ACKNOWLEDGEMENT

The National Institute of Mental Health wishes to acknowledge the generous cooperation of the State governments and of the State and county mental hospital superintendents and staffs.

I. —INTRODUCTION

The data in this report are taken from the 37th Annual Census of Patients in Mental Institutions. This yearly census was conducted by the U. S. Bureau of the Census, Department of Commerce for the years prior to 1947, and by the National Institute of Mental Health since then. A detailed historical account of the development of this census may be found in "Patients in Mental Institutions; 1947" pp. 1-4, U. S. Government Printing Office, Washington 25, D. C.

The publication is divided into four parts as follows:

Part I - Public Institutions for the Mentally Retarded

Part II - State and County Mental Hospitals

Part III - Private Mental Hospitals and General Hospitals with Psychiatric Facilities

Part IV - Private Institutions for the Mentally Retarded

These reports provide basic data on the numbers and characteristics of hospitalized patients, movement of patient population; and, in addition, certain administrative data are provided for the State and county mental hospitals and public institutions for the mentally retarded.

Provisional survey data for the State and county hospitals and public institutions are published more currently in "Mental Health Statistics-Current Reports", Series MHB. These publications are available on request from the National Institute of Mental Health, National Institutes of Health, Bethesda, Maryland.

II. —COVERAGE

Prior to 1961, the State and county mental hospitals were termed "public mental hospitals" and included "psychopathic" (short term intensive treatment hospitals operated by the State) and "public prolonged-care" (State and county operated) mental hospitals. As the functions of the psychopathic hospitals are also performed in many of the intensive treatment units of other State mental hospitals, the Model Reporting Area States recommended that the distinction between "psychopathic hospitals" and "State mental hospitals" no longer be made, and that the data for these hospitals be combined, thus eliminating the terms "psychopathic" and "public prolonged-care". Beginning with 1961, the "public mental hospitals" are referred to as "State and county mental hospitals", thus making clear that other public facilities such as Veterans Administration hospitals, military hospitals, Public Health Service hospitals and territorial hospitals are not included.

This report covers the fiscal year ending in 1962. Most of the hospitals' fiscal years end on June 30th. Exceptions are as follows:

March 31--New York

August 31--Texas

September 30--Alabama

The schedules distributed to the various hospitals were as follows:

a. Movement of population by sex

b. Detailed schedules:

Admissions with no prior admission during year by age, sex, and diagnosis

Resident patients at end of year by age, sex and diagnosis

Personal employed by type of position

Financial statement

The population movement schedule was completed by all of the 285 State and county hospitals (See Table A.) Incomplete reporting of the detailed schedules is given in Table B.

III. —DEFINITIONS

Type of Hospital

1. State and county mental hospitals—Hospitals operated by State and county governments.
2. Exceptional cases—Three hospitals have been classified by the way they function

rather than the authority under which they operate.

- a. Saint Elizabeths Hospital, Washington, D. C.—Although operated by the Federal Government, this hospital serves the residents of the District of Columbia in the same way a State

² Does not include one hospital in Minnesota

³ "Mental Health Statistics - Current Reports", Series MHB-H-7

- hospital serves the residents of a State. Operating funds come largely from the District of Columbia Government.
- b. Wayne County General Hospital and Infirmary, Eloise, Michigan—The large psychiatric unit of this hospital is classified as a State mental hospital since it serves the residents of Wayne County in this capacity.
 - c. The DeJarnette State Sanitarium, Staunton, Virginia—Although under State authority, this hospital is not tax-supported and is operated as a private hospital. Therefore, it is not classified as a State mental hospital but is included in the Census as a private hospital (see Part III of this report).

Discussion

In order to reflect accurately the number of patients hospitalized in a State public mental hospital system, the appropriate types of hospitals must be included. All states have State mental hospitals; but in addition, some States have county mental hospitals. In these States, the county hospitals may care for specialized groups of patients who, in States without these facilities, may receive comparable care in the State hospitals. Since some of the county hospitals serve the same function as State mental hospitals and others are similar to chronic wards in State mental hospitals, the data for these two types of hospital have been combined in this report. In making comparisons between States with regard to admission rates, resident patient rates, etc., it is important that data on all of the State and county hospitals be taken into account.

Patient Movement Categories

A movement of population table is a book-keeping account of the flow of patients into and out of a mental hospital during the year. Since this type of table shows the number of transactions rather than the number of patients, there may be some duplication of patients. Each movement category is defined as follows:

1. Patients on the Books at the Beginning and End of the Year.
 - a. In hospital. Patients physically present, or accounted present, in the hospital, i.e., those considered "resident patients" (See Section V).
 - b. In extramural care. Patients on the books of the hospital but not in actual residence, i.e., subject to hospital control but residing in a location other than the hospital proper. Patients in extramural care are further classified as follows:
 - (i) On trial visit. Patient is placed on trial visit, usually in his own home, as a test of his ability to adjust to community life.
 - (ii) In family care. The patient is placed in the community with a private family other than his own, under the supervision of the hospital.
 - (iii) Otherwise absent. Includes all patients who have been placed on temporary visits with the understanding that they will remain out of the hospital longer than seven days but will return on a specified date.
 - (iv) Unauthorized absence. Includes all patients on escape, elopment, or AWOL who are still carried on the hospital's books.

2. Additions. Patients who enter a mental hospital during the course of a year.

- a. Admissions: This category includes three admission classifications. Admissions With No Prior Psychiatric Inpatient Experience includes patients admitted to hospitals with no record of prior admission to any inpatient psychiatric facility either within or outside the state system. The state system is defined to include state and county mental hospitals and public institutions for the mentally retarded. This category is used for the first time in 1962 and replaces the former classification, first admissions, which was defined as "a patient who has not previously been admitted to a public or nonpublic hospital authorized for the treatment of mental disorders." The major difference between these two definitions lies in the area of psychiatric services in general hospitals. In using the first admission definition, some states did not consider prior psychiatric treatment in a general hospital as constituting a previous psychiatric admission. Under the present definition such cases are considered as having a prior admission to an inpatient psychiatric facility. Therefore, the number of admissions with no prior inpatient psychiatric experience will either be less than or equal to the number of first admissions (old definition). Admissions With Prior Admission to Hospitals in Same State System are patients admitted to the hospital with a history of prior admission to a public mental hospital or a public institution for mentally retarded in the same state. All Other

Admissions include patients admitted to the hospital with prior admission to other inpatient psychiatric facilities--state psychiatric facilities in other states, Veterans Administration hospitals, private mental hospitals, private institutions for the mentally retarded, and any other inpatient psychiatric facilities (including psychiatric services in general hospitals) which are medical facilities accepting patients for screening and/or treatment of psychiatric disorders.

- b. Transfers In. Include patients who are moved between hospitals within a single State system with no break in custody. Patients may be transferred from one hospital to another in the same State system even though on leave or escape. The State system is defined to include State and county mental hospitals and public institutions for the mentally retarded within the State.

Movements of patients into and out of a State system are considered admissions and discharges, respectively.

3. Separations. Patients who are removed from the books of the hospital.

- a. Discharges. Patients formally removed from the books of the hospital. Such patients may be discharged directly from the hospital or from extramural care.
- b. Deaths. Patients who die while in the hospital or while on extramural care.
- c. Transfers Out. Include patients who are moved between hospitals within a single State system with no break in custody.

Age of Patients

Age of first admissions is reported as of the last birthday prior to admission. Age of resident patients is taken as of the last birthday prior to the end of the reporting year.

Diagnostic Classification

The diagnostic classification can be found in Diagnostic and Statistical Manual--Mental Disorders, American Psychiatric Association, 1952, or in Standard Nomenclature of Diseases and Operations, "Psychobiologic Unit", American Medical Association, 1952.

IV. --LIMITATIONS OF HOSPITAL DATA

It might be expected that interstate differences in resident patient and first admission rates for the State and county mental hospitals would provide a basis for inference as to variations among the States in the prevalence and incidence of mental disease which is sufficiently serious to require hospitalization. However, based on present knowledge, there are a number of reasons why such inferences should not be made. Not all persons with serious mental illness are admitted to State or county hospitals. The number of persons in the community who, under examination, would be diagnosed as mentally ill is unknown. Furthermore, there are many factors other than the person's mental illness which determine whether or not he will seek psychiatric care, such as (a) availability of family and willingness to keep the person at home and (b) community attitude toward the person's behavior.

For those persons seeking psychiatric care, there are several factors which determine whether or not they will be admitted to State and County mental hospitals. The more important of these factors are:

- a. In many communities, psychiatric clinics, various other outpatient services, psychiatric facilities in general hospitals, private hospitals for the mentally ill, and other specialized agencies may be used for the treatment of some mentally ill persons who would otherwise have been admitted to the State or county mental hospitals. There is considerable variation among States in the availability of these facilities and in the ways they are used by the communities they serve.
- b. Within a State and county hospital system, existing facilities may expand, new facilities may open, or other changes may occur that would have the effect of increasing or decreasing the number of patients that could be accommodated.

Therefore, since the number of persons in State and county mental hospitals does not reflect the entire problem or even a known proportion of the problem of "serious" mental illness, rates of admission to or residence in State and county mental hospitals are not valid measures of incidence and prevalence of "serious" mental illness.

V.--THE MODEL REPORTING AREA

In order to undertake the task of solving, in a constructive and cooperative manner, the complex problems involved in gathering uniform, comparable, and meaningful statistics on the mentally ill, a group of State mental hospital authorities, with the aid and counsel of the National Institute of Mental Health, have joined together in the Model Reporting Area for Mental Hospital Statistics.

The expressed objectives of this organization are:

1. The development of a strong central statistical bureau in each State mental hospital system.
2. The development and use of standardized definitions of the various categories of mental hospital patients.
3. The production of standard basic tabulations.
4. The use of appropriate statistical methods in follow-up studies of mental patients.

One of the first projects undertaken by this group was to develop a set of standard definitions for the patient movement categories; first admission, readmission, transfer, resident patient, and temporary visit. More recently, the admissions categories--Admissions With No

Prior Psychiatric Inpatient Experience, Admissions With Prior Admission to Hospitals in Same State System, and All Other Admissions were derived by the Model Reporting Area to replace the first admission and readmission categories (See Page II-8). Of special interest with respect to this report is the Model Reporting Area definition of resident patient--"Includes all patients physically present in the hospital, plus those patients who are permitted to leave the hospital on a temporary absence with the understanding that they are to be returned within a period not to exceed seven days. Patients absent without permission, termed--escape, elopement, AWOL, etc., are not to be included in the resident count". Resident patient data in this report for States in the Model Reporting Area are based on this definition. The membership of the Model Reporting Area is shown in Figure 1. Further information about the organization may be found in The Model Reporting Area for Mental Hospital Statistics, U.S. Department of Health, Education, and Welfare Publication No. 699, available on request from the National Institute of Mental Health.
