### The Political Economist.

MONETARY PROSPECTS OF THE NEW YEAR. The pecuniary year 1864 opens under remarkable circumstance. The year 1863 has left to us a legacy of three powerful mercantile causes. First, we are buying cotton largely in new countries; secondly, we are promoting new npanies in vast numbers; thirdly, we are considerably extending our general export trade, not only with a few countries, but with almost all countries—with the world at large. It is right that we should consider clearly what the large. It is right that we should consider clearly combined effect of these three causes is likely to be.

Various estimates have been made of the extent of our future importations of cotton, and of the future demands that will be made upon us to pay for it. Some weeks since, we ourselves ventured on an estimate that at the average Liverpool prices of 1863, we should have imported in 1863, 52,559,600l worth in cotton; in 1864, 68,008,000l worth.

These figures have been excepted to on both sides. Some eminent authorities, as Messrs Neill, have put forward much more formidable anticipations. Other authorities have thought that our estimates were in excess of the truth. But, on the whole, we are inclined to set off one series of objections pretty much against the other. Anticipation, our readers remember, is always rough work, and looking at the broad aspect of the subject, and remembering that on such a subject precision is neither essential nor possible, we are not disposed to modify our conclusions.

But, instead of computing future conjectural figures, we find by the Board of Trade returns just issued and printed in our usual Supplement, that we have imported raw cotton in the ten months ending 31st October, at the following values, from the countries undermentioned:—

Cotton, Raw-From United States.... Braz 1

we look at the quantities, we find that we imported in

the same ten months RAW COTTON. 1861 ...... 10,108,528 

we paid in 1862 for only one-third more in quantity: We have not yet received the valuations for the imports for the month of November; but we have received the quantities, and we find that we imported of raw cotton

In October, 1863 .....

so that the import is still, conjectures apart and in unques-

tionable matter of fact, very great.

There is nothing at all to be alarmed at in the absolute augmentation of our imports either this year or next. If we should have to pay for them in manufactures and not in bullion, the account might be easily balanced. Our imports increased 30,000,000t in 1860, and no one, save a student of such matters, ever was aware of the fact.

The enormous accumulated wealth of this country, of which in a series of elaborate articles we have given our readers some idea, is, in fact, a force of such magnitude that it can immediately supply the materials for any new exports which may be required, even if those exports should be many millions in value.

Even in ordinary times such would be the case; we could easily pay in manufactures what was wanted. But now we have a pecumar and nearly unprecedented facility so doing. We shall export, in all likelihood, during the coming year much more than usual to all parts of the world. Cheap corn has everywhere produced its usual effect; the diminution in the cost of food has left a surplus income to be invested in other commodities; it is not the rich few who benefit by cheap corn; they hardly know the difference. The new income available for new investments belongs to the mass of mankind, and will be expended in the common familiar articles agreeable to the mass of mankind. Of these ordinary articles England is the great producer. In the present state of the world, she will be a great seller of them to all other nations, and will have a large balance due to her from them. When, therefore, she has to buy cotton in new countries, all that those new countries buy in all other parts of the world will be available in liquidation of the debt of England. Her debtors may sell to the cotton countries, but in so doing they will only indirectly pay the debt which they have incurred to us. Our debtors sell to our creditors, and the transaction is closed by a mere transfer in our books. We never were so likely as now to be able to pay a new demand upon us, because we scarcely ever before were likely to have so much due to us from foreign nations.

It is also to be considered that as we are buying dearer cotton than we used to buy, we shall have less to spend on other things. We do not say less than we have formerly had to spend, for the income of the country augments at an unprecedented rate; but less than we should have had to spend if cotton had not rises that we should have received, and that deduction will be a deduction for our other imports, from the imports we should have received, and that deduction will balance as far as it goes the drain on our resource consequent on the purchase of more costly cotton.

If, therefore, cotton purchased in n be paid for in the ordinary manner, and by the commodities of commerce, we should not regard its cost or its repayment as a matter of any importance. We should be sure that we could manage to pay for it without difficulty. But, unfortunately, a large experience proves that a new trade requires much cash. New countries, and especially semibarbarous countries, are not at once ready to buy, because they are able to sell. They take the money and keep it, sometime for a longer and semetimes for a shorter time. It is evident that such has been the case on the present occasion.

Referring to the above-given table, we find that we have imported in 1863, in the ten months ending 31st October :-

	£	£	
From Brazil	1,689,213		
Egypt	6,599,293		
India	22,051,712		
	30	0.340,218	
in the corresponding months of 1	862 :		

	£
From Brazil	1,274,063
Egypt	2,713,332
India	12,632,381
	16,619

Increase of cotton imports from these three 13,720,442 But our exports have not augmented equally. We exported

in the ten months of 1863:-

To Brazil	3,146,007
Egypt	
India	15,396,395
	22,032,8

In the corresponding months of 1862:

	£
To Brazil	3,129,566
Egypt	
India	12,421,663
	17,463,932

Being an increase of only...... 4,568,936

showing a vast difference in the purchases which we make from these three countries, and the purchases which they are willing to make from us in return.

It is evident, therefore, that there must be a large balance of trade due from us to the cotton-growing countries, and a part of this we shall in all probability have to pay in bullion. What, then, is the necessary effect of our having to pay in that manner? There are many persons who imagine that the difficulty caused by a drain of bullian is a difficulty caused by our legislation, and especially by the Act of 1844. But this is a mistake. The Bank of France, which is under no such legislation, is in an equal difficulty. It began to raise its rate before the Bank of England, and its rate is now as high as that of the Bank of England. operation of a drain of bullion is one which to be prevented by mere legislation. We express our cannot contracts in the precious metals; our banks especially, and all persons with great obligations, are under enormous obligations to pay gold and silver at very short notices, or on de-mand. It is necessary, therefore, that a considerable amount of these metals should be held in this country. All our credit rest upon its being so held. If it were known there were no gold in this country, people would never believe, they would have no ground for believing, that those who had promised to pay it would be able to pay it; the first result would be panic, and the next bankruptcy. It is necessary, both in France, where there is no "Peel's Act," and in England, where there is, to raise the rate of interest when the store of the precious metals is in course of diminution. We must not hope that legislation will relieve us from a difficulty which it did not create, and which is inherent in the very essence of our commercial civilisation.

The effect of a drain of bullion must depend on its magnitude, and on this point a false source of consolation has of late been sometimes relied on. It is said, and it is true, that a considerable quantity of raw cotton is re-exported, and that we shall only have to pay for our cotton, the cotton we keep and use, and not for that which we send abroad just as we received it. But this is an error. If we buy cotton at Bombay or Brazil we must pay for it, whether we re-sell it or not; and if those who sell it will take only bullion, bullion we must The cotton we re-sell becomes part of the general exports of the country, and we are paid for it in the same way in which we are paid for all other exports. Gradually, for we generally give credit, we shall receive some commodity of an equal value to the raw cotton we re-sell. But we may not ever receive a sixpence of bullion in exchange for it; and if we do, it will probably be a long time first. As far as respects the

immediate operation of a drain of bullion, we must calculate on paying for the cotton we sell as well as for the cotton

But there is a consideration also of a consolatory character, which is much better founded, and which must always be borne in mind when we are considering the large figures in which our Board of Trade Tables and our ordinary estimates represent our cotton imports. These figures give cotton at Liverpool prices. We shall not have to pay in bullion for cotton cotton at at that price. We shall not have to pay bullion to the ship-owners who bring cotton from Bombay, or to the English merchant who makes advances on it at Bombay: we shall only have to pay in bullion the native price, if we may so call it, the debt due to the actual Indian cultivator, who will have silver because he wishes for nothing else, and has confidence in nothing else. Still, after this abatement, there will be a considerable drain for bullion, and the question returns, what will be its effect?

We need not be alarmed at it after the recent and most wonderful proofs of the effective nature of the remedy in our The Bank of England has only to raise its rate of discount, and supplies flow to it from all quarters. We get means to meet the drain in bullion, though we cannot, of course, prevent or terminate the drain itself. The foreign countries will have bullion, they must have it. The most probable course of the money market seems, therefore, to be a continuance of oscillations. At the present moment, it is likely that money will diminish in value, -that the Bank of England will reduce its rate, and that the general market will readily follow it. After a time, the efflux of the precious metals, which has now been delayed, will again begin. The supplies which, during the period of dear money, the Bank has accumulated, will flow out during the period when money is less dear. And this is quite right. We only wish to get more bullion to pay for foreign cotton, and when we have got it we should be ready to pay it away. As soon as our store begins to be reduced below the proper limit, the process must recom-mence. We must raise the rate, diminish the efflux, and attract more money; and, when we have attracted enough, again lower the rate and let it go. We do not, of course, expect that money is likely soon to be very cheap; the efflux of bullion will arrest a downward movement long before it reaches any point of extreme depression. But though money will, as far as we can foresee, be dear for a considerable period, there will be many fluctuations in the degree of its dearness, and we may expect many eras of ascent and descent, not very important, perhaps, to the general public, but very perplexing to the practical dealers in money.

We have written so much on the cotton drain that we must be brief on the other two causes which we specified, and fortunately there is not much of very great importance to say respecting either the increase in our export trade or the new Companies which have been started. The enormous figures to which the nominal capital of these Companies amount, give to their creation a ficticious and unreal importance. The real -what calls have been paid, what actual money of individuals has been paid into the till of the new concernsbe ascertained. All we can say is that as yet there are no visible creations, no achievements, no works in progress, no works even begun, which can be a formidable drain on the resources of a country like England. Great nations are not ruined by figures in newspapers. Their capital is only exhausted by tangible results, by material creations which in such a time as 1845 every one could see, and which now no one can even profess to discern.

We are sure, therefore, that the new Companies are not as yet injuring the country by exhausting its capital, but it is not impossible—we desire to speak with doubt and caution that some of them may be co-operating with older establishments in creating evil of another sort. To speak plainly, it may be that the great facilities for obtaining discount and advances-facilities unexampled it is to be remembered in the money market—may have generated a certain quantity of bad business. Credit is the life of trade, but every sudden every sudden growth of new credit is always tainted with an ture of evil. The late extensive credit has fortunately fallen upon a period of very prosperous trade—of trade stimulated by cheap food, and, therefore, we may hope that the alloy of evil may not be large. Still, some alloy general considerations warn us to expect, and what alloy there is, a long period of dear money, especially one of oscillating dear money, will be sure to display and detect.

On the whole, therefore, we anticipate that the year 1864 will be a serious though not an alarming year. Our trade will probably be very large and very profitable, but against this we shall have to set the possible consequences of a long period of dear money,—the gradual detection of undue credit,—and the gradual failure of any trade which such credit may either have fostered or created.

### GERMANY VERSUS DENMARK. PEACE OR WAR?

THE superior wisdom of an inactive and unforecasting foreign policy over an anxious and restless one-of waiting to meet evils when they arise in place of endeavouring to guard against them while still at a distance and only contingent-of trusting to cure rather than troubling ourselves about prevenwhich the late Sir Cornewall Lewis used to preach, has seldom received a stronger confirmation than is furnished by our present perplexity in reference to Schleswig-Holstein and the Danish succession. Some fourteen or fifteen years ago Europe had undergone a series of internal disturbances and revolutions, out of which more than one war had arisen. Matters were at length quieted; but among the various controversies that had come to the surface there was one in particular which had broken out into actual hostilities and which it was feared might on a subsequent occasion break out again. This was the quarrel between Germany and Denmark in reference to the two puzzling Duchies which lie between them and are claimed in part by both. All the great Powers of Europe were very desirous to avoid war. It was feared, or foreseen, that on the death of the then King of Denmark without male issue a war of succession was likely to arise, which might end in the dismemberment of the Danish dominions and the apparent disturbance of the balance of power, unless provision against such a contingency could be made beforehand. Accordingly the five great Powers and a number of the smaller German Princes concocted a treaty by which they settled two things-first, that the Danish territory should be maintained in its integrity under one Crown; and secondly, that that Crown should be worn by Prince Christian, and not by the Duke of Augustenburg. This treaty was not formally ratified Duke of Augustenburg. This treaty was not formally ratified by the German Diet; but various Sovereigns, who constituted nine-tenths of the voting and military power of the Diet, ratified it individually. The treaty did not indeed bind the signitaries in so many words to guarantee to King Christian the succession and the integrity specified in the document, but it certainly did bind them to acknowledge him, and no one else, as Sovereign of Denmark, Schleswig, Holstein, and Lauenburg.

Now, there was no reason, apart from a common wish to eliminate future causes of disturbance, why England (or France either) should have meddled in this matter or been a We had no interests involved in the party to this treaty. dynastic connection with Germany through Hanover had been terminated years before. We had no family relations with Denmark, and only a very uninfluential one with Germany. If we had stood aloof and allowed the Continental Powers, or Russia, Denmark, and the Federal Teutonic Diet, to settle the matter as they pleased, we might now have remained comparatively uninvolved, and might have regarded the matter with the quiet interest of mere benevolent spectators. But having been parties to the treatv. having been active movers of it, having concocted it in London, and got it named the "Treaty of London," we are bound to stand by it, and to do honour to our pledge, whatever that pledge may honourably bind us to. And besides this, we have since contracted close matrimonial engagements with both the antagonists in this quarrel. We have married our eldest son to a daughter of Denmark, and our two eldest daughters to two sons of Germany. It is difficult, therefore, to be silent or to be idle on the question, -which in the meantime grows more complicated and more menacing every meantime grows more compnessed and and deep anxiety two day;—and we are forced to consider with deep anxiety two sing questions: "Will there be war or peace? What must England do if there be war?

We showed last week that there ought to be no war; that the only danger arose from the fact, not that any of the Sovereigns concerned wished for war, but that some of their subjects were foolishly passionate and that some of themselves

were inclined to be foolishly meddling;—that they were doing what, without meaning war, was very likely to kindle war. If the Germans were only moderate and rational, and if Prus and Austria were only as determined to avoid war as their interests should lead them to be, the affair might be pacifically arranged (though not without trouble perhaps) by a conference of all the Co-Signitaries to the treaty of London, supplemented This assembly by a Plenipotentiary from the Federal Diet. might compromise the quarrel. They might revise the treaty. They might assign Holstein to the Duke of Augustenburg and to the Germanic Confederation. They might annex Schleswig to Denmark in full possession, and Holstein and Lauenburg to Germany in full possession. They might even arrange a Constitution, satisfactory to the foolish Teutonic mind, under which both Duchies should remain permanently subject to the Danish Crown. Nay they might possibly agree to allot Schleswig as well as Holstein to the Bund, and reunite Den mark to Norway,—so shamefully torn from her in 1815,—thus forming with Sweden a really strong Scandinavian King-Almost any pacific settlement might come out of such a conference. War scarcely could come out of it.

But instead of this, what has been done? The King of Denmark has suspended the objectionable Constitution he had given to Holstein; but nevertheless the Federal troops have occupied Holstein, and the Danes have quietly retired before The Federal Commissioners who accompany the army have, it is true, issued a proclamation forbidding the people to "anticipate the decision of the Diet," by declaring the succession of the Duke of Augustenburg. Notwithstanding this, wherever the Federal forces have penetrated, the Pretender has been proclaimed without any actual interference on the part of the Bund; the Duke himself has landed at Kiel; and has made a special appeal to the Emperor of the French, and has received from that astute Sovereign a civil but inconclusive answer. Since then, Austria and Prussia have called upon the Diet (in which they are omnipotent) to summon King Christian to annul the Constitution he had granted last November to Schleswig, on pain of seeing that Duchy as well as Holstein occupied by Federal troops,—though it is not pretended that Schleswig forms part of the German Bund. King Christian appeared inclined to yield even to this demand, and it is known that England and we believe Russia also, recommended this concession. But neither his Ministers, nor his people, nor his Swedish ally, are prepared to suffer him to do so; and it is said that he cannot do so without the consent of the Risgraad or joint Parliament, which is not now sitting, which cannot be called together except under that very constitution whose abrogation is demanded by the Germans, and which if it did meet would most probably refuse to submit to the peremptory demands of Under these circumstances, it seems more than the Diet. doubtful whether the Federal summons will or can be complied with; and it seems quite certain that the Federal occupation of Schleswig, threatened in the event of noncompliance, would be an act of war, and would lead to war. is the present position of affairs;—and it must be confessed it looks awkward. Much of the language of Austria and Prussia, all the words and conduct of the other German Powers, and the proceedings which have everywhere followed the entry of the Federal army, and have not been repressed by its leaders, fully warrant King Christian in believing that the intention of Germany is, and that its action will be to wrest away a large portion of his dominions, and to bestow it on his rival. The German Sovereigns talk, indeed (but in open defiance of their own Treaty of London), of referring the claims of the two Princes to the Diet; -but the desires and preferences of the Diet are well known. King Christian may then be pardoned for thinking that as he must fight for his Orewn seener or later, he may as well fight at once.

Meanwhile England is leaving no stone unturned to persuade the fanatic antagonists to be wise and moderate. But what is she to do in case her efforts should prove unavailing? We do not remember that she was ever placed in a more thoroughly unpleasant position than she will occupy in case war should actually break out between Denmark and Germany. She is bound by treaty to recognise King Christian; and not to recognise the Duke of Augustenburg. From this obligation she cannot escape. But there can be little doubt that the Holsteiners are in favour of the Duke, and wish for union with Germany. England's honour and her please, therefore, place her in direct opposition to the wishes of the

population; and if she acts at all she must act against them. Denmark, again, has another ugly, but very cogent, claim against her for the integrity of her dominions. England was a principal party to the iniquitous spoliation in 1815, when Norway was virtually torn away from Denmark which she loved, and forced into a union with Sweden which she hated. And if England now allows the German claim to be enforced by arms, she will be at least a conniving party to the robbery of nearly two-thirds of Denmark's remaining territory. Yet, on the other hand, we cannot conceive any war into which the British people would see themselves dragged with so much dis-They do not understand the quarrel. It must be admitted by those who understand it, that the right is not We have not the and is not all, on either side. faintest individual national concern in the matter; it does not import us much that Denmark should be large and strong; and though the possession of Kiel might make the German Bund a maritime power, it could not make it a power such as If we were forced to fight, we we need fear or count with. should have to fight against the natural wishes of a German population to be united to their kindred; we should have to fight probably and virtually to facilitate the approach of the French Empire to the Rhine; we should have to fight simply and solely because thirteen years ago we made and signed

treaty with the distinct purpose of preventing a fight.

A conference, or some sudden access of sanity on the part of Austria or Prussia, seems to offer our best prospect of escape from the threatened imbroglio.

### THE RECENT PARLIAMENTARY STRUGGLE IN FRANCE.

THE advocates of Parliamentary Government, if depressed by the non-success of the Prussian Chamber in changing or even affecting the course of King William, may take comfort from recent proceedings in the French Corps Legislatif. liamentary battle is fought in France under circumstances of singular difficulty, circumstances which never occurred before, and probably will never repeat themselves. The head of the and probably will never repeat themselves. Government, unlike most hereditary despots, is a man of great intellectual ability, who was himself elected by the authority which elects the Chamber, who is on most questions strictly in accord with the mass of his people, and who, if he does not literally dread, does profoundly dislike Parliamentary control over the Executive. The army, overwhelmingly strong, is with the central authority. The middle class, if not with it, is still hostile to revolution, and greatly afraid that Parliamentary victory is but a step towards victory in the streets. The Parliament itself is limited in its attributes, has no control over Ministers, no authority over the army, no power of initiating laws, and, indeed, but one clear prerogative,—that of allowing or disallowing the charges made on the Budget. in this Legislature, Finally. thus limited in function and deficient in physical strength, the Government possesses and, except on one or two minor points-the Montauban dotation or plans for creating large, and, except on one a military aristocracy—a trustworthy majority. In spite of all this, so powerful is the action of a Parliamentary system among a people who really approve of freedom and are capable of following argument, that one orator with an insignificant "tail" has been able to inflict keen annoyance upon the Government, and extract from it professions which are almost pledges. The Government, it will be remembered, desire permission, after funding 12,000,000l of the floating debt, to issue new Treasury bonds up to the same amount next year. It was at once perceived by the Opposition that this power, advisable or even necessary in itself, would enable the Emperor, if so minded, to expend 12,000,000l for any object which he could hope subsequently to justify. That sum, though, as M. Thiers put it, not enough to carry on a great European war, is enough to meet its first expenses, and, once roused by the sound of cannon, France will yield her Chief all necessary resource They were, therefore, anxious to refuse this authority,-first, because refusal would limit the power of engaging in petty expeditions which they dislike; secondly, because it would compel the Emperor, before interfering for Poland, to ask the Chamber's consent, and so recognise its supremacy; and, thirdly, because it might possibly irritate the Imperial Government into a very dangerous course of action. To refuse the permission point blank was of course useless. The nation would only have said that the Opposition preferred its party

interests to those of the people of France. Consequently, M. Thiers, with that rare tact, that union of wisdom and finesse which belongs only to men trained for years to Parliamentary warfare, only proposed that the amount conceded should be reduced to six millions. Disclaiming all oratorical presumption, and speaking simply as a man of business, he pointed out strongly and clearly that the tendency ments was always to exercise their full powers, and that he wished to disable them as far as possible from warlike opera-without consulting the country. This was the substance of a speech almost obscure in its close adherence to technical details, and it created the utmost alarm in the Imperial ranks. To yield to the amendment was not only to embarrass the Emperor, but to set a new precedent, restricting probably for ever the muchvalued discretion of raising money up to 12,000,000l a year Yet to resist it simply was to tell all the world that the Government would want an extra six millions for some unknown purpose during the year. It was, moreover, likely to give the Opposition a real lever among the moneyed classes who could readily follow their argument. Fortunately, the Government were either aware of the general drift of the motion M. Thiers was known to have threatened, or conscious from the uneasiness among capitalists of the necessity for moderation. The Committee had, therefore, in advance, arranged to promise that in 1865 the amount issuable should be reduced to six millions, and as to 1864 they relied on the talking Ministers to show that the amendment was "incon-This was done, and very badly venient to the service." done, though M. Lanjuinais made mince-meat of the technical argument; still it enabled the Chamber,--which was besides not too anxious to prevent war for Poland-to vote the sum required by an enormous majority.

M. Thiers seemed to be defeated, but he had in reality ined two very striking advantages. He had taught his folgained two very striking advantages. lowers and the people to recollect the half-forgotten secret of Parliamentary strength, and he had alarmed Suppose, for example, that a majority of the Chamber, convinced by his arguments, or fearful lest France should be permanently injured—for that is the point at which legislative subservience gives way—had accepted M. Thiers' motion, the Emperor would have been reduced to one of three alternatives. Either he must have struck a new coup d'etât, by asserting publicly a financial dictatorship, and appealing to the people -a step Sovereigns detest when anything short of a throne is at stake—or he must have issued the bonds without sanction, and applied for an indemnity afterwards, in which case the interest would have been high—or he must have given way, and then the Chamber would have recovered complete and full authority over his foreign policy. The whole attitude of France would have been changed, for Europe no longer have had to reckon with the Emperor backed by the masses, but with the old statesmen of France backed by the intellectual class. That change might be injurious or beneficial, but it would undoubtedly have revived

Parliamentary power.

As it was M. Thiers was supported by only fourteen votes, but still he had recalled to men's minds, and especially to members' minds, the full sense of the power which resides in a money vote of the Chamber. He had, moreover, awakened the Government to danger, and consequently to the necessity, of moderation. M. Gouin said the promise for 1865 was inserted in the Committee's report before the amendment had been printed, and M. Gouin doubtless spoke truth, but still it was open to the Ministers not to adopt that report as they did. They might, had they not been conscious that they were opposed by something stronger than votes, have refused to concede anything, and relied on the assured majority, and had M. Thiers been a Red they would doubtless have done so. Being, however, confronted by a great Parliamentary general, they were coerced into caution, and tried to win by fair argument in the Chamber. On that floor they were no better armed than M. Thiers, and were defeated in a style which the educated classes of France will thoroughly understand. They were compelled, moreover, to talk in the most pacificatory way, and though the Emperor is not bound by their talk, still it has become much more difficult for him to declare war, except upon grounds which unanimous France will approve. Above all, they have learnt that if the Chamber is to exist at all they must be more moderate in expenditure; and for despotism to be moderate in expenditure

is, in France, impossible. The people will have either meal or malt, the freedom which strengthens their energies or the glory which fires their blood; and glory in France, as in Japan and everywhere else, costs endless cash.

#### PRISON DISCIPLINE IN HAMPSHIRE.

On the 4th January next the Quarter Sessions of the Hampshire magistrates will discuss, at Winchester, Lord Caernarvon's able report on the improvements wanted in the prison discipline of that county. Two or three months ago we commented on the character of the report, and showed that its principles were nearly identical with those of the Irish system,—or rather as nearly identical with it as it is possible for a county-prison-system (which can only make the best use of very short sentences) to be with a convict system, which aims at making the best use cf a long period of penal discipline. As the immediate prospects of our county prison discipline depend in a great measure on the example set by the Hampshire magistrates on Monday next, we need offer no apology for taking up the subject once more, and doing what lies in our power to support Lord Caernarvon in his wise and useful reforms. If he succeeds, there will be doubtless many Quarter Sessions willing to follow in the footsteps of the Hampshire magistrates, without verifying, by their own separate investigations, the wisdom of the principles which Lord Caernarvon's Committee has adopted and recommended for the use of the county jail at Winchester. If he fails, we fear the extension of sound penal principles to our county prisons may be delayed for a year or two longer. Wholesome suggestions for the reform of our penal system cannot well be introduced under more advantageous circumstances than they will meet with at Winchester on Monday. Advanced without a vestige of doctrinaire extravagance by a sensible Conservative Peer, who has devoted much time and much ability to their investigation, they will come with as little of the horror of innovation, and excite as little of presumptive suspicion, as any principles that cannot boast of a hoary tradition are likely to excite in the distrustful spirit of Quarter Sessions opinion.

And first let us notice that in one respect (if in one respect only) the suggestions of Lord Caernarvon's Committee do not differ from those of the Lord Chief Justice, Mr Adderley, and the other hasty theorists who (apparently on a priori grounds) ridicule the Irish system for attempting a reformatory treat ment. Lord Caernarvon, like Sir Walton Crofton, and all the most experienced authorities on this subject, aim at making the prison discipline, as a whole, not less, but much more disagreeable and penal than it now is. There never was a greater blunder than that made by the hasty assailants of the Irish system,—that they were sacrificing wholesome severity to humanitarian philanthropy. Lord Caernarvon, at all events, whose report owns that in this it is copying the Irish Directors of Convict Prisons, recommends no changes which do not, on the whole, require a very decided advance in the direction of austerity. For example, they begin with preaching a much stricter enforcement of the rule of hard labour,—that is, of the tread-wheel or the crank. Then, in the earlier stages of imprisonment, the report recommends the withdrawal of many indulgences,—of amusing books, of the use of the slate, of spade labour, of every-day open-air exercise, of mattresses under the bedding, and, throughout the whole imprisonment, it would shorten by at least two hours the extravagant ten-hour allowance of sleep. And, finally, it recommends a dietary without meat, "at all "events during the early stages of imprisonment." "They "are disposed to think that meat, whenever necessary, will
be best given in the form of soup." Such suggestions as
these are clearly not conceived in a spirit of weak philanthropy. They are not suggestions likely to be popular amongst the prisoners, but exceedingly unpopular, If carried out, they very much diminish the gratification or resignation with which offenders against the law see the prison doors closing upon them.

But the element of this report which will excite most opposition from the disciples of the Lord Chief Justice and Mr Adderley, will be the deliberate adoption of the principle of a progressive relaxation of the penal element in the discipline in proportion to the industry and good conduct of the prisoner. This, it is said by the old school, is an attempt to reform the prisoner, and on all attempts to reform him they look with the sort of scorn which one feels for a conjuror or an astrologer who is attempting to impose on us

with mystical frauds. A criminal is in their eyes a criminal, whom it is mere sleight-of-hand to attempt to turn into anything else; you may disgust him with crime if you go the right way about it, but to supplant in any degree motives to crime—that is not in the nature of thingsthe act of a mere charlatan to attempt it. Now the simple the act of a mere charlatan to attempt it. Now the simple answer to all this a priori prejudice is, that you will disgust the criminal much more with crime if, while making it highly penal, you give him also some sense of the graduation from penal and ordinary labour, some feeling of the advantages industry gains, and of his power to gain by industry, than if you leave on his mind the even dead appelloyed sense of continuous suprish his mind the even, dead, unalloyed sense of continuous punishment. The impressions a prisoner will take away of the disagreeableness of his penalty are more lively, rather than less, if you give him some power to alleviate its pressure by extra personal industry, for he then contrasts the involuntary punishment with the voluntary industry which is permitted to be in some small degree its equivalent, and learns to hate the one even more by the comparison with the other. Thus the Committee propose that the first month of imprisonment should be occupied by dead crank-work or tread-wheel for eight hours per day, or, if the prisoner is unequal to that, by ten hours of picking oakum, without any possible relaxation or remission. During the next two months, if the prisoner has done nothing to delay his elevation into what is to be called the second class, the ordinary rule would be the same, but the prisoner would be permitted, by labour after the compulsory work is over, to gain a remission of one day in every ten of his stay in this class, and a possible rise, therefore, into the next class some six days somer than the regular period. During the fourth, fifth, and sixth months of the imprisonment, the criminal who has done nothing to delay his rise into the third class would only have six hours per day of crank or treadwheel-(a period even then longer than the worst prisoners practically have now)—and would be permitted, for the first time, to do spade labour in the open air for a part of the remainder of his work; and be able, moreover, to diminish, by great industry, the regulation stay in this class by one day in every week, or by 12 days in all. The fourth class would consist of the prisoners of the second half-year's imprisonment; in it the tread-wheel and crank-work would only be four hours per day, and a much longer time left for less dis-gusting work. Besides spade labour they would be now allowed, for the first time, to do some industrial or trade work requiring skill as well as industry, and they would be able diminish their stay in this class by one day in every week as before, or in this case to gain by very great industry their place in the least penal class 26 days, nearly a month, sooner than the regulation period. In this the highest class, the tread-wheel or crank-work would be diminished to three hours per day, or 18 hours per week, and out of this the prisoner would be allowed a remission of two hours of this penal labour from the total remainder of the sentence for every day gained in previous classes. In other words, the greatest possible industry of the prisoner in previous classes would have procured a remission of some 88 hours, or five weeks' hard labour during the remainder of the sentence, which in the longest sentences might amount to a year, and, in most which exceed a year at all, to six months.

Now, these remissions of the more disgusting work do, we believe, leave the most industrious prisoner on the new plan under quite as severe discipline as the average prisoner is now. But it gives a sense of graduation to the prisoner's mind, fills him with some motive for effort, gives a sense of hope without which industry is not industry but only toil, and draws a well-marked distinction between the more and less industrious. It is simply idle to say that all this is of no good. While criminals are men, the motives of hope and emulation will act upon them, and so far from its being a wise thing to shut out these motives in order to make imprisonment more odious, we believe the odiousness of the imprisonment is never so heavily felt as by those prisoners who have gained some taste of the advantage of voluntary industry.

taste of the advantage of voluntary industry.

Of course, in a short sentence, which at most lasts two years, we are not sanguine that much real reformatory effect can be produced on habitual criminals. But the recommendations of the Committee at least open the way to such an influence in the case of the better class of prisoners; they render it far more easy to keep up a good discipline in the

prison; and they will we believe produce a far keener sense of the penal character of the punishment, than that ungraduated dead level of hopeless penalty, which puts ungraduated dead level of hopeless penalty, which puts criminals into the sullen and stupid mood in which their minds cense to act at all on the moral features of their

THE IMPUNITY OF INSANITY.

Ir is not pleasant to discuss a question of legal jurisprudence while a fellow-creature is lying under sentence of death, and when the decision whether or not the sentence shall be carried into execution may hang upon the view which we may persuade the public, or Her Majesty's advisers, to take of the matter in dispute. But at this moment so many lawyers, physicians, and clergymen are vying with each other as which shall write or speak the most perilous nonsense on the subject of insanity as a plea for impunity, in reference to the case of George Townley, that we cannot, in common honesty and in common consideration for the public interest, allow ourselves to be deterred from endeavouring to set the question on its proper basis by any fear lest our argument may have some influence in determining the ultimate fate unhappy man who has just been respited during Her Majesty's

We have no intention of reviewing the evidence, or of questioning the verdict of the jury. We will not be drawn aside to consider whether, as a deliberate pre-determined design to slay his victim was not imputed to the assassin by the prosecution and is negatived by some points of the evidence adduced, it is not possible that bitter and unendurable provocation the part of the young lady at the final interview might, the eye both of morality and law, reduce the crime from the guilt of murder to that of manslaughter,—though we incline to think that this plea might have been urged with much cogency by the prisoner's counsel. We need not do more than just mention the ingenious legal argument which we have heard put forward in some quarters,—viz., that, although the culprit may have been perfectly sane at the commission of the offence, yet if he have become insane at any subsequent period, either before the trial or even after the delivery of the verdict, he ought to be exempt from punishment on the ground that if he had been in full possession of his faculties he might have so conducted his defence as to obtain an acquittal, or might have been able to offer some conclusive reason "why sentence of death should not be passed upon "him," when asked that critical question by the Clerk of the Court previous to the Judge putting on the fatal cap. plea we may have to consider, if Sir George Grey recommend the Queen to commute the murderer's punishment on the ground of supervening insanity. We need not waste time in commenting, by more than a passing reference, on the monstrous testimony adventured by Dr Forbes Winslow to the effect that the prisoner's insanity was to be inferred from the fact of his setting up (as every criminal not utterly cynical and ruffianly invariably does) a not wholly unplausible theory in order to justify himself in his own eyes,—and that he was utterly incompetent to distinguish between right and wrong, because his views of right and wrong in some particulars differed from those of Dr Forbes Winslow. At present we are only concerned to expose the unsoundness and danger of the doctrine so nakedly put forth by a Dr Black in a letter to the Times (Dec. 25th) and since much re-echoed both in conversation and in print. cording to this reasoner, "there is a form of insanity," (distinct alike from general mania, from special hallucinations, and from what doctors have got a loose habit of calling "moral insanity,") which is of frequent occurrence, and "which irresistibly impels its victim to the commission of acts of outrage and murder. This species of insanity is "termed by French medical psychologists manie sans délire,
"and by English ones 'instinctive madness or insane im"unulse." Mr Townley's mind, in Dr Black's view of the "'pulse.'" Mr Townley's mind, in Dr Black's view of the case, naturally weak and already shaken by want of sleep, morphia, and brandy, "gave way under the shock of hearing "that his clerical rival was preferred to him, and in this con-dition, without reason, without the consciousness of right and wrong, he was irresistibly impelled" to the act in ques-

New, we all know that there is a form and degree of insanity which renders its victim wholly irresponsible for his actions, and which the law recognises—whether always

wisely or not we will not here stop to discussfrom the usual punishment awarded to such deeds of criminal violence as he may have committed. It is assumed that, because he is mad, therefore he did not know he was doing wrong or incurring the penalty of wrong, and that, therefore, he ought not to be punished. We believe both inferences to be often inaccurate; but whether sound or not, such is the common judgment of half-educated humanity, and such is the practice of the law which roughly embodies that judgment. We all know, again, that there are various forms and descriptions of insanity; and no experienced psychologist will hesitate to recognise as one of them "impulses" which Dr Black mentions, and which he choose to call "irresistible." It is under this word irresistible tha It is under this word irresistible that lurks the fatal fallacy and the terrible peril of his argument, "Impulses" are matters of degree. "Irresistible" is a term of degree. We are all of us subject to impulses; most of us to vehement impulses; many of us often to sinful impulses; not a few of us not unfrequently to criminal impulses. An "impulse' and An "impulse" is often nothing but a strong and usually a sudden desire to do something which tempts us-something which is suggested to us thing which tempts us—something which is suggested to us by an ill-regulated fancy, or an unchastened appetite. We are seized with a sudden impulse to assault a man or to out-rage a woman. Some of us are "impelled" to fury, some to lust, some to destruction;—some of us to all these things at times and in turn. The precise cause and nature of the impulse, or of the desire of seizing upon us just then, we may not know. It may be physical disturbance, it may be an outhweak of temper it may be simply a longing then, we may not know. It may be physical distributes, it may be an outbreak of temper, it may be simply a longing like that of thirst, it may be the suggestion of "opportunity" acting on innate appetites or passions— would have called "suggestions of the passions—what our ancestors of the Devil," and which we would have called "suggestions of the Devil," and which we might do well to call so too.—Now, why do we sometimes yield to these "impulses"? Clearly because the impulses are in accordance with our desires,—because counteracting motives are not at hand powerful enough and prompt enough—because it is easier to yield than to resist—because the habit of selfcontrol has not been cultivated into sufficient strength and omnipresence. Why do we sometimes resist these impulses? Clearly because morality or fear or self-respect comes in to restrain us—because we know we shall do wrong to give in —because we know we shall be punished or shall suffer remorse if we give in. These impulses, common to us all —and often, God knows, vehement enough and wrong enough to be loosely called "insane"—are resistible or irresistible—it would be more correct to say are resisted or not resisted-just according to the strength and readiness of the controlling and counteracting motives and reflections. of us yield to them, and some resist them; sometimes we all yield to them, and sometimes we all resist them. But in ninety-nine cases out of every hundred it would be an abuse of language and absolutely false to say that the temptations and impuses we succumb to were one whit stronger than those we resist, or that the men and women who succumb were one whit "insaner" than the men and women who resist.

The plain truth is that, if we speak correctly and carefully, no impulse is per se "irresistible": it becomes so only in consequence of the absence of an adequate resisting force. consequence of the absence of an adequate resisting force. If, on the other hand, we speak loosely, like Dr Black and Dr Forbes Winslow, then every impulse may become irresistible if the resisting motives are weakened or withdrawn. The impulse to possess a woman you desire or to destroy a man you detest, is yielded to, and we term it irresistible, if we are cert of secrecy and confident in impunity. The same impulse, not a whit more wicked, not a whit more insane, becomes resistible, and is resisted, if we believe we shall be found out and know we shall be hanged. To admit Dr Black's therefore, and pardon George Townley in consequence, would be, in hundreds of future cases, to convert what is now only a wicked impulse, a sensual or a violent one, into an insane impulse,—and what is now a resistible impulse into an irresistible one. For it is most important to bear in mind that crimes like the one in question are generally committed by persons whose minds are peculiarly morbid or ill-regulated, who, either from abnormal strong appetites and passions, or abnormal weak consciences and wills, have a "proclivity to crime"—i.e., a tendency to yield readily to eager, angry, or licentious impulses. To establish a precedent, therefore, in a case like the present, under which such persons will be led to fancy that their wicked impulses may possibly be treated as "insane" and "irresistible," will be to remove from them the strongest of all counteracting motives to control their desires. We can conceive few things so dangerous or so immoral as to publish and confirm the doctrine, that crime is to go unpunished in proportion to the vehemence of the criminal's passion and the weakness of the criminal's conscience.

It may be urged that in the case of the "impulses" designated in Dr Black's argument-viz., sudden, savage, and overpowering ones-no deterring considerations, whether of morality or fear, have any weight or have any time to operate, and that, therefore, any plea or precedent which weakens them can at worst only act theoretically as it were,—only weaken what has in fact now no acting strength what-But we hold this argument to have no validity. trolling influences, scruples of conscience and the fear of punishment, are, it is true, often altogether overwhelmed or put out of sight in the actual moment of vehement temptation or passionate desire. But the mode in which these influences operate in preventing crime lies in the habitual connection in men's minds between special crimes and severe retribution here and hereafter,—a connection which prevents the impulse from ever reaching the "irresistible" or "insane" stage. Men contract a sort of life-long and instinctive practice of regarding crimes which involve hanging, for example, as crimes which they must never even dream of committing—must never come even within reach of.

Since writing the above, it is announced that George Townley is to be removed to a lunatic asylum, and of cour respited indefinitely. As soon as we learn the precise grounds on which this decision has been arrived at, we shall have a few more remarks to add on that special point. That practical determination may or may not prove defensible. The plea that has been put forward is clearly indefensible.

FRENCH RAILWAYS AS PROPERTY.

IMPERFECTLY as French Railway Finance is understood in this country, and obscure as it will probably continue, owing to the complex and varied relations between the Railway Companies the State, the one broad fact is apparent that for the money expended the French railway system is better than our own. France has more value for her money than England, has applied her railway expenditure with greater discretion, and as a consequence the profits of French railways are larger upon the capital employed than on this side the The difference between the principles of railway Channel. legislation in the two countries will in a great measure account for this. In France the general scheme of railway accommodation has been regarded as national, and as closely identified with the well-being of the state. Upon the Legislature therefore devolved the duty of laying down at the set the courses of the main railway arteries, and of committing their construction and working to Companies properly constituted and with competent means; at the same time protecting the public against any abuse of the monopoly thus by regulated scales of tolls and fares. means, and by subsequently conceding to these great Com-panies the practical monopoly of the districts traversed by their trunk lines, an efficient system of moderately cheap and useful railways has been secured for France, uninjured alike in original construction, and the working of their traffic, by competition. Here, in England we have in some instances two lines of railway where one might answer all purposes, and perhaps not either line adapted to the wants of districts traversed; while North-Western, and South-Western, Great Western, Great Eastern, and others, have always been seeking to wrest from their neighbours some portion of their traffic, thus wasting much capital which belongs to the nation rather than to themselves, and conferring by their perpetual warfare no advantage whatever upon the community. The one great cause of this may be traced, we venture to think, to the principle of our railway legislation. Instead of regarding our railway system as a great national question, requiring much legislative care, we have left the initiative to private enterprise alone, the State reserving to itself only the power of conceding or rejecting the various railway schemes brought before Parliament from time to time. The great national question has with us therefore really never been considered. The individuals, or individual companies, promoting railway schemes, have had no interest to consider but their own, and,

as it happened, sometimes the true merits and ultimate success of the project has been a matter of small amount to its promoters. On the other hand, it is true, there has been a Board of Trade, which once made "Reports" upon rival railway schemes; and, again, rival railway schemes have been considered by Committees of both Houses of Parliament in "groups." But the reports of the Board of Trade were not binding upon Committees, were frequently set at nought, and referred only to projects already initiated. The consideration of rival railway schemes in groups is open to the same objecstion; and the distinction between the French and English systems, and in our view the superiority of the former, have consisted chiefly in the facts that in France the State, without regard to any private interest, has decided what railways should be made as most conducive to the public weal; while in England Parliament has only taken upon itself to decide between the respective merits of isolated schemes and private interests without regard to and without considering the national question of the best system of railways for smallest cost.

The enormous railway business of France is thus committee to the administration of six great Companies only; and it would be scarcely possible to adduce better evidence of the undisturbed possession which these great corporations hold of their territory than that a writer in the last number of the Revue des deux Mondes devoted the chief part of a lengthy paper to the history, of what we should have considered a small skirmish, between the Southern and Mediterranean Companies. In France, happily however for shareholders in French railways, this has been a great event—an exception to a general rule. The Southern Company, having a line of railway already constructed from Bordeaux to Cette, sought to invade the territory of its neighbour the Paris and Mediterranean by extending this line from Cette to Marseilles, upon the plea that it was shorter by 45 kilometres than the existing line of the Paris and Mediterranean, and that it would divert from the Straits of Gibraltar a large proportion of the sea-borne traffic from the Mediterranean to the Atlantic. After a contest of two years, it was discovered that no reasonable charge by the proposed Marseilles and Bordeaux Bailway could cover the cost of unloading at Marseilles, conveyance from Marseilles to Bordeaux by railway, and reloading at Bordeaux; and so the project of the Southern Company was defeated. seems almost beyond belief that a scheme so utterly visionary and impracticable could ever have been put forth by a rational Company for the approval of a reasonable Govern-ment. Another inroad upon neighbours' domain by means of a line from Rhodez to Montpellier was also projected by the Southern Company, and defeated; and these two victories for the conservative cause of French railways are, according to the Revue des deur Mondes, regarded as the establishment of a precedent which for the future will secure to all the six great Companies the peaceful and undisturbed possession of their allotted territory. This decision, which may be pro-bably as it is significant as pronounced by the writer in question, was made last June.

But there is another question connected with French railway finance, which we think may be far more significant and eventful. French railways are rapidly increasing. The guarantees by the State of a fixed rate of interest upon the capital employed or to be employed in the construction of railways are accumulating at railway pace, while the class of railways constructed become year by year of a less remunera-tive capacity in proportion as they are extended to less populous and inferior districts. To render this intelligible,

e must have recourse to figures and bare statements of fact.

The original concessions of French railways were made on lease for terms varying from 30 to 100 years, the State providing the land, and a portion of the capital, absolutely, or on loan at low rates of interest, and dividing profits with the Company after certain rates of dividend paid to the shareholders, and certain stipulated reserves made from revenue as a sinking fund for the redemption of the capital during the term of lease.

The six great arterial lines laid down by the State under this form of concession were:—

1. The Northern line from Paris to Calais, Boulogne, Dun-

kerque, and the Belgian frontier.

2. The Western line from Paris to Havre, Dieppe, &c.

3. The Orleans or Central line from Paris to Orleans, Bordeaux, Nantes, &c.

4. The Southern line from Bordeaux to Cette, Bayonne,

Toulouse, &c.

5. The Paris, Lyons, and Mediterranean, from Paris to
Marseilles, with branches to Cette, Nimes, Avignon, Dijon,
Bessneon, &c.

6. The Eastern line from Paris to Strasbourg, Châlons-sur-

Marne, &c.

It will thus be seen that of these six great systems (Réseaux) the only one without direct access to the metropolis upon its own lines is the Southern from Bordeaux to Cette.

Originally, independent concessions were granted to many of the railways now included in these systems, such as the Paris and Lyons, Paris and Orleans, Paris and Rouen, Rouen and Havre, Boulogne and Amiens, and others, but these are all now consolidated into the six great Companies above

Incidentally we may here remark that as the capital provided by the State for the formation of portions of these systems of railway under the original form of concession for the purchase of land, earthwerks, to e purchase of land, earthworks, &c., is not, we believe, in asy instance included in the published accounts of the Com-panies, the calculations as to the cost of French railways in ontrast with English, American, and other railways, which are to be found so frequently in print, are, to the extent of the capital so omitted, erroneous.

In 1858 and 1859 a new form of concession was adopted by the French Government. Branch railways of inferior productive capacity to the main lines were then projected, and as the proprietors of the main lines were unwilling to dilute their profits by admitting these new projects into partnership on equal terms, and as the capital could not have been raised for their construction without some such support, the State consented to alter the form of concession to such a fixed rate guaranteed interest upon the capital required, as with capital by the public. The French Government in adopted the same principle that we have for the construction of our railways in India. The outline of these concessions of 1858 and 1859 is a guarantee of interest by the State on the capital raised for fifty years, with a sinking fund for re-demption of the capital calculated at 4 per cent. All the profits on the old lines of the Company in excess of certain red rates to be added to the revenue of the new lines instead of going to the State. After 1872 the State to participate in the profits. The guaranteed interest paid by the State to be repaid out of profits on the new lines when they exceed the guaranteed rates.

The old lines (Ancien Réseau) under the original concessions, and the new lines (Nouveau Réseau) under the new concessions of 1858 and 1859, have therefore separate interests, and involve separate accounts for fifty years, when the old and new

will be consolidated.

The distinction between the French and English railway system is here strikingly marked. Our original main lines always paid well, and still pay well no doubt, if proof could be given by access to the figures, but their profits are in all cases, we believe without exception, so diluted either by partnerships with inferior branches and extensions, by guarantees to inferior lines, and by competition, that six per cent. with us is now a maximum dividend, and the average perhaps not more than three per cent., while some of the French Companies (old réseaux) pay 20 per cent., and the average cannot be less than 10 to 15 per cent.

In the present article we can only give an outline of what has been done, what remains to be done, and of the rate of progress, in French railway construction up to the latest dates.

The entire system of French railways and the latest dates. entire system of French railways authorised by

the State up to June last is in length..... 12,671 Of which there were completed about ..... 6,900

Leaving uncompleted ......or about 46 per cent. of the whole. Of these uncompleted lines there were-Authorised before 1863 ..... 4,552

Authorised in the year 1863 ..... or upwards of 91 per cent. of the entire system authorised, and equal to about 18 per cent. of the entire system com-

We have shown that since 1859 the capital raised for the construction of railways in France is guaranteed a fixed rate

of interest by the State. The amount of capital actually gua-ranteed up to last June was nominally 1614 millions of pounds sterling, at an average rate of nearly  $4\frac{2}{4}$  per cent. per annum, of which liability nearly one-fourth, or 37 millions, was contracted last June alone. This casts our railway guarantees in India completely into the shade; but the writer in the Revue des deux Mondes, to whom we have before referred, accounts for this large addition to the State liability in June, 1863, by for this large addition to the State Industry before the the fact that the concessions were made immediately before the elections. This may or may not be. We deal only with facts. Under any circumstances, the State engagements on account of railways are very large, are accumulating at a violent pace, and before leaving the subject we will refer to one significant fact brought to light in the session of 1863. Guarantees given by the State in 1859 on a capital estimated at 15 millions of francs, are found in 1863, owing to the defective estimates of 1859, to be guarantees on eighty millions instead of fifteen, or an increase of .433 per cent. We will hope that similar errors will not be discovered hereafter, as they become serious even to so wealthy a country as France when guarantees of 43 per cent, interest are given annually on nearly 40 millions of pounds sterling.

It has thus been clearly the policy of the Emperor Napoleon and his Government to support railway property in France. By the State guarantees to the new réseaux the old réseaux retain all their original value, while the new is good property well secured, although palpably at no small sacrifice to the

#### THE BOARD OF TRADE TABLES.

WE have elsewhere commented on the principal results of the Board of Trade Tables.

### Agriculture.

LAND LAWS, AS AFFECTING AGRICULTURE. MANY of our most intelligent and practical agriculturists have re cogoised as fully as the political economist the influence of land laws upon the agriculture of the country. And such laws often act indirectly by inducing certain habits and customs, as well as by direct legal operation. In the paper read by Mr George Hope, at the Edinburgh Social Science meeting, " On the Conditions of Agricultural Success," to part of which we lately referred, he thus adverts to the subject before us :-- "You cannot compel owners of property to grant leases, or to make only such agreements as are just and reasonable ......All I contend for is that the law should not encourage or aid the carrying out of such unequal agreements. Successful farming can be best carried on by the occupier either being or considering himself in the light of the owner; at least the evils I have alluded to would vanish were occupiers generally the owners of the estates they cultivate. But this cannot be the case to any extent for a long time to come. By means of entail laws and the right of primogeniture, large masses of property have been thrown together and retained in the hands of a single individual......I cannot see what there is in land that should make its destination different from money. A man need not be prevented from leaving the bulk of his property to one child, and next to beggaring the others, if he sees fit, but certainly the law should not aid him in this, or do it for him." And he concludes with the following just, and for a non-lawyer most remarkable suggestion :-"If the law allowed property to be left [he might have added limited or settled] only to those alive at the decease of the donor for date of the settlement], and if the right of promogeniture were abolished, landed estates would in time be reduced to comparatively moderate dimensions, to the great benefit of agriculture and the general prosperity of the country." We do not, with Mr Hope, believe that any great benefit would accrue to British agriculture by the occupiers of farms generally being likewise the owners. That they should be "in the position of considering themselves in the light of owners," by the possession of leases of not less duration than twenty-one years, is most unquestionably desirable; but if agriculture is to become, as it must, a really commercial pursuit, we believe that the division of the whole interest in land between owner and occupier will more rapidly and completely produce that result than the union in one person of the two characters. Land, agricultural land, in this country has become an object of investment, and from various circumstances a favoarite one, so that the yearly income or interest derived from such an investment is generally lower than that derived from other investments. When, therefore, a man proposes to farm land for profit, if he chooses to farm only the land of which he is owner, he must invest or lock up a considerable amount of his capital in the land itself, and for which capital he will receive—in the form of rent saved—only a low rate of interest. It is true he will have the absolute security which his ownership affords, and from the way in which English estates are commonly managed that appears to be an advantage for the attainment of which the farmer may reasonably make some sacrifice. But, in truth, all the security which ownership affords might practically be assured to the farmer by a long and rational lease, while the farmer holding his farm on lease would be able to apply the whole of his capital to the proper business of an occupier, the cultivation of grain and other produce, and the breeding and feeding stock for sale. Consequently the leaseholder would be able with the same command of capital to carry on a much more extensive farming business than the landowning farmer. And although the profits of capital employed in farming are probably lower, and perhaps more precarious than the profits derived from cap

On the other hand, if a person of small means attempts to farm his own land for profit, he is likely soon to become an incumbered proprietor, for the facility of raising money upon his estate is so great, that every bad season or mistaken effort is likely to be eased over by means of money raised on mortgage, rather than by retrenchment or more circumspection or additional exertion, to which the tenant-farmer must of necessity resort under similar gircumstances.

The best state of things for agricultural prosperity is where the owner of a farm, having executed all necessary permanent improvements,—buildings, roads, draining, and so forth,—lets the farm thus improved for a long lease to a tenant of competent capital and skill. The rent will form the measure of the owner's interest on his investment,—the value of the farm and his outlays on permanent improvements,—while the tenant as a farmer will employ his own capital in the strictly commercial pursuit of profit derived from husbandry. To realise such a state of things the owner of the farm must have both the means and the inclination to execute the requisite permanent improvements. But the effect of our existing land laws is to reduce the number of landed proprietors who possess both the capital and the will to improve their estates to the narrowest limit. The accumulation of land in the hands of individuals is so great as to be most detrimental to the progress of agriculture. This is occasioned by the combined operation of law and custom. It is not practically much aided by the law of primogeniture, although that law marks the origin of the existing unhealthy accumulations of landed property, viz., the feudal tenure of land for military or quasi-military purposes. Practically, very few landed properties of any extent descend to the heir-at-law, by reason of the intestacy of the owner. But nearly all large estates are made the subject of settlements under which the actual possessors are tenants for life only, and are commonly subject to considerable incumbrances. Often these incumbrances are so heavy as to reduce the life tenant almost to the condition of a receiver and nominal owner. It was the prevalence of such condition which rendered so many landowners the bitter opponents of the repeal of the corn laws, for they enticipated a fall of rents as the result of free trade, and they well knew that any permanent fall in their rentals would go far to extinguish their own beneficial interest in the estates of which they w

The following may be taken as a statement of the position of the great majority of the owners of English landed estates. A, the present possessor, who is a person of middle age, with a wife and family, succeeded to the settled estate on the death of his father, the rental of which is, say 7,000/ per annum. A's mother, an elderly lady, is still living, and draws her jointure of 1,000/ per annum from the estate. A's father had power under the settlement to raise a gross sum of 30,000/ for the benefit of his younger children. He had younger children, and the 30,000/ charge was raised and remains on the estate. The yearly interest on that mortgage at 4l per cent. is 1,200/. Nor is that all. The settlement was made on the marriage of A's father and mother, and subject to the power to jointure A's mother, and to raise portions for his younger brothers and sisters, the estate was limited to the first son in tail. A is such first son, and had he done no act to bar the entail and had survived his father, he would have become tenant in tail in possession, and by a short legal process might have made himself owner in fee simple. Events, however, happened otherwise. A went to College with the knowledge that if he survived his father he must succeed to the family estate; he found no difficulty in obtaining credit and money, and by the time he was twenty-two or three years of age he found that he had accumulated a very inconvenient load of debt. He owed 5,000/. Then he wished to marry, and another sum of 3,000/ was required to set up his establishment. In the meantime A's father had greatly improved the family mansion, and had got into debt by so doing to the extent of 5,000/, and he had undergone a contested election which had left him saddled with 2,000/ more than he could wipe off out of his income. What was to be done? A and his father, acting together, could bar the entail of the estate, and they did so. But neither of them had the slightest intention of selling any part of the property, or of diminishing the area of th

A has been some years in possession of the estate under this resettlement. He has been a prudent man, and has neither remodelled his mansion, nor indulged in contested elections, but he has a family growing up. His eldest son is of age and requires a proper allowance. His younger children, four in number, require their portions of 5,000*l* each.

His gross rental of 7,000l is liable to deductions for manage ment, and repairs, to the amount of 500l per annum, leaving	
net income of	. 6,500
Interest at 4l per cent. on 30,000l, the portions of A's	
brothers and sisters 1,20	0
Interest at 4l per cent. on 15,000l, charged on the estate	
on its resettlement at A's marriage	0
tions of A's younger children	0
Allowance to A's eldest son 50	0
	- 4,100

Now, A's estate requires to be drained, the farm houses and buildings are not such as to attract farmers of great skill or capital, and he sees himself in the apparent possession of an estate, which he has not sufficient capital to manage or improve, and though he is aware that his tenants are not of the first-class, he is too much trammelled and hampered to be able to put his farms into such a state as to obtain better tenants. Hence he goes on, and his tenants go on, in ways which in an agricultural sense are neither improving nor profitable.

What will be the condition of A's son when he succeeds to the property, supposing, as is most probable, that it will be resettled on his marriage during A's life, in the same way as in the preceding generation? Be it observed, that though the widow's jointures in time wear out, and the estate is freed from them, the sums raised for portions and debts remain permanent mortgages on the property, and go on accumulating from generation to generation, until the estate is sold to some merchant Prince or banker-made Peer, who will probably start it on a new career of strict settlements. Now, had portions of this estate been sold off, as the necessities or exigencies of the family required, even if A's father had desired to make "an eldest son," he would have had a real ownership and enjoyment of a smaller estate. But it is the tying up of the land which does most mischief agriculturally. There never is any possessor who has the power to make the most of the property, and each succeeding owner finds himself more incumbered and more helpless than his predecessor. That laws which encourage or permit such settlement of land are at all events agriculturally unmixed evils, cannot be seriously questioned.

THE REVENUE.

An Abstract of the Gross Produce of the Revenue of the United Kingdom, in the undermentioned periods, ended December 31 1863. compared with the corresponding periods of the preceding year.

### Foreign Correspondence

(FROM OUR OWN CORRESPONDENT.)

Paris, Thursday.

PARIS, Thursday.

The debate last Thursday in the Corps Legislatif, on the amendment proposed by M. Thiers in the bill for authorising a new loan of 300,000,000f, which amendment was that the issue of Treasury bills in 1864 should not exceed 100,000,000f, had not the political view of the question—that is, the policy which rendered the new loan necessary—was by common consent postponed to the debates on the address; and the financial part resulted in a sort of compromise. The Government, for example, declared its readiness to limit the issue of Treasury bills in 1865 to 150,000,000f, and to do all in its power to keep down the issue in 1864. In presence of this engagement, the amendment of M. Thiers lost much of its importance, since the question became reduced to this—twelve months, sooner or later, as regards time; 50,000,000f, more or less, as regards amount. The Chamber did not think fit to pronounce against the Government on what it considered two such petty matters of detail, especially as the Government represented that with the Treasury bills now outstanding, and with the loan against the Government on what it considered two such petty matters of detail, especially as the Government represented that with the Treasury bills now outstanding, and with the loan to be raised, the limitation to 100,000,000 in 1864 would present great practical inconvenience. It is true that M. Thiers' amendment had one object not ostensibly avowed,—namely, to prevent the Government from engaging in expenses for warlike preparations without the consent of the Legislature:—but the latter skill-stills alright this has also may expectate the original original and intensity. tions without the consent of the Legislature:—but the latter skilfully eluded this by solemn protestations of its desire and intention to keep the peace. These protestations were to be sure not generally credited, but it was deemed politic to affect to believe them. On the whole, the debate, which had been expected to be singularly animated, was tame, and it ended in the rejection by a large majority of M. Thiers' amendment. The distinguished statesman proved that his oratorical talent had not grown rusty by disuse during the weary years he has passed in retirement:—he spoke with the elegant facility and the admirable clearness of past and happier days. spoke with the and happier days.

The Bill on the loan has passed the Senate, but has not yet been romulgated with the Emperor's sanction. This formality, how-The Bill on the loan has passed the Senate, but has not yet been promulgated with the Emperor's sanction. This formality, however, will probably be accomplished before the end of the week. Very shortly after, no doubt, the Minister of Finance will make known the manner in which he will raise the loan—whether, namely, by public subscription or by private contract with bankers. On this point great curiosity is manifested in financial circles. A public subscription would be generally preferred, but no surprise would be felt if, in the present state of the market, M. Fould should treat direct with capitalists. As to the terms on which he will accord the loan, he of course keeps them a profound secret. found secret.

The Bank of France has fixed its dividend for the second half of the year 1863 at 85f; that of the first half was 80f—total 165f, which, in English, are 6l 12s. For 1862 the dividend was which only 158f.

The demand for coin and bullion at the Bank of France, which had greatly declined, has been very active this week, and the consequence is that the stock thereof, which last Thursday was between 21,000,000f and 212,000,000f, is to-day, as I am informed, only 185,000,000f. At private bankers also the demand for specie is very pressing,—more so than can be satisfied. But the Bank directors have not made any alteration in the rate of discount

Not much business has been done in the Bourse during the past week; but a less desponding spirit has been manifested, and there has been a slight improvement in the principal

A meeting of the shareholders of the Isthmus of Suez Canal is convoked for the 1st March, to hear a report on and take decisions respecting the conflict between the Company and the Viceroy of Egypt. This convocation renders without object the action brought by some shareholders against M. de Lesseps, to compel him to call a meeting. He has, however, other new proceedings on his hands; they arise out of the violent controversy which has taken place between him and Nabur Pacha, representative of the Egyptian Government.

M. Mires reappears on the scene. He convokes for the 12th January a meeting at his own house of the shareholders of the Caisse Generale des Chemins de Fer. He does so, he says, "in virtue of article 14 of the law of 17th July, 1856, on companies en commandite, which authorises shareholders to meet for common and collective interests."

A "declaration," signed by France and Switzerland, stipulating that the price of telegraphic despatches between the two countries, from whatever point of the territory they may be sent, shall not exceed 3f for 20 words, and 1f 50c for every 10 words above, is promulgated to-day in the Moniteur.

A report on the Savings Banks in all France in 1862, shows that in that year the deposits amounted to 164,614,131f, and the reimbursements, interest included, to 148,222,396f. The number of new accounts opened in the course of the year was 222,924. The proportion of depositors to the population was 1 to 27; in 1861 it was 1 to 28.

As this is the season at which additions to libraries are chiefly made, it may be well to call the attention of all persons interested in Political Economy to the catalogue of Messrs Guillaumin and Co., the great continental publishers of economic literature. The works issued by this firm comprise every branch of Political Economy, and are chiefly by the most eminent authors, French and foreign, living and dead:—they form, in fact, a complete and admirable library. Under the general title of "Collection des Principaux Economistes," Messrs Guillaumin present in fifteen volumes, uniform in size and type, and of great beauty, the works of the Fathers of the Science—the economists and financiers of the eighteenth century—the "Physiocrates," and the successors of the latter—Turgot, Adam Smith, Malthus, J. B. Say, Ricardo, and others of lesser note. Under the title of "Economistes et Publicistes Contemporains," we have the works of Blanqui, MacCulloch, Stuart Mill, Rossi, Bastiat, Leon Faucher, Michel Chevalier, Carey (United States), Roscher (Leipsig), and many other writers of equal renown. On what may be called the questions of the day, we find works by living French authors of the greatest authority. The question of the subdivision of land for example, which was lately raised by Mr Cobden, will find partial elucidation in the "Economic Rurale de la France depuis 1789" and the "Economic Rurale de l'Angleterre, de l'Ecosse, et de l'Irlande," of M. Leone de Lavergne, and the "Systèmes de Culture en France" of M. H. Passy. On Banks, to which public attention is now much turned, we have the "Traité Theorique et Pratique des Operations de Banque" of M. Courcelle-Seneuil; "De la Reforme des Banques" by M. Alfred Darimon; "Le Credit Populaire" by M. Batbie, &c. On Pauperi-m, there are "Pauperisme et les Associations de Prevoyance" by M. Emile Laurent, "Probleme de la Misère" by M. Alfred Darimon; there are "Pauperisme et les Associations de Prevoyance" by M. Emile Laurent, "Probleme de la Misère" by M. Cobacte et al Reve

tional," by M. Cauchy. Under the head of Commerce is a long list of works, of which the most remarkable is the "Dictionnsire Universel du Commerce et de la Navigation," the largest, most complete, and most exact commercial dictionary ever published in any language:—it contains a really extraordinary mass of all sorts of information of the greatest utility to commercial men and to writers on commercial subjects. In the category may be specially noticed "Les Traites de Commerce," by M. Paul Boitzau, —a collection of all the commercial treaties France has recently entered into; "Exam-n du Systeme Commercial," by M. Michel Chevalier; "Des Crises Commerciales et de leur retour periodique," by M. Clement Juglar. The preceding are of course only a very few of the rumerous works published by Messrs Guillamin; and among those left unmentioned are many as remarkable as the few that are cited.

Under the title of La Finance, a weekly journal is published at Brussels, which is of great utility to bankers, speculators, and merchants engaged directly or indirectly in continental affairs. In each number are the financial news of the week of Paris and Brussels, reports of the Bourses of the two cities, and articles on the principal politico-financial questions which occupy public attention in France and Belgium. There is also correspondence of great interest from Vienna, Frankfort, Constantinople, Turin, and Loudon. The journal is edited by M. Crampon, who is well known as the "City Editor" of the Monde daily paper of Paris, and who is one of the ablest financial writers of the day, and beyond all question the most fearless. As in Belgium liberty of the Press exists, whereas in France it is unknown, La Finance is able to make comments and revelations which no journal in Paris dare think of publishing; and this advantage M. Crampon, from a sense of duty to his readers, hesitates not to employ.

The following is the market report :-

FLOUR.—At Paris there has been little activity, but prices have improved. Yesterday, choice was 51f the sack of 157 kiloge; first marks, 50f; good, 49f; other sorts, 47f to 48f. Six marks, disposable, were 50f; four months of January, 50f 50e; four months of March, 52f; type Paris, per 101 kilogs, was 32f for disposable and for delivery.

WHEAT.—Offers were less numerous at *Paris* yesterday. At the beginning of the market an advance of 50c was demanded, but it was only obtained for some few lots. Choice white was 28f to 28f 50c the sack of 120 kilogs; choice red, 27f 50c to 27f 75c; first quality, 27f to 27f 50c; other sorts, 26f to 26f 50c. For Montereau, 27f 70c were demanded, but only 27f could be obtained. Picardy, the 100 kilogs, were 22f to 22f 50c.

22f to 22f 50c.

COTTON.—The sales at Havre, in the week ending Friday, were 5,494 bales, and the arrivals 3,057. The greater part of the former were Indian, and the latter were from England. The closing quotations were: Low New Orleans, 355f the 50 kilogs; good ordinary Broach, 295f; good ordinary Tinnevelly, 285f. The stock was estimated at 32,640 bales. On the first two days of this week, the market was active, but yesterday calm prevailed. The quotations yesterday were: Jacmel for delivery, 320f; Surat, 227f 50c; Omrawuttee, 260f; Tinnevelly, 292f 50c; Madras for delivery, 287f 50c to 291f; Coconada, 272f 50c; China, 247f 50c.

COFFEE.—Bussiness was not very active at Havre, in the week ending

272f 50c; China, 247f 50c.

COFFEE.—Bussiness was not very active at Havre, in the week ending Friday: 50 sacks Hayti Cape, disposable, 87f the 50 kilogs in bond; 600 ditto for delivery, 86f 50c; 580 Rio, not washed, for delivery, 84f; 400 ditto washed, disposable, 94f: 81 ditto, for delivery, 93f; and a small lot of Guadaloupe habitant, 135f duty paid. By auction some lots of damaged of different sorts were sold. The arrivals exceeded 5,500 sacks. The stock on the 22nd was 139,841 sacks 1,679 casks. This week, Hayti Cape has been 86f 75c in bond; ditto for delivery, 84f; Rio, 81f. At Nantes, last week, no sales were made, and there have been none this week. At Bordeaux, last week, business was active: 1,100 sacks Java, disposable, 125f the 50 kilogs; 106 La Guayra, 86f; 125 ditto, 87f; a small lot of Guadaloupe bonifieur, new crop, 155f. By auction, 152 sacks Porto Rico sound went at 89f to 90f in bond:—some damaged La Guayra was also sold. This week, Malabar, 120f. At Marseilles, 712 casks Rio in port, good first, went at 90f. No sales this week.

week.

Sugar.—At Havre, in the week ending Friday, the market was calm. 3,500 bales Reunion, for delivery, 64f 50c the 50 kilogs, bonne quarrieme, duty paid; 100 casks Havana, direct importation, 43f 50c for No. 12, in bond. Some damaged Havana was also sold. The arrivals exceeded 15,500 sacks and 700 casks. This week, no sales have been made. At Nantes, last week, no transactions were entered into. There were large arrivals of Reunion. Nothing done this week. At Bordeaux, last week, a small lot of French West India usine went at 70f 25c the 50 kilogs. Nothing was done in bonne quatrieme, but the quotation remained at 60f. Reunion was 64f, bonne quatrieme. As many as 17,000 sacks arrived, of which 1,600 were sold for delivery. No sales this week. At Marseilles, last week, the only transaction was 1,200 casks Havana, for delivery, at 42f 75c for No. 12. Nothing done this week.

week.

Indigo.—The market was very calm at Havre in the week ending Friday, the sales being only 10 chests. Bengal at about 12c above the estimates. The arrivals were 3 chests and 20 serons, the latter from England. This week, nothing has been done. At Bordeaux, last week, the sales amounted to 34 chests Bengal and 38 Kurpah. No sales this week.

week.

HDBs.—At Havre, in the week ending Friday, the sales were 1,467

Buenes Ayres dry cow at 95f 50c the 50 kilogs; 5,550 La Plata salted saladeros, from 50f to 51f for cow, 56f for cox; 300 Rio Grande, salted ox, fine quality, 56f; 4,044 ditto cow, 49f; 747 horse Monte Video, salted, 41f. The arrivals were about 19,000. This week, Pernambuco

salted, 48f and 48f 50c; Rio Janeiro salted ox, 48f; Rio Grande salted cow, 50f 50c; Monte Video salted cow, 51f; Uruguay salted ox, 57f.
Woot.—The sales at Havre, in the week ending Friday, were 162 bales La Plata unwashed, 1f 25c to 2f 65c the kilog; 10 bales Buenos Ayres sheepskin, unwashed, 1f 30c, the latter by auction. There were no arrivals. This week, Buenos Ayres unwashed has been 1f to 2f 47\$c.

TALLOW.—Nothing was done at Havre, in the week ending Friday, and there were no arrivals. This week, New York has been 50f to 50f 50c; La Plata, 52f. At Paris, yesterday, the 100 kilogs, octroi duty included, were 110f 50c.

SFIRITS.—At Paris, yesterday, Montpellier, disposable, was not quoted; 3-6 of 90 deg., first quality, disposable, was 82f to 83f the hectolitre (22§ gallons). At Bordeaux, the day before yesterday, 3-6 Languedoc of 86 deg. was 92f; beetroot, first quality, 85f.

#### COMMERCIAL AND MISCELLANEOUS NEWS.

The Republic of Hayti have abolished the extra charge of 10 per cent. on the weighing, wharfage, &c., of goods, and replacing those charges by an additional duty of 10 per cent. on all articles imported into or exported from that republic.

The coinage at the United States Mint at Philadelphia, for the month of November, was as follows:—

#### The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th end 5th Victoria. cap. 32. for the work on Wednesday, the 30th day of Decomber, 1863.

100	SSUE DEP	ARTMENT.	
Notes issued	28,382,240	Government Debt	3,684,900
V	00 220 240		98 339 940

			Silver Bullion	
	BA	28,332,240 NKING DE	PARTMENT.	28,332,240
Proprietors' Capital		14,558,000	Government Securities (includ-	

Proprietors' Capital Rest Public Deposits, including Ex- chequer, Savings Banks, Commissioners of Natiunal Debi, and Dividend Accounts Other Deposits. Seven Day and other Bills	3,251,018 10,841,991 13,021,212	Other Securities	10,957,380 22,388,824 8,206,210 680 365

Dated the 31st December, 1863. M MARSHALL, Chief Cashier. The above Bank accounts would, if made out in the old

l	form, present the follo	wing res	ult:—	
I	Liabilities. Circulation (including Bank post bills)	£	Assets. Coin and Bullion	233,438,154 14,362,606
ã		44 540 543		47 000 756

44,549.741 47,800.
The balance of Assets above Liabilities being 3,251,0184, as stated in the above account under the head Rasz.

The preceding accounts, compared with those of last week exhibit

N Pol	A-0		
	An INCREASE	of Circulation of	£412,789
	An INCREASE	of Public Deposits of	575,445
	An INCREASE	of Other Deposits of	309,575
	An INCREASE	of Government Securities of	
	An INCREASE	of Other Securities of	972,868
	An INCREASE	of Bullion of	145,538
		of Rest of	15,647
	A negenter	of Pessere of	292 677

The alterations in the Bank return of this week are of slightly unfavourable character. The increase in securities marks a large demand for accommodation. The increase in the bullion is 145,538l, but the reserve has been trenched upon to the extent of 323,677l.

Subjoined is our usual table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1853:—

At corresponding dates with the present week	1858.	1860.	1861.	1869.	1868.

In the corresponding week of 1854, the Ottoman Governmont had expressed its willingness to accede to most of the suggestions of the great Powers; but news of the entry of the combined fleets into the Black Sea had destroyed the good effects anticipated from the conciliatory disposition of the Turkish Cabinet, and had produced a general fall in the prices of securities. Intelligence of a rupture between the prices of securities. Intelligence of a rupture between the English Envoy and the Persian Court had been received. The Walker expedition from San Francisco had landed in Lower California at La Paz; and, displacing the Mexican governors, had proceeded to proclaim it an independent republic. Lord Palmerston had resumed his seat at the Home Office.

In 1861, a further decline on the Paris Bourse had been occasioned by rumours that the meeting of the expected Con-

gress was likely to be indefinitely postponed.

In 1862, the news received from New York, in the absence of a formal reply to the despatches of our Govern-ment, had been more favourably interpreted. The demand for money was active. The altered condition of our American trade, owing to the cessation of the cotton shipments to England, was occasioning the arrival of large imports of bullion in London.

In 1863, the financial report of M. Fould had been published in Paris, stating the ascertained deficit for 1862 at 1,200,000*l*, consequent on the Mexican expedition, and estimating the surplus for 1863 at 4,400,000*l*. The new agree-The new agreement was finally agreed to between the Austrian Government and the National Bank at Vienna, by which the Bank

became entirely independent of the State.

The amount of the "other" deposits, as compared with
the "other" securities, showed, in 1853, a deficiency of the "other" securities, showed, in 1853, a deficiency of 6,585,074l; in 1860, a deficiency of 9,611,989l; in 1861, a deficiency of 3,724,996l; and in 1862, a deficiency of 5,676,893l. In 1863, the deficiency is 9,362,612l.

DISCOUNT AND MONEY MARKET.—There has been a general revival of the demand for money during the three past days. To-day there is an additional and successful inquiry, and the Bank rate is fully maintained. The general tone of the foreign exchanges is rather less favourable, and the continued drain from which the Bank of France suffers is calculated to confirm the impression that we shall, before

long, experience renewed stringency in the money market. Subjoined are the discount rates for bills of different

periods	:		
	30 to 60 days	7	ner cent.

active, and the terms are quoted for short periods on Govern-

ment securities at 64 to 7 per cent. The following are the rates of discount allowed by the

various joint stock banks and discount houses:	_	
Joint Stock Banks	5 per	r cent.
Discount houses at call	5 per	r cent.
Ditto, with seven days' notice	51 pe	r cent.
Ditto fourteen days		
At the London and Wastmington I non cent only		mma bolo

The discount rates abroad are mostly hardening. In Paris, money is fully at the Bank rate. The demand in Madrid

is maintained, and there is some talk of a loan of 3,000,000l. The current quotations on most of the continental Bourses are subjoined :-

Bullion .- No purchases of gold are reported at the Bank to-day, but 45,000l in sovereigns have been withdrawn.

The lists now published of capital applied for in the London market during the past year give a total of about 145,000,000l. Foreign Government and colonial loans figure to the extent of 43,000,000l in this sum. The nominal capital of the Italian Five per Cent. loan, 29,000,000l; 6,000,000l that of the Imperial Ottoman bond loan, with the 1,000,000l Venezuelan, and 400,000l Salvador loans, the

subscriptions to which were afterwards returned to applicants, are included.

The actual nominal capital embarked in new loans during the year is probably near 11,000,000l, and the actual sterling value about 8,000,000%. The approximate allotments, as nearly as can be ascertained, are as follows :-

	£
Ceylon Government Loan	1,000,000
Columbian Loan	200,000
Confederate Cotton Loan	3,000,000
Italian 5 per Cent. Loanabout	3,000,000
Imperial Brazil Loan	3,300,000
Immovial Ottoman Loan	300,000

A published analysis of the different Companies brought forward during the year gives the following details :-

Companies.	No of Cos.		Capital Authorised.		Capital Offered, £		Deposit.

English Funds.—The influence of politics has been severely felt during the past week in the stock market, where prices have constantly and slowly declined. Deliveries of stock appear also to have been made; and these, operating on a market which continues somewhat overcharged, have tended additionally to depression. To-day much anxious feeling has been manifested in connection with the altered appearance of the money market. The result has been that the favourable expectation of the Emperor's speech, fostered by the advance on the Paris Bourse yesterday, has been neutralised. Consols closed 91 to 91½ for money, and 91½ to 91½ for the 7th inst. New 3 per Cents. and Reduced 91 to 91½, and India 5 per Cents. 106½ to 106½. Exchequer bills have advanced since Friday last, and quote 8s to 3s dis. India bonds, 6s dis. to par.

Foreign Stocks.—Business has not been very but the fluctuations in Mexican, in Greek, and in Spanish Passives are considerable. The controversy respecting Greek bonds continues; but the decline in their price appears to show that the chances of a settlement are receding in public estimation. In Mexico the absence of any approach to the close of the war or to the settlement of the country acts prejudicially on the value of the stock in this country; and, notwithstanding the amounts that have been taken for foreign account, sales press and the quotations decline. Spanish Passives, as well as the Coupon Certificates, have been acted upon by the rumours of a loan. It is acknowledged that there is little chance of raising a loan for the Spanish Government in France, while the exaggerated wrongs of the Passive bondholders remain unredressed; and it is hoped that the juster claims of the Certificates will not be passed by. The comments of part of the Spanish press are favourable symptoms of the returning moral consciousness of the nation, but there is as yet great want of perception as to their real interests in dealing with French as compared with English creditors. It may be that the time for the Coupon Certificates must still be delayed. Our own trade with Spain is so steady, so little subject to fluctuation, save with regard to the amount of the produce she has to offer for sale, and the relations with England are so much confined to a few large houses, chiefly established at the seaport towns, that the mass even of well-informed people in Spain are so little acquainted with the extent of their dependence on us, that they underrate the value of more intimate connection with the mercantile classes of this country. As our chief export to Spain is in specie, there is little to recall English associations to the Spanish mind. With France, on the contrary, constant and large operations Much of the clothing used in Spain, furniture, are going on. and articles of luxury find their way from the French ma-nufacturing towns. The capital subscribed for the railways and other works effected or in progress has been in great part obtained from France; and almost everything is chief Spanish towns now tells of France and of French proficiency in the useful or elegant arts. Hence it is that, while comparatively ready to listen to the exigent representations of French creditors, very ignorance renders the Spaniard inattentive to the reclamations of those having a more pressing claim to urge and greater benefits to bestow. opening of the London Stock Exchange means welcome to a host of projects for the improvement of the manufacturing industry of Spain, and for the multiplication of her carrying power. It means increased production and increased export; the addition of enormous riches to a country richly dowered with climate and soil capable of immense development, and favoured with an unexceptionable geographical position for

The general tendency of the markets to-day, affected by political disquiet, has been heavy. The closing prices of the stocks dealt in are subjoined:— $4\frac{1}{2}$  per Cent. Brazils, 1863,  $87\frac{1}{2}$ ; Scrip,  $\frac{3}{2}$  to  $\frac{1}{4}$  dis.;  $4\frac{1}{2}$  per Cent. Chilian, 83 to 84; 7 per Cent. Egyptian, 100 to 101; Greek, 24 to 241; Coupons, per Cent. Egyptian, 100 to 101; Greek, 24 to  $24\frac{1}{2}$ ; Coupons,  $11\frac{1}{2}$  to  $11\frac{3}{4}$ ; Mexican,  $36\frac{1}{4}$  to  $36\frac{1}{2}$ ;  $4\frac{1}{2}$  per Cent. Peru,  $84\frac{1}{2}$  to  $85\frac{1}{2}$  ex div.; Portuguese 3 per Cents.,  $47\frac{1}{4}$  to  $47\frac{3}{4}$  ex div.; Scrip, 1 to  $1\frac{1}{2}$  prem.;  $4\frac{1}{2}$  per Cent. Russian, 1853, 85 to 86; ditto, 1862, 5 per Cents., 89 to 90; Spanish Deferred,  $46\frac{1}{2}$  to 47 ex div.; Passive,  $34\frac{5}{8}$  to  $34\frac{7}{8}$ ; Certificates,  $14\frac{3}{8}$  to  $14\frac{5}{8}$ ; Turkish 6 per Cents., 1854,  $89\frac{1}{2}$  to 90; ditto, 1858,  $69\frac{3}{4}$  to  $70\frac{1}{4}$ ; ditto, 1862,  $67\frac{3}{4}$  to  $68\frac{1}{4}$  ex div.; 3 per Cent. Venezuela,  $23\frac{3}{4}$  to  $24\frac{1}{4}$ ; 6 per Cent. ditto, 55 to 56; Italian 5 per Cents., 673 to  $68\frac{1}{4}$  ex div. per Cents.,  $67\frac{3}{4}$  to  $68\frac{1}{4}$  ex div.

Notice has been issued that the interest due on the Greek loan of 1862, together with the bonds drawn for redemption,

will be paid in due course.

This being New Year's Day, the Paris Bourse has been

Subjoined is a list of the highest and lowest prices of Consols every day, and the closing quotations of the principal English and foreign stocks Dec. 24 and this day:—

RAILWAY AND OTHER SHARES.—Notwithstanding the general unfavourable state of the markets, English shares are well maintained, and prices mostly exhibit a further improvement. Caledonian stock has risen \( \frac{1}{2} \) per cent. Great Eastern has also risen \( \frac{1}{2} \) per cent. Great Northern stocks again note improvement, the ordinary of 1 per cent., and the "A" stock 1 per cent. Great Western has advanced 13 per cent. Lancashire and Yorkshire stock is 1½ per cent. higher, and London and Brighton has experienced a similar advance. London and North-Western has risen 3 per cent. Metropolitan is rather lower, ½ per cent. decline being noted since last Friday. Midland stock has improved ½ per cent., and South-Eastern a similar sum.

The Indian and colonial markets remain firm.

Foreign railway shares are quiet.

Joint stock banks and the financial companies continue to find favour in the eyes of the public, and an almost general rise is to be noted,

Subjoined is our usual list of the closing prices of the principal railway shares Dec. 24 and this day:

EXCHANGES.—Bills on Holland were particularly in request, and generally the tone was less hopeful as regards

-Annexed is the weekly circular of Messrs

BULLION. — Annexed is the weekly circular of Messrs Pixley, Abell, and Langley on the transactions in bullion during the week and in Indian rupee paper:—
Gold.—Since our circular of the 28d inst. the arrivals of gold have been of considerable importance; they consist of the Scotia, from New York, with 90,000!; the Saxonia, from New York, with 18,000!; the Etna, from New York, with 194,000!; and the Shannon, from the West Indies, with 242,000!. At present there is but slight demand for gold for export, and about 163,000! has been sent into the Bank during the past week, and further amounts will follow. The Ellora has taken 56,700! to Bombay, and 12,000! to Alexandria. The following statement of the imports of gold from Australia and America during the past six years, will be interesting to our readers:—

yours	WILL DO	moresma	From Australia.	sauois.	From America.

	1962		9 104 000		147 400	

Silver.—The Ellora has taken about 317,300 to Bombay, and this amount will be increased by the shipment from Marseilles, through which port purchases have been made this day at 613d per oz standard. The Shannon has arrived from the West Indies with about 400,000 in silver and dollars. This specie, however, will not be deliverable to the consignees for some days. Our market has been rather quiet during the past few days, as usual at this time of the year; but to-day a little business has been done, and we quote the rate at from 613d to 613d per oz standard, for the next steamer from Southampton.

Mayican Dollara.—There is a rather large amount of this coin in the

business has been done, and we quote the rate at from 61½d to 61½d per oz standard, for the next steamer from Southampton.

Mexican Dollars.—There is a rather large amount of this cein in the Shannen, just arrived, but some days will clapse ere they are ready for delivery. The dellars ex Seine were sold at 61d per oz, showing no material alteration in price.

Exchange on India for banks' drafts, at 60 days' sight, remains about the same. We quote Bombay, 2s 0½d; Calcutta, rather higher, at 1s 11½d; Madras, about the same. Bills on Bombay on demand have been in great request, and 2s 0½d would have been willingly given, but the banks decline to draw on demand at all.

India Government loan notes have been rather more in demand, and quotations are as follows:—5½ per Cents., 113 to 114; 5 per Cents., 104 to 104½; and 4 per Cents., 95 to 96.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; ditto, fine, 77s 9½d per oz std, last price; ditto, refinable, 77s 10½d per az std, last price; panish doubloons, 76s to 77s per oz, nominal; South American ditto, 74s 6d to 75s per oz, nominal. Silver—Bar silver, 5s 1½d to 5s 1½d per oz std; Moxican dollars, 5s 1d per oz, last price; Spanish doublolars (Garolus) 5s 2d per oz, last price; Spanish doublolars (Garolus) 5s 2d per oz, last price; Spanish doublolars (Garolus) 5s 2d per oz, last price; Herfranc pieces, 4s 11½d per oz, last price.

The gold in the market has to-day been taken for France.

FAILURES AND MERCANTILE EMBARRASSMENTS.—A petition for the winding up of the Metropolitan Cab and Carriage Company (Limited) is to be heard on the 16th January, before Vice-Chancellor Wood,

The 8th February proximo has been appointed for the adjudication upon claims on the Unity General Life Assurance Creditors are required to send in their claims to the official liquidator by the 25th January inst.

It is proposed by the Master of the Rolls to make a call on the 13th January, on the contributories of the Commercial Discount Company (Limited). The amount is to be 5l per share, less any sum previously paid by contributories.

A petition for the winding-up of the Silver Vein Mining ompany (Limited) is to be heard before the Vice-Warden of the Stannaries, on the 4th January inst.

The Master of the Rolls proposes to appoint an official liquidator of the Roodee Iron Shipbuilding Company (Limited) on the 11th inst.

MERCANTILE CHANGES.—Messrs Hankey and Co., of Fenchurch street, have issued notice that after the 1st January inst. their business will be conducted under the title of the Consolidated Bank, but that cheques or bills drawn on Messrs. Hankey will be paid as usual.

Messrs Cama and Co., of Gresham house, London, and Romford court, Liverpool, have announced their retirement from the business carried on by them, which is to be liqui-

Mr G. E. Seymour has announced the association of Mr H. W. Seymour and Mr. R. W. Elwyn with himself, under the firm of Seymour and Co.

Messrs Layton and Co. have given notice that Mr C. A. Hulbert has ceased to be a member of their firm.

Mr George W. Constable, late of Henderson and Constable, and Mr Joseph Wykes, give notice that they have commenced business under the style of Constable and Wykes.

PUBLIC COMPANIES.—The report of the Directors of the London and Brazilian Bank has been issued, in anticipation of the meeting convened for the 11th January. The net profit is stated at 13,556l. A dividend of 17s 6d per share is recommended, at the rate of 5 per cent. per annum, free of income tax. 810l is to be added to the reserve fund, which, with the addition of the profit resulting from the issue of 300 new shares, 19,189*l*, will reach 20,000*l*.

The Oriental Commercial Company are offering the remainder of their shares-2,000 in number-at a premium of 3l per share.

The prospectus of the Kumaon and Oude Plantation Com-any (Limited) has been issued. The Company has contracted for the purchase of three estates in Kumaon and two in the north of Oude, for the purpose of cultivating tea, cinchona, silk, cotton, and other produce.

The Mauritius Land Credit and Agency Company is announced, with a capital of 250,000l, in shares of 20l each. It has been formed under the auspices of the International Financial Society, and promises a full measure of success

From a letter addressed to a contemporary by the General Manager of the General Credit and Finance Company of London, it appears that the treaty stated to have been entered into by this Company and the Turin and Savona Railway, and announced in the report of the Council of Administration of the latter Company, at its general meeting on the 18th November last, was premature, as the negotiations for such a treaty, which were then pending, have been broken off, and there is no arrangement whatever between the Companies.

MISCELLANEOUS. - At the Government auction of the Passive Debentures, at Madrid, on the 31st ult., the prices fixed by the Minister for the purchase of stock were—first-class internal, 40.80; second ditto, 27.75; second foreign, 35.80. The tenders sent in were from 46.50 to 50.23 for the first class 30 to 30.70 for the second, and 37 to 38 for the second foreign.

Messrs Baring Brothers and Co. announce the receipt, on account of New Granada dividends, from the Custom-house of Santa Marta, 798l 7s 7d; Cartagena, 500l; Sabanilla, 205l 9s in all, 1,603l 16s 7d.

Messrs Baring Brothers and Company announce the receipt of 88,133 dols 26c on account of Mexican dividends.

Messrs Baring Brothers and Company's agents in Venezuela, advise that they have received on Venezuelan dividend account, for 55 per cent. of the import duties for about two weeks 58,559 dols 61c—Custom house of La Guayra 42,087 dols 75c, Puerto Cabello 16,471 dols 86c.

#### COMPARATIVE EXCHANGES.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about 3 per mille premium, and the short exchange on London is 25.27½ per 1l terting. On comparing these rates with the English Mint price of 3l 17s 10½d per ounce for standard gold, it appears that gold is about 1-10th per cent. dearer in London than in Paris.

By advices from Hamburg the price of gold is 42½ per mark, and the short exchange on London is 13.4½ per ll sterling. Standard gold at the English Mint price is therefore at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days sight is 16½ to 165 per cent., and the premium on gold is about 50 per cent. At these rates there is a profit on the importation of gold from the United States.

#### Times. The Commercial

Pattern Post to Italy.—On the 1st January next, and thenecorward, patterns of merchandise, similar to those already transmissible by post between any places in the United Kingdom at reduced rates, may be transmitted by post from England to Italy, at the following rates of postage, which must in all cases be prepaid by means of postage stamps, viz.:—Not exceeding 4 ozs, 4d; above 4 ozs, and not exceeding § lb, 6d; above ½ lb, and not exceeding 1 lb, 1s 4d; above 1 lb, and not exceeding 1 lb, lb, 2s; above 1½ lb, and not exceeding 2 lbs, 2s 8d; every additional ½ lb, 8d. No packet of patterns must exceed two feet in length, breath, or width. The patterns must not be of intrinsic value. There must be no writing or marks other than the address of the person for whom the packet is intended, a trade mark and numbers, and the prices of the articles. The patterns must be sent in covers open at the ends, so as to be easy of examination. Samples of seeds, drugs, and so forth may be enclosed in bags of linen.

#### COMMERCIAL EPITOME. FRIDAY NIGHT.

There was an improved feeling in the wheat trade at Mark lane, to-day, and prices had an upward tendency. Barley—the supply of which was large—sold heavily; and the demand for other kinds of spring corn was in a sluggish state, on former terms. The four trade was firm, at full currencies. This week's imports amount to 3,190 quarters, of which 12,340 barley, 6,770 oats, and 1,850 waste of form. eks of flour

sacks of flour.

Advices from Alexandria state that the supplies of produce on ale were small, and that, although the trade was firm, very little basiness was doing for export. Saide wheat was quoted at 31s 6d to 31s 9d; Beheireh, 28s to 34s 6d; and Saide beans, 26s to 27s per quarter, free on board.

The basiness of the Liverpool cotton market, which, owing to the Christmas holidays, has this week been limited to four days, has resulted in 43,000 bales, of which spinners have taken 26,000, has resulted in 43,000 bales, of which spinners have taken 26,000, and exporters 9,000 bales. Prices are fully 1d per lb higher than the lowest rates of the previous week, a large advance being obtainable at once yesterday as soon as it was assertained that the Liverpool stock had not been under-estimated to my extent. To-day and to-morrow are close holidays in e any extent. To-To-day and to-morrow are close holidays in

Intelligence from Alexandria to December 23 is to the effect that the cotton trade was in a sluggish state, at drooping prices. The supplies on offer were small, the arrivals, which had been large, having been mostly of contracted produce. Middling to good middling was worth, according to Messrs Brigg's circular, 25.25d to 25.50d; good middling to fair, 25.75d to 26.25d; fair to fally good fair, 26.25d to 26.90d; and good to fine, 28d to 31d per lb, free on board. Freight to Liverpool, by steamer, 14d ner lb.

per lb.

The colonial and foreign produce markets have been closed during the week for the holidays, and no public sales have been held. A fair amount of firmness has, however, prevailed, and in the few transactions effected by private contract, previous quotations have been fully supported. The market will re-open on Tuesday next.

day next. Placeday next.

The result of the wool trade, last year, owing to the advance in the price of cotton, as well to the healthy state of the markets for weellen goods, was most satisfactory. The imports from Australia and the East Indies were in excess of former years; nevertheless, an improvement varying from 1d to 3d per lb took place in the quotations. Home-grown and colonial wools were from 2d to quite 3d per lb dearer at the close than at the commencement of the year. It is not invested the wheat 110 000 believes

2d to quite 3d per lb dearer at the close than at the commencement of the year. It is estimated that about 110,000 bales were taken for export to France, Belgium, and America. According to Messrs Ronald and Son's circular, 60,835 bales of East India wool were offered at Liverpool, against 56,035 bales in 1862. In the metal trade, this week, there has been great activity, and for iron, copper, and spekter, exhanced rates have been paid, whilst all other descriptions have sold at very full prices. The preliminary meeting of the ironmasters was held at Wolverhampton yesterday, when the following resolution was passed:—"That the prices of the iron be advanced 20s per tor, and that the men be advanced 1s per ton for puddling, and the millmen ten per cent., in 14 days, to commence from Saturday, the 16th January, 1864."

Most oils have somewhat improved in value, and French spirits of turpentine have advanced to 74s per cwt. On referring to Messrs Mordaunt and Co.'s circular, it appears that American refined petroleum reached its highest point—2s 6½—in September, and that the lowest point—1s 8d—was touched in March and April. The new year commences with a stock of 3,000 barrels crude, and 15,000 refined, against a total of 12,000 barrels last year. P.Y.C. tallow has fluctuated between 42s 3d and 41s 9d per cwt during the week.

Trade at New York is on the whole stocky and breaking.

per cwt during the week.

Trade at New York is, on the whole, steady, and breadatuffs are in good request for export, at enhanced quotations. The imports of cotton and woollen goods during November were very large. The shipments of specie, from Jan. 1 to Dec. 12, amounted to 9,535,158l, against 11,621,458l during the same period in 1862; 689,934l in 1861; 8,432,381l in 1860; and 13,830,730l in 1859. The money market, at latest date, was very firm, at the annexed

#### COTTON.

New York, Dec. 16.—Prices improved under the advices of advance in the Liverpool market, and the falling off in the receipts at New Orleans, and with a fair spinning and speculative demand, the market has continued firm. The sales for the three days are 6,200 bales. The receipts have been:—From Liverpool, 50 bales; Aspinwall, 114; Pernambuco, 212; Porto Rico, 17; Havana, 100; Naseau, N.P., 3,737; Baltimore, 93; per railroad, 673; total, 5,068. Total import since 1st inst., 12,326; total import since 1st September, 71,434 bales.

New York, Dec. 19.—The trade was rather quieter, at 82c per lb for middling uplands. The quotations were as follows:—

#### LIVERPOOL COTTON MARKET.

LIVERPOOL COTTON MARKET.

The fluctuations in the price of cotton during the past year are thus alluded to by Messrs Marriott and Co. in their annual circular, just published:—"As the year advanced, the shipments of goods, chiefly to the East, were on such a scale as to clear away the large stocks which had accumulated in the hands of producers; and although the value of cotton became high beyond all experience, yet their production was largely maintained, prices rising in fair proportion to their cost. With few exceptions, prices declined till about the 6th March, American then being 3d per lb, Brazil and Egyptian 5d per lb, whilst East India were only 2d per lb below the rates current on 1st January. The subsequent variations were slight until August, when a continuous and rapid rise took place, till at the close of October American had advanced 8d, Brazil and Egyptian 9d, and East India 6d per lb. The sub-

Jar

arertheanded and the

BAG L

The al The

in th

abou

sequent stringency in the money market tended to limit the demand, and prices irregularly declined from 1d to 3d per lb. The close of the year finds the quotations of American, Brazil, and Egyptian generally from 3d to 4d per lb, and those of East India generally from 4d to 6d per lb higher than at the close of 1862." The consumption was as follows:

The total import of 1863 has been	of 1862	433,950 1,932,114

#### MARKETS IN THE MANUFACTURING DISTRICTS

Easier rates for money, combined with more favourable accounts from India, have created a better feeling in the trade for cotton goods, and in the value of the raw material an improvement has taken place. The actual stock of cotton at Liverpool is 281,319 bales, against 206,285 bales last year. In iron an extensive business has been transacted at enhanced currencies. trade, both as regards steam and house descriptions, has been

wery active.

Manchester, Dec. 31.—Confidence has gathered materially since the beginning of the week, and to-day has culminated into a state of great excitement as soon as it became known how little the atock of cotton in Liverpool extensions have grown in magnitude, known how little the stock of cotton in Liverpool exceeded the estimate. Transactions have grown in magnitude, though this being the last week of the year, the attendance at market has been limited. To-day large sales have been made, especially of printing cloths in 34 and 36-inch widths, the prices of which have lately been irregular. India buyers, however, have shown no great will to operate, as they expect that for some weeks to come their advices will be unfavourable. Yarns, of course, have at once moved up with cotton, but sellers prefer waiting till rates get established next week, to accepting such as they chance to get proffered now. Most sellers, in fact, have withdrawa themselves in the belief that a general enhancement is imminent.

LEEDS.—The sales are confined to a few parcels of spring goods and a moderate amount of medium broad-cloths in the white state, combined with the sale of a few tweeds for ladies' cloakings. In other respects, the markets have a cheerful aspect.

LEICESTEE.—The hosiery trade is quiet. There is no material change in wools, the market being quiet, but prices are about the same. Yarns continue firm, at high prices.

NOTTINGHAM.—There has not been much doing in the lace trade. Plain goods are a dull sale, in consequence of the high price manufacturers are compelled to ask for them, through the dearness of yarns. The demand for black silk laces and narrow edgings is also slow, while silk mechlins and quiltings are still in request. Stocks are exceedingly light. In hosiery, there has not been much doing.

ROCHDALE.—The flaured market has been very quiet. I plain and fancy goods change hands in small quantities. Y shire goods, except "scourers," are not in so good request general, the prices of both goods and wools are firm.

DUNDEE.—Flax, tow, and codilla continue quiet. Jute, e cially good to fine, is in demand, and some large sales have made at rather improved prices. The inquiry for years in the continue of the same large sales have

made, at rather improved prices. The inquiry for yarns is very active, at an advance of about 1d per spindle upon late rates. Linens are also in improved request, both for the home trade as shipment.

Bradford.—The wool market shows a somewhat improved BRADFORD.—The wool market shows a somewhat improved state of things. There have been more inquiries, and transactions are more numerous to-day. The prices recently current are more easily maintained. Quietness still prevails in the yarn market. The export houses are kept back by the fear of war, but the home trade continues pretty good. In pieces there is little change. The operations of home, American, and foreign buyers are on a small scale. There is, however, a cheerful feeling.

BIRMINGHAM.—The trade of this town continues in a very satisfactory state. The gun trade is the only one of all the important branches of our manufactures in which any degree of

portant branches of our manufactures in which any degree of slackness is felt.

SHEFFIELD —Comparatively few orders have been received.

The advices from the home and most of the foreign markets is satisfactory.

The pits have been working full time NEWCASTLE-ON-TYNE .and there has been an ample supply of coals for shipment. Coal freights to Havre are quoted at 10l los; Boulogne, 8l 17s 6d; Alicante, 27l; Trieste, 29l; Venice, 31l; Genoa, 29l; Alexandria, 31l; and Constantinople, 27l per keel. The demand for ican

keeps very brisk.
WOLVERHAMPTON.-WOLVERHAMPTON.—The iron trade is very firm, and prices have advanced. Coal and ironstone are in very brisk demand.

The hardware trade is satisfactory.

GLASGOW.—The pig iron market has been brisk—sellers, 67s 6d prompt cash, 68s one month; buyers, 67s 10½d one mosth.

CARDIFF.—The coal and iron trades continue extremely active, a further advance in prices. The prices of nil and bar are fully maintained, and great difficulty is experience in supplying the demand. House coal merchants are fairly supplied with orders.

#### CORN.

### AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Dec. 16.—There was an improved demand for flour, and a fair business was transacted for export, at an advance in prices of 5c to 10c per barrel. Superfine State was quoted at in prices of 5c to 10c per barrel. Superfine State was quoted at \$6 to \$6.20; extra State, \$6.40 to \$6.50; choice State, \$6.55 to \$6.65; and choice extra Ohio, \$9.25. Wheat changed hands freely, both for home use and for export, on higher terms. Spring Chicago realised \$1.43 to \$1.47; amber ditto, \$1.48; and Milwaukee Club, \$1.40 to \$1.42 per bushel. The market for corn was not to say active. Western mixed, in store, \$1.25; ditto, \$1.47 rear bushel.

was not to say active. Western mixed, in store, \$1.25; ditta, afloat, \$1.27 per bushel.

New York, Dec. 19.—The trade for wheat and flour continued active, at steadily advancing prices. The export demand was moderately extensive. In the value of maize, a further improve-

ment took place.

The Irish markets have, for the most part, ruled inactive, but without leading to any material alteration either in wheat or

whethout leading to any material allocations spring corn.

We learn from New York that there was increased activity in the demand for wheat and flour, for export, at enhanced quotations. The arrivals of produce by land and water-carriage had fallen off. Corn had improved in value, but not to the extent satisfipated from the reported deficiency in the crop of 130,000,000 bushels. On the Continent, full average supplies of produce have been exhibited for sale, but very moderate quantities have been taken on English account. taken on English account.

The following quantities of produce were shipped from Mon-

#### COLONIAL AND FOREIGN PRODUCE MARKETS. TRANSACTIONS OF THE WEEK.

MINCING LANE, FRIDAY EVENING.

The transactions in the Colonial markets have this week been very limited, as usual during the Christmas holidays, and there are not many sales declared for the ensuing week.

SUGAR is firm, with few sellers, and some parcels of Mauritus have changed hands, on fully last week's terms. To-day 8,000 bags old clayed Manilla sold at 41s 6d per cwt.

Nothing of interest has transpired in COFFEE, which is steady.

The TEA market presents little alteration. Some done in the finest grades of congou for exportation. Some business has been

Rua, Cocoa, and Rice are unchanged. There is less pressure to sell the latter article, particularly as regards white Bengal, the stock of which keeps relatively small—viz., 12,500 tons, against 24,950 tons in 1862.

Fifty tons Bengal SALTPETRE have sold, for December shipment, at

Fifty tons Bengal Saltpetre have sold, for December shipment, at 39s 3d per cwt.

In the Metal markets, some activity has prevailed, and prices generally are higher. Copper is much dearer: foreign, 100l to 110l per ton. English was raised 5l per ton to-day. At the ironmasters' preliminary quarterly meeting, this week, it was resolved that the prices be advanced 1l. Scotch pig is higher, the last sales ranging from 67s 3d to 69s 6d per ton, mixed numbers. Foreign tin firmer: Straits, with full prompt, 115l per ton. A large business has been done in spelter, at rising prices, viz., 19l 15s to 20l 7s 6d on the spot, and 20l 10s per ton for February delivery.

OILS have been quiet. Linseed has, however, advanced to 35l per ton.

The Tallow market was firmer in the early part of the week, but there has since been a dull tone prevalent, and prices have receded. First sort Petersburg Y.C., 41s 9d; January to March, 42s; March only, 43s; April to June, 43s 6d; for the last three months, 45s per cwt.

PARTICULARS OF TALLOW.—Monday, December 28.

				AD	DITION	AL N	OTIC	JES.			
Ra	EFINE	D Su	MR -		DITION holiday				othing	g new	torepo

GLEEN FRUIT.—Being holiday week, there is nothing new to report.

GLEEN FRUIT.—Being holiday week, there is nothing new to report.

I susually the came after the Christmas holidays. Some cargoes St Michael, Terceira, Valencia, and Sicily oranges, sold by Koeling and Hunt, went at a slight reduction upon the prices obtained last week.

Lemons lower. Black Spanish well supported, with a limited stock remaining. Chestnuts advanced in price. Walnuts of good quality improved in value. Almeira grapes at easier rates. Some parcels Seville sours arrived.

Seville sours arrived.

DRY FRUIT.—Trade in currants has been dull during the week; but fine, being scarce, are in good demand, and higher rates have been paid. The market looks healthy, and the trade are barely supplied. Raisins are dull, prices being a shade too high to attract buyers, and the continental demand being very small. Sultanas neglected.

ENGLISH WOOL.—Werty quiet.
COLONAL WOOL.—Market firm; not much doing.

FLAX.—Market firm; prices unaltered.

HEAP.—Market very firm, and few disposed to sell, the aspect of war deterring them.

Cotton.—Sales of cotton from Thursday, 24th December, to Thursday, 31st December, 1863, inclusive:—450 bales Surat, at 22½d for fair Broach, and 22½d for fair Dhollera; 1,060 bales Kurrachee, 15¼d for middling, 16d to 16¾d for middling fair, 16d to 17d for fair; 1,210 bales for fair, 22½d to 23½d for fair bhollera; 2,220 bales Western, 22¾d for barej fair, 22½d to 23½d for fair, 24½d for good fair; 2,220 bales Western, 22¾d for barej fair, 22½d for fair fair and fully fair; 50 bales Salem, 22¾d for fair, 24½d for good for fair; 250 bales Coconada, 21½d to 23½d for fair—total, 5,760 bales. In consequence of the reduction in the Bank rate of discount to 7 per cent. there was an increased domand for cotton on Thursday, and on the resumption of business on Monday this improvement continued, and prices advanced about ½d per lh. Yesterday, when it became known that the actual stock at Liverped was only 26,000 bales in excess of the estimates, the demand became of ½d to 1d per lb. Sales for arrival:—4,500 bales Western, at 22½d December, 22½d to 23½d November, 22½d to 23½d November, 22½d to 23½d November, 22½d to 23½d October, and 23½ sentember shipment, for guaranteed fair; 2,000 bales Tinnevelly, 22½ December, 22½d to 23d November, and 22½d to 23½d October alipment, for guaranteed good fair; 3,350 bales Bengal, 17½d December, 17½d November and December, shipment, for guaranteed fair; 8,400 bales China, 19¼d November and December, and 20¾d to 21d August shipment, for guaranteed fair—total, 18,950 bales.

PRESENT QUOTATIONS. -total, 18,950 bales.

Tobacco.—The market has been less active, and purchases chiefconfined to supply immediate requirements. Prices unchanged.

Learners and Hubs.—The leather trade during the past week habeen extremely limited, and the transactions at Leadenhall, on Tusday, were on the same scale. No change in prices was indicated.

MERALE.—There has been a steady business doing in metals all the
week. Copper has been very largely done in at advancing rates, in
anticipation of an advance in prices, which has been declared to-day to
the extent of 5l per ton. Iron has been buoyant, and at the Stationshire quarterly meeting of masters an advance of 20s per ton is determined upon. Tin is more inquired for, and Straits is a shade firme
Lead steady. Spekter has been largely bought up at fully 20s advance
Tin plates are in request.

Tin plates are in request.

METROPOLITAN CATTLE MARKET.

METROPOLITAN CATTLE MARKET.

Monday, Dec. 28.—The total imports of foreign stock into London, last week, amounted to 3,521 head. In the corresponding week in 1862 we received 2,440; in 1861, 2,382; in 1860, 2,031; in 1856, 0, 1,163; in 1869, 2,554; in 1858, 8,550; and in 1857, 782 head. Our market to-day was but moderately supplied with fat stock. Scotch, Devons, and the best Shorthorn beasts moved off freely, at an advance in the quotations, compared with Monday last of 2d per 81bs. re very scantily supplied All breeds commanded lves, the show of which otherwise the beef trade was inactive. We were with sheep; but their quality was prime. All breeds comman steady sale, at fully last week's currency. Calves, the show of was limited, met a dull inquiry, at late rates. The pork trade somewhat heavy.

THURSDAT, Dec. 31.—There was about an average supply of beasts on offer in to-day's market. All breeds met a dull inquiry, and Menday's prices were barely supported. The extreme value of the best Seets was 5s 2d per 8 lbs. The show of sheep was seasonably good. Down and half-breds moved off freely, at full currencies: but heavy sheep were a slow sale, at late rates. The top figure was 6s per 8 lbs. Choice calves were firm, and the turn dearer. Otherwise, the veal trade was inactive. Pigs and milch cows were very dull, but not quotably lower.

#### EPITOME OF RAILWAY NEWS.

TRAFFIC REFURNS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 19th of December, on 11,029 miles, to 577,260*l*, and for the corresponding week of last year, on 10,645 miles, to 536,440*l*, showing an increase of 384 miles, and of 40,820*l* in the receipts. The gross receipts on the 15 principal railways amounted, in the aggregate, on 7,790 miles, to 465,299*l*, and for the corresponding week of 1862, on 7,596 miles, to 485,079*l*, showing an increase of 194 miles, and 30,220*l* in the receipts.

#### RAILWAY AND MINING SHARE MARKETS. LONDON.

MONDAY, Dec. 28 .- In the share market to-day the trans Monday, Dec. 28.—In the share market to-day the transactions were few, but the variations from the closing quotations of Thursday last showed a disposition to firmness in nearly all the descriptions, particularly English railways, American securities being an exception. In the English lines, Bristol and Exeter, Caledonian and Great Western (South Wales) closed at an advance of 1 each, Brighton and North British \( \frac{1}{2} \) each, North-Eastern (York) \( \frac{1}{4} \), Great Northern and Great Western (West Midland, Oxford) a further \( \frac{1}{2} \) each, and Manchester, Sheffield, and Lincolnshire a further \( \frac{1}{4} \); and Great Eastern relapsed \( \frac{1}{4} \). In colonial, East Indian (G and H extensions) improved \( \frac{1}{4} \) each, and Buffalo and Lake Huron \( \frac{1}{2} \); Great Southern of India (5 per cent.) receded \( \frac{1}{2} \). In mines, South Caradon and Wheal Seton advanced 5 and \( 2 \frac{1}{4} \) respectively.

Bullato and Lake Haron 5; Great Southout of Advanced 5 and 2½ respectively.

Tusnax, Dec. 29.—In the share market to-day, the transactions were principally for the account, and the movements in the closing prices generally showed steadiness, those in English railways being rather numerous, and all in advance. Of these, Great Eastern recovered ½: and Great Northern (A stock), Great Western, Midland, North British, North-Eastern (Berwick), ditto (Leeds), North Staffordshire and South-Eastern improved ½ each, Lancashire and Yorkshire and North-Eastern (York) a further ½ each, and Manchester, Sheffield, and Lincolnshire a further 1. In colonial, the only movements were a decline of 1 each in Grand Trunk of Canada (3d preference), and ditto (deferred). In foreign and American, no alteration occurred. In mines, East Bassett advanced 1, and Hingston Downs ½; Wheal Seton relapsed 2½; and East Wheal Russell and North Downs declined ¼ each, and Yudanamutans ½.

WEDNESDAY, Dec. 30.—In the share market, to-day, a merely nominal

relapsed 2\frac{1}{2}; and East Wheal Russell and North Downs declined \frac{1}{4} each, and Yudanamutana \frac{1}{2}.

Wednesday, Dec. 30.—In the share market, to-day, a merely nominal amount of business was transacted, but in English railways and joint stock banks there were several further instances of advance in the closing quotations, the other descriptions showing us material change. Of the English railways, Great Western (South Wales) improved \( \), South Devon \( \frac{1}{2}, \) and North-Eastern (Stockton and Darlington) \( \frac{1}{2}, \) ditto (Berwick) a further \( \), did to (Gerwick) a further \( \), did to the only alterations were such as were occasioned by the several Indian railways (except Indian Branch) being now quoted ex interest. In mines, North Downs recovered \( \frac{1}{2}, \), west Chiverton advanced \( \); Wheal Buller declined \( \frac{1}{2} \); and Cape Copper and Cobre Copper advanced \( \frac{1}{2}, \) Wheal Buller declined \( \frac{2}{2} \); and Cape Copper and Cobre Copper advanced \( \frac{1}{2}, \) Under the Buller declined \( \frac{2}{2} \); and Cape Copper and Cobre Copper advanced \( \); Wheal St. John del Rey being quoted ex dividend.

Thurshax, Dec. 31.—In the share-market to-day, the amount of business was again inconsiderable, but a tendency to improvement was shown in the closing prices of all the several descriptions. In English railways, Great Eastern (A stock) advanced \( \), Brighton \( \frac{1}{2}, \) Lancashire and Yorkshire \( \frac{1}{2}, \) Great Western further \( \frac{1}{2}, \), North-Eastern (York) a further \( \frac{1}{2}, \) and Great Eastern (Ordinary) and North-Western a further \( \frac{1}{2}, \) and Great Southern of India \( \frac{1}{2}, \). In foreign, Namur and Liège (of both descriptions) and Sambro and Meuse (preference) are now quoted ex interest. In American, the only movement was an improvement of in Pennsy

FRIDAY, Jan. 1.—The railway market was dull to-day, and prices experienced a reduction, but not to any important extent. Midland and Caledonian stocks receded 1 per cent., and London and North-Western, Great Western, Lancashire and Yorkshire, and South-

DR DE JONGH'S

ht of the Order of Leopeld of Belgium)

TIGHT-BROWN COD LIVER OIL, Prescribed by the most Eminent Medical Men at ha safest, speediest, and most effectual remedy for consumption, outnown to monthill, asthma, couches, and make the constant of the sent rickers, invantile wasting, and hall secofulous appections, is incomparably superior to every other kind,

SELECT MEDICAL OPINIONS.

BY HERRY MARSH, Bart., M.D., Physician in Ordinary is the Queen in Ireland.—"I consider Dr de Jasgh's Light-Brown Cod Liver Oil to be a very pure Oil, 501 likely to create diaguat, and a therapentic agent of great value."

De LANKESTER, F.R.S., Scientific Superintendeus, Sanh Kensington Museum,—"I consider the Cod Liver Oil seld under Dr de Jongh's guarantee is the preferable is my other kind as regard genuineness and medicina.

Dr GRANVII.LE, F.R.N., Author of the "Spas of Grassy."—"Dr Granville has found that Dr de Jongh's Light-Brown Cod Liver of Di produces the desired effect is a shorter time than other kinds, and that it does not make the ausman and indigention too often consequent esthe administration of the Pale Oil."

Dr LAWRANCE, Physician is H.R.H. the Duke of ste-Coburg and Gotha.—"I invariably prescribe Dr is Joach's Cod Liver Oil in preference to any other, selling assured that I am recommending a genuine sticle, and not a manufactured compound in which the stopy of this invaluable medicine is destroyed."

Beacy of this invainable medicine is used by de Jongh's Light. Brown Cod Liver Oil is sold say in latrical Half-Pints, 2s 6d; Pints, 4s 9d; parts, 9s o-pauled, and labelled with his stamp and spaints, without wellow Norm Can resistant an assume, by respectable Chemists and Druggists.

SOLE CONSIGNEES:
ANSAR, HARFORD, and CO., 77 Strand, London, W.C.

CAUTION .- Beware of Proposed Sub

CAUSE and CURE—diven away to Nervous agreen, 20,000 copies of NERVOUS DEBILITY, ITS cause and Cure, on the self-cure of Nervous Debility, is self-cure of Nervous Debility, and Memory, Dimness of Hight, Lassitude, Dislik, as decisty, Impediments to Marriage, &c., resulting from early errors of youth, which, if neglected, result in assumption, insanity, and premature death; with a directions for restoration to health. Post free found from observation) for one stamp.—Address same Smith, 8 Barton cresent, London, W.C.

Hammond, H. G. of King's College and the Lodon Respital, has published the whole of his experience

The purious of the property of

NOTICE TO MERCHANTS, SHIPPERS, AND COLONISTS.

In consequence of the Railway Works across Ludgate hill, T. TRELOAR, Cocoanut Mat, Matting, and Kamptulicon Floorcloth Manufacturer, Prize Medallist, 1851, 1855, and 1862, has REMOVED from No. 42 to No. 10 LUDGATE HILL, E.C., a few doors higher up and nearly opposite his old premises.

### KAMPTULICON FLOOR CLOTH.

GOUGH AND BOYCE,

ORIGINAL PATENTEES AND MANUFACTURERS,

12 BUSH LANE, CANNON STREET. MANUFACTORY-GREENWICH ROAD.

The public are respectfully cautioned that many persons advertise themselves as manufacturers of tais favourite article who are not so.

### HUBBUCK'S PATENT WHITE ZINC PAINT

Is the most durable and beautiful paint known, does not stain or discolour with the att of large towns, and by their process, which is patented, is cheaper than White Lead.

It is es ecially adapted for painting Iron, as, by virtue of a semi-galvanic action, it enters the pores and forms an amalgam of the two metals, which protects the Iron from decay or incrustation. It should be used instead of Red Load, which is proved to be destructive to Iron exposed to Salt

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Brytes, in proportions varying from ten to thirty per cent. No workman can produce good work with such material. These who have obtained the Patent White Zinc Paint from Grinders who have not adulterated it, will never willingly use any other Paint for their est work.

Each Cask of Pure White Zine is stamped-

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

"For public schools, and all rooms occupied by children, there will now be no excuse for using peisonous paints. Parents have remarked, that their children on returning from the country to newly-painted houses have suffered in health. The reason is evident—the breast extracts the insidious poison from paint, and the langs draw in the deadly vapour."—JOHN BULL, September 14, 1850

### WHOLESALE IRONMONGERY.

RATSI RATSI RATS !

IMPORTANT AND VALUABLE DISCOVERY.

H A R V E Y 'S M E T H O D

Exterminates all the Rats on the Premises in One
Week, without the use of Poisons, Traps, Dogs, or
Ferrets, and leaves No Dead Rats in the Holes.
Simple in its operation, Trifling in its expense, Certain
in its Success, permanent in its result,
It has proved an Immense Boon to hundreds of
Farmers; is invaluable to all Persons whose Lands or
Fermises are infested with these obnoxious and destructive vermin; and is universally acknowledged to be
the Greatest Success of the Day. Bent, post free, by
the Inventor, on receipt of 30 stamps. — Address,
William Harvey, Wellington road, Great Yarmouth.

HOLLOWAY'S OINTMENT.—
Youth's Friend—This excellent Ointment is so innocent in its nature, so cociling in its properties, and so healing in its action, that it is invaluable in skin diseases, scalid heads, tetter, tooth-rash, chafings, and the many varieties of rashes and cruptions well known and deeply dreaded in the nursery. Trivial maladies may by it be met and conquered at their outset, and all future mischlef overcome before it has gained hold upon the constitution, and endangered future health. Full directions are wrapped round each pot of Ointment, Holloway's unguent may be applied with the best result in many diseases to which the sufferer silenity submits, because the task of investigating them would be both difficult and delicate.

MORE CURES OF COUGHS, COLDS, MORE CURES OF COUGHS, COLDS, and HOARSENESS, by Da LOCOCK'S PUL-MONIC WAFFRS.—From Mr Jas. Froud, Chemist, Derchester. 1st October, 1862.—"I know sms family in particular, and I doubt not there are many others, who look upon them as a "domestic necessity," who in every slight cold, huskiness in the throat, cough, &c., turn to them as naturally and as successfully as a thirsty man turns to water." "Others who delight in vocal har mony seldom mix in parties or join public psalmody without taking with them 'Dr Locock,' as the Wafers are significantly called." These Wafers give a rapid sure of asthms, consumption, coughs, and all disorders of the breath and lungs. They have a pleasant tasks. Price 1s 1½d, and 2s 9d per box. Sold by all drugsists. Beware of counterfelts. JUVENILE CLOTHING.

deposit their Bonds with Mesers T. WIGGIN and CO.,
the Company's AGENTS in LONDON, who will effect
the exchange, and return them the new Bonds and
Stock at the risk and expense of the Company.

R. 8, WATSON, Treasurer of the Fiscal Agency.
Boston, U.S.A., July 10, 1863.

TO THE ELECTORS OF THE BOROUGH OF BRIGHTON.
GENTLEBER,—The falling health of your Senior Representative necessitating his early retirement. I am prompted by an honourable ambition to seek your coardence as he successor.

GENTLEMEN,—The failing health of your Senior Representative necessitating his early retirement. I am prompted by am honourable ambition to seek your coaidence as has successor.

I feel assured that so liberal and enlightened a Constituency will never recognise the Candidate of a Retrogressive Party as the organ of their principles; and believing that energetic measures are easential to the cause of advanced Liberalism in your Borough, I respectfully solicity our kind support, hedging myself that, come an Election when it may, I will contex the vacant seat with unfinching determination, to the latest moment of legitimate effort.

Gentlemen, abould I become your representative, I promise you I will be no mere party instrument; but, accepting the axiom of "Measures not Men," will invariably support any proposition, by whomsoever initiated, which may contribute to the noral, social, and political advancement of the people.

In the theory of our Constitution we are all equal before the law, whatever our religious convictions; and I am convinced that if Legislation were directed to the practical adoption of this pinciple, the greatest happiness of our industrial population, and prosperity of the country in general, would be secured.

It will be not less my pride than my duty to promote, among other scarcely inferior measures, a large extension of the suffrage, with an effective protection of its rightful exercise; the withdrawal of all State grants from sectarian bodies; and the equalisation of the boon of England, I am persuaded that it is for the interest of the Establishment to accept the growing feeling of the country as to the expediency, as well as the justice, of abolishing compulsory Church raise.

Experienced in mercantile matters, I gratefully recognise the conduct of Lord Palmeraton, in his extension of free Trade principles to our commerce with the nations of the world, and in his patriotic maintenance of that peace which is essential to their full dovelopment; while to his general policy of non-interfere

THE FRENCH AND GERMAN
PROTESTANT COLLEGE, Netherton House,
Clapham, Surrey, combines the comforts of an English
home with the advantages of a Continental Education.
The French and German Languages, so indispensable to
a good cancation, are taught by resident masters. They
give leasons daily. The enters of instruction adopted
secures for young gentlemen a sound English, Clausical,
and Mathematical Education, combined with Drawing,
History, Geography, and Modern Science. Pupils prepassed for the military, naval, merchant, and civil service examinations. Terms, inclusive, from thirty to
fitty guiness per annum, according to age and requirements. A difference will he made for two Pupils from
the same family. For references and prospectuses apply
to Monsieur A. de Chastellan. as above.

The International Financial Society (Limited) have been encouraged to sid in the organisation of this Company by the strong desire for its success evinced by the Chamber of Agriculture and the commercial body in Mauritius, and by the ready support it has met with from leading houses connected with the colony.
The progress of the island as a sugar-producing

The progress of the island as a sugar-producing llony has of lats been extremely rapid. The producing of sugar has more than doubled within the last velve years; and the crop of last year (viz., 1862-63), toceded 180,000 tons.

Within the same period of time there has been an image of 130,000 in the population, consisting, for those part, of Indian lumigrants who are becoming peasured sattlers.

Railways, the first section of which will probably be opened early maxt year, are in course of construction, and cannot fail further to develop the resources of the island.

The annual exports have for the last five years ex-sided, on an average, £2,500,000; while the imports two, during the same period, amounted to little more an £2,000,000.

have, during the same period, amounted to little more than £2,000,000.

The Colonial Budgets have, for many years, past shown on the average a large surplus.

The legal rates of interest on mortgages in Mauritius is 9 per cent; and the Company, in raising money in England on Debentures, for investment in the colony, will preserve such a margin as, together with the companisations they may receive for their agency, should enable them to realise a large profit on the small amount of paid-up capital required to c-induct the business.

With a view to secure the debenture hollers, it will be a rule that the total amount raised by the Company on debentures shall never exceed the amount invested in mortgages; and that investments shall be made only is first unortgages and for amounts not exceeding half the estimated values of the properties offseed as security.

Arrangements have already been made for placing the first i-sae of debentures on astisfactory terms.

For Mortgage Loans in Mauritius, of six years and upwards, the born-owers will be required to contribute half-yearly to a sinking fund on the principle of "Credit Foncier," which has been applied with so much advantage to both lender and born-ower in many parts of the Continent of Europe.

In addition to employing its own capital the Company will invest the money of const tuents, guaranteeing interest, or principal and interest, as may be agreed upon.

There is in Mauritius an efficient resister of original

interest, or principal and interest, as may be agreed upon.

There is in Mauritins an efficient register of original titles to land, coanceted with the "Land Court" of the island; and also a Transcription Offics, wh.re successive titles may be traced.

The mortgage investments made by the Government Savings Bank of Mauritins during the last twenty-five years prove that investments judiciously made under the mortgage law of the island are eminently recurs.

A new law which is passing through the local Legislature will reduce the operation of lending on mor gage to a conditi in of still greater simplicity and safety.

The management of the Company will be vested in the Board of Directors in London assisted by a Board in Mauritius.

The influential surgert given to the Company both in England and Mauritius, and the great want of such an analysis of the company both in england and Mauritius, and the great want of such an

in Mauritius.

The influential surport given to the Company both in England and Mauritius, and the great want of such an England and Mauritius, and the great want of such an institution, must secare an ample field for safe and lucrative operations.

The Directors of the International Financial Society feel, therefore, no hesitation in recommending the undertaking to the favourable in tice of the public.

Printed Copies of the Memorandum and Articles of Association may be inspected at the offices of the Solicitors, Messers Wilson, Bristows, and Carpmael, 1 Copthall buildings.

Application for shares must be addressed to the leteractional Financial-Society (Limited), at their Teporary Offices, 45 Old Brood street, E.C., which must be left with their Bankers, Messrs Glyn, Mills, and Go No. 67 Lombard street.

The List of Applications for Shares cle yesterday, 1st January.

THE LLANRHIDIAN BITUMINOUS THE LLANKHIDIAN BITUMINOUS COLLIERY COMPANY (Limited).—To be been porated under the Companies Act of 1882, by which the liability of the shareholders is limited to the actual amount of their shares. Capital 2700,000, in 200 shares of 25 each. Fir.t issue 10,000. "A division of 71 per cent. guaranteed for the first 12 monties 10 per shares to be paid on application, 21 on allotment. It is confidently anticipated that no further call will be required. Should no allotment be made, the deposit-money will be returned in full.

ABRIDGED PROSPECTUS.

ABRIDGED PROSPECTUS.

This valuable and extensive property, the miseral rights of which have been secured, contains ten workshie sams, of the aggregate thickness of 42 feet 11 inches of highly bituminous coal, besides an abundance of argillacious iron ore of excellent quality, both of which can be profitchely worked. It is s'tuated in the parish of Llaurshidsen, in the county of Glamorgan, about one mile from the Barry or Loughor river, and nearly opposite Llanelly, South Waler, and is laid on various grants for long periods, at low royaltie.

The coal, which is entirely free from alast or earthy

grants for long periods, at low royalite.

The coal, which is entirely free from slats or earthy matter, has been proved to be of a very saperior quality for house, gns, smiths, and manufacturing purposes, which will ensure for it an unlimited demand for the South and West of England, France, Ireland, and the saports of Wales. The demand for this description of coal exceeds the supply; heling the reverse of steam coal, of which the supply is in excess of the demand.

A shaft has already been sunk to the depth of sham. 200 feet, intersecting two of the seams of coal, see 5 feet, and the other 4 feet 6 inches in this kness, and all the seams are works, is to the depth of 600 fathoms from the present shaft, which is of sufficient size for an outlet of 300 tons per day.

The selling price of the coal, free on board the vessels,

The selling price of the coal, free on board the vessels, is from 8s 6d to 8s 6d per ton; and the sale of 200 team per day (which may be increased to 500) is estimated to yield a net profit per day of 225 7s, or about 3s 4d per ton, which will return a large percentage on the capital invested in opening out the coiliery, independent of the profit which may be realised by sale of the iron-tone. Respeciable contractors arms need to be arrested to

profit which may be realised by sale of the iron-tone.

Respeciable contractors are veady to execute the
works, viz., a railway and shipping place on the river
Loughor, in four months, the distance has ig asset a
mile. Under these favourable circumstances, with the
large demand for first quality house coal. It is confidently
expected that a most satisfactor dividend will be
declared at the ord of the first financial year; but under
any circumstances a dividend of 72 per cent. and its
amount paid up is guaranteed, the vendors having
agreed to leave with the Directors a sum out of the
purchase-money sufficient for that purpo c.

The Directors will take powers to proceed to allot-

The Directors will take powers to proceed to allot-nent so soon as thry 'hall deem sufficient capital has seen subscribed to enable them to profitably work the olliery.

illiery.

Prospectuses and forms of application, with reports of minent engineers, may be had of the brokers, bankers, olicitors, or the secretary of the Comp ny.
