another point, again, which deserves consideration is that, in Celtic folk-lore, the beings whose normal home is the Other-world are far from being rigidly confined to that region, but are represented as coming to view in the actual world either by day or by night—in current folk-lore preferably by night. They are regarded as appearing either singly or in groups; and those to whom they appear may see them either as solitary spectators or in company with others. They are also represented as entering into various dealings with normal human beings, and among the relations of these beings are included in fact the institution of marriage. Further, just as the beings of the Other-world may enter this world, the men of this world may enter the Other-world, whether by invitation, accidental, or invasion. Many Celtic legends, such as that of the 'Two Sons of Etain,' in Irish, and the story of Pwyll, Penddef Dyfed ('Pwyll, Prince of Dyfed'), in Welsh, are largely based upon belief in inter-relations between the two worlds of the type in question. Christian teaching and the belief of other countries have done much to assimilate the Celtic consciousness, in the matter of belief in imaginary beings, to that of advanced civilization; yet enough of the ancient psychological attitude of the native Celtic mind still exists to cause these beings to be regarded as resembling beings that have had upon the mind in ages further back.

1. Celtic demons and spirits in antiquity.—A large number of the names of the Celtic deities that are not yet understood are names which occur but once, and consequently they may be regarded as probably the names of local deities or local tutelary spirits. Sometimes the name is clearly identical with that of some known, river, or mountain, and occasionally with a name of a race of spirits. Thus, the name 'Anychus,' in Irish, is a variant of 'Ancient Celtic Deities,' in Trans. Gaelic Soc. of Inverness, 1906; in other cases, the origin of the name is unknown. About two hundred and sixty names, which occur only once on inscriptions, have come down to us from the northern part of France, and doubtless, many more. Along with these individual names there existed other groups of supernatural beings, such as (a) the Bacuchi, of whom Cassan (ibid., vol. vii. p. 262) says, 'Aliis eis corum curas quoque eperant insanum quodam tumulus videmus intusca, quos etiam Bacucaus vulpus appellatus, ut semetipsa ultra prosperitas sui corporis cognoscit num quidem in quaedam fastus gestusque autellerem, nunc vero velut ad quorum temporibus suis religiones monstrat, nunc vero ad alia se credenter adorat et quae motus quibus vera officia aut superbe aut humiliter peragatur explicant.'

(b) The Castacei or Castacii are known to us only from an inscription in the city of La震荡ensiae, 1904: 'Reburinus lupidarius Castacea vi. [i. a. n.],' and similarly (c) the Iotici or Ioticei are mentioned on an inscription at Cruviers, Dép. Gard (CIL xii. 2902: 'Ioticiis'), while (d) the Duosi are mentioned by three writers, who all appear to view them as one of the Other-world, and suggest that, at one time, the character of these beings was regarded as beneficent or neutral.

The passages relating to the Duosi are the following: August. (De civ. Dei. xvi. 51) says, 'Quaedam enim Galli nuncupant, additae habe immunitatem et partem et officia, plures taleque adherent, ut locos securi impotenti visita.' Similarly, Isidore (Or. vol. xii. 103) says, 'Filios, qui Graece Panteis, Latine Incubi appellantur. ... Seppe inimici existant, etiam mulieribus, et earum pargant consuetudines, quos daemones Galli Duosi vocant, quas additae habe pargant inimmunitates.' 69. 104: 'Quem autem vulgo Incubus vocant, quem Romanos Fornacem, et anglos seseque, Priscum (de Divin. Letherian. i. 654, ed. Sim.) says: 'Quaedam etiam inferiora a Duossis, quae est in Pantic, sacris, iluminatos inveniunt, consuetudinem portisse inventa sunt.'

(c) The Iotici are a group of male gods, whose name occurs on an inscription at Dormagen, in that region of the Rhine, in the year 1906 (CIL xii. 292: 'Ihibus Marcus et Atius vs. s.l.m.').

That were clearly regarded as beneficent. (f) The Nerviti or Nervinae were probably a tribal group
of beneficent deities or spirits that were connected with the tribe of the Nervi. In one case we have, as the name of a group of deities that were regarded as deities, the plural one nos, the most widely diffused of Divine names in the Celtic world, namely (g) Lugoves, the plural of Lugus.

This plural term occurs on the following inscriptions: (1) at Omsa, in the territory of the Celtici (CIL ii. 245): 'Lug- 

vibus sacrum (Lugina) (Luginius?) Urko collegio sutorum din- 

duo' (CIL ii. 246); (2) in the territory of the Cori- 

vii (CIL iii. 366): 'Lugoves'; (3) at Born (CIL 469): 

'Domesticis Lugibis'...

Other beneficent spirits are (k) the Di Cassetae, 

who are mentioned on the inscriptions as follows: 

(1) At Lorsch (CIL 1386): 'Caetibus pro salutu domin- 

dorum duorum (m)estrenorum'; (2) at Ober-Ringen, in Hesse-

Darmstadt (CIL 1389): 'Caetibus voto fecerunt' Macce-

dus Fausstinius' (g) (regem) (Cernent); (3) at Landstuhl, Pfalz (CIL 

1779): 'Dias ete Caetibus Matutinus v.s.l.m.'; (4) at Neustadt, on the 

Hart: 'Di Casselis Cassetae'...

Another group of beings that corresponded to the type in question was that of (i) the Di Silvane, 

who are mentioned on the inscriptions as follows: 

(1) At Lorsch (CIL 1386): 'Caetibus pro salutu domin-

dorum duorum (m)estrenorum'; (2) at Ober-Ringen, in Hesse-

Darmstadt (CIL 1389): 'Caetibus voto fecerunt' Macce-

dus Fausstinius' (g) (regem) (Cernent); (3) at Landstuhl, Pfalz (CIL 

1779): 'Dias ete Caetibus Matutinus v.s.l.m.'; (4) at Neustadt, on the 

Hart: 'Di Casselis Cassetae'...

In Irish legend there are many allusions to the side (as, for instance, in Sorgoic Cnotaiala ('The Sick-bed of Ceolmain') 

(Windisch, Irischen Sagen, p. 366; Legten, 'Die glyce 

Tochnaene Eratina ('The Betrothal of Elain') ib. pp. 139, 141). 

In one passage of the latter a fairy domicile (sid) is definitely asso-

ciated with a malevolent spirit ('diaforon') and we have 

the following description of the Irish counterpart of the Welsh Lwyd, son of Kilcoed, a famous magician, twice mentioned under the name 

Lligwythron in Owain ap Cadfan, a Welsh 13th cent. poet, Daludy ah Gwilyn. In the Book of 

Armagh, the side are called 'de tenini,' and they appear to have been regarded as malevolent spirits, such as Mag Moll. In the latter case, one of the means of journeying to them was in a ship of glass. Some of the fairies were regarded as male ('feraid') and others as female 

('ban-sidhe'), the latter in the latter case, with the same meaning as in the Irish word for fairy, 'sidhe.'

In Irish legend there was one native term for a supernatural being, the female spirit of malignity, namely, sidhearn (Sidhchar na hUlidhe, 113° 41, 114° 12, 115° 32). This word is undoubtedly the phonetic equivalent of the Welsh hweir— a term no longer used except in the Welsh original, to describe the female spirit of malignity, a name which originally must have meant 'the white phantom.' This appellation would suggest that hweir did not originally in Welsh the connotative meaning of malignity, which sidhearn seems to have 

acquired in Irish.

In medieval Welsh the name hwd in the sense of 'fairy' is applied in the Black Book of Carmarthen (Poem xxxiii, l. 17) to 

Gwyn, son of Nudd (Gwich a rh. Fred; Nudd a rh. Nudd); and his mistress is said to be Creiddill, the daughter of Lludd 

(the Welsh original of Geoffrey of Monmouth's Cordula, daughter of King) in the story of Rhithauch and Gwyrmor by 

Gwyn is represented as fighting every first of May until the Day of Judgment (Caw, iy. 68); in the poem of Dafydd ab Gwilym, which reflects the current Welsh folk-lore of the 14th cent., Gwyn is regarded as in some sense the leader of the 'faires,' since in the popular 

footh Tofhith y Gwyn ('the family of Gwyn') in two passages. The Welsh picture of fairy-land given by the poet by no means represents it as a 'land of eternal youth,' since among its 

dwelling are mentioned gwarchad ('hags'), nor can it be said that the picture given of its inhabitants suggests its beneficent 

character. The expression y Tfojtht y Gwyn ('the fair family') for the fairies is found in the 13th cent. ymgyrchiad ('shadow'), for instance, was used for the soul. The more usual Welsh word, however, for the soul is 'ennid, a derivative of the root aen, to breathe.'

In medieval Welsh this term is constantly used in the sense of 'soul', but the meaning 'soul' is of frequent appearance, traces, too (Rhys, Celtic Folk-lore, iii. 601-604), of a belief that the soul might take on the bodily form of some animal, such as a lizard. In the Middle Ages, Chaucer introduced, both into Gothic and into Bythonic speech, certain terms of Greek and Latin origin, such as Ir. diabol, Welsh diawf (in a later form diawef), from daemona; together with such forms as Ir. demh, Welsh c'hafroot, the latter being derived from Lat. contrarius through carntilus (where l has been substituted for r by 

The spiror (older spirit), 'spirit,' and the Welsh ysgodri of the same meaning, both come from Lat. spiritus. In other terms of native origin for the supernatural beings of folk-lore, such as Ir. side and acs side, 'the fairies,' whence the term ban side ('banshe'), which means literally 'woman-fairy.'

The oldest term used in medieval Welsh for a fairy is hwd, together with its derivative hwdol, in the same sense, for a male fairy and hudoles for a female fairy. Hudoles also means 'magic,' and this use of the same term for both fairy-land and magic is well illustrated in the popular picture of the Celtic mind, of magic with the Other-world.
DEMONS AND SPIRITS (Celtic)

So beings from Annwn might make raids upon this world. Such a raid appears in medieval Welsh to have been called gormes (lit., 'an over-flow,' 'then oppression'). Certain raids of this kind are suggested in various parts of the Book of Taliesin, for example, in the song carrying away of the infant Pryderi, in the raid upon Tywyn's foals, in the narrative of Manawyddan and the mice, and in the story of Llud and Lleuad, as well as in the stealing of Merinedd, son of Modron, from his mother. In these raids certain fabulous packs of hounds took part, which are sometimes called Cenn Annwn ("the dogs of Annwn"), and, by Dafydd ab Gwilym, Gwnn gormes (Poem xliv.). There appears to be no epithet used of them among the supernatural beings of Irish and Welsh medieval legend, but in Breton stories the werewolf (bislaverre) seems to have played a part even in medieval times.

3. Demons and spirits in Celtic lands to-day.—In the remoter parts of Ireland, Scotland, Wales, and Brittany there is still a considerable survival of the older psychological attitude, especially in the sphere of the emotions, towards the supernatural beings and pictures of the world. The teaching of Christianity, however, by Roman Catholics, Anglicans, Presbyterians, or other religious denominations, for example, as to the lot of the dead, runs entirely counter to the belief in ghosts that are able to wander about during the living; nevertheless, the fear of ghosts is a very real terror to many people, after nightfall, in Celtic as in other countries. So far as the period of daylight is concerned, the older frame of mind may still be seen. And, indeed, even the inhabitants of the least progressive Celtic regions, be said to have been completely modified through education and experience. With the advent of darkness, however, this older frame of mind tends to assert itself in consciousness—not, perhaps, so as to produce beliefs which their holder would regard as justifiable, but to a sufficient extent to perturb the emotions, especially in the presence of some uncanny or weird-looking object. In Ireland and the more secluded parts of the Highlands and Islands, there has been, on the whole, less of a breach of continuity with medieval times than in Wales; and the same may be said of Brittany. Hence the beliefs of the Middle Ages, as they stand in the livid and morbid type of the 'Fairies' still, as in the Middle Ages, that are the chief supernatural beings of the type here considered; but, side by side with them, there subsist, in Ireland as elsewhere, the belief in the re-appearance of the ghosts of the departed, and also in the appearance of fabulous creatures, such as the Pucu, the Loprauch, the Water-bull, the Water-horse, and the like (see T. Crofton Croker, Fairy Legends). As to Gaelic Scotland, there is an abundant material for the study of the Celtic mind in Campbell's Tales of the W. Highlands.

These tales describe such beings as the ghlasan (the Marx glashlon), which was a bairne sprite that rebelled against clothing, and, in this respect, resembled the grampus, a household spirit from the Welsh lands, which sometimes describes an underground world of giants, and an earlier tale (no. 103) similarly points to a belief in gigantic beings. Another tale (no. 52) speaks of a monstrous being called Ethid MacColluin, who had one hand growing out of his chest, one leg out of his abdomen, and one eye out of the front of his face. Other tales describe fairies, sleeping giants, flying ladies, mermaids, brownies, and the like, while not a few of the stories speak of such beings as the Water-horse or the Water-bull, or other beings transformed into a man, the Water-bull, the Water-bird called the Looitie (said to be a monster of Argyllshire), dragons (thought to haunt Highland lochs), and the Water-spirit called the Phonya. The Water-bull is generally
DEMONS AND SPIRITS (Chineses)

There are several stories of demons appearing as goats and dogs. The Welsh demon Ywer ("the wolf") and the Irish píc géit ("the black goat") have been known to take on the form of a wolf or a dog. In the Welsh language, the demon is often described as a malevolent creature that preys on sheep and cattle.

In the folklore of the British Isles, the demon is often depicted as a shape-shifter, able to take on the form of any creature it desires. This ability is often used to confuse and terrify the people, making them feel uncertain and vulnerable.

The demon is also known to be associated with the supernatural, often appearing in the form of a spectral figure or a ghostly presence. In some tales, the demon is said to be able to communicate with the dead, and to take on the form of a ghostly figure in order to warn the living of danger.

In the folklore of the British Isles, the demon is often depicted as a malevolent creature that seeks to harm the living. It is often portrayed as a shape-shifter, able to take on the form of any creature it desires, and to use this ability to confuse and terrify the people. The demon is also known to be associated with the supernatural, often appearing in the form of a spectral figure or a ghostly presence. In some tales, the demon is said to be able to communicate with the dead, and to take on the form of a ghostly figure in order to warn the living of danger.
diffused religious conceptions. While it is possible that Chinese religion started from a pure mono-thelism, we have no record of any such time. In the most ancient books the worship of Shang-ti is accompanied by the worship of natural objects, of the spirits of ancestors, and of the worthies of former times. All these elements have been continued and developed.

In the popular religion of to-day, the worship of spirits immanent in, or in some vaguely conceived way connected with, natural objects, takes a much larger place than can possibly be taken by the worship of Shang-ti, confined as this is to the Emperors. This worship is, however, far more strictly impersonal, indefinite. In virtue of the spiritual efficacy connected with it, anything—rock, tree, living creature—may become an object of worship. No extraordinary feature in the object is necessary to call forth this religious observance—a whole town has been known to go after a common viper found in a bundle of firewood. Among the commonest signs of the recognition of such spiritual powers bound up with various objects is the practice of putting flat stones or figurines of ivories set on the roof of a house or in the branches of trees, and the small pillars which are erected alongside graves and inscribed to the spirit of the soil, in acknowledgment of his property in the site of the grave. The power of such a symbol is due to the belief in a local genius, on any interference with what is supposed to be under his control. It is a moot question whether the spirit of the soil is one only, identified with Hou-Tu, one of the ministers of Hsian Ti (2099 B.C.), or whether there are not, rather, at least in the popular mind, many local genii.

Alongside of such spirits, and at the lower end of the scale of spirits hardly to be distinguished from the genuine spirits, you kuei, ching ('fairies', 'elves', 'goblins', 'spirits'), of various kinds, harmless, or, more usually, mischievous and malevolent. Every locality has its own traditions with regard to such beings. In Swatow the morning watch is not sounded because of a 'kelpie' (yu-ching) in the harbour, which, on hearing the watch-drum was wont to carry off any early-stirring inhabitant. Of living creatures it is said that a serpent is worshipped, and in the north the fox, are those round belief in supernatural powers has mostly gathered. In general it is said that birds and animals when they grow old become spirits (ching). The fox, for instance, is said to grow in size with the increase of years, and possesses different powers at fifty years of age or a hundred or a thousand. Even of trees it is said that by long absorption of the subtle essences of heaven and earth they become possessed of supernatural qualities.

Besides these supernatural beings, and wholly impersonal, are the maleficient influences called sha. They move, like physical forces, in straight lines, and can bewarded off in various ways, as by earthenware figures of lions being set on the roof of a house or in other positions of vantage, or by a stone or tile placed at a road-end and inscribed with the 'Eight Diagrams' (see Cosmosomy, etc. (Chin.), or with words intimating that, as a stone from the Thirteen Provinces is unprovided with qi, the same is true of this one').

According to Chinese etymology, the word kuei, 'demons,' is connected with a word of similar sound meaning 'to return,' and a kuei is accordingly defined as the spirit of a man which has returned from this visible world to the world invisible. 'All of a man, dead a kuei is a proverbial saying. In such use of the word kuei we must remember that nothing derogatory is implied, and that 'departed spirit' rather than 'demon' is the proper translation. There was a possibility of making consistent with themselves the popular various Chinese views of the spiritual nature of man and his state after death; to determine, e.g., the relation of the kuei to the three souls each man possesses, according to Taoist teaching, or, according to another theory, to the twofold soul which dissolves at death into its component parts. In any case, existence in some fashion after death is assumed. Whether much existence is necessarily or in all cases immortal, it is not easy to determine. There may exist an eternity of punishment; but, on the other hand, there is a word chi, which means the death of a kuei. Kuei are to be honoured in the appropriate way; and, as other spirits may be expected from them, fear has a large place in Chinese worship. Each family worships the names of its own ancestors. Names otherwise unprovided for are placated by public rites, particularly by the sacrifice of an offering of the kuei feast, on the 15th of the 7th month. All kuei are more or less objects of dread; but in particular the kuei of a wronged person may be expected to seek revenge ('the wronged ghost impedes the murderer's steps'), and the kuei of a malicious person is feared. In the popular representation, the other world is for the Chinese of all at least a replica of the Chinese Empire with similar social gradations, however, allotted otherwise than in this world; and very common among Chinese is the sayer's assurance that the meritorious deceased has been appointed by Yu Ti a mandarin of such and such a grade in the shadowy double of this or that Chinese city. Moreover, however difficult to prove, it is possible that a work in consoling the spirit in the world of the dead. The doctrine of transmigration holds a large place in a Chinaman's theory of the relation between the unseen world and this.

While a kuei is, strictly speaking, a departed spirit, it is hardly to be supposed that all the innumerable kuei imagined to be active in this world or as retributive executors in the infernal regions are of this origin. Perhaps what we might distinguish as ghosts and demons are alike called kuei. The Chinese generally are obsessed by the fear of kuei. These are supposed to abound everywhere, and to be specially active at night. Any un-toward happening or uncanny sound—particularly any sound that is thin and shrill—is ascribed to them. Many serious cases are rectified by kuei because of misfortunes befalling their inmates. There are appropriate ceremonies for the placating of offended kuei, who in such cases are addressed in friendly manner (e.g. Shing yen, 'Sagey person'); and they can also be controlled by charms of Taoist origin.

The spiritual world is peopled from the human race not only by 'departed spirits' but by inhabitants of another grade called kuei. This name is applied not only to the fairy-like beings mentioned above, but also to those of mankind who 'by a process of physical or mental refinement' have raised themselves to the rank of immortals.

Finally, as in ancient times sages and worthies were worshipped as tutelary spirits (e.g. Hou-Tu), so has it been in later times. The gods (shen) of to-day are the men of ancient times' is a common proverb. Thus the Chinese pantheon has been filled with canonical names. The Taoist texts (A.D. 219), canonized as Kuan Ti, god of war; and the magician Chang, canonized as Yu Ti, who is practically the chief god of the Taoist religion; and not only with such, but also with an ever-increasing number of gods of all kinds and grades.

The pope does not canonize on so large a scale as the Emperor of China ('Legge, Ed. of Chinese, p. 184). These are the idols of China whose temples and images are everywhere to be seen.

While the multiplication of deities and the pervasive dread of demons are mainly connected with
DEMONS AND SPIRITS (Christian).

1. IN THE EARLY CHURCH TO COUNCIL OF CHALCEDON (A.D. 451).—It is stated by Origen (de Principiis, procem.) that the Primitive Church did not lay down any fixed doctrine concerning the nature of the angels. The Church, however, he tells us, asserts their existence and defines the nature of their service as ministers of God for the purpose of promoting the salvation of men (ib.). On the other hand, Origen is not equally reticent. Some information concerning good and evil spirits may be gained even from the earliest Christian writers.

1. Apostolic Fathers.—(a) Clement of Rome, exhorting those to whom he writes to zeal and well-doing, points his readers to the example of the whole host of God's angels who stand by, ministering to His will (Ep. i. ad Cor. xxxiv. 5).—(b) In Ignatius we find the statement that the heavenly beings (σατανα), including the δαίμον των αγγέλων, will receive judgment if they do not stand in Christ (Spanr. 6). There is a further reference in Trench, 5, where Ignatius claims to be able to understand the heavenly things, and the dispositions of the angels. In the Letter of the Smyrnaeans on the Martyrdom of Polycarp, it is stated that the martyrs 'gazed with the eyes of their heart on the good things reserved for them, but not in Christ (Spanr. 6). It has also been suggested that the martyrs 'gazed with the eyes of their heart on the good things reserved for them, but not in Christ (Spanr. 6). It has also been suggested that the martyrs 'gazed with the eyes of their heart on the good things reserved for them, but not in Christ (Spanr. 6). It has also been suggested that the martyrs 'gazed with the eyes of their heart on the good things reserved for them, but not in Christ (Spanr. 6). It has also been suggested that the martyrs 'gazed with the eyes of their heart on the good things reserved for them, but not in Christ (Spanr. 6). It has also been suggested that the martyrs 'gazed with the eyes of their heart on the good things reserved for them, but not in Christ (Spanr. 6). It is also said in the same chapter

1 It should be noted that in the longer recension the latter passage is amplified in a manner consistent with the more developed doctrine of Ignatius (e.g., Const. vii. 1). While the former passage is omitted as possibly inconsistent with his doctrine.

2. The Apologists.—We find a number of passages in the writings of Justin, Tatian, Athenagoras, and Trenscens bearing on the subject.

(a) Justin.—The most important of these is the well-known passage in 1 Apol. 19, where, in refuting the charge of atheism, Justin says: 'But both Him (i.e. the Father) and the Son who came forth from Him and taught the men and the good angels, who follow and are made like unto Him, and the propitious Spirit we worship and adore.'

The insertion of the angels among the Persons of the Trinity is unique, and is possibly to be explained by the fact that we frequently find 'angels' as a title of the Son (Timon, Hist. des dogmes, i. 243). With this passage should be compared the Dial. c. Tryph. 128, in which the angels are asserted and their relation to the Logos discussed. In 2 Apol. § 3, Justin defines the functions of the angels, stating that 'God commissioned the care of men and all things under heaven to the angels whom He set over these.' He then accounts for the existence of evil in the world as the result of the transgression of angels, who had transgressed the Divine appointment (rāθiēς, and by sinial intercourse with women produced offspring who were regarded as belonging to the human race by themselves and made among men all manner of wickedness.' He proceeds to identify the demons who were the offspring of the fallen angels with the heathen gods. Justin is the earliest author to whom we can assign the passage quoted above, αὐθεντεῖται καὶ προκαταλαμβάνεται. To the passages already quoted may be added Dial. c. Tryph. § 88, in which the free will of the angels is asserted, and § 57, where it is said that, of the three men who appeared to Abraham, one was the Logos and the other two angels.

(b) Tatian denies the material nature of demons, asserting that their constitution (σαταναί) is spiritual, as that of fire or air. He also states that their nature was never made clear (Ort. 15, cf. 12. 20). The ministry of angels in the government of the universe is also alluded to by the writer of the Ep. to Diognetus, viii.

(c) Athenagoras defines by 'angels' the angels as being that of exercising the providence of God over things ordered and created by Him. God has the general providence of the whole; particular parts are assigned to angels (Apol. 24). In the same chapter he writes of certain of the angels, and identifies the giants mentioned by the Greek poets with their illicit offspring. He speaks of one angel in particular (Satyan) who is hostile to God, and discusses the difficulty of this belief. He states that Satan is
a created being like other angels, and is opposed to the good that is in God. In another passage he asserts that it is the demons who invite men to worship images, being eager for the blood of sacrifice, these images having no particular relation to the persons they represent (ib. 20; see further reference to the work of the angels at the end of ch. 10).

(d) The writings of Irenæus contain a large number of passages dealing with the angelology of the Gnostics, which he refutes. He is himself of opinion that the angels are beings divine (ad Th. ii. 31). He affirms in opposition to the Gnostics, that the Christian does (facit) nothing by their invocation (ii. 49. 3). He alludes to the fall of the angels, and refers to the dominations of angels (ad Th. iii. 21). But in other passages of power (iii. 8. 2; cf. also v. 21, § 3, and 21, §§ 3, 4).

3. Greek Fathers.—The doctrine of good and evil spirits was greatly developed by the Alexandrian writers Clement and Origen. In the writings of these two, and of the other Alexandrian Fathers, numerous references are to be found to the functions of angels and demons. The notion of the guardian angel, already noted in Hermas, is here especially developed. Origen agrees to each name a number of angels, who influence the soul and the conduct of men, even when they are not called upon to intercede for them. These angels are a part of the 'angels of the churches' of the Apocalypse; he boldly (auxductor) refers to the angels of churches as the invisible bishops (per singulas ecclesias ibi sunt episcopi, alius visibilis, alius invisibilis; ille nunquam; Sanct. ii. 13). In other passages he lays stress on their work of intercession for men (cf. Strom. v. 14, vii. 12, and iv. 18, vii. 13). Under the influence of Neo-Platonic ideas, the Alexandrian Fathers assert that there is a double activity in the higher dealing of angels, the one, lower with the material order; and that in both of these the angels of God are employed. Origen clearly expresses the view that the world has need of angels, which over against the brute world, plants, and animals, elementa (hom. xiv. 2 in Num.).

The following passages in Origen may also be consulted: de Princip. i. 3, 8, n. 6, c. Eus. iv. 29, v. 4, 5, 18, 28, viii. 31, 23, 34, de Orat. i. 38, 21, in Levit. hom. ii. 9, ex Num. hom. x. 4, xx. 3, in Esth. hom. xiii. 1, in Ps. xxxvii. hom. i. 7, in Luc. hom. xx. 6, in 1 Cor. hom. xii. 7, in Ps. hom. xiv. 2, in 1 Cor. hom. v. 5, in Levit. hom. iii. 6, in Hesd. hom. ii. 2, in Hier. hom. vii. 14, in Ps. hom. xxvii. 3, in Ps. hom. xiii. 7.

4. Later Greek writers.—There are a number of references in the Cappadocian Fathers to the nature and functions of angels. Concerning their nature there appears to have been some difference of opinion. (a) Basil held that their substance (sōkia) was ethereal spirit or immaterial fire (de Spirit. Sanct. § 38).—(b) Gregory Nazianzen is doubtful (Orat. xxxv. 16).—(c) Gregory of Nyssa declares them to be entirely spiritual (in Orat. Dom. hom. iv. 32).—(d) Many references are contained in the writings of Gregory of Nyssa. He asserts that their nature is superior to ours, but cannot be accurately comprehended by us (de incomprehensibili Dei Nature, v. 3). They are possessed of an incorporeal nature (de universis urbis), and he account the earlier interpretation of Gn 6 in (Gen. hom. xxii. 2). According to Basil, the sanctity of the angels is due to the activity of the Holy Spirit (op. cit., § 38). They are less liable to sin than we are (heteroepo), and they are able to reform sinners. This is proved by the fall of Lucifer, whose sin was envy and pride. These Fathers assign guardian angels to individuals, churches, and nations. Basil is, however, of opinion that the guardian angels are driven (αναλωται) from bees and a bad odour doves' (hom. in Ps. xxxiii. 5). Gregory of Nyssa is the only Greek Father who follows Hermas in the view that every man who has both a good and a bad angel as his constant companion (de Dict. ii. 17). But in other passages of power (iii. 8. 2; cf. also v. 21, § 3, and 21, §§ 3, 4).

5. Latin Fathers.—(a) We find in Tertullian a number of references to spirits, good and evil. Like Origen, he connects the ministry of angels with the sacrament of baptism. According to this writer, the baptismal water receives its healing properties from an angel (an angelus Bapt. 22). He adds, moreover, the actual purification effected in baptism is due to a spirit who is described as 'angels baptim abusive,' who prepares the way for the Holy Spirit (non quod in aquis spiritum sanctum sanctificat). This reference is a later allusion to the fall of the angels, corrupting their own free will, from whom sprung the race of the demons. Of the former, Satan is the chief. They are the source of diseases and all disasters. They delude men into evil things, and are the cause of the disorder in the universe (cf. Strom. v. 14, vii. 12, and iv. 18, vii. 13).

(b) The concern of the angels in human affairs is referred to by Firmilian in a letter to Cyprian (Ep. lxx. inter Cyprian. 1; cf. Euseb. HE v. 28).—(c) The doctrine of Lactantius is peculiar. Before the creation of the world, God produced a spirit like to Himself (the Logos); then He made another being in whom the disposition of the Divine origin did not remain. This being, of his own will, was infected with evil, and acquired for himself another name. He is called by the Greeks ἀδάμας, but we call him eriminator, because he reports to God the faults to which he
Demons and Spirits (Christian)

entices us' (cf. the Jewish apocrypha, Sap. 7:20, 'the accuser'; Lactant., Div. Inst. ii. 9). In this passage of Lactantius insert a passage which is regarded by the best authorities as spurious, and in which the origin of the term of the "dei" angels is treated in a Manichea fashion. Here it is stated that, before the creation of the world, God made two spirits, them only, as the source of the world, made two spirits, them with the right hand of God, the other, as it were, His left hand, and eternally opposed to each other. These two spirits are said to be the angels of the demi-urge, who, divided into two classes, are described in ii. 16, and in the same passage later, in Deor., i. 29, ii. 8; and, on the devil, ii. 29, vii. 24-29.

(d) Later Latin Fathers, such as Ambrose and Jerome, were of opinion that the demi-urge angels were created for the material world (cf. Ambrose, de Incarnat. Dom. Sacr. 16; Jerome, in Ep. ad Tit. 1). Some difference of opinion exists among them about the interpretation of Gn 6, 5. Jerome, appearing to regard the spirits as possessed bodies (cf. in Esch. 238v), Ambrose, on the other hand, agrees with Hilary in the statement that they are 'spirituales et incorporeae' (cf. Ambrose, in Lec. vii. 120; Hilary, in Ps. cxxxxvii.). The sin of Satan, according to Jerome and Ambrose, was pride.

The views of the Latin Fathers with regard to guardian angels are similar to those which we have already encountered in the writings of the Greek Fathers. Thus, for instance, we find in this subject where it is stated of nations, churches, and communities that each possesses its guardian angel.

See esp. Jerome in his Comm. on Ec. xi. 21, 22, and in Dei, viii. 14. Jerome is among the earliest of Latin writers to call attention to the diversity in the orders of spirits, comparing the angelic hierarchy with the organization of the officials of the Empire (esp. ad loc. Iuv. vi. 28, adv. Ref. ii. 23). Ambrose has a passage which bears upon the cult of the angels, whom he appears to place on a level with the martyrs, and whose invocation he warmly recommends (cf. in Eccl. xxi. 55).—(e) Already in Eusebius a distinction is found between the worship of (αισθήτορα) due to God alone and the honour (τρέφεται) paid to the angels (Prop. Ec. vii. 15; cf. also Dei Ec. iii. 3, Prop. Ec. xiii. 13).—(f) Finally, for this period of Augustine, we must consult, especially, the of Civ. Dei, in which the angels play no small part. They form the heavenly City of God, and this part of the Holy City assists that other part here below: 'hanc [sic. Civitatem Dei] angelorum sancti annuntiaverunt qui ad se societatem invitaverunt cives suos in illa esse voluerunt' (xii. 25). The angels minister alike to Christ, the Divine Head of the mystical Body, who is in heaven, and to the members of the Body who are on earth. Thus it is in the Church that the angels ascend and descend according to the words of Scripture. ‘This is what happens in the Church: the angels of God ascend and descend upon the Son of Man because the Son of Man to whom they ascend in heart is above, namely, the Head, and below is the Son of Man, namely, the Body. His members, the Head ascends to the Head, they descend to the members' (Enarr. in Ps. xlvii. 20).

Augustine states that the angels are spirits of an incorporeal substance, 'invisible, immaterial, rational spirits' (cf. ps.-August. de Cognit. vera vitae 6). The designation 'angel' refers to the office, not to the nature, of these spirits (Enarr. in Ps. cxxi. sermon. i. § 13). Angels received at their creation, from the Holy Spirit, a twofold gift, and it is possible that, in the case of those who did not fall, they received also the assurance of perseverance (de Civ. Dei, xii. 9. 2; xi. 13). Augustine refuses to identify the 'sons of God' (Gen 6) with the angels (ib. xx. 23). The sin of the fallen angels was pride. The fall of Satan occurred at the very beginning of his existence, and the good angels have enjoyed the vision of the Word from the moment of their creation (de Gen. ad Lit. ii. 17, xi. 21, 26, 30). The office of the evil angels is to deceive men and to bring them to perdition (in Ioan. tract. cxxv. 7). They occupy themselves with the practice of magic (c. Acc. i. 19, 20). But the power of these evil spirits is limited; God employs them for the chastisement of the wicked, for the punishment of these good for their faults, or even for the purpose of testing men (de Trin. iii. 21, ad loc. de Gen. ad Lit., xii. 23). Augustine asserts that the good angels announce to us the will of God, offer to Him our prayers, watch over us, love us, and help us (de Civ. Dei, vii. 30, x. 23; Ex. cxxix. 69). They are even entrusted with the care of creation (cf. Gen. i. 26).—(g) Augustine deems it familiar any cultus of the angels: 'honoramus eos caritate non servitute' (de Vera Relig. lv. 110). They do not desire our worship, but rather that with them we should worship their God and our own. With regard to the order of the angelic hierarchy and the signification of the titles attributed to the angels, Augustine declares himself to be entirely ignorant, and appears to discourage speculation on this subject (Enarr. 15; ad Oros. 14). See also Augustine, de Civ. Dei, xii. 378-376; Kirsch, op. cit. pt. iii. ch. 5.

Conclusion.—The evidence of the passages cited above may be summarized as follows. The earlier Fathers of the Church, acquiescing with the Jewish apocalyptic literature, all affirm or imply the existence of spirits good and evil. At a very early period, as we can see from the writings of Hermas, the doctrine of good and evil angels was already adopted, and we may trace a steady development of this doctrine in the writings of the Greek and the Latin Fathers, while it is probable that later speculations on this subject were greatly influenced by the writings of Origen. Opposition to Gnostic speculation led earlier writers to insist on the fact that angels and demons were created beings, while some writers refuse to allow to the former any part in the work of creation. Difference of opinion seems to have existed as to the nature and constitution of angels and demons, though the majority of writers appear to have regarded them as incorporeal spirits. A distinction is seen in the teachings of Gen 6:2. The earlier writers more usually identify the 'sons of God' with angels; later writers frequently reject this interpretation. The legend of the fall of the angels, and the person of Satan, is an especially early problem in evil and the relation of evil spirits to God. It would appear that the majority at least of later writers held the view that angels were capable of sinning, being possessed, like men of free will. There are some traces of the beginnings
of a cultus of the angels which, according to some authorities, may be traced before or as far as Justin Martyr, and which appears to be clearly taught in the writings of Ambrose. It is probable, as may be gathered from Irenæus, that the dangers of the cultus became apparent during the Church's struggles with paganism. This period we find very little about orders or numbers of angels. This subject, as well as the dedication of a church by Constantine to the archangel Michael, will be best discussed in the next section.

1. ORDER OF ANGELS. DURING THE SECOND COUNCIL OF CONSTANTINOPLE (A.D. 553).—During this period we have especially to observe two points: (1) the development of both invocation and worship, and a writer so late as Augustine explicitly teaches that they should find no part in Christian worship. The statements of Origen have led some authorities to form suspicions of God, the heavens, and angelic orders, which are passages in his writings where the cultus is explicitly condemned. To the authorities cited we may add canons 33 of the 4th cent. Council of Laodicea, in which Christians are forbidden to form 'speculations of God, the heavens, and angelic orders' and to form assemblies, which is unlawful' (Hefele, Hist. Conc., Eng. tr. i. 317). But the passage is of doubtful meaning, and it should be observed that Dionysius Exiguus renders ἡμῖν ἀρχαῖον προσφέρειν as 'to give offerings to angels'. This canonic, which was known to Theodoret, who refers to it twice (Ep. ad Col. 2nd 370). In the former of these passages he states that this disease (παθήσεις) is still to be found in Phrygia and Pisidia. This view is supported by certain inscriptions discovered in that neighbourhood, among which may be included the following: 'Αγία Μοίρα Ἀρχαία ἐνίκητα σιωπήνων ἁμάρτων τῷ ἐν Πηγᾷ ἱερῷ άναδιούσῳ αὐτῷ αἰώνιον ζωήν. This canonic was known to Theodoret, who refers to it twice (Ep. ad Col. 2nd 370). In the former of these passages he states that this disease (παθήσεις) is still to be found in Phrygia and Pisidia.

In the latter passage, Theodoret again quotes the canonic of Laodicea, as forbidding prayer (εὐχασθαι) to angels. One other passage in this writer may be referred to. Greek, I. 3, 3, in answer to the pagan objection that Christians also worship other spiritual beings besides God, he answers that Christians do indeed believe in invisible, and they do not regard these beings as incorporeal and, unlike the pagan deities, sexless, and that they are employed in worshipping God and furthering the salvation of man. The evidence of Theodoret with regard to the cultus of angels and churches dedicated to them is supported by Didymus (De Trin. ii. 7-8), who says that churches are to be found in both towns and villages, under the patronage of angels, and that men are willing to make long pilgrimages to gain their intercessions. The earliest historians refer to the dedication of a church to an angel is to be found in Sozomen (HE ii. 3), where it is stated that Constantine erected a church, called the Μυχαήλ, not far from Constantinople. The reason of the dedication was that the archangel Michael was believed to have appeared there. In the West we find instances of the dedication of churches to the archangel Michael at least as early as the 5th cent. (see DACL, vol. i. col. 2147). St. Michael is the only archangel who is mentioned in the calendar before the 9th century. Various festivals of this angel are to be found in different calendars, but they appear in all cases to be the anniversaries of dedicated buildings. In the case with the festival of the 29th of September, still observed in the West, which commemorated a church, long since destroyed, in the suburbs of Rome on the Via Salaria (Duchesne, Christian Worship, 127). The earliest cases kept on the 30th, not the 29th) are found in the earliest Roman service-book, the Leontine Sacramentary (ed. Feltoe, pp. 106-108). In the prayers contained herein are found clear references to the invocation and veneration (generatio) of angels.

In the Second Council of Nicæa (A.D. 787), which dealt with the iconoclastic controversy, the question of the nature of the angels was discussed. At this Council a book, written by John, bishop of Thessalonica, was read, in which the opinion was advanced that angels were not altogether incorporeal and invisible, but endowed with a thin and ethereal or fiery body. In support of this view John quotes Basil, Athanasius, and other Greek Fathers. He expresses the same view with regard to demons, and states that Christians both depict and venerate angels. These views appear to have met, on the whole, with the approval of the Council, which sanctioned the custom of depicting angels and venerated them, though there are passages in his writings where the cultus is explicitly condemned. To the authorities cited we may add canons 33 of the 4th cent. Council of Laodicea, in which Christians are forbidden to form 'speculations of God, the heavens, and angelic orders' and to form assemblies, which is unlawful' (Hefele, Hist. Conc., Eng. tr. i. 317). But the passage is of doubtful meaning, and it should be observed that Dionysius Exiguus renders ἡμῖν ἀρχαῖον προσφέρειν as 'to give offerings to angels'. This canonic, which was known to Theodoret, who refers to it twice (Ep. ad Col. 2nd 370). In the former of these passages he states that this disease (παθήσεις) is still to be found in Phrygia and Pisidia. This view is supported by certain inscriptions discovered in that neighbourhood, among which may be included the following: 'Αγία Μοίρα Ἀρχαία ἐνίκητα σιωπήνων ἁμάρτων τῷ ἐν Πηγᾷ ἱερῷ άναδιούσῳ αὐτῷ αἰώνιον ζωήν. This canonic was known to Theodoret, who refers to it twice (Ep. ad Col. 2nd 370). In the former of these passages he states that this disease (παθήσεις) is still to be found in Phrygia and Pisidia.
DEMONS
and SPIRITS (Christian)

the names and the offices of the different orders of angels, and the manner in which we may profit by the imitation of the angels, together with certain other points of lesser interest. References to evil spirits will be found in the same author (cf. Moral, iil pass).

Finally, John of Damascus, who in his writings so frequently shows traces of the teaching of the Areopagite, follows the latter in his classification of the celestial hierarchy (de Fid. Orth. ii. 3). In the same passages he gives a description of the angels, in which he defines a number of points which, as we have seen, had been matters of controversy, both before and during the period under discussion. The definition is as follows:

'An angel, then, is an intellectual substance, always mobile, endowed with free will, incorporeal, serving God, having received, according to grace, immortality in its nature, the form and character of whose substance God alone, who created it, knows.'

It may be said that at the close of this period something like a general agreement had been reached about the nature and functions of spirits, good and evil, and it remains only to discuss some further elaborations which we encounter in the medieval period.

III. FROM 800 TO THE REFORMATION.

During the medieval period, speculations concerning the nature of good and evil spirits are constantly to be found in the writings of the schoolmen. These, for the most part, consisted in the application of medieval dialectical techniques to the statements of Scripture, the opinions of Augustine, and the schematization of the Areopagite, whose works had been translated by John Scottus Eriegena, and obtained great popularity throughout the West (in Ordinatio, Eng. tr. 1938, p. 588). It is impossible here to enter into details about the nature of these speculations, and it seems most convenient to illustrate their general trend from the writings of certain representative theologians. In spite of the diversity of opinion, it should be observed that the first canon of the Fourth Lateran Council (A.D. 1215) made certain clear and definite statements with regard to spiritual beings, and their relation to God, without apparently, however, terminating the disputes of later theologians on this matter. It is stated that

'God is the Creator of all things, visible and invisible, spiritual and corporeal, made either in the beginning or after the flood and into the temporary terrestrial by which mankind continues, spiritual and corporeal, angelic and human, and from Adam, as spirits and as incorporeals. The devil and other demons were created, indeed, good by God, and from the consent of himself (suum et), of his own accord (per se). Man burned by suggestion of the Devil.'

As we have said, this decree appears to have failed to produce unanimity of opinion among the schoolmen, and the subject remained, as Harnack remarks, 'the fencing and wrestling ground of the theologians, who had here more freedom than elsewhere' (Hist. of Doqua, Eng. tr. vi. 186). But on many points we discern a general agreement.

Thus, with regard to guardian angels, all held that each man from his being partakes of a spiritual nature, and that this applied also to sinners, while some asserted this even of Antichrist himself. Evil spirits, on the other hand, tempt and incite men to sin, though it should be observed that even the power of the devil was held to be subject to the limitation that he cannot affect the free will or spiritual knowledge of man, but can approach him only through his lower nature (so Albertus Magnus, Summa Specul. theol. 12 B. tract. 6; see also Bonaventura, in Sent. 2. dist. 13, Alm. Mag. lib. 9, tract. 9). But the question of the substance, essence, endowments of grace, parrability, modes of cognition, and individuality of the angels, as well as certain other problems, still remained in dispute.

(a) Peter Lombard (d. 1160), the first systematic theologian of the West, devotes ten sections of the second book of the Sententiae (dist. ii.-xi.) to the subject of good and evil spirits. In his teaching he follows the Areopagite, and deals, among other things, with the questions of the nature, creation, free will, fall, and peculiarity of angels; their relation to demons to magical arts; he also discusses the question whether Michael, Raphael, and Gabriel are the names of orders or of individual spirits, and whether each man has a good and bad angel. The latter notion is developed with a discussion as to the possibility of progress of the angels in virtue.

(b) In the numerous references to good and evil spirits contained in the writings of Bernard, two passages are especially worthy of notice. The first is contained in the De Consideratione (v. 4), where the angels are described as

'...vires (Jerusalem matrix nostrae) ... distinctae in personas, dispositos in dignitatis, in individuos, dominus liubens et oblivescens debitum, honesta legum concinnatissimum, fullo tenamen.'

In the long passage which follows we find a disquisition on the angelic hierarchy, which closely follows that of the Areopagite. In the second passage (serm. viii. in Cont. v. 19), Bernard states some points which he feels unable to resolve:

'The Fathers appear to have held various opinions on such matters, and it is clear to me on what ground I should teach either opinion, and not the others: neither do I consider a knowledge of these things to conduce to your progress.'

The points in dispute refer to the nature of the bodies of the angels: it is asked whether their bodies are part of themselves, as is the case with men, or assumed for purposes of revelation. On guardian angels, see in Ps. 'qui habitat,' serm. xii. 2; serm. vii. in Cont. v. 4; on the devil and evil angels, see in Ps. 'qui habitat,' serm. xiii. de Gratia et Libero Arbitrio, cap. vi. § 18.

(c) Anselm, who may justly be regarded as the pioneer of speculative theology in the Middle Ages, is probably the first Western writer to apply with any fullness the processes of the Aristotelian dialectic to the traditional teaching of the Church about good and evil spirits. These play a somewhat important part in his remarkable system, especially in the elaboration of the Ora Deo Homo, where it is suggested that man was created for the purpose of completing the number of the angels, which had been diminished by the fall of the devil and his companions. This opinion Anselm’s friends, such as Albertus Magnus, made use of for himself: the human race is made for itself and not merely to replace individuals of another nature (Ora Deo Homo, i. 18). In the long discussion which follows concerning the number of the angels, and whether the number of the elect will exactly correspond with the number of those that fell, Anselm admits a diversity of opinion, and concludes that it is permissible to hold any view that is not disproved by Scripture. Cf. also de Casa Dioeholi, cap. vi, where the cause and manner of the Fall are discussed. On the angels, cf. de Fide Trin. 3.

(d) In order to present a clearer view of the Scholastic doctrine of good and evil spirits, it will be best to give here a brief summary of the teaching of this subject, where we probably find it in its most developed form. This is contained in the ‘Tractatus de Angelis’ which is comprised in Questions i. to liv. of Parva prima of the Summa theologica of Thomas Aquinas. Angels are altogether incorporeal, not composed of matter and form; exceed corporeal beings in number just as they exceed them in perfection; differ in species since they differ in rank; and are incorruptible because they are immortals. Angels can assume an aerial body but do not exercise
the functions of life. Thus they do not eat propric, as Christ did after His resurrection. Angels can be localized, but cannot be in more than one place at the same time. The substance of angels is not pure thought, because, in a created being, activity and substance are never identical. Similarly, the pure act of thought is not pure intellect. They have no sensory cognition. Their cognition is objective—not, however, through determinations in the object, but through innate categories. The cognition of the higher angels is affected by simper and place, whereas that of the lower angels is affected by simper alone. Angels by their natural powers have knowledge of God far greater than men can have, but imperfect in itself. They have a limited knowledge of future events. The angels are possessed of will, which differs from the intellect in that, while they have knowledge of good and evil, their will is only in the direction of the good. Their will is free, and they are devoid of passion. The angels are co-eternal with God, but were created by Him ex nihilo at a point in time (this is strictly de fide); their creation was not prior to that of the material world (the contrary opinion is here permitted). The angels were created in a state of natural, not supernatural, beatitude. All angels were created by God as their Creator, they were incapable of the beatific vision except by Divine grace. They are capable of acquiring merit, whereby perfect beatitude is attained; subsequently to its attainment, they can lose the beatitude being perfected, they are incapable of progress.

Concerning evil spirits, Aquinas’ teaching is briefly as follows. Their sin is only pride and envy. The devil desired to be as God. No demons are under natural evil, all fell by the exercise of their free will. The fall of the devil was not simultaneous with his creation, otherwise God would be the cause of evil. Hence there was some kind of interval between the creation and the fall of the demons. The devil was originally the greatest of all the angels: his sin was the cause of that of the other fallen angels, by incitement but not by compulsion. The number of the fallen angels is smaller than that of those who have persevered. The minds of demons are obscured by the deprivation of the knowledge of ultimate truth; they possess, however, natural knowledge. Just as the good angels, after their beatification, are determined in their goodness, so the will of the devil angels is determined to evil. The demons suffer pain, which, however, is not of a sensory character. They have a double abode—hell, where they torture the damned, and the air, where they incite evil.

The foregoing will give some idea of the teaching of the scholastics on the nature of spirits in its developed form. Many other questions were raised which is impossible to discuss here; but one further instance may be given, viz., the speculations as to the manner in which angels hold communion with each other. This matter is treated by Albertus Magnus and Alexander of Hales. This communication is effected immediately, and the spiritual vision of the angels is described by Albertus Magnus as 'inmutis,' by Alexander of Hales as 'mutus' (cf. Alb. Magn. Sum. Theol. 2, tr. 9, quast. 35, m. 2; Alex. Hal. Summa, pt. ii. quast. 27, m. 6). Finally, we may quote one 14th century authority, namely, Tractier (1361), who, though, like his contemporaries, he follows the Dionysian classification of spirits, yet expresses himself with much reserve about the nature and character of angels. The following passage is contained in his sermon on Michaelmas Day:

With what words we may and ought to speak of these pure spirits I do not know, for they have neither hands nor feet, neither shape nor form nor matter; and what shall we say of a being which has none of three things, and which cannot be apprehended by our senses? What they are is unknown to us, nor should this surprise us, for we do not know ourselves, viz., our spirit, by which we are made men, and from which we receive all the good which passes. Hence it is not strange that we cannot apprehend this exceeding great spirit, whose dignity far surpasses all the dignity which the world can possess. Therefore we speak of the works which they perform towards us, but not of their nature.

With regard to the development of the cultus of the angels during this period, the following observations may be made. Dedication of churches to angels and especially to St. Michael became far more common, both in the East and in the West. With regard to festivals of angels we find special offices in the medieval breviaries by which the unconfessed cultus of the angels obtained formal recognition. The names of individual angels are encountered in many litanies, and, finally, the cultus of the guardian angels received official sanction when a feast in their honour was instituted (October 2nd) after the Reformation. No doubt the introduction into the formal liturgy of the Church lingered behind the practice of popular devotion, in this as in other matters.

In conclusion, we may remark that, at the Reformation, Protestant theologians, especially those who held to a formal worship of good and evil spirits, even maintaining that the former intercede for mankind, but prohibiting any invocation. This belief, based on Scripture, underwent considerable modification in the 18th cent., and many of which we witnessed the beatitude of rationalization in different directions. The beginning of the 19th cent. was marked by a revival among Protestants of the belief in angels expressed 'in a philosophic and idealizing sense' (Hagenbuch, Hist. of the English Church, vol. ii., p. 281). A word should be said that among modern writers of this school the whole subject has ceased to excite any interest either speculative or practical. In the Roman Church we cannot detect any change in belief or practice concerning the existence of good and evil spirits, though we may point to certain indications of a tendency to discount the sabbathism of medieval speculation on the subject (Liebmann, Instit. Theol., lib. ii. cap. 2, art. 1, in vol. iii. p. 259). In the Anglican Church the belief in angels has the fullest liturgical recognition, though the subject is hardly dealt with in her formularies. The invocation of angels was defended by some of the Caroline divines: the practice of dedicating churches to angels remains unbroken. In the Book of Common Prayer the 29th of Sept., still known in the Roman calendar as the 'Dedico Sancti Michaelis Archangeli,' has become the feast of St. Michael and All Angels.

The comparative lack of interest felt in the whole question of the existence and nature of good and evil spirits may be explained by reference to the fact that, while belief in the existence of such spirits is generally accepted by Catholic theologians, there is still to be found a strong reaction from the excessive speculation of scholasticism.

DEMONS AND SPIRITS (Coptic).—The beliefs of the Coptic Christians on the subject of demons and spirits were derived from those of their pagan predecessors in the Egyptian-Roman period (see 'Egyptian' art. below), and show interesting traces of Gnostic influence. In spells to ward off the attacks of devils the designations of the demons are given, and the mysterious magical names of the gods are invoked, confused in true Gnostic fashion with the Hebrew appellations of the Deity. Here is a typical invocation:

'Pantokrator Ia6 Saba6th Moneous Somonc Usrktou (7) see 'Egyptian' art. below. He appears in the Seventh Heaven and judgest the evil: I conjure thee to-day, thus that ye be vanished to-day for me the twenty thousand demons which stand at the river Egypt, beseeching the Father twelve times, hour by hour, that He give rest unto all the dead.'

Here we have the Gnostic spirit Ia6 confused (naturally enough) with the Deity (Jahweh), but invoked in prayer against evil. The name 'the Father.' However, Ia6 Saba6th in Coptic spells is hardly to be distinguished from the Deity. Good spirits are invoked as 'ye who are upon the northern and eastern sides of Antioch. These spirits, being released from the nether regions of the earth, have the power of vanquishing the souls of the living, and of performing in every place, in the name of the Deity, and of the angels, all kinds of good and evil. The names of the angels are often confused: Emmanouel appears as the name of an angel, by Tremouel and Abraxiel; the last has a very Gnostic sound.

Chief among the good spirits were, of course, the archangels—sometimes four, sometimes seven: 'those who are within the veil' (kara6patripouma). Each man had a guardian angel, who protected him against evil. The angels are invoked also the cherubim and seraphim, and the four-and-twenty elders, and even the four beasts that uphold the throne of the Father. These were all conceived as objective spiritual beings, to be invoked in prayer against evil. The names of the spirits had to be known, or they could not be invoked: some appear named after the letters of the alphabet, others are merely 'those who come up with the great stars that shine.' The latter is a passing touch, and reminds us of the ancient dead who were thought to walk among the stars, the akhenu-sek.

Among the evil spirits we find, of course, Satan, whose name in our case is Zis—often cited. The survival of the name of the old Egyptian Typhonic god Set. Fate (Mepo) seems to occur as an evil demon. Disease was thought to be largely due to the attacks of devils, and especially in the case of epilepsy. If has been conjectured, with probability, by Crum ('Catalogue of the Coptic MSS in the British Museum, 1905, p. 253, n. 9) that the name ethekhe has been corrupted into the name of a female demon, Abersela, Berselil, or Bersonil, who appears in an Ethiopic transcription as Werczyli. Berselila was apparently regarded as a flying vampire, and classified in Coptic vocabularies as a kind of bird. A demon of the midday heat appears in the Ethiopic versions of the 'Prayer of S. Siemus,' with the 'Werczyli,' mentioned above (references in Crum, loc. cit.).

Magical charms (pndtukt) against the attack of demons were common enough. They were usually written on slips of parchment and enclosed in a little leather box, generally tied to the arm or, no doubt, hung about the body just as the modern charm of the Egyptian feldhud is worn. The contents are usually vague invocations, as has been seen. One of the finest is the MS Or. 5897 of the British Museum (published by Crum, op. cit. 1908), from which excerpts have been given above. Cf. art. CHARMS AND AMULETS (Abyssinian).

The usual Coptic word for a demon or spirit, good or evil, is ty, which is the Old Egyptian for a good spirit. The term ki6, for an evil spirit, which is the same as Old Egypt. hekau, 'magic' or 'enchantment,' occurs occasionally. The appellation referau, 'sunderer,' 'diviner,' is a tr. of the Gr. diaphoros, which is itself often used in Coptic. For 'angel' the Gr. aggelos is used.

LITERATURE.—In addition to that cited in the text, see list of authorities appended to art. CHARMS AND AMULETS (Abyssinian).

H. HALL.

DEMONS AND SPIRITS (Egyptian).—1. Scope of the article.—The delineation of an investigation on the subject of demons and spirits presents no little difficulty in religions which are so distinctly animistic. The earliest texts (numerous chapters of the Book of the Dead), some of them going back even to pre-historic times (as the funerary chapters of the proto-Hebrew collins, certain parts of the 'Delivered man, the Egyptian Book of the Dead,' and especially the Pyramid Texts), the chief demons and spirits in these are called sometimes biu, sometimes haunless (see below). The meaning of the special terms by which they are designated is very difficult. The significances of such terms as aferu, utenus, and ashenu, we must admit that as yet we have no precise knowledge. The passing allusions in a very few texts seem to indicate that they were conceived under the form of devouring spirits, troops of monkeys, lizards, and hawks. These are, in any case, survivals of the most ancient periods. The same is true of the jackal-demons (Pyramid of Pepy II., line 849). The higher and lower 'Beings of S' led us to designate a classification of spirits into heavenly and earthly. The rohkitu are, according to the texts, both spirits full of wisdom and personifications of the powers opposed to (and vanquished by) Egypt or the gods of Egypt.

2. Pre-historic demons and spirits.—Our information of the earliest period is preserved in the earliest texts (numerous chapters of the Book of the Dead), some of them going back even to pre-historic times (as the funerary chapters of the proto-Hebrew collins, certain parts of the 'Delivered man, the Egyptian Book of the Dead,' and especially the Pyramid Texts). The chief demons and spirits in these are called sometimes biu, sometimes haunless (see below). The meaning of the special terms by which they are designated is very difficult. The significances of such terms as aferu, utenus, and ashenu, we must admit that as yet we have no precise knowledge. The passing allusions in a very few texts seem to indicate that they were conceived under the form of devouring spirits, troops of monkeys, lizards, and hawks. These are, in any case, survivals of the most ancient periods. The same is true of the jackal-demons (Pyramid of Pepy II., line 849). The higher and lower 'Beings of S' led us to designate a classification of spirits into heavenly and earthly. The rohkitu are, according to the texts, both spirits full of wisdom and personifications of the powers opposed to (and vanquished by) Egypt or the gods of Egypt.
it has become a protective function of a specially determined group of men or a locality, heavenly or earthly. The humait of the primitive cults seem often mentioned; they even figure in a number of representations that have not yet been noticed—if, as the present writer suggests, it is indeed figures of these spirits that are seen on the ornamented furniture (tabernacles, shrines of the sacred barque, supports for vases or utensils of worship), represented in a number of temple base-reliefs and in frontispieces of Theban tombs. They have hardly ever been noticed, except by Budge (Gods of the Egyptians, i. 159), who quotes, without approving, the view that they are the great flock of souls of future generations. This view does not seem sufficiently borne out by the texts. The humain of the primitive cults seem rather to have been swarms of spirits of a beneficent character, in the sense that they watched over the safety of the sun, at the time when the religious world consisted of innumerable bodies of spirits and an impersonal sky-god with no precise attributes, and when the various heavenly bodies (even the most important ones, like the sun) were entrusted to the care of spirits, who directed their movements and defended them. Sometimes, of course, these spirits were also demons, etc., determined it is true, to become the patrons of man or of the lower classes, represented in the texts, as protective in some measure, though perhaps not of the earthy.

These demons were once the guardian genii of the geometrical divisions (two or four) of the universe; they supported the mass of the firmament at its extremities, and welcomed or destroyed the souls of the dead as they arrived at the borders of the earth. Their stellar role also seems to have been considerable; they inhabit certain constellations, or the sanctuaries on earth that are the magical counterparts of these regions on the heavens. Sometimes they are the guardians of a special region of the firmament (e.g. the bis of stars in the territory of Heliopolis, the 'Abode of the Celestial Abode,' the magical representation of this celestial abode); sometimes they escort certain heavenly objects to the planets; sometimes they are, across the vault of heaven. Polytheism makes these bodies divine persons, and reduces them to the position of deities of the sun. Finally, theology confuses them more and more with the various 'souls' of the gods, employing the evolution in meaning of the word bis itself. A great number of these spirits are classed together under the vague title of 'followers of Hor,' whence the priesthood deduced more and more lofty funerary meanings in relation to the lot of the dead.

The historic period, however, preserves a fugitive rôle for them on certain occasions of immemorial tradition, just as the material part of the dead continues to receive immediate sanctity. The spirits of the North and South become a sort of heraldic representation of the forces of the world considered as composed of two halves, or they are transformed into genii guardians of the income of the universe. They play a part also in several incidents in the coronation of the king. Other spirits, as the 'demons' of one of the Anubis, regarded as a constellation of the Northern world (cf. Brugsch, Red. and new Relig. in Egypt, 1884-1888, p. 671), perhaps the Great Bear (cf. the jackal-demons mentioned above), or as the genii of other parts of the astral world, reappear as figures in the mysterious ceremonies of the royal coronation or the jubilee (see Naville, Festical Hall, London, 1892, pl. ix—xi., for specimens of these figures, whose mystical value has been very much exaggerated by modern writers). As a general rule, however, their rôle is a purely traditional one, and their significance as demoniac does not seem to have been early understood.

Besides the innumerable representations of bis and rohit on in statues, stelae, base-reliefs, frescoes, etc., several other spirits have left marks on traces of their activity on certain sacred furniture, on which they are seen as traditional figures, symbolic or even magical. They are also represented, in certain texts, as certain animal figures on sacred vessels and in some of the stelae, traditionally placed on the sacred barques used in procession, which convey the Egyptian gods in their representations of their journeys in the other world. Thus the 'griffin,' which is found on the bow of all the barques of solar gods, seems to have been the form of the celestial genii confused with the 'warlike soul' of the god; and the same may be said of the birds that are placed in rows on the bow of the bark (cf. the hosts of el-herheh), or those on the strange boat of Sokar (a good example in the temple of Boit el-Medineh). Their functions, interpretations and significations are, or were in the 'followers' of the gods of the time of date, and represent two attempts to adapt them to developed beliefs. They seem really to be a survival of the time when these groups of 'demons' had an active share in the general direction of elementary forces. The predominance of 'functional epithets' serving as collective names for the majority of these demons is perhaps one of the most significant facts in this connexion.

The whole question of these groups of spirits calls for an exhaustive study, which would yield the results of Egyptian religions thought that could be attained, and would also explain the development of forms of this kind similar to those of other primitive religions and the evolution of the bis into polytheism proper. Such a study should be joined closely with an attention to Egyptian religion, comprising both the anachronistic manifestations of all kinds of 'spirits' and the existence of a sky-god similar to the god postulated in so many parts of the old religious tradition. The vague, primordial god—who, however, has no demigodological function whatsoever—is found in Egypt in two parallel forms, proceeding from two great local systems of mythology: (1) the sky-god Hor, and (2) the sky-goddesst Nut (subdivided even earlier into the day-sky, Nun, and the night-sky, Nuit). A foundation might be found in the data supplied for one part in the very remarkable work of Budge in his Gods of the Egyptians (see Lit.).

3. Historic period: number, aspects, forms.—The Egyptian terrestrial and ultra-terrestrial worlds are naturally peopled with an infinite number of demons and spirits. But, if we look closely, we find that this is by no means so great as that of many other religions. It shows neither the abundance of the Chaldeo-Assyrian religions or of Mycenean demonology (see Pottier, BCH, 1907, p. 239), nor even the crowd of devils and spirits of Venetian religion. The number of 4,601,990 demons, given in ch. lxv. of the Book of the Dead, is an exaggeration which does not correspond with any teaching or fact of any importance. As a matter of fact, ancient Egypt has not, to our present knowledge, left any record of the name of the countless and very evil spirits which we find in so many other countries.

These legions of beings, generally invisible, but always provided with material bodies, are per-
ceptible to men at certain times, or to those who can fortify themselves with the necessary charms and formulæ. Their size does not seem ever to have been a question of interest to the Egyptians. No text mentions giants, though one passage in the Book of the Dead speaks of demons 'twelve foot high.' This, however, is evidently the summanum. None of the numerous paintings of demons of the under world make them any larger than the men or beasts of the terrestrial world, except in the case of a certain number of serpents (when they are not, as a rule, they are dealing with allegorical or symbolical serpents). Nor do any of the ancient texts make allusion to extraordinary dimensions. The difference between Egyptian and Oriental religions in this respect is thus marked. 1

The material world, as well as the spirits and others of the same type were carried to the under worlds in the sun's journey is a simple artifice of Theban theology, and Maspero (Myth. archéol. ii. 34 f.) has shown that these different under worlds, compiled in actual geographical order, are a product of local mythologies which really describe the world of night and the celestial world.

The groups of very feeble demons and spirits which are devoted by the Egyptian ones (Pyramids arc especially mentioned in the texts or drawings of the historical period. No doubt the whole conception was thought barbarous (see below).

(b) The celestial world.—The celestial and uncalled, of the ancient world, the universe of Egyptian religion is full of all kinds of demons, closely resembling those found in the religions mentioned above or among the savages of to-day. But in Egypt there is no proper classification of spirits belonging to water, to rocks, woods, marshes, etc. Furthermore, their multiple roles in dreams, or in illnesses of man or beast, seem to belong rather to the popular domain than to official beliefs.

It would appear that there are two kinds, that historic Egypt had already, to a great extent, got rid of that naivete which is the characteristic of polydaemonism in primitive Animism, and which persists so strikingly in Chaldæo-Assyria in the organisation of the distinction between official and popular religion, however, is still a delicate question of the appreciation of facts, and especially of the period. It is, nevertheless, certain that phenomena such as storms, floods, and epidemics are attributed in historic Egypt, and not to the demons, as in Chaldæo-Assyrian belief. On the other hand, the inscriptions from the temple of Abydos prove that the priesthood frankly admitted that demons were continually present, not to do harm, and that it was necessary to purify the king's retinue with charms, as it proceeded to the temple. The funerary and incantations that took place at funerals bear witness to the same practice. While the famous inscription of the Princess possessed of Bakhan proves the official belief in demoniacal possession. The literature shows us that the demons, as in all other countries, inhabited by preference desert places, the borders of marshes, and cemeteries (in the sense in which they become confused with ghosts properly so called); and it is a certain fact that their power was greatest at night. They were also most powerful on certain days of ill omen, on which the influence of the good gods was diminished, as is proved by the horoscope papyri of Leyden and London. The light of the sun put them to flight. They were combated, according to varying circumstances, by means of talismans, amulets, incantations, etc., and in all these innumerable details various representations of demons in a material way only, and not in doctrine. It is also very difficult to see a specially Egyptian characteristic in the almost complete confusion that exists, in all these attributes of the earthly demons, that were demons proper to Egypt, and, as the latter have the same name of khuy: in a number of cases, it is sometimes almost impossible.
to distinguish whether such and such a case of illness be due to the work of a demon or of the dead. Sometimes the Egyptian text is quite clear, e.g. in the formulation relating to 'the imprisoning of the shades of the dead that can do harm' (Book of the Dead, ch. xxvii., line 20), which was written graduated to certain classifications by variants.

When well considered, Egyptian ordinary life does not seem to have been so much overshadowed and tormented by the constant fear in the case of under-world religions of civilized and semi-civilized peoples. While the official cult elevated the demons to the tone of gods, we do not find it going the length of constantly trying to despise them, during the performance of duties, at the opening of the tabernacle, or, again, at the time of sacrificing. (It may be, however, that the priests went the air with the wings by which the demons to flight (Ibid. ex oraculis hierarchiae, ed. Wolff, 1855, p. 181.).) The Egyptians do not, like the Indians, trace terrors round their offering. (Notice, however, in the foundation-rites of a temple, the purification of the ground by means of a mock of evil spirits, performed by the king and figures dressed as gods.) Nor does any Egyptian text ever say that demons are specially dangerous at the time of death, as is right, e.g. in the Avesta. The dead, it is true, are protected against demons during the preparations for the banzil; they are surrounded, on their way to the grave, by every kind of magical protection; at the grave itself, talismans and phylacteries of every description protect the coffin and mummy (note that these precautions are meant both to ward off the demons of this earth as they proceed to the next world, and to compel the demons to stay, by magic, on his journey to the other world); mystic emblems are painted on the prest-Isen sarcophagus, and other precautions of the same kind are found in other countries that all these precautions are not amount to so much as we find, in this connexion, in civilized religions of the highest organization; and we may say that the dying Egyptian was as well prepared for the demoniacal world as he was for the next life. In other words, demons are given an order so much as most races with systems of organized beliefs. We must not be misled by the messages of the demoniacal world into a misunderstanding, and the demons of the literature. In the other world, it would be natural to imagine that the thought of Satan and his demons was a continual weight on the conscience, in the form of our European Middle Ages; and yet the popular tales, processes of justice, legends, and even theological thought, were filled with the demons, and, the more often we find a, material diversity, and a constant aggressiveness which are very much in excess of anything that we learn of ancient Egypt in this respect.

c. The other world (this term including the various classes of regions separating Egypt from the abodes of the dead, under whatever form they may be conceived, and these abodes themselves; paradise, Elysian fields, caverns, passages, rosetites, etc.).—In account of all the demons of the other world, a very good idea of them may be obtained from the indexes in the various editions of Budge's *Book of the Dead*, or from Maspero's *Études de mythologie et d'archéologie égyptienne*, ii.180 (for the royal tombs). These demoniacal spirits are as numerous as the devils of the under-world in all other religions. They are the inhabitants of night. It is worthy of remark that none of them has any symbolic value; the majority are simply the repetitions of beings like the mischievous or terrifying beings of the earth. In the group of books of the Book of the Dead type we have tree-spirits, monkeys, crocodiles, a considerable variety of serpents, lions, etc., and the vignettes of the Theban epoch employ all the precision that could be desired on the subject. In the series of the type 'Book of Hours,' 'Book of Hell,' 'Book of the Gates,' etc., we have a more sombre view of the demons, yet still of the same specific character; a great number of these demons, in the shape of men, of animals, or of mixed form, are armed with weapons of various kinds, but are not fantastic. These are far oftener functional epithets than true proper names: the majority of the names are used by the historians of religions. The onomastic list, however, is quite short, and shows the poverty of Egyptian thought on this point: 'the Archer,' 'the Fokam,' 'the Lancet,' the 'Cutter,' the 'Ripper,' 'the Bounder,' etc. These different demons have the same names, or are called 'the Lady of Terror,' 'the Lady of the Sword-thrusts,' 'the Brave,' 'the Violent.' The serpent demons are called 'Life of the Earth,' 'He who lives on gods' (= enter of gods[?]). The guardian serpents Akalu, Seth, Thoth, and Tokhres, etc. are the spirits of the dead or of the dead. Sometimes the Egyptian text is quite clear, e.g. in the formulation relating to 'the imprisoning of the shades of the dead that can do harm' (Book of the Dead, ch. xxvii., line 20), which was written graduated to certain classifications by variants.

Generally speaking (without distinguishing the various classes of under-world literature), the original Animism of Egypt is reflected in the number of demons that can and cannot harm. As the body is split into three spiritual objects: a thread and its different parts (ch. chii.), a boat, each part of which has its genius (ch. xxviii.), posts, doors, parts of a building, boxes, etc. This process is all the more logical from the fact that Egyptian belief did not think of the spiritual object; natural or manufactured, on this earth possessed a spirit or a demon—rocks and trees as well as houses, pillars, sceptres, clubs, etc.; and iconography sometimes shows these spirits with their heads appearing out of the objects they inhabit. The evolution of belief consisted mainly, here as elsewhere, in gradually 'detaching' the 'spirits' from their objects; and the demons of our present discussion were transformed step by step into *guardians*, and, in the case of some of them, into *masters*, of these objects. The latter privileged members have contributed to the number of the gods.

5. Nature.—By means of a large number of accurate texts, we can form an estimate of the constitutional character of the demons and spirits of Egypt, and by the aid of the ancient texts we can get back to the very beginning of their formation. All our rites and ideas are connected with the general animistic character of the primitive religions of the Nil Valley. The universality of 'spirits' in Egypt is well known, and we have just seen that there is not a single being or object, natural or manufactured, that has no demon. The different names of *bin* and *khau* did not imply any difference of nature originally, and the ancient texts show, by variants, that the two terms are frequently interchanged. They merely signify the different degrees of materiality of these souls or spirits—which are always material (see BODY [Egypt.]). The word *bin* seems later to have tended to belong to demons and spirits of a beneficent character, while the name *khau* was given by preference to malevolent spirits; but this indefinite classification has arisen purely from later dualistic thought (see DUALISM [Egypt.]).

Now, these texts clearly prove that the demons are absolutely the same in the essentials of their nature and attributes as the most ancient Egyptian gods. The formulae confuse them constantly. Demons and gods have the same 'determinative' in hieroglyphic script (the three signs of the 'axe' [really a mace with two pennants], or the archaic sign of three hawks perched on a sort of gibbet). At first, the strongest devoured the weakest impartially; and later, the dead, assimilated by magic to these strongest members (cf. Pyramid of Unas, line 506 ff.), are shown devouring the *notrus* (gods) as well as the *khau* (demons).

A single characteristic will serve to distinguish them, and to indicate the process by which the god gradually emerged from the dense crowd of demons. The demons, or genii, or spirits, are *anonymus* groups, with only a collective name, and confined to a special activity or settled function. As they rise in importance or the same importance, certain groups of them rose by a slow process of elaboration to higher dignity. The others remained for ever a few millions of obscure spirits, whose mode of life was of no importance; or they furnished the troops of spirits of which examples are given in § 2. In the groups with important functions, the characteristics led to fusion with a more individual being provided with a proper name. Difficult as it is to
draw the line of demarcation between a god and a demon in such a conception, a careful examination of the texts leads to the conclusion that the mark of a god is possession of a name. A demon possesses no name at all. The end of the line is incontestable for well-established gods like Sorku (the crocodile) and Ririt (the hippopotamus); it is equally incontestable for demons like Apopi and the twenty-three great serpents of the Pyramid formula, or the other reptiles named in the rest of the sacred literature; it can be demonstrated for demons like the cat of the sacred tree ahaflu in the famous ch. xvii. of the Book of the Dead, and for all the principal demons in the descriptions of the satellite catbodies of the world-forces. Each is a god from the time that it has a name, both for its life and for its aspect. Power, the amount of reverence inspired, and the importance of functions are only questions of degree, insufficient to separate, in this religion, a number of humble gods from demons. Even specialization in a unique or monitory action is not a criterion. Napiri, demon of harvests, Rammin, Maskhoni, the ‘Seven Hathors,’ and many others of this type are more, or less than the very fact that they have names; and, if the cult they receive is humbler than that of other gods, it is identical in conception and form. (Here there is a noteworthy difference from what is said of Semitic spirituals in the Bible, Gen. xxi. 4). One might add, however, that the rate at which the names are given them by all, and confirms what we have seen of the stellar character of numbers of these groups of spirits before polytheism. The texts show, further, that a number of those spirits, mapping the secondary and character of the mass, were treated exactly as true gods by the Egyptian. The gods whom they are assimilated to the principal great gods. It will be observed also that the demons remaining in the men of anonymous groups still remain some worship on certain occasions in the historic epoch. Under the Semitic names, for example, there are priests of the ‘spirits’ of Helopollis, Ruto, and Nebkhenn (el-Kah).

The fact that demons become gods by a process of ‘emergence’ goes a long way to explain why there are not in Egyptian religion, as in other aologies, lists and hierarchies of demons and angels. Not only is there nothing resembling the sort of ladder aologies of other races, but there are not even chiefs of groups or protagonists, like, e.g., the Chaldean demon of the south-west wind. The fact is that, as soon as a primitive group attained to importance in the general cohabitation of the world-forces, it reattached a god from itself, who absorbed his group entirely or became a chief; so that the demons, good and bad, always arise directly from a god, and naturally share his character and attributes.

6. Role and character. — Just as the demons have at first no hierarchy, so they have no general characteristic role, no functions of general cosmogony, directed for or against the harmony of the kosmos. The distribution of their activities into functions that are always very limited and highly specialized is a strong proof of the antiquity of their formation. Their power does not go the length of raising a scourge like a tempest (see above), or, like the Indian demons, of preventing rain. This paucity of attributes, in a character otherwise always material, and this distribution of groups of spirits without classification, make it quite comprehensible how their final rôle and their good or bad aspect depended, in the era of polytheistic formations, upon the relative character of the gods round whom they were grouped, since such a god was simply the synthesis of the activities of which the demons were the analysis. The god himself was at first of vague significance as regards his general rôle in the progress of the world; it was only when he had acquired a more precise energy that he brought along with him his troop of demons — good or bad for man. It would thus be precocious to attempt a moral geography of the demons. The necessarily un-moral character of the spirits does not allow of any classification which would arrange them by ‘angeloele’ and ‘demonology’ — these terms being used with a moral signification. Even in the historic period their original character remained ineffaceable: the demons were, first of all, the inhabitants of a place or an object, the guardians of a locality, of a door, a passage; they ended, more or less, by having a god as sovereign; while they modelled themselves on his nature and tendencies.

But one point is clear, that they are subject to their god, and consequently favourable and subject to his relatives and friends, and hostile to others. They are, then, good spirits for the living or dead man who is assimilated by worship or magic to the congregation of their master, bad spirits to all others; and the whole Book of the Dead, which has not the least moral character (even the famous ch. xxvii. of Confession), is essentially neither more or less than a treatise of the very fact that they are capable of winning over the demons of the other world, and making them defenders of the dead, or at least submissive spirits. Nothing shows the persistence of these conceptions so well as certain passages, p. 844, 845, 846, 847; e.g., the demon, ‘the serpent who devours souls,’ is considered dangerous to the sun itself, which has to take great care when passing over its back (Tomb of Seti I., third hour of hell; theology invented in mythological explanations, but the primitive fact is clear).

7. Final organization. — The organization of all these incoherent spirits, unified by chance facts (and by nothing but facts) around multiple gods of early polytheism, was the result of great labour. It must have taken local theologians a long tale of centuries; nevertheless it always presented great gaps. It can be partly reconstructed by the help of the texts of the Memphite and prophet-Theban collars. The unifying of provincial eschatologies under the form of the Theban Book of the Dead, or of the various Books of the Under World (‘Hours,’ ‘Doors,’ etc., of the royal hypogees, etc.) has been observed by many conceptions of other races, the harmonization, which adjusted the demons more or less successfully to the gradual conception of the kosmos.

This formation of armies of good and evil, being the final characteristic of united religious, is the most important fact to be studied in connection with demons alone. It will be treated in the last article, Deaemi (Egypt). For the understanding of the present article we may note here only the following facts: the grouping around the sun and his companions of former aduate demons of the stars, or vassals of Thoth, Hermes, Abrish; the inverse grouping, around the Great Serpent Apopi and his officers, of the chief demons opposed to the sun. Finally, a god of order and light, Osiris-Ra, is opposed, with all his allies, to a Sit-Apoip, the prince of evil and darkness, and the enemy of order; this struggle continues without truce and with its fixed dates (see Calendar [Egypt]), until, in the last period, Sit-Apoip becomes confused in Osric religion with Osiris, and all these gods that single alone throw light upon the representations of the under world of this period, in which armies of demons, under command of Ra, Tean, Set, and divapeta, slayer, and bars legends of the damned.

The damned are not sinners in the moral sense, but adversaries of Ra, now enemies. This task was reserved for the last centuries — to transform hostility to the sun, Ra, into hostility to the moral law of Fia-Osiris; but the task was accomplished (see Dualism [Egypt]). Even the forty-two judges, two of Osiris, the only silent demons with no moral role, and quite artificial; and Shait, the demon who devours the souls rejected by Osiris, is only an entity with no moral character.
The absence of a part in the good or evil of the moral world appears still more clearly in the conception of the rôle of demons in connexion with the living. There is not a single Egyptian text in which they have any part in the sins of men, or in suggesting evil thoughts, or even, as in Assyria, in procreation of evil, misunderstanding, and family quarrels. They are restricted exclusively to physiological evil.

Patrie's remarkable book, Personal Religion in Egypt before Christianity (London, 1906), shows, however, a clue to demons in the hermetic literature who play a part never (see pp. 42, 49, 54, 60, 115, 166). But, in spite of the author's efforts to associate demons with all actions in a very early period, the earliest date he can reach (6th cent.) merely succeeds in showing the coincidence of these new ideas with the Persian domination; this emphasizes the resemblance between these non-Egyptian characters and the teaching of the Persian religion. We may add that at this time, and so recent, the sexual sins ever seen increasing its ranks by the soul of a single sinner.

8. Popular demonography. The phase of demons which has attracted the keenest attention of Egyptologists is their rôle in popular life and literature and in current magic. The causes of this are the abundance of information furnished by papyrology, the picturesqueness and precision with which the literary texts give the knowledge of Egyptian life, and the data they supply for the study of magic. From a comparative point of view, however, such a study does not exhibit many of the characteristic traits. An account—ever-changing—of the various demotic demons in Egyptian life or superstition would require considerable space (see CHARMS AND AMULETS [Egy.], MAGIC [Egy.]). As everywhere, here the demons are at the command of the magician, to whom they are also the devotionals—either by voluntary or involuntary—of the living or animal; or else they themselves cause these phenomena, just as they cause madness and epilepsy (see DISEASE AND MEDICINE [Egy.]).

The horoscope or simply superstitious influence of the fates, the fortunes, the ephemeral—of demons to the earrmen, the chant, are facts that apply to all popular religions. The purely Egyptian traditions are not many; the demons have sex (see Hierarchic Papyri); there are none of the sexless demons of Assyria. The popular literature (see the Story of Satni-Khamois) seems to indicate the possibility of belief in incubi or succubæ, but the passages, which are very numerous, require to be examined carefully. The threatening aspect of demons in literature is perhaps, the most strikingly presented (see CHILDREN [Egy.]; also Berlin Papyrus, 3027) is also the same as appears elsewhere. On the other hand, we must remember the restrictions made elsewhere about the interference of demons in the magic and literary papyri is not to be taken as a faithful picture of the actual life of the Egyptians.

It will be noticed, further, that the Egyptians never mention demons who are wantonly cruel, or thirsting for blood, death, and carnage, as in Chaldean-Assyria, or demons who dare to attack the gods (the combats between Ra and the demons of Apopi are antagonism, which is a different thing). The purely animistic character of these demons, struggling to live on their own account and interests, to the societies of the savages of modern Africa, and (2) somewhat similar to the classical Mediterrenean civilizations of the Europe of the Middle Ages or of the Renaissance.

As in all religions during decline, we observe at later epochs the growth of demonicial beliefs in connexion with black magic, and in opposition to the official cults. The combination of Egyptian with other Asiatic or Mediterranean demonologies shows itself in the demotic papyri, and particularly in the tabellae devotionis (see MAGIC [Egy.] and, provisionally, Budge, Egyptian Magic, or Erman, Die ägypt. Rel., ch. vii.).

9. Ghosts. The complexity of the Egyptian notion of personality is an initial difficulty in the way of classifying the phenomena relating to ghosts. The eight or nine elements which, in the historic period, constitute a person (see BODY [Egy.]), have each a formal, and habitat in the second existence. The outcome of these that concerns our present purpose is the khu.

The etymology of the word khu is still very doubtful, and we cannot deduce a connexion whatever of the khu with the form; the khu is, as it were, the role from the radical meaning of the word. The sense of 'luminous,' 'brilliant,' has suggested to several authorities the explanation based on the photophoric character of the willo'-the-wisp. But, these phenomena are not seen parts of Egypt on the skirts of the desert, supposed to be the favourite haunts of ghosts. A later interpretation has been proposed, taking the word khu as a brilliant spark, a part of the solar substance. But this seems to involve the theological speculations which played upon the anthropological meaning of the word when solar theories held the first rank in exogogical doctrine. The signification 'enclosure,' 'circle,' or 'certain encircling,' as the complimentary meaning of 'resplendent' or 'glorious' to the epithet khu given to the ghosts of the dead, seems more probable, but has never been definitively settled.

The present writer would suggest, finally, a connexion between these notions and the khepri, the sun in the intrinsic meaning of khu, and the special soul 'which shines in the eyes,' and to which a great many peoples accord a particular personal.ascription. The observation that the connexion between the breath of the living eye and the thinness of the dead eye suggests the relation between a kind of daemon, a part of a soul 'forever' having magic virtues of its own (which would justify, besides, all the magic relating to the power of the soul), and continuing to live after death with the various attributes which we accord to ghosts. There is, however, no formal proof by texts of this explanation.

The khepri is known as a living being. It has never been credited with a lofty rôle. It is a priori a wandering, unhappy, hungry being, a sort of outcast from the great crowd of the dead and other 'spirits'—such as a dead man, e.g., whose grave has been desecrated, and whose soul, double etc., has perished by privation or by the attacks of monsters. Accordingly, we never find the khu of a king or a nobleman appearing in the texts in the rôle of 'ghost, as this rôle is always a humble and inefficient one. The attributes of the Egyptian ghost, then, reduce themselves finally to those of harmful demons, and agree very largely with what is believed on the subject in all religions. Ghosts affright people with 'demonic possession' in all its varieties; they possess infants (see CHILDREN [Egy.]) and, by a strange way into the interior of the body of living people, and cause innumerable ills (see DISEASE AND MEDICINE [Egy.]): they appear suddenly to terrify the living, especially at certain hours of the night, and preferably in the neighborhood of cemeteries, or in places reputed to be their favourite haunts (cf. Maspero, Contes populaires, passim); they attempt to violate any woman they can take by surprise in a lonely place (e.g. one of the chapters of the Book of the Two Ways, in which a magic power is accorded the khu 'of taking by force any woman he wants'); or, in order to devour living substance, they throw themselves into the body of children, excite them to frenzy, and cause them to die; the khepri of women dying in child-birth aim especially at causing infants to die (cf. the curious formula of the papyrus Zauberspruche für Mutter und Kind, published by Erman, 1901; see also Erman, Religionsgeschichte, ch. 2); and Harland's examples of the part played by ghosts; this belief is analogous to numerous beliefs throughout all Africa. The khepri of suicides, executed criminals, unburied dead, and shipwrecked sailors are particularly tormented. It is miserable to think that the magician of the later centuries applied by preference—conjurating, invoking, and putting them at his service for his thousand and one evil's
tormenting in sleep, causing death by enchantment or by fever, assisting lovers to exact vengeance, or helping those who wished to attract or recall an unfaithful husband. For all these reasons, the Doublets', or Double souls, the struggling demons, is nevertheless tinged with magic of Asiatic or North African origin. The baleful activity of all these ghosts is naturally specially excited at certain unfavourable times in the calendar (see Calendar [Egypt]), and they come in their hordes at these times to join the troops of evil 'spirits' struggling against order (see Dualism [Egypt]), just like a band of plunderers accompanying the real combatants. Very seldom do we hear said that the spirits of the dead were confused with the demons as to habitat, needs, functions, character, and powers. This double assertion would require a more detailed demonstration than is here possible. It may be doubted whether it seems to lead, by syllogism, to an equating of the spirits of the dead with the first gods, in whole or in part. But, as a matter of fact, no theory of Egyptian religion could be more contrary to truth or more contradictory of all religious teaching. Never at any time or under any form did the Egyptians believe that the dead become gods. The case of the sons or heirs of gods (chiefs and kings) belongs to an entirely different category, and the confusion of the dead with Osiris, or some other of the gods of the dead, by magic or by religious process is either an erroneous assimilation or an absorption of the dead man's personality by an already existing god. It is, therefore, absolutely necessary to insist on the fact that the demons and spirits, the original forms of the Egyptian gods, have nothing to do with the spirits of the dead in their essential nature, but merely resemble them in the respects of their activity (see STATE OF THE DEAD [Egypt]).

LITERATURE.—The provisional state of the sources and evidence regarding demonology has been noted in the course of this article. The whole theory of spirits has never been gathered together in one work, although various fragments of it are scattered through all the works that discuss Egyptian religion. No attempt has here been made, amongst others, in which information is more specially grouped, the following: E. Amelineau, Prolegomenes, Paris, 1905 (where an exactly opposite ethnographic theory is supported at length); E. A. W. Budge, Egyptian Magic, London, 1905, Gods of the Egyptians, 1904, Liturgy of Funerary Offerings, 1904, Opening of the Mouth, 1900, and Book of the Dead, 1908; A. Erman, Die egypt. Relig., Berlin, 1905; G. Maspero, Studies of the Egyptian dead, vol 2. Paris, 1900; P. Landais, La divinité et le sacré, Paris, 1909; G. Maspero, Les anciens Egyptiens, Paris, 1909; the monuments of the dead, naturally fill the whole series of Egyptian monuments of all periods, a special mention, E. Lacroix, Hypogeos regnes de Thebes, Paris, 1883; and P. Lacan, Sarcophages anciens au musée du Louvre, Index, Cairo, 1903-1906. 

GEORGE FOUCART.
where the Greek 

**daimon** is employed, like the Latin *mones*, to denote the spirits of the departed (Lucian, *de Lictis*, 24; for the evidence of inscriptions, *Dea parens = dea monea*, see Roescher, i. 929; Frazer, *Pausan.* 1890, iv. 24).

826. The word is not less conclusive when we find Darius and Alcesias described as demons in reference to their condition after death (Esch. *Pers.* 623; Eur. *Ap. * 1063), and when the Muse prophecies that Thespians, though dead, shall rest hidden in a man with the face of a man (Plato's *Phaedr.* 971). See, further, Usener, *Gotternamen*, p. 248ff.; a somewhat different view is taken by Rohde, *Psyche*, i. 95, 153. As the shining, once incarnate, so the shining personages, with due respect, are expected to show favour, a reference to the 'good demon' sometimes implies nothing more than this (Vasay, in Pauly-Wissowa, iv. 2912). But the good demon also appears in circumstances which made him the ancestor-worship. In Boeotia a sacrifice to the good demon was made the occasion for the first tossing of the new must (Plut. *Qu. Conv.* iii. 7, 1, p. 655 E); and at Athens it was the custom after dinner to pour wine into a hollow shell in his honour (Aristoph. *Eq.* 83, etc.). At other times he is the personification of good fortune, as the protecting spirit of a community, a family, or an individual; in this sense, Nero arrogated to himself the right of being the chief god of the world (Cic. *Deo tert. * 4598. See Rohde, i. 254ff.

With the various manifestations of the good demon we may contrast cases where the influence of the spirit was pernicious. An evil spirit was often associated with a class of human beings.

A good illustration is afforded by the story of Euthymus the box-tamer, who fought with a 'hero' enthroned at Tenea in Italy. The story is told of the kindred of Odysseus' brother Ortelus or Aleyon, who had been slain by the people of Tenea, for resisting a sacrifice. According to the tradition of the ghost, his relatives were destined to be killed by the same people who were his wife, which was yielded by the townsfolk in order to save themselves from his wrath. The practice was of immemorial antiquity at the time when Euthymus chanced to come to Tenea, and, having entered the temple, saw the maiden, and fell in love with her. So Euthymus put on his armour, and, when the ghost appeared, without his assault and vanquished him; and the hero, driven from the land, plunged into the sea, and was never seen again. Pauly, who tells the story (vi. 6, 7, 11), as well as other authorities (Strabo, p. 252; *Suid.* s. v. *Euthymos*), had seen a picture illustrating the event which he records, and, in the course of describing it, he quaintly remarks: 'The ghost was a horrid being, and the whole appearance was most dreadful, and he wore a wolfskin.' The ghost-idea is less prominent in the story of the demon of Anagryus, one of the Athenian demons, who destroyed a child and of a neighbourhood peasant for trespasses committed on his command (Suid. s. v. *Anagryios daimon*).

Yoshio (Op. 159, 172) distinguished between 'heroes' and 'demons,' and later philosophical speculation treated demons as belonging to a higher grade of dignity (Plut. *de Def. Or.* 10, p. 415 B). But in stories like the above the two terms are used without distinction; and heroes as ghostly beings were considered so dangerous that persons passing by their shrines were warned to keep silence, lest they should suffer injury (Herodotus, x. 96). It is clear then that a hero is incapable of conferring blessings, and is only powerful to work ill, is enwrapped by Babrius, *Fab.* 63.

Other evil demons are represented as specially attached to an individual. Thus, the dread and strange vision of monstrous and pernicious shape, which appeared to M. Brutus in his last campaign announced itself to him as his evil demon (Plut. *Brut.* 26). Or an avenging demon may be the inspiration behind a plot to apply public crimes or a particular family, as when, in the *Agrapha* of *Eschylus* (1477), after the murder of her husband, Clytemnestra boasts that she herself is the incarnate demon of the Pelopids, 'so gross with over-grown flesh.' In such capacity the evil demon often bore the special title of 'Alastor;' and in the *Pers.* (357) the slave Simeus, who entrapped Xerxes into a fatal manoeuvre, so that he lost the battle of Salamis, is described by the Persians as the Simeus of their ·literary' demon. In the same manner the Chaldean *sorcerer* is employed as an *alecto*. Sophocles, in referring to an actual case, was not possible for any one but a madman, does not hesitate to say: 'Who would choose this, unless madamid by *aegis* (v. 684) and *daimon* (v. 954) *Partheniac varit* (Evel. *253).* It would be easy to multiply instances where demonic agencies are made responsible for good or evil fortune; and it is not surprising that the prevalence of such opinions opened the door to chicanery and imposture. And so the demons of Nero and his companions became the ventriloquist (Tit. 1475, *Sertorius*), who, by giving utterance to his oracles in a feigned voice, persuaded his hearers that they were the pronouncements of a demon lodged within his own breast. (Aristoph. *Eq.* 1189; Plut. *Def.* 247 C, and the scholi.) This proceeding corresponds exactly with the methods of savage magicians, as reported by E. B. Tylor in his article on 'Demonology' (*EB* vii. 63).

The notion of the tribal or guardian spirit, which watches over a man from his birth, directs his actions, and may be either friendly or hostile, was widely entertained among the Greeks. It is best expressed in the famous fragment of Menander (550 K.). 'To every man at Athenian birth a demon is assigned to initiate him in the mysteries of life.' This is not a literary fancy, but a popular opinion: 'There are many who have a crean soul, but a good demon,' says Theognis (161). Or e may appeal to Findar, a witness of a very different type (Pyth. v. 122). 'The mighty purpose of Zeus directs the demon of those whom he loves' (see W. Headlam, in *JTh.* xxxii, 1903, 204; Rohde, i. 316; Usener, 256). But, in regard to the force of particular passages, there is room for disagreement. The word *daimon* is used in such a way that it is often difficult to seize its exact significance in a particular context. Thus, besides bearing the special meaning with which we are now concerned, it may be employed either (i) in a sense a little more restricted so that it is distinguishable, if at all, as expressing the Divine power manifested in action rather than the Divine personality as an object of worship; or (2) in the abstract sense of 'demonizing.' Thus, the abstract and the concrete meaning, with a view to the selection of an English equivalent, is unlikely that to a Greek the word ever became so colourless as the tr. 'fate' or 'destiny.' Such that this was the original sense, as has been suggested in recent times (Gruppe, *Gr. Mythol.* 901, n. 4; see, however, Usener, 292), is hardly credible.

We have seen that the belief in the separate existence of the soul after death leads to the assumption that the souls of the dead are powerful over the living, and that other potencies of a similar character, spirit-like but not souls, exist independently, they are identified with the earth. A further step is taken when these demons are regarded as capable of entering into and possessing human bodies (Gomperz, Greek Thinkers [*Eng. tr.* 1901], ch. i. §§ 5, 6). This may be illustrated by the various instances in which the human soul is represented as permanently or temporarily identified with the Divine being whose power he assumes. Hermes became incarnate in the ministrants at the oracle of Tophonians at Lebadea (Pausan. ix. 39, 7), Buceches in the mystic (school,
on Aristoph. Eq. 408). Similar is the inspiration drawn from the chewing or eating of magic substances, such as the laurel leaves sacred to Apollo (Soph. frag. 811, etc.), or the honey which inspired Thryse on Parnassus (Soph. frag. 172), and Zephyrus (Soph. frag. 888, with the present writer's note). The demon which took possession of a man's body was sometimes conceived as a fiery spirit, which raised the dead from their beds of fever. Homer's fiery emblems of love (Iliad, 840, 9, 7), which perpetuates the names of its victims with a feverish ecstasy. Hippocrates found it necessary to combat the superstition that epilepsy is due to some god—Poseidon, Apollo, Orcus, or Hecate—having taken possession of the sick man (I. I. 1, 592 F). Phaedra's wasting sickness is attributed to the chorns in the Hyppolytus of Euripides to possession by Pan, Hecate, the Corybantes, Cylene, or Dictynna (141—147); and the then illness of Glauce, described in the Medea, was thought by those present to have been caused by the anger of Pan (1172). See also Usener, 294.

2. In the classical age.—The Olympian religion, in which the possession which we receive from Greek literature about the ordinary beliefs of the classical age, is a composite structure, largely built up by the transference from past generations of elements on which time had worked, an essential change. The demon passed into gods; the shadowy gods became definitely conceived personalities. A good illustration of this process may be taken from the development which can be traced in the notions entertained of the Naiads, Dryads, and Nymphs. Dryads and Naiads owe their origin to the fetishism which believes that every natural object is endowed with a living spirit. In course of time the spirit is separated from its environment: the Dryad, for example, inhabits the oak, but the oak itself is no longer animate. But the indwelling spirit has not yet become immortal; the Dieydad cannot live the oak (Hom. h. Aphrod. 257; Apoll. Rhod. ii. 481). A later stage has been reached when the ideas are more personal. Dryads were summoned by Zeus to join the concave of the immortals (II. xx. 7 ff.). We need not pause to illustrate the process by which a tribal deity has been elevated to national dignity, or a god with limited powers has merged his identity in the attributes of an Olympian. Other demons have taken subaltern rank in the celestial hierarchy, as when the Corybantes are classed as the attendants (περιθανομε) of Rheia (Strabo, 472), and the Satyri attach themselves to Dionysus. Euryonymus, a grisly demon who ate the flesh of corpses, was painted by Polygnotus among the inhabitants of the lower world; he was blue-black in colour like a carrion-fly, his teeth were bared, and he was sitting on the skin of a bull (Pausan. i. 28. 7). Dionysus was sometimes attended by Akrotos, the potent spirit of the unmixed wine (Pausan. i. 2. 5); and Aphrodite by Typhon, perhaps the spirit of good luck, not unlike our Puck or Robin Goodfellow (Gruppe, 533, n. 2). Even the hell-hounds of Hecate are recognized as evil demons (Euseb. Prep. Evang. iv. 23, 7, 8).

It has recently been contended (Farnell, CGS v. 1909 444) that the personification of abstract ideas and of the spirits claiming our veneration and worship is to be explained as due to the development of mankind into a primitive habitat of mind to any outbreak of excessive emotion. Typical cases are quoted from the ceremoinal observances paid in various parts of Crete. (W. C. 10, 17. 1; Plut. Cleomen, 9). If the suggestion is correct, it throws a remarkable light upon the development of Greek psychology. It is easier to recognize primitive ideas in the delification of Madocas (Pausan. vii. 24. 1) and Hunger (Plut. Qu. Conn. vi. 1, p. 404 A). The Madocas is supposed by Farnell to be a god under another title, as producing frenzy in their victims. But Hunger is hardly to be explained as the concrete embodiment given to the abstract idea of the deities in the Aetos. It is extraordinary that the failure of the crops through drought, and the wasting of the flocks and herds through disease, should have given rise to the fragible testimony to the operation of a malignant and supernatural power. In order to avert such a calamity, an annual sacrifice of a demon with the hero in the character of a slave, who was beaten with rods of willow to the words of the chant, 'Out of the fire and blazing flame, and out of fever and health!' took place at the town of Chersones in Bosporus. Phalaris, in the passage quoted above, tells us that he had himself performed the ceremony when holding the office of the chief magistrate. For its significance, see Frazer, GB 7, 1900, ill. 1916.

Again, as the crude fancies of primitive superstition ceased to correspond with advancing enlightenment, they tended to gather round them the details of legendary adventures, and to become associated, in the record of a mythical past, with particular localities or heroic figures. Thus, the ravening monster, compact of indigenons stories of a destructive dragon fused with Oriental or Egyptian elements, was localized in Boeotia and connected with the story of Clytemnestra. The Harpies or 'Snatchers' (Hom. Od. xiv. 571), another composite notion in the evolution of which wind-demons and death-angels had taken part, survived ultimately for their share in the punishment of Pandare, and the story of their descent from the voyage of the Argonauts. They are nearly related to the Erinyes and the Sirens—both chthonic agencies; but, whereas the belief in an avenging spirit punishing homicide survived longer, and has preserved itself as a potent spiritual force, the Sirens soon passed into the region of fairy-land, and were remembered chiefly from Homer's description of them in the Odyssey. The Gorgons—also under-world powers and storm-spirits, and in the tradition except through the adventures of Perseus.

Besides these, there was a whole host of sprites, bogeys, and hobbgoblins which remained nearer to their primitive associations. Their names are generic rather than personal, and they were rarely dignified by a connexion with some heroic tale. Such was Eunpasia, a demonic apparition that appeared sometimes at mid-day and sometimes by night. She had the power of continually changing her shape, but the children who met her were turned to stone by the donkey's leg which was her constant attribute (see Dem. xviii. 130; Aristoph. Ran. 289 ff.). Gello—a name which has been compared with the Arabic ghol—was a spectre which kidnapped children. Almost unknown to literature, the name lasted through the Middle Ages, and survives in some localities down to the present day (Maas, in Pauly-Wissowa, vi. 1060). Somewhat more familiar to us is Mormo, a bogey of the nursery, invoked to frighten children (Theor. xiv. 40; Xen. Hell. iv. 4. 17)—perhaps a hypocoristic form of Mormolyske—a werewolf (μορμολυκα, Plut. Phaedo, 77 E, etc.). Another bogey-name is that of Lamia, who was said to have the remarkable power of taking out her eyes and putting them back at pleasure. She was also a kidnapper and murderer of children, and is sometimes identified with Mormo and Gello, as if these were different names of the same monster. But in Lamia there are more traces of a definite personality; and she has almost become a mythical heroine, as a Libyan queen beloved by Zeus, whose children were killed by Hera, and who in consequence revenged herself by killing other children (see Dalynwys ap. school. Aristoph. Pera, 1397, 435, 14). The name Acro and Alphito—words of doubtful meaning which perhaps signify 'booby' and 'grey-head' (Chrysipp. ap. Plut. de Stoic. rep. 15, p. 1040 B). Elphitides was the name given to the spectre in-
DEMONS AND SPIRITS (Greek)

Early Greek Philosophy, 1892, p. 571; Rolfe, ii. 178 ff.

Socrates was in the habit of asserting that he was frequently impeded by a Divine sign from taking a particular course of action. This customary sign was imparted through the medium of a warning voice, and was manifested on trifling as well as on important occasions (Plat. Apol. 31 D, 40 A). The deduction that Socrates intended to imply is that he was guided throughout his life by a familiar spirit, though at one time he held, has in recent years fallen into disfavour (see Zeller, Socrates (Eng. tr. 1865), p. 82 ff.; H. Jackson, in JHS v. (1875) 222 ff.). But, whatever may have been the real intention of the sign, it can hardly be denied that, in a society where the belief in the existence of demons was widely prevalent, many of his hearers the Divine sign must have supposed it was sent by an agency.

Plato, in this sphere as elsewhere, has gathered up the threads of previous speculations and woven them into new combinations by the play of his philosophic fancy. In accordance with popular tradition, he seems to have regarded the demons and the deities of the ancient religion of Greece as the same and that the demons are the bastard sons of gods by nymphs or sires of some other sort (Apol. 27 D). The demons are of an airy substance, inferior to the heavenly ether, and serve as interlocutors between gods and men (Epinom. 984 E). Love is a great demon: like all spirits, he is intermediate between the Divine and men. He conveys to the gods the prayers and sacrifices of men, and to men the commands and replies of the gods (Symp. 202 E). This recalls the Pythagorean doctrine as previously quoted, and Proclus says it is also Orphic: modern critics have generally held that it is a mode of reconciliation between the old theology and the new conception of an inaccessible god (Gruppe, 1054). Plato accepts the popular view of demons as identical with the souls of the dead: when a good man dies, he is honoured by being enrolled as a demon, which is only another form of the same, 'the wise one' (Cratyl. 398 B). Every man has a distinct demon which attends him during life and after death (Phaedo, 167 D, Rep. 617 D). Each demon has his own allotted sphere of operation, and watches over his appointed charge like a shepherd over his flock (Poli. 271 D, 272 E). The recapitulated passages are drawn from the narratives of the myths with which Plato diversified his more formal arguments, and only the true mind is to be sought rather in a passage of the Timaeus (90 A) in which, with a reminiscence of Heraclitus, he declares that God has given to each man, as a guiding genius, the personification of his soul within us, the rational faculty which dwells in the summit of our body and lifts us towards our celestial kindred.

Aristotle is reported to have assented to the belief that all men have demons which accompany them during the whole period of their material existence (frag. 193 (Rose)); but it is impossible to say whether he attached to it any philosophical importance. Xenocrates agreed with the statement in the Timaeus, that the soul is the guardian spirit (Arist. Top. ii. 6. 1122, 37); and he also maintained the existence of a number of good and bad demons (Zeller, Plato, et al. (Eng. tr. 1876), p. 593). But, the school which did most to establish a belief in demons as a part of the material equipment of its students was unquestionably the Stoic. The Stoics sought with unwearyed industry to bring every conception of popular religion into connexion with their own theology and their doctrine of pantheism enabled them without difficulty to find a place for the demons within their system. They were firmly convinced of the existence of demons, which, having like passions with men, and responding to their desires and fears,
DEMONS and SPIRITS (Hebrew)

LITERATURE.—The main facts are summarized in the articles, e.g. 'Dulamon,' by von Sybel, in Roscher, i. 355, and by Waser, in Pauly-Wissowa, v. 270, where references are made to less accessible of the special treatises. See also R. Heinze, ' Xenocrates,' Leipzig, 1877, pp. 207-216; Tamburini, de Antiquorum Demonomicon, Ossea, 1899. Much useful information will be found in O. Gruppe, Gr. Mythol. und Religionsthiere, Munich, 1897; J. E. Harrison, Homeric Gods, and O. Gr. Religion, Cambridge, 1899; A. Dieterich, Nekyia, Leipzig, 1899, esp. pp. 46-62; H. Usser, Gotzschatzen, Bonn, 1896, esp. p. 392 ff; E. Rolinde, Psyche, Tubingen, 1905.

A. C. PEARSON.

DEMONS and SPIRITS (Hebrew).—It will be most convenient to divide the material into three periods: pre-exilic, exilic and post-exilic, and Apocryphal.

I. THE PRE-EXILIC PERIOD.—1. In the early Heb. poems there is but one allusion to an angel, and none to spirits or demons. The 'holy ones' in Dt 33, later supposed to be angels (cf. Acts 7, v. 59; Gal 3, v. 29), were probably not a part of the original text (cf. Driver, Dendrocriny, Edinburgh, 1895, p. 392 ff). In Jg 5 v. 20 we read: 'Curse ye Meroz, saith the angel of Jahweh.' Probably the angel was a manifestation of Jahweh, as in the J document.

2. Our next earliest evidence is in the J document. In Gn 33, v. 15, cherubim are said to have been the guardians of Eden's entrance. There is reason to believe that these cherubim were the same beings which we have enumerated, and partly by the contact with Oriental civilizations, which had become continually more intimate since the beginning of the Hellenistic period (Robude, ii. 384; Gruppe, i. 1460). Since the demons were regarded as an unceasingly active in the service of the gods, they were assigned a definite place in the celestial hierarchy of the Neo-Platonists, as subordinate to angels and archangels. Prophecy, Eph. ii. 20, the demons are first associated with αγγελος by Philo, according to Dieterich, Nekyia, 61). Hence, as part of the machinery by which the apologists of paganism sought to shore up their tottering edifice against the assaults of the Christians, they appear with considerable frequency in the controversial writings of the early Fathers of the Church.

It is not within the scope of this article to examine the various methods employed by Greek mythology, and particularly those of the Milesian school, in the composition of the ritual drama, which might be at hand on important or ceremonial occasions; similarly, the use of iron was effective against demonic influence (Kies, in Pauly-Whip). Whether this is not so however, the desire to be on good terms with evil demons is held to be the leading motive in such various rites as sword-dances, the ploughing with magic animals, the shaving of the face with chalk or meal, or the dressing of a boy in girl's clothes (cf. Orph. viii. (1895) 243), it must be remembered that such hypotheses are far removed from certainty. The debatable evidence will be found collected in Gruppe, 894 ff.

3. Vom deuten in connexion with the Orphic cults, see ORPHISM.
Jehovah Himself, who has come upon some special mission. Perhaps it was regarded as a kind of partial manifestation of Jehovah, but at all events there was no clear line of distinction between Jehovah and His angel. These manifestations of Jehovah also regard as beautiful things, so that, when it was desired especially to praise a man, one said to him: 'Thou art good in my sight as an angel of God' (cf. I S 9:29, 2 S 14:17-20 19:7). At the same time, the term melak of the Talmud, to designate a kind of apparition (see I S 14:16-19, 14-16, 18, and cf. I K 29:2, Jer 27:3). In the J document other beings of the Divine order besides Jehovah are represented as real. These are called 'sons of God' (נָחַלְתָה) in Gn 6:4 and E. In both of them to have taken human wives and to have begotten the heroes who lived in olden days. These beings are not called angels, and do not appear again in pre-exilic literature.

3. In the E document the same conditions of things prevail, though here angels appear at times in numbers. In Gn 21:1 an angel called Abraham out of heaven to prevent the sacrifice of Isaac. The present text calls him the 'angel of Jehovah.' It is thought that in the original form of the text he was called the 'angel of God,' as in Gn 21:17 Jehovah moved forth the angel of God. The question of the 'angel of God' is also of considerable interest. It may be that he was an attendant of the Deity, and so closely associated with God that he said: 'This is none other than the house of God.' In Gn 31:11 the servant of Laban was also called his 'angel,' but we are told that he said: 'I am the God of Bethel.' The angel was, therefore, not represented as a personal messenger of God, but as an attendant of Jehovah, as Jacob met Jehovah and he said: This is God's host.' Here apparently the angels were a manifestation of God and of His attendant company of spirits. In Ex 13:14 the 'angel of God' who had gone before the camp of Israel removed and went behind. This angel performed the same function as the pillar of cloud in the J document (cf. Nu 14:10). That the 'angel of God' of Gn 31:11 practically identical with God is shown in Ex 23:20, where God declared that His 'name' was in the angel that should go before Israel.

There is, then, no radical difference of conception between the J and E. In both of them the angel of the Deity is usually a manifestation of the Deity Himself, though in one instance (Gn 22:14) the angels are apparently the spirits who accompany God. In Jg 2:2 (a passage which G. F. Moore [JBD, New York, 1895] attributes to E), God is said to have sent an evil spirit against Abimelech and the men of Shechem; and similarly in I S 16:16-19 19:18 (a passage which Budde attributes to J) an evil spirit from God is said to have come upon Saul. The 'spirits' of the Hebrews were, therefore, like the 'angels' of the Egyptians, who were placed in the tomb of Israel's dead (Isa 44:22). In Jg 13:3, where Jehovah is thought of as surrounded by a host of spirits. These spirits were as yet undifferentiated; they had no moral character; they were neither angels nor demons, but took on their character from the nature of the tasks which they were given to perform. Jehovah Himself was responsible for whatever was done; He rewarded Ahab to his death; it was at His bidding that one of the spirits became a lying spirit in the mouth of Ahab's prophets to accomplish this end. The spirits of Jahweh's court were not the only spirits in which the Hebrews of the period believed. In 2 K 20:13 and 6 reference is made to a kind of horsemen who addressed the king, who were regarded as spirit defenders of Israel, for one passage relates that, when the chariot of fire took Elijah away, Elisha exclaimed: 'The chariots of Israel and the horsemen thereof!' and the other represents them as the defenders of Elisha from a foreign army.

5. There are few other references to angels or spirits before the Exile. An early Epiphramite narrative (I K 19:19) tells us that an angel touched Elijah and awakened him. Later apocryphal narrative tells us twice that an angel of Jahweh spoke to Elijah (2 K 1:15, 18), while another, also late (I K 18:9), tells that an angel spoke to another prophet. In 2 K 19:11-15 13-17 we are told that an angel of Jehovah smote the Assyrians. Pre-exilic prophets make almost no reference to angels, although Hosea (12) declares that Jacob 'had power over the angel.' This is a reference to the 'man' of Gn 32:28, and is the only occurrence of 'angel' in a pre-exilic prophecy. The literary form of angels. One Deut. editor refers to the 'angel of Jehovah' (Ex 33), but he was influenced by E.

6. One other class of supernatural beings of the time before the Exile are the spirits, viz. the seraphim. Our knowledge of them is gained from one passage only, Is 6:1-7: In his vision, Isaiah saw Jehovah, above whom the seraphim were standing. Each one had six wings, and they constantly uttered the tripling. At the sound of their voices 'the foundations of the threshold were moved.' Finally, it was one of these who took from the altar a live coal and touched the prophet's lips. It is clear that, like the cherubim, the seraphim were not angels (i.e., messengers), but were attendants of Jehovah. Like the cherubim, they are composite figures, and later Jewish thought placed them with the cherubim in Paradise (cf. En. 61:17, Targ. En. 29:21). Various explanations have been given of the form of the seraphim which have been offered. (1) An old explanation, now generally abandoned, derived seraph from the Arab. sarrīfī, 'to em- blish, to beautify.' This derivation is probably preferable. (2) Delitzsch and Hommel have connected it with the Assyrian seriš, 'serpent,' the 'serpents' of the angels of Jehovah, the name of Nergal, a sun-deity; but, although an old syllable says that this was the epithet of Nergal in the 'Westcoast,' so such deity has appeared in any real Canaanite source, and is consequently improbable. (3) Cheyne (EBI, art. 'Demons') has, under the influence of the previous suggestion, attempted to connect the name of the god Beləf, whose name occurs in a Phoen. inscription (CTIN 258). This he equates with sārāph, supposing that a word for 'serpents' was in use in Hebrew from a very early period, and that this word was connected with the seraphim with the Egyptian crepis found, for example, in a 13th dynasty tomb at Abydos. These crepis were winged, were guardians of the grave, and in denotive were called še'el (cf. R. Friedmann, Gesch. der Phöniz. Berlin, 1889, p. 177 f.). (4) Probably the true explanation connects the seraphim with the fiery (šerāpāh) serpents of Nu 21:9, and supposes that the seraphim were primarily serpents. This view is supported by the fact that Heh. tradition gave the serpent a prominent role in Paradise (cf. Gn 3), that they worshipped a serpent-god down to the time of Henoch (H 15:4), that this serpent was at Jerusalem a well called the 'Dragon's fountain' (Neh 2:12), probably the modern Efrîn, that a brazen serpent was found at Gehenna, the pre-exilic Hebrew hesed. T. Macalister, Bible Side-Lights from the Mound of Gezer, London, 1896, p. 70), and that on the vase of Neubronner there is a serpent associated with the cherubim in Paradise, as in the Enoch passages cited above serpents are associated with the cherubim. (5) In course of time the scars of Paradise became more prominent as the attendants or guards of Jehovah, and were given wings, etc. to make them more powerful.

In pre-exilic Hebrew thought, then, Jehovah had three classes of attendants—cherubim, spirits, and seraphim. The cherubim and seraphim were guards of Paradise and attendants of Jehovah. The spirits were His couriers, and might be sent on missions by Him. They played, however, a very small part. Jehovah Himself was thought to appear in special manifestations to accomplish His purposes. Such manifestations were called the 'angel of Jehovah.' They have been connected with the , and the smited Leviathan as a great dragon or demon. In Dt 32:9 Hebrews are said to have sacrificed to šēdēn, not to Eloah (God). Shēdēm was understood by the translators of the Septuagint as
demons, but, as it is made parallel with 'foreign gods' (cf. v.9), and is the equivalent of the Assyr. šedu, or bull-deity, it is probable that it is used here as the name of a foreign deity. The fact that the root ṣēdī became in later Judaism the general term for 'demon' (cf. Jastrow, Dict. of the Targ., Talmud, and Mid., New York, 1903, p. 1539ff) does not prove this inference wrong. If this view is correct, Hebrews no difficulties whether we date Dt 32, with Ewald and Dillmann, in the reign of Jeroboam II; with Kuenen and Driver, about 630 b.c; or, with Steuerangel, in the Exile.

There are no clear references in pre-exilic literature to other demons, but it is probable that the Hebrews of the period believed that demons inhabited waste places, and that they endeavoured to propitiate them. The sacrifice to the wilderness demon Azzaz (q.v.) (Lv 16) is clearly a survival from pre-exilic days, and it is probable that Lilith (Is 31:4) was an old wilderness demon.

11. EXILIC AND POST-EXILIC CANONICAL MATERIAL. In Ex 27, Ezekiel's temple does not occur, though in 9th. aft. and in 40th. a supernatural man appears who performs the functions of an angel. In the former passage he directs the marking of isolaters for destruction; in the latter he bears Jehovah's command which is the new sanctuary. The elder belief in spirits survives to some extent in Ezekiel. In 22:3-7 4th. a spirit' is said to have come upon Ezekiel and filled him with ecstatic inspiration. This spirit was one of the members of the angelic court, who is given such a vivid description (cf. Toy, SBO, New York, 1899). This usage of 'spirit' is found only in the earlier chapters of Ezekiel, and in 8th. is made synonymous with 'the hand of Jehovah. In 11:25, the prophet for the first time, in the division of angels, describes more nearly the spirit of Jehovah, and does not seem to denote a separate entity of a lower order. It inspires the prophet to refexion rather than ecstasy. In other parts of Ezekiel 'spirits' do not occur.

2. In Deutero-Isaiah angels are not mentioned, and in Trito-Isaiah only one reference to an angel or spirit is found, viz. the 'angel of [Jehovah's] presence' (cf. v.1). The term occurs in a poetical reference to the angel mentioned in Ex 23:20, of whom it was said, 'My name is in him.' The term 'presence' or 'face' seems to be borrowed from Ex 33:20, where Jehovah says to Moses, 'I will be with thee... and I will set my face against them.' The reference in Isaiah really betokens a post-exilic literary survival of a pre-exilic idea.

3. In Zechariah the 'angel' in the function of messenger appears as a fixed idea. The angel talked with the prophet, and in this way Zechariah received all his prophetic messages (cf. Zec 1:12. 13. 14. 15. 16. 17. 18. 19. 25. 36. 4-5). The angel is here clearly an intermediary between God and man. Zechariah never is said to have seen God. In Zechariah, too, we meet for the first time, in the division of angels into ranks. In 2:4 one angel is clearly the commander of another, and sends him on a mission. The 'angel of Jehovah' appears here also as a kind of guardian of Israel, since he protects the nation, the representative of the nation. In 11th. and 4th. the angel of Jehovah appears as a kind of Grand Vizier among the other angels. Possibly this early differentiation of angels into ranks was due to Persian influence, though this seems improbable, for, when this property was supposed only twenty years had elapsed since Cyrus's conquest of Babylonia and Palestine.

4. In the Book of Job we have different strata. The prologue is older than the poem, and may have been composed before the Exile. In it Jehovah is represented as surrounded by a court of supernatural beings. These are called brĕn ha-šâ'elôthim, or beings of the Divine order—the old name employed in Gn 6:4. These beings are pictured as free to walk through the earth wherever they will, but upon appointed days they gather to pay their court to Jehovah. Satan is still a member of this group, though he has become offended and has lost his faith in the existence of disinterested virtue. He is permitted to angels upon a mission of experiment—an action which proves most painful to his victim. The whole conception is quite akin to that of 1 K 22. In the poem, which is later than the prologue, little is said about angels, and that little is of interest. In 5 the possibility of angelic intercessors is referred to. The angelic beings are here called 'holy ones.' In 4:8 and 15 these 'holy ones' are said to be less than Jehovah's wisdom, and this little is of interest. In 5 the possibility of angelic intercessors is referred to. The angelic beings are here called 'holy ones.' In 4:8 and 15 these 'holy ones' are said to be less than Jehovah, but much holier than men. The 'angel' of 33:8 (RV) is better rendered, with the margin 'messenger,' since Kiliub is referring to himself and not to a heavenly messenger (cf. Barton, Com., on Job, N.Y., 1911). In 38 the 'sons of God' of the prologue are termed 'angels,' and are identified with the morning stars.

5. In the Psalter, angels are messengers of either good or evil. Ps 34:7 declares: 'The angel of Jehovah encampeth round about them that fear him, and delivers them.' Ps 91:11 mentions the angel that lets His angel chase and persecute the wicked. Similarly, Ps 78:48 declares that God cast upon the Egyptians 'the fierceness of his anger, wrath, indignation, and trouble, a band of evil angels.' Hps 1 K 22:22 gives an instance of the wrath and indignation of Jehovah. Ps 104 reverses in a way the process, declaring: 'He makes his angels winds.' The angels as guards are again referred to in Ps 91:11: 'He shall give his angels charge concerning thee, to keep thee in all thy ways.' They will hear thee up in their hands.' Ps 105:12 and 148 call upon angels as well as men to praise God. Ps 89:7 implies that God is surrounded in heaven by a council of angels. This is also implied in Ps 103:21 and 148, where the angels are spoken of as the 'ministers who do God's pleasure,' and as 'his host.' In Ps 8, where the present text, in speaking of man, reads: 'Thou hast made him little less than God (elōhim), the reference is probably to angels, and in the parallel text, there was, perhaps, 'sons of God' (brĕn ha-šâ'elôthim).

6. The Priestly document contains no reference to angels. It conceives of God as far away, as an 'Everlasting Father.' Also as so powerful that 'his will shall prevail with thee.' The reference in Isaiah really betokens a post-exilic literary survival of a pre-exilic idea.

7. The same is true of the Books of Chronicles, which are closely dependent upon P for their point of view. The Chronicler mentions angels in two passages only, 1 Ch 21 and 2 Ch 32:2. The former passage is dependent on 2 S 24, and has taken over the angel who inflicted the punishment for David's census (see vv. 8-11. 12. 13. 14. 15); the latter is dependent upon 2 K 19, and has taken over the story of the angel who destroyed Sennacherib's army.

8. Angels do not really appear in the Book of Ecclesiastes. The word 'angel' is found, it is true, in 5:2 (Heb. 5), but it is probably a reverent way of referring to God Himself (cf. Barton, Ecclesiastes, in ICC, 1909). The Chronicler had set the example for this practice, as written, 1 K 20:19, the will of Jehovah is, and has taken over the story of the angel who destroyed Sennacherib's army.

9. In the Book of Daniel the belief in angels re-appears, and they are thought to be exalted far above man (see 3:28 10:6). In 3:28 an angel comes in human form to deliver the three children from the fiery furnace (cf. v.28), and in 6:22 God's angel
is said to have stopped the mouths of the lions.

The conception of the division of angels into ranks, which was found in Zechariah, re-appears in an accentuated form in Daniel. Each nation apparently has a 'prince' or archangel detailed to look after its interests, so that there is a 'prince of the kingdom of Persia' (10:12), a 'prince of Greece' (10:20), a 'prince of Israel' (11:1). The last-mentioned is Michael, who was 'one of the chief princes' (10:12). Possibly this conception is also found in Is 37:35, which dates from about 335-333 B.C. In Daniel, too, we come upon a new feature of the archangelic period: the angels, or at least the archangels, begin to have names. In addition to Michael, already mentioned, 'the man Gabriel' (Gabriel means 'hero of man') appeared to impart with Daniel (3:28; 2:18). The giving of definite proper names to angels—a feature very common in some of the apocryphal books—marks another step forward in the evolution of the conception.

10. Taking the post-exilic time as a whole, some interesting general facts with reference to angels may be gathered. They are called by a variety of names: 'sons of God' (Is 44:4, Jb 38:7, Ps 80:5); 'angels of the mighty' (Ps 3:1); 'reiim', i.e. 'watchers' (Dn 4:28); 'Holy ones' (Zoe 14, Ps 80:5); and 'princes' (Dn 10:30, 32). Although angels are once identified with stars (Job 38:7), there is no attempt in the canonical books, such as appears in some of the apocryphal angels, to define the nature of angels or to tell the substance of which they are composed. The term 'host of the height' applied to them in Is 24:20 is, no doubt, a modification of the pre-exilic phrase 'host of heaven,' which was applied to the stars. During the last years of the Jewish monarchy these had been worshipped (see Jer 8:2, Zeph 1, Dl 49); they were then considered as gods, and the prophets opposed their worship. As the close of the Exile drew near, Jahweh was declared to be supreme over them (Is 45:12; cf. 40:29), and in Neh 9 they are said to worship Jahweh. Apparently it was believed that this host was not subordinated to the position of subordinates and worshippers without a struggle (see Job 36:7). It is probably in 27 the dragon Leviathan, which, as shown below, is a name for the Bab. dragon Tiamat, suggests that the idea of a struggle was borrowed from the Babylonian Creation Epic.

It has been held by some that the division of angels into ranks and the belief in archangels point to the fact that the angels originated in the subjugation of other gods to Jahweh. The argument in favour of this view is strong. It would seem improbable that the development of archangels was due in the first place to Persian influence, for they appear already in Zechariah, when Persian influence was too new. The fact that in Daniel the different archangels are each the prince or guardian of a special nation is in favour of the origin suggested, for it assigns to them just the role that the national gods of the heathen world had performed.

The names of angels were various. They acted as Jahweh's court (Job 1:2) and as his council (Ps 89): they might be intercessors for men (Job 5), or guardians of the righteous (Ps 34), whom they bear up in their hands (Ps 90:14), Nu 20:21 (Ps). The archangelic role also pointed to their differences in the peculiar relationship of vocation to prophets (Zec 1:10, 11, 12, 13, 14, 15, Dn 8:10-12); they inflict punishment on the wicked (Ps 78); some of them guard the nations (Dn 10:24); and in general they do whatever Jahweh wishes them to have done.

Angels during this period were for the most part without names. There are only three exceptions to this: the 'angel of his presence' (Is 63), which, as pointed out above, is a poetic way of referring to a pre-exilic idea; and the individual angels Michael and Gabriel. These last appear in Daniel only, the latest book of the canon to contain any reference to angels. They are canonical examples of a tendency which is abundantly illustrated in the apocryphal books, to give names to angels and to attribute permanent characteristics to them. The name Michael, meaning 'Who is like God?', was a natural one to apply to an angel, though it had previously been borne by a number of men (see 2 Sam 20:12; 1 Ch 13:18; 2 Ch 21:1, and Ezr 8). Gabriel, as already noted, signifies 'man of God,' and was also a natural name to give an angel.

II. The Hebrew belief in demons belongs especially to the time of good—Satan—who has since held a large place in the world's thought. Some of these demons were believed to inhabit the deserts and to roam about at night (cf. Is 34:14). Like the fiqum of the Arabs, they were supposed to take on the form of wild animals. Wild animals and their pains had been taken to provoke some of these by sacrifices, and such unfriendly spirits now became demons in the commonly accepted view. Then, too, the old mythology had preserved the memory of ha-eltbim. It kept alive the memory of how some of these spirits had been commissioned in the olden time to bring men to destruction, and from this circle of ideas there was born a belief in an arch-enemy of good—Satan—who has since held a large place in the world's thought. Some of these demons were believed to inhabit the deserts and to roam about at night (cf. Is 34:14). Like the fiqum of the Arabs, they were supposed to take on the form of wild animals. Wild animals and their pains had been taken to provoke some of these by sacrifices, and such unfriendly spirits now became demons in the commonly accepted view. Then, too, the old mythology had preserved the memory of ha-eltbim. It kept alive the memory of how some of these spirits had been commissioned in the olden time to bring men to destruction, and from this circle of ideas there was born a belief in an arch-enemy of good—Satan—who has since held a large place in the world's thought.
Jahweh's permission, but his state of mind is thought to be a cause of regret to Jahweh. In consequence of Jahweh's concern for Satan and His desire to win him once more to a proper attitude, He permits him to make investigations in the heavenly court. But since Jahweh is by nature an adversary (cf. Gen. 3:1), in this narrative Jahweh is represented as ultimately responsible for the evil, but it is permitted for a good end—the scattering of the doubts which had invaded the angelic circle and embittered one of the controversial demons.

(b) In Zec 3 5 Satan appears to oppose the high priest Joshua before the 'angel of Jahweh.' The 'Adversary' (for such is the meaning of the name Satan) stands in the court of Jahweh as a public enemy, and the book of Hab. 2 20 shows how much the people of heaven thought of him, both in the universe of the God. Satan is here brought under a personal curse, and if He sees the glory of God, He may be destroyed by the word of God.

(c) The only other OT passage where Satan is mentioned is 1 Ch 21, where there is a further witness to the fact that Satan was now held to be responsible for the murder of Abel. The chapter gives an account of David's census of the people, and the punishment for it, and is dependent on 2 S 24; but, whereas it is said in Samnel that Jahweh said to David, 'Go, number Israel,' because He was angry with the people, it is said in Chronicles that Satan 'moved David to number Israel.'

Satan is clearly a development out of the group of spirits which in earlier days thought to form Jahweh's court, members of which were sent upon errand to mankind. Another demon who appears in one post-exilic canonical passage (Lv 16) is Azzazel (q.v.). The ritual of the Day of Atonement it is prescribed that a goat shall be chosen for Azzazel, that the sins of the people shall be confessed over him, and that then he shall be sent into the wilderness by a special messenger and turned loose (cf. Lv 16:10, 30). The goat is in reality a sacrifice to Azzazel. The ritual of this chapter is clearly a substitute for the sacrifice which was made in Azzazel was a wilderness demon, and probably the sacrifice was originally offered to him to propitiate him. It is, accordingly, a survival from a kind of worship of fear. The name 'Azzazel signifies 'entire removal.'

Another class of demons were so'irim, lit. 'airy ones' (RV 'satyrs'; marg. 'he-goats'), who, like Azzazel, were thought to inhabit wastes and ruins. Is 34:4, in a picture of the future desolation of Edom, says that 'satyr shall dwell there'; and Is 13:21, an exile passage, in portraying the desolation of Babylon, declares that 'satyrs shall dance there.' Just as the Arabs degraded the gods of the heathen to jinn and attributed to them some of the hairy characteristics of animals, so these satyrs appear to have been originally heathen deities (cf. W. E. Smith, Rel. Sem. 120 ff.). It is for this reason that Lv 17 prohibits, for the future, sacrifice to satyrs, implying in the statement that they were of sacrifice in the past. Similarly 2 Ch 11:15, in reproducing 1 K 12:26—the statement concerning Jeroboam's arrangements of priests for the high places—amplifies it by saying that he appointed 'priests for the satyrs and the ashchatim, the goat enchanter.'

The shédim which are mentioned in Dt 32:27 are once referred to in a post-exilic canonical writing, Ps 106:7, where shédim is a synonym for demons, the word really, as the parallelism shows, refers to the heathen deities of the Canaanites, whom some of the post-exilic writers made satyrs, as just noted. That it was the intention of the Psalmist to call them demons here is confirmed by the fact that both Talmud and Talmud shēdīn is the root used to designate demons in general (cf. Jastrow, Dict. p. 155s).

Is 34:14 mentions Lilith (RV 'night-monster') in connection with satyrs. It is probable that the name is connected with the Heb. root for night, and that Lilith was a night-monster or demon which was thought to lurk in desolate places.

The 'horse-leech' (adonig) of Pr 30:22 was perhaps a demon. While there was a large leech to which the name may be applied, it was also regarded by the Jews of later time as the name of a demon. This seems to be the case in the Targ. to Ps 12, which says: 'The wicked go round in circles like adonig, who suck the blood of men.'

In Ca 27:3 the Shammumei adjures the daughters of Jerusalem 'by the roes and hinds of the field.' These are here probably not simple animals, but faun-like spirits by whom, as by other supernatural beings, adoration could be paid.

In four passages (all exilic or post-exilic) a great demon or dragon called Rahab appears. She was surrounded by a host of helpers, but after a severe struggle she and her helpers were overcome by Jahweh. Then he who heeded Rahab in pieces, who pierced through the dragon?; Job 38:1 'The helpers of Rahab do stoop under him; how much less shall I answer him?'; Job 20:7, 9 He quelled the men with his understanding he smitteth through Rahab; by his breath the heavens are bright, etc.; Ps 89:40 'Thou hast broken Rahab in pieces as one that is slain; thou hast scattered thine enemies with the arm of thy strength.' It is long been accepted that the book of Job was applied, probably by the writer's art, 'Tiamat' in JAOS xv. (1890) that Rahab in those passages is simply another name for the Bab, primeval sea-monster Tiamat. She is, accordingly, here not a native Heb. demon. For the original picture of her and her helpers, see L. W. King, Seven Tablets of Creation, London, 1902, Tablets ii. and iv. Although Rahab is not native to Heb. soil, she plays a considerable part in post-exilic thought. Jahweh was naturally substituted for her, and was adopted among the Hebrews, and His worshippers magnified His power as they thought of the might of this terrible dragon of a demon.

In at least two passages this primitive Bab. monster was known among the Hebrews as Leviathan. In Job 38 Leviathan is evidently a mythical dragon capable of darkening the day, while in Ps 74:14 we read, 'Thou brakest the heads of Leviathan in pieces.' and vv. 10-17 go on to speak of the creation of the sun, the fixing of earth's bounds, and the making of summer and winter. In the psalm, therefore, we clearly have a reference to the Bab. Creation Epic, and it is probable that the passage from Job refers to the same monster. In Job 41 the crocodile is described under the name Leviathan, but in vv. 3-21 the description of the natural animal is mingled with elements drawn from a mythical fire-breathing dragon. It is probable, therefore, that Leviathan, like Rahab, was the Bab. Tiamat under another name.
demons which appear in the canonical literature were continued and heightened. There is, however, a great difference between them in this respect. Some of them, like Sirach and Maccabees, make almost no reference to angels. Sirach mentions only the angelic names, and in the Assyrian army (456), the writer of 1 Mac mentions angels only in referring to this event (78), while the author of 2 Mac refers to them only in saying that the Jews of the Maccabean time prayed that all calamities be sent to the Greeks, and one was sent to smite the Assyrians (cf. 11 15 16c). Similarly, the Wisdom of Solomon makes no reference to angels except that in describing the Exodus it declares that the word of God was an active angel of vengeance (cf. Wi 16 1). In some of the Enoch apocalypses, on the other hand, belief in angelic and demoniacal agency is carried to great length. This is especially true of the oldest Enoch apocalypse (Eth. En. 1 36), of the Parables (Eth. En. 37 71), and of the Sin of Enoch. Other works make a more moderate use of this belief, although it clearly underlies all their thinking. This is true of Tobit, the Testament of Buddha, the Apocalypse of Baruch, the Greek additions to Daniel, 2 Esdras, and the Book of Jubilees. The beliefs continued and were in some respects intensified, but, in proportion as the writers came under the sway of Greek rationalism, they found it necessary to give the need for such supernatural agencies. The author of Jubilees, in re-telling the story of Genesis, employs angels only where they appear in that book.

In certain writers the old tendency to attribute a spirit to everything still manifests itself. The author of the Enoch Parables speaks of a spirit of the sea, of hoar-frost, of hail, of snow, of fog, of dew, and of rain (Eth. En. 69 92), while another spirit is said of stalks (38 4 39 2 and passion). The author of Jubilees speaks of the spirits of fire, wind, darkness, hail, snow, frost, thunder, cold and heat, winter and summer (Jub 2), but he calls them angels at the same time, and he also terms the ‘pitchers’ (an older name for angels) the ‘fathers of spirits’ (106). These two agree in making spirits of the phenomena of Nature. In a different vein from that, in the Testament of the Twelve Patriarchs, we find an entirely different set of spirits. These spirits are in reality demons, and are under the direction of Beliar, the prince of demons (see art. BELIAL). Thus, we are told that there are seven spirits of darkness (Hez. 29). These seven are said to be the spirit of fermentation, of insatiability (resident in the belly), of fighting (resident in the liver and gall), of obsessionalness and chicanery, of pride, of lying and fraud, and of injustice with which are the acts and acts of rapacity (cf. Reuben 3 24, Simeon 6, Judah 29, Dan 5, Gad 4). Later, additions make the senses and sleep spirits of wickedness (Reuben 2 3). The function of these spirits was to lead men into various sins, and, after they the done so, to take vengeance on them (Levi 3). The evil spirit which a man had served was said to await his soul as it left his body at death in order to torment it (Asher 6). In most of the Apocryphal books the spirits have passed over, and rationalistic thought, that central idea of the 1 2.

Through literary influence there is a slight survival of the Cherubim and Seraphim of an earlier time. They, together with the Ophanim (serpent-beings developed out of the original Seraphim), are said to be holy angels (cf. Eth. En. 61 17 17, Slav. En. 20 21); but these beings play no important part in the thought of the period.

3. It is far otherwise with the angels, who are declared to be immemorial (Apoc. Bar. 59 1). This clearly represents the view of several of these writers. Thus the author of the Enoch Parables declares that the Most High is accompanied by 1000 x 1000 and 10000 x 10000 angels (Eth. En. 68 72). Angels were destroyed by the angel of fire (En. 68 72), which everything was performed. Thus, it is said that myriads of angels accompany the sun on his course (Slav. En. 11 24), and that 400 take the sun’s crown to God at sunset, and return to it at the end of the day (En. 68 72). How it has been, then, the number of all the angels!

These numerous angelic hosts were believed to be divided into ranks. Distinguished from the common mass, the archangels commanded and directed others. This division appears most clearly in the evil angels or demons, a long list of whose leaders is given in the earliest Enoch apocalypse and in the Enoch parables (cf. Eth. En. 6 9 and 69). This list will be further considered in discussing demons below. Thus, in the Book of Enoch it is said (cf. Eth. En. 9 40 and Slav. Or. ii. 215), though two passages (40 71) substitute Penuel (i.e. Penuel) for Uriel. Just as human hosts had human commanders, so the archangels were the commanders of the others. Thus in the Testament of Levi 28, the angel of the Presence is counted an archangel, to whom angels below make an announcement of what is transpiring. This development of the angelic hosts into ranks was to some extent reflected in the canonical Bible, and perhaps even the development may have been influenced by contact with Persian thought.

As to the nature of angels, the conception was not uniform. At first they were considered a kind of supernatural men or Gods, in all the books that speak of them, they are frequently called ‘men’ (see, e.g., Slav. En. 1 7). They are, like men, said to possess bodies and spirits (Eth. En. 67). They intermarried at one time with human women (Eth. En. 7, Slav. En. 18). Enoch’s archangel Michael (Slav. En. 22), showing that they were considered in many ways kindred to men. This view is a survival of the old conception reflected in Gn 6 22. Gradually another view developed, according to which the constitution of angels was quite different from that of men. They are, accordingly, said to have a nature like that of fire (Slav. En. 29 2), and to have been made at the beginning of flame and fire (Apoc. Bar. 21 9); their splendour is said to be equal to that of the stars (31). This view was, in some cases where tradition perpetuated the crasser view, blended with the other. Thus Enoch was thought to have been put through a process of purification and glorification before he became an angel (Slav. En. 22); and later, when he was permitted to return to the earth for thirty days, an angel chilled his face, apparently to dim the lustre of its angelic glory, before he descended to mingle with men (cf. Apoc. Bar. 2 36). Whether the nature of Nature were at times regarded as angels. Thus frost, hail, and fog are so designated in Eth. En. 60 9, and the author of Jubilees calls these and similar forces of Nature indifferently ‘spirits’ and ‘angels’ (Jub. 10 3 22). At the same time angels were thought to have definite limitations. They were not able to hinder the work of God (Eth. En. 41); they were ignorant of their own origin (Slav. En. 24); fallen angels could not see the glory of God
The conception of demons which appear in the Apocryphal literature are of four distinct types. Two of these regard the arch-demons as fallen angels, but in one type this angelic genesis of demons is much more slurred up than in the other. In the canonical literature discussed above, Satan was regarded as one of the number of the Divine beings who formed Jahweh's court (Job I. 2). The steps by which in the canonical literature he became the great opposer of good had already been sketched. In one type of Apocryphal thought he became the arch-demon, who tempted man and led him astray (see Wis 2:14 and Slav. En. 39). These writers simply took Satan over from the canonical literature, and his various titles as Divine or satanic entity was forgotten. The author of Wisdom moved in an atmosphere of philosophic thought in which neither angels nor demons played any considerable part. The author of Slavonic Enoch, though he speaks of great archangels and arch-demons, probably believed in them, but the interest of his narrative led him to place the emphasis elsewhere. These writers call Satan by the Tr. of his name, diabolos, or 'devil.' They identify him with the god of heaven, and account for the origin of sin by his agency in leading man astray. (c) The Book of Tobit represents a third type of thought. In it one demon appears,—Asmodeus, and he is clearly, as his name implies, of Persian
origin (but see Ginzberg, JF ii. 217-219). The author of this legend, as is well known, is a Persian
poet, and it is probable that he was living in the East, that its
fragmentary and poetical nature is forced on him more than that of the canonical, or even the
apocryphal, writings of his people.

(1895, 1896) referred to in his Miscellaneous Writings of the
Twelve Patriarchs and the Ascension of Isaiah. In these works the
demonology, while very real and all-pervasive, is made up in
a rational way, and such contact as it has with those human
thoughts is at quite a different point from that thought. As mentioned above, the world is
thought to be pervaded by evil spirits, but these are
simply the personification of the evil propen-
sities of man—jealousy, lust, pride, chicanery,
infernal capacity, etc., etc. Writers have to
emulate the influence of the devil to take the place of
Beliar presided. Beliar to them takes the place of the
devil in Wisdom and the Secrets of Enoch, of
Semyaza in the other Enoch books, and of Azma
Wisdom of man is the name of a great evil power.
Possibly Beliar was an old name for Sheol, though that is
uncertain. It is true that writers like to use the
name of the prince and leader of all evil and destructive spirits.

To most Jews of the period, as indeed to most
men of that time, the world was full of supernatural
agents. As there were angels to accomplish every
good act, so there were demons or evil spirits to perpetrate
every evil deed or to prompt every sinful
impulse. Some of the writers, however, manifest
no trace of this demonology; such are Ben Sira and the
author of the Books of Maccabees. The sub-
ject-matter of Sirach as well as the philosophical
point of view of its author excluded any reference
to them, while the author of I Mac had probably
come so far under the influence of incipient Saddu-
ceanism that demons had little or no place in his
thought. To most men, however, demons in one
form or another were very real, and played an
important part in life.

GEORGE A. BARTON.

DEMONS AND SPIRITS (Indian).—1. Pre-
valeinve of the belief in spirit influence.
The people of India, particularly the four main tribes and
the lower castes, from the cradle to the grave
burning-ground, are oppressed with a feeling best
described as demonophobia—the belief that they are
haunted by evil spirits of all kinds, some
malignant beings, others beneficent, to whose
agency are attributed all kinds of sickness and mis-
fortune. Their worship is a worship of fear, the
higher gods, particularly in the opinion of the less
intelligent classes, being regarded as otiose and in-
dispensable to the evils which attack the human race,
while demons are habitually active and malignant.

Among the Tharí of the Himalayan Tharí, 'the bhataé, or
demons lurking in the forest trees, especially the weird cotton
tree (Bombax ceiba phyllid), and the prada, or spirits of the
trees, lead them a very miserable life. When the last ray
of light leaves the forest, and the darkness settles down upon their
villages, all the Tharí men, women, and children, get
inside their fast-closed huts, in mortal dread of those
malevolent beings, morose and cruel throughout the
night, and bears that now prevail for their prey. Only
the terrible cry of Fire' will bring these poor fear-stricken creatures
to open the doors to remove the heavy weight of these
defileful demons. They form at the entrance of deep woods, to save them from
the many diseases and accidents the godly and malignant spirits of the
trees have long been and cause them damage. One of the worst, The
Gospel in Gonds, 1889, pp. 214).

In S. India, where this belief is even more widely spread
than in the N., every village is believed by the people to be
surrounded by evil spirits, who are always on the watch
to infect disease and misfortune, of all kinds on the unhappy villager.

Thy lurk everywhere, on the tops of palm trees, in caves and rocks, in ravines and chasms.

They flit about in the air, like birds of prey, ready to pounce down on any
unprotected victim, and the Indian villagers pass through life
in constant dread of these invisible enemies. So they turn for
protection to the guardian deities of their village, whose
function it is to ward off these evil spirits and protect the
village from epidemics of cholera, small pox, puerperal fever,
catarrh disease, failure of crops, childlessness, fire, and all the
manifestillojus that beset them to injure their lands and
flocks. (W. H. Whitehead, Bull. Madr. Mus., v. 120 ff.). Traili, who took
over charge of Kurnool in 1850, reported that the population
had been divided into two classes, human beings,
and the nanoparticles, S. Oakley, Holy Himalaya, 1868, p. 217)

For other testimony to the reality of the small
effect of demons, see the article Sir W. S. Stewart, Rambles and Recollections, 1853, I. 285 ff.;

'B. E.' Siddons, The

2. Origin and character of the demon of
evil spirits. Among the belief in demons,
evil demons, is a form of belief in its origin
independent of Brāhmanism or the orthodox form of
Hinduism, though the latter has in many cases
annexed and absorbed it (see § 12).

The cultus is in true form one of the
ancient gods of the Vedas, who are deities
of pessimism, due partly to racial idiosyncrasy, partly
the rigour of their environment, has prevailed among
the races of India from the very earliest times (see H. O. O. Het., des
Veda, 1894, p. 217; Atharvaveda, SBE xiii, passim).

The so-called Asuras, Dánavas, Dayitias, and Rákṣasas belong to
this group, 'all personations of the hostile powers of Nature, or of mighty human foes, both
evil spirits and actually converted into superhuman beings.' This group as a whole seems to be de-

erived from pre-Anaimistic beliefs, the worship or
dread of 'powers' (náma, not náma), the vague
impressions of the terror of night, hill, evergreen
trees; they are clear in the belief in evil and
devout beings hostile to the orthodox gods (A. Macdowell,
Vedic Mythology, 1897, p. 156 ff). Max Müller
and J. Muir agree in denying that all these Vedic
gods are equivalent of evil spirits which were
are still.

The aborigines of India (Contributions to the Science of
Mythology, 1897, p. 212; Original Sanskrit Texts, 1880, pt. ii. 380 ff.). It is
to be derived that among

both Aryans and non-Aryans they were the result
of pre-Anaimistic beliefs of both races. At the same
time, it is probable that the Aryan
view of the demon world was coloured by their
association with the indigenous races,
The black complexion, ferocious aspect, barbarous habits, rude speech, and savage yells of the Dayans, and the snarls and howls of the Bengal bear, the terrors of the wood, the tempests and the tempest, and the obscurity of night, would make on the coarse savage an impression, and may perhaps make one speak of them, in the highly figurative language of an imaginative people in the first stage of civilization, as ghosts or demons; or as the inhuman spirits of the most sedentary races more than of the last; and of the latter it was the custom among the Dayans to say that they lived in the Danus, into the remotest corners of the country, or lead to their partial incorporation with the congers as the lowest grade of supernatural beings, and more particularly of the ghosts. The Pindōs, by a sort of moral or physical similarity, are represented as being in any and every way, by violence, accident, suicide, or sentence of law; or who have been robbed, notorious evildoers, or dream-wasted persons. The Aryan, or any well-known bad character is a source of terror to all his neighbourhood, or to the object of such as these, for so powerful and malignant as he was in life (J. M. Wallhouse, JAI v. 406 f). They are represented with small thick bodies, of a red colour, with long, wide, and pointed ears, and one eye instead of two, both the teeth of a lion in their mouths, and their bodies covered with ornaments (Calcutta Review, 1873, in Zendische Zeitschrift, 1881, they live in large caves, empty houses, or old wells; they often appear as a deer, a tall figure, a strange ox or goat; if a person sleeps under a tree or in a field it is believed that the abode of the Bhūts or jostles one on the road, he falls sick or some ill-becalms befals him (ff. ey., p. 292). In Gujarat the Bhūts and Prēteks, held the European Vampires, are believed to take possession of a corpse, and speak through it; they appear in the form which they possessed when living; or enter a living man, and cause him to speak as they please; afflict him with fever or other disease; appear as animals, and frighten people by vanishing in a Bane gore; remain invisible, and speak only in whispers; a Bhūta has been known to come to fellows with a man, or to carry him off and set him down in a strange place; cases have been reported in which women have been found with child by them; when a Bhūta appears in a tree, the tree is seen to bend, and in any forest that is impure; they cannot rest on the ground, and for this reason a peg, or brick, or banyo pole is placed at their shrines on which they may be expected to land. They are considered as a nasal tone, and hence 'goblin speech' (piśācako bhāsā) is the term applied to it. A Bhūta is a客厅 in modern English (PJE v. 258); those whom these come dead Brahms are wheat-covered, while others, like the ghost of a negro, are black; the dead estates of the latter are represented as they are helpless by day, and move abroad at night; but midday, when they cook, and evening are specially dangerous times, and women who are believed to have seen such are protected (E. Thornton, Bristol and Caste of Tribes of S. India, vi. 160, A. K. Iyer, 1901); Kilkis proposed to make a tree, a net, or o the demons is written on the bark informing them that it is intended to eject them (Iyer, p. 251; cf. Crooke, in B. P., 1900, p. 93, the trees are also known as demon-haunts (Tylor, Prim. Cult. 5, 1873, i. 221). The Thalavans believe that to throw a stone into a place, and to place a black stone, or one which brings them game, and is abused for his iniquity but if the horse proves unsuccessful (L. K. Iyer, The Cochinda Tribes and Cultes, i. 239, 47, 53). Trees are also described as demon-haunts (Crooke, in B. P., 1900, i. 223, 165, 1.i. 2, 403, 89). The Todas believe that, before they were created, their gods occupied the Nāgiri Mountains; they now reside in heights close to the Todas hamlets (Kieren, The Todas, 1906, p. 152 f). In the tales of the water spirits or of the dead found all over the country, which are malignant, and drag down unwary travellers. In the medieval tale of Nāgiri (Crooke, vol. i. 423; Fraser, G. B., 1900, i. 209, these Rākṣasas, Dānavas, or Dānavis still maintain their position in popular belief, and are invoked surviving through the study of the Epic literature and the older collections of folklore, like the Jatakas or the tales of Cowasdeva.

II. The second and much more important class of evil spirits is that of the ghosts (Skr. bhū, 'to become, he'). In contradistinction to the fiends or non-human spirits, these are the malignant spirits of men, which for various reasons cherish feelings of hostility to the human race, and, if not expelled or propounded, do evil mischiefs. Among the more primitive or domesticated beings the belief that disease and death are the result of real or imaginary processes of Nature is only imperfectly realized; and these and other calamities are regarded as the work of evil spirits, sometimes acting on their own initiative, sometimes incited by a sorcerer or witch.

III. Their characteristics.—In S. India three terms are used to designate these spirits—Bhūta, Prēta, Piśāca, the first name being ordinarily applied to all three classes.

(a) Spirits of the murdered, the unsatisfied, and the foreigner.—Of these classes of Bhūta the most dangerous and the spirits of the multitudes invisible, and speak only in whispers; a Bhūta has been known to come to fellows with a man, or to carry him off and set him down in a strange place; cases have been reported in which women have been found with child by them; when a Bhūta appears in a tree, the tree is seen to bend, and in any forest that is impure; they cannot rest on the ground, and for this reason a peg, or brick, or banyo pole is placed at their shrines on which they may be expected to land. They are considered as they are helpless by day, and move abroad at night; but midday, when they cook, and evening are specially dangerous times, and women who are believed to have seen such are protected (E. Thornton, Bristol and Caste of Tribes of S. India, vi. 160, A. K. Iyer, 1901); Kilkis proposed to make a tree, a net, or o the demons is written on the bark informing them that it is intended to eject them (Iyer, p. 251; cf. Crooke, in B. P., 1900, p. 93, the trees are also described as demon-haunts (Tylor, Prim. Cult. 5, 1873, i. 221). The Thalavans believe that to throw a stone into a place, and to place a black stone, or one which brings them game, and is abused for his iniquity but if the horse proves unsuccessful (L. K. Iyer, The Cochinda Tribes and Cultes, i. 239, 47, 53). Trees are also described as demon-haunts (Crooke, in B. P., 1900, i. 223, 165, 1.i. 2, 403, 89). The Todas believe that, before they were created, their gods occupied the Nāgiri Mountains; they now reside in heights close to the Todas hamlets (Kieren, The Todas, 1906, p. 152 f). In the tales of the water spirits or of the dead found all over the country, which are malignant, and drag down unwary travellers. In the medieval tale of Nāgiri (Crooke, vol. i. 423; Fraser, G. B., 1900, i. 209, these Rākṣasas, Dānavas, or Dānavis still maintain their position in popular belief, and are invoked surviving through the study of the Epic literature and the older collections of folklore, like the Jatakas or the tales of Cowasdeva.

(b) Spirits of the murdered. All over the world the ghost of a murdered person is believed to cherish an angry passion for revenge (Westermarck, i. 418 f.). Some of the most dangerous Bhūta are of this class.

In Croog the demon most widely feared is that of a magician who was shot. In other parts, mother Bhūta comes as a Sākha to be buried as a sacrifice under the walls of the Kolhapur fort (cf. Crooke, ii. 137 f). comes food supplies to dwindles, the milk to give no butter, and the cattle to sicken; the Brahmins distinguish three classes of such demons, who are known as the Bhūta, the Brahmins who have lost their way, including those who have been murdered, boggled, or killed by a tiger (G. Richter, Manual of Croog, 1870, p. 165; Mem. As. Soc. Bengal, 1900, i. 140 f.). Several of the most widely revered local deities of S. India are the spirits of persons, particularly Brahmins, who have lost their lives in some tragic way, and the ghosts of dead Brahmins, or of those who were slain by tigers or other wild animals (E. A. Guitt, Centre Govt, 1901, i. 160 f.). Crooke, i. 418 f., 273 f.

Hence comes the conception of a special Brahmā demon, known as Bhūma-ra-kāsa, Bhāma-dautiya, Bhāma-purāsa, or popularly as Bhāma, the spirit of a murdered Brahmā. The Brahmā being himself a spirit-laden, his ghost is invested with special power and evil. In Bengal

1 Formerly cited as MABS
(b) Those who have left this world with unsatisfied desires.—The spirits of the unhappy and unsatisfied fall into three classes:

(a) Unhappy widows and widowers, childless women.—Among these the most dreadful is the Chand, Chariali, Chaudal, Chandul, or the Alvantin, as she is called in the Deccan,—the spirit of a pregnant woman, one dying in childbirth, or within the period of pernatal torture.

In the Panjab she appears as a pretty woman, with her feet together and her head resting on her own family (Fung ii. 101). Among the Orions, when the excess forces her to appear in the flame of his lamp, she looks like the Dakini, the common type of ogress; but her feet are distasteful, she is hunch-backed, and has a large hole in her belly like the hollow in a tree (M. S. B. v. 160). In Madras a widower who is overthrown to death in a reported suicide or accident, becomes a she-devil, known by the unprominent epithet of the Dakini. Each night she appears, and she continues until her normal term of life is over (N. M. 7. 114). In the Deccan the Jakhin (Skr. pakshi, pt. to fly) "moves it" (to the forehead) from the deceased's house, to the ladies' baths, and dressing-rooms, takes her husband's second wife and child, and carries them off to her stepmother, one of the British fairies, steals babies and returns them after a time (BG xiv. 46). The spirit of a deceased husband or wife, purifying the scene of their former joys. This is, in part, an explanation of the objection felt among the higher castes to wide-marriage of the caste of money-lenders, among the rite at night in order to avoid the observation of the sacred spirit, and of the use of onion ceremonies which repel evil spirits. In English literature R. Rose, Crooke, and others refer to their being a spirit known as the "Esmeralda" (BG xiv. 464). Among the Rolis of Ahmednagar a widow bride is held to be unlucky for three days after her marriage; and must take care that no married woman sits on her lap; otherwise after such a marriage the widow bride or her husband should fall sick, the medium, when consulted, usually reports that it is caused by the spirit of her first husband, who is annoyed because his wife has married again; the bride must give to a feast, spend money in charity, and wear in the copper corner over her neck a tiny image of her late husband, or set it among his household gods (BG xiv. 299). Such widows are known in the Panjab as the "crown of the rival wife" (nivasan mésum), and to them all gifts made to her are presented as a measure of precaution. R. Rose, Crooke, and others refer to their being a spirit known as the "Esmeralda" (BG xiv. 464). When a widow of the Le tribe in Bengal manifests herself in the form of a ghost, the deceased woman's husband places the iron bangle of his first wife on the arm of her successor (E. A. G. i. 421). In the Deccan the Asa is the spirit of a woman who has been abandoned by both her husband and woman; she appears before her husband, one or more children; she attacks young women, and must be propitiated by offering cooked rice, turmeric, red powder, and a body (BG xiv. 133). The Hadal or the Haflal, the spectre of a woman dying in pregnancy or childbirth, is plump in front and a skeleton behind, lives in wells, trees, or dark corners of the house, attacks women, and, sometimes appearing as a beautiful woman, lives with men until her fated nature or spectral form is discovered (BG xiv. 554). The corpses of women dying under such circumstances are often burnt in order to prevent sorcerers from digging them up. But not using the unborn fetus or the bones of the mother for purposes of Black Magic (BG xiv. 311; A. K. J. v. 171).

(c) Spirits of foreigners.—The same feelings of awe or four natures are felt for the spirits of foreigners, whose value, cruelty, or other qualities have impressed the minds of a subject people.

At Saharanpur a Muslim named Allah Baksh, who died in the Panjab, in a state of impurity, was worshipped by the lower castes of Hindus (N. M. 183). Such a spirit is known by the euphorbical title of Mamtub (famous, known). Among the Moslem a Muslim, his hair on end, and carries branches in his hand; even the Friar, pi不公平, sometimes becomes hostile to people who unhappily sit upon his tomb, spits at it, or in other ways annoys him (BG xiv. 160; BG xv. 814; BG xiv. 554). People resort to the shrine of a Muhammadan saint Alam Pir, at Muzaffargarh in the Panjab, to procure release from such spirits. In fact, the Indian Mohammedans have appropriated much of the mythology of their Hindu neighbours, and whereas the Hindu myths and introductions of control evil spirits have become widespread among the Mohammedan population. Sometimes the widow wears a gold wire bracelet on her right wrist, and every year, in the same way as the deceased husband, feeds a bride (BG xiv. 311). The spectre of a woman dying in pregnancy or childbirth, is plump in front and a skeleton behind, lives in wells, trees, or dark corners of the house, attacks women, and, sometimes appearing as a beautiful woman, lives with men until her fated nature or spectral form is discovered (BG xiv. 554). The corpses of women dying under such circumstances are often burnt in order to prevent sorcerers from digging them up. But not using the unborn fetus or the bones of the mother for purposes of Black Magic (BG xiv. 311; A. K. J. v. 171).

The spirits of the unmarried dead form a large group. In the Indus such spirits are called Virka (Skr. civa, hero, spirit), "eminents," and to their memory have small temples and images erected, where offerings of cloth, rice, and the like are made to them to appease their hostility or to pacify them, or to break the spell of their anger and threaten those who are forgotten of their duty" (Support, A Journey through Mytton, Ombers, and Madiker, i. 461; Crooke, Crooke, i. 386). The spirits of the spirits of bad men, which affect the living. In Kanara, if neglected, such spirits are called "unpropitiated," and disturb people by dreams and nightmares (BG xv. pt. 1. 300). In the Deccan the Jhoud is the spirit of a youth dying in childbirth, or left unmarried and living in his own house, he attacks any member of the family who occasionally looks into his room; the at least one spirit to which in life he would have objected (BG xv. ii. 1034).
into the protecting family deity, like Gnoo Gosdin, the Male god who dwells in the house-pilar, or Dharma Ponna, the Kandih god of the family or tribe (Risley, ii. 58, i. 403).

In any case, after a time, usually represented by the flight of the human image, the spirit automatically passes to its rest, and ceases to be a source of danger to the survivors.

In the Deccan the life and influence of a Bhuta last for four, and often six months, after the performance of the ceremony of cremation, and is represented (BG xviii. 1. 555); the Ipon of Upper Burman worship only their fathers and mothers (Gazetteer Upper Burma, i. pt. l. 668, 670). 

When the inability to perform the funeral rites and the consequent restlessness or maliciousness of the spirit are due to the absence of the corpse, as in the case of death occurring in a strange land or the failure to return the body, the relatives perform the funeral in effigy.

Among the Gares, when a man dies away from his village and cannot be cremated, his relatives buy a number of cow-hides and put them in a pot to represent the bones of the dead man, or erect a mortuary hut in which they are deposed (A. Playfair, The Gares, 1907, p. 237). In some cases among orthodox Hindus, the corpse is represented by branches of the sacred Butta frondans—trees, the head by a coconut; pools, or water for the dead, represent the corpse, and the official priest, by the use of magical formulae (mantra), infuses life into the image, the animating principle being represented by a lamp placed near it. If the lamp goes out for a moment, the usual funeral rites are performed (V.I.I.N. viii. 201; cf. BG xviii. l. 604). When the death of a relative occurs, the corpse is consigned to the ground, so that the spirit, being specially a spirit of warlike people, is performed to appease the warlike spirit. 

Even in the case of those dying in a natural way, preparations are taken to prevent the spirit from returning to its original home from the burial- or cremation-ground.

Among the Madras tribes, when a Bauravi is being buried, the family and relatives of the deceased girl have left the house "Do not trouble the people"; the spirit of a dead Savara is solemnly adjured not to worry his widow: "Do not send sickness on her children. Her second husband has done no harm to you. She chose him for her husband, and he consorted; "O man, be appeased," O unseen consort of her death!" (Thurston, i. 179, vi. 321). When the corpse of a Tamittha is carried outside the house, the chief mourner pours water on it, saying: "As a stream divides countries, so may the water now pour divided us!" (Gazetteer Upper Burma, i. pt. l. 557).

The plan is to endeavour to deceive the spirit, so that it may not find its way back, by taking it out of the house feet foremost, or through a door not usually opened for ingress and egress.

The Meinels never carry the corpse over the threshold of the male members of the family or the tiny little entrance is used (Hodson, 117). Among the Magha of Bengal, when the house is burnt down, the corpse is carried out on a cloth. They then return out the house ladder, and creep in through a hole cut in the back wall, in order to baffle the ghost (Risley, i. 34). A similar device is that of making the corpse-bearers change places on the road to the grave, and turn the corpse in the opposite direction (BG xvii. pf. l. 684, ix. pf. l. 48. With the same intention, the mourners are forbidden to look back when leaving the cemetery (Crooke, ii. 56, l). The evil influence being communicated through the sight (C. Crawley, The Mystic Fire, 1905, p. 115; FL xviii. 1905, p. 3). Some time after the expiration of a month the corpse is tied together to prevent the ghost from 'walking', or it is tied up in a cotton bag, as among the Bodoys (Playfair, 106; Thurston, iii. 184, iv. 375, vi. 391; Gazetteer Upper Burma, i. pt. l. 658; MAEB, 1905, l. 109).

Among the Koyes of Madras, when a girl dies of smallpox, a sub-fab is erected to catch the spirit, and prevents its returning to the house. There are some people, when returning from the funeral, flock poults towards the grave, as if mocking the spirit, or make barricade of thorny bushes between the grave and the house (Crooke, ii. 67; Risley, ii. 70).

With the same intention, the names of deceased relatives are taken by the living, the father: "Who are they?" Any person is at liberty to name any person or, when parents die, men assume the names of their deceased grand-father; women, of their deceased great grandfather, and widowers, of their late wife; widows, of their late husband. One reason given for the wide-spread custom of shaving after a death is that it changes the names of the deceased relatives so as to deceive the pursuer and removes the shelter in which it may hide and cling to the mourner (Fraser, JAI x 1890, p. 50). To prevent the spirit rising from the grave and causing trouble in it is a common practice, particularly among mesta castes, to bury the corpse face downwards, and to pile stones and thorns on the grave (Thurston, iv. 322, 453; Gait, i. 419; Crooke, ii. 69; p. xxi. 196; cf. S. Marley, Eastern Bengal, 1892, p. 25).

Precautions in the case of more dangerous spirits—

Precautions of this kind are more urgent in the case of spirits specially malignant.

In the case of a Calcutta Church, someone was nearly killed by a corpse of a woman dying pregnant is open and the child removed; or the spirit is scared by fire, earth, and water; or iron nails are driven into her fingers, and the limbs fastened together (Crooke, i. 273 ff.). The Orangs carry the corpse of such a woman to a distance, break it up, and scattered pieces of it, round, bringing the heels in front, into which they drive long thorns; they bury her deep in the earth face downwards, and place with her corns and bones of men (BG, i. 163). If you come home, may you turn into an ass!; the roots of a palm-tree are also buried with her, with the curse: May you come home with the leaves of the palm-tree; for they leave the burial-ground, they spread mustard seeds along so, saying: If this is the road, pick up all these! (MAEB, 1906, i. 149). This last charm is very common, and is one of the usual impossible tasks found in the folk-tales (Crooke, i. 223; BG xix. 104, xiv. 417; STEEL, Temple, Wanderings, 1894, p. 439). These precautions, under Brahmin guidance, have been elaborated into a special funeral ritual for women dying during the menstrual period, after the sixth month of pregnancy, and within ten days after childbirth (BG xviii. p. 417).

The misery of the unmarried dead is relieved by the curious rite of marriage with the dead (cf. Frazer, Pausanias, v. [1898] 859 ff.); a custom which in India is still followed only in Madras and among some Burmese tribes.

When a Toda boy dies unmarried, a girl is selected; her head is covered by her father with a mantle, and she proceeds to the pocket of the dead, and the spirit Brihannala performs the rite of tying the marriage necklace on the dead unmarried girl (BG, 1894, 727, 729; FEINSTEIN, 1894, 5). The disgusting custom of enforced sexual connexion by a male with such a dead girl, ascribed by Abbe Dubois to the Niyars, seems to be based on the knowledge of this rite of mock marriage (J. A. Dubois, Hindu Manners, Customs, and Ceremonies, 1860, p. 9). Besides the Todas and Nambaddars, several S. Indian tribes perform this mock marriage, such as the Badugas, Bilawas, and Konars, while among the Falis and Vanyans the dead girl is buried with the arms about the plant (Corolopistis gigantea) (V. N. Ayas, Transacts State Mus. 1906, ii. 239; Thurston, i. 117, iv. 373, v. 221, vi. 231). Among the Koyes of Upper Burma, if, before the great contracting ceremony is completed, either party dies, the rites are continued with the corpse, which is kept undisturbed until the rite is finished; in this they probably follow the custom well established among the Chineses (Gazetteer Upper Burma, i. pt. ii. 201; J. M. De C. Rice, Relig. of China, 1904, ii. 390 ff.; J. II. Gray, China, 1875, i. 215 ff.).

6. Possession by spirits.—Possession of evil spirits or demons is of two kinds.

The theory of embodiment serves several highly important purposes in savage and barbarian philosophy. On the one hand, it provides an explanation of the phenomena of delusion and derangement, especially as connected with abnormal utterance, and this view is so far extended as to produce an almost general belief that it is possible for an evil spirit to enter into a human being and cause him to perform wondrous acts, and to enable the savage either to "lay" a hurtful spirit in some foreign body and then go away; thus it is, according to the curious cult, a spirit for his service in a material object, to set it up as a deity for worship in the body of an animal, or in a block of stone or image or other thing, which contains the spirit as a vessel contains a fluid: this is the key to strict fetishism, and in no small measure to idolatry (Tylor, 8, 125).

These two varieties of spirit possession can be traced in Indian beliefs.

(a) Abnormal or disease possession.—In the first place, we have cases of abnormal possession. Certain persons are supposed to be specially liable to spirit possession, thus defined by a native writer:

'The men most liable to spirit attacks are the impotent, the lustful, the lately widowed, bankrupts, men and women of foolishness of whose, convicts, and singers, riders, broilers on the unanswerable, gluttonous, and starved. The women most liable to spirit attacks are girls, girls, women of the Church, widows, old women, old widows, serfs, idlers, riders, broilers on the unknowable, irregular or gluttonous eaters, and all sickly women. Women are specially liable to spirit attacks in times of pestilence, during their pregnancies, and in childbirth; and men, women, and children are all apt to suffer when women and children are gardeners or near the temple. Intelligent and educated men and healthy intelligent women are freer than others from spirit attacks' (BG xix. 1906).

Demon possession thus accounts for various abnormal states of mind and for the phenomena classed as hysteria. Hence patients, particularly women, suffering in this way require special pro-

Digitized by Microsoft®
tection, or it is necessary to expel the demons by whom they are possessed.

In India the belief is prevalent that a pregnant woman dreams of dogs, cats, or wild animals coming to attack her, she is believed to be possessed by evil demons. An evil demon, or 'devil driver,' is called in, who makes a hideous figure on the ground representing the demon, sings, beats a drum, mutters spells, but finally induces the patient to agree to an offering of food for the demon, on receiving which he leaves her (A. K. Iyer, I. c. p. 300). In the Punjab, a woman after childbirth is specially liable to the attacks of demons, and has to wear an iron ring, made, it is said, through the prayers of the patient, so as to drive away from her (P.V. II. 81). For the same reason, at the polo riots of a gift, offerings are made to demons (A. K. Iyer, i. c. 240). The same thing happens at various crises in human lives, such as the bride and bridegroom, the mourners, and the corpse-bearers of the deceased. Such persons are possessed by various demons and amulets (see CHARMERS AND AMULETS, Indian), vol. iii, p. 441 ff.

7. Possession by spirits of the exorcist.—The exorcism of evil spirits by a professional exorcist has been reduced to a system, and prevails widely in all parts of the country, particularly in S. India. In N. India the medium is known as Bhagat (Skr. bhakti, 'fervent faith'), Sānya, 'the wise one,' Ojā (Skr. ojakhyāya, 'teacher'); among the hill tribes of Central India as Baiga, Bhumāka, Parthā, or Damano; in the Deccan as Janta, 'the knowing one,' or Mantrī, 'holy saint.' He is distinguished from the Mantrī, who learns by orthodox methods the charm formula (mantra) from a teacher (guru), by the fact that he does not undergo special training, but works through the inspiration of a familiar spirit or guardian, who enters him when he works himself up into the proper state of ecstasy. This ecstatic state occurs on various occasions and for various purposes. His special aim is to induce a sense of possession of various kinds of disease; but he also becomes possessed at death rites, when he identifies and announces the pleasure of the spirit, at naming, when he decides the proper name of the child, and at such domestic ceremonies.

The medium in his ecstatic state is seized with revolting cramp-like contortions and muscular quivering, head-dancing, and frantic dancing, which usually end in complete or partial insensibility. When Dr. C. Elliott, the well-known observer, went to the medium's house, 'the man did not literally revolve; he covered his head well up in his cloth, leaving space over the head for the god to come in; and in this condition he was twisted and turned, his clothing thrown at him rapidly, and soon sank exhausted. Then, from the pit of his stomach, he uttered words which the bystanders interpreted to direct a certain line of conduct for the sick man to pursue. But perhaps the occasion was not a fair test, as the Parthā strongly subjected to the pressure of an onlooker, on the pretense that the god was afraid to come in before so great a hackš (official) (Settlement Rep. Hoshangabad, 1867, p. 129). Compare the account by Curt, W. L. Samuels, in Dalton, 222, quoted above, vol. iii, p. 481 f.

(a) Tabus imposed upon the medium. —The medium is subject to numerous tabus. The god 'would not enter his head' (A. K. Iyer) unless a Brahman attended the rites, thus proving their non-Aryan origin. The Kott medium must not speak directly to his wife or to any other woman for three months after a successful evocation, he must not eat the food served to him, nor the food of any other; he must not go to the house of another spirit, or in general, his head, as it is called, must be left in a clean state. In the Deccan, when the lamp goes out while he is eating, and leaves him exposed to demon assault; if he happens to hear a mysterious woman speak; if he is present at a marriage, his speech is considered profane. Should any such events occur, he must stop eating and fast for the remainder of the day. He must avoid certain vegetables and fruits, and must never eat stale or twice-cooked food. If he be a Mussulman, he must not eat a special kind of milk, or food cooked by a menstruous woman (Bg xxiv. 415).

(b) Methods of identifying spirits by the medium. —The medium uses varied methods of identifying the spirit which has seized his patient.

In the Punjab he waves corn over the sick person, and, making a leap for each suspected demon, keeps on dropping grates that on which the shift falls (false indications are frequent) (Settlement Rep. Hoshangabad, 1867, p. 129). The Berar medium bangles a string over a wood fire and repeats spells; when the smoke touches the string, the appropriate formula is indicated (P.V. III. 219). The Kott medium lays out thirteen leaves, each assigned to a special god, and, hanging a pendulum from his thumb, he is supposed to detect the particular test, that deity must be propitiated (Dalton, 85), In the Gujarāt an officiant tied charred threads round the house, drove a nail into the ground, and consecrated a spot for the medium. After the charade the medium is expelled by yoking a plough, and driving it round the village to form a sacred circle, which touches the ground at each corner and two at the door; the house was purified; a Dev, or orthodox god, was installed, and before his image a water-drink was offered and libation poured on the roof with lit oil, while the medium continued to mutter charms for forty-one days, and occasionally visited the sacred plot. In the usual sacrificial and festive acts, a goat was sacrificed and buried in the ground, and the beam and plough- yoke are fixed, dazed with red head, and worshipped; a bell is then dragged containing the image of Mari, the disease goddess, from her shrine, to the village boundary, where the image is worshipped, and a buffalo calf is also carried (X/XV, 3, 206). In the Telugu country the scape-animal is a buffalo, and, as the image of the goddess is carried in procession, people flourish sticks, or spears, and throw them into the air in order to induce the hungry spirits to seize them and the wood, and strike the weapon bearing the man who takes the image (Build. Madr. Mus. vi. 199).

1. It should be noted that the term 'medium' is used here in its widest sense to mean a person possessed by demons. The term is often used in India to refer to anyone who is believed to be able to communicate with the spirit world, whether possessed by a benign or malevolent spirit.
ground. Familiation of the patient with the smoke of pepper and dog's dung, as a means of inconveniencing the demon, was also practised in India. For this purpose, the patient, or her close relative (cf. her character in *The Clash of Civilizations*), p. 447), wears a girdle of broken twigs taken from a bough, and goes to a cave, the reoort of the Dyani. There she learns spells (samatra), and after the dance puts a stone, set on end of a year the hole is full, she has become an expert, and can take away life and restore it. If the hole is not full she has the power to take away life. Every year she is obliged to sacrifice a black cat and pour its blood into the hole. She and the man above are cursed, and to these all diseases are attributed. When a child dies, any Bisibih in the village is charged with causing the death (MASE p. 114).

As examples of these village guardians we have Chankhpi or Chankh, the holiest of the Naga devils, who live in marshes and attacks children. To appease her an image is made of earth taken from the banks of a river; offerings are made to it, and it is thrown into the river. The field guardian of the Reddis of Bijapur lives in a stone under a sacred tree, which is fenced with red lead, and offerings are made before beginning ploughing (ib. xxvii. 147). Darbik is the guardian of the Birhors of Bengal, and is represented by a black rock (Isley, l. 138). Naturally such village guardians are often embodied in the boundary stone. The chief object of worship to the Banga (ib. xxii. 151, xxvi. 341) is the boundary stone, the Sewagriyah of the Bihariys (BG xii. 69; Crooke, TC ii. 93).

The worship of the goddess Kali (Simantapuja) is part of the orthodox marriage rite (BG xviii. p. 129). In Tanjore the Elai-kal, or boundary stone, is the subject of a remarkable worship (Bull. Madr. Mus. v. 146 i.).

(7) The demon Guardians.—In S. India the chief of these is Ayangadu, known locally as the Sitalari, or guardian of snakes (Bull. Madr. Mus. v. 137). The snake is regarded as the soul of the dead, and the serpent-roads, or lanes of serpents, are the spirits who conduct the dead to the place of the dead. As such they are very much revered, and are thought to be the cause of all evil. The serpent roads, or lanes of serpents, are the spirits who conduct the dead to the place of the dead. As such they are very much revered, and are thought to be the cause of all evil. The serpent roads, or lanes of serpents, are the spirits who conduct the dead to the place of the dead. As such they are very much revered, and are thought to be the cause of all evil.
11. Gaining control of a demon.—In the rites of Black Magic, a demon, if he can be brought under the control of a master, or magician, plays an important part; he may be used as a protector by his master, or, in other cases, he may let him to work mischief on those whom he desires to injure. The magician, by the use of spells (mantras), can often induce him to enter some receptacle, and he thus becomes a marketable commodity.

When the arrangements have been made, the Opha hands over a corked bamboo cylinder which is supposed to contain him. This is taken to the place usually a tree, where it is intimated that he should in future reside; a small ceremony is performed, liquor being poured on the ground, or small mounds (pindas) erected. His body is then given over to the Bhūt or Bhūtī, who is supposed to take up his abode in the place chosen for him. His function is to watch the crops and guard them from the birds. Little birds are caught and driven away. The shaman often keeps enough to feed from a field thus guarded, he is certain to be stricken by the evil influence, and no one will eat his provisions. He should have no association with his wife, and be free from all pollution. Every night, after his bath, he should bathe in a tank or river, and drink water in a small glass while praying to the god whom he wishes to propitiate, in the words prefixed by his name. He will take his meals without what I want.” These, with his thoughts concentrated on the deity, he should utter 101, 1001, and 100,001 times during the period. Should he do this, in spite of all obstacles, and humiliation by the demons, the god will grant his desires (Thurston, vi. 232). In Mysore, among the Hindu and Malays, jungle tribes, when a demon, his spirit is supposed to be stolen by some one else’s devil, who is pointed out by the astrologers, who divine by throwing cowrie-shells or rice. The heir, then, as a measure of precaution, redeems the spirit by offering a pig, fowl, or other gift; and the spirit is driven out in a pot, where it is periodically supplied with food and drink to prevent it from ‘walking and doing mischief’ (I. L. Rice, Mus. v. 1897, i. 346; F. N. B. Burton, Arabian Nights, 1835, i. 346 ff.; F. N. R. 170). The power of a demon is believed to rest in his hair, and if a man can cut out in cold weather the latter, he is his slave for life (MNVY ii. 180). In Travancore, Kutichchan, the boy or the boy who finds the demon, watches the property of his lord, as the master of such a demon possesses infinite powers of evil; but these, if wrongfully exercised, recall upon him, and cause him to the children and all other physical or moral agency (S. S. Subrahmanya Ayar, Census Rep., Travancore, 1901, i. 203). Siddhartha, the daughter of Chakravarthi, is said to have performed his acts of heroism by aid of a demon which he subdues by riding a corpse in a cemetery (BG i. 171).
ways the Taoism of China, and reinforced from Indian Tantrik beliefs (L. A. Waddell, Buddhism of Tibet, 1885, pp. 19, 34, 477; Sir H. Yule, Marco Polo, 1876). This process of the absorption of demonology by orthodox Hinduism naturally results in the decrease of the former, as intelligence, education, and the active missionary efforts of the friend of evil, admit to the at least several native writers. One, speaking of Bengal, states that the numbers of the Bhûtas have largely been reduced; fifty years ago there were as many millions of demons as there are men at the present time. This rapidly decreases year by year. We attribute this reduction in numbers to the facilities now afforded by railways of visiting Gaya and other places for the purpose of performing the obsequial rites which appease the angry spirits of the dead (NYA ii. 190). 

According to B. P. Bonjoum we learn that in Kutch some of the most dreaded evil spirits have recently disappeared—the Brahman ghosts having left the country because they dislike the cow-killing permitted by the British Government; the Muhammadan ghosts, who are usually regarded as the shape-copies of the Brahmans, have also disappeared, since the only low-cost spirits are left, and their influence has become much reduced (BG xxiv. 421.). Even in Cochin and Travancore, the homes of demon-worship, it is said to be gradually giving way to Buddhism, as represented by the cults of Siva, Subrahmanya, and Gopati or Gañesa (A. K. Iyer, i. 311).

LITERATURE.—The cults of the demons and evil spirits of India have been so imperfectly studied because many strange and these rites are repulsive, and performed in secret, and thus do not allow themselves to be described, while there are offensive to many students of Hinduism belonging to the higher and learned classes. The materials, which is of great extent and complexity, is scattered through the antropological literature of India, some of which has been quoted in the course of this article. It is most abundant in S. India. The Indian demonology has been studied in the Manual of the Administration of the Madras Presidency, 1862-92; the Bulletin of the Madras Museum; the District Manuals, esp. that by W. Logan on Malabar, 1887; general treaties, such as E. Thurston, Caste and Tribes of S. India, 1909; V. N. Aiyar, Travancore State Manuals, 1909; B. L. Rice, Myths, 1897; F. Buchanan, A Journey through Myan, Ceylon, and Malabar, 1867; L. K. Amutha Krishna Iyer, The Cithin Tribes and Caste, vol. i. (all published), 1909; P. Percival, The Land of the Vedas, 1884; S. Materi, The Land of Champa, 1884; R. Cocker, Cooper, Grange and the Deveau of the Indiavent, South Indian Family of Languages, 1875, in which and in B. Ziegenbain, Genealogy of the South-Indian Gods, 1869, the work of the Shakra of or Tinewi, is reproduced; G. Oppert, The Original Inhabitants of the Brahmanical, 1877; M. Monier-Williams, Brahmanism and Hinduism, 1891; in A. K. Forbes, Riga Sutra, 1875, reproduced the Blood Niruddh or the Destroyer of Superstition, and the Science of the Dharmasastra, by T. DEMONS AND SPIRITS (Jain).—Superhuman beings, according to the Jains, fall into two classes: demigods (aditakas or devois) and the gods (devas). A sub-division of the latter distinguishes good and bad gods (devoi, and asuvi goti); the bad gods are also spoken of as kadevas or kadevaram. Demons would come under the two headings aditakas and kadevas, and ghosts under that of kadevas. It must, however, be kept in mind that, according to the Jains, neither the state of a god nor that of a demon is permanent, but both have their individually fixed duration, which may extend throughout the whole cycle of years, or of some age: a soul may attain in the scale of beings and the duration of this state—his individual lot—depend on the merits and demerits (karma) of the soul; when the allotted time is over, the soul will be re-born in some other state according to his karma, a god may be re-born as a hell-being, but the latter will be re-born as an animal or a man only.

The narakas, or hell-beings, have a demonical nature, but they cannot leave the place where they are condemned to live, nor can they do harm to any other beings than their fellow narakas. The souls of those who have committed heinous sins are on death removed in a few moments (see DEATH AND DISCERNMENT). The dead (daimjon) are one of the seven nether worlds which contain the different hells (see COSMOGONY AND COSMOLOGY [Indian], §4). There the soul of the condemned is fitted out with an enormous body of a loathsome shape, and is usually called the hell-beings possess superhuman mental powers (avadeva); they avail them, however, only to find out their enemies and to fight each other. In addition to the pains produced by the wounds they inflict on their enemies, as represented by the cults of Siva, Subrahmanya, and Gopati or Ganesa (A. K. Iyer, i. 311).

The remaining demons and the ghosts are contained in the two lowest sub-divisions of the gods: the bhavakarahvas or bhavayakas, and the vyatapas. The lowest class of the bhavakarahvas (i.e. those gods who live in palaces) are the asuvarakarahvas or simply asuras. They reside in mansions of their own below the surface of the earth, in the upper half of Rattanaprabha, the highest of the seven worlds. As in Hindu mythology, the asuras may be good or bad; but there are fifteen extremely wicked osuris—Amarbisa, etc.—who administer tortures in the three uppermost hells; in a former life they had delighted in wanton cruelty. The remaining class of the bhavakarahvas, vyatapas, etc., seem to be demi-gods rather than demons.

The vyatapas include demons, ghosts, spirits, and spirits, who live on, above, or below the earth. They are divided into eight classes: the bhavakarahvas, kimpurasis, mahorges, gandharvas, yakas, rakshas, bhutas, and pisachas, all of which occur almost identically in Hindu mythology. The last four classes contain demons and ghosts, but they are not demigods. It is among the rakshas good ones, adorers of the tirthakaras, who may take diksh in. In general, the names of the demons and ghosts, etc., are very much the same as those of the other Hindus; but the position of the superhuman beings has been, in many respects, altered by the efforts of the Jains to introduce systematic order into their mythical conceptions current at the time when their religious teachings were reduced to a definite form.

LITERATURE.—Umaiwari's Tattvavrikshhigama Sistra, chs. 3 and 4 (tr. ZDMG L. [1906] 393 f.); Yamunavari's Lekyarpaksa, 1906. 9th and 10th sargas. H. JACOBI.

DEMONS AND SPIRITS (Japanese).—1. Ghosts. 'The difficulty,' says a Japanese writer, 'of reflecting materials for an article about ghosts and ghost-stories is that they are so many of them.' Ghosts and ghost-stories are too numerous to admit of tabulation or classification. There are certain traditional forms which they are supposed to assume. They are mostly of the female sex, are clad in white flowing robes which conceal the
absence of legs, and dishevelled hair hangs loosely over their shoulders. As a rule they are supposed to bear some resemblance to the living original, but this is not invariably the case. The ghosts of the wicked bear on their faces marks of the punishments they are enduring in the invisible world: they appear with one eye, or three eyes, with a long tongue protruding beyond their lips, or with a long flexible neck like that of a snake. They are supposed to be the results of the karma of a previous existence.

The Japanese ghost is not generally malicious; there are times, however, when he can exhibit an amazing amount of perversity and wicked ingenuity. Dr. T. Inouye, who has devoted much thought to the question of ghosts, summarises their appearances as follows. (1) They are commonly seen in the twilight or at dead of night when everything is black and indistinct. They are usually seen, in lonely or solitary places; or (3) in houses recently visited by death, or that have long been deserted, in shrines, temples, graveyard, or among the shadowy forms of woodland. It is very rarely that a ghost appears to a group of persons.

2. Warnings of approaching death.—It is common among temple folk in Japan to say that at the moment of death the soul will often go to the temple to give notice of its death. On such occasions, a jingling or rattling sound is heard by the temple-gate or in the main hall of worship, and it is believed that these sounds are heard by the invariably followed by the announcement that a parishioner, male or female, has died. The man from whom the present writer obtained his information warned him that these stories must not be looked upon as mere idle talk. A thing is of constant occurrence, now as in the past. Two stories from Tono Monogatari will illustrate this point.

A certain rich parishioner of a temple in the township of Tono (in the province of Dewa) was confined to his bed with a disease which was known to be incurable. One day, however, the incumbent of the temple was surprised to receive a visit from the sick man, who was welcomed in the greatest cordiality, and regaled with tea and cakes. After a long and pleasant visit, the priest remained for the night, and the head novice followed him to the front gate. The old man, passing through it, turned suddenly to the right and disappeared mysteriously from sight. The servants in the temple were in the meantime making the discovery that the cakes had been left untouched and the tea spilled on the mats.

Several persons afterwards asserted that they had seen the old gentleman walking mysteriously down the street. The man died that evening, and the family maintained that he had been brought to the temple on his bed all day. The spilling of the tea is characteristic of many of these stories: it seems to be the proper thing for the Japanese ghost to do.

Another very pretty story comes from the lonely mountain village of Ito, the outskirts of which is in Echigo. The wife of a carrier, living with her husband and son, near to a mineral spring, fell into the river, as she was returning after dark on a moonless night from the spring, and was drowned. Husband and son were awaiting her return at home, very anxious to learn the cause of the absence of their mother. After waiting a while, they discovered that she was coming, but so slow was her course that it was evident she was towards the night somewhere, and would return the next morning. As the boy was dozing on his bed he was awoke by something tugging at his hand. Seeing nothing, he went to sleep again. But the tug at his hand came again, and the touch was like that of his mother's hand. Then he called his father, and, striking a light, he found that the place upon which the strange fingers had clung was covered with a peculiar CAD of the mother's dead body. The rest of her body was found among the rocks in the river bed. The palm of her hand was all torn and bleeding. Evidently, in her fall, she had caught a stone or tree, and torn the palm of her hand.

3. The limbs of a ghost.—While the common ghost, and especially the stage-ghost, is generally conceived as a head and shoulders ending off in vague draperies, the following story of the Haunted House of Yotsuya will show that underneath the vague draperies a real man is supposed to exist.

The house in this volume was haunted by a troublesome and noisy ghost who allowed the insinuates so little rest. At last a man, tugging at the cheap rents, discovered a desirable residence, determined to face the ghost and lay him if possible. He shut himself into the house at night and waited the ghost. At dawn he discovered that he was not, however, a terrible ghost at all. When he found that the man showed no disposition to run away he became quite gentle and opened his grief. In the days of his flesh he had been a fighting man, and had had the misfortune to lose his leg at the result of one of his battles. The spirit resided beneath the house, and a one-legged ghost in the realm of the spirits was an object of ridicule. He had long haunted the house for the purpose of recovering his lost limb, but unfortunately he had never yet succeeded in persuading any mortal to listen to his plaint. The man promised to give his assistance, and, instructed by the ghost, proceeded to dig at a certain spot beneath the house. Presently, there arose from the hole a most ugly shape, in appearance like the leg of a man which drifted off, and joined itself to the body of the ghost. "Thank you," said the happy ghost, "I am satisfied now."

4. Ghostly counterparts of material objects.—The Japanese ghost rarely (if ever) appears naked. He appears sometimes in his grave-clothes, but very frequently in the ghostly counterparts of the clothes which he is accustomed to wear in life. He often has a spiritual sword, and has been known in stories to commit murder, e.g., strangling, with the ghostly counterparts of material objects, such as a rope or a piece of tough paper.

5. Close connexion between the two worlds.—These two worlds are very closely connected. The spiritual world lies as near to the material, and is as closely interwoven with it, as the spirit of man is with his body. The link of connexion is never broken, and the Japanese ghost feels the same keen interest in the welfare of his family, province, or country that he felt when alive.

There are many stories to illustrate this: for example, one recently published by Vice-Count Tanii in the Kokumin-Shinbun, of a certain Hannako, Bukomu, a servant of the Tosa clan, who, having been beheaded (A.D. 1674) with his whole family on account of embezzlement of provincial funds, went to the judge on the day following the execution, to relieve himself of an important message which oppressed his mind. In many stories, the constable or a servant of a spirit, who had spent many years in the continuous recitation of the Hoke Kyo, edifies (or annoys?) the community by continuing the same practice in the darkness of the latter night. A murdered man gives no rest to judges, councillors, or kinsfolk, until he has secured a vengeance by artificially accused person and the arrest of his own guilty brother.

These are but a few instances out of the many ghost stories which with Japanese literature and folk-lore abound. Whether the tales are true or not does not matter. The important thing is that they all illustrate the constant belief of the
Japanese in the reality of the spirit world, and in the constant and close interest which its denizens take in the concerns of men.

6. Other aspects of this belief in conduct. — "Are you not ashamed," says a kind-hearted husband, in one of Tokutomi's novels, to his spiteful wife, "are you not ashamed to stand before the family ichi [tablets of the dead], when you have been treating death town by brother's child with such cruelty?" There can be no doubt that the belief in the continued interest taken by the dead in the concerns of the world they have left behind them has exerted in the past, and still exerts, a great influence on the moral conduct of the individual Japanese. The influence is fostered by the presence on the domestic shrine of the tablets of the dead, by the observances on death-days and other anniversaries of the dead, by the ceremonies, joyous and somber, of the Tsurunokai, by the many Injunctions of the Shinto rites, and by the practice, observed in private households as in the great affairs of State, of announcing to the spirits of the deceased, as matters that must touch them closely, the latter quarter of the year, or the family circle or the country. When the second Tokugawa Shogun, Hidetada, wished to change the succession in his family, he was only dissuaded from his designs by the consideration of the fact that to notify the change by some messenger sent expressly to the realms of the dead, Imperial messengers are constantly being sent to announce some event to the spirits of the Imperial Ancestors, and the Shokonsa shrines which, during the present reign, have been erected in Tokyo and elsewhere, to the memory of the patriot dead who have died for sovereign or country during the Meiji period, represent the enlargement by design of the moral conduct of the individual Japanese under one form or another. The spiritual world of the Japanese is no longer bounded by the narrow limits of the province. Like their patriotism, it has become Imperial, for what lies outside the bounds of the Empire the Japanese have but little concern.

7. The spirits of material objects. — The Japanese ghost differs from ours in conception. It is not, as with us, just the spiritual portion of a man, separated from his body; it is the whole soul, spiritualized, the exact, immaterial counterpart of the material man. Every material object (e.g. money, as we saw above) has this spiritual counterpart, and there has from the earliest times been a tendency to identify the spirit of the material counterpart of the material objects, especially things remarkable for beauty, majesty, age, and the like. We hear occasionally of the ghost of a teapot, a badger, or the like; the poetic imagination of the Japanese, has perceived her wilds with gods or spirits of the mountain, the cascade, the tree, the well, the river, the moon, and above all, the sun. The indigeneous Japanese cult is threefold. It is nature-worship, ancestor-worship, and, as a corollary to the two, the worship of the spirit of the material counterpart of the material thing.

8. The spirits of animals. — If man has a spiritual counterpart to his material self capable of leaving the latter and of continuing its existence apart, and if the same can be said of plants, mountains, and other inanimate bodies, it stands to reason that the same qualities ought, logically, to be attributed to the animals. All animals are, in Japanese popular thought, thus endowed with spiritual counterparts, and some are more conspicuously than others. Foxes, badgers, bears, and the like are able not only to appear before the eye in the spiritual counterpart of their own material shape, but even to enter into the bodies of men and other animals, and to speak and act through them.

The fox. — The fox is the hero of a thousand stories. He has, in fact, been known to change himself into a lion and a legend from Nara we read of a Shinto priest from the Kasuga shrine who, having lost his horse, went into the forest to search for it. He was astonished to see a giant creature standing on its fore- limbs; none had stood only a few days before, and, in order to make sure that he was not being bewitched, he cut a branch of a tree. The next day the tree had disappeared, but on the place where it had stood there was a poor little dead fox with an arrow through its heart. Again, the fox has been known to turn into a woman, not only as a temporary disguise, but permanently; and there is a popular play known as the Shinto no minigyo, or 'Forest of Shinto,' which is entirely on the supposed marriage of a man with a vixen who had assumed the form of a young woman. The woman and her oni were the most mischievous and tragic demonesses. The story of the midwife who was tricked by a fox into assisting at the accouchement of his wife is also a favourite one which we find in the inanimate tree. The fox is a real swift and sharp retribution to men for acts of injustice and cruelty, but it is, as a rule, mischievous rather than spiteful, and there are not a few instances in which the fox has shown great gratitude. There are no stories which tell of the fox requiring good with evil; but it never omits to requite evil with evil.

A story from Kai tells of a samurai who shot at a fox with intent to kill. He missed his aim, but the fox did not forget the hostile intention. Next day when the samurai was out hunting, the fox set him on fire. On the other hand, a story from Omi tells of the gratitude of the fox to whom the priest had shown kindness; and the great Nichiren, who had a very tender heart for animals, was said to have two familiar and attendant foxes who accompanied him everywhere, predicting the future, and warning him of coming dangers. A story is also told of a certain Yasunichi, who held the office of judge at Takakura, near Kyoto. The grounds surrounding his mansion were so full of foxes that they became a nuisance to the neighbourhood, and Yasunichi was minded to get rid of them. He appointed a day for a great fox-hunt; but, on the evening before, a fox appeared to him in the shape of a handsome boy, and, in the name of the whole tribe, promised the best of behaviour if only Yasunichi would spare them. Yasunichi did so, and never repeated of the bargain.

For further stories relating to the power of metamorphosis ascribed to the fox, as well as for similar stories relating to other animals, the reader is referred to M. W. de Visser's excellent treatises on the 'Tenga,' the Fox and Badger, and the 'Cat and Dog,' in Japanese folk-tales, appearing in vols. xxxvi. to xxxvii. of the Transactions of the Asiatic Society of Japan.

9. Possession by foxes and other animals. — What we have hitherto said has related to the supposed power of the fox and certain other animals of bewitching men by assuming phantom bodies. In fox-possession, the spirit of the animal intrudes itself into the body of a man or woman, in such a way that the intruding spirit exercises a control, more or less absolute, over the person in whose body it resides. This power is ascribed not only to the fox, but to the dog, the monkey, the badger, and the serpent. Strange to say, these beliefs are more prevalent in Kyushu and S.W. Japan than in the North and Central districts, and it seems not unnatural to ascribe them to Malay rather than to Chinese or Mongolian influences. The following is a list of the names commonly given to these forms of possession, together with the localities in which they are said to be especially found:

DEMONS AND SPIRITS (Japanese)

11. The oni as modified by Confucianism and Buddhism.—The introduction into Japan of Chinese and Indian influences brought with it certain modifications of the oni. The Kojiki itself is a book largely influenced by China, and therefore, possible, that the idea of the yokotetsu shikome may not be a purely Japanese one. To Buddhism is certainly due the idea which makes of the oni the attendants of the god of Hell, Yama. In a story in the Ujiyaze Monogatari they appear as fairies, amidst surroundings which are almost German.

An old woodcutter, who has a large wen upon his right cheek, is overcome by a storm and compelled to pass the night in a hollow tree. Unintentionally, he becomes an instigator of the revels of the oni, who dance around his tree. The old man, who is a good dancer himself, joins in the dance, and, after a very delightful night, promises to come again to him and make him a master dancer. The oni are a little doubtful as to his sincerity, and take the wen off his right cheek as a pledge. When he returns, he becomes an object of envy to his neighbour, who is also a woodcutter, and with a devilish, sharp-trained mind, hurries to his left cheek. The neighbour determines that he will also try his luck, and takes possession of the hollow tree to wait for the oni dance to commence. But he is not a good dancer, and the oni lose their temper. They drive him out of the dance ring, and, as he flies, one of them takes the wen which he had taken from his predecessor and throws it at his right cheek, where it sticks. Then the man returns home with a wen on either cheek.

Some of the tricks ascribed to the oni, such as the stealing of a letter belonging to the Emperor Murakami (A.D. 885-889), which is afterwards mysteriously lowered by lightning from a high tower, and so restored, seem to suggest a credulity that was easily imposed upon. When a woman disappeared from a public park in Kyoto, being last seen walking hand in hand with a man, and when a search made for her resulted in the discovery of a pair of arms and a leg, the police of the period (A.D. 885-889) were probably very glad to be able to plead that it was the work of the oni. An oil-painting, defacing its own owner along the streets, and entering a house, which had burnt a young girl, ought to satisfy the most exacting of spiritualistic seances.

12. The word oni as applied to living persons.—Whilst oni also appears as tenko, 'heavenly fox,' or fox demon, or to the yuki, or inhabitants of the Buddhist Pratataloka, it is also sometimes metaphorically applied to living people. Thus we get oni-musha, 'a devil warrior;' oni-shigen, 'a darling general.' The most purely Japanese term seems to be the beautiful but hard-hearted woman is an oni, an ugly, evil face is oni-zura, and there is a phrase, oni na jūbei, which suggests that the devil was a handsome fellow in his youth.

13. Adaptations of Indian sentiment we get the word tenkō.—The Japanese oni is sometimes conceived of as playing the part of Mara, the Tempter, who so constantly comes between Buddha and his disciples, and who is the enemy of truth. More frequently he is the Yaksha or Rākṣasa of Indian demonological poetry. It has been conjectured that the Onigishima of the popular Japanese story is the Yakṣadiyapa of the Jātakas. In the same story, the onitajī, or attack on the demons, is said to be an adaptation of Rāma's invasion of Ceylon, as given in the Mahabharata.

14. Tengu.—We now come to the consideration of the mysterious beings known as tengu. The popular explanation of this term is 'heavenly dog;' but the word also appears as tenko, 'heavenly fox;' and tenkō, 'heavenly light.' The Buddhist explanation of the word tengu is 'light and darkness,' 'freedom and non-freedom,' 'enlightenment and error.' Thus considered, the tengu is a being in whom are united both sides of these antitheses. A similar interpretation makes ten'kō to be the heavenly mantra which dominates the Vajradhātu, or Diamond World, and gu to be the earthly mantra which rules in the Garbhadhātu, or Womb World. The tengu participate in the lives of both worlds. Shinist and Confucianist writers, Baron Teshio, for example, do not hesitate to denounce the tengu as nothing but figments invented by a crafty priesthood for the purpose of deceiving an ignorant people. It is, nevertheless, interesting to speculate upon the sources from which the conception of these fabled creatures came. The tengu is frequently found in Chinese literature, and it may perhaps be said that the idea of these beings came from a close observation of animals in their native haunts. The Buddhist monks of old generally built their temples in the recesses of solitary mountains, and one of the commonest of the titles bestowed on the founder of a temple or sect was that of kōsin-shōnin, 'the venerable opener of the mountain.' This legend connects all the great kōsin, e.g., Saitō, Kōbo, Nichiren, etc., with stories of the tengu, and the favourite baunts of these creatures are famous temples, such as Kamakura, Atago, Kompāra, Omine, Ontake, Oyama, Miyokō, Akina, and Nikko. The frollicksome antics of animals which believe themselves to be absolutely unseen by human eyes might easily give rise to legends of

1 In the days of the anti-Christian persecutions, Christian emblems and books were occasionally saved or destroyed by being shut up in shrines dedicated to supposed demons, or 'tengu,' owing to the superstitious fears of the people. The present writer has been told of a crucifix which was thus treated; also of a copy of the Christian Scriptures.
DEMONS and SPIRITS (Jewish)

tengu and other weird beings. There would also be ground for imagining that some of the staiders of the brute creation were re-incarnations of *yamabushi* and other pious recluses.

15. *Garuđa.*—Undoubtedly the *tengu* are connected with the *Garuđa* or garuda of Buddhism and mythology. *Tengu* will appear as priests, riding on foxes, carrying feather fans, or even swords like *sōmaru*; but their commonest form is that of a bird of prey not unlike an eagle or a vulture. It is a safe generalization to say that, wherever a *tengu* is represented with the beak and claws of a bird, or with wings to fly with, the prototype is the *Garuđa.* When the *tengu* takes some other form, e.g., a shooting star, a white badger, and so forth, the origin near Tokyo is at the village of Nakayama, where, at a certain temple belonging to the Nichiren sect, periodical retreats are held for the purpose of driving out evil spirits of all kinds (see an art. on 'Buddhistische Gnadensmittel,' in the *Mitteilungen der deutschen Gesellschaft für tengu, Natur- und Völkerkunde Ostasiens* [vol. v., Tokyo, 1907]).

16. *Tengu-possession.*—*Tengu*-possession differs from one that by *oni*, or any of the bewitching animals. There is no mischief in it, and no devilry. With *oni* possession often the case, for merely becomes preternaturally learned or solemn, reading, writing, or fencing with a skill that would not be expected from him.

17. *Exorcism.*—When a man is possessed by a *tengu*, exorcism is of little importance. For possession by evil spirits, foxes, badgers, and the like, there are many forms of exorcism in vogue, the sect of Nichiren being especially noted for its labours in this kind of healing. The most famous place in Japan for this purpose is Nakyuma, where, at a certain temple belonging to the Nichiren sect, periodical retreats are held for the purpose of driving out evil spirits of all kinds (see an art. on 'Buddhistische Gnadensmittel,' in the *Mitteilungen der deutschen Gesellschaft für tengu, Natur- und Völkerkunde Ostasiens* [vol. v., Tokyo, 1907]).

18. Spirits of the house, etc.—Spirits have much to do with the Japanese conception of the house. No building can take place without a reference of some kind to *tengu*. But this is a large subject, and will be more conveniently treated in connexion with the house.

LITERATURE.—In addition to the authorities quoted in the text of this article, the present writer has drawn mainly upon three sources, all Japanese:—

(i.) The *Journal of the Tokyo Anthropological Society.*

(ii.) *Tsuchioka, Būkkyō Shinbun*, a weekly journal published under the auspices of the reforming school of Buddhists, also in Tokyo.

(iii.) *Tei no Hijiri* ("The Light of the Far East"), the organ of the Tokyo Philosophical Society.

A. LLOYD.

DEMONS AND SPIRITS (Jewish).—There can be no hesitation in saying that the existence of spirits was, during most periods of Jewish history and in most places, regarded as incontestable. Yet this statement is capable of being modified in no small degree. It has been stated, on the one hand, that demonology obtained so strong a grasp of the popular mind as completely to fetter it with superstition and to stifle all higher aspirations; that religious leaders and thinkers were themselves not free from these ideas; and that this belief obscured and in many ways detracted from the value of their ethical teachings. On the other hand, this has been too categorically denied by writers who hold diametrically opposite views. As might be expected, the truth lies in the golden mean. The human mind and soul are capable of accommodating simultaneously opinions which are not only inconsistent, but even mutually exclusive. Yet it is important to note that, however strong the tendency may be to disentangle his thoughts and to harmonize them that he is willing to retain the incongruent. Consequently a whole-hearted belief in the supremacy of the Godhead need not necessarily exclude an admittance of the working of other powers. To arrive at the conclusion that one or the other of these beliefs must be rejected requires considerable progress along the path of mental reasoning.

The belief in spirits during post-Biblical times was a case similar. In ancient Greece, there was an especial *Assyry-, Bab.* and *Hebrew* art. on the present subject. What Chaldea, Arabia, and Egypt gave to Canaan underwent substantial change, and received additions from internal and external sources. In Palestine itself, art. 'Demonology.' The scope of the present article is to furnish suggestions which may in some cases account for their existence. While frankly admitting the origin of a large number to be purely superstitions, there are yet many forces which may be readily understood, including Halakah, Haggada, and Qabbala. On account of this wide area, great care must be exercised in drawing conclusions. Demons occurring in late books must be traced to their earliest sources. A related reference in the Shulhan *Arūkh* (1558) requires investigation as to whether it be a medieval invention or a lingering survival of a primitive superstition. Secondly, references must be examined to see whether they are the utterances of individuals or genuine examples of popular belief; and distinctions must be drawn between local and general beliefs, between Semitic and non-Semitic, and between Jewish beliefs and those borrowed by Jews from their neighbours in European countries. A remark more than any of the foregoing, is the exercise of careful analysis in selecting Talmudic material. It is absolutely necessary to assign each authority to its proper local and chronological category; it is to say, evidence which applies to Babylon is inadmissible for Palestine; that which is found to occur in Galilee cannot be used to prove

ments for Judaean; and the same care must be exercised in relating the story.

In investigating Talmudic evidence as to spirits, the reader will notice, at the outset, different attitudes adopted by the Rabbis in dealing with this question. In some cases the reality of demons seems to be beyond question; in others it seems, with no less certainty, to be denied. Stories occur in which both these attitudes may be traced simultaneously. The reason for this may be found if the nationalities of the respective teachers be considered. It is certain that Galilean teachers accepted, while Judaean teachers rejected, the existence of spirits. The numerous instances which the NT furnishes would have been impossible save in Galilee; there is a strong similarity between these and those adduced by Galilean Rabbis. The same must be said of those Rabbis who came from Mesopotamia. As they were brought up in surroundings in which superstition was rife, their teaching was tinged by a belief in spirits, and in comparison with them the clairity of Palestinian teaching stands out in bold relief.

Justin Martyr (Dial. I. 65) accuses the Jews of cults, amulets and conjurations, to no less an extent than the heathen. The evidence of R. Simon b. Yohai, a Galilean Tanna of the 2nd cent., is equally conclusive for Galilee. Thus Bab. Erubin, 64b, says:

'The Master says: We do not pass by food (which is lying in the street, and which may have been used for protection against spirits).'

R. Yehuda, a Galilean, and Simon b. Yohai, a Galilean, said:

'This decision applies only to the earlier generations, when the daughters of Israel were not practised in all arts of magic (p. 277). Nowadays, when the daughters of Israel are indeed practised in all magical arts, this does not apply. It has been taught that one should pass by loaves, but not by food; and he said, pieces: if they be small pieces also for this purpose!' [Note that none of these Rabbis is a Judaean. Simon b. Yohai was a Galilean, and R. Aie and R. Aie were Babylonians.]

The difference between Judaean, on the one hand, and Galilean and Babylonian, on the other, may be demonstrated by the story related about Zonin and the Palestinian Aqiba in Bab. 'Aboda Zara, 53a:

'Zonin said to R. Aqiba: Both of us know that there is no reality in idols, but how is it that we see men going to them and returning back? He replied: I will relate to thee a parable. There was once in the city an honest man, with whom all the teachers of religion of both nations went to deposit their money without witnesses. One man, however, would always do so before witnesses. On one occasion he forgot and omitted the witnesses. Then the wife of the honest man went to him, and said, I forgot to tell you. Then he replied, And indeed, is he foolish, shall we lose our faithfulness and faithfulness to God? They said, On account of our sakes. When they are sent upon man, the precise limits of their duration are specified; they are adjured and warned at what moment, by what names of spirits, and what drug they shall take to produce sleep. When the time arrives for the disease to depart, and it happens that the sufferer is at the (heavenly) temple, the diseases say: If rights we should not go, but shall we prove unfaithful to our oaths for the sake of a fool?'

These and similar anecdotes, which are to be found in the same place, show that the Pal. Rabbis placed no reliance in spirits and conjurations. It should be noted that R. Aqiba (A.D. 50-135) says of himself elsewhere (Sem. viii., M. K. 216): 'The people of the south know Aqiba, but the people of Galilee know him.' It was in Galilee that the people believed in possession by evil spirits in the actuality of demons (e.g. NT references), whereas in Palestine the views of Aqiba prevailed.

One of the favourite forms of procuring intercourse with spirits was by spending the night in a cemetery. In connexion with this practice, reference should be made to Jer. Targum, i. fol. 49b, and, in a slightly different form, to Gen. Rabbah, ii. 29, outer column (ed. Krotoschin, 1866), and Bab. Hagiga, 36, near end. In all these cases invocation of spirits is mentioned: e.g. כָּלָיָם שלדמ, he who burns incense to the sheidim, and he who passes the night by the graves in order to get under communion with an unclean spirit. These customs are strongly condemned, and are viewed as an indication of insanity (i.e. one who participates is a נָחָר). With these may be compared the story in Levit. Rabbai, xxvi. 5:

R. Erakhya in the name of R. Levi relates that a kohen and an Israelite were proscribed by a demon and went to a skilled physician, who prescribed for the Israelite, but left the kohen neglected. The latter asked the reason, and the physician replied: 'He is a kohen, and is of those who spend the night at the graves; but thou, who art a kohen, dost not act thus, therefore I left thee and prescribed for him.'

This story illustrates the difference between the ignorant and the learned classes; it should be contrasted with the statements of Athanasius (Logatio pro Christianis, chs. xiv., xxvi., xxvii.), to whom demons were a vivid reality.

Probably the earliest demons are those originating from the movements of celestial bodies and from natural phenomena. To the former, of course, belong Bab. and, later on, Persian examples. Similarly the sand-storm in the desert may be safely held toacco DJ, some of the scenes of the jinn. So, too, Ps. 91:5 'the destruction that wasteth at noonday' may not improbably refer to the burning heat of midday. The development of this idea may be traced in Bab. Pesahim, 1116b, where the same word getebh occurs.

Inasmuch as the functions of religion were, among the Jews, very wide, the scope of the teacher's activity extended to many branches which would not to-day be considered as belonging to the true sphere of religion. He legislated for social as well as for religious matters; the daily intercourse between man and his neighbour was the object of his attention. Consequently, when there are found quasi-religious phenomena, in connexions which seem very remote from religion in its modern signification, it must be remembered that the word has been greatly restricted in the process of time. In turning back to those spirits which may perhaps have their origin in these phenomena, the following must be borne in mind. Thus in Pesahim, 111b, to which reference has been made, the following statement occurs:

[From the first line to the sixteenth there can be no doubt as to their actuality; after that date it is doubtful. They may be found in the shadow of ivy which is stunted (not a yard high), and in the places and corners and under the eaves of a yard high, but chiefly they may be found in the shadows of a high wall.]

The Gemara does not particularize the spirits mentioned in the passage cited, which follows references to many varieties of spirits. There cannot, however, be much doubt that the getebh מְרִי, or spirit of poisonous pestilence, is meant, although the passage might refer generally to the sheidim, for this spirit is described a few lines earlier in the Gemara:

[The getebh מְרִי is of two kinds; one comes in the morning, the other in the afternoon. The former is called getebh מְרִי, and causes mealy pittance to ferment (lit., it appears in a vessel of mealy pittance and stirs the space). The latter is the pestilence which destroyeth at noonday; it appears like a sieve on the eaves of a roof, and it turns like a sieve (8th supra).]

It would not seem a very rash assumption to regard this spirit as the development and personification of midsummer heat. Tammuz is elsewhere stated to be the height of summer, e.g. Shab. 53b, where a popular proverb is quoted to the effect that even in Tammuz the donkey feels the cold. The fact that attention is drawn to those shadows which afford insufficient protection from the rays of the sun, and the stress laid on the evil effects of proximity to a privy, render the more probable it may be noted, incidentally, that the term brokerage by a demon is מְרִי, מְרִי. The spirits are said to have been created on Friday afternoon before Sabbath; see Gen. Rabba, vii. 7; Pirke Abott. 39, where they are included in the category of mythical phenomena.
able; so also does the mention of the action of heat on food and on animals (cf. the danger of sleeping under the rays of the moon [Pes. 111a, near foot]).

Closely allied to spirits which are embodiments of natural phenomena are those which affect man in his daily life. In the Gemara many examples of such are mentioned. Under the guise of demons, they teach lessons in cleanliness, sobriety, care, and economy. For instance, R. L. Lagi says: "Whoever does one of the following four things risks his life, and his blood is on his own head, namely: he who performs his natural functions between a palm tree and a wall; he who passes between two palm trees; he who drinks tomato juice; he who drinks (or washes) any part of the body with pure water, even if his own wife has spilled it in his presence."

It is unnecessary to show what points underlie these warnings, which are, meanwhile, still further discussed in the Gemara; but it is well to note that the form of the warning has changed somewhat. The demon is implied, but not actually expressed. Similar instances are the following:

The Genizah of the Pers. Talmud; so Goldschmidt, in his tr. of Jer. Talmud, p. 1111 of sustenance is called Cleanliness; the Genizah of poverty is called Dirt.' R. Papa says: 'A man should not enter a house where there is Dirt.' Because Dirt can kill cats and devours serpents, and serpents have small houses; should one of these houses enter his hut, it could be dislodged and turned away. Others say that a man should not enter a house in which there is no cat, by night. Why? Because a serpent could, unknown to him, become attached to him.'

One of the peculiarities of the Hebrew language, as compared with Greek, is its paucity of abstract nouns. In the Talmud, that which did not fall in which the Talmud is composed, has a far larger vocabulary than Mishnic Hebrew, yet it cannot be denied that the mind of the Jew preferred nouns of a concrete meaning. This fact deserves recognition when comparing demonology in the vocabulary contained no word which could adequately render such terms as 'dirt,' 'infection,' 'hygiene,' etc., and in dealing with scientific terms it was, and is still, a matter of extreme difficulty to find suitable translations. This fact was so evident to any one who attempts to render into classical or even Mishnic Hebrew a piece of philosophical prose which could be turned into classical Greek with facility. Consequently the personification of a quality is to be disregarded, and the underlying principle must be extracted. It might be urged that the Greek no less than the Hebrew people had its demons; but other circumstances, which will readily suggest themselves, have to be taken into account. Instances of this kind are the following:

In I Thess. 7:18, reference is made to the demon σῶμα, whose name also occurs in Talmud, 109a, where the kind actions of R. Huna are enumerated. Še'itah clings to the fingers-tips and afflicts people, especially young children, who eat with unwashed hands. R. Huna was acquainted with this demon, and used to place a jar of water ready, saying, 'Whoever wishes, let him come and wash his hands as to avoid the danger from the Še'itah.' Kohler (J.E., art. 'Demonology,' p. 317, note) associates Še'itah with cuprum. In the same way the Shimshon Ar'baḥ prescribes, an early reference to the evil spirit which clings to a man's unwashed fingers-tips, and urges the necessity of washing them. It is scarcely conceivable that the evil spirit in this case can have any value, and should be accounted for, which the Hebrew word for which the Greek σῶμα does not contain an equivalent appropriate.

If possible the demon Līliṭ (see 1 Sam. 21: 11) ; Erubin, 196, 109b, Λυσίτος. This belongs to this category; this man is said to have married Līliṭ in addition to Eve, and filled the world with lotions and demons of every description, which she bore him. Then, seized with jealousy of Eve's children, she attacks and attempts to slay newly-born infants. The story recalls the myth of the formless Līliṭ, and all the other Līliṭi give the Līliṭ idea is a personification of the perils which beset women in child-birth.

Although the demon has become completely rationalized, the warning is addressed to man's common sense, and not to his fear of the supernatural. Yet it must be borne in mind that Paul, the great apostle of the Galatians, thought of Paul of Socrates may be compared; it is in such circumstances undoubtedly that the prophylactics suggested by the Rabbis were meant to apply. The recital of verses of Scripture, especially of the

For all of which suitable Heb. equivalents are lacking; it cannot be from pure choice that demonology was called upon to furnish descriptive titles.

There are cases in which demons and spirits are cited as playing pranks of a harmless or even amusing character, comparable to those of fairies and kelpies in folk lore. The fact that such stories are found in many of the older Talmudic portions, the Gemara supports the idea above suggested. Children accompanied the Rabbis and listened to their discussions, and a story of the marvellous and supernaturally may have been purposely introduced in order to stimulate wondering wits or as a reward for diligent attention.

On the other hand, it cannot be denied that in many cases the demon is of a purely superstitions nature, e.g. Beraḥoth, 64a:

'It is taught: Abba Benjamin says, 'Were mortal eye capable of seeing everything, it would be impossible for any human being to exist on account of his existence. A child's life would be empty without fairy stories; even to-day the personification of the spirit of Christmas festivity receives good-natured toleration. Religious thinkers belonging to the most heterogeneous schools of thought accept angelology and demonology not as a concomitant of religion. The presence of both is essential to that mystic element from which no religion is or should be entirely divorced. But the force of the imaginative faculty becomes stronger when it invoques the sphere of reason and subverts reason itself. It is almost impossible to establish a hard and fast rule in these cases.'

The demonology of the Qabbala, and also of the later Rabbinoic writings, is extremely interesting. Many beautiful conceptions from Jewish ceremonial are derived from Qabbala, which assumes a mystic connexion between things terrestrial and celestial, and symbolically identifies the form with the matter.

The prayer at the blowing of the ram's horn on New Year's day makes the notes of the sk'far into angels ascending to the Divine Throne, while inability to blow the sk'far is due to the sk'far hā'ir (evi inclination, loss) which intercepts man's holy thoughts and robs him of hodonoda (devotion) and ability to produce a note. So, too, the sk'far is due to the sk'far hā'ir, which prevents the sk'far from the synagogue to his home, which is prepared to receive the Sabbath bride in peace and love, two good angels accompany her, and the evil angel is constrained to say Amen. But, if man's thoughts are not properly attuned, and if the reception of the sk'far is rejected, the good angels cannot make their return. The sk'far hā'ir and the evil angel prevails.

In such cases the spirits are to be explained as graphic representations of the frame of mind of the man, poetically, transformed, and the spirit rendered in graphic form. Inasmuch as the sk'far of Socrates may be compared; it is in such circumstances undoubtedly that the prophylactics suggested by the Rabbis were meant to apply. The recital of verses of Scripture, especially of the
DEMONS AND SPIRITS (Muslim).—Besides the gods to whom they devoted a regular cult, the ancient Arabs recognized a series of inferior spirits, whom they worshiped under the guise of natural phenomena and magical practices. In this matter, as in others, Muhammad preserved the ancient beliefs by adapting them to the new religion, in such a way that it is impossible to distinguish which elements in his teaching are derived from his inward conviction and which are simply a concession to the doctrine of his compatriots. To these notions—Muhammad's inheritance, so to speak—are added outside elements, Jewish and Christian, themselves derived from Chaldaic and Parthian. It seems impossible to give a precise account of the doctrine of the Qur'an on the subject of spirits, for even the very earliest commentators are hedged around with insurmountable traditions, which it is anything but easy to criticize. Nevertheless, however, the Qur'an traces out all the main divisions of the system: angels, servants of Allah; Satan and his horde who animate the images of false gods; jinn; the beings of whom are believers, some unbeleivers. If it is true that the existence of several categories of angels, it nevertheless names only two, viz. Jabril and Mik'âl; for Harût and Marût are fallen angels with a Satanic rôle. However, just as Judaism, under the influence of the Qabbala, multiplied its list of spirits, and Christianity set up in battle array its armies of angels and demons, Islam also found in this belief and in the magic struggle for the favour, or against the attacks, of spirits an element of reaction against the cold, aloof unity of Allah.

From Judaism and Christianity Islam learned the names of spirits not known before, and it gave them definite forms, in descriptions which grew in bulk during the centuries. The principal divisions of anthropomorphism and the hadisht, and then gained in coherence under the influence of Mu'tazilism. This doctrine we shall discuss in a few lines.

Islam recognizes three classes of living beings higher than man: angels (angels, plural, malakû); demons (shaitân, plural, shaqtîn); jinn, or men. The essential and common characteristic of these beings is that they are formed from one single substance, instead of from a combination of substances like the human body.

Among these spirits, the front rank is occupied by the angels; they are Allah's bodyguard, and do his will and obey his word. According to Kazwini (i. 53), 'the angels are beings formed from a single substance, endowed with life, speech, and a reason.' And, as angels are not divided as to the characteristics that distinguish them from demons and jinn; according to some, they differ in their very nature, just as one species of terrestrial animal differs from another; others are of opinion that the difference is only in continuities, or relativeness, such as are contained in the notions of complete and incomplete, good and bad, etc. The angels are essentially sacred, untouched by the guilt of passion or the stains of anger. They are in constant communion with the commands of Allah. Their food is ta'âbû (the recitation of the formula 'Glory to Allah!'), and their drink is tâqdis ('Allah is holy!'). Their occupation is to repeat the name of Allah, and all their joy is in his worship. Allah created them from a form of space to be found in them without an angel bending or prostrating himself before Allah.'

The Arabic word malak, the general word for angel, means 'sent,' and is a Jewish loan-word. It has lost its true form malâk, which survives, however, in the characterization of the plural malâkû. The exact pronunciation was as in pre-Islamic Arabic, as we know from a verse of Abû Wajra, quoted in the Lisan al-'Arab (xii. 386), where it is necessary to drop the mette. But a certain number of angels had special names, which without comment have been inserted here, partly derived from the Qur'an. It seems useless to quote all the verses of the Book where angels are mentioned; we shall therefore notice only the most interesting.

The greatest of the angels—those honoured by all the others as dearest to their Lord—are the four throne-bearers of Allah (hamalat al- 'arâq), whose name will be doubled on the resurrection day. Their duty consists in raising up, before Allah and implore him on behalf of true believers. The legend gives them the form of the four beings who passed into Christianity with the Apocalypse to symbolize the evangelists: man, bull, eagle, and lion. This legend defines the relations established by their form between each other and a class of living beings on earth: the first angel is humanity's intercessor before Allah; the second pleads for domestic animals; the third for birds; and the fourth for savage beasts.

The cherubim (korâbîyûn) are angels who are absolutely absorbed in the holiness of Allah; their function is to repeat the ta'âbû ('Glory to Allah') unceasingly all day and all night. They seem to inhabit a sacred palace and fly, where they live in peace, far removed from the attacks of the devil, Jibûl.

There are four angels who have a distinct personality and are not known by a separate name: Jabril (Gabriel), Mik'âl (Michael), 'Azzârîl, and 'Irafiyl. Authorities class these in a special group; these four archangels will be the last to die at the end of the world. Jabril (or Jibûr'il, Jibril, and sometimes Jibrîr) is, above all, the angel of revelation (rû'ûs an-nabîyûn); he was the messenger sent by Allah to the prophets and particularly to Muhammad. His formidable appearance would overawe men, and so he appears in disguise to the prophets. Muhammad entreated him to reveal himself to him as he really was, and Jibûr'il consented; but, when he appeared,
immense, and covering the whole horizon with his wings, the Prophet raised an army. Even the inhabitants of the sky were alarmed by him. When Allah sent him to deliver the Word to a prophet, they heard a noise like the dragging of chains over rocks, and so terrible that they swooned. When the angel was thrown down to the earth, they recovered their senses, and asked what the Lord had said to him: ‘The Truth’ (al-Haqq), replied the angel, and all repeated: ‘Al-Haqq, al-Haqq!’ This function of Jabril is explained in Arabic by terms analogous to those used in Christian theology is the ‘guardian of holiness’ (hizān al-quds), the ‘faithful spirit’ (ar-raḥ al-‘a‘imin), the ‘holy spirit’ (ar-raḥ al-quds); in which terms we see a borrowing from Christianity. He is the ‘awesome of holiness’ (ta‘ūs al-mala‘ik). His role, however, is not restricted to the carrying of revelation.

A tradition says that, when the Prophet asked him to reveal all his power, Jabril answered: ‘On my two wings I bore the country of the people of Leth, and carried it up into the air so high that its inhabitants could no longer hear their cows crow; then I turned it upside down.’ It is also said that he has assistants who watch over the wanderings of the world. Schwab (Angels, II., 1807, p. 91) notes some of his various functions. The most simple descriptions give him six huge wings, each composed of a hundred little ones; he has also two other wings which he uses to destroy rebellious angels. But later texts show Jabril provided with sixteen huge wings, and covered with saffron hairs; a sun shines between his eyes, a moon and stars between every two wings. He enters the Sea of Light (Bahár an-Na‘) three hundred and sixty times every day; and every time he comes out of it a million drops fall from his wings, and form the angels called ‘Spiritual’ (Rūḥānīyā), because they spread abroad spirit, peace, and perfumes (‘ar-raḥ wa-ar-raḥa wa-ar-raḥa). Jabril is ‘inert’ (mulk) after Mikail. He is named three times in the Qur’an (ii. 91, 92, lxvi. 4); but he also appears under other names (ii. 81, 254, v. 109, where he is the annunciator to Mary; xvi. 104, xxvi. 193, liv. 11, 92). Jabril in the form Mikail is mentioned after Jabril, to reply, the commentators say, to the Jews, who regarded the former as their ally and the latter as their enemy, and gave this as a pretext for rejecting the revelation, in the light to Muhammad by Jabril (Tabarî, Tafsir, i. 330).

Mikail (Michael) is the angel charged with providing food for the body, and knowledge and prudence for the mind. He is the supreme controller of all the forces of nature. From each of his eyes there fall a thousand tears, from each of which Allah creates an angel with the same form as Michael. Singing praises to Allah until the day of judgment, they watch over the life of the world. (These are the or ‘angels of the sun’). Being Michael’s assistants, they control the rain, plants, and fruits; every plant on the earth, every tree, every drop of water, is under the care of one of them. The earliest traditions locate Michael in the seventh heaven, on the borders of the Full Sea (al-Bahr al-Maṣgūr), which is crowded with an innumerable array of angels; Allah alone knows his form and the number of his wings. Later on, however, the descriptions become more precise: his wings are the colour of crimson, he is covered with saffron hairs, and each of them contains a million faces and months, and as many tongues which, in a million dialects, implore the pardon of Allah; from a million eyes that weep over his three million cheeks. Michael, which Allah formed the cherubim, Michael was created five hundred years after Isrā’iil. The conception that arises from the representation of the beings, the Prophet raised an army. Even the inhabitants of the sky were alarmed by him. When Allah sent him to deliver the Word to a prophet, they heard a noise like the dragging of chains over rocks, and so terrible that they swooned. When the angel was thrown down to the earth, they recovered their senses, and asked what the Lord had said to him: ‘The Truth’ (al-Haqq), replied the angel, and all repeated: ‘Al-Haqq, al-Haqq!’ This function of Jabril is explained in Arabic by terms analogous to those used in Christian theology is the ‘guardian of holiness’ (hizān al-quds), the ‘faithful spirit’ (ar-raḥ al-‘a‘imin), the ‘holy spirit’ (ar-raḥ al-quds); in which terms we see a borrowing from Christianity. He is the ‘awesome of holiness’ (ta‘ūs al-mala‘ik). His role, however, is not restricted to the carrying of revelation.

A tradition says that, when the Prophet asked him to reveal all his power, Jabril answered: ‘On my two wings I bore the country of the people of Leth, and carried it up into the air so high that its inhabitants could no longer hear their cows crow; then I turned it upside down.’ It is also said that he has assistants who watch over the wanderings of the world. Schwab (Angels, II., 1807, p. 91) notes some of his various functions. The most simple descriptions give him six huge wings, each composed of a hundred little ones; he has also two other wings which he uses to destroy rebellious angels. But later texts show Jabril provided with sixteen huge wings, and covered with saffron hairs; a sun shines between his eyes, a moon and stars between every two wings. He enters the Sea of Light (Bahár an-Na‘) three hundred and sixty times every day; and every time he comes out of it a million drops fall from his wings, and form the angels called ‘Spiritual’ (Rūḥānīyā), because they spread abroad spirit, peace, and perfumes (‘ar-raḥ wa-ar-raḥa wa-ar-raḥa). Jabril is ‘inert’ (mulk) after Mikail. He is named three times in the Qur’an (ii. 91, 92, lxvi. 4); but he also appears under other names (ii. 81, 254, v. 109, where he is the annunciator to Mary; xvi. 104, xxvi. 193, liv. 11, 92). Jabril in the form Mikail is mentioned after Jabril, to reply, the commentators say, to the Jews, who regarded the former as their ally and the latter as their enemy, and gave this as a pretext for rejecting the revelation, in the light to Muhammad by Jabril (Tabarî, Tafsir, i. 330).

Mikail (Michael) is the angel charged with providing food for the body, and knowledge and prudence for the mind. He is the supreme controller of all the forces of nature. From each of his eyes there fall a thousand tears, from each of which Allah creates an angel with the same form as Michael. Singing praises to Allah until the day of judgment, they watch over the life of the world. (These are the or ‘angels of the sun’). Being Michael’s assistants, they control the rain, plants, and fruits; every plant on the earth, every tree, every drop of water, is under the care of one of them. The earliest traditions locate Michael in the seventh heaven, on the borders of the Full Sea (al-Bahr al-Maṣgūr), which is crowded with an innumerable array of angels; Allah alone knows his form and the number of his wings. Later on, however, the descriptions become more precise: his wings are the colour of crimson, he is covered with saffron hairs, and each of them contains a million faces and months, and as many tongues which, in a million dialects, implore the pardon of Allah; from a million eyes that weep over his three million cheeks. Michael, which Allah formed the cherubim, Michael was created five hundred years after Isrā’iil. The
The borders of the world; his head reaches the highest heaven, and his face looks towards the Tablet of Destiny. The angels, who see the sight of men, harm not, and writers accordingly give him seventy thousand feet and four thousand thousands, while his body is provided with as many eyes and tongues as there are men in the world. Every time a being dies, one of these eyes closes, and at the end of the week only eight eyes will be open, since there will be only eight beings alive—the four archangels and the four throne-bearers. Azrā'il has four faces, each of which is reserved for a separate class of beings: his left hand is for prophets and angels, that on his chest is for believers, that on his back for unbelievers, and that on his feet for the jinn.

The angel of death consigns the souls he has seized to the angels of punishment (wulūkāt al-ʿadhāb), according as they are believers or unbelievers; but certain authors say that it is the angels assisting Azrā'il who themselves carry off the dead. After forty years passed in Dārwaḍ, that Azrā'il, with Allah's permission, calls the souls, and they come and place themselves between the two first fingers of his hand. Lastly, according to still others, Azrā'il gathers the believing souls together hand by hand, in white silk cloth perfumed with musk, and sends them to the farthest summits of heaven (al-ʿalīyijm), while the souls of unbelievers are crowded into a rag coated with tar-water and launched into the depths of hell (as-sijm).

No man can escape Azrā'il; it is impossible to cheat him even by being instantly transported by magical means to the very ends of the earth: Azrā'il is there in an instant. Thus in the story of the young man who was carried to China by his jinn; this popular story is found everywhere (Tabari, Ghazālī, Wolf, The 1001 Nights, Mistatref, etc.). The Qurʾān commentators, however, insist on the relations which Solomon vowed with Azrā'il, though he had started by fainting at the sight of the angel in his true shape.

Isrāʾīl is, according to the formula given by Kaʿb ibn Waṣqīn, the angel who brings the orders of Allah to their proper destination, and who puts the soul into the body. He is the angel of whom the Qurʾān speaks without naming him (vi. 73, lxxxi. 33, etc.), and who is to sound the trumpet of the last judgment (gūn). Azrā’il’s son, the head of the angels, has the charge of the guarding of the gates of heaven. A person who writes to Isrāʾīl changes his wills; i.e., according to different opinions, except the eight angels mentioned above, or only the four archangels, who will perish in the following order: Jabrīl, Mikā’il, Isrāʾīl, and, last of all, the angel of death. After forty years passed in Dārwaḍ, Isrāʾīl will be re-born and will sound the second blast, the blast of resurrection (nafṣat al-bāṭḥ); all the souls, gathered together in the bell of his trumpet, which is as vast as the heavens and the earth, gather, with his warm breath, bodies they are about to animate. While this is the essential function of Isrāʾīl, it is not his only function. When Allah wishes to give a command to men, he orders the Pen (qalam) to write upon the Tablet of Destiny (lāḥ). Thus he gives to Isrāʾīl, who places it between his eyes, and transmits it to Mikā’il. Mikā’il gets the command performed by his assistants, who represent, as mentioned above, the forces of Nature. Authors describe Isrāʾīl under a form borrowed from a hadith of ‘Aisha, repeating the words of Kaʿb al-ʿAbbār, i.e.

the Jewish tradition. ‘Isrāʾīl has four wings; with the first he closes up the East; with the second the West; with the third he covers the earth; and with the fourth he veils his face before the Almighty Power of Allah. His feet are under the seventh heavens, while his head reaches up to the foot of the throne. A late and strange story (Wolff, p. 14) shows him wandering at the risk of death that Allah has to stop his tears because they threaten to renew the Flood of Noah.

After a dead man has been placed in the tomb, and his friends have left him, and he has heard the sound of their voices, he might wish that Allah had to stop his tears because they threaten to renew the Flood of Noah.
