## Sir Thomas Lawrence, P.R.A.\*

BY G. D. LESLIE, R.A., AND FRED. A. EATON.

The Counted of Darnley).

By Sir Thomas Lawrence, P.R.A.

THOUGH the son of an innkeeper Bristol, extraordinary natural endowments, extreme precocity, and untiring assiduity marked Sir Thomas Lawrence from his very child. hood as one destined to rise to great eminence in his profession; while at the same time the versatility of his accomplishments, his self-possession, his personal appearance, and

even many circumstances of his early environment, all scem to have helped to fit him for the important position which he was to hold as President of the Royal Academy.

On his mother's side, at least, Lawrence came of a good family; she was a Miss Lucy Read, daughter of the Rev. W. Read, vicar of Tenbury, and hy her mother's side connected with the Powis family. Thomas Lawrence, senior, had been an excise officer, but was, at the time of Sir Thomas's birth, in 1769, landlord of "The White Lion" in Broad Street, Bristol. In 1772 he removed to "The Black Bear," a very important and much-frequented hotel, at Devizes, on the old Bathroad. From all accounts he was rather a pompous and officious personage, dressed in velvet and laced ruffles, and was at all times ready to give the distinguished travellers who stayed at his hotel the henefit of his company and conversation. In fact, very much the style of host that Mr. Marlow and Mr. Hastings mistook Mr. Hardcastle for. He never tired of showing off the wonderful accomplishments of his precocious son; and it was thus that Master Tommy hecame, even before

\* Born, 1769; Student, 1787; A.R.A., 1791; R.A., 1794; Knighted, 1815; P.R.A., 1820; Died, 1830. This article is a contribution towards the history of the Royal Academy, which will be continued from time to time.

he was seven years old, perfectly familiar with the appearance, manners, and conversation of that aristocracy amongst which, in the future, he was destined to move and take his place. He was a handsome child with thoughtful eyes and rich dark chestnut curls which hung forward and enveloped his pretty face when engaged in making his drawings. Of his extreme precocity we have many evidences, perhaps the most reliable, and certainly the most quaint and matter of fact, of which is contained in the following extract from a letter of the Hon. Davies Barrington. Writing to his friend Gilhert White, he thus descants on the boy's attainments, very much as though describing some object or curiosity of natural history (Fehruary, 1780):-" As I have mentioned so many other proofs of early genius in children, I here cannot pass unnoticed a Master Lawrence, son of an innkeeper at Devizes, in Wiltshire. This hoy is now nearly ten years and a half old; but at the age of nine, without the most distant instruction from anyone, he was capable of copying historical pictures in a masterly style, and also succeeded amazingly in compositions of his own, particularly that of 'Peter denying Christ.' In about seven minutes he scarcely ever failed of drawing a

The Sitter's Chair of Sir Thomas Lavorence, P.R.A.

In the possession of the Royal Academy.

strong likeness of any person present, which had generally much freedom and grace, if the subject permitted. He is also an excellent reader of blank verse, and will immediately convince any one that he both understands and feels the striking passages of Milton and Shakespeare."

Master Lawrence, of "The Black Bear," was as much famed for his pretty recitals from Milton and Shakepeare as for his little crayon portraits. We are told that Garrick, whilst staying at the hotel on his way to Bath, delighted much in the juvenile performer. The proud father informs Mr. Garrick that "Tommy has

learnt one or two speeches since you were here last," and Mr. and Mrs. Garrick retire. after their dinner. to the summerhouse in order to hear Master Tommy recite something out of what his father called "Milton's Pandemonium."

Of ordinary education young Lawrence had little or nothing, for he was taken from the only school he ever went to when he was hut eight years old. He was by no means. however, a mere home-hred milksop, for besides being a good hilliard player, a good shot, and a clever actor, he was very atbletic and particularly fond of boxing.

In 1779 his father removed to Bath, where the future president, besides receiving lessons in his art from a portrait

painter named Hoare, had frequent opportunities of studying fine examples of the old masters in the collections of different nohlemen in the neighbourhood. It was not long before he was earning a considerable competency by making crayon portraits of the fashionable frequenters of that famous city. His method was to paint for half an hour from his sitter, and then to work up the portrait without nature for another half-hour. It prohably was from this rather dangerous method of procedure in early life that he contracted a hahit of flat. tering; which, though leading no doubt to an enormous amount of patronage, yet in the eyes of an expert connoisseur detracted somewhat from the merits of his portraits. Lawrence would execute three or four such crayon portraits in a week, receiving as much as three guineas a

piece for them. At Bath Lawrence had for sitters many distinguished people, amongst whom were Lord Barrington, Sir H. Harpur, Viscount Cremorne, Lord Kenyon and the beautiful Duchess of Devonshire. There too he first saw Mrs. Siddons; she appeared at the Bath Theatre, and young Lawrence from recollection made a pencil drawing of her as 'Aspasia,' in "The Grecian Daughter," in the act of stahbing the Tyrant, which was engraved and sold for five shillings a copy. Lawrence must have felt pretty well assured of his power even at this period of his life, for in a letter to his mother, in September, 1786, he writes: "Excepting Sir Joshua, for the painting

> of a head, I would risk my reputa-tion with any painter in London."

In 1787 Lawrence went to London and beother young artnotice: "Stop, in the young

came a student at the Royal Academy. On his introduction, amongst several ists with their productions, to Sir Joshua Reynolds, he was singled out for young man; I nust have some talk with you. Well, I suppose now, you think this is very fine, and this colouring very natural, hey! hey!" And then, after a hit: "It is clear you have heen looking at the old masters; hut my advice to you is to study nature; apply your talents to nature." It is easy to see from this that the wise old President felt

The three daughters of the Earl of Mornington, afterwards Lady Mary Bagol, Lady Raglan, and the Countess of Westmorland.

By Sir Thomas Lawrence, P.R.A.

man's work that tendency to mannerism which was ever his besetting sin, and advised the severe study of nature as a wholesome corrective.

Lawrence's success as a portrait painter, after he came to London, proved quite a record for rapidity. To his fellow students he seemed, with his handsome features and curling locks of hrown hair, as a young Raphael suddenly dropped amongst them. The fashionable people in town vied with one another in giving him commissions. The King and Queen themselves took the greatest interest in his works, and even urged the memhers of the Academy to elect the young man an associate when he was only twenty-one years old. Such a proceeding, however, though favoured hy Reynolds and West, would have heen contrary to the then laws of

Lady Wallscourt.

By Sir Thomas Lawrence, P.R.A.

the Institution, which did not allow of any one being elected under twenty-four years of age, and was successfully resisted. But when the attempt was renewed in the following year, the opposition gave way, and on November 10, 1791, Lawrence was elected an associate, the first of five chosen at the same time, of whom the only other of note was Stothard. His election to full membership followed on February 10, 1794, his two companions on this occasion heing Stothard and Hoppner. Thus, before he was twenty-five he became an Academician, an instance of the early attainment of the

honour which has had no parallel.

On the death of Sir Joshua Reynolds in 1792, Lawrence had heen elected painter to the Dilettanti Society, and at the same time the King appointed him to succeed the late President as Principal Painter in Ordinary. During the presidency of West, Lawrence executed most of his finest works, and in the exhibitions at Somerset House, his portraits were looked for from year to year with the greatest interest.

In the early years of the nineteenth century a great change came over the fashions in costume and head-dress; silk brocades, full skirts, elahorate muslin caps and fichus, frizzed, powdered and puffed-out hair, gave way to short

waists, dainty, close-fitting, pseudo-classic gowns, and hair worn in plain Grecian hands, its natural gloss increased hy pomatum, whilst satin and velvet superseded silk and muslin. These changes were eminently congenial to the art of Lawrence. No painter equalled him in the skilful dexterity with which he rendered the glossy lights ou dark hair, the shimmer of satin, or the richness of velvet. His knowledge of drawing stood him in good stead in rendering the increased evidence of the figure which the closely-fitting garments favoured. The prevailing taste for that class of personal heauty, of which Mrs. Siddons was so conspicuous a type, exactly coincided with Lawrence's own feelings; in short, never was a painter more fortunate as regards the tastes and

fashions of the period in which he lived. Untrammelled hy the cares of wife or family, the young artist worked with surprising and indefatigable industry. The times were stirring ones; portraits of military and naval heroes fell to his lot hy scores. In 1814 he received a commission from the Prince Regent to paint the portraits of the sovereigns and the famous warriors and statesmen who had heen the means of restoring the peace of Europe. In the following year he received the honour of knighthood, at the instigation, it is believed, of the Emperor of Russia, one of his illustrious sitters. In 1818 he pro-

ceeded to the Congress of Aixla-Chapelle, and thence to Vienna. painting in both places the portraits of the allied sovereigns and their most distinguished ministers and generals, and in May, 1819, to Rome, where he painted his well-known portraits of Pius VII. and of Cardinal Gonsalvo. Of these historic portraits the greater part are now in the Waterloo Gallery at Windsor Castle.

From these journeyings Lawrence returned laden with honours and gifts, having heen elected a member of the Academy of St. Luke, and of the Academies of Florence, Venice, America, Denmark, and Austria, as well as receiving the Austrian Legion

Towards the end of 1829 Lawrence's health became impaired, he seemed wearied and pale, as though from overwork; there were uo symptoms, however, of any actual disease, and his doctors, being in douht as to his case, decided to play what in those days was the fashion-

able "trump card " of hloodletting; under this treatment he rapidly became worse, and finally sank exhausted on the 7th of January, 1830. A post-mortem resulted in the discovery that, though there was some slight ossification of the heart, the real cause of his death was due to loss of blood by leeches and lan. cet.

To give anything like a complete list of Lawrence's portraits would occupy far too much space here. Amongst the best of his productions may be mentioned the very fine full-length portrait of his predecessor, Benjamin West, in the National Gallery; for life-like truthfulness, dignity of expression, and exquisite painting, than this nothing could be finer.

Another very beautiful work is the portrait group of the Countess Gower (afterwards Duchess of Sutherland) and her daughter Elizabeth. With children Lawrence was generally very successful, his hest picture of this kind heing prohably 'The Children of Charles B. Calmady,' no longer, unfortunately, in this country, of which he himself said that it was "one of the few I should wish hereafter to be known by." The one, however, by which he is perhaps best known is the portrait of 'Master Lambton,' belonging to the Earl of Durham, of which we give an illustration; though rather artificial in sentiment, it is undoubtedly a wonderfully fine work. Of the other illustrations which accompany this article, 'The Daughters of the Earl of Mornington' (Lady Mary Bagot, Lady Raglan, and the Countess of Westmorland), 'Lady Wallscourt,' 'Miss Croker,' 'Master Hope,' 'The Countess' (of Darnley), and 'Miss Caroline Fry,' recently bequeathed to the National Gallery by Mr. William Wilson, are all excellent specimens of Lawrence's skill in the portrayal of feminine charm and beauty and youthful grace; while his fancy subject pictures, which were neither numerous nor important, are well represented by his diploma work-'The Gipsy Girl.' The portrait of himself is from a drawing hy George Dance, R.A., in the possession of the Royal Academy. His 'Sitter's Chair' also helongs to that body, having been bequeathed to it by the Rev. J. R. Bloxam, D.D., whose father married Lawrence's

In painting a face Lawrence delighted in what are termed "high lights"; these sparkling accentuations to the eyes, lips, or nose, he rendered with surprising dexterity and accuracy. He revelled in the deep, rich brown shadows which Reynolds first introduced to the art of portraiture in England, though at times he was apt to exaggerate their warmth by too free an introduction of red. He is seen at his worst when he had to

portray any extremely celehrated or exalted personages. on which occasions he seems to have felt bound to give his work the full benefit of his somewhat theatrical ideas of poetry and sentiment. For examples of this sort we may mention his portrait of 'The Duke of Wellington,' wrapt in his marshal's cloak, hugging his telescope, hareheaded, alone, in a thunderstorm; or that of 'John Kemble as Hamlet'; or the still worse likeness of 'His Satanic Majesty,' with outstretched arms and legs, calling up his infernal hosts, which Pasquin severely satirised, while Fuseli complained that "Lawrence bad stolen his devil from him."

It was to Lawrence that an increase in the width of frames, at the annual exhibitions, was due; a rather hroad, richly decorated style of frame still bears his name. Hitherto frames had been narrow and unpretentious, though pretty and decorative in design; the example of the President, it is needless to say, soon spread, a matter deeply to be deplored.

As has been already stated, Lawrence was unanimously elected President in succession to West. It was a choice that everybody approved of; even the grumbling faultfinder Fuseli saying that, "If they must have a face painter to reign over them, let them take Lawrence.' His whole career had marked him out for the post. Shee, who subsequently attained the same dignity, says in a letter that he voted for Lawrence, and that he "never gave a vote with a more sincere conviction of its justice and propriety, both as to the Academy and the art." The choice was at once approved by George IV., who had succeeded to the throne on the death of his father in the early part of the same year, and who continued to take the same interest in the Academy he had already shown when Prince Regent. In proof of this, and of the favour with which he regarded the election of Lawrence, he presented the Academy with a very massive gold medal and chain to be worn by its Presidents. The medal bears the inscription, "From His Majesty George the Fourth to the President of the Royal Academy."

The good fortune of Lawrence seems to have continued during his presidency, for the ten-years of his office were years of peace and quiet in academic matters, a result which

may, no doubt, in some degree, be set down to his skilful tact and polished manners. There were no storms within and no assaults from without. But as regards the general interests of art in this country the period was an important one, for it was marked by what may he called the first Government recognition of the necessity of encouraging the arts. fine West had often

Miss Croker. By Sir Thomas Lawrence, P.R.A

urged the desirability of forming a national collection of pictures, and had applied in turn, without avail, to Pitt, Fox, and Percival for support. Lawrence followed with even more insistence in the same strain, and with more success, for in 1824 the Earl of Liverpool, who was then Prime Minister, obtained the assent of Parliament to the purchase, for £57,000, of the Angerstein collec-

granted in 1827, and the Artists' General Benevolent Institution, first started in 1814, but which was not incorporated till 1842. It may be mentioned in this connection that Lawrence himself was ever ready to give pecuniary assistance to struggling artists; indeed, his henevolence was large and unstinted, and was one of the causes which led to the embarrassment in money matters

from which he constantly suffered. Another cause was his taste for collecting drawings and works by old masters, on which he is estimated to have spent £60,000. The refusal of this collection by the Government after his death was followed by an attempt to get up a subscription to purchase it for the nation, towards which the Academy voted £1,000, and Sir John Soane a like sum; but it failed, and the works were sold by auction. A collection of architectural casts made by Lawrence was purchased by the Academy for £,250, and presented to the British Museum for the use of architectural students, but after keeping them for some years the Trustees returned them to the Academy, where they now are on the walls of the architectural school.

No changes of any importance occurred in the Academy during Lawrence's presidency. The exhibitions remained at much the same level, both as regards the number of works exhibited and the receipts. The schools attracted the average number of students. The practice of sending travelling students abroad, discontinued since 1795, owing to the war, had been resumed in 1818, when Lewis Vulliamy, an architect, was awarded this prize, and in 1821 a

similar distinction was conferred on Joseph Severn, who had gained the Painting Gold Medal in 1810.

An interesting incident in the Presidency of Lawrence was the appointment of Sir Walter Scott as Honorary Antiquary. On his first appearance in that capacity at the Annual Dinner, Lawrence proposed his health, quoting as he did so the lines:—

"If he had been forgotten,
It had been as a gap in our great feast
And all things unbecoming."

Allusion has already been made to Lawrence's last

tion of  ${\mathfrak{Z}}{\mathfrak{S}}$  pictures; and so was founded the National Gallery.

Other artistic matters of importance in which Lawrence took great interest, were the founding, in 1823, of the Royal Hibernian Academy, to the first exhibition of which, in 1826, he sent some of his pictures, and the effort to establish in the same year the Royal Scottish Academy, an effort, however, which was not crowned with success until 1838. He was also a great patron and supporter of the two great charitable societies for the relief of distressed artists and their families, the Artists' Benevolent Fund, founded in 1810, and to which a Royal charter was

illness and death. He seems to have had some premonition of the coming end, for at the Artists' Fund Dinner in 1829, in replying to the toast of his health, he said: "I am now advanced in life, and the time of decay is coming; but come when it will, I hope to have the good sense not to prolong the contest for fame with younger, and perhaps abler men. No self-love shall prevent me from retiring, and that cheerfully, to privacy; and I consider I shall do but an act of justice to others as well as mercy to my. self."

Master Hope. By Sir Thomas Lawrence, P.R.A.

He died, as has beeu already stated, after a few days' illness on January 7, 1830, and was buried in St. Paul's Cathedral on the 20th of the same month, the pallbearers at his funeral being the Earls of Aberdeen, Gower, and Clanwilliam, Lord Dover, Sir Robert Peel, Sir George Murray, Mr. John Wilson Croker, and Mr. Hart Davis. The exhibition of the British Institution in the same year consisted chiefly of Lawrence's works, ninety-one of his best pictures being collected.

### 'St. Paul's from the River.'

BY HENRY DAWSON.

ETCHED BY W. A. REID, FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

'ST. PAUL'S from the River' is a representative example of the originality and careful realism which characterised the art of Henry Dawson. It was painted the year before he died, and shows the artist in the full strength of his powers as one of the most genuine of our English workers in landscape. It is particularly strong and effective in the painting of the sky and its reflection in the murky Thames waters, made lovely by the borrowed hues of sunset. The dome of the Cathedral rises up against the blue sky, which is filled with long lines of small clouds, some flushed with orange and red, while darker masses on the horizon are piled in long ranks behind the houseroofs and distant church spires and towers. The sunset colours of the sky are reflected on the rippled surface of the river. Across the centre of the picture runs a line of dark red, sombre warehouses and factories, with rows of wharves, and shipping of various kinds, casting dark shadows across the water; large lighters, with sails, are anchored on each side in the foreground, with numbers of small boats and all the usual accessories of a great city's river-side.

Henry Dawson's pictures are valued more highly today than they were during his lifetime, as the work of one of the best of the painters of landscape, river-side, or sea-view, who flourished during the middle period of the nineteenth century. He may have gained his love of ships and of the sea from his birth-place, Hull, although he was taken to Nottingham when still a baby. Until he was twenty-four he worked as a common haud

in a lace factory, but painted in his odd moments, and now and then sold his efforts for a few shillings; but in 1835 he turned his back upon his trade and started as an artist, with a local hair-dresser as his first patron. Beyond half-a-dozen lessons from J. B. Pyne, in 1838, he was entirely self-taught. He had no great imagination or intellectual power, but a deep and honest love for the scenery of his native country, and originality in his method of expressing himself in paint. His pictures are faithful transcripts, and are stamped with the evidences of a direct study of nature uninfluenced to any great extent by the work of contemporary artists. In the latter half of his career he seems to have come under Turner's magic influence; and to have been moved to try more brilliant effects than any he had hitherto attempted; but he was in no way a slavish imitator of the great landscapist, and, though many of his canvases are distinctly Turneresque in treatment, yet even in this he has an undoubted style of his own.

In 'St. Paul's from the River,' the ugly architecture of the gloomy houses form a fine and sharp contrast to the beauty and light of the sky and the river, and the effect of the great cathedral towering over all is most impressive. The picture cannot lay claim to the mystery and the witchery with which Turner would have invested a similar scene, but it is, nevertheless, a composition of high artistic quality, rendered with an impressiveness and an amount of poetic imagination not often found in Henry Dawson's canvases.

The Doune and Craig-Etlachie, From a drawing by A. Scott Rankin.

### Rothiemurchus.

By THE REV. HUGH MACMILLAN, D.D., LL.D., F.R.S.E.

F all the districts overshadowed by the extensive Cairngorm range, the most magnificent, hy universal consent, is Rothiemurchus. This is a region entirely unique. It has nothing like it elsewhere. If Scotland as a whole is Norway post-dated, this part of the country is especially Norwegian. Scotland is famous for its artistic colouring, which Millais compared to a wet Scotch pehble; hut here the colouring is richer and more varied than in any other part of the country. The purples are like wine and not like slate, the deep hluegreens are like a peacock's tail in the sun, the distant glens hold diaphanous hluish shadows, and a hloom like that of a plum is on the lofty peaks, which changes at sunset into a velvety chocolate, or the hue of glowing copper in the heart of a furnace. A day in Octoher is something to he remembered all one's life, when the tops of the mountains all round the horizon are pure white with the early snow, and their slopes are adorned with the brilliant tints of faded hracken, golden birch and hrown heather, and all the low grounds are filled with the unchangeable blue-green of the firs. At Rothiemurchus the landscape picture is most heautifully halanced, framed on hoth sides hy heath-clad hills, and rising gradually to the lofty uplands of Braeriach and Cairngorm, and the broad summit of Ben Macdhui rounding up and shouldering away behind the great chain itself, coifed with radiant cloud, or turbaned with folded mist, or clearly revealed in the sparkling light, hearing up with them in their aged arms the burden of earth's heauty for the hlessing of heaven. All the views exhibit the most harmonious relations to one another, and each is enhanced by the loveliness of its neighbour.

Rothiemurchus is a high-sounding name. It is a striking example of the genius which the ancient Celtic race had for local nomenclature. It means "the wide plain of the fir trees," and no name could he more descriptive. Nothing hut the fir tree seems to grow over all the region. It has miles and miles of dark forest covering all the ground around, and usurping spots that in other localities would have been cleared for cultivation. You see almost no trace of man's industry within the horizon. Whatever cornfields there may he are entirely lost and hid within the folds of this uniform clothing of fir-forest. All is nature, primitive, savage, unredeemed. In the centre of the vast plain rises up the elevated upland of Tullochghru, about a thousand feet above the sea-level, whose farms have a hrighter green, smiling in the sunshine, contrasted with the surrounding brown desolation. It seems to emerge like an island out of an ocean of dark-green verdure flowing all around its hase, and hreaking in billows far up the precipices of the Cairngorms. The scenery as a whole is on such a gigantic scale that the individual features are dwarfed. The huge mountains hecome elevated braes or plateaus, and miles of mountainous fir-forest seem to contract into mere patches of woodland. No one would suppose that the hollow which hides Loch Morlich in the distance were more than a mere dimple

in the forest, and yet it is more than three miles in circumference, and opens up on the spot a large area of clear space to the sky. The eye requires to get accustomed to the vast proportions of mountain and forest to form a true conception of the relative proportions of any individual object. Nothing can be more deceptive than the distances, which are always supposed to he much shorter than they really are.

The crest of the Grants of Rothie-

murchus is a mailed hand holding a hroadsword, with the motto "For my Duchus." Duchus is the name which they gave to their domain. It is a Gælic word meaning a district which is peculiarly one's own. Rothiemurchus was always regarded hy its proprietors as standing to them in a very special relation. This sentiment has been

Old Coat-of-Arms of Patrick Grant, of Rothiemurchus, and his wife, Jean Gordon.

From a drawing by A. Scott Rankin.

given very touching expression in that popular work, "The Memoirs of a Highland Lady," published three or four years ago. The attachment of the authoress, who was a daughter of Sir John Peter Grant, of Rothiemurchus, to her native place was unbounded. She constantly speaks of her heloved "Duchus"; and when ahout to accompany her father to India, when he was made a Judge in Bombay, she gives a pathetic picture

of her last walk in the "Duchus" with her youngest sister. Her fortitude gave way when she heard the gate of her home closing hehind her, and she wept bitterly. "Even now," she says, after long years of absence, "I seem to hear the clasp of that gate; I shall hear it till I die; it seemed to end the poetry of my

On the Spey at Aviemore,
From a drawing by A. Scott Rankin,

The Cairngon in Runge. From adrawing by A. Scott Rankin.

existence." Even the casual visitor feels this strange spell which the place exercises upon him; and if one has spent several summers in wandering among its romantic scenes, the fascination becomes altogether absorbing. Season after season finds your feet drawn towards this charming region; and no other spot can replace it, no other scenery surpass it in its power over the imagination and the heart. There is little reference made in the "Memoirs of a Highland Lady" to the natural characteristics of Rothiemurchus. The hook does not describe the grand mountain scenery, or give any account of the deer-stalking in the forest, or of the climbing of the great peaks of the Cairngorm range. It is occupied entirely with the mode of life, and the social relations of this remote region at the heginning of last century. But you feel conscious all the time of the presence of the mountains. You feel that the grand scenery is not the mere hackground of human action, hut mingles with it in the most intimate manner; and all this makes the reading of the hook, so full of artless simplicity and natural piquancy and humour, peculiarly delightful.

The railway station for Rothlemurchus is Aviemore, which has entirely changed its aspect in recent years. In the old coaching days it had hardly a single huilding except the inn, where the horses were haited and passengers on the way to Inverness halted to refresh themselves. This quaint hostelry is still standing, hut no longer used as an inn, looking like an ancient Scottish peel, showing on its doorway the height to which the Spey had risen during the celehrated Moray Floods, which Sir Thomas Dick Lauder so graphically descrihed, when living sheep were hrought across the river and left in the trees of the garden by the overwhelming waters. The whole country was inundated and hecame one great lake, and the face of the hill hehind was seamed with white roaring waterfalls, and a dense mist filled all the air. Aviemore is now a busy junction where innumerable trains in the summer months pass north and south, and passengers from all parts of the world

meet each other on the platforms. A row of new villas is huilt along the line, and a splendid hotel with a nohle hackground of hills, and an incomparable view in front of the Cairngorm range. where all the great peaks are seen grouped together in the most effective manner, occupies the rising ground hehind. The lands of Rothiemur' chus are hounded on the west hy the Spey that flows past Aviemore, at the foot of Craig-Ellachie. This storied rock is not included in the possessions of this hranch of the family, although it formed the slogan or war-cry of the whole clan, "Stand fast, Craig-Ellachie." It comes out holdly from the general line of hills, and

forms a most conspicuous feature in the landscape. It is composed of mica-slate broken into ledges and rocky slopes, and in some places is quite precipitous. It is covered mostly with purple heather, interspersed with weeping hirches and hushes of willow. The hare spaces are clothed with hracken, whose golden tints in autumn are indescribable; and even the hard exposed rock is weathered and frescoed with yellow and hoary lichens. It is a rich feast of colour to the eye at all seasons of the year, and exhibits a poetry of fleeting hues fairer than an equal portion of sky, which it hlots out, would show. By a poetic instinct it was chosen as the symbol of the clan, and its enduring stedfast character shadowed forth their unchanging faithfulness amid all the strains of life. The fame of this rock in the landscapes of their native region has always powerfully impressed the imagination of the warlike people. It has been the scene of many a gathering of the clan in times of war and foray; and from this central spot the fiery cross used often to he sent round to summon the clansmen together. Ruskin, during his visit to this region, greatly admired the picturesqueness of Craig-Ellachie; and he speaks thus of its associations-"You may think long over the words 'Stand fast, Craig-Ellachie,' without exhausting the deep wells of feeling and thought contained in them-the love of the native laud, and the assurance of faithfulness to it. You could not hut have felt it, if you passed heneath it at the time when so many of England's dearest children were heing defended hy the strength of heart of men horn at its foot, how often among the delicate Indian palaces, whose marhle was pallid with horror, and whose vermilion was darkened with blood, the remembrance of its rough grey rocks and purple heather must have risen hefore the sight of the Highland soldiers-how often the hailing of the shot and the shrieking of the hattle would pass away from their hearing, and leave only the whisper of the old pine hranches, 'Stand fast, Craig-Ellachie.'"

HUGH MACMILLAN. (To be continued.)

Craig-Ellachie and the Aviemore Hotel.

# Artist, Doctor, and Sportsman.

GEORGE A. FOTHERGILL, M.B.

Bank Top Station Tower, Darlington.

From a drawing by George A. Fothergill.

UR suhject in this sketch is a rising artist with, as yet, hardly more than a local reputation. Mr. Fothergill has attacked the entrench. ments of pictorial art and won an entrance at one of the least accessible entrances; joining within a small but select band which, from the very difficulties and obstacles that must be sur-

mounted to become eligible, can never be overcrowded. He has made himself master, artistically, of the horse and pony of all hreeds. He touches life at many sides, as the accompanying illustrations show, but what has brought him into prominence is the remarkable ability and power which he possesses for drawing high-class horses.

For it can be safely said that in the world of art there is no subject—not necessarily excepting the human form itself—that will absorb more enthusiasm and make greater demands upon an artist's power and skill; that will give him years of harder study, early and late, at home and afield, than that marvellous and fascinating union of strength and beauty which the horse affords.

So far as one can judge, artistic ability seems a neutral

quality in itself, that, once granted, runs concurrently along in the direction which the natural tastes of its owner follow. I mean to say that a boy who is fond of ships, or of soldiers, will, if he has artistic talent, choose them as the subject of his artistic efforts. Mr. Fothergill inherited general artistic tastes from his father and grandfather, who were both good amateur draughtsmen, and others in his family had also shown artistic leanings; but the special application of these tastes was decided by his own personal predilections. Love of sport has caused his artistic studies to deal with the subjects it embraces.

It is only four years ago since Mr. Fothergill definitely abandoned the practice of medicine and seriously took up art as a profession. But he is such a rapid and prolific worker that he is already able to point to some very substantial achievements, while with almost Titanic energy he is still reaching out in all directions with new and varied projects. He works with pencil and pen, draws in water-colour, crayon, and for lithographic reproduction with lithographic chalk upon transfer paper, finding in these, up to the present, all the outlet he requires for expressing himself. Apart from a thorough grounding in drawing from the cast at school, he is largely self-taught, and has had to pick up knowledge piecemeal here and there, discovering things almost from the elements for himself as he weut along. He has not had the advantages of that sympathetic atmosphere that contact with brother artists brings, and never had a lesson in animal or landscape drawing in his life; nor in water-colour, except what his father taught him. Dr. O. W. Holmes held that, as a rule, a self-made man is a badly made man. The only meaning this has in Mr. Fothergill's case is that, to bring himself up to the level of men who started with greater advantages than he, has

cost him not only some tremendously hard work, but also much lost time. Of course, pluck has done it. For the last three and a half years he has, he tells me, worked twelve hours a day with scarcely a break. And thus gradually the amateur has been merging into the artist, and it is at this point we find him to day. He has adopted his new profession from deliberate choice, and is seriously determined to live by it; he has no thought of asking indulgence on account of the handicaps to which I have alluded, wants no patronising "not bad for an amateur" or "very good for one self-taught" criticisms upon his work, but puts it forth to stand or fall by the same canons and upon the same conditions as his fellowartists. Any attempt to speak of his work with finality at the present time would be simply fatuous. All I need say

(1901), with 220 illustrations, which contains in fullest detail his life, career, and opinions upon men and things. While I feel bound to say that I think it suffers largely from the difficulty a man who writes about himself always has, to discriminate between matters that are of general interest and those of purely private and personal concern, and that as a piece of book-making it could have been much improved by the assistance of an experienced editor; yet it contains some very serious advice, sound sensible talk and practical experience of the utmost value—especially to any young artist aspiring to accomplish what he has achieved, and to learn something worth knowing about those subjects upon which his experience enables him to speak with authority—which outweigh any trivialities and superfluities

"Lord Brooksby" (K. C.S.B.), and "Lady Zetland" (K.C.S.B.). The property of Mr. J. J. Harris, Darlington.

From a drawing by George A, Fothergill.

is that he is not only launched, but fairly afloat in the opensea. Where his voyage will end remains to be seen. He has already published upwards of a hundred large auto-lithographs of sportsmen, horses, and views of Darlington, where, by the way, he resides. Some of these are printed in colours, and of nearly all Mr. Fothergill has published a very few coloured by himself. Some have been conspicuous successes, all have the merit of sound knowledge, originality of treatment, and the genius that pays attention to details. His books include: "A Riding Retrospect" (1895), with 45 illustrations; "An Old Raby Hunt Album" (1899), with 52 sketch-portraits and 8 auto-lithographs, which was extremely well received, and may be said to be the foundation of his growing reputation; "Notes from a Diary of a Doctor, Sketch-Artist and Sportsman"

to which objection might be taken. He has also in the press at the present time, to be published by Dresser and Sons, Darlington, "A North-Country Album," which treats of signs, signboards and sundials, animal and bird life, picturesque landscape and buildings-just those bits which a facile artist, with a sense of fun and an eye for the quaint and unusual, sees in his walks abroad, and, if of rather more local than general interest, have all the stronger appeal to those whom they do interest on that account. It is impossible to foretell in what directions Mr. Fothergill may yet "break out." He has succeeded in producing Christmas cards of an original and personal kind, obtaining new and unhackneyed effects by quite simple means. He has "up his sleeve" a projected book for children, of the "Golly wog" and "A.B. C. for Baby Patriots" type, from which

A little old Curiosity Shop.

From a sketch by George A. Fothergill.

we reproduce an illustration. All this, hesides over a hundred portraits of hunters, chasers, and polo ponies, represents, roughly, four years' work.

The hare recital—and I feel it is little more—of the ahove will serve to show that we have bere a new and vigorous artistic force, which I venture to prophesy Darlington will not, hefore long, he ahle wholly to contain.

I have shown, and the illustrations given herewith show, that Mr. Fothergill is an all-round man. But he has one great gift; and there are plenty of men doing—to he frank—equally well, and technically even hetter, much that he can do, who have it not.

From his college days he says he has never heen able to keep his eyes off a horse. His first drawing of a horse was made at the age of fifteen. During the two years of his practice as a medical man, which took him to various parts of the country before he finally settled where he is, he was always as husy studying horses as his patients. It was, indeed, humorously suggested that he sometimes put the horses first and the patients after; hut this, ueedless to say, he strenuously denies. In any case he has had years of constant contact with horses, sportsmen, and hunting. He has ridden all sorts, and even broken them in. His knowledge of human anatomy-in which he took first-class honours at Edinburgh—has proved simply invaluable in helping him to master animal anatomy. Indeed, much of the study that is necessary to qualify a man for the practice of medicine is of almost equal service as a preparation for the practice of art. After all, there must be some connection between the two professions, for is not the great painter-physician, St. Luke, patron of hoth? With such experience of, and enthusiasm for, his suh-

ject, and his own natural gifts, it is not surprising to find that he is able to catch the characteristic points of a horse, and, with a peculiar delicacy of touch which is his own, to express each animal's individuality to the satisfaction of the judge of horses generally; but more, by his freedom from exaggeration, hy the grace of pose and balance, hy a certain felicity of arrangement, hy the life and spirit imported into the work and the fine feeling for the nervous high-strung nature of the beautiful animals he loves so well, he is able to excite the admiration of those who enjoy a heautiful thing finely expressed, and can feel its "horseyness" even though they know little of horses. What Herring was most successful in portraying, his hiographer tells us, was "the beautiful, healthy, and natural gloss of the coat, the real effect of heing well-hred and well-reared, the union of strength and elegance, the perfect symmetry of the animal, so effective and so unexaggerated." Undoubtedly Mr. Fothergill can be credited with the same gift. Our reproduction from his auto-lithograph of "Eye-Witness," a horse helonging to Sir William Chaytor, Bart., could, it seems to me, he exactly described by the words I have quoted above. Mr. Fothergill regards it as the hest picture of a horse he has

All pictorial art worth the name must rest upon a solid basis of truth. If you are going to draw horses you must satisfy primarily the sportsman, and the judge of horses generally. These professional experts know very definitely what they want, and their power, within the limits that helong to them, is alsolute. Whom they will they slay, and whom they will

they keep alive. But if the artist fails to keep them in their place, he is artistically doomed. He will never rise heyond the level of quality of the tailor's fashion plate. Who has not observed with mingled astonishment and dismay the immense admiration and value with which sporting friends invest old prints—of art value nil, as pictures heneath contempt—which are just nothing more than equine fashion plates? They find them completely satisfactory—apart from historical interest, which I am not considering—

hecause they give them what they want. And what they want is little more than memoranda, and I need hardly say, not enough—if that were all Mr. Fothergill had to give—for the pages of this Journal.

We know that towards the end of his career, Herring objected to painting mere portraits of animals in a hox, and insisted upon making a picture of each. It may he said that Herring's artistic conscience woke up tardily, or perhaps he was not in early life in a position sufficiently strong to resist the wishes of his clients, for he made plenty of monotonous horse portraits in his time. At any rate, Mr. Fothergill's conscience is very much awake on this point, and in the "Notes

from a Diary'' he discusses very soundly and very practically the question of artistically composing the portraits of horses. His ideal painter of horse portraits is

Rohert Alexander, R.S.A. The problem the painter of horse portraits has to solve is to represent his subjects naturally, with all their character-and this is as various in horses as in human heings; each horse has a characteristic way of standing, Mr. Fothergill says-to show them without pose in an ordinary normal position, to represent them in suitable and consistent surroundings, and to avoid repetition, monotony and conventionality. He has also to avoid the mistake of over-emphasis of his knowledge of the anatomy of a horse; the temptation to display their learning is one that not a few sporting artists, hoth past and present, have found hard to resist.

The man who knows the horse and pony of all hreeds has at command a sum of knowledge equivalent to that of a painter who has mastered all hranches of the human race - Caucasian, Aryan, Red Indian, Mongolian, Hottentot and the rest. Now a man may he ahle to make a very good drawing of a European who could not draw, say, a Hottentot; and it is a fact that many men, even now, who can draw hunters and hackneys, and horses generally, cannot draw a pony-it is so difficult not to make just a small horse of him. Mr. Fothergill makes a strong point of his ability to differentiate the two. Upon the scientific theory of a horse's

motion he is thoroughly np-to-date. He has availed himself to the full of the revelations of instantaneous photography as to the true theory of quadrupedal motion, and fully realises the moral ohligations of the artist to he hoth scientifically correct as well as artistically satisfactory. It is well known that such hooks as Stillman's and Muyhridge's on the horse in motion have revolutionised our knowledge of the action of a horse's gallop, and not only shown us new positions, such as what is called the "gathered" position of the four legs, never hefore known, but flatly demonstrated the falsehood and

he then had in

view, but for

Then, again, on the question of artistic honesty, he, like every true artist, takes the strongest possihle ground. He has the most justifiable contempt for the "potboiler" type of artist, many of whom still go their rounds to the best shows and race meetings; whose aim is merely to flatter, painting an ideal horse for dishonest persons who want to hear their

friends say "What a model of a hunter!" Mr. Fothergill says, "An honestartist who knows his work well will not budge an inch for anyoue, and only aims at doing a faithful likeness of the animal before him, as he himself sees him." Nothing makes one more hopeful for the future of an artist than to find that he has a lofty and incorruptible conception of his mission.

In an appreciation of this kind some personal details are usual, if not necessary. Let me, therefore, record that Mr. Fothergill was born in 1868, at Leamington, that he was educated at Leamington College and Uppingham School, and that he proceeded to Edinburgh in 1887 to study medicine, taking his degree in October, 1895. At Uppingham he had a thorough grounding in the antique under a well-known master, Mr. Charles Rossiter, who declared him one of his best pupils during thirty-three years of teaching. It is interesting to add that the first peu drawing of Mr. Fothergill's ever published represented one of the corners of the studio building at Uppingham and appeared in The ART JOURNAL

in December, 1886, in counection with au article by Mr. Rossiter upon the Art Teaching at Uppingham School. Fifteen years after leaving Leamington he caricatured his old head-master. Dr. Joseph Wood, for "Vanity Fair," for which journal, by the way, he has also caricatured Captain Longfield Beatty, and the late W. Jack Drybrough, Esq., though the latter was never published owing to the untimely death of Mr. Drybrough in

that he has now adopted. Undoubtedly the possession of an eye trained to see must have been an important aid in winning the first-class anatomical honours to which I have already referred. Then the professors of the University were very glad to avail themselves of his talents in preparing drawings for their lectures, and in this way he was brought into contact with Sir William Turner and his assistants, Sir Thomas Grainger Stewart, and other professors. After becoming qualified, he acted as assistant and locum tenens in various places and finally set up for himself at Hillmorton, near Rughy; Market Harborough and North Wales. Mr. Fothergill does not say he will never practice again, but at present he is wooing Art with that stout heart and single purpose which have seldom failed to succeed in the loug run. At Darlington he has found good friends, and if, as he hints, parental approval of his change has unfortunately not been forthcoming, it becomes all the more necessary for him to show hy results that the step is justified.

History has a knack of repeating itself, and it must be

an encouragement to Mr. Fothergill to know that much of his career follows in a pretty close parallel that of a previous great artist and sportsman. John Leech, who inherited his talent from his father, never had any regular art lessons. Educated at a public school, the Charterhouse, his father likewise put him to the medical profession at St. Bartholomew's, where the great excellence of his anatomical

The bad Clown who took the Cutting Man's Clothes,

Haymaking: Caught in a Shower.

From a sketch by George A. Fothergill.

drawings attracted the attention of the surgeons, and furnished him at the same time with that knowledge of the human form that gives such reality to his drawings. The embarrassment of his father's affairs alone prevented him from proceeding to Edinburgh, and he never qualified; but he saw some practice as assistant to a practitioner at Hoxton, and afterwards to Dr. John Cockle, of the Royal Free Hospital. He gradually gave

up his medical studies and resolved to live by his art, for he was always drawing, horses by preference. Like Mr. Fothergill, Leech early turned his attention to lithography, and Mr. Kitton tells us that, having drawn his pictures upon a stone, poor Leech spent many a weary day carrying the heavy stones from publisher to publisher in search of a huyer. I need not pursue the comparison farther. We know the rest about Leech; we can wait with patience, and I venture to say with confidence, to see how it will he with Mr. Fothergill.

The illustrations I have not referred to include an exceedingly fiery and spirited drawing of an angry owl, drawn from a fresh specimen of a marsh owl shot near Darlington; the 'Corner of a North-Country Horse Fair' is more or less true to the Horse Market, Darlington; and the drawing of the two superh deerhounds was exhibited at the Dudley Gallery Summer Exhibition, 1901.

HAROLD W. BROMMEAD.

A Christmas Card, By George A. Fothergill,

### The Presidents of the Royal Scottish Academy.

I.—GEORGE WATSON, P.R.S.A.

GEORGE WATSON was horn at Overmains, Berwickshire, in 1767. He must have shown a strong love for drawing when a hoy, for we find him as a pupil of Alexander Nasmyth, and at eighteen years of age he was in London, and spent two years in the studio of Sir Joshua Reynolds. After some travel he returned to Edinburgh, and took a prominent position as a portrait painter. For four years he was President of the Associated Artists. and at the first general meeting of the Scottish Academy, held on the 27th of May, 1826, Mr. Patrick Syme in the chair, the following gentlemeu were elected office-bearers, viz.:—

President,
George Watson.
Secretary,
William Nicholson.
Treasurer,
Thomas Hamilton.

George Watson, P.R.S.A.

Prom a painting by himself.

George Watson lived at 10, Forth Street, Edinhurgh, and there he was waited on by Lord Cockburn, who was acting for those artists who had not joined the young Academy, but who wished now to do so; an anualgamation which was afterwards happily accomplished.

When in London he painted the well-known portrait of Benjamin West, aud during his lifetime exhibited forty-five pictures in the Royal Academy and the British Institution. Many of his works are to be found in Scottish country mansions. He was uncle to Sir John Watson Gordon, President of the Royal Scottish Academy in later years.

He died at Edinburgh, 24th August, 1837, and was buried in the West Kirk Burying Ground. G. A.

The Old Man's Treasure. From the Picture in the Walker Art Gallery, Liverpool.

laymakers—Noon.

From the painting by Hugh Cameron, R.S.A.

## Hugh Cameron, R.S.A.

A S in the case of virtually all the pupils of Robert Scott Lauder, R.S.A., former Master of the Trustees' Academy in Edinburgh, the art of Hugh Cameron is a strictly personal development. He stands for no school or set canon, but paints in an individual style easy of recognition and obviously the sincere and spontaneous expression of himself. It is sincere, that is, so far as it goes, for Cameron never gives way to Byronic abandon, and does not choose to reveal himself without reserve in art.

This characteristic self-repression has had much to do with his more recent preferences in the choice of subjects. Springing from seaside musings near his country-house at Lower Largo, on the southern shore of Fifeshire, a long series of his works may, in one view, be most aptly described as sea dreams. They are, however, dreams embodied in calculated form, and only realised after laborious thought, and the long-sustained and close study of material. Delicacy of manner is not to be confounded with either vagueness of conception or ease of treatment. The difficulties of the work are hidden under seeming facility of execution.

In another view, the works referred to are the culmination of a practice otherwise wide in its range. Cameron has explored the several fields of genre, portraiture and landscape. It is only of late years that, at a stage of his artistic evolution defined in the sequel, he seems most freely to have yielded to an artistic love of the sunlit beach and summer sea. He has felt with increasing fervency and depth the mystery and fascination of the ambers of evening and the opals of dawn hovering upon the Firth. In them he has discovered the form of art into which it is

possible to throw the better part of himself, his sensitive colour-sense, his feeling for grace and beauty, and his consciousness of the mellow harmonies existing between man and nature.

With his temperament and finely-strung emotional

A Match for Grandfather.

From the painting by Hugh Cameron, R.S.A.

nature, his observation of the unities strikes one as inevitable. He introduces no jarring details upon a plea of realism, but with one dominant note spreads upon his canvas a suhdued hut rich fusion of light and colour. He has mastered the secret of opulence without glare, and in simple sweetness of tone and assonance of tints has discovered a new charm. He seeks the modesty of semitones, the soothing modulation of crooning in paint. His blues, yellows, greys and hrowns are notahly soft and pleasing—hair with the sunlight in it, eyes of amethyst and turquoise, young faces gleaming and flushed with mantling blood, and floating garments rich but chaste.

A Lonely Life.

From the painting by Hugh Cameron, R.S.A.

We turn to Cameron from the decision of Bough, the vigour of Pettie, the deft promptitude of Sir George Reid as flower-painter, and the studied dramaturgy of Orchardson. He takes us nearer the mystery of Chalmers and the silvery matins of Corot. We look to him for the restful peace of self-control, the eloquence of reticence, and the luxury of a passing halt in the half-realised borderland between fact and fancy.

The typical Cameron is mystic, a vision of the undefined, a distant melody faintly heard. Partially to explain this, there is a story of him told by J. M. Gray. In 1873, Lawton Wingate was at Comrie, painting mainly npon the old realistic lines. "Mr. Cameron came to see the younger artist's pictures, and took occasion to criticise some points in them. Mr. Wingate defended them as being true to fact; to which his friend replied—'I feel the work to be wrong, and art is not an affair of argument; it is an affair of feeling.'" The

remark led Wingate to think of the meaning of fidelity in art. He had already heen awakening to the fact that it is not measurable hy line and rule, and he says: "There and then it struck me with irresistible force. I determined thenceforth to appeal directly to feeling as my guide; and only from that date can I see any real progress in my art."

In the advice to Wingate, as in the representative painting, there is a good deal of Cameron himself. Here it is necessary to draw a distinction between temperament and the range of emotion, on the one hand, and artistic expression on the other. Even to casual and superficial observation, Cameron is a consistent human unit, given to reflection and brooding. With him personally, and at least in the gestatory stage of artistic creation also, thought has a tendency to relax its concentration, and to pass into the visionary. In that mood the things of life hecome an abstraction. This is seen and felt in the mildly dreamy introspective eye, a feature indicating assimilative power and a proneness to submit things objective to subjective influences. This trait, as signifying habit, implies a more or less homogenous individuality. Having reached that point, Mr. Cameron becomes a subject for more penetrating analysis, for if, superficially, and to appearance, the man's nature be placid, strong emotion is caged below.

This means that, in art, the force of passion is quelled in æsthetic delicacy, the outlook is broad and the sympathies of the widest, but the painter's heart and intellect recoil from the ugly, from the distortions of pain and the tragedy of sorrow. More decidedly, perhaps, than in any other respect, Cameron's nature cleaves to the beautiful. His mind is absorbent, and intellect and imagination never stay their working, but, in art, neither tells of the deeper mysteries of his life. This is the counterpart of the modesty of nature. Such selfrestraint as his is never found apart from power. The tendency to abstraction turns to a valuable artistic gift. For it is only after a subject has been so completely absorbed as to become a distinct intellectual abstraction the joint creation of thought and imagination—that it can be treated as a whole. Only then does the conception become a harmony in colour, soft in its gradations and pleasing in its relative values, graceful in arrangement and satisfying in the approach it makes towards that unrealisable perfectness of design which is alternately the painter's inspiration and his despair. Keeping his reticence in view, the seal of the man Cameron is indelibly stamped upon the work of the painter.

To pursue the parallel a step further, a painting is so true a mirror of the painter, his character and intellectual timbre, that the one proves a key to the other. In the man we find a quiet dignity almost patriarchal, a silence pregnant with suggestion, catholicity of taste, a singular breadth of mental vision, and an exceptional power of appreciation. In the typical Cameron is more of grace than strength, of subtlety than force, and a more profound feeling for the melodies than for the grander and more resonant harmonies of colour. These things are felt in the easy flow of lines, in pose and action, and in the unvarying deference to form. In many canvases the sum total of the truth they hold seems to lie in close observation of the magic of the sun. Forms are indicated and hrought into shapely relief by the play of light upon rounded and vanishing surfaces. Or, perhaps more plainly, hard outlines are suppressed and figures are modelled out of light and colour with the brush.

These matters are dwelt upon because, in the case of Hugh Cameron, the analysis of manner and idiosyncrasy

The Village Well.

From the painting by Hugh Cameron, R.S. A.

is more profitable than marshalling the facts of biography. His life does not account for his art. It is nowise affected by incident, and the story of his education and career may accordingly be brief. He was born in Edinburgh in 1835. At the age of four or five he began to feel the art-impulse, and to copy and sketch in pencil. He was about five when he attempted a drawing of the people coming out of St. Andrew's Church; it was wet weather and the majority carried umbrellas. His years were still few when he first attempted pencil portraits, and soon thereafter drawing became both a pastime and a serious occupation. So far his life may be read in many others.

At fourteen he passed into the practical stage, by being formally indentured to an architect and surveyor. When this step was taken on his behalf, he was neither consulted nor offered a choice of profession. As a matter of fact, he had made up his mind four years previously to be a painter, and so little did that idea partake of the nature of a passing boyish fancy, that his apprentice master very soon acquiesced in it as a settled resolve. He not only recognised the inevitable, but showed an active sympathy with the youngster, and, far from repressing, encouraged his ambition. In the first place, he relieved Cameron of the strict observance of office rules. Being himself fond of painting, his personal taste pled for his apprentice. When, accordingly, he came upon an oil portrait of a fellow apprentice done by Cameron during office hours, he made no protest, but sent the young painter out to his own house to paint a portrait of his father. He then sent him to the south country to paint a portrait of a friend,

a sheep farmer, and while there, Cameron got some of the material afterwards worked into his picture of 'Sabbath Eve in the Shepherd's Home.' A further practical advantage of his apprenticeship was that he obtained a knowledge of architecture which proved useful to him in after years.

Meantime, in the first year of his apprenticeship (1849) he had been enrolled a student at the Trustees' Academy, and entered the School of Design under Messrs. Dallas and Christie. An arrangement had been made under which he had permission to leave the office so as to attend the art class, but he had not bargained for getting there nothing beyond the strictly limited training of an architect's apprentice. He may have been enrolled as such, and in any event the masters looked upon him as committed to the profession of architect. Under their misapprehension he studied for upwards of two years, giving close attention to the work of the class, but always drawing nearer and nearer the form of art which proved his destiny and the field of his life-endeavour. The practice was valuable, but as time passed it became irksome. The teachers continued giving him nothing but drawing from architectural designs, objects on the flat, and the like; he had borne it patiently, but the spirit of protest rose at last.

"Why," said he, "do you not give me the figure to draw?"

"What do you want with figure-drawing?" was the reply. "Are you not to be an architect?"

"No," was the firm answer, "I'm going to be a painter."

At that juncture Robert Scott Lauder assumed the

mastership of the Antique and Life Class, and into it Cameron was at once passed. Lauder was appointed in February, 1852, and under him Cameron began the

study of the antique, taking his place in the class on 12th October, 1852. He was one of forty-nine students, including Orchardson, Peter Graham, McTaggart, and Herdman. George Paul Chalmers' name appears in the following year. The first subject Cameron got to draw was a bust.

"How do you wish it done?" he asked.

"Wish it done?" said the master, "I don't care. Do it any mortal way you like, but get it done."

Rejoicing in freedom from dictation as to method, Cameron finished the particular drawing mentioned in two nights, and the master, being satisfied, gave him more important and difficult studies. He pondered and lahoured, working hard, slowly asserting

himself in his work, and throwing into it that character which makes for the development of personal style. He was so successful that in two years' time (1854) he gained a first prize for a drawing from the antique. He took the Life Class along with the Antique, and, after leaving Lauder and the Trustees' Academy, studied for a time in the Life Class of the Royal Scottish Academy. He travelled much upon the Continent in after years, and it is always difficult to trace influences. Those emanating from the Masters may raise higher standards

Portrait of the Artist. From a photograph.

of endeavour, and while refining the taste of an impressionable artist, may go to the making of the ideals that rule and shape his life. They are, nevertheless, in

the general case unconsciously absorbed. Cameron's Continental studies do not affect the statement that his art training occupied the greater part of the decade down to 1859, and that it was confined to Edinhurgh.

In 1854, while still a student, he made his first appearance as an exhibitor in the Royal Scottish Academy with a somewhat amhitious work, 'Joseph interpreting Pharaoh's Chief Butler's Dream.' He was then only nineteen, and the picture was done in the intervals of office work. The next year he sent two portraits and his first work in genre, 'Preparing for School.' In 1856 he did not contribute, and ahout this time he left his architect master's office. His first exhibited works as

a professed painter were 'Sahhath Eve in the Shepherd's Home,' or 'The Shepherd's Sahhath,' and 'The Soldier's Widow.' These appeared in 1857 and 1858 respectively. He painted figures in landscape, but never landscape for its own sake. Thus, in 1859, came 'Going to the Hay,' now in the National Gallery-two girls going to the hayfield and singing as they go. A high light throws the shadow of one girl's head upon the other's shoulder, and both figures are set against a background hedge most

lahoriously treated in detail.

EDWARD PINNINGTON.

(To be continued.)

Age and Childhood. From the painting by Hugh Cameron, R.S.A.

Sgraffito Decoration in progress in the Lady Chapel, St. Agatha's, Landport.

J. Henry Ball, Architect.

# Sgraffito as a Method of Wall Decoration.

I T is depressing to begin an article with the assurance that it is going to he dull, hut such is my case.

The nature of technical matters is to be dull when they are reduced to writing. If you do this, that will happen—If you don't do this, the other will happen—You must be sure to do so and so, or this and that will be the result—Beware—Be hold—Be not too hold—and so on and so on; such is the nature of writing on technical matters, and of the studious attempt to recapitulate in print proceedings which are only capable of complete explanation in practice, in the handling of material, and in the exhilarating struggle to produce a result within the limits of your technique.

Moreover, such methodical treatise cannot be lightened nowadays by those airy excursions into antiquity, or into mythic science, which beguiled our forefathers. They embroidered their subject with a hird's eye view of Creation, with a story on hearsay from Plutarch, or with travellers' tales of the marvellous harnacle tree, hut we are supposed to be historical, critical, comparative, analytical-in short, to he omniscient; and so it comes to pass that otherwise pleasant people produce exhaustive papers and hecome Eminent Authorities. From this latter fate, at least, I am secure. My article is practical and technical-the experiences of a craftsman in sgraffito; and though at hest I can only anticipate heing "dull in a new way" to the general reader, yet I hope that this article may he of service to the few workers who have any concern with monumental decoration, and may lead to permanent results on now silent walls.

And so to work without further apology. First—what is sgraffito? The Italian words graffiato, sgraffiato, or sgraffito, mean "scratched," and scratched work is the rudest form of graphic expression and surface decoration

used hy man. The term sgraffito is, however, specially used to denote decoration scratched or incised upon plaster or potter's clay while still soft, and for heauty of effect depends either solely upon lines thus incised according to design, with the resulting contrast of surfaces, or partly upon such lines and contrast and partly upon an under-coat of colour revealed by the incisions; while again, the means at disposal may be increased by varying the colours of the under-coat so as further to express the design.

In this article I am only dealing with sgraffito as applied to inside wall decoration. Now the walls which you may he called on to decorate will he either bare or plastered. If hare, you will he spared some trouble and a great deal of dust; for all you will have to do before making a start will he to rake out thoroughly the mortar joints of the brick or stone wall, hrush out thoroughly all sandy dust from these rakedout joints, and peck the surface of brick or stone where needed so as to give a good key for the coarse coat.

If, however, the walls are plastered, you must hegin hy hacking off all the existing plaster, raking out the joints, hrushing and pecking the wall as hefore directed, thus preparing it to receive your first "rendering" coarse coat of Portland and sand. Be sure that you use Portland cement of the hest quality. I always use White's. The sand should be well washed, sharp grit, the best obtainable. Why? hecause inferior sand may have clay nodules or dirt in it, and when this is the case you will he disagreeably informed of the fact hy the finishing coat of your work "hlowing," that is to say, being defaced hy little pockmarks, small circles of plaster heing raised on, and then detached from, the finished surface wherever a soft nodule of clay is concealed hehind in the coarse coat.

The gauge of the first or rendering coat of coarse stuff may be two or three of clean sharp sand to one of Portland, and care should he taken that the two ingredients are thoroughly well mixed, otherwise the permanence of your work will he endangered. Now give the wall as much water as it will drink, and the rendering, or flanking in, as it is sometimes called, can begin.

When the wall has been duly rendered, the surface of the coarse coat should be roughened, either by scoring it, or by stubbing it with a stiff broom, the purpose in either case being to obtain a rough surface of ins and outs so as to make a good key for the succeeding coats of plaster.

The use of this coarse coat is twofold: it keeps back damp which in the nature of things occurs on the outer side of the wall, and promotes an even suction for the succeeding coats of plaster—an even suction being most necessary, otherwise one part of your day's ground would immediately "go in," i.e., the water would be quickly drawn from it by a thirsty part of the

label ends, on which are ringed string holes, to the two top corners of the cartoon. This will prevent the paper being torn away by the weight of the cartoon, and the register consequently being dropped.

Now you will have a clear impression of your design in small white dots on the grey coarse coat, and, if you have designed your cartoon with due understanding of the capabilities and limitations of your method, you should soon accomplish the work of marking in the different spaces of colour with white paint and a hoghair brush. To this question of design, its capabilities and limitations in sgraffito, I shall return later on; we are now concerned entirely with method.

When you have done the marking in, the wall will be divided up into a sort of map of white lined spaces, as shown in the illustration, and each space should be

Wall space "marked in" (Brereton, Rugely, Staffs).

The same wall space, showing final result in Sgrafito.

Designed and executed by Heywood Sumner.

wall, while another part, where the suction was slow, would keep soft, the upshot being firecracks where the suction was fierce, delay where the suction was slow, bad work and words.

In about two days' time the coarse coat will be sufficiently set for you to begin marking iu your design on the rough grey wall. I will suppose figure designs in various colours. These, drawn on stout cartoon paper, must have been previously pricked in outline. This pricking may be well done with a darning needle fixed in a penholder bound round with string—like a bat handle—for secure holding, while the cartoon should be placed on a thick blanket so as to admit of the needle piercing the paper; when the pricking is done the paper burr at the back, round the prick-holes, should be removed by scouring with sandpaper, otherwise they will be closed up by the ragged edges of the pricked paper, and your pounce impression will be imperfect.

Now get up your cartoon in its proper place on the wall, and pounce it on. For this purpose your pounce may be dry Parian wrapped in a muslin bag. Mark pencil rings on the cartoon round the nail holes on which your cartoon is supported; remove the cartoon; replace the nails in the same holes in the wall, and paintwhite rings round them. These are the register holes of your cartoon, and accordingly of your colour spaces; they must be carefully kept, otherwise you will have much unnecessary trouble. In the case of large cartoons you will find it convenient to glue luggage-

marked with a letter showing your plasterer what colour to lay in the space, this being the end in view of the marking-in. Now you are ready to begin the actual execution of the sgraffito. Up to this point your plasterer has been doing his work, rendering the walls, and you have been doing yours, marking in your designs; now, however, you will work together in much closer union, and must plan each day's work ahead for the next week, or more, so that the coloured plaster for next day's work may be got on to-day, and so on from day to day. Why? Because sgraffito work is "fresco" in the true meaning of the word: it must be done-fresh; the process being that one day you lay a ground of coloured plaster, the next day you cover this with a thin layer of white plaster, and then cut your design out of this thin white layer, thereby revealing the coloured ground

Well, when you have talked over your wall and all its marking-in with your plasterer, and explained to him, if he is new to your methods of work, the colour meanings of the letters in the spaces, e.g., R—red, B—blue, G—green, C—crimson, etc., then you should give him a written list of the different gauges of colour, to be fixed up in easy view for reference as he gauges up the colours on his colour banker. If you are using several colours, you will find it convenient to fix up divisions like stalls on a long board so that each colour may have its own place, and you also should provide yourself with several hawks, or mortar boards, so that each colour

may have its own hawk. The following is a gauging list of colours which may be found useful, the colour being in all cases Mander's powder distemper colour, and the cement with which it is mixed being fine Parlan. I have noted anything special in their respective behaviour on the wall.

Turkey red. 1 of colour, 3 of Parian.

Bright red. 1½ Turkey red, 1 fast crimson, 8 of Parian, will set quicker than No. 1, and harder.

Indian red. 1 of colour, 3 of Parian (slow in setting and some-times salt).

Red oxide. 1 of colour, 3 of Parian (a brownish red, slow in

Fast crimson. 1 of colour, 3 of Parian (a very fine strong colour, needs a good deal of knocking up to mix it properly).

of raw umber, 3 of 6. Brown, Parian (slow in setting).

7. Red brown. I of raw umber, \frac{1}{3} golden ochre, \frac{1}{3} fast crimson, 6 of Parian.

8. Purple. 1 of fast crimson, 1 of ultramarine blue D, 6 of Parian (sets quickly and sometimes earls. Purple can be times salts. Purple can be modified by adding 1 of French ochre to the above, and 3 of Parian).

9. Bright blue. 21 ultramarine blue ly french ochre, 9 of Parian (sets quickly and very hard, and frequently salts. The French ochre modifies the French ochre modifies the fierceness of tone of this blue, and the above gauge may need further modification under certain circumstances of lighting and position).

Dark blue. 2½ lime blue, ½ Frenchochre (sets quickly and sometimes salts).

11. Pale blue. 11 ultramarine blue D, 13 lime green, 9 of Parian (sometimes salts).

12. Green. 1½ ultramarine blue D,
1½ French ochre, ½ lime green,
9 of Parian (sets rather quick g of Parian (sets rand and frequently salts).

13. Dark green. 1½ lime blue, 1½ golden ochre, 9 Parian; or 1½ lime blue, 1 umber, 1 French ochre, 9 Parian.

14. Yellow. 1 golden ochre, 3 Pa-

15. Light yellow. 1 French ochre, 3 Parian.

Biown yellow. 3 French ochre, ½ umber, ¼ crimson, 10½ Parian.

17. Black. 1 blue-black or man-ganese, 3 Parian.

None of the colours mentioned are expensive except fast crimson, 28. 6d. per lb., ultramarine blue D, 1s. 6d. per 1b., and lime green, is. per 1b.

Of course, by reducing the amount of colour, and thereby

increasing the amount of Parlan, you can get lighter shades of any of the above colours; but do not forget that an increase of Parian means quicker setting, and you must allow for this in the time of getting on your colour-coat beforehand; otherwise, when you cut the final coat you will find your colour-coat cleans up very hard, smooth, shiny, and unduly grey.

Blue sets harder and quicker than any of the other colours, and it frequently salts in the process of drying out. That is to say, a white efflorescence of saltpetre appears on the colour surface. Leave this alone till it is quite dry, and then brush it off with a stiff dry brush, and rub over the colour with a damp rag, after which the original colour of the blue, green, or purple will be completely and permanently restored. The colours

that have an earthy base do not salt. Salting is tiresome, tries your patience, and clouds the first effect of your new work, but it does no ultimate harm to your colour.

You should provide a number of tins (Player's navy cut 2 oz. tins are very useful) or gallipots of equal size for the measuring of colours and of Parian. Now your plasterer gauges up the colour needed, and then fills in space after space of your next day's work according to the outlines and lettering of your marking-in, taking special care not to disturb the register nails. The colourcoat should be about 1 inch thick. When this is done the whole of the newly-laid surface should be roughened (not scratched), so as to give a key for the final coat

Sketch Design by Heywood Sumner, for Sgraffito Decoration executed in the centre apse, St. Agatha's, Landport, Portsmouth. J. Henry Ball, Architect.

which will be laid the first thing next morning.

For the final coat I use fine Parian, which sets as white as milk and cuts like cream cheese, with no imperfections of any kind; only-like Mr. Toot's tailor-it is expensive. If you should find that it sets too quick, air-slake it, i.e., spread out some cement on the top stage of your scaffold, or in some place where no dust or grit will fall on it, and leave it exposed for twelve or twentyfour hours before using. If you want a creamy rather than a milk-white ground, soak half a gallipotful of golden ochre in a bucket of water, stir well, then strain, and use this ochre water for gauging up your Parlan final coat, taking care that it is well stirred before use.

If you and your plasterer are strangers, you should be up betimes to see after the ochre water, the laying of

Sgraffito Decoration, All Saints, Ennismore Gardens, London-part of North Wall.

Designed and executed by Heywood Sumner.

the final ground to the right thickness (one-sixteenth, one-eighth, to one-fourth, according to the distance of the work from the floor), the keeping of the register nails, etc.; but if you are accustomed to work together, and mutually know where each comes in, you ought not really to be wanted early, while you will be wanted late; in which case make your arrangements for beginning on the fresh-laid ground between eight and nine o'clock. The ground should be trowelled-up quite firm to the touch, and without any damp shine on it before you begin cutting it. When ready, get up your cartoon in its right place as indicated by the register nails; mind the back of your cartoon is quite clean; pounce your design on the newly-laid white ground; use Portland cement for your pounce, the grey powder of which will give a clear impression on your ground.

Now for the execution of the "scratching," or really cutting, for nothing gives such clean, quick results as a knife blade fixed in a tool handle; with this tool you may learn to work with such rapidity that it will take two if not three assistants to follow you cleaning up the spaces of colour and the lines which you have cut; and you will soon find that you must be ambidextrous in order to overcome the obstacles of inconveniently placed scaffold poles and stages. For the first hour or two you

should cut in outline all the large spaces of colour, backgrounds, long lines, etc., because the final coat when first laid on will scale off quite easily from the colour coat; gradually, however, the final coat will begin to set and to adhere to the colour coat, and as the day goes on your rate of progress will get slower and slower. At first the final coat cuts like cream cheese under your knife, then "short," i.e. crumbly, then tough, then hard, and finally like stone. It is better to leave all fine work, such as heads, hands, aud feet, to the tough stage; and you should use special care in cutting during the "short" stage, otherwise you have to spend valuable time in mending breaks. Note that in cutting you should always slant your knife away from the edge which you mean to leave as a sharp outline, because the act of cutting is apt to shake the key of the final coat; by slanting your knife aright you leave intact the plaster which is to remain, and you disturb the key of the plaster that is to come away, thereby facilitating the work of your assistant who is following you up, removing the spaces of cut-out plaster and cleaning up.

The cleaning up is of great importance, as on this depends the strength and quality of your colour. When the final coat is first cut and removed so as to show a

Sgrassito Decoration, All Saints, Ennismore Gardens, London—part of South Wall.

Designed and executed by Heywood Sunner.

space of colour, such space will be greyed by the adhesion of small particles of the final coat. In order to remove this greyness the colour surface should be scraped with a plasterer's small tool, and a good cleaner will get handling as well as colour into the scraped surface by the direction and manner of his scraping.

I have already mentioned that some colours, when mixed with Parian, set much quicker and harder than others. You should arrange to have these colours laid on the last thing before your plasterer finishes work; and you must never get on more than the next day's colour on the walls, otherwise you will find that when you try to clean up your colour coat it will scrape smooth, grey and shiny, instead of rough and full-coloured, and all your efforts will be unavailing to get up your colour to its proper strength.

The colour coat throughout your work should be followed on within twenty four hours as the outside limit, and should be scraped immediately after it is cut, and then left alone. You must give all your colour similar conditions in order to obtain a one-stuff quality for the whole of the work.

If you find that you cannot finish the whole of the ground which you have had laid for your day's work, harden your heart, and cut off what you cannot finish; lay fresh colour, and start afresh on a new ground next

day. But, notwithstanding, you ought to estimate rightly, and you ought so to arrange that your whole gang are fully employed all day, and the day's work done as planned.

If you wish to finish off your wall decoration with plain spaces in the filling or frieze, above or below your sgraffito decoration, you will find that a pleasant variety to these incised and sunk colour surfaces may be obtained by flush filling in work. In this case you lay your Parian final coat straight on to the coarse coat about ½-inch thick, cut it according to your design (which must be quite simple, ungraphic, and with large interspaces), and when this is set, fill in the interspaces flush with selenitic sand and colour, or with Parian sand and colour, finishing with a floated rough surface to contrast with the trowelled smooth surface of the Parian, and cleaning off any colour stains which may be made on the Parian in the course of floating up the flush, rough-surfaced colour coat.

I now come to the question of design. Simplicity of expression and a rigid selection of your graphic materials are imposed on you by the method. Light on dark; dark on light; colour spaces and colour lines telling against a white ground; white spaces and white lines telling against a colour ground; contrasts of pale against dark colour spaces; juxtapositions of colour

spaces in harmony, or in opposition, warm or cool, dark or pale in incidence; these are the restrained means at your disposal. You must welcome line as your means of expression, and instead of aiming at an impossible realism, you must try to find the vitally expressive line, the essential character, movement, posture, growth and colour; in short, the graphic generalisation of the natural forms with which your decoration is concerned; and

Sgraffito Decoration in the garden corridor of a private house, Winchester.

Designed and executed by Heywood Sumner.

rememher that your result will be effected as much hy omission as hy commission; right leaving out in your design is just as important as right putting in, and interspace forms must be considered as much as silhouette forms.

Moreover, you must design with a clear perception and good-humoured acceptance of the limitations imposed hy the huilding which you are decorating. In all our endeavours many qualities and many differing considerations go to make up the final result, yet there is always one—First. One thing we must seek first if the other things are to he added to us; and the first thing needful in design for wall decoration is that the decoration should helong to its place. It should seem to grow out of the wall spaces, and grow in a temper of acceptance and in relation to the scale of the huilding.

No words of advice can achieve such consummation devoutly to be wished for, hut you will be on the road if you begin with knowing your building and wall spaces by heart; brooding over them, dreaming of them, until your decoration takes shape in forms and colours of rhythmic harmony, gradually to be fulfilled in the actual execution of the work.

And this is of necessity in sgraffito. You must carry out the work yourself in situ, you must be quick ahout it, and you must learn to see through scaffold poles, and

putlogs, and stages in the execution of your designs. No easy matter revising your work under these conditions, or to allow for the different lighting a wall gets when the scaffold is gone. But practice—though it will not make you perfect—will at least give you experience, and diminish the number of your mistakes.

Finally, in your graphic expression you must feel the monumental character of your work—monumental—something which stands, or remains to keep in remembrance what is past. So says the dictionary, and the words have a noble cast ahout them, raising us up into the realms of

"The antithesis of things that bide,
The cliff, the beach, the rock, the tide—
The lordly things, whose generous feud
Is but a fixed vicissitude."

This is the sphere of monumental decoration: To stand—to remain—to keep in remembrance—something rooted, belonging to its place. Not to he bought here, and sold there, in the eager competition of connoisseurship; not to he rushed ahout the world wherever men may agree to swarm in exhibition, but a thing securely planted in one place, and created with the stable assurance of natural growth.

Every artist who has had the happiness to spend laborious days on wall decoration must have felt an exaltation of soul in his work and in the thought of

days to come.

There they stand, the walls that speak: men will come and go; creeds and government will change in their expression, their emphasis, and their sway; heliefs will shift; hopes will rise and fall; things will happen very differently from what we may guess; but still the walls will utter their silent visionary message to future generations of men as they strive, and achieve, and liuger, and pass by. Dimly hy night the presences shadow the walls; brightly by day they inhabit their set place. No change nor chance will affect them except the sure agelong decay of the nature of things, and except-a great exception-except destruction. Yes, murder and sudden death are fates which again and again have destroyed these things which stand, which remain, which keep in remembrance. Alas! that the graphic stories and insistent presences which inspire and express the ideals of one generation should live to be hated hy another. This is Idolatry. That is Heresy. This is detestable. That is ridiculous. They must be hacked off, obliterated, covered with paint, plaster, anything so as to destroy the vision that is inevitable, anything so as to reduce the recording walls to blank silence.

Or again. Think of the glories of glassy colour which have been shivered into ruin; or which, from hasty care and secret hurial, have arisen in shattered splendour to attest the fury and the folly which may possess the minds of men. Ah, poor monumental art! so often prone, so often remaining as a castaway landmark in a strange land, while the past which it commemorates is

so little remembered, so lightly honoured!

And yet—and yet—although we know all this; although we know the wreck of Time; although now we may sometimes fear whether the world within us has any part with the mechanical world without, and whether our graphic language of ideal symhol can appeal to this matter of fact generation; notwithstanding this knowledge, and notwithstanding these blank misgivings, we artists, by our high calling and vocation, are bound to ignore them, and to do our work of hand and soul with the constant helief that it is wanted, that it is what we were made for, and that it will remain.

HEYWOOD SUMNER.

Rainbow Landscape.

By P. Wilson Steer.

### In the London Picture Galleries.

From a drawing

by James Fitzgerald,

MONG the many exhibitions opened during November, the most attractive in its kind, undouhtedly, was that of the New English Art Club, which, for the twentyseventh time, hrought together a collection of pictures and drawings hy living artists. Again, by a process of elimination, among the many exhibits one can without difficulty name the most noteworthy -the pictures of Mr. P. Wilson Steer. The most

complete, the most triumpbant, far and away the most beautiful of these is 'The Mirror.' Mr. Steer is seldom poetical, if we may apply the word to an art other than that with which it is directly associated. But the idea of uniting into a harmony of line and colour, by means of reflection in the oval mirror, this radiant study of two seated nude figures, that idea, as here exemplified, is indisputably poetic. In the matter of actual painting, this is one of the very hest things Mr. Steer has given us-eagerness, pleasure in the work, give life to each passage. The 'Rainhow Landscape,' which, by permission of Mr. C. K. Butler, the owner of the copyright, we are enabled to reproduce, is more amhitious. It is a hrilliant attempt, almost a hrilliant achievement, in the rendering of a dramatic aspect of nature-the landscape in fugitive sunshine, cloud and sky vomiting forth, so to say, their half-wrathful, altogether passionate message. In parts, notably in the foreground river, there is beauty; hut there is a breathlessness-may we not say an airlessness-about the landscape, handled so audaciously, that conflicts with heauty, causes heauty to turn aside. Here, however, we have a vital work, which compels attention. Equally provocative of discussion is Mr. William Strang's 'Emmaus,' whose subject challenges comparison with the Remhrandt of the Louvre. It is interesting, as work hy Mr. Strang can hardly fail to be; yet it seems to have heen conceived, not as a whole, hut in pieces. Apart from the fact that the figures look dwarfed in this low chamber, we are reminded here of Titian, there of Professor Legros, again of Paul Veronese. As to the Christ, he is not a presence, only a quite ordinary man in an awkward, inexpressive attitude. In hlack and white Mr. Strang is generally his own forceful, undaunted self; in 'Emmaus' he appears to he in quest of an æsthetic entity.

Apart from the three pictures named, the New English contained a gratifyingly large proportion of other than commonplace exhibits; indeed, the show in this respect compared favourably with that of the International Society. If in Mr. J. S. Hill's 'Durham' the overhanging smoke is somewhat leaden, the canvas has strength, dignity, heauty.

Among architectural studies in water-colour were Mr. D. S. MacColl's finely-felt 'Belfry and Watch Tower of Calais,' reticent to a wish, treated in old-time manner; and Mr. Rothenstein's 'Relic Stall at Le Puy,'

exquisitely toned, full of mystery. Allusion must he made again to the romantically conceived 'Knight Errant' of Mr. Arthur Tomson; to Mr. Anning Bell's coloured relief of 'Charity,' a genuinely interpretative

tbing; to several delightful colour harmonies by Mr. Charles Conder; to the little landscape study by Mr. W. Y. Macgregor, which accomplishes its quiet aim; and to the portrait of a cbess-player by Mr. Francis Bate, wherein he works unflinchingly towards a desired and individual end.

With advantage to himself, one exhibitor at the New English Art Club might have stepped into Messrs. Agnew's gallery, for the purpose of studying the 'Lock' of Constable. Mr. David Muirhead's 'The Water Mill' owes its inspiration, surely, to the great English landscapist. If we would see how much of Constable's quality has been lost, how little of his own Mr. Muirhead has added, let us pause before the noble picture in Bond Street. What lift and movement there is in the clouds, with what unerring faithfulness and beauty the distance is rendered, how finely related to its setting is the figure! At the seventh annual exhibition on behalf of the Artists' General Benevolent Institution, which must bave profited much by public curiosity translated into shillings, this Constable hung next to the famous 'Stolen Ducbess.' The sensational career of this picture lady has made her famous on other than artistic grounds. In the 'Viscountess Ligonier' Gainsborough is particularly Reynolds-like, and the 'Sir William Blackstone' was, of the tbree, perbaps his most intimate work. For the rest, the 'Right Hon. William Adam' is a good example of Raeburn, the face ably modelled; Hoppner's 'Miss Emma Crewe' interests as a brilliant study of golden tone; the out-held baby is altogether delightful in Reynolds' 'Duchess of Marlborough and Child'; very blithely are blues and pearl-whites united in Romney's 'Mrs. Robert Trotter'; and Turner's 'Eve of the Deluge' is a great imagining of his later period.

From a drawing
by Miss Constance Foxley.

ITH very few exceptions, those who contributed to the 116th Exhibition of the Royal Society of British Artists seem to be somnolent, or else well content to render in a commonplace way themes no less well worn than sentimental. A visit to the gallery could be recommended at any rate to those in need of a soporific.

Occasionally, however, a sense of pleasure stirred the visitor and banished the tendency to sleep. Mr. Cayley Robinson's 'Fata Morgana' reveals his mannerisms rather than his inspirations. Austere in line, mystical

in aim, the symbols chosen are either too near to or too far from reality to satisfy. It is a halting production, yet it was one of the most noteworthy exhibits in Suffolk Street. In phosphorescent blues and violets Mr. Foottet shows us the Pont Neuf, Paris, with no deeper note in the scheme than the purple of the background houses and spires. Mr. Wynford Dewhurst continues to treat, in obvious impasto, blossom time in the orchards of France; Mr. F. Spenlove-Spenlove has observed the beauty of red-sailed boats on the water-ways of Venice; Mr. Rupert Bunny's 'Feather from the Wings of Cupid' is after-all too long a way after, it must be confessed-Venetian masters of colour, but no Venetian would have been guilty of the unfortunate figure to the extreme right; Mr. J. D. Fergusson, in a somewhat Hans Hansen-like way, has pictorial tales of the East to tell; and, while the reverse of profound, 'Miss Olga Brandon,' by Mr. W. Graham Robertson, is within its limits an accomplishment.

For three weeks beginning October 28th crowds flocked to the Guildhall, to see before their departure to America the last ten canvases, by Mr. E. A. Abbey, destined for the Public Library of Boston. It will be recalled that a few years ago, there were exhibited the first five pictures of this series, treating of "The Quest of the Holy Grail." In the small upstairs gallery at the Guildball it was difficult, if uot impossible, to judge of the decorative value of these works, the largest of them 8ft. by 33ft. If, as thus seen, it was not easy to relinquish one's quest of Sir Galahad, who in each case wears "Abbey red," conceivably his assertive figure may not so militate against a decorative effect when the canvases are in their final position. In London, within wide black frames, these were ten distinct pictures, suitable for hanging in a gallery, but hardly for uniting as decoration of a given architectural space. It must be confessed, we have not here an exemplification of the decorative instinct; such, for instance, as in the great Sorbonne painting of Puvis de Chavannes.

Of many other exhibitions arranged during November, I can allude only to M. Eugène Burnand's 'Christ's Prayer after the Last Supper,' put on view at the Dowdeswell Galleries. With a whole world of tradition behind him, it is difficult for a modern artist unselfconsciously to approach such a theme. In the immediate foreground is a long, narrow table, spread with pearl-white cloth; behind it, against a wall of white, stand, on either side of the central figure, the eleven apostles, all in white save Peter, who has a blue hood; and the up-looking Christ, sensitive in expression and attitude, is again clad in white. M. Burnand is to be congratulated on his austere, yet sympathetic and wellknit, arrangement of pearl whites and greys, on the admirable way in which the well-modelled heads are grouped and related to the inspirational figure in the centre.

FRANK RINDER.

The Turin Exhibition, 1902.

Poster designed by Bistolfi to advertise the Collectien.

### Passing Events.

TURIN takes the lead as the scene of a great decorative exhibition in Italy, and we reproduce an attractive poster, designed to give prominence to the undertaking. The First International Exhibition of Modern Decorative Art is being organised under the most favourable auspices, and everything points to the complete success of the euterprise. The fact that Mr. Walter Crane is identified with the proceedings is a sufficient guarantee of the excellence and completeness of the arrangements to give Great Britain a representative section. Mr. Walter Crane recently received a great ovation when examples of his art were displayed at Budapest, and auother indicatiou of his European popularity is afforded by the fact that at Turin a special collection of his work will be shown. The names of some other artists occupying prominent positions in the realm of the Decorative Arts may be mentioned. MM. Anning Bell, C. Voysey, Selwyn Image, and Harrison Townsend are associated with the scheme, and with many others will exhibit. All Continental countries will be laid under contribution with equal thoroughness. France, it is scarcely necessary to say, will be represented by the most recent productions in the style of "L'Art Nouveau," which will have an opportunity to maintain its fascinations by comparison with the more sedate compositions of other countries; or it may be to receive its death-blow in the lists of popular favour, as uncertain a tournament as any of mediæval times. The enthusiasm is such that all that is worth seeing in

this branch of art promises to be on view at Turin from April to November this year. We wish to announce that a series of articles is in preparation for THE ART JOURNAL from the pen of Mr. Walter Crane, and the illustrations will be selected by him. It is with some satisfaction that we have completed these arraugements, for, from his official and otherwise eminent position, no one is better fitted to carry out the details or provide so complete a record of the Exhibition and its influence on modern Decorative Art.

EXPRESSION has been given in the daily newspapers to the news of the discovery of a picture by Rembrandt, found at Compiegne; and the matter has been generally commented upon as entirely new. It is, however, more than a year ago since Dr. Hofstede de Groot, of the Hague, discovered the picture at Compiegne. It is a variation of 'The Pilgrims at Emmaus' in the Louvre. No doubt wheu the picture was in Paris, the authorities of the Louvre considered that having themselves a fine picture by Rembrandt, another, of a similar subject, must be a copy: but Dr. de Groot has been able to demonstrate that they are both from the brush of the master.

SIR WILLIAM RICHMOND is an indefatigable worker, but yet finds time to attend to the parochial duties in which, he insists, every true citizen

should take an active interest. On the evening of the 1st of November, in the Town Hall, he addressed the parishioners of Hammersmith, and urged the necessity of art culture, incidentally suggesting the desirability of adding many standard works on art subjects to the Corporation Library, to the Advisory Committee for which he lends his expert knowledge. This interesting lecture was the first of a series arranged for the enlightenment of the fortunate inhabitants of Hammersmith, as well as anyone else who cares to make the journey, and there is no doubt of the popularity of these refining influences. The next lecture, with special reference to art training, will be on January 30th, when Mr. Walter Crane will discourse and illustrate his remarks with the lantern.

THE preservation from destruction of Hogarth House is due in some measure to the agitation which gave the scheme prominence, though itself unsuccessful; the endeavours of those who worked so hard, therefore, deserve some recognition. It is stated that the purchaser intends the quaint building to remain as one of the landmarks of Chiswick, but the precise use to which the building will be put has not yet transpired. It will be difficult to exhibit relics of the great satirist, for the small and badly lighted rooms do not lend themselves to display. There is, however, a sentimental interest as the picturesque little house which compensates the explorer who seeks and finds it.

VAUXHALL BRIDGE has been demolished, and from a temporary structure thrown across the river facing the Tate Gallery, it is possible to conceive in the mind's eye the effect of its successor. The architectural features of the engineer's design have been widely condemned, and many petitions have been sent to the London County Council asking that an architect may be appointed to collaborate with Sir Alexander Binnie so that the artistic details may be reconsidered. On the 6th March, 1899, the Times contained an appeal and a protest signed by an imposing array of Academicians and other artistic experts, but the County Council remained immovable. One enthusiast has consistently hammered away at the adamantine body, and although it is not possible here to explain the technical improvements suggested by Mr. H. Heathcote Statham, Editor of The Builder, we wish to refer to his scheme published in a recent number of his Journal, and to echo the opinion of Professor Aitchison, R.A., that thanks are due to Mr. Statham for his public action in the matter. Much earlier in the proceedings Mr. Statham made practical suggestions in a paper read at The Royal Institute of British Architects, and every endeavour was made to place expert architectural advice at the disposal of the Engineer to the County Council. We hope that when the under-water part of the new bridge is completed, some modification of the original design will be adopted in accordance with the advice tendered in such a spirit of good citizenship.

THE collaboration of one expert with another is an excellent thing if each keeps to his own sphere and there is a real assimilation of talent. Petty jars avoided, and forbearance in consultation maintained, the best interests of any scheme are promoted by an interchange of thought. Unfortunately the line of demarcation is not always obvious. For instance, Mr. Statham is of opiniou that when a new bridge is in contemplation, it should be the architect who should

design the bridge, the engineer being afterwards called in to prepare the foundations. This commends itself to architects, but we fancy engineers would cry trespass. Nevertheless it is desirable that the work of specialists should he combined to form one harmonious scheme, and this is equally applicable to the completion of buildings with the help of the artist and the sculptor.

WE wish to draw attention to the Premium Plate presented under certain conditions to each yearly subscriber to THE ART JOURNAL. We think it has not been realised sufficiently well that these large plates represent the work of the leading artists of the day, and the quality of each impression is such that it is as worthy to be framed and preserved as prints purchased at a much greater cost than is covered by the subscription to this Journal. The previous plates have been (1895) 'Hit,' an etching after Lord Leighton, P.R.A., (1896) 'The Convalescent,' an etching after Sir L. Alma Tadema, R.A., (1897) 'An Idyll of 1745,' an etching after Sir J. E. Millais, P.R.A., (1898) 'The Toils of Day are over,' an etching after B. W. Leader, R.A., (1899) 'Helena and Hermia,' an etching after Sir E. J. Poynter, P.R.A., (1900) 'A Reverie,' an etching after Marcus Stone, R.A., (1901) 'London's River,' an original etching hy W. L. Wyllie, A.R.A. This year the Proprietors have made a departure from precedent, and are preparing a plate after E. Blair Leighton's 'Adieu.' This picture has been especially painted for THE ART JOURNAL and arrangements are heing made by which it will be reproduced, under the supervision of the artist, in a plate of the highest class.

### New Artistic Publications.

HE most important book on the Fine Arts issued in the autumn has been Sir Walter Armstrong's "SIR HENRY RAEBURN" (Heinemann). This was a work projected by the late R. A. M. Stevenson with Mr. J. L. Caw, the present hard-working Curator of the National Portrait Gallery in Edinburgh. It has been carried to a very successful conclusion by the learned Director of the National Gallery of Ireland, working on it as a labour of love during his long-extended study of Turner, now, we are glad to know, nearing a close. "Sir Henry Raeburn" affords excellent scope for illustrations, and a very representative list has been secured. Sir Walter Armstrong's comments on the Lowland Scot -himself one of the race-are remarkably searching, and his summary of Raeburn's art is a serious contribution to the art criticism of the painters of our own country.

An equally important work of the higher criticism is Mr. Berenson's "LORENZO LOTTO" (Bell), now in its second edition, with additional illustrations. Although not nearly so sumptuously set out, this essay on constructive art criticism reveals a power of expression, combined with experience, which is very convincing. The same writer's new book on "The Study and Criticism of Italian Art" (Bell), a collection of essays first appearing in periodicals now brought together for the first time, is chiefly remarkable for the article on "Amico di Sandro." In this persuasively written account of someone whom the author admits cannot be conclusively proved to have lived, Mr. Berenson gathers together all that can be said for a painter who was not (he thinks)

The Coronation of the Virgiu,
Amico di Sandro (Bell).

Sandro Botticelli, nor Filippino Lippi. This artist, admittedly a great man, has by some outsider been named Berto Linaiuolo, but the writer prefers to let him be known, at least at present, only as the friend of Sandro.

Mr. Walter Craue has "dressed and decorated" a sweet series of forty designs in colour from the last Essays of Elia, under the title of "A MASQUE OF DAYS" (Cassell). Mr. Crane is now undoubtedly in the height of his power, and has left the stiff and somewhat dry design of earlier days far behind. These drawings are full of grace and vigour, and are very well reproduced.—Mr. G. Howell-Baker, under the title of "PENHOLM" (R. Brimley Johnson) brings together twenty-five very artistic and uncommon designs, figures and landscapes, in black and white, in another manner of decoration he is beginning to make his own.

The story of "MADAMÉ RECAMIER AND HER FRIENDS"

(Harper's) renders the author, H. Noel Williams, ample opportunity to display literary skill combined with abundant knowledge of the better side of Parisian life at the beginning of the nineteenth century. Madame Récamier has hitherto been almost only a name to readers of English, and this is the first time a complete account of her has been published. The volume is well arranged, but it is very regrettable the publishers did not go to the many sources easily available to make reproduction from original works.

Amongst the books which fascinate as well as instruct, Mr. Muybridge's "HUMAN FIGURE IN MOTION" (Chapman and Hall) must take a very high place. In nearly one hundred series of instantaneous photographs executed on the plan of a cinematograph, all kinds of interesting and beautiful figures disport themselves. The men studies include wrestlers, fencers, cricketers and other athletes. The women—of which we give an

A Pironette.

From " The Human Figure in Motion" (Chapman and Hall).

example — are dancing, running, walking, with some in diaphanous garments, some half clad and some nude, and also children in various pretty positions. Such figures are of immense importance to the figure painter.

No one is better qualified than Professor Lanteri to teach modelling. His daily work at the Royal College of Art would alone qualify him for the highest place amongst teachers. His book on "MODEL-LING" (Chapman and Hall) is a thoroughly practical work on the subject, and worthy of the very high praise accorded to it by Mr. Onslow Ford in the preface. Professor Lanteri starts from the very beginning of the study of modelling the bust and figure, and it is easy by following his simply stated directions to understand what is possible to be done.

Amongst new editions, that on "THE RIVIERA" (the third), by Dr. Hugh Macmillan (Virtue), is one which will appeal to all who know the south of France, while its fifty excellent illustrations vigorously recall that wonderfully beautiful coast.—Professor Church's "CHEMISTRY OF PAINTS AND PAINTING" (Seeley), also in third edition, is a book which ought to be in every artist's bookshelf however small.

The fourth enlarged edition of Professor Fletcher's "HISTORY OF ARCHITECTURE" (Batsford) is a volume equally indispensable to the artist and architect. Being by far the most comprehensive book on the subject, and illustrated to the highest possible limit, and beau-

tifully printed, this publication cannot be too greatly praised.

Two publications, specially for young people, show how well children are catered for in the artistic way.

By Mrs. Herbert Railton
(Freemantle)

"BRUSH WORK AND DESIGN," by F. Steeley (Bacon and Co.), contains fully illustrated and simple lessons on the earliest use of the brush, which are certain to interest every intelligent child.—"WYLLIE'S MARINE PAINTING" (Cassell) reproduces in excellent colour tones a series of twenty-four simple sea studies by the eminent Associate of the Royal Academy.

Messrs. Freemantle have issued two of Shakespeare's

Modelling a Bust. By Professor Lanteri (Chapman and Hall).

Plays in unusual form and different from each other. For "MIDSUMMER NIGHT'S DREAM" Mrs. Herbert Railton has written a delightful introduction for boys and girls, and illustrated the play throughout with many well-drawn designs. In "THE TEMPEST," Mr. Anning Bell has decorated nearly every page with drawings in his own now well-known style, some of which, notably 'Ferdinand and Miranda,' are fine works of art.— "THE CHIEF'S DAUGHTER," by P. Caros, illustrated by E. Biedermann (Kegan Paul), is a pretty little book with fairly good illustrations not quite well reproduced.

Messrs. Bell are publishing a series of very small handbooks on artists at a shilling, which contain the essentials in each master's life, and therefore likely to appeal to those for whom necessarily art can be known only in a glimpse: ROMNEY, WATTS, BURNEJONES, VELAZQUEZ, and FRA ANGELICO have already appeared.—"BRITISH SCULPTURE AND SCULPTORS OF TO-DAY," by M. H. Spielmann (Cassell), an almost unique publication on our present-day sculptors, is amply illustrated by reproductions from works of all our chief artists in marble as well as in metal and enamel.

### SPECIAL PLATES.

## 'The Village Philharmonic.'

BY STANHOPE A. FORBES, A.R.A.

 ${
m M}^{
m R.~STANHOPE}$  FORBES, A.R.A., is justly regarded as the leader of the so-called Newlyn School of Painting, and, although the right of original discovery of the village belongs to Mr. Walter Langley, he was the undoubted founder of the movement, and the artist whose work has made the name a familiar one in all parts of the world. In the spring of 1884, Mr. Forbes, thinking that the art-loving public must he growing tired of the blues and whites of his Breton subjects, with which he had then been occupied for some years while working under Bonnat in Paris, resolved to visit Cornwall in search of fresh themes for his brush. After trying one or two places, he stumhled across both Newlyn and a good subject-'A Cornish Fish Sale'-almost at once; and in Newlyn he has remained ever since. No one has painted for us the romance of humble Cornish life, with its tragedies, its daily work and modest pleasures, and its humours, with such skill and such sympathetic insight as he has done. An artistic colony soon spraug up around him, most of its members being frankly realists, with a helief in "open-air" work, and with methods of technical execution chiefly learnt in French studios.

In Cornwall the weather is so mild that there is always a possibility of painting out of doors all the year round, and its equable grey climate allows the constant study of the model in diffused daylight—two of the chief causes which have given this rather evilsmelling fishing village its reputation as an ideal painting place. Mr. Forbes is the cleverest and the strongest painter of the school, and his vivid and powerful handling suggests the methods of the best French traditions; while his constant search after subtle atmospheric effects, and his strong contrasts of light and shade, stamp his work with an artistic value far beyond that of the mere subject he selects, admirably as he is accustomed to treat the life of the fisherfolk of Newlyn in all its picturesque variety.

'The Village Philharmonic' represents the interior of a Newlyn cottage, with its low, raftered roof, and furuiture of the simplest description. The members of the local Philharmonic Society have assembled here in the early evening to practise for some forthcoming concert. The musicians, on the right, number fourtwo violins, a 'cello, and a double-bass. The leader, an elderly man, stands, conducting with his violin bow. On the left, ranged against the grey wall, hehiud a long wooden table, stand the singers, nine in all, boys, youths, and men of all ages, chiefly clad in their working fisher costumes. They are devoting themselves to the business of the moment with a serious earnestness which has been admirably rendered by the artist. The grouping is both natural and effective; hut the great merit of the picture lies in the very clever and truthful manner in which a most difficult effect of cross-lighting has been treated. Night is beginning to fall, and the only natural light which enters the room is through a small window in the left-hand corner. The only other light is artificial, and comes from two small oil-lamps, one hanging above the heads of the singers, and the other standing on the table on the right, which illuminates the figure of the old violoncellist seated by it, and, in a lesser degree, that of the leader of the orchestra. The intermingling of these two lights, of dying day and flickering lamp, has been most successfully rendered. The end of the long table gleams palely under the fading grey of evening, and the heads of the singers are illuminated by both white and yellow lights, while strong shadows intermingle upon the floor, and the corners of the room are cast into darkness.

The picture is, of course, a very dark one. Some of the figures are seen only indistinctly through the gathering gloom; but it is an interior full of atmosphere, with its interchanging lights and interlacing shadows, with the blackness faintly illuminated here and there hy bright spots where furniture or walls reflect the lamps or window. It is one of Mr. Forbes' finest paintings of interiors, in which he has always set himself some difficult problem to overcome-interiors in which the question of the general effect produced by the lighting has been, perhaps, a more important question to him than the general subject of the picture. In 'The Village Philharmonic,' however, the subject itself is treated admirably, with excellent characterisation and quiet humour. It is one of those homely Cornish scenes which uo one has put upon canvas with greater truth than this artist, or painted with greater sympathy and

The picture was painted in 1888, and exhibited in the Royal Academy, and was purchased in the autumn of that year by the Birmingham Corporation. It obtained a gold medal at the Paris Exhibition of 1891.

### 'The Old Man's Treasure.'

By CARL GUSSOW.

CARL Gussow, born in 1843, at Havelherg, is a member of the Royal Academy at Berlin, and in 1876 he began to he associated with the education of the students at that institute. The Royal Academy, London, accepted pictures for exhibition in 1878 and 1881. He has received many honours from other countries, and has a position of distinction on the roll of fame of his own nation.

The subject of the picture of which we print a plate reproduction reveals more than the title suggests. The fretful kitten is certainly the treasure of its patriarchal protector, but it also compels the interest and admiration of the old woman with the basket and the buxom frauleins. It invites, moreover, the comparison of youth and age. The petulant struggles of the kitten to obtain freedom accord with the dislike for restraint felt by the young, feline or human: while the age of the man, far into his second childhood years, contrasts well with the frail life of his tiny treasure. The picture, presented to the Liverpool Corporation in 1880, now hangs in the Walker Art Gallery, to the Trustees of which we are indebted for permission to publish our special plate.

# Supplement to "The Art Journal."

# A History of Artistic Pottery in the British Isles.

BY FRED. MILLER.

Glazed Earthenware Candlestick Jugs of this character are called "puzzle" jugs.

VIVILISED man might well have heen defined as a horn collector. Beginning with tops, marhles and knives, he passes on to butterflies and stamps, thence through the countless hobbies of the "grownups." And of these countless "manias" of maturity the collecting of examples of the potter's craft would appear to be the most general. Indeed, it would hardly he an exaggeration to say it is an universal trait

among civilised folk, this disposition to collect and desire to possess "pots." I can recall a certain bedroom in an Essex cottage in which I used to stay during summer holidays, upon the mantel-shelf of which were strangelooking creatures of white china, with gilding to help out the modelling by suggesting form, and brown

patches of colour here and there to add to the verisimilitude. I used to look at them as I lay in bed waiting to be allowed to get up, and I can even now recall drawing a mental parallel between the counterfeit presentments and the only dog I knew intimately, and wondering how it was nature was so hadly imitated. The potter who was responsible for those china dogs got as near as money and his own unaided efforts enabled him to the "old Chelsea" he had seen in some collection, for that was his criterion, not nature. There were other odd examples of the potter's craft in this cottage—a china ornament, like three or four towers of a ruined castle perched on a rock, with very sharp projecting fragments of china sticking over the surface to suggest moss, and some bright metallic-looking jugs which I now know to have been "lustre." Just as this good dame treasured these "chiny ornaments," so we treasure our old china, and you may depend upon it that the desire to possess and disposition to collect fine examples of the potter's art will outlive most other 'crazes.''

It is not difficult to account for this widely distributed love of pottery,

for it is only in such products of human lahour that we see man's complete triumph over raw material. This may seem to some, one of those exaggerated generalisations, but I would ask such as question this dictum to note that the word raw has much virtue in it in this connection, and marks the distinction hetween the work, say of the sculptor, and that of the potter. The sculptor's clay, marble, ivory, will take all the hand cunning and skill he can bestow upon it; but when he has reached his limits, when his mental machinery has run down, there is no further hazard, for even if he work in terracotta the risk of firing is almost nil. With the potter the supreme ordeal of fire is the crowning trial to which all he produces has to be put. With all the care that may be exercised, with all the improvements in kilns and mechanical appliances we may now possess, the ordeal hy fire must ever be a supreme hazard, a nervestraining ordeal increasing in danger in proportion to the amount of human skill bestowed upon its production. When we stand, therefore, hefore a very beautiful example of the potter's art, we consciously or unconsciously feel that; and it is the satisfaction the eye receives in taking in the beauty of surface, the brilliance of colour, the grace of the shape, which partly explains

A Thrower at work. The girl weighs out the clay and supplies the potter. The wooden gauge is used to keep the size of the pots uniform.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

the fascination the potter's art exerts upon the majority of folk who have any intelligent sympathy with the work of men's hands

The fact that poets and writers have through the ages used the craft of the potter for images and similes, shows that just as the school boy's "wonder grew that one small head could carry all he knew," so man has never ceased to be impressed with the fascin-

ation of the potter's wheel and the supreme work of his hands. What is, after all, more fascinating than watching a"thrower" produce a beautiful shape out of a dull ugly

the clay as he pulls it into shape, and when to this is added decoration and the glazing and firing, the child of his hands becomes a veritable citizen of the world of human inventions.

If it be true that no one should be a critic who does not do or cannot point to some work he has accomplished in the calling he criticises, so no one but a potter can adequately enter into the triumphs of the potter's craft, for only he who has had any practical experience of "potting" realises what goes to success, seeing that only he knows what difficulties have been overcome. This is one advantage I enjoy, and it would be mock modesty on my part to pretend that I do not consider it a very great one, for it at least gives me sympathy which comes of insight

In glancing briefly at the history of pottery\* in this country, which is what we shall attempt to do in these opening pages, it may be as well to say a few words as to the plan the present writer hopes to follow. The pottery expert looks at potting largely from the marketable point of view-what such an example will fetch in the sale-room-what he may hope to get for it in his own gallery. Now this question of purely a ledger interest does not concern us, for the market value so often depends upon passing fashion and the rareness of work of its class far rather than its worth as a work of beauty. As we are to consider English pottery from a historicalartistic standpoint, a vast literature dealing with marks and other means of identification is at once dismissed, and the squabbles of experts trouble us not. There is this to be said, that the work of the old potters, and particularly potteries long since destroyed, such as Bow, Chelsea, Plymouth, and Bristol, can never be cheap because the number of people who desire examples is greater than the number of pieces which have come down to us : competition regulates the price. But apart from

such a consideration—a very important one from a dealer's point of view—it can safely be said that the most cursory glance at any good representative collection of British pottery convinces one that it possesses a certain human charm which is wanting in so much modern work. The early potters were all of them

Turning pottery in the clay state on a lathe to thin down the vessels as they come from the thrower, and give them a good surface.

Castor Ware

Food Vessel with incised ornament and perforated knobs to take cord.

on their mettle; they worked at high tension, for they had set themselves the task of doing for us what hitherto the foreigner had done for us. When John Dwight hit upon making salt-glazed stoneware and

Cinerary Urn from Barrow.

started his Fulham kilns about 1671, he had the German stoneware before him, and he knew that if he were to be commercially successful he must produce work as good as that imported. How good that was the work of this pioneer potter in the British Museum speaks with emphatic eloquence; it seems impossible to do anything better in its way than what John Dwight produced two hundred years or more ago at Fulham.

Take the case of the manufacture of china in this

country. When Edward Heylyn and Thomas Frye, in 1744, were granted their patent for "A new method of manufacturing a certain material whereby a ware might be made of the same nature and kind, and equal to, if

Example of Staffordshire glazed Earthenware of the 17th Century.

not exceeding in goodness and beauty, china and porcelain ware imported from abroad," and started the works at Stratford-le-Bow, they called them the " New Canton Works," their avowed object being to beat the Celestial in a class of work which had reached a perfection in the sixteenth century never since attainable there and elsewhere! The task Heylyn and Frye set themselves can only he approximately gauged when we compare a piece of Chinese porcelain with the materials as they came from the womh of nature. The hardness and translucence of the body or "paste," smoothness and hrilliancy of the glaze, and its adaptability to coloured decoration must strike the most ordinary beholder as ahout as difficult a task to imitate as a man could well engage in. It is surely not an exaggerated statement that a fine piece of porcelain beautifully painted is about as perfect a product of human skill and labour as we can see, and the task, therefore, before those pioneer potters at Bow was little short of stupendous. How far they succeeded may be seen in the Schrieber Collection at South Kensington, which, for the purpose of the student, is a perfect collection, the examples being ou the whole so excellent.

This early Bow porcelain is a long way behind the Oriental. They appear to have had a difficulty in keeping the shape of their vases either in the drying or in the kiln (probably in both); at all events, many pieces in the Schrieber Collection are out of the true. The glaze, too, has not that homogeneity, that oneness with the fabric itself, which is essential in the best porcelain; hut taking the Bow pieces intrinsically they are quite remarkable, and even their imperfections give them the human quality I spoke about, for they seem to speak to us of the trials, struggles, disappointments that had to be overcome one by one. There is, too, that absence of shoppiness, the death-dealing hand of the factory, upon these early productions, and little wonder is it, therefore, that connoisseurs are prepared to give £400 for a pair of figures.

In the British Museum is a most interesting example of Bow porcelain—a bowl, about the size of a slop basin, with an account of its production in the handwriting of the painter who decorated it. As a commentary upon the "cloud-capp'd towers" which the painter alludes to in this strangely human document, it has a pathetic interest.

Here is a copy of the document, the only omissions being a few unimportant sentences:—

"This bowl was made at Bow china manufactory, at Stratford-le-Bow, about the year 1760, and painted there hy me, Thomas Craft—my cipher is in the bottom; it is painted in what we used to call the old Japan taste. . . . There is nearly 2 dwts. of gold, about 158. I had it in hand, at different times, about 3 months; about 2 weeks' time was bestowed upon it. It could not have heen manufactured, &c., for less than £4. . . . I never use it but in particular respect to my company. . . Perhaps it may be thought I have said too much about this trifling toy. A reflection steals in upon my mind that this said bowl may meet with the same fate that the manufactory where it was made has done. . . .

"The above manufactory was carried on many years under the firm of Messrs. Crowther and Weatherby, whose names were known almost over the world; they employed 300 persons; about 90 painters, of whom I was one, and about 200 turners, throwers, &c., were employed under one roof. The model of the building was taken from that of Canton, in China. . . . It now wears a miserable aspect. Mr. Weatherby has been

### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Romano-British Fottery.

dead many years; Mr. Crowther is in Moreden College, Blackheath, and I am the only person of all those employed there who annually visit him.—T. CRAFT, 1790."

The failure of the Bow pottery, which just preceded the closing of the Chelsea one, is forcible evidence of the difficulties the potter has to make hoth

ends meet, and if we look thro' the names of great potters, we shall find too many instances in which he comes down in poverty to the grave. His best work needs connoisseurs to appreciate it, and as the new Slade professor at Cambridge said in his opening lecture recently, that while the Government and municipalities spend money in trying to produce artists, nothing adequately was done to train the public to whom after all the artist had to appeal for a living, for without the cultivated amateur the artist comes to starvation.

One thing strikes a student of the potter's craft in Britain, and that is that we were very much hehind Continental nations both in our demand or use for the work of the potter and the ability to produce specimens of any particular excellence or skill. We put up with leather bottles and wooden cups, and it would appear that pottery for service at the table was little used in England, even in the houses of nohles, so late as the 17th century, for Pepys, under date 29 Oct., 1663, says, "I sat at the merchants strangers' table (at the Lord Mayor's dinner), where ten good dishes to a mess, with plenty of wine of all sorts, but it was very unpleasing that we had no napkins nor change of trenchers and drank out of earthen pitchers and wooden cups." Plates were not in use hefore the middle of the 18th century and then were confined to the rich. Pewter took the place of trenchers with yeomen.

The works of the potters who wrought previous to 1750 that have come down to us are so few that our task of taking a hird's-eye view of pottery in this country up to that time can well be hrief, and we will now proceed to

Dipping dishes in the glace. The dishes themselves have had one firing and are in the "biscuit" state. The decoration is often put on the biscuit, and is therefore under the glace.

take the subject in detail, after which we shall deal with greater fulness with the work produced in the latter half of the 18th century, reserving however the hulk of our space for the consideration of the work being produced hy our contemporaries, for what is being done now has a living interest for us that is wanting in all other work.

Industry and Idleness. The Fellow-Prentices at their Looms.

By William Hogarth.

# The History and Development of British Textiles.

I. CARPETS AND TAPESTRY.

By R. E. D. SKETCHLEY.

WITH the invention of the loom and the weaving of the first web begins the conceivable story of man and of nations. Before that there must have been the bare fact of life to be maintained and transmitted: but to realise what it was to live so strangely on the strange, unused earth, would need imagination sufficient to surpass all wonder-tales of the world, all legends of the great adventures of gods, and men, and monsters. There are acknowledged limits to creative imagination, but destructive imagination is a still more restricted power. Dryden once declared that the guardian angels of kingdoms were "machines too ponderous for him to manage"; but it would be a plain matter to set archangels on the public stage compared with the difficulty of realising one day of common life, had the loom not been invented. The primitive man, who left sheep unshorn, and the wild harvests ungathered, could as easily have conceived of the effect on life of six thousand years' weaving, as we of life wanting the fabrics of the loom and all the beauty weaving has wrought.

To reach the actuality of such existence it is not enough to strip from our vision of the world all woven fabrics, to realise the nations without their textile manufactories, their flocks, their harvests of fibres and of vegetable dyes, and to clear the seas and highways

of traffic in the productions of the loom. Still there is record, in literature, in ornament, in architecture, in painting, of the loom and the shuttle, of the weaving and dyeing and using of the web, and of the stir and splendour brought into life by the mystery of the weaver. Art, which records the influence of essential things on the minds of each age, has not passed by the weaver at his loom. Weaving has been celebrated by poets from the writer of the Book of Job to the last maker of verse, it has influenced design from the time when the craftsman first noted as pattern the interlacing of warp and weft. From the Greek vase-painter who drew Penelope at her crafty weaving, to Velasquez, noting the mystery of light and shadow, the splendid action of the women in the tapestry manufactories of Spain, painters have seen the beauty of the subject. As for architecture, one authority claims that the first principles of the art are derived from textile fabrics, and it is obvious that the temples and palaces of the classic and mediæval master-builders were generally intended to be hung with tapestry. Pheidias himself, according to Plutarch, directed the tapestry weavers who wove the hangings for the Parthenon.

In all these ways, in things great and small, of use and of delight, in our rest and in our labour, the importance of weaving is matter of course to every

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES

civilised person. Nobody would dispute its influence over the fashion of life, or attempt to live independently of it. What is not so generally realised is the influence of every civilised person over the fashion of weaving, the dependence on public regard of its value and beauty, its existence as an art. Theoretically, the plain fact is not denied. Practically, few educated people, not immediately concerned in the production of textiles, have any knowledge of the technical processes, of the present conditions of the industry, or of the splendid history of which our national manufacture of textiles is the latest chapter. Partly, of course, this is the result of the modern industrial system. The rapid development of the mechanical side of weaving, the consequent erection of huge factories where the work goes on out of sight of the buyer, have severed the long, intimate connection between the loom and common life. The modern loom is not simple, not familiar to sight and use, as in the days when it was as much a part of domestic life as is the sewing-machine. Looms such as those in our illustration from Hogarth's morality of "Industry and Idleness," presented no perplexity even to the least mechanical mind. The successive operations of shedding, picking and battening, the use of the various parts of the loom, were plain to any intelligent onlooker; but the hand-loom and the quiet craft of the weaver belong to the past. The picture from the Clothworkers' Hall, reproduced here, shows a state of things already remote, though not in time. Mechanical production, apart from general life, is, it would seem, an inevitable condition suited to our needs. Accepting this, what is the wise attitude for those who care that weaving as an art shall continue to beautify life?

What vulgarity public indifference will bring on the applied arts was shown once, and surely shown for all, in the Exhibition of 1851. What public enthusiasm and

care for these arts of daily life would produce, we in Great Britain—with our vast supplies, our vast markets—have it in our power to realise in a splendour that would surpass the splendour of those smaller nations which serve as the famous examples and inspiration of the modern world. But to care, sentimentally, that our carpets and our curtains, our chintzes and dress materials should be in good taste will hardly affect the matter. Knowledge is power, and if the public and the manufacturer are to co-operate—as they must if fine weaving is to be maintained—there must be common knowledge of what "good taste" is, and of what is the true development for this age and this people of the great art that has strangely come to be esteemed as one of the lesser arts.

That knowledge is for use to-day, but it is only to be gained from looking at the present in the light of the past. All we produce is either a development of what has been done before our time, or a contradiction of it, or an imitation. If it is a development, it can be understood only through knowledge of what went before; if a contradiction we must know whether it contradicts a true or a false thing, that we may judge whether we are foolish or wise; if an imitation, we must look at the original.

So far, briefly, of the importance of the story of textile art to everybody who cares that the manufacture, which is our pride and a great part of our prosperity, should not suffer degradation. It is a wide subject, and an important one; fortunately, it is also delightful. The truth of the present does not lie in industrial statistics, but in the realisation of splendid activity, and of the world-wide effects of that activity. The truth of the past is not in archæological statements concerning things finished and excelled. Not the dry bones of history, nor the dry facts of statistics, but the splendour

#### SUPPLEMENT TO THE ART JOURNAL.

St. George and the Dragon.
From an old English Tapestry.

with which weaving has covered the earth from east to west, since the beginnings of Empire till our own day, is the true subject of a study in textiles, their history and development.

There was a man who made a hook of all the world, punctual and exact, yet who could not find his way out of the wood by his father's house. His predicament was the result of beginning at the wrong end of universal history. Though each nation has but served her turn at the loom, and woven according to the general tradition; though the story of weaving in Great Britain or in any other country is only a part of the story of the world's weaving, and cannot he told hy itself, yet for each the order and relationship of facts is different and has a different beginning.

In Great Britain the history of textiles begins with the weaving of wool. Even before the Roman occupation and the setting up of the loom, wool was plaited to make cloth. Wool was the material for the first web made in these islands. Later, the use of flax was learnt, and hemp and cotton and silk and the hair of different animals were used by the weavers. But it was with wool that the art was first practised, and after cotton—which, historically, has not the same intimate connection with our national existence—wool is to-day our most important textile fibre. For this reason tapestry-

weaving, which includes the weaving of carpets, ranks first in the history of textile art in this country. Of the three chief kinds-plain weaving. tapestry-weaving, and the weaving of stuffs that receive pattern by printing -the second is most dependent on wool. Silk has been used in carpetmaking and to a greater extent in the weaving of tapestry, and, of course, there is intermixture of flax and hemp and cotton for the warp threads or for the backing of both fabrics. Still these fine developments of the art of weaving are essentially woollen manufactures.

I have said that tapestry-weaving includes the weaving of carpets. . In the present condition of the arts that seems like Jonah swallowing the whale. Tapestry-weaving on a high-warp loom was, as every one knows, revived in this country by William Morris, and specimens of the fine work of his looms at Hammersmith or at Merton are familiar. The attempt to weave tapestry at Windsor, in imitation of the Gobelins manufactory, is not so long extinct as to be quite forgotten; and other instances of the modern practice of a great and ancient art are occasionally exhibited. But this lingering survival or revival of the craft, for which in its high days Mantegna and Leonardo and Raphael made cartoons, is hardly to be considered in the sum of the nation's weaving. Compared with the enormous output of carpets it is, in quantity, nothing. Tapestry can never be a "manufacture," a staple industry, in these days of cheap mechanical production. One fact makes that clear. It is said that fifteen

years will hardly suffice to make a skilful weaver of high-warp tapestry. Such a weaver, it is estimated, in a year of three hundred working days produces rather less than a square yard of tapestry, while a powerloom forty years ago produced from thirty-five to forty yards of carpet in one day. It is not strange that in modern estimation tapestry-weaving is hardly realised to exist, while the exportation of carpets from Great Britain to all parts of the world is common knowledge. Every school-child knows that Glasgow makes Kidderminster carpets, and that Brussels carpets are made at Kidderminster; that Wiltons are made in Yorkshire, and Axminsters at Wilton. If any general knowledge of tapestry-making may be assumed, it is owing to the productions of the historic Gobelius manufactory. Yet, for all that, carpet making is only a subdivision of tapestry-weaving, and tapestry-weaving is an essentially Western art, while carpet-weaving is essentially an art of the Eastern people of tents. Examples of English tapestry woven prior to the foundation of the famous manufactory at Mortlake under the patronage of James I. are rare. Our illustration of one of the earliest specimens of these rare hangings has therefore historic value apart from its value as a fine piece of decoration.

## Kate Greenaway.-I.

BY AUSTIN DOBSON.

In the world of pictorial recollection there are many territories, the denizens of which you may recognise by their characteristics as surely as Ophelia recognises her true love by his cockle hat, staff and shoon. There is the land of grave gestures and courteous inclinations, of dignified leave-takings and decorous greetings; where the ladies (like Richardson's Pamela) wear the most charming round-eared caps and frilled negligées; where the gentlemen have ruffles and hag wigs and spotless silk stockings, and invariably exhibit shapely calves above their silver shoe-buckles; where you may come upon a portly personage with a star in St. James's Park taking an al-fresco pinch of snuff in that leisurely way

in which a pinch of snuff should be taken, so as not to eudanger a claret-coloured coat or a lace cravat; where you may seat yourself on one of the beuches by Rosamond's Pond in company with a tremulous mask who is evi-

mask who is evidently expecting the arrival orch of a "pretty fellow," or happen suddenly, in a secluded corner, upon a damsel in muslin and a dark hat who is hurriedly scribbling a letter, not without manifest signs of agitation. But whatever the people of this country are doing,

they are always elegant and

always graceful, always appropriately grouped against their fitting background of high-ceiled rooms and striped hangings, or among the urns and fishponds of their darkshruhhed gardens. This is the land of Stothard. In the adjoining country there is a larger sense of

In the adjoining country there is a larger sense of colour, a fuller pulse of life. This is the region of delightful dogs and horses, and domestic animals of all sorts; of the most winsome and black-eyed milkmaids, and the most alluring "sand-red cows"; of the most headlong and horn-blowing huntsmen; a land where Madam Blaize foregathers with the impeccable worthy who caused the death of the Mad Dog, and the most bewitching Queen of Hearts with the Great Panjandrum himself; a land, in short, of the most kindly and lighthearted fancies, of the freshest and breeziest and healthiest types—which is the land of Caldecott.

Finally, there is a third country, a child-land inhabited almost exclusively by the sweetest little child-figures

that have ever been invented, in the quaintest and prettiest costumes, always happy, always playful in a decorous manner and nearly always playing, always set in the

orchards, and red-roofed cottages with dormer windows. Everywhere there are green fields, and spring skies, in which a kite is often flying. No children are quite like the dwellers in this land, they are so gentle, so un-

affected in their affectation, so easily pleased, so innocent, so trustful, and so confiding. And this is Greenaway-

It is sixty years since Thomas Stothard died, and only fifteen since Randolph Caldecott closed his too-brief career. And now Kate Greenaway, who loved the art of both, and in her own gentle way possessed some of the qualities of each, has herself passed away. It must rest with other pens to record her personal characteristics and to relate the story of her life, always supposing that the diary, which she is said to have left behind her, should not he permitted to tell its own tale. I who write was privileged to know her a little, and to receive from her frequent presents of her books; but I should shrink from anything approaching a description of the quiet, unpretentious lady, whom it was always a pleasure to meet and to talk with. If I here presume to recall one or two incidents of our intercourse, it is solely because they bear either upon her amiable disposition or her art. I remember that once, during a country walk, she gave me a long account of her childhood,

which I wish I could reproduce in detail. But I know that she told me that she had been brought up in just such a neighbourhood of red roofs and "gray old gardens" as she depicts in her drawings; and that, in some of the houses, it was her particular delight to turn over ancient chests and wardrobes filled with the flowered frocks and capes of the Jane Austen period. Then, again, I call to mind another thing which she told me, either on this or another occasion, which struck me as extremely characteristic of her kind heart. As is well known, she corresponded frequently with Mr. Ruskin, and must have possessed numbers of his letters. In his latter years, it had been her practice to write to him periodically-I believe she said once a week. He had long ceased, probably from ill-health, to answer her letters; but she still continued to write lest he should miss the little hudget of chit-chat to which he had grown accustomed. At another time-I fancy it must have been in a pleasant country house which contained many examples of her art, and where she was putting the last touches to a delicately tinted child-angel in the margin of a Bihle-I ventured to say, "Why do your children always-" But I need not complete the query; the answer alone is important. She looked at me reflectively, and said, "Because I see it so."

Answers not dissimilar have been given before by other artists in like case. But it was this fidelity to her individual vision and personal perception which constituted her strength. There are always stupid well-meaning people in the world, who go about making question of the sonneteer why he does not attempt something epic, or worrying the carver of cherry-stones to try his hand at a Colossus; but although they disturb and discompose, they luckily do no material harm. They did no material harm to Kate Greenaway. She yielded, no doubt, to pressure put upon her to try figures on a larger scale; to illustrate books, which was not her forte, as it only put fetters upon her fancy; but, in the main, she courageously preserved the even tenor of her way, which was to people the artistic domain she administered with the tiny figures which no one else could make more captivating, or clothe more cunningly. It may be doubted whether the collector will set much store by Bret Harte's "Queen of the Pirate Isle," or the "Pied Piper of Hamelin," suitable at first sight as is the latter,

with its child element, to her inventive idiosyncrasy. But he will revel in the dainty series of "Almanacks" (1883 to 1895 and 1897); in the charming "Birthday Book" of 1880, in "Mother Goose," "A Day in a Child's Life," "Little Ann," "Marigold Garden," and the rest, of which

the grace is perennial, though the popularity, for the moment, may have waned.

I have an idea that "Mother Goose; or, The Old Nursery Rhymes, 1881," was one of Miss Greenaway's favourites, although it may have been displaced in her own mind by subsequent successes. Nothing can certainly be more deftly tinted than the design of the "old woman who lived under a hill" and peeled apples; nothing more seductive, in infantile attitude, than the little boy and girl who, with their arms around each other, stand

watching the black cat in the plum tree. Then there is Daffy-down-dilly, who has "come up to town, In a yellow petti-

coat and a green gown," in which habiliments, added to a straw hat tied under her chin, she manages to look exceedingly attractive, as she passes in front of the white house with the pink roof, and the red Rock-a-hye bahy.
Thy cradle is green;
Father's a nobleman,
Mother's a Queen.
And Betty's a lady,
And waars a gold ring;
And Johnuy's a drunner,
And drums for the king! shutters, and the green palings. One of the most beautiful pic-

## The River Wye.

FROM ROSS TO CHEPSTOW.

WITH DRAWINGS BY A. R. QUINTON.

A MONG the many beautiful streams of Britain there is, perhaps, not one of them which has so many and so varied charms as the River Wye. Issuing from the southern slopes of the great Welsh mountain, Plinlimmon, it begins its life as a mountain torrent, but gradually sobers down into a broad placid stream, flowing in a sinuous course of one hundred and thirty odd miles, and receiving many tributary streamlets before it mingles its waters with those of its big sister, the Severn, a few miles below Chepstow. Thickly dotted along its banks are picturesque ruined castles, abbeys, and manor-houseseach with its own story to tell of bygone days; quaint old towns, and at least one stately cathedral, each bearing names which often recur in the pages of history, and still retaining signs of the age when kings, barons, and

The Monnow Bridge, Monmouth.

From a drawing by A. R. Quinton.

commoners, priests and laymen, struggled for supremacy.

Although there is much that is interesting and pleasing in the earlier part of its course, it is at Ross that the romantic scenery of the Wye may be said to commence. Above that town the river flows for many miles through a fairly open valley, bordered indeed with wooded hills, but with a broad expanse of meadow land between their feet and its margin. But on approaching Ross the slopes draw nearer to the brink of the stream, and for twenty miles or more the Wye flows through an almost continuous glen, carved deeply out of a lofty and undulating table-land.

The ancient town of Ross, our starting-place, is chiefly built upon the slope of a hill terminating on a plateau, descending steeply to the river. Upon this plateau stands the church, with its adjoining garden, the Prospect, which commands a lovely view over the valley of the Wye; whence the graceful spire of the church forms a landmark for all the country round. If the town has not figured conspicuously in the history of our country, it will always be associated with the name of John Kyrle, the "Man of Ross," whose good deeds have been immortalised by the poet Pope, and become a household-word throughout England:

"But all our praises why should Lords engross?
Rise, honest Muse! and sing the Man of Ross."

Many of the public institutions of Ross are due to the benevolence, sagacity, and energy of Kyrle, including the public works which carry his name, and the "Prospect." He was buried in the church, against the wall of which a splendid marble monument was erected to his memory by his relative, Lady Dupplin, in 1766.

Among the other objects of interest in Ross, the weather-worn old Market Hall is sure to attract the visitor's attention. It is said to have been erected in the time of Charles II., and stands on the site of an older Booth Hall.

Half-a-mile below the town of Ross the Wye is crossed by a picturesque old stone bridge at Wilton. During the Civil Wars it is said to have been broken down to check the advance of Cromwell's troops, but it still bears a curious piece of antiquity, in the shape of a pillar having on it four sun-dials facing the four cardinal points, and on one side appears the following inscription:—

"Esteem thy precious time, Which pass so swift away; Prepare then for eternity, And do not make delay."

Close by the bridge stand the grey ivy-covered ruins of Wilton Castle, formerly the home of the Grey family, who are believed to have resided there since the reign of Edward I. The ruins are now in the hands of the trustees of Guy's Hospital, and a private residence has been erected on part of the site.

The district traversed by the Wye in the first stage of its seaward journey, from Ross to Monmouth, is an elevated upland, a region of rolling hills shelving down towards winding valleys, whose declivities become abrupt towards the margin of the main river. Near to this the hills are often scarped into cliffs and carved into ridges, but further back we have slopes and undulations, cornfields and scattered woodlands, in marked contrast with the crags and forest-clad glades near the edge of the swift and strong stream. The valley narrows after leaving Ross, but the scenery improves as we come in view

Ross, from Wilton Bridge.

of Goodrich Castle, crowning a wooded steep above the river, and Goodrich Court, also seated on an eminence. The latter is a modern imitation of a mediæval dwelling, and formerly contained the remarkably fine collection of ancient armour which has since found a home in the South Kensington Museum, and is known as the Meyrick Collection. The Castle, which is some distance beyond the Court, was in its day a fortress of formidable strength. There is little doubt that the keep was built about the period 1135-1154, in the time of King Stephen. In the time of the Civil Wars it was held for King Charles I. hy Sir Henry Lingen, but was taken from him by the Parliamentarians, in 1646. They left it in much the same condition of ruin as we see it to-day, a striking object of interest to all who make the voyage of the Wye. In the courtyard of the castle, Wordsworth fell into conversation with the child whose answers suggested one of the most familiar of his shorter poems-'We are Seven.''

At Goodrich the river commences one of its most remarkable bends. From Goodrich Ferry to Huntsholme Ferry is little more than a mile overland, but by the river it is eight miles. The Wye sweeps round in an easterly direction after Kern Bridge is passed, then turns ahruptly and flows for a mile in an opposite course, enclosing in the loop thus formed the house and grounds of Courtfield, where, in a more ancient mansion, "Wild Prince Hal" is reported to have passed the days of early childhood, under the care of the Countess of Salisbury. The pretty village of Welsh Bicknor is also passed, and then we presently come in view of the lofty Coldwell Rocks, where the river, which for a time has pursued a southerly direction, now doubles hack almost upon its former course, and makes the most remarkable curve in the whole of its windings

from Plinlimmon to the sea. It is the far-famed Symonds' Yat, a limestone plateau some 600 feet above the river, which here describes a huge elongated loop, so that after a course of hetween four and five miles it returns again to within less than half-a-mile of its former channel. It is recorded that a person of the name of Symonds once lived in a small cottage on this rock, and at that time the Yat separated the counties of Gloncester and Hereford, and as the passage from one county to the other had to be made at this spot, it became the Yat or Gate, and was known all around as Symonds' Yat. The scenery of the Wye culminates at this spot, and the view from the summit is one not easily to be forgotten.

More extensive prospects may, doubtless, be obtained from other view points, but for a grand combination of rocks and woodlands, winding river and smiling meadows, this spot may well take the palm. After leaving the Yat, the Wye bends round the hase of the Great and the Little Doward, two bold limestone hills on its right bank. On both are remarkable encampments, whilst fossil remains of hyena, elephant, stag, and other animals have been found in a cave known as King Arthur's Cave, on the former hill.

Very lovely is the course of the river as it flows onward through steep and densely wooded slopes and presently brings us in view of a detached cluster of rocks called the "Seven Sisters." This part of the Wye is reported to have a greater depth than any other length in its course. At the end of the reach is the beautiful level height called King Arthur's Plain, which in the distance assumes the appearance of towers belonging to an ancient castle. The high road turns away from the river at the apex of Symonds' Yat, but a footpath follows

the banks on either side as far as Monmouth. Shortly before reaching that town the wilder and more romantic part of the Wye ends, and from thence the valley is more open, the scenery, though still rich and beautiful, less varied, and the river pursues a straighter and less ruffled course.

The situation of the town of Monmouth is remarkably picturesque. Beautiful hills surround it on all sides, but the valley has expanded to allow the Monnow and the Trothy to form a junction with the Wye. A curious old bridge spans the Monnow, bearing on its first pier an ancient gate-house, one of the few survivors of a defensive work once common in England, which, though somewhat altered by being pierced with postern arches for foot passengers, still retains the place for its portcullis and much of its ancient aspect. Formerly the town was surrounded by a wall and moat, and was entered by four gates, of which the Monnow Gate alone remains. Until about fifty years ago many memorials of ancient Monmouth were still in existence, but they have mostly been "improved away." One or two old houses dating back to the early part of the seventeenth century may yet be found, and a pretty oriel window is still pointed out, in a building which was once an ancient priory, as Geoffrey's Study. Geoffrey of Monmouth was once a familiar author in the days when books were few. He is a reputed native of the town, and was, probably, educated in one of its monasteries. But the great event connected with Monmouth and the general history of the country is the birth of Henry V. here, in 1387. His statue stands "for all the world to sec," in front of the Town Hall in Agincourt Square. It represents the King in full armour, and is inscribed, "Henry V., born at Monmouth, August IX., MCCCLXXXVII."

A short distance below Monmouth the Wye again enters a narrow glen, hardly less beautiful, if less romantic, than the gorge which it has traversed on its course from Ross to Monmouth. The hills once more close in upon the river, leaving but seldom even a strip of level meadow between its margin and their slopes. The steeply wooded banks are so wild and so continuous that at times we seem to be passing through an undisturbed remnant of primæval forest. At Redbrook, however, there are signs of human activity. A pretty glen here descends from among the hills to the left bank of the Wye. By the river-side are little quays with barges alongside, and, alas, it must also be added, tall chimneys pouring forth smoke to mar the beauty of a lovely spot.

At Bigswier the river is spanned by an iron bridge, throwu lightly from bank to bank, and is of sufficiently pleasing design to harmonise with the surroundings. From this point the Wye is affected by the tide, but not to any appreciable extent, until a few miles below, in the neighbourhood of Tintern. On a hill overlooking Bigswier stand the church and castle of St. Briavels. The castle was erected soon after the Norman Conquest as one of the border defences; it stands on the edge of the ancient Forest of Dean, and saw much rough work in its early days. The old Keep is in ruins, but the other portions are used as a residence. A curious custom once prevailed at St. Briavels. A tax of two pence per head was levied on the parishioners to be expended in the purchase of bread and cheese for all paupers who attended service on Whit Sundays, for which there was

Seven Sisters Rocks, near Symonds' Yat.

From a drawing by A. R. Quinton.

a yearly scramble. For about three centuries this unseemly scramble took place in the church immediately after the invocation of divine peace on the assembly which usually thronged together on that occasion. The clerk, standing in the front of the gallery, was the appointed chief-agent in the affray, and the divisions of seats and pews hecame means for exercising the grotesque agility of all the old and young; the lame, the blind, and ragged hoys and girls, performing their part in the scene according to their peculiar humour and adroitness.

The next village encountered, on our way down the stream, is Llandogo, which nestles among gardens and orchards, and rises tier-above-tier on the thickly wooded hill which rises steeply from the road beside the river. Near hy is Offa's Chair—a point in the great earthwork known as Offa's Dyke, which once extended from Tidenham, across Herefordshire and Radnorshire, to the Flintshire hills beyond Mold, and perhaps to the coast of North Wales.

As the valley again slightly expands, shelving bands of sward, dotted with houses, announce that we are approaching the precincts of the far-famed Tintern Abbey. First we must pass the long and scattered village of Tintern Parva, whose pretty white cottages and pleasant gardens extend for a mile along the river's bank, which here makes another of its sharp bends. Cunningly indeed did the monks of old choose their dwelling places. There is no spot for many a mile which so completely fulfils the requirements of quiet and seclusion with certain mundane comforts, as that which they have selected. As one gazes at this nohle relic, and the winding Wye stealing past it through the hills, one must accord it the first place among the classic ruins of this island, in so far as regards the heauty of its situation. For comparisons to it in architectural grace, one's thoughts may go on to Fountains Ahbey, to Melrose, or to Glastonbury. But the builders of none of these chose such a charming spot in such a lovely valley. Forests were near at hand to supply them with fuel without stint, and game for their table on days of feasting. The tidal river would bring the barks of merchandise to their very door, and its leaping salmon would alleviate the severity of their fast days. Chepstow, with its castle, guarded them from marauders by the sea, and they were far enough within the line of border fortresses to fear no ill from incursions from the mountains of Wales.

The plan of the foundation of the Abbey is cruciform, and what remains of the grey skeleton of the edifice affords a fine example of early twelfth-century work. It was founded in the year 1131 hy one Walter de Clare " for the good of his soul, and the souls of his kinsmen," and was confined to the use of monks of the Cistercian order. Two inscribed tombs in the cloisters give the names of two of the abbots, but, apart from such fragmentary scraps of information, the history of Tintern may be said to have perished with the Abbey. The tracery of the west front window is exquisite in design, and still remains in very fair preservation. The scene, on entering the interior, is most impressive. Vaulted roof and central tower are gone, but the arches which supported the latter are intact. The columns on the northern side of the nave have fallen with the clerestory above, but the remainder of the building has suffered comparatively little damage. The glass, of course, has long since perished with the windows, even the mullions and tracery are gone; ivy, ferns, and herbage, form a coping for the wall; the greensward has replaced the

pavement of stone or tiles; but still it is hardly possible to imagine a more imposing and lovely scene than these ruins.

Between Tintern and Chepstow the scenery of the Wye assumes an entirely fresh character. A grey lime. stone wall, fringed with trees, and darkened here and there with ivy and other creepers, rises above the wooded slopes. As we approach the Wyndcliff, the grassy bed of the river opens out into a sort of amphitheatre, and we can trace the huge horse-shoe curve swept out upon its floors by the stream, between the base of the Wyndcliff which it washes, and the mural escarpment of Bannagor and Tidenham Crags, which form the opposite boundary of this great river-trench. It is a steep climh to the top of the Wyndcliff, but the glorious prospect obtained from the summit well repays the effort. Below is the beautiful horse-shoe fold of the Wye, bounded by richly-wooded slopes that sweep from the right with a curve in the form of a sickle. Where the curve ends there stands an imposing wall of rock with a reddish base, its brow of dazzling white lined with green woodland, while far away towards the coast the point where the river enters the Severn estuary, which is here broadening out on its way towards the distant sea, is faintly visible. The beautiful grounds of Piercefield lie between the Wyndcliff and Chepstow. Art has here assisted Nature, in this domain, by carrying paths through a belt of woodland, with outlooks cunningly contrived to command the hest views. These grounds are thrown open to the public on certain days.

The town of Chepstow occupies the right hank of the Wye, and is built upon a slope, which descends in places rather abruptly from the general level of the surrounding country to the river's brink. Formerly it was enclosed by walls, like Monmouth, considerable portions of which are here and there preserved, especially in the neighbourhood of the Castle. One of the gates still remains in High Street. It is called the Town Gate, and was for a long time used as a prison. Chepstow Castle is approached by a gentle acclivity clothed with green sward. Besides the memories of sieges, batteries, and reprisals, which all old castles awaken, there is here, as is not uncommonly the case, a particular story of human interest attaching. The story centres in that part of the structure known as Henry Marten's Tower. Henry Marten was a commoner of Oxford, who, after taking his degree in 1618, entered the Inns of Court, and married a lady of fortune; from whom, however, he was subsequently separated. Eventually he became one of the judges of the tribunal who condemned Charles I., and after the Restoration he surrendered in response to a proclamation, and was tried at the Old Bailey. He admitted attending the trial and signing the warrant for the execution, hut pleaded no malice, and urged the necessity of obedience to the then existing government. He was found guilty, but he petitioned for pardon, which was granted upon conditions. These included the forfeiture of his estates, one of which was the Manor of Leominster, which had formerly belonged to the Queen of Charles I., but had come into his possession during the Protectorate. He was also to remain a prisoner for life in the Castle of Chepstow. Never was a convict consigned to a more desirable place of captivity. In Marten's Tower the ex-judge lived, with gradually extended liberty, for about a quarter of a century, until released by death. His remains now rest in Chepstow

The Ministrants. (A lithograph.)

By C. H. Shannon,

# The Drawings of Mr. C. H. Shannon.

TO the alert student of art, no London exhibition of the past season was more provocative of thought,

more pleasure-giving, than that at the Dutch Gallery which comprised seventy-three drawings, pastels, lithographs, and woodcuts hy Mr. Charles H. Shannon. Hung in numbers not too great, in a quiet little gallery, they gave the visitor a welcome sense of pause. Here instead of the clamant was the finely modulated voice; the insignificant commonplace did not intrude; the popularly assertive incident was absent; for the transient vogue and enthusiasm there was no place. A fineness of feeling, partly instinctive, but clarified and made the worthier hy study and dream, bound each exhibit to other. This series of drawings calls for notice, then, as an eloquent protest against the haste and turmoil, the heedlessness of all save exhibition standards, the thirst for notoriety, that stamp many so-called art products of to day. Ruskin has said that great art is produced only hy men who feel acutely, nobly; and to give expression to the best of which he is capable, a man must, at times, seek inspiration in those visions lacking which his industry can be of little avail. Without this power of detachment from actuality there can he no resthetic progress.

The importance of the Shannon Exhibition, however, rested in part only on its value as a protest, for this is merely by the way. The first thought suggested in the quiet of the exhibition was that in Mr. Shannon we have an absorbed student. Again and again he has been charged with following too closely the footsteps of

Sea and Breeze. (A lithograph.)
By C, H, Shannon.

Mr. Watts or of earlier artists; and some of his pictures are open to a measure of criticism from this standpoint. Yet to affirm that Mr. Shannon is a mere imitator would he hopelessly wide of the truth. If it be a mistake heedfully to consider pictorial achievements of Italian and British masters; to become conversant with their outlook, their methods; to apprehend and re-mould to personal issues certain of their qualities-if this he a mistake, then Mr. Shannon must be charged with it. But, surely, if an artist have anything of worth to reveal, he will he the more and not the less fitted intimately to shape that revelation hy earnest and prolonged study of that which appeals to him in works of great predecessors. By individuality we do not, or at any rate should not, mean that the natural course of development, hy way of childhood and youth to time of maturity, is foresworn. Respect is due to the man who instead of seeking at all hazards and in early days to he "individual," is content to allow his powers gradually to attain, in part under the influence of existent works, a truer, more complete development.

In the second place Mr. Shannon is a stylist. Few words are less scrupulously used than the word style. Perhaps Buffon was not far wrong when he said that style is the man. The definition is at all events suggestive, and may well he considered in connection with the art of Mr. Shannon. On occasions absorption in method as the end instead of as the means is a hlemish in his work; hut at his hest, what in the widest sense may he called his style impregnates all delightful qualities of his art. Style is far other than mere manner, which may issue from a given set of non-intellectual habits; even less is it facility of hand. In the sense used hy Buffon, style has its source in the mind, the soul. It gives expression to the attitude of the artist towards his environment. It reveals his artistic pre-

Portrait of Professor Alphonse Legros. (A lithograph.)

By C. H. Shannon.

ferences, and hence the quality of his mind; it is the personality in vibration.

If my two predicates he conceded—that Mr. Shannon is a student and a stylist-we are well on the way to appreciate what is hest in his drawings and pictures. It may next he noted, and this partakes at once of weakness and of strength, that his art is seldom closely related to the actual. Life, with its events and passions, seems to unroll itself to him somewhat as a dream, a vision of a far-off country, of the intense experiences of whose men and women we can know little. For this reason we cannot imagine him giving us a Pietà where a mother's love and anguish are rendered as in the drawing hy Michael Angelo at the British Museum. In the works of few living artists is more of thought, more of emotion of a certain kind, to he found, and these two elements essential to good art are intimately knit. We point out a limitation, not a defect, when we say that Mr. Shannon is not pre-eminently an interpreter of Pity, Solicitude, Love, Hate, Sorrow. Till now, perhaps wisely, he has heen content to exercise his gifts on the re-fashioning of forms and colours to a heauty discovered hy himself. Of him in truth it may he said that while Nature furnishes the words, he creates the rhythm. In any of the five examples we reproduce is there a figure or a line, much less a whole composition, that has not heen deflected by the artist's personality? Almost he is too scrupulous in this respect. Not once, hut many times, it is to he assumed, does he ponder each fact until absorption and regeneration are complete. He communicates to us none of those lightning flashes, none of that impetuosity, which grip the imagination in some of Leonardo's drawings, for instance. Having made a pictorial discovery, the starting point of every work of art, it comes to us with something of spontaneity lacking, hy reason of the original impulse not forthwith

having heen expressed, even though tentatively. The practical ahandonment of the rapidly made sketch has its advantages, of course; hut while the image as a whole is hy some hest perfected in the mind, something of its essence is prohably lost in the process.

During recent years there has been an outcry against the literary picture. Mr. Shannon avoids it, not at the dictates of a transitory vogue, hut hy instinct. He agrees with Taine, we may he sure, who rightly held that the primary purpose of a picture is not to tell the truth, hut to gratify the æsthetic sense-a dictum in apparent conflict only with that of Keats, "Beauty is truth, truth heauty." Suhordinating literary to pictorial requirements, some artists can still convey a narrative; the genius can interpret hy way of form and colour an otherwise all hut incommunicable idea; hut in neither of these directions does Mr. Shannon primarily essay to work. This again is a matter of temperament, of inclination, which proves at the least that Mr. Shannon elects not to depend on adventitious aids. In Mr. Stopford Brooke's phrase, there is matter of thought, matter of love, in his pictures; hut so suhtly are these wrought into the texture of his work, so heedful is he that what of exaltation there is shall he of a purely pictorial kind, that careful study only reveals the true significance.

To the Portrait Painters' Exhibition at the New Gallery in the autumn of 1900, Mr. Shannon contrihuted a portrait of Mrs. Mildmay and her little daughter, which alone would serve to mark him out as one of the most sensitive and distinguished of living artists. It is circular in form, and the difficult space is eminently well filled with contours at once simple and rhythmical. The quiet colour-scheme, the way in which the colours are laid on, these give pleasure. Among the pastels, drawings, lithographs, and woodcuts at the Dutch Gallery were several of no less distinction-and again it may be said that distinction rather than robust strength constitutes Mr. Shaunon's chief claim to admiration. For 'The Ministrants,' a lithograph which we reproduce, there were many studies. The finished work is a

characteristic one. Not only has each of the figures been dwelt upon in thought, been stripped of what, in the artist's opiniou, would be a too assertive personality, but each has been seen as part of a hauntingly beautiful compo-Observe sition. how the rectangular lines of the chamber are varied by the flowing contours of the figures; observe how imaginatively just is the correspondence between some of these figures and the circular vessels they bear, or in one of which a little Cupid is seated to the left; observe how gracious is the attitude of the seated girl, how exquisite are the folds of her drapery on the floor. Music. sunlight, the flutter of wings: these are suggested, elusively

yet pregnantly, in this lyrically conceived work. It is to be noted that Mr. Shannon is in one sense a realist; his nudes are not those of a Bouguereau, but of actual existence. Two of the most delightful exhibits, here reproduced, are concerned with the sea. 'The Shell-Gatherers,' a pastel, seriously as it loses by translation into black and white, is an illustration of how admirably Mr. Shannon can fill a given space; it is a triumph of composition. There is balance, variety, apt repetition, rhythm of ensemble. In the original the imaginative appeal of these flashing waters, of the lithe figures, expressed in quiet yet joyous harmony of colour, is irresistible. Here is a place of rest and of delight, a thing of pure art. The lithograph, 'Sea and Breeze,' reproduced on p. 43, yields hardly less of pleasure. It would be difficult to recall in work from any modern hand a more happily conceived group than that of the woman whose arms clasp the little child; the poetical quality-and despite what an eminent critic has lately said, how else than by the word poetical can we express certain elusive characteristics in a drawing such as this?—is present, unforced. Not the poise of the figures only, but the foreground composition, the lilt of the stretch of waters behind, the way in which these human beings are imaginatively detached and pictorially re-knit to their

environmentsurely this is poetry in picture. Mr. Shannon's study of a head, see p. 46, is conceived and executed in something of the spirit of the old masters. It is a generalisation of beauty, the depicture of a type rather than of an individual; and little that is essential has escaped through the fine-meshed web of Mr. Shannon's æsthetic apprehension.

From the little gallery of por-traits, including those of Mr. Sturge Moore and Mr. Van Wisselingh, we repro-duce 'Professor Alphonse Legros,' a lithograph. Apart from treatment it is interesting as the portrait of a distinguished artist whose work has had a profound influence on several of our younger men,

undoubtedly, on Mr. Shannon. Of the portrait hardly more need be said than that it interprets a personality, aud this with true economy of line, of concentration just where concentration is demanded. The eye naturally travels to the face, yet the hands, the folds of the coat, the modelled sketch to the left, play their required parts. The exhibition at the Dutch Gallery included, too, some beautiful woodcuts, whose circular spaces were filled with rhythmic designs of country life and the like, not the least well balanced and lovely of them concerned with diving 'Coral Snatchers.'

One of the thousand provinces of genius is to reveal that which is ordinarily overlooked, "to put sight upon us." This may be achieved in many ways. To interpret

The Shell-Gatherers. (A pastel.) By C. II. Shannon.

Study for ' The Bath of Venus.' By C. H. Shannon,

the very essence of the actual, by stripping off superfluous detail-that is one way. To assimilate existing forms and colours, to shape them anew in the crucible of the imagination to yet nobler issues-that is another and perhaps a more compelling way. The method of Mr. Shannon is of the second kind. Something of fire, of impetuous ardour, of vital movement,

his art lacks, perhaps; but it is always on a high plane. In a letter dated 1863, to Theodore Pelloquet, one of the few authors whothen dared to champion bim, Millet made a profoundly interesting statement :-- "It is not so much the nature of the subjects represented, as the longing of the artist to represent them, which produces the beautiful, and this longing in itself creates the degree of power with which his task is accomplished." If the last part of this statement accord with fact, and I am inclined to think it is a fragment only of a larger trutb, we have in it an explanation of many of Mr. Shannon's fine achievements.

I bave said that Mr. Shannon pays little or no heed to exhibition standardshe does not set out to create a sensation at this or that show of pictures. But almost in proportion as he exercises this wise if uncommon restraint, as he refuses to be assertive for the mere sake of assertion, do we come to follow with keen interest his career. If he be absent from the New English Art Club we are conscious of a gap which no other artist can fill; if he be represented at the International or the Portrait Painters, his are among the works most potent to attract, now by reason of fine design, now of barmony if not actual splendour of colour. Despite all that is said to the contrary, the time has not yet

come-will never come, so long as beauty holds sway over thought and emotion-when a man of talent like Mr. Sbannon has to be untrue to his ideals ere he gain recognition. We look with every confidence for work from him of yet more intimate beauty, of feeling more intense.

## 'Linlithgow Palace.'

AN ORIGINAL ETCHING BY MR. AXEL H. HAIG.

From a drawing

HE Falace of Linlitbgow was the birthplace of Mary Queen of Scots. When this single point in its history has been named, the building, even were it less picturesque or less beautifully situated than it is, takes high rank amongst the very numerous palaces and castles at home and abroad over which the halo of romance has been shed through their association with the story of Mary Stuart. And when, by Miss Constance Foxley. beautiful in ruin, it

presents the delightful aspect bere presented by the accomplished needle of Mr. Axel H. Haig, the eye leaps with gratification, as the memory does with emotion, to know that so bright a jewel in Scotland's diadem of royalty here had such a fair casket. Of its history before and after its association with Mary something must of course be said, and when this has been told, it will be seen that this remarkable structure-now known officially by H.M. Board of Works as "Linlitbgow Peel" -has a full share in the more stirring centuries of Scottish history.

There is a singular characteristic in relation to that history, that so much of it is associated with buildings now in ruin; and perhaps it may be added without offence that many of those historic buildings-palace, abbey and castle-owe their destruction to our auld enemy of England. Abating what the rascal multitude may have done in Reformation times-"I have been looking at his reformations," said Johnson in St. Andrew's !- it has nearly always been possible for the

Scots to declare that an enemy hath done this. But in the case of Linlithgow Palace, its present ruinous condition has no romance attached to it. It was not done during the rough wooing of Henry VIII., or hy internal zeal for reform, or by that ahandonment for more commodious dwellings which has left so many ancient "peels" in Scotland roofless to the elements. It was nothing more dignified than the wanton conduct of a party of Hawley's dragoons, as recently as January, 1746, that delivered up Linlithgow Palace to destruction. Yet even here the romance of the Stuarts shows itself, for these dragoons were part of the royal army sent to quench the fire of the young Chevalier, and, unrestrained by a regard for what was now the property of the reigning house, they here kindled a fire which left its permanent mark on this splendid pile. Viewing the ruin, it is almost impossible for the most loyal of Scots to refrain from wishing that Prince Charlie had had hetter luck!

That Linlithgow Palace was a magnificent structure hoth the records and the remains testify. Leaving out of view the traces still to he found of the handiwork of Edward I .- the "hammer of the Scots"-and of the uative kings, from David II. downwards, the picturesque and romantic story of the palace is practically circumscribed between the years 1424 and 1542. In the former year the palace was greatly damaged by fire, and James I., who had hrought his English Queeu home, then hegan to rehuild, and in the last-named year occurred that event which still keeps Linlithgow most strongly in popular affection, the birth there of Mary Queen of Scots. James V. was also horn in Linlithgow Palace, and as his death occurred in Falkland Palace a few days after Mary's hirth, we have here another association of that peculiar kind to which reference has heen made, for Falkland Palace, although partly restored, for a time stood in apparently hopeless ruin. The portion of the palace most valued in popular esteem is the west side, in which Mary's hirth room is situated. Much of the existing palace was erected by James I., James II., and James III., and one of the most notable additions is the lofty hower crowning the north-western angle, and conspicuous in every view of this grand ruin. Here Queen Margaret, according to a tradition which has almost the dignity of history, "all lonely sat and wept the weary hour," watching for the return of her husband, James IV. -never to be witnessed-from the sad enterprise which ended on Flodden Field. Pity the king had not heeded the (traditional) warning of the blue-gowned figure who interrupted his devotions in the adjoining church!

The palace was probably at its best when James V. brought to it his French Queen, Mary of Guise. Her words are preserved, that she had nowhere seen a more princely palace, and some words from Sir David Lyndsay preserve the opinion of that famous poet and Lyon King-of-Arms, on taking his leave of Linlithgow, that its

"palyce of plesance
Micht be ane pattern in Portugall or France."

From the general absence of windows on the outer walls, the building has, from east or west, rather a dull aspect, although from whatever point it is viewed it is picturesque. Our view shows the east front, with what was originally the principal entrance. The wide opening seen was connected by drawbridge with some outer works, of which heavy remnants still exist. An avenue of trees, of which traces can he followed, led to this entrance. The surrounding loch adds an ever-present beauty to every view of the palace. Iu the early part of the seventeenth century the north side was largely rehuilt hy James VI., and on this side the more modern desire for outer windows was gratified. But as it was this part of the house that the dragoons set on fire, the whole side of the quadrangle stands an empty carcase-roof, floor and window heing alike destroyed. In the centre line of the gaunt ruin stands the stout wall in which were the fire-places for all the many rooms looking outward and inward. This front is partly concealed by trees in Mr. Haig's etching. The interior face of this side of the quadrangle has, of necessity, a more modern look than the others; the whole detail bearing the impress of the architect of George Heriot's Hospital in Edinburgh. The king here indicated his dual sovereignty hy showing his royal cypher as J.R.1, or J.R.6, according as the ornament ahove is a thistle or a rose. The architectural interest. so far as detail goes, centres in the interior of the quadrangle, and of this an exterior view can give no suggestion. Perhaps the most singular feature is the low and very wide ohlong window on the west front, in Queen Mary's room, which seems to hear upon a row of very slight mullions an immense superincumhent weight. Ohviously these stones could not, either from their position or character, hear the weight, and the secret is that the opening is a flat arch, the voussoirs and keystone heing distinct, although flat on the underside. This clever work is always examined with interest hy architects. Indeed, the whole pile ahounds in varied and characteristic detail worthy of study.

After its destruction by fire in 1746, the palace remained for many years simply as an open quarry, and an extant drawing of 1770 presents much the same general aspect as now. There are stone roofs on the four "turnpike" stairs in the corners of the quadrangle, hut all else stands open to the elements. In recent years a small sum has been voted to stay the hand of "human or elemental violence," and perhaps the ruin is as well preserved as it can he on the meagre funds supplied. Linlithgow Palace is an "ancient monument" of the highest value, and yearly attracts many visitors hecause of its inherent interest. Should any attempt be made to restore it? This question came up very prominently on the death of Queeu Victoria, when Lord Rosebery proposed that a restoration of the palace as a royal residence might be a suitable Scottish National Memorial to our late heloved Sovereign. But the suggestion received little encouragement. Scotsmen are so much accustomed to read their history in ruins, they seem unwilling that the hand of even a loving restorer should he laid on such a relic as Linlithgow Palace. Better that it should stand, roofless and forlorn, as a memorial of Mary Stuart than hecome an adequate residence for the descendants of another Queen, even although that Queen should be Victoria!

## A Newly-discovered Drawing by William Woollett.

I Toccasionally happens that lovers of Art and collectors of the works of well-known masters, are delighted with the news of the existence of a hitherto unknown, and consequently unrecorded example of the skill of a particular artist: it is therefore with pleasure that we are enabled to refer to a recently discovered original chalk drawing hy William Woollett, the celebrated engraver, which has for more than one hundred years heen hidden from public observation and knowledge in a country house hut a few miles from Maidstone, the town of Woollett's hirth and residence during the early years of his life.

The accompanying illustration will enable those collectors who are acquainted with his portraits to recognise it as a presentment of the artist himself, prohahly when he was a lad of ahout fifteen or sixteen years of age, and the fact is emphasized by the following inscription written on the hack of the frame : - " This Portrait of himself was drawn hy him when at Maidstone and given to his Friends, and hy them presented to W. Baldwin, 1796."

Woollett's signature in the hottom right - hand corner is in printed characters, which correspond exactly with a printed inscription on the title-page of a hook of fourteen pen-and-ink drawings of hirds and quadrupeds, executed hy him when he was only twelve years old. This

hook is in the Maidstone Museum, and evidences of the skill of the future engraver are apparent.

The drawing is executed in black chalk on slightly tinted paper, and is worked up to the edge of the paper, the extreme measurement of which is eleven inches and three-eighths, and which was hut roughly trimmed when taken off the drawing hoard, so that three of the pin-holes remain. The texture of the paper is very similar to the well-known paper used for chalk drawings at the present time, and a portion of the water-mark is easily seen to the left of the portrait.

The character of the work shows great exactness and precision of touch, combined with good judgment as to the necessary strength of each stroke of the crayon, and

a knowledge of the value of heavy darks to give corresponding value to the adjacent lights and half-tones. There is also a noticeable absence of "outline," which is somewhat remarkable in the work of one who was little more than a child, and who probably at that period had received hut little instruction in the art of drawing. The one really weak point in the drawing is in the hands, which do not look like the hands of a young person, hut of a much older individual, and it is not unlikely that Woollett solicited some friend, perhaps his father, who was a thread-twister by trade, to let him draw from his hands justead of his own.

This unique work has remained in the possession of the Baldwin family since the year named in the above inscription until a quite recent date, when, at the dispersal of the contents of the mansion at Stede Hill, Harrietsham, Kent, hy public auction, it was purchased hy the trustees of the Bentlif Art Gallery, Maidstone, and so has now, after a lapse of more than a century, returned to the town in which it was produced, and where it will henceforth remain as a public evidence of Woollett's skill and talent as a draughtsman even in the days of his hovhood.

Whilst writing on the subject of Woollett we take the opportunity to direct public attention to the present condition of his grave-stone in old Saint Pancras Church-

Portrait of himself.

By William Woollett.

yard. When, a few years since, the grave-yard was levelled and transformed into a public recreation ground, the stone was removed from the grave and affixed to the south wall of the church tower; but it is in great need of repair, for the stone itself is very weather-stained and shahhy, and many of the letters, which are simply incised, are almost illegible.

The stone was restored many years ago (1846) hy the Graphic Society, hut there is now a favourable occasion for another society, *i.e.* the Royal Society of Painter Etchers, to come forward and either restore once mee the original stone, or, better still, replace it with a new one which shall more worthily perpetuate the name of the father of English Landscape Engravers.

A Pageant of Childheod From the Detwe on the Walter St. Fallery Loverfood

No. 1.—The Crown and Lion of Bavaria. From "Münchener Kalender," 1888.

By Otto Hupp.

## An Heraldic Artist of To-day.

M ODERN Decorative Heraldry may be said almost not to exist—and for the reason that it is modern. This is not the paradox it may at first appear to he. Heraldry was essentially an art of the Middle Ages; and, in so far as it is modern, it hardly comes under the category of Heraldry.

The Herald indeed survives, and will live on, presumably, as long as his emoluments hold out; but his occupation (other than that of amiable antiquary learned in a particular hranch of mediæval lore) is gone. The Heralds' College still enjoys the privileges conferred upon it in the fifteenth century; it is still housed in the huilding Wren designed for it after the Great Fire; it has its Earl Marshal, its Kings-at-Arms, its Heralds, its Pursuivants, and the rest-unimpeachable authorities upon the subject of ancient armorial hearings, hut powerless, it would seem, to control the design of a new escutcheon-witness the hearings of our Colonies and Dependencies. It is not difficult to understand the fond desire of new men in a new country to introduce into their apocryphal shields natural animals in all their picturesque surroundings; hut how anyone not absolutely out of sympathy with the very idea of beraldry, to say nothing of heraldic design, could countenance the anachronistic achievements which pass current on the outskirts of the British Empire, is heyond all comprehension.

Made in Germany is the reverse of a recommendation in the British market. Rightly or wrongly, we pride ourselves upon our British make; and it is the national impulse to stand together. But there is something of the market, too, in our prejudice against what is foreign, some possible soreness at having in the past heen worsted in competition, or a shrewd fear of competition to come. We do not show full confidence in the

Nore.—The illustrations to this article are reproduced, by permission, from the "Münchener Kalender," published at Munich—Verlagsanshalt vorm. А. J. Manz. Висh и. Kunstdruckerei Act. Ges., München.

superiority of home manufacture hy decrying whatever comes from ahroad. Trade interests apart, it must in fairness he allowed that there are some things they do know how to make in Germany. Germany has given us, for example, music and poetry of the best, and in art a Dürer and a Holhein, not to mention a whole group of Little Masters. But the art in which it is

No. 2.—A Sign of the Zodiac. From "Münchener Kalender," 1891, By Otto Hupp.

No. 3.—A Sign of the Zodiac. From "Münchener Kalender," 1891. By Otto Hupp.

unrivalled is heraldry. Sixteenth · century German armorial work has never heen surpassed; and, what is more, the Germans never lost their fine traditions of design. Heraldry is with us a province of art long since forsaken by the artist. Pedantry having usurped authority over it, he fought shy of the cage prepared for his fancy, and went where he was free. Only here and there a designer who happens to know enough of pseudo. science to hold his own against the pedant dares, to this day, to give play in heraldry to his creative impulse; for the rest the fear of breaking some vague but inexorable law, or of the penalties thereby to he incurred, paralyzes his powers of design. The Germans seem in this matter to have preserved an independence of spirit which Britons have addicated; with them heraldry was consequently not degraded to the contemptible position it has fallen into with us. You have only to go to a town like Nuremberg and make a pilgrimage to the two great cemeteries where Alhrecht Dürer and Peter Fischer lie huried, to see that the traditions of their day, a red-letter day in the calendar of art, never died out. Heraldry, of course, followed the fortunes of contemporary art; it grew as years went on more florid; eventually it declined; hut it never got out of touch with the artistic spirit of the times, and it is alive in Germany. Whether we should say it lives hecause it was not enslaved, or that it was never enslaved, hecause it was alive and vigorous, matters not. What imports is that there at least the art of heraldry survives and thrives. Modern German decorative artists of any note have proved themselves proficient in heraldic design-Rudolf Seitz, Franz Stuck, Joseph Sattler, and others have all shown themselves at home in it; hut there is one artist of our day who has elected to stand hy heraldry, and is still doing work in that sort which is not unworthy of the national tradition. That the hest of heraldry is still "made in Germany," we owe in great measure to Otto Hupp, of Munich.

It is seventeen years now since he published his first "Münchener Kalender"; and from 1886 onwards he has

annually, as it were, "left his card upon us," as though to show that in Bavaria at least Heraldry is still flourishing. An artist of his ability has naturally not confined himself to work upon the scale of an almanack. Even in England we see from time to time (or those of

No. 4.—Arms of Pope Leo XIII. and of the Bavarian Bishops. From "Münchener Kalender," 1894. By Otto Hupp.

us at least who are awake to what is going on ahroad) that he has done work of ampler dimensions, that he has painted, for example, the walls of a restaurant, and so forth; hut his calendars are enough to show us the man and his art; and hy the friendly permission of the publishers we are able to reproduce pages from them sufficient to illustrate a phase of art characteristically German indeed, but from which, as it seems to the not too jealously patriotic mind, English designers have something to learn.

The younger German men are just now going rather mad over "The New Art," derived more or less from us: we might do worse than return the compliment by taking

the nineteenth century did not lapse entirely into the hands of die-sinkers and coach-painters.

It is impossible to glance through the pages of Otto Hupp's calendars without heing struck with the freedom of the artist. His art sits lightly on him. He is so evidently master of his subject that he can play with it, and fearlessly give loose to his imagination. If at times

No. 5.—A Sign of the Andiac. From "Münchener Kalender," 1888. By Otto Hupp.

a lesson from the vigorous mediævalism of the Fatherland. The latter half of the nineteenth century saw a revival in this country (who shall say how real?) of the Gothic spirit which Italian influence had seemed to quench; in Germany it never quite went out; something of it lived through the Renaissance, revealing itself now and again in a florid form of foliated ornament, but nowhere so unmistakahly as in heraldry, which even in

No. 6.—Arms of Salm-Reifferscheidt. From "Münchener Kalender," 1899.

By Otto Hupp.

his art is more "rohustious" than commends itself to English taste, that is rather a matter of national, or it may he personal, feeling than of artistic propriety. Heraldry is not, when all is said, precisely a modest art—the husiness of its designer is to hlazon forth the pride of ancestry, even defiantly; and here is an artist who does it with the assertive emphasis hefitting the proud office of Herald.

No. 7.—Arms of The House of Zollern. From "Münchener Kalender;" 1895, By Otto Hupp.

The natural thing to do in designing a calendar is to make use of the signs of the Zodiac, and for an artist expert in heraldic design it is equally natural to render them heraldically. That is what Otto Hupp began hy doing, treating the signs, however, more or less in his own way-Aquarius, for example, as a fish-tailed watergod, and Virgo as in the act of crowning the unicorn. Some of the signs reappear in other form in the crest of the helmet-Virgo (No. 3) as a mediæval maiden, whose striped skirts flow out into ingeniously devised mantling; hut, where possible, a wider range is given to symbolism: the crest for January consists of the crowns of the Three Kings (apropos of the Epiphany) irradiated hy the Star in the East; for Fehruary, of a riotous jesterhoy (No. 2) in allusion to St. Valentine; for September, of a hare, rampant; for November, of the horns of a stag, framing the Rood as seen hy St. Hubert, whose day occurs in that month.

In the third issue, 1888, a holder treatment was adopted (No. 5)—the devices occupying no longer the half hut the whole length of a long page. Some of the crests are different: for January, the negro king with his offering; for February, an owl with the cap and hells of a jester; for May, twin fleurs-de-lys; for June, a fish, not one of those which came out of the sea to listen to the preaching of St. Anthony of Padua, hut the one which hrought up in its mouth the key of the Minster at Meissen, which St. Benno threw into the Elbe when Henry IV. presumed to depose Pope Gregory VII.; for August, a demi-unicorn; for Septemher, a hound—referring presumably to St. Eustace, dog-days then heing over.

The year after that the smaller series of designs recur; and from that time until 1894 one or other of the two is used; hut there is in each successive calendar something new. One year it is a calendar of the chase,

No. 8.— Arms of Carolath-Beuthen. From "Münckener Kalender," 1899. By Otto Hupp.

with a border of quaint birds and beasts, and the genealogical tree of the House of Bavaria; another, it is the arms of the German States, or of the Bavarian bishops and the one Bavarian Pope (No. 4); or it may be a mediæval view of the Bavarian capital, with arms and emblems, or even the trade-marks of the great German breweries—which, by the way, it would be interesting to compare with the originals; we may be sure they have not the *style* which Otto Hupp has imparted to them.

With the year 1895 begins a new series of calendars—the signs of the Zodiac occur no more, and in their place we have for each month the arms of a reigning prince—Zollern, Guelph, Waldeck, and so forth. The shields are shown smaller than an Englishman would have drawn them, and the supporters (where they occur at all) still smaller in scale, leaving as much as three-

No. 9.—Cover design of "Münchener Kalender," 1899. By Otto Hupp.

No. 10.—The Genealogical Tree of the Kings of Würtemberg. From "Münchener Kalender," 1900. By Otto Hupp.

quarters of the page to be occupied by helmet, mantling, and crest-which last is often the preponderating feature of the design, and is most skilfully managed. The alertness of the artist's fancy is shown by such happy thoughts as the introducing into the background of the arms of the House of Zollern (No. 7) the Imperial crown in the shape of a flaming cross or cruciform star, prophetic, as it were, of the fortunes of the dynasty. Otto Hupp's treatment of mantling is also at times as fanciful in idea as it is vigorous in drawing; and his variations upon familiar types are not arbitrary, but directly evolved from something in the arms or crest belonging—as where the stripes of the Oldenburg shield or the cape of the Wettiner crest are echoed in ribbons of mantling, or where the mane of the lion's head, which is the crest of the Schwarzburgs, itself mantles the shield. See, too, how some years later the asses' ears of the Salm-Reifferscheidt crest (No. 6) are reflected in the mantling. It is strange how thoroughly the artist is saturated with mediæval influence, and yet how individual he is.

The series of princely shields, including those of Bismarck, Hohenlohe, Nassau, and Leiningen, is continued in 1896. The first two of these with masterly simple mantling, the others on a smaller scale with clever but rather gross horders of vegetable growth and insects, the name of the house often cunningly introduced on a label, not at the base of the shield, but so as to occupy the ground behind the crest.

From 1897 onwards, the calendar hegins with the arms of the German States—Prussia, Bavaria, Saxony, Wurtemberg, Baden, and Hesse, in succession, as frontispiece, followed at first by the shields of German Princes, and, when they are all told, of German Counts, the designs including, in the names hoth of the months and of the families, some very strong lettering, Roman or Gothic as may happen.

In the calendar for 1900 the lettering forms a happy break in the quasi Scandinavian horder at the top of one page and at the bottom of its opposite. There

is some falling off in the designs for 1901, not redeemed in this year's calendar, the pages of which are rather bald and empty. This may he due in part to the shields of the families represented; but the mantling at least was within the jurisdiction of the artist, and he seems to have skimped it, if not to have scamped it. In his smaller lettering, too, Otto Hupp shows a carelessness not to he observed in earlier work from his hand; it looks more like the rough draught of the way in which inscription is to come than accomplished penmanship. It is the work of a master still, but of a master performing his task rather perfunctorily. Perhaps he is getting tired of calendar work

—in which case it is to be hoped he will have the strength to desist from it. He has made for himself among lovers of heraldic design a reputation which it would be a sin to tarnish.

LEWIS F. DAY.

#### Reviews.

"BOOKBINDING AND THE CARE OF BOOKS," hy Douglas Cockerell (John Hogg, London), the first of a series of handhooks on the artistic crafts, sets forth most carefully and in minutest detail the whole process of "extra" hinding, from the folding of the sheets (or the pulling to pieces of the old hook) to the tooling of the new leather binding, and the final addition, perhaps, of ties and clasps to it. This is a book expressly addressed to those who want guidance in practical work; and it seems to give about all that a hook can give in the way of verhal explanation of a handicraft which, as one reads, seems to he a most painstaking, if not tedious, husiness. It should be useful

also (with its specifications) to those who have to get books hound. The subject of design is only slightly touched upon: the author helongs to those who think that every workman should be his own designer; it follows that design, as he understands it, does not go beyond what every workman can do. It is disappointing to find that the scrupulous thoroughness advocated throughout in forwarding is not insisted upon in decoration. It is taken for granted that there is no occasion for inlaying when onlaying (the pretence of it) is so much easier; and even the sticking on of paper as a substitute for white leather is countenanced! For the rest Mr. Cockerell shows himself a most careful and conscientious workman. Mr. Noel Rooke's illustrations are to he commended. Diagrams which administer to our artistic satisfaction are as rare as they are welcome.

"THE FITZROY PICTURES" (George Bell and Sons, London). Mr. Heywood Sumner's experience in mural decoration on a large scale fits him peculiarly for the task of designing coloured cartoons for the decoration of schoolrooms. He has seldom heen happier than in the pictures of 'The Months' just issued. They are

A Fitzroy Picture. By Heywood Sumner.

admirably simple in treatment, and show, moreover, conspicuous sincerity of design. The artist has observed nature for himself and treated it in his own way—witness his representation of 'August.'

"PROGRESSIVE DESIGN FOR STUDENTS," hy James Ward (London: Chapman and Hall). A series of "progressive lessous in elementary and applied design, such as a master might give to a class of pupils," promises almost more than a volume of moderate size would contain. Mr. Ward, however, appears to have found the subject insufficient for a book of some fifty pages of large print, and has eked it out with chapters (on Brush-drawing, Stencilling, Interlacing and Strapwork Ornament, and Counterchange Ornament) which hardly seem to helong to the course at all-even the few final pages on Surface Design do not follow in strict progression upon the lessons before. The fact is, the hopes held out in the preface of a systematic course of teaching from Elementary to Applied Design, are not realised. Snippets of information are not enough for either Primary School Teachers or Art Masters. Those who want anything of the kind want something more thorough.

General View of West Side of Ambulatory. Frieze of 'The Battle of Bannockburn.' By William Hole, R.S.A.

## The Decoration of the Scottish National Portrait Gallery.

A GOOD deal of money and effort has in recent years been expended in the decoration by means of mural pictures of important public buildings in Scotland. In Edinburgh a notable example is to be found in what, for want of a better name, may be called the frescoes-though the process in which they were executed is not that of the old fresco painters-of the McEwan Hall of the Edinburgh University;\* iu Glasgow the Corporation have commissioned several eminent local artists to decorate with pictorial illustrations of the ancient history of the city the banqueting hall of their stately civic buildings, while in Aberdeen a young artist, Mr. R. D. Strachan, has quite astonished his contemporaries in the North by the vigour and beauty of his mural work. Other efforts of the same kind in the larger towns of Scotland might be mentioned in detail, to show that a form of art popular during the golden days of the Italian Renaissance has again found favour among those who have money to spend, and who guide the public taste.

The scheme just completed for the adornment of the entrance ball and ambulatory of the Scottish National Portrait Gallery, is one which in its importance bas quite a national character. This gallery, situated in Queen Street, was, it may be recalled, built at great expense and gifted to the nation by the late Mr. John Ritchie Findlay of Aberlour, one of the proprietors of the "Scotsman" newspaper. It is in the Gothic style of architecture with marked Venetian features. Externally its adornment with portrait figures of eminent Scotsmen set in niches

between the windows, gave for a time a mucb-needed help to Scottisb sculpture, and this part of the work is still in progress. Internally the edifice is divided

into two equal halves. On the west is the National Portrait Gallery; on the east the Antiquarian Museum, and between them is a spacious entrance hall with a square colonnade of stone pillars carrying an ambulatory on the first floor.

Before his death Mr. Findlay, in association with the Board of Manufactures, wbo are the custodians of the building, had arranged a scheme for the decoration of the walls of the entrance hall and ambulatory with a series of frescoes or mural paintings to commemorate outstanding events in the history of Scotland, but unfortunately for his native city, of which he was so generous a benefactor, he was removed before the work was well commenced. He had, however, seen and warmly commended the

Study for The Chancellor in the 'King David' panel. By William Hole, R.S.A.

\* See The ART JOURNAL, 1896, page 234.

frieze and one of the frescoes; and he had left the money necessary for the execution of the scheme, which, now that it has been finished, adds another to the already numerous interesting features for which the ancient capital of Scotland

Mr. William Hole, R.S.A., is the artist. It has taken him fully three years to execute this admirable series of historic paintings, and, like other artists in literature and art of whom we read in like circumstances, he has seen the end of this important work with feelings of pleasure not unmixed with regret. It has heen to him a lahour of love as well as a daily duty. As an easel painter Mr. Hole has heen favourahly known, in Scotland at least, for many years. In the South his name is more associated with his masterly etchings from the works of great masters, such as Velasquez, Millet and others, which have been so much admired. His easel work has always been of a thoughtful and thoroughly conscientious character, but it possibly has not commanded the same attention as pictures with more meretricious and showy qualities by artists with half his artistic and intellectual equipment. As a fresco painter, however, engaged in depicting incidents in the history of his own country, he has found his

mètier. Intellectually Mr. Hole is well equipped for such a task. He has shown himself to he possessed of what may be called the historic imagination, by which faculty he has seized the salient features of the scene he has sought to depict, and visualised them in paint in a vivid and interesting manner to the eyes of the spectator; he has freedom and accuracy of hand, he is an excellent draughtsman

> of the figure, he has a fine sense of well-halanced composition and grace of line, and what, for the execution of a series of pictures like this, extending over a long period, and entailing much patient research, is not less valuable, he has a firm belief in thorough. ness, and possesses an infinite capacity for taking pains. The result of the combination of these qualities is to he seen in the production of a frieze of a highly original and decorative character, and a

By William Hole, R.S.A.

series of frescoes which places Mr. Hole at a hound among the great decorative painters of the period.

The frieze or panel on each of the four sides of the front of the amhulatory is not only a pleasing example of the painter's art, hut a highly instructive pictorial document, the subject of it being a procession, starting from the earliest times, of the men renowned in the arts of war and peace who have made Scotland. The work is focussed, so to speak, around an allegorical female figure representing "Caledonia," drawing aside the veil of the past, and pointing also to the sky, in which in the future other stars will appear. Many of the figures have considerable relief; gold and other joyous colours have been freely used in their decoration, and the result, though the figures number about 150, has been highly satisfactory. To name even a selection of the great men commemorated would be too much of a mere catalogue; it may be more to the purpose to say that the work has been so truthfully studied, that it constitutes, from the time of the Stone Age to the present day, an admirable and historically accurate study in costume, in ornament, and in armour, which the learned antiquarian and the most casual visitor can equally appreciate. The national collection of portraits has indeed provided authentic likenesses for nearly all these celebrities, from James III. to Thomas Carlyle, the last of the series.

This attention to secure historic accuracy of detail is also a characteristic feature of the series of eight large mural pictures by which the walls of the amhulatory are adorned. In this respect Mr. Hole has not followed the example of the later fresco painters of Italy, who clothed their hiblical characters in sixteenth-Each picture bears the century Italian costume. stamp of its own period. The series begins with the landing of St. Columba, who introduced Christianity into Scotland, and ends for the present with the

Study for a Cross-bow Man for The Battle of Stirling Bridge. By William Hole, R.S.A.

marriage of James IV. to Margaret of England-an event which in due course led to the union of the crowns of the two countries, so long at warfare with each other.

The Marriage Procession of James IV. and Margaret Tudor. Edinburgh, A.D. 1503. By William Hole, R.S.A.

Thus, as regards the first picture, actual specimens of the costumes, ornaments and weapons, worn by the Celtic chief or king and his queen and courtiers, who have gathered in a Druidical holy place by the seashore to hear the missionary of the new faith, may be seen in the adjoining antiquarian museum. Mr. Hole has even been careful to note the difference in the arrangement of the tonsure in monks of the ancient Celtic church to which St. Columba belonged, as distinct from that of the Roman Catholic Church, which as yet had no footing in the country. In like manner the growth of armour, from the rude early Celtic targe to the highly developed plate covering of the mediæval knight, of weapons and of dress, is accurately noted in each fresco without its pictorial significance being in the least sacrificed. That the pictures, while pleasing to the artistic sense, should also be a liberal education in costume, armour and ornament, is peculiarly appropriate to a decorative scheme for a building of this kind, and enhances to a great extent its value to the public.

The 'St. Columba Preaching' is about 12 feet square. The second in order, an upright panel 12 feet high by 6 feet across, is one of the most attractive of the whole series. They are all good, but one or two of them in subject and in execution are perhaps a little more attractive than their neighbours. It represents the landing at Queensferry, A.D. 1068, from England, of St. Margaret and her widowed mother, and their reception

by King Malcolm Canmore. Margaret, who was the sister of Edgar Atheling, had, along with her mother, to flee northwards to escape the conquering Normans. She is described as "young, learned and pious," and, winning the heart of the king, she became Queen of Scotland, and, for her good deeds, was afterwards canonised by Rome. In this picture there is a fine contrast presented between the maidenly grace and beauty of Margaret and the manly strength of this early Scottish king, who salutes his guests in courteous fashion; there is much charm in the landscape, which shows the blue waters and green shores of the Forth under pleasant sunshine, while the picturesque Saxon galley, with ample sails, now lying at rest at the stone pier where this royal reception takes place, has been introduced into the scene with decorative effect.

In a large fresco, 25 feet by 12 feet, the artist has depicted an event of great significance in the early history of the country-the defeat at Largs, A.D. 1263, of the Danes under King Haco by Alexander III. This is an exceedingly good example of the exercise of the bistoric imagination which Mr. Hole has applied to the

creation of these pictures, of his ability to present a scene as it might have occurred, and in all probability as it did occur, and to people his frescoes with personages in a lifelike manner. The fight, it is recorded, was "a running one by sea and land," a characteristic of it which has been emphasised in a series of bold and striking incidents. There are Scottish knights charging the hardy Norsemen who bave effected a landing on the sandy shore; dauntless Scottish foot soldiers wade into the water to attack the invaders in their boats, and some of these sectional and individual combats between the broad-shouldered Danes in chain-mail and the humblerlooking Scots are presented with dramatic force and effect. The type of boat used by the Danes survives to this day in the Shetland Islands. The fourth panel, of which we reproduce the full design and one of the figure sketches, recalls the deeds of King David I., the builder of Holyrood Abbey, he whom James VI. afterwards described as "a sair sanct for the crown," in respect of his too generous alienation of crown lands to ecclesiastical purposes. In the background is a representation of the artificers engaged in the building of this famous Scottish Abbey, with Arthur's Seat and Salisbury Crags beyond. In the foreground the king, equipped for hunting, rides a white palfrey, held by a boy who also is in charge of a typical

staghound. The architect of the palace and the Chancellor of the kingdom, the latter looking very "glum,"

desire to engage the attention of his Majesty, but he waives them aside to listen to the plaint of some poor people—a class he prided himself was his peculiar care.

Further round the ambulatory is represented an episode in the Battle of Stirling Bridge, of the details of which we reproduce several of the original studies, while opposite the Haco picture is another fresco of equally large dimensions, in which in a spirited man-

ner is recorded that crowning glory of Scottish arms which won for ever the

Mr. William Hole, R.S.A., working at a Frieze.

of the panel, the artist has cleverly turned it to account as the dividing line of the contending armies, where met in deadly shock the charge of the flower of the English chivalry against the stalwart Scottish spearmen. Here we can admire to the full Mr. Hole's descriptive and vivid drawing, his bold touch, and his skill in depicting horses and men in lifelike action.

Alongside of it, in an upright panel, is commemorated the presentation of the boyking James III. by his mother, Mary of Gueldres, to the nobles at the siege of Roxburgh Castle after his father's tragic death, A.D. 1460, an event which Mr. Hole has happily treated, while the last hut not least of the series is a representation of the marriage procession through a street of old Edinburgh, with balcony and bow, of James IV. and his young bride Margaret Tudor, the daughter of Henry VII. The

which plays a prominent part in it, while decoratively treated is from sketches made upon the spot, and the pomp and circumstance of the warfare of those days, when men in fighting looked each other in the face, are represented with due effect and dignity. The incidents of hattle on both sides are varied and interesting, with here and there a touch of pathos added; and a door-head having intruded itself into the centre

local landscape,

independence of the kingdom-the Battle of Bannock-

burn (p. 55). This is a most satisfying composition. The

The Good Deeds of King David I. A.D. 1124-1153.

By William Hole, R.S.A.

whole scene, which we reproduce, recalls in a delightful way a mediæval pageant, to which local interest has heen given by showing the city fathers, during a pause in the royal progress, presenting to the King and Queen a marriage gift.

These pictures are painted on the east and west walls of the amhulatory, four on each side. In spaces hetween the Gothic windows of the north wall are idyllic compositions representing 'The Ballad'-the music of peace, also reproduced, and 'The Pihroch'—the music of war. The subject of the former is a young page playing a lute and singing to a group of court ladies, and of the latter a wild rush of Highlanders, to the inspiring strains of the hagpipes. Each fresco is enclosed in a broad horder with Arahesques of some characteristic Scottish flower, leaf, or fruit conventionalised; the subsidiary spaces on the walls and the arch spandrils have also heen suitably decorated, and at one part carry armorial shields of Scottish nohles, and at another the quarterings of the Queens of Scotland, while the lofty roof of the hall, done in a soft sapphire blue, is star-spangled with a correct astronomical projection of the northern heavens. The Corinthian capitals of the red stone pillars carrying the ambulatory have heen heavily gilded, and suggest, in the position they occupy, the calix out of which is unfolded the honquet of colour all around.

The pictures, it may he interesting to note, are executed in what is known as "spirit fresco"—a medium found hy experience to he the most lasting in which to paint mural decorations in the northern half of the kingdom. The walls are grounded with wax; a substance which, with oil of spikenard, is also used in the grinding of the colours, with the result that the

surfaces are "mat," and not shiny as in work in oils. This, however, fits in well with the general decorative plan, which is meant to he flat in effect, like a piece of tapestry with an even distribution of light and shade. In this respect Mr. Hole followed the traditions of Giotto rather than those of the later Italians-a course also adopted in his decorative work hy that great modern French artist, recently deceased, Puvis de Chavannes. A note of originality in design and treatment, however, distinguishes this unique series of paintings hy Mr. Hole, and heing the work of one hand they have a unity of purpose and aspect not often seen in works of this kind in public huildings. One other commendable feature about the frescoes is that Mr. Hole has sought to fit them for the place they occupy as a background to a handsome piece of architecture. Naturally, therefore, the colour-scheme is uniformly quiet in feeling-low-toned blues, soft reds, greens and greys, with here and there a dash of black or dark hrown for emphasis, heing the prevailing tints; and though there is little or indeed no attempt made to render aërial perspective, it is wonderful how the felicitous combination of these colours has imparted to the pictures, the incidents of which are all enacted in the open air, an out-of-door aspect. Mr. Hole, it need hardly be said, designed all these pictures in cartoon form before painting them on the walls. Everything was drawn to scale, the figures heing studied from the life, and occasionally a coloured sketch was made to try the effect. Hundreds of studies were executed of single figures and groups, and his scrap-hooks and sketches for the last three years, in connection with this monumental work, are almost as interesting as the pictures themselves.

W. MATTHEWS GILBERT.

#### Edward Onslow Ford, R.A.

E DWARD ONSLOW FORD was horn in London on July 27, 1852; on December 23, 1901, he died at No. 62, Acacia Road, St. John's Wood. The worth of a life depends in small degree only on the number of its days. Keats was but twenty-six when he died, Giorgione was no more than thirtytwo when his magnificent career was cut short. Whether it come soon or late, death is ever a tragedy; and perhaps the most heautiful, if not the least poignantly sorrowful time at which the summons can come, is when the hlossom of life has still unopened petals, generous in promise of yet more spleudid development. Springing mysteriously from the sources of life, the passing from life of a personality must always he marked, just in proportion to the lovableness, the nobility of that personality, hy a cleavage of ties, hy the seemingly ruthless termination of hopes, aspirations, dreams.

The death of Onslow Ford, at a moment when all Christendom was preparing to celebrate the feast

Bust of M. Paderewski.

By E. Onslow Ford, R.A.

of good will and wide-reaching love among men, came as a personal sorrow to many other than those of his immediate circle. His art was hased on the foundations of a receptive and generous personality. Some men, with little to express, give the appearance of achieving many things; hut the hest work of Onslow Ford approximates only to the ideal of heauty and significance and graciousness which day after day perfected in his mind, exercising an increasing influence on his endeavours. To meet him even casually was to hecome aware of a personality gentle, nervously sympathetic, alert. If it he true that each of us, by the nature of his ideas and acts, huilds up either a prison-house or a sunlit palace of thought, which in its turn influences like structures huilt by his neighbours, then of a surety the palace of thought created hy Onslow Ford remains to welcome and encourage earnest pilgrims along life's too often sharp-stoned highway. The man exhaled, was wrapped ahout with, an atmosphere that gave to his slightest word oract a distinctive charm. Had he never made for himself a name as a sculptor, he would still hold a place among those artists of life,

hearers of joy and consolation to many who stand unmoved before the Elgin Marbles or the Mona Lisa of the Louvre.

I hold myself particularly fortunate in being enabled, by the courtesy of Mrs. Onslow Ford, to reproduce the work on which the sculptor was engaged at the time of his death; when I saw it in the studio the clay was still soft, the hand-marks of the artist were still, so to say, impermanent. What more aptly than this 'Snow Drift' could symbolise those "thoughts hardly to be packed into a narrow act," the "all I could never be," of a life which closed hefore the fiftieth milestone had heen reached? It is a figure born of snow flakes-snow flakes which thus congregated retain much of that intangihility, that airy grace, that happy ahandon which they possess as in myriads they pass, wind-driven, hefore our eyes. An inscrutable fate has cast this personification of snow drift-numbed, but surely with breath still issuing from the parted lips -upon some lone shore. The figure, with its highly sensitive face, streaming hair, halffolded arms, pose of calm if not of joy, has been lovingly modelled hy the sculptor. It reveals, as few if any things from his hand could hetter reveal, the fine feeling, the constant impulse towards beauty, the determination not to leave vague or unfinished detail which in his opinion called for definite expression. There is no necessity to dwell on the pathos of this 'Snow Drift,' wroughtit is practically finished-as it was during the last weeks of Onslow Ford's life. So, almost unawares, did the peace of death come to

freeze into an eternal calm his efforts here, the efforts of one whose sympathies, like sun-lit snow-flakes, had gladdened the hearts of many, caused them to step forward with uplifted instead of with downcast eyes.

Edward Onslow Ford, at the age of eighteen, hegan to study at the Royal Academy, Antwerp, where, a few years previously, Sir Lawrence Alma-Tadema had received his first training in art. It was Onslow Ford's original intention to become a painter; nor to the end did eager interest in the sister art lapse. During most of his summer holidays he made sketches in oil, and we need go no farther hack than the Academy of 1899, at which was exhibited his 'Woolacomhe Bay,' to discover a work in this kind. After two years at Antwerp he went to Munich, and, entering the workshop of Professor Wagmüller, was recommended to devote his talent to the perhaps more exigent art of the sculptor. While at

Munich, Onslow Ford married the third daughter of Baron F. von Kreusser. At the Royal Academy in 1875 he was first represented by a hust of Mrs. Onslow Ford;

in 1876 two more husts came from his studio, then and for some time afterwards at Blackheath; and, later, the portrait, in terracotta, of the Rev. Newman Hall, served to suggest that his name would not for long remain unknown. In any circumstances, it is no easy task in this country, where the art is still relatively slighted, for a sculptor to make headway; and the difficulty is increased when a man refuses to sacrifice his ideals on the altar of popularity. In 1881, however, Onslow Ford won, in open competition, the commission to execute the figure of Sir Rowland Hill, now in the Royal Exchange, first seen at Burlington House in 1882. Onward from that time success was assured; hut he was not of that inartistic race to whom success is synonymous with æsthetic annihilation. If we compare the Rowland Hill statue with the Oueen Victoria Memorial, so ill seen at Burlington House last summer, sure and steady progress is discernible. From first to last Onslow Ford was a student, examining, pondering, comparing, assimilating, alike examples of Greek art and those by talented modern craftsmen. He was elected to Associateship

He was elected to Associateship of the Royal Academy in 1885, and, hy a perhaps unexampled number of votes, to full Membership ten years later.

For long the studio in Acacia Road was a centre for artists of diverse schools and dissimilar aims. Some years ago Mr. Arthur Hacker painted a portrait of Ouslow Ford at work in this studio; and in 1899 there was shown at the Royal Academy the portrait, which we are enabled

to reproduce, from the hand of Mr. Wolfram Onslow Ford, the artist's second son. Familiarity with the sitter does not tend to make less difficult such a task; but it is improbable that any more faithful and intimate presentment of the sculptor is in existence, especially as he was when the strain of perhaps over-eager and continuous work had hegun to leave traces on his face. In his right hand he holds a photograph of one of his favourite pictures-Van Eyck's unsurpassable portrait of Jan Arnolfini and his wife; in the right-hand top corner a few inches of Mr. Hacker's portrait are visible; behind-on a pedestal which in the finished work hears rich and beautiful enamel-is 'The Singer' of 1889; and hehind that again we have a glimpse of the Shelley Memorial, now at University College, Oxford, originally intended by Lady Shelley for a site in Italy.

'The Singer' rauks with the 'Folly' of the Tate Gallery,

Glory to the Dead.

By E. Onslow Ford, R.A.

Snow Drift.
By E. Onslow Ford, R.A.

with 'Music,' 'Peace,' 'Applause,' and 'Echo,' as evidence of the zeal and patience and skill which characterized Onslow Ford's efforts in this delightful

kind. In other parts of the studio, witness is borne to the many friendships, whether based on a common love of art, of literature, or on the wider foundation of a joint humanity, formed by Onslow Ford. A group in one corner consists of a particularly strenuous and able portrait of Wolfram Onslow Ford; of Daguan Bouveret-this is a rapid sketch made at a single sitting; of Messrs. W. Q. Orchardson, Arthur Hacker, and of the talented American, a great personal friend of our artist, Mr. J. McLure Hamilton. To this list we must add portraits of Sir Lawrence Alma · Tadema, of Millais and Herkomer, Briton Riviere and Ridley Corbet, and, a recent work which we reproduce, of Mr. Edwin A. Abbey, R.A. Certainly not the least penetrative, sincere and able portrait from the hand of Onslow Ford is that of Queen Victoria: an achievement, as now

seen in *plein air* in front of the Infirmary at Manchester, full of dignity, of reserve, of character. No wonder that the Queen held it in such high esteem—

seldom if ever has her womanhood been so well expressed—as from the first bust to commission several others.

Onslow Ford's output was large, and it is impracticable here to do more than name a few of his important works. The fine bust of General Gordon, 1888, was followed two years later by the memorial of the hero-in Oriental dress, seated on a fully caparisoned camel-now on the Esplanade at Chatham; a bust of Mr. Balfour, 1892; the Gladstone of 1894; the Jowett Memorial of 1897; Dr. Dale of 1898; Sir William Agnew, 1899; the Huxley and the monument to the Maharajah of Mysore, 1900; the equestrian statuette in silver of Lord Roberts' gallant son who died of wounds received at Colenso-a lithe and beautiful study which has not been exhibited; the portrait head, commissioned by the musician himself, of Paderewski,

Bust of Edwin A. Abbey, R.A.

By E. Onslow Ford, R.A.

which we illustrate as a third example of recent work; and the 'Glory to the Dead,' here reproduced, familiar to and admired by many who visited the Academy last year: these things mark almost as many mile-stones on the æsthetic highway of one whose distinguished, if hrief, career was shaped towards lofty issues.

FRANK RINDER.

## Passing Events.

MR. HERBERT COOK, in The Nineteenth Century and After for January, asks: "Did Titian live to he ninety-nine years old?" and having brought forward evidence to state a negative answer, he concludes that Titian only lived to the age of eighty-seven. Mr. Cook doubts if the generally accepted dates of Titian's life (1477-1576) are correct, and says that there is no authentic record until the year of Giorgione's death (1511) of the work of Titian, in which year he gave a receipt for a payment on account of some frescoes in Padua. The hiography of Dolce (published 1557) shows that in 1507-8, with Giorgione, Titian worked on some frescoes in Venice, at this time being "scarcely twenty years old," and this contemporary evidence places Titian's hirth at about the year 1489. But in 1571 Titian wrote to King Philip II. of Spain and mentioned that his age was 95, that is to say, dating his own hirth some thirteen years earlier than Dolce states was the case. Messrs. Crowe and Cavalcaselle accept the master's own statement of the time of his hirth, although they hint at a cause for exaggeration. Northcote, in his Life of Titian (1830), preferred 1480, "on the joint authority of Vasari and Sandrart," hut a passage quoted in Mr. Cook's Essay from Vasari's biography, shows that the date 1480 was a misprint, Vasari having in two other places mentioned 1489. Mr. Cook therefore decreases the age of Titian on the contemporary and independent evidence of Dolce and Vasari, hiographers both intimate with the painter, and he rejects the artist's own statement. Most writers have been content to accept the researches of Crowe and Cavalcaselle. Mr. Claude Phillips, than whom there is no more thorough exponent of the detective interest, acknowledges in his book his indebtedness to the two famous authors, hy whose decision he ahides .: and the most recent authority on the subject, the catalogue of the Winter Exhibition at The Royal Academy, 1902, in agreement with the opinion of Sir E. J. Poynter, fixes the date at 1477.

F we could be convinced that Titian's years amounted to less than has been generally supposed. a most rare piece of artistic folklore would vanish. We could no lorger enter the great Venetian painter as the champion of the profession in the lists of longevity. In the hands of which artist, then, could be placed the long lance as symbolical of long life? Mr. G. F. Watts, one of the greatest painters of all time, attains the age of eighty-five on February 17th. Nollekens, the sculptor, and Beechey, each with their eighty-six years, Carlo Maratti with his eighty-eight, Giovanni Bellini and Michelangelo, each with their eighty-nine, Linnell and Largillière, each with their ninety, Rohert-Fleury with his ninety-four, were all ousted by the Scotch artist Schelky, who attained to more distinction with his ninety-six years than with his hrush and canvas. But it is among the Men of Kent that we find an artist who has eclipsed all others with his tenacity to life, and with Mr. Sidney Cooper (B. 26th September, 1803) as champion at ninety eight, even Titian, with the longest life which has been attributed to him, must look to his

DURING the last few weeks death has ended the career of several artists eminent in their several spheres. The world of art cannot afford such severe losses. Elsewhere we dwell more fully on the work of E. Onslow Ford and of Kate Greenaway. In future numbers we shall refer to the work of Sir Noel Paton, David Law, and John Brett, and we wish now to convey to the relatives of the deceased artists our sympathy for the great loss they have experienced. The loss seems more acutely personal hecause from time to time we have enjoyed the active support of the artists to a somewhat exceptional degree, and our remembrance of our cordial associations will be a lasting memorial to them.

WE wish to call special attention to a new publication which will be of the greatest service and interest to all connected with the Fine Arts. We refer to Mr. Herbert Slater's "ART SALES OF 1901" (Virtue), a record of prices obtained at auction for pictures and prints. This bulky volume has heen compiled with the greatest care, the index alone covering over one hundred closely-printed pages.

The Flight into Egypt. By Holman Hunt. From "The Saints in Christian Art." (Bell.)

#### Recent Art Publications.

HE eighteenth century, a period of political and social upheaval and transition in France, was also marked by the evolution of a distinct style of decorative art, although there was no corresponding advance in sculpture and painting, the modern renaissance of which did not really commence until the nineteenth century. Lady Dilke, who has made French art her special study and has already published several books on the subject, has, in her new volume, "FRENCH FURNITURE AND DECORATION IN THE EIGHTEENTH CENTURY" (Bell), passed in exhaustive reviews the masterpieces of all the great decorators who worked during the reigns of Louis XV. and Louis XVI. With rare literary skill she has woven the vast mass of material collected into a most interesting consecutive narrative, in which the reader is brought into intimate touch, not only with the artists themselves, but also with those for whom they worked. De Cotte and Boffrand, Pineau, Oppenord, and Meissonier, Verbreckt and the Rousseaus, Watteau, Gillot, Audran, Oudry, Boulle, Cressent, and others less celebrated, look forth, each with his own distinctive individuality, from the framework of their designs, whilst the shadowy forms of their employers flit to and fro, suggesting, controlling, criticising, and, alas, all too often marring, by their frivolity, what might have been the noble character of the surroundings created for their pleasure. With its beautiful reproductions of typical salons and its numerous illustrations of furniture and other minor details of decorative art, its Appendix giving lists of the work of typical masters, transcripts of rare manuscripts. and its well-arranged Iudex, the "French Decoration" will take rank as a classic of sterling value to all interested in the society of the eighteenth century.

The want of a new and comprehensive work on Christian Art has long been felt, and the appearance of

"THE SAINTS IN CHRISTIAN ART," by Mrs. Arthur Bell (Bell), with its beautiful and appropriate illustrations, is peculiarly opportune. The old standard books on the subject are completely out of date, and the student who relies on their statements as to the authorship and location of works of art will often find himself quite behind the age. Knowledge of art is now essential to all who lay any claim to culture, and knowledge of sacred art implies not merely acquaintance with the names of the great masters who excelled in its production, but also an intelligent comprehension of the subjects represented and the meaning of the symbols introduced. To give but one example: no amount of æstbetic feeling or bistorical information, valuable as hoth are, will suffice to explain the appearance in Fra Angelico's 'Great Crucifixion' of the various groups of saints, but their identity and the significance of their presence will be understood at once by the initiated. The first volume of "The Saints in Christian Art" deals with the Evangelists, Apostles, and their immediate successors alone, but it will be followed by others on the later saints. For the arduous task of their preparation Mrs. Arthur Bell's long experience as a writer on art has fitted ber well, and it is probable that in course of time the present publication will take a similar position in schools and colleges to that of her "Elementary History of Art," which is a government textbook in England and America.

It is a pity that other owners of fine collections of pictures do not follow the spirited example of Mr. Drury Lowe, of Locko Park, Derbyshire, and issue descriptive catalogues of the works of art in their possession. The "CATALOGUE RAISONNÉE OF THE PICTURES AT LOCKO PARK" (Bemrose), compiled by the well-known German art critic, Dr. Jean Paul

Richter, will he found of great value to the student and the collector, for it emhodies not only considerable research on the part of its author, hut also the notes made by the purchaser at the time of their acquisition. The collection consists mainly of works by the great Italian masters, hut it includes also examples of Franz Hals, Wright of Derhy, and Hogarth. The twelve illustrations are excellent reproductions of gems of the collection, amongst which, perhaps, the most heautiful are the 'Portrait of a Lady,' by Domenico Ghirlandajo, the 'Portrait of Duke Ercole of Ferrara,' by Francesco Cossa; the 'Portrait of Mrs. Lowe,' ascribed to Lucas de Heere, and the 'Head of a Youth,' after a drawing by Andrea del Sarto.

In an admirably illustrated little volume (Seeman, Berlin), one of a valuable series of handbooks on the great Italian cities, Mrs. Louise Richter gives a practically exhaustive account of the quaint mediæval town of Siena, which, situated as it is out of the beaten track, has been to some extent overlooked by tourists until quite recently. A long residence in Siena has given the authoress an intimate acquaintance with it, and her wide culture has enabled her to discriminate well hetween the essential and the immaterial in dealing with the relics of the past. Her book is a lifelike portrait of a unique survival of a time gone hy, a piece of good literature as well as a valuable text-book.

So far as literary merit is concerned, "FRA FILIPPO LIPPI," hy Mr. Edward C. Strutt (Bell), is one of the most satisfactory of the art-monographs which have recently appeared. It is written in a hright yet incisive style, and although it is the result of much careful research, that research is not forced upon the attention of the reader. The dry hones of historical data are clothed with flesh and blood, and transmuted by the magic touch of imagination into the living image of a man whose personality must have heen singularly attractive. Strange to say, that personality is not very clearly reflected in the work of the merry-hearted friar, whose motto seems to have been, "Let us eat and drink, for to-morrow we die." Fra Filippo Lippi's sacred pictures, although there is nothing divine about the 1, might all have heen painted by one who had kept his monastic vows unbroken, so that his faults and lapses from the strict path of morality appear to have been to a great extent the results of the circumstances of the time at which he lived rather than of any natural

"Japan: A Record in Colour" (A. and C. Black). The fine-coloured reproductions of Mr. Mortimer Menpes' clever drawings make his new book a most attractive volume, but it is difficult to follow the writer of the text in the assumption that all previous students of Japan have heen prevented, by the duplicity of the natives or by their own stupidity, from arriving at a right judgment on any branch of the subject under review. Moreover, the note at the beginning of the volume is puzzling. Miss Menpes, who speaks of herself as having heen a child five years ago, says in it: "I endeavour to present with what skill of penmanship I possess my father's impressions of Japan;" hut it is impossible that any young girl, however gifted, could have written the opening chapter "On Art and the Drama," still less that on "The Geisha."

It is somewhat difficult to understand why the Siennese should have expended so much care, thought, and technical skill on the production of the masterpiece examined by Mr. Robert H. Hobart Cust, in a handy little volume entitled, "THE PAVEMENT MASTERS OF SIENA" (Bell). The book is the first of a new series of monographs on the great craftsmen of the past. With so much to attract the attention in the Cathedral, it seems a pity that such exquisite designs should have been produced merely to he trodden underfoot. Had not the celebrated pavement been protected by a wooden floor it would long ere this have ceased to exist, and the result of this precaution is that it is known to very few, for it is only for a short time after the Feast of the Assumption that the covering is removed. Many of the hest sgraffiti have been taken to the Opera del Duomo, and their place supplied in the Cathedral itself hy copies, a fact adding much to the value of the reproduction in Mr. Cust's book of the work in its original entirety, with a key plan making reference to any particular design easy.

"Brunellesco," by Leader Scott (Bell). The designer of the celebrated double dome of the cathedral of Florence has suffered from the greater fame of his pupil, Michelangelo, much as Perugino did from that of Raphael. In this charmingly written and beautifully illustrated little volume Leader Scott to a great extent atones for this long injustice hy the skill with which she assigns to her subject his true place in the history of art. She evolves, moreover, a most lifelike picture of his personality, and tells with a freshness giving them new zest the deeply interesting incidents of his friendship with his much-loved rival Donatello and the young painter Masaccio, whose early death was one of the great sorrows of the architect's life.

Those who are unable to afford the more costly volume on "REMBRANDT VAN RIJN," by Mr. Malcolm Bell, will hail with satisfaction the appearance of a little monograph by the same author with numerous and excellent illustrations (Bell). It contains practically all the information in the larger work, but there are fewer illustrations, and the long lists of etchings are omitted.

Professor Axel Tallherg, A.R.P.E., has been at work on a portrait of Tolstoi, and this has heen published as a large etching, by the painter, from the firm of J. K. Lindstedt, of Helsingfors, in Finland. The plate is very forcible, and renders the character of the Russian prophet in a manner worthy the original. The plate is similar in treatment to Rajon's famous head of Darwin, hut it cannot be said to be quite so fine in artistic quality.

The plate for the Art Union of London subscribers is, for 1902, the large etching hy Mr. W. L. Wyllie, A.R.A., entitled 'Victoria Victrix.' This is the plate of the artist's own picture in last year's Academy, wherein Queen Victoria is heing conveyed in state from the Isle of Wight by representatives of her Navy. Mr. Wyllie has been fairly successful in suggesting the majesty of the occasion, and in black and white his work is very telling.

'President McKinley,' by W. Nicholson (Heinemann), is one of the finest of this artist's portraits of the earth's great rulers of the present generation.

## 'A Pageant of Childhood.'

BY T. C. GOTCH.

FROM THE PICTURE IN THE WALKER ART GALLERY, LIVERPOOL.

Like his fellow townsman of Kettering—Mr. Alfred East—Mr. Thomas Cooper Gotch, horn in 1854, was originally destined for commerce. When he reached his majority, however, he determined to pursue art, not merely as a pastime, hut as a profession. Early in 1876 he entered Heatherley's school; the same autumn he hecame a student at the Ecole des Beaux-Arts, Antwerp, where he worked for several months; in 1878 he joined the Slade school in London; and suhsequently, with more or less lengthened intervals, he was for three years in the studio of Jean Paul Laurens, Paris. A voyage to Australia, a sketching tour in Denmark, a winter in Italy: these are other circumstances which have gone to the shaping of Mr. Gotch's art.

Little as it is indicated in the picture which we reproduce, Mr. Gotch was for some time a member of the Newlyn Colony. Only a few months ago at Whitechapel there was seen a picture of the frankly realistic kind, prohably dating from this time. Entitled 'Sharing Fish,' it represents a group of Cornish women on the cliff-ramparted shore taking part in an old-time custom. In much the same manner, although here an ever-present tragedy instead of a picturesque survival forms the theme, is ''Twixt Life and Death,' seen at the Academy in 1890. It was in the following year that Mr. Gotch fared to Italy, and there came under influences which served to divert his aim from realism to a more carefully considered decorative ensemble, from the almost monochromatic pictures then in vogue at Newlyn to the splendid colour-schemes of a Paul Veronese, a Tintoretto, a Titian. As early as 1886, his 'Destiny,' hung at the inaugural exhibition of the New English Art Cluh, revealed his love of allegory; hut 'My Crown and Sceptre' of the 1892 Academy hest marks the parting of the ways. It laid the foundation-stone for that decorative quality exemplified in 'The Child Enthroned,' the 'Alleluia' of the Tate Gallery, and other familiar works from this hrush.

'A Pageant of Childhood' is a characteristic Gotch. For him, youth is a never-failing source of study, of delight. It is necessary to go no farther hack than his little portrait, seen at the New Gallery last year, to prove what patience, what enthusiasm, he hrings to hear on the representation of child-life. Our picture shows a true pageant. Here are young folk gloriously arrayed in hrocaded stuffs, following the smallest of their number, who hears a pennon. The wondering half-timidity of the little lady with the long train; the unconcern of the two trumpeters; the wistful look of the girls with cymhal and drum; the contrast in colour hetween the diess of those who, fillets round their hair, hring up the rear: each figure, each detail tells of persistent quest of the decoratively apt. And as to symbolism, suggestion, is there not on the background wall a presentment of Time the scytheman, waiting the moment to mow down, one hy one, or may he at a single instant, these comely hoys and girls who take no count of death?

## 'The Singing Girls.'

FROM THE PICTURE BY WALTER FIRLE.

CULTURED folk in every part of the world associate the name of Donatello with that hlithe and winsome has-relief of singing and dancing children to he seen in the Bargello, Florence. But many good citizens of Breslau, in whose ears Donatello is no more than a soft-sounding name, link in thought the idea of singing girls with the art of Walter Firle. He was horn in that capital of Prussian Silesia on August 22, 1859. Although not extraordinary, a few details of his life may he given. His father, a merchant, appears to have taken pleasure in sketching; hut nothing was farther from his thoughts than that Walter should earn his livelihood hy art instead of in commerce. The decisive moment came when - and this is a variant of the familiar incident relating to our own Millais-some youthful sketches were suhmitted to Hackl. The arhiter of fate-for a straw may weigh down a halance -nodded approval. Walter entered the Munich Academy and there came under the influence of Lofftz. Later, during a visit to Venice, he met at Chioggia his fellow countryman, Ludwig Dill, and for some time stopped in or ahout the city of waterways, earning somewhat, in order not to hurden his father. While he was wandering ahout Bohemia, a turn in Fortune's wheel-this in the form of an offer from an uncle to provide him with money to study in Holland-may he noted as of vital importance in his æsthetic career. From studies made in Holland he huilt up his first noteworthy picture, which dates from 1884.

If Walter Firle can rightly he placed within a category, it is within that at whose head stands Max Liehermann; not the Liehermann who hore into Germany the Barhizon tradition, hut that later Leihermann who, after study of works hy the great seventeenth-century Dutchmen, painted pictures like 'The Sempstress,' 'The Courtyard of the Amsterdam Orphanage,' etc. Effects of light filtering through latticed windows into large low-roofed chambers, enhancing the heauty and the significance of peasant folk within; quest of the succinct, the apt, the beautiful in the faces and gestures of these figures; a certain lift, horn of the instinct to create, which separates art from a mere record of fact: such are two or three of the early and eagerly followed heacons of Walter Firle. He left Holland permeated with the sentiment of its splendid achievements in the past. Taking a studio in Munich, he worked almost incessantly for a year on his first important canvas. It was accepted for exhibition, and one day he awakened to find himself almost famous. The picture, concerned with the hour of reverie in an orphanage, was afterwards awarded a gold medal at Berlin and hought for the National Gallery there. In the museum at Budapesth is his second amhitious work, the 'Sunday School Class' of 1885; at Breslau his third, 'The House of Mourning,' where the grief-stricken mother, seated heside the still-open coffin of her daughter, is the object of pity and of wonder to the men and women and children who, silently, have come into the death chamher. An important series, illustrative from a modern point of view of petitions in The Lord's Prayer, is, again, in the gallery at Munich. We need do no more than examine the reproduction opposite to feel assured that Walter Firle has breathed new meaning into one of the worthiest traditions of art.

A Decorating Room.—Gilding is chiefly the work in such a shop, but the filling in of printed designs with colours is also done. The more elaborate painting on expensive sets and vases is done in another shop, skilled artists being then employed.

# Supplement to "The Art Journal."

# A History of Artistic Pottery in the British Isles.\*

BY FRED. MILLER.

THERE is very little to say about pottery in Great Britain until the seventeenth century, and what there is to tell can be very briefly written.

The earliest remains are the rude clay vessels found in barrows or burial mounds over all parts of the country. The largest Collection is the Greenwell in the British

Slip Decorated Dish, Seventeenth Century.

By Thomas Toft.

Museum, and the learned divine who formed it is the great authority upon the subject, and his work may be consulted by the inquiring student. This pottery is classed in the early bronze period, though there are remains of burnt clay vessels anterior to this, classed with the Neolithic or age of polished stone implements. A cursory glance at the Greenwell Collection reveals the fact that this early pottery is of the simplest possible character, such as could easily have been made by the rudest form of wheel, probably a revolving stone slab worked by the foot as is still employed by the natives of India and elsewhere. These pots are all of them wide at the top so that the potter could easily manipulate them, and only some two or three have handles, though several have had pieces of clay put on and pierced to form loops through which a cord could be passed. The ornamentation consists of lines which could easily be done on the wheel by a sharp instrument as the pot revolved, with the addition of zigzag lines and combinations of lines. Food vessels, drinking cups and cinerary urns are the uses to which these early specimens of the potter's art were put.

The Collection alongside, from German barrows, shows an advance in the art. There elaborate shapes with narrow mouths are met with, handles are common, while the clay itself is of a finer quality and the surface is more highly finished.

Curiously enough they are much less ornamented with scratched lines, as the potters seem to have been content with throwing pleasing shapes.

I am aware that most authorities assert that these early pots are made by building up the clay, but I am of

\* Continued from page 5, Supplement.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

opinion, after carefully examining the Greenwell Collection, that a rude form of wheel was known, and the ornamentation round the pots seems to suggest this. After all, the vessels shaped on a revolving stone slah hy village potters in India are not much more finished than these urns.

The ware known as Samian is of a dull red colour, and has a smooth surface, which has had a coat of thin glaze very uniformly distributed over it. The ornamentation is in all cases in relief, and hy far the larger number in the Museum are evidently made in moulds, though some few have had the ornaments applied after the pot was thrown.

Figures of men and animals play an important part in the decoration, though geometrical forms and floral designs are also common.

The hody of some of the imitation Samian ware is of an orange colour, and the glaze easily flakes off.

This ware was imported into this country hy the wealthier Romans. It is excellent in every way, hoth as potting and as design, and occupies a unique position in ceramics. Many centuries afterwards it seems to have inspired the hrothers Elers, for their red stone-ware might well have heen modelled on this Samian pottery.

In the British Museum are numerous examples of pottery decorated in slip, that is, white clay applied to the pot of dark paste in a liquid condition; the ornamentation is therefore in slight relief; some have powdered mica dusted over them. These were prohably made at Castor, near Peterhorough. Some examples have the design in relief. Bowls, vases, and cups, all good examples of the product of the potter's wheel, are in the collection. The colour varies from a dirty yellowish white and light slate grey to dark hrown. The slip was put on with wooden instruments or quills, which allowed it to flow into thick and thin lines, according to the nature of the design. The designs themselves vary from conventional floral ornament to stags and hounds, the hunted hare and the wounded hoar, hut the workmanship is rude. All this class of pottery was produced under Roman influence. In the seventeenth century slipdecorated pottery, covered with a soft glaze, was made in Staffordshire, and was the prevailing pottery of the day.

With the decline of the Roman power in this country we find the art of the potter made no advance; on the contrary, it received a check. The potting of the Anglo-Saxons is described by one authority as made of rather

Ancient Potter's Kiln discovered at Normangate Field, Castor.

An Enamel Kiln.—This kiln or "glost-oven" is used for firing on enamel colours which are painted over the glaze. The heat is about a cherry red, sufficient to melt the flux mixed with the colours. There is no necessity to have the articles put in seggars or five-clay boxes, as no smoke or flame comes in contact with the work

dark clay, coloured outside brown or dark slate colour, which has sometimes a tint of green and sometimes hlack. Bands of parallel lines with scratched ornamentation hetween is a favourite form of decoration, raised knohs or crosses arranged symmetrically around them is another favourite device. It is often badly fired and is rudimentary in every way, showing no aptitude or striving to discover the more excellent way. Glazing the ware was unknown, and pottery cannot he said to have advanced to an art until this was generally practised.

Little is known of the pottery from the Norman Conquest until the seventeenth century. A large collection of fragments with some few perfect specimens of mediæval potting can he seen in the Guildhall Museum. It is still very rude ceramically, hut glazing was practised, a pleasant soft green glaze heing a favourite with these early potters. A great step is made when glazing is added to the work as it leaves the wheel, for apart from the knowledge required to make a glaze, the ware itself must he considered in relation to the

glaze, as there must he harmony between the two if good results are to he ohtained. The glaze should contract with the hody, and if it does not, it crazes or cracks if it does not actually flake off, a defect of a good deal of cheap modern pottery.

It is evident that pottery of any distinction was imported from ahroad, and we find that cannettes from Cologne, made of stoneware, suggested to William Simpson, a Staffordshire potter, the mauufacture of a similar ware in England. His patent was granted in 1580, hut little is known ahout him or his work. A stoneware jug of this date is in South Kensington, and is an excellent specimen of the potter's art.

One must not omit to mention in passing the manufacture of encaustic tiles, which was an important and successful industry in the Middle Ages. Many of our churches

#### SUPPLEMENT TO THE ART JOURNAL.

contain excellent examples of this class of pottery, the design being incised in the red clay and then filled with a light clay. These tiles were mostly glazed, and were probably made by the inmates of the religious bouses wholly for ecclesiastical use.

The slip-decorated pottery glazed with a soft lead glaze made in Staffordshire from about 1610 to 1710, is of the rudest character. The meu who used slip to decorate the ware were about on a par with the decorators of pails-and jugs used by bargemen. Its only claim to our attention is the fact that it is rare.

Wrotham too, in Kent, had a pottery for this class of slip-decorated ware. Posset pots, puzzle jugs, tygs, candlesticks, and dishes are the articles chiefly produced both here and in Staffordshire. Examples can he seen in our Museums. The earliest dated piece of this Kentish pottery is said to be 1612. This class of pottery was evidently made by villagers for villagers, and though the potters, like Thomas Toft and Ralph Simpson, were proud to put their names to their dishes, they must have heen easily satisfied if that was the best they could do. We must, of course, remember that the method of filling a clay pipe with white slip of the consistency of cream and then letting it flow on to the ware down the stem, did not allow of much finish; yet these early potters essayed figure designs, and very curious such dishes are.

All this early slip-ware was made of ordinary clay and glazed with a soft lead glaze such as would melt at a heat that would fire the body.

To John Dwight, of Fulham, we owe the first great advance in potting. He obtained a patent from Charles II., entitling him to make the stoneware vulgarly called Cologne ware, and he appears to have started potting at Fulham about 1671.

If we look at the productions of his kilns in the British Museum, after glancing at the work produced here in his time, we seem to step straight away from the artisan to the artist, so excellent as potting and fine as art is this work of the old Fulham potter. Stoneware is produced by mixing with ordinary clay substances like sand, felspar, flint, and other bodies which at a great heat become semi-vitreous. Dwight's claim to have

A Plate-maker at work.—The wheel is called a "jigger," and the mould is revolved upon it. The potter beats out a pancake of clay and dexterously throws it upon the mould, and after pressing it with a moist sponge he takes a tool called a profile and shapes the back of the plate by pressing the clay against the mould, which causes the foot to risc.

made porcelain is not borne out by the examples of his potting which have come down to us, hard and excellent in quality though it be; for though when thin his ware is translucent, it is stoneware. Pottery is merely burnt clay, but stoneware is a mixture of various earths and rocks, and requires a high temperature to fuse the ingredients into a close, hard body. If ordinary clay were fired to such a heat it would run, and hence the necessity for putting some material with the clay to take the "fat" out of it, as it is termed. Some natural clays, particularly those of a bluish colour, will stand a higher temperature, and these form the basis of the common stoneware used for ginger-beer bottles, drainpipes and the like. Dwight was the first potter to use salt as a glaze, an idea he obtained from Germany. This method of glazing can only be applied to stone-

ware, owing to the heat required to volatilise the salt. The wares have to be fired in an open kiln, and not in fire-clay boxes or "seggars." At a certain heat, which is judged by the colour of the ware being fired, common salt is thrown into the kiln through openings at the top, which are kept closed until this moment is reached. The salt, meeting with water vapour, becomes decomposed into hydrochloric acid. This escapes, and the soda, attacking the silica of the clay in the body, forms with it a silicate of soda. This covers all parts of the ware with a hard thin coating of glass perfectly even all over, having a dull gloss instead of the excessive glitter of a dipped glaze. Stoneware can be fired without being glazed, and the Elers, contemporary potters with Dwight, did not glaze their ware. We do not know the date of Dwight's birth or death. He

A Printing Room.—The men work the copper-plate presses and print the transfers in ceramic colours in much the same way as fine-art printing is done. The prints, which are taken on very thin paper, are then laid down upon the china or earthenware by girls and women. The paper burns away in the kiln, leaving only the colour, which is fired on. The patent for printing on china dates from 1752.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

was a Fellow of Magdalen College, Oxford, and as ingenious as he was learned. His descendants long owned the pottery, and to this day there is a pot-

tery carried on on the same

site.

Apart from the influence exerted upon English potting from foreign sources, we are indehted to the advent of foreigners for much of the progress made, and to uone more than John Philip and David Elers, two hrothers who came over with William of Orange, and started potting near Burslem in 1690. They were the first potters in Staffordshire to pay great attention to the production of a fine paste, carefully washing and straining their slips through fine sieves to secure a fine hody. They produced a beautiful deep red stoneware, which they decorated by using hrass dies to stamp

small reliefs on their articles. These hrothers first introduced salt-glazing into Staffordshire, and the influence they exerted upon the potters of the locality was great. As generally happens, their trade secrets were stolen, jealously as they endeavoured to guard them hy employing ouly idiots and persons dull of intellect to keep them. A potter named Astbury feigned idiocy in order to he taken into the Elers' employ, and he secured many of their technical secrets, which later on he turned to good account. To Asthury is ascribed the use of ground flint as an addition to the paste of earthenware, though Dwight had used this substance long hefore. This addition of flint secured great refractoriness in the kiln and lessened the shrinkage.

It is worthy of note that Wedgwood never succeeded in producing a deep red hody of the same quality as that

A pottery was started in Lambeth in 1676 by John Uriens van Hamme, a Dutch potter, "for makeinge tiles, and porcelane, and other earthenwares, after the way practised in Holland." This was the first introduction into England of tin-glazed ware, known generically as Delft. It had heen discovered that by putting tin iuto the glaze a milky-white opacity was given to it. Ordinary earthenware therefore could be made to look not unlike porcelain. Painted decoration could be applied on the glaze hefore it was fired, and the colour melting into the glaze gave the pottery that rich softness of colouring so much admired in old Delft. Muffle colours could he used afterwards, as these only required a gentle heat (petit feu) to fix them on the glaze. Some specimens of the elaborate decoration painted on these tin-glazed dishes are in our museums.

We now come to the Staffordshire potteries nearer our day, for by degrees all potting seemed to gravitate thither, owing to the ahundance of clay and the proximity to the coal-fields.

One name, that of Josiah Wedgwood, stands out from all others—not that he does not owe much to those hefore or contemporary with him, hut hecause he may be taken as the microcosm, the epitome of the potter's art as practised up to that time, and that in its narrow sense, as Wedgwood never made porcelain. Josiah Wedgwood had the great advantage of coming from a family of potters, his great-great-grandfather

Bowl, Tickenhall Ware.

having heen in business in Burslem in the seventeenth century, and what was known therefore about potting was at his disposal, and from that point of vantage he could step forward on journeys of discovery. He was born in 1730, and the work he saw produced around him was on the one side the soft glazed slipdecorated earthenware, and on the other a fine kind of white salt-glazed stoneware closely resembling porcelain. This white Staffordshire ware is very excellent both in make and design. The decoration is in low relief and in excellent taste, as can he seen by reference to the jar and cover and teapot, and other specimens in the South Kensington Museum.

The reader will remember that the brothers Elers had started making a fine red stoneware some forty years before the birth of Wedgwood, and the pieces just alluded to were probably inspired by these Dutch potters, if some of them were not made by theiu. Though unsuccessful in a commercial sense themselves we saw that the Elers started the Staffordshire potters on a new tack, and one of the men to reap where they had sown was Thomas Wheildon, who, beginning potting in a small way and actually at first peddling his goods, had by 1749 got extensive works of his own. The name of this pioneer potter is not familiar to the general reader, but it is clear that Josiah Wedgwood, who was taken into partnership from 1754 to 1759, learned much from Wheildon, as did Asthury and Spode and other master potters who for a while worked for him. A comparison of Wheildon's pottery with Wedgwood's will convince anyone on this point. Wheildon's methods of preparing his pastes and carrying on his works were the most complete of any at that time. To an inventive mind like Wedgwood's, five years with such a good potter as Wheildon would lay a foundation upon which he could huild with every hope of success, and we find that hy 1769 the works he christened "Etruria" were opened, and up to the time of his death in 1795 Wedgwood's career is one long record of successes, won first with his Queen's ware, and later on with his hlack hasalt, jasper, and other hodies. It is probable that Wedgwood possessed no real chemical knowledge, hut an intimate acquaintance with potting methods and constant experiment gave him a wonderful grasp of the whole of the potter's art. Up to his time the style of decoration and shaping was English, hut Wedgwood fell into the classical taste of the latter half of the eighteenth century, and all the work which is distinctively his hears one impress. Ornamentation in relief in light paste upon a dark hody was his favourite method of treating his fine-art productions, and as he made replicas of the Portland Vase, we can see how this Roman antique influenced him in the style of decoration he adopted, and from his success set the fashion in potting, most of the potters imitating Wedgwood wares.

(To be continued.)

Eastern Carpet-Weaving.

# The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

ARPET weaving is essentially an art of the Eastern people of tents "—that is true of the historical craft. But there are two chronicles of carpet making, and one is of the manufacture in the West. This manufacture is a necessity, if the civilized world is to be supplied with carpets sufficient for its requirements; and if in the future carpets comparable with the weavings of the unconquered East are to be produced, it will be from the busy workshops of the West. Not only technically but æsthetically-in colour, in significance of design-the finest carpets of British looms surpass all save a few of the carpets imported from the East. And the beauty of British-woven carpets is the expression of a vigorous activity, promising more than it has yet performed; while the beauty of modern Oriental carpets is a recollection, fragmentary, uncertain, of a vision not now vouchsafed.

The arts of the East are losing significance; they are no more the perfect expression of national genius. This is especially evident in carpet-weaving—since undated times the textile art most expressive of the genius of the mystic East.

Appreciation of Western connoisseurs cannot bring back to the carpets of Persia and of the Levant their ancient perfection. The beautiful carpets of India must be sought among a mass of productions not beautiful.

Western manufacture, of such importance now and for the future, seems at first sight to be without precedent and without analogy: an attempt on experimental lines to which tradition and past experience are inapplicable. We have to do what the East has done—to make carpets

\* Continued from page 8, Supplement.

that are the outcome of principles of use and of beauty. But our manufacture of machine-made carpets holds a position in national art and industry and life quite dissimilar from the place filled by the great weaving craft of Asia Minor, of Persia, and of India, in the ancient life of those nations.

Eastern carpet weaving was a simple craft, developed, by reason of its peculiar fitness to express the artistic ideals of the East, into a significant and splendid art. The fabric is usually formed by knotting thrums of coloured yarn, or cotton, or silk, round the warp-threads, which are stretched on horizontal rollers kept in place by two upright supports. After each row of tufts is tied in, the weft is shot between the warp-threads, and the row beaten down with a heavy comb. Pattern formed by such a method is made up of small squares-the tufts or loops of yarn-and unless the "pitch," or number of tufts to the square inch, be very fine, only conventionalized forms can be fitly rendered. Direct representation, save in the finest makes, is undesirable. In any case, the necessity that a floor covering should conform to ideas of flatness, and the fact that the design is always seen from above and in perspective, should preclude pictorial rendering of forms in carpet designs. So far as form is concerned, suggestion and symbol are, generally speaking, the only means whereby designers can appeal to the imagination of those who see their work, or express their own imaginative power. To the Moslem weaver, and to those who used his carpets for religious and magnificent purposes, this art of suggestion was perfectly expressive. By symbol and by suggestion Oriental carpet-weavers expressed in their work the

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

mysteries of deep and ancient wisdom, the heauty of earth, the passion to make a clear sign of the life of dream and of actuality. Symbolic meaning underlies the traditionary carpet patterns of the East. These ancient carpets are significant as the paintings on wall and wood and canvas of the picture-making nations of the Western world. Even if we, whose expressive art is pictorial, could use an art of suggestion as Moslem weavers used it, yet there are circumstances that would affect our carpet designs and render them unlike those of the East. Only the general principles that underlie all manifestations of a common art are shared by East and West.

A real Axminster, or other hand-made European carpet, though technically hardly differing from an Oriental fahric, would still, if the designer understood the function of design, he as different from an ancient Persian carpet as a tale of the "Arahian Nights" from a story told hy one of Chaucer's pilgrims. Not only in artistic significance and in technical process, hut in use and in conditions of display, the carpets of Western manufacture are distinguished from the carpets "that wrought are in the Orient."

In the first instance, at all events, Eastern carpets were intended for religious or regal purposes, and even in domestic use they serve a different purpose to the floor coverings of the West. There, where the floor-space is not set with furuiture, the whole design is visible when the carpet is laid down. In colour it may he as splendid as magnificence demands, for, generally speaking, it is not required to he subservient to a scheme of decoration. Here, their design is never seen as a whole save at the time of purchase. A carpet must "keep its place" if the general effect of a room full of furniture and with patterned chintzes and curtains and wall paper is to be satisfactory. It would he tedious to enumerate all the differences hetween the art of weaving carpets and of the manufacture of carpets, hetween true Eastern and true Western examples. The differences are ohvious enough, and are only touched on in this place to emphasize the artistic justification for a manufacture that many people, from an æsthetic point of view, think

superfluous, so long as "Persian" or "Indian" or "Turkey" carpets are in the market.

It is plain that as a method of artistic expression, as a traditional art applied to purposes of honour, and hy reason of its close connection with the life and heliefs of the nations that developed it, ancient carpet-weaving is distinct from the modern manufacture.

Primarily "manufactures" are expressive of one national ideal only-increased profits of production and cheapness in the articles produced. This is not said to depreciate manufactures. On the contrary, the fact that processes of production hased on such a dispiriting necessity should prove capable of expressing artistic ideals, and that art should have learned to use these means of expression, are correlative facts equally honourable to industry and to art. The origins of art and manufacture are far apart. Applied art measures the distance and spans it. Save in a manufacturing era the term would have no currency, hut if it confesses that heauty is an after thought in the production of useful things, it states that the application of art to industry is an accomplished fact. Nohody who compares the Kidderminster or Brussels carpets of to-day with the "horrors from Kidderminster," or the much and justly abused Brussels carpets of fifty or half fifty years ago, can fail to see the progress summarised in the words "applied

Carpet-making on any considerable scale hegan in these islands about 1735, when the distressed weavers of Kidderminster, following the example of Bristol, set up looms for the weaving of reversible carpets. Until 1851 -to fix an approximate and convenient date-it was mainly developed along "manufacturing" lines, that is to say, along utilitarian and commercial lines. By the time of the Exhibition of 1862, nearly all the mechanical inventions that have revolutionised the technical side of carpet-weaving were at the service of manufacturers. The Jacquard apparatus had for long heen commonly used in pattern-weaving, the application of steam-power weaving to tapestry carpets had heen shown in the Exhibition of 1851, and hefore the close of that Exhibition specimens of power-wove Brussels carpets arrived from America to spur British manufacturers to apply the power-loom to Jacquard carpet-weaving. Eleven years later, in 1862, machines capable of producing nearly forty yards of carpet a day were exhibited hy Messrs. Crossley, of Halifax, and the use of these Jacquard power-looms had almost entirely superseded the use of the hand loom in the making of English Brussels. The

Jacquard apparatus, the power - loom, the Jacquard power - loomthese important mechanical inventions are the main achievements of the first century and a quarter of carpet-weaving as a manufacture. The chief kinds of carpet fahrics, too, were represented in the 1851 and 1862 Exhihitions -"Royal" and "Chenille" Axminsters, Brussels,

Western Carpet-Weaving.

#### SUPPLEMENT TO THE ART JOURNAL.

Wiltons, Tapestry and Kidderminster carpets, as well as hand-made carpets such as "Turkey" and real Axminsters. Methods of producing cheap and strong carpets in large quantities, and the production of various fahrics to fulfil every requirement of use, had heen achieved.

That is forty years ago. The methods in vogue to-day are still practically the same. But the identification of art and manufacture are the terms of a problem peculiar to this generation. The craftsman of pre-manufacturing times was a single-minded person so far as his work was concerned. Taking pleasure in his work, that pleasure expressed itself unconsciously in heauty. He made useful things heautifully. The race of "absolute manufacturers" were also single-minded. Their purpose was swift and inexpensive production, and we see their achievement. The single-mindedness of the craftsmen and of the early manufacturer is alike impossible now.

We have to develop a mechanical industry on artistic lines. Apparently it is an attempt without precedent. So is each day's activity for each individual; indeed, so is every manifestation of art, of industry, of life. Our carpets must "show themselves ohviously to he the outcome of modern and Western ideas," just as the woven harmonies of the East show their origin and the use for which they were designed. Almost it may be said, that just so far as our carpets differ from ancient Oriental carpets, do they proclaim their identity in principle. The paradox explains itself, and is persuasive of the practical use of history. History never repeats itself, hut it illustrates the recurrent operation of principles. The more modern and British our carpetmaking is, the more it conforms to an almost universal and primeval tradition. If it seems essentially an industry of recent years and of new conditions of life, it is for that very reason a repetition of the principle that produced alike the carpets of sixteenth-century Persia or the tapestries of Pre-Renascence Europe. The tapestry-weaving at Barcheston in the reign of Henry VIII. by Rohert Hicks, "the only auter and beginner of tapestry and arras within this realm"; the foundation of the famous workshops at Mortlake under the rather delusive encouragement of James I. and his "Babie"; the introduction of carpet-looms into Kidderminster, and every subsequent event in the history of British carpetweaving, is either to be seen as an attempt without a precedent, or as one of successive efforts to achieve a national expression of art in weaving.

English tapestry-weaving, indeed, has hitherto been more an imitative effort than any expression of native artistic energy. Since the early Middle Ages, looms must have been at work in the religious houses and towns of England; hut each important manufactory has been originated and supported by one man interested in the art, and neither William Sheldon nor Sir Francis Crane succeeded in establishing tapestry-weaving as an English industry. At Merton, to-day, tapestry is woven more English than these earlier pieces, and it may he, in some later history of English tapestry-weaving, that the work of William Morris will be recorded as the first influence to create a tradition that shall endure and develop the ancient art to new significance.

Even as isolated efforts in one direction, however, the various episodes of tapestry-making in England are worth recording. They are too interesting to he forgotten, and too important in the story of art in industry. Ruhens and Van Dyck designed cartoons for Sir Francis Crane's workmen, and a long series of classical tapestries came from the eighteen looms set up in the tapestry house at Mortlake. The subsequent failure of the enterprise is not to be regretted. There was no British painter to produce cartoons, and, just as the court of Charles II. was a vulgar copy of the court of Louis XIV., so the Mortlake workshops under his patronage did not improve on the pattern of the Gobelins. The royal

tapestry works at Windsor was a recent attempt to found an English imitation of the Gohelins. It failed, and during twenty years of existence produced nothing to justify its continuance. The French tapestry works are able to weave all that is needed in this kind of tapestry. William Morris showed the way for a revival of significant tapestry-weaving, and for that reason English tapestry deserves consideration from a practical point of view. Not in memory of an ancient art, but because our best achievements in tapestrymaking are recent and of promise, I propose to consider British tapestryweaving together with British carpet - weaving in the following articles.

A Tapestry Fabrique in Spain.

The Spinners.

By Velazquez.

(To be continued.)

The Countess of Newbourg and her daughter. By permission of Reginald Vaile Esq.

Country Pleasures.

By Jean-Baptiste Pater.

# Mr. Reginald Vaile's Collection of Eighteenth-Century French Pictures.—I.

FOR the past three months there have been exhibited in the Magnin Art 2.11 in the Mappin Art Gallery, Sheffield, some thirty pictures helonging to Mr. Reginald Vaile, which, with one or two exceptions, are hy French artists of the eighteenth century. From many points of view the event calls for notice in these pages, and, thanks to the courtesy of Mr. Vaile, we are enabled, in this, the first of two articles, to reproduce several of the important works. Sheffield in the heginning of the twentieth century: the France of the eighteenth century. The mind-pictures evoked hy the words are radically different; indeed, it would not be easy within the stated limits of time and space to suggest peoples and conditions more remote. Five hundred years ago Chaucer alluded to the Sheffield whittle, the common knife used hythose whose social rank did not entitle them to carry a sword; to-day, Sheffield is the capital of steel. Sheffield is essentially industrious. Each of its citizens, tacitly accepting as inevitable conditions of modern commerce the smoke-hung atmosphere, the muddied

waters of its dozen streams, toils from morning to nightfall, either with hand or hrain. Forgetful of the fact that in the Castle and the Manor the Earls of Shrewshury lived hardly less sumptuously than Henry VIII. or Queen Elizaheth, it has heen said that Sheffield has no lordly ancestors, that its inhahitants are stolid, unamusing, if eminently hospitable and kind.

To the relatively unleisured populace of Sheffield, then, could they unravel their impressions, the sentiment exhaled hy the pictures of Mr. Vaile must have come as a revelation, or rather, mayhe, as an inexplicable enigma. Of dilettanteism, frivolity, pretty conceits, luxurious trifling, the atmosphere of the houdoir, of the fashionahle salon, the multitudes that flock in and out of Yorkshire factories know little, understand less. Strenuous work during the day, strenuous play at football or other national sport when work is done; little apt to curh the angry word, almost invariably voicing what is kind somewhat brusquely; making

for a goal with little circumlocution: thus, hriefly, may he summed up the acts and modes of thought of the Sheffield populace. As I had opportunity to ohserve, many of them were puzzled at sight of Mr. Vaile's pictures. It were well had it heen possible to deliver one or two lectures on the subject, which would have served to span the chasm of thought and feeling dividing the two worlds.

Even for so-called cultivated persons—and how ready we are to apply the epithet to those who hy hahit outwardly oh-

serve a few social rulesno phase of art is less easy of approach. The naïveté of the primitives: the resplendent colour of the Venetians; the force of a Remhrandt, the silvery dreams of a Corot; the dignity of a portrait hy Watts, the modernity of another hy Sargent: for one or more diversereasons we can with ease adjust our attitude to such works of art. Rightly to appreciate French art of the eighteenth century, however, involves first of all a considerable imaginative effort; that is, if we he not already in touch with the social and political conditions whence it sprang. All art worthy the name is re-

lated to its age; either it mirrors the age or, as a protest, reverts perhaps to mediævalism for inspiration. To take a hroad view, society in France of the earlier eighteenth century was hastening towards a fall. The people, down-trodden, insufficiently fed and clothed, were ranged on the one side; on the other were the noblesse and those whom they chose to favour. Prior to the Revolution it is impossible to conceive of the rise of a school of painters other than that which actually developed. No small part of their province was to assist in keeping obscured the eyes of the aristocracy, to soothe them into a false security. The paramount aim of art is to yield pleasure;

and, again hroadly, pleasure was to he gained only hy looking on works expressive as nearly as may he of—nothing, hut that nothing treated, hy the introduction of accessories, hy skill of handling, as though it were matter of import. If we accept Mr. Stopford Brooke's dictum that in every great work of art there must he present matter of thought, matter of love, immortals that give hirth to joy and to heauty, much of the French art of the eighteenth century will he found lacking, particularly in one element: thought, although of course

not altogether absent, is there as a mere ghost. By an unwritten law, which every successful painter was hound to ohserve, the sphere of his endeavour was restricted to presentment of themes remote from the common life of the day. Classical or legendary subjects: the luxurious trifling of this or that fine lady at court; love scenes in one of the thousand heautiful gardens that rose throughout France at hidding of king or courtier; anything concerned with the elahoratelywrought veneerwherewith unthinking cruelties were covered: so far hut no farther -if we except suggestions like those in Watteau's incomparable

Princess Couslande-Graft.

By Antoine Pesne.

tion. Amuse us-at all hazards do not be serious-as you value our favour, hint not at the turmoil in the "common" world which we would disregard: thus in effect said the patron to the artist.

But some may object that similar restrictions operated when Greek sculptors created things of enduring heauty, figures or groups as perfect in their kind as it is possible to conceive. There is, however, a signal difference. In Athens, slavery was a fact accepted by all as inevitable, and high living was not hased on

wrong inflicted consciously, or even semi-consciously, on those of a different class. It was hy choice, and not hy reason of any social necessity, we may assume, that Greek artists worked as they did. On the other hand. what of nohle beauty might not the world have lost had Jean François Millet lived a century earlier, or had our own Watts heen horn, as was Watteau, in 1684 at Valenciennes. It is essential, as I think, to the just appreciation of pictures such as those helonging to Mr. Vaile, to readjust our point of view, and hring it into conformity with conditions and limitations such as I have attempted to indicate. With oue or two note-

worthy exceptions-and always Watteau the seer must he remembered-we need not expect to find pictures which are the issue of "impassioned contemplation," of great adventures such as genius loves to follow, of profound study of men and things, of enthusiasm kindled by the significant, of wide-reaching sympathy, controlled only hy the painter's vision of beauty, complete and unified. Artists worked within a consciously restricted area: that is the fact not to be forgotten, a fact almost incompatible with the presence of the spiritual element.

As frontispiece to this number we reproduce what

undoubtedly is one of the gems of Mr. Vaile's French gallery. It is from the hrush of Jean-Marc Nattierhis signature and the date 1749 appear on the marble column to the right-and represents the Countess of Neubourg and her daughter. In it we have a superh example of the art of this skilled, if not inspired, painter. Born in Paris in 1685, Nattier died there in November, 1766. He was a pupil of his father, Marc Nattier, and possibly of his godfather, Jean Jouvenet. In the Palace of Versailles a room is occupied by his

pictures. Two of the five examples in the Louvre show respectively Mlle. de Lambesc and the young Count of Brienne — a work painted in 1732, which, although more cumhered with detail, hears some resemblance to Mr. Vaile's picture - and 'The Magdalen,' in white silk robe. seated in a rocky land-scape, with a book open at the "Psaumes de la Péni-teuce.'' Not until the priceless Wallace Collection was opened in 1900 was there a Nattier in any of our public galleries. At Hertford House we may study the artist in several characteristic achievements: in the large fanciful por-Portrait of a Lady. trait, deemed

By Louis Tocque.

de Clermont, served by copper-coloured attendants after her hath; in that of Marie Leczinska, Queen of France, wearing a sumptuous red robe; and, among others, in that of a Prince of the House of France, in elahorate Court dress, where notes of gold and positive reds and blues are introduced in the colour scheme. Some fine examples are, too, at Trentham. Nattier did not aim at profound characterisation. So far as his art is concerned, the human soul - which hreathes in many a picture by Remhrandt, and, to take a modern example, in Whistler's portrait of his mother-might not eternally he at work moulding this

to be of Mlle.

The See-Saw (" La Bascule").

By Nicolas Lancret.

contour, setting that light in the eye. The Countess of Neubourg, whatever in truth she may have been, is seen as a beautiful model in fair surroundings. Yellowhearted pansies in one hand, feather from costly jewelbox in the other, she is distrait, uninterested, a thought weary of the emptiness of her life, as she poses for her portrait. In its kind it would be difficult to find a more comely face than that of the little girl, whose eyes are of deepest brown. Light scintillates everywhere. It plays on the veined marble, on the wall and the heavy curtain above, on the lace of the dressing table with its mirror of harmonious lines, on the ivorywhite of Madame's robe, on the blue drapery which passes from behind the figure on to the knees, and, finally, is concentrated on the faces and busts of mother and child. Art such as this could hardly be carried farther. It is all but an ideal rendering of the elegance, the brilliance, the costly idleness of the period. Certainly it mirrors the age.

Antoine Pesne, by whom is the portrait which we reproduce of the Princess Couslande-Graft, was a contemporary of Nattier, born in Paris a year or two earlier -probably in 1683 or 1684-who died in Berlin in 1757, where he had become Court Painter to Frederick the Great. His historical pieces and portraits were admired by connoisseurs at the Court, and in the Potsdam Galleries, as in those of Dresden and Berlin, are some of his principal pictures. Neither at Hertford House nor in the National Gallery is he represented, and the Louvre possesses only a portrait of Nicholas Vleughels, a contemporary French painter. To show the Princess as an artificialised palmer serves as an admirable comment on the sentiment of the time. She bears the staff and scrip, and wears the scallop shells of those who fared from one holy shrine to another, subsisting on charity as incessantly they travelled. But her bodice is wrought with gold, a large pearl is on her blue ribbon. As with

several others, the portrait is in a frame whose gilded design carries out the idea of the picture. At the four corners are scallop sbells, and at the top a staff and scrip are grouped with Cupid's arrows and the torch of Love.

A second fancy portrait, here illustrated, shows another of the hundred directions in which artists of the time exercised their talent for invention. Like Nattier and Antoine Pesne, Louis Tocqué, or Tocquet, was born in Paris during the last decade of the seventeenth century—to be exact, in 1696. He married the daughter of Nattler, vied with him as a painter of Court beauties, and after spending two years at St. Petersburg, whence be moved to Copenhagen, died in the French capital on February 10, 1772. Despite his renown, Hertford House provides us with no example from his brush, but in the Louvre are ten portraits, at Versailles several more, including that of the Empress Elizabeth of Russia. In one respect, at any rate, Tocqué and his contemporaries are to be cordially commended, albeit the merit should rather be credited to the vogue of the day: they seldom or never painted a woman in a high dress, which hides many of the most beautiful lines in the human figure. The lady is supposed to personify one of the myriad stars that æon after æon pursue invisible paths as they voyage through space. Her rich dress is of pearl colour, her sash of faint violet, and her hair, of course, is powdered.

Our headpiece is by a man whose name is more widely known. Jean Baptiste Pater, as every lover of the arts is aware, was born at Valenciennes in 1695, eleven years after Watteau, whose pupil he became. One of the most delightful of the imaginary word-portraits by his English namesake, Walter Pater, is contained in that series of letters, extracted from "An old French journal," concerned with Watteau and Pater,

The Love Vow (" Le Serment d'Amour").

By L. A. Trinquesse

with the incomparable genius of the one, the less inspired, less exalted talent of the other. If in Mr. Vaile's collection the single picture by Watteau—a portrait of Mile. Haranger, relative of the Abbé Haranger, who obtained for the artist loan of a house at Nogent, near Paris, wherein he died in 1721—finished only so far as the face is concerned, weaves for us no enchantment like 'L'Embarquement pour l'ile de Cythère,' reveals to us relatively little of the man who once and for all expressed the tragi-comedy of Gilles and his fellow players, we have in the picture by Pater a work which shows him at his hest. It represents one of those fêtes galantes for which he is renowned. How

pleasant is this fair landscape, where, in the sunshine, richly. dressed men and women play at love, and while away the hours in a dalliance from which they would have no awakening. The arrangement of figures, foliage, landscape, shows that. whencesoever it came, Pater could heautifully compose a picture, and, so long as we do not put it side by side with a fine Watteau in the same kind, it yields us a full meed of pleasure, induces a mood of buoyant irresponsihility, provides within its frame many a haunt of delight. On a smaller scale, but no less attractive, is a second picture of the same kind; and Pater is represented.

as well, by 'Le Mari cocu et hattu'—it shows a suspecting husband paying the penalty of masquerading in his wife's clothes with the object of discovering her faithlessness—and 'La Chasse Chinoise,' particularly fine in colour, painted for the king, its carved frame bearing the arms of the Bourbons, the fleur-de-lys, and the royal crown. The four Paters admirably exhibit three phases of his art.

No less familiar the civilised world over are the pictures of Nicolas Lancret, yet another artist born in the French capital at the end of the seventeenth century. According to Ballot de Sovot, the success achieved by two of his exhibited works caused a rupture

hetween himself and Watteau, from whom, after a hrief friendship, he was permanently estranged. His, again, was not the effortless genius of the Prince of Court Painters, whose works he copied. The two ovals which we reproduce charmingly illustrate the art of Lancret. The colour harmony of the originals cannot be rendered, hut we may see how finely he has filled the aptest of all spaces wherein to represent youthful gaiety, may see into what lovely nature patterns he has woven trees and foliage, the sentiment of spring in them. 'La Bascule,' with the boy, arms outheld, laughing to the woods as he see-saws, and 'Cherche Mouchoir,' where the girl in green hodice and striped dress of red and black

mischievously peeps at the hoy in gold cloak passing the handkerchief -- these pictures suffice to prove that if the figures of Nicolas Lancret do not move with the airy grace of those of his great contemporary, he is by no means to he classed with the mere imitators. At Hertford House we may study him to advantage, among others, in the small and exquisite 'Girls Bathing,' and in the 'Fêteina Wood,' for long attributed to Pater. Mr. Claude Phillips suggests that this last is the 'Bal dans un Bois,' which, when exhibited in 1718, excited the wrath of Watteau.

'Le Serment d'Amour' is from the hand

of L. A. Trinquesse, the dates of whose birth and death are unknown, but who was admitted into the Guildat The Hague in 1767, and exhibited in Paris as late as 1793. Neither in the Louvre nor in Hertford House is there any picture by him. The two couples, admirably balanced in the composition, who move swiftly through this woodland glade, are under Cupid's spell. Finger to lip, love-poisoned arrow in hand, the winged figure on the pedestal looks down as naïvely as though, since known by the Greeks under the name of Eros, he had not made men and maidens dance to his hewitching measures.

Find the Handkerchief ("Cherche Mouchoir").

FRANK RINDER.

Original sketch for 'The Pursuit of Pleasure.' By Sir Noël Paton, R.S.A.

## Sir Noel Paton, R.S.A.

Titania and the Indian Boy.

From the original drawing

By Sir Noël Paton, R.S.A.

BY the death of Sir Noël Paton, R.S.A., LL.D., long Her late Majesty's Limner for Scotland, Edinburgh will seem to many comparatively empty. To his friends, he was one of its chief ornaments and attractions. He was exactly fitted to the place where the greater part of his long life of

eighty years was passed. There was a close and striking harmony between the perfect symmetry of his life, from birth to death, and the splendid tapering rise of the gray capital of the North, from the railway to the topmost points of Castle and Calton Hill.

He was in full accord with both its distinction, its majesty, its antiquity, and its variety. For the genius of Sir Noël sought expression not only in painting but also in poetry and sculpture. This is further emphasised by his having been born (1821) in the early Scots capital, of which it is said in the ballad of "Sir Patrick Spens"—

"The King sits in Dunfermline toun, Drinking the blude-red wine."

The place is saturated with history and superstition. Looking down the glen below Wooer's Alley Cottage,

Sir Noël's birthplace, you see Dunfermline Palace and Abbey ruins. It was there that, in boyhood, he used to go out at nights looking for the fairies and elves. There also he imbibed—through his mother, he thought, but I think through both parents—that love of things antiquarian which held him through life.

His mother was a MacDiarmid, and upon one of my earlier visits to him in Edinburgh, he took out a genealogical chart, now lying before me, and traced his mother's pedigree back to Malcolm Caenmore, and so to an earlier Malcolm II. who reigned 1005—1034. Then raising his splendid figure and throwing back his head, he said proudly, "I am of the blood of the ancient Scottish Kings."

He might have been a king, he looked so regal. And yet, was it possible wholly to repress a smile?—which instantly vanished, however, under his stern look and

Wooer's Alley Cottage, Dunfermline. From an early drawing by Waller H. Paton, R.S.A.

Photo. J. Moffat, Edinburgh.

Sir Noël Paton, R.S.A., LL.D.

injured air. I was intently studying the chart, and asked carelessly a guileless question as to the male line.

"Your mother, I see, married Joseph Neil Paton. Who were the Patons?"

His face became set as flint, but he answered not a word. The fact is that his grandfather was either weaver and town hellman in Dunfermline and afterwards a turner, or a turner and printer. But he was a genius, for he was an author who printed, illustrated, and published his own works. His name was David Patton. His son, Sir Noël's father, was first a weaver and latterly a pattern designer. There is no doubt that Sir Noël drew his turn for art from his

was of the wondrous human perversity which led a man of his artistic genius, strong sense, and intellectual power, to allow one half of his genealogy to take up so much of his attention, and occupy so high a place amongst his life interests. What was hest in him came through his father, and yet he valued his long descent through his mother as highly as, if not more highly, than his artistic faculty.

From the mother came his love of Highland story and tradition, his sentimental Jacohitism, and his superstition. I could not help heing amused by the earnest credulity with which he would discuss the value of dreams and omens, and the reality of the supernatural heings of the Highlands. He was proud of his share in Celtic otherworldliness. He thought it strengthened his imagination and filled him with supernatural romance.

"Don't you think, Sir Noël, you get more

grace and beauty of fancy from the fairies of the Lowlands, than of imagination from the demons of the Bens. You cannot he superstitious."

"Not superstitious? Look at this letter signed hy myself in Mrs. Crowe's 'Night Side of Nature.' It takes us hack to Duufermline and my early life, and settles the point.

"Wooer's Alley Cottage, Dunfermline-in-the-Woods. "Monday morning, 31st May, 1847.

"DEAR MRS. CROWE,

"That dream of my mother's was as follows:—Sbe stood in a long, dark, empty gallery: on her one side was my father, and on the other my eldest sister Amelia, then myself and the rest of the family according to their ages. At the foot of the hall stood my youngest sister Alexes and above her my sister Catherine—a creature, by the way, in person and mind, more like an angel of heaven than an inhahitant of eartb.

"We all stood silent and motionless. At last It entered—the unimagined Something that, casting its grim shadow hefore, had enveloped all the trivialities of the preceding dream in the stifling atmosphere of terror. It entered, stealthily descending the three steps that led from the entrance down into the chamber of horror: and my mother felt It was Death. He was dwarfish, hent, and shrivelled. He carried on his shoulder a heavy axe; and had come, she thought, to destroy 'all her little ones at one fell swoop.' On the entrance of the shape my sister Alexes leapt out of the rank, interposing her self hetween him and my mother. He raised his axe and aimed a hlow at Catherine, a blow which, to her horror, my mother could not intercept; though she had snatched up a three-legged stool, the sole furniture of the apartment, for that purpose. She could not, she felt, fling the stool at the figure without destroying Alexes, who kept shooting out and in hetween her and the ghastly thing. She tried in vain to scream: she hesought my father in agony to avert the impending stroke: hut he did not hear or did not heed her; and stood motionless, as in a trance. Down came the axe, and poor Catherine fell in her hlood, cloven to 'the white halse hane.' Again the axe was lifted by the inexorable shadow, over the head of my hrother, who stood next in the line. Alexes had somewhere disappeared hehind the ghastly visitant; and with a scream, my mother flung the footstool at his head. He vanished and she awoke. This dream left on my mother's mind a fearful apprehension of impending misfortune 'which would not pass away.' It was murder she feared; and her

Portion of Dining-Room, 33, George Square, Edinburgh.

suspicions were not allayed by the discovery that a man-some time before discarded by my father for bad conduct, and with whom she had somehow associated the *Death* of her dream—had been lurking about the place, and sleeping in an adjoining outhouse on the night it occurred, and for some nights previous and subsequent to it. Her terror increased. Sleep forsook her, and every night, when the house was still, she arose and stole, sometimes with a candle, sometimes in the dark, from room to room, listening in a sort of

waking m nightbreathing of the assassin. who. she imagined was lurking in some one of them. This could not last. She reasoned with herself; but her became intolerable, and she related her dream to my father, who, of called course, called her a fool for her pains-whatever might be his real opinion of the matter. Three months had elapsed, when elapsed, we children were all of us seized with scarlet fever. sister Catherine died almost immediately - sacrificed, as my mother in her misery thought, to her (my mother's) overanxiety for Alexes, whose danger seemed more imminent. The dream-prophecy was part fulfilled. also was at death's door given up by the doctors, but not by my mother; she was confident of my re-covery; but for my brother who scarcely considered danger at all, but over whose head she had seen the vision. ary axe impend-

ing, her fears were great; for she could not recollect whether the blow had or had not descended when the spectre vanished. My brother recovered, but relapsed, and barely escaped with life; but Alexes did not. For a year and ten months the poor child lingered; and almost every night I had to sing her asleep; often, I remember, through bitter tears, for I knew she was dying, and I loved her the more as she wasted away. I held her little hand as she died; I followed her to the grave—the last thing that I have loved on earth, and the dream was fulfilled.

"True and Sincerely yours,
"J. NOEL PATON."

Mrs. D. O'Hill, sculptor, Sir Noël's sister-the Mrs. Amelia Robertson of the chart-first gave me a hint of this wonderful dream. When I asked Sir Noël if he still believed such things, he replied, "Of course I do," but a laugh in his eye led me to be a little sceptical of the measure of his faith. The conversation here referred to took place nearly twenty years ago at his house in George Square, Edinburgh. He was then a fine-looking

man, large of frame, stately in his bearing, and with a good deal of the air of the grand seigneur. And that leads to a common delusion regarding him

"I know," he said, "that people think me proud, because I do not care to mingle much with men, or to be on familiar terms with them. It is not pride that keeps me in isolation. You can call it reserve, but it is reserve based upon diffidence, and modest doubt of myself. I am never sure of the impression I make, and I shrink naturally from familiarity."

A similar feeling affected his view of art. He once said-

"No form of human endeavour equals the artist's. You can doanythingwith our art, music and song. They used to call me the young Raphael. It was an incitement, not to imitation but to failure. A

The Vision of the Holy Grail. By Sir Noël Paton, R.S.A.

higher always rose above my highest, a better above my best. I could never paint my full thought, could never give it expression. Something was always left just beyond my reach to tempt another effort. As I approach it, it recedes and rises. I suppose it is the unapproachable ideal."

He said this very sadly at a time shortly after the dream affair. If my notes are disjointed I cannot help it. It is not for me to dissect, but to try to restore Sir Noël, or rather to construct him.

EDWARD PINNINGTON.

Bury.

Pencil Sketch, By Cosmo Monkhouse

### Cosmo Monkhouse as an Art Critic.

Pencil Study of a Head.

By Cosmo Monkhouse.

THE late Mr. Cosmo Monkhouse was a man of very various gifts and accomplishments. He was one of those who seem to he horn with the literary tendency inherent, and for whom no particular stimulus or hias is needful, since they take to hooks and a hookish line of thought as naturally as infant streams descend the hills. I remember

heing told that when Monkhouse appeared at the Board of Trade, in 1857, to take up the not exorbitantly responsible post of a junior supplementary clerk in his seventeenth year, he came straight from St. Paul's School with a great air of the "literary man" ahout him, and confided to the inspection of his familiars a desk containing enough poetry to furnish forth two handsome volumes. Nor, although cold winds of criticism blew upon him, did this lyric ardour so entirely ahate hnt that in 1865 he published a volume, "A Dream of Idleness," which was not without its admirers. Monkhonse, until near the end of his life, cultivated the Muse, and two pleasant collections remain -the "Corn and Poppies" of 1890, and the posthumous " Pasiteles the Elder" of 1901-to testify to his grace and skill in the manipulation of verse.

But Monkhouse was also a novelist—he puhlished "A Question of Honour" in 1868; he was a hiographer, a critic of literature, a writer on educational subjects. His ready pen and his sensible, well-halanced judgment were not directed to any theme without producing a result which was at least of ephemeral value. But it is in none of these capacities, not even, I suppose, in that of poet, that posterity will mainly he occupied with the name of Cosmo Monkhouse. I think that one or two heautiful things of his—the nohle "Dead March" and the "Song of the Seasons"—will hecome familiar in collections of nineteenth-century verse. But Monkhouse will he rememhered, since everyhody nowadays

must have his label, as an art critic. This was the kind of work to which his scattered powers and divided interests finally converged. Here he grew more and more at home. Here he had a place which was entirely his, and which he filled serenely and with dignity. There seemed to be something, which peculiarly calmed him, and recalled his too-restless cnriosity to a fixed theme, in the spectacle of heautiful objects.

Monkhouse was never more agreeably himself than when immersed in the examination of a fine work of art. He was a perfect type of the arbiter of art, as the eighteenth century understood it. If you saw him with a specimen of rare ceramic in his hands, you were inclined to cry, with Byron—

"How well his connoisseurship understands The graceful bend and the voluptuous swell."

His manner in front of a picture, or a vase, or a medallion, was simplicity itself. The airs of a Maudle were disgusting to him, and he was almost rude to the raptures of a Mrs. Cimahue Brown. He bent his eye very seriously to the task, and often it was the eye

Sketch in Oils. By Cosmo Monkhouse.

alone which seemed to move. Stolidly, almost torpidly, Monkhouse would fix himself in front of the object, and then turn with some little word muttered, or almost grunted, which gave the key of the position. He was an exceedingly kind man, and one of the griefs of his life was that he had so often to explain to ambitious owners that their possessions were not quite so valuable as they supposed, were often, indeed, not of any value at all. Monkhouse's gracious heart shrank from the knitted brow and pursed lips of the disappointed owner, and he cultivated little shrugs and coughs that let the poor man down lightly, vague exclamations and wanderings of voice that broke his fall. Then he would trot, as soon as possible, to a

Pencil Sketch. By Cosmo Monkhouse.

station in front of something that he could really praise, and the difference of emphasis did more than direct exposure could have done to shake confidence in a fraud or a copy.

Curiously enough, it was long before Monkhouse hecame convinced that he could combine this delicate visual judgment with any definite species of literary work. He was approaching his fortieth year when he brought out a collection of "Studies of Sir Edwin Landseer." If I recollect right, these were of slight importance, and written in the first instance to accompany prints of the then so popular painter. But in 1879 Monkhouse had at length an opportunity to exhibit in a work of importance his practised talent as a connoisseur. In that year he was invited to contribute to a series of useful biographies of the Great Artists, a "Life of

Sketch in Oils. By Cosmo Monkhouse.

Turner." I well recollect the gratification which this commission gave him, and the zeal with which he prepared to carry it out. He was not weary with frequent taxes upon his memory; he was fresh, ardent, and full of compressed information. The figure of Turner particularly attracted him. He had long made the early English water-colour painters his study, and nothing could he more gratifying than to he asked to exteud his impressions to the painter whose genius emhraced and transfigured the talent of these his predecessors, in whose sunrise all their delicate stars were consumed.

There was room for such a volume as Monkhouse planned, and indeed for one on a more amhitious plan. Thornbury's too-famous "Life of Turner" had been one of those thoroughly bad books which seem to prevent the diffusion of light hy their dead bulk of obstruction. Hamerton had done much better in a biographical and critical monograph, elegant, fervent, and incomplete, like most of the work of that vivid and inconsequent writer. Monkhouse did not possess some of the brilliant qualities of Hamerton, he had less rapidity of mind, less initiation. But he brought to the execution of his task a ripe taste, a solid judgment, and great experience of eye. The result was that he produced a "Life of Turner" which, in spite of its exiguity, was, and remains, a little masterpiece, and which, in a series of useful manuals of very varied value, continues to stand alone as a permanent contribution to literature. I am not sure that it will not come to be regarded as the best of Monkhouse's compositions.

Sketch in Oils, By Cosmo Monkhouse,

The next important addition hy Cosmo Monkhouse to the literature of art was the volume which he published in 1890 on "The Earlier English Water - Colour Painters." The book did a great deal, if not to stimulate, at least to regulate and classify popular interest in these charming forerunners. Monkhouse was never tired of recommending the peculiarly English character of this national school of water-colour, with its unohtrusive sincerity and heauty, its homely feeling for the atmosphere and the colour of our island. His book covered the century from the Sandbys down to Turner, and he had some thoughts of pursuing the topic in greater minuteness through the pages of a vastly enlarged edition. While, however, he was still, in his leisurely way, wondering whether his avocations would permit him to do this, Mr. Roget came by with his huge official "History of the Old Water-Colour Society," and there was no room for another exhaustive treatise on the subject. But in 1897 Monkhouse reprinted his own monograph, with some revisions and additions.

In the pages of "The Earlier English Water-Colonr Painters" will be found some of the most finished passages of prose which Monkhouse has left behind him. His description of the Alpine drawings of Cozens, an artist for whose silvery effects be cultivated the highest enthusiasm; his differentiation of Turner and Girtin; his analysis of the charm of William Hunt; and his remarks introductory to the names of De Wint and Copley Fielding, are examples of the sohriety and grace of his sound and careful art criticism which cannot be praised too highly.

In 1886 Monkhouse was very much struck by a stranger who came up to him in the Early Italian room of the National Gallery, and asked him, "If there was anything in these pictures to admire except their age?" The desire to present a lucid and intelligible reply to this startling inquiry, led him to set ahout the immediate preparation of a popular work on "The Italian Pre-Raphaelites," which appeared in 1887, and from 1890 to 1893 he delivered several series of

popular lectures, partly at King's College and partly in the National Gallery itself, with the purpose of encouraging a sensible comprehension of archaic Italian art. He continued his popularisation until it embraced the whole National Gallery, on which glorious collection he issued a pleasant volume in 1895. I am not prepared to say whether Monkhouse possessed a specially technical authority on these difficult matters, but I am inclined to suppose that the conditions of his life, which had precluded much foreign travel, scarcely placed him on a level with younger and more daring adepts.

I must not forget that his careful and conscientious method was of inestimable service to the "Dictionary of National Biography," to which, from the heginning to the end, he supplied many exhaustive contributions. His memoir of Reynolds in particular was a triumph of concise composition; and his papers on Gainshorough, Turner, Millais, and many others were marked by the same characteristics of precise statement and patient inquiry—qualities to which his editor, Mr. Sidney Lee, testified in the Atheneum not long after his death. He was a great admirer of Hogarth; and in three articles which appeared in these pages, for Septemher, Octoher, and Novemher, 1879, he printed a most excellent and original comparison of Landseer and Hogarth as humourists and animal painters.

Cosmo Monkhouse was a man of great simplicity and straightforwardness. He did not affect, nor even perhaps possess, the qualities which encourage a writer to do hattle with his peers. He was pacific, he was indolent, he was a little slow. In the contemplation of heauty, he preferred its minor to its major key. He admired and revered the great masters, hut it was a drawing hy Edridge, a green and purple tile from Shiraz, a charming Sheraton table, a mezzotint after Coates, that he really enjoyed. He was a refined virtuoso who was also a perfectly honest man, and this combination of modest thoroughness with a cordial and unohtrusive enthusiasm is the key-note of his character as a critic.

## Rothiemurchus.-II.\*

BY THE REV. HUGH MACMILLAN, D.D., LL.D., F.R.S.E.

THE Spey, as it forms the western houndary of Rothie murchus, has a somewhat diversified course, heing mostly swift and shallow, with extensive margins of white pehhles in its hed; hut where the high road from Aviemore crosses it hy a picturesque iron hridge, it expands into a deep and wide pool as hlack as Erehus, as if it concentrated in itself all the peaty waters of the hogs of Drumochter, where it rises, and gives one an impressive idea of the might of the river. The Spey is not a classic stream. No poet has sung its praises, hut the murmur of its tide has found articulate expression in the beautiful strathspeys which echo the swiftness of its pace and the swirl of its waters. It has been associated as no other British river has been with our national dance music. Its tributaries from Rothiemurchus, each "a mountain power," swell its volume and add to the heauty of the scenes through which they flow. They traverse the whole extent of the region from east to west, from the hare hleak heights of Braeriach and Cairngorm to the rich green meadows which the Spey has made for itself in the low grounds. The vast pine forests would be oppressive without those voices of Nature that inform the solitudes, and destitute of those silvery pools which mirror the alders and hirches. The Luineag issues from Loch Morlich, and exposes for

converts much fertile land into a wilderness of sand and gravel. With its vagaries have heen connected the fortunes of the House of Rothiemurchus, which would he prosperous so long as the course of the river continued the same, hut disastrous should it change its hed and work out a new channel for itself. Twice, at least, this change has happened, when the property passed from the Shaws to the Grants, and during the great Moray floods which devastated the whole district. The subject streams of Rothiemurchus, which are the size of rivers and speak powerfully of the great range of mountains in which they rise, gather to their generous

mountains in which they rise, gather to their generous heart the whispered wanderings of a hundred rills. They hring down the grand music of the mountains, the roar of the tempest, and the sigh of the wind and the swoop of the mist in the wild corries, and the soft murmur of the upland hrook. In the rhythm of their song may he detected all the mystic tones in which the mountains converse with one another. The Luineag is the stillest water, for its hed is least rugged; hut the Binnie is full of large granite houlders over which it rushes with a swift clear current, whose harshness is

\* Continued from page 10.

Tiew of Rothismuschus from Lower Tullochghru. From a drawing by A. Scott Rankin.

made musical hy the listening air. It is the sound of the Binnie alone that is heard, when the night deepens the oppressive stillness and lonesomeness by hushing all other noises, and the great mountain range looms on the horizon heneath the stars, a gigantic silhouette—a geological dream, a vision of the primeval ages, whose shade inundates all the landscape, and turns all the amphitheatrical valleys black as chony.

Nowhere are there more magnificent fir-forests than those of Rothiemurchus. These forests, about sixteen square miles in extent, are the relics of the aboriginal Caledonian forest which covered all this region in one unhroken umbrageous mass; and there are here and there many of the old giants which the hand of man had never planted, still growing in the loneliest recesses, and giving an idea of what the whole primeval forest must have been in its prime, ere the woodman, about a century and a half ago, invaded its solitudes and ruthlessly cut down its finest trees to be converted into timber. Most of the trees that now cover the area are of comparatively recent planting, and though well grown do not display the rugged picturesqueness for which the fir in its old age is so remarkable. A plantation of young Scotch firs is as formal as any species of the pine tribe, and presents an exceedingly tame and monotonous appearance; but as the tree grows older, it develops an amount of freedom and eccentricity of shape which no one would have expected of its staid and proper infancy. Its trunk loses its smoothness and roundness, and hursts out into rugged flakes of hark like the scales on the talons of a hird of prey, or the plates of mail on an armed knight. Its boughs cease to grow in symmetrical and horizontal lines, and fling themselves out in all directions gnarled and contorted, as if wrestling with some inward agony or outward obstacle like a vegetable Laocoon. Its colour also changes; the trunk becomes of a rich tawny red, which the level afternoon sun briugs out with glowing vividness, and the blue-green masses of irregular foliage contrast wonderfully with this rusty hue and attest the strength and freshness of its life. Such old firs are indeed the trees of the mountain, the companions of the storms that have twisted their boughs into such picturesque irregularities, and whose mutterings are ever heard among their sihylline leaves. They are seen to best advantage when struggling out of the writhing mists that have entangled themselves among their hranches; and no grander background for a sylvan scene, no more picturesque crown for a rocky height, no fairer subject for an artist's pencil exists in nature. While the rain brings out the fragrance of the weeping hirches, those "slumbering and liquid trees," as Walter Whitman calls them, that are the embodiments of the female principle of the woods, it needs the strongest and hottest sunshine to extract the pungent, aromatic scents of the sturdy firs, which form the masculine element of the forest.

The fir is an old-world tree. Its sigh on the stillest summer day speaks of an immemorial antiquity. Its form is constructed on a primitive pattern. It is a relic of the far-off geological ages, when pines like it formed the sole vegetation of the earth. It is the production of the world's heroic age, when Nature seemed to delight in the fantastic exercise of power, and to exhibit her strength in the growth of giants and monsters. It has existed throughout all time, and has maiutained its characteristic properties throughout all the changes of the earth's surface. It forms the ever-green link between the ages and the zones, growing now as it grew in the remote past, and preserving the same appearance in build and figure.

It is a novel experience to wander on an autumn

Upper Tullochghru.

Whitewell and Larig Pass,
From a drawing by A. Scott Rankin.

afteruoon through the unbroken forests of Rothiemurchus. The Scotch fir usually looks its best at this time, for the older leaves that have a yellow withered hue have been cast, and the new ones developed during the summer shine with a beautiful freshness and greenness peculiar to the season. Wherever a breach occurs among the trees, the ground is everywhere covered with a most luxuriant growth of juniper bushes, some of which are of great age and attain a large size. The grey-green of the foliage contrasts beautifully with the dark blue-green of the firs. A dense undergrowth of heather, into which the foot sinks up to the knee, clothes all the more open spaces. Where the trees crowd together more closely the heather disappears, and in its place the ground is carpeted with thick luxuriant bushes of the bilberry and cranberry, whose vivid greenness is very refreshing to the eye. The huge conical nests of the black ant, composed of withered pine-needles, are in constant evidence; while on the forest paths, when the sun is shining, may be seen myriads of the industrious inhabitants passing to and fro on their various avocations. The labour involved in the construction of these nests must be enormous. Many of them are old and abandoned; and over these the cranberry and bilberry bushes, which are ever pushing forward their roots on new soil, spread themselves so that they are half or wholly covered with a rank evergreen vegetation, indicating their origin only by the undulations they make in the ground. The aromatic smell that pervades all the air is most refreshing. It stimulates the whole system as you fill your lungs with its invigorating breath. The sanative influence of the fir-forest is most remarkable. The plague and the pestilence disappear, the polluted atmosphere is deodorised, and with an effect as magical as that of the tree which sweetened the bitter Marah of the wilderness, the presence of this tree purifies the most deadly climate.

There is no wood more durable than the timber of the old Scotch fir. It is proof, owing to its aromatic odour, against insect ravages; and its texture is so hard and compact that it resists the decay of the weather. So charged with turpentine are the firs of Rothiemurchus, that splinters of the wood used to be employed as candles to light up the dark nights, when the people gathered together in someneighbour's cottage to ply their spinning. wheels and retail their gossip and old stories. These wood-torches when set in sconces would burn down to tbe socket with an unwavering and brilliant flame, and would thus give forth a large amount of light and heat at the same time. During last season the dark, cold days were hrightened for us by splendid fires made of old roots left in the ground when the patriarchal trees had been cut down, and which contained a vast amount of resin. I know no fires so delightful, not even those made of the pine-branches and cones of the Vallambrosa forest in Italy, blazing up at once, and continuing to the end clear and bright, while emitting a most pleasant fragrance filling all the room, and creating a most healthy atmosphere, which counteracts the noxious influence of the rain and damp. The trees in this cold mountain climate do not grow very rapidly, but they are valuable in proportion to the slowness of their growth; the part of the wood which is exposed to the sunshine being little more than sapwood of small value, while the part which is turned to the north, and grows instormy situations and takes long to mature, is hard and solid and very valuable. It is of a fine red colour, and when cut directly to the centre or right across the grain is very heautiful; the little rings formed of the annual layers heing small and delicate, and in perfectly even lines. The hest part is nearest the root.

Ahout two hundred years ago such was the ahundance of timher and the difficulty of finding a market for it, that the laird of Rothiemurchus got only is. 8d. a year for what a man chose to cut down and manufacture for his own use. The method of making deals was hy splitting the wood with wedges, and then dressing the hoards with axe and adze; saw-mills with circular saws and even the upright hand saw and plane heing altogether unknown. A very old room in Castle Grant is still floored with deals made in this way, showing the marks of the adze across the hoards. As a specimen of the immense size of the trees that were cut down in the forests of Glenmore and Rothiemurchus, there is preserved at Gordon Castle a plank upwards of six feet in hreadth. The trees when felled were made into rafts and floated down the Spey into the sea. Large heaps of cld roots dug up from the peathogs and from the clearings in the forest may he seen, piled up heside every cottage and farmhouse for household fires; and everywhere the people seem to he as dependent upon the forests as the peasants of Norway. Indeed, what with the forests and the mountains and the timber-houses, one might easily imagine oneself wandering in some Dovrefield valley, instead of at the foot of the Cairngorm range.

For the contemplative and poetic mind there is no more impressive scene than a fir-forest. It is full of suggestion. It quickens the mind, while it lays its solemn spell upon the spirit like the aisles of a cathedral. Here time has no existence. It is not marked as else-

where hy the varying lights and shades, hy the opening and closing of the flowers, hy the changes of the seasons, and the appearance and disappearance of various objects that make up the landscape. The firforest is independent of all these influences. Its aspect is perennially the same; unchangeable amid all the changes that are going ou outside. Its stillness is aweinspiring. It is unlike that of any other sceue in nature. It is not solitude, hut the presence of some mystery-some supernatural power. How vividly, in the hallad of the Erl King, does Goethe describe the peculiar human or supernatural feeling of the forest. The silence is expectant, seems to hreathe, to become audihle, and to press upon the soul like a weight. Sometimes it is broken by the coo of a dove which only emphasizes it, and makes the place where it is heard the innermost shrine, the very soul of the loneliness. Occasionally you hear the grand sound of the wind among the fir-tops, which is like the distant roar of the ocean hreaking upon a lee-shore. Sometimes a gentle sigh is heard far off, how originating you cauuot tell, for there is not a hreath of wind, and not a leaf is stirring; it comes nearer and waxes louder, and then it hecomes an all pervading murmur. It is like the voice of a god; and you can easily understand how the firforest was peopled with the dim mysterious presences of this northern mythology. In its gloomy perspectives, leading to deeper solitudes, there seem to lurk some weird mysteries and speechless terrors that keep eye and ear intent. You have a strange sense of heing watched, without love or hate, hy all these silent, solemn, passionless forms, and when most alone you seem least lonely.

## 'Judith Shakespeare.'

AFTER THE PICTURE BY J. YOUNG HUNTER.

WISELY, as all will concede, Mr. J. Young Hunter a son of Mr. Colin Hunter, A.R.A.-has renamed the picture reproduced opposite since it was exhibited in the 1900 Academy. Then it bore the sufficiently apt title, 'Rings and things and fine array'; words, it is unnecessary to state, used by Petruchio in "The Taming of the Shrew." But as the theme of the picture was suggested to the artist by the late William Black's novel," Judith Shakespeare," and as we have here a presentment of the daughter of our great poet and dramatist, and of Anne Hathaway, on the door-step of the still to be seen cottage near Stratford.on. Avon, the latter shading her eyes from the too vibrant sunshine to watch her richly-clad daughter essaying a curtsey in the manner of long ago: as this is so, the new title is the simple and obvious one. Familiar as is the name of Judith Shakespeare to everyone, few would be able at short notice to recite the relatively little that is known of her life. Hamnet and Judith Shakespeare, twins, were born early in 1585, the parish registers showing that they were baptised on February 2nd. Soon thereafter, dome'stic ties irritating him probably, Shakespeare left Stratford, and for the succeeding eleven years saw little of his wife and children. Those were the years of literary triumphs, the time when, by reason of his considerable earnings, he applied for and ultimately obtained the right to a coat-of-arms. Practically nothing is known of Judith Shakespeare's early years; indeed, not until the beginning of 1616, when on account of failing health Shakespeare caused his will to be drafted, do we hear of her again. On February 10th, 1616, Judith was married at Stratford parish church to Thomas Quiney, son of an old friend of her father, and four years her junior. Inasmuch as the banns had not been asked in public, and no licence procured in advance. the bride and bridegroom were summoned to the Ecclesiastical Court at Worcester, when a fine was imposed for the irregularity. They lived at a house called The Cage, in Bridge Street, where Quiney traded as a vintner, he taking part, too, in municipal affairs. and acting as a councillor and chamberlain. Evil times came in 1652, when the husband appears to have left Stratford for London, only to die in the metropolis a few months later. There were three children. The eldest, Shakespeare, baptised on November 23rd, 1616, lived but till the following May. Richard, christened on February 9th, 1617-8, died before he reached his majority; and so it was with Thomas, baptised on January 23rd, 1619-20, buried on February 26th, 1638-9. To Judith, who survived her husband, sons, and sister-she died at Stratford in her 77th year-Shakespeare bequeathed the tenement in Chapel Lane, in remainder to his elder daughter, as well as £150 in money, of which two thirds, her marriage portion, was to be paid within a year, and an additional £150 if she were alive three years after the date of the will. Thus, in addition to the incomings from the Chapel Lane house, the gaily-decked lady of our picture received what to-day is equivalent to about £1,200.

## 'Memories.'

BY WALTER LANGLEY, R.I.

FROM THE WATER-COLOUR DRAWING IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

LTHOUGH Mr. Stanhope Forbes, A.R.A., may be regarded as the founder of that school of English painting which is associated with the name of Newlyn, yet Mr. Walter Langley is its undoubted "father," that he was the first artist who settled in that picturesque Cornish fishing-village. He went there in 1882, and has been faithful to it ever since. During the past twenty years he has devoted himself to painting subjects taken from the daily occupations of the Newlyn fishermen and their womenfolk, and their perpetual struggle to make a living out of the sea. Occasionally he has depicted them in their lighter moments, but as a rule it is the sadder side of their lives which most appeals to him, and he chooses rather to paint the wife in her poor cottage, worn with anxiety for her husband battling against the tempest out at sea; the young widow still grieving for the victim of some past storm; or old men, women, and children crowding down to the small pierhead to watch the boats which are running towards safety. His interest is with the toilers and workers, and so he selects naturally such sad themes as these, but without any thought of exciting that sentimentality which lurks in so many hearts.

'Memories' is a typical example of Mr. Langley's point of view and his methods of working. It represents the interior of a low-roofed cottage with whitewashed walls, across which stretches a long, low window, over the curtain of which a glimpse of the sea under a grey sky can be seen. A young widow, with her head resting against the window-beam, is gazing out, her heart torn with the remembrance of the husband and bread-winner now lying at the bottom of the sea. She has been mending a fishing-net, but, overcome with grief, her arm falls idly to her side. In the centre of the room her mother sits in a wooden arm-chair at a small table. The old lady wears a white cap and spectacles, and is looking up from her needlework to gaze sadly and sympathetically at her daughter, whose bitter trouble she has herself most probably experienced in past years. In the foreground the fisherman's little daughter is seated, looking down at an open picture-book on her knees. She, too, misses the absent one. On the wall her father's violin still hangs, and his yellow tarpaulin jacket lies on the oak chest.

This picture, which was painted in 1885, displays all the technical brilliancy for which Mr. Langley's watercolour work is famous, while the feeling he has displayed in the rendering of it is very tender and sympathetic, making it a very characteristic example of his genuine and delicate art.

The artist, who is a member of the Royal Institute of Painters in Water-Colours, and the Birmingham Royal Society of Artists, was born in Birmingham in 1852. He was apprenticed to a lithographer, and studied design in the evenings at the School of Art, and later on at South Kensington. But Nature was too much for him, and he abandoned business for art. With the exception of his lessons in designing, he never received any instruction. In learning to paint he relied entirely on himself, with the result that his work soon displayed an originality and freshness which has placed him in the position he

THE MANUFACTURE OF PORCELAIN IN ENGLAND.

By FRED, MILLER.

Soup Tureen in white Porcelain made at Bow, circa 1750.

WE have ahundant evidence that the potters of the 17th century were keenly desirous of learning how that mysterious hody we call china was made. We saw in the former chapter that John Dwight, the great Fulham potter, bad claimed to have discovered the secret of its manufacture, though he got no nearer than a bard, wellfired stone ware. Any kind of fired clay is a simple process of manufacture compared to porcelain, and without the proper ingredients a physical impossibility. It must bave heen very tantalising to an English potter to see vases, plates, and other articles imported in quantities from Canton, while utterly unable to make anything like this hard, heautifully glazed semitransparent ware, and to know that orders for services were executed in China for rich folk, as was largely the case, while his productions were passed over.

It has been the present writer's endeavour to steer clear of technicalities and interminable discussions that take up so much space in many works on ceramics. Questions of dates, marks, and the chemistry of pastes are only confusing to the general reader, and yet at the very threshold of the subject of the first manufacture of porcelain in this country we are confronted with a number of debatable matters. The reader who is not a potter merely desires a simple, clear definition of wbat is meant by china or porcelain. Briefly then it is a body composed of two natural ingredients, a white refractory earth called china clay or kaolin, which will bear a great heat without melting or collapsing, and a white earth which will partially melt or vitrify at a great beat. These two earths are perfectly incorporated and in the kiln become one, the fusible earth mingling with the infusible, which gives the ware its translucence. But before these two natural ingredients were discovered in England the vitrifiable substance was made artificially and was called a "frit," in other words a kind of glass. A hody or paste, to use the potter's term, so made is called artificial to distinguish it from natural porcelain, and the early porcelain in this country belonged to the latter

\* Continued from page 13, Supplement.

class. It is to William Cookworthy, of Plymouth, that we owe the discovery of hard natural porcelain, he being the first potter to mix the white china clay and Cornish stone together to produce the hard translucent body we find in Oriental porcelain.

Professor Church states that only for a short time was natural porcelain made in England. It never became a flourishing industry, as it did in certain Continental potteries, and was displaced by the artificial porcelains, and to this day soft porcelain is the sole product of English china works.

With such a composite hody as this artificial china a large number of ingredients have from time to time heen tried, such as bone ash, the effect of which is to enable the paste to stand a great fire, ground flint, Swedish felspar, pipe clay, alum, etc. The glaze is a very important part of china-making. The hard body requires a hard glaze composed largely of felspar, lime and potash. The softer artifical pastes bad lead in the glaze, so that its melting point would be about the same as that to which the body itself was fired, it being very important that the paste and glaze should he in equilibrium. A hard glaze could not be applied to a soft body, as the beat to melt the glaze would melt the paste, and a soft glaze on a hard body would craze or crack and soon discolour. The crackle on Oriental porcelain is purposely done and is under the control of the potter, and is no defect in the glaze itself.

Bow Vuse with painted and modelled decoration, Schrieber Collection, S.K.M.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

The first china works in England were at Bow, the patent, dated 1744, being granted to Edward Helyn and Thomas Frye. The latter supplied the art, and we know from the mezzotint plates he scraped that he must have been equal to the management of the art side of a pot factory. Their patent was for the production of a porcelain, containing amongst other ingredients "an earth, the produce of the Cherokee nation in America." The importation of this china clay from America was costly, and in a later patent the unaker, as the Cherokee earth was called, was replaced by other materials. This pottery flourished for awhile, the turnover advancing from £6,500 in 1750 to £11,200 five years later. Nevertheless we know from that interesting human document of Craft's in the British Museum, quoted in the first chapter, that misfortune fell upon the firm and the works passed into Duesbury's hands in 1776, and were shifted to the Chelsea pottery, which was, with the Derhy works, under his control.

If we consider the Bow china from an art point of view we find that at the outset Chinese porcelain was taken as the model (the works were called New Canton), and the soup tureen in S. K. M. has the hawthorn sprig in relief, a pretty faithful copy of an Oriental motif, but at the base of the handles are moulded masks such as no Chinese would bave modelled. The love of moulded decoration is a marked feature in both Bow and Chelsea china, and it was soon carried to excess, so that we have vases hiding themselves under a wealth of flowers, ribhons, etc., imitated in china. Much of this moulded ornament is a marvel of misdirected ingenuity and mechanical skill, for so delicate is it that no specimen could long bave remained perfect. It seems a pity that so much time and

ingenuity was given to this flimsy

Chelsea Figure, Schrieber Collection, S.K.M. Circa 1759.

of decoration.

The painted decoration in enamel colours is somewhat thin-looking, small motifs being dotted over the surface often to hide some defect in the glaze. Bow was a very soft porcelain, and it is evident that they had much trouble in keeping the ware true, for we notice in their vases a large number of them are very much out of the perpendicular, having shrunk unevenly in the kiln. A large quantity of figures were produced at Bow.

One very curious feature ahout the early English porcelain is the hlend of the rococo with the Oriental, which produces a very strange result. These 18th-century potters could not help heing much influenced by the Chinese porcelain they were familiar with, and at the same time the products of Saxony and Sèvres which were hrought over were also thought to he worth copying: hence this queer hybrid decoration which is so distinctive of the time. So intent were these old potters in making goods in the "old Japan" or other "taste," that no opportunity was given for any strenuous original endeavour.

The date of the founding of the Chelsea works is not known, but from advertisements of the time it was certainly in full swing in 1750, as the announcement that large numbers of curious goods were for disposal in this year shows. We know too, from Shaw, that large numbers of potters went from Burslem to work in the Chelsea china factory in 1747. "Soon finding, however, that they were the principal workmen, on whose exertions all the excellence of the porcelain must depend, they resolved to commence business on their own account, at Chelsea, and were in some measure successful." The Mr. Charles Gouyn who, in the General Advertiser of January 29th, 1750, is alluded to as 'proprietor and chief manager of the Chelsea house," may have been one of the foreign potters who, from time to time, came to England, and who hy reason of his taste and

Chelsea Vase, Sprimont period. Circa 1760. Jones Bequest, S.K.M.

#### SUPPLEMENT TO THE ART JOURNAL.

Specimen of Tile printed by Sadler and Green in Liverpool. Circa 1750.

ability took the lead in this company of Staffordshire potters and so became proprietor-manager. Nicholas Sprimont seems to have succeeded Gouyn, a position he kept until 1764. This master potter was originally a silversmith, and we can trace in many of the "pieces" produced under his direction how much the design of the silversmith influenced the shaping of china. Sprimont, who, like Gouyn, was a Fleming, had a somewhat uncontrolled taste in the matter of handles, cover lids, and feet to vases, evidently in imitation of ormulu mounts, which as a silversmith he may have modelled for Oriental porcelain, for it was common to mount Chinese porcelain in florid ormulu settings. The statuettes, groups, and figures, are among the

best-known productions of the finest period, and in the catalogue of the sale in 1756, more than forty varieties of figures are mentioned. The actors and actresses of the day were favourite subjects, but figures of Shakespeare, Milton, Sir Isaac Newton, George III., and Britannia were popular. Tureens, sauce-boats, and dishes were made in the shape of boars' heads, swans, ducks, rabbits, partridges, etc., the modelling of these being often most excellent. This class of china is peculiar to Chelsea.

The mechanical skill in moulding the small statuettes is considerable, as Mr. Derwent Wood, the well-known sculptor, pointed out to the present writer, and it is his opinion that there are no moulders capable of doing such work now living. The figures themselves are often very spirited, and Roubilliac, Bacon, and other celebrated sculptors were employed in modelling for the Chelsea works.

Professor Church divides Chelsea china into the very translucent paste, owing to the employment of much glassy frit and the extreme softness of the glaze made from the opening of the pottery until 1757, and

the harder body due to the use of burnt bones which characterises the work of the next ten years. The productions of this pottery appear to have been sold by auction yearly, and the number of pieces must have been considerable, as these sales lasted at Christie's sixteen days. The price fetched by "a large group of Jason and Medea vowing before the Altar of Diana," enamelled and richly finished with gold, was only three guineas in 1773; a century later in the same sale rooms £29 10s. was the sum realised. That the gains of the china works were small we may infer from the difficulty Sprimont had in selling the pottery as a going concern; but in 1770 Duesbury, the then owner of the Derby works, became the proprietor and continued them until 1785, when Chelsea works were closed, the moulds, models, etc., being removed to Derby. So ended the two celebrated London china works, Bow covering a space of about thirty-two years and Chelsea a few years longer. Just as it is said now that the purely art side of a pottery does not pay, so evidently the proprietors of the Bow and Chelsea works proved.

When once china-making was introduced into England works sprang up all over the country, so eager were people to manufacture this new ware,

and as a rule patrons were forthcoming to give the enterprise their help: thus we find the Duke of Cumberland the patron of the Chelsea works. Worcester porcelain was originated by a Dr. John Wall, physician, and Mr. William Davis, apothecary, both natives of the place. A deed exists (dated June 4th, 1751) giving the names of fifteen partners who between them subscribed the capital, which consisted of forty-five £100 shares. Davis appears to have been the manager, and it was probably he who knew most about the composition of the porcelain body. Great pains were taken to guard against the secret leaking out and no strangers were to be admitted into the works.

Pifteenth-Century Tapestry in the possession of the Vintuer's Company, London.

## The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

A MONG those who rode out of London with Chaucer were "a webbe, a dyer and a tapiser." It is supposed that the "webbe" was a plain weaver, and that the "tapiser" was engaged in weaving stuffs for carpets and hangings by the special process that distinguishes carpet and tapestry-making from ordinary weaving. These early "tapisers," however, are obscure figures in the industrial life of that time. None of their work remains, their names are unknown, and though it is supposed that from the thirteenth century highwarp tapestries were woven on native looms, it is impossible to be sure that the hangings of which descriptions remain, were not examples of "Opus Anglicanum"-of the famous embroidery that English workers furnished for the churches and palaces of Europe. Whether high-warp or low-warp tapestryweaving was first introduced into this country is also not known. In fact, when Edward III., in the eighteenth year of his reign, ordered inquiry to be made concerning the tapestry manufacture in London—"De inquirendo de mystera Tapiciorum, London"—there was, if the commissioners had but known, scope for a report that would have been as frequently quoted as the unilluminative fragment of the document alluded to by all writers on the subject. The vagueness of our information concerning these forerunners of the carpet and tapestry-weavers of to-day is almost equalled by the confusion as to what tapestry is, that prevailed then and prevails now. Before speaking of the different manufactories that succeeded the forgotten ventures of early times, it is as well to give a straightforward description of the process.

\* Continued from p. 10, Supplement.

Tapestry-weaving is of two kinds-high-warp and low-warp weaving. In high-warp weaving the weaver sits behind the upright frame, where, on rollers, the warp is stretched. Behind him is the cartoon, whence he translates colour and detail to an outline traced on the threads in front of him. He sees the face of the web by reflection in a mirror, and copies at sight, turning to the cartoon, and then, thread by thread, weaving the picture with coloured wool on the warp. The warpthreads are separated by cross staves at the top of the loom into two ranks, though lower down they lie in the same plane. Weaving begins in the lower right-hand corner of the frame. By an attachment of strings the weaver pulls towards him, with his left hand, a group of threads from the first rank, behind which he passes his spindle, wound about with coloured yarn. To complete the "pass," the corresponding group of threads in the second rank is brought forward, and the spindle is returned from left to right, entirely covering the warp. The weft is then driven home, and another pass is made. In this way the tapestry-weaver forms solid patches of coloured yarn corresponding to the forms in his copy. Gradation of tone is given by hatching with one or more tints.

The low-warp weaver looks down on the warp-threads, which are stretched in a horizontal frame above the cartoon. Between the threads he sees, dimly and imperfectly, the design he is to copy. His own work is not seen while he is about it, as the front of the web is underneath and the weaving is done from the back. The warp-threads are separated, as in the ordinary handloom, by two treadles, operating on alternate threads, and as the weaver has both hands free for passing and

#### SUPPLEMENT TO THE ART JOURNAL.

re-passing his spludle, and has not to measure or test his work hy the cartoon, weaving after this mode is more rapid than on a vertical loom. Consequently low-warp tapestry is produced at less cost.

It is plain which of these two methods, supposing the weaver an artist with opportunity to show his art, will produce the finer tapestry. In texture, not even an experienced workman can distinguish hetween the work of vertical and horizontal looms. The whole difference lies in greater or less opportunity for art, and if the weaver is unable to do more than make a spiritless copy, or if the cartoons are ugly or unsuitable, it matters nothing whether he works by method, not seeing his

work, and only seeing his pattern imperfectly, or as one not hindered from using judgment and invention. The conflict of high and low warp is a great part of the history of tapestry-weaving, and in England there is no record of it. The other conflicthetween tapestryweaving as the art of making textile pictures and tapestry-weaving as a method of imitating oil - paintings - was also fought out elsewhere than in England, and until our own day English tapestry was almost entirely taken up with reproductions of painted pictures.

The exceptions are the few pieces ascribed to English workshops of date earlier than the factory at Mortlake. None of these is presumably earlier than the middle of the fitteenth century. The 'St. George and

Dragon' piece we have already reproduced. It shows admirably the character attributed to English work at a time when mediæval ideals were tending towards the greater elahorateness of the Renaissance. The famous hangings in St. Mary's Hall, Coventry, represent Henry VI. and his Queen, or Henry VII. and Elizaheth of York, on some occasion of ceremony, and belong in date to the latter half of the fifteenth century. Other pieces are the fine 'St. Martin' tapestry in the possession of the Vintners' Company, here reproduced, and the 'Marriage of Henry VII.' in a private collection in Cornwall. The weaving of the 'St. Martin' is ascribed to the monks of St. Alhans, and the date is said to he

Enough tapestry remains, then, to show that Rohert Hicks, the tapestry-weaver established by William Sheldon in Barcheston manor-house, at Weston, towards the end of the reign of Henry VIII., was not the "only heginner" of the art in this country, as Sheldon's will affirms. Prohahly, however, this was the earliest manufactory established in England, though at Kilkenny some time hefore 1539—when he died—Piers, Earl of Ormonde, made an attempt to introduce the weaving of tapestry, carpets, etc., from Flanders. In the Warwickshire manufactory were woven four great maps of the Midland Counties, showing towns and villages, forests, streams, and even mansions. They hear the Sheldon arms. Three of these are now in the York Museum, and the fourth, though mutilated, is in the

Gough collection at the Bodleian. pieces at Hatfield, representing the 'Four Seasons,' are also attrihuted to Rohert Hicks, and show how strong was the Flemish influence - prohahly operative on English tapestry design from the time of Edward III. What was the end of the Barcheston experiment I do not know. The looms were in existence for many years after the death of William Sheldon in 1570.

Nearly fifty years later, in 1619, James I. made a grant of £2,000 to Sir Francis Crane, to enable him to establish tapestry works at Mortlake. A house was huilt on the north side of the High Street, and subsequently a "limner's house" was huilt on the opposite side of the street for the designer to the works. Fiftyskilled

High-warp Weaving. Tapestry Weaving at Merton.

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

exists. On the scale desired by Van Dyck—twice the size of the Raphael cartoons—the designs alone would have cost the king 300,000 crowns. Compared with the £300 paid for the seven cartoons of the 'Acts of the Apostles' in 1630, the price is high enough. It proved prohibitive.

I have spoken first of contemporary designs made for the Mortlake weavers, as it is obvious that these represent the most vital aspect of such a venture. Portraits must be added to the list—portraits of Van Dyck and Crane, of Crane by himself, and of the two first Stuarts of the Belgian manufacturer, where they had remained after the execution of one of the numerous woven series made from these designs. Probably, too, the cartoons for 'The History of Vulcan,' which ranks with 'The Acts of the Apostles' as the historic achievement of the manufactory, were purchased. Both series of tapestries are now in the National Garde Meuble at Paris. The Raphael cartoons are, as every one knows, in the Victoria and Albert Museum.

One can do little more than summarize the output of the Mortlake weavers as representative of the place they

Low-warp Weaving. The Return of Ulysses to Penelope.

By Pinturischio.

with their queens, the heads of the royal children in the borders, are among them. But by far the greater amount of Mortlake tapestry represents such stock series of designs as 'The Seasons,' 'The Months,' 'The Senses,' 'Hero and Leander,' 'Diana and Callisto,' or 'The History of Vulcan'—perpetuated by the post-Renaissance tapestry looms of every country. The purchase of the Raphael cartoons for the manufactory has been already alluded to. It must be remembered that such cartoons, by an unwritten law, became the property of the tapestry-weaver into whose hands they were given to be reproduced. By the advice of Rubens, Charles I.—then Prince—secured seven of the ten cartoons commissioned by Pope Leo X., from the workshop

take in the tapestry weaving of England. They wove many famous suites, in texture fine, in colouring somewhat inferior to the colouring of the Gobelins. The tapestries of Mortlake rank with great tapestries, but they are only English woven in the sense that they were woven in England. They represent no tradition of English work, they are not the beginning nor the conclusion of any organic art in this country. Flemish workmen wove them; the cartoons were furnished by great painters and by ingenious designers from Italy, from Flanders, from Germany—the manufactory represents an event in the universal history of tapestry weaving, but no event in the development of the art in this country. James I. was genuinely interested in the

#### SUPPLEMENT TO THE ART JOURNAL.

work, Charles I. even more so. Both spent large sums on it. So, according to his own account, did Sir Francis Crane. Much of the record of the undertaking is a record of the King's debts to Crane, of Crane's dehts to the workmen, of settlements and re-settlements and of such things not germane to the art of weaving. According to one account, the profits on four copies of 'The History of Vulcan' amounted to upwards of £12,000, yet everyone seems to have been in deht who was engaged in the husiness. Sir Francis died in 1636. At that time 140 weavers were employed at Mortlake, and the manufactory was carried on, hut without noteworthy results, till some time after the Restoration.

In the eighteenth century, there were manufactories of tapestries and carpets in Fulham, in Paddington, and at Soho, hut these are distinct from the real heginning of carpet weaving hy British manufacturers in 1735, and may he briefly dismissed. The Fulham manufactory is the most interesting. An unfrocked Capuchin friar—Parizot hy name—was at the head of it, and the British

Government supported his scheme for the manufacture of Turkey carpets, as they were made at the "Savonnerie." The chief difficulty was to procure workmen, the weavers in the great French fahriques heing watched and kept in durance of the most vigilant kind, for fear, after their training, they should depart with trade secrets to the service of foreign governments. The punishment of those unfortunates who tried to escape; the devices of the state to prevent it; the espionage, the opening of letters with suspicious post-marks—such as "Padinkton" or "Kensington"—the detention of letters addressed by Gohelins workers to "M. Parizot, in Foullemme Manufactory à London," are among the curiosities of textile history. It is said that a hundred workmen were got together hy Parizot, hut his extravagance ruined the project, and his successor, Passavant, transferring the establishment to Exeter, failed to retrieve its fortunes. Soho, in 1758, produced tapestries from landscapes hy Francesco Zuccherelli that were for long to he seen at Northumherland House; otherwise the achievements of this manufactory are obscure.

The Enchanted Castle. (No. 67 in R.A. Exhibition.) By Claude.

## The "Old Masters" at Burlington House, 1902.

CLAUDE.

THE collection of so many fine Claudes under one roof will be to many the chief attraction of this Exhibition. A right understanding of the great Franco-Roman landscapist of the seventeenth century can only be obtained by a sympathetic understanding of his personal attitude towards nature, and of the peculiar mode of interpretation resulting from it.

Ruskiu has attacked him with a rhetorical bitterness which would do credit to a special pleader or to an electioneering agent; but he has brought no new charges against him. He decries his compositions as of exceedingly unequal merit, a fact which has always been recognised, even during his lifetime, and by his friends, who, nevertheless, valued his works above those of any other landscape painter; while popes, princes, and art-lovers vied with each other for their possession, purchasing them at prices then unheard of.

"He must be considered," writes a German painter who knows him well, "as one who rose by force of native genius, the pupil of nature only. He spent whole days in the open air, observing the subtlest atmospheric changes. He troubled himself with no rules, but followed nature simply. It was owing to his happy natural gifts that his compositions were so fortunate. Speaking generally, he was absolutely unlearned, signing his name even with difficulty. His life was both quiet and retired, his only pleasure being in the exercise of his art. . . .

"His work has this great quality, it attracts all; it charms the unlearned, while the connoisseur, enraptured and amazed, can hardly tear himself away from so much beauty."

His gifts lay only in the direction of landscape; in spite of much time and effort expended on them, he could never draw figures. When his friends criticised their unnatural length and shocking drawing, he would reply: "I sell my pictures, but I throw my figures in!"

It is as a painter of light, of radiance, that he is unapproachable, and it is as such that he is lauded on his tombstone, "QUI IPSOS ORIENTIS ET OCCIDENTIS SOLIS RADIOS IN CAMPESTRIBUS MIRIFICE PINGENDIS EFFIN-XIT," "Who Wonderfully painted the Light of the Rising and of the Setting Sun upon the Country Side."

He died at the age of 82, in the persistent exercise of his art; having always lived with consistent homeliness and simplicity.

It is difficult to understand how a man of Ruskin's undeniable æsthetic subtlety could have so completely failed to understand Claude as to be able to write "there is in his work no simple or honest record of a single truth "; and again, "his pictures are one mass of error from beginning to end"; phrases most prejudicial to the critic's reputation as an art appreciator.

It is true that he who approaches Claude with the eye of a botanist, thirsting for such information as whether the group of trees silhouetted against the clear sky consists of oaks or beeches, of walnuts or of chestnuts, will go away disappointed, as he would from the learned Poussin, or from Rubens; or for the matter of that, from Raphael, or Titian!

But if he would feel the seduction of the South, of ancient palaces, of world-old trees, of shimmering waters, of vast stretches of Campagna, dappled with

By permission of Lord Windsor.

Procession to Calvary. (No. 14 in R.A. Exhibition.)

light and shade, if he would know the meaning of "haleyon days" and of "Elysian fields," let him go to Claude!

He gives as little satisfaction to the topographist as he does to the botanist. We who know and love Rome and its environments, naturally wish to identify localities which he has touched with the glamour of his art; and it cannot be denied that here he grievously fails us. We recognise 'The Arch of Titus' (Nos. 55, 66, 77, 106); 'The Temple of the Sibyl' (57); 'The Fortress of Ostia' (60); 'The Pantheon' (62); 'The Colosseum' (66); 'The Torre delle Militie' (47); 'The Waterfall of Tivoli' (51); 'The Medieval Round Towers which Protect the Coast of Latium' (52, 58, 64); 'The Gulf of Terracina, with Circeum in the distance' (77, 62, 50); but, alas! these familiar landmarks rise amid surroundings we know not.

We must reconcile ourselves to the fact that Claude

was not an archæologist, but a poet; not a topographist, but an artist. who took the facts of nature as an architect takes stones, to use them as he chooses in the fabrication of the Palace of his Dreams. We must not go to him for small facts, but he will give us, if we chose it, the finely distilled quintessence of places, and of days!

His ideal, we must remember, was one universally accepted at his day; when all pictures,

Dulwich Gallery, St. Francis of Assisi.
(No. 12 in R. A. Exhibition.)

whether figure or landscape, were expected to be "compositions," that is to say, works of art, not mere transcripts from nature. The realism of to-day, based on the "snapshot," had not yet come into existence.

If Claude's pictures are as purely ideal as is possible to the works of mortal man, who builds out of the material of his experience, his sketches—of which a great number are collected here, notably the little drawings from the Windsor Library, others are at the British Museum—are accurate studies from nature (see for instance the study of S. Giovanni e Paolo, with its careful reproduction of medieval architecture). On the other hand his large elaborate drawings are of small artistic value, in spite of detailed and conscientious execution. And this is not surprising when we remember that they were executed for the purpose of controlling the output in the picture market, for he suffered much at the hands of imitators and forgers.

ma je co tle In sp ch tle lei W for in me ot b start rej va me sa

Dulwich Gallery, St. Anthony of Padua (No. 17 in R. A. Exhibition.)

The actual material subject-matter counts for little with him. In this respect the 'Enchanted Castle' (No. 67, lent by Lady Wantage) forms a striking exception, most of the other pictures being instances of the repeated but varied treatment of the same "tema."

The landscapes belonging to the Duke of Westminster (No. 106), and to Lord Radnor (No. 77), are both based on a drawing (No. 82) in the Liber Veritatis, but are nevertheless absolutely dissimilar, being differently lighted, and the expression of different conditions of sun and air.

Claude is never concerned with the reproduction of the particular pattern of a given landscape, but with the acts and moods of the sorceress, Light; with the gleaming patina with which she gilds rude travertine ruins; with the impalpable silvery iridescence of air; with the tenderness of distant horizons; with the warm glow of southern sunshine, and with the shimmer of sun-smitten waters.

#### RAPHAEL.

An exceptional opportunity for the comparative study of that phase of Umbrian art which centres about the person of the youthful Raphael

is here presented by the accidental juxtaposition of no less than seven pictures, well known to critical literature, which bear, or have borne, his name, the collation of which is bringing to light the unexpected existence of an intercommunity of qualities so striking as to predicate a common origin; an assertion which, in their present proximity, can be easily verified.

We will take the figures of three saints (No. 28, belonging to Sir J. C. Robinson), which are ascribed to Perugino's pupil, Lo Spagna, as our point of departure.

Photo. Brann, Clement & Cie,

(No. 73 in R.A. Exhibition.)

By Fra Bartolommeo.

By permission of Sir Frederick Cook, Bart, M.P.

Although this attribution dates from the time of Waagen, and is repeated by Crowe and Cavalcaselle, this picture was nevertheless ascribed to Rapbael, both when in the Dudley Gallery and at the sale at Christie's.

83

Undoubtedly connected with it are three cognate figures, originally in the same Gallery, which now form part of the Mond Collection.

These six saints are obviously by the same hand as a small picture in the Louvre, 'The Dead Christ' (No. 1568-430), somewhat vaguely catalogued as belonging to the "Ecole d'Italie." It seems to me that the author of this little work (and therefore of the six saints) is clearly not Lo Spagna; the pose and movement of the figures and the arrangement of their draperies are too

purely Peruginesque. We must look for some pupil of Perugino, of less able and definite an artistic personality than Lo Spagna.

Not that the facial types, the drawing of the hands, and the general scheme of colour, are characterless; on the contrary they seem to me to correspond perfectly with the peculiarities of Eusebio di San Giorgio, at an early period of his not very distinguished career.

The group of pictures, of which Lord Windsor's 'Cbrist carrying the Cross' is the best, belongs, in my

National Gallery, London.

The Holv Family.

By Fra Bartolommeo.

hoto, Anderson. Gall. Corsini, Rome.

The Holv Family, By Fra Bartolommeo.

opinion, to another phase of the work of the same master.

Although it would be absurd to attribute the execution of Lord Windsor's picture to Raphael, it is more than possible that he provided the sketch on which it is based. This becomes more probable, if one accepts it, as I do, as having formed, together with the three Raphaelesque pictures hanging near, the predella of the great altarpiece, the 'Madonna of S. Anthony' (No. 85), helonging

to Mr. Pierpont Morgan.

The group composed of the fainting Virgin and other women in Lord Windsor's picture is undeniably Rapbaelesque in conception. Quite the reverse, on the other hand, is the fair-bearded man in armour in the same picture, as are also the thick-necked horses, with their wooden movements and small heads; and as is also the general colour-scheme, of which a pale orange is the dominant note. So also is the artificially crimped and curled arrangement of the bair in the young man who drags Christ by a cord. And what a Christ! What a contrast between him and the Christ of the 'Disputa!'

The two pictures of monks lent by the Dulwich Gallery

belong to the same predella (No. 12, 17).

No nearer to Raphael is the Christ in the 'Agony in the Garden,' whose mean features, pointed beard, unnaturally long neck, wild hair, and stiff and shapeless hands reveal a third-rate master of the quality of Eusebio.

On the other hand the noble simplicity of the pose of the sleeping disciples must be attributed to the sketch by Raphael from which it is derived. What Eusebio's unassisted genius could produce is shown by a picture called (strangely enough) 'A Legend of S. Nicholas' (No. 16), in which a naïve poverty of conception is very unattractively united with tastelessness of representation.

How different an impression of artistic capacity is produced by the almost contemporary 'Knight's Dream,' in the National Gallery, in which the figures are approximately the same size. It may be used as a measure determining the relative levels of a Raphael and of a Eusebio.

Having found it impossible to accept Raphael as the possible author of these small predella-pieces, and being convinced that they are by Eusehio, we are forced to conclude that Raphael, for some reason unknown to us, confided the execution of this predella to his friend and

quondam studio-companion.

If we re-associate these predella panels with the great altar-piece (No. 85), of which they form the hase, we will find that time, injuries, and restoration, have done somewhat towards levelling the barrier of "quality" which originally put the work of these two unequally gifted fellow students into different worlds. Nevertheless the beauty, both of colour and movement, of the two flying angels in the lunette, hears witness to their origin. Especially lovely is the noble head on the right, seen in profile.

It is impossible that so sublime a creation should be the fruit of the same artistic temperament as produced the stilted and prosaic figures of the predella!

We have not space to examine or determine the nature of the disfigurements to which this splendid altar-piece has heen subjected; it must suffice that we point to the contrast presented by the hackgrounds of the upper and lower pictures, the one, of an opaque and heavy blue; the other, untampered with, delicate, transparent, ærial, radiant.

#### FRA BARTOLOMMEO.

A series of interesting questions are associated with Sir Frederick Cook's Fra Bartolomueo (No. 73), of the Madonna with the Infant Cbrist and the little St. John, of which the composition is similar to that of the recently acquired picture in the National Gallery, and to that of another, the authenticity of which has never been disputed, in the Corsini Gallery in Rome.

That a great master should paint the same picture twice is rightly accepted, on psychological grounds, as a priori improbable. This is one of the reasons why such a picture as the 'Vierge aux Rochers,' in the Louvre, accredited by unimpeachable evidence both external and internal, is accorded its exclusive authenticity.

It is quite as likely that Raphael should have painted the Sixtine Madonna twice, as that another richly endowed and imaginative artist of the Renaissance, with a mind teeming with "inventions," should in this period of slow production first paint a picture and then copy it! Such a proceeding would argue extraordinary lack of creative power, and . . doubtful commercial morality, it being generally understood that in selling a picture its author parted with its copyright also!

Fra Bartolommeo seems to form an exception to this rule, for each of these three pictures appears equally

authentic.

The study of the pictures themselves will furnish us possibly with a clue to the reason of this anomaly.

The picture in the Corsini is late in date; is low in tone, hlack in the shadows, and learned, not to say pedantic, in composition; that in the National Gallery is, on the contrary, fresh, spontaneous, pitched in a very high key, but defective in modelling, imperfect in drawing, and hard in colour, especially in the flesh-tints; it is in short immature; but is nevertheless, in my opinion, the original on which the other two are hased.

And as recently as two years ago it was not difficult to recognise it as sucb. Since it was bought for the National Gallery, indescrihably tender "glazes," by means of which Fra Bartolommeo evoked the iridescence of blonde flesh, and the last "finesses" of modelling, have heen removed, leaving the picture in such a state that two critics of fine taste have hesitated to accept it as his at all. The indestructible charm of its rhythmic line seems to me, however, still to proclaim its incontrovertible legitimacy.

It is an early work, as is shown by the light and lovely key in which it is painted (I speak, alas! from memory), and by the peculiar undulating line of the hem of the

dress.

The pyramidal composition is broken in Sir Frederick Cook's picture and in that of the Corsini Gallery, in the one case hy the addition of Joseph, and in the other of Anne.

There are other slight changes too, corrections and improvements of the general composition, such as would inevitably suggest themselves in the course of repetition.

Vasari's account of the Frate's serious and concentrated life, of his constant effort to realise the best he

could conceive, is corroborated by his work.

His early pictures and his early drawings, of which a number have survived, are of an exquisite delicacy of sentiment and execution; whereas the few pictures we possess of his ripe manhood are forcible, soher, and restrained; they have lost their sweet spring-like freshness and are recondite, the fruit of effort, of science, almost architectonic in construction, studied in rbythm, learned in the distribution of light and sbade; but for

all that sincerely religious, the work of the first Florentine after Giotto whose vision of the Queen of Heaven is solemn and hieratic.

Surely it is intelligible that a man of so fastidious and modest a temperament, whose career covers so wide a gamut of achievement, should revert more than once to an earlier composition, remodelling it in accordance with his changed taste.

This search, not for novelty but for perfection, seems to me both noble and characteristic. That the spontaneous and facile Raphael should have been influenced by an art which was the fruit of severe discipline is not among the least of Fra Bartolommeo's titles to our gratitude.

I. PAUL RICHTER.

## David Law, R.P.E.

From a drawing by
Miss J. B. Bowness.

HE death, at Worthing, of Mr. David Law, on the 28th of December, 1901, in his seventy-first year, removed one of our foremost landscape etchers, and one of the founders of the Royal Society of Painter-Etchers.

His health had been failing for some time, and it is practically two years since he ceased working. His last important commission, a large plate of 'The Meadow Pool,' after

Clayton Adams, for the Art Union, sickness compelled him to resign—not without a manful struggle—to the competent hands of Mr. C. O. Murray.

Those who are familiar with his work will find that his life very fully explains and supports it; for it was

quite logically the outcome of his early training and experiences. At Edinburgh where he was born on the 25th of April, 1831 — he was apprenticed to a landscape steel engraver, attending in the evenings the art classes at the Academy conducted by Messrs. Christie and Dallas, to whom so many wellknown men owed their first tuition. Law belonged to the same "flight," so to speak, from the Academy, as the late R.A.'s John Pettie and Tom Faed, and the present W. Q. Orchardson.

When his time was out he obtained an appointment as "hill" engraver in the Ordnance Survey Office at Southampton; and though of little value artistically, we may suppose that this map-work would give him practical acquaintance with the technical side of etching, and graft upon the steel-engraver's knowledge the power to manipulate the bitten line, if it did not familiarise him with its greater freedom and resources. In those days etching was a neglected art. It simply would not have occurred to anyone desirous of becoming an artist that he might enter this way upon his career; that door had been closed so long that its existence bad been forgotten, and the very path that led to it lost sight of. Law was determined to follow an artistic career-he had to choose from the ways that were open; he therefore resigned the Ordnance Survey work to devote himself to water-colour painting.

It was all a long time ago, and many people whoknow Mr. Law's work very well are not aware that he practised water-colour painting with success for many years; maintaining loftily and soundly the rich, solid and conscientious tradition of our fine insular school. The technique of those drawings which I have seen suggests a little of the pleasant "spottiness" of Birket Foster, with something of the hreadth of E. M. Wimperis, and the colour is rich and full; proving in a way that is very satisfactory to the lover of his etched work that the colour suggestions of his "black and white" have been read aright, and the true impressions received.

The output of Mr. Law's long life of almost incessant industry is naturally very great, greater than we can enumerate here. His two first important commissions were executed for Mr. Arthur Lucas, the publisher— 'The Armada sailing from Ferrol,' and 'The Defeat off Gravelines,' after Sir Oswald W. Brierley. There are many important series of original etchings—the two Thames series, of which the first was made for Mr. Lucas; the Castle series, for Messrs. Dowdeswell,

which includes the large wellknown Windsor and Warwick plates; and the Trossachs series for Mr. Lucas (from which we reproduce 'Stirling ·Castle'), besides very many separate plates. Some of his last works were engravings after MacWhirter for The Fine Art The Society. Trossachs series, which was dedicated to the late Queen, may he said to represent very fully the strength and range of Mr. Law's powers. The ten etchings comprising the series elicited a letter of

Portrait of David Law, R.P.E.

From the painting by J. Seymour Lucas, R.A.

Stirling Custle,
Drawn and Etched by David Law,

hearty appreciation from Mr. Ruskin. "Your noble etchings," he wrote in 1885, "have come this morning, and I am entirely grateful for the gift, and have true pleasure in possessing them." They show all the marvellous delicacy and refinement, masterly draughtsmanship, and exquisite qualities of life and sparkle hy which Mr. Law's reputation was gained.

Over thirty years ago, in "Etching and Etchers," Mr. P. G. Hamerton wrote: "Mr. Law's work is much more an interpretation of water-colour than independent etching. His way is to study from nature in water-colour, which he uses holdly and skilfully, and then to interpret that on copper. I never met with any interpretative etching more generally successful than his. Mr. Law has overcome the great sky difficulty, for his etched clouds have really the soft quality of clouds; and their forms, without heing painfully accurate, are full of care for truth." This was written when Mr. Law was only heginning as an etcher, and refers, no doubt with justice and truth, to a transitional period. It was not, and could not be, intended as a final verdict upon his art and technique.

It is true that Mr. Law came to etching through water-colour painting, but he was a steel-engraver first; and his etching conveys to the writer much more of the liherated steel-engraver than of the etching

water-colour painter. Steel engraving was a painfully slow, laborious art, and only a little relaxation from its rigid limits and exactions would seem to the engraver a very great emancipation. Mr. Law's work is often as elaborate as steel engraving, yet it is never "tight"; it is always cheerful and unwearied, however immense the ohvious industry displayed. He took as much liberty as he required for ease, and his rigid training enabled him to accomplish with comfort what another could never have done without showing "tiredness."

Four original etchings hy Mr. Law, as well as interpretative plates after Corot and David Murray, have appeared in The Art Journal since 1881; and it will not be forgotten that our Premium Plate for 1898, 'The Toils of Day are Over,' after B. W. Leader, R.A., came from his needle. Mention may he made of 'The Rocky Bed of a Welsh River,' also after Leader, in Virtue and Co.'s "Royal Academy Etchings" Series. Many original etchings by him appeared in the "Portfolio."

By the courtesy of the family we are enabled to reproduce the painting of Mr. Law at his etching:table, by Seymour Lucas, R.A., never before reproduced. Personally he was a man of a large-hearted and genial Scottish type, and hy a large circle of friends will he sorely missed.

H. W. B.

## John Brett, A.R.A.

From a drawing

By T. Runciman.

ARLY in his career John Brett, who was born in 1831, was described by Ruskin as "one of my keenest-minded friends," and the phrase aptly describes the concise arguments in paint which Mr. Brett produced in his lifetime. From 1856 to 1901, with the exception of the year 1863, Brett contributed at least one picture to each successive exhibition at the Royal Academy, and in 1881 he was elected an Associate of that body. With him were elected MM. William Burges, Dicksee, Gow and Thorneycroft, the death of Burges later in

that year causing a vacancy which was filled by Mr. Aitchison.

The entries in the catalogues of the exhibition show that in his youth Brett did not confine his attention to the seascapes and landscapes which claimed his subsequent endeavours. Three portraits appear under his name in 1856, and in the following year his 'Glacier of Rosenlaui' was companion to a figure subject entitled ' Faces in the Fire,' which THE ART JOURNAL described as "a subject by no means worthy of the execution." The delicate finish of his work, which afterwards became one of his chief characteristics, had even then attracted notice, and in 1858 his solitary canvas, ' The Stonebreaker,' compelled the admiration of Mr. Ruskin, who recorded in his "Notes" that "this, after John Lewis's, is simply the most perfect piece of painting with respect to touch in the Academy this year; in some points of precision it goes beyond anything the pre-Raphaelites have done yet. I know no such thistledown, no such chalk hills and elm trees, no such natural pieces of far-away cloud in any of their works." After pointing out a few errors in the composition, Ruskin continued: "For all that, it is a marvellous picture. . . . . If he can paint so lovely a distance from the Surrey downs and railwaytraversed vales, what would he not make of the chestnut groves of the Val d'Aosta!" The following year, Mr. Brett's 'Val d'Aosta' was accepted for exhibition. On seeing it Mr. Ruskin wrote: "Yes, here we have it at last-some close coming to it at least-historical landscape, properly so called—landscape painting with a meaning and a use. Here for the first time in history we have, by help of art, the power of visiting a place, reasoning about it, and knowing it, just as if we were there. Standing before this picture is just as good as standing in that spot in Val d'Aosta. . . . . A notable picture truly: a possession of much within a few feet square. . . . Historical landscape it is, unquestionably: meteorological also: poetical-by no means; yet precious in its patient way: and, as a wonder of toil and delicate handling, unimpeachable. The chestnut-trees are like a finished design of Dürer's; every leaf a study: the poplar trunks and boughs drawn with an unexampled exquisiteness of texture and curve."

From that time to the end of bis life, Brett spent most of his working hours in depicting sea effects from John o' Groats to Land's End. He also made periodical excursions to Italy, where he found congenial subjects both on the coast and inland. At the R.A. Exhibition in 1880 he exhibited two pictures, one of which, 'Britannia's Realm,' was purchased for the nation from the funds of the Chantrey Bequest. In this picture the calm sea is refreshingly true to nature, and so clean is the execution that at a distance it has the appearance of being painted in water-colours.

Although Brett's disposition was such that he was not likely to be concerned with the written opinions of his work, yet the flattering reception accorded to him by Ruskin created a standard of eulogy which other critics could not maintain. Such extravagant praise from anyone less qualified than Ruskin to examine and estimate the worth of a picture would have crushed the artist's progress with intended kindness. To a late critic who had placed him in "the school of minute elaboration," Brett retorted that "it is a well-established practice that if you cannot dig, and to beg you are ashamed, you go into business as an art critic": but when the next moment he lamented that Ruskin had no successor, it was evident that he still cherished the laudatory analysis of his work by his earlier commentator, and resented the judgment of a less appreciative writer. Yet Mr. Brett need not have become indignant when he was entered on the roll of "the school of minute elaboration," and we think the opinion of which he complained, that "ever since that day the word 'laborious' has been the keynote of the press criticism of my unfortunate productions," was not at all general. The remark was probably meant to indicate the scrupulous and praiseworthy care with which his pictures were finished, not to imply a painful decoration of his canvases.

In 1886 he exhibited in the rooms of The Fine Art Society "an average summer's work out of doors, consisting of forty-six sketches and three small pictures, painted between June and September." He came from his seclusion by special request, and wrote some prefatory notes to the catalogue to explain his method of painting. The brief essay indicated his researches as a student of atmospheric effects, and showed bis ability to explain the purpose of every brush stroke he made. He believed in sketching only for its use to fix certain scenes on the mind, and considered a sketch to be useless if the picture could not be afterwards produced by the aid of the memory alone.

When in town he lived for many years in Harley Street, but about ten years ago he first occupied "Daisyfield," Putney, where he died on January 7th, 1902. This house was built according to his own ideas and requirements. It was a one-floor building, and consisted of dwelling rooms, a studio, and an astronomical observatory.

Gold Filagree Pendant and Silver Brooch with Sapphire.

By F. S. Robinson.

Erooch and Enamel Pendant.

By J. C. Watt.

## Artistic Jewellery.

Cloisonné Enamel Pendant 'on grey blue ground; centre pearl, with amethysts. By B. Nelson.

GREAT change has come A over the production of jewellery during the last few years. Instead of being solely in the hands of jewellers belonging to the trade, with their stereotyped and often-repeated designs and their uniform manner of setting precious stones, we find the matter now taken up by artists, who not only create the designs for the particular object which they may wish to engage upon, but also carry out the designs themselves when they do not intrust them to skilled and experienced workmen. The trade jeweller will continue to exhibit his style of ornament, notwithstanding this very new departure, and as such a style will always find a larger public than will artistic description of ornament, we need not trouble ourselves as to his welfare, nor indeed consider further the position he holds in relation to our subject; but

for those "amateurs" who like to possess objects made once, and once for all, instead of articles turned out by

Silver Bracelet.

By Paul Cooper.

the dozen, there are places where beautiful and individual things can be obtained, and where a look round is a liberal education in such matters. Amongst such places we would mention Mr. Montague Fordham, who continues to collect and exhibit, at 9, Maddox Street, fine examples of what those artists who have taken up the crafts seriously can do. The position he has taken is all the more valuable at the present time, because the so-called Arts and Crafts movement has un-

Enamel Pendant on Silver Repoussé.

By B. Nelson.

Silver Bracelet. By B. Nelson.

fortunately degenerated into a craze, with the usual lamentable result that a number of quite worthy individuals, who have no idea of what art really means, have taken up the crafts and have produced articles of which the workmanship is often very imperfect, and the design as dull as that of the ordinary trade productions. Provincial and foreign exhibitions bave done much to favour these minor craftsmen, who naturally have more time to spare for the preparation of work for exhibitions than the creator of really beautiful tbings, who generally prefers to work quietly in his own workshop on such commissions as he may obtain. Defective workmanship and poor design have been rampant in jewellery which bas recently appeared in various exhibitions, and it is therefore specially interesting to see at Mr. Fordbam's show-room really fine jewellery of such artists as Mr. H. Wilson, Mr. F. S. Robinson, Mr. B. Nelson, Miss May Morris, Mr. J. C. Watt, and others.

Mr. H. Wilson shows some charming work, both in enamel and precious stones, emerald rings in novel settings, and amongst other things a high comb for the hair which wants description at some length, being one of the most original designs for that fashionable article of ladies' adornment which we have yet seen. It is in golddecorated with some of the twisted wire work so much affected by this artist. The peacocks stand with necks intertwined and drooping tails, plain spaces of gold are left and barmonious coloured jewels set.

Mr. Nelson is another artist craftsman who is coming well to the fore—we give an illustration of a cloisonné enamel pendant of his, but unfortunately one loses in reproduction the delightful harmony of the doves and the grey blue ground.

A clasp by Miss Casella in cast silver would inevitably appeal to any dog lover, setting forth as it does two hounds with beautifully-modelled heads, curled round on each half of the clasp and bearing the appropriate motto "Love me, love my dog." Mr. Robinson makes a new departure in gold filigree. We believe thus far be is the only artist in England whose filigree work is before the public. It is certainly the only English filigree work we bave yet come across; and a pendant

exhibited at Mr. Fordbam's with pearls is a delightful piece both in design and execution.

Buttons may not sound a very important item where artistic matters are under consideration, but at the present time any woman with a feeling for dress will

tell you that they have become so, and a look at the varied collection at Maddox Street will convince one of the fact: Mr. Fordham has some of every sort and kind to offer, charming small repoussé silver ones, large ones worked in copper, enamelled ones of different patterns and colours, as well as little coloured china plaques set in either silver or copper, which are quite a novelty and much to be recommended for certain styles of toilettes.

Mr. John Baillie, at The Mall, Kensington, has an interesting show of artistic work, and amongst other things some good pieces of jewellery; noticeably some from Mr. Watt which are of charming colour and workmanship. Unfortunately there were on view only two brooches and a buckle by this artist, whose work made one desirous of seeing more. Mrs. G. Carr had some good enamels, a beartshaped pendant of interesting design in basse-taille enamel, and beautiful in colour. Miss G. Smith exhibited two small broocbes-one representing Orpbeus in enamel set in a quaint silver device; the second, a Bacchante, had a similar setting.

Hair Ornament:
Mexican Opal and Enamel,
By Miss E. M. Wortlington.

Miss E. Kirkpatrick's enamels were of a lovely colour, and one as a buckle was specially to be admired as a good piece of work.

Bracelet: Gold, Pearls, Emeralds, and Enamel.

# The New Gallery and the Society of Oil Painters.

"THE Monarchs of Great Britain and Ireland." Such is the high-sounding title of the Winter Exhibition at the New Gallery, whose scope is singularly appropriate to this Coronation year. King Edward VII. himself is patron. The student of history, of costume, of archæology, will find much to attract as he makes the round of the three galleries, hung with some 170 portraits, as he examines the armour in the central hall, the several hundred miniatures, drawings, manuscripts, and royal relics in various cases. Those in quest of fine æsthetic achievements, however, come away disappointed somewhat. Many who contributed to the success of the Tudor, the Stuart, and the Guelph exhibitions in Regent street again aid the management; but from the royal collections come only, apart from relics, a series of fine miniatures by Nicholas Hilliardof whom Donne wrote that a hand or an eye drawn by him "is worth a history by a worse painter made" and his pupil, Isaac Oliver, and some of the Holbein drawings from Wiudsor. Had not the palaces heen undergoing structural or other alterations, the King would doubtless have lent many of the unrivalled portraits from Windsor and from his future London residence at the end of the Mall.

In the small south room, round the top of whose walls hangs a reproduction of that portion of the Bayeux tapestry illustrating the departure of and return to England of Harold, are the earliest pictures. A work in four compartments, deemed to date from about 1425, is concerned with as many scenes in the life of St. Etheldreda. In the first her marriage with Egfrid, King

of Northumberland, is represented; iu the second she superintends the erection of a church at Ely, to whose cathedral this archaically beautiful work, with its raised gold background, formerly belonged. Every lover of art will welcome, too, the Earl of Pembroke's diptych, on whose left side Richard II. is seen kneeling with three Saints behind him. on whose right the Virgin and the Infant Christ are in a semicircle of Angels, roseerowned, their blue-silver wings pointing heavenward. Pictures such as these, by artists whose names are forgotten or unknown, suggest the reflection that increased knowledge of the human form, of perspective, and the like, is not inevitably accompanied by greater pictorial beauty. An altar-piece representing the marriage of Henry VI. and Margaret of Anjou, a portrait of Margaret Beaufort, iu black dress-on which the gold embroidery has beautiful effect - and diamond-shaped headgear, the Earl of Pembroke's version of the three 'Children of Henry VII.,' the name of each written above the figure, the Earl of Ancaster's oblong memorial picture of the marriage of Henry VIII. with Katherine of Aragon, all unascribed, attract as we pass round to Holbein's masterly cartoon of Henry VII. and Henry VIII., executed as a study for the fresco destroyed at Wbitehall in the fire of 1698. There is a sweep, a certitude, about

this cartoon, its every line alive, which call for prolonged study. Holbein was the artist to render with pictorial dignity the massive figure of "Bluff King Hal."

The West Gallery contains much to amuse, something to delight. In the first kind is an unascribed portrait of Elizabeth, in short dress, decorated with monstrous beasts, with birds, fishes, and flowers, and a second, attributed to Zucchero, unsympathetic of contour and colour, in which she is made to serve the purpose of a flowerpot. A finer hand was at work in two more portraits of the virgin queen, both given to Zucchero, that belonging to Mr. Charles Butler, showing her in outstanding lace ruff and richly-wrought dress with puffed sleeves, a happy arrangement of somewhat formal design, wherein the sitter is all but de-characterised. Assigned to Lucas de Heere, the 16th century Flemish artist, are a beautiful interior, the red-robed lady, reading from an illuminated manuscript, somewhat unaccountably said to be Lady Jane Grey; 'Mary I.' in amber, pearlembroidered robe, with bands of brown fur; and Mary Queen of Scots, in costly dress and white lace ruff, her close-fitting cap edged with pearls and two bands of jewels.

There can he no doubt as to what is the 17th-century treasure of this West Gallery: this is Van Dyck's world-famous portrait of Queen Henrietta Maria, which, by the courtesy of the owner, Mr. Edmund Davis, we reproduce. Never, probably, was there wrought a finer harmony of pearl and rose. Just such a half-languid scheme suits this seemingly languid lady, right hand resting on crown, formal ringlets on her forehead.

To the left as we enter the North Gallery are large Knellers, Van de Vaarts, Jervases, and opposite, by way of bringing the exhibition up-to-date, Mr. Orchardson's 'The Four Generations,' seen at the 1900 Academy. Elsewhere we find a historically interesting 'Interior of the Guildhall,' with scores of figures, by

Early Spring in Tuscany.

By D. Y. Cameron.

From the Picture in the Collection of Edmund Davis, Esq.

Queen Henrietta Maria. By Van Dyck.

William Daniel; Sir W. J. Newton's 'Christening of the Prince of Wales,' 1843; portraits by Hayter and Winterhalter; and, of the King, by Bastien Lepage and Mr. A. Stuart Wortley. On the end wall are examples by Reynolds, Gainsborough, Lawrence, and Hoppner. Out of not very promising material, Gainshorough painted a picture of some beauty, showing George III., life-size, in Court dress; and again we are enabled to pause hefore his exquisite portrait of Anne Luttrell, Duchess of Cumberland, one of the few irresistible creations at the New Gallery, one of the loveliest of Gainsborough's "dear, dead women." Mrs. Alfred Morrison's version of 'Le Deuil Blanc'-Mary Queen of Scots in white mourning assumed on the death of her first hushand, Francis II .- from the Hastings collection, is one of several charming exhibits in the miniature section.

In reducing the number of exhibits from about 500 to 350, the Society of Oil Painters has taken a wise step. On walls whose every inch of space, from well beneath the line of vision to many feet above it, is hung with pictures, as though the aim were to fit in the greatest number practicable, work is not seen to advantage. As numbers have diminished, so has the standard been raised.

I would direct attention to the landscapes of Mr. D. Y. Cameron. 'The Valley,' deep and rich in tone, is a true pictorial evocation of that romantic sentiment alluded to hy Stevenson, when he said that in passing from Fielding to Scott "we become suddenly conscious of the hackground." The Valley invites the imagination along the hill-ramparted road, towards some such goal as that of those ancient wayfarers whose wanderings are perhaps commemorated in our word romance. 'Early Spring in Tuscany,' which, by the courtesy of Mr. Cameron, and of the owner, Mr. W. Warhurton Wingate, we reproduce, is of a different kind. The aim here has heen to express the joyous uprising of the earth-spirit in a land of heautiful memories. The wide Italian highway is flanked by slender poplars, not yet in leaf; under shelter of the hill to the left, heyond the red-roofed house, are blossoming fruit trees; the slopes of the hills are bathed in colour. The design, as might be expected from an etcher so able, is at once structural and delicate; the blithe green of the

wayside grass, the notes of purple and faint violet, the mist-grey poplars graciously receding, the serene blue sky, are wrought to rare heauty of colour. But the best remains. Early spring in Tuscany is a time of sunflood. The artist has gone a long way towards achieving that fragment of the impossible which shall reveal in form and colour the rapture with which sunlight falls on an awakening earth, the joy with which earth welcomes the ever-vibrant although &on-old call to new activity. Were there no other picture here, the gallery should be visited to see this work of Mr. Cameron.

The four pictures of Mr. James S. Hill-retired from the distinguished sextet of landscapists whose annual show at the Dudley Gallery was of great interest, his place having been taken hy Mr. Mark Fisherserve to enhance his reputation. Between Mr. Hill's hreezy depictures of stretches of Welsh moorland, overhung by drifting cloud, is the very clever 'Ugly Princess' of Miss E. Fortescue Brickdale. She is one of the several followers of the Pre-Raphaelite schoolanother of whom is Mr. Byam Shaw, represented hy a positively-coloured subject picture-into whose tradition it is difficult here and now to infuse fresh life. Mr. Alfred Withers, to his advantage, appears to have come under the influence of the young Scotsmen; Mr. Arthur G. Bell has reverted, for a reversion it is, if we mistake not, to the modern Dutch manner of observing and painting; Mr. Terrick Williams has given us nothing better than 'The Market, Concarneau,' with groups of peasant-folk in the sunshine; the marine of Mr. J. R. Reid, 'Home with the Catch,' is vigorous as one could wish; Mr. Peppercorn, alike in his grey sea-piece and his 'Dartmoor,' reveals the quiet spell of solitary nature on the coast and remote inland; the romantic spirit permeates the not in all respects satisfactory 'Endymion' of Mr. George Wetherhee; and, among others whose works should he mentioned, are Messrs. Herhert Marshall, F. F. Foottet, Fantin-Latour, and R. W. Allan, the pastoral by whom is particularly charming. On no account should there he overlooked Mr. T. Austen Brown's 'To the Fold by Moonlight,' where a golden glow from the lanthorn falls on the fleeces of the sheep, and the white fronted but, the red roof, the mysterious half tones of trees and country things are knit into a luminously beautiful scheme.

## Passing Events.

HE Election of Mr. G. F. Bodley to the full membership of The Royal Academy is a trihute to his meritorious career since his admission as an Associate in 1832. In 1899, he received the Royal Gold Medal, the first presentation of which was in 1848, since when it has heen presented annually to some distinguished architect, or man of science or letters. Lord Leighton, P.R.A., Mr.Alfred Waterhouse, R.A., and

Professor Aitchison, R.A., are among the recipients best known in this country. It was offered to John Ruskin, but the time heing past when he cared to receive honours which might have been acceptable in his earlier years, he courteously declined the Medal with a dignified excuse to that effect. King Edward has intimated his wish to continue its presentation, and Mr. J. F. Bentley, the architect to the new Roman Catholic Cathedral at Westminster, will this year be placed on the roll of recipients.

M.R. MATTHEW RIDLEY CORBET, elected to Associateship of the Royal Academy on January 29, was born several decades ago in the quiet little Lincolnshire village of South Willingham. His initial training in art was under Davis Cooper, a cousin of Mr. W. H. B. Davis, R.A. Mr. Corbet was one of the six or

From the picture in the Tale Gallery.

Val d'Arno: Evening.

By M. Ridley Corbet, A.R.A.

seven pupils who attended the opening class at the Slade School, and later he entered the schools of the Royal Academy. Suhsequently, he spent three or four years in Rome, there to come under the potent influence of Signor Giovanni Costa, a regular exhibitor at the New Gallery, friend of Leighton, and patriot no less than painter. Italy-that sun-steeped land where Dante wrote, where Giotto painted and designed his hell-tower, where to Botticelli came his vision of Spring, to Leonardo a yet more comprehensive and profound vision of the world and of the drama of human life-in the spirit of Italy Mr. Corbet's work is steeped. His knowledge of Italy is not that of the tourist; it is that of the poet-painter, whose imagination is stirred by the cadence of the hills, the magic of dark cypresses silhouetted against the evening sky, the elusive heauty of olive-clad slopes, the "temper" of that country whose every valley, as mists steal silently across, is charged with memories. From the 1901 Academy there was hought with the Chantrey Fund Mr. Corhet's 'Val d'Arno,' which, with his consent, we reproduce. It reveals a vibrant nature, an ability pictorially to evoke at once the solemnity and the serene joy of the hill-ramparted valley of the Arno, as light ehbs in the west, and the colours of day siuk into the obscure unity of night.

THE Prizes and Studentships offered by the Royal Institute of British Architects last year provoked good competition. The subject set in accordance with the Soane Trust, was a design for a swimming hath, the medalliou and £100 heing awarded to Mr. James B. Fulton. The Tite Certificate and £30, offered for a design for a Royal Memorial Chapel in the Italian Style, was taken hy Mr. C. Gasgoyne. For the Owen Jones studentship, founded for the encouragement of the study of Architecture, more particularly with respect to ornament and coloured decoration, Mr. Edward H. Bennett was awarded the Certificate and £100. Mr. C. Wontner Smith took the Pugin Medal and £40, offered annually to promote the study of the Mediæval architecture in the British Isles. In each case the money is only given to the student if he elects to fulfil conditions of travel for the advancement of his studies. The work of the competitors, together with contributions from the various Travelling Students, was recently exhibited at The Alpine Cluh, and on the 3rd of Fehruary the prizes

were distributed to the ahove-named students and to those successful in other competitions. Mr. John Slater, in his address from the Chair, echoed Sir E. J. Poynter's advice to the Students of the Royal Academy, that it is no indication of genius to he grotesquely original; Mr. Henry T. Hare criticised the technical accuracy and the draughtsmanship of the work suhmitted; and Sir I. Alma-Tadema spoke a few words of encouragement.

OF the lectures given during the winter in the Hammersmith Town Hall, none was so popular as that delivered on the 30th January. Mr. Walter Crane discussed "The Language of Line" and made his subject sufficiently elementary to keep together a large audience. The remarkable facility with which the artist made lightning sketches to explain a technicality or to strengthen an argument gave a seaside-celehrityartist tone to the proceedings which was quite amusing. Mr. Crane told anecdotes and illustrated them as delightfully, if more roughly, as he does in his books. His remarks on the evolution of the primary egg into animal forms, and his explanation of the conventional strokes which represent landscape effect, were particularly instructive. In one of his drawings he wittily made the name of the horough a play on the typical figure of Vulcan at his forge. The various streets in "Hammer-smith," and the winding course of the Thames, were made to form the outline of his sketch, a local application of mythology which was duly appreciated. Sir William Richmond, R.A., was in the

LEIGHTON House has recently been the object or uncertain ownership or administration, hut it still helps towards its own maintenance hy being the scene of concerts, exhibitions and lectures. During Fehruary some interesting and well-attended lectures, illustrated with the lantern, were delivered by Mr. Windsor Fry, R.B.A., on the History of the Art of Painting from Cimahue to Leighton: and in one of the studios Miss Fortescue Brickdale exhibited a set of paintings, imaginative though sometimes ludicrous in conception and colouring. Many of these were shown in Bond Street last year classified under the title of "Such stuff as dreams are made of!"

A PPEAL, to the House of Lords has gained the decision that tapestry is not legally a fixture. In bringing this question to the highest Court the litigants have done a service to owners of such decorations, for although the Court of Appeal reversed the judgment of a lower Court, until the matter bad been finally settled the possession of valuahle tapestry without the right to remove the pieces at will was a doubtful privilege.

WE understand that shortly a movement will be made hy the patrons of Christie's sale rooms to endeavour to have the principal sales held either earlier on Saturdays, or on Fridays. The time of commencing sales varies curiously in different countries. In Paris an important sale as a rule hegins on a Monday or a Tuesday at one or two o'clock in the afternoon. In New York important auctions are always held in the evening, beginning at six o'clock, usually in the middle of the week. The Saturday afternoon sales at Christie's have been an important event in England for a very long time; hut recently, with the change of customs and the great tendency to enjoy the country from Friday night till Monday morning, the attendance in King Street has been seriously affected. It would appear, therefore, that the authorities would be well advised to consider the question of holding all their important sales on Tbursdays or Fridays. It must be within the knowledge of those who are interested in such matters that whenever a good picture comes into the market, whether it be sold at Christie's or Rohinson and Fisher's, it fetches a large price even in the middle of the week. For example, the two Van Dyck portraits from the Peel collection were sold on a Thursday, and as £24,250 was paid for them, it is quite certain they would have fetched no more on a Saturday afternoon.

FRANCE has reason to he proud of such contributors to her national possessions as the late M. Thomy Thiéry. His hequest to the Louvre of a collection of pictures by the most famous painters of the Barbizon Scbool has, however, caused the Trustees some concern, for the inadequate wall space at their command is notorious, and they are confronted with the same difficulties regarding the exhibition of the recent additions as have troubled the authorities at the Luxemhourg. One clause stipulates that the collection is to he shown intact, which will necessitate the re-arrangement of other pictures. We hope this will soon be done, so that the new acquisitions may he placed on view.

I T is not generally known that the pictures in the Brera Gallery, in Milan, have been undergoing a re-arrangement. This work is not likely to be completed for some time, and meanwhile the visitors have opportunities of examining close at hand the chief pictures. Raphael's 'Sposalizio' on the floor, with a possibility of looking closely into the handiwork, is an occurrence necessarily of great rarity, and one much appreciated by connoisseurs who are visiting the gallery just now.

I T has been definitely settled that the Exhibition of Modern Decorative Art at Turin will be opened on the 26th of April. As soon afterwards as can be arranged we shall deal exhaustively with the subject.

## Books on Decorative Art.

" LE VERRE," by Paul Frick (Paris: Librairie C. Reinwald, Schleicher Frères, Editeurs). Under the title of "Le Verre," M. Paul Frick contributes to the "Livres d'or de la Science" (section industrielle) an astonishingly comprehensive little hook on glass, its history and manufacture. He bas contrived in a wonderfully small compass to give us, at the price of a franc and a half, practically all that we want to know about the composition of glass, its manufacture and manipulation. Soda glass and flint glass, crown glass and plate, common bottles and Venetian wine glasses, come equally within his scope-mirrors and their silvering, lenses and their polishing, chemical retorts and watch glasses, cylinders and artificial pearls. The only chapter that falls short is that dealing with artistic developments, which is neither so full nor so appreciative as the others. M. Frick hardly seems quite to realise, at all events he does not fully explain, what M. Gallé is doing at Nancy or Mr. Tiffany at New York. It is really the industries connected with glass which most deeply interest him, and on all that concerns them he speaks with knowledge and authority, giving us, in fact, just that much-needed insight into the practical working of the glass house which artists and art workers outside the trade have such difficulty in acquiring.

The new edition of "A BOOK OF STUDIES IN PLANT FORM AND DESIGN," by A. E. V. Lilley and W. Midgley (Chapman and Hall, London), is considerably enlarged, containing not only a number of additional illustrations, hut two new chapters on "Leather Embossing" and "Plant Ornament in Relief." The authors have found, they say in their introductory note, "too great a tendency among their students in design to simply copy the natural forms on ornamental lines, without inventing a fresh and original treatment, each for himself," and it is their endeavour, "by placing a considerable number of historical and other ornamental renderings of the same plant side by side with the drawings from nature," to enable them "to realise more clearly what is required in ornament." Whether the rising generation is not more likely to appropriate the conventions of Messrs. Lilley and Midgley, is a question-more especially as the examples of historic types given by them are few and far between, and the modern renderings of, for example, the honeysuckle on page 80, will appealmore strongly to the sympathies of students up-to-date than the most perfect Greek anthemion. Be this as it may, the hook is very popular among students, and in its improved form is likely to be a greater favourite still.

"A SYSTEM OF BRUSH DRAWING AND DESIGN," by R. Smeaton Douglas, F.S.A.Scot. (Cbapman and Hall, London). "Most books on hrush drawing," says Mr. Douglas in bis introduction, "seem to have been written more for the very young pupil who takes up the suhject as an amusement, rather than for the more advanced student who desires to devote himself with a serious purpose to this branch of Art." But even if the "consistency of cream," here recommended, were a hranch of serious art, which it is not, the 15 plates of which the book consists would not go far towards their avowed purpose of qualifying teachers under Article 91 D of the Code.

The Arrival at Cologne.

By Richard Doyle

## Recent Art Publications.

 ${
m M}^{
m ORE}$  books have been written about Mary Stuart than about any personage of the Middle Ages. Yet the interest in her career is indeed perennial, while the latest volume, just published by Messrs. Virtue, is one which has the highest claims to attention. It is entitled "PALACES, PRISONS, AND RESTING-PLACES OF MARY STUART," written by Mr. M. M. Shoemaker and Mr. T. A. Croal. This handsome volume, with nearly 70 illustrations, is not a history of the unhappy lady whose gentle upbring in Touraine so unfitted her for strife in stormy Scotland, but only of the places she occupied. In France, palaces were her home; in Scotland her resting-places never sheltered her long; while her eighteen years in England were altogether spent in prisons. The Frontispiece to the book is a reproduction in exquisite tints of the most beautiful aud authentic portrait of Mary Stuart, from the National Library in Paris, while the other illustrations are mostly taken from similar documents, and from views of the palaces and prisons.

"THE HISTORY OF AMERICAN ART," by G. Hartmann (2 vols., Page, Boston, U.S.A.) gives a faithful account of the chief American Artists, both of to-day and of earlier times. Mr. Whistler and Mr. Sargent bulk largely in the volumes, while a crowd of young men of whom Europeans scarcely know the names are brought forward for brief recognition.

"THE BROTHERS DALZIEL" (Methuen) renders a history of the fifty years' work carried on with much distinction by the worthy brothers George and Edward Dalziel, draughtsmen, engravers and publishers. Their association with the chief Artists in black and white in England led them into close contact with many notable people. Illustrations from designs by Leighton, Watts,

Holman Hunt, Burne Jones, Rossetti, Pinwell and Millais, with autograph letters reproduced in facsimile, make the volume full of charming variety.

A book with similar artistic interest, with illustrations by men working during the same period, is "SOME POEMS BY ALFRED, LORD TENNYSON" (Freemantle). Mr. Joseph Pennell

"The Essays of Elia."
(Methuen.)

The Start.

By Garth Jones.

supplies a characteristic preface, summing up the excellencies of the illustrators who lived in "the sixties," and Mr. Holman Hunt, in an introduction, tells of the difficulties the designer had to encounter when his interpreter on the wood was not thoroughly capable. Many of the illustrations are shown in facsimile and in wood engraving, and it is certain that the latter leaves a good deal to be desired.

"Leigh Hunt's Old Court Suburb" (Freemantle), originally published about fifty years ago, has been charmingly edited by Mr. Austin Dobson, and illustrated by Mr. Railton, Mr. Shepperton and Mr. E. J. Sullivan. The general arrangement of the book is uncommonly delightful.—"The Essays of Elia" (Metbuen), is illustrated by Mr. Garth Jones with much originality, and Lamb's Essays assume a new aspect under his inspiration, of which we print a specimen.

The second and third volumes of Dr. Russell Sturgis' "DICTIONARY OF ARCHITECTURE AND BUILDING" carry to completion this most elaborate and exbaustive undertaking. Every word which can be found in an architectural work, or technical word employed by a builder, is explained and discussed with clearness and knowledge. Sometimes, as in such words as "stone," "window," "vault" and "round-church," the articles cover several pages, with many illustrations. Countries also are dealt with under their names, giving the characteristics of their architecture, and every explanation is made more convincing by diagram and illustrations where necessary.

Mr. W. J. Muckley's manual on "ARTISTIC ANATOMY" (Ballière) has worthily reached a second edition.—"PERSPECTIVE FOR ART STUDENTS," by R. G. Hatton (Chapman), is published to help candidates to qualify for the new Syllabus for the Board of Education, great care being taken by means of clear diagrams to show the meaning of the author.

The well-merited success of their National Gallery Catalogue has happily induced Messrs. Cassell to make a similar publication on the National Portrait Gallery. Every picture in the gallery is reproduced face to face with descriptions of the work, making the volumes, of which only the first is ready, like the previous ones, the most complete possible illustrated catalogue. Not only are the portraits useful for reference, but also as materials for comparison between the various representations of the personages; such, for example, as Queen Elizabeth, where we have nine different portraits presented on one page.

Compilations on county histories have ever been publications much sought after, and Mr. J. S. Fleming's "ANCIENT CASTLES AND MANSIONS OF STIRLING" (Gardner, Paisley), is no exception to the rule. It is indeed evidently a labour of love, and altbough the paper and print leave room for improvement, the volume is one which will give a great deal of pleasure to others beside those connected with the locality.—"SKETCHES OF CHRIST CHURCH, OXFORD," by John Aston (Methuen), is evidently meant for freshmen, for the drawings are neitber well chosen nor well drawn.

"MEDLEVAL LONDON," by Dr. Benham and Mr. Charles Welch (Seeley), on similar lines to the preceding, appeals necessarily to a much larger public. It is a description accompanied with many drawings of London

before the fire of 1666.—"SHAKESPEARE'S TOWN AND TIMES" is an enlarged second edition of Mr. and Mrs. Ward's very acceptable book. It is regrettable, however, that the illustrations are made sometimes to face inwards and sometimes to face outwards in an unreasonable manner.—"THE ART OF BUILDING A HOME" (Longmans) is specially suitable for those who are arranging to build or furnish small or elegant houses; it contains a series of lectures by Mr. B. Parker and Mr. R. Unwin, with seventy illustrations explaining the suggestions of the authors.

Mr. Hugh Thomson has provided a series of astonishingly clever illustrations to "RAY FARLEY" (Fisher Unwin), a novel by J. Moffat and E. Druce, of otherwise ordinary merit.

The most useful Annual, and the most instructive both to Artist and Connoisseur, is "The Year's Art" (Virtue) which under Mr. Carter's careful hands has reached its 23rd annual issue. The feature of the 1902 volume is a series of good Photographs of Portrait Painters, and Mr. Carter's own résumé of the Art of the past season.—"The Chemistry of Pigments," by Mr. E. J. Parry and Mr. J. H. Coste (Scott), is a highly technical work on the chemical qualities of colours, and is to be commended to artists seriously studying the properties of paint.

THE FRENCH PICTURES.-IV.

BY CLAUDE PHILLIPS.

WE have done with the art of the eighteenth century, though not with the works which had their origin in the eighteenth century. Fragonard, Greuze, Houdon, lived on iuto the first years of the nineteenth, pale ghosts of their former selves, since their conceptions no longer had any root in the time, and they vainly, pitiably strove, by a mere outward conformity to the new fashions in art and in thought, to keep abreast of the generation of men who had the Great Revolution in their veins. On the other hand, it must not be forgotten that most of those painters of the neo-Classic School, with David at their head, whom we justly rank as the most deadly enemies of the eighteenth century and all its works, did much of their best work in that very period, and a great deal of it-strenuous as might be their repudiation of what they deemed its faded butterfly frivolities-in continuation of its most academic traditions. Do we not find the gayest, the brightest butterfly of them all, Fragonard himself, making his first success with that pre-eminently academic performance, 'Le grand prêtre Corésus se sacrifie pour sauver Callirrhoé'; and Greuze heartbroken because the Academy will not take him at his own valuation, and accept as great art his 'Severus reproaching Caracalla with the attempt to assassinate him '?

\* Continued from page 363, 1901.

Jacques - Louis David, the chief and leader of the intransigeants, the man who hated and despised Watteau as much as he did royalty and all its works, was fifty-two when the century closed. Gérard, the portraitist of the Empire and the Restoration, was thirty; -Guérin, that inventor of sham Græco-Roman classicism, who in frigidity went beyond David himself. was twenty-six; Girodet, the painter of the 'Déluge' and the 'Songe d'Endymion,' was thirty three; and Pierre Prud'hon, the only one of the school with whom we are here immediately concerned, was forty-two. I have but now called Prud'hon "one of the school"; and yet this description is in its essentials erroneous. From his own time and its frigid formulas, infinitely more conventional than what they sought to replace, he could not wholly escape. But, without casting them away, he transfigured, he fertilised and humanised them, substituting for the harsh, rigid Roman and Græco-Roman art of David-who could be both great and human, but only when a modern subject or a human being inspired him-the suavity, the musical harmony that Leonardo da Vinci and Correggio had breathed into him. And, diligent student as Prud'hon was of these divine masters, he was no mere pasticheur, no mere imitator of outward characteristics, such as the academic student easily acquires. His was a kindred spirit; and something of the divine suavity, something of the mysterious serenity of Leonardo, something of the more voluptuous and earthly grace of Correggio did indeed pass into the soul of this humble French provincial, who alone among the neo-classicists belonging to the end of the oue century and the beginning of the next, was in the higher and larger sense a painter; who alone beautified the pseudo-classic formula by something of the warmth and the loveliness of Nature.

It has been said already that David was unquestionably a master when his mistaken view of the function of art did not constrain him to draw the life-blood

from his conceptions and his figures, and to make of them so much Græco-Roman sculpture, bereft alike of the force and the suavity which he could show in modern sub. jects with which he was really in touch. In such pages of contemporary history as the 'Couronnement de l'Impératrice Joséphine,' he can prove himself as veracious and as dignified as Domenico Ghirlandajo himself, and, moreover, in certain groups, very like him. In such portraits as the 'Pius VII.,' the 'Mme. Pécoul,' the 'Madame Récamier' of the Louvre, he stands forth the equal of any portraitist of the seventeenth, eighteenth or nineteenth century. Strangely enough the one instance in which he is truly and grandly classical, is in a modern and absolutely contemporary subject, 'The Death of Marat.' For here he preserves, with the historical and momentous aspect of

the event, its essentially vital and human character. But enough of this harsh yet singularly interesting painter, who is, alas! unrepresented in the Wallace Collection. If it were necessary to compare David and Prud'hon to two great painters of the past, I should-with all necessary apologies to those painters and that past-point to Mantegna and Leonardo.

Prud'hon is really seen at his best in the magnificent fusains, or charcoal drawings, of which the finest series are to be found in the Louvre and at Chantilly. Here the neo-classicism, which, as a man of his time, he is compelled to adopt, though with his own essential modifications, develops a phase of passion and absolute grandeur which is hardly to be met with in his paintings. In the Wallace Collection his suavity is more completely exhibited than his strength. Nevertheless, if we except

the Louvre itself, it may be claimed for the Nineteenth Century Gallery (No. XV), at Hertford House, that it contains a better series of Prud'hon's paintings than any other collection. The earliest example of his art here is the pretty little piece 'Puppies' ("Oh! les jolis petits chiens!"), which is sentimental genre, aiming at the tenderness and vivacity which delight us in a Fragouard, but not quite easy or successful in movement. All the rest is much later in date. The little ' Maternity' (on this page) must have been painted some time before 1810, since the large copy, with life-size figures, made by Prud'hon's mistress, the ill-fated Mdlle. Constance Mayer, and now in the Louvre, was exhibited

at the Salon in that year. This little study has, for the time to which it belongs, an atmospheric envelopment, a truth and expressiveness of chiaro. scuro, quite wonderful. Like the 'Zéphyr,' its near neighbour here, it might, without being utterly put to shame, be placed even beside Correggio himself. Of such painting as this-of such use of the brush-no other Frenchman was in these first years of the nineteenth century capable.

The 'Zéphyr se balançant au dessus de l'eau,' as the picture is called in the French catalogues, is a reduced original version of the picture of that name which appeared at the Salon of 1814. A life. size sketch in oil from this same original belongs to Baron de Schlichtling, and was in the Paris Exhibition of 1900. But the little jewel of Hertford House is greatly supe-

By Prud'hon. rior to either of these both in handling and in exquisiteness of charm. In its embodiment of a beneficent force of nature in a gracious and everyouthful human form there is something, not of the Græco-Roman but of the truly Greek. One of the master's most famous works is the 'Venus and Adonis' of this collection, which first appeared at the Salon of 1812. The sketch in oils for the whole work-much praised by the Goncourts-is in the Marcille collection; and Chantilly holds a lovely repetition from Prud'hon's own hand of the Venus, shown this time in three quarter length only, and, in her spirituality of aspect, a Psyche rather than the Goddess of Love.

The vast canvas of the Wallace Collection, though one of the most imposing, is not, as a whole, one of the finest of Prud'hon's works. The beautiful landscape, with its gleams through tall tree-trunks of yellow and

Maternity.

By Ary Scheffer.

greyish light, bas no true relation to the figures or their chiaroscuro; the Venus is lovely, flexible, and quite Correggiesque in her appealing charm; but the stiff and frigid Adonis savours too much of Prud'hon's friend Canova. The figure of the reluctant youth looks, indeed, like one of the Italian sculptor's icily gracious statues but imperfectly galvanised into life. Moreover, the lighting of the figures bas no true relation to that of the landscape. But then we cannot expect even a Prud'hon to be altogether in advance of his age in such matters as these.

Altogether lovelier, and a creation which recalls Correggio, in its perfectly suave beauty, unmarred by any rough or jarring note, by any awakening to the more poignant realities of life and love, is 'The Sleep of Psyche' (p. 97). It might, with almost equal fitness, have been called 'The Sleep of Venus and Cupid,' since Psyche is represented in all the allurement of full-blown beauty, and the Love God not as the ardent lover-a youth but not yet a man-but as the chubby little divinity who, so often in eighteentb-century art. appears as the delight and the plague of his mother. Yet there is in this Psyche a purity, a virginal grace tempering voluptuousness, which excludes such an interpretation. A swarm of beautiful boy Zepbyrs, poised in the air, float silently and effortlessly downwards, rapt in a painless ecstasy as they watch and guard from harm the

sleep of the Love God and the mortal of whom his love has made a divinity. In colour, in atmospheric vibration, in the tone and transparency of sbadow-in these points Prud'hon lags far behind his great prototypes of the sixteenth century. In grace and spiritualised sensuousness he is their not unworthy successor. Here he adds to the Correggiesque harmony and musical flow of line, something of the Alexandrian Greekthrough temperament evidently rather than through deliberate imitation. There is a much smaller version of 'The Sleep of Psyche' in the Musée Condé at Chantilly.

The 'Assumption of the Virgin' is the finished sketch for the picture exhibited at the Salon of 1819, and now in the Louvre. Here Prud'hon has remembered not only Correggio, but Guido Reni. This 'Assumption' has the self-conscious elegance and cunningly-regulated ecstasy of the Bolognese caposcuola, who during the earlier half of the seventeenth century reigned supreme in Italy. When he is at his best in portraiture -as in the injured but still beautiful 'Madame Jarre,' of the Louvre, which so greatly influenced the art of M. Henner-Prud'bon knows no superior among bis contemporaries. The sole example of his art in this branch to be found at Hertford House, is a sprightly portrait-sketch -little more than a monochrome-'Joséphine Beaubarnais, afterwards the Empress Joséphine.' I have some misgivings as to the correctness of the designation in this case. Still, since it is consecrated by long usage, and no more probable description offers itself at present, I must needs keep it as it is. Of the vivacity and elegance of the presentment there can be no doubt.

Antoine-Jean Gros, the precursor of the Romanticists, is represented here only by the little piece, 'General Bonaparte reviewing Troops,' painted some time between the Battle of Arcole, 1796, and the Battle of Marengo, 1800. This bears a general family resemblance to the large 'Equestrian Portrait of General Bonaparte reviewing Troops after the Battle of Marengo,' which is now in the Palace of Compiègne. Gros is here still painting with the passion and the hero-worship of his youth. Later on he will return, humbled and penitent, to the fold of David, the uncompromising, his first master—there to meet his downfall and destruction.

Géricault, another precursor of the great Romantic movement, is represented here by a 'Cavalry Skirmish,' fierce in passion, full of the horrid clangour of war. This is the Géricault of the 'Officierde Chasseurs à Cheval de la Garde Impériale,' and the 'Cuirassier blessé quittant le Feu,' which represent in the Louvre what may be called the Napoleonic phase of the fiery young painter's art. In the famous 'Radeau de la Méduse,' which was, on its first appearance, more highly appreciated in England, where, in the painter's life-time, it was exhibited, than in France, he is a Romanticist who still shows, even in his tremendous revolutionary effort for freedom, some traces of the pseudo-classic school of Guérin in which he was trained.

And now we come to the acknowledged head of the Romantic movement, to Delacroix himself, assuredly one of the great masters of the nineteenth century, depreciate him as his ungrateful descendants in art may, who, as if to vex his ghost, go over, bag and baggage, to the enemy, worshipping even in his defects his rival and inveterate persecutor, Ingres, who is undoubtedly great in virtue of the suavity, the severe elegance and the grandeur of his conceptions, great in the undaunted realism of his portraiture, but as a colourist wholly abominable. Delacroix is as liable to be misunderstood as Tintoretto, with whom he has, indeed, something in common. With him drawing, composition, colour, were above all modes of expression, used, and uncompromisingly used, in order to realise his painter's vision to the full; and thus mere academic correctness was not for a moment allowed to weigh in the balance when the aim could only be attained by some heroic and quite deliberate departure from the grammar of the art. Some of these divergences are, it must be owned, not a little trying even to Delacroix's most fervent admirers. Their annoyance at what may seem either ignorance or wilful defiance, not infrequently puts them into a frame of mind which is the very one in which it is least possible for the imagination of the onlooker to meet half-way the imagination of the painter-poet. And without such sympathy, such readiness to divine and to give one's soul to the soul of the painter, Delacroix's passionate, lurid art, in which colour stands above all for emotion, for tragic significance, when it does not mean voluptuous enchantment, cannot be understood.

His great qualities and his obvious defects are well illustrated in the two canvases in the Wallace Collection—the 'Execution of the Doge Marino Faliero' (p. 101), and the smaller 'Faust and Mephistopheles.' Nothing is correct in this Venetian tragedy of the fourteenth century; neither the à peu près architecture, nor the drawing of the strange yet impressive

figures; nor yet their facial expression, which is often of the most rudimentary order. But for all that the artist realises bis vision, gets his effect of a great world-tragedy, the pomp and outward gloriousness of which but serve the more to emphasize the horror of a crime so tremendous, so crushing in force and deliberation as to stand bigh above punishment.

To turn from Delacroix to Delaroche, to Gallait, to Robert-Fleury in this same gallery, is to see at once the difference between the poetised vision of the painter transfiguring with his genius some awe-striking event of history, and the finished historical anecdote, or narrative in paint, which aims not so much at an interpretation as at a representation: and is therefore, even at its best, an historical document, or an bistorical romance in paint, rather than, in the bigher sense of the word, a picture. The 'Faust and Mephistopheles' is, in truth, notwithstanding its beauty of colour, more than a little grotesque. In the series of designs lithographed by Delacroix for Goethe's 'Faust,' it appears again; but this time is rendered with a far higher dramatic intensity. The painting, which I have intentionally grouped here with the 'Francis I. and Marguerite de Navarre' and the 'Henri III. and the English Ambassador ' of Delacroix's young friend and companion in art, the Englishman Bonington, serves chiefly to reveal the interchange of influences that went on between the two artists; the Briton, as a born colourist and a born romanticist, giving to the full as much as be took back. Here he is certainly superior to Delacroix, who must not, however, be judged by so relatively puny an effort. We have in the Wallace Collection no Dévéria, no Chassériau. We have only, to illustrate the Romantic period in France, when the painters-even to some extent the arch-romanticist Delacroix himselfwere the exponents, almost the servants of the poets, such men as Ary Scheffer, Léopold Robert, Roqueplan, the piquant vignettiste and aquarelliste Tony Johannot, the industrious and superficial Isabey. The great Orientalist Decamps has a place of his own in the school; so has the brilliant short-lived Marilhat; so has the frigid romanticist of chronicle and history, Paul Delaroche, whose influence in European art was, in relation to his actual value, enormous.

Ary Scheffer, Dutch in origin, and thus importing into the passion and the onrush of the Romantic movement in France an element of Teutonic mysticism, was a mediocre painter, and an appreciator of poetry in others rather than, himself, a seer of poetic visions as the painter sees them. It was not an absolute novelty, this subordination of the artist to the poet. Have we not seen our own painters, with Sir Joshua Reynolds at their head, floundering most miserably when they strove to raise themselves on stilts, and so to express what it was not wholly in themselves or their century to understand? We have but to remember the 'Ugolino' of Sir Joshua, and his 'Macbeth and the Witches;' and Romney's unfortunate excursions into the same domain; and Sir Thomas Lawrence's 'Satan,' which so appals us on the staircase of the Diploma Gallery of the Royal Academy, though hardly as he intended that it should appal. Such men as Blake, Flaxman, and Fuseli, were on a wholly different plane, since they in the first place aimed at clothing the idea in a form which should still preserve something of the abstract, and only in the second place sought for beauty. We find too the frigid, and in his sham Roman austerity not a little ridiculous, Guérin painting after Racine an 'Andromaque et Pyrrhus' and a 'Phèdre et Hippolyte.' But the great impetus to the illustration or theromantic poets by their worshippers, the romantic painters, was given hy Delacroix himself with his 'Dante et Virgile' (1822), a youthful and immature work, and yet in some respects his masterpiece of expression. Hereare expressed all the smouldering horror, the frenzy of livid despair, the infinite pity, the infinite hopelessness that we seek for in vain in the 'Ugolino' of a Reynolds. Scheffer was deeply penetrated with the overwhelming power of the great creations in which woe was so expressed hy genius that it hecame heauty.

In the famous 'Paolo and Francesca' (p. 99) he has given what is really, though it

may appear to us just now not a little old-fashioned, a fine and impressive rendering of the most moving episode in all poetic literature. We are in the Fifth Circle of Hell; and as Dante and Virgil sorrowfully gaze, there float past them, white and ghostly against the hlackness of the perpetual night and storm, Francesca still infinitely loving in sorrow, and Paolo wailing his unending wail for the woe he has hrought on his heloved. The exact moment of the encounter of the lovers with the two poets is not realised; since, in the "Divine Comedy," as Paolo, listening to the tale told hy Francesca, hursts forth in his agony of weeping ever renewed, Dante, pierced to the heart with a pity which hereaves him of sense, swoons, and "falls as a dead hody falls." The poet tells of those who have sinned the sins of the flesh, and who whirl innumerable in this Circle of Hell, that "nulla speranza gli conforta mai," no hope can ever mitigate their anguish. And to these two flowers of youth and love, whom so much that was sweet and fair drew to their doom, his heart goes out in a yearning so intolerable that for the one moment it quells and annihilates his whole heing. And yet these souls of all in hell alone had comfort. To them Justice and Wisdom Divine gave as their doom eternal torment. Yet Divine Mercy, infinitely pitiful, gave with that doom, amidst the awful moan of never ceasing storm winds, within the pall of darkness and despair no other ray could pierce, consolation unspeakable. With them were whirled through Time and through Eternity lovers hereft of love, torn still hy pangs unquenched of hell itself, lovers the torment in whose hreast effaced

The Execution of the Doge Marino Faliero,
By Delacroix

the very hell with. out. This valiant youth and this fair woman, vanquished and drawn into the web of Fate, they whose love was in the fiercest flame of passion white-hy truth and sacrifice purged of the grosser dross of sin-they were in their very doom for ever one: one heart, one soul, one agony of recollection, one fathomless despair; hut over all triumphant, one eternity of perfect union and of perfect love!

The 'Paolo and Francesca' of the Wallace Collection hears the date 1835. It helongs thus to the very climax of the Romantic period. An exact replica is in the Academy of Arts at St. Petershurg,

with the same frame, designed no doubt by Scheffer himself. Round this, rihhon-like, runs the worldfamous passage, heginning with the words "Nessuu maggior dolore che ricordarsi del tempo felice nella miseria," which have for ever and ever hurnt themselves into the heart of humanity. It is not a little strange that Scheffer's version of the love-tragedy, surviving his time and himself, should so have impressed itself on the world, that it still remains the version. That of Mr. Watts, suhlime in depth of sorrow and in height of pity, is immeasurably greater; Flaxman's outline drawing has extraordinary intensity; Dante Rossetti has rendered once for all the scene of the reading, when, in Francesca's words, "La hocca mi bacio tutto tremante"-when the fatal kiss, for which the go-hetween book is responsible, seals the fate of the lovers. Ingres, in the picture in the Musée Coudé at Chantilly, has so frigidly presented the episode as to utterly destroy the youth and passion which alone justify it. Cahanel gives the death of the pair, and the savage joy of the wild hoar who has slain them, in the most approved melodramatic fashion. Mr. Frank Dicksee has sought to present the scene of the reading, "Soli eravamo, et senza alcun sospetto," hut with a couple so decorous, so timidly observant of the proprieties, that no go-hetween hook could have stirred their pulses heyond control. But all this is straying too far from the Nineteenth Century Gallery, at Hertford House, and we must strive to turn our wavering footsteps back thither.

Delaroche may be studied, hy those who still care to

The Villa Doria-Pamfili, at Rome.

By Decamps.

study him, in the Wallace Collection, in two once-famous pieces, 'Cardinal Mazarin's Last Sickness' and 'The State Barge of Cardinal Richelieu on the Rhone, supplementing which we find a smaller version of the canvas 'Les Enfants d'Édouard,' now in the Louvre, and 'Joan of Arc in Prison.' 'La Vierge au Lézard' does not rise much above the level of the glorified 'image de piété,' so nauseatingly sweet, so trivial and self-conscious is the art here displayed. The best things hy Delaroche here are two little oil paintings almost on the scale of the miniature, 'A Mother and Children' and 'A Child learning to read.' Here the charm of spontaneity is enbanced by an exquisite and yet not excessive finish. Delaroche must, however, be studied in the Louvre; at Chantilly; at the Ecole des Beaux-Arts, which contains his famous Hémicycle, and in the important canvases 'Charles I. insulted by the Parliamentary Soldiers,' at Bridgwater House, and 'Strafford going to the Scaffold,' at Stafford House.

His example did more than that of any other painter to force the art of modern Europe into devious paths leading to nothingness. The painted drama, the historical anecdote more or less accurately realised, the illustration of the fails divers, and not the creation evoked from the first-band contemplation of Man and Nature—these things for the moment reigned supreme, and reduced art to a level at which all independence was lost. Painting became mere illustration of poetry, history, and sentimentalized actuality; thus accepting a suhordinate rôle which even now contents too many skilled practitioners. Some men who followed in the footsteps of Delaroche—notably the Fleming Louis Gallait and the Bavarian Carl Piloty—equalled if they did not surpass him on his own chosen ground. Gallait, whose 'Duke of Alva

administering an Oatb,' in the Wallace Collection, is an excellent example of his manner at its best, displays in his great bistorical pieces, such as 'The Last Moments of Count Egmont' and 'After the Execution of Egmont and Horn,' an beroic ardour, a fierce, smouldering passion for national glory which give to his works of this class a genuine and, in a sense, a national value.

Nogallery-not the Louvre, not even the Musée Condé of Chantilly-can boast such a series of oils and watercolours by Decamps as Hertford House has to show. The French, momentarily unfaithful even to those who bave served them best, too intolerant of that which seems to them to lag a little hehind the time, or to evoke no longer a responsive flash in contact with an audience or a public, have cast down now Watteau, now David, now the Classicists, now the Raphaelists, now the Romanticists. Some shattered idols are put to pieces and again raised on their pedestals; others remain hut so much broken and defaced marble. For the moment Delacroix and Decamps are on the ground, except with the judicious who do not allow waves of fashion to sweep them away; Jean-François Millet himself does not, in France, strike the note that is quite grateful to the ear or eye; there are signs that even the greatest of the Impressionists, who bave been on the top of the wave lately, will by degrees sink into the trough. Decamps does not always come up to the modern standard as regards the true coloration, the true complementary tone, the true transparency of shadow, or the true atmospheric envelopment. In these respects, indeed, Watteau and the painters of the 'Fètes Galantes approach nearer to the extreme moderns than do the Romanticists, or, indeed, any of theintervening painters. Still, he is and remains at his best a master, a lyric poet of the brush, an Orientalist with a visiou of the East peculiarly his own. We are told sometimes that this is not the true Orient, but the dream of one who, wrapped in the glamour of the poets, was able to see thus, and thus only, what was presented to his eye. What does it matter after all if this be so? What is wanted of the painter is not painfully accurate, literal transcription, truthful only in the lower degree, but his own vision of his subject, which, seen as he only can see it, emerges in a re-creation poetised by his artistic personality.

Of the Oriental scenes at Hertford House, one of the loveliest is 'La Rade de Suyrne,' the anchorage of Smyrna, all lucent grey and pale yellow in the afternoon light shed over calm shining waters, with an effect of singular and most soothing calm to the eye and the spirit. 'The Watering Place' ('L'Abreuvoir') is magnificent, too, in its contrast of deep blue skies flecked with cloud, with the great walls of massive masonry burnt all a golden hue by many centuries of sun, against the steep slopes of which the horses, led by their Arabriders, drink. 'The Villa Doria-Pamfili at Rome' (p. 102) is lovely almost as a Watteau is lovely, with its pools in which sleep the reflections of stately trees, its peacocks lazily dragging their splendours along, and its company of gaily-dressed cavaliers and ladies, who

make of the lovely glades a site for a new Decameron. A jewel of execution solid and finished, yet full of accent and vibration, clear and crystalline in atmosphere, this is a Decamps that even the most sceptical cannot deny. 'Mules at Boulac' is massive and vigorous in execution, but heavy and opaque in shadow. In 'The Miraculous Draught of Fishes' we have the genuine and quite reverent re-creation of a subject so august in its very simplicity that it may well dismay the bold innovator who attempts it. Over lake and mountain glowing sunset is descending, the shore is filled with an eager crowd of spectators passionately gesticulating in their wonderment, as they direct their gaze to the boat, and become aware of the miracle that under their eyes the Divine Presence brings about. In the foreground two Roman soldiers sit their horses, motionless and indifferent spectators of what they behold-contemptuous masters and guardians of an alien race. To approach such a subject as this with the freedom, the defiance of conventionality, of the modern, and yet with genuine emotion, even with awe, is to show genius. Among the many water-colours by Decamps in the Wallace Collection are two of the most famous: 'Arabs fording a River' ('Le Passage du Gué')-see below-and 'Released from School' ('La Sortie de l'École Turque').

(To be continued.)

A Water-Colour. By Decamps.

# The Houses of Parliament, Westminster.

AN ORIGINAL ETCHING BY A. BRUNET-DEBAINES.

rom a drawing by Fames Fitzgerald.

ESTMINSTER was the scene of great excitement on Thursday, the 16th October, 1834.

Shortly be fore seven o'clock in the evening it was discovered that the House of Lords was on fire, and a few hours later "it was currently reported through the town that Westminster Hall and even the Abbey itself were in flames." The

tide was unusually low, and the Thames not furnishing the abundant supply of water it might have done at another hour, the fate of the historic buildings seemed certain; but when the Times went to press, at half-past two o'clock, the editor was able to add, for the relief of the country, that "Westminster Hall is, we think, quite safe." This opinion was confirmed. The destruction was confined to the Houses of Parliament, and so badly were these buildings adapted to the requirements that it was a subject for rejoicing to many that an opportunity had been afforded to more suitably house the Legislature. It would have been au irreparable loss to the nation had the Abbey and Hall been destroyed. Without these stately links with similar pageants, the forthcoming Coronation ceremony would lack its mediæval suggestiveness; and much of its quaintness, hallowed by precedent, would seem trivial.

The successful architect in the competition to prepare designs for the Houses of Parliament, or the new Palace at Westminster, was Mr. Charles Barry. During the progress of the work many difficulties had to be overcome, but the scheme of ventilation seems to have caused the principal delay. If the complete buildings before the fire were correctly described as "a heterogeneous mass of architectural erections, in which taste, chronology, and convenience were equally set at nought," the adaptation of one of the destroyed chambers -"patched-up ruins"-to serve as a meeting place for Legislators, also formed an unsatisfactory structure; and on the 24th July, 1845, Lord Brougham moved "that an humble address be presented to Her Majesty, praying that by the expenditure of an additional sum of money the new Houses of Parliament may be ready for occupation by the following January. Nothing could equal the sufferings which noble lords endured in the present House, and he could not help suspecting that there was something behind to occasion delay, that there was a taste committee, or some frescoe painting, or some idea of ornamenting the Houses, or some plan in an eminent quarter to make the two Houses subservient to pictorial and sculptural embellishment; which, though perhaps an excellent thing, was not so important as business." This motion was rejected by a majority of 24, and Lord Brougham, with his supporters, probably wished advantage had been taken of the offer made by King William IV., immediately after the fire, that until the completion of the new buildings, Buckingham Palace should be utilised for the debates. The House of Lords was first occupied for a political meeting on the 15th April, 1847.

A notice dated the 25th April, 1842, states that "the Commissioners of Fine Arts having resolved to ascertain whether fresco painting may be applied with advantage to the decoration of the Houses of Parliament, three premiums of £300 each, three of £200, and five of £100, are offered to artists whose cartoons, executed in chalk or charcoal but without colour, are deemed worthy by the judges." The subjects were to be taken from British History or from the works of Spenser, Shakespeare or Milton. The work of 140 competitors was hung in Westminster Hall, and of the successful artists only two are now living, Mr. G. F. Watts, R.A., and Mr. J. C. Horsley, R.A.

Models for statues, designs for carved work in wood, and other decorative devices having been meanwhile requested, on the 15th July, 1844, another advertisement was issued which intimated that six arched compartments of the House of Lords would be decorated with fresco paintings. The Commissioners invited for this purpose designs illustrating Religion, Justice, the Spirit of Chivalry and three historical events. Six artists of repute were commissioned, but outside competition was sought. Of the three prize-winners of £200 each, Sir John Tenniel is the only living representative.

Westminster Hall, although it does not appear in this etching by M. Brunet-Debaines, is recognised as a portion of the Houses of Parliament. It is a building in which so many scenes of peace and violence have taken place, that even the shortest allusion to the most historic of them would fill more space than we can spare. It is interesting to recollect that until within the last few years there were other buildings on the Abbey side of it; on the space where the statue to Cromwell now stands stood the Law Courts. It seems but a few years ago—actually it was in 1878—that a case of great interest to artists was tried there, that in which Mr. Whistler obtained a farthing damages from Mr. Ruskin, and recorded the proceedings in his delightful book, "The Gentle Art of Making Enemies."

M. Brunet Debaines chose Lambeth Bridge—time, late evening—as his point of observation. His etching shows not only the Gothic building in much of its picturesque beauty, but the little piece of shore between the Victoria Gardens and Lambeth Bridge is like a piece of bygone London, and reminds us of the condition of other parts of the river-side before the advent of the Embankments. The Victoria Tower, with its pinnacles and flying flag, stands out well from its surroundings, and the artist with a few skilful touches of his needle has admirably suggested the architectural character of the whole building.

M. Brunet-Debaines was born at Havre on the 5th November, 1845. His father was an architect of repute, and gave to his son a thorough grounding in that profession. But other branches of art were more congenial to the youth, and he gradually devoted his attention to painting and etching. A mastery of the science of perspective has always shown itself in his representations of cathedrals, and much of this certainty of delineation is due to his early training. As an interpreter of Turner's paintings, M. Brunet-Debaines has achieved distinction, and his copper-plate translations of the work of British artists has made his name familiar and respected on this side of the Channel. He is among the few etchers of to-day who have attained the summit of excellence.

Illustrated by Kate Greenaway.

To "Motber Goose" followed "A Day in a Child's Life," 1881, and "Little Ann,"
1883. The former of these contained various songs set to music by Mr. M. B. Foster, the organist of the Foundling, and accompanied by designs on rather a larger scale than those in "Mother Goose." It also included a larger proportion of the floral decorations which are among the artist's chief gifts.

Daisies and daffodils, tulips and roses, are flung about the pages; and there are many pictures, notably one of a little figure perched upon a five-barred gate, which repeat the triumphs of "Mother Goose." In "Little Ann and other Poems," which is dedicated to the four children of the artist's friend, the late Frederick Locker Lampson, she illustrated a selection from the

 $^{\rm o}{}_{\rm a}{}^{\rm e}$  We are again indebted to Messrs. Warne and Co. for permitting reproductions from their copyright books by Kate Greenaway.

\* Continued from page 36.

verses for "Infant Minds" of Jane and Ann Taylor, daughters of that Isaac Taylor, of Ongar, who was first a line-engraver and afterwards an Independent Minister. The dedication contains a charming row of tiny portraits of the Locker Lampson family. These illustrations may seem to contradict what has been said as to Miss Greenaway's ability to interpret the work of others. But this particular task left her perfectly free "to go ber own gait," and to embroider the text, which, in this case, was little more than a pretext for her pencil.

In "Marigold Garden," 1886, Miss Kate Greenaway was berown poet, and next to "Mother Goose" this is probably her most important effort. The flowers (note especially the jar of roses on p. 26), are as entrancing as ever; and the verse makes one wish that the writer had written more.

From "A Day in a Child's Life."

Illustrated by Kate Greenaway.

"For what are you longing, you three little boys in Oh, what would you like to eat?"
We should like some apples, or gingerbread—
Or a fine big drum to beat,"

From "Under the Window."

Written and Illustrated by Kate Greenaway.

The "Genteel Family" and "Little Phillis" are excellent nursery pieces, and there is almost a Blake-like note about "The Sun Door."

"They saw it rise in the morning, They saw it set at night, And they longed to go and see it, Ah, if they only might!

"The little soft white clouds heard them, And stepped from out of the blue; And each laid a little child softly Upon its bosom of dew.

"And they carried them higher and higher,
And they nothing knew any more,
Until they were standing waiting,
In front of the round gold door.

"And they knocked, and called, and entreated, Whoever should be within; But all to no purpose, for no one Would hearken to let them in."

Here is another, "In an Apple Tree," which reads like a child-variation upon the theme of the admirable "Mimnermus in Church" of the author of *Ionica*:—

From "The Birthday Book for Children."

Illustrated by Kate Greenaway.

"In September, when the apples are red,
To Belinda I said,
'Would you like to go away
To Heaven, or stay
Here in this orchard full of trees
All your life?' And she said, 'If you please,
I'll stay here—where I know,
And the flowers grow.''

In another vein is the hright little "Child's Song"-

"The King and the Queen were riding
Upon a Summer's day,
And a Blackbird flew above them
To hear what they did say.

"The King said be liked apples,
The Queen said she liked pears;
And what shall we do to the Blackbird
Who listens unawares!"

A few words must be said in regard to Miss Greenaway's career, the more so as the account, presumably supplied by herself to the current  $V^Tho^*s$   $V^Tho$ , is rigorously coucise in its modesty. She was born on the 17th March, 1846, her father being Mr. John Greenaway of Islington, a draughtsman on wood, who

From " The Language of Flowers."

Illustrated by Kate Greenaway.

contributed much to the earlier issues of the *Illustrated London News* and *Punch*. Very early she exhibited a distinct bias towards colour and design of an original kind. She studied at different places, and at South Kensington. Here she had for master the late Richard Burchett, who, five-and-thirty years ago, was a prominent figure in the art schools, a capable painter, and a teacher exceptionally equipped in all the hranches of his craft. Mr. Burchett thought highly of Miss Greenaway's abilities; and she worked under him for several years with exemplary perseverance and industry. She subsequently studied in the Slade School under Prof. Legros.

Her first essays in the way of design took the form of Christmas cards, then heginning their now somewhat exhausted career; and she exhibited pictures at the Dudley Gallery for some years in succession, heginning with 1868. In 1877 she contributed to the Royal Academy a water-colour, entitled 'Missing,' and in 1890 was elected a Member of the Royal Institute of Painters in Water-Colours.

Bythis date, as will he gathered from what has preceded, Miss Greenaway had made her mark as an illustrator of children's books, since, in addition to the volumes already specially mentioned, she had issued "Under the Window," "The Language of Flowers," "Kate

From a series of drawings
Formerly in the possession of John Ruskin,

Illustrations to Mavor's Spelling Book.

By Kate Greenaway.

in 1897. In 1891 the Fine
Art Society exhibited some
150 of her original drawings
—an exhibition which was
deservedly successful, and
was followed by others.
As Slade Professor at Oxford,
Mr. Ruskin, always her fervent admirer, gave her unstinted eulogium; and in
France her designs aroused

the greatest admiration. The *Débats* had a leading

article upon her death, and

"Five little sisters walking in a row;
Now isn't that the best way for little girls to go

Each had a round hat, each had a muff, And each had a new pelisse of soft green stuff.

From "Under the Window,"
Written and Illustrated by Kate Greenaway,

items, and has the advantage of an exceptionally graceful and sympathetic introduction from the pen of Mr. M. H. Spielmann. As Mr. Spielmann is understood to be the biographer-elect of Miss Greenaway, whom he knew intimately, I make no scruple to borrow, from so authoritative a source, one or two dispersed facts which may serve to render the above account less incomplete. She was born at 1, Cavendish Street, Hoxton, and the country residence referred to in

From "The Queen of the Pirate Isle." By Bret Harte.
Illustrated by Kate Greenaway.

the foregoing paper was a farm at Rolleston, where she had been sent on account of her mother's delicate health; and annual visits to this farm (writes Mr. Spielmann) up to 1868, "kept her eye clear and her love for nature warm''; but, he adds acutely, "nature not quite as she saw it, rather as she felt it." At South Kensington, he says, stories are told how she and Lady Butler "would bribe the porter to lock them in when the day's work was done, so that they might labour on for some while more." Another of the interesting points in this Introduction is that six of the first of Miss Greenaway's little drawings on the wood were acquired for the "People's Magazine" by the then editor, the Rev. W. J. Loftie; and that stories were "written up" to them, one of which was by the subsequently famous author of "A Short History of the English People," Mr. J. R. Green. Out of her connection with Mr. Loftie grew her conuection with Christmas cards, and out of the Christmas card, the Greenaway child, as we know it, was gradually evolved.

But we must stay our levies on Mr. Spielmann, and turn to the exhibition itself. Perhaps its most novel feature is the central case, containing, among other things,

some of those missives to Mr. Ruskin of which mention has been made. Happy the sender, happy the recipient! In these epistles, like the famous contributions to the "Guirlande de Julie," picture and poem are often combined - delicate little tablets of symmetric script, decorated by flowers and sprays, or groups of tiny figures, which leave the mind-to use Smetham's admirable words of Blake-" in a pleasant uncertainty as to whether it is a picture that is sing-

ing, or a song which has newly budded and blossomed into colour and form." Some, too intimate and particular, no doubt, for the vulgar eye, are shielded by little shutters of paper which close discreetly upon their secrets. Turning to the walls, one is struck at once by the thought that the Greenaway of the brush and pen was far greater than the Greenaway of the picture books. Excellent and painstaking as were the reproductions, they are as moonlight unto sunlight compared with the original drawings. It is also abundantly evident from the drawings exhibited that when Miss Greenaway strayed from her own domain into larger compositions, or rather into compositions more exactly akin to ordinary water-colour, a considerable portion of her personal charm departed. But in designs such as those lent by Mrs. Arthur Severn (notably No. 5, 'Flowering Arch, through which poor children pass to leave their troubles behind'), little masterpieces of refined line and fairy tinting; in the illustrations to Mavor's Spelling-book (Nos. 99, 103, and 111); in the broader aud more conventional "Apple Pie Alphabet," and in the illustrations to "Marigold Garden" and "Under the Window" (the artist's first book "all to

herself") we get a Greenaway unexcelled and unapproached for sweet. ness, grace, simplicity and delicacy of treatment. Truly said Ruskin to his pictorial correspondent, "Holbein lives for all time with his grim and ugly 'Dance of Death'; a not dissimilar and more beautiful immortality may be in store for you if you worthily apply yourself to produce a 'Dance of Life.'"

### The Life and Work of Dante Gabriel Rossetti.

BY MISS HELEN M. M. ROSSETTI.

#### THE EASTER ART ANNUAL, 1902.

THE Easter and Christmas numbers of THE ART JOURNAL, have always been devoted to artists who have severally taken an active interest in the preparation of the monographs. In departing from precedent with our Easter number this year, we have been guided, not only by a desire to include Dante Gahriel Rossetti among those distinguished artists whose achievements have merited such recognition in the series, but also, by devoting a monograph to the most ardent member of

the Pre-Raphaelite Brotherhood, to conclude the history of that artistic revolution which has described heen incidentally in our special numbers on Millais, Morris, Burne-Jones and Holman Hunt. By the cooperation of owners of well-known pictures, it has been possible to include reproductions of Rossetti's most characteristic work, and the assistance derivable in past years from the subjects of the monographs has heen given hy the artist's brother and biographer, to whom and to whose daughter we are deeply indehted for access to authentic records, and for the use of several illustrations not hitherto published. To Mr. Fairfax Mur-

Mr. Fairtax Murray we are also under great ohligations. He permitted his unique collection to be largely drawn upon, and through his generosity many rare illustrations are included. In reproducing pictures, those have heen chosen which particularly illustrate notable characteristics or important periods of work. The plates are 'The Christmas Carol,' 'The Beloved,' and 'Paolo and Francesca;' and there are forty-eight other illustrations.

Miss Helen M. M. Rossetti, a niece of the painter, has collected with every care the material for her essay. She has referred no more than is consistent with historical research to the private life of her uncle, whom she cannot recollect, hut with whose inner life she has hecome familiar hy family associations.

Among those artists who have possessed that rare attrihute, the birthright of a poetic imagination, few have expressed their thoughts except by their own medium. Rossetti, from bis infancy, thought poetry, wrote and published it, sometimes by itself, at other times to accompany a realisation in paint of the same idea. He contri-

From the picture in the Collection of Fairfax Murray, Esq.

Bocca Baciata, By D. G. Rossetti.

gestive lines to the organ of the P.R.B., "The Germ; or, Art and Poetry, heing Thoughts towards Nature," a shortlived magazine, but a wonderful. Whether he excelled as a painter or as a poet has often been the subject of discussion. It is related that Mr. Whistler once gave his approbation to a sonnet and disparaged a picture; though it was probably random humour and not deliberate criticism which prompted the remark. He had seen a picture hy Rossetti, heautifully framed, and when the artist read the lines dedicated to it, exclaimed, "Rossetti, take out the picture and put in the sonnet!" There is no doubt that he was

huted many sug-

gifted with a great artistic passion, which he sometimes expressed in words of much fervour; but the larger share of his attention was turned towards painting. His own life of prodigality, tribulation, and emotional enthusiasm was reflected in his pictures, and his work shows the vehemence of his mental temperament.

He died exactly twenty years ago (Easter Sunday, 1882), at Birchington.on.Sea: it is opportune that our tribute to his genius should be published at the season of the year when the world of art was deprived of a thinker of unexcelled originality and power.

Loch-an-Eilan, From a drawing by A. Scott Rankin.

# Rothiemurchus (III). Loch-an-Eilan\*

BY THE REV. HUGH MACMILLAN, D.D., LL.D., F.R.S.E., F.S.A.SCOT.

OCH-AN-EILAN is one of the local show-place scenery in Scotland, and the special show-place OCH-AN-EILAN is one of the loveliest bits of of the district. All roads in Rothiemurchus therefore lead to it. But the high road goes round from Aviemore by the Doune, which is the residence of the proprietor. Doune House is a square modern building, substautially constructed, in the midst of spacious parks and richlywooded policies, on the banks of the Spey, whose soft cultivated beauty contrasts strikingly with the bare rocks and brown heath-clad mountains around. A high mound crowned with trees lies to the east, from which the mansion received its name. It was originally a fort, and traditiou says that it was inhabited by a brownie which faithfully served the household for many years, probably a survival of the use to which the mound was originally put. This family seat was occupied for many years by the Duke and Duchess of Bedford. The Duchess was the daughter of the famous Jane, Duchess of Gordon, who lived on the neighbouring property of Kinrara, and seems to have inherited the vivacity of disposition and the active benevolence of her mother. A large number of the leading men of the day were entertained in the Doune during her occupancy, among others Lord Brougham. A dispute arose one night among the visitors, as to whether the Lord Chancellor of England carried the Great Seal about with him when he travelled.

\* Continued from page 80.

The Duchess put the matter to the test at once, and marching at the head of her friends to the bedroom of Lord Brougham, who was lying ill at the time, she persuaded him to imprint a cake which she had just baked, with an impression of the Seal, which, of course, settled the question.

Rothiemurchus originally belonged to the powerful family of the Comyns, who owned all the lands of Badenoch. With the displacing of the Comyns is associated a tradition of the Calart, a wooded hill to the west of the little loch of Pityoulish. In the pass close to this loch one of the Shaws, called Buck Tooth, waylaid and murdered the last of the Comyns of Badenoch. The approach of the Comyns was signalled by an old womau seated on the top of the Calart, engaged in rocking the tow; and Shaw, with a considerable force of his clansmen, sprang from his ambush and put them all to the sword. The graves of the Comyns are still pointed out in a hollow on the north side of the Calart, called Lag - nau · Cumineach. Unswerving tradition asserts that this Shaw was no other than Farguhar, who led thirty of the clan Chattan in the memorable conflict with the thirty Davidsons of Invernahaven, on the North Inch of Perth, in 1396. His remains were interred in the churchyard of Rothiemurchus, and a modern flat monument with an inscription, and with the five cylindershaped stones, the granite supporters of the original slab, resting upon it, indicates the spot. Tradition says that these curious stones appear and disappear with the rise and fall of the fortunes of the House of Rothiemurchus. A footman of the Duke of Bedford, during his tenancy of the Doune, removed one of them to test

the truth of this tradition. But he was obliged speedily to restore it, owing to the indignation of the people. A few days after putting back the stone upon the grave he was drowned in fording the Spey; and his death was considered in the district the just punishment of bis sacrilege.

The Shaws held possession of Rothiemurchus till they were finally expelled by the Grants of Muckerach in 1570. On account of their frequent acts of insubor-

dination to the Government, the lands of the Shaws were confiscated, and bestowed upon the Grants "gin they could win them. Many conflicts took place between the two rivals, one of them in the hollow now occupied by the large well-stocked garden of the House. Though defeated and slain, the chief of the Shaws would not surrender his rights, but even after death continued to appear and torment the victor, until the new laird of Rothiemurchus buried his body deep down with. in the parish church, beneath his own seat; and every Sunday when he joined in the prayers of the congregation he had the satisfaction of stamping his feet upon the body of his enemy. The last of the Shaws of Rothiemurchus was outlawed on account of the murder of his stepfather, Sir Jobn Dallas, whom he hated

which he hated because of his mother's marriage to him. One day, walking along the road, near a smithy, his dog, entering, was kicked out by Dallas, who happened to be within, when the furious young man drew his sword and cut off Dallas's head, with which he went to the Doune, and threw it down at his mother's feet. The room she was in at the time is still pointed out; and the smithy where the murder occurred is now part of the garden, and it is said that on the anniversary

of the tragedy every August, the scent of blood is still felt in the place, overpowering the fragrance of the flowers.

Muckerach Castle, near Granton, now in ruins, was the earliest possession of the Rotbienurchus family. The lintel-stone of the doorway was removed and built into the wall of Doune House. It has carved upon it the date of the erection of the castle in 1598, and the proprietor's arms, three ancient crowns and three wolves'

heads, along with tbe motto-"In God is all my trust." Several members of the Rothiemurchus family greatly distinguished tbemselves in the world of diplomacy and politics. Sir John Peter Grant, a very clever barrister, was first M.P. for Great Grimsby and Tavistock, and in 1828 was appointed one of the Judges of the Supreme Court of Bombay. His son was Lieutenant-Governor of Bengal, and ultimately Governor of Jamaica, and for bis valuable services was knighted. His sister, who married General Smith, of Baltiboys, in Ireland, wrote the charming "Memoirs of a Highland Lady," giving a social account of Rothiemurchus in the early years of last century.

Not far from the garden of the Doune, on a knoll which commands an extensive view, is the mansion - bouse

Loch-an-Eilan.

From a drawing by A. Scott Rankin.

of the Polchar, where the late Dr. Martineau resided for many years. The house has long sloping roofs and low walls, and is well sheltered by trees from the blasts which in winter must blow with great violence here.

From June to November the venerable divine was accustomed to come to this place from London, and the change no doubt belped to prolong his valuable life. When he came first to Rothiemurchus, he found

och-an-Eilan. From a drawing by A. Scott Rankin.

that everything was sacrificed for the sake of the deer forest. Old roads were shut up, and the public were excluded from some of the grandest glens. Dr. Martineau set himself to counteract this spirit of exclusiveness; and in a sbort time he succeeded in securing free access to the loneliest haunts of nature. Of an extremely active bahit of hody, he climbed the heights, and explored all the recesses of the Cairngorms. In his later years, however, he seldom moved heyond the scenes around his own door. His refined face and earnest manner always impressed one. Calling upon him on his ninety-second hirthday to offer my congratulations and good wishes, I shall not soon forget his look, as if be were already a denizen of another world, and had hrought its far-reaching wisdom and experience to bear upon the fleeting things of time. The family of Dr. Martineau have done an immense amount of good in the locality, having founded a capital library for the use of the inhabitants and visitors, and a school for wood-carving, with an annual exhibition and sale of the articles made by the pupils, which has stimulated the artistic taste of the young people in a wonderful degree.

Passing the low-hrowed manse, whose situation in the shadow of Ord Bane is exceedingly picturesque, a beautiful path at the foot of the hill conducts the visitor to Loch-an-Eilan. A stream flows all the way from the loch heside the path, which is overarched by graceful birch-trees, such as MacWbirter loved, and which he actually painted on the spot several years ago while residing at the manse. The studies of the Lady of the Woods by his facile pencil in this place are ex ceedingly beautiful. They bang their long waving tresses overhead, and cast down over the white path the most delicious shadows; while the murmur of the stream soothes the senses, and makes one see visions and dream dreams. In a little while the northern shore of Loch-an-Eilan comes in sight, embosomed among dark-green fir forests. It occupies an extensive hollow, overshadowed on the east hy the bare round mountain mass of Cadba Mor, one of the outer spurs of the Cairngorm range, while on the other side rise up the grey precipitous rocks of the Ord Bane, clothed with birches and pines to the top. The Ord Bane is composed mostly of primitive limestone, and hands of mica schist very much bent and twisted by the geologic forces to which it owed its origin. It is easily ascended, and the view from the summit, owing to its central position, is hoth extensive and magnificent, including the two borizons to the north-east and south-west, with their clothing of dark fir forests in one direction, and of birch woods in the other. Loch Morlich shows itself distinctly in its wide hasin glancing in the sun, while far over the wild mountains that surge up tumultuously in the southwest, Ben Nevis storms the sky with its broad summit. Charles V. said of Florence, "It is too beautiful to be

looked upon except on a holy day." The same might he said in a truer sense of Loch-an-Eilan, for it is a sanctuary of nature. Its heauty touches some of the deepest chords of the beart. It is not a mere landscape, it is an altar picture. It is a poem that gives not merely a physical or intellectual sense of pleasure, but awakens the religious faculty within us, creating awe and reverence like a holy hymn. One of its great charms is its unexpectedness. It comes upon you with a sense of surprise in the heart of the forest. Its water is the spiritual element in the dark fir-forest. It is to the landscape what the face is to the human hody-that which gives expression and imagination to it, and therefore it lends itself easily to spiritual suggestiveness. It is the face of nature looking up at you, revealing the deep things that are at the heart of it. All around the loch are fir-woods, miles in extent, in whose depths one may lose oneself. But here at the loch-side one comes out into a wide open space, and finds a mirror in which the wbole sky is reflected. There is a sense of freedom and enlargement. One sees more of the shadow than the sunsbine among the fir-trees, and only hits of the blue sky appear high up between the green tops of the trees; but bere the whole heavens are seen not only above but below, with the double beauty of reflection. The water makes the blue sky bluer, and the golden sunshine hrighter. The sight awakens the thought that it is good to have clear open spaces in our life, in which heaven may he brightly imaged. It is good to have in our souls parts devoted to a different element from that of which our life is usually composed, in which we may have large glimpses of the world that is above us, the spiritual and eternal world. Life must broaden if it is to brighten. Over the narrow stream the trees arch, sbutting out the sky. To the shores of the wide lake they retreat, leaving it open to the whole firmament.

(To be continued.)

HUGH MACMILLAN.

Refreshment Cottage at Loch-an-Eilan.

From a drawing by A. Scott Rankin

Entrelac Panel. By John Chandler Bancroft.

### An Artist in Woodwork.

THE inlaid woodwork here illustrated was designed and executed in his own workshop by John Chandler Bancroft (eldest son of George Bancroft, the historian) who was born in 1835, and died last winter at his house in Boston.

Mr. Bancroft was trained as a painter in the later fifties, and studied under Bendemann at Diisseldorf. Paris at that time had heen scarcely thought of in America as an artistic centre. At Düsseldorf, however, he found himself in congenial surroundings, and he went from there to Paris for further study. At Barbizon he made the acquaintance of Jean François Millet, Bodmer, Jacques, Corot, Duprès and the other artists who lived there and made the village famous. His keen enjoyment of these French landscape painters never palled, and later in life he acquired some of their pictures. His own practice as a painter had, unfortunately, no visible results beyond the cultivation of his taste and the enlargement of his knowledge of methods; for, owing to lack of confidence in a power he undoubtedly possessed, he was never known as a practising artist even in his own country. His performances always failed to satisfy his critical eye, and he seldom finished any picture. It might have been otherwise if he had heen obliged to earn his living hy painting; for he had the eye of a

true painter. He studied assiduously in the galleries of Paris and Madrid, and he had a most retentive memory for all works of art which interested him. Bancroft was a member of the well-known Century Club

in New York and of the Society of Arts and Crafts in Boston, and in hoth, although never active, he was held in the highest esteem by his fellow members. He collected, besides French pictures, a great number of Chinese and Japanese specimens of Art-workmanship, some of the last being bought hy him in Japan; the most important of these, an almost unique collection of Japanese prints, has found a permanent home in the public museum of Worcester in New England, a town with which the Bancroft family was closely connected.

About 1867, owing to financial difficulties, Bancroft abandoned all idea of painting as a profession and took a position in a banking house. It was at this time that, in his leisure moments, he commenced wood carving, which he soon began to vary with inlaid work and with work done in entrelacs of mouldings in the Moorish manner. These last two forms of woodwork permitted a far wider and more varied scope of colour than unrelieved carving had done; and, giving up his clerkship as soon as his pecuniary stress was past, Bancroft pushed them, one would be tempted to say, to the limits

End view of a Cabinet,

By John Chandler Bancroft.

Interior. By John Chandler Bancroft.

of perfection. The small panels forming the ground behind his entrelacs were often elaborately inlaid, and the mouldings themselves occasionally relieved with fine lines of brass let into the wood. This letting in of brass, forming a species of cloison, was a favourite method of his, giving a certain distinction and brilliancy to the finished work. He used largely tropical woods, whose great variety of tint must seem incredible to any one not knowing them, blue-green, lemon yellow, orange, brick red, wine red, grey and even violet, besides an infinite number of tawny and streaked browns, all used together to a wonderfully harmonious end. The designs were always geometrical, taken from the old Saracenic, and having the same simple motives, however intricate the results. In the last years of his life, however, Bancroft, although never entirely leaving the Moorish, inclined more to designs of a Japanese character, of which his own dining-room in Boston is a most successful instance.

The methods he employed in the construction of panels for ceilings, wall-spaces, door-frames, etc., were not without interest. An exceedingly careful drawing was made to scale, from the first small sketch, by means of compasses and carpenters' squares and rules. Then the entrelac-moulding was sawn in lengths, mitred to fit the pattern. Bancroft prided himself greatly on the absolute geometrical accuracy with which he could accomplish this on such a rough implement as a circular saw. The pieces were then laid in place upon the drawing

and glued end to end, held always firmly on the table by means of boards and handscrews. The resulting joints were almost invisible, and when firmly set, the whole open work was turned over, a manipulation requiring no small dexterity when the panel was of any size. The joints were then backed with corresponding lengths of wood. At this stage Bancroft would begin trying effects of colour in the filling of the open spaces. Although he had always a definite scheme in his mind, he invariably experimented before deciding irrevocably, finding it, in the case of woods, nearly impossible to foretell just what value a given colour would take on. The most surprising effects would thus come to light, browns often becoming unexpectedly quite red when placed next certain greens, which had also the result of rendering some pale woods, such as butternut or pear, a subtle pink. It was by availing himself of such remarkable results of contrast that Bancroft produced many of his most delicate effects. Accidents of grain, landscapelike streaks and stains in the wood, in fact any of the many freaks of knots, weather, and even wormholes, were turned to account by him with most individual results. Bancroft always deplored the tendency of all woods, even when polished, to grow brown under exposure to the light, and occasionally he has used bits of Japanese silks and papers as backing to entrelacs, and in these experiments produced charming results.

In Baucroft's inlaid work the fret-saw played an important i part. Several layers of different coloured woods would be glued together, and the pattern drawn on the upper one, which was then sawn out, and the layers again separated, leaving the pieces ready for as many different renderings of the pattern as there were kinds of wood employed. These pieces were then glued to a backing in their due order, and the fine empty lines left by the saw filled in with a mixture of lamp black and glue, with bichromate of potash added to render it impervious to moisture; or with a plaster of Paris paste, or with a thin line of brass, often with an alternation of all three. In the case where a fine line of brass was used.

This part of the work was left to an Italian workman named Torno, who for many years helped Mr. Bancroft in his workshop. Such things as door-frames were always put up whole.

Bancroft's strong feeling for composition and for whatever had to do with colour-relations, combined to give his work its unusual and very individual beauty. Unfortunately, there is no great quantity of it existing. It consists practically of the following—four complete rooms in his own house in Boston; work done for Mr. Alexander Agassiz at Cambridge and at Newport; for the late Edward Chase, Esq., in New York (this last of exceptional completeness, being a dining-room which

Cabinet, By John Chandler Bancroft.

the panel, after its insertion, would be tooth-planed, leaving a brass burr sufficient to hold the metal in place. The work would then be backed on this side, reversed, the temporary backing removed, and the surface planed down and polished with repeated coats of thin shellac rubbed down till the texture was like that of finished agate. These brass lines were the chief way in which Bancroft has used metal in his work. Occasionally zinc ones took their place, but not often. At one time he tried cutting holes in the wood of the desired shape, and casting type-metal in them. In one large mirror-frame of inlaid work he cut pieces of zinc to fit, and used them in the inlay with admirable effect. The putting of the finished panels in place had to be done singly, except in instances where the sublivisions were remarkably small.

contained the two sideboards of the illustrations, which were made expressly for the places they occupied); for James Higginson and Henry Marquand, Esqs., also in New York; for Charles Fairchild, Esq., in Boston; and four rooms at his own house in Newport, together with various pieces of furniture such as tables, sideboards, mirror frames and screens.

The commercial instinct was not in Bancroft, and, although he would at one time have welcomed commissions, he was never able to get himself before the public. But among those who knew his work there is but one mind about it; and perhaps it is not too much to hope that, now that it has passed over to the other beautiful things of the past, it may with them be famous.

THOMAS ARMSTRONG.

### The Master.

I FAIN would tell the simple tale
Of little Tommy Barradaile,
Who oft, with fingers deft, would limn
Some thing ('twas all the same to him

What thing it was)—some thing I say, The kind you meet with every day— A House, a Tree, a Saw with Teeth; Nor did he write their names beneath,

For Tommy's friends had ne'er a doubt They'd recognise the things without, And very seldom did they taste The pangs of confidence misplaced.

Both Tommy's friends and Tommy's dad Heaped toys upon the little lad; A kite, a boat, a box of bricks, A cup and ball, some conjuring tricks.

They gave him skipping ropes and tops, (Sometimes they gave him lollipops,) They gave him marbles red and blue, A Noah's Ark they gave him too.

And out of all that he possessed His Noah's Ark he loved the best; He took the very greatest pride In all the animals inside,

He'd gently raise the roof and peep At fauna jumbled in a heap, The Cat reclining on the Cow, The Lamb and Lion anyhow.

That little Lamb! Ah, it was sweet; To draw it was his greatest treat; Its little image filled his mind, Its little tail hung down behind.

Now Tommy took "The Boys' Own Bits," A print arranged for youthful wits, With jingling jokes and stories terse, In rousing prose or rattling verse.

With "Pastime Pages"—happy boy! With Puzzles—oh, delirious joy! With Prizes to be struggled for By every young Competitor.

And at the time of which I write Young Tom has tried with all his might In unaccustomed ways to shine— And win their "Prize for a Design"!

Upon a sheet of paper fair His Baa Lamb he has drawn with care; He's left a little space, and then Its outline he has drawn again—

Until the sheet is covered quite With Baa-Lambs, looking left and right, Baa-Lambs with equal space between, Midmost of which a Button's seen. The button's very big, 'tis true, I do not think I mind, do you? Such simple shapes, I should surmise, Might be allowed some extra size.

Not many weeks had Tom to wait Ere he had learnt his happy fate, He'd learnt—could he believe his eyes? That Thomas B. had won the Prize!

He'd won the Prize! Yes, it was true, For there was printed, full in view, His very drawing, line for line, And underneath, "The Prize Design."

The eager print-shops welcomed it, On stalls of Smith it was a hit; It caught the eyes of passers by Who paused and glared in ecstasy.

Its chaste simplicity of form Took the Metropolis by storm; A jaded Public felt a sense Of fine artistic reticence

The "Decorative Purists," who Most surely knew a thing or two, Sate wondering if its Author'd care To fill their Presidential Chair.

Their Secretary sent a wire Addressed to Thomas B., Esquire, Requesting that he would consent To be their honoured President.

(I've not, I think, explained to you That Tommy's dad was Thomas too, A Builder and Contractor keen Of somewhat supercilious mien.)

And when he got the telegram, "I'm just the man," said he, "I am; I've been neglected by the Fates, But all shall come to him as waits."

Meanwhile young Tommy's kudos grew, Wide o'er the land his praises flew; The tide of eulogy ran high, While Tommy stood, indifferent, by.

The Press (that seldom stints its praise Of those whom fame has crowned with bays) Recorded oft the flattering tale, And boomed the name of Barradaile.

In lowly cots, in marble halls, Baa-Lambs and Buttons grace the walls; In Palace fair, in Mansion gay, Buttons and Baa-Lambs hold their sway.

There may be here and there a one Who thinks the thing is overdone; But still that Presidential Chair Supports the form of Thomas père.

EDWD. F. BREWTNALL.

No. 1 .- Poster by Cecil Aldin,

# Poster and Advertisement Design.

TILL now, the attempts to produce artistic posters have been few, and not very successful, and this is partly because it seemed hardly worth while to produce good pictures for so ephemeral an object.

But still the poster is with us and insists on being seen, and with all its defects goes some way to cover ugly walls and hoardings with a patchwork of colour. Gradually we have begun to accept it as a necessity, and even as an opportunity for some sort of entertainment and decorative effect.

If, however, any real improvement is to be made, there must be a clear understanding of the style of work suitable for posters, and they must not be confounded with pictures. The use of some well-known examples of pictures for advertising, such as Millais' 'Bubbles,' has taught us what to avoid, first because the reproduction in colour of an oil painting is too costly, if properly done, and second, because the technical method is inappropriate.

The few examples here illustrated do not by any means cover the variety of work done; they are selected only as showing a clear recognition of what appear to be the true principles of poster design.

In all of them the subject is treated in a very simple and direct manner, with no attempt at pictorial realism, or light and shade; very few colours are used, and these are laid almost quite flat with only an outline to surround them. The reason of this is sound: large simple masses of colour tell best at a distance, and are cheapest, being easy to print, while the outline helps to give precision and to enforce detail; it is made thicker according to the distance at which the poster is to be seen.

If we compare with such work the shaded lithographs widely used, their inferiority must be evident, the effort to give relief by shading and modelling is thrown away—it does not tell at a distance—and the use of too many colours does not tend to a broad effect.

The subject of Mr. Tom Browne's design (No. 2), exhibited at the Poster Academy held at the Crystal Palace, is simple and obvious enough; but a quaint humour is shown in the cow's interest and the cat's share in the spilt milk; Brittany costume lends picturesqueness—unless it be allusive to milk from a foreign source; a flat green ground sufficiently indicates meadow, and the outline clears and accentuates the details.

Mr. John Hassall is one of the most successful designers; his freshness of style, fertility of invention, and refined sense of humour make his work something to be looked for with pleasure. The particular specimen here given (No. 3) is entirely in black, white, and red, of course an arbitrary scheme of colour, intended to catch the eye, but the effect is very pleasing and brilliant; the story is well told, and the drawing of the figures firm and good, with a humorous feeling for types of character; the reproduction gives but a poor idea of the red carpet, coach, trappings, and sky, but shows the general composition well.

Mr. Cecil Aldin is, like Mr. John Hassall, well known in the allied branch of decorative book illustration, and he has a similarly large intelligent method and mastery of colour, together with a love of nature and human nature quite his own.

As to the subjects of posters, they must, of course, vary according to the needs of the advertiser as well as the invention of the designer; but as a general rule

the most successful seem to be the simplest in motive, and often those of a bumorous turn are calculated best to catch the eye of the passer-by. It might be suggested to designers of them, as a counsel of perfection, that when called upon to advertisethings common or ugly in themselves, such as boots, blacking or soap, they should make them attractive by their connection with a pretty or amusing picture, and not merely present us with a picture of the thing itself.

Magazine and music covers, in as far as they may be advertising media, are of a similar nature, and sbould obey similar rules of art—and it must be said, in this connection, that as a matter of taste the modern magazine cover would be better and more dignified if it were a good deal simpler. The reiteration on the cover of a magazine of

an illustration contained within it, often in more glaring colours to attract attention, tends to vulgarise the illustration and to detract from the effect of it in its place. It is better on the outside to have purely decorative de-

No. 2.—Poster by Tom Browne.

sign in bright but harmonious colour or black and white.

A great field for variety of decorative design is afforded by the covers of all kinds of ephemeral literature, and it is quite possible to make them attractive within the limits of good taste; but pictures on the outside are certainly not the right thing. Surely no one who would read sixpenny editions of good authors is likely to be drawn to them by the bideous portraits frequently put on the outside. A cheerful design or pattern would be a more effective bait, one would think, for those wbom the title is insufficient to attract.

It is largely a matter of reasonableness, but the particular danger of advertising is that it salways apt to be blatant and exaggerated, instead of attracting by what is pleasing or

what is pleasing or interesting. Still there are signs of improvement; and in time we may no longer think of an advertisement as a necessary evil.

### Blanchisseuses.

BY ALICE HAVERS.

FROM THE PICTURE IN THE WALKER ART GALLERY, LIVERPOOL.

NE of the thousand misapprehensions under which the world labours is that a rose by any other name would smell as sweet. This is to take no account whatever of the music of words, to say nothing of those which are ouomatopoetic. Surely washerwoman is less pleasing than blauchisseuse; and although the French have adopted our "mail coach," our "jockey club," and other sporting terms, they are not likely to demean the calling of those represented in our picture by connating it with the English word. As a fact, the conditions of this kind of labour in the two countries differ widely. A tub in a back yard; a wringer in a small scullery; a clothes-line stretched from wall to wall of what by courtesy is called a garden; these are common conditions of washing in England, if we take no heed of large laundries, which in some ways are less attractive still. In France, including Normandy and Brittany, every river, from the Seine to the Loire, and even down to the thousand streams that water the country from east to west, is the haunt of the blanchisseuse. In that country beauty adheres to what should always be the fair practice of those who make things white-the literal meaning of the French word.

Many readers must at some time or other have made holiday in France, and witnessed some such scene as that depicted by Alice Havers, who, it may be said, was once a student at the Royal Academy Schools, and died in 1890. No wonder that it was one of those aspects of country life that Jean François Millet wrought into his pictorial epic: his 'Blanchisseuse,' repeatedly engraved, was sold for 4,000 francs at the Marmontel sale, 1867. If you would discover the blanchisseuse of character and charm you can do no better than fare to some remote place in Brittany, where still the peasant folk are loyal to their ancient tongue, the older among them-French being compulsory in the schools, this will not long be so-regarding equally as a foreign language those of the French and English capitals. They are a legend-haunted people, steeped in a romance that stretches back to and even ante-dates those upstanding stones of Carnac through whose avenues white-robed priests of a forgotten faith were wont to move. To many of them S. Yves is not so much the God-fearing attorney of Treguier, as Sant Ervoan, the only saint of Breton birth, always eager to aid those on the coastline and in the hamlets of his country of Landreger, who love and honour his memory. The Breton blanchisseuses take infinite pride in making snow-white the wonderful coiffes they wear; and if a marriage be imminent, there comes from many a carved chest of a modest cottage an array of hand-made lace such as few fine ladies in England can boast. As in spring the leaves open, blossom bursts forth on apple tree under the hill by the water-side, these people pursue a fair calling under conditions of delight.

### The First Communion.

By FLORA MACDONALD REID.

FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

THE subject of this picture, 'The First Communion,' has always been a favourite one with both English and foreign artists. Every traveller on the Continent is familiar with the sight of some such group as the one painted by Miss Reid - some young girl of the people in the white dress in which she is to attend her first communion, the gown forming a happy contrast to the more sober, work-a-day costumes of the people who surround her in the street of some old-world town of quaint architecture. The sight is always a picturesque one, and one not easily forgotten.

Miss Reid has chosen for the setting of her picture the still almost mediæval town of Bruges, and has laid the scene in the small place given over to the Vegetable Market, with a formal row of trees down each side of it. The background consists of a number of houses with picturesque gables, with the roof and tourelles of the Hôtel de Ville and the Chapel of the Holy Blood rising on the left, and the tower of the great Belfry standing out in the distance. In the centre of the square a number of white-capped market-women are grouped round their stalls, which are covered with fruit and vegetables, rabbits in hutches and fowls in wicker cages. One of them, an old peasant, is seated among her wares, and speaks to a young girl who stands in front of her, dressed in the white robes, long veil, and white wreath of her first communion. The old lady, who is perhaps her grandmother, looks at her with pride, and is evidently "improving the occasion" with a few words of advice. A small girl, seated on a basket, gazes at the young communicant with envious eyes. In the distance other groups can be seen, with girls in white, marketers and stall-holders, and boys with sabots clattering over the rough stones.

This picture is a good example of the clever, boldlyhandled work of Miss Reid, painted out-of-doors from the actual scene, and in no way smacking of the studio. With the exception of a course of drawing at the Edinburgh School of Art, this artist owes the whole of her artistic education to her brother, Mr. John R. Reid, whose methods of work her own so closely resemble that it is not always easy to distinguish one from the other. From her earliest days she has studied painting in the open air, with the sky, the trees, the fields, and the field-workers for her models, with the object of learning to see things as they really are. These methods she has followed in Belgium, Holland, France, and Norway, in which countries most of her painting-time has been spent. Truth of tone and the charm of outdoor light characterise her work, which is bright, sincere, and healthy, and displays in choice of subject and mode of treatment that spirit of the plein-air school which is a marked feature of her brother's painting. Devotion to art has placed her among the leading women-painters of England, and her pictures have been purchased by various important Corporations, such as those of Liverpool and Leeds, for inclusion in their permanent art-

THE MANUFACTURE OF PORCELAIN IN ENGLAND.

BY FRED. MILLER.

THE china first produced at the Worcester works is greatly influenced by Chinese and Japanese porcelain, and this style continued until the advent of some of the Chelsea artists in 1768. For the next thirteen years the finest vases, often in the Dresden and Sèvres taste, were produced. There was much more restraint in the shaping of the vases than we find in Bow and Chelsea, and instead of encrusting the surface with flowers and other rococo devices, the Worcester potters tried to produce good shapes and relied upon painting as the chief embellishment, while the potting itself was excellent. Figures were not produced at Worcester. A rich blue under the glaze is a favourite form of decoration. Transfer printing, which had been invented by Sadler and Green, of Liverpool, who secured a patent for it in 1756, was always largely used both over and under the glaze at Worcester, and the engraved plates used to print the transfers were often excellent works of art. The plates were printed in a sort of fat oil on thin paper, and these were laid down on the biscuit or glaze surface. The oil came off the paper and the pottery colours were

\* Continued from page 20, Supplement.

Stoneware Jug.

Thought to be of English make of the time of Elizabeth, S.K.M.

then dusted over the transfer, which, being sticky, caused the powder to stick to the engraved lines. The finest specimens of Worcester are, however, those hand-painted in enamel colours and judiciously decorated with gilding. Five of the ground colours for which this porcelain is celebrated are the deep mazarine blue which can only be produced under the glaze, and a turquoise blue, peagreen, maroon, and canary yellow over glaze.

The prices of Worcester china in 1769 were as follows: a dessert service, jet enamelled (printed in hlack), 25 pieces, 28s.; 43 pieces, constituting a tea and coffee service, decorated in the fine old Japan star pattern, 71s.; 3 hexagon jars and covers, mazarine hlue and gold, with painted birds and insects, £8 15s. These three last items would fetch now from £150 to £200.

The composition of the paste varied from time to time. The cool greenish white of old Worcester is due to the presence of a little smalt in the paste, to counteract the yellow colour caused by impurities in the ingredients.

The following are the chief events in the history of the Worcester pottery.

1776. Death of Dr. Wall.

1783. Works sold to Flight, who had acted as London agent. Chamberlain set up new works, which are those of the present day.

1793. Barr became a partner.

1840. Messrs. Flight and Barr joined with Messrs. Chamberlain.

1847. The original factory ceased.

Coffee-pot made by Thomas Whieldon. Circa 1740.

Tea-pot thought to have been made by Elers. Circa 1690.

#### PLYMOUTH AND BRISTOL.

William Cookworthy, a Quaker, first discovered and identified true china clay or kaolin about 1755. This great potter was a chemist and druggist, and his journeys took him into the china-clay districts of Cornwall, and it was in Tregonning Hill that he found both china clay and china stone. Cookworthy took out his patent in 1768, and started works at Plymouth, engaging the artistic aid of a French painter.

These works had a short life, as we find that "Messrs. Cookworthy and Co." had a china factory at Bristol from 1771 to 1773. In 1774 Richard Champion purchased Cookworthy's rights, and carried on the works until 1781 at Bristol, so that we can here treat both manufactories under one heading.

The first hard porcelain is due to William Cookworthy, and an advertisement in the \*Bristol Yournal\* on 28th November,1772, announces a great sale of Bristol porcelain, "wholly free from the imperfections in wearing which the English china usually has, and its composition as equal in fineness to the East Indian, and will wear as well. The enamelled ware, which is rendered nearly as cheap as the English blue and white, comes very near, and, in some pieces, equals the Dresden, which this work more particularly imitates." In fact the Bristol potters adopted the Dresden mark, the crossed swords in underglaze blue, on many of their pieces, evidently for the purpose of deceiving buyers.

Champion, who had long experimented in ceramics before he met Cookworthy, petitioned parliament in 1775 for an extension of his patent, and though he met

Dish, Lambeth Delft, 1660, in British Museum,

#### SUPPLEMENT TO THE ART JOURNAL.

Bristol Figure in Schricher Collection, S. K. M.

with much opposition from the Staffordshire potters, headed by Josiah Wedgwood, his request was granted; but misfortune seemed to follow him, and despairing of making the works pay, he succeeded in selling his patent to a company of seven Staffordshire potters, who originated the hard porcelain works at New Hall, Shelton. Champion retired to a farm in South Carolina, and died in 1791, in his 48th year. Though a man of taste, judgment, and inventiveness, he never succeeded in making Bristol porcelain fashionable, and it is with

Specimen of Liverpool Delft. Circa 1730.

a feeling of shame that one has to chronicle the crushing out of a man who must always be looked upon as one of the great ceramistes of this country. It may be interesting to some readers to know that the teapot part of the tea-service Champion presented to Edmund Burke was bought by a collector in 1871 for £210. Jugs which now realize from £12 to £40 apiece were sold in 1780 for 6s. 6d. each; a fine ribbon pattern dessert set with festoons of flowers fetched £15 4s. 6d. in 1780; two compotiers, probably from this very set, were knocked down a few years since for £270!

Some idea of the hardness of Bristol porcelain may be

Bust of Prince Rupert made by John Dwight in his Fulham stoneware.

About 1671. British Muscum.

gained from the fact that the fire at the Alexandra Palace in 1873, which fused other English porcelain into a shapeless lump, had hardly any effect on this ware. Bristol and Plymouth china must always take high rank both as potting and as fine art.

The vases, figures, plaques in biscuit decorated with flowers and foliage in full relief, some of their most characteristic productions, and other ornamental works, are fine specimens of ceramics.

Space will not allow of more than enumerating some of the other celebrated china works of the eighteenth century.

Coalport or Coalbrook Dale, founded by John Rose, between 1780-90; absorbed Swansea in 1820, Nantgarw, 1828, Caughley, 1799.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Derby pottery established before 1750. John and Chris. Heath, the proprietors, became bankrupt in 1780. The porcelain works were started by William Duesbury in 1751. He is said by Jewitt to have acquired or stolen the secret from Andrew Planché, a French potter who had worked in Saxony and settled in Derby about 1745.

From 1773 to 1785 Duesbury had a house in Bedford Street, where works were on sale. This is the finest period.

In 1815, Robert Bloor became proprietor, and the works

were closed at his death in 1849.

Longton Hall, Staffordshire, founded by William Littler and Aaron Wedgwood in 1752. Paste and glaze good; good u g. blue.

Pedestal, green and white jasper ware, made by Wedgwood. Circa 1776.

Lowestoft, founded in 1756 by Hewlin Luson, of Gunton Hall. Robert Bunne, one of the partners in the concern, according to Mr. Jewitt visited the Bow or Chelsea factory disguised as a workman and bribed a warehouseman to let him hide in a tub, from whence he saw the mixing of the ingredients. The works were closed in 1803-4.

Nantgarw, Glamorganshire. William Billingsley and his son-in-law Samuel Walker left the Worcester works in 1811; they settled in this village and began making porcelain. They continued till 1820. They then applied to government for a grant to aid them, and kilns were built at Swansea for them. In 1819, Mr. Rose of Coalport secured their services. closed in 1823.

New Hall, Shelton, Staffs., established by Whitehead about 1750. Taken over by Richard Champion's Co., who owned the patent rights of William Cookworthy. The make ceased 1825.

Painted Porcelain Vase, made at Worcester. Circa 1760. In the Schrieber Collection, S.K.M.

Spode, Josiah, was born in 1733, and after serving an apprenticeship to Thomas Whieldon, some time partner of Josiah Wedgwood, started on his own account. He introduced transfer printing into Stoke in 1784, and died in 1797. He was succeeded by his son, who commenced to make porcelain in 1800. He invented the opaque porcelain known as Spodeware soon after. William Copeland became a partner and his son purchased the whole concern in 1833.

# The History and Development of British Textiles.

I.-CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

CARPET-WEAVING, destined to be of such importance to the British nation, was hegun with little circumstance in Kidderminster about 1735—for one cannot include the manufactories at Fulham or at Paddington, mentioned in the previous article, among national weaving enterprises. Actually, Bristol wove carpets a year or two hefore Kidderminster; hut the Bristol carpets, when the Worcestershire weavers copied them, hecame known as Kidderminsters, and Kidderminsters are practically the first British-woven carpet fahries in textile history. It is more convenient to leave technical description of the various carpets till modern carpet-weaving is reached. Here it is sufficient to say that Kidderminster or Scotch floor-cloths differ from all

other kinds of carpet inasmuch as the pattern is formed by the interlacing of warp and weft. The fahric is, as everyone knows, a double or, in three-ply Kidderminster, a triple web, made into one by the interweaving of the threads to form the pattern. Carpet-weaving of this kind presented few difficulties to the Kidderminster workmen, weavers with a tradition of five hundred years of cloth-weaving behind them. The work went vigorously forward, and the new manufactory developed steadily in the valley where runs the Stour, whose water is "well fitted for the washing of worsted yarns."

Some ten years after Kidderminster hecame a carpettown, the ninth Earl of Pemhroke, noting the distress of

the Wilton weavers, induced one Anthony Daffony or Duffosy, a French carpet weaver, to hrave the perils attendant on skilled craftsmen seeking service in England, and hrought him, hidden in a sugar-cask, from his native land to Wiltshire, there to teach English workmen his craft. Wilton hoasts that the first English-woven carpet was made there, "hy and under the superintendence" of the contrahand Frenchman. The carpets woven were Brussels or perhaps Wiltons, and if, with a show of technical reason, Kidderminsters are denied the name of carpets, the hoast may he true. At all events the Wilton carpet-workers received a patent for the exclusive practice of their "art and mystery" in England. Both in this town and in Kidderminster carpet-making seems to have heen carried on partly as a domestic industry, linking the old conditions of cottage-weaving with the new order of factory lahour. The first looms for the weaving of Kidderminsters would differ little from the ordinary hand-loom-the loom that in weaving districts was to he found within almost every house, round which the whole life of the family centred. Our illustratiou, from the model in the Southern galleries of the Victoria and Albert Museum, represents the form of loom in use ahout this time, hefore Kay's flyshuttle was generally adopted. The principle is simple enough. The warp threads are wound on a roller at the hack of the loom. Through an eye in the "heald,"

Hand Carpet-Weaving in England.
Weaving a Mossis Carpet.

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

Form of the first Kidderminster Loom, South Kensington Museum.

or "heddle," and between the teeth of the comb-like "reed," they pass to the front roller or "cloth-beam," round which the finished web is rolled. The "heald-shafts"—trausverse bars to which the healds of alternate warp-threads are fastened above and below—are moved by treadles, so that the warp-threads are alternately raised and depressed to allow of the passage of the shuttle containing the weft. By means of the "reed," which is drawn forward after each passage of the weft, the thread is then beaten up close to the web that is already formed. In the model a piece of striped reversible carpet is being woven. The Brussels loom, where each coloured yarn is wound on a different frame, is more complicated. Still, there are many points of similarity between this and the ancient familiar loom of house-weaving.

For a few years the Wilton weavers enjoyed their patent nudisturbed, but in 1749 John Broom, a Kidderminster carpet-maker, with the assistance of a weaver from Tournai, built a Brussels loom, and in secret, working by uight as well as hy day, the first Kidderminster-woven Brussels was produced in an attic on Mount Skipet. The secret, however, was discovered by a rival manufacturer, who hired an attic next door, and by means of a ladder watched the building and working of the loom night after night, till in his turn he could practise the art of weaving Brussels. In a short time the town was busy with what is still the largest part of

the carpet-manufacture of Kidderminster. Wilton carpets—practically Brussels with the terry surface cut to form a velvet pile—hegan to be made at the same time

Meanwhile in 1775, Mr. Thomas Whitty, of Axminster, in Devonshire, set the women of the little town to weave those magnificent carpets, lovely in colour, in texture, in design, that have made the name of Axminster memorable in our textile annals. These carpets, like those of the French manufactories, of Fulham and of Paddington, were made "on the principle of Turkey carpets "; that is to say that the yarn is knotted by hand round the warp threads. In 1757 the Society of Arts awarded Mr. Whitty a premium of £25 for a carpet "adjudged to . . . . excel Turkey carpets in pattern, colour and workmanship," and in the two succeeding years similar awards were made to the productions of the Devonshire looms. At the Brighton Pavilion, when George IV. used it as a royal palace, at Windsor, and in many of the great houses of England, these splendid carpets were to be seen. It is curious to read that early in the nineteenth century an immense Axminster carpet, measuring 74 feet by 52 feet, was supplied to the Sultan of Turkey at a cost of £1,000. The modern parallel is in those Smyrna carpets that travel to their name-town from Austria.

Mr. Whitty's enterprise was the first of those episodes

#### SUPPLEMENT TO THE ART JOURNAL.

that have maintained a tradition of British carpetweaving as distinct from the manufacture of machinewove carpets. In our own day, at the Merton Abbey works, in Donegal, where the Mortons of Darvel have introduced the art, at Carlisle, at Wilton, and at one or two places more, the ancient way of making carpets is to be seen. The manufacture in Donegal is one of the most interesting phases of the revival of handicraft, but that story belongs to a later chapter. These modern instances are nineteenth-century history and can be only alluded to in this place.

I have seen it stated that the Earl of Pembroke introduced hand-tufted carpet-weaving from the East as well as terry carpet-weaving. In any case, when the weaving activity of Axminster ceased, real Axminster carpet-weaving was transferred to Wilton, and carpets were woven there from the fine designs first copied by the Devonshire women-weavers as well as from patterns of newer invention.

Before the close of the eighteenth century the carpetweaving centres of Great Britain were already fairly established. The making of carpets had been added to the ancient wool-weaving industries of Yorkshire; and Glasgow, like Kidderminster, had profited by the example of Bristol, and had started the mannfacture of Kidderminster or Scotch carpets. Previously, carpets had been woven at Edinburgh, but the chief connection between Edinburgh and the development of carpetmaking lies in the fact that Mr. Richard Whytock, who, in 1832, patented his invention of Tapestry carpetweaving, belonged to the Scottish capital. Mr. Whytock and Mr. James Templeton, the inventor of the Patent Axminster weaving-process, originally patented in 1839, brought about a neworder of things in

carpet manufactories north and south of the Tweed. Carpet-weaving, though in common with other textile manufactures completely revolutionised by the great mechanical inventions of the years between 1730 and 1800, has its "inventors' century" about fifty years later than other branches of weaving. Kay's "fly shuttle," Arkwright's "spinning-frame," the "spinning-jenny," Crompton's "mule," the power loom, the Jacquard apparatus, date back to the eighteenth century, but carpet manufacturers had still but limited scope, practised little more than a primitive and negligeable kind of manufacture till the nineteenth century.

The progress of carpet-making in towns where it was added to other textile industries may be judged from the figures relating to carpet and other weaving in Kidderminster, in years within the period of greatest mechanical development. In 1775, when carpets had been woven there for forty years-first Kidderminsters, then Brussels and Wiltons-1,700 silk and worsted looms and 250 carpet-looms were working in the town. In 1830, after the Jacquard apparatus had been applied to these kinds of carpet-weaving, 2,020 carpet-looms were in use, against 80 looms for plain weaving and 400 looms standing empty. Of the 2,020 carpetlooms, 1,765 were making Brussels carpets, 210 were Kidderminster looms, and 45 were used for weaving Venetian carpets-a variant of the Kidderminster fabric, where the weft is completely covered with a heavy warp.

About thirty years later, in 1862, when the application of steam-power to Tapestry and later to

Jacquard carpet-weaving had already a record of a few years, there were upwards of 400 power looms producing carpets in Kidderminster, as well as hand looms to a considerable number. The quantity of carpet produced in 1862 by a power-loom was equal to the production of six hand-looms; the ratio of increased production in ninety years being at least twelvefold. These figures represent the development in British carpet-weaving up to the time when the modern manufacture of the fabrics in use to-day, by methods that are completely modern, began. Roughly speaking the year 1851, when the first power-wove Brussels carpets were shown in the Great Exhibition, is the year that divides the past order from the existent order of carpet-weaving.

The first period of British carpet-making ends with the introduction of Jacquard machinery; the second may be said to cover the first thirty years of the nineteenth century; the third brings us to 1851, and comprises the years when the inventions of Mr. Whytock and of Mr. Templeton—the processes whereby tapestry-carpets and chenille Axuinster carpets are woven—were perfected. To speak of the carpets and of the machinery for carpet-weaving that were exhibited in London in 1851 is to speak of undern matters, though the development of methods then but just devised, the growing impulse towards beauty as well as towards utility, has filled fifty years with a record of change that cannot be summarised as briefly as can the early history of carpet-weaving in Great Britain.

(To be continued.)

Primitive Hand-weaving. A Weaver's Room.

La Tempête. By Rodin.

La Tempête. By Rodin.

# New Work by Auguste Rodin.

"LE MUSÉE DE RODIN," which was one of the most interesting features of the Paris Exhibition, has been transported to Rodin's country place at Meudon, and now stands in his garden. In the gallery of this Musée Rodin has arranged on glass selves, in well-proportioned glass cases, his original models in clay; many of these are not yet worked out in the size intended, and many are the first conceptions of works we all know.

The arrangement of the Musée is not complete, many statues are not yet in their places. The morning we went

L'Âme et le Corps. By Rodin,

down one glass shelf, too heavily weighted, had broken, and all the clay originals thereon had been smashed. It was a real disaster, but Rodin horeit well, and seemed more concerned about the possibility of his assistant being injured than distressed at the ruin of his models, though from time to time his orders to the

young man to seek for certain pieces in the *débris*, showed that some at least, were precious models.

Besides the Musée which Rodin has placed at Meudon, he has had a new atelier constructed there. There is a series of large pigeon-holes from floor to ceiling in the gallery of this atelier, and, looking up, we can see all these recesses filled with work. Rodin still keeps his large ateliers at the Rue de l'Université, he works at Meudon in the mornings, and in Paris in the afternoons. We are simply amazed at the infinity of his invention, and his inexhaustible power of work. Here at Meudon, as also at the Rue de l'Université, there were many groups we had never seen previously, most of them conceived twenty years ago, and now heing carried out in the plenitude of the master's power.

In the Musée we remarked a small group in plaster, 'L'Âme et le Corps.' It is the figure of a horse complete to the neck, from whence issues forth the upper part of a woman's form: with hands joined above her head she seems to be drawing herself forth from the body of the animal, expressing the effort, the eternal effort, to free the soul from the body.

The body of the horse and the figure of the woman are strongly and heautifully modelled; this seems needless to add, since such is the perfection of Rodin's modelling, that he has often been compared to the old Greeks; certainly, nothing like his work exists in modern Sculpture. Always Rodin insists that modelling is everything. Poets naturally insist on the perfection of their means of expression. Our lips, our

hands, our voices we can control hy study, we can perfect their power and ohedience so as to he fit instruments for the creative force. Nature recognises in the man who can take infinite pains, a good interpreter. She certainly speaks through true genius: through one of the gifted she tells one secret, through another of the chosen, another of her secrets, hut always she speaks most clearly and exquisitely through the great. est, the truest,

Les Nuages.

By Rodin.

the simplest. Through Rodin, Nature expresses her eternal laws of creation, her union of the strong and tender, her ceaseless production of life. In Greek allegory, in legend, in cloud, in wave, in animal and human form, Nature speaks through Rodin her mystery of love and life, unending, undying. We find groups of touching sympathy, of tenderness, of love, of releutlessness, of tragic suffering from the inevitable; attitudes of appeal against fate, the eternal cry of humanity—all are here; forms agitated by emotion, or reposing, drawing hreath for the ceaseless march of life.

lunch, Rodin talked delight. fully in his sure but simple way. It was a heautiful morning; his house at Meudon is on a height, and we looked out of the windows across the hilly ground flooded with sunshine. He talked of the art of the past, and regretted that this was not a great epoch of art. Machinery, he thought, had for a time killed art. In old days, work. men made even a chair or a table with care and understanding;

As we sat at

thought and intelligence were needed to make every joint fit with neatness and strength, and such a workman could better appreciate a picture or statue which was well made than men whose lives were passed in accumulating money and spending it. "We do not look for appreciation from the latter," Rodin added; "men who do nothing cannot know what is well done." Rodin does not despair of the future, he thinks man must come back to art, and that after a century or two there will be a resurrection in art.

Thinking of Rodin and Legros, we said it seemed

Polyphême. By Rodin.

Polyphème. By Rodin.

strange that an artist who entirely helonged to the glorious past of art should exist nowadays.

"There is always a survival from the past," he said, something that cannot perish, but the present age is sad and painful for the true artist."

As we talked Rodin handed us a little group in plaster to look at, it was the 'Creation of Woman.' A hand issuing from a cloud, creating the heautiful woman's form which came forth from the man's side; the man faint and exhausted from the wound; the woman with uplifted hand and adoring expression thanking the God for her birth.

In the Musée is a heautiful group, in relief, of two lovers in purgatory, resting a moment, in shelter, from the ceaseless whirlwind which hlows them round their circle of pain; the woman's head drops for that moment, all too hrief, on the man's shoulder, and she sleeps.

At the Rue de l'Université there are many new works, and some of them most remarkable. 'La Tempête,' which is for a part of the Dante story, is marvellous in its fine modelling and intensity of expression. It is the head of a woman, the head and shoulders are straining forward as if carried on in the rush of the wind, the wild hair swept upwards, the mouth open, the eyes full of a strange light, the very gleam of cruelty horrified at its own relentlessness, such eyes! The whole conception is strange, powerful, and unforgetable, while the modelling is strong and true, faithful to nature in every detail. 'Les Nuages' are represented by two female figures side hy side, one kneeling, the other half-seated, half-lying, with the feet drawn up; the outstretched arm and hand of the one draws up the long hair of the other, while the hair of the recumbent figure sweeps the shoulder of her companion. The effect of the whole outline is wonderful, giving as it does the idea of changing, drifting clouds. The heauty of form is enchanting. In the group, 'Illusion,' Rodin shows himself artist, poet, philosopher! There are two figures, the man's sinking down to earth, one wing shattered, draggled; the attitude of the falling figure splendid, the long, hackward sweep of the falling hody magnificently modelled, full of grace. The woman, with heat head and figure weighted with grief, expressing the clinging love which will not have its faith, its happy dream, destroyed. Rodin has been called an impressionist hy unthinking people, perhaps hecause he is daring, and is not enslaved by tradition. To call him an impressionist is to show that his work has been most superficially studied. His faithful modelling, his truth to nature, his unceasing work, separate him entirely from a school which tries to hide its ignorance and incompetency under vague indications which it calls originality, and tries to obtain effect by cheap effort.

One more group must he noticed, a small hronze of Polyphème discovering Acis and Galatea. Polyphème stands ahove the lovers, one foot rests on the rocks just over the hidden pair, the other on the rocks lower down, he looks on the happiness of the two graceful figures, locked in an embrace, in a niche below him, and his hands have seized the rocks in his fury, to hurl them on the unsuspecting pair.

A long time is required to gain even a slight idea of all Rodin's work. Group after group can he studied with real delight, and each time we visit his studios there is fresh work. We realise how much can he done even in one lifetime, and a wholesome sense of insignificance creeps over us as we stand in the presence of such masterpieces, and feel the power of such an artist, who is himself always learning, always coming with a fresh childlike mind to the worship of Nature.

CHARLES QUENTIN.

Les Nuages. By Rodin

### Additions to the British Museum.

F as a whole less notewortby than those during the previous twelve months-in 1900 the Henry Vaughan bequest was in itself considerable—the 1901 additions to the Print Room at the British Museum call for brief notice. The department for whose conduct Mr. Sidney Colvin is responsible is precluded from buying examples by living artists. Were a draughtsman like Rembrandt or Leonardo or Michael Angelo to appear, Parliament would have to sanction, we suppose, a contemplated purchase before the death of the artist. Some years ago Professor Legros set an excellent example when be presented to the Museum a number of his works; and among many others who have so done are etchers as eminent as Messrs. D. Y. Cameron and William Strang. Recently Mr. Theodore Roussel has sent to the Print Room two portfolios, one containing the series of those colour etchings to which he has devoted so much time and talent, the other about twenty of his delightful river-side pieces, including the rarely beautiful 'Laburnums and Battersea.' Nor is this wise generosity limited to Mr. Roussel. His twenty supplementary mezzotints for the Liber Studiorum come from Mr. Frank Sbort; a study of a kneeling girl, in three chalks, from Mr. Charles H. Sbannon; twenty etchings, in their several states, mainly illustrative of Wagner's "Parsifal," from Mr. R. Egusquiza; a set of proof woodcuts, as yet unknown to the public, from Mr. Sturge Moore, poet as well as designer; and a particularly interesting collection of proof woodcuts, many printed in colours, from M. Lucien Pissarro, son of the French impressionist painter. The Museum Print Room is used so often and to such good

purpose by genuine students of art, that it is to be hoped other living artists of repute will from time to time present examples of their work.

The purchases of the year include an interesting relic of the now littleremembered Jeremiah Meyer, one of the original members of the Royal Academy. From a descendant there bas been procured his memorandum - book, containing sketches for some of the miniature portraits which he executed with no little skill. Alike amusing and rare is an early English engraving by William Rogers. Entitled 'Eliza Triumpbans,' it is a portrait of Queen Elizabeth, 1589. A number of pencil sketches of woodland scenes by Patrick Nasmyth; a fine example in water-colour of

the portrait art of A. E. Chalon, R.A.; about 272 coloured prints by George Baxter, an early Victorian engraver-these presented by a descendant; an assemblage of something like sixty old-time Japanese drawings; 19 mezzotints by S. W. Reynolds, not before in the possession of the Museum; a rendering by D. Lucas, after Lawrence, of a large head of the Duke of Wellington; an engraving by Wagstaff of the Coronation of Queen Victoria, this after E. T. Parris, who painted the picture in 1839; Cosway's portrait of Mrs. Plowden; two of Burne-Jones' essays, in gold on especially prepared purple surface; many modern etchings, some after Mr. Dendy Sadler, others after Rosa Bonheur, Lawrence, Greuze; a pencil sketch by Gainsborough for a lady's portrait; a sketch of 'Lady Rancliffe's Swedish Dog,' in two chalks, by Landseer-these are other of the additions. Particular attention may be directed to two purchases. Millais' 'The Deluge' is one of the most strenuous and imaginative drawings of his pre-Rapbaelite period; Jean François Millet's 'Les Bêcheurs' is a study in black chalk for the celebrated etching, a study more intense, perbaps better balanced, than the finished work. Not the least beautiful of recent acquisitions is that which we illustrate: a study by Watteau of five heads, bequeathed by the late Mr. Henry Vaugban. Much of the charm, some of the force, of the original-in red, black, and white chalks-is of necessity lost. But bow nervously searching, how animated, how technically fine is this drawing, all who see it even in reproduction must be aware. It is comparable with several superb sketches by Watteau in the Louvre collection.

In the British Museum.

Studies of Heads.

By Watteau,

By permission of Mr. S. T. Gooden, Pall Mall.

Evening, Fordwick Meadows, near Canterbury.

By T. Sidney Cooper, R.A. (1843)

# T. Sidney Cooper, R.A.

DURING the last few months of Mr. Sidney Cooper's life the gradual decline of his strength warned the world that the end of a remarkable career was not far distant. He had exceeded by so many years his allotted term of life, and had returned so many times to his artistic concerns after fighting serious illness, that the power to trifle with the decrees of oestiny had seemed his to enjoy. His death on the 7th February, 1902, ended the work to which, from the days of his childhood, he had devoted himself with exemplary persistence. He was the longest lived of artists with authentic records. but the matter of accumulated years is less important than his achievements. Cooper battled for fame and even food from the time when he sketched Canterbury Cathedral on a slate to the time when his perseverance and talent secured him a place of honour among painters. The present generation is well acquainted with the details of his life and we refer posterity to his "Autobiography," published in 1890, an extended form of a contribution by the artist to our own columns in 1849.

To those young artists who with advantages of education and companionship find continual striving irksome and failure discouraging, a few references to the hardships encountered by Cooper with ultimate reward, may lead to emulation of the deceased painter's endeavours. Born on September 26th, 1803, at Canterbury, during the term of office of the second President of the Royal Academy, at the age of five Cooper's prospects in life were not improved by his father's desertion of his family. In 1815 he began to learn coach painting, and

in after years he was instructed in the art or scene painting. Most of his spare time was spent in sketching, and in due time he travelled to London and studied at the Angerstein Gallery, the pictures comprising which commenced the National Gallery, and at the British Museum. He procured admission to the R. A. Schools, but poverty compelled him to return to his native place to resume coach-painting. Diligence soon procured him the means of crossing the Channel, but when there he had to earn a precarious living by sketching portraits and painting sign-boards. War on the Continent drove him to England in 1831, and he took obscure rooms in London, from whence he made excursions to Smithfield and Regent's Park to sketch cattle. Shortly afterwards Mr. Robert Vernon purchased a picture of his, and became his constant patron.

Cooper's work soon began to he widely appreciated. The reality that Landseer gave to dogs, J. S. Ward, Abraham Cooper, and J. F. Herring to horses, and Morland to pigs and donkeys, Cooper gave to cows and sheep, and from those subjects he never departed, with perhaps the sole exception of his work for one of the Westminster Competitions, for which he chose 'The Battle of Waterloo' as subject. He often put cattle into the landscapes of F. R. Lee, R.A., and sometimes into those of J. B. Pyne: and in the Mappin Art Gallery, Sheffield, there is a composition by three well-known artists; the landscape is by T. Creswick, R.A., the figures are by W. P. Frith, R.A., and the cattle are by T. Sidney Cooper, R.A.

### Passing Events.

 $S^{\,\mathrm{IR}}$  E. J. POYNTER on the 19th February unveiled the monument in St. Paul's Cathedral to his illustrious predecessor, Lord Leighton, P.R.A. The memorial was executed by Mr. Thomas Brock, R.A., who received warm commendation for his work during the ceremony. The recumbent figure in bronze, which depicts the deceased artist, rests upon a sarcophagus on which are inscriptions on bronze tablets. At the head and feet are placed respectively bronze figures symbolical of painting and sculpture. The whole composition was nobly conceived, and there is a dignity about the finished work which properly accords with Lord Leighton's characteristics. "A Friend of Both," writing to The Times, asks why Millais was not similarly honoured. It is no disparagement to the gifts of Millais to point out that his term of office as President of the Royal Academy was short: he was loved and lamented, but his achievements did not equal Leighton's socially, if artistically, and the memorial in St. Paul's is partly a tribute to a long tenure of office and an unflagging energy in the execution of onerous duties. But, although the limited space available in the Cathedral forbids the erection of a memorial to Millais there, it must not be forgotten that a commission has been given to Mr. Brock to proceed with a commemorative work, which will eventually be placed on a site already selected in the Tate Gallery.

THE six lectures on Sculpture delivered by Professor Alfred Gilbert, R.A., to the students of the Royal Academy, could be epitomised by the words Observation, Endeavour, Experience of others, and Revision, the four essentials to Creation. Mr. Gilbert emphasised the difference between accidental and willed design by some black-board sketches, which bumorously supplemented his spoken thoughts. As a creator in a sister art, he mentioned Beethoven, whose compositions were not the records of barmonious chords struck by chance on an instrument, for he was nearly stone deaf; his were creations which were the fruit of deep thought and a passionate love for his art. In like manner the work of painters, sculptors and architects should not be liable to the suspicion of being mere fluke productions.

N one of his lectures Mr. Gilbert touched upon the absolute necessity for reading of the achievements of those who have recorded their experiences, or whose biographies furnish the right sort of inspiration for a student of art to seek. The library of the Royal Academy does not seem to be so well patronised by frequenters of the schools as it should be. The establishment of local free libraries, where often complete and well-chosen text-books and histories can be obtained easily, is possibly the reason for the apparent negligence by young artists of literature on special subjects. A glance at the work of any prominent artist will prove the help to be derived in the choice of subjects from a knowledge of history and especially legendary history. But there is history of another kind which artists with classical subjects in contemplation must study. The invaluable collection of books in the Architectural Library in Conduit Street has recently been enriched by five volumes of original drawings by Mr. J. K. Colling, a valuable addition to the books on architecture which are accessible to those who are interested in the subject. Mr. Gilbert would recognise a kindred spirit in his love of architecture and patient work in the original drawings of Gothic details from which the standard works of reference by Colling have been produced. Everyone who studies architecture is indebted to those who bave purchased and presented these volumes for permanent reference.

THE necessity of taking some measures to suppress the smoke nuisance was exemplified by a statement by Sir William B. Richmond, R.A., at a recent meeting of The Royal Institute of British Architects. After a period of fog the deposit on the glass in the Gardens at Kew was found to weigh six tons, and the Keeper is naturally alarmed at the danger to cultivation which has arisen. An attempt is to be made to force the authorities at Brentford to compel manufacturers to regulate the outpouring of smoke from factory chimneys. The conservatories at Kew contain so much that is of value to the artistic community that any action will be supported that is taken to preserve the plants from deterioration. Sir William, and his colleagues on the Coal Smoke Abatement Society, spoke of the ruinous effect on historic buildings and all works of art caused by the use of ordinary coal, and urged that measures should be taken to make compulsory the use of smokeless coal, or other means of obtaining heat.

T has been decided that the Memorial to Kate Greenaway shall consist of an endowed cot in the Great Ormond Street Hospital for Children, and that any surplus funds shall be devoted to the perpetuation of the name of the children's artist by cots in other hospitals. No more suitable scheme could be imagined, and the Committee's efforts should be well supported. It would be appropriate if the Foundling Hospital derived benefit from any available funds, for Kate Greenaway illustrated "A Day in a Child's Life" for that deserving institution. Children especially are asked to collect for this object, and for one whose work was devoted to children's pleasure it will be a reciprocal task to help towards the success of the project. Cards decorated with reproductions of some of the artist's characteristic drawings will be sent on application to Mr. A. Liberty, the Hon. Treasurer of the Fund, The Lee Manor, near Great Missenden, Berks.

VALENTINE GREEN, represented by the painting by L. F. Abbott in the National Portrait Gallery, should feel gratified at the attention paid to the fifty examples of his work which hang in the gallery of Messrs. Colnaghi. Thus brought together, a negative answer must be given to the question whether it is a passing fasbion which causes such high prices to be realised for bis mezzotint engravings. The thousand guineas which stands as the highest price paid for an impression from one of his plates seems extravagantly bigh, but no one can see the collection of prints without wondering why this form of engraving does not entice artists of the first rank to master its difficulties and carry on the traditions of the Valentine Green School. In sympathetic hands it is one of the most expressive means of representing beauty, and the possibilities of its use in portraiture are inexhaustible.

THE National Portrait Gallery has been enriched by the purchase of a portrait of John Bunyan, painted

in 1685 hy Thomas Sadler. The authenticity of this picture is established by an unimpeachable record, and its acquisition by the Trustees is very welcome. It is interesting to remember that a copy of the first edition of "The Pilgrim's Progress" realised  $\pounds t.475$  in May last at Sothehy's. A portrait of Dr. Johnson, supposed to be from the hrush of Opie, has been presented by Lord Ronald Gower.

THE lecture on "Rohert Louis Stevenson from a painter's point of view," addressed by Mr. T. C. Gotch to the Ruskin Society of Birmingham, on the 19th Fehruary, was a subject happily inspired and admirahly treated. Stevenson was a great painter of word-pictures, and, in common with all artists of imagination, he possessed qualities and imparted qualities to his work which showed his knowledge of the human heart, an insight which Mr. Gotch defined as one of the attributes of genius. Sir William B. Richmond has so sympathetically translated the personality of the great man of letters, that those who know him only hy his written work may easily find in the portrait a corroboration of the lecturer's comparison of the life of Stevenson with "a work of art of singular originality and charm." This novel description, in its earthly interpretation, suggests Christie's; but it is none the less applicable to a fragile, inspiring existence. "With Stevenson," said Mr. Gotch, "a landscape is not an ornament added to the work, it is the theatre of some drama, the fit hackground for some emotion vital to the story. So with the painter, he seeks no mere transscript of nature, however true; he is touched with an emotion or he sees in the lines of nature something which suits the problems of his art." Mr. Gotch quoted many passages from the hooks of the gifted author, his selection heing made less to prove Stevenson's acquaintance with the art of painting than to show his intuitive mastery of those natural elements which constitute the essentials of a true artist.

LYSSES' palace at Ithaca, and the other scenes reproduced in Mr. Stephen Phillips' play at Her Majesty's Theatre, are examples of spectacular display which deserve to be recorded. Mr. W. R. Lethahy, of the Royal School of Art, South Kensington, made sketches so that the scenery should give a correct idea of the architecture and decoration of ancient Greece, as determined from excavated material. Mr. Joseph Harker constructed the stage buildings from these sketches, and the scenes were as much in harmony with the period of the play as research and ingenuity could make them. The other scenes were tastefully contrived, for which visitors were indehted to Mr. Hawes Craven and Mr. W. Telbin. Calypso's Island, "This odorous, amorous isle of violets," was especially picturesque, and the final scene in Hades was faultlessly terrible. We do not agree with Mr. Justice Darling that the work of a scene painter is the most important part of the modern drama, but, aided by artists and scholars of note, Mr. Beerbohm Tree, in the plays he produces, spares neither trouble nor expense to house and mount them in a sumptuous way which gives them an importance apart from their dramatic merit. For this he has won the respect and support of artistic patrons of the Theatre, and that he should have sought the assistance of Mr. Sidney Colvin, Dr. Murray, and other experts at the British Museum testifies to the high ideal he cherishes that in no way shall a historic production be marred by incompetent

advisers. The costumes were devised by Mr. Percy Anderson with such accuracy as could he reasonably expected.

"PAOLO AND FRANCESCA" is another play which has afforded scope for artistic embellishment. The costumes were especially attractive, and a tribute must he paid not only to Mr. Percy Macquoid who designed them, but to those also who carried out his instructions. The artist acknowledges his indehtedness to the illuminated manuscripts of the period, and with the same authority the furniture was constructed. Scene 3, Act 3, "An Arhour in the Castle Gardens," was perhaps the most admirable as regards scenic effect, but in every case the hackgrounds to the play did credit to Mr. Telhin. The lattice window in Rossetti's 'Paolo and Francesca,' which forms a plate in our Easter Number, might almost have heen the source of inspiration for the quaint recess shown in the last act.

A S an instance of a change of fashion which recalls the early Victorian Era we may be pardoned, perhaps, if we resurrect a paragraph from THE ART JOURNAL for 1846. A Mr. Thomas Cooper was brought before a magistrate on some minor charge, and was described in the police report as " fashionahly dressed, with large moustaches." On heing questioned, he said he was an artist helonging to the Royal Academy, which provoked the following comment: "Mr. Thomas Cooper may he a Student of the Academy, but is in no other way connected with it. The error is the more to be regretted inasmuch as there are two gentlemen named Cooper among its memhers, Mr. Ahraham Cooper and Mr. Sidney Cooper. We may add that no member of the Royal Academy perpetrates the atrocity of moustaches, a most un-English affectation." What a shock that writer would have if he could rise up now on some Exhibition day when artists congregate at Burlington House!

M. R. ALFRED W. RICH, a memher of the New English Art Cluh, recently held an exhibition of water-colour drawings at the Egyptian Hall, Piccadilly. His subjects were mainly pastoral, hut some river scenes were depicted with considerable skill, notably 'The Thames at Greenwich' and 'Greenwich Hospital.' If 'Moonlight on the Wandle' was correctly drawn, the painter's licence might have been exercised to render the hends of the river less angular; otherwise it was an agreeable composition.

A COMPETITION is announced for a Memorial Statue in marhle or hronze to he erected in Melbourne to the memory of Queen Victoria. Ahout £8,000 will he available for the completion of the work of the successful artist, and five premiums of £50 each will be awarded to the authors of the five designs placed next in order of merit. Designs must he sent in to the Town Clerk of Melbourne not later than the 1st December, 1902, and particulars of the scheme can he obtained from the Agent-General for Victoria, Westminster.

COLONIAL artists will exhibit work at the Royal Institute Galleries in June and July under the management of the Royal Colonial Institute. It should prove an attractive Exhibition, and welcome will he given to the original work of artists, knowledge of whom has been gleaned mainly from reproductions.

Honiton Lace Fan, adapted from an Italian Design.
"History of Lace" (Sampson Low).

### Recent Books on Art.

M RS. PALLISER has become an authority on Lace of the first degree, and as it is nearly thirty years since the previous edition of her famous work appeared, M. Jourdain and Miss Alice Dryden have done well to prepare a new edition of the "HISTORY OF LACE" (Sampson Low). With nearly one hundred new illustrations and several chapters re-written the volume is practically a new publication. It deals with the history of lace from the earliest times, in Italy, Greece, Spain, Flanders, and France, and in great detail in England also. The illustration above represents an adaptation, by Miss A. Trevelyan, of an Italian design for Honiton lace work which was made in Devonshire for the Paris Exhibition of 1900.

James Northcote was an incisive critic of his contemporaries, and his remarks on Reynolds and Gainsborough give much local colour to the proceedings of the artists during the early days of the Royal Academy. His friend and admirer, James Ward, took elaborate notes of his discussions with the painter, and under the title "CONVERSATIONS OF JAMES NORTHCOTE, R.A., WITH JAMES WARD, ON ART AND ARTISTS" (Methuen), Mr. Ernest Fletcher has produced a most entertaining book. Mr. Fletcher undertook the work of putting Ward's notes of his conversations into literary form, at first simply hecause the manuscript came into his hands through a marriage connection, but he has evidently felt the spell of the old conversationalist, as he has carried out his part of the work with signal success.

Mr. R. E. Fry's illustrations to Mr. R. C. Trevelyan's "POLYPHEMUS AND OTHER POEMS" (Brimley Johnson), are full of suggestions, and exhibit an artistic quality worthy of serious cultivation. At present Mr. Fry's instincts are somewhat beyond his technical powers.

We recommend very strongly the series of lectures which Sir Martin Conway hrings together under the title "The Domain of Art" (Murray). They are lectures given to students at Camhridge, as Slade Professor of Fine Art, and no more sane advice was ever given to students by a professor. Sir Martin's experience in other fields keeps him from that narrow view of things which the ordinary art critic of to-day cannot overpass. His advice in collecting and in the patronage of art, of the relation of men of to-day towards art, is singularly forcible, and deserves to be read by everyone.

Dr. Bushell has written a touching little note to the late Cosmo Monkhouse's "HISTORY OF CHINESE PORCELAIN" (Cassell and Co.), of which a new edition was heing prepared at the time of the writer's death. As an authority on porcelain, quite as much as a writer on art and a poet, Cosmo Monkhouse will be remembered; and in this volume, illustrated with twenty-four beautifully coloured plates, he has given us of his best. As a guide to collectors and connoisseurs the hook stands alone.

The
European Armour
and
Arms of the
Wallace Collection,
Hertford House.

BY GUY FRANCIS LAKING, M.V.O.,

KEEPER OF THE KING'S ARMOURY.

WITH the opening of the Wallace Collection last year the want, so long felt hy the student-lover of armour and arms, has to a certain extent heen removed.

We have no national armoury, save the very incomplete collection at the Tower of London, which, under the present conditions, has hut a remote chance of being added to or advanced in any way by public desire.

In the thirties and forties of the nineteenth century it was attempted to augment the collections hy purchases made from time to time, hut this system ended in disastrous results, for many of the additions so acquired were worthless and puerile forgeries, with wonderful histories attached to them, possessing absolutely no genuine antiquity; or else they were fragments of true and genuine armour so restored that the modern and bad adaptations engulphed any desirable features of the purchase.

These uotes take us hack to our grand-parents, and to a time almost too long past to he of much interest in this notice, save to show that the nation did at one time make an attempt, though an unfortunate one, to improve our national armoury. Since that period the Tower Collection has practically lain dormant, to he only recently awakened by the skilful handling of Viscount Dillon, the present curator of the armouries.

It should, however, he clearly understood that these disparaging remarks apply only to the purchases made in the thirties and forties, for in the collection are examples of defensive armour which could not he matched; nor could their equals he found were the arsenals of Europe ransacked, either as regards the quality of design and manufacture, or for the sentimental interest attaching to them.

It must he also remembered that the Tower of London, as now known to us, has for its principal foundation the small series of suits that have been handed

down from the remnants of the actual properties of Henry VIII., which included possessions from the Tower, from Westminster, from Hampton Court, from Windsor, and from St. James's House, nigh Westminster, the inventories of which places, hesides other royal residences, were taken in 1547, the first year of the reign of Edward VI. The armour and arms were afterwards collected together to form an arsenal, first located at Greenwich, and then removed to the Tower of London. The date of the removal of these collections seems to have been about the year 1645. Viscount Dillon, in "Archæologia," vol. li., admirahly describes a contemporary MS. inventory of 469 folios, that was presented to the Society of Antiquaries hy Gustavus Brander, F.S.A., in 1775, in which manuscript a few of these suits figure, also large stores of commoner armour and arms. Much of this is even now to he seen at the Tower, hut not in the large quantities spoken of, as this source has from time to time heen drawn upon in order to supply trophies of arms to decorate St. James's Palace, Windsor Castle, Hampton Court, Edinhurgh Castle, and other royal palaces and public huildings.

A museum of arms—some of the highest quality, and little known to the collector and lover of armour—is that in the Rotunda at Woolwich. Among its most important exhibits is the magnificent tilting-heaume from the now almost forgotten Brocas collection. The Baron de Cosson, in describing this same heaume, at the time it was shown in the Loan Collection in the Archæological Institute in 1880, adds very justly to his description of the piece, that it is perhaps "the grandest jousting helm in existence."

The United Service Institute collection, now exhibited in the large gallery at Whitehall, Westminster, can hoast of three fine exhibits: a finely emhossed cahasset helmet, a late sixteenth-century rapier—superh in quality—and a most interesting sword of the end of the fourteenth

century, which was exhumed from that ever-resourceful store, the river Thames. The British Museum can show us the Burgess hequest, a collection of some fifty good and early pieces, but unfortunately, as is often the case, sadly overcleaned. At the British Museum also is the late Baron Ferdinand Rothschild's bequest, including two fine swords, a few projectile weapons, a truly fine morion, and lastly, and certainly the most important of the exhibits, the well-known Georgio Ghisi shield. In the Victoria and Albert Museum, South Kensington, are a few minor loan exhibits, also a selection of decorative arms that have heen purchased from time to time; while at the Hall of the Armourers' and Braziers' Company, in Coleman Street, may be seen some good arms and armour, the chief item being a cap-à-pie suit, fashioned in the Jacohi school. But all this is by the way, and I must return to the Wallace Collection of Armour, which I am about to try and speak of in this series of articles; but I cannot help feeling somewhat discouraged in my task when I see the masterly way in which the pictures in that collection are being dealt with by Mr. Claude Phillips, their scholarly curator.

I have already said that we possess no representative collection of armour in London, and even the magnificent gift to the nation of the Wallace Collection does not wholly compensate for this. Although richer by far than we could ever have hoped to be in the work of the armourerartist, it has failed to give us the commoner types of weapons, as for instance the guisarme, the ranseur, and

many of the specimens which point out the vagaries of fashion through which the hafted weapon passed, and which are so fully represented in the splendid Amhras collections of Vienna or the Musée d'Artillerie of Paris.

The Wallace collection of European armour and arms was entirely formed by the late Sir Richard Wallace, and, as it is stated in the introduction to the catalogue, was chosen chiefly with a view to illustrate the beauty of the armourer's art in all periods; but with no idea of showing the forms and fashions employed in armaments offensive and defensive. To compensate for this it had the advantage of being chosen, and for the most part collected, by a gentleman of unerringly fine taste, judgment, and the all-important factor, almost unlimited means, without which it would be impossible to gather together a collection of such universally high quality. Sir Richard Wallace was no doubt aided in his selections hy the comprehensive knowledge of the late Mr. Spitzer, whose first collection of arms and armour he managed to secure for the sum of £73,000. This collection was a fine nucleus for an armoury, as it included some of the most desirable acquisitions from the collection of the Count de Nieuwerkerke, who, in his turn, had obtained from that well-known antiquarian, M. Pickert, of Nuremburg, a fine series of suits, including the universally admired equestrian harness now placed in the centre of Gallery VI. at Hertford House, and also several suits which had passed from the now almost historical collection of Sir Samuel Rush Meyrick, of Goodrich Court.

General View of Gallery No. 7 as now arranged.

Among other numerous examples from this same collection is a fine and complete series of salades, armets, and early closed helmets; also an interesting group of swords of mediæval date, that the Count de Nieuwerkerke had, after many years of collecting, with the assistance of Monsieur E. Juste, M. Louis Carrand, M. Baur, M. Beurdeley, and M. Henry Courant, managed to hring together. With this to work upon, Sir Richard, with care and discretion, added piece hy piece to his newly formed collection, any fine specimen that he considered as a desirable acquisition. It must be said to Sir Richard's great credit that he never, with I think four exceptions, hought a false piece. This was astonishing, as he could have had no technical experience of the subject, except for that great and universal knowledge that comes from constant and close acquaintance with the beautiful in art.

The extensive oriental armoury was not the work of Sir Richard Wallace, but was brought together by the Marquis of Hertford, from whom Sir Richard inherited it almost *en bloc* and in its present entirety, save for a few examples of Indian and Persian jade-handled daggers that are to be seen in the vitrines of Gallery VIII. The catalogue of this section is not yet complete,

but undoubtedly this particular branch is somewhat wanting in the high quality that is so noticeable throughout the remainder of this collection. Notwithstanding that the oriental section includes over one thousand exhibits it is not comprehensive, and the types of weapons and armour are too often duplicated to render the collection of any great interest.

It is safe to say that no weapon can date as anterior to the end of the sixteenth century, and in the generality of cases they must be included within the category of the eighteenth and nineteenth century arms and armour. Naturally in such a large collection many of the exhibits are fine examples of their respective arts, but one has always that slight prejudice against the weapons and armaments of the Orient, that fertility of design and workmanship is so often overshadowed by the richness of the material employed.

It is for the European section of the armoury the Wallace Collection is so justly famous, but to attempt to mention in a few short articles even a tenth of the 1350 exhihits, would be on the face of it impossible, so in order to do justice to the collection I shall be forced to generalise.

GUY FRANCIS LAKING.

By T. Couture.

### The Wallace Collection.\*

THE FRENCH PICTURES.-V.

BY CLAUDE PHILLIPS.

THE much-regretted Marilhat, one of the many painters who died at thirty-six-the age so often fatal to genius - was, as an Orientalist, the rival, during his all too short career, and in some respects even the superior of Decamps. There are no signs of that genius peculiar to the painter-poet, which lifted the latter so high when he was genuinely inspired. But the light brilliantly scintillates in this study, 'Palm Trees,' as it does hardly anywhere in the work of the more famous master. And such pieces as 'On the Nile' and 'A Scene on the Nile' have perhaps more of the true Oriental bustle and colour, more of literal truth than Decamps could give, or cared to give; but less of dream and enchantment, which is perhaps but the higher and more essential phase of truth. Eugène Gabriel Isabey, a man who during his long life maintained a reputation for the whole of which it is not now easy to account, combined in his genre pieces the frou frou and amusing frivolity of the eighteenth century with a romanticism of the more superficial and unemotional order. A painting of this order is 'The Court Reception at a Château,' much superior to which, however, in charm and delicacy of colour, as in truth of sentiment, is 'The

Young Mother.' His reputation as a marine painter was in his later years at least as great as that which he had earlier achieved in Romantic genre. Even here, though his refinement and his command over certain atmospheric effects are undeniable, we are struck with the smallness, and indeed the futility, of his conceptions. 'A Promenade by the Sea' is rather a sea-coast genre scene than a marine proper. More frivolous, more superficial, more chiqueur still is Eugéne Lami, whose life filled nearly the whole of the nineteenth century, since he was born in 1800 and died in 1894. He possesses extreme skill in filling up his canvasor rather his sheet, since he is chiefly an aquarelliste - with a multitude of small figures in brilliant costumes, falling naturally into their places, and seemingly full of life and vivacity. But, consider these more nearly, and you will find them to be mere animated dolls, cunningly devised to furnish some sumptuous architectural décor, some ornate landscape or vivid street scene. Capital examples of his manner are the water colours 'The Great Staircase at Versailles,' 'Before the Great Revolution,' and 'The Court of Louis XIV. in Flanders.

It is impossible to discuss here the works of such

• Continued from page 103.

et Pierrot.'

faded Romanticists as Léopold Robert and Roqueplan, or, indeed, those of a number of less than second-rate French painters, who somehow in the Wallace Collection have found their way into company for which they are not qualified. Even the thirty oil-paintings and water-colours with which prosaic, painstaking, thorough, hard, uninspired, and pre-eminently bourgeois Horace Vernet is so over-richly represented, call but for scant mention in such a rapid survey as this. Not, indeed, that the first comer, the rapin of the studios, can afford to look down, as he does with unutterable scorn, at this indefatigable and wondrously prolific painter of battles and Oriental scenes. What a sum of knowledge, what a power of superficial if not of penetrating observation, what a sustained intensity of effort, go even to the building up of these flat, stale, and unprofitable performances, by which no eye is any longer gladdened, by which no pulse is any longer stirred! Accurate draughtsmanship, enhanced by no true quality of style, cold colour, a finish thorough without being effective, an Orientalism correct yet not convincing-such qualities as these mark 'The Arab Tale-teller,' 'Judah and Tamar,' 'Joseph's Coat,' and other similar pieces. A certain rough, Napoleonic humour gives charm and something like pathos to 'The Veteran at Home.' For sustained vigour and resolute finish-also for a kind of furia not common in his work-'The Lion Hunt' stands out pre-eminent among the Vernets at Hertford House.

It is well, however, to possess these six examples of a master scarce even in France, Thomas Couture, the one-picture man, whose 'Décadence des Romains,' now in the Louvre, constituted a standard of excellence set up by the painter himself, but never again reached. Couture became in time what Heine with scorching sarcasm declared Musset to be: "un jeune homme d'un bien beau passé." 'The Roman Feast,' a scene of classic revel, which even its audaci'y does not prevent from appearing frigid and wanting in the pulsation of life, closely recalls in motive and treatment the 'Décadence des Romains.' In the 'Timon of Athens,' notwithstanding the dryness of the painting, there is learning, humour, and a note of emotion; while with these qualities a more intimate charm attracts and holds the onlooker in the 'Harlequin

'The Duel' (p. 135), showing, with a quietude under which smoulders the poignant drama, the preliminaries of a duel between Harlequin and Pierrot, following upon a masked ball, is a composition easy, truthful, and seemingly spontaneous, the figures being admirably framed in the chill winter landscape. It would be interesting to know what is the link connecting this 'Duel' of Couture with the famous 'Duel in the Snow' of Gérôme, now in the Musée Condé at Chantilly. The dramatis personæ are the same; but here we bave the scene before the climax, there the terrible consummation of the tragedy. 'Tis stage-tragedy, no doubt; but where the personages are, if not of the stage, at any rate shrouded in its disguises, this matters less. No forgetfulness is possible for those who have looked upon the dead Pierrot, bloody and ghastly in his shroud-like garment, and seen the agony of remorse on the faces of bystanders, sobered by the chill of dawn and the presence of death-none for those who have felt this awful sense of the irreparable that Gérôme in the Chantilly picture drives home with such an intensity of strength and pathos. It is as if the onlooker had lived through an unforgetable moment of life, at the recollection of which a nameless horror will ever numb his heart. Dramatic anecdote—the fait divers even at this its highest point—is not the worthiest art; and yet here it holds us, and we how our heads, disarmed and willingly led captive.

There is considerable risk that, amidst the splendours which at Hertford House surround and swallow them up, the small drawings which pleasingly yet imperfectly represent one of the greatest of modern Frenchmen, Raffet, the inventor of modern military art, may be overlooked. And yet the very soul of heroic France informs the creations in which, as lithographer and draughtsman, he has given, without departure from realistic truth, the Napoleonic epoch, the Napoleonic legend-with a vibration of passion, with a sublime enthusiasm, such as no other artist of France, no Meissonier, no De Neuville, no Detaille has ever equalled, or approached. He must not be judged solely by the little marvels of delicate execution here-such as 'The Trial of Marie-Antoinette,' the spirited 'French Infantry in Square,' so cunning in its truth of composition, or 'Napoleon after Austerlitz,' which so closely recalls one of Meissonier's most popular pieces. On the other hand, 'Soldiers of the Republic'—a group of those heroes, ablaze with patriotic ardour, tough as well-tried steel, who defended the frontiers of France, and then, an irresistible phalanx, overran all Europe-gives to perfection, with his easy certainty of draughtsmanship, and seeming spontaneity of arrangement, this inestimable quality of enthusiasm for the military glories of the mother-land, which fewer painters than poets bave possessed. His ardent patriotism seems to ring out from all he does like a trumpet; and from the breast of those who look on in breatbless passion of sympathy it tears a responsive

We come down to sober earth again, to absolute composure, to art consummate of its kind, but not so consummate as to conceal art, when we reach Meissonier, the sixteen examples from whose brush, all of them belonging to the earlier half of his well-filled career, are reckoned among the chief glories of Hertford House. Meissonier's place in French art, and in the art of modern Europe, is peculiar, and in

some respects unique.

Meissonier belongs to no modern school or direction but his own, being a child, though not wholly a legitimate one, of the great Dutchmen of the seventeenth century. His works-end this is said in no disrespect, but with every willingness to recognise skill which is in its way of extraordinary perfection-are so many exquisite and astonishingly ingenious toys, fashioned for the lovers of rare and precious things, and competed for by those who alone are able to possess them—the millionaires of the two hemispheres. Take them from the century, wipe out this wonderfully ingenious talent, and all that it has so patiently wrought out, and would the art of the world-and that is surely the world !-irreparably suffer ? Would such a wound be inflicted that it would be impossible to fill the void; such a scar be left that there would be permanent loss and disfigurement? The answer is No. Meissonier bas never had man or Nature so closely in his embrace as to be able to give back a new truth, a virgin beauty in respect of the one or the other. It is the costume of former days, the picturesque attitude, the piquancy of modern man in antique garb, the pomp and circumstance of war, its everyday life, its melodrama and tragedy, its historic aspects, that have chiefly interested him. Meissonier was never a true colourist; that is, not

The Roadside Inn.

By Meissonier.

only was he rarely, if ever, a harmonist of the first water, heing as a rule hot aud harsh even when he strove his hardest for richness and splendour; hut he did not appreciate colour as the born colourists have done and do—that is, as the great instrument of expression, of pathos, of mystery, the true inner voice of nature and of art.

Turn from Meissonier to the famous Netherlanders whom he emulated—to Metsu, Terhorch, De Hooch, Jan Steen, De Keyser; to Gerard Dou and Frans van Mieris; to Adriaen Brouwer, to Teniers; and the radical difference will at once make itself manifest. The Dutchmen had saturated themselves with the truth that was hefore

them; and though they served up that truth with a pungent sauce of humour, and a realism wilfully exaggerated to and beyond the point of grossness, they were for the most part penetrated with that pathos which lies at the root of all life when contact is reached with its essence. Indefinably, too, their great gifts as colourists help them here to express the very heart of their conception. Meissonier's is, on the other hand, the most hrilliant art of the stage, the finest essence of the Comédie Française at its hest. As a rule he does not, like the outand out Roman. ticists, hase himself on any definite event, any definite poem or drama; hut for all that his dramatis personæ are always conscious of a public, always living

their life under the stimulus of contemplation from the outside; hardly ever appearing so inevitahly a part of the framework—whether of man's handiwork or Nature's—that we cannot in thought dissociate the one from the other. Meissonier's wonderful life-work, though it is very far from heing admirable only on account of the strenuous lahour expended upon it, is an extra, an objet de luxe, a delightful amusement, a wonderment in the history of painting; not one of its chief arteries, not in any way a true or adequate expression of his time, its fashions, or its deeper convictions, whether in art or in life. That he stood firm to his own technique, that he did not

adopt the fashions or even, in any material degree, the wonderful developments of his later time—for this let him not be severely hlamed. So long as a man has anything vital in heauty or in significance to express with his hrush, so long let him have his own way, and use his own technical modes, his own instruments of expression.

We, the majority, who helong to no clique, to no isolated "chapel," as the French call it, may equally accept Watteau and Fragonard on the one hand, David and Prud'hon on the other: Ingres, and his hated and co-rival Delacroix; Corot, Millet and Rousseau, and yet also Manet, Claude Monet, and the hest of their

followers; Puvis de Chavannes, and vet his antithesis in feeling and expression, Bastien. Lepage. It isthis has heen said already in another way-the lack of the deeper human note, the failure to reach the heights or the depths, that detracts from the finest that Meisso. nier has giveneven from such great examples of dramaticintensity and poetical realisation as 'La Rixe,' the '1814' in its two versions, and the smaller 'Napoleon and his Staff' (1863) in this Collection. Only once - and that in the ride past, under the eves of the victorious Napoleon, of the cavalry regiments in the '1806' ('After the Battle of Eylau') -has Meissonier risen to the topmost heights of his argumeut, and given forth a magnificent cry of enthusiasm, which

The Print Collector ("L'Amateur d'Estampes"),

By Meissonicr,

sends the vitalising spark thrilling through his wonderfully accurate work, and raises it immeasurably in value.

The Meissoniers in the Wallace Collection belong almost exclusively to the earlier half of his practice. Yet he may he perfectly well judged hy them, seeing that his aims and methods showed nowhere any radical divergence, any absolutely new departure; hut only gradual development of power and virtuosity. The earliest specimen of the hrilliant "small master" is 'Dutch Burghers,' which in its quietude has some of the deep-seated gravity of Dutch portraiture of the seventeenth century. 'Les Bravi'—two ragged

Macbeth and the Witches.

By Corot.

ruffians armed to the teeth, lying in wait for some luckless victim—is, for all its resolute finish, not yet art of the Comédie Française; it is rather melodrama of the Porte Saint-Martin. Seemingly some years later than this is the gaily-coloured hut less than harmonious 'Decameron.' That the costumes of these pretty, alert, hut prosaic actors are two hundred years later than Boccaccio's time matters but little. What matters much is that the whole beauty, the whole glamour of this story-telling, this love-making on the very

edge of the precipice, this masking the mouth of the plague - pit with flowers, has evaporated. Perhaps, however, the picture has in the course of time usurped a too amhitious name. It may he that Meissonier has only meant here a 'Conversation Galante' of the sixteenth century. But even then! What dry and uninspiring prose it is that we have here! The less said ahout the dry, lahoured, and not in the least humorous 'Polichinelle' (1860) the hetter.

The four single figures of 'Cavaliers' are, on the other hand, thoroughly charac. teristic of Meissonier; and, taking them for what they are, we may unreservedly admire accuracy and perfection of turn-out, martial resolution, the concentration in each case of the motive, the refinement and sympathy which give charm to these famous presentments of over-hold

youth and manhood. Least elahorate hut, perhaps, in its nonchalance most charming of all, is the 'Cavalier: Time of Louis XIV.' Together may he hracketed the two panels, hoth of them lahelled 'Musketeer: Time of Louis XIII.,' in which smartness of accoutrement and manly vigour, bordering very appropriately upon the aggressive, are the key-note.

By far the most famous panel of the four, and, indeed, one of the most popular of Meissonier's works, is the 'Cavalier: Time of Louis XIII.' (1861), p. 140. The figure of this eminently handsome and a little supercilious

gentleman, who may have helonged to the following of the Maréchal d'Ancres or the Duc de Luynes, is so firmly and finely designed that it will without sensible loss hear indefinite enlargement. It is presented, and in every particular realised, with singular authority, and with a certain high-comedy flavour, too, which here comes not at all amiss.

Another Meissonier of the very first order, as regards composition and finish, is the celebrated genre piece 'L'Amateur d'Estampes' (p. 138). It is here, where

Meissonier is in many respects at his hest, that he may most profitahly he compared with the great Dutchmen, who at Hertford House are to be found next door to him. Nothing could well be finer up to a certain point than the figures of the two print - collectors, who, in a delightful nid de collectionneur of the eighteenthcentury, are seen intent on the portfolios, the precious contents of which they are turning over together; nothing hetter than the subordination of significant and perfectly rendered detail to the ensemble. Yet we lack, on the one hand, the richness and depth, the atmosphere, the transparency of half-light and shadow, in which a Metsu or a Terhorch would have revelled under similar circumstances; on the other, the sprightly and ingenuous charm which, among French draughtsmen of the

A Cavalier: Time of Louis XIII. .

By Meissonier.

eighteenth century, the Saint Auhins, or Portail, or Ollivier, would have imparted to such a subject—giving, with the note of truthful observation and mundane elegance, the note of something human and touching in its very *intimité*. 'Halting at an Inn' is in its very perfection of workmanship toy-like and a little futile.

Far ahead of it is a later and infinitely more heautiful rendering of the same subject, 'The Roadside Inn' (p. 137). Here Meissonier, without otherwise modifying his style, makes some important conces-

A Glade in the Forest of Fontainebleau.

By Theodore Rousseau.

sions to the plein-air theory and practice, which more and more in the period of his maturity was obtaining a hold on modern French art, and through it on art generally. Two cavaliers, in the elegant riding costume of the last century, have halted at a roadside inn, in the bright sunshine chequered with shadows clear and luminous in their silver greyness; and from the ostler-a wonderful little figure, with his face three-parts modelled in half-shadow-they ohtain welcome refreshment which they discuss while he stands motionless and expectant at their horses' heads. The most astonishing perfection of finish is here allied to a reticence that will have none but the most absolute and the most unemotional simplicity. And yet, sturdy manhood at its heyday, the world at its best and brightest, the flame and flicker of the sun making beautiful all that it touches-these are things that go some way towards making poetry out of this exquisitely inscribed leaf of prose.

It is a subject for infinite regret that the group of great landscapists which for the purposes of convenience, if not of accurate description, we may still call the Barbizon School, should not he more amply and significantly represented than it is in the Wallace Collection. And yet we should perhaps congratulate ourselves rather that it is here at all. Glasgow has a magnificent Corot, and the Victoria and Albert Museum will have, when the Ionides Collection is shown, most of the great men of the school. But still the National Gallery hangs back, and, while the Louvre has Constable, Crome, and Bonington, and will soon have Turner, hesitates to admit-or at any rate to acquire out of its own resources-Corot, Millet, Rousseau, Diaz, Troyon, and Daubigny. It is thus that the restricted hut interesting group of works of this class, of which Gallery XV. of the Wallace Collection can hoast, acquires a unique interest and value.

We who worship, and have ever worshipped, Claude Lorrain, cannot refuse our admiration to Corot; we to whom Ruysdael, Hobbema, Constable, and Crome are household gods, cannot refuse to admit Théodore Rousseau, Diaz, and Daubigny. As in the case of Meissonier and the Dutch genre painters of the seventeenth century, some instructive comparisons can be made at Hertford House hy those who pass from the galleries where the masterpieces of the Netherlanders hang, claiming, as of right, the admiration of all, to this one, where Corot and Rousseau are seen, appealing, and rarely appealing in vain, to those to whom Nature, and

art, its quintessence, are dear.

The great 'Macbeth' of Corot (p. 139), though not one of those poems of silvery light and harmony of his, so subtle, so indefinable as to be compared only to music, is one of his noblest and most moving performances-and one, for this master of the modern and the classic idyll, of unusual dramatic import. It is a dark Corot, hut one in which the most sombre spaces are luminous with a tremulous half-light making darkness visible. In the last softened splendour of sunset Macbeth and Banquo have passed over the crest of the hill crowned with magnificent beeches, whose branches, extending like arms, vast and mysterious, across the picture, seem to be outstretched in warning. As they descend they are arrested by the group of the three witches, erect, dark, and menacing against the dying sun. A classic harmony of design, simplifying and concentrating the landscape motive so as to secure the truest and most poignant expression of the subject, a lovely and tender though not a showy scheme of illuminationthese qualities make of the 'Macbeth' one of Corot's

finest things. Hypercriticism might allege that here the mood of the dramatis personæ and the mood of Nature are not in absolute consonance the one with the other; that in the evening, still fair with the faint loveliness of the vanished yet lingering day, there is, for all the darkness, a predominating suggestion of calm and hope; while in the meeting of the victorious chieftains with the weird Three there is already pre-

monition of defeat, despair, and death.

Théodore Rousseau's superb landscape, 'A Glade in the Forest of Fontainehleau' (p. 141), which hangs as a pendant to the 'Macbeth,' is one of his most complete and satisfying achievements. If we attempt description, we can but point to the great curtain of oaks in the foreground, beyond which stretches, ruddy and golden still in the beautifying illumination of waning sunset, a prospect of meadow and woodland, the shallow pools intersecting which send back from their surfaces the tempered glow of the sky. The whole picture breathes forth an atmosphere of serene contemplativeness at the decline of happy day; of a melancholy which is yet tinged with hope rather than with sadness; of acceptance, and of that rarest thing in modern art-rest.

Now pass hack from these masterpieces of modern landscape art to the Ruysdaels, the Hobbemas, the Cuyps, the Adriaen van de Veldes. Putting all prejudice aside-and preserving, too, intact, our ardent admiration for the great Dutchmen - have not the moderns got nearer to the heart of Nature, have they not nestled themselves where the greatest landscapists of the preceding ages never penetrated? Have they not, by love and not by violence or a merely profane curiosity, drawn from her hosom secrets which she never hefore confided to mortal? To leave to Nature her own moods, her own endless gamut of passionate, pensive, and joyful expression, and yet to show Man in mysterious consonance with her'; to express Man ahove all, in the infinitely varying moods which the contemplation of Nature and her appeal to his heart of hearts spontaneously evoke—this is to achieve what the greatest of the preceding ages had not accomplished. Narcisse-Virgile Diaz is represented by an Oriental scene, 'A Fountain at Constantinople;' and by two delicious little sketches in oils, 'Venus disarming Cupid' and 'The Education of Cupid,' in which Correggio has heen emulated, yet not precisely imitated. The large landscape by Troyon, 'Watering Cattle,' is a singularly commonplace and unattractive specimen of his art. First-rate, on the other hand-both in the bold and masterly draughtsmanship of the cattle and the happy way in which they fill the sea-coast landscape-is the same master's 'Cattle in Stormy Weather.' Here, again, an instructive comparison may he made, since in an adjacent gallery is to be found the 'Cattle in Stormy Weather' of Paul Potter. The cattle of the young Dutchman, who, as is well known, chiefly inspired Troyon, are much more highly individualised, more highly dramatic; they are not less happily set in the landscape. But the modern Frenchman conveys a certain sense of space, of hreadth and unity, which the little marvel of Potter does not suggest in the same degree.

The comparatively early example of Jules Dupré, 'Crossing the Bridge' (1838), is marred by the want of fusion in the tints and the violence of illumination in the great overhanging masses of cloud. It is not a little curious to note that Jean · François Millet and Daubigny have been excluded from the great galleries of Hertford House. Nothing in French Art that may have seemed to those who hrought together this wonderful collection too hourgeois, or too openly and passionately in sympathy with humanity in its simplest and most primitive aspects, has, indeed, found a place here. Thus there is no Le Nain group to take its isolated place in the seventeenth century; and what is more wonderful, no Chardin to gladden and soothe the eye, to warm the heart with his truthful, tender pictures of the lower French hourgeoisie. The note struck hy Jean-François Millet may have seemed too tragic, his picture of humanity and nature too tremendous in weight, solemnity and con-

viction. Dauhigny, with his heart-searching pathos in the treatment of every-day landscape, with his exquisitely tender transcripts of calm-flowing river, whispering wood, hlooming orchard, and undulating field, has no more than his great contemporary found favour. To horrow the phrase of Maeterlinck, the life-work of these two great masters might well he called "Le Trésor des Humhles." Though, indeed, whether we judge it from the artistic or the emotional standpoint, or—as we more properly should, and, indeed, must—from hoth comhined, it is surely the treasure of all mankind.

CLAUDE PHILLIPS.

## 'The Evening of the Battle of Waterloo.'

BY ERNEST CROFTS, R.A.

FROM THE PICTURE IN THE WALKER ART GALLERY, LIVERPOOL.

From a drawing by
Miss J. B. Bowness.

DEPICTOR of hattle-pieces, Mr. Ernest Crofts, R.A., Keeper of the Royal Academy, is one of the few living artists to devote himself almost exclusively to what was once a more popular field of endeavour. In particular he has studied the hundred dramatic incidents connected with Waterloo, and, while keeping in mind pictorial requirements, has aimed

to make his canvases historically faithful. In this kind we have, for instance, 'The Morning of Waterloo,' 1891; 'Napoleon's Last Attack,' 1895; 'Capture of a French Battery,' 1896; and the 'Storming of the Château of Hougomont,' of 1897. The work which we reproduce antedates any of these, having heen purchased by the Walker Art Gallery from the autumn exhibition of 1879.

"What a pity that so great a man was so ill hrought up!" Thus is the inscrutable Talleyrand said to have remarked of Napoleon, meaning thereby that the adventurer element, as distinct from the adventurous spirit essential to military genius, was one of the main causes of his undoing. The despot of eighteenthcentury despots would have set up a more enduring kingdom, prohably, had he to largeness of vision added more of true sympathy for those whose cause he professed to champion. He tried to reconstruct the map of Europe; hut, a British prisoner, he died of a painful disease on the island of St. Helena in 1821. With catch phrases of the eighteenth century on his tongue, he, as emperor, was supposed to have the interests of the proletariat at heart; hut, so long as his own amhition was satisfied, he would have witnessed almost with indifference each unit of the army, over which he exercised so extraordinary a control, mowed down. Yet, with all his shortcomings, Napoleon Buonaparte stands high among the amazing men of the world.

On June 12, 1815, Napoleon left Paris for Belgium; on June 21 he returned to the French capital. During the interval there had occurred the most momentous land hattle of modern history, momentous alike for the desperate intensity of onslaught and defence and for its after effect on the peoples of Europe. Napoleon's army amounted to 122,401 men, and, containing many veterans, and numbers who had served in the campaigns of 1813-14, it was, perhaps, the finest he had ever commanded. Wellington was at the head of a mixed force of Englishmen, Hanoverians, Brunswickers, Nassauers, Germans, and Netherlanders, who totalled ahout 105,950. He pronounced it "the worst army ever brought together." Under Blucher were 116,897 men, finely disciplined, animated hy an intensely warlike spirit. The story of Napoleon's initial triumph over the Prussians at Ligny, where fell 12,000 of our allies; of how, on the other hand, Ney was forced to retreat hefore Wellington at Quatrehras; of how, in order to effect a junction with the Prussians, Wellington had to retreat on Brussels; and of the decisive action on June 18-this story has heen told a hundred times.

The incident represented in our picture occurred about the time when there arose from the field that fateful cry, "Sauve qui peut!" At 7.30 P.M. Napoleon made his last attempt to crush his foes. This proving unsuccessful, there was a general advance of the whole British line, and the Prussians drove the French in confusion from Papelotte. In the retreat, Napoleon at first took refuge in a square; hut at Genappe, the first important defile through which the defeated army passed, he quitted his carriage, and, determining to make straight for Paris, reached Charleroi about dayhreak, with an escort of some twenty horsemen. His travelling carriage, with hat left in it, fell as hooty to the pursuing conquerors. Mr. Orchardson's picture in the Tate Gallery, 'Napoleon on Board the Bellerophon,' shows us the sequel to the inglorious moment in his career depicted by Mr. Ernest Crofts.

## Charles Robert Leslie, R.A.\*

BY G. D. LESLIE, R.A., AND FRED. A. EATON.

CHARLES ROBERT LESLIE, as his name suggests, was of Scotch descent, his grandfather having emigrated in 1750 from Scotland to Cecil County, in the State of Maryland. The painter's father and mother, Robert Leslie and Lydia Baker, were both natives of Maryland.

Robert Leslie was a man of great ingenuity in mechanics, who pursued the business of clock and watchmaker in Philadelphia. He was a member of the Philosophical Society, and was known and respected by some of the most eminent scientific men in America, including Benjamin Franklin and La Trobe, the architect of the Capitol at Washington. In 1793 he came over on business to England, and it was during his stay in London that his eldest son Charles was born, on the 19th of October, 1794, at Islington. On the death of his partner, in Philadelphia, Robert Leslie with his young

children returned to America, sailing from Gravesend on the 18th September, 1799, and after a voyage of seven months and twentysix days reached Philadelphia on May the 11th, 1800. The protraction of this voyage was due to the ship, The Washington. having heen engaged in action with a French privateer on the 24th of Octoher, and though the privateer was beaten off, with the loss of 37 men killed and 58 wounded, The

\* Born, 1794; Student, 1813; A.R.A., 1826; R.A., 1826; died, 1859. This article is a contribution towards the history of the Royal Academy, which will be continued from time to time.

Washington was so disabled in her rigging that the captain had to put into Lisbon to refit. They did not leave Lisbon until the 31st of March, and even after that were much delayed by gales.

The painter's father died shortly after his return to Philadelphia, in 1804. His widow was left by no means well off, but she contrived, by keeping a boarding-house, to bring up her young family in a respectable manner. Charles Robert and his brother Thomas were educated at the School of the University of Pennsylvania, the master, Dr. Rogers, out of kindness abating considerably in his charge for the tuition of his friend's children. The boys spent their summers and autumns in visits to the farms of their maternal uncles, Ward and Hall, in Chester County. C. R. Leslie had from his boyhood been fond of drawing, and when old enough to think of

a profession desired to be a painter. There were, however, no means available for carrying out this desire, and in the year 1808 he was bound apprentice to Messrs. Bradford and Inskeep, Booksellers and Publishers in Philadel. phia. Through the kindness of an assistant scene-painter, Tom Reinagle by name, Leslie obtained a place on the stage of the theatre at Philadelphia upon several occasions when the celebrated George Frederick Cooke was performing. The impression made on the young artist's mind was so strong that he drew from recollection a

The Mother and Child,

By C. R. Leslie, R.A.

striking portrait of the great actor, which attracted the attention of several gentlemen of Philadelphia. A suhscription was raised hy their help and Mr. Bradford's to enable Leslie to study painting two years in Europe, and after some few lessons from Sully, he sailed from New York in 1811 armed with letters of introduction to West, Beechey, Allston, and other artists of distinction.

Though a little homesick during the first few months in England, the widening circle of his new acquaintances and the artistic influence of his new surroundings soon took effect in the rapid development of his powers; after some preliminary instruction he was admitted a Student at the Academy in 1813, and exhibited in the same year his first picture, 1819, Leslie may be said to have found the line of

Portrait of C. R. Leslie, R.A. By John Partridge,

'Murder,' with a quotation from Macbeth; and in the following year the 'Witch of Endor.' From the venerable President West the young artist received much kind help and encouragement, and through his friend, Allston, he made the acquaintance of Coleridge and Charles Lamb; whilst at the theatres, of which he was always fond, he saw Mrs. Siddons, the Kembles, Bannister, and Edmund Kean. In order to support himself he painted at this time numerous small portraits. These were highly finished, and generally exceedingly good likenesses. Among them may be specially mentioned those of himself, of Washington Irving, and of Sir Walter Scott.

In his picture of 'Sir Roger de Coverley going to Church,' exhibited in

" Who can this be?" By C. R. Leslie, R.A.

art which he afterwards made so peculiarly his own, and on which his reputation rests,-viz.: humorous genre. The subjects taken from his favourite authors, Addison, Shakespeare, Cervantes, Sterne, Smollett, and Fielding were always happily selected, and rendered with an appreciative intelligence in which he has never been equalled. Among the best known may be mentioned 'Sancho Panza in the Apartment of the Duchess'; 'The Dinner at Page's House' from "The Merry Wives of Windsor"; 'Uncle Tohy and the Widow Wadman'; all these in the National Collectiou; 'Don Quixote and Dorothea'; scene from "The Taming of the Shrew"; the Bourgeois Gentilhomme; scene from "Comus," designed for a fresco painting in the Pavilion of Buckingham Palace Garden; 'Reading the Will,' from "Roderick Random."

Besides the fresco from "Comus," Leslie painted two other large pictures for the Queen, viz., 'Queen Victoria receiving the Sacrament on her Coronation in Westminster Ahhey' and 'The Christening of the Princess Royal.' His success soon met with recognition from the Academy, and in 1821 he was elected an Associate hy a majority of one over George Clint, his promotion to Academicianship following in 1826. He had married in the previous year, and it is probable that the cares of an increasing family and the prospect of a certain income with much leisure induced him, in 1833, to accept the appointment of drawing master at the

West Point Military Academy, which had been procured for him by his brother; but the work proved to be far more arduous than he had been led to expect, the climate damp and unhealthy, and the cost of living very high, while, added to these drawbacks, he pined daily for the society of the comrades and the art world that he had parted from, and it is not surprising that in the following year he resigned his appointment and returned to England, in which country he made his home for the rest of his life.

In the early years of his membership Leslie does not appear to have taken any active part in the business of the Academy, hut he subsequently displayed great interest in its affairs, and was the author of many proposals, beginning in 1844 with one that the number of works allowed to he sent by each exhibitor should be limited to six. A resolution to this effect was passed by the Council and sanctioned by the General Assembly, but was subsequently, on the motion of J. M. W. Turner, seconded by H. W. Pickersgill, rescinded hy eleven votes to seven, and no change made; nor have many endeavours made since in the same direction ever been successful. Other efforts of his met with a better fate, especially the proposal to admit engravers to the Academicianship, which, hrought forward by him first in the Council in May, 1852, was finally carried to a successful issue hefore the end of 1853, and saw its first accomplishment in the election of Samuel Cousins in

Sancho and the Duchess.

By C. R. Leslie, R.A.

1855. Some of the proposals made hy him, though negatived at the time, have since heen carried into effect, such as the opening of the exhibition in the evening, and the abolition of the laws requiring that candidates for the Associateship should he "at least twenty-four years of age," and that they should "not he memhers of any other society of artists established in London." On the election of Sir Charles Eastlake to the Presidency, it was on his proposal that an annual allowance of £300 was voted to the President until the hequest of Sir Francis Chantrey should come into operation.

In 1847 Leslie was unanimously elected Professor of Painting at the Royal Academy, an office which he retained till 1852, when his state of health ohliged him to resign. The substance of his lectures was published in 1855 as a "Handhook

Portrait of C. R. Leslie, R.A., by himself.

ahle, and is pleasantly displayed in the memoirs of his friend, John Constable. He also wrote a "Life of Sir Joshua Reynolds," and some "Autohiographical : Recollections," hoth of which were published after his death under the editorship of Tom Taylor. In the Recollections we obtain a charming picture of the coterie of distinguished people, among whom the artist's modesty and amiahility rendered him ever a welcome favourite. Coleridge, Sir Walter Scott, Lord and Lady Holland, Sidney Smith, Lord Egremont, and in later years Dickens, Thackeray and The Doyles were, amongst others, his intimate friends; of these his pen affords us many delightful and graphic reminiscences.

The death of this amiable and accomplished artist took place on May 5th, 1859, the day following the opening of the Academy to Young Painters." His literary skill was consider Exhibition which contained his last two works,

Scene from " The Taming of the Shrew." By C. R. Leslie, R.A.

'Jeannie Deans appealing to the Queen' and 'Hotspur and Lady Percy.'

The reproduction below from the last work of the artist, left unfinished at his death, may interest our readers, as it was of this sketch that Thackeray wrote the following, in the last of his "Roundabout Papers":-"Not many days since I went to visit a house where, in former years, I had received many a friendly welcome. We went into the owner's-an artist's-studio. Prints, pictures, and sketches hung on the walls as I had last seen and remembered them. The implements of the painter's art were there. The light which had shone upon so many, many hours of patient and cheerful toil, poured through the northern window upon print and bust, lay figure and sketch, and upon the easel before which the good, the gentle, the beloved Leslie laboured. In this room the busy brain had devised, and the skilful hand executed, I know not how many of the noble works which have delighted the world with their beauty and charming humour. Here the poet called up into pictorial presence, and informed with life, grace, beauty, infinite friendly mirth, and wondrous naturalness of expression, the people of whom his dear books told him the stories-his Shakespeare, his Cervantes, his Molière, his Le Sage.

"There was his last work on the easel-a beautiful fresh smiling shape of Titania, such as his sweet guileless fancy imagined the Midsummer Night's queen to be. Gracious, and pure, and bright, the sweet smiling image glimmers on the canvas. Fairy elves, no doubt, were to have been grouped around their mistress in laughing clusters. Honest Bottom's grotesque head and form are indicated as reposing by the side of the consummate beauty. The darkling forest would have grown around them, with the stars glittering from the midsummer sky; the flowers at the queen's feet, and the boughs and foliage about her, would have been peopled with gambolling sprites and fays. They were dwelling in the artist's mind no doubt, and would have been developed by that patient, faithful, admirable genius: but the busy brain stopped working, the skilful hand fell lifeless, the loving, honest heart ceased to beat. . . . . "

Charles Robert Leslie left three sons, all of whom became distinguished in their respective professions: Charles Robert, a marine painter, and author of several works on nautical subjects; Bradford, made a K.C.I.E. for his services as a Civil Engineer in India; and George Dunlop, who, following directly in his father's footsteps, was elected a Royal Academician in 1876.

Unfinished Sketch for "Titania."

# Mr. Reginald Vaile's Collection of Eighteenth-Century French Pictures.—II.\*

FRANÇOIS BOUCHER, from whose hand is the picture reproduced as the principal illustration in this article, has been called the Anacreon of painting. This, surely, is not so much because his work possesses the lyric quality, as because, like the Greek poet, he celebrated the praises of love and wine. Boucher was born in Paris, in 1703, the son of a designer for embroideries, from whom, doubtless, he received his earliest instruction in art. For some months he was under Le Moine, and later became the assistant of Jean-François Cars. One of the most famous of his youthful achievements, executed as a lad of eighteen or nineteen, was his series of engravings after Watteau, undertaken at the request of M. de Julienne for the now highly-prized volumes issued after the death of the master. In 1723 his picture of 'Evilmerodach setting free Jehoiakim' won a prize at the Academy, but, failing to secure the Prix de Rome, in 1727 he fared to Italy at his own expense, with Carle van Loo, his junior by about a year, as companion. Three years after his return to the French capital, in 1731, Boucher was admitted to the Academy by virtue of his 'Rinaldo and Armida,' now in the Louvre. On the death of Oudry, in 1755, he ruled the destinies of the Gobelins tapestry works, and, thanks to the patronage of Madame de Pompadour, to whom he owed much, in 1765 he succeeded Carle van Loo as Premier Peintre du Roi. So great was his facility, his energy, that during a life of 66 years he is said to have executed something like

ten thousand pictures and drawings, to take no account of engravings. Nowhere can Boucher so well be studied

Hertford House, where are twentytwo works by him, including a portrait of the Marquise de Pompadour, and, decorating the walls of the greatstaircase, the famous 'Lever du Soleil' and 'Coucher du Soleil,' originally designed for the Gobelins

Miniature.
By Fragonard.

works, but bought from the Salou of 1753 by La Pompadour.

In the esteem of Diderot, at any rate at certain moments, noterms of censure were too severe for the art of Boucher, no invective sufficiently penetrative. But Diderot's Salon criticisms—the earliest of their kind in modern literature—were penned by one eager for a return to nature; they were not the issue of a balanced æsthetic judgment. Boucher developed during a time when artificiality was the god of cultured circles, when nature even was obscured by the artificial veil through which she was observed. Ruskin has well said of Fra Angelico that he lived in perpetual peace. Excitement—not those thrills

of joy which accompany creation. hut excitement of the factitious kind -was the mood whence sprang the spiritually unnurtured art of Boucher. He had amazing facility, a fund of invention, above all a feeling for what is decorative. To judge his works aright, as Mr. Claude Phillips has pointed out, they must be seen on the walls of a Louis Quinze Salon, with furniture and objets d'art of the period. In the words of Mr. Austin Dobson, he evoked

"A Versailles Eden of cosmetic youth, Wherein most things went naked, save the Truth."

The Diana of Mr. Vaile's picture (p. 151), represented as a huntress, her attrihutes of bow, quiver, and arrows beside her, is a Parisian coquette rather than

the lithe goddess of the Greeks who, sure and fleet of foot, moved through the woods above the world. But the figures are beautifully placed in the landscape, and there is in the picture that note of voluptuous ease always to be associated with Boucher. Perhaps he came nearer than any of his fellows to creating out of nothing pictures of enduring charm. Mr. Vaile's smaller picture by Boucher shows the triumph of Amphitrite, mother of Triton—the oval space is felicitously filled, and the colouring of hlues and pinks less harsh than in many examples.

The importance of historical perspective in criticism cannot hetter he exemplified than in dealing with the art of Jean-Baptiste Greuze. Strange as it may appear to us, he was hailed hy Diderot and others as a painter who, in a golden age of artificiality, discovered new

inspiration by returning to nature. Greuze was born at Tournus in 1725, and gained immediate recognition in Paris with his first exhibited picture, 'Le Lecteur de la Bible.' But to choose themes from humble life, however confusing to contemporary connoisseurs, does not involve a return to the simplicity, the large-heartedness of nature. It is difficult if not impossible tobelieve that Greuze himself was sincere au fond in painting as he did. Compare him with our own Hogarth, for instance, and then, taking full account of dissimilar conditions, seek for the vraie vérité. I concur in Mr. Brownell's view that Greuze is as sentimental as a bullfinch, with hardly a natural note in his

gamut. He exploited for pictorial purposes scenes, gay or tragic, in the life of the bourgeoisie. Yet while he used the material, he did not so much as attempt to draw inspiration from the sources of that life.

But if we cannot accept Greuze as one who got behind the artificiality of his day, if his conventions are more wearisome than those of many of his contemporaries and predecessors if his pictures evoke memories rather of Adelphi melodrama than of the actualities they purport to represent, he was an accomplished painter, with fine feeling for tone, and undoubted ability for composition, for the use of line. 'The Unhappy Family,' which we reproduce on p. 153, may

Portrait of a Lady.

By Carle Van Loo.

well be a sequel to the famous 'L'Accordée du Village' of the Louvre—drink has but slightly altered the face of the handsome youth who, as a father, is now heing solicited for hread—which when exhibited in the 1761 Salon, was acclaimed as the best thing ever painted by the then popular artist. As translated into hlack-and-white, we lose one of the hest qualities of the original—a certain persuasive beauty in the colour-passages, in the relationship of tone. In 'The Beggar Boy,' again, which we illustrate on p. 152, the melodramatic expression, the too ohvious posing, may almost be forgiven hy reason of the finely reserved treatment of grey in the scheme.

Mr. Vaile possesses two other examples hy Greuze: 'La Jeune Fille au Mouchoir,' a blue-eyed girl, handkerchief tied round head, seated in a high-back chair; and

Dunu resting. By Boucher.

The Beggar Boy.

By Greuz.

'The Two Sisters,' a domestic drama where an aged father is upbraiding the elder of his daughters, richly dressed, apparently for having taken to the stage. In this last we have one of those piquant contrasts which Greuze used again and again as an expedient for arousing interest.

The examples by Jean Simeon Chardin, born in Paris in 1699, at once suggest that in him we have a painter markedly more intellectual, less artificial, than Greuze. 'The Young Princess,' as the title implies, is not concerned with an incident of humble life; yet, without going beyond conventional limits as to theme, Chardin here proclaims his independence, his æsthetic isolation, and commands our respect. The picture shows a sumptuously decorated apartment, on whose floor two children in great hooped dresses—one of green with gold embroidery—make a zigzag wall of cards, while beyond the figure of an attendant in deep orange we have a glimpse of another chamber, hung with a beautiful chandelier. 'The House of Cards' (p. 154) is simpler, but no less purposeful.

If, among the thirty-one examples by eighteenthcentury French artists in the collection under notice, we would discover that which in truth indicates a genuine return to nature, there can be no question that ultimately we shall pause before the miniature by Jean-Honoré Fragonard, born at Grasse in 1732, who for a brief time was a pupil of Boucher. Twice in Messrs. Agnew's galleries, as again at the Guildhall, the public has had opportunity to see the series of brilliant decorative canvases painted for Madame du Barry's pavilion at Louviennes, and at Hertford House are

gems like 'Le Chiffre d'Amour,' the faded 'Gardens of a Roman Villa,' the audacious 'Swing,' and, certainly not least, the portrait of a fair-haired child, a remembrance of which Mr. Vaile's picture serves to evoke. The De Goncourts were right when they dissociated Watteau and Fragonard from their fellows and called them poetpainters. In the miniature, which we reproduce on p. 149, there is a freshness, a vitality-observe the life in the line of the straying blue ribbon to the right—a sense of spontaneity, welcome as fresh air and sunlight after the heavy-scented atmosphere of some dim chamber, however resplendently decorated. The wide-open eyesare those of a child from whose hair flowers laughingly peep, round whose hat the blue rim runs with mirth, and at whose breast notes of blue and rose complete a portrait winsome in colour, winsome in line. Grasse master again and again depicted figures in side face silhouetted against a background, one of his triumphs iu this kind being the exquisite 'Chiffre d'Amour' of the Wallace Collection. In 'The Wagered Kiss,' see page 149, we have a less fortunate example, for, upward from the waist, the attitude of the openmouthed girl lacks plasticity. Evidently the young man is claiming from the only half-un willing girl on the other side of the table the kiss lost at cards. The artist was chiefly interested, we may suppose, in the play of light on the cloth, on the rich draperies and heads of the trio, who, their ornamental shepherds' crooks laid aside, are for the moment only in humble surroundings.

Each of the two brothers Van Loo is represented by a portrait. The elder, Jean Baptiste, was born at Aix in 1694, and sixty-one years later died in that Provençal town. But his art was untouched by the spirit of troubadour land, of the Provence whose romance and love songs are still audible to those imaginatively conscious of the lyric past. In the Louvre are two

Portrait of Madame Favart.

Portrait of a Lady.

By Antoine Vestier.

works by Jean-Baptiste; Mr. Claude Phillips has identified 'The Grand Turk' of the Wallace Collection as that from the hand of his brother Carle, exhibited at the 1737 Salon, hence Hertford House possesses no example. In the National Portrait Gallery is a portrait of Walpole, painted during the artist's visit to England in 1740. Of Madame Favart—wearing, in the picture we illustrate, a dress of white satin with stripes of faintest rose, an

ermine-lined mantle, and a turban in which a large pearl is set-it is unnecessary to say more than that she was beautiful, accomplished; that she was a bold reformer of stage costumes, and for long courageously withstood the insulting advances of Marshal Saxe. As she did not marry the French dramatist till 1745, the year Jean-Baptiste died, it is probable we have here a portrait of her as Mlle. Duronceray. Charles André van Loo, commonly known as Carle, twenty-one years younger than his brother, under whom he first studied, was born at Nice, and died in Paris in 1765. On his second visit to Italy in 1727, in company, it will be remembered, with Boucher, he was knighted by the Pope, and for three years prior to his death was Court Painter to Louis Quinze. In the reproduced picture we see him as a portraitist skilled to meet the demands of the moment. The fair face, framed with powdered hair, is set on fair shoulders, and

neck and bosom are untouched by the marks of time. In such a scheme the rich, red dress and the gold-coloured lacings of the bodice over ivory white, the considered gesture, are in place. Like his brother, Carle van Loo spent a brief time in England before his death.

Save for Madame Vigée Le Brun-whose pastel portrait of her daughter in red shawl, drawn for her own pleasure, is more spontaneous than the celebrated picture in the Louvre-Antoine Vestier is of all artists represented in the collection the one who lived longest into the nineteenth century. Born at Avallon, Yonne, in 1740, he died in Paris in 1824. Even were other evidence not forthcoming, the oval portrait of a lady, which we reproduce, serves to suggest that he had seen and admired the works of contemporary British paintersas a fact Vestier travelled for some years in England and Holland, returning to Paris in 1764, to practise as an oil painter and a miniaturist. If the portrait be compared with that by Carle van Loo, we are conscious at once of the difference in approach, the dissimilarity of treatment. As to details, it may be noted that the simple bodice of deep, pearl-coloured satin has no ornament, and there is an informality about the muslin sleeves, caught up with heliotrope ribbons, which denotes a change in modes of thought; moreover, the lady's hair, dressed high, is unpowdered. The manner of treating the face, above all, reveals that society had been or was about to be awakened from its apathy to the needs of the people. Antoine Vestier reflected the temper of his time. In the lady of the picture he has given us a gracious and a suggestive work. In addition to those already named, this little gallery of French artists of the eighteenth century includes a portrait of the Marquise de Vandernesse, richly robed, gathering carnations on the terrace of a garden, by Nicolas Largillière (1656-1746), one of the most popular painters of his day, who, during two visits to England, portrayed respectively Charles II. and James II.; a small cottage interior by Jean Letellier (1614-76), nine examples by whom are in the Museum of his native town of Rouen;

The Unhappy Family, By Greuze,

Portrait of the late Mrs. Vaile.

By Théodore Roussel.

and a pastoral scene hy Jean-Baptiste Huet (1745-1811), a pupil among others of Boucher, wherein goats, sheep, and a dog—he was famed for his animal studies—are introduced.

As has heen said, Mr. Vaile's collection of French pictures includes one or two examples not belonging to the eighteenth century. As arranged in the Mappin Art Gallery, Sheffield, three works only hung on the

end wall. Each is hy Mr. Théodore Roussel, the talented French artist, who, hy long residence in England, has hecome, save for delightful lapses into his native tongue, one of us. Two are landscapes, the third a portrait. In passing from Nattier or Carle van Loo, from Greuze or Antoine Pesne to Mr. Roussel, we are conscious of an æsthetic revolution no less profound than those social revolutions which intermittently have stirred France since 1789. In one of Landor's "Imaginary Conversations," Malesherhes, the statesman, says to Rousseau, "Nature has given you a speaking-trumpet which neither storm can drown nor enemy can silence." Actuality, individually ohserved, fearlessly and individually interpreted, has been one of the clarion calls of modern art. After diligent training, render faithfully the impression even of a transient aspect of men or things, no matter how strange the outcome may appear: this vital doctrine has heen preached from the studio and the market-place. In Mr. Roussel's two landscapes, 'The Clump of Oaks' and 'Green Brocade,' beauty of detail is sacrificed to the enchantment, now of a mass of trees observed across a stretch of grass, a single green-gold hough swaying overhead, now of an avenue of chestnuts, where sunlight penetrates the almost invisible haze.

In the centre, surrounded hy drapery of fawn and purple, was Mr. Roussel's portrait of the late Mrs. Reginald Vaile. However highly we may account the pictorial achievements of French eighteenth-century artists, to which of them-if we except Watteau without hesitation, and mayhe Fragonard-would we go, were it possible, rather than to Mr. Roussel, as his art is here exemplified, for the portrait of one known and honoured? The subject of this oval picture is heautiful, and the heauty is of a kind which hreathes joy in its passage through the world, that descends as dew or lights as a ray of sunshine on hurdened souls. On occasions, Mr. Roussel has heen somewhat ruthless as a portraitist; here he has reverenced the truth and interwoven it with strands of sympathy. The gleaming emerald on the forefinger, the dark eyes, and dark hair surmounted hy a hat with graciously inclined feathers, the notes of passion red on the sunlit lawn in the hackground —Mr. Vaile's riverside garden forms the setting —are sensitively wrought into "her picture as she was"

—are sensitively wrought into "her picture as she was" —indeed, "a thing to wonder on." In the Sheffield catalogue two stanzas from Rossetti's "The Portrait" appear. The last stanza of that poem hegins with the line "Here with her face doth memory sit"—singularly apposite to this picture of a lady known for her graciousness and vivacity.

### Some London Exhibitions.

DARWIN tells us that "fact-grinding" destroyed his imagination, and caused him to "nauseate Shakespeare." Fact-grinding on the one hand, on the other a non-observance of, or rather an indifference to, the similitude of things, are among the banes of modern art A majority of the 517 water-colour drawings, which comprise the eighty-seventh Exhibition of the Royal Institute, falls into one or other of these categories. Recently, at the Guildhall, the Prince of Wales called on England to "wake up." If, in the general concerns of life this be necessary, it is certainly not less necessary in the domain of pictorial endeavour. It is impossible to associate tens, nay, hundreds, of the exhibits in the Piccadilly galleries-the central and eastern of which, by the way, have been thrown into one-with earnest and sustained endeavour to accomplish the best of which the several painters are capable. Here an artist seems well content to transcribe a fragment of crude actuality, undeflected, but not seldom weakened, there another suffers from studio blindness, and, having ceased to question the virility and worth of his particular manner, gives us a drawing remote alike from nature and from the no less potent beauties of the imagination. We would welcome what is tentative, if only the attitude revealed something of that passionate eagerness with which, for instance, Ruskin observed the aspen tree against a blue sky.

An exhibit unmarred by the restlessness which leads nowhither is to be found in Mr. Leslie Thomson's 'Tidal Creek, Isle of Wight.' The quiet theme is rendered with sympathetic reserve, is, too, pictorialised. If Mr. D. Y. Cameron had not before exhibited a drawing of the fine doorway which, in brown shadow, is seen in the centre of the palace fronting the Canale Antonio, Venice, his large study in crayon and wash

would have been fresh to us as well as interesting. As it is, it stands out by reason of absolute sincerity, even though it lack some of the suggestiveness, uncontrolled, maybe, for which we look in first-haud notes by a man so able. The Canadian artist, Mr. Horatio Walker, is one of the new members; but none of his four exhibits -executed some time ago if we mistake not-is comparable in forcefulness or charm with the 'Potato-Gatherers' of a year ago. By Mr. John R. Reid are subject-marines of daringly positive colour; by Mr. R. B. Nisbet several genuine attempts to express transient aspects of nature; by Mr. Lee Hankey a depicture of youth and age, 'Mutual Support,' wherein he essays, and not unsuccessfully, to interpret an incident in the great human epic; by Mr. Byam Shaw a Shakespearean group, 'Before Dead Henry's Corse,' where the pall of rich scarlet tells felicitously; by Mr. Tom Browne, R.I .elect, a spirited trifle, 'Bathing Time, Biarritz.' At one end of the western gallery are 314 miniatures, exhibited under the auspices of the Society of Miniaturists.

Hardly, if at all, less aesthetically depressing is the 117th Exhibition of The Royal Society of British Artists in Suffolk Street. Here, again, contributors drift towards a triviality whose outcome is insincerity, towards the sentimental, the anecdotal, the insipid. We regret the absence of Mr. Cayley Robinson, who, however, will probably be represented at the Academy. Constable-like as it undeniably is, the 'Stapleton Vale, near Bristol,' of Mr. F. A. W. T. Armstrong, has been so strenuously felt, is painted with so strong a purpose, that it makes most of the other landscapes appear superficial, weak. Mr. W. Graham Robertson works with his accustomed facility and distinction, whether in 'La Dame au Pavot,' the portrait of Miss Olga Brandon, purple poppy in hand, in loose grey robe, standing before a mirror, or in

the rendering of a little girl, standing amid tall sunlit poppies, which, somewhat unfortunately for the younger artist, has been hung near Mr. C. M. O. Orchardson's garden scene, 'One Summer's Day.' It is impossible to tax Mr. W. Blundell Thompson with lack of daring. As an experiment, his portrait of Mr. Herbert J. Bateman, wearing homespun suit, a smoking cigarette in one hand, palette in other, seen against a blueish background, from the uncertainty of which a bronze of the Dancing Faun emerges on the right, has value. Mr. F. F. Foottet's 'The Abbey, Westminster,' again, is anything but commonplace. Save for two green trees set amid the statues in the foreground square, the scheme is of carefully gradated purples. The towers of the noble pile, of purple, are wrapped in atmosphere as we see them silhouetted against a violet sky. Colour here is imaginatively used. Mention may be made of the dog studies of Mr. Carton Moore-Park, of Mr. Arthur Stewart's clever interior, introducing the portrait of a gentleman, of Mr. J. D. Fergusson's Eastern pieces, of Mr. F. Spenlove-Spenlove's Dutch pastoral, of Mr. Walter Fowler's little landscape on a wet day, of Mr. Lewis G. Fry's in certain respects able, in others merely clumsy, study for a portrait, and of Sir Wyke Bayliss' cathedral interiors. Of several members recently elected, one is Mr. Hans Trier. We illustrate his 'Riva degli Schiavoni,' whose appeal depends in the main on its excellent tone qualities. Mr. Trier has observed Venice for himself, and has shaped his observations to beauty.

Of infinitely more import to art lovers than either of these exhibitions was the opportunity afforded at the Obach Galleries to study the Right Hon. Sir John Day's collection of pictures by "French Masters of the School

of 1830,"

From Georges Michel, one of several "fathers" of the Barbizon painters-who from the then unbuilt-on heights of Montmartre, where afterwards Puvis de Chavannes had his studio, romantically observed the surrounding country-to Rousseau, Diaz, Jacque, Dupré, and onward to Henri Harpignies, each master is represented in the little collection of forty-five works. The cattle of Diaz at drink, or lowing beneath a dramatic evening sky; 'The Goose Maiden' of Millet; Dupré's study of a peasant woman, in red and black, faring along a country road; the oblong depicture of seaweed gatherers by Daubigny; Troyon's 'Collecting the Flock, Sunset': these are among the pleasure-giving canvases. Two works haunt the memory. In 'The Harvest Moon' Daubigny proclaims himself a poet, a seer. The mystery, the silence, the solemn majesty of night are unerringly interpreted. In the deep yet luminous shadow of the foreground pool, in the clump of trees, beyond which the moon mounts in the sky towards a single gleaming star, in each part of this masterpiece reigns that spirit which, from twilight to dawn in early autumn, broods potent and impressive over the woodland places of the earth. In Corot's 'Le Printemps' the nature pulse beats less fitfully than in many of his silver-grey idylls-than, for instance, in the lovely 'L'Etang de Mortefontaine,' exhibited at the Goupil Gallery. At the farther end of the grassy avenue, overhung with leafage, is a church spire; through the interstices of the trees sunrays penetrate, and by their May fresh quality give to the picture a sentiment of vibrant youth.

These pictures exemplify Stevenson's dictum, that in the veins of the Barbizon masters there raced the exaltation of great art.

### A "New" Palma Vecchio.

It is now some time since the picture-loving world first heard about the Holy Family discovered last year by Professor Cantalamessa, and placed in one of the principal rooms of the Venetian Academy.

The painting is a remarkable one, exceedingly beautiful in its colour and its composition, and challenges comparison with some of the finest easel pictures which had been produced in Venice during the later Renais-

It was "discovered" by the Director of the Gallery in the possession of a certain Signor Alessandro Bedendo of Mestre, in a very dirty and dilapidated condition. Together with Bassano's St. Jerome, which has also been acquired by the Gallery, it had been the round of the picture-dealers in Venice, but none of them had discerned that under its coating of dirt lay a masterpiece of a great colourist. Professor Cantalamessa struck an easy bargain, had the picture removed to the Gallery and carefully cleaned, and then the glowing colours of a very beautiful "Sacra Conversazione" began to reveal themselves. It has been assigned to Palma on the strength of internal evidence: of the large square drawing, the highly personal manner of depicting light and shade, and the peculiar fusion of colour in which he was such an adept. It is clearly in his last manner, the manner of his Dresden Venus and the Madonna of Vicenza.

Professor Cantalamessa would place it among the very latest of his pictures, among those forty paintings which were found in an unfinished condition after his death.

The elder Palma may not have been one of the greatest masters, but he belonged to a great school and was one of those whose influence helped to forward the

mighty movement of the Renaissance.

He had been born at Serinalta, near Bergamo, about 1480, and had come to Venice early enough in life to have begun his artistic career within her schools. Bellini had been his earliest model; as his technical powers matured it became Giorgione who inspired him, and with his later years grew up a relationship with Titian so close that it has never been decided as to whether it was Palma who suggested motivo to Titian or Titian who influenced the work of Palma. The most superficial glance at this Virgin and Child shows it to have been inspired, if not directly borrowed, from Titian's Madonna di Casa Pesaro. That picture was finished and put up in the Frari in 1526 and Palma Vecchio died in 1528, so that we have every reason to believe it to have been painted between those two dates, and the various unfinished portions but serve to corroborate this theory. For instance, the head of St. Joseph has several undecided outlines, and the hand lacks the shadow on the upper phalange of the fingers which would give the right modelling. St. Catharine's hands and hair are also incomplete, and her wheel is barely indicated. Equally unfinished is the left hand of the Madonna, which has been rubbed over with a rosy wash, evidently to throwinto further relief the fair skin of the Child, and the most obvious correction of all lies in the towers of the distant castle, which he apparently found too high and blotted out with a blurr of dirty paint, through which nevertheless the original outlines are visible.

In a picture in which the principal parts have been so elaborately finished these "pentimenti" lead one to conclude that he was in some way prevented from bringing it to full completion, and the most probable obstacle to so doing was his death.

Morelli would have it that Palma was an invalid during the later years of his life, and incapable of producing work of the highest quality. But had he heen in very bad health he would not have been able to take part in a competition for San Pietro Martire in 1528. There is also an unpublished document dated April 21, 1528, signed by Jacopo Palma in the presence of the notary Zaccaria Priuli, in which he says\* "Io Jac. Palma pictor fazo fede del nome et persona," so that he was apparently still going about three months before his death. He died on the 30th of July in the same year, and from certain papers still preserved in the Venetian Archives we learn that his doctor "Ser Francesco Caron" attended him in his malady for seventeen days and nights.† So that we may hesitate in accepting Morelli's theory as to the ill-health and consequent unproductiveness of Palma's later years. The picture which, as we have said, belonged to Sig. Alessandro Bedendo had been bought by his father from the Pizzamano family, who had acquired it, earlier in the century, from another nohle house. There are several reasons for believing that this family was that of the Widman. It was in the beginning of the nineteenth century that the sale of their pictures took place, and two seventeenth century writers refer to a "Sacra Conversazione" by Palma as being in their collection. Ridolfi's description would exclude it from being the one now at Naples. He quotes (1650) a "seated Madonna who gazes amiably at the kneeling St. John Baptist, with other Saints around." Although the Naples "Sacra Conversazione" is the only one in which the Madonna gazes directly at St. John Baptist, the figure of the former occupies such a prominent place that it would certainly have been mentioned by Ridolfi.

Arch, di Stato Sezione Notariali, Busta 778. Priuli Zaccaria Prot.
 + Arch, di Stato-Testamenti-Att, Alvise Nadal, No. 159.

Martinioni, who, a little later (1664), made the notes to Sansovino's "Venetia Città Nobilissima," speaks of the beautiful Palma Vecchio in the Palazzo Widman, containing a Madonna, Our Lord, St. Joseph and other saints. The mention of St. Joseph equally proves it not to be the "Sacra Conversazione" now at Vienna, sothat we have some very plausible grounds for assuming the picture described as being so long in the Widman collection to be that recently bought from Sig. Bedendo. Who were its original possessors? The Widman family only came to Venice long after Palma's death, and were enrolled among the Venetian aristocracy at the end of the sixteenth century. Professor Cantalamessa thinks it may have been the noble house of the Priuli of San Severo, who owned the heautiful Early-Gothic palace on the Rio San Lorenzo, for Sansovino mentions them as great patrons of Palma and the purchasers of many of his works.

The colour scheme of this picture is exceptionally happy. The Madonna's crimson robe and blue mantle are complemented by St. Joseph's orange cloak, and St. Catharine wears a dress of dark green and a vivid red. St. John Baptist has no hrilliant colour in his clothes, but the figure itself is one of dark bronzed tints and warm brown shadows particularly effective against the silvery distance of hill and lake. The high light is concentrated upon the Virgin and flaxeu-haired Child, and upon the tanned limbs of St. John. St. Catharine and St. Joseph, lower in tone, sink into secondary significance. The two points of interest are obviously the Madonna and St. John, and there is a certain tenderness in the manner in which these figures have been painted, a concentration of energy, a closeness, which is not present in all contemporary Venetian work. I believe that we may not only accept this as a genuine Palma, but as one of the most serious and most successful or his works.

LILIAN PRIULI-BON.

The Holy Family.

By Palma Vecchio.

The Hon. Diana Macdonald, Lady Sinclair of Ulbster, only daughter of Alexander, Lord Macdonald (of the Isles). Cosway's original stippled Engraving.

The tinted Engraving of the Hon. Diana Macdonald, with Prince of Wales's Feather and Coronet added, to represent Caroline of Brunswick, Princess of Wales, afterwards Queen Caroline.

# Cosway's Engraving of Diana, Lady Sinclair, utilised to represent Caroline of Brunswick and Caroline of Anspach.

BY THE ARCHDEACON OF LONDON.

A SINGULAR fate has hefallen Cosway's stippled engraving of the beautiful Miss Diana Macdonald, daughter of Lord Macdonald, who in 1788 married the Right Hon. Sir John Sinclair, of Ulbster. When Princess Caroline of Brunswick became engaged to George, Prince of Wales, afterwards George IV., no engraving of her was at hand. An enterprising printseller took Cosway's engraving of Miss Macdonald (then Lady Sinclair), introduced a coronet with Prince of Wales's feathers on the top of the hair, and sold it as a portrait of Princess Caroline. A few years ago, Miss Sarah Tytler published a book called "Royal Ladies of the House of Hanover," and presented this pirated edition of the Brunswick Princess (in reality the portrait of Lady Sinclair), as Caroline of Anspach (wife of George II.), who died fifty years before Cosway's picture was painted. The adventures, however, of Lady Sinclair's charming portrait were not ended. Last year,

Mr. Wilkins, publishing his two volumes on Caroline the Illustrious (the wife of George II.), reproduced the portrait of Lady Sinclair as that of Caroline of Anspach at the time of her marriage to George II. In the interval since the publication of Miss Tytler's book, it had found its way to a German town, where Mr. Wilkins bought it.

The original painting and engraving of the Hon. Diana Macdonald, Lady Sinclair of Ulbster, by Cosway, are in the possession of her grandson, Sir Tollemache Sinclair, and one of the original copies of the engraving pirated for Caroline of Brunswick is owned by the writer, at the Chapter House, St. Paul's Cathedral.

The Hon. Diana Macdonald was the only daughter of Alexander, Lord Macdonald (of the Isles), by his wife Elizabeth Diana, daughter of Godfrey Bosvile of Gunthwaite, Yorks, and was born about 1765. Her

father and mother were visited in the Isle of Skye hy Dr. Samuel Johnson in the "Tour to the Hebrides." Lord Macdonald welcomed the Sage with a long poem of Latin Lyrics, and he was the Chief whom Johnson tried to stir up to the martial training of his Clan. He afterwards raised "The Regiment of the Isles," and his son raised "Macdonald's Highlanders," fencible regiments in the struggle with Napoleon. Lady Macdonald's sister Julia, Vicountess Dudley and Ward, was a well-known heauty of her day, and was painted by Sir Joshua Reynolds as 'Fortitude,' with a lion beside her, for the great west window at New College, Oxford.

As a young child, Miss Macdonald's picture was painted in crayons by Angelica Kauffman, which is in the possession of Sir J. G. Tollemache Sinclair. A little later she was painted as a gipsy girl hy Hoppner, but this was apparently not liked by the family, has passed through several hands, and was sold the other day at Christie's to Leggatt. When she came out, there was a debate in the family whether she should he painted by Gainshorough or Cosway, and the choice fell on the

Cosway's picture is very beautiful, hut for some reason was never finished: the head is complete, the rest is in tints of amber. Two small engravings of it were brought out: one in colours, the other plain. It was the coloured engraving that was pirated to represent Princess Caroline of Brunswick, and many years subsequently, by a double mistake, Princess Caroline of Anspach. Within the last few years, a large edition of the engraving has been brought out hy Messrs. Sabin, of Shafteshury Avenue. By darkening the eyes they have a little altered the original, hut there is the same charming expression.

Two of Miss Macdonald's brothers, Alexander and Godfrey, succeeded to the Macdonald estates and peerage; a third, James, was killed at the hattle of Bergen-op-Zoom; a fourth, Dudley, lived till 1840, and was known as an enthusiastic musician; he and his brothers played violin trios, and possessed more than

one "Strad."

Miss Macdonald married in 1788 the Right Hon. Sir John Sinclair, Bart, of Thurso Castle, Caithness, the author of the "Statistical Account of Scotland" and Founder of the old "Board of Agriculture," etc.

She had thirteeu children, seven sons and six daughters, who were all six feet high or more, the tallest being six feet seven. The six young ladies were presented to King George III. at Holyrood as "thirtysix feet of daughters." The pavement outside their house in George Street, Edinburgh, was called "The Giants' Causeway." The eldest son, Sir George, was a long time in Parliament, and a friend of William IV.; Alexander was well known as a genealogist and antiquarian; John was many years Archdeacon of Middlesex and Vicar of Kensington, and huilt the new parish church of St. Mary Abbots; William was Rector of Pulhorough and Prehendary of Chichester, and father of the present Archdeacon of London. Of the daughters, Julia married George, 4th Earl of Glasgow, Helen married Stair Stewart of Glasserton, and Catherine, who was once a very popular novelist, is remembered as the authoress of "Holiday House," a breezy hook ahout the adventures of herself and her hrothers and sisters as

Lady Sinclair, who was a charming hostess, and whose receptions in Edinburgh are often alluded to in books about those days, died in 1845.

WILLIAM M. SINCLAIR.

#### Dismissed.

THE Judges appointed by the Council of the Royal Academy have now welcomed or repulsed the efforts of those who sought to be represented in the Exhibition soon to 'be opened in Burlington House. With the increase in the number of aspirants to recognition the proportion of works accepted for the 134th Exhibition must be smaller than for the first few exhibitions when the test was not so severe as it is in these days of intense competition. A glance at the early Academy catalogues makes one suppose, indeed, that the promoters of the institution had tocontribute largely in order that the walls should not be left hare. To the first Exhibition Reynolds contributed four out of a total of 136 pictures; to the second, eight out of 245; the fifth, sixth, eighth and ninth each received thirteen canvases from him: and Gainshorough and West were among those who sent many pictures to the exhibitions of the young society.

These facts suggest that the number of rejected pictures were comparatively few. With the increase of contributors, however, some more rigid discriminating power had to he observed; and with the consequent limiting of space open to outside talent disappointments naturally followed. It is possible in years to come that some reforms may be made by which less space will be reserved for the sometimes perfunctory art of privileged exhibitors; but even should that time arrive, the room available for the work of outsiders will be still insufficient, and many who have sought admission

will he sent empty away.

It is to those who have failed to satisfy the judges, or whose works have been crowded out, that we wish to dedicate a few words of encouragement. There is no maxim more true than that which attributes ultimate success to early failures. The quality is not given to all to accept defeat with idle complacency; were it so, there would he few real triumphs. Men who have achieved greatness in their several professions have mostly risen from obscurity by persistent hopefulness and sustained effort: fresh determination has been derived from the rebuffs of fickle fortune.

To be denied a place on the walls of the Royal-Academy on the present occasion will be dispiriting to those who have used their hest endeavour to secure that qualification. It may be that for the moment the hopes of the young artists will be dulled by the rejection of the pictures or pieces of sculpture, the completion of which has cost so much labour and thought; amhition may be numbed hy such dismissal. Let them take courage and resolve to try again next year. Study will convince them more and more of their shortcomings, and unconsciously they will be benefitted by control. Above all, let them cherish no thoughts of resentment against the jury whose duties of selection are so severe.

The rejection of some work is a disagreeable necessity, and its performance must give the judges cause for regret that they cannot extend more freely a welcoming hand to the amhitious student. But though they cannot do this, they feel kindly disposed towards those who have desired to contribute to the success of the Exhibition. All are working with a common object in view, and,

"Brothers in Art, a friendship so complete,"

the judges will eventually be able to give to the unsuccessful artists the encouragement which, this year, has been absorbed by other members of the fraternity.

### Passing Events.

I N connection with the Turin Exhibition, and on behalf of the Arts and Crafts Exhibition Society, Mr. Walter Crane, the President of the Society, has arranged for the loan, from the authorities of the Victoria and Albert Museum, of the fine arras tapestry representing 'The Four Seasons,' by William Morris, and another Morris design will appear in a coverlet embroidered by Miss May Morris. One of the exhibits will be a case of the Kelmscott Press books and some cartoons for glass by Burne-Jones and Madox Brown. Mr. Crane has sent the friezes and panels he has painted to decorate the galleries, besides many examples of his work for carpets, tiles and pottery, executed by the best manufacturers. Among other artists who have contributed work may be mentioned Mr. George Frampton, R.A., Mr. Lewis F. Day, Mr. Anning Bell (wbo has accompanied Mr. Crane to Turin), Mr. Pomeroy, and Mr. Voysey. These preparations ensure the representative character of the Decorative Art Section of the Turin Exhibition.

M. R. HEYWOOD SUMNER and Mr. W. Aumonier spoke on the subject of "Inlay and Marquetry" at the Royal Institute of British Architects on the 7th April. Some old examples of work were sent from the Victoria and Albert Museum. Mr. Sumner referred to the process of inserting coloured wax into incisions, a primitive method of ornamentation which he described in his contribution to our pages entitled "A Forgotten Craft" (July, 1901). Prior to the discussion of the papers, the President announced that the Royal Gold Medal this year would be given to Mr. T. E. Collcutt. The medal had been awarded to Mr. J. F. Bentley, but his death immediately before the announcement of the King's acquiescence in the choice of the Council, required another recipient to be nominated.

M.R. GEORGE FRAMPTON, the latest elected Royal Academician, has recently been much before the public by reason of various memorials executed by him to honour the remembrance of notable people. His statue of Queen Victoria was unveiled in Calcutta on the 19th March. Mr. Frampton has reaped academical honours in rapid succession, and as an Art teacher he enjoys a sound reputation.

CHRISTENED with the name of "The Wallpaper Gallery," Messrs Jeffrey and Co. have opened a showroom at 31, Mortimer Street, W. The gallery contains the most recent designs by the leading decorative artists, and deserves to be well patronised.—The exhibition of artistically-cased pianos by Messrs. Brinsmead will repay a visit to 20, Wigmore Street.

THE June number of THE ART JOURNAL, will be devoted to the most topical subject of the year. The Coronation of King Edward VII. affords an opportunity to describe the most remarkable of the Royal possessions. Mr. Lionel Cust, His Majesty's Surveyor of Pictures, Mr. R. R. Holmes, the King's Librarian at Windsor, Mr. Guy Francis Laking, the King's Armourer, will contribute articles. Every care has been taken to ensure the inclusion of the most choice examples of the art of all periods in His Majesty's Collection. This special number will be an authentic compilation of considerable value. There will be several large reproductions, one of which will be an original etching by Mr. Axel H. Haig showing the interior of Westminster Abbey.

#### Recent Fine-Art Books.

T was a happy inspiration for Messrs. Bell to arrange with Mr. Lionel Cust to write a description of "THE SKETCH-BOOK OF SIR ANTHONY VAN DYCK," which has now found its proper resting-place in Chatsworth Library. Mr. Cust renders the story of these drawings succinctly yet with complete knowledge of the circumstances, and the few pages of introduction are models of what such forewords should be. The sketch-book was filled by Van Dyck during bis journeys in Italy at the beginning of the seventeenth century. They are mostly executed with pen and brown ink, occasionally aided by the brush. There are forty-seven plates, the majority containing several designs on the same page; and they are mostly memoranda of pictures seen by the young artist and drawn by him for practice and reference. The reproduction of these sketches is carried out by a kind of photo-lithography, which is unusually satisfactory.

Since the retirement of Sir John Tenniel our old friend Punch has not seemed quite the same. The artist who followed him had a task which at first seemed almost beyond his power to carry through successfully, but as time has gone on Mr. Sambourne has gradually risen to a proper artistic level, and now he has attained a position which makes him an acceptable successor to the more famous veteran. All this is well exemplified in "Cartoons Of 1901" which Punch has just published. In these it is possible to trace this rise in artistic merit in the "first" cartoonist. As to the new "second" cartoon artist, Mr. Bernard Partridge, he leaped into the new position with a bound, and some of his designs are equal to the very best traditions of Punch.

Mr. Fotbergill, about whom we recently published a special article (p. 11), has brought together many of his recent drawings in "A NORTH COUNTRY ALBUM" (Dresser, Darlington), and these give an excellent impression of his abilities and humour.

A very remarkable book of small dimensions but filled with new ideas is Mr. George Auriol's "PREMIER LIVER DES CACHETS, MARQUES, ET MONOGRAMMES" (Paris, Librairie Centrale des Beaux-Arts). This contains fully 400 original and artistic monograms, many of them entirely new in conception, and nearly every one successful in being easily understood, as well as amusing to examine.

"THE BEST HUNDRED PICTURES" (Letts), which were successfully scattered broadcast over the country, have now been brought together in a presentable volume. The subjects in the very old and also in the most modern examples are not particularly well-chosen, or selected with proper knowledge, but those of the early and middle periods of the nineteenth century leave nothing to be desired.

"FIVE GREAT PAINTERS OF THE VICTORIAN ERA," by Sir Wyke Bayliss (Sampson Low), being lectures on Leigtbon, Millais, Burne-Jones, Watts and Holman Hunt, is only a partially successful book. The author is too much filled with a sense of his own importance, yet if this somewhat amiable trait is excused the lectures make excellent reading.

Messrs. Bell continue to issue their series of shilling "LIVES OF PAINTERS," Holbein, Reynolds, Leighton, Watteau, and Holman Hunt, which in little compass give the prominent facts of these artists' careers.

Fish from the Dogger Bank From the Deture on the Art Gallery of the Corporation of Bermangham

### SPECIAL PLATES.

## 'St. George.'

FROM THE PICTURE BY BRITON RIVIERE, R.A.

THE picture which we reproduce, exhibited at the Academy of 1900, is not a typical work by Mr. Briton Riviere in one important respect; although two animals are introduced, they are not shown in living relationship with man. Mr. Riviere is perhaps the best known of all our animal painters; and, inasmuch as he began to make drawings at the Zoo when he was seven, and exhibited at the British Institution before he was twelve years old, the attention he has devoted to this phase of art, leaving altogether out of account his special talent, should warrant his present popularity. Four generations of the Riviere family have been associated with the Royal Academy; his grandfather, his father, and his eldest son passed through the schools; he himself, though never a student there, is a R.A. For a time he worked under the influence of the Pre-Raphaelites, and a remnant of the sentiment of that school is discernible in 'His only Friend,' recently seen at the Glasgow Exhibition. In 1865 he painted the 'Sleeping Deerhound,' the first of many successful essays in a similar kind. That sympathy with the animal kingdom, that consciousness of the kinship between man and dog, for instance, voiced by Byron in his poem on the Newfoundland, Mr. Riviere possesses in unusual degree. There can be no question that herein we have the key to his appeal, supplemented as that appeal is by long and careful study.

The story of how St. George, Patron Saint of England, fought and slew the dragon is told in Voragine's "Legenda Aurea," but later it found its way into the Office Books of the Church, until left out by Pope Clement VII. The fame of St. George in this country dates back to the time when Richard Cour de Lion successfully iuvoked his aid in the first Crusade; but not until the reign of Edward III. did he become our Patron Saint, albeit at the Council of Oxford in 1222 it was ordained that his feast be kept as a national festival. There are a hundred versions of the story of his life. That given by Bishop Percy would have us believe that iustead of being born at Lydia, brought up in Cappadocia, and martyred in the reign of Diocletian, A.D. 303, the St. George of our picture was son of Lord Albert of Coventry, stolen in infancy by "the Weird Lady of the Woods," and by her brought up to deeds of arms. On his body were three marks: on the breast a dragon, on one of the legs a garter, on the right arm a blood red cross. In Lydia he heard of a great dragon, to which daily a damsel was given for food, and when he arrived Sabra, the King's daughter, was already tied to the stake. As the dragon came for his prey, the knight thrust his lance into the monster's mouth, killed it, and brought Sabra as his wife to England, thereafter dwelling at Coventry. Another variant of the fascinating romance, which symbolises the conquest of good over evil, of light over darkness, has it that our tutelary saint killed the monster on Dragon Hill in Berkshire.

# 'Fish from the Dogger Bank.'

BY JAMES CLARKE HOOK, R.A.

I T would be difficult to exaggerate the pleasure which the pictures of the veteran artist, Mr. J. C. Hook, R.A., have given to many thousands of his fellow Englishmen. From them the fresh salt air of the sea comes blowing into our faces, carrying away one's thoughts to happy days spent among the loveliest coast scenery of our islands, and to quiet corners where men go down to the sea in ships for their daily bread. It is nearly fifty years now since he gave up painting historical and Italian subjects, after careful study in Venice, where he intensified his love of colour, and began to produce the first of that long series of pictures of blue seas and sun-warmed cliffs, with occasional visits to the brooks and lanes of Surrey, which ever since have given keen delight to so many of us. It was in 1854, when thirty-five, that he first "discovered" Clovelly, which he painted with such loving fidelity and such artistic power as to immediately win lavish praise from Ruskin and the appreciation of the Royal Academy.

'Fish from the Dogger Bank' represents a stretch of the flat sandy shore of Scheveningen, in Holland, with three of the heavy, clumsy-looking Dutch fishing-boats, or "pinks," lying at anchor. They have just returned from a successful visit on that well-known station for cod-fishing between England and Denmark. The men are engaged in landing the catch. This is done by packing it in baskets, which are then flung overboard into the shallow water, and dragged ashore by wading sailors. In the left foreground four kneeling women arc spreading out the fish on the sand, deep in discussion of quality and prices. Farther off, a larger group of fishermen and women are stauding round a large heap of cod on the margin of the water, to which one of the men is adding the contents of another basket. Under a grey-blue sky the sea, of that greenish-yellow hue produced by shallow water over sand, is covered with small waves, barely big enough to rock the strongly-built craft. In the background, the long, monotonous sand dunes stretch away into the distance. The picture is low in tone but very fine in quality. The kneeling countrywomen, with their white caps, are clad in subdued shades of red, pink, or brown, very rich in colour. The figure-painting in this group is very good, and the iridescent fish are excellent -all of great truth to nature, and recalling the Pre-Raphaelite influence under which Mr. Hook worked in the fifties, and seen in such pictures as 'Luff, Boy!' and 'Welcome, Bonny Boat!' In 'Fish from the Dogger Bank' we miss the bright blue and emerald seas of England, in the rendering of which the artist has been so justly famous for so many years. Here he has chosen a lower key of colour, but has rendered with equal charm the greyness of a flat, sandy shore under a cool sky. The picture, in fact, shows Mr. Hook's power not only as a painter of sea and coast, but as a figure painter as well, and one who knows how to arrange his picturesque groups to the best advantage. It was painted in 1870, and formerly belonged to Mr. David Price, having been acquired by the Birmingham Corporation at the sale of that well-known collector's pictures.

# Supplement to "The Art Journal."

# A History of Artistic Pottery in the British Isles.\*

THE POTTERIES OF LONDON.

By FRED. MILLER.

ONDON is in some respects at a disadvantage as compared with the Midlands in the manufacture of pottery, for all raw materials, such as clay and coal, have to be brought from a distance, while rents too are high, and both of these are factors of importance in regulating prices, especially where they are cut fine. We said in a former article that china-making was long since abandoned, nevertheless a considerable amount of artistic pottery, both as to quality and quantity, is provided in or near London, and we cannot hegin our survey of the potter's art as practised in an artistic sense today better than with these few London potteries at work.

But before beginning our itinerary let us try and estimate the conditions under which a modern potter works, what encouragement he receives, and how far it is possible for him to give us of his best. As regards then the patronage extended to him, it must be admitted that he has much to complain of. Those superior persons who talk so eloquently about art conscientiousness and the need of having nothing but the best have as much responsibility resting upon them as the producers of the work that is so unsparingly condemned or damned with faint praise, and it were a comparatively easy proceeding to make a hasty generalisation, as is not unfrequently heard from those whose interests and sympathies only extend to old work, and condemn en bloc modern productions.

The work of to-day needs the discriminating patronage which the person of taste can and should be ready to extend to any excellent striving after a full expression on the craftsman's part-not the work done to please the eye which has its price, but the work which, unless it be a labour of love, cannot be produced at all. This is where connoisseurship comes in. The discriminating

Grotesque: Martin IVare

patron should be ready to help that worker who is making an effort to come up to the standard which every craftsman knows and feels is before him. Connoisseurship implies sympathy and understanding; the one enabling the cognoscente to realise the difficulties overcome in any supreme effort, and the other to appreciate whatever is of good report in the work under review. I separate connoisseurship from collecting because the two things are quite distinct. A millionaire can be a collector, and provided he will give the dealer's

price can secure anything that comes into the market. The rich collector is a victim of fashion, for he never begins buying until a boom has set in and it becomes a visible expression of his wealth to have such and such examples in his palace. The connoisseur is really the person who is behind any fashion, for luckily there are always the two or three to be found who value human labour, the supreme work of men's hands for its own sake, who huy a thing because of its intrinsic worth, its triumph as a specimen of man's control over materials.

Salt-glazed Vases : Martin Ware.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Underglase Painted Tiles by De Morgan and Co.

They are the real collectors, for they never allow utter neglect to overtake any good work, and it is their discrimination that can do so much to help on the work that is being done for the future, for it is a great question whether any work of to-day will ever he held in the estimation of that which has age upon it.

Collectors of pottery and porcelain have fixed the price of good old examples by the competition among them to possess these rarities, the price steadily rising it would appear, and the connoisseur, who is at the same time a reasonably poor mau, had much hetter look around and see what is being done now that is not unworthy a place in his collection, than come into the market against the wealthy; for though it is always on the cards that he may even now pick up bargains in out-of-the way places, the chances are growing fewer every year. Looked at even as an investment there is something to be urged in favour of such a proceeding, and surely there is a satisfaction in finding out excellence for oneself; to have heen a pioneer in a boom is surely a pleasing reflection, and where the purse is slender the only chance of coming in at all is when prices are normal, before the unearned increment has been added. Therefore I say to those who appreciate human effort after perfect expression, look around, form your own judgment, and collect for the future, and in that way you will he helping the present to continue the fighting.

Now let us look at the matter from the point of view of the potter. He is placed in an awkward predicament, because good potting is not only a very skilful operation, demanding long practice as well as natural aptitude, but is also a costly husiness, and that from two causes, the initial outlay in starting a pottery and the losses incurred in producing good work owing to waste in firing. It is a strangely fascinating craft or it would never have had the devoted votaries it has claimed for its own, but the potter whose one aim is to turn out what he knows, and he alone, to he worthy of him, is likely, I fear, to have to let his aspirations sweeten his porridge.

Can art come from a factory? Can a fine piece of pottery he produced under the conditions that obtain in a large and well-equipped pottery? It is easy enough to answer this off-hand, as certain superior persons do, and say that the factory system is death to art. I think I realise as fully as anyone how hlighting is the influence of the factory system on all the handicrafts, and yet potting is one of those callings in which co-operation is a necessity, for one pair of hauds cannot do everything. Where it is the co-operation of four brothers, all enthusiasts, as in the case of the Martins, whose salt-glazed ware is one of the most unique examples of potting we can find to-day in London, we have conditions as well-nigh perfect as we can hope to find. Where again you find an enthusiastic ceramic chemist, as well as artist,

like Mr. de Morgau, prepared to sink what most of us would esteem a fortune in order to produce what he considers excellent, then you have conditions that work to the turning out of what is unique and excellent.

As another type of craftsman-pioneer we can take the late Sir Henry Doulton, who from being a manufacturer of sanitary ware took up artistic potting as an experiment some thirty or more years since, and established a reputation for artistic work which the firm still maintains. Doulton had, ohviously, very exceptional

advantages, for he was a man well versed in the mysteries of the craft, and had at his back not only a vast machinery but considerable wealth to draw upon, and if the artistic potting did not pay for some time, it brought kudos to the firm, and was of ahiding interest to its progenitor. The drawhacks a man like Doulton had to contend with were not a few. Mechanical excellencies have a way of crushing out a good deal of that artistic spirit, which being a plant of so tender habit, seems to wither away in the atmosphere of the factory. The greater the number of appliances you have at command the increased danger there is of producing work skilful but awful. Then too to discover a number of workers who will co-operate, and while working under one roof, and not always under conditions that make for the hest, will still keep their enthusiasm and not sink down to mere machines with uo egos of their own to find expression, provides plenty of problems to the artistic factory manager.

Underglaze Painted Tile Panel, Executed by De Morgan and Co.

#### SUPPLEMENT TO THE ART JOURNAL.

" Aladdin." Modelled by J. Broad. Doulton Terra-cotta

The public has very vitiated ideas of the prices that must be demanded for really fine pottery. If a thing is unique, the result of the impulse, the expression of someone's ego, and that an exceptional one, then in fixing a price for it, the time the craftsman has spent upon it is an important factor, for the price per hour goes up in a constantly increasing ratio as soon as you leave the mechanic behind, and a good many hours may be spent in the decoration of a pot. Then, too, where much of the effect is the result of right conditions in the kiln, the good example has to pay for the waste, which is very considerable, and increases with the amount of skill put into its production. A good Martin pot, for example, cannot therefore be sold for a few shillings, and yet a pot as good as can be turned out of its kind at another pottery may be purchased for a small sum. Whatever moralists may say about the desire to possess what no one else can, is, besides being an important factor in the price of an example, very understandable. You may reproduce a very excellent work an infinite number of times, but we value such works in an everdescending scale as we find them multiplied. And here we touch one of the important questions raised, when art becomes merged into manufacture. It seems to me one must either cater for the man in the street or the connoisseur, and there is no middle course. If you are executing an order for a thousand teapots, as I saw being done at Doulton's, say at half-a-crown each, you can spend some money in getting a well-considered pot shaped by a skilful thrower, and you can engage the services of a R.A., if you will, to model some small figures to stick on the sides, but having fixed your pattern then its repetition is a question of mechanics, and a few pounds' worth of art may for a time run a factory. If on the other hand you want an unique tea-pot, unlike any other in existence, in however small a way, then you must find a potter who will execute the commission, but you must be prepared to pay considerably more than half-a-crown for it. It may then happen that a large establishment like Doulton's would refuse to execute so trifling an order, while one of the Brothers

Martin would be willing to oblige you, though they have found, often to their cost, that it is most difficult to please patrons when it comes to making pottery to order.

Where art and manufacture have to run together, as in potting, price should be considered by the critic in instituting a comparison, for a half-crown teapot may be dear at the price, while an original one cheap at the pound or more asked for it. The critic, in attempting to estimate the art worth of any work, should not excuse the badness of an original because of its uniqueness, or belittle the manufactured article because it is turned out by the gross; this is confusing the issue. The potter who treats his calling always as an art has no excuse for any shortcomings on the score of taste, for his raison d'être is gone if he fail here, whereas the manufacturer having to keep his hands employed must be ready to undertake any work, and the excuse that such a class of work sells, though individually he may not defend it on the score of taste, is an all-sufficing reason why his factory should turn it out.

The individual working always at his full strength may be able to do something to lead public taste, while the manufacturer can hope for little more than supply a demand, though with the machinery at his disposal to obtain publicity by advertisement he may do some-

thing to create a demand.

It would seem, therefore, to summarise briefly, that the connoisseur should be ever on the look out for excellence in the work being produced in his own day, and extend to those craftsmen who are honest, sincere, and capable, his sympathetic generous patronage. He is doing much, then, to make the conditions such as will stimulate the earnest worker, and favourable to the production of what a future generation may prize greatly.

(To be continued.)

Vase in Underglaze Fairnce By Miss F. E. Lewis. Doulton Ware.

Vase in Salt- glazed Stoneware By M. V. Marshall Doulton Ware.

### The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

By R. E. D. SKETCHLEY.

THE nearer one comes to modern times, the more hopeless it seems to give any idea of what a great manufacture, such as this of carpet-making, really is. Tracing early history, where the record is scanty, where a few facts only of all that once was the truth exist, there is not this difficulty. Such material of fact is far removed from the bewilderment of actual life. Conventionally, historical truth is complete when time and place and apparent circumstance of bygone events are noted. One knows that the building of the first Brussels loom in England, or the first installation of the Jacquard apparatus, or the application of steam-power

carpetweaving, or any other eventthatgoes down as a dated statement in "history," was a culmination of endeavourand ofthoughtthat was the purpose of life to eager men. But in history, only the plain fact remains; and in actuality, only a mechanical improvement or invention to which we are well accustomed, from which the wonder of new power put under our hands has gone. The labour and rivalry, the griefs and enthusiasms of mostinventive men, have left us no traceable record. A technical description of machinery represents

to

that which they did, but

\* Continued from

page 32, Supplement.

the strenuous life behind each invention has mostly no

John Webster made a memorable sentence-"I rest silent in my own work." So of the real truth, the human truth, in a subject such as textile history. In their own work, in the machinery visible to us, and active as they ordained its activity, these meu "rest silent." The only textile history one can write is a convenient compilation of facts: in the first place of general facts, telling when and where and how the manufacture began; in the second place of particular facts, the facts that represent the additional gain, the new possibilities

brought into reality by each invention, from Kay's fly-shuttle to the latest improvement in carpet - looms. The general facts of early British carpetweaving, so far as they can be gathered, have been given. It is a bare record, quite insufficient if one desires to realise the pastat all events it is the only truth to be had now. Butleaving circumstance, and turning to the record of invention, where the material is definite and complete enough, one is confronted with greater difficulties. There is the primary fact that a technical description, the account of the thing created by such powerful thought, is

Jacquard Wearing on a Hand Loom. The loom with fly-shuttle and drop-box.

#### SUPPLEMENT TO THE ART JOURNAL.

"not interesting;" and secondly, as has been said, there is the impossibility of grasping or expressing the great sum of labour and invention, of action and knowledge and experience, that we call a manufacture.

The activity of to-day, changing from what was yesterday to what will be to morrow, representing the life-thought and labour of so great a multitude, both living and dead, the climax of so much one does not see, containing so much that seen, cannot be described, or described would not be generally intelligible-how is one to write of all this with truth and acceptability? One can only state the problem, and hope that way to kindle thought, that shall add to technical and matterof fact summaries some colour of the more than this, that even the sight and sound of the work brings into one's conception of a manufacture. As for the meaning of a manufacture to those whose life's work is realised in its activity, its growth and development, that would have to be written in another way than the way of statement. One writes remembering these undertruths, but one can only write of the work, not of all those who rest silent therein.

There is enough to write of the work. It will be plainest, having given facts of circumstance, to trace separately the development of the various carpet-fabrics through the succession of improvements that have produced the best, as we know it. The many kinds of machine-made carpets in use to day are divisible into four classes, according to the principle of production. These classes, and the various kinds of fabric belonging to each, will be treated separately. Jacquard-woven carpets, comprising Kidderminsters and the recent improvements on that originally undistinguished fabric, as well as Brussels and Wiltons, are the first to be considered. Printed Tapestry carpets, either with the loops uncut, or cut to form a "velvet pile," come next. The two main methods by which machine-woven Axminsters are made, form the other two divisions.

As has already been said, Kidderminsters, Brussels, and Wiltons were the first British machine-woven carpets. They were woven on primitive looms for more than fifty years before the Jacquard was applied to their manufacture. Indeed, to follow the development of reversible or Kidderminster carpets is to follow the development of textile machinery, so far as woollen cloth is concerned, through all its chief phases. Brussels weaving has a history distinct on certain points from the general history of cloth-weaving, but whatever the fabric that has its pattern controlled by the Jacquard, it belongs, by that fact, to the main story of textile development.

The first Kidderminsters were no more than coarse woollen cloths, woven double, either plain or in simple twill patterns. Woven pattern, as everyone knows, depends on the order in which the warp threads are lifted and depressed for the shot, or passage of the weft. The early Kidderminsters were woven on looms where the shuttle was thrown by hand, where it had to be changed for each colour-change in the weft, and where the number of heddles, and consequently the combinations of shedding, or order in which the warp threads are moved, were limited to as many as could be operated upon by the treadle under the weaver's feet. Oriental fabrics show what can be done on primitive looms. But the Kidderminster weaver of the eighteenth century was not an Eastern, with pattern and colour a tradition of the blood, and a passionate patience in expressing the tradition the rule of his mind and hand. He wove with

woollen threads, dyed without splendour or subtlety,

and it was not asked of him, nor in his thoughts, to make his web beautiful.

The fly-shuttle and the drop-box, whereby each shuttle as it is needed is raised to the level of the shuttle-race, to be sped between the open warp-threads by a blow from the picker, were successive improvements, improvements that increased the productive power of the loom. Instead of throwing the shuttle by hand, its flying passage through the shed was directed by the "picking - stick," or "fly-pin," moved like a conductor's baton by the weaver. The level beat of the fly-pin jerks the "picker," which hammers against the shuttle, at rest in the shuttle box, and drives it along the shuttle-race to the box at the opposite side of the loom. By pressing a spring at the back of the "lay," a fresh shuttle is brought into position by the upward or downward movement of the drop-box, when a change of weft is required.

But the most important invention, so far as the weaving of other than plain or twilled cloth was concerned, was the invention of the draw-boy loom. By machinery, worked from the treadles, or, in the first instance, by a human draw-boy, perched aloft, who pulled cords attached to the heddles in the order required to form the pattern, patterns of greater intricacy could be woven with far greater ease than on looms where only the treadles operated on the heddleshafts. Using thin heddle-shafts, about a hundred heddles could be arranged in a loom, providing, even without any tying of the harness, a hundred different sheds, or order in which the warp threads are separated. By tying the harness, fresh combinations could be formed. The draw-boy was a noteworthy invention, but with the introduction of the Jacquard it gradually became obsolete. Instead of tying the harness when a patterned fabric requiring, say, a thousand different sheds, was woven on a loom holding at the utmost one hundred heddles, any number of sheds, in any order, could be obtained by means of the new invention.

It is no part of these articles to repeat information given in technological works, and either already familiar as the every-day action of hands and feet, or undesired as knowledge by anyone likely to read such a description here. The effect of each mechanical invention on the previous condition of the manufacture, what it meant in fresh power and extended possibilities to the manufacturers—these are the points to be made. The principle of the Jacquard apparatus is the A B C of mechanical pattern weaving, while the appearance of it is as familiar to the onlooker as is the principle to those who use it. Everyoue knows that the function of the visible and concealed machinery, whose appendage of strung, perforated cards, looking at a little distance like yellowed newspapers, shrugs upwards and falls downward card by card in endless succession, is to raise the warp-threads in the order required. The quivering of the multitudinous harnessthreads, connecting the warp-threads with the liftinghooks of the Jacquard, the perpetual shift and flap of the pasteboard cards overhead, are in the memory of most people; facts that superficially it is easy to understand. Each perforated card represents a row of the pattern. As each card in the string of cards passes over the honeycombed face of the "cylinder" overhead, the cylinder presses against the ends of wires which project from a perforated board called the needle-board. Each of these "cross-wires" is connected with upright wires, hooked at either end. The lower hook catches a

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

harness thread, the upper hook catches on a pin in a board, or "griffe." Where the card is perforated, the cross-wires are unaffected by the pressure of the cylinder. Where the card is solid, the cross-wires are pressed back on their springs. This pressure on the cross-wire raises the upright hooked wire to which it is attached, and lifts it off the pin on the griffe. The griffe then rises, carrying with it all the upright wires whose cross-wires were not pressed back by the card.

Each of these wires, lifting a harness. thread, raises a warp thread or group of threads, and so the shed is made for the shot of the weft. The cylinder rotates, another card is carried up, the same process, but affecting another set of warp · threads, takes place, another shot is made, and so the pattern grows. With this machin. ery, pattern unlimited is theoretically within the range of mechanical weaving. But the weaver of Kidderminster carpets had his own definite limitations, quite apart from the fact that design was a dead letter, so far as his productions were concerned. He wove a double web of worsted warp

worsted warp and worsted warp and woollen weft, united by the interchange of under-ply and upper-ply to form the pattern. The weft-threads are the important threads, so far as colour goes. The warp modifies the colour effect, is an element in it, but only that. Practically, till designers took the possibilities of the fabric into their scheme, two-ply Kidderminsters meant two-coloured Kidderminsters—a colour for each weft. As the unity of the double fabric depended on their interweaving, the pattern had to be close and small, or baggy spaces were the outcome. It was a cheap kind of carpet, and that was all that could be said for it; though the colour limita-

tion was, on the whole, an advantage, when manufacture and the carrying out of "design" had nothing to do with each other. The invention of the three-ply, or triple-web, Kidderminster, by Thomas Morton, of Kilmarnock, gave even an uninventive and art-ignoring manufacturer athree-coloured, in place of a two-coloured, scheme for his carpets. It is within the last twenty years only that Kidderminsters have been improved beyond the point to which the Kilmarnock weaver's

invention brought them. "Art Squares," "Roman, "Caledon," "Kensington" carpets, are more heard of now than Kidderminsters. Improvements in the fabric, improvement in general taste, the designers, who, with William Morris, have made a new thing of the old "Scotch Kidder," have a record in these newnamed carpets of to-day. If one's own memory of reversible car-

pets that were certainly not "Art Squares" be insufficient, the words of a well-known writer on design, written some years ago, show how Kidder minstersofthe original type were estimated. He writes:-"Kidderminster Carpet . . . . is a common

Jacquard Weaving on a Power Loom.

Weaving a "Caledon Carpet."

fabric suited to the bedrooms of middle-class houses; but the art capabilities of this material are very small, as it can only have two colours in any line in its length. This carpet consists of two thicknesses which are imperfectly united, and is not durable." Such a carpet, one would think, was not suited even to the bedroom of a middle-class house; but though at the time these words were written the fabric might justly be called common, the art capabilities of Kidderminsters are fortunately not so contemptible as would appear. To the capable artist, the art capabilities of a fabric are questions for individual determination.

#### SUPPLEMENT TO THE ART JOURNAL.

William Morris, when he designed the "Grass" pattern, or the hetter-known "Lily" pattern, with its diapered lilies and fritillaries, or any other of his designs for Kidderminsters, was first to prove that "very small" is capable of extension. As to the reason given for this assertion—that the carpet can only have two colours in any line in its length—that is a mistake. Two colours in any line across the carpet must be meant, a very different matter.

The first Kidderminster carpets designed by Morris were not woven at his own works, but it is not likely they were woven on power-looms. That, however, so far as the fabric is concerned, makes no difference. The enormous increase in production, consequent on the application of steam-power to carpet-weaving, that followed the purchase of the American patent by the Crossleys of Halifax, in 1851, need only he stated. The later use of electricity as a motive power can also be dismissed here in a statement of the bare fact. Whether the shuttle flies across the loom at almost invisible speed, or passes comparatively slowly along the shuttle-race; whether the lay comes clanking forward or is brought forward hy the weaver's hand to beat up his web, makes no difference to the web, whatever it may do to the weaver. But improvements in the fabric followed the discovery that its limitations did not exclude heauty. The lack of durability, caused by the friction of imperfectly united webs, one above the other, was partially avoided by designers of all time who made their designs small. William Morris enforced and observed that rule: "A Kidderminster carpet calls for a small design, in which the different planes, or plies, as they are called, are well interlocked,"

But the use of a binding-thread, either playing no part in the colour scheme, or used to modify the effect of the weft-colours, obviates to some extent the necessity of designing small in order to obtain a strong fabric. As, however, this binding-thread goes through and through, passing over the upper weft-threads and under the lower weft-threads, the strength of the fabric is still its weakest part. The binding-thread is exposed to constant wear, and with the wearing through of this important thread ends the durability of the carpet. A farther improvement consists in the use of a huried hinding-thread. In a two-ply carpet the under surface of the upper ply is caught down to the upper surface of the under ply. In a three-ply carpet the binding-thread passes through the middle ply.

The reversible carpet of to-day has durability and art capability enough to make it worth using and looking at. It is a double or triple fabric, united first by the interlocking of the different plies, and united again hy a strong hinding-thread; with a colour for each shuttle, two or three, available in any line across the carpet, and subsidiary colours to he obtained by using coloured warp-threads. To William Morris all machinemade carpets were only "makeshifts for cheapness" sake." Fortunately he showed the way whereby the many who cannot lay hand-tufted carpets on their floors may make shift contentedly with less splendid fabrics. A chapter on Carpet-designers would contain well known names to follow his as designers for Kidderminsters. The carpets reveal some of them. One cannot, for instance, mistake a design by Mr. Voysey.

# The King's Collections of Works of Art.

BY LIONEL CUST, M.V.O., F.S.A.,

SURVEYOR OF THE KING'S PICTURES AND WORKS OF ART.

I NASMUCH as the King's collections of works of art are dispersed among several palaces, which are not all accessible to the ordinary visitor, the actual extent and wealth of the royal collections can hardly be apprehended or estimated by the public.

Windsor Castle, Buckingham Palace, Hampton Court, St. James's Palace, Kensington Palace, Holyrood, Sandringham, and other royal houses, all contain treasures, some of a nature special to the locality in which they are preserved. A complete catalogue of the pictures, furniture, china, and other objects comprised in these collections would electrify and dazzle the modern connoisseur, and their value in these days of preposterous

and inflated prices could only be reckoned by millions of pounds.

To give any idea of the actual contents of the collections would be beyond the scope of this article. It must be sufficient to try and record how these collections came into being. It should be noted, however, at the start, that from the earliest times the royal amateurs have made their collections from personal rather than national motives, and that it is due to successive hequests on the part of individual sovereigns to the crown as a hereditary as well as a national institution, that the royal collections can in any way he said to rank among the assets of the national wealth.

Photo. Hanfstaengl.

Blind Man's Buff. By Sir David Wilkie, R.A. (Buckingham Palace.)

dispersal at Whitehall was not such a hopeless display of prejudice and imbecility as the break up of Versailles a century and a half later.

Syndicates were formed to buy up the pictures, and some of the King's servants seem to have been allowed to do this in lieu of any regular payment of the sums due to them. But there were three agencies already at work, which picked out the plums and took them away. The Archduke Leopold William of Austria was the Pierpont Morgan or Mrs. Gardner of his day, and swept up all that was good, as may be seen now in the marvellous collection of the Imperial Gallery at Vienna. The Spanish ambassador had orders from his master, Philip IV., to secure the chief works of Raphael and Titian, who were the highest in the esteem of that gloomy monarch. Cardinal Mazarin represented the prodigal amateur of his day, while the merchants Jabach and Van Reynst anticipated the judicious investment of trade profits, so conspicuously practised at the present time.

And so there passed away from England some of the most justly famous paintings by world-famous artists, a depletion of the national wealth which had no parallel until the incursion of American and South African millionaires about A.D. 1900. At Madrid, Paris, Vienna, the art-lover beholds and admires the works of art which an English Government sold for a mere song. To name them is in the words of the Latin poet:

"Infandum renovare dolorem,"

With the Restoration, brighter days ensued for the Royal Collections. Charles II. was lucky enough to

recover from retainers, who now crept out into the sun of the royal patronage, many of the pictures, which they had formed themselves into syndicate to buy. Thus, most of the paintings by Van Dyck and his predecessors were preserved. Moreover, the King met with an unexpected piece of good fortune, in that the States General of Holland were moved to purchase the pictures acquired by the Dutch amateur, Van Reynst, and returned them as a gift to the English Crown. Thus, a large portion of Charles I.'s collection was recovered and remains the property of the Crown at the present day. The chief jewels are, however, to seek elsewhere, as are those from the collection formed by the splendid Duke of Buckingham.

James II. during his short reign did little to increase the number of works of art in the Royal Collections. The catalogue of his possessions is interesting, as shewing how much of his father's collection had been preserved or recovered.

The reign of William and Mary, if it added little to the scope of the Royal Collections, except a series of formal portraits, continued by their successors for many years, was yet remarkable for notable events. One important event was the removal of the Court to Kensington Palace and to Hampton Court, both of which were added to and beautified under the directions of Sir Christopher Wren, and decorated by Verrio, Laguerre, and other fashionable artists of the period.

Perhaps the most noteworthy trace of King William III, in the royal collections is to be sought at the Hague and Amsterdam. William, happier in his native Holland

than in England, transferred to his Dutch palace some of the most precious paintings belonging to the Crown of England. He took, with two or more Holbeins, including the famous 'Robert Cheseman,' a fine painting by Van Dyck of the King's parents at the time of their boy and girl marriage, a masterpiece by Gerard Dow, and a few other notable pictures. They remained in Holland at the time of his death. Queen Anne claimed them, but their return was negatived by the States General, who were perhaps mindful of their waste of generosity towards Charles II. So it happens that the royal collection in Holland is the richer for some spoils from that of the English Crown.

It was during the reign of William III. that the two greatest disasters happened to the royal collections. The Palace of Whitehall was stocked with valuable works of art. In 1691 the negligence of a maid-servant caused a fire, which destroyed the Stone Gallery, and this was followed in 1698 by a more serious conflagration due to the same cause, which laid the whole palace in ruins, except the famous Banqueting Hall. Many pictures were saved, but Holbein's great mural painting of Henry VII., Henry VIII., and their wives, Bernini's historic bust of Charles I., and other noteworthy objects perished in the flames. The King displayed little emotion, merely remarking that he had already made up his mind never to use Whitehall Palace as a royal residence.

The arts had sunk so low in Germany, especially in the north, that little could be expected of so pronounced a German as George I., or even of his slightly more cultivated son, George II. The latter's consort, Caroline of Anspach, was the first to re-awaken in the royal family some sense of appreciation of the art-treasures which were even then the property of the Crown.

In an age when the concrete realities of life were so much to the fore, Queen Caroline was a very remarkable individual. This is not the place to discuss her career, or the influence which she had upon English society. It is sufficient here to say that at Kensington Palace, where the Queen usually resided, she took an energetic part in improving the palace and grounds and rearranging the collections in it. Among other acts she discovered the long-forgotten book of Holbein's drawings of the English Court under Henry VIII. and made them known to the world.

Much of Queen Caroline's artistic intelligence was inherited by her son, Frederick, Prince of Wales, perhaps the least understood and the least appreciated member of the Georgian dynasty, and the one who had the least chance of living down his youthful indiscretions.

Frederick, with all his faults, weak and worthless as he seemed to his contemporaries, or was judged so from his boon companions, was all the same a man of culture. He made some judicious purchases from the collections of Dr. Mead and other amateurs, which were dispersed at this period. Through a Mr. Bagnall, who was connected with Spain commer-

cially, Frederick obtained some important paintings, such as the 'St. Martin,' usually ascribed to Rubens, but now assigned to Van Dyck. Frederick, too, employed perhaps too freely the showy Italian painters of the time, Sebastiano Ricci and Francesco Zuccarelli, whose works still abound at Windsor and at Hampton Court. Given a longer lease of life, the responsibilities of kingship, and wiser counsellors, Frederick might have become an enlightened patron of art and artists.

His son, who inherited the throne as George III., can hardly be esteemed for the above qualities, although he was instrumental in bringing about the most portentous event in the history of British art, the foundation of the Royal Academy of Arts. During the period which may fairly be styled the golden age of English painting, the King became immortal, it may be said, in spite of himself. To the greatest English painter of the time, Sir Joshua Reynolds, who eventually became the chosen President of the King's new Academy, George III. at first showed but scanty favour. But in spite of this the most homely and least picturesque of English sovereigns, together with his still homelier and plain, if not illfavoured Consort, furnished to the portrait-painters of the period some of their most successful subjects. Allan Ramsay, graceful and delicate, with a touch of Nattier and the French School; Gainsborough, brilliant and audacious, not afraid to set a homely Queen Charlotte by the side of an entrancing Duchess of

Cumherland; Zoffany, with the penetration of a Hogarth allied to the careful painting of a Metsu; Beechey, with his British downrightness and honesty of purpose, all found in the King and Queen subjects worthy of their hrush.

Personality has always counted for something in art, and a hrilliant and flashy Prince of Wales and Prince Regent, about to expand into a padded and lay figure king in George IV., found his suitable portrayers in the shallower and occasionally trivial, though often hrilliant art of Cosway, Hoppner, and Lawrence. If George IV. inherited some, perhaps many, of the weaknesses and even vices which had hrought his grandfather, Frederick, into disrepute, it can always he alleged in his favour that, given all his faults, he was an enthusiastic and even enlightened patron of the arts. Extravagance in huilding was the order of the day, and in an age when private persons were guilty of such places as Belvoir Castle, Eridge and Battle Ahhey, a sovereign may he excused for the lavish outlay given to Wyatville for Windsor Castle, and to Nash for Buckingham Palace. Even that architectural outrage known as the Brighton Pavilion, may he excused as the first development in England of some appreciation of the true spirit of the art, then so little known, of the Far East, which has now hecome a mere common-place for the student.

But it was not merely as a builder of palaces that George IV. increased the wealth and splendour of the Crown. He witnessed the great debácle of Royalty in France, and reaped the spoils from its wreckage. Under the advice of Lord Hertford and other skilful agents in Paris, George IV. acquired for laughable prices some of the hest specimens of French eighteenth-century furniture from Versailles and other royal palaces. The collection of Sèvres porcelain which he formed is of fahulous value, exceeding in quantity and often in quality the famous specimens in the Wallace Collection.

Guided also hy such experts as Lord Farnhorough, Sir William Knighton and others, George IV. added to the royal collection of pictures, already so rich in the works of Italian and Flemish artists, the world-famous collection of Dutch pictures, now at Buckingham Palace, the splendid nucleus of which was formed by Sir Francis Baring.

These treasures were stored at Carlton House, where they narrowly escaped destruction hy fire. When Carlton House was hroken up in 1826, the hulk of the art treasures was removed to Buckingham Palace, and, when that palace was rebuilt hy Nash, they were for the most part again removed to Kensington Palace until the new palace was ready to receive them.

Portrait of Helen Fourment. By Rubens, (Windsor Castle.)

William IV. on his accession took an important step by transferring many of the finest paintings from Kensington to Hampton Court, to which palace free access was now granted to the public. Several pictures of historical interest were moved to Windsor Castle, and others to Kew Palace.

The marriage of Queen Victoria to Prince Albert of Saxe-Coburg-Gotha opened a new era in the history of art in England. From his youth up the Prince Consort, as he was afterwards to be known, had been a zealous student of art. His active hrain sketched out for itself schemes for the development and improvement of the Fine Arts, some of which he was able to see come to maturity with his own eyes.

In his appreciation of the art of painting, the Prince Consort anticipated many ideas which were to strike root later on. He collected paintings by the Primitive Artists not only of the Tuscan School, hut also of the early Flemish and German Schools, at a time when paintings of this class were still reckoned as rude and Gothic hy amateurs, who had not yet emancipated themselves from the tyranny of the late Italian Academical Schools. The Prince Consort was one of the first amateurs to

value a Fra Angelico higher than a Guido Reni, and to set a Bernard Van Orley or a Lucas Cranach in the same rank as a Carlo Maratti or a Nicolas Poussin. For Raphael the Prince Cousort had an unbounded admiration, and the collection of prints and engravings, illustrating the works of Raphael, preserved in the Royal Library at Windsor Castle, remains as a testimony to the Prince Consort's zeal. To the Prince Consort can be traced the birth of all those schemes which led to such epoch making events as the Great International Exhibition of 1851 or the foundation of the South Kensington Museum. To him was due the great Westminster competitions for cartoons and frescoes. But the Prince Consort was too far ahead of his contemporaries. That which his brain conceived required the right persons to carry out his intentions. They had not yet come into

The Great Exhibition of 1851, so successful in its issues, at the time revealed the Fine Arts in Europe at their very worst. But the plough was in the soil, and from the seed scattered hy the Prince Consort grew the plentiful and hounteous crop which has been of so much henefit to the world at large.

The Government School of Design and the Museum at South Kensington, now known as the Victoria and Alhert Museum, have as yet hardly realised the hopes of their projectors. But they have formed the prototypes of those great institutions for Art and Industry, not only in the great cities of England and the Colonies, but also on the Continent, especially in Germany, where the late lamented Empress Frederick testified hy her energy and singular

intelligence to the special qualities which she had inherited from her royal father.

Devoted as was the Prince Consort to the arts of painting and sculpture, he again had the misfortune to live in an epoch which was almost harren of remarkable genius throughout the art world, or in which true native genius had great difficulty in making itself known through an overwhelming crust of academic ignorance and prejudice. Bred under the influence in Germany of the mock heroics of Cornelius, the frigid classicism of Carstens and Steinle, and the equally frigid religious revivalism of Overbeck and Veit, the Prince Consort hoped to he ahle to plant these ideas in the almost untilled soil of English art-hence the great schemes for decorating the Houses of Parliament, and for fresco-painting, schemes of which the wreckage still remains to show the loftiness of their idea and the incapacity of their executants.

In an age when portrait · painting in England depended on such men as Hayter, Grant, or Partridge, it is quite intelligible why the Queen and the Prince Consort should have preferred the facile accuracy and complacent skill of so uninspired an

artist as Winterhalter. His works now form a conspicuous part of the royal collections, hut the painter's reputation has suffered unduly through the abundance of indifferent copies by third or fourth rate painters, mostly of English origin, which are often mistaken for the originals.

The new Renascence was still to come, Ruskin's voice was heard, but little heeded, Rossetti, Millais, Leighton, Watts, Holl, had not yet made their mark, and, when the

English School of Painting had recovered its position, the good and wise Prince had passed away.

To the re-arrangement of the pictures and other works of art in the royal palaces, the Prince Cousort devoted much attention, and it was only his premature death which put a stop to any further developments. Unfortunately, the Prince had been persuaded at Buckingham Palace that one uniform style of frame was a preferable form of decoration for a picture gallery. The Dutch paintings, collected by George IV., were therefore deprived of their original frames, and placed in one uniform patteru, in itself of an indifferent design. The result can only be described as disastrous and regrettable.

After the death of the Prince Consort, little alteration was made in the royal collections. The widowed Queen Victoria was ever averse to change of any sort in her surroundings, where the arrangements, as disposed by her lamented Consort, were seldom disturbed.

Winterhalter was succeeded by Angeli, who continued to be preferred by Queen Victoria up to the last. For the Fine Arts, as producing works of imagination or original fancy and invention, Queen Victoria displayed little sympathy. It was not that the Queen was niggardly in her patronage, for there was seldom a time when some artist such as Landseer, Gourlay Steell, Burton Barber, or Boehm, was not actually employed in her service. But the main stream of British Art flowed by unnoticed.

It has remained for the present Sovereign, King Edward VII., to inaugurate a new era for the Fine Arts in England, the extent and effect of which it is too early at this day to estimate.

The complete re-arrangement and re-decoration of the Royal Palaces of Buckingham Palace and Windsor Castle have afforded to the King an opportunity for the review and re-organisation of the priceless art treasures belonging to the Crown.

At Windsor Castle, in the State Rooms, the collection of

A Village with Watermills.

By Hobbema.

(Buckingham Pulace.)

French furniture, many of them masterpieces of Riesener, Gouthière, Boulle, and other celebrated artists, are now set out in a manner not only to give satisfaction to their owners and pleasure to the spectators, but also to act as a suitable decoration to the splendid building in which they are enshrined. Bronzes, china, jade, and other ohjects are in course of re-arrangement, so as to enable the Sovereigns and their guests to enjoy and appreciate them. The armour

has been brought together, and now forms one of the most conspicuous ornaments to the Castle. Many of the pictures by Holbein, Titian, Rembrandt, and others from Charles I.'s collection, have been brought out to form a picture gallery in themselves. The renowned collections of paintings by Canaletto and Zuccarelli have heen dispersed so as to give a better idea of their decorative qualities. At Buckingham Palace, too, changes of a remarkable nature have been in progress. The great picture gallery has been re-hung, and the little-known but remarkable collection of fulllength portraits by Sir Joshua Reynolds, Gainsborough, Hoppner, Ramsay, Beechey, Lawrence, Cotes, and others has been arranged in the state rooms and galleries so as to form a noble series, illustrative of British painting at that epoch. In this way the dignity of the Palace has been increased a hundredfold.

To his private rooms the King has transferred the interesting collection of modern paintings from Marlborough House, comprising works by Leighton, Watts, Prinsep, and Doré, and other well-known modern artists, which have been united to some of the choicest works by Landseer, Phillip, Frith, Noël Paton, and Meissonier from the private collection of Queen Victoria, and form a representative collection of painting in the nineteenth century.

Over all the re-arrangement of the royal collections His Majesty the King has presided in person, His Majesty's skill and interest in such matters being well-known. His gracious consort, Queen Alexandra, has for long been known as a lover of art and music, and as an indefatigable visitor to art exhibitions.

A reign so auspiciously commenced can hardly fail to be of lasting importance for British art. The collections helonging to the Crown may safely be ranked among the nation's most valuable treasures; the nation therefore cannot fail to be grateful for the thorough appreciation of these treasures which has already been shown by their present august possessors.

LIONEL CUST.

#### Westminster Abbey.

WHATEVER reproach to Londoners exists in the truth that visitors are better acquainted than they with the places of interest in and around the treasure city, most urban and suburban residents are familiar with at least two of the chief resorts. They may not know the Tower, the Museums and the City churches so well as their country friends, Continental neighbours and transatlantic cousins; the very ease of access to such places ensures procrastination. But there is a limit to ignorance. However negligent Londoners are to take advantage of opportunities to see the objects of surpassing interest around them, Westminster Abbey and St. Paul's Cathedral are not disregarded. The Ahbey and the Cathedral are frequented by townsmen who never cross the thresholds of other places historically well worth a visit. These two structures are not considered as show places only, but as retreats from the whirl of business. There, the noise of traffic and the rush of work are things of an outside world. The quietness, or, at certain times, the music, soothes and refreshes the visitor, who cannot but he moved to

Edward the Confessor's Shrine. From a Water-Colour Drawing by Herbert J. Finn.

reverence by the appeal of the service or the grandeur of the surroundings.

Not only on account of its age and purpose does Westminster Ahbey inspire reverence. Its architecture and decorations are so supremely beautiful that the preservation of the building becomes a greater national trust as time goes on. He must he an unemotional man who does not feel morally inspired in the presence of such venerable remains of early Christian enthusiasm. The pillars, the foliage, the carvings, apart from the dignity of the building itself, serve as tokens of the handicraft of past ages, when such things were produced with no commercial motives, simply as an artistic expression of religious fervour. The deeply carved shields with strange heraldic devices, and the sculptured story of the life of Edward the Confessor in that saint's chapel, inspire the beholder with admiration for the perseverance of the artists who accomplished so much towards the embellishment of the fabric. In the Cloisters, the peace of mind which reposes the loiterer suggests the presence of the spirit of faith which haunts the holy precincts and grants sanctuary from

Historians of many generations have discussed the date at which the Abbey Church of St. Peter was founded. The opinions of archæologists differ, and all computations are necessarily more or less unsubstantiated: but it is certain that the Abbey owed its origin to the recognition in England of the Christian faith in the seventh century. In the thirteenth century it was practically rebuilt, to survive the calamities of fire and civil disturbance during the intervening years until now, when it is again to he the scene of one of those regal ceremonies which have heen performed within its walls continuously throughout the history of England. Much of the original work, fragile in its execution, has disappeared under the decaying influence of time, and many parts have had to be replaced with new material. In this work, as in the preparations for such an event as is now imminent, the authorities have the power to see that no harm is done to the structure. Many eminent artists have carried on the traditional design, some with improving influence, some with dehasing, but all piously doing their best to interpret the unwritten scheme of the first designer, and to maintain a Temple worthy of its purpose. Wren proposed a steeple, which was never carried into effect. It was a hold idea which has been applauded and condemned by partisans of succeeding generations. Hawksmoor raised the towers, and various structural alterations have been made under the direction of the surveyors. Much thought has been given to the interior, especially in the disposition of the monuments, which before the accession of George IV. were mostly protected by iron

The Chapel of Henry VII., or, more properly speaking, of the Virgin Mary, to whom it was dedicated, is a glorious specimen of florid architecture, the exuherant

The Cloisters.

From a Water-Colour Drawing by Herbert J. Finn.

richness of which is amazing. Sir Christopher Wren termed it "a nice piece of embroidered work," a description which was probably not meant to disparage the structure. Like embroidery, it possesses the decorative heauty associated with the finest handworked material, and the pendants to the roof may he compared to heautiful stalactites which hang from cavern roofs like icicles.

It was in "this most gorgeous of sepulchres" that Washington Irving composed some fine lines when he ahandoned himself to a contemplative survey of the Ahhey—"On entering, the eye is astonished by the pomp of architecture and the elaborate heauty of sculptured detail. The very walls are wrought into universal ornament, incrusted with tracery, and scooped into niches, crowded with the statues of saints and martyrs. Stone seems, by the cunning labour of the chisel, to have heen rohhed of its weight and density, suspended aloft, as if by magic, and the fretted roof achieved with the wonderful minuteness and airy security of a cohweh."

The Anglo-Saxon kings were accustomed to he crowned at Winchester, but William the Conqueror elected to he crowned by the Archhishop of York at Westminster Abbey.

Since those days it has heen associated with all the principal state ceremonials, and scenes have heen enacted full of pomp and magnificence peculiar to the customs of the times. Pageant has succeeded pageant, not the least appropriate ceremony among them heing the first Handel Festival, in 1784, at which the King and Queen Charlotte were present in state. Within the Ahhey walls, choristers and congregations have lifted up their voices in praise of their Heavenly King, and no Mecca is more worthy of a pilgrimage; there is none of greater fame nor hetter. It is not strange that the subject has inspired painters and men of letters of all times.

The accompanying view of the Choir is a worthy addition to Mr. Axel H. Haig's famous cathedral subjects, although it is on a smaller scale than some of his well-known etchings. Mr. Haig has etched on the plate surface available a picture which will testify (if any further testimony he needed) to his patience and ahility. The minute details of the altar-piece and ironwork have heen rendered with extraordinary skill, and as an example of the etcher's art the execution is worthy hut difficult of imitation. The three water-colour drawings hy Mr. Herhert J. Finn are exhibited at the St. James's Hall, with many others having cathedrals as subjects. Sentiment in architectural compositions heing one of the particular charms of Mr. Finn's work, we have learnt to expect in all his drawings emotional translations of the original subjects: in these views of the Ahhey huildings he has given something more; he has lighted the scenes with the mellow light

one would desire with such surroundings, and, especially in the representations of the Cloisters, the poetry of the place is faithfully communicated.

A. YOCKNEY.

Entrance to the Chapter House.

From a Water-Colour Drawing by Herbert J. Finn.

By RICHARD R. HOLMES, C.V.O., F.S.A.,

HIS MAJESTY'S LIBRARIAN AT WINDSOR CASTLE.

Henry 1111. By Hilliard. (Windsor Castle.)

FOREMOST among the palaces of Europe for antiquity and splendour Windsor Castle occupies a position absolutely unique. For more than eight centuries it has been the favoured home of every Sovereign of this country, and has become associated with many of the most historic and romantic events of their several reigns. Its proud position on the steep chalk cliff overlooking the noble valley of the

Thames, and its vast park still stretching southwards to the great heaths of Surrey and Hampshire, give to its outward glories an unsurpassed magnificence, but this stateliness of walls, ramparts and towers is more than equalled by the sumptuousness and splendour of the treasures enshrined in its galleries and ancestral halls.

The monarchs of England have never neglected the patronage of the Arts, and some of them have heen conspicuous amid the occupants of European thrones for enlightened taste and for profuse expenditure of toil and money in gathering together the finest works of the greatest artists in every form and variety of expression. Political troubles and changes have dispersed or destroyed much that loving care had collected, but there still remains a vast amount of treasure which gives to Windsor Castle a most exalted place among regal nuseums. In the following pages some short account is attempted of some of the more important objects now arranged in the various apartments of the Castle into the inheritance of which our gracious Sovereign, Edward the Seventh, has lately come, and in the enjoyment of which it is the earnest prayer of all his subjects that he may long continue.

To the contents of the Royal Library it may be as well to draw the attention of the reader, as there is preserved the celebrated collection of portraits hy Holhein of the famous men and women of the time of Henry VIII. This series consists of no fewer than eighty-five heads executed in chalk, sometimes slightly tinted, all from life, and in many instances studies for pictures still existing. It is of the utmost importance, not only as giving with masterly insight the absolute portraiture of many of the most notable personages of the sixteenth century, hut as showing the characteristics of the work of the master during the whole period of his sojourn in this country from 1526 till his death in 1543. Of the history of this matchless collection no full

(Windsor Castle.)

account can he given. It certainly, after the death of the artist, remained for some time in England, whence, hut how and at what date cannot be ascertained, it was removed to France. Charles I. restored it to the royal collection hy purchase from the French Amhassador, M. de Liencourt, but afterwards gave it to Lord Pemhroke in exchange for the small St. George hy Raphael, now in the Louvre. Lord Pemhroke passed it on to the Earl of Arundel, with whom it remained till the dispersion of the art collections of that nohleman.

How it found its way again into the possession of the English crown is uncertain; some writers say it was purchased by Charles II. hy the advice of Sir Peter Lely. To Queen Caroline, the enlightened Consort of George II., is due the discovery of these drawings. On ransacking an old cuphoard at Kensington Palace, the

ing the found vother of importa taining ings of da Vin Queen I framed, many vowere hu own priting-roothey vomoved ingham and lat other of

Dr. Donne.

By Isaac Oliver.
(Windsor Castle.)

volume containing them was found with another of no less importance, containing the drawings of Leonardo da Vinci. The Queen had them framed, and for many years they were hung in her own private sitting-room. Hence they were removed to Buckingham Palace, and later, with other of the royal collections, transferred to Windsor. The drawings themselves are so well known by the numerous reproductions which have heen made from time to time, that there is no need to mention them in detail. That chosen for illustration in this paper is the very masterly head of Sir Thomas Wyatt (p. 179); in the original a slight tint is introduced, the modelling of the features is remarkably fine, and the drawing of the hair and beard is eminently characteristic of the power and delicacy of the hand of the master. It was not only in full-sized pictures and drawings that Holbein was pre-eminent. His work in the less known and rarer art of miniature painting was equally extraordinary, and in the royal library are preserved

numerous specimens of his skill which, though small, exhibit the same qualities of firmness of drawing and precision of touch. Of these there is one, repro-

duced on p. 174, which is specially interesting, as the drawing, half life-size, of the same lady, the Lady Audley, is included in the collection; in this drawing are noted all the jewels and ornaments which are given in elaborate detail in the miniature. Of the work of Hilliard, who continued in

The Darnley Jewel.
(Windsor Castle.)

this country the practice of the art of miniature, there are at Windsor many excellent specimens, chief among them being a series of four exquisitely coloured portraits of Henry VII., Henry VIII., his Queen Jane Seymour, and their son Edward VI. These, we learn from the

Sketches of Figures for the Frescoes in the Chapel of San Lorenzo in the Vatican.

By Fra Angelico.

(Windsor Castle.)

catalogue of Charles I., were originally pendant from a jewel, enamelled by the artist himself (who, like many early masters, was also a worker in precious metal) with a representation of Bosworth Field. Of these four pictures in little, that of Henry VIII. has been selected for reproduction (p. 174), and its elaborate ornamentation bears witness to the pains bestowed upon the goldsmith's work by the artist.

Here, as mention is made of the goldsmith's art, may he the fitting place to describe the historic "Darnley Jewel," preserved among His Majesty's collection of engraved gems and precious stones. It is illustrated on page 175, and is one of the most curious and interesting specimens of the work of the goldsmith and enameller which has come down to our time. From internal evidence it appears certain that it was made for Margaret Douglas, Countess of Lennox, in memory of her hushand, the Regent Lennox, who was killed at Stirling in 1572. He, by maternal descent, was of the bloodroyal of Scotland, and she of the royal blood of England, her mother being the Lady Margaret Tudor, eldest daughter of Henry VII., and wife of James IV. of Scotland. Their son, Henry, Lord Darnley, was husband of

Mary Queen of Scots, and father of James VI. of Scotland and I. of England. The jewel, therefore, is of singular historic interest, apart from its value as a splendid specimen of the art of the northern portion of Great Britain. The principal part of the design is a

crowned heart, formed of a large sapphire, surmounted by a crown and supported by wings, the badge of the house of Douglas, of which the Countess was a daughter. The four figures represent Faith, Hope, Victory, and Truth. Round the rim of the jewel is this verse in the old Scottish language:—

QVHA HOPIS, STIL, CONSTANTLY, VITH, PATIENCE SAL OBTEIN VICTORIE IN YAIR PRETENCE;

that is, "Who hopes still constantly with patience, shall obtain victory in their claim." The heart and crown both open, and they, with the back and inside of the jewel, are covered with mottoes and allegorical figures; for a full explanation of which the reader may consult the notes written by P. Fraser Tytler, and puhlished by command of Queen Victoria in 1813.

Returning to the subject of miniatures, the Royal Library is particularly rich in the work of Isaac Oliver, who continued to nphold the high position of the art in this country: he inherited the traditions of his master, Hilliard, and continued through the reigns of Elizaheth and James I. to paint the portraits of the members of the Royal Family and of the chief nobles and ladies of the land. Of his more notable works at Windsor may be mentioned the full-length of Sir Philip Sidney,

well known by Vertue's engraving, and the fine half-length of Henry, Prince of Wales, in armour, which narrowly escaped loss, as some years ago it was discovered hy the late Sir John Cowell hanging in one of the lodges in the Great Park. A less known hut equally heautiful specimen of this artist's work is given on page 175; it is the head of Dr. Donne, and the modelling of the features is worthy of close attention. It has been engraved hy Meryon as the frontispiece to one of the volumes of the Doctor's Sermons. Isaac Oliver's son Peter followed in the footsteps of his father, and numerous specimens of his skill are in the Miniature Cabinet.

Of the work of Samuel Cooper, the prince of miniature painters of the seventeenth century, the Royal Collection contains specimens, if not without equal, certainly unsurpassed in any other collection. Many of these are widely known by reproductions, particularly the exquisite head of James, Duke of Monmouth, as a boy, which, with four others of the same large size and grandeur of style, were painted for Charles II. One of the smaller portraits by him, also of the highest order of merit, is reproduced on p. 175, and is a lifelike and

His Mojesty King Edward VII. By E. Wehrschmidt.

Cameo.—The Emperor Claudius.
(Windsor Castle.)

speaking study of the head of Walker, the artist who so frequently painted the head of Oliver Cromwell.

In the whole of this marvellous collection, in number over a thousand, nearly all the principal artists of note are represented, the most celebrated of the later masters, Richard Cosway, by a large number of his best and most poetical works. Of these a charming portrait of the Princess Amelia, the youngest daughter of George III., is reproduced on p. 175, showing the grace and delicacy of

the painter's touch, and the mastery of his treatment of the hair, in which he equalled the work of Samuel Cooper.

In the same room in which these treasures are preserved is stored the great and celebrated collection of the drawings of Old Masters. The drawings of Holbein have been mentioned, as well as the discovery with them of the drawings and MSS. of Leonardo da Vinci, which are principal among the treasures of the Castle. These were contained in the original volume, in which they

Sir Thomas Wyatt By Holbein (Windsor Castle.)

The Alhani Collection just mentioned was secured for George III. through the agency of James Adam, one of the architect hrothers. It had heen started in the previous century by the Commendatore Cassiano del Pozzo, and among its treasures is a series of volumes of

he observed the peculiar direction of the lines from left to right, which is to he noted in nearly all Leonardo's own work, as he drew and wrote principally with the left hand. These drawings and the mass of the great artist's MSS. are now contained in six large portfolios, hut as soon as more space is available they will be rearranged in a manner more worthy of their value.

The original number of volumes

The original number of volumes in which the mass of drawings of old masters was hound, amounted to ahout 250. Unfortunately for the present generation, whose taste is formed on different models from those of a century and a-half ago, thirtyfour of these volumes are filled with the studies of Domenichino, a highly respectable craftsman in his day; some scores more contain an interminable series of masters of the Bolognese School, Caraccis, Guido, Guercino and the like, pretty hut commonplace. Of the earlier and of the more important masters, the drawings have heen removed from the volumes, where they were exposed to much injury hy ruhhing, and have heen, hy order of the late Prince Consort, mounted in such a manuer as to ensure their safety, and are preserved in portfolios.

Among the finest and choicest of these are two drawings hy Fra Angelico, two of the most important that exist of that exquisite master. One is a study on a yellow ground in white and histre of the head of a monk. It is reproduced on this page on a somewhat smaller scale than the original, and on the back are smaller sketches of figures for the well-known frescoes in the Chapel of San Lorenzo

in the Vatican (p. 176).

Of other artists worthily represented we may mention the names of Perugino, Pinturicchio, Signorelli, Mantegna and Fra Bartolommeo.

The drawings of Raphael are numerous, and some of them are of the highest interest; among them is one of singular heauty, heing the first sketch for the figure of 'Poetry,' which was painted by the master's own hand in the ceiling of the Camera della Segnatura in the Vatican, the decoration of the walls and vault of which by him, in the fulness of his prime, is second in artistic importance to no other chamber in the world. A sketch by Raphael for one of the frescoes in this chamber for three heads of poets in the 'Parnassus,' is reproduced on p. 178. It is hardly inferior to the 'Poetry' but is not so well known. It represents Homer, Virgil and Dante, and on the hack of the drawing is a sketch on a smaller scale for the figure of Dante, holding his immortal song.

Second only in importance to the unique collection of drawings hy Leonardo comes the series of designs hy Michael Angelo. In fact it is no exaggeration to say that until the student has seen these, be can have no

Head of a Monk.

By Fra Angelico.

(Windsor Castle.)

particular value, as preserving, at least in the form of copies, many works of classic art which have since disappeared. Nine large volumes contain elahorate drawings of ancient bas-reliefs, and several volumes are filled with the careful studies of Francesco and Pietro Sante Bartoli. Two volumes are filled with drawings of Christian antiquities, and, what is of more importance, with drawings of the great mosaics of the churches, executed with infinite care hefore the time when these invaluable relics were entirely ruined by neglect or restoration.

Valuable as these volumes are, the series of original drawings is far more precious, and with those already in the possession of the Crown, makes the Royal Collection at Windsor one of the most important in Europe. Of the works of Leonardo da Vinci at present the collection contains five times as many as are to be found in all the cahinets in the world put together. Of these, some of the most important are the studies for the heads of some of the apostles for the great fresco of the Last Supper at Milan. Of these, one of the most characteristic is that for the head of Judas, here reproduced (p. 182). In it may

The 'Bacchanale de' Putit,'
By Michael Angelo.
(Windsor Castle)

proper insight into the marvellous power of that extraordinary man, for in no other collection are to be found specimens of his work so complete in design and of such marvellous elaboration of execution. Vasari has mentioned some of these and given the history of their being

Head of Judas (Red Chalk Drawing). By Leonardo da Vinci. (Windsor Castle.)

done for Tommaso de' Cavallieri, the intimate friend of the artist. These justly celebrated designs are all preserved at Windsor, and they are known to most by engravings and reproductions in photography; no facsimile, however, can do justice to the exquisite delicacy and finish of the originals. Besides the drawing of the fall of Phaeton, known by the engraving of Beatrizetto, there is the wonderful study of Prometheus chained to the rock, his entrails torn by the vulture's beak, hut so marvellous in vigour and vitality, though prone on his bed of stone, that Michael Angelo traced its outline on the back of the paper and used the figure so traced as that of our Lord rising from the tomb, for his projected design of the Resurrection, a subject which he, like Rapbael, was never able to complete. Another, equally remarkable for its complete finish and elaborate design, is that reproduced on page 181. It is known everywhere as the 'Bacchanale de' Putti,' or festival of the children. It is divided into five parts, a central group with another in each corner, and in its whole design, modelling and lighting is the manifest work of

a sculptor. The central group shows a crowd of children of both sexes carrying the body of a beast of uncertain description-for it is curious how little attention was paid by any artist of this period to accuracy in the anatomy of any creature but man-to prepare it for their

consumption. In the upper corner on the left the cauldron is prepared and the fire lighted, and on the opposite side another group are busy over the vat of wine with which the repast is to be washed down. Below, on the ledges of the rock which forms the central platform are two others, one group of a gaunt and wasted female with her starving children, the other an old man prone on the ground and covered by children, like the patriarch Noah by his sons, the one group representing Famine, the other Satiety. In this drawing the very curious and characteristic forms of the feet and of the articulation of the fingers peculiar to the painter can be well studied.

Yet one more drawing claims attention. It is one that has a world-wide reputation, and is known by the name of 'The Bersaglieri,' the 'Tireurs d'Arc,' or 'The Shooters at the Mark.' It is not one of those mentioned by Vasari as a gift to Cavallieri, but it is the finest in conception and design of all Michael Angelo's drawings, and may be said to rank as the finest drawing by an old master existing in the world. It was so esteemed at the time of its execution as a canon of composition, that Raphael himself caused it to be copied in fresco on one of the walls of the villa which he was then decorating for Prince Borghese. This fresco was carefully removed from the walls when the villa was destroyed in 1849,

and is still preserved in the Borghese Gallery in Rome.

Besides these the Royal collection contains numerous examples of the art of Dürer and other masters of the German school, drawings by Claude and Poussin worthily represent the French, while the art of the Low Countries is also adequately represented.

In the same room where these treasures are stored is preserved the great collection of engravings also collected by George III. Few public museums, and perhaps no private cabinet, can rival this in the number and value of its engraved portraits. In its portfolios the Sovereigns of this country, with their families, are represented hy every known engraving which could be acquired, many of extreme rarity, and all specially selected for beauty of impression. After these come in due order the Sovereigns of other Royal Houses; nobles, statesmen, warriors and others all contribute to swell this wonderful gallery, which embraces, or attempts to include, the likeness of every one of every country whose features were considered worthy of transmission to posterity. In addition to the portraits is a vast collection

of engravings arranged under the different schools of painters whose works they represent. Of these the most complete and important are the engravings by Hogarth and those after Sir Joshua Reynolds. There is also an almost complete collection of the 3,000 plates engraved by Hollar; more lately the collection has heen enriched by a unique collection of the engraved works of Sir Edwin Landseer formed by the late Queen Victoria and the Prince Consort.

The above is hut a meagre and incomplete list of the art treasures in the Royal Lihrary. In its splendid galleries are stored over 120,000 volumes of printed books, in all languages and representing every class of literature. The collection is, however, of recent growth. When William IV. came to the throne he found that he alone of all the monarchs of Europe was without a library, and he at once set to work to replace as far as he could the great library of his father, which bad heen made over to the British Museum by George IV. Under the Rev. J. Glover and Mr. B. B. Woodward, both of whom had the advantage of the supervision and encouragement of the Prince Consort, it soon assumed proportions and a character equal to the stately home in which it was enshrined, and now can boast a high place among the private libraries of the world. Its chief treasures still date from the time of George III., as when the King's library was transferred to Great Russell Street a few of the valuable books which had heen personal presents to the King were retained. Such are the two unique Caxtons, "The Doctrynal of Sapience," on vellum, and the "Fables of Æsop," the only copy with the frontispiece. Of greater value, hut not of such national importance, is the splendid copy of the great Psalter printed at Maintz by Fust and Scheffer, bearing the date of 1457, the earliest date in any printed book in the world. This copy, which competes with that at Vienna as the most perfect of the eight which are known, was presented to George III. on his accession by the University of Gottingen. To these has been added recently, deeply interesting also as the last purchase for the Royal Lihrary to which Queen Victoria gave her

assent, the copy of the book written by Henry VIII. "Assertio Septem Sacramentorum Adversus Martinum Lutherum," to which the royal author appended his signatures on the first and last leaves; for the writing of this volume Pope Leo X., to whom it was dedicated, granted to Henry the title of "Defender of the Faith." This book remained in the library of the Scottish College at Rome till 1849, and is now deposited in the room in which the author lived, and in which he may have written the signatures which give it its unique value.

At the head of this chapter (p. 174) is given an engraving of the gold ornament known as "The Needwood Torque"; this splendid specimen of early British work was found in a fox's earth in Needwood Forest in 1849. It came as treasure-trove into the possession of Queen Victoria, and is now deposited in the Royal Lihrary.

In another and more private chamber of the castle is preserved the collection of engraved gems, many of which were the property of Henry VIII .- of many of these the history canuot now be traced. Conspicuous among them is the great cameo portrait of the Emperor Claudius, a reproduction of which is given on p. 177. It is of the highest type of glyptic art, and ranks among the finest of these works which have descended to the present time. There is a note in the catalogue of Charles I. which records that this precious gem was hroken hy the Lady Southampton when her husband was Lord Chamberlain. She was the notorious Frances Howard, the divorced wife of the second Earl of Essex. It is in the same case with this that the Darnley Jewel mentioned above finds its resting place, surrounded by other relics and gems remarkable for beauty and historic interest; but of these it is impossible in the limit of the present article to give more than the barest idea. The whole of the celebrated collection of gems of Consul Smith is here preserved, and many of the signet rings, hadges of orders, and "Georges" of the sovereigns of the realm; but this brief mention must suffice and will give the reader some faint idea of the treasures that are enshrined in the ancestral home of the King.

RICHARD R. HOLMES.

The King and Queen (then the Prince and Princess of Wales) on their way to a Drawing-Room.

By Sir John Gilbert, R.A.

#### PLATE ILLUSTRATIONS.

# His Majesty King Edward VII. Her Majesty, Queen Alexandra.

BY E. WEHRSCHMIDT.

A STUDY of the articles written by Mr. Cust, Mr. Holmes and Mr. Laking will reveal the interest in Artshowed by the Monarchs of England. It is undeniable that Sovereigns, by precept as much as by practice, influence the taste of their subjects, and an active criticism by Royalty is helpful to artists and collectors. When Prince of Wales, the King showed his keen interest in Art by being constantly among artists and by attending exhibitions of their work. His Majesty has always found time to indulge his artistic inclinations, and that he will continue to do so now that his occupancy of the Throne demands increased responsibilities, is promised by his journey from the country in order to be present at the Royal view of the 134th Exhibition of the Royal Academy.

# Westminster Abbey.

BY AXEL HERMANN HAIG, R.E.

WE refer to Mr. Haig's etching on page 173 in our article on Westminster Abbey. It is appropriate that there should be an example of this artist's work among this series of articles on the artistic possessions of the King, His Majesty having been graciously pleased to place in his collection artist's proofs of two of Mr. Haig's recent etchings which have appeared in The ART JOURNAL, viz., of Windsor Castle and Buckingham Palace.

#### The Royal Princesses.

BY THOS. GAINSBOROUGH, R.A.

THE three princesses in this picture who sat to Gainsborough for their portraits were the daughters of George III. The artist was one of the original members of the Royal Academy of Arts, founded in 1768 by his Majesty. The picture is now in Windsor Castle.

BY LUKE FILDES, R.A.

It is not without reason that the name of Queen Alexandra is always received with enthusiasm, so deeply have Her Majesty's gracious kindness of manner, her active sympathy with suffering and her desire for the welfare of her people, and, if I may be permitted, I will add, her Majesty's simple and unaffected charm, implanted a loyal affection in the hearts of her people, and not least of the members of the Royal Academy, who recognise in Her Majesty an enthusiastic lover of painting, and in herself a skilful executant of the delightful art of water-colour. All our wishes will go out to Her Majesty at her forthcoming coronation for a long and happy life."—SIR EDWARD J. POUNTER, P.R.A., speaking at the Royal Academy Banquet, 3rd May, 1902.

# The Coronation of Queen Victoria.

BY SIR GEORGE HAYTER.

THE commission to paint the official picture of the Coronation Ceremony of Edward VII. has been given to Edwin A. Abbey, R.A. It is difficult to represent pomp and portraiture, and opportunities to gain experience in such themes are rare. Mr. Abbey's skill in grouping figures and managing his colours makes his treatment of the ceremony an interesting picture to wait for. Sir George Hayter's representation of the Coronation of Queen Victoria is a competent record of an event which occurred on June 28th, 1838. Sir George Hayter practised portrait and historical painting, and produced many official works which are interesting chiefly from the persons of note included in the compositions. His Coronation picture was enthusiastically received at the time of its exhibition. "It is universally allowed to be the chef-d'œuvre of the artist, and will rank as one of the finest historical works of modern times." His picture of the Christening of King Edward VII. in St. George's Chapel, Windsor, was one of his best productions. He was well in favour at Court and was knighted in 1842.

# Unrecorded Armour and Arms in the European Armoury of Windsor Castle.

BY GUY FRANCIS LAKING, M.V.O., F.S.A.,

KEEPER OF THE KING'S ARMOURY.

THE European Armoury at Windsor Castle holds to-day perhaps a position unique in Europe, for no collection of armour and arms that we know, either Royal, National, or private, is in a setting so appropriate. By this is meant that where Royal and great personages of the past bave walked, talked, and lived, there to-day rests their armour and weapons, as a silent remiuder that their names shall not fade nor their chivalrous actions be forgotten. Could but King Harry VIII., James I., the favourites of Elizabeth, Henry Prince of Wales, Charles I., aud nearly all the succeeding monarchs down to the last of the Georges, revisit "Great Windsor," the castle they must have known so well, each would find at least one armament or weapon with which they would be familiar.

An appreciation of an armoury of many thousand pieces in one sbort article of bardly as many thousand words is impossible, for on every side are objects of absorbing interest, tbat in themselves each merit a separate paper. How can the superb so-called Cellini shield be described in a few lines, the equally wonderful Hampden sword be passed with a mere glance. So let these few notes but deal with such specimens of the armourer's art that up to the present have escaped the just merit they deserve, and which almost within the last few months have lain unnoticed and uncared for in some unthought-of corner, or lost as unrecorded treasures of the King's armoury.

We shall begin with the defensive armour. Turning to a period within the first quarter of the sixteenth century, let us consider a set of tilting pieces belonging to one of the four suits of Heury VIII. preserved in the Tower collection, and the barness which in the past was always accredited to Charles Brandon, Duke of Suffolk, it being thought impossible that the King should have two suits so much alike. Research has now corrected the attribution, and we find that the "Brandon" suit was made for no less a person that King Henry himself, and to this suit these extra tilting pieces belong. These consist of two grand-mentonière (No. 4), a third example of which is still in the Tower, an extra

No. 1.—A North Italian Short Sword of the End of the Fifteenth Century.

guard for the left elbow and forearm, a gauntlet for the bridle hand, a locking gauntlet for the right hand, that is, a gauntlet within the clutches of which could be held a mace or sword, the top of the finger-plates fastening with a catch the inside of the cuff, in such a manner that the weapon could not be wrested from the grip; a pair of cuisse plates and a gauntlet, also for the bridle arm (No. 5), of fine and large proportions, presenting the extremely curious feature of a circular rondel on a short stem applied above the wrist, such as is seen on the backs of the early closed belmet, the armet, where its use can be explained, guarding as it does the back opening of the helmet. But on a gauntlet its purpose is difficult to determine, for it protects nothing, and to us seems apparently a rather cumbersome appendage—yet, if we recollect rightly, this feature on a gauntlet is not unprecedented, for on the same suit in the Tower is another gauntlet, almost exactly similar in form to this one, showing also the peculiarity of the rondel; however, in the Tower specimen the actual rondel is missing, leaving but its stem as a record of its former presence. Belonging also to these tilting pieces are the steel plates from the bow and cantle of the war saddle.

No. 2.—Circular Buckler with a "gonne" in the centre. From the Original Armoury of Henry VIII., in the Tower of London.

The whole set, like the suit to which they belong, are in all probability by a German armourer, working under the influence of Sussenhoffer, but whether made in England or Germany it is impossible to determine. The decoration is extremely simple, consisting of narrow bands and bordering, delicately etched with carefully drawn foliated scroll work and pomegranate-like fruit. The field gilt—the plain surfaces, now of brightened steel, no doubt were formerly russeted or blued. However, it is not upon this decoration their attraction lies, but upon the "grandiose" manner in which their might-have-been unattractive forms bave been handled.

A treasure that has in reality been rescued from complete oblivion, for it was found in a box of rubbisb in an unused room in the Round Tower, is the brayette reproduced (No. 3). This presents the interesting feature of two laminated plates on either side. Its condition is superb, containing the original lining and also the russet and gold surface. The borders are etched, the main plates of it fluted with chevron lines similar to the slashed decoration found upon civil dress of the period, circa 1520. There is little doubt it must bave belonged to Henry VIII., although it does not exactly match any suit with which we are now acquainted belonging to that monarch. The harness to which it has formed part must have been magnificent in its completeness, no doubt very like the suit in the Musée d'Artillerie of Paris (No. G179 of the present

catalogue) said to have been made for Julian II. de Médicis, for use on foot in the champ clos, when the wearer was, in reality, completely "clothed" in steel, for in such a harness there was no portion of the body that was not protected by some cleverly constructed almaine plate.

The Windsor Armoury is fortunate in possessing six of the bucklers, with pistols in the centre, that are mentioned in an inventory of the Tower made within the first half of the sixteenth century. There were formerly eighty round bucklers there, with "gonnes" in them; many of these still remain at the Tower. They consist of a round convex buckler with a pistol barrel projecting from the centre of each, and having a breech-loading arrangement in the interior. Above the barrel is a small grating through which the bearer might watch his opponent. It is discharged with a match, in a holder fixed inside the buckler, to be worked by the right band. The breech-loading is ingenious: an iron cover coming down over and retaining in position the

chamber, which is the size corresponding to that of a modern 12-bore cartridge.

From a note of another of these bucklers in the "Guarderobe of the Towre," Harleian MS., 1419, it appears they were originally fringed with green silk and lined with green velvet. The one illustrated is as complete as any of them nowin existence (No. 2). Another example from the original Tower series is in the armoury of Hampton Court, and also one in the Hall at Edinburgh Castle, where no doubt it has been brought at a comparatively recent date with other armour and

arms for purposes of decoration.

Of the offensive arms in the castle, none, saveafew Roman bronze swords, have greater antiquity than the cruciform hilted

No. 3.—A Erayette, enriched and gilt.

From one of Henry VIII.'s Suits.

\* Extract from "Arms and Armour at Westminster, the Tower, and Greenwich," 1547, by Viscount Dillon, published in Archæologia,

No. 4.—Grand-Mentonière belonging to the Henry VIII. Suit, now at the Tower of London.

sword described in the old inventory as the sword of the Cid (No. 11). It is a fine serviceable weapon, although of hardly earlier date than about 1460-1500. The simple hilt is entirely gilt, the pommel of flattened cylindrical form, the quillons straight and flat, but presenting the extremely interesting feature of the single ring that guards the first finger, when it was passed over the guillon, as in the manner of the later rapier, to ensure a firmer grip of the sword. This pas d'ane, as this formation was called from its likeness in shape to the imprint of an ass's hoof, has been the subject of an interesting paper, published in Archaologia some little time ago hy the Baron de Cosson. The blade of this interesting weapon is back-edged, a feature as a rule not found in such sword blades until fully a century after this date.

Passing from the last sword, by right of their chronological order, we come to two fine broad-bladed Venetian cinquedia, so called on account of the formation of their ox-tongue-like blades; the word cinquedia being derived from cinque—five, and diti—fingers, i.e., the breadth of five fingers, which will be generally found the hlade breadth of these deadly weapons at the hilt; the anilace mentioned by Chaucer having its prototype in the "parazonium," and the braquemont or épée de passot being all of the same family of weapon. Of these two examples perhaps No. 14 is the more uncommon, and certainly the finer in condition. The hilt, as are also the scabbard mounts, is russetted and deeply incised with a cross hatching. The blade, of finely moulded section, brilliantly blued and enriched with a form of gold

niello-like ornamentation, introducing circular medallion portrait busts rendered in the manner of Maso Fineguerra, or some Florentine engraver of rather later date. No. 15 is a similar weapon, but more familiar to us in the formation of its ivory grip; the blade in this case is etched with a mythological subject, and gilt. It has its fine original scabbard of cuir-bouilli, tooled with the most characteristic late I talian cinquecento enrichments, introducing in its centre composition a kite-shaped shield. This scabbard has been fortunately recovered

and brought to its own weapon after a separation of nearly a century, for it was found behind some heavy storage in the Round Tower, together with the splendid embossed and gilt chapel-de-fer (No. 6). This helmet, although simple in its general outline, has the charm found nearly always in armour of quality, and more especially that of early sixteenth-century date, the excellence of material, the satisfying balance of ornamentation, and its ever apparent usefulness. In Mr. Stibbert's fine collection, near Florence, is an almost identical helmet, having its surface entirely gilt, also bearing on its plumeholder the figure of Christ in the attitude

of blessing, seemingly taken from a composition of 'The Last Supper,' whilst above are the words LAU-DAMUS TE, rather pointing to the helmet's former use in some papal or ecclesiastical guard.

The hilt of a North Italian short sword (1) is of great interest; for, had it not suffered from the too vigorous

Italian, Sixteenth Century.

over-cleaning of the early "fifties," it would far excel any offensive arm of its period-the end of the fifteenth century-in our English Collections. The fine series of early swords at Hertford House can show us nothing of an equal excellence as regards general design; for the inter-twisted snakes that form its guillons or cross guard, and the outline of its flat wheel pommel, would require a master little short of a Ghiberti to manage their sinuous bodies with that dexterous ease that has at once happily accomplished its end in the uniting of an apparently free composition to the strictly accepted form of hilt to such a weapon. In the middle of the pommel, and in a small sunk panel in the centre of the quillons are applied silver filigree tracery oriels, almost oriental in their flamboyance, which same feeling is apparent in the prettily intertwined design of the grip, strangely recalling the Sicilio-Arah motives seen on Venetian lamps and pastille burners of early sixteenthcentury date.

Before passing with a stride the first quarter of the sixteenth century to that of the last, an interesting dagger of a type that in France is known as "a rognons" should be glanced at, for it presents a typical English specimen of such a weapon (No. 8). The grip is of ehony, octagonal in section, widening at the pommel and above the quillons into two lohes, from which formation it derives its nickname. The hlade is serviceable, for it is four-sided, each face heing hollowed, and tapering to an acute point. At the hilt it is simply etched and gilt with formal leafwork, but in some cases inscribed with some doggerel rhyme or motto. In the past this most rare dagger was mysteriously arranged with a group of Indian daggers of comparatively recent manufacture. Its date would be from 1525-50. The Italian mace (No. 12) is of a usual type of its period, the latter part of the 16th century, but curious as having heen thought of Indian fashion, and

in consequence arranged in the Oriental armoury of the Castle. Arriving at a more enriched specimen of the armourer's art, the left hand dagger with the hlade that springs into three parts, on releasing a

latch, is altogether in the approved "Celliano" school (No. 10). The hilt is russetted and chiselled with figures

in low relief, and further enriched with gold azziminia damascening. However, from certain details, the shape of the grip, &c., one is inclined to consider Germany the country of its production rather than Italy, which to an extent may explain the little too-heavily handled ornamentation.

There is a suit of armour reaching to the knee, among the hetter-known suits at Windsor, that in the past has always heen accepted as having helonged to the Earl of Essex, aud is so mentioned in the inventories, hut on turning over the leaves of the "Armourer's Book," a volume purchased by the Victoria and Alhert Museum at the Spitzer Sale in 1894, on plate 37 this very suit is seen illustrated, and in the corner of the plate, possibly in the handwriting of Jacohi, the armourer himself, is the interesting note saying that the harness was made for

Sir John Smith; this is our excuse for illustrating part of an already well known armour, but appearing for the first time under the correct heading as regards its former wearer. The fine morion reproduced, No. 7, although

belonging to the "Smith" suit, has never hefore heen associated with it. In form it is pear-shaped, with a row of enriched, rosette-headed copper-gilt rivets around its lower edge, which in the interior secured its padded coif or lining. On either side are shaped panels of emblematical female figures etched and gilt, drawn with that elongated gracefulness usually associated with the French Fontainehleau school of the second half of the sixteenth century.

Of considerable historical interest are the portions of a suit shown in the illustration No. 9, to demonstrate to what completeness as regards multiplicity of pieces a war harness of fine quality might attain. In the Tower of London is an equestrian suit of fine and large proportions, made hy Jacobi for the Earl of Worcester.\* The Tower example is most undouhtedly made for use a horse, whereas the other portions of the

suit at Windsor were assuredly made for use on foot. It consists of a hreast-plate, hack-plate, open burgonet, buff, and reinforcing breast plate, which beyond being a great weight in itself, reinforces an armour, the weight of which is far heavier than the heaviest tilting suit the writer is acquainted with; indeed so heavy are the tasses, and so thick are its plates, their use can be guessed at as an attempt to guard against the already too proficient arquebus bullet. This half suit has heen up to now erroneously accredited to the Earl of Leicester. The decoration is characteristic of Jacobi's work, having sunk, crescent-like ornaments, not engraved as is expected, but simply gilt, which gilding in the Windsor suit remains to-day in a fine state of preservation, whereas the other portion of this same suit in the Tower, hardly shows traces of its past splendour of gold.

A few words of comment must be passed upon the circular buckler, No. 16, as it belongs to a complete suit with graven and gilt hands, also in the Tower, made for King Charles I., the work, as suggested by Lord Dillon, of Petit of Blois.

The fine silver inlaid sword (No. 13) is, perhaps, too well known to have a rightful place in the "unrecorded arms" of Windsor, but that which is quite unrecorded is that it is the actual weapon girt to the side of King Charles I. in his portrait by Daniel Mytens, painted in 1627, hanging in the "Pinacoteca" of Turin (No. 395 in the catalogue), where the King is represented standing by the colonnade of a palace, his right hand holding a staff, his left resting upon his hip. The sword has the large spheroidal pommel that characterises the English hilt, although the silver encrusted

caryatids, masks, etc., are strongly influenced by an Italian feeling. The etched and gilt blade of the weapon is the work of the Solingen blade-maker, Clemens Horn. Both this sword and the sword of the Great Duke of Marlborough, sumptuous in its elaborate, highly-chiselled hilt (No. 17), are not improved by reproduction; for no idea, especially of the first mentioned, can be obtained in a black and white reproduction, where the skilful handling of the variously coloured gold plays so large a part in its general

Next to this (No. 18) is the chanfron, belonging to a

superb little blue and gold suit, made, as we like to think, hy William Pickeringe, the master workman at Greenwich, for Henry, Prince of Wales, son of King James I. The suit to which this chanfron helongs is perhaps the richest treasure of the Windsor armoury; hut it is safe to look upon this piece, with its splendid etched and gilt emhlazoning of England, surrounded by the ribband and motto of the Garter and the initials H. P. ahove, as a new discovery, for it was hung, hent, crushed and overcleaned almost heyond recog-nition, in a very "skyed" posi-tion in the guard chamber. Its form, and happily its surface, has heen restored to it, long to remain, we hope, as an illustration of the work of an English Artist-Armourer.

#### Some Illustrations of Coronations.

Crown worn by George II. on the day of his Coronation, 11 October, 1727.

ONE of the earliestrepresentations of the crowning of an English King is that of Harold, shown in the Bayeux Tapestry, and amongst old illuminated manuscripts are to he found other illustrations of the ceremony of Coronation.

An engraving, published hy the Society of Antiquaries, from a coeval painting shows the

procession of King Edward VI. from the Tower of London to Westminster on 19th Fehruary, 1547, prior to his coronation.\* Probably the earliest contemporary prints, which are authentic, are illustrations to "The Archs of Triumph Erected in Honor of the High and Mighty Prince James, the First of that Name King of England, and the Sixth of Scotland, at His Maiestie's Entrance and Passage through His Honorable Citty and Chamber of London upon the 15th day of March, 1603." This very rare work, of which there is a copy in the British Museum, was "invented and published by Stephen Harrison, Joyner and Architect; and graven hy William Kip"; it was "Imprinted at London hy John Windet, Printer to the Honorable Citie of London, and to he sold at the Author's House in Lime Street at the signe of the Snayle, 1604." The work contains nine engraved plates, as follows: -a title-page; a portrait of the King in his full rohes of state, engraved by Laurence Johnson; and seven triumphal arches. The first was erected at the east end of Fenchurch Street; the second, by Italians, in Gracechurch Street; the third, hy Dutchmen, on the Cornhill, near the

Royal Exchange; the fourth ahove the Great Conduit in Cheape; the fifth close to Little Conduitin Cheape; the sixth about the Conduit in Fleet Street; and the seventh, representing the Temple of Janus, at Temple Bar. These arches were erected for the coronation procession,

\* A full description of destroyed by fire, in 1793, at Cowdray, in Sussex, is given in a paper read by Mr. John Topham before the Society of Antiquaries on 19th March, 1787.—See Archæologia, vol. viii.

ever, preserved until March in the following year, when His Majesty visited the City, and passed under them. Another early print is "The Cavalcade, or His Maiesties passing through the city of London towards his coronation. Munday 22 of April A. MDCLXI." It was executed by Wenceslaus Hollar, the celehrated engraver, for "The entertainment of His Most Excellent Majestie Charles II. in his passage through the city of London to his Coronation, written hy John Ogilby, and published in 1662. The print is from an etching on copper and represents a long procession of numerous nohles and persons holding high office, mostly riding on horsehack, terminating with the King on horsehack surrounded hy gen-

hut in consequence of the prevalence of the plague,

when that ceremony took place in July, 1603, the King

declined to proceed through the City, and went direct

from Whitehall to Westminster. The arches were, how-

tlemen pensioners and "equeries" on foot. The hook also contains illustrations of the triumphal arches erected hy the City of London "to express their joy with the greatest magnificence imaginable: imitating therein the antient Romanes, who, at the return of their Emperours, erected arches of marhle, which, though we hy reason of the shortuess of Time, could not equal in Materials, yet do ours far excel theirs in Number, and stupendious Proportions."

The first arch, of which there is an engraving, was erected in Leadenhall Street. It was of the Doric order; in the centre was a statue of the King, and hehind him a representation of the Royal Oak hearing crowns and sceptres instead of acorns; on either side, hut slightly lower, were statues of Kings James I. and Charles I. The second arch, erected near the Exchange in Cornhill, was a Naval one, adorned with paintings of Neptune and with living women representing Europe, Asia, Africa and America. The third arch stood near Wood Street, and was in two storeys in Corinthian style, representing the Temple of Concord, with a woman on the top of the cupola, as Concord treading down a serpent, and other women round the hase, as

Love, Truth, Temperance, Justice, etc. The fourth arch was in Fleet Street, near Whitefriars, and represented the Garden of Plenty, surmounted by a woman with a cornucopia, whilst lower down were others as Ceres, Flora, etc.

After passing under these arches the King left the City through Temple Bar and proceeded to Whitehall. On the following morning he went hy water to the House of Lords, where he arrayed himself in his Royal rohes and entered Westminster Hall. From there he walked to the Ahhey, preceded hy nohlemen carrying the Regalia, the whole route heing covered with hlue cloth. An engraving of this procession is given in Mr. Ogilhy's work, and shows the King, supported by the Bishops of Durham and of Bath and Wells, under the canopy carried by the Barons of the Cinque Ports.

The eugravings representing the coronation of King James II. were executed for a work compiled by Francis Sandford, Esq., Lancaster Herald of Arms, in 1687. James II. ahandoned the procession from the Tower through the City to Westminster, and the principal engraving in this hook is the procession from Westminster Hall to the Ahhey, headed by the King's Herh Woman, an elderly lady wearing a hadge with a rose, crown, and initials J.R. A contemporary set of four engravings were also published depicting 'The Crowning,' 'The Inthronization,' 'View of the Quire to East End,' and 'The Dinner at Westminster Hall.' In the last is shown the King's champion riding up the centre of the Hall.

Illustrations of the coronation of William and Mary, on 11th April, 1689, are nearly all from a Dutch work published at Amsterdam, and the artist, R. de Hooge, has to a very large extent drawn upon his imagination, as the architectural details of the Ahhey in no way represent the huilding at that or at any other time. There is, however, a print of the procession from Westminster Hall to the Ahhey hy Sam Moore which is of interest in shewing that the King and Queen on this occasion walked side hy side under one canopy.

Of the Coronation of Anne there is an engraving of the procession to the Ahhey published by John Overton at the "White Hors without Newgate."

George III. appears to have heen unfortunate in delineators of his Coronation, as the plates executed for James II.'s Coronation were slightly altered and made to do duty again for "Farmer George."

The records of George IV.'s Coronation, in 1821, are contained in two sumptuous works; one was published by Mr. John Whittaker in 1823, and the other was commenced hy Sir George Nayler, Garter King of Arms. latter was announced to he complete in five parts. The first part was issued in 1825, and the second part appeared two years later; several thousands of pounds were lost on the sale of these two parts, and, owing to the death of Sir George Nayler in 1831, the work was stopped. In 1835 the remaining unsold copies of these parts, together with the copyright and copper plates, were submitted for public sale and purchased by Henry Bohn, who also acquired the plates contained in Mr. Whittaker's work. These he amalgamated, and issued them in one volume in 1837. This work is extensively illustrated

with coloured engravings by Augustus Pugin, Charles Wild, and the hrothers Francis and James Stephanoff, and many of the original water-colour drawings are now in the Victoria and Alhert Museum, the architectural features heing admirably executed by Pugin and Wild, and the figures principally by the Stephanoffs.

George IV. was the last king to walk in procession from Westminster Hall to the Ahhey, and to return to the Hall for a Banquet. Amongst the drawings at South Kensington six of them hy C. Wild show various ceremonies connected with the Coronation, enacted in Westminster Hall;—the Dean and Prehendaries presenting the Regalia to the King; the procession starting for the Ahhey; the Hall prepared for the Banquet; the first course (parts I. and II.) of the Banquet; and the Champion of England, Henry Dymoke, riding into the Hall, during the Banquet, to challenge any person to comhat who dared to deny that the King was the rightful Heir to the Crown.

C. R. Leslie, R.A., executed a painting of Queen Victoria receiving the Holy Sacrament at her Coronation in Westminster Ahhey on 28 June, 1838. A sketch for the figure of Her Majesty is at South Kensington, and the painting was engraved hy Samuel Cousins, R.A. Sir George Hayter also painted the Coronation scene with Her Majesty seated on the Throne, and this picture was engraved by H. T. Ryall.

In 1649, hy order of the Commonwealth the whole of the Regalia, excepting the anointing spoon, was destroyed. Charles II. had accordingly to order a new set to he made, and the crown with which the monarchs are crowned is still called "St. Edward's Crown." Each Sovereign has his own State crown, the precious stones of that helonging to the previous monarch heing used to a great extent in making the new crown.

The canopy, which was horne hy the Barons of the Cinque Ports up to the time of King George IV.'s Coronation, formed a conspicuous object in the processions, and it is interesting to note from the various illustrations the different ways in which it was used. Charles II. is shown to he walking under a very small canopy, supported hy only four Barons; James II. proceeded under a larger one, and his

#### CORONATION NUMBER.

Engraved by Samuel Cousins, A.R.A. Queen Victoria receiving the Holy Sacrament at Her Coronation in Westminster Abbey, June 28, 1838.

Painted by Charles Robert Leslie, R.A.

Queen, who preceded him, had also a canopy held over her; whilst William and Mary walked side by side under a still larger canopy. George IV. retained the canopy, but instead of walking beneath it, he caused it to be borne behind him in the procession. Silver-gilt bells were hung at the corners of the canopy, as shown in the illustration of King James 11.'s procession. Sarah, Countess of Waldegrave, whose first husband, E. Milward, Esq., was a Baron of the Cinque Ports, bequeathed three of these bells to the South Kensington Museum in 1873. One of each was used at the Coronations of Kings George II., III. and IV. respectively.

The authorities of the Victoria and Albert Museum at South Kensington have made a small exhibition of some of the illustrations. The collection does not pretend to be in any way a complete record, but the works shown are of considerable value, from an antiquarian point of view, in exemplifying the manner in which the coronation ceremonies were performed, and showing the various costumes at the different periods.

At the British Museum there is also an exhibition of prints, manuscripts, medals and printed books, relating to previous coronations, and amongst this collection are many of the rare and interesting prints which have been described.

H. M. CUNDALL.

Coronation Procession of James II, to the Abbey,
Portion of Engraving by I. Collins.

#### . Coronation Weaving.

T is chiefly in the robes worn by the King and Queen, by Princes and Princesses, and by all who play a part in the ceremony, that the beauty of the Coronation is dependent on modern skill. The royal robes are traditional, and as expressive of tradition in material, colour, and form, as is the oldest survival in the historic regalia. But the transference of authority by means of investiture with the actual mantle of office is obsolete; and has been obsolete since the beginning of coronation records in England. For each sovereign the weavers of his time have woven of linen thread, of silk, and of gold, the alb, tunicle, and imperial mantle that form the garments of investiture. Besides these, the crimson velvet for the Parliament robes, and purple velvet for the Robes of Estate, are needed for the King's wear on Coronation Day; while the mantles and robes of the Queen, of the royal family, of ecclesiastics, statesmen, nobles, and courtiers, represent a sum of splendid weaving worth taking into account.

By desire and example of royalty these fabrics have been almost entirely woven on British looms. English embroiderers at the Royal School of Art Needlework have embroidered King Edward's golden mantle with the imperial design of eagles, palm-branches, roses, shamrocks and thistles; while the Queen's robe was embroidered in India. The mantle itself, or rather the cloth of gold from which it was made, was woven on a hand-loom in Messrs. Warner's mills at Braintree in Essex; and in the same long gallery other hand-looms

wove velvets, satins, and figured silks for Coronation use. In the neighbouring town of Sudbury, cottage weavers transformed the purple and crimson silk—dyed, mostly, at Leek in Staffordshire by the firm of Sir Thomas Wardle, first of modern English dyers—into regal velvets. In the midland counties, in Leek, in Halifax, in Patricroft, and Macclesfield, north of the Tweed, and in cities such as Canterbury, where the weaving craft had died out, on hand-looms and on power-looms, the Coronation weaving was accomplished by British weavers.

Standing at the end of the long upper room in the Braintree works, where the Coronation weaving was in progress, one saw actualities linked in a thousand complex ways to far-off conditions of life. The broad effect of light from the windows on either hand, sheen and colour of silken warp-threads, the movement of the weavers, rhythmic to vision, and filling the ear with the rhythmic beat of the moving looms-thenceforward a special memory of sound-made the first impression of actuality one of significance and pleasure. Passing from loom to loom, realising the complexities of skill, the variety of colour, texture and design in the fabrics woven, the simplicity and breadth of a first impression were broken by the intervention of many definite and vivid details. And these details of craftsmanship and of the things made, how complex and far-reaching to the extremes of time and distance are the traditions that survive in their existence.

The connection between these traditions and the quiet circumstance, the open-air cheerfulness of the Essex town, is a brief one. The town outside the factory settled down into its characteristics independent of the forces and events represented by modern silk-weaving, though, as a weaving-town, Braintree has early mention in industrial chronicles.

Braintree has a weaving history dating certainly from Elizahethan days, when those "gentle and profitable strangers," the Protestant craftsmen of the Netherlands, found safety from the Inquisition in English towns. Possibly the history is longer. The neighhouring towns of Colchester and Sudhury are among the places where woollen manufactures - serges, "sayes," and "hayes"—were introduced by Flemish settlers under Edward III., and the "say and hay" manufacture of Braintree may have hegun at the same time. But the Coronation velvets, hrocades, and cloth of gold are no development of Dutch cloth-weaving. The Dutch settlers introduced silk-weaving into some parts of England, hut not into Essex. That is a recent event. The weaving of velvet Coronation rohes on the cottage-looms of Sudhury, and of the silk and gold fahrics at Braintree are a development of Spitalfields weaving. Till seven years ago the firm of Warner wove Spitalfields silks in Spitalfields; and the settlement of French Huguenot weavers here and elsewhere in England, after the Revocation of the Edict of Nantes in 1685, links Spitalfields silk-weaving to a tradition, whose heginning was a forgotten tale to the weavers of Byzantium.

The Chinese Empress, who tended silk-worms and wove silken wehs on the loom which she invented, was worshipped on altars built more than four thousand years ago; and she is the emhodiment of a heautiful industry far older than the myth. India, it is probable, learnt the cultivation and use of silk from China. Europe filched the secret in the sixth century. Two Greek monks, missionaries, returning from China to Byzantium, hrought silk-worms' eggs in the hollow of their staves. From magnificent Byzantium the art spread over Europe. The silk weaving of the cities of Asia Minor, of the Saracens in Spain, of Sicily, whither in the twelfth century King Roger brought his prohlematical train of Greek captives, to weave on palacelooms fahrics whose heauty is fortunately not matter of legend, and of the great cities of mediæval Italy, followed the weaving of Byzantium. From Italy France learnt the weaving of silk, and the uneasy conscience and stultified imagination of Louis XIV. added the skill and knowledge of his Huguenot subjects to the sum of craftsmanship in seventeenth century England.

Just a century had passed since the Dutchmen first wove silk in this country, when the French refugees settled in Spitalfields, in Macclesfield, in Leek, and in other towns. Between the French silk-weavers, setting up their looms in a strange land, and the English workers at Braintree, Sudhury, Leek and Macclesfield, whose skill is seen in the Coronation rohes, there is, in many cases, the continuity of actual descent. But to trace the development from 1685 to "here and now" would need a volume. Solid continuous history, not

Winding Silk at Braintree.

to be suggested, links the weaving of two hundred years ago to the fine weaving of to-day. The weavers of the King's mantle—William Shoulder and Albert Parchment—epitomise in their English-sounding names the development of those years. The names of the seventeenth-century Huguenots have, by translation and adaptation, become English names, borne by English craftsmen. The silk industry has become British during the same long and gradual changes.

As the Coronation weaving is a "purple patch" on the industrial record of Braintree, so is the weaving of the King's mantle an episode apart from other Coronation weaving. This is not only because of the heauty of the fabric. Beautiful it is, this supple web of radiant gold and silk; magnificent, vivacious, meriting by its glittering beauty the old name for such a tissue—"ciclatoun," bright, shining. But the purple and crimson velvets on looms just across the gallery, evoking colour-memories of crimson rose petals and purple pansies, seemed no less beautiful, though in less resplendent fashion. Nor is it because golden textiles, now that splendid existence takes other forms than pageantry, seem special and rare compared with silken textiles "of easier availe." As a fact, cloth of gold is a steady branch of manufacture, though not cloth of gold such as that woven for the King's pallium. Its unique beauty is an expression of its high significance in the ceremony of Coronation. Hence the special interest of its weaving.

An English monarch's Coronation robes were ordained triple for Charles II. The Parliament robes of crimson velvet and ermine are worn during the procession to the Abbey; the King is invested with the ecclesiastical

dress during the ceremony; and the purple velvet and ermine robes of Estate are assumed for the return procession. The essential robes of kingship are those used in the ceremony of investiture, and the chief of these is the Imperial mantle, the pallium, or pall of cloth of gold. Twenty-seven yards of golden tissue, of yellow silk with a weft of pure gold, have been woven at Braintree for King Edward's pallium. The pallium of Queen Victoria was woven at Spitalfields with a design of green palm-branches, eagles, rose, shamrock, and thistle, crowns and fleur-de-lys, representing the sovereignty of the wearer with sufficient emphasis. Time changes woven fabrics, and the sixty years that have passed since the mantle left the looms of Spitalfields have left their traces. Curiously, an added beauty is the result. Cloth of gold has usually a magnificence somewhat devoid of charm. It takes the light in one glare of brilliance. Subtleties and modulations of light and shade are not part of the effect. But, with time, the stark splendour of the late Queen's mantle had gained this charm. Broken threads, a surface less invariable, caught the light and held it in a flicker, a shimmering radiance. To imitate this accidental beauty in the present tissue many experiments were made. There is no doubt that these were successful. The fabric is the most sunlighted thing imaginable, and it holds the light at play. On this material the embroiderers at South Kensington have worked the present version of the design, long traditional in its chief emhlems, as the adornment of the Coronation mantle. Embroidery as a means of ornamenting the fabric is, of course, also in accord with ancient custom. Tradi-

Weaving Brocaded Silks at Braintree.

Weaving Cloth of Gold, with spinning wheel for winding gold thread on quills.

tion makes the shadowy Saxon wife of Edward the Confessor the embroiderer of his mantle. The pallium as one sees it is significant enough of regality, but its present form has lost much of the original expressiveness. According to the rubric it was to be four-square, to remind the King of the four quarters of the earth over which the Creator had sovereignty, to whose ser-

vice each monarch, receiving unction at the hands of the priest, dedicated himself and his splendour. This significance of form was lost at the coronation of James II., and the round orh, surmounted by the cross, has taken the place of the four-square pallium as an ohvious symbol of that thought in the ceremony.

Coronation Medal, designed for Messes. Elkington and Co. By E. Fuchs.

is anything but favourable to the state and progress of art in this country." It is then recorded that "almost everything Wilkie has done this year is a failure. Landseer has some things every way worthy of his fame—"The Life is in the Old Dog yet' is worth forty of the best portraits in the rooms. Turner has several things which, in point of daub, for effect, outdo all his former outdoings. The best thing of Etty's is the 'Prodigal Son'; were there nothing besides in the Exhibition, it would redeem the character of British Art. Maclise has several things all good in their kind. In the miniature room there is a portrait (sketch of 'Boz') by S. Lawrence, which is spirited and like, but which gives those wbo know him very little idea of the intellectuality of our distinguished young friend's countenance."

## Coronation Notes.

THE reproductions on this page will give some idea of two medals designed to commemorate the Coronation of Edward VII. These medals have been struck by commercial enterprise and are in no way official. A contemporary account of the distribution of medals at the Coronation of Queen Victoria is amusing. "Medals were scattered with a profuse hand at intervals by the Lord Treasurer of the Household, whose dress was not a little disarranged by the rough manner in which he was treated. The Aldermen of the City of London were particularly conspicuous in their efforts to obtain some of the silver shower." It is a good thing that such scrambles have been abolished. The annual scrimmage for pancake at the Westminster School is a sufficient recognition of custom.

A LL over the country schemes are under consideration or have been adopted, by which the Coronation of the King will be remembered. We notice with satisfaction that many committees are endeavouring to make the occasion one for rejoicing by future generations as much as hy participators in the event. There is much to be said in favour of savage indications of joy by means of bonfires and fireworks: such seductions to exuherant loyalty are effective if the weather happens to be fine, and a moderate expenditure of money is commendable; but the permanent memorial is the desirable celebration. There are many municipal objects worthy of acquisition or betterment, such as Town Halls, Libraries, Recreation Grounds. It is only necessary to visit public collections of works of art to see how they are enjoyed by the people, and studied by

the embryo artist. No better scheme can be adopted than that which has for its object the formation, in however humble a way, of the essentials to refinement and culture.

I T is interesting to turn to a contemporary review of the 70th Exhibition in the Trafalgar Square huilding of the Royal Academy, held in the year that saw the last Coronation in England. On the 5th May, 1838, a "first notice" appeared in The Globe, and on the 18th June, many visits having heen paid to the Exhibition meanwhile, a mature judgment was published. The critic found that "the impression it has left

Coronation of William and Mary: the Royal Barge nearing
Westminster Hall, By R. de Hooge

THE Thames watermen, we believe, are not to be honoured on the present occasion with a place in the procession, although they will be nominally on duty in London. Thus the disinheritance of the river is once more exemplified. Queen Victoria was accompanied in her procession to the Abbey by her Bargemaster and forty-eight Watermen, and sustained the illusion that the river was the highway of London. Perhaps it is time to realise that the waterway has been superseded by the railway and can no longer compete with the roadway. Yet to look at the many representations of pageants of the olden time is to regret that this picturesque means of progress, typifying the commerce of the City, has had to be abandoned.

## The Royal Academy Exhibition of 1902.

 $R^{\mathrm{IEN}}$  n'est usé pour le génie." Thus intrepidly, in this Coronation Year, does the Royal Academy, on the title-page of its catalogue, proclaim the sovereignty of genius. The phrase of Théophile Gautier is profoundly true; and, even though it were not exemplified in a single picture, the motto is well chosen. Rightly apprehended, it makes for catholicity of appreciation, for tolerance, or rather sympathy of judgment. Analogous, in some respects, to the genius of man is the genius of Nature. From age to age the material on which Nature works is the same; yet she never repeats herself. Always, with the fresh green leafage of spring, a new voice is audible; always, as golden autumn sinks into the black month-thus is November called in Brittany-hitherto unseen beauties are revealed. Nature, untamed, unspoiled, is a great exemplar. The Academy's motto should give pause to those who pass sweeping condemnation on the hundred picture exhibitions annually held in London, lest here and there an impulse, struggling worthily to express itself, pass unheeded, as, for that vast number of persons who live blindly in country places, the pageant of the seasons possesses no appeal. Familiarity, whether with theme or method, should not issue in contempt—save, that is, when a painter puts to ignoble uses the talent that is his.

On the other hand, those more or less responsible for the guidance of public taste, should be careful not to hail as genius every flourish of youth, nor to discover it in every "one-man show." "Rien n'est usé pour le génie." If there be but a spark of the imperishable fire in a picture, a piece of sculpture, it may suffice to kindle into being a school of artists no less worthy of the twentieth ceutury than were the Barbizon masters of that from which we have just emerged. And, in truth, is this without the bounds of possibility? In conversation with the writer a young landscapist expressed his failure to understand why, here and now, we should not have the modern equivalents of Leonardo, Giorgione, Rembrandt. Perhaps he was right. One of the most interesting of present-day developments of thought asserts that for fate we should read attitude; that the life of the individual and of communities is determined by the way in which they approach it. That there is, to say the least, a kernel of truth-and truth is ever potent-in this dictum each unay prove for himself. What, then, of the widespread disbelief in contemporary æsthetic endeavour? This: that it creates an antipathetic atmosphere, robs art of the soil, the sunshine, the "dews of peace," without which, perhaps, the Mona Lisa never could have been painted or the Elgin marbles fashioned. In a thousand relationships, as Ruskin, for one, has pointed out, the influence of love is recognised as supremely potent. If we genuinely desire to witness vital activity in British art, are we wise to be so prodigal in discouragement; should we not rather concentrate attention on what of good there be, and by fostering that, hope that the public will come gradually to disesteem what is trivial, merely pretty, uninformed by thought or emotion?

One preliminary word more. There is a widespread belief that the products of genius are for the appreciation of the few only. This is false. The rarer, the more intimate the beauty, the more essentially is it the heritage of all. But, as Milton's prose or the illuminative exaltation of Shakespeare communicates no rapture to those who permit their souls to lie fallow, so do the other arts require intelligent study ere what is hest yields a few ears only of a harvest of joy, which shall go on maturing century by century. It is a vulgar error to postulate that the conquest-fields of genius are circumscrihed. If, indeed, that were so, the outlook

would he gloomy. Noble vision, nobility of expression, the re-weaving of ancient material in the light of a fine inspiration: these are gifts we should recognise with eagerness, not least hecause. now that free public galleries are established all over the country, they are capable of elevating life in the cottage of the manual lahourer, no less than in the palatial abode of the multi-millionaire.

Although it has doubtless caused disappointment in several studios, the reduction made this year in the number of picturesexhibited at Burlington House must he approved. In the eleven galleries devoted to works in oil, 795 examples are hung, as against 923 last year, and 1,090 in 1900. The exhibi-

tion as a whole, too, including Mr. Thomas Brock's colossal equestrian statue of the Black Prince, set in the centre of the quadrangle, contains no more than 1,726 works, as compared with 1,823 in 1901. It is of interest to note, further, that, save in 1895, when 887 oil paintings were included in a total of 1,713 exhibited works, in no year since 1890 has the catalogue contained equally few entries. Taking the eleven years, 1890-1900, but leaving out 1895, the figures are 2,119, 2,102, 2,007, 1,829, 1,849; 1,928, 2,104, 1,967, 2,056 and 2,057. It is to be hoped that we may accept the diminution in number as a good omen, and conclude that the Academy will go farther in the direction of limiting the mass of mediocre work annually hung. Admirers of Mr. Abbey will be disappointed to find no historical or Shakespearean canvas

from his brush; Mr. E. J. Gregory sends nothing; and one of the most regrettable absentees is Mr. Alfred Gilhert. Of unrepresented outsiders, usention may he made of Mr. Cayley Robinson, who, again, did not contribute to the spring show of the British Artists. For the last time, after an almost unbroken series of seven decades, there are works by the late Mr. Sidney Cooper; works, too—one of them of rare significance and beauty—from the hand of the late Onslow Ford.

In the centre of the north wall of the Salle d'Honneur—on the same gold background, used to cover a few inches of the wall, as Mr. Frederick Goodall's, for him

unusual, sketch 'The Garden of Gethsemane'-is Sir Edward Poynter's 'Storm Nymphs,' here illustrated. ln the limming of the three figures, who in their rockhound home sport with costly wreck. age cast up hy tumultuous waters, careless of human needs, Sir Edward shows himself an accomplished draughtsman, an acceptable pictorial exponent of a neo-classic theme. He does not seek to scamp detail, hut rather to work in a tradition such as that with which we associate many of the masterpieces of the world. In the gem room is a small version of the President's 'Vision of Endymion,' seen at Messrs. Aguew's galleries some mouths ago; and of three watercolours one is a study of Mrs.

No. 149.—Storm Nymphs (p. 202).

Murray Guthrie, whose portrait in oils was at the Academy of 1900.

Precedence has rightly heen given to the state portrait of King Edward VII., painted by Mr. Luke Fildes at the command of His Majesty. Isolated by cloth-of-gold draperies, and with every attribute of magnificence, it hangs on the end wall of Gallery III., where, a year ago, surrounded hy stuffs of purple and black, was Benjamin Constant's etherealised portrait of Queen Victoria. The task was certainly responsible, and the responsibility is obvious; and even were Velasquez, Goya, or Van Dyck to reappear they might well feel daunted at the necessity to pictorialise just that scarlet uniform, that crimson curtain, that vieux-rose carpet and chair-covering, that assertive blue

No. 547. - Reception by H. M., King Edward VII. of the Moorish Ambassador, 10th June, 1901 (p. 204).

By J. Seymour Lucas, R.A.

ribbon. And the colours were inevitable. The King is represented life-size, in field-marshal's uniform, scarlet jacket, studded with orders, top-boots, and white breeches. From the shoulder depends the deep crimson cloak, lined with ermine, worn at the opening of Parliament. The red carpet of the dais, and its two visible steps, is transmuted to rose by the light that falls on it; the heavy marble pillars are draped in red; red, again, is the cushion on the marble-topped baroque table, where lie crown and orb. The King

stands in almost full face, his right hand grasping the sceptre, which rests on the table. That this is a faithful portrait treated in a kingly way there can be no reasonable doubt. When we remember, moreover, how rigidly a painter is bound down to details of colour, pose, accessory, it was too much to hope that in addition we should have from Mr. Fildes not a transcript, but a creation; that he should have interpreted in even greater degree the historic significance that attaches to the kingly office, with its splendid

vistas reaching back to Alfred, its unexcelled dignity—in a word, that he should have achieved the perhaps impossible.

A second picture is exhibited by command of the King—that by Mr. Seymour Lucas (see p 203) It shows

House. In a canvas relatively small for the hundreds of figures it contains, Mr. J. H. F. Bacon shows Sir A. J. Newton delivering his address of welcome to the C.I.V.'s in the Guildhall: "Your Sovereign—the Empire—this Imperial City, are satisfied." The Lord

By George H. Boughton, R. A.

the reception by His Majesty, with Queen Alexandra on the canopied dais by his side, at St James' Palace, on June 10th, 1901, of the Moorish Ambassador, Kaid el Mehedi el Mehebbi, and his suite. The simple grandeur of the white-robed central figure, and of his attendants, is in admirable pictorial contrast to the gorgeous uniforms of our Western Court. There is dignity in the mien of the hooded messenger who reads words of greeting from the ruler of a sun-steeped land. It was a happy idea, too, to give beneath a medallion portrait of the Ambassador, whose face in the actual picture cannot be seen.

The British artist cannot vie with his French neighbour in the production of historical canvases. In France, an Accession would have been pictorially celebrated by a hundred brushes, as would have been the home-coming of Lord Roberts and other national incidents that lent themselves to pageant. There are, however, a few pictures in this kind at Burlington.

Mayor stands on the platform, supported by City dignitaries in robes of scarlet and purple, and in front, closely packed, are innumerable khaki-clad figures confronting the speaker. The accuracy, the labour, are amazing.

Apart from collaborating with Mr. A. S. Cope in the equestrian portrait of Mr. W. Baird, Mr. John Charlton is represented by one work only. 'In Memoriam' takes us back to the Diamond Jubilee of 1897, at the moment when Queen Victoria was making her triumphal passage along festooned St. James' Street, on her way to the Thanksgiving Service at St. Paul's. The sunshine of that day was soon to endure eclipse. The last public ceremony performed by Queen Victoria has been painted by Mr. Caton Woodville. The Lord Mayor of Bristol receives knighthood in front of the Council House, while scarlet-liveried grooms stand at the heads of the horses, and the folk of that great commercial centre, from gaily decked balconies and

No. 54.—A Lively Meusure (p. 217).

windows, await the moment for cheering their Sovereign.

To find the pictorial link between works such as these and the, for him, exceptionally large canvas of Mr. F. D. Millet, we have to go back in memory to pictures

Of the war, whether in actuality, in journalism, or in picture, we have had enough—enough, that is, save in the domain of great accomplishment. The war pictures, pure and simple, are almost a negligible quantity at the Academy. True, Mr. Watts' sole contribution is a hust

No. 401.—The End of the Song (p. 216).

By E. Blur Leighton.

in last year's Academy dealing with the funeral procession, which in silence passed between lines of hattleships from the Isle of Wight to Portsmouth, wound its way through silent London, and finally halted at Windsor, where the body of the Queen was laid to rest. Mr. Millet's 'Proclaiming the King' does not fulfil the expectation of splendour aroused by the title. The spokesman is no Rouge Dragon or other Court official, whose very name stimulates the pageant. sense. From a farm waggon belonging, apparently, to the village of Broadway, in Worcestershire, the local representative of the King makes an announcement, whose purport is already known, to the police constable, the farmers, the labourers, the women and the children of the hamlet, grouped around. Eveu as a compilation the picture is unskilled.

portrait of Major-General Baden-Powell (p. 210). The hero of Mafeking is in the khaki for whose unloveliness Mr. Brodrick made excuse, on the score of utility, at the Academy Banquet. It is hroken, however, by a long green tie, whose colour-correspondence is to be found in the feather of the wide-hrimmed felt hat, where, too, is introduced a note of red. Below, in the artist's autograph, are the lines—

"All may have,
If they dare try,
A glorious life or grave."

Another figure prominent in South African affairs is painted by Mr. P. Tennyson Cole, in the person of Lord Milner, standing, full length, a hust of the King in the background; and from the brush of Professor

By fermissin of Messrs Arthur Tooth and Sons.

No. 152.—Across the Health (p. 208).
By B. W. Leader, R.A.

Herkomer is 'The Earl of Albemarle, Lieutenant-Colonel in command of the City Imperial Volunteers.' No artist has attempted to depict a scene of actual

carnage; but Mr. J. P. Beadle, in 'Paardeberg,' (see opposite), shows an incident associated with the

scale, two pure landscapes, the others concerned respectively with 'The Way to the Village Church' and 'An Old Manor House,' whose gables and heautiful windows catch the glow of the sinking sun. In the central gallery the popular artist chooses—for members are

By John M. Swan, A.R.A.

first noteworthy triumph of British arms in South Africa, news of which was received with so much rejoicing in the spring of 1900. As the sun rose on the anniversary of Majuba day, the Boers, under Cronje, finding their position no longer tenable, succumbed to the inevitable - the inevitable as planned by Lord Roberts. The trench, dug during the night by the Canadians and a company of Royal Engineers, under heavy fire, dominated the Boer defences at a distance of eighty yards, and "at 8 a.m., the burghers came straggling out, unarmed, mostly carrying their portable possessions." As Mr. Beadle is an expert observer of military scenes, we may take it that his picture is a faithful record. In 'The Morning' Miss Lucy Kemp Welch aims to interpret one aspect of a theme that in a thousand ways lends itself to picture-that of the sympathy of animals with man. The horse watches over its wounded or dead rider on the veldt till aid shall come or it sink down exhausted. Perhaps Mr. W. B. Woollen witnessed the incident on which he has based his 'Victoria Cross,' where a rider, at peril to himself, has returned to the plain, within gunshot of the enemy, to fetch a comrade whose horse has fallen.

Mr. B. W. Leader sends four canvases on a considerable

said to have a voice in this matter-to be represented by 'Across the Heath' (see p. 207). Sentinelled by pines, it makes for content to fling oneself down on such a moor, whence the eye can travel over an expanse of country, whose every lane and field and hedgerow affect us to delightful thought. Mr. Leader's initial contribution to the Academy was 'Cottage Children blowing Bubbles,' of 1854; and since the 'sixties he has seldom, if ever, failed in his appeal to Burlington House visitors. The picture which we reproduce is an addition to this extensive gallery. Of the several landscapists whose work merits study, Mr. Ernest A. Waterlow is indubitably one. As an example of his art, we illustrate on page 214 'A Backwater on the Ouse.' Nature is not here accepted, so to say, en masse, for in each detail and in the whole we are conscious of the refining influence of thought and emotion. As a design there is balance, order, variety; and the cool greens and greys of the colour-scheme evidence a vision genuinely sympathetic.

Mr. Sargent dominates the Academy hardly, if at all, less than the New Gallery. Eight life-size portraits, and three life-size groups, each of three sitters; such is the sum of his exhibited work in Piccadilly and Regent

On the Sail .

For . the Colline on the Collection of Water F. Marice Pat.

No. 424.—The Victors of Paardeberg (p. 208),
By James P. Beadle.

Street. But it is not hy reason of the size and number of his exhibits—albeit he exercises his full rights of membership hy sending eight canvases, a course in which he is followed only by Mr. A. S. Cope, who to seven portraits adds a design for a yachting medal—that Mr. Sargent compels attention. It must he admitted that no British-horn portraitist, no British-horn artist, indeed, shows a series of works comparable in vitality, in invention, in individuality, on occasions in triumphant hrushmanship and fine ensemble. 'The Ladies Alexandra, Mary, and Theo Acheson, daughters of Lord Gosford,' greet the visitor, from the end wall of Gallery II, immediately the top of the stairway is reached. They greet, and they challenge. A not very exact comparison has

heen instituted hetween this picture Irish Graces' of the National Gallery; yetif markedly dissimilar from that particular Sir Joshua, the Acheson group is unmistakahly an essay in the grand style, a style triumphantly used by eighteenth-century masters of portraiture. From the central jar, of dull gold, springs an orange tree, heavily laden with fruit and leaves. The dress of each sister is white. The lady to the left stands, arms raised ahove head, gathering fruit - a courageous and, as treated by Mr. Sargent, amply justified pose. A second sister, hlue gauze round neck, with a straying sash of light blue, is at the hase of the jar, in naïve, half-shrinking, momentary attitude, as if ahout

to rise. Oranges gleau through the semi-transparency of the over-skirt, into which she has gathered them. The third figure, with large hlack-plumed hat and hlack-and-white sash, stands to the right. A hasket of oranges on the vivid green grass of the foreground, foliage, and a decoratively treated sky, complete this daring composition. The charge of artificiality is surely not justified. Mr. Sargent, it is true, has chosen to represent a moment in the life of these sisters of an essentially transient kind. There is little or no suggestion of past or coming experiences. A change of sky and the thing vanishes. But it is not on that account less true—in design, in poise, in glad colour—to the sentiment of the moment; the grace of the picture helongs to our own day.

On less amhitious lines perhaps, hut, all things considered, Mr. Sargent's most masterly portrait of the

year is 'Lord Rihhlesdale,' in long riding coat and top hat, standing against a fluted marhle pilaster. As a pictorial presence, firmly and sympathetically knit, complete and unmannered, he dominates the central gallery.

Here, too, is 'Mr. Alfred Wertheimer,' in buff waist-coat—standing almost in profile hy a wall hung with retorts—hardly less of a triumph than 'Lord Rihhlesdale'; and 'Mrs. Endicott,' somewhat uncompromising, save in so far as the rendering of the black velvet dress is concerned. The other single figures are the 'Duchess of Portland,' in white satin and rich cerise cloak, one foot on the curh of the marble fireplace of greenish white, a picture that can be compared, or rather contrasted, with

the portrait of 'Mrs. Charles S. Henry,' hy the artist's master, Carolus Duran, which it balances on the other side of Mr. Hemy's marine; 'Lady Meysey Thompson,' an unfortunate essay from whatever standpoint viewed; and 'Mrs. Leopold Hirsch.' The hard contour of the cheek in this last militates against pleasure, hut there is no more exquisite harmony at Burlington House than the pink and silver gown, of old Span. ish hrocade, a deep berthe of lace falling from the shoulders. For some time Mr. Sargent is known to have been engaged on a group of the three daughters of Mrs. Charles Hunter-it was begun at Wharncliffe House two or three years ago. The three sisters, in black and white, sit hack to

Phos. Hollyer. No. 177.—Major-General Baden-Powell (p. 206).

By G. F. Watts, R.A.

back on a circular ottoman, the arms of two most happily linked. A feature of the design, perhaps the most remarkahle feature of the whole picture, is the excellent grouping of the heads; they are hrought together—a somewhat smeary Japanese screen behind—in a way at once congruous and delightful.

In two prominent portraits Mr. J. J. Shannon proclaims his versatility. 'Lady Marjorie Manners,' graciously seated heneath foliage, a bunch of red roses in her black gown, right hand on a fierce-looking bull-dog, and head elegantly poised on slender neck, has something of the quality of an old mezzotint; it exhales an eighteenth-century charm—one, perhaps, not quite in consonance with the temper of to-day. On the other hand, 'Phil May, Esq.' (see p. 217) is a modern of moderns. It would he interesting to know whether Mr. Shannon attempted to portray him in ohviously

No. 249.—Holy Motherhood (p. 216).

By T. C. Gotch.

decorative fashion, or if he at once apprehended that such a course would he an æsthetic mistake. In any case this is a remarkable work, in which Mr. Shannon balances himself very cleverly on the perilous line that divides characterization from caricature. A definite personality is hefore us in the wearer of the pink hunting coat, hair flattened over forehead, hat in right hand, while in the left is the cigar stump to which he is loyal. It is an outspoken statement, disengaged from all superfluities, one which, indeed, verges on the merciless. But so it sometimes is when truth is loyally pursued. Those who recall Mr. Tom Graham's heautiful 'Italian

Girl,' loaned hy Mr. Sargent to the International Society's exhibition at Knightsbridge three years ago, will find in his 'Lady Low' (see p. 216) material for thought. There are pleasant passages in the drapery, and a certain freedom of touch calls for commendation. The avenue of approach, however, is markedly dissimilar from that followed by Mr. Graham when he painted the dark-eyed accordion-player with roses in her cream-coloured dress.

Mr. Orchardson's two portraits, of Dr. Alexander Asher and Sir John Leng, placed on the line beneath a picture that at first sight only could he mistaken for

No. 156.—The Last Ray (p. 217).

By G. D. Leslie, R.A.

a Brangwyn, are much more than merely capable; his brush expresses the finest shade of meaning in his mind. Attention may rather be directed, however, to 'The Borgia,' which, despite obvious shortcomings, is one of the pictures of the year. If only by reason of its stylistic qualities, it commands the respect of those who make study of the central gallery. None save Mr. Orchardson could so have painted the whitespread table, beneath a dramatic canopy of stone pines, which broodingly overshadow the final incident of this strange feast. The fine colour relationships would alone suffice to yield pleasure. On the table are vessels partly filled with purple or deep-red wine, a costly dish of green grapes, silver bloom on each, melon and other fruit-which may be instructively compared with the 'Marriage at Cana,' by Veronese, in the Louvre-and, at the head, is the magnificently dressed master of these grim revels.

Subject pictures, as such, possess a perennial appeal. Two prominent works in this kind confront one another in the first room. In 'La Belle Dame saus Merci' (see opposite), Mr. Frank Dicksee has essayed to represent the lady of the "wild sad eyes" who held in thrall the dreamer of Keats' poem. The mailed knight has set her on his bay charger; and thus, she looking down on

him unpityingly, he-blind to all else, Keats tells us, and hearing only her faerie song-looking up at her face, they move through a blossoming country towards her "elfin grot." Opposite is the 'Aphrodite' of Mr. Briton Riviere. The underlying motive, that of the potency of love, holds undying inspiration. The canvas was suggested by some lines in the Homeric hymn, which tell how the laughter-loving goddess, gloriously clad, hastened down many-rilled Ida, attended by the grey wolf and the bear, the lion and the pard, each under her spell. Many interesting studies for this composition were made, among them that for the leopard drinking at the foreground stream. recently on view, with others, in

Bond Street. We can hardly look at this 'Aphrodite' without recalling the woodland throng in Titian's great 'Bacchus and Ariadne' of the National Gallery. Immediately to the right is the 'Lighting-up Time' of Mr. Stanhope Forbes. The intent is obvious: to establish a just pictorial relationship between these homegoing market folk and the late evening nature-sentiment of remote Cornwall. Even in quiet country places the law now requires that each vehicle, onward from an hour after sunset, shall carry a light. The cart in Mr. Forbes' picture could hardly move with perilous swiftness, but the lad has got down to light the old candle lantern, ere proceeding farther beneath this lowering sky.

One of the smallest pictures in the exhibition is wonderful in inverse proportion to its size. Sir Alma Tadema's 'Caracalla,' so suave, so finely tempered, as to

make us desire a title less associated with brutality, has concentrated into its canvas-space of about 82 inches by 14 inches, embedded in deep gold frame, manifold beauties. If there be too little of emotion—for we may look on the picture unmoved—it is impossible to blind oneself to the masterly way in which each detail has been at ouce minutely rendered and subordinated to a most exigent scheme. There is beauty in the figure of the Emperor, wearing cloak of pearl and purple, who moves over the white marble tesseræ of the floor; beauty in the figures of the maidens, who scatter rose-petals in his path as, bowing low, they step backward; beauty, the beauty of implied silence, in the upraised arm of the servitor; beauty in the many-coloured columns, some rose-twined, in the alcove of Venetian red beyond the limpid green water of the bath, in the ornately carved wall or smooth door against which the dark head of Caracalla is silhouetted, in the bronze figure surmounting the white tower, seen against a sky of too-positive blue, through the open doorway. Miniature-like in its precision, satisfying in its gradations, we here have a finely ordered apotheosis of art in this kind.

The contributions of Mr. Alfred East are this year or unusual interest. He is of those who acknowledge no sovereignty or nature. Suggestions he gains from this

or that scene, but always the impulse towards composition is present. Cool, fresh, delightfully spacious and decorative as is 'The Valley of the Lambourne,' with its balancing trees, whose every interstice is the issue of heedful study, on either side the quiet-flowing river, attention may rather be directed to two somewhat dissimilar endeavours. True to the sentiment of the title is the aspect of the scene rendered in 'An Idyll of Como.' A great thundercloud forms above and partially veils the dream-blue lake, and on the foreground grass, slim trees to right and left, peasant folk dance a measure, intentionally less rhythmic than would have been the case had Watteau been the painter. There is harmony of colour, and, to be paradoxical, atmosphere decoratively interpreted. Yet more worthy of remark, perhaps, is 'Gibraltar from Algeçiras' (p. 217). As to design, we note the happy repetition of the bend in the foreground stream by the elliptical shape of the bay, balancing it to the left; note how the piers of the beautiful Moorish aqueduct have their correspondence in the slender poplars of the mid-distance; note how true is the poise between mass and mass, and how admirably placed is the town, rising from almost sea-level. And the congregation of white houses is indubitably part of a colour-scheme that embraces the gold-green trees, the faint blue bay, dominated by the Rock of Gibraltar, and the more assertive tones of the foreground. This is a decorative landscape of worth.

Mr. Napier Hemy stands alone in the Academy as the exponent of certain moods of the sea; above all things he is strenuous. In 'The Pilot' two stalwart oarsmen, a third in oilskins at the helm, are pulling a heavy boat across angry waters towards the sailing-craft, which waits to be guided through the narrows of a perilous harhour. It is the sea, not of the landsman but of the sailor; the tumultuous sea of swinging waves and winddriven foam. 'The Crew,' see opposite, is another characteristic example. What of anecdote there be is easily understood. We immediately apprehend the appositeness of the sub-title, 'It was time for us to leave her'-leave the sinking ship whose masts are visible to the extreme right-by the direct, forceful way in which Mr. Hemy interprets the power, the insatiate rapacity of these buffeting waters. The artist was wise to paint out the gulls-three were originally introduced -for their sure flight impaired the dramatic appeal of

the picture. Mr. Peter Graham is, perhaps, the most popular of living sea painters. Verisimilitude is his aim. Where only Sea Birds roam' is calculated to provoke the admiration of a majority of Academy visitors. The brown rock, partly hidden by vivid green seaweed, encompassed by surging waters, is painting in this kind carried as far as it is possible. At the other extreme, as to sentiment, is Mr. Stanhope Forbes' 'Chadding in Mount's Bay'-a party of children fishing with the line from a white hoat, mirrored on unrippled waters of blue. Some will recall the vibrant wordpicture of Shelley, of a sea that "trembles and sparkles as with ecstacy." In 'Voices of the Sea' (see p. 212) Mr. Colin Hunter treats another of its innumerable moods. These "unpastured" waters break on the rocky shore, perhaps with an insistent call for peace, or perhaps they gather energy for one of those splendid onsets

which imperil the safety of man. Mr. W. L. Wyllie sends a picture on a somewhat similar theme — a processional advance of foaming breakers beneath a grey sky; but he is, par excellence, the exponent of the Thames. 'Pushing down against the Flood,' which in reproduction forms the headpiece of this article, might almost as aptly as Mr. Wyllie's Chantrey work have heen entitled 'Toil, Glitter, Grime, and Wealth on a Flowing Tide.' It shows the Pool of London at sunset. To the right are the Custom House, Billingsgate, the Monument, and St. Paul's Cathedral; to the left the tower of St. Saviour's, Southwark, originally the church of the Augustinian Priory of St. Mary Overy, with London Bridge and Cannon Street railway bridge in the central background. Mr. Wyllie is familiar with every spar, every rope, that, combined, give æsthetic charm to sailing craft; his merchant steamship is a pictorial

By Arnesby Brown.

No. 326. – The Grew: ''If was time for us to leave her" (p. 214).

By C. Napier Hemy, A.R.A.

presence, his line of harges being tugged up stream possess solidity, character. We have in this work an interesting presentment of the busy, smoke hung waterway which has conduced in such large measure to the commercial supremacy of the most populous city in the world.

'Peaceful Rest' (p. 220), by Mr. Edward Stott, has been somewhat unkindly juxtaposed to a picture wherein are positive blues. Search Burlington House and you will find nothing more quietly beautiful, charged with more of fine personal feeling. Perhaps to no pastoral does the Academy's motto apply with equal force. Almost any evening in Sussex a

shepherd can be seen thus lighting his pipe as the flock wander by a pool. But only an artist carries away an impression of so subtle a beauty, is able to compose that impression-to give sweep to the marginal line of that blue pool, on whose surface evening clouds are mirrored, to suhdue any overexuberance there may be in the grass, thus to introduce a few trees at the base of a chalky hreak in the Downs, reposefully to select from and interpret conflicting sentiments — as Mr. Stott has done. From the same studio is 'Youth and Age,' wherein a lad, and an aged woman, in white cap and apron, both bearing faggots, move along a field path as the moon rises above background pas-

tures. Mr. Clausen sends two pictures only, each somewhat disappointing. 'Homeward'—two horses and their attendant lads leaving the plough in late sunlight—is built up of so many unbeautiful lines and spaces that the pleasure-seeker is daunted; and 'The Rick Yard: a Winter Idyll,' is, in design, similarly unshaped.

Although pictorial art cannot usurp the art of music any more than it can successfully invade the province of literature, some of the most beautiful pictures of the world vibrate with music or suggest intervals of pause. As an example, it is necessary to cite only Giorgione's 'Fête Champêtre' of the Louvre, wherein "the hand trails upon the viol strings . . . and the brown faces cease to sing." A number of works at Burlington House serve to suggest, in greater or lesser degree, that

music, at times unheard, to which the measures of life are set. Apart from the endless music of sea and stream, of wind in pine or elm, human made instruments, less fine of timbre, maybe, than the varied instruments of Nature, are time and again introduced. One of the nymphs in Sir Edward Poynter's principal picture holds a lyre, fashioned of a shell; Mrs. Stanhope Forbes' decorative woodland has as motto the boy's song to Mariana, in "Measure for Measure," "Take, oh, take those lips away;" and Florizel, as represented by Mrs. Mary F. Raphael, has laid down his pipe among the poppies to breathe words of love into the ear of Perdita. Mr. G. H. Boughton, in 'A Tanagreean Pastoral' (see

p. 204), has discovered a happy motive. As the title suggests, he aims to re-vitalise some of those exquisite Greek figures, in rhythmic draperies, found, after centuries of burial, in the neighbourhood of Tanagra, where, hundreds of years before the Christian Era, the Spartans defeated the Athenians. Pan presides over the fountain, at whose base are those who make music on pipe and lyre and tambour. ine. The dancers. in swirling draperies, move on glad-green grass, the green of the poplars behind is tender, the hills are bathed in purple. We may here allude to Mr. Boughton's second picture, 'A Fallen Angel,' outstretched on a ledge of rock, high above ominously

dark waters.

No. 299.—Lady Low (p. 211).

By Thomas Graham.

Meditation, induced and still farther tranquillised by the music of strings, is the sentiment invoked by Mr. Gotch in 'Holy Motherhood' (see p. 211). This artist finds peculiar pleasure in the rendering of rich stuffs, and, although we cannot but account as unfortunate the introduction of kirtle and pointed bodice, which break the flowing lines of the otherrohes, he communicates pleasure to the observer because of the decorative use to which the brocaded draperies—of green, blue, gold, red—have been put. For a variant on this Madonna subject, the visitor may turn to Mr. Val Prinsep's 'Virgin at Bethlehem.' Mr. E. Blair Leighton remains loyal to a theme immortalised by great poets like Petrarch, the Italian prototype of Rossetti, who sang of it with southern passion, southern outspokenness. 'The End of the

Song' (see page 206), is concerned with the theme of love. Neither the harpist nor the sumptuouslydressed girl who smiles at his honeyed words, is aware of the approach of a third figure - mayhe husband, maybe fatherhis sword already halfunsheathed. In those olden times there was little parleying, for ever to silence an intruder was a little considered incident. 'A Lively Measure,' see page 205, is a subject well suited to Mr. Seymour Lucas' hrush. The three worthies, on a hench against a tapestry hackground, are of those who in every age enjoy life; they accept all experience as a contribution to the comedy, or at worst the serio-comedy, of an ever-moving pageant. To paraphrase Fitzgerald, a jug of ale, a pipe well filled, a woman's smile, were for this trio allsufficient to make earth a paradise.

Last year the name of Mr. Arneshy Brown came into prominence hy reason of the purchase, under the Chantrey Fund, of his 'Morning.' This young artist long ago emerged from the influence of his first master, Andrew MacCallum, nor would it now he easy to find evidence of the fact that for three years he was with Professor Herkomer at Bushey. The more interesting of his two Academy pictures is 'Full Summer' (see p. 214). Mr. Brown helongs, of course, to the pleinair school, but into the naturalism of a Bastien Lepage

he aims to interweave something of the romanticism of a Troyon. Sunpenetrated mists rise from his cattle-haunted meadows, and again, in 'Full Summer,' one of the prominent aims is to charge the sunlight and shadow with a note of personal feeling. The lad who fares with his cows along this country lane, the bank of foliage, the distant trees: these are the material used by the artist to interpret his impression of sun-

No. 269.—Phil May, Esq. (p. 210.) By J. J. Shannon, A.R.A.

It is otherwise with Mr. I. M. Swan in his 'Leopardess and Young descending a Hill' (see p. 208). The cloud-wrapped Himalayas are intended as no more than a setting -and an apt setting they form-for the three animals that make their stealthy entry from the left. The characterisatiou is strong, full of purpose.

Mr. G. D. Leslie is, within certain limits, an accomplished artist. We could wish, perhaps, that on occasions he permitted a breath of wind to awaken from their stillness his trees, his grasses, his water. But a conventionalised peace is ever the sentiment of Mr. Leslie's pictures, and cool greens, hrowns, and greys only find place on his palette. 'The Last Ray,' see p. 212, is a representative canvas of an art which, though unimpassioned, is singularly welcome at an Academy overcrowded with assertive and meritricious pictures.

'Three Kings: Sherwood.' Thus is named Mr. J. MacWhirter's large upright in the central gallery, reproduced as a special plate. Theme and title are particularly apposite this Coronation year; it can hardly he hy chance that the popular Scottish artist has chosen now to send this trio of woodland sovereigns. From time immemorial the oak, last of created trees, as man was the last of created heings, has been held sacred, and even to-day in Finland it is "God's tree," nor can we in Britain imaginatively dissociate it from the immortals. Slowly reaching its maturity, its

strength, its greatness, impress. The first oak, according to legend, sprang from the hlood of a Titan, slain while invading the ahode of Zeus, who thereupon chose it as his forest personification. Jupiter was worshipped in the form of a lofty oak tree, whose roots were upon the Capitol. At Dodona, in Epirus, an ancient oak was the actual seat of deity, whose responses were interpreted from the

No. 733 .- Gibraltar; from Algeçiras, Spain (p. 214). By Alfred East, A.R.A.

light and shadow.

rustling branches of the tree. Ovid, doubtless expressing a current helief, tells how Eresicthon's—

"... implous axe mid Cerey's acred grove
Dared violate her immemorial shades.
Huge with the growth of ages in its midst
An ancient oak there stood, itself a grove,
With votive tablets hung and grateful gifts
For yows accomplished. Underneath its shade
The dryads wove their festal dance."

But Eresicthon, despite warnings, would not stay his hand:

"The trembling tree sent forth an audible groan! From its pale leaves and acorns

From its pale leaves and acorns died the green,
Dark oozing sweat from every branch distilled,

And as the scoffer smote it, crimson-red Gushed from the wounded bark

the sap, as streams
When at the altar falls some mighty hull

The life-blood from his neck."

For the sacrilegious act of thus striking at a nymph whom Ceres loved, Eresicthon was doomed. In our own country the worship of the oak was an integral part of Druidical ritual. Pliny, indeed, derives the name Druid from δρῦs, an oak, and hy some it is still connected with darach, the Celtic word for the tree. Contrary to current helief, that mystic plant, the misletoe, seldom grows on the oak; hut the Druids held that the spirit of the oak retreated into the parasite hough when its own leaves withered, and hence they dedicated on the altar sprays of the "all-heal" misletoe. Of all others the British oak is famed for its longevity. The "King Oak," in Epping Forest, is said to have sheltered William the Conqueror nearly eight and a-half centuries ago, and it is far from improhable that the legend is hased on fact. In the

'sixties, at 3 feet from the ground, the circumference of this tree was 26 feet. But if the King Oak he anything like 1,000 years old, what of that at Cowthorpe, in Yorkshire, which at the same distance from the ground has a circumference of 48 feet? Its measurements are approximately the same as when Evelyn described it in 1664, and, despite its age-long watch, its present ruined state, it still each year celebrates that sacred marriage hetween Zeus and Hera—the union hetween heaven and earth which we call spring.

This slight excursion proves that Mr. MacWhirter has

ample warrant for the title of his picture; moreover, we have in Sherwood one of those great forests that in the earlier historic period covered a large portion of England. Later, it hecame a royal forest, and, as all know, it is the traditional scene of many of the adventures of the famous outlaw whose name is perpetuated in that of the natural amphitheatre on the verge of Sherwood, Rohin Hood's Hill. The fresh green moss

covering the hases of the oaks in Mr. Mac-Whirter's picture serves to suggest that at heart these three kings are still young, with all their experience. Thousands of times hefore they have watched the sun dip heneath the western horizon, have listened-for we may credit to the oak power to translate vibrations of what we call light into those which we call sound-to the last encrimsoned farewell of the sun, as pictured hy Mr. MacWhirter. By way of contrast to the mighty, long-lived oak, we have in the middistance some silver hirches, with whose representation the artist is closely associated. The hirch - slender. rapid of growth, which passes swiftly from youth to old age -attends for a hrief space only upon the monarch of the forest.

Mr. Ralph Peacock is one of the most widely remarked of our younger portraitists, and he has a special reputation as an interpreter of child-life. To the present Academy he sends an essay in a different kind. Something of his profound admiration for the art of Mr. Holman Hunt is conveyed in the portrait of the veteran artist

who, in velvet coat, stands with bands hehind hack, naturally, reposefully. The furrows are congruous on the grey-hearded face, indicating as they do the autumn of a purposeful life. Of Mr. Peacock's two child-studies, we reproduce on this page, 'Maud, daughter of Victor Cavendish, Esq., M.P.' In the portrait of this little girl, the forget-me-nots in whose hat vivify the colour scheme, the artist introduces as hackground one of those cahinets—like the stool on which she leans it is inlaid with mother-of-pearl—in the painting of which he takes pleasure.

No. 98.—Mand, Daughter of Victor Cavendish, Esq., M.P. (p. 218). By Ralph Peacock.

Doubtless owing to Mr. Sargent's admiration for his art, we find a portrait from the brush of Signor Mancini. As the picture is hung, the high varnish on an uneven surface of paint catches every reflected light, and hence this piece of bravura painting can hardly be judged aright. The lady - no other, as is well known, than Mrs. Charles Hunter, portrayed by Mr. Sargent a year or two ago-has flung herself down on a golden couch, against which her black dress tells emphatically. Fragments of actual glass, it is curious to note, are introduced in the ring and buckle and in the silver flower-bowl behind.

Than Mr. Henry S. Tuke there are, within or without the Academical fold, few more delightful interpreters of bathing and boating idylls. One of his two Chantrey

pictures, it is true, 'All Hands to the Pump,' is unmistakably realistic; but Mr. Tuke expresses himself more completely in 'August Blue.' Impressions in which he is most interested, and in whose rendering he excels, are those of dancing, sunlit waters, wherein, from a reef of rock, or an old boat, lads bathe, or, in unhastening joy, attend the call of sun and wind and sea. These

No. 1638.—The Marchioness of Granby: Bust, Marble (p. 220). By George Frampton, R.A. (Diploma Work).

pictures are essentially of the open air-executed out of doors, too, if we mistake not -but they do not belong to the crude form of pleinair painting. The lads are lithe and natural; they act with the unconcern of youth. Boats, rocks, sea, are the reverse of unfaith. ful. But Mr. Tuke would use his material to express something visioned by himself alone. As indicated in one of his Academy exhibits this year, he would reveal what to him seems most beautiful in effects of sunlight transmuting into a harmony of 'Ruby, Gold and Malachite' the scene on which it falls. 'The Run Home' on this page is particularly fresh and breezy as to theme. It is daring, from the standpoint of composition, to introduce in the foreground a portion of a racing yacht,

sliding swiftly through the water; but balance is achieved by the representation behind of the hull of a great sailing ship.

In the Piccadilly quadrangle, where should have been Onslow Ford's 'Queen Victoria' last year, is Mr. Thomas Brock's equestrian statue of Edward the Black Prince. Almost inevitably the horse reminds us of

No. 392.—The Run Home (p. 219).

By Henry S. Tuke, A.R.A.

Verocchio's splendid creation in Venice-this although in detail the two animals have little in common. The horse of the Black Prince moves forward with simple dignity; it is a serious and interesting effort in a kind markedly more satisfactory than that of the prancing steeds, unvital, unrealised, of too many of our monuments. At the other extreme as to size is the 'Castagnetti' of Mr. J. Havard Thomas, a silver statuette about ten inches in height. The unperplexed talent of this artist is less widely acknowledged than it deserves to be. No figure at the Academy is in greater degree inter-penetrated with purposeful thought than the player balanced on left leg, right upheld, crossing it, who leans forward slightly, and sounding, with outstretched hands, his castanets.

Mr. George J. Frampton, who was raised from Associateship to full membership of the Royal Academy on March 26th last, has already deposited his diploma work. This takes the form of a bust portrait of the Marchioness of Granby, in marble, see p. 219. Mr. Frampton is a firm adherent of what may be called

No. 1651.—Professor E. Lantéri (p. 220) By Charles J. Pibworth.

the polychromatic school of sculptors; he does not believe that here and now we need dissociate colour from reliefs or examples in the round. In the 'Lady Granby,' the medallions, bearing a peacock design, the ear-rings, and the fastening of the quaint headgear under the chin, are touched with gold. A second of Mr. Frampton's contributions is a bust of Chaucer, reading, which, when carried out in marble, will be placed in the Guildhall, to celebrate the quincentenary of the death, to use the words of Tennyson, of

"the first warbler, whose sweet breath Preluded those melodious bursts that fill The spacious times of great Elizabeth With sounds that echo still."

Professor Lantéri sends to Burlington House a bust, in marble, entitled 'Reverie;' and dreams may well come, unbidden, to the woman of the mobile lips and sensitive features whose draped

head is represented. We reproduce, on this page, the plaster bust of Professor Lantéri—doubtless later to be cast in bronze—from the hand of Mr. Charles J. Pibworth, a portrait, free from trivialities, treated with breadth.

No. 281.—l'eaceful Rest (p. 216). By Edward Stolt.

No. 1725.—Polar Bears—Silver Piece (p. 221).

By J. M. Swan, A.R.A.

Mr. John M. Swan, in his own domain, is one of the most able of living British sculptors. At his best-as, for instance, in the puma with a macaw in its mouth of 1900 I—the results of study pursued with the eagerness of a scientist are lifted out of the sphere of science by the shaping influence of his imagination; his knowledge of animal life-of anatomy, characteristic attitude, habits-is not paraded. Mr. Swan is this year represented by three pieces of sculpture. In the Central Hall is the 'Wounded Leopard,' life-size, attempting to take an arrow from its shoulder, strenuous and purposeful if less rhythmic than some previous efforts; and in the Lecture Room are the remaining two examples, one of these the finely conceived bronze group of a boy, bowl upheld in left arm, with two bear cubs clambering towards it. The effect aimed at, and attained, is that of a spiral, pleasantly enticing the eye upward from base to highest point. 'Polar Bears,' two aspects of which are reproduced on this page, is Mr. Swan's third exhibit. On the apex of a block of crystal, set in silver which as a tracery runs up one of the sides, the two animals hug one another in anything but friendly embrace. To be judged aright, this little silver piece

must be seen in the round. The motive is fine; it is thoughtfully if not triumphantly expressed.

In an article which dealt briefly with the life-work of Onslow Ford, published recently in THE ART JOURNAL (pp. 59-62), 'Snowdrift' appeared as one of the illustrations (p. 61). Had it not been so we should now have reproduced this final and perhaps most beautiful endeavour from the hand of the sculptor. Since January the then soft clay has been translated into marble, and the Procris-like figure, as seen at the Academy, lies, not on dull clay, but on honeycombed marble - frozen snow it might well be-with, as base, an oblong slab of gleaming green onyx, above a band of lapis lazuli. In any circumstances the rare beauty of the work would give us pause; knowing it to be a work finished during the last days of a nobly directed career, it becomes the more impressive. 'Snowdrift' remains as an epitome of the life of Onslow Ford, shaped-albeit not consciously as an epitome-by himself. Peace has breathed its message into the marble figure who, arms folded, lies on the snow. We could desire nothing more poignant, more apt.

FRANK RINDER.

By Marianne Stokes.

## The New Gallery Exhibition of 1902.

THE Fifteenth Summer Exhibition in Regent Street contains 309 exhibits, as compared with 469 in that of twelve months ago. The pictures and drawings have been reduced by about 100, chiefly because of the nonutilisation for pictorial purposes of the balcony; as to sculpture, it has been all but abandoned. If diminution in the number of exhibits signified that the general standard were higher, there would he cause for congratulation. But this is not so. Moreover, interesting in its way, doubtless, as is the collection of modern Japanese objects, the fountained central court is better fitted for the display of statuary, metal-work, &c., amid which, undistractedly, the visitor on former occasions could pause to revise his impressions. The New Gallery owes much to Burne Jones; but from a pictorial point of view his influence operates in an unsatisfactory way on some of the contributors, the truth being, probably, that, here and now, it is impossible to found a Burne-Jones "school" of any worth, or with anything more than a semblance of vitality. In many respects, then, the exhibition disappoints. Remove twenty, maybe, indeed, no more than a dozen works, and the leavening element would be absent altogether.

It would be too much to expect that what has been aptly called the golden autumn of Mr. Watts' art shall at each stage yield products so delightful as the tumbling amorini of 1901. Besides a little sunset landscape, the veteran master sends 'Love steering the Boat of Humanity,' which we reproduce on this page. So, on relentless waters, beneath a relentless sky, does a radiant presence come to aid man, at moments of peril, when fateful winds seem too strong for him; such is the "message" of the picture. From the æsthetic stand-

No. 7.—The Wind in the Trees [Tempera] (p. 225).

By Walter Crane.

point it is little short of a marvel for a man of Mr. Watts' years.

Bewildered we may be when we come carefully to examine the picture. It has been pointed out that the hoat, with fallen sail, is represented as making headway in the teeth of a strong wind, that the figure of Love is not steering at all. If intent less lofty inspired—for there is a measure of true inspiration here—the effort, if Mr. Watts' profound feeling for line and colour did not in some part find expression, then the picture might be lightly accounted. As it is, despite shortcomings, 'Love steering the Boat of Humanity' has no rivals in the domain of allegorical works at the New Gallery. And, after all, perhaps we have seized a part only of the 'message.' Mr. Watts may mean that under the guidance of Love, the craft of life can make progress even against a hurricane of wind and waters.

One of three contributions hy Mr. Sargent dominates the northern gallery: 'The Children of Asher Wertheimer, Esq.,' reproduced as a plate, facing this page. Decoratively it is a trinmph; it satisfies, too, as a revelation of the several characters. The figures are aptly brought together at a moment of pause, which sums up many youthful experiences; they are, too, environed. Here, again, are no colours divorced from their surroundings. The drapery over the hack of the couch finds its correspondence in the dress, of blithe carnation, worn beneath white muslin by the little girl with penetrative eyes and jet-black hair, her arms round a vivacious spitz, tricked

out with hows of mauve. Mr. Sargent has never painted a child, perhaps we should hardly say more winsome, but, instead, more hewitching. In her is concentrated that mysterious orientalism which inspires the beauty of the group. Balance of form and colour-to which the black poodle, a sitter that evidently continues to interest Mr. Sargent much, contributes-variety combined with felicitous repetition, ally controlled characterisation, singleness of purpose unifying, completing the whole endeavour: by the presence of these qualities does the group become a memorable work of art, with an accent of absolute sincerity. On the opposite wall is 'On his holidays, Norway'-a lad outstretched on the rocky bank of a swiftly-flowing river, net and fishinghook heside him, as well as two salmon. It is a dashing, dexterous essay, incontestably interesting as an experiment in the plein-air kind by Mr. Sargent.

To one picture only in the north room can we turn from the Wertheimer group without an unwelcome sense of decline. Mr. T. Austen Brown has before now produced noteworthy canvases, but 'Haymakers' (p. 223) marks not alone an advance, but testifies to larger and more personal vision than hitherto. Under an unmodified top light the picture is ill seen; it demands a more tempered illumination than it is possible to arrange at the New Gallery; moreover, rightly to be judged, it should be isolated. Even under Regent Street conditions, however, the work cannot fail to arrest the attention of every serious student of contemporary art. Some critics will doubtless regard the peasants as Milletesque; hut granting a suggestion of Jean-François-and this need not be conceded, as we hold -Mr. Brown has assimilated, conquered, deflected, and so made undubitably his own, what, if any, of such influence there he. The two figures are genuine pictorial creations. Once intelligently and receptively seen, we cannot forget the man in white shirt and hlue-green trousers, face in shadow, bearing his load of newlymown grass, its fresh greens and golds rendered with interpretative breadth. Nor can we forget the woman of dignified mien, with firmly-set, peasant-proud head, on whose white blouse fall shadows from the rake and hoe she carries. These folk, moving in solemn sunlight along a poplar flanked road, have heen seen in a large, simple way; simple and large is the pictorial evocation. Beyond the trees are a hrown field in shadow, red-roofed cottages, and a glimpse of sky, overhung by an ominous cloud. This background, at any rate at the New Gallery, does not recede satisfactorily, the several planes are not expressed. But 'Haymakers' is a noble conception, nobly interpreted.

A third canvas on a considerable scale is Mr. Frank Brangwyn's 'The Cider Press,' see p. 225. It is a theme eminently well suited to the temper of this artist's work. "Pretty" pictures in this kind we have had time and again; but the pretty-a word which we use in the restricted modern sense of beauty with its spirit fled-is, we rejoice to know, anathema to Mr. Brangwyn. His aim has been to unite the decorative with the idyllic, and, like the old-time press at whose handle red and hlue-bloused men are labouring, to wring from this prodigal harvest of green and red apples inspiriting essence. We could wish some details other than as they are, but there is a generosity, a sense of profusion that we would alter no whit. The delightful little hoy stand. ing amid the apples in the centre, the piping lad, the heavily-laden fruit-tree, the dramatic sky, the strenuous workers-in these, and in the composition as a whole, we find pleasure. It is to be hoped that before long

Children of H. Witheimer Org.

Mr. Brangwyn, the holdest and, save for Mr. Watts, almost certainly the most able of living English decorative painters, will have opportunity to fill the spaces in some of our public huildings or city halls.

A feature has again heen made of examples in tempera, thirteen of which are hung in a group in the little south room. In the centre is 'The Wind in the Trees' of Mr. Walter Crane (see p. 224). "All the winds of the world play upon the Tree of Love," and the two embracing figures are here represented as affrightedly heset with the fierceness of that from the North, the hitterness of that from the East, the honeyed hreath of that from the South, the passion of that from the West. Looking at the picture, some will recall Shelley's immortal ode to the "hreath of autumn's heing," with its hurden of longing, "Make me thy lyre, even as the forest is." Mr. Crane's tempera does not thrill us, hecause it is uncharged with anything akin to these Shelley lines, in which human thought and emotion are caught up and swept along hy the "wild spirit . . . moving everywhere." One of the most charming of the series is the 'Snowdrop' (p. 222) of Mrs. Marianne Stokes. The king's daughter, as told in the old story, has been horne hy the little folk into their woodland home, that they may watch over her in her unawakening sleep, lying calmly content in her white hed, covered with glass. Such stories serve, in an over-husy and clamorous age, to perpetuate that which is naïve and simple and heautiful in the realm of fancy. Something of facrie imagination Mrs. Stokes possesses, and we welcome 'Snowdrop' hecause of its pause-giving qualities, hecause of the pleasant emphasis laid on the unseen realities-presences, they are, that always companion the dreamer-of life. ,

Water-colour - perhaps the most abused of mediums-has been put to its proper uses hy Fernand Khnopff, particularly in the lower panel of his diptych. The pseudo-mysticism of 'The Secret' need not detain us. Some may like to speculate as to the artist's intent in painting the hluerohed lady, the hand of whose longgloved arm rests on the lips of a marhle mask-that of her "other self," probahly-hut the enigma is hardly worth unravelling. Of greater moment is the exquisitely rendered hase of a huilding with gothic windows and doors, overgrown here and there with faint green, reflected on the quiet water of the foreground river. Technically, this is one of the most successful exhibits in Regent Street.

The portraits of Sir George Reid invariably command respect at the New Gallery. Not for some time has he sent to Burlington House, and, unfortunately, alheit doubtless hy his own wish, his name has disappeared from the list of those nominated for the degree of Associateship. It is difficult to understand why the Academy did not recognise Sir George Reid's talent while yet there was occasion. His two portraits possess qualities too often gaily relinquished hy popular painters of the unoment. 'Professor G. D. Liveing, F.R.S.' (see p.

226), has not been sacrificed on the altar of the decoratively attractive, the hrilliant for hrilliancy's sake, the artificial. The personality of the student-sitter has heen seized hy a scholar of the hrush. It is not impressionistic in the sense of revealing a momentary vision; rather it shows the expression of a motive whose significance was slowly if surely apprebended. Sir George Reid's second portrait, that of Sir Joseph W. Pease, M.P., is, perhaps, the more æsthetically alive. Mr. W. Graham Rohertson's 'Mrs. Patrick Camphell,' a study in hlack and silver, suffers from the ashen painting of the flesh, hut, as in nearly every work from this hrush, it gives evidence of a facility directed to other than commonplace ends.

One of the most widely-discussed portraits in the exhihition hangs close hy, that of Lady Diana, daughter of the Marquis and Marchioness of Granhy, from the hrush of Mr. J. J. Shannon. The fair-haired girl, in hlack dress and lace collar, leans forward over a cushion-a pose whose nonchalance is not quite convincing. Mr. Rohert Brough is one of the most popular of young Scottish portraitists. He is apt at everything to which he gives bis attention, play no less than work, in-doors and out-of-doors. His dash and facility are exemplified in 'A Fairy Tale, a portrait group of Daisy and Ned, children of J. D. Buist, Esq.,' in landscape setting; and in 'Alexander Wedderhurn, Esq., K.C.' Other portraits worthy of remark include Mr. R. Jack's 'Miss Dorothy Turnor,' a red blossom in her dark hair, her arms resting on the oval back of a chair, and Mr. William Shackleton's portrait of an auhurn-haired lady, reminiscent, as was this artist's 'Youth and Age,' exhibited last year, of Mr. Watts.

No. 58.—The Cider Press (p. 224).

By Frank Brangwyn.

In the domain of pure landscape, Mr. Leslie Tbomson's 'Lindisfarne' stands out from all else. The picturesquely assertive, the anecdotal landscape are without the artist's æsthetic horizon. If I cannot make my appeal by means of a scene uninteresting in nature to the careless eye, then let me not appeal at all: so, in effect, Mr. Leslie Thomson says in 'Lindisfarne.' The view is that across the dry salt grasses of the flat shore of Holy Island, looking on to the quiet estuary, with its trail of sunlight where sailing-craft move, and in the distance a line of coast in the neighbourhood of Bamborough Castle. Save for a couple of figures ''doing nothing'—nothing, that is, by way of giving

subject to the canvas -and some wheeling gulls, there is no life other than that of nature. But the picture weaves a repose. ful spell over the spectator by reason of the spacious, finely-gradated sky, unbroken by any cloud, of the "chordic" quality of the whole. Nature, remote and cloudwrapped, has been happily visioned by Mr. William Padgett, whose 'Rift in the Mist' shows remote mountain peaks of imaginative blue, permitting themselves for this momentonly, thus unveiled of silvery atmosphere, to be seen of man. Of canvases of note in more or less the same kind are Mr. Bertram Priestman's 'Meadow Land and Marsh,' wherein he seems to be feeling towards a new method, successful here at any rate with regard to the shadowed clump of trees of the distant upland; Mr. G. H. Boughton's 'Autumn's

Dying Fires,' its threefold imagery of desolation—bare boughs, dying embers watched by a solitary figure in the fading light—suggestive of the most haunting of Shakespeare's Sonnets; Mr. Alfred East's 'Morning Song,' where a nude girl walks amid purple irises by a meadow stream; Mr. Moffat Lindner's 'Between Summer and Autumn,' with its over-emphatic tree-reflections on the rippled surface of the foreground lake; and the 'Wild Cherry Trees' fearlessly rendered by Mr. Adrian Stokes.

Mr. Edward Stott reserved his picture of the year for the Royal Academy, but to the New Gallery he sends two little canvases. More important than 'Autumn Gold'—a country lane along which cows are straying—is 'A Moonlit Idyll.' Premising that the figures could well be dispensed with, for, as introduced, they distract and give a false centre to the work, we have here a canvas

which stands apart from any other at the New Gallery. The quiet scene has been deeply felt, and we see not only a field of cabbages, two or three white-fronted cottages, a serene sky, but through these the expression of the artist's sincere and ardent quest of the beautiful, of that phase of the beautiful discernible in the fields and lanes of Sussex by a man of fine vision.

Places of honour in the large western gallery are occupied by three sequent works by Mr. C. E. Hallé. 'In Infancy, the Mother's Care,' shows a child on the daisied bank of a river giving to the kneeling mother a yellow-hearted daffodil; 'In Manhood, the Help and Playmate,' a young man and a girl, lovers surely, are

beneath an apple tree; and 'In Old Age, the Daughter's Song'which at first glance might be mistaken for Merlin and Vivian the patriarch, with grey locks and sunken cheeks, is solaced by the sound of running water and of his daughter's voice, to the accompaniment of a harp. Another ambitious effort is Mr. Herbert Schmalz's 'St. Monica's Prayer.' hung as centre on one of the long walls of the north gallery. St. Augustine, the greatest of the Latin Fathers, in his youth, to a penetrative intellect added a pagan love of pleasure almost unrealisable to-day. Neander has put it on record that "whatever treasures of virtue and worth the life of faith (even of a soul not trained by scientific culture) can bestow, were set before him in the example of his pious mother," St. Monica. In Mr. Schmalz's picture she kneels at

# Impressions of the First International Exhibition of Modern Decorative Art at Turin.

BY WALTER CRANE, A.R.W.S.

(A DELEGATE FROM ENGLAND.)

The Turin Exhibition Buildings-Principal Entrance.

THE idea of this Exhibition is certainly a bold and brilliant one. No small amount of courage was needed to organise a popular exhibition in reliance upon Decorative Art as the main attraction and centre of interest, and I believe the artistic committee of Turin experienced some difficulty at the first in convincing the wealthy citizens and public of Turin of the reality of such basis. Decorative Art, indeed, as a means or language of restbetic expression, either in a national or international sense, scarcely existed a quarter of a century ago. We had, it is true, the "Fine Arts" and "Industrial Art." Abundant samples of both sorts have been seen at International Exhibitions since 1851; but each, after its kind, bas been kept carefully apart and distinctively labelled.

The results, bowever, of the great movement—the very marked revival of and interest in Decorative Art of recent years—are now manifesting themselves in a kind of international language of expression in line and form. There appears to bave been a species of natural evolution (however artificial in some of its forms) going on in the arts of design—an evolution of line and form which may be traceable to comparatively few and simple parental germs.

The original stock is now so disguised, so overlaid

The Turin Exhibition Buildings.

Façade of the Grand Vestibule.

and covered with the luxuriant growth and efflorescence of the graft, that it is in danger of being obscured and forgotten; but it is there, nevertheless, and, moreover, by common consent the roots are found in England.

The children may be wild and extravagant, but they sprang from sober-minded parentage. From the medieval inspiration of the 'fifties, 'sixties, and 'seventies, and the return to simplicity, bave sprung the parasitic clinging and spiral forms of "l'Arte Moderna."

The primitive elements still exist, but new ones bave been added: infusions from Japan, Persia, and the East, from India and China, from Ancient Egypt and Assyria, from Aztec remains, from Maori and Polynesian carvings. These are some of the strange chemical elements flung into the seething cauldron of modern invention, around which, in a serpentine dance, move the weird sisters of the new art!

The vision of the new artist, too, seems sometimes affected by the bald engineering and scientific appliances of everyday life, and we find in architecture and decoration motives which seem inspired by the telegraph pole and its wires, or the ever-recurring insulator.\*

The river of artistic evolution, as it were, swollen in a time of rapid revolutionary scientific discovery and movement—with tributary and often turbid streams of new thought and balf-formed ideas—sweeps with increased velocity between the banks of bistoric tradition, carrying away many a landmark upon the wild and swirling lines of its currents. Amid the drift and wreckage which float upon the waters, strange and often incongruous re-combinations of form occur, of old and new, of brass and clay, of free thought and tradition—shot with the iridescent hues of the ever-changing surface of the eddying flood.

Such thoughts not unnaturally occur at a first glance at the exhibition at Turin.

We enter at the "prima porta," or "ingresso principale." Approaching from the Via Raffaelle, we are confronted by two vast pylons of a semi-Egyptian, semi-Assyrian type, capped with broad eaves of Swiss-châlet suggestion, with a more or less Saracenic battlement emerging above. The pylons are coloured

<sup>\*</sup> In the photographic pavilion, indeed, the designer has frankly accepted the ubiquitous tripod and camera as the principal ornamental and constructive motive of the portal, so that there can, in this case, be no mistake about the purpose of the building.

a deep Indian yellow, scored with lines and patterns in white; under the broad eaves occur friezes of a vine pattern in green, outlined with gold upon a black ground. The pylons are connected with light wooden gates, built to a long, descending curved line from either side. These are painted strong Indian red, and through these access is obtained to the exhibition grounds in

the Parc Valentino. The pylons are flanked on either side with tall standards, in groups of three, and on these is hoisted the brave banner of Turin—the golden bull, Toro del Torino—on a deep blue ground. The ensemble is certainly striking and bold, and the lines of the gateway and pylons compose well with the pleasant background of the wooded slopes on the other side of the River Po.

Passing through the gates one is compelled to halt before a wonderful and energetic military spectacle in bronze. It is the equestrian statue of Prince Amadeo of Savoy, a new national monument (solemnly inaugurated by the King of Italy on the 7th of May). Its sculptor is Signor Calandra, and he has been very bold

and original in his treatment of the pedestal. Instead of the usual bronze panels set in the stonework, hе has carried an animated, connected, and very dramatic design continuously around the pedestal, springing from basso to the highest alto relievo, with bold groups of charging knights at the corners. The historic periods illustrated in these groups, too, seem

as various as the treatment. It is a history of the military prowess of the House of Savoy, and this extraordinary pedestal is the most interesting part of the monument. It is crowned by the figure of the Prince upon a spirited horse, rearing up on his hind quarters—a reminiscence of the Battle of Custozza, and therefore politically significant to the Piedmontese as a symbol of their freedom from the Austrian yoke.

From the artistic point of view, and looking at the monument critically, if one cannot quite reconcile oneself to the choice of scale and the non-architectonic treatment, one is compelled to admire the vivacity and courage of the conception and treatment.

Turning a little to the right we catch sight of a

Sculpture on Pedestal of the Statue to Prince Amadeo.

By Signor D. Calandra.

wonderful dome, the "Rotunda d'Honneur," or "grande vestibolo," of the exhibition, from which branch out, to various points of the compass, the sections of the different nationalities.

The roof of the dome is quite plain, hut from the first circle of windows downwards breaks out a rich efflorescence of ornament, both polychromatic and sculptural. Great curved semi-transparent yellow eaves or sun screens overshadowing the highest windows -looking like huge eyelids to the lights of the dome -are the most salient features at first sight. Then one perceives a series of massive buttresses, starting from rectangular pedestals, on each of which a colossal group\* in plaster of the three arts (architecture, painting and sculpture) are repeated. Sweeping curves extending

upwards and inwards from these lead up to a female figure of victory (or fame, or honour), with outstretched arms, holding in each hand a gilded laurel wreath. and the same figure is repeated on the crest of each buttress all round the dome. The chief units of the mural decoration upon the walls between and upon the buttresses consist of chequers of green and gold, vertical lines incised and gilded, terminating in fanciful discs, and rectangular leaf-masses in two or three shades of green, the plaster of the wall surfaces being of a creamy or ivory white.

Entering, a vast scenic painted scheme of decoration meets the eye. From the main piers gilded trees, in low relief, branch upwards from the ground, the spring of their hranches connected or concealed by squares of green and gold chequers. The æsthetic botanist will recognise our old friend "honesty" in his seed time (the "herb o' grace" of modern decoration) among these festive branches. Above, in gold letters upon discs are inscribed the names of Italy's great sons, masters of the past, and past-masters of decorative

art, such as Giotto, Leonardo da Vinci, Michael Angelo. Above each name is a lamp painted, and from each lamp ascends a column of smoke, uniting above and spreading horizontally, forming a sort of irregular arcade around the interior of the dome. By each lamp are grouped Muses, and hehind them, forming a belt, is a grove of formal trees, in two or three planes of distance, bright orange and red semi-transparent rifts of sunrise breaking through the grey sky hehind the tree stems. The ceiling of the dome suggests that the tesseræ of a pavement has been in some mysterious way attracted upwards. Detached squares of gold and hlue are the principal elements, hut no doubt these are the newer symbols for the starry vault;

whilst the attenuated and fantastic trellis-work of the lower oval range of windows suggests spiders' webs.

A corridor surrounds the vestibule of the dome. which opens on one side to the gardens and the main entrance, and on the other sides gives access to the various sections, the largest being a great central hallthe "Galleria Italiana"-devoted to the display of Italian decorative art. This hall is also elaborately decorated-the walls stencilled and painted, the ceiling and the iron supports of the roof draped and festooned -the old classical and Renascence motive of the hanging garland mixing up with types and forms belonging to "the new art."

Here is displayed modern Italian work in the various Arts and Crafts of design: pottery and glass, textiles,

Statue of Prince Amedeo of Savoy. By Signor D. Calandra.

furniture-often wonderful in technical qualities, but to English taste generally extravagant and fantastic in design, and over-emphatic in its exaggerated expression of the prevailing mode in motives of line and form, which is allowed to dominate in all materials apparently, quite regardless of the principle that the special characteristics and the limitations of the material should he carefully observed, and he the governing element in designing and the adaption of design to various useful or decorative purposes.

This remark, indeed, might apply very generally to the exhibitions of the various foreign sections, so far as they were complete, when seen by the present writer, with the exception of the Dutch, where the furniture and textiles and the ensemble of rooms had evidently heen studied from a point of view closely kindred to the English Arts and Crafts principle stated above; but

<sup>\*</sup> I should have said that the modeller of these groups is Sig. E. Rubino. The architect of the exhibition building and entrance gates is Sig. Riamondo D'Aronco, who is architect to the Sultan, and resides at Constantinople.

even here, in surface design, the restless squirming curves, the tangles of spiral and attenuated stems, with semi-detached spots, or degraded peacock's-eye featbers, were reiterated too often.

A growing suspicion enters the mind that this kind of design is becoming, or, indeed, has become, a sort of æsthetic rhetoric, with little or no thought or meaning behind it, and that its superficial characteristics are being rapidly assimilated, and imitated in degraded forms for purely trade purposes.

This is not a bappy reflection. But such a fate too easily may overtake movements genuinely artistic in their origin, under the commercial organisation under which we live.

There is, of course, all the difference in the world between the honest manufac-

turer who desires to produce good work, and who seeks the aid of genuine artists in the design of the work he produces, and pays a fair price for their taste and invention, and one who gets up a base imitation of some current designer's style, or even copies an artist's de-

sign witbout acknowledgment, rusbing bis wares upon the market with the sole aim of making a profit.

No doubt, too, there exists a vast undiscriminating public who fall an easy prey to the expert salesman with bis "artistic" novelties. There is a desire to have the true artistic hall-mark upon every article-to he in the mode, by hook or by crook, to he able to pronounce the current artistic watch-word in decoration. With such a spirit abroad it is perbaps hardly surprising that purely commercial products should be offered for

Decoration of the Turin Exhibition Buildings. Allegorical Group of The Arts.

corrective, perbaps, to the excesses of the new art,

The Turin Exhibition Buildings. The Grand Vestibule.

works of artistic impulse, taste and originality-and any large exhibition of art is peculiarly liable; to the invasion of such counterfeit wares.

The managers of the Turin Exhibition, bowever, it must be said, are wise in their generation. Ostensibly, and principally, it is, no doubt, an Exhibition of International Decorative Art; but, to supplement this by way of garnish to the central dish, there is a gallery of modern Italian pictures and sculpture.

Also, amid the charming groves of the Parc Valentino, for those wbo cannot live by "Arte Moderna" alone, there are various pavilions with both direct and indirect appeal to other and more material appetites, such as cafés and restaurants, and a

building devoted to wines, oils, and "conserves alimentari." Then for purely physical diversion, have they not tboughtfully provided a switch. back railway and a water - sbute, so that the denisens of Earl's Court, should they wander to Turin, will feel quite at bome; while as an æsthetic antidote and

> there remains the Castello Mediævale, with all its wonderful reproduction of conscientious detail, with its frescoed walls and quaint provençal legends recalling us to the spirit and the art of another day.

> > WALTER CRANE.

(To be continued.)

N TE .- The Committee of the Exhibition, it may perhaps be mentioned for the benefit of English visitors, have published an admirable little guide (in English) to Iurin, copiously illustrated from photographs, which gives all the main points of interest in and about the city. (F. Casanova, Bookseller, Turin.)

## Passing Events.

THE reception of M. Rodin at a complimentary dinner in London on the 15th May was the formal recognition of the work of an artist who, in his physical maturity, is receiving the honours deserved at an earlier period of his career. This homage to merit provides another instance of the untenable position of an artist equipped with only mediocre abilities and without influential means of pursuing his calling: it provides also the exemplification of the platitude that given real ability the meanest circumstances are no barrier to fame. Those who took part in the tardy lionising of M. Rodin should have experienced a qualm of conscience that the claims of their guest had been ignored for so long, although "THE ART JOURNAL," from its constant exposition of Rodin's work, could scarcely be included in this experience.

H APPY are they who hear their detractions and can put them to mending." If some discriminating board of investigators could be formed to discover and support those necessitous gentlemen, skilled and conscientious in their work, who have failed to secure repose in their declining years, the world would eagerly "put to mending" the detractions from its honour caused by such cases of neglect of which the late John Sandford Dyason was an example. Artist, architect, author, tutor, his lack of concentration to one profession may have been responsible for his poverty. His efforts were sincere, his talents undoubted, yet he was doomed to penury while others flourish with less capabilities, inferior experience, but with more well-directed footsteps. Mr. Dyason was a familiar figure at the meetings of several learned societies in London. In his demeanour was a quality which caused his shabby, almost suspicious, appearance to pass unchallenged, and it is one of the irrefragable twists of fortune that such a citizen should be dependent in old age on the Board of Guardians over which, in his younger days, he presided.

WHILE rejoicing with our Continental brethren in the possession of a living artist so highly endowed as M. Rodin, with them we must lament that the art of sculpture has been deprived of M. Jules Dalou, a worker of the keenest perceptibilities, who was born in 1838, and died this year. M. Dalou, in his younger days, was well known in London; he held office as Master of the School of Modelling at South Kensington, and was an occasional exhibitor at the Royal Academy, his last appearauce there being in 1879. He and the late Mr. Onslow Ford were artists whose work spared the world from the reproach of a lecturer recently, who called statues "hideous caricatures and soul-killing effigies," that all statues answered that definition.

THE death must be recorded of M. Benjamin-Constant (born 10th June, 1845; died 26th May, 1902) and of Mr. Phil R. Morris, A.R.A. (born 4th December, 1833; died 22 April, 1902).

N landscape painting it is not desirable to insist on the accuracy of the topographical element introduced. Most painters indulge their fancies, and even Constable, who interpreted Nature with more than average fidelity to his subjects, sometimes departed from reality. Nevertheless, the country of Constable's rendering is quite recognisable, and the Great Eastern Railway Company desire to render accessible to tourists the neighbourhood which was so well beloved by the famous artist. A short train journey to Colchester, a drive to Dedham, thence by towpath or river to Flatford Mill, affords an opportunity to see a most delightful part of the country, and at the same time to compare records on canvas, of both Constable and Gainsborough, with the original sources of inspiration. The country remains practically unaltered, and the excursion is thoroughly agreeable and interesting.

COLCHESTER has been enriched by a building which is a worthy addition to municipal government houses. In 1897 eight sets of drawings were exhibited in the old Town Hall, and Mr. R. Norman Shaw, R.A., the assessor, awarded the first premium to Mr. John Belcher, A.R.A., under whose supervision the new Town Hall has been erected. Lord Rosebery performed the opening ceremony on the 15th May, when the building began to formally justify its existence.

BOND STREET has been enlivened recently by an exhibition of drawings from which have been made illustrations to the ever-ebullient "Punch." The temptation at such an exhibition is to renew acquaintance with the joke, and to smilingly waive criticism of the drawing; but some of the drawings shown at the Woodbury Gallery were worthy of study from the point of view only of clever pen-and-ink draughtsmanship. Mr. Linley Sambourne had many drawings executed in his own distinctive manner. Mr. Bernard Partridge showed several of his black-andwhite masterpieces. Mr. E. T. Reed, the playful historian, Mr. Phil May (whose portrait we reproduce on p. 217), Mr. Ralph Cleaver, Mr. Raven Hill, and Mr. C. L. Pott, were well represented by their work, and we are glad to learn that the proprietors of the Woodbury Gallery have been able to substantially help the Hospital for Sick Children, in aid of which deserving institution the exhibition was arranged.

THE growth of Art galleries in the West End has proceeded during the last few years with astonishing rapidity, and the sumptuous appointments among which exhibits are set is an indication of the prosperous results of commerce in Art. The Parisian house of Lowengard has recently opened a branch establishment in London, and at 31, Old Bond Street, some exquisite works of art, especially tapestry, may be seen.

M ESSRS. SPOTTISWOODE have permitted us to see examples of colour work for the embellishment of book and magazine covers. The admirable results obtained prove that the firm have gained a rare excellence by difficult and costly experiments, and have achieved that refinement of taste in the juxtaposition of colours which so many printers unsuccessfully strive to attain.

EXHIBITIONS are promoted with so much activity at this time of the year that it is a pleasure to divert attention from picture Art to artistic pursuits in companion subjects. Messrs. Doulton's works at Lambeth are rather difficult of access, but the disadvantages of the journey could not entirely absorb the satisfaction to be derived from an inspection of the cleverly executed designs exhibited .- The collection of embroidery and lace shown by Messrs. Debenham and Freebody was worthy of the standard of excellence for which the Wigmore Street establishment is noted.

SUBSCRIBERS to "THE ART JOURNAL" are reminded that the premium plate for last year (1901), 'London's River,' an original etching by Mr. W. L. Wyllie, A.R.A., can only be obtained up to July 31st, 1902, when the extended time expires for the reception of the coupons. Under similar conditions the premium plate for this year, 1902, will be available to Subscribers. The engraving is in preparation from the original picture 'Adieu,' by Mr. E. Blair Leighton, and is quite dissimilar in subject from any previously offered in this

#### Recent Books on Art.

From a Drawing by Miss Constance Foxley.

volume of such a series as Bell's "Great Masters' necessarily varies, and one of the most workmanlike and satisfactory is Lord Ronald Gower's ''SIR DAVID Wilkie." The writer is perfectly at home with every phase of his subject's life, and he is able to illustrate all the artist's best pictures (except onethe 'Rent Day'), and his list of owners of works is practically complete. Other volumes of the series are Mr. F. M. Perkins' "GIOTTO"

and Dr. W. Martin's "GERARD DOU," the latter being by the hard-working under-Director of the Hague Museum. Messrs. Bell's companion series of "Great Craftsmen" is also continued in Mr. Headlam's excellent "PETER VISCHER," the old German metalworker, and Mr. A. M. Cust's "IVORY WORKERS OF THE MIDDLE AGES." A second edition of Mr. Walter Crane's practical and helpful "BASES OF DESIGN" (Bell) is also published.

Messrs. Cassell's serial publication, now issued in a handsome volume, of "THE NATION'S PICTURES," is probably the first important book in which all the illustrations have been produced by the three-colour process. The subjects, all by modern British painters, are particularly well chosen, and undoubtedly represent the best of the nation's pictures by artists mostly of to-day. The process, with all its glamour of originality and brightness, is not absolutely successful, and it may be that monochromatic reproductions would have been more likely to please in the long run.

For strangeness in execution and weirdness in subject no book can be found to compare with the fascinating collection of "ANTIQUE WORKS OF ART FROM BENIN" (privately printed for Mr. Batsford), by the late Lieut. General Pitt-Rivers, formerly the official inspector of Ancient Monuments in Britain. They were found in Benin, on the coast of Guinea, near the mouth of the Niger, in 1897, and it had been the intention of the author to continue his researches. Enough has been brought together (400 pieces in all) to show the marvellously interesting styles of West African Art.

The originals of the "ILLUMINATED LETTERS AND BORDERS IN THE NATIONAL ART LIBRARY" (Eyre), at South Kensington, are quite inadequately appreciated by the public. The authorities bave issued a very complete catalogue by J. W. Bradley, and doubtless this will help to draw attention to the treasures in the Library.-Messrs. Blackie have published a handbook for students and teachers on "BRUSH DRAWING," with abundant illustrations in colours. The same publishers issue a further set of "DRAWING CARDS," also in colour, for school use.

Mr. Walter West has excelled himself in the illustrations to bis pastoral poem of "FULBECK" (H. W. Bell, Norfolk Street). Both figures and landscapes are artistic in conception and execution, and the little drawings are well reproduced.

We are not yet amongst the ardent admirers of the art of "F. C. G.," so that his "FROISSART'S MODERN CHRONICLE" (Fisher Unwin) does not appeal to us as an artistic effort, although, doubtless, as a political squih the book will have its purpose.

The British Royal Pavilion of the 1900 Paris Exhibition was plentifully described in these pages. The energetic and very successful director, Mr. Isidore Spielmann, has issued from St. Stephen's House, Westminster, a quarto illustrated account of the rooms, with illustrations of every one of the very remarkable collection of Old English pictures in the rooms.

For those who wish to ascertain how the ordinary Frenchman looks on artistic tradition, the little book "LA VIE ARTISTIQUE DE L'HUMANITÉ" (Paris, Reinwald) will scarcely be found sufficient. It is rather superficial, and errs from the fact that it is impossible in 200 pages to give proper balance to the art of the world; but it is so very frankly Parisian as to be interesting for that alone.—The first International Congress on the Teaching of Drawing (Paris, 117, Boulevard St. Germain) has issued a most elahorate report, much longer than the occasion demanded. All the speeches, and many details concerning people of whom the world has yet to learn, are printed in detail. The name of the representative from England is not to be found in the ordinary sources of information.

"When our Ludeman wa"

## Supplement to "The Art Journal."

### SPECIAL PLATES.

## 'On the Garry.'

BY JOSEPH FARQUHARSON, A.R.A.

THE work of Mr. Joseph Farquharson was not very well known in England until his election to the Royal Academy two years ago, hut that he is among the foremost of our landscape painters will he recognised at once by his heautiful picture, 'On the Garry.' His work has much of the strength and force of the art of that great master of Dutch landscape painting, Ruysdael, and at the same time is so full of poetry and feeling that it cannot fail to appeal to all lovers of scenery, and, indeed, we venture to think, to awaken a sense of the heauty and wonder of Nature in many hitherto uninfluenced by her charms.

In looking at the picture hefore us there is irresistibly horne to our minds a sense of peace; there is no feeling of unrest in the ever flowing waters, whose winding course we can trace hack in the distance to the far hills, and yet this never ending movement we feel to he in contrast to the quiet hills, the firm standing trees, and the still rocks, round and over which the water incessantly flows. No figure mars the scene with any suggestion of human unrest or disquiet, and the heauty of the whole is enhanced by the rich tones of the colouring and the strong lights and shades which the artist has so skilfully employed to hring vividly hefore our minds the cool depths of the rock pools.

Mr. Farquharson is a disciple of the gospel of thoroughness in which no true artist can afford to disbelieve, and which is responsible for the heauty of many of our best modern landscapes. One of his hest works is to be seen at the Tate Gallery, the 'Joyless Winter Day'; it was purchased for the Nation in 1883 nuder the terms of the Chantrey Bequest. The picture is an excellent example of the style hy which Mr. Farquharsou is more generally known to the public, for he has made the treatment of snow his special study. There is prohably no artist living who has painted more successfully the quiet heauty of a snowy landscape. Who has not looked with pleasure and admiration on his many contributions in this style to the Royal Academy Exhibitions of recent years? - the snowcovered fields, throwing out in hold relief the hare hlack trees, the shivering sheep and the still winter sunset, all so true to uature that we almost feel a chilly seusation as we gaze at the picture. Another fine example of this class of work is to he seen at the present exhibition at Burlingtou House, the picture is called 'A Winter's Night.'

But that Mr. Farquharson can paint a heautiful landscape without the snow is ahundantly proved by the picture under notice, and we look forward with pleasure to seeing many more examples of the versatility of his landscape art.

The picture 'Ou the Garry' has heen reproduced as a large etching by M. Brunet-Dehaines, who has done full justice to its many charms.

## 'When our Gudeman's Awa'.'

By BRITON RIVIERE, R.A.

THE painter of animals, especially of dogs, will always find favour with the general public, and more so if the artist can attach to his subject some indication of a story. Mr. Briton Riviere never fails us in this respect, and in the picture under notice what a tale is there of care and affection hestowed by the man whose humble estate is revealed to us in the details of the picture, and of love and fidelity on the part of the dog, as, all eagerly expectant of his master's return, he waits in that master's favourite seat, looking as if already he heard the well-known foot-fall. The unaffected attitude of the dog is very striking, as he thinks not of the admiration he deserves, hut merely of the duty in hand, to guard his master's possessions.

Mr. Briton Riviere is a worthy follower of the greatest animal painter the world has ever seen, and though his works may not he so generally known as those of Landseer, this is prohably due to the fact that at the time of the publication of the engravings of the latter they had hut few rivals, and were to he found on the walls of nearly every English home, while the artist of to-day is surrounded with competition in this respect.

Speaking of Mr. Briton Riviere in "The Art Annual" for 1891, Sir Walter Armstrong, the well-known writer, says, "His strong points are his sympathy with animals, his pleasant sense of colour, his directness of conception, and his fine vein of poetry. . . . . His sympathy with dogs is too thorough to permit of their degradation into half-taught actors. He paints them for what they are, a symhol of what man was once, the rough material of civilisation with virtues and vices yet unhunted hy convention; emhodiments of the crude elemental passions, controlled only hy the hahit of respect for such a substitute for providence as man can offer and canine nature understand." All these striking characteristics of Mr. Briton Riviere's art are exemplified in the picture under notice.

Mr. Briton Riviere hegan work as an artist when quite a hoy, and exhibited at the British Gallery and the Royal Academy while still at school at Cheltenham College, and afterwards when he went up to Oxford. After he left college he contributed illustrations to various English and American publications. He has heen a constant exhibitor at the Royal Academy and various exhibitions abroad, and though his leaning has generally heen towards animal painting, he has during the last few years shown us another side of his art by giving us some excellent portraits; but even into these he has usually iutroduced some favourite dogs.

An exceedingly interesting exhibition of studies and designs hy Mr. Briton Riviere was held receutly in the Galleries of the Fine Art Society. The studies represented the larger part of a collection covering a period of more than thirty years. Many of them were made with direct or indirect reference to subject pictures. Others were simply records of various animals which from time to time came under the artist's observation. The majority of them are from life, and they not only gave us an insight into the methods hy which the artist obtains the life-like forms of his animals, but they also show us the extreme care and earnestness with which he prepares his pictures.

## A History of Artistic Pottery in the British Isles.\*

THE POTTERIES OF LONDON.

By FRED. MILLER.

 $\Lambda$  SCULPTOR should have the making of a potter in him, for the two callings have much in common and some of the best examples of the potter's art have been largely the work of sculptors. But though sculptors have been employed in all the celebrated potteries, as we saw in a former article, it is not often

Portrait of E. B. Martin.

Modelled by R. W. Martin.

that a sculptor starts a pottery, and largely gives up his own work to run a pot factory, as did Mr. R. W. Martin, though the word "factory" will, I know, sound ugly in his ears, for it is his attempt to escape from the blighting effect of the factory that has kept the Martin ware the artistic, delightful production it is, but at the same time has brought more honour than profit to its owners, for the Martin ware, which is a salt-glazed stoneware, is produced by the brothers Martin, no other labour being employed

I inquired of Mr. Charles Martin, who, as the husiness man, is generally to be seen in the small showroom shop in Brownlow Street, whether they had tried women's assistance, so largely used in most potteries, and he said, emphatically, "No." The work on sale was solely the production of his hrothers, who work down at Southall, though he confessed that their choice of the site of their pottery was not a very happy one; but all London potters are at some disadvantage owing to the fact that the raw material has to be brought from a distance.

It is now about thirty years since R. W. Martin began to work as a potter, though it is due to Mr. Walter Martin to say that many of the technical details, so essential to good potting, and yet so evading when one

\* Continued from page 36, Supplement.

is a tyro, have been worked out by him. Mr. R. W. Martin had been a student in the Royal Academy schools, and might have won the renown as a sculptor that he has for his pottery. Not that his skill as a sculptor does not find scope as a potter, for, after all, the shape of a pot—its contour, proportion, mass—is the first consideration, and the decoration ought to be, not something applied in an arbitrary manner, but design growing out of, or at all events suggested by, the shape. Then there is infinite scope for modelled decoration, and some of the pots shaped into animal or human forms are sculpture of a high order.

Potting is an engrossing, nay, fascinating calling, and when once one has done anything with clay and a kiln, the fascination seems to get into the blood, and so one is led on step by step, the feeling of a pioneer in a strange land stimulating one to proceed. And that is the spirit in which the brothers Martin have worked all along, trying to do something better each time, exploring fresh country rather than tilling a well-manured patch. Female assistance would he of little use to the Martins, as there is nothing of the mechanical about their ware, no reproducing some particular article by the dozen or gross, for each example coming from their kiln is an original effort, to the extent, at all events, of not being a copy of any other existing work, though where one is decorating pots for years patterning must run somewhat in grooves.

I have said elsewhere that each worker has to make up

Portrait of R. W. Martin.

Modelled by himself.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Martin Ware. Grotesque Jug.

his mind whether he shall appeal to the connoisseur or the man in the street, there being no middle course. Messrs. Martin are fully alive to this, and so they go on in their own quiet way, producing what they feel to he good work, trusting in the discriminating few to find them out and patronise the produce of their kiln, for it takes the work of some months to fill their kiln, moderate in size as it is, so that a couple or three firings a year is ahout as much as they produce.

The general reader may obtain some idea of the risks a potter runs when he realises that the work of many months has to undergo this ordeal of fire, and it is possible to ruin the work of half a year through the fire ceasing to he a servant and becoming a master. Stoneware must be fired in an open kiln, i.e. the ware must he exposed to the direct heat of the fire, and not be protected in seggars or fire clay hoxes, as other glazed pottery is; and for this reason, that when a certain heat is reached, which must be high enough to hegin to melt the

fabrique itself, common salt is thrown in from the top of the kiln, and the vapour given off attacks the hody of the ware and gives it a beautiful gloss, sometimes very glassy, at others less so, but at no time does salt glazing resemble a dipped glaze, which looks "varnishy" hy comparison. Stoneware is more nearly akin to hard porcelain than pottery, as the body itself is vitreous, though porcelain has a dipped glaze.

The palette is much more restricted than it is with pottery fired to a lower temperature, as few colours will stand the euormous heat, and therefore stoneware should depend a great deal on the manipulation of the surface of the clay for its decoration, colour being employed to give emphasis to certain forms and to add beauty rather than to produce the complete design. The Gres de Flandres, so largely imported under the name of "Cologne-ware" in the seventeenth century, relied upon ornament in relief for its decoration, its colouring heing due chiefly to cohalt hlue. The palette is more extended now, there being a purple, celadon, hrown, as well as a range of hlues. A sculptor, therefore, is quite at home in stoneware, as modelling, incising, and work in low relief is peculiarly appropriate if it is not indeed demanded by it. Every touch of the modelling tool remains in all its crispness, and the greater the freedom, therefore, in manipulating the clay the better is the ultimate effect.

We may classify Martin ware under three categories: 1, where the decoration owes most of its effect to the colour, though even here the pattern is incised in the wet clay, the colour heing contained within the raised lines; 2, where modelling plays the most important part; and 3, where the whole shape is modelled, as in the case of the quaint hirds-owls and night herons-and fish and grotesques which are such a characteristic feature of the Martin kilns. These animal forms are treated in the right spirit and are sculpturesque, not illustrations of natural history. This is worth emphasising, because so much work that passes for sculpture in pottery is a sort of painting in clay rather than the translation of form into the medium employed to give shape and substance to the motif. The colour is made to play about them in a delightful manner, and this, added to those heautiful accidental effects when the fire has been kind, give good specimens of modelled ware a unique quality and value.

The risks in firing stoneware are considerable, for some pieces cinder, others get overfired in places, others again come out too dull, though refiring will sometimes improve such. The hreaking and collapsing cause the greatest loss, and this, added to some which through the shifting during the firing get damaged or stick to each other, causes much wastage. The choicest examples of their kiln, therefore, have to pay for these drawhacks, and collectors should always remember this when selecting examples of any pottery: the more exceptional the specimen the higher must he the price

De Morgan Ware.

#### SUPPLEMENT TO THE ART JOURNAL.

De Morgan Ware: Lustre and Underglaze Painting.

asked, seeing that so much labour is thrown away in producing fine ceramic work.

Admirers of contemporary drama may recall Cyrus Blenkarn in Mr. H. A. Jones' "Middleman," and a correspondent sent to the Pall Mall Gazette an account of the firing of the kiln at Southall, whither he went that he might see whether Mr. Willard, who was the potter in the play, was fairly true to life, and the scene on the stage actual. It is interesting to read the following extract, which gives those who have never seen a kiln fired a good idea of the operation.

"Having obtained permission from Mr. Charles Martin to be present during the final process of 'firing off,' I made my way to Southall. Their kiln is built within an irregular-looking building of stone, cement, brick, iron, and wood; the shaft which juts out from the centre of the roof for several feet, and the vaporous smoke, which rolls away before the wind to join the scudding clouds, being the only outward and visible signs of its inward fiery presence. On the threshold I met Mr. R. W. Martin, who at once led the way in to the kiln. The heat was so terrific that the atmosphere appeared to be glassy and wavy. Two men stripped to the shirt, and with bared arms and throats, were leaning against the wall; the one resting on a long iron rod, and the other on a coalheaver's shovel. They were grimed with smoke, and dust, and clay; perspiration trickled down their arms and faces like rain on the panes of a window; black beads of perspiration clung to their swarthy throats; their hair was matted, and their voices were as the voices of men in the Sahara Desert. The elder of the two, who had entire charge of the kiln, was Walter Martin, and the younger, who was assisting him, was his brother Edwin. They had both been at work in that building, turn and turn about, since Thursday mid-day, and for the last twenty hours Edwin Martin had never left the fires. 'How can you stand this fearful heat?' I asked. They said that it was 'nothing;' and Walter Martin, after having cautioned me to 'stand by,' opened the door of one of the fires directly opposite to where I was standing, and said, 'Now that is heat.' It was indeed: he closed the door again in an instant, but not before I felt as though I had been done through and through. Then they began to coal up for the last time before salting off.

Each of the five doors at the base of the kiln was opened in quick succession, and large logs of wood and shovels of coal thrown in to feed the fire. Each time a door was opened the heat became well-nigh unbearable -the wooden beams and rafters became so hot that I could scarcely bear to touch them; and iron girders and binders warped like warm sealing-wax. At the base of the kiln it was impossible to get more than about four feet distant from the fires; neither was it possible for a tall man to stand upright, because the beams and rafters of the floor above were not much more than from five to six feet from the ground, while upstairs there was plenty of breathing space. As time wore on the heat grew more and more intense. The beams and rafters scorched and blackened, and had to be drenched with salt and water to prevent them from bursting into flames. I looked into the kiln from above, while the salt was being put in to glaze the pottery, and saw the raging fury of the flames in all their gorgeous splendour. The colours were magnificent. Purple, blood orange, royal red, and sun colour, with here and there a streak of deep-shadowed fawn and grey, were interwoven, combined, and massed together in grand Turneresque harmony. And there, within that living hell, splendid examples of the potters' skill were being fired without protection of any kind. Meanwhile Walter Martin, who had hurt his foot, had to be provided with a stick to lean on while he worked with his right hand; and finally, a pair of crutches were procured for him from a neighbouring cottage. He grew anxious. He had packed the kiln, and only he could fire it off. If an accident happened, or if an error of judgment were committed, four months' work might, and probably would, be either destroyed or rendered valueless. But he stuck to his post like a man; and although occasionally he groaned aloud with agony, he resolutely went round and round the fires, upstairs and down again; shovelled the salt in; tried his proofs; had the fires once more renewed, and superintended the pugging of the fire-holes to exclude the draught, and then, his labours for the time being came to an end, for it takes five days for the kiln to cool."

If a sculptor makes a good potter a good ceramiste must be a chemist, and it is in the dual capacity of

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

chemist and artist that Mr. William De Morgan approached pottery, now some thirty years or more ago, building his kilns and ateliers in what was, when I first knew the pottery, waste land in Fulham, close to Wandsworth Bridge, but when I journeyed thither recently to obtain matter for this article, quite a township has been built around the place.

Many people would call William De Morgan a visionary, one who has carried idealism to quixotic lengths: but then artists are dreamers and visionaries, to distinguish them, I suppose, from merchants and mechanics: on their visions and dreams their reputation is builded. The business man, with his common-sense measuring rod, gets quite irate because the methods he employs in striking a balance or estimating a profit cannot be applied to art; but then many enterprises of great pith and moment have failed to show a profit. Factories do not run artists, though artists supply the impetus which runs many a factory, and one would say that had Mr. William De Morgan put himself into the hands of a man of business, there has been enough of this impetus in his cosmos to have run a pretty big factory. Anyway De Morgan can claim to have done much for ceramics and the rediscovery of the lost art of the Hispano-Moresque lustres is the result of his experiments; yet instead of treasuring this secret as any ordinary business man would have done, and made it show a handsome profit, he took the trade into his confidence and taught them all how to produce lustred ware. Here was a potter's secret that had been buried for centuries given away by this potterchemist! I venture to say, though, that William De Morgan's kilns give us the finest lustre produced in the present day, some of his pieces being of great beauty.

It may interest the general reader to know how lustre is obtained. Copper and silver are the chief metals employed, the former producing the ruby or reddish tones, and silver the yellow ones; but if these metallic colours be fired simply in a muffle, they are not lustrous, only metallic. To effect this, when the greatest heat to which the muffle is fired bas been reached, the smoke of wood and straw has to be let into the kiln, and if this operation is successful—and there are many times when that is not the case—the metals are attacked or oxidized by the smoke, and then we obtain that beau-

tiful iridescence which is the charm of this ware. There is great play of colour in good lustre, and tiles so treated when massed into panels are most decorative, the variety of tone giving beauty and interest to the scheme. Lustres are painted on glazed wares in much the same way as ordinary china colours are applied.

The other pottery produced by De Morgau is the rich underglaze painted ware, the nearest approach to the old Eastern pottery which goes by the name of Persian, Rhodian, or Damascus ware produced in England. William de Morgan was the first potter in England to obtain these results, and the colours he produces are as fine as the best Eastern work. The manager of the pottery showed me a panel composed of some old Persian tiles, made out with De Morgan copies, and it was impossible to tell the new from the old. The beauty of colour is secured partly by painting on a slip, and partly by the glaze employed. The red body is covered with a white slip (finely ground white clay), which is painted upon, and then glazed with a thick alkaline glaze. The result is a rich transparency of colour, very soft and liquid-looking, instead of the unsympathetic hardness of so much painted pottery. The colours sink into the slip, and the thick coating of alkaline glaze softens them, giving them depth, and brilliance, combined with softness, as the colours spread slightly and melt into the slip instead of remaining hard upon the surface as they do if applied direct upon the biscuit.

The De Morgan kilns produce a large quantity of tiles and also pots both lustred and painted under the glaze, as just described. The character of the decoration has always preserved a marked individuality, for Mr. De Morgan, though greatly influenced by Eastern art-and who that paints pottery can help being so directed-bas always given his designs his own mental twist, which leans towards the grotesque and barbaric. With the unique palette at his disposal, De Morgan would not be doing himself justice were he to handicap himself by adopting a style of design that lessened his opportunities of a fine colour scheme. The plates and vases are thrown at the pottery as well as painted there. The tiles, too, which are of a very hard body, quite distinct from white Staffordshire tiles, are very carefully made, so that they will stand exposure to varying temperatures and weather.

De Morgan Ware: Lustre and Underglaze Painting.

## The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

THE two methods by which machine made carpets were first woven, are plainly applications of weaving-methods long familiar in the making of finer stuffs. A reversible carpet, save in the materials used, differs not at all from any double cloth; while the method of weaving Brussels or Wilton carpets is practically velvet-weaving "writ large." Velvet-weaving had been among the subtleties of the weaver's craft for centuries before some Flemish wool-weaver took worsted and linen thread, and wove a coarse looped fabric with them, as fine silk was woven to make velvet for "persons of estate." Translated into the harsher, un-lustrous materials, this mode of weaving produced a strong unpretentious fabric, fit for hard use, and with qualities that only waited the capable designer to be pleasant qualities. The looped Brussels surface is not beautiful in itself, as is the texture of a piled carpet. The quality of Brussels is not a fine medium of translation for design as are more exquisite fabrics, but it is always a carpet with honest qualities of strength and "fast" colour. When the colour of carpet-wools, and their use in pattern, became such that long wear and "fastness"

were really desirable, these qualities became merits. They are merits in many of the innumerable Brussels and Wiltons woven now in Great Britain.

Though the introduction of the Brussels loom into Kidderminster was an event of enough excitement to take story-form, and to be remembered, yet the loom itself, when the weavers of the town had sight of it, must have seemed very little different to the looms of the plush-weavers long in use there. Whether a silk velvet or a woollen carpet be woven, the structure of the stuff is the same, and the loom is built according to a similar principle.

At least two warps are essential; one to form the pile, the other to combine with the weft in forming the groundwork. The pile is woven over wires, which are inserted from the side, beneath the upper threads, and withdrawn after the weft has bound the ridged yarn to the groundwork. Obviously, a greater length of pilewarp is needed to form a looped row than is needed of the ground-warp, and this makes two warp-beams necessary even in weaving unpatterned stuff.

But to obtain a new kind of fabric is only the begin-

ning of textile art. Pattern complicates matters. In Brussels, the weft and the lower warp have no office but to make the foundation, and bind the fabric together. Pattern is obtained by the use of different-coloured yarns in the pile-warp. If a design requires four colours, four differentcoloured yarns will be needed in the fabric, and each of these yarns is required in various lengths. Instead of running off ordinary warpbeams, therefore, the yarn for Brussels and Wiltons is wound on bobbins like a large cotton reel, a bobbin for each thread, and these bobbins are mounted in wooden frames behind the loom. From the bobbins, the threads run off to form a layer of yarn in the loom, and from the layers of yaru-two, three, four, or five, as the variety of colour in the design requires-the Jacquard lifts the thread needed at any given point in the carpet. These layers of yarn are called "frames," as are the actual wooden frames that hold the packed rows of bobbins, and the quality of Brussels is determined by the number of frames in the fabric. A fiveframe carpet, which is the usual "best Brussels " standard, has five layers of yarn, besides the linen groundwork; a four-frame Brussels has four layers, and so on.

The weaving of Brussels and Wiltou carpets is almost identical. For both carpets the self-coloured yarns pass in layers from the bobbins through the mails of the harness. The Jacquard over-head lifts certain of the harness threads, as was described in the previous article, and thus holds clear, in their right sequence, the warp threads that are needed for a row of the pile. A wire, of varying size according to the depth of loop to be formed, is passed under the row of lifted threads:

Preparing Jacquard Cards at Braintree.

\* Continued from page 40, Supplement.

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

the passage of the weft binds the wire-raised threads to the ground-work, and the lay heats up the wire to the last row of the carpet. Other yarn-threads are ralsed hy the Jacquard, another wire is inserted helind the first wire, till a number varying from six to twenty are fixed in the fahrle like knitting-needles in a piece of knitting. Then a mechanical device grasps the first wire hy its end, withdraws it, and swings it into position as-saythe twenty-first, instead of the first of the series. The second is likewise removed from first place to last, and so the set is used again and again. Loops are left when the Brussels wire is withdrawn, but the Wilton wire has a small sharp hlade at one end that rips up the loops as it is drawn backwards through them. So a piled fabric in place of a looped fabrle is made. In a Wilton carpet four shots of the weft hind the pile to the groundwork, while in Brussels only two are necessary.

I have said that the Jacquard lifts the combliation of threads necessary to form a row of the pile. But, of course, the Jacquard is only a modern convenience, not an essential feature of the Brussels or of any other loom. The Brussels loom of a hundred years ago was fit to produce a carpet just as strong, and—within narrower limitations—just as pleasurable in design as the best carpets of to-day. Power in place of hand-weaving, the Jacquard in place of the draw-loom, have brought down the price of carpets. But the awakened desire for beauty in every-day things, which has used Jacquard-woven carpets for its own purpose, could have found expression as well under the conditions of carpet-making a hundred years ago as now.

The model of a Brussels loom, such as was superseded by the Jacquard loom, has been given to the Kidderminster Museum by Mr. Grosvenor. A comparison of the fashion of this obsolete loom with that of a modern Brussels loom will show that the capabilities of hoth—apart from productive power—are about equal. (See next page.)

The weaver at the old loom was assisted by the drawboy (or girl), whose husiness it was to raise the row of threads now raised by the Jacquard. This was done by means of the cordage to be seen at the side of the loom. The five frames holding the hohbins, wound with yarn, are shown, and the layers of yarn passing from these bohhins through the mails of the harness are clear. The photograph of a modern Brussels loom shows, rather dimly, the same essential features. The wooden frames hehind the loom are in the same position, the lowest horizontal, the others slanting upwards at gradated angles.

The number of yarns in the warp of a Brussels carpet depends, of course, on the number of "frames" in the fabric, and on the number of "points" in each row. For weaving a five-frame Brussels, with 256 points or loops to the row, 1,280 warp threads, each wound on its own hohhin, are necessary. That is to say, that if one cuts an honestly woven five-frame Brussels across from selvedge to selvedge, one cuts through 1,280 threads of yarn in a space of twenty-seven inches, lying one above the other in five layers, now one and now the other leaving its level to rise to the surface, there to form a loop. A six-frame carpet of the same "pitch" would contain 1,536 worsted threads running from end to end of its length. Practically that is the limit of quality, as a greater number of threads can hardly be used without choking the loom. To watch the weaving of Brussels, to note the hobbins, row upon row, in frame above frame, to see the close-set warp-threads passing from these frames to the body of the carpet, is to believe of necessity, without any experience of them in use, in the enduring qualities of a good Brussels.

It is then as a strong carpet, whose colour-hecause the yarns are "hank-dyed," dyed in the skein—is as fast as colour can he, that Brussels has been respected for 150 years. Improvements in the fabric were not needed, as in the case of Kidderminsters. The fahric was heyond suspicion. But if the original Kidderminsters needed all that art could do for them in the way of design, the type of Brussels in vogue at the same time was infinitely worse. Kidderminsters were, and often are, quite ugly, hut they can never make a great show of ugliness. Limitations in the form of the design and of range in the colour prevent the worst in the realisation of any scheme. But the designer for Brussels has many opportunities for effect. A colour for each frame used to be the measure in colour, but for long this scheme has been enlarged by the use of "planted" framesframes containing two colours, or two tones of the same colour. A five-frame carpet, with two of the frames planted, gives the designer seven colours with which to do what he pleases. Seven disagreeable colours or seven good colours badly usedare formidable in a woven design, and the texture of a Brussels carpet gives distinctness to any mistaken use of either colour or form. As to the size of the design, provided it repeat correctly

"Building" a Loom at Braintree.

#### SUPPLEMENT TO THE ART JOURNAL.

A Brussels Loom of fifty years ago.

Presented to the Kidderminster Museum by George W. Grosvenor, Esq.

within the width of twenty-seven inches, there is, theoretically, no limit on ambition. The worst type of Brussels, harsh and assertive, a jumhle of form and colour, is unfortunately still a fact, and a common fact. But we have the contrast also realised. Dr. Dresser was, I think, the first reform-designer for Brussels. The fahric suited his rigid ideas of textile design, and the Brussels formula, as he worked it out, had propriety. Modern designs for Brussels, and for Wilton, where the pile surface and the use of finer yarn are on the side of the artist, show what has been done since the 'sixties.

Before leaving the subject of Jacquard-woven carpets, some reference must be made to the preliminary stages in the work of making a carpet. These preliminary labours, such as "huilding" or preparing the loom for the use of the weaver, or the cutting of Jacquard cards, are, of course, not special to carpet-weaving. They are, however, an essential part of the process wherehy Kidderminsters, Brussels or Wiltons are made, and in an attempt to summarise the processes of Jacquard carpet-weaving, these patient, accurate occupations should have notice. The illustration, "Building a Loom," explains itself to anyone who has ever looked at a loom, and noted the cordage of harness threads, cach with its "mail"—the eye through which the warpthread is passed. Accuracy in taking up the proper warp-threads, and in drawing them through their right mails, is the heginning of accuracy in the design of the fahric. A yarn misplaced would spoil the whole design. So, in the other preliminary stage of Jacquard carpet-making represented here—the preparing of the cards-a mistake in "reading-in" would have disastrous consequences.

The "reading-in" machine is used for the transference of the design from the design-paper to the perforated cards. Various machines for this purpose are in use, but the one represented is perhaps the most general. On the whole, mistakes are more easily

rectified in this oldest of reading-in machines than in some of the newer ones—a great advantage, as is obvious.

The "reader-in" stands opposite threads that answer to the warp threads of the fahric. This series of endless threads passes over cylinders at the top and bottom of the frame, and through a guidehoard to keep them in position. The design-paper is fixed in front of the workman, who threads a cord in and out between the vertical threads to represent a line of the pattern. As the work proceeds it passes under the cylinders at the hase to the far side of the frame. There, at ahout the level of the workman's hands, is a hox containing needles similar to those in the Jacquard. By pulling forward a series of the separated threads the workman operates on these needles, which in their turn push certain of the punches, held in a perforated plate, into one of two empty steel plates, also perforated. Between these plates,

after their removal from the reading in machine, is placed a blank card, and by a press or roller the punches are driven through the card. Each of these cards, a translation of a line of the pattern, is numbered, and the series of cards necessary to form the whole design is strung together ready for the weaver's use.

In the illustration the operations of "reading-in" and of punching the card from the steel plates are shown in progress.

### Wharfedale.

WITH DRAWINGS BY A. R. QUINTON.

"A NOBLE youth of the family of Romeli, going acoursing with his greyhounds, came to a place called the Strides, being a cleft of a rock, through which passes a torrent of water, but so narrow that a person may easily step over it. This the unfortunate young man attempted, but leading one of his dogs which did not advance at the same time, his step was suddenly checked, and he was precipitated into the gulph and drowned. His mother, being informed of the accident, said she would make many a poor man's son her heir. She therefore founded a religious house at Emsay, and afterwards removed it to Bolton."

Such is Dr. Johnson's picturesque account of the origin of Bolton Priory, and Wordsworth refers to the same theme in the following lines:—

" 'What is good for a bootless bene?'

The Falconer to the Lady said;
And she made answer, 'Endless sorrow,'
For she knew that her son was dead;
She knew it by the Falconer's words,
And from the look of the Falconer's eye,
And from the low that was in her soul
For the youthful Komilly.'

There seems little room for doubt that a Priory was founded at Embsay, about 1120, by William de

Meschines and Cecilia his wife, and that some thirty years later it was translated to the banks of the Wharfe. Cecilia was the daughter of Robert Romilée, a Norman, and her husband was a descendant of the Saxon Earl, Edwin. Their only child and heiress, Alice, adopted her

mother's maiden name upon the death of her parents, and married William FitzDuncan, nephew of David, King of Scotland. They had issue a son, commonly called the Boy of Egremond, who, surviving an elder brother, became the last hope of the family. His tragic death at the Strid is the popularly accepted reason for the removal of the Priory from Embsay to Bolton.

Situated on a heautiful curvature of ground, made in the course of many ages by the continuous action of the Wharfe, with a rich moorland background, and an open sylvan expanse of country in front, through which the river moves in a clear, uninterrupted course, the Ahhey rises in a scene of great sweetness and beauty. The building, like many other works of its kind, shows traces of the workmanship of different periods; but unlike similar structures in the same county, it is not altogether a ruin. The nave is still used as the Parish Church of Bolton, and it is an interesting fact that prohably, without any interval, divine service has been performed in it since the foundation of the Ahhey. The Abbey was dissolved in 1539, and the nave is said to have been spared for the use of the Saxon cure, which implies that a Saxon Chapel existed here anterior to the Priory. The style of architecture of the nave, which was restored by Sir G. E. Street, R.A., in 1864, is Early English, and the aisle, which was added early in the thirteenth century, is substantially the same, although

the Decorated windows, inserted after the aisle was completed, would suggest a later period. The pillars which divide the north aisle from the nave are alternately cylindrical and octagonal. At the end of the nave is the Mauleverer Chapel, heneath which the ancient members of that family are said to have been always huried, standing upright. Underneath the south wall is a singular passage, which led to the dormitory of the monks.

The west front was built by Prior Moone, in the sixteenth century, and his inscription and rebus are still to he seen on it. with the arms of the Cliffords, and the sculpture of a pilgrim and dogs. The pilgrim may have been intended to indicate the hospitality that the Priory afforded to all weary travellers, and the hounds either commemorate the office of forester held by the builder of the tower, or they perpetuate the memory of the founders -the Meschines (from the French mes chiens, "my dogs"). The remainder of the church is now a picturesque ruin, including the piers of a central

tower, north and south transepts, and a long hut aisleless choir, with the remains of chapels on the south side. With the exception of the lower walls, the work here is of the Decorated Period, and shows many features of interest. North of the high altar is the canopy of a tomb within a recess of the wall, beneath which a skeleton was found, and part of a filleting of hrass with the letters NEVI, from which it seems to have belonged to Lady Margaret Nevill. Another skeleton was also found, in the centre of the choir, more than five feet from the surface, under a thick covering of lime, enclosed by plain stones set on the edge, and a thin flag over the face. There were no remains of a coffin, from which fact it appears prohable that the Prior or Canon was buried in the rohes of his order.

Bolton was the burial place of such of the Cliffords as died in Yorkshire. The remains of the chantry chapel opening into the choir by a richly ornamented arch on the south side, with a vault beneath, indicates their last resting-place; but when the vault was explored, many years ago, it was found to be empty. At a short distance from this vault, the base of the chapter house, which communicated with the cloister, was discovered. It is an octagon, twelve feet on each side; there appears to have been thirty-two stalls, the bases of which are adorned with quatrefoils and roses at each angle. The entire outline of the Close at Bolton cannot now be

traced, but it probably extended from the great gateway (now forming the central portion of Bolton Hall), north and south, and touched upon the Wharfe, behind the churchyard at one point and near the Prior's Pool at another. Part of the wall, however, by the wayside, yet remains strong, and of well-constructed ashlar. Within this enclosure, as usual, were the apartments and offices of the house. Of the cloister court, containing the chapter house, refectory, kitchen, and dormitory, only few fragments remain. It was in the churchyard, between the Ahhey and the river, that Wordsworth placed his traditional story of the White Doe of Rylstone, which was always found here during service.

"Now you have seen the famous Doe; From Rylstone she has found her way Over the hills this Sabbath day; Her work whate'er it be is done, And she will depart when we are gone; Thus doth she keep, from year to year, Her Sabbath morning foul or fair."

Whilst Wordsworth rendered the churchyard classic by his poem of the white doe, Landseer has done the same hy his celebrated picture of 'Bolton Hall in the Olden Time,' which is at Chatsworth, the Derbyshire seat of the Duke of Devoushire, who makes Bolton Hall his quarters during the grouse season. In the square castellated tower, which forms the centre of the present hall, which alone escaped the wreck of the offices at Bolton, the records of the Priory were kept. The two outer arches having been walled up, a handsome groined and vaulted dining room now fills the ancient gateway. The adjoining drawingroom contains a few portraits of some interest, the most notable of which are Lord Charles Clifford, eldest brother of the second Earl of Burlington, who died young in 1675, represented as a hunter with two dogs, and known as the "Boy of Egremond," said to be by Lely, and other memhers of the Clifford family.

Beautiful as Bolton may appear as a ruin, and interesting as it may be as a relic of a life which is past, the lover of nature will find a keener delight in the glorious landscape which forms so perfect a setting to the venerable pile. Green meadows stretch in front of the

ruins, and hehind them winds the broad Wharfe, bordered now hy trees which dip into the stream, now by green banks, crowned with wooded hills, which rise one behind another to the distance veiled by soft mists rising from the valleys between. The river Wharfe has its origin on the slopes of the Cam mountain, in the north-west of Yorkshire, and traverses, in the sixty or seventy miles of its course to join the Ouse, almost every description of the scenery for which this romantic part of England is famous. Over woodland and meadow, rushing madly down precipitous rocks, and flowing placidly along fertile plains; shut up in some parts within deep gorges, and at other points spreading out to river-like dimensions, it has an ever-varying charm to those who trace its progress. It has been a fertile source of inspiration to hoth poets and painters. Turner found it yield subjects to him in generous abundance for his matchless drawings, and it is still a favourite sketching ground for the landscape artist of the present day.

Wharfedule—The Strid.

From a drawing by A. R. Quinton.

The portion of the river which it is now our purpose to explore extends from Bolton Bridge to Barden Tower, a distance of little more than four miles, hut so replete with beauty is it that many days would fail to exhaust its charms. Before Bolton Bridge was erected a ferry served to convey travellers across the river, and a little chapel was attached to the ferryman's house for the benefit of wayfarers. On a heam in the room of a cottage at the west end of the bridge the following curious inscription is still legible:—

"Thou yat passys by ys way, One Ave Mare here thou'l say." of a hint that it can rise so instead of rippling merrisunken hroad ridges of pushow how it can widen it.

Bolton Woods are the pushors are the pushors are the pushors are the pushors are the pushors.

Wharfedale—Bolton Hall.
From a drawing by A. R. Quinton.

In the "Town-field," through which a footpath leads from the bridge to the Abbey, Prince Rupert is said to have encamped on his way to Marston Moor, in July, 1644. If, instead of following the heaten track through the trees, a divergence be made half-way across the field to the Holme Terrace, fine views of the Abbey, with the pastures in the foreground, the Wharfe and Scar on the right, the Nab Hill in the Deer Park to the north, and Hazlewood Moor on the east, will be the reward. The well-known Stepping Stones, which are in a line with the east end of the Abbey, have recently been superseded by a wooden footbridge on stone piles, hut the stones have not been removed. When they were originally placed across the river is unknown, but their purpose appears to have been to provide easy access to divine service to inhabitants on the hills on the opposite side. In summer-time they are usually well above the surface of the water, but after heavy rain, or after a rapid thaw of snow, the river sweeps the pastures for many feet inland, and rises in great waves over the hollow trough made by the fall of water, through and over the stones, rushing on with much roar and disturbance against the foot of the scar, and rebounds to pour its way round the curve and down the reaches towards the bridge. So rapid is the rise caused by the continuous supplies of the numerous "becks" and streams on each side of the river which carry off the water absorbed by the surrounding moors, that instances have occurred when

persons who, having crossed by the stones, have in a few minutes been unable to return; and a sudden overflow of the reservoirs above Barden has been known to overtake an unwary pedestrian in mid-stream, thus placing him in a somewhat perilous position. The shallow, clear water which one sees on a fine summer day, when no rain has fallen for some time, gives no hint that it can rise so rapidly and roar so fiercely, instead of rippling merrily over its stony bed, but the sunken hroad ridges of pasture land and sandy strands show how it can widen its course and tear its way.

Bolton Woods are the private property of the Duke of

Devonshire, and certain restrictions are necessary for the guidance of the enormous number of visitors who make pilgrimage to the spot on some days of the year. Although the riverside is in some places forbidden ground, there are many miles of paths through the woods which are always open to the public on weekdays; and many "seats" or rustic shelters have been erected at points which command the most attractive views. Hartington Seat is the first of these which is encountered on a ramble up-stream, the prospect from which is depicted in our sketch.

The great show place of the Wharfe lies higher up, where the whole river is contracted by a deep trench in the rocks ahout sixty yards long and but a few feet wide. Thus hemmed in

hetween the ledges of rock the waters pour through the narrow channel with the velocity of a torrent. The scene is a very striking one. Either side of the river is overhung by solemn woods, from which huge perpendicular masses of grey rock jut out at intervals. Here a tributary stream rushes from a waterfall, and bursts through the wooded glen to mingle its waters with the Wharfe; there the Wharfe itself is nearly lost in a deep cleft in the rock, and next becomes a hurried flood enclosing a miniature island; sometimes it reposes for a moment, and then resumes its native character, lively, irregular, and impetuous. This is the Strid, which has been invested with so mysterious an interest by its association with the supposed fate of "the Boy of Egremond."

The spot where a stride is possible is marked by a huge rounded stone in the middle of the channel, a few yards lower than the fall of water. In winter the stone is often completely covered, and it is no unusual occurrence for the rocks on either side, as far as the trees, to be completely submerged by the tumultuous waves. So great is the fascination, amongst a certain class of visitors, to show their foolhardy agility, that a lifebuoy is kept constantly at hand wherewith to rescue those who find their skill unequal to their courage: in spite of which, however, not a few narrow escapes and several cases of drowning have occurred during recent years.

Some rough natural steps lead up the rocky hillside by the Strid to a point called Pembroke Seat, whence

Wharfedale—The Valley of Desolation.

From the original drawing for the painting exhibited at the Royal Academy.

the first sight of Barden Tower is obtained, all embowered in a forest of trees, with the rich moorlands above and on either side of it. The vast forest, which once covered the hillsides of the Wharfe Valley, stretched nearly four miles from the boundaries of Bolton to those of Burnsall, the adjoining village to the north, and was the property of the Lords of Skipton Castle. In the time of Edward IV. it had six lodges for the accommodation of the keepers, viz., Drebley, Barden, Laund, Gamsworth, Howgill, and Ungayne. These were small square towers, constructed for defence, and may be considered as castles of the lower order, and the occasional residence of the chief lord. Barden Tower is the only one left standing, although several of them are now represented by farmhouses, which occupy their sites. In this great extent of forest, extending from the Abbey to Burnsall, and far and wide on either side of the valley, roamed herds of the red deer, the wild boars had their dens, and the wild cat, the polecat, the badger, and the marten, had their hiding-places. But in the course of many years, as the land was gradually cleared, these rightful owners of the soil were banished by the inevitable advance of cultivation. It was about 1485 that the Barden Lodge was converted into a better residence by Henry, Lord Clifford, whose father had been deprived of his estates during the Wars of the Roses. Henry had been brought up from childhood in the family of a shepherd, but when a reconciliation between the rival parties took place, after the accession of Henry VII., the Cliffords were restored to their inheritance, and Henry, after twenty-one years' seclusion, with the manners and education of a sbepberd, came into the possessions of his ancestors. Here "The Shepherd Lord" spent many years of his life, until, in 1513, when sixty years old, he was appointed to a principal command over the army which fought at Flodden Field. The Tower is now but a shell of its former self, but it is a spot about which memories of older days linger affectionately. A tablet on the south side states that it was restored by Lady Anne Clifford in 1658. This extraordinary lady was a great repairer of castles belonging to her house, and she also repaired seven courches and founded two hospitals. On being requested by one of the Secretaries of State to give her help to the Government candidate for the borougb of Appleby, she sent the following characteristic reply:-"I have been bullied by a usurper, I have been neglected by a Court, but I will not be dictated to by a subject; your man shan't stand.'

The Valley of the Wharfe above Barden has a good deal to attract the traveller: Simon's Seat rises to a height of 1,592 feet above Barden Tower, and affords a panoramic view of great extent and beauty; York and Ripon minsters, as well as Roseberry Topping, being visible when the weather is clear. Some of the small valleys that here open into Wharfedale, contain scenery striking enough to tempt an exploration of their depths, but we must limit our remarks to one or two spots on the eastern side of the river, by which route we may retrace our steps.

Posfortb Gill is a lovely, wooded, deep ravine, through which a mountain stream, which has its origin in Simon's Seat, three miles away, pursues its rapid course to join the Wharfe. At two points in its journey it makes a leap from its rocky bed, and forms cascades of fifty and thirty feet in height. The first of these is called the Park Waterfall, the upper one is unnamed. Early in the present century a tremendous thunderstorm

burst over these vales and moors, and in its fury large oaks and other forest trees were levelled to the ground or blighted, bridges were swept away, and a terrible scene of devastation followed in its train. The northern base of the Nab Hill, as far as the second waterfall, suffered most severely, and bas since been known as the Valley of Desolation. Instead of Desolation, the Vale of Beauty would more aptly describe its present appearance. For nature is always ready to heal the wounds which she inflicts, and to-day the storm swept oaks form a pleasing contrast to waving branches of transparent green and the dense undergrowth of the forest glade. Here the botanist and true lover of nature may observe her in richest garments, and revel in charms of untold beauty. On the opposite hill may be seen the forked antlers of the wild deer which still dwell on this romantic spot, a remnant only of the stately herd which once roamed over the vast forest from Bolton to Longstrothdale, and whose breadth reached from Skipton to Knaresborough-the huntingground of the illustrious chiefs of many a noble house.

A. R. QUINTON.

## 'An English Pastoral.'

AN ORIGINAL ETCHING BY JOHN FULLWOOD, R.B.A.

"THERE is no month in the whole year in which nature wears a more beautiful appearance than in the month of August." So wrote Dickens, and Mr. Fullwood's etching is an agreeable illustration to the words. Here is shown the country at its best. Nature has expanded under the invigorating conditions of spring until it offers matured beauty to the eyes of the whole world. By the bank of the river, and with rich pasture lands in view, the wanderer will find contentment in such a scene of peace. If he be inclined for sport he will find exercise for his skill in fishing; if he would seek rustic companionship, the ferry-boat will take him across the water, and, at the end of the barely defined pathway, in the village his wishes will be satisfied.

As a second title to this plate Mr. Fullwood suggested 'The Valley of the Avon,' "for the view is typical of the willowy land above and below Evesham." The Avon in Worcestershire is not so well known as it is in the adjacent county, for Warwicksbire is a particularly interesting province to the Englishman. It is renowned for its picturesque scenery, and the river which flows through the land adds much to the attractiveness of the neighbourhood. That the beauties of the Avon were extolled by Shakespeare is not the least noteworthy of the records of the immortal dramatist's connection with Stratford. The legend of Lady Godiva, "wife to tbat grim Earl who ruled in Coventry," memorises the city of spires, and Birmingham is famous for its commercial activity. With the county town is associated the history of its castle; Leamington is named with the delightful inland watering-places; at the Public School at Rugby distinguished men have received their education; and Sir Walter Scott has told us of the entertainment of Queen Elizabeth by the Earl of Leicester, at Kenilworth, in such a way that the pageants of the occasion have a permanence in history which otherwise they would have lacked.

## Doves and Pigeons.

WITH DRAWINGS BY MISS C. L. ALLPORT.

s a general rule popular tendency runs in the direction of hlurring the nice distinctions of science, classing whales as fish and even hats as hirds, and so forth; yet occasionally we find slightly varying types of the same thing held in vastly different estimation, in a way to which science gives little or no support. Something of this kind has happened in the matter of doves and

pigeons. The difference between them seems to be chiefly literary, a discrimination between two names, one poetic, the other commonplace. This is not saying it is none the less a vast one. If you consult people whose business lies in the world of sentiment-divines, painters, poets, scholars, lovers-to ask what difference they see hetween a dove and a pigeon, they will reply that it is radical and far-reaching. The dove is one of the most sacred emhlems of our religion, as well as of heathen mythology; it is the symbol of the soul; the type of gentleness, purity and innocence; the example of domestic happiness and conjugal fidelity. It has been the theme of sacred and profane poetry from the earliest times; its very name has been the lover's most endearing vocative for thousands of years, right down from the sublimely passionate and gorgeously riotous imagery of the Song of Songs, to the petty, dehased "lovey-dovey" of contemporary suburban

courtship. And the pigeon? you ask. Ah, yes, the pigeon. A very pretty and pleasant domestic fowl, which can he trained very usefully to carry letters and so forth. Its flesh is very good eating, especially

From a drawing by C. L. Allport.

Serious naturalists hrush aside with rising impatieuce the extraordinary moral qualities and virtuous attributes that have been foisted, so to speak, upon the dove. Waterton indignantly characterises as "lovesome nonsense" Auduhon's description of his lovesick turtle dove, which listened with delight to her mate's "assurances of devoted affection," and was "still coy and undetermined, and seemed fearful of the truth of her lover," and, "virgin-like, resolved to put his sincerity to the test." One can, indeed, sympathise with the naturalist who found this kind of thing a little tiresome.

Referring to the matter of conjugal chastity, and the popular helief that doves pair for life, and remain celihate after the death of the partner, Waterton says-"All wild hirds that go in pairs are inevitably attached to each other by Nature's strongest ties; and they can experience no feelings of what may he called mistrust or suspicions of unfaithfulness; otherwise we should witness scenes of ornithological assault and hattery in every hedge and wood, during the entire process of their incuhation. The soot-hlack crow is just as chaste, affectionate and constant as the snow-white dove itself." The whole hasis upon which the amazing moral elevation of the dove rests appears to he the popular fallacy that those who are heautiful are good. He has a heautiful form, lovely plumage, calm, gentle and timid ways, and a pleasing voice. Poor old "Jim Crow" is just as admirable a hushand and as devoted a mate; only, as he has a raucous voice and a black coat, virtue in him does not, somehow, seem so interesting or meritorious.

Fortunately, if all this seems unjust and unfair, it matters very little. It is as well, perhaps, to know exactly how matters really stand, hut it is too late, some thousands of years too late, to correct the mistake. The conceptions, or misconceptions, that have grown up around and associated themselves with the dove are hoary with immemorial antiquity. In Chaucer's day the literary character of the turtle dove for unchangeable

fidelity, life-long devotion and incurable grief when the domestic partnership is broken, was already fully blown and developed.

But ages hefore Chaucer, the dove's popular character for grief that refuses to be comforted was generally held. The prophet Isaiah's expression, "I did mourn as a dove," contains precisely the same allusion.

So, even if we find that the dove is in nowise specially distinguished ahove his fellows for moral qualities, and that the measure of the attrihution of those he does possess has been vastly and even absurdly exaggerated, nothing can now be done about it, and it were better not to let it worry us.

The sacred emhlem and the poetical image derived from the hird have their recognised meaning and accepted value, quite apart from their inherent truth. Metaphors of this kind are simply the tokens of language, and once in circulation, are kept there, hecause they are useful and convenient. Such tokens rarely survive a strict inquest of origin. Why, even in the matter of gentleness and tractahility, much modification of the dove's popular character is called for. Many ferocious and unlikely wild heasts can he more or less tamed and domesticated, and hred in captivity, hut some of the hest-known of the wild doves, the ring-dove, or wood-pigeon, the largest of the species in these islands, and the stock-dove, a darker and smaller variety, remain absolutely irreclaimable by man. Waterton says: "As yet all attempts to reclaim this pigeon (the ring dove) have been of no avail. I should suppose that it is not in the power of man to make it hreed within the walls of a dove-cot." comes with a certain shock to realise that the handsome hird, whose soothing and melodious coo-roo-coo adds deeper charm to the inviolable quietness of the summer woods, is as hopelessly untameable, as much a hird of freedom, as the eagle himself.

The dove of the Bihle, as also the hird held sacred to Venus hy the ancients, is believed to he the collared or Barbary dove. It is of a pale cream colour, with a hlack ring round its neck, and is found in Palestine, Asia Minor and Greece. Our turtle-dove belongs to the same group, and here in England is a migratory bird, leaving us each September to avoid the winter's rigours.

From the earliest dawn of history, and in all countries, by Jews, Greeks, Romans, Mussulmans, and Christians, the dove has been associated with the idea of a messenger. The "pigeon-post" of the siege of Paris, and the carriers employed by Baden-Powell in Mafeking, are simply modern counterparts of Noah's messenger, sent out to report the progress of the ahatement of the Deluge.

It will not do to suggest the authority of the Bible as an explanation for the remarkable unanimity of all mankind upon this question. No connection could possibly exist between Virgil and the Psalmist, yet hoth poets, profane and sacred, derived inspiration from the dove for some of their most beautiful thoughts. The Psalmist more than once calls himself the Lord's turtle-dove, and in a supreme outhurst of tenderest yearning, sighed, "Oh, that I had the wings of a dove!" As for its importance in the lover's vocabulary—at best a strictly limited and conventional one—most serious embarrassment would be caused the poetical lover and the erotic poet in search of superlatives if denied access to this familiar figure.

In Christian Art the dove is, of course, the emhlem of the Holy Spirit, who, in Milton's invocation-

> "With mighty wings outspread, Dove-like sat'st brooding on the vast abyss, And madest it pregnant;"

and is constantly introduced in pictures of the Annunciation, Baptism of our Lord, and Pentecost. In Filippo Lippi's beautiful picture in the National Gallery a snow-white dove descends in a spiral of golden stars from the Father's hand above.

In the Trinities of the tbirteenth and fourteenth

centuries, the dove is seen hovering between the Father and the Son, seated side by side, touching the lips of each with the tips of its wings; and as the pictorial emblem of the soul, it is seen in old pictures issuing from the lips of dying martyrs.

We will not pursue this well-nigh inexhaustihle subject farther. Miss Allport's drawings accompanying these notes show all that feeling for the charm and grace of these heautiful feathered things that readers of this Journal would expect from previous acquaintance with her work. The studies given include turtle-doves, ring-doves, white Java doves, and pigeons. In the initial drawing will be noticed a representation of that curious practice common to all the male birds of the pigeon trihe in spring, when the birds are pairing, of puffing out their necks after the manner of pouters. More interesting to me even than identifying the various species in these drawings, which is a little difficult without colour, is to notice how Miss Allport uses to the full their superh decorative value, how she catches their lively and fluttering movements and the quaintness of their character when at rest. Truly they are lovely and attractive things, most aptly described by the lady-like word "sweet"; and one does not wonder that in the enthusiasm of admiration mankind has united in a vast and venerable conspiracy to give them, out of compliment, a sort of Honorary Degree in the university of morals. No doubt it is true that pairing turtle-doves do not really present bills and kiss like orthodox human lovers, yet, none the less, their ways are very pretty and delightful; and the combined appeal of their natural charm, of the antiquity of their extrinsic literary character and the sublime uses to which it has been put, and of their tremendous and profound import as a religious emhlem, is irresistible. Nothing can ever impair the beauty of the precept: "Be ye wise as serpents and harmless as doves!' H. W. BROMHEAD.

NO - NOCOLO DINOS From the Return mothe Art Gallery of the Corporation of Elvinomapoa

## Cerne Abbas.

WITH DRAWINGS BY ARTHUR TOMSON.

FROM Dorchester stretch forth in a northerly direction, like the fingers of a hand, some four or five roads. Every one of these ways will be of interest to a student of Mr. Hardy's novels. One, however, in particular, has a story to tell to the antiquarian as well, and will have a special charm forall lovers of picturesque scenery. On this road, about nine miles from Dorchester, lies Cerne Abbas—Cerne Abbas, once the abode of monks, then the centre of a now antique industry; to-day the chosen resting place of the spirit of sleep.

Cerne Abbas lies surrounded by downs; not by downs that encircle it in regular array, as the mounds might of some gigantic fortification, but downs of greater individuality; of divers shapes and sizes, and lying towards this direction and that, so that from the windows of most Cerne houses you look up many a valley. Some of these hills are covered with dense wood, some are bare, some are fringed at the top by thin rows of trees. There is fine feeding for sheep on these downs, there are hill-sides, too, on which the rabbits can barely find sustenance; there are green downs and brown downs, and cultivated downs which vary in appearance according to the season of the year; and on one down—on a down rising from one limit of the little town—is carved a strange and fantastic image.

A river trickles through Cerne in a characteristic fashion. Being an undemonstrative river, it carries the name of the Cerne. Above and below Cerne Abbas it moves through flat pasture land which is flanked on each side by the downs; here its course is well marked. Its passage through the town cannot by any means so easily be noted. The water often appears among the houses in a manner difficult to explain; here it appears at the bottom of an old-fashioned garden; here it seems to rise up from under the foundations of a house; nowhere about Cerne does it seem to be freely enjoying its rights as a river.

Cerne must ever have had a sentiment about it that was very individual. When the monks possessed the place there are signs that they possessed it thoroughly; and we know that on one or two occasions Cerne wrote its name large in history.

To it came the boy, who was afterwards famous as Cardinal Moreton, soldier, Archbishop, Chancellor and Master of the Rolls, for his education. To it came Margaret of Anjou with her son for a brief refuge. To it came St. Augustine; and the Monastery of Cerne was

Cerne Abbas from the River.

From a drawing by Arthur Tomson.

Abbey Street, Cerne Abbas.
From a drawing by Arthur Tomson.

said to be of his founding. And from a Cerne family sprang George Washington. When people made parchment in Cerne, and it was the centre of a large traffic in skins, Cerne was of all towns among the Dorsetshire downs the most notable. Now in the days of its decline, Cerne shows its want of prosperity with equal whole-heartedness—in all Britain there can hardly be a town from which the vitality has so completely fled. There are even shop-fronts from which the names of almost forgotten tawers and parchment makers, followers of the dead industries of Cerne, have not yet been removed.

I remember my first visit to Cerne. It was on a late autumn day and all the land was telling of the coming of winter, and the air seemed full of the sentiment of farewells and of the ending of many things—of good things and disastrous things. Suddenly, without knowing at all what manner of place I was coming to, I was presented with a view of the town. The road—one deeply set in the chalk hill—took then a sudden turn, and a few minutes after I was in the main street of Cerne. Once there the spirit of the place laid its grip upon me; there was no escaping from it. Neither from the tavern, nor from anywhere in the grey streets came any sound or sight of human beings. Some sheep were feeding on the grey down that made a background to

the town, but among them there was no shepherd. After a time a dog came through an entrance to a courtyard and looked at me, and went away down another courtyard and fetched another dog. Afterwards many dogs were brought together, but none of them brought with them their owners; and when they had looked at me they mostly went home with the air of heings who had great things to attend to. remember wishing that I too could take a house in Cerne and have a dog to look after me: but having recently rented a house elsewhere in the neighbourhood, I decided to escape from the somewhat enervating atmosphere of the place with as little delay as possible.

When next I visited Cerne there was a suggestion of spring in the air, and far more life in the sky, and also in Cerne itself. Yet neither on that occasion, nor on the occasion of many subsequent visits to Cerne, have I ever discovered it in a festal mood, or in any moment of commercial activity, nor excited over an election, or wedding, or a birth, or a death, or in any of the par-

oxysms that are peculiar to any normal town.

Merely a stroll round Cerne Abbas and its environment provides the visitor with ample explanation for the habitual attitude of this quaint little Dorsetshire town. Cerne is like a man who is resting after long labours, who has gathered round him proofs of his work, and can therefore afford to be oblivious of public opinion. In every part of Cerne we find evidence of its former state, when railways had nothing whatever to do with the fortunes of men, when it was almost as easy to make a living in the middle of the Dorsetshire downs as in the centre of the great metropolis.

The most ancient of all the antiquities of which Cerne is most justly proud, is undoubtedly its Giant—the Giant carved on a great down which is from many points of view the most prominent feature in Cerne's hilly background

Concerning this Giant's portrait—it is 180 feet in length, and even on the walls of the Royal Academy would make a distinct impression—there is an amusing legend, to which, I notice, little heed is paid by the county antiquarians. This portrait, say the local storytellers, is of an immense person, who in the Dark Ages came to Cerne to spoil and to ravage. Unfortunately for him, he ate too largely of the sheep that he captured

from the neighbouring farmers, and lay after his meal in a state of repletion, on the hill just above the town. While he was thus incapacitated the townsfolk came to him and slew him; and to commemorate the whole event, they drew upon the hill-side, just where they killed him, an exact presentment of the giant's enormous figure.

Antiquarians have nothing so definite to say about the picture. They all agree, however, that it is very old. One I have heard contend that the nudity of the figure, and its colossal proportions, mark it undoubtedly as the picture of a god, and that the shape of a camp near by, and one or two other facts, make it not impossible that the picture belonged to the Bronze Age. The portrait bears some sort of inscription: which, however, according to the same authority, is a proof only that it existed when the monks came to Cerne, who by these tokens made known to their new followers that an interest in the ancient image would at any rate not be prohibited by the Church. But whatever its history is, there can be no doubt that this vast graven

image adds considerably to the sentiment of the place. The monastic buildings in Cerne, of which there is at least one very beautiful remainder, belonged to the Augustine order. There are even records-vague, possibly, but very picturesque ones-that the saint himself visited Cerne. A spring in the churchyard, with some old stonework still standing about it, received, we are told, his blessings, and at this present day those who drink of its waters have a better chance of attaining their hearts' desires. Between the saint and his followers and the people of Cerne, matters, it is said, proceeded hardly so smoothly at their first meeting, when certainly there was between them no exchange of courtesies. The Cerne folk tied cows' tails to their visitors and drove them out of the town, and when the saint returned, which he seems to have done very promptly, he invested the rude Cerne people with fishes' tails which they were unable to remove at their pleasure-I have questioned the doctor of the place, and he has, he says, come across no existing remnants of the curse among his patients, which shows how thoroughly the saint must have taken the people again into his favour.

When the monks of Saint Augustine once settled in Cerne they proceeded to build for themselves what must

The Road between Lydling St, Nicholas and Cerne Abbas.

have been a very fair monastery. Not the remnants of it, but the remains of a later monastery may be found without number; but, as a farm has been built on the site, much of the old stonework is at first not easily recognisable. One remnant, the Abbey Gate, has been preserved, and almost entirely preserved. It stands at the back of the farmhouse, in a small enclosure, in which there are also some very finely grown trees, and some eminently picturesque ones. In front, from the ground on which the old courtyard of the monastery stood, the gateway reveals all its wondrous workmanship. Here may be seen, overhanging an archway decorated with animals of evil shape, two oriel windows of singular magnificence; and as the eye is charmed on the outer side of the tower by the calm dignity and simplicity of the masonry, so here it receives delight from an infinite complexity of carving and emblazonment, which, in spite of all the frost and wind it has faced, has lost little of its elaborate detail and certainly none of its

Some little distance from the gateway on the south side of Cerne is the monastery barn, a structure of not quite its original size, and without its original roof and rafters, but still an object of great interest. This barn,

The Abbey Barn.
From a drawing by Arthur Tomson.

which dates back to the fifteenth century, is built of flint. Standing on the floor on a summer afternoon, with one of the huge doors thrown sufficiently open to admit a wide view of the great fields and downland beyond-a landscape steeped in the rays of the declining sun-one can picture in one's mind not a little of the early pastoral life that existed in this peculiarly pastoral country. What picturesque associations belong to the doorway itself and the massive stone porchway that protects it. Since the time of the monks how many waggons laden with grain have passed through that opening. On a summer afternoon, with the sunshine pouring through the doorway, and the bulk of the interior filled with a thick grey luminous atmosphere, the old barn tells its story in its own peace. ful and remote way; hut at night one feels it would be far otherwise. Then through the doorway would come the stamping of hoofs, and the crashing of heavy wheels, mingled with the vexed cries of the drivers, and of those even more interested in the waggons' freight. Through that porchway then would file a procession of tired men and horses hurried by the stress of time or by the importunities of some ever-recurring storm; and one would realise something of the toilsome lives to which that barn has been a sort of centre-lives full of little leisure and of hardly-won rewards, but wholesome lives enough notwithstanding-lives lived at least in pure air and beautiful surroundings and engaged in the most dignified and possibly the most poetical of all pursuits.

Of all the architectural beauties of Cerne, not one adds so much to the picturesque ensemble of the place as the

Abhey church. Whether you enter Cerne from the peaceful valley which connects the little town with Dorcbester, or from either of the steep down roads that stretch towards the east and west of it, it is the church tower always that gives the crowning beauty to the unique and romantic view. Although it is of the Perpendicular style, and of dehased Perpendicular style, the tower looks as old as the hills that surround it. About it is the same atmosphere of mystery, from it proceeds the same atmosphere of peace, which must he resistless even to a turbulent mind. But within the church, alas! there is no such satisfying sentiment. It possesses a carved oak pulpit of the time of Charles I., but notwitbstanding all one may gather from that, the inside leaves upon one an impression of uncommon bleakness. Injudicious restorations have possibly much to answer for this. Yet for the sake of its tower the church can only be regarded as a lovable one; for does it not pronounce to those near and afar off the sentiment of Cerne-the sentiment of this strange accumulation of relics of bygone ages, situated in the heart of the Dorsetsbire downs: this seat of a religious order that will find a home here no more, this centre of a commercial activity of which the world has no longer any need, this home of great men, and place of education of another; and now a place only for a poet to dream over, for an artist to weave into fantastic pictures. The days of Cerne's magnificence are gone by, but is not its present almost as great as its past? For at no time was the country in so much need of Cerne as it is in the present day-of Cerne Abbas as it is now with its great message of Peace. ARTHUR TOMSON.

The Fireside Fairy. By R. Doyle, From "The Lady's Companion" (1850),

## The Best of Richard Doyle.

T is not usual to attribute greatness to "The Tour of Brown, Jones, and Rohinson," or to the author thereof. In this case the popular verdict has its usual rough justice. Often it happens that a man of delicate genius gives himself to the public in a cheaper form than his best,-makes a hit with it, and goes on in the same style ever after, so far as the public is aware. Doyle did that very thing, very early in life, since the majority of the "Pips hys Diary" cartoons and some of the "Brown, Jones, and Robinson" appeared in Punch. Guided hy the warm applause which greeted these, he came to work chiefly in that manner. And although the Punch cover is one of the best decorative designs ever placed upon a magazine which stares the British Empire in the face every week, Doyle has rarely heen taken seriously as an artist. Mr. P. G. Hamerton (in "Etching and Etchers," first edition) praises Doyle's wit, but says that his etchings have no value as works of art. Other writers dwell on his delightful qualities, chiefly from a literary standpoint, as witness De Quincey, Thackeray, and the kindly French critic Chesneau. But, just as those who would know the best of "Phiz" must study Mr. Croal Thomson's fine monograph, so those who would know Doyle's true position must study the article by Mr. Austin Dohson in the "Dictionary of National Biography," which alludes to "Dick's Journal" as a

Nore.—The writer's thanks are due to Col. R. Holbeche (of the Camera Club), and to Mr. S. J. Hodson, R.W.S.

marvel of fresh and unfettered invention. This, again, is only to be rightly understood by a sight of the original, which is in the Print Room of the British Museum. It is an MS. journal kept by "Dick" in 1840. That it was kept entirely in the family circle would appear from the fact that even Mr. Holman Hunt, one of Doyle's oldest and most valued friends, never saw the little volume during the artist's lifetime. It is now one of the treasures of the Print Room, and would be a remarkable work for anyone to produce at any age. For a boy of sixteen to have produced it is surprising. In 1885, after Doyle's death, it was reproduced in facsimile, with an introduction hy J. Hungerford Pollen, but the reproductions, good though they are, cannot equal the delicacy of the originals. Some of the best are 'Beethoven's Concerto, performed by Liszt and Eliasson," Braham in Masaniello, and the street scenes at the time of Queen Victoria's marriage. Very lovely also are the portraits of his sister iu the family groups. At that time Doyle had a fine, nervous style, rather like the work of the Parisian Tony Johannot, or certain early illustrations hy Meissonier. It is a lively style, and often implies sunlight. He kept it on in Punch for a certain time, hecoming paler and freer and more decorative by degrees. Just when he was between his earlier and his later manner he did some illustrations which are remarkable for simple beauty. These were the drawings for Leigh Hunt's "Jar of Honey from Mount Hybla," in 1848. And, with a curious return to this central manner, after a number of works in his looser style he illustrated "A Juvenile Calendar," hy Mrs. Hervey, in 1855.

Mr. F. G. Kitton, in "Dickens and his Illustrators," has done a real service to Doyle's memory in pointing out the illustrations to the "Chimes" and the "Cricket on the Hearth." The "Battle of Life" drawings are in Doyle's cheaper manner, hut nothing could be better than the scene of the estrangement between John and Dot. The attempted suicide of Margaret is almost as impressive.

Mr. Holman Hunt, to whose kindness I owe much information ahout Doyle, tells me that even in early struggling days the Pre-Raphaelite Brotherhood took pleasure in buying—when they could afford to do so!—the "Manners and Customs of Ye Englyshe" as they appeared in Punch, and studied with real appreciation

the artistic arrangement of the groups, and the Later on, character. Doyle hecame their warm personal friend. For Ruskin, as is well kuown, he executed a very fine title-page, "The King of the Golden River" (p. 252). It is about the hest of his looser manner; though simple, it summarises Doyle's finest fancy-all his freedom of line; as much of his irresponsibility as shall give lightness, hut no more; a wealth of gentle suggestion. For another man's three lines he has put one; with the very fewest of these simple instruments of expression he has given the pure spirit of Ruskin's fine prose. It is a line-poem of a noble and smiling valley, with the glen of the Golden River seen hehind its forests, placid kine straying across its hreast, and fields of corn

waving in the hreeze; in the distance is an ancient farmstead, one of those mansions so hallowed by long years of rustic ceremonial, of spinning, of shearing, of harvest festival and Christmas gathering, that it has acquired a flavour of homely aristocracy. Far hehind rise the shoulders and cliffs of a mighty mountain range, the light clouds lying hy their peaks. All is golden peace and happy lahour in the fresh air, a theme which has inspired some of the finest passages in Art and Literature. Perhaps it is small wonder that Doyle should have heen inspired too. For, under this inspiration, Virgil wrote the "Georgics," Jean-François Millet painted the 'Sower,' his masterpiece of hreadth and suggestion of rhythmic movement, and under this inspiration did Mrs. Barrett Browning pen that finest of all herstanzas, which describes Millet's picture with curious fitness.

> "His dews drop mutely on the hill, His cloud above it saileth still, Though on its slope men sow and reap.

More softly than the dew is shed, Or cloud is floated overhead, 'He giveth His beloved sleep.'"

Particularly in this "Golden River" drawing does the stragglesome tendency of Doyle's line help the spirit of it; even does it create a sense of atmosphere. Aided hy the wild woody waving of the lettering, one can hear the fresh highland breeze go crooning down the vale. Whistler, in some of his later etchings, has used his lines in a similar spirit, to convey an impression of the hlur of moving mill-sails, and we know that Remhrandt was a master who had this resource at command, when he was working without reference or deference to the stiff taste of his time.

The other drawings in Ruskin's hook do not arise to so high a plane; to find others one must refer to the first edition of Frederick Locker's "London Lyrics."

The gem of these illustrations is 'The Old Oak at Hatfield Broadoak,' in which Doyle's style appears at its very hest, being simple and strong, like the pen-work of Millais in "Once a Week."

The size of this Titan of old Britain is suggested by two graceful little figures on horsehack, pausing beneath its masses of foliage, and a fleeting herd of deer; nor does the style anywhere destroy the breadth of the effect hy any attempt at over-minute detail. The figures give an instant impression of refinement, hut no more. Anything more would lessen the poetry of the sentiment into the prettiness of a vignette. Without hesitation one classes the work as large. The sensation of an ancient, stately forest is there. Such a tree creates a

neighhourhood for itself, an historic neighhourhood, through which have passed the Roman legions and the hosts of the King-maker. And this again is a nohle theme, which has inspired great workers, this of "the forest primæval, standing like Druids of old." Doyle's study of elves and squirrels in a tree has almost as fine a feeling ("A Jar of Honey"). His impressible nature seems to have heen profoundly stirred on these occasions of meeting with these two great themes, the Mountains and the Forest, heing hrought to them hy some mind more dominant than his own. When he has set himself to the themes one does not see an equal measure of inspiration, as witness "Brown, Jones, and Rohinson on the Lake of Como,"—a nice hut not great drawing, as it might have been. Evidently Doyle depended much upon the companionship and sympathy of his fellow men. They could depress him, they could inspire him. Without them his work flows tamely, and vet he cannot lose his manner in the rendering of humanity or of nature; he must he Doyle, not as are the

A Composition. By R. Doyle. From "The Life of Oliver Goldsmith" (1848). By John Forster. By permission of Messrs. Bradbury, Agnew and Co.

Realists. He goes to nature, but to a limited extent; he dare not take much from her, but only just so much as his 'gentle style can bear. There is one curious exception to this, which shall be noticed later. With the fanciful creatures of old legend and superstition he is at home; the Fairies he draws are quite convincing.

This brings me to another of his finer works, hidden away in the obscurity of an old periodical long dead, The Lady's Companion for 1850 (p. 248). It illustrates a very beautiful and touching story, which is all in the

The King in disguise. By R. Doyle.

From "The King of the Golden River." By John Ruskin.
By permission of Mr. George Allen.

spirit of "The King of the Golden River," and such a noble fantasy has given Doyle just as strong an inspiration. I often wonder who wrote the tale. Perhaps Holme Lee, the authoress of the Tuflong bo stories, which have much the same dignity and sweetness, or Mrs. Gatty. For the Mrs. Loudon who edited the magazine was a remarkable woman, and commanded the best talent of her time.

In water-colour, Doyle tends to be trivial and somewhat resourceless, and is frequently gaudy where he meant to be rich in hue. But in the National Gallery of Ireland is a very large composition of several hundred figures entitled 'The Triumphant Entry, a Fairy Pageant.'

Dublin is rich in Doyle's work, in various media, one of the best being a drawing hung in a dusky corner—which suits it; the subject is a fairy form arising like mist out of a mountain tarn in the moonlight, and a knight on a scared horse. This is a very beautiful work, very serious in feeling, very fine in its simple treatment, though it does not quite entitle Doyle to rank as a master in the art. The Print-room of the British Museum has a similar work, which almost makes me place his technique in the first-class, it is so fasci-

nating. But it is the business of the critic to speak proportionately, and for all the peculiar merit of this work, and of another very large dream of a Fairy Dance in a glen, one cannot seriously consider the craftsmanship as more than good second-class. The 'Fairy Glen deserves description, being a very large water-colour, dated 1878. It is all foliage, with peeps of pale yellow evening light through, and a great slope of burdock leaves down to the water's edge. A crowd of dainty tiny figures is flittering around like a wreath of smoke; in the foreground a blue kingfisher flies up, his vivid hue giving a greyish look to the little blue wraiths beyond.

The composition is somewhat crowded, and rather clogs the great sweep of the Fairies' circling movement. Quite often Doyle has to fall back on body-colour for little bright touches of limbs and drapery, and so his work suffers the usual penalty of being a trifle chalky and garish in those places. Of course, Sir Nöel Paton's 'Oberon and Titania' pictures are supreme; otherwise this of Doyle's, and a large and much more artistic 'Fairy Dance' in William Allingham's book, are the finest renderings of Fairyland known to me by British hands. This latter fairy dance is of a tender grey, suggestive of young moonlight and poetic mist, and while the wholeness of the great circular movement is carefully kept, certain figures and groups are emphasised with real Greek beauty, and suggest that Doyle had cast an observant eye over Flaxman's 'Homer' designs before setting to work. There is a dryad grace about certain of these fairy maidens, such as one perceives in Flaxman's exquisite divinities (notably his 'Morning'), and it gives the whole a serious claim to high artistic rank. This, of course, is barring the strict technique of the full wash, for there Doyle so often fails-so often is he persistently

dotty in his foliage, so streaky everywhere. The 'Fairy Glen' suffers thereby; but the Print Room has one study of a noble Scottish mountain range (Loch Quoich), all rich greens and dusky purples, which is not unworthy to rank with similar work by the great men, being broad and clean of colour, the strong tones hit off at once and not muddled with any after touches.

Caledonia in her wild stern moods has a way of exciting certain artistic fibres, as might the boom and twang of some gigantic harp. The artist has, so to speak, in his sudden eagerness to get right up close to Nature in this excitement of her strong beauty, absolutely cast aside his usual timidity, and flung his arms round her and

The Shepherdess and Flock. By R. Doyle From " A Jar of Honey." By Leigh Hunt.

By permission of Messes. Smith. Elder and Co. hugged her, As a rule, if one does this to Nature, one gets a box on the ear and considerable discouragement. But here Nature has rewarded her lover kindly enough, and has additionally helped him with a group of waterfowl in the foreground, which are gracefully touched in and happily assist the sense of wild repose. Doyle has rather mistakenly inserted a modern piece of lawn and a lawn shrub, part of the pro-

perty of his host; but then he was so absorbed in the study that he forgot the picture. Quite as often as not, this is a fortunate forgetfulness. In this instance it rather mars the effect of solitude. Possibly the beauty

of Absolute Solitude was a theme which never did appeal (so · called)

which is in reality the most crowded hour of glorious life, aud Doyle understood that condition very well, and sympathised with it wholeheartedly, as I will show. But he has drawn so many crowds —he began at sixteen in his Diary by drawing so many crowds, and drawing them so remarkably well for a man of any age-that one must always consider him an eminently

overmuch to Doyle the sociawho drew crowds so easily and effectively. There is a Solitude The Repentance of King Robert

of Sicily. By R. Doyle. From " A Jar of Honey." By Leigh Hunt. By permission of Messrs. Smith, Elder and Co.

social being. Life made him happy, evidently. He rejoiced in the whirl and sparkle of its stream, its quaintness, its prettiness, in the general shape of it. He had not been like many another man of genius, compelled to fight his way, to conquer opposition, to make the public accept and understand and finally approve of his Message. I use a capital M, for surely all originality is a Message of a greater or lesser sort. Doyle fitted in with the social taste very early-though he had a sufficient share of character, on certain occasions-and he seems very early to have felt that the best life for him was that of absorption in the simple art which happened to suit society also; he managed to live very sociably, and yet to be also of the life of J. J. Ridley in "The Newcomes." This is a good life all round, if a man can find its white light sufficient. A man of such temper is always likeable, and is always becoming more likeable, seeing that he is nobody's rival, nobody's enemy. . .

But this is preaching, not criticism. I do not consider Doyle as a complete J. J. Ridley, and we are told that J. J. attained to high rank in the craft of painting, which Doyle did not. But Doyle could sympathise entirely with that character, as may be seen by his etching 'J. J. in Dreamland' (frontispiece of "The Newcomes," 1854).

It is suffused with poetry, and though Doyle's hand wavers at the task, that task is so pleasant that he cannot fail. J. J., that personality so near and [dear to Thackeray's heart also, sits by the piauo, listening to music played by a beloved hand, at whose touch his spirit is uplifted into a realm of romance. All round the dingy room floats the phantasm of fairy legend, terrible monsters, brave knights, beautiful ladies, joys of battle and festival, and true love triumphant. A pleasaut and most noble palace of Dream! Happy they, the rare ones, who never have to quit it for the sordid world of greedy minds and mean streets. Happier they who can carry it always in heart, like the Perpetual Light of the Rosicrucians, who can guard its flame undiminished by the gust and buffet of common cares. Doyle's art was to him just such a sanctuary, despite his social tastes, and so he very fitly has used his own face as model for that of J. J.

Of the same tenor is a small initial drawing of a stricken knight, attended by his faithful squire and his lady-love. It would seem as if she has come too late, for she presses her hands over her eyes as if to shut away the harsh sight of the dear face suddenly gone cold to her. Much mute eloquence is in the simple study, and the insolence of Victory is symbolised in the crowing cock. Doyle is not often so tragic in fantasy.

The best drawing of this set is 'The Old Love again.' It hardly conveys the idea of a chance meeting of two persons, once lovers, separated by social destiny, who now, with outward calm and inward agitation, desire that if they cannot be friends, at least each shall think well of the other. Such is Thackeray's suggestion. Probably the thing is impossible to convey by any mere draughtsman's effort. Life itself does not show its own tale so, rather would it hide it carefully in a genuine case of such an anxious moment. The artist has not the means of the writer, who can state what is really felt. But the drawing is more in the spirit of Millais than the others, and it is a pity Doyle could not have conveyed the same truth into his studies of Ethel Newcome. Ethel is lovely, but not quite fully and rightly drawn, as Millais or Du Maurier would have drawn her. Colonel Newcome is well enough rendered.

Another man of genius whom Doyle illustrated to his own great profit is Leigh Hunt, as stated earlier. The initials of "A Jar of Honey from Mount Hyhla" (p. 251) are marvels of beauty, but the severe style of the engravers, W. J. Linton and E. Dalziel, has added a Flaxmanesque quality which rather divides the honours. The 'Rohert of Sicily' and the Arcadian scene are as dainty as a cameo, and the angelic figure does not seem to have come from Doyle's pencil, on a first glance. But the sentiment is his throughout, glowing with Leigh Hunt's

sunny inspiration. It is no discredit to the artist that he should be at his best with Linton's strong and skilful hand for partnership, any more than it lessened Doré's praise that he should be interpreted by H. Pisan and S. Pannemaker, those consummate masters of a school of engraving which hasnowwithdrawn hefore the inroad of "process." One can only call such an artist a very fortunate man, for that occasion.

Doyle illustrated "PiccadillyPapers," by Lawrence Oliphant, and like its author, who chose to set up as Preacher, does not quite succeed in his attempt to be serious. The theme of a man tempted to suicide, and loatbing the vision of the hubble Reputation and the Race for Wealth, is a strong theme in the hands of a strong man, hut in "Piccadilly" it merely evolves as a fancy. Leech, or even "Phiz," would have made it im-

pressive. Tenniel, in those Titanic days of his when he drew the 'Pythagorean,' would have produced a great work. Rethel, author of "Der Tod als Freund," would have produced a very great work. But gentle Doyle's pretty drawings are no more in grim earnest than the "Piccadilly Papers." To accomplish the bitter tragedy of Vierge, Rops, and Méryon, one must have some vitriol in one's composition.

Still, though not vitriolic, Doyle has once or twice accomplished tragic drawings of nohle pathos. In Dickens's "Cricket on the Hearth" (1846), the last design, illustrating the very painful misunderstanding between two good people, is extremely impressive. The sorrow

is genuine—despite the fanciful figures, in which Doyle has excelled even his usual grace,—the carrier and his wife sit in real misery about each other. To look at the honest man's face is to understand that there is some sorrow of which one may die, if it endure very long. And the figure of the woman is full of silent eloquence too. Plainly she is innocent, yet plainly she is wretched. All the past happiness of these two cannot bring their hearts together just now.

One cannot often find a work of Doyle's so simply

complete as this, perhaps one should not expect it. He can generally be sufficiently in sympathy with his author, if not required to be strenuous, grim, or realistic. Realism was impossible to one who had never had certain harsh experiences, such as the grinding-mill of the Schools and the heavy pounding of the Struggle for Fame and bare Life, such as Vierge and Mèryon endured-and which crushed the latter.

No, one must not separate Doyle too far from his style, which helongs to graceful fancy, not to awkward fact: you must not take him from his proper sphere of decoration, and set him to work at realism with its tones and values. Give him a gracious idea to put into decorative fancy, and he did it with a refinement peculiar in its simplicity. At the end of John Forster's

John Forster's "Life of Goldsmith" is a very remarkable example p. 249). The stately statue of the childish hut greathearted author stands in the centre. Around are the varied incidents of his chequered life; his setting forth, poor and unknown, to trudge to London; his moments of sorrow in his lonely garret; his grave conversation with Johnson, to which Reynolds with his ear trumpet attends critically; his wanderings, his debts, his deatb,—the Wreath of Thorns is woven around them all, even round the feet of the great central Figure. But the figure rises away out of the thorns of this world, and stands serene, with laurels arching its noble head—Laurels and Sunlight.

The Osprey at Loch-an-Eilan Castle.

From a drawing by A. Scott Rankin-

### Rothiemurchus (IV). Loch-an-Eilan\*

BY THE REV. HUGH MACMILLAN, D.D., LL.D., F.R.S.E., F.S.A.SCOT.

THE little island which gave the loch its name was originally a crannog or artificial lake-dwelling. After affording a secure retreat for ages to the primitive inhahitants by its wicker huts huilt on wooden platforms, it finally formed a foundation for a Highland feudal stronghold of considerable dimensions, covering all the available space, and appearing as if rising out of the water. Tradition asserts that it was originally huilt hy the red Comyns, who once owned all the country round ahout. The lands of Rothiemurchus having been granted hy Alexander II. to Andrew, Bishop of Moray, in 1226, the Earl of Buchan, son of Rohert II., hetter known on account of his ferocity as the Wolf of Badenoch, took forcible possession of these lands, and was in consequence excommunicated. In revenge he sacked and hurnt the Cathedral of Elgin. For this sacrilegious act he had to do penance by standing harefoot for three days at the door of the Cathedral, and was restored to the communion of the church on condition that he would return to the Bishop of Moray the lands he had

wrested from him. This castle was one of the possessions which the Wolf gave up. During his occupation we may well suppose that it was the scene of many bloody deeds and crimes. It was afterwards hestowed on lease upon the Shaws, whose chief dwelt there for more than a hundred years without molestation. From the Shaws it ultimately passed to the Grants of Muckerach, who have continued to hold it ever since. One event only has heeu recorded since they took possession. In 1668, after the disastrous hattle on the "Haughs of Cromdale," which has so long beeu sung and danced to in Scotland, the remnant of the defeated adherents of

James II., the followers of Keppoch under General Buchan, fled to Loch-an-Eilan for refuge, and made an attempt from the mainland to seize the castle, which was defeated by the Rothiemurchus men under their valiant laird. A smart fire of musketry greeted them from the walls of the castle, the balls of which were cast hy Grizzel Mor, the laird's wife, and they were repulsed with great loss. Since then the castle has become a roofless ruin, whose time-stained walls, mantled with a thick growth of ivy, adds greatly to the picturesque appearance of the loch. The stumps of the huge fir-trees from which the timber for the roofing and flooring of the castle was obtained, may still he seen on the margin of the peat-hogs hehind the loch, from which the people of the neighbourhood obtain their fuel, preserved as hard and undecayed as ever after the lapse of all these centuries. It has been persistently said that a zigzag causeway heneath the water led from the door of the castle to the shore, the secret of which was always known only to three persons. But the secret has never heen discovered, and the lowest state of the loch has never given any indication of the causeway. On the top of one of the towers, the osprey or sea-eagle. one of the rarest of our native hirds, has huilt its nest. For several seasons the bird ahandoned the locality, as

it was not only persecuted by the crows, which stole the materials of its eyrie, but also frightened by the shouts of visitors on the shore starting the curious echo reflected from the opposite walls of the castle. But recently the pair came back; and I was fortunate enough last summer in seeing the male bird catching a large pike and soaring up into the sky with it, held parallel to its body with one claw fixed in the head and the other in the tail. After making several gyrations in the air, with loud screams, it touched its nest, only to soar aloft again, still pertinaciously holding the fish in its claws. A seagull pursued it, and rising above, attempted to frighten it, so that it might drop the fish; but the osprey dodged the attacks of the gull, which finally gave up the game and allowed the gallant little eagle to alight on its nest in peace, and feed its clamourous young ones with the scaly spoil. The fish in Lochan-Eilan are principally pike, which often attain a large size, especially in the eastern bays, being there so little disturbed.

Sir Thomas Dick Lauder realised the capabilities of Loch-an-Eilan for figuring in romance, and has given us a vivid description of its picturesque features in his story of "Lochandhu." It combines within the small area of three miles in circumference all the elements of romantic scenery. There is no monotony, but on the contrary an infinite variety along its shores, which form coves and inlets, and low rocky points and gravelly beaches, and open green banks. On the east side the rocky precipices rise almost immediately from the water and fling a dark shadow over it. The path here is seldom used, and one rarely meets a visitor in the solitude. On the nearer or western side there is a large promontory of green meadow-land, standing out against the richly-wooded background of the Ord Bane, on which is situated

an ornamental cottage with a red roof, which in summer is frequented by crowds of visitors, who come from all parts of the country in carriages and on bicycles, and make delightful picnics on the shore. The site of this ornamental cottage was first occupied by a cottage which was built for the Widow Grant by her son, General Grant, in accordance with her own wishes. This general was originally a turnspit in the kitchen at Doune. Quarrelling one day with the cook, she came crying to her master that the boy had cut off her hair with his knife. He then ran down the avenue at full speed. His master shouted after him in Gaelic, "Come back, you black thief, and get your wages." "Wait till I ask for them," was the reply. He then enlisted as a soldier and rose rapidly from the ranks to the highest position in the Indian army and amassed a large fortune. He never came back to his native glen, but he provided for all his relations and gave his mother a pension, on which she lived happily for many years, not priding herself very much on her son's wonderful career, nor held in any high consideration by her neighbours in consequence. On the promontory below the cottage stands a rough granite monument intimating that at this point General Rice. who did a great deal of good in the locality during his sojourn in it, and whose portrait may be seen in almost every house, was drowned by the breaking of the ice while skating on the loch on 26th December, 1892.

The southern end of the loch is formed by precipitous grey rocks in the background, crowned with dark woods, the haunt in former times of the wild cat, and surmounted at the highest point by a monument now almost entirely concealed by the trees, erected by her husband to the Duchess of Bedford, whose favourite look out was from this place; and on the shore by magnificent moraines

covered with green grass, heather and hracken, which produce in their autumnal fading the most gorgeous effects of colour. Beyond these immediate houndaries the open country reveals itself, taking into the horizon the round peaks of the Boar of Badenoch and the Sow of Athol, and so completing the magic picture of the loch hy the ethereal hlue colours of the far distauce. The quieter hays are white with whole navies of water-lilies; and when the hills and open parts of the woods are crimson with the heather in full hloom, almost changing the water of the loch, hy the enchantment of its reflection, into wine, contrasting with the rich hlue-green of the fir-trees, there is not a finer sight to be seen in all the land. It was feared at the time that the terrible conflagration which ravaged the wooded shores on the eastern side two years ago would destroy for ever much of the heauty of the loch. But while a vast portion of the luxuriant undergrowth of the woods was hurnt down on this occasion, the loss was more than made up hy the revelation of the varied rocky features of the scene, which this undergrowth had hidden hy a monotonous covering of uniform vegetation; and now after the rains and storms of two winters have washed away the charred and hlackened wrecks, the recuperative powers of nature have already spread over the naked spaces a healing mantle of tenderest green. The woods at the head of the loch were left altogether untouched; and here hy the side of the charming path, which at every step discloses some new combination of heautiful scenery, there is a number of very ancient firs, whose gnarled exposed roots form the hanks of the path, and whose venerable trunks and hranches overshadowed the spot long hefore the castle on the island was hullt. They are the relics of the great ahoriginal Caledonian

forest; their huge red holes, armoured from head to foot with thick scales like a cuirass, nature's own tallies, record in the mystic rings in their inmost heart the varying moods of the passing seasons.

Beyond Loch-an-Eilan is a much smaller loch where the conflagration hegan, and which therefore suffered greater havoc in the destruction of its woods. It is called Loch-na-Gamha, or the Loch of the Calves, on account of its old connection with the creachs which used to take place along its shores. On the eastern side there is a path through the forest called Rathad-na-Meirlich, or the reivers' road; hecause along it the cattle stolen hy the Lochaher marauders in Speyside were driven to the south. There is a tradition that Roh Roy himself took part in such raids, and was no stranger in these parts. An old fir tree to which the Speckled Laird of Rothiemurchus, as he was called, tied a hullock or two during these forays, in order to procure immunity for his own herds, was standing until it was hurnt down hy the recent forest-fire. I possess some fragments of this old tree, so surcharged with turpentine that they act like torches, and hurn down to the hand that holds them with a steady hright flame. Several of the Macgregors, whom Roh Roy took with him from the south to aid in one of these expeditions, remained hehind and settled in Rothiemurchus, and hecame allied with the laird's household. A tombstone preserves their memory in the churchyard. The laird, Patrick Grant, who got the name of Macalpine hecause of his friendliness to the unfortunate clan Alpine or Macgregors, was greatly helped by Roh Roy in a time of sore need. Mackintosh, the nearest neighbour of Grant, huilt a mill just outside the west march of Rothiemurchus, and threatened to divert a stream of Grant's lands to it. A fierce quarrel arose hetween the

two lairds on this account, and Mackintosh threatened to hurn the Doune to the ground. Marching for this purpose with his men, he suddenly encountered the forces of Roh Roy, and fled precipitately. Roh Roy set fire to Mackintosh's mill, and sent him a letter in Gaelic in which he threatened to kill every man and hurn every house on the Mackintosh estate, unless he promised to ahstain in future from molesting Rothiemurchus. A song was composed on the occasion, entitled "The Moulin Dhu," or Black Mill, the tune of which is one of the best reel tunes in Highland music. The Street of the Thieves is the most celebrated of the forest-paths of Rothiemurchus; hut the whole district is full of paths. used for more innocent purposes. They are most intricate and hewildering to one who knows not the ground, hut easily traversed by a native-they are so dry and comfortable to the feet, heing covered with russet carpets of pine-needles, as if nature herself had made them, and not man. What heavenly lights and shades from the hranches overhead play upon them; and how the westering sun with its level rays brings out the red hues, until the forest paths glow in sympathy with the splendid abend gluhen on the sunset hills!

The dense mass of vegetation in these forests strikes one with astonishment. Not an inch of soil hut is covered with a tangled growth of heather, hlaeberry and cranberry bushes and juniper; and feeding parasitically upon the underground stems are immense quantities of the yellow Melampyrum or cow wheat, and pale spikes of dry Goodyera, that look like the ghost of an orchis. Here and there in the open glades the different species of Pyrola, or winter-green, closely allied to the lily of the valley, send up from their hard round leaves spikes with waxen halls of delicate whiteness and tender perfume. The one-flowered Moneses grandiflora, exceedingly rare, is found in some ahundance in the woods at the south west end of the loch. And it may chance that in some secret spot the charming little Linnæa, named after the father of hotanical science, may lurk, reminding one of the immense profusion with which it adorns the Norwegian forests in July. The mosses are in great variety and extraordinary luxuriance, especially the rare and lovely ostrich-plume feather moss, which grows in the utmost profusion on the shady knolls. The Rothiemurchus forests have always heen famous for their rare fungi, especially for their Hydna, a genus of mushroom, which has spikes instead of gills on the under surface of its cap. One species, the Hydnum ferrugineum, is found only in these

forests, and exudes when young drops of blood from its spongy substance. There are innumerable ant-hills of various sizes, some being enormous, and must have taken many years to accumulate. You see them at various stages. Some are fresh and full of life, crowded with swarms of their industrious inhabitants. But many are old and deserted, either half grown over with the glossy sprigs of the cranberry, or completely obliterated by the other luxuriant vegetation.

All through the forest you see little mounds covered with hlaeherry and cranherry hushes, which clearly indicate their origin. They were originally ant-hills. Each particle of them was collected by the lahours of these insects. If you dig into them you will find the foundation to he composed exclusively of pine-needles, and you can trace the tunnels and galleries made by the ants. It is a curious association this-of plant and animal life-a kind of symbiosis. The struggle hetween the two kinds of life is seen here in a most interesting way. The wave of the undergrowth of the forest, in its slow, stealthy, irresistible progress, encroaches upon the ant-hills, and forms at first a ring round their hase. Gradually it creeps up their sides, and you see one-half of the ant-hill covered with cranherry hushes, and the other half retaining its own characteristic appearance of a heap of hrown fir-needles with the ants swarming over them, husy at their work. But the vegetable wave still advances and finally extinguishes the last spark of animal life on the mounds, and rolls its green crest over their buried contents. In this remarkable way the soil of the forest is formed by a combination of the lahours of plant and animal life. Looking at the vast mass of animal and vegetable life, you feel that there is something almost terrihly impressive in this rapacious, ever-splendid nature, tirelessly working in its unconscious forces, antagonistic to all stability. You have an overpowering conception of vital energy, of individual effort, upreaching to the sun and preserving the equilibrium of nature!

One has no idea from the uniform clothing of the fir-forests of the extraordinary irregularity of the ground, except here and there in the open parts and places bare of timber, where the ups and downs of the landscape may he seen to perfection. Huge moraines and heaps of river-drift show what elemental forces were at work, in the later geologic periods, in moulding the aspects of the scenery. Volcanic forces first piled up the gigantic granite masses of the mountains on the horizon, and great glaciers planed down their sides and deposited the débris over the low grounds where the

By the Loch-side: Loch-an-Eilan.
From a drawing by A. Scott Rankin.

forest now creeps. The past here seems to he all nature, a theatre where only the physical powers have been operating. Human life at the beginning must have heen on too small a scale to contend with the mighty natural forces, and was soon wiped out and effaced. In a fir-forest, with its heather and juniper, man could find almost no subsistence in his primitive state-no kind of scenery could have heen so inhospitable to him. And yet over the green upland slopes of Tullochghru, where the ground has not been broken for centuries, great quantities of burial cairns and circular dwellings, and artificial mounds or places of popular assembly show that there was here in far-off times a large population. At a place called Carn-rhu- Enachan, near the Croft, where evidences of glacial action are most striking, there is a green hill-side which must have heen the earliest clearing in the great ahoriginal forest, on which lies a half-hidden stone with three cup-marks rudely hollowed out on its surface hy a flint implement, surrounded hy faint traces of human habitation. These cup-marks are as significant as the footprints which Rohinson Crusoe saw on his lonely island. They are the only ones I have been able to find in all the district.

They people the past for us, and give it that human interest without which the grandest scenery becomes desolate and uninviting. They show that where man had made a home for himself in the primeval forest, there heside it he prepared an altar for the unknown god of his unconscious worship. Older far, and of happier memory than the castellated lair of the Wolf of Badenoch on Loch an Eilan, these primitive cup-marks speak, not of man's inhumanity to man, hut of man's reverence and upward look of soul, and of the peace that hinds heaven and earth. The eternities of the past and the future are associated with these rude symbols. We feel that the persons who scooped them out with their flint tools were men of like passions with ourselves; that they had similar experiences and similar fears and hopes. Their dust has utterly disappeared, their memories have altogether perished, hut what they dedicated to religion has survived, has shared in the immortality of religion; and nature has here preserved the first feeble steps of primitive man along the upward path with sacred inviolability amid the inhospitable

HUGH MACMILLAN.

# A Theory of Art.

By J. W. NORTH, A.R.A.

From a drawing by James Fitzgerald.

ND yet it is conceivable that the drawing might he there without the artistic excellence."

To explain this, my theory is, that all good art (and there is no other) is a consequence of the finite power of perception possessed by individual human heings.

Art is an involuntary exaggeration of some aspect of Nature, not necessarily, only, or wholly, external nature,

which appeals to a fine and sensitive nature; this seems to me to explain why a great picture, or poem, or statue, or any work of great Art, in Music or Drama, impresses one more than the actual original would; and why mechanically accurate scientific reproductions do not excite enthusiasm; there is no human exaggeration, love and admiration (adoration if you will) displayed in them, and each Art seems to me to have exactly this same hasis, it all rests on Iuvoluntary exaggeration and Love; love of the thing is the primary cause of Art, a long way second to this is love of the Art; though a combination of the two, together with the executive faculty, must always exist in a great master of any Art.

Although I helieve the finite character of the perceptive power of the human heing is the cause of Art, yet the greater the intelligence and strength of Heart and Brain, the greater the master, hecause he appeals to a worthier, wider circle, and to a greater range of emotion.

The true worker in any Art is a minister of the very oldest form of religious worship—a worship which has never caused blood to he shed, or cruel deeds to he done, a worship which is the essence of humility hefore the Great Creator, and of which the ministry ceases to exist instantly that humility is lost. Unreasoning people, although aware that the Arts have existed from the very earliest ages—Music, Painting, Sculpture, Poetry—and existed separately, and without any change of importance, carelessly fail to understand the significance of these divers tongues, and turning matters upside down, claim the arts as an appanage of some form of what is usually known as religious worship.

The fact of these distinct forms of Art always existing, proves that one does not, and cannot take the place of the other.

To put it in another way, originality in Art is the expression of unaffected emotion, and is inevitably individual, hecause of man's limitation: those countless fairy tales told in trees, and hills, and streams, and skies hy our Father, which we try to spell to our little hrothers more or less painfully.

All Arts are complete in themselves, not interchangeable, and have been in their essence, complete from the creation of man, as man is known to us. No Art has changed its nature through all the ages. No age has been without Art. No other form of religion has existed unchanged, even in the short space of time of which we have record.

Each Art is an expression of worship, of an infant's desire to imitate, however feebly, something of its

The sum of it is, that Art is a consequence of the finite capacity of man, and a proof of the existence of a higher power.

J. W. N.

# Decorative Art at Turin: Notes upon some of the Sections.

BY WALTER CRANE, R.W.S.

(A DELEGATE FROM ENGLAND.)

WHEN the present writer left Turin, immediately after the opening of the exhibition, comparatively few of the sections were really complete, and therefore anything like detailed criticism is not possible. Of the sections practically complete at the opening, besides the English and Scottish, were those of Holland, Sweden, Hungary and America.

The German Section, under the artistic direction of Herr von Berlepsch, promised to he hoth in extent and variety, as well as in novelty and boldness of decorative effect and elahoration of detail, the most important of all our neighbours at Turin.

The entrance to the Section is very impressive. A massive semicircular arch, decorated upon its soffit with isolated wreaths in hronze, encloses a shouldered arch of novel form, and upon its keystone appears the inscription in hold square hlock letters, in relief and gilded, 'Germania,' while on the crest of the enclosing arch is holdly emblazoned the hlack eagle (p. 261).

Entering, one finds a vaulted courtor vestihule, lighted from above, the light falling softly through the green leaves of hanging vines; in the centre a sunk fountain presided over hy two mysterious sphinx-like nymphs of a pensive aspect.

The design of this court or vestibule is due to Herr von Behrens, the distinguished architect of Hamburg.

Under the shadow of vaulted arches, one may pass from the grey and green quietude of this vestibule to other courts and salons right and left, in which other

Entrance to the French Section.

leading States of the great German Empire are represented each by distinctive designs, both as to the design and arrangement of the courts and rooms themselves and also as to their details-furniture and decorations. Thus, in turn, we may see Prussia, Saxony, Bavaria, Baden, Würtemburg, Hesse and Hamburg, and gather a sense of what their leading decorative artists are capable. We find a chapel painted hy Herr Wichtendahl of Hanover, impressive in its "dim religious light" and primitive feeling. A striking mural painting of a knight in complete steel, side by side with a nude lady, in a background of green leaves and flowers, meets the eye as the decoration of the end of another salon, but the stained glass, in new art patterns in the windows each side, seem too distracting and emphatic while mural work of this kind occupies the stage, so to

Returning, we enter a vast vaulted chamber lighted from the top, the vaulting supported by four large pilasters at the four corners. This is the Kaiser Wilhelm Raum, designed by Herr Von Billing, and a bust of the Emperor is placed in au arched recess to face the visitor on entering. Further on we enter the wonderful Majolica Salon designed by the architect Kreis, and the distinguished room of Herr von Olbrich of Darmstadt, and, as the heart of the whole German Section, the delightful German house designed by Herr von Berlepsch, with its charming court and arcaded balconies, and gaily painted and decorated walls-the decoration of the latter pleasantly and poetically recalling a sense of the deep grass of green meadows, with their flowers prankt against the sky-line, by way of frieze. All suggests thought and fantasy, and the invention displayed in the design and decoration of these courts and rooms of the German Section reflect the highest credit upon their originators, as well as upon the skill of the craftsmen who have worked so well under the genial direction of Herr von

It was, indeed, instructive and pleasant to see the fraternal and kindly way in which all the German artists and workmen co-operated towards the common end, meeting together in the evenings at the board at the Castello Mediaviale, drinking toasts and exchanging ideas. As one who enjoyed their hospitality I wish to pay them this tribute.

I had hut little opportunity of seeing the bulk of the exhibits in the German Section, which were not then fully arranged, owing to the very extensive

huildings not being complete for the opening, but it was intended to have a large and important show of recent German work in book decoration and printing of all kinds. I did see some very remarkable lithographs in colour hy Herr Karl Biese, the subjects heing wild landscapes with storm-blown trees and tumbled boulders, rendered in a broad decorative way with much romantic feeling. Herr Biese (one of the German delegates) seems to be one of a group of painters and lithographic artists who abide and work together in an ancient castle in Baden. Others of this group who showed lithographs were Herr Volkmann and Herr G. Kaupmann-green woods in sunlight and in twilight, also snow scenes treated with much feeling and selective sense from the decorative point of view. By means of such lithographs, original autograph work

of good artists may be acquired by the public at very small prices.

Looking at the German Section as a whole, with its elahorately designed architectural features and extensive and costly schemes of decoration, one feels that these works could never have been undertaken without substantial financial support, and such, indeed, one learned was the case. A sum of 50,000 marks was, I believe, in the first instance granted by the German Government, and this sum was afterwards largely supplemented by private contributions, so that the German Government and people, it would seem, quite recognised the importance of enabling their decorative artists to make a strong and representative show at this first international exhibition of decorative art at Turin.

In fact, all the nations except England (including Scotland) are officially represented at Turin, and their sections are supported by Government grants. In the absence of such important aid we can only console ourselves by the thought that in an unofficial show the hands of the organisers, however they may be restricted by monetary considerations, are not tied by official regulations, and are not bound to exhibit anything but what they themselves select on the ground of artistic merit.

Turning from the German to the Dutch Section, one

Façade of the Austrian Villa. From a photograph by Sig. Edoardo di Sambuy.

is struck with a certain kinship in the feeling of greater reserve and simplicity in the design and decorations which characterises the exhibits of Holland as a whole as compared with other nationalities other than English.

M. Sluyterman, the eminent architect of the Hague, was the directing spirit of the section, which is remarkably well and effectively planned in an interesting way, attracting one rather by its quiet corners, harmonious rooms, and the character of its exhibits and workmanship in detail rather than hy any striking or dramatic ensemble. One is conscious of a pervading domestic feeling, and the influence of a practical sense which has designed and constructed things to live with, and has

concentrated its attention chiefly upon the home of the citizen.

The furniture designed and exhihited hy M. Sluyterman is of a refined type, extremely reserved and simple in its design and construction, mostly rectangular in line, hoth as to its construction and decoration. The latter consisting principally of ivory inlays emphasizing the constructive or functional features.

The drawings and designs exhibited hy the art schools of Holland contained some interesting work, and some delicate and artistic studies.

The work of the painter-etcher, Professor Zilcken, should be noted, and the stained glass of Jan Schouteu of Delft, which utilises the decorative character of the Dutch

peasant type and costume in a somewhat hold and original way.

It was also interesting to note the revival and modern application of the old Japanese method of dyeing patterns upon textiles, in which use is made of wax to stop out the plain parts, the wax, cracking irregularly, allows the colour to run into and variegate the ground with veins which give a certain curious richness and unity to the design and colour of the dyed stuff. This method, well known as giving the peculiar effect to the old Java cottons, has heen revived hy the Dutch and applied to hangings of various materials, often with remarkable effect.

Our English title, "Arts and Crafts," seems to have heen horrowed by manufacturers of furniture and household decoration in Holland, who exhibit in the Dutch Section, notably Messrs. John Th. Uiterwijk and Co., of The Hague, who have a remarkable hall, designed, constructed, decorated and furnished completely by them. It has a heavy timber heamed ceiling and massive timber supports of considerable bolduess and character, and, barring a tendency towards eccentricity in the patterns of the hangings and some of the furniture, forms an agreeable and quiet interior. The somewhat vague and impressionistic mural pictures occupying the large panels of the walls, however, scarcely seem to accord with the severe character of the wood work. The type of design adopted in the furniture and metal work shows the influence of Mr. Ashhee and his Guild of Handicraft, where I helieve Mr. John Uiterwijk studied for a time.

The furniture - makers "Unter St. Martin's" also

exhibit a well-appointed room filled with well-constructed and modestly decorated furniture.

The Austrian Pavilion, a separate huilding from the main huilding of the Exhibition, I did not have an opportunity of seeing-that is to say, its contents-hefore leaving. The building itself is in what is now known as the "Secession" style-"Secession" heing in Austria and Hungary another name for the New Art.

The London public, however, have a fair opportunity of forming a good idea of the current modes in furniture and decoration favoured at present in Austria in the Exhibition at Knightshridge, at Prince's Skating Rink.

Hungary makes an elahorate and

Entrance to the German Section.

Prom a photograph of Sig, Edoardo di Sambuy

sumptuous show at Turin, and she also has taken ardently to the new art forms. Her designers, one would be inclined to say, love them "not wisely hut too well," and we will hope that the hold traditional decorative art of the country, with its suggestions of an Eastern origin in many of its forms, will assert itself as a corrective, and provesufficiently inspiring to new development.

The most remarkable exhibit in the Hungarian section is the pottery of Izolnay, with its wonderful iridescent glaze, amazing in its brilliancy and variety, though more charming when softened to the suggestion of the bloom upon a ripe plum.

The Scottish Section really exemplifies the taste and resources of the Glasgow school, the scheme of decoration throughout being designed by Mr. Charles Mackintosh. It is quite characteristic in its somewhat austere refinement, but plays out its motive in attenuated form and

Side Door of the Austrian Pavilion.

From a photograph by Sig, Edoardo di Sambuy,

restricted range of colour very consistently, and, what is always effective in an International Art Exhibition, remains quite distinct in character from other sections. Mrs. Mackintosb contributes some of her remarkable coloured and jewelled gesso panels, and there are other works—designs in furniture, glass, stencils, black and

white design, and embroidery—which are characteristic of this very distinct school of decoration, which has been fostered under Mr. Francis Newbery.

The American Section was arranged and decorated under the superintendence of Mr. John Getz, and forms an interesting and characteristic sbow. One of the features is a collection of recent designs by American arcbitects. Also a collection of the celebrated Tiffany glass, as well as silver work of the same and other makers. The quality of the opalescent pot metal used in the samples of leaded glass shown was very wonderful, and the small jewels of glass very fine in quality; but the kind of design adopted did not appear (to Englisb

taste) to he quite appropriate to the material, the decorative heauty of which is apt to be lost in the attempt to get the effect of pictorial planes or too minute detail.

Of the French Section one is sorry not to be able to give more than a passing mention, as its completion was so late, and one had so basty a glance; but one's general impressions was that 1'Art Nouveau had taken entire possession, and one met with the various manifestations of its spiral and restless lines applied to all kinds of design—painted decoration, furniture, metal work, textiles, pottery—anything. As craftsmansbip, the cleverest things appeared to be some inlays in which various woods were used to express certain textures and pictorial values on natural facts—misapplied skill and ingenuity again, from the English point of view.

I did not see any works of M. Mucba, M. Grasset or M. Boutet de Monville, but M. Besnard and Mme. Besnard were in evidence to represent the talent and artistic resource of their gifted country.

England bas no official show, and there was no British Commission, and no money fortbooming for "merely decorative" art—so an exhibition of the Arts and Crafts Exhibition Society, and a collection of the works of the present writer, by the special desire of the Turin Committee, do duty for the English Section, to which was most courteously assigned one of the hest and most important galleries in the building. We had a mixed collection to show, and judged that the simplest setting would be the best. Therefore plain white has been kept to for the walls, relieved hy the black and the red in the friezes, inscriptions, and curtains at the entrances—so that the national red and white of St. George's ensign is at least displayed at our portals.

WALTER CRANE.

(To be continued.)

### Some London Exhibitions.

THE PASTELLISTS, BRITISH COLONIALS AND OTHERS.

EVEN since the opening of the New Gallery and the Academy, there bave been innumerable art exhihitions. Mr. A. G. Temple is to be congratulated on having brought together at the Guildball a fascinating collection of works by British artists and hy well aud lesser-known Frenchmen of the eighteenth century; in Ryder Street was an important picture by that rare master Piero di Cosimo, well fitted for the National Gallery; Scotsmen, such as Messrs. George R. Halkett, James Paterson, and Grosvenor Thomas, arranged interesting "one-man" sbows; portraits by the late Benjamin Constant, and a hundred delightful pencil studies by the Marchioness of Granby could be seen at the Grafton Galleries; Mr. Byam Shaw's series of cabinet pictures, illustrative of various texts in Ecclesiastes, testified to his inventiveness; the cartoonists of Punch and "F.C.G." were "At Home" in Bond Street; nor must we forget the pleasure giving little exhibition at the Dutch Gallery, where, for the first time, Mr. Charles Ricketts appeared as a painter. In general, the Surrey Art Circle succeeds in procuring from its Presideut, Mr. Alfred Gilbert, one or two pieces of sculpture. This summer, unfortunately, Mr. Gilbert went unrepresented alike at the Continental Gallery and at the Academy. Among prominent contributors to the Surrey Art Circle, however, were Messrs. Montague Smyth, E. Reginald Frampton, W. Tatton Winter, and Sidney Moore, the Hon, Sec.

In the re-arranged galleries of the Institute a dual exhibition took place. The Pastel Society, reducing the number of exhibits from the 312 of 1901 to 189, was content to occupy the spacious central room, to west and east of which the British Colonials were provided with wall-space. The Society aims at a certain cosmopolitanism; hence, not unfitly, the most daring exhibit is by a young Frenchman, two of the finest-gold-point portraits by Professor Legros, which do not strictly come within the scope of the Pastellists-from the hand of a naturalised Englishman. M. Simon Bussy's group of Mlle. Moreno, of the Comédie Française, and M. Marcel Schwob, naturalistic almost to the point of cruelty, compels attention. At Mr. Van Wisselingh's be was recently represented by a number of pictures of remote Alpine beights, at bour of radiant sunrise or sunset, of church towers solemnly dominating ancient roofs, of solitary moorlands. His pastel at the Institute, if less dignified of purpose, is a swift and succinct transcript of a characteristic page from life. Nor is be by any means the only foreigner who could profitably be studied. Pictorial perils beset M. Josselin de Jong when, in 'Tbe Foundry,' he essayed to show a great bar of molten iron, dragged from the furnace by two stalwart workers; but he achieves unity and beauty in the issue. M. Réné Billotte, albeit of the many wbo use pastel as though it were oil colour, gives, in the 'Bords du Clain,' a finely felt interpretation of an old hill-town seen beyond a river through golden poplars, at whose base cattle graze; M. Raffaelli sketches with marked ability the old gateway of St. Denis, past which flows the tide of Parisian life; and M. Nico Jungmann's 'The Woman,' red-baired, is a departure from his familiar themes. Of native artists who show to advantage, Mr. Henry Muhrman is one of the chief. May be

Frosty Noon. By Arthur Streeton.

his reserved and excellently-toned 'View of Hampstead Heath,' and even the little still-life, 'Sbells,' owe something to the inspiration of Matthew Maris; in any case they are among the best pastels at the Institute. The medium appears eminently well suited to the art of Mr. Clausen, whose small studies of field labourers possess charm of colour, a certain litheness of form. For the rest, Mr. H. M. Livens' cbild in green frock aud white pinafore, Mr. Edward Stott's 'Harvest Moon,' akin in sentiment to Mr. Watts' sunset landscape at the New Gallery, Mr. J. R. K. Duff's procession of blackfaced sheep, and, not to go farther, Mr. William Padgett's wind-swept 'Marsblands,' warrant notice.

The British Colonial Art Exhibition is an experiment in a right direction; an experiment, too, whence has issued a Society, members of which must have resided for at least ten years in the Colonies. Those responsible for this initial effort, of necessity somewhat tentative, are to be congratulated. Over-sea Premiers have visited the Mother Country for the purpose of consolidating the material interests of Britain and her Colonies. It is no more than just that the art products of Australia, New Zealand, Jamaica, India, Cape Colony, Natal, Canadaand examples from each were to be found among the 170 pictures, miniatures, pieces of statuary, arranged in tbe eastern and western galleries at the Institutesbould at regular intervals be exhibited in London. Several of the contributors, Messrs. Rupert Bunny and Abbey Altson, for instance, won Australian scholarships, and familiar as are many of the names in the catalogue, a majority of the artists are either born in or closely associated with one or other of the colonies. A critical estimate must be postponed till the recentlyformed Society has had time to organise a genuinely representative exhibition, in which, without doubt, Messrs. Homer Watson and Horatio Walker should be of those who send from Canada. We reproduce the ' Frosty Noon ' of Mr. Artbur Streeton - Trafalgar Square, water and wet pavement a-gleam with golden light from a stormy sky, most artistically observed from the north-east corner-one of several Australians who successfully practise their art in this country.

FRANK RINDER.

## Passing Events.

THE dangerous illness of the King was a calamity to the nation which was only modified by the hopeful news of His Majesty's speedy recovery of strength. The possibility that the British empire at any moment might have been deprived of its Chief hrought to mind King Edward's continuous association with art and artists. Now that His Majesty's life has been preserved, it is not our intention to refer in detail to the many occasions on which his presence has conferred support and dignity to public ceremonies in connection with the arts, to the many private artistic engagements which have been fulfilled hy the King, to the pains he has taken to give his portrayers every facility to produce a faithful likeness, to the patronage he has given to various institutions and projects. It is only an occasion to loyally pray that Edward VII, for a long time to come will remain our King, and that national affairs will give him sufficient leisure to preside over the fortunes of the

NOTWITHSTANDING the postponement of the Coronation ceremony from the 26th June, the Honours List which was published on that day commemorated the occasion, although it was robbed of its chief incident. The Honours which have fallen to artists are chiefly in recognition of the position in the country held hy the ancient institutions with which the gentlemen are connected. The President of the Royal Academy (Sir E. J. Poynter) has received a Baronetcy; the President of the Royal Society of Painters in Water Colours (Mr. E. A. Waterlow) a Knighthood; and the outgoing President of the Royal Institute of British Architects (Mr. William Emerson), a Knighthood. The Art Director of the Victoria and Albert Museum (Mr. C. Purdon Clarke) has also been knighted, and one of the Trustees of the Wallace Collection (Mr. A. B. Freeman Mitford) has been created a Peer. The most noteworthy honour is the inclusion of a painter among the dozen famous men of the time who have been appointed to the new Order of Merit. Mr. G. F. Watts, R.A., who has repeatedly declined the honour of rank, is well fitted to be enrolled with the distinguished few of the

I T may be mentioned that monographs have been published, as extra numbers of THE ART JOURNAL, of the Life and Work of Sir E. J. Poynter, Bart., P.R.A. (by Cosmo Monkhouse in 1897), and of Mr. G. F. Watts, R.A. (by Julia Cartwright in 1896).

Supporters are being sought for a petition to the Secretary of State for the Colonies to cause an amendment to be made in the Copyright Act. It appears that, while in the United Kingdom the law is respected regarding the copyright of paintings, drawings, and photographs registered in Canada, there is no reciprocal protection in Canada, without re-registration, for things registered in the United Kingdom. This state of affairs has been confirmed in the Court of Appeal of Outario by the case Graves v. Gorrie. The petition may be signed at the galleries of the principal art publishers.

L ONDON proper, within its limited area, is rapidly becoming stored with pictures for the permanent Corporation collection, and the inadequate hanging

space has developed a problem which has hecome more difficult of solution by the recent rich bequest by Mr. C. Gassiot, a well-known City wine merchant, of a remarkably fine series of works by distinguished artists. Alien pictures occupy the walls for some months each year, and the permanent collection is not visible; but still there seems to be a wish on the part of the City to acquire examples of the work of modern artists. 'The River Bank,' by Arnesby Brown, and 'Ruby, Gold and Malachite,' by H. S. Tuke, A.R.A., have been purchased from the Royal Academy Exhibition. We hope it will be possible to find space to display them permanently and continuously.

THE collection of primitive Flemish paintings and artistic decorative work of the same period at Bruges is of an interest altogether unique. Of the 200 paintings brought together from all parts of Europe every one is of fine quality, the majority are pictures of the first rank, these including the celehrated Memlings belonging to Bruges itself. Of the other works by Memling the two superb examples helonging to Mr. Leopold Goldschmidt, of Paris, are first, while the collection of over a dozen examples of various painters helonging to M. de Somzée, of Brussels, form a group such as only collectors who began buying years ago can hope to form.

I N our March number (p. 93) we had the satisfaction to reproduce Mr. Ridley Corbet's Chantrey picture 'Val d'Arno: Evening.' Accompanying this illustration was a note concerning his election in January to the Associateship of the Royal Academy. We regret that he has not lived long to enjoy the honour or to secure further promotion, and it is our sad duty to record his death: "On the 25th June, at 54, Circus Road, after pleuro-pneumonia, Matthew Ridley Corbet, A.R.A., aged 52 years."

In a recent lawsuit the Court was informed that a picture by Mr. W. L. Wyllie, A.R.A., had heen altered—a flash of lightning, at least, having been painted out. It is aggravating to the artist and it excites our warmest sympathy that the work on which special knowledge has heen bestowed should be tampered with hy a hack painter. Meteorological effects are best left to Mr. Wyllie, who has had uncommon experience in such subjects. He accompanied Sir Norman Lockyer on an expedition, and recorded the conditions prevailing, though he looked at things as an artist and not as an astronomer.

PENDING the erection of new premises in Southampton Row, the L.C.C. School of Art will be situated in Regent Street for another three years. An interesting exhibition of students' work in many departments was on view there for the first five days in July.

 $A^{\rm N}$  oil-painting entitled 'The Charcoal-Burners,' by Mr. John Fullwood, R.B.A., has been presented to the Walsall Art Gallery by Mr. E. J. Shaw, J.P.

 $I\!\!I^N$  the Woodbury Gallery there are to be seen examples of the work of Sir William Newton, miniature painter to William IV. and Queen Victoria. The Royal Portraits have an additional interest from the fact that they were painted on ivory, so skilfully pieced together that no join is discernible.

A Condottiere Firm the Picture in the Sirt Gallery of the Corporation of Birmingham

# Supplement to "The Art Journal."

### SPECIAL PLATES.

# 'The Sheep Drive.'

BY JOHN LINNELL.

FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

OHN LINNELL, who died at the ripe age of ninety in 1882, painted this picture in 1863, when he was more than seventy; and it is a striking example of the way in which he retained his artistic power and his poetical insight into nature up to the very end of his life. It represents a simple English country scene, such as Linnell always loved to paint, generally a quiet landscape made impressive by sunrise or sunset effects, or storm, and in its method of treatment it recalls his life-long friendship with William Blake, and reminds one of some of the pastorals of his son-in-law, Samuel

The scene is the slope of a hill, with an undulating meadow in the middle distance surrounded by trees, and green woods stretching below. A large flock of sheep is resting upon the grass in the sunlight. In the foreground the shepherd stands with his dog under the shadow of a tall tree, while on the other side, across a small brook, a countryman is seated with his wife and child on a small grassy knoll. The valley stretches away in the distance, showing glimpses of a silvery river, and backed by blue hills seen under a blue summer sky filled with white fleecy clouds. If not one of Linnell's most poetic achievements, it is still a picture of much quiet beauty.

Linnell combined with his accuracy in the delineation of nature a sympathy with her poetic aspects, and an insight into her more subtle moods, which give a singular charm to all his landscapes. The groups of figures and of animals which he was in the habit of introducing with most picturesque effect, show that his sympathy with the rustic daily life of the country-side was just as great. His poetry, though far from equalling his painting, still bears the stamp of a very reverent love of nature. Ruskin, writing of one of his pictures, refers to the close study pursued by him "through many laborious years, characterised by an observance of nature scrupulously and minutely patient, directed by the deepest sensibility, and aided by a power of drawing almost too refined for landscape subjects, and only to be understood by reference to his engravings after Michael Angelo.'

This picture was probably painted during the period when the artist resided near Redhill, where he had built himself a house. It was situated on the slope of a hill, and he had on the one hand a charming bit of woodland, and on the other a wide-stretching vale, with the blue hills in the distance.

### 'A Condottiere.'

By LORD LEIGHTON, P.R.A.

FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

THIS very noble portrait of a man in armour, painted in 1872, and exhibited at the Royal Academy in that year, together with the lovely 'Summer Morn' and 'After Vespers,' represents the art of the late Lord Leighton at its strongest and most virile period. There is no sign here of that slight trace of mannerism, tending to a rather waxy sweetness and grace, and that diminution of vigour which marked the painting of his last years. He has given us here a splendid portrait of a fighting man, and one capable of leading others, possibly of a finer type than was usually to be found among the Italian condottieri; while the painting of the glittering armour and the red sleeves of the surcoat under the chain mail is a brilliant piece of technical work. It is more direct and less decorative than many of the pictures of the great Victorian painter, whose catholicity in art, like his sympathy and his knowledge, was extremely wide. He was probably the most learned painter this country has produced. His wide knowledge of art, and a self-restraint and reverence for tradition, were among the leading characteristics of his painting. His ambition was to keep alive an Italian ideal of beauty in England. "Of all our present masters," Ruskin said of him, "Sir Frederick Leighton delights most in softlyblended colours, and his ideal of beauty is more nearly that of Correggio than any seen since Correggio's time.' He always followed his own convictiou that art has a law of its own, and a harmony of colour and form; derived and selected no doubt from natural loveliness, but not to be referred too closely to the natural, or to the average, in these things.

The condottieri, or captains, were leaders of military companies in the Middle Ages, which they used to hire out to carry on the wars of the Italian States. They played a very important part in Italian history during the fourteenth and fifteenth centuries, as the republics and lordships into which the country was divided were incessantly engaged in war. A severe discipline and an elaborate organisation were introduced into the company itself, while in their relations to the people the most barbaric license was permitted. One of the most famous of the condottieri was Sir John Hawkwood, known to the Italians as Acuto, whose portrait on horseback, by Paolo Uccello, is still to be seen in the Cathedral of Florence.

This picture of Lord Leighton's has a peculiar technical interest. It was painted in paste, a medium used on an absorbing surface, and largely employed by Titian, according to Marco Boschini. In his book of "La Carta del Navigero Pittoresco," published in Venice in 1660, he says: "Tiziano aveva la maniere di prepare la sua tela con la farina propria." It is a pity his example is not more generally followed, as no artist that ever lived has suffered less from the hand of time than Titian.

# A History of Artistic Pottery in the British Isles.\*

THE POTTERIES OF LONDON.

By FRED. MILLER.

L AMBETH from quite early in the seven-teenth century has heen associated with the manufacture of pottery. There are a few pieces extant of the date 1630 of the fahrique known as Delft, from the fact that this kind of ware was largely produced at Delft in Holland. The peculiar nature of this ware is that the glaze is made white and opaque hy the addition of tin, and the decoration, usually in hlue, is painted on the glaze, and then fired. The colour sinks into the glaze, and acquires a depth and softness that is most agreeable. Some of the fine old Delft is heautiful in its colour, and almost equals the hlue of old Chinese porcelain. We have referred in a former article to the patent taken out

in 1676 hy John van Hamme, to carry on "the art of makeing tiles and porcelane and other earthenwares, after the way practised in Holland." But this tinglazed pottery may he said to he a fahrique of the past, and it is long since any was made in Lamheth: indeed, its manufacture is extinct in this country.

The present Lamheth potteries date from the year 1815, when John Doulton, who had served his apprenticeship at Fulham, established a pottery in Vauxhall Walk, in conjunction with J. Watts. From there these two men emigrated to the present site some eleven years later. The pottery then consisted of ahout twelve persons, working one kiln a week.

Continued from page 45, Supplement.

The decoration painted under the glaze. Doulton Ware.

The decoration painted under the glaze. Doulton Ware.

The surroundings of the Lamheth potteries during these earlier years were very different to what we see to-day. Then an acre of garden with a fish pond, vines and peach-trees surrounded the house of the owners; hut this fair demesne has long since heen covered hy bricks and mortar, for as the pottery grew in size this pleasaunce hecame absorbed, and, looking at Lamheth to-day, it requires a fervid imagination to associate vines and peach-trees with this quarter of London.

The artistic pottery which is here our concern dates from no further hack than the Paris Exhibition of 1867, when a few vases and jugs of simple forms, decorated with hands of hlue and hrown and a few turned lines, were produced. This departure was largely due to the

late Sir Henry Doulton, who, joining his father in the husiness of Doulton and Watts, took up the practical side of the pottery, working as a "thrower," and gradually acquiring a very thorough knowledge of all departments of the factory; so that when he turned his attention to artistic potting, he had a very wide and thorough technical experience to call upon.

The work produced at Doulton's at this time was almost entirely of a mechanical nature, such as drain pipes, chemical vessels, hottles, and the like. The fahrique itself was salt-glazed stoneware, hrownish in hody. The earliest efforts at decorated pottery were Tohy jugs (which are still made), with their quaint and incongruous representation of topers with foaming tankards, impossible windmills, huntsmen, stags and dogs in relief of a whiter clay than the hody. Occasionally jugs relating to important events or individuals were produced, of which the "Nelson" and "Wellington" jugs and hottles, and the jugs commemorating the passing of the

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Painted Tile Panel. Doulton Ware,

Reform Act in 1832 may be mentioned. At the time of writing this article the firm are making some half million Coronation Jugs for the King.

Visitors to Messrs. Doulton's pottery are generally shown some examples of the earliest "art" pots produced, and by the side of the latest productions of their kilns these are very modest and experimental. The problem to solve was how to adapt their stoneware to the purposes of artistic potting: was any new departure possible? There was the grès de Flandres, familiar to all lovers of pottery, which was extensively imported in the seventeenth century; there were the grey beards and brownish stone bottles of the same period, and there was that fine white salt-glazed ware, so prized by collectors, produced in Staffordshire early in the eighteenth century, an example of which has been given in a former article.

Salt-glazed pottery seems to suggest ornamentation in relief, and in many examples of Doulton ware we find the surface broken up with small pressed patterns of a whiter clay than the body, and with colour playing over the surface. In the cheaper ware the ornamentation is restricted to these dots, bosses and bands of relief decoration, but in the more expensive examples incised work is added, and a form of decoration suggestive of sugar-icing to cakes produced by squeezing slips out of a tube. Incised work is particularly suited to stoneware, and one of the artists who has worked for many years for Doulton's, Miss Barlow, does very spirited etchings of animals. Owing to the nature of salt-glaze,

every touch on the wet clay remains unaltered after firing, so that incised work keeps all its crispness, and these etched animals as a consequence are very effective as decoration.

Women have always been largely employed at Lambeth in the decoration of pottery, and such work offers a girl possessed of artistic gifts considerable scope, as it brings into play hand-cunning, fertility of resource, inventiveness and taste. It is a pity that the subdivision of labour appears to be the necessity of a large factory, for there can be no question that to secure anything like a marked individuality in a pot, it should be treated as a wbole, i.e., the shaping of it should be as much a part of the scheme of decoration as any ornamentation put upon it. In fact, the decoration should spring out of the shape, and should be studied as a whole, which does not seem possible where a vase is passed from hand to hand, one worker doing a portion of the ornamentation, and then a fresh hand carrying it on, and possibly a third completing it.

I am well aware that it is most easy for the superior critic to condemn en bloc all that emanates from a factory, but surely the only fair thing to do is to be as ready to single out what one can for praise as what one can damn, knowing how much there always is of the latter to be found. Doulton's is a large concern, and to keep it going needs a very wide market, and it is a necessity of the situation that the public, with a big P, is catered for. It must be said to Messrs. Doulton's credit that the egos of their best workers is not wholly absorbed in the factory - their souls ground up, as it were, in the clay-and that individuality does find scope. The pendulum in a big concern like this Lambeth pottery swings wide, and between the half-crown teapot on the one side and the fifty-sbilling vase on the other is a pretty wide selection, as may be judged by the reproductions of some of their most recent productions, which they took the trouble to have photographed to illustrate this article. Messrs. Doulton can also point to the fact that they still run one side of their works as an artistic branch, whereas many firms who went in for Art Potting twenty years ago have long since abandoned it, owing to the fact that Art was not found to pay.

A degree of technical skill and mechanical perfection has been reached at Lambetb which one thinks cannot well be carried further, but, as has often been remarked with all artistic processes, so soon as technicalities have become perfect, something else is sacrificed. It would seem as though man, as long as he had to grope

Salt-glazed Ware. The second Vase from the left is a Specimen of

Miss Barlow's Animal Etching on Stone Ware. Doubton Ware.

#### SUPPLEMENT TO THE ART JOURNAL.

Salt-glazed Ware, with incised and moulded decoration. Doulton Ware,

and experiment to find out the more excellent way hy venturing into the unknown, the more of the virile quality he got into the efforts of his hands, the mere effort appearing to keep his soul sweet; and conversely, when he settles down to enjoy the results of all this endeavouring, he thereupon hegins to grow torpid, knowledge crystallises, and everything, from heing tentative and strenuous, hecomes fixed, and the "faultily faultless" state is entered.

There is such a thing as happy accident in art, and particularly so in pottery. You leave the fire to do something, and you breathe a prayer as the work is committed to the flames that the heat may he just right, hut where every device, every technical detail, is thought out and perfected, there is little room for happy accident: the result is known from the beginning. This does not mean that no risks are run at Doulton's, and that the fire always does what is wanted, but they cannot, working in the huge way they do, leave as much to happy accident as an individual potter can. One is apt to have some such feelings as these steal over one when one sees to how great perfection potting methods can he carried, as at Lamheth; and though the palette for stoneware is now quite extensive, the high glazing of much of it strikes one as less pleasant than the more eggshell gloss of some of the old saltglazed pottery. Then, too, the complete hiding of the body under enamels takes away a certain character which the old examples possess.

What is equally astonishing—and it is obviously the outcome of this mechanical perfection—is the number of methods for the decoration of pottery Messrs. Doulton have developed since they took up the study of ceramics. Next to the salt-glazed ware comes the Faïence, which is a yellowish clay body painted in colours in the "hiscuit," and then glazed with a yellowish soft glaze which, while it hrings out the colours, at the same time softens and blends them. The decoration usually takes the form of a simplified rendering of flowers, drawn in outline and coloured naturally, the motifs heing thrown into relief hy the rich backgrounds employed. Sometimes the decoration consists of figures, hut unless a certain shaped vase he chosen, figure decoration is not entirely satisfactory.

Messrs. Doulton have recently introduced a sort of stoneware majolica, which, heing fired to the great heat of salt-glazed pottery, is covered with a glaze which lends itself to painted decoration, and will, at the same time, resist the action of the atmosphere of London or other cities. Italian majolica is really an enamelled

terra-cotta, and, not being fired to the intense heat of stoneware, is said not to he quite reliable in this climate.

For wall decoration they have a form of impasto painting, the colours firing with a dull gloss. The work looks much like tempera, and its manipulation is very similar, as the colours are painted on thickly and solidly. The objectiou to tile decoration is its glittering surface, but in this "Vitreous Fresco" this objection is removed, while in the hands of a dexterous wielder of the hrush the boldest effects are obtainable.

Much of the work produced at Lambeth is of an architectural character, and there can be no doubt that some kind of well-fired pottery is the only permanent decorative material that can be used

in cities where the atmosphere is impure. The "Carrara Stoneware" is not salt-glazed, but the body is coated and hidden by an opaque crystalline enamel that fires with an eggshell gloss. Visitors to the late Paris Exhibition will recall the Doulton Pavilion, of a pleasant greenish hlue tint, made of this material. Some architects assert that a building covered with pottery of any kind cannot

Panel in " Vitreous Presco." Doullon Ware,

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Salt-glazed Ware with modelled decoration. Doulton Ware.

have dignity. That does not appear to me to be a necessity, but want of adaptation; and a surface that will not corrode and can always be restored by washing, surely offers great inducements for its employment.

Modelling naturally plays an important part in the decoration of Messrs. Doulton's pottery, and the employment of skilful modellers enables the Lambeth works to produce large architectural panels and reliefs. Terra-cotta, thoroughly fired, is the body chiefly used for this sculpture-pottery, but in their vases modelled

animals and grotesques were employed with good effect. A good deal of liberty appears to be given to their skilled craftsmen, so that in their higher-priced specimens originality and individuality are secured. Allowing the worker to sign his or her pieces is an advantage to both producer and purchaser, for it checks that tendency towards the dead level of mediocrity and commonplace so induced by the factory system, as it gives the producer a personality by making him feel that he is not a mere cog on a wheel of the vast machine, but an entity that even an after age may identify.

I called at the Fulham Pottery, which is the site of John Dwight's original kilns, but the manager said that with the exception of a few small articles they make from time to time to give as presents to friends and clients, they have quite abandoned artistic potting, as it is a loss to them. Mr. Bailey, the then owner, some twenty years ago tried to revive china-making, and spentalarge sum upon this revival, and though the work produced

was of a high quality and specimens now command a greatly enhanced price, the attempt had to be abandoned owing to the pecuniary loss incurred. This is a melancholy commentary upon the conditions that obtain. One feels that something is wrong somewhere, for numbers flock into the art precincts yearly, whose only chance of keeping there is working in some decorative branch of art, and what more suitable one than potting, both for its fascination as a calling and the opportunities it affords for originality and skill of hand.

(To be continued.)

# The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

FROM a consideration of Jacquard woven carpet-fabrics one turns to the remaining kinds of machine-made carpets—printed tapestry, moquette, and chenille Axminster carpets—to a subject entirely modern, to processes distinct, and underived from any ancient weaving process. The fabric of a printed tapestry-carpet is practically identical with a one-frame Brussels, but Brussels weaving and tapestry-carpet weaving have hardly anything in common, and while the one process has an unchronicled beginning, developing out of an ancient "mystery," in some indefinite weaving-town at some time unknown, the other belongs to our own day and to this country, and the bare facts of its beginning are among modern industrial facts.

Scotland and the United States share in about equal

\* Continued from page 48, Supplement.

degree the credit of inventing machine-made carpet fabrics, while English manufacturers have developed and perfected inventions such as that of tapestry-carpet weaving worked out by Mr. Richard Whytock, or the chenille weaving process of Mr. Templeton, or the American patents of Mr. Bigelow and Mr. Halcyon Skinner for weaving carpets on power-looms, and for moquette-carpet making. Of these process inventions, tapestry-carpet weaving is first in date. Mr. Richard Whytock, the inventor, was the son of a minister, and grew up in Dalkeith, near Edinburgh, during the last quarter of the eighteenth century. At that time, the system of factory labour was gradually taking the place of the cottage spinning and weaving of flax and wool, owing to improvements in the loom, which, beginning with Kay's fly-shuttle, reached Scotland near the close

from cylin-

ders, as in

the case of

chintzes and

of the century, and revolutionised the long-prevailing modes of labour there, as in England.

The improvement and rapid development of an activity so familiar in the daily life of an observant boy. turned Richard Whytock's inventive thoughts towards textile machinery, and especially machinery for making carpets, already an important part of the Scottish weaving industry. The carpet fahrics known to him as manufactures were Kidderminster and Brussels, and the idea of weaving a carpet that should have the appearance of a five-frame Brussels, in colour and in texture, and yet be as inexpensive as a "Scotch ingrain," was the end of his experiments. Instead of a continuous layer of varn for each colour-a series of carpets, as it were, laid one above the other-Mr. Whytock schemed to obtain a Brussels tissue with one layer of yarn. The difficulty is obvious. Pattern in textiles is either the result of interweaving different coloured threads, as in Kidderminsters, or of bringing different coloured threads to the surface, as in Brussels, or

Richard Whytock, the Inventor of the Tapestry-Carpet Weaving Process. From "The Colour Printing of Carpet Yarns." By permission of Messrs. Scott, Greenwood and Co.

of delaines, seems the plain way to obtain a manv-coloured cloth without the use of frames. The plain way, however, is, as various experiments have proved, not the best way in this

case. The looped surface of Brussels, or the velvet surface of Wiltons, receive injury from stamping with blocks, and only take colour inadequately and uncertainly. The other method of stamping the warpthreads before weaving is not much more satisfactory. The warp-threads, arranged in a parallel series, are printed from blocks, the pattern heing elongated to allow of the shortening caused by looping the threads to form the surface. Any inequality in the threads, the slightest inexactness in the printing, blurs and confuses the pattern, and the whole series of threads is then of little value. This method, too, necessitates the cutting of fresh blocks for each pattern, a block for each colour.

A thread drawn from a piece of patterned delaine or calico-one of the fabrics originated in Scotland-gave Mr. Whytock the idea of analysing the pattern still farther. Instead of a series of threads, printed as a whole, he resolved the fabric into single threads, each thread barred with colour. By this means he obtained a series similar to those obtained by block printing, but

of greater exactness, and without the expense of cutting the blocks. To convert these lengths of yarn into the finished fahric, three processes are necessary-printing, setting and weaving-and these three processes are, in idea, the same to-day as they were in 1832, when Mr. Whytock took out his patent, at the end of many laborious and patient years of calculation and experiment. Improvements have, of course, been made since then, and it is better to describe the process as it is, than as it was seventy years ago, when the inventor was the sole manufacturer. In 1846, after Mr. Whytock had heen proving the practicability of his invention for fourteen years in Edinburgh and at Lasswade, Messrs. Crossley, of Halifax, bought the patent. The firm of Crossley had previously secured Mr. Wood's patents for weaving by power, and the application of steam-power to the weaving of tapestry-carpets was accomplished before 1851. The Exhibition of that year contained examples of these new carpets, and also of tapestrycarpets woven on the Sievier power-loom, where the terry was raised without wires, and the fabric printed at once in all its colours. The tapestries woven by this method, however, were among "disappearances" noted by the jury reporting on textiles in the Exhibition of 1862, when, by that time, the Whytock process had been developed almost to its present speed and cheapness by means of the Bigelow power-loom, acquired from the American inventor by Messrs. Crossley ten years previously. Improvements in the machinery, and in the details of the fahric, brought tapestrycarpets to great popularity, so that the Exhibition jury of 1862 quote Brussels and tapestries as the leading carpet-fabrics of England. The small space occupied by a tapestry-carpet loom, compared with that needed by a Brussels loom, with its necessary frames, the simplicity of the loom, and the saving of cost and labour in preparing Jacquard cards, were advantages from the "manufacturing" point of view. With the public, cheapness, brightness, and resemblance to Brussels were qualities sure of appreciation, and the carpet manufacture of the West Riding of Yorkshire, after the introduction of tapestry-carpet weaving, increased at such a rate that in 1862 its annual value was three times that of Scotland, and one-third greater than that of Kidderminster, where Brussels and Wiltons were still chiefly woven.

If the tapestry-carpets of to-day are less esteemed than those of mid-Victorian days, it is partly because of the very qualities that first brought them into popularity. Until recently they were neglected by designers, who turned their attention rather to the more certain and durable medium of reproduction offered by a good quality of Brussels, or to using the opportunities of colour and texture in the various kinds of machinemade Axminsters. The two difficulties that the manufacture of tapestry-carpets has had to contend with, were, first the initial difficulty-borne by the inventor through many persevering years-of persuading manufacturers of the practicability of so complicated a process, and, secondly, the convenience with which, by this process, quantities of cheap and gaudy carpeting can be turned out to meet the vulgar demand.

One has only to follow the working of Mr. Whytock's process to realize how difficult of demonstration its practical value must have been.

The plain yarn, one warp-thread, is first wound in a single layer on the printing-drum. The drums are of various sizes according to the length of yarn required for the design, or the number of warps of one pattern to

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

be made, a usual circumference being eighteen feet nine inches. In the illustration, the drum is only halfwound with yarn. Beside the drum, to the right, is the print-board, and on the printboard is a vertical strip of the pattern, representing one warp-thread. Say the pattern repeats in 648 stitches, 648 bars of colour will be on the pattern strip. The print-board is also numbered from 1 to 648, and the edge of the drum has a similar index. Under the centre of the drum, parallel with its axis, is a small railroad, and a set of small wheeled boxes, each containing colour - paste, runs on these rails. A roller, like a grindstone covered with felt, is in each of the colourboxes, and as the box is run under the drum, the

roller, soaked with colour, presses against the white yarn, and colours it in a stripe—a stripe that represents a bar on the pattern paper, a point in the woven design. The order in which the yarn is striped is, of course, determined by the pattern-strip. If Nos. 1 and 2 on the pattern-strip are blue, the drum is turned on its axis till 1 is reached on the index; the "boxer"—the boy who stands, in the illustration, among the colour-boxes to the left of the drum—runs a blue colour-box on the rails, and one blue stripe is made. The drum is turned to index-number 2, and the second blue stripe is ruled across. If No. 3 point is green, a green colour-box runs across, and so on, till the strip is read off, and the drum filled. In the illustration, a reader, a printer,

and a boxer, are represented, but usually the printer is his own reader. For the sake of speed, all the strips of one colour are dyed before another colour is used, and the action is so rapid, that, it is said, a runner could not cover the distance as quickly as the milcage in yarn is covered by the 1-inch strips of colour.

Byingenious contrivances, the yarn is

Printing the Warp-Threads for Tapestry-Carpets.

winding, and the great skein is laid in a frame, steamed to fix the colours, and wound on bobbins. It left the bobbins white, it returns striped. When the whole of the threads-216 generallythat compose the width of the carpet, are thus striped and steamed, they pass to the "setter," usually a woman. Then begins the second process. The photograph (p. 56) shows the setting machine, with its dumb-waiter-like stand of bobbins, whence the threads pass through clasps, over the 'setting-board,'' and through more clasps to the beam, which is not shown in the illustration. The setting-board is striped, to show the position of the threads, and the women, with deft "seeing" bands,

then removed, without un-

revise mistakes, adjust, and manipulate, till—twelve feet at a time—the patterned warp threads are collated, and reeled on to the warp beam.

The third process is the weaving, and this approximates, though with important differences, to the weaving of Brussels. 216 threads, already patterned, instead of the 1,280 self-coloured threads that form the width of a five-frame Brussels, simplify the machinery. There is, of course, no Jacquard, and there are no frames of bobbins. The tapestry-loom occupies about one-third of the space a Brussels needs, and has a less apparently responsible action. The threads are in order, and the pattern actually on the threads, instead of in the raw material, as it were, of self-coloured yarns,

and weaving is only the act of fixing the pattern in its right proportions, and as a fabric. The pile warp is on one beam. wound there during the setting process; the chain-or foundationwarps on another beam, andthestuffing warp on a third, and between each tootb of the reed these four warps are drawn - four, instead of eight, as in a five - frame Brussels. The

A Tapestry-Carpet Loom.

#### SUPPLEMENT TO THE ART JOURNAL.

wire action for raising the pile is almost exactly the same as in a Brussels, and just as a knife-edged wire produces a Wilton surface instead of a Brussels surface, so, in the tapestry-carpet loom, the difference in wires is the only change necessary to produce a velvet-pile instead of a terry carpet.

That the sequent minuteness of attention requiredthe inventive exactness of the process needing clear and perfect realisation and use in every part-should have seemed unrealisable for the purposes of cheap manufacture, is not surprising. What is surprising, is the common and profitable execution of such a nicely adjusted and complicated scheme. First under the direction of the inventor at Lasswade, then at Halifax, and now in Great Britain, in the United States, in Germany and France, the large output of tapestry and velvet-pile carpets proves the commercial value of Mr. Whytock's invention. As to the artistic value of it, that, of course, depends on forces incalculable by the inventor. The fahric has qualities differing slightly from those that Brussels offers to be made the best of by designers. In Brussels, the carpet design is a distinct reproduction of the paper design. In tapestry, by the conditions of the dyeing process, the dyes spread somewhat, a dark dye will impinge a little on a light dye, the general effect will he vague and indefinite compared with the effect of the same design woven as a Brussels.

This effect can be used wisely, or, in a cheap and careless production, it can he distressing, and an ample excuse for all the hard things that have been alleged against tapestry-carpets. In any case it is not irremediahle, and carpet inventors have various ways of ohviating it. This vagueness may he pleasing or unpleasing, and the same alternative is presented by the other difference between the opportunities afforded hy Brussels and by tapestries-the difference in colour effects. Theoretically, there is no limit to the colours of a tapestry-carpet. An additional colour-box is not an expensive addition, and the difference in labour involved is also unnoticeable. Accordingly, tapestry-carpets may he more hideous than Brussels can he, just as Brussels can excel Kidderminsters in all carpets should not be. Then, it is an inexpensive kind of carpet, and one that, in its resemblance to the esteemed and respectable Brussels, commends itself to a public that is not exigent for art. So one need not go far to find flagrant examples of tapestry-carpets, dazzling, incoherent, gaudy and flimsy. But to esteem a fabric according to the worst specimens of it, would he to leave no fabric with a reputation. It has not the wearing qualities of a standard Brussels, nor is it so fast in colour, but compared with the cheaper quality of Brussels, it takes its right place as a useful fabric, and one whose capabilities of heauty are not to he contemptuously summarized.

# Rothiemurchus (V.)-Glen Eunach.

BY THE REV. HUGH MACMILLAN, D.D., LL.D., F.R.S.E., F.S.A.SCOT.

 $R^{
m OTHIEMURCHUS}$  is essentially a sporting estate. More than three-fourths of its lands have no agricultural or pastoral value, and are fit for no other purpose than a deer forest. The vast upland regions aud luxuriant fir-woods would hardly yield any subsistence for sheep or cattle, and the climate is too bleak and cold for them. But they are admirahly adapted for the antlered denizens of the forest, frequenting in large herds the mountain corries, which have patches of grass of a peculiarly fattening quality, and afford much sport in stalking them. The deer forest of Rothiemurchus has always occupied a high place in the estimation of sportsmen, and has commanded a large rental. It has often been held season after season by the same tenant, and the result has been uniformly satisfactory. For the accommodation of the deershooters, a very elegant and commodious lodge, Drumintoul, has been built on the other side of the Druie, not far from Loch Pityoulis, from whence access is obtained to the high grounds by a capital drivingroad through the woods. Glen Eunach forms the principal part of the deer forest, and from this circumstance its magnificent scenery is not so well known as it ought to be. It is the object of the proprietor and tenants to keep the glen as secluded as possible, in case of scaring the deer. But before the stalking season commences, parties are allowed to visit the place with certain necessary precautions. To the vast majority of visitors to the district, however, it must obviously be a sealed spot.

Entering by a gate at Loch-an-Eilan, over which the Scottish Rights of Way Society has fixed a board, indicating that this is the commencement of the public road to Braemar by the Larig Pass, you skirt the northern shore of the loch, which you soon leave behind, and proceed through old fir forests around the base of the bare mountain mass of Cadha Mor, one of the outer spurs of the great Cairngorm range. This hill is well worth ascending, for the sake of the splendid view which the top commands of the whole region. A pathway leads to the summit, the fir trees becoming more dwarfed and stunted the higher up you climb. Near the top of the first height there is a gully where the deer often resort, and the ground is torn up by their combats during the rutting season. In this place I have several times found a curious moss which grows only on the droppiugs of deer, a species of Splachnum, which has a very fine appearance with its large red capsules and bright green foliage. Developing only on animal substances, it seems to reverse the great rule that plants precede animals in the scheme of creation. On the highest ridge the ground is remarkably bare and stormscalped. The winds rush over it with almost irresistible fury, even on a comparatively calm day, and sweep everything before them. The vegetation that clothes this bleak altitude is Polar in its character, rising only an inch or two above the soil, or creeping along and holding firmly by its roots. Arctic willows and azaleas form the only patches of verdure among the large heaps of white granite débris; and over the tangled masses of dark mosses and lichens that cling closely together for mutual help against the common foe, a curious stringy lichen of a straw colour, the Alectoria Sarmentosa, unknown except in such Polar situations, forms tortuous knots. A bit of ground with its characteristic plants from this ridge would remind one of a spot in Greenland or Spitzbergen.

The Cadha Mor, though looking like an independent summit over Loch an Eilan, whose sky line it forms, is in reality the elevated foot of the Scorran Dhu, a lofty hill opposite Braeriach, and only two or three hundred feet lower in height. The easiest way to ascend the Scorran Dhu is over the long-extended ridge at the back of Cadha Mor, rising higher and higher by gentle elevations to the sharp conical summit. On the sky-line, not far behind the ridge of Cadha Mor, is a huge boulder left by glacial forces on this exposed point called the "Argyll Stone," After the disastrous

hattle at Aherdeen, Montrose fled across the country to the Spey, intending to make use of the ferry-hoats on the river to pass over to the other side. But finding them removed and an armed force waiting to oppose his passage, he marched his army back through the forest of Ahernethy, where he remained for several days, and then proceeded through the forest of Rothiemurchus over the hills down into Badenoch. Argyll followed fast upon his heels, and caught sight of the vanishing host at this point. Learning that many of the natives had joined the standard of Montrose, Argyll took vengeance upon the whole district, which he laid waste with fire and sword. Not far from the Argyll Stone there is another large boulder called Clach Mhic Allan, or the Duke of Atholl's Stone. The Duke was taking refuge behind it, when he was set upon and killed near the summit of Inch Riach.

At another index hoard of the Scottish Rights of Way Society in the heart of the forest two ways meet and cross each other. The one to the left leads through the Larig to Braemar, the other to the right is the path to Glen Eunach. Near the point of divergence there is a small shallow lake, which in hot summers is often dry. For a mile and a half the well-made road proceeds in a straight line on a uniform level through the well-grown plantation which has superseded the old ahoriginal forest of giant trees. In this wood I have several times seen and heard the crested tit-a hird which is now almost wholly confined to the Rothiemurchus forest and is hecoming more rare, though once it was ahundant wherever the ancient Caledonian forest extended. Byand-hy you come to the pass of the glen, where the precipitous hanks on either side contract, and the stream, deep down helow, forces its way with considerable difficulty, roaring and foaming, over the great

houlders that fill its bed. Directly opposite on your left hand is the bare, elegantly-shaped cone of Carn Ilrick, which rises to an imposing altitude from this point. It is the "sanctuary" of Rothiemurchus, where, in former times, the deer escaping into it were not allowed to he shot. This humane practice, however, no longer obtains. This hill, like a grand, solemn sphinx, is set to guard the portals of a mountain region of mystery and romance. The murmurs of the stream in its hed are all-pervading. You hear them a good way off -filling all the air like the voices of a multitude. The steep rocks on either side, according to the folk-lore of the place, are inhabited by two different "hrownies," perpetually quarrelling and shouting at one another. Wild shrieks and mocking laughter are heard, especially when the helated pedestrian approaches the pass at twilight, and recalls, with fear and tremhling, its uncanny reputation. No mortal was ever the friend of the one "hrownie" without deeply offending the other, who manifested his anger in very offensive ways. The sound of many waters at the pass accounted for a good deal of this supernatural superstition. Beyond the pass, the last solitary firs of the forest contend with the elements, and are twisted and dwarfed by the severity of the struggle; hut you hardly notice them, for they are extinguished by the universal magnitude of the inorganic masses and forces around. From this point the pass opens up a wide treeless waste of utter solitude. Terraces of moraine matter, broken and gleaming white in the sunshine, indicating the different levels at which the stream formerly ran, hank up its course; and little rills coursing down the mountains from hoth sides, fall into it to swell its volume. This region has never heen animated hy human life. It is above the zone of cultivation. No ruins of hamlets, with nettles growing

Entrance to Glen Ennach.

round the cold hearth-stones, cluster on the spots where the turf is softest and greenest among the heather, to testify of forcible evictions and heart-broken farewells, and of the new homes of exiles far away across a world of seas. The peace here is not the peace of death, to which man's works return, but the peace of the primitive untamed wilderness. From time immemorial the region has been dedicated to the noble pastime dear to the old kings and chieftains of Scotland. Large herds of red deer frequent the corries; but you may wander for days over the boundless waste without seeing a single antler, when all at once you may behold on the ridge over your head a score or two standing motionless, gazing at you with their horns piercing the sky-line like skeleton boughs. It is a grand sight, but it is only momentary, for, scenting danger, they disappear over the shoulder of the mountain, noiselessly, like a dream, into the safe shadows of another glen.

On the right-hand side, shortly after the pass is traversed, a solitary pine may be seen on the high ground isolated at a considerable distance from the last straggler, which marks the spot where the old inhabitants of Rothiemurchus used to take leave of their friends when they went to the summer shielings. This was considered an important occasion, and several oldworld ceremonies were performed in connection with it. A large company helped to lead the cattle, and to carry the dairy utensils and household bedding of the women who were to stay behind and occupy the rudely-constructed bothies, where they carried on the manufacture of butter and cheese for winter consumption. After seeing to their comfortable settlement in the huts, usually constructed in some green sheltered place beside a mountain rill, the friends would depart to their own

farms down in the low grounds, and at the end of three or four months, the women of the shielings would return home laden with the products of their summer industry. Glen Eunach, as I have said, was never inhabited. It had no agricultural capabilities, but here and there beside the streams there were green spots that grew very nourishing grasses, which enabled the cows to give large quantities of milk, and the shielings of Glen Eunach in ancient times were justly celebrated. On the left-hand side of the stream there is a large extent of ground principally covered by moraines, which is hid from the visitor along the road by the elevated terraces forming the banks of the stream. Among these moraines is a small lake, marked on the ordnance map by the curious name of "Loch Mhic Ghille Caoile," which means the loch of the lean man's son. It obtained this curious name from the circumstance that a native of Rothiemurchus was killed heside it long ago, in connection with the raiding of the cattle in the summer shielings of Glen Eunach one Sunday morning by the Lochaber reivers. The herdsman in charge of the cattle, as the Rev. Mr. McDougal graphically tells us, rushed to the church of Rothiemurchus, where the people were met for worship, and informed them of the robbery. Mac Ghille Caoile, who was the fleetest of foot, because of his hereditary leanness, outstripped the men who went off at once in pursuit, and came up alone with the marauders at the little loch in Glen Eunach, where he found the cattle gathered together in one spot ready to be removed. Here a fierce altercation took place, in consequence of which Mac Ghille Caoile was slain. Taking up his body and hiding it in a hollow near at hand, called "Coire Bo Craig," the raiders decamped, so that when the rest of the pursuers arrived they saw

no trace either of their companion or the relvers. Some five or six weeks later, a Lochaher woman visiting Rothiemurchus told the people of the manner of Mac Ghille Caoile's death, and of the spot where his hody was concealed, as she had heen told by the reivers; whereupon his friends brought down his remains, and laid them devoutly in the churchyard. The loch after this became associated with his name; and the discovery in recent years of an old rusty dirk heside the loch, with which prohably the ruthless murder was committed, gave confirmation to the story.

Crossing the stream hy a wooden hridge you come to the first hothy, huilt of timher, for the use of deerstalkers. Here it is customary to leave the road, and climh Braeraich, over heath and peat hogs, hy a foottrack hy the side of a tributary hurn that comes down from the heights. From this point you do not see the full proportions of the mountain; you see only a part of its long extended sides rising tier above tier to the sky. You must go farther away in order to take in the whole view. Perhaps the best point of observation is the railway station at Aviemore, where you see the huge mountain rising up from the extensive fir forest of Rothiemurchus in a long swelling massive slope, with immense rounded shoulders, catching alternate sunshine and shade from the passing clouds, and exhibiting, even under sudden gleams of light, a peculiarly grey barren aspect. Ahout a thousand feet from the summit the uniformity of the slope is hroken up hy two great corries, divided from each other hy a narrow neck or ridge, connecting the shoulders of the mountain with the top. One of them is occupied by a bright green transparent tarn, perhaps the highest lakelet in Britain, into which a streamlet trickles down the face of the cliff in a series of waterfalls, a mere slender thread in dry weather, but presenting a magnificent sheet of unbroken foam when swollen hy a storm. The corries look at a distance, when filled with the afternoon shadows, like the hollow eye-sockets of a gigantic skull. In the rifts and shady recesses patches of snow linger almost throughout the whole year, and appear dazzlingly white hy contrast with the dark rocks around.

The loneliness of the wooden hothy is oppressive. I have rested in it in times of storm and calm. Even on the brightest summer day it is desolate in the extreme; and the stream that murmurs past has a forlorn sound, as if it missed the cheerfulness of human hahitations. This one hothy emphasises the solitude, as a single tree does in the treeless wilderness. It reminds you of social instincts and companionships for which there is no gratification in this glen. I remember spending an hour or two in it along with the Master of Balliol and Professor Jones, having heen compelled to take refuge from a wild storm which shrouded all the mountains in a dense leaden mist, and soughed in fierce gusts among the corries, and raised the voice of the stream that flowed behind to a loud uphraiding. A cheerful fire of wood dispelled the gloom, and made us warm and cosy. In one recess there was a rude hed, with a shelf and candles and tea cups, proving that the hut was often occupied at night. You can imagine the eeriness of the solitary tenant, especially if he had a superstitious mind filled with the ghost stories of the district. The very coldness of the night would give him a sensation of the supernatural, such as might precede the advent of a spectre, and the wailing of the winds would seem like the voices of the dead. A feeling of expectancy would take possession of him as if some mysterions heing were coming out of the vast darkness to hold commune with him. The very room itself would he filled with some unknown presence, some one of the powers of darkness. It is a wonder that anyone can he found hardy enough to pass through such an experience. One must be matter of fact and unimaginative indeed to do so. But a summer day in such a spot is a delicious sensation, when the whole glen is filled with a suhdued and softened light, and the mountain sides seem as if a blue smoke were rising over them like a veil, giving them a spectral charm, and the ripple of the streams is musical, and the purple heather just beginning to bloom, and to tint the hogs, has a faint odour, a "caress of scent," the very soul of perfume.

HUGH MACMILLAN.

Storm-stayed in the Hut.

#### Poetic Ornament.

A FRIENDLY DISPUTE BETWEEN WALTER CRANE AND LEWIS F. DAY.

L. F. D.—How comes it, I wonder, that I, who am at least as much interested in Ornament as you, am satisfied with design which you would dismiss as merely commonplace? I think you are too much afraid of the commonplace in ornament—what I fear is its self-assertion.

W. C.—It is probably on the question as to what is, or what is not, commonplace in ornament that we differ.

Tell me what is commonplace, The obvious, devoid of grace?

Well, we know it when we see it. What is trade but an organised system for its production? Some artist starts a fresh idea in ornament, straightway it is made mincemeat of, for universal supply, and applied to all sorts of unsuitable purposes. We shall soon have ornament (for outward application only) in digestible quantities, provided in tins "ready for use" at a small charge!

L. F. D.—Aren't you confounding the common with the commonplace? Yes, we know it when we see it; but I can't accept your suggestion towards its definition. The ohvious is often absolutely the right thing. And, as for grace, what more devoid of it than the art determined to be anything but commonplace? You talk of trade. If it is artistically in a bad way, that is perhaps because artists abuse it instead of trying to help it.

W. C.—The difference between the common and the commonplace is quite distinct in my own mind; and I was endeavouring, as I thought, to define the difference—but "language was given us to conceal our thoughts" (especially on art). We seem to understand the use of the word "obvious" in different senses; at any rate we are certainly using it in different senses. What to an accomplished and tasteful designer is ohviously in its right place is by no means so to the inexpert and tasteless. Certain basic lines may be common to all ornament, but it does not follow that ornament on such lines need he commonplace. The question of trade influence is wrapped up with the whole system of modern production; a subject too big for a digression.

I. F. D.—We don't appear to get much further in our definition of "commonplace." Can we agree upon its opposite, the quality which you must have in ornament and which I look upon more or less as overweight?

Would "fine" do for you?

W. C.—What? You consider an essential quality in ornament as "overweight!" Fineness of some kind it is, no doubt, which makes the difference we are discussing, hut what you call "overweight" I should probably consider as a saving clause. It seems to me we shall have to have two labels—one for useful ornament and the other for ornamental ornament. Regarding ornament, as I do, as a sort of language or song, I think what it says or sings should be to the purpose, and not tedious; otherwise, give me plain surface.

L. F. D.—Definition seems to be hopeless. We still misunderstand one another. Perhaps our difference is that I regard ornament as language only, not necessarily as song, and do not find it tedious when it speaks prosaic

common sense.

W. C.—I think the most heautiful ornament does "sing." It fills something of the place of music, is perhaps an equivalent in some sense. Sense of harmony, fitness, proportion, taste in colour—can you produce ornament without these, or some of them? These form, perhaps, the "common sense" of ornament, or are at least important ingredients. Prose may have its place in ornament, as in literature, but in neither need it he commonplace. Words are common, just as the forms or types in ornament; but there seems no limit to the variety of their possible recombination.

L. F. D.—I will not say the most beautiful ornament may not be likened to song; and I am not contending for the commonplace. I am only trying to get at what it is which reconciles me to ornament you will not tolerate, I suppose I do think ornament—sing as it may at its happiest—on the whole more prosaic than fine art; of which the only justification is that it is fine. Ornament is more modest. It may have a quite practical purpose, and very often it makes no claim to intrinsic interest

apart from its use just then and there.

W. C.—To decide what reconciles you to what I cannot tolerate can surely only be settled by some concrete instance. Put me to the test. I am rather surprised at your use of the term "Fine Art." I think beautifully designed decoration is as fine as any so-called fine art, and I consider the distinction misleading nowadays.

L. F. D.—My personal preference, as you know, is all in favour of ornamental art. I quite support your contention that it may be as fine as anything. But 1 think it convenient to have some term hy which to distinguish art claiming independence of any useful or practical purpose, and I don't grudge it the title it has assumed.

W. C.—I do not see that Ornament (or decorative art) is necessarily more prosaic than "Fine Art" (or pictorial art); all depends on the designer and his resources and powers of suggestion. Not that I wish to underrate Fine Art—I would rather say Fit Art. The qualities that go to make painting are out of place in a wallpaper. Yet both may be fine in their own way.

L. F. D.—Great part of ornament has to fulfil some *not poetic* purpose; and it is that humble, and perhaps prosaic, but most fit ornament which you seem to me, in your higher appreciation of the poetic, to under-

value.

W. C.—It seems to me every art has its natural limitations whether it is called "fine" or anything else, just as all kinds of art have their purpose and relationship to some human need. A picture, after all, must be decorative, just as a gem is, and both want their setting.

As to the non-poetic purpose of ornament, I am afraid I do not agree. Ornament can have no purpose unless it be to give some touch of joy or beauty to a thing—which seems to me, to put it much in the same relationship to practical purpose as poetry bears to life. But it must be absolutely fitting to its purpose all the same. I would say with Carlyle "Let the Devil fly away with the fine arts," with this qualification—if they are not fit arts.

L. F. D.—I insist upon the non-poetic purpose of much (not all) ornament. Take an instance or two. Who wants poetry in a carpet, or joy in a wallpaper? The purpose of either is fulfilled if it forms a pleasantly broken background of restful colour.

W. C.—Your "pleasantly broken background of restful colour" no doubt is a sufficient purpose for wallpaper or carpet, and I do not expect quotations from Shelley or Chaucer on either—albeit I was once guilty of

inscribing the refrain from "The Flower and the Leaf" all over a wallpaper. Don't shudder. The Arah comforted himself with texts from the Koran on his carpets and wall tiles, and they made beautiful ornament. Surely the pattern of a wallpaper or carpet is all the better for some charm about it, in addition to meeting technical requirements and a severely utilitarian purpose? You seem to grant this, indeed. The reason we see so many "stodgy" patterns is probably that they are turned out to order without any "joy," in a very unpoetical factory, simply to meet "shop requirements."

L. F. D. — Neither of us wants stodgy, shoppy, spiritless ornament. But I find "joy" enough in trying to solve a problem in design, and satisfaction in the solution of it. A touch of poetry is all to the good, so long as it is not at the expense of ornament; but it is no part of the bargain, and does not make amends for any shortcoming in technical or practical requirements. You seem to want all ornament to be attractive. I am satisfied with the modest ornament which is content to he

(what much of it should be) background.

W. C.—I could sign your articles, I think, only I am not sure that we yet have the same idea of the meaning of what I call poetry, or charm, in ornament. I do not see how it could be at the expense of the ornament, for it ought to be an essential part of it, just as poetic idea should be inseparable from the mechanism of verse. Background is most important, and is often indeed the most attractive part of a picture or interior. By "attractive" I don't mean assertive; but I don't see how ornament can be really good unless it gives pleasure, unless it possesses some beauty—is attractive, in short.

I. F. D.—We seem to be on the way to unanimity. Whether ornament gives pleasure, or is in your sense attractive, depends upon the onlooker. Something appears to give me pleasure which is not enough for you; for example, a pattern which ingeniously and perfectly fulfils its purpose of breaking up the wall or the floor space of my room, without any charm of novelty,

or poetry, or symbolism.

W. C.—It may be so; hut I cannot understand how such a pattern, while perfectly fulfilling its useful function and meeting its technical conditions, if it is the product of a sensitive and intelligent human being and not of a machine, should not bave also something hesides in it—something human, in short, which speaks of character or individual (or racial) feeling behind it, in however still and small a voice. Modern conditions of trade and factory production do not favour this quality, and I suppose but few would ask for it, or expect to find it, or even recognise it if there!

I. F. D.—I am disposed to endorse all that; but I still feel that you want something more than I do. Prohably I should find that "human" character you speak of in the intelligent solution of a decorative problem. With regard to the personal element in art, its interest is not to be denied; a strong personality writes, so to speak, always under its own signature; but I am not sure that I want anyone's personality to call out to me from the walls and the floor of my

room.

W. C.—You are satisfied with the scientific or technical solution of a pattern problem, the evidence of intelligence alone. I look for a spark of imagination or touch of human sympathy as well. This seems to be the little difference between us—a distinction perhaps rather than a difference? It seems to me that the personal element gives the dramatic interest to all forms of artistic ex-

pression, but it need not necessarily be clamorous—indeed, if it is, it is in danger of becoming inartistic.

L. F. D.—I, too, am thankful for a spark of imagination, and appreciate individuality when it does not assert itself unduly. How nice it would be if we could have everything! But it does not work out so. I ask for surface pattern, and they give me something which, even if it were a poem, would not he what I wanted.

W. C.—I do not know who "tbey" may be who thus dispense their gifts regardless of your requirements; but we none of us appreciate the exchange when offered (metaphorically) serpents and stones, say, for bread and fisb. You will bave to "insist on seeing the label." It would be a terrible thing to be offered Kipling instead of a useful Kidderminster, I should agree; but who nowadays would bide his poetical light in the meshes of a textile or the pattern of a wallpaper? There is more surface pattern than poetry about, and there is always plain surface to fall back upon if neither suit.

L. F. D.—Who indeed would nowadays hide poetic light under any practical purpose? It glares, a naked incandescent lamp! I tbink I want it doused. As to the preponderance of surface pattern, I am not so sure. There is no great plenty of adequate surface decoration; hut of the kind of pattern which supports itself on some crutch of sentiment, there is more than enough.

W. C.—Rather a Will-o'-the-wisp, from your point of view, this poetic light, isn't it? I confess I see more "sbop" than "sentiment" in our surface pattern, as a rule. I don't object to sentiment if it is genuine; but really I was under the impression that the present age bad stamped it out, and gloried in having done so—walking through dry places seeking rest.

I.F.D.—And yet it rather seems to me as if you sometimes found sentiment where I do not—for example in decoration evincing a faith in the all-sufficiency of nature —which, on the part of an artist, seems to me naïve

almost to the point of childishness.

W. C.—I have never seen any decoration "evincing a faith in the all-sufficiency of nature"; can you refer me to a sample? Decorators would often be better, it seems to me, if they had rather more faith in nature—in line and colour arrangements, for instance. Naīveté and childlike directness are very charming qualities in art; but, of course, one must heware of their affectation. Very self-conscious "grown ups" sometimes masquerade in pinafores.

L. F. D.—That they do. I refer you, not to a sample, but to the whole hulk of that section of modern work, I won't call it art, which disclaims artistic precedent. Surely an artist must put his faith in art! The necessary relation of his design to nature is obvious; but design implies something much more. He cannot trust nature. She does not show him the way out of artistic difficulties

-leads him into them rather.

W. C.—Is l'Art Nouveau your bogey? I see rather a kind of convention in this than a new interpretation of nature, for the most part; and I think one might trace the elements of even the most modern precedent-disclaiming work to certain germs or forms in historic or prehistoric ornament—differently compounded of course. In the practice of design I think we learn everything from nature, and then we have everything to learn. Of course we learn from art as well as nature, but an artist is neither an arcbæologist nor a naturalist; and there must always be some unenclosed country for the fancy or imagination, heyond grammars and dictionaries—at least, I hope so.

L. F. D.-It is not the "new" art but the naively

natural I had in my mind; and I said nothing about enclosing the fields of imagination. I like your paradox; but, tell me, if, having learnt everything from nature, we have still everything to learn, where else do we learn it but from art? That is just my point.

W. C.—I have already granted your point, that we learn from art as well as nature. It is a matter of course and goes without saying; hut there are also such things as experience and the complex processes of the individual mind, through which all facts, impressions and influences, whether from nature or art, must pass, as so much raw material (or cooked material) before any new form of art is reproduced. The forms of art, like the forms of nature, are the result of evolution.

L. F. D .- I agree to all that, if I understand you aright, and it is precisely in that naturally, and necessarily, and inevitably, human and personal quality of art (no matter how simply it sets out to solve its perhaps most practical problem) that I find the human element on which you lay stress; and, finding it, I do not ask further for poetry in pattern.

W. C .- Humanity is quite enough for me; though I don't admit there is anything necessarily inhuman or undecorative ahout a suggestion of poetry-which, after

all, is only another name for feeling.

L. F. D .- Nor did I say there was. And I have never quarrelled with poetry. What I do say, is-first, that there is a deal of modern work in which we are expected to excuse shortcomings of design and workmanship on the plea of poetry, real or pretended; and-second, that poetry is no part of the business of ornament.

W. C .- Well, I really was not aware that poetry was so plentiful, or was thought so much of, that it could cover bad design and workmanship. I suppose it all depends upon the point of view, and what we mean by poetry. Certainly it is "no part of the business" of an ornamentist-only his pleasure. That is my point-tbat you must have some sort of evidence of pleasure in the design or work on the part of its producer, or it will not give pleasure to the heholder.

L. F. D .- Poetry real or pretended, I said. I grant you it is mostly pretence. And you grant me all I claim when you allow that poetry is no part of the business of ornament. As to pleasure, art is not play; but the very pleasure of a workman in his work has a fair chance of pleasing.

#### 'Giorgione at Asolo.'

AN ORIGINAL ETCHING BY CHARLES HOLROYD, R.E.

A N Allegory of the Renaissance." The print is almost that in its intention, Mr. Holroyd tells me-the artist seen hetween heavenly and earthly beauty, hetween Christian and Greek art. Unless one is content to take it simply for its pictorial effect - and one would have a right to take it so, undoubtedly-it wants a "legend," and Mr. Holroyd, and no other interpreter of his own vision, should be its writer. I will not attempt to be its writer; yet a thing or two I will say. It was suggested, as I happen to know, by the reading of Mr. Herbert Cook's agreeable, studious book on Giorgione; and often, ere he read that book, had the etcher of this plate pondered over the lives of those Venetian painters, in which the sense of human beauty and of human dignity was developed so much. Is it De Civitate Dei that is being conned in this print, by one who, with mouth firmly set, has yet the will to glance at the implied-I will not say the realised-loveliness of the lady who has been worshipped not alone by the lover with the lute? Anyhow we are reminded, even if it be but faintly, of the two calls-the appeal of sex and of charm, and the appeal of graver things and austere destinies. Aud so, of the Italian Renaissance, it is, in a certain way, an allegory, even if we do not definitely say or feel that the grave elder is Gentile Bellini, the lover Giorgione, and the lady Catarina Cornaro.

It is a dozen or sixteen years, I may believe, since Mr. Holroyd at the Slade School, where he obtained the travelling Studentship, began to etch. It was in the later days of Legros at that Slade School, and from Legros Holroyd has learnt much. There was a natural sympathy between them. The dignity and reserve of the master commended themselves to the pupil and influenced him, and later Holroyd was influenced by the great bygone artists who had affected Legros himself-rather, however, by the Italians than by Rembrandt. In the art of Holroyd there is much derived from the former; little from the latter. In the art of Legros there is much derived from, or at least suggested by, both. Perhaps it was Legros himself who gave to Holroyd his characteristic love of the life and functions of the priest, so that the etcher of 'Communion dans l'Eglise de St. Médard' is reflected in the admirable Holroyd prints of the Monte Oliveto series. But Holroyd has not been by any means only an etcher of the life of the Church. The Italian Pastoral fascinates him-the making of grave music in halcyon weather; the ordered splendour of the garden; the "Borghese" or another. Italy, in fine-or, I would rather say, the dignity and refinement of the South; for at Nimes, at Arles, at the Provençal Aix, why should he not be as much at home, and as entirely satisfied with high beauty as at Asolo in the Trevisan, or in the Campagna of Rome? Nor has Mr. Holroyd neglected England, or been insensible wholly to its charm. Only it must not he "pretty," it must not be small. Some rolling Yorkshire country will do for him, even if it be only a 'Farm hehind Scarhorough.' He is a man of ideals. He will hold his own, and rightly. His work may be imperfect at times. At times the limit of its sympathies may seem to he narrow. He is exclusive. He does not accept everything. But of one thing you may be sure: Whatever he does accept has dignity.

FREDERICK WEDMORE

No. 218 .- Pig-faced Bascinet.

# The European Armour and Arms of the Wallace Collection, Hertford House—II.\*

Ву GUY FRANCIS LAKING, M.V.O., F.S.A.

KEEPER OF THE KING'S ARMOURY.

No. 213 .- Barbute Bascinet.

N the arrangement of the armouries at Hertford House chronological order has given way to the method employed by the late Sir Richard Wallace, that is, the grouping over the walls of the galleries various panoplies of armour and arms, but with the difference that formerly the entire European section was crowded on to the walls of the comparatively small gallery on the first floor (now numbered 17), whereas it

at present occupies three of the most spacious of the ground-floor galleries, numbered respectively 5, 6, and 7, but with this addition, and, I may add, improvement, that the more perishable examples have been enclosed in glass cases. The numbering of the various pieces follow consecutively from No. 1 in Gallery 7 to No. 1,343 in Gallery 5.

It will facilitate to a certain degree my criticism if the objects under notice be taken chronologically and irrespective of their number in the catalogue, so the irregularity with reference to the numbering will therefore be excused.

A sword of very early form, possibly dating from the ninth century, may justly claim to be first as starting our chronological list (No. 12). This most rare form of sword was one of the early series, obtained from the collection of the Count de Nieuwerkerke. It has

Continued from page 134.

been admirably illustrated and described by the late M. Viollet-le-Duc in his "Mobillier Français," vol. v., p. 365. The chief characteristic of this weapon lies in the formation of the pommel, for its crown-like finial has given rise to many theories as to its origin, one of these being the supposition it might have represented a sacred relic bound to a flattened oblong bar, pommel, occasionally seen in the tenth-century swords,

as, for instance, in a specimen found in the river Thames at Bray, and now in the collection of Mr. Edward Barry, of Ock-

wells Manor.

Another interesting specimen of this same type of sword is in the British Museum collection, found in the river Witham, and another exactly similar in the collection of Mr. Morgan Williams, of Aberpgwm. These two swords only differ from the Wallace example in the formation of their quillons or cross guard. In both these specimens the cross guard droops over the hlade, whereas in the Nieuwerkerke-Wallace sword the quillons are quite straight and of square-shaped The surface sections. ornaments applied to these early swords will be found in nearly all cases worked in that manner which is known in Italy as azziminia, in Spain as ataujia, and in France as tauchie, which in execution closely resembles the Koft-gari

Sword. early Century.

Sword. Middle of the Fourteenth Century.

No. 357.—An Axe, Fourteenth Century.

work of India. The method of workmanship of such decoration is as follows:—
The surface of the article to be decorated is finely cut with a delicate cross-hatching; the design, whether it be in gold, silver, or even copper, is then hammered on to the surface, which, being thus roughened,

retains a hold upon the applied metal; it is then polished, and the whole can then be finished without fear of removing the ornament thus overlaid. The ornamentation employed on the two early swords mentioned consists of geometrical patterns, monsters, masks, and even a stiff arrangement of scrolls and flowers, recalling the formal archaic ornaments found on Chinese bronzework of the Sung Dynasty more closely than any other particular past-metal handicraft ornament.

Nos. 13, 18 and 19 show fine examples of fighting swords of the first half of the fourteenth century, but they may appear somewhat wanting in interest, as whatever may have been their original surface enrichments, it is now entirely lost beneath the thick rust oxide with which they are coated.

Among the very few weapons that I have dared to place within the fourteenth-century category is No. 357, an axe with a straight-cutting blade, deeply stamped with the sacred initials 1.H.S., and the

monogram M.A. It may be a mistake to assign it to so early a date as the fourteenth century, but certain technicalities of manufacture, together with its excessively early form, strengthen the supposition.

To merely mention the fine serving knife, No. 755 in Case 6-the companion of which may be seen in the Louis Carrand bequest to the Bargello of Florence-will be sufficient, for it brings to a close the extremely short list of offensive arms that can safely be ascribed to the fourteenth century. The handle of the knife is composed entirely of ivory-probably walrus-carved at the pommel with the figure of a lion holding in its claws a small dog. The workmanship is careful, and the animals rendered with a certain freedom characteristic of their Italian origin, recalling to a great degree the carved ivory saddle-plates purchased by the Louvre at the Spitzer sale of 1893. Curiously enough the Spitzer saddle-plates and the Wallace serving-knife came both from the already mentioned Carrand Collection.

The items of defensive armour that can be placed in the fourteenth-century list number only three examples, and of these three Nos. 215 and 216 in Case 4 may be considered the earliest. They are a pair of gauntlets, probably French, of the last quarter of the fourteenth

century. In form the cuff is extremely short and bell-shaped, a very characteristic feature of that period, and familiar to us in the beautiful effigy of the Black Prince in Canterbury Cathedral, in the statuette of St. Michael at Dijon, or in the less known, though very interesting, effigy of John, Lord Montacute, on his monument in the nave of Salisbury Cathedral.

In the Wallace gauntlets the steel is of close, fine texture, and of that peculiar black lustre which is met with only at this period. They are "trimmed" or furnished with applied ornaments of brass or latten, which was, in all probability, originally gilt, and possibly enamelled. On the cuff is the word AMOR, twice repeated. These fine and rare gauntlets are very successfully illustrated in Viollet-le-Duc's "Mobillier," vol. v., p. 456; but are drawn, however, with fingers, which are now wanting, and which I am inclined to think were supplied by the versatile imagination of that clever illustrator and writer. However, they are of the greatest interest as a document of costume, and are certainly unique in this country. The only other pair that can compete with them for quality and preservation are those left by that eminent connoisseur, the late Mr. Ressmann, to the Bargello of Florence, to which museum he also bequeathed the greater part of his fine collection; on comparison with the Wallace gauntlets we are reluctantly obliged to admit that those in the Ressmann collection are finer as regards form, ornamentation, and preservation. A left-hand gauntlet of the same period and manufacture, but without the brass enrichments, is to be found in the Stibbert Collection, also at Florence.

For examples in England the gauntlets hanging over the tomb of the Black Prince, which I have already referred to, resemble the Wallace examples in form, but they are entirely of latten, and of but very indifferent workmanship. In the Tower of London there is a gauntlet purporting to be of the same date, but it is a comparatively modern forgery.

It may suggest itself to the reader we have passed without notice the various mail hauberks of fourteenth-century fashion, in particular No. 82, an example furnished with mail mitten gauntlets, supposed to be of late thirteenth-century work. But as the history of chain mail is interwoven with much mystery, and great uncertainty of date and nationality, it is safer to pass no comment on these specimens than by an unjust criticism to give a biassed view of their authenticity.

The next specimen of defensive armour which is

No. 755.—A Serving Knife, Fourteenth Century.

worth consideration is—following the chronological list—the beautiful helmet No. 213 in Case 4. It is familiarly known to all lovers of armour as a "bascinet," derived from the old French of "bacyn," a bowl or basin, which shape this so-called helmet in its primary state of the twelfth century must have somewhat resembled, but which now, as in the bascinet or

Nos. 215 and 216 .- A Pair of Gauntlets, late Fourteenth Century.

barbute under discussion, has developed into the graceful headpiece of late fourteenth-century fashion. This, the Wallace example, retains a fine black "patina" or surface, so preferable to its over-cleaned, though none the less rare, case companion, No. 218, the vizored bascinet from the Meyrick Collection.

The bascinet No. 213, like the gauntlets already described, is illustrated in M. Viollet · le · Duc's "Mobillier," vol. v., p. 187. It came in the first place from the collection of the Count de Nieuwerkerke. In the "Mobillier" its untionality is given as Venetian, but in all probability Germany is more likely to have been the country of its manufacture, as an almost similar form of headpiece appears in the effigies of Albrecht

von Hohenlohe, also on that of Urich Landschaden. In the Poldi Pizzoli Museum at Milan are two bascinets of nearly similar form, but both presenting the peculiarity of applied ridges around the lower portion of the skull-piece, an additional defence, the use of which has never been quite satisfactorily explained.

The second bascinet referred to in this same case, No. 218, is a good representative helmet of the first years of the fifteenth century. It is in the form almost universally known as "pig-faced," on account of the acute-snouted vizor so humorously represented in the missals, carvings, etc., of the period. Although this example is of great rarity and archæological interest, it cannot rank as an absolutely first-class specimen, having, like the Tower of London bascinet, suffered from vigorous and illadvised cleaning. It has, however, the additional interest of having been a part of the well-known collection formed in the first quarter of the nineteenth century by Sir Samuel Rush Meyrick. This specimen has been engraved and illustrated by Joseph Skelton in his "Engraved Illustrations of Ancient Armour," plate xiv., pp. 3 and 4, which illustrations fully show off, I am afraid, its want of form as compared to the superb bascinet now in the Dino Collection, late from the Londesborough or the Hefner Alteneck example; or even that somewhat grotesque bascinet in the fortress of Coburg.

Nos. 133 and 134, a pair of "brassards,"

are curious and full of interest, owing to a certain mystery which attaches to them. Are they true pieces? Are they as early as they appear by their form? Or are they a sixteenth-century revival of a past fashion? To the first question one is inclined to give the benefit of the doubt, for although there are certainly small technical defects, their general appearance of age is eminently satisfactory; but as to their being of as early a date as I have ventured to place them in the cataloguecirca 1420-on further consideration one is doubtful, choosing rather to date them within the first years of the sixteenth century, for in the delightful series of engraved figures in "The Wedding Feast" of Martin Schongauer, an almost identical vambrace with a curious sliding gauntlet is to be noticed on one of the figures.

With the really fine and complete series of helmets of the "salade" type in the collection it is difficult to discriminate, for each has its own special points, either of beauty or interest; but for anyone seeking examples of such helmets, Case 4 in Gallery 7 holds the most attractive series to be found in the armouries.

No. 201 is a salade in one of its more primitive, if less graceful forms. No. 208 is a tilting salade, superb in condition, and wholly satisfying as regards proportions. No. 210, a Venetian salade, fashioned on classic principles, fine in condition, and stamped with an armourer's mark, probably that of Antonio Missaglia of Milan: it came from the Vendramini and Meyrick Collections. No. 202, a Barbute salade, the form even more

No. 765.—A Serving Knife, bearing the arms of Philip-le-Bon, 1396—1467.
No. 749.—A Serving Knife, bearing the arms of Rollin, Chancellor of Burgundy.
No. 750.—A Serving Knife, bearing the arms of Sire de Dancourt.

trated hy Viollet-le-Duc in his "Mobillier," vol. vi., p. 265, but he was probably in error when he pronounced it to be Frencb.

A delightful little helmet of the salade type (No. 91) which is likely to be overlooked owing to its somewhat lofty position on one of the walls of Gallery 7, is of French origin, and most pleasing in its simple outlines. The surface is entirely russetted, and a great amount of character is lent to it by the introduction of large pyramidical brass-headed rivets, which retained the coif or lining in position.

The Italian Salade (No. 200) should be noted, for it is a further advancement towards the complete closed helmet of the sixteenth century and is characteristically Italian. In one of the portraits, attributed to Giorgione, of the great Stefano Gatta-Melata, such a salade is seen resting upon a balustrade in front of the general. It will be noted that the lower portion of the vizor curves inward, following the line of the cbin, and that the back of the skull-piece has the additional binged plate—all parts showing the development towards a more complete form of beadgear.

This example is in every way satisfactory—in form admirable, the workmanship excellent, and the condition as regards preservation and surface fine; like other salades already mentioned it was from the Louis Carrand and the Nieuwerkerke Collections. No. 203 is another salade belinet of similar construction, but although formed on the same principle, is distinctly German, both in fashion and workmanship.

The defensive arms of the fifteenth century in this collection are represented by many varying forms. In a great variety of cases they are fine, but it is almost safe to say that none are of superlative quality. A sword that is in most ways satisfactory can be seen in Case 6, No. 676; it is an Italian fighting sword of the second half of the fifteenth century, the hilt being composed of copper gilt, the formation of the pommel being continued to the grip, which is fashloned of horn, the

blade is stiff and tapering; but this fine weapon bas one drawback from the collector's point of view—it bas been over-cleaned.

In the Musée de Cluny, among the fine swords left by the late M. de Beaumont, there is an almost identical weapon, but finer in the quality of the blade, as it bears the arms of the Visconti family; it bas, too, the advantage of being in better condition.

In Case 6 is a replica of the magnificent Donatello sword of the Royal Armoury of Turin. The age of the hilt seems somewhat dubious, but being taken from so fine an original it is thoroughly satisfying as a decorative note. Fitted to the hilt is a blade also of uncertain date, but in all probability belonging to the seventeenth century, judging from the style of the etching which forms its surface ornament. Marcel Reymond, speaking of the Turin Donatello sword in "La Sculpture Florentine," states that the sword, from the character of the decoration, must have been made towards the latter period of the artist's life. The original sword has a grip of cocoanut wood, upon the bronze ferrule of which is signed in full the artist's name.

One of the strongest features in the series of fifteenth-century weapons is the extensive exhibit of that curious form of short sword known in Italy as the cinquedea Veniziana, for which in England we have no name, but which has at various times been erroneously termed the anelace, the braquemart, or langue-de-bœuf. The name serves to describe its formation, the word being derived from cinque, five, dita, finger, i.e. the breadth of five fingers, which will generally be found the width of the blades of these weapons at the extreme bilt. In the finer examples the blade was utilised as the field for the richest ornamentation; Fineguerra, Baldini, and Barbari deigning to execute the designs

either in fine aquaforte engraving, or in the more beautiful gold niello. In this collection there are thirteen examples, all choice specimens, but alas! four of them almost ruined by the vigorous over-cleaning of the past.

The finest of the series is No. 673, which, by the introduction of gilt Roman coins, produces an effect of richness that it would be difficult to improve. Had the cinquedea No. 669 been in a less corroded condition, it would have surpassed any in the collection for beauty of design and workmanship. Unhappily, from the centre of the grip downwards, the surface, and even part of the outline have perished from rust oxidisation, due, no doubt, to long immersion in water; but notwithstanding this the outline of the pommel and grip scarcely fail to convey an idea of its past beauty.

The duration of the fashion for the cinquedea may be roughly estimated at from forty to sixty years, or from about 1440 to

In our appreciation of the last named weapon we may have passed over a few objects of high interest, although

they can scarcely be called defensive weapons; in particular the three superb little carving-knives, Nos. 749, 750, and 765 in case No. 8. The last-named deserves to be first described; for it is of the greatest importance, as upon the silver-gilt mounts that adorn the hilt are emblazoned the shield of the arms of Philip-le-Bon, Duke of Burgundy (1396-1467), four times repeated, worked in the most delicate translucent enamels, and produced at a period when the enamels of Limoges were at their zenith, causing them to be of almost univer-

No. 10.—A Suit of Armour, German Fashion, late Fifteenth Century.

sal European demand. In this case the shield of arms is surrounded by the collar of the Order of the Golden Fleece, which was instituted by Philip in honour of his marriage with Isabella of Portugal, in 1430. Down either side of the grip is introduced the motto of the same Order, "Autre N'a(u)ray." This little serving-knife was formerly in the collection of the Count Alessandro Castel· lain, passing into that of the Count de-Nieuwerkerke, with whose collection it was exhibited at the South Kensington Museum, in 1877.

Identical in form, and varying very little in decoration, are the two other knives, Nos. 749 and 750. The former emblazoned with the arms of Rollin, Chancellor of Burgundy under Philip - le - Bon, the latter charged with those of the Sire de-Dancourt, Grand Master of Artillery to that same monarch; they both come from the collection of M. Louis Carrand and the Count de Nieuwerkerke. No. 749 also formed oneof the gems of M. de Meixmorans' Collection at Dijon, brought together in the first quarter of the nine. teenth century.

We have now ar

rived at the last quarter of the fifteenth century. Embracing the defensive arms of that period, No. 10, a capà-pie harness of German fashion (date about 1470-90), makes a brave display, but from a true collector's point of view is far from satisfactory. The backplate, part of the helmet, the left arm, and almost the entire legs, being modern additions. The original plates, however, are stamped in places with various armourer's marks; the only one recognisable being that of Adrian Trietz, of Insbruck, impressed upon the cuff of the gauntlet.

## The Aerograph.

A N ingenious instrument which has advantages over the brush for distributing colour has recently claimed some attention. The device is called the Aerograph, and it consists of a receptacle in the form of a fountain pen, through the end of which, governed by a regulating stop, colour is forced by means of power generated by the use of a treadle. The brush will not

Portrait in Water Colour.

Drawn with the Aerograph.

dapted for use in extensive decorative schemes, and for such a purpose it is specially recommended. In the band of a skilful manipulator the Areograph can be utilised to produce considerable differences in effect, and it is possible to obtain with equal facility a delicate line or a spray, the amount of colour to be applied being under instantaneous control.

Applied to the imitation of crayon work a satisfactory result can be achieved in a minimum amount of time. The device is useful in such work as the completion of coloured areas in charts, the particular colours in each section having been slightly indicated by the draughtsman. For duplicating purposes it is a workable invention.

It is urged by the inventor that it is of much importance to the professional artist, as the drawing can be made before the idea becomes "dulled or lost in the drudgery or toil of slower processes." We do not endorse this particular statement in favour of the instrument, for a pencil always must be unchallenged as the best medium for briefly recording the bare notion of an

Ten-Minutes' Sketch.

#### THE ART JOURNAL.

idea. The inspiration which passes so quickly that the mind retains no permanent quickening, is scarcely worth classifying with the flights of the imagination which induce serious application to his craft on the part of the artist, who is unworthy of his profession if he will not submit himself to drudgery and toil unceasing. This is perhaps a quib-ble at an expression which is well meant in intention, but which is not entirely convincing.

The Areograph is extensively used in colour-

# The Influence of Dante upon the Art of his Century.

N O one, I suppose, will deny to each of the arts its especial province. Music represents emotions heyond the compass of words, words have a wider scope than auy external art. Painting, in her turn, can represent more vividly and more forcibly the facts of the external world.

It is dangerous, perhaps, as a matter of theory, to go farther than a few plain words like these. But if we take two pieces of painting, and find that, though they show equal command of materials, one instinctively pleases, and the other as instinctively repels: if, again, we take the same story in a book and in a picture, and find that in one case it is nohle, in the other merely repulsive, then, I suppose, there is no harm in our stopping to ask why. The task is easier, the discovery will he more profitable.

To all who know anything of Tuscan art, the names of Cimahue, Giotto, Orcagna, are household words. Yet the ideas connected with them are apt to be merely scattered and vague, or else the over-emphasised perceptions of some strong mind which has made one of them its especial study. Let it he allowed us to particularise in a general way.

Cimahue was a painter of purely religious pieces, with no attempt at naturalism, but a very definite seeking after heauty. Giotto was hoth much wider in scope, and intensely realistic in aim: striving hy all his powers—imperfect though they were—to paint life as it is. His symholism, when it comes, is plain and direct, usually

expressed in single figures. Next after him comes Simone Memmi. He has made no advance as a craftsman, and has only become more introspective and thoughtful. Then comes the period with which we propose to deal.

There is a spirit very clearly visible to the visitor in Florence: and though he may connect it with no very definite time, he does with one name: viz., that of Orcagna. It is a spirit, suggestive hut unmistakahle; betrayed rather hy change of mood than change of subject: though it has to a large extent introduced, instead of the painting of life actual, the symbolical treatment of all that connects it with things beyond. Even subjects of a more ordinary kind, however, are given a mystic turn. We notice strange heasts about the fringes of the picture, stray uncouth demons intruding here and there, giving us the feeling that there are gentlemen of their kind in ahundance lurking outside. What is the cause of this new and hardly wholesome atmosphere? Where are we to realise it? Whence are we to trace it? As an artistic influence, how admirable is it? These are the questions to be investigated here.

There is much to he seen in Florence herself, as in certain other places in Tuscany: hut its effect is damped to some extent hy other influences round. To find it in perfectness let us go to Pisa, to that Campo Santo which is at once so heautiful, so curious, and so famous.

Although this little hurial-ground is well known

Giottesque Madonna. From the Church of St. Francis, Assisi.

Ry Giotte

enough, a few words describing it can do no harm. The whole place is an ohlong, pretty far removed from the square. There are high unbroken walls all round, within them broad arcades, and within again a comparatively small space open to the sky, in which the bodies of the dead rest. The slope of the roofs is steep, and they rest on the inner side upon graceful traceries of geometrical gothic set in round-headed openings, through which the pictures on the long walls can he easily seen from the other side. The whole place has so much wall, roof, and tracery as to give it the appearance of an annex to some great institution, rather than of an open-air hurial-ground. The sense of peace is heyond description.

We would fain linger over this, but we are come to see the pictures. Those that concern us cover the whole of one long wall and part of another; they are hy various painters; but three at the left end attributed to the hrothers Orcagna may claim our attention. We choose them out of the others, not hecause they are the only ones exhibiting the spirit we speak of, but because they indicate its source. The reader may, taking the description given, re-discover it in many paintings at Florence, in those of Spinello at Arrezzo, and others hesides those in the Campo Santo itself. The attribution to the Orcagnas has been questioned, and, though I am not here to quarrel with or defend it, I cannot forhear a word on the subject, as it does throw light indirectly on something which concerns us now.

Dante died in 1321, Andrea Orcagna in 1389, i.e., sixtyeight years afterwards. If his life overlapped with Dante's he must have died an old man. There is no precise record of his hirth, hut the question of his style may throw some light on the matter. The tendency of artists is towards longevity; and in old age we often notice a change: always, with men of character, tending to inspire them with a restless and troublous spirit. Now the grounds on which these works have heen doubted as those of Orcagna are, so far as I can understand, the presence of such a spirit as this, as contrasted with more tranquil paintings in Florence. Put the date of Orcagna's hirth at 1310, and you have him aged somewhere between fifty and sixty years old at the time when these paintings, by common consent, were executed; the very time when we should expect the change referred to to be heginning to take hold on him.

With this preface, let us examine the paintings. The first compartment is, on the whole, the hest known and the most praised. We must agree that it is very vigorous and full of incident, abounding in ideas, and therefore to be examined carefully. In the lower part at each side is portrayed the life that is of the world, worldly; on the one side, in the lazy joys of shade and song; on the other, in the more active exercises of the field. On the company heneath the trees Death is sweeping down with a huge scythe; in her course the cripples, the poverty stricken, call out to her for a merciful stroke, hut she passes them without a sign. So Death comes on the idle. The more active have warning of her by the way. The riders find in their path corpses on whom the worms fatten, consuming them one hy one. If a glance at the bodies is not enough to tell us the state of things, the attitude of one rider, with his fingers to his nose, hints it significantly enough. Ahove these images of death a hermit's life is set forth, with all the attendant pastoral doings. In the middle of and to the right of the upper part of the panel rise up the spirits of the dead; angels and demons contend for them in the air, and they are

borne, some to hliss on high, some to torment in the depths.

A glance is enough to assure us that the painter has no real care of heauty. This is not the result of archaism as some may he tempted to suppose. Others who went hefore showed much more sense of it, though none of them had the power to enable them to draw that magnificent figure of Death sweeping through the air. This ugliness is a necessary attendant on the painter's purpose and frame of mind. He gives the ugliest details, as in a hideous checked garment in which one of the bodies is clothed, chooses the ugliest moments in

a chain of events, making the souls, represented as fair-sized children, pass through the mouths of the hodies they inhahited, straining them as they go. The fiends who claim them are as hideous as fiends need he, the angels who rescue them are unlovely; and helow that foul stench rises up continually, to remind us that poor human nature decays and grows rank if not put away decently and quickly into the ground when its ill - starred spirit has left it.

Let us pass now to the last of the three. Although it can hardly he said that here there is anything more revolting to the physical sense, yet from it we understand how utterly the painter has descended into hell, to rise up, not purified and

cleansed, but ready to glut the fancy of men with foulness and fury. The incidents of the representation are horrible enough, every imaginable torture goes on, all the resources of the elemental and reptile world are pressed into the service of punishment, while in the middle sits a huge giant-a crust of armour with a helly of fire-holding two victims in his hands, while others, like parasitic vermin, crawl ahout his hody and torture themselves in its jutting flames.

He has descended into hell, but he cannot stay there. He comes out, and corrupts every sweet, every lovely thing. The strugglings of the earliest art have yet left us with the idea of a Virgin sweet, patient, and reverent: with some grace of motherhood; with some sense of the descent of a divine thing upon her; with some memorial

humility and hopeful aspiration. Look at her now! Gaunt, hard-featured, arrogant. All earthly charm taken from her, and no heavenly light infused. Mary, truly in bitterness; the hitterness of her own hard, unforgiving spirit. Christ's mother in nothing: rather, the woman sterilized into the judge, she sits enthroned. Honoured hy ministrants whose service she accepts, whose love she terrifies, whose worship she disregards.

Indeed, it is a consummation sad enough; but sadder, almost, to think that it was all due to the influence of one of the greatest works that ever came single out of the mind of man: the Divine Comedy of Dante. The

Inferno. I might almost have said, since it was thence that the painters really drew their ideas : hut let me, alheit with some diffidence, examine into the general characteristics of the poem in so far as they concern the matter hefore us.

In the first place it is taken up almost entirely with heings of the shadow world; Dante himself being the only living man who figures there.

In the next place the poem describes for the greater part painful scenes, not pleasant ones. It is true that the third hook is full of thoughts of the utmost comfort and loveliness: hut, as in the case of most ideas of the like nature, they are too slight to be treated in plastic form: for example the moving of a star-like

By Fra Filippo Lippi. spirit along the arm of an illumined cross. (Paradiso,

Madonna of the Liberation. From a picture in the Accademia, Florence.

XV.) Moreover the poet has warned his readers generally to fall hack and not follow him here ("o! voi chi siete," etc., Canto II.), a command in which they have, for the most part wisely enough, oheyed him.

Horrible as are the images used to bring guilt home to sin, they are not of Dante's own devising. There is hardly any great writer hut found much of his materials ready-made: and the poem would never have made the profound impression it did in its author's lifetime had he used images with which his readers were not familiar. Fires there were hefore Dante, hut he first confined them to lakes on the hanks of which men might walk and watch the souls hurning. Devils there were, hut he lengthened and sharpened their claws. The instruments of torture which tradition had left vague he ordered and specified; thus filling the mind with awful concrete

images, which endure to this day.

In the third place the poem is charged with thought like a storm-laden sky with electricity. Not only religious thought, but the hates and loves of the time; often commonplace, sometimes unworthy: and, even though Dante wrote a prose work to explain it, in any respectable edition the commentary exceeds the text.

We have then these three things. Scenes in which spiritual persons are the actors; scenes mainly of horror or pain; and, lastly, so fully charged with meanings that the author's own text is insufficient to convey them.

There is one other characteristic which deserves a separate consideration. People are not treated in the mass, but individually. It needed a longer pedigree to get into the Inferno than to enjoy life on earth in high places. The actors in the comedy, then, are few and distinguished: every one who speaks is known to Dante

and should be known to the reader.

Now, of all the characteristics mentioned only this last is certainly of any value to the painter. One can conceive that, other considerations being waived, fine subjects might have been made of, for instance, the meeting of Dante and Virgil with Cato. But this is not the aspect which struck on these painters. They were profoundly impressible with the influences the poem hrought to bear on them. They realised and applied to their own souls its awful threatenings if not its sublime rewards: and in the midst of terror and excitement they missed those great figures that might have been of value to them.

It will be said, "How is it certain that the paintings are inspired by the actual poem and not by the general spirit of the time?" That they do reflect that spirit is evident; but they none the less draw it out of the poem itself. Dante once for all put the teaching of that school of theology into a form that there was no gainsaying and no amending. He defined what was vague before, and anyone who wished to represent it in concrete form

must and did go to him.

The interval hetween the poem and the paintings may strike us as a second objection at first sight; but really it is only what we ought to expect. In the first place there was in Dante's lifetime a very strong influence at work in the field of art: viz. that of Giotto. He outlived Dante by fifteen years, and though a close friend of the latter, was not in any way dominated by him. He was widely employed in Padua, at Assisi, besides in Florence herself; and when he died, he left a strong hody of workers brought up under his influence: Memmi, Gaddi, and the rest. The nature of this influence, we have already sketched; and all this would be enough to account for the delay, were there not another and a more general cause.

Living arts deal only with figures familiar and established. A Tuscan painter of Orcagna's day had no leisure to be reading yesterday's novel or studying the latest print. It is only where the stock-in-trade of one art has passed into men's minds, when its figures are familiar-when it has become part of life, in a wordthat another art has any business to treat it seriously. The forms of architecture do not appear in contemporary paintings, but only in those done after an interval of some years. The story of Faust as made manifest by Goethe in verse found its expression in music after just such another interval as we are contending for here.

The conclusion is, then, that the same subject has made a noble poem and a depraved school of art. How is this to be accounted for?

Partly, of course, because the painters did not read the whole poem, but of reality only in a very small part. There is a more essential reason. The same things are not food for both arts. In painting much thought may oppress, continuous incident will be troublesome; things of the spirit world are unsatisfactory: the ugly or obscure is impossible. All these assertions may seem dogmatic, but they are founded on reason and the reason is not hard to find.

The function of sight is to realise actual and apparent things, beyond all other senses. Secing is believing we say: and exactly as its power to realise the visible is mighty, its power to realise the invisible is restrained.

Secondly, that thought oppresses the painter must be evident to all who think. Heavy brows make idle hands, or at least confine them to some mechanical occupation. All paths are free to thought, the unlovely often, the invisible by tendency and choice. Moreover, historically the proposition has been found true: and this in spite of the fact that some of the greatest painters have been the

most thoughtful men.

In the case of Michelangelo the profound thought was controlled and kept at a distance during his prime, but in old age it burst out and overpowered his fingers. His art lost its natural grace and became a tempest of ideas until finally the plastic power dwindled into the drawing of crucifixes for his friends. Much the same thing happened to Botticelli in old age, only in him the art power failed suddenly and altogether. Dürer did not live to he an old man, or the same thing had certainly happened to him. Great men tend towards abstract thought in old age; but if it tend to choke a painter's productions then, plainly it cannot he wholesome for his art at any time.

Lastly, why is it that art may never be by intention ugly? Ought she not to try and influence moral ideas, and must she not use all means needful for this?

I think all her acts must he ordered with reference to one great end, which is to inflame our spirits by the presentment of what is noble or beautiful. To lead us on by pointing to the heights above, not to the gulfs behind; to encourage us with the waving banner of hope, not flog us with our iniquities; by showing us the best, to inspire us to become the best. It is at once her limitation and her glory. We do not seek out physical ugliness in life: we tolerate it if need be, but we do not seek to perpetuate it, to people the Isle with

Dante himself was not a happy man, and I sometimes wonder whether the world is happier for all he has written. But this is not the point. Perhaps the world ought not to he happier for him; but it ought to he happier for its pictures; and it is because of this that men like the Orcagnas have failed.

It is because of this that modern art has failed too. She has forgotten that straight lines are for the carpenter, lamp-light for the romancer, rioting and drunkenness for the Exeter Hall lecturer, wraiths for the theosophist. In aspiring to teach, she has forgotten how to praise. Her eye has fallen from the star of beauty that used to lead her, and her feet are floundering in muddy ways.

Watch again, O mistress, for the loveliness of things; lift up your eyes and we will trust your feet. Lead us among the flowers, and we will be gentle; show us majesty, and we will be strong; paint for us, as of old, the gate of the heavenly city, and we will enter and be at

ADDISON MCLEOD.

"Music" Frieze.

# New Designs for Wall-papers.

CUSTOMS and localities change, and amid the general evolution of things, the neighbourhood of Berners Street has come to be one of the recognised centres of the wall-paper industry—not, that is, of the actual manufacture, but of exhibition and distribution. Messrs. Jeffrey, therefore, whose factory in Essex Road has hitherto been the only site of their show-rooms also, are to be congratulated on having opened fresh premises for the latter purpose in the more accessible position of Mortimer Street.

It will be remembered that this firm have, for a number of years past, made a speciality of decorations from designs by Mr. Walter Crane. It requires a hand thoroughly accustomed to the artist's style of treatment to be able to interpret it for mechanical reproduction; and it is indeed astonishing with what skill and fidelity Mr. Crane's drawings are rendered. His patterns and scheme of colouring are often of such a complex nature as to strain the capacity of process and material to the uttermost. And yet the result never gives the impression of their having heen thinned down from a more elahorate composition in the original to a modified and impoverished version of the same.

The above remarks apply, for instance, to a recent design of Mr. Crane's, "The Cornfield," the motif whereof its name appropriately indicates. The composition is of many colours, from the yellow of the corn to the hlue and red of cornflowers and poppies respectively. It is an involved pattern and somewhat lacking in the bold masses and leading lines upon which most of Mr. Crane's decorative designs are hased. On the other hand the artist's "Fruit" frieze, for those who admire this particular kind of ornament, could scarcely he excelled. It consists of a pronounced swag of brilliantly contrasting colours, with delicately outlined ribhons and scallop shells. Yet another design of the same artist's is the "Olive" filling, which, while meeting the taste for a French stripe, offers, in the adaptation of natural forms, something of greater interest than mere abstract perpendicular hands.

It is always a clever achievement to employ the human figure satisfactorily in repeated ornament, the general rule being that the higher the organism, the less readily it lends itself to mechanical reduplication. There is, indeed, a sense of artificiality in the aspect of a man or woman recurring, line for line, in one identical attitude, although, of course, in any process like wall-paper printing or machine weaving variation is out of the question. Experiments which involve this problem cannot fail, therefore, to furnish a profitable objectlesson to the artist. Three cases in point occur among Messrs. Jeffrey's more recent wall-decorations.

First comes Mr. Walter Crane's "Dawn," a design in

Peacock Wall-paper,
Designed by W. B. Macdougall,

which an allegorical figure, enclosed, cameo-fashion, within a medallion, is repeated at set intervals; but the whole is of such conventional, nay, even architectural, character, as to lose all effect of disagreeable monotony. If the difficulty here is rather avoided than overcome, Mr. Scarratt Rigby, in the second place, fearlessly encounters the situation. In his "Music" frieze he introduces three female figures, which repeat in clear silhouette and with a regularity that no artifice seeks to temper nor disguise. Beautiful and decorative though these be as units. how far it would conduce to rest and contentment to live with such a closely recurrent sequence all round one's room could only be proved by experience. Thirdly, is a design hy an artist of the Birmingham school, Miss Dorothy Hilton, which offers perhaps as good a treatment of figures as could be desired. Intended for a nursery paper, the subject, the game of "Oranges and Lemons," comprises a number of children at the foot of an orange and a lemon tree, with intertwined branches. The figures, while they fall into a perfectly balanced group, form a graceful undulating line, and, taken one by one, present a marvellous variety in pose as well as in costume; notwithstanding that for the exigencies of the blockcutting, nearly all their faces are shown in profile. Their print frocks are rendered with a directness and a simplicity in diversity that is particularly effective. The whole is a harmony of somewhat pale tints. This

The "Bray" Wall-paper.

Designed by A. F. Vigers.

"Olive Stripe" Wall-paper.

Designed by Walter Crane.

young artist, if she follows up her present success, should have hefore her a brilliant career as a designer.

In contrast to the last-named work, though, like it, also a machine-printed paper, is Mr. Macdougall's "Peacock" decoration. The drawing of the peacocks perched on stiff-clipped yew trees is very quaint and decorative, while a hright and strong combination of colours carries out the ornamental scheme to perfection, and demonstrates how rich a result may be obtained by judicious use of the inexpensive mechanical process.

Less ambitious, no doubt, but for practical purposes more generally useful, are designs based on the lower organism of the vegetable creation. Among the foremost designers in this branch is Mr. Heywood Sumner, who, like Mr. Walter Crane, made his reputation first as an illustrator of books. His stained-glass design and his sgraffito decoration have become so well known in the artistic world that his remarkable gift of ornamental rendering of floral forms has scarcely received the amount of attention that is its due. So powerful, indeed, and so individual is his manner that one can practically without hesitation recognise this artist's hand whenever one meets anything that he produces, albeit there is no sort of sameness either in his range of subject or method of treatment. Mr. Sumner's "Columbine" wall-paper is an admirable instance of naturalism confined within the strictest limits that ornament need prescribe. The exquisite form of this most picturesque of flowers-likened by the Latins to the eagle and, in the gentler imagination of our mediæval forefathers, to a cluster of homing doves-is reproduced with a fidelity to nature almost vividly real. The spurred petals, become detached and floating like

The "Columbine" Wall-paper.

Designed by Heywood Sumner.

birds on the wing, carry out the graceful fancy of a flight of doves, at the same time that they impart a welcome feature in the main lines of the pattern. The excellent

effect of the design itself is heightened by printing in wash tints or blended tones of colour. But, agreeable as broken surfaces are in the single piece, there is no denying they have a tendency, when the paper is hung, to produce an abrupt transition of colour at the junction of two hreadths. It requires, therefore, the exertion of special care on the part of the manufacturer, in dealing with these processes, to provide against any such contingency.

Another artist, whose work seems likely to attract an increasing degree of notice, is Mr. A. F. Vigers. Able as he is, perhaps it would be more correct to describe him as a draughtsman than as a practised designer of ornament. He certainly exhibits much skill and taste in rendering the details of plant form in a manner that recalls the illustrations of some old Herbal; but judged by the standard of strict decoration, it is not to be claimed that Mr. Viger's designs are invariably successful. In the first place his lavish wealth of incident is apt to degenerate into overcrowding and confusion. A closely filled surface such as results from this treatment might be suitable enough in a textile-for example in cretonne for covering an arm-chair or sofa-but it lacks breadth and dignity when spread over a flat wall · surface. And, further, Mr. Vigers

sometimes omits to execute all the several parts of his composition, as it were, upon one uniform plane of ornament. That is to say, some parts are much conventionalised, while others are almost literal transcripts of nature to the life; and these, com-

bined in one single composition, cannot be relied on to constitute so congruous a whole as if all elements introduced had first been reduced to one common denominator. Now the above criticism is not meant to depreciate Mr. Vigers in the least. His faults are such as the best and greatest of our designers, including even William Morris himself, have at one time or other been known to commit. But there is no reason why, with his accurate powers of observation of nature and his keen appreciation of its charms, added to a colour sense ranging from the most audacious combinations to the softest and tenderest blendings of hue, Mr. Vigers should not attain to very high eminence and proficiency as a designer. But he must learn to exercise more rigid censorship over himself, eliminating all superfluous detail and the tangle that results from its presence, and cultivating on the contrary greater definition and boldness in the mass-in a word, he must have regard solely to the appearance of the work as finished and placed in position. The "Bray" pattern, composed of arrow-heads, marsh-marigolds and forget-me-nots, is a fair average example of Mr. Vigers' design. It exhibits his too-favourite practice of making parts of the pattern overlap one another, while at the same time it is not altogether deficient in symmetrical arrangement of line and contrasted spaces of dark and light.

Mr. Ingram Taylor's "Laonda" design is intended to supply the want of those who require a wall decoration to harmonise with French furniture. It provides, by means of a band of rose sprigs printed across the top of each length of paper, the rather novel effect of a frieze and field combined, without the sharp horizontal line that usually divides the former from the wall-space below.

The "Laonda" Wall Decoration.

Designed by Ingram Taylor.

The latter is covered by an unobtrusive pattern of abstract diaper work.

It remains only to mention Mr. Haité's characteristic designs of heraldic lions and oak leaves, obviously conceived as appropriate souvenirs of the Coronation.

AYMER VALLANCE,

Miniature Reproduction of old Japanese Stencils, showing decorative treatment of Leafage and Birds.

#### A Plea for the Stencil.

To contend that the value of stencilling as a method of decoration is not appreciated in this country to the extent that it might and should be, is to repeat an old cry, but nevertheless it is still true as when the question was first raised a number of years ago. If any advance has been made at all in this regard, it is unquestionably due to the labours of some few enthusiasts who have studied the works of Oriental artists, and have done their best to make their beauties known over here, to the end that examples so excellent might be followed by the Western artist and craftsman. The publication of Mr. Andrew W. Tuer's book on Japanese stencils, followed by that of Mr. Hiatt, and supplemented by the practical work of Mr. Rottmann, Mr. Arthur Silver, Mr. Aldam Heaton, and one or two more, has certainly aroused some degree of interest in this particular method of enriching flat surfaces; indeed, even our Science and Art Department has been moved to offer awards in national competition for designs capable of being rendered in the manner under discussion, and the results have, in many cases, been extremely good. But, for all that, much has yet to be done before the stencil plate is employed in the embellishment of our homes as much as its peculiar claims to respect and favour demand that it should be.

The stencils illustrated here are from the collection of

Mr. Frank Jackson, whose rare old pewter formed the subject of two articles in these pages in 1899; some of them were purchased by him in Japan, and others were formerly the property of Mr. Ernest Hart. Mr. Jackson is a member of the Japan Society, a keen enthusiast on all matters Japanese, and I feel exceptionally favoured that he should place so many of his treasures at my disposal, that readers of The Art Journal may share the enjoyment associated with their examination.

It is not necessary for me to give a lengthy description of the method by which the Japs make their stencils, for that is by this time pretty well known. Suffice it to say that the bolder patterns are cut from a single sheet, but in those where very fine detail, too fragile to resist the strength of the brush, is introduced, two sheets are cut simultaneously, across one of them are laid fine strands of silk-human hair is sometimes employedand then the fellow is laid on top, and the two become one, a very strong adhesive being used to keep them together. The presence of these connecting strands is clearly apparent in the fish design, Fig. 7, in Fig. 10, and Fig. 11, but in actual stencilling they would not be seen, as they are too thin to prevent the colour from the brush circulating beneath them. The paper selected by the Japanese stencil-cutter is of a very lasting character -generally manufactured from mulberry fibre-and its

Miniature Reproduction of old Japanese Stencils, showing decorative treatment of Fish, Shields, Tortoise, and other Forms.

9 10 11 12

Miniature Reproduction of old Japanese Stencils, illustrating the comparative effects of "punching" and "cutting."

powers of resistance are often increased by a coating or hard-drying oil or varnish.

The designs are cut hy means of knives as sharp as razors, and punches of different sizes. Most of those shown here are knife-cut only, hut Figs. 5, 9, 10, and 12 illustrate the skilful employment of both knife and punch. True! the craze for all things Japanese is over, but the influence of the work of the artists of the Land of the Sun upon that of our own less inviting latitudes has been greater than many people imagine. For instance, it is only necessary to glance for a moment at Figs. 2, 12, and 13, herewith, to guess where some of our designers of wall-papers and textile fahrics have heen for inspiration. Fig. 3, with its twigs, leaves, and hirds, is extremely delicate in conception and execution; the tortoise comes into Fig. 5, in which it is interesting to note how the lines of the connecting network roughly accord with the shape of the animal named; hide shields form the motif of Fig. 6, while the principal feature in Fig. 9, to which attention should he drawn, is the vigorous sweep of dots swirling between the hlossoms. Fig. 11 is, I think, unusually clever, even though not particularly decorative, the effect heing obtained almost entirely hy the thickening and thinning of parallel lines. Fig. 14 is a quaint treatment of hats, and in the last design presented, Fig. 16, we have a conventionalised hird which, judging from recent work of theirs, some of our school-of-art students must have studied pretty closely.

It must be remembered that "one stencil one colour" is not the rule. Many colours, in all manners of graduating shades, are often employed upon one and the same plate, and then it is that the greatest possibilities of

stencilling are revealed. Indeed, to obtain variety of effect, it is no uncommon thing for two or more plates to he employed on a single pattern, which afterwards may he further touched-up hy the skilled artist, with the result that it is very difficult to discover that stencils have been employed at all.

In answer to the question, "What articles does the Japanese artist decorate in this way?" the reply must he that their name is "legion." The silks, cottons, and crêpes of which the native apparel of the Japs principally consists are rendered beautiful in this way, the men's loose flowing rohes and the women's kimonos coming in for a special share of attention. Then, the kakemono, or wall-picture, is sometimes stencilled, and so, too, are the panels of screens; the artist in lacquer requisitions the stencil plate to transfer the design upon which he is to work, and the embroideress avails herself of it for the same purpose. One may safely say that there are few hranches of Japanese applied art in which the stencil-plate does not play some part or another, though in many of the results obtained its employment is not in any way revealed.

Is it not reasonable to suggest that it would he well if some of our young folks at home, who delight in covering door panels, plaques, vases, and drain-pipes with representations of languorous lilies and despondent daffodils, were to try their hands at stencil designing and cutting, aspiring to rival even the Japanese in this their special field? It is not essential that they should endeavour to compete with the minute intricacy of the Orientals, for that is hardly possible; hreadth of treatment has its charm in stencilling as in other means of decoration.

R. DAVIS BENN.

Towards the End of the Journey.

By J. Coutts Michie.

## J. Coutts Michie, A.R.S.A.

No student of modern art movements can fail to he interested in the progress and development of the Scottish school. It has so many important characteristics and such a peculiar atmosphere of originality, that it can hardly he judged by the standards which are applicable to the art of other countries. There seems to he inherent to the race a certain love of poetic expression, which has a very marked effect upon the tendencies of Scottish painting. It shows itself not

Penserosa.

By J. Coutts Michie,

only in choice of subject, hut as well in the management of colour and tone, and even in many details of technical practice. To its operation is due much of the romantic quality which gives to the production of almost all the memhers of the school a high degree of persuasiveness, and a pervading sentiment which appealsstrongly to all lovers of delicate suggestion. It is presumably a reflection of the national character, the result of associations and surroundings which have affected in a definite manner the mental growth of the people; and for this reason, despite its dominating influence, it has never become a mere convention to he followed without proper appreciation of its meaning.

Indeed, one of the hest merits of the school is that it allows to all the men who helong to it complete freedom of action, and does not hind them down to ohserve any set formula. Though the influence of national sentiment is strong upon them as a mass, each individual puts his own interpretation upon the general tradition, and uses it only so far as it will help him to define his personal view of artistic responsibility. There is in Scotland much less of that deliherate following in the wake of this or that leader, which elsewhere divides pictorial practice into a few definite classes and causes the formation of a series of little schools more or less in opposition to one another. It is possible there to judge each man hy himself, and to credit him with a full measure of independence; he is not merely one of a group controlled hy a code of rules which apply equally to every memher.

It is prohably because of this independence that so many Scottish artists excel in more than one hranch of practice. They are remarkable for their versatility and for their readiness to adapt themselves to new conditions, and they never hesitate to hreak fresh ground if they think that hy so doing they can give freer expression to their artistic convictions. They are so sensitive to the suggestions which nature offers, that they seem

to rebel against everything which might tend to force them into a narrow groove, or to confine them within limits likely to prevent them from ranging about in search of new material. Yet this love of change is not mere restlessness without reason or balance; it is always directed by a shrewd sense of what is æsthetically correct, and it very rarely leads to any extravagance of method. At its worst it shows itself in a somewhat excessive desire for experiment; but at its best it stimulates the production of a number of interesting works which bear indisputably the stamp of original thought and have the charm of wholesome unexpectedness.

In the case of such an artist as Mr. J. Coutts Michie it is to his possession of a full measure of the best characteristics of his race that his right to attention is

primarily due. He is typically a member of the modern Scottish school, and both in the matter and the manner of his work shows plainly what have been the influences by which he has been shaped. Like so many of his fellows, he is a man of wide range and full of artistic resource; he is a craftsman of marked ability, and he

Miss Muriel Wallace.

By F. Coutts Michie.

never fails to give to his pictures that atmosphere of tender poetry which is only attainable by the sympathetic observer who has perfect faith in nature's infallibility.

His career has been in some respects unusual, for he has enjoyed a greater number of educational opportunities than fall to the lot of the average man. He was born in Aberdeenshire in 1861, and at the age of sixteen became a student in the Board of Manufactures School at Edinburgh, working in the Antique Room and in the Academy life school. Four years later be gained a gold medal in the National Competition for a figure picture of 'Silenus and Bacchus,' and was also awarded a scholarship by the Academy, On the strength of this scholarship he went to Rome for a year, and then changed his quarters to Paris, where he entered Carolus.

Duran's studio for a while before returning to Aberdeen. In 1883 came what seemed likely to be a serious break in his professional progress. He had even then made a reputation as a portrait-painter, and was busy with a number of important commissions. But his health broke down badly as a consequence of a sharp attack of Roman

Haytime in the Fens.

By J. Coutts Michie.

fever, and he bad to abandon his work and betake himself to Tangiers in the hope that the climate of tbat place would help him to recovery. To a young artist actually on the threshold of permanent success, such a check to his progress must bave been bitterly disappointing, and the four years which he was compelled

A Picardy Landscape,

By J. Coutts Michie.

spend in Tangiers before his bealth was fully re-established must have seemed weary enough. But he did not allow this to be a wasted time, for as soon as he was able to get about be began to make sketches of the picturesque scenery and life by which he was surrounded; and before his period of probation came to an end in 1887, he bad painted two important pictures in which he embodied the knowledge which be had gathered during his stay in a country which has inspired many other artists with admirable ideas. One of these pictures was called 'Prayer,' and represented a negro kneeling in a field and surrounded by a flock of sheep;

tbe other, 'Taken the Veil,' was a scene in a harem, a young girl assuming for the first time the veil which every Mabommedan woman must wear. This ceremony is attended with various religious observances, so the subject gave the artist an opportunity for producing an effective composition of groups of women hurning incense round the girl, who, by putting on the veil, declares ber accession to the state of womanhood.

When at last Mr. Coutts Micbie was able to take up his life again in Aberdeen he quickly recovered the ground which he had lost by his prolonged stay abroad. He soon was busy with a fresb batch of portraits, and with these and occasional pictures he was able to occupy himself satisfactorily enough. In 1890, bowever, be found an additional outlet for bis energies, for be set to work

making this association an active and influential concern. It is now one of the most flourishing art societies in the whole of Scotland, and its annual exhibitions, held at Aberdeen, are admirable displays of modern art work. In 1891 he joined with Mr. Rohert Noble to start another association, the Society of Scottish Artists, and in 1893 he was elected an Associate of the Royal Scottish Academy. Two years later, desiring apparently a wider field of practice, he established bimself in a studio in London, and since that he has divided bis time between the metropolis and Aberdeen.

There are two sides to his art, in both of which be

may fairly claim to have gained more than ordinary distinction. He is a clever figure-painter, and in the long list of his portraits, many of admirable quality stand out as notable assertions of his power; but he is also a landscape-painter of exquisite subtlety and sympatby. He began his practice in portraiture early in his student days, for he was not more than nineteen when be painted the Marquis and Marchioness of Huntly, and Sir John Innes; and to the period between 1880 and 1883 belong bis pictures of 'Sir W. Cunliffe Brooks,' 'Lady Wickham,' 'Sir Allan Mackenzie,' and of many other people of note in the neighbourhood of Aberdeen. During the past ten or twelve years the number of his acbievements in this branch of art has heen very greatly increased. He bas counted among his sitters

Lady Muckenzie of Glen-Muick,

By J. Coutts Michie,

the Earl and Countess of Southesk, Baron Whettnall, the Belgian Minister Plenipotentiary to the Court of St. James's, Mrs. George McCulloch, Mr. and Mrs. Ellis, Mr. and Mrs. Dunlop, the Misses Colls, Lady Mackenzie (p. 292), Mrs. Hingley, and Sir David and Lady Stewart; and he has painted, hesides, many presentation portraits, among them those of 'C. J. Todd, Esq.' (p. 293), for the Waxchandlers' Company; 'Sir Benjamin Baker' and 'Harrison Hayter, Esq.,' for the Institute of Civil Engineers; 'Sir George Bruce,' and 'Hugh Mathieson, Esq.,' the Indian merchant. In all these portraits there is evident a great deal of close and sincere observation of character, and a thoroughness of executive statement which can be unreservedly commended. In his pictures of young girls, Mr. Michie is especially successful. His 'Penserosa' (p. 290), and his portrait of 'Miss Muriel Wallace' (p. 291), which was exhibited at the Paris Salon in 1899, have in high measure the charm which results from the right interpretation of a dainty personality, and their attractiveness is increased by the judicious simplicity of the setting which he has given to his young sitters.

But Mr. Coutts Michie's deserved success as a portrait painter has not prevented him from taking rank among the hest of our painters of pure landscape. As a student of open air nature he shows, indeed, a feeling for aerial subtleties and an instinct for style which are only found in men who are blessed with the highest development of the artistic temperament. His landscape, true and expressive as it is, is agreeably free from those vices of realism hy which uninspired workers commonly seek to conceal their want of insight into the more elusive aspects of their subjects. He views the scene that he chooses as his pictorial motive hroadly, and he huilds upon it a picture which has a nohly decorative quality and a largeness of manner that never fails to be rightly impressive. He errs neither in the direction of excessive simplicity nor in that of overstatement of prominent facts; and his treatment is always controlled by the love of poetic sentiment, which comes to him as part of his national inheritance. He may truly he said to be a horn landscape-painter, and he has

Autumn Landscape.

By J. Coutts Michie.

C. J. Todd, Esq.

By J. Coutts Michie.

cultivated his natural gifts with the soundest discretion.

His first essays in this hranch of art were made at an early age. He was not more than sixteen when he exhibited, and sold, a landscape in the gallery of the Royal Scottish Academy; and since then he has steadily added to the array of canvases hy which he has a right to he remembered. As he has matured, his work has gained greatly in power, and many of his later pictures have heen conspicuous successes in the exhibitious where they have appeared. His 'Sunshine and Shadow,' shown at Municb, was sold there to a Viennese

gallery; his 'Autumn Clouds' was hought at Berlin hy Herr Krupp, the famous manufacturer of warlike appliances; his 'Autumn Landscape' (p. 293), exhibited first at the New Gallery, was awarded a medal when it went in 1898 to the Paris Salon; and his pastoral, 'Towards the End of the Journey' (p. 290), his 'Hay-time in the Fens' (p. 291), at the Salon in 1900, and his 'Picardy Landscape' (p. 292) at the New Gallery in 1902, have apprecially enhanced his reputation. Now he occupies an unassailable position as one of the chiefs of the younger Scottish school. He has many years before him in which to add to his already excellent record; and with his advantages of natural endowment and thorough training, his future achievement should be well worth watching. What he has already accomplished may he taken as promise of much more to come.

A. L. BALDRY.

Matthe

Three Statues by Ghiberti, from Professor Brockhaus' "Studies on Florentine Art" (Brockhaus, Leipzig).

## Recent Art Books.

THE German Press has always heen remarkable for the publication of erudite and heavily illustrated works dealing scientifically with the Fine Arts. A large quarto volume which well sustains this character has just appeared from the famous firm of F. A. Brockhaus, of Leipzig, under the title of "FOR-SCHUNGEN ÜBER FLORENTINER KUNSTWERKE," hy Professor Heinrich Brockhaus, the director of the Art Historical Institute in Florence.

The author divides his work into four parts, dealing respectively with the Ghiherti Gates, the Medici Chapel, Andrea del Castagno's fresco of the Trinity in the Church of the Annunciation, and the family picture of the Vespucci, hy Ghirlandajo, in the Ognissanti Church.

Ghiherti's Doors, "worthy to he the gates of Paradise," are analyzed in every detail, and amply illustrated with critical diagrams of the architecture seen in the reliefs. Large reproductions are given of the portraits of Ghiherti himself, one as a man of 42, with a kind of turhan, and another of him at the age of 70, and nearly bald. Ghiherti's statues (see our illustrations) at Or San Michele are also discussed, and his work in general shown to he the direct forerunner of Raphael's frescoes. The Medici Chapel gives the writer an opportunity to discuss elahorately the various pictures of the Madonna and Child, hy Fra Filippo Lippi, Lorenzo di Credi, and Andrea della Rohbia.

The fresco of Andrea del Castagno deals chiefly with the representation of St. Hieronymus, while the Ghirlandajo in the Ognissanti allows the story of Amerigo Vespucci-from whom America was named-to he given in much detail, together with portraits of the whole of the traveller's family. The now-famous fresco discovered only in 1898 shows the likeness of Amerigo quite plainly, and this fact alone makes the author's hook specially interesting to English-speaking people.

There is no authority on the teaching of Architectural Drawing who can compete for experience with Mr. R. Phené Spiers, Master of the Architectural School of the Royal Academy. It is very natural, therefore, that he should he called on to publish another edition of his well-known volume on "ARCHITECTURAL DRAWING" (Cassell). The hook is specially useful for the more serious architectural students. Mr. Phené Spiers has a natural gift for imparting knowledge, and he has given all the hest of the results of this in his volume, which also is fully illustrated with workmanlike

Another new edition is Mr. Walter Crane's "LINE AND FORM" (Bell), equally workmanlike, with readily understood definitions on the decorative qualities of line and form.

Other two works on decorative forms, "DESIGN," by R. G. Hatton (Chapman), and "PATTERN DRAWING AND DESIGN," by John Carroll (Burns and Oates), carry

forward the same ideas with special applications to other instances of designs, such as would be of service to students both of decoration and architecture.

"MODERN MURAL DECORATION," hy A. L. Baldry (Newnes), is more ambitious than the preceding, dealing as it does with the completed interior decoration of palaces, museums and State huildings of all kinds. Mr. Baldry has given great study to the subject, and, as a pupil of Albert Moore, he is well able to appreciate the artistic quality of the decorative work of to-day.

For another form of decoration Mr. E. R. Suffling has prepared a treatise entitled "The Art of Glass Painting" (Scott, Greenwood). It cannot he said, however, that this author is particularly successful in the result, as he appears to he afraid to give his own opinions on the matter under discussion. At the same time, there are many useful and practical hints to he obtained from the hook.

Of an entirely different character is the remarkably well illustrated quarto on "GLASS MOSAICS OF BURMA,"

hy Herhert L. Tilly, published by the Government printing department in Rangoon. To those seeking accurate details of the rich decorations of the Far East, nothing could exceed this work both in interest and utility; the groups of shrlnes and pagodas are revelations of decorative exuherance. In hlack and white they appear almost a dazzle, and can give only a faint idea of their hrilliant colours when covered with glass mosaic.

Messrs. Duckworth have hegun a series of Essays on Painters, in small hooks for pocket use. "REMBRANDT," hy A. Bréal, presents the great Dutchman in a most skilful and interesting way, with conclusions nicely balanced and particularly sane.—Of the same publishers' "ROSSETTI," hy F. M. Hueffer, almost exactly the reverse can he said. Such a hastily put together hook, with ill-digested opinions, ought never to have heen published.

"LANDMARKS IN ARTISTIC ANATOMY," hy R. J. Colenso (Balllière) is a sensible little work, giving the chief points likely to interest an art student when beginning to draw the human figure.

# New York Metropolitan Museum.

WE print below a view of the façade on Fifth Avenue, New York, of the new wing of the Metropolitan Museum, which will now very soon he open to the public, and will thereupon hecome the main entrance to the huilding. This fine addition dignifies and redeems the whole museum, which hitherto has not struck the visitor to the older part as externally a very distinguished or imposing piece of architecture. The new wing will he chiefly used for Sculpture, of which the Museum owns several works—such as the colossal group hy George Grey Barnard, entitled 'The Two Natures'—for which there was no room in the old huilding. The main hall for Sculpture measures 54 by 103 feet long, and there are recesses for husts, and spaces for mural paintings similar to those in the Royal Exchange, London.

The addition of this wing was undertaken by the Museum authorities, and indeed practically completed with the ordinary resources at their command, long hefore they had any inkling of the tremendous windfall that was coming to them in the Rogers Bequest, which has already heen recorded in these pages (1901). Having provided themselves with a nohle huilding to fill, they thus find themselves amply supplied with the means to fill it; though we understand that, owing to legal formalities and inevitable delays in realizing a large estate, they have not even yet actually touched any of the Rogers millions. But in good time we may confidently expect to see the New York Metropolitan Museum taking its place alongside the two or three most important nuseums in the world.

Copyright, 1901 by Irving Underhill, N.1.

## Passing Events.

VENICE has suffered an irreparable loss by the fall of the Campanile of St. Mark's. The great tower sank on the 14th July, and one of the pillars of history is no more. Even if the building is replaced by another in imitation of the old one, or, if re-constructed at all, a confessedly modern tower is erected, the disaster will be a sad page in the annals of the city. It would be a difficult matter, we imagine, to find an artist who has made a pilgrimage to Venice and not returned with a record of his own impressions of the buildings there. The feeling of dismay is, therefore, all the more acute because of the association of the Campanile with the work of artists of this country. To the intelligent traveller, too, who can appreciate if not understand the wonders of Architecture, Painting and Sculpture which the world can show, the loss of the Campanile is great, and it is significant that expressions of sympathy from all civilised countries have been received by the people of Italy. But we must not be too gloomy over the catastrophe. The proximity of St. Mark's and the Doge's Palace makes it an occasion for thankfulness that these historic places were not injured. We hope that the measures taken will ensure the stability of the other buildings.

 $M^{\mathrm{R.~CHARLES~L.~EASTLAKE}}$  contributes to the Nineteenth Century for August an interesting article on "Old Masters and Modern Critics," At the end of his essay he asks, "What do we really care for opinions passed in the seventeenth and eighteenth centuries on literature and painting? How will our own be regarded a hundred years hence?" Many contemporary expressions of opinion will be thought no more of in the course of time than they are now, and it will be necessary for the student of the future to learn to discriminate between the work of such critics and that of scholars whose researches and convictions must not be ignored at whatever date they are scanned. The literature concerning art in the earlier days of bookmaking was not sufficiently lucid to be compared with the completely illustrated works of the last century, and we believe the students of the future will appreciate in a correspondingly higher degree for their greater worth (by reason of the reproductions) the labours of present-day compilers. The growth of culture and interest in the arts has caused the production of numberless handbooks and monographs, among which are some that cannot pass into oblivion, if spared from that fate by the quality of the illustrations only.

ON Monday, 28th July, the members of the Royal Society of Painters in Water Colours presented to their oldest colleague, Mr. William Callow, an illuminated address of congratulation on the ninetieth anniversary of his birthday. Mr. Callow has been associated with the R.W.S. for sixty-four years, and has never failed to contribute his share of drawings to each exhibition during that long period. His many friends and pupils of the past will be glad to hear that he has quite recovered from his recent severe illness, and will wish that he may still enjoy good health.

 $A^{\rm\,METHOD}$  of solidifying oil colours to the consistency of crayon has been announced by M.

J. J. Raffaelli. The artist claims that this form of paint is practicable, and that with it can be produced results more permanent and more natural than can be obtained with other media. The experiments of independent artists will be watched with some curiosity to see whether, as the inventor affirms, the discovery is likely to revolutionise the technique of modern art.

L ORD CHEYLESMORE'S bequest to the nation of his large collection of mezzotint engravings is an important event in the history of the British Museum. From an artistic point of view the collection is of considerable interest, and commercially many of the specimens are valuable. Public attention has recently been drawn to this delightful form of engraving by the high prices which have been obtained for examples of the work of eminent engravers, and an opportunity to compare the skill of the chief exponents of the art has been furnished recently by the Burlington Fine Arts Club, to which exhibition, as a Member of the Club, the late Lord Cheylesmore contributed.

M. R. WINDSOR FRY, R.B.A., has recently exhibited at Leighton House a picture which illustrates the final noble act in the life of Sidney Carton. It is an earnest rendering of one of the immortal characters in fiction, and the treatment of the subject is as significant of Mr. Fry's high endeavour as are the lectures which he periodically delivers. No one can look without emotion on the representation of the frail little seamstress who, on the way to the guillotine, derives courage from him she at first supposed to be Darnay; it is one of the human incidents created by Dickens which deserves scholarly interpretation.

W HITECHAPEL, has been the scene lately of some activity in regard to Collections of Works of Art. The Summer Exhibition was opened towards the end of July, and an attractive display of Japanese objects was provided for those citizens of the East who cared to enter the Art Gallery. That large numbers of visitors were interested is a tribute to the care of the organising committee who brought together such a representative selection, and who arranged so admirably the different works lent from state and private collections.

M.R. HERBERT J. FINN has made arrangements whereby examples of his work may be seen continually at the Woodbury Gallery in Bond Street.

THE Corporation of Glasgow invite entries for an Art Metal-Work Competition, and full particulars may be obtained from the Superintendent of the Corporation Galleries, Glasgow. The last day for receiving specimens is the 29th November.

THE Directorate of the Universal Exhibition, St. Louis (1904), are offering a prize of about £400 for a design for an official seal. The emblem must symbolize the history of the great Louisiana Territory, and its purchase from France in 1803 by the United States. Further information may be obtained from Mr. George F. Parker, Sanctuary House, Tothill Street, Westminster, London. A section devoted to photography will be one of the special attractions of the Exhibition.

The tircus Rider

## SPECIAL PLATES.

# 'By Stress of Weather Driven.'

BY HENRY MOORE, R.A.

FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

 $E^{
m NGLAND}$  has had many notable painters of the sea, but no one of them has surpassed the late Henry Moore, R.A., in his mastery of its many moods. He has painted it, and the sky over it, with an extraordinary energy and dash, together with an intimate knowledge of wave-form and wave-colour, obtained by many years of hard work and constant cruising at sea, when he noted every change in the atmosphere, every kind of fine or rough weather, and every aspect of salt water, until his brush could render them with almost absolute fidelity. Like Turner, he had no fear of foul weather, and studied his storm-effects regardless of rain, or cold, or gales. He has depicted for us the blue and cmerald sea which encircles our island under the most varying conditions-at one time lashed into fury by the raging tempest, at another lying calm and luminous, glittering under the summer sun when the faintest breezes ruffle its surface; and in both has always combined a wonderful truth of observation with real poetical feeling.

A deep, translucent blue, which is the chief characteristic of the waters of the English Channel, was, perhaps, his favourite colour; but in such a picture as By Stress of Weather Driven' he shows that his renderings of the same waters turned to a cold grey under a stiff gale were just as fine and as true. This picture, which was painted at Scarborough in 1879, represents the entrance to the harbour, with the lighthouse at the pier-head, and fishing-boats and other vessels running in for shelter before a rising storm. Great waves roll in from the North Sea and dash themselves into foam against the pier walls and jetties. Both sea and sky are clad in a uniform cold grey, and the rushing air is thick with driven spray and flying spume. In the distance small figures are hurrying down to the harbour entrance to watch the boats in their struggle to reach a place of safety. It is an exceptionally fine rendering of the majesty of the sea.

Throughout a very industrious life, Henry Moore only painted what he felt impelled to paint, and made no concessions to popular taste by introducing "human interest" into his pictures; the sea itself claimed all his affection. It was, perhaps, partly owing to this that he was neglected by the Royal Academy throughout the greater part of his career. He was not elected an A.R.A. until 1885, and only received full honours in 1893, two years before his death. During all these years, however, no one equalled him as a painter of the sea.

This picture was presented to the Birmingham Art Gallery in 1895 by Mr. James R. Holliday, in memory of his father, Mr. William Holliday. The Gallery possesses three other works by this artist—the well-known 'Newhaven Packet,' painted in the year he was elected an Associate of the Academy, 'Summer Time in Cornwall,' painted two years earlier, and 'In the Moray Firth,' 1876.

## 'The Circus Rider.'

FROM THE PICTURE BY PAUL MEYERHEIM.

PAUL MEYERHEIM comes of an artistic family, originally settled at Dantzig. His grandfather was a house-painter, a decorative artist, who executed a few portraits and restored many old pictures and frescoes. His father, F. E. Meyerheim, was the first master of Edouard Franz, elder brother of Paul, who died in 1880, and of the artist of our picture. With Adolph Menzel, the friend of his father, Paul, along with Heilhuth, Knaus, and others, was in Paris during 1867, when Courbet made the famous separate exhibition of his works. Born in Berlin in July, 1842, his first work exhibited at the Academy there was entitled 'An Elephant in a Booth,' and ever since his name has been chiefly associated with animal subjects. The 'Snake Charmer,' which, at the Paris Salon of 1861, served to bring him into prominence, was one of the successes of the year. In 1872 'Sheep Shearing' was awarded a gold medal in Berlin; and other works more or less in this kind are the 'Wild Man's Tent,' 1874. 'The Coal Cart,' 'The Hay Harvest,' 'Gipsies in the Wood,' etc. It has been said that the æsthetic tradition of the family of Meyerheim culminated in Paul, that "his passionate temperament is shown in his colour," that his imagination is of the "light-winged yet deeply penetrative" kind. But whether or not we agree with these statements, the picture reproduced opposite serves to show that the artist is familiar with, and can render acceptably, scenes into which animals are introduced. Interest in the circus is perennial. Since the dawn of the Christian Era, and even before that, multitudes have been drawn to it, and we have our Hengler's and our Sanger's to carry on an ancient tradition. The procession represented by Paul Meyerheim, in the picture reproduced opposite, has little in common with those which, at times of festival, passed from the Capitol in Rome, by way of the Forum, onward, perhaps to the great circus of Maximus, in a valley between the Palatine and Aventine Hills, capable of seating, it is said, a quarter of a million of persons. Such processions were led, not by a somewhat tawdrily-dressed damsel on a worn-out white horse, but hy the presiding magistrate in the dress and with the insignia of a Triumphator, his chariot drawn by fiery steeds. At one time the Roman circus served, too, as an amphitheatre, and as a precaution for spectators when wild beasts fought in the arena, Cæsar made a canal, ten feet broad, between the lowest tier of seats and the course. Chariot races were the chief spectacle. In order to make these contests equitable, the chariots were placed in an oblique line, so that whether on the outermost or innermost circle, cars had to cover about the same distance. Occasionally there were horse races, each rider having two animals, from the one to the other of which he leaped during the race. Like most forms of entertainment, the circus has now been modernised, and Paul Meyerheim shows us, astride a dromedary, the clown who, even more than the drum-beating nigger, is an essential personage at such entertainments. It is safe to predict that, notwithstanding the fascinations of the motor-car, feats of horsemanship will attract dwellers in the perhaps transformed Europe of 3,000 A.D.

# Supplement to "The Art Journal."

# A History of Artistic Pottery in the British Isles.

THE ART POTTERIES OF DEVONSHIRE.

BY FRED MILLER.

Aller Vale Pottery

M OST visitors to this heautiful county hring hack a specimen or two of the artistic pottery, made hoth in North and South Devon, as a memento of a delightful sojourn; and pursuing our ceramic itinerary through England, we will in this article deal with three of the chief potteries in the west of England, Mr. Charles Brannam's "Barum" ware, Mr. W. L. Baron's "Barnstaple" ware, and the Aller Vale Pottery Company, in South Devon.

One of the aims of these three potteries is to produce effective ware at a price that hrings it within the reach of

the man in the street. Not that such a laudable endeavour should prevent the connoisseur in his closet adding this Devou pottery to his collection, hut these three potteries, I take it, are run on popular lines, and the work is certainly, so far as price goes, within the reach of the hig public. Now price is the factor, and it is useless hlinding oneself to such a self-evident truth, for price is regulated by the cost of production, and if the services of a clever rising sculptor, let us say, he engaged to model and otherwise decorate pottery, the cost of such productions will he regulated by the wages paid him for his services, plus risk and loss incurred in firing. Repetition of the pieces he models can lessen the cost of production, as the cost of the original can theu he distributed over a wide area, but these Devon potters claim not to repeat their productions, preferring to develop originality in their workers and individuality in their pots. Now, unless a pottery he run as a sort of artistic-philanthropic institution, all charges incurred in producing work must he paid by the public, and that hrings us face to face with our opening premiss, that art work is conditioned by price, and it comes to he a question therefore how much art you can afford to put on a pot which sells retail for a few shillings. Caleh Plummer, you will remember, found he could only put so many spots on his toy horses for sixpence.

Now the most cursory knowledge of the potteries in this country reveals one fact, the great difficulty all potters who devote themselves to artistic productions experience in avoiding loss. It has heen so with the celehrated china works, hoth in London and elsewhere, as I think I have shown in the earlier articles, and it is a difficulty that presents itself to all who touch ceramics as a business. The great china works of Sèvres are a national institution and their productions are not disposed of commercially. This was the case in former

times with Dresden china, and is so to a great extent with the Royal Danish porcelain. It is a sorry commentary upon human endeavour that some of the most heautiful examples of ceramic art have heen a pecuniary loss to their producers.

I cannot hut think that the public is largely to blame for this state of things. In huying a really good specimen of pottery, the purchaser should remember that he is acquiring a work that time cannot change for the worse, and that unless an accident happen it is good for all time. Why then should the purchaser expect to ohtain for a few shillings a really artistic production when he knows that if he huy a water-colour or oil, he will get nothing worth having under a few pounds? How few there are, even with discrimination and artistic leanings, who will give so much as a pound for a pot; yet, as I hope I have shown the general reader, the skill and knowledge that go to produce an artistic piece of pottery is of quite as high order as that which goes to the painting of a great deal of the work one sees in picture shows, and that quite apart from the risk the potter runs every time his work goes through the ordeal hy fire. Let the public who can appreciate a good piece of ceramic art be a little more prodigal of their patronage, and less parsimonious in the distribution of their

Mr. Brannam's Barum Ware.

### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Group of Aller Vale Pollery of various colours.

favours, and the melancholy, oft-repeated statement that artistic pottery does not pay, will be no longer true. What can be more discouraging to those who have devoted their talents and life to acquiring skill in one of the most difficult of all artistic crafts to find that they are forced to stand in the market-place idle because no one hath hired them, or work far below their standard and for a miserable pittance because of the apathy of the public and the false economy shown?

Another point that cannot be ignored, is that while pounds will be paid for an old specimen, the same person will begrudge shillings for a new one.

Admitting that these conditions obtain it is no small achievement to run a pottery on artistic lines at a profit, and this desideratum has been secured by these Devonshire potters; and I put this fact in the forefront because in examining the productions of these potteries as we propose doing, it is an excuse, if such be needed, for certain tricks of method which some critics will at once seize upon to condemn. I have touched upon the question of price as an important factor in estimating the value of the work under review, because it explains to a great extent why these "tricks" are resorted to, and, moreover, I question whether such a crucial test can be put aside, for it is really the touchstone in all applied art. What is the good of holding pious opinions on the subject and voicing exalted views on high-art principles if when some attempt be made to put them into practice commercial failure is the result? great effort is being made to cultivate the artistic

instincts of the people and to encourage village or local industries, and pot making is just one of the finest opportunities for putting some of these theories to the test of practice. Some folk sneer at any one who caters for the man in the street, but why? Is he not worth pleasing-nay, worth winning the artistic suffrages of? These Devonshire potteries receive the patronage of a wide public, which shows their owners have learned what is demanded of them, and to take a narrow and partial view of such ceramic productions, because all are not in full accord with one's canons of criticism, is as unfair as it is impolitic. It is so easy to talk, so hard to do, and a mere fault-finding attitude helps nobody. The work

of these Devon potters speaks for itself in the reproductions, but the reader must bear in mind that work depending largely for its effect on coloured glazes loses much by photography.

#### BARUM WARE.

The present proprietor's father worked as a journeyman in the pottery in Litchdon Street, then owned by Messrs. Rendle and Son, who carried ou the works for more than sixty years. Mr. Brannam, seuior, eventually acquired the pottery, which was then turning out the usual commercial work, drain pipes, roofing tiles, pots and pans. The artistic side of potting had its inception in this way. The potters, as they took their meals by the side of their silent wheels, would shape the clay lying by into odd objects just as their fancy dictated, and their employer, noticing some affinity between the

figures modelled by the men and the grotesque productions of the aucients, had the more striking of them fired. These original efforts caught the attention of affluent townsmen, for whom sets of ware, with these rustic decorations, were manufactured.

This is the only way an art industry can properly be run, by the workers individually supplying the art, and it is pleasant to record this incident in connection with Barum ware. It was, as we see, really the outcome of fancy, the expression of the joyousness in their cosmos, done not of necessity or for gain, but to please some inner emotion and play of imagination. It was at the 1851 Exhibition that the first specimens of Barum pottery were shown. They were some half-dozen jugs decorated in "sgraffito," by Mr. Brannam, senior, to whom a bronze medal was awarded. Prince Albert himself complimented the potter on the skill evinced in their production. Sgraffito is made by covering a vessel of red clay or terra-cotta with a coating of white slip made of some natural white earth, like pipe-clay. This is done by dipping the vessel as it comes from the potter's wheel

Barum Ware.

Grotesques.

### SUPPLEMENT TO THE ART JOURNAL.

into a cream-like slip. When this coating is dry the design is formed by cutting it away, so as to expose the red body underneath. The patterns so formed can then be picked out in hright colours. and finally the whole is glazed.

The reader will recall that slip-decorated ware was the earliest form artistic potting took in this country, and as pottery was an early Barnstaple indus-

try, many remains of the old work heing unearthed from time to time, this sgraffito ware was probably suggested by some of these ancient remains. The advent of Mr. Charles Brannam, who was then a student in the Barnstaple School of Art, turned the Barum pottery more directly in the direction of artistic productions. By that is meant the decorating of articles of all kinds, such as toilet sets, jardinières, jugs, umhrella stands, etc., and not merely the production of vases and objects whose use is chiefly ornamental.

The finer ware is all thrown by Mr. Brannam himself, and though a certain number of moulded pieces are produced the potter's wheel is responsible for most of the pots, and there can be no doubt that the work of the wheel is more distinctive, as it is more suitable, for giving the clay its shape than any other method that can be employed.

In addition to sgraffito decoration the pâte sur pâte, or slip upon slip, is now largely used. These slips are produced with coloured liquid clays, and are applied to the pots in a bold free manner, at times in considerable relief which breaks up the surface and is very effective. Mr. Brannam told me that the decorations are drawn directly on the clay without any preliminary sketch on paper, and with a dark body covered with a slip a great deal of variety in the effect may be obtained where judgment is exercised, as the slip can be left in places to form the design, while the background can be scraped away; or the red colour of the ware can be revealed by scraping away the slip. The freer the treatment of this class of ware the better, for where much of the effect depends upon the flowing of the coloured glazes a bold treatment is far more effective than a highly elaborated one. Modelled decoration, especially in the handles, is largely resorted to, as well as to form "grotesques." A quaint treatment of fish, birds and animals, plays an important part in the surface decoration, and the mingling of such emphatic motifs with conventionalised foliage enclosed in panels suggested by the shape of the pot yields a very effective result. The deep blues and greens of some of the glazes "flowing and pulsating," as Professor Church described it in one of his Cantor lectures, satisfies the

Barum ware is also made of a whitish clay with coloured decoration, but the most distinctive class, it

Barum Ware in rich colours.

seems to me, is where rich glazes play over the surface and where a good deal of the form is given by incised lines, the pâte sur pâte belping out the effect.

MR. BARON'S BARNSTAPLE WARE.

"The Barnstaple ware," as Mr. Baron calls his pottery, is all thrown, none of it heing turned afterwards on a lathe, as is so often done to give the clay a "finish,"

as it is termed, which effectually hides all evidence of the wheel. This freedom of shape imparted to the clay by the thrower is sustained in the decoration, which is done free-band. Two hodies are used, the deep red which is raised at Barnstaple, and a white one which is raised at Marland, some eight miles away. This white body bas long been celebrated, and at one time Barnstaple was the home of the clay pipe industry. Thousands of tons were shipped every year to America and the Continent. I notice the red hody is denser and beavier than the white. Most of Mr. Baron's effects are obtained by dipping the body into coloured slips, and then etching or scraping away those parts required to produce the design. The slips are greens, blues and rich browns, and as over the whole comes a soft glaze of various tones, a greater variety of effect is the result. A white pot may be slipped green, blue, red or brown, and glazed yellow, blue, green or transparent, and this play of colour produces harmonious and pleasing results, for happy accident has a good deal to do with the final result. Mr. Baron told me that a piece fired at the top of the kiln would come out a different colour to the same piece fired at the bottom. Such effects cannot be regulated, though some of a potter's most successful results are the result of the kindliness of the fire. Mr. Baron studied at South Kensington, and then worked for a short time as a designer at Doulton's Lambeth pottery, but when he started potting he had everything to learn as to the mixing of clays and glazes and the action of the kiln. This latter he built for himself, and at first met with "heaps of failures," as he said, "but I stuck to it and now employ several hands." As an assistant master at the local School of Art, where this masterpotter teaches modelling and design, he is able to select the most promising pupils as apprentices, and to direct their studies both in their work and at the

The whole of the decoration is done while the pot is wet or in the "green" state, and as no printing, tracing or pouncing is resorted to, the designer drawing what be will on the clay, no two pieces are alike. When Mr. Baron first started, he told me that be "decorated a lot of pots with fish, suggested by the Japanese hut not copied, my models being the fish and weeds so plentiful on this coast," a very excellent idea. After the pot is finished it is dried and fired, and is then in the

### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

" biscuit." This firing is in an open kiln, hut when it is glazed it is fired the second time in fire-clay boxes or seggers.

"We sell a large quantity of puzzle jugs and motto ware, and I find," Mr. Baron said, in conclusion, "the Americans who visit North Devon are some of my best customers; they seem to have hetter taste than the majority of Britishers. I believe there is lots of room for small potteries like mine, not large manufactories, hut small works employing ahout a dozen hands, all under the supervision of the owner."

Perhaps the attempt to run potteries as large factories not only squeezes out the art, and so prevents them paying.

Barum Ware

Barnstaple Ware.

north of the county.

Motto decoration is a common device, and is a trick that some may condemn. It is certainly not very decorative as a device, but it pleases a good many people to read wise saws written in pottery. The Japanese and Chinese are proud of lettering their china, and though their hieroglyphics strike us as decorative it is lettering, and an Aller Vale pot might please them as much as one of theirs does us. Besides, there is plenty of selection, as the reproductions of the specimens of this South Devon pottery evidence, and those who dislike the motto decoration can choose some quite

resorted to as in the two

other potteries in the

good arabesque and foliated designs.

The glaze appears to he somewhat harder on the Aller Vale pottery than that made at Barnstaple, hut altogether Devonshire may well be proud of its pottery, and the potters can congratulate themselves on producing ware that is redolent of the soil, if so we may use the word, and this is giving high praise to Devonshire pottery, as it implies that it has a character of its own. Mr. Baron's remark ahout small potteries strikes me as much to the point. So long as the work is under the personal supervision of the owner, the pottery keeps up to a certain standard of achievement, which is likely to fall when the concern grows too large for this individual attention. It is the difference hetween children left to themselves and with little supervi-

sion or training, and children wisely and systematically hrought up. The encouraging, too, of individuality and the non-repetition of the articles produced, or at any rate the avoidance of slavish imitation, all tends to keep up the fresh. ness of the work and to give it a spontaneity that is so delightful in any craft.

FRED MILLER.

(To be continued )

#### THE ALLER VALE POTTERY

was started ahout thirty years ago hy a Mr. John Phillips. Two bodies are chiefly used, a red and a white, and considerable use is made of coloured slips, both in sgraffito and for brush work. The white vase reproduced has its ornament in a blue slip, and in another vase the flower decoration is in monochrome on a deep green ground. Any one who has used solid colour on pottery knows how effectively a surface can be decorated in this manner, especially when it is glazed with a soft and melting glaze. The Aller Vale Pottery is situated near Newton Ahhot, in South Devon, and in the early days of the pottery hoys were trained in the Cottage Art

Schools in the surrounding villages, and afterwards put to the hranch for which they showed the most aptitude. No girls are employed in the decoration.

The hody is a pure and not a mixed one, though hoth a red and white one are used. From the specimens I have examined, and which are here reproduced, this pottery relies a good deal on hrush work for its decoration, incised work not heing so much

Baron's Barnstaple Ware in various colours, some in Sgraffito, others in coloured glazes.

# The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

THE invention of the patent-Axminster weaving process by Mr. Templeton, of Glasgow, followed Mr. Whytock's invention by a few years. The original patent was taken out hy the Glasgow manufacturer in 1899. During the years between that date and the Exhibition of 1851, Mr. Templeton had perfected the process of weaving "Axminster" carpets from chenille wefts, and improved the carpet manufacture by the addition of a beautiful fabric, demonstrating its fitness for fine schemes of pattern hy employing decorative artists to make designs. Mr. Whytock invented on the basis of Brussels, then the best-esteemed carpet

\* Continued from page 56, Supplement.

made in Scotland, but Mr. Templeton took as his pattern the costly and perfect fabric of a hand-tufted carpet, and planned to reproduce its characteristics in a "manufactured" tissue. Probably the Turkey carpets made at Kilmarnock, to which premiums were awarded in 1831, gave him the idea. Before that time no hand-tufted carpets had been made in Scotland, and it is improbable that their beauty and quality were at all familiar to manufacturers in days when comparatively few Eastern carpets were seen in Great Britain. The few "real" carpets made in England, and those made in France, would not make the tufted carpet generally known as the most splendid of carpet fabrics. At all

events, eight years after Gregory, Thomson and Co. obtained their two awards for four "Turkey" carpets, carpets imitating with fair success, and at a moderate price, the quality of the tufted hand-fabric were manufactured by Mr. Templeton

at Glasgow.

To produce the beauty and durability of a hand-made pile carpet in a machine-woven tissue, was a complicated matter. Like Mr. Whytock, Mr. Templeton found the practical idea for his invention in a textile process already familiar to Scottish weavers. The analogy hetween the texture of a carpet such as he desired, and the chenille shawls then widely made in Scotland, was his starting-point. From the idea thus obtained, of using a west of chenille fur in place of a row of tufts tied singly into the fahric, the inventor developed the method of weaving now in use for the production of seamless "Axminsters." Two weaving processes are uecessary; weft-weaving, and the final carpet-weaving. The first of these, though only preparatory, is the "creative" process, the other no more thau the compilation.

Carpet - chenille, and the chenille used for shawls or for otherreversible textiles, are distinct, but the process of manufacture is the same up to a certain point, and Mr. Templeton found his inventive way sim-

Weaving a Seamless " Axminster."

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

plified by that fact. Instead of a twisted thread, furred on all sides, carpet-chenille has its fur turned up, like the bristles of a brush, from a backbone of thread. To obtain this fur—each strip of which is a row of "points" in the carpet, just as a succession of different coloured tufts makes a row in a hand-woven carpet—is the first and most important of the two processes, for on the colour and quality of these strips the design and texture of the carpet depend.

The design is first put on ruled paper, then cut into strips horizontally, not, as in the case of tapestry carpetpatterns, vertically. Two or more of the strips are next joined together by their ends so as to form a continuous line of pattern-paper, wherein the last point of row 1 is succeeded by the first point of row 2, and so on. It is as though one cut a page, or part of a page, of print between the lines and joined the strips sequently in one long line of text. From this sequent version of the pattern the west-cloth is woven, either on hand-looms, such as those shown in the illustration (p. 63), or on power looms. The west-weaver's loom has an open warp, composed of threads arranged in groups with spaces between them. He lays the pattern-strip, which

represents, say, rows 1 and 2 of the design, parallel with his warp threads, and begins to weave. If the first three points of the design are blue, he takes a shuttle of blue yarn, and weaves backwards and forwards till the blue stripe of his web is equal in depth to the blue band on the narrow strip. For six red points he would weave a still wider red band, and so, following tbe pattern-paper, he weaves a striped web, eighteen or more than eighteeu inches wide, according to the unuber of chenille strips needed of that pattern.

Cutting through this fabric vertically, between each of the groups of warp-threads, a series of barred strips is obtained, each a duplicate of the pattern. In the illustration "weft-weaving" (p. 63) the west-cloth cannot be seen, but in the photograph of the chenille-cutting machine (p. 64) the web, as it leaves the weftweaver's loom, is shown stretched below the front roller. The cutting-machine completes the weft, converting the striped material into chenille fur. The cloth passes under the blade-set cylinder at the top of the machine, which, revolving, cuts it into strips-strips that have a thick fringe of worsted thread on either side of a backboue of lineu warp-threads. These run on over a grooved cylinder, heated so as to turn up the double fringe into an erect V-shaped section. The weft is then ready for the carpet-weaver.

In the final stage, as in weftweaving, either a hand-loom or a power-loom is used; the Patent

Axminster Power-Loom representing the development of Mr. Templeton's process by Mr. W. Adam, partner of the Kidderminster firm of Tomkinson and Adam. The Adam loom, however, though extensively used both in Kidderminster and in Messrs. Templeton's works in Glasgow, will never entirely supersede the hand-loom for the weaving of these carpets, owing to the fact that seamless Axminsters-carpets woven in a piece to fit any space-must be woven by hand. So far as the quality of the fabric is concerned, it matters nothing wbether hand-weaving or powerweaving be used. In the Adam loom, the chenille is delivered through a tube, whereas on the handloom it is passed between the warp-threads wound on a notched stick, or in a shuttle, but that, as well as the rate of production, makes no difference to the quality of the carpet. What the weaver or the machinery alike has to do, is to compose the strips of chenille into the pattern of which each is a line, and to bind this velvet pattern in a strong fabric of warp and weft-threads. As many as four or five warps are sometimes used, and at the least there must be two, one to combine with the lower west in forming the back of

Weaving Chenille-weft on a Hand-Loom.

### SUPPLEMENT TO THE ART JOURNAL.

the carpet, and one to bind the upper weft—the chenille—in place. The hacking is either of jute or of worsted, and as it is woven the chenille is set upon it, row by row, and fastened into the fabric by close-set warp-threads, which the chenille-fur hides from sight. Finally, when the carpet is taken from the setting-loom, the pile is shorn to velvet smoothness in a knife-edged machine, and, with the exception of overlooking, and of starching the hack, the process of manufacture is complete.

By this method piled carpets of almost any depth and fineness, and of any size and shape, can he woven. There is no mechanical limit to colour, though, of course, the labour and expense involved in obtaining a great variety of coloured yarns for one design has to be considered; and as the yarns are dyed in the skein, they are, if the dyer knows his business, fast in colour. The fahric is beautiful in itself, and, in a good quality, as durable as possible, for according to the depth of the pile, so is the depth of the pattern.

A designer need hardly desire a hetter medium, and freer opportunities for inventive use of colour and form, than are afforded by this carpet in a fine quality, and it is not surprising that Patent Axminster designs by Mr. E. T. Parris in quite early Victorian days, and later by Sir Owen Jones and Sir M. Dighy Wyatt, should be practically the starting-point of British carpet designing.

The fabric was an incentive to apply art to its manufacture, hut, though the firm of Templeton pointed the way to other manufacturers by reproducing designs of the pioneer carpet-artists, the Patent Axminster carpets and rugs exhibited by the inventor in 1851 were rather exceptions to, than typical of, the general understanding of the fabric. Until the time of the first Great Exhibition, its opportunities seem rather to have been exploited for the purpose of realising pictorial ambitions, hitherto denied to the carpet manufacturer, than used with fitness and heauty. Chenille hearthrugs representing the heauties of Loch Long, or the more stirring scenery of a "tiger jungle," with hills behind its perilous shade, are examples of the tendency in design. Such things were attempts to follow the practice of French carpetdesigners, who imposed a panoramic medley of natural forms-trees, cities, rivers and mountains, figures, fruit, flowers and all instruments of war, art or labour-on the finely-wrought fabrics of Auhusson or the Gobelins. The right use of natural forms in carpet patterns began to be understood in England only after the pictorial vanity had heen sufficiently reprobated by the formulators of the modern canons of design, the wholesome effect of whose severity was already apparent in British carpets sent to the Paris "Exposition" of 1857, and still more in the carpet fabrics shown at the London Exhibi-

Boating at Largo.

From the painting by Hugh Cameron, R.S.A.

# Hugh Cameron, R.S.A.-II.\*

M. CAMERON'S trend was for many years towards portraiture and genre, and as the years go past we come, after his election to an Associateship of the Royal Scottish Academy in 1859, upon such pictures as 'Responsihility' (p. 300), in the Kepplestone collection, 'Remonstrance,' 'A Deeside Lassie,' 'A Cottage Interior,' 'A Lonely Fireside,' 'The Lesson,' 'The Village Well' (1871), 'Threading the Needle,' 'Rummaging' (1873) (p. 299), 'A Lonely Life,' 'Age and Infancy,' and 'Solitary.' In the year 1869 he was raised to the full rank of Royal Scottish Academician. These works were interspersed with portraits, and a number of Italian pictures came in the eighties. One of the latter is 'A Funeral on the Riviera,' now in the Dundee Institute, a canvas filled with Italian glow. 'Children of the Riviera' playing a game, 'Peasants returning from Work in the Olive Groves,' and others, helong to the same period. The painter worked hard at these pictures. They helped the formation of his style, and so illustrate a stage in his progress.

In spite of these interludes and trials of new direction, there is no doubt, however, that Cameron's secret preference was for the simpler forms of genre. Old age and childhood and their contrasts, like suggestions of spring relieving the deadness of winter, or hope lighting memory, always appealed to him. So the rural worker, as in his 'Haymakers' Noon' (1878), the haymaker and harvester, touches his artistic appreciation. Apart from the variety of these themes, and the endless combinations they offer of colour and wonder-working light, they strike his nature on its hrighter side. He never tries either with Bastien Lepage to paint the hard, repulsive

\* Continued from p. 20.

realism of peasant life, or its poverty and depression with Millet. His workers rejoice in spending their strength in toil. They feel the joyousness of existence, the luxury of living, and take their places as fitting parts of the gladdening sunshine, set amidst the yellows of the golden harvest field, or against the deep blues of distant seas. The elegies of Millet are exchanged for lilting lyrics sung for the heart's relief and the sheer love of singing.

In such a work as Mr. McCowan's 'Age and Child-hood' is felt the pathos of the contrast referred to hetween youth and eld. The treatment rests upon

softness of gradation, and the careful exclusion of strong contrasts and ahrupt transitions. Art accords with feeling, and this harmony between the thing said and the manner of saying it is felt in all Cameron's more characteristic works. It comes out with both force and sweetness in Mr. Gihson's home idyll, 'A Match for Grandfather' (p. 17). In ' Play' one little girl in hlue is trying to coax a kitten to leap across the

Portrait of M1s. Strachan. From the painting by Hugh Cameron, R.S.A. By permission of A. P. Watt, Esq.

The Timid Bather.

From the painting by Hugh Cameron, R.S. A.

joined hands of another little girl in pink. Mr. Hugh Brown's 'Rummaging' (p. 299) is equally simple in subject—a young woman looking through a chest of drawers—but exceptional in that colour quality so difficult to suggest in black and white. 'The Little Housewife' (1880) is a delightfully tender little picture of a golden-haired girl busying herself with household duties. The painter found the subject of Mr. Rose's picture, 'A Lonely Life' (p. 18), when painting in the Highlands. In the figure of the old woman putting the key into her cottage door is concentrated the entire sentiment of the title.

In 'The Rivals' (1884) is the quaint expression of childish jealousy, the dethroned sovereign of the bousehold looking ask. ance at the new-comer. In Mr. Hole's etching (Plate) only a section of the picture is seen, that containing the principal group, the grandmother holding King or Queen Baby in ber lap, while three children, hrother and sisters, gather curiously round. In the painting, the left is occupied by the pouting child, who has been compelled to abdicate in fayour of the new arrival, and whom an elder sister is vainly trying to coax towards the quartet seen in the etching. The work is bighly finished in manner and complete in conception, the quaint and gentle feeling of the little comedy pervading its translation into colour. These are the types of a long series of works noteworthy for their extreme simplicity and charm of treatment, the qualities that make the work of art. In these and a hundred other pictures the subject, in fact, is of the slightest. Their interest is almost wholly artistic.

In 1885, Mr. Cameron went to Largo, and in course of time took Viewforth House, bis country residence there. It is a short distance east of the town, and within a stone's throw of the pebbly and shell-strewn shore of Largo Bay—the Bay of 'The Boatie Rows.' More than twenty years previously (1863) be had painted 'The Hairst Rig,' a figure-picture introducing reapers in a

field of yellow grain set against a blue sea. He had also painted 'At the Seaside' in 1877, but it was 1889 before, in 'Pleasures of the Sea' and 'The Timid Bather' (above) he yielded wholly to the fascinations of rippling wave and sunlit sea as a ground for child-figures. In 1892 came 'Moruing by the Sea' and Mr. R. H. Brecbin's 'The New Boat'children on the beach, a summer sea, gulls floating ahout on gleaming wings, and all set in a sbimmering light (p. 299).

In portraiture, Mr. Cameron has done much capable work. His 'Mrs. Stracban' (p. 297) is probably one of the best examples of his technique and his exposition of character. It is a swift, bold work, broader than the painter's wont, more nearly approaching 'A Lonely Life' in breadth than any other outstanding example of his style. In a portrait of 'Mrs. Love,'

and again in that of his mother-in-law, 'Mrs. Anderson' (p. 298), the analyst of character declares himself; and in the latter the work is, furthermore, replete with a tender colour sweetness composed of white and delicate shades of grey and lavender.

Whatever opinion may finally be entertained of Mr. Cameron's work, and what. ever rank and position may he assigned him as painter, he must needs be grouped with the more cultured memhers of the artist guild. Refinement is of the essence of his art, and pervades his every conception. His colour is soft as the music of the flute. His art is less a passion than a reverie. Consistently with this his view of art, its sphere and function, is of the hroadest. No subject in nature, human life, allegory, Bible story, ethics or moral homily, literature or pure art, does he consider outside the legitimate artistic ken. It follows

as an almost necessary consequence that he holds by

Rummaging. From the painting by Hugh Cameron, R.S.A.

appeal they make to the sense of the heautiful, a quality affecting hoth subject and style. Art is to him no soulless and unmeaning parterre of decorative colour, hut a language of intellectual and emotional significance hoth deep and wide, qualified by the more purely sensuous elements of graceful form and beautiful colour. To Cameron the fine art of painting is the pictorial rendering of every aspect of nature, every attribute of humanity, every phase of life.

In painting he has passed through three distinct stages. At

first, and down to ahout 1857-60, he followed the traditional style acquired at the 'Trustees' Academy. It

From the painting by Hugh Cameron, R.S.A.

was essentially realism, or the naturalistic adhesion to the literally truthful rendering of the facts of subject. To that period belongs 'The Shepherd's Sabbath.' He measurably clung to the same manner in rendering the background in 'Going to the Hay,' but in all other respects that picture is a departure from tradition. In it is found the beginning, the starting-point of Cameron's present endeavour. It marks the abandonment of the conventional. It is no pictured sentiment, but simply an effort to harmonise art with nature. When the painter realised that there was more in painting than a mere compilation of detachable and unrelated details, he took the first step in the direction of pure art. In his earlier works he felt a want of cohesion, of unity, even of the naturalistic truth which had filled his vision. He found, in his own phrase, that the way in which a thing is said makes for truth, is an essential part of the truth, and hence the pressing need of thoroughness in art. He, therefore, saw a higher aim in combining truth with artistic treatment, the clothing of facts in an artistic dress.

He next adopted the more intricate style in which he painted 'Reading to Grandfather,' a picture which does not appear to have been exhibited. It is dated 1881, and is in the collection of Mr. David Tullis, Rutherglen. It is painted in a low scheme of colour. The reader's brown dress is relieved by a faint infusion of warmer tints, red softened by touches of grey. The setting is composed of greys and blues, and the printed page is kept down to a soft grey, while behind are mild tones in wall and fireplace. In the result we are conscious of a subtle restrained concord of colour. Akin to this picture

is Mr. Hugh Brown's 'Rummaging' (p. 299), previously referred to, an earlier work belonging to 1872-73. In it the motive is clear—colour and tone for their own sakes. Its merit as paint makes the picture. It stands upon artistic quality.

For several years Mr. Cameron's first and second styles ran parallel, and in the works of a little more than the last decade, they may be said to merge. He interprets nature face to face, but the accent is removed from the realism of details to artistry and pictorial quality. In such fashion he has found expression for much that in his earlier years he had no means of saying. He believes that an artist can paint for painters and also for mankind. He accordingly has no desire to abandon subject painting. "Appeal," he says, "to intellect, heart and the purely artistic sense, if you can. Hold, if you like, by art for art's sake, but do not exclude subject. You can place colour in the front of your intention, and even make it the centre of the emotion to which you appeal, but it is equally legitimate to make a centre of incident or of sentiment. Art is a means of expression. Decorate, if you like, but it is an error to be exclusive."

His difficulty is to harmonise figures with their setting in a realistic landscape, and, conversely, to bring an open air effect into harmony with figures. His aim, accordingly, is broadly pictorial. His study is to make no violent departure from nature, and yet to keep composition, tone and harmonic quality iu full view. There is, therefore, nothing inconsistent with nature in his children on the shore, and nothing in the scene in which they are set. It is of the essence of his purpose to avoid the violation of nature, and yet to make a picture, as a whole, an artistic unity. One hears of painters bending nature to the purposes of art, and scouting the reference of their works to the standard of nature; in Cameron's best work the vivifying impulse is that nature shall be wedded to art. It is one of the subtlest forms of painting to bring two truths-that of nature and that claimed by the artistic conscience-into harmonious combination, and it is also one of the most difficult. It is, nevertheless, Mr. Cameron's ambition to reconcile the claims of nature with those of art, and while in his best works the figures are the predominating influence in the perfecting of the design, such a painting as 'The Timid Bather' (p. 298)-and it is only one of many-is true to nature in form and effect, artistic in treatment, and pictorially beautiful.

A correspondent writes perhaps quaintly, but certainly suggestively:

"I cannot criticise, cannot analyse pictures. To me every painting is a song in colour, and painters I associate with flowers, each with his own as an emblem. McTaggart reminds me of apple-blossoms. Pettie of poppies and peonies, Hornel of the draccena, Corot of water-lilies afloat, Bough of the changing clematis, Diaz of oak leaves and honeysuckle, Orchardson of white hawthorn and mistletoe, Lockhart of a bed of anemones, Albert Moore of the Glory and moss roses, Maris of the downy, involucred edelweiss; Monticelli of a whole parterre - snowdrops, orchids and marigolds - tender and bizarre; and Hugh Cameron of primroses and violets."

THE NETHERLANDISH PICTURES.--I.

BY CLAUDE PHILLIPS.

N this great section of painting, as in some others, the Wallace Collection is splendid rather than representative. I am very far from deploring this, seeing that it must ever he, and remain in its essence, a princely collection of pictures handed over to the nation; leaving to the National Gallery its own recognised rôle of representing the smaller and the greater masters of the respective schools in their proper proportions. Frans Hals, who represents the joie de vivre, the lusty vigour, the power to do and the power to enjoy, of Dutch seventeenth-century life, as Rembrandt represents in his own sublime fashion the deeper aspects of that life, its brooding thought, its intense gravity and persistency, the traces of suffering heneath the joy in health, in riches, and in family life-Frans Hals, the great chief of the Haarlem School, is only represented at Hertford House by one picture. But that one-the famous half-length portrait of a young aristocrat, which, in accordance with tradition, is here styled 'The Laughing Cavalier'-is, having regard to its date and its place in the master's life-work, an incom-

parable example, which well deserves its world-wide popularity. It hears, with the monogram of the artist, the date 1624, and was purchased by the Marquis of Hertford in 1865 from the Pourtale's Collection. Though Hals was forty-three or forty-four at this time, the picture, which is thus to he placed in his earlier middle time, cannot he said to represent his astonishing art at its zenith, as regards hrush power and general freedom of execution. It is, moreover, less homogeneous—less ohviously painted fout d'un jet, as our neighbours have it—than several pieces produced ahout the same time.

There may be selected among these, as instances of what is incomparably joyous and momentary, the 'Portrait of the Painter and his Wife, Lysheth,' done about 1624, and now in the Ryks Museum at Amsterdam; the irresistibly appealing 'Portrait of a Young Man,' dated 1627, now in the Berlin Museum; the wonderful little pair of portraits of a hurgomaster and his wife, dated 1628, at Longford Castle; the 'Portrait of a Man,' dated 1630, at Buckingham Palace, in which last-named canvas, superh in forceful yet austere colour, in sovereign hreadth and strength of execution, in felicity

· Continued from page 143.

and seeming spontaneity of composition, the full maturity of the painter unmistakably shows itself. The paintings to which the 'Laughing Cavalier' are most nearly related are, after all, the two great "Doelen" pieces-second and third of the seriesthe 'Banquet of the Officers of the Guild of St. Adrian,' and the 'Banquet of the Officers of the Guild of St. George,' in the Municipal Gallery at Haarlem. Here the style of portraiture is identical, though there is very naturally in the big corporation portrait-groups a greater dash, a greater decision in the brush work, and less subtlety in the facial expression. Of the two great canvases above cited, the former contains, perhaps, the more wonderful collection of portraits, the latter is the more coherent composition and the more convincing from the dramatic standpoint, as an exhibition of the joy of the many in common, which is so different a thing from the mirth and buoyancy of the individual.

In the 'Laughing Cavalier,' as we must continue to call the picture in the Wallace Collection (opposite), Hals has already got away from the turbid brown flesh tints of his early time, and has adopted the light, hright tone and the delicately-toned grey shadows of his middle period, and of his later maturity short of the period of old age. The flesh-painting is much more fused than it would have been in the later time, but the treatment of the hair and moustache, of the white ruff and the glancing black silk of the dress, shows already the supreme mastery, the incredible swiftness, audacity and precision of touch, which in this style no other painter has approached. Other parts of the dress, such as the splendid embroideries on the black, done in gold and colours, and the white lace on the sleeves, are painted in a much more careful and a much more lifeless manner—it may be at the bidding of the imperious cavalier, desirous of having his costly and tasteful finery appreciated to the full by the onlooker. The whole expression and attitude of the young nobleman suggest suppressed mirth no doubt, and a sense of rollicking humour, but not actually laughter near to the point of explosion. He is joyous, full of a pride that will not he suppressed, in his youth, his riches, and his breeding; but also sarcastic, provocative, intolerant of opposition. He flashes across us in one characteristic mood, in one characteristic moment of life, but we may not with safety seek to reconstruct from it the whole man in his various and, it may be, not always coherent aspects.

The necessities of hanging have been the cause that the 'Laughing Cavalier' appears in the great gallery of Hertford House as the pendant to the 'Lady with the Fan' of Velazquez; and it must be recorded, with all due respect to Frans Hals, that he, the master-craftsman of the Dutch school, does not unharmed support the contrast with the contemporary Spaniard. With the latter the mysteries of the technique remain mysteries, only partly penetrahle even hy the initiated; and the mysteries of the individuality guard themselves even more jealously from that unveiling and summing up which in portraiture has its own supreme interest, yet is not always reconcilable with the quality of life at its highest intensity. From the absolute quietude, from the unconventional simplicity of the Spanish picture there radiates, however, an ardour of temperament, an inner vitality so tremendous that the portrait appears, nay is, on more than equal terms with the questioning onlooker. It almost seems as if its force, its imperious power of fascination would in the long run overpower and

consume him. In the brilliant 'Laughing Cavalier' of Hals the charm, the delight is all on the surface; the wonderful mastery of the brush-work allows itself to he followed in every stroke; the delineation of character is astonishingly vivid as far as it goes. But even here we do not get so far below the outer man as to approach the threshold of the mystery which is at the root of even the most ordinary human individuality. In the one case the painter, his painting, and his model are, in all their most distinctive qualities, obvious; in the other, they have the indefinable attraction which is in life itself—that of the enigma.

It has already been pointed out in a previous notice that the Rembrandts at Hertford House are on the whole a very remarkable series, although they can scarcely be said to show absolutely the height and depth of his art, or the height and depth of bis soul, as the collections in the Louvre, the Berlin Museum, and the Cassel Gallery-to say nothing of the Hermitage-do. Have we anything here that moves the spectator as some of the many late portraits of Remhrandt himself that might be enumerated dothat can compare in depth of emotion with the 'Sacrifice of Manoah' at Dresden; the 'Pilgrims at Emmaus' and the 'Good Samaritan' of the Louvre; the 'Daniel's Dream' and 'Potiphar's Wife' of the Berlin Gallery; the 'Jacob's Blessing' of Cassel; or with that jewel or Rembrandt's art, glowing in sombre depth of colour, glowing, too, in sombre depth of human pathos and sympathy, the little 'Hannah and Samuel' of the Bridgewater Gallery? Still London now, with the Rembrandts of the National Gallery, the Wallace Collection, Buckingham Palace, the Dulwich Gallery, Hampton Court Palace, and the private collections of Dorchester House, Bridgewater House, Grosvenor House, Devonshire House, and of Bath House, may be said to rival even the great Imperial collection of the Hermitage at St. Petersburg, even though to it be added those of Prince Youssoupoff, Count Sergei Stroganoff and Count Orloff Davidoff in the same city.

The Rembrandts at Hertford House cover most of the master's wonderful career from boyhood to age. The earliest years, the Leyden Lehrjahre, are, however, unrepresented; and there is nothing to illustrate the last eight or nine years, which, if not equal to the great decade between 1650 and 1660, are yet among the most interesting in the whole fruitful career. The earliest canvases here are the two great full-length portraits and the little biblical piece, 'The Good Samaritan'; all of them dating from about the year 1632. This little picture, small only in dimensions, hut broad and full accent in touch, for all its minuteness, which rivals that of Gerard Dou, the master's pupil and companion in early life, shows at once the intense gravity with which Rembrandt approaches the great scenes of drama and emotion in biblical history, his power of re-casting them in the mould of his ardent imagination, and his feeling of awe and worship, face to face with even the humblest and most purely human episodes which typify the spiritual and material life, the aspirations and woes of humanity. It is not alone the sorrow, the disillusion, the solitude of his later years that gave to his work its essential character of solemn pathos, of a sympathy so ardent and painful as to light up from within, to transfigure with the vivifying warmth of spiritual beauty beings and subjects conceived in a spirit of humble, unquestioning realism. We recognise this spirit from the very first, even in such comparatively rude essays as those early single-figure studies, the 'St.

The Laughing Cavalier.

By Frans Hals.

The Burgomaster Jan Pellicorne with his Son Caspar.

By Rembrandt.

Paul in Prison' (1627) of Stuttgart, and the 'St. Paul by candlelight' (1628) of the Germanic Museum at Nuremberg. It permeates the whole life-work; gaining very naturally in intensity in those last fifteen or eighteen years which were on the whole the greatest of the master's artistic career. There is a period—that of the married life with Saskia, that of the material comfort and splendour of the establishment at Amsterdam during those early days of brilliant success

and fashion when Rembrandt, still not wholly mature, reigned supreme—there is a period, comparatively restricted, when the joie de vivre, the almost gluttonous desire to enjoy to the full the material side of love, of physical delight in every phase, of wealth, and of power, has the upper hand, and obscures, though it does not obliterate, the deeper and more essential aspects of the art. Even here the joy in life is not the unquestioning, the child-like joy of a Hals; it has something in its

Susanna Van Collen, Wife of Jan Pellicorne, with her Daughter.

By Rembrandt.

manifestations of a poignant brutality, something, too, of a lurid splendour.

But to return for a moment to the 'Good Samaritan,' from which we have just a little strayed. For all its incisive and finished execution, for all its quiet intensity and its picturesqueness of mise-en-scène, it is far from the suhlimity of the later 'Good Samaritan' of 1648, in the Louvre, that sad yet consoling evening scene which exhales a spirit of pity and of hrotherly love such as has possessed no other artist, ancient or modern, in the same

degree. The small 'Good Samaritan' was in 1633 etched in reverse by a capalle pupil of Rembrandt, assisted by the master himself; a dog in a grotesque attitude heing added in the foreground, in order to fill up an empty space. We cannot well exonerate the master from this breach of good taste, and put it down to the pupil, who ex proprio motu would never have dared to venture upon the intrusion of such an excrescence. This is a typical instance of that grossness and tastelessness which in certain phases of

Rembrandt's art went side by side and hand in hand with sublime genius. The productions belonging to the earlier half of the career were not infrequently disfigured by such vulgarities, as well as hy a grotesque violence of movement; hut to the end fine taste and well-balanced judgment hut seldom completed, and thus rendered more precious still, those creations which were the intimate personal expression of a great pictorial genius, of a great seer and interpreter of men, and above all of a great heart and a great soul. The most uninspiring bourgeois simplicity, the most unquestioning acceptance of life and man as they are, the, for Rembrandt, smallest possible dose of imaginative interpretationthese are the qualities and defects which mark the important pair of portraits, 'Jan Pellicorne with his Son Caspar' (p. 304), and 'Susanna van Collen, wife of Jan Pellicorne, with her Daughter' (p. 305), hoth of them helonging to the year 1632, or thereabouts, the latter being signed "Remhrant f., 163 . . " (1632 or 1633). Although the Hertford House portraits show a certain inexperience, a certain hardness and timidity, and also what, for Remhrandt, amounts almost to a passionless objectivity in the mode of conception, they by no means deserve all the dispraise lavished upon them hy Dr. Bode in his great work on the master. They abound in passages of fine, sombre colour, and are marked, too, by a certain reposeful dignity which is not altogether common in his later portraits. The head of Jan Pellicorne has, if not the life and profundity of the later work, yet something of a melancholy aloofness which recalls Van Dyck. Susanna van Collen, too, has a certain spiritual charm and refinement which the Dutch housewife, even of the higher order, as a rule lacks. Here, then, is a not unsuccessful attempt to suggest an element of spirituality that is actually in the human heings portrayed. Later on we get that far greater thing, the suggestion of the divine element glowing at the heart of all humanity and shining like an inner light through the rough, time-worn envelope, which the master reverentially leaves as it is. Close upon these paintings in point of date comes the little 'Portrait of a Boy,' signed "Remhrandt f. 1633." Here we have a veracious and unaspiring study of some little studio model who in this and the succeeding year frequently posed for Rembrandt. He is to be seen in a very similar picture of the same date in the collection of Prince Youssoupoff at St. Petersburg; and again in one which was in the collection of Baroness Nathaniel de Rothschild in Paris; and yet again in a larger canvas, dated 1634, which is in the Hermitage of St. Petersburg. It is a question, too, whether the 'Boy with Curly Hair,' in the Duke of Portland's collection at Welbeck, is not another and a more vigorous presentment of the same round-eyed, round-faced, rosy-cheeked little fellow, with the dewy lips and the vacuous gaze, like that of some half-frightened, half-fascinated animal. In the small canvas of the Wallace Collection the head is treated

\* Though the point has nothing to do with the Rembrandts in the Wallace Collection, I wish to put on record the existence, at Coombe Abbey, the seat of the Earl of Craven, in Warwicksbire, of a very important early Rembrandt, no trace of which, so far as I have yet ascertained, is to be found in any of the great modern works dealing with this special subject. This shows an aged man, of simple aspect, instructing a sumptuously attired young Hebrew prince in the Books of the Law. It may possibly be intended to represent Jeholada and Joash. The technique is unquestionably that of 1630 or 1631; the pictures most nearly recalled being the 'Repose in Egypt,' in Mr. Boughton Knight's collection; 'Rembrandt's Mother Reading,' at Wilton House; and the 'Young Man in a Turhan,' at Windsor Castle. I have not been able to discover a signature. In the same collection is another canvas identical in subject, but painted some twenty-five years later, and much broader in technique. This also is accribed to Rembrandt, but is in reality the work of a highly accomplished pupil or follower. The question of the exact attribution in this case requires further study. The painter is in all probability Jan Lievens.

already to a great extent in the style of the artist's early maturity, the painting of the splendid rohe and cap heing, however, markedly inferior to the rest. This is a note, an exercise, done for the artist's amusement, and he has not cared to travel far beyond the model or to invest it with any special significance. Though the 'Portrait of the Artist (in a cap)' dates probably from the succeeding year (1634), it hetrays far stronger traces of the first manner than the painting which has just been discussed. The greenish flesh tints and the anxious overwrought modelling all point that way. And yet to this very year, 1634, belongs one of our painter's greatest masterpieces, one of his most surprising and authoritative examples of techniquethe 'Old Woman of Eighty-three,' in the National Gallery.

No painter fluctuates more in technique than Rembrandt; now he advances, now he retrogrades in the most perplexing fashion. The 'Portrait of the Artist (in a plumed hat)' is again one of the least attractive, one of the least self-revealing portraits in the vast and continuous series with which Rembrandt amused his leisure, kept his hand in practice, evolved the most splendid and various of character-studies, and on occasion illuminated for himself and the onlooker the very depths of his own soul. The modelling is, for him, hasty and superficial; the tone is golden, the handling swift yet not very certain; the whole has some pictorial, but little spiritual charm. This is no doubt a "pot-boiler," in which, taking himself, for the sake of convenience, as a model, the artist has sought to disguise rather than to emphasize the

And now comes one of the most exquisite things in the Wallace Collection, and one of the most charming in the whole auvre of Remhrandt. This is the 'Young Negro Archer' (opposite). It has, in my opinion, heen strangely underrated, even by such a supreme authority on the subject as Dr. Bode. But the reason is, no doubt, that until the collection was re-arranged as a national museum the picture was hung far too high in the great gallery at Hertford House, and in such fashion that its subtlety of tone and handling escaped notice. It is as fresh, as rich in subdued colour, as vigorous in accent, as when, in or about the year 1635, it left the artist's studio. And here we are not dealing merely with the model sumptuously and delicately attired, and hearing, like some black Cupid, the bow and quiver which helong to the chase, hut may also suggest the chase of souls, and the weapons that are Love's. The whole pity and pathos of the alien, the enslaved race is here. The pretty boy, an aristocrat of his kind and colour, and finely hred, is evidently a pet, a spoilt plaything. He fronts the spectator, patient in acceptance of love such as is given to animals, patient in endurance of domination such as is imposed on slaves; with an expression of infinite wistfulness, tempering youth in the bud and vital force that is in itself a joy not to be gainsaid. And yet there is no reason to infer that Rembrandt thought all this out from the point of view of the psychologist or the word-poet. He saw with the eye of the true seer, he felt with that indefinable sympathy that sends its warmth and radiance from one human heart to another; his intuition seized upon the exquisite pictorial charm of the motive, and beneath it divined all the rest. Eye, hand, brain, and soul were here at one to produce a work which, for all its apparent simplicity, is a masterpiece. The treatment of the dark skin, with all its delicate hroken tints and transitions, is astonishingly true and heautiful; the somhre richness of the fanciful archer's costume-olive green velvet, shimmering in the high lights, and yellowish-white lawn, upon which the gold of the chain, the jewels and accoutrements stand out hravely -is in its suhdued splendour singularly satisfying to the eye. Hardly anywhere in the earlier half of his career has Remhrandt wielded his hrush with greater strength and certainty than in this portrait study, or imagined a harmony more subtle and heautiful in its reticence. He is here so sparing of colours, yet so rich in colour!

Next in order of date comes the landscape, painted about 1640, which I have, hy reason of its unreal character, catalogued as 'An Ideal Landscape' (p. 301). In Dr. Bode's great work it is more distinctively characterised as 'The Landscape with a Fortress.' Here, as in the later 'Landscape with Ruins' in the gallery at Cassel, we are far from the splendid realism of most of the etched and a great many of the painted landscapes-from the spirit, indeed, which informs all the hest Dutch landscapes founded in Dutch nature. Here Remhrandt is romancing, surely, and as freely as even Turner ever did when his fancy took wing and spurned the ground, though with a less soaring imagination, and with less of the poet-painter's power, too, of welding together into a congruous and conceivable whole the elements of landscape forcihly

united, from this quarter and that, in the same scene. In the magnificent etching 'The Three Trees,' for iustance, or in the little 'Skating Scene' in the gallery at Cassel, uature is translated and interpreted by Remhrandt much as he translates and interprets man. Here we have, on the contrary, to the full as much Dichtung as Wahrheit; and the poetry is scarcely of the happiest. Conviction is not brought home to the spectator that the greatest master of transfigured realism has actually seen the scene thus in his mind's eye. The style, in its mixture of fantasy and literal truth, is rather that of the backgrounds to some of the biblical pieces than the style of the landscapes in which nature has been closely embraced and studied. Midway hetween the two manners in this side-hranch of the great Dutchman's art is that suhlime version of an everyday aspect of Nature, and the wonderment of man in contemplation of it, 'The Mill,' in the collection of the Marquess of Lansdowne. There, indeed, is a true vision of reality transfigured, such as later on Turner at his highest achieved.

The 'Parahle of the Unmerciful Servant,' which came from the Stowe Collection, is one of the vastest and most important Rembrandts left in England, now that the 'Pastor Ansloo consoling a Widow' has departed for ever to adom the ever-growing museum on the

A Young Negro Archer.

By Rembrandt.

hanks of the Spree. It was mezzotinted in 1800 hy James Ward as 'The Centurion Cornelius.' Dr. Bode, who, in his "Studien zur Geschichte der Holländischen Malerei," had given the date for this picture approximatively as 1665, in his definitive work on Remhrandt puts forward that much earlier one, 1650. Such a change of opinion on maturer study is, coming from such a quarter, entitled to every respect. To me, however, the new date seems to he, hy a few years, too early. The peculiar grey quality of the flesh and the shadows, the singular hreadth and simplicity of the disposition and the execution, the vision-like rather than genuinely dramatic character of the whole-all these things appear to me to point to a date hetween 1650 and 1660. The Hertford House picture has never had full justice done to it, mainly hecause it has too often in the public estimation heen coupled with a socalled Remhrandt, 'The Workers in the Vineyard,' in the Staedel Institut at Frankfort, which is rather an inferior and rather a repulsive picture, and certainly not a Remhrandt. The same hand is to he detected in the Frankfort picture as in the much-discussed 'Christ with the Little Children' of the National Gallery; and the hand is perhaps that of Eeckhout. This great canvas in the Wallace Collection is as high above it in artistic worth as Remhrandt is above the worst of his pupils.

Portrait of the Artist (painted on copper).

By Rembrandt.

With the murky yet transparent atmosphere that envelopes and hut half reveals these pathetic, strangely wistful figures, a veil of mystery enwraps them, giving just this visionary aspect to the simple rendering, so touching in its very grimness, of the familiar parable. The figure of the "master" before whom the unmerciful servant is brought by the centurions is one of Rembrandt's most magnificent pieces of colour-a "symphony" in sumptuous reds and pinks, intensified by the golden-white of the linen, and kept in harmony with the rest hy the greys of the flesh. As the central figure of the three personages who front him is shown the unmerciful servant-a creature too mean for vengeance, too miserable to understand or repent his sin. He is guarded on the one side by a helmeted young centurion, severe and self-contained, all attentive to the well-merited rebuke, on the other hy a patient, time-worn man of sorrowful aspect. In some indefinable way the great artist has here expressed his bewilderment, his trouble at the injustice, the failure in brotherly love that may make of this fair world so dreary and intolerable a wilderness.

The 'Portrait of the Artist's Son, Titus' (p. 309), is one of the most characteristic in the heautiful series of portraits in which Remhrandt has with so much love, and so haunting a sense of sorrow to come, immortalised this youth of nohle and pensive aspect-his son and the beloved Saskia's - who was to die at the age of twenty-seven, a year hefore the solitary master was himself to he called away. It is as if Titus were the embodiment in the flesh of the ideal side of Remhrandt's nature, of his love of the beautiful and the exalted, which he found beneath a surface not always beautiful - of his world-sadness, for which the mere material woes of his chequered career cannot alone he made answerable. The handsome youth, whose heauty here has something sculptural, something almost Greek in its loftiness, is here ahout sixteen. In the portrait in Earl Spencer's collection at Althorp he appears at the age of fourteen, in a gorgeous fancy dress; and

The Artist's Son, Titus.

By Rembrandt.

this last being dated 1655, the picture in the Wallace Collection must perforce have been painted about 1657. A little later on comes a still more magnificent portrait, not so hard and sculptural—an incomparably broad and splendid piece of true painter's work, overwhelming in world-sadness and presentiment of catastrophe to come. This is the sombre 'Titus' of Dorchester House, in which the youth is seen budding into the man. Rembrandt's son is here about eighteen or nineteen, so that Captain Holford's portrait must date from 1659 or 1660. To say nothing of the other portraits, which are duly enumerated and reproduced in Dr. Bode's book, so often already referred to, there is a pronounced reminiscence, if not an actual portrait, of Titus at an earlier stage, in the angel wbo inspires St. Matthew, in the picture of the Evangelist, dated 1661, which is in the

To much the same date as the Hertford House 'Titus' belongs the very small 'Portrait of Rembrandt, by Himself' (p. 308), painted on copper, with singular breadtb and finish, and with a golden flesh-tone to be found oftener in the decade between 1640 and 1650 than in that between 1650 and 1660, to which this latter portrait belongs. Our painter looks here about the same age as in the Earl of Ilchester's surprising three-quarter-length portrait-if anything over life-size-at Melbury Park. This being dated 1657, our little piece must belong to that or the previous year. Thus nothing in the Wallace Collection quite reaches the year 1660. We stop sbort some twelve years before Rembrandt's death, and at the very zenith of his art, though at a point when his reputation bad singularly diminished with his fellow-countrymen. Poor Rembrandt was, in those latest and most fruitful years of his career, "out of fashion." He must have known at times even the sharp pinch of poverty. The meanness of his surroundings in contrast with the splendour and the profusion of the earlier time must have often hurt and dispirited him. The sufferings of the man, bewildered yet not shaken from bis manhood or robbed of the all-penetrating glow and sympathy of his genius, have indeed left their terrible marks on the face, aged before its time, which with a naiveté so heart-piercing presents itself to us in those later portraits, perhaps the most amazing products of bis genius. But the world, for whose benefit such men as these mighty ones live and endure, for whose everlasting delight and spiritual ennobling their bitterest tears are shed, their most poignant agonies suffered-the world has gained immeasurably by the vicissitudes which overclouded this great life and with their sad colour tinged this vast genius. Rembrandt was even in his first period an artist of wonderful promise and performance, of singular inventiveness, of a rare gravity and pathos, if of defective taste and uncertain balance. In his second he was a master, sumptuous and astonishing, but above all warm, buman and tender; in touch with all the subtleties of reflection and emotion, even in the splendour and the eccentricity of his miss en schward which be loved to surround himself. In his last period, dating, we may say, from 1648 onwards, he appears a master the power and vastness of whose vision, the intense ardour of whose sympathy, the simplicity and greatness of whose pictorial rendering it would be hard indeed to parallel in the world's art.

We see two figures rise gigantic above all the rest. From the solitary, the limitless plain rises the awful Titan, Micbelangelo, alone for ever in his contemplation of the universe, oppressed by the woe of all created things-like his own 'Jeremiah,' a source of eternal sighs and tears. Lifted so high on the very loftiness and intensity of his sadness, he is one to whom the mere individual with his joys and sorrows, with his effort to uplift the world which ever crushes and overwhelms him, is too small a thing to make appeal. From the seething crowd of bumanity, dominating the peopled city, the field and the river, rises a figure not less vast-Rembrandt. He is the very embodiment of the humanity whom he ceases not to contemplate in joy and in sorrow: from its highest embodiment, Christ the God made Man that he may be the example of suffering and submission, to the Prodigal Son, pardoned and tenderly consoled, to the ragged beggar to whom the richer man in brotherly love gives alms. Nothing for his steadfast glance, that only the tears of pity for a moment can dim, is too great or too small; nothing too sublime to be seen and rendered from its human aspect, and so to make universal appeal; nothing too splendid or too joyous, nothing too sordid or too miserable. For all aspects of life that are truly and typically human, he has an equal sympathy. To him, indeed, "the proper study of mankind is man"; and it is the divine element inherent in the merely and simply human, the inner light glowing until it burns through the mean and worn envelope, that he bas represented as no other painter has ever represented it. Michelangelo's sublimity is in his aloofness, in the tremendous majesty with which he towers high above man and sees him, the race but not the individual, from immeasurable heights. Rembrandt's sublimity is in his equal and brotherly embrace of all men and all things created-in the intensity and the transfiguring power of his love.

CLAUDE PHILLIPS

The Road to the Forest.

From a drawing by A. Scott Rankin,

#### Rothiemurchus (VI)—Glen Eunach.\*

By THE REV. HUGH MACMILLAN, D.D., LL.D., F.R.S.E., F.S.A.SCOT.

BEYOND the first bothy the scenery becomes grander and lonelier. The glen contracts; the slopes of Braeriach on the one side and those of the Scorran Dhu on the other, become steeper and loftier. Nature is more awe-inspiring, and seeks to impress us more and more the nearer we approach to her heart. In a short time the great precipices of the Scorran form peaks and spires of indescribable graudeur. The face of the perpendicular cliffs, more than two thousand feet in height, is broken up into deep rifts, with long trailing heaps of débris at the foot, and great outstanding buttresses of rock as if these mighty masses required additional support; and the colour of the granite is a rich dark blue, like the bloom on a plum. The rocks had caught this hue from the sky during untold ages of exposure to sun and storm. The effect of these gigantic rocks with wreaths of mist and cloud writhing up their sides, and revealing more and more of their great height and steepness, cannot be described in words. The stream at the foot of these precipices flows darkly and sluggishly over a wide peaty hollow amid the stumps and tortuous roots of old

pine trees, testifying that this place was once densely wooded with the primeval forest. How these trees could exist then, and why they cannot flourish now, is a problem not easy to solve. It is not that the climate or any of the conditions requisite to the growth of the pine tree has changed. The probable reason is not the height of the spot, or the bleakness of the climate, but the exposure of the individual trees, when planted, to the prevailing storms. When once a gap was made in the serried ranks of the pines as they grew in the original wood, they yielded one by one to the force of the tempest; and the reason why we cannot now make our planted firs to grow in

such a situation, where we see thousands of their fallen progenitors cumbering the ground with their bleached remains, is that we cannot imitate the slow gradual method of nature in giving them the shelter which, through long centuries of mutual crowding together, they afforded to each other.

Farther on the picture is complete, when the first glimpse of Loch Eunach is seen at the next bothy, which is built of stone, and is meant for longer habitation. There a waterfall tumbles down from a huge bastion of Braeriach, the sound of which is lost in the immeasurable silence; while beyond it the mountain ascends out of sight, plateau above plateau. Loch Eunach reposes in the hollow hetween the great cliffs of Scorran Dhu and the gigantic sides of Braeriach, whose gloomy shadows are cast down upon its waters. From its situation it is exposed to all the winds of heaven, which often come in immense sweeps, lifting the water in blinding spin-drifts far over the shores. A universal darkness sometimes gathers over it on the brightest day without a warning, in a moment, and torrents of slanting rain come out of it that sting your face and wet you through and through. But the clouds and the mist vanish as rapidly as they appear, and an azure world is revealed in the clear depths below, unflecked and dazzling, and the clouds, even when they again form, are

A Stag calling.

From a drawing by A. Scott Rankin.

From a drawing by A. Scott Rankin.

suspended overhead in soft ethereal masses in their reposeful majesty and calm, and the waters are broken everywhere hy multitudinous swift-blowing ripples, that seem like shuttles working backwards and forwards, weaving the sheen of the waves that glance in the sun like watered silk. The lower end of the loch is dammed by huge banks of granite sand of the whitest hue, formed by the disintegration of the rocks around by the ever-restless waters, and here a walk along the shore reveals tufts of Alpine vegetation, Oxyria and Alpine Lady's Mantle, and rare Hieracia, such as delight the botanist's eye and heart. Loch Eunach, like many of our Alpine lochs, abounds with delicate char, which make delicious eating.

The head of the glen, beyond the loch, is shut in by a lofty and rugged amphitheatre of cliffs called Corrour, which pass across hetween Braeriach and Scorran Dhu, and down whose dark faces are long streaks and patches of light green, marking water-courses. Between the loch and these cliffs there is a large tract of level land, of wonderful smoothness and verdure, which is a favourite haunt of the deer. Here they may often be found in the earlier and later seasons of the year, cropping the rich grass in security, while in summer they seek the higher elevations for the sake of the cooler air. This spot used to be included in the shielings of Rothiemurchus. One summer, about the beginning of the eighteenth century, Lady Mary, the wife of the famous laird, Patrick Grant, surnamed Macalpine, accompanied the maidens to the shielings of Corrour, for change of air; and there, without nurse or doctor, in a mere hut tenanted by the cattle, was suddenly born her second son John, who got the name of Corrour from this circumstance. This son had a distinguished career as an officer in the army, and died abroad after a good deal of service. This incident was further commemorated by the name of Corrour being given to a large villa recently built by a relation of the present laird on the way to Aviemore. In all the district there is not a grander spot than Corrour. There are very few that can come up to it in all Scotland. The scenery of the deep corry recalls that of Loch Corruisk among the Cuchullin Hills in Skye, and Loch Eunach equals, if it does not surpass, the wonderfully wild view of Loch Avon from the heights of Ben Macdhui above it. In that weird caldron of the storms, that den "where," as Wordsworth boldly says, "the earthquake might hide her cubs," the imagination could revel in the most dreadful shapes of ancient superstition. We do not wonder that hefore the Highland fancy, in such lonely places, visions of water-bulls and ghostly waterkelpies should shape themselves out of the gathering mists.

To be alone on the shores of such a loch during a tempest would be the height of sublimity. Ossian and the Inferno would he seen in the writhing mists and foaming waters, and frowning rocks appearing and disappearing through the clouds; and the howling of the winds would seem like the spirits of the lost. Even on the brightest summer day, when sitting on the pure white granite sands on the margin of the loch, one seems like sitting "on the shore of old romance," and has an eerie feeling as if the veil that separated the seen from the unseen were thinner in this place than anywhere else, and might be lifted up at any moment and some uncanny shape appear.

Braeriach is in the Rothiemurchus forest, which extends to the Duke of Fife's forest on the Braemar side. It is one of the foremost of the great group of mountains which forms the roof of Scotland, and occupies the most imposing elevated ground in Britain. The boundary between the counties of Aberdeen and Inverness runs

The Tallon Moratish Presentail by B. W. Hyman Bart, is the Manshester Art Extlery

ocks above Loch Eunach. Frem a drawing by A, Scelt Fankin.

along the ridge of Braeriach, and is one of the grandest lines of delimitation in the kingdom. A well-made zigzag path, constructed by the deer stalkers for bringing down the produce of the chase from the mountaiu, ascends from Loch Eunach, hy which it is comparatively easy to climh to the top. On the way up many fascinating rills cross one's path, which flow down a course lined with the softest and greenest moss, inexpressibly pleasant to the eye in the desolate wilderness, while here and there cushions of the lovely moss-campion, starred with its numerous crimson hlossoms, form a delightful sward hy their side. You can hardly tear yourself away from the charm of the little transparent pools, and from the sweet gurgling sound they make in the awe-struck silence, and the delicious coldness of the sparkling water which you are tempted at every step to scoop up with your hand and drink, infusing new vigour into your parched frame. The granite rock holds these rills like a crystal gohlet, and from its hard sides no particle is worn away to pollute the purity of the element, or tame its hrilliant lustre. The cairn crowning the highest point is only two or three yards from the hrink of a tremendous precipice, which forms part of a long wall extending for upwards of two miles, perhaps the most formidable line of precipices to he found in Britain. Cairntoul, which rises up across the gorge to almost the same height as Braeriach, shapes the huge granite houlders of its top into a gigantic cairn, and hears in its highest corry a heautiful little circular lake, which shows as green as an emerald in the afternoon light, and gives rise to the white waters of the Garrachory hurn. Near the summit of Braeriach, at the north-east extremity, are five springs, which are perennial, and are called the "Wells of Dee." The rills from these springs unite a little lower down the mountain at an elevation of ahout 4,000 feet, and farther on to the

southward join the Garrachory. These rills are supposed to form the principal source of the Dee. At this height vou cannot distinguish the varied tones of the minstrelsyoftheunited stream as it hreaks into foam among the numerous houlders in its course; hut you hear instead an allpervading sigh or murmur in the air, like the distant echo of the shout of a multitude, which has an indescrihahly grand effect upon the mind.

The panorama of the whole Highlands of Scotland, from the long hroad summit of Ben Macdhui, gleaming red in the level afternoon light, surrounded hy the wild grandeur of the crags ahout Loch Etachan and Loch Avon, "the grisly cliffs that guard the infant rills of Highland Dee," to the highest point of Ben Nevis in the far western distance, storming the heavens, and gathering a fringe of dark clouds around its hrow, seems to spread out in one uninterrupted view hefore you-a tumultuous ocean of dark mountains, with here and there the solid mass crested with glistening snow. Gazing on the suhlime picture, in which the wild chaos of nature has swallowed up all traces of man's presence, and not a single human habitation or sign of cultivation is visible in all the immeasurable horizon, you feel to the full the inspiration of the scene. So quickened is the pulse, so elevated are the feelings, that one hour in such a situation is worth a whole month on the tame level of ordinary life in the city or on the plain. The mind receives a keener edge, and is quick to perceive the interest that is not only in the great whole of the view, hut also in the smallest details of it. The mystery of the mountain is in the eye of the lonely wildflower that strives in a forlorn way to emhellish the hrown weatherheaten turf; and every tuft of grass that waves in the wind, and every little rill that trickles in the silence, seem to he conscious of the sublimity of the spot. Problems of the original upheaval by some mighty in. ternal force of the mass of primary rock which forms the hase of the whole group of mountains occupy and stimulate the mind. The granite detritus, of which you take up a handful from the ground heside your feet, and pass like sand through your fingers, seems like nature's great hour glass, speaking to you of worlds that have passed away in ages for which you have no reckoning, of universal decay and death; and you are reminded that these seem-

ingly everlasting mountains are perishing, slowly when measured hy man's notions of time, hut surely; for, as the poet tells us, they are only clouds a little more stable and enduring, that change their shapes and flow from form to form, and at last disappear for ever in the eternal

#### Book Illustration.

- A FRIENDLY DISPUTE BETWEEN EDWARD F. BREWTNALL, R.W.S., AND LEWIS F. DAY.
- L. F. D.—WHY presume to illustrate the story which an author has put into words?
- E. F. B.—Why not help a lame dog over the stile if you can?
- L. F. D.—If there is a lame dog in the case it is possibly not the author. But it is no question of lame dogs but of competent writers quite capable of running alone.
- E. F. B.—The competent writer is, of course, quite capable of running alone, as you say; hut it has been discovered that, as a rule, he runs in double harness just as well—sometimes even better.
- L. F. D.—In double harness they would run together. In illustration the artist comes after the author. Fair collaboration is another story.
- E. F. B.—Then I will say tandem—in which case the artist is in the shafts. How do you like that?
- I. F. D.—You are playing with the question. An author says his say. If he says it adequately, the artist's commentary on it is superfluous.
- E. F. B.—I should say, on the contrary, that most fiction and much poetry distinctly gain hy heing adequately illustrated.
- L. F. D.—Alas, poor Fiction! Do you really mean to say you would rather read your favourite novel in an illustrated edition?
  - E. F. B.-Yes, if I might choose the illustrator.
- L. F. D.—But we do not choose the illustrators of our hooks, and so your answer is tantamount to no.
- E. F. B.—To "No"? Oh, no, no! I pray you, do not take me too literally. It is hut my way of saying that I want the chooser of the illustrator to choose properly. "Your favourite novel" implies choice on my part. My favourite novel is, in my opinion, one of the hest. I desire that the illustrations shall be of the hest also, or I would none of them.
- I. F. D.—I take it we are discussing current book illustration, not the hest illustration of the hest book—which is a rare exception.
- E. F. B.—I seem to remember that we hegan hy discussing the presumption of the illustrator—hut no matter! I should say the person who really ought to settle this question is the Reader (with a capital R, to whom prefaces are generally addressed). And the Reader, in his thousands, seems to say that he is distinctly anxious for illustrations. If he were not, if he were even indifferent ahout them, the publishers would no longer supply them on every hand in the way they
- I. F. D.—Quite right: it is the presumption of the illustrator we are discussing. I will not deny that a great artist may, hy exception, justify the illustration of a perfect story, nor yet pretend that in the case of a had one the presumption is very great. All I say is that from my point of view illustrations are commonly superfluous if not a positive annoyance. But then my standpoint is not that of the publisher; and I do not admit that whatever pays is right.
- E. F. B.—But whatever pays is not necessarily wrong. It is all a question of the honesty and wholesomeness of the demand. It is no more commercially immoral to

- supply illustrations than to supply stories, or Academy pictures, or tin-tacks, or wall-paper, or sausages, or glue. If you will pardon my heing serious for a moment, I think the almost universal demand for illustration (I am, of course, one of the demanders) is perfectly sane and wholesome, and an adequate reason for its existence. It sounds a commonplace one, but if examined, will, I think, he found quite satisfactory.
- L. F. D.—Why wander into the ethics of trade? The demand is commercially cause enough for production. Artistically it has nothing to do with it.
- E. F. B.—I am woudering whether, after all, it would not save trouble to condense this discussion in what I may call the "Soap Advertisement" manner, as thus—"Good morning! Do you dislike illustrations?" "No, I don't. Good evening!"
- L. F. D.—First you try and hide hehiud trade, and now you escape under a lather of soap!
- E. F. B.—The reason why I, and most of the rest of the world, like our stories illustrated, is that we have little or no imagination; and that "things seen are mightier than things heard"—or read. The small minority that likes its stories "plain," does so either hecause it finds all pictorial work rather a hore, or, more often, hecause it is highly imaginative and requires no pictorial assistance. It would he manifestly unfair that the more gifted should have things arranged entirely for them; and this is the reason why the true umpire in this matter is The Reader.
- L. F. D.—To purchase an illustrated hook does not prove any preference for illustrations. I have had to huy hooks with pictures in them which I promptly tore out. I doubt the longing of the cultivated reader for cuts, a large part of which do not really illustrate, hut are mere artistic trimmings to the hook, of no real assistance to the reader.
- E. F. B.—Would "Alice in Wonderland" have had so rohust a life, think you, without Tenniel's White Rabhit and Mock Turtle? Do not Walker's illustrations accentuate the charm of Miss Thackeray's stories? Do not Houghton's magnificent drawings realise for every one of us the very atmosphere of the Arabian Nights? Can the most imaginative conjure up a hetter Sir Galahad than the one that Rossetti has given us, or decline to accept as absolutely satisfactory Holman Hunt's Lady of Shalott? Could anything he more touchingly in harmony with the text than Millais' Edward Grey? I know a hoy that found Gilhert's illustrations to Shakespeare a revelation. He hung over the drawings—he devoured them—he loved them—he copied them. And they led him to read Shakespeare.
- I. F. D.—I grant you the possibility of picturing some one scene in a hook (that is not what is understood hy hook illustration), and, hy exception, of really throwing light upon the author's words. I cannot in a hreath discuss all your instances of illustration; but you mention Shakespeare—what have his illustrators done for him? I admire John Gilbert's work as much as any one; hut he translated Shakespeare into Gilbert. I prefer my poet untranslated.
- E. F. B.—I am not careful to maintain that Shake-speare should he illustrated. Prohably he should not, any more than he should he acted (see Charles Lamh). Of course he is not fiction at all in the ordinary sense—nor even ordinary drama. With regard to Gilhert's illustrations to his plays, I spoke, with deliherate intent, of their effect upon a boy. Before Alice reached Wonderland she peeped into her sister's book, hut it had no pictures or conversations in it. "What is the use of

a book," thought Alice, "without pictures or conversations?" A wise young person Alice.

L. F. D.—Now you are sheltering yourself behind the child. I helieve you don't want your stories illustrated any more than I do; hut, having been guilty of illus-

tration, you can't quite say so.

E. F. B.—I will put my name to any form of words that will make you realise that I prefer an illustrated edition; and that (competent) illustrations greatly enhance my pleasure in a book. You do not like illustrations. You are hopelessly in the minority. The great majority of people, cultivated or uncultivated (and I don't know which section is the hetter judge) do like them. To my mind that settles the matter. You say the demand for them is commercial. You have just as much right to say that Tennyson's and Browning's poetry owed its existence to a commercial demand.

L. F. D.—I only said that you justify illustrations on the ground of the demand for them—which no more argues their artistic nature than does the liking of the great majority. I grant great work must appeal to the many; but their liking does not prove great work, which only the few ever appreciate at its worth. On the main question we must agree to differ; but I will take up your qualifying parenthesis, and say that "competent" illustration is so rare that it hardly

counts.

E. F. B.—I should say that competent anything is pretty rare. But I do not think you disposed of the instances I gave you. I will add to them Phiz's illustrations to Dickens, which I think are ahout as good as they could be.

L. F. D.—I give you Pbiz, and some of your other instances, especially Tenniel's illustrations to Alice. I will even go so far as to say that children's books are perhaps better illustrated. In any case, I do not mean to say that a book cannot he helped hy illustration, if the artist is wholly in sympathy with the author, or may not be bettered by it, if he is the greater artist of the two; but I maintain that illustration, as it is done by professional illustrators, is, with rare exceptions, superfluous or worse.

E. F. B.—I think we are a good deal in agreement; but I would point out that Phiz, Tenniel, and the rest, were "professional illustrators." Probably there are many superfluous drawings; hut are there not also many superfluous stories? I fancy that, as a rule,

these are as well illustrated as they deserve to be. A dull and lifeless story has a very paralyzing effect upon the illustrator.

L. F. D.—Tenniel is more an illustrator of events than of books—more a symbolist than an illustrator. However, it is not a question of drawings good enough for the book, or of hooks good enough for the drawings, but of the need of illustration generally, or the help of

it, which I do not think you have shown.

E. F. B.—In the case of stories of bygone times, the illustrator realises for the reader the costume and the surroundings, which most readers would be incapable of realising for themselves. In a modern story the sympathetic illustrator (and I will have none other) realises the characters and the action. The reader has the pleasure of having his conceptions corroborated and defined more clearly for him, and of saying, "Ah! of course it was like that." This in addition to the pleasure the drawing gives as drawing.

L. F. D.—It comes then to the sympathetic illustrator, who occurs only hy exception—the rule being that the draughtsman selects two or three characters in a story and does the best he can with them in the time and for the money given. Mind, I don't blame him; the conditions are not in favour of sympathetic co-operation; but the story gains nothing hy bis mere drawings, how-

ever good they may be.

E. F. B.—What little fiction I read is of the hest, and is well illustrated. If there are such cases as you speak of, doubtless the writers of the stories have also to "do the best they can in the time and for the money." I do not wonder that you occasionally tire of the inferior mixture.

L. F. D.—What little fiction I read is of various degrees of excellence; but the illustrations to it are seldom of the hest, or so much as adequate. Sometimes they don't merely "tire" me, as you say, hut exasperate me so that I have to tear them out of the book before I can read it—and this even in the case of writers admittedly the best.

E. F. B.—You really seem very unfortunate. We clearly see the matter with different eyes, but I think I am the person to be congratulated, as what is a source of irritation to you usually brings an added pleasure to the

L. F. D.—Unfortunate? Yes, and the pest is spreading to my newspaper—of which also I wish you joy!

From "Through the Looking-Gluss."

Illustrated by Sir John Tenniel.

No. 1.—Tooled and Inlaid Binding.

By Miss Alice G. McCulloch.

### Tooled Bookbindings.

THE process of bookbinders' tooling need hardly at this time of day be described in detail. It is a form of stamping, differing from it in that the stamping is done by hand, and that, whereas in stamped leather the practice is to impress the ground of the design, leaving the pattern in relief, it is here the pattern which is impressed. As in stamped bindings the ground is sometimes gilded, so in tooled bindings the pattern is sometimes in "blind," as it is called, merely darkened, that is to say, by the pressure of the hot tool upon the leather; but the practice is to gild the pattern, fixing the gold leaf by a second process of tooling.

The design of bookbinders' tools is very much a question of taste; but whatever their character, the design of the binding built up with them is sure to tell of the way it was done. The most successful of designs are those in which the artist has taken counsel with his tools. In fact, there are few processes of work which more surely enforce the acceptance of their limitations. And as a rule they are accepted, if only for the reason that the designer is usually at the same time the "finisher," and knows full well what his tools will and will not allow.

The bookbinders of the sixteenth century (who have yet to be surpassed as masters of adequate tooling-design) worked on lines distinctly suggested by their way of working; and modern innovators, depart as they may from the old lines of work, have in no case gone so far as to invent a scheme of design comparable to that devised by the famous binders of the Renaissance. The fact is, the method of tooling compels the adoption of one or other of a few simple systems of design. The "gouge," for example, restricts freedom of curvature in a very noticeable way. A binder's gouge is practically a

carpenter's gouge ground down until, instead of a cutting edge, it gives a flat-faced section of the curved blade. Press that flat-faced tool upon the leather and you have "tooled" the segment of a circle; repeat the pressure with the tool alternately facing one way and the other, and you produce a waved line; but the successive stamps of the gouge do not, and cannot in the nature of things, give the flow of a line drawn freely by the hand. And so in the case of spiral and other such lines, by the successive use of semicircular-shaped gouges smaller and smaller in radius, you can describe a spiral; but it hasnot, and cannot have, the life and spring of a free line; the curve is stiff and cramped.

Such curves, however, lend themselves readily to the most varied combination. It was the triumph of the sixteenth-century binders to turn the somewhat mechanical lines given by their tools to admirably ornamental account. By the use, of course, of gouges not forming segments of circles, one gets freer and more flowing lines, which serve admirably as the stalks of little sprigs of flowers and foliage; but to give free and vigorous growth to scroll or branch it would take a number of special gouges; and if special gouges are to be cut for every detail of design, there is really no very valid reason why one should not at once engrave the design in its entirety and stamp it. There is not merely economy in building up pattern by means of the fewest possible gouges, it is the game which the finisher sets out to play. Not but what he is free to use a wheel with which to run lines -and Miss McColl at least has made admirable and most distinctive use of it—but there are limits to what the wheel, even in skilled hands, can do. It serves admirably for long sweeping lines of very subtle curve; but when it comes to rounder forms, and

No. 2.—Tooled Book Cover.

By Miss Jessie King.

especially to turning gently round, there is hardly room upon the book cover to do it.

As with gouges so with other tools, it is a point of workmanlike pride to get the utmost out of them, and to design what can he done with comparatively few fresh tools if not with those already in hand. The simpler and the smaller the tool the easier it is to manage-to plant it at once just in the right place, and to press it down equally. And the more elementary its form, the more various the uses to which it can be put. If the tool represents, for example, a trefoil, you have a shape that is final; hut if it gives only one leaflet of the three, you can build up with it quatrefoils, cinquefoils or other figures; you can not only foliate a stem with it, but place the leaves alternately or in pairs upon it, and at any distance apart. In the same way much more variety is to be got out of a single tool which represents a petal than out of one which gives a whole flower. Everything points, in fact, to the huilding up of tooled pattern oftenest out of small and in themselves insignificant elements. Whether the tools represent features in solid gold, or in outline or engraved with crosslines, is a matter of personal preference or of the effect aimed at-tools of various kinds may be used in the same design—the essential thing is that they should he flat. All attempt at shading in gold lines is futile; its effect depends entirely upon the angle at which the lines catch the light. So that, apart from the consideration that the appearance of relief is not desirable in tooling, you cannot possibly get it in a form that is to he relied upon.

The famous Grolier used tools not merely in outline, but in which the outline was drawn in dots—and the effect of the dotted lines was very rich. It enabled him also, by tooling them dot by dot, to draw freer lines than a gouge would give. How far he actually carried the practice I am not prepared to say, but the method opens out a way to artistic freedom of which sufficient use has rarely been made.

In saying that, exception must be made in favour of the Glasgow School of Art, where, under the direction of Mr. Newbery and with the co-operation of Messrs. Maclehose and Sons (it is too seldom we find a school of art in close touch with local industry), a new and characteristic departure has been made in tooling design. The note apparently was struck by Miss Jessie King, an artist of marked individuality, whose jewelled line (No. 2) has a singularly sparkling effect in gold upon morocco. The influence of her work is very apparent in Miss Alice Gairdner's simpler and less fanciful but hardly less satisfactory cover (No. 4). There is a trace of it, too, in the headed lines in Miss Alice G. McCulloch's binding (No. 1); but though trained in the same school, she works more in her own manner.

In striking contrast to the clever Scotch work is

the altogether quieter performance of Mr. De Sauty, which comes as an opportune reminder of the greater steadiness of the unbroken line. His line pattern (No. 3) just hits the mean between the simple and the intricate. Elsewhere (No. 5) he adopts the familiar

No. 3.—Tooled Binding.

Ry Alfred de Sauty-

device of a diaper, leaving, however, a sufficient margin of plain morocco to show his respect for the material he is working on. Where some such precaution is not taken, the propriety of so close a diaper may be questioned. A simple powdering is a very different thing; and, by varying the intervals between the repeat, a variety of effects may he got out of the same unit of design. But a full diaper, though rich in effect, involves so much labour that one is inclined to resent its expenditure upon mere repetition, which has not the interest of more thoughtfully planned pattern.

A practice much in vogue in modern diaper design is, simply to accept

the given space, subdividing it into quarters and these again into quarters, until a subdivision is reached small enough for the measure of a pattern to

No. 5.—Tooled and Inlaid Binding.

By Alfred de Sauty.

No. 4. - Tooled Book Cover.

By Miss Alice Gairdner.

be repeated all over it. That is all very well as far as it goes, and may result in quite satisfactory surface pattern; but it does not go very far, and at best it is rather a mechanical and unthinking way of setting about design. What if the proportions of the hook itself leave something to be desired? Resulting, as they do, from the mere folding of the original sheets of paper (the fixed dimensions of which are not determined purely by considerations of proportion), they well may. Plainly it is the husiness of the designer to make the hest of the shape of the book. He may be called upon even to correct it-as he can well do by the width of his border or borders, by emphatic lines across the cover, hy the introduction into the design of features prominent enough to call attention away from it. The massing of the ornament in Mr. De Sauty's design (No. 6) does something towards disguising the rather squat proportions of the book. Even in the case of a diaper the measure of the desirable repeat is not necessarily onesixteenth or sixty-fourth or other such ohvious part of the area to be covered. In fact, the problem of design is not to he solved by the simple process of subdivision.

The method of building up pattern upon which the finisher proceeds, accounts to some extent for his difficulty in knowing where to stay his hand; he is tempted to go on enriching the cover until nothing of the quality of the leather is left—which yet was well worth preservation. Many of the most satisfactory of tooled hindings, however, are, as our illustrations show, those in which a fair proportion of the morocco is intact, and some indeed in which the tooling is confined to a few interlacing or other simple lines which do not cover any appreciable surface of it, but are enough only just to give quality to the colour. That of course our illustrations cannot give, nor yet the value of the brighter coloured flowers upon a low-toned ground.

The practice of inlaying in connection with tooling is as old at least as the time of Henri II. At first the introduction of bright bands and points of colour, to relieve the comparatively sober hue of deep rich-toned leather, was in the form of pigment, never very pleasant

No. 6,—Tooled and Inlaid Bookbinding.

By Alfred de Sauty.

to the touch. It was a step in the direction of tborough and straightforward workmanship to inlay lines and dots of leather dyed to a brighter tint; but the colour of the inlay was for the most part harsber than that of the paint, which could easily at the last moment be modified and brought down to the required sobriety.

Nowadays, when so called "inlay" is no more than the onlay of leather shaved down to a minimum of substantiality, the workmanlike thoroughness of the device is less apparent, and least of all when (as is sometimes the case) instead of leather it is only paper that is onlaid.

Pictorial possibilities of a decorative kind are opened out by the more modern expedient of, as it were, a mosaic of coloured leathers, the joints masked by lines of gold tooling which take very much the place of the metal cloisons in enamel. Excellent work has been done, by the French binders amongst others, in which the local colour is given entirely by onlays of leather, the detail by tooling; but the temptation to pictorial effect is as a rule too strong for the artist, who is apt to forget that it is the cover of a book which he is designing, and not a tour de force in onlaid leather.

It seems to be an ideal of orthodox bookbinders to use, even in onlaying, only leathers of the evenest tint. Artistically there is no reason or excuse for this. On the contrary, the variety in the colour which comes naturally of staining a natural skin, is all to the good, and might be turned to excellent account. The love of evenness is a foible not peculiar to the English taste but characteristic of it - if taste it should be called. Another mistaken idea is that only colours in strong contrast with the ground are worth onlaying. So violent is the contrast sometimes that nothing short of veiling the colours with a delicate web of tooling will bring them into harmony. A web of tooling, by the way, is not such a far-fetched idea as it might seem: there was in the seventeenth century a lace-like form of geometric patterning in gold very much on the lines of old guipure which, but for the implied imitation of needlework, would have been in its way perfect-for, after all, the rigid lines are absolutely suitable to gold tooling. When, however, it comes to a glitter of gold all over the cover, the quality of the leather is sacrificed to it, and we ask ourselves, Was it worth while?

LEWIS F. DAY.

# Mr. Wallace Rimington's Water-Colours.

THE first and most salient point about Mr. Rimington's work is its many-sidedness. It is not of that casual kind which demands merely a passing note of admiration; nor is it, on the other hand, of such a character as to arrest the wandering eye by mere modern meretricious mannerisms or eccentricities of style. Breadth of handling, delicacy of touch, and a sort of Sbakespearean sympathy with the soul of things is what forms the great attraction of Mr. Rimington's pictures. Though he roves up and down Europe for his subjects, his Art is always essentially English, English of the Turneresque type. His technique is that of the born water-colourist. No other medium would serve his purpose equally well; by no other possible means could he express the exquisite transparency, the delicate gradations of colouring, the ethereal atmospheric effects tbat are so charming in many of his sketches. Yet, although he is essentially so very English in bis methods of work, Mr. Rimington's facile brush has portrayed for us subjects that few artists of any age or nationality have yet had the courage to attempt. He has roamed not only through France, Italy, Switzerland, and most of the other beaten tracks trodden *con amore* by the feet of every enthusiast, but he has also wandered along many untrodden paths in that beautiful Pyrenean Borderland that is neither Spanish nor French, but wholly and solely Basque. He has also gone farther afield and brought us back charming sketches from parts of Northern Spain practically unknown up to now, so that he is, in a sense, an explorer as well as painter.

If, as we have been told, genius is only "an infinite capacity for taking pains," then assuredly Mr. Rimington may lay claim to this title, for he is interesting and untiring in his study of nature.

The more deeply one studies Mr. Rimington's work the more one feels the influence of Turner in it. It has, indeed, many of the most salient characteristics of that greatest master of water-colour.

It shows the same intuitive knowledge of the structure of natural objects; for Mr. Rimington seems endowed with a similar power of drawing mountains, not so much with topographical accuracy as with an instinc-

Crowland Abbey, Lincolnshire.

By A. Wallace Rimington.

tive feeling for geological formation. His trees also have the same sort of expression of vivid life, growth, and individuality about them; and his complex cloud masses show the same absolute reality of texture and contour. Moreover, "the fascination of the remote" possesses him too, as it possessed the imaginative mind of his great predecessor. He loves dim purple distances and the

In Poblet, Spain.

By A. Wallace Rimington.

infinite suggestiveness of limitless space, light, and air. His subtle and delicate tonality enables him to portray the spirit of a scene with refinement and a mastery all his own, however; yet whilst gazing at many of his sketches, a Miltonian quotation appended by Turner to his Academy picture of the year 1798 frequently crosses one's mind:

"Ye mists and exhalations that now rise
From hill or steaming lake, dusky or grey,
Till the sun paints your fleecy skirts with gold,
In honour of the world's great author, rise!"

That Mr. Rimington also loves "mists and exhalations" is plainly to be seen. We have only to look at his sketch of Salisbury Cathedral seen through an autumn haze to realise this. The spirit of autumn seems to have wrapped the whole place in a transparent gossamer veil, hoping herewith to hide the nakedness of the trees around from the glowing glances of the declining Sun-god. The colour-problem in this picture is an extremely difficult one. The sunset glow

is dexterously thrown against the tower, through a fine faint mist; the hazy sky, which also reflects the light, rendering the colouring somewhat prismatic in spite of its delicacy.

Something in the same style is a sketch entitled: 'October Fairy Veils,' which was painted from the hills near St. John's Cross, ahove Exeter, whilst a light mist was rising from the valley of the Exe. It shows the sunlight breaking through these "fairy veils" most deliciously, and the expanse towards the horizon appears infinite.

Doorway of Deva Church, Spain.

By A. Wallace Rimington.

In 'Crowland Abbey' (p. 321), we have one of the architectural treasures of the English Fenland, and those who are acquainted with the stretch of flat country lying between the sister-ahbeys of Crowland and Barney will doubtless agree with me in thinking that it is endued with a strange beauty of its own, the keynote to which is a sense of vastness and space illimitable. This is exactly what Mr. Rimington has been able to catch and portray for us in his sketch of Crowland, a frankly-grey drawing, with a lovely luminosity of atmosphere and sky. Through its pale atmospheric haziness we get a strong and fine suggestion of the rich sculptures of the west front of the old abbey. We are unconsciously impressed by its stately loneliness, and thoughts of its ancient by gone grandeur creep into one's mind, for the spirit of the place is in the sketch lying before us.

'The Fading Crimson of the Sky' (p. 324), is a drawing that suffers much loss in reproduction. Here, Mr. Rimington gives us a delicious summer twilight in sunny Spain, painted on the Basque coast, ahove the tiny watering-place of Zaraus. It is very lovely in colouring, rich in dim distances, breathless expanses on land and sea, and exquisite atmospheric effects. The peace of evening reigns everywhere, the sea slumbers, the winds are still, and toilsome day is o'er. A

shepherd in the foreground is leading home his flock along a country road past some women sitting idly near a stone gateway, the after-glow is slowly fading in a sky of pale crimson, orange, and pale yellow. The whole landscape lies at rest, steeped in a warm glow that is gradually darkening into dusky greys and violets. The figures reflect the deep sky-tones, and the sea, though low in

A Patio in Zaragoza, Spain.

By A. Wallace Rimington.

tone, is wonderfully luminous.

'Morning Light on the Bidassoa River' is a different bit of the Basqueland I love so well, and it appeals strongly to me. It is painted from just underneath the walls of the ancient little city of Fuenterrabia, near the spot where the battle of the Bidassoa was fought during the Peninsular War. In Mr. Rimington's sketch we are looking across the flat, broad flowing river on to wooded slopes dominated by La Rhune, one of the most prominent peaks of the lower Pyrenees, which, by the way, has (almost on its summit) an old Welling. tonian fort. The delicate pearly effects of dawn are especially heautiful in this sketch, which nevertheless seems flooded with silvery sunshine and wrapped in golden haze. These three last drawings were all done in what I always think of as "Wellington's country," because he has left behind him so many

"footprints in the sands of time" all round about that district. Indeed, there are reminiscences of England found on every hand there, some of which date hack as far as Edward the Black Prince, who has also left behind him many lasting "footprints" in these regions.

Akin to, yet entirely different from, this work, is the picture of 'Wells Cathedral hy Night' (p. 322), one of several painted in a somewhat similar key, though most of them are under more positive moonlight effect. The

ancient pile looms forth mysteriously, almost like a wraith of itself. beneath a cloudswept moonlit sky, in a very striking fashion. This is a lowtoned drawing, the prevailing colour of which is a silvery-greenhlue-grey, most fascinating and effective.

'Porchester Castle' (p. 324) is another of Mr. Rimington's successful grey drawings, having a strongly luminous sky; very broad

Wells Cathedral, Half Moonlight.

By A. Wallace Rimington.

in handling, and simple in colour. A typical English landscape with wood and water, meadow-land and grazing cattle, low-lying river hanks, barges and harge-men.

Mr. Rimington does not, however, confine himself to depicting "mists and exhalations," nor yet to

portraying the many moods of Mother Nature. On the contrary, to quote a Ruskinian phrase, he eminently " forceful in hand," and many of his watercolours show great strength of line and accuracy of draughtsmanship, especially in ecclesiastic architecture, in which there is a large amount of intricate detail. Amongst examples of his art in this direction. one of the most charming is his drawing of 'The Miguelete at Valencia ' (p. 323). The hell-tower of this cathedral is one of the few ancient glories remaining to Valencia, for nowhere else in Spain has the vandalism of the nineteenth century worked more havoc than in this city. He shows it to us on the occasion of one of those gorgeous religious fêtes for which Spain is celebrated. This is a very elahorate and carefullywrought drawing, and is largely dependent on its colour for its full effect, its

luminosity heing quite remarkable. The very attractive colour scheme consists of pale-toned sunlit buildings—the hell-tower literally glowing with delicate colour—heneath a pale sky, with a good deal of crimson about the figures in the procession issning from the great arched doorway, and much varied and vivid colour amongst the crowds which throng the street and fill the halconies. These are, by the way, particularly life-like, and characteristically Spanish.

A crowd is always most difficult and complicated to draw, hut Mr. Rimington has succeeded admirahly. There is not only light and life in the picture, hut also knowledge and soul.

Some other reproductions of his charming drawings

accompany this article: 'A Patio at Zaragoza' (p. 322), 'The Doorway of Deva Church' (p. 321), and 'In Pohlet' (p. 321).

Zaragoza, like Nuremherg, is old, and quaint, and full of pleasant surprises. You wander through dark archways to find yourself unexpectedly in spacious patios beautiful with dainty, plateresque or morazabic detail of arch and loggia, richly carved pillar and shallow stone stairway, marhle fountain and ancient AZULEJO tile. It is a corner of one of these patios that Mr. Rimington has portrayed; the quaint details of its carving most faithfully executed, the light and shadow most skilfully indicated.

Deva is a bright little seaport town at the mouth of one of those picturesque river valleys so characteristic of the Spanish Basque coast, and it prides itself upon its fine old church, the doorway of which, delineated hy Mr. Rimington, is a good example

of firmness of line and fineness of detail. The figures, very strong in colour, stand out holdly from the quiet green-greys which form the general tone of the architecture.

Though a town of immense size, Pohlet is quite out of the beaten track, especially in a mountainous country so little travelled as Spain. Nevertheless it is a most interesting place and full of delight to the artistic eye. Its foundation dates from the twelfth century, but the

The Miguelete, Valencia, Spain.

By A. Wallace Rimington.

art of almost every succeeding period has left its impress on the architecture of its three superh ruined cloisters with their guesthouses, halls, and refectories, its magnificent churches, its hroad walls and picturesque towers of defence, and its great stone gateways, the charms of which are much enhanced by the luxuriant growth of roses and honey suckle, wild vine, creeping plants, and overhanging trees. The delightful hit of clois-

ter Mr. Rimington has given us in the sketch 'In Pohlet' is excellent work, the architectural portion heing solid and true in values, and the strength of sunlight very well expressed. The roses look so fresh and natural that one almost seems to catch a whiff of their odour, and the solitary figure sitting in the half shade seems well content with his surroundings. But this, again, is a drawing that suffers greatly in reproduction, its union of strength and delicacy heing much marred in the processes of photography.

It is very difficult in the course of a short article to give even a slight idea of the unique character of

The Fading Crimson of the Sky.

Above Zaraus, in the Basque Country, Spain. By A. Wallace Rimington.

Mr. Rimington's water-colours, not only hecause he is so manysided and so comprehensive, hut also for another and stronger reason: to do full justice to an artist one ought to he able to translate his art into words, and this is just what one cannot quite do with most of Mr. Rimington's work. Its most valuable quality lies in its freshness, its truthfulness, and its apparent artlessness. He seems to understand pre-eminently how to make use of

the Every-day in order to express the Beautiful.

To tell the truth, nohody hut a lyric poet could adequately describe his work, hecause his pictures are, to my mind, more like lyric poems transmuted into colour than anything else I can think of—some of them are pastoral poems, but of the most soul-felt modern type; others are hallads of the Middle Ages, or else slow stately psalms out of the old lyrical version used in the England of hygone days.

Of Mr. Rimington as the man, space does not permit me to speak. This much only may I say: "Il a bien peint parce qu'il a bien senti!"

H. ELLEN BROWNING.

By A. Wallace Rimington.

## The Popular Art Movement in France.

THE fact that no organic style in art has survived in the practice of Western Europe, despite the splendid traditions of the past, has engaged the serious attention of artists and economists now for a long time; and many have inquired into the causes of this deplorable circumstance of modern civilisation with a view to devising some remedy. Nor is it unprofitable to observe what opposite conclusions, having set out from the same starting-point, they have severally reached.

First and greatest of all, it is hardly necessary to say, was John Ruskin; who, however, by taking up an entirely irreconcilable attitude towards almost every invention of which modern science is proud, failed to effect a very tangible result. For how could he persuade people to abandon machinery and revert to a state of things when railroads were not? It was something, nevertheless, to have done, that Ruskin should have opened our eyes and, by showing us how groundless was our self-complacency, should have made some of us think.

Chief among the disciples of Ruskin was William Morris, who, while less uncompromising than his master in respect of machinery, yet carried Ruskin's economic doctrines much further, and proclaimed that the fount and source of the evil lay in existing social conditions, nor was there any way of amelioration except through a complete social revolution.

On the other hand, it is curious to note a still more recent opinion, to wit that of M. Jean Lahor, a poet, artcritic and lecturer, well known in France, who, while owing much to Ruskin and Morris, yet arrives at an entirely contrary conclusion. In France they have tested the efficacy of social revolution. It happened a century ago; hut, so far from its having hrought the longed-for ideal any nearer fulfilment, M. Lahor's experience goes to prove that the triumph of the democracy has only meant the extinction of tradition in art and the imposing in its place of a hanal and ugly mediocrity. He dates the artistic degradation which he bewails in his country from the sweeping changes of 1789. But he does not despair. Nay, he perceives the germs of æsthetic redemption in the extraordinary revival of art that is taking place throughout Europe, as well as in America, and derives therefrom utmost consolation and hope for the future.

And in tracing the course of the movement M. Lahor frankly owns that it is neither to Italy nor to France—generally but, he says, undeservedly accredited as the most artistic people in the universe—nor indeed to any Latin nation that the honour is due of having initiated the æsthetic reformation, but rather to the northern peoples, and first and foremost to England. Romanticism, the literary phase of it emhodied in Sir Walter Scott, the artistic in Pugin, with his strenuous advocacy of the old religion and the old architecture, in a word the Gothic revival, and next Pre-Raphaelitism, must be regarded as the early stages of the movement represented by Ruskin and Morris and supported by the host of artists who have followed after them.

Now, up to this point, I for one have no wish to

dispute M. Lahor's statement of the case. But it is surely an unjustifiable error to treat the latest manifestations of artistic wantonness, which they call on the Continent "L'Art Nouveau" and "Modern Style," as if they were properly a continuation of the work of Morris. M. Lahor does not profess to defend the extravagances and eccentricities which he is well aware disfigure the "new art," but he fails to discriminate between the two things. Not only are they not identical in origin and inspiration, but they are diametrically antagonistic to one another in principle. The primary aim of William Morris and his school was to gather up, with the deepest veneration for history, the threads of tradition where they were hroken off, and thence, if it might be, in patience and humility to develop on the old lines: whereas the new school has quarrelled utterly with the past. It prides itself on its individuality. Whatever else it enjoins, novelty is the first essential of its being, novelty at any cost. All such considerations as construction on an architectural basis, requirements of the material, utility, simplicity, dignity, harmony and heauty are cast aside as prejudices and superstitions. And the extreme and logical issue of "the new art" is thus no outcome of the old, but rather a repudiation of and a challenge to everything and everybody that has preceded it.

We have really nothing quite analogous to it, nor any artist of mark in this country, except a small number perhaps in Glasgow, who can he named as its exponents. But the epidemic, whencesoever it sprang, has attacked Belgium and Germany, France and Holland, with contagious virulence. Indeed, so fast and furious has been its feverish career, that a reaction, as I hear, has set in, and the "modern style" has already hegun to be rejected as a thing out of date in the very countries where hitherto it has met with the readiest favour and support.

Find fault, however, as one may, one cannot but be profoundly thankful that the former indifference is over. Let us not judge over-harshly the transgressions that have been committed against good taste and good sense, but regard them rather as symptoms of an exuberant artistic activity in quarters where, not very long ago, there existed only ignorance and apathy with regard to art.

Continuing, M. Lahor draws attention to the fact that all the hest artistic products are consciously and deliberately designed and chosen by the rich and cultured few, and by them only. The vast majority of the community (the same is true in our own country as it is in France) is still outside the pale of artistic influences. They neither care to acquire what is beautiful, nor, if they did care, is it offered to them at a price they can afford to pay. These fundamental wrongs-for wrongs assuredly they are which cannot be defended on ethical grounds-cry aloud for redress; and to M. Lahor, who contends that the poorest human heing is as legitimately entitled to the enjoyment of art and beauty as of air and light, belongs the credit of having conscientiously thought out and formulated a clear and definite scheme by way of remedy. This scheme he explains in

his excellent pamphlet, the title of which, "L'Art pour le Peuple à défaut de l'Art par le Peuple," affords the keynote of the contents.

And firstly, M. Lahor insists on the necessity of educating popular taste, a process which he purposes to accomplish by establishing local museums of what we should term ethnology in all the chief towns of the ancient provinces of France. One great central collection like that at the Hôtel Cluny is not sufficient. To he of effective service the museums must be easily accessible to the dwellers in the remotest country districts; and the contents of each should be as representative as possible of the special features, arts and industries of the district in which it is situated. M. Lahor instances the admirable collections already established at Arles and Quimper respectively. And since architecture is the foundation and standard of all the other arts, peculiar emphasis should be given to this subject, the best local models being selected for exposition and reproduction. Not only do types and methods of building vary in different countries, but also in different districts, the differences being determined by a number of causes, such as climatic conditions and the materials available in any particular neighbourhood. Thus where stone is scarce, as in the lowlands of Northern Germany, for example, brick building attained to an astonishing perfection; in Norway the employment of timber prevailed even for the construction of permanent churches, like Hitterdal, for instance. In districts where quarried stone is to be obtained, notable differences are to be found. In some places the stone heing very white, in others decidedly yellow, reddish or blue in tlnt, imparts a particular character to the buildings. In other places, again, grey granite or flint is the dominant feature. But, even so, local peculiarities assert themselves. Thus the elaborate flint ornament of East Anglia differs widely from the simple flintwork of Kent. Nay, go where one will, in every ancient town that modern interference has not reduced to a dead level of new uniformity, delightful local specialities occur, which, being natural, ought to he treasured, not suppressed. In general, Italy may be regarded as famous for its marble, and yet there is Verona, with its exquisite salmon pink bricks. Normandy, with its supply of celebrated Caen stone, is not far distant from Anjou, yet there is Angers, glossy with black slates. Nothing is so illogical as centralization, nor so destructive of artistic effort. Yet heretofore, when it has been required to erect, let us say, a municipal hall in some provincial town in France, it seems not to have occurred to the responsible authorities to do otherwise than send to Paris for a design, as though there never had been any architecture worth consideration outside the capital; or "as though," to quote M. Lahor, "there were not any difference between Brittany or Normandy and Provence, the Basque territory, Auvergne, Burgundy, Picardy or Flanders!" There results only an insipid building of the usual stock type of Parisian Renaissance, in most cases quite out of keeping with its surroundings. The model supplied by the metropolis, not being native of the soil, but transplanted, expatriated, always will remain exotic, and can never in its turn propagate the growth of a sound and healthy art. It is by a process of decentralization, of fostering and developing rural and provincial arts and peculiarities that M. Lahor hopes to train the masses to take an intelligent pride and interest in the glorious heritage of the past, out of which alone can anything of a coherent style be evolved for the times to come.

Moreover, M. Lahor seeks-and in this he must command the sympathy of all persons of taste throughout the world-to establish a Continental league which shall cover the work both of the Society for the Protection of Ancient Buildings and also of that for Checking the Abuses of Public Advertisement. Again and again M. Lahor has been painfully struck by the reckless way in which the claims of money-making are allowed to override all other considerations. It happens only too frequently that the choicest architecture or natural scenery becomes irrevocably disfigured by the intrusion of hideous chimney-shafts, warehouses, or other commerclal enormities, towering above everything else, and blocking out the beauties of the view. The problem is how to put a stop to such offences, and it behoves everyone who loves and values the beautiful to rally in defence of its sacred cause. A propos of advertisements, I have been obliged to forswear a certain preparation of oats, which I allow to be delicious, ever since I heheld, on the walls of an ancient town by the Rhine, a colossal advertisement-board staring me in the face right across the river. And this desecration-more shame to us!was perpetrated by a British firm. Our own countrymen unhappily are not least guilty in this regard. For instance, look at Norwich as it is to-day, cursed by the invasion of electric trams. These modern abominations not only spoil the picturesque aspect of the venerable city, hut are a positive danger to every other kind of traffic in the steep and narrow streets. In the same city the magnificent old "Strangers' Hall" was recently saved from official demolition only hy the devotion of a private citizen, Mr. Bolingbroke, whose name ought to be handed down for grateful remembrance to all future generations.

Many minds at the present moment are exercised concerning the fall of the celebrated Campanile at Venice; and there seems only too strong reason for believing that the disaster is to be attributed to the dredging operations which have been conducted near the entrance of the Grand Canal, so as to enable vessels of deep draught to approach the Riva. For, with a soft and liquid bottom like that on which Venice is built, it is impossible to confine the effect of unsettlement within determined limits. The removal of a large quantity of the mud from any given spot disturbs a much wider area, and, so surely as water finds its own level, there ensues a subsidence which tends to undermine the foundations of the entire city. Nor can the extent of the mischief be ascertained until too late, when every building in the place shall have collapsed. It is awful to contemplate, hut it may be that Venice is already doomed to disappear. Such is the price to be paid for commercial greatness! It were better far that Venice had lain permanently in what Ruskin, referring to its sumptuous repose, calls "golden paralysis," than that it should have been stirred up to energy that means only selfextinction on the altar of Mammon.

Concerted action, then, on the part of all persons of taste is absolutely needed that no vestige of the inheritance of art hequeathed by our forefathers be suffered to perish; and that not merely every individual monument threatened with destruction or defacement be religiously safeguarded, but also that public opinion be influenced so powerfully that ere long no one will dare even to propose an act of vandalism being committed.

M. Lahor's scheme comprises a further project (and this, I fear, is too Utopian for realisation unless some millionaire philanthropist be induced to finance it), a project compared with which the programme of the

Kyrle Society dwindles into insignificance; namely, the opening of popular depôts where, at low prices, the artisan and the labourer may purchase artistic furniture and ornaments for their homes. For this end M. Lahor proposes to hold shortly in Paris an inaugural Exhibition of Art and Hygiene, at which loan collections of ethnological objects may be on view, side by side with such specimens of decorative art as he may have managed to find within the range of slender incomes. The enterprise is a vast and a noble one, and worthy of

its author, who is too altruistic to rest content unless he can share with the meanest of his fellow-creatures the artistic refinements which afford himself the keenest pleasures in life. And if—absit omen—he do not succeed in his purpose, he may yet be cheered with the consciousness of having failed, not because his scheme was undeserving of success, but simply because he has aimed at an ideal too exalted for acceptation in a sordid and prosaic world.

AYMER VALLANCE.

### On a Ring in the Naples Museum.

(Among the collection of antiquities from Pompeii in the Naples Museum, are some rings with the finger-bones of their owners. On one ring, found upon a skeleton in the House of the Faun, is engraved a small figure and also the inscription "Cassia.")

O NLY a girl's ring—and yet around it Clings a human story, passing strange; Dulled, since first it left the goldsmith's anvil, Thinned by centuries of Time aud Change.

'Tis a slight thing, of an antique pattern, On its gold a ruhy blazes yet; While to its poor mortal dust has crumbled The still fairer jewel that it set.

For the ring contains a bony fragment Of what once was dimpled beauty's hand, Wearing still the badge of its betrothal, Shrunk and withered, in its jewelled band.

From the treasure-house of old Pompeii Came this relic of an older day; From the centuries of dust and lumber, This bejewelled bit of human clay.

"Cassia" is the name engraved upon it, Just a common Roman name—yet so, How the heart doth reconstruct the story Of that human love, so long ago!

Who was "Cassia"? Was she fair and lovely? Was she mother, widow, wife, or maid? Was she sunny as an April morning 'Twixt the almoud-blossom and the shade?

Or was she a great patrician lady?

Were the stars drawn at her boroscope?

Did a noble youth, too, seek to woo her,

And the bigh gods presage joy and hope?

Was this, then, thy gift, O princely lover— This poor ring, that, chosen in youthful pride, Never more to leave her dainty finger, Still adorns the poor dust of thy bride?

Didst thou hasten to the merchauts' quarter, And, to 'stablish thy betrothal claim, Barter straitly with the Eastern dealer For the engraving of the maiden's name? Or, was't after some mere lovers' quarrel, Just a cloud o'ershadowing the bright day, That this gift of love was bought and tendered, And the mists of discord blown away?

Did she take it with a sweet relenting, As the way is of a maid with man? Was the day a happy golden idyll, As it has been since the world began?

Didst thou hymn her in Ovidian measure, Give her rank and attributes divine, Write a sonnet to a mistress' eyebrow, Full of "Juno," "Pallas," "Proserpine"?

Didst thou pledge her in the old Falernian, Loved of Horace, and by him renowned? Did she drink from the same crystal heaker, Her bright hair with vine-leaf garland crowned?

Ah, fair "Cassia"! in her hours of joyaunce Did her life to her seem passing sweet? Scarcely might she heed the Augur's omens, Or the thud of the Avenger's feet.

When the envious light closed in upon her, Radiant Hebe in her youthful bloom— But, when cruel day again disclosed her, Mouldering horror, in her ravished tomb.

And, amid the wreck of all that's mortal,
One thing still defies both time and rust—
Just this one sad trinket, still adhering
To the remnant of poor Cassia's dust.

Human Love indeed—yet here eternal!

Overcoming Time and Space and Grave;
One poor islet of romance,—left stranded

By the centuries' incoming wave.

Ah, poor lady! even in death dishonoured,
Here I pay my tribute to thy shade—
Victim and witness to that vanished city
Where thy little hour of life was played!

EMILY CONSTANCE COOK.

#### Passing Events.

SIR EDWARD J. POYNTER has published in *The Times* an appeal for money to aid the restoration of the Campanile, and donations may he sent to Mr. T. G. Jackson, R.A., the hon. treasurer to the fund, at Burlington House.

PORTRAITS of Sir Arthur Sullivan hy Sir J. E. Millais, P.R.A., and Dean Milman, hy Mr. G. F. Watts, R.A., have heen exposed to view recently in the National Portrait Gallery.

THE eleventh exhibition in the Guildhall, composed of a selection of works by French and English painters of the eighteenth century, was visited, in comparison with some previous exhibitions, by remarkably few people. This decrease in attendance is rather surprising, for although London has offered excitements and other attractions, none of the many visitors from abroad would miss seeing the ancient municipal huilding in the City, and heing there, it might he supposed they would have passed through the turnstiles of the picture gallery.

THE work suhmitted in competition to the Board of Education, and shown this year in the galleries of the Indian Section of the Victoria and Alhert Museum, did not reach so high a standard that unqualified praise could he expressed hy any of the examiners. In the official reports such phrases as "a decided falling off," "want of mental activity," and "much helow the average," scarcely halanced such as "some slight improvement," "standard well maintained," and "less extravagance and affectation": and the several expert verdicts noted a lack of genuine application. The examiners on Internal Decoration, Furniture and Iron-

work deplored that the tendency towards eccentricity is on the increase, and quoted the words of a competitor as the apparent aim of the majority of students-" The main aim in this design is individuality and quaintness." This conclusion is in the spirit of the address by the President to the studeuts of the Royal Academy last year, and it is to he feared that the prevailing taste encourages artists to execute grotesque designs. Being largely applicable to domestic uses, the work exhibited at South Kensington may he granted more indulgence than other forms of art, hut we hope the repeated censure hy those qualified to judge will have the effect of guiding the efforts of students into more dignified endeavour.

S OME comment has been passed on the rapidity with which scenes of the processions and reviews have been published, and some contradictory drawings having appeared, some guidance has been sought concerning the most accurate record to purchase. A daily paper mentions a certain weekly publication, and we concur in the tribute to the attractiveness of the journal, while reserving our testimony as to the accuracy of the scenes represented; for from the same office the Queen Victoria Coronation picture by Charles Rohert Leslie, R.A., was attributed to "Charles Roherts"—a glaring error which makes us suspicious of further records.

WE wonder in what spirit the new Prime Minister will dispose of any questions affecting the Fine Arts in this country which are brought forward for consideration by the Legislature? Mr. Balfour has often shown intimacy with artistic subjects, and the appreciation of art by a powerful minister may influence the decisions of his subordinates.

N connection with the civic festivities which have just enlivened Preston, the following quotation is interesting. Lord Leighton usually declined to address public audiences outside the Academy; but he accepted office at the Art Congress held at Liverpool in 1888, and in his presidential address referred to the strong tendency towards a return to closer honds hetween the various hranches of art. "The chief magistrate of an important provincial centre of English industry, the Mayor of Preston, wears at this time a chain of office which is a heautiful work of art; and this chain was not only designed, but wrought throughout hy the sculptor who modelled the stately commemorative statue of the Queen that adorns the County Square of Winchester, the artist who presides over the section of sculpture in this Congress, my young friend and colleague, Mr. Alfred Gilhert."

#### SPECIAL PLATES.

### 'The Fallen Monarch.'

BY SIR EDWIN LANDSEER, R.A.

From a drawing

By George

Montbard.

which Sir William Agnew, Bart., has recently generously presented to the Manchester Art Gallery, is one among the few pictures of importance by Sir Edwin Landseer that have not been engraved, and we believe that the illustration we now give is the first reproduction of any kind of this picture.

In 1822, Landseer, then only twenty years old, painted a picture of 'Nero,' an old lion in Cross's Menagerie at Exeter Exchange (the first show of this kind ever seen in England). This picture was etched by his hrother, Thomas Landseer, with five other illustrations by Sir Edwin, for Spilsbury's "Carnivora," a work containing engravings after mauy other artists. The attitude of the animal in 'Nero' is almost identical with that in 'The Fallen Monarch,' but in the former picture

the animal, still living, watches one with stealthy eyes, and the muscles of the fore-paws are less relaxed.

Two years before Landseer painted 'Nero,' he had had an opportunity for dissection, through the death of a lion at the Exeter Menagerie, when he painted two large canvases (each 6 feet by 8 feet), both of which were exhibited at the British Institution the following year.

Landseer also sent to the Royal Academy Exhibition of 1822, 'The Prowling Lion,' so that about this date the artist produced several pictures of the "king of beasts."

Looking through Mr. Algernon Graves's list of Landseer's works, we do not find mention of any picture of lions, with the exception of 'Van Amburg and his Animals,' exhibited in 1839, till the time the artist modelled the lions for Nelson's Monument in Trafalgar Square; these were cast in bronze and placed in position in 1868, though commenced some years before.

'The Lion and Lamb,' one amongst the last half-dozen pictures finished by Landseer, was exhibited at the Royal Academy in 1872, the year before his death.

'The Fallen Monarch' must, one would think from the breadth and style of handling, have been produced some years later than 'Nero,' but there seems to be no record of the date at which it was painted. The beast in 'The Fallen Monarch' is older and more gaunt than in the other picture, and portrays him in his native desert, when, too feeble to catch or devour his prey, he has succumbed to starvation.

The indication of the immense strength of the shoulders, loins, and paws of the mighty beast, all the muscles relaxed in death, is finely rendered, and the breadth and simplicity of the treatment of the subject produce an effect of grandeur conveyed by few of Landseer's pictures.

## 'Death of the Duc d'Enghien.'

FROM THE PICTURE BY H. PIFFARD.

OF the many illegal acts perpetrated under the Bonaparte régime, that represented in our picture is certainly not the least noteworthy. Louis Autoine Henri de Bourbon, Duc d'Enghien, trained in the art of war by his grandfather, the Prince of Conde, was every inch a soldier. How could it be otherwise, indeed, with a descendant of Condé the Great, who at the Battle of Rocroy, when defeat threatened the French, by the swiftness and intrepidity of his tactics transformed the event into a victory, and thus, at the age of twenty-two, caused himself to be regarded as one of the most famous generals of his day. Louis Antoine Henri, born at Chantilly on August 2, 1772, was privately educated by the Abbé Millot, and with his grandfather was present at the Battle of St. Omer in 1788. The following year, with other members of his family, he went into exile. In 1792 he fought with the Royalist forces in Flanders, and thereafter specially distinguished himself at the Battle of Berstheim, 1793. Subsequently he was made a Knight of the Order of St. Louis, and from 1796-9 he commanded the vanguard of his grandfather's forces. Suspected of concocting a plot against Napoleon Bonaparte, spies were told off to watch his movements. and on March 14, 1804, his château was surrounded by four hundred gendarmes, who, taking him prisoner, conducted him to Strashourg. At Vincennes, before dawn on the morning of March 21, he was tried by court - martial, and after a five hours' examination condemned to death, although without being found guilty on definite charges. Half-an-hour later, at about 4.30 a.m., he was shot down in some such way as Mr. Piffard shows. In anticipation of the sentence-for it was a foregone conclusion, and the trial no more than a travesty of justice-the grave had been dug, and into this his body was at once thrown. After the Restoration the remains of this Royalist, who faced death it is said with magnificent calm, were removed to the Chapel of the Castle of Vincennes. Few incidents in Napoleon's career have been more widely discussed than that represented in our picture. While many regard it as a stigma on the character of Bonaparte, Thiers practically exonerates him from blame, and Welschinger lays much of the guilt on Talleyrand. The records of the trial have been published, and it is said amply demonstrate the illegality of the proceedings of the military commission-an illegality publicly acknowledged, it has been stated, by General Hullin, President of the Court. In any case, Fouché, who, with one or two interruptions, was Minister of Police from 1799 to 1815, said of the event, "It was worse than a crime; it was a blunder." Many who look on our reproduction of the picture will recall the very differently treated 'Execution of Maximilian' from the brush of Edouard Manet, which alike when it was painted in 1867, and in 1898 when stay-at-home English folk saw it at Knights. bridge, provoked much discussion. It, too, depicts a brave man fearlessly meeting an ignominious death. Save as to subject, however, the two works have little in common. Manet's picture is from the hand of him who once said, "I also tried to write, but I did not succeed; I could never do anything but paint." Even his most ardent admirers would not put Mr. Piffard on a level with Manet.

## Supplement to "The Art Journal."

## A History of Artistic Pottery in the British Isles.\*

By FRED. MILLER.

THE Royal Worcester Porcelain Works are the oldest in existence in this country for the making of china, for though innumerable changes have taken place since the founding of the works in 1750, the manufacture has heen continued without a hreak since Dr. Wall first produced his beautiful ware. This was a natural soft porcelain, to distinguish the hody from the artificially soft hody of the present day and the hard porcelain of China and most Continental factories. The reader will remember that Plymouth and Bristol were the only two china works in this country to make hard porcelain. Bronqniart, the French expert, divides soft porcelain into

These small pieces are in the laste of the "Empire" period; the dark blue hardly shows the fine gilding off to advantage in the illustration, that being one of the chief features in these charming little specimens.

two classes—naturally soft, as the early pastes of Bow, Chelsea, St. Cloud, and Sèvres, and the artificially soft of the present day. The use of calcined bones has, since the early Bow days, been largely used in English porcelain, and constitutes the great difference hetween English and other pastes. The hones are chiefly imported from South America, as only ox bones can he employed. Pate tendre is for most purposes the hetter article, particularly for richly decorated services, as the colours sink into the glaze in the muffle instead of vitrifying on the surface. The art of china making is not only to produce a translucent hody, hut one that happily weds itself to the glaze, so that the latter does not craze or crack through the shrinking of the hody in a different ratio to the glaze.

On the question of paste, there can he little doubt that the early manufactures have a heauty that is wanting in those of to-day, and yet such a manufactory as that of Worcester is equipped in a way that Dr. Wall, could he see it, would allow was more than perfect. Machinery accomplishes now what hand lahour had to do so lahoriously before, and as regards the grinding of materials, and all those mechanical processes which are so important in the production of such a fahrique as china, the mechanical side of the work has reached a pitch of excellence that, hroadly speaking, must he final. Modern grinding machinery is of a most perfect description, and as with the latest contrivances the grinding

can realise how the old china makers would envy such help. Yet with all these advantages there can he little question that old china is more heautiful than new, and what that something is one had hetter not attempt to determine. It is always an interesting point in artistic work, how with increased mechanical skill and the perfecting of method some quality goes, and it would seem that as long as the craftsman has to struggle and exert himself to the utmost to overcome difficulties, hereaches heights that are never scaled hy those who, having nothing more to learn, settle down to the comfortable enjoyment of their acqui-

of glazes takes tendays to accomplish, one

sitions. The very striving after more excellent ways evidently stimulates the worker, and acts as a tonic, keeping him from effetness and a suave mediocrity.

Visitors to the Paris Exhibition of 1900 had the opportunity of seeing what is heing done in the productions of artistic porcelain on the Continent, and with the exception of Denmark it appeared as if the manufacturers of Dresden and Sèvres were en· gaged in reproducing their old work. The Copenhagen china

An elegant Vase, decorated solely with a beautiful example of Rose Painting, in most effective but soft-toned colours.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

A quaint Ewer, painted all over with an arrangement of Single Chrysanthenum, the handle is dark blue and gold, and the tout ensemble is very charming.

works have struck out a line for themselves, and whatever may be urged against their style of decoration, it has the merit of being individual, and that seems to me to be a very important quality and one unfortunately notsufficiently valued in this country.

The pioneers in china making in England had the Oriental and the French work before them to imitate or model from, and though there is a good deal of jejune copying in old English china, individuality leapt out to give character to these productions,

and until more of this egoism is displayed in the shaping and the decoration of porcelain, so long will it fail to occupy the place it ought to do in decorative art. It must get out of the rut and enjoy more freedom if it is to take rank with other handicrafts, for here we have one of the most perfect of all known manufactured substances, and one that can be shaped and coloured to produce the most beautiful results. To express an individual opinion, I should like to see less dependence upon the style of Sèvres in modern decorative china. It is foreign to our nature and forbids anything like freshuess of treatment and the expression of our natural

ego. For one thing it has served its purpose and all that was stimulating in a study of eighteenth-century French models has been drawn from it.

If one must go to foreign sources for suggestions, the Oriental is worth considering again in this respect. Worcester very successfully modelled vases on Oriental suggestions and yet gave the wares a turn that entitle them to the word original, and that is what might be done again: not the adherence to the letter, but the life-giving spirit.

A modern porcelain factory being a strictly commercial undertaking must show a profit, and the manufacture of articles of every-day use is necessarily the most important side of the works, for articles whose chief

use is to be ornamental are not called into being of necessity as is table china, and in the decoration of tea-pots, jugs, plates, etc., a different method has to be adopted than obtains in vases and other purely decorative pieces. When one considers the hundreds of combinations that have been tried in the decoration of a dessert plate, it is obvious that anything fresh in scheme is exceedingly difficult of accomplishment. But possibly this very striving after novelty is the reason why so much that is not quite in good taste is the result. There is a certain barbaric quality about the decoration on old china that is very satisfying, more effective and suitable than the ultra refinements of the opposite school of genteel suavity. The force of this is felt when one sees a number of pieces of old china displayed in a room. The style is emphatic, and there is a certain largeness of treatment in much of it that makes old porcelain furnish a sideboard because of this barbaric splendour I have alluded to.

China painters are a class by themselves, and became astonishingly expert in the use of the pencil. They are usually taken as apprentices at the age of 14, for it is thought that to acquire the requisite manipulative skill necessitates an early beginning. In this work precedent and traditiou seem to be the forming influences, and how powerful they are is seen in the methods of the china painter, for this, unlike most other crafts, has not moved with the times. Some years ago, when china painting was the fashion with amateurs, a certain novelty of treatment was seen in the best efforts, but this work of outsiders bad probably little influence in the potteries, and now that china painting has dropped out of fashion the regular china painters move along like the wheel which deepened the rut year by year.

The flower painting, for instance, one sees on a modern Worcester vase might have been done a century ago, so rigid is the adherence to old shibboleths. What amount of scope there is for originality, for the clever hand to come to the front, I have no means of judging. I have known three National Scholars who have left pot

A set of 3 pieces, the two Ewers having apple-green grounds, and the centre piece, of which the ground is a deep moss green. The panels, which are delicately painted, are framed in designs of gold tracery, relieved with slight embossments, the effect being very light, and essentially suited to the modern drawing room or boudoir.

#### SUPPLEMENT TO THE ART JOURNAL.

painting for other hranches of art, and their experience is that little encouragement is given the more artistically disposed hands, while the division of lahour that obtains in modern industrial concerns takes away the interest and joy the worker might and should take in his work, for where the piece to be decorated is passed through several hands hefore it is finished it may he likened to a child at the Foundling, it is parentless. Of course such evidence coming from the lips of men who have proved themselves to he of more than average ability may be biassed against the factory system, but this touches on that very topic before alluded to, How to Comhine Art with Commerce, and very difficult of solution is it.

Worcester, as far hack as 1756, employed transfer printing, which seems to have heen introduced in the enamel works at Battersea, and the art and artists being thrown upon the world hy the closing of the Battersea works in 1756, R. Hancock, one of the principal artists, found a congenial home at Worcester. The outlines are printed and the colouring put in by hand, except in the case of underglaze hlue and where the effect ends with the printed patterns, and this combination of printing and painting very considerably reduces the cost. It would be absurd to pretend that printing helps the effect from an artistic point of view, as can be seen hy comparing a printed outline with the pencilled one on a Japanese piece of pottery. When the transfer is in hlue under the glaze, as in some of the old Worcester, the melting of the colour into the glaze and the softening it thus receives takes away the faultily-faultless

nature of a printed pattern. Some of this old printed under-glaze blue (the colour has a depth and richness of tone that is only seen in underglaze work) ware is very pleasing, and though cheap enough when new, commands quite long prices now.

I can quite understand Mr. Moore Binns, the present art manager of the Worcester porcelain works, and to whom I am indebted for the photographs used to illustrate this article, thinking it a little hard that the old china is always hrought up as a kind of evidence against the efforts of the present, for the comparison at once instituted hy this reference to the past is nearly always to the disparagement of to-day. Allowances must be made for the glory that the past wins by its heing far, as Tennyson put it, but the student of ceramics does honestly feel when he is walking through such a collection as the Schrieher at South Kensington that, leaving out historical association, there is much in the early English china that is more heautiful than the work of our own time, though this is technically greatly in advance of the old. Even this allowance may he disputed, hut it cannot he questioned that a modern potter is certain of his results, which is far from heing true of those who shaped the clay when Dr. Wall directed affairs. It may he that the old china-makers thought only of pleasing the few who were connoisseurs, whereas now the many-the man in the street, to use up-to-date nomenclature - is considered. The art franchise has widened considerably during the last 150 years, hut though patronage is on a hroader basis, it cannot he said to he on a surer one. Then, again, history tells us that old English china was produced at a loss, a fact requiring no comment.

When we consider the fahrique of Worcester porcelain and dwell upon the matter of ceramic technique, there is little to he said save in praise of the hodies and their manufacture. Technique can go no further, and the "pierced" and "jewelled" wares are marvels of cunning, though the result, to my thinking, is hardly commensurate with the outlay. The surface of fine porcelain is in itself so heautiful that nothing more is needed than colour and gilding, and this metal enrichment

should he well restrained, for overmuch gold on china gives it a vulgarity and commonness that repels. Gold, heing a precious metal, should he preciously used and not smothered over the whole surface. It should he employed to accent and not overlay thearticle. In shaping the clay, the attention of the thrower should he directed

to a certain dignity of contour, a simplicity hordering on severity of outline, and this is especially the case where the surface is to he elahorately painted. It is ahsurd to cover a vase with a design only a small fragment of which can be seen at one time. Such errors of taste are hrought about through

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Worcester China.

studying the decoration apart from the object to be painted.

Such a remark as this is directed to the general reader who may become a purchaser of china, for the public is largely to blame for much that is questionable in modern porcelain. The taste has been vitiated by the cheap foreign wares flooding the market, goods which appear to offer the public so very much for their money. In the case of modelled figure-work, for instance, what really fearful monstrosities are offered to the public at unheardof prices. A sculptor should find congenial employment in modelling for china, for how beautiful fine figure work looks when carried out in this material. It is a temptation for those who see these inferior wares preferred to their own to emulate the foreigner in offering seemingly so much for the money, and it is to be hoped that the public will soon learn to see that a little good art is to be preferred to a warehouse full of bad; and, moreover, it is only the good thing that will go on increasing in value and not pass into nothingness.

FRED MILLER.

Worcester China.

Dinner, Tea, Dessert, Breakfast and Coffee Services, in various styles, patterns and colourings. In the manufacture of these wares two bodies or pastes are used—Fine China for Tea, Dessert, Coffee and Breakfast Sets, and for the more expensive Dinner Sets; and Semi-Porcelain, known as "Royal Worcester Vitreous" Ware, for the cheaper Dinner Sets.

### The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

By R. E. D. SKETCHLEY.

THE process by which "Royal," "Aristo," "Imperial," and other trumpet named Axminsters are manufactured, was invented in 1873 by Mr. Halcyon Skinner, then master-mechanic in one of the largest carpet-mills in the United States. The Kidderminster firm of Tomkinson and Adam, who ahout thirty years previously had introduced Mr. Templeton's Patent Axminster loom into England, secured the patent rights for Great Britain from the American inventor, and improvements by the English manufacturers and by Mr. Skinner and his son have perfected a textile process of unsurpassed ingenuity and value. Stripped of technicalities, the method of weaving "moquette" Axminsters is easily understood. The root idea of Mr. Templeton's invention is the substitution of a furred thread in place of a line of tufts. The original Skinner loom, and all subsequent developments from it, are devised to insert the tufts hy machinery instead of hy hand; to accomplish at machine speed what the hand of the craftsman performs in his own time. In order to attain this end, many inventions have heen made, and a summary on general lines of the process as it is to-day, represents the sum of many men's

After the design is put on ruled paper, it is cut into cross strips, and handed to the women in charge of the setting machine for translation into carpet materials. The illustration on this page shows clearly how this is accomplished. Bohhins of self-coloured yarns are placed in rows on an inclined plane, and the threads corresponding in colour to the pattern strip are hrought forward, and fastened in their right order against a roller, or "spool," in front of the machine. The machinery is set in motion, and a length of yarn sufficient for a yard of carpet is reeled off the hohhins on to the spool. For each line of the pattern a spool is filled,

lahour and thought.

and when filled they are handed to the girl whose work it is to draw the ends of yarn through tubes, fixed in a har parallel to the spool. If the pattern repeats in 250 lines there is, on the 250 spools, material for 250 yards of carpeting; that is, for a hundred repeats of the design.

The next step is to arrange the spools in their right sequence, ready for the accurate, tuft hy tuft, production of the fahric. To this end, the number of spools needed for a repeat of the pattern are slung one ahove the other hetween two endless chains, passing over wheels. By the action of the loom, each spool in turn drops to a level just ahove the warp-threads, where it is lifted from its place on the chain hy clippers, which, after the projecting tufts of yarn have heen drawn from the tuhes and fixed in the foundation, restore the spool to its place. The mechanical action that follows the dropping of each spool differs in the different moquette looms, but in all, its object is, of course, the same-to introduce the pile-yarns into the warps, to fasten them there, and to cut off a tuft-length from the yarn coiled round the spool.

In the original Skinner loom, and in improvements

thereon patented hy
the inventor, the
spools present their
tuhes to the warps in
a horizontal position.
By a rocking movement, the ends of yarn
are turned down in
the splits of warp, a
shot of fine thread
hinds them to the
warp, and they are
then comhed upwards
and secured again hy
a shot of coarser filling.

In another type of moquette loom, the projecting ends of yarn are, hy a movement of the spool, laid across the splits hetween the warpthreads. Hooks, placed heneath the warp, drag the tuftingyarns down; a shot of weft hinds the row in place, the ends of the tufts are turned up, and a second shot secures them finally. Differences in the method of cutting the tufting-yarns also dis-

Winding the Spools.

\* Continued from p. 64, Supplement.

#### THE HISTORY AND DEVELOPMENT OF BRITISH, TEXTILES.

tinguish one loom from another, but on these mechanical variations, unless they bave a distinct effect on the fabric, it is not necessary to expatiate. In the Smith-Skinner loom, the tufts are cut hy a rotary knife, or disccutter, which sweeps across the carpet from selvedge to selvedge, and, working against a blade fixed underneath, severs the yarn. The spool, thus set free, is replaced by the clippers, as has been said. The amount of shearing required by these carnets is

very small, the surface of the carpet when it leaves the loom needing little more than revision to perfect it.

It will be seen that Royal Axminsters, to use a generic name, offer a liberal scheme of design to the artist. There are, of course, certain restrictions to be borne in mind in order that a design may fulfil its commercial as well as its artistic purpose. But, unless the regularity of machine woven pattern be urged as inimical to charm, there is no mechanical restriction to hinder a designer from achieving any standard of beauty he may desire. A designer for a fine grade of "Axminster," whether "chenille" or "moquette," has every chance to distinguish or to commit himself.

In all carpet-designing colour is the first consider. ation and the most effective source of charm. Form is only secondary, partly because the design of a floor-covering is neither seen as a whole, nor in a fortuuate position for full apprecia-

tion, partly

Weaving "Moquette" Axminsters.

because subtleties of line and form are unrealisable save in the finest fabrics. On the beauty and effectiveness of his colour-scheme, on the art with which colour is used to give full value to its quality and to the quality of the material, the first claim of a carpetdesigner to understand his work must rest.

The development of the carpet manufacture by the invention of new fabrics, has been along lines that have made a practical appreciation of this fact possible to designers, and

the revival of the splendid traditions of the dyer's craft by men such as William Morris and Sir Thomas Wardle, gives the present-day designer, whether for hand-made or for "manufactured" carpets, a range of colour varied and subtle enough for the realisation of any scheme he may conceive.

All that mechanical invention has added to the fact of a manufactured carpet in variety of colour and in fineness of texture; all that the great dyers have achieved for modern weavers, is, theoretically, at the service of designers for "Axminsters." The limitations on the freedom of art imposed by commercial considerations still leave him favourable scope. The

most "levelling" of these conditions in its operation on the ambition of a designer for moquette carpets, is the necessity that his design shall conform to the average taste, as the mann facturer understands it Theamount of preliminary hand. lahour involved by thismethod of making

#### SUPPLEMENT TO THE ART JOURNAL.

carpets — the labour, that is, of winding the spools and of threading the tubes—is the same, whether carpeting sufficient for one or for ten carpets be woven. The designer, therefore, is working to please the average householder, and, as manufacturers are well aware, the design most expressive of personal invention is not likely to please those who regard familiarity of motive as the "safest" standard of beauty.

The other considerations incumbent on the designer for moquette Axminsters leave his originality unassailed. As each line of pattern necessitates a spool on the chain, and as a few inches of space between each spool is necessary, a short repeat is preferable to a long repeat. Of course, too, the width in which this carpeting is

woven, generally twenty-seven inches, and never more than three feet, must be remembered in constructing a scheme of design. In colour—and this, as we have said, is the first essential for splendid carpet design—there is no mechanical limitation. So far as possibility of execution is concerned, the range of colour for a design is only limited by the limits of the dyer's art. The expense involved in the extra labour of dyeing and matching yarns for complicated colour schemes, and the fact that fresh colour-renderings are more difficult to devise if the initial scheme is exhaustive, are, however, practical restrictions on designers insatiable for colour.

(To be continued.)

Threading the Spools

# Turner's Last Swiss Drawings.-I.

N connection with the elaborately illustrated work on Turner, by Sir Walter Armstrong (published by Messrs. Thos. Agnew and Sons) which has just appeared, we have made some researches respecting the interesting series of water-colours of Switzerland made late in life by Turner. It must have been about the year 1836 that Turner made the last of his drawings for the "England and Wales" series, and practically brought his work for the engraver to a close. This work, which brought him in a steady income, had occupied a large part of his time during the previous twenty years. Within that period his engraved work cannot have amounted to less than 500 plates. A whole army of engravers was kept busy, and Turner's time was devoted not only to the production of the drawings, but also to the constant criticism and alteration of the proofs of each separate plate, to say nothing of the frequent disputes with the engravers. How had an influence this preoccupation had upon his work we see in the faulty technique of many of the later England and Wales drawings. There are unmistakable signs of weariness, and there is certainly something incongruous in a man of his age and position taking jobs for the illustration of Campbell's or Moore's poems, or, again, working from the sketches of other men for Finden's Bihle. But, perhaps, a more important motive for the sudden stopping of this kind of work is to he found in the falling off in the demand.

During the last few years, say, from the date of his last Roman journey (1828-29), he had come more and more to work in body-colour, and had filled numberless sketchbooks with little studies and sketches on blue or on grey paper, almost without exception of Continental subjects. The "England and Wales" proper stopped at the ninety-sixth plate, but a kind of supplement appeared a few years later in the form of seven small plates engraved hy J. C. Allen. Of these, three were vignettes, meant probably for the title-pages of the larger work. Very few copies of these engravings were printed, but they are noticeable as the very last works of Turner made for the engraver,\* and what is more curious, the last illustrations, either in oil or water-colour, of English scenery. These final drawings, I may add, are in body-colour, and all of them of the Suffolk coast. They form, as it were, the last scene in the vast panorama of England-landscape, castles, harbours, towns and rivers-that Turner and his engravers had been unrolling during nearly a quarter of a century.

And yet the work which is, perhaps, the completest expression of Turner as a great original artist, and the most spontaneous outcome of his own way of looking at nature, remained to be done.

There may he two opinions about certain of his later oil pictures-though I think that the trend of opinion of late is more and more toward the accentuation of their importance-some of these later drawings may show here and there signs of a certain indecision, and an unpleasant blending of tints-but the pre-eminent value of these later colour impressions, I mean especially the Venetian and Swiss sketches in the National Gallery, has been acknowledged of late by many who find in much of the work of Turner's middle period a stumbling-block and a rock of offence. It is from Ruskin,

strangely enough, that the most divergent notes come, when he speaks of these magnificent late Venetian sketches as "extravagant and showing some of the painter's worst and final faults"; he acknowledges, however, that at the same time they show "some of his peculiar gifts in a supreme degree.'

In looking, then, over these Swiss and Venetian sketches, we see the direct expression of Turner's mind face to face with nature, and this is given with that spontaneity and command of material that only long years of experience can command. As we have hinted, marks of approaching decay can here and there be traced. In some of the Swiss sketches, and still more in the drawings based upon them, in the much-lauded 'Splügen' and in the 'Goldau,' in many ways so magnificent, who can fail to see not only the unpleasant mannerisms of texture and overloading of detail only too prominent in many of the drawings made for the engraver, but that want of grip and decision so characteristic of old age?

In their manner of execution, we recognise that these later Swiss and Venetian sketches form a group by themselves.\* They present a curious instance of the evolution of the simple and the direct out of the mixed and the complicated, and the simplicity of method and directness in the grasp of the impression is more prominent perhaps in the Venetian than in the Swiss drawings.

Turner was never fond of making elaborate studies direct from nature. His sketch-books are filled with pencil outlines, ranging from rapid flowing notes to careful and highly finished studies. When we come to colour and work in colour forms, not more than, say, a third or a fourth of the vast accumulation of material in the National Gallery, we find already a suggestion of a picture, a definite effect and a composition. In fact, as Ruskin has pointed out, the coloured sketch was done at home, in the bedroom prohably of the inn where he was staying, but immediately under the influence of what he had seen. This statement, of course, must not be taken too literally; Turner was a many-sided man, and for his methods both in sketching and in his finished works was open to any suggestion. He even, at one time, sketched from nature in oil, and was persuaded to try a kind of sketching tent or box, a device which would have interested the late Mr. Hamerton. Some of these oil studies of Devonshire landscape may be seen in the last room at Trafalgar Square. We find, again, in the Turner collection, innumerable sketches of skies, noticeable above all for their exquisite refinement of colour; many of them may have been done from a window. Few of these, however, come up to some studies of cumulus in a sketch-book of which Mr. Heseltine is the fortunate possessor, a book which Mr. Munro found in his trunk on his return from the tour in the Alps which he took with Turner in 1836; the studies in this book, however, date from an earlier year. Turner made many careful colour studies of weeds also. big coarse weeds for use in foreground-docks, coltsfoot, or sorrel—but seldom of flowers; of birds, too, but always, I think, of dead birds. No better account of his

<sup>\*</sup> Upon them was founded what was practically the whole of Turner's later work—the oil pictures of Venice and the water-colour drawings of Swiss lakes and rivers. I can offer no explanation of this division of material, but there is no exception to it.

<sup>•</sup> A possible exception is the title-page vignette made for an edition of the "Pilgrim's Progress," dated 1847.

way of working at a late, but not the latest period, could he given than Ruskin's terse note upon a rapid sketch of the Falls near Schaffhausen, in the Fitzwilliam Museum-"sketched from nature, worked with colour and renewed with the pen." Even in the case of the most rapid of the sketches on which these latest Swiss drawings are based, it is an open question whether they were actually worked in sub divo. Some were, perhaps, made at a window, others from a boat.

It now remains to hriefly explain the origin of these Swiss drawings of 1842 and 1843, and their connection with the sketches in the National Gallery with which we have linked certain of them. When in 1878 the late Mr. Ruskin consented to show to the public in London the whole of his carefully selected series of Turner drawings, he accompanied the loan by a series of discursive notes, fanciful, arhitrary, and didactic, but lit up here and there hy passages of great poetic heauty. These notes were written at Brentwood in February, hut they were interrupted hy a serious illness. On his recovery, in the following May, he added to them an "epilogue"; to this epilogue I must refer those who are interested in the story of the genesis of the drawings. It is a simple narrative written in the easy conversational style of the " Præterita."

At the suggestion of Mr. Irvine Smith, of Edinburgh, who knows perhaps as much ahout Turner's work in water-colour as anyone now alive, I have attempted to trace certain of the sketches that formed the foundation of the drawings made in 1842 and 1843. Together with what is practically the whole of his later sketches, they have passed with the Turner Bequest into that vast collection which was catalogued and sifted many years ago hy Mr. Ruskin. I think that most of them can be found in Group VI. of his strangely hewildering and capricious guide, "Fifty Studies"-I quote from this explanatory Guide, p. 28-"on his later Continental journeys, made in pencil outline only on the spot and coloured from memory. Of the finest quality of pure Turnerian art, which is in sum . . . . the true abstraction of the colour of nature as a distinct subject of study, with only so much of light and shade as may explain the condition and place of the colour without tainting the purity."

We have heen able to trace the present owners of all the drawings mentioned in Mr. Ruskin's "epilogue." In the following list the name of the original commissioner stands first, and that of the present owner last. We have added the number of the sketch in the National Gallery.

#### TEN DRAWINGS OF 1842.

1.- 'SPLÜGEN PASS.'-Munro of Novar, Ruskin, Mr. Arthur Severn. Sketch No. 75.

2.— BLUE Rigi.'-Mr. Bicknell, Mr. J. E. Taylor. Sketch No. 96

(in part), Cfr. also No. 674. 3.—' RED Righ.'—Munro of Novar, Ruskin, Mr. J. E. Taylor.

Sketch No. 45. 4.- 'LUCERNE LAKE.'-Munro of Novar, Lord Armstrong, Mr.

Armstrong-Watson. Founded on several slight sketches. 5.- LUCERNE LAKE, BAY OF URL'-Mr. Bicknell, Mr. Irvine

Smith. Founded on several slight sketches. Cfr. among others No. 589.

6 .- 'LUCERNE FROM THE WALLS.'-Ruskin, Sir John Fowler, Mr. E. Nettlefold, Sketch No. 288.

7.- COBLENZ.'-Ruskin, Mr. Arthur Severn, Mr. J. Haworth. Sketch No. 280 or 583. 8.- 'CONSTANCE.'-Griffith, Ruskin, Mr. Irvine Smith. Sketch

No. 286. 9.- 'DARK RÍGI.'-Munro of Novar, Mr. Cassels, Mr. C. A. Swin-

burne, Sketch No. 96. Cfr. also No. 674.

10.—' ZURICH.'—Munro of Novar, Mr. Irvine Smith. Sketches Nos. 287 and 289.

DRAWINGS OF 1843.

1.- 'KŪSSNACHT.'-Munro of Novar, Mr. C. A. Swinburne 2.- 'LAKE OF ZUG.'-Munro of Novar, Ruskin, Lord Dudley, Sir Donald Currie. Sketch No. 97.

-' LUCERNE, MOONLIGHT.'-Munro of Novar, Mr. Irvine Smith. Sketch No. 658.

4,- GOLDAU.'-Ruskin, Mr. G. Coats. Sketch No. 98. 5.- 'ST. GOTHARD, FAIDO.'-Ruskin, Mr. G. Coats.

'LUCERNE, MOONLIGHT.'-When Turner in 1843 offered to make ten more drawings on the same terms as in the previous year, he could only ohtain commissions for five. Of these, Munro of Novar took three, the 'Küssnacht,' now the property of Mr. C. A. Swinburne, the 'Lake of Zug,' which, as we have seen, passed to Ruskin, to Lord Dudley, and at last to Sir Donald Currie, and finally a third drawing, as to which Ruskin confessed that his own memory failed him; however, he thought it was 'Zurich hy Moonlight.' There can he no reasonable doubt but that Mr. Irvine Smith is right in identifying this drawing with the 'Lucerne hy Moonlight,' now in his possession. This latter drawing came from the Novar Collection, and was thus described in the catalogue made by the late Mr. W. E. Frost, R.A., after the death of Mr. Munro. "'Lucerne, Moonlight'; city to left; wooden hridge, centre, mid-distance; two girls on wall with drapery, right foreground; man in red vest on point of land, left; hlack pitch-kettle on fire, etc.; size, 118 hy 187." A good enough description if we read "steps of quay" for wa11.1

The sketch in the Turner Collection (No. 658) is taken probably from the Reuss Brücke, at that time the only hridge that was uncovered and passable for carriages. It differs considerably from the drawing both in subject and effect, as will he seen in comparing the photographs of the two. Beyond the long covered Kapell Brücke, the moon, in the sketch, is hreaking through the greyblue mist: the sky in the drawing is more elahorated, and the effect recalls a heautiful hlue study of moonlight at sea, after a storm (No. 571 in the National Gallery). There is a white figure with a hlack dog in silhouette on the quay to the right, and in the drawing the recollection of the figure may he traced in the man with the lanthorn on the approach to the hridge. A faint, warm glow reflected from the last flush of sunset lights up the houses to the left, interspersed here and there with the white spots of lamp-light.\* The sketch is slight, with little colour, and no trace of pencil outline. As for the drawing, in spite of Mr. Ruskin's dictum that it was not up to the mark of the rest, we see in it certain qualities of concentration of effect and unity in the lines of composition that are perhaps wanting in some of its companions.

'LUCERNE TOWN.' +- This is the second drawing for which Ruskin in 1842 induced his father to give a commission, the other being the 'Cohlenz.' In the "epilogue" to the notes on the drawings exhibited in 1878, he gives a dramatic narrative of the subsequent sale of the drawing to a dealer. The 'Lucerne Town' passed at a later date into the collection of Sir John Fowler, and it now helongs to Mr. Edward Nettlefold.

The sketch (No. 288 in the National Gallery) is, in this case, carried nearly as far as the drawing; it is, in fact, the most highly finished of the sketches of this series, and apart from the figures in the foreground, the two, sketch and drawing, are practically identical. We are

<sup>\*</sup> The last windows to the left should be those of the "Balance," which I always picture to myself as Turner's inn at Lucerne. But see also under the 'Blue Rigi. + This drawing is now more generally known as 'Lucerne from the Walls.'

By J. M. W. Turner, R.A.

looking east from a spot on the southern line of walls, which at that time crept round the flanks of the hills that rise behind the town on the left hank of the Reuss. In fact, the point of view must be from just above the station of the little rope railway that now takes you up to the wooded heights of Gutch, famous then as now for its shady walks and cool beer. On the opposite side of the river the sun shines on the towers and walls that form the northern rampart of the town. On this side the walls have so far escaped destruction, and the picturesque line still stretches over the flank of the hill. Of the walls on the right bank, one solitary tower alone remains, perhaps that indicated to the extreme left of the sketch. A warm amber light falls on the hillside and on the houses of the town below. In the centre we see part of the covered Bridge of the Mills, the Mühlen Brücke, and the tower of the Zeughaus rising to the south as a tête-de-pont. Beyond, on the right, pale washes of cobalt over the lake pass into purplish and greenish tints on the distant hillsides. But it is a hazy autumn day, and except for the Rigi which looms out vaguely through the heavy air over the lake, the Alps are nowhere visible. In the sketch the furiously rapid pencil outlines can still be traced in many places. They are even more prominent in the photograph.

CONSTANCE.—Griffith, the dealer, in 1842 took this drawing, so Mr. Ruskin tells us, in place of his commission on the sale of nine other Swiss drawings. Ruskin bought the drawing shortly afterwards for eighty guineas. It is now in the collection of Mr. Irvine Smith. The sketch in the National Gallery (No. 286) is identical in general effect and composition; it is, however, extremely slight. I have not been able to find any trace of other work done by Turner at Constance,\* either of the town or of the lake,

 The fine drawing called 'Constance,' exhibited by Mr. R. M. Brocklebank at the Guildhall in 1899, is certainly not that town; if my recollection serves me, it is a view of Schaffbausen. unless it be a sketch in the National Gallery, which may perhaps be a view of the town of Bregenz, at the other end of the lake; he must have passed that way when en route for Ragatz and the Splügen. The sketch, of which a reproduction is given, is a mere hasty blot of an effect seen in one of Turner's early morning prowls, washed in either on the spot or rapidly noted on his return to the inn. The time can hardly be later than 5 a.m. There is no pencil outline visible. The pale yellow light of the sky shines out above the blue misty clouds that rest on the lake, and is reflected in gradation on the water, the line formed by the towers and the bridge is nearly black, and some houses to the left are indicated by mere flaps of the brush. I am here describing the sketch; Ruskin, in his notes on his collection, says of the drawing, which I have not myself seen for some time, "part of the lake of Constance is seen pale behind the city, retiring into the far-away blue clouds, from behind which the sun is just going to rise." He compares the effect and composition to the 'Leicester Abbey,' but the 'Constance,' he says, is unique in Its luxury of colour. To the left of the drawing a picturesque mass of riverside houses, boats and rafts, is illumined by light which one must perhaps think of as reflected hack from a mass of clouds in the west. As to the point of view, we are looking up stream to the spot where the river-which behind us soon broadens out into the lower lake, the Untersee-flows out from the lake under a long covered wooden bridge. This bridge was replaced many years ago by a pretentious structure of iron and stone, adorned with statues, which carries both the road and the rail.

#### 'Balmoral Castle.'

ORIGINAL ETCHING BY AXEL HERMANN HAIG, R.E.

From a drawing

By Miss Constance Foxley.

shadow of a great rock in a weary land. There our loved Sovereign found rest and peace

amidst her many burdens of State, and although for a

E are told by Innes Adair in her privately-printed book, "The Hall of Memories," that Balmoral means "the house in the shadow of the great rock," and for over half-a-century it realised to Queen Victoria the prophet's idea, as the shadow of a great large part of the time the Queen had very sad, she had always glad memories of Balmoral, for it became in itself more than a desirable residence. After the Prince Consort's death it became a monument to him, remaining, like the cairn on the other side of the Dee, a place of remembrance—Carn-na-Cuimhne—for ever to be associated with his name.

The Castle seen in Mr. Haig's etching is not the building to which the Queen first came in 1848. The house then was a quaint, many-gabled and turretted mansion, described hy the Queen as "a pretty little castle in the old Scottish style." The selection of this place as the Queen's home of retirement was deliberately made. Her Majesty's physician, Sir James Clark, had his attention drawn to the unusually healthy nature of Braemar, and on his advice the reversion of a lease of Balmoral was obtained on the death of Sir Robert Gordon, brother to Lord Aberdeen. This lease had in 1847 twenty-seven years to run. But in 1852 the property

was purchased, and in 1853 the foundation-stone of the great Castle as we now know it was laid. The site was chosen on climatic considerations, for Deeside was reported hy Sir James Clark as one of the driest districts of Scotland, no spot in the valley being more favoured than Balmoral. The causes are the sandy and gravelly nature of the low grounds and of most of the surrounding hills, and the fact that the vapour-laden clouds from the Atlantic break and discharge themselves on the range of mountains south and west of Braemar. Within a week of the Queen's first residence, in September, 1848, Sir James Clark wrote: "the place as regards healthiness of site and beauty of scenery exceeds my expectations, great as they were." And here, as the Queen writes, "all seemed to breathe freedom and peace and to make one forget the world and its sad turmoils." The turmoils of that time were sad enough, for the Continent was greatly disturbed, Ireland was in a fever, and India was in the midst of the Sikh war. But the life at Balmoral passed on amidst peace and quiet, the Queen and her family always benefiting by the grand air and impressive scenery of the Royal Estate.

The new Castle, which was designed on lines entirely suggested by the Prince Consort, the plans being prepared by Mr. William Smith, architect, Aberdeen, is built with a pure light grey granite, quarried in the neighbourhood, and the brilliance and beauty of the stone, imperishable in colour, make it a very striking object as seen amidst the surroundings of varied green. In October, 1856, the Queen writes: "Every year my heart becomes more fixed in this dear Paradise, and so much the more so now that all has become my dear Albert's own creation, own work, own building, own laying out . . . and his great taste and the impress of his dear hand have been stamped everywhere." We must resist the temptation to say anything about the subsequent years of the Queen's life in Balmoral, of the great grief of the Prince Consort's death, or the many bereavements which fell on the Queen, and which are commemorated in statues, cairns and memorial trees throughout the estate. Nor can a word be said as to internal renovations and minor changes made to fit the Castle for the occupancy of King Edward and Queen Alexandra.

The view chosen by Mr. Haig is that from the northwest, and shows the north front in shadow, while the west front, where Queen Victoria had her rooms, is in brilliant light. The details of the dignified old Scottish baronial style are amply brought out, the characteristic "pepper-hox" turrets, the crow-stepped gahles, the corbelled windows and the ornament of the more important rooms being shown. The clock tower in the east, with three smaller pointed turrets, and the circular flagstaff tower, give dignity to the great pile, and the general effect of the Castle as a worthy Royal residence is fully displayed in the picture. The site of the Castle is about 926 feet above sea-level at the doorstep, and the

flag thus flies from a tower at least 1000 feet above "ordnance datum."

While Balmoral first became known to "the man in the street" when Queen Victoria and the Prince Consort took up their ahode there, they were far from being the first royal personages seen on Deeside. From "Braemar, an Unconventional [but most interesting] Guide Book," by the Hon. Stuart Erskine, a great deal can he learned of the general character and history of the place, while Mr. Michie, parish minister of Dinnet, gives a chapter of interesting topographical and antiquarian lore, from which we gather that even the Roman Emperor Severus visited Braemar. But the certain facts as to this are scanty in the extreme, and we are on more solid ground when we, eight hundred years later, come to Malcolm Ceanmor, who built here a hunting seat, and instituted a yearly gathering of the clans at Braemar, such as was revived in that gathering of "Duffs, Farquharsons, Leeds' and Forbes' men," which the Queen describes in her Journal in September, 1850. Malcolm's Castle survived to give accommodation in 1377 to Robert II., the first Stewart King, through descent from whom Queen Victoria derived her right to the British throne. We may next turn to the exciting times of "the '15," when the Earl of Mar organised that great hunting party which eventuated in the battle of Preston, and much loss and damage to Scotland in general, and Braemar in particular. Into those matters we cannot enter in detail, it being sufficient to give a hint to those who wish to enquire further into the story of Balmoral and its surroundings.

Mr. Stuart Erskine dwells on the great merits of the district, and claims as one of its chief attractions that there is no railway within eighteen miles of Castleton! This is a merit which Queen Victoria heartily recognised and perhaps had no small share in securing. The climate is so fine that he compares it favourably with St. Moritz and other winter resorts, with the consolation that if you are fleeced (of which he doubts the possibility) you are fleeced by honest intelligent Highlanders! Taylor, the Water Poet, visited Braemar, and tells of its wonders and attractions both in prose and verse. He describes it as "all composed of such mountaines that Shooter's Hill, Gad's Hill, Highgate Hill . . . are but molehills in comparison . . . in respect to the altitude of their tops or perpendicularitie of their bottomes," and after describing in his usual quaint style a deer hunt, he enthusiastically "drops into poetry'' and says:-

"If sport like this can on the mountaines be, Where Phobus' flames can never melt the snow, Then let who list delight in vales below; Skie-kissing mountaines pleasure are for me;

Lowland, your sports are low as is your seate, The High-land Gaimes and Minds are high and great,"

T. A. CROAL.

# The Coming Indian Art Exhibition at Delhi.

OST people are aware that a Durbar of all the Princes of India, under the presidency of Lord Curzon, is to be held on January 1st, 1903, at Delhi, to celebrate the Coronation of King Edward VII. The Durbar, which is to be unique even among the many superb and similar gatherings of Hindustan, and to far sur-

pass that held by Lord Lytton in 1877, when Her late Majesty was proclaimed Empress of India, will not only announce the Coronation to the chiefs and people of India, but will also be taken as an opportunity to show them what their country is capable of producing, and to promote the interests of the beautiful industries indigenous to India, by bringing them to the notice of the many thousands of visitors who are expected to attend the gorgeous ceremonial from all parts of the world.

By special desire of the Viceroy, therefore, one of the chief features of the Durbar is to be an Art Exhibition, at which only the purest, highest, and best specimens of Indian Art, in all its manifold branches, will be exhibited. Dr. George Watt, C.I.E., the well-known specialist in Indian Art, has been appointed Director of the Delhi Exhibition of Indian Art Manufactures. He is at present travelling about the country engaged in selecting and collecting specimens of artistic industries suitable for the Exposition. He is paying particular attention to artistic work which, from some cause or another, has decayed, and which he now hopes to revive.

During his visit to Madras he inspected several beautiful specimens of grass and mat work, which is an example of the many beautiful native band industries that modern cheapness and competition, coupled with culpable neglect on the part of the authorities, bave almost crushed out of existence, or caused to be forgotten. These industries will have a prominent place allotted to them at the coming Exhibition.

A Madras firm of jewellers also is already booked to show forty-six lakhs of rupees' worth of Indian jewellery.

Dr. Watt has just been visiting Bombay. He has arranged for exhibits from there of wood carvings, carpets of rare patterns and finish, and other things. He also inspected a number of samples of magnificent jewellery. One specimen, containing an immense turquoise, was valued at a lakh and a quarter of rupees. Two other ornaments at five lakhs. One Bombay firm will show stock to the value of twenty-five lakhs, and another a stock of twenty lakhs of rupees.

The building in which these and other beautiful exhibits will be displayed will be worthy of its contents, the occasion, and the splendid surroundings. It will consist of a structure which will have the appearance of great solidity and permanency, and be very unlike the stucco and lath constructions usually seen in exhibitions. It will be in the Indo-Saracenic style of architecture, situated in a lovely garden containing playing fountains, highly realistic of a scene from the "Arabian Nights." The entrance, which will be

approached by an imposing flight of steps, will somewhat resemble that of the Agra Taj. Out of the lofty entrance hall, right and left, will be two large saloons devoted to special subjects. Opposite the entrance, and running at right angles to the hall, will be a noble pillared corridor in which the exhibits will be placed. In the verandahs surrounding the building will be native shops of the highest class.

The Jewellery Court will be the only portion of the building in which the individual firms or craftspeople will be allowed to open stalls for the purposes of sale. The reason for this being that if stalls were generally allowed, the difficulty of insisting upon a high standard of work would be almost impossible, and the exhibition would be filled by Agra and Delhi men to the exclusion of craftsmen from other parts of India.

Articles other than jewellery are consigned to the Director of the Delhi Exhibition of Indian Art Manufactures at Delhi, through a specially delegated Government officer. They will be arranged in accordance with separate classifications, which have been decided upon, in glass cases provided by Government, the arrangement being carried out by Dr. Watt, C.I.E., and his assistant, Mr. Percy Brown, Principal of the School of Art in Lahore.

According to present arrangements Dr. Watt chooses every article (or a duplicate of it) which is to be sent to Delhi. If an article is purchased, the money will be received at the Exhibition, and will be forwarded on to the local craftsmen, free of charge, through the local officer appointed for the particular district.

The Government itself is likely to be a large purchaser with a view to distributing specimens of Indian Art among various museums at home and in India.

Four schools of art will be represented at the Exhibition, viz.:—Bombay, Madras, Lahore and Burma. They will each be allotted a room twenty feet square. The Madras Government has already voted a considerable grant towards fitting-up the Madras room.

The features of the Bombay room will be carved panelling for the interior decorations, and in the open spaces of the walls will be placed Ahmedabad and Surat "Kincobs" in frames. These beautiful brocades look extremely well hung in this way, and if this scheme of decoration became popular, the industry at Ahmedabad and Surat would be greatly benefited. Other features will be a large carved sideboard, Kutch and Poona silver ware, brass and copper work, silks from Surat and Ahmedabad, and the fine sandal-wood carvings from Billimoria.

No European article of any kind in India will be admitted into the Exhibition, and arrangements will be made so that each specimen of work hailing from various parts of India will be kept together in the Main Court so as to facilitate comparisons.

Gold, silver and bronze medals will be given to the best producers of work in each class, and the Exhibition will be the most important and largest ever held, of all that is highest and best in Indian Art,

C. B. THORNHILL.

Creation of Adam and the Promise of Redemption, with symbolic designs (over the entrance arch to the Chapel of the Ascension).

By Frederic Shields.

Interior of the Chapel
of the Ascension.
Decorated by Frederic Shields.

DASSENGERS up and down the Bayswater Road must often notice a red brick chapel standing aside from the road, with a little space of lawn before it. There is something strangely reminiscent of Italy in the architecture. A door to the left of the chapel entrance stands open, and offers a glimpse at the end of a stone vestibule of what would appear to be wide garden precincts, quite, at first

glance, after the manner of an Italian monastery or cloister. This hint of green grass and airy spaces in the midst of a wilderness of bricks and mortar, as one sees it through the open door, has the effect of stimulating the imagination in a quite singular degree. Truly "imagination hath the disposition of all things."

One day I discovered that there was no stately close nor flowery garden behind the little chapel, but only a disused and melancholy graveyard. Do not penetrate there as I did, reader, even to discover the headstone of Lawrence Sterne, whose body lies among the forgotten dead; for a double distilled melancholy, a hlighted desolation lingers in this Campo Santo, as in all city graveyards.

Instead, enter the little chapel, of which just such another does not exist in the whole world, and you will indeed he rewarded.

How heautiful to be able to turn aside from the noise and tumult of the streets to this quiet and holy place, where pictures speak from the walls of the heavenly life, and the very stones cry out the story of the Great Lover of the world. Art is the only Evangel of Christianity here, but Art which is so suhlimed to its task, so concentrated on its high mission, that the lack of the customary services and sermons which one associates with church-going, appears as entirely fitting and proper as it is novel.

The chapel does not offer a mute invitation only. On one side of the main oak door these words are inscribed:—

"Passengers through the busy streets of London,
Enter this sanctuary for rest and silence and prayer.
Let the pictured walls within speak of the past,
Yet ever continuing ways of God with man."

And on the opposite wall the legend is continued in these wistful phrases:—

" Is it nothing to you all ye that pass by?
Come and rest awhile.
Commune with your own hearts and be still.
Jesus Christ, the same yesterday, to-day, and for ever."

Unhappily at the present time the chapel is closed to the public except for two hours in the afternoon; and it does not seem to be known when the founder's wish—that its catholic and hospitable doors shall he set open during all the hours of daylight—will be carried into effect.

Photo, Autotype Co.

The Raising of Lazarus. Decoration in the Chapel of the Ascension.

By Frederic Shields.

This lady, Mrs. Russell Gurney, possessed a mind of cultured intelligence, combined with a nature of rare spiritual beauty and intensity. It was the dream of her life to give to some great English city (London preferally) a chapel for silent worship, which should be so adorned with paintings as to lead men's thoughts upwards and fill their minds with the beauty of the life and teaching of Christ.

The primary difficulty of finding a site was so overwhelming, the rebuffs and discouragements she met with so frequent, that anyone of a less tenacious purpose and strong faith would inevitably have relinquished the idea. But "more things are wrought by prayer than this world dreams of," and at last her desire was realised. The old mortuary chapel in the Bayswater Road was obtained from St. George's, Hanover Square, to which it belonged, and in 1890 the Bishop of London's chancellor sanctioned the erection of the present building, with which the old mortuary chapel is incorporated.

The architect Mrs. Russell Gurney selected was Mr. Herbert Horne. The chapel he has raised is simple and dignified, and in the best style of Italian Gothic.

It would have been impossible to find any artist more sympathetic with Mrs. Russell Gurney's aims than was Frederic Shields, to whom she committed the painting of the interior. Never has more complete harmony of mind and purpose existed between artist and patron. Mr. Shields worked with untiring ardour and earnestness to forward her wishes, and it would almost seem that they had but one soul between them, so completely did one realize the purposes of the other. The painter writes touchingly of her death in 1896, "it may he conceived what drear vacancy this lady's loss leaves in the heart of her servant."

On entering the great panelled door one passes into an ante-chapel, somewhat cavernous and gloomy, with an opening on the left into the

Photo, Autotype Co.

The Baptism. Decoration in the Chapel of the Ascension.

By Frederic Shields.

old mortuary chapel. In front, a curtained arch separates us from the Chapel of the Ascension itself. One lifts the curtain and passes at once into an atmosphere of light and glory. The walls, lit from above by a row of clear glazed windows, gleam softly with beautiful colours and forms; the air is permeated with

a sense of joyous and holy peace.

After the first bewildered happy glance the visitor is arrested by a sense of awe at the colossal nature of Mr. Shields' enterprise. We have before us a long, somewhat narrow and lofty chapel, every inch of whose walls is partitioned into spaces which the artist intends to fill with paintings. Much has already heen done, but much remains to finish, and Mr. Shields' admirers earnestly desire the termination of the wretched Chancery suit which is retarding the chapel's completion, and by wearing anxiety breaking the heart, wasting the days, and crushing the spirit of the painter. Until this has reached a satisfactory consummation, even the many heautiful works ready and waiting in Mr. Shields' studio (which work I have been privileged to see) cannot be affixed in those empty spaces on the walls, whose nakedness cries out pitifully enough to be covered.

Without regard to the work yet to come, however, there is enough here to engage our deepest attention, and to indicate sufficiently clearly the general scheme, through each part of which one main spiritual idea runs like a golden thread, giving unity and harmony to the

whole.

The consideration of the designs—the scope of which is so tremendous—has brought me to think of the chapel work as one thinks of a symphony. One hears a good many such titles as "a symphony in blue" (or green or purple or magenta as the case may be) applied to pictures of a very limited intellectual scope, and often containing a sad want of ideas. I am using the analogy here in no such loose or cheap connection.

The severest examination into Mr. Shields' complex and thoughtful scheme of design—with its great dominating motives, its lesser parts so finely and evenly balanced, its alterations of mood, the interdependence of each portion with the whole, and the whole governed so as to produce great richness with unity of effect—provesthe work to be profoundly symphonic in character.

Fourteen large compartments are ranged along the centre of the right and left hand walls of the chapel. Of these, eleven on one wall are already filled with

compositions, and four on the other.

These noble and significant pictures represent scenes from the Life of Christ, on the wall to the left of the entrance, and on the opposite wall are four scenes from the Life of St. Paul.

I shall have occasion to speak of the former in detail

Distributed between these pictures are panels with representations of prophets and apostles, many of them expansions of designs made by Mr. Shields for the windows of Eaton Hall Chapel, Cheshire, belonging to the Duke of Westminster.

They are altogether a most unique series, and Christian art has nothing to show which at all resembles them. Specially do we feel that Mr. Shields has entered into deep communion with the old Hebrew prophets.

If any may be selected where all are of so high an order of merit, I should choose to mention a grand conception of Moses, standing lonely and awful on Mount Sinai; David, the King and poet, filled with the divine

fire; Jonah springing triumphant from the whale's mouth, a very incarnation of Life out of Death; and St. Paul, from whose eyes the Spirit looks forth with compelling power, and whose poor body, aged, worn with stripes, imprisonments, labours, watchings, hunger and thirst, testify to his sufferings for Christ's sake. The downfall of Paganism is indicated in this last design by the shattered image of Pan to the right of the saint.

Distributed below each two panels of apostles and prophets is a smaller picture of some scene closely connected with the mission or teaching of the prophets or

apostles above.

Thus, heneath St. Stephen and St. Paul, the missionary saints, is a design representing the vision of the man of Macedonia in chains and darkness, crying across the sea, "Come over and help us." Below Joel and Jonah is an exquisite rendering of the Widow of Sarepta, with her child newly given back to her from the grave.

And this connection of idea prevails throughout the twelve pictures that form the terminals to the series of

prophets and apostles.

Of all the work in the chapel, none exceed in beauty and delicacy these small designs. They are wrought in colour of bronze storm clouds, and with the prophets and apostles surmounting them—whose prevailing note of dusky gold deepening to brown contributes to a harmonious sobriety—serve the subsidiary purpose of pulling all the work together as it were, and giving oneness to the general artistic effect of the chapel.

But the summit of spiritual significance and beauty is achieved by crowning the height of the wall with a

flight of angels.

By means of the beautiful symbolism which is incarnated in them, Mr. Shields has set a special emphasis—a climax, one might say—over each of the designs of prophets and apostles with their relative terminals, decorating the wall immediately helow the angels. Over St. Paul, and the Man from Macedonia, flies a veritable "Bird of God," bearing in his hand a missionship with a dove as figure-head, and a sail blazoned with a cross.

Then we note another, who in throbbing rose colour deepening to crimson and golden hovers over St. Simon Zelotes and St. Jude and the design below, and appropriately reminds us of that day when the tares shall be cut down with a reaping hook and cast into the fire.

In the same way the spirit of each of the numerous groups of designs seems to be drawn up like some vital essence and made visible in these skyey messengers of

None of them is more beautiful than the one who, clad in tremulous rain-washed greys with faint pink and primrose about him, bears the triumphant banner of victory over the grave, and symbolises the truth which St. Thomas so hardly learned, that there is resurrection after death, that indeed death is but the doorway into a fuller life.

Each of the fourteen angels that surrounds the chapel's height, in colour, position, and form, has a definite correspondence with the spiritual world. They are pregnant with meaning and resplendent in beauty.

Between the angels and set over the large cartoons are long and narrow intermediate panels filled with designs, which a little recall the work of William Blake.

The corresponding spaces below are all blank, and Mr. Shields has not yet determined how he will treat them. The arch over the organ loft is entirely finished,

341

and in the two spandrils are representations of the creation of Adam, a very characteristic and original conception, and the promise of redemption.

It is impossible not to remember that Michael Angelo has treated the former subject on the roof of the Sistine. Who that has seen it can fail to recall the swift descending, life-exhaling figure of God Almighty, who stoops to touch the langourous hand of Adam with His forefinger. The body of the first man lies, but yet

only half detached from the earth of the hillside from which he has been moulded. Life has only reached him at the point of union with the Divine hand. How the Master makes us feel the magnetic thrill, the bound of the nerves, as the life stream pulses into Adam from God!

Mr. Shields neither paraphrases this work nor borrows from it. He conceives the subject in a far other light. To him therepresentation of the First Person of the Trinity implies a profanation and the breaking of Divine law. Therefore he makes the Second Person of the Trinity the Creator. And it is through the agency of no magical touch that his Adam springs into being; but Christ leans towards the prostrate figure, and the attitude suggests that His breath, entering into Adam's nos-

trils, enables him to draw his first palpitating inspiration.

High up, in the spandrils of the chancel wall, is a melodious rendering of the 'Parable of the Wise and the Foolish Virgins,' but the great wall itself is a blank. How one longs to see the beautiful Ascension which Mr. Shields hopes to paint for it.

Mrs. Russell Gurney, in one of her letters to the artist, writes:—"I have a vision for the chancel of outspread hands, with the words 'Lo! I am with you all the days!' and adoring angels on either side."

Not long ago I paid a memorable visit to Mr. Shields' rambling garden studio at Wimbledon, and was shown among other works, to my great satisfaction, the four symbolical figures—Faith, Hope, Charity and Patience—which, two on either side, will one day flank the great title-picture of the chapel.

That these panels are profoundly beautiful and full of significance to those who comprehend, goes without saying, but it is not my place to speak of them here.

The rough sketch I have given of the general scheme of the chapel will serve to indicate the unique nature and great scope of Mr. Shields' plan of design. But he has, himself, drawn up a guide containing two keys to the pictures-a short key for those who wish to study them at length, and find out for themselves all the infinite beauty and thoughtful symbolism they contain, and a long key for others whose limited time, or ability to grasp for themselves all the intellectual and spiritual complexity of the designs, renders it desirable to fall back on an authoritative source of information about them.

And now I shall digress, to call detailed attention to some of the large paintings which, to my mind, are specially characteristic of the artist and his methods of thought.

Photo, Fry and Son.

Portrait of Mr. Frederic Shields, A.R.W.S.

I am struck by the calm, unquestioning faith displayed by the painter in his design of Christ walking on the sea. Body and soul, sinking beneath the load of doubt, Peter flings himself on the Saviour's bosom. There is no supernatural luminous apparition here, gliding flame-like over the surface of the sea.

Quite firmly Christ's foot is planted on the descending slope of the wave. Wave and foot are made to look as like wave and foot as may be. To Mr. Shields the miracle seems quite actual, quite simple, and in his conviction lies his strength.

How heautiful is the composition! The sweeping, slanting lines of the draperies follow the curves of the wave, and lest all should he a too monotonous melody of line, the upward swirling cloak flutters like a hanner ahove the head of Christ.

Space does not permit me to dwell on the heauties of all the large paintings — Christ cursing the harren fig-tree; Christ healing the hlind man; Christ washing the disciple's feet; the raising of Lazarus,

with its mellow colours, and the magnificent contrast it displays between life and death, warmth of sunlight and cold of grave; the Transfiguration, the attempted stoning of Christ in the Temple, the woman of Samaria, and the four compositions representing scenes in the life of St. Paul—hut I must he allowed to linger a moment hefore the remaining three.

Looking up at the painting of 'Christ in the House of His parents,' we find it contains a touching image of the Virgin, who on her knees beside the Holy Boy, presses her lips to His cheek in a mute wistful kiss, for in her heart she dimly realises that only suffering can await such perfection. Even her deep self-less motherlove will he powerless to avert the stress and storm that must fall upon that heloved Head.

Presently, she is aware, He will gently disengage Himself from her emhrace, and sighing, will go on alone hearing His cross, to face His High Destiny.

Just the same mute passionate mother-kiss is the keynote to Millais' 'Carpenter's Shop,' yet hoth pictures are as far apart in their different standpoints as the two poles.

And now let us turn to the Annunciation. It may he urged with regard to it, that Art has said the last word there is to say on the subject. Recollections of the traditional Annunciations of the Old Italians (varied according to the poetic insight and special character of the different painters) flit through one's hrain. Sweet, strange, haunting creations, which once seen, must colour, one would think, all one's conceptions of the Annunciation for ever after.

No faintest echo of any of them is here, however!

A deep evening stillness lies upon the landscape. The folded hills sleep behind the sleeping village. The air deepens and melts into a violet dusk exhaled hy night herself. The flat-roofed houses are all dark save

St. Paul. Jonah.

Panels in the Chapel of the Ascension.

By Frederic Shields.

for one point of orange light from a window (is it that of St. Anna, one wonders?) making the intense loneliness of the scene seem more apparent. It is a transfigured world in this en. chanted twilight, full of a strange intentness-listening and waiting it would seem. For what? The deeply hluesky is set with one star, whose piercing glitter, augmenting this effect, suggests an heavenly eye watching her, "upon whom the ends of the world are

come." The crescent moon presides virginal over the scene.

In the foreground the Virgin kneels heside her unfinished day's work. There is no joy apparent in her acceptance of the Divine will, only she is awed throughout her heing, and ready to receive without question whatever may he in store for her of love and pain.

Something in the howed figure touches one with the emotional intensity of music. I am tempted to quote Heine's description of Scheffer's Margaret in trying to elucidate this Virgin. "She has more feeling than face," he says—"she is a painted soul."

The Angel Gahriel, tender and aerial as those swathes of mist which linger in the hollows of the hills at evening-time, floats hefore her, uttering the message. A hranch of flowering almond adds a note of beautiful symholism, for the almond is not only considered since the Middle Ages as the type of the Trinity (God the Father, Son and Holy Ghost are one, even as shell, fibre and kernel are one nut), but it is also a type of the Immaculate Conception. An old German writer thus poetically states it: "Aaron laid a rod in the earth, which hore the almond nut, noble beyond all measure, that didst thou bear, mother, without man's aid, Sancta Maria."

The colour harmonies of this heautiful composition augment the earnest and suggestive treatment.

Turning from it to the Baptism of Christ, the eye lights on the great central heroic figure and dwells on it with satisfaction. Mr. Shields has represented Christ in one aspect only, but that a magnificent one. Here is the perfect flower of humanity's hest efforts in life, art, thought and love, consecrating Himself to High God from whom the Idea emanated.

There is inspiration in this conception, Christ's glistening Body and solemn illuminated Face stand out

with quite unearthly radiance from the mellow night-hlues and storm - purples of the background.

In a general retrospect of Mr. Shields' work in the Chapel of the Ascension it will at once be conceded that although most of the subjects have been treated hefore, and treated consummately hy the old masters, yet there is nothing here at all which suggests repetition or comparison. This leads us to the consideration of the question-what is the nature of the differences which separate Mr. Shields from the old masters of the Italian Renaissance?

To Mr. Shields, Art is Prophecy, hut then so it was to Michael Angelo and Fra Angelico and the Giotteschi. One reason why Mr. Shields' outlook is so unique (though the subjects he treats are old as the hills) is that four centuries and more of evolution of the Christian religion from the fantastic honds and childish superstition of the Roman Church, to its present pure and lofty position in England, lie hetween him and the Art of those old great ones. In the same spirit as they, hut with an intellect attuned to the great Zeit Geist of to-day, Frederic Shields regards the art, of which he has so great a mastery, as heing only valuable for the expression of great religious ideas. He transmutes these ideas into images of engaging heauty and satisfies alike the

eye and the soul. Ruskin says some-where of that great prophet, Holman Hunt, " the story of the New Testament when once his mind entirely fastened on it, hecame what it was to an old puritan or old catholic of true blood, not merely a reality, not merely the greatest of realities, but the only reality." And with equal truth the passage might he applied to Mr. Shields.

His art is a passion. flower sprung from the hlood of Christ-yet not, perhaps, so much a passion · flower as a

The Angel playing a marriage peal of eight bells. Panel in the Chapel of the Ascension. By Frederic Shields.

rose. For there is nothing of the delicate. morbid, the passionatepale, nor the greensickness of mystery in his work. It is entirely sane, healthy and selfpossessed. Sweetness and grace

is its predominant note, conviction and faith shine through it, and a great peace has set its seal upon it. His art is no flowering out of time (like the passionate and romantic religious work of Burne-Jones and D. G. Rossetti), hut the fruit of all that is hest, most thoughtful and most devotional in his own age. There is no quaintness of mediæval grace ahout his style,

no strained note of romanticism or self-conscious mystery. He does not seek to catch the eye or please the curious taste hy any eccentricities of colour, lighting, drawing or design. But he speaks of mysteries as one at home with them. This forthright style of his appeals to minds open to its grave charm with the simplicity and directness of the heatitudes.

So little of Art to-day is concerned with Christ-yet here is a painter concerned with nothing else.

The age cannot he wholly destitute of religion, as so many pessimists would have us helieve, for Frederic Shields is the product of his age.

No greater present has been offered to the Christianity no less than the Art of to-day, than the silent chapel

> in which the voice of the preacher and the song of the choir will never he heard. It is for London to realise and acknowledge the magnitude of the gift.

Erected by the money and prayers of a saint, and designed by a painter whose beautiful use of symbolism, intimate acquaintance with the Bible, noble imagination, and adequate art, render him peculiarly fitted for the task, the Chapel of the Ascension may prove itself to he, in this coming era, a new instrument for the consolation of souls.

I. LANGRIDGE.

The Angel of the Resurrection. Panel in the Chapel of the Ascension. By Frederic Shields.

Footbridge across the Binnie.

# Rothiemurchus (VII)-Larig Ghru.

By the Rev. HUGH MACMILLAN, D.D., LL.D., F.R.S.E., F.S.A.SCOT.

N the grand beautifully balanced view of the great Cairngorm range, obtained from the platform of the railway station at Aviemore, a remarkable cleft is seen between the long-extended eastern plateaus of Braeriach and the massive western slopes of Calrngorm. This gloomy Pass is called the Larig Ghru, or, to give it its full name, the Larig Ghruamach, or Savage Pass, from its extreme wildness. It is filled with writhing mists or dark shadows, or when the sun shines directly into it, it discloses its rocky sldes moistened by the melting of the snow in the clefts above, lit up with a dazzling silver radiance. You can see far into its inner recesses, almost half-way through, and the vista reveals visions of bleak cliffs, red granite slopes, an almost perpendicular water course, rounded summits retreating one behind the other until the end is filled up with the huge shoulder of Ben Macdhui, which appears and disappears in the mist. Looking very grand at a distance, you can only form a true conception of its savage sublimity when you actually enter for a considerable distance into the rugged jaws of the Pass itself. From the near and far point of view it has often attracted the attention of the artist; and pictures of it in oil or water-colours not seldom adorn the walls of the exhibitions of the Royal Academy in London.

The Larig Ghru pierces the great Cairngorm range from south to north, and is the principal route by which the pedestrian can cross from Speyside to Braemar. It used to be much frequented by drovers and shepherds, who transported their flocks and herds by this route from the hillsides of Aviemore and Kingussie to the markets of Castletown on the Dee. But since the opening of the Highland Railway between Inverness and Perth these markets have been discontinued, and the surplus sheep and cattle of the district are sent by train to the large towns and cities of the south; consequently the Pass has fallen into desuetude as a great public road, and is now used almost exclusively by adventurous tourists who wish to penetrate into the

\* Continued from page 214.

sublime solitudes of the Cairngorms. There never was any road worthy of the name in its palmiest days-only a species of bridle track; but such as it was, it was kept in the best repair of which it was capable. But since its abandonment to the summer tourists, it has been allowed to revert to the wildness of nature; and were it not for the zealous efforts of members of the Cairngorm Club, who have taken the matter in hand, it would by this time have become impassable. They have in many places smoothed the roughest parts of the track, and in others indicated its course, when it would otherwise have disappeared in bog or rocky desert, by the erection of stone men as guides. Especially welcome are these rude cairns amid the vast bewildering heaps of débris that have fallen from the lofty cliffs on both sides of the Pass at its highest point, and meet together in the narrowest parts and bar the way.

A gang of labourers employed for a few weeks would have removed all these difficulties of the route, and made it easy and pleasant for the tourist, either on foot or on horseback. But there are no public funds available for this purpose; indeed, it is not considered desirable by the powers that be, that the track should be maintained at all. It would be considered a piece of good fortune if it should disappear altogether and these solitudes be entirely unvisited, so that the deer forest through which it passes might not be disturbed. For many years the Pass was closed to pedestrians, lest they should scare the game; and it was only after many unpleasant struggles that the Scottish Rights of Way Society succeeded in opening up a through communication between Aviemore and Braemar, and establishing the public right of way through this defile, which they bad held from time immemorial, although for a period It had been foolishly suffered to pass into abeyance. But though the freedom of passage was ultimately conceded, it was restricted to the narrowest line consistent with going through at all. No margin on either side of the track was permitted, and the pedestrian has in consequence to plant his feet in the exact footsteps of his predecessors, and so make the ruts ever deeper and more trying. In this way the path is the most difficult and tiresome of any in Great Britain. It is a pity that a more generous interpretation was not given to the licence allowed, so that the arduousness of the passage might

The Entrance of the Larig Ghru,
From a drawing by A. Scott Rankin.

have been somewhat mitigated. No one visiting this sublime solitude for the sake of the wild scenery would wish to inflict the slightest injury upon the sport of the huntsmen—their interests would have been as sacred to him as his own; and the likelihood is that, treated with a generous trustfulness, he might be even more zealous of the rights of the proprietor than, as human nature is constituted, he can be at present.

The entrance of the Larig Pass is about six miles from Aviemore. There are two routes by which it can be reached, both equally delightful all the way. The most direct route is by the high road past the village of Inverdrule, which consists of a cluster of grey wooden houses like a Norwegian settlement, situated in a wide clearing in the fir forest. The clang of the blacksmith's anvil sounds musical in the still air; and the busy hum of the long row of wooden hives in the hlacksmith's garden, filled with delicious heather honey, charms the summer silence. The schoolmaster's garden has bright borders of flowers in it; and the school-house windows are filled with large pots of geranium in full scarlet hlossom, which still further increase the resemblance to a Norwegian village. A bypath leads to the Dell, now let to summer visitors. The first lairds of Rothiemurchus lived here in the simplest fashion, and it was long used as a jointure house, commanding in the centre of the plain, beside the much-divided channels of the Druie, covered with thickets of alder and willow, a very fine view all around the horizon. The main road passes the neat and substantial United Free Church—built with much taste, principally of the granite boulders of the place, with its interior ceiling and fittings made as fragrant as a house of the forest of Lehanon with the

aromatic smell of red-grained fir hoards-and makes a wide opening in the forest all the way up to Coylum Bridge. At this point a board indicating that this is the commencement of the public road to Braemar by the Larig Pass stands in the wood on the right-hand side of the road before you cross the bridge. A delightful track along the bank of the shady river takes you through thickets of alder and clumps of fir to the rustic wooden bridge that crosses the Binnie, about two miles farther up in the heart of the forest. The loud murmurs of the river, whose many boulders awaken its volume to a wilder music, accompany you all the way; and the current of cool air carried along by the flowing waters cools your heated brow. At the wooden bridge, the other route from Aviemore round by the north shore of Loch an-Eilan and through the long fir woods, joins this route. and both cross the Binnie over the ruinous steps. A kind of ford has been made a little above, by which vehicles can cross in a most jolting fashion when the water is low. The path after a while emerges into open pasture ground beside the quiet stream lined with alders and birches. This green oasis was once cultivated, and on the other side of the river there are the ruins of two large substantial houses connected with the farm of Aldruie. They were tenanted hy Macgregors, who were brought to this region by Roh Roy from the Braes of Belquidder. The farm has been allowed to become a waste wilderness, and is now part of the great deer forest; a solitary house and stable being built for the accommodation of gillies and horses employed in connection with the sport. Beyond this bothy the path soon takes you through the luxuriant heather and gigantic juniper bushes, which form the underwood of

the forest; along the bank of the stream, to the direct opening of the Larig Ghru Pass. Here at the end of a fir wood, a stone pillar and a guide-post stand, with the necessary directions. Were it not for these patent indications, the obscure entrance would often be missed by the stranger.

For nearly a mile the path passes through a scraggy fir forest, its narrow course almost concealed by the luxuriant heather meeting over it from hoth sides. The quality of the ground varies continually from soft peatbog to hard granite gravel and rough boulders, and one has to walk hy faith and not by sight, getting many rude shocks and sudden trippings from unseen and unexpected obstacles. In wet weather this part of the route is altogether deplorable, and is the occasion of so many disasters that one becomes utterly reckless, plunging on, heedless of the sodden state of one's shoes and the draggled wretchedness of one's clothes. The track mounts continually upwards until at last you rise above the straggling forest into the wide open moorland, with a grand view all around, and the free air of heaven playing with grateful coolness on your heated face. Here you pursue your way over huge moraines, the relics of the ancient glaciers that once swept over this region, and converted it into an undulating strath of the most surprising labyrinthine heights and hollows. The path takes you along the edge of these great mounds, where their broken sides slope down precipitously to the channel of the burn that foams and roars over its boulders far below. On the other side, directly opposite you, the bare conical hill of Carn Elrich rises to an imposing altitude. It is a magnificent spectacle, and the sound of many waters, that comes up to you and seems to fill all the hushed listening air like the shout of a multitude, is very inspiring. The sides of the moraines are covered with masses of hlaeberry and cranberry bushes loaded with their purple and scarlet berries; for whatever may be the failure of the wild-fruit harvest in the low grounds, where sudden frosts and blights in spring and early summer are so apt to wreck the richest promise, an abundant crop may always be gathered here, above the risk of such casualties. In the Pass there are no less than six different kinds of berries growing-blaeherry, whortleherry, cloudberry, cranberry, crowberry, hearberry, in great ahundance. The crowberry offers its refreshing black berries to the parched palate in great abundance beside the path; the cloudberry, with its broad currant-like leaves and orange rasp-like fruit, haunts the hogs, while the whortleberry mingles with the blaeberry in the same situations, but is easily distinguished from it by its more straggling hahit and by the glaucous or grey-green colour of its leaves. Its berries are very like those of the blaeberry, only of a somewhat flatter shape and with a more refined taste.

At the large houlder, surmounted by a stone-man, which crowns the highest point of the Pass, and which commands a splendid vista, looking back, of the richly wooded scenery of the Spey around Aviemore, the defile contracts, and on the one side are the great precipices of Braeriach, and on the other the rugged, frowning buttresses of Creag-na-Leachan, which look as if they threatened to fall down and crush the visitor. These rocky jaws of the Pass are composed of red granite, which looks in the heaps of broken debris at the hottom of the defile what it really is, but up in the overhanging cliffs has taken on a dark purple hloom by weathering, which completely disguises its true character, and in stormy weather assumes a most gloomy and forhidding appearance, greatly enhancing the savage aspect of the

gorge. Granite, wherever it occurs, is always characterised by a special type of scenery. It usually exhibits a tame uniformity of outline, unrelieved even by the great height to which it is often elevated. Owing to the ease with which this rock may be decomposed by the weather, and the protection which the angular rubbish thus formed gives the surface, being constantly renewed as often as it is wasted away by the elements, it forms long, uniform, gently inclined slopes. But owing also to its being traversed by innumerable vertical joints, this rock forms savage corries and dizzy cliffs, which the decays of nature only make more precipitous, as they remove slice after slice from their faces. Thus the different angular exposures of the rock to the wasting powers of nature at the front and at the back of Braeriach, for instance, have given rise to the widely different appearances of the hill from those two points of view, which so astonish the visitor. The smooth undulating slopes and tableland on the west side of the hill contrast in a remarkable manner with the vertical walls into which the mountain breaks down all at once on the east and north sides, descending sheer for two thousand feet into the profound, mist-hidden glens. There is no other rock which combines these apparently incongruous features on the same rangethe grandeur of lofty precipices and the smoothness of sloping shoulder and level top.

About a mile farther up the Pass you have to cross over the stream, at a point where an enormous avalanche of angular masses of rock has poured down the left side of the hill into the valley. Through this cataract of stones you hear the loud rumble of an unseen cataract of water falling from the heights and forming one of the trihutaries of the stream at your feet. The spot makes a kind of cul de sac or a recess on the route, where you can get shelter from the wind, soft materials for a couch to lie upon, fuel to kindle a fire, and plenty of the coldest and most delicious water, all inviting you to rest awhile, and make ready an al-fresco meal. In this favoured corner of the Pass you may gather in ahundance on the slopes around the rare and interesting cornel, the Cornus suecica, beautiful alike in its flowering and fruiting stage. It has a large hrilliant white strawberry-like blossom, but in the centre is a dark purple tuft, almost black, which gives it a very singular appearance. The apparent white petals are actually bracts, which remain on the plant when the flowers are fertilized, and gradually go back to the green colour of ordinary leaves, as is the case in the Christmas rose. The dark purple tuft in the centre consists in reality of the true flowers. In autumn the foliage of the cornel fades into beautiful red and orange tints, and the blossoms give place to one or more large transparent scarlet berries. In its fruiting stage it is a very striking and conspicuous plant, and cannot fail to attract the eye even of the greatest novice in hotany. I remember seeing the peasants in Norway hoeing it away as a weed in the potato-fields!

The stream above this spot for a considerable distance disappears below the ground, and the channel where it should flow is covered with hlaeberry and wortleberry bushes. Higher up you see it again pursuing its rejoing course in the light of day, and in unabated fulness, over stones covered with the softest and richest mosses of the most vivid green and golden colours. These mosses in the bed of the stream give to the music of the waters a peculiarly subdued and muffled tone, like a prolonged sigh, which greatly increases the feeling of melancholy in the forlorn waste around. The path here passes over

The Larig Pass, From a drawing by A. Scott Rankin.

Stream in the Larig Pass.

From a drawing by A. Scott Rankin.

ground peculiarly bare and storm-scalped. Hardly any vegetation grows on it save the white reindeer lichen, the brown alpine cudweed, and grotesque tufts of upright cluh-moss. The stones are blackened with various species of tripe de roche, looking like fragments of charred parchment, which crunch under your tread into black powder. Nothing can exceed the loveliness of the lemon crust of the geographical lichen, which spreads over the granite boulders everywhere in great patches, looking like maps with its glossy hlack fructification and little waving lines. Its vivid yellow colour contrasts in the most charming manner with the vivid red of the surface of the granite stone on which it grows. It is a perfect feast of heauty to the eye that can appreciate if.

Beyond this point you enter on a region of extreme desolation. The stream that has been your companion all along has disappeared. You are now on the watershed of the Pass, about 2,750 feet above the level of the sea. On your left hand the south-west side of Ben Muich Dhui rises up to the lofty sky-line in almost perpendicular slopes of granite detritus, on which hardly a speck of grass, or lichen, or moss is seen. These slopes stand out against the clear blue cloudless sky, when the sun on a bright day is shining full upon them, with the most intense scarlet radiance, like mounds of newly burnt slag at the mouth of a mine. You have a sense of imprisonment, of oppression. Each rock and height seem endowed with personality, and impress you with a feeling of hostile and irresistible power. The red screes take on a look of cruel menace. Where the rocks of Creag-na-Leachan form the western boundary of these screes, there is a breakneck descent

from Ben Macdhui into the Pass called the Chimney, which presents almost insuperable difficulties to all hut the experienced climber. The course of a side stream, descending from the heights in a series of white cascades, breaks the uniformity of these great slopes, and is supposed to form the true source of the Dee. Immense heaps of rough and crowded blocks of stone that have fallen from the cliffs on hoth sides of the Pass obstruct the way, and being often sharp and set on edge in all varieties of awkward positions, the footing is exceedingly precarious, and the progress over them must be slow and cautious. The stone-men of the Cairngorm Cluh are an immense help in the perplexing intricacies of the track. Here and there oases of Alpine verdure occur among the leafless cairns, where the weary eye is refreshed by seeing frequent gray-green rosettes of Alpine cudweed upholstering mossy ground, tufts of glossy dark green Alpine rue, and, in one or two places, clusters of the rare and striking Saussurea Alpina, with its pale blue composite flowers and large handsome leaves. In hollow basins among these heaps of detritus are the three principal pools of Dee. They are evidently formed by the perpendicular stream that falls from the shoulder of Ben Muich Dhui, and is lost for a time under the cairns, to reappear at intervals in these sheets of water, where the ground is unobstructed.

Clambering over the last barrier of wreckage from the cliffs, you come down on the other side to the source of the Dee. There you see the river rushing full-bodied and complete at once from under the huge mass of moss-covered stones, proclaiming its freedom in a loud confused roaring. You obtain a long vista of the other side of the Pass, with the narrow rugged path

gleaming white at intervals, and the noble river, which has no superior in Scotland for the clearness of its waters, and the uniform swiftness of its current, winding down at its side to the cultivated glens and straths. Amid an array of giant mountains unequalled in Scotland within a similar area, forming the guardians of the Pass on either side, your eye catches the magnificent steep sides and conical top of Cairn Toul, which fills up the whole southern side of the gorge. You sit down beside the clear waters, that give you such a sense of overflowing, unfailing fulness, and yield yourself freely to the thoughts and feelings that arise in your heart. You feel that there is a spell upon you which it would be sinful to disturb. The imagination of a Doré could suggest nothing more wildly desolate than this secluded fountain-head of waters, with the mountain streams murmuring around it and the vast solitary peaks rising above it, shutting it out from all except the sun for a few hours at mid-day, and the stars at night. Nothing can exceed the loneliness of the place. One coming here alone would almost thank his shadow for the suggestion of companionship which it afforded. But what a field for meditation to one who is in league with the stones of the field, and who can interpret the mysterious signs in which the dumb mountains speak to him! The stream has the voice of a sibyl uttering mystic oracles; and an occasional Alpine bird flitting about, made almost tame by its ignorance of man, soothes the listening air with its tender twitter, and makes the place where it is seen and heard the very soul of the loneliness. How full of significance does every stone become, and how touching is the mute appeal of each Alpine flower by your side! You feel yourself a small and unheeded atom in the midst of the overwhelming mass of matter around you; and yet you feel at the same time that you belong necessarily to the heart of things, and supply the element of consciousness to them all, and are folded closely round in the arms of Infinite Love. In all your life you have never been so alone with nature, in the very heart of it, as here. You seem to hear the pulse of the earth, to feel something of the eternal leisure of the mountains. Nature lays her calm cool hand upon the tunult of your heart, and while she humbles you, and makes you poor in your own esteem, she exalts and enriches you with her wealth of grand suggestions. On a calm summer's day the mystery of the origin of the river in this spot captivates the mind, and recalls all the romance and tenderness of "youth and buried time." But what must it be in winter, or in a storm, when the shallow waters are chauged into raging torrents and the wind is shrieking fiercely among the rocks, and the sky is blotted out with dark clouds, and the corries are filled with swirling mists, and stinging rains, and blinding snow!

HUGH MACMILLAN.

#### The Waddesdon Bequest.

BY THE KEEPER OF BRITISH AND MEDIÆVAL ANTIQUITIES AT THE BRITISH MUSEUM.

(No. 161.)

Pendent Jewel of Gold, enarelled and set with three small Rubies and an Emerald.

 $German, Sixteenth\ Century.$ 

T may almost be said that, by the addition of the magnificent collection of Baron Ferdinand Rothschild to the British Museum, a new department has been added to the national collection at Bloomsbury. The dominant note in archæological museums is the sobriety of the contents, a quality that appeals with unfailing effect to the eye and brain of the trained antiquary or the student of history; but to the ordinary visitor, with a love for pretty things with attractions that "jump to the eyes," as the French phrase has it, the archæological museum usually demands too great a mental effort. Exception must be made for those fortunately situated, such

as the Museums of Athens, Gizeh, or Naples, where the very air smells of antiquity and the visitor has already drunk in the spirit of the distant past.

No great effort is called for from the visitor who

spends an hour in the Waddesdon Room. There may be predilections for particular kinds of beautiful art workmanship in preference to others; but there can be no two opinions about the immediately attractive character of nearly every case in the room. It is only fair to say, on my own part, that the Government made no difficulties about providing suitable accommodation for so munificent a bequest, and the cases in which the objects are shown, as well as all their internal fittings, were specially designed and made, so that the collection might be worthily installed. The Pompeian style in which the walls have been decorated has been the subject of criticism by some purists whose ideas of unity are disturbed by the proximity of Renaissance jewellery and classical motives. But it must not be forgotten that the British Museum is built in a pronounced classical style, and a classical roof and Renaissance walls would have been less defensible, while the purist would, in my judgment, have had a more legitimate cause for complaint. The ideal wall decoration in such an installation seems obviously to be fine pieces of contemporary tapestry; but what chance has a public nuuseum with limited funds of obtaining two panels of sixteenth-century tapestry about 50 feet long by 20 in height? While the price of such luxurious adjuncts is to be reckoned by tens of thousands of pounds, they are clearly out of the reach of any Government museum.

The estimated value of Baron Ferdinand's bequest at the time of his death four years ago was, 1 believe, £350,000, a sum which then seemed to me rather excessive,

#### THE ART JOURNAL.

hut so greatly have works of art of this particular class increased in value during these last few years, that I feel sure they would now produce a much greater sum. There can he little doubt. moreover, that from various causes the market value of decorative works of art will continue to rise, and that even at the present high prices it is a good inis a Rothschild. Nothing can surpass the heauty of the gold mounts ofthefineantique agate vase (No. 68), and it really deserves to be ascribed to the hand of Cellini, or an artist craftsman of his standing-an attribution often and lightly made. hut seldom justified. Nor is its charm confined to the mounts alone; the vase itself is worthy of fully as minute

an examination. The simple graceful outline, though doubtless governed to some extent hy the original form of the block of agate, is very pleasing, and the handles formed of heads of Pan are distinctly good; while the holdly modelled vine leaves and grapes are disposed over the surface with well-considered skill, and do not in any degree mar the elegance of the contour. The three vases shown in the accompanying figures (Nos. 69, 70, 71), are remarkable in other respects.

satisfaction than a score of silver cups, and it may safely he said that such an opportunity only occurs once in the lifetime of a collector, even when he

The most attractive case in the

Greek, about 280 B.C.

Pendent Tewel of Gold, enumelled and set with Rubies and Emeralds. German (Nürnberg), Sixteenth Century.

The first (No. 71) is without great pretensious as to the vase itself; the material is a variegated jasper, pleasing in colour, of simple outline, turned and polished on the lathe with great truth and accuracy. The dainty mounts and handles are, however, of rare beauty, though again marked by a pleasing simplicity. Goldsmith's work of so high a quality is but seldom found, and this piece will hear the keenest scrutiny, either by the practical jeweller or by the equally critical eye of the collector. Another point to be remarked in this and in another cup in the same case (No. 72), is the brilliancy and quality of the stones with which they are set. The old diamonds of Golconda and Brazil differ so widely in colour and quality from the diamonds of to-day that they scarcely seem to be the same stone, and the intense and clear blacks and whites used by the artists of the sixteenth and seventeenth centuries are seen to be no mere painter's trick, hut an actual representation of the appearance of the older and rarer stones. The finely formed vase of bloodstone (No. 69), in the middle of the group, is an excellent example of the perhaps overelaborate style of Italian work of the latter part of the sixteenth century, which a hundred years later became florid and meaningless. In technical quality and even in the design of the parts, the work is of high finish and leaves little to desire, but in the vase as a whole there is a marked absence of the restraint that charms the eye so greatly in the Italian art of the quattro-cento. The third vase of the group has a value of a different kind; it is formed of a fine block of lapis lazuli, of admirable colour, and is believed, with some justice, to be of classical work. An illustration without colour can give but a feeble idea of its beauty, and the same observa-

No. 261.—Portrait Bust in Walnut Wood, said to represent Margaret of York, German, about 1530.

tion may in fact be made with equal justice of the whole of the class to which these vases belong. The brilliancy of the colours of the enamelled mounts and the peculiar heauties of the stones cannot be at all realised in a monochrome picture, though I fear the chromolithographer would, after all, only score a modest success in such a case.

The two jewels which are shown in the figures, the locket (No. 168) and the pendent jewel (No. 161) are both noteworthy pieces. The first contains a miniature portrait of Sir Bevil Grenville, the well-known Royalist general of the West Country, painted by David de Grange. The locket itself is by some judges claimed as of English work, and certainly England was quite capable of producing such jewels in the first quarter of the seventeenth century, as the famous Lyte Jewel bears witness. But although I willingly concede its probable English origin, I must confess to a feeling that the design itself is rather French than English, so that it may better he called in the French manner. The Lyte Jewel is worthy of a monograph; as a piece of goldsmith's work, for the quality and setting of the stones, for its enamelling, as tasteful as it is brilliant, and for the condition and interest of the portrait of James I. that it contains, it will hear comparison with any piece of similar work. Of quite a different class is the little jewel in the form of a horseman (No. 161). Its merits depend entirely on form and colour, and it is certainly from the hand of a most capable artist; no other could have contrived, in so tiny a toy, to convey the impression of vigour and force as is seen in this little cavalier, whose horse is barely an inch in length.

The ebony casket (No. 218), of which a figure is here given, is the work of a well-known artist of Augsburg, Matthew Wallbaum. The close connection of the rich Southern German cities with Italy and her art gave them a character very different from that prevailing in

the North, and it has long heen the fashion, and is even still, to set down their productions as Italian or perhaps French. Closer study hoth of style, and what is perhaps a surer guide, an examination of the makers' marks, shows their German origin heyond dispute. This piece has not escaped such an attribution, for a former owner, the well-known Odiot père, considered it to be the work of Jean Goujon. It is nevertheless a very fine piece of work, and worthy to rank with the hest French work of its time.

Among amateurs and collectors many of the objects in the collection have been the subject of discussion on various grounds: their condition, comparative quality, and even in some cases, their authenticity. Chief among such disputed pieces have heen the two charming busts, formerly called Charles the Bold, and his wife, Margaret of York; a careless attribution, for the dress clearly demonstrates them to date from ahout 1520-30, while Charles died in 1477. In the Berlin Museum, however, there is a replica of the man's hust, identical in all respects, save that it lacks the enseigne on the hat, which has the subject of St. Margaret and the motto IE NE SCAI. The existence of such a duplicate opens the door for the "experts" to condemn one or the other as a modern copy, and in the present case the Rothschild pair of husts have heen tried and found wanting hy sundry authorities of more or less weight. I have always maintained their genuine character, and am pleased to find that I have the support of Dr. W. Bode, whose opinion is admittedly worthy of the highest respect. He has, however, done more than stamp them as genuine, for in a recent official publication of the Berlin Museum he has produced good evidence for their heing the work of Conrad

Meit, of Worms, the Court sculptor under Margaret of Austria, Regent of the Netherlands. The hust of this great lady in the National Museum at Munich is identical in style and technique with that of the lady in the Rothschild Bequest, and it may even he said that there is a likeness hetween the two faces, although the British Museum hust is that of a far more pleasing person than the Regent Margaret ever was. It is worthy of note, however, that St. Margaret forms the device of the hadge on the man's hat, a circumstance that adds prohability to the surmise that these two individuals, modelled hy Margaret's Court sculptor, were great people in her Court. That Meit was an artist of great power is clear enough from an examination of these two husts alone, which possess to the full all the qualities which render this particular form of portraiture so delightful. But Dr. Bode has gathered together in his article a series of works in various collections that furnishes convincing proof of the great capacity of Conrad Meit. Of these the most remarkable are a coloured life-sized hust of a laughing boy in terra-cotta in our own Royal Collection, and two stone husts of a young man and his wife, in the possession of Monsieur Gustave Dreyfus in Paris, a collector of admirable taste and judgment. Although these latter do not appear to he persons of such rank as the pair in the Waddesdon Bequest, they are fully equal in all artistic qualities, and possess the same simple dignified pose, while in grace of outline they are even superior. Dr. Bode has placed his fellow workers more deeply in his deht than ever by putting together the story of the artist capable of executing such masterpieces.

In so short an article as this, it is not possible to do more than indicate a few points of interest in a collection

like the Waddesdon Bequest, where so many objects have an interesting story. A brief statement of the authentic particulars of each is given in the catalogue I have written,

recently published by the Museum, in which also a great proportion of the specimens are illustrated. The two bronzes shown in the first plate should have been mentioned earlier in this notice, being, as they are, probably the finest examples of true art in the collection. Though not of the best period of Greek style, they are near enough in time to recall dis-

tinctly the masterpieces of that period. The admirable modelling of the heads, and the fortunately good state of preservation in which they remain, enable us to appreciate to the

full the dignified serenity of the beautiful faces, a type of beauty that one instinctively associates with a moral tone of equal purity. It is a curious fact that no one would now claim this particular type as that of the modern Greek; in my experience it is more frequently found in modern England. But that may be

patriotic bias.

# The Life and Work of Sir W. B. Richmond, K.C.B., R.A.

COMPILED FROM BIOGRAPHICAL FACTS PREPARED BY THE ARTIST

BY MISS HELEN LASCELLES.

#### THE CHRISTMAS ART ANNUAL, 1902.

"I must at once and before everything tell you the delight given me by the quite beautiful work in portraiture with which my brother-professor Richmond leads and crowns the general splendour of the Grosvenor Gallery. I am doubly thankful that his release from labour in Oxford has enabled him to develop his special powers so nobly, and that my own return grants me the privilege of publicly expressing to him the admiration we all must feel."

THESE words of eulogy were spoken by Mr. Ruskin in 1883, at Oxford, when he resumed the Slade

Professorship which, for an interval of years, had been held by Sir W. B. Richmond, R.A. The important work executed by the artist, and his influence on the art of the present time, has made desirable the publication of an authoritative biography containing the record of his aspirations and accomplishments. Our Christmas Number will be devoted to this object, and we recommend the publication to those who admire the active professional career of the artist and to those who enjoy the story of a life full of incident and romance. To those who cannot reconcile themselves to his achievements, we specially urge the perusal of the monograph, for therein is written much to explain certain characteristic work which has been misunderstood. Sir William is an ardent

student of history. Extensive travel has supplemented his book-learning, and his pictures, whether of Scriptural, classical, or modern suhjects, are alive with acquired experience. Let our quotation speak for his skill as a portraitist. His archæological studies have been pursued chiefly because of his love of probing the past, but partly in order that profound inquiry may stimulate his thoughts and influence in the right direction the productions of his brush. His decor-

ative work in St. Paul's Cathedral has been severely criticised, it has also been warmly applauded; its completion must be awaited before the unified scheme can he properly judged. It was Sir William's early ambition to execute mural decorative painting, and the technical side of such work has claimed his lifelong

study. "It is my husiness to convince by my art," he wrote to *The Times* in 1899, in the course of an elucidation of his plans concerning the Metropolitan Cathedral; in the present monograph he has inspired a lengthy account of the difficulties over which he has attempted to triumph in what he regards as the great work of his life.

The son of a Royal Academician, and the grandson of a miniature painter of repute, the hereditary and somewhat similar artistic inclinations of Sir William

Richmond have been fostered by study, until his name has become linked with the names of eminent contemporary artists. The father, George Richmond, R.A., won distinction as a portraitist: the son, one of a numerous family, early showed an aptitude for Art.

From his youth up, Sir William has been identified with the progress of the Royal Academy: he entered the Schools in 1857, he exhibited his first picture in 1861, he was elected an Associate in 1888, and in 1895 he attained to full membership. He has held the Professorships of Painting and Sculpture of the institution, and has besides lectured to the members of many other learned societies. An indefatigable worker, and a man of commanding personality, the story of his life is of absorhing interest. The

The Studio of Sir W. B. Richmond, R.A.

Christmas monograph has a worthy subject, and is a notable admission to the series of works which are identified with THE ART JOURNAL.

The tbree plates are 'The Song of Miriam,' a design showing Miriam leading the triumphant chorus of Israelite women after the defeat of Pharaoh and his hosts in the Red Sea; 'An Audience in Athens,' which the artist ranks first among his subject pictures; and 'The Studio of Sir W. B. Richmond, R.A.,' in which is shown many completed works and some pictures in progress. It is a view different from the one shown on this page. A selection of representative portraits is included, and designs for the mosaics and other embellishments of St. Paul's Cathedral are reproduced.

The Lib and William Str. W. S. Malmane, SCOT, e.A.

Mro Lawzum Throm the Picture in the National Gallery London

"Where the Streamlet meets the Sea."

By A, J. Warne-Browne.

# The Work of A. J. Warne-Browne.

T is not only because it possesses a more than ordinary degree of artistic merit that the work of Mr. A. J. Warne-Browne deserves attention; it is notable also because it belongs to a class of pictorial production which has always been in the hands of a comparatively small number of exponents. Curiously enough, though many painters have chosen marine subjects as motives for quite a large number of memorable pictures, the men who have given themselves up to study of the sea for its own sake have never been numerous. Interesting paintings of shipping, of coast scenes, and of incidents in the lives of sailors and fisher-folk, are not uncommon, and many of them are marked hy distinguished technical qualities; but only occasionally is it possible to light upon a canvas which records sympathetically the peculiar heauties of the sea itself.

Apparently the reason for this is that the man who is

so responsive to the strange sentiment of the restless waste of waters that he will devote his life to an investigation of the causes of its variety is an artist of a rather rare type. It is obvious that unless he is endowed at the outset with an intense love of his subject he will not have the patience to analyse the numberless subtleties which make it so fascinating to the sincere student. But if he once falls under the spell of the sea, its incessant changes of aspect will be to him not only a constant delight, but also a never-failing source of inspiration. They will lead him on to study more and more closely the ways in which the sentiment of the sea can be conveyed to other nature lovers, and they will stimulate his imaginative powers in the fullest measure.

Before, however, he can hope to secure the approval of the people who are best qualified to judge his work, he must recognise that there is a great deal for him to

A Ground Swell.

By A. J. Warne-Browne.

"Ships that pass in the night,"
By A, J, Warne-Browne,

Storm Wrack.
By A. J. Warne-Browne.

learn about the causes of the complex effects which he admires so enthusiastically. He must have an absolutely intimate understanding of the moods of the sea if he intends to deal with it in more than a superficial fashion, or to make it something better than a background or an accessory in his pictures. It is indispensable that he should know the anatomy of wave forms, that he should realise the multiplicity of the changes produced in the appearance of the surface by the incidence of light, the density and depth of the water, the movement of tidal currents, and numberless other

modifying causes, and that he should appreciate to the fullest extent how much the tone and colour of the sea vary under different conditions of atmosphere. He can never allow himself to imagine that he has found a way to formalise his knowledge, or that he can substitute convention for direct study. Any attempt to depend upon set rules of practice would only lead him into hopeless trouble, and would destroy his whole claim to consideration.

But for this very reason all the more credit must be given to the few men who work on sounder principles. An artist like Mr. Warne-Browne, who shows that he has sincerely set himself to master his exacting subject, is worthy of all respect because he is plainly possessed by an unusual sense of responsibility. It is scarcely likely that he will he understood by ordinary people

whose knowledge of the sea has been obtained by occasional visits to some fashionable watering place, or that his conscientiousness and depth of study will bring him popularity as a matter of course, but he will not fail to secure a following among the better type of art lovers who sympathise with his enthusiasm and perceive the full significance of his effort.

Although it is only within the last ten years that Mr. Warne-Browne has achieved a reputation as a marine painter, his inclination for this form of study is by no means of recent growth. He was born in an inland

The Wild West Sea.

By A. J. Warne-Browne.

The Seine Net-Pilchard Fishing.

By A. J. Warne-Browne.

towu—at Warminster, in Wiltshire—and he saw the sea first at Exmouth, when he was eight years old. The impression it made upon him was, even at that early age, a very vivid one, and year hy year this impression has hecome stronger until it has grown into an absorbing conviction which has fixed the direction of his whole career. It has heen accountable for much of his success as an artist, and has certainly led him into habits of observation and methods of expression which have set him distinctively apart from the majority of his fellows.

As so often happens to men who have risen to eminence in the artistic profession, he had to undergo many experiences of a more or less unpleasant kind hefore he was allowed to follow his natural hent. His keen desire

to hecome an artist was opposed by his parents, who wished him to choose an occupation which they thought would he less precarious and uncertain in its prospects. So when he left school he was sent into the office of a solicitor to see whether the law was in any way to his liking. A few months' prohation, however, satisfied him that such a profession was hy no means what he wished to adopt, and as at the end of this period the solicitor died, he was able to escape from what must have heen to him most uncongenial surroundings. Even then he had no opportunity of making any progress in the serious study of art, for he was given a series of chances, all more or less unwelcome, of qualifying himself as a husiness man, and his aptitude for commerce was tested in a number of ways.

But these struggles against an adverse fate ceased in the early eighties, when his parents came to live on the

outskirts of London. He was theu permitted to make his own choice of a profession, and he promptly hetook himself to Calderon's School of Art, at St. John's Wood, with the intention of preparing himself for admission to the Royal Academy Schools. This intention he soon ahandoned, and he went instead to the Antwerp Academy, by the advice of Mr. W. P. Frith, who gave him an introduction to M. Verlat, the Professor of Painting there. The merit of his work gained him immediate admission to the life-room at the Academy, and during his stay there he was ahle to acquire that thorough grounding in technical practice which he needed to fit him for dealing with the greater problems of pictorial production.

Kynance during an Equinoctial Gale.

By A. J. Warne-Browne.

His next move was to Berlin, where he hecame a member of the staff of a large publishing house, and was engaged with several artists in doing various kinds of work for reproduction. After more than a year of this useful experience he returned to England to act as a kind of art adviser to the London branch of the same house. This engagement, however, ended a little later, when the firm ceased publishing illustrated hooks and relinquished the section of their husiness in which Mr. Warne-Browne was chiefly concerned. His position then was in some ways an anxious one. He was hy this time a married man with a family, and the loss of his post was distinctly inconvenient. But opportunely a friend or his, a well-known portrait painter, asked him to go down to Heydon Hall, in Norfolk, to do some work for the Baroness Burdett-Coutts; and this commission not only tided him over a difficult interval, hut may fairly he

said to have been the starting-point of his career as a painter.

Towards the end of 1890 he went to Cornwall and spent some eighteen months in and ahout St. Ives. This visit to the West Country gave him his first opportunity of turning seriously to account his youthful enthusiasms and enabled him to hegin the careful study of the sea to which he had so early heen inclined. It did not take him long to prove that he had found his right direction, for in the spring of 1892 he had on the line in the Academy exhibition an important marine picture painted near the Lizard. In this year, however, another commission from the Baroness Burdett-Coutts hrought him hack to London, and during the whole summer of 1892 he was engaged upon a series of water-colour drawings of Holly Lodge, her house at Highgate. These were afterwards exhibited at Messrs. Vokins's gallery and

Autumn Weather.

By A. J. Warne-Browne,

some of them were reproduced in the Strand Magazine as illustrations to an article on Holly Lodge and its owner.

For a couple of years Hampstead was his headquarters, hut he made frequent excursions to Cornwall, and finally, in April, 1894, he decided to settle in that comparatively remote part of England. At first he stayed in the little fishing village of Cadgwith, a couple of unlesseast of the Lizard, and then, finding this district to he in every way suited to his purposes, he hegan in 1895 to huild himself a house on the high ground hetween the villages of Cadgwith and Ruan Minor. He chose a spot from which he could obtain an uninterrupted view of the sea over the trees and that ched roofs of Cadgwith, an ideal situation for a painter who wished to keep himself constantly in touch with nature and to miss no chance of studying the endless varieties of the

sea.

In 1896 he gave admirable evidence of the use that he was making of his advantages, for he was represented at the Academy hy a large canvas called 'Moonlight off the Lizard,' which deservedly attracted great attention, and was purchased soon after the exhihition opened hy a wellknown collector. Since then he has shown at Burlington House several memorable works, and has held exhibitions of seascapes and coast subjects at Messrs. Graves' and Mr. Mendoza's galleries; and to the recent Cornish Exhihition in the Whitechapel Art Gallery he contributed 'The Seine Net,' a characteristic

Morning Breezes.

By A. J. Warne-Browne.

illustration of the methods of the Cornish pilchard fishers (p. 357).

With the exception of a very few landscapes, practically the whole of his work for the last ten years has dealt with the sea. Before this period commenced he painted-in 1891-a large religious subject, representing Christ walking on the sea; but, though this canvas had a considerable vogue when exhibited in London and elsewhere, he felt that such motives were not likely to suit him, and he has not ventured on a second experiment of this kind. He is far more at home when he is occupied with earnest records of nature like 'Morning Breezes,' 'Kynance' and 'Ground Swell,' and 'Autumn Weather,' with dramatic effects of atmospheric tone like 'Storm Wrack,' with studies of wave movement like the 'Wild West Sea,' or with careful paintings of picturesque bits of coast like 'Where the Streamlet meets the Sea.' In these the best qualities of his art are always apparent, and the sincerity of his point of view can never be questioned. Every year he gains in command over the intricacies of his material, as his experience widens and his knowledge of nature becomes more profound; and every year adds to the keenness of his enthusiasm.

A. L. BALDRY.

A Misty Morning, Kynance

By A. J. Warne-Browne.

## Passing Events.

FOR those who organise Exhibitions in provincial cities it should be a comparatively easy task to select some first-rate collections from the pictures shown in London. The Royal Academy and The New Gallery are happy hunting-grounds for the provincial Curator, who, keeping in mind the sympathies of his own locality, can secure the cream of the work exhibited during the season. To the Londoner, the Autumn Exhibitions in the provinces are very attractive. Friendship with a good picture is strengthened hy unexpectedly seeing it ou unfamiliar walls, and when it hears an inscription notifying that it has heen "Purchased by the Corporation," the knowledge is welcome that it has become a National possession.

HIS year has shown either that the work of exhihitors is not up to the standard desired by the Trustees of the National Collections or that the matter has been purposely neglected. No early acquisitions have heen made for the Liverpool and Manchester Galleries, no pictures were hought from the Chantrey Fund. Mr. Claude Phillips has written to emphasize the necessity at the present time of securing examples of contemporary British Art for the State collections, especially with reference to the Tate Gallery, and Mr. Baldry has urged that the time has come for an inquiry. Mr. Ruskin in one of his Manchester lectures advocated a Central Board to arrange purchases: "There ought to be a great National Society instituted for the purchase of pictures, presenting them to the various galleries in our great cities and watching there over their safety." If such a society could be established and actively supported by the Government the collections throughout the country would be more educational than they are now.

M. R. G. F. BODLEY, R.A., and Mr. R. Norman Shaw, R.A., as assessors in the scheme for the Liverpool Cathedral, have selected the authors of five designs to compete further.

A<sup>N</sup> additional prize is offered to students at the National Competition of 1903. On the death of Mulready, in 1863, a fund was created, the greater part of which was expended in erecting a monument over the deceased artist's grave in Kensal Green Cemetery. The balance was handed over to the Society of Arts in order that a Mulready Medal should be instituted for the best studies from the nude. This occasional, visible reward, was given last in 1896, and previously in 1893. Students in London and visitors could not do hetter than go to the Victoria and Albert Museum, and there devote attention to the fine collection of Mulready's own studies.

"GOOD old bricks for sale." Such is the text on a notice board outside Christ's Hospital, and the appearance of the "Hall Play" confirms this business-like announcement of the demolition of the venerable foundation. Newgate Street is indeed suffering changes, and within a few paces of each other two of the historic buildings in London, with all their associations, are being removed to give place to modern constructions. The New Sessions House will in due course supplant Newgate Prison, the grim work of G. Dance, R.A., and it remains to be seen to what purpose will be devoted the old school land that has not already been acquired for Bartholomew's Hospital.

THOSE who wish to know about Mr. Walter Crane's decoration of the Ark of the Covenant, Stamford Hill, are referred to our volume for 1896 (p. 197), in which an illustrated account was given by Mr. Lewis F. Day.

Instead of Thursdays and Fridays, students now have Tuesdays and Wednesdays set apart for them at the Tate Gallery, Millhank. Visitors may obtain entrance ou these days by observing the customary regulations.

## Recent Fine-Art Books.

"FRANS HALS" (Bell), by Gerald S. Davies, the muchesteemed art master of Charterhouse, is a very brave and nearly successful attempt to tell the lifehistory and artistic experience of one of the artists who has proved uncommonly attractive to the present generation. It was only in 1887 that Messrs. Christie's in their records of auction sales admitted Frans Hals to rank with those painters whose works are worth notice because they fetch a certain sum, and this was probably because at the De Zoete sale, in 1885, a portrait by the artist reached a thousand pounds. The earlier records show a diminishing quantity until in 1786, at a sale in Holland, a picture fetched five shillings only. This is the now famous portrait of Johannes Acronius in the Berlin Gallery, and worth at the least four thousand pounds. Mr. Davies tells his story with a simplicity which well accords with the unaffected Dutch painter's characteristics; and his many illustrations, although nearly all from public galleries, reveal the best side of the artist's qualities. The lists of known pictures by Hals are only records of publicly exhibited pictures, and the author does not venture to mention one not already accepted picture. It is somewhat difficult in this list to recognise the small, but delightful National Gallery of Scotland under the title of the Edinburgh Corporation Galleries. Notwithstanding this Mr. Davies' book, as the first serious work on Frans Hals, deserves much commendation, and his sympathetic treatment of the artist is sure to find acknowledgment.

Following an excellent precedent which now obtains in most of the European galleries, the Syndics of the Cambridge University Press have published a very fully illustrated Catalogue of the Pictures in the Fitzwilliam Museum. The notes and attributions are prepared by Mr. F. R. Earp, one of the Assistant Directors of the gallery, and are frankly acknowledged to be largely compiled from materials supplied by Prof. Sidney Colvin, the former Director.

The many admirers of our chief living decorative artist will be glad to know of the publication of the small folio on "THE ART OF WALTER CRANE," by P. G. Konody (Bell), a work of much affectionate consideration by both writer and publisher. Mr. Crane occupies a position entirely unique as one of the band of decorative artists initiated by Rossetti; and being practically the only one of outstanding merit now, he deserves all the admiration and respect produced by this publication. The 140 illustrations, several in colour, give ample evidence of his artistic talent. We observe that the "Easter Art Annual" published in 1898 in connection with this Journal, is not mentioned amongst Mr. Crane's published works, although it was altogether written by himself. This, however, is of little importance, as it is quoted over and over again and at full length with due acknowledgment, so that our "Easter Annual" may be said to contain the germ of all that is most worthy of consideration of the artist's works.

Mr. George Wolliscroft Rhead, R.E., has published through Messrs. Chapman and Hall two sets of large lithographed studies for the use of schools

-as examples, that is to say, in the first place of elementary freehand drawing and light and shade, and in the second to meet to some extent the syllahuses of the Board of Education relating to Design, Memory Drawing, and Blackboard Drawing. The sets consist each of twelve drawings, six in outline and six shaded. The first series is devoted to plant form, the second to living objects-in either case boldly magnified to the full size of a large folio sheet, and drawn with an uncompromising outline which not even the dullest of students could mistake. The treatment adopted is naturally more effective as well as more amusing in the case of living creatures, frog, seahorse, snail, bee and so forth, than of flowers, especially the more delicate ones, which in their magnified form inevitably lose something of the natural charm belonging to them; but Mr. Rhead has had the courage of his educational purpose, and has not flinched from it. As a teacher of some experience and Art Director of a polytechnic institute, he may be trusted to known what teachers and elementary students really want.

Lord Ronald Gower's "SIR JOSHUA REYNOLDS" (Bell) is so heavily illustrated—there are nearly ninety pictures reproduced—that no small hook on the first president is so adequate and satisfactory. To the ordinary reader who wishes to obtain a clearly defined descriptive portrait of Reynolds with ample illustrations, this hook is the best, the only serious omission being the portrait of Lawrence Sterne, which the author describes as one of the finest portraits in the world.—Miss Lina Eckenstein's "ALBEECHT DÜRER" (Duckworth) renders the story of the famous Nürnberger in a handy way. It is, almost necessarily, compiled from other books without access to actual facts, as, for example, the statement that the 1493 Portrait of the Artist is still at Leipzig, whereas it has been for some years in Paris.

Miss Albinia Wherry's "STORIES OF THE TUSCAN ARTISTS" (Dent) is a successful attempt to put into story form an account of the lives of the most interesting masters of the north of Italy, Botticelli, Ghirlandajo, Donatello, Fra Angelico, and it concludes with a chapter on home treasures, wherein what has been said is made to apply to the examples in our national collections.—A similar work, but less well illustrated and for younger readers, is Miss Ella Noyes' "SAINTS OF ITALY" (Dent), which specially explains the obscure legends represented in famous old Italian pictures.

Although "THE LAND OF THE DONS," by Mr. Leonard Williams (Cassell), scarcely touches artistic questions, the book is worth careful study by any who wish to travel in Spain. The last chapter, on the Future of Spain, is eloquently written, and convinces the reader that the resources of the country only require reasonable care in direction to hring the Peninsula back to prosperity and power.—"IN BIRDLAND WITH FIELD-GLASS AND CAMERA," by Oliver G. Pike (Unwin), is a new popular edition of a most charming book on the haunts and habits of birds found within very few miles of the north of London, accompanied by nearly eighty illustrations.

## SPECIAL PLATES.

## 'Mrs. Lauzun.'

BY SIR HENRY RAEBURN, R.A.

FROM THE PICTURE IN THE NATIONAL GALLERY.

BY general consent, Sir Henry Raeburn is not only the most talented of Scottish portraitists, a relatively unimportant dictum, but merits a place among that little band of English artists, born, roughly, during the second and third quarters of the eighteenth century, who quickened the spirit, raised the ideals of art in this country, as had not been done since the days of Van Dyck. His years of maturity are perilously near those during which native portraiture began to decline, and there arose the great landscape tradition of which Girton and Turner are the foremost exemplars. Reynolds lived from 1723 to 1792; Gainsborough from 1727 to 1788; Romney from 1734 to 1802; Raeburn from 1756 to 1823; Hoppner from 1759 to 1810; Lawrence from 1769 to 1830. Sir Henry Raeburn-whose surname may be derived from that of a hill farm in Annandale, and on the family shield is a rae or roe deer drinking at a burn-left an orphan at six, was educated at Heriot's Hospital, and at fifteen apprenticed to a goldsmith, who introduced him to David Martin, a portrait painter of repute in Edinburgh. Early in life he married the wealthy widow of Count Leslie, and soon thereafter, en route for Italy, was counselled by Sir Joshua to study the works of Michael Angelo in the Sistine Chapel-advice which, had it led to imitation of the great Italian, might well have proved his undoing. On his return in 1787 he established himself in Edinburgh, where onward till his death in 1823 he held a position analogous to that of Reynolds in London. Most of the prominent men and women of his day, including Sir Walter Scott, were limned by him, so that when an old lady revisited the Scottish capital in 1876 she found many of the friends of her youth, since dead, smiling in picture from the walls of the Royal Academy. In 1792 Raeburn was made an A.R.A.; in 1815, three years after having been elected President of the Society of Scottish Artists, a R.A.; a few months before his death, moreover, he was knighted by George IV., and shortly afterwards appointed His Majesty's Limner for Scotland.

'Anne Neale Lauzun,' the reproduced picture, was painted in 1795, the year Raeburn established himself in York Place, Edinburgh. It was bequeathed by Miss Lauzun to the National Gallery in 1901, there to join lifesize portraits of Lieut. Colonel Bryce Murdo, and of a lady of the Dudgeon family. Pictures by Raeburn have during the past few years increased by leaps and bounds in money worth. A fancy portrait, which brought 240 guineas at auction in 1877, made 1,250 guineas last July; and, on May 3rd, 'The Two Sons of David Monro Binning,' exhibited in 1811, realised 6,500 guineas. If sale-room prices be taken as an index, then, granting that examples of like relative merit have occurred, Raehurn occupies a fifth place among native portraitists, following, in the order named, Hoppner, Reynolds, Romney, and Gainsborough.

ee The Reproduction from Mr. Piffard's picture, 'The Death of the Duc d'Enghien, Which appears facing page 64, Supplement, was wrongly inscribed as having been presented by Sir William Agnew, Bart., to the Manchester Art Gallery, an error which will be rectified in future editions.

## 'Where Is It?'

BY H. STACY MARKS, R.A.

FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

N O one succeeded better than the late Henry Stacy Marks in portraying some little episode in the everyday life of an old-fashioned country gentleman. He painted them with such care and with so much affection, that a similar feeling of interest is experienced by the spectator. He certainly was at his best when the subject of his picture admitted of simple treatment, such as is to be found in "Where Is It?" Here we have one of these old gentlemen, dressed in black velvet coat and knee-hreeches, skull-cap on head and spectacles on nose. He is seated at a high bureau in an old-world interior, diligently and anxiously engaged in the search for some missing letter or memorandum. Drawers, cupboards and boxes are all open; papers and books are scattered over the floor, where they have been thrown during this keen hunt for missing property. The old gentleman's face is clouded with perplexity in his endeavour to remember the exact place in which he put it. The subject could not well be simpler, but the artist has painted it with such loving care that there is a quiet charm about it which renders it very pleasing. Mr. Marks had a keen eye for quaintness of character, and a strong perception of those qualities which render old age attractive. The picture is soundly and carefully executed, with none of the brilliant flimsiness of much modern art, while as a study of character it is worthy of much praise.

In his pictures of birds, for which he was justly famous during his life time, much the same qualities can be detected. He delighted to the utmost in the quaint characteristics of storks, pelicans, penguins, parrots and all birds with personalities bordering on the grotesque, and had a very thorough knowledge of their habits and expressions. There was no undue exaggeration, however, in this side of his art. He had a refined and dry sense of humour which was peculiarly his own. There is nothing forced or strained about it, and no vulgar attempt to make his creatures appear to be human beings in disguise. It is said that nothing made him more angry than to be considered a mere "comic" painter. It is true that he had no feeling for grace or ideal beauty, while his powers of composition were ordinary; but, on the other hand, he was always faithful in his study of nature, and spared no pains upon his work, which, added to his sense of humour, make his pictures a pleasure to all who appreciate such qualities in art.

In his early days he was much attracted, as were so many young painters, hy the principles and methods of the English Pre-Raphaelites; but his innate humour and originality were too much for him, and in his 'Toothache in the Middle Ages,' by which he first became known to the public, he showed that he had struck out a line of his own. He also produced a variety of works of great technical value for wall decoration, designs for stained glass, and book illustra-

# A History of Artistic Pottery in the British Isles.

THE DELLA ROBBIA AND MEDMENHAM POTTERY.

BY FRED. MILLER.

THE Della Robbia establishment is one of the potteries that has been started within the last few years (in 1892 I believe) and which in less than a decade has made a name for itself among those who seek for some individuality in a pot, and are not content with the "Art-ware" with which some enterprising draper dresses one of his windows from time to time, in which a farthing is part of the price.

Mr. Harold Rathhone, the manager and art director—and, for that matter, largely its founder—has made a genuine effort to restore to the worker in an industrial and artistic manufactory the dignity and interest in his work which is his birthright, in other words to make his employees realise the nobility of labour rather than the degradation of employment in a factory. He endeavours to give them an opportunity to observe the proper function that art in alliance with intelligently applied science is intended to fulfil, more or less, in every branch of manufacture in which brain-work counts.

The conditions under which his labourers work has been one of Mr. Rathhone's first considerations, and those who are acquainted with the environments that so often obtain in art workshops are painfully impressed

Della Robbia Exhibit, Cork Exhibition, 1902.

Tile Panel-The Brownies-in Della Robbia Ware.

with the undesirableness under which workers live. What a travesty it is to think of art of any kind whatsoever heing produced in a steam-ladened, overheated, evil-smelling shop! Art that is supposed to be the expression of man's joyousness, the spontaneous utterance of his sense of the delight of existence!

In place, therefore, of the racket and disturbance of machinery and mechanical appliances, we find in the Della Robbia Pottery the wheel turned by the hand of a watchful boy, whose intelligence is constantly appealed to through the word of command of the "thrower," whose whole attention is directed to securing some subtlety of shape, some delicacy of line in the contour of the vessel which is heing pulled hy his thumh and fingers out of the lump of clay on his wheel.

This question of the environment of the worker in art

manufactures is of far more importance than those who run factories imagine, and commercially—for that is the only side that touches the question in any vital sense—it is worth considering, for on all sides one hears the complaint made of the want of initiative, taste and thought on the part of the worker. How can labour be other than grudging when the lahourer's first thought is to escape it, whereas if he get some "joy in the working" a little of it is likely to find its way into his work, and act as a sort of artistic leaven.

A considerable amount of attention is now being given to the crafts, and some effort is being made to hring them back into every-day life, and yet we shall find that a manufacturer who will give a very decent subscription towards some fund to he devoted, may be, to the encouragement of art craftsmen, will too often in his own manufactory appear singularly indifferent to such a matter as the conditions under which his employees have to work. I will not press this point further than to observe that this remark has special hearing on ceramic work generally, as a chat with those who have worked in a pot factory will convince one, seeing how eager they seem to be to get out of it. Mr. Rathhone went to the root of the

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Painted Plaques in Della Robbia Ware.

causes of the failure of so much modern pottery—that assuming to be artistic is so very commonplace—when he did his best to make his own workshops pleasant places, or, at any rate, not wholly uncongenial to those who are employed to invest his clay with artistic merit.

Further than this, the apprentices are encouraged to give full expression to their individuality in so far as their ideas may be contained within the limits of certain fixed and cardinal principles of design and style, though the carrying out of such a rule depends upon the latitude allowed, and if the art director is always "editing" the ideas, there is apt to be brought ahout that condition of stagnant uniformity which is so deplorable. I speak here as an old pottery painter, and it is obvious, that if whatever one does is subjected to a severe censorship, individuality is an expression with little meaning.

Mr. Harold Rathbone, being himself an artist, a pupil of the late Ford Madox Brown, is eminently fitted to direct a pottery and to temper his jurisdiction with an ever-ready sympathy which enables him to put himself in the place of his workers.

I am aware that considerations, other than those of art, have to be brought to bear on such a commercial undertaking as a pottery—unless it be run as a philanthropic institution—and all those who have had anything to do with art wedded to commerce, are painfully

aware that the public is the supreme arbiter, for upon their patronage all else depends. Their suffrages have to be won, and this winning of patronage is the crux of the question. Ultimate analysis brings it to a question of pounds, shillings and pence, and as I have had occasion to say in a former article, it comes to be a question of who can offer the most effective pot for half-acrown.

It is to be feared that the public is vitiated on this matter of price, and instead of asking "How much art should I obtain for my half-crown?" it is "What is the furnishing value of this as against that?" and here the bigger pot gains the preference.

Granting that these considerations are those of the counting-house and not the studio, it is right they should be kept beforeone in a general survey of English ceramics, for the conditions under which work is produced are the controlling forces. That the finest work

is the outcome of favourable conditions is the plain evidence of history, and it is to be feared that in these days the conditions are not what they might be. The man in the street is not a connoisseur and is ever deceived by ornament, and too often those who fool him most receive his best patronage. If only he could be brought to see what goes to the producing of a really tasteful pot—and it is the hope of the present writer that this series of articles may help him to realise this—then he would be ready and willing to bestow his patronage wisely.

The Della Robbia ware is made of a whitish clay, and in a good many examples this is allowed to tell, the colours being applied in parts and not all over, so that the general effect is light and delicate. A large lampstand and big bowl I saw in the collection of the Rev. Thompson Yates are treated in a pale turquoise blue, yellows and greens, but the whole effect was light and cheerful, such as fits it for the decoration of a drawing room. As for the decoration itself, some idea may be gained by the illustrations. Incised work is largely resorted to, and transparent colours are employed to fill in the arabesques. In some examples the decoration is first modelled and then coloured, as in the old Italian pottery, and Mr. Rathbone is developing this side of the pottery to fit it for architectural work, for which it is well adapted. The fountain in the court-yard of the Savoy Hotel is one of the recent large works executed at

Della Robbia Vases.

#### SUPPLEMENT TO THE ART JOURNAL.

Panel in Della Robbia Ware.

Modelled by Harold Rathbone, from Cartoon by Ford Madox Brown.

Stations of the Cross, Memorial Tablets, Headstones, Fonts, Pulpits, etc., but the conservative tendencies of those in power makes such an endeavour an uphill fight. It is the regret of all lovers of decorative art that those who have the ordering of our religious buildings have so little training to guide them when embellishing their sanctuaries. Things are hetter than they were, but there is yet much to be desired in this respect, as a visit to our churches testifies.

Almost every class of work that can be executed in baked clay is produced at the Birkenhead Pottery, and Mr. Rathhone impressed upon me that "the central motive in the domestic department of the Della Robbia pottery is to follow the advice given us by the late Lord Leighton, to make the articles of daily use and service beautiful, or as comely as possible under the conditions

of their utility." In this endeavour the real difficulties of wedding the useful to the beautiful are grappled with, and, it must be acknowledged, not without success.

#### THE MEDMENHAM POTTERY, NEAR MARLOW.

In writing these few words about this pottery I have this advantage, in that I have been able to watch its steady progress during the six years of its existence, with Mr. R. W. Hudson as its patron. Its director, Mr. Conrad

the pottery, and very heautiful and effective it is. There

ought to be a considerahle demand on the part of architects for pottery, as it is both effective as de coration. when suitahly treated, and permanent, surely an important point. In the matter of ceramics for ecclesiastical purposes Mr. Rathhone said that he was trying tointroduce his ware for

Dressler, has sought to run a pottery strictly on artistic-commercial lines, which means to supply a want and create a demand for its productions. In Mr. Dressler's own words the pottery "was founded with the object of producing architectural pottery and tiles possessing individuality in design and execution. In order to reach this aim we must place ourselves in conditions approximating those of the old potteries whose ware delighted and inspired us. We therefore established our pottery right away in the country. We use our Marlow materials as much as possible and employ village workpeople. These elements are allowed to influence our work to the fullest possible extent." A great deal of money has to he sunk in getting

ceramic works under weigh, and it must necessarily be some time before any monetary return is seen. And these early years are the trying ones for the finding out of the more excellent way, which is what the directing hand has never to cease doing, is a matter of experiment and oft-repeated disappointment. I know that Mr. Dressler has had to work on, often with little to encourage him, save the desire to wrest success from opportunity, and in several cases it has meant starting afresh, pulling down the kilns built to replace them with others that should do their work more economically and therefore successfully, for its director soon realised that it is essential, to win commercial success, that the cost of production shall be brought to the lowest point consistent with the standard of excellence set by the master mind. It is not such a difficult thing, given the knowledge and equipment, to turn out artistic pottery that shall please the most exacting taste when cost is not the chief consideration, but it is a very difficult problem to solve how to do this and show a profit. If it cost say half-a-crown to make a tile and you sell it at eighteen-pence you may do a large business, but that sort of thing ends in beggary, for no one is going to give away his labour in this fashion. And it is to secure the right adjustment between cost and selling price that so much energy on the part of Mr. Dressler has been

The Medmenham Pottery has devoted itself chiefly to supplying architects and huilders with tiles and other ornamental pottery, as Mr. Dressler, being himself a sculptor, leans naturally more towards architectural work than pot-painting, and in no department of ceramics is price a more important consideration than in tile work. A matter of a penny a tile comes to being a crucial test when tiles are used by the thousand, and

Panel in Medmenham Tiles These Tiles being in multiples of three, can be arranged to any size.

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

yet it is exceedingly difficult to lessen cost of production whenever a high standard of artistic excellence is set. Every stage in the progress, from the clay to the finished article, has to he watched with a severely economical eye. The reader may begin to think that a critic's function is purely a matter of L. S. D., and in the matter of pottery it comes to he a test question, seeing that the history of ceramics, in this country at all events, is too much a record of failure, owing to the inability of the master-potters to make the works pay. And I have witnessed the struggle in the case of this Medmenham Pottery to meet patrons in this matter of price. In this connection the making of tiles by pressing clay into moulds by hand has had to he supplemented by the cheaper contrivance of stamping them out under dies, a saving of 25 per cent. being thereby effected, though artistically it seems to me the loss is greater than the gain. Still, those who appreciate the difference between hand-work and machine products can have the former by paying the

Mr. Dressler has aimed at producing tiles which shall he soft and harmonious in colour and with a somewhat rugged simplicity in design, for he is a believer in a certain barharic quality in place of the sauve, over-refined style so much in vogue. A favourite device is to have the design produced with raised outlines and the colour is then floated in, girls from the village being trained to do this. The tiles are then subjected to a great heat, which causes the colours to flow, producing certain accidental qualities which in large masses is so much more pleasing than that rigid mechanical certainty of so much tile work one sees. The body of the tile, too, has heen carefully considered, so that the glaze shall not be affected by weather, which often causes the glaze of Staffordshire tiles to flake off. The Medmenham body is very hard, being subjected to a great heat, and the

increased price necessitated by the greater

jected to.

Mr. Dressler's own work is seen in the figure-work in relief, the decoration of the new huildings for Messrs. Lever Brothers in Duhlin being one of the late works completed. This consisted of long friezes illustrating, in a picturesque fashion, washing day.

local clay has to have several ingredients added to it to secure this hardness of body, which comes from the high firing it is sub-

This coloured architectural sculpture is covered with a glaze, with the addition of certain agreeable tones of colour used in a broad, simple manner, somewhat after the style of the great sixteenth century Italian work, and nothing can he more effective and suitable to out-of-doors decoration. Endless experiments have had to be made to secure the right body, for hardness is essential in pottery for such a purpose, and yet it must be one that will wed itself to the glaze, for so much pottery has failed because the right affinity has not been maintained

between the body and the glaze. A hody to fulfil these requirements is necessarily a mixed one, for no clay as dug will fulfil these conditions. The old seggars and spoiled ware, if free from glaze, are ground up and added to the clay to take the "fat" out of it, i.e. to enable it to resist a great heat, for natural clay will melt if fired above a hrick-heat.

Mr. Dressler has confessed to me that he has had to allow some of the ideals with which he started to fall seemingly into disuetude. The hope of finding native talent that could be soon brought into line with the work turned out has not been fulfilled. Less liberty and a stricter adherence to rules and orders has had to he observed, and the liberty which he hoped to foster when he began potting has had to he curtailed. It is the old difficulty, the labourer, having no inherent artistic sense, has to be directed at every step, and one head has to supply the thought to run the concern.

(To be continued.)

## The History and Development of British Textiles.

I.—CARPETS AND TAPESTRY.\*

By R. E. D. SKETCHLEY.

WRITING of machine-made carpets, the thought of the "silent" men, of the unnamed inventors of past days, of the multitudes who have planned and laboured to effect the modern order of manufacture, could not hut he present in a conception of how so great a change had heen wrought during the years that have seen the development of this hranch of the British textile industry. But writing of the production of hand-tufted carpets in these islands to-day, the silent multitudes are still more unforgettable, still more impossible to hring within the limits of a subject whose present facts they nevertheless determined in their obscure lives.

William Morris revived the art of hand carpet-weaving, never quite unpractised in Great Britain since "Axminsters" were first made in their native town, ahout the middle of the eighteenth century. Morris called his carpets "Hammersmith" carpets in commemoration of

\* Continued from p. 72, Supplement.

Portion of a "Hammersmith" Carpet,

Designed by William Morris.

the place of their weaving, and British wools dyed hy himself, British weavers, and the genius of a great British craftsman as the motive of the enterprise, would seem to hear out the localised associations of the name. But Morris, making carpets in London or at Merton in the last quarter of the nineteenth century, looked at the work of the dyers and weavers of old, measured the depth and goodness of his colours hy those of antiquity, studied the old herhalists and the methods of dyers watched hy Pliny, and filled his mind with the heauty of carpets such as that Persian one of the time of Shah Ahhas, that first showed him what "wonders could he done in carpets."

So that if the "Hammersmith" carpets woven in the eighties are the first-fruit of an endeavour that is to-day developing towards achievement-the endeavour "to make England independent of the East for carpets that may claim to he considered works of art "-William Morris's carpet-weaving, and all later hand carpet-weaving experiments, are inevitably connected with the East, that through long ages hrought to perfection of heauty and significance the wisdom of the artists and seers and craftsmen of nations perished hefore Egypt hecame a power. All fine British hand-woven carpets are as unmistakahly a development-not, he it plainly understood, a plagiarism-of ancient Oriental carpet-weaving, as though that Morgan Huhhlethorne who left Elizabethan England for the Persia of Shah Ahhas, to learn the arts of dyeing and weaving carpets, had returned irresistible with the inspiration of his splendid "Wanderjahr," and had set the looms of the English weavers and their minds with dreams of colour and design that a lifetime of patient lahour would have heen insufficient to express. But either he did not return, or he was, as his name suggests, imperturbahly British, or the Elizahethan weaver was as little apt to interpret the woven visions of sixteenth-century Persian carpets, as Nick Bottom to "expound" the summer-night's dream witcheries of Titania and her forest

To keep, then, within limits of what has heen done in Great Britain to preserve the art of hand carpet-making, is to treat, so far as facts are concerned, of very recent and unremote activities, while at the same time the ancient and remote origins of these latest textile experiments must be horne in mind.

It was in 1875 that William Morris he an carpet weaving in Queen's Square, a carpet knotter from Glasgow teaching the girls who worked at the first loom. In 1877 the Shah Ahhas carpet already mentioned delighted him ahove all his previous ideas, and systematic study and analysis of an ancient Persian carpet hrought him in spirit where Morgan Huhhlethorne apparently never came through experience—to the understanding of the essential significance of the craft. By 1880 the carpet looms at Hammersmith were regularly at work, an exhibition of hand-woven carpets in the spring of that

#### THE HISTORY AND DEVELOPMENT OF BRITISH TEXTILES.

year marking the practical accomplishment of Morris's idea. The circular issued at the time states the theories on which the venture was founded. After speaking of the deterioration in the carpet-weaving of the Levant, of India and of Persia, that made this Western attempt necessary "unless the civilized world is prepared to do without the art of carpet-making at its best," Morris formulated in a few words the principles that must be observed if British hand carpet-weaving is

to prove more than a passing fashion. He wrote of the hand made carpets of the West:—"These, while they should equal the Eastern ones as nearly as may be in materials and durability, should by no means imitate them in design, but show themselves obviously to he the outcome of modern and Western ideas, guided by those principles that underlie all architectural art in common."

It is true that the essential distinction between the arts of design for East and West, that Morris would have had the Western designer observe in making the forms of his art suggestive to the "pictureloving" man of "gardens and fields, strange trees and boughs and fields," is no distinction in the case, say, of Persian rugs of the "scroll and beast" period, or of rugs woven in certain districts of Central Asia. Chino-Persian symbolism wrought by the rug-weavers of centuries in strange forms of leopard and deer, the more individual designs that are "meant to tell us how the flowers grew in the gardens of Damascus, and how the hunt was up on the plains of Kirman, or how the tulips shone among the grass in the mid-Persian valley," are as likely to appeal to the picture-craving Western as any design produced by Morris.

Yet how little even these apparently plainly suggestive Oriental designs are expressive to any save the Orientalist. Colour, form, the carpet itself, have other meaning than the pleasure of the eyes. The old wisdoms, thoughts strange and deep of life and eternity, of the connection between the seen and the unseen, are not decipherable by Western eyes in the mosaic of forms made by the weaver's hand, nor, if decipherable, are they other than historically interesting. Nor are the frankly naturalistic rugs of modern Persia, such as the "Sarakh" rugs of the nomad weavers of Kurdistan, with their naïve gaiety of colour and form, or the profusely realistic designs of "Teheran" or "Ispahan" fabrics, "suggestive" to European minds as Morris desired to make his designs suggestive. In Persia, as William Morris never forgot to insist in addressing pattern-designers, "the art was perfected, and thence above all places it spread to cover the world, east and west," but for him the inspiration of the perfect work of Persia was an inspiration "to set about designing such like things," remembering "that a carpet can be made which hy no means depends for its success on the mere instinct of

colour." Suggestive design, enduring workmanship, colour that should be exquisite and various without the fine gradation that he held to be unsuited to the material—these were the principles he deduced from his admiration for Persian carpet-weaving. His practice as a designer and as a weaver of his own designs determined his detailed theories of beauty in carpets. Elementary form, suggestive but never vague, flatness of design, with no more than a suggestion of plane behind plane,

The Adoration of the Magi,
Design by Sir E. Burne-Jones. Executed by Messrs, Morris & Co.

#### SUPPLEMENT TO THE ART JOURNAL.

frank contrast of colour, harmoniously brought together and hounded hy defining outlines—these, broadly speaking, are his working principles of carpet design.

We have given so much space to the theories that Morris advanced, hecause the spirit of practical enthusiasm that hreathes in every word he wrote on carpet-weaving is the generating spirit in the modern attempt to make a national craft of the immemorlal craft of the East. But whilethe "Buller's Wood" carpet, with its lovely interlacing of curving stems, its flowers and perching hirds, the "Peterhouse" carpet, and other less magnificent webs woven during these last twenty years at Merton, are undoubtedly one of Morris's great claims to he remembered as a maker of beauty, his chief fame as a weaver will probably rest on the Arras tapestries that were his highest weaving projects. As a weaver of hand-tufted carpets his enterprise has been followed, and from the growing success of the attempt one may augur a worthy future for the craft In Great Britain. But as a tapestry-weaver the influence and achievement of William Morris are singular, and it seems fit to give some account of what he wrought in that "noblest of all the weaving arts," in connection with what I have written concerning his carpet-weaving, seeing that the two weaving methods were in his mind and practice closely associated.

In his carpet-weaving Morris had nearly everything to do for himself. He was dyer, designer, master-weaverthe sole mover in the enterprise. But, to some extent, his market was provided for him. Carpets of one kind or another are required by every one, and he had only to prepare the public mind to recognise merit in his kind of carpet-weaving. For the tapestry he planned to weave, however, there was no demand, nor from the facts of the case could there ever be a general demand for it. As Morris wrote in 1878 to Mr. Wardle, who had proposed a joint experiment in tapestry-weaving:—"Tapestry cannot be made a matter of what people nowadays call manufacturing." And again :- "I have no doubt we shall both lose money over the work; you don't know how precious little people care for such things." So that when, after moving into Kelmscott House, Hammersmith, in 1878, Morris had a tapestryloom huilt in his hedroom, and began weaving through the early hours of the spring and summer days the

"greeneries" that he had designed during several months of impulse, he hegan with full knowledge of the "unwanted" character of his work.

At Queen's Square, too, in the house just vacated as a living-house, another loom was built, and there Morris taught first one lad, and then, with his help, two others, the art he had taught himself through many months of daily practice and study. "The Goose-girl," a design hy Mr. Walter Crane in illustration of Grimm's "Fairy Tales," that had pleased Morris as fit for translation into tapestry, was the first piece of figure-tapestry woven by William Dearle and his assistants, who were later to accomplish such noteworthy hangings as the Exeter College Chapel "Star of Bethlehem," or the long series of "The San Graal" at Stanmore Hall. But though this first figure-piece was designed by Mr. Walter Crane, the artist to whom Morris had looked from the heginning, writing of him as the "one man living (so far as I know) who can give you pictures at once good enough and suitable for tapestry," was, of course, the friend of hls whole working and dreaming life-Sir Edward Burne-Jones. As soon as the important move took place that transferred dyeing pots and carpets and tapestry-looms from London to the space and quiet of Merton Ahhey, the work hoth of tapestry and of carpet-weaving was enlarged from the experimental stage into one of important accomplishment. "Greeneries," flower-and-leaf pieces such as the "The Woodpecker " or "The Forest," were the first work of the weavers-Messrs. Dearle, Sleath and Knighttrained In the Bloomshury days. The cartoon for "The Forest" was the joint work of Morris, Mr. Dearle, and Mr. Philip Wehh, who introduced the animals; while the more harmonious" Woodpecker" was the sole work of Morris. The execution of figure-designs by Burne-Jones, such as the "Flora" and "Pomona," wherein flowers, leaf-scrolls, horders and the scrolls that hear the motto were elahorated in the workshop, prepared the way for the weaving of "The Star of Bethlehem," completed in 1890. Those who saw this fine weh in the Oxford Street show room before it was hung in Exeter College Chapel had a hetter opportunity to appreciate its heauty than visitors to Oxford enjoy. The woven design of the straight-rohed, straight-winged angel

of the star, with the resting feet, the deep eyed kings in their splendour, and the child and mother within the shelter of the shed, realises not only the artist's vision of the moment, glorified with such tenderness hy the painters of all time, hut, also, in the fulness of the expression, in colour, in detail of rohes, the inventive lahour of the workers at the loom. Yet more of the heauty of the whole is owing to the weavers in the profusion of flowers that brighten the foreground and in the rosehedge hehind the Virgin's headcharming detail hut slightly indicated in Burne-Jones's cartoon. Finally, this tapestry, expressive of the fine visions of the painter, of the true craftsmanship of the weavers, is, ahove all, expressive of the ideal that animated Morrls in the supervision of this and other hangings of Arras tapestry. (To be continued.)

# Turner's Last Swiss Drawings .- II.

N a previous number of this Journal (see p. 329) we attempted to trace the conditions under which Turner's latest work amongst Swiss lakes was executed, to follow up the history of certain of his Swiss drawings, and more especially to throw light upon Turner's method of work in his later days. To help us in this, photographic reproductions of certain of his drawings\* were placed side hy side with photographs of the sketches upon which these drawings were hased. These sketches may all he found in the National Gallery, hut they are not all of them among the works permanently hung on the walls of the lower rooms; the others, however, may at any time he seen on application to the attendant on duty there. There may possibly he other sketches of this series among the vast stores of note-hooks and hundles of loose sheets still stowed away in the identical tin hoxes that were handed over, nearly fifty years ago, to the trustees of the National Gallery by the executors of Turner's will. Ruskin's selection from these stores, especially in the case of Turner's later work, was at times somewhat capricious. Those we have chosen, however, are, we think, sufficient to illustrate the points at present dwelt upon.

'THE LAKE OF ZUG.'-This is one of the 1843 drawings. It was made for Munro of Novar, but he thought it was too blue, and let Ruskin have it. The latter sold it many years ago-it was not in the 1878 exhibition-to Lord Dudley. It is now in Sir Donald Currie's drawingroom in Hyde Park Place, where it hangs as a companion to the late unfinished drawing of Pallanza. It would he difficult to say which is the hluer or the more lovely, they hoth stand out like jewels, and rivet the eye on entering the room, where some thirty other drawings hy Turner hold them company. There is no doubt that we have in the elahorated sketch here reproduced for comparison (No. 97 of Ruskin's catalogue) one of the ten that Turner hrought to Griffith in 1843. As in the case of the 'Walls of Lucerne,' this sketch is no hasty impression. As a hasis there is a rapid, flowing pencil outline, noticeable especially in the Mythen peaks, and then upon the paper still wet with the first washes of colour, over the deep blue slopes of the Rossherg, a series of hatchings with the hrush has given the gradation to the warm light that streams in on the left. It is to the texture given by these hatchings that is due not only the appearance of high finish on the mountain side hut also the marvellous intensity of the hues. The point of view is from the south shore of the lake, along which the St. Gothard line now runs; to the right rise the first huttresses of the Rigi. At the head of the lake the white church of Aart is silhouetted against the deep hlue slopes of the Rossherg, over which the sun is just ahout to hurst out. Ahove, to the left, the morning mists hegin to coagulate, as it were, into cumulus, the first threat, perhaps, of a local thunderstorm. Beyond, in ghostly outline, faintly discerned through the golden morning mist, rise the twin peaks of the

\* These, I should say, had been prepared for Sir Walter Armstrong's work on Turner, and were kindly placed at my disposal by Messrs. Agnew and Son. There are groups of figures and boats indicated both to the right and the left in the sketch, and these are further elahorated in the drawing, where to the left we have the well-known motif of girls hathing; otherwise the description of the one applies to the other. For some unknown reason the drawing has lately heen known as 'Zurich,' and it appeared under that name when shown at the Guildhall in 1899. The well-known twin peaks on the horizon should alone have corrected such an error.

"ZURICH.'—This is one of the five drawings for which Munro of Novar gave commissions in 1842. In the catalogue drawn up hy the late Mr. W. Frost, A.R.A., after Mr. Munro's death, it is thus described: "Zurich, town mid-distance, lake and mountains heyond; roofs of houses and people picking grapes; army passing through gate of town."

Turner made ahout the same time another drawing of Zurich, similar in subject and treatment; from it a large plate was engraved by J. A. Prior. This drawing was formerly in the Gillott Collection, and now belongs to Mr. Tatham. As for the drawing with which we are now concerned, it was sold for twelve hundred guineas at the Munro sale, and it is now in Edinburgh in the collection of Mr. Irvine Smith. The incident of the plucking of the grapes, in the foreground, confirms the impression given by some of the other drawings of this series, that they are founded upon effects seen somewhat late in the year, that the sketches, indeed, were made as late prohably as the middle of September. And it was in that later autumn season, it would seem, that most of Turner's last work on the Continent was made. We happen to know that the next year, in 1843, he did not return from ahroad until the heginning of October. (See the "Journal of a Lady," quoted hy Thornhury, p. 245.)

I cannot pass over another point of interest, to which Mr. Frost alludes in his description-the throng of horsemen passing over the hridge helow; this incident is still more prominent in the drawing engraved hy Prior. Turner must always have associated Switzerland with revolutions and military movements. At the time of his first visit in 1802, during the interval of the peace of Amiens, he found himself in the thick of a complicated series of disturbances fomented by the intrigues of the First Consul. In the early forties the land was a very hothed of contending parties. There is a rare reference to these autumn excursions in a letter now in the possession of Mrs. Ayscough Fawkes, and in it Turner makes a hrief allusion to the disturbed state of the country. He writes to his friend Hawkesworth Fawkes in December, 1844, "I went, however, to Lucerne and Switzerland, little thinking or supposing such a cauldron of squahhling, political or religious." I have found two sketches of Zurich in the National Gallery (Nos. 287 and 289) upon which Turner may have based this drawing, but they hoth differ from it considerably in point of view. In the one we have chosen for illustration (No. 287), an angle of the old rampart is a prominent object in the foreground. This may, perhaps, he the Katzen Bastei; in an old guide-hook of 1840, this Cat's Bastion is mentioned as

The Rigi at Sunrise.

By J. M. W. Turner, R.A.

The Rigi at Sunrise (The "Blue Rigi").

By J. M. W. Turner, R.A.

From the drawing in the Collection of John Edward Taylor, Esq.

"commanding a delightful view of the town, lake, and distant Alps," and as having been preserved when the adjoining walls were cut away. Its position must have been somewhere a little to the south of the present railway station. The sketch is a rapid one, but the effect of great detail is given by the outline, to some degree in the true local colour, quickly traced with the brush. A great mass of yellow light is reflected on the lake and river, while the distant hills are half lost in a veil of blue mist.

'THE RIGI AT SUNRISE.'—This drawing, known as the 'Blue Rigi,' was bought in 1842 by Mr. Bicknell; after his death in 1863 it passed into the hands of Mr.

J. E. Taylor, the present owner.

Turner made two other famous drawings of the Rigi at this time.—I. The 'Red Rigi,' which was bought by Munro of Novar; after belonging at one time to Mr. Ruskin, it now hangs as a companion to our 'Blue Rigi' in Mr. Taylor's drawing-room at Kensington. 2. The 'Dark Rigi,' like the 'Blue Rigi' an effect of dawn, and often confused with it. It was one of the drawings commissioned by Mr. Munro and it now helongs to Mr. C. A. Swinhurne.

In all these drawings we see the long crest of the Rigi rising above a low wooded spur—the Meggenhorn—which sbuts off the open lake except to the extreme right. In the shallow water in front dark masses and spots are obtained by strangely shaped craft, often reminiscent of gondolas, by floating masses of rubbish, or again by waterfowl. Here, in our 'Blue Rigi,' the dark mass of the mountain, ultramarine passing into aubergine-purple, is sharply relieved against the diffused yellow light of the sky. Just above the highest crest of the mountain, the morning star shines out, and is reflected on the calm lake below. (In the photograph the reflection alone is to be made out.)

The sketch, of which we give a reproduction, is in some points closer to the 'Dark Rigi' than to our drawing. Under the right flank of the mountain hovers a grey-white floating cloud, either the last wisp of the morning mist, or possibly, for so it looks in Mr. Swinburne's drawing, the steam blown off by the little lake steamer, which Turner has introduced into another drawing of this series.\* In this sketch a plum-like bloom is given to the surface of the Rigi by a scumbling of warm colour over the hlue ground. To the right a range of snowy mountains is indicated by the drag of a half-dry brush. It will be noticed that in the sketch the outline of the Rigi is broken, as if taken from a point further along the bay to the south-east. Ruskin, however, who may well have known, says somewhere that these sketches were made from the windows of the "Cygne." As the view from this point is now utterly ruined by the huge blocks of buildings, mostly hotels, to the left, and as the line of the quays, too, has been considerahly advanced at the expense of the shallow shores of the lake, it is difficult to settle this point now. My old guide-book says of the "Swan" that "complaints have been made in 1837 that it was dear." It was then a new hotel, and I cannot help thinking that Turner would have been more at home at the "Balances," by the Reussbrücke, "an old-established house, good, clean, and moderate charges" (see under 'Lucerne hy moonlight'). The choice in those days lay between these two inns.

EDWARD DILLON.

# 'O Mistress Mine, where are you Roaming?'

BY EDWIN A. ABBEY, R.A.

ETCHED BY FRED HUTH. FROM THE PICTURE IN THE WALKER ART GALLERY, LIVERPOOL.

N more than one domain of art the name of Mr. Edwin A. Abbey is to-day prominent. In the Public Library at Boston, U.S.A., is a series of decorations by him illustrative of the great Arthurian legend; he has been chosen to paint the official picture of the Coronation of Edward VII. in Westminster Ahhey; as a black-andwhite draughtsman he has for years been held in honour. By birth a Philadelphian, in early life Mr. Abbey entered the drawing-office of Messrs. Harper in New York, and while yet the enthusiasms of youth vivified every impression, crossed the Atlantic for the purpose of studying in the "old country" that pastoral life knowledge at first-hand which was essential ere he could illustrate Herrick. This initial visit, save for ahsences hardly more prolonged than those of painters born in England, has lasted till now; moreover, the drawings of no living artist are more expressive of native traditions than are those of Mr. Abbey. He exhibited for the first time at Burlington House, if we mistake not, in 1890, and his 'Richard, Duke of Gloucester, and the Lady Anne' attracted widespread attention in 1896, the year of his election to Associateship. Since July, 1898, he has been a Royal Academician. It is worthy to note that, Mr. Watts alone excepted-for even Mr. Sargent was three years in the "outer circle"—the raising of Mr. Abhey to full membership of the Academy was more rapid than that of any modern artist.

As a book illustrator Mr. Abbey will always be associated with the comedies of Shakespeare, whose interpretation is at once an exigent and a delightful task. As is well pointed out by R. E. D. Sketchley in "English Book Illustration of To-day," the artist "thinks his way through processes of gradual realisation to the final picture of the characters in the play or poem. If he isolates a figure, one feels that figure has stepped forward into a clear place of his imagination as he followed its way through the crowd. If he sets a pageant on the page, or some piece of turbulent action, or moment of decision, the actors have their individual value."

'O Mistress Mine, where are you Roaming?' was first seen at Burlington House in 1899, while still the painter was R.A.-elect. It differs essentially from pictures like 'King Lear,' inasmuch as it is a pure imagining. The lilting song in Twelfth Night is introduced by Shakespeare as an interlude, as a motive which loses something when the suggested persons are actualised on canvas. Many of us prefer to read, or at most to hear on the stage, that song of the clown, however admirably the implied scene he represented. The Shakesperian association evoked by the title conflicts with pleasure somewhat in this characteristic work. In Mr. Abbey's canvas, sympathetically etched by Mr. Fred Huth, the lover finds his lady on a hattlemented terrace, beneath the vine trellis of which a minstrel sings. Without, beyond the spring blossoms and the slope of the Apennines, is a glimpse of sunset sky. For the rest, the questioner is in rich carmine robes, the lady in black, with pink-lined sleeves. By kind permission of Mr. Abbey there is reproduced on page 361 a sketch for the principal figure.

In Mr. Irvine Smith's 'Lake of Uri, from Brunnen,' and again in the engraved drawing belonging to Mrs. Williams. The first steamer on the Lake of Lucerne was started in 1837, and met with much opposition from the boatmen.

# A Note on some Lady Photographers, with Selected Examples of their Art.

A Study. By Agnes Jennings.

PHOTOGRAPHY is so much in

Is so much in these days, that a glance at the work of a fewladies who have taken up photography as a husiness should not he de trop in the pages of THE ART JOURNAL, particularly as we are ahle to let them, to some extent at least, speak for themselves

through the examples here given.

In several cases, the ladies whose work accompanies these notes have set out to hecome painters, and consequently have gone through the routine training of art students; and such a training is of inestimable advantage to them in the calling they have elected to follow. What one feels ahout so much of the "art photography"

ahroad, is that there is Falstaff's hread allowance of the art to an unconscionable amount of that which is not art. One ought to keep clearly hefore one, in discussing such a subject as this, the categories of art and mechanics.

The production or good negatives as negatives, and the printing of the same hy any of the numerous processes, is the mechanical side of the work, and many operators seem satisfied when they have succeeded in accomplishing this. When there is the opportunity of showing taste and even imagination in the posing of the model, lighting the same effectively and judiciously, that part of the work which is included in the term "artistic," is too often sadly to seek, and I have to confess that from what I have seen of the work of some of the leading lady photographers, they can successfully hold their own against most men, and in one hranch, that of taking children and young girls, I am inclined to put men in the second rank. Their success in this hranch is not surprising, for women hring sympathy and intuition to bear upon their work, two important factors in a successful photograph, and ones that tell markedly where the subjects are girls and children. And even in the case of the grown-ups, a woman's

knowledge of what goes to give the effect of "well-dressed," enables them to make the hest use of drapery.

Just as the placing of a figure on the canvas is the first consideration with a portrait painter, so the posing of the figure should he the first thing attended to in camera work. It is difficult to secure originality in this matter, for in the hundreds of thousands of negatives annually produced the field is necessarily very

thoroughly explored. The mere search after novelty is attended with more failure than success, as is evidenced hy many of the exhihits at the Photographic Salon held at the Dudley Gallery every autumn. The work shown there is largely that of amateurs, who can therefore please themselves, instead of having to please their sitters, and though occasionally one saw a successful novel arrangement, I can well understand that such odd and hizarre effects as many of them were would not commend themselves to a photographer's clients. Still, as I ven. tured to suggest to some of the workers whose sun pictures are reproduced, there is something to he learnt from these novel arrangements, a hint or suggestion worth following out, for there is nothing easier than to get into a groove in any calling, and this is particularly so in camera portraits, and however much the exhihitors at the Salon may he jeered at for their departures from a conventional standard-and I must admit that a good many examples appear to wish to masquerade as anything other

than photographs, as though they who produced them desired chiefly to escape the limitations of the camera—one occasionally sees a study that evinces the right artistic selection under the conditions the art imposes, for a photograph must he a photograph when all is said and done, and to attempt to make it look like a had chalk drawing, or a poor one in sepia, is to hring the art into contempt. A photographer is called upon to do his or her hest at the moment, and the lack of the opportunity of deliherating and getting to know something ahout the sitter is a

severe handicap, and the only way a professional worker can venture upon new modes of lighting and untried arrangements is hy experimenting with suitable models. Some of the examples here given are from negatives taken in this way. A good deal, too, can he learnt hy studying fine portraits hy the great artists, and I notice that lady photographers have learned much in this way, hoth as to posing and lighting, but

also in designing the painted cloths which form the hackground to many photographs. The really barharous back-cloths one used to see in so many photographs, and still does in the provinces, have given place to much more harmonious and carefully designed backgrounds. Those who wish to stamp their work with their ego, either paint these cloths for themselves or get them done to their own design. Portrait painters of to-day have always that hogey, an exact likeness, appearing to them, for the idea is very generally held that a photograph must he like the sitter, while painted portrait is likely to he the re-While it is verse. perfectly true that a negative does faithfully record the image hefore the lens, it hy no means follows that what is developed is characteristic of the sitter, and that is after all what we mean hy a likeness. It is the painter and the painter only who can search for and give us "the man hehind the man," and in this searching the likeness that is on the surface, the mere superficial commonplace record, goes, happily I think; for

The Mirror.

By Catherine Edmonds

best, and there is plenty of scope for a nice taste and artistic discrimination, plenty of room for the art to come in. When it comes to work on the negative itself we tread on delicate ground. A good deal of "retouching" is not defensible, for it is nothing more than bad drawing. The paring down of features, the shortening of a nose or chin and other enormities of this nature have only to be mentioned to be condemned. I merely touch upon this in passing, for none of the work I have selected for reproduction errs in this way. The retouching is nothing more than making good certain defects and the lessening

of distortion due to the lens.

How far can a photograph at. tempt to be pictorial? Thequestion suggests those abominations, photographic compositions in which people, very obviously models, and not very good at that, assume attitudes and expressions at the photographer's bidding. One still sees these "picture" negatives at photographic exhibitions, though who buys them I am at a loss to understand. Yet a highly pictorial quality can be given to a photograph in quite legitimate ways, as some of the examples given prove, but there is always danger ahead, for the least exaggeration or false note is fatal. It is very tempting to a well - equipped photographer to endeavour to

trench upon the painter's ground, but a photograph has to be a print from a negative when all is said and done; there is no escaping it. Too many show photographs seem to wish to hide themselves beneath a sham pictorialness, to pretend to be a smudgily executed chalk or sepia drawing, but it seems to me that all the "fakes" ever devised only accentuate the very thing their authors wish to leave behind. A photograph is a rendering in black and white, and where you have to get "colour" by the opposition of light with dark the absence of brilliancy is a fatal defect. We think nothing of a mezzotint that is wanting in brilliance, and to say that there is an absence of this quality in a photograph is to condemn it. Yet at the Photographic Salon I noticed a large number of these low-toned prints highly priced and prominently placed, as though the society looked upon them as the last word on sun pictures! They show that those who produce them are ashamed of being photographers and aim at being artists; but their efforts in this direction savour of the ass in the lion's skin.

Printing has made great strides within the last few years, and much attention is wisely given to it, seeing what great latitude is allowed and how considerable is the opportunity given to the photographer to exhibit

skill and judgment by the way he prints his positives. Except at my request none of the ladies whose work is given use albuminised paper, but print their negatives in platinum, bromide or carbon, the former from choice, as many tones of colour can be obtained in this medium. The shiny printing out paper which brings out everything in the negative is never used by artistic photographers, though in the provinces it appears to be the most popular medium. The matt surface papers give an air of mystery-the lost and found quality which painters aim at, and this surely is an advantage in a sun picture, though there must be hrilliancy too. Some parts of the picture must be accented to give it "snap,"

By Helen Mc Caul and Elizabeth Dickson.

where all is woolly, how tame is the net result! And this woolliness is the fault to be found with so many of the artistic productions exhibited by amateurs.

There are severe limitations which the camera and lens impose upon one, and it seems to me beginning at quite the wrong end to pretend that these are nonexistent. An artist can select what he pleases out of the wealth of matter before him, and all the while he is working, this power of selecting what is essential to the exclusion of all else can be exercised. There is nothing comparable to this in photography, and the nearest approach to it is in arranging the material before the exposure is made, but this must be effected with due

recognition of the limitations imposed upon the worker hy the lens, so as to avoid distortion due to the too violent perspective yielded by all lenses. Amateurs who essay portraiture will not recognise these limitations, will not recognise that photography is entirely a question of light, and constantly try effects which simply will not come hy the means employed. The number of films and plates thrown away yearly hecause of this attempt to do the impossible in photography is enormous. Just as the painter achieves nothing with certainty until he learns what is possible in paint, so the camera artist will waste his time and money unless he frankly accepts the conditions imposed upon him, and gives up trying to effect the impos-

sible with the means at his disposal. I speak here as an amateur myself, for I have wasted a good deal of money in the vain attempt to overstep the modesty of photography. When one comes to practise

Alice in Wonderland. By Helen McCaul and Elizabeth Dickson.

as a professional, the fact that you have to please the person of average taste who is more or less tied and hound hy conventions, I imagine conditions one's work at once. To secure their lasting patronage you must please them there and then, for rarely is it given to one to have a second chance. The successful camerist, therefore, gets to know a certain class of effect that comes well, and that can be repeated with some certainty, and works within those limits, and hy degrees develops a certain individuality which amounts to originality, so that though it is less possible to go round a photographic exhibition and say who produced the prints without referring to the catalogue as is possible at the Royal Academy or other gallery, it is never-

theless possible to *spot* photographs by internal evidence, and the maker of sun pictures can hegin to congratulate himself when this state of thing is achieved.

No. 1.

## Chip-Carving.

CHIP-CARVING is a very primitive division of the great art or craft of carving, whether in marble, stone or wood. Nearly all nations, both in ancient and

in modern times, have practised it. As soon as man became sufficiently civilised to develop a sense of pleasure in decorating the articles which he had fashioned with his own hands to supply his wants, and had skill enough to make himself a knife or some sort of implement with a sharp-cutting edge, he became, no matter how rudimentary his ideas of design, a chip-carver. This instinct is characteristic of savage nations at the present day. They cover their canoe paddles and prows with this form of decoration, and show great skill in arranging their patterns to fit the differently shaped parts of the form they are ornamenting. It is difficult to say exactly what kind of knife was used by these primitive people; it may have been of metal or of hard stone, it may have been straight or curved, but it was obviously a knife of some kind, however primitive.

In most civilised countries the peasantry still practise chip carving. In England a certain amount is now being done in remote country places, re-introduced by the Home Arts and Industries movement, as a way of passing the long dull winter evenings, though as a spontaneous native craft it seems to have died out.

From Norway, Sweden, Iceland, Germany, Russia, Japan, India and Persia, and England in old days, examples of chip-carving can he gathered. Those which have come down to us seem generally to belong to the seventeenth, eighteenth, and nineteenth centuries, hut there is every reason to believe that the craft must have been practised in these countries in earlier times.

The modern form of chip work differs from the more primitive work, peasant or savage, in that wood-carver's tools are used instead of simply the knife or carpenter's chisel, which were the implements of the earlier and more primitive workers; the result being that the work has gained in geometric accuracy, as well

as in delicacy and refinement, but has lost in vigour and freedom—and perhaps also in interest. Specimens of chip-carving in stone are sometimes found in early Romanesque churches. There is such an example in a little church of Norman date in the village of Studland in Dorsetshire. The work there was done either with an axe, or, more probably, with a stonemason's chisel and mallet.

A very skilful worker can carve slightly curved surfaces and also curved lines with a knife, but as a rule the use of the knife constrains the carver to straight lines and flat surfaces. This is shown in the Spanish hox, a case for holding a prayer-book (Figs. 2 and 3), which is unmistakeably cut with a knife. Of the simple patterns shown in the illustrations 4, 5, 8, series A was entirely cut with a knife; series B is the result of attempting to carve the same patterns with the three tools known to woodcarvers as a "fish tail" or "spade" chisel, an "extra flat" gouge, and a "veiner" or "fluter" (the last mentioned hardly a quite legitimate chip carving tool). It is clear that series A is freer, bolder, and more effective than series B, but less refined, less delicate, and certainly less accurate. The whole scheme of pattern used in chip-carving is made up of small elements like the stitches of a needlework sampler, and all the elementary cuts are triangular in shape; three incisions make a triangular pocket, and four a square pocket (Figs. 4, 5). The greater part even of the most intricate patterns are composed of these triangular pockets arranged in various ways. A favourite comhination is the hexagonal star formed by six pockets together, the pockets being, of course, triangular. In Fig. 5 another form which frequently occurs is given.

No. 2.

No. 3.

At first sight it looks rather different from the other shapes, hut it is in truth simply made up of two pockets which, instead of heing triangles, have their outer sides curved. There are three systems on which the patterns are commonly arranged. In the first the pattern is carried all over the object carved. No plain spaces are left; hut the whole surface is covered with devices composed of pockets, either triangular or square. The second plan is to leave plain hands (wide or narrow) hetween horders and circles of chip-carving. The third way is to leave large plain surfaces and draw in the pattern freehand, not arranging it geometrically.

The all-over treatment is the one invariably used by savage nations and the most primitive peasantry. Fig. 3 is a good example of it. The second plan is that followed in Icelandic, and sometimes in German, carving. Here the result is artistically more satisfactory. The ornament is less in quantity and hetter in quality; it is evident that a higher and more cultivated intelligence has heen at work upon it than was the case in the first or savage plan. The lid of a Japanese hox shown in Fig. 7 is a very heautiful example of this second method. And here it is worth while calling attention to the way the richer pattern is placed in the midst of the flat diapering of the hackground. The workmanship of this hox is exceedingly good and very delicate.

It seems to he the work of a highly skilled carver, who did not use a knife, hut had fine chisels and perhaps other tools at his command, and who spared no pains to make his work as good as it could he.

The third plan can only he successfully used when the workman is a good draughtsman, for it depends, not on accurate geometrical lines, hut entirely on the carver's feeling for form and his power to express it. Of the examples given in Figs. 4, 5, 8, series A shows the result of using a knife, B of working with wood-carver's tools. There is a panel from Persia carved in this freehand chip in the Victoria and Alhert Museum.

It is difficult to describe the actual method of using a knife in chip-carving. If the object is small enough, the wood can be held in the left hand, the knife clasped in the right, the thumh resting on the wood that is to he cut, while the first finger is on the hack of the knife-hlade. The sides of the triangles are then wasted gradually away with the knife sloping at an angle of about 45° to the surface of the wood. In cutting long straight or curved lines, stems or outlines round the patterns, a centre line is first cut straight down into the wood, and then from either side of it a sloping cut is made inwards, removing two long shavings of wood and forming a V-shaped cavity.

In carving with tools, the wood is laid on a hench or table, and held down with the left wrist and arm; but the fingers of the hand must he on the hlade of the tool always, guiding and checking it as it moves. To cut the pockets, the carver has first to find the middle point of the triangle, and draw from it to the angles three straight lines, which give three small triangles within the larger one. The three joining lines are then cut straight down, and the three sides of the original triangle (which form the hases of these smaller figures) are sloped down to meet them, so that each small triangle comes cleanly out as a chip.

Straight or curved boundary lines and stems are cut with a veining tool, and curved surfaces are often cut with a tool known as an "extra flat gouge."

Some of the hest examples of chip-carving come from Iceland, Sweden and Norway; and in these countries the work seems to have more raison d'être, as they are

No. 4.

No. 5.

accustomed to use wood for all manner of household utensils, which in England are invariably of earthenware or metal. Probably the wood is a kind of pine; it is light hrown, and when carved, a preparation of wax and turpentine with a little powdered vermilion added, is hrushed over it, which gives a slight polish and turns it to a very good colour.

The Icelandic examples have a very distinct character: the usual purely geometric way of setting out the pattern is departed from, and the design is generally hased on a scroll, which is often curled up forming a volute with an eye, which is divided into two or three large chip pockets, often with curved sides. The scrollwork, consisting sometimes of a continuous wave scroll. forms a wide hand, and is left plain; only the intervening spaces are filled in with chip pockets. The effect of the use of the hroad plain hands is very good, and gives an interest to the design which is lacking in geometrical figures composed entirely of triangular pockets. Letters are frequently introduced, forming horders; and the Icelandic alphahet is very suitable, as the lines of the letters are square rather than curved. There is, I think, no doubt that the Icelandic peasants did their carving with a knife. The sides of the pockets, especially the curved ones, are not worked evenly down to one point, hut scooped out, leaving uneven ridges such as would result from a knife-cut; moreover, the line which follows the outside edge of the scroll is just like the scratched line that can he made with a knife. Two hoxes in the Victoria and Alhert Museum (Nos. 716 and 720) show undoubted signs of having been carved with a knife in this rather rough manner. They are made of pitch pine, with a coarse grain, and stained. In some of the more highly finished objects in the Museum the carving is undoubtedly done with tools, and round gouges have heen used; indeed, the round shape of the tool leaves marks hehind it which are at once distinguishable from straight chisel cuts. This gives variety, hut detracts from the real character of chipcarving.

The Swedish carving has not the interesting character of Icelandic work. There are none of the effective plain

No. 6.

No. 7.

hands; the work is decorated all over, more like the work of savages. It is, however, generally very carefully executed. The sunk pockets are often cut with a tool known to carvers as a "parting" or V tool, the hlade of which has two sides meeting at right-angles. The use of this tool gives a mechanical appearance to the carving, hecause all the pockets, vary as they may in size and depth, must be cut at the same angle to the surface. The Swedish carvers often paint their work, and are fond of hrilliant colours, not to say gaudy ones.

Norwegian chip carving is very much like Swedish; the Norwegians introduce chip patterns into their favourite dragon designs. They use two or three differently shaped knives or tools. Several of their horders are composed of very acute triangles (see Fig. 1) which must he cut either with a tool known as a "skew" chisel or with a very sharply pointed knife. The "skew" chisel is like an ordinary chisel with the edge ground away at an acute angle to the side of the hlade.

There are many examples of old English chip-carving. Two very interesting specimens are to he found in the Victoria and Albert Museum. It is difficult to say for certain whether these were carved with a tool or a knife; hut if a tool was used, it was probably a carpenter's chisel. The geometrical forms lose much of their accuracy when cut with this tool. A carver's chisel is much thinner, and is ground and sharpened on both sides, with a long hevel, hringing the cutting edge into the centre of the hlade. This makes it a far more delicate instrument, and enables the carver to work with perfect accuracy and to finish with exact cleanly cut angles at the

No. S.

No. 9.

meeting of the surfaces. I should define real chipcarving as ornament which can be executed entirely with a knife or chisel. When the modern chip-carver introduces any other form of cut, such as those borders which are known by cabinet-makers as "thumb mouldings," or lines made with veiners, fluters, or gouges, he is, strictly speaking, departing from the province of chip-carving and entering upon methods which do not belong to it. There is a sharp distinction between chip-carving and other forms of surface carving.

# Cosmopolitan Art.

A FRIENDLY DISPUTE BETWEEN MR. SELWYN IMAGE AND MR. LEWIS F. DAY.

SELWYN IMAGE.—There is no more fundamental fallacy than to suppose that art should be something cosmopolitan, knowing neither age nor country.

LEWIS F. DAY.—Why? Of course, a man's work will betray his age and country, but surely the less he thinks about that the better. Let bim say his say. The world may be his audience. Wby not? Art is a language of wider than national comprehension, and seems, therefore, just the one form of expression which can and should be cosmopolitan.

S. I.—Why? Do you ask? Because the basis of art is individuality. This applies to nations just as much as to persons. Art is the individual expression of an individual way of seeing, feeling, and adapting nature. You write of an artist, "Let him say his say." Precisely, his say; that is my point. And only when what be is saying thus springs from individual character, and is coloured by it, does he speak forcibly to the widest circle. Again, let me add, this principle applies to nations as well as to persons.

I. F. D.—I quite agree that art is individual expression. But I do not see why the individual should never rise above parochialism. He may be a man of the world and not lose his individuality.

There have been artists who were deeply impressed by the art of other and very different countries, and yet remained absolutely themselves. Alfred Stevens was not less himself because he owed something to the great Italians, nor William Burges because he sympathised more with French Gothic than with English, nor E. W. Godwin because something in Japanese design appealed to him.

S. I.—No doubt in the art of every nation there are elements which can profitably be transferred, as well as fundamentally local ones which cannot. A fine artist instinctively separates these, and assimilates such of the former as impress him. However, that he not only has to separate, but to assimilate, to stamp the borrowed coin with bis own image and superscription, before it becomes of value in its fresh currency, argues, to my mind, not that art is cosmopolitan, but rather that this is just what it is not. You cannot successfully transfer it en bloc from one land to another.

L. F. D.—I fancy we attach different meanings to the word cosmopolitan. I understand a cosmopolitan to be a citizen of the world. You appear to regard bim as an importer of foreign goods, wholesale.

S. I.—No, my dear friend, I entirely accept your definition, and think it an excellent one. But if I am really a citizen of the world (and I doubt whether such a thing is possible) I am every way as much at home in Pekin, say, as in London; the air of the one place is as congenial and healthful to me as the air of the other. To my mind, however, the manifestation of art amongst any given people is largely conditioned by the character and circumstances of that people; and when its practitioners say "Pooh-pooh! any other tradition we happen to admire we can adopt just as well," they lose their own native virtue, and at most obtain but the semblance of another's.

L. F. D.—I don't contend that art should know "neither age nor country," or that what is native to one country is equally proper to another. The point on which we differ is whether there be not much that is foreign which we may assimilate, and still be Britons. May one not claim to be a citizen of the world and yet be most at home by one's own fireside? A Londoner may very likely be more at bome at Peckham than at

Pekin, but that does not imply that his range of vision should end with the postal radius. Your argument seems to me not to allow the poor citizen of the world a

S. I.—I am sure, when he is full-fledged, a man may assimilate much that is foreign and still he a Briton. But seeing that every nation's art is hased on, and differentiated hy, certain national characteristics, I would have students wholly taught and thoroughly grounded in these first. I mean Englishmen in English traditions, Frenchmen in French traditions, and so on. Foreigners may give us certain finishing touches, they cannot lay for us a sound hasis. I am thinking particularly at the moment of students. As soon as these are masters of their craft I am most ready to allow they would do well to study foreign products, e.g., even so alien a product as Japanese art. But let a man know his own country hefore he is off galavanting ahroad. I don't deny a citizen of the world a home; I only say that, if he is what he claims to he, his home is anywhere. That's why I question his existence.

L. F. D.-Perhaps the citizen of the world is only a fiction; hut he stands conveniently for the man who doesn't stay always at home, and is open to impressions from all round, and far heyond the country where he

was horn.

National characteristics are in us, and will out. I don't want to hush them up as if they were crimes, nor yet to nurse them as if they were virtues that must be coddled.

S. I.-All right. Let our good old friend, the citizen of the world, stand at that. He's a fine fellow, and I hope he'll let me shake him hy the hand, and drain a humper to his health.

But what's this ahout coddling? who said coddling? not I. I'm all for open windows, and fresh air, and

plenty of it.

L. F. D.-Open the window, and the fresh air that comes in must needs waft influences from across the sea. To wrap yourself up against them, in a cloak of insu-

larity is, to my mind, coddling.

S. I .- That's right enough, if intelligently appreheuded and applied. But don't let yourself he hlown about, as the theologians phrase it, hy every wind of doctrine. I never said ignore foreign art; I only said, he assured there is a tradition of art native, and therefore peculiarly suited to you. So learn this first with thoroughness.

L. F. D.-I cast no doubt upon your "intelligent

apprehension," hut that is hy-the-way.

Where, then, precisely, is our point of difference? We do differ. For example, even the student of design need not, it seems to me, shut his eyes to the teaching of

Japanese flower-drawing.

- S. I.—I fancy we don't differ essentially. It's merely a question of degree hetwixt us. To my thinking the young student-please mark the epithet-should mainly confine himself to native methods and examples till he has mastered them. After that he may he left to his own instinct amid the wonders of foreign art. Learn one thing well at a time; it lays the soundest foundation.
- L. F. D.-You are deserting the position you took up with regard to cosmopolitanism. If you had merely said learn one thing at a time, it might have occurred to me that two at a time induced that most excellent exercise of even the youthful mind-comparison; hut I should hardly have thought your mild scholastic statement worth attack.

S. I.-No, no, friend, not a hit of it; I'm deserting nothing. I say, indeed, learn one thing at a time, hut I don't "merely" say that. Because art is not an indifferent cosmopolitan affair, hut definitely a local product. I say, know your own locality first, and work it for all it's worth. You may fetch from over-sea a few daintinesses by and hye and acclimatise them. That's what I said to start with, what I've heen saying all along, what I say still.

L. F. D.—Art is less an affair of locality than of race. And our particular race is so mixed that an Englishman is likely to have more in him of Norman, Saxon, Danish, or other foreign blood than of native British; and there may, consequently, very well he more that speaks to him in some foreign phase of art than in the output of

his native parish.

S. I.—Granted that we English are a mixed lot. Yet it is equally true that there is a definite traditional English type of character, as there is a definite French or German or Italian type, as visible in their hest art as in their hooks and manners. This may he modified hy instinct and circumstances in individuals; hut it remains the hasis and predominant feature of any artist's work that is healthy and progressive, and is the thing most vital to insist upon with young students.

L. F. D. -Show me this "definite traditional English type" and I will believe in him. Is it John Bull you

mean?

S. I.—What! do you, of all people, mean to tell me you see no deep and constant difference, for example, hetween an English fourteenth-century MS. and an Italian one; hetween a Reynolds child and a Greuze; hetween a Scotch lassie and a Parisienne? etc., etc. Of a surety, thou hut jestest.

L. F. D.—So your typical Englishman is Reynolds!

who owed nothing, I suppose, to Vandyke?

S. I. - Reynolds may stand very well as a typical English artist. That he learned much from foreign artists does not knock on the head my original contention, however. I have never denied a power of assimilation in due season; nay, I have insisted on its desirahility. But this to my mind is not to assert the cosmopolitan character of art, hut rather to deny it.

L. F. D .- If, as you do not seem to deny, the result of a typically English master's study is that his work is such as he would never have done hut for the influence of some Dutchman, or Spaniard, or Italian, that, to my mind is an unanswerable argument in favour of cosmopolitanisiu (as against, may I call it, nationalism) in art, and proves your "fundamental fallacy" theory to he itself fallacious. You overstated your case, dear sir,

and you may as well admit it.

S. I.—To yield to so delightful a controversialist would indeed gratify me: hut alas! truth forhids. Nationalism, to use your own admirable term, is still to me the hasis of all sound art, hoth in the nature of things and as au historic fact. An Englishman may adapt something Italian and transmute it into his own. That doesn't make him a hit the less fundamentally an Englishman, or a hit the more fundamentally a cosmopolitan.

L. F. D.—I cannot faithfully profess any disposition to yield, and so the only agreement there is any hope of our coming to is, that we remain each of his own contrary

opinion.

S. I.—I suppose that is so. And indeed such is often the result of an argument. Yet, perhaps, in an honest argument either disputant learns something hy-the-way, and time hasn't heen wholly wasted.

Photo, Alinari.

Christo sulle Acque.

From the painting by Domenico Morelli.

## Domenico Morelli.

Some years ago the Art Journal brought to the notice of its readers the greatest master of modern Italian painting, Domenico Morelli. Recognised even then as an artist of distinction, his subsequent work confirmed his powers, and scarcely had he published the valuable records of his life (V. Napoli Nobilissima, 1901), than he died at his native town of Naples. Morelli's death on August 12th, 1901, made a deep im-

pression in Italy, and the decease of the best-loved painter in artistic circles in Italy was universally lamented. He had, in addition to his artistic talent, a keen sense of justice. To comprehend his appreciation of merit in the work of others, one has but to examine the memoirs in which, while dwelling fairly with his own career, he related the most prominent features of the art of his day.

It is from his memoirs that the elements for this article were obtained. I wish to give due prominence to this fact, as much has been written of him in ignorance of his early Neapolitan associations, it having been stated frequently that he commenced the revival of modern Italian art, whereas he himself ascribes the honour to Filippo Palizzi. To Morelli must, however, be given the credit of popularising the movement. He created enthusiasm by example and exhortation,

Photo, Alinari. Christo Morente.
From the painting by Domenico Morelli.

and having formed a centre at Naples, this artistic activity had an effect on the whole Peninsula. It was natural that a certain diffidence should be felt when the influence exercised by Palizzi over Morelli was discussed: but any such reserve was unnecessary after Morelli had acknowledged the great influence that Palizzi had over him. He confesses that the technical reforms, to which he gave so much attention, were really

inspired by Palizzi's criticism. This has an extremely important bearing on Italian painting, for till the advent of these memoirs no one had found the courage to fully state the fact, writers perferring to show that the technical researches which produced the beneficial changes now to be seen, were the result of mutual study hy the two painters, and though this version is in a sense correct, the greater credit seems due to Palizzi.

It is more than probable that Morelli, urged by his free and inquisitive spirit, would have attained the same results without the help of Palizzi's example. It was really a question of time. Morelli tells us that Palizzi's influence agitated his youthful spirit into a revolt against the existing conditions, and it was on account of this that he soon received from his fellow students the name of "pittore coraggioso"—courageous painter.

Like Balilla, he was destined to hring revolution to artistic Italy, and he thus epitomises the academical routine of the country:

"Starting by copying engravings, the next step was drawing in relief, followed by painting from the nude; in the latter class the students remained six years, an

examination being held once a month. Then studies in landscape were made, and every two months a finished oil painting was required; trees were usually selected as subjects, the masters holding the view that a tree in a landscape should he studied as much as the nude should he in the figure school." The academy was, in fact, a school of "puristi." The students who received the prizes were those who showed the least independence, and who followed artistic precedents. At Naples each mouth a study from nature was made; but nature was not painted in its splendour, nor were opportunities afforded to infuse the various individualities of the students. Nature was copied by separating the artist from nature; that is to say, by taking for a foundation a certain number of the productions of the past which were considered models of ideal beauty by the professors. No one gave a thought to intellectual education or to the study of history; nor was any attempt made to penetrate the spirit of the great authors of the day, so that students who wished to acquire this knowledge had to cultivate it elsewhere. "In the schools," says Morelli, "there was no one who could even start us in the study of history, and for those who had received no literary education this was indeed a

serious matter. Only six or seven of us in the whole academy wished to be instructed, and we read all the books we could procure. I cannot recall who it was that once found a valuable hook by the painter Raffaelle Mengs; hut from midday to two o'clock several of us would go to the library to read the book which told us of the greatness of Raphael, of the drawing of Titian, of the colour of Correggio, and of the effects of light and shade. But they were sometimes discouraging words for us, for we

had not the means of seeing the drawing of Raphael and the colour of Titian or Correggio in the collection of cauvases in our 'Quadreria,' as it was closed to us for the convenience of strangers.'' The students' small library included the Bible and the works of Mengs, Walter Scott and Winkelmann, Homer and Benvenuto

Photo, Alinari

La Deposizione di Christo dalla Croce.

Cellini, Giorgio Vasari, Dante, Leopardi, Manzoni and Victor Hugo.

At this point it is interesting to refer to the memoirs of another Neapolitan painter—Saverio Altamura—who shared, in a different way, the artistic glories of Morelli.

This artist, who was one of the few attendants at the library, writes:—"The most intimate of my friends—he who hy his example became really a mentor—was Domenico Morelli. Favoured by a wonderfully

Photo, Almari,

La Monaca al Coro.

From the painting by Domenico Morelli.

picturesque spirit, he divined the sentiments of the poets, and was able to express in words our common enthusiasm for Shakespeare, Dante, Schiller, and Byron. We made sketches when the scenes profoundly impressed us. He was my model-I his. I could not at that time express our preference for Pozzuoli, Baix, Cuma, Portici, and Granatello. The explanation only came thirty years later, when we happened accidentally to again cover the old ground. It was that Morelli then had the vision of the mystical Palestine which became later the source of his inspirations." Altamura wishes, by his words, to show the intellectual merit of Morelli's art-a merit which has to be shared with no one. In Morelli must be seen the technical mastery, at once impatient and powerful, which, forcing its way above the academical system of his day, revealed itself in his work by truth and nature, combined with his own

personality; and one must also appreciate him as an intellectual painter—one who had ideas which would stimulate his productions.

This technique requires but little mention. Italian painting at the time of Morelli, who was born in 1826, was practically that of all European countries: when a man's figure had to be represented, a lay figure was taken, and nature was reduced to the ideal beauty I have already mentioned-the environment being a matter of indifference to the painter. In fact, whether the picture was to represent an interior or an exterior the same rules applied. The model was arranged in the studio and had to be copied exactly as it was seen in that light -this was the education given at the Academy. This was the teaching of the professors, and they regarded disdainfully those who, like Palizzi and Morelli, departed from principles considered unsuitable by the official critics. By the side of this school was formed the new one, of which the recognised chief, as a matter of course, was Morelli. With him were others who could not accept the theory of ideal beauty correcting nature, a principle called "horrible" by Ruskin. This little band gave their attention to painting out of doors, and endeavoured to represent various objects illumined by the sun, or darkened by natural shadows. By this means the drawing, the tone and the colour expressed the full harmony of nature.

Naples was the centre of the new technical movement instigated chiefly by Morelli; and Florence, in the memorable Exhibition of 1861, was the city where the rival schools met, both well prepared for a formidable and decisive encounter. The opening found Morelli represented by his canvas 'Iconoclasti,' a work painted in 1855, and now at Copodimente. Next to this picture was exhibited a production of one of his pupils, Bernardo Celentano, entitled 'Consiglio dei Dieci.' The result was gratifying. The well-known Duc d'Atene de Stefano Ussi took a favourable view of the new movement, and the school of the "puristi" lost prestige. Briefly, the revolution in Italian painting, so far as concerned form and technique, asserted itself at Naples and triumphed at Florence.

With his freedom and technical perfection, Morelli then continued his idealistic and intellectual researches. Altamura tells us that from his youth Morelli dreamt of the mysteries of Palestine, but did not aspire to become a mystical painter in the footsteps of Fra Angelico and Filippino Lippi. On the contrary, he tried to give to religious painting an attraction quite novel and modern, producing canvases of the Virgin and Child, and representing Jesus showing His goodwill towards men. He wished to present these subjects in a new manner, in no way becoming paradoxical or puerile, yet giving the spirit and the sentiment; in fact he wished to humanise the Christian drama. The task he thus set himself had impenetrable depths, hut one sees in him an accomplished master of technique, one of the greatest of colourists, who had an imagination which permitted him to attain perfection in an almost exhausted branch of religious art.

"The recognition of men of genius," wrote Delacroix, "is in reality through the realisation that what has already been done has not been sufficiently done." Morelli, in painting his Virgins, avoided tradition and enriched painting by a new source of sincerity and sentiment. He has been reproached for having painted pretty Neapolitans instead of Madonnas, but this might be said of the Virgins of Raphael or any of the artists of the Venetian School. Titian's 'Assunta' represents a

Photo, Alinari.

Tentazioni di S. Antonio. By Domenico Morelli.

pretty and vigorous Venetian girl quite as much as Morelli's 'Madonna della Scala d'Oro' does a beautiful Neapolitan, as also his 'Rosa Mystica' and his 'Vas insigne devotionis.' Morelli's couception of the Virgin might, therefore, recall the work of Raphael, Titian, Palma il Vecchio or Murillo. In the Christian drama he saw the old traditions and modern life together, so that his pictures of the Virgin have the warmth of youth, and his renderings of children are the embodiment of truth and health, and Morelli wished to avoid tradition and to connect himself instead with the masters of the Renaissance and the seventeenth century, who had combined religious ideas with life, the result being that he was considered revolutionary by the public. But he triumphed over his adversaries in the matter of technique, and even over those who followed tradition.

Among his religious canvases, that which is best known from the point of view which interests us, is one of the emhalming of Christ, entitled'Deposizione di Christo dalla Croce' (p. 377). It is a magnificent subject, and one of his finest and most suggestive compositions. By this work a new light seems to he thrown on

Photo. .1linari.

L'Amore degli Angioli.

From the painting by Domenico Morelli.

the death of our Saviour. Altamura has assured us of the painter's admiration for the Bible, and Morelli himself mentions the fact that he had the inspiration to produce through the study of the Gospel this picture, in which he represented Christ as no one had previously done. All other painters of the descent from the Cross have found a motive for showing Christ wasted by His sufferings; Morelli places Christ in the centre of the scene, thus allowing himself to respect traditiou, and though not treating the subject in the manner of his humanized religious art, he has gone to nature for form and colour in painting the sad ceremony, and to the Gospel for a general idea of the scene. Around the Body, enveloped in the shroud, he placed pious women and Apostles, dismayed yet filled with admiration; the rising moon illumines the figure of Christ, and throws beams of light

over the scene in which the darkness is more powerful than the light. This, added to the general brown tone, gives an indescribable impression of mystery, one which is not decreased by the realistic seen envelop. ment of Christ in the shroud. Against the philosophers who see a literary source in Morelli's religious

painting, I should like to oppose the master's talent, cultivated in Naples, where sights touch the imagination by their real form, by their outline, by the attraction of their colours. Reverie is not indulged in to any extent by Italians, but they appreciate things through reality, by actual form, and Morelli, who was a most noble son of Italy, approached religious reverie by means of visible beauty. In a native of Vienna you will find craftiness; in an Italian, paganism. The religious art of Morelli is based on the paganism of a soul which adores beauty, and by comparing his work with that of Burne-Jones there will be found in these two painters the similar spirits of two races.

Among the engravings accompanying this article will be found Morelli's masterpiece, 'Tentazioni di S. Antonio' (p. 379), and it is really pagan love that he shows us in this figure of the saint who, with fixed and vacant gaze, mouth and hands in prayer, sees what he would rather avoid, the nymphs in the distance going amongst the trees and endeavouring to undermine his continence and sanctity. The subject having proved a success, he painted a second and a third picture. By changing the motive he produced, perhaps, a more complete effect, enclosing the Saint in a wall and making him appear wishful for the power of Samson to enable him to break down the barrier which keeps him from fleeing from temptation. The head close to the Saint, with laughing eyes fixed on him, seems to represent

one of the common people of Naples, who for trickery would be able to compete with the worst street urchins of Paris. Compare, then, these scenes with the pure reverie of Burne-Jones's 'King Cophetua and the Beggar-maid,' and that will provide a new means of judging Morelli and the character of his work. The same applies to another canvas 'Christo tentato nel Deserto,' which, from the point of view of composition, could be classed with the first 'Tentazioni di S. Antonio,' in which the Saint is seated.

The depth of his sentiment indicates the pure and spontaneous paganism which controlled the soul of the painter. It exists in the 'Tentazioni,' it moves one in his 'Christo sulle Acque,' in which it becomes tragical, and it becomes almost idyllic in 'Amore degli Angioli' (p. 379), which was inspired by a poem by Moore.

Domenico Morelli was a painter, a poet, a thinker, an agitator; in fact, he was a master whose beneficial

influence will long be felt.

It is sometimes sad to reflect that all that lives must die, but when an artist has passed the age of threescore years and ten he, like any other human being, has lived his allotted time on earth. Yet there are many people who, when they heard of the death of Morelli, wished that he could have been numbered among the strong who come to fourscore years and more. Not only in Italy, but all over the world, the loss Art has sustained has been keenly felt.

ALFREDO MELANI.

#### 'Adieu.'

FROM THE PAINTING BY E. BLAIR LEIGHTON.

I N one of Mr. Pinero's plays a young lady remarks that the world is full of unhappiness: "the world's full o' husbands," replies a maid-in-waiting. Such

philosophy is disconcerting, but fortunately not convincing. If it could be proved that unhappiness was invariably associated with man in his most honourable capacity, marriage would be contracted with little rejoicing, and there could be no such sentiment as is represented in Mr. Blair Leighton's picture 'Adieu.'

No novelist can tell romantic stories better than Mr. Blair Leighton. He manages to depict incidents which quicken the imagination, and his talent is well exemplified in this, one of his recent works. The picture was painted specially for THE ART JOURNAL, and, under certain conditions, reproductions of it may be claimed by all subscribers.

For the past seven years a large Etching has been the pendant addition to each successive volume, but 'Adieu' has been executed in photogravure, a medium, like mezzotint engraving, particularly adapted to show the beauties of a delicately painted subject. The Preminu

Plate issued in connection with this publication is a feature to which we occasionally refer because it is not widely understood that every year a large

reproduction (about 20 inches by 14 inches) is included in the subscription to this Journal, plus a trifling fee for postage and These prints are packing. finished with the greatest care, and as works of art worthy of display, they are not inferior to publications for which alone a higher price is charged. At successive stages of progress, Mr. Blair Leighton criticised the reproduction of his picture in order that nothing should be left undone to make the finished plate a good interpretation of the original work.

Earlier in this year an illustration was given of the artist's Academy picture 'The End of the Song,' and to our volume for 1900, a biography of the artist was contributed. On other occasions typical works have been reproduced in our pages, and it is gratifying that we are able to include among our Premium Plates so agreeable an example of the art of Mr. Blair Leighton.

No. t.—'Kerchief carried by King Charles to the Scaffold (folded),

Copied by Miss Allen.

### Modern Amateurs in Lace.

WRITE me down-no, not the proverbial ass, but-

And at what date in the world's history could one better have been written so? A time when the word amateur is not only sans reproche, but is, as the poor phrase it, one of the "best respected" names amongst us; when the whole nation is, or ought to he, on its knees in gratitude to—the amateur; when, in a war of unexpected magnitude, the tide was turned in our favour by—the amateur.

Our first illustration represents the 'kerchief carried by King Charles to the scaffold. Given by him then and there to Father Huddleston, it has come down through his collateral descendants into a family connected with my friend Miss Allen, who lends it to me.

What a debt of gratitude we owe to this amateur, in that her love led her to make this exquisite, and as she herself calls it, "a faithful copy" of such a work of art. Alas! that the original should be lost to sight; in our

memory this copy will keep it dear. It is in its entirety but a demonstration of the capabilities of that so celebrated point boutonnière. Here, as in all needle laces, we find that the fillings, when they are toiles or clothlike, recall those of Hollie Point. But these fillings are so varied and unique that they again point to the amateur. Some lover made and laid it possibly at the feet of the king, and he took it to his death. So numerous are the modes that I was forced to fold the "hankie" so that all four corners could be seen. It is the only instance that I remember in which all four are different; the folded cambric lies between. Of your charity, gentle reader, if you have seen the original tell me where you have found it.

Prim Puritanism stares at us from the mode of Miss Robertson's lace. In this also I have been able to show her manner of working (No. 2). Spitze it is from its points, and it carries us hack to the falling lawn collars edged with it, and the days of ruffs and farthingales, and all the pictures of the best lace periods. Although this lace employs chiefly one stitch, there is a mode which deserves notice, as it is to he found in three of the other laces. I mean the circle traversed by two lines which cross it diagonally, and sometimes called a button-hole wheel. Like most simple designs, it is as easy as it is effective. So much is it the motive of the whole lace, that it is a pity it were not carried out, literally, au fond in the design, where it comes to an abrupt pause.

Greek lace it would be called; it has the necessary geometric designs, and so would run into the cousin-hood of Reticella, where the linen foundation has almost disappeared. This again runs into cut work or point coupé, and so are we landed in many difficulties and distinctions. "Thinks I to myself" in many com-

No. 2.—Needle-point Lace.

By Miss Robertson.

munings with these laces of my amateurs, punto in aria is a generic term for all these laces.

There lies but the inked outline, there the needle and the thread "in the air" till the worker appears. Just as in writing there is the pen and the paper, with a subject waiting till the hand and brain of man appear, although the subject may possibly be also very much in aria too.

The small oval dots which form a festoon in the insertion are found frequently in Genoese laces of a certain

No. 3 .- Genoese or Milanese Pillow Lace.

type, and this brings me to the pillow laces dites Genoese or Milanese (No. 3). Cater-cousins, again, these laces are liable often to be confounded one with the other. They are of the type in which so many of the coats of arms of great families were made. In my specimen the reseau is excellently well devised to suit the exigencies of the design. It is of singular regularity, which is by no means usual in the older laces. For myself I have not yet decided to pin my faith to the travellers' tales which account for these irregularities by saying the pattern was worked separately, and then united on the pillow. Tempted as I am to use the "Impossible" of the doctrinaire, I will, but with my wonted wariness, put forth a few other reasons for the general vagaries of this reseau.

Badly pricked patterns, if pin holes were used in these for the ground-work. Unskilled workers if the reseau were made, more Valenciennes, with no holes at all and everything dependent on the hand. This was most probably the method, as the reseau is but enlarged Valenciennes. Above all comes the fact that the art of the pillow is inferior to that of the needle, and to the groundwork it cannot adapt itself and make holes to order as can the needle. Says my pillow-worker: "Look, see, mum! tha at's a la-arge hole, but if I puts in another pin it'll throw me bobbins wrong." In the philosophy of the technicologist there is much in the knowledge of "how to get rid of they bobbins," which helps him as to methods employed; but I will not in this matter pin my faith anywhere as yet, not even with a lace pin.

Next Miss Ensor's lovely needle point (Nos. 4 and 5). How did she make it? Not the method, for that I show, but the stitches—the design? From "little pieces" is her answer. Most soothing and comforting, indeed, to one who suffers as I do from the ignoramus, who speaks contemptuously of "scraps" and "oddments" of lace, forgetting that the hand may be still ere the scrap be finished and the artist's work be ended for all time, and forgetting, or rather ignorant of, technique in art, that

stitches and the manner of their making is our difficulty to-day; and that, design as we will, we hang still upon the finger of the executante, and she upon these "little pieces" for our re-building. A process to which mortals ever must, not in lace only, but in every art, be indebted to "scraps and oddments."

There is one criticism which this old-world method of designing calls up, and that is that it is just a little apt to make the design "scrappy." I will use the

word of the ignoramus for the nonce, and yet I repent me of the deed, for look how the design is so absolutely different in fillings even where the outline is the same that it is almost impossible to spot the repeat. Put the finished and unfinished bits together. In good sooth it is equal in difficulty to the search for any modern statesman in a puzzle page. The outline certainly one sees, but the fillings are tout autre chose, and one half hesitates to say it is there. Moreover, I would wager that relict, my "bottom dollar," that the trefoil which succeeds the pine as before, will turn up in a perfectly new guise when the work is complete.

In two cases I have been able to show the method of this needle

point and prove from it what I have so often asserted, that is the perfect freedom of action possessed by the really skilled worker. The reproduction shows where the needle has taken its own line, for some reasons a better one than those laid down for it in ink.

Here my best cottage pillow-workers possess the same, or possibly a greater skill when they are not tied to pin holes: "Nay, mum, I shan't put no pin in they false holes," and so her fingers fly, and the groundwork turns up true in the end, a vrai réseau indeed. In Belgium the workers of Valenciennes have no pin-holes in their groundwork at all.

There is an evil in designing in segments or pieces as it were, and yet, even here, Miss Ensor's other lace almost contradicts this criticism. There she gives us a consequent design, a flowing scroll of comparative regularity, and yet to my mind not half so soul-satisfying as the irregularity which I have been partially minded to carp at. The brides picotts reappear with their delightful and very distinct thorniness. Here we have again the recurrent trefoil, the emblem of the Trinity which is so ever present. Small wonder that it should be so when so much lace must have been made in the beginning for "Holy Church." I have myself kept an English lace, the "Trefoil," shown in THE ART JOURNAL, October, 1896, for the very same purpose.

Punto de Venezia tagliato a fogliami! What a mouthful, and yet we must swallow it in the interests of another work, lent me by Miss Allen (No. 6). Prodigious indeed—labour one would like to call it with those countless stitches like the hairs of one's head for multitude. Look at those cordonnets. Where could I find a better text for a lecture that I love? With the naked eye one notes that it is by constant oversewing that it is constructed, and that those heavy scrolls must have for foundation the "bunch of small cords," and not one only or the single horsehair of Alençon. It by no means always outlines the pattern as has often been erroneously said, much of the pattern here is without it. Its use is where the objects and the design require it, as they do here. The cordon-

No. 4.—Needle-point showing method of working.

Made by Miss Ensor.

nets in lace answer to the heavy scrolls in old silver and the deep foliations in stone-work; indeed it may have its rise in the acanthus spray itself, without which bow many arts would die!

Personally, I have always assigned the well-known love story to this lace. It was treasures in the plural, doubtless, which the sailor brought, and which his love in Venice copied. Coral and its counterpart, the frost on the English cottage window-pane, is too universal a design to prove the tale. Besides, Valencienne claims equal rights with Venice to a coral lace, though some recent writers would claim it solely for Italy. Look, I pray you, at the ecbinus to the right hand, and again high up to the left, distinguishable by the cordonnets which form its apical plate. And again in the two corners the crumpled or foresbortened, or, it may even he a retreating star-fish. This lace is in art almost the only example of anything being made of treasures of the deep, in so far as decoration is concerned.

"But thou hast kept the good wine until now." Verily, this Tape Lace is an exact illustration of these sacred words (No. 7). Not intentionally, but of necessity, did I keep it, since I did not talk with Mrs. St. Hill of this labour she delights in, nor bave the result in my hand till the foregoing had been written. Therefore what I shall say of it is no fulsome flattery, but the "square-toed truth." I shall tell it, and that with much gratitude, for ber lace is wholly and entirely a living proof of all that I have ever thought or said on the possibilities of the skilled worker, and to find this in an amateur is

more than "heart can wish for," literally more than "money can huy." Further, my other amateurs will but support me when I tell how it is done -no critic so just and true as those who know the hardness of the path. "The skilled worker is often independent of ber pattern and ber pins," say I. Said Mrs. St. Hill: " That is how I did it." "That" being a homely piece of dark-blue linen upon which my own not wbolly untrained eyes had much ado to find any design. It was indeed but the merest outline sketched in the most casual fashion. "The fillings?" "Wby, 1 do them just as they come at the minute." To ber, then, no difficulty in rounding the corners of the endless convolutions which go to make up a tape lace, no worry in the brides-by which word I do not mean as a recent Lace Historian has it, the principal performer at a wedding! hut the bars, here marvellously diversified, by which the so-called "Tape" is attached. And not theories only, but realities, does this beauty prove-for all time, no one could accuse it of being

machine-made. Those two pinboles alone to the left of the two central figures show it at the merest glance. No machine could do it, and the varieties introduced into the cloth-work tempt the eyes for the moment into the belief that the "repeat" is a fresh pattern.

The exquisitely fine thread of which this lace is made, is an inheritance from ancestry with like talents au houts des doigts. So that amongst my amateurs, as in the lacemaking counties, I have the one whose heredity will out at her fingertips, will she! nil she! Like the man who "must scribble, though be fail to dine," she must make lace. Proving for me, lastly, the wisdom of not joining in the pessimist's cry to day: "Lace-makers are dying out"—Nay! "by the twitching of their thumbs," we may look for fresh beauties daily and not be disappointed.

And now to the important question, the application of my text, what is the use of the amateur? That there is to-day a certain sort of simmering in the pot which has brought the amateur to the top there is no denying. Even the critic of the garden book, which has been sprung upon us in such multitudes of late, demands of him, or rather ber—"We want the simple empirical experience of the amateur gardener." Now I for one have my objections to the suggestions of quackery, but at the same time, it is a bealthy sign of the times when the word appears in a sentence which actually quarrels with the amateur for being reflective, and hegs that be will "teach." When and where is there room for his teaching? To-day, when one looks at one's own Home Industries from the point of view of Patriotism, there is

No. 5 .- Miss Ensor's Needle-point.

a large field of labour for the accomplished lace amateur. It is well that the thoughts which arise on this subject should be uttered, and that I may soon be able to "give tongue" on the matter is my earnest hope.

To whom but to the Lover do we owe modern efforts on all sides to supply those art trea-

sures which this love demands, and which the mere accident of birth or capacity for toil in his ancestors permits the pocket to allow him? And there is much more we *might* owe to him. The subject is too wide a one for this article, but the field includes both judging and teaching, the former being too often sadly misplaced and occasionally relegated to trade alone, which, if not always, is often ignorant and almost always prejudiced.

And not as judges only do we need our lace amateurs, we want them in the new light aforementioned as teachers. In the days of Lady Clara Vere de Vere, she was admonished by her critics to go and teach sewing, and in sport the verse in which this was done has often become sadly mixed. In the case of lacemaking her pupils need not only be girls, but boys. I know two amateurs, the one a sailor whose punto a gruppo on

No. 6.—Gros Point de Venise.

Adapted and made by Miss Allen.

knotted lace was perfect, from his knowledge of ropes, and the other a descendant of long lines of amateurs, whose long, slim fingers dance among the bobbins as though his heredity came straight from a lace county. There is a rapidly increasing demand for technical teaching, paid for by

County Councils, who, since they be human, are possibly not "counsels of perfection," but who are, inasmuch as they have done much good in many ways, as much entitled to our consideration as those who do but dream of what *might* be. Dream, did I say? Perchance they sleep!

And so I find myself in a position which I often jestingly say is mine by rights, that of the "middle-woman," but with no profit. I certainly fill her place in bringing my amateurs and my gentle readers together, and I am content with the office. But "no profit?" Nay! have I not the sport, the good hunting, and the happy home-coming laden with trophies? And when all's said and done, Mr. Critic, you won't deny that I love my labours; and so you will, as I asked you at the beginning, "write me down an amateur."

The Conjuror.

By Sir J. E. Millais, P.R.A.

## 'The Conjuror.'

BY SIR J. E. MILLAIS, P.R.A.

THE picture by the late President of the Royal Academy, now for the first time reproduced by the courtesy of its owner, Lady Jekyll, has been exhibited but once, and is unknown save by the few. It appears that the owner was for long unaware, as well she might be, of the authorship of the little work, but one day she chanced upon a drawing by Millais which served as clue. On February 15th, 1898, Mr. Holman Hunt wrote thus: "This painting of a conjuror performing his tricks to a company of ladies, gentlemen, and children in mediæval costume, was one of several painted by Sir John E. Millais, when he was about eighteen, in 1844.5. It was one of a series of rapidly painted compositions, executed for Sergeant Thomas, who had become a picture dealer." It is, then, among the earliest of Millais' known efforts in colour, and ante-dates by several years, of course, the first of his pre-Raphaelite pictures.

In the Mappin Art Gallery, Sheffield, is 'The Proposal,' which belongs to about the same time, and there exists a 'Cupid crowned with Flowers,' deemed to have been painted in 1841. The Conjuror—magician he appears to be to the wonder-eyed children—is in rich scarlet, and elsewhere are notes of sumptuous colour. What a change was wrought in the young painter during the succeeding four or five years may be judged if we compare 'The Conjuror' with, for instance, 'Christ in the House of His Parents,' painted in 1849.

## Portraits by Alfred Stevens.

THE parish registers for 1818 of Blandford, Dorset the Shottsford Forum of Thomas Hardy's novels contain an entry relating to the baptism, on January 28, of Alfred Stevens. Fifty-seven years thereafter, early on the morning of Saturday, May 1, 1875, Alfred Stevens

Tate Gallery.

Mrs. Collmann,
By Alfred Stevens

died at the house in Eton Road, London, which he had dreamed of transforming into an Italian palace, with loggia and courtyard for sculpture, with reception rooms splendidly decorated. His name even now, to our shame be it admitted, is held in honour by the few only. Had Leighton never put brush to canvas, pencil to paper, had he never encouraged a struggling painter, we owe him a deht of gratitude for proclaiming Stevens "a supremeartist... the greatest of English designers." Than he there was born in England during the nineteenth century no artist more versatile, none who gave heed more intent to the promptings of genius.

At ten years of age he left school to assist his father, a house-painter and decorator. In 1833, Landseer, approached as to taking Stevens into his studio, demanded £500 for the service; hut instead the lad,

with £60 in his pocket, started in a sailing vessel for Italy. After sketching in the ruined forum at Pompeli, copying Giottesque frescoes and pictures hy Andrea del Sarto in Naples, in the spring of 1835 he journeyed on foot to Rome, paying for his food and lodging, as Monticelli is said to have done in Southern France, hy using pencil and hrush. In 1839 he was in Venice, and so faithful are some of his copies of Titian that they have heen mistaken for contemporary replicas. Once only was he a pupil: this under Thorwaldsen in Rome, 1841-2. It was in Rome, too, that he studied works in various kinds hy the Italian genius whose name, not altogether without warrant, has heen attached to him - to he known as the Michael Angelo of England is no inglorious thing. During the autumn of 1842, Stevens landed at Southampton, and but for the

kindness of a life-long friend would not immediately have heen able to visit Blandford.

In 1845, he was made "Professor of everything" in the School of Design at Somerset House; to 1845 belongs the design of the railway carriage for the King of Denmark; to 1849 the drawings, never carried out, for the doors of the Geological Museum; in 1850 he became chief designer to Messrs. H. E. Hoole, Sheffield: in the Great Exhibition of the succeeding year, the grates, stoves, fire-dogs, decorative panels of Stevens revealed an æsthetic personality, bold and fine, which in any age would have been accounted rare, but in the England of the fifties was unique. It is impracticable here to indicate even the more important of his endeavours: among them are the decorations in Dorchester House, the Prophets in St. Paul's Cathedral, the designs for the decoration of the cupola and the lion sejant of the British

Museum—this last widely known, if not always associated with Stevens.

A generous interpretation was put on Alfred Stevens' procrastination—the result in large part of a passion to express the inexpressible—withregard to the Wellington monument. On November 22nd, 1870, in a letter which contains the following passage, the artist was invited to address a memorial to the Treasury. "It is possible . . . that from your want of experience in the execution of great works like that with which you were entrusted, you may have unintentionally expended the public money in a manner equally unprofitable to yourself and to the public . . . Should you he able to establish this to their Lordships' satisfaction they

may he induced to regard the result as the consequence of the experiment which was made in selecting you for the execution of the work." The unfinished Wellington monument is the most masterly example in its kind of modern times.

During his lifetime no work hy Stevens was exhibited at the Royal Academy; indeed, after the non-acceptance of his designs for the doors of the Geological Museum, he refrained from sending. In 1876, however, two of his sculptures were included, and at the Old Masters Exhibition, 1890, at the suggestion of Lord Leighton, a room was set apart for drawings and models by him.

Michael Angelo, in answer to a question as to which was the greatest art, answered "V'è un' Arte sola." Alfred Stevens' motto was "I know of but one art." The art of creating heauty, whether in architecture, painting, sculpture, was to him

supreme, indivisible. The portraits which we illustrate are among the very few from his hrush. That of the late Mr. Leonard Collmann, at present in the South Kensington Museum, is reproduced by the consent of his son, late Queen Victoria's Inspector at Windsor Castle. Without the timely assistance of Mr. Collmann, whose resemblance to Thackeray is remarkable, the Wellington memorial would not have reached its present stage of progression. The lovely presentment of Mrs. Collmann was bought by the nation for £250 in 1899, and than it the Tate Gallery contains nothing more delicately perceived, more lovingly, exquisitely harmonised. These portraits, and that of Mr. Morris Moore, seen at the Royal Academy in 1901, give Stevens a high place among the pictorial artists of the nineteenth century. He had warrant, indeed, for proclaiming the unity of the arts.

Leonard Collmann.

Twilight.

By F. Cayley Robinson, R.B. A.

## Autumn Exhibitions.

WERE aesthetic achievement in proportion to the number of our exhibitions, one conclusion only would be possible: that we live in a golden age of art. During the last few days of October and the early days of November the autumn season, so far as galleries are concerned, reached its zenith. Cards for "one-man shows"-and, as no sex distinction has yet been made in this connection, the unlovely designation includes work by women-sufficed in themselves to form a bulky packet. Here were collected examples by a well-known Italian, Professor H. Corrodi, there by a Frenchman, M. Marie Joseph Iwill, elsewhere by an Austrian, Herr Emil Fuchs; an able Dutchman, M. Bauer; Colonials, such as Messrs. Inglis Sheldon-Williams and R. J. Randall; Scotsmen, with as little in common as Messrs. D. Y. Cameron and J. Stirling Dyce; Englishmen-from Associates of the Royal Academy to distinguished artists like Mr. Oliver Hall, with Agnew's show of twenty masterpieces. In addition, the British Artists opened their 118th exhibition in Suffolk Street, the Royal Institute of Painters in Water Colours arranged 699 studies and sketches by members, the New English Art Club "protested" at the Dudley Gallery, but this twenty-ninth time less vehemently than in its buoyant youth.

Yet if, after heedful examination of each exhibit in each gallery, the chaff be sifted from the grain, how lamentably little remains. Nearly four centuries ago in Florence, uninvited crowds flocked to see a single drawing, whose matchless beauty has no correspondence in the thousands of works recently put on view in

London. Vasari says that for two days men and women, old and young, hastened to Leonardo da Vinci's chamber, in the monastery of the Annunziata, to behold the cartoon of the Virgin and Child with SS. Anne and John, the cartoon which, despite its sovereign appeal—and where is a drawing technically more triumphant, conceptively more interpretative—has, during these sunless days, remained almost unvisited in the diploma gallery at Burlington House.

If, even yet, we cannot cease to lament the noncontinuance of Mr. Whistler's meteor-like reign in Suffolk Street, two distinguished Honorary Members contribute this autumn to the interest of the British Artists' Exhibition. Though he be intent on pointing a moral, Mr. Watts seldom or never fails to express his fine feeling for colour; and when he paints a portrait such as 'Miss Lilian Mackintosh' didactic aims do not intrude. The picture is not only a pleasant harmony in low tones-pale golden hair is related to the white dress, to the amher scarf, to the soft red sash-but serves as a vehicle of communication between the largehearted octogenarian and the world in whose life he continues to take a vital interest. It is seldom possible to apply the epithet "charming" to a picture by Mr. Holman Hunt; yet the potency in his work compels attention, often admiration. No exhibit in Suffolk Street is less easily overlooked than Mr. Holman Hunt's small water-colour of the 'Piazza della Constituzione, Athens,' dated 1892. There is a fixed intensity of purpose in this strange representation of ruined

columns, fateful cypresses, laden orange-trees, with two hastening figures to the left, beneath a brooding, starlit sky. It is suggestive of some profound vision whose significance evades such precise expression of facts

These two exhibits apart, there can be little question as to which warrants initial study: Mr. F. Cayley Robinson's 'Twilight,' reproduced overleaf. At first sight, divorced from colour, some may condemn it as little more than mannered, but this were unwise. Mr. Robinson's talent is of the cloisteral order. Only through small, high windows in thick walls does be permit light from the outside world to enter his austere chambers, and generally it is the light of ebhing day, when homing birds are on the wing. He transports us from the fret and turmoil of modern life to a realm of grave, sad calm, whose silence almost There is ardour, but it is that of the overwhelms. dreamer of solemn things; there is radiance, but it is that of the hearth, not of the great, unimprisoned sun. Before the picture itself we find delight in the painting,

as such: in tbat of the vieux - rose dress and the dull golden hair, agleam with light, of the girl in the foreground; of the grey wall and the white table - cloth, with exquisitelyrendered shadows, to the right; of the glow from the open hearth blent with the light that steals in tbrough the window: of the red-bordered blanket in which the

in which the baby is wrapped. The design is by no means flawless, in particular with regard to the woman seated in ungainly pose, gazing into the fire; the almost horizontal line of her dress from knee to knee has been gained only at the sacrifice of beauty. Yet as a whole, lapses allowed for, the concept is aptly interpreted; the figures are truly

Many of the large pictures in Suffolk Street are by women. Mrs. Jopling sbows Mrs. Kendal as 'A Merry Wife of Windsor,' wearing a crescent-shaped headgear, held in place by a chin cloth; by Miss Lucy Kemp-Welch is a study of those delightfully shaggy borses that have their home in the New Forest; by Mrs. Lea Merritt, 'The Helping Hand.' This last is a particularly ambitious effort in the religious kind. Christ, doubly crowned, stands by a weary labourer in the barvest field, whose wife, child in arms, is unconscious of the succouring presence. But neither pictorially nor imaginatively is the conventionalised central figure related to the pseudo-realistic setting. Supplementing his extensive gallery of theatrical portraits is Mr. W. Grabam Robertson's sketch of Miss Nellie Farren as Ruy Blas, in flaxen wig, big hat with plume, her arms akimbo, a decorative essay in low tones hy a talented artist, but not a pictorial interpretation of the dasbing hero in the Spanish burlesque, who delighted Gaiety audiences. Mr. J. D. Fergusson fearlessly uses rich colour in his 'Well in Morocco,' but that he can work with breadth and understanding almost in monochrome is proved hy 'Still Life.' Mr. F. F. Foottet has a tendency to lose sight of structure altogether. Round 'The Shepherdess' sheep, woolly throughout, are pleasantly, even poetically grouped, hut the attempted white and violet harmony is not achieved, the work is a somewhat interesting failure. Mr. F. Spenlove-Spenlove, in his beach scene at Katwijk, conveys a sense of light and air, and shows his accustomed ability for composition; Mr. Walter Fowler's landscape, 'A Gleam hefore the Storm,' bears evidence of sincerity not yet sufficiently controlled; the peasant figures in Mr. E. Borough Johnson's 'Gossips' demand a more sympathetic environment; the canine pieces of Mr. Carton Moore-Park indicate practised observation, abledraughts-

manship; the President, Sir Wyke Bayliss, concerns himself with the interiors of the Duomo in Florence and in Perugia; Mr. Walter B. Thompson has depicted himself with a verve, an assurance, that give us momentary pause.

The art-loving public in Liverpool have been much delighted with a remarkable exhibition of

Interior of The Exchange Art Galleries, Liverpool.

pictures held at the Exchange Art Galleries (Messrs. Agnew's), in the newly arranged rooms. The Exhibition, which was held on behalf of the Liverpool Royal Infirmary, embraced four important pictures by Turner—'The Marriage of the Adriatic,' 'Ehrenbreitstein,' 'The Wreck Buoy,' and 'Rosenau'—three half-length portraits by Romney, including 'Madame de Crespigny' and 'Mrs. Croucb,' Constable's famous picture of 'The Lock' exbibted in Paris in 1827, and the great masterpiece of Gainsborough, 'General Honeywood.' There were also a fine 'Portrait of a Girl, Sketching,' hy Raehurn, some examples by Reynolds, and others by Cotman and Wilson. Nearly all these pictures were from local collections and they revealed at a glance the rich extent to which art is appreciated in the neighbourhood.

Many memhers of the Royal Institute of Painters in Water-colours appear incapable of making a landscape sketch or a study, of noting down transient effects, forms, magic correspondences of colour, which vanish with tantalising rapidity. This conclusion is borne in upon one by the exhibition in Piccadilly of 699 so-called studies and sketches. The artists in general seem to regard nature through a semi-opaque film on which is

one of their finished pictures. Thus, the advantage of having impressions constantly corrected, vivified, is sacrificed; insight, integrity of aim, are ousted by mannerism. Mr. R. B. Nisbet is one of the exceptions. His sketches of hreezy moorland roads, of picturesque sailing-craft at evening, of tragically intense skies, of the rosy roofs and golden façades of Venetian palaces, serve as memoranda for after-work. The figure pieces of the President, Mr. E. J. Gregory, leave little to desire in the way of skill; Messrs. Tom Browne and John Hassall represent the humorists; Messrs. Winter Shaw and Alex. Machride those who aim to interpret nature poetically and decoratively. If only for his rohustness,

his freedom from incertitudes, we are attracted hy Mr. John R. Reid, who always knows what pleases him, although not invariably what will attract the spectator. The group hy Mr. John Fulleylove does not strictly come within the scope of the exhibition, yet he has seldom painted architectural effects more ahly, more sympathetically, than in 'Ville Franche' and 'The Old Harbour, Nice,' the many-windowed houses of the quay descried heyond innumerahle masts of sailing hoats.

The exhibition at the Goupil Gallery of twenty examples in oil and thirty one pastels and drawings hy Mr. Clausen gave incontrovertihle proof of his power. Herecognises that

for him, at any rate, so-called truth to detail is compatible, nay, almost synonymous, with falsehood to the larger significances wherein such details are merged. Hence, in his quiet pastels, motives are found in upland pastures, greyed at dawn, haunted by shadows at twilight, in golden sunlight or passionate after-glow. Of subject, in the ordinarily accepted sense, there is none in such essays; but they have a serenity, a rhythmic heauty, which reveal the fine temper in which they were wrought. Mr. Clausen has not merely observed nature from without, hut heen inwardly stirred by the spirit whose presence is so often denied and constantly overlooked. The pictures include 'The Path by the Ricks,' checkered with hrilliant sunshine and deep shadow; 'In the Barn,' an interesting variant of the picture reproduced in THE ART JOURNAL, June, 1901, p. 165; a portrait of hlue-eyed 'Kitty,' which we are enabled to illustrate, and of an old man with a 'Little Brown Jug'; and a sun-splashed canvas, 'The Bird's Nest.' Several interesting flower studies suggest admiration of the fine achievements in this kind of Fantin.

In November the large Grafton Galleries were occupied by a number of works by Herr Emil Fuchs, the designer of the Coronation medal and of the King's head on the new postage stamps. Of the many portraits, that of Mr. Martin Colnaghi is among those immediately recognisable—that it has more than a semblance of life no one can deny. One of the principal objects of the exhibition was to show the memorial to Prince Christian

Victor of Schleswig - Holstein, destined for St. George's Chapel, Windsor. the grey marhle ohelisk which rises from the sarcophagus are inscribed the dates of the gallant young soldier's hirth and death, this last at Pretoria on October 29, 1900. At the hase, in white marhle, is a winged figure, mayhe intended to represent Britannia, crossed hands resting on sword, the hilt of which is wreathed with laurel and decorated with a figure bearing palms. But the artist is more successful when less amhitious.

A few new etchings hy Mr. D. Y. Cameron, on view at Gutekunst's, serve afresh to direct attention to his fine and well-considered

technique, ahove all to the temper in which he works. Mr. Cameron possesses the inestimable gift of intent contemplation; his etchings are something far other than snap-shots executed with the needle. Towards this or that scene he exposes, so to say, the sensitized plate of his personality; adventitious details are eliminated, essential heauties, significances, contrasts, correspondences, remain. Not the least remarkable quality in 'Chinon,' is that "divine discontent" which spurs on Mr. Cameron to more lofty effort, compelling him at the same time to cut steppingstones in the hard rock of fact as he climbs upward towards fuller realisation. That we can turn without instant disappointment to his etchings from fine examples hy Remhrandt, Dürer, Meryon, Mr. Whistler and Sir Seymour Haden testifies to their worth.

Kitty.

By George Clausen, A.R.A.

By permission of Messrs. William Marchant and Co., Owners of the Copyright.

The winter exhibition at Messrs. Tooth's Haymarket galleries had several attractions: a strong pastoral by Jacque, Millet's impressive woodcutters, labouring in mysterious shadow, two idylls by Corot, Detaille's dramatic 'Bonaparte en Egypte, 1798,' a series of small, highly-finished Meissoniers, many British water-colours, and a large presentment of horned cattle in the same medium by Rosa Bonheur. But for the familiar signature and the fact that it comes from the collection of Madame Maris, the little picture 'Outside a Café' might be ascribed to almost anybody but the late James Maris. We know him as a robust depictor of old Dutch towns, of windmill-flanked waterways, and, belonging to an earlier period, of delicately detailed figures and scenes, resembling the contemporaneous work of his brother Matthew. This courtyard has an intensity of colour in

keeping with the theme. No grey veil dims the deep blue sky; sunlight is sovereign, shadow a handmaid. 'Outside a Café' pictorialises the spell of the East as apprehended by James Maris, and probably painted under the influence of Gérôme forty or more years ago.

Mr. Charles Whymper is a practised observer or animals; no detail of colour or texture escapes him, his hand is sure and skilled. At the Graves Galleries thirty pictures and studies of 'British and other Game' served again to demonstrate his qualities and his shortcomings. Elephant and buffalo, stag and rhinoceros, otter and fox, birds from eagles to many-coloured peacocks and pheasants, he isolates and depicts, without in the main attempting to environ. As statements of fact, admirably realised, it would be difficult to excel these examples by Mr. Whymper.

FRANK RINDER.

## Passing Events.

MR. ASTON WEBB, A.R.A., on the 3rd November formally opened the new Session of the Royal Institute of British Architects. In his address he announced his intention to bring members to the Institute rooms for more social intercourse than is possible when papers are read and business is transacted. It was with a similar motive that his immediate predecessor gave hospitality at the Guildhall, and there is no doubt that such gatherings are appreciated. The councils of most other learned societies offer like opportunities in their own buildings, and the idea of the new President is made more interesting because of his wish to use the Institute rooms for his purpose. The portraits and other visible possessions make unlimited subjects for conversation. Reminiscences and acquired history will readily make introductions, and will lead to more serious topics for mutual benefit as well as for corporate strength. The portrait of the Earl de Grey will recall to some the fact that during his presidency many conversazioni were held in the Institute rooms, then in Grosvenor Street; sporting members will be reminded by Mr. Sargent's portrait of Mr. Penrose that the still active past-President, so far back as 1841, rowed for Cambridge against Oxford in the inter-University race, then over the Westminster to Putney course; some will talk of the influence on Sir E. J. Poynter of his father, an indefatigable member of the Institute; curiosity will be expressed concerning the portrait of Sir William Emerson, by Mr. J. J. Shannon, A.R.A., which, in due course, will find a place in the library; and there are many other associations which will make the scheme a thorough success.

THE Trustees of the National Gallery having decreed that visitors need not deposit walking sticks on entering the building, it will be necessary that the attendants hitherto in charge of that department now act as special custodians of the pictures. The experiment is agreeable, but, in order to safeguard the works of art, increased vigilance must be employed. It is not impossible that damage may be done wantonly, even in these days of refinement, and cases have occurred of

premeditated destruction. It is not customary in many foreign galleries to enforce the regulations which at the National Gallery have been recently amended, and this freedom of entrance is a concession of importance. Nevertheless, we cannot help recollecting the history of the Portland Vase. It is true that the miscreant flung a piece of sculpture and so only did damage which could be repaired to a certain extent; but if in his intemperate fit he had been armed with a stick the precious vase might have been irreparably destroyed. A fine of £3 was poor compensation for the injury to so perfect a relic, and it is a matter of opinion whether the Nation can afford to risk the pictures in its Gallery.

A N influential committee, composed of the Artists, Collectors and Publishers, who are chiefly concerned, has recently been appointed to discuss questions of Artistic Copyright. A wider scope has been given to the recently-formed Society for the Protection of British Fine Art in the Colonies, and if the proposed conferences lead to the institution of an intelligible code of regulations it will be a great event in the history of Art and Law.

BY the will of Lord Cheylesmore, in addition to his mezzotint portraits, pictures by Delaroche, Sir Edwin Landseer, Van Both and William Collins, pass to the national collections. Examples of the work of all these artists were in the London Galleries already and Collins is represented in most of the important provincial cities.

THE date on the finished water-colour sketch of Don Quixote, contributed by Sir John Tenniel to the Exhibition at the Royal Institute, gives us an opportunity to express our pleasure that the artist has been able to proceed with the work for which he has so much ability, but which he feared would have to be neglected on account of his failing eyesight.

Abel: Keeper of Sheep,
By Sir E, Burne-Jones ("The Beginning of the World": Longmans).

#### Fine-Art Publications.

WHILE not lending itself to the same charming sesthetic considerations as the previous hooks from this publisher, Mr. Austin Dohson's "WILLIAM HOGARTH" (Heinemann) takes worthy rank amongst the series. The large uumher of illustrations amplify the text; the only possible criticism heing that a larger selection might have heen taken from the original paintings instead of from old prints. Sir Walter Armstrong writes an introductory chapter on the "Art of Hogarth," in which he lays special emphasis on the perfect craftsmanship displayed by the master.

Although comparatively small in hulk, the most interesting Art hook of the season is "The Beginning of the World" (Longmans), hy Sir Edward Burne-Jones. The illustration above shows the character of the work, which is dignified with great simplicity, yet exactly fulfilling the hest conditions for original illustrated letterpress.

"Introductory Studies in Greek Art," by Miss Jane Harrison (Unwin), are in reality exhaustive essays on the subject. Miss Harrison's enthusiasm for Greek art loses nothing in heing reduced to print, and her excellent clearness of expression is particularly suitable to the artistic exactitude of the works she criticises.—The second series of "The Study and Criticism Of Italian Art," by Bernhard Berenson (Bell), is not quite so fresh in style as the first, but the essay, "The Caen Sposalizio," is one of the best he has written.

The purely husiness side of artistic affairs is found in "A TREATISE ON THE LAW OF COPYRIGHT," hy E. J. Macgillivray (Murray). All the Acts of Parliament, Conventions, and Orders in Council are set

forth for all kinds of copyright, the Fine Art section receiving due attention. In view of the many efforts now heing made for the improvement of copyright, it is a hold thing for any author to come forward with such a publication at this time. The special fulness which the writer has given to case law, however, will make this hook useful even when the law is altered.

A very large amount of care is evident in the preparation of the important hook on "COLOR PROBLEMS," hy Miss E. N. Vanderpoel (Longmans), emanating, as its title reveals, from an American source. A great number of diagrams in colour are included, and the volume successfully appeals not only to the painter, hut to designers, decorators, dressmakers, and even florists and window dressers. Colour hlindness is revealed with its possibilities of dangers under various circumstances, and theories and harmonies are discussed with the coloured plates to carry forward the argument.

There is no more interesting figure in modern art than the hero in M. Theodore Duret's "HISTOIRE D'EDOUARD MANET ET DE SON ŒUVRE" (Floury, Paris). This is a volume the outcome of sincerest devotion, and while it is not likely to attract the lovers of classical ideas, for those who are less precise in their limitations it will prove a source of great satisfaction. It may he a long time hefore Manet will he accepted hy the majority as a master, hut this need not deter anyone from reading and enjoying this hook.

Signor Venturi's great task, to which he has set himself with much vigour—to render the History of Art in Italy in seven large books—is well continued in the second volume, entitled, "DALL' ARTE BARBARICA ALLA ROMANICA" (Hoepli, Milan). There are over 500 illustrations of the art of Italy from the time of the Goths to the twelfth century, as shown in crosses, crowns, doors, bindings, frescoes, and missals, accompanied with many historical documents.

A further series of essays by William Morris on "ARCHITECTURE, INDUSTRY, AND WEALTH" (Longmans), are full of inspiring thoughts.—Many works have been published on the Hertford House pictures, and others are well known to be in preparation, therefore Mr. Fred Miller's "PICTURES IN THE WALLACE COLLECTION" (Pearson) is somewhat daring. Beside the polished sentences of Mr. Claude Phillips this writer's style of criticism in the highest walks of art is not likely to meet commendation.

The pocket volume "Fred Walker," by Miss Clementina Black (Duckworth) relates all that is necessary to be remembered in a charming artist.—Of the same size are the "Poems of John Keats" (Newnes), and "Rosalynde," by Thomas Lodge (Newnes), both prettily illustrated by E. J. Sullivan.—Bell's "Miniature Series" is continued by Mr. McDougall Scott's "Raphael," and Miss Zimmern's "Alma Tadema," the latter being in every way commendable.

Among the serious Christmas books Mr. Graham Robertson's "OLD ENGLISH SONGS AND DANCES" (Longmans) is remarkable. The old songs and music are decorated by one who proves himself a master in the art. For those who are looking for something refined and uncommon we recommend this publication.—Equally clever in idea, but not so in execution, are the extraordinary illustrations to "EUGRNE ARAM" by Philip Spence (Dent). We have seen nothing so droll as these drawings, and the last of the series is the cleverest of all.

Mr. Andrew Lang's "BOOK OF ROMANCE" (Longmans) has a few illustrations, coloured, after H. J. Ford. The colouring, while skilfully done, is not nearly so effective as the results from the blackand-white plates.—The same may be said of Mr. Charles Robinson's illustrations to "KING OBERON" (Dent), some of the smaller pieces being particularly successful.—The coloured illustrations to "GRAY'S

ELEGY" (Hurst and Blackett), by an unnamed artist, are good in design, but somewhat weak in the figure drawing.

A sensible book for those to whom Art criticism is usually too difficult to understand, is "How to Look At Pictures," by R. C. Wilt (Bell), wherein the different considerations of colour composition and treatment are intelligently discussed.—For art students, also, two books recently published by Chapman and Hall will be found useful: "The Art of Shading," by William Mann, which, especially for class use, gives many useful directions and illustrations; and "Wood Carving," by F. G. Jackson, which is recommended specially to those commencing the study of artistic work.

Of another class are the almost purely picture books issued by Mr. Heinemann. "A DOG DAY," by Cecil Aldin, contains drawings slightly tinted, mostly clever, but sometimes vulgar, and much below this excellent artist's previous designs. "YOUNG GEORGE," by Edith Farmiloe, has oddly enough the same unhappy touch of vulgarity, but many of the drawings are uncommonly successful. "BABES OF THE EMPIRE," by A. H. Collins, is an ingenious series of pictures of children taken from all parts of the British Empire.

Mr. Anning Bell's illustrations to "Shelley's Poems" (Bell) are as refined as this delicate artist ever produces; and the illustrations to "Don Quixote," by W. H. Robinson (Dent), have caught the spirit of the Spaniard.—"Lombard Studies," by the Countess Cesaresco, while more leaning towards literature than art, deals with several artistic questions, and has many various illustrations.—"Darlington in Silhouette" by G. A. Fothergill (County Publishing Co.) is ingenious in idea, but somewhat enigmatical to the ordinary person.

It has become increasingly difficult to find new ideas for Christmas cards, but the happy mean of treating an old subject in a new and acceptable way has been found by Messrs. Dobbs, Kidd, and Co., in their Crescent Series of greeting cards.—Messrs. Raphael Tuck, covering a much larger field, are the publishers of many excellent designs, in which artistic excellence bears a considerable part.

# Supplement to "The Art Journal."

### SPECIAL PLATES.

## 'The Doubtful Coin.'

BY J. F. LEWIS, R.A.

FROM THE PICTURE IN THE ART GALLERY OF THE CORPORATION OF BIRMINGHAM.

N some directions John Frederick Lewis was perhaps unequalled by any master of the English School. Everyone knows that Ruskin claimed him as a true Pre-Raphaelite, in that he finished every detail with minute precision, and with exact truth to nature, truth without formalism or idealism. As far, however, as the development of his painting was concerned, he owed nothing at all to that well-known movement. Indeed, he was hard at work many years before the famous initials P.-R. B. first appeared on any canvas, and "pursued calmly the same principles, developed by himself, for himself, through years of lonely labour in Syria." No man ever had a greater love for his art than Lewis, or devoted himself more closely and singly to its practice. He could not bear to part with a picture until he considered that he had carried it to a finish beyond which he could not improve it. He added elaboration to elaboration, and still found something wanting; and did not hesitate to rise, even in the middle of the night, to put some touch to a canvas which he thought would be improved by it.

Though as a youth he studied engraving under his father, he soon abandoned it for art, and first made a name as an animal painter. Then for a year or two he painted Spanish and Italian scenes, until his first visit to Cairo in 1843. Henceforth the East claimed him as its own. In the words of Mr. Hodgson: "Lewis saw the quaintness and the picturesqueness, the bric-à-brac and the embroidery, and also the searching, all-pervading light of the East. What there is in the East of wonderful, in the way of detail or ornament, of rich colour and blended light, he has expressed as no one else has ever done."

'The Doubtful Coin,' painted in 1869, is a very fine example of Lewis's skill in rendering such details. It represents the interior of a bazaar in Cairo. Two veiled ladies have come to visit an old seraff, or money. changer, bringing with them a large gold coin which the merchaut is examining through his glasses with minute care, and grave suspicions as to its genuineness. Behind them stands their attendant with the mule, with some of their bazaar purchases flung across his shoulder. Another merchant, with sharp features, who leans over the partition of the stall, is taking a keen interest in the transaction. Untiring labour and exquisite skill have been bestowed on its production, with the result that it is a superb piece of colour and execution. It is one of those glowing studies of jewel-like Oriental colour shimmering in the changing lights of a Cairene interior in which the deceased master has not been surpassed. The yellows, the crimsons, the different values of black, the silver and gold tissues, are a veritable feast and a joy to the eye. The painting of the different fabrics is minutely faithful, and yet the general effect of the picture' is one of broad, rich masses of colour admirably arranged.

# 'My Lady's Health.'

FROM THE PICTURE BY W. RAUBER.

MYLADY! She has been the burden of song, or inspired the poet, ever since sounds were lifted into the realm of music, ever since words were so rhythmically used that they rescued from thought and emotion those realities of the imagination which cannot otherwise be expressed. Without Laura what were Petrarch? He immortalised her in lyric, and the constancy and fineness of his love have become proverbial. They met on April 6th, 1327, and on the same day twenty-one years thereafter, as Petrarch has recorded on the fly-leaf of his Virgil now in the Ambrosian library at Milan, she died. Nor can we dissociate Dante from Beatrice, "the glorious lady of his heart," encountered by chance in the streets of Florence on a May day in 1274, a meeting that determined the future trend of the poet's life. How Dante loved, idealised Beatrice, we may learn in the Vita Nuova, directly inspired by her. Italian poetry, without the warp of love into which was weft other elements of life innumerable, would be a relatively sorry product.

Again, "my lady" was sovereign in Provence in the old days when that land echoed with song. Once chosen, any failure to do her honour was severely punished by the Courts of Love, and woe betide the troubadour who failed to lay at his lady's feet the choicest flowers in the garden of his Hesperides.

Of what may be the supreme instance, who shall speak with certainty? We shall never know, probably, whether it was man or woman regard for whom inspired Shakespeare to write those sonnets which are one of the most precious legacies handed down from the Elizabethan or any age. Never has been, never can be, the English tongue put to nobler use than in some of that half-ceutury of sonnets so profoundly significant, so intimately beautiful. As with poetry and music, so in a measure has it been with pictorial art. We think at once of Titian, of Giorgione's lovely 'Tempest' in the Giaovenelli Palace, and, as we look for the thousandth time at Leonardo's 'Mona Lisa,' we wonder.

In the work reproduced Herr Räuber represents a picturesque "My lady" incident the like of which could have been observed almost any day in the England of the eighteenth century. Some vestiges remain of that spirit of chivalry, conformity to which wrought a profound change on mediæval life. With the disappearance of the three-cornered hat, the long hair fastened into a queue, the elaborate vest, the lace frills, the costly coats, often decked with gold, there went not a little of that courtliness which was an essential feature of manners until then. It is held, and doubtless with reason, that the decadence of manners has many compensating advantages. But even though "my lady" to day is held in higher general esteem than ever, that is no excuse for abandoning, but rather a reason for holding fast to, those adornments of conduct which, even though at moments they lack spontaneity, add to the colour of life. We of the early twentieth century can hardly hope to witness a scene such as that depicted by Herr Räuber, for even although baronial courtyards of the kiud still exist, we can find like costumes in museums or on the stage only, and of the manners we must read in some contemporary romance.

## Supplement to "The Art Journal."

# A History of Artistic Pottery in the British Isles.\*

ELTON WARE AND COPELAND WARE: CONCLUSION.

By FRED. MILLER.

#### ELTON WARE.

It is now some twenty-two years ago since Sir Edmund Elton turned his attention to potting, and this was the outcome of watching some brick-makers at work near his heautiful home in Somersetshire. He started working up some of the clay, and finally had a potter's wheel put up and slowly acquired the trick of throwing. Any one who has watched a potter thinks it must be easy to manipulate clay on a wheel; hut let him try, and he will realise at once, by the clay flying off the wheel, that it is an art that requires learning; and Sir Edmund Elton soon found that much else required learning before he could throw, decorate, glaze and fire a pot successfully.

As an assistant he took into his atelier a boy from the garden, and now this boy, George Masters, grown to manhood, is his right hand. The master-potter disdained help from outside, preferring to learn everything for himself, and the history of his, Sir Edmuud's, first efforts are a series of failures, only overcome by dogged pertinacity and enthusiasm for the calling that he, an amateur possessed of artistic predilections, had taken up with the resolve to conquer in this difficult field.

\* Continued from page 77, Supplement.

Deep Red Pitchers, designs in relief. Elbon Ware.

The body of Elton ware consists of a rather fusible common clay mixed with a small quantity of a more refractory kind. This mixture, having been reduced with water to the proper consistency in the slip-kiln, is thrown on the wheel into the final forms which the vessels are to take. These, when dry enough, receive their preliminary decorative treatment, in the form of deeply incised outlines cut with tools similar to those in use at Doulton's. Then the whole is thickly coated with a coloured slip as a general groundwork, and a second drying commences. When ready for the next stage, the patterned spaces between the lines are filled in with very stiff clay slip, white or coloured. This is "lumped" on and stands out in high relief. Another drying-time is allowed, and then the surface of the pattern is further raised and dealt with according to fancy by cutting, carving and shading. The piece, so far finished, is fired gently to fix the colours, but not to harden the ware. Then it is glazed, and at last fired at as high a temperature as it will hear. The glaze used contains lead, but is harder than common lead glazes, while the mode of manufacture and the high temperature of the kiln ensure perfect union hetween the hody and the slip-clays which form the decoration. For the same reasons the ware possesses the unusual merit of heing non-porous; the glaze also being rarely crazed or crackled.

No duplicates are made, and no mechanical means of repeating decorative elements are in use. No ordinary potter's workman is employed, nor indeed any one who has before worked in a pottery.

The colour of Elton ware is, possibly, its greatest charm and is certainly the quality its maker sets chief store by. The deep rich reds and lapis-lazuli blues are unsurpassed for tone and depth of colour. There are fine shades of green merging into blue, and the play of colour in this ware is quite delightful. As for shapes, these are infinitely varied, a certain quaintness and even grotesqueness heing a note of this pottery. The decoration is also very varied, but as colour is all-important the decoration itself in many specimens is contrived chiefly to increase the play of colour of the coloured slips and glaze.

Besides heing a delightful hohby, Sir Edmund Elton now does a profitable business in his ware, and the number of medals he has won at different international exhibitions indicates that success has long since been reached—striking evidence that one man can, by energy and love of his work, overcome all obstacles and bring his bark into port after stormy seas.

#### COPELAND WARE.

The name of Spode is familiar to all lovers of old china, and it was Josiah of that name who founded the firm, now Messrs. Copeland's, one of the largest

### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

and hest-known of the manufactories at Stoke-on-Trent.

The son of the first Spode started the present works in 1770, so that in point of time Copeland's is one of the oldest houses in the trade, and the work turned out has a high reputation for its excellence, both as to paste and decoration. The second Josiah Spode, the founder of the firm, was the first to make a very hard kind of earthenware which he called iron-stone china, and the decoration in underglaze hlue, enriched with red and gold, is the most characteristic style of decoration associated with the name of that old potter. A representative collection was left to the South Kensington Museum hy one of Spode's descendants, and looking at it to-day one has to acknowledge that there is not only a strong individuality ahout it, hut in itself there is something harharically sumptuous that makes a good deal of modern decorated pottery look very thin and puerile. Both the first Spode, who learnt his craft under that great potter Thomas Whieldon of Fenton, concerning whom so little is known, and his more famous son, are honoured names in the ceramic world, and his, Spode the second's, stone china, which had the great merit of not crazing, hecame as popular on the Continent as it did in this country, and is said to have driven out the French faïence owing to its greater durability.

The second Josiah Spode hegan the manufacture of china in 1800, and is said to have been the first to add felspar to his hody, which increased its transparency and beauty: this was in addition to calcined hones, which we saw was one of the ingredients introduced into the Bow porcelain. Spode died in 1827 aged seventythree, and he had been instrumental in raising the china trade in "The Potteries" to the highest eminence. W. Copeland, who had represented the firm in London, had heen taken into partnership, and his son, who was Lord Mayor in 1835, carried on the firm, as his descendants do at this day, so that the firm of "Copeland's, late Spode" has at its hack the tradition of 132 years, a rich legacy for its present representatives to inherit. Copeland's works cover an area of some nine acres, so that the amount of work turned out of this pottery in the space of a year would afford a statistician a nice problem to solve. Earthenware and china are both produced at Copeland's, while as regards decoration we have at one end of the scale the most sumptuous vases and plaques such as crowned heads present to royal personages, while at the other we have dinner and tea services such as less exalted folk can possess. The pendulum

Open-Work Pottery. Ellon Ware.

swings wide in such a huge concern, and the markets of the whole world are canvassed to keep the huge staff in constant employment. Reproductions of a few specimens will give the reader a slight idea of the character of the work issued from this old firm, hut it would require far more space than I have at my disposal to do justice to the firm of Copeland's, late Spode.

In appealing to the wide public, all classes have to he considered, and very diverse tastes catered for, and the superior critic might find much to condemn as not coming up to his standard of artistic excellence. Copeland's most obvious reply would he, "We cannot run our factory for connoisseurs; it has to pay its way."

I mention this hecause some readers may wonder at my non-critical attitude. I am as alive to the poorness, artistically, of much work turned out of the potteries, but I do not consider this the place to play the rôle of superior critic, but as this is the last of the articles I was commissioned to write, I add the following general notes.

As the ingredients, such as Cornish stone, blue or ball clay from Devonshire, china clay from Cornwall, flints

#### SUPPLEMENT TO THE ART JOURNAL.

from Gravesend, and felspar from Sweden, all have to he hrought into the potteries, the question is often asked, how comes it that Stoke-on-Trent is the home of potting—" The potteries" in fact? The local marl is only used in the making of the seggars, or fire-clay hoxes in which the ware is fired, so that but for its proximity to the coalfields, there seems no particular reason why Staffordshire should be the chief seat of manufacture; hut seeing that it has heen so for a hundred and fifty years or more, it is unlikely that Stoke will ever lose its position as the chief home of the potter in this country, for a craft that is so traditional as potting would lose immensely hy being transferred to other localities. Potters are horn and hred to their calling, and youths and girls naturally pass into the works

Copeland Ware.

as they arrive at the wage-earning period. One helps another; a father passes his cunning on to his son, and if we examine into the matter we shall find generations of potters. Naturally a good deal has heen done to encourage and foster local talent, and the School of Art at Stoke stands high as a teaching centre, and many well-known artists have come out of the potteries, the eleverest seemingly preferring to win renown in other spheres than in a china factory.

Is this because there is insufficient scope for a worker with individuality and amhition? There seems all too little of the former quality in so much that is produced, ostensihly as "art" work, in the potteries. Is there no demand for originality of treatment? Do purchasers care little or nothing ahout the art of their teacups and plates? Collectors of old china seem to think that modern productions are, artistically, worthless. Is this so, or is it a case that nothing modern can he as good

as what is old? This is not the place seriously to discuss such a question, hut in passing one may note that it is a great question whether connoisseurs in time to come will set as great store hy modern china as we do that of a hundred and more years ago. Age, we will allow, does give a value, other than the artistic, to the work of men's hands; hut apart from such a sentimental consideration as this, there can he no question that the hulk of the work of to-day lacks distinction. Expensive vases and services are made now as of old, upon which enormous labour and the utmost mechanical skill are expended, but what rank do these works take, viewed as works of art? One way of answering such a question is to imagine them placed in juxtaposition with old work say in the Ceramic Galleries at South Kensington Museum. Will they stand such a comparison? The student must answer this.

During the preparation of these articles, which have heen running through this year's ART JOURNAL, I have had occasion to examine a good deal of modern ceramic work, and one of the things I note is that most individuality is shown in the productions of small potteries who turn out faïence. The makers of china, on the other hand, seem more content to follow precedent, and there is less striving after originality or even individuality than one fancies should he the case. For one thing it is so much easier to start making pottery than porcelain, and an individual with a taste for ceramics, like Sir Edmund Elton, can produce faïence with much greater facility than would he the case had he started to make porcelain. There are a dozen potteries to one china works in England, for to produce china for the market and to show a profit appears to necessitate large and well-appointed works, and in large concerns the individual has far less scope than he has in a more limited field of action.

The chemistry and mechanics of potting have reached a state of excellence that would have astonished an old potter like Whieldon, and yet while that side of the craft has advanced, the artistic side has not only not dollowed suit, hut in many respects has fallen upon evil days—vapid, hanal, meretricious too often is the design and decoration of modern china. As for modelled work, much of it is, from a sculptor's point of view, heneath contempt, rarely rising ahove the vapidly pretty, if it is not worse. Yet what a scope there ought to he for the work of clever modellers!

I have spoken with several artists who have come out of the potteries, and their testimony is that there is no scope for a really clever, amhitious student; and the consequence is that those who hy their talent might remove the reproach that there is little taste or originality in modern pottery, use it to get into another line of work. This may or may not he the fault of the conditions that ohtain, and the owners and managers of pot factories may have a good answer to the ahove indictment, hut that an improvement all round is desirable is the conclusion I have reached during the writing of this series of articles. L'Art Nouveau on the Continent has heen sneered at and treated as a passing craze in many quarters, but there can he no doubt that it evidences a very earnest desire to escape the thraldom of convention, and a laudable effort to allow newer impulses to stir and direct the craftsman. L'Art Nouveau may protest too much, hut those who, like the writer, made a study of the hest work at the late Paris Exposition, and judged it without hias, must acknowledge that the work produced under its influence is

#### A HISTORY OF ARTISTIC POTTERY IN THE BRITISH ISLES.

Copeland Ware.

more interesting and characteristic of to-day than the traditional art which familiarity has made us contemptuous of. The movement on this side which the phrase 'Arts and Crafts' suggests has also been ridiculed, and there is no doubt but that

over-emphasis and a mere striving after originality has made some of the works produced under these newer influences at times jejune and odd, hut surely the total effect is all on the side of good, for if the Arts and Crafts Society has accomplished nothing else, it has enabled the craftsman of to-day to enjoy a liherty and gain a position that a few years ago was not his. The same old wheel has not gone on deepening the rut year hy year. The perpetuation of worn-out motifs has given place to a legitimate striving after a fuller expression of the ego of the worker, thereby giving him some joy in the working which more mechanical conditions rob him of.

The pre-Raphaelite movement of fifty years ago was equally condemned and ridiculed hy the savants of the time, but we can see as we take a survey of the last half century that the art of to-day is the gainer hy this movement, which required a Ruskin to defend and popularise it.

Some such movement, it appears to me, is required in the potteries, particularly in the china works, for there comes a time when the old order must give way to newer modes of thought, newer methods, fresher points of view.

My remarks must he in the nature of generalisations, for it has not heen my métier in these articles specifically to criticise the works which have heen described in these pages—it has heen sufficient to put certain data hefore my readers upon which they may form a judgment; hut in this final article it seemed appropriate to give this hrief summary, in which a personal impression has found expression.

There is a feeling ahroad, a feeling that deepens rather than dissipates, that we, as a nation, are allowing other peoples to outdistance us. Old nations, as well as old firms, are very apt to get into grooves, to hask in pleasant hackwaters rather than hreast the flowing stream. But backwaters are stagnant, and do not encourage healthy life, and if there is one certain fact that life teaches, it is that there is no standing still, no resting on one's oars: man either goes forward or drops hehind; he never stays still.

I.—CARPETS AND TAPESTRY.\*

BY R. E. D. SKETCHLEY.

THE ideal that passed from the minds of tapestryweavers when the idea of emulating oil painting with the spindle and yarn took possession of their ambition, finds realisation after centuries of oblivion in the Arras tapestries woven in the Morris weaving sheds. The noble tapestries of the early sixteenth century were his model; tapestries where the clotb is almost filled with figures "arranged in planes close up to one another," giving an effect "peculiarly rich in contrast with the poor, unfilled look of figures arranged as in a picture, with space around." This sequent disposition of planes is, of course, not dependent on a multitude of figures as in the great masque and pageant themes of the Flemish tapestries. As Morris wrote of simpler forms of tapestry: "You may almost turn your wall into a rose-hedge or deep forest . . . . plane upon plane of rich, crisp foliage with bright flowers and strange birds." But always this filled-up effect was the end in view, depth of tone, strength of colour, purity and dignity of form, and a happy profusion of detail giving these cloths true decorative value.

The most important achievement of the firm as tapestry-weavers is the series of hangings designed by Burne-Jones in illustration of the noble legend of the Grail, and executed at Merton for Mr. D'Arcy, of Stanuore Hall. The panels that contain the various scenes of the romance are eight feet bigh, while a band of tapestry, five feet high, placed beneath the panels, is designed with a thicket, habited by deer, which pass under the branches of the trees hung with the emhlazoned sbields of King Artbur'sknights. These fine "verduras,"

\* Continued from page 80, Supplement.

with their blazonment of heraldic charges, their crisp leafage and the dusky forms of the deer, owe hardly more than their suggestion to the painter. Here, as in the lovely details of the country of the Quest, the imagination of the weaver finds expression. The legend of the Grail, inscribed on a scroll, runs above the thicket, and, reaching to the ceiling of the high dining-hall at Stanmore, the armed men and damsels, the tall angels, stand in noble sequence amid the forest boughs and blossoming earth. More than three years' work was needed to complete this series from the slightly tinted cartoons of the artist, the texture throughout being sixteen warptbreads to the inch. A replica of this series was woven for Mr. George McCullocb for his house in Queen's Gate.

It is of interest to remember that the last design of Sir Edward Burne-Jones, and the last work his hand touched, was a design for tapestry that was to have been woven by the firm of Morris and Co. for exhibition in Parls in 1900. The subject of his choice, "The passing of Venus," was nobly planned by him, and the unfailing excellence of the weaving at Merton would surely have made this tapestry no less a perpetuation of the spirit of the great master-weaver than those earlier tapestries that he saw growing on the looms, or the tapestries wrought in some part by bimself in hours of bappy labour at "the dear warp and weft."

The tapestry-weaving of William Morris was not the sole tapestry-weaving enterprise of the 'eighties, but though the Windsor Tapestry Works had every advantage of capital and high patronage to establish them, they may be briefly dismissed. Modelled on the system

of production that prevails at the Gobelins, the weavers, under the direction of a French masterweaver, were engaged in reproducing oil paintings on low-warp looms. After some twenty years of patronage the production of the Royal works ceased, cartoons and looms were sold at auction, and some of the tapestry-weavers passed into the employment of the firm of Morris, where they graduated from low-warp to highwarp weaving. The comparatively recent establisbment of a high-warp tapestry-weaving school for cripple girls by Miss Clive Bayley at Bushey must be mentioned. The "St. George and Dragon"

tapestry, designed by Mr. Heywood Sumner, and executed by the girl-weavers for presentation to Earl Roberts, is among the interesting productions of the school.

In order to summarise the achievements of William Morris as a "tapestry" weaver—to maintain his classification of tapestry and carpet-weaving as allied and inseparable in principle—one is compelled to break the coherence of a general record of hand carpet-weaving in Great Britain. This is of the less moment, seeing that each enterprise, both modern and bygone, has been an individual matter, unconnected save by the unity of principle that has regard to good craftsmanship. Without enthusiasm for the craft, without resources of knowledge, artistic and practical, without power to translate enthusiasm and knowledge into terms of practice, in dyeing the wools, in weaving them fitly and inventively, and in finding a market for the webs, there can be no successful attempt at hand carpet-making. Personality-impulse, initiative, and contrivance-is the force that must supply what the tradition of the craft supplies under more generally inspiring conditions of labour.

Personal enthusiasm, experience in organising labour, and in devising schemes of labour, have rarely worked with more interesting effect than in the case of the establishment and development of carpet-weaving in Donegal by the Mortons of Darvel within the last four years. This attempt to establish the craft as an organised peasant industry among the hills of Donegal seems likely to add one of the most fortunate chapters to the textile history of Ireland. Not only the story of the four years' work, of the steady development of

interest and capability in the girls who weave at the looms in Killybegs, of the growing demand for "Donegal" carpets, and the consequent enlargement of the scheme, but the spirit in which the enterprise was conceived, the spirit that orders its execution, augur success in the future for a scheme whose effects may be more lasting and valuable than any save those who know the villages of Western Ireland can foresee. But this, time will show; is, indeed, already showing. Here one is concerned to give an outline of the undertaking that produces "Donegal" hand-tufted carpets for the British and foreign market.

A member of the Congested Districts Board, who had seen hand-tufted carpets made by Scottish weavers in the employment of the Messrs. Morton, first suggested to the head of the firm the possibility of setting the deft fingers of Irish girls to work of finer capability than the "sprigging" of handkerchiefs. The suggestion led to the establishment of a small weaving centre in Killybegs, chosen for its situation on a branch of the Donegal railway, with a harbour, and in a district of hills where is fine pasturage for the sheep whose fleeces provide the yarns that Irish dyers colour for the weavers. A carpet-knotter from Southampton was engaged to teach the girls, and, from the beginning. they proved apt to learn a craft whose simple, unvarying technique brings within the range of the worker the pleasure of translating designs whose beauty may equal the beauty of anything planned to be woven. Wonders-as Morris exclaimed-may be worked in carpets, and the able staff of designers who work for

#### SUPPLEMENT TO THE ART JOURNAL.

At work on Donegal Carpets.

the Messrs. Morton, both for the power-woven fabrics manufactured in Darvel and Carlisle, and for the handweavers of Donegal and Carlisle, realise the possibilities of the web, and their opportunities as "modern and Western" designers for an ancient craft.

A factory to hold four hundred weavers has been built for the girls who come from the district just about Killyhegs, and here is the centralised activity of the scheme. Wool is collected here and spun and dyed for the branch weaving establishments that are founded, or to he founded in course of time, at other villages, such

as Kilcar, Ardara or Glenties. Here, too, the final overlooking of the carpets woven by the sister villages takes place, and from Killybegs, by rail and water, the webs that have husied the hands and brains of the Donegal lasses are dispatched to market. A carpet for Queen Victoria was one of the early lahours of the Irish weavers, and more recent Royal orders prove that the interest taken in the scheme is not likely to fail for want of noteworthy example. But though patronage may help to create a demand, the carpets are not to be looked on as merely "fashionable" fabrics. "Support home industries" is a cry too often raised to catch the philanthropic ear,

and so to create a demand for things not marketable on their own merits. The wise spirit of philanthropy might incline towards furthering the work undertaken hy the Mortons with the encouragement of the Congested Districts Board; but those who care nothing for the real distresses of Ireland, wbo are indifferent to the waste of nimble spirit and craftsman's capacity among the poorly-paid embroiderers and knitters; who see nothing in the love of a people for the land of their hirth and tradition but a love of squalor and idleness, may yet encourage the carpet-weavers of Donegal for the best and soundest of reasons-that their car-

pets, in materials, durability and beauty justify their existence to the most exigent of critics. In design it is of interest to note the development of what may fairly he claimed as a British style of ornament from the Orientalism of the first designs executed in Ireland. The designs of "Donegal" carpets are eclectic—Persian, Turkish, French modes of ornamenting carpets are followed—but "English" and "Celtic" designs are among the newer and certainly not least successful productions of the weavers.

Dante's Dream (p. 16).

By D. G. Rossetti.

## Dante Gabriel Rossetti.

Mrs. William Morris (p. 27). By D. G. Rossetti.

THE influence of no other single Britisb painter is so apparent in the art of our time-and not alone the British art — as that of the subject of this monograph, Dante Gabriel Rossetti. "I believe," said Ruskin, in the course of a lecture delivered shortly after the artist's death, "that Rossetti's name should be placed first on the list of men,

within my own range of knowledge, who have raised and changed the spirit of modern art; raised in absolute attainment, changed in direction of temper."

And certainly the most cursory glance at the work of the average "early Victorian" painter—a stroll through the Vernon Collection at the Tate Gallery, for instance is sufficient proof that there was much room for improvement in the spirit, at any rate, which animated this sphere of art in the early days of Rossetti and the PreRaphaelite movement. The principal object of the majority of these painters appears to have been the apotheosis and the reiteration of the commonplace, their chief characteristic utter lack of originality or imagination. The eternal "sea-pieces" and "cattle-pieces," and "fruit-pieces" and "family-pieces," as Ruskin bas put it, leave us, or we leave them, with that tired and dissatisfied feeling produced by the contemplation of decadent art—I use the word in its literal sense, with no

moral, or immoral, sous-entendu. There is something so belplessly inane and artificial in the art of this period that one feels that some form of revolution was inevitable to destroy it, even as that great cyclone, the French Revolution, swept away the dense clouds of artificiality in social life wbicb preceded it. Curiously

The Girlhood of Mary Virgin (p. 6). By D. G. Rossetti,

enough, throughout the whole history of art as known to us, from the Byzantines and early Italian painters until our own times, it has periodically required some man of genius, or some small group of men, to rise up and rediscover Nature, that apparently selfevident fact, from where it lay buried and forgotten by the artists. It requires from time to time the eyes of a genius to penetrate the mists of artificiality which obscure the vision of his fellowmortals. Towards the middle of the nineteenth century the small band of Pre-Raphaelites, with Rossetti as leader among them, rendered once more this very necessary service to art.

Dante Gabriel Rossetti, or, as he

was christened, Gabriel Charles Dante, was the first son of Gabriele Rossetti, the Abruzzese anti-despotic poet and commentator of Dante. His mother was the daughter of Gaetano Polidori, a Florentine professor and man of letters, and of an English lady whose maiden name was Pierce. Thus Dante Gabriel was by

Rossetti's Father (p. 26).

birth three-quarters Italian; and indeed we can see little of the Anglo-Saxon spirit in his works, though he had in privatelife a decided partiality for England and things English. He was born on the 12th May, 1828, being the second of Gabriele Rossetti's children. It is not within my scope to say much

here concerning the family or private life of Rossetti, but it is interesting to note that, whereas so many artists and writers have started life heavily handicapped by their families and domestic relations, the early surroundings of Dante were in every way calcu-lated to encourage and foster the development of his intellectual powers. There was no

flavour of vulgarity or petty-mindedness in the modest Charlotte Street household, and from their earliest years Mrs. Rossetti, who attended to the elementary education of her children, accustomed them to pursuits of an intelligent and elevated kind. Thus we learn that at the age of five little Dante enjoyed Hamlet, and

before he was ten he and his brother had read much of Shake-speare, Faust, Walter Scott, and the Arabian Nights.

From his very earliest years Dante Gabriel showed a taste for drawing, and it was always an understood and accepted fact in the family circlethat he would be an artist when he grew up.

The artistic training which he received was of a very limited nature, which circumstance partly accounts for two phenomena connected with his art—the somewhat defective technique noticeable in some of his works, and the strong

stamp of individuality, uninfluenced by any school whatsoever, but due entirely to himself, his own taste and imagination, which so distinctly characterises them all.

Towards the end of 1841, when aged thirteen and some months, he left King's College, where his father was professor of Italian, and bade good-bye to regular schooling for good, entering Sass's Academy, a class for drawing which was conducted by Mr. F. S. Cary, a son, as it happened, of the translator of Dante. Here be remained about four years, proceeding thence to the Antique School of the Royal Academy, where his art studies proceeded for another two years. He made no very conspicuous progress and was never promoted to the life class.

The fact is that Rossetti's was a nature and an intellect which could gain little from outside influence—to his detriment as a painter in some respects, to his inestimable gain as an artist in the broader sense. He was impatient of the slow routine of regular learning;

his band craved to follow the more rapid impetus or his mind. The tedium of copying casts and studying perspective was well-nigh intolerable to this youth, whose ambition already urged bim to enter the domain of serious art and to depict lofty, intellectual subjects.

Thus in 1848, dissatisfied with the slow progress he was making at the Academy School, we find bim writing to Madox Brown the now famous letter which initiated his artistic connection and life-long friendship with the great historical painter. Dante did not continue for very long, however, any regular course of study under Madox Brown, finding the fixed discipline here, as elsewhere, irksome. He wished to paint pictures, not to labour at copying casts or the "pickle jars" which, according to tradition, Madox Brown set him to depict by way of practice.

And here, before turning to Rossetti's first picture, I may mention that I propose in the course of this paper to pay attention to grouping of subject matter rather than to strict sequence of date in dealing with his work.

Mary Magdalen at the door of Simon the Pharisee (p,6). By D. G. Rossetti,

From the picture in the
Collection of Fairfax Murray, Esq.

" Found" (p. 9.)
By D.G. Rossetti

At the Academy School Rossetti had made the acquaintance of Holman Hunt, and on leaving Madox Brown's studio he removed his paints and other artistic impedimenta to Cleveland Street, where amid somewhat dismal surroundings he shared a studio with his young fellow-student, now already an exhibiting artist of some note, and proceeded almost straight away to paint his first picture, 'The Girlhood of Mary Virgin' (p. 1).

This now-famous picture is so intimately connected with the heginning of the Pre-Raphaelite movement, and so original in style and spirit, hesides heing the first important work hy Rossetti (it was preceded hy a small oil portrait of his sister Christina), that it deserves more than passing mention.

The Virgin is represented seated heside her mother at an embroidery frame, a simple, austere, virginal figure for whom sat the artist's sister Christina. Needle in hand, she pauses at her work and gazes, rapt in thought, at a little angel who stands heside a tall white lily. Outside the window of the room where the Virgin and her mother are seated stands St. Joachim, her father, tending a vine, the young tendrils of which are symbolically trained to form a cross. The picture is, indeed, full of such symbolical touches—strips of palm and seven-thorned hriar lie on the floor, and underneath the jar where grows the lily are six large hooks whose hindings hear the names of the six cardinal

virtues. Rossetti's sonnet, "Mary's Girlhood," was written for this picture:—

"This is that blessed Mary, pre-elect
God's Virgin. Gone is a great while and she
Dwelt young in Nazareth of Galilee.
Unto God's will she brought devout respect,
Profound simplicity of intellect,
And supreme patience: from her mother's
knee
Faithful and hopeful; wise in charity;

"So held she through her girlhood; as it were An angel-watered lily that near God Grows and is quiet; 'rill, one dawn at home She woke in her white bed, and had no fear At all—yet wept till sunshine, and felt awed; Because the fulness of the time was come."

Strong in grave peace; in pity circumspect.

Rossetti was never either a helieving or a professing Christian, but this early picture, like all his later ones dealing with religious suhjects, is sympathetic, indeed reverent, in tone—not the work of a materialist entirely out of all sympathy with, or understanding of, religious or spiritual sentiments. The same may he said of the 'Ecce Ancilla Domini,' now in our National (Tate) Gallery, and of the 'Magdalen at the door of Simon' of much later date.

The female members of Rossetti's family — his mother and sisters Christina and Maria more especially — were devoutly religious, and Dante had from childhood heen brought up in the Christian (Protestant) faith. Thus, although with years of discretion he developed into a sceptic on questions of religion, and never had one single element of the pas-

tor in his entire constitution, it is only natural that, hoth in his poetry and his paintings, he should always have treated religious subjects in an elevated and reverent spirit.

In the 'Ecce Ancilla Domini' (p. 3), strikingly original as this new treatment of the oft-depicted subject is, there is no flavour of narrow-minded materialism, no note that could jar on the most seusitively religious mind. The Virgin — here again painted from Christina, whose spiritual, Madonna-like face rendered her a perfect model for such a picture—is just aroused from slumber; half rising from her couch, she gazes with something at once of awe and of serenity in her face, at the approaching messenger. There is little colour in the picture. The Virgin and the angel are clad in white, the angel holds a white lily in his hand, the walls and the couch are white, almost the only colour in the whole canvas being the deep blue of the oriental sky, seen through a window, and a hlue drapery hehind the Virgin's head.

This picture, for some reason well-nigh incomprehensihle to us to-day, aroused, along with other Pre-Raphaelite pictures exhibited the same year, a perfect tempest of ahuse, and remained long unsold in the artist's studio—"a hlessed white eye-sore" to the impecunious youth.

In Rossetti's other great religious picture, 'Mary Magdalen at the door of Simon the Pharisee' (p. 5), the

Photo, Mansell

Hesterna Rosa (p. 9). By D. G. Rossetti

Magdalen is represented surrounded by a company of fellow-revellers about to repair to a neighbouring feast, at the moment when she beholds the head of Christ through the open window of Simon's house. "And behold a woman in the city, which was a sinner, when she knew that Jesus sat at meat in the Pharisee's house, brought an alabaster box of ointment." Her lovers and companions surround her, and seek to deter her with prayers and jibes, but blind and deaf to their appeals, her eyes fixed on the Christ's face, she sees Him alone, and tears from her brow the garlands of roses which adorned it. Simon, from within, looks disdainfully at Mary Magdalen, and a servant, knowing her, smiles at her approach. Christ looks towards her and waits. Rossetti wrote one of his finest sonnets for this picture, of which these lines are the final sestet:—

"Oh, loose me! Seest thou not my bridegroom's face
That draws me to Him? For His feet my Xiss,
My hair, my tears He craves to-day."—and oh!
What words can tell what other day and place
Shall see me clasp those blood-stained feet of His?
He needs me, calls me, loves me: let me go!"

The most important version of this picture, in pen and ink, was begun by Rossetti in 1853, and terminated in 1858, but the original idea of the picture was of earlier date.

Besides these Rossetti painted various other religious subjects during the course of his life, and notably some very fine designs for stained glass for the Morris firm, remarkable for their vigour, ingenuity of design, and admirable simplicity of line—this latter quality so essential in stained glass, mosaic, etc., and so little understood by modern artists. 'The Seed of David,' a triptych oil-painting in the Llandaff Cathedral, and the 'Parable of the Vineyard' and 'St. George and the Dragon' series in stained glass deserve special mention.

# II.—The Pre-Raphaelite Movement.

WE left Rossetti painting 'The Girlhood of Mary Virgin' in Holman Hunt's studio on the very verge, or more correctly in the full current, of the much talked and written about and much criticised Pre-Raphaelite movement.

So much, indeed, has already been written and said of late years on this subject, that one naturally feels some reluctance in broaching it again, but to write about Rossetti without devoting a little space to the Pre-Raphaelite Brotherhood would not be possible, and so I will say a few words on the subject, and then pass on.

1848 was, par excellence, a year of revolution and innovation; and while Dante's father, the exiled Italian patriot, was anxiously watching for some change in the political conditions of Italy which might enable him to return, the son, who never took any interest in political or social questions, was, in conjunction with a few other youths of genius and initiative, inaugurating the most formidable revolt against accepted conventions in the world of art which the nineteenth century witnessed. When I say the most formidable I do not by any means forget that other movement which has exercised so marked and so wide-spread an influence on modern painting-the Impressionist. Three new influences, indeed, are paramount in the art of the latter half of last century-the Pre Raphaelite, Impressionism, and the Japanese. But apart from the fact that the Pre-Raphaelite was the first of these movements, and thus in a certain measure prepared the ground for the others

Photo, Mansell.

Washing Hands (p. 9).
By D. G. Rossetti.

—for it is the first steps on the path of innovations which are the hardest to make—I consider that it was also the most important intrinsically, and the most farreaching in its effects.

Dante Gahriel and his hrother William Michael Rossetti, Holman Hunt, Millais, F. G. Stephens, James Collinson, and Thomas Woolner the sculptor, such were the names of the youths—the eldest of them under twenty-four years of age—who handed together in open revolt against worn-out laws and traditions in art under the title of the Pre-Raphaelite Brotherhood. Ford Madox Brown, their senior hy a few years, though he never actually enrolled himself as a memher of the Brotherhood, was an earnest sympathiser, partly a precursor, partly a convert.

Which of the three prime movers in the Brotherhood-Rossetti, Holman Hunt, or Millais-was responsible for the first definite suggestion of such an association it would he difficult to say. All three were equally essential to it, and prohably have equal claims to its foundation. Millais and Hunt were undouhtedly the more competent painters at that time, and Hunt, as his works throughout his career prove, was a most earnest and strenuous seeker after truth and nature, a man of determination and of intellect. In these latter respects Millais was at this period undouhtedly considerably under the influence of his young confreres, as is shown hy the deterioration in subject-matter which his later work displays. Of the three, Rossetti possessed the richest imagination, the greatest creative power, and heing the most headstrong and impetuous of the set, prohably went farther than the others in urging that such a hody should be formed under the name Pre-Raphaelite.

To this generation, who, hy means of picture galleries and innumerable publications, photographs, and reproductions of all kinds, are more or less well acquainted with the works of the early Italian painters, and to whom the names of Giotto, Botticelli, Fra Angelico and Filippino Lippi are familiar as household words, it is difficult to realise how little a youth like Rossetti or any of his associates (who at the date of the formation of the Pre-Raphaelite Brotherhood had never heen outside this country) could know ahout the painters who preceded Raphael. Our National Gallery was at that time a very different thing from what it now is, and Rossetti could hardly he acquainted with the works of the early Italians further than through Lasinio's engravings from the frescoes in the Campo Santo in Pisa (some by Benozzo Gozzoli, Orcagna, a few things attributed to Giotto, etc.); two pictures hy Francia, some specimens of Gaddo Gaddi, and the little Perugino in the National Gallery; Mantegna's 'Triumph of Julius Cæsar'-the latter and the Perugino heartily despised by Rossetti, entre parenthèses-and casts of Ghiherti's famous gates of the Battisterio in Florence, which were tremendously admired by Rossetti and Holman Hunt. With the works of the non-Italian painters anterior to Raphael they were slightly acquainted, hut not to any very considerable extent; the work of Van Eyck in our National

Gallery was known to them and admired.

Their admiration for the Pre-Raphael painters was therefore inspired rather by their contempt and detestation of the pompous and stereotyped works of the painters who succeeded Raphael than by their absolute knowledge of the former; and there was something of the spirit of the famous "Gueux" in their adoption of a title which had heen cast at them as a term of reproach.

Later writers-commencing with Ruskin and culminating in a hook by an enthusiastic lady admirerhave heen pleased to attribute all kinds of objects and "purposes" to the Brotherhood, and seem erroneously to imagine that the artists who formed it set themselves up as a sort of lay mission to their fellows. No greater mistake could he made. They were concerned with art, in a certain sense with the reform of art, not with morals. Their one great object, the most moral object indeed at which an artist can aim, was the painting of good pictures. A high intellectual standard in the choice of subject, individual freedom and non-subjection to academic laws in the treatment thereof, truth and fidelity to nature as regards execution-such, in a few words, were the main principles of the Pre-Raphaelite Brotherhood.

And what is true of the Pre-Raphaelite Brotherhood as a whole, is most signally true of Rossetti individually. He was essentially an artist and a poet, not a teacher of morals. He was a man of elevated intellect, far ahove the commonplaces of his time, and of poetic imagination, and this intellect and imagination he gave

Rob and Francesca (see p. 3 From the Roberton of Edmund Davis E.g.

out to the world in his paintings and his poetry. His paintings, though essentially beautiful, are never insipidly so-not mere prettiness with nothing more solid behind it. There is thought behind all, and poetry and imagination; in short, there is intellect. But with very few exceptions there is in his work no set moral purpose; Rossetti did not paint in order to preach some good lesson, religious or otherwise, to his contemporaries. The fact is, he paid but little heed to his contemporaries, and they entered very slightly into his calculations. He lived apart from them, and was little concerned with their desires or doings. He wrote and he painted the very best he had in him, and in this he conformed to the highest moral laws in so far as they concern the artist. He did not regard his pen or his brush in the light of a pulpit, after the manner of so many of his compatriots. Ever since Hogarth, the pioneer of English painters, who scourged with his brush the follies, frivolities, and vices of his times, there has been a strong tendency among English artists to extract sermons in stone or paint or other medium from their art. Rossetti was little concerned with the follies of his time, and he did not inveigh against them. He helonged to that race of men who leave cabmen to settle topographic difficulties, sermons to paisons, and painting to artists. He lived in an atmosphere of his own; belonged to himself and his art. He painted very few modern subjects, and lived rather in the Middle Ages than in the nineteenth century. And for this he paid the necessary penalty in being comparatively little known during his life, though much misunderstood and misrepresented.

One of the very few pictures from Rossetti's brush dealing with modern life, and touching on moral or social problems, is 'Found' (p. 6). This picture represents early dawn in a London street abutting on one of the bridges. A young drover from the country, while driving a calf to market, recognises in a fallen woman on the pavement his former sweetheart. He tries to raise her from where she crouches on the ground, but with closed eyes she turns her face from him to the wall. The woman's face is full of expression and pathos, a face with much of beauty in it, but worn and bearing the traces of vice and suffering. Under the earlier pen-and-iuk version of this picture is inscribed in Rossetti's hand this verse from Jeremiah, "I remember thee, the kindness of thy youth, the love of thy betrothal." Rossetti also wrote a very fine sonnet, which we give below:-

"There is a budding morrow in midnight,
So sang our Keats, our English nightingale—
And here as lamps across the bridge turn pale
In London's smokeless resurrection-light,
Dark breaks to dawn. But o'er the deadly blight
Of love deflowered and sorrow of none avail,
Which makes this man gasp and this woman quail,
Can day from darkness ever again take flight?

"Ah, gave not these two hearts their mutual pledge Under one mantle sheltcred 'neath the bedge In gloaming courtship? And, O God! to-day He only knows he bolds her;—but what part Can life take now? She cries in her locked heart, 'Leave me—1d on out know you-go away!'"

'Found,' like many of Rossetti's pictures, went through numerous vicissitudes. It was commenced in 1853, commissioned by several would-be purchasers, but never finished. Two pen-and-ink versions and various studies for it exist.

An early design, 'Hesterna Rosa' (p. 7) deals with somewhat the same theme. This is founded on Elena's song in Sir Henry Taylor's "Philip van Artevelde'':—

"Quoth tongue of neither maid nor wife,
To heart of neither wife nor maid,
'Lead we not here a merry life
Betwist the shine and shade?'
Quoth heart of neither maid nor wife
To tongue of neither wife nor maid,
'Thou wag'st; but I am sore with strife,
And feel like flowers that fade.'"

The design represents the inside of a tent or cabin after a night's revelry, at the hour of early dawn. Two men are playing dice, with their mistresses, vinegarlanded, close by, one singing with her arms round her lover's neck, the other, the hesterna rosa, in a sadder mood, hides her face in her hand. A child, close by, plays a lute, while an ape, suggestive of the haser side of life, scratches himself in another corner.

With the exception of 'Found' Rossetti painted no large modern picture of great importance—indeed very few modern subjects seem to have appealed to him at all. 'Dr. Johnson with the would be Methodists at the Mitre' (p. 4) is a delightfully unexpected little drawing executed in Paris in 1860, the year of his marriage to Lizzie Siddal. The incident is taken from "Boswell's Life of Johnson," and represents a little tea scene at the "Mitre," whither Johnson had invited two young ladies who desired to discuss Methodism with the learned doctor. He has taken one of them, an especially demure-looking young lady, on his knee, no doubt in order to elucidate with greater emphasis some knotty theological point. The figures of Johnson and Boswell -historically Maxwell, not Boswell, should have been the fourth-are excellent specimens of portraiture. This theological discussion has evidently proved of an absorbing nature, for a waiter comes down to extinguish the lantern, as though to suggest to the quartette that the hour is advanced.

'Washing Hands' (p. 8), a water-colour belonging to the year 1865, shares with the 'Found' and the 'Johnson' picture the distinction of being among the very few specimens of comparatively modern costume painted by Rossetti. It represents the last stage of an unlucky love-affair, and the lady is washing her hands of it and of her lover.

Dante drawing an Angel in memory of Beatrice (p. 10).

By D. G. Rossetti.

## III.—Dante Subjects.

S OME of Rossetti's finest work—I think that I should not be far wrong in saving his finest, was are detailed. not be far wrong in saying his finest-was produced under the influence of Dante's poetry. From their earliest infancy the Rossettis had grown up in a Dantesque atmosphere, one of the most familiar spectacles of their childhood being the figure of their father poring over the works of the great Florentine, writing notes and commentaries. Indeed, so heavy and musty were the volumes old Rossetti delighted in, so copious and minute his notes, that in early childhood the name of Dante Alighieri was rather a terror than a delight to his children—the "Convito" being regarded as the very essence of unreadable dulness. But as Gabriel and his brother and sisters grew up, they, too, were destined to fall under the spell of the divine poet, and to Dante Gabriel, both as painter and as poet, Alighieri was a never-failing source of inspiration. He was but little in sympathy with his father's theories and elaborate interpretations; the sublime poetry, the superhuman imagination which could grasp at once heaven and hell and the whole universe, appealed to him; he cared little about theological or astronomical discussions or disputes, nor did he trouble himself as to the precise circumstances under which Dante's stationary foot was always the lowest when ascending the mountain whence Virgil bade him retrace his steps, nor what that much-disputed mountain may have been.

Rossetti's earliest Dantesque design was a pen andink drawing, very Pre-Raphaelite in style, representing Dante drawing an angel in memory of Beatrice—a subject taken from a passage in the "Vita Nuova," which I quote in Rossetti's own translation: "On that day which fulfilled the year since my lady had been made of the citizens of eternal life, remembering me of her as I sat alone, I betook myself to draw the resemblance of an angel upon certain tablets. And while I did thus, chancing to turn my head, I perceived that some were standing beside me to whom I should have given courteous welcome, and that they were observing what I did. Also I learned afterwards that they had been there awhile before I perceived them. Perceiving whom I arose for salutation and said, 'Another was with me.'"

The water-colour reproduced above, illustrating the same subject, is a quite different composition painted by Rossetti some years later, in 1853. This picture, apart from its intrinsic charm and interest, is memorable as being the first link in Rossetti's acquaintance and subsequent friendship with Ruskin. It was shown to the eminent critic by its purchaser, Mr. MacCracken, and was so greatly admired by him that he subsequently took measures to meet Rossetti. Ruskin remained for many years Rossetti's friend and the generous patron of his art, and entertained the warmest regard for him both as artist and man—a regard which Rossetti reciprocated, although with the passing of years and divers circumstances, the two men saw little of one another in later life.

In the initial Pre-Raphaelite year, 1848, Rossetti made the first pen-and-ink design for the beautiful diptych of the 'Salutation of Beatrice' (p. 12). The left compartment represents the 'Salutation on Earth'—in the streets of Florence—an incident described in the "Vita Nuova." The 'Salutation in Eden' is from the "Divina

Commedia," and illustrates that wonderful passage in the "Purgatorio," beginning with the line, "Guardami ben, ben son, ben son Beatrice." We reproduce

below a charcoal study drawn from Mrs. William Morris, which is, I think, the finest head ever drawn by Rossetti-indeed I know few heads by any painter of any nationality, ancient or modern, which can compare with this for absolute beauty. This study was made for the 'Salutation on Earth,' but so intense and spiritual is the expression that it recalls rather the Beatrice of the "Divine Comedy," the Bea-trice who leads Dante higher and higher through the ascending spheres of Heaven, and in whose face Dante reads the reflection of Paradise-

"...Il piacere eterno, che diretto Raggiava in Beatrice, dal bel viso Mi contentava col secondo aspetto."

The 'Dantis

Amor' (p. 14) is a quaint design which Rossetti made some years later to form the centrepiece of a replica of the two 'Salutations,' which he executed for a cabinet for

the Morris firm. It is a symbolical representation of the last line in the "Divine Comedy":

"L'Amor che muove il sole e l'altre stelle."

To 1849, or a little later, also belongs a small water-colour illustrating a passage of the "Vita Nuova," which tells how Beatrice at a wedding feast denied Dante her salutation (p. 14). This, like all Rossetti's early water-colours, is charming and original in colour and design.

Another watercolour of early
date (1852), not
taken direct from
Dante s poetry,
but inspired by
him, is 'Giotto
painting Dante's
Portrait,' a subject suggested
by Dante's portrait by Giotto,
then recently
discovered in a

Head of Beatrice (p. 12).

La Donna della Finestra (p. 16). By D. G. Rossetti.

fresco in the Bargello by Gabriele Rossetti's old friend Barone Kirkup. Beyond this, however, the picture gives expression to a verse of the "Purgatorio" on the transitoriness of fame, in which Dante, according to some interpreters, foretells his own renown:

"In painting Cimabue fancied be
Possessed the field: now Giotto has the acclaim
In such wise that it darkens his repute—
So has one Guido from the other reft
The glory of language: and he's born, perhaps,
Who'll turn out of the nest the one and both."

Behind the seated figure of Dante stands Guido Cavalcanti, reading from a volume of the other Guido's poetry, while Cimabue, a person of obsolete aspect, gazes at Giotto as be paints.

The most beautiful of all Rossetti's early Dantesque water-colours is perhaps the 'Paolo and Francesca' (plate opposite p. 8) painted in 1861 for bis patron Mr. Leatbart, being a replica of the first compartment of a diptych of earlier date (1855). This beautiful little picture illustrates those wonderful lines in the fifth canto

of the "Inferno" in which Francesca tells Dante "in what manner love conceded that she first recognised her duhious desires."

Rossetti translated the lines to which this picture gives expression:

"One day we read
for pastime and
sweet cheer,
Of Lancelot, how
he found lovetyrannous:
We were alone and
without any fear,
Our eyes were
drawn together
reading thus,
Fulloft, and still our
cheeks would
pale and glow;
But one sole point
it was that conouered us.

From a Water-colour in the possession of H. T. Wells, R.A.

Beatrice denying her Salutation (p. 12). By D. G. Rossetti. their friend Lapo Gianni, and their respective ladies, might he conveyed over the seas in a harque, and "not talk of anything hut love." This picture Rossetti took up late in life, hut in style and spirit the design belongs rather to his earlier period.

Some of the greatest works of Rossetti's later period also draw their in spiration from Daute—the Beata Beatrix,' now in our National

Gallery, the 'Dante's Dream,' in the Walker Art Gallery, Liverpool, and 'La Donna della Finestra.'

The 'Beata Beatrix' (p. 11) was painted in memory of Rossetti's beloved wife—the Lizzie Siddal whose face

appears in so many of his earlier canvases and who so often, during her life, had sat for Beatrice. I quote below Rossetti's own description

of this picture :--" The picture illustrates the 'Vita Nuova,' emhodying symbolically the death of Beatrice as treated in that work. The picture is not intended at all to represent death, hut to render it under the semblance of a trance in which Beatrice, seated at a halcony overlooking the city, is suddenly rapt from earth to heaven.

"You will rememher how Dante dwells on the desolation of the city in

For when we read of that great lover how He kissed the smile which he had longed to win— Then he whom nought can sever from me now For ever, kissed my mouth, all quivering."

There is all the passion and abandonment of that first

unauthorised kiss in this wonderful little picture, which is one of the most exquisite things Rossetti painted.

In the second compartment of the earlier diptych the souls of the lovers are seen clasped together floating through Hell amid a tempest of flames. In the later triptych, reproduced here, Dante and Virgil are represented in a central compartment with the words "O lasso" inscribed hetween.

'The Boat of Love' illustrates a charming sonnet of Dante's addressed to Guido Cavalcanti, in which he expresses a desire that they two with

connection with the incident of her death, and for this reason I have introduced it as my background, and made the figures of Dante and Love, passing through the street and gazing ominously on one another, conscious of the event; while the bird, a messenger of death, drops the poppy between the hands of Beatrice. She, through her shut lids, is conscious of a new world, as expressed in the last words of the "Vita Nuova"— 'That blessed Beatrice who now gazeth continually on His countenance qui est per omnia sæcula benedictus."

This picture of Beatrice in a trance, which immortalises Rossetti's wife in death, is one of his most perfect paintings: perfect in those qualities in which he excelled-poetry, colour, and human and spiritual beauty. There is not a single discordant note in the whole picture; all is in perfect harmony. In no painting that I know of is the repose of Death more beautifully symbolised-the rest from the trouble and tumult of human existence with nothing of the ugly physical side of death. We have the repose of Death with none of its borrors; and beyond its repose the Christian idea, as seen through Dante, of the heatitude of death for the blessed. Rossetti could pay no greater tribute to the memory of his wife, whose tragic death, two years after marriage, was a grievous blow to the artist. There is something in the spirit of the 'Beata Beatrix' which reminds me of the incident in the "Vita Nuova" of Dante drawing an angel in memory of Beatrice.

'Dante's Dream' (p. 1) likewise illustrates the "Vita Nuova." I quote the particular passage from Rossetti's translation—one of the very finest specimens of translation in the English language.

"Then Love spoke thus: 'Now all shall he made clear;
Come and hehold our lady where she lies.'
These idle phantasies
Then carried me to see my lady dead:
And standing at her head
Her ladies put a white veil over her;
And with her was such very humbleness
That she appeared to say, 'I am at peace.'"

This verse describes the picture more clearly than any words I could add. Love, it will be seen, bends down to kiss the dead Beatrice, while Dante, whom he leads by the hand, grave and rapt in thought, stands hy and gazes on. The picture is unfortunately much deteriorated from its original form by Rossetti having repainted the hair of Beatrice, from dark to yellow, at a later date.

Towards the close of the "Vita Nuova" Dante tells us how, on one occasion, being in great distress at the death of Beatrice, and fearing lest any should behold his forlorn condition, he chanced to raise his eyes, and beheld a young and beautiful lady who was gazing down on him from a window with a gaze full of pity. Dante addressed to this lady a sonnet beginning:

"Love's pallor and the semblance of deep ruth
Were never yet shown forth so perfectly
In any lady's face, chancing to see
Grief's miserable countenance uncouth,
As in thine, lady, they have sprung to soothe,
When in mine anguish thou hast looked on me,
Until sometimes it seems as if through thee
My heart might almost wander from its truth."

This incident is the subject of Rossetti's fine composition, 'La Donna della Finestra,' of which we reproduce a study belonging to 1870 (p. 13). The principal version of this picture was painted in 1879, but in my estimation the earlier study is the finer in expression.

### IV.—Arthurian and other Pictures.

ROM Dante to Shakespeare seems a natural step, and we will now cast a glance at those pictures of Rossetti's which illustrate the works of the great English dramatist. To 1858 belongs a very fine design from Hamlet, representing the scene in Act III. where Ophelia returns the prince his letters (p. 16). The treatment of the subject is simple and dignified, and displays none of that theatrical turn so almost universally to be met with in pictures representing scenes taken, not from real life, but from the drama. Ophelia-a charming portrait of Miss Siddal-is seated in a quaint carved seat, which no one but Rossetti or Madox Brown could have invented, and with averted face she holds out to Hamlet the bundle of letters. In a letter to Professor Norton, Rossetti thus describes this picture: "The 'Hamlet and Ophelia' may need a word of comment. I mean him to he ramping about on the stalls of the little oratory turning out of the main hall, to which Ophelia has retired with the devotional book which her father gives her to read. He throws his arms wildly along the sill of the screen, and frays the roses to pieces as he talks, hardly knowing what he says. She still holds out to him the letters and jewels which she wishes to return, hut has done speaking and lets him rave on. In the woodwork are symbols of rash introspection-the Tree of Knowledge, and the man who touched the Ark and died. The outer court is full of intricate stairs and passages, and leads to the ramparts where the ghost walks at night."

Rossetti, by the way, seems to bave forgotten that some natural outlet should have been allowed for Hamlet's legs. The legs, however, are in no way essential to the scene, and we do very nicely without them. Hamlet

Hamlet and Ophelia (p. 16).

By D. G. Rossetti.

The Beloved. 1 see p 28.

is represented here youthful and grave, with none of that wild and fantastic mise-en-scène which both painters and actors who preceded Rossetti considered indispensable to him. Another version of the same subject of later date exists, a watercolour belonging to the year 1866. In this version Hamlet and Ophelia are standing, he holding her right hand in both his, she with averted face, and the casket of letters in front of her. In 1864 Rossetti painted a small water-colour which he named 'The First Madness of Ophelia.' It represents an incident which is not in the play, but which may be supposed likely, i.e., the first symptoms of Ophelia's madness before the regular "mad scene," She is being led away by Horatio, not, as it has been erroneously stated, by Laertes, while the King and Queen stand by in silence.

To 1870 probably belongs the first design for the 'Death of Lady Macbetb' (see below). As a representation of the terrible in a dramatic form this design is almost unique from Rossetti. Lady Macbetb, in frantic terror of approaching death, is wildly rubbing her hands in a vain effort to erase the imaginary blood-stains. A physician bathes her head and attendants surround her. Another design, which shared with the 'Lady Macbeth' the not very rare distinction of never being executed as a picture, is 'Desdemona's Death Song' (p. 18), of which the principal design belongs mainly to 1878. Emilia is shown combing her unhappy mistress's hair while she sings her last eartbly song.

We have unfortunately but few designs or paintings of Rossetti's illustrative of ancient literature; the mediæval and romantic appealed to him rather than the classic. One of his noblest designs, however, is inspired by Homer; I refer to the 'Cassandra' (p. 19). The design will be best understood from Rossetti's description: "The incident is just before Hector's last battle. Cassandra has warned him in vain by her prophecies, and is now throwing herself against a pillar and rending her clothes in despair because he will

The Question († 18).

By D. G. Rossetti,

not be detained longer. He is rushing down the steps and trying to make himself heard across her noise as he shouts an order to the officer in charge of the soldiers who are going round the ramparts on their way to battle. One of the captains is beckoning to him to make haste. Behind them is Andromache with their child, and a nurse who is holding the cradle. Heleu is arming Paris in a leisurely way on a sofa; we may presume from ber expression that Cassandra has not spared her in her denunciations. Paris is patting ber on the back to

sootbe her, much amused; Priam and Hecuba are behind, the latter stopping her ears in horror. One brother is imploring Cassandra to desist from her fearinspiring cries. The ramparts are lined with engines for casting stones on the besiegers."

It is deeply to be regretted that divers circumstances—the taste of his purchasers among others—prevented Rossetti from ever executing this remarkably fine design in the form of a painting. For vigour of conception and execution, expression, grouping, and ardour of thought it is almost unique. The figure of Cassaudra—like "a mountain-beast new-taken"—is powerful and tragic in the extreme. We might have expected Helen to be more absolutely beautiful, but it must be borne in mind that this is only a pen-and-ink design, and we cannot tell what Rossetti might have made of her in the finished picture.

Among the few other subjects taken from the store-house of ancient Greece and depicted — or rather projected — by Rossetti, are the 'Aspecta Medusa,' begun in 1865, and a small design, 'Troy Town'

Photo, Mansell,

The Death of Lady Machelh (p. 17), By D. G. Rossetti,

Study for Desdemona's Death Song (p. 17).

By D. G. Rossette

(p. 9), illustrating his ballad bearing that name. These beginnings, like the 'Cassandra,' proved of an abortive nature so far as painting is concerned.

A large pencil drawing, 'The Question' (p. 17), represents Youth, Manhood and Old Age questioning the Sphinx, who, for all answer, stares blindly and unre-

lentingly into space. Youth, his question unanswered and perhaps unasked, falls back dead, and it is said that in this conception of Youth dying on the threshold of knowledge, Rossetti wished to symbolise the untimely death of the brilliantly-gifted son of his life-long friend, Ford Madox Brown.

As an almost unique study of the nude this is very interesting from Rossetti, the only other nude figure by him of which I am aware being a full-length black chalk figure representing the 'Spirit of the Rainbow.'

As I observed above, the mediæval and romantic appealed to Rossetti more strongly than aught else, at any rate in his earlier days. King Arthur and the Arthurian legends, which Madox Brown was, perhaps, the first to set going in artistic circles, was at one period a source of endless inspiration to Rossetti—an interest which he shared with Burne-Jones, William Morris, and others of that brilliant circle with whom he first became acquainted towards the end of 1855.

Gabriel Rossetti and his brother had from boyhood been acquainted with Malory's 'Morte d'Arthur,' and to 1854 belongs a curious little Pre-Raphaelite water-colour, 'King Arthur's Tomb,' the idea of which is due, I believe, rather to Rossetti's imagination than to any definite incident in Malory. Guenevere is

praying alone at a memorial tomb which she has erected to Arthur in the grounds of the convent of which she has, since her separation from him, become prioress. Here Lancelot seeks her out and would fain renew with a kiss the memory of their olden love, but Guenevere, grown older and repentant, refuses.

Among Rossetti's charming illustrations for the "Moxon's Tennyson" (1856), is one of Sir Galahad in quest of the Sanc Grael, stopping at a wayside chapel to quench his thirst with water; and to 1857, the year of the famous Oxford fresco undertaking, belongs, among a number of small water colours, mostly very mediæval in tone, an Arthurian drawing, the 'Damsel of the Sanc Grael,' a very different conception of the subject from the later painting of his declining years which bears the same name.

Mr. Mackail, in his life of William Morris, tells us that Burne-Jones first "discovered" Malory in a second-hand bookshop in 1855, and communicated his find to Morris, and together they appear to have jealously guarded and concealed their treasure from the unsympathetic outer world until "a year later they heard Rossetti speak of it and the Bihle as the two greatest books in the world, and their tongues were loosed by the sanction of his authority."

The story of the Oxford Union Debating Hall frescoes has been too often told to require lengthy reiteration—how Rossetti persuaded the committee in charge of the building operations to fall in with his scheme for decorating the hall; how seven artists were engaged for the work: Rossetti, Burne-Jones, William Morris, Arthur Hughes, Spencer Stanhope, Val Prinsep, and J. Hungerford Pollen, and how little, alas! these young men knew of the particular kind of work which they had undertakeu. The subjects chosen were all

How they met themselves (f. 22).

By D. G. Rossetti,

taken from the Arthurian legends, and the artists demanded no money-payment for their work beyond their expenses during the period they were engaged on it. Many entertaining stories are told of these days, and it is alleged, among other things, that the keep of the artists cost the committee a sum considerably beyond what they had anticipated, for, apart from the fact that much too short a period had been estimated for the work, the catering being left to their own discretion, they revelled in orgies of plum puddings and similar fare, not to mention lavish supplies of ultramarine and other ex-

pensive pigment.

Rossetti chose as his two subjects, 'Lancelot asleep before the Chapel of the Sanc Grael,' and 'Sir Galahad, Sir Bors and Sir Percival receiving the Sanc Grael.' Unfortunately, as stated above, owing to the artists knowing very little concerning the medium they had to deal with, little now remains of these brilliant and valuable decorations, beyond a blurred mass of colour, whence emerges an occasional limb or face as in a Japanese depiction of a fire. Rossetti made a third design intended for one of the vacant bays, which, however, he never executed, representing 'Lancelot escaping from Guenevere's chamber.' To this Celtic cycle of legends also belongs a very fine design of later date, 'Tristram and Yseult drinking the Love Potion' (p. 18). In few other works, within my own range of knowledge, is the fatalistic conception of love so well expressed as in this picture and the 'Paolo and Francesca.' The all-powerfulness of fate seems to overshadow the lovers as irresistibly as in the Greek drama.

Among the English poets living in his own time, none appealed more strongly to Rossetti than Browning. In the early Pre-Raphaelite days he painted, or commenced, several pictures illustrative of his works. 'The Laboratory' (p. 22), which is probably the first water-colour which Rossetti painted, illustrates the lines in Browning's poem bearing that name:

"In this devil's smithy,
Which is the poison to poison her, prithee?"

and shows the lady with clenched hands and eager passionate eyes purchasing with her jewels the poison destined for her rival. This the aged alchemist is holding in a small phial while evidently giving full medical directions to the impatient lady. This is very different from the rest of Rossetti's vividly bright water-colours, but it is full of life and vigour, and warm and deep in colour.

Among others of Rossetti's mediæval watercolours of the middle period of his life and art we may mention 'Fra Pace' (p. 22), a delightful little picture representing a monk

From the picture in the Collection of Fairfux Murray, Esq.

The Merciless Lady (p. 22).

By D. G. Rossetti.

From the original in the South Kensington Museum.

The Borgia Family (p. 21).

By D. G. Rossetti.

kneeling at a desk and absorbed in the illumination of a manuscript. He has evidently been long engaged on the work, for a cat has coiled up to sleep in the folds of his robe, whom a juvenile acolyte, evidently somewhat désœuré, tickles with a straw. The monk, clearly a Pre-Raphaelite, is copying with great minuteness a dead mouse which lies on the desk in front of him.

Another particularly charming water-colour, which helongs to the close of 1859, is the 'Christmas Carol,' which inspired Swinburne's poem of that name, heginning—

"Three damsels in the queen's chamber;
The queen's mouth is most fair;
She spake a word of God's mother
As the combs went in her hair."

The queen is seated, playing on a sort of clavichord, while two attendant ladies comh her vivid copper-red hair. This picture is a hrilliant piece of colour, and in conception and design it ranks among the most delight-

ful productions of Rossetti's second period. By the courtesy of Mr. Fairfax Murray we reproduce this picture as frontispiece.

'Before the Battle,' which belongs to the succeeding year, Rossetti said he painted "during a solitary stay in the country of some length when peculiarly nourishing himself in mediæval impressions." It is, indeed, a perfect feast of mediæval costume and sentiment, and represents a castleful of ladies who have heen emhroidering hanners, which are now being fastened to the spears by the lady of the castle.

Rossetti painted two pictures dealing with the Borgias, one of early date, reproduced above, showing Lucrezia seated, with her brother Cesare and Pope Alexander VI. close by, listening to music and watching two children dancing. In the other Borgia picture the unscrupulous Lucrezia is washing her hands after preparing the poisoned draught for her hushand, whom, with wifely concern, she is watching, as, hobbling on crutches, he is heing walked up and down the room hy

From Mr. Marillier's Monograph.

Fra Pace (p. 20).

By D. G. Rossetti.

Alexander VI., "to settle the poison well into his system," as Rossetti put it. This edifying little scene is reflected in a small circular mirror behind Lucrezia's head. Rossetti completely altered this picture from its original form some time after first painting it. Thus, in these two pictures we are given Lucrezia Borgia's two principal characteristics—her love of art in the first, her decidedly irregular moral character in the second.

'The Merciless Lady' (p. 20) shows a man seated between two ladies and listening ecstatically to the singing

of the fair one on his left, while the other, who evidently has some claim on his affections, seeks in vain to draw him away from her rival. The rapt expression and attitude of the man are excellent, while the look of frowning and unswerving determination on the dark girl's face gives rise to a faint hope that she may yet win back her too susceptible lover. On the ground in front of them her glass of wine stands untouched. The other two are drained, and may, in some measure, account for the present frame of mind of the couple.

The supernatural exercised a strong fascination over Rossetti's mind, though he never abandoned himself to any irrational extent to communion with "bogeys," for whom, however, he entertained a genuine regard and affection. One of the subjects of a weird and uncanny nature which he depicted is 'How they met themselves' (p. 20). Two lovers strolling at twilight through a wood are, of a sudden, confronted

with their own doubles. The lady falls hack in a faint, while her lover, terror-stricken, makes a vain effort to draw his sword. The apparitions glance defiantly at the lovers as they pass on—the bogey-lover, no doubt, amused at this feeble material effort to undo him. The first design of this subject, belonging to 1851, has been lost, but Rossetti re-drew it several years later, and also painted two water-colour versions.

## V.-Types of Beauty.

ND now we come to that section of Rossetti's works A by which he is best known, and which marks the last, and in some respects the richest, period of his art. In those single female figures which Rossetti commenced to paint in about the year 1862-types of physical and spiritual heauty which appealed to him, and each one of which embodied some particular conception of the artist's of life or art-are displayed at once Rossetti's greatness and the defects appertaining to it. In them we can trace, as it were, the increase, the summit, and the decline of his power. The simplicity, the love of and strict fidelity to Nature which characterised his early works, are diminished, but we have in all its force, sometimes even to the extent of exaggeration, those qualities in which he most noticeably excelled-beauty of colour and form, ardour and elevation of thought, wealth of semi-mystical imagination. Rossetti was by nature too much of an idealist, too great a worshipper of the beautiful in art, too decidedly a creative genius to remain long a strict naturalist in his paintings. In early youth, when he felt the necessity of freeing himself from the traditions and fetters of the past in order to assert his own powerful individuality, he turned to

From the picture in the Collection of Fairfax Murray, Esq.

The Laboratory (p. 20).

By D. G. Rossetti.

Nature—the only starting point whence an artist can strike out a path of his own, the only school where he can study and remain himself—but as time went on the rigid uaturalism of his earliest works gave way before the creative impetus of his own mind, and he created a style of his own and a school of his own.

All the wealth of thought and imagination, all the passion for beauty, which in his earlier days found scope in such designs as the 'Salutation of Beatrice,' 'Giotto painting Dante's Portrait,' and the 'Cassandra,' he now crowded into one single figure and its attributes, often masterpieces of concentrated thought and expression and supremely beautiful, but not unfrequently overexuberant, over-freighted, as it were, with meaning and sentiment. Thus, while some of these single figures, such as the earlier 'Beata Beatrix' and the later 'Proserpine,' are perfect revelations of Rossetti's thought, in others of his later ones we might almost say that everything is over-intensified, and this finds material expression in exaggerations amounting to mannerism-as, for instance, in the 'Blessed Damosel' of 1877 (p. 24). Some of these later works, combined with ignorance and the natural density of public criticism, have given rise to the most erroneous notion that Rossetti was merely an exaggerated mannerist who painted nothing but throats impossibly long, and lips equally impossibly full.

One of the earliest of these single-figure compositions, and in some respects one of the most beautiful, is 'Lady Lilith' (p. 25), a depiction of sensuous beauty to which belongs that sonnet in the "House of Life" named "Body's Beauty," of which the following four lines best express the intention of the picture:—

"... And still she sits, young while the earth is old, And subtly of herself contemplative, Draws men to watch the bright web she can weave Till heart and body and life are in its hold."

This canvas is, indeed, a perfect feast of physical beauty, from the beautiful, indolent, sensuous woman combing her hair and rapt in the contemplation of herself, to the wealth of flowers in which she is embowered, prominent amoug which we can note the poisonous foxglove, the rich draperies which clothe her, and the ornaments that surround her. Rossetti, who had unfortunately a prejudice against leaving well alone, took up the face at a later date and considerably deteriorated it. The warmth and vigour of life are gone from the later face, which is a mere mask of those passions of which the former is the living semblance.

In contrast to 'Lilith,' the embodiment of sensuous beauty, Rossetti began in 1866, and finished in 1870, another large oil painting embodying spiritual beauty. Side by side with the 'Body's Beauty' in the "House of Life" is 'Soul's Beauty,' descriptive of the Sibylla Palmifera.

Holding a palm leaf in her right hand, with eyes gazing steadily and seriously ahead, and enthroned in stone, this is, indeed, a contrast to the languishing and self-contemplative embodiment of bodily beauty. These pictures taken together are, as it were, a new expression of Titian's famous 'Sacred and Profane Love,' and only less rich in colour and beauty than the great Venetian's work.

Another painting which, like 'Lady Lilith,' gives expression to physical beauty is the 'Venus Verticordia.' This as it originally stood was one of Rossetti's strongest and completest pieces of work, but at a later date he spoiled it by repainting the face, which, thus altered, is comparatively weak and belongs to a lower intel-

lectual standard than the great mass of his work, though even now it is impossible not to admire the magnificence of the flowers which surround and, as it were, clothe the otherwise naked Venus. Rossetti entertained some doubts concerning the reception which might be accorded to this semi-nudity, some of his purchasers being remarkably squeamish in such matters. One of these, Mr. Valpy, nicknamed the Vampire by Rossetti, objected even to an arm being left undraped, which almost gives rise to the suspicion that there was some foundation of truth in the Vampire-nickname, and that the good gentleman feared not only moral disorganisation as a result, but that the spectacle of human flesh, even in counterfeit, proved too great a trial to his ghoulish nature.

The 'Astarte Syriaca' (p. 31), although not free from

By D. G. Rossetti.

some of the exaggeration connected with Rossetti's later work, is a truly majestic conception of the Assyrian Venus. The painter wished to express in this picture the mystery of beauty—that eternal mystery which, despite all analysers and classifiers, must always remain beyond the power or scope of the human understanding. The stately form of the Astarte, standing erect against a sky, blood-red from the setting sun, where the moon rises, is the very embodiment of mystery. A fine sounet of Rossetti's belongs to the 'Astarte Syriaca':

"Mystery: lo! betwist the sun and moon
Astarte of the Syrians; Venus Queen
Ere Aphrodite was. In silver sheen
Her twofold girdle clasps the infinite boon
Of bliss whereof the earth and heaven commune:
And from her neck's inclining flower-stem lean
Love-freighted lips and absolute eyes that wean
The pulse of hearts to the sphere's dominant tune.
"Torch-bearing her sweet ministers compel
All thrones of light heyond the sky and sea
The witnesses of Beauty's face to be:
That face of Love's all penetrative spell,
Amulet, talisman and oracle,
Betwixt the sun and moon a mystery."

'Mnemosyne,' a figure bearing close resemblance to the 'Astarte,' for which it was probably a study, is scarcely the realisation of 'remembrance fallen from heaven,' but rather of gloomy memory brooding over the sadness of the past, which no thought of the future alleviates.

Among the very finest of these pictures which belong to Rossetti's later period is the 'Proserpine' (p. 23). This expresses most forcibly the Greek conception of Death as opposed to the Christian. Standing alone in a corridor of the halls of Hades, Proserpine broods gloomily and regretfully on the world she has forsaken—the world of light and life for which the Greeks regarded the darkness and inactivity of Hades as a pitiable exchange. The dim light of the lower regions is illuminated by a bright ray of light from the world above. Mrs. William Morris was the model for 'Proserpine,' as also for the 'Astarte Syriaca' and 'Mnemosyne,' all three of which are grand portrayals of her tragic type of beauty.

A very fine study for a never executed picture, 'Silence,' which bears considerable resemblance to 'La Donna della Finestra,' belongs to about the year 1870.

'Monna Vanna' is for some not very explicit reason the title given to another of these single-figure compositions—a beautiful lady sumptuously bejewelled and attired in the most gorgeous of gold-embroidered robes, and holding outspread in her hand a fan of black and yellow plumage. This picture might be intended as a representation of luxurious ease; the lady's outlook on life is evidently passive rather than active, and she is the embodiment of easy-going laissez faire.

Among the finest specimens of this class not yet referred to should be mentioned 'Monna Rosa,' a standing figure arranging some roses in a bowl; the 'Loving Cup'; 'Aurea Catena,' a most beautiful portrait of Mrs. Morris seated at a parapet in the open air fingering a golden chain, and gazing musingly into space; the 'Lady with the Fan,' a portrait of Fanny Cornforth—the model who sat for 'Lady Lilith' and other pictures of that type; 'Penelope'; 'La Donna della Fiamma'; two very fine 'Pandoras,' and the 'Veronica Veronese,' which is a symbolical representation of the art of music, showing a lady listening to the notes of a canary which she tries to reproduce on her violin. This picture is remarkably beautiful in

every detail, and a fine testimony of Rossetti's powers as a colourist. He wished to express here his conception of art as being the creation of the human mind consequent on a personal emotion roused by something in nature, and on the whole it is one of the most admirable productions of Rossetti's later years. He finished it in 1872, the model being the beautiful Miss Wilding, who sat for the 'Sibylla Palmifera,' 'Monna Vanna,' and other pictures.

Among these pictures of later years which mark, in my estimation, a decided decadence from the early vigour of Rossetti's work, may be named 'The Damsel of the Sanc Grael,' a composition belonging to 1874, and not at all in keeping with his Arthurian paintings of earlier date; the 'Blessed Damosel' of 1877—a replica of a very fine picture of earlier date—which, though beautiful in its way, is decidedly impeachable on the score of mannerism; the 'Sea Spell' of 1877, a weak picture with much flowing drapery and little backbone; and, with certain restrictions, 'La Pia,' which was among

Photo, Mansell.

Lady Lilith (p. 23).

By D. G. Rossetti.

the last things he painted. It is agreeable to reflect, however, that despite the decadent tendeucy noticeable in these works, Rossetti was, hy no means, entirely under its influence, for 'The Damsel of the Sanc Grael' belongs to the same years as the 'Proserpine,' while the same year which brought forth the 'Sea Spell' also produced the majestic and powerful 'Astarte Syriaca.'

On the whole we have to thank Rossetti, among other things, for the creation of a type of feminine heauty unsurpassed, and in some respects unequalled, by the

works of the great Venetians, a type of woman in which physical and spiritual heauty are so perfectly hlended that in some instances it is hard to say which claims supremacy. There is all the passion for physical heauty inherent to a Southerner and an Italian in these works, hut not in the most voluptuous, 'Lady Lilith' for instance, is there one single element of coarseness to mar the beauty of the painting, while in some the very mystery of human existence, that undefinable something which we call the soul, seems mirrored in the canvas.

### VI.-Portraits and Conclusion.

A S a portrait painter it has often been alleged against Rossetti that he displayed too marked a tendency to idealise. We must remember, however, that he was in the habit of selecting whom he should portray, and as a rule only chose persons whose type of physical or intellectual beauty appealed to him. The fact that the ladies he portrayed usually had full lips, for instance, can thus be easily accounted for by the knowledge that this characteristic pleased him and that he in consequence selected to paint women who possessed it; and not by the erroneous assumption that he was incapable of painting thin lips where they existed, and always replaced them by full ones.

Of members of his own family Rossetti drew and painted numerous portraits. At the beginning of this monograph(p.2)isreproducedanearly drawing representing the artist's father surrounded by the *libri mistici* in which his heart rejoiced—a charming and characteristic portrait of the old Italian; of his mother, than whom was no mother ever more deservedly loved and revered

Rossetti sitting to Miss Siddal (p. 26). By D. G. Rossetti,

by her children, Dante Gabriel painted several portraits. Among the finest is the crayon drawing in the National Portrait Gallery, reproduced (p. 26), representing Frances Rossetti and her daughter Christina, then in early middle age. As will be seen, the resemblance between mother and daughter was remarkable. The very soul of the poetess of "Passing Away" seems to look out from the sad dreamy eyes of Christina, while the innate nobility and grave earnestness of the mother's face and character are faithfully and lovingly portrayed in the figure beside her. Rossetti painted several other portraits of his gifted sister; some, in youth, showing the austere beautiful face with which we are acquainted in his Madonnas; one, reproduced on p. 2, showing the poetess at the age of thirty-five, and others of a later period when the ravages of illness had left but little of her early beauty, but in which the intensely spiritual and religious side of her nature are exalted. I know of no other modern portraits which are equal in expression to some of these later portraits of Christina Rossetti by her brother, which, like her life, seem to express all the faith and fervour of the Christian religion.

Of his wife Rossetti drew innumerable portraits and sketches both before and after their marriage. Madox Brown refers to these drawings in his diary of 1854—

Miss Siddal hiding drawing and Rossetti finding it (p. 30). By D. G. Rossetti.

"Gabriel . . . drawing wonderful and lovely 'Guggums' (an uneuphonious pet-name which Rossetti gave his wife), one after another, each one a fresh charm, each one stamped with immortality." In the South Kensington Museum is a pen-and-ink sketch of Miss Siddal standing by a window, which he drew in 1854, a charming portrait, refined and dignified in the extreme. To a date two years subsequent belongs a little pencil drawing representing her with folded hands, reclining in an arm-chair, which is quite one of the most exquisite and delicate drawings from Rossetti's pencil (p. 29). In another drawing Miss Siddal is standing with her hands resting on the back of a chair in front of an easel beside a window in the studio in Chatham Place, overlooking the river (p. 29). From this treasure-house of 'Guggum' sketches we will mention yet another, a drawing of head and shoulders, which gives an excellent idea of her delicate consumptive type of beauty. On this page is a quaint half-caricaturish sketch by Rossetti, which is intended to represent him sitting to Miss Siddal for his portrait.

Photo. Mansell. Mrs. Rossetti and Miss Christina Rossetti (þ. 26). By D. G. Rossetti.

Lizzie Siddal was herself a remarkable woman, and a number of designs and watercolours, executed under Rossetti's influence, elicited the ungrudging admiration of Ruskin, and bear ample testimony to the rare gifts of imagination she possessed, and her unusual power and facility for design. Her work was terribly interrupted by illness, however; indeed, during the whole course of her friendship and love for Rossetti she was the victim of grievous ill-health, and her tragic early death cast a shadow over the remaining years of the artist's life.

Another very beautiful and gifted lady whose features appear in some of Rossetti's pictures—the 'Dante's Dreau' and 'Vision of Fiammetta' among others—and whose portrait he drew on more than one occasion, was Mrs. Stillman, née Marie Spartali.

Perhaps Rossetti's most beautiful oil-portrait is that of Mrs. William Morris in the Tate

Gallery, which, besides the quality of expression in which he always excelled, is a most splendid and brilliant piece of colour. The sketch on p. 1, and that which bears the title of 'The Couch' (p. 30) were drawn from Mrs. Morris.

In 1874 he drew the fine portrait of his sister-in-law,

Tennyson reading "Maud" (p. 27).

A sketch by D, G. Rossetti,

Lucy Madox Rossetti (p. 28), serious and kindly in expression, and a masterpiece of pastel drawing, a medium in which he excelled.

In his portrait of Swinburne (p. 27) we are shown the poet in his early days, the youthful and enthusiastic author of the "Poems and Ballads" which startled and horrified Philistine England. He looks out from the canvas so full of life, vigour, and inspiration, that in looking at it we seem almost to hear the roll and rhythm of his impetuous verse. The vigorous crop of bright auburn hair is splendid in colour, and the flesh is rich and vivid in tone.

Of Robert Browning (p. 27), whose poetry deeply impressed Rossetti and his circle, we have likewise a water colour portrait which is vigorous, lifelike, and full of intellectual strength. From his pen we have also some very interesting sketches of Tennyson reading "Maud" aloud, which Rossetti took during a gathering in Browning's

house in 1855 (p. 27). The fact is, Rossetti was not suited for general portraiture, and was at his best only when the subject of it appealed either to his intellect or his sense of beauty.

The main purpose of Rossetti's painting was the

By D. G. Rossetti,

creation of heautiful things, in which respect the majority of his work is a perfect triumph. Without venturing any attempt to analyse the quality of heauty, I simply mean hy this that the contemplation of Rossetti's pictures gives pleasure and satisfaction to the eye and senses, just as the contemplation of a heautiful object in nature gives pleasure—a sunset or a fine landscape, for instance. He was supreme among modern painters as a colourist and unsurpassed hy any, ancient or modern, in the realisation of certain types—deep and lofty ones—of expression. If as a painter and a colourist he does not hear comparison to the masters of the ancient Venetian school, I certainly do not know of any head by Titian or Tintoretto which is comparable to his Beatrice in the 'Salutation' or his 'Astarte

Syriaca' in respect to expression. There is an unfathomable depth of expression in Beatrice's eyes, and even Leonardo, if more subtle, was never more spiritual or refined.

His life, as an artist, may he roughly divided into four periods which might be compared to the four principal phases of Italian art: the first epoch heing that in which Giotto and Simon Memmi were feeling their way from decadent Byzantinism to a revival in art; the second that of the later and more advanced of the primitivi; the third, the richest epoch of the Venetian School and the early Renaissance; the fourth, the later Renaissance which gradually led on to the decay of Italian art. During the first, or Pre-Raphaelite, Rossetti's most important works deal with religious subjects and are characterised hy great purity and simplicity, earnest en-

deavour after truth, and sympathy for religious feeling, without, however, any of the true exaltation helonging to a faith which was not his. As a painter he was yet feeling his way. In colour these earliest works are comparatively crude and lacking in depth and richness. The leading productions of this period are the 'Girlhood of Mary Virgin,' the 'Ecce Ancilla Domini,' the two versions of 'The Anniversary of the Death of Beatrice,' and the 'Lahoratory.'

The second period is devoted principally to Dante and the Arthurian legends, and consists mainly of small water-colour compositions, hrilliant in colouring, romantic in feeling, strong in imaginative and inventive strength, while many of the earlier ones still bear decided traces of Pre-Raphaelism. Noticeable among the productions of this second period are 'The Salutation of Beatrice,' 'Dante's Vision of Rachel and Leah,' the Arthurian designs for Oxford and otherwise, and

'Bonifazio's Mistress.' The 'Bocca Baciata' (p. 15), a very heautiful and carefully executed little painting of a pretty woman surrounded hy marigolds, and suggested, as the title indicates, hy a line of an old Italian ditty, "Bocca haciata non perde ventura, anzi rinuova come fa la Luna,' may he said to mark the meeting point hetween the second and third period.

The third and central period is also the richest, counting some of Rossetti's finest small water-colours and the first and strongest specimens of his single-figure type. It is the period to which belong his richest colouring and his most powerful realisation of Beauty. To it helongs what is usually considered the finest production of Rossetti's life and art, the 'Beloved,' which is indeed a very apotheosis of feminine heauty.

Lucy Madox Rossetti (p. 27).

By D. G. Rossetti.

As will he seen from our plate (opposite p. 16), it is a purely human conception of the Bride of the Canticles, and has nothing to do with any religious sentiment or interpretation. Surrounded by her maidens, she advances to meet the bridegroom, and at his approach she unveils her face, which, for radiant heauty and purity is almost without parallel in the annals of pictorial art. She realises the lines of the song: "Who is she that looketh forth as the morning, fair as the moon, and terrible as an army with hanners?" Rich and splendid in colour heyond all description is the hride's gorgeous rohe, which is of a wonderful Rossettian green, emhroidered with red and gold. The hridesmaids who surround her represent divers types of heauty, Eastern and Gipsy and European, while in front of the hride, in striking con-

trast to the delicate tints of her flesh, stands a little negro holding a golden vase of roses. This picture forms part of the magnificent collection helonging to Mr. George Rae, of Birkenhead.

The finest version of the 'Paolo and Francesca,' the 'Cassandra,' 'Beata Beatrix' and 'Lady Lilith,' are among the numerous productions of this central period.

The last period, which may he said to date from about 1872 to the artist's death, includes many very fine specimens of his later style, such as the 'Proserpine,' the 'Roman Widow,' and the 'Astarte Syriaca,' hut much of his later work, especially in re-touching, shows the decadence produced hy illness, chloral, failing eyesight, and a morbid state of mind and feeling.

One very favourite error with regard to Rossetti's pictures, and one which has been repeated aud repeated ad nauseam, is that he only painted one type of face and

Miss Siddal (p. 26).
By D. G. Rossetti,

restricted himself almost exclusively-it not quite soto a single female model. It would be well-nigh incomprehensible to me how such an erroneous impression could have gained ground were it not for the tendency there is among the majority of people to cherish illusions of this kind where works of art are concerned, and to avalanche them at you at every appropriate and inappropriate opportunity. It is difficult to understand how this single-model theory can be entertained by anyone who is at all adequately acquainted with Rossetti's works. The 'Beata Beatrix,' the 'Astarte Syriaca,' the women in the 'Beloved,' the 'Lady Lilith,' the 'Sibylla Palmifera,' and the Virgin in the 'Annunciation,' are surely as diverse types of women as can well be found in any single painter's work. Even when he repeats the same head - as in the instance of 'Ophelia,' the Beatrice in 'Dante's Dream,' and the 'Bocca Baciata,' being heads painted from the same persons as in instances above cited-he introduces such variations of expression, etc., as to do away with any tedious monotony.

I have spoken of Rossetti's work as a painter, almost to the exclusion of his achievements in the field of poetry, not because I regard him as greater in this first respect than in the second, but simply because here we are more concerned with his paintings. In point of fact it would be difficult to say, in which of the two greats arts he excelled—he himself inclined to think more highly of his poetry. But although he was perhaps more flawless as a poet, he did occasionally attain to perfection in both arts, and it would be as

impossible to improve upon the 'Paolo and Francesca,' as it would to better 'Sister Helen.'

I can think of only one other Englishman who combined with equal strength the two divine gifts of poetry and design, and that is William Blake. Mad or sane (and after all madness and sanity are but relative), he was undoubtedly a remarkable genius. and if his design of the 'Crucifixion,' his 'Stars singing together,' and his 'Jerusalem,' are the products of insanity, I can only say that it is to be regretted that the majority of mankind are so uncompromisingly sane. No two men could be more diverse in character, in their outlook upon life, or in their influence, than Dante Gabriel Rossetti and William Blake, but, with the exception of these two, I can recall no single Englishman of whom it can be said, "He was equally great as a poet and as a designer; and he was supremely great as both."

To write about Rossetti the artist, and say no word of Rossetti the man, would not be possible, for he was of such powerful and striking personality, that his work seems truly part of himself, and it is impossible

Miss Siddal: from a drawing in the fossession of H. T. Wells, R.A. (p. 26).

(From Mr. Marillier's monograph.) By D. G. Rossetti.

to disconnect the one from the other.

There are some artists whose productions strike us as fortuitous—the outcome of circumstances and influences foreign to themselves. In many instances, indeed, we are content to take the work and let the author alone; sometimes we are hetter pleased to ignore or forget him. With Rossetti this is not so.

All those who came into personal contact with Rossetti—whether friends, mere acquaintances, dependants or memhers of his own

family-appear to have fallen under the spell of his strong personal fascination. Indeed, this appears to have heen so marked that one who helieves in any regular system in the universe might well question whether something had not gone wrong with that part of the machinery which regulates the economy of things, seeing that Rossetti's character was given to an artist rather than to a man of action. The greatest statesmen and warriors of the world have owed more to their power of fascinating their fellows than to any other quality. It is invaluable in practical dealings with men, more subtle than the finest diplomacy, and more powerful than a hattalion of soldiers. To it Napoleon owed much of his success; without it he had heen a lost man over and over again, and the return from Elha had never heen. It is the quality par excellence which helongs to the leaders of men, and the distinctive mark of genius.

This power of personal fascination was, I think, the most distinctive trait in his character. His influence over the men who surrounded him—even the great men —was extraordinary. A man of genius and of powerful character, like William Morris, was scarcely the sort of man to he strongly influenced hy another, hut Mr. Mackail in his hiography of him records how once on Burne-Jones' coruplaining that his designs in Rossetti's manner seemed hetter than his own, Morris replied with vehemence, "I have got heyond that; I want to imitate Gahriel in all I do." And there is in fact no douht that Rossetti exercised great influence over all the great men of his set.

As may he imagined with a man of his stamp, Rossetti was used to getting his own way and to carrying everything in front of him in what he undertook. His friends appear never to have disputed this right with him, hut to have quietly acquiesced. In his "Autohiography of a Journalist" Mr. W. J. Stillman, speaking of Rossetti in his later years, writes: "Rossetti's was one of the most fascinating characters I ever knew, open and expansive, and, when well, he had a vein of most delightful talk of the things which interested him. . . . He had a frank egotism which made him see everything and everyhody purely in their relation to himself. . . . Whatever was to his hand was made for his use, and when we went into the house at Rohertshridge he at once took the place of master of the house, as if he had invited me, rather than the converse, going through the rooms to select, and saying, 'I will take this' of those which suited him hest, and 'You may have that,' of those he had no fancy for. . . . No one rehelled at heing treated in this

Photo, Mansell.

The Couch: Sketch of Mrs. Morris (p. 27).

By D. G. Rossetti,

princely way, for it was only with his friends that he used it. He dominated all who had the least sympathy with him or his genius."

In youth and in his prime he was the most delightful, lovahle, and fascinating of companions; generous, humorous, always ready for a good joke or piece of fun. And even in his later years, when trouhle, lillness, and the disastrous effect of the drug hy means of which he sought to hattle with insomnia, had left their mark on Rossetti, he still retained much of his early

charm, and there is ample evidence to show him still in the light of a delightful and entertaining friend and host to those who were privileged to he numbered

among his friends.

I doubt whether any human quality is more powerful in rendering a man popular among his fellows than a sense of humour. The true humorist is as far removed from the aggressive joke-maker—that dullest and most wearisome of men—as pole from pole. A touch of humour at an opportune moment can turn the very gall of anger into honey; if clumsy or injudicious, it sours the milk of human kindness itself. Rossetti possessed a true and fine sense of humour, which enahled him without effort and unprompted hy envy or malice, to make fun of his friends, his patrons, his enemies, and often, indeed, of his own works. Innumerable are the tales told hy friends of his never-failing and good-natured humour, while his letters are quite masterpieces of unaffected and humorous epistolary style.

Among the "Guggum" sketches are several of a quaint and humorous turn. Here is one showing Miss Siddal, sublimely unconscious of the eye of Providence which watches her from ahove and heholds all things, hiding away a drawing of her own which she evidently did not wish Rossetti to see (p. 26). In the next compartment we are shown Rossetti, surrounded hy a host of unpaid hills which litter table and mantel-shelf and floor, finding the drawing concealed hehind a number of portfolios and canvases. The surrounding details of this little sketch recall some verses in a humorous valentine he addressed to Lizzie Siddal, in which he lamented his forlorn condition during her absence:

"The bore was heard ere noon; the dun Was at the door by half past one: At least it is thought so, but the clock—No Lizzie there to help its stroke—Struck work before the day hegun.

Some time over the fire he sat, So lorely that he missed his cat: Then wildly rushed to dine on tick—Nine minutes swearing for his stick And thirteen minutes for his hat."

This disorder of his apartments, combined with his irregular hours, seems to have heen a great cause of vexation to Ruskin, who often refers to it in his correspondence, as for instance: "If you wanted to ohlige me you would keep your room in order and go to hed at night. All your fine speeches go for nothing till you do that."

Rossetti was the most generous of men, and as willing to take trouble for his friends as he was ready to give it. Many great men are grudging in their praise and envious or depreciatory of the greatness of others. Rossetti, on the contrary, took the keenest interest in the talents and work of those in whom he detected the capacity to do something, and nothing gave him greater pleasure than the success of his friends. Not all of these, however, have displayed similar disinterestedness with regard to himself or his memory.

In his youth and prime he did not err in the direction of super-sensitiveness in regard to adverse criticism. In later life, however, when under the influence of nervous illness and chloral, he became highly sensitive and mcrbid in certain directions

(especially where any aspersion was cast on his moral tone), and indeed the idea of persecution and conspiracies may be said to have assumed the proportions of a monomania in his last years. The disastrous effect on his nerves and health produced by Buchanan's attack, "The Fleshly School of Poetry," is only too well known, and to go into the history of the matter would be both unnecessary and undesirable here. Suffice it to say that the attack was unjustifiable and spiteful, and that had Rossetti been in an ordinary condition of health and nervous stability he would have treated it with indifference and contempt. The whole incident only serves as a further proof, if proof were needed, of the objectionable character of these factitious moral excitements which people are in the habit of getting up concerning those whom they can neither appreciate nor understand.

One trait which was very distinctive of Rossetti's character was enthusiasm. At the present day when this quality is

associated almost exclusively with white hair, and when only those men who are approaching or who have passed the allotted term of threescore and ten seem capable of youthful energy and impetus, it is difficult to conceive the genuine enthusiasm for an ideal—be it political, social, or artistic—which animated Rossetti and the youths associated with him, which kept them at their easels, anid surroundings not always of the most cheerful kind, painting unpopular subjects for the greater glory of their art, and which accompanied many of them to the grave.

We have already briefly referred to Rossetti's attitude towards matters of religion. He was by nature rather a believer than an agnostic; hut all the enthusiasm and faith inherent to his nature, which in another man might have found expression in religious fervour, he put into his art, which was the one great faith, purpose and ideal of his life. As to the existence of a deity, his not very conclusive ideas on the subject are fairly well summarised in this line in "Soothsay": "To God at best, to Chance at worst."

For the rest, Rossetti was an upright man, free from envy and those petty and mean qualities which alone we have any particular right to judge or censure, a man rather of passions and impulses than of any very logical or definable causes and results. A London cabman once referred to him as a "harbitrary cove," and I sometimes

think that the man came nearer to a correct definition of Rossetti's character than numbers of biographers, psychologists and demonstrators who have attempted to analyze it.

His life was uneventful so far as actual occurrences are concerned; though a life like his, so productive of great things, and so intimately associated with great men, was, in fact, most eventful in the truest sense of the word, and not to himself alone.

Of his early life and early struggles to establish his position as an artist, his brother has told us in his memoir, how, among other things, he at one time vaguely contemplated railway telegraphy as a more encouraging and lucrative career than art, and how this consummation was, in the public interest and his own, mercifully averted by the hand of Providence, for which interception both railway travellers and lovers of art should be grateful. He also has told us about the Pre-Raphaelite Brotherhood and the interesting little circle of Brothers-

From the picture in the Manchester Art Gallery.

By D. G. Rossetti.

their doings, their meeting, their friendships and their dissolution—of the "Germ," which germinated and prematurely died, unable to command a shilling a copy from the public who now are willing to pay £100. (So powerful are the decrees of Fashion!)

The most important event in his private life was his love for the beautiful and delicate Miss Siddal, and the most tragic her death from an over-dose of laudanum two years after their marriage.

His outer life in later years centres principally round his house in Cheyue Walk, the friends he housed and entertained there, the work he did there, and the life he led. Besides his human friends, he kept for many years large numbers of dumb or inarticulate ones, and had a perfect passion for quaint and out-of-the-way beasts—

Rossetti's Studio at Cheyne Walk (p. 32). Sketch by H. Treffry Dunn.

owls, wombats, bedgehogs, and a zebu were among the number.

The house itself, which Rossetti took much pains in furnishing, was filled with rare and beautiful objects which he collected—old china, Japanese prints and boxes of all shapes and sizes, pictures, prints, old furniture, and innumerable unclassifiable objects of a quaint or beautiful kind. The little views, on this page, of his studio and drawing room in Cheyne Walk will be interesting as being connected with the life and work of their occupier.

The one great sin of omission of Rossetti's life was bis never visiting Italy. It is, indeed, almost incredible that this passionate worshipper of the beautiful, this lover of Italian art and literature, who interpreted so nobly in his painting the poetry of Dante Alighieri, and was one of those who "invented," so to speak, Botticelli and the early Italian painters in this country—it was almost incredible, I say, that this man of Italian

blood and Italian sympathies sbould never have visited Italian soil. Such, however, despite his life-long intention to do so, was the fact. Procrastination was among Rossetti's numerous defects.

Thus he lived and did his work and died on English soil, without everhaving seen the country which was more than half his own. He passed away in Birchington on Sea on the 9th April, 1882, in the 54th year of his life, after many years of painful and protracted illness, nervous and otherwise. In the cemetery of this obscure little sea side town his restingplace is marked by a Celtic cross designed by his friend, Ford Madox Brown.

Too brief a period has elapsed since Rossetti's death to render it possible to speculate with any certainty as to what relative position he will be accorded in the long run among the painters of the nineteenth century. The

decision of so important an issue must remain with time alone. Much has been said in criticism of the technical imperfections which belong to Rossetti's works. I think, however, that it may safely be said that, whatever his imperfections as a painter may have been-and is there not a certain tendency to exaggerate these?as an artist he ranks, and always will rank, very high. It is not skilful technique alone, not the mere handling of brushes and pigment, which count in a picture; for then Filippo Lippi would count as a lesser man than Carlo Dolci. There is beyond mere technical perfection that undefinable quality which appeals to the senses and the mind which is the real essence of fine art; and this remains through all the ages, unal-

terable. It is the same in the great Assyrian monuments, in Phidias, in Giotto, in Michel Angelo, in Hokusai, and in the great modern painters. It is this quality which alone ensures the endurance of a work of art.

In conclusion, I may add that Rossetti appears to me to have been almost unique among modern painters in his absolute originality. His name can be associated with no single school of painting, unless it be that which he himself created. Even in his earliest days we can see no foreign influences in his work. The greater number of even the most individual and creative of modern painters have passed through various schools and influences before discovering their own endowment, before fully asserting their own individuality. Rossetti is an almost solitary exception to this rule. He was from the beginning his own master, his own developer, and his own school.

By Sir W. B. Richmond, R.A.

## Sir William B. Richmond and His Work.

I.—EARLY INFLUENCES.

SIR WILLIAM BLAKE RICHMOND was born in London on November 29th, 1843. He is the son of the well-known portrait painter, Mr. George Richmond, and is one of a large family. Contrary to the established tradition of romance, that the eldest or the youngest sons are those who achieve or inherit distinction, he came in the very centre of his family, and reversed the order of fiction by asserting in his instance a fact.

From his earliest days beauty of every kind appealed with growing force to the sensitive and imaginative child, while the eager brain was even then busy with multitudinous fancies and speculations. These often led him to stand aside from the press of life, inactive, apparently, but in reality watching with curlous and observant eyes all that went on; or lost in deep wonder and thought over "the world's turning." His early surroundings and education were such as to encourage and intensify these tendencies. Few children have ever been brought up in an atmosphere more entirely embued with the artistic spirit than were he and his brothers and sisters. The first book put into his hands as a child was Blake's "Illustrations to the Book of Job," and this is a typical fact of the influences brought to bear upon his whole childhood and after career. Mr. Richmond was a man of wide and cultivated taste, both in literature and art, and his house in York Street was a gathering place for a small and intimate circle of friends united under the poetic influence of Blake.

Among these was Sir William's godfather, Samuel Palmer, the poetic landscape painter, also a fine musician, with a powerful tenor voice, so searching, that once when he was singing on one of the highest hills above Shoreham, it was heard ringing down the valley. Then there was

Photo, Caswall Smith.

Mrs. David Little, By Sir W. B. Richmond, R.A.

Edward Calvert, a strange, dreamy Pagan, whose garden contained an altar to Pan, and whose companionship used to be in the highest degree delightful to Sir William, young as he was. Calvert would have the boy to stay with him at Hampton Court, and enchant him with stories of his wanderings in Greece among the Arcadian Hills, quote Virgil to him, and, as illustration to the text, show him portfolios of the most delicate pastoral drawings.

Mr. Palmer was also a great lover of Virgil, and in his Virgilian designs, as well as in his translation of the Eclogues, he entirely seized the spirit of the poet. Another member of this gifted coterie was the interesting Swedenborgian, Francis Oliver Finch — poet, philosopher, painter, and charming musician; indeed, his rendering of the old English songs used to he compared to that of Braham's. Many others there were, all early friends of Mr. George Richmond's, uniting in venerating and looking up to their inspired leader, William Blake.

This band of serious artists was in a measure analogous to the later company of the Pre-Raphaelite Brotherhood, with whose dispersal hero worship seems almost to have gone out of fashion, leaving little better in its place than cynical indifference. Certainly it is difficult to imagine in these days that young men should venerate a personality living on the third floor

of 3, Fountain Court, Strand, with such enthusiasm that the bell-handle communicating with the gifted but poor painter and poet was always kissed before being pulled. Mr. Richmond, when a boy of eighteen, once had the honour of walking with Mr. Blake from Regent's Park to the Strand, and described his sensation thus: "I felt walking on air, and as if I'd been talking to the Prophet Isaiah." It is a coincidence, and leads one to wonder if there is any. thing in a name, that he should have selected the one of his sons who was to become so distinguished, and whose name stands at the head of this article, to name after his hero. Certainly the spirit of Blake

has in a measure fallen upon his namesake, for though their work has been widely different, there is in both the same poetic imagination, the same reaching up to a lofty inspiration, the same strong emotion held in restraint; and all through his life Sir William has had the keenest veneration and admiration for the poetpainter, whom he resembles likewise in his love for literature as well as for painting.

Other visitors at Mr. Richmond's house in those early days were Sir John Everett Millais, then quite a young man, but already known as the painter of 'The Carpenter's Shop,' Mr. Holman Hunt, and one who was to become a very important element in Sir William's life, Mr. Ruskin. To an imagination already eagerly alert, those surroundings must have been stimulating in the highest degree, and the strong personal affection that he felt for many of his father's friends, led him to be with them as much as possible, and so un consciously to assimilate much that must at that time have been beyond his comprehension. It is easy to imagine the fascination of those gatherings in York Street in the long evenings after the day's work was over. The eager enthusiastic men dropping in one by one, Mrs. Richmond with her beautiful clear-cut profile and gracious stately presence, throwing a charm over the scene, the keen intellectual talk, the music, the general atmosphere of something beyond and above the everyday world. No wonder that the child was thrilled and inspired, and his nature steeped in impressions to bear such fruit in after years.

There was a curious concentration of home life

Joan of Arc.

A Pastel Sketch.

By Sir W. B. Richmond, R.A.

too; intimate friends being there so often as to become part of the family circle, the children being always encouraged to mix freely with them. People mostly dined in the middle of the day then, late dinner not having come into fashion among workers. After tea the children took their places at the long table, drawing boards were brought out, and they drew, either designing or copying, while the father, mother, or some friend, read aloud till bed-time. This, night after night, generally with an interval for music. The books chosen were always the very best, and nothing else was allowed. Mr. Richmond had a keen love of literature, especially of poetry, and be used to read Milton, Bunyan, Shakespeare, Chaucer, and the Bible to his children from their earliest days.

Later he read to them Clarissa Harlowe and Sir Charles Grandison, and other great novels, including "Les Misérables" when it first came out, so that they all started in life with an unusually extensive knowledge of the masterpieces of English literature. He also used to delight them with stories of the people with whom he mixed in his capacity of portrait painter; moving in the most distinguished society of London, he was greatly in demand, for he was an unrivalled raconteur. Almost the only social excitement was acting charades, and the Richmond family developed into a kind of travelling company, and used to hold charade meetings at different friends' houses.

Oncealways, sometimes twice a year, the family migrated to Sevenoaks or Otford, in Kent, and great was the excitement among the children when the coach and four that

was to take them to the country drew up at the door. Much of the old-world London, now so fast disappearing, was then existent, most of the Borough hostels were standing, and a favourite place for the party to stop at on their journey was the "Tabard," whence Chaucer's pilgrims started on their ride to Canterbury. These country visits were among the bappiest times of a happy childhood, when, to quote Sir William's own words, "Shoreham, Otford and Sevenoaks seemed to me like the plains of Paradise." All these places, too, were full of the associations of his father's friends. Henry Hallam, the great historian, once stayed at Sevenoaks, and took a fancy to Sir William, who was then quite a child. His Latin declensions were in process of being hammered into bim by Miss Duckworth, a kind and learned lady and a very old friend of the family. Hallam made the boy repeat tbe declensions, and then talked kindly to bim for some time, adding at the end, "Every nigbt when you go to bed, pause and ask yourself, 'Have I added to my knowledge to-day?" This piece of advice made a deep impression on the small hearer, and not only did he never forget it, but he resolved forthwith to act upon it.

Extremely delicate as a child, Sir William was educated by tutors at home; indeed, his surroundings were in many directions an education in themselves. If the boy felt a pang when his more robust brothers departed for what is generally the goal of every boy's ambition, he probably was the gainer in the end, the individual attention and the greater freedom of home life allowing wider scope for the development of his peculiar faculties. Intensely idle concerning things

that he did not like, he was very industrious over studies that appealed to him, and capable of hard and severe application, a quality which in later life he has carried almost to excess. He early displayed talent and fondness for music, and to this day it goes hand in hand with art, the two chief delights of his life. The musical training bestowed on him was of the most thorough description. His first lesson was given to him by old Edmund Knyvett, wbo was one of Haydn's pupils. He used to go to York Street dressed in a hlue coat with brass buttons and shorts, and play Mozart's and Haydn's fugues and sonatas upon one of those charming tinkling little Broadwood pianos made about 150 years ago.

Another musical friend, and one who has indirectly exercised a great in fluence over Sir William's life was Mr., now Sir, Herbert Oakeley;

who to an equal love for music added more scientific knowledge. They became intimate when Sir William was about fifteen, and he often used to go and stay with Mr. Oakeley at Hampton Court, when they would spend most of their time in the Chapel, playing concertos, organ fugues, and whole symphonies on Father Smith's beautiful organ during the day and on the piano of evenings. Wagner's star had not yet risen, and Handel, Bach, Mendelssohn and Beethoven were their favourite composers, who often held them so entbralled tbat at 7 o'clock they would suddenly realise tbat it was morning, and they bad not been to bed at all. People in those days were mostly Philistines as regards taste in music, and really good concerts were uncommon. Hallé had not begun his work in England, and there were few concert halls. What pleased the public taste were the pretty tinkling melodies of Mozart, in preference to bis finer work; and in the same way anything of Beetho-

Presented by the artist to the National Portrait Gallery.

The Death of Ulysses (p. 17).

By Sir W. B. Richmond, R. A.

ven's that recalled Mozart was much admired, while the great 9th Symphony and works of that character were practically ignored. Sehastian Bach, prohably the greatest musician that ever lived, was little known, except hy a small circle of real music-lovers, who used to meet at the Hanover Square Rooms, where the hest concerts in London were held. Sir William was present here when a symphony of Schumann's was performed for the first time in England. Looking over the score with him on this occasion were Jenny Lind and Meyerheer; when the latter entered the hox in the middle of the symphony Sterndale Bennett, who was conducting, stopped the orchestra and gave an indication of the opening notes of the march from the "Prophète," which was played in honour of the great composer.

Another well-known man, Mr. Cox, the Bodleian lihrarian, came across Sir William on a journey to Oxford, when the latter was fourteen years of age, and initiated him into his first love for old hooks, an affection that he has never lost. During the whole period of his visit to Oxford Mr. Cox was consistently kind to him, and showed him many things hoth in the Bodleiau and elsewhere. Pointed out to the hoy in the Hall of Exeter College were two young men, who had just come up as undergraduates, Mr. William Morris and Sir Edward Burne-Jones, who were afterwards to

hecome two of Sir William's closest and dearest friends. Many years afterwards, writing of Mr. Morris, he says, "He was the manliest fellow that ever tried to pull an effete society together. He had the roughness and strength of a Norseman together with the tenderness, nay, even shyness, of a woman; a great hig generous character, though a hit narrow if you like, from his thoughts running in a groove. Really intensely aristocratic, his socialism was the natural development of a nature that was ever driving in the direction of amelioration; it began in taste and ended in altruism."

This sketch of Sir William's early life and surroundings, though very inadequate, gives some idea of the artistic atmosphere in which he grew up. He certainly had exceptional advantages, hut even exceptional advantages are not without their drawbacks, and the attractions of good society enjoyed too early, and attained without struggle, may he an enervating as well as an exciting cause. This may account for the fact, hy no means uncommon, that the sons of remarkahle men are frequently not in any way remarkahle, and strangely enough this crossed Sir William's mind when he was thirteen, and led to an incident which was in a sense highly romantic, and though hy no means a praiseworthy act, was yet inspired by the hest motives. He and his friend More Palmer,

a boy of exceptional talent, determined that they would no longer be a burden on their parents, but would embark on the world on their own responsibility.

They were by no means unaware of their own abilities, and had rightly or wrongly decided that they would be able to maintain themselves by their own exertions. It was settled that Palmer would give music lessons, he being a wonderful musician for his years, and that Richmond would take portraits; they were besides prepared to

initiate the young into the mysteries of the Latin Grammar. Both of the hoys at this early period of life were strong Pantheists, the first chapter of Genesis was regarded by them as a delightful fairy story, and with rather precocious critical faculties, made alert by tbe amount of intelligent conversation they had listened to, comparative mythology was a great topic of talk hetween them. The preparations for departure were limited; a little portfolio and some paper and pencils was all the equipment they thought necessary, and by way of funds the pair mustered 6s. 6d. between them. Tbey started from Kensington on a cold February afternoon, walking through Richmond, Kingston and Hampton Court. The avenue in Bushey Park lying solemn in shadow beneath the starlight thrilled the impressionable adventurers, but they resisted temptation to linger and pushed on to Teddington, where they put up for the night at an inn, almost exhausting the precious 6s. 6d. Quite regardless of this, however, the next day, Sunday, they proceeded on their way, and when the pangs of hunger made themselves felt, marched

confidently into the first inn they came to and intimated to the host that they were travellers whose funds had run low, and that if he would like a portrait of his wife or daughter they were prepared to execute one in return for a dinner. The good-hearted fellow acceded at once, was delighted with the drawing, and be gave the hungry wayfarers a cut from an excellent joint and a glass of beer. If the landlord or his descendants still retain the portrait and remember the incident, it must be with some pleasure at having relieved from the pangs of starvation the future R.A. This was a good start, and

indeed it is not unlikely that the boys were not mistaken in their estimate of their capabilities, and that had their pockets contained a few pounds they would have made their way.

It would have been an interesting experiment, and one is tempted to wish that their parents had allowed them to carry out their idea; but the parents took a different view, and becoming alarmed at the disappearance of their sons, and judging that they would have

escaped by way of Richmond, sent mounted policemen in pursuit. That triumphantdinnerwasinterrupted by the arrival of a constable, who informed the runaways that they had better go home at once unless they wished to be taken there by force Down crashed the dream of golden possibilities, sordid commonplace reasserted itself, and now, only too fully aware of hunger and sore feet, which they had before ignored in their excitement, the two adventurers sadly turned their faces homewards. All that day and far into the night they walked back to London, serious doubts meanwhile arising as to what would be their reception when they got there. In fact, so apprehensive was Sir William that he sought the house of a friendly tailor, and from this shelter sent a note to his father announcing his return. Unsuccessful as this attempt at independence was, it was yet an effort in a good direction and hrought its own results. There is probably no step which an imaginative child takes in life which does not advance the development of some characteristic, and a sense of new force and power

Moses. Picture in progress (p. 32).

By Sir W. B. Richmond, R.A.

grew in the boy after this struggle to stand alone, which, after all, while inconsiderate, had at its basis a kind of impulsive chivalry and unselfishness. It seemed to him almost as if the wild oats of life had been sown and reaped in those forty-eight hours of wandering. It certainly was a sort of embryo of a man who has since loved travel and adventure, has courted hardships for the sake of them, and has always felt the need for much solitude, often suddenly leaving the fulness of London life to plunge into travel, returning thither again when the mood was past.

Barabbas at the Cross (p. 30).

## II.—THE ARTIST'S GREAT AMBITION.

In 1857 Sir William entered the Royal Academy schools, being set free from the dominion of tutors at home. Here his chief companions were three lads who afterwards became three of the most gifted painters that England has ever produced, Albert Moore, Frederick Walker, and Simeon Solomon—the last survives. He worked hard at drawing from the antique and life, going through the curriculum of a then most indifferent education, besides always drawing or painting on his own account and on his own methods. At the same time he kept up his classical studies and his music; iudeed,

that restless untiring energy and thirst for work that has characterised his whole life was already strongly developed in many directions of art and literature.

Candles were an expensive commodity in those days, and the York Street children were only allowed dips in shades to take up to bed; these gave a poor light and burnt out quickly. Much of Sir William's pocketmoney went in the purchase of candles, that he might not he hindered from working into the night, and he often sat up till one or two in the morning and rose again at six. At this time Mr. Ruskin took great interest in his work and helped him plentifully with praise or criticism. Mr. Ruskin's house at Denmark Hill. where he went to stay, was an artistic paradise to the boy,

and he was delighted with the loan of a watercolour drawing of Abbotsford by Turner, and a study
of mussel shells by William Hunt; these he carried home
and copied entirely to Mr. Ruskin's satisfaction. But
though he absorbed and treasured up most of the
sayings of the master, he retained his own convictions,
when firmly established, in spite of the fascinating eloquence of Ruskin. Sir William had been taught to
regard Michael Angelo to be the greatest artist of the
Renaissance. He was about this time engaged in copying in pen and ink engravings by Mantuarnus, from
Michael Angelo's frescoes in the Sistine Chapel. Mr.
Ruskin did not comprehend or appreciate the art of
Michael Angelo; hut in spite of his depreciation of
the great Florentine, Sir William clung to his opinion,

established not only hy precedent but conviction, which was only more firmly rooted when he saw for himself Michael Angelo's work in Rome and Florence.

In 1859 Sir William painted his first picture, 'Enid and Geraint.' In it he followed the style and method of the Pre-Raphaelite brothers, which, under the influence of Mr. Ruskin, he had learnt to adopt, though he abandoned it in later years. He sold this picture for £20, spending that in his first journey to Italy, travelling with a tutor. This journey marked an epoch in his life. Brought up to believe above all others in the Italian school of painting, Italy was the land of his dreams, and there was no better awakening for him than when

in Venice, Florence, Milan, and Genoa; indeed, it was a complete fulfilment of his anticipations. This journey laid the foundation of his enduring love for Italian art, for the country for its own sake and for its people. That first impression of delight in and admiration for beauties both of art and nature in Italy has only become deeper and more enduring with every returning visit. Venice was to him the realisation of an early dream, and to the art of Tintoretto, by the vigour of its colouring and the vivid imagination of the master combined with an element of mystery in his design, Sir William's sympathy accorded a foremost place among other Italian masters. Michael Angelo, Tintoretto and Giotto ever remain his

Photo. Hollyer.

The Lady Hood (p. 31).

By Sir W. B. Richmond, R.A.

The Scuola di San Rocco in Venice contains a series of pictures for imagination possibly without rival. The spontaneity of invention, masculine execution and sustained fire of inspiration took the young painter's enthusiasm by storm; hours were spent there and many sketches made during this and suhsequent visits to Venice. Whenever Sir William returns to Venice his first visit is invariably to the Scuola di San Rocco, as in Rome it is always to the Scuola di San Rocco, as in Rome it is always to the Sistine Chapel. Carpaccio also has a great charm for him; he made drawings of several of his pictures. This was before Mr. Ruskin had "discovered" Carpaccio. Day after day was spent wandering about the galleries sketch-book in hand, and when after six weeks of hard work and enjoyment he returned to Eugland he took with him three

favourite masters.

volumes of sketches from the works of Titian, Paolo Veronese, Holbein, Luini, Tintoretto, Giotto, and many others, besides drawings of architecture and sculpture.

Early in the following year Sir William took a prominent part in the formation of an Artist's Volunteer Corps in connection with the Royal Academy schools. This new occupation proved fruitful in many ways, for it brought him into touch for the first time with men who were to become life-long friends. A meeting was held at 8, George Street, Hanover Square, the house of Mr. Henry Phillips, to decide the important question of uniform for the Artist's Corps. Here Fate shuffled

together three brilliant cards from her pack, Sir Frederick Leighton, Sir John Millais, and Sir William Richmond. It was at this meeting that Leighton and Millais came into touch and Rich. mond's friendship with Leighton began. Leighton eventually commanded the corps, while Sir William became Honorary Secretary almost immediately, and was present in that capacityatthe first meeting in St. James's Hall, which was also attended by J. R. J. Hullah, then the lead. ing musician of the day, Holman Hunt, William Morris.

Millais, Lighton, Swinburne, Rossetti, Burne-Jones, and many other men distinguished in art, letters, and music. Mr. Ruskin became an honorary memher of the corps. In the same year, at a Volunteer Review on Wimhledon Common, when Lord Bury, afterwards Lord Albemarle, was in command, Sir William was introduced to the beautiful and accomplished Mrs. Sartoris, who was watching the movements of the troops with that intelligent sympathy so characteristic of that distinguished and accomplished lady. Sir William and Mr. Watts mit for the first time at this review. The result miy be described in the same words as before; a close and strong friendship grew up between them. Wille there is nothing so infinitely varied as

the manner in which sympathies are engendered and the way is paved to intimacy, there is at the same time nothing that so little lends itself to description, and the chronicler is reduced to a monotonous and frequently bald statement of facts.

Sir William's next picture was a small one of 'Ruth in the Field of Boaz'; this picture has disappeared as before, the money it brought in was laid aside to defray the expenses of another journey to Italy. This time he went to Padua to see Giotto frescoes in the Arena Chapel, to Mantua, to Verona and Siena, where he studied Mantegua, Pinturicchio, Perugino, Donatello, and Giulio

Romano, an artist who is un deservedly neglected now, and again to Venice, whither the fascination of the art of Tintoretto again drew him with its magnet force. Stirred to enthusiasm by what he saw, and the subsequent value to his art of the heauty that he absorbed while still young, ardent and impressionable, the value of this visit can hardly be estimated. Many more sketches were added to an already large store. Returning home by Paris, he spent a considerable time there, going daily to the Louvre, drawing and studying the

"The Sisters"—daughters of the late Henry George Liddell, Dean of Christ Church (p. 10).

By Sir W. B. Richmond, R.A.

various schools of painting and sculpture in that incomparable museum, till he knew almost every work in those galleries separately and intimately. Then home again, encouraged to make fresh exertions by the noble works he had heen studying. His next picture was one of 'Jonathan and David'—it has disappeared. This was followed hy a portrait of two of his brothers, the first of his pictures exhibited at the Royal Academy; it appeared there in 1861, and elicited warm approval from Mr. Ruskin.

The year after he attracted some attention by several portraits of children, which were exhibited at the Royal Academy, the hest of them being a portrait of one of his brothers dressed in black velvet. This picture led to

A Wood near Volterra, Italy.

By Sir W. B. Richmond, R.A.

several commissions for portraits, of children, in particular; these were generally small, very highly finished, and painted with extraordinary care. Small sums were in vogue in those days, £40 or £50 was regarded as ample reward by the young artist, yet by the time he was twenty-one he had managed to save £1,500; great application and industry found substantial reward.

Although portrait painting was the husiness of his life, he never ahandoned his dreams and amhitions in other directions—many of his later pictures were conceived in those early days—and he proceeded steadily with the study of anatomy in St. Bartholomew's Hospital, and with drawing from the nude and from drapery in every spare moment at his disposal. At anatomy he hecame so proficient that, carrying the small hones of the wrist in his pocket, he hecame so accustomed to feel them that he

could name them with. out withdrawing them, judging entirely hy the touch. This study of detail was probably an excess. A painter is not a surgeon; and while a certain knowledge of anatomy is of course necessary to his art, it should be studied in general rather than in particular. What an artist has to see and delineate in the human form are broad planes, large spaces and curves; in achieving this he is hindered rather than helped if his mind is constantly dwelling on the smaller structural planes rather than on the larger. In delineating the wrist, knowing the name and size of each little hone that composed it, would be fettering to the mind that is trying to seize the outline and depict holdly the massing of lights and shadows; still,

all knowledge is valuable, though Sir William does not now recommend to young students such excessive knowledge of anatomy.

In 1864 were painted the portraits of Sir Henry Acland's two sons, and the daughters of Dr. Liddell, Dean of Christ Church (p. 9), and many others. Mr. Ruskin was much pleased with the latter picture; indeed, with all the work of this year. He sent Sir William a warm letter of approhation, which contained at the same time a curious critical anachronism, containing an instance of the perversity of judgment now and then displayed hy the great writer. The picture represents the three girls sitting in the foreground of a modern landscape, the centre young lady wearing upon ber feet a dainty pair of huckled shoes, which Sir William drew and painted with elaborate care. After praising the picture

Mr. Ruskin added, "My dear Willy, you have made one great mistake. The rest of your picture heing so supremely heautiful, why the devil didn't you paint the damsel's feet instead of her shoes? Perugino would never have such a mistake." The exaggeration of such a criticism is obvious. In a picture of three prettily. dressed modern girls, the introduction of hare feet would have been entirely out of keeping with the other surroundings, and it is needless to say the alteration was not effected. It may have heen that Mr. Ruskin had been afraid he had over-praised the young man's work, and cast about for something to blame as a counterhalance; and it speaks highly for the merits of the picture that he could find nothing more serious to criticise.

Procession in Honour of Bacchus (p. 11).

By Sir W. B. Richmond, R.A.

Dr. Liddell and Sir Henry Acland were added to the fast-increasing circle of Sir William's friends; and during this and succeeding years, he was a great deal at Oxford in their society and in that of the Professor of Astronomy, Dr. Donkin, whose portrait he painted for Sir H. Acland, and with whom he was able to indulge his passion for music in long evenings devoted to it. Dr. Donkin was a fine musician, his house was a centre in Oxford where those who loved the art of music could

enjoy it. These visits were his principal recreation during two years of strenuous effort, and were in a way an initiation into real manhood. A stay in the north of England resulted in three large portraits of children, which he ranks among his hest work, and in all during that summer he painted seven elaborate portraits. Through this press of work and struggle to keep pace it was real rest and refreshment to him to return to the old grey city lying peaceful and still in its green meadows, to the congenial society, and to enjoy the intellectual conversation and the warm sympathy of friends who were deeply interested in his career. The whole aspect of the life was pleasant to him, loving, as he has always done, hooks and reading, and the personal interchange of ideas with thoughtful minds. To produce a real artist, which is something different from a mere painter, the literary side of a man must be cultivated as well as the artistic. Thought, imagination and technical skill must he considered together, and the more the critical faculties of the artist and his appreciation of what is fine and noble in literature is cultivated, the wider his range of subjects fit for the pencil will become, to the infinite profit of his work and his mind. No douht intercourse with Dean Liddell and others of his type encouraged and drew out the intellectual side of Sir William's character, forging between him and literature a link so strong that no stress of after-work has ever parted the chain.

A drawing for a portion of the window in St. Paul's. By Sir W. B. Richmond.

Circumstances beyond his own control rendered the greater part of 1865 a dead year as far as work was concerned, but at the end of it he took up his painting again, and once more went to Italy, this time to Rome. Here he took a studio in a building in the Via Felice belonging to Pietro Nisi, and determined to concentrate himself upon a big work.

The studio was that in which Leighton had some years earlier painted his famous 'Cimabue and Giotto,'

and there was doubtless more than coincidence in the selection, for the 'Cimabue' had made a great impression on Sir William when it appeared in 1855, and he had now become an ardent admirer of Leighton's art. The nobility of Leighton's work and his sense of style delighted his friend, and his elegant appreciation of heauty was stimulating to the kindred spirit. Nor was Sir William singular in this respect, for Leighton had already exercised great influence upon a generation, and was going far to justify Thackeray's remark to Millais years before, when he had met the gifted young painter for the first time in Rome. "Millais," said the great novelist, "I have met a young man in Rome, the most brilliant in my recollection, who will be P.R.A. before you." Here then, under the shadow of Leighton, the large picture of the 'Procession in Honour of Bacchus' (above) begun. Mr. Gladstone, who spent the winter of 1866-67 in Rome, took a great interest in its progress, and would come and sit in the studio and watch with keen enjoyment the work grow under the artist's hand. His wonderful personality and power of giving out to a sympathetic listener attracted Sir William as it did every one else, and from that time onward until Mr. Gladstone's death they maintained a constant intercourse. At this time Mr. Gladstone was deep in Homeric studies, and during many mornings spent in the studio and during walking, would talk much of what he had been reading, and consult the younger man as

freely as if they had b е е п equals. Herein lay one of the great secrets of Mr. Gladstone's power and charm, tbat he never talked down to younger or lesslearned persons than himself, but courteously assumed that they were on the same intellectual level, eitber men or women. There is no

The Roman Campagna.

A Sketch by Sir W. B. Richmond, R.A.

surer way of attracting or influencing people than this, especially young people, and perhaps young men in particular. Life in Rome was very pleasant in those days, the city was a kind of head-quarters of art and intellect, where the cream, skimmed from all corners of the world, was wont to gather. Society was small and very intimate, the delightful if changeful climate, the heauty and grandeur of the ancient as well as medieval city, which sheds an air of romance over trivial, everyday things, formed an appropriate environment for such brilliantly intellectual circles. English people lose

some of their stiffness and reserve when they are away from their native land on a holiday.

Sir William, characteristically, found bis way where music was to be enjoyed, and during this winter he made the acquaintance of Liszt from meeting him at a series of charming little chamber concerts in the Sala Dantesca, organised by the music-lovers of Roman society, of whom there were very few more now; and when on one memorable occasion, at a party at the house of the Director of the French Academy in Rome, be met Gounod and heard bim play and sing

tbrough the whole of Faust. But as has generally been the case tbroughout his hardworking life, Sir William was too busy to have much time to devote to society. The great ambition of his life, to execute mural painting and decoration, had never been lost sight of, and he now set to work in earnest to qualify himself for it by acquiring all the knowledge of various branches of Art be could, so that sbould the occasion arise he would be prepared to take advantage of it. Signor Podesti, the well-known artist then painting in the Vatican, initiated himinto the art of frescopainting, and in addition to this he studied good examples of mural decoration both in fresco and

The Temple of Nike Apteros, seen from the Propylea.

A Sketch by Sir W. B. Richmond, R.A.

mosaic in the churches of Rome and the Vatican, the Museums of Naples and Rome, watching every opportunity to study any newly-found wall painting at a time when Signor Rosa was excavating in the Forum, and upon the bank of the Tiber.

Michael Angelo's paintings on the roof of the Sistine Chapel were the object of his deep admiration and constant study. He would spend days at a time there, observing and copying with the greatest care, frequently drawing from memory in the evening what he had observed during the day, till, to quote his own remark:-"I knew the roof of that Chapel as I know the palm of my hand." Realising that a knowledge of architecture is indis-

pensable for good decorative work, he extended his studies in that direction, not only making a great many architectural drawings, but going into technical details of construction also. In England the drift of events seemed pointing to the realisation of his desire. The glamour aroused by the decoration of the Houses of Parliament had subsided, yet not so entirely as to hanish all hopes of its being revived in a more serious, as well as in a more understanding spirit. Mr. Watt's magnificent fresco in Lincoln's Inn Hall was a step forward and aroused Sir William's longings for a like venture, and set him to strain every nerve in preparation so that when the time came he should be ripe and ready. But the time was not to come yet, and alongside of his preparatory work he was making many

studies of scenery and effects of light and shade for the 'Procession of Bacchus,' and sketching largely in the Campagna of Rome and in other parts of Italy. He was during these years much under the influence of Signor Costa, the celebrated landscape painter and a close friend of Leighton's, and also of one who was afterwards to he a close friend of Sir William's, though he did not then know him-George Mason. He was much struck hy the "style" in Signor Costa's design, and the feeling displayed in it for form and colour touched him in points on which he was most susceptible, and hrought to him a view of the interpretation of Landscape allied to figure design.

Costa treats Landscape as a sculptor treats form, his appreciation for line, relative masses, accent and tone is curiously sensitive, and when one remembers that in Rome forty years ago the art of landscape painting was at the lowest possible level of commercial aim, it cannot be wondered that serious artists viewed the work of Costa with hope of its regeneration. It is impossible to over-estimate the influence of this great painter's work upon the more thoughtful and refined of his artist contemporaries.

There is a philosophy about Signor Costa's way of approaching art that gives great dignity and insight to all that he does; he works not only with a pure instinct, hut also from clear reasoning he knows why he paints in a certain manner. His work is spontaneous, but also every step is clearly reasoned out before taking it. Sir William attributes much of the charm of his own

> landscapes to the lessons that he learnt from Signor Costa, and still more to the spirit that pervaded these lessons.

The Roman Campagna had a great fascination for Sir William, and he spent much time there, staying with various Mercanti di Campagna, and enjoying to the full the quaint pastoral life that still goes on there exactly as it did in the days of Horace. The shepherds especially delighted him, and he struck up a great friendship with one of them, named Beppino, and used often to go and sit in his cabin, or wander over the Campagna with him in the glorious summer starlight. At first sight they might have been considered a strangelyill-assorted pair of friends, but Beppino, in spite of his calling and his rough Roman dialect, was a man

of culture. He had been taught by the priest of his village, and read the Eclogues in the original: his lonely life in the beautiful Campagna had stirred his imagination and filled him with poetic fancies, so that he was able to meet the artist on his own ground during their wanderings through the hot, still nights. When Sir William revisited Rome several years later, he sought out his friend again, hut death had intervened, and Beppino was already laid under the turf he loved so well.

After more than two years of almost unremitting labour the picture of the 'Procession in Honour of Bacchus' was finished and hrought to England. It was exhibited at the Royal Academy of 1869, where it was very well hung, and received a good deal of applause, ultimately becoming the property of Mr. Gil-

strap, of Fornham Park, Bury St. Edmunds, who was succeeded by his niece, Mrs. George Manners, to whom we are indebted for the courtesy of allowing a reproduction of the picture as well as of the 'Song of Miriam.' This was the first year of the migration of the Royal Academy from Trafalgar Square to Burlington House, and was rather a memorable one in many respects. Besides the 'Procession of Bacchus,' which, whatever its merits, was a very sincere effort, there was Alma Tadema's 'Pyrrhic Dance,' Frederick Walker's 'Bathers,' Albert Moore's 'Quartett,' Leighton's 'Helios and Rhodos,'

and beautiful work by George Leslie. In fact it struck the young painter, coming hack from his long absence abroad, with a fresh eye and an unbiassed judgment, that the English school had extraordinary vitality, and was full of promise of great things to come. That the promise has not been entirely fulfilled, and that the fruit of this fair blossom is still to be desired, is unfortunately undeniable, but this is not the place in which to treat of it—fashions change not always for the better.

During the summer of 1869 serious illness obliged Sir William to throw up his work, and he was ordered to Algiers, where he spent six months, mainly in the open air. This was his glimpse of the Orient, and the vivid colouring and splendid sunshine were very attractive to him. The climate restored his

health wonderfully, and riding a great deal and working little, the quondam invalid passed several months, and finally he recovered his health. Whatever his chroniclers have to write of Sir William, they never are able to place it upon record that he was idle, and this stay, though nominally a holiday, was fruitful in studies, principally of sunlight effects upon figures, which have since proved of infinite value to him. He came back to England early in 1870 with his health completely restored, and passed through Paris at the moment when war was declared between France and Germany.

The Rise of Phæton; being one of a series of pictures from the Myth of Phæton.

III.—HOME, STUDIOS, AND FURTHER PROGRESS.

On his return to England Sir William took a house in Hammersmith, which has been his home ever since, and will be to the end of his life. When he bought it Hammersmith was a small suhurb, and the house stood in the middle of green fields, some of which he also purchased and turned into a garden. Now that the advancing tide of bricks and mortar has swept trees and fields away to replace them by narrow streets made hideous with electric trams, Beavor Lodge stands alone within its high-walled garden, a relic of old days, an oasis of peace amid the surging sea of traffic. In the garden the birds sing as if they were a hundred miles from London, and they have every reason to believe that they are so. For it is a country garden, not a suburhan imitation: it has not even been invaded by that craze of nursery gardeners, hedding-out. Instead there are long grass walks with borders on each side, in which great scarlet poppies make vivid spots of colour, and hlue irises and white rear their stately heads, and lilies and delphiniums and many other old-fashioned plants grow and flower at their will; a carefully tended rose-garden, and hedges of sweet peas and sweet brier load the air with fragrance. Round the lawn in front of the house laburnums and may-trees and lilac tangle themselves into a little shruhhery, and all along the walls trees are planted; so that in summer the garden is shut into a green grove, and the last glimpse of house and chimneys shut out. Under this one-sided

avenue a gravel walk runs the length of the garden, which is known as the "Monk's Walk," and this is the favourite haunt of the master of the house, who may often be found pacing up and down there. A racquet court has been made against the side of the house, and at the back thereof a Virginia creeper grows and twines, till it is finally captured and led away over a pergola, where it forms a perfect shelter for a sunny day. The house itself is old, and has been much added to by its present occupier, but very little of it can be seen from theoutsideowing to the way it is shrouded in creepers. Two

great Italian oil jars filled with white daisies keep guard on either side of the front door, and are a good introduction into a house that is full of quaint, curious, or beautiful things that Sir William has collected on his many travels. The studio is a large lofty room, and the walls are lined with pictures of every kind; some large, but the majority little sketches in oils of places in all parts of the world; Eastern houses with pillared courts and carved lattices, sunny Italian landscapes, and the Egyptian desert under every conceivable aspect from sunset to sunset.

Sir William, like Remhrandt, is fond of painting in a subdued light, and for this reason his models are frequently required to sit in a species of raised tent minus one side, which is a device of his own for the disposal of light according to his fancy. Half-finished pictures on easels, casts, rough sketches of compositions, draperies of gorgeous colour lie ahout, and all the usual impedimenta of an artist's studio, where all ages seem to meet. A modern Alhanian dress lies side by side on an old carved English chest with a piece of ancient Spanish embroidery, faintly tarnished with age and of priceless worth; fragments of Greek sculpture jostle pieces of mediæval armour in the recess devoted to them, and in a corner of the room the great Arcadian shepherd looks down, slightly scornful, upon the modern grand piano placed almost at his feet. A gallery runs across one end of the studio and helow it a heavy curtain shuts off a little room heyond, which is almost entirely lined with books. Indeed, it contains very little else, except a

The Studio of Sir W. B. Richmond, R.A.

picture or two and a cast of a beautiful Greek head; and the orderly disorder of a busy man reigns there. For Sir William is a man of many occupations: he is a student, and so most of the furniture not in use is strewn with books, open or shut; he is a Borough Coun. cillor and President of the Coal Smoke Ahatement Society among many others, so his writing - table is piled with pamphlets, reports and letters, till it looks as if his whole time must be occupied there; he is a J.P., so it is not unusual for a sitting to be interrupted hy a sergeant arriving with recruits to be sworn in; he is a lecturer,

hence there is usually a partly-written speech on the already crowded writing table. But still above all other things he is an artist. In the dining-room hangs a large brass plate of Moorish work of the best period and supposed to have only one equal in the world, surrounded by sketches of Moorish architecture in Spain; in the same room is a fine cast of the Bruges Madonna, an early work by Michael Angelo, of great charm and pathetic beauty. The juxtaposition of the two may sound incongruous, but the effect is not so; it only conveys to the mind the impression, borne out by all there is to be seen at Beavor Lodge, that the key-note of life there is love of heauty for its own sake, of whatever kind or of whatever

epoch.

Here Sir William

took up his residence in 1870. The first winter was occupied with the 'Bowlers' and various portraits, two especially of Lady F. Cavendish and of her husband Lord F. Cavendish, then 'Ariadne deserted by Theseus on the Island of Naxos' (p. 17), which appeared at the Royal Academy in 1872. It was suggested to him by the poem of Catullus, the "Marriage of Peleus and Thetis," and he has united a strange strength and pathos in the dull bronze-green robed figure alone by the angry tossing sea. There is something in the poise of the arm passionately flung heavenward that conveys bitter, impotent despair; yet despite the desolation of the whole figure, repeated in the rocky, sandy coast, there runs throughout the design a vein of strength. Sir William modelled the figure of Ariadne first in clay, and drew the

drapery from folds of muslin carefully arranged and set in plaster over the figure. This he describes as being most stimulating to the imagination, and attributes the grace of the wind-blown drapery to a lucky accident, in the casting "it happened to come so." A propos of this picture, Sir William writes: "I should always advise a young painter at the outset of his career to aspire towards the highest class of subject; it will probably master him, but let him determine that he will spare no pains to bring to bear upon it all the scientific knowledge that he can. The more difficult the task the more he will learn from struggling with it. Lessons are best learnt in the performance of a picture rather than in the theory of one. Knowledge acquired with an aim at heart, the aim to make use of it in something you are

doing, is the knowledge that will stick to you, the motive being to create something for yourself and to take nature and science for your guides."

In 1874 'Ariadne' was followed by the colossal picture of 'Prometheus Bound,' which is sixteen feet high, and is now in the Birmingham Museum; and then by the 'Electra at the Tomh of Agamemnon,' exhibited in the first year's Grosvenor Gallery; but he was obliged to set aside imaginative work for a time, it did not sell, and portraiture again was resumed, not entirely, exclusively, but mainly. Among those executed then were one of Queen Alexandra, then Princess of Wales, and many portraits of children, but he had no intention of lapsing

into portrait painting only; he always contrived to keep in touch with the sort of painting that most appealed to him. He was also a good deal occupied with sculpture, actuated by a desire to feel his design in the round, which has nearly always led him to model the figures for his pictures before painting them, a method not sufficiently in use now.

At last his desire for mural painting was realised. In 1874 Mr. Stuart Hodgson, the owner of Lythe Hall, Hazlemere, gave him a commission to decorate the drawingroom at Lythe Hall in fresco. This he gladly undertook, and the four cartoons representing the 'Duties of Women' weredrawn out at once, and the frescoes finished the following spring. In consequence of the approval which this first effort met with, the civic authorities of Liverpool gave Sir William a commission to paint a large

Sir W. B. Richmond, R.A.
In his hand a mask of William Blake, made in life-time by
Frederick Tatham, Sir William's uncle.

fresco in the council chamber. The result was an elaborate design of the 'Triumph of Commerce over Barbarism,' in connection with which he undertook a special journey to Italy, but the commission fell through. The drawing for it contains some sixty figures, all of which were first modelled in wax; the whole composition being complete, it formed the scene in the concrete, from which the elaborate pencil drawing was executed.

During these years he was very little represented at the Royal Academy, though a charming portrait of his daughter appeared there in 1876; hut he gave warm support to the Grosvenor Gallery, which was founded in 1877. The first picture from his brush which appeared there was 'Death and Sleep carrying the Body of

The Gong of Moream we page 17

Sarpedon into Lycia '(p. 2). The subject was taken from the well-known passage in the Iliad, and has been treated with intense poetic feeling. Although not a large picture, it gives a feeling of limitless space to the spectator, the blue, misty background of sea and sky seeming to recede for miles beyond the central figures. The same subject occurs in Flaxman's 'Illustrations to Homer,'\* and the difference of line between the two is noticeable, Flaxman, who always aimed at conveying a definite meaning in the fewest possible strokes, has made use almost entirely of horizontal lines, thereby probably intending to denote the sense of rapid flight; in Sir William's picture the upward trend of the lines, converging almost to a point in the wings of Sleep, seems to mean a slower, more solemn movement, containing at the same time a suggestion of spiritual ascent. In 1879 the life-size 'Statue of a Runner't in bronze appeared at the Grosvenor Gallery, and the same year came the commission from Mr. Gilstrap to paint a companion picture to the 'Procession of Bacchus,' which had appeared ten years before. The subject chosen was Miriam leading the triumphant chorus of Israelite women after the defeat of Pharaoli and his hosts in the Red Sea. The design is a very fine one, and comprises eighty-four figures, every one of which was first modelled in wax. The whole design in the round was then photographed ou glass and its shadow being cast on to the canvas, an outline was drawn round it, perfect accuracy of perspective was insured. Before executing this picture Sir William made an expeditiou to Mantua to study Mantegna, and the design was actually thought out and sketched in the rough in the train between Turin and Paris (plate facing p. 16). The following year there appeared 'The Wise and Foolish Virgins.' The motive of it was suggested in Assisi, one dawn, by peasants going to work.

In 1880 he found it necessary to take another studio iu Kensington, and here were painted several of his best pictures. 'The Release of Prometheus by Hercules' (p. 2), 1882, is full of vitality. Hercules, poised on a rock in strong relief against the sky, with life and energy in every line of his virile body, is shooting a last arrow at the vanquished eagle, whose presence is indicated by a feather floating down. Prometheus, a no less fine figure, but cramped from his bonds, lies in an uneasy attitude on the rock below, as if half fearing to rise lest his deliverance should not be really accomplished.

In 1885 came the 'Audience at Athens,' which is generally supposed to be Sir William's most important work, and which he himself ranks first among his subject pictures (plate facing p. 24). His extensive travels in Greece and study of Grecian architecture and literature served him to good purpose here, and the landscape that is seen through the colonnades is correct in every detail, done with the tender touch that comes from knowing and loving every stone. The picture is very strong in tone and colour, and though it is entirely without action, it is not monotonous. The murder of Agamemnon by Clytemuestra is being represented on the stage of the Athenian theatre, and the audience are held fixed and variously interested in the tragedy that is being acted before them; yet the diversity of expression shows how differently each spectator is

affected, from the grave Archons (in their marble chairs, who sit intent and impassive) to the girl in the left-hand corner who cowers down, hiding her face, unable to bear the horror any longer. The difficulty of painting such a formal picture without making it dull has been overcome by admirable composition, and the contrast of the warm bright colour of the landscape with its abrupt shadows, and the smooth half-tones of the marble. There is something great about Sir William's treatment of this magnificent subject. The picture is now the property of the town of Birmingham.

Photo. Caswall Smith

Ariadne in Naxos (p. 16).

By Sir W. B. Richmond, R.A.

In 1886 was painted 'Hermes,' and in the following year 'Icarus.' Then another piece of sculpture, the 'Arcadian Shepherd,' which appeared at the Royal Academy in 1889, as well as a 'Landscape in Arcadia,' now in the possession of Lord Davey. The shepherd is larger than life, an athletic figure crowned with a nest of short curly hair; and it is wonderful that in the full tide of his painting, Sir William should have found time to accomplish such an elaborate and highly finished statue. It was originally intended to be cast in bronze, but the design was never carried out. It can be seen in the view of the studio, frontispiece plate. 'Venus and Anchises' (p. 18) appeared at the New Gallery in 1890, the subject having been suggested by Mr. Watkiss Lloyd, one of Sir William's

<sup>\*</sup> The 'Death of Ulysses' (p. 5) was suggested by the line in the Odyssey: "By the sea thou shall die." It is conceived as having taken place at Ithaca, and the wanderer expires in the arms of his faithful Penelope.

<sup>†</sup> This statue was executed in plaster, not in clay, and cast in bronze. The figure was put up on a skeleton of wood and metal wires, and the muscles were laid on in plaster and tow one by one. The surface finish was done in wax.

Venus and Anchises.

By Sir W. B. Richmond, R.A.

oldest and most valued friends. The story of Venus and her earthly lover has, like all Greek myths, an inward meaning; maybe, is typical of the return of Spring to the earth; so the landscape is essentially a spring one, bathed in sunshine and full of budding flowers; Venus herself, in her robes of saffron, would pass equally well

for the Goddess of Spring, as she advances to where Anchises is waiting in the shadow, longing for her coming, just as men long now for the time of the singing of birds. The picture is one of brilliant beauty of colour, and was purchased by the City of Liverpool for the Town Hall soon after its appearance.

## IV.-FRIENDSHIP WITH RUSKIN: TRAVEL.

In 1879 Sir William was appointed Slade Professor of Fine Art at Oxford, succeeding to Mr. Ruskin, who resigned on account of ill-health. While he held the Professorship he was accustomed to paint all day and after dinner to devote himself to writing his lectures. As there were twelve lectures a year, and each of them cost him from three to four weeks' writing of evenings, the pressure of work that this entailed would have been too much for many men. Some of the lectures led to a

Sketch on the Island of Delos.

By Sir W. B. Richmond, R.A.

serious difference with Mr. Ruskin, who had, with his customary dislike of Michael Angelo, denounced him and other artists of his period with great vehemence. Sir William, whose prolonged study of them had convinced him that Michael Angelo and Raphael deserved the reputation that had been accorded to them for centuries, defended them in his inaugural and other lectures, thereby drawing on himself a storm of reproach from Mr. Ruskin. This he accepted as merely critical, not personal, and in no way allowed it to interfere with his friendship for one whom he fondly terms "the master"; and on Mr. Ruskin's recovery he resigned the Professorship in his favour. Touched by this Mr. Ruskin sent to ask if he might come and dine with Sir William, who gladly acceded to the request, and a pleasant evening was spent talking over old times, with no word of the disagreement that had come between them of late. Only when Mr. Ruskin rose to go he said as he took his friend's hand, "Willy, why did you make that violent attack upon me about Michael Angelo." "Mr. Ruskin, because you talked nonsense." was the uncompromising reply. Then the nobleness of soul of one who, if he was sometimes betrayed into injudicious and unbalanced criticism, was yet a great man, shone out. "You are quite right," he said, "it was nonsense!" And so the friends parted, never to meet again in this world.

All this time Sir William had been much under the artistic influence of Mr. George Mason, with whom he had become acquainted soon after he came to Hammersmith, and with whom, as he lived close by, he maintained a constant, almost daily, intercourse. Death

arrested the intercourse, but the influence Mr. Mason inspired still remains (see p. 32).

The love of travel has always been very strong in Sir William, and since he took up his residence at Hammersmith he has, at one time or another, made a good many long journeys in Greece, Egypt, and Spain, besides numerous visits to Italy; indeed, he has rarely spent the winter in England, sometimes summers have been spent in out of the way places. In 1882-83 he gave several months to wandering among the islands of the Ægean Sea, making many drawings and coloured sketches and penetrating as far as he could into Greek myths and ancient civilization wherever any traces of these remained. He used to voyage about from island to island in a small boat manned by Greek sailors, and during one of these journeys his career was very nearly brought to an abrupt conclusion. They had landed on the

island of Delos for a day's sketching, carrying food with them for one day only, for the island is entirely uninhabited. When they were about to leave, a strong north wind arose; unable to push off, they were kept prisoners on the barren rock. A week went by, the provisions had been exhausted, and still the storm raged. The Greek sailors, sullen and hungry, were beginning to regard the traveller who had brought them into this peril with some resentment; starvation or a violent death seemed to be the alternatives that awaited the adventurous traveller. Fortunately at this critical moment, while wandering in the bays along the rocky shore, they came across some Naxian spongedivers, who had a limited store of food, maintained by them and by the carcass of a wild pig until the storm abated, they were finally able to leave the island.

The following year Sir William again returned to Greece, this time journeying over the Morea, where he visited Sparta, passing through Elis and Arcadia, now quite a modern town with hardly any trace left of the ancient city commanding the plain from its five hills, and Corinth, Argos, the Acropolis of Mycene, and other remains of antiquity. He travelled slowly, entirely

on horseback, stopping at little villages, entering as far as possible into the life of the people, and tracing every point of resemblance in their ways and customs with their ancestors of long ago. They are a picturesque and interesting people, and the simple pastoral life of the peasants delighted Sir William.

In the heart of Arcadia, time and civilisation have passed by and left that corner of the world untouched, and existence goes on much in the same way that it did in the days of the Sicilian poet Theocritus. The day's journey was begun early, and after the ride through rocky passes and forests, or among the olive grounds and maize fields of the plains, the travellers would halt at noon in some village for rest and refreshment. The first sign of habitation was often a little stream, with flocks of sheep and goats coming down from the hills to drink, and the shepherd

St. Francis, Picture in progress.

By Sir W. B. Richmond, R.A.

playing his pipe to the orchestra of sheep bells. Every sheep carries a bell, and each bell is, or nearly always is, of a different note, so that occasionally the loveliest harmonies are produced, curiously like Wagner's "Tone Music," and as the soft sound of the wooden pipe strikes in among these harmonies with a chant-like melody, the effect is unexpected and produces sounds never heard of before, like to a dream realised in music. Riding ou to the accompaniment of the bells and the bleat of the sheep, they would arrive at a village and stay there during the heat of the day, resting in the shade and enjoying the picturesque scene hefore them. Under a great plane or chestnut tree groups of women seated with their distaffs made a lovely scene, some dressed in blue aud yellow, but mostly in white with brilliant-coloured head-dresses, but always charming; little brown children with bright eyes and bare feet, whose only covering was a ragged shirt, and a shepherd or two leaning on their crooks, all gazing at the Franks with the greatest curiosity. Pigs rolling in the stream with grunts of satisfaction, patient donkeys gazing into space with one ear up and the other down, hungry dogs auxious to steal but afraid of the consequences, thin cocks and hens picking about, and little snatches of song, tinkling of bells, ripple of water, piping of olive reeds, rustling of corn as the wind found its way among the stalks, vying with the chatter of the women's talk, made a scene such as the ancient poets saw, giving

Study for Demeter Picture in progress.

By Sir W. B. Richmond, R.A.

to them the inspiration for their immortal poetry.

Suddenly there would be a pause, and the women and children fetching water from the stream or washing clothes there would rise and make way as the village priest led his lamb down to the water, and let it drink first. before drinking himself and washing his face. Then he would return through the respectful crowd.

Helen Richmond.

By Sir W. B. Richmond, R.A.

and the songs and chatter and occupations would hegin again, while the sun flickered through the leaves and glorified everything, even the dirt. Sometimes the discovery that one of the shepherds had his pipe would lead to a dance. These dances are exactly like those represented on ancient Greek vases; the performers join hands and move slowly in a circle to a chant which is sometimes gay, sometimes sad, the measured beauty of the rhythm leaving nothing to be desired; first of love they sing, then of war; the old Greek drama is represented in modern life. The best example of this survival that Sir William met with was at a small village in Arcadia. One or two began to play and dance, gradually joined by others, the sound of the pipe attracted another musician with a hautboy of old olive wood of most beautiful tone, and a third with a drum, probably a Turkish innovation. The music rose aud fell, drawing more and more dancers into the circle, until at last the whole population of the village was swaying in time, forming the most weird and picturesque scene. The children gathered round the musicians, who, as the music grew gay or sad, acted their parts admirably; here and there from among the bushes women applauded and encouraged the dancers, while a group of eight of them acted as chorus, all husily twisting their threads the while, under the shadow of a great chesnut tree.

This was only one of many such scenes that he witnessed during his wanderings, which lasted many weeks, and gave him an insight into the spirit of ancient Greece such as he could have obtained no other way. Returning to Athens he stayed a little while there, making studies for the 'Audience at Athens' on the Acropolis, and exploring thoroughly all the Greek remains of architecture and sculpture. But all through his journey no place stirred him like the plain of Marathon, which he visited from Athens. The place is picturesque in itself, and overwhelming in its associations for the student of Greek history, who feels, as he stands by the little mound, all now remaining to commemorate the heroes who fought such a valiant fight at Marathon, that here he has reached the heart of Greece, the very epitome of her greatness.

V.-EGYPT: THE PYRAMIDS AND THE SPHINX.

Egypt claimed Sir William next time he went abroad, which was in 1885, arriving at Alexandria early in September, and thence proceeding to Cairo. This further penetration into the East and Eastern life was full of charm for him, and the day on which he first saw the Pyramids was a red letter one in his calendar. But more than all he was impressed by that most wonderful monument of a great and wise peoplethe Sphinx, that with the same shrewd impassive face, the same wise cynical smile has watched generations pass away and palaces fall into ruin, and still remains the same. He explored the interior of the Great Pyramid, which contains the tomb of Cheops, and then went to Sachara to see the tombs and Pyramids there. Some of the tombs have, so far, escaped the hand of the spoiler, and remain untouched as they have been for thousands of years; those that have been opened are found to be covered iuside with hieroglyphics cut in most delicate relief, representing the whole life of the Egyptians. They are highly realistic, and beautifully executed and coloured, though exposure has in many cases destroyed the colour.

This was the most Eastern place that Sir William visited, and the tropical heat, the low mud huts, the brilliant moonlight on the palms, the crowds of Arabs, and the primitive way of life, were to him intensely attractive. The first night was a disastrous one, the hut in which the travellers slept being close and stuffy and haunted by cats, who prowled among the saddle-bags snarling and disputing over the scraps of food that they found; and infested by smaller foes who made sleep impossible. They petitioned to be allowed to move their quarters to the roof, but were answered that it was impossible, as the women's apartments were adjacent, so they bore the discomfort as best they could, and the next day made themselves a zareba of cane branches in the desert, among the palm trees growing round a lake made by the overflow of the Nile. Here the Sheikh sent them a guard of fifteen men in case of an attack from

bounding in the

the desert; but the peace was unbroken, and after sojourniug here for a few days the party returned to Cairo, entering the city in the evening when it lay wrapped in twilight, the minarets and domes standing up like sentinels in the misty darkness, the impressive Pyramids in the distance against the strong light of the afterglow, like eternal sentinels, and great slopes of plumcoloured hills

whole plain, made a scene which brought back the

Arabian Nights; mysterious adveuture, picturesque

crime, and a life so different to that of commonplace

commercial so-called civilization. Gradually the city

disappeared in a sea of blue, up to the horizon, which

Portico of Sultan Hanam Mosque, Cairo. By Sir W. B. Richmond, R.A.

looked like a wall against the sky, and the purple twilight crept on till heaven and earth seemed for a moment mixed. Long after the sunset, rays remained in the west, the afterglow being a very real thing indeed, a distant echo of sunlight capable of casting a strong violet shadow. Then the lights of the city shone out like jewels in the azure twilight, and the travellers came into the long streets lit by scanty oil lamps alternating light and darkness, and full of dim figures, camels crashing their way down the thronged alleys, sullen Bedouins edging silently through the crowd, and finally they arrived in the centre of the exaggerated bustle of an Eastern town.

Keeping Cairo as headquarters, Sir William rode out to Ghizeh to shoot wolves and jackals, but the expedition came to au untimely end owing to one of the party having a touch of the sun. He also went to Heliopolis, where Joseph and Mary rested on their flight into Egypt, or, as the Arab guide expressed it, "took lunch." Nothing is now left but an obelisk at the end of a long avenue of trees, which was there when Abraham visited Egypt. in Cairo he devoted himself to sketching, generally in Old Cairo, or Boulak-both are full of fine motives; or wandering in the different quarters of the town, or the Coptic villages in the environs, he found

Photo, Hollyer. A Child Study. By Sir W. B. Richmond, R.A.

in every corner subjects for his sketch-book. Although he drew incessantly, he felt too saturated with new impressions to make full use of them until he had time to realise them. He found that the chief use of foreign travel was to observe nature which is untrammelled by convention, and so to store the mind that it can draw upon that store in peace later on, and invent out of what it has found—what can be done by painting on the spot is so little and so unsatisfactory, but what can be done by observation and memoranda is enormous.

Sir William has since made other visits to Egypt, notably one where he skirted the Desert of the Blacks in company with a friend and fourteen Soudanese troops, all mounted on camels: a long and arduous journey to Wady Natroun, where there still exist Coptic monasteries dating from the fifth century, the lives and customs of the monks being identical with those of their predecessors. This journey finished with a visit to Crete and a third visit to Athens and the Morea, with the purpose of seeing the excavations in Tyryns and Mykene, and the then recently discovered treasures upon the Acropolis of Atbens.

Sir William returned to Egypt in 1895, when he went up to El Kab and stayed with a friend in his diabeyah. It was an exceptionally hot winter, and the warmth of the climate was delightful to the traveller, who became almost like an Arab, adopting the dress, a long loose linen shirt, discarding shoes and stockings with all other European impedimenta. He got through a great deal of work, besides wandering for miles over mountains which are exceptionally noble in form, though small; dangerous in parts are the narrow tortuous valleys among which it is easy to lose one's way. Thoroughly did he enjoy this sojourn. Going down the river on his way home, he visited many places of interest, including Thebes, Luxor, and Denderah, delighting in their beauty and living in the past, studying the relation of Egyptian to Greek architecture. He stayed some

time in Cairo, devoting himself especially to drawing in the mosques and about the environs of the delightful city, not yet spoiled by European barbarians, frequently spending the entire day in one or other of the mosques observing the picturesque crowds of Arabs, negroes and Copts passing from the shadow of the deep doorways and recesses to the full light of the court open to the sky. One has not realised what colour is until the East has been visited.

A year later the fascination of the desert drew Sir William again to Egypt, first to Cairo, then to Alexandria, from whence he and a friend, with fourteen camels, struck westward, then south-east, crossing the high level plateau which borders the Desert of the Blacks. Their destination was Wady Natroun, where there exists a Greek monastery, founded in the fourth century. Few Europeans have been to this interesting place. The journey was not without its dangers, owing to the savage Arab tribes who wander over the desert, and some of whom are hostile to Europeans. The monastery was successfully reached by his friend, but Sir William, who had been ill during all the latter part of the journey, nearly died of dysentery, and had to lie up in a shed. He recovered, and as soon as he was fit to move the travellers returned to Cairo, disappointed somewhat, but glad to bave seen the real desert. The colour is amazing; at noon the sand takes the colour of ripe corn, and as the day grows towards evening the lights grow warmer, until at sunset even the shadows are scarlet and purple. The moon is very white in Egypt; like a silver globe it casts deep shadows as intense and sharp in outline as if they had been drawn in ink, and in the still nights the flat surface is lit, the brilliant colours of the pebbles shining pink or blue in the strong light, a very carpet of precious stones. Never are there to be seen such lustrous stones elsewhere; they take all colours from the amethyst to the ruby.

Spain is another country which is full of interest

for Sir William, not so much by reason of Spanish pictures, as by its architecture.

He is not an enthusiastic admirer of the Spanish school of painting, having always preferred the Italian; but Spanish Gothic architecture, particularly where it retains traces of the Saracen influence, is remarkably beautiful and unique in character. The best examples are the cathedrals of Toledo and Seville, the latter being a masterpiece of its kind, having about it a severe romance, and a masculine sense of proportion governing fascinating details. The graceful beauty of the mosque at Cordova enchanted him, and he made many studies of it, while for Granada the only word of description be could find was "fairyland."

## VI.-ST. PAUL'S CATHEDRAL.

To resume the record of his working life, in which the travels just spoken of were only interludes, the time came at last when Sir William was called upon to undertake the decoration of St. Paul's Cathedral in mosaic. This he regards as the work of his life, on which all previous study centred. He had gone into the subject so thoroughly in Italy, that, when in 1891 he was approached with a view to the decoration of St. Paul's, he felt perfectly ready from a technical point of view to undertake it. The result of the enterprise every one knows; it has been much abused and much praised, and, as always, a great deal of nonsense has been written about it in the Press, combined with some sincerity. The hostile attitude is very natural, for English people have been so long unaccustomed to the use of colour in buildings, that the idea has arisen that architecture should necessarily stand alone, a solitary art, and it has been forgotten that from time immemorial, till the end of the sixteenth century, no buildings were complete without the addition of colour. In point of fact uncoloured building is entirely modern; the Parthenon at Athens was coloured inside and out, and so were all Greek temples. Those built of stone were cased with stucco and painted thereon with wax, and there are ample remains of such decorations in Greece, Sicily and Italy. Byzantine work followed on Greek traditions,

and so did Roman, though in a minor degree. The Greek arts were probably in a measure initiated by the Egyptian, and it is well known that all Egyptian temples were coloured. In England all the mediæval churches were painted from top to bottom, including Westminster Abbey, and at this moment, though it may hardly be believed, there are over 2,000 English churches which retain traces of wall painting. There is no doubt that Wren intended to decorate St. Paul's with mosaic, and a scheme was partly drawn up, though it was never completed. It is impossible to imagine anything more terrible than mosaics executed at that time would have been. Taste was at its lowest ebb, and even Wren, with all his capacity and ability, had no idea of what was noble in decorative art; it was not in the air, and had the designs been carried out it is probable they would have been monstrous failures. The mosaics executed in St. Peter's at Rome during Wren's period as an architect in England, are -qua mosaic-hideous, like huge oil paintings hung up, and even the mosaics of a little earlier time in St. Mark's, Venice, by such great artists as Titian, Tintoretto, and Paolo Veronese are likewise, from a decorative point of view, inadequate. The art of mosaic is eminently one which demands severity of design and severity of treatment, simple though brilliant colouring, with a great quantity of gold. Gold is the life of mosaic.

When the Dean and Chapter first approached Sir

Design for one of the Choir Domes, St. Paul's Cathedral. From a water-colour drawing by Sir W. B. Richmond, R.A.

William upon the subject of decorating St. Paul's, they asked him to paint upon the walls; but this he declined to do. Not only because Wren had intended to decorate his cathedral in mosaic, and, as architect, understood the requirements of the building as to material better than any one, but also because mosaic can be washed without injury to it, an absolutely necessary precautiou in the smoke-laden atmosphere of London. A further advantage is that mosaic admits of a free use of gold, which is, in his opinion, a necessity of decoration in our climate, or indeed in any other. As soon as Sir William had received the commission, he drew out his scheme of design, and started for Italy, to re-study the mural decoration in Rome, Sicily and other places. He determined to set his face against pictorial mosaic, and to adhere to the principles of design and execution which prevailed in Greece, Italy and Asia Minor during the classical times of the Byzan. tine Empire, revived again in Italy in the fourteenth century, and in England in the nineteenth: he laid down as an axiom that his design should be controlled by his material, not the material by the design. Another sine qua non was that the work should be executed by English and not foreign labour; if, in his opinion, England could not provide workmen for the decoration of her Metropolitan Church, it had better be abandoned. And above all he determined to readopt the old method of setting the cubes into the wall direct, avoiding the modern style of fixing them by means of gum on to canvas in a workshop far removed from the building that is to receive them. In order to carry out the work in the ancient manner

a cement had to be found, and in a Bolognese manuscript Sir William found the ingredients of a mastic cement, which answers in every detail to one employed in the fourteenth century in the restoration of the mosaics on the dome of the Baptistery at Florence. Its advantages are many; it does not dry too rapidly, and retains a certain modicum of elasticity for a long time, while it eventually becomes as hard as stone. The next step was to procure the cubes, and for these he went to Messrs. Powell, the best glassmakers in England, if not in the world. They took great pains to supply him with mosaic cubes in colours of his choice; indeed, on placing them side by side with tesseræ of the best Greek and old Italian manufacture, they were hardly distinguishable from them, allowing for some disintegration of surface made by time and weather upon the ancient cubes. Then came the difficulty of obtaining workmen. Messrs. Powell had two men in their employ who had repeated a picture of Mr. Holman Hunt's in mosaic, but as their execution had been based upon the modern picture mosaic, executed with thin plates of glass instead of cubes, the method which Sir William had determined to employ was entirely new to them. A few more men being collected, the work was taken in hand. It appeared to Sir William that, much as he desired to execute at once upon the

wall of the church, the beginning should be made as easy as possible, seeing that he was to initiate the recovery of a lost art,

was obtained.

hence the difficulties must necessarily he great. He therefore huilt in his garden a studio for himself and a shed for the workmen, whose numbers as time went on increased to nine, and there they worked for four months. The first mosaics to he executed were those in the two spandrils above the arch on the north side of the sanctuary, hetween the cornice and the capitals. He chose to make his first essays upon the part of the church lying midway hetween the vaulting and the floor, so that he might have a fair chance of trying the strength of light and shade at a comparatively speaking moderate altitude. Thus he would have a guide for future work hy which he could reason what strength would he required at a greater height. He hegan at the heginning with his workmen, learning to cut up the material with his own hands, and executing a good deal

of the work himself. As a result of this ex-Design for one of the Spandrils in St. Paul's Cathedral. perience he helieves in From a water-colour drawing by Sir W. B. Richmond, R.A. only four shapes, Photo, Hollyr. namely, the cuhe, the double cube, the equilateral triangle, and elongated cut forms finishing in sharp points. He had large slahs of slate cut, which were well scored with diamond shapes, so that the intonaco to he laid upon them would find a grip, and into these the cuhes were pressed. At first Sir William had great difficulty in persuading his workmen to leave a good margin of cement hetween the cuhes, for those of them who had any experience in laying the tesseræ had acquired the had hahit of jamhing the cuhes, thereby quite ruining the legitimate signs of huilding, and making, instead of a structural design, an indifferent imitation of a picture. He expounded to them that the worst mosaic is most like a picture, and the hest has all the structural qualities akin to architecture; the one entirely out of place as architectural decoration, while the other seems to grow naturally out of structural conditions. After a time the men hegan to take a keen interest in the work, and also, in spite of his occasional explosions of anger, to like their stern master who worked with them, and a spirit of excellent camaraderie prevailed in the studio. At the end of four months the spandrils were finished and taken to the Cathedral. The wall was cut hack to receive the slahs, which were fixed with bronze screws into leaden sockets inserted into the stone, and hound to the wall with red lead. With regard to this first attempt, Sir William at once perceived a few defects which did not appear

until they were in position. The outlines were not sufficiently strong, and the half tones too narrow on account of the too liheral use of white; errors which he rectified in situ.

Having now got his men into thorough training, he determined to hegin forthwith working upon the wall, and accordingly emharked upon the easternmost dome of the choir. The design was first made on a small scale, then enlarged ahout four times the size. At this point Sir William made studies from nature for

every head, every foot, every fold of drapery, the full size for the mosaic, followed hy a coloured sketch done either in pastel or tempera. Then he worked on the full-sized cartoon done from the small drawing, corrected and re-corrected it, and then he added the colour in tempera mixed with pastel. This procedure he followed in every case, all the cartoons heing drawn hy his own hand, excepting in the minor parts, and he had two assistants in the studio who drew the outlines from highly fluished drawings made hy himself. As the cartoons were finished they were taken to the Cathedral, traced and transferred on to the wall hy pressure from a style. The designs for the quarter-domes were all drawn at once on the wall, a necessity when dealing with strong curves. Many were the attempts which had to he reconsidered hefore a satis-

Some drawings for the OUTAMBULA BAR IN TE NEBRIS small domes had to he drawn in sections, and the fitting of these together on the curve was not an easy matter; all irregularities of space had to he taken account of, and the via media to he found hy calculation as to whether the design could or could not he seen clearly from the floor, and yet not appear to bring the surface down too closely to the spectator, required great care to find. Another four months were spent on the eastern dome. Before commencing the mosaic, Sir William offered up his charcoal design. Afterwards he coloured it, and again offered up a portion of the coloured cartoon. The first was with the object of ascertaining the strength of outline, the second the strength of colour; hut when the mosaic was executed there was reason for some regret. The cartoons having heen executed in pastel, did uot receive any reflection upon their surfaces, hut the mosaic does receive reflection. Experience taught Sir William to make his outlines and masses far more distinct in the cartoon than they are intended to appear when transposed to another and reflective medium, hecause the reflecting surface eats into all the dark surfaces. He also found he had overdone the detail, and put in more work than was really needed. But here it must be remembered that Phidias completed every figure upon the pediment of the

Parthenon, although some of the most exquisite portions of the work were to he for ever hidden from view from the time they left his workshop until they were taken down hy Lord Elgin. This to the commercial mind is lahour thrown away, hut to the dedicatory spirit of the great Greek artist, his lahours meant religious offering to the virgin goddess; he gave her his hest and noblest, disregarding the lahour as he disregarded praise or hlame. Those who have watched the progress of the work in St. Paul's will recognise

Water Carrier: a sketch for a picture in progress.

By Sir W. B. Richmond, R.A.

that, whatever may be its merits or defects, Sir William Richmond has offered it in the same spirit of dedication, grudging neither labour nor failing to expend his best energy and experience. Sentiment apart, it is established that the influence of delicate details, even upon a height, is never wholly lost; it gives a play of colour, a mystery and an interest which breadth alone cannot achieve; it is possible to overdo detail, but it is far worse to underdo it. To overdo breadth ends in baldness, which is almost certainly a far greater sin than an excess in the other direction.

Every part of a building, of course, requires different treatment, owing to the manifold effects of light to which the surfaces are subjected. In the case of the dome it was desirable to heighten it in effect rather than lower it, so Sir William made the scale of the objects thereon small as compared with those upon the face walls, and designed for it on the principle of concentrating circles, which he considers to be a finer treatment for a domical surface than breaking it up into vertical rihs. Fearing to miss his intention of adding rather than diminishing height, he kept the outline of his forms thin-not more than half an inch in width-and made use of brown instead of black. Upon all the interior forms of birds and trees he permitted himself neither brown nor black, and kept all the drawing of the wings, feathers, etc., very bright in colour, making use of

green, red, amber, blue, grey, both warm and cool, and the high lights of white or a pale lemon-yellow. In many instances, notably in the birds which he wanted to appear whitish, he outlined the more delicate parts of their plumage in silver, so that those outlines might appear to be dark when the silver was not shining, and dark off the white when the silver shone. In the leaves of all the trees he drew the veins with silver, and touched the edges of the leaves with gold. The gold background of the whole design is made of burnt gold. and the tesseræ are laid in circles, concentrating at the apex and widening as they descend the curve. The colours necessary for mosaic are very few, and as the work advanced they were reduced to eight tones; indeed, the more he did, the more Sir William found it necessary to simplify the work and eliminate details which would have been acceptable in painting, but were not legitimate in mosaic. Pure white he found to spread excessively, dark blue tells as black, amber becomes unreasonably dark, and even pale, cool pinks grey very much at a distance, requiring to be outlined with a strong red to give them value. Both warm and cool greys can be altered as to their appearance very markedly by the colour of the outline by which they are surrounded; outlined with blue the whole mass appears to be influenced in a very distinct manner by its environment; the same holds good when the outline is red. Blue round white intensifies the blue as light, whereas outlined with red white appears pink. Strong yellow-greens tell extremely well, but they must be outlined with a thick line of red or rich brown to give them their proper value. White lines among light green are very disastrous except at rare intervals: either a toned grey or a dull yellow breaks the green

Photo. Hollyer.

Andrew Lang (p. 31).

By Sir W. B. Richmond, R.A.

best. A black outline to blue is only necessary to divide the blue from gold, or to draw the folds of drapery where the lights of the blue are heightened with gold; the black outlining seems to preserve the integrity of the blue, whereas a red outline turns the blue into purple. A dark outline of blue on green gives a very mysterious effect, but in that case the blue must be a very clear one, and of the middle quality, neither green nor of red tendency, otherwise the blue will make

the green appear muddy.

It has been said that a great deal of silver was used, notably in the two spandrils and in the dome, but Sir William resolved against employing it so extensively in the future, as it has a tendency to grey its surroundings. It looks very dark when not illumined; on the other hand, silver has, when flashing, a greater power of light and expansion than gold. A line of silver one-sixteenth of an inch wide, will eat through the lines of black, almost as light eats into the lead lines of a window. The appearance of silver is easily attained, without disadvantage, by inserting a thin line of white and outlining it upon either side with a still thinner line of gold. As the dome was worked out Sir William gained experience of the effect of one colour upon another, and of what to avoid in future. The chief thing he saw reason to regret was the insufficient strength of the outlines, especially upon those parts of the design that have a golden background. The tesseree that he employed were also on the whole too small in the earlier work, and from this fact arose an excess of detail, as he was able to put more into a given space than with the larger cubes. The gold background was extremely successful, no burnished gold being used at all, and red, green and pure gold being laid side by side.

The brassy and unpleasant appearance of modern gold backgrounds is chiefly due to two causes, first that the tesseræ have been laid too flatly and closely together, secondly, only one quality of gold, instead of many, has been adopted-interchange of various tints of gold gives a pleasant variety of tone and colour. Probably, of the two, the more disagreeable effect is obtained by the too close proximity of the tesseræ, but also by the colour of the intonaco in which they are laid. There is no danger in letting the ground show half an inch or more in width round each cube, and under certain circumstances of light even that width may be expanded, there being ar greater likelihood of error on the thin than on the thick joint. Gold set into a white ground never looks so well as when it is set into a red one, the white outline having a tendency to grey the gold excessively: this was recognised by the ancients, for in the Baptistery at Florence they took pains to colour the white line red. In modern Italian restoration of ancient mosaic, bright; burnished gold has been set up in the place of dull and broken gold, hence the old work has been rendered vulgar and garish, instead of rich and solemn. As an instance, the mosaic in the apse of S. Ambrogio at Milan has in recent years been almost spoilt by coarse restoration.

Burnished gold shines excessively in full light, and consequently eats through the edges of every neighbouring colour, and in shadow it becomes relatively dark, and an extremely powerful reflector of darks; whereas the modified or crackled gold does not shine so brightly, nor does it reflect dark to the same extent when in shadow. It may be remembered how thin the spiked gold lines are which lighten the draperies of the Greek and early Italian mosaics, when the gold flashes they only seem to illumine the colour with which they are mixed,

and when they are in shade only give splendour to the local colour; they are never over-pronounced as glitter.

This treatment of gold is undoubtedly the finest, and it is that treatment which Sir William has reverted to in his work in St. Paul's. The black pigment made use of by the old Greek and Italian mosaicists seems to have been a kind of cinder colour, quite dull, not glossy on the surface, and corroded by the heat of the kiln. They had not a strong black, so as a rule they adopted dark brown as an outline: it told darker than the indifferent black at their command. The brilliant light of the Italian skies does not oblige the outlines of form to be so manifestly insisted on as in our dark climate. Where in Italy a thin outline of brown would be quite sufficient to detach one colour from another, and to mark the form, here to achieve the same result double thickness of outline and double depth of colour is necessary. Therefore Sir William found that he required a stronger black, and Messrs. Powell supplied him with one that was invaluable. In shadow it tells really black, and becomes a deep grey when the light falls directly upon it; in reflected light it assumes a sufficiently neutral dark to serve all purposes of a strong outline, so when the work is in full light the black outlines do not cut too sharply.

Design for East Window, St. Paul's Cathedral. From water-colour drawing by Sir W. B. Richmond, R.A.

After the completion of the small dome, as winter was coming on, and the scaffolding in the cathedral was not complete, Sir William determined to execute two more panels upon slate; these were done in the workshop at Whitefriars. But when they were put in place, he realised once and for all the utter futility of such a practice. His cartoons had been made previously, and being set in place they looked strong and light, because of the non-lustrous quality of their surfaces. The mosaics, seen side hy side with the cartoons in the workshop, looked right, and were certainly wonderful fac-similes of the drawings; but the moment they were placed among their surroundings, deep undercuttings of mouldings and darkness, it was evident to the artist that they must be gone over and considerably strengthened, not so much in regard to

the local colour as in emphasis of black and white. The dark outlines he judged to he too thin, and the white lines too much toned, and he and his men at once set to work to correct these defects, inserting outlines of half an inch in width of the new black among the dark colours, and among the light colours were inserted very pure white drawing or separating lines. A great deal of the bright gold was also withdrawn to be replaced hy dull. The effect was magical, and repaid the labour it cost, which was excessive, as the intonaco had already become as hard as flint, and each single tesserahad to be removed hy mallet and chisel.

This finally decided Sir William that in future he would work always in situ; his experiments having convinced him that the practice of executing decorative work in a studio, and then fix-

ing it on the wall of a huilding differently lighted and influenced by the character of the architectural mouldings and surroundings, is fatal to successful decoration. It also involves considerable loss of time and expenditure of euergy, because if the artist is conscientious, he will feel hound to re-execute the greater portion of his work, so that it may take its relative place among the objects of which it should be one, and to which it should hear relation. He also found it desirable to make only the roughest sketch for colour on the cartoon, although every houndary line between shadow and shade, shade and light should be very clearly defined, because the transposing from one material to another involves changes that can only be made under the eye of the artist. It is true that he can calculate, in a measure, for the modifications, a necessary part of transposition; but the more delicate modifications, which are the life and soul of success, he can

only make when actually working in the material that is producing his design. For this reason it is necessary that the artist should constantly superintend the translation of his design from one material to another whenever he cannot execute it himself.

So space after space was gradually filled up, each improving as experience and practice were gained. At the same time Sir William was careful to retain work which, while it did not come up to his standard of completeness, displayed at the same time a vitality and character that he felt it would be a pity to lose. Uniformity of execution in a work of such magnitude would end in dulness; we feel the pulse of the workman in the touch of failure, and the work is human; the shadow as well as the light of the human mind is there; our sympathies are aroused for the duplex nature of

man. A dead level of perfection would be quite insufferable on such an enormous scale, which naturally demands the exhibition of many and various phases of thought.

The question of coloured windows was not an easy one to decide. Had Sir William been free to follow his preference he would have blocked up the upper windows in the apse, leaving the lower tier in white glass, well leaded up into patterns so that the floor of the apse would have received strong light, that would have been reflected up again on to the apse. Instead of that desirable effect dark green windows have been put into the lower tier, and the centre window has heen blocked up by a black altar, which is exactly the wrong place to have introduced a note of darkness. The result is that the floor of the

apse receives no light, nor does the back of the reredos, so the mosaics which are on the curved surface of the vault of the apse are in shadow, instead of gleaming with light as was intended. He still hopes that a change may some day be affected: the green windows replaced by clear glass and a white altar substituted for a black one, or, better still, no altar there at all. He found it necessary to keep the upper tier of windows warm and highly coloured, and especially to treat the centre one of the three with very deep colour, as it would otherwise have absorbed too much light as seen from the nave. The clerestory windows presented a difficulty on account of the necessity to preserve a sufficiency of light. The design is drawn entirely with lead lines, the glass is set into lead, the lead forming every outline; it has no painting on it save in the faces of the angels, whose features are drawn in strong black lines. Glass windows are, no more than mosaic, intended to be an imitation of

Photo. Hollyer. Robert Browning (p. 31).

By Sir W. B. Richmond, R.A.

pictures. The best windows are least like pictures, the worst are indifferent copies of them. Picture-windows do not go well with mural decoration, and they only cause into vogue when wall decoration was being abandoned. In the two transept windows, lead over an inch in width was used for the main outlines; these windows look very flat, and none of the design jumps out of the surface.

When the choir aisles are completed according to the scheme, the decoration of the choir proper will take its place; at present the transition between the deco-

rated portion of the choir and the undecorated aisle vaults in the four bays, still incomplete, is too sudden and gives a thiu appearance to the wall of the choir. In the windows of the nave Sir William would like to see no stained glass, but instead white glass, leaded up in fine patterns not too large in scale, and with a broad bold border, to improve the proportions of the windows, which at present appear very faulty. The green glass at present existing in the windows above the drum of the dome is most unpleasant in colour; itshould be warm, not cold, for the light of London is curiously blue already. Also it sheds false colour upon the stone and upon the mosaics.

those in the great spandrils of the dome as well as those in the quarter-domes.

St. Paul's is not only admirably adapted for decoration, but the somewhat ponderous and uninteresting architecture is immeasurably improved by colour. Standing beneath the dome, looking first east and then west, the eye derives much more pleasure from the vista, glowing with the chastened colour offered by the choir, than from the bare coldness of the undecorated nave. Whether public opinion is unanimous on the subject is no matter; posterity will judge. What the nation has to be grateful to Sir William for is the revival of an ancient art, that had been replaced by inferior modern

imitations and was in danger of being lost entirely. He has re-established the advantage of the old method by proving that it is better, quicker and cheaper than the new, that it leads to finer work, is legitimate in principle, infinitely more interesting to the workman; and the day of paper mosaic is probably over in England.

A few remarks of Sir William's on his scheme for the big dome, and on design in general, will best terminate this sketch of the decoration of St. Paul's: "If the big dome is ever covered with mosaic, and I hope

it may be, it should, I think, be treated broadly, i.e., not broken up by sham architectural forms, but mainly covered with gold, among which as a background should loom out angels with great wings. Indeed the design should be the Hierarchy of Heaven, but so treated that the design shall not be too prominent; mystery should be maintained, but the mystery of reflected light upon gold, not the mystery of gloom, of which we have quite enough in the dark climate of England. The time will, I believe, come when architecture and paint ing will be courbined again; this much-to-bedesired event will not occur till the Palladian style, so much now in

Prince Bismarck (p. 31).

By Sir W. B. Richmond, R.A.

in conclave; that is the way the Pantheon was achieved. The three arts are too much cut off from each other.

"After all, there is but one art—the art of design; a man who has the power and ability to design one thing, can design another as soon as he has made himself master of the necessities inseparable from the material used. There is a promise of such a future, but before it can be fulfilled the English public must be diverted from the narrow prejudices which have grown for the last three hundred years, till they have become a habit of mind not easily dislodged. I should like to see interiors of churches where decoration cannot be afforded built of hrick and stone, after the fashion of the Lombard Romanesque churches. Red bricks with their white joints make a colour-scheme in themselves, and the contrast they form with the silvery grey of stone is remarkably rich and pleasing to the eye. An interior of a building exhibiting stone only, unrelieved by any colour, sends a chill into the very soul. Much might also be done by calling into the colour-scheme of churches the various tints of stone which are to be supplied by many quarries in our own country. It is difficult to see why a building should necessarily be created of one class of stone only, and we must get rid of grooves and precedents before we can learn to be original."

The scheme of decoration is not yet complete, but it goes on steadily, if slowly; indeed, within the period of writing this article, the artist has made another design for one of the domes in the choir aisle. He hopes to he able in time to show a complete scheme of decoration, carried out and fulfilled by English workmen on a scale second to none in Europe. This is not the place to attempt any criticism of work that has been so much discussed. There are many who heartily admire all that has been done

### VII.—CONCLUSION.

During the first eight years that Sir William was engaged upon the mosaic, he devoted almost his whole

time to it, laying his other work aside, except for a few portraits, and his diploma picture of 'Orpheus,' and some wall painting in Cheltenham. Latterly, however, he has, while still carrying on the work at St. Paul's, begun to paint again, in the literal acceptance of the term.

Prince Bismarck (Friedrichsruhe, Dec., 1887).

From a pencil drawing by

Sir W. B. Richmond, R.A.

His black-and-white drawing of 'Barabbas at the Foot of the Cross,' executed within the last year or two, is little known, but is very strong and full of thought (p. 7). It represents Christ on the Cross, looking down with infinite compassion on a bowed figure kneeling at His feet; the robber, released from prison by the will of the multitude, has been haunted by the aspect of the one who suffered in his stead, and some irresistible compelling power has drawn him to the foot of the Cross, where many things have been made plain to him. This year Sir William was represented at the Academy hy a picture of 'Hera in the House of Hephaistos' and a portrait of his friend W. J. Cartwright; and at the New Gallery by a fine portrait of Mrs.-now Lady-Clinton Dawkins, and a picture called 'The Last Watch of Hero for Leander.' The last mentioned shows Hero leaning over the parapet, her head resting on her clasped hands as she watches for the lover who came no more. In the background a dull

Photo, Holtyer. Dr. Westcott, Bishop of Durham(p. 31). By Sir W. B. Richmond, R.A.

orange sunset light lingers in the sky half concealed by cypress trees, but the darkness of the foreground is un. relieved, and Hero's facelooms out of the gathering dusk, wideeyed, and white, straining to catch every sound, with an expression of anxiety that is almost terror. Not terror yet, for she is fighting against the truth that is gradually forcing itself upon her, but soon to be her fate, during the

long dark hours in which she realises that he will come no more.

It would take too long to enumerate even a selected list of the portraits which Sir William has painted;

Queen Alexandra, Lady Wantage, R. L. Stevenson (p. 4), Browning (p. 28), Holman Hunt, Lady Carlisle, Lady Hood (p. 8), are a few among the many who at one time or another sat to him. In 1886 the German Emperor had sent him the gold medal, and the year after he went to Friedrichsruhe to paint Prince Bismarck (p. 30). Sir William spent ten days at Friedrichsruhe with the great statesman, who opened out to him in what Princess Bismarck declared to he a remarkable manner. Probably he felt more free to say what he liked to an Englishman than to one of his own countrymen, and could meet him on more equal ground as man to man, forgetting for a time his hurden of statesmanship and power. The artist was touched by many things in the character thus revealed to him. Behind the impassive mask was no man of iron, but a sensitive emotional Saxon, who himself averred that he had never had trouble with his head, only with his heart. A man of few attachments, but those few tremendously strong; a great lover of music, a fine scholar, delighting especially in Horace, whose verses he knew by heart; but of the graphic arts entirely ignorant. The evening before Sir William had left Berlin for Friedrichsruhe, he had dined with some German professors, who told him that Bismarck had never heen into the King's Museum except once when he was caught in a shower and had no umbrella, and they had hegged him to tell the Prince

Lady Richmond.

Head of an Italian Girl.

Study in sitverpoint by Sir W. B. Richmond, R.A.

he would give them the encouragement of his presence sometimes. Sir William ventured to point this out to

the Prince. "Perfectly true," said Bismarck, "but what can I do? With the army on one hand and the army on the other hand, what time is there to think of art?" Sir William urged his plea, representing that after all the whole of Germany did not consist of soldiers, hut there was a great system of education which must come under Bismarck's notice, and which demanded his encouragement. After a short deliberation the Prince said abruptly, "You're right. I'll go," and the following year Sir William had the gratification of hearing that since his visit Bismarck had shown much more interest in the King's Museum.

Darwin was another interesting sitter, though he was a man who had, through constant work in one direction, drilled himself into one groove of thought to such an extent that, except for novels, of which he was a portentous reader, he owned to having little interest in literature or art. Two great ecclesiastics, Bishop Lightfoot and Bishop Westcott (p. 30), were painted by Sir William, and deeply did he enjoy their conversation. Doctor Lightfoot was a singularly intellectual force, but Bishop Westcott was a mystic, a man of the most highly organised temperament. His conversation was intensely imaginative, every sentence conveyed a suggestive idea, and not only was he a very fine talker, hut unlike many such, a most patient listener, whose endeavour was to learn of every one. Archdeacon Wilson was added to the roll the same year.

Perhaps of all Sir William's portraits the one that attracted the most attention was that of Mr. Andrew Lang (p. 26); but Sir William, as well as many others, consider his portrait of George, Lord Pembroke, the hest he has ever executed; people coupled

it with that of Lady Hood. Gladstone he painted twice, once in 1867 when his hair was still black, and again many years afterwards (p. 13). A close friendship had existed hetween them ever since they had met in Rome, and Sir William knew much of the great politician's mind, opened out to him in many walks and talks at Hawarden during two most interesting periods of Gladstone's life; first when he was deeply engaged in the study of Dante, and secondly when he was foreshadowing the idea of Home Rule. Even to those who disagreed with his politics Gladstone endeared himself, and he completely took charge, for the time heing, of all who came under the spell of his personality. His rhetoric was just as forcible in private as in public, and his powers of convincing in ordinary tabletalk were no less remarkable than those employed hy him in the House of Commons. For a man so vehement and so naturally impulsive his self-control was phenomenal, and he possessed that attribute of a really great intellect, the faculty of throwing aside at will whatever had heen occupying his mind. After periods of the highest excitement he would dismiss the subject of it from his mind and immerse himself in a novel. When the bond of so many years was at last severed, Sir William made many drawings of his friend after death, and he is at present working upon a large piece of sculpture intended as a monument to Mr. and Mrs. Gladstone to he placed in Hawarden Church.

The principal subject-picture he has in hand at this time is 'Moses viewing the Promised Land' (sketch p. 6). The patriarch stands upon a peak of rock, with lifted head, gazing at the distant country that he will never see. Thick drifts of cloud wrap round him like a shroud, hiding him from those helow, only lifting to let him gaze forth, and here and there to show through a rift, distant, jagged peaks. The picture is very light in tone, with the clear atmosphere of the mountain, and full of a sort of reflected radiance, as of the glory that was half revealed. Sir William is also engaged on various portraits, notably one of the present Archhishop of York. His principle is always to keep a great deal of work going on at once, and to turn from one to another picture as necessity or inclination guide him. There are stacks of pictures in the studio, which may some day he completed or may not, though it is no part of the artist's scheme to leave unfinished work hehind him.

It may he added, in conclusion, that Sir William was elected an R.A. in 1895. He is hesides a D.C.L. of Oxford, a Fellow of the Societies of Arts and Antiquaries and an Honorary Associate of the Royal Institute of British Architects, as well as M.A. He was made a K.C.B. in the Juhilee year. Besides working on the Borough Council of Hammersmith, he is an active memher of the Society for the Ahatement of Coal Smoke, and has lately hecome president of a Corporation which has heen initiated for the hetterment of London. He is a great reader and a constant student of the classics.

On page 18 mention was made of the artist's friendship with George Mason. Sir William writes of him as follows: "I delighted in the real English poetry that his work exhibited. How exquisitely he saw the mysteriousness of English landscape, its predominant grey, which is sometimes enlivened hy those flashes of gold which occur at sunset; and how he appreciated the twilights, which are more beautiful in England than those of any other country. Mrs. Percy Wyndham's 'Evening Hymn,' hy Mason, always seems to me like Wordsworth at his hest. I wanted very much to paint English landscapes, and did do one picture

called 'The Calves,' which I saw recently and liked, hut it is not my métier. My eyes were awakened in the South. Every painter is impressionable, but he must find out for himself what is the governing force of his own character. My nature must live hack; 1 must dream; the past has for me a vividness which receives suggestions from the present. Somehow in the woods and mountains of Italy, among the islands of Greece, in Arcadia, in the deserts of Egypt, or in the city of Pompeii, it is not the people treading those grounds who are real to me, but what is uppermost is the world two thousand years ago-that exists. I know it is the fashion to say that this is all wrong, hut I do not care to divorce myself from an imagination (if I may he permitted to call it so) which lives much in abstractions, from the intense desire to reproduce those fancies in form and colour, however inadequately. It is partly because so much that one thinks is ill adapted to these media that words come as a kind of easement to the imagination, and I have written a great deal, though published little. In the really artistic temperament three things are predominant, and when they are balanced, probably a really great artist (I do not mean I am one, far from it, hut I would he if I could) is produced-emotion, intellect, and reason. They hardly ever go together, or rather the elements of the three in combination are hardly ever found in one work. The intellectual may be reasoned, and each stage is conscious, hut the work that one does hy emotion is done rapidly; and that work has never contented me hecause I feel that what Titian said is so true, 'l'improvisatore non fà mai la bella poesia.' The same thought was expressed by Tennyson when he said, 'It is the poetry that is minute and highly finished which really lasts, and there is no real art which has not been accomplished by lahour and suffering, although neither lahour nor suffering should ever show; we must learn to disguise that.' The artist is like a mother, he bears within him a thought which is perhaps to move the world; even if it is not a great thought, to he in any sense perfect its embodiment must be the result of pain. Art is just like life, and the artist must learn to suffer, to endure, to rule himself and his emotions until they hecome a part of his intellectual force. Emotion must never be allowed to run away from intellect, they must keep pace together; it is so easy to start lustily upon a race and to get out of hreath before it is finished. A great artist keeps his impulse glowing hy not expending it too soon. Design must he strong enough to he sustained by the moral courage necessary for its completion, and no picture is ever finished until the day it is done, just as life is not accomplished till the day we die, and Finis is written at the foot of that picture.'

It is difficult to justly estimate the work of those with whom we live in the hurry of life, especially in these crowded days of change and variety. The test of time is the only ahiding one, and in two or three centuries men will know more about the art of to-day than we do now. There has been no attempt at criticism or eulogy in this sketch of Sir William Richmond's work as an artist, only an endeavour to represent faithfully a life that, whatever the results may he, has been spent in strenuous effort in a great cause. Art for art's sake is a fine thing; art dedicated to the ennobling and hettering of humanity is a finer one; and those who keep alive among us the high ideals and lofty purposes that can lift even sordid things into another atmosphere, are doing a work that should enlist the sympathy and interest of men for all time.

HELEN LASCELLES.

## Mural Decoration.

ROM the time as far back as can be traced in the history of the world to the present day, mural decoration has always afforded scope for variety of treatment. In their respective ways, the picture-writings of Egypt, the wall-paintings at Pompeii, the fresco decorations of Italy, and the tapestries of mediaval Europe, have helped to enlive empty wall snaces. After periods when wood panelling wall spaces. After periods when wood panelling in different styles was fashionable, modern taste commands attention to wall-papers. Incomparable as this comparatively modern creation is to the laborious productions of artists of former times, yet some of the most imaginative artists of the day are prograded in prefusing this the day are engaged in perfecting this means of decoration.

decoration.

The manufacture of wall-paper is one of the artistic industries identified with the nineteenth century. It is true that towards the end of the c ghteenth century this form of wall-covering began to be used; but it was not until the early part of the nineteenth century that it

became the cause of great commercial enterprise. Messrs. W. Woollams and Co., founded in 1810, claimed to be the originators of printed wall paper claimed to be the originators of printed wall-paper in this country, and their museum of old designs and manufactured goods has passed into the possession of their successors, Messrs. Arthur Sanderson and Sons, Ltd. On the next page is reproduced a portion of a very old pattern, the original of which was hung on a wall, discovered on the removal of a partition in an old mansion in Clandon Park. The design, stencilled in flock, is estimated to be at least 200 years old, a proof that this department of wall decoration can boast a respectable antiquity.

that this department of wall decoration can boast a respectable antiquity.

The best designs among the relics left by Messrs. Woollams are being adapted to modern requirements by the present owners, and, as infinite pains are being taken to preserve the beauty of the old work, the world will be enriched by the revival. The means to approach perfection that the former producers lacked are now possessed and manipulated to a degree of great efficiency by Messrs. Sanderson. But the reproduction of these old designs compared to their activity in the printing and disposal of modern work is, in a degree, a form of relaxation. It is their more serious work which calls for attention.

It might be supposed that the apparent perfec-

degree, a form of relaxation. It is their more serious work which calls for attention. It might be supposed that the apparent perfection of mechanical printing would have long since rendered obsolete the methods of production available in earlier days. But extensively though machinery is used, to those who prefer the stamp of individuality to rigidly correct printing, handprinted goods are in considerable demand. In order to supply the market with this particular class of goods, hand-printed and stencilled designs receive a large share of attention, and it is curious to note that such work is produced by almost the identical process used by Messrs. Woollams in 1810. By reason of the slowness of the method, and the extreme care which is necessary to obtain the desired effects, such patterns are more expensive; but where cost is no object, the result is undeniably superior.

Messrs. Sanderson and Sons have earned a right to be named as the leading wall-paper manufacturers. This distinction is merited not only by the superiority of the productions of their designers, but by

" Claude" Design, by Arthur Sanderson & Sons, Ltd.

he s kill with which the rich colour effects are obtained. It is a pleasure to refer to the ability of the firm to satisfy the requirements of all classes, and a visit to their showrooms will quickly convince the visitor of the unanimous striving of many workers towards refined decoration. One indication of the desire to afford customers every facility to choose designs, is an arrangement by which any wall-paper can be seen by artificial as well as natural light. Few more agreeable occupations can be imagined than an hour or two of leisure in their showrooms.

The illustrations on the opposite page are a

The illustrations on the opposite page are a few selected to show as well as may be in black and white, the charm of a few stock patterns. The 'Kremlin' and 'Belgrave'' designs are conspicuously rich in effect, the colours giving a natural appearance to the floral pattern. The 'Laurel Leaf'' design is one which will commend itself to those who desire a dignified, almost stern, decoration; and the "Princess May'' pattern, reproduced from a silk design for use in the Royal Palaces, will form, on account of its delicacy and brightness, a fitting embellishment to such rooms as afford scope for specially dainty treatment. The "Canal" frieze needs little comment. It is a quaint imitation of a Dutch scene, and the design lends itself to most effective use. The illustration shows the extent of the pattern, which is repeated as opportunity suggests, the intermediate spaces being occupied with the fan-like trees only. This gives the effect of a hand-painted frieze at a very reasonable cost. The "Claude'' design above can be used either with or without the border as occasion needs, to give the effect of an old tapestry panel or a continuous landscape frieze. Among other excellent subjects which are not reproduced here, but which will alone repay a visit to the Show Rooms, 52, Berners Street, the "Owl" and "Peacock" designs may be mentioned.

Producing clever designs, and paying every

Froducing clever designs, and paying every attention to historical accuracy in the reproduction of old designs for the decoration of rooms in certain styles, Messrs. Sanderson and Sons deserve the very high reputation they enjoy. With each successive season new ideas are realised with enterprise to meet the demand of the prevailing fashion, and the possibilities of wall-paper decoration become greater as the encouragement of success leads to continue endeavour. The scope is unlimited, because the harder manufacturers press towards the ideal will evade them; it being of a will o' the wisp nature, which baffles complete attainment. And this is well; for unattainable perfection will always be an incentive to labour provided there is a sufficient reward for zeal to counteract despair.

## Royal Barum Ware.

HE potter, claiming for his craft antiquity unparalleled by other of the arts and deriving unlimited suggestion in design from the productions of his forerunners, can design from the productions of his forerunners, can seldom create an uncommon form in clay which will appeal to the world as of original conception. However much the craftsman may strive to devise new shapes, which cannot be condemned as absurd, he will probably model objects, quite unwittingly, which have been produced by other hands at some period of history. The apprentice potter can therefore choose to adopt one of three available means to attain his consummation: (1) to conscientiously follow in the wheelmarks of his professional ancestors; (2) to combine the distinctive characteristics of some of his honoured predecessors: (3) to seek his fortune with a style of his own cessors; (3) to seek his fortune with a style of his own—a course possible once in a century or so but almost unmentionable on account of its rarity.

The first path is undoubtedly the best on which to tread. Given a resourceful mind, the designer can modify or extend the thoughts of the earlier craftsmen, embodying the excel-lences of the past with the requirements of the present; and he who would achieve greatness or increase his business must also anticipate the trend of the future. The competition of modern times makes essential the exhibition of work which will tempt purchase from those who, preferring to see before

they buy, would never commission production.

It is an indication of the growth of appreciation that the purely artistic effort is becoming commercially profitable, and this is very noticeable in respect to Barum traditions of ceramic art are worthily fostered by Mr. C. H. Brannam, who, succeeding to a factory, by personal application has identified his skill with the district of North Devon,

and by much quiet endeavour has given a renown to the town of Barnstaple equal almost to its association, under the name of Barum, with early English times.

One of the features of Barum Ware is the density of colour which is reached, and although this characteristic is not uncommon in ware manufactured in other parts of the world, yet Mr. Brannam achieves complete success in the world, yet Mr. Brannam achieves complete success in the selection of colour to convey just the right ornamental effect. Without being too solid, the tone is sufficiently heavy to dignify the piece, and, when relieved by other shades or colours, an effective composition is obtained. The illustrations here will show the contrasts, but the softness and the careful blending of the colours are only suggested. Barum Ware has been favourably noticed by Royalty, and the list of distinguished patrons who have become converse of pieces is a long one patrons who have become owners of pieces is a long one. Her late Majesty, Queen Victoria, commanded specimens of work to be submitted, and the ensuing orders were completed satisfactorily. It may be mentioned that besides the flower vases, jugs, cups, tobacco jars, bowls, and other receptacles made in the ordinary way, special commissions are speedily executed, coats-of-arms and monograms being burned into the pieces whenever desired. Considerable success has been obtained in this most difficult art, advantage having been taken of opportunities for the show of delicate handling in

taken of opportunities for the show of delicate nanding in-the representation of heraldic designs.

Barum Ware is of two kinds; the one which depends for effect on rich colouring and glaze, the other which is decora-ted in Sgraffiato, or modelled in low relief. The latter is an interesting process. A vessel of red clay (terra cotta) is covered with a coating of white slip, made of some natural white earth. When this bridal garment is set, portions of it are etched away in order to expose the red clay. In finishing, other colours are introduced into the design, and the result is a characteristic piece of Barum Ware. In the Victoria and Albert Museum, S. Kensington, there are many examples of the ancient employment of this Sgraffiato decoration. Incised ware, as produced in Perugia and Cyprus in about the fifteenth century, seems to have been very crude in execution; after making allowances for damage during excavation and for time decay, compared with modern work it appears inferior in workmanship. As regards embellishment, the variegation introduced now is much more brilliant, and keeping in mind the wonderful preservation of colour in the specimens of Egyptian and Grecian ceramic art which have been discovered, there is no reasonable cause to suppose that the productions of the present day will not rank in the future as

works of art of the highest grade ever reached.

Some of the vases reproduced show the clever adaptation of animal forms to the construction and decoration of the of animal forms to the construction and decoration of the pieces. The deft workmanship and anatomical knowledge which is necessary to enable a graceful ornament to appear, for instance, in the quaint form of a penguin is undeniable. For the information of posterity, the originals should be signed by their respective authors. In centuries to come, when the Directors of our National Museums are endeavouring to determine the date and authorship of the productions of determine the date and authorship of the productions of the present day, it will be a far simpler task than it is for living archæologists, whose knowledge of the past is necessarily largely speculative owing to the lack of documentary evidence. There are many works of art of this description of sufficient merit to warrant the distinguishing mark of the artist being imprinted: if only for the enlightenment of future generations, the example of some eminent deceased potters should be followed.

There is an indication of a complete mastery of modelling in the representation of beasts in the different shapes which come from the Barum factory. No better

Examples of Barum Ware From the originals made by C. H. Brannam, Litchdon Street, Barnstable

tribute can be paid to the artists than to confess an irresisti-ble impulse to crane the neck with a view to finding out where is the end of the animal so naturally twined round the vase and incorporated with it. Such ideas are, of course, not new; there are ornaments in the British Museum which show that similarly grotesque figures were fashionable in bygone days; but the imita-tion of old ideas to be

Examples of Barum Ware. From the originals made by C. H. Brannam, Litchdon Street, Barnstafle

acceptable must be true, and considerable skill in manipulation is apparent in the work under notice.

Visitors are cordi-ally invited to witness the production of these works of art. Tourists will find an excursion will find an excursion well repaid, and American cousins when they "do" England should not fail to find their way to C. H. Brannam's Royal Barum Ware Factory, Litchdon Street, Barnstaple.

#### An Artistic Inheritance. Copeland, late Spode.

M R. JEWITT traced the first mention of Josiah Spode to 1749, in which year he was employed by Whieldon, the celebrated potter associated with Wedgwood and others eminent in the art. In 1770 Spode entered into business at Stoke-on-1rent, and in 1797 William Copeland, for many years identified with Spode's Works, became a partner. The famous manufactory, having descended from generation to generation, is now continued under the title of Messrs. W. T. Copeland and Sons. It seems scarcely necessary to say more than this. With such a record of years during which worldwide eminence has been attained, the merits of the firm must be written down unquestioned: if any reference is made, respectful homage must be paid to those whose privilege it is to carry on the traditions of their family, and whose endeavours towards perfection in their art are the justification of their birthright.

In the early days of the partnershin, the Prince of Wales, afterwards George IV., visited Stoke to see the process of porcelain manufacture, and Mr. Spode was appointed Potter to His Royal Highness. King Edward, accompanied by the Queen, a few years ago also went over the works, and this Royal patronage is a tribute to the worth of Copeland ware, many specimens of which have from time to time passed into the Royal collections. In 1866 a dessert service consisting of the King Challenger of the King Ch ing of 198 pieces passed into the possession of the King. The figures of the centrepiece were designed by J. Durham, A.R.A. and the whole production was on a scale of great magnifi-

cence.

The manufacture of sets of choice table appointments is a branch industry to which great attention is paid, and every endeavour is made to secure the best artistic issue. An unimpeachable finish is insisted upon before any piece leaves the manufactory, and in some of the results there is a close affinity to the delicate beauty of the glass-ware of the early Venetians. As regards design, there is a varied assortment

of geometric and subject patterns, a selection from which can be made to satisfy the taste of all purchasers.

In the decora-tion of vases and bowls, Messrs. Copeland have always shown praiseworthyre-finement. The finement. The excellence of most of their original designs is only equalled by their imitation of the work

Copeland Ware

tion of the work of celebrated artists. The dainty touch of Watteau is transferred admirably to the "Ccci" vase here reproduced, and when it is recollected that on the way to completion each vase is subjected to many difficult processes, the most trivial failure in any of which means destruction, the results obtained are almost incredible. In the manufacture of jewelled porcelain some astonishingly fine effects are obtained. Copeland ware of all descriptions is the outcome of repeated experiments, and represents the concentrated skill and experience of many decades. It is to the interest of the artists employed to see represents the concentrated skill and experience of many decades. It is to the interest of the artists employed to see that all the ware is satisfactorily finished, and this, combined with the vigilance of those responsible, makes Copeland ware beyond suspicion. Awards have been repeatedly

obtained at Exhibitions and the high grade of the speci-mens of the potter's art which continually leave the works, ensure acceptability by their undoubted merit.

It may not be out of place to mention that before entering the factory a penalty is exacted from visitors. It exacted from visitors. It being one of the show places of England, this penalty has been paid by many distinguished people. It consists of a Visitors' Book, to which each stranger is asked to contribute an autograph. In the wear 1852. Charles the year 1852, Charles Dickens went over the fac-tory and recorded his impres-sions in "Household Words" under the title of "A Plated Article." Although since that time the business has been largely increased, it is interesting to note that many of the surroundings remain much the same; while his imaginary conversation with a manufactured plate em-bodies a description, in his own inimitable style, of the various processes

Expert knowledge of the highest degree is applied to the manufacture of Copeland Ware, and the traditions of the Staffordshire Potteries are ambitiously carried on. The name of Cope-land is linked with Stoke-on-Trent (the very name of which town is sufficient to warrant quality), while their name is

" Cecil" Pattern I ase, Copeland Ware.

an alternative word for excellence. To what further success they may attain it is impossible to predict. Whatever new ideas are worth consideration, Messrs Copeland are among the first to take advantage of them to improve the standard at the time existing. If in the production of some rare design they are so unfortunate as to fail to achieve the end they have in view, it has been repeatedly proved that the failure has only been an incentive to further endeavours. It is by this combination of perseverance and hereditary skill that so much has been accomplished towards the perfection of artistic pottery. Whatever commercial reward has been theirs, the student, to whom actual monetary worth does not appeal, rejoices to see such elegance in contemporary art. Copeland Ware deserves to be named with the choice pieces which at auction command high prices, and besides commanding admiration, the future may nossess them with an added theirs, the student, to whom possess them with an added quality of appreciation in specie. Individual taste may perhaps not tend to unanimity on this point, but if anyone visits the works and fails to be at least moderately charmed by the beauty of the work shown, that visitor must

be of the melancholy undiscerning order of humanity.

# The Concord of Sweet Sounds.

"IF music be the food of love, play on "—one of Brinsmead's pianos. It is with every deference to the immortal author of "Twelfth Night" that this particular instrument and make is suggested. What more amorous agent is there than a piano? Or what piano better qualified for its task than a Brinsmead? When the lover no

longer hungers, prosaic melody is as readily forthcoming from the same instrument and satisfaction inevitable. If it is desired to use the instrument as an elaborate piece of furniture, the achievements in this direction by Messrs. Brinsmead and Sons are too well known to needrecapitulation. If every-one went to them for instruments, there would be none there whose souls

could be "fit for treasons, statagems and spoils"; for none could withstand the seductions of such music.

Wigmore Street is the scene of Messrs. Brinsmead's activity, and there pianos are sent direct from the works in Kentish Town. It may not be possible for all to enjoy an inspection of the various instruments on view at the show-norms, and of the various instruments on view at the show-rooms, and in order that

musicians in the country may not be wholly deprived of the pleasure of knowing the products of Messrs. Brinsmead, an illus-trated catalogue has been prepared which will reveal many new designs in casework, and some improve-ments in mechanical construction. Those who are in terested should write for the booklet as earlyaspossible as the demand is great and the supply limited.

A Brinsmead Sheraton Grand
