FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, JULY 6, 1901.

VOL. LVII.—No. 1.
No. 346 BROADWAY, NEW YORK.

TERMS, \$4 A YEAR, 10 CTS. A COPY.
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

That old story about the little boy with the pin hook who ketches all the fish, while the gentleman with the modern improvements who stood alongside of him "kep' throwin' out his beautiful flies and never got nothin'," is a pure lie.—Frank R. Stockton.

THE HOME OF THE BASS.

AN illustration supplement goes with this issue. It is "The Home of the Bass," from a drawing by W. P. Davison, whose trout stream picture "Between Casts" was given with our issue of June 1. Others of the series were: April 6, "The Trapper's Camp"; May 4, "Rap Full." Early announcement will be made of a new series.

This is the weather when if one could not go fishing in cool waters the next best thing would be to play first assistant to Game Protector Overton in the exploration of the Arctic Freezing Company's cold storage rooms.

Your prophets who foretell the future of a game species are no more sure of their ground than those who prognosticate of other things. The freaks of fashion may stimulate or discourage the pursuit of an animal hunted for its fur; invention may provide an oil to take the place of that obtained from another species; the unanticipated settlement of a remote district may wholly change conditions. In Lieut. Schwatka's account of his raft journey down the Yukon in 1882, he prophesies of the moose, "The Yukon Valley will give them a safe refuge from civilization when the hunting of them in Maine and Canada will exist only in books and stories." There were two factors affecting this matter which Schwatka did not take into consideration—the discovery of gold on the Yukon and the development of the game protective idea in Maine and the Provinces. The Yukon gold has attracted a vast population into what was in Schwatka's time an unsettled and practically unexplored wilderness; and with the coming of the gold seeker the price of moose meat has been put up, and the game has been and is now so persistently hunted that the prophet of 1901 would reverse the prophet of 1882, and declare that the chances of longer survival were with the game of Maine and Canada. With right protection the Maine game will last for many generations of moose and men.

The small boy hunter, who stalks the mother robin in June and kills her if his aim is lucky or true, comes in for a generous share of hard words from those who have never been boys themselves—that is to say, women and some men—and none of us have any too much patience with the predatory youngster when he invades our own orchards or lawns and pots the birds in which we have a quasi proprietary interest. But the boy is not the one to blame. It is his mother. Boys don't think. Their mothers ought to. The mother woman should protect the mother bird.

Send a lock of your hair, your photograph and ten dollars and receive by return mail a non-resident license to hunt in Illinois. The photograph is the latest wrinkle. It must be pasted on to the license for purposes of identification. But if the shooters who go shooting in Illinois are like the sportsmen of other parts, the rough and disreputable looking tramp who comes to town after a week of burning gunpowder could not be identified as the original of his own photo on his license.

Another new wrinkle in Illinois is the omission of quail and woodcock from the protection of the game law. This is only one more in a long series of blunders which mark our game legislation. Here is an ambiguity in the New York law intended to protect wild birds other than game. Prior to the revision of this year the section read:

"Wild birds other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird,

kingfisher, and birds for which there is an open season, shall not be taken or possessed at any time," etc.

In this text the intent clearly was to except the "birds for which there is an open season" from the class to be protected at all times, and the term "birds for which there is an open season" clearly refers to game birds.

But as revised this year, the prohibition reads, "Wild birds other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird, kingfisher, and birds for which there is no open season, shall not be taken or possessed at any time," etc. The wording and punctuation remain the same as before, and the meaning of the section is then that the English sparrow and other named species and all other birds except game birds for which there is an open season may be killed at any time. "Birds for which there is no open season" are all birds other than game, and for them the New York law now provides no protection whatever.

Still another example of "English as she is wrote" is contained in the law which the American Ornithologists' Union has induced a number of States to adopt. The admirable purpose of this law is to define the game birds and to protect all others. By an ingeniously stupid employment of a double negative in several instances these laws forbid the killing of non-game birds, but permit their sale. For example, in Maine the law reads: "No person shall kill * * * any wild bird other than a game bird, nor shall purchase, offer or expose for sale any such wild bird." In other words, no person shall not purchase. And in New Jersey "no person shall take nests or eggs of wild birds," nor shall have such nests or eggs in possession, which is to say that no person shall not have the eggs in possession. To declare that no person shall not, is equivalent to saying that every person shall.

The Society for the Protection of Native Plants is a Boston institution, founded by persons interested in wild flowers, and cognizant of the fact that many of our native plants are exposed to the danger of extermination. It is the announced intention of the Society to publish brief articles, or leaflets, calling the attention of thoughtful people to the matter, and to point out what plants especially need protection and in what way the desired end may be best effected. The leaflets will be distributed to teachers in schools, to flower missions and village improvement societies, and in other places where they will be effective. The co-operation of wild flower lovers is invited, and the movement is one which should have cordial support. There is at present no membership fee. The secretary is Miss Maria E. Carter, Curator of Herbarium, Boston Society of Natural History, Boston, Mass.

The State Forest, Fish and Game Commission has placed in the Adirondacks a herd of twenty elk, four of them males. They were presented to New York by William C. Whitney, and come from his Table Mountain preserve in the Berkshires of Massachusetts. It is given out that George J. Gould is arranging to procure a herd of moose in Canada to be presented to the State for the Adirondacks.

The sportsmen of Havana are considering the introduction of desirable game into Cuba, and when the Cuban legislative machinery is in running order a new game code will be adopted. It is suggested by some persons who have no reverence for antiquity that the ancient Spanish laws on game should make way for something embodying modern progress. There is one statute which we trust no one will venture to relegate to oblivion. It is the one which provides that rabbits shall not be tracked in the snow. As Cuba has neither rabbits nor snow, it is evident that here is one game law which absolutely cannot be broken, and a law like that our Cuban brothers of the gun should be proud to possess.

Among the objects upon which we come on our field excursions none are more provocative of speculation and dreaming than the chance memorials of man's former occupation.

It may be that in our outing under Southern skies we come upon little heaps of stones disposed at regular intervals, which mark the spot where in the years of strife was bivouacked a winter encampment of troops; and as we study out the street plan of the camp we may conjure up in fancy, or in recollection, perhaps, the scenes of

those momentous years, and see again the evening fires or hear the reveille.

In the further South, where the surface of the ground is not subject to the leveling effect of frost, it is not at all unusual to find an "old field" with the ridges of the crop still rising above the surface, clearly marking the rows, and with giant pines growing from them, showing that the cultivators of the soil who labored here had gathered their last crops before nature planted the trees.

Sometimes in our quest of big game in the mountains of the West we come upon a series of stones and rocks so disposed as to form the wings of a V, with the long sides converging gradually to its point at the brink of a cliff, and we know that here in the long ago was an Indian buffalo piskan. If not too eager in our own quest, we may pause a moment to recall the exciting scenes that were enacted here in the days of the red hunter, when the game was craftily lured to the mouth of the fatal chute, and then the thundering herd was driven down the ever-converging, always narrowing lane of death, and over the precipice to its doom. Game and hunters both alike have long since passed from the land; but to one who can read the story these weather-worn piskan stones are eloquent with their suggestion of the old-time ways.

Or it may be that an old cock grouse has lured us on and on in the cover until we stumble upon the fallen stone chimney and the vine-clad foundations of an old New England homestead. Here stood the house; there was the well; the barn was just over there, and the apples gone wild tell us of the orchard. Beyond on a gently swelling knoll shaded by great elms, and most pathetic of all, is the little inclosure where, in keeping with a custom not uncommon, the family laid their dead to sleep the long sleep. All this we may study out, but the old partridge devoid of sentiment has stolen away, and we may carry home the picture of New England family life our fancy has painted, but no game in the bag.

It is a law of nature that relaxation should follow effort. It matters not whether the effort is of the mind or body, or both, nature ordains that if the organism is best, conserved rest must follow. This does not signify that a period of activity is necessarily followed by a period of inactivity or dormancy. The mere alternation from one to the other has no significance in respect to wholesome recreation. True rest and development require change of scene, change of thought and change of effort. After engaging for weeks or months in the narrow confines of a vocation the best powers of either man or woman gradually decline. All that is pleasurable is worn away and in time without any relaxation, a vocation and drudgery are one.

A change from a contemplation of man's own handiwork to a contemplation of the work of omnipotence is the best restorative. The rest and change conferred by the benefit of the trees are indicated by a vivacity of mind and vigor of body, a broader view of life and appreciation of life's purposes, and the probabilities of added years.

Rest and wholesome recreation are best where the trees grow. The camper can erect his tent and live in the environment of primitive man and still enjoy the luxuries of civilization.

The sunlight, the fragrance of the wilderness and fields, the beauties spread everywhere so gratifying to the eye, the pure air free from the contaminations of the city, are a tonic to mind and body, far transcending any of the nostrums of mankind.

For him whose recreation is with rod and reel, the benefits of the trees, too, are free. They enhance the charms of the waters wherein dwell the brave and wary trout or bass, and gratify the angler's eye as the touch of rod and reel is gratifying to his hand.

In the unrelenting struggle of civilization, men are prone to believe that they cannot afford the time to partake of the benefits of the trees. In such a narrow view they fail to perceive that they are certain to live a shorter life as measured by years, and a narrower life as measured by the social and business horizon, and by individual capabilities. If the artificial phases of life predominate to the neglect of the natural, the time will come when nature will exact a settlement. The allotted span of life can be reached more happily by taking the rest enjoined by the doctrine of recreation told in the whisperings of the trees.

The Sportsman Tourist.

By Clifty Creek.

By Clifty Creek in this lone wood
I'm Nature's charmed and honored guest.
For me she decks her maidenhood
In colors bright and loveliest;
For me her song birds tune their throats,
And warble blithesome, sweetest lays;
While o'er it all a memory floats
Of cherished bygone days—
Of days when these cool, limpid pools,
And these bright, laughing ripples free,
Sang me a song not learned in schools,
Of faith and hope and constancy.
Ahl that was years and years gone by,
But as I lingering list to-day,
They sing the same old glad refrain—
They'll sing it on and on for aye.

COLUMBUS, Ind.

WM. J. BECK.

Old Duke.

It was the hottest part of a hot August day. The sun beat down from a sky of brass overhead upon the dry, arid plain, sending back great waves of quivering, scorching heat; the earth seemed transformed into a vast fiery furnace, and the creatures of the plains gladly sought the meager protection afforded by the scanty shade of the scraggly mesquit or the spreading cottonwood. It was therefore no wonder that the ever inquisitive prairie dogs poked their heads out of doors, half-curious, half-alarmed, as the quick thud, thud, thud of light hoof beats on the hard ground, like the distant tattoo of a drum, told them that in spite of the overpowering heat danger was abroad, and that some animal was fleeing for its life.

The prairie dogs dodged back into their holes as a herd of panting, half-exhausted antelope swept by with their tongues lolling from their mouths and their wide expanded nostrils showing red as blood, while their breath came in short, wheezing gasps through their parched throats. They disappeared over the next rise, heading in the direction of Sweetwater Creek, and scarcely were they lost to view when another creature appeared in sight following fast on their trail, and the cause of their wild flight through the terrible heat became apparent. The pursuer was a huge Scotch staghound. He ran with his head well up, covering the ground with mighty bounds with a speed known only to his kind. He looked neither to the right nor to the left, but ever straight ahead in the line of the antelopes' flight, panting heavily as he ran, and it was easy to see that the strain of the chase was beginning to tell on him as on the ones he was pursuing.

He had been running for two long hours, and would gladly have given up the exhausting struggle, but his master had commanded him, and it was his duty to follow the trail until called off, or until he could run no more. To him it seemed a cruel thing to ask a dog to run on such a day. If it were only a wolf—one of his mortal enemies—that was leading him this chase, there would be some consolation in it, but to run antelope in such weather seemed not only foolish, but criminal and un-sportsman-like as well. It might be sport for his master to watch this race of death, but it was cruel sport at best, appealing to his master alone. The hound's strong limbs worked automatically as he sped over the ground with the same unbroken stride. The scorching sun beat down upon him, the suffocating waves of heat smote him in the face and parched his throat and half-blinded him; still he ran on. Oh, for a drink of fresh, cold water to quench the thirst that consumed him! As if in answer to his prayer the trail led down into a hollow where, at certain seasons of the year, a noisy stream was wont to flow. The course of the channel was now marked merely by a dry, rock-strewn gully, but in the shelter of a high bank there still remained a shallow pool of stagnant water. The antelope had paused here to drink and had trampled the pool and fouled the water, but to the thirsty staghound the miry puddle that was left was gratefully welcomed and proved his salvation. He lapped up the fetid water eagerly, and then dropped to the ground in the scanty shade of a small, crooked mesquit tree for a brief respite from the killing run.

He rested but a moment, and again took up the trail. As he left the hollow and mounted the next rise, he commanded a wide view of the plain before him, and there, not a quarter of a mile away, he espied his quarry. The antelope had paused to look back, thinking, no doubt, that their relentless enemy had at last wearied of the chase, but as the hound appeared in sight they sped away and the never-ending race began anew. Gradually one of the herd, a young buck, dropped behind the others, unable to longer endure the killing pace. It was a terrible struggle that followed. The young buck, worn out and exhausted, made a mighty effort to regain the herd, but his tired limbs would not respond. The staghound drew nearer and nearer, running unsteadily, all his strength, all his will power, brought to his aid in this last dash. He closed in on the doomed buck, and with a final desperate spring caught the antelope by the throat, and together they rolled on the ground. The buck was too exhausted to make any resistance. He had run his last race, and succumbed to his fate without an effort. The hunter and the hunted, both had reached the limit of their endurance. The staghound had not the strength to rise, but lay beside his victim, waiting for the master for whom he had striven so hard, at whose command he had slain an innocent unoffending creature.

The rays of the setting sun lingered for a moment on the two forms lying there so still, the living as silent as the dead; then the great, red, fiery disk sank below the horizon and the scorched earth gave a sigh of relief, gladly welcoming escape from the withering heat and the faintly stirring breezes of the approaching night. As the twilight deepened into darkness the moon rose and flooded the rolling stretches of sand hill and plain with her pale light. The skulking wolf stole forth from his hidden lair and sent up his evening serenade to the moon before starting on his nightly prowling in search of food. The scent of blood from the newly slain antelope was borne to his nostrils from afar, and gradually three or four shadowy, flitting forms drew near, in answer to the summons to the feast, and cautiously approached the spot

where the dead buck lay, half fearful of some hidden ambush, or the cold clutch of one of those dreaded traps which the hated men creatures oftentimes concealed near the carcass of an animal for the undoing of all unwise, unsophisticated wolves. Suddenly a tall, gaunt form rose slowly from the shadow where the dead buck lay, and the cowardly wolves fled in affright as they recognized the form of their most implacable foe.

The staghound stood for a moment beside the fallen buck, and then with tottering, swaying steps started on the long, painful journey home. His strength failed him ere he had proceeded far, and he sank to the ground with a piteful whine. If he could only reach the pool of stagnant water he felt that he might yet save himself. Half crawling, half dragging himself along, he continued on his way, until, after what seemed an eternity of suffering, he reached the gully and the miry pool only to find that some other creature had been there before him and drunk the last drop of the precious fluid. The patient hound sought the shelter of the mesquit tree, and with a last despairing, mournful cry laid himself down to die. His cry was answered by the deep-toned baying of a hound, sounding faint and far away. As in a dream he heard the sound of a horse, hard-riden, rapidly approaching, and then a shrill whistle followed by a familiar voice shouting his name:

"Duke! Duke, old fellow! Where are you? Where is he, Music? Hunt him out!"

He gave a weak answering bark, and the next instant the cold muzzle of his old friend Music, the big fox hound, was thrust in his face, and Old Duke, the best dog in the State of Texas, knew that he was saved at last.

At sundown of that same day Harry Reynolds, owner of the H Horizontal Bar Ranch (so named for its brand, which read H—), threw the saddle over J. C.'s back and reckoned he would jog over to the B Diamond Ranch on a matter of business. It was only a five-mile ride, but owing to the extreme heat he did not hurry his pony, and it was dusk when he finally drew rein before the abode of his friend, Beardy Miller, owner of the B Diamond Ranch. He found that gentleman seated on an upturned bucket before the door of his house smoking his Texas meerschaum.

"Howdy, Hal," the latter drawled, rising to his feet and extending a huge paw as Reynolds swung himself from the saddle and advanced to meet him. "What brought you out on such an infernal hot night?"

"Hello, Beardy!" Harry responded. "Just thought I'd ride over and have a talk. How's everything?"

"Sizzlin', just at present. I fried my bacon on the grindstone this evenin', and all our hens are layin' hard-boiled eggs. I'm thinkin' of reducin' the cook's wages."

Harry grinned and eyed his friend with an amused expression on his handsome face.

"You're about the hottest looking proposition I've been up against this summer," he observed.

"I reckon I be," said Beardy Miller, complacently. The owner of the B Diamond Ranch had rightfully earned his sobriquet. He had a great, bushy head of very red hair, but the thing that most attracted the attention was the profuse growth of the same material that covered his face, concealing all his features, save his eyes and nose. Luckily for the peace of the community at large, his disposition was less fiery than appearances would seem to indicate.

The two men chatted a while over their pipes, and Harry had just risen to go when something seemed to occur to him.

"Where's Old Duke?" he inquired. "He generally comes to meet me."

"I left him runnin' a herd of antelope," Beardy Miller replied. "I don't reckon he caught 'em, and for all I know he's runnin' yet."

"You don't mean to say you ran the dogs such a day as this, do you?" Reynolds cried in amazement. "You must be crazy."

"No; not all of them—only Old Duke. We was out together, and he spotted that old herd and looked to me for orders. I couldn't resist seein' a little fun, so I says, 'Get after 'em, and of course he got. I followed for a spell, but it got too hot, so I come home, and Duke was too far away to hear me when I called him. I reckon he'll be along after a bit."

"He'll wind himself and drop in his tracks, that's what he'll do," Harry declared, with emphasis, and without another word turned away, filled his canteen at the well and sprang into the saddle. "Where's the rest of the dogs?" he demanded.

"In the kennel. What you goin' to do?"

"Go after Old Duke. The moon will be out to-night. Let me have one of the dogs."

"Tain't any use—" Beardy Miller began.

"I'm going to try, anyhow," the other interrupted. "Let me have Music."

"Oh, all right! If you're dead set on goin'," Beardy Miller declared. He knew that when Harry Reynolds made up his mind to do a thing arguments were futile. He disappeared in the direction of the kennel, and in a few moments a large, deep-chested, finely marked fox hound came trotting up to Reynolds and looked at him inquiringly.

"Where did you last see the antelope?" Harry called out to Beardy Miller, impatiently.

"About a mile up the big hollow. Better strike straight across for the divide. They always circle in that direction you know."

"All right; I'll strike their trail. Come on, Music." He wheeled his pony and started away at a canter, with Music running a little in the lead. "The crazy fool, to run a dog on such a day as this," he muttered angrily to himself.

"He's a queer one," Beardy Miller soliloquized, as he reseated himself on the bucket. "But he'll never find Old Duke."

If there was one thing Harry loved more than another it was a good horse; next to horses came dogs in his affections, and Old Duke, Beardy Miller's Scotch staghound, was just about his ideal of what a dog should be. Swift in the chase, strong in endurance, a brave fighter and a staunch friend, and next to a horse a man's best companion—that is what a dog should be. Old Duke was all of this and more, and Harry said hard things about Beardy Miller as he and his two companions hurried along through the gathering darkness on their mission of mercy. And just as the full moon appeared above the

edge of the plain, like some huge lantern hanging in the heavens, just as the noble staghound, half-crazed with thirst and almost wholly exhausted, began his ineffectual struggle to drag himself home; just then Music struck the trail and proclaimed the news in the rich, vibrant tones that had gained for him his name, and J. C. pricked up his ears and quickened his pace, ready to perform his share of the work in hand, whatever it might prove to be.

Had they followed where the trail led they would have had a long run before them, but Harry knew the ways of this particular herd, that they would double in a wide circle and head for the divide, so he called off the hound and struck straight across country. He was more fortunate than he had dared to hope to be in picking up the trail again. He was nearing the gully now where the staghound had paused to drink, when suddenly the mournful death cry of the hound sounded faintly far ahead. Music sent back the answering cry; J. C. responded to the quick spoken word and broke into a run, and Harry gave vent to the shout that had reached the ears of the dying staghound.

There was a quick scramble through the rocky gully. Harry sprang from the saddle while his horse was still running, and rushed forward after Music to the crooked mesquit tree where Old Duke lay dying of thirst. Making a basin of his hat, Harry filled it with water from his canteen, and raising the dog's head, supported him while the life saving draught trickled down his parched throat.

When he had done everything in his power to relieve Old Duke's sufferings, Harry endeavored to coax the hound to follow him, but all to no avail. Old Duke's strength was spent; he made a feeble effort to stand, and then sank back with an appealing look which Harry could not resist. Stooping, he lifted the big dog in his strong arms and placed him across his saddle. Mounting carefully behind him, he held the hound in place, and with a word to J. C. started back for the B Diamond Ranch.

Beardy Miller had found the house too warm for comfort, and had made his bed out in the open air on the ground. The approach of the rescuing party awakened him, and he sat up, rubbing his eyes in astonishment as he saw Harry carefully lift Old Duke down and then hurriedly draw a bucket of water from the well and proceed to give the staghound a good bath and a rubbing down.

"What in thunder are you all doin'?" Beardy Miller at last inquired, wonderingly.

"Trying to save Old Duke's life," the other grunted, in response.

"I thought you gave the hunt up long ago. What's wrong with the hound?"

"Dead beat and nearly dead for want of water. I don't reckon he'll ever run again. If I had him over at my place I might pull him through."

"You don't say he's that bad? I didn't suppose he'd run himself to death, but then I ain't used to these yere sight dogs. If you want the hound you can have him. I reckon you think more of him than I do, and you say he's winded so he won't be good for much."

"All right. I'll be glad to have him," Harry responded. "He'll do now till morning. I'll ride over to-morrow and see how he's getting on. So long." He swung himself into the saddle—this man who was never known to get tired—and before the sound of his horse's hoof beats had died away in the distance Beardy Miller was snoring peacefully; but a tired, worn out staghound raised his head, listening until the last faint hoof beat had sounded, and then, with a deep breath that was like a sigh, his head sank wearily between his paws, and he too fell asleep.

FAYETTE DURLIN, JR.

Companions on Outings.

Editor Forest and Stream:

Among the interesting discussions in the columns of FOREST AND STREAM, little, if anything, has been written as to the advisability of taking one's outing alone, or with companions. It seems that such a discussion might prove interesting and instructive. The novice, at least, might profit from reading the experiences of those competent to be heard on both sides.

It must be generally admitted that on outings which take one a long distance from home, a congenial companion or two lends a feeling of confidence and security, and tends to ward off homesickness. But must not all this be purchased at the price of unfettered independence? Is the price not worth more than the purchase?

If one prefers big-game hunting, the employment of the same guide each trip supplies a companion who comes not to be a stranger. Trips like this allow the widest realization of liberty, and completely free one from all delicacy of feeling that he might trespass on the rights of others. If one desires a few days' canoeing, he has but to command and the guide is ready and willing to obey. If camping, in a spot that strikes the fancy, is wished, the thought has but to be communicated to the guide and the wish is fulfilled. If fishing is desired, just pass the word, and the faithful guide is ready. Then, too, one is kept clear of companionship that might not prove congenial to him—or vice versa. Then the chances of some one being shot by mistake for game are nearly eliminated, and the absence of boisterous excitement brings one's being into closer communion with nature and her wonderful works.

It has been truly said and written that "one man knows another thoroughly only when he has camped with him." Where one indulges in an outing with untried companions the success and pleasures of the outing are reduced to the chances of a lottery. This, I know, is plain talk, and I intend it shall be so. I know of instances where men who had known one another for years and been the best of friends, became the bitterest enemies on an extended outing. This could not have happened had each taken his outing alone.

Then there is the question of economy. Some like a more expensive outing than others, and what might be called economy by some, would be classed as penury by others. Economy is all proper enough, but the really penurious individual has no business indulging in a fishing, hunting or yachting outing, for some one has truthfully said, "Such pleasures are among the luxuries of life." Penury and the price of luxury cannot travel hand in hand. Whether in camp or not, the penurious individual is apt to look upon the naturally generous person as being demented, and the generous person (rightly, I think)

associates the penurious individual with the word "swine." Put the two under canvas, miles away from home, and how will they enjoy their outing together?

Each individual has his peculiarities and imperfections, although there are persons who think they are exceptions to this rule. If one is determined, therefore, to take his hunting or fishing outing with a companion, judgment should be exercised in the selection. Let the person be as near your own temperament and tastes as possible. My own experience has been that men of far better education than myself have made the most considerate and enjoyable company. Refinement usually travels hand in hand with education, and the outgrowth of both is consideration for the feelings and failings of others. Of course there are thousands of uneducated persons who have been endowed by nature with feelings of consideration and sympathy. But the fact remains that these excellent qualities are more apt to be found with good breeding than otherwise.

I have found guides excellent company and the very best of companions. They are intelligent, too, for their vocation naturally brings them in the company of people of education. Many a guide has eaten and slept under the same canvas roof, for weeks, perhaps, with men whose names are household words throughout the civilized world. This being the case, it is not surprising that the majority of guides can talk intelligently and interestingly on nearly all questions of the day. Yet, many of them fail to see a newspaper for weeks, or, perhaps, months.

If one takes his outing with a guide (which I freely admit to my mind is the ideal way), he should not consider that, in Maine at least, \$2 per day is enough wages for guide hire, for \$3 is not an exorbitant price, but about what should be the average in these days. The average guide doesn't earn that much for perhaps 125 days in the year, and \$375 per annum is not much of a salary. I have heard penurious individuals argue that \$1.50 per day is enough to pay any guide. They are business men, too, and if you should deal with them they would demand the highest price for their wares. Such persons would luxuriate at a guide's expense, but they are not even willing that the guide should receive living wages from them. If, by accident, you should get into camp with such as these for companions, look out, for they will surely live at your expense.

Days or half-days afield or afloat near home can be tolerated if one finds himself in distasteful company—it is soon over then. But on an extended outing the whole trip is spoiled, and one would be better off to stay at home.

The most despicable individual that fate can throw an honest sportsman into the company of, even for the fractional part of a second, is the worthy who knows it all, and growls at the weather. Invariably he is an ignominy of the first degree, but too brainless to know it. He blats of the ignorance of geologists, biologists, fishculturists, naturalists and all other scientists, and presumes to set up his own silly reasoning as the highest standard of intelligence. As Mark Twain would say, "He fails to mention that he is a lineal descendant of Balaam's ass." But intelligent people know it.

This worthy would be amusing if the above were his worst characteristics. But he rides rough-shod over other people's property, breaks down fences, shoots trespass signs to pieces, helps himself to anything he sees (if the owner isn't looking) and blows of how he "would do up the game warden" if that person should happen across his path. But I can't do him justice, so I stop.

WILLIAM H. AVIS.

HIGHWOOD, Conn.

Mosquitoes Galore!

LIEUTENANT SCHWATKA'S experience with mosquitoes reminds me. Years ago I crossed the Newtown salt meadows on a horse car. It was from a point where Williamsburg left off and Newtown, then called Maspeth, began. Both are now included in Greater New York. The sun had set and in the twilight from the surface of the meadows could be seen innumerable coils of smoke, each one as clearly defined and separate as if emanating from the dying embers of a redman's camp-fire.

First would the dark mass of smoke leave the ground in a slender spiral thread to broaden out as it ascended, keeping up the spiral twining of the cloud.

This phenomenon could be seen upon the entire stretch of meadow ahead of us. It was a curious and interesting sight to watch those thousands of small camp-fires giving forth their spiral canopies of smoke.

The air had been still and quiet and the smoke ascended slowly and gracefully from the grass. Suddenly a gust of wind passed over the meadows, blowing toward us, and instantly the spiral harmony of the situation was changed into a grayish atmosphere, and as it reached the open car in which I sat a realization that we were looking at spiral clouds of mosquitoes arising from the grass, instead of smoke, was forcibly thrust upon myself and the well-filled car of passengers.

The woodwork of the car, the inside of the roof, the backs of the seats, the hats and clothing of the passengers instantly assumed a dark gray color. The horses were covered from head to foot and became almost unmanageable. The car became, as some one once remarked, "all bustle and confusion."

While the passengers with handkerchiefs whipped the mosquitoes from their necks and faces, the driver urged the frantic horses to their utmost speed, and after a race of about ten minutes we emerged from the meadows and spent the remainder of the trip gradually getting rid of those mosquitoes that were traveling in our car.

I know nothing about Alaska mosquitoes, but if they are as thick every summer's day in Alaska as they were that particular evening twenty years ago on the Newtown Creek meadows, then I wonder how grizzly bears, moose or any other furred animals can live in Alaska and thrive.

CHARLES CRISTADORO.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Natural History.

A Plea for the English Sparrow.

I SEE in magazines and papers so many articles denouncing the sparrow that I feel it my duty to tell of my thirty-five years of close companionship with this little chap. While I read the accounts of his alleged murders, and depredations on other birds, I have yet to see any such disgraceful acts on his part.

My experience with him has proved to me that he is the farmer's best friend. He is the first little fellow in the spring to pounce on and destroy all the caterpillars and insects that are destructive to the farmer's crops; and he keeps pegging away at these vermin until the grain is ripe. Then the crops are so far advanced that they are safe. All he then asks in return for the benefit he has been to the farmer is a little grain to carry him through the fall and winter.

So few know the reason for the introduction of the English sparrow to this part of the world that I wish to give it. Many years ago the streets of New York were lined with beautiful trees. In the spring, as soon as they began to put on their summer foliage, they were attacked by an ugly looking green worm called the inch worm. These would devour all the leaves, leaving the tree perfectly bare, and then hang from the trees in millions by a silken thread. They became such an intolerable nuisance that a great many people had the trees cut down to get rid of them. After the introduction of the sparrow this nuisance ceased to exist. He did his work bravely and well. This certainly is a proof of the benefit he is to the farmer. You can depend on it that he destroys more harmful insect life in proportion than he takes back in pay for what grain he eats. While now and then there may be cases of disgraceful acts on his part to others of our most beautiful feathered creatures, he has always behaved himself in my presence.

At this writing he is living in peace with the catbird, robin, brown thrush, oriole and many other birds in and around my premises. The little chap cheers us with his presence and cheery note all winter; thousands of them are killed off by deep snow, cold and want of food. Not only is he a benefit to us in the way above mentioned; he is a shield, a protector to all the other birds, in that he gives up his life to tramp cats, hawks and the boy with rifle. If he were not with us surely all the other birds would have to suffer.

I saw an article in one of our magazines advising the wholesale destruction of the sparrow with grain soaked in poisoned water. What a terrible combination that is to get in the hands of some idiot, who would use it, and destroy numberless other feathered songsters. Last winter one of my neighbors soaked corn in poisoned water and scattered it for the destruction of crows. He killed a bevy of quail. I saw the dead birds. Besides, many other birds may have suffered with the quail.

Before condemning this little chatterbox make your home with him summer and winter, and the more you see of him the more you will see his value to the farmer, and you will find on the long, cold and dreary days in the country in the winter, when all the other warblers are in the sunny South, these little innocents will brighten your pathway with their cheerful notes.

I am agreeably surprised this season to see the large increase in our most dressy song birds. Can it be possible that we are reaping our reward so soon by protecting the birds under the new law?

I have studied bird life for the last thirty-five years, and in all that time never saw a bird like one I was interviewed by this week. This little creature gave me the pleasure of his company for some minutes one day this week while I was sitting on my piazza. He was about the size of a female sparrow, but more slimly built, with sharper bill. All his markings were dark, except decided pure white stripes three-fourths of an inch long lengthwise across his head and down his back. These white bars looked as if they were made by the pencil or brush of an artist, coming to a point at both ends.

I wish to ask what has our beautiful red-wing blackbird been guilty of that he is not protected by law? I cannot understand why he should be classed with the crow blackbird. I have as yet to see anything that we might term disgraceful on his part. He is the first beautiful creature to reach us in the spring; he always comes to our swamps the first week in March, and gladdens our hearts with those sweet liquid notes. We are fast becoming educated to the fact that all our feathered friends have been put here for some wise purpose, and all at some time in the near future will be protected. Were the scales to drop from our eyes we then without a doubt would see the important mission that the birds are meant to fill.

ALFRED A. FRASER.

OAKDALE, L. I.

Remedy Against Mosquitoes.

CONSUL E. H. PLUMACHER writes from Maracaibo: A simple remedy against mosquitoes has been employed in several places in South America and is equally well adapted to the temperate zone. It consists in planting the castor-oil plant (*Ricinus communis*), or "palma christi," around the house and premises.

In cold and temperate climates the castor-oil plant grows to a height of 4 or 5 feet; in these countries it becomes a tall tree, and is perennial. It seems that the smell of the plant is disagreeable to mosquitoes and other insects, and it is an acknowledged fact that where these plants grow few mosquitoes will be found.

My personal experience bears this out. My residence is surrounded by plaitain and banana trees, and I have been much troubled in the past by the great number of mosquitoes which gathered between the leaves. Following the example of old settlers in the country, I planted the castor seeds, which grew up in profusion, and there are now no mosquitoes to be found among the plaitain and banana trees, although I keep the ground well irrigated. By keeping branches and the seeds of the plant in rooms, the mosquitoes are driven away from the latter.

Experience with Wild Animals.

Editor Forest and Stream:

In your issue of March 30 Mr. Wm. Wells discussed an article of mine in FOREST AND STREAM of Feb. 23, and answered it so completely to his own satisfaction that he closed with a challenge to "hear from the other side." Only a series of circumstances beyond my control have prevented an earlier reply. Material was not wanting. Mr. Wells seems to know a great deal about the panther, but not all. The experience of others counts, because just as real as his. The experiences recorded by me, though not my own, were, nevertheless, just as real and well authenticated as those of Mr. Wells. Yet forsooth, because not in line with his own, he refuses to believe them—a clear instance of the too broad generalization referred to in my article. Not only so, but he makes statements clearly at variance with other writers just as well qualified to judge. He says, "North and South, East and West, *Felis concolor* is the same," and that his people, though for a century and a half fighters of wild beasts, have no tradition showing that a panther is ever to be feared.

Vice-President Roosevelt is pretty good authority both on the scientific and the practical side of this question of "Experience with Wild Animals." He says: "It is foolish to deny that in exceptional instances attacks may occur. Cougars vary wonderfully in size, and no less in temper. * * * In the old days, when all wild beasts were less shy than at present, there was more danger from the cougar." ("The Wilderness Hunter," pp. 344-5.)

Speaking of size, Mr. Wells does not tell us whether the several he killed by one blow over the head with a six-shooter were full grown adults or only kittens. It would be interesting to know. It would help to an understanding.

Mr. Wells does not believe in "attacks," and says there is not a case on record of a man being killed by a panther. Let me enlighten him. In the "Big Game of North America" (pp. 414 ff.) are several instances: "In Washington, Joseph Jorgenson, a young and powerful man, at work with a spade, received an unprovoked attack from a cougar. On his defending himself, the cougar returned again and again to the attack, until finally killed by a blow from the spade, splitting his skull. The man was so badly injured in this fight for life that it was many weeks before he recovered." Another: "Mr. Cathcart, of Snohomish, Wash., was also attacked by a cougar in daylight. He was returning from a visit to a neighbor, and was a short distance from his own residence when a cougar sprang out of the place where he had been concealed in a dense thicket and attempted to strike him down, but luckily missed him and landed in the path at his feet. With a large cane that he held in his hand he made such a determined fight for his life that he held the cougar at bay, at the same time calling lustily for help. His faithful dog heard him and came to the rescue, and none too soon, for Cathcart was almost exhausted with his battle with the animal. On the appearance of the dog, the cougar took to a tree and was afterward shot."

Several other instances are given, one by Hon. Orange Jacobs, ex-delegate to Congress from Washington. The incident took place in 1864. Jacobs had just killed a large male panther and was about to measure him. A slight noise attracted his attention, and he saw not 20 feet away the female getting ready to attack him. Her spring and the crack of the rifle were practically simultaneous, and though he jumped aside, she brushed his shoulder. Fortunately the one shot finished her.

In "The Wilderness Hunter" Mr. Roosevelt records the killing of an Indian by a cougar in 1886 near Flathead Lake. Also an experience of Prof. John Bache McMaster in 1875. "He was camped near the head of Green River, Wyoming. One afternoon he found a couple of cougar kittens, and took them into camp. * * * Happening to look up he suddenly spied the mother cougar running noiselessly down on them, her eyes glaring and tail twitching. Snatching up his rifle he killed her when she was barely 20 yards distant." Mr. Roosevelt also records that Gen. Hampton had told him of the killing of a negro on his Mississippi plantation years ago. Now then, it is not claimed that these instances prove that all panthers are dangerous, nor that Mr. Wells' experience is not both interesting and valuable so far as it goes, but these recorded facts do puncture his balloon in several places, and if he keeps his promise, as of course he will, he must come down—i. e., believe. He said: "Whenever any one brings forward an undoubted case of a man in America being killed by either wolf or panther, I will believe that they will make an unprovoked attack on man, not before."

To say nothing of the other cases cited, Gen. Hampton and Col. Roosevelt do not need any indorsement of their statements.

Pardon my taking so much space on this much-written-of theme. I only wanted to show that while experience is good, life is so short that no man's experience can cover all known facts nor the sum of human knowledge on any subject.

JUVENAL.

MAY 29.

A Black Chipmunk.

PHENICIA, N. Y., June 27.—Editor Forest and Stream: After having seen thousands of chipmunks in my lifetime, it was my good fortune yesterday to discover a black one. The little fellow lives within 200 yards of this station. I have made it my business to call on him several times already, and nearly every time find him at home. He is quite tame—so much so that I have been able to approach within 6 or 8 feet of him. He seems just a shade smaller (or is he a young one?) than his common brother; does not show the least sign of the familiar stripes, but has the same little chick! chick! of his fellows. Are they not rare?

J. G. LEIPOLD.

[Black or melanotic chipmunks are rare; but as with albino specimens, they may be looked for one in the thousands seen in a lifetime.]

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen. Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 246 Broadway, New York.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Los Angeles County Association.

THE citizens of Los Angeles county, Cal., have organized a fish and game protective association, which, starting with twenty-three members, has in a month grown to a membership of 250. Secretary L. Herzog thus explains the character and purpose of the association in an address to the residents of the county:

"Realizing that all wild birds and animals, including game birds and fish, are being rapidly exterminated, owing to the non-observance of our laws, and believing it is right to do that which will conduce to preserve our animal life for the benefit of the many, a meeting was called some months ago and responded to by many citizens who admire nature for nature's cause, and which has resulted in the organization of what is known as the Los Angeles County Fish and Game Protective Association. This organization has no connection with any gun club, nor is it organized for any purposes of hunting or sport; it is non-political and was conceived and will be conducted solely for the purpose of protecting all harmless animals and all game during its lawful close and breeding season. Also to introduce more game birds in our fields and foothills and more game fish in our streams. This Association is maintained solely by private money obtained by membership fees, which are \$1 per year. This Association is only one of many of the same character in this State and which have convicted almost every guilty man who has been arrested through its or other agencies, and who have in return for their misdeeds paid fines ranging from \$20 to \$250 each. This Association can and will convict those who may be brought before its prosecuting board with the necessary evidence. But one of the greatest factors to promote this good work, in the judgment of its present membership, is the hearty, enthusiastic and honest assistance of those living in the game districts. Just as soon as it becomes known that the farmers, cattlemen, large ranch owners and all persons living in the game sections are aroused and declare they will assist us by informing upon violators, and in all ways work in harmony with our efforts, then the objects of this Association will be attained and violations become a thing of the past.

"This Association has no desire to make arrests or cause friction in any way, but hopes to begin an education of the general public in regard to the self-government of game and other useful and ornamental wild animals. We also wish to warn all persons not to resist or interfere with the deputy commissioners of this Association in the discharge of their duty, as they are working under authority of the California Fish and Game Commission, and have all the authority and power to make arrests, with or without warrants, that are vested in any sheriff. Our deputies are all furnished with proper papers and badges. "Kindly note that all game and other wild life belongs to the State of California, and not to those property owners upon whose land it may roam, and neither does the possession of such land invest any special privileges in regard to shooting out of season. If every man will do his duty in now protecting the game during its breeding season there will be enough game for all, and the many will have their chance of sport in the proper time, instead of the few, as is now the case.

"And, further, it is our aim to prevent wanton destruction of harmless birds and animals by parties when out hunting game. In other words, when hunting rabbits kill rabbits; if quail, kill quail, but do not make, as a side issue, a mark of all the harmless birds and animals crossing your path.

"Realizing the people hold the key to the situation, we ask you to help us—and that means all the people. This can be done by you joining our organization and enlisting in the work as above suggested. We wish it distinctly understood, however, that this Association is only organized for the purpose of enforcing the State and county laws, treating all alike, for the purpose of protecting and increasing the supply of all game, fish, song and insectivorous birds, and for this purpose only."

We give the by-laws as a useful guide to others:

BY-LAWS.

of the

LOS ANGELES COUNTY FISH AND GAME PROTECTIVE ASSOCIATION.

Following are the by-laws adopted by the Los Angeles County Fish and Game Protective Association:

1. This organization shall be named the Los Angeles County Fish and Game Protective Association.
2. Its object shall be to protect the fish and game of the county by enforcing the fish and game laws, as passed by the Legislature of the State of California, and all ordinances passed by the Board of Supervisors of Los Angeles county, California.
3. The officers of the organization shall consist of a president, a vice-president, a secretary, a treasurer, a prosecuting attorney, a prosecuting board of three, to serve for the term of one year or until their successors are duly elected and qualified.
4. The duties of president, vice-president, secretary, and treasurer shall be such as usually devolve on such officers respectively in other organizations.
5. The duties of prosecuting attorney shall be to prosecute vigorously all cases of arrest made by the advice of the prosecuting board.
6. It shall be the duty of the prosecuting board to carefully weigh and consider all information and reports that may be brought to their notice of violations of any of the fish or game laws, and to determine whether or not the evidence produced or obtainable is sufficient to warrant a prosecution in any such case, and to instruct the prosecuting attorney accordingly.
7. The meetings of this Association shall be held on the second Wednesday of each month at 3 P. M.
8. Nine members present at any meeting shall constitute a quorum.
9. Order of Business.—1. Reading of minutes of the previous meeting. 2. Reading of communications. 3. Reports of officers. 4. Reports of committees. 5. Election of members. 6. Unfinished business. 7. New business. 8. Good of the Association. 9. Adjournment.
10. The organization shall offer a standing reward of \$25 for any information of any violation of any fish and game law or ordinance that shall result in a conviction of the person informed against.
11. The initiation fee and dues of this Association shall be \$1 per year, and are payable at time of initiation.
12. The by-laws of this Association shall be amended by a two-thirds vote of all the members present at a meeting. Two weeks' notice thereof shall be given to the members before amendment.

Commenting upon the work done by such organizations, the Game and Fish Commissioners say in their last report:

"The formation of clubs and associations for the enforcement of the game laws of the State and counties has become more general. The success attending these local efforts has been most gratifying. In several leading counties of the State these associations have become strong and active, and have so influenced public opinion that any violator of the game laws is almost certain of arrest and conviction. The results of these combinations plainly exemplify that the interested public have a successful remedy for enforcing these laws. As soon as the peace officers of a county understand that there is a public sentiment back of the game laws, and determined local effort to enforce them, they will join in the effort, and not before. To foster and encourage this movement has been one of our aims. We have issued commissions to men named by these associations, and have paid the men for services rendered, until such time as the Association were able to compensate them. Thus the efforts first made in Humboldt, Fresno, Santa Clara and Marin counties have resulted not only in the observance of the laws in those counties, but their influence has extended to many others, and in time will, we trust, cover the entire State."

CHICAGO AND THE WEST.

The Illinois Game Law.

CHICAGO, Ill., June 29.—A letter just at hand from State Game Commissioner A. J. Lovejoy, of Roscoe, Ill., explains some of the details regarding the peculiar transactions which left us in Illinois without protection for our quail. Mr. Lovejoy states that the real condition of the law is not so bad as was at first supposed. True, the statute as it reads now will not prohibit the shooting of quail and of woodcock, but the original clause forbidding their being held in possession still stands under the old law, and this offers a very strong leverage for protective work. Mr. Lovejoy states that so nearly as can be determined the blunder in the law is attributable to the carelessness of the clerk of the committee which had the draft in charge. In the engrossing a whole line was left out, including the words "quail and woodcock," as well as some words of less material importance. The clause regarding the possession and selling of quail was not thus changed.

Now here we have a beautiful example of modern civilization. The law as it is printed is not the wish of the people, but the wish, or rather the fault, of one man—an obscure clerk in a committee room. Yet the courts will tell us that this law stands and must be observed as it is written. I used to live out in the West in earlier times, and if we had had a fool law like that out there it would not have had respect enough accorded it to last it over night. The sentiment of the people was what made the law in that region, and it is what should make it here. Technicalities did not go in New Mexico, and they ought not to go in Illinois. In the good old times men used to meet and size up together about what they thought was right, and then everybody had to do about what everybody else thought was right, and if he did not he had no standing in the community, because he was pretty apt to get hung. We have changed a good many of these things in this high geared modern civilization of ours, but I am not sure that we have improved upon the old ways very much after all.

Of course with the men who are really law abiding, this error in the law will not make the slightest difference in the world. Many so-called sportsmen of the swinish sort will avail themselves of this slip of the committee clerk and will feel themselves free to shoot quail at any time in this State. The facts having been made generally known in the sporting press, the shooters of the country are not so badly off as they might be. All the decent shooters will bear in mind the intent of the law and not its letter. They will hold their own quail dates just as the law intended they should be printed. If you know any shooter who goes out without regard to dates simply because there is this blunder in the law, you may set that shooter down as anything on earth but a sportsman.

The Roar of Wild Beasts.

The daily newspaper has a vocabulary of its own. Such words as "roar," "flash," "shock," "thud," etc., are essential to the get-up of a daily. We shall always have the "blinding flash of the revolver," the "crash of the bullet through the brain," and we shall always hear about the "roar of wild beasts," regardless of the fact that revolvers do not flash and wild beasts do not roar. Now here was a Chicago woman, a Miss Mason, who, with a friend, got lost this week in the mountains back of San Bernardino, Cal. "From midnight to daybreak," the story reads, "the young women struggled through the forest. At times, exhausted, they would sink to rest upon a bed of sagebrush, only to be aroused again by the roars of wild beasts about them," etc. There are a few sportsmen in the United States who would be tickled to death to know just what sort of wild beasts these were which roared in the night time just back of San Bernardino. A grizzly does not make a business of roaring. A coyote does not roar. A mountain lion screams once in a while, and so perhaps does the wildcat, but they do not roar. The pine squirrels do not roar, and neither does the horned frog of California. Prithce, what were these roars?

Hollow-Points for Greenland's Icy Mountains.

Chicago is not usually rated as of first consequence as an outfitting point for parties intending to visit Greenland, yet this week a large outfit was bought here with the intention of use in the latter named locality. Mr. A. W. Church, of Elgin, Ill., is to be one of the members of the Peary expedition which will sail from New York a week from next Monday, and Mr. Church has, after counseling with Mr. Hirth, of Spaldings, decided to get most of his outfit there. He has determined also upon a .30-40 rifle and the hollow-point nickel-jacketed bullets which have recently been found so successful in that arm. Mr. Church laid in a quantity of this ammunition in the belief that it would prove serviceable among the big game of the Arctic country to which the party is going.

Mountain School.

Gen. E. V. Sumner, U. S. A., retired; Col. Schuyler Crosby, of New York, and W. F. Cody (Buffalo Bill)

have established a singular sort of school out at Cody, on the Q. Railroad in Wyoming. It is called the Cody Military College and International Academy of Rough Riders—certainly a circus-like appellation enough. Yet carried out in proper fashion, the purposes of this school are not so bad. The buildings are to be made of logs. It is not of special interest to state that they will contain baths, gymnasiums, reading rooms and library, but they may be something in the fact that rough riding, as well as practical camp life in the mountains, will be taught. As to the school which will teach big-game hunting, the thing has its humorous aspects. No school can approach the old free life which was once natural to the West. But if even its ghost can be revived or perpetuated, perhaps so much the better.

Big Silver-Tip.

Mr. F. M. Stephenson, of Menominee, Mich., is in town to-day, and leaves for the Gaylord Club, of Wisconsin, to-morrow. Mr. Stephenson and a friend had the luck to kill a big silver-tip bear in the mountains of Mexico this spring. The bear was found eating at the carcass of a cow which had been mired down in a bog hollow. The skin of the bear, which was a silver-tip, was so long that when hung on the wall with the feet just touching the floor, Mr. Stephenson could not reach up to the tip of its nose. Mr. Stephenson is about 6 feet 4 inches in height himself, hence one may imagine what a height this was.

E. HUGH.

HARTFORD BUILDING, Chicago, Ill.

A Lost Chance at Elk.

Editor Forest and Stream:

It sometimes happens in the course of human events that a blunder which causes a keen disappointment and lifelong regret to the blunderer is extremely ridiculous and laughable to all but the blunderer.

Three young men, acquaintances of mine from Fort Collins, drove to my ranch in the mountains of northern Colorado, a distance of 140 miles, for a little outing. They were all tenderfeet and inexperienced in ranch life and hunting, but were enthusiastic to kill something. Deer were so abundant that scarcely a day passed without some being seen from the house, out in the meadow. While I was getting breakfast in the morning, just at break of day, which was too early for the city chaps to be up, I would generally see deer in the meadow. I would call the boys and report deer in sight. Then there would be a wild scramble for "duds," and they would be out with eyes half open, groping around in the early dawn like chickens scared from their roost at night; and shivering in the chill of the morning.

Then my attention would be all taken up watching their tactics in the effort to get a shot. It was like watching a "sight unseen" trade when you know the property of both traders. I could see both the hunted and the hunters from the house, which was on a bluff overlooking the meadow, through which flowed a creek heavily bordered with willows, which afforded cover for stalking. Such morning escapades would always terminate in an overdone or burnt breakfast, and the exit of the deer from the meadow in their usual health.

One of the boys, Frank, claimed to have killed deer, and was not so enthusiastic over them, but his whole heart was set on getting a shot at an elk. He thought it would be the crowning effort of his life if he could only kill one, and he was confident that a chance was all he needed.

I proposed going to Big Creek Lake, a beautiful sheet of water one by one and a half miles in size, situated high up in the mountains, about six miles from the ranch, and surrounded by heavily timbered mountains, where elk were always to be found, with several bear and plenty of deer. Frank was especially anxious to go, thinking he might get a shot at an elk. We drove as far as we could, then picketed our horses and proceeded on foot. All the way Frank was training his gun on objects and picturing himself shooting an elk.

The country was rough, and I picked out the smoothest possible way of getting through, and yet the boys were loud in their imprecations against such a rough trail, and asked in a sort of "you-don't-know-the-country" way if I couldn't take them back by a rougher trail. I said I certainly could and would. While two of the boys and myself were wandering leisurely along near the edge of the lake Frank had taken a circle further out in the woods, and had come around ahead of us, but all the while in our sight. We were sitting on a log, and saw him get up on a log which was lying up several feet from the ground and gaze steadily ahead into a little swampy park for more than a minute; then he jumped down and came on toward us, and when he got about half-way to us he called out in a loud voice, "Say, do any of you fellows want a shot at some horses?" The situation was plain to me like a flash. There were no horses within several miles of there, and I said to the boys in a "stage whisper," "It's elk." We jumped to our feet, and just then we saw two cow elk trot through the little park and then stop about 100 yards away and stand long enough for several good shots. I urged them to shoot, but the excitement was running too high through their nerves, and, with all their aiming and efforts at self-control, not one of them fired a shot, and the elk left in disgust.

Then Frank came and made full confession. All the time he was standing on that log looking, he was within close range of the elk, and it never occurred to him that they might be elk, but he thought they were horses. The scene which followed is easier imagined than described.

Later, while we were strolling along the shore of the lake, and while one of the boys was off a short distance in the woods looking for deer, we made some artificial bear tracks in the sand and put a little muddy water in them to make them look very fresh. Then we called the fellow out of the woods to see them, and soon had him worked up to a high state of excitement. He was never enlightened, so far as I know, and he had the story well circulated. I heard it long afterward in town, as he had told it.

I fulfilled my promise to show them rough country as we went back. I knew a place directly on our way back which was as nearly impassable as I cared to

tackle myself. While I was leading the way over a windfall, walking logs and jumping from one to another from 5 to 8 feet from the ground, having my shoes shod to prevent slipping, I heard a commotion behind. I looked back and our fellow had disappeared entirely. He was easily located by his liberal use of words, such as they were, which came forth as if they had been pent up for some time for that particular occasion. As he came crawling up in sight from among the logs, I assured him that this was smooth compared with some parts of the Rockies. Of course he couldn't see how any comparison could make it smooth.

EMERSON CARNEY.

MORGANTOWN, W. Va.

The Adirondack Deer.

BUFFALO, June 28.—*Editor Forest and Stream:* The last word regarding game preservation will not be said so long as deer and gun endure. I therefore feel justified in committing trespass on your pages.

The good God evidently considered the greatest good of the greatest number when He created the Adirondack forests, for He placed them where they are accessible to millions of those who need them most—denizens of cities, inmates of shops and factories, offices and stores. He made them wild enough to tempt the game and yet surmountable by the man. Most of us are selfish in our natures and look at things from our own view points. I think mine is that of many thousands to whom this wilderness can be the nearest earthly approach to paradise. I love the woods, the sunlight and shadows, the dashing waterfalls, the majestic forest trees, the storm-beaten crags. I love the silence and all the woodland sounds. Then I do love the hunt, and am sportsman enough that I count two weeks well spent with cold and weary limbs if I can get one deer, but oh! how I want that deer, and my purpose now is to state some ways in which I can be helped to get him.

My notion is that many who write on game protection in the North Woods have never been nearer their subject than Newspaper Row. There is just one provision in the game law, which, if enforced, would give every man who goes into the woods all the sport and all the venison he ought to have—don't let any man kill but two deer. The average guide kills from thirty to fifty in a season; there are hundreds of residents of near by towns who make four or five excursions a year and kill a dozen or so, and there are many lumber camps that serve venison all the year round to fifty or a hundred hungry wood choppers. It is the only fresh meat they have, and they keep hunters out all the time to supply it. Deer breed in the Adirondacks with almost the same facility that cattle possess in the pastures. If they were given half a show they would multiply sufficiently to furnish the veriest tenderfoot that keen stimulus of the chase that causes the blood to course as no liquor ever brewed; yet the last time I was in these woods, during two whole weeks, I saw but a single white flag waving over the witchapple 500 yards away in a direction where some of my friends were guarding another runway, so I dare not shoot, and they never saw him.

The administration of the game laws is a farce. In our cities the officials are frequently engaged in daily violation of the laws through their relations with saloons and gambling houses, so in the mountains the deputy game wardens are among the most flagrant marauders. They use their pull as the alderman does his, and sin without fear. The remedy for all this is easy. A dead deer is worth to a guide about \$3; he can buy its equivalent in meat for this amount, and when he learns that a live sportsman is worth \$30 a year and that his friends are worth \$30 a head, there will be some effort on the part of the craft to see that the buttered side is up. Let the guides organize a union and fine (themselves) members who violate the law and treat as scabs and bring to justice all outside the organization who violate the statutes. In sixty days ninety per cent. of the illicit killing would stop; in two years they could drive a fine deer within shotgun range of every man who employed them and the fame of each guide would grow great in club and hostelry—in all places where hunters do congregate.

And now I am going to switch off on a branch of the subject where I expect to stir up controversy. I am in favor of a shorter and later open season—the months of October and November, with two weeks open to the hounds. September has been a very warm month, even in these mountains, for a number of years—so warm as to rob the chase of the vigor which is a large part of the inspiration, and warm enough to spoil much of the meat, while the snows have held off all through November—at any rate to such a nextent as to impede the running of the deer. The cold, brisk days of late autumn are the ideal ones for him who loves the sport and finds the game in the best condition to make a lively run and furnish extra juice and flavor to the steak. As for the hounds, the average city man is not able for a week or so after he goes into the woods to endure the tramping; he does not possess the woodcraft necessary to make still-hunting anything but a delusion, so the guide goes out and plays dog—and a mighty poor dog he makes. The man who only takes down his Winchester once a year is not enough of a shot so any one need begrudge him all he hits.

I don't believe in driving the deer into a lake, paddling out within boat's length and putting a ball in his shoulder, but nine out of every ten of them run the streams, and any doctor, lawyer, merchant or priest who fires a fatal ball from stand on riverside or at swimming buck from the shore of a lake is welcome to his potpie and can feel it well earned.

And then the music of the hounds! Even the college professor learns the first day to distinguish the deep bay of good old Spot from the sharp yelp of saucy Nell; and the long hours on the fern bank behind the rock are cut in two by the occasional tingle brought by the distant roicing of the pack, no matter whether they drive toward one or not. The hounds very seldom make more than two runs a day, and usually only one, and with a party of half a dozen will not bring in more than the law allows in a fortnight's season. Enforce the provision as to the killing of only two deer and make it unlawful to sell venison at any time and the dogs may easily gain their freedom for a brief race each year.

GEO. S. HULL.

From Shore to Shore.

PORT RICHMOND, N. Y., June 28.—*Editor Forest and Stream:* I want to say a word through FOREST AND STREAM to your Staten Island correspondent who signs himself with the well-known trade mark of Hennessy's famous Three Star brand.

His letter is very interesting—no sarcasm, Hennessy, if this reaches your eye—but he's away off on his rabbit statement.

Staten Island is a good big little place, and while there may be plenty of rabbits down around Princes Bay where Three Stars scintillates, I beg to assert firmly, but politely, that the north shore of Staten Island from New Brighton to the Arthur Kill bridge is not so dangerously overrun with hares as your correspondent would lead one to believe.

Last year the Richmond County Game and Fish Protective Association experimentally blew in a lot of money on quail for the south shore (Princes Bay and vicinity), and I am glad to learn that they are prospering. Next year we north shore members of the Association hope to

COMMISSIONER A. J. LOVEJOY.

see enough hares liberated to enable our hounds to keep their toe nails run down smooth.

As it is now, we have a few good chases in the early part of the season, but later it becomes hard work to start a hare.

I think your correspondent is All-en-tangled in his rabbit remarks, but if he will come to Port Richmond and verify my statement I will come to Princes Bay to verify his, though I have not the slightest doubt of its truth.

OLD CROW.

Commissioner Lovejoy.

STATE GAME COMMISSIONER A. J. LOVEJOY, of Illinois, is a man of affairs. In addition to his game commissionership, Mr. Lovejoy is President of the American Association Fairs and Expositions; Vice-President State Board of Agriculture, Illinois, and General Superintendent State Fair; President Beloit Interstate Fair and Driving Association; member Live Stock Committee University of Illinois; member Executive Committee International Live Stock Exhibition, and chairman Finance Committee Board of Supervisors of Winnebago county.

Black Game and Capercaillie in Vermont.

SWANTON, Vt., June 24.—*Editor Forest and Stream:* As the importer of the capercaillie and black game that were brought into Vermont, we were very much interested in Mr. Von Hoffmann's article on capercaillie, and we would be pleased to hear what proof he has of the untimely death of any of the birds that were released in our State.

In one locality we have good evidence that the black game are thriving and increasing in numbers.

N. P. LEACH.

Times Have Changed.

How times have changed! Last Sunday all day long four men worked in the south meadows, not a hundred rods from Fort Hill, planting potatoes. They had a horse to furrow the rows, and some of the time two women were present. Hundreds of people saw them, but they were not molested. Of course the law against Sunday labor was violated, but what of that? The laws seem to be made, some to be observed and some to be violated. If the law protecting trout of less than six inches in length is violated the violator is in immediate danger of being arrested and fined. The game warden is on the watch for him. So it seems that a 5¼-inch trout is held to be more sacred hereabouts than the Sabbath day.—Northampton (Mass.) Gazette.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

How Frank Saved the Trout.

BY GEORGE E. GOODWIN.

THE pleasures and benefits that are derived from vacations and outings spent with dog and gun or with rod and line in the woods of northern New York, the wilds of Canada, the none-too-well-known depths of the Rockies and in many other sections of our great North American continent where game and fish are yet to be found, are known already to many ardent sportsmen, and the time when a fortnight can be passed on some favorite range or water is looked forward to with keenest anticipation, and many an hour is given up during the months of waiting to studying routes and time cards, overhauling fishing tackle and hunting outfits, purchasing an article here and another there to take the place of some one that has served its days of usefulness in seasons past or to supplant some other that is relegated to disuse because of more modern and (not always) improved ones having been devised, and, perhaps greatest pleasure of all, to picturing mentally the hoped for battle royal with some particular old and wily trout that was lost last year by the parting of a frayed leader in an only too well remembered pool, or to conjecturing in what way the mistake that cost the opportunity of a shot at that grand old buck that frequented a particular range of beech timber and carried the "biggest set of horns in the woods" can be avoided when the cares of business are once more thrown aside, the burdens imposed by modern civilization dropped from weary shoulders and the too often unwilling, but nevertheless exacted worship of Mammon exchanged for and supplanted by that free communion with nature which brings man nearest to the Great Father.

Many a weary plodder, with the instinctive love of the chase passed down to him, through long generations, from an ancestry that ate, slept and lived apart and far removed from the dull and deadening grind of the wheels of commerce, pauses at his tasks and gives up a moment to the thought of what delight and happiness would be his if such an outing was or could be brought within his reach, and then, with a sigh, turns back to his work, realizing that it is not for him.

Many a man, however, works along under such impressions, and grows old in consequence thereof more rapidly than he ought, to whom there comes from time to time opportunities unnoted in which he could in part, satisfy his longings if he only knew how to take advantage of them, and that too without in any way materially interfering with or neglecting his business. Acting on the principle of the old adage that "half a loaf is better than no bread," at least some of us who cannot get a stated vacation can from time to time find a few hours, a half-day, or perhaps even a whole day, which by good management and planning can be given up to some pet sport, and if this little sketch will bring to but one care-burdened lover of nature a full realization of that fact, it will not have been written in vain.

A certain Friday evening in May a few years since, the writer found himself in a little northern New York village, the business which had called him there completed, and with nothing to do on Saturday but make his homeward trip. In the course of a conversation with a business acquaintance that evening, the subject of fishing came up, and after some talk this gentleman, whom we will call Avery, said:

"By the way, as you are fond of fishing, if you will stay over to-morrow and go home on the night train I will put in the day with you, and we will try and get some trout. I have plenty of tackle and can fit you out in good shape, and we can have a royal good time. What say you?"

And I said just what any sensible man would or should say under like conditions, that I would be only too glad to take him at his word, and would remain.

The next morning, bright and early found us on a train speeding along toward Rainbow Lake, some eighteen miles distant, and as the breakfast bell was sounding from the snug little hostelry of mine host Wardner, located but a few rods from the station, and about the same distance from the lake, we alighted, our appetites sharpened by our early start, and were soon seated at the table and doing ample justice to the trout breakfast which was set before us. Avery had telegraphed the night before, advising them of our coming, and by the time we had finished our meal, lighted our pipes and walked down to the boat house, Frank, our host's son, and one of the best men who ever pulled a trout fisherman, had his boat in the water and everything in readiness for the start, and you may be assured that we were not long in stowing away both our tackle and ourselves and telling Frank to "Let her go." Lake trout was the object and trolling the game, and rods were quickly rigged and lines in the water. Avery put on a phantom minnow, while I, not liking anything artificial in the midst of such surroundings, started with a live one. Frank informed us as he pulled slowly along that the fishing had been very poor for nearly a week, and, while the wind had changed during the night and the conditions seemed more favorable, he did not regard the day as ideal, and was afraid we would have but indifferent sport. Under certain conditions this would have been decidedly disappointing, but to the writer, who had not had a line in the water in a whole year, it conveyed little or no meaning. Freed from business cares for a day, gliding over the surface of a beautiful sheet of water, rippled by a gentle breeze, wooded hills and rock capped mountains meeting the eyes in every direction, the question of a large or small catch, or, in fact any catch at all, did not seem of any particular importance. But it so happened that Frank, wise as even he was in trout learning, was not entirely right in his prognostications, for we had hardly been at it half an hour before the phantom aroused either the appetite or the anger of a 2½-pound trout, and after a few minutes of lively work Avery held it up for inspection with the remark to Frank that it did seem to be rather a poor day. Then an hour and a half passed, and Frank's judgment seemed likely

to prove better than the first operations had indicated, for neither of us had a single strike in all that time. We had covered all the best ground in the lake proper, and the question arose as to whether we should run down the outlet and fish the river or go through a cut, just large enough to permit the passage of a boat, into Clear Pond, a little gem of a lake lying west of Rainbow and separated from it by a strip of land only 15 or 20 feet wide, through which the cut had been made. The decision finally reached was in favor of Clear Pond, and I do not believe that any one of us has ever regretted it. As soon as the boat cleared the ditch our lines were run out and my minnow, hitherto undisturbed, had gotten hardly ten yards from the boat when he was struck viciously and the light rod I was using had about all the strain it could stand for the next five minutes, and when it was finally allowed to straighten out, Frank had a 3½-pound beauty in the landing net, and I could not resist the inclination to remark, with a side glance at Avery, that it did seem to be rather a poor day. A fresh minnow was hooked on, lines run out and we were soon at work again, and during the next hour Avery landed two and I had two strikes and failed to hook either of them.

By this time it was past noon, and in spite of the breakfast we had stowed away at seven, thoughts of lunch began to manifest themselves, and we put ashore under some large pines, discussed the contents of the hamper which had been prepared for us, and then threw ourselves down on the soft pine needles, and for an hour enjoyed an idleness which only like conditions and surroundings make possible. But the possibilities contained in the clear waters of the lake spread so temptingly before us called us back to action, and our traps were soon snugged away, the boat again on the water and every nerve, a few minutes before so perfectly relaxed, now on the alert for a strike. The next hour brought three fine fish into the boat, one coming to Avery and two falling victims to their liking for live bait. Then came a period of, as Frank remarked, "just fishing," and we began to feel that our day's sport was over, and although we had as fine a catch as one could wish for, the longing for just one more was present, and we decided to try the ground opposite the mouth of the ditch, where Avery had taken his first fish, and, that failing us, to cross back to Rainbow and fish over the likely places on our way to the hotel. Avery reeled in his line as we started and examined his phantom with the greatest care before again consigning it to the water, while I had Frank pick out the liveliest minnow from the pail and put it on my hook in the most tempting way possible, and, thoroughly prepared for whatever might come, we drew near the opening and waited, with every faculty alert, as the slow movement of the boat drew our lines closer to the spot where we hoped the game might be lurking. On and on, closer and closer, now in the exact place, then over it and drawing quietly away, but no spiteful snap was signaled over either line, but the looks of inquiry that were exchanged were quickly interpreted and Frank was told to try it again. So swinging well out into the lake, we turned back over the same ground and again settled down in eager expectancy. Once more the bait nears the opening, then is drawn silently by, and Avery turns to me and in a somewhat dejected tone remarks, "I guess it's all up. Let's reel in and get into the other lake," so quickly acquiescing, I began taking in my line, when a quick movement which fairly makes the boat lurch informs me, even without Avery's shout of "I've got him," what had happened. And judging from the way his slender rod was bending and his line whizzing through the water, the "him" in the case was something that would do one's eyes good to look upon. Avery, after the first burst of excitement, settled down in his grim, cool way and brought all his skill to bear on the task before him, but try as he would he could not keep the fish from getting a little further away with each lunge. I had noticed, earlier in the day, a snag which came just even with the surface of the water, lying pretty well inshore, and felt that the fish was so near it that he was bending every effort to get into it, and said to Avery, "If you don't stop him he will get fouled on that snag," but he replied, "Nonsense; he isn't within 30 feet of it." "Well," I answered, "perhaps not, but if he was on my line I would want him a good deal further away, and what is more, I would put my tackle to the test to get him there, too."

At this time the fish was sulking almost directly astern of the boat, but, in response to a little urging, he concluded to move, and having made up his mind he went at it right heartily, darting like lightning shoreward, then stopped suddenly and remained quiet, and all that Avery could do did not budge him. Avery looked at me with a bit of an anxious expression, and I remarked, as if in answer to an unspoken question, "Old man, your 30 feet was, I am afraid, not far enough. It looks to me as if your jig was up," and by the expression of Frank's face I could see that he agreed with me. And, in fact, after a few more vain efforts, Avery reluctantly came to our way of thinking, and told Frank to back the boat while he reeled in his line, and in a few minutes the fact was demonstrated to us that the tackle was firmly fouled well down at the bottom in 10 or 12 feet of water. Then Avery, usually calm, lost his serenity, said a few emphatic, but repeatable, words and was about to smash something with a vicious pull, when Frank stopped him with, "Don't do that. Your fish may not be lost after all. Let's investigate a bit before giving up." We looked at him in astonishment, for having already discovered that the snag on the surface was an end of a limb attached to a good sized tree that lay in a water-logged condition on the bottom of the lake, there seemed nothing to do but to break away and go home. Frank, however, was serious, and moving the boat so it rested above the point where the line was fast, he leaned over the lee side where the water was still and began peering into it. After a bit he straightened up, turned to us and said, "The fish is there and Mr. Avery has, by trying to start him, pulled the line, which seems to be fouled around several small branches so hard that his nose is drawn tightly up against one of them, and he has no leeway at all and can't move."

"Well," said Avery, who had not calmed down to any appreciable extent, "what of it? He is 10 feet under water, fastened to a tree that weighs a ton, and we are not particularly well supplied with either diving bells or derricks, and there is nothing left but to break the line and let him hang there until he tears himself loose or dies."

"Let us have a try at him at any rate," Frank replied,

and Avery, yielding rather to my appeal than to any hope of success, consented. Frank then, after cautioning him to keep his line taut, turned the boat until it lay directly over the trunk of the tree, the bow resting over the point where the fish was tangled in the top, and the stern pointing back toward the butt. He took one oar, stuck it down on the lee side, caught the end in a crotch and told Avery to hold the handle with his disengaged hand, so that its center rested against the gunwale, and, acting as a lever, kept the boat from being driven out of its position over the trunk of the submerged tree by the breeze, which for an hour past had been growing fresher and harder. At the same time I was delegated to hold fast to a limb that stuck up near the surface, opposite my position in the stern, and prevent the boat from turning on Avery's oar. This all arranged, Frank got out a half-inch rope about twenty-five feet long, which he carried as an anchor line, took it and the remaining oar, went up in the bow and began operations. Looping the middle of the line over the end of the oar blade he stretched himself over the bow, resting on his stomach, and began prodding about in the water with the oar, holding it with his right hand and hanging on to the rope with the other, so it would not slip off the end of the blade. We waited as patiently as possible, hanging on to the oar and the limb respectively with grim determination, and after about five minutes heard Frank give a satisfied grunt, and saw him straighten up and draw the oar inboard with the remark, "I've got it." We both exclaimed, almost in a breath, "Got what? The fish?" but he answered in his exasperatingly deliberate way, "No, the tree." At this Avery began to show signs of breaking out again, but he was cut short by Frank telling him to draw up his oar and move carefully into the bow, taking care meantime to keep his line good and tight. Frank then took the place he had vacated midships, gathered up the ends of the anchor line and began hauling on them. The first effect was to draw the boat forward and downward, but after a bit the tendency changed, and we, who were all eyes, saw the tree, trunk, branches and all, begin to slowly rise toward the surface. The ropes were drawn up on the side of the boat opposite to that on which I was gripping my limb, and as the tree began to stir I was requested to take hold with both hands and lift. And lift I did, for the fact began to dawn on me that there were some things about fishing that I had yet to learn, and that in Frank I had a particularly bright and competent instructor. This raising process did not last long, however, for we soon reached the limit and could not stir it another inch. So Frank made his ropes fast to the gunwale, told me to hang on to the limb, and, putting out the oars, began pulling the boat, stern foremost, shoreward. I say "began" advisedly, for it seemed for a time that it was to be nothing but begin, as we had not apparently raised the tree so it was clear of the bottom, but after a bit his powerful strokes began to tell, and the boat and tree moved, slowly and laboriously it is true, yet moved shoreward. This, of course, could not continue long, for the water shoaled gradually as we progressed, and soon Frank, pretty well winded with his exertions, dropped the oars and leaned over to see what change had been produced in the situation, and his satisfied look as he straightened up was full of encouragement, and I think it gave new strength to my arm, which had been getting pretty tired by reason of my long and steady pull at the limb I was yet hanging to. After a moment's rest Frank released the rope from the branch to which it had been fast, using an oar for that purpose, moved the boat forward until the bow was again over the point where the line was fast, stationed Avery with his oar lever on the middle thwart, had me grip a new branch, and then betook himself to prodding around in the water again with the rope looped over the blade of the remaining oar and his body hanging over the bow of the boat as before. Pretty soon the oar was drawn up and carefully shoved back into the boat, and then we sat and waited to see what Frank was doing with his hands, but realizing, both from the way his body was contorting and from the vigorous grunts that emanated from his direction, that he was busy. Avery and I must have been pretty well stiffened up, he hanging to the oar with one hand and to his rod with the other, and I grasping the branch with both mine, but the proceedings had gotten to a point where such things were entirely overlooked, and we were both waiting with the utmost interest, and wondering what Frank's next move would be, when we heard a dull, snapping noise and saw him turn himself over and back into the boat with sort of a compound convolution movement, and hold up a piece of tree top about three feet long, the larger end almost fringed where it had been twisted off, and hanging from its center was the trout.

It hardly seems necessary to say more, but it will do no harm to record the fact that no thought was given to tired muscles, that no regret was expressed because of our performance, or rather Frank's, having used up so much time that we could not fish on the homeward way, that the day with its incidents was one of the most enjoyable and will be one of the longest to be remembered of any that was ever given to such sport, and that the trout that Frank saved tipped the scales at exactly 5½ pounds.

The Rainbow Trout in Michigan.

SAGINAW, East Side, Mich.—The law that applies to the Au Sable and its tributaries is a grand one. It makes your basket look slim, though beautiful. I have just had three days on the North Branch. We got fish enough, but not many. Yesterday afternoon, my friend, W. A. Avery, of Detroit, pleaded for us to stop the wagon as we were on our way to the car, so he could try a nice looking stream that we were passing. He jumped out and with a No. 6 Cahill made a cast and hooked and fought until I got it into the net a big rainbow trout, 4¾ pounds, 23 inches long and 5¼ deep. It was a magnificent fish, and I think probably as large a one as has been taken with a fly in any Michigan waters. I do not mean but what a great many larger rainbow trout than this have been taken, but they usually have been taken with some sort of bait at night.

W. B. MERSHON.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

ANGLING NOTES.

Flopping of Trout.

YESTERDAY I was talking with an old gentleman who is an inveterate fisherman and asked of his success in angling this year. He fishes the trout brooks far and near from his home, always with worm bait, and I am told that he will to-day struggle through thick alder growth with the enthusiasm and energy of a boy in his teens. He said: "The brush is so thick on Sproat Brook nowadays that you have to stick your pole in through any hole you can find, and I have to let 'em swallow it pretty well down before I yank, and then I can handle 'em, generally; but the other day I lost three and only saved one—a good 10-inch trout. I ought to have had one fish that I lost, and it was surely a pound trout or better. The hook came out because I did not give him time enough to swallow it way down, but I landed the trout all of four feet from the edge of the water, and there he was flopping all right, and the bank was not sloping, so I thought I had him sure, though the brush was so thick that I could not get to him in a minute, and he kept flopping, flopping, flopping, straight as a gun barrel toward the water, and into it, before I could put a hand on him. If the brush had not tangled me all up I could have saved him."

Did any boy or man ever know a trout under similar circumstances to flop away from the water? Did any one ever know of a trout (or any other fish, for that matter) that was thrown on the bank, be it far or near from the water, that it did not flop toward the water by the most direct route? There is never an instant's hesitation as to the direction in which the water is to be found, and unless the fish falls into a depression from which it cannot flop, it will generally get back into its native element unless the fisherman is quicker than the fish. The remark of the old man about the flopping of the trout caused me to think about the times, as a boy, that I have thrown trout out on the bank and the thought gave rise to the questions I have asked.

The brain of fishes is exceedingly small, and consists of the enlargement of the extremity of the spinal marrow, and in a pike the proportionate weight of brain as compared to body is as 1 to 1,300. I never have seen it figured as to a trout, but as I look back to some trout that have flopped away from me into the water after I thought them reduced to possession—I mean to my possession—it would appear from their generalship in escaping that their brain as compared to body, proportionately, is as 1,300 to 1, or just the reverse of the pike.

Running of Eelers.

A year or two ago I wrote an article for FOREST AND STREAM on the common eel, and it was after reprinted in one of the reports of the Forest, Fish and Game Commission, and it has been the means of bringing a number of letters to me, asking for further information about the eel. Some of the queries I could answer and some I could not, and I began to ask some questions on my own account. What I wish particularly to know is the exact time that eelers run up any given stream, and the duration of the run, and this information I have not been able to obtain thus far. In a general way I know the eelers run up from the sea in the spring, but I have no memorandum of the exact time in any particular stream.

A friend very kindly sent me a newspaper clipping lately with the date line Belleville, N. J., June 15, which states: "The Passaic River on both sides this afternoon was fringed by a continuous ribbon of young eels, which were so thick that many were forced upon the banks."

This information, I must confess, was a little startling to me, for it was the first intimation I have ever received that the eelers ran up on both banks of a stream at the same time. I saw one run of eelers, but saw it only from one side of the stream, and I never dreamed that there could be a similar run on the other side, and of course never investigated. For years I have been gathering all sorts of information about eels, and this evening I looked over a stack of clippings and memoranda, and nowhere is there a suggestion that eelers run up both banks of a stream at the same time, and if this is true of all streams it simply doubles the enormous run of eelers, as it has been estimated from one bank alone. The duration of the run of eelers is another thing about which we know little positively from anything which has been printed. One item, which I cut from the Christian World, says: "The eelers have been seen to travel along the bank of a river in a continuous band, or eel rope, which has been known to glide upward for fifteen days together." This is the only reference I have ever found given in days of the length of the run of eelers, and without knowing why, I have always had a feeling that this period of time was not well established. The eelers when they run are about four inches long, and they make a solid ribbon in the water along the shore, and if they do run for fifteen days and one out of a hundred survives, and grows to a foot in length, the total number would seem to be sufficient to fill our fresh-water streams and ponds, which they select for temporary abiding places, so full that there would be no room for anything else. Possibly some one on the Passaic or elsewhere can give through FOREST AND STREAM definite information as to the length of time the eelers do run, and confirm the statement that during the run they are found in the water on both sides of the stream they are ascending.

Striped Bass.

Some years ago when the matter of providing a close season in the Hudson River for striped bass (*Roccus lineatus*) was agitated, there was a diversity of opinion as to the exact spawning season of this fish in the river and all sorts of conflicting evidence on this subject was presented, and all presented in good faith, apparently.

Last winter the question came up again, when it was proposed to amend the law, and I had considerable correspondence with law makers and anglers who were interested in protecting the bass during the spawning period. Not only the spawning season was under discussion, but the place of spawning and the age when the fish first spawned. The present law protects the striped bass in the Hudson from net fishing from April 30 to July 30, and it also provides that no striped bass under 8 inches in length shall be taken. Last week I spent part of a day at

the New York Aquarium, visiting Mr. Spencer and Mr. De Nyse, and we discussed a number of things, and among them the spawning of the striped bass. Mr. De Nyse has some records on the subject which I noted. When he was connected with the old aquarium at Thirty-fourth street and Broadway, where the Herald Square Theater now is, he was notified that a large striped bass was held alive at 155th street. With an assistant he went there at once when the notice was received, and it happened to be late in the evening, and found a fish fastened with a rope through the gills to the shore. It was on the 15th of May, and in handling the bass ripe eggs ran from her freely. This bass was caught in a drift net in the Hudson and weighed 55 pounds. On the 28th of May he received notice of the capture of another striped bass in the Hudson. This fish, weighing 70 pounds, was also a ripe fish, the eggs running as freely as did the eggs from the first mentioned bass. Major Ferguson and Holton are, I believe, the only ones who have artificially hatched the striped bass, and both secured the eggs in May—one in the Potomac and the other in North Carolina—and there never has been any good reason that I could discover to doubt that the season in the Hudson would differ materially from more Southern waters.

Age of Spawning Striped Bass.

The age at which striped bass first deposit eggs seems to be an open question. Mr. De Nyse is of the opinion that they do not spawn until they are ten or twelve years old, but his opinion is based largely upon observations of fishes in confinement. There are now in the New York Aquarium striped bass that have been there since 1894, and are consequently seven years old, and some of them are estimated to weigh from 30 to 35 pounds each, but so far none have been observed to cast eggs, but confinement may have retarded their sexual development, and it is also barely possible that they may have spawned unobserved, though Mr. Spencer and Mr. De Nyse think this unlikely; but they will make it a point to observe the fish closely another season.

Smelt and Codfish.

For two years past the State of New York has been unable to obtain smelt eggs on Long Island, though in former years they have been obtained by the millions, as the plant of fry in 1896 was 34,000,000, in 1897 45,000,000 and in 1898 48,000,000, all from eggs taken in Long Island streams. There was a falling off in 1899 to a very few millions, still worse in 1900, and this year none at all, though the north and south shores were explored at the usual time for smelt to run. In 1900 it was thought that the heavy storms which prevailed at the spawning season prevented the smelts from running into the streams where they were in the habit of spawning, but this would not be an excuse this year. Talking of this to Mr. De Nyse, he said, quite positively, that he believed the codfish artificially hatched by the United States Fish Commission and which now swarmed in Long Island waters, had preyed upon the smelt to such an extent that they were practically destroyed where they were formerly so abundant. He did not say what evidence, if any, he had of this, except the presence in vast numbers of the young codfish, where formerly smelt were so plentiful, but it may be a reasonable explanation of the disappearance of the smelt. In other than Long Island waters the smelt have been known to spawn in deep water off the mouths of the streams to which they usually resort for spawning, and I had hoped after 1900 that the smelts would again show themselves in the streams as formerly, but they have not done so, and if the codfish are responsible for their absence it may be a case of the survival of the fittest, much as we will miss the smelt.

Black Bass in New Jersey.

A New York newspaper—the Sun—on June 23 had an item about black bass fishing in New Jersey. It said: "There hasn't been such a black bass season as this in New Jersey in years, according to Jersey fishermen. * * * More black bass are being landed, and the fish are finer than Jerseymen have seen for a long time. In Greenwood Lake large messes of fish from 3 to 5 pounds apiece are being landed, and in some of the smaller and less known waters the catches are even better. The fishermen are praising the enactment of the close season law for black bass, which is comparatively new in the State." It might be well to stop right there with the testimony that the fishermen are praising the enactment of a close season law for black bass, and FOREST AND STREAM may well congratulate itself that after many years this is so, but I cannot forget that it is to Greenwood Lake that New York owes the enactment of a law which opened the black bass season in New York on May 30, and that the law was in force for long years in spite of the weekly teachings of this paper that the law was all wrong, and that it must result eventually in a scarcity of black bass. There never was a reason given for opening the season on May 30 except that it would enable fishermen from the city to fish on a national holiday—Memorial Day. The New Jersey Fish Commissioners, after New York had advanced the season to June 15, advocated a similar law in their State, and the fishermen are praising it. The sleep was longer than Rip Van Winkle's, but there must be rejoicing that finally there was an awakening, and the next step will be to advance the close season to July 1, and there will be more rejoicing and more praise singing.

From the Ristigouche.

Mr. Mitchell sends me another letter in regard to salmon fishing, the letter being dated at his home, Norwich, Conn., June 20: "I left Metapedia on the morning of the 14th at 3:15, and arrived home on the 15th at 7:05 P. M. That looks like quick traveling, and makes one feel that he is not so very far away from salmon fishing after all. But I made two trips this year, as Archie and I returned home to a funeral, not intending to go back again this season. After the funeral I found I had a week to spare, and went back to Canada. On my first trip I got but one fish, which I wrote you about. On the second trip, six days' fishing, my score was four fish, and the average was low—10½, 13, 17 and 20½ pounds. I have just received a letter from Mr. Porteous, who is fishing the water. He killed a 22-pound fish last Friday, and on Saturday one of 20 pounds, the last the first of the season on the Alford water. I wrote you about the water being

so very low when we arrived on May 24. Before I left for home the second time the water was actually higher than at the same time last year, which accounts for the Alford water not fishing earlier.

"Mr. Ayer killed two fish last Saturday on the lower water below the Pine Tree. They weighed 20½ and 26 pounds. I think it very likely that they will have fine fishing this week and next. I sail on the 26th. It was awfully hard, though, for me to cut my fishing in two this year, even for a trip to Europe. I shall do a little fishing as usual in Loch Leven, but will not take any trouble to find salmon fishing on the other side."

I heard, indirectly, that Mr. Charles H. Wilson, or Mr. Williams, fishing the Mowat water at Deeside, on the Ristigouche, killed a salmon of 32 pounds.

Water Pollution.

At a sitting of the Royal Commission to investigate the salmon fisheries of Great Britain, Prof. W. H. Perkin, of Owens College, Manchester, gave evidence in regard to water pollution and its effects, which may be summed up in a few words. That while few acids and alkalies were in themselves injurious to fish, the substances contained in sewage robbed the water of dissolved oxygen so necessary to fish life. Land and Water commenting upon this said: "This is a point which is apparently not very generally grasped, for people seem to think that if effluent is not actually offensive to the smell, it is harmless. There can, however, be no doubt that in many cases crude sewage would be actually less injurious to fish life than sewage, which has been treated chemically, for the latter de-oxygenates the water to an extent which renders it quite incapable of supporting fish life."

Mr. J. B. Fielding, who represents the Royal High Commission now investigating the salmon fishery of Great Britain, is now in this country collecting evidence to be used by the Commission.

Sturgeon.

Last year I mentioned that one day when I was out in a shad boat on the Hudson a drift net fisherman caught a salmon which brought him something like \$60 or \$70. A single fish which will make such a return is valuable, and the sturgeon are getting very scarce in the Hudson. This year I learned that at the Albany water works pumping station something like twenty-five young sturgeon are killed annually—fish 2 to 3 feet long. Such fish are worth saving. A. N. CHENEY.

The Emperor of Wisconsin Waters.

THE fierce and voracious mascalonge (*Lucius masquinongy*) well deserves its title of fresh-water shark and river pirate. It is the undisputed, absolute master of its watery domains, and rules therein with iron-clad laws, always watchful, ever aggressive and frightfully relentless.

It is perhaps no more destructive to animal life than the shiner, sucker and other harmless fish, but the prey which it devours are of larger size, and its means of destruction are so conspicuous and powerful that its reputation for pitiless rapacity has become universal. It preys on and destroys with impunity and without any apparent mercy every fish that happens near it, none seeming able to escape its terrific onslaughts except the black bass and perch, whose array of sharp dorsal spines daunts even the confirmed predatory habits of this watery wolf. The reptile wariness of the black bass, combined with its celerity in maneuvering, renders its capture almost impossible by any of its natural enemies, and those protective spines referred to are seldom used except in cases of emergency.

The mascalonge has pronounced cannibalistic habits, and when its appetite becomes greater than its love for its own kind it will pounce upon a younger, weaker member of its kindred and devour it without any remorse.

Its voracity is universal. Frequently have I found squirrels and muskrats in the stomach of a 'lunge, and often have I heard of cases where ducks were found in a perfect state of preservation in the stomach of an old patriarchal 'lunge. When a scarcity of food prevails the mascalonge has a striking propensity for seizing everything that comes within its vision. The tail of a deer, a gaudy piece of cloth, almost anything of any appreciable size or attractive color proves a deadly lure. Then again when a competency of food exists, it will go into a trance or quiescent state and remain so for several weeks, taking no heed of the almost countless varieties of lures that you troll past it. They are not, however, as capricious about their food as is the bass. They merely cease biting for weeks at a time, and nothing can induce them to change these idiosyncrasies into more favorable ones for the fisherman.

The mascalonge spawns annually from 100,000 to 400,000 eggs during the month of May, just as the ice is going out. These eggs are deposited in shoal water along the shores of a lake, in a thoroughfare, or in a shallow creek, and are sufficiently mucilaginous for them to become attached to the rushes and the grass where they supposedly remain till they hatch. It is a fact that but comparatively few are permitted this quiet, peaceful rest, as many more timid marauders such as the sucker and the shiner are always on the lookout for such palatable and such easily gained food upon which they thrive throughout the spring. This wise provision of nature accounts for the scarcity of these noble fish. But a surprisingly small quantity of the eggs spawned in a season ever reach maturity. If nature, in a moment of recklessness, had provided that the majority of them should mature, we would now find, much to the disgust of the angler, nothing but the 'lunge inhabiting those myriads of beautiful and picturesque lakes that add so much grace and charm to the Northern latitudes.

The growth of the young 'lunge is extremely rapid. It attains a length of 10 inches during the first year of its life. If it receives sufficient food thereafter the growth will continue at a tolerably uniform rate of about 3½ pounds per year, and this increase will be maintained for six or seven successive years, after which the yearly increase in avoirdupois becomes almost imperceptible. These fish are very long-lived and constantly increase in size, provided they are well supplied with food. There is ostensibly no limit to their growth. A fish of 18 pounds weight is considered a splendid specimen, though we have authentic record of fish that have attained the tremendous weight of 80 pounds.

The mascalonge can easily be distinguished from the true pike or great northern pickerel, although much confusion exists among anglers in reference to the identification of the two. The mascalonge is indisputably a member of the great pike family, but the different climatic and environmental changes that it has undergone have given it a few distinguishing characteristics. The most conspicuous of these is the number of branchiostegals. In the mascalonge the number varies from seventeen to nineteen, while in the pike there are but from fourteen to sixteen. In the case of the mascalonge the lower halves of both cheeks and gill covers are naked, while the upper halves are almost entirely covered with scales. The gill covers of the pike are similar to those of the mascalonge, while the entire cheek is covered with scales.

Some anglers assert that three distinctive species of the 'lunge inhabit the waters of the North. From my own observations and investigations I find that in the number of branchiostegals, the squamation of the cheeks and gill covers, and in structure, they are all of one specific likeness. There is, however, to be perceived a marked variation in coloration. This is attributable to the fact that fish invariably assume the color of the water in which they reside. In dark, brackish, dull water we find fish of a dark, brackish, dull color. In bright, silvery water the fish are decidedly of a lighter shade than those found in a dark water. In this way wonderful and omniscient nature has provided a process by which her children are afforded a protective resemblance to their natural surroundings. The same phenomenon may be observed in the case of the Northern deer, whose glossy and beautiful coat undergoes three distinctive changes in order that its color will harmonize with its environments and aid in protecting it from its enemies.

The young mascalonge is always covered with dark spots or with dark bars, and a lighter colored ground. As the age increases those spots or bars, as they may be, become obsolete and the fish assumes a uniform grayish coloration with brownish or greenish reflections and a white belly.

The cavernous mouth, the large tongue and the powerful jaws of the mascalonge are all armed with an array of long, sharp teeth which form the chief weapons of attack, which they use relentlessly on an ill-fated prey. I was, unfortunately enough once to get my hand in the mouth of an 8-pound 'lunge. When I removed it, after no little effort, it looked as if some one had been running a cross-cut saw across it.

The mascalonge is solitary in its habits, and lies ensconced among bulrushes at the edge of a stream, close to the shore of a lake, at the edge of a sandbar or just within the borders of a grass bed, where its predacious instincts are held in check till the appearance of some unsuspecting fish, upon which it rushes with a concentrated force and gobbles it up in an incredibly short time.

On a bright day when the sun sends its beaming warmth upon the water the mascalonge delights in running up into shoal water and there basks lazily for hours at the time. On such occasions the most highly inviting lure will not tempt it from its paradise of perfect beatitude. If the angler continues to annoy it by persistently trolling backward and forward in front of it, it will ultimately become exasperated, and, with a terrible swirl, swim rapidly to a more peaceful abode in the depths of the lake.

Many sportsmen advocate the use of a gaff for landing a 'lunge, but to me the most humane as well as the most sportsmanlike method of disposing of your quarry is to first work it up to your boat within reasonable pistol shot and then, with a deliberate aim at the top of the head, fire point blank. The result is invariably instantaneous death to the fish, while you gaze upon your prize with admiring eyes and a clear conscience, for you are well aware that you caused it none of the pains and agonies attendant upon gaffing.

From my experience in fishing for these fish I find that in the spring of the year either a large sucker or phantom minnow works admirably for enticing these wary monsters from their secluded retreats. The former should be cast just at the outskirts of some likely looking weed bed, and then be permitted to swim about for a minute or two before the process of slowly reeling it in commences. The latter should be trolled close in to the bars and rushes at a slow gait.

During the summer months and especially in the fall, there is nothing more alluring to them than a spoon ranging from a No. 6 to a No. 12. It is always advisable to use a silver spoon in dark water, while a brass or copper spoon proves exceedingly satisfactory in clear, silvery water. On a hand line a No. 12 spoon is always preferable, and by the use of this water luminary exceptionally large fish can be attracted and caught. The largest mascalonge I ever caught (30¾ pounds) was caught on such a rigging in Big Crooked Lake, Vilas county, Wisconsin. If one prefers to use a rod a good substantial split bamboo, not exceeding 9½ feet in length, or 12 ounces in weight, is by far the best obtainable. If one is exceedingly adroit in handling a rod, a much lighter one affords all the more exciting sport, but I would hesitate before recommending a rod lighter than 10 ounces to a novice.

There are, strictly speaking, no infallible signs or criteria to which a fisherman may adhere and have invariable success. I have seen mascalonge caught on every kind of a day imaginable, but a dark, gloomy day, when the water is turbulent and the wind is blowing a gale and the barometer registers about 28, is unmistakably the most favorable day for catching these matchless beauties.

The striking power of a 'lunge is tremendous. They go at the lure with a rush and a vim in which all their great vitality and weight are concentrated, and if the person governing the rod is not always watchful and expectant a complete wreckage of his tackle is inevitably the result. An extremely taut line should always be maintained while the fish is under play, for if you permit it to rise to the surface of the water and give one of those awe-inspiring leaps, its freedom is a certainty.

Mascalonge have a striking individuality in their methods of play. You meet with the sounder, whose presence you are aware of only by its frantic jerks in its violent efforts to escape capture. This is the commonest kind, and you rest your eyes on his sleek, shining body only after it has become exhausted and drawn in beside the boat. Then you occasionally hook a leaper, whose aerial flights are even greater and more gracefully exe-

cuted than those indulged in by the black bass. Just before performing this wonderful feat the 'lunge rises to the surface of the water, and with a few mysterious body contortions it swirls, spreading and disturbing the water till a veritable whirlpool exists.

A mascalonge is by no means ready to submit to a blow from a club or a pistol shot simply because it allows itself to be drawn up beside the boat without offering any resistance. Quite frequently have I seen 'lunge display a wonderful amount of resource when hooked. After exhausting their supply of tricks they would resort to a stratagem peculiarly their own. Their struggles would suddenly cease and they, like so much dead weight, would allow themselves to be reeled in until they almost touch the boat, apparently oblivious to what was happening. They would lie on the water like a great log, no signs of life being discernible, till an effort was made to give them the finishing touch, when, with an unexpected, terrible swirl, down they would go to a seemingly bottomless lake. When such exigencies arise the fisherman must necessarily have his wits collected or rod, line, reel and all are liable to lead a useless existence thereafter in the dark, isolated depths of the lake.

It is never safe for the person handling the fish to attempt to kill it. This is unexceptionably the business and the duty of the guide, who, as a rule, is very skillful in the art. When such an act is done the fish should always have free play with the line, for if the angler neglects this vastly important point the hook will invariably become disengaged and the fish will gain its liberty.

The biggest 'lunge I ever caught was the 'lunge that got away. How vividly do I recall my amateurish actions on that occasion. I had fished but little previous to that exhibition, and the misery and disappointment I suffered for many days afterward came near causing me to abandon the delights and fascinations of further piscatorial activity. It was like this: I had gone but a short distance from camp when the canoe stopped very abruptly. I was jerked forward rather unceremoniously and narrowly escaped a capsize. Surely my gang was caught on a sunken log, so great was the pull in that direction. I attempted to reel in, when to my profound astonishment I realized that I had a 'lunge hooked. In my excitement and inexperience I began, by superior strength alone, to bring my beauty up alongside the canoe, all the while utterly disregarding the remonstrances of my guide. I wanted that fish, so what cared I for the pet theories and instructions that had been unfolded for my special benefit? In a few minutes a prodigious 'lunge came wriggling up to the surface of the water and lay absolutely motionless. I afterward thought I discerned at the time a broad smile playing over his face as if he were thinking, "What young fool has got me on his line this time? I don't do a thing to his tackle." In my eagerness to land him I grabbed a club that was lying inconveniently near and made a wild pass to strike him. To me the unexpected happened, of course. The fish gave one of those terrific jerks and splashed and sprawled about, disturbing the water like a Mississippi tug boat, and then shot off with surprising quickness to a safe retreat, leaving the empty hook dangling in the water. If my line had not been one of exceptional strength, I would undoubtedly have lost the spoon and much of my line. As it was, one of the hooks of a No. 8 gang was actually straightened out, so great was the force that was brought to bear upon it.

A mascalonge is not your property until it is safely stowed away in the bottom of your boat with life extinct. On numerous occasions I have known a gamy 'lunge to leap clear of the sides of a boat and escape, while its proud owner was seeing it in the fancy of his imagination deliciously baked and floating in a clemency of egg gravy while his companions were lauding his dexterity and making him feel content with the world.

The universally accepted method of playing a large 'lunge is not to rush matters, but to be content with a slow, steady, even, cautious play until the fish becomes thoroughly exhausted and then work it in gradually toward your boat.

Certain fish, the same as certain persons, have greater or more pronounced fighting qualities than others. It is never advisable, however, to judge a fish too quickly. Those fierce, ferocious fighting qualities often remain latent until the battle is obviously at an end, then very unexpectedly they manifest themselves and if the angler has allowed himself to become reckless and careless he will invariably lose his fish.

Successful fishing is the same as every other phase of life. It requires study, practice and broad experience. One must necessarily acquaint himself with fish; their habits; their fighting tactics; their food, and their habitat, in order to catch them in great quantities. He must thoroughly familiarize himself with all these things and then persevere with the spirit of a true fisherman. Fishermen may be classified the same way as men of a profession. We but seldom meet a good one, occasionally a fair one, often a poor one, and then again those who cannot fish and never will be able to.

Wisconsin with its infinitude of beautiful lakes, its almost boundless tracts of grand and solemn forests; its lovely sunsets and pure, exhilarating air, offers to the serried men of office confinement an ideal retreat during the summer months. The shores of the larger lakes are nearly all dotted with summer resorts, where comfortable lodging and good, wholesome food may be secured at very reasonable rates. Fifteen years ago it was considered a hazardous undertaking to travel from one lake to another, especially in an untrodden, strange country in quest of the fur and fin. Nowadays most of that wildness has disappeared and well-beaten trails lead from one lake to another. Multitudes of people seeking recreation visit these happy fishing grounds annually, and many elegant private summer houses grace the shores of more than one silvery lake.

Fishing, as one would naturally suspect, is not comparable to what it was a few years ago; but there still remain countless fish awaiting only a passing hook. There are so many lakes that the supply of fish is almost inexhaustible, which fact will leave Wisconsin as the fisherman's paradise for years to come.

WILBUR CARLIN MCINTOSH.

A Few Days in Maine.

BOSTON, June 28.—*Editor Forest and Stream:* I have to record another successful trip to my favorite fishing grounds at Redington, Me. The day I went down was cool and comfortable, and the ride, though a long one, was delightful. At Farmington I found that Mr. F. N. Beal, the popular manager of the Sandy River road, had shown another evidence of his desire to cater to the wants of the traveling public, and had added a parlor car to the rolling stock of his road, running to Rangeley on the afternoon train, making the return trip on the train leaving there at noon, so that hereafter sportsmen from New York and Boston may have the luxury of a Pullman the entire route. On arriving at Redington what a change awaited me! The mill was shut down and the people that made the place a pretty busy one were all gone. Only the railroad section men and the people necessary to care for property remained. But the Redington House was open, and Mr. William Miller, who runs a house at Phillips, was in charge. My old friend, Harrison, who for many years catered to the wants of the patrons of the house, was also gone—he had died by his own hand a few weeks before. I was told that Mrs. Harrison was at the Round Mountain Lake camps—the guests there will know what good cooking is. The fishing was good, although not what it was the past few years. I believe it is the intention of the owners of the property to run it as a sportsman's resort. If that is the case they ought to stop the indiscriminate fishing in the pond, and having done that they should also take measures for restocking the pond. It has been great fishing there for years, the number of trout taken out of the pond and in the stream being simply enormous, but the steady drain has begun to tell and the fishing was the poorest I have ever had there. I brought home eighty trout, which I am free to admit was a good enough catch for any man, but other years I have taken more in number in the same time. It is still good fishing there, and can be made better by the means I have suggested, and in the hunting season it is one of the best regions for deer in Maine. Mr. Miller is a good man to run such a place, and sportsmen going there will be sure to find accommodations that cannot fail to be satisfactory.

WM. B. SMART.

The Salmon Rivers.

BOSTON, June 24.—The salmon angling season is on, and many of the noted fishermen are already at their preserves or are gathering there. A special to the daily papers says that while Mr. Vanderbilt and friends, Lord Minto and party, and Louis Cabot, of Boston, and party, are fishing their preserves on the south side of the St. Lawrence, the fishermen on the north side include Grover Cleveland, Col. D. Lamont, J. J. Hill, of the Northern Pacific; George Baker, president of the First National Bank of New York; Lord Lovedale and others. Lord Savordale and his friend, Mr. Harris, from England, are fishing a preserve called Migan, 465 miles below Quebec. Mr. Hill and party are fishing the St. John, on the Labrador coast, 500 miles below Quebec. Mr. Hill is reported to pay the Provincial Government \$3,000 a year for the rod fishing on this river. E. C. Chapman, of New York; F. S. Hodges, of Boston; H. K. S. Williams, of New York, and R. W. Johnson, of New Brunswick, N. J., are fishing the Nantashquan, 570 miles below Quebec. E. C. Fitch, of Waltham, Mass., is to fish the Romaine River this year. He pays \$1,000 a year for the lease. Mr. T. Gorham Peters and Waldron Bates, of Boston, are fishing the rough waters of the Nepisquit, Messrs. H. P. King and J. T. Spaulding, with Mr. L. D. Ahl, have gone to their preserve on the Ristigouche. Col. Whitehead, of Montreal; John Manuel, of Ottawa; John Law and Robert Patterson, are on the Godbout. Ivers W. Adams, of Boston, who recently purchased the salmon privileges of the River Moisie, will be there this season. The latest reports from the most of these rivers is that the fishing is not yet up to the standard of former seasons. Still, there has been sent up to Montreal from the Ristigouche Salmon Club a salmon weighing 42 pounds. Other large fish have been taken, but not a great number yet. Mr. Archibald Mitchel and his son were the first fishermen at the Ristigouche this year. The young man killed the first salmon of the season May 24, a very early date for salmon to rise to the fly at those waters. The tributaries of the Saguenay are reported to be earlier than usual. The anglers are already gathering at the several preserves along the St. Marguerite. Mr. Walter M. Brackett, the Boston salmon artist, has already taken up his summer residence at his preserve there. Mr. D. H. Blanchard, of Boston, after having landed an 8-pound togue at Lake Hebron, Monson, Me., with two or three friends, will start for his preserve on that river within a few days. Mr. John Fottler, of Boston, with several friends, is fishing the St. John at Gaspé. Mr. Harry Dutton, of Boston, is at the Little Pabos. Several members of the H. W. De Forest Club, of New York, are fishing the Grand Caspédia, the rental of which is \$7,500 a year. Mr. E. N. Fenno, of Boston, is fitting out for a salmon fishing trip to Bedeque, Cape Breton. He will also try the trout fishing of that part of the country.

At Moosehead the trout fishing continues good, with an occasional salmon to keep up the interest. Mr. and Mrs. Harry M. Hartshorn, of Boston, have made the record of the week at Kineo—fourteen trout and seven togue, the string weighing 35 pounds. Judge Charles Allen, of Boston, is fishing at Kineo. At Moosehead Inn, Greenville Junction, the fishing is reported excellent. Dr. H. C. Hichborn and Dr. S. R. Lancaster, of Boston, have taken in a few days' fishing there all the fish the law will allow them. A string of 38 pounds of togue is credited to an Arlington party there last week. One of the togue weighed 8 pounds. At the Rangeleys the fishing is holding out remarkably well. A number of good catches have recently been made. Mr. L. O. Crane, of Boston, has taken a salmon at the Upper Dam that weighed 4¾ pounds. Mr. Eugene Lynch, of Boston, at the same place, has caught a salmon weighing 6 pounds 3 ounces. Lewiston and Auburn, Me., people have also taken a number of good fish at the same place. Mr. George B. Bearce, of Lewiston, has broken the salmon record there with a fish of 8¾ pounds. There is a movement on foot to establish a fish hatchery at the Upper Dam. It is proposed to form an association and push the matter. There is no better

place in the world for a trout hatchery. It is understood that some money is already pledged. From all the Rangeleys come reports of good fishing. Mr. Jacob Hecht and Mr. S. L. Hecht, of Boston, have been having good fishing at Haines' Landing. Mr. Jacob Hecht has taken a good many salmon, but no very large ones, though hooking on to one that broke his rod short off. Mr. S. L. Hecht made a record for the week of ten trout and salmon, the largest a salmon of 5 pounds. Dr. Edwin N. Whittier landed five trout and salmon there Friday, the largest a salmon of 4½ pounds.

At Rangeley Lake the fishing has continued good. Among the successes of Boston anglers, reported from the Rangeley Lake House the past week, may be noted: Westley Jones, 2¾ and 3 pound salmon; R. H. Hinckley, Jr., 3¼ and 5 pound salmon; J. A. Atwood, 3-pound salmon and 3-pound trout; C. H. Hayes, 3½-pound salmon; J. E. Pushee, 3½-pound salmon; Mrs. J. F. Steel, 3, 4 and 4½ pound salmon; W. S. Patten, Lowell, Mass., 6 and 3 pound salmon; O. K. Dexter, Lowell, Mass., 3 and 3½ pound salmon; C. B. Coutrell, Brookline, Mass., 6 and 4½ pound salmon.

It has been decided that the extension of the Portland and Rumford Falls Railway from Bemis to the foot of Rangeley Lake will go on the east side of Bald Mountain. This has made a positive boom in camp lots on that shore of Mooselucmagantic. Several surveyors are at work running out the lots. It is understood that the Rickers, of Poland Springs, have purchased lots there, and that they will build "something fine" this season. It is suggested that they desire a place to send some of their guests who desire camping and hunting and fishing.

BOSTON, July 1.—Reports from the Rangeleys and Moosehead are that trolling for trout and salmon is about done for the season, and that fly-fishing is now about the only method practiced. This has to be done nights and mornings, since the recent extremely hot weather has rendered it almost impossible to endure the glare of the sun on the water, even if any trout would rise in the middle of the day. A Kineo report says that S. S. Hibbard, of Boston, took sixty-two trout in a single afternoon, the largest 3¾ pounds. Mr. Hibbard says that the trout were all taken on the fly, and many of the smaller ones returned to the water. Mr. and Mrs. E. E. Thomas, of Boston, are out of the woods from a two weeks' canoeing and camping trip about the vicinity of Eagle Lake. They found the fly-fishing all they could ask. From Greenville Junction, at the foot of Moosehead, come reports of good fishing. Herbert Lawton, of Boston, has captured a trout of 7 pounds at Greenwood Lake.

The fishing continues good at the resorts above Bangor. A salmon weighing about 16 pounds has recently been taken from the Caribou Pool, the largest fish ever caught there. The season opens on white perch July 1 and great fishing is promised at Field's Pond, Swett's Pond, Lake Chemo, Lake Pushaw, Silver Lake and Lake Sebasticook. Commissioner Henry O. Stanley says that the sport with these perch will be great. Large ones can be caught by trolling with a Rangeley spinner, while smaller ones rise to the fly readily.

There are reports of good fly-fishing at Haines' Landing, Mooselucmagantic Lake, especially at the Outlet, in the vicinity of the Oquossoc Angling Association camps. Among the anglers who have lately taken trout and salmon may be noted H. M. Curtis, A. B. Sederquist, George F. Steele, S. L. Hecht, J. H. Hecht, J. B. Sligh, E. N. Whittier, Miss Whittier, Boston; E. F. Coburn, Lawrence; J. P. Proctor, Fitchburg; John M. Cheeney, Southbridge. Mrs. J. O. McFadden, Boston, has secured ten salmon, the largest 6½ pounds. Mrs. W. G. Soule, of Boston, has secured four salmon, the largest 4 pounds. Rangeley Lake reports mention the best fly-fishing of the season. Farmington, Me., reports note good fishing at Vernum and Clearwater ponds, with great fly-fishing for small trout at Sweet's Pond.

Plans are about matured for the annual excursion of the Maine Sportsmen's Fish and Game Association to Kineo, Moosehead, July 6 to 10. SPECIAL.

Pennsylvania Fishing Points.

SAVRE, Pa.—Early reports from the trout streams in this locality were exceedingly discouraging—more so, in fact, than for several years past. The long continued rain flooded the streams to overflowing, and the anglers who ordinarily find much pleasure in seeking the trout while he is worm hungry were deprived of their accustomed sport.

Lately, however, some good reports from trout waters have come to hand, and possessed of the requisite skill the angler should be able to bring home some nice creels of trout. There are some likely streams around Cortland that should yield plenty of sport just now. For instance, take the head waters of Fall Creek, northwest of Cortland. The stream rolls along through a lovely country, and even though the catch of trout may not always equal expectations the delights of the landscape offer a redeeming compensation.

A number of streams which intersect the country south and east and west of Cortland invite the angler who wishes to catch some nice trout and study the beauties of a really glorious country.

At Slaterville Springs, a few miles southeast of Ithaca, there are a number of streams which for years have yielded plenty of fair sized trout.

At McClean and Hartford Mills are to be found a few good streams, and in years past have furnished a large number of trout. To some extent, perhaps, the glory of these waters has departed, but there are trout enough remaining to give the moderate angler a fine turn of sport.

From Owego go to Flemingville via the Southern Central branch of the Lehigh Railroad and there fish Owego Creek. The stream crawls lazily through a land fair to look upon, and some good sized trout should be taken on this reach of waters. A few streams in the vicinity of Wilseyville and Candor, reached from Ithaca or Owego via D., L. and W. R. R., contain a goodly stock of trout, and the country is comparatively easy to work out.

Reports from bass waters indicate that plenty of sport is in store for the disciples of this branch of angling a little later on. On the Chemung and Susquehanna rivers, opposite this place, a good many bass of fair size are taken. At the juncture of the two rivers, below Athens,

large bass are caught, and as one proceeds down the Susquehanna the fish and the fishing grow better. From Ulster to Towanda and below the latter place there are to be found many favored bass grounds. At Wyalusing are the far-famed bass grounds where the fish run plenty and large in size. A more delightful place to angle is hard to conceive than at Wyalusing, and a little further on in the season one should have splendid sport on the Susquehanna at that point.

At Harvey's Lake are annually taken some noble black bass. The fishing here is easy, the scenery inspiring and the air full of the freshness of the mountains. There are some wild, boisterous streams prowling through this mountain sentineled country out of which magnificent brook trout are taken. But the streams impose hard work upon the angler, and this fact is sufficient to deter the less robust members of the craft from venturing on the sport.

While in Ithaca, N. Y., last week, I learned that the perch fishing at the head waters of Cayuga Lake is unusually good, the fish averaging nice as to size and plentiful. The bass fishing at the Ithaca end of the lake is never good until the season has well advanced. Along Fall Creek above the Ithaca gorge black bass of appetizing size are being taken. The cool, shady retreats from which the angling is to be enjoyed along this stream make the sport doubly enjoyable during these mid-summer days.

At Canoga, on Cayuga Lake, across from Union Springs, fishing on black bass, muscallonge, pickerel and pike is said to be good, with plenty of large perch to be caught during the intervals between the taking of the larger fish. One in quest of easy bass, pickerel and lunge fishing cannot miss the best sort of sport, with all the attractions of a splend'd lake country added, by going to Farley's Union Springs or Cayuga village. These are all complete fitting out points, easy of access, and the accompanying expenses are adapted to the angler of modest means.

M. CHILL.

Log of Schooner Privateer.

FOLLOWING is the log of the cruise of N. M. George, of Danbury, Conn., and S. B. Segar, of Boston, Mass., among the Florida Keys with Ball Brothers on the schooner Privateer, from March 28 to May 1, 1901:

Thursday, March 28.—Got under way at 6:45 A. M. Light N.W. to E. wind. Ran to Cape Florida and fished from dinghy. Caught twenty kingfish and a big hammerhead shark. Ran to Soldier Key.

Friday, March 29.—Ran to Ragged Keys. Got conches and crabs. Ran to reef, got crawfish, muttonfish and yellowtail. Ran to Caesar's Creek. Wind light—N.W. to E.

Saturday, March 30.—Lay at Caesar's Creek. Saw a few tarpon but they would not bite. The schooner Lawrence left for Anglefish Creek. The sloop Saracus arrived.

Sunday, March 31.—Ran to Bonefish Bank. The schooner Lawrence lay in Anglefish Creek. Caught at banks bonefish, groupers, cavalía, snappers, grunt and sailor's choice.

Monday, April 1.—Mr. George caught an 8-pound bonefish in morning. Ran to mouth of Jewfish Creek. Barnes Sound. Found a big school of tarpon in Barnes Sound. Anchored at 11:45 A. M. Returned to schooner at 12:40. Mr. George hooked three tarpon and landed two—6 feet long, 38 inch girth, 132 pounds, and 6 feet 2 inches long, 37 inches girth, 127 pounds. Segar hooked three and landed one—5 feet 1 inch long, 30 inches girth, 68 pounds. After dinner Segar hooked one and lost it. School went to eastward. Made sail and ran three miles after them. Returned at dark. Went out at 7 in the evening for tarpon. Full moon. Returned just before 8. Mr. George hooked three, landed two—one 5 feet 8 inches long, 34 inches, 98 pounds, one 5 feet 7 inches long, 33 inches girth and 91 pounds. Mr. Segar hooked five and landed one—5 feet 2 inches long, 28 inches girth, and 57 pounds. Total, fifteen hooked, six landed.

Tuesday, April 2.—Lay in Barnes Sound. Saw no tarpon. Trolled in Jewfish Creek. Caught groupers, snapper, cavalía. In evening caught five large snappers, three of them weighing 5 pounds each.

A 12-FOOT HAMMERHEAD.

Wednesday, April 3.—Rain squall, wind S.W. at 2 A. M. last night. At 6 A. M. wind came N.W. Ran through Jewfish Creek and kedged and beat through Boggy. Ran to Key Largo and sent mail to Planter. Kedged through Cow Pen. Anchored at East Key. Got crawfish. Wind backed to W. and blew hard.

Thursday, April 4.—Ran to East Indian Key Channel. Saw a few tarpon. Anchored and hooked one tarpon and broke the line. Rowed across the flats to Tea Table Channel. George landed a tarpon 5 feet 6 inches long, 32 inches girth, 85 pounds. Segar landed a big one, length 6 feet 11 inches, girth 40 inches, weight 166 pounds. Ran schooner around into Tea Table Channel. Saracus went to Alligator Light. Wind light N.N.W. in A. M. Heavy from W. in P. M. Cold. Total, two and a half hours, three hooked, two landed.

Friday, April 5.—Light E. wind, calm with low barometer. Hazlewood came over from the Saracus in forenoon. Many tarpon. Came in on first of ebb, but no bites. Saracus left for Miami in P. M. Saw a few fish in P. M. and fished an hour. Mr. George caught one 6 feet 8 inches long, 38 inches girth, 145 pounds.

Saturday, April 6.—Lay at Tea Table. No tarpon showed. Ran over to Indian Key Channel.

Sunday, April 7.—Ran to Knight's Key. Anchored at dark. Wind fresh N. and calm and fresh W.

Monday, April 8.—Ran to Bahia Honda; saw small school of tarpon. Went out at 1 P. M. Segar caught tarpon at once 6 feet 4 inches long, 35½ inches girth, 120 pounds. Mr. George hooked a large one at 1:44 P. M. and we gaffed him at 1:55. He proved to be the largest tarpon ever caught with rod and reel. Length 7 feet 2 inches, girth 46 inches, weight 213 pounds full. Made sail and ran to Key West and anchored at 12:30 A. M.

Tuesday, April 9.—Boxed tarpon and shipped by City of Key West to Miami to be mounted. Laid in supplies and left Key West at 5 P. M. with fresh N. wind. Anchored at Loggerhead Key at 9 P. M.

Wednesday, April 10.—Wind fresh N.E. Beat up to Bahia Honda and anchored at 10 A. M. Fished from 2 to 5 P. M. Mr. George hooked a tarpon and just before gaffing it a shark bit it in two and we got all of fish from bayonet forward. Estimated length 7 feet, girth 40 inches, estimated weight 168 pounds. Then Mr. Segar hooked

MR. GEORGE'S RECORD TARPON.

and fought one for over one and one-half hours, when a shark bit it in the back. Length 6 feet 8½ inches, girth 40 inches, weight 160 pounds. Before Segar got back George hooked another and shark took off some of its scales. Length 6 feet 8½ inches, girth 40½ inches, weight 169 pounds. In evening we caught on the shark line a hammerhead shark just 12 feet long. Had a great circus with him.

Thursday, April 11.—Interviewed natives. Ran to Jack Channel. Segar caught one shark and George caught one cavalía. Only one small tarpon in sight. Wind fresh N.E. and calm from noon.

Friday, April 12.—Got under way early and ran to Sable River. Wind heavy S.E. Trolled for small fish and caught bass, trout, and hooked two small tarpon and made them jump. Saw several tarpon, all small, but would not take the tarpon hook.

Saturday, April 13.—Ran to Long River and up to the Forks. Explored upper branches. Saw no tarpon and caught no small fish. Beat out of Long River when tide turned at noon and ran to Lossmans River. Wind S.S.W. threatening in N.W.

Sunday, April 14.—Left Lossmans River at daylight and beat up to Pavilion Key. Wind fresh W.N.W. Explored and looked for clams, but found none.

Monday, April 15.—Sailed and beat up the coast and through Caximbas Pass. Wind N.E. back to W.S. Fresh in P. M. Ran aground for a few minutes near the pass.

Tuesday, April 16.—Wind light N.E. Sailed and poled out of pass against strong heavy tide. Saw few tarpon at Caximbas Pass. Sailed and beat to Marco, where we got our mail and water, and after dinner started for Punta Rassa.

Wednesday, April 17.—Calm forepart of last night, then breeze from E. Sailed all night and anchored at 3:20 A. M. near Sanable Light to wait for daylight. Ran to Punta Rassa, and Segar and George went to Meyers on steamer.

Thursday, April 18.—George and Segar arrived on steamer. Ran to Captiva Pass. Wind very heavy from S.S.E. Visited Van Vleck Camp. No tarpon in sight. Photographed devilfish at Punta Rassa.

Friday, April 19.—Bar. 29.56 at 1:30 this A. M. Wind a gale from S.S.E. with rain. Run the Hurricane Anchor. Wind hauled in A. M. to N.W. and blew a gale.

Saturday, April 20.—Heavy wind from N.W. Beat up to Uzeppa for supplies. Left Uzeppa at 1 P. M., with a fine fair wind. Arrived St. James at 3 P. M. and laid in supplies. Yacht Cero lying at St. James.

Sunday, April 21.—Moderate N.W. wind. Ran to Punta Rassa.

Monday, April 22.—Left Punta Rassa at 10 A. M. Passed Bar buoy at 12 M. Passed Marco at dark. Anchored behind Cape Romano at 9 P. M.

Tuesday, April 23.—Got lumpy at our anchorage last night, so got under way at 2 this morning. Passed Pavilion Key at 5 A. M., N.W. Cape at noon. Wind hauled S.W. Made the Keys, two miles W. of Channel Key, and beat down to Bamboo Key.

Wednesday, April 24.—Ran to Key Vaca Creek. Moderate westerly wind. George had three strikes and

landed one—length 5 feet 9 inches, girth 35 inches, weight 109 pounds. Segar caught a big shark and George a small one. Left Key Vaca Creek at 3:15 P. M. and ran to Indian Key and anchored at 7:30 P. M.

Thursday, April 25.—Explored Indian Key and got crawfish. Ran to Tea Table Channel. Saw a few tarpon. George got two jumps out of one and lost him. Segar caught a fine jumping shark. Caught lots of bottom fish and one pompano. Wind N.W.

Friday, April 26.—Light N. wind, shifting to E. and getting warmer. Caught plenty of bottom fish. Saw very few tarpon.

Saturday, April 27.—Ran to Alligator Light. Caught two barracuda (largest 27 pounds), muttonfish, amber jack (20 pounds), groupers (largest 27 pounds), rockfish. Beat up to Tavinere Creek and ran aground.

Sunday, April 28.—Went afloat just before light. Ran through Tavinere Creek and up to Monieres. Walked across to Planter. Beat up to Boggy. Caught some grunts and snappers.

Monday, April 29.—Ran across Blackwater Sound. Kedged through Jewfish Creek. Saw a few tarpon in Barnes Sound near Steamboat Creek. Anchored at Bonefish Banks. Caught groupers, cavalía, runners. Wind N. and E.

Tuesday, April 30.—Rain and N. wind last night. Beat up to Caesar's Creek via Anglefish Creek. A few tarpon, but no hungry ones. Caught plenty of grunts, porgies, groupers, snappers, porkfish and crawfish.

Wednesday, May 1.—N. wind and rain last night. Ran to Fowey Rocks and caught seven large groupers from 15 to 25 pounds. Muttonfish and two dolphin. Ran to Miami. Arrived at 4 P. M. and ended the cruise.

[Mr. George's big tarpon is now on view at the store of Messrs. Wm. Mills & Son, 31 Park Place, this city.]

Fishing on the Delaware.

TRENTON, N. J., June 22.—The bass season opened here on the 15th of the present month under very favorable conditions. The largest catch recorded for the first day was a total of six, taken by Tom Lawton, above the Calhoun street bridge, averaging about 2 pounds apiece. Strange to say, the fishermen who ventured further up the river report very poor success, especially those who tried the Reading Railroad bridge; around this spot was always considered the best fishing grounds in the vicinity. But of late years the railroad company have had troughs placed almost the entire length of the bridge, where the fast liners took water on the scoop, and woe to the fisherman who happened to have a strike with the wind blowing a bit up river and an engine taking water about 85 feet above him at the rate of a mile in 1:30—a needle bath wasn't in it. But that is now a thing of the past, for the troughs have been taken up and placed further down the roadbed. It was discovered that the rust from the water had been making very serious inroads upon the iron work of the bridge.

In regard to bait, the fish do not seem to have any special preference, taking stoned catfish, sand pike, and helgramites equally as well.

The outlook for rock fishing was never brighter; large numbers of these fish have already been taken. Although they have been biting well through the day, the largest ones are caught at night. The principal and most successful bait used is blood worms. To J. R. Taylor, of Applegate & Co., belongs the credit of capturing the

A SHARK GOT THE REST.

largest fish to date on hook and line, with one tipping the beam at 12 pounds.

An occasional salmon has been taken by the shad fishermen in their nets this season. The river was stocked with the fish a number of years ago. Wm. White, superintendent of the water power, landed two while fishing for shad some time last month weighing 10 and 11 pounds respectively. These were taken above Scudder's Falls, about 6 miles from Trenton.

CANNIBAL.

Large Adirondack Trout.

Editor Forest and Stream:

In looking over some old copies of your paper I saw a copy of June 16, 1900, with an article from John C. Phillips, of North Beverly, Mass., telling of his capture of a 6 pound speckled trout, and his statement that he thought it was the largest taken in Adirondack waters for some time. I know of a speckled trout taken from Piseco Lake, in Hamilton county, that weighed 7¾ pounds. Mr. Schermerhorn, of Poland, N. Y., made the capture. Although this is a little late I trust that you will publish, as this is a locality that is little heard of in your paper.

GEO. B. MAY.

CHICAGO AND THE WEST.

The Heated Term.

CHICAGO, Ill., June 29.—We have been favored here in Chicago for the last week with a section of the hottest kind of hot weather. The usual consequences of a heated term in a large city have ensued—deaths, prostrations, suicides. As to the latter, one cannot avoid the reflection how much better it would have been had the suicide gone fishing instead of committing suicide. Indeed, how much better it would be for everybody suffering in the cities if, on the appearance of such a spell of weather as we have had this week, they would slam down their desk tops and simply go out where life is endurable. Big cities were never meant as a living place for humanity, and the fact that they are such is simply one of those perversions not sanctioned by nature.

As to the fishing pure and simple, or as viewed from the standpoint of returns, not so much could be said for this week. The hot weather has put the fish pretty much off their feed, and although a cool wave has made its appearance to-day, it is hardly to be expected that the weekend parties will have much success beyond that of having a good time and a cooling off. The best results in bass fishing of which I have had any word in the last ten days is that reported by Mr. E. R. Letterman and Mr. A. C. Smith, at the Lauderdale chain of lakes near Elkhorn, Wis., from which point the two above gentlemen returned this week. Their friend, Mr. F. N. Peet, came back a few days earlier than they did. Mr. Peet tells me that they had simply splendid bass fishing, and caught all the bass they cared to. They found their best successes in casting over the heavy weed beds with spoon hook and pork rind or frog bait. The bass were on the feed and bit ferociously at times, the sport for several days being of very fine and satisfactory quality. As to how many fish the party took, Mr. Peet declined to answer, excepting that he himself brought home three baskets full of bass.

One angling store reports this week that it is outfitting about fifty anglers for the regular Saturday afternoon exodus to the Fox Lake chain and the lakes of lower Wisconsin. This will show something of the angling traffic of this point in the summer time.

Good Muscallunge.

At last I get word of one decent muscallunge—indeed, the only good one I have heard about this summer so far. Mr. S. Pedlow, of this city, reports the news regarding the fish. It was caught in Trude Lake, Wis., by William Simpson, of Milwaukee, and a friend, who were guided by August Eastman, of Mercer, Wis. The fish was taken on June 15, and on the evening of the same day weighed 32 pounds, at which time it was weighed in Quinn's Hotel in Mercer. This is not a thumping big muscallunge, but 32-pounders are mighty rare these days.

Michigan Grayling.

Mr. George L. Alexander, of Grayling, Mich., in a letter to a friend states that he has had some good fishing for rainbow trout in the Au Sable this spring, and on one trip was so lucky as to catch three nice specimens of grayling. He does not report any other grayling taken in his immediate neighborhood. He thinks the North Branch of the Au Sable will not stand such heavy fishing as the main river. Mr. Alexander is trying to assemble a little party of friends for a trip down the Au Sable during the month of July, and is so good as to suggest that it might be a pretty good thing for FOREST AND STREAM to be represented on this trip, in which opinion I cordially agree with him.

The tendency of the news from the lower peninsula of Michigan seems to be that on the whole the trout season has not been very satisfactory. The rainbow trout can still report progress in Michigan. The grayling situation is more hopeful than it was at this time last year or the year before, or the year before that. It is not to be imagined that the grayling may be rated an angling fish in these days, but its chief interest lies in the fact that it is not yet extinct and may at a later time become an angling possibility once more.

Mr. F. H. Tinthoff and his friend, Mr. C. H. Harris, who fished in the Au Sable this spring, caught a few grayling, though not enough to amount to much as a basket of themselves.

Good Bass Fishing.

Mr. O. Von Lengerke, who has recently returned from the Neepenauk on Lake Puckaway, Wis., reports excellent fishing in Puckaway Lake and the Fox River adjoining that place. He thinks that this spot is a splendid place for the all-round sportsman, there being bass fishing, duck shooting, prairie chicken shooting, grouse shooting and squirrel shooting, all within reach of that point and in the proper seasons.

Grand Rapids Carnival.

Mr. Ben Bush, of Kalamazoo, Mich., is taking charge of some of the details regarding the coming bait and fly casting contests which will be held in connection with the grand celebration and carnival at Grand Rapids, Mich., on July 3 and 4. A very liberal prize list has been established by the Grand Rapids citizens, and the entry to all the contests is free. Any and all sportsmen are invited to attend and to compete. It is the aim of the Grand Rapids men to popularize the sport of angling, and Mr. Bush sees no reason why this should not become as popular as trap-shooting. He requests that Chicago anglers keep in mind the dates and come over to Grand Rapids and help boom the boomiest carnival that ever was pulled off. It has been a pleasure more than once to call attention to the quality of the sportsmanship of this beautiful little Michigan city of Grand Rapids. We doubt if there is a place in the United States of its size which has more sportsmen to the square inch or a better class of fellows. For any one who can leave the dear ones at home on the glorious Fourth, Grand Rapids offers inducements of distinctly pleasing sort.

For the Mountains.

Mr. Bert Seiboldt, of Salt Lake City, Utah, an experienced, all-round sportsman and angler, is in Chicago this week outfitting for a long trip in the mountains. Mr. Seiboldt will be accompanied by Mr. C. H. Aldrich, At-

orney-General under the administration of the late President Harrison. The two are providing themselves with a splendid outfit at Spaldings', and will later in the season start for the mountains. They want trout and bear, and the entire likelihood is that they will get both, more especially as Mr. Seiboldt savies the Rocky Mountains a plenty.

Mr. Albert Hayden, of this city, starts in a few days upon an extended trip in Colorado, where he will spend several weeks, chiefly engaged in fishing for trout. Mr. C. H. Ferry, of this city, with his family, starts for Lac du Flambeau, Wis., to-day, and will be gone for a few weeks. Muscallunge will be his principal endeavor.

Chicago Fly-Casting Club.

The next meeting of the Chicago Fly-Casting Club will be held on July 13. This will be a re-entry day and will complete the first half of the 1901 schedule. All the members are requested to be present and make up their back scores. The club is two events behind the schedule owing to weather of an unfavorable nature, and Secretary Heston hopes that everybody will come on and finish up these back scores. The following scores were made at the last meet, June 22.

	Long Distance Fly. Feet.	Bait Casting. Per Cent.	Delicacy Bait. Per Cent.
I. D. Belasco.....	85	87 7-10	95 1-5
I. H. Bellows.....	100	84 9-10	94 2-3
H. Greenwood.....	85	86 2-5	89 1-2
H. Greenwood, re-entry.....		85 7-10	
H. G. Hascall.....	107	95 1-5	97 1-6
N. C. Heston.....	80	96 1-5	94 1-6
G. A. Hinterleitner.....		84 1-5	95
G. A. Hinterleitner, re-entry.....		93 1-5	
F. N. Peet.....	104	87 1-5	93 1-6
C. B. Robinson.....		79 1-5	71 1-3
C. B. Robinson, re-entry.....		81 1-2	
G. W. Salter.....		93 9-10	84 1-3
G. W. Salter, re-entry.....		95 7-10	

Winning scores: Long distance fly, H. G. Hascall 107 feet; bait-casting, N. C. Heston, 96 1-5 per cent.; delicacy bait, F. N. Peet, 93 1-6 per cent.

At the "Wood Pile."

Mr. John D. McLeod, of Milwaukee, dropped in at Chicago Tuesday last for a little visit. Mr. McLeod left Milwaukee on Friday for his weekly visit to the Wood Pile, as he has rather shabbily named the exquisite little lodge owned by Mr. Miller and himself on their preserved stream, the Pine River. Mr. McLeod invited two or three Chicago friends to join him this week, but unhappily every one of these gentlemen was unable to go. Mr. Graham H. Harris had a prior engagement and left the middle of the week for a bass and muscallunge trip at Manitowish, Wis. Mr. Hempstead Washburne and family have left Chicago for the season, and are now residing in their cottage at the Huron Mountain Club, on the south shore of Lake Superior.

Angler Poet.

Mr. John S. Zimmerman, of Chicago, who has occasionally appeared in the columns of the FOREST AND STREAM, is well known among his friends as a toucher of the lyre. His Chicago publishers announce this week the appearance of a book of poems by Mr. Zimmerman, entitled "The Rubaiyat of Mirza-Mem'n." The version is stated to contain 131 quatrains in the form immortalized by Edward Fitzgerald.

A Muskrat on the Fly.

Editor Forest and Stream:

I recently received a letter from the celebrated Adirondack guide, Charles O. Bartlett, of Saranac Lake, who probably knows as much about the Adirondacks as any guide now living, and as he gives me therein a very novel experience in fly-fishing, I thought the readers of FOREST AND STREAM would be interested to learn of a new kind of fly-fishing introduced in the North Woods by guide Bartlett. He writes me as follows:

"Well, I must tell you of my fishing experience last Saturday. I went down to the saw mill dam, near the Au Sable River, fly-fishing. I commenced casting, when I saw a muskrat swimming from the dam over toward the flume, about twenty feet below me, so I made three casts for him, and the third one struck the water about four inches in front of him, and I jerked and hooked him about one inch back of his jaw, and if ever I had fun it was then. First, he pulled for the flume, but could not make it; and then he turned and went to the bottom in about six feet of water, and he everlastingly did scratch the bottom. Finally, he came up and went for

the dam, and landed on a smooth, flat rock, and then I could hold him. He then turned and swam toward me, and I knocked him on the head with a club. You would have thought to have seen the rod, that I had a 10-pound trout on. After this experience, I went fishing in earnest for trout, and caught a brook trout weighing 2 pounds and 2 ounces, and also a rainbow trout weighing 1 pound and 14 ounces. The rainbow trout jumped three feet out of water when hooked, just like the landlocked salmon at the Adirondack League Club."

Official organ, FOREST AND STREAM.

'Mid Reef and Rapid.—XIV.

BY F. R. WEBB.

"I AM afraid we won't reach Bear Lithia to-night," said George, as he struck match after match on the base of his match box, held under the shelter of his hat, in a futile effort to light his pipe, the rain meanwhile trickling gently down the back of his neck, as the overhanging boughs were by this time thoroughly saturated, and the only protection they now afforded was to break the force of the storm.

"I think not," said the Colonel, "if this continues much longer."

"It is not apt to rain long when it rains as hard as it does now," I said.

"How far is it?" asked Lacy.

"Well, it's about three miles from here to the Elkton dam, and about two more from there to Bear Lithia—say five miles in all."

"What time is it now?" asked George.

"Ten minutes to five," I replied, as I consulted my Waterbury.

"I expect we might as well give it up, then, and go into camp at the first good place," replied George. "It's full late enough now to make camp, and it will be nearly or quite dark by the time we reach Bear Lithia."

"Oh, I think we'll have time enough," I replied. "You must remember that we will have no supper work to attend to at Bear Lithia, as we are to be the guests of the house, and will, consequently, take our meals there, and all we will have to do will be to put up our tents, which won't take long, and can be easily done by lantern light after we come back from supper, if we wish," I replied; "besides, it is pretty much all swift water and rapids from here down."

"There's the Elkton dam with its slack water and its portage," he objected.

"I know it; but the dam is a low one and easily portaged, and the back-set is hardly half a mile long, with a current clear through it. Besides, I don't know of a single good camp place between here and there."

"What's the matter with going on then?" said Lacy. "We can't get wet in these rigs, and really might as well be shoving along as lying here under the trees."

"Well, there are three rapids between here and the dam," I replied. "One is broad and shallow and one is very rough and rocky, and all are long, and I don't like to tackle any of them with this rain beating up the water so and obscuring the channels. We'll need to take advantage of all favoring circumstances to run them all right."

"That's a fact; I didn't think of that," admitted Lacy. "Weller was capsized in the rough one last month when he and Shepherd made their cruise," I continued.

"Was that the place?" asked George.

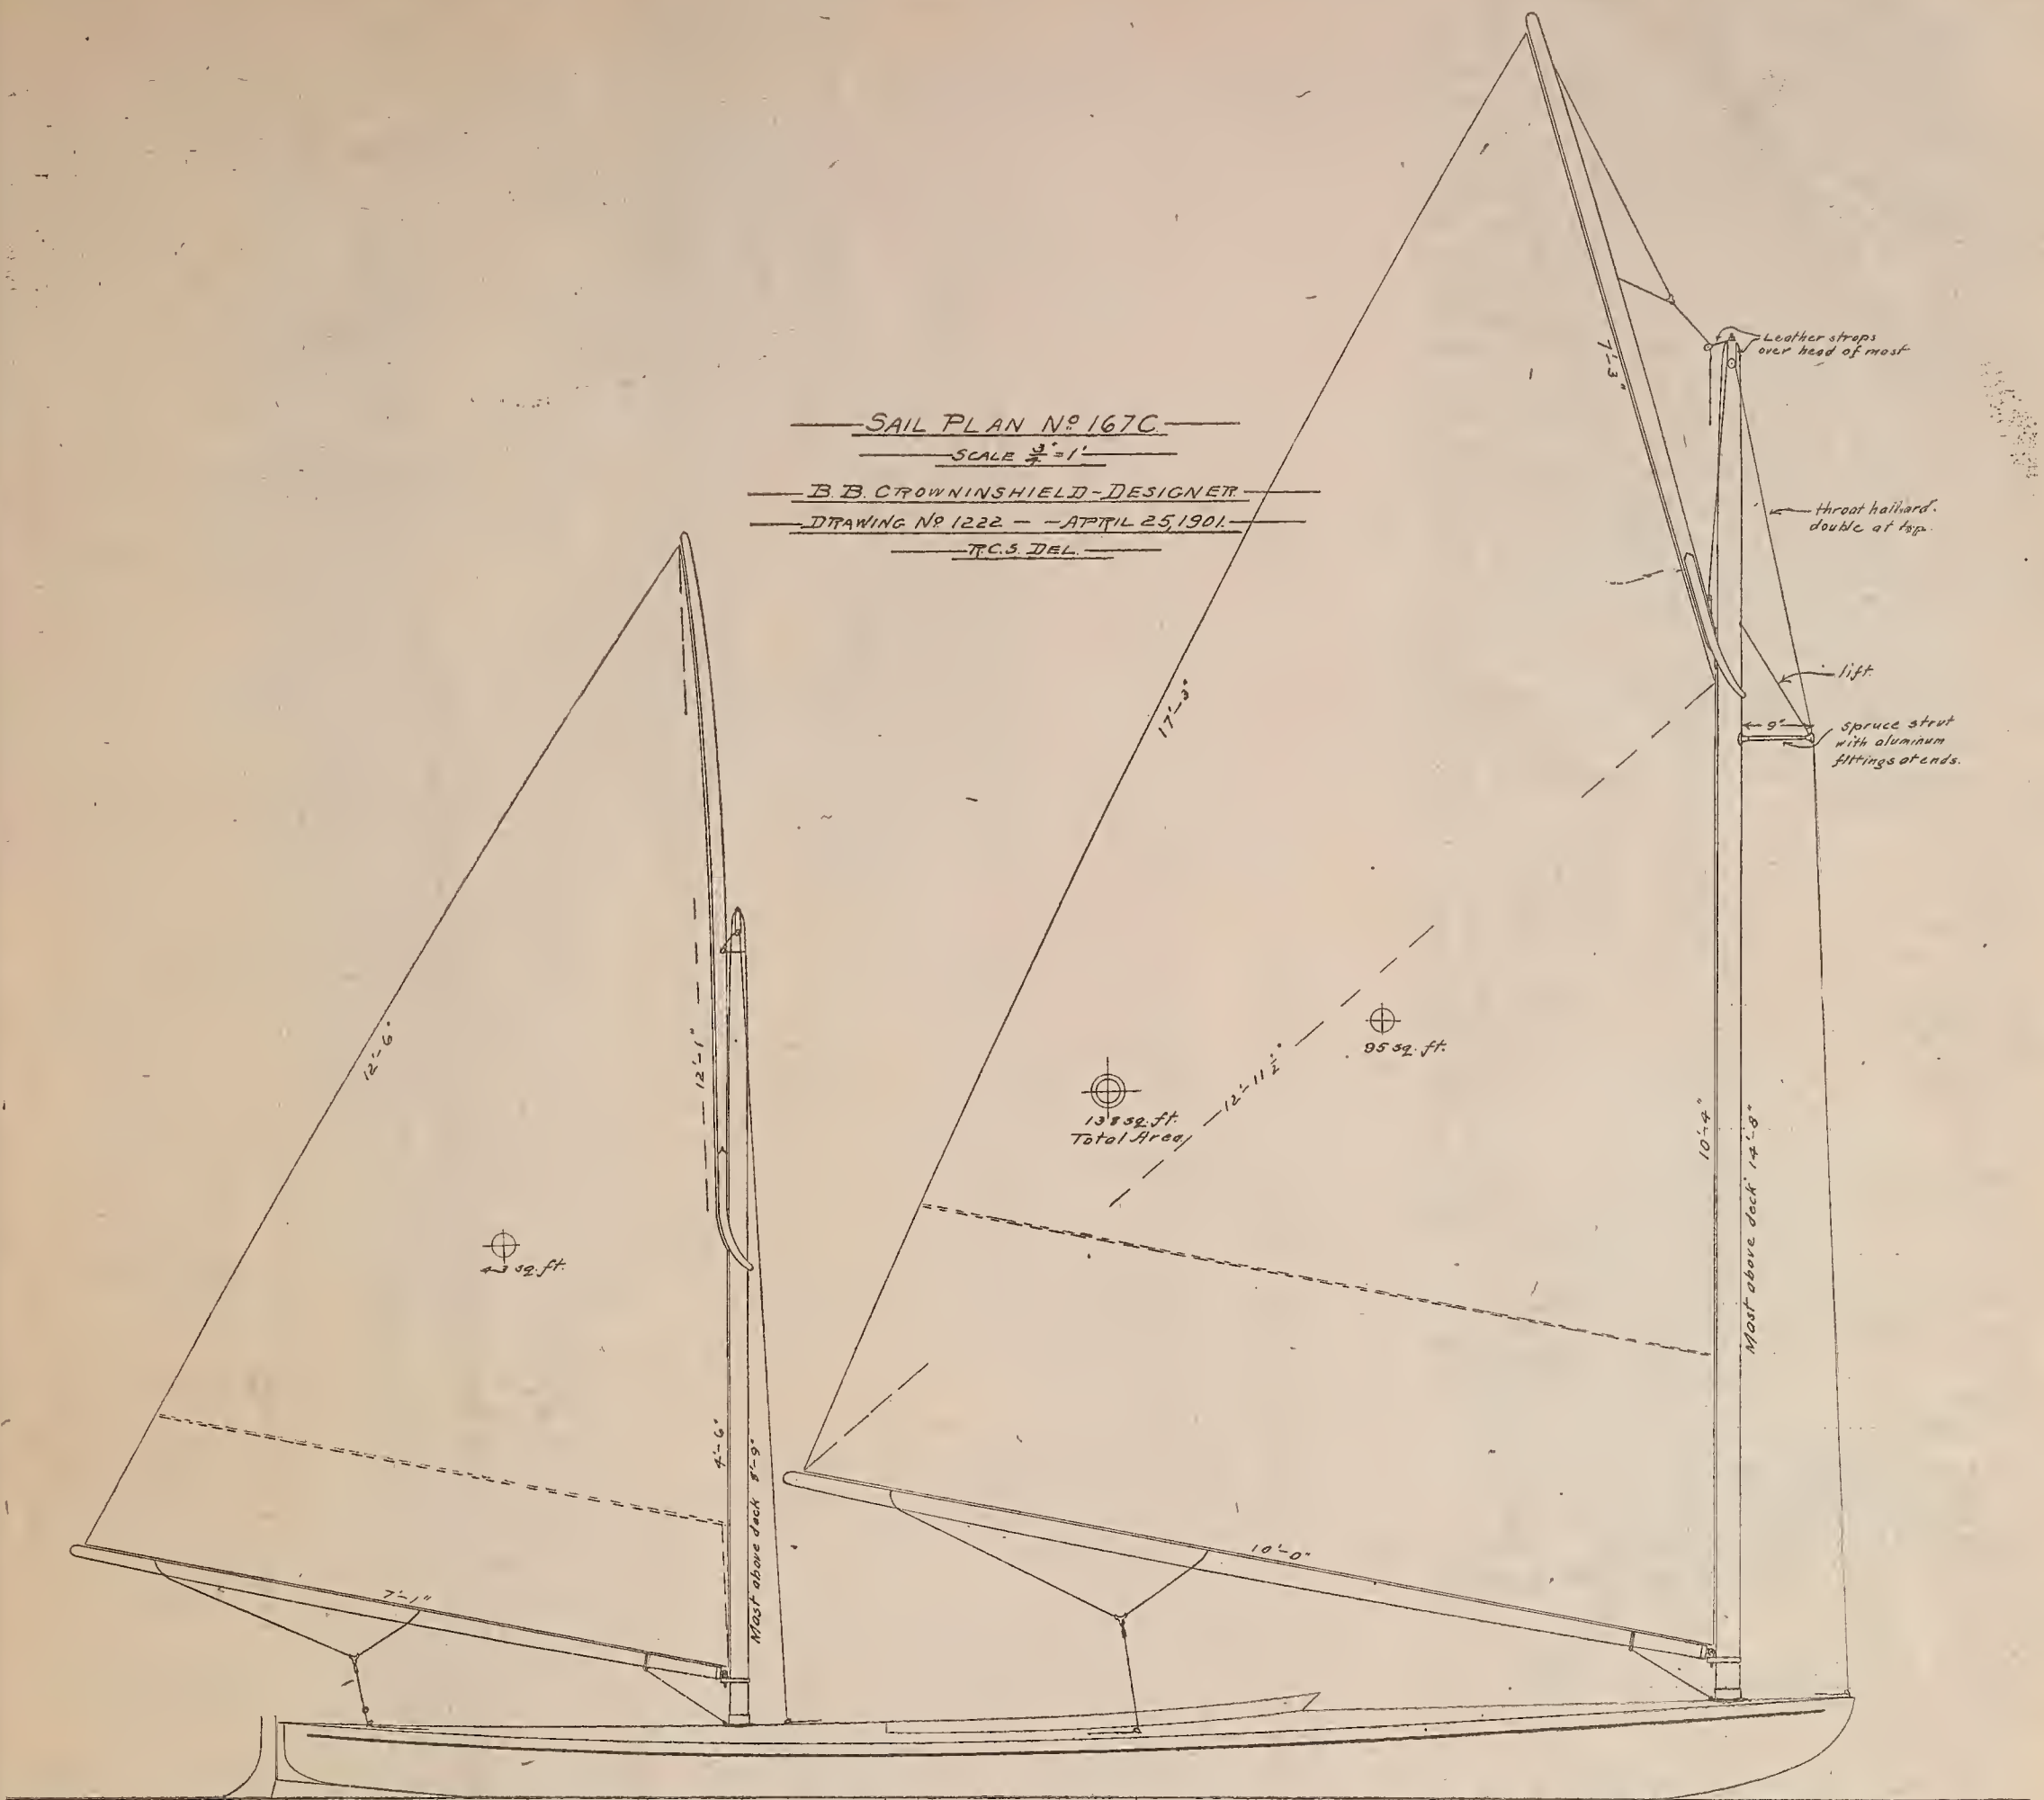

"That's the place," I replied.

"The boys told me it took half the night to dry his blankets out," added Lacy.

"I shouldn't wonder," replied George.

"The rain's slacking up now, and will soon be over," observed the Colonel.

This proved to be the case, and in ten minutes more we were able to pull out from under the dripping trees, and by the time we had rounded the bend below and were dancing swiftly and merrily down the first rapid, the rain had all passed over and was sweeping, in a rapidly receding gray veil, on down the valley, with the mountain ranges on either side of the river crawling up out of it at a brisk rate, their towering summits still enveloped in the heavy cloud masses, which hung lowering over the entire heavens, while white, fluffy patches wreathed and eddied along their rugged flanks, as though torn like fleece from the sides of the storm, as it swept along through the

SAIL PLAN OF RACING CANOE DESIGNED BY B. B. CROWNINSHIELD; BUILT BY W. F. STEVENS, 1901.

rough, frowzy mat of trees and bushes along the mountain sides.

We ran all the rapids successfully, without a bump or a knock, the final rush down the big rough one shooting us far out on the smooth though swift waters of the Elkton dam.

The towers of the big summer hotel at Elkton loomed up conspicuously above the trees that crowned the bluff on the right, as we drifted slowly down the mill pool, and the small white house under the bluff, with the flight of steps leading down to the collection of rowboats moored in the water beneath, was identified as the boat house belonging to the hotel.

"Commodore, it's after 6 o'clock; hadn't we better abandon Bear Lithia and go into camp? It's raining again, too," said Lacy, as we drifted down the swift water and under the old, covered wagon bridge opposite Elkton, after portaging the dam.

"Well, it's only two miles further, and there's good, swift water all the way, and I know of no good camping place near here," I replied.

"I move we go on; we'll get there in time enough, and I hate to make camp in the rain," said the Colonel, as he hastily drew his gossamer cape out from under his front hatch and prepared himself for the returning rain.

"I say so, too," said I, as we all made haste to follow the Colonel's excellent example.

"Go on it is, then," said the others.

"This is my first experience in cruising in a rain," said the Colonel, as he secured a light for his pipe, the flickering rise and fall of the match as he puffed, puffed away enveloping his head and face in a faint little halo of light through the misty rain and in the gathering twilight.

"Is that so?" asked Lacy. "I would have supposed that you were well seasoned to all kinds of weather on camping trips by this time."

"Well, I am," replied the Colonel, "but it has just happened that in my several cruises with you fellows we have never yet had occasion to cruise—or been caught out—in a rain. We have had frequent rains, but always in camp."

"Yes; I believe you are right," added George.

"Well, how do you like it, so far as you have gone?" asked Lacy. "You have certainly had a pretty good initiation, for I don't recall in all my experience a more steady rainy day."

"Well, it isn't bad, as traveling in rainy weather goes," replied the Colonel. "The protection afforded by the canoes is excellent, and it is hard to see how it can be

improved upon, and I really don't mind a rainy day now and then in warm weather."

"Nor I," said Lacy. "It brings variety, and is all in the cruise, as the expression is."

"I draw the line, though, at making camp in the rain," said I.

"Yes; I don't fancy that myself," said the Colonel.

Twilight was gently stealing on apace, quickened and intensified, and the evening shrouded and gloomed, by the dense, low-hanging, leaden clouds that obscured the sky, and shrouded the mountains and hills from view, and from which descended a fine, light, penetrating rain, through whose dense, mist-like veil even the nearer objects—the hills and trees on the banks—were hazy and vague, while overhead the sky was blotted out, and the clouds merged in the leaden mist which descended from them.

Enveloped in our rubbers, we sped onward as fast as the swiftly flowing water and good, brisk paddling would speed us, our destination now not far away, and it had become a race between us and darkness, with the points considerably in favor of the latter.

Around the next bend the bluffs and headlands in the Bear Lithia neighborhood loomed up, vaguely visible through the rain and the gathering gloom, and, acting upon my suggestion, George produced his bugle and made the air resound with some of his most piercing blasts and choicest discords, so as to give notice of our approach in case any of our Bear Lithia friends might be patiently waiting for us. A light gleamed far away on a hill like a faint, twinkling star—it was in Naylor's house. George redoubled his musical exercises, and his performances on that bugle became something astonishing and ear-splitting.

We paddled around another little bend to the left, and the boulders and logs of the old, broken-out Naylor dam opposite Bear Lithia, which—like so many dams in this stream—is located in a sharp bend, and seems to be but a continuation of the left bank straight across the river, came into view.

"There they are!" Lacy exclaimed, as through the fast-darkening gloom and the thick veil of steadily increasing rain we could dimly make out a little group on the bank, in the angle at the further end of the dam, who were waving handkerchiefs, umbrellas, etc., at us with welcoming shouts, as we paddled swiftly up to them and beached our canoes just above the broken-down dam, down over which the water roared and tumbled in a whitened mass, and scrambled hastily ashore, where we were

warmly and heartily greeted by Will Compton, Tom Naylor and others.

"We had given you up, and were half-way home when Naylor heard your bugle and saw your fleet on the river from his house, and yelled to us that you were coming," said Compton.

"Yes; that yell of mine was almost equal to a blast of the bugle," said Naylor, laughing. "They were over a quarter of a mile away."

It was quite late, and Compton would not hear to our making camp, but insisted on our leaving our little fleet afloat just where it lay and repairing to the hotel during our stay.

In view of the hour and the discouraging state of the weather, it didn't need much urging to induce us to accept his kind and hospitable invitation, so taking out our clothes bags, the hatches and aprons were closed and locked, the canoes carefully made fast to the trees on the bank, with ample provision against any possible rise in the river consequent on the day's rain, the paddles sent up to Naylor's house, and we all set out for the Springs hotels, half a mile away.

We stretched our tired, cramped limbs along that muddy road and through the fast-falling rain with a feeling of relief and luxury, for the day's run had been a hard one, and we were tired; but after we had stopped at the little country store and post office kept by Naylor, and Compton had produced a bottle of beer apiece, which was thankfully disposed of, and after we had reached our rooms, where Compton joined us with a small pitcher of water, some glasses, sugar and a little ice, and a decoction of something hot and strong was partaken of, the principal ingredient of which was found in the mysterious depths of some one's clothes bag, we felt quite refreshed, and by the time we had ensconced ourselves in warm, dry clothing and had partaken of a good, hot supper in the hotel dining room we felt quite entirely ourselves again, and in good condition to enjoy our evening cigars on the veranda, in company with Will C. Compton, Sr., who happened to be spending a few days here, and some of the other gentlemen guests of the place, who braved the dampness of the rainy night for a half-hour's chat with us over their cigars.

[TO BE CONTINUED.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Canoe Designs for the Int. Canoe Race.

THE international canoe race that is to be held next August in Langston Harbor, England, between the Winchester Boat Club, of Winchester, Mass., and the Royal C. C., of England, is a matter of no little interest to canoeists both here and abroad.

Mr. Thomas W. Lawson, well known as the owner of Independence, has a country place in Winchester, Mass., and being naturally interested in water sports and having no little local pride, is the backer of the enterprise. His representative will be Mr. Herman Dudley Murphy, a man well known as a skillful and capable canoe sailor.

It was Mr. Lawson's wish that two canoes should be built, and after a series of trial races have been sailed on Mystic Lake, the better of the two boats should be named Uncle Sam and sent to England.

Through the kindness of Mr. B. B. Crowninshield, the designer of both canoes, we are able to reproduce in this issue their lines and sail plans. Although Mr. Crowninshield is not a designer of canoes, his wonderful success in designing other types of sailing vessels has brought him the order for these canoes, and incidentally we might mention Mr. Crowninshield has designed boats for three international matches to be sailed on the water this year. They are, namely, Independence, for the America Cup races; Illinois, for the Canada cup races, and Uncle Sam, for the international canoe races. We wish him success in all three.

One of the canoes was built by Mr. W. F. Stevens, of Bath, Me., and the other by the Mather Launch and Canoe Co., of Atlantic, Mass.

The dimensions of the canoe built by the Mather Boat Works are as follows:

Table with dimensions for the Mather Boat Works canoe, including Length (17ft. over all, 15ft. waterline), Overhang (2 in. forward, 10 in. aft), Beam (2ft. 6 in. at deck, 2ft. 3 1/2 in. at waterline), Freeboard (1ft. 1 1/4 in. at stem, 10 7/8 in. at taffrail, 7 in. least), Draft (5 1/2 in. extreme, 5 3/8 in. to rabbet, 2ft. 10 in. board down), Displacement (392 lbs.), Area (123.7 lbs per inch at L.W.L., 8.09 lateral plain, 33.12 sq. ft. wetted surface, 120.00 sq. ft. sails, .69 sq. ft. rudder, 2.66 sq. ft. centerboard), and Ratio (3.63 sail area to wetted surface, .493 stem to C.B. to L.W.L., .133 overhangs to L.W.L., .0933 rudder to balance lateral plain).

The dimensions of the canoe built by Mr. W. F. Stevens are as follows:

Table with dimensions for the W. F. Stevens canoe, including Length (17ft. over all, 13ft. waterline), Overhang (2ft. forward, 2ft. aft), Beam (2ft. 8 in. at deck, 2ft. 6 3/8 in. at waterline), Freeboard (1ft. 1 1/4 in. at stem, 9 3/4 in. at taffrail, 7 1/8 in. least), Draft (5 3/8 in. extreme, 5 1/4 in. to rabbet, 2ft. 11 in. board down), Displacement (378 lbs.), Pounds per inch at L.W.L. (126.7), Area (7.61 sq. ft. lateral plain, 34.28 sq. ft. wetted surface, 138.00 sq. ft. sail, .71 sq. ft. rudder, 3.2 sq. ft. centerboard), and Ratio (4.02 sail area to wetted surface, .519 stem to C.B. to L.W.L., .267 overhangs to L.W.L.).

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

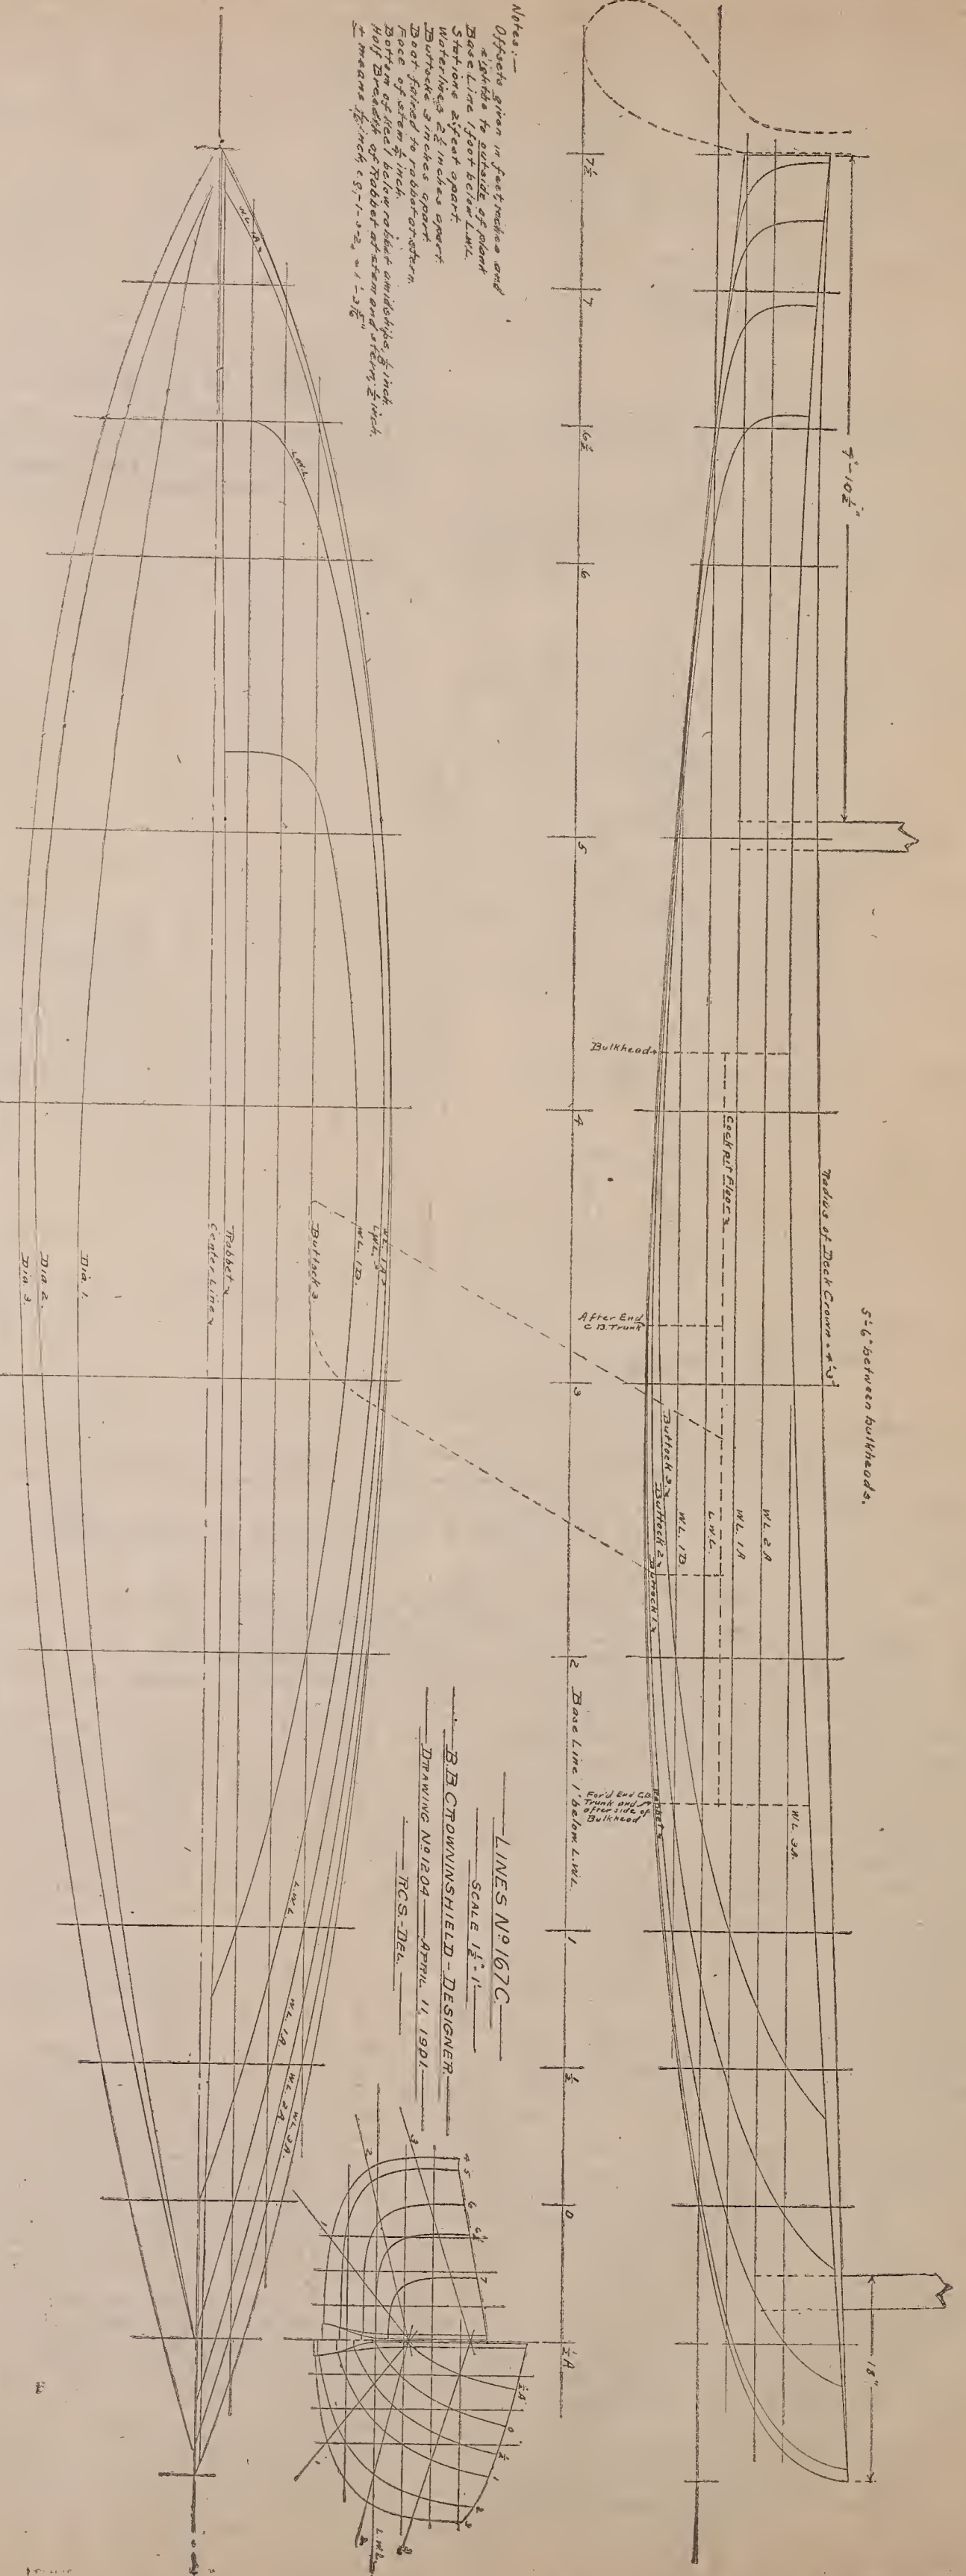

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

JULY.

- 4. Beverly, open sweepstake, Monument Beach.
4. Shelter Island, club regatta.
4. Duxbury, club race, Duxbury, Mass.
4. Boston City, City Point, Boston Harbor.
4. Corinthian, second club championship, Marblehead, Mass. Bay.
4. East Gloucester, open, Gloucester, Mass.
4. Gravesend Bay Y. R. A., first open regatta, Gravesend Bay.
4. Annisquam, open, Ipswich Bay, Mass.
4. Larchmont, annual regatta and schooner races for Colt cup, Larchmont, Long Island Sound.
4. Hartford, annual, Saybrook, Long Island Sound.
4. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
4. Pavonia, McInnis cup, Bayonne, New York Bay.
4. Canarsie, parade, Canarsie, Jamaica Bay.
4. Penataquit Corinthian, annual, Bay Shore, L. I.

RACING CANOE—DESIGNED BY B. B. CROWNSHIELD, BUILT BY W. F. STEVENS, 1901.

RACING CANOE—DESIGNED BY B. B. CROWNSHIELD. BUILT BY THE MATHER LAUNCH & CANOE CO., 1901.

- 4. Columbia, Chicago, Lake Michigan.
- 4. Burgess, Marblehead, Massachusetts Bay.
- 4-5. Lake Michigan, Y. R. A., Lake Michigan.
- 4-7. Biloxi, club, Biloxi, Miss.
- 4. Cohasset, knockabout championship and handicap races, Cohasset, Mass.
- 4. Quincy, handicap, Quincy, Mass.
- 5-11. Atlantic, cruise, Sea Gate, New York Bay.
- 6. Shinnecock Bay, club, Shinnecock Bay.
- 6. Hull-Massachusetts, club, Hull, Mass.
- 6. Winthrop, special handicap, Winthrop, Mass.
- 6. Mosquito Fleet, City Point, Boston Harbor.
- 6. Riverside, annual, Riverside, Long Island Sound.
- 6. Beverly, convention, Monument Beach.
- 6. Cohasset, knockabout championship and handicap races, Cohasset, Mass.
- 6. Savin Hill, club, Boston Harbor.
- 6. Columbia, club, City Point, Boston Harbor.
- 6. Seawanhaka Corinthian, third race for Center Island cup, Oyster Bay, Long Island Sound.
- 6. Burgess, Marblehead, Massachusetts Bay.
- 6. South Boston, ladies' day, City Point, Boston Harbor.
- 8. Norwalk, annual, South Norwalk, Long Island Sound.
- 8-9-10. New York, Newport series, Newport.
- 10. East Gloucester, evening race, Gloucester, Mass.
- 13. Moriches, club.
- 13. Mobile, club, Point Clear, Alabama.
- 13. Corinthian, third club championship, Marblehead, Mass. Bay.
- 13. Beverly, club, Monument Beach.
- 13. Winthrop, class handicap, Winthrop, Mass.
- 13. Hull-Massachusetts, club, Hull, Mass.
- 13. Larchmont, open, first day of race week, Larchmont, Long Island Sound.
- 13. Seawanhaka Corinthian, race for Roosevelt memorial cup, Oyster Bay, Long Island Sound.
- 13. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 13. Kennebec, club, Kennebec, Me.
- 13. Manhasset, special, Port Washington, Long Island Sound.
- 13-20. Larchmont, race week, Larchmont, Long Island Sound.
- 15-19. Interlake meet, Put-in-Bay, O.
- 17. Beverly, Buzzards Bay.
- 17. East Gloucester, evening race, Gloucester, Mass.
- 18, 20, 23. Newport Y. R. A., special races, Newport.
- 19. Quincy, open, Quincy, Mass.
- 20. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 20. Quincy, handicap, Quincy, Mass.
- 20. Columbia, club, City Point, Boston Harbor.
- 20. Westhampton C. C., club.
- 20. Hull-Massachusetts, club, Hull, Mass.
- 20. Savin Hill, club, Boston Harbor.
- 20. Winthrop, Winthrop, Mass.
- 20. Duxbury, ladies' day, Duxbury, Mass.
- 20. Beverly, Corinthian, Monument Beach.
- 20. Winthrop, open, Winthrop, Mass.
- 20. South Boston, club handicap City Point, Boston Harbor.
- 20. Norwalk, club race, South Norwalk, Long Island Sound.
- 20. Stamford, annual, Stamford, Long Island Sound.
- 20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
- 20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
- 20. Burgess, Marblehead, Massachusetts Bay.
- 20. Pass Christian, club, Pass Christian, Miss.
- 22. New York, cruise, rendezvous, Glen Cove.
- 22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
- 22. Canarsie, open, Canarsie, Jamaica Bay.
- 23. New York, cruise to the eastward.
- 24. Seawanhaka, cup race, Lake St. Louis.
- 24. East Gloucester, evening race, Gloucester, Mass.
- 25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
- 25-26. Erie, regatta, Erie, Pa.
- 27. Beverly, open sweepstake, Monument Beach.
- 27. Bay Waveland, club, Bay St. Louis, Miss.
- 27. Shelter Island, ladies' regatta.
- 27. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
- 27. Shinnecock Bay, special, Shinnecock Bay.
- 27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
- 27. Northport, annual, Northport, Long Island Sound.
- 27. Winthrop, special handicap, Winthrop, Mass.
- 27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
- 27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
- 29. New York, Astor cup races, Newport.
- 29-30. Burgess, open, Marblehead, Massachusetts Bay.
- 30-Aug. 3. Pan-American regatta, Buffalo, N. Y.
- 30-31. New York, trial races to select America Cup defender, Newport.
- 31. Corinthian, Marblehead, Massachusetts Bay.
- 31. East Gloucester, evening race, Gloucester, Mass.

Marine and Field Club.

June 22.

Fourth race of Y. R. A. of Gravesend Bay.

Class K—Start, 3:20.		Elapsed.
Susie, Cornelius Ferguson.....	Withdrew.
Class M—Start, 3:20.		
Akista, Geo. Hill.....	2 00 00
Bonita, Haviland Brothers.....	2 06 00
Class N—Start, 3:20.		
Squaw, H. G. Heath.....	2 09 30
Class P—Start, 3:25.		
Cock-a-too, Hendon Chubb.....	1 23 30
Song and Dance, E. F. Luchenbach.....	1 23 30
Elsie, C. P. Rosemon.....	Withdrew.
Class Q—Start, 3:25.		
Wraith, C. Tompkins.....	1 27 00
Wmk, Wm. Barstow.....	1 28 00
Corodo, A. Peters.....	1 37 30
Spots, D. D. Allerton.....	Withdrew.
Broncho, F. C. Moore.....	Withdrew.
Class R—Start, 3:30.		
Pebble, R. W. Speir.....	1 33 00
Peanut, C. Brewer.....	1 20 30
Class V—Start, 3:25.		
Martha M., R. B. Moore.....	1 20 30
Marine and Field Special—Start, 3:30.		
Vixen, W. S. Baylor.....	1 39 10
Flying Fox, Buckman & Cone.....	1 33 00
Kelpie, W. K. Brown.....	1 36 40
Quinque, Louis H. Smith.....	1 37 00
Singer, A. P. Clapp.....	1 40 06
Jig-a-Jig, W. Hutcheson.....	1 38 10

Burgess Y. C.

MARBLEHEAD, MASS.
Saturday, June 29.

THE fifty-fourth regatta of the Burgess Y. C. was sailed Saturday, June 29, in a strong S.W. breeze. Two classes started—the raceabouts and the 16-footers. In the raceabouts the Herreshoff designed Sintram won handily. The 16-footers sailed a close race, and off the Neck they had all they could do to handle the strong puffs. Raccoon, designed by Crowninshield, won by over a minute. The summary:

Raceabouts—Start, 2:45.		Finish.	Elapsed.
Sintram, W. P. Fowle.....	4 01 40	1 16 40
Pompilia, R. Robbins.....	4 04 35	1 19 37
Indian, Lawrence.....	4 06 45	1 21 45
Runaway Girl, H. Tweed.....	4 10 15	1 25 15
16-footers—Start, 3:00.			
Raccoon, J. Irving.....	4 07 04	1 07 04
Ugly Duckling, C. F. Lyman.....	4 08 08	1 08 08
Cyclone, R. Wiggan.....	4 13 42	1 13 42
Gea Whit, Macomber.....	Withdrew.

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Thursday, June 27.

No yacht club in recent years has had three consecutive days of such successful racing as the last days of last week. Each day was marked by a large entry list and fine weather with good sailing breezes.

Thursday, June 27, the first of the three days' racing, opened with exceptionally fine weather conditions, with a whole sail breeze from the W.S.W., which held until the boats were on the second round of the course, when it dropped considerably and hauled to the S. and freshened up considerably.

The courses were triangular, the first leg being a reach, with the wind on the port side. The second leg was a run, with spinakers carried to starboard, and the third leg was a beat. Each triangle was sailed twice around, the schooners, yawls and 51-footers sailing 23½ miles, the 30 and 36ft. classes, 16½ miles; the raceabouts and knockabouts, 13½ miles, and the Manhasset raceabouts and 21-footers, 8¾ miles.

The preparatory signal was at 12:30 o'clock, and five minutes later the yawls were sent off, Vigilant leading at the windward end and Ailsa being at the leeward end of the line. Vigilant was soon in the lead, which she held to the finish. Vigilant jibed around the first mark 40s. in the lead of Ailsa. Vigilant did her best when reaching and running, and Ailsa made a better showing on windward work. Vigilant gradually increased her lead and finished first by 1m. and 31s.

In the 75ft. class for schooners, Elmina, Quisetta and Muriel started. Elmina and Quisetta fought it out again, and Elmina won by 1m. and 25s. Elmina was protested by Quisetta for forcing her to give way when close hauled on the starboard tack. It is unfortunate that gentlemen who are in yacht racing for the sport of the thing should not observe the rules of the road. As this has happened several times so far this season, and boats continue on their course when they haven't the right of way, there will be some collisions before the season ends. Altair and Humma met again, and the former boat sailed a fine race and crossed the finish line a winner.

In the 36ft. class Leda led all over the course and won from O'Shima San. Oiseau won in the 30ft. class, and Badger added another win to her long list of victories. The summary follows:

Yawls—Class G—Over 90ft.—Start	Finish	Elapsed.
Vigilant, Percy Chubb.....	3 22 57	3 22 57
Ailsa, H. S. Redmond.....	3 59 28	3 24 28
Schooners—Class D—65 to 75ft.—Start, 12:40.		
Elmina, F. K. Brewster.....	4 19 31	3 39 31
Quisetta, H. F. Lippitt.....	4 20 56	3 40 56
Muriel, Charles Smithers.....	4 23 50	3 43 50
Sloops—Class K—43 to 51ft.—Start, 12:50.		
Altair, Cord Meyer, Jr.....	4 36 30	3 46 30
Humma, J. Rogers Maxwell.....	4 38 22	3 48 22
Sloops—Class M—30 to 36ft.—Start, 12:55.		
Leda, H. L. Maxwell.....	3 57 40	3 02 40
O'Shima San, J. T. Pratt.....	4 15 47	3 20 47
Sloops—Class N—25 to 30ft.—Start, 1:05.		
Oiseau, J. Rogers Maxwell.....	4 10 57	3 05 57
Enpronzi, Alfred Peats.....	4 17 44	3 12 44
Marion, F. M. Smith.....	4 26 37	3 21 37
Raceabouts—Start, 1:10.		
Jolly Roger, S. Leroy Ackerly.....	4 16 05	3 06 05
Scamp, Johnston De Forest.....	4 14 43	3 03 43
Rogue, F. T. Bedford.....	4 16 54	3 06 54
Badger, Thorsen & Jones.....	4 14 18	3 04 18
Seawanhaka Knockabouts—Start, 1:15.		
Lucille, Henry H. Landon.....	4 38 05	3 23 05
Marcia, Dresser & Jacquelin.....	4 35 36	3 20 36
Vagrant, Brown & Low.....	4 32 17	3 17 17
Nakado, J. T. Sherman.....	4 37 10	3 22 10
Sloops—21ft. Class—Start, 1:20.		
Ox, R. W. Bavier.....	3 41 16	2 21 16
Gazabo, N. P. Vulte.....	3 33 35	2 13 35
Manhasset Raceabouts—Start, 1:20.		
Mist, J. W. Alker.....	3 37 48	2 17 48
Firefly, Guy Standing.....	3 38 06	2 18 06
Lambkin, S. W. Road.....	3 35 09	2 15 09
Bab, Morgan & Phillips.....	3 44 59	2 24 59
Arizona, George A. Corry.....	3 30 19	2 10 19

Vigilant wins by 1m. 31s.
 Elmina wins by 1m. 25s., but has been protested by Quisetta.
 Altair wins by 1m. 52s.
 Leda wins by 18m. 7s.
 Oiseau wins by 6m. 47s.
 Badger wins by 25s.
 Vagrant wins by 3m. 19s.
 Gazabo wins by 7m. 41s.
 Arizona wins by 4m. 50s.
 Mr. C. W. Wetmore, Mr. Walter C. Kerr and Mr. Chas. A. Sherman made up the Race Committee.

Friday, June 28.

The second day's racing at Oyster Bay was marred by collisions and protests.

As the schooners of the 75ft. class were reaching down to the starting line Muriel went afoul of Quisetta and punched a hole in her mainsail. Quisetta was at the windward end of the line and Muriel in her wake to leeward. As Quisetta was to cross before the starting signal her helmsman luffed her and finally brought her about on the starboard tack. Muriel could not clear Quisetta and her bowsprit went through the latter's mainsail. As no serious damage had been done, both boats crossed and started around the course. Elmina and Amorita had in the meantime started, and were well in the lead. A light breeze was blowing from the W., which made it a reach to the first mark. The second leg was a run with booms to starboard and booms to port. Owing to the haze and the small marks used by the Seawanhaka Corinthian Y. C., most of the boats overstood the stakeboats. At the first mark Elmina was in the lead, and she jibed over to reach the mark. Muriel followed suit, as did Quisetta. As Quisetta was to leeward, Mr. Lippitt luffed up under Amorita's stern in order to get a windward berth. When passing Amorita that yacht jibed and her boom caught in Quisetta's topmast stay and her bowsprit snapped off at the gammon iron. Soon after her fore topmast broke off and she was more or less of a wreck. As Amorita's boom had been damaged, she withdrew and hoisted a protest flag. Elmina now had only Muriel to beat, which she did with ease.

In the yawl class the race was uninteresting, as Ailsa was late in starting, and she never headed Vigilant over the course, which boat won by 4m. and 8s.

Mira got the best of the start in the 43ft. class, and was

SAIL PLAN OF RACING CANOE DESIGNED BY B. B. CROWNINSHIELD; BUILT BY THE MATHER LAUNCH & CANOE CO., 1901.

in the lead at the end of the first round. At the second mark on the second round, Effort, Mira's only competitor, established an overlap and called for room. Mr. Irving Zerega, who was sailing Mira, claims he gave room, but Mira was fouled by Effort. Mira protested Effort. The times were:

Yawls—Class G—90-footers—Start, 12:05.	Finish	Elapsed.
Vigilant, Percy Chubb.....	3 24 15	3 19 15
Ailsa, H. S. Redmond.....	3 28 23	3 23 23
Schooners—Class D—65 to 75ft.—Start, 12:15.		
Elmina, F. K. Brewster.....	3 43 09	3 28 09
Muriel, Charles Smithers.....	3 52 09	3 37 09
Quisetta, H. F. Lippitt.....	Disabled.	
Amorita, W. G. Brokaw.....	Disabled.	
Sloops—Class L—36 to 43ft.—Start, 12:25.		
Mira, Charles L. Poor.....	3 17 51	2 52 51

Sloops—Class R—Under 18ft.—Start, 1:00.		
Cricket, H. C. Pryer.....	3 13 44	2 13 44
Nora, Lewis Iselin.....	3 14 16	2 14 16
Kazaza, T. J. McCahill.....	3 18 29	2 18 29
Chipmunk, T. S. Young, Jr.....	3 15 32	2 15 32
Mystral, A. C. Bostwick.....	3 10 15	2 10 15

Vigilant wins by 4m. 8s.
 Elmina wins by 9m.
 Effort wins by 2m. 55s.
 Oiseau wins by 3m. 32s.
 Ojibway, sail over.
 Jolly Roger wins by 1m. 17s.

SAIL PLAN OF RACING CANOE DESIGNED BY B. B. CROWNINSHIELD; BUILT BY THE MATHER LAUNCH & CANOE CO., 1901.

SUPPLEMENT TO FOREST AND STREAM, July 6, 1901.

THE HOME OF THE BASS.

Copyright, 1901, by Forest and Stream Publishing Co.

Marcia wins by 1m. 15s.
 Arizona wins by 48s.
 Vera wins by 2m. 6s.
 Mystral wins by 3m. 29s.

Saturday, June 29.

The third and last day of the series at Oyster Bay was made most interesting by a match race between the auxiliary Aloha, owned by Com. A. C. James, and the English auxiliary Lady Godiva, now under charter by ex-Com. H. C. Rouse. Aloha won.

The course was the same as on the previous days, and there was a good fresh breeze blowing, making it a close reach on the first leg, a run on the second and a beat on the third.

Vigilant scored her third consecutive win over Ailsa. Vigilant got the best of the start and led over the course, winning by over six minutes.

Owing to Quissetta and Amorita being disabled in yesterday's races, Muriel and Elmina were the only starters in the 75ft. class for schooners. From start to finish Elmina led and won by over eight minutes.

The schooners Latona and Katrina sailed a race. Both were in cruising trim. Latona won easily by 7m. and 25s.

In the 51ft. class Altair again beat Humma. Dorwina, the new boat designed for the 43ft. class by Messrs. Gardner & Cox, raced against Mira, also a Gardner design, and Effort. Mira was sailed by Mr. Irving Zarega, and was beaten by Dorwina, which was sailed by Mr. Addison G. Hanan, by a little over three minutes.

The summary follows:

	Finish.	Elapsed.
Yawls—Class G—Start, 12:05.		
Vigilant, Percy Chubb.....	3 03 07	2 58 07
Ailsa, H. S. Redmond.....	3 09 23	3 04 23
Schooners—Class D—Start, 12:15.		
Elmina, F. K. Brewster.....	3 23 41	3 08 41
Muriel, Charles Smithers.....	3 31 42	3 16 42
Amorita, W. C. Brokaw.....	3 31 20	3 16 20
Schooners—Class D—Start, 12:15.		
Latona, H. C. Eno.....	3 29 56	3 24 56
Katrina, J. B. Ford.....	3 47 21	2 32 21
Sloops—Class K—Start, 12:30.

 Sakana, sail over.
 Kazaza wins.
 Aloha wins by 3m. 10s.
 Arizona wins.
 Neola wins.
 Mollie S., sail over.

Eastern Y. C.

MARBLEHEAD, MASS.
 Saturday, June 29.

As has been the case with almost every race of the Eastern Y. C. in recent years, its annual open race, sailed Saturday, June 29, was attended by few yachts. Athene and Constellation had no competitors in their classes, but both sailed for record time over the course. Athene beat Constellation on every point of sailing and won the Puritan cup for the best actual time over the course. Golden Rod assumed length to race with Shark, but was no match for her.

The race which was of most interest was for the special class of 25-footers, in which Calypso, Chewink and Flirt were pitted against one another for the first time. Calypso got away with the two keel Crowninshield boats without any difficulty. This seems suggestive of things that might have been, for Chewink is a small Independence and Calypso embodies the features which Hanley would have put in a centerboard 90-footer.

INDEPENDENCE.

New York Y. C.—Glen Cove Cups.

GLEN COVE—LONG ISLAND SOUND.

Tuesday, June 25.

THE New York Y. C. held its races for the Glen Cove cups on Long Island Sound on Tuesday, June 25. A special race had been arranged between the owners of the Cup defender Columbia and yawls Vigilant and Ailsa. On account of the difference of rig in these boats, Columbia was penalized by a large allowance. However, she won handily, saving her allowance and winning with minutes to spare. It was gratifying to see the way Columbia walked away from her competitors, for she seemed faster than ever before, and her crew is working in splendid shape.

Vigilant turned tables on Ailsa, and won by 3m. and 5s. When Ailsa beat Vigilant so badly at the annual regatta of the N. Y. Y. C. down the bay a few days ago, Vigilant was without her centerboard, and this very likely accounts for the poor showing she made on that day. Since then her board has been installed and the improvement was decidedly noticeable.

In the 51ft. class there was a good race between Altair and Humma. The latter boat led until they hauled on the wind, when Altair took the lead and won by 1m. and 34s.

Effort and Mira again met in the 43ft. class. Effort, sailed by Mr. Addison G. Hanan, won, beating Mira by 1m. and 57s.

The race between Elmina and Quissetta in the 75ft. schooner class was most interesting. Amorita and Muriel were on hand, but did not worry the first two boats.

The English cutter Hester was matched against the schooners Katrina and Shamrock.

The light northeast wind that prevailed in the morning dropped entirely at 11:30 o'clock, the time scheduled for the start of the race. It remained a dead calm up to nearly 2 o'clock, when a light southwest breeze came up and the preparatory signal was hoisted on the steam yacht Colonia, which served as the committee boat.

The course was from a line between the committee boat and a mark a quarter of a mile north from Matinicock Point buoy, six miles east by north to and around a mark one and one-quarter miles west by north from Lloyd's Point, four miles northwest to and around a mark one and three-quarter miles east by north from Great Captain's Island Light, five miles southwest, three-quarters south to a mark at start. This course was to be sailed twice over, but owing to the late start the committee stopped the yachts at the end of the first round.

The starting signal was given at 2:25, and Ailsa, Vigilant and Columbia crossed in the order named, with only a few seconds between them. Columbia took the lead almost immediately, leaving the other boats in bounds.

Anoatok was the next boat to start, followed by Mira, Effort, Humma, Altair and Leda. The starting signal for the schooners was made at 11:30 o'clock. They were all close together as they went over. Quissetta was the first to cross; Elmina was only 9s. behind. Then came Shamrock, Katrina, Hester, Amorita and Muriel.

It was a beam reach, with booms to port, to Lloyd's Point mark, a jibe there and a reach across the Sound

and back home on the wind. This is how the leaders jibed around the mark off Lloyd's Point:

Columbia.....	2 57 30	Humma.....	3 10 55
Vigilant.....	3 01 25	Amorita.....	3 11 05
Ailsa.....	3 02 07	Altair.....	3 11 54
Elmina.....	3 08 34	Muriel.....	3 12 06
Quissetta.....	3 09 35	Katrina.....	3 14 50

Reaching across the Sound to the Great Captain's Island mark, these positions were not materially changed, and this is the way they hauled on the wind:

Columbia.....	3 18 22	Amorita.....	3 35 15
Vigilant.....	3 24 12	Muriel.....	3 36 15
Ailsa.....	3 25 25	Katrina.....	3 38 33
Elmina.....	3 32 40	Humma.....	3 40 07
Quissetta.....	3 34 12	Altair.....	3 43 45

The marks were new in design, the floats carrying a black ball, with yellow band, surmounted by a bright metal cone. They worked well and could be readily seen.

The Regatta Committee was composed of Mr. S. Nicholson Kane, Mr. Newbury D. Lawton and Mr. J. Frederic Tams, the latter taking the place of Mr. Chester Griswold, who is out of town. The summary follows:

	Start.	Finish.	Elapsed.	Corrected.
Sloops and Yawls—Class G—Over 90ft. Racing Length.				
Columbia.....	2 52 32	3 57 20	1 31 48	1 31 48
Vigilant.....	2 25 29	4 17 12	1 51 43	1 47 37
Ailsa.....	2 25 27	4 20 14	1 54 47	1 54 47
Sloops—Class K—43 to 51ft. Racing Length.				
Altair.....	2 28 17	4 40 55	2 12 38	2 12 38
Humma.....	2 27 53	4 42 05	2 14 12	2 14 12
Sloops—Class L—36 to 43ft. Racing Length.				
Effort.....	2 26 34	4 59 39	2 33 05	2 33 05
Mira.....	2 26 24	5 01 26	2 35 02	2 35 02
Sloops—Class M—30 to 36ft. Racing Length.				
Leda.....	2 28 28	5 05 03	2 36 35	2 36 35
Anoatok.....	2 26 05	5 06 39	2 40 34	2 40 34
Schooners—Class D—65 to 75ft. Racing Length.				
Elmina.....	2 31 48	4 31 30	1 59 42	1 59 42
Quissetta.....	2 31 29	4 32 02	2 00 31	2 00 06
Muriel.....	2 33 23	4 39 07	2 05 44	2 05 44
Amorita.....	2 32 52	4 35 42	2 02 50	2 02 50
Special Class—Yawls.				
Vigilant.....	2 25 29	4 17 12	1 51 43	1 51 43
Ailsa.....	2 25 27	4 20 14	1 54 47	1 54 47
Special Class—Cruising Trim—Mixed Rig.				
Hester.....	2 32 48	4 46 12	2 13 24	2 13 24
Katrina.....	2 32 27	4 49 57	2 17 30	2 14 03
Shamrock.....	2 32 09	4 59 20	2 27 11	2 23 40

Columbia, after conceding Vigilant an allowance of 4m. 6s., beats Vigilant by 15m. 49s. and Ailsa by 22m. 59s.

Altair wins by 1m. 34s.
 Effort wins by 1m. 57s.
 Leda wins by 3m. 59s.
 Elmina beats Quissetta by 24s.
 Vigilant wins by 3m. 4s.
 Hester wins by 39s.

The English-built steam yacht Christabel arrived at New York on June 22 from Cowes, England. She is under charter to Mr. Adrian Iselin, Jr., N. Y. Y. C. During the trip the yacht experienced bad weather and was hove to for seven nights. Christabel was built by D. & W. Henderson & Co., at Glasgow, Scotland, in 1893, from designs made by Mr. G. L. Watson. She is 150ft. long, 22ft. beam and 12.5ft. deep. She carries a crew of seven-teen men.

New York Y. C.

NEWPORT, R. I.
Monday, July 1.

CONSTITUTION sailed her first race on Monday, July 1, against Columbia, the successful defender of the America Cup in 1899. Columbia was in splendid shape, and her crew have had two solid months of constant drilling. Capt. Barr and a number of the men served on her two years ago. Constitution, on the other hand, is comparatively a green boat with a new crew. The loss of Constitution's mast caused a delay in the working out of the men which is noticeable. Columbia has not been measured since 1899, but taking that season's measurements, Constitution would have to allow her 1m. and 22s., thus making Columbia a winner by 2m. and 10s. corrected time.

To those yachtsmen who have seen both of the boats and taking everything into consideration, the result of the race was not a surprise.

Steam yachts and sailing craft were there in plenty. The new Alvina was conspicuous, Narada equally so, while Josephine, Eugenie, Kanawha, Taurus and Geraldine were on hand. Then the schooner Endymion, bound across the ocean, and Palmer, the "seventy" Virginia and the cutter Hester were also out. The steamer Colonia carried the Regatta Committee, and the tug Storm King the guests of the club, under the charge of Capt. Sands. Thomas W. Lawson, of Boston, the owner of Independence, watched the races closely from his fine steam yacht Dreamer.

The preparatory signal was given at 11:30 o'clock. Jib topsails were broken out on both boats just before the starting signal at 11:40. Columbia crossed to windward of Constitution. Constitution seemed to foot faster than Columbia but did not point as high. The wind was light at the start, but increased gradually up to the finish. About half an hour after the start Constitution was some distance off Columbia's lee bow. Constitution came about on the port tack, and as she neared Columbia Capt. Barr brought his ship around also. Constitution was doing finely on this tack, but her chances of winning were spoiled by the cringle on the clew of the jib drawing out. Before the sail could be secured, brought on board and another bent and set in its place, nearly ten minutes had been lost. The course was fifteen miles to windward and return. Columbia was first around the outside mark. The times there were:

	First Leg.		
Columbia	11 40 34	1 24 55	1 44 21
Constitution	11 40 37	1 26 55	1 46 18

Columbia's gain to windward, 1m. and 57s.

As Columbia bore around the mark she jibed her boom over to port and shortly after set her spinnaker to starboard. Some three minutes later her balloon was broken out. Constitution lost considerable time after rounding the mark by not getting her light sails set in good time. On the run home Constitution's extra length and larger sail plan stood her in good stead, and she slowly but surely pulled up on Columbia.

The balloon had been doing so little good that it was taken in on Constitution. The mark at the finish was then close at hand. With only her spinnaker and mainsail she closed up on the leader very fast, but Columbia shot over the line first at 2:32:38. Constitution followed at 2:33:24, beaten 48s., in her first race.

The times on the second leg were as follows:

	Second Leg.		
Constitution	1 26 55	2 33 29	1 06 34
Columbia	1 24 55	2 32 38	1 07 43

Constitution's gain to leeward, 1m. and 9s.

	Start.	Finish.	Elapsed.
Columbia	11 40 34	2 32 38	2 52 04
Constitution	11 40 37	2 33 29	2 52 52

Columbia beats Constitution 48s., elapsed time.

After the yachts had crossed the finish line Columbia met with a mishap. She jibed, and as the breeze was freshening this proved disastrous. The sheet slipped off the cleat, and the boom brought up with a jerk against the lee runner, and, as is so common with these peculiar steel spars, it collapsed. Capt. Barr at once luffed his sloop up and the drooping end of the boom was hauled on board.

E. D. Morgan, manager of Columbia, has telegraphed to the Chapman-Merritt Wrecking Company to get the yacht's spare boom and bring it here. It is expected to be here in time to be shipped so that Columbia can start in Wednesday's race.

Hull-Massachusetts Y. C.

HULL, MASS.
Saturday, June 29.

In the regular club race of the Hull-Massachusetts Y. C. on Saturday, June 29, only one class lined up for the start—the 21ft. handicap class. The 25-footers were racing at Marblehead and the 18ft. knockabouts at City Point. In this class the starters were the knockabouts Holly II. and Dabster. They made a very pretty start, Dabster going over the line half a length ahead, and Holly II. on her weather. It was blowing fresh from the S.W., and both laid out pretty well under the breeze. It was Holly's breeze, however, and she commenced to go away from Dabster after she had crossed the starting line. On the first round Dabster's mainsail was torn at the leach and she withdrew, leaving Holly II. to finish it out alone. The summary:

	Elapsed.	Corrected.
Holly II., W. M. Ware	1 40 30	1 34 30
Dabster, G. P. Keith	Disabled.	

Boston Y. C.

SOUTH BOSTON, MASS.
Saturday, June 29.

A Y. R. A. race was given by the Boston Y. C. on Saturday, June 29, for restricted 25-footers, restricted 21-footers and 18ft. knockabouts. There was a strong S.W. breeze blowing, and the racing was good in all classes. Interest was somewhat lost in the 25-footers through the absence of Calypso. Flirt and Chewink, but the race between Early Dawn and Marion was so close that it greatly made up for the absence of the other cracks. Early Dawn won by 42s., but she had to fight every inch of the course. There was a good race in the restricted 21ft. class. Zaza

added another victory to her list, but Tabasco II. gave her a hard chase. Tabasco II. is a new boat, designed by Fred D. Lawley for H. H. Wiggin. She had just come from the shop, and, for her maiden race, made a very good showing. The yawl Coquette finished a good third, beating out the new boats Opitsah III. and Eaglet.

In the 18ft. knockabouts Bacchante took her first prize for the first time this season, beating out Bonita by less than a minute. It seems that Bacchante has at last found out what her weather is, and, from the record of previous races, it appears to be in a stiff breeze. She is an out-and-out centerboard without a pound of outside ballast. The summary:

25-footers.		Elapsed.
Early Dawn, J. E. Doherty		1 37 00
Marion, W. P. Gahal		1 37 42
Little Peter, F. B. Doane		Withdrew.
21-footers.		
Zaza, W. P. Shute		1 38 10
Tabasco III., H. H. Wiggin		1 39 39
Coquette, B. D. Amsden		1 39 46
Eaglet, W. S. Burgess		1 41 16
Opitsah III., S. H. Foster		1 43 26
Apache		1 46 24
18-footers.		
Bacchante, Humphrey & Lauriat		1 43 07
Bonita, G. H. Wightman		1 44 04
Aspinquid, W. A. Comey		1 46 30
Ayaya, W. P. Keyes		1 50 31
Malillian, G. M. Permar		1 51 31
Oriana, Alfred Douglas		1 53 42

Cohasset Y. C.

COHASSET, MASS.
Saturday, June 29.

THE third race of the Cohasset Y. C. was sailed over the regular club course on Saturday, June 29. Two classes of knockabouts started. In the first of these Monsoon won her maiden race, and in the special class Fancy withdrew, leaving the field to Fly. The summary:

Knockabout Class.		Elapsed.
Monsoon, J. Knowles		1 03 00
Delta, R. B. Williams		1 11 41
Harelda, A. Bigelow, Jr.		1 13 26
Eleanor, Moor Brothers		1 16 00
Special Class for Knockabouts.		
Fly, C. W. Barron		1 13 00
Fancy, C. W. Barron		Withdrew.

Newport Special Thirties.

NEWPORT, R. I.
Saturday, June 29.

THE series of races to be held for the 30-footers opened on Saturday, June 29. In a stiff S.W. breeze the boats sailed from Brenton's Cove to Dyer's Island and back. The start was at 2:33. The summaries:

Start, 2:33.	Finish.	Elapsed.
Wawa, Reginald Brooks	5 38 58	2 05 58
Esperanza, H. O. Havemeyer, Jr.	5 42 09	2 09 09

The Canada Cup Challengers.

TORONTO, June 29.—The first week in July should end the uncertainty as to which 35-footer will try to wrest the Canada cup from the Chicago Y. C. The trial races for the selection of a challenger begin on July 3, and will be held on triangular and windward and leeward courses alternately. The issue is still much in doubt. Between Beaver and Invader, the Toronto boats, there is not very much difference; whatever there is favors the latter. Invader is the smarter running and in light winds; Beaver has beaten her in windward work in a breeze, but that was when her mainsail was not setting properly. How the Toronto yachts will compare with Canadian, the Hamilton craft, is still a matter of conjecture at this date, although it should not remain so long, as the three yachts are scheduled to come together at Hamilton in the race for the Queen's cup on Dominion Day.

There have been some changes in the committee of judges for the trial races at Toronto. The judges at present are: Messrs. A. G. Peuchen, F. A. Turner, F. J. Campbell, George E. Macrae and Owain Martin, all of Toronto. The Hamilton gentlemen invited were unable to accept.

The tuning-up process has been going on steadily in Invader. Little has been done to Beaver, for after two seasons of careful management she is in excellent trim, and about all that will have to be done to her before the trial races will be to replace the battens in the mainsail, clear out any superfluous weight aboard and blacklead her bottom. If selected as the cup challenger, which is just possible, she will probably have a new suit of sails. Her present canvas is in excellent condition, but if she receives a new suit it will probably be a larger one, ballast being removed from the lead bulb in order to even up the measurement. Such, at least, is current gossip, although her owners have not made any announcement on the subject. Invader is now very close to the best racing trim. After an immense amount of trouble her mainsail is setting fairly well. A piece had to be cut off the leach at the upper peak before the sag could be taken out of it. Canadian-made sails are all very well, but it takes a long time to get them into shape. Toronto yachtsmen are commencing to think that after all it is wiser to import sails from the old land.

Invader was again drydocked on Thursday. Her bottom was not very foul, but the lines of her buttocks and seams showed up very plainly—far more plainly than those of Beaver, after two seasons' racing. The new boat's long floors and little deadrise make her hard on herself in a choppy sea, unless there is wind enough to make her sail on the lee bilge. The deadwood of her fin is so far aft that there is a comparatively shallow body when the mast step comes. To overcome the effect of the straining at this point two large brass plates were screwed on, one on either side of the keel. They were blacklead over. Invader's whole bottom was carefully scraped, sandpapered and blacklead to the waterline. Her topsides were given another coat of black enamel. They are relieved by a gilt ribbon, with scroll work on the bows.

Com. Gooderham has evolved a scheme for saving measurement in his headsail triangle. In measuring this it is usual to take the distance from the mast to the bowsprit end as the base, and from the deck to the highest sheave

hole as the perpendicular, this latter being practically the height of the mast, for in these jib and mainsail sloops the forestay goes from the truck to the bowsprit end, and the jib halyard block is strapped right under the eye of it at the masthead. Invader's jib halyard block is arranged differently. The forestay and strut stay are connected with a wooden spur, about 4ft. above the strut and spreaders. At the junction of the spur and forestay one block is made fast on the under side. At the junction of the spur and strut stay another is made fast. The jib halyards run up through the first block, then aft to the second and then down to the deck.

This arrangement keeps the jib a trifle further forward, the pull of the halyards being in a direct line with the forestay, and it effects a saving in the measurement of the headsail triangle of about 60 sq. ft. It has its disadvantages, however. Invader's jib hoists quite high enough, but her balloon canvas cannot go up to the truck, as is usual. Of course the head of the spinnaker or balloon jib could easily be mastheaded, but the penalty would be the loss of the saving in measurement. Invader set her spinnaker for the first time on June 25. It is disappointingly small, the boom being only slightly over 20ft. in length, and the hoist being limited, as shown above. She only carried it for a few minutes on this occasion, and did not develop as much speed as the onlookers expected under the circumstances. Her balloon jib is also comparatively small. Both sails would work admirably in a fifteen or twenty mile breeze, but it seems a pity to starve the boat on balloon canvas when she seems to be at her best in running and in light winds.

Invader is, however, quite capable of taking care of herself in a blow. The puffs in the northwester of Sunday, June 23, traveled at the rate of twenty-five miles an hour occasionally, but the prospective cup challenger carried her whole mainsail. She was well heeled over, but her stability increases as she submerges her long lee side. She was not sailed for all she was worth, the sails being kept lifting in order not to stretch the new canvas out of shape. It was her first sail in a blow, and she did well. She carries more of a weather helm in a breeze, however, than is satisfactory.

There is considerable satisfaction expressed at the action of the Yacht Racing Union of the Great Lakes in seeking to postpone the operation of the amendment to the scantling rule providing that the keel, stem, sternpost and frames should be of oak. The Lake Yacht Racing Association clubs were not notified, and if the rule were enforced Invader, having a pitch pine keelson, might be debarred. All but three of the United States boats would be similarly affected. The postponement of the amendment has been left to a mail vote.

Beaver and Invader sailed for Hamilton on Saturday to take part in the Queen's cup race.

CHARLES H. SNIDER.

The Cup Challenger.

Editor Forest and Stream:

When Shamrock II. was in dock at Southampton she was open to public inspection from the dock side, but nobody was allowed into the dock itself, as when Navahoc was docked. Nevertheless one could, by careful bearing, obtain a very fair idea of her principal length dimensions, and in the evening I made the rough sketch from memory which I now send you. You should have received it long ago, but I did not like to send it before discovering Mr. Watson's wishes on the subject. He now writes me offering no objection, so if you will you can publish the rough sketch for what it is worth.

The stern is perhaps a little finer in vertical profile. The draft is taken at 20ft., the freeboard at 6ft. amidships, and it may be even less. It is only a guess from sailing round her when at moorings. She has very little sheer.

You may perhaps have noticed my description of the accident which occurred when the King was on board. I was sailing about watching her at a distance of about 300 yards. I am convinced that the accident occurred from the eye fore-pin of bobstay shackles pulling out and breaking across the pin-hole. This eye was built into the hull of the boat, and certainly ought not to have given way.

Depend upon it the telescopic system of main and topmasts is a great mistake, and I wonder that any man can be found to volunteer for masthead work in a boat so fitted. If any part of the topmast gear gives way the heel strains the head of mainmast and away goes the whole sail plan.

The ancient plan of carrying the topmast in caps strains the masthead also, but the masthead, and, indeed, the entire length of the mainmast, can then be trussed internally and even made sectionally waterproof by suitable diaphragms at frequent intervals; so that should a yacht be dismasted, the mast would float.

These cup challengers and cup defenders are becoming almost as thoroughly engineering problems as are great bridges or steamers. The designing of the hulls, the spars, the rigging, and the very sails themselves is, in these huge cutters, becoming more a question of strength of materials than of sailing efficiency.

Is it not time that in the America Cup competition some limit should be placed on the sail area for the cutter rig—say, 10,000 sq. ft.—and let the designers put the fastest ships they can under it? Ship-shape hulls, not freaks, a simple rating by sail area, would not be at all desirable for ordinary yacht racing, but for the cup races it seems preferable to the present regulations and rating which drive us into such huge sail plans and enormous spars. Yours faithfully,

THALASSA.

We regret that it was impossible to reproduce the sketch that accompanied the above article.—EDIT.

Clarence W. Dolan is having a house-boat built, which he will use on shooting trips in Chesapeake Bay. The new boat is in process of construction at Nyack, N. Y., from designs by Tams, Lemoine & Crane. The specifications call for every appointment which will add to the comfort of the owner. The principal dimensions of the boat are: Length, 115ft.; beam, 17ft. 6in., and draft of water, 2ft. 6in. The extreme lightness of draft will enable Mr. Dolan to navigate safely any of the shallow waters of the hunting grounds. Power will be supplied by two 75 horse-power motors.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Answers to Correspondents on Small Yacht Construction and Rigging.

I HAVE been asked by the editor to reply to the numerous letters on these articles which have been received from readers in various parts of the country, and as there are too many of them for a separate reply to each, I will try and answer the main points only. Two correspondents point out omissions in the designs, one of which is owing to a detail being left out in tracing from the original design, while the other is a clerical error of my own. The first, and most important, is the absence of any pin or bolt for the plate to turn on the centerboard, and to make matters worse, there is a mark, somewhat like a bolt hole, in the construction plan which has nothing to do with the drawing at all. The position of the bolt may be found by taking half the distance from the underside of the keel to the top edge of the plate when it is lowered, and it will be a similar distance in from the fore edge, the corner of the plate being cut to a quarter circle, struck from the center of the bolt hole, the exact distance in from the edges of the plate to the center of the hole in this case being $6\frac{1}{2}$ in., while the distance from the center of the hole in the case to the fore end of the case, inside, is $7\frac{1}{2}$ in., allowing $\frac{1}{4}$ in. clearance.

The second error is in the sum of the rating of the 24 l. r. cruiser, and this is owing to the figure .1 being left out of the divisor, which should be 2.1 instead of 2. This would of course explain itself to any one acquainted with the Y. R. A. rule, as the figures 2.1 are the "constant" for all ratings. It will be found that all the dimensions for rating are correct, and that the sum of

$$\frac{50.40}{2.1}$$

gives a rating of exactly 24 l. r.

Other writers complain of the cockpit arrangements of the centerboard boat, and the internal fittings of the keel boat. My only excuse for these faults is that I designed the two boats to suit the requirements of their owners; and merely chose them from a number of other designs as being fairly typical boats of their kind which any one could alter to suit himself. As one of these gentlemen says, it is easy enough to show a larger cockpit if required, but when he goes on to suggest that the builder would perhaps forget to make the alteration in building the boat, he evidently fails to see why the articles were written. My object in writing them is to try and explain some of the methods of boat building now in use in such a way as to help any one to build a boat who has not been brought up to the trade, and not to provide a design of that much-sought-after boat which shall satisfy everybody.

Those who have written to know what the cost of the materials for one of these boats would be, I can only refer to their local timber merchant and yacht chandler, as prices vary considerably in different places. I shall be very pleased to give the names of the best firms in London who supply timber and other materials, and quotations could be obtained from them.

One correspondent wishes to know if there will be any steam launch designs, but I regret to say I do not see my way to this. I will, however, answer any questions on the subject, provided they are of general interest.

Chapter VII—Center Case and Rudder Trunk.

The method of fitting the rudder trunk of the 24 l. r. cruiser has already been described, and it should be done before the frame is set up.

The center case of No. 1 design may also be partly fitted at the same stage—that is to say, the keel can be rabbeted and the slot cut. Both case and trunk, however, must be finished and fixed after the boat is planked, or else the joint between their lower edges and the keel may go out of shape and leak afterward.

Taking the center case first, we will go through the whole process from the commencement, and start by cutting the rabbet on each side of the slot in the keel, as described in Chapter III.

The width of this rabbet should be one-third of the thickness of the sides of the center case or rudder case, and should be on the outer edge. Its depth should be about half its width, and it must be exactly parallel with the slot in the keel and of a uniform width and depth throughout. It must be carefully set out in pencil on the keel before starting to cut it out, and it should be roughed out with a narrow chisel to nearly its full depth, and finished with the lower edge of the case, chalking and fitting them to each other till a good joint is obtained. Then the insides of the two side pieces should be painted with two coats of good red and white lead paint, with plenty of oil in it.

While they are drying, the end stanchions can be cut. These should be $\frac{1}{4}$ in. thicker than the width of the slot; having a shoulder $\frac{1}{8}$ in. on each side, to prevent them going too far through the slot when driven in their places. The sides of case are rabbeted $\frac{1}{8}$ in. at each end, to take the extra thickness of the stanchions, so that all joints are rabbeted, and bedded in white lead and varnish. When the sides of the case are ready the rabbet in the keel must be filled with white lead and varnish as thick as cream, and the stanchions being covered with the same mixture; the sides can be driven home into the keel and held in place by clamps on the ends, holding them to the stanchions.

Then screw up through the keel into the sides with long brass screws, as shown in the sketch, and screw the sides into the stanchions. Now fit the sills over the ends of the oak floors, which have previously been cut off to the side of the case. They should be dovetailed into the sills.

The sills must be bedded in white lead and varnish, and closely screwed to the case and fastened through the keel with stout copper nails. A pair of knees should be fitted over the sills on the sides of the case at the plate bolt, and another pair at each end of the case. The rudder case is fitted in the same manner, but the slot is wider at the fore end to take the stem of the rudder. No knees are required on the rudder case.

The knees at the sides of the center case, mentioned in the last paragraph, should be made of wrought iron, galvanized, and they should either be fitted on one of the regular floor timbers, or else a short extra timber must be put in for them to rest on, as they should never be placed directly on the inside of the planking. They should be $\frac{1}{2}$ in. wide and $\frac{3}{8}$ in. thick at the angle of the case and keel, the arms being at least a foot long and tapered to $\frac{1}{4}$ in. by 3-16 in. at each end. The upper arm, against the case and sill, must be screwed to them with stout brass screws as long as possible; but of course they must not go quite through the case. The lower arm must be through fastened with stout copper nails, through planking, and floor timbers. Extra knees may be used at each floor timber all along the case if the boat has to knock about on the ground much, but they could be a bit lighter than the above. The knee which is fitted at the center plate bolt should be swelled out sufficiently to let the bolt go through it, and before it is fastened, a piece of leather should be placed between it and the case to make the bolt hole water tight.

The rudder trunk, or rather case, of the centerboard boat must be fitted water tight to the deck, and to insure this it should be left about an inch above the level of the deck till after the beams are in place, when it can be faired up with them. It must have a fillet or ledge along the top on each side to screw the deck into.

When the rudder is in place in the case, the head rests on a circular gun metal plate, which is fixed on the deck at the fore end of the case, being raised about an inch above the level of the deck on a small block of mahogany or teak, turned to fit the plate, the after part of both plate and wood being cut away to allow the blade of the rudder to pass if it is desired to remove the rudder entirely, but it is both stronger and simpler if the rudder only pulls up into the case and is held up by a pin through the rudder stem, as in this case, the top of the case is closed, and does not show on the deck. A stout metal washer should be placed between the under side of the tiller and the deck plate to reduce the friction, and a metal plate should be let into the keel at the bottom of the fore end of the case, to form a lower bearing for the rudder.

If it is not necessary to lift the rudder at all, owing to the boat being kept afloat, it will save a lot of work to use a piece of soft, solid drawn brass tube for the rudder trunk. This tube must be $\frac{1}{2}$ in. larger inside than the stem of the rudder, and should have a gas thread on each end, the lower end being screwed tightly into the keel and filed off flush outside, while the upper end projects $\frac{1}{2}$ in. above the deck with hardwood block and gun metal plate referred to above, screwed tightly on to the top of the tube, and then to the deck. This is the simplest and best form of trunk, and never leaks, but of course the rudder can only be removed from below.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

YACHTING NEWS NOTES.

The English cutter *Zin'ta*, which was purchased last winter by Mr. Edward M. Pedelford, N. Y. C., arrived at Greenport, L. I., on Sunday, June 23, at noon. *Zin'ta* left Gourock, Scotland, on May 16, and was thirty-seven days out. Pleasant weather was experienced throughout the passage. *Zin'ta* is a composite cutter designed and built by Wm. Fife & Son at Farlie in 1893. She is 68ft. over all, 46.4ft. on the waterline, 12ft. 6in. beam and draws 6.4ft. The boat was in command of Capt. George Litton, who had a crew of four men.

The English-built steam yacht *Tuscarona* arrived at New York on June 23 from Greenock, Scotland. The vessel is under charter to Mr. H. Ballantine, of Newark. She had a smooth passage. She was built by Scott & Son at Greenock in 1897, from designs made by Mr. G. L. Watson. She is 181.4ft. long, 26.8ft. beam and 14.55ft. depth. Her crew consists of thirty-one men.

The following sales have been made through the agency of Messrs. Huntington & Seaman:

Schooner yacht *Monhegan*, Clark A. Miller, New York, to J. P. Story, Jr., Washington, D. C.
Cruising launch *Curlew*, J. K. Tod, New York, to Samuel A. Beardsley, New York.

Yawl, Boheman Leonard Ames, New York, to Samuel H. Groser, White Plains, N. Y., and Hermes, Haviland Brothers, Brooklyn, to W. A. Ruddick, Boston, Mass.

Knockabout *Sequel*, Garrie G. Smith, Port Jefferson, L. I., to Charles H. Lee, New York.

Schooner yacht *Fearless*, F. M. Welles, New York, to Charles S. Hamilton, New Haven, Conn.

Mr. James S. Watson's auxiliary schooner yacht *Genesee* dropped her anchor in Quarantine on Thursday night, June 27, after a passage of twenty-seven days from Gibraltar.

Mr. Frank A. Wilmot, of Bridgeport, Conn., has sold the auxiliary yawl *Hadassah* to Mr. D. B. Ogden, who will use the yacht at Bar Harbor. Mr. Wilmot is the owner of *Hussar II*, which he has changed to yawl rig and added a gasoline engine.

The following sales have been made through the agency of Mr. A. J. McIntosh: Sloop yacht *Ilderim*, from James Gallatin to Edwin M. Post; schooner yacht *Orithyia*, from Frederick H. Lee to F. A. Root, and the knockabout *A'ta*, from H. Anderson to G. Searing Wilson, Manhasset Bay Y. C.

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Off-hand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

The 100-Shot Revolver Record.

THE accompanying target represents the new 100-shot revolver record at 50yds. on the standard American target, which was made at Avondale range, Savannah, Ga., June 1, by Capt. C. S. Richmond, the well-known expert revolver marksman. This score of 918 points beats the previous record by 3 points.

Capt. Richmond used a .44cal. revolver and Peters factory mid-range loaded cartridges. The shooting was witnessed by trustworthy persons, and the correctness of the shooting sworn to before a notary public.

The Independent New York Schuetzen will be strongly represented at the National Schuetzen Bund of North America at San Francisco, July 14 to 23.

Trapshooting.

Fixtures.

July 3-4—Flint, Mich.—Second shoot of the Michigan Trapshooters' League. John Parker, manager; Chas. Caleb, Sec'y.

July 4.—Schenectady, N. Y.—All-day amateur target tournament of the Schenectady Gun Club. Harry Strong, Sec'y.

July 4.—Towanda, Pa.—Annual tournament of the Towanda Gun Club. Mangantrap, M. F. Dietrich, Sec'y.

July 4.—Frankfort, N. Y.—Third annual target tournament of the Frankfort Fish and Game Protective Association. W. J. Weller, Sec'y.

July 4.—Haverhill, Mass.—Open handicap shoot of the Haverhill Gun Club. S. G. Miller, Sec'y.

July 4.—Ossining, N. Y.—Target shoot of the Ossining Gun Club.

July 4-5.—Champlain, N. Y.—Champlain Gun Club's tournament; all events open to amateurs; some events open to professionals. Wm. Fraser, Pres.

July 5-6.—Duluth, Minn.—Central Gun Club's tournament. J. W. Nelson, Sec'y.

July 9-11.—Pine Bluff, Ark.—Eleventh annual tournament of the Arkansas State Sportsmen's Association, under the auspices of the Pine Bluff Gun Club. E. A. Howell, Sec'y.

July 10.—Leominster, Mass.—Contest between teams of the Leominster, Fitchburg and Gardner gun clubs.

July 10-11.—St. Paul, Minn.—Sixth annual tournament of the St. Paul Rod and Gun Club, at Inter-city Shooting park; \$340 added money. J. L. D. Morrison, 604 N. Y. Life Building, St. Paul.

July 15-17.—Columbia, Mo.—State Amateur shoot, under the auspices of the Columbia Gun Club. W. A. Vivion, Sec'y.

July 18.—Williamsport, Pa.—All-day tournament of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.

July 24-25.—Detroit, Mich.—Third shoot of the Michigan Trapshooters' League, under auspices of the Pastime Gun Club. John Parker, manager.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenicke, Sec'y.

DRIVERS AND TWISTERS.

The County Gentleman, England, in explaining the admirably accomplished manner in which the English team lost, by shooting with gun below the elbow and two barrels to the Americans' one, says: "They buy guns specially made for clay bird shooting, which they one and all use in manner most productive for producing results, however ugly and unlike game shooting their style, while their cartridges are specially manufactured in every detail. They believe in heavy guns, over 8lbs. in weight, able to stand the heavy charges of both powder and shot, which their cartridges contain." After stating that the Americans "believe" in heavy guns, the aforementioned journal gives a list of the Americans' guns, all 8lbs., or under. There is an unconscious respectful tribute to American ammunition, machine loaded mostly, all alike loaded with precision, whether for targets, pigeons or game. However, it is just possible that the American team would consent to shoot a match, one barrel only, for all contestants, or the use of both barrels is of no advantage, let the Americans shoot both barrels, while the English shoot but one. On this side of the water, we have a belief that there is something in pointing the gun aright and shooting at the right time. But there is much conceded as to the effectiveness of American guns and loads, which should be gratifying to American skill and pride. And yet, while seeking to soften the defeat of the home team, the County Gentleman bestows unstinted praise on the skill of the American team, and there is a fair sentiment pervading its columns which denotes that they are all sportsmen.

The following is a complete list of the members of the St. Paul, Minn., Rod and Gun Club. They extend to you a most cordial invitation to be present on July 10 and 11, promising you not only a well attended tournament but a pleasant and enjoyable time as well: J. L. D. Morrison, G. F. Thomas, H. C. Hirsch, J. A. Quinn, J. C. Highhouse, C. A. Wheaton, Chas. Thompson, J. A. Helfenstein, C. R. Wilkinson, M. N. Goss, S. M. Kirkwood, T. C. Canfield, Paul, Hauser, Jr., Geo. Somers, Jr., Chas. Hauser, A. E. Boyesen, Frank Novotny, R. Schiffmann, M. Defiel, E. M. Allen, P. H. Gotzian, Elijah Baker, Hart N. Cook, C. B. Bowlby, Jacob Danz, 2d, I. Sheddon, A. E. Perry, Wm. Carling, J. C. Henry, Geo. G. Benz, W. A. Fonda, Al Fisher, E. B. Swygart, C. E. Robertson, J. C. Kennedy, A. E. Krebs, J. T. Rogers, Geo. R. Slocum, Lee Hall, W. B. Thorp, Otto Mueller, J. C. Famechon, Edwin Irl, W. P. Brown, W. C. Walther, L. C. Emerson, W. S. Flynt, H. W. Dezotell, John L. Townley, F. E. McKay, C. M. Leibrock, Geo. S. Burch, H. D. Defiel, Geo. McKee, Geo. E. Doll, M. F. Kennedy, A. R. Spear, G. C. Knox, J. J. Dwyer, H. E. Hunt, H. E. White, H. C. Lawrence, E. P. Roberts, J. H. Block, S. B. Shotwell, Jr., S. J. Gottschammer, J. B. Emerson, A. J. Schmitz.

The Shooting Times says, concerning the recent international match, and the guns used by the Americans: "Their guns, although not bearing comparison in style and finish with the best English made guns, yet gave extraordinary close patterns, and are extremely heavy from our point of view. Some of the cases [shells] used were $3\frac{1}{2}$ in. and contained $2\frac{1}{2}$ to 4drs. of powder, with about 1in. of wads." If our English conferees continue to lengthen the shells with each successive mention, there will be but little of the bore which is not chamber. However, the same journal very fairly states: "It has been recorded that the extra $\frac{1}{2}$ oz. of shot is equivalent to 33 pellets, and the heavy charge of powder there is no doubt gives tremendous smashing power. Notwithstanding these advantages, we cannot but think that had the teams been equal in skill the second barrel would have given victory to the British. This was proved over and over again by the successful use of the second barrel, and a comparison of the individual scores shows that the majority of the American shooters were unquestionably far superior in the skillful use of their weapons."

Mr. Paul Parker won the second quarterly shoot of the Kansas City handicap championship trophy for 1901, at Blue River Park, Kansas City, by defeating eighteen contestants by killing 25 birds straight, June 29. Also a match at 25 live birds per man for \$50 a side, and the price of the birds, was shot between Messrs. Guy Little and F. M. Berkley, both of the Washington Park Gun Club. The latter won by a score of 22 to 21.

The Daily True American, of Trenton, N. J., in its issue of the 29th ult., presents a portrait of Dr. George M. Thomas, the energetic and popular president of the New Jersey State Sportsmen's Association, and secretary of the Trenton Shooting Association. The text which accompanies the portrait expresses high esteem for the Doctor's worth, and proves that a man may be a profit even in his own country.

Through the medium of a catalogue, elaborately complete in every detail, the Bridgeport Gun Implement Company, 313-315 Broadway, New York, presents valuable information in respect to the kinds and qualities of its golf goods for the season of 1901-02. Of the 94 pages, 39 are devoted to illustrations of play and "Practical Hints on Golf."

The press dispatches have stated that the American team were booked to leave England for home on June 30, but Mr. Banks' letter, published elsewhere in our columns, reports that they will start on schedule time, on June 29. With the thermometer bobbing in the 90s, if it so continues they will find a hot time in the old town on their return.

In the third match between Messrs. J. E. Applegate, of Freneau, N. J., and S. M. Van Allen, on the grounds of the Middlesex Club, at South River, Mr. Applegate proved victorious by a score of 47 to 45. The conditions were 50 birds each, \$50 a side.

A cablegram received by Capt. J. A. H. Dressel, of the U. M. C. Co., conveyed information as follows: "Liverpool, July 1.—Team except Elliott, Merrill and Powers sailed Sunday. The team won everything in sight."

Mr. A. B. Cutcliffe, secretary, of Brantford, Canada, writes us as follows: "The Brantford Gun Club are arranging a target tournament for Aug. 6 and 7. Will send programmes when printed."

Messrs. Guy Little and J. W. Bramhall, of Kansas City, Mo., have been matched to shoot at 50 live birds each at Blue River Park, for \$50 a side and price of birds.

Messrs. Fisher and Perment have arranged to shoot a match at 25 live birds each for \$25 a side, July 11, on the grounds of Smith Brothers, Newark, N. J.

Mr. Paul North is deserving of much praise for originating and conducting to a successful issue the recent great international trapshooting match.

Mr. J. F. Welch, of Robeline, La., informs us that the local club will give a two-day shoot in the near future.

BERNARD WATERS.

Richmond Gun Club.

SILVER LAKE, Staten Island, June 29.—The following scores were made at a meeting of the Richmond Gun Club:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	10	10	10	10
Lewis	8	6	7	5	8	3	9	6
Albrecht	5	4	6	5	5	6
F. Schoverling	6	7	9	7	7	9	10	8
Bechtel	6	9	3	5	5	6	5	..
Duke	9	9	10
Hadkins	4	4	4
Joline	6	6	5	5
Murray	5	6	6

DUKE.

WESTERN TRAPS.

Waterloo Tournament.

THE two days' trap shoot of the Cedar Valley Sportsmen's Association, held at Waterloo, Ia., June 18-19, was a pleasant affair, although the attendance was smaller than the promoters hoped.

The shooting was at three expert traps, unknown angles, Sergeant system. Among the visitors present from out of town were S. F. Culver, of Cresco; E. D. Peck, of Storm Lake; Clarence Wise, of Cedar Falls; G. E. White, of Freeport, Ill.; F. M. Morrill, of Rochester, Minn.; L. Van Vleck, Albert Lea, Minn.; F. C. Walker, Jessup, Ia., and Dan Cleveland, of Manchester, Ia.

No entries were reported from Dubuque, Cedar Rapids, Marshalltown or Central City, although Waterloo has always sent shooters to each of these towns, and although Cedar Rapids is not far from Waterloo.

Table with columns for Events, Targets (1-6), and Broke. Lists names like Hartman, Weitnauer, Culver, etc., with their scores.

Second Day.

Table with columns for Events, Targets (1-6), and Broke. Lists names like Birdsall, Hartman, Wise, etc., with their scores.

Highest averages during the shoot: First, Henry Steege; second, F. Morrill; third, H. Weitnauer; fourth, Campbell; fifth, Culver; sixth, Krebs.

St. Paul Tournament.

Keep in mind the sixth annual shoot of the St. Paul Rod and Gun Club, at the Intercity Shooting Park, July 10-11; \$340 added. This shoot will come at a good time, and ought to prove a winner.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, June 29.—The appended scores were made on our grounds to-day on the occasion of the ninth shoot of the second series.

The day was a perfect one for shooting, with the exception of being a little too warm. P. McGowan won Class A medal on 23. Dorman and Jones tied for Class B on 22. E. W. Eaton won Class C also on 22.

Twenty-four members took part in the trophy shoot, and several others came too late to enter that event, but shot in other events of the day.

All is now in readiness for our team match with La Grange Club, and our July 4 events:

Table with columns for Ninth trophy shoot, 25 targets. Lists names like J. D. Pollard, Dr. Meek, C. T. Keck, etc., with their scores.

Nonpareil Gun Club.

Burnside Crossing, Ill., June 29.—The Nonpareil Gun Club held a meeting to-day at Watson's Park, with the following results:

Table with columns for Events, Targets (1-6), and Broke. Lists names like Dr. Shaw, Barto, Amberg, etc., with their scores.

Ties on 15 for first and second: Barto 20, J. R. Graham 22. Ties on 14 for third: E. S. Graham 4, Alabaster 5. J. R. Graham won first quarterly, 30 straight; E. S. Graham won second quarterly, 29; Alabaster won third quarterly, 28. Same day, \$2 miss-and-outs, birds extra:

No. 1. No. 2. No. 3. No. 4. No. 5. No. 6. No. 7. No. 8.

Table with columns for No. 1-8 and rows for Barto, Palmer, Amberg, Miller, Pumphrey.

Peters Cartridge Company's Tournament at Gainesville.

GAINESVILLE, Fla., June 27.—To-day saw the close of the tournament of the Gainesville Gun Club, assisted by the Peters Cartridge Company, under the management of Mr. Harry Lemcke. In point of attendance the shoot was not what it should have been.

The shoot was held on the gun club grounds, which are situated in an old field surrounded with pine saplings that kept out any little air that would have reached the shooters.

Every one was pleased, and expressed thanks to the Peters Cartridge Company and their representative, Mr. Lemcke, for the many kindnesses shown, and voted the products of the company perfection. The boys all stand by the Victors, and Jack Camp, who won the handsome locket given by the company for the amateur championship of Georgia and Florida, 50 targets, on a score of 42 out of 50, 18yd. mark, established a record for the club in having made 25 straight with Victors, some time since.

In the evening, after the shoot, Mr. Lemcke presented Mr. J. Camp with the trophy in a few well timed remarks, and wished him many happy shooting years. Mr. Camp is a young man, and bids fair to make a fine shot.

Below please find scores in full for both days, as owing to the extreme heat the shoot was closed the afternoon of the second day instead of running same into the third day, as per programme:

First Day, June 25.

Table with columns for Events, Targets (1-10), and Broke. Lists names like Ford, Bartleson, McKinstry, etc., with their scores.

Second Day, June 26.

Table with columns for Events, Targets (1-10), and Broke. Lists names like Bartleson, Ford, McKinstry, etc., with their scores.

Peters trophy, 50 targets, handicap 14 to 18yds.: Bartleson, 18yds. 41; C. Camp, 18yds. 41; Duke, 18yds. 27; J. Camp, 18yds. 42; Dell, 18yds. 40; W. McKinstry, 18yds. 30; Morrow, 18yds. 39; Beckham, 18yds. 2; Davis, 18yds. 31; Johnson, 18yds. 6; Ford, 18yds. 36; D. McKinstry, 18yds. 29; Bowen, 18yds. 21; Throver, 18yds. 31; Cushman, 14yds. 21; Cobb, 14yds., withdrew; Collins, 20yds., 36.

Boston Gun Club.

BOSTON, June 26.—The regular weekly prize shoot of the Boston Gun Club was held on their grounds at Wellington to-day, visitors being present from Quincy, Milton, Lexington, Wollaston and other towns. Though one of those days when the thermometer is about 15 or 20 degrees higher than what any one wishes, a cool breeze sprang up from the east and made an otherwise hot afternoon into one of the finest.

In the prize match Spencer was the only one to point the gun just a little more accurately than the rest, permitting only 3 targets to escape out of the 25 shot at. Next in line is Ford with 20, closely followed by Woodruff and Williams with 19.

Scores follow, all shooting unknown angles and handicap distance:

Table with columns for Events, Targets (1-12), and Broke. Lists names like Adams, Woodruff, Banks, etc., with their scores.

Table with columns for Match scores. Lists names like Spencer, Ford, Woodruff, etc., with their scores.

Ossining Gun Club.

OSSINING, N. Y., June 30.—Herewith please find scores of the Ossining Gun Club, made June 29 at the regular weekly shoot.

In last week's FOREST AND STREAM mention is made of a new excuse for low target scores: "The targets being water-soaked made them extremely tenacious." The extreme heat must certainly have made our targets soft at yesterday's shoot, or it might have had a similar effect upon our "think tanks." Any way, the scores were:

Table with columns for Events, Targets (1-5), and Broke. Lists names like W. Hall, C. Blandford, S. McBeth, etc., with their scores.

No. 3 was at 5 pairs. We have secured several hundred first class live birds for the Fourth of July shoot. C. G. B.

IN NEW JERSEY.

South Side Gun Club.

Newark, N. J., June 29.—The weather was hot, yet there was a good attendance. In a six-man team race, each man shooting at 25 targets, some excellent shooting was done. The scores follow:

Table with columns for Events, Targets (1-6), and Broke. Lists names like Gardiner, Glover, Dudley, etc., with their scores.

Team contest, six men to a team, 25 targets each man: Team No. 1—Gardiner 20, Glover 24, Dudley 22, Hayes 24, Dukes 22, Weller 21, Engle 20; total 153. Team No. 2—Appar 22, Piercy 23, Sinnock 21, Colquitt 20, Herrington 16, Woodruff 19, Eichhoff 18; total 129.

Trenton Shooting Association.

Trenton, N. J., June 27.—This date will be long remembered by the members of the Trenton Shooting Association and their guests. The championship of Mercer county at targets was decided on the above date, and C. A. Comp, one of our shooting stars, won the title with 45 in a field of forty-one entries.

The trophy is in the shape of a handsome silver urn, costing \$50, and was donated by the members of the club. The conditions to-day were 50 targets, unknown angles; entrance and targets free. The cover over the score made the work pleasant on account of the grateful shade it furnished.

The other improvements came in for attention, and a most pleasant and enjoyable time was had by every one. No hitch occurred. Everything passed off as smoothly as possible.

The secretary challenged Mr. Comp to defend his title, and the date set for the match is July 11. The trophy is open to all of the club members and all residents of Mercer county. If the holder succeeds in defending his title three times straight it becomes his personal property:

Table with columns for Events, Targets (1-10), and Broke. Lists names like Thomas, Widmann, Hingeley, etc., with their scores.

For championship of Mercer county at targets: 50 targets per man, unknown angles; entrance and targets free: Thomas 44, Widmann 33, J. R. Taylor 38, Mickel 32, Wilkes 37, F. Smith 29, J. Thropp 39, Duncan 30, Brokaw 30, Applegate 25, Hendrick 44, Rowan 36, Craft 17, Webber 32, Lutes 44, Eskay 27, Banks 30, Steward 38, Howard 32, Murphy 22, Hingeley 24, Van Arsdale 30, Jaques 31, Sinclair 33, Maddock 40, Jackson 36, Edgar 35, Ellis 39, Knowles 31, Brackett 25, Farlee 44, Carson 38, C. Smith 37, Jasper 36, Howell 35, Carr 26, Cole 31, Page 40, Comp 45, Bennett 42, Daly 33.

GEO. N. THOMAS, Sec'y.

Hudson Gun Club.

Jersey City, N. J., July 1.—The following scores were made at the shoot of the Hudson Gun Club:

Table with columns for Events, Targets (1-11), and Broke. Lists names like Schorty, Dudley, Piercy, etc., with their scores.

Two-man team race, 50 birds a man, \$2 a team: Hudson Gun Club. Schorty 11111101111111111111-24, Dudley 11111110111111111111-23, 11111111111111111111-25-48-96

South Side Gun Club.

Table with columns for Events, Targets (1-6), and Broke. Lists names like Piercy, Hoffmann, etc., with their scores.

Richmond Gun Club.

Table with columns for Events, Targets (1-6), and Broke. Lists names like Snyder, A A Schovering, etc., with their scores.

Secaucus Gun Club.

Table with columns for Events, Targets (1-6), and Broke. Lists names like Banta, Bock, etc., with their scores.

Oceanic Gun Club.

Table with columns for Events, Targets (1-6), and Broke. Lists names like Jones, etc., with their scores.

Southern Interstate Tournament.

CHAS. L. DAVIS' annual tournament took place at Warm Springs, Ga., June 17 to 20, and was the most successful shoot held in the South this year. Warm Springs is the most beautiful and attractive resort in the South, beautifully situated in the mountains, Mr. Davis being sole owner. He intends making the shoot an annual affair, and will use extra efforts to make next year's tournament even more successful than this one. The live birds were an exceptionally fine lot for warm weather birds. Over fifty different shooters took part; they were a very enthusiastic lot. Not getting enough shooting in the four days they stayed over and shot the fifth day. Some fine scores and long runs were made by McCormick, Lawrence, Col. Martin and Dr. Wilson. The trade was represented by Harry Collins, Dupont Powder Company; Arthur du Bray, Parker Bros.; Chas. Lincoln, U. M. C., who was making his maiden trip in the interests of said firm, and made many friends; H. B. Lemcke and John Parker, Peters Cartridge Company and King Powder Company; L. Z. Lawrence and J. F. Skelly, Lafin & Rand Powder Company; A. G. Fox, Winchester Repeating Arms Company. A great many States were represented: Georgia, Ohio, Maryland, Alabama, Mississippi, Tennessee, South Carolina, New York, Pennsylvania, North Carolina and Michigan. The handicap by distance proved conclusively that it is the best form of handicap up to date to equalize shooters. The contest for the Peters Cartridge Company trophy was an interesting and very spirited one, and was won, on the shoot-off, by Frank Woodworth, of Chattanooga. There was a large attendance of spectators, many of whom were ladies. The shoot was very ably managed by Jack Parker, of Detroit, Mich, and he made many new friends for himself and his company. Taken altogether, it was a very successful and jolly meeting. When one finds such men as Dr. Wilson, Col. Martin, Col. Anthony, Harry Collins, Baugh, Reif, McCormick, A. G. Fox, Lemcke, Dan Joseph, Dick Pooler, Parker, Skelly, Du Bray, Lincoln, Lawrence, Jack Parker and others not so well known to the shooting fraternity, one will always find "some thing doin'." Look out for next year's Warm Springs annual.

First Day, June 17.

Table with columns for Events, Targets, and Broke. Lists names of participants and their scores for the first day of the tournament.

Second Day, June 18.

Table with columns for Events, Targets, and Broke. Lists names of participants and their scores for the second day of the tournament.

June 19.—Twenty-five targets, entrance \$5: Martin 23, Winchester 19, Broyles 20, Wilson 23, McCormick 23, Anthony 23. Shoot-off of ties: Martin 23, Wilson 24, McCormick 25. Seven live birds, handicap; entrance \$7: Legler 6, Pierce withdrew, Pooler 6, MacWilcox 7, Moody 7, McCormick 7, Baker 7, Cureton 6, McSwein 6, Arnold, Broyles, Frazier, Dan Joseph, Springer, W. Dunn, Holland, Thackston, McRae, Jr., and Lynch withdrew; Rawson 7, Ryan 6, Dunn 6, Dr. Tignor 6, Du Bray 6, Etheridge 7, Thompson 7, Walker 6, Martin 6, Anthony 7, Willard 7, Boykin 7, Winchester 7, Skelly 6, Angier 6, Parker 6, Collins 6,

Lawrence 6, Lovejoy 6, Woodworth 7, Swan 6, Heidt 7, Peterman 7, Worthen 7, Young 7.

Annual handicap, entrance \$25: Table listing names of participants and their scores for the annual handicap event.

June 21.—No. 1, 100 targets, entrance \$10: Martin 97, Wilson 91, McCormick 98, Baker 88, Lawrence 91. No. 2, 50 targets, entrance \$5: Wilson 49, Martin 48, McCormick 48, Etheridge 45, Pierce 38. No. 3, 50 targets, entrance \$5: Wilson 49, Martin 48, McCormick 43, Pierce 33, Lawrence 50. Lawrence ran 89 straight, McCormick 59, Wilson 55, Martin 44.

North Dakota Sportsmen's Association.

The annual tournament of the North Dakota Sportsmen's Association opened on June 17, and continued three days. Many noted shooters were present. The trapping and managing details were complete.

June 17, First Day.

Table with columns for Events, Targets, and Broke. Lists names of participants and their scores for the first day of the North Dakota tournament.

June 18, Second Day.

Table with columns for Events, Targets, and Broke. Lists names of participants and their scores for the second day of the North Dakota tournament.

Table listing names of participants and their scores for an event.

June 19, Third Day.

Table with columns for Events, Targets, and Broke. Lists names of participants and their scores for the third day of the tournament.

The weather conditions were perfect. The scores were as follows: Wood 7 10 12 11 7 12 Stair 9 14 12 14 5 13 Simpson 8 15 13 12 7 14 Coulter 7 7 11 13 4 13 Duis 8 14 12 14 4 13 Brekke 6 14 9 8 7 8 Carruth 9 14 12 13 1 12 Wheeler 7 7 11 14 5 10 Wells 6 13 12 11 7 13 Cavalier 7 14 12 15 8 14 Vanneth 7 11 13 10 5 12 Bartlett 9 13 13 13 7 9 Anderson 7 14 8 9 5 12 Hirschy 10 14 15 13 9 14 Sprague 8 12 12 13 6 12 Hale 9 14 12 15 9 14 Seymour 8 14 11 14 10 15 Boeing 8 11 12 15 7 14 Mabie 7 14 12 12 7 13 Peterson 7 9 12 10 12 Robbins 7 11 13 13 7 14 Paulson 6 14 13 9 12 Dewey 8 11 13 14 9 10 Miller 12 13 12 5 5 Cooper 6 15 11 14 6 14

As on the previous occasion the team shoot this afternoon proved one of the most interesting events of the day. The shooting was very close throughout, and two of the teams were tied for second honors. The result of the shoot by teams was as follows: Team No. 1—Stair 21, Seymour 24, Dewey 25, Duis 21; total 91. Team No. 2—Wood 19, Simpson 23, Smith 19, Hale 21; total 82. Team No. 3—Carruth 23, Mack 22, Brekke 11, Boeing 20; total 76. Team No. 4—Cooper 21, Miller 15, Wheeler 20, Wells 19; total 75. Team No. 5—Sprague 20, Lindstrom 22, Cavalier 20, Vanneth 20, total 82.

Mississippi Valley Notes.

The annual summer shoot of the Road House Gun Club was held June 25-26. Bluebirds were thrown from magautrap, 255 targets per day, three moneys, and \$25 for first and second averages. The management was disappointed in the attendance, owing to the fact of an early harvest, which kept many of the boys who compose the rank and file of shooters in this locality busy in the wheat fields. Chas. Spencer won first and F. C. Riehl second average. Scores follow:

Table with columns for Events, Targets, and Broke. Lists names of participants and their scores for the Mississippi Valley tournament.

West Branch Rod and Gun Club.

WILLIAMSPORT, Pa., June 24.—Following are the scores made on June 22 by the West Branch Rod and Gun Club for a solid gold badge, which the club shoots for every two weeks. The West Branch Rod and Gun Club will hold an all-day tournament on July 18, with merchandise and sweepstake events. We also expect an expert from Parker Bros., and one from the U. M. C. The scores are as follows, 25 birds for each man: Mosher 16, Heller 16, Kaupp 8, Frantz 17, Poullitt 22, Huffman 14, Talley 19, Johnston 20, Erdman 22, Shibe 19, Piat 18, Ely 14, Skillman 15, Dimick 20, Lettan 22. In the shoot-off of tie Lettan won the medal. H. A. DIMICK, Sec'y.

West End Gun Club.

RICHMOND, Va., June 27.—Herewith please find the scores made at the weekly shoot of the West End Gun Club to-day. The conditions were 50 targets, except for Dean, who shot at 25: Blair 48, Johnson 45, Stearns 45, Ellyson 43, Boyd 43, G. D. George 43, Saunders 43, Rurdie 42, Haves 42, Gill 41, Harrison 40, Hewitt 40, J. C. Tignor 39, Hammond 38, Dr. Bagby 38, Jones 37, Colquitt 37, Jackson 36, Parrish 34, Harris 33, H. B. Greene 33, Williamson 32, Cannon 32, Anderson 32, Dr. A. S. George 30, Venable 29, Massie 29, Tiller 27, Whittet 27, Young 25, Wilson 25, Bukner 23, Dr. Rudd 21, Warron 21, Dean 16. FRANKLIN STEARNS.

PUBLISHERS' DEPARTMENT.

Very Cheap Rates to Colorado.

On special days this summer the rates for round trip tickets over the Burlington Route from Chicago, Peoria and St. Louis to Colorado will be more than cut in half, and on other days about half rates will apply. Then, since we put our fast trains on, it takes only one night on the road to get there. We are doing everything possible this year to make it convenient and not too expensive for people of moderate means to spend their vacation in the Colorado mountains. There is no country in the world like Colorado for invalids and others in search of rest and pleasure. The pure, dry climate has the most astonishing permanent effect on the health and spirits of visitors, and especially is this so in the case of those from that part of the country near to the level of the sea. Write to-day, inclosing 6 cents in postage, for our beautifully illustrated book on Colorado, and with it, if requested, I will send also our handbook of the State, giving information about the different places, hotels, ranches, etc., and the prices charged for board. P. S. Eustis is General Passenger Agent C., B. & Q. R. R., Chicago.—Adv.

Summer Homes.

IN the Lake Country of Northern Illinois, Wisconsin, Minnesota and the Upper Peninsula of Michigan, on the line of the Chicago, Milwaukee & St. Paul Railway, are hundreds of most charming summer resorts. Among the list are Fox Lake, Delavan Lake, Lake Geneva, the Lauderdale Lakes, Waukesha, Oconomowoc, Palmyra, the Dells at Kilbourn, Elkhart Lake and Madison, Minocqua, Star Lake, Frontenac, White Bear, Minnetonka, Marquette, Spirit Lake, Okoboji, Big Stone Lake, etc. For illustrated booklets "Summer Homes for 1901" and "In the Lake Country" send address with six cents in postage to F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, Chicago, Ill.—Adv.

Reduced Rates to Cincinnati via the Pennsylvania Railroad, Account Convention of United Societies of Christian Endeavor.

On account of the convention of the United Societies of Christian Endeavor, to be held in Cincinnati, July 6 to 10, the Pennsylvania Railroad Company will sell, July 4 to 6, from all stations on its line, excursion tickets to Cincinnati at one fare for the round trip. These tickets will be good for return passage, leaving Cincinnati not earlier than July 8, and not later than July 14. For specific rates and full information, apply to ticket agents.—Adv.

Mr. James F. Marsters, of 55 Court street, Brooklyn, N. Y., has issued a new catalogue of fishing tackle, which contains two full-page plates of trout and bass flies in their natural colors. The catalogue will be sent to any one on receipt of 3 cents postage.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, JULY 13, 1901.

VOL. LVII.—No. 2.
No. 346 BROADWAY, NEW YORK.

TERMS, \$4 A YEAR, 10 CTS. A COPY.
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

If indeed you be an angler, join us and welcome, for then it is known to you that no man is in perfect condition to enjoy scenery unless he have a fly-rod in his hand and a fly-book in his pocket.—W. C. Prime.

A MATTER OF SENTIMENT.

THE lively sentiment displayed on the one hand by mankind for the things which are rare or which have passed away, and, on the other hand, the apathy displayed for the things which exist in common abundance, are nowhere so well exemplified as in matters pertaining to our wild animals. It would seem that man is pleased to preserve in the realm of mind what he has been pleased to destroy in the realm of matter.

When the buffalo roamed over the vast American prairies in millions unknowable, the spirit of slaughter dominated great numbers of men, of whom many were our own citizens and others were men who journeyed hitherward, all intent on destruction. The killing was conducted with relentless persistence. The buffalo meat, in quantities for a nation's food, was left to waste and decay where it fell, while the skins—the only part then of commercial value—were offered in such vast quantities that the market was glutted. The New Englander, many hundred miles from the scene of the killing, could buy a prime skin for a few dollars. The situation then evoked no more general feeling of sentiment than if the skins were cordwood or any other common article of commerce. Now, a fine buffalo head is eagerly possessed, not as an article of commerce, but as a relic of a once mighty big-game animal of America, or a trophy of prowess and success whose like is beyond the compass of man. A buffalo skin is at the present day so rare and of such high value that its possession is eagerly desired and greatly prized.

The alligator, in a different way, received the attention of man. The first estimates concerning it were unfavorable. It was rated as being a valueless reptile whose destruction was deserving of approbation rather than of censure. Many in consequence were killed as vermin. Estimates of it rose higher when it was later found that the reptile's hide made a dainty, excellent leather. Still later, when in certain districts the total extinction of the alligator impended, it was found that he was an essential part of the order of things in his semi-tropical habitat, and that the absence of his sleepy reptilian body on the banks of the lakes, lagoons, bayous and rivers was displeasing to the eye, as was the silence to the ear where his bellow once greeted it. When it was known that he was a component part of the surroundings, the sentimental valuation worked in his favor and he now basks in the favor of protection, guaranteed with more or less perfection by the law.

The beaver, on account of his skin with its coat of fur, won his place in the esteem of man from the very beginning, but when the destruction threatened extinction, then the beaver and his ways afforded a sentimental delight, and the man who owns now a colony, or knows of one's whereabouts, has a possession beyond the mere computation of dollars and cents.

The fishes, too, have the benefit of sentiment. The muskallonge has become more highly prized as his numbers become fewer and his habitat more confined. The grayling lives in tradition, excepting in a few limited areas. In like manner we have a sentimental feeling for the other species which have passed or are passing away. This impulse to destroy and regret over the destruction is indeed a curious phase of human nature. In the light of experience it teaches the lesson of moderation. Let the animals, whose existence is not incompatible with that of man, live without greater destruction than their reproduction. Regretful sentiments over wanton destruction or final extinction will have no cause to be exercised.

OPEN WATERS.

THE Chaleur Tourists' Association, of Campbellton, N. B., which has for its purpose the promotion of sportsman tourist travel in those portions of New Brunswick and Quebec which surround the Bay Chaleur, has found its efforts partly nullified by the lack of open fishing waters to attract anglers from abroad. All of the most desirable streams have been leased to individuals and clubs. Under these circumstances one of the first steps taken by the Association will be an endeavor to have the Provincial authorities reserve certain salmon and trout streams for public fishing.

This free fishing water question is one which has assumed a serious aspect in Pennsylvania, where the number of streams open to the public has within the past few years rapidly diminished. The last Legislature sought to make provisions for free fishing by this declaration, which is embodied in the new fish law, as to what are public waters:

"Section 23. That from and after the passage of this act, public fishing shall exist in the following waters of this commonwealth: All waters within land owned by the commonwealth; all waters and parts of waters that have been or may be declared navigable by acts of Assembly, or public by common law; and such other waters made public by its owners, by grant or usage."

If our interpretation of the concluding part of this be correct, it means that where an owner has in effect made waters public by usage—that is, by permitting the public to fish in them—he may not now close them to the public. For instance, a farmer who has in the past allowed fishing on a stream running through his meadow could not now by posting his land keep the public from entering to fish the water. It goes without saying that no such law as that could stand the test of the courts. A further provision of the new law makes free for fishing "waters tributary to public or free waters, in which fish received from the State are planted upon application of the owner." This is in effect just such a law as once existed in New York, which was that waters stocked by the State should be open to the public. To this so high a lego-piscatorial authority as our frequent contributor, J. S. Van Cleef, Esq., of Poughkeepsie, excepted that it was in conflict with well-established common law principles governing land possession and trespass, and would not be sustained by the courts. Such questionable statute building gives new point to the reply attributed by a writer in the New York Evening Post the other night to a distinguished Chief Justice of Massachusetts when a query was put to him by a lawyer and statesman of national reputation. "Are you reading law?" asked the lawyer, observing the Chief Justice reading what seemed to be a law book. "No; I am reading the Massachusetts statutes," replied the Chief Justice.

SNAP SHOTS.

There being in the parks of New York city not enough benches to provide seats for all the people who want to sit down, an enterprising individual—one Spate—believing that a public park is a private snap, has made a deal with President Clausen of the Park Board to put chairs into the parks and collect a five-cent fee from those who occupy them. No one blames Spate particularly for his impudent enterprise; he is only acting out the very common trait of human nature which impels a private individual to profit at the expense of public rights when he can. The Spates we have always with us, from the humble push-cart man who plants himself in a crowded thoroughfare to sell his bananas, to the railway combine which seizes the streets of a city, and the lumber company which despoils the public domain. We do not blame the Spates, we do blame the public guardians who have been appointed to defend the people's interests against the Spates, but who basely betray their trust. In this park paid chair case popular indignation has very properly been directed against Commissioner Clausen. It was an unfortunate day for the public parks of New York when this man Clausen was put into control of them. He signaled his accession to office by seizing the aquarium as political plunder, putting out its efficient superintendent and putting in an ignorant political heeler. Under the Clausen administration the parks have deteriorated to such an extent that it will take many years of intelligent

management to restore them. The philanthropic people who have been working to secure small playgrounds for the children of the poor in the congested quarters of the city, have found on the part of Commissioner Clausen consistently ignorant and pig-headed opposition. At this time when the city's population is increasing and the demands on the parks as breathing places, especially for the poorer classes, are all the time growing more insistent, the need of the hour is for a park control which shall have an enlightened appreciation of the problem and a sympathetic resolution to solve it. How far Commissioner Clausen is from appreciating the situation is demonstrated by his Spate chair deal and by his assertion that the continuance of the paid chair system will depend upon whether or not it shall be sufficiently well patronized to prove a paying enterprise. There is no doubt that if the chairs shall remain they will be profitable for the proprietor. If President Clausen should make another deal with another Spate to fence in the parks and charge a good stiff fee for admission to them, there is no question that a sufficient number of people would be found to pay the fee and to make the fenced park enterprise very profitable; and this, according to Commissioner Clausen's enlightened public park philosophy, would be sufficient to justify the maintenance of the fence.

The Society for the Protection of Native Plants, to which allusion was made last week, has sent out its Leaflet No. 1, which explains the growing necessity of restricting the destruction of some of our wild flowers by heedless plucking. Among the plants needing protection in the vicinity of Boston the leaflet names the Mayflower, whose slow-growing runners are pulled up bodily, and then the flowers are picked off and shipped to market in enormous quantities, so that its practical extermination within an area of a few hours' ride of the great cities is almost certain unless the ravages are checked. The kalmia or mountain laurel, ground pine, maiden hair fern, sabbatia and fringed gentian are others which in eastern Massachusetts are threatened with extinction by the excessive collecting for market purposes. This extensive picking for sale, which is a "serious menace to many plants which do so much to give the country one of its greatest charms, may be effectually discouraged," says the leaflet, "if the public appreciates the danger to the plants and abstains partly or entirely from purchasing those plants whose existence is threatened by wholesale collecting." The leaflet issued by the Society may be had on application by mail to Miss Maria E. Carter, Curator of Herbarium, Boston Society of Natural History, Boston.

While there has been some delay in getting the New York cold storage cases under way, we are assured that no stone will be left unturned in the effort to push them to a speedy settlement. Governor Odell has become interested in the matter, and has declared that the department must have the best counsel obtainable. The firm of Black, Olcott, Gruber & Bonyng, of this city, has been retained. The \$10,000 suit talked of has been abandoned as being entirely insufficient in amount and a moderate adequate penalty will be sued for. It has been in the meantime that political influences would be exerted to defeat the ends of justice in this case, but this may safely be put down as mere talk. The New York authorities are not likely to let pass by such an opportunity to strike an effective blow at the illicit traffic which has so long made this city a dumping ground for Western game as well as for the unlawfully marketed game of the State. The public expects and will demand the severe punishment of these defiant New York dealers in prohibited game.

John M. Marlin, President of the Marlin Firearms Co., died at his home in New Haven, Conn., on July 1, aged sixty-five. Mr. Marlin was born in Windsor, Conn. In 1864 he founded in New Haven the firearms manufacturing company which has ever since borne his name and has become famous the world over. He was a skillful inventor, his first manufacture being of pistols of his own patent. Subsequently he engaged in the making of revolvers, and later of rifles and shotguns. Mr. Marlin enjoyed the respect and esteem of all who knew him, and his name as a manufacturer stood for a guarantee of honest workmanship and excellence.

What a waste of good white paper and ink was all that Lawson controversy over Independence.

The Sportsman Tourist.

A Pair of Fishers.

BY BLANCHE TRENOR HEATH.

In the dewy morn they drifted down the silent river glad;
He was an artful fisherman, and she an artless maid;
And he, this angler up to date, was loaded to the brim
With the latest fads in rod and bait, chosen with care by him;
While she, the artless maiden, in a fetching sailor rig,
Had brought as her only outfit a luncheon basket big!

So across his line he watched her with a quite complacent smile,
As she trailed her pretty fingers in the sparkling stream the while;
Posing with grace unstudied, chatting of this and of that,
With flying glances from beneath her saucy sailor hat;
And he thought, as his rod he handled with a neat and knowing touch—

Seeming to feel the wily fish already in his clutch—
How very narrow in her range a woman really is,
Unfit to grasp the angler's art with all its mysteries!

Yes, the simple maid he pitied, that she could not know the thrill
Of joy and pride that follows the inborn fisher's skill!
Yet for all his smile complacent, in her aptness at the game,
She proved herself his equal when the test of trial came;
For the work begun in the morning by her fetching sailor rig,
At noon she neatly finished with the luncheon basket big!
And, ah! when they drifted homeward, as the slanting shades began,
Though the man had caught the wily fish, the maid had caught the man!

In Old Virginia.—XI.

ALL too soon the day came that was to mark the close of my first visit in the "Old Dominion."

The cousins had been in the day before to spend the day and make merry in a good old-fashioned way, seen only in its perfection in that favored section of the North American continent.

All lands and countries, all tribes and peoples, differ in conditions and customs. The anxious wooer of each land and clime seeks to conform to the customs required to insure success.

In some countries he has to win the parental consent by presents given, or services rendered, the paternal ancestor. In yet other lands the prize is won by sudden surprise and capture, and a speedy retreat. There are sections of our own great country where the consent of the fair one herself is all that is necessary, provided the State line is not too distant and the cruel parent has not the fleetest horse.

But it remains for the Old Dominion to differ from all other countries in this custom, as in many others. The wooer who seeks to win one of her daughters must work out his own salvation through a long and devious way, beset by many a seen and unseen danger. As there is no royal road to learning, so it is with a Virginia courtship. The lady, her immediate family, the old family servants, the cousins to the third and fourth generation removed, must be won over; and even the beloved thorough-bred horses and dogs must be reckoned with; but the man does not know the grand old commonwealth, the mother of Presidents and peerless women, who does not unhesitatingly admit the "game worth the candle."

And so my first chapter of a Virginia courtship and pleasant season of sport was drawing to a close.

As before stated, the cousins had been in the day before to make merry and enjoy such a dinner as can be served nowhere in like manner. The table pulled out to the length of a seaside resort plank walk, is loaded with everything good to eat known to the section or subject to importation.

A jolly lot of young people—young and not so young—with appetites only surpassed in excellence by their digestions, ready to give and take in a tilt at repartee, with nothing but the best of kind feeling even when routed and defeated by a more ready wit.

The soon to depart guest being spared at first is allowed to enjoy the party and thrust merely as an interested spectator, and wonder at the universal flow of good spirits. Not a cynical or unkind word is to be heard from one of this large assembly, which for the same number elsewhere would show half dozen kill joys.

Even poor old Cousin Joe, with his right arm buried at Harper's Ferry, and his left leg stiffened with rheumatism and filled with Yankee lead, is as jolly as a grig, while Cousin Letty, with her sweet, pale face and gentle eyes, which seem to be always looking on the faded gray cap and fragment of bursted shell (all she ever got back from the bloody field of Gettysburg, where she sent her gallant soldier lover), is every ready with a bright little speech full of good cheer. All have their sorrows, great and small; but they have all been put off and laid aside for this festive occasion. Unorthodox they may sometimes be in their religion, but you find no one guilty of the unpardonable offense of heterodoxy in hospitality in the Old Dominion; and it is enjoy yourself and help others as far as lies in your power to enjoy themselves on all festal occasions. There are no long pauses in the conversation, finally broken by a trite commonplace, but every one is talking his or her level best, and thoroughly and genuinely interested. The snatches of conversation caught by the listener indicate the characteristics and tendencies of each speaker.

"Run? [It is the fox hunting cousin speaking.] No, sir, we couldn't call it running—he simply flew; never touched the ground except occasionally in the high places, in order to let out another link. We crossed at the lower ford down by the old mill, cut in on the chase through by the bog beyond, running three miles to the dogs' one. Just beyond the old pear thicket we struck a big dry ditch where it was 15 feet wide, and the little horse took it like a bird—never stopped to rise at all, but simply cleared it on the dead run, without breaking his gait. I wouldn't take two hundred acres of the best tobacco ever grown for the horse, game clear through from fore top to fetlock; never saw his match and never expect to."

"Yes, it was a tough fight. [Cousin Joe was speaking.] The forces were on opposite hills, not over 500 yards

apart, and the shot and shell flew as thick as minie balls, mowing down everything in sight and occasionally knocking a gun clear off the top of the hill. It was strictly a big-gun fight. We lay for two hours waiting for a lull, so that we might charge, and it seemed like I never saw a moment when the whole hilltop wasn't a seething mass of flame and a humming storm of shot and shell. Flag shot down three times, and put back each time by a man who had to feel his way through the clouds of dust and smoke."

"Yes, it is a perfect dream. [From one of the girls.] Aunt Mary wrote that it was the very latest thing out, and nothing like it had been seen as yet, even in Richmond. I will show it to you when you come over, and will probably wear it to church next Sunday."

"We had money up, you know [one of the sporting boys]; ten dollars, even money, that each fellow's own dog could kill the coon in three minutes. Jeff won the toss, and when the tree fell, let his dog loose. The old coon laid hands on him just once, and whipped him clean and fair before he ever broke his hold. As he lit into the bushes I let old Blue loose, and he killed that coon in just thirty-two seconds; never broke his first hold, nor got a scratch that drew blood."

"Yes, she is bright and cheerful [Cousin Lettie speaking], but lives entirely in the past. The old suit of gray, with the bullet hole and dark stain on the coat, are brought out with more and more frequency, and she's evidently failing fast."

"We got the old buck last week, the one that ran the persimmon blockade; and he was as fine a deer as ever wore antlers. [This from Rand.] Dick killed him by the 'leaning tree stand'—shot him at 125 yards on the run, with a Winchester. No persimmon tree was near enough to save his life this time [with a meaning glance at me, which I thought it wise not to see]."

"Aunt Sally says [from a young lady cousin] that she has a new receipt for making perry, and promises to make up all my pears for me if I send them over. I promise you all a good time when it gets the bead on this fall."

"Birds? [From another sporting cousin.] Yes, they were thick, and I never saw my dogs do better. The pup never made a break, and I believe he is going to make the best dog I ever had. Old Shot put up a bird out to my right, which when killed fell squarely on the head of the pup, holding point on another bird, and—so help me smokeless powder!—he never bat his eye nor moved, and held his point like an old veteran until I came up and killed the bird."

"Yes [from a young lady], there will be twenty couples and we are all going down in the afternoon, spend the evening on the river and drive home by moonlight. You certainly must come; it will be the affair of the season."

And so they go on, each one talking about that which interests him the most; all in high spirits, laughing and unconventional. They finally work around, not unexpectedly, and begin to pay their respects to the parting guest. Uncle Joe unwittingly opens the way for some pleasantry at my expense, with the question, "You have enjoyed yourself hunting since you have been here, sir?" My reply is decidedly in the affirmative. "You have killed a little of all the game we have here?"

"Nearly everything," is my reply, "except a deer, and it is my own fault that I have not added that game to my bag."

Cousin Rand nods a decided affirmative to this statement.

"But you haven't failed altogether in your dear hunts, have you?" [This from one of the young ladies.]

A sudden hush falls upon the company, and my hostess pretends to give some very necessary orders to one of the servants. The wait continues, and I see that I am bound to answer the question, and so with as bold a face as I can put on make reply, "I am not ready to say that I have entirely failed in all of my deer hunts, although candidly admitting that I have not yet bagged a deer."

"Are you coming back again?" This from one of the young men with an emphasis that indicates more in the question than appears on the surface. A direct answer to this question, I see, will prove very embarrassing to my hostess, and so make reply, "D. V., I hope to again return to Virginia, and trust that it may be to this very spot."

Here my hostess deems it prudent to excuse herself for a few moments on a plea of further instructions and assistance to her well trained and evidently fully competent servants, and with a good-natured laugh at my expense, the embarrassing questions cease. The delights of that jolly dinner party will live long in my memory as one of the happiest events of my visit in "old Virginia."

And now I come to the good-bys to the many darkeys who had so affectionately taken me into their confidence. The boys, one and all, ducked and grinned, and grinned and ducked, with many a "good-by, sah; good-by, sah; I shore is sorry dat yo' is' gwyne to leab us!" Old Uncle John, in the pathetic strain of the real old-time darky, bids me a most touching farewell. Dressed in one of my coats, a present which cost the poor old man untold agony by the strain put on his rheumatic shoulders (42 in size crowded into my 36 coat, the sleeves of which struck him about midway between wrist and elbow, and failed to meet across his chest by a bleak expanse of about 10 inches), he resignedly said, "Good-by, sah; good-by, young maastah; I is shoah proud ob dis fine coat you done gimme, an' I shoah is 'bleeged to you. I don't neber 'spect to see you no moah, sah, 'kase I ain't got long to stay heah now; but I des say Gawd bless you, sah; Gawd bless you." With a quiver in his voice and a tender moisture in his eye, the old man turned away, leaving me with the feeling that I had received a sincere and earnest benediction.

Old Aunt Emily flattered me by parting with me with the assurance, "I des feel lak you was one ob my own folks, an' I des hope dat you is comin' back, and dat rite soon; leas'twise," she added quickly, "if you ain' goin' take my Miss Lady away when you does."

My gun bearer and general factotum, "Governor," was so affected when I came to bid him good-by that he was absolutely speechless. He stood digging his little brown toes into the ground, and twisting his wisp of straw,

the remnants of a hat, around and around in his little black hands, while I solemnly enjoined upon him that he pursue the path of rectitude and carefully protect and care for in every way in his power his young "mistus." The rather long speech ended, he took the coin I tossed him, and after about a moment of speechless gratitude, delivered an explosive "Thank you, suh; thank, you, suh; I will take care of Miss Lady; I will, sah, all de time. I sho' will, des as well as evah I kin," and took to his heels around the house, where I observed him a few minutes later trying to relieve his feelings by turning somersaults.

My adieu finished in the house, Milly appeared at the door with the announcement, "Carriage is waiting, sir; Uncle Ben got your baggage all in and says it time to go to de train."

It was a kindly row of black faces arranged on either side of the big porch, and a fair picture of one sweet girlish face, framed in the old-fashioned door, that I saw, looking back as the carriage wound down through the grove, at the end of my happy visit "In Old Virginia."
LEWIS HOPKINS.

The Woodsman's Wild Garden.

THE greatest need of the nomadic woodsman is what we comprehensively call "garden stuff." Of meat he generally has a plenty, and is only too apt to make that practically his sole article of diet. The natural craving of the stomach for vegetable food, especially fresh green vegetables, is habitually ignored by hunters and trappers who penetrate far into the wilderness, and the result is that the system gets clogged with the waste of animal matter. The kidneys and bladder are irritated by excess of phosphorus, the blood is overheated, and constipation, with its invariable accessory of rheumatism, becomes the familiar ailment of the woodsman.

All this is the result, I believe, not so much of necessity as of ignorance. It is by no means impossible, as the woodsman commonly believes, to obtain fresh vegetable food, even in the remotest fastnesses of the wilderness. Indeed, the woods and ponds and streams are an inexhaustible wild garden, well stocked save in the dead of winter with native vegetables whose edible qualities need only to be understood by the camper in order to furnish him with a most wholesome and delightful addition to his meager bill of fare.

I am surprised that this fact seems so little known even by skilled and veteran woodsmen. Having camped with some of the best guides and sportsmen, I have invariably found that their knowledge of the edible plants of the woods was just about as extensive as a cat's knowledge of astronomy. The botany of their own domain is thus a *terra incognita* to them. And this seems all the stranger when we consider how intimately and thoroughly the trained woodsman understands everything else about him—everything that can minister to his comfort, health, profit or sport. He can tell you enough about birds and beasts, signs and seasons, to make an encyclopedia; but he will sit down to a meal of everlasting pork, venison and trout, and simply sigh for the tang of some green vegetable to "take the lump out of his stomach"—simply sigh for it, I say, when by going six rods from camp with a little elementary knowledge of his resources he might have his heart's (and stomach's) desire.

From May until December no woodsman who will take the trouble to study or learn from another's experience a little of the botany of the woods need go without a sufficient supply of vegetables from his wide-stretching wild garden. Or perhaps if he will only watch the deer and bear for a while, instead of shooting them on sight, he will learn, as the newspapers say, "something to his advantage."

There are times when it seems to the meat-clogged hunter and fisherman as if he would give half his kingdom for a mouthful of some tart or peppery or bitter vegetable, to cleanse and purge his alimentary canal and get the leaden feeling out of his stomach. At such times, instead of sighing for the vegetable pots of civilization, let him devote half an hour to gathering a bunch of the roots of the toothwort or crinkled root, which may be eaten, like radishes, dipped in salt, and will lend a delicious savor to a meal of meat and bread. Another pungent root or tuber growing plentifully in the woods is the ground nut or dwarf ginseng. You can find it in almost any moist clearing, though you must dig deep for the small round tuber that tastes so grateful to a meat-jaded palate.

I hesitate to speak of mushrooms, as an article of woodland diet, because, plentiful as they are about old stumps, logs, etc., a special knowledge of them is necessary to guard against confusing them with poison toadstools, which they so closely resemble. But if some member of the party only possessed this knowledge, what a feast might be enjoyed far from the luxuries of civilization!

The woodsman's wild garden, however, grows many varieties of wholesome and delicious "greens," which, in the spring, any camper may easily recognize and have for the picking. Along the brookside in how many old beaver meadows have I crushed while trout fishing the luscious leaves and stalks of marsh marigolds or cowslips! None in the river meadows of the settlements grows finer than this unmarketed vegetable of the wild woods. And how these cowslip greens refresh the whole system, when boiled in the camp pot and served with a dash of vinegar, salt and pepper! Every camper should take a small jug of vinegar with him into the woods, "just for greens," as the boys say.

Then there is that other wholesome and delicious pot herb of the woods called familiarly cow cabbage (botanically *Hydrophyllum virginicum*). This has not so wide a range as the marsh marigold, but in localities where it is found it grows abundantly, and has the advantage of leafing out earlier than cowslips, and remaining tender and edible for a longer period. Trilliums also make excellent greens, and as the camper will find them blooming late into June, in the open woods, he can prolong with them his pot herb diet until the very height of the trouting season.

The wild parsnip, found growing along water edges in May and June, is fully as palatable as the cultivated

variety, and is an excellent appetizer when fried or browned in the camp spider. The Indian cucumber root, which any field botanist can unearth for you in the fall, is not much behind the garden cucumber in succulence and flavor. The Indians used it for a relish, and the woodsman will find it a welcome addition to his bill of fare. Serve with vinegar, pepper and salt.

The roots of the yellow pond lily, chopped fine and fried, have a very pleasant taste, and make a wholesome and readily accessible vegetable food in the woods. Wild radish, if you know it and can find it, is a really crisp and pungent relish, with much the same taste as the garden radish, which was derived from it.

Almost every boy should remember the watercresses he used to gather in the cool brooks about his native town. The camper will find it in the quieter reaches of mountain streams, and under the banks of mountain lakes. In the latter, too, he will find the wild celery of which ducks are so fond, and which is grateful also to a discriminating human palate. How nicely either the cress or the wild celery spices the guide's biscuits and the flaky pink flesh of mountain trout! Wild mustard and horseradish, too, will put a keen edge on a dulled appetite, if you cannot find watercresses.

In Thoreau's "Maine Woods" he speaks of using hemlock leaves as a substitute for tea. The woodsman should know of several other and better brews than that in case the tea caddy gets empty. Wintergreen leaves make a far better tea than hemlock. The leaves of red root (*Ceanothus americanus*) yield a pleasant drink, and wild chicory is better than either of the foregoing. Common dandelion roots, dried and crushed, furnish a coffee that is both palatable and wholesome.

I have not mentioned berries or high bush cranberries as one of the resources of the woodsman's husbandry because such a resource is evident to all. And yet many a camper in the summer and fall will allow himself to get half sick on perpetual meat and biscuits, rather than spend time to gather a few quarts of the luscious and abundant fruits with which the burned-over clearings abound. How differently he would feel physically, and how much more benefited he would be on coming out of the woods, if he would forego a little of his sport to supply the camp with a daily mess of berries! Let each man take his turn at berry picking; and who knows if he carries his rifle along with him whether the most faithful in this duty may not be the first of the party to add to his trophies the hide of a berry-loving bear?

JAMES BUCKHAM.

Gigging a Dolphin.

FAR, far out on the mighty ocean, hundreds of miles from land, thousands of miles from our desired haven, oppressed by the vast monotony of sea and sky, we sped along through days that seemed almost changeless. We were on a sailing vessel, seven passengers of us, bound from Rio de Janeiro, Brazil, to New York. Our ship was a barque, the Adelaide Pendergast, owned in New York. She had been long out from her home harbor; first to Cadiz, Spain, with merchandise; thence to Rio de Janeiro, for coffee, with which she was now laden.

Her crew were Norwegians, her master, Capt. John Lawson, as jolly an Irishman as ever sailed the salty waves.

We had sailed out of port with a breeze which bore us southward, hoping by tacking to hold our own in a measure until the wind shifted. But Eolus did not favor us, and for days we pursued our course toward the southeast, below the Tropic of Capricorn, and our best efforts at tacking only brought us nearer the coast of Africa, instead of that of North America. To land lubbers, as we were, the delay was trying and the days seemed of interminable length.

Only those who have experienced it know the longing of the seabound for land, and when the captain remarked one morning that Africa lay just ahead of us, we declared that it smelled balmy, until chagrined by the information that it was 500 miles distant.

After the engrossing diversion of sea sickness was over, and we had been entertained by all of the tricks of Gyp and Blanco, the captain's poodles, and had seen the fattening hog, and fed the cooped chickens and ducks as many times as we desired, we settled down to the contemplation of sea and sky.

It is all photographed on memory's walls; the shifting, tinted clouds across the azure of the tropic sky, the long charge of the "white horse" across the watery plain, the phosphorescence of night, or the yellow moon overhead with the reflection below:

"Like a golden goblet falling,
And sinking into the sea."

Strange, with such scenes to charm us, that we longed for incident.

But we did, and every little diversion of the long forty-four days' of our voyage was hailed as of interest.

We watched the schools of porpoises, whirling in black circles above the waves, admired the flying fish as they flashed by on their silver wings, and the nautilus, with its inflated sails, gave us the colors of the rainbow to delight our eyes.

We loved the Mother Carey chickens that followed the wake of our vessel, the only path over the blue plain, and were wild with admiration of a mighty albatross, which went with us one long bright day, sometimes far ahead, then far behind, its snowy wings untiring in their flight. What did it seek? Was it lost? Such were our unanswered questions.

"Hurrah!" cried the captain one day. "Here is something new for you! Come and see a dolphin, the most beautiful fish that lives in water."

We made a rush for the bulwarks, and to our delight saw swimming along with us several emerald hued fish, from three to five feet long, graceful in shape and motion.

Their bodies were like satin, of a delicate green, shading to a deeper hue at the fins. Darting and whirling, they changed places rapidly, moving from one side of the ship to the other.

"I'll give you a sight you never saw before," exclaimed the captain. "You shall see a dying dolphin."

He brought out his gig, a small harpoon, with its cruel

fishhook darts, and fastening a line to its long handle, made it secure around his wrist.

"Can't hook these fellows with a hook and line," he said.

We had already been regaled with shark and barracuda from the line that hung at the stern.

The captain leaned over the rail. With lithe motion the fish darted under the weapon suspended over them. A quick plunge, with sure aim, a green flash through the air, and the struggling, leaping victim was landed on the deck. And now we saw the dying dolphin. Let scientists explain how it changes its colors; we can but make record of its appearance.

The glowing green died away into silver. This became spotted with blue, which gradually spread until the whole fish was a sapphire color. Waves of gold flashed over it, growing deeper until it was a golden fish, only to be transformed into a roseate one by spots which came and extended. Thus from color to color changed the gleaming sides of the quivering beauty of the deep, until pity was almost forgotten in admiration, and we exclaimed: "Never have we seen anything more beautiful than a dying dolphin."

We were practical enough to enjoy the fried fish of a delicate golden brown, which was a welcome relief to our salty bill of fare; but that is a commonplace recollection compared in the mind's eye with the memory of the fish, which, swanlike, yields its chief charms in the dying hour.

ANNA R. HENDERSON.

The Breaking of a Door Handle.

THE breaking of a door handle is not ordinarily a serious affair, but if it has been in constant use more than a hundred years, has been familiar to your touch since your hand could first reach it and has opened and closed the old door for beloved and revered forms to whom earthly portals long ago closed forever, one feels a personal loss. So I feel it, and the more keenly for remembering so well my good grandfather, whose cunning hands fashioned this slender bow of hickory so many years ago, very likely by the winter evenings' firelight of this same hearth where I sit, telling stories meanwhile to his children as I to mine.

Since then the fireplace has scarcely changed, and the room but little. A high-posted, curtained bed stood in the corner such as this generation of children never saw, and in another such obsolete furniture as the big spinning wheel for wool or the little one for flax. But the old cracked looking glass hangs between the windows and the high "chist o' draw's" stands in its place. Outwardly there has been a change that I can scarcely realize.

The smoothest of the few cleared fields was rougher than the roughest now, and thick set with blackened stumps. Within a little distance stood the primeval forest, its huge trunks fencing the clearings like wide-set palisades.

This ten-acre meadow east of the buildings was a black ash swamp in which grandfather got lost one day and wandered a long time till he came upon a strange house, but upon going to it he found it to be his own. When the frame of the house across the yard was raised, a fine buck jumped inside it, looked about a moment and bounded out and away into the woods. On the ledge, the favorite playground of the children, grandfather's "prentice boy," Bill Howard, shot a lynx.

It was a half-day's journey to the creek, only a mile away, over the rough and miry road that led to it. There were licks in the woods much frequented by deer and later by domestic cattle. They were very distinctly to be seen within my recollection—broad paths of naked earth among the thick herds grass.

To get to the nearest neighbor's, grandfather must go through the woods, often by blazed paths, and the nearest mill and store were miles away.

It was to such a half-wild region, then the youngest of the fourteen United States, that grandfather came from the long-established civilization of Rhode Island and the Providence Plantations, where he was born, as were his father and grandfather. When informed of his purpose one old neighbor cried out against it, "Tommy Robinson, what possesses ye to go up there, beyond the reach of all God's masses!"

ROWLAND E. ROBINSON.

Notes from Central America.—I.

As to-night I reclined in my hammock, hanging in "el pórtico" of my Honduras home, with the Southern Cross radiant just above the high mountains, on whose slopes the pueblo of San Juanito is located, I could not help thinking that the untraveled Northerner really ought to see the Southern Cross and Honduras scenery through other eyes than those of the author of "Three Gringos in Central America," who found so little to admire in either—but then, you see, he admits that he did not visit San Juanito.

It certainly is not pleasant to ride three or four hundred miles on muleback over Central American caminos—climbing mountains approaching 10,000 feet in height, fording rivers, and, at times, losing the trail when it diminishes to a mere path in the dense underbrush and is intersected by others of the same class leading to various destinations. It is true that during the dry season the sun's rays beat down at mid-day with intense heat, and that during the rainy season travel is both difficult and dangerous. But there are compensations in the landscape, the cool shade, the refreshing baths—in mountain scenery hardly surpassed anywhere in the world, and the general adornments of a tropical clime.

Then, too, it must be admitted that there are *garapatas* that there are *pulgas* (fleas) in abundance, that *tortillas* and *frijoles* are almost always in evidence, and that there is generally a dearth of good food along the journey; and yet one who speaks the language (Spanish) and understands the manners of the country, seldom travels hungry or destitute of rude comforts.

This morning as I threw open my window at break of day and heard the quail whistling in the bush, I could not help wishing that I had with me one of the various good bird dogs I have owned in "the States" and time for a trip afield—for good gun and ammunition I have. There are plenty of quail in Central America—and pheasants and turkeys, too—but the underbrush, except on cleared

plantations, is very bad and usually too full of *garapatas* (a sort of tick) to tempt invasion. Deer and other large game also abound in the mountains, but my time is fully occupied with my work, and as yet I cannot give, from personal experience, any details of hunting in Central America. Nor have I cast a line into the streams, in many of which are found excellent fish for the table, included a variety of bass that, when hooked, fights with a zeal to delight the angler's heart. But I am not unfamiliar with the method of fishing, altogether too common in the country, having, only a few days ago, amputated the remains of a hand and forearm, shattered by a stick of dynamite with short fuse that was not thrown quickly enough into the stream.

Here, as elsewhere, El Medico works Sundays as on other days, and it is patent to any observer that the natives in this—as in other mining camps—would be far better employed on the Sabbath if occupied with their usual daily labor, instead of following the regular Sunday programme of drinking, gambling, cock fighting and fighting among themselves.

Though hardly reliable at any time, the Central American native is decidedly reckless after having poured out liberal libations to the god of festivities in the form of *aguardiente*—or, as the Gringo frequently terms the clear native rum, "white eye." A discussion regarding the results of a throw at dice, a defeat in the cockpit, or even more simple difference of opinion, frequently results in knife thrusts or bullet wounds—the former generally extensive but seldom dangerous, the latter frequently fatal. Then come the *soldados* and practically always catch the injured, who is often too drunk or too badly injured to flee, while the victor in the scrimmage—the more criminal—frequently escapes to the mountains.

There is, outside of the jurisdiction of martial or military law, no capital punishment in Honduras. It was abolished in order that those in authority might not have the privilege of life or death over the masses. To convict a political or personal enemy of murder or of crime punishable by death was not considered difficult in a court composed of those whose positions, and, perhaps, very lives, depended upon their loyalty to a sovereign's will.

And now the Southern Cross has dropped behind the mountains. The night is advancing and the morning will come only too soon.

DR. J. HOBART EGBERT.

SAN JUANITO, Honduras, C. A.

Natural History.

More About the Beaver.

Editor Forest and Stream:

Two articles in your last issue set memory going once more, and I am again tempted into the animal discussion. The first article that attracted my attention was about beaver (always an attractive subject). Among other things, the writer says, "I carried that 46-pound beaver six miles without stopping to rest." Now this was certainly a most wonderful feat, though scarcely recognizable by the average man.

In the waning days of the reign of the buffalo I was in camp on a Western stream where beaver were quite plenty. I had invested in some half dozen beaver traps and kept them set along the stream, getting a good many tufts of fur or claw, and an occasional beaver. One day a Mr. Beardslee, now of Hennessey, O. T., and myself were bringing the saddle of a black-tailed deer into camp on our shoulders, taking turns at the carrying. As we were coming along down the stream I bethought me of one of my traps that had not been visited for some time. Laying down the saddle, we went out of our way a short distance to the place where the trap was set. There was a large beaver in the trap which was still alive, the arrangement for drowning it having failed to work. We killed the beaver and then I gave Mr. Beardslee the choice of which he would carry, the saddle or the beaver. He promptly chose the beaver, which, while seeming the lighter, was soft and yielding on the shoulder. I had no great trouble with the saddle, as we rested often. But with poor Beardslee it was different; the beaver was perhaps heavier than the saddle, and soft and yielding to the shoulder, but it would not lie still. Being round and pliable, it was constantly shifting its position; now pulling on this side, now on that, and never at a balance; and at the end of a quarter of a mile Beardslee stopped to rest. An eighth did the trick the second time, and from that on it grew less and less, and the beaver was constantly being shifted from shoulder to shoulder, and forward and backward, down and up, and sideways. Beardslee wanted to change loads, but I declined, and I can see his look of disgust yet, when after two hours' struggle he threw it down in camp and remarked that it was the most deceiving thing he ever tackled. We estimated its weight at 60 pounds, but it is likely it would have shriveled as badly as fish in contact with the scales. Yes, I think the man who carried the beaver six miles without stopping to rest can get a fair donation toward a medal to commemorate the feat by addressing N. B. Beardslee, Hennessey, O. T.

The other article that attracted my attention was that of the Mr. Flynn who saw beaver swimming in the day time in the Pecos River, Texas. My first experience in the field of the beaver was like this: I was hunting big game (my very first), and went to a stream to get a drink. While there I saw six animals in the water playing very much as Mr. Flynn described his beaver as doing. After watching them for a time, I shot one, having made up my mind they were beaver. When I retrieved it it did not come up to my idea of a beaver, but noting its flat tail (slightly flattened like a muskrat's), even though it had fur on it, I skinned it for a beaver and tried to stretch the pelt on a hoop, but it absolutely refused to be drawn into a circle, and I finally gave it up—that beaver was an otter. Afterward I saw six otters playing in the water like so many kittens, and again shot one. This time I knew what it was, and skinned it properly, and the skin brought \$7. The first skin was spoiled.

Now Mr. Flynn's description of his beaver's antics was so like what I saw the otter doing that I shall likely always entertain a suspicion that these beaver, like my first, were indeed otters.

The otter is a constant traveler, and is often seen in day time, usually in pairs or families. The beaver has a permanent home, and only moves when increasing population compels it. It lies very close and is seldom seen in day time, though it is easy to understand how under the conditions described by Mr. Flynn the beaver might have been drowned out of their dens by the freshet and compelled to show themselves in day time, whether it was their nature or not, just as we see muskrats at flood time taking refuge in trees, stumps and logs.

Animals and Man.

IN a recent FOREST AND STREAM W. Wade asks for information as to the effect contact with civilized man has on wild animals. It has been my experience that animals of the cat tribe change their habits least of all. I have gone into parts of the mountains where all game was very tame and had little fear of man. Ten or fifteen years afterward every animal but the cats had changed their habits more or less, but I never could see that the cats changed at all, even close to the settlements, where they were constantly hunted.

One spring a couple of us were trapping bear down near the Colorado-Utah line. There were no indications that the country had ever been trapped before for anything but beaver, and all game was very bold. The country was full of foxes, and do what we could we could not keep them out of the bear traps. As the foxes had shed we did not want to catch them, but they would get caught. At one trap we caught eight cross foxes in eight nights, in spite of the fact that we laid the body of each fox caught out in plain sight, hoping it would keep the others away. At another trap we got five cross and a jet black silver-gray inside of two weeks.

We blocked up the trap pans as stiff as we dared, but the foxes would run back and forth over the traps until they displaced the covering, and knocked out the sticks. As long as they did not spring the trap it was all right, as the bear didn't know what a trap was, but it would be aggravating to find a worthless fox in a trap and the bait taken away by a thirty-dollar bear. Bear would travel around all day, and we shot as many as we trapped. But though the country was full of cougar and bobcats (*Lynx rufus*), it was a rare thing to see one.

Ten years afterward one would never see a bear in daylight, and you could not get a fox anywhere near a trap unless you took great pains, but the cougars and cats were just the same—no shyer, no bolder—the same sly, sneaking brutes as always. I afterward had the same experience with foxes around Battle Lake, in Wyoming. In neither case could the foxes have been hungry, as the country swarmed with mice, moles and small game. It was simply that the foxes didn't know what a trap was.

Speaking about foxes, it was always my idea that the red, cross and silver-gray were all the same fox. A hundred skins from a good fox country would show all grades from red up, and I have watched litters of young foxes that were all colors, from red to black. One family that I watched for over a month consisted of a red dog, a bitch that looked nearly pure black, and four cubs that graded from red to dark cross. (A cross fox is a red fox with patches of the dark, silver tip, silver-gray fox fur on shoulders and rump. A first-class cross fox will have the silver-gray fur all over his back, shoulders and rump.) The den was only a mile or so from camp, and nearly every evening I used to go over and watch the outfit with a glass. The old foxes would bring in all sorts of game for the cubs. One evening I met the old she fox coming in with a mouthful of moles. She dropped them and bolted, and she had been carrying nine big moles in her mouth. How she did it was more than I could see.

For several years I hunted cougars with dogs in one small tract of country hardly ten miles square, killing in all fifty or sixty cougars, but they were just as thick and bold at the last as at first. The last year I was there the brutes killed every colt belonging to a bunch of twenty-five mares that were kept in a pasture close to the ranch house. A long range of rocky cliffs came down to the upper end of the pasture, and the cougar stayed among the rocks during the day, and as the scent would not lie on the hot, dry stone, the hounds could not work out a trail.

No matter what happens to the other game here in the Rockies, it is very likely that cougar and wolf will furnish plenty of sport for a long time.

Mr. Wade is right about the wildcat being a fighter. If the cougar had half as much grit he would be a bad thing to hunt. A cougar does not seem to be able to turn quickly, or to strike a quick blow with its paw. A bear is much more active on its feet, and handier with its paws. But a wildcat is all teeth and claws, and if cornered will put up a pretty good fight, though they are so small that an active dog that knows where to take hold can kill one at one bite. The big gray lynx does not seem to be much of a fighter.

I suppose that the explanation of the little effect that contact with civilized man seems to have on the cats is the natural habits of the beasts. Being a nocturnal animal and adept at hiding, they seem to know that they are safe when other animals would be in danger. When disturbed a cat will hardly ever run far, and will never make a wild, frightened dash for safety if it thinks it can creep away. I have many times run across cougars when I had no dogs or gun, and if tracking was good could always come back with the hounds during the day and jump the beast inside of a quarter of a mile, whereas if it had been a bear or wolf it would have been twenty miles away. And if one runs into a pair or family of cougars and the dogs tree one, the others will not go far. I have several times bagged a whole outfit that way one after another within a few hundred yards.

Fearless Robins.

TROY, N. Y.—*Editor Forest and Stream:* About 100 feet from Second avenue, north, through which the United Traction Company run their noisy trolley cars every few minutes, there stands an apple tree fully sixty years old, in which the robins have built for years.

This season, however, a pair of these birds have built their nest inside the second story of a two-and-a-half-story brick building, within 12 feet of the old tree, on three strips of wood, making a platform not over 6 inches wide, near a window which has the upper sash lowered 8 inches, the nest being 7 feet from the floor.

This building is used as a floor oil cloth printing house, and the printers and presses make such a racket ten hours a day that they can be heard a square away when the windows are open. The occasional removal of the wooden bars on which the cloth is hung in folds within a few feet of the nest does not disturb the birds. After the nest was partly built it was thrown on the floor by one of the men, who thought it rubbish thrown in the window by some mischievous person, but one of the printers rearranged it four hours later, whereupon the birds finished building it, and within a week four eggs were found in the nest, and all four have hatched. The male birds seem to be the more shy of the two; but considering the noise and bustle within and without the building those of us who know of the circumstance consider it

A NEAR VIEW.

quite a remarkable occurrence. We succeeded on May 28, after quite a few failures, in obtaining a photograph of one of the old birds standing on the edge of the nest about to feed its young, but as will be seen from a copy which I mail, their constant motion has blurred the picture. The camera was held within 4 feet of the nest.

EDWARD F. POWERS.

Later.—The robins which built their nests inside the brick building commenced the same April 29, and in about seven days later commenced to set.

The four birds were hatched about May 16, and they left the nest on the 31st. The old birds seemed to have no difficulty in getting three of their young through the window near the nest, and on the old apple tree, but the fourth bird flew about the building and was caught by one of the printers, who let it go near the other birds, and the old ones showed their appreciation of the kind act by flying at him with many angry cries. We have seen two of the young birds since their exit from the building, and believe all four are alive, and they seem to be almost as large as the old birds. The photograph was taken May 28.

E. F. P.

Hawks.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* One of your very appreciative readers invariably indulges in a quiet smile upon reading in your columns or other publications the opinions of learned ornithologists and other observers to the economic value of hawks. Perhaps it is because his memory recalls the trials of a certain freckle-faced boy of eight or nine, or it may be his faith in the theory that early impressions are the strongest. He probably remembers the boy's love for pets, which was in a measure gratified by his father bringing home a pair of young pigeons, and how the little home was built for them, and more care and attention lavished upon those pretty fantails than upon all the "chores" allotted to him. On his coming home from swimming one day only one of the pigeons came to eat from his hand, and a thorough search failed to reveal the whereabouts of Spotty. It was with grave misgivings that the boy went to bed that night, hoping for the best. Next day the lad searched high and low for his lost pet, and still no trace. The following day, however, all doubts were set at rest by finding a mass of feathers, easily identified—mute evidence of the tragedy in which a hawk had played the part of villain. Then it was that the oath of vengeance was made. Through his tears the boy might have been heard to mutter, "Just wait till I'm old enough to have a gun!" Other pigeons were given the boy, but none seemed quite so dear as his lost one, and many also met a like fate. As the father frowned upon any suggestion that a gun would be a handy thing to have around the place, it was several years before the boy's opportunity came. Made bold by continued success, a hawk levied on

old Speckle's brood of chickens for ten consecutive mornings, whereupon the parent was heard to say that "we" would have to get a gun. Then the boy felt free to make a dicker for an exceedingly light single barrel shotgun, rather uncertain as to action of lock, etc. About this time the boy began to learn his trade in the village, so the gun was hidden away, and every opportunity was taken to wage war on the sworn enemy. Many and varied were his first experiences with his foe. He would frequently spend Sunday afternoons in the woods searching for the nests of the hawks, and when found would go there in the morning or evening and "do business." After firing at a large hawk sitting within easy range and getting no results save a handful of feathers, he concluded he needed a heavier weapon. However, he had several notches on his gun stock, when he became the proud possessor of a double 10-bore muzzle-loader. Then "business" improved. He learned a valuable lesson concerning recoil when, to make assurance doubly sure, he deliberately pressed both triggers at one and the same time (the gun having been heavily loaded with BBs for a chance shot at low-flying geese in the spring); but when he picked himself out of the brier bunch and saw the hawk toppling out of a distant tree he was satisfied.

And in after years, as he graduated in turn with the breechloader and finally a hammerless, and killed many quite beautiful pigeons himself, he would neglect no opportunity to get a shot at his enemy. Once he scored five straight within five minutes, and took them all home, too. And even to this day the boy will forsake the pursuit of legitimate game of any kind if he spies a hawk. Only recently while engaged in rifle practice with a few friends a short distance from the city he was at the score, with four of his ten shots still to shoot, when a hawk was observed on a distant tree. Result: a wild scramble, considerable laughter among his comrades, and another notch on the gun stock.

Thus it is that a smile more or less grim spreads over the face of the aforesaid reader as he notes certain scientific facts advanced. He has no quarrel with the scientist.

OCEAN.

To Domesticate the Zebra.

By name at least the tsetse fly of South Africa is well known to most readers and it is recognized as a measurable bar to the settlement of portions of the country. It lives not very far from the coast and renders the country that it inhabits impossible for horses. It is more or less migratory in tendency and it is impossible to say just what its boundaries are.

The tsetse fly is not much larger than a common horse fly, is brown in color with yellow bars across the abdomen. It is especially active during the heat of the day, and its bite is almost certain death to ox, horse and dog. Wild animals of the country that it inhabits are not affected, nor is the jackass. The fly lives by sucking blood, and a few days after the animal has been bitten it dies.

Mr. R. J. Sturdy has recently written the report on veterinary work in British East Africa and Uganda protectorate, in which the question of this fly is touched on, and shows that by protecting horses from its bite by the use of horse boxes with fly proof windows, the disease may be practically eradicated. He urges in the same connection the domestication of the zebra as a means of transport, as this animal does not suffer from the ravages of the tsetse fly disease. He says:

"I am convinced that, should the government enter upon a scheme for its domestication, it would prove one of great value, and that at not very distant date a supply of animals would be available, not only for African service, but also for army transport work at home or in India. The great difficulty so far has been the domestication of the adult animal. I have, however, to suggest the following plan for obtaining a possible way out of the difficulty: I would propose that a kraal be formed within a district where firearms are non-existent, as in the case of a preserve. The kraal would have two extending arms leading from open country into it, and would be constructed large enough to hold a herd of, say, fifty adult animals. Several mounted Cape boys would be employed, whose duty, in the first instance, would be to accustom the zebras in the neighborhood of the kraal to the sight of horses and mules. If my anticipations prove correct, the zebras will in the course of a few days follow the horses or mules, and advantage could be taken of this to lead them into the kraal. If it were, however, found that they would not be led it would be necessary to have them driven in by the Cape boys, assisted by swift-footed natives.

"The animals being in this way confined within the kraal they would naturally propagate their species. It is with the offspring that I would propose that the experiment in the way of domesticity would begin. As is well known, it has been found nearly impossible to rear a zebra foal apart from its mother. I would not propose to separate them; they would live along with and be nurtured by their mothers. A few months after birth the young animals could be caught and by various ways become accustomed to the sight and presence of man. I am very hopeful that in this way a number of young animals of both sexes would become domesticated and prove useful for transport service, and also in propagating their species. The second generation, if my experiment prove in any way successful, would be even more domesticated than their parents, and I am sure that in the course of time a large supply of the domesticated zebra would be forthcoming for the future use of transport work at home and abroad. The initial cost would be a little more than the first results might justify, but there is no reason to doubt that in the long run the ultimate results would far more than compensate for the initial expenditure."

While the zebra has long been believed to be untamable there are a number of cases on record where it has been broken to harness and driven. Certain it is that it breeds quite readily in captivity, not only with its own kind, but has been used in crossing with other equine animals. Mr. A. E. Brown, superintendent of the Philadelphia Zoological Gardens, has, we believe, bred quite a number of zebra at one time and another.

Dog and Snake.

In August, 1844, I was a boy of fifteen, working with my father on the farm in northern Illinois. One afternoon he had just climbed on a load of straw he had been pitching up to me, when I heard a rattlesnake on the ground near by. After looking about a few minutes, we discerned him in the stubble, about 20 feet away, just coiling, ready for defense or attack. In those early days it was considered almost a religious duty to dispatch every venomous creature of that kind, so plentiful were they on the prairies. I was about to get down from the load for that purpose, when I thought of the little dog Penny. He was a slender little fellow of the proverbial "yaller dog" species, but had a great reputation as a snake killer. So I whistled for Penny, who came running, in eager response, from the house. Being directed and hissed on, he soon discovered the snake, still darting out his tongue and giving forth warning with his tail. We had a fine view from the load.

Penny approached cautiously, first on this side, then on that, till he had gone round the snake several times, always finding him ready for a fatal blow in any direction. Suddenly he stopped still, and turned his head to one side in serious contemplation. I think if he had had a finger he would have scratched his head just back of his right ear in search of an idea. After a few moments' reflection, his plan seemed formed. He stepped back a step or two, made a bound forward, toward the snake, and snapped at it with his teeth, coming very close to it, but not touching it; then bounded back as quick as a flash. The snake struck out his full length, and very fiercely, but he was not quick enough. Penny had dodged him. The snake, of course, was now straightened out, and the dog, springing so quick you could hardly see him, caught it in the middle of the body, and, giving it one quick, violent shake, dropped it on the ground, completely stunned, so that it was only a moment's work to seize it again and shake it into many pieces.—Correspondence Los Angeles Times.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

As Touching the Woodchuck.

WHAT can the commonplace pen of a commonplace mortal write on such a commonplace theme as this that isn't known to all and several humanity already? What new facts are deducible? Does not every treatise on natural history, every encyclopaedia, exhaust the subject in all its possible ramifications?

Right here there impinge upon my inner consciousness a vision of my amateur gardening experience, and my mental economy shrieks an emphatic negative to those latter interrogatories. The books tell of the animal's habits, its good ones, such as building its home, getting its food in sequestered pasture lands, its hibernations, etc. I had read this sort of thing and regarded myself fairly well versed in woodchuck and other animal lore. But a few weeks of actually associating with him taught me that the brute has heights and depths and an illimitable penchant for pure, unadulterated cussedness that I'd never so much as dreamed of, and that is not so much as suggested in the books.

"Dem 'chucks is de mos' ornerey cusses livin'," said Pete, my man of all work, a title never more aptly misapplied, for, I think, without exception, he was the laziest negro who survived the disruption of the "Peculiar Institution." He had ventured this opinion one morning after informing me that "de 'chuck's bin a samplin' de garding fer sho'." While viewing the wreck of several rows of lima beans, which had been my especial care, and which I found had been pulled up bodily and left scattered on the ground, Pete resumed: "Dey hain't no sorter use fer dem beans an' wouldn't eat 'em ef dey wuz a-starvin', but dey jess pulls ob 'em up 'cause ob de nacheral, low down cussidness wots into 'em."

Pete's tirade failed to impress me deeply at that time, as I was inclined to attribute the visitation to one of the natural drawbacks attendant on gardening that I had been cautioned about. But, as time wore on, and I had to contemplate in seasonable succession the spoliation of my beet and onion beds, cucumber and squash vines, melons and, later, a fine growth of sugar corn, I not only agreed with Pete fully, but I invested my opinion with an unction that sprang from the innermost recesses of my soul. It is said, and I once believed, that there are no superfluities in the economy of nature, but I confess that I lack the perspicacity to find an essential niche for the woodchuck to fill. In health and full development the animal will yield a half pint of oil, worth in the marts of trade about one-twelfth of one dollar. To catch the 'chuck and extract the oil costs not less than twelve times that amount. Hence it is not a glaring commercial success. Under the pseudonym of "ground hog" the woodchuck attains notoriety and is more talked about on the 2d of February than any one of its useful contemporaries, and he bears the questionable distinction of figuring in the meteorology of the succeeding six weeks.

To desire the extinction of the woodchuck is one thing, to effect it is quite another. He is endowed with talents in excess of many animals. As a strategist he is simply great. On the sunny hillside, in plain view of all that pass, is the earth cone designating his subterranean home. The harried gardener, unused to his ways and wiles, says to himself: "Behold the lair of mine enemy! With pick and spade I will hie me thither, exhume the thieving rascal and do him to death." With willow branch thrust into the sinuous tunnel for a guide, the despoiled amateur bends to his task and digs with a zeal inspired by the recollection of a ruined garden. Hot, perspiring, with aching back and blistered hands, he finally reaches Mr. Woodchuck's nest only to find that the sly old rascal has utilized a blind channel of egress and escaped unhindered while he dug and fumed. He has learned something, however.

Instances of catching the woodchuck by digging are

now and then related at the Four-Corners Grocery, in which the digger took the precaution to securely plug the secret tunnel. But it is generally conceded along the countryside that the only really effective manner of woodchuck hunting is with a rifle that can be relied upon to shoot accurately at a forty-rod range; but the hunter must fulfill certain requirements himself in the way of acquiring facility with the rifle, and this is no trifling matter. The best use to which a dog can be put in woodchuck hunting is to chain him up securely at home. A man, to the leeward, can approach to within shooting distance of a woodchuck in an open field; but a dog can approach from no direction without being spotted by the game before the dog himself is aware of the animal's proximity. The 'chuck comes out of his burrow at frequent intervals during the day to get a bite of grass or other greens. At each alternate or third mouthful he rears up on his hind legs and looks into the eye of the wind to see if anything is coming. He seems possessed of a singular faculty that there is no danger to the leeward; hence the hunter approaching from that direction may often get within easy shooting distance. It is but a matter of cool sight and steady hand then to introduce a leaden pellet along with Mr. 'Chuck's vegetable refectation.

I had a Flobert that I regarded as quite a fine shooting stick, an idea acquired from the man of whom I got the gun. One morning, after a particularly aggravating raid, Mr. 'Chuck seemed bent on adding insult to injury by spending much time gamboling over his earth-works in the meadow back of the garden, and leering across at me.

"Pete," I said, "I'm going to give him a dose of Flobert." I caught a faint suspicion of a smile on Pete's face as he responded:

"Dat ort to mek 'im t'row up de cawn 'n things 'e et las' night, ef so be an' you' hits 'im," with emphasis on "hits."

Scorning to notice the covert slur upon my marksmanship I inserted a long .22 shell in the Flobert, took a good rest to insure my aim, and banged away. With a flirt of heels that raised a fog of dust, Mr. 'Chuck disappeared. Rushing over to the burrow expecting to find a dead or dying woodchuck, I confess to quite a disappointment on beholding a clear tunnel free from sanguinary obstruction.

"Wonder if I could hit the side of a barn," I growled in chagrin.

"Not 'less yo' stood inside de bawn an' hed de do' shet," chuckled Pete, making no effort to conceal his merriment; "'dcn you wouldn't hit much wif dem cat-tiges."

"What fool notion possesses you now, you gibbering ace of spades?" I retorted, pushing another shell into the rifle with which to try my skill (or lack of it) at a target.

"Golly, boss, Ise jess hed t' laff; look at dem cat-tiges, dey's blank ez wite dominos," and Pete fairly exploded in a crescendo of mirth.

Sure enough, on looking at the cartridges, I found that what I had supposed was a pellet of lead was simply a hard twisted roll of brown paper. Half a dollar in hand and the promise of my second best brierwood secured Pete's word not to relate the incident. I have always believed that the sooty-faced rascal knew all about the cartridges from the first and kept quiet till I had committed myself, for the sake of an anticipated bribe.

"Get some hay and brush-wood and we'll smoke the brute out and club his head off," was my next utterance and Pete lost no time in doing my bidding. But the smoke wouldn't go into the hole. Pete blew till apoplexy seemed imminent, but to no avail.

"If we could make a draft through the burrow we'd have him all right," I ventured to observe.

"Dat 'if hez done sp'iled more'n one hunter's luck," was Pete's astute rejoinder. "But wha's de mattah wif a stovepipe?" and the black face glowed with a spark of sense. I thought he was joking at first, but he went on to explain: "Jess stick 'bout two len'ts o' pipe inter de blin' hole an' dere'd be draf' 'nuff to pull yo' hat t'rough."

The idea seemed tenable and I sent Pete to the attic for the pipe that had done service in our parlor in the early spring time. We spliced three lengths and placed one end firmly in the escape end of the tunnel, stuffing the ehinks with clods. There was a stiff west wind blowing and, on lighting a heap of straw and mulch at the tunnel entrance, we had the satisfaction of seeing a dense cloud of gray smoke pour from the pipe.

I felt certain that no woodchuck could stand much of that sort of thing and confidently expected to see him rush out, dazed and blinded, when he would fall an easy prey to a club. But the fire burned out and no 'chuck rewarded my anticipations. We increased the fuel supply, adding some wet hay to enhance the volume of smoke; but no results.

Just then Pete, who had been crouching on the ground, sang out: "Shuah's I lib and breve dat hawg's digging away from de smoke." Following his example I listened with my ear to the ground and could plainly hear the sound of the 'chuck's paws, scratching away down in the depths for dear life. It was plain that, when the smoke penetrated his nest, instead of rushing out to be killed, Mr. 'Chuck had simply gone to burrowing, piling the earth behind him, and thus escaped suffocation.

"He's too much for us," I remarked.

"Jess wait twel 'es got ober 'is scare an' has fixed up 'is house ag'in, an' I'll show yo' how to ketch 'im," replied Pete, but when pressed as to ways and means he merely looked wise and uttered one word, "Turkle!"

Several days later Pete appeared one morning with an ordinary speckled turtle and invited me to see him catch the 'chuck.

Reaching the burrow, Pete folded a strip of asbestos and bound it on the turtle's back with a bit of wire. To this he fastened a bunch of tar-soaked oakum and set it on fire. The turtle proceeded to gyrate his legs and, when released, started off at a most prodigious pace—for a turtle. Pete headed the fiery traveler into the main entrance to Mr. 'Chuck's domains, seized a stout hoe's tail that he had brought with him and waited at the exist. Very soon, with an introductory snort and

a cry of terror, my garden despoiler bounded into daylight, sneezing, blinking and quaking in mortal fear, Swish! The bolt descended and I felt that my garden was in a measure avenged.

"How came you to think of the scheme?" I asked Pete as we contemplated the woodchuck's remains.

"Huh! Allus ketched 'em that-a-way w'ere I cum from."

And that old black excrescence on nature had witnessed the spoliation of my garden for six weeks and held his peace. SAMUEL MANSFIELD STONE.

From a Letter.

SEYMOUR, Wis., June 9.—Dear Friend: Last Tuesday night, June 4, after we had the chores all done, I was sitting in the house reading, and Frank and Bruce started to go over to our neighbor that lives on the Rice farm south of here. When about half way from the corner to the creek they saw a bear cross the road from the west. This was about 7 o'clock. You can bet they made quick time getting back to the house, and told me. I grabbed my gun and plenty of cartridges, and told Frank to go over to Dave Sherman's and get their Winchester—it is one that old Jim Sherman used to have. I took the Winchester and Frank took my gun. I sent him down to watch where the bear had crossed, and ran across to the upper corner of the woods—there is about twenty acres in the piece. I had just got to the woods, when I saw him poking along up the creek in the weeds and brush. I held low down behind the fore shoulder and pulled. He turned a back somersault, lit on his feet and took the back track at thirty miles an hour. I threw in another cartridge and let him have it to help him along. The last I saw of him he was headed straight for Frank. I followed along and my dog came to me—in fact he was running all over the woods. I expected every instant to hear Frank open up. I went clear through to where he was, and he said no bear had come out there. Then I thought I had killed him. We yelled to Evans to come with his dog to help find the bear, but he was slow about getting started, so I went back alone to find my dead bear. I went back through the south side of the woods, went east nearly to the creek before I found him, and I tell you he was awful lively for a dead bear. When I saw him he was six or eight rods from me, head up, looking at me. I got my gun to my face, but could not get down into the back sight, it was so dark. I got down as fine as I could and aimed at where his feet ought to be and let her go. Say, that bear went into the air about six feet and came straight at me under a full head of steam. He got within 50 feet of me, when I gave him another. It turned him so he went past me, not over 20 feet. My dog got there just then and I set him on, and I guess he thought it was a sheep. He ran up and grabbed it in the side; it stopped the bear; he whirled around, made a spring into the air 5 or 6 feet and came down where he thought the dog was. But the dog was gone. I thought the dog was a goner. The bear seemed to think there was going to be trouble; he turned over on his back, drew his legs up, raised his head up as if looking for the dog, and as that was the chance I was looking for, I broke his neck, and the fun was all over. After awhile my hair limbered up so it was smooth again, and I would never have known how many shots I fired, but the folks counted and they say I made seven shots and hit him four times.

I took him to the butcher shop and had him dressed, and I have the hide tacked down in the granary. It is 5 feet long and 3 feet wide in the narrowest place. He weighed 83 pounds dressed, but it was the liveliest 83 pounds I ever ran up against. This was all done within a mile of the main street of the city of Seymour, Wis.

Ducks Breeding on Conneaut Lake.

THE Meadville, Pa., Tribune of June 22 reports: The Conneaut Lake steambot men are doing a commendable act in protecting from slaughter about 100 ducks that have settled on the lake for a summer home, breeding there instead of going further north. As is generally understood, it is now illegal to shoot ducks, and whenever some enthusiastic camper, spying the birds, starts out to shoot them, one or more steamers as promptly start after the shootist, with the warning that "If you shoot any of those ducks you'll have to settle with the court before you get back to camp."

The state of affairs has become so generally well known about the lake that it is only an occasional over-venturesome new comer who now requires "going after," and the ducks are becoming very tame, and especially so since Capt. Charles Niece, a few days ago, rowed out and fed them about a peck of corn. A flock of about thirty of the birds were feeding along the west shore, and Capt. Niece, with his corn, rowed quietly along between the ducks and the shore. As he approached the birds they swam out a few rods, but plainly manifested an interest when he began throwing handfuls of the corn out on the water.

As he continued to scatter the corn the captain rowed slowly toward the shore, and then along the shore, scattering the corn where the water was a couple of feet deep. In a few minutes the ducks began to swim cautiously toward the shore on an investigating tour, and it didn't take them long to discover that the bottom was scattered with corn, and then followed an exhibition of diving that was worth seeing. The ducks would go to the bottom where the water was fully 4 feet deep, and it wasn't long until every duck on the lake was participating in the banquet.

The result of this and subsequent scatterings of corn has been to make the ducks very tame and it is an easy matter for one to row up within 50 feet of them, while they frequently follow a rowboat and swim close to the steamers looking for the feed which they have learned from experience is pretty certain to be forthcoming.

Two families of youngsters have already been brought out by the hopeful mothers, and it is likely that others will soon appear. The Conneaut Lake boatmen are elated over the success which has thus far rewarded their efforts to protect the feathered summer sojourners, and are more than ever determined to see to it that the birds are not killed. This is the first time, so far as can be learned, that any number of ducks have made their summer home at the lake.

The Appalachian National Park.

ASHEVILLE, N. C., July 5.—*Editor Forest and Stream:* A distinguished party from Washington have been in Asheville and the surrounding country this week on an investigating tour regarding the establishment of the Appalachian National Park, of which I have written you several times. This party was composed of Secretary of Agriculture James Wilson, his secretary, J. A. Wilson; W. J. Magee, of the Bureau of Ethnology; Gifford Pinchot, of the Bureau of Forestry; S. H. Newell, United States Geological Survey, and J. A. Holmes, State Geologist.

The party was investigating the timber conditions of western North Carolina, and during the next week purpose to spend the time in the woods along the State line between North Carolina and Tennessee.

Secretary Wilson has been kindly disposed toward our park movement from the first, and this personal investigation which he is making will undoubtedly only add to his enthusiasm in the cause and more fully acquaint him with the necessities of such a movement.

Prof. Holmes, chief of the Government Forestry Bureau, stated while in Asheville that the numerous floods which had recently occurred in the various portions of the southeastern section are due in great part to the timber destruction which has been carried on during the past ten years. He further stated that these floods, while doing an unlimited amount of damage, are, nevertheless, going to be among the strongest arguments for our forest reserve when the matter comes before Congress next winter.

The Appalachian National Park Association feels that in securing the personal investigation by Secretary Wilson and his party we have greatly strengthened our cause.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

When a Bass Gets on My Line.

WHEN the springtime's o'er me stealing,
And my heart is often thrilled
With the overflow of feeling
With which the world is filled,
There can be no joy or privilege
That is comparable to mine
When I have a seven-pounder
At the end of hook and line.

I have tasted all the pleasures
That the wells of life afford;
I have feasted on the bounties
That the world delights to hoard;
But I'd leave the festal table,
With its wealth of ruby wine,
To feel a seven-pounder
"Cutting capers" with my line.

I have been inspired by music
By the masters in the art;
I have listened to the eloquence
Of intellect and heart;
But no melody enchants me
With its harmony divine,
Akin to that which follows
When a bass gets on my line.

There is music in the woodlands,
When the summer lingers there;
There are carols in the meadows,
When the skies are blue and fair;
But all these charms of nature
I would willingly resign,
To hear the hum of reeling
When a bass gets on my line.

There is nothing nearer heaven,
When a fellow's tired quite,
Just patiently awaiting
For a fish to come and bite,
To have your rod bent double
By a bass, with mad design,
And feel a seven-pounder
Fiercely tugging at your line.

If I should get to heaven,
I presume I'd want to know
What the chances are for fishing—
Like the sport I knew below—
For, though 'mid joys supernal,
I would certainly repine
For a day upon the river
And a bass upon my line.

JAMES ROBERT ALLEN.

Texas Tarpon.

KANSAS CITY, Mo., June 29.—*Editor Forest and Stream:* I have just received from my friend, the Rev. Father O'Dwyer, of Kansas City, a letter from Aransas Pass, where he is at present having a great time among the tarpon and other game fishes of the Gulf.

The record that the good father has made is so extraordinary that I feel impelled to send it to you for publication, even if by so doing I run the risk of displeasing his reverence by publishing what he intended for a private communication.

I know, though, that if he be offended he is such a good fellow that all I have to do is to say "*culpa mea, peccavi*," and he will reply, "*Absolvo te. Pax tecum*," or something similar, and all will be well again. The following is a copy of his letter:

"Tarpon, Tex., June 23.—Mr. Waddell.—Dear Friend: I got here at 12 P. M. Tuesday. Caught five tarpon Wednesday, six Thursday, nine Friday and four Saturday forenoon, interspersed with six jackfish and two large jewfish.

"You may judge for yourself what kind of fishing is

here and what a time I have had. I am writing according to promise, and to communicate what I know will be agreeable information. It may induce you to come here before I leave, which will be about two weeks from next Wednesday. Yours sincerely, M. J. O'Dwyer."

Just think of landing in three and a half days twenty-four tarpon, six jackfish and two large jewfish! Such sport puts the Florida fishing entirely in the background. It is true that one would get more bites in Florida than at Aransas Pass just now, but they would be from mosquitoes.

It is with feelings of deepest regret that I have had to decline the good father's invitation to join him, although perhaps by the time I could get there he would have caught all the fish in the Pass, and have left none for me. My professional duties this busy year will prevent me from going so far from my office. However, I hope to go soon with a friend to Galveston to try the sport there for a few days.

Inclosed is a clipping from a late Galveston paper, which you may see fit to reproduce in whole or in part for the benefit of those of your readers who are tarpon cranks.

J. A. L. WADDELL.

From the Galveston Tribune.

"Galveston Bay is teeming with tarpons." So says Robert I. Cohen, who is about the most persistent fisherman to be found anywhere in Texas. Mr. Cohen belongs to the Missouri class of people. When he makes a statement he is generally prepared to prove what he says. He has been tarpon fishing. He caught a tarpon and the fish was landed and brought to Galveston.

Mr. Cohen is very enthusiastic on the subject of tarpon fishing. He says—but let him tell his own story:

"The flats are fairly alive with the big silver-scaled fish," said Mr. Cohen. "They are not there in twos or in threes, but hundreds of tarpon are making sport right within a stone's throw of the Galveston wharves.

"I have been fishing for mackerel for a long time. Mackerel fishing is fine sport, and I thought it was good enough for me. But Dr. Mayfield is responsible for my forsaking the gamy mackerel for the still more gamy tarpon. Dr. Mayfield telephoned me yesterday morning there were more tarpon in front of the quarantine station than there were stars in the heavens.

"Well, to make a long story not so long, I got a lot of paraphernalia needed in the landing of a tarpon and hired a man to row me to where Dr. Mayfield said the tarpon were making merry. I had hardly thrown my line over, when 'whir' and a big fish had been hung. Sport? Well, I should say so! He jumped out of the water ever so many feet, swam this way and then that, when all at once he managed to cut the line, and I began to think that what I didn't know about tarpon fishing would fill a big book.

"Just as I thought a brilliant opportunity had passed by, my son, Robert I., Jr., hung another fish, if anything larger than the one that had gotten on my line; but he was no more fortunate in landing him than I was. It did not take two jiffies for us to lose two fine tarpon hooks.

"After that the big fish bit almost as fast as we could throw the baited mullet overboard, and in one instance a tarpon was hooked with nothing but a piece of white handkerchief for bait.

"After we had been out about half an hour the fellow that we at last managed to land got fastened on the hook. When Mr. Silver-Scaled Fish ascertained that he was hung good and hard he made as gallant a fight for liberty as one would care to witness. He would throw himself out of the water with the speed of a locomotive, and as soon as he reached the surface would dart away first this way and then that. But I was beginning to learn a trick or two about landing a tarpon. When he would give slack in the line I would wind up the reel just as fast as I could, and as he would bear away from the skiff I played out the line just fast enough to keep him well tantalized.

"After I had toyed with him for perhaps twenty minutes and was beginning to think that he had the vitality of a Mexican burro—for I was nearly played out myself—he began to give signs of weakening. By slow degrees we coaxed and towed him to Pelican spit, where, with the aid of a big sharp knife, he gave up the ghost.

"I don't think there is a place in the earth that can touch Galveston Bay for tarpon fishing. The big fish are there in great numbers, and are as hungry as they can be. They are giving the mullets a hard fight for existence. One can see in the course of a half hour dozens of tarpon swimming near the surface and leaping out of the water in their efforts to get a dainty meal of a good-sized mullet. During the time we were out at least twenty-five of the big fish got fastened on our lines. But tarpon are not the kind of fish to be easily caught, and I think we played in big luck to land even one."

Mr. Cohen brought the tarpon he caught to town with him, and the fish was on exhibition all morning in front of a sporting goods store on Mechanic street.

If F. W. Muller, Jr., is to be believed, tarpon fishing is not the only kind of sport that can be found in the waters around Galveston these days. According to Mr. Muller the beach is swarming with fat Spanish mackerel. He says that he was on the beach this morning off the foot of Seventeenth street, and in less than no time had caught twenty of this kind of fish.

Pearl Fisheries in Venezuela.

CONSIDERABLE interest having lately been evinced in the United States regarding the Venezuelan Island of Margarita, I transmit a short description of one of the principal sources of the island's wealth—its pearl fisheries. The pearls of Margarita have been known to white men since the discovery of the island by Columbus and his followers. It was on this island, and on the mainland adjoining, that the Spaniards found the natives decked with pearls. History claims that these pearls were one of the prime causes of trouble among the adventurers who first visited and settled on these shores.

Pearls having lately risen in value, there has been extraordinary activity on the island. Buyers from different parts of the world reside there and purchase from the native fishermen the products wrested from the depths.

About four hundred sailboats are used by the natives

in the fisheries of Margarita and its neighboring Islands of Coche and Cubagua. The principal beds are at El Tirano, northeast, and Macanao, northwest of Margarita. About two thousand men find constant employment in this trade. The fishers use metal scoops, which are dragged over the oyster beds and, when filled, brought to the surface, where the shells are opened and carefully examined. The boats in use are from 3 to 15 tons, and pay to the Venezuelan authorities 15 bolivars (\$2.90) each for permits to fish.

The pearls are very fine in quality, beautiful in luster and run from white to yellow; occasionally a black one, priceless in value, is brought to the surface. One white pearl of large size and good quality was sold in Margarita within two weeks for \$1,700. The shell of the oyster is not of much commercial value, being too thin for the manufacture of buttons and other fancy articles, such as are made from the Oriental pearl shell; this is due, I am told by an authority, to the short life of the Margaritan pearl oyster, eight years being about the average age.

Pearls from dead oysters have very little value, as they lose their luster.

A French company has recently started fishing for pearls by means of divers and diving apparatus, and expects great results from the enterprise. The divers claim they can select the larger oysters and leave the smaller undisturbed, giving them time to grow and increase in value. The value of pearls found near Margarita is estimated at about \$600,000 per year. Most of these pearls go to the Paris market, which, sellers claim, gives the best results.

LOUIS GOLDSCHMIDT, Consul.

LA GUAYRA, May 25.

A Raid on the Kidels.

From "Her Majesty's Tower," by William Hepworth Dixon.

ONE of the King's officers, the Tower warden, was a man with extensive powers, and a hundred archers at his back. A subject always in dispute between this officer and the city folk was a claim put forth by him to catch fish in what the commons called an unfair way. The warden claimed a right to put kidels in the water, not only in front of the wharf, but in any other part of the stream. A kidel was a weir filled up with nets, which caught all fish coming down with the tide, both the small fry and the old flappers. * * * For a small sum of money any rascal on the river could buy his license, and set up kidels in the Lea and in the Medway as well as in the Thames. The effect of netting these rivers was to destroy the salmon and shad, as well as to capture the flounder and the trout. * * * In the Great Charter there was a special clause on kidels; King John consenting, among other things, that, under pain of excommunication, all kidels should be removed from the Thames and from his other streams. Yet the warden, paying scant attention to a parchment which he probably could not read, laid down his weirs and nets as before, only desisting for a time when the Sheriff of London, backed by an armed band, dropped down the river and seized his nets. * * *

Complaints were laid before Andrew Buckrell, Mayor; Henry de Cotham, Sheriff, and other magistrates, that many new kidels had been laid in the Thames and the Medway, by authority of the Tower Warden, contrary to the City Franchise, and to the great injury of the common people. More than elsewhere this wrong was being done to them in the Medway, in the neighborhood of Yantlet Creek. This was a ticklish thing, for, although the Thames lay under the jurisdiction of London for many purposes, it was not clear that the Mayor and a city band had any right to pursue offenders up the Medway, and to seize them under the walls of Rochester Castle. They put their right to the test. Jordan de Coventry, Second Sheriff, with a body of men, well armed and resolute, started on Jan. 6, 1236-37, for Yantlet Creek, where they fell suddenly and stoutly on the master fishermen and their servants. They found no less than thirty kidels beyond that creek toward the sea.

With little ado they tore up the nets and seized the masters: Joscelyn and four good men of Rochester; seven good men of Strood; three good men at Cliff, all master-mariners, with nine others, their helpers and abettors in the wrong. Jordan brought these captured nets and culprits up to London, where he gave the nets to the First Sheriff, and lodged the master-mariners in Newgate.

When the news of this raid reached Rochester, Strood and Cliff, much din arose, and men from these towns rode up to London to see what could be done for Joscelyn and his fellows. They applied to the king for help, on the ground that no man had power to seize the king's subjects by force and cast them into jail without his license. Henry inclined to take this view; but the mayor and sheriffs maintained their right to arrest offenders against the king's laws and the city franchises. Being then absent from London, Henry sent a writ to the mayor commanding him to accept bail for the appearance of his prisoners until such time as the king could hold a court to try the case. This court was called in the Palace of Kennington, when Buckrell and the citizens Joscelyn and the master-mariners appeared before the Archbishop of York, the Lord Chancellor, and other great personages, among whom the most eminent was William de Raleigh, the famous justiciar, a collateral ancestor of Sir Walter.

William de Raleigh, who held a brief, as it were, for the Crown, put Buckrell and his men on their mettle. "How," he asked them, "had they, with such rash daring, seized the king's liegemen in their boats and cast them into a common jail?" Buckrell answered him: "That he had seized Joscelyn and the rest for just reasons: because, being taken in the act of using kidels, they were infringing the rights of the city, lessening the dignity of the Crown, and incurring the ban of excommunication, in accordance with an express clause in the Great Charter." He asked, in conclusion, that the judges should enforce the law and punish the master-mariners by a heavy fine. William de Raleigh took this view of the kidel business, and his verdict gave immense delight at Guildhall. He sentenced Joscelyn and the other masters to pay a fine of ten pounds each—the fines to be rendered to the chief men in the city. A great fire was lighted in Westcheape, and the captured nets from Yantlet Creek were burned in presence of a joyful crowd.

Some Great Bass Fishing.

Four Hundred and Twenty Small-Mouthed Bass in Two Days at Lake Ida, Minn.

MINNESOTA is credited with 10,000 lakes. Whether this be so or not I do not of my own knowledge know.

Twelve years ago I came out here from New York. It was in the early spring, and, after hearing of the fishing enjoyed around St. Paul, I naturally awaited with impatience the opening of the season. And I was greatly disappointed when it did open, for, while I caught bass galore, they were of the large-mouthed variety, which, because of prejudice, perhaps, I do not favor. To my idea they lack the gameness of the small-mouthed hero. It is needless to say that I came home disappointed after each visit to a new lake in quest of the small-mouthed bass. It finally became monotonous, going here and there on the assurance that in such and such a lake would I find the fish I was after—and not finding the red-eyed, small-mouthed denizen of the deep. I made one more back-breaking trip after this elusive fish and then came home and putting up my rods declared there were no small-mouthed bass in the State of Minnesota—and I was wrong, very wrong, indeed.

Out of curiosity I would sometimes go to the Union Depot when the Monday morning trains came in and watch the boys stagger in with their strings and gunny-sacks of bass, pickerel and croppies—bass being in the lead. I saw no small-mouthed friends among the arrivals.

I was bewailing my fate to some friends who knew this country, and was assured that we had small-mouthed bass in this State, but not in the lakes near St. Paul. Along the line of the Great Northern Railroad, from Osakis up, I was promised that I could get all the small-mouthed bass I could desire. Skeptical as I was, I started, stopped off at Alexandria, and drove to Lake Ida, and here I found them—the real, genuine, simon-pure article. And, like the tramp who used soap years ago and never used any since, I have fished no other lake since. I may find but a single day in a season in which to fish, but to Lake Ida I go. My veracity would suffer were I to relate my luck at that lake on various repeated occasions. The average fisherman hesitates to take a four hours' steam-car ride for a day or two of fishing, and they keep close to St. Paul. Those who do take the time and trouble are amply repaid.

The small-mouthed bass put up such a fight that men who have caught the large-mouthed fish only think they have hooked a grampus when a small-mouthed bass takes hold.

The waters of Lake Ida are deep and cold. Weeds and lily-pads are missed. Even the big-mouthed bass when taken in this lake fight and really make a good straight show at resistance before landing in the net, no doubt because of the coldness of the water.

They run large, 4-pound fish being quite common. I have a photograph of five fish taken there one afternoon by a friend weighing 26½ pounds, three small-mouthed and two large-mouthed. He states that they "towed the boat" in two or three instances after taking out all the line from the reel. I once got into a school of these gamy fellows; they hugged the sandy bottom ten feet down. I remembered Black's description in "White Heather" of fishing for salmon with two rods, and having in the boat two 6-ounce rods rigged for still fishing, I started in with two lines in the water. It was a succession of strikes and the landing of the fish first with one rod and then with the other. While playing a fish the second rod would demand attention, and reaching down and striking the second fish, I would hand the rod to the boatman, instructing him to keep the fish simply under control, and when I had brought my bass within reach of the landing-net of the guide and I would lay down the rod and reach back for the fish-laden one in the guide's hands and then play the bass until drowned, before which time the other line, baited with minnow and thrown in, would need attention; the fish would be struck and the rod handed to the boatman as before. This fishing lasted one hour; not more than half a dozen fish were landed, as they were large and fought furiously, but for an experimental, steady hour's fishing with two rods it was a success, and while it lasted, highly exciting.

The fish were voracious, and as the minnows were small they gulped the bait without much mouthing or running. I had already early in the day begun to throw my fish back, and these went "into the drink" to afford sport for another day.

And what prompts me to write this is that I have just had a friend call who spent two days at Lake Ida and landed 422 bass—returning the whole catch to the water as fast as taken, save the few eaten by himself and guide.

At Alexandria are lakes in plenty, in any one of which can the finest fishing be had. Those who go up there and who keep all they catch, express home a barrel filled with fish before they have been away three or four days. After returning home and having fault found with them for not sending the fish cleaned and skinned ready for the pan these people reform and let their neighbors buy their fish at the store when they want them in future.

An hour of fishing in the morning, between 9 and 10, a couple of hours from 5 until 7 in the evening, will give a man in numbers all the bass he needs. If he will send home a barrel every other day, why, then, it is simply a matter of keeping everlastingly at it, and getting there.

The lakes of Minnesota teem with bass, and those around Alexandria especially so, as to the small-mouthed variety.

Those of you who can find the time and have the inclination will do well to try our Minnesota bass fishing. It is a long way from the Bowery out here, to be sure, and not so handy as Greenwood or Hopatcong; yet, as is frequently said as to other things and places, "it is well worth the trip" to the man who loves bass fishing.

CHARLES CRISTADORO.

ST. PAUL, MINN.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

CHICAGO AND THE WEST.

Hot Weather Hiatus.

CHICAGO, Ill., July 6.—As to local fishing news, there is not any worth mentioning, for the past week of hot weather has caused a hiatus in all sorts of angling plans. Such of our fishers as have been out this week report practically no sport at all. Harry Gobel was down to Cedar Lake, Ind., and he said that the only thing which had nerve enough to bite was the bullhead, and even the big bullheads were hidden somewhere in the shade and declined to come out and transact business with any kind of a bait.

In the lower portion of the Wisconsin lake region there have been a great many anglers out, more for summer resort purposes than for serious fishing. Of all those who have visited the lower Wisconsin lakes, Mr. S. D. Thompson, of Chicago, can report perhaps the best luck. He has sent down to be mounted a fine specimen of the fish usually called pickerel in this part of the world—the great Northern pike, in reality. This fish weighed 16 pounds, and was taken by Mr. Thompson at Eagle Lake, in Waukesha county. Every once in a while a good fish turns up in these restricted and much-fished waters. I did not hear whether this was taken in the lower lake, or mill pond lake, or in the deeper body of water known as Lulu Lake, or Schwartz's Lake, about a mile above there. I should rather guess that it came from the mill pond lake, for although that it is a good fish itself, it is very rarely indeed that one is taken in Lulu Lake which does not go even heavier, several specimens having been taken there which run over 20 pounds. It is well known that there are some of these monsters in this little piece of water, and it is always a part of the ambition of the visitor to get a for although that is a good fish itself, it is very rarely taken, however, excepting through the ice in the winter time or else in the very early spring. Usually there is about one good big fish taken in that lake every year, sometimes not so many as that. Billy Tuohy has been fast in one or two of these big fellows, and has a choice assortment of fish stories to tell about the possibilities of Lulu Lake.

Mr. Ambrose, of the American Book Company, came back from the Eagle water country of Wisconsin this week with the best lot of muscallunge which is reported for the past two weeks. He had some very decent fish.

Trout Season.

The hot weather has had the effect of hatching out all kinds of flies, bugs and insects, not to mention the particular brand known as the American mosquito. The grasshopper crop is now on, and all trout fishers know that the grasshopper is one of the things in animate nature which the trout is altogether unable to resist. As a consequence, the trout are now rising in a great many of the streams in lower Wisconsin. Mr. John D. McLeod, of Milwaukee, reports very fine sport on the Pine River a week ago. He did not go up this week end to fish the stream, as the hot weather has practically killed the pleasure in such fishing, but he believes that as soon as the temperature is low enough to enable a man to get out of doors he will begin to get some good sport, as the fish were rising freely to the grasshopper when he was last up there, and hence also were disposed to take the artificial fly, which, of course, was the only lure employed.

The Au Sable.

The 8-inch law is reported to be doing wonders for the fishing along the Au Sable, of Michigan. I have not yet heard from Mr. George L. Alexander, of Grayling, Mich., regarding the prospects on that stream, but Mr. McLeod, of Milwaukee, is anxious to see the old Au Sable once more, this being one of his earlier fishing haunts. It is among the possibilities that if the hot weather keeps up and business continues nil, we may all take a run with Mr. Alexander on the Au Sable one of these bright days. It will be our deliberate purpose to tangle up with big rainbow trout, and no little fish need apply. It is worth a dollar and a quarter to see Mr. McLeod handle a big trout when he gets a strike. He uses a little Leonard rod weighing about 4 ounces, which he has had wrapped with silk from end to the other. With this rod Mr. McLeod allows the fish no latitude and no mercy, but starts him in early in the game and keeps him coming with a supreme confidence in his tackle which always gives me cold chills up my back to witness.

The Fox.

There ought to be a little fly-fishing about now along the shallow reaches of the Fox River, where the bass are now feeding upon insect food to a greater or less extent. The Fox is not a bad wading stream at such points as Clintonville, Yorkville, Dayton, etc., and although one could not expect to take any bass except early in the morning or quite late in the evening, he might now and again have a little fun, and he would certainly be able to keep his feet wet and cool, which is something of a desideratum in this sort of weather. The rock bass, croppies, etc., which now and then one meets in his fly-fishing for bass on this stream, are not altogether to be despised. Given a light fly-rod, a No. 4 coachman and a half-pound rock bass, just in the cool of the evening, when the shadows are quite black on the water across the stream, and one ought to be at least more happy than he is sweltering in the fairly unupportable heat of the city. Indeed, fly-fishing on a stream where one has to wade is nearly the only kind of angling which appeals to one in this kind of weather. As to bait-casting for bass from a boat under a sky as merciless as that which has prevailed all over the West for the past seventeen days, let those go in for that who fancy it. It means accumulating sunburn almost too swiftly for the average man, and moreover, it is a bootless employment, for the bass themselves are not taking chances of sunburn these glaring days.

All in all, the signs do not seem to point for very good fishing during this torrid month of July, which under the best average conditions for midsummer must be rated the poorest month of the year for fishing in this latitude. The muscallunge season, if we may be said to have one in this part of the world, is now practically closed. As to bass fishing, of course one can go up to any one of the hundred different lakes in the pine woods of Wisconsin and

get all the big-mouthed bass he cares for. Mr. Graham H. Harris, President of the School Board of Chicago, is still absent on his fishing trip on the Manitowish chain of Wisconsin. Mr. Harris is a fly-fisherman, and goes rather for bass than for muscallunge. He will in all likelihood have pretty good sport at bass.

The Wishininne Club purposed its regular annual pilgrimage to the Manitowish chain this summer, but the hot weather proved too much for everybody. Mr. George E. Cole hires him to his cottage at Spring Lake, Mich. Mr. W. L. Wells, Mr. C. S. Dennis and others are taking up golf in the cool of the day and not risking them on the waters at midday. Mr. J. V. Clark, another member of the club, has been practically prostrated by the heat this week, and unable to get out of town. All in all, we have nothing but disaster to report in an angling way this week in Chicago.

The Frog Question.

To make everything worse, there is such a scarcity of bait frogs here in Chicago. Frogs are hardly to be obtained at any kind of figure, and the local dealers are looking out for frog catchers who know of preserves where bait size frogs are not exhausted. This sort of thing is poorly distributed in the West just now. Last week they had a rain of frogs in one of the St. Paul suburbs, where the newspapers graphically report the fall of a "dark green mass" composed entirely of frogs. Nobody in Minnesota has been able to tell where these frogs came from, but in all probability they were taken from Indiana, which is the ordinary frog supply pond for this city, and which is this week producing almost nothing at all in the way of its old-time commodity. This rain of frogs at St. Paul happened during the prevalence of very high winds, and this would seem to be another illustration of the proverb which indicates that "is an ill wind that blows nobody any good." We would welcome a frog cyclone here in Chicago just at the present time.

Big Rainbows.

I was talking with Harry Gobel, who collects rent in the Hartford Building, when he can get it, and who goes fishing when he is not trying to collect the rent. Harry asked me whether I knew anything about the Peshtigo River in Wisconsin, and, of course, I was able to tell him all about some big brook trout which I had seen taken from that stream some years ago. These big trout were captured by fishermen of Ellis Junction, who went by wagon up the Peshtigo to the mouth of Medicine Brook, where there is a deep hole well known as a feeding ground for big trout in the warm months of the summer. The Peshtigo at this part of its course gets too warm for trout, hence these trout naturally drift in to the mouths of the cold lesser tributaries such as the Medicine Brook. I saw a market basket full of brook trout, and of these I think there was not one fish which would lie down flat in the basket without having its head or tail turned up. The fish would thus seem to run somewhere between 3 and 4 pounds in weight. They were taken on minnow bait almost altogether, and snailed out on the bank without mercy.

Mr. Gobel told me then something which had already come to my ears by way of vague traditional rumor regarding other good fishing points on this big river. He tells me that some years ago he fished the Peshtigo on the rapid waters which run about a mile below the falls of the Peshtigo, a point to be reached from Athelstane, Wis., by a wagon road of about fifteen miles. Mr. C. E. Rollins, of this city, has often spoken of these fish of the Peshtigo, and I believe it was Mr. Rollins who first put Mr. Gobel on to the point. From Mr. Gobel's description there is a pool or so and a long reach of fast water, about a mile in all, and this is the only part of the river which offers any fish at all, anywhere in that district. It is here that the big rainbow trout lie, and Harry told me that he caught a rainbow trout there which weighed 7 pounds. This fish he took by means of a risky wade out in midstream, allowing his hook to float far down below him. When he struck the fish it was so large that he was very much excited, and hastening ashore fell over a rock and cracked the bone of one of his ankles, which to this day shows a lump in commemoration of the struggle he had with the big rainbow. He finally got him out upon the bank, and falling down upon him caught the fish in his arms and so saved it.

Yet Mr. Gobel says that this is not the record rainbow of that water by any means, but that he has known them to be taken weighing as much as 9 pounds. It should be known that the Peshtigo is a mighty water even this far up toward its head. Rainbows lie in the deep water out midstream and it is hard to get at them. Really a bait and a bass casting reel would be the most killing way of fishing for these big fish. Mr. Gobel tells me that they are so heavy and the water is so strong that the usual fate of the fly-fisherman is to have his flies snapped off at almost the first rush of the fish. It may readily be seen that fly-fishing for these fighting rainbows in a water like this must be a sport of as keen a nature as can be found in any part of the country. While I cannot state that there is good sport at this reach of water at this time, the likelihood is that the Peshtigo has not been exhausted in its rainbow supply, and that one could with proper care and due patience still get hold of one of these big fish. If he kill one anywhere near as big as that which Mr. Gobel took, it would pay him for a week of work. The native fishermen in quite a stretch of country round about that part of the Peshtigo are well aware of the excellence of the fishing there, and have hit the rainbows pretty hard with their long-gearred cane pole tackle.

A Good Thing.

In these days of extremely hot weather the average fisherman who has any kind of luck has a serious disappointment when he undertakes to bring his catch home with him. It is more than half the fun to bring home the products of one's sport. Nothing gives the angler more pleasure than to show his family and friends the fish which he has circumvented. A nice lot of trout laid out on a long, cold platter—what is a prettier sight than that, and who would rob his family of the pleasure of that sight? Even a nice take of bass or of croppies, or of rock bass, is a pleasure if brought home in good condition—and anything in the world but a pleasure if brought home spoiled or on the point of spoiling, as is only too often the case

in the summer season. I have often mentioned the pleasure I have experienced with a refrigerator basket of which I first got word from my friend, Mr. Mershon, of Saginaw, Mich. It was with great pleasure, therefore, that I saw the much better basket of refrigerator pattern which is put on the market by the Burlington Basket Company, of Burlington, Ia. This is a tin-lined basket provided with an ice receptacle, and with a tight cover which can be locked down. It is in effect a little ice chest, and by its means one can bring home his fish perfectly dry and yet cold and stiff as wedges, and can keep them with little or no difficulty after the first arrangement of the basket. There is very much to sport nowadays besides the crude essentials which once were held necessary. Any modern angler who intends to bring a part of his catch home cannot afford to dispense with one of these very practical and very stoutly made baskets. I should not think of going fishing any more without taking along such a refrigerator as part of my outfit, and many and many is the good lot of fish which I have saved in that way which otherwise I should have been obliged to give away at the place where they were taken. It is after all a good thing to remember the folks at home once in a while, because if one establishes a sort of rapport between himself and the head of the family, the aforesaid head of the family is all the more willing to let him go fishing the next time. This tip, therefore, is very well worth keeping in mind.

Death of Mr. Meek.

In the death of Mr. Benjamin F. Meek, of Louisville, Ky., the angling fraternity not only of the grand old State of Kentucky but indeed of the entire United States suffers a very severe loss. Mr. Meek died at the ripe age of seventy-six, and he died full of honor. His was one of those conscientious, painstaking natures which was never satisfied with slighting anything. The maker of the early Kentucky reel, he set a pattern which has never been surpassed, and from the first he made reels as good as could be built. They were made honestly, like himself. In his specialty he reached a distinguished success, and there are few who have done more good in the world or have given men more pleasure than he has. The business of B. F. Meek & Sons will be continued, and the descendants of Mr. Meek will still continue to exercise the hereditary and painstaking care which has always gone into their product. Yet I fancy that many an angler will look with all the more pride upon the Meek reel which has been his possession for many years, and that it will now have a yet greater value as a product of the hands of the genuine and conscientious angler who has now gone fearlessly to his last accounting.

Experience of Mr. Parker.

I met Mr. Thomas Parker in one of the gold-mounted cafés of Chicago the other evening, and in the course of conversation Mr. Parker laid before me the facts of a singular occurrence which had recently happened to him.

"You see this little cigar cutter which I wear as a watch charm," said Mr. Parker, "and you may observe that the diamond which formerly adorned it is now missing. It was a little diamond, a mere trifle—perhaps worth \$300 or \$400—and the main interest attaches not to the stone itself but with the circumstances under which I happened to part company with it.

"I was up to Oconomowoc Lake not long ago and was lucky enough to hook a very decent sized pickerel, which I fought to a finish and was just upon the point of taking into the boat. As I bent over the fish to get hold of it firmly, my watch chain swung over the gunwale of the boat and in some way the diamond became detached from the cigar cutter and fell into the water. I could see it shining and gleaming as it took its zigzag flight 50 or 60 feet down into the water. Then, sir, if you will believe me, a peculiar thing occurred. The pickerel, which had been none too securely hooked, at that moment shook himself free. He must have seen the diamond as it sparkled down in the water, for he made a sudden dive as though following it in its flight. I know nothing of what went on below in the depths of the water, and had made up my mind sorrowfully to say good-by to both the pickerel and the diamond, when, later in the evening—

"The same fish struck again, of course," said one of the party.

"You are right," said Mr. Parker, his eyes lighting up with a certain interest, "and at nearly the same place where I had lost the stone."

"You cut a notch upon the side of the boat where you lost it," said another of the party.

"Of course I did," said Mr. Parker. "Otherwise how could I have located the spot?"

"And you opened the pickerel, didn't you?" said yet another.

"Of course I did," said Mr. Parker. "If you will only let me go on with this story—"

"And you found—"

"Yes; I found—what do you suppose?"

"Why, without any doubt you found a box of cigars," replied the second speaker, with a certain conviction in his tone.

Mr. Parker turned away and left the party. "It is a shame," said he, "how some people will spoil a good story."

A Frog Farm.

Mr. E. K. Stedman, of Mt. Carroll, Ill., writes: "A friend of mine is desirous of starting a frog pond. I am not up in frog culture, and none of my books touches upon the subject. If you will give us a column or two in the FOREST AND STREAM on this subject it will make interesting reading."

The question of frog farming is an old one in the columns of FOREST AND STREAM, where it has been justly referred to as being a chimera of highly unsatisfactory if not impossible nature. The consensus of opinion is that frog farming cannot be carried on in a profitable manner. I believe, however, that there is still something to be learned regarding the frog proposition by a good many of us. In some localities the frogs—that is to say, the large bullfrogs, which I suppose are referred to in this communication—multiply with exceeding rapidity. In yet other localities it would be impossible to do anything with them, even although the mortal ken would be unable to distinguish the difference in the two places. For instance, I recall two frog ponds situated less than a quarter of a mile apart in the lower part of Wisconsin. I cannot state

whether these ponds are in Walworth or Waukesha county, but I think it is Walworth. We used to visit them sometimes when on bass fishing trips near Eagle Lake, Wis. We drove west about six or seven miles from Swartz's Lake, near Troy, Wis., over a rolling hilly country, and presently came to these two ponds or lakes. They were situated down in the hollows among the timbered hills, and excepting that they were very shallow and muddy, looked something like the average salt lake of that country. The borders of these lakes were lined for a distance of 30 or 40 yards out with a deep, soft mud. To look at, the lakes were no better than a dozen of the common bass lakes for the purposes of raising frogs. Yet for many years these little spots have been famous as a great place for bullfrogs. I am no frog sharp and I cannot tell how long it takes to raise a bullfrog. Yet the farmer on whose lands these ponds were located states that he has known 1,000 frogs to be killed on each of the ponds during the season. Any one of the frogs would be more than a foot in length. Naturally, toward the end of the summer season the frogs would be pretty well cut down, but next year by June or July there seemed to be pretty nearly as many as the year before. Now I always have supposed that it took two or three years to raise a bullfrog to its full stature. Yet, if so, then these bullfrogs certainly must migrate and come into these ponds, for there are more there every year in June than there are in September of the year previous, and they are not little ones, but big ones.

It is a favorite sport on these frog ponds to shoot bullfrogs with a .22 rifle, and resorters at the summer hotels thereabouts make this a part of their programme. I have mentioned in FOREST AND STREAM that we would sometimes kill dozens of frogs with a .22 rifle in a short time. The place was regularly visited by market-hunters who killed frogs for the market, as was also the Fox River, some dozen miles or more away.

Now if the gentleman of whom Mr. Stedman writes be fortunate enough to know a piece of natural frog ground like the above, he could surely raise frogs, and perhaps raise them profitably, unless his land cost him so much that it would take a pretty stiff return to keep up his interest on the investment. These ponds were worth nothing to the farmer who owned them, and he allowed any one to shoot frogs on them who cared to do so. Whether a man could get rich raising frogs even under these favorable circumstances is a question which ought properly to be referred to Dun & Co., or to Bradstreet, who, as I believe, do not report any very great number of millionaire frog farmers. On the whole, it would perhaps be safer to suppose that the frog flourishes best not as an exotic or a hot-house flower, but as one of the products of unfenced nature.

The great frog markets of Chicago—that is to say, the live bait markets—are supplied by men who make a business of catching bait frogs along the marshes and ditches of upper Indiana. These, however, are wild frogs, and I do not know of any one who has attempted a frog preserve.

Daily Hint from Paris.

One of the afflictions of our modern civilization is the light-colored Fedora hat. Almost every citizen has one of these things in his repertoire. No matter what might be his complexion—sallow, muddy, or bright, voluptuous red—he thinks himself safe in buying one of these lead-colored afflictions, and not only buying it but wearing it. There is only one real excuse for buying the pale Fedora, and that is with an eye to the future. Worn for two or three years, with its brim bent down, its binding removed and its high band properly stretched, the pale Fedora may in time, if it be not too heavy or too thick, be turned into a very decent sort of angling hat. In purchasing one it is well to prove its susceptibility to perforation. If in your judgment you can stick a No. 8 fly-hook through it, and not only stick it through but get it out again, then buy the hat.

While upon the subject of apparel, I am moved to mention a certain little incident in surgical tailoring which I saw during my late trip to Montana. My very good friend, Jack Monroe, joined us one evening at our bear camp on the Two Medicine Lake. Jack was wearing a pair of Mackinaw trousers, which had seen better days, especially in the neighborhood of the knees. He had been hunting coyotes and creeping and crawling along after antelope, wolves and one thing and another, until he had worn the knees of these trousers pretty much to pieces. This, however, did not disconcert him. "I will show you something," said he. And borrowing a needle and thread he did show us something. He took his hunting knife and calmly cut the legs off the trousers about midway on the thigh. Then he reversed the legs on the stumps and sewed them fast on again, with the result, that the worn out knees were now behind him instead of in front of him. Viewed from the front, his Mackinaws were now just as good as new. As to the rear view, it is enough to say that it was not quite the same. It was a little difficult for us for some time to tell at a distance whether Jack was a-coming or a-going, but he declared the arrangement entirely satisfactory to himself. "This," said he, "is what in the West we call upsetting a pair of pants." I have never heard the term used in that connection, but recommend both the term and its implied operation to the fashionable tailors of the larger cities, where I am satisfied it is not yet in general use. He who makes two pairs of pants grow where before there had been but one is properly to be called a benefactor of humanity.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

American Fisheries Society.

DETROIT, Mich., July 3.—The annual meeting of the American Fisheries Society will be held at Milwaukee, Wis., July 19, 20 and 21, 1901. The meeting will be called to order at 10 o'clock A. M. July 19, at the Hotel Pfister.

We earnestly desire a large attendance at this meeting, and to this end we urge every member to make special efforts to be present and to bring along as many new members as possible. The list of contributors of papers and lectures is a sufficient guaranty that the programme will be one of unusual merit and interest. In connection with the meeting, a trip will be made to Bayfield, Lake Superior, to inspect the new station of the Wisconsin Fish Commission, conceded to be one of the largest fish hatching plants in the country.

Correspondence intended for the President, Secretary or Treasurer, not mailed to their regular address prior to July 17, should be mailed to them at Milwaukee, care of Hotel Pfister.

Papers and lectures for the Milwaukee meeting will include the following:

J. C. Parker, Michigan, "Man as a Controlling Factor in Aquatic Life."

S. P. Bartlett, Illinois, "More About Carp."

A. D. Mead, Rhode Island, "Experiments in Lobster Culture."

W. J. Orr, Michigan, "Fish Laws and Their Proper Enforcement."

W. C. Marsh, District of Columbia, "The Brook Trout Disease."

J. J. Stranahan, Georgia, "The Prevention of Cannibalism in Rearing Black Bass."

Charles G. Atkins, Maine, "The Study of the Diseases of Fishes."

Grant M. Morse, Michigan, "Uniform General Laws; the Keynote to Practical Protection and Perpetuation of Our Wild Life."

W. T. Thompson, New Hampshire, "Brook Trout Notes."

A. C. Babbitt, Michigan, "Transportation of Brook Trout Fry."

J. Bayard Lanekin, Georgia, "Feeding of Black Bass Fry."

J. W. Titcomb, Vermont, lecture.

C. H. Townsend, District of Columbia, lecture.

F. B. DICKERSON, Pres.
SEYMOUR BOWER, Sec.

Canadian Angling Notes.

THE reports from the ouananiche waters are more satisfactory this season, so far, than those from the salmon rivers. Some of the more famous of the latter have proved very disappointing this season. Especially is this the case on a number of the South Shore streams. The Cascapedia has not turned out at all well, and some anglers were therefore several days without getting a single fish. One gentleman who spent a day or two on the river lays the blame for this unfortunate condition of affairs upon the net fishing near the mouth of the river. The Margaree, in Cape Breton, and other salmon streams in the Canadian Maritime Provinces, have also turned out badly. Most of these have been overnetted in their estuaries.

Mr. Louis Cabot's fishing on the Grand River was unfortunately cut short by a summons to return home on account of illness in his family.

Up to within the last few days the water has been very low in many of these streams, and this may have had much to do in hindering the run of fish into them, and in keeping the salmon about the shores of the Gulf of St. Lawrence and of the Baie des Chaleurs, where more than usual of them found their way into the nets. If the recent rains have reached to the country drained by these rivers there is every reason to suppose that the July run of fish will be very much ahead of the June one, and that this year, as last, the latter part of the season will furnish much more of fishermen's luck than the first part.

On the Grande Décharge the fishing continues good. The University Club party, already mentioned as having gone there, including Messrs. George Pollack, Woodbury Kane and H. E. McVicar, enjoyed very good sport, and some satisfactory catches have been made by Canadian anglers as well. Mr. Heald, of New York, and party, have lately left for the same waters.

It is interesting to note that within the last few weeks a number of salmon parr have been taken in some of the Lake St. John waters, showing that thus far the plant of *Salmo salar* in these waters is proving a success, as, in fact, there is no reason why it should not. Another large plant will be made in the autumn from the Roberval hatchery. From the letters of inquiry received concerning these fish, it would appear that quite an interest is being taken in the experiment. Its success must largely depend upon the perpetuation of the anadromous habit in the young fish. Will they go down the Saguenay to the sea as smolts, and if they do will they return to the tributary waters of Lake St. John, in which they were planted, to spawn? This is the question!

If the adult fish should remain during the winter, as many suppose the ouananiche to do, in the waters of Lake St. John, it will not likely require many generations to reduce the salmon to the size of the ouananiche.

E. T. D. CHAMBERS.

QUEBEC, July 6.

A Phenomenal Record.

MR. HOWARD M. PAUL, of Camp Nawadaha, Blue Mountain Lake, N. Y., accompanied by Mr. James H. Carpenter, of Troy, N. Y., made a fishing trip into the heart of the Adirondacks, and had the pleasure of breaking the record for seasons back, in Terrell and Salmon ponds, that will be for years a hard one to equal.

Mr. Paul caught a lake trout, weight 25 pounds, length 41 inches, girth measurement 21¾ inches. This fish is the largest one ever known to have been caught in this section.

Mr. Carpenter caught three large trout in one hour, just before sunset. The weight and measurement of these fish, which may be of interest, proves to be as follows: No. 1, weight 4 pounds 11 ounces, measurement 25 inches; No. 2, weight 9 pounds 1 ounce, measurement 28 inches; No. 3, weight 15 pounds 2 ounces, measurement 32 inches.

Mr. Paul is very much elated over his 25-pound trout, and has had it mounted as a trophy for his office, which will certainly never fail to bring back pleasant recollections of the sport he had in landing such a rare specimen.

A Self-Burying Fish.

A FISH of curious habits exists in New Zealand, and is called by the Maories the *kakarai*. It is generally discovered when a man is digging out rabbits or making post holes in the summer time, and it lies at a depth of a foot or two feet under the soil. The character of the soil, whether sandy or loamy, does not seem to matter. The fish is from two to three inches long, silvery, shaped like a minnow, but rather more slender and tapering. It

appears to be dead when exhumed, and if dug up in the summer and put into water it dies at once. If, however, it is brought to daylight in May or early June (the end of autumn), when the rains are beginning to make the soil thoroughly wet, and put into a tub of water, a curious thing happens. After a day or two it casts its skin, which sinks to the bottom, and the fish plays about bright and lively. When dug up in summer there appears to be a growth of skin, or perhaps of a dry gummy exudation, which seals up the head and gills. Apparently this enables it to aestivate through the dry weather, and seals the fish as an Indian fakir is sealed up before he goes in for a long fasting burial. Of course in winter there must be marshy spots or pools in which the fish can swim and propagate, but often all evidence of such natation disappears in summer, and the hot, dry, waterless plain seems the last place on earth in which to find a fish.—New Zealand Correspondence Spectator.

The Antiquity of Fly-Fishing.

THE origin of the art of fly-fishing is so old as to be lost in the past. I have not the least doubt that long before the Bronze Age horse or human hair and hard thorn hooks (such as are used to this day for catching flatfish on some parts of our coasts) enabled the lake or cave dweller to catch fish with a natural May-fly. Even when artificial fly-fishing was first practiced is unknown; in England the first printed description of it of any importance is that given by Juliana, a daughter of Sir James Berners, of Roding, in Essex, who wrote on fishing, hunting, hawking, etc., and whose "Treatyse of Fysshynge" was published in Fleet street, London, at the Sygne of the Sonne, by Wynkyn de Worde, about the year 1500. It is a little black letter quarto volume, and contains such instruction on artificial fly-making and descriptions of flies for the different months as proves that artificial fly-fishing was no new art in England long before Henry VIII. Some modern iconoclasts question whether Dame Juliana Berners ever existed. I think it is very mean of them to throw doubt on such a charming and accomplished lady, whose account of fishing—and more particularly artificial fly-fishing—is the spring, the fountain head of that long series of works on angling which now number more than a thousand—a literature such as no other sport can show.—R. B. Marston in Fishing Gazette.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XIX.—Gunshyness and Blanking.

The dog flees from the sight of a gun or the report of it simply because he is afraid in respect to it, and this display of fear is called gunshyness. It is one of the most common educational troubles which embarrass and obstruct the efforts of the amateur. It is commonly the result of his own faulty attempts at training, or the acts of those who are equally thoughtless.

The novice, in most cases, proceeds on a wrong theory in his endeavor to accustom the dog to the report of the gun. His own knowledge of it is generally and unconsciously made by the standard by which to measure the puppy's knowledge.

Generally the trainer fails to consider that the puppy is wholly ignorant concerning the uses of the gun, and that its terrorizing reports, which cause fear in many boys, also may be to the puppy a cause of intense fear. If the trainer would keep in mind that his own early boyhood, with its timidity, ignorance and immaturity, is a better standard by which sympathetically to understand and school the puppy, he rarely, if ever, would have cases of gunshyness.

Men of excellent sense in other matters assume as a matter of course that a dog and gun were made as a natural corollary of each other, and hence could be used together as if they were litter brothers. Anything short of success in the application of the theory is ascribed to the imperfection of the dog's nature.

To punish a dog for his fears adds to and confirms him in them. The fact that so many dogs are cured of gunshyness is positive proof that they never would have been afraid of the gun if they had been properly accustomed to it from the beginning. It is a self-evident fact that if a dog's shyness of the gun can be allayed after he has acquired a fear of it, by proper treatment, before he had any fears of it at all, he could be familiarized with its use, without causing him alarm. A little care at first in familiarizing the pupil with the noise of the gun will oftentimes save many weeks or months of later trouble in curing him of gunshyness, and add so much more to his usefulness.

However, the trainer will have cases of gunshyness to cure, resulting either from his own mistakes or those of others, and therefore it is necessary that he should know the best methods of treatment for it.

Some apparently mild cases persist to a discouraging degree, while under favorable circumstances some bad cases may be cured readily. Nevertheless, the degree of shyness exhibited is no criterion of the length of time required to effect a cure, nor is there any arbitrary method by which a cure may be effected.

Highly nervous dogs are easily made gunshy if the trainer has been so thoughtless as to frighten them by heedlessly firing the gun. Indeed, the dogs of steadiest nerves can easily be made gunshy if the report of the gun is associated with pain, as when punishment is inflicted in training the dog to drop to shot, or for breaking shot, etc. If the dog, furthermore, is afraid of his trainer, any unusual or extra serious acts of the latter are regarded with alarming apprehension, and evoke a purpose to seek safety by flight.

Gunshy dogs pursue quite distinct ways, seeking safety from the gun or avoiding it. Some run away entirely, either returning home or going afield, or taking advantage of the opportunity to self-hunt; others seek the first place which affords concealment, and tremblingly hide therein; or, terror stricken, others may lie down a few yards away and curl up apathetically; or they may range at a safe distance from the handler and outside of his control. Some will be afraid at the sight of a gun; others will show no fear of it till it is placed at the shoulder as if to fire it, while others again have fear only of the report.

There are three essentials to be observed in curing gunshyness—namely, the dog must not be permitted to run away, the gun must be used in a manner which impresses him that it has no reference to him at all, and the trainer must have his pupil's confidence and affection, for if the pupil is afraid of both gun and trainer (gunshy and trainershy), the prospect of a cure is not hopeful. Fear of the trainer, if such there be, must first be allayed before any successful attempt can be made to cure the dog's gunshyness.

There are different methods of cure. If the dog is inclined to run away when his gun fears are excited, he should be taken into an inclosed yard, from which he cannot escape. The trainer should assume a kind, careless, nonchalant air, and seem to be interested in anything other than his pupil. Above all, the serious, portentous air, such as the trainer assumes when he is about to give the puppy a thrashing, should be avoided, although such, nevertheless, is quite likely to be the air that the amateur will assume. By sternly concentrating the attention of a dog and advancing on him with more or less hostility of manner, the bravest dog will become fearful of harm.

If the dog will not bolt at the report of the gun, no precautions against running away are necessary, but whether in field or yard, the gun as a factor of the lesson should be kept in abeyance for a while. The effort should be directed toward making the incident as commonplace and unimportant as possible. There should be as much of the pleasurable and as little of the painful as possible in it. A few palatable morsels to eat, some gentle patting of the head and kind words of approval bestowed on the pupil will not be amiss at different stages of the lesson. After a time, when the pupil is not apprehensive of it, a cap is snapped, and the trainer looks at anything other than the dog at this juncture. He can see what the dog is doing without looking directly at him. The latter, when he hears the report, is likely to scrutinize the trainer closely, and if he detects no purpose referring to himself, he passes the incident by as a matter of no importance. On the other hand, let the trainer look hard at the dog and impress upon him that all the alarms are directed at him, and the matter is made worse instead of better. If he runs to corner and curls up in fancied security, he must be brought gently back, and the same deliberate procedure is repeated.

Another method, often successful, is to place the dog's food in its regular place at the regular time, and then to shoot at a reasonable distance away when the dog begins to eat. If he bolts into his kennel, the food is quietly removed and none given again till the next meal time, when the lesson is again repeated as at first. In time his hunger will become so ravenously importunate that he will appease it regardless of all fears. The noise of the gun coincidentally will have a grateful significance and a pleasant association, so that fears will give way to delightful eagerness. As a matter of course, under this method the dog's liberty is restricted at all times, otherwise he would seek food independently.

If the dog is a confirmed bolter, it is better to take him at once into the open field for his lessons. He must be prevented from running away, and hence the spike collar and check cord come into useful play at this juncture. The collar and cord do not in the least allay his fears of the gun, nor have they any inherent powers of cure concerning it. They simply prevent or deter him from running away, and thus prevented he must be, else a cure cannot be effected. Then, shooting with judgment and exhibiting kindness, an unconcerned manner, and judiciously bestowing rewards, will effect a cure in the majority of cases.

Dogs have been cured by taking them to a trapshooting tournament and chaining them in a safe place nearby the shooters. Neither dog nor man can remain continuously in a state of fright, whether the danger is real or imaginary. Continuous firing, hour after hour, merely wears out the dog's fright, and he becomes accustomed to it from habit.

If the dog has ordinary courage and sense, the cure is sometimes effected in the field in a moment. If he has a desire to pursue birds, he may be led on a long cord into a field where they are numerous, and when one attracts his attention it is shot, if not protected by law, and he is permitted to capture it. Again, if he can in any way be induced to chase a rabbit, if the trainer can shoot it close ahead of him while he is in close pursuit, a cure is in most instances effected then and there.

The company of an old, steady dog is at all times reassuring, regardless of his breed or special hunting proclivities. A rabbit dog, however, is likely to be the best assistant. Nothing so excites the spirit of the chase in a dog as to see or hear another dog in full cry after a rabbit.

A gunshy dog should never be worked on game birds before he is fully cured of his fault, otherwise the chances are great that he becomes birdshy and a blinker. If he has both faults, he must have exceptionally good qualities if he is worth the attempt to cure him.

A blinker is cured by kind treatment, by permitting him to eat the entrails of the birds which are shot, and by ignoring any faults and errors of which he may be guilty. Sometimes the one who caused the blinking can never cure it, and therefore it is necessary to place the pupil in the charge of another trainer.

Much has been written on the heredity of gunshyness, but most of the writers on it have succeeded better in proving that they were not quite familiar with what constitutes heredity than that the dog's fears were transmitted. Dogs of a highly nervous and excitable temperament, with a silly mentality, show alarm at any strange noises, whether caused by the gun or anything else. Inherited nervousness or cowardness would be a better term for the trait.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

JULY.

- 10. East Gloucester, evening race, Gloucester, Mass.
- 13. Moriches, club.
- 13. Mobile, club, Point Clear, Alabama.
- 13. Corinthian, third club championship, Marblehead, Mass. Bay.
- 13. Beverly, club, Monument Beach.
- 13. Winthrop, class handicap, Winthrop, Mass.
- 13. Hull-Massachusetts, club, Hull, Mass.
- 13. Larchmont, open, first day of race week, Larchmont, Long Island Sound.
- 13. Seawanhaka Corinthian, race for Roosevelt memorial cup, Oyster Bay, Long Island Sound.
- 13. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 13. Kennebec, club, Kennebec, Me.
- 13. Manhasset, special, Port Washington, Long Island Sound.
- 13-20. Larchmont, race week, Larchmont, Long Island Sound.
- 15-19.—Interlake meet, Put-in-Bay, O.
- 17. Beverly, Buzzards Bay.
- 17. East Gloucester, evening race, Gloucester, Mass.
- 18, 20, 23. Newport Y. R. A., special races, Newport
- 19. Quincy, open, Quincy, Mass.
- 20. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 20. Quincy, handicap, Quincy, Mass.
- 20. Columbia, club, City Point, Boston Harbor.
- 20. Westhampton C. C., club.
- 20. Hull-Massachusetts, club, Hull, Mass.
- 20. Savin Hill, club, Boston Harbor.
- 20. Winthrop, Winthrop, Mass.
- 20. Duxbury, ladies' day, Duxbury, Mass.
- 20. Beverly, Corinthian, Monument Beach.
- 20. Winthrop, open, Winthrop, Mass.
- 20. South Boston, club handicap, City Point, Boston Harbor.
- 20. Norwalk, club race, South Norwalk, Long Island Sound.
- 20. Stamford, annual, Stamford, Long Island Sound.
- 20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
- 20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
- 20. Burgess, Marblehead, Massachusetts Bay.
- 20. Pass Christian, club, Pass Christian, Miss.
- 22. New York, cruise, rendezvous, Glen Cove.
- 22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
- 22. Canarsie, open, Canarsie, Jamaica Bay.
- 23. New York, cruise to the eastward.
- 24. Seawanhaka, cup race, Lake St. Louis.
- 24. East Gloucester, evening race, Gloucester, Mass.
- 25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
- 25-26. Erie, regatta, Erie, Pa.
- 27. Beverly, open sweepstake, Monument Beach.
- 27. Bay Waveland, club, Bay St. Louis, Miss.
- 27. Shelter Island, ladies' regatta.
- 27. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
- 27. Shinnecock Bay, special, Shinnecock Bay.
- 27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
- 27. Northport, annual, Northport, Long Island Sound.
- 27. Winthrop, special handicap, Winthrop, Mass.
- 27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
- 27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
- 29. New York, Astor cup races, Newport.
- 29-30. Burgess, open, Marblehead, Massachusetts Bay.
- 30. Aug. 3. Pan-American regatta, Buffalo, N. Y.
- 30-31. New York, trial races to select America Cup defender, Newport.
- 31. Corinthian, Marblehead, Massachusetts Bay.
- 31. East Gloucester, evening race, Gloucester, Mass.

Newport Special Thirties.

NEWPORT, R. I.

Thursday, July 4.

THERE was a cup race on Thursday, July 4, between the 30ft. sloops, the trophy being offered by Henry Walters. There was a light southeast wind, and the course was over an eight-mile triangle, the first mark being at Bishop's Rock and the second at Jamestown. The start was made from Brenton's Cove. The yachts crossed well bunched. Wawa a trifle in the lead. As soon as they had crossed spinakers were set and it was a run to the first mark. Five minutes after the start Barbara got hung up on a lobster pot and did not finish. The second leg was a broad reach and a beat to the finish line. Carolina won by 58s. The summary:

	Start.	Finish.	Elapsed.
Carolina, Pembroke Jones.....	3 25 00	4 57 34	1 32 34
Wawa, Reginald Brooks.....	3 25 00	4 58 22	1 33 22
Esperanza, H. O. Havemeyer, Jr.....	3 25 00	4 59 30	1 34 30
Dorothy, H. Y. Dolan.....	3 25 00	4 59 49	1 34 49
Hera, Ralph N. Ellis.....	3 25 00	5 01 11	1 36 11
Barbara, Winthrop Rutherford.....	3 25 00	Did not finish.	

Friday, July 5.

Carolina, owned and sailed by Mr. Pembroke Jones, won her second cup of the season on Friday, July 5, a pretty trophy offered by Mr. Chester Griswold, of the Regatta Committee of the N. Y. Y. C. The wind was light from the northeast.

The yachts beat up the bay to Dyer's Island and ran back to Brenton's Cove, Carolina leading all the way. The start was at 3:20. The time follows:

	Finish.	Elapsed.
Carolina, Pembroke Jones.....	5 56 47	2 34 47
Esperanza, H. O. Havemeyer, Jr.....	5 58 29	2 36 29
Dorothy, H. Y. Dolan.....	5 58 42	2 36 42
Hera, Ralph N. Ellis.....	5 59 01	2 37 01
Wawa, Reginald Brooks.....	6 03 19	2 41 19
Barbara, Winthrop Rutherford.....	Did not finish.	

Canarsie Y. C.

CANARSIE, L. I.

Saturday, July 6.

THE Corinthian regatta of the Canarsie Y. C. was held on Saturday, July 6. The race was open to all boats belonging to the club and no time allowance was given.

The course was twice over a route four and a half miles, and the wind was from the south, veering to westerly and rather light. The first leg was a run to the Canarsie steamboat dock, thence out through the breakwater to a mark boat off the Grifflie and back. The summaries:

Canarsie Yacht Club Special Race.		
	Finish.	Elapsed.
Vision, G. B. Fitzmaurice.....	3 54 03	1 43 43
So So, Herbert P. Tuttle.....	3 54 12	1 43 50
Ideal, W. H. Sampson.....	3 57 13	1 47 00
Tam O'Shanter, Commodore D. J. Brunsley.....	4 00 31	1 50 03
Yank, Charles Duhy.....	4 00 32	1 50 09
Black Diamond, W. R. Fleming.....	4 00 36	1 50 12
Irene, George Winters.....	4 05 00	2 10 20
Imp, J. Dunlap (Sharpie).....	4 05 01	2 10 01

Newport Y. R. A.

At a general meeting of the members of the Newport Yacht Racing Association held on July 2, a programme was arranged for an open regatta to be held off Newport Aug. 1 and 3, which will be one of the most important yachting events of the season. The classes to be represented will be the 90ft. yawl, special 70ft. and class 2 of 70ft. sloops, the 51ft. sloops, the 70ft. schooners and the special 30ft. sloops. Other classes may be added.

The Association, financially, is probably on a better footing than any similar organization in the world. It does not pretend to be a yacht club in any sense of the word, its object being solely to promote yacht racing. It has adopted as a burgee a white swallow tail flag on which is a red representation of the old stone mill for which Newport is noted. The following officers were elected to serve for one year:

President, George L. Rives; Vice-President, Herman B. Duryea; Secretary, Arthur T. Kemp; Treasurer, Ralph N. Ellis; Regatta Committee, Herman B. Duryea (chairman), Royal Phelps Carroll, A. Cass Canfield, Woodbury Kane, Winthrop Rutherford, Reginald Brooks and H. Yale Dolan.

Board of Governors, George L. Rives, Herman B. Duryea, Arthur T. Kemp, Ralph N. Ellis, Frank K. Sturgis, Woodbury Kane, A. Cass Canfield, Harry P. Whitney, Winthrop Rutherford, Royal Phelps Carroll, Reginald Brooks, H. Yale Dolan, Lloyd Warren, Henry F. Eldridge and Elbridge T. Gerry were elected.

Following is a full list of members of the Association: T. Lothrop Amed, Hugh D. Auchincloss, Maximilian Agassiz, John Edward Addicks, George Agassiz, Heber R. Bishop, Oliver H. P. Belmont, Edward J. Berwind, Henry D. Burnham, James Gordon Bennett, Henry W. Bull, Perry Belmont, Percy Chubb, A. Cass Canfield, Henry Clews, Julien A. Davies, Chauncey M. Depew, George B. De Forest, H. Yale Dolan, Clarence W. Dolan, John R. Drexel, J. De Forest Danielson, F. S. Grand, D. Hauteville, Elisha Dyer, Jr., Anthony J. Drexel, Arthur B. Edmons, John W. Ellis, Ralph N. Elli, George P. Eustis, Gordon Fellows, Amos Tuck French, Joseph E. Fletcher, Daniel B. Fearing, Robert Ives Gammell, Robert Walton Golet, Theodore K. Gibbs, Elbridge T. Gerry, Henry O. Havemeyer, Jr., William R. Hunter, William F. Iselin, Pembroke Jones, H. Van Rensselaer Kennedy, Henry F. Lippitt, Louis L. Lorillard, Prescott Lawrence, John R. Livermore, William Starr Miller, Ogden Mills, Edward V. Morrell, Frank P. Mitchell, Guy Norman, George H. Norman, Herman Oelrichs, Frank P. Olney, Charles J. Paine, Francis K. Pendleton, Lloyd Phoenix, Almeric H. Paget, John M. Richmond, John C. Rhodes, John B. Rhodes, Henry S. Redmond, Charles L. F. Robinson, George L. Rives, William Greene Roelker, J. Clinch Smith, J. Lisperard Stewart, Robert Sedgewick, James Stillman, James A. Stillman, George Isham Scott, Frank K. Sturgis, Robert L. Stevens, Frederick Sheldon, Rutherford Stuyvesant, Joseph S. Stevens, Anson Phelps Stokes, Hamilton McK. Twombly, Benjamin Thaw, J. Frederick Tams, William R. Travers, William P. Thompson, Alexander Van Rensselaer, William H. Vanderbilt, James J. Van Alen, William K. Vanderbilt, Jr., Robert B. Van Cortlandt, James T. Woodward, Hamilton Fish Webster, William C. Whitney, Ross R. Winans, Whitney Warren, M. Ormc Wilson, Payne Whitney, Francis M. Ware, William Woodward, Richard T. Wilson, John J. Wysong, James M. Waterbury, Henry Walters, the Hon. George Peabody Wetmore, Lloyd Warren and Harry Payne Whitney.

Riverside Y. C. Annual Regatta.

RIVERSIDE—LONG ISLAND SOUND.

Saturday, July 6.

THE thirteenth annual regatta of the Riverside Y. C. was sailed on Saturday, July 6. The race was spoiled by a thunder squall that struck the fleet about 4 o'clock, which made it necessary for some of the boats to withdraw. The catboat Cricket, owned and sailed by Mr. H. C. Pryer, carried sail too long and capsized. The tug Stamford, which served as the judges' boat, picked up Mr. Pryer and his sailing mate, who were none the worse for their wetting. A large number of boats had been entered, but only seven started. The 30ft. catboats Dot and Windora sailed over a course seven miles to leeward and return, starting off Captain's Island. The rest of the boats were to sail over a triangular course. At the start the wind was from the northeast, and it held from that quarter for about half an hour. All but Lambkin had rounded the first mark when the squall struck, and the catboats Dot and Windora lowered their mainsails and withdrew. The summary follows:

Yawls—36-ft. Class—Start, 3:15.		
Finish.	Elapsed.	
Memory, W. N. Bavier.....	5 37 23	2 22 23
Catboats—30-ft. Class—Start, 3:15.		
Dot, T. T. Pierce.....	Did not finish.	
Windora, John Green.....	Did not finish.	
Catboats—18 to 21 Feet—Start, 3:20.		
Ox, R. J. Bavier.....	5 39 30	2 19 30
Cricket, H. C. Pryer.....	Disabled.	
Manhasset Raceabouts—Start, 3:20.		
Lambkin, S. W. Roach.....	6 19 15	2 59 15
Catboat—18-ft. Class—Start, 3:20.		
Kazaza, T. J. McCahill.....	5 41 00	2 21 00

The winners were Memory, Ox, Kazaza and Lambkin.

Squantum Y. C.

QUINCY, MASS.

Saturday, July 6.

THE second race of the Squantum Y. C. was held this afternoon off the club house in a fair sailing breeze from the E. Maud went over the line first, but was soon overhauled by Peacock. Although the latter boat lost considerable time by failing to turn the first stake and having to return from the second leg to round the stake, she picked up in great shape, and soon was at the head of the procession, which position she held until the end of the race. She led Maud 2m. and Olande 5m. The judges were Frank McNamara and Hamilton Flood.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter VIII.—Laying the Deck, Coamings, Etc.

To those correspondents who write for the specifications and tables of offsets, etc., I must apologize for their non-appearance, but they will appear later, and will give full details. I may say that a bulb-fin could be fitted instead of the centerplate on No. 1 design if desired, only the area of the plate and the position of its center of lateral resistance must not be altered. I would suggest a 1/4 in. plate 3ft. deep of equal area to the one shown with a 1/2 cwt. bulb of torpedo form.

Do not attempt to start on the deck until you have finished all the inside work, such as knees, floors, center and rudder cases, etc., which can be done before it is on. The more you can do before the boat is decked the better, as afterward you will not only have less light under the deck, but you will find it very cramped and awkward to work in such a small space.

Put in any bulkheads you may require, and line the cabin, etc.; in fact, do all the internal work that you can before the deck is on; but I shall leave the details of this for a subsequent chapter. The seats and flooring of the centerboard boat may be done either before or after decking. The deck of No. 1 boat will be made of best quality 1/2 in. match boarding, and in laying it start from a center line working to the sides and letting the ends of the boards overlap the deck edge, and also the inside line of the cockpit. These ends can be trimmed off afterward. See that

all the tongues and grooves in the match boarding are unbroken and well painted before they are fastened in place, and of course keep the beads on the under side, which must have two coats of paint before it is fixed.

Drive each joint up tight, with shores from the shelf or planking, and nail to the beams on both edges and in the middle of the plank.

When all the deck is on, the edges must be trimmed off with a draw knife or saw, and planed to fit the planking, being screwed to it about every 3in. all around the edge, and also round the inside of the cockpit. Now punch the nails about 1/8 in. below the surface, the screw heads being countersunk to a similar distance; plane the whole deck smooth and fair, and finally going over it with coarse glass paper to take out the plane marks. Dust it carefully, and give it a good coat of red and white lead, priming, and when this is dry, stop all nail and screw holes, and round the joint between deck and planking, taking care there are no "holidays" or forgotten places. A coat of white paint should go over the stopping, and be well rubbed down when dry, leaving the deck ready for canvassing.

The material generally used to cover the deck is stout unbleached cotton sheeting, which can be obtained wide enough to cover the whole deck in one piece.

The deck must be covered as thickly as possible with a coat of white lead and varnish as thick as cream, and while it is wet stretch the center of the cotton along the center line of the deck as tight as two or three men can pull it, tacking it at the ends of the boat and cockpit with 1/2 in. copper tacks.

Now get several other men or strong boys to help you, and starting at the stern, stretch both sides at once across the boat, tacking the cotton over the edge of the deck every 3in. as you go along, and always rubbing it out from the center line to the sides to get rid of any air bubbles, as if you were mounting a photograph on card. Be careful to stretch it equally all over, and to

work out any creases, and when it is stretched and nailed tightly all over the deck, nail round the edge of the cockpit, and cut out the hole, turning the edges down into the cockpit and tacking them like the outer edges.

The white lead and varnish will now have soaked through the cotton, and another coat of the same paint over the whole deck will join the coat underneath, and become one solid piece with the wood deck when dry.

If a deck is covered in this way it should never show any wrinkles and bubbles afterward, but it all depends on the stretching, getting dry wood for the deck, and using plenty of paint.

The deck of No. 2 design is not covered with canvas, but is laid in narrow tapered planks of best yellow pine or kauri pine, with the center or king plank, and the outside plank or covering board, both of teak. All nails are hidden, and the seams are caulked, and paved or filled with marine glue.

This method of decking is the same as that in use on all large vessels, and looks far better than the canvas covered deck of the centerboard boat; but it entails a great deal of labor, and is much more costly, besides being difficult to make watertight. The canvas covered deck can be used equally well in the 24 ft. r. cruiser if desired, but as the laid deck is the usual form, a description of it will be useful to any one building a larger boat.

Set out the width of the covering board and king plank on the beams, and treat the deck as if there were no openings for the cockpit and cabin top, putting in a rough temporary beam across the opening to set out the widths on. About 4in. will be a suitable width for the covering board amidships, and it should taper to 3in. fore and aft, with the shaped piece round the stern, about 6in. wide in the center. The covering board should project about

its own thickness, say 1/2 in., outside the planking all around the boat, and it must be screwed into each deck beam and to the top strake of the planking with stout 1 1/2 in. brass screws, which should be countersunk 1/8 in. below the surface, the holes being plugged with small pieces of teak to match the rest of the covering board, any joints in it being butt scarphed, as in the planking, but screwed and plugged instead of being nailed.

The king plank should be 2in. wider amidships than the diameter of the mast, and it should taper to 4in. wide at each end. It must not, however, be fitted till all the rest of the deck is on, as it is the closing plank, and must be driven tightly into its place.

When the covering board is fixed, divide the space between it and the king plank at the widest part of the boat into an equal number of parts as near 1 1/2 in. each as possible. Then divide into the same number of equal parts two other beams, one half way between the midship beam and the bow and the other half way between it and the stern. Bend a stiff batten through each set of marks and pencil the line on all the beams from end to end of the boat. In this way the exact width of each deck plank will be shown on every beam, and also the ending of all the planks in the covering board.

Get enough long, narrow planks for the deck, cut out to the greatest width required amidships; and have a 1/2 in. bead worked on one of the lower edges, both sides being planed up. Take one of these planks, and mark off on it the positions of the deck beams; set off the correct widths for the first plank next to the covering board at each beam; and cut the edge to these marks, planing it with a slight bevel on the edge, so as to leave a caulking seam on the top; bend the plank into its place and fit it in the same manner as the outside planking described in a previous chapter; the edges with the bead being nearest to the center of the boat. Now bore horizontally through it from edge to edge, till the bit enters the edge of the covering board, taking care the bit does not run up or down, but is kept exactly parallel to the surface of the plank. These holes should be placed, one between each deck beam, and a long copper nail driven through each, so as to go at least an inch into the covering board. The plank is held flat on the beams by several cramps while being nailed, or else the edges may not keep in place.

When all the horizontal nails are in, drive a skew nail diagonally through the inner edge of the plank into each beam, punching the head well in, and taking care not to bruise the top edge; these two sets of nails hold both edges of the plank firmly, and neither of them shows on the surface. The sketch explains this method of nailing, and shows a seam with caulking and marine glue.

The rest of the deck planks must be cut out to shape and nailed in the same way, and the bead on the under side of each must always be kept on the inner side of the plank.

If, owing to long planks being unobtainable, a butt has to be made, it should be screwed up from below, taking care that the points of the screws do not come through.

After the deck planks are fixed the king plank must be exactly fitted to the gap between the two sets of planks, and driven tightly into its place and screwed down to the beams like the covering board. There should be no difficulty in getting it tight, as where the cabin top and cockpit come the planks will all be cut off a few inches inside the opening as they are laid, and the king plank will be put in, in two tapered pieces, one at each end of the boat.

Trim off all plank ends, etc., to the sides of the openings for the cabin top and the various hatches.

To get the shape of the coamings or sides of the cabin top in either boat, bend a thin piece of common wood about 8 or 9in. wide into the place where they are to go, shoring it well into its proper position as to curve and flair (or angle with the deck), then run a pencil around the deck and mark its level on the template, writing down the height, as shown on the design, at each end, and in about two or three other points along its length. Remove the template and cut the lower edge parallel to the deck level, but low enough down to reach the under side of the carlines and beams when in place. Lay it on a suitable piece of wood and run a pencil round the lower edge and set off the heights above the deck level to enable the top edge to be roughly cut about an inch too large.

The coamings of the No. 1 boat will be put in in two halves, meeting in a point forward, and they will require steaming at the fore ends before fitting to their places. A 1/4 in. bead should be worked on the lower inside edge before steaming, and when finally fitted in place they must be screwed every 4 or 5in. with stout brass screws.

The sides of the cabin top in No. 2 boat will be in three pieces, the front semicircular piece being steamed and bent around in the same way as the other boat's coamings, except that as it is 1/4 in. teak, and at least a foot wide, it will require several hands to get it in place, and very careful handling, with plenty of shores and cramps to keep it in place while it cools.

The two side pieces being nearly straight can be put in cold, and must be scarphed to the ends of the front piece.

The after ends of both boats' coamings will be mitred to the ends of the thwarting coaming, and a small chock of the same wood screwed inside. Small coamings must also be fitted to all hatchways in the deck.

Gravesend Bay Y. R. A.

GRAVESEND BAY.

Saturday, June 29.

THE Gravesend Bay Y. R. A. held their fifth race over the usual courses on Saturday, June 29, under the auspices of the Atlantic Y. C. The southerly breeze that was blowing at the start dropped at the middle of the second round, leaving the boats becalmed, but when nearing the finish it freshened again.

The larger yachts sailed eleven miles, and had a broad reach to the first mark, another reach to the second mark and a beat home.

The 21ft. catboat Minnetonka, which sailed over the course alone in her class, capsized, but was righted and finished the race. The summary follows:

Sloops—Class M—43 to 51ft.—Start, 3:05.		
Finish.	Elapsed.	
Akista, George Hill.....	5 56 18	2 51 18
Bonita, Haviland Brothers.....	5 58 25	2 53 25
Sloops—Class N—30 to 36ft.—Start, 3:05.		
Narika, F. T. Cornell.....	6 00 52	2 55 52
Vivian, A. E. Vernon.....	5 23 31	2 18 31
Susie, C. Ferguson.....	Did not finish.	
Sloops—Class Q—21ft.—Start, 3:10.		
Minnetonka, A. E. Vernon.....	4 40 00	1 30 00
Sloops—Class P—21 to 25ft.—Start, 3:10.		
Cockatoo, Hendon Chubb.....	4 30 04	1 20 04
Song and Dance, E. F. Luckenbach.....	4 30 44	1 20 44
Sloops—Class Q—18 to 21ft.—Start, 3:10.		
Elsie, C. P. Roseman.....	4 40 15	1 30 15
Spots, D. D. Allerton.....	4 37 35	1 27 29
Broncho, F. C. Moore.....	4 34 39	1 24 29
Wraith, Calvin Tomkins.....	4 39 02	1 29 02
Sloops—Class R—Under 18ft.—Start, 3:10.		
Pebble, R. W. Speir.....	4 46 23	1 36 23
Peanut, Calvin Brewer.....	Did not finish.	
Catboats—Class V—Under 18ft.—Start, 3:10.		
Martha M., Richard Moore.....	4 44 50	1 34 50
Marine and Field Club Knockabouts—Start, 3:15.		
Jig-a-Jig, W. Hutchinson.....	4 45 07	1 30 07
Kelpie, W. K. Brown.....	5 34 22	2 19 22
Flying Fox, Buckman & Cone.....	5 56 36	2 41 36
Quinque, L. H. Smith.....	5 57 00	2 42 00
Stinger, A. P. Clapp.....	5 32 48	2 17 48

The winners were Akista, Vivian, Minnetonka, Cockatoo, Broncho, Pebble, Jig-a-Jig and Martha M.

Bar Harbor Y. R. A.

BAR HARBOR, ME.

Thursday, July 4.

THE first knockabout race of the season was sailed on Thursday, July 4. It was won by Rip, owned by Edgar Scott, of Philadelphia. Rip outsailed Bobs, owned by Antonio Stewart, of New York, by 35s. Iroquois finished third and Cherub fourth. The boats had a fresh wind from start to finish.

The Canada Cup Challengers.

TORONTO, July 1.—The three prospective contestants in the trial races to select a Canada cup challenger came together in a race to-day for the first time. It was at the Queen's cup race at Hamilton, held under the auspices of the Royal Hamilton Y. C. A large visiting fleet had assembled and watched the match. The course was 25 miles in all, being twice around an equilateral triangle in Lake Ontario off Burlington Beach. There were seven starters in the race—Beaver, Invader and Canadian, and Myrtle, one of the Canada cup defenders of 1899; Hazard, a very smart Herreshoff 30-footer; I'll Away, a 25-footer; Viking, a former Nova Scotian sloop of considerable speed, and Brenda, a 30-footer.

Hazard and Canadian fouled one another at the start, but although no damage was done, it was evident that the concave-bottomed craft was not in good sailing trim. Her canvas did not set well by any means, and it is understood that her spar will be moved forward. Capt. Fearnside took her around the course once and then steered into the harbor, to complete his preparation for the trial races, beginning on July 3. The other yachts went around the course, finishing in the following order:

Invader	5 14 25	Myrtle	6 01 00
Viking	5 58 05	I'll Away.....	6 04 40
Beaver	5 32 30	Brenda	6 20 15
Hazard	5 33 05		

Beaver, as will be seen, finished in second place, but she fouled the buoy, striking the flagstaff with her main boom. She was coming in with a started sheet.

The breeze was light and variable, and quite suited Invader; moreover, she was sailed by probably the smartest amateur skipper on the Canadian side, Mr. Æmilius Jarvis, of Canada cup fame. On the other hand, however, she was handicapped by the lack of her spinnaker and balloon jib, which were shipped after she left Toronto and did not arrive in time for the race. A baby balloon jib had to be utilized as a spinnaker. Invader's lead of eighteen minutes and five seconds in twenty-five miles clearly establishes her superiority under weather conditions such as then prevailed.

Canadian was able to point as high as the Toronto boats, but they outfooted her. The elapsed time of the completion of the first round shows how she fared in the twelve and a half miles she sailed. She started on very nearly even terms with Invader, the first over the line. The time of the first round was:

Invader	2 18 25	Myrtle	2 42 20
Beaver	2 33 55	Viking	3 13 30
Hazard	2 35 40	I'll Away.....	3 14 00
Canadian	2 37 25	Brenda	3 23 50

On the run Canadian seemed to hold her own. She has had 1,000lbs. of ballast added and the depth of her fin increased, but she is still not quite stiff enough. She lay over until 3ft. of her deck was under water in a trial spin with Viking on the last day of June. Viking appeared to have the best of the argument.

July 6.—The first week of the trial races for the selection of the Canada cup challenger resulted in the contest simmering down to a struggle between the two Toronto boats, Beaver and Invader, the Hamilton entry, Canadian, being clearly not a factor in the racing. At the end of the week the result of the trials was as far off as ever, although the number of the competitors had diminished and this should simplify matters. Invader showed herself a first-class boat in breezes of seven miles and under, while Beaver proved once more her superiority where there was wind enough to drive her. The performances of the two boats were not surprising. It was only natural that Invader, with 1,483 sq. ft. of canvas and a pared-away underbody, should sail faster in light winds than Beaver; and in a fresh breeze it was only natural that Beaver, with 1,335 sq. ft. of canvas and a larger underbody, should foot faster and edge to windward.

As for Canadian, the Hamilton craft, all that can be said is that she had, from the first, no chance of being selected as the Canada cup challenger. It would be difficult to say whether this was owing to lack of preparation or to the boat's model. The latter is peculiar enough to account for many things, but whether the boat is radically slow or not was not shown by the races she sailed. She was pitted, in an unfinished condition, against boats upon which time and money (in one instance both) had been lavished in the tuning up process. There could, of course, be only one result. Day after day Beaver and Invader had been out for their trial spins, and wherever a possible improvement was noted it was promptly made. Their gear was a marvel of strength, neatness and easy running qualities. Canadian was fitted with stiffly running sheets and halyards, that sometimes jammed in the blocks, which were of less modern design, if of tried and true pattern. Her double headsails were harder to handle and of less benefit than the powerful jibs that filled the fore triangles of the other two contestants. But it was not in these details that Canadian suffered most. The boat was absolutely unprepared for the races. The Royal Canadian Y. C. wanted to hold them in the week commencing June 24. Capt. Fearnside notified the club that he could not possibly be ready by that date, and asked to have them postponed until the second week in July. The Royal Canadians consented to a postponement until Wednesday, July 3, and would wait no longer.

Canadian only received her canvas a week before the trial races. She was sailed once or twice, and was found to carry a big weather helm. It was decided to move the mast 1 1/2 in. further forward. This was the reason for her abandoning the Queen's cup race on July 1. The moving of the center of effort forward only partially corrected the weather helm, and a longer bowsprit was decided on. There was no time, however, to make and ship it and supply the new rigging, and Canadian came down to Toronto with her old horn, arriving just five hours before the first race.

It would not be safe to go so far as to state that Canadian could be improved so as to beat Invader or Beaver, but she could be improved so as to give them both a good race. Her design calls for a greater immersion of hull and 200ft. more canvas. With these alterations, with ballast of the proper weight and quality, with the weather helm corrected and the half-ton of extra weight used in her construction eliminated by the use of lighter and stronger material, Canadian would be a different boat. She showed herself, under all her disadvantages, as good a

sea boat as any of them—perhaps better. While she makes considerable fuss in a seaway, she tosses it away from her, and can safely be sailed in a blow with skylights and hatch covers off. There is as much room in her as there is in the ordinary keel craft of 50 per cent. more measurement. The boat's best performances, handicapped as she was, were off the wind. Capt. Fearnside had seen enough of the splendid trim of his opponents and of his own boat's unprepared state to convince him that further trials were useless. Being a yachtsman of the first order, he took his defeat with the same pluck he showed in building and sailing his craft, and steered homeward at the end of the week with a cheery good-by. Canadian may be improved to be a first-class racer; she is a good cruiser at any rate. Her performance, however, has not been such as to encourage the adoption of Father O'Brien's design of square bilges and a concave bottom by fresh-water yachtsmen.

The breeze in the first two races of the series was one in which Minota would have beaten Beaver by at least a minute in the mile. This will give some idea, therefore, of the speed of the contestants, Minota and Beaver being two known quantities.

The course was a three-mile equilateral triangle, so placed that in the light southerly wind off Toronto Island the first leg was a close reach, the second a trifle broader and the third a spinnaker run. Invader crossed the line with Beaver 10s. ahead of her and Canadian 7s. behind. At the first buoy she had a lead of 55s. over Beaver and of 2m. and 8s. over Canadian. This she increased all the way around, gaining, on the second leg 1m. and 50s. on Beaver and 4m. and 43s. on Canadian. In the run with spinners to starboard she did not do so well, although still gaining. She covered the mile in 4s. less than Beaver and 1m. and 2s. less than Canadian. Minota would have given her a close run. The elapsed time on this, the first race of the series, was:

	1st Leg.	2d Leg.	3d Leg.	Total.
Invader	9 35	11 22	18 39	39 36
Beaver	10 30	13 12	18 43	42 25
Canadian	11 43	15 55	19 41	46 51

The yachts were sent once more around the triangle, the wind having shifted so as to give two close reaches and a run with spinners to port. Canadian discarded her balloon head canvas and did better in the reaches, although she was beaten by a greater margin at the finish, owing to the wind heading her off at the last and then dying out. The elapsed time of the second race was:

	1st Leg.	2d Leg.	3d Leg.	Total.
Invader	10 26	13 05	19 10	42 41
Beaver	11 41	14 00	21 25	47 06
Canadian	12 33	15 08	25 00	52 41

This satisfied the judges that Invader was the better boat in a six-mile breeze with no bucking necessary, so the contestants were towed back to their moorings in the harbor. There had not been enough wind for them to come out to the course or return from it, and the trial was of little use, for there would be little possibility of a Canada cup course being covered within the time limit under the circumstances.

There was plenty of wind on the following day, Thursday. The yachts left their moorings in Toronto Bay with a ten-mile breeze from the eastward. Invader, leaving last of all, took the precaution to tuck in her first reef. When the yachts reached the lake the breeze was not quite so fresh, but they had plenty of it in a few minutes. A white squall from the eastward commenced to make things lively, and another from the north came along and did the same. The rain descended in cataracts, filling the bellies of the sails as the yachts lay over and completing the work of the spray in drenching the crews. The yachts dodged about the judges' boat, jibing and coming in stays, now and again dipping the clews of their mainsails in the heavy puffs. Canadian took in the first reef in her mainsail and dispensed with her jib. Beaver also reefed, which is a fair evidence that it was blowing. The two were now ready to race and lined up for instructions from the judges' boat, but Invader had either misunderstood the intentions of the others, or else found the weather outside too much for her. She had gone back to her moorings in the harbor. The others hovered about the island shore for some time, and then they too went into port.

There was a breeze again from the eastward on Friday. The three contestants were at the starting buoy by 2 o'clock, the crews all feeling confident of winning, from the way their craft had behaved on the preceding day. It is very easy to imagine, when the lee deck is a foot under water and the foam is flying, that your boat is going faster than any other boat ever went. The three had kept away from one another in the squalls of the previous day, for it was blowing pretty fresh, with the land close aboard, the fog swirling about in banks and a small fleet of spectators to keep clear of. In this way there was no test of heavy weather speed, the boats not remaining together for more than 2m. at a time. Consequently, each crew had a well-developed idea that they were going to impress the shape of their transom indelibly upon the minds of the others.

Canadian took in a reef after reaching the lake—as much to rid her of her desire for weather helm as to keep her on her feet. Just as the preparatory gun was fired, however, the wind lightened and the reef was shaken out, the boat going over the starting line with the crew sweating the throat and peak halyards. The three started well together on a three-mile beat to windward, the judges' boat leading the way. There was only one buoy in the course—the starting buoy. The instructions were to round the steamer and sail back to the start.

The hopes that had been built on Invader's performances on Wednesday were shattered. There was a good whole-sail breeze, with a fair easterly roll. Beaver at once edged ahead and to windward. Invader was pointing as high, but not fetching where she looked, or footing as fast. Canadian was driving along, dropping astern and to leeward, with her tiller a-weather all the time. When the fleet came about, on the starboard tack, she did slightly better, and footed as fast as Invader at times. Beaver reached the steamer, jibed over and squared away on the home run nearly a mile ahead of her. Invader was a poor second when she rounded the steamer, being nearly 3m. behind Beaver. She was very quick in setting her spinnaker, however, and at once began to retrieve her loss. Her balloon canvas was set in a minute and a half. Beaver took double the time. Canadian did not set her spinnaker

until 5m. after rounding the steamer. The judges' boat had moved up to meet her slightly. Canadian's spinnaker was only set as an experiment, but the records show that the experiment was a successful one. With one man on the spinnaker boom and another on the main boom, she tore through the seas, making a clean entrance and leaving a remarkably clear cut wake, although by no means easy to steer. Her elapsed time on the run was 29m. and 50s., according to the figures given out. Invader took 33m. and 5s., and Beaver took 34m. and 30s. The gains on the run were not sufficient to make up for the losses on the beat. Beaver won by 2m. and 10s. from Invader, and by 8m. from Canadian. At the turn outside she had a lead of 3m. and 45s. and 12m. and 40s. over the two respectively.

The time of the race was:

	Start.	Turn.	Finish.	Elapsed.
Beaver	2 25 10	3 15 55	3 50 25	1 25 15
Invader	2 25 53	3 19 30	3 52 35	1 26 42
Canadian	2 25 35	3 28 35	3 58 25	1 32 50

At the completion of this, the third race in the series, the breeze freshened considerably. Canadian reefed, dowsed her jib and then reefed again. The judges paid little attention to her and started the other two contestants off on a beat to windward by themselves after the skippers had exchanged places, Mr. H. C. McLeod, of Minota fame, taking the tiller in Beaver this time, while Mr. Æmilius Jarvis took charge of Invader. It was a neat task to carry the skippers from one craft to the other with no dinghy handy, but Mr. J. Wilson Morse's sailing skiff Madge did the trick successfully. The race was first delayed by the parting of Beaver's jib traveler. This was remedied, and the contestants were sent off. Beaver traveled at a great pace in the freshening breeze and had Invader well beaten within 15m. after the start. But a second accident happened, and the race had to be called off. Beaver's port spreader buckled, crippling her as far as a beat to windward was concerned. She came in stays and filled away on the starboard tack. She was able to make the piers on this leg and stood on in. Canadian having snuggled down to a double-reefed mainsail and staysail, followed her on into the harbor. Invader also sailed in, reefed down in the shelter of the piers, and went out into the lake again for a test in a stiff breeze.

After much consultation, the judges made the following announcement:

"We, the judges of the trial races, have decided that the Hamilton boat is not a factor in the trials, and that more races must be held between Beaver and Invader before the choice is made. The judges will endeavor to secure a regular crew for each boat, and the next race will be on Monday or Tuesday, if there is any wind. The judges must have at least an eight-mile breeze before going out."

More than one follower of the races thought that it was about time that something was said about crews. The trial races are important, but there was far more laxity about them, in the matter of crews, than there would be in an ordinary club race. The Canada cup regulations permit of a crew of six men, including one professional. Canadian was the only boat that had an entirely Corinthian crew. At one time there were three professionals in Invader, and one of them was sailing her. The regulations as to the number of the crew were observed more carefully by Beaver than by the others.

Com. Gooderham, who was daily sailing Invader ever since her launch, only sailed her in the first trial races. He has not yet made an announcement regarding his intentions, but it is understood that he may not sail the challenger in the final races at Chicago, even if Invader should be selected. If Mr. Æmilius Jarvis can find time for the enormous amount of work devolving upon a skipper of a cup challenger, he may be prevailed upon to sail the craft. He is already widely known as a successful skipper in international contests, and has brought many cups to the Canadian shore. He is the best man the Royal Canadians have in sight, although it is by no means certain that he will be at the tiller of the challenger.

The prospects for the Canadians regaining the cup are not brilliant. Invader's performances have shown her to be the superior of Minota, but not by a large margin. Minota's performances this year have shown her to be inferior to Illinois at any rate. Invader does not appear to be able to spare Minota very much. The latter craft would have beaten Canadian by a narrow margin in the trial races so far. There would be little use in sending Beaver to Chicago, because her only hope would be in a blow. The Canadians' only chance appears to be in increasing Invader's balloon canvas sufficiently to enable her to make up in running what she loses in beating. Both her spinnaker and balloon jib are small, owing to her measurement saving device in hoisting them. They do not go up to the truck. On a reach, no matter what the weather conditions, Invader could probably get away from Beaver.

CHARLES H. SNIDER.

Shelter Island Y. C.

SHELTER ISLAND—GARDINER'S BAY.

Thursday, July 4.

The first of the series of five races given by the Shelter Island Y. C. was sailed over the new fifteen-mile course in Gardiner's Bay on Thursday, July 4. The yachts that sailed in class S, for Rear-Com. Loehr's cup, were F. M. Smith's sloop, Effort, which made three points; Mira, Charles Lane Poor, two points, and Hebe, A. C. Baucker, one point. In class N, for Com. Poor's cup, were F. M. Smith's New Marion, three points; M. B. Fuller's Helen, two points, and H. L. Coe's Martha, one point.

Sunday, July 7.

The second of five races of the Shelter Island Y. C., to be sailed in Gardiner's Bay, in which each yacht is accredited a point for entrance and a point for each yacht she defeated in her class, was sailed on Sunday, July 7, in a good whole-sail breeze from the eastward. The course was seven miles to windward and return, and the prizes cups offered by the Commodore and Vice-Commodore.

The result of the race shows the standing to date of the competitors to be as follows: Hebe, class L, three points; Effort, class L, two points; Mira, class L, one point; Martha, class N, two points; Marion, class N, three points. Helen, of class N, did not finish.

BADGER.—Designed by B. B. Crowninshield. Owned by F. Bowne Jones and William M. Thorsen.

Larchmont Y. C. Annual Regatta.

LARCHMONT—LONG ISLAND SOUND.
Thursday, July 4.

THE Larchmont Y. C. held its twenty-second annual regatta over the club courses on Thursday, July 4. Some sixty boats started and the race was interesting from start to finish. Ailsa and Vigilant fought it out again in their class. Navahoe was on hand, but did not start, as she had lost her centerboard. The breeze was east by north, and held from that quarter all through, but with varying strength.

Ailsa and Vigilant were sent away at 11:35 o'clock. These boats sailed twice over a triangular course fifteen miles in length, making thirty miles in all. The first leg was a beat, the second a run with spinakers and a reach home. Vigilant was 6m. in the lead at the end of the first round, and finally won, beating Ailsa by nearly 15m.

The start of the schooners was close, Elmina getting a little the best of it, with Quissetta close by, Muriel and Amorita following. Elmina won by over 4m.

In the 51ft. class Humma got far the best of the start, but was finally defeated by Altair by 4m. 37s.

In the 36ft. class there were four starters, the Newport special thirties receiving 11m. 5s. time allowance. Leda won easily, with Spasm second.

There was a good race between the yawls Memory and Sakana, the former winning by 59s.

In the raceabout class there were five starters. Merrywing beat Snapper by the small margin of 15s. The summary follows:

Schooners—Class D—Course, 30 Miles—Start, 11:40.		
	Finish.	Elapsed.
Elmina, F. W. Brewster.....	4 44 18	5 04 18
Amorita, W. G. Brokaw.....	4 55 26	5 15 26
Quissetta, H. F. Lippitt.....	4 48 28	5 08 28
Muriel, Charles Smithers.....	4 51 45	5 11 45
Schooners—Class D—Cruising Trim—Course, 30 Miles—Start, 11:40.		
Katrina, J. B. Ford.....	5 42 00	6 02 00
Yawls—Class G—Course, 30 Miles—Start, 11:35.		
Vigilant, Percy Chubb.....	4 16 17	3 41 17
Ailsa, H. S. Redmond.....	4 30 53	3 55 53
Sloops—Class K—Course, 22 Miles—Start, 11:45.		
Humma, J. R. Maxwell.....	3 25 24	3 40 24
Altair, Cord Meyer.....	3 20 47	3 35 47
Sloops—Class L—Course, 22 Miles—Start, 11:50.		
Dorwina, W. L. Ward.....	3 42 14	3 52 14
Hebe.....	Did not finish.	
Sloops—Class M—Course, 22 Miles—Start, 11:50.		
Veda.....	4 42 35	4 52 35
Leda, J. R. Maxwell.....	4 18 15	4 28 15
Spasm, E. D. King.....	4 24 40	4 34 40
Possum, E. S. Ballard.....	4 39 50	4 49 50
Yawls—Class M—Course, 22 Miles—Start, 11:50.		
Memory, W. M. Bavier.....	4 54 02	5 04 02
Sakana, A. B. McCreery.....	4 55 01	5 05 01
Sloops—Class N—Course, 22 Miles—Start, 11:55.		
Lorelei, J. M. Ellsworth.....	Did not finish.	
Oiseau, J. R. Maxwell.....	4 29 56	4 34 56
Alerion, A. H. Alker.....	4 29 15	4 34 15
Empronzi, Alfred Peats.....	4 49 46	4 54 46
Special 25ft. Class—Course, 11 Miles.		
Nei-san, J. M. Woodbury.....	Did not finish.	
Sloops—Class P—Course, 11 Miles—Start, 12.		
Rochelle, Edward Kelly.....	Did not finish.	
Smoke, Louis Bowry.....	3 01 39	3 01 39
21ft. Raceabouts—Course, 11 Miles—Start, 12:00.		
Badger, Thorsen & Jones.....	2 50 10	2 50 10
Merrywing, H. M. Crane.....	2 47 30	2 47 30
Snapper, A. B. Alley.....	2 47 45	2 47 45
Scamp.....	2 47 15	2 47 15
Vipcr, W. D. Hennen.....	2 55 58	2 55 58
Catboats—Class Q—Course, 5½ Miles—Start, 12:05.		
Rod, R. G. Sand.....	3 28 00	3 23 00
Ox, R. Bavier.....	4 05 06	4 00 06
Sloops—Class R—Course, 5½ Miles—Start, 12:05.		
Mystral.....	3 20 26	3 16 26
Neola, C. D. Mallory.....	Did not finish.	
Cricket, H. G. Poyer.....	3 34 05	3 29 05

Kingfisher, August Belmont.....	3 19 37	3 14 37
Sora.....	3 30 19	3 25 19
Flim Flam, A. D. Prince.....	3 37 41	3 32 41
Hope, C. O. Iselin.....	3 20 52	3 15 52
Sandpiper, R. Belmont.....	3 25 08	3 20 08
Opossum, H. M. Raborg.....	3 19 27	3 14 27
Nike.....	3 24 47	3 19 47
Catboats—Class W—Course, 5½ Miles.		
Mongoose II.....	3 06 09	2 56 09
Molly S.....	3 45 22	3 35 22
Manhasset Raceabouts—Course, 11 Miles—Start, 12:05.		
Lambkin, S. W. Roach.....	3 55 59	3 50 59
Firefly, Guy Standing.....	3 50 58	3 45 58
Arizona, J. A. Cory.....	4 12 57	4 07 57
Mist, J. W. Alker.....	4 19 30	4 14 30
Dory Class—Course, 5½ Miles—Start, 12:05.		
Prize, H. Van Rensselaer.....	5 26 00	5 21 00
Cecil.....	5 29 17	5 24 17
Catboats—Class T—Course, 5½ Miles—Start, 12:10.		
Mongoose II., Simeon Ford.....	3 06 09	2 56 09
Molly S.....	3 45 22	3 35 22
Catboats—Class W—Course, 5½ Miles—Start, 12:10.		
Last Chance.....	4 34 15	4 24 15
Sneaker.....	5 05 40	4 55 40
Country Club Lark Class—Course, 5½ Miles—Start, 12:20.		
Skidoo, M. G. Davis.....	4 59 14	4 39 14
Halo, James Smith.....	4 27 46	4 27 26
Flirt, Fabyan & McKee.....	4 50 10	4 30 10

ATHENE.—Designed and built by the Herreshoff Mfg. Co., for W. O. Gay.

Streak, E. Cunningham.....	5 22 06	5 02 06
Catboats—Class V—Course, 5½ Miles—Start, 12:10.		
Kazaza, T. J. McCahill.....	3 56 21	3 46 21
Hobo.....	4 39 27	4 29 27

The winners were Elmina, Altair, Dorwina, Leda, Memory, Alerion, Nei-san, Scamp, Rod, Kingfisher, Arizona, Last Chance, Molly S., Kazaza, Halo and Prize.

Jamaica Bay Y. C.

JAMAICA BAY.
Thursday, July 4.

THE Jamaica Bay Y. C. held a regatta over the club courses on Jamaica Bay on Thursday, July 4. The breeze was light from the southeast. The times were as follows:

Open Catboats Over 25ft.			
	Start.	Finish.	Elapsed.
Jennie, William G. Gallagher.....	2 44 00	4 54 07	2 14 07
Mavourneen, E. C. Wood.....	2 45 00	5 01 25	2 21 25
Ella B., J. L. Brainerd.....	2 40 00	5 04 20	2 24 20
Open Catboats Under 25ft.			
Vitesse, W. G. Pearsall.....	2 50 00	4 03 16	1 18 16
Lochinvar, J. F. Sabin.....	2 50 00	5 15 00	2 25 00

The winners were Jennie and Vitesse.

Sunday, July 7.

Club cups were raced for by the single-stickers of the Jamaica Bay Y. C. off the station at Holland's Landing on Sunday, July 7. The course was to Block House Point and return. It was a free run down before the southeast wind, with booms to port, and a beat back. The race was witnessed by a large throng of members and guests. The summaries:

Sloops—Start, 2:20.		
Waunita, Frederick S. La Fond.....	4 36 00	2 16 00
Class C—Open Catboats, Under 17ft.—Start, 2:50.		
Vitesse, William G. Pearsall.....	4 03 16	1 18 16
Class A—Open Catboats, 20 to 28ft.—Start, 2:40.		
Jennie, W. Gallagher.....	4 54 07	2 14 07
*Mavourneen, E. C. Wood.....	5 01 25	2 21 25
Ella B., J. L. Brainerd.....	5 04 20	2 24 20
Summer Cabin Cats—Start, 2:30.		
*Louise, R. L. Jaques.....	4 59 34	2 29 34
Tessie, C. J. Pfug.....	5 05 05	2 35 05

*Mavourneen's corrected time, 2:18:05; Louise's, 2:26:34.

Morrisania Y. C.

LONG ISLAND SOUND.
Sunday, June 23.

FIFTY-NINE boats started in the sixth annual regatta of the Morrisania Y. C., which was held on Sunday, June 23. There was a fresh southwest breeze blowing, and a number of boats broke down. The summary follows:

Class A—Cabin Sloops, Cutters and Yawls—30ft. and Over—Start, 11:11.		
	Finish.	Elapsed.
Coquette, M. T. Delancy.....	3 33 00	4 22 00
Yankee, A. W. Strong.....	3 41 00	4 20 00

Others in this class were Florence, L. Englert, and Veta, J. W. Steffens.

Class B—Over 25ft. and Under 30ft.—Start, 11:11.		
	Finish.	Elapsed.
Pinochle, J. Babit.....	3 17 00	4 05 00
Bertha K., F. Kaiser.....	3 36 00	4 25 00

Other entries were Connie, G. Ollweiler; Puzzle, W. S. Coultas; Effie, J. Sinclair; Peerless, C. Heindrichs; Water Lily, T. Kiernan; Bona Fide, A. Grassley; Cygnet, A. Clements.

Cabin Sloops, Cutters and Yawls—25ft. and Under—Start, 11:16.		
	Finish.	Elapsed.
Edna, G. J. Stelz.....	2 45 30	3 29 30
Marguerite.....	2 49 00	3 33 00

The remainder of the class were Aster, J. Neidmann; Niagara, Fisher & Schappert; Isis, A. Butler; Psyche, D. Mackerwith; Howard, J. Berrian; Gertrude, Curtis & Morstadt; Anita, C. Loocke; Dolores, J. Granbery; Dawn, F. Daum; Twinkle, E. Dautreville.

Design for a Cup Defender.

KNOWING that any information in connection with large 90ft. cutters is of particular interest at the present time to all those interested in yachting, we publish this week a design of a Cup defender. This design has much to recommend it, considering that it is the work of an amateur, Mr. John A. Connolly, Jr., of Brooklyn, N. Y.

The design is sort of a combination of Constitution and Independence. In comparing it with Constitution it resembles her in the overhangs, placing of the fin and gracefulness of the fore and aft lines, also in placing the midship section nearly in the center of the boat and having its greatest overhang aft. The resemblance to

Independence is in the over all length and the shallow body shown in the midship section with its hard bilges. The principal dimensions are as follows:

Length—

Over all	140ft. 5in.
L.W.L.	88ft. 8in.

Overhang—

Forward	24ft. 3in.
Aft	27ft. 6in.

Beam—

Extreme	24ft. 1in.
L.W.L.	23ft. 2in.

Draft—Extreme

20ft.

Freeboard—

Bow	6ft. 6in.
Taffrail	5ft. 3in.
Least	4ft. 6in.

Displacement

131 tons.

Mr. Connolly has recently completed a design of a boat for a well-known yachtsman, which will be built during the winter, and will be seen in the racing next season. She is 65ft. 3in. over all, 43ft. 10in. on the waterline, 15ft. 8in. beam and 5ft. 10in. draft.

Beverly Y. C.

BUZZARD'S BAY, MASS.

Saturday, July 6.

THE regatta held by the Beverly Y. C. on Saturday, July 6, was only little better than a drifting match. The breeze at the start was fresh from the E., but before the boats had gone half way over the course it died out to a flat calm. Four of the eighteen starters were unable to finish within the time limit.

In the 25ft. class only three boats started, Thorana, Kalama and Isis, and the former won her maiden race.

Radiant was the first to finish in the 21ft. class, with Gadfly second and Quakeress third. Edith, Kestrel and Amanita withdrew.

Eunice, the second boat of the entire fleet to finish, won with ease over Howard and Hod.

In the 15ft. class Next secured a victory.

Owing to an error by the judges in making out the summary of the regatta, July 4, Flickamarro was awarded the honors in her class, when they should have been given to Spider. The judge to-day was F. E. Cabot. The summary:

25-Footers.	
Thorana, T. B. Wales.....	3 27 25
Kalama III., David Rice.....	3 39 36
Isis, E. O. Burdett.....	3 41 05
21-Footers.	
Radiant, C. M. Baker.....	3 32 46
Gadfly, Mrs. Geary.....	3 33 20
Quakeress, W. F. Harrison.....	3 34 45
Edith, E. H. Baker.....	Withdrew.
Amanita, L. Bacon.....	Withdrew.
Kestrel, L. S. Dabney.....	Withdrew.
Fourth Class Cats.	
Eunice, W. O. Taylor.....	3 09 55
Howard, H. O. Miller.....	3 26 34
Hod, H. B. Holmes.....	3 49 14
Allison, Stewart McLeod.....	Withdrew.
15-Footers—One Design.	
Next, Paul Jones.....	3 12 07
Flickamarro, W. B. Emmons.....	3 12 26
Spider, H. M. Stone.....	3 16 33
Vim, R. Winsor.....	3 18 18
Go Bye, H. Stockton.....	3 18 26

Savin Hill Y. C.

DORCHESTER BAY, MASS.

Saturday, July 6.

THE first handicap race of the season of the Savin Hill Y. C. was sailed in Dorchester Bay on Saturday, July 6. The start was at 2:20, and ten yachts went over the line when the gun was fired. Pioneer, owned by Charles Kelly, won the race. The summary:

Pioneer, Charles Kelly.....	1 23 45
Kalitan, Patten.....	1 23 58
Hattie, Eliot.....	1 32 32
Hattie, Swallow.....	1 34 27
Primrose, J. A. Stark.....	1 30 41
Spray, Kidd.....	1 37 22
Eleanor, James Clark.....	1 37 43
Leurez, J. McBeath.....	1 37 49
Tabasco, Durgin.....	1 43 01
Edith, Dammerell.....	1 44 44

DESIGN FOR A CUP DEFENDER BY JOHN A. CONNOLLY, JR., 1901.

Western Yachts.

Lake Michigan Yachting Association.

CHICAGO, Ill., July 6.—The regatta of the Lake Michigan Yachting Association, which was set for July 4 at Milwaukee, Wis., proved a rather disappointing affair, by virtue of prevailing weather conditions of an unsatisfactory nature. The Milwaukee luck is proverbial. The course is much hemmed in, and hardly ever a regatta is started at that point without a dead calm coming along to spoil the pleasure of the occasion. This was the story of July 4, and it marred what would otherwise have been a spirited encounter between the leading boats of this portion of the Great Lakes.

The following yachts entered for the regatta: Schooners, Class A—Sallie, Spring Lake; Merlin, Racine; Hawthorne, Chicago; Mistral, Chicago.

Class B—Vencedor, Siren, Vanenna, Neva, all of Chicago.

Class C—Charlotte R., Chicago.

Class D—Josephine, Chicago; Beatrice, Milwaukee.

Class E—Margaret, Milwaukee; Yvanna, Green Bay; Chetopa, Chicago.

Class F—Arline, Chicago; Katie H., Chicago; Alcyone, Green Bay.

Class G—Old Abe, Sheboygan; Myrine, Chicago.

Class H, Canadian Cup Defenders—Illinois, Chicago; Briar, Chicago; Prairie, Chicago; Yankee, Chicago; Milwaukee, of Milwaukee; Minota, Chicago; Orion, Milwaukee.

Class I, Association Knockabouts—Colleen, Chicago; Vagabond, Milwaukee; Cock Robin, Milwaukee.

Class J—Question, Milwaukee; Athlete, Milwaukee; Lady May, Milwaukee.

Class K—Sadie, Topsy, Spray, Cat, Nina, Pirate, Blackbird, Dark Secret, all of Kinnikinnic Y. C., Milwaukee.

Cruises to Kenosha.

The Chicago boats engaged in a cruising contest all the way from Chicago to Milwaukee, stopping at Kenosha and making that the finishing point of their contest. The big fellows, Vencedor and Siren, had another nip and tuck race, and Siren beat her old-time rival nearly half a mile, going across the wire 23m. ahead in the finish at Kenosha.

As to the actual winner of the cruising contest, Illinois, the cup defender, carried away the banner, having a time allowance of 40m. and coming in 18m. behind Siren. Vencedor followed Illinois, and back of Vencedor came Prairie, Minota, Josephine, Hawthorne, Katie H., Charlotte R., Dolphin and Mawaja. The cruising race could not be called a very interesting affair, as the hot weather of the past week was marked by occasional calms. The breeze was poor for most all the time up the lake, and beyond Waukegan the boats ran into practically a calm. In this slow and baffling work Illinois overtook Siren and made its winning. Illinois and Minota, the latter another one of the cup defenders, had a close thing of it in this cruising race, sailing nose and nose for a good stretch of the course with mainsails and balloon jibs drawing, neither boat outfooting the other by a length. The times in the cruising race are as follows:

Start, 9:15.	Finish.	Elapsed.	Corrected.
Siren	7 43 00	9 18 00	9 18 00
Illinois	8 01 00	9 46 00	9 05 00
Vencedor	8 03 00	9 48 00	9 47 40
Prairie	8 33 30	10 17 30	9 30 30
Minota	8 33 00	10 20 00	9 39 00
Josephine	8 42 30	10 27 30
Hawthorne	8 45 00	10 30 00
Katie H.	8 50 00	10 33 00

The Milwaukee Regatta.

The sailing at no time after the start approached yachting conditions. It was a drifting contest all the way round, and there was not a finish within the time limit in any class excepting Class K. In Classes A, B and E the course was not half completed, although the judges announced a decision in those classes, apparently more by guess than any other way. In Class A, schooners, Hawthorne, of Chicago, won, being the only yacht to sail about the course. In Class B, 52-footers, Siren finished first leg in 1:35 and was awarded the cup. Vanenna, of Chicago, was second, 1:40; Vencedor, untimed. In Class E, 35-footers, Chetopa, of Chicago, was awarded the cup.

Very much interest attached to the race between the cup defenders Illinois, Orion and Minota, but the yachts had to come back under tow, the wind dropping entirely off and killing all hope of a contest. The knockabouts met with similar conditions. The races were set forward for the following day.

Among the races, unsatisfactory as they proved, the sloop class furnished the best sport. Siren was handled ably and deserved the win which was accorded to it. The race was won in the second leg, the maneuver of a long tack with the wind on the quarter enabling it to establish a lead which was not cut down.

In Class K Topsy finished the course, 17½ miles, the only one to finish. In the knockabout class Colleen was making a handsome showing at the time the wind fell and left all becalmed.

On July 5 the same record of hard luck seemed to pursue the sport. The cup defenders all got away, but Orion and Minota both broke down and Illinois, better handled as it has been, won the contest without opposition. In Class D Beatrice was the only one to sail around the course. Colleen, of the knockabouts, repeated the good showing of the day previous, and won in its class, cleverly beating Vagabond and Cock Robin. In Class G Old Abe defeated Mame. The smaller classes did not start. This day there was a fresh southwest wind which gave very decent sailing conditions.

The most exciting contest of the day was that between Vagabond and Colleen. Colleen was handsomely handled and made a very pretty finish. Vagabond had the misfortune to get caught in irons and lost some time before she could get under way. Cock Robin had by this time made up much of the lost distance which had existed between it and Vagabond.

As among the cup defenders, Orion was the first to cross the line, Illinois 46s. later, with Minota overlapping Illinois. Early in the race Orion sprung a spreader, which left a great deal of strain on the mast and left her handlers under the fear that the stick would go by the board if they

cracked on any canvas of consequence. This accident was the cause of the withdrawal of Minota, and rather than to invite injury she was pulled out of the course. Illinois did not sail the second round of the triangle. Beatrice in Class D finished one round of the triangle. The crew did not wish to finish the second round, and hence the cup was withheld from this boat.

Some Cup Defenders.

On June 30 the yacht Detroit, intended as one of the cup defender possibilities in the international event to follow later in the season, was measured and given a little try out. Its racing length as established by Wm. Cotherell, of Chicago, is 35.25. The builders of Detroit think that it can safely handle 500ft. more canvas than some of the other boats. It will carry 1,000lbs. of ballast, and is scheduled for 1,650ft. of canvas. The measurements as given are 47ft. 7in. over all, 11ft. 6in. beam, 26ft. 4½in. waterline. It carries a 14ft. centerboard, and with the board down needs 6½ft. of water.

The Milwaukee syndicate defender for the Canada cup is to be called Milwaukee, and was launched at Oshkosh, Wis., July 2. This boat did not get down the lake in time for the Milwaukee or Kenosha regatta, but will go at once to Chicago to participate in the trial races. Milwaukee's measurements are 51ft. 5in. over all, 10ft. beam. The normal waterline is stated at 27ft. 6in. The Milwaukee syndicate owning this boat is headed by Capt. Pabst, of the well-known Pabst Brewing Company. The trial races among the defenders promise to be interesting when finally pulled off. The first of the trials is to be sailed Saturday, July 20, the cup race being set for Aug. 10.

Another boat whose chances are liked by many for the Canada cup is Cadillac, the Henley boat, which should shortly be launched, if not now already in the water. It is, however, not yet certain that Cadillac will come West, or at least in time for entry in the trial races, although it is earnestly hoped that such will be the case. Mr. Hanley was present in the international race last summer, and his experience with Genesee will leave him all the better fitted to master the little deficiencies of that boat with his 1901 craft.

As to the chances of this city in the cup race, there are many Chicago yachtsmen who do not fancy them. There is a lot to be done yet before any one of the Chicago boats is at its best. Take Minota, for instance, a boat which properly tuned up and in condition and properly sailed would give Illinois all it could do right now. This boat is left pretty much to take care of itself, and many of its possibilities are left unproved. It will take a perfect boat and good seamanship to come out of this cup race this summer with any kind of glory, and Chicago yachtsmen who propose entering these races would better begin to bestir themselves a little in advance of that time, rather than even a very few moments after the race is over.

Columbia Y. C. Fourth of July Regatta.

This was undoubtedly the most successful regatta ever held on Lake Michigan. The morning races were for cabin sloops, cutters, schooners and yawls. The wind in the morning was light, fluky and shifting. The course was triangular, the first leg to windward, second leg a spinaker run, third leg a close reach. Nearly all of the twelve classes had entries, and the day was a busy and eventful one from a nautical standpoint. Besides the regular silver loving cup class prizes offered by the club itself, there was a special prize offered by Mr. Thomas H. Webb, of Peoria, Ill., for competition on time allowance for all cabin yachts between 18 and 30ft. l.w.l. The Webb trophy is a magnificent and very massive sterling silver loving cup with an etching of Katie H. on one side, an etching "Columbia Yacht Club Trophy. Cabin Yachts 18 to 30ft. l.w.l. Thos. H. Webb, Donor," on another side, and "Won by Nymph, Dr. F. W. Holmes, July 4th, 1901," on the third.

Nymph was designed and built by Henry R. Davies, a Columbia Y. C. amateur, and has been very successful in races on Lake Michigan.

The afternoon races were sailed in a good breeze, first and second legs close reaches and last leg a broad reach, course 4 2-3 nautical miles.

A large crowd viewed the races from the club house verandas, participated at dinner and presentation of prizes, and in the evening dancing and music were the commands. The records:

Schooners—Class 2—Start, 10:00.	Finish.	Elapsed.	Allows.	Corrected.

Columbia Y. C. July 6 Races.

Course, 4 2-3 nautical miles; a close reach all around; wind, very strong and puffy.

Wasp broke the course record, held by Query, by over 2m. in the first race.

The crowd at the club house enjoyed these races greatly, as the puffs made the crews give an unrivaled acrobatic performance. The records:

Class 5—Swallows—Start, 2:30.	Finish.	Elapsed.	Allows.	Corrected.
Wasp	3 12 22	00 42 22	Scratch.	00 42 22
Wishbone	3 16 12	00 46 12	00 03 18	00 42 54

HARTFORD BUILDING, Chicago, Ill.

The Cruise of the Corinthian Y. C. of Philadelphia.

THE fleet of the Corinthian Y. C. of Philadelphia will rendezvous for the annual cruise at Glen Cove, Long Island, N. Y., on the afternoon of Friday, July 12, 1901.

A meeting of captains will be held on board the flagship at 8:30 P. M.

The routine and rules contained in the "Club Manual" will be observed during the cruise.

Squadron Runs and Races—Prizes have been offered for port to port runs for yachts in cruising trim, and when four or more start, a second prize to be awarded. The Commodore has offered a cup to the yacht in each class winning on corrected time the greatest number of runs.

Saturday, July 13—Race from Glen Cove to Oyster Bay.

Sunday, July 14—Fleet to remain at anchor at Oyster Bay.

Monday, July 15—Race from Oyster Bay to Morris Cove.

Tuesday, July 16—Race from Morris Cove to Shelter Island.

Wednesday, July 17—Race from Shelter Island to New London.

Thursday, July 18—Fleet to remain at anchor. Gig and dinghy races for yachts' crews will be held in the afternoon. Entries to be made to the Fleet Captain.

Friday, July 19—Race from New London to Newport.

Saturday, July 20—Disband.

Glen Cove may be reached by the Long Island Railroad from Thirty-fourth street ferry, East River, New York. A boat will convey members and their guests to Glen Cove on Friday, July 12, leaving Adams Express Company's wharf, Pennsylvania Railroad, Jersey City, after the arrival of the train leaving Philadelphia at 1 o'clock, via Pennsylvania Railroad.

Captains intending to join the cruise will kindly notify the Fleet Captain, No. 511 Bullitt Building, Philadelphia, at as early a date as possible.

The Commodore particularly requests that as large a number of yachts will participate in the cruise as possible, as there are handsome prizes offered for all runs in all classes.

Indian Harbor Y. C.

INDIAN HARBOR—LONG ISLAND SOUND.

Tuesday, July 2.

SIXTEEN yachts started in the circuit race given by the Indian Harbor Y. C. on Tuesday, July 2. The wind was light from the southwest until a sharp squall made the boats douse light sails. The 43-footers sailed twice over a nine-mile course, and Dorwina beat Saunterer handily.

The sloop Cymbra sailed a good race against the crack Leda of that class over the same course and was beaten only 12m. and 11s. Alfred Peat's 30-footer Empronzi, ably sailed by C. W. Mower, defeated Alerion by 1m. and 29s., and the noted raceabout Badger added another win to her long list by defeating Spindrift 5m. and 11s. The summary follows:

Sloops—51ft. Class—Racing Trim—Start, 12:50.	Finish.	Elapsed.
Altair, Cord Meyer	3 47 35	2 57 35

Sloops—51ft. Class—Cruising Trim—Start, 12:50.	Finish.	Elapsed.
Mariquita, H. B. Shaen	4 27 03	3 37 03

Sloops—43ft. Class—Start, 12:55.	Finish.	Elapsed.
Saunterer, T. H. Smith	Did not finish.
Dorwina, W. S. Ward	4 53 38	3 58 38

Sloops—36ft. Class—Start, 1:00.	Finish.	Elapsed.
Leda, H. L. Maxwell	4 53 52	3 53 52
Cymbra, F. C. Henderson	5 06 03	4 06 03

Sloops—30ft. Class—Start, 1:10.	Finish.	Elapsed.
Alerion, A. H. Alker	5 06 39	3 56 39
Empronzi, Alfred Peats	5 05 10	3 55 10
Windora, John Green	Did not finish.

Raceabouts—Start, 1:15.	Finish.	Elapsed.
Spindrift, Samuel Conley	4 36 36	3 17 36
Badger, Thorsen & Jones	4 27 25	3 12 25
Scamp, J. DeForest	4 36 51	3 21 51

Sloops—18ft. Class—Start, 1:20.	Finish.	Elapsed.
Opossum, H. M. Raborg	4 47 50	3 27 50
Neola, C. D. Mallory	Withdrew.

Yawls—36ft. Class—Start, 1:00.	Finish.	Elapsed.
Mercury, W. N. Bavier	3 54 11	2 54 11

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Thursday, July 4.

THE Seawanhaka Corinthian Y. C. held races for club knockabouts and club catboats on Thursday, July 4. The boats went away on the port tack in a free run to the first mark. The next leg was a reach, then a beat home. The course was covered twice. Wyntje, owned and sailed by Mr. Sherman Hoyt, which was the champion in the Seawanhaka Corinthian knockabout class last year, won, after a capital race with Marcia, sailed by Mr. D. Le Roy Dresser. The summaries:

Seawanhaka Knockabouts—Start, 3:05.	Finish.	Elapsed.
Wyntje, Sherman Hoyt	5 09 22	2 04 22
Marcia, D. Le Roy Dresser	5 10 28	2 05 28
Nakodo, J. T. Sherman	5 15 58	2 10 58
Mistral, E. L. Low, Jr.	5 16 30	2 11 30
Heron, F. R. Coudert, Jr.	5 20 30	2 15 30

Seawanhaka Catboats—Start, 3:10.	Finish.	Elapsed.
No. 1, T. W. Satterthwaite	5 29 58	2 19 58
No. 4, M. Hudson	5 34 03	2 24 03
No. 2, C. Woodward	5 43 30	2 33 30

Newport Y. R. A.

Constitution, Columbia and Independence.

As this is the first year that any Boston yachtsman has built a boat for the purpose of defending the America Cup since the season that Jubilee and Pilgrim came out, naturally great interest was centered on the performances of Independence against the two Herreshoff boats, Constitution and Columbia. The races given by the Newport Y. R. A. are the first time that all three of the boats have met. Yachtsmen had been able to get a slight line on Constitution's wonderful speed in the races she sailed against Columbia on July 1 and 3, while Independence was still an unknown quantity. The first two races resulted in an unqualified victory for Constitution, proving that she was from ten to thirty minutes faster than Columbia over a thirty-mile course in a light breeze, and a most disappointing showing by Independence, which boat was outclassed by both Columbia and Constitution.

Saturday, July 6.

Com. Gerry's steam yacht Electra acted as the committee boat, and the course laid out was fifteen miles to windward and return. At the start the wind was light and from the east, the tide ebb and a choppy sea with a noticeably long swell underneath. Before the boats had reached the outer mark the wind hauled a little to the north, which allowed the boats to make it on a close reach on the port tack. When about half the run home had been covered, the wind hauled again into the southeast, making it a reach to the finish. The preparatory signal was given at noon, and the starting gun at 12:10. Capt. Rhoads sent Constitution over the line a couple of seconds after the gun. Columbia was some seconds behind, but a little to the weather. Independence crossed 15s. after the 2m. handicap gun had been fired. All the boats crossed on the starboard tack, and shortly after crossing Columbia came about, and in a minute Constitution did the same. Columbia and Constitution were soon back on the starboard tack. The two Herreshoff boats were close together, Columbia behind, but to windward, while Independence was some distance to leeward and making poor weather of it in the lumpy sea, and as the wind was so light each roll of the sea seemed to throw the wind out of her mainsail. Constitution and Columbia continued to draw away fast from the Boston boat, and Constitution pulled slowly away from Columbia on each tack. About 3:15 the breeze that had dropped perceptibly began to freshen, and both the leading boats were moving very fast. Independence was way behind and apparently out of the race. Constitution took in her jib topsail before rounding the mark. Constitution beat Columbia on the windward work 1m. 58s., and Independence 50m. 42s. Columbia beat Independence 48m. 44s. The times at the outer mark:

	Start.	Turn.	Elapsed.
Constitution	12 10 02	3 43 35	3 33 33
Columbia	12 10 17	3 45 48	3 51 31
Independence	12 12 00	4 46 15	4 24 15

After rounding, Constitution jibed over and set her balloon. Columbia set her spinnaker after rounding and shortly set her balloon jib topsail. Constitution had her spinnaker boom dropped and the sail sent out in stops, but she did not use it. Independence seemed to have struck soft spots and was miles behind. On the run home the balloon on Constitution was kept drawing, and she traveled apparently faster than did Columbia. At one time Constitution lost the breeze and Columbia, which still held it, bid fair to pass her. Constitution set her large and then a smaller spinnaker, but finally took the latter in and jibed over. Finding that ballooners might not draw, both boats put on jibs and fore staysails, as the wind was about abeam. On the run home Constitution beat Columbia 9m. 8s. The times:

	Turn.	Finish.	Elapsed.
Constitution	3 43 35	5 48 08	2 04 33
Columbia	3 45 48	5 59 29	2 13 41

The complete table follows:

	Start.	Finish.	Elapsed.	Corrected.
Constitution	12 10 02	5 48 08	5 38 06	5 38 06
Columbia	12 10 17	5 59 29	5 49 12	5 47 55
Independence	12 12 00	Not timed.		

Constitution beat Columbia 9m. 49s. Over the whole course Constitution beat Columbia 11m. 6s., actual time. She had to allow the older boat 1m. and 17s., so that she won the race by 9m. and 49s.

At the finish Independence could just be seen in the mist, and as she did not finish within the time limit she was not timed.

Monday, July 8.

Mr. Alexander Van Rensselaer's steam yacht May acted as the committee boat, and the start of the race was from a point about five miles E.S.E. of Brenton's Reef Lightship. At the start the wind was very light from the S.W., and the tide ebb. The course laid out was a triangular, the first leg being S.W., the second E. by S. and the third N.N.W. This gave the boats a beat to windward on the first leg by a reach on the second leg and a reach on the third leg.

The preparatory signal was given at 11:45, and Constitution crossed 26s. after the starting gun, which was given at 11:55. Columbia, well up to the windward end of the line, was next over, with Independence under her lee. All crossed on the starboard tack. Rhoads put Constitution about on the port tack and crossed the bows of the other boats. Constitution went to windward like a witch and soon worked away from her opponents. After half an hour's sailing Constitution was well over half a mile ahead of Columbia. Independence was some distance under Constitution's lee, footing very fast, but not pointing as high as the others. The breeze was so light that the crew on Independence were kept to leeward to bring the boat far enough down to keep the sea from rolling the wind out of her sails.

All the way to the first mark Constitution continued to open up the distance between her contestants. About 1 o'clock all three boats were on the same tack, Columbia almost a half mile behind Constitution and Independence about the same distance astern of Columbia. Constitution rounded the first mark at 2:15:51. She had beaten Columbia 10m. 37s., and Independence 39m. 23s. in the beat of ten miles. The times for all three boats at the first mark follow:

	Start.	Turn.	Elapsed.
Constitution	11 55 26	2 15 51	2 20 25
Columbia	11 56 07	2 27 09	2 31 02
Independence	11 56 22	2 56 10	2 59 48

After rounding, Constitution eased her boom off to port, and working jib topsail and balloon fore staysail were set for the reach. Columbia had set her balloon jib topsail in stops before rounding, and broke it out soon after going around the mark. Independence, who was far behind, set her balloon after rounding. On this leg the wind hauled more to the W. and Columbia and Independence set their spinakers. Later Constitution, after jibing her boom over to port, set her spinnaker, but lowered it soon after, Columbia taking her spinnaker in at the same time. In the reach to the second mark Constitution beat Independence 6m. 17s. and Columbia 8m. 42s. Independence beat Columbia 2m. 30s. on this leg. The times at the second mark:

	1st Turn.	2d Turn.	Elapsed.
Constitution	2 15 51	4 04 44	1 48 53
Columbia	2 27 09	4 24 44	1 57 35
Independence	2 56 10	4 51 20	1 55 10

On the reach to the home mark Constitution footed so fast that it was thought that she would finish before Independence rounded the second mark. With everything drawing, she sailed at a wonderful clip, keeping the twelve-knot steam yachts busy to keep pace with her. The times to the home mark:

	2d Turn.	Finish.	Elapsed.
Constitution	4 04 44	4 54 30	0 49 46
Columbia	4 24 44	5 24 36	0 59 52
Independence	4 51 20	6 14 40	1 23 20

Constitution beat Columbia on elapsed time over the course 29m. 25s., and 28m. 8s. on corrected time. She beat Independence on elapsed time 1h. 19m. and 14s., and on corrected time 1h. 18m. and 31s. The table of the race follows:

	Start.	Finish.	Elapsed.	Corrected.
Constitution	11 55 26	4 54 30	4 59 04	4 59 04
Columbia	11 56 07	5 24 36	5 23 29	5 27 12
Independence	11 56 22	6 14 40	6 18 18	6 17 35

New York Y. C.

NEWPORT, R. I.

Wednesday, July 3.

THE second race of the series given by the New York Y. C. for Constitution and Columbia was brought to a sudden end shortly after the start by Columbia meeting with another mishap.

Both boats were on hand early, and they looked to be in fine shape for the race. The boom that buckled up in the race on Monday had been replaced by another. Columbia's canvas was in better shape than Constitution's, the latter's topsail looking badly.

The starting line was made five miles east of Brenton's Reef Lightship, and the committee set the signals for the course. The legs were ten miles each; the first was W.S.W., the second S.E. by E. and the third N. ½ E.

After the preparatory signal and just before the start there was some nice jockeying done by the skippers on the two boats. Columbia was sent across the line just as the starting gun was given at 12:25, close to the stake-boat, and Constitution kept off and crossed a few seconds behind and to leeward. After crossing, both came about and stood away on the port tack. The breeze was fresh and both boats were heeled well down and sailing at a very fast rate.

Eighteen minutes after the start, when both boats had settled down to work and Columbia was doing splendidly, having a slight advantage over Constitution, she was suddenly brought up into the wind. Capt. Rhoads, thinking that Capt. Barr was coming about, followed suit in Constitution, but when he saw headsails being hurriedly lowered on Columbia he realized that an accident had happened. The older boat's bowsprit was cocked up in the air, and closer examination showed that the martingale had buckled up in the form of a letter J. The bowsprit was found to be sprung, but further than that no damage had been done. A nasty accident (that might have been a repetition of Shamrock II.'s) was avoided by an observing crew and a skillful helmsman. Had the broken martingale not been discovered as soon as it buckled and the boat brought immediately into the wind, the bowsprit would undoubtedly have gone and the mast would probably have followed.

Hull—Massachusetts Y. C.

HULL, MASS.

Saturday, July 6.

THE weather conditions for the regatta of the Hull-Massachusetts Y. C., sailed on Saturday, July 6, over the club course off Hull, were not very favorable, the wind being light from the S.E.

Two classes competed. The course for both was from the flag boat off the club house to buoy off Peddocks Island, to buoy off Strawberry Hill, to Sheep Island, to Peddocks and repeat, finishing off club house.

The two classes were sent away together. Bonito, which has been winning prizes in every regatta, sailed under the auspices of the club, immediately jumped into the lead, and it became the imperative duty of her skipper to find the marks for the other yachts.

Bonito was the first to cross the finish line, her lead over Aspinquid being an even 5m. The winner lost considerable time hunting for the buoys.

Aspinquid beat out Malillian for second place by less than a minute, while Ayaya finished fourth and Barbara fifth. Ayaya and Barbara had a good battle, Barbara causing no little surprise by her excellent work.

In the handicap class, C. A. Coleman's Mildred had things her own way from the start, winning by more than 22m. on corrected time. Dabster was unable to finish within the time limit. The summary:

Class T—18-Footers.			
Bonito, G. H. Wightman	2 31 45		
Aspinquid, W. A. Comey	2 36 45		
Malillian, B. S. Permar	2 37 40		
Ayaya, W. P. Keyes	2 40 08		
Barbara, A. L. Hayden	2 41 26		
Bacchante, Humphrey & Lauriat	2 43 23		
Nethla, C. W. Cole	2 47 23		

Handicap Class.			
Mildred, C. A. Coleman	2 32 05	2 32 05	
Hollie II., W. M. Ware	2 57 23	2 54 23	
Dabster, George Keith	Time not taken.		

Mosquito Fleet Y. C.

CITY POINT—BOSTON HARBOR.

Saturday, July 6.

THE open Y. R. A. regatta of the Mosquito Fleet Y. C. of South Boston on Saturday, July 6, was the most successful held this season under the auspices of the Dorchester Bay clubs. There were six classes for Y. R. A. yachts, the only one failing to fill being class I, 18ft. knockabouts.

Flirt won her second victory of the week in class D, defeating Calypso more than a minute. Little Peter came out with a new mainsail, but it set very unsatisfactorily and will be discarded for the old one.

Mildred II. added to the interest in the class S honor hunt by taking first place over Opitsah III., Zaza and Eaglet in that order. Zaza was right after the craft of the Indian name at the finish, and the Burgess boat was far astern.

Hostess made her first appearance in the 25ft. open class, but withdrew before completing the course. Thor-dis won by several minutes.

The Dorchester Y. C. dories, the Savin Hill Y. C. one-design tenders and the open tenders had their usual close contests. The summary:

Class D—25ft. Cabin.	
Flirt, F. W. Fabyan and McKee	1 40 09
Calypso, A. W. Chesterton	1 41 50
Hustler, Whittemore & Robbins	1 54 05
Early Dawn, Jos. E. Doherty	1 42 41
Little Peter, G. B. Doane	1 45 55
Chewink, Frank G. Macomber, Jr.	Withdrew.

Class C—25ft. Open.	
Thordis, W. U. Foster	1 46 45
Theodora, Frank Burgess	1 50 42
Carrie M., N. C. Robinson	2 01 05
Hostess, Henry M. Faxon	Withdrew.
Romance, Loring Sears	Withdrew.

Class S—21ft. Cabin.	
Mildred II., S. P. Moses	1 48 30
Opitsah III., Sumner H. Foster	1 49 40
Zaza, G. P. Shute, et al.	1 49 49
Eaglet, W. Stanley Burgess	1 56 03

Class T—18ft. Open.	
Circe II., Fred L. Pigeon	1 27 03
Fantasy, William Allerton	1 31 50
Flip, J. H. Farrell	Withdrew.

Class X—15ft. Open.	
Vitesse, W. J. Coombs	1 34 06
Toss, J. B. Stearns	1 35 40
Elsa, Walter Kelly	1 37 15

Dorchester Yacht Club Dories.	
Boomerang, C. A. W. Bartlett	1 59 10
Lurline II., J. P. Meade	1 59 11
Anitra, F. W. Cutter	1 59 16
Vera, H. Lundberg	2 00 10
Hobo, T. W. King	Withdrew.
Boast, Eben Dunton	Withdrew.

Savin Hill Y. C.—One Design Tenders.	
H. Skinner	1 06 11
A. B. Howland	1 07 10
A. McInnis	1 07 30
J. Turner	1 07 48
J. E. Robinson	1 09 30
W. F. Scott	1 09 41
Charles Leach	1 10 15
C. A. J. Smith	1 10 31
Dr. Temple	1 11 20
E. Keepers	1 12 04
J. Willis	1 14 15

Open Tender Class.	
H. L. Stickney	1 01 50
E. E. Merrill	1 04 25
J. F. Trotman	1 08 29
W. F. French	1 09 33
R. S. Landers	1 10 15

Burgess Y. C.

MARBLEHEAD, MASS.

Saturday, July 6.

THE Burgess Y. C. sailed its fifty-sixth regatta in a light N.E. wind on Saturday, July 6. There were only two classes, the raceabouts and 16-footers.

The raceabouts were sent to Bowditch Ledge, then to Goosebery Ledge buoy and then home. It was a hard fought battle all over the course, Runaway Girl appearing to have the best of it until just off Point Neck, when she was passed by Indian. Runaway Girl took in her spinnaker here and dropped to third place, Indian getting first and Pompilia second.

In the 16ft. class there were six starters. Kalitan took the lead at the start and was never headed, beating Raccoon by 2m. 9s. This is Kalitan's first win. Raccoon and Ugly Duckling put up a great fight all over the course for second place, Raccoon finally winning by 5s.

While Ugly Duckling and Raccoon were having a luffing match in under the neck Gee Whiz and Cyclone were making for the line, and it looked as if one of them would land second money, but the other two kept off just in time to win by a few seconds. The summary:

Raceabouts.	
Indian, J. Laurence	1 13 53
Pompilia, R. Robbins	1 14 22
Runaway Girl, H. Tweed	1 14 40
Darthea, E. B. Lambert	1 15 35
Sally V., L. F. Percival	1 20 10

16-Footers.	
Kalitan, D. H. Follett	1 12 58
Raccoon, J. D. Irving	1 15 07
Ugly Duckling, C. F. Lyman	1 15 12
Gee Whiz, F. G. Macomber	1 15 55
Cyclone, R. Wiggan	1 16 07
Mocassin, J. D. Irving	1 21 02

Cohasset Y. C.

COHASSET, MASS.

Saturday, July 6.

THE Cohasset Y. C. sailed a regular club race on Saturday, July 6, over course A. Only two classes started, the handicap class not filling. The wind was light and fluky, shifting from the N.E. to the S.E. A thick fog hung over the course at the start, and Fly in the special knockabout class got mixed up with the regular knockabout class, losing valuable time and the race. Harelda proved to be a light-air boat, defeating the other starters in the knockabout class by a minute. The summary:

Knockabout Class.	
Harelda, A. S. Bigelow, Jr.	2 50 30
Delta, R. B. Williams	2 51 35
Remora, G. G. Crocker	2 51 43
Elcanor, Frank Moors	2 51 55

Special Knockabout Class.	
Fancy, C. W. Barron	2 27 15
Fly, C. W. Barron	2 40 35

Red Bank Y. C.

RED BANK, N. J. Thursday, July 4.

THE fifth annual regatta of the Red Bank Y. C. was sailed on Thursday, July 4. The course was laid between the club house and the Oceanic bridge, and was ten miles in length. The times were:

Table with 2 columns: Name and Elapsed time. Includes Catboats—Class A, B, C, D and Knockabouts.

Duxbury Y. C.

DUXBURY, MASS. Saturday, July 6.

THE fifth race of the season for the 18ft. knockabouts was sailed on Saturday, July 6, in a light S.E. breeze. The summary:

Table with 2 columns: Name and Time. Includes Miladi, Dazzler, Kittiwake, Lobster, Trouble.

The win of to-day for Miladi gives her three firsts this year, Oom Paul having two.

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Off-hand, 200yds. Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, June 16.—The Columbia Pistol and Rifle Club had a large attendance and the greatest shooting in its history to-day. A. H. Pape beat all records with the rifle, placing his 10 shots in the 4in. ring, a feat never before accomplished. His score in detail was 4, 2, 4, 4, 3, 2, 2, 2, 2, 27. It will be seen that 6 of his shots were in the 2in. ring, 1 in the 3in. ring and 3 in the 4in. ring. He had a run of 12 shots in the 4in. ring. This score beats the record, 34, held by F. O. Young, 7 points. He will receive a special Columbia button from the members, as it is without doubt the score of all scores. He will also receive a beautiful cushion with duplicate of target worked on it in full size by Mrs. G. Mannel, she having offered one similar to that presented to Young with his record. Pape fired over 100 shots and kept tab on German points to see how he would pan out in the bund. He made over a 2-point average. He attempted to better the above 27, and succeeded in making 35 with all his shots in the 5in. ring—a feat never done in the club before. On top of all the cheering and congratulations A. J. Brannigan finished his score with his .38 revolver with all his shots in the 5in. ring, thus winning the Cosgrave medal, which has been up for over a year open to pistol and revolver. Brannigan richly deserves the honor and congratulations which continued to a late hour. He immediately put up a gold medal for 10-shot score in the 4in. ring open to pistol and revolver. Mr. Brannigan's score also beat the club record (37, held by F. O. Young), 1 point, and tied Young's 36 with pistol for first honors to-day. A. B. Dorrell was high with .22 rifle, and Capt. Kuhnle at sixty-five years beat all the boys but Pape with fine rifle. Many visitors took part and witnessed the shooting. Weather conditions were favorable. Scores, off-hand shooting, on Columbia target. Pape used his Pope Winchester, and King's powders, with Young's combination of the same:

Table with 2 columns: Name and Score. Lists scores for A. H. Pape, Capt. Fred Kuhnle, F. O. Young, Ed Hovey, A. B. Dorrell, G. Mannel, G. M. Barley, Dr. J. F. Twist, P. A. Becker, A. J. Brannigan.

P. A. Becker 50, 55, 55; F. O. Young 65, 70; G. W. Hoadley 73; Dr. J. F. Twist 55, 82, 86, 89; Dr. H. W. Hunsaker 83, 84, 92. .22cal. rifle, 50yds.: A. B. Dorrell 19, 24; H. Hinkel 29; E. Miller 27, 29; E. A. Allen 37, 41; W. G. Haxe 40, 41; H. Stevens 37, 54, 54; Mr. Heller 84.

F. O. YOUNG, Rec. Sec'y.

Rifle at Shell Mound.

SAN FRANCISCO, June 24.—Yesterday was an ideal day at Shell Mound range. The range was crowded, and some good work was done. J. E. Gorman, of the Golden Gate Club, with a Smith & Wesson single shot pistol, broke the former record held by him of 471 in 50 shots at 50yds., Standard American target. His score was 475. By 10-shot strings, 95, 96, 95, 95, 94. This is marvelously fine work, as the shooting is done in the open, and the marksman has to study both light and wind.

Assiduous practice for the great national bund shoot next month is the order of the day. A most successful festival is assured, and the array of prizes donated by our citizens is a credit both to them and to the bund. Many dozens of prizes have an intrinsic value of from \$100 to \$1,000 each. Scores yesterday: San Francisco Schuetzen Verein, monthly bullseye shoot: F. Hensel 100, D. Salfeld 135, L. Bendel 365, J. Gefken 416, F. Brandt 459, J. Horstmann 560, H. Stelling 571, Capt. J. Thode 600, R. Stettin 601, J. Utschig 615, W. F. Garms 633, J. Beuttler 710, F. P. Schuester 735, H. Meyer 773, A. Pape 780, F. Bockmann 806, Alec Pape 820, W. Gindemann 831, C. F. Thierbach 839, G. H. Bahke 910. Germania Schuetzen Club, monthly bullseye shoot: R. Stettin 178, J. Gefken 278, W. Doell 303, E. Brandt 330, C. M. Henderson 445, H. Zecher 450, D. B. Faktor 500, F. P. Schuster 533, D. Salfeld 700, J. F. Bridges 781, L. N. Ritzau 786, L. Haake 806, W. Goetze 845, H. Schwieger 905, J. Utschig 920. Norddeutscher Schuetzen Club, monthly medal shoot: First champion class, F. P. Schuster 440; second champion class, not won; first class, D. Salfeld 407; second class, L. Brune 378; third

class, W. Doell 380; fourth class, H. Sethmann 324; best first shot, D. Salfeld 24; best last shot, W. F. Garms, 25.

Red Men's Schuetzen Company, monthly medal shoot: Champion class, William Dressler 402; first class, Capt. Grieb 311; second class, J. A. Mohr, 375; third class, H. Schult 326; fourth class, D. Tamke 256; best first shot, C. Oldag 24; best last shot, J. A. Mohr 23.

Golden Gate Rifle and Pistol Club, semi-monthly handicap: A. Gebret 227, 229; D. B. Faktor 214. Gold medal—W. F. Blasse 192, 203; M. F. Blasse 190, 203, 214; B. Jonas 209, 206, 214, 218; C. M. Henderson 224, 223; J. B. Bridges 200. Silver medal—F. Fay 171, 191, 191, 180; E. L. Reimenschneider 193, 190. Pistol, handicap—J. E. Gorman 95, 96, 95, 95, 94; W. F. Blasse 80, 81, 81. Silver medal—M. J. White 86.

SAN FRANCISCO, July 1.—Weather conditions were fine yesterday at Shell Mound range, and the shooting stand was crowded with riflemen. Many marksmen, who seldom handle the rifle any more, were on hand practicing for the coming big bund shoot.

F. E. Mason, who has been doing fine shooting of late, made in a practice score in 10 shots on the regulation point target, 29 points out of a possible 30, a marvelous score. Scores of the day: San Francisco Schuetzen Verein, medal shoot for July—Champion class, D. B. Faktor 451; first class, R. Stettin 412; second class, Henry Stelling 404; third class, Dr. F. H. Cranz 400; fourth class J. Beuttler 369; best first shot, D. B. Faktor 25; best last shot, D. B. Faktor, 25.

Germania Schuetzen Club, monthly medal shoot—First champion class, F. P. Schuster 223, 214; second champion class, Charles Thierbach 203, 198; first class, Henry Stelling 211, 200; second class, L. N. Ritzau 210, 204; third class, William Doell 217, 195; best first shot, F. P. Schuster 25; best last shot, F. P. Schuster 25. Norddeutscher Schuetzen Club, monthly bullseye shoot—R. Stettin 303, F. Rathjens 245, F. P. Schuster 424, L. N. Ritzau 425, August Hohmann 575, John Gefken 608, Capt. John Thode 752, William Gindemann 736, John D. Heise 873, Henry Meyer 912, A. Mocker 990, Herman Huber 999, Otto Lemcke 1015.

Swiss Rifle Club, monthly bullseye shoot: prizes were secured in the following order—F. Vautier, Charles Bachmann, A. Gehret, A. von Wyl, A. Monotti, J. Leeman, A. Studer, A. Furrer, F. Baumgartner, J. Scheibli, P. Croce, F. Suter, E. Bacota, A. Huguenin, B. La Croix, R. Hauser, H. E. Chollet, A. Grandjean, George Orsi.

Swiss Rifle Club, monthly medal shoot—Champion class, A. Gehret 433; A. von Wyl 466; first class, A. Studer 404, R. Hauser 388, J. Scheibli 369, G. Orsi 369; second class, P. Croce 356, A. Monotti 355; third class, Charles Bachmann 325, Joseph Furrer 302, E. Bacota 297, B. La Croix 286, Edward Suter 287, H. E. Chollet 255.

Golden Gate Rifle and Pistol Club, rifle, handicap—Dr. L. Rodgers 224; O. Bremer 200; F. E. Mason 223, 224, 227; A. B. Dorrell 217; D. B. Faktor 225; gold medal, J. Kullmann 209, 201, 199; M. F. Blasse 202.

ROEEL.

Visible Traveling Projectiles.

Mr. D. C. Beaman of Denver, Colo., has recently procured a patent for visibly traveling projectiles. The invention is thus described in the patent:

"The improvement consists in making the projectile visible while traveling through the air.

"To be more specific, the improvement consists in providing the projectile with a composition or substance capable of ignition from the powder or other explosive of the driving charge or by friction with the inside of the barrel of the gun or other firing implement or machine, or by friction with the air, whereby a visible smoke or streak, either dark or luminous, is produced during the passage of the projectile from the gun toward the object aimed at, or a substance which will by friction alone diffuse, disperse, emit, or give off a dust or other substance sufficient to make the path of the projectile visible.

"My object is to enable the gunner and others to readily observe whether the shooting is too high or too low or too much to the right or left of the object, as well as any other inaccuracies of aim, and better enable the marksman to correct his aim and regulate the amount of explosive to be used, especially in firing at moving objects or targets, animate or inanimate.

"I accomplish the aforesaid object by coating the shot, bullet, or other form or kind of projectile with a substance or compound that emits or diffuses fumes, smoke, or vapor of more or less density during comparatively slow combustion after ignition either by the heat or flame of the explosion produced by the discharge of the gun or after ignition by friction with the bore of the gun or with the air or otherwise, or by friction with the air without ignition."

While the patent covers all kinds of projectiles—cannon balls, shells, rifle bullets and shot—Mr. Beaman claims it interests bird and inanimate target shooters especially. It is well known that at times a shooter will score a number of misses for which he cannot account, and this invention is intended to inform him where he is shooting.

The patent gives the formula of the compound in chemical terms, and it is not expected that the coating of an ordinary charge of shot will add perceptibly to the cost.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, July 7. Conditions, 200yds., off-hand, at the German ring target.

Gindele was declared champion for the day with the fine score of 230. The weather was fair; thermometer, 86, wind, 8 to 5 o'clock, strong and gusty:

Table with 2 columns: Name and Score. Lists scores for Gindele, Payne, Hasenzahl, Speth, Drube, Strickmeier, Nestler, Uckotter, Roberts, Lux, Hofer, Topf, Weinheimer, Hoffman, Surkamer.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

July 10.—Leominster, Mass.—Contest between teams of the Leominster, Fitchburg and Gardner gun clubs. July 10-11.—St. Paul, Minn.—Sixth annual tournament of the St. Paul Rod and Gun Club, at Inter-city Shooting park; \$340 added money. July 17.—Columbia, Mo.—State Amateur shoot, under the auspices of the Columbia Gun Club. W. A. Vivion, Sec'y. July 18.—Williamsport, Pa.—All-day tournament of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y. July 24-25.—Detroit, Mich.—Third shoot of the Michigan Trapshooters' League, under auspices of the Pastime Gun Club. John Parker, manager. July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenicke, Sec'y. July 30-31.—Bowling Green, O.—Target and live bird tournament of the Bowling Green Gun Club. John H. Lincoln, Sec'y. Aug. 6-7.—Brantford, Can.—Target tournament of the Brantford Gun Club. A. B. Cutcliffe, Sec'y. Aug. 8-9.—Lafayette, Ind.—Fifteenth annual tournament of the Lafayette Gun Club, Amateur. John Blistain, Sec'y. Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; \$1,000 in money, trophies and medals. F. W. Heubach, General Manager.

Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas. Aug. 23.—Pleasant Hill, Mo.—Fifth annual sweepstake and merchandise tournament of the Pleasant Hill Colored Gun Club. T. H. Cohron, Sec'y.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw.

Sept. 23.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association. Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y.

Sept. 23.—Richmond, Va.—Tournament of the Virginia Trapshooters' Association, under auspices of the West End Gun Club.

Sept. 15-16.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Cafe and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 10-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 16-19.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; \$1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York. Regular entries close at 6 P. M., July 16.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail on such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Shooting Times (England), in an editorial comment on the American team, guns, loads, etc., says: "The Anglo-American clay bird contest at Hendon ended, as we anticipated, in a runaway victory for the Americans, the home team being quite outclassed from start to finish. The American team, it was admitted by Mr. Paul North, was composed of the finest clay pigeon shooters that America could produce, and every individual was provided with the best weapon, as well as the most perfect ammunition for the purpose. Their guns were 12 bore, choked to 1 1/2, weighed 8 pounds or more, with 31 to 32 inch barrels, while their cartridges, 3/4 to 3/8 inch cases, loaded with 1 1/4 ounces of No. 7 1/2 shot, were wadded with the very best material that has ever been seen in this country. The inch or so of soft wads in the cartridge was to prevent the escape of gases into the shot charge when leaving the muzzle. Eight Americans shot with Parker guns, two used Winchester "pump" guns, and two shot with guns made by the Hunter Arms Co. The English team used guns by Cogswell & Harrison, Greener, Boss, Langley, Boswell, Cashmore, Westley Richards, and Rigby. Apart, however, from the question of arms and ammunition, it must be admitted that the English team were much inferior as marksmen. This is sufficiently demonstrated by the fact that in the first match, which was lost by 65 birds, the British team in as many as 150 instances saved the loss of the bird by the use of the second barrel, thus proving that the second barrel was a most important factor. The American team were, we thought, rather slow and seemed to follow their birds, but there was no doubt about the result when they loosed off. In the great majority of cases the bird was fairly struck and simply vanished in a puff of dust. This result may be explained by the fact that at 40 yards the American guns gave a pattern resembling the top of a pepper-caster, every pellet being within a circle only 14 inches in diameter. This closeness of pattern, of course, speaks more eloquently than words as to the fine shooting of the Americans." It will appeal to the sportsmen on this side of the ocean as a novel idea that the American team members were slow in their time when shooting. A pattern of 14 inches in diameter at 40 yards is also novel. Nevertheless the praise of American guns, ammunition, skill, etc., is merited.

The programme of the Interstate Association's trap shooting tournament given for the Providence Gun Club, Aug. 7, 8 and 9, is now ready for distribution, and can be secured of Mr. R. C. Root, secretary Providence Gun Club, Providence, or of Mr. Elmer E. Shaner, manager Interstate Association, No. 111 North avenue, Pittsburg, Pa. The programme is alike for each day, namely, ten events, of which five are at 15 and five at 20 blue-rocks, entrance \$1.50 and \$2. Headquarters at the Narragansett Hotel. The programme further presents the following general information: "Price of targets (2 cents each) included in all entrances. All purses will be divided according to the Rose system, into four moneys, at the ratio of 8, 5, 3, 2. Guns and ammunition forwarded to C. F. Pope Co., Providence, R. I., will be delivered at the shooting grounds free of charge. First class loaded shells will be for sale on the grounds, and lunch will be served on the grounds. The Interstate Association's rules will govern all events. The grounds will be open for shooting all day Tuesday. Targets 1 cent each. The Providence Gun Club will give to the seven high average amateurs shooting entire programme: First, \$25; second, \$20; third, \$15; fourth, \$10; fifth, \$5; sixth, \$3; seventh, \$2. To the four high average paid representatives shooting entire programme: First, \$20; second, \$15; third, \$10, and fourth, \$5. To all of the shooters who will remain over until Saturday, Aug. 10, the Providence Gun Club will give a complimentary Rhode Island clambake at Field's Point. This dinner will differ from the one two years ago, as it will be given in the day time, no electric lights. From the dinner we will continue down the river to Crescent park, where you will get your money's worth. No mistake."

The following telegram was received from Mr. Edward Banks on Tuesday afternoon of this week, immediately, we presume, after the American team had lauded at Boston: "We have just arrived with all on board the Cestrian well. Powers, Merrill and Elliott stayed in Europe, and will return later. The weather since we left Liverpool has been most inclement; rain, winds, fogs and extreme cold making it almost a midwinter trip in midsummer. We celebrated the Fourth of July in good shape, our skipper, Capt. Thomas, aiding us in our efforts. One of the attractions on that day was a shooting exhibition, which made noise enough for anybody. On the fifth we sighted an iceberg, and at night the thermometer dropped to forty, making three blankets not enough to keep off the shivers. We have had fog more or less for half the trip, and everyone is now well acquainted with the sound of the Cestrian's whistle. The boys are all in good shape and simply delighted to be back home again."

In the ten man team contest on the grounds of the South Side Gun Club, Newark, Saturday of last week, between the South Side Gun Club and the Bowling Springs Gun Club, of Rutherford, N. J., the former won by a score of 211 to 210, out of a possible 250.

Under date of July 8, Capt. J. A. H. Dressel writes us as follows: "Assuming that the friends of the American team like to keep posted as to what they are doing, I would say that the team sailed on the Cestrian and are due in Boston on the 9th or 10th inst. Mr. Powers is in the hospital with a light attack of typhoid fever, and Mr. Merrill remained behind to look after him. Mr. Elliott has gone to Belgium to shoot pigeons. From a confidential source I am satisfied that they are all glad to return, they being either homesick or worn out. They have arrived at the unanimous decision that America is good enough for them."

The Lafayette (Ind.) Gun Club has issued the programme for its fifteenth annual tournament, to be held on Aug. 8 and 9. Shooting commences at 9 o'clock. There are fourteen events on the programme for the first day, at 10, 15 and 20 targets; entrance \$1, \$1.50 and \$2. There are ten events for the second day, of which No. 9 is at 50 targets, \$5 entrance, for the Badge shoot, open only to Indiana shooters. Four moneys in each event, and four moneys for high averages for the entire programme.

The communication from Capt. J. A. H. Dressel, published elsewhere in our trap columns, will be read with keen interest by the trapshooters and other sportsmen of America. It announces a repetition of the conditions which governed the Anglo-American medal match. Also a reception dinner will be given to the team, the particulars of which are also mentioned by Capt. Dressel in his communication.

According to the press reports, if the American team had remained abroad another week or two, England would have been annexed to the United States. As the matter now stands, Britannia only lost a large part of her personal property.

Owing to the hot weather Mr. J. S. Wright has decided to postpone his shoot, fixed for July 10, at Interstate park. BERNARD WATERS.

The Anglo-American Match.

The Impressions of a Spectator.

I SHOULD like to be allowed to record my impressions of the Anglo-American match which took place at the Middlesex Gun Club grounds at Hendon last week. I confess that I was among those who at one time thought the conditions of this contest were more or less even, but I was convinced during the early stages of the struggle that my opinions were hardly well founded. It is not my intention—and I wish to state it clearly at the outset—to underrate the marvelous skill displayed by our visitors, for, in a large measure, the contest was one of skill, but it was skill backed up by other conditions, to which I think attention may with profit to all be called. Not only were our gunners outclassed at having to meet a body of shooters who, while being described as sportsmen, may also be described as experts, if not professionals, at their business. They were the pick of seventy million people, and were men who probably fire off more cartridges in one month—perhaps in one week—that some Englishmen fire in a year. Our guns were also outclassed, and our cartridges distinctly so. The birds were thrown at a pace and at a distance which to my mind beat not only gunners but guns, and I am perfectly satisfied that clay-bird shooting of the type displayed by the Americans can no longer be classed as an auxiliary to game shooting, but a distinct sport of itself, necessitating special weapons and special loads. You were good enough last week to illustrate the difference in the size of the cartridges used. I take it that the two illustrations represented the extremes, but in no case did our American visitors fire the same load as the Englishmen, and although many persons thought that a match would be arranged in which both Englishmen and Americans would use our guns and our charges, they were disappointed to find that no test of that kind took place, and consequently there is no datum as to what the result of such a match might be. The probabilities are that the Americans would have won by reason of their greater practice, but I am satisfied that the distinction would have been less marked. Opinions will necessarily differ as to whether clay-bird shooting will go down as a sport if it is to be made a sport entirely its own, necessitating, as I have previously observed, special guns and special cartridges. When it was introduced it was, I believe, introduced as an auxiliary, and was recommended to game shooters as a means of practice during the dead season, fitting them to use their game guns and game charges with better effect in the field. Whether it has done this I do not know. Time alone will prove whether shooters will divide themselves into two distinct classes—game shots and clay-bird shots—but I am convinced that no further matches will take place under conditions such as we saw them last week.

There are many lessons which, as you foreshadowed, can be drawn from the contest in question, and the greatest one, I think, will be found in cartridge loading. Apart from all other considerations, it will be admitted that there is a superiority in American cartridges, principally in the wadding, this being so beautifully adapted as to provide a cushion between the shot and the powder, and preventing any escape of gas in the shot to scatter it and make the pattern wild and irregular. I saw some guns plated, and the pattern given was almost faultless; due not so much to the guns, seeing that in some instances they were very cheap ones, but to the method of loading, and I have ascertained that the cost of these cartridges is far beyond anything paid by the best English sportsmen. I have long been convinced that cheap cartridges are a mistake, and, although as much as 50 per cent. more may be paid to get exactly what is wanted, I am convinced that costly cartridges would be cheaper in the end, inasmuch as more kills would be recorded with the first barrel. As Mr. Paul North rightly observes, the Englishman chucks one of two barrels away, usually the first, and steadies himself with the second; but he has in consequence to rely on a diminished chance, seeing that the bird is further away and the pattern less deadly. I think this much is proved by the use of smaller shot, which implies that our visitors believe in literally, if I may use the term, mobbing the quarry, and giving it no possible chance of escape.

It does seem to me very singular that in view of the columns, almost volumes of matter which have been written by so-called experts on cartridges and cartridge loading, we should have to wait for a contest of this kind to give us practical lessons in what our experts all along pretended to fully understand and know so much about. In almost all cases the wads occupied nearly, and in some cases more than, an inch of the case, and moreover, were a size larger and forced into the cartridge case. On examination I found their wads to be made of pure wool, while ours are hard and cut from something which I am not sufficiently versed in the subject to be able to describe; but the results were so certain that I am certain, too, that we are on the eve of a change in cartridge loading, not only for clay-bird shooting but for game shooting also. Whether this will necessitate a lengthening of the shell, or whether the same results can be secured in the same space, is a matter for experience rather than opinion. It seems that our visitors acquitted themselves equally well at live-bird shooting, and as in this a 3in. case is usually used, I assume that we shall see the effects of better loading very quickly in this branch of sport—if such it may be called. The question of one versus two barrels solved itself, and I cherish a hope that at the next championship meeting single barrel contests will be introduced; but I would suggest that unless heavier guns and longer cases are used, the birds should be thrown a shorter distance, and the distance from the shooter to the trap diminished also, for I take it that a long run of kills is what everybody wants, and this, I am convinced, quite impossible under prevailing conditions.

There is one other matter which I would like to touch upon, although I feel some delicacy in so doing; I refer to the kind of liquid fortification necessary for good shooting. No man begrudges a clay-bird shot his proper measure of nourishment, but I certainly think that tea and ginger beer are more conducive to sustaining skill behind the gun than the more pungent refreshment usually indulged in by the average British trapshooter. It is evident that the very highest results were aimed at by our visitors, and there was not lacking, as far as I could see, anything on their part to secure that result, even though it entailed a good deal of self-denial in what are held to be the good things of this life.—A. B. C. in Shooting Times.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

WESTERN TRAPS.

Missouri State Amateur.

CHICAGO, Ill., July 6.—Shooters of the middle West should bear in mind the eleventh annual tournament of the Missouri State Amateur Shooting Association, which will be held at Columbia, Mo., July 15, 16 and 17. Mr. W. A. Vivion, secretary of the Association, lives at Columbia, and will answer any inquiries. The Columbia Gun Club has a membership of thirty-five, all good fellows, and each one of the members will be glad to see visitors. The tournament is strictly amateur, professionals not allowed to participate in any of the purses, although they are eligible to shoot for the targets. Dave Elliott, of St. Louis, will trap the live birds and two magautraps will handle the targets. The club adds \$10 for the first high gun each day, and \$5 to second high gun. Rose system of division obtains, and there are to be four moneys.

Bowling Green.

The Bowling Green Gun Club, of Bowling Green, O., will hold an amateur tournament July 30 and 31 at targets and live birds, magautrap, Sergeant system. Live sparrows and live pigeons also. Mr. John H. Lincoln is secretary of the club, and the club will welcome all visitors of amateur tendencies. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Chicago Gun Club.

Chicago, June 29.—The scores of the Chicago Gun Club follow. Ed Steck was in good form to-day and did the grind act on 103 out of 110 shot at. Visitor Boltman did good work with his new gun. Harry F. Carson, formerly a member of this club, has not forgotten how to hold. About three years since he shot at targets. The club will have larger attendance now, as the Saturday half holiday will be taken advantage of by some of the members that are employed by large firms that do not shoot targets, and object to giving others a chance. Five men—Buck, Steck, Bowles, O'Brien and King—won once in the monthly shoot. Weekly trophy, 25 targets, handicap in targets:

Table with columns: Name, Broke, Hdcp., Total. Includes names like Walters, Bowles, Mack, Mrs. Carson, H. F. Carson, Dr. Carson, Buck, Boltman, Dunbar.

Table with columns: Name, Broke, Hdcp., Total. Includes names like Walters, Mrs. Carson, H. F. Carson, Buck, Boltman, Mrs. Howard, Dunbar, Bowles, Mack, Dr. Morton, Steck, Dr. Burcky, Dr. Carson, O'Brien, Bowles, Buck.

Shoot-off of ties on 14: Steck, 18.....011111-6 O'Brien, 21.....111111-7 Dr. Carson, 21.....101100-4 O'Brien won.

July 6.—The scores of the Chicago Gun Club's weekly trophy shoot follow. Steck was high gun, and Morton won the handicap trophy. Weekly trophy, 25 targets:

Table with columns: Name, Broke, Hdcp., Total. Includes names like Antoine, Dr. Carson, Mrs. Carson, Dr. Morton, A. W. Morton, Dr. Burcky, Morgan, Steck, Cornwell.

Table with columns: Name, Broke, Hdcp., Total. Includes names like Mrs. Carson, Dr. Burcky, Morgan, Quade, Antoine, Dr. Morton, A. W. Morton, Dr. Carson, Steck.

Chas. Antoine wins monthly trophy on shoot-off, with added sweep. BLUE JEANS.

Garfield Gun Club.

Chicago, July 6.—The appended scores were made on our grounds to-day on the occasion of the third shoot of second series in trophy shoots.

The day was an unpleasant one for shooting, owing to a strong and gusty wind from the rear, making the targets fly any old way. Nevertheless some good scores were made. Hellman and Ford tied for Class A medal on 24, W. A. Jones won Class B medal on 22, and C. H. Kehl won Class C on 8.

The attendance was the smallest of the season, owing to our big celebration shoot only two days ago, and the boys' guns have not had time to cool off yet.

Third trophy shoot, second series, 25 targets:

Table with columns: Name, Broke, Hdcp., Total. Includes names like J. D. Pollard, T. Johnson, A. McGowan, P. McGowan, L. Thomas, N. H. Ford, Dr. Meek, C. H. Kehl, A. Hellman, W. A. Jones, A. Marshall, S. E. Young.

In a team shoot between six-man teams of the Garfield and La Grange gun clubs, Garfield won by 6 targets. Each contestant shot at 25. The scores were:

Garfield—Dr. Shaw 21, J. S. Boa 22, T. Hicks 22, C. P. Richards 23, A. Hellman 21, N. Ford 22; total 131. La Grange—N. P. Northcott 25, A. E. Sweeney 20, J. J. Ellis 22, F. I. Ellis 22, R. B. Adams 18, R. McMullen 18.

Pleasant Hill Colored Gun Club.

PLEASANT HILL, Mo.—The fifth annual sweepstake and merchandise tourney, open to all colored shooters, will take place at Pleasant Hill, Mo., under the auspices of Pleasant Hill Colored Gun Club, on Aug. 23.

All colored shooters should begin to try and arrange to be here on that date. Those not wishing to enter sweepstake events can have a grand day's sport entering in the merchandise events, where entrances will be only 1 cent for targets. Shooters can win such grand prizes as guns, revolvers, ammunition, etc., as the manufacturers have been very liberal toward us this year. We expect to see more colored shooters at Pleasant Hill on the 23d than ever was known of before.

The sweepstake events, where there will be added money, will be open to all. This is done for the friendliness that exists between the white clubs of Pleasant Hill and vicinity, our boys being permitted to shoot in their practice shoots, and welcome to attend some of their all-day shoots.

Programmes will be out in a few weeks, and may be obtained by addressing T. H. Cochran, Sec'y, Box 345.

Towanda Gun Club.

TOWANDA, N. Y., July 4.—The shoot held by the Towanda Rod and Gun Club on July 4 is considered by sportsmen the best meet ever held here.

The two most interesting matches were the 25-target events. In the first, Stroh broke 22, and in the second broke the 25.

In the miss-and-out events, Stroh won the first with a score of 7, and Ryan duplicated the feat in the second event of the kind. Mr. Shaw, of Owego, representing the Scotten-Dillon Tobacco Company, of Detroit, acted as referee.

There were twenty-five shooters, among them being W. H. Stroh and J. W. Ensign, of Pittston; S. D. Reed, Frank Cleveland and C. L. Cooper, of Tunkhannock; Del. Higgins, H. D. La Plant and Wm. Hollingshead, of Sayre; F. E. Strubble, of Athens; L. J. Beecher, of Le Raysville; Fisher Welles, of Wyalusing, Pa.; Mr. and Mrs. L. Brownie, of Abilene, Kan.

Targets were thrown from a magautrap. Fifteen events were shot with a total of 195 targets thrown; of these Stroh, of Pittston, broke 164, and F. D. Montayne, of Towanda, 160. The first thirteen events are summarized as follows:

Table with columns: Name, 1-15. Includes names like W. H. Stroh, F. D. Montayne, Del. Higgins, Jay Ward, L. Brownie, Geo. McCabe, S. D. Reed, F. Welles, Wm. F. Dittich, J. W. Ensign, F. Cleveland, W. Hollingshead, C. L. Cooper, G. L. Ryan, Geo. Curran, Porter Gregg, W. Shiner, F. E. Struble, M. Shores, H. D. La Plant, L. J. Beecher, R. Driscane, R. B. Kerriek, Mrs. L. Brownie, O. Mayer.

Millbrook Gun Club.

MILLBROOK, N. Y.—The Millbrook Gun Club held an all-day shoot on July 4. The main event, a 100-bird race, was for the championship gold medal of Dutchess county.

When the hour for starting the medal race arrived, 2 P. M., there were four of the best target shots in the county entered, namely, F. B. Stephenson and G. G. Stephenson, of Amenia; Foster, of Millbrook, and Condit, of Poughkeepsie. When the race was half over it was seen that Tompkins, a novice, of the home club, had a chance to win, and to the surprise of all present he won out in the end with the fine score of 89 breaks.

Mr. Tompkins commenced shooting in February of this year and soon took the lead among the beginners. On Decoration Day his average was about 70 per cent.

One hundred-bird championship medal race: F. J. Tompkins 89, F. B. Stephenson 88, E. J. Foster 86, G. G. Stephenson 76, M. Condit 70, A. S. Tallman 67, J. Sackerson 48, J. Baldwin 44, W. J. Perkins and A. M. Boucher withdrew.

Ten-bird events:

Table with columns: Name, 1-10. Includes names like Tallman, Foster, F. Stephenson, G. Stephenson, Boucher, Tompkins, Baldwin, Condit, Perkins, Sipperly, Hicks, W. Vincent, Cook, Sheldon, B. Vincent, De Witt, Olivet, Stocking.

I. TALLMAN.

Brockton Gun Club.

BROCKTON, Mass., July 4.—The third of the prize handicap series for 1901, inaugurated by the Brockton Gun Club, was shot to-day. The remaining contests of it are July 13, 27; Aug. 10, 24; Sept. 2, 14, and 28. There are ten events, of which Nos. 3, 4 and 5 are at 10 targets, a total of 50, and which are governed by the following conditions: 50 bluebirds per man, unknown angles, handicap birds added as dead. Six best scores out of the ten to count. Each member competing for prizes must begin his score within thirty minutes after arriving on the grounds. Practice shooting to commence at 1:30 P. M.; prize shooting at 2:30. Targets 1 cent. Members only to compete for prizes. Sweepstake shooting optional.

The weather conditions were favorable. No. 7 is the handicap allowance, and No. 8 is the total. The scores:

Table with columns: Name, 1-5, Broke, Hdcp., Total. Includes names like Baker, Wood, Leonard, Lambert, Harlow, Stanley, Maxwell, Pratt, Whiting.

A. F. LEONARD, Sec'y.

Wollaston Trap Club.

WOLLASTON, Mass., July 5.—The Wollaston Trap Club held a shoot on the Fourth. The weather conditions were very good, but only three of the shooters broke more than 70 per cent. of their targets. There were ten events of 10 targets each.

Events 5 and 6, reversed; event 9, 5 pairs; all other events, unknown angles. The scores:

Table with columns: Name, 1-10. Includes names like Prescott, Barry, Baker, Whitmarsh, Paolucci, Elwell, Bates, Bixby, Whiton.

W. M. BAKER.

Bellows Falls Gun Club.

BELLOWS FALLS, Vt.—The Bellows Falls Gun Club held its weekly shoot on the club grounds, Drislain's field, Thursday afternoon. Owing to the extreme heat, there were only a few members out. Dr. Newton and M. Lamb, of the Greenfield Gun Club, were guests. Below are the scores:

Table with columns: Name, 1-5, Events, Targets. Includes names like Dr. Newton, M. Lamb, Gibson, Blakley.

C. H. GIBSON, Sec'y.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

IN NEW JERSEY.

Centerville Gun Club.

Centerville, N. J., July 4.—Herewith find scores of shoot at Centerville Gun Club grounds for to-day. We shall be pleased to have you print our scores in your paper so that the shooters of the country may hear from us occasionally.

Table with columns for shooter names and scores. Includes S V Van Doven, A Hall, Geo Dalley, S T Schenck, W N Servis.

South Side Gun Club.

Newark, N. J., July 6.—There was a large attendance of shooters, many of whom were visitors. The main event was the team shoot between the home club, the South Side Gun Club, and the Boiling Springs Gun Club, of Rutherford, N. J., the home club winning by the narrow margin of 1 target—211 to 210.

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Cape May Gun Club.

Cape May, N. J., July 4.—Last fall we were talking about a gun club up here on the golf club porch, and now you see it is a reality. And it is not separate from the golf club, but really a part of it, "a club within a club," you know.

This afternoon there was a sound of voices from the red room. After a while a group of young men emerged and announced that a gun club was organized on a permanent basis. W. J. Allison is president and George D. McCreary, Jr., secretary and treasurer.

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Forester Gun Club.

Newark, N. J., July 4.—An interesting programme was offered at the shoot of the Forester Gun Club to-day. Lunch was served at noon. The weather was fine, but warm. The merchandise was won by Tighe and Brant. The shooting was much easier than usual on account of the ground improvements.

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Mississippi Valley Notes.

THE Piasa Gun Club entertained twenty-six shooters at its annual tournament on the Fourth. Both the A and B Class medals were shot for. F. C. Riehl won the former with a score of 48 out of 50, and E. M. Geddis the latter with 39, after a shoot-off, miss-and-out, with Eugene Gaskins. Nearly two thousand targets were shot, the afternoon being very happily spent.

Table with columns for shooter names and scores. Includes Class A and Class B categories with individual scores.

Dave Elliott entertained a very happy company of patriots on the Fourth at Dupont Park, St. Louis. Both targets and live birds were shot, the following scores being made: The Shelbyville Gun Club gave a finely attended Fourth of July amateur shoot at its splendid grounds, north of that thrifty city.

Schenectady Gun Club.

SCHENECTADY, N. Y., July 6.—Herewith find scores made on the grounds of the Schenectady Gun Club on July 4. The day and all arrangements were perfect, but we were bothered about an hour after commencing the first event. This accounts for a large number leaving without shooting through the programme.

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Staunton Gun Club.

STAUNTON, Va., July 4.—The tournament of the Staunton Gun Club to-day was well attended. Dr. E. F. Wayman was high average for the day with a total of 135 out of a possible 150.

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Auburn Gun Club.

AUBURN, N. Y., July 4.—The annual local Fourth of July sweep-stake of the Auburn Gun Club had scores as follows: Events: 1 2 3 4 5 6 7 8 9 10 11 12

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

American Team Match, Anglo-American Conditions.

NEW YORK, July 5.—It has been agreed that a reception will be tendered to the American team on their return, as a testimonial of our good will and in recognition of the very excellent work which they did in Europe. From cable dispatch, contents of which have been transmitted to you, we know that the American team left London on the 30th ult. They return via Boston, and are due on the 11th or 12th inst. They will be received by a representation of the committee of arrangements, which is composed of Walter F. Sykes, 85 Water street; Elmer E. Shaner, 111 Fourth avenue, Pittsburg, Pa., and J. A. H. Dressel, 320 Broadway.

NEW YORK, July 3.—We have arranged for a friendly match between a team of New Utrecht Gun Club members and the returning American team for Monday afternoon, July 15. Our team will be allowed to use both barrels, but will be limited to 1 1/2 oz. of shot. If enough of our members are present we shall put two teams in against them; each man will shoot at 100 birds. The match will commence upon the arrival of the train at Interstate Park which leaves Thirty-fourth street at 1:50, or Flatbush avenue at 1:54 P. M.

Haverhill Gun Club.

HAVERHILL, Mass., July 4.—The Haverhill Gun Club had a very successful all-day handicap shoot to-day. The attendance was not up to our usual number, which can be accounted for easily, as nearly all clubs in our vicinity held shoots to-day, and nearly all business in our city being suspended for the balance of this week, giving a number of our members a chance to go away on quite a holiday trip and escape the extreme heat of the past week.

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Ossining Gun Club.

OSSINING, N. Y., July 6.—Scores of the Ossining Gun Club, made at the regular holiday shoot, July 4, at live birds:

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

Richmond Gun Club.

SILVER LAKE, Staten Island, July 4.—The scores, made at the Richmond Gun Club's shoot to-day follow:

Table with columns for shooter names and scores. Includes events, targets, and individual scores for various shooters.

THE BRITISH TEAM.

The Scottish-American Match.

LONDON, June 29.—Editor Forest and Stream: You have long since been made acquainted with the outcome of the Scotch-American match, which was shot just one week ago, June 22, at Glasgow.

The morning of the match was brilliantly fine, a pleasant contrast to the weather we had had on the previous days. It is true that it rained—and rained hard—when all the shooting was over, but it did not matter then.

The race was shot under conditions decidedly different from those which prevailed in the Anglo-American match. This time the teams shot in squads by themselves.

The terms of the match were as follows: Ten men teams, 100 targets per man, \$500 a side, known traps and angles, 18yds. rise. As the squads contained four men, three traps were used.

Frank Izzard, a representative of the Schultze Gunpowder Company, was chosen referee, the judges being: For America—Emile Werk and Frank S. Harrison, who alternated.

To D. F. Pride I owe thanks for the copy of the scores herewith. Mr. Pride generously furnishing me with the same.

American Team.

Table listing American team members and their scores: T A Marshall, E H Tripp, R Merrill, J A R Elliott, R O Heikes, J S Fanning, F S Parmelee, C W Budd, Fred Gilbert, W R Crosby.

Scottish Team.

Table listing Scottish team members and their scores: R Faulds, R Campbell, T Simpson, F Inglis, T Murdoch, W Menzies, G Sinclair.

Table listing British team members and their scores: T Muirhead, A Cossar.

J. H. BUTT, CAPTAIN BRITISH TEAM.

Table listing W Brand, Broxburn, with his score.

The American reserves in this match were B. Leroy Woodard, of Campello, Mass., and H. E. Getchell, of Woonsocket, R. I.

THE SCOTTISH AND AMERICAN TEAMS.

barrel and 11 with his second, his total number of breaks being 99. The Scottish reserves were W. Russell, of Biggar, and D. M. Kay, of Balfron.

Table comparing American and Scottish team scores by player, showing first and second barrel breaks and totals.

Thus to E. H. Tripp, "the gentleman from Indiana," belongs the honor of making the highest total with one barrel, his second barrel being needed so seldom that he forgot to use it until too late to be effective.

Gilbert and Merrill each scored 100 flat, but Fred found it necessary to use his second barrel 6 times; Merrill needed it badly 8 times.

The "kindergarten squad," Marshall, Tripp, Merrill and Elliott, scored 94, 97, 97 and 97 in its four times at the bat.

Gilbert and Crosby did not encourage the two Scotchmen pitted against them. Gilbert broke his 100 and Crosby broke them all, too, with the exception of his 84th; the low-flying right-quarterer from No. 1 trap.

Crosby vs. Faulds.

Mr. Faulds, of Abington, is considered the best clay-pigeon shot in Scotland, particularly on sharp crossing targets.

The conditions were use of both barrels, 100 targets from the traps used in the team match, and 50 targets from the "Partridge" tower.

The men each shot 6 targets and then sat down, it being a case of "one man up." Crosby shot rapidly, and did not waste much time.

After the above 100 targets had been disposed of, a move was made to the "partridge" tower. This was an erection, protected by sheet iron, behind which were two traps.

For instance: Crosby was up first, and shot at 6 to the left, losing his 1st and 6th; then came Faulds, who broke his first 5, but lost his 6th.

This game was a new one to Crosby, so that his score of 42 out of 50 to Faulds' 41 is to be looked upon as first class.

Faulds is an excellent shot, and a hard man to beat. Had only one barrel been allowed he would have won easily, as he broke 35 with his first barrel from the "tower."

Table showing scores for Crosby and Faulds in ground traps and tower.

Notes.

For the information of the curious it may be as well to state that every match shot here was for "blood," the full amount of the stakes being put up in every instance.

The Scotchmen were generous hosts and good losers. They appreciated good shooting and applauded generously.

It is by no means improbable that the Scotch and English will shoot a match. If they do come together, the American team rather fancies the chances of the Scotchmen.

Chan Powers is better to-day, but will not be out and about for a few weeks yet. His case is one of typhoid fever, but in a mild

form. Dick Merrill remains with him, and both will return to the States later in the summer.

Jim Elliott and his son Fred return on the steamship Canadian, sailing either on July 17 or Aug. 20, according as Jim's plans mature. He is after live-bird matches, and will probably be accommodated.

The balance of the crowd goes aboard the steamship Cestrian at 9 to-night, sailing early to-morrow—Sunday, June 30—morning. We should be in Boston about July 9, and in New York as quickly as possible after landing, so as to get in trim for the G. A. H. at targets.

Heikes has lumbago, but he says he'll manage to get aboard the Cestrian somehow. He wants to get home. And so do the rest of the crowd—they're homesick!

The photograph of the Scotch and American teams is by Agnew & Son, of Glasgow, and is as good a group photo as was ever reproduced.

On my way home I shall endeavor to get from each member of the team on the Cestrian his ideas as to the trip and its results. A compilation of such ideas ought to make some interesting notes for FOREST AND STREAM's trap columns.

Westward ho!

EDWARD BANKS.

Interstate at Sherbrooke.

FOR the first time in the history of the Sherbrooke Gun Club rain interfered with its arrangements—and such a rain! Two days before the shoot a second deluge visited the headwaters of the beautiful St. Francis River, on which the grounds are situated.

In ten hours the river rose 16ft. The magautrap house was 6ft. under water, and 4ft. of muddy water was in the club house.

This was the condition of affairs when Mr. Shaner, the Association's manager, arrived on Saturday morning. Saturday and Sunday were fine days, and the water fell almost as fast as it had risen, so that by hard work things were gotten into shape.

Monday was fine, but warm, and the shooting began with fifteen entries, which comprised all who shot through.

Many, whom the club had every reason to expect, were absent. Of trade representatives the club's faithful friend, Ben Norton; F. H. Conover, Leamington, Ont. (Dupont Powder Company), and E. C. Fort, of the Robin Hood Powder Company, were the only ones present. H. D. Bates and E. C. Griffith, winners of the Grand American Handicap, were with us, and will be welcome any time. Messrs. J. Holcombe and E. F. Greenwood are always to be counted on with certainty at Sherbrooke, and of such is the Kingdom of Heaven. To Messrs. Biddell and Lovelace, of Newport, Vt., the club is greatly indebted for their interest. There is a new club, but if they are all as good men they deserve success.

We hope to be able to return their visit at an early date. Messrs. Galbraith and Cleghorn, of the Westmount Gun Club, stayed right through, and we only wish there were more like them. The town is theirs.

Messrs. Moreau and Beaupre, of St. Hyacinthe, are old friends, and we only hope their club will give us a chance to shoot with them before the summer is out. One of the nicest shoots we ever went to was given by them two years ago.

Of the home club ten men shot all they could, and worked the rest of the time. Three good men were missing—Kirkpatrick, Matheson and Inglis—but they couldn't help it. They were flood-bound.

First Day, July 1.

Table with columns for Events, Targets, and names of participants with scores for the first day of the shoot.

Heavy thunder storms caused frequent cessation of firing along the line on Tuesday, but the enforced idleness was enjoyed by the good-natured crowd in the club house, and no one got wet.

Second Day, July 2.

Table with columns for Events, Targets, and names of participants with scores for the second day of the shoot.

In the merchandise series, 12 targets, re-entries unlimited, Griffith won first on both days, after long and interesting shoot-offs. As there were twenty-eight prizes for the two days almost every one got something, and about all there was to shoot for was precedence and choice.

E. C. Fort and Robin Hood powder combined resulted in the longest straight—68.

The club took the visitors for a trolley ride Monday evening. The car was converted into a Buffalo lodge room, and the initiation of four candidates netted \$1.60.

F. H. Conover is the honorable holder of the Royal Humane Society's medal for saving life, as well as two others received on different occasions during his twenty-three years' service as a lighthouse keeper. Mr. Conover is an artist and writer of considerable ability, and as a shooter and sportsman also shines.

Mr. Shaner says the shoot was all right. His presence certainly atoned in a great measure for the absence of the friends who were unavoidably detained.

There wasn't a kick nor a disputed target in the whole two days, and the cashier turned over the accounts correct to a cent. We hope you will all come again. Jos.

South Dakota Shoot.

STOUC CITY, S. D.—This great young State seems a little late in the season in holding its tournament. When the time approached for holding this meeting it was found necessary to reorganize the gun club. All those who now compose the club are new blood and have had little or no experience in conducting a tournament.

Two things were somewhat against the shoot as to large attendance; first was changing the dates set for June 26 and 27, and the other was selecting July 4 for the second date. It would seem that a majority of the shooters have something to keep them at home on the Fourth, and even those who were responsible for the management of the shoot found it difficult to get away from their business, and thus the attendance was small the second day, and when the noon hour had arrived the shoot was declared off, and a few sweeps were pulled off.

The club was fortunate in having a good man in W. S. Doty, of Salem, as captain, and besides him there was another experienced man present, who pulled off his coat and went in to make a full hand, and materially assisted in keeping everything moving along in regulation style, and that was none other than Tramp Irwin.

While South Dakota has thousands of chicken shooters, it does not have so many target shooters as Iowa, and so they get a good portion of their attendance from Iowa and Minnesota. Yet it seems most of these boys had business elsewhere.

Those here were E. E. Aney, Springfield, S. D.; R. H. Chase and F. Campbell, Alexandria, S. D.; H. G. Taylor, L. A. Mikleson and E. E. Mikleson, Meekling, S. D.; L. A. Barr, Akron, Ia.; W. S. Doty, Salem, S. D.; E. D. Trotter, Kinsley, Ia.; W.

Tramp Irwin, Chicago; Fred Slocum, Alcester, S. D.; Fred Dray, Beresford, S. D.

Then there were Messrs. Schwartz, McDowell, Blasdell and Frink, from Luverne, Minn.

The weather conditions were fine—rather warm, slight wind behind the traps.

White flyers were trapped on the Sergeant system. The shooting grounds were the very best, facing north, not a tree nor any obstruction within a mile.

Some splendid shooting was done by Slocum, McDowell and Irwin, each losing 7 targets out of the 150 in the programme. Taylor was not so far behind, losing but 10 all day.

The members got together in the evening and had quite an interesting meeting.

Springfield sent in a bid for the next year's tournament, and F. E. Aney was made secretary, and the shoot given to them. Fred Slocum, of Alcester, was made president; H. G. Taylor, of Meekling, vice-president, and Fred Dray, of Beresford, treasurer. During the meeting a resolution was passed to the effect that in the future no amateur shall be handicapped during the shoot.

First Day.

Table with columns for Events, Targets, and names of participants with scores for the first day of the South Dakota shoot.

Second Day.

Table with columns for Events, Targets, and names of participants with scores for the second day of the South Dakota shoot.

Crookson Gun Club.

CROOKSON, Minn.—The tournament of the Crookson Gun Club, held on June 27 and 28, had a good attendance. In addition to the members of the Crookson Club the following shooters are noted: A. L. Craine and F. H. Staples, St. Cloud; F. E. Trent and F. R. Reickert, Long Prairie; L. L. Iverson, Belmont; George Duis, E. C. Cooper, H. M. Wells, J. W. Boeing, W. B. Wood, T. C. Griffith, A. E. Palmer and E. C. Carruth, Grand Forks; F. H. Sprague, D. C. Moore and M. W. Hostetter, Grafton; L. F. Thielman, St. Cloud.

B. O. Seymour, of East Grand Forks, made the splendid average of 96 in the first seven events shot off Thursday. Out of 105 targets he broke all but 4.

Messrs. Herschy and Bartlett are barred in the division of prize money, as they both represent manufacturers.

The scores were:

Thursday, June 27.

Table with columns for Events, Targets, and names of participants with scores for Thursday, June 27.

Friday, June 28.

Table with columns for Events, Targets, and names of participants with scores for Friday, June 28.

The percentages for both days were as follows: Davidson 93-2-3, Sorenson 88-2-3, Wood 85, Cooper 82-3, Boeing 87-1-3, Reichert 77, Thielman 85, Cramb 90-1-3, Trent 93-2-3, Allen 93-1-3, Stair 79-1-3, Agren 78, Vannett 83, G. Dewey 83, W. Dewey 83, Hill 90-2-3, Sprague 90-2-3, Moore 83-1-3, Hostetter 88-2-3, Bartlett 89-2-3, Hirschy 96-1-3, Seymour 96, Rowe 92, Evander 91-2-3, Robbins 94, Day 73-2-3, Carruth 83-2-3, Duis 86-1-3, Withey 81.

Trapshooters' League of Indiana.

BEDFORD, Ind., July 2.—With an apology for delay, I inclose scores made in the annual shoot of the Trapshooters' League of Indiana, held at this city June 11 and 12. I supposed these scores had been sent to the sportsmen's journals, but the fact is I had forgotten to mail them until now:

First Day, June 11.

Table with columns for Events, Targets, and names of participants with scores for the first day of the Indiana shoot.

Events 2 and 9 of the first day and 3 and 9 of the second day constituted a 100-target race for the diamond medal emblematic of the individual championship of the State League, and was won by Winston.

Event 13 of the first day was an extra event at 15 targets. Event 9 of the second day was the race for team honors, and the medals are now in the keeping of Stipp & Sherwood.

Second Day, June 12.

Table with columns for Events, Targets, and names of participants with scores for the second day of the Indiana shoot.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., July 4.—The scores made at the shoot of the Fitchburg Gun Club are appended:

Table with columns for Events, Targets, and names of participants with scores for the Fitchburg shoot.

PUBLISHERS' DEPARTMENT.

Porter Service on Coaches of Pennsylvania Railroad Trains.

The extension of porter service to the coaches on the principal trains of the Pennsylvania Railroad was begun several years ago, on account of the increasing popularity of the Pennsylvania Railroad standard coach with the American public.

Such Pennsylvania Railroad porters, in addition to the Pullman porters, have been in service between New York and Pittsburgh on Western trains leaving New York at 9:25 A. M., 1:55 P. M., 5:55 P. M. daily, and Philadelphia at 8:40 A. M. and 12:25, 4:30 and 8:50 P. M. daily, and leaving Pittsburgh at 3:7:30 and 8 A. M. daily; also on train leaving New York at 10:10 A. M. week days for Washington, and train leaving Washington at 10 A. M. week days for New York.

Recently they have also been placed in service between Pittsburg and Indianapolis and Chicago via the Pan-Handle Route, on trains leaving New York 1:55 P. M., Philadelphia 4:30 P. M. daily, and leaving Chicago 10:05 A. M. and Indianapolis 2:55 P. M. daily.

Pennsylvania Railroad porters have just been assigned on the Washington and Buffalo Day Express, leaving Washington 7:50 A. M. daily, and leaving Buffalo 9 A. M. daily. Pennsylvania Railroad standard wide vestibule coaches, containing washstands, have also been added to the equipment of these trains.—Adv.

To California Through Colorado.

By all means the most interesting way to reach California is via Denver and Salt Lake City. We have selected that route for our personally conducted twice a week excursions, planning the train schedule so that all the magnificent Colorado mountain scenery is passed by daylight. These excursion parties travel in Pullman tourist sleeping cars, which are thoroughly comfortable, contain every convenience, and cost much less than the ordinary Pullman sleeper. The rate for a berth holding two, from either Chicago or St. Louis, to California is only \$6. Kindly write for particulars. Inclose 6 cents in postage for our beautiful seventy-two page book on California, full of illustrations.

Address P. S. Eustis, General Passenger Agent, B. & O. R. R., Chicago, Ill.—Adv.

The records of the L. C. Smith gun, manufactured by the Hunter Arms Company, of Fulton, N. Y., have been consistently progressive in the highest competition every year. In 1897 Mr. John Hallowell was high in the record of straights with 154. In 1899 Mr. Charles Young was high with 211 straight. In 1900 Mr. John Fanning was high with 231 straight. In 1901 Billy Crosby was high with a run of 345. All used Smith guns. The most eminent American and foreign guns were represented in the Anglo-American team contest. The highest average was made by Billy Crosby with an L. C. Smith gun.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

SPORT AND ITS CRITICS.

WITH a regular periodicity, which is about once in so often, we have the deliverance of his message by the prophet who aspires to reform sportsmen, to turn them from the error of their ways, and to convert them from killing game. The preacher of the law of kindness to wild animals may not show any marked solicitude as to what may be the Divine view of his methods of pursuing and reducing to possession the almighty dollar; but he is extremely concerned about what he thinks is the Divine view of the sportsman who pursues and reduces to possession the quail and the grouse. He is always cock-sure that he knows just what the Divine view of this is, and he proclaims it with manifest conviction that he has a call to tell his fellow men all about it. One of these writers, in a periodical intended for the instruction and edification of young people, says:

"If any of the sportsmen who pose before the public with records for having wantonly killed quail, grouse and reed birds, could be made to see nature in the manner God meant they should see it; if they could study the charming domesticity of bird life, or could realize the love that the parent bird bears to its young, they would never kill another bird. Birds do not sit quietly on their nests caring for their young all day; they have just as much work to do as any housewife, and they caress their babies just as often as any human mother."

Unfortunately, sportsmen as a rule have no opportunity to study in the spring time the charming domesticity of bird life exhibited by the wild game they pursue in the autumn; but it is open to us all to consider the domestic hen, how devotedly she sits, how solicitous she is for her brood, how she "caresses her babies," and we may draw from the spectacle the same lesson that our writer tells us is that taught by the wild bird. According to the reasoning advanced, if in so contemplating the hen men "could be made to see nature in the manner God meant they should see it," and "could realize the love that the parent bird bears to its young, they would never kill another bird," of the barnyard species, at least. This would make an end at once of poached eggs for breakfast and chicken potpie for dinner; we should simply go on feeding corn to the hens and crushed bone to promote their laying until the chicken tribe covered the earth. If the domesticity of the wild fowl is a reason for sparing the life of the game, that of the domestic fowl should act to the same saving end. If the sportsman is culpable for killing wild birds, mankind at large has no excuse for killing domestic poultry; and a writer who adjures the sportsman to forego his game, yet makes no protest at the slaughter of domestic fowl, strains at a gnat and swallows a camel.

The fact is that these critics of sport are obliged to ignore the whole scheme of creation, which is an universal and continuous bringing forth to a life of which death is the end. Millions upon millions of each distinct form of animated beings have lived their lives and died their death. Millions are living and dying to-day. Other millions will live and die in the ages to come. When it is said that they live their lives, it is not meant that they live out the full span of life; for it is also a part of the working plan of nature that the rate of production of any given species must be checked in another way than by the mere dying of old age upon the completion of the natural span of life. Darwin writes, "There is no exception to the rule that every organic being naturally increases at so high a rate that if not destroyed the earth would soon be covered by the progeny of a single pair. . . . In a state of nature almost every plant produces seed, and among animals there are very few which do not annually pair. Hence we may confidently assert that all plants and animals are tending to increase at a geometrical ratio, that all would most rapidly stock every

station in which they could anyhow exist, and that the geometrical tendency to increase must be checked by destruction at some period of life."

Man, himself a part of the inexorable system of life and death, is also an agent in creating life and destroying it. He breeds countless animals, which when bringing into life he foredooms to death—bees, swine, sheep, goats, chickens, ducks, geese. He brings them into life, millions upon millions, only that he may destroy them. He breeds cattle because they give beef for him to subsist upon; he breeds poultry because chickens are good to eat. And except for Brahmins and vegetarians no one questions that in the view of nature upon which mankind acts in this respect men "see nature in the manner God meant they should see it." It is only when, turning aside from his butchering of droves of cattle and the killing of flocks of poultry, man goes into the woods and kills a wild bird, that these writers favor us with the special revelations they fancy they have of the Divine attitude respecting the provision of meat for the table.

Now a ruffed grouse is good for man's stomach. Man cannot breed the grouse, although he has tried to do so. If he could raise grouse in captivity by the thousand and wring their necks and ship them to market, we should have no word of protest save from the Brahmins and vegetarians aforesaid. But a grouse being good to eat, and man being unable to raise it in the poultry yard, he can nevertheless take his gun and dog and go into the woods where the grouse lives, and if his dog is a good one and his gun is properly loaded, and his eye is keen and his aim true and his nerve steady and the wires in working order between eye and brain and trigger finger, he can down that bird, and his dog will bring it to him, and he will smooth its feathers out and put it in his game pocket; and at night when he gets home and she meets him at the door and asks him what luck, he will hand over that bird and others with it, with a glad smile; and all in good time it will come on the table, and then as for that one particular grouse there before him, that man will be pretty apt to believe that he "sees nature in the manner God meant he should see it"—namely, done to a turn and with some wild grape jelly to go with it—a dish upon which he may with grateful soul ask a blessing, and with quite as much propriety as upon a refrigerated fowl of uncertain age and date of killing from the butcher shop.

Reason, logic, common sense, indicate that the sportsman's view of game as something worth having and worth getting is the right one. Game is a thing good to eat, a part of the earth's produce for the use of man. Even if we class it as a luxury of the menu, and not an essential, its acquirement and use are none the less warranted—luxuries are necessities when one knows how good they are.

Being good to eat, your wild bird must be captured before it can be eaten. "First catch your hare." Game being wild by nature, one may not seize a grouse and chop its head off as a barnyard fowl; it must be hunted with a gun and shot in order that it may be reduced to possession. When a sportsman goes out and shoots a game bird, he is making use of that bird in the way in which we may say with all reverence the Divine plan contemplates that it should be used. This has been the rule since man came on earth. Primitive man killed wild game and subsisted upon it, long before he had acquired the art of taming animals to his dominion and breeding them to kill for food. The rule will continue. So long as game shall be good to eat, so long will it be eaten. The principle that it is right to have game to kill is the basis of the game systems of the world to-day. We protect game. Why? That there may be game. Why do we want game? To hunt it and kill it. In other words, the community, the state, provides for keeping up its game food stock, just as the farmer keeps up his poultry. Wild game bred for shooting and domestic game bred for the axe—it is all one in principle, in practice and in ethics.

The pens which are busied in decrying sport—that is, the sport which consists in the pursuit of game—are enlisted in a hopeless cause. They would quite as profitably undertake a campaign against the killing of domestic fowl. They may fancy in their egotistical obsession that their perverted view is to "see nature in the manner God meant they should see it," but the world never did and will not now take that view of it.

SOME NAMES.

THE name of the "old-wife" duck is very ancient, older, indeed, than the occupation of the country by Europeans; for the Indians before us called it the "old-squaw," and we got the term from them. How appropriate is the name you may know, if you have ever been waiting in your battery at dawn, when the mist lay on the water, enshrouding you as with a curtain, and from beyond the veil—weird and mysterious as sounds coming from unseen sources in the fog always are—there has come to you the loquacious gabble of the old-wives exchanging their early morning gossip.

The name shows that the Indian had an appreciation of humor, when he recognized in the unending habbling of the wildfowl the garrulousness of his old woman. There is the same humor in the West Indian name, "old woman's tongue," which is given to a certain tree whose seed pods played upon by the air are never still. Exciting to a smile too in its way is the West Indian name of a tree whose ripened seed pod explodes with a noise like a pistol, and which is called "the monkey's dinner bell," because when the monkeys hear the seed pod explode they gather to feed on the seeds.

In striking contrast with these humorous appellations are the names of somber significance sometimes given to birds and trees. In the Malayan Peninsula are certain owls which share the world-wide popular ill-repute of the species as birds of ill omen and death; and which are named from the cries they utter. One of these "ghost birds," when it cries in the darkness, seems to say *Charek Kafan*—"Rend the cloth for the shroud." Another says *Toh Ka-tampi*—"Old-man-winnow-the-rice-for-the-burial-feast." And a third calls, *Tumbok larony*—"Nail the coffin." Much more cheerful cries in the night are our own whip-poor-will and chuck-will's-window.

We have in all parts of America place names which are commemorative of the former Indian occupation, and there is one tree name which is extremely suggestive to one who knew the old West and its people. This is the name of the "lodge-pole pine," so called because of the extensive use the Indians made of it in setting up their lodges. The lodge-pole pine is found over extensive areas from which the Indian has long since vanished forever; but the musical name will long perpetuate the memory of the primitive people who pitched their lodges by the cut-banks of the rivers in the valleys.

The New Jersey Legislature in revising the game law omitted to make any mention of the deer, and it has popularly been assumed among the sportsmen of the State that the species was unprotected. But the July number of the *Game Laws in Brief* holds that so far from being unprotected at all, the New Jersey deer is by the statute protected the year around. Deer are not specifically named in the law, says the *Brief*, but are protected by the section of the statute which makes it unlawful to kill any game animal, "excepting at such times as may be permitted in the act." The deer is a game animal, and no season for its killing is permitted in the act; it is therefore protected at all times. We believe that this view advanced by the *Brief* would be sustained by the courts, and if this should prove to be the fact, the protection thus assured to the deer remnant would be gratifying to all who have more sentiment than deer hunting ardor.

Allusion has been made to the work of the American Ornithologists' Union in defining what are game birds, and in securing absolute protection for all species not so classed. The catalogue of game birds as submitted by the A. O. U., and very generally adopted, comprises:

The Anatidæ, commonly known as swans, geese, brant, river and sea ducks; the Rallidæ, commonly known as rails, coots, mud hens and gallinules; the Limicolæ, commonly known as shore birds, plovers, surf birds, snipe, woodcock, sandpipers, tattlers and curlews; the Gallinæ, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and quails, and the species of Icteridæ, commonly known as marsh blackbirds and reed birds or rice birds.

The laws in which this classification is embodied provide that only the species designated shall be considered game birds, and the destruction is forbidden of all other birds, certain ones, such as the English sparrow, crow and hawk, in certain States being excepted. In this most commendable manner the A. O. U. is contributing to popular education and the promotion of a right public sentiment to govern the taking of wild life.

The Sportsman Tourist.

Companions on Outings.

Go It Alone with Your Guide Unless You Know Your Companion from the Ground Up.

On the whole I am inclined to agree with Mr. Avis (in the issue of July 6) in knowing your guide and making him your *Fidus Achates* on fishing or hunting trip. How many trips have been abandoned before completion or made jaunts of misery because of the uncongeniality of the members of the party? You may think you know your friend, but a week in a boat or under canvas will thoroughly disabuse you. There are those who have tramped and paddled together and have been inseparable companions in the woods and upon the waters for years, until one or the other travels the wide river and crosses alone to rest in the shade of the trees, leaving his friend of years to either give up his yearly trips or in future take them alone in company with the guide.

There are such cases, but they are shining exceptions to the rule.

I can imagine no more inharmoniously disastrous procedure than five young fellows starting off on a fishing or shooting trip with a view of keeping in one party. All the chances point to divisions and rows before the party has been in camp twenty-four hours. With a single companion I have had my patience tried. The route being mapped and planned, before two days had elapsed, must that be changed—or a row precipitated.

There are many kinds of companions. The man who has forgotten more about the woods and waters than the guide ever knew makes trouble. While the guide is carefully but surely making his way through the faintly blazed woods will our companion tell him a dozen times that he is off the trail and is going north when he should be going west. Yet the guide smiles and keeps on. From the making of the lean-to and the arranging of the beds of hemlock tips to the frying of the fish and making of the coffee will the guide learn that he is doing it "all wrong."

In fact, nothing that the guide does is really right, and our companion tells him so frequently, and yet the guide smiles and deviates not from the way he has heretofore done and pleased.

The guide who knows every sunken rock, submerged log and deep spring-hole in the lake, will be told where they all are or should be. Our companion will never be in attune with the goings on, invariably wanting to do other than the guide recommends. If the guide suggests and urges fishing up the lake because of most favorable conditions, our friend will surely want to try the stream instead, and vice versa.

Contrariness seems to be his beaten path, and he keeps right in it.

He will sometimes let selfishness crop out, and if there is anything from the best seat in the boat, the driest side of the lean-to, or the lightest load, he is on the alert for all.

He is sometimes given to profanity, not on rare occasions, such as the losing of a big trout after a long fight through some unforeseen cause, when a sudden explosion might be overlooked and pardoned, but he incessantly keeps it up. I remember shooting on a small slough ("sloo") with a chance companion; he in his boat but a hundred feet away from mine, but hidden among the tall wild rice. Well, that poor retriever of his never will reach the dog's heaven if that man's invectives have any weight with the deity who looks after the future of canines. I had one solid afternoon of blood-curdling, crystallized, frozen profanity, and I resolved never to swear again myself. It certainly was a terrible example. It, in this case, happened to be just an afternoon's shooting; a week's companionship with my newly found profane friend would have been insupportable.

Of course in such a case you quickly find out the caliber of your companion and make no further trips with him.

A week in the woods will bring out the weak and the strong points in a companion—cementing or loosening the bonds of friendship already formed.

Mr. Avis' picture of the man and guide is a true one. It is simply a case of to wish and to have. No consultation, no arguments, no disagreements; in fact, "chewing of the rag" is simply an unknown condition. The guide is a reflection of the will of the employer. Quick, respectful, willing, apt and intelligent, he is ever on the alert to do all those things best suited to the occasion and incidentally the comfort and pleasure of the hunter or fisherman. There are many who so thoroughly appreciate the comfort and enjoyment of owning one's guide that nothing will tempt such to go into the woods with a companion.

While along these lines I might relate a day's experience in a boat with a companion. A jolly, good-natured German had many times importuned me to go fishing with him, but I had always managed to excuse myself from the ordeal, knowing him to be a steel-rod-three-hooked-catch-everything-in-sight sort of a fellow. Yet he was, as people go, a good fellow. Fourth of July approached and again he turned up. He showed me a telegram from Lake Osakis, on the Great Northern Railroad, that read of hungry and mighty bass being freely taken. I invented many excuses against going, all of which were met until the situation finally resolved itself into one where I must refuse point blank to go fishing with him and offend him, which I was disinclined to do.

And I went. And such a day! Mein Gott! He fished with two steel rods at one and the same time. He used a spoon with the accompanying three grappling hooks. He used bait in addition, grabbing a handful of minnows from the pail, losing the bulk of them and finally hooking two minnows to each prong of the grappling iron. Seated in the stern of the boat he set his two lines adrift at the same time, tucking a steel rod under each thigh, sitting on the rods practically.

Discounting the situation, I was indifferent as to the fishing and was slow in putting my rod together, when

the man in the stern gave a yell and jumped on his feet, just saving his rod from being pulled into the water by the bass that had struck. The second rod accommodatingly tumbled into the bottom of the boat as he arose, instead of falling overboard and sinking, as it should have done ordinarily.

He held his rod in two hands and jerked that bass for all he was worth, and in doing so the reel fell loose from the rod, dropped into the minnow bucket at his feet, the bass taking out line, the reel meanwhile spinning around in the bottom of the pail. Consternation seized my companion, and in his helplessness he reached out the rod to me. I succeeded in saving the bass for him.

I then read him a lecture on fishing with two rods at one and the same time, but to no avail; and the hook-baiting process having been gone through again both lines were once more in the water trailing fifty feet behind the boat.

Again a strike—on the second rod—and as he grabbed at the rod and jumped I by the merest good luck saved the other rod from falling into the lake. He had been hasty in affixing his reels, for again the reel fell free from the rod. Instead of again handing me his rod to land his fish he this time reached along his rod, bending the tip double, and seizing the line pulled the bass in hand over hand. The line was strong, the three hooks were well down the bass' gullet and there was nothing to do but come along.

It was an exciting day in a boat, especially during the process of casting, when it became a matter of expediency for me to keep well under cover from the swishing hooks.

This was simply an experience, but I had more to blame for it because I went with my eyes wide open.

Some one has said that no boat was ever made large enough to permit more than one man to cast a fly or bait at the one and the same time. I surely agreed with the author of that saying, as I dodged those doubly baited, triple pronged hooks.

To conclude, unless you knew your companion back several generations, go it alone and stick to your guide—and risk being looked upon as selfish and exclusive.

CHARLES CRISTADORO.

The Great Dismal Swamp.

THE Great Dismal Swamp is a region strange and interesting, weird and solitary. It occupies a billowy plain some forty miles in length by twenty-five miles in breadth along the Atlantic seaboard, extending from Suffolk, Va., in a southerly direction, well into the bounds of North Carolina. Its eastern boundary is outlined by certain dune-like elevations in Princess Anne county, Va., stretching from Norfolk, Va., to Elizabeth City, N. C., while its western boundary is determined by a well-defined escarpment known as the Nansemond Shore Line, beginning at Suffolk and continuing to Albemarle Sound, N. C. Its deep shades, great stretches of brake and its very solitude make it a region of interest. To the naturalist and sportsman it has much to offer. In its silent fastnesses, the black bear finds a home admirably adapted to his protection and in every way favorable to his increase. Here, amid the dense growth of underbrush and timber, he may live in comparative safety. And there is perhaps no locality in the whole Eastern United States, of like extent, which can offer a larger bear population than this great morass. The white-tailed deer is also an abundant denizen of the swamp, frequenting the elevated parts. In addition to the deer and bears, there is a big-game feature of a rather unusual nature. The swamp abounds in wild cows. These animals, of a brown color and somewhat smaller than the ordinary cow, having for many years been under the peculiar conditions of the swamp, until they are almost completely specialized, are extremely wild. They are feralized from the herds of the farms adjacent to the swamp and are the descendants of cattle which many years back wandered into the fastnesses and were lost to their owners, finally becoming wild. Being no longer recognized as property, the sportsman may call game all that he may have the prowess to shoot.

Lake Drummond, some ten miles from Suffolk, Va., is the only great body of water in the swamp. It is a beautiful sheet of water, of an oval contour, and fringed with a heavy growth of timber, mostly cypress (*Taxodium*), white cedar and black gum. Its water is of a dark color, owing to the decaying vegetation of the surrounding country, but is suitable to drink, and possesses the quality of remaining pure longer than most other water. For this reason it is often carried to sea by sailors on long voyages.

The characteristic mammalian fauna is of a semi-tropical nature as regards the smaller forms, while there are many tropical plants. Of birds there are not many kinds, prothonotary, hooded and Swainson's warblers and the Maryland yellowthroat being the principal smaller forms. The trees, some of which are primeval, are large and beautiful, while there is a luxuriant growth of ferns and aquatic plants. Cane grows in profusion.

The whole region is one of romantic aspect, and it is a beautiful sight to see Lake Drummond by moonlight. The giant cypresses, with their gnarled, outstretching limbs, stand out in sharp silhouette, and the silvery light on the lake contrasts strikingly with the surrounding country, darkened by the dense growth of timber and tangled vegetation. The shore line appears a black, encircling rim, with here and there the sharp point of a peninsula, interrupting the even aspect and adding ruggedness. From the bog comes the deep croaking of frogs, and sometimes in the canebrakes the noise of some animal crashing its way along. Save for these sounds of nature, the region seems wrapped in an awesome stillness. Myriads of fire-flies send out their glowing lights. And as the watcher looks out upon the lake, he may recall with a thrill Thomas Moore's great poem, "The Lake of the Dismal Swamp." The scene is beautiful, and after a view of it we can well understand how came the impression that inspired "The Lake of the Dismal Swamp."

As a whole, the region is full of natural beauty, replete with scenery of a very unusual nature, and pervaded with an atmosphere weird and romantic.

JOHN W. DANIEL, JR.

LYNCHBURG, VA.

Peculiarities of Indian Ponies.

In the summer of 1885, while conducting a survey in the Northwest Territory for the Canadian Government, I had some interesting experiences in connection with Indian horses, some of which are related here.

There were at that time still a few of those remaining that had been trained by the Indians as buffalo runners. As a general thing the movement of these buffalo runners with a rider in the saddle was that of an easy lope. So easy, indeed, was their movement that a rider was scarcely jarred at all. These intelligent animals were trained to follow the buffalo of their own accord, and in many cases they would do this entirely without the use of the bridle.

It was my good fortune on the expedition referred to to secure one of these well-trained Indian horses. As a saddle horse it was hard to find his equal. But for several weeks he appeared to balk whenever attached to a cart or wagon. It was naturally concluded that the horse had not been used to this kind of labor, and he was seldom called upon to perform it. Occasionally, however, when ascending steep hills and the wagon load proved too great for a single team, one or more of our saddle horses was hitched on ahead of the other team as a temporary assistant. One afternoon another was tried in turn, but in every case big Pinto, our faithful saddle horse and old buffalo runner, refused to pull. He was attached in the usual way by means of collar and traces to the end of the wagon pole and would simply walk ahead without even tightening his traces. Various means were tried to teach Pinto to work in this way. On one occasion where our entire wagon with its contents was in danger of rolling backward into the river, a whip was applied vigorously to Pinto's hide, but without effect. The loss of wagon and provisions in a wild country where it would be impossible to secure new supply would endanger the very existence of our party, so that measures were taken rather more severe than usual to save the load from going backward down the hill. As whipping was of no use a fire brand was made and applied to the horse's belly and also applied to his haunches, but still the brute would not pull a pound. Another of the men mounted his back and a number of times discharged the heaviest rifle, thinking to scare the beast into action. These and other means all failed. Just then a party of Indians came along and informed us that Pinto had been trained to pull only when fastened by the tail. It seemed an inhuman thing, and yet in our desperate condition the plan was tried. No sooner did Pinto find himself properly harnessed than away he went up the hill with his load, and ever after when the services of an extra horse were required Pinto was attached in this way, ropes being tightly wound about his tail and fastened to the wagon pole.

H. G. TYRRELL, C. E.

The Heretic and the Caïman.

On the afternoon of Feb. 27, 1899, I was sitting in a steamer chair under a magnificent mango tree on the bank of the Nechi River—"Where in the world is the Nechi River?" In Colombia, South America. It runs into the Cauca, which is the largest branch of the Magdalena, and bears the same relation to the latter that the Missouri does to the Mississippi. "How did you come across a steamer chair in that out of the way region?" I bought it for 75 cents, in Kingston, Jamaica, on my way down; brought it several hundred miles up stream from Barranquilla on a steamboat, and then up the Nechi in a canoe. If you want to hear about what I did that afternoon, listen, but do not interrupt me.

In the winter of 1898-9 I had a bad attack of la grippe and by the end of January was in poor condition. The doctor said: "What you must do is to go away; to get an entire change of air and everything else."

"Go where?" I asked.

"Anywhere; I don't care where you go so you get away from here. You must get out of Washington."

"Does it make any difference which way I go?"

"Not a bit, only so you go somewhere; and you want to go as soon as you can."

"How would South America do? I could go look at our place down there and see what it is like."

"Why, yes; that's all right. That is the very idea."

"But, remember, doctor, it will be only six or seven degrees from the equator; all sorts of things to eat and water to drink, lots of mosquitoes, canoe travel on the rivers and malaria to suck in."

"It don't make any difference; you will be out of doors most all the time with plenty of exercise. You will be in the woods a good deal, won't you? You're always right when you are there. As for malaria, I will put you up a lot of capsules, two grains of quinine in each, with some pepsi and stuff so they will not upset your stomach, and you can take one every night when you go to bed. That's a capital idea. Good-by; I'll see you again before you go."

I took the doctor at his word. With Col. Dunstan as a companion I left New York on the Atlas line steamer of Feb. 10, 1899 and had the satisfaction of enjoying—or perhaps I should say enduring—the great blizzard of that time off the coast, at sea, instead of on shore among the snowdrifts. We reached Barranquilla near noon on the 20th; left there the next morning at 7 o'clock by steamboat and early in the morning of the 24th got off at Boca del Nechi, the steamer going on up the Cauca. During the day we hunted up some canoe men and engaged them to take us eighteen leagues up the Nechi. Next morning we started at 8:15 o'clock in a large dugout some thirty or more feet long, Dunstan and I with our two trunks, amidship; the captain of the craft in the stern with a paddle and a light pole for emergencies. The crew, consisting of one man, who did the poling, was forward. The river has a rapid current and the water was too high for good traveling, as we had to hug one bank or the other all the while, crossing from side to side now and then to avoid swift water or to get good bottom for poling. At 10 o'clock we stopped for a few minutes in the shade of an overhanging tree while the crew ate a bite of fish and cassava bread. At a quarter before twelve we tied up for breakfast, which was over in half an hour, and we were on our way again. At 7 in the evening we landed at a

house where my companion was known and where we received a hospitable welcome, got a dinner and comfortable quarters for the night. There were plenty of mosquitoes, but we put up our toldos—mosquito nets—and defied them. We had seen little sign of civilization on our way upstream. Now and then one of the usual cane, or split palm, houses with its steep thatched roof and accompanying plantain patch came in sight. Occasionally we passed patches of corn of luxuriant growth—maize—once in a while a few cattle about the bank, but careful about getting in the water, having a wholesome dread of the caimans, the crocodiles, of which there are plenty in all these rivers. I had expected to see many

As my hand closed on the small end of the stock and the three fingers ran through the loop of the lever, a natural restful sort of feeling came over me. I pitched the gun to my shoulder quickly, three or four times, sighting on different objects, all the time with my back to the caiman. "There, I guess that will do," I said; "it feels all right," and wheeling about I threw up the gun, caught sight on the caiman, back of its foreleg, and let go. It was done in an instant, but I knew instinctively when I touched the trigger that I had it, and was not astonished at hearing the ball strike, but then—that huge, apparently lifeless mass—that inert trunk of drift, as it were—suddenly sprang into action that seemed almost

In Muskoka.

TORONTO, July 11.—*Editor Forest and Stream:* Being in Muskoka recently, and while enjoying a smoke and the grand view from the veranda of my friend's house at the head of Muskoka Lake, my attention was drawn to a robin flying past with what appeared to be a large earth-worm in its mouth. The robin alighted on one of the flower beds, and dropping what I supposed to be a worm, made several attempts to strike it, always retreating a few feet before renewing the attack. The unusual method of attack caused me to investigate, when, much to my surprise, I found that what I had taken for a large worm proved to be a small copperhead snake, considerably demoralized from the vigorous attacks of our red-breasted friend. I do not know if it is usual for robins to attack snakes, this being the only instance known to me of their doing so. There is no doubt about the species of the snake, the mark on the head having the appearance of burnished copper.

Had Kipling been in Muskoka in the month of June he would have found a more suitable title for our northern country than "Lady of the Snows."

On the mainland back of Beaumaris Island bushels of ripe blueberries, or huckleberries, could have been gathered during the last week of June; sweet peas in full bloom, and all kinds of vegetables in the hotel gardens, as fully advanced as those grown in the Niagara district.

While in Muskoka admiring the grand and ever-changing scenery, almost unequalled, and certainly not excelled, in the world, the pleasure was marred by the thought that so few of my fellow-creatures were able to take advantage of what nature has provided, and intended for a summer breathing place for the overworked residents of the pent-up cities and towns of this vast continent. I was greatly surprised that comparatively few take advantage of a few weeks' sojourn in this health-giving and vigor-building country, so easy of access, and within the means of those in ordinary circumstances. Of course, a large number of wealthy people have secured islands and sites on prominent points of the mainland, on which they have erected beautiful summer homes under the shade of the forest trees. Many of these homes have wind mills that pump the water into tanks located on the rocks or high lands, from the pressure of which the water is forced into the respective homes with all the facilities of a city system of water works; but where hundreds are located there is room for thousands, without even the semblance of crowding.

I cannot understand how it is that sensible people, during the dog days, rush to overcrowded, expensive and glaring seaside resorts, instead of going to our Northern woods and lakes, where boating, fishing and bathing can be had at the very doors of the hotels and summer residences.

The Muskoka lakes and Georgia bay districts can be reached from many of the large cities of the United States in one day's travel, and from Toronto in four or five hours. Of course to those who would like to go further afield it will require a few hours longer to reach the famed Nepigon trout and Temiscamingue districts.

The ordinary discomforts of railroad traveling have in a large measure been removed by the introduction of improved cars, good roads, fast trains and courteous officials.

We have been told there are sermons in stones; I never before realized the truth of this maxim to the same extent as I did on Sunday, June 30. Standing with my

BRINGING OVER THE PACK CATTLE.
Photo by Cecil Clay.

all these creatures on the way up, but only one or two small ones came in sight.

We got away next morning at 7 o'clock, after our morning "coffee and roll," which, in this instance, consisted of eggs, cassava bread and chocolate. At 1 o'clock we breakfasted on eggs and cassava bread, with claret and water. The events of the day were much the same as those of the preceding one. Parrots flew back and forth across the stream. We scanned the banks and numerous bars for caimans, but saw only two or three, and those little ones not over eight or ten feet long. Occasionally troops of monkeys made a horrible din among the treetops, sounding like the noise of two or three menageries broken loose. It was 7 P. M. when we reached our destination, Matanzas, and glad enough we were to get there. The place is simply a clearing made for pasture for our pack cattle and two or three thatched roofed houses for housing hands and storing goods left for us by the steamboats. After dinner we had a smoke, then went to bed at 9 o'clock. Next morning I was up before 6, had my desayuno, then took a walk, finding it warm in the sun but very pleasant in the shade. After awhile wrote a lot of letters, breakfasted about noon, took some photographs and then made a package of several rolls of film to send home with the letters. Our canoemen took them with them when they went down stream and mailed them on the steamer we had left, as it returned from up the Cauca.

We were met at Matanzas by Harry Dunstan, the Colonel's son, and had to wait there all day to get the pack animals from a pasture across the river and riding mules from L'ana. The pack cattle were brought across four at a time. Ropes were tied around their horns, and they swam beside the canoe until they struck bottom on our side and were driven up the bank. Talking with Harry Dunstan I said I thought it strange we had not seen more caimans on our way up from the Cauca, as I had heard his father say there were so many of them in the Nechi. He then told me "The men say there is a large one comes out on that little gravel beach over there"—pointing to a small, steep gravel beach, or bar, some thirty yards long, on the opposite side of the river, there some two hundred or more yards wide—"every afternoon, suns himself for an hour and then slides back into the water."

"Well," I said, as I settled myself in the aforesaid steamer chair for a comfortable siesta; "he better take care of himself if he comes out there while I am here. I'll get my Winchester after him."

About 3:30 o'clock, as I was dozing in a dreamy, half-awake sort of way, I heard one of the men say, "El caiman!" I started up. "Who said caiman?" I cried. The man ran up. "Señor! El caiman! el caiman!" pointing to the opposite side of the river. I looked across the stream and there on the gravel lay an object of a sort of neutral tint, an unobtrusive, dirty gray color, about as big as a good-sized, sixteen-foot saw log, and apparently large enough to swallow me whole. I had never seen anything quite like that before.

"Hand me the Winchester." Harry went for it. Now "the Winchester" was my beloved, though, therefore, through the columns of FOREST AND STREAM, much maligned, little .73 model .44-40 gun; 20 inches long in the barrel, 17 inches between the sights. The stock is all scored, like an old-fashioned baker's tally, with marks for moose killed by it. I had not used it for several years, however, having on my last hunting trips carried, as a matter of sentiment, another model Winchester, given to me by a dear friend and hunting companion. I never use an elevating sight on a hunting rifle and do not shoot at a mark with a hunting gun. "How far is it across there, Harry? You're a good surveyor and ought to be able to judge distance," I said, as I took the gun.

"Oh, two hundred yards. More than that, I guess," he replied.

"Well," said I, "I have not used this gun for some time; I shall have to look along it once or twice."

incredible. Its motions were quick as electric flashes. It threw its great tail from side to side, turning its head to meet it, up and down from side to side, blood and gravel flying. It reminded me of the little devilchasers that boys light and set off about the streets on the Fourth of July. It was a tremendous exhibition of strength and agility. "Jove!" I said; "if those things are that quick, Harry, I will take precious care how I go near one of them." At last the contortions ceased and the great caiman lay out at full length, dead; but its struggles had taken it so near the edge of the bank that when they stopped, and it lay extended, it rolled off into the water and sank. The "carambas" and "carajos" of the men stopped, and there was silence until Harry said: "He'll presently be floating by Magongué with the buzzards pecking at him."

I handed him the gun, filled my pipe and reoccupied the chair. Presently I heard animated talking, and looking around saw the men, who by this time had each rolled and lighted a cigar or cigarette, assembled in a group, some seated on a pile of pipe, others on the grass; while one stood and declaimed energetically, ac-

OUR HOST, WITH WIFE AND CHILD, NECHI RIVER.

companied his discourse with pantomimic gestures. "What in the world is that fellow talking about now, Harry?" I asked.

"Oh," he replied, laughing, "he is telling them that all day long he had been praying to all the saints in the calendar—at least all he could remember, and especially to his own patron saint—that that beast, that devil of a caiman, might come out on the gravel bar, so he could see the one-armed heretic shoot at it."

"I hope he is satisfied."

"Oh, yes; none of them ever saw such a shot as that before."

friend on the mainland, overlooking Milford Bay, Beaumaris and many other islands, awed by the immensity and grandeur of the scene, I felt I was in God's church and receiving impressions grander and more sublime than obtainable elsewhere, no matter how eloquent. I thought of Dean Swift's sermon on behalf of the orphans, the shortest on record, but effective—"There they are!" it was all there.

RANGER.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

CECIL CLAY.

On Cowanock.

"A TINK we bett'r go back now. The win' she com' blow pr' soon," said Pierre, and as I looked back to windward across the lake, it occurred to me that it was good time to return. The wind had risen steadily, and we had drifted before it faster and faster, until now Pierre, instead of paddling, was holding water, in a fruitless endeavor to check the speed of the canoe, as it ran before the pursuing waves which threatened to break over the stern, into something like a proper gait for trolling. We had almost reached the end of the trolling ground. Beyond us the water was shallower and there was but little chance of our getting more pike.

So I reeled in the line, and as Pierre turned the canoe about, I worked my way forward into the bow, where I knelt down and grasped my paddle in preparation for the fight homeward. The lake, which had lately been almost motionless, rippled here and there only by little breezes, was now one restless, surging mass, heaving until it seemed, as I knelt in the canoe, that the white crests of the waves at times almost blotted out the further shore. The sand beaches that had lately shone in the sunlight as they circled the borders of the lake, were now entirely swallowed up in the tumult of waves that broke white in the distance before us. The two loons which had floated lazily on the quiet surface of the lake, showing their long, snake-like necks and even the greater part of their bodies above the water, seemingly too indolent to exert themselves for any purpose, were now changed utterly. Cry after cry mingled with the dash of the breaking waves and the noise of the wind among the tree tops. At times the note was loud and clear, like the whistle of a steamboat softened by distance. Again it was as a man calling for help somewhere out in the distant tumult, but most often a lower, plaintive and more querulous sound came forth, rising and falling without apparent effort, as if, in the vastness beyond, the spirit of the storm were muttering to itself and bewailing some sorrow too deep for fuller utterance. Again the voice was fraught with laughter, not hearty and ringing, but as of one light-headed or delirious with fever. Truly may the loon be called the spirit of the storm, as floating in the roughest water, he rejoices the more the harder the wind blows and the whiter the crests of the waves as they break beneath him, hooting his joy in wild and piercing cries to his mate, who responds from a distant part of the lake, where her head is occasionally visible, a black speck on the green water about her.

No time was this on Lake Cowanock, famed for its roughness and its ability to raise a big sea in an incredibly short time, to try to cut across the arc of the lake that lay between us and the camp, so, following the shore closely, we slowly battled our way forward against the wind and the waves which disputed our progress. Now and again, as the bow of the canoe plunged down into a breaker, the spray dashed upward and splashed into the canoe in a solid sheet. Soon I was drenched to the waist, but still the struggle continued, until our arms ached. Then we changed sides, thus obtaining a temporary relief. When a wave larger than usual appeared, I stopped paddling for a few strokes, Pierre paddling hard to lift the bow out of water until the wave had passed. Then I resumed paddling.

Slowly we progressed, passing several small headlands that forced us out into the wind, beyond the lee of the shore. At length we reached the last point, the largest of all that lay between us and the smooth water in the bay beyond. It was there that the great final struggle was to come. Even from a distance the point had shown up white with the spray of the breaking waves. Now, as we approached it, the wind blew harder every minute and the white crests of the waves multiplied until the whole expanse about us seemed one mass of breaking foam. Slowly we worked our way along the rocky shores until we left the partial lee of the point and came into the full force of wind and sea. For a moment they beat us back. Our progress stopped suddenly as they burst upon us. Soon, however, taking advantage of momentary lulls in the wind and of several lower waves succeeding each other now and then, we managed to get clear of the land and opposite the end of the point. At times when the wind blew its fiercest, as a wave higher than its fellows came bearing down upon the light boat, I was forced to hold water with my paddle to keep her head up to the sea, while Pierre paddled frantically in order to avoid losing any of our hard won ground. Spray dashed up on both sides of us and enough water came aboard to form a small pool down in Pierre's end of the canoe. I was already soaked to the waist, so that the extra wetting I got did not inconvenience me much, for I had plenty of exercise to keep me warm.

We were gaining slowly but perceptibly. Before long the wind seemed less strong, and fewer whitecaps broke over the bow. Before us lay the smoother water of the bay, with a white sand beach circling about its end, not hidden from sight as the others by a breaking surf, but bordered only by untroubled water undulating slowly to and fro, reflecting faintly the disturbance without and rolling slow, leisurely ripples that broke gently upon the sand at measured intervals. Then the wind seemed to go down and the sea to subside. We glided along without effort now, the change seeming all the greater as our tired muscles relaxed after their long strain. It was only by looking back over the foam-dotted surface of the lake that we could realize that the wind was still blowing as strong as before. Heading straight across the smooth water to where the tent stood out white against the dark background of trees above the beach, we soon reached our destination.

After unloading the canoe and lifting it up on the beach out of reach of the water, Pierre started to clean the fish and I lay down on a big flat-topped rock, from which I commanded a good view of the lake, which stretched before me, round as a cup, except where one point on either hand marked the edge of the bay. The further shore, although it was some three miles away, stood out clear and bold between the water and the sky, one long, flat-topped ridge rising abruptly above the otherwise even tree line. Over to the west and the north, where the shore was lower, rose the tops of the hills about Lakes Bande and the Pobelo. Streaked cirrus clouds stretched hurrying in scattered ranks to the northward across the

bright afternoon sky. The lake was still thickly spotted with flecks of white, and now and then, as the tops of the waves rose and fell, a yellow sand bank, by the outlet at the opposite side of the lake, glittered in the sunlight.

Then, as I watched, the sun crept gradually lower, the clouds drifted away to the northward, leaving a clear, unbroken blue sky overhead. The quiet of evening seemed even here to be stealing upon us. Birds chirped and twittered. Over on the other shore of the bay a white-throated sparrow kept whistling his clear, silvery song of "Peabody! Peabody! Peabody!" as though he wanted all the world to take notice. Out on the lake the white-caps faded away and the waves showed fewer broken summits above the line of the further shore. The noise of the wind among the forest trees overhead died slowly down into a faint rustle which soon was quiet. The sea was fast subsiding. How quickly it can rise and go down no one who has not seen this lake knows. Soon, as the shadows about us lengthened, the last ripple was gone from the water and the lake lay calm in the evening light, unruffled from shore to shore. Here and there the smooth surface was broken by widening rings, where the big pike were breaking as they swam about near the top. Round about the shores the sand beaches again divided by a broken ring of white the dark forests from the glittering water. The big red sun hovered over the hills about the Pobelo.

Then I went in swimming, pike or no pike. The beach sloped so gradually that I found I could walk out a quarter of a mile or more without getting out of my depth. The air was chilly as I came out of the water, but a short run up and down the beach on the wet sand soon put my blood in circulation again. As I dressed the sun went down, a blazing globe of fire in a clear sky, behind the black forest growth of the further shore. The hills stretched to the northward, until they faded away into dimness in the twilight sky. The lake quivered slightly in the half-light, the black edges growing wider as the shadow of the shores deepened. The voices of the birds grew still, and the quiet was soon intense, relieved now and then only by the distant calls of the loons or the faint croak of some heron wending his way homeward along the line of the tree tops on his return from the day's fishing.

There I watched the fading light in the sky and listened to the forest silence until Pierre's call and the smell of frying fish warned me that supper was ready. Then we had supper under the brightening stars and rolled ourselves in our blankets on balsam boughs. Below us at our feet lay the lake, stretching forth into the distance until it faded out in the brightness of the night. We heard the lapping of the water upon the beach, and now and then there came to us down the lake the splashing of an otter at play or of some larger animal wading about in the shallows along the shore.

Then we went to sleep while the loons called to each other from out the starlit silences.

FRANK LAWRENCE.

Charles Marsh.

SEYMOUR, Wis., July 2.—*Editor Forest and Stream:* In your issue of May 26, 1900, on page 405, I read, "The Last Adirondack Moose," from the pen of J. H. R., and here is a record of what he says: "I do not know when he was killed, but I know this: In December, 1858 or '59, I think the latter year, Charles Marsh, a resident of the town of Pine, St. Lawrence county, killed a bull moose." And he adds: "Marsh was one of the old-time woodsmen, though hardly more than thirty-five years old. He hunted, fished, trapped, both for fur, wolves and panthers; he was an ideal woodsman, a dead quick shot. * * * I hear he has now gone over the Divide; for he went West in the early sixties, and I have not seen him since." And now, if you will give me a chance, I will tell you of the last years and days and deeds of Charles Marsh. About thirty years ago he struck our then wilderness town of Seymour, Outagamie county, Wis., about seventeen miles west of Green Bay. He was accompanied by Rube Irish, another old Adirondack hunter and guide. They had a lot of steel traps, guns, deer hides and camp equipage. He soon found too many settlers in our small hole in the woods here and moved eight miles north, stuck up a shack, got a piece of land and tried to till the soil. We were many of us hunters here at that time of necessity, and soon found that Uncle Charlie (as we called him) could do some tall shooting at the many deer that were all around these parts at that time. If a deer was foolish enough to make more than one jump in his sight Uncle Charlie owned him.

If we needed a gun sight, or a rifle cut over, a main spring made, or a watch repaired, Uncle Charlie was the one to whom we went. His word was as good as his shooting. He was also a good hand on the trail of the honey bee, and many was the bee tree located by him.

About ten years ago I wanted to build a new frame barn—we had outgrown our old log barns of pioneer times—so I hired Uncle Charlie to do the job. He came, looked the timbers and all over and took the contract. He was as particular in building that barn as if it had been a fine dwelling house. I said, "Uncle Charlie, you will not make your salt if you take so much pains." "Well," he said, "this may be the last barn I shall build, and I want it done right." It was; and it was also the best one. When he had finished I paid him more than the bargain called for, which seemed to surprise him, but he was much pleased.

While building the barn, and at other times, he gave me much of his past history. He had been a hunter and guide for twenty-eight years in the Adirondacks before coming here, and I have heard him tell all about that moose, which is mainly as J. H. R. states, only more so. He said it was his first moose and last one. The first shot struck the moose square between the eyes, but instead of going down, as he should, he charged Uncle Charlie, who sprang behind a large spruce. "The old bull made the liveliest time of my life for me," he said, "for the next few minutes. Around and around that spruce we went, his horns clattering against the old spruce. I had about made up my mind I was a goner, when he moved away and looked me over, and before I could reload was off. We didn't have the pump gun in those days or I would not have needed to follow the old fellow

nearly two days longer before I got him. I have killed lots of painters, and one time I shot one, and he was so near me that when he made his last jump his tail switched me. But that old bull moose gave me a hard racket, when we were going lickity switch around that old spruce; and I just made up my mind that that was hardly the right end to shoot a bull moose."

About eight years ago Uncle Charlie moved forty miles northward again; civilization was crowding him as it did Daniel Boone. Then the news came that he was sick, and then the news of his death. His last request was that the writer should preach his funeral sermon. They brought him down to his old home eight miles north of here, and I buried him in the little churchyard, there to wait for the last trump of First Corinthians 15:51-53. Peace to his ashes. I hope to meet him again in peace.

M. REED.

Ruffed Grouse Shooting—A Fragment.

WITH infinite delight I look back upon that afternoon in the Brown county wood hunting ruffed grouse. My orange and white setter, Colonel, comes running to me now with that old cock. How proud the fellow is! His big tender eyes are seemingly almost suffused with tears from sheer joy.

Bully for you, Colonel, and bully for me! It is your first grouse, and, ah, my lucky star; it is my first, too. Wasn't his rise a perfect storm, though? And do you know, old dog—there, now, let go—isn't he beautiful?—that I'm all a-quiver from the fear that I'd miss him? Queer, isn't it, that two tenderfeet like you and I should be so fortunate, and so soon, too, after getting in the woods. But right here, on this little hillside, is where the boy said he saw them last summer. Young chaps they were then; and great stars! what a place for such game! How can we find our way up and down these hills and through this undergrowth? Why, there goes another! Oh, pshaw! why didn't we look out for that! Whoop! Heel, Colonel! I'm afraid to chance you just yet! We'll walk them up, and then, Colonel, you can fetch them in when—well, maybe you can fetch them in. Wait now, my boy; wait a bit. Hold on until I load this barrel; then we'll follow across the hollow after that chap. Oh, well, come on; I'll load as I go. Ah, Colonel, my boy, we are the clean th—; yes, blarst it! There goes another—and another—Drop, you cuss! Drop! What we don't know about grouse hunting would fill several octavos.

WM. J. BECK.

Natural History.

An Outing in Acadia.—VI.

BY EDWARD A. SAMUELS.

[Continued from Vol. LVI., page 435.]

IN the evening of the day on which the lynx had been killed the talk turned to that animal, and Phœbe said, "A lynx is far from prepossessing, but I suppose it has its mission, has it not, Doctor?"

"Yes," he replied; "all the rapacious animals have their special mission, and it is very interesting to study their habits and see how each is fitted for its special sphere and work. They, with the rapacious birds, seem to have been created for the purpose of keeping others in check, which, from their greater fecundity, might increase in such numbers as to become pests, but that they shall not be extirpated nature has provided them with structural peculiarities which enable them to, in great measure, escape from their enemies. For instance the sheep, deer, and other ruminants which are, in a state of nature, liable at any moment to become the prey of a carnivorous animal are obliged to be constantly on the alert, and every mouthful of food they eat is seized while watching for the approach of an enemy. Now, if no provision were made for their safety, they would be captured oftener than they are; but the Creator provided beautifully for their preservation. As you know, the ruminants are those animals which chew the cud. They, from force of habit and instinct, eat very rapidly, seizing the herbage upon which they subsist and swallowing it with hardly any chewing. They can thus fill their stomachs in a very short time, and then, retiring to a secure place, they chew the food they have swallowed until it is in a fit condition for digestion and assimilation.

"I never quite understood how they do that," said Phœbe. "I know that they chew the cud, but what the exact process is I never knew.

"It is very easy to explain. When the animal has filled its first stomach or rumen—the ruminants have four stomachs—it raises the food into its mouth by pellets, or 'cuds,' so called where it is completely ground up or, as we say, masticated; it then passes into the second stomach and the process of digestion proceeds, until that which was green grass or hay at first is converted into a delicate white curd. On leaving the fourth stomach it passes into the intestine, where it is urged onward by contractions of the tube, through an extent of forty-six feet in the sheep, and a proportionate length in all the herbivora; sliding by the mouths of multitudes of lacteal vessels, or milk suckers, or absorbents, it finally enters the venous system to circulate with and become blood."

"I can see now what I never fully understood before," said Ralph. "Of course I have seen sheep and cattle 'chewing the cud' ever since I was a child, but I had no idea what the habit was originally for; it must have been, as you say, a special provision by which they can eat their food unmolested. They require absolute rest and freedom from any exertion to do this perfectly; and I have noticed that if the ox be pushed and worked hard without having time to masticate, he falls off in flesh, his health is poor, and his digestion incomplete."

"Yes; but, Doctor," said Phœbe, "the horses run wild in a state of nature, and they do not chew the cud."

"True," he replied; "it takes a horse a long time to fill its stomach, because it is obliged to masticate thoroughly every mouthful it eats. A hungry ox in a rich pasture will fill himself in twenty minutes, while a horse would want at least an hour and twenty minutes to take

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Mountain Lion Hunt.

LEAVING New York Dec. 24, we arrived in Denver the following Thursday. Upon making inquiries as to a good hunting ground, we were directed to Mr. W. R. McFadden, the taxidermist, and as a great part of his stock is game of his own killing, he is thoroughly competent to advise as to hunting grounds in all parts of the West. He recommended the town of De Beque, Colo., and as a guide Joe Crandall. We found Joe Crandall and also Lem, his brother (who went with us on our last trip), all right in every sense of the word. They are first-class hunters and guides, dead shots, and, moreover, gentlemen. De Beque, over the D. & R. G., fourteen hours' ride from Denver, took us through the Royal Gorge and gave us a view of some of the grandest of scenery. On our arrival we went at once to the De Lano House, kept by Frank De Lano, and were well entertained.

Next morning we found Mr. Crandall, the guide, but were sorry to learn from him that he had lost his two dogs, without which it would be of little use to go after lions. Nevertheless we told him we should like him to take us out, and, if possible, to get other dogs.

On our first hunt we went to Mr. George Newton's, about fourteen miles from De Beque, on what is called Roan Creek. Here we secured two dogs. But we met with no success; there seemed to be no lions in that section, and after four days we returned to DeBeque. We then got two dogs belonging to Lem Crandall—a fox hound and a large bloodhound, the latter not afraid of anything on earth—and with these went to what is called Wallace Creek, where there is a large ranch owned by Mr. Harry Rawlings. Here we hunted four days, but, although there were plenty of signs of lions, we again failed, for the fox hound was young and not accustomed to running alone, and the other dog was not trained for tracking.

Once more we returned to De Beque empty handed. We were now somewhat discouraged, and were thinking of returning to the East, but just at this time a Mr. Anderson, who had two lion dogs, came to town, and hearing of our failures, came to see us. He had such faith in the ability of his dogs that we concluded to try them and engaged him on the spot, recalling Mr. McFadden's admonition that we could surely get a lion if we only had a little "sticktrativeness."

Joe Crandall had, in the meantime, left town in search of the dogs he had lost, and we engaged his brother Lem as guide. Lem thought that the Wallace Creek country was as good as any, and next morning we started for Mr. Rawlings' again, where we were met by Mr. Anderson with his two dogs, Trail and Drive, and Mr. Crandall's fox hound. We found the first two all that their owner claimed. The next morning our party, consisting of Doctor, myself, Mr. Crandall and Mr. Anderson, started for the Big Alkali (this is a name given to a place in the mountains where there are several deep gorges running back five or six miles from the main trail). The distance traveled from the ranch was about fourteen miles in all. This was made on horseback in about three hours. We arrived at the hunting ground at 10 o'clock, and at once saw signs of game in the presence of lion and wildcat tracks. We started up what is known as the left-hand prong of the gulch, and rode along some time without finding any lion tracks that appeared to be fresh. There were plenty of old ones, and the dogs, who were leashed together, would put their noses on them, look up, whine, as much as to say, "We can follow them if you will only let us go," but the guide thought them too old to be followed successfully, so we moved along up the gulch.

About noon we halted under a big overhanging ledge; here we ate our dinner and then pushed on. We were on foot now, as it was too rough here for the horses. We concluded to untie the dogs and let them hunt for themselves.

We proceeded up the trail a mile further, and had arrived at a hillside where the snow had melted, leaving the ground perfectly bare, when suddenly old Trail gave tongue, telling us in good plain dog language that he smelled game, and as we knew from the nature of the ground it would be impossible for him to follow an old track here, we watched him with interest. The other dogs, not having Trail's powers of scent or intelligence, dashed here and there, adding their voices to his, but waiting for him to pick the course, which he carefully did. They were soon out of sight up the gulch, and getting along faster as the trail led into the woods, where the ground was covered with snow. They had been running perhaps five minutes, when all three redoubled their barking, and we knew they had jumped the game or come up with it. We soon crossed the trail ourselves, and saw at once it was a lion they were after and a large one.

Up the gully he ran for about a mile, then circling twice around the top of a small mountain, with the dogs in full cry behind, he came down toward the gully again from which he had started. On he came, until almost to the bottom of the gully, and not a hundred yards from where we were standing the sharp yelp of the dogs changed to a steady howl, and we knew the lion had treed. We found he had selected a large spruce, about two feet in diameter, standing on the hillside near the bottom of the gully. Creeping through the bushes to a point about seventy-five yards from the tree, we had our first good view of him. On a large limb, about fifty feet from the ground, looking away from us and toward the dogs, he stood, lashing his side with his tail, and presenting a sight which well paid us for our former failures. His position was not good for a dead shot, but thinking he was about to jump, I fired, the bullet striking him in the flank, passing forward through his body diagonally, inflicting a terrible wound, but one that would not have proved at once fatal. Had he jumped from the tree at this time we should, no doubt, have lost a dog or two, for he was not greatly disabled. As smokeless powder was used, he connected all his troubles with the dogs, but when struck he jumped to another

the game birds of eastern North America, the species that is most hunted and persecuted."

"You are right," said Ralph; "and I repeat the wonder is that any are left, and yet they are sometimes very tame, particularly those which have always been in the forests, far away from the settlements."

"Yes," replied the Doctor; "I have no doubt that the distrust of man that we find among birds is acquired only after long persecution. Darwin affirms that the distrust is not acquired in a short time, even when they are much persecuted, but that in the course of successive generations it becomes hereditary."

In treating of the tameness of birds before man has molested them Darwin mentions a number of species in the Galapago Archipelago which were astonishingly unsuspecting at the time he visited those islands, in 1835. He says: "This disposition is common to all the terrestrial species; namely, to the mocking-thrushes, the finches, wrens, tyrant-flycatchers, the dove, and carrion buzzard. All of them approached sufficiently near to be killed with a switch, and sometimes, as I myself tried, with a cap or hat. A gun is here almost superfluous; for with the muzzle I pushed a hawk off the branch of a tree. One day, while lying down, a mocking-thrush alighted on the edge of a pitcher, made of the shell of a tortoise, which I held in my hand, and began very quietly to sip the water. It allowed me to lift it from the ground while seated on the vessel. * * * Formerly the birds appear to have been even tamer than at present. Cowley (in the year 1684) says that the 'turtle-doves were so tame that they would often alight upon our hats and arms, so that we could take them alive; they not fearing man, until such times as some of our company did fire at them, whereby they were rendered more shy."

"These birds, although now still more persecuted, do not readily become wild. In Charles Island, which had then been colonized about six years, I saw a boy sitting by a well with a switch in his hand, with which he killed the doves and finches as they came to drink. He had already procured a little heap of them for his dinner."

In conclusion, he says: "From these several facts we may, I think, conclude, that the wildness of birds with regard to man is a particular instinct directed against him, and not dependent on any general degree of caution arising from other sources of danger. * * * With domesticated animals we are accustomed to see new mental traits or instincts acquired and rendered hereditary, but with animals in a state of nature it must always be most difficult to discover instances of acquired hereditary knowledge. In regard to the wildness of birds toward man, there is no way of accounting for it except as an inherited habit. Comparatively few young birds, in any one year, have been injured by man in England, yet almost all, even nestlings, are afraid of him. Many individuals, on the other hand, both at the Galapagos and at the Faillands, have been pursued and injured by man, but yet have not learned a salutary dread of him."

"Although we may well believe," added the Doctor, "that the distrust of man, which exists among animals and birds is an acquired habit, yet there seems a curious modification or relaxation of it at certain seasons of the year among game animals. Every sportsman has noticed that during the close season the moose, deer, etc., are tame and unsuspecting to a remarkable degree. In the open season, when they are legitimate prey for the hunter, they are almost unapproachable, yet at other times they will hardly move away at the approach of their enemy. There are curious traits yet to be explained in the lives of these animals, and the field for study is very large. But it is 10 o'clock," he added, "and Saturday night, at that; we will have a quiet day to-morrow and no lynx adventure. We passed a little church on our way here, about a mile up the road. Are there to be services there, to-morrow?"

"No," replied Mrs. Murray; "but there will be a week from to-morrow. Our preacher alternates between this and the next settlement, and it is their turn to-morrow." "Well, we'll rest quietly, then," he said; "and a quiet Sunday you will have no doubt in your little settlement. And now, good night, all," he added, as Mrs. Murray handed him his bed lamp; "good night, all, and pleasant dreams."

Eggs Hatched by the Heat.

MILFORD, Conn., July 9.—*Editor Forest and Stream:* My farmer reports a rather curious incident in connection with my chicken business. A Brahma hen was due to hatch her brood last week during the heated spell. She had stolen a nest in a barrel which lay on its side in a distant corner of the yard. She hatched out ten chicks, and three eggs were bad, or supposedly so, and were left in the nest, when the hen was transferred to more commodious quarters. My man passed the barrel constantly afterward in watering and feeding. He thought many times of throwing the three bad eggs away, but did not do so. It was exactly sixty hours afterward that in passing the barrel he found that one egg had hatched, a healthy chick lying there and calling loudly for food. Two nights and three days had elapsed. The temperature during those days never went below 80 degrees F. at night, and was doubtless over 100 degrees F. during most of the time. MORTON GRINNELL.

No Sport About It.—"I see that the Cup defender Constitution takes trial trips on Sunday. Is it right to indulge in a sport on the day of rest?" "Trips in a Cup defender don't come under the head of sport. They are classed as dangerous scientific experiments."—Cleveland Plain Dealer.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

the same amount of grass; but wild horses, as a rule, do not feed in places in which rapacious animals can steal on them, but rather in open plains or prairies, and they are not usually liable to be attacked. I have read of colts of mustangs being seized by bears and prairie wolves; but that must have happened when stallions were not near by, for there is no more savage animal than a wild stallion, nor one that is better able to defend himself; and I have no doubt one could readily beat off a bear if he were attacked by it.

"Now, in addition to this habit of chewing the cud, many of the ruminants have been given other means of self-preservation. The female deer hides her young fawn in a secure place while she hurries away in pursuit of food, and when she returns to her offspring she has the faculty of withholding the scent so that her tracks may not be followed."

"The moose brings forth her young often on an island in a lake," said Ralph, "so that her great enemy, the bear, may not destroy it; sometimes, however, he discovers her retreat, and usually, in that event, her calf is killed. She gives him battle, of course, and the blows she can strike with her sharp hoofs are far from insignificant, but he is too quick and crafty for her, and the calf is devoured."

"I suppose the various rapacious animals attack their prey differently?"

"Yes," replied the Doctor; "the cat tribe, in which occur the lion, tiger, panther, and even our lynx, steal silently upon their victims, and burying their sharp, retractile claws in them, drag them down."

An old hunter, who has killed large game in Africa and India, says that lions, tigers and panthers kill in the same manner, usually by seizing the throat, and so dragging the beast to the ground. He says that he has found claw-marks on the withers when the kill has been a big animal, such as a water buffalo, showing that the beast had sprung on its back first and then buried its teeth in the throat. Death is caused sometimes by a broken neck, but more often, he is inclined to think, by suffocation. He once saw, in broad daylight, a panther seize a goat. It was the work of an instant; the panther rushed in, made a complete somersault with the goat in his jaws, then sprang up, dropping the goat, which lay still with a broken neck. Our American panther and lynx and the South American jaguar often lie concealed on the large limb of a tree that overhangs the runways of animals and drop on them; there is hardly any escape, for the victims of the sharp, retractile claws of the savage beast are fixed on them.

"What do you mean by retractile claws, Doctor?" asked Mrs. Murray.

"I mean that Felidae, or cat tribe, have claws which are, when not in use, incased in a sheath. If you will examine the feet of your house cat you will find that the claws are completely unsheathed, and they are not uncovered unless the cat seizes a mouse or bird with them."

"You are right," exclaimed Phoebe, who had taken the cat into her lap, and was pulling at its claws; "the sharp talons are completely enveloped by the tough skin."

"Yes," continued the Doctor; "it is a provision by nature that they should be thus protected; for, if they were exposed like those of a dog, when their owner is traveling about, their sharp points would soon be dulled, and their prey would escape. Now, when one of these cats seizes its prey its claws recurve or hook themselves into its flesh and the marauder cannot easily be shaken off. The wolves, which hunt their prey in packs and run it down, do not need the sharp claws that the cats, which slyly steal and spring upon their victims, require. The fox secures his prey usually by strategem and by stealing upon it like a cat, and it is astonishing how successful he is in killing his game."

"I agree with you, Doctor; the fox is a very destructive animal," said Ralph. "He can depopulate a large tract of game in the course of a year."

"Yes," replied the Doctor; "Reynard is a pretty expensive denizen of our woods. He kills all kinds of game birds and animals; has been known to capture the fawns of the common deer, and his attacks on the farmers' poultry have rendered him an object of detestation. Some idea of his destructiveness may be found from a statement made by a correspondent of one of our American periodicals who discovered a fox's burrow, and on partially digging it out he found in it four partridges, a large hen, and a woodchuck. Four days later he completed the work of unearthing the family of five foxes, when he found eight partridges, three rabbits, and another very large woodchuck."

"Well, Doctor," said Phoebe, when he had finished, "these animals, as you say, have their mission, and it seems to me that it is an injurious one, so far as we are concerned. All those you have named destroy other animals and birds which man needs for food and, consequently, they are working against his interests all the time."

"You are in a great measure right," he replied. "If things were in their original condition the services of the rapacia would be unnecessary; but we have destroyed the equilibrium, have broken nature's balance, and this requires a readjustment, to meet the change. The best example of the evil effects of disturbing natural conditions is seen in the stocking Australia with European rabbits. They have, owing to the favorable climatic conditions into which they have been introduced, by their enormous increase become a pest of the most destructive order. You see nature's conditions were changed. Now we find that we more and more need as food the game which was intended originally as food for carnivorous animals and birds. We cannot have woodcock and grouse, such as we shot to-day, if the woods are overrun with foxes and lynxes and other destroyers of game; and, in consequence of the increase of mankind, there would be no danger of too great a multiplication of these birds, even if they were unmolested by their old-time foes."

"You are right, Doctor," said Ralph; "there would be no danger of the country being overrun by partridges even if every animal and bird of prey were destroyed; but they have no peace now, and the wonder to me is that any are left."

"Yes," was the reply; "the ruffed grouse is, in my opinion, although the most important and valuable of all

limb, presenting his broadside to us, a capital position for a sure shot. I at once fired again, and this time caught him just behind the foreshoulder, the bullet passing through his body, coming out below the spine. He was just preparing to jump, but at the report of the rifle his strength left him, and he came tumbling down. As he fell he made vain attempts to save himself by clutching at the limbs, and broke off several as large as a man's arm. The guide laughingly remarked, "He is bringing down his arms full of clubs to use on the dogs," but by the time he reached the ground he was powerless, and in a few minutes was dead.

He proved to be a magnificent specimen of his kind, a large male, measuring seven feet from tip to tip, and weighing, as we afterward learned, one hundred and fifty pounds. We lashed him to a strong pole and two of us managed to carry him, but he made a heavy load, and we were glad when we had him securely fastened to the saddle on old Kate's back. We now began our homeward trip, arriving at the ranch about 7 P. M., well pleased with our day's sport.

On our next hunt we concluded to try the Big Alkali again, and starting in good season arrived at about 11 A. M. This time we took the right-hand prong of the gulch. As before, we soon came upon lion tracks and passed several old ones, but left them to look for some more recently made, which we found. The dogs were then unleashed and were soon in full cry on the trail.

As on our last hunt, the lion crossing a dry hillside gave the dogs some trouble. Old Trail quickly got things straightened out, and he and his companions were out of sight over the top of the mountain. We could hear their steady bay for a few minutes, and then the sharp, quick yelp, telling us the lion was started. There was this difference between our first and this hunt: in that one the lion running in a circle had come back to the tree near his starting point, while this one took a straight course over a high mountain. For a while the dogs were out of our hearing, but as we knew the general direction they had taken, we followed, and were soon in hearing distance again, and knew by the sound that the lion had treed. It took two hours of the hardest kind of climbing to get where they were. In the meantime the lion had been in several different trees; we could tell by the barking of the dogs when he would leave one, and after running a short distance take to another.

We finally reached a point about one hundred and fifty yards from where the lion had taken refuge in the top of a small cedar, and from here we witnessed a strange sight. The tree the lion had selected was, unluckily for him, a low, scrubby one, on which the limbs grew close to the ground, and old Trail, not content to stay below and wait for us, concluded to go up after him. The sight of a dog in a tree ten feet above ground and within three feet of a large lion was what met our view.

From our position we could hear his cat-like snarl and see him reach down and strike at the dog with his mighty paw, one blow of which would have killed the noble animal. It was not a case of "know nothing, fear nothing," for Trail was six years old, and had been hunting lions since he was a puppy. In some way he managed to evade each blow. It was a hard place to shoot, for a little variation would have resulted in killing the dog. But thinking he could do no better, the Doctor fired, the first shot shattering one hind leg of the lion, and firing again as quickly as possible, he broke the other. This, of course, caused the lion to lose his balance, and down he came, and with him old Trail. Both landed about the same time, and lion and three dogs were pretty well mixed up. He was still able to use his forepaws with telling effect, and it was here that one of our dogs was injured—little Drum, the fox hound—although he subsequently recovered. Apparently thinking the dogs were too thick for him, the lion ran down the mountain directly toward us, leaving a trail of blood behind him on the snow, and in spite of his crippled condition made good progress. A large spruce stood about fifty feet in front of us, and toward this he came. The dogs were snapping at his heels as he reached it, and started up, climbing by the use of his forepaws and the stumps of his hind legs, but old Trail had no idea of letting him escape, and fixing his teeth in his hind quarters he hung on with a persistency that I have never seen equaled. In his crippled condition the weight of the dog proved too much for him, and he fell back to the ground, where another shot from a Winchester killed him, thus ending what the guide said was the most exciting lion hunt in which he had ever engaged.

In taking the lion down the mountain, we found a deer he had lately killed and partly eaten, burying the remains in the snow.

We soon reached the horses, and lashing our game on the back of one of them, started for camp, arriving there about dark.

E. L. BURNHAM.

MAINE.

CHICAGO AND THE WEST.

Bear Country.

CHICAGO, July 13.—Judge Charles H. Aldrich, of Chicago, and Mr. Bert Seaboldt, the "asphalt king of Utah," have not yet gone away for their trout and bear trip in the Uintah range of Utah, but they have to-day nearly finished assembling their outfit and will presently start for the West.

I was speaking to Mr. Seaboldt this morning, and asked him, among other things, where the big grizzly bear skins come from which are so often in the market at Salt Lake City, it being a well-known fact that some of the best grizzly hides marketed in the United States come from that point. Mr. Seaboldt said that they came very largely from the Wahsatch range and the spurs making out from that range. The main range of the Uintahs is another favorite point for these bears. Mr. Seaboldt said that the station of Price, on the D. & R. G. Railroad in Utah, was a good place to have for an objective point, and that the cattle country twenty-five to forty miles out from there and in the foothills of the mountains would produce bears enough to satisfy the most ambitious hunter. He said that one outfit of professional hunters came in there a couple of years ago and cleaned out the bears and mountain lions which had practically rendered the raising of stock impossible. Mr. Seaboldt thinks that one might run across his grizzly in that region, although he admits

that black bears are now more plentiful than the grizzlies. His party will go 150 miles from the railroad, clear up into the Uintahs, and he expects to have some pretty good grizzly stories by the time he comes out. He speaks with great respect of the grizzly, as seen in the Wahsatch country or in the Book range of mountains, which is a spur of the Wahsatch, and says that some of the hunters up there found more bears than they wanted. They had a few bear dogs in with them, and, of course, this was the reason they saw so many bears.

As to still-hunting the grizzly, it may be a possible thing in that part of the world, but I would have to be shown about that. None the less, this is a bear country worth keeping in mind. Mr. Seaboldt is an experienced hunter and outdoor man, and knows what he is talking about. He thinks the late fall is the best time to go after bear there, as the hides are in much better shape at that season.

Good Grouse Country.

Mr. Harry C. Sefton, of Mt. Vernon, O., is passing this summer in Chicago. Mr. Sefton recently returned from a trip in southern California, not far from San Diego. He did not fancy that country so much, since it showed little game but the valley quail, of which he said there were a great many near the ranch on which he was living. He advised me that last fall he and some friends made a hunting trip to Buford, N. D., or rather across the line from Buford. They went southwest into the bottoms of the Yellowstone River, going about twelve or fifteen miles from Buford before they pitched their camp. Some of the party killed deer, and they all of them got all the shooting they cared for at sharp-tailed grouse, which they found in the thickets and the grassy country adjoining the river bottoms, as well as in the edges of the Bad Lands across the river. Mr. Sefton says that the station agent at Buford told him that he had the previous winter seen over 1,000 deer shipped from that locality. This statement is probably not accurate, although it has without question something of a foundation in fact. The bottoms of the Missouri River or the Yellowstone River are, in this neighborhood, wide and deeply covered with willows and brier thickets. Here the white-tailed deer are still fairly numerous, and can be killed by a man who is able to shoot a deer running after jumping it at close range. Mr. Sefton said that he heard of grizzly bear sign about twenty miles southeast of Buford in the Bad Lands country, and it would seem that once in a while a grizzly is heard of in that country even yet.

Far from Home.

It was far from home that Mr. John Ellingson died, and under very sad circumstances. Mr. Ellingson lived at Austin, a suburb of this city, and he had been for many years employed as an artist on the Chicago Record. He was by personality pleasant and kindly, and although a cripple, nature having given him a deformity of the spine, he was nonetheless ever cheerful and devoid of the least trace of peevishness. About three months ago Mr. Ellingson and a friend, Mr. Hall, another artist, determined to go to Old Mexico for a trip of rest and exploration. They did not intend to stay very long, but they found the country hard to get away from. The simple-minded people of the mountain regions in which they found themselves were glad to pay them for their photographs and sketches, and the young men lived nicely on occasional work in this way, being practically the guests of the natives for many weeks, the latter not being accustomed to anything in an artistic way so finished as these two Chicago gentlemen were able to give them.

It was natural enough for these two young men to wish to make up a hunting party, and about three weeks ago they did so, engaging a half-dozen Indians, and going up into the mountain country back of the village where they were situated. They were hunting at an altitude of about 7,000 feet, and were all in apparently good physical condition. Mr. Ellingson was by himself for a short time, when he chanced to see four deer. He called to Mr. Hall to bring him a rifle and expressed regret that the latter had arrived too late, as he could have killed all of the deer had he been in possession of the gun. It was but a few moments later than this that Mr. Ellingson was taken suddenly sick, and it required but a short time for his friends to see that the matter was of a serious nature. They called it acute asthma, though it might have been heart disease so far as any one can tell, since there was no physician along. At any rate, the afflicted man had the greatest difficulty in breathing, and it was soon seen that the end was not far away. Hastily making a litter, the party carried him as far as they could down the mountains, but in less than four hours from the time he was first taken, he was a corpse. When Mr. Hall brought the body of his friend into the village, he was confronted with a strange dilemma. It seems that a dead body cannot, lawfully, be brought into town in that country, and since Mr. Hall had broken the law, he was in danger of imprisonment, which would perhaps have meant two years of incarceration at least. It was only his half-tearful expostulation that he did not know his friend was dead that saved him from this further misfortune. Mr. Ellingson was buried there in Mexico, far from home, and what was undertaken as a pleasure trip thus ended in the most sorrowful manner possible.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

A Hunting Frieze.

MR. E. W. DEMING, the well-known artist, has just completed for a house in Yonkers a drawing-room frieze which has for subject an Indian moose hunt. The successive stages of the hunt are pictured in the several panels in Indian pictograph style, and the whole makes a very effective piece of decoration. The paintings are now on exhibition in Mr. Deming's studio, No. 21 West Twenty-fourth street, this city.

His Marksmanship.—"Did—did you ever shoot a man?" questioned the tenderfoot timidly of Pepperhole Pete. "See here, young feller," bawled Pepperhole Pete, in a voice that shook Pike's Peak, "don't you never reflect on my marksmanship ag'in! Shoot a man! I never miss'd one, y' dern galoot!"—Ohio State Journal.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Black Bass in Texas.

FOR ten years or more Mr. Wm. D. Cleveland, of Houston, Texas, and I fished together every season for one fish or another in one place or another. Sometimes the whole summer was devoted to fishing, at others a few weeks only. We fished for trout in Maine and the Adirondacks; black bass in Canada, West Virginia and New York; ouananiche at Lake St. John; lake trout at Saranac and Lake George, and mascalonge in Hay Bay and the St. Lawrence, and for anything that would bite in other waters. Business finally kept him in the South, and he developed into a tarpon fisherman, and devoted his spare time to the big herring, and other duties curtailed my fishing, and when I could I sought fresh pastures and went further afield, so we did not meet to fish in the flesh, though the friendship was kept up in spirit. Now I have a letter from him saying overwork has caused him to take a rest and that he is coming North again and wishes me to meet him at some one of our old haunts, where we will find the best fishing, to try our luck together once more. The spirit must have moved him speedily, for soon after his first letter came another, saying he had been out for black bass in Texas, and I extract the following from his letter: "Shortly after writing you the other day Col. Cunningham telephoned me that the fish had been biting very nicely for the past month, and if I did not come out the next day he would not invite me any more. I had been promising for three or four months to go out to his place, but one thing or another had detained me. He said over the telephone that he had not permitted any one to fish in Cleveland Lake (named for me), because three years ago the Government had planted some yearling small-mouth black bass in the lake at his request, and they had grown into big fellows, and he wished me to take the first ones from the lake. I answered that I would go, and at 9:45 took the Southern Pacific for his place, arriving there at 11 o'clock. The Colonel met me at the station and said it was too hot to go out on the water then, but he called up Frank, his brother, and directed that he should have Old Nell hitched to the gig at the front door at 4 o'clock to take me to the lake. He also directed Frank to tell Parker to have the boat taken out, dried and overhauled, and to take with him his deer-tail bob and teach me how to catch fish. Then he directed Jim to take several cane poles, in case I broke my rod I would have something to fish with, and to remain at the lake and tote the fish home. You know how the Colonel banter fishermen.

"Promptly at 4 o'clock, after a good dinner and smoking three or four cigars each, I got into the gig and was at the lake in twenty minutes. The lake is about three-quarters of a mile long and about 250 or 300 yards wide, having high banks and rolling ground and post-oak trees on one side, with rather low ground and swamp trees on the other. We took the lake about midway of its length and did not get a strike until we reached the lower end. About the time that I got into the boat a delightful south-east wind blew up, making a few ripples on the surface of the water. After I had taken three handsome bass the Colonel drove up on the bank in his buggy and asked 'What success?' I told him to wait a few minutes and I would show him, and in the few minutes I caught two other bass, and he asked me to bring them to the shore and he would take them and put them on ice and we would have them for supper. Within half an hour after the Colonel departed I caught four more bass, and then it was about 6 o'clock, and the wind had gone down, and I did not get another strike.

"Bear in mind that I was fishing with a new bob, without name, but very attractive, and using a cane pole, having forgotten my rod after all. I occupied the front of the boat, Parker the middle and Frank and Jim occupied the rear, using a paddle on either side. I covered the ground thoroughly, and Parker did not get a strike, and I intended he should not when I started, after the Colonel's remarks about showing me how to fish. The five bass weighed 12½ pounds, one of them 3½. The four that I caught later weighed 9½ pounds, one 3 pounds, or a total of 22 pounds for the nine fish, which I considered a fine catch.

"I am satisfied that three of these fish were small-mouth black bass, and the Colonel says all of the fish were planted by the U. S. Fish Commission three years ago. Can it be possible that these fish could have reached that size within that length of time? I want you to tell me for the information of the Colonel and myself."

It is really amusing to read my friend's letter and see that there was actually a bit of doubt in his mind concerning the species of bass he caught, in spite of the fact that he was "satisfied" that three of them were small-mouth bass. This is what happens to a man who becomes an expert black bass fisherman and then forsakes them and wanders off after strange gods in the form of tarpon. There was a time when he would have said they were or were not small-mouth bass, and been right about it, too. I had serious doubts myself about there being any small-mouth bass planted in Texas by the U. S. Fish Commission, first because it is doubtful if the water is suitable, and, second, because Mr. Raveme told me very recently that the U. S. Commissioners distributed exceedingly few small-mouth black bass, and the few in Northern waters; but to make sure, I hunted the matter up in the report of the U. S. Fish Commission, and find that in 1898 the U. S. Fish Commission planted "75 large-mouth black bass in Cleveland Lake, Sugarland, Texas," and Sugarland is Col. Cunningham's plantation.

The growth is not unusual, for the fish were nearly four years old, and food in abundance will do wonders in growing fish to large size. In Northern waters a pond was planted with small-mouth black bass about 4 inches long, and in five years from the planting the pond pro-

duced a bass weighing 7 pounds 10 ounces. The large-mouth black bass grows to a greater size than the small-mouth, and in Southern waters the former attains its greatest weight.

Hudson Shad Fishermen.

In commenting upon the shad fishermen of the Hudson River I tried to be very conservative and state facts, uncolored by any possible prejudice, and therefore it was with pleasure that I received a letter soon after *FOREST AND STREAM* came from the press from a gentleman who is familiar with the shad fishing of the Hudson, and who has been a close observer of the shad fishermen for many years, and who speaks by the book when he speaks of fish and game legislation and the fisheries of the Hudson River. As the letter is personal I shall not use the writer's name:

"I have read with much interest your article in this week's *FOREST AND STREAM* relating to shad fishermen on the river, and it seems to me you draw the lines very mildly in regard to them. For the last thirty or forty years it has seemed to me that the shad fishermen of the Hudson River constituted a special variety of the genus homo, for the reason that they never commended anything and have grumbled at everything. When the shad have been plenty, and they obtained high prices, they grumbled because they were not more abundant at the same prices. When an effort was made to close the river for one or two days that the fish might go upon the spawning grounds they grumbled because they claimed that it interfered with their natural and inherent rights. When the fish were small, as they were a number of years ago, they grumbled because they were not larger. When, as was the case two or three years ago, the catch was somewhat limited and the prices were high, they grumbled and abused the State and the United States because the supply was not larger at the same prices.

"When, as was the case this year, the catch was enormous and the fish were large, they grumbled because they could not get the same prices that they did when the fish were scarce. I can give several more cases in which they grumbled, but it is enough to say that they were born grumblers and have imposed on nature.

"Twenty or thirty years ago I considered myself fortunate if I could get a shad for my supper table which would weigh 4 pounds, but during the past year I have been able to get all that I wanted weighing from 5 to 7 pounds each. There was one taken near the close of the season this year, nearly opposite this city, weighing 8 pounds, and two or three years ago I saw one also taken opposite this city which weighed plump 10 pounds, and if I had seen it in time to secure it I would have sent it to you as one of the results of stocking and protection, so far as the shad are concerned, in this river.

"Perhaps I should add that among the grounds for grumbling is one made by the shad fishermen to the effect that closing the river for a couple of days interferes with the catch of shad, and as they may not live until another year to benefit by their method of protection they prefer to catch all the shad there are in the Hudson even though the entire crop be exterminated.

"Since writing the above it has occurred to me that one or two facts within my personal knowledge might be of interest. About the year 1853 I was at Milford, on the Delaware River, when the first substantial catch of shad was made. They numbered about sixty, and twenty of these weighed 6 pounds each or upward, one of which we had on our supper table.

"My grandfather used to live in New Jersey, eighteen miles from Lambertville, and in the twenties and thirties it was the custom for him and his neighbors to go to Lambertville every spring and each would bring home a load of shad, enough for one or two barrels, which were salted down for winter use. He frequently told me during his lifetime that quite a large proportion of the shad which he obtained in this way weighed from 6 to 9 pounds each, 8-pounders being a very common size. This indicates to me what under proper protection and restocking we may expect in the near future."

What my correspondent says of the practice of his grandfather and neighbors on the Delaware was formerly true on the upper Hudson River. Before the building of the Troy dam, about 1825, shad ran up the river to Baker's Falls, more than forty miles above Troy, and less than three miles from where I am writing. The shad could not get above the falls, and the farmers from far and near gathered to secure shad for salting for home consumption. I have talked with one man who resorted annually to Baker's Falls to secure shad for salting, and female relatives in my own family have told me of the practice as they knew of it. In our own day shad have been cut off by dams from ascending the Delaware River, and when fishways were built in the dams the shad again ascended to former spawning grounds. This I learned from a visit to the dams that stopped the shad for a time and from a visit to the upper river, from which they were for a time cut off. Capt. Pinder, who fishes at Catskill, told me that he had never taken a shad of 10 pounds in his nets, but on the Smithtown River, on Long Island, it is claimed that shad have been taken up to 14 pounds, and the employees of the Forest, Fish and Game Commission have, when taking eggs, found shad in the nets weighing 12 pounds.

Trout in Champlain Canal.

The Champlain canal is fed by the Glens Falls feeder at Fort Edward, the water for the feeder leaving the Hudson at the Feeder dam, about two miles above Glens Falls. This spring there was a break in the feeder and the water was drawn off to make repairs, leaving but a little water in the ditch, at intervals where there were low places. An officer of the Glens Falls Cement Works sent boys in the feeder near the works catching fish of some kind, and upon investigating he found the fish were brook trout, about 7 or 8 inches long, all about the same length. I was asked if I had planted trout in the canal, but, of course, I had not, and now the question is, where did they come from? There are trout streams flowing into the Hudson above the feeder, but none are tributary to the canal itself, and the only solution I can offer is that the trout worked down from above and found their way into the canal—but why? is the question.

What should cause the trout to leave cool, clear water streams and make their way into the muddy water of a canal? I confess I doubted the correctness of the identification of the fish, but when assured from several sources that the fish were "speckled trout" I could only accept the statements of those who saw the fish, contrary as it was to the known habits of the brook trout to frequent the waters of the State canal. A. N. CHENEY.

Maine Fishing.

BOSTON, July 13.—Trout and landlocked salmon fishing in New England waters is rather poor. At the Rangeleys a few fish are being taken, but the best of the season is over. A railroad magnate fished two days on Lake Mooselucmaguntic last week and caught only one little trout. At Richardson Lake the fishing is no better. At the Upper Dam very little is being done, with the veteran anglers waiting for the late fly-fishing. At Moosehead there is a little fly-fishing, but generally the guests are interested in some other sports. But bass fishing in many of the ponds in Maine is good. J. Parker Whitney came out from his camps at Mosquito Brook, Richardson Lake, and stopped at Andover for a couple of weeks, to escape the worst of the black flies. He tried the black bass fishing at Roxbury Pond, with good success. Very good strings of bass have lately been taken at the Winthrop and Belgrade ponds.

July 1 the law was off on white perch at the ponds in the section of Winthrop, Readfield and Monmouth, Me., as well as the waters in the section of Bangor. The anglers have been on the alert, and some good strings are reported. The perch will take the artificial fly on or near the surface, while they yield readily to still-fishing with worms or other bait. Trolling with a Rangeley spinner is also proving a good way to take the big ones. The fish and game commissioners have made a rule that only 25 perch shall be allowed to any angler on a single day. White perch fishing is not new in the State of Maine, by any means. About thirty-five years ago there was a White Perch Association at Waterville, Me., and this association had an annual meet and dinner, usually at one of the better white perch ponds at Smithfield, Rome or Belgrade. Editor Ephriam Maxham, of the Waterville Mail, was one of the earlier anglers for white perch, and a great lover of the sport. His score, and that of the rest of the Association, was almost religiously kept. A kindlier soul never followed in the footsteps of Izaak Walton, but he has long since taken his departure to the land of the blessed. But the Maine Fish and Game Commission is taking an interest in the stocking of other waters in the State with white perch, and is pleased with its success.

BOSTON, July 15.—New England sportsmen have been interested in the published accounts of the excursion and meeting of the Maine Sportsmen's Fish and Game Association, at Kineo, Moosehead Lake, last week. It was one of the best attended meetings the Association has ever held. All the political fish and game protectors were there, and there is no doubt that a good deal of the power that influences fish and game legislation was present. The members and guests present numbered nearly 100, including the Fish and Game Commissioners, ex-Governor Powers and other notables and newspaper editors from all parts of the State. The feature of the meeting was the address of Commissioner Carleton. He threshed over considerable old straw concerning the repeal of the September deer law; the causes which led to its enactment and repeal. He remarked that the Commission did not regret its repeal, since the timber land owners desired it. He read the following clipping from the editorial columns of a leading Maine agricultural paper:

According to the present outlook there will be a strong effort made to abolish the Fish and Game Commission in the next session of the Legislature. The feeling against this branch of our State Government has been steadily rising during the past two years, and now the opposition has become sufficiently strong to show its hand. The destruction of crops by deer through the northern section of Maine is largely responsible for this condition of affairs. When men are obliged to watch these animals tramping down and eating their grain, and do not dare to raise a hand in defense of their property, it is easy to see that a change of some kind is bound to come. This is not Ireland, and city sportsmen are not English landlords. It looks very much as though some of our sporting gentry would have to give up their soft snaps and give the farmers a chance. The country boy also wants a chance to once more use his cotton twine and banded pin in catching trout. We are inclined to think that the farmer will have an inning in the near future.

In his reply, Mr. Carleton said that the above item clearly outlined the wish and purpose of those who would see all laws for the protection of fish and game repealed, and a return to the days of the boy with his twine line and banded pin. While he admitted that deer may have damaged crops to a limited extent, he also dwelt upon the great advantages everybody in the State was deriving from the influx of sportsmen and summer tourists. To the fact of the actual presence of fish and game this summer business is largely due. The farmer's son with his pin hook and the crust hunter have had their innings. They formerly had them till nearly every head of game was destroyed and the fish in our streams nearly exhausted. Times have changed.

"We are inclined to think," says the writer of the article in the agricultural paper, "that the farmer will have his inning in the near future."

"Now, while this is the veriest rot, demagogism and rant," said Mr. Carleton, "it has its influence, and helps to create and foster a feeling of antagonism to our fish and game laws, and to meet and overcome this should be our first duty.

"A Maine farmer once rented a hilly, rocky pasture to a ladies' golf club from New York, for a big price. The farmer's servant, scandalized by the sight of tall, athletic girls in scarlet coats, armed with iron hoofed clubs, reported to the farmer that 'Them girls in the pasture scare our cows.'

"The farmer scratched his head, 'Hir-ram,' came the leisurely answer, 'times has changed since we was young. Used ter be the cows scared the girls.'

"The writer of this article is like Hiram. He doesn't understand that times have changed since the boy with the pin hook and the farmer had their innings."

The other speeches were mainly congratulatory. The subject of the attitude of the State toward her guides was ably handled. The guide law has grown in popularity ever since its enactment. The sportsman and tourist is

always welcome to the great interior fish and game preserve of Maine.

Mr. George Loud and Bert Hanson, of Boston, have just returned from a three weeks' fishing trip to Bonnie River, N. B. They had good sport, taking all the fish they wanted. Mr. and Mrs. L. O. Crane, of Boston, are still at the Megantic preserve. Before they left the Upper Dam Mrs. Crane took a salmon of 3 pounds 13 ounces. Mr. Crane writes that the fishing at Big Island Pond is improving. Some fine catches are being made. "We took seventy-six fine trout after supper the other night at L. Pond, all on the fly. Mrs. Crane took thirty-six, giving me a hard lead the most of the time. All of that catch was returned alive to the water, since we had all the trout in the camp larder than could be used." This is one of the best of rules thoroughly followed at the Megantic preserve, "No fish shall be killed not wanted for food," and Mr. Crane is one of the first to live up to it. The newspapers are full of reports of brook trout being taken in the White Mountain region. The recent rains have kept the streams up to a good fishing height, and great strings are reported. It is the same old story. The summer tourist, with his dollar and a half fish rod, takes 175 fingerlings in a day's fishing. What brook in the world can stand up against such fishing? The last reports from Kineo, Moosehead Lake, say that the fly-fishing is improving. Ex-Mayor Edwin U. Curtis and Mrs. Curtis, of Boston, have been fly-fishing there. Mrs. Curtis has had good sport, taking twenty-six trout at one outing. Winthrop M. Pitman, of Boston, fishing in the vicinity of Kearsarge, North Conway, N. H., returned with a string of 125 trout, the result of one day's fishing. W. O. Perkins, of Boston, has been fishing the main stream of the Penigewasset and has taken some large trout. From Attean camps, Jackman, Me., come reports of very good fly-fishing. Mr. and Mrs. Herbert Lawton, of Boston, are making some good catches there.

Still better reports are coming of the white perch fishing at the ponds in the vicinity of Bangor, Me. Swett's Pond is a favorite resort, one fisherman taking fifty-six perch in an hour. The black bass fishing is also good. From Belgrade ponds the reports of black bass fishing are excellent. Bait-fishing with minnows, frogs and grasshoppers is the rule. Still something is being done with the fly. Dr. W. H. Norcross, of Lewiston, landed a bass weighing 5½ pounds at Sabatis Pond Thursday. The citizens in the vicinity of Sabatis Pond have asked the Fish Commissioners to restrict the number of fish to ten bass and twenty-five perch in a day. At Lake Pennessewassee, Norway, Me., the bass fishing is reported good. Supt. E. L. Lovejoy, of the Portland & Rumford Falls Railway, took two fine bass there Saturday, fishing from Free-land Howe's camp. Still, there is some white perch fishing near Boston, for those who know how to find it. Mr. J. H. Jones caught a couple of good ones from a pond in Waltham the other day. SPECIAL.

Rainbow Trout in the Appalachians

Editor *Forest and Stream*:

I have just been passing around among the summer guests of Sapphire the very charming runes of your occasional correspondent, Mr. H. Stewart, who rusticates at Highlands, twenty miles away, and owns a large forested area in that part of Macon county. They were printed in *FOREST AND STREAM* some three years ago, about the time you published my "Words for Buncombe," and I have kept them ever since—as I keep the Commandments. They are certainly imbued with the fine sentiments which inspire John Burroughs, whose disciple I am rapidly becoming, despite an innate proclivity to hunt and shoot. I am no longer, let me say, a wanton destroyer of the beautiful in nature, but when I go forth it is to admire and not exterminate, though I confess that I do enjoy fly-fishing for trout, or any other variety of fish, for that matter. The use of bait in ponds or lakes involves still-fishing, which does not interest me, whereas fly-fishing enhances the sport, as I seek it, from start to finish. In no manner is the poetry of motion more strikingly illustrated from the first cast of the line to the final flop in the basket or boat. It is all motion!

Yesterday, at the mouth of Nixey Creek, which feeds the Sapphire Lake, I had the good fortune to take two trout which weighed a pound apiece with a coachman fly, sold by Abbey & Imbrie years ago, an exploit which astonished the craft, for it has been the impression here that the trout of the lakes would not take artificial flies. So you see I have a feather in my cap, although it is a white one.

The trout here are certainly astonishers for size and numbers. It is hard to convince outsiders that *S. salvelinus*, the speckled beauties of the Atlantic side, and of song, are found in these mountains; and yet the high regions of the entire Appalachian range are full of them. The stream fishing here at Sapphire and in its immediate vicinity is hardly surpassed in New England or the Adirondacks, while both the mountain and rainbow trout have been introduced into the artificial lakes, which are formed by draining the cañons. The Toxaway Hotel and Land Company, which owns some 27,000 acres of forest adjoining the Biltmore estate, limits its guests to count and weight, but every fisherman is sure to basket his quota of twenty, and often includes specimens which scale 2 pounds.

But if the mountain trout are remarkable, much more are the rainbow trout which have been introduced into Fairfield Lake, from a plant obtained in Handy, Vt., in 1897, and propagated at the company's fish hatchery on the Horsepasture at Sapphire. Fairfield Lake is an artificial body of water two miles long and forty feet deep in places. In four years these rainbow trout have grown from fry to nearly 4 pounds in weight. Manager J. F. Hays recently took one of 45 ounces in weight; John C. Eads, of Macon, Ga., one of 3 pounds 14 ounces, and Elliott Miller, of New York, one of 3 pounds 12 ounces. Dr. Richard Whitehead, Instructor at Chapel Hill, N. C., has also taken very large fish. All mentioned were on light rods with flies or bait. There is no doubt that the rainbow trout thrive better here than in their Rocky Mountain habitat. They have quieter water. They do not have to stem mountain torrents perpetually. The insect food of Fairfield Lake is in greater variety. There are crawfish, helgramites and lizards, but no minnows.

Chopped liver is fed to them regularly. Everything favors an abnormal growth—change of temperature, change of water, change of environment, culture, care and protection. Variation in size is readily accounted for on natural grounds. They occur in all families, but more readily in fishculture, where roughness of handling when stripping spawners for their ova injures a large proportion of the eggs.

So much for North Carolina mountain trout. As for the streams themselves, they are ideal. From their catch basins in the clouds they drop by 300-foot leaps from their rocky escarpments until they accomplish a descent of 3,000 feet or more, and thereupon they take the similitude and manner of creeks like the Whitewater, the Horse-pasture, the Tuckaseegee, the Toxaway and the French Broad, which form the feeders of the Tennessee and Savannah rivers. There are not less than forty of these high falls in this immediate vicinity. From the summit of Mt. Toxaway, where there is an observatory and a lodge, the Whitewater Falls show against the green of the forested mountain side, fifteen miles distant, like a column of marble when the sun strikes it. The width is perhaps one-third its height, so that it compares phenomenally with the noted high falls of the continent, while its location in mid-air is unique.

To most vacation ramblers this coming south for cool quarters is an enigma. But I can say, from a continental experience, that, excepting the sea coast, high elevations afford the only escape from midsummer heats. I have chased the comforter far up into the sub-arctic latitudes of Alaska and Labrador, and there seen the discomfited natives curl up like beavers in an oven with July and August heat, and I really believe there is a hot box at the North Pole at this season. Such phenomena explain the exuberance and variety of bird life and plant life which is found in that region, and the reason for its selection as a breeding ground for flight birds and water fowl.

Globe trotters are only just beginning to discover the advantages and attractions of this Appalachian ridge, chiefly because they have not been easily accessible until within a decade. Now we have tramways and trolleys and graded roads, and all hotel conveniences. Even invalids can attain unto them. We are only twenty-two hours from New York.

CHARLES HALLOCK.

SAPPHIRE, N. C., July 10.

West Virginia Conditions.

ROMNEY, W. Va., July 13.—*Editor Forest and Stream:* In reply to a newspaper article I noticed in reference to tanneries, saw mills, and other factories not killing fish, I have only a few words to say. The party that made that statement knew he was stating a barefaced lie, and I refer all parties to the condition of the North Branch of the Potomac prior to the time saw mills were erected above Piedmont, the pulp mill at Piedmont, and other sources of pollution. Before this pollution was commenced the North Branch was a good black bass stream, and I have stood on the banks of it at Washington Bottom, ten or eleven miles west of Cumberland, Md., and have seen any quantities of bass on their spawning beds and swimming around. How is it now? At Parkersburg, a few weeks ago, the Federal Grand Jury indicted three saw mill men for pollution of a stream, and the suit of the city of Cumberland against the pulp mill people at Luke, Md., shows very positively that there are laws on this subject, and that they can be enforced. The thousand or more people who live on the South Branch of the Potomac are not going to sit idle and let Cover's or the United States Leather Company, or any other concern, spoil this beautiful stream and pollute its waters so as to be unfit for man or beast. These tanneries will have to build settling basins, and it is no use for them to kick and squirm.

As the South Branch has been too muddy for me to report any catches of bass this season, will write you of a 32 pound carp caught with hook and line this spring in Stump's Eddy, by Mr. C. D. McIlwee, one of our luckiest fishermen. Mr. McIlwee holds the belt for the largest fish taken with hook and line out of this stream; but a short time after he caught his large one a young man, by name of Garrett Parsons, had an exciting adventure with what he claims a larger carp than the one caught by McIlwee. Mr. Parsons was down in a meadow watching the receding high water, and noticed something swimming around, which he took to be a muskrat. He waded out to it and struck it with a stick and then found it was a tremendous carp. He got his hands in its mouth, but could not hold it, as he was so much excited, and the fish was so slippery. The fish made its escape into a run and then into the river a few yards away.

A great many camps are here now, but the fishing has been very poor, on account of high waters. I think it will improve shortly, as it has the appearance of clearing up now, and as very few small bass have been caught, and they have had time to spawn, I think it will be fine fishing here later on.

Our last Legislature gave our game warden a salary of \$1,200 a year and \$300 additional for traveling expenses, etc., and gave him power to appoint deputies in each county. This he is very slow in doing, and it is badly needed in the counties of Hampshire, Hardy and Grant, and no doubt in other counties. Guess he is faster in drawing his salary than in the protection of our game.

A crowd of sportsmen from Wheeling and vicinity passed through this place to visit and inspect a tract of land, about eighteen miles above Moorefield, on the south fork of the South Branch, for the purpose of establishing a game and fish preserve. Another party from New York is after this same land, for the same purpose, and it is to be hoped that one or the other will purchase it for this purpose.

Partridges are thick here this summer and I predict a fine quail season this fall. Squirrels are very scarce around here.

JIM BURR BRADY.

Notice.

CHICAGO AND THE WEST.

"Good Boating."

CHICAGO, Ill., July 13.—This is the season of the year when the summer resort hotels are assiduously distributing their glowing literature. I believe it was an Eastern railroad which sent out a genius along its line to write up the attractions of the different fishing resorts, and printed the report of the said genius to the effect that fine bull-head fishing and fine trout fishing could both be found in such and such a lake along the aforesaid line. This sort of thing does not go to-day, for the sporting public at least expects something of accuracy in the schedule of the summer resort; yet I notice a number of railroad hotels in our North Woods who advertise the "giant muscullunge," the "leaping black bass" and the "speckled beauty" as of yore. Nearly all of these summer hotel folders also call attention to the fact that there is "good boating." It is rather of a comfort to the average city man who goes into the wilderness to reflect that, although the owner of the hotel has been studiously doing all he could to keep down the deer supply by jacklight hunting in the summer time, and has perhaps kept his boys busy fishing through the ice in the winter time, has none the less been generous enough to leave the "good boating" for his summer guests. Take courage, my brethren. If the fish do not bite, you still have left the water, and so long as you have plenty of water you can have "good boating." No hotel folder should be without this announcement; and, indeed, very few of them are without it.

"Good Fishing."

As to good fishing, that is another matter. We are all up in the air in this neighborhood, so far as actually good fishing is concerned, nor have we much license to expect any considerable change in the conditions until the cooler season of autumn. Mr. Graham H. Harris, who has returned from the Manitowish chain, states that eight bass in one day was the best he could do. It should be remembered, however, that Mr. Harris does not fish for bass with anything but the fly. I imagine that any one could have very good sport with bait on bass in any one of a number of different waters near the Manitowish station.

In the Vieux Desert region, accessible from State Line, Wis., there are a lot of good bass lakes. Nut Lake and Dinner Lake are good little bass waters, situated about a half-mile from each other and about six miles from the big lake. So far as is known, these lakes were not fished by any one until 1898. They still have a great many bass in them. Thirty and forty bass have been taken there in the course of an afternoon. The most deadly way for fishing these waters is by means of a bait-casting rod and free reel, and at this season of the year the spoon hook with a pork rind bait is perhaps as good a lure as any, although the live frog will do business in the evening in these wilderness lakes, provided one can secure the frogs. One of the most exciting experiences I ever had was in a little lake called Moon Lake, up near the Gaylord Club, where I once met a school of bass feeding at the edge of the lily pads. These fish would snap at anything I could throw to them, the artificial fly, frog, spoon hook, or anything else. After I ran out of frogs and took to the fly-rod, I had some splendid sport with them. There are scores of lakes accessible from State Line. Conover or any one of the fifty different railroad stations in upper Wisconsin, where one can have all the bass fishing he wants, not to mention "good boating."

Good Canoe Trip.

I am very often asked by parties for information regarding some good stream suitable for a canoe or boating trip where one can camp out and do a little fishing. One might do much worse than follow the Wisconsin River from State Line or the Vieux Desert country down to Rhineland. This is a distance of about 140 miles in all, and it takes one through a very wild and prolific part of Wisconsin River system. There are some muscullunge in the Wisconsin River in this portion, to say nothing of a great many wall-eyed pike and small-mouth bass. In the fall one would sometimes see ducks, perhaps partridges, and perhaps also deer. There are no dangerous rapids, but the water is in places fast enough to make it interesting. This is a good thing to bear in mind if one is looking for a floating trip.

At the Huron Mountain Club.

Mr. Hempstead Washburne, of this city, is just in town, back from his cottage at the Huron Mountain Club, on the south shore of Lake Michigan. There are at present about thirty members up at the club, and they are all having a good time, although the fishing just now is nothing extraordinary. It was better during the earlier months of the season, though even now there are enough trout taken to supply the tables and to afford sport for the faithful.

It was at the Huron Mountain Club that a little bear hunt occurred a week or so ago, in which the leading figures were Mr. W. P. Hamilton, of Detroit, his twelve-year-old son, Dr. Baxter, of Chicago, and John Nelson, a local guide. It would seem that Nelson had seen sign of a good bear and had put out a steel trap, and presently he brought word that the bear had gone off with the trap, clog and all. Mr. Hamilton and his son started out that day, and they and Nelson followed the bear all day long through a heavy bit of swamp. They could not get up with him, and had to go back to the club that night. On the next day Dr. Baxter joined them and they all started out at 4 o'clock in the morning. They followed Bruin steadily until dark, but were unable to come up with him, and finally had to give up the chase and let the bear get away with the trap, perhaps to perish a lingering death, perhaps to have his foot rot off in the jaws of the trap after some weeks of suffering. They claimed that they had no dog with which they could follow the bear, and that the bear in some way had freed the clog from the trap, so that he could travel with considerable speed. They saw places where the bear had pounded against the trunks of trees with the trap, and in one place had actually cut off or broken off a big pine stub in this way, hammering it with the side of the trap. At times the bear would pick up the clog in his arms and walk with it in that way, evi-

dently having the trap upon his front foot. The track of this bear measured 6 inches across the ball of the foot, which is a very large bear for that part of the world.

Speaking of Mr. Graham H. Harris reminds me that he starts this coming week with his family for an extended trip through the Western regions. They stop first at the Hot Springs of South Dakota, and then go out into the Yellowstone Park country, and will locate at Henry's Lake, where Mr. Harris had such fine sport last fall, and where he thinks the trout fishing surpasses anything that he has known.

The Au Sable.

Mr. John D. McLeod, of Milwaukee, has inveigled the undersigned into a trout trip on the Au Sable River of Michigan. It is, of course, the poorest time of the year, and we will very likely get nothing of consequence, yet we start on Monday evening to try it for a day or two, it being our firm conviction that any place is better than the city in these hot days of summer. Mr. George L. Alexander, of Grayling, whom out of all the men I have met all over the United States I figure to be about the most generous and kind-hearted that ever was, writes that he will be too busy to join us on this trip. It was Mr. Alexander who started this thing going in the first place, it being then his scheme to have Mr. W. B. Mershon and one or two other members of the Saginaw Crowd up at Grayling for a run down to a part of the stream where there are some big rainbows. Now Mr. Mershon is too busy knocking dollars off the bushes, Mr. Alexander is likewise deeply engaged in the same pursuit. As for Mr. McLeod and myself, he is going to quit knocking them off, and I quit long ago, so it now looks as though we would start, as the society reporter writes of the wedding procession, "promptly at the appointed hour."

A Few Bass.

Billy Farmer, of this city, starts this afternoon for a session with the big-mouths at Billy Tuohy's hotel on Eagle Lake, Wis. At this date Billy Farmer holds the Tuohy medal for the biggest bass of the season safe enough, he having taken a bass of 6 pounds a few weeks ago. He is determined this time to break his own record. This record was held last year by H. M. White, of Chicago, with a 6-pound 7-ounce bass. Mr. White is still at Eagle Lake trying to equal Billy's 6-pound bass of this summer. He has been having pretty good fishing, last Saturday coming in with a catch of twenty-two bass, and a week previous with one of twenty, including a number of very good fish.

There are some big-mouths still left up in the country adjoining Fox Lake, Wis. Lake Emily seems to be a favorite water, and although of no great extent, it has never been fished in the modern scientific method until very lately. Two anglers by the name of Robert Jansen and Althrough Pope on last Tuesday caught over 100 black bass in this little lake, which is something of a record for a water situated in so old-settled a country as that part of Wisconsin.

Annual Fish Day.

I do not know whether I mentioned it or not at the right time, though I intended to do so, and certainly it deserves mention—this great annual fish holiday of the city of Bloomington, Ill. Bloomington is a busy little city, but it has near it no river, creek or lake of any consequence. There is one little lake known as Miller Lake, which was stocked five years ago with game fish. Last year it was determined by the city fathers that the public of Bloomington ought to have one day's fishing a year at least, and on last July it is stated that there were 2,500 people who went out fishing in this little lake on the occasion of the annual holiday. On July 6, the date of the holiday for this year, there were fully as many anglers of all sorts and conditions on the shores of this little pond. The people came out before daybreak in order to get good positions, as they do when attending a hanging down in Arkansas, and all day long and until dark they patiently did their best to avail themselves of the privileges brought by this fishing holiday. Once a year, one day out of 365—it is too bad that Bloomington and every other city in the world cannot do a little bit better than that by way of fishing holidays.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Canadian Angling Notes.

THE sport continues so good among the ouananiche in the Grande Décharge of Lake St. John that the Messrs. W. Ruthven Stuart and J. Ruthven Stuart, of London, who have already spent some time there, are extending their visit another month. Other British sportsmen who are at present enjoying this fishing are T. T. McCready and W. H. McCready, of Dublin, Ireland. Messrs. Graves, Morrison and Cardie, of Columbus and Cleveland, O., are making an extended trip in the Lake St. John country, being after trout as well as ouananiche. Among other American angling parties who have been exceedingly successful in the Grande Décharge is one composed of Messrs. H. J. Martin, W. H. Martin and Colonel Jones, of New York. They found the ouananiche very plentiful, and their catch was a very large one. In fact, it is the universal experience this year that the fish are very much more numerous than usual.

With the diminution of the fly pest in the woods at the end of this month, there is likely to be a large increase in the number of canoeing parties bound for the lake country north of Lake St. John. For most of these waters anglers will require larger flies than are now used in the Décharge. In fact, the large flies used there in the early part of the season will be found suitable in the ouananiche pools of the Peribonca and Ashuapmouhouan, Lake Tschotagana and Lac-à-Jim. In many of the intervening and smaller waters good trout fishing is to be had. Either the River Aleck, Lake Epiphany, or River and Lake des Aigles will be found well worthy of a visit by lovers of the angle. All contain trout in abundance, and in some of them large doré and gray trout are also to be taken by trolling. The Little Peribonca contains large quantities of both ouananiche and trout. It is reached by steamer from Roberval to the mouth of the Grand Peribonca and thence by canoe. The canoe routes are all hemmed in by forests

right to the water's edge, the rapids are frequent and picturesque, and it would be difficult indeed to imagine more enjoyable routes for a summer outing.

From the north shore of the St. Lawrence and from Labrador it is learned that the salmon fishing is much better than it has been on the south shore. Over a hundred fish have been killed in the Trinity, which is a comparatively small river.

Mr. Hart, of Waterbury, will fish one of the Gaspé streams with a party of friends next week. The net fishing has been splendid of late in the Baie des Chaleurs, and good sport will probably be reported a little later from the anglers among the second run of salmon in the rivers flowing into the bay.

E. T. D. CHAMBERS.

QUEBEC, Canada, July 18.

The Tarpon Record.

KANSAS CITY, Mo., July 8.—*Editor Forest and Stream:* The big tarpon now on exhibition at the store of Messrs. Wm. Mills & Son, 31 Park place, New York city, is claimed in your issue of July 6 to be the largest tarpon ever caught with rod and reel.

This claim is not well founded, for my friend, Dr. H. W. Howe, of Mexico City, Mex., in December, 1899, caught one just ten pounds heavier—viz., 223 pounds. This fish was fully described in my paper on "Winter Fishing at Tampico," published in your issue of Aug. 4, 1900.

This fish was landed on a light Devine tarpon rod, a No. 36 Empire City line that had been in constant use for more than two weeks, and one of Dr. Howe's reels.

I hold in my office the original affidavit of Dr. Howe and two others who saw the fish landed and weighed, a copy of which was incorporated in the aforesaid paper of mine.

The scale used for weighing the fish was one sold me by Mr. Ed. vom Hofe, and which was tested a short time before by weighing accurately two men.

It is evident, therefore, that Dr. Howe still holds the championship.

I note also in the same issue of your paper that two tarpon fishermen in thirty-four days' fishing in Florida landed between them fifteen tarpon. In the same time at Tampico, Mex., they could certainly have landed over one hundred. As far as I have been able to learn, the winter and spring fishing along the Mexican coast is far superior to that along the Florida coast.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XX.—The Tools of Training.

The whip, whistle, spike collar and check cord are all the instruments the trainer needs to perfect the dog in his education for work to the gun.

Both whip and spike collar have been denounced as cruel by many wifney cmfwy pu cmfwp shrdl shrdlmm they are used. The cruelty therefore is in their application, which is a manifestation of the trainer's propuses.

If the trainer cannot use the spike collar without being cruel, it is better for him to entirely forego its use, as it is better also to forego any attempts at training if he cannot control his temper. When properly applied, the collar inflicts pain without mutilation. It serves a useful purpose, and its use can be justified on that score. Breaking the colt to harness, which at first hurts him, or breaking the ox to the yoke, inflicts certain degrees of pain, yet if not carried to unnecessary degrees no one considers that cruelty is inflicted. One or two cuts from a heavy whalebone whip raises welts on the side of the roadster, and causes a greater intensity of pain than there would be occasion to inflict in all the lessons of the average retriever.

Anger and violence result in cruelty. When they are exhibited, the trainer is such in name only. He then is unfit to teach, and he then incapacitates the pupil to learn.

The best training collar, though called a spike collar, is a combination of both spike and choke collar. Its construction should be simple and its material of the best. The leather should be medium weight harness leather, without sponginess or flaws. For convenience in use, the collar is made in two parts.

The longer part should be from 22 to 24 inches in length by 1¼ inches in width. An iron oblong, sufficiently large to allow the free end of the strap to play through it, is sewed in the other end of the strap. If a ring were used it would allow the strap to twist around the dog's neck; the oblong prevents it from doing so. The spikes, six in number, are screwed through steel plates on one side of the strap, two to a plate, and are secured by nuts screwed on them on the opposite side of the strap. The spikes to allow the free end of the strap to play through it, is should project inwardly, about ½ inch. The points should have a bevel of about 45 degrees, so that they will hurt, without cutting or puncturing the skin. The shorter strap, 2 or 3 inches in length, has a square buckle at one end to buckle free end of the collar, and a ring is at the other end in which to fasten the check cord.

The whip is carried and used to punish the dog for any misbehavior in a general way. Its presence alone has a beneficial moral effect. While the dog enjoys the society of his master as a companion, he detests servitude, which conflicts with his own spontaneous actions or purposes, and he obeys many times for no other reason than that obedience is compulsory.

The presence of the whip and its significance do much to maintain discipline. For its moral effect, many trainers carry it fastened to the coat, where it is in sight at all

times, and where it is instantly available when needed. The majority of trainers and shooters, however, carry the whip in the pocket. Those most in favor, therefore, are flexible, so that they may be rolled up and stowed in a small compass.

Whips heavily loaded with iron or lead should never be used, as they are unpleasant to carry, and as a slung shot are not at all needed in furtherance of the dog's education.

A silk or linen cracker on the end of the whip adds to its effectiveness. It also preserves the lash from wearing out. An admonitory crack of it often serves to adjust the dog's efforts quite as well as a whipping does.

The check cord serves a most useful purpose in keeping the dog under control at such times as he would misbehave or interfere if left to his own will, or run away if he is displeased or afraid. It also comes efficiently into use in many parts of the field and yard breaking.

A braided cord is the best. It does not require so much care in coiling it for the pocket, and it cannot untwist in the annoying manner peculiar to common rope.

The cord used to connect windows with their counterbalance serves admirably the purposes of a check cord. A ¼-inch line is quite large enough for all field purposes, although in the yard lessons a ½-inch line, as being easier on the hands, may be preferable. The check cord should be as short as is consistent with effecting the desired purpose. If used beyond a certain length, which is variable according to the special matter to be accomplished, it is more or less cumbersome and unmanageable. When not in use it should be coiled carefully so that when one end is fastened to the dog's collar it will play freely without tangling or kinking.

The whistle serves as a great aid in handling the dog when he is seeking for prey. It should have a good tone of medium pitch. Metallic whistles have a tendency to make the mouth sore, and when full of frost in cold weather are painful to the teeth and lips. For use, it is best suspended from near the hunting coat collar in front by a string of sufficient length.

The senseless and continuous whistling practiced by some trainers and shooters should be studiously avoided. To the dog, the blasts have a meaning only when they are associated with definite ideas, and such he cannot have if they are continuous.

If the whistle is carried habitually in the mouth, there is a great temptation to blow it unnecessarily, therefore it is better to place it in the pocket until it is actually needed. Men who carry it in their mouths continuously are prone to acquire a drawn, anxious look, and are ever alert to blow it on the slightest pretext of setting the dog aright in his seeking. Probably nine out of ten of the blasts on the whistle are unnecessary, and therefore more or less harmful. Its only useful place in the management of the dog at work is to turn him if taking a cast too wide; to attract his attention to a signal of the hand, which the shooter desires him to see, and to make him cease work and come in. A different note is used for the respective purposes, and once the note is definitely fixed upon, it should always be used in its proper relation and none other.

The trainer can use any note or combination of notes which he pleases, there being nothing specially conventional in this respect, although in a general way a long and short note are used to make the dog turn, a succession of short, sharp notes to attract his attention, and a prolonged whistling to make him come in.

When trained for field trial purposes, some dogs are taught to work further out and go faster to blasts of the whistle, to the end that the whistling of the opposing handler may not check the dog's efforts.

XXI.—Field Trial Breaking and Handling.

In field trial competition, a dog needs to do his best, and this he can do only when he has self confidence, proper schooling, good spirits, and stamina which comes from excellent physical condition.

A dog, working alone in such manner as pleases himself, and yet, perhaps, in a manner pleasing to the shooter, is then engaged quite differently from a matter of competition. Allowed to take his own time and methods, he may do well; but in competition his performance is relative, and therefore inferior if some other dog does better.

The field work of the dog, with its cramped subservency to the interests of the gun, and the work of the dog in field trial competition, are distinct inasmuch as the pottering burdensomeness of the shooter in actual work is largely eliminated.

There are shooters who hold that a field trial should be an exhibition of high class field work as it is done in actual service to the gun afield. Such arguments are absurd. To hold a dog down to the restrictions imposed by actual work to the gun would vitiate all competition. The purpose of the competition is to try out the dog's powers to the utmost, in the qualities which are essential in actual field-work, and in the approved manner of field work, free from the obstructiveness of the shooter whose dominant idea is the capture of the bird rather than the degree of his dog's natural qualities. The capture of the bird, by the way, is a difficult idea to remove from the average shooter's field trial data. He cannot consider a race between two or more dogs without making the dead bird a standard of value. One season at field trials usually convinces the as-in-actual-field-work oracle that he is quite right and the field trial world is quite wrong; in the second season, he usually begins to learn something on the one hand and unlearn something on the other; and later on, if he have a reasonable degree of good sense, he learns to know that he did not know it all.

The term, "natural qualities," is difficult to explain to the advocate of pure field work which is done in the interest of the gun, for the reason that it embodies a theory which runs counter to his prejudgments and prejudices. He generally attempts the reductio ad absurdum that "natural qualities" indicate an unbroken dog turned loose to run wild. As a matter of act, the field trial dog needs to be broken to ascertain useful degree, and while he competes after the manner of actual field work he is freed from its deadening burdens. The trotting horse is broken to harness and to obedience to voice and rein, yet he, in a race, is given the freest opportunity to display his natural qualities to their ut-

most. Why not insist that he should race to a farm cart so that his natural qualities would thereby be displayed "as in actual field work?"

The manner in which the horse races is not the manner in which he is driven on the road; the manner in which he is trained on the track is not the manner in which he is trained for road work, yet the natural qualities, the speed, stamina, intelligence, gameness, disposition, etc., which the horse displays in races are the qualities which are of service in actual road work, and when he is used in the latter service the manner of handling him is modified accordingly.

No sane man would think of driving his horse on the road as if he were racing for a championship. Most men can talk sensibly in respect to the distinctions between a race horse and a cart horse, yet a large percentage of them would probably lose their good judgments when considering the differences between a field dog and a field trial dog, though the difference between either might be merely a matter of handling. Indeed, a dog might be both a field trial dog and a field dog, and not infrequently he is such. Few men can handle a race horse or field trial dog; not every man can handle the ordinary horse or dog, and some men cannot handle any kind of dog, for which they hold the dog blamable.

It is true that fast dogs have bolted at field trials, and it also is true that race horses have run away on the tracks when racing, but it would be erroneous to assume that such acts are considered standards of merit. And yet a dog of high class natural qualities may commit a flagrant error and win a race, not by virtue of having committed such error, but by virtue of being a better performer than his competitors, error and all considered. On the other hand, a dog may commit an error of such magnitude that it disqualifies him from further competition in the race in which he is engaged.

Field trials are conducted by intelligent, experienced gentlemen. They have all the experience and knowledge which come from "actual field work," with the added knowledge of what constitutes the principles of a competition and the best manner of conducting it.

In preparing a dog for a competition it therefore is better to act on the theory that he will engage in a race. Memories of what dear Star did on a memorable day when he made forty-nine or more points with birds to every point will not offset his inferior performance in competition. Not what he has done but what he does do is the only datum the judge considers.

To perform at his best, a dog must be in fine physical condition. His muscles must be hard and strong; his feet tough; his body free from fat and surplus flesh, all resulting from sufficient exercise in the preliminary weeks, combined with proper feeding and general good care. Furthermore, he must have ample practice on birds, so that he will be able to perform quickly and skillfully on them. Speedy work is essential, for one can easily understand that a dog which works on his birds sharply, accurately and intelligently will not give a slower dog any chance to score, however well the latter may be able to work if given more time. No forcing process serves to fit the dog for a field trial. Over-exercising to reduce fat, whipping to correct errors, etc., do not condition the dog. Good, honest preparation and enough time are the essentials. Soft flesh, thick wind and unskillfulness are not corrected by hurry or pressure.

Without the necessary preparation, no dog has other than an exceedingly remote chance in a field trial competition. Trusting to luck and to one's own ability to help the dog to win is trusting to a forlorn hope.

The judges are quite alive to what work is done independently by the dog and what is done by the assistance of his handler. They will make their estimates accordingly. This does not imply that skill is not necessary in handling a dog in a field trial, but it notes a distinction between skillfully handling a dog which is able to make a good competition and on the other hand endeavoring to assist one which is unfit to compete. Handling and assisting are different matters.

Sharp practice is now many years obsolete. Honesty and skillfulness are not in the least antagonistic. Any attempts at trickery are instantly detected by the modern judge, and if the offending handler escapes a reprimand on the spot he does not escape close surveillance thereafter and a disbelief in his honesty on the part of the judges, so that in a way he justly suffers a depreciation of character from any attempts at tricky handling.

The field trial dog is best developed by permitting him to self hunt, or by conducting his training on a modification of it. In this manner, his self interest is stimulated to its utmost, consistent with a reasonable degree of work to the gun.

Most dogs work less keenly when restricted too closely in their work to the gun, and some dogs work in a slovenly, spiritless manner under such circumstances. The greater self-interest the trainer can evoke in the dog, the greater will be the dog's effort to gratify it. This can be done and maintained only by kindness and encouragement in the main.

The chief considerations in a field trial are locating the birds, pointing them, backing the competing dog, steadiness to point, wing, and shot, and judgment in ranging.

The general wisdom of the dog, as manifested by his practical acts, is expressed by the term "bird sense." Any training, over and above what brings out these qualities in a finished manner, is redundant, and, from a competitive standpoint, tends toward harming the dog's chances rather than toward improving them. In seeking, finding, pointing, etc., the mind of the dog should be concentrated on the work which is recognized as competitive. If he makes his work secondary to the doings of his handler, he is thereby hampered with considerations which are not competitive, and his performance as a contestant will be injured accordingly. In short, the field trial dog is trained specially to fit the conditions of a race. If he works out his ground with greater speed and more judgment, follows a trail with greater speed and precision, points his birds more truly than does his competitor, he will be doing practically all the work. His opponent then will seem to be doing nothing, for the work all being done before he can get to it, there is nothing for him to do.

Contrary to the views held by some writers, great experience on game is no handicap to the field trial

dog. It, on the contrary, gives him the knowledge which he needs in competition. He cannot be too knowing in all the details of field work. Great experience, however, may be confounded with overwork or staleness, which is a decided factor in making a dog unfit for his best performance. Experience, in a proper sense, never makes a dog less keen or less snappy in his work, but overwork will, to a certainty, make him so.

The essentials of a good field trial dog's performance are as follows: staying out at his work industriously, and therefore never coming in to his handler till ordered to do so; beating out his ground with judgment—that is to say, going from one to another of the places likely to serve as haunts or feeding grounds for the birds; locating the birds quickly and accurately after he catches the foot scent or the body scent; pointing them intelligently and stanchly, and backing only when it is necessary to do so; all being governed by a desire to be independent in action and take the initiative whenever it is possible to do so; to be filled naturally for such performance he must have intelligence, stamina, enthusiasm and pluck, self-confidence, a good nose and a good disposition.

The preliminary fitting of the dog for field trial competition is a matter to keep in mind at all times. During the summer months he should be kept in reasonably good physical condition by exercising, good food and a wholesome place in which to sleep. His field work beginning with short hunts, is gradually increased, till he is given all the work he can stand without lessening his enthusiasm and energy in it. He should be thrown entirely on his own resources, consistent with the conditions exacted by the competition.

If the dog has not the knowledge of how best to hunt his ground or go to his birds, etc., before the race, during the race is a badly chosen time in which to teach or assist him. While the handler is endeavoring to assist his dog to accomplish a certain act, the competing dog, more confident and able, may do it readily on his own initiative.

The information already presented in this work on the subject of a steadiness to shot, point, back and wing is applicable to the training of the field trial dog. He must be steady in the work which is designated as being competitive. Flushing intentionally or through erroneous judgment will be penalized to a certainty, although flushes under adverse conditions, such as running onto a bird down or across wind when the dog could not scent it are rarely considered as being a demerit.

The best manner of ranging, roading, pointing, etc., qualities treated fully in previous chapters, are essential to the field trial dog. They should be carefully developed to their best, for the fact that the dog is in a race instead of "an ordinary day's shooting" should ever be borne in mind. To insist that the field trial should be conducted as an ordinary day's shooting is analogous to insisting that a horse race should be conducted as an ordinary day's farm work. In the one case, the dog displays the powers with which nature endowed him, under the least restriction consistent with his control; in the other, he displays his powers as a mental dog, habituated to the restrictions of servitude.

It is better to give the dog as much time as possible near the scene of the trials, so that he may have experience on grounds similar to those of the field trials, and become acclimated as much as possible. Changes of water, climate, food, etc., not infrequently affect the dog's condition and the quality of his field work. He never should be run longer than he maintains his best speed and effort. An hour at first, once or twice a day, night and morning, when the dog is coolest, with a two-hour run every second or third day when he is in better condition, will serve to maintain the average good dog at his best field work. It is a mistake, on the other hand, to have a dog so highly keyed in speed that from high animal spirits he will run so fast he cannot do anything other than to pick out a course to run in. When so extended, he cannot use his nose to the best advantage even if he can use it at all. For the trials which have longer heats than a half hour or hour the matter of endurance must be more seriously considered, and the preparation of the dog must be with a view to establish less speed and longer effort. His preparatory runs are longer to conform to the longer runs exacted in the competition wherein endurance is a factor. Dogs vary greatly in their capacity for work. Some will perform well every day, while others again may not be equal to a satisfactory performance oftener than every other day. The idiosyncrasies of the individual must govern. The trainer should endeavor to keep the dog at a pitch wherein he delights to work every moment. If the latter potters betimes, or loafs, or is dilatory of execution, he loses accordingly if his opponent is industrious persistently and finished in his work.

The Derbys are considered by many as being puppy stakes, but they are so in name only. The age limit is necessarily so liberal that it permits the running of two-year-olds, a trifle more or less as to age, and at two years a dog may be considered as being mature in relation to field work. The breeder should, therefore, endeavor to have his puppies whelped as nearly on or after Jan. 1 as possible, to thereby obtain the greatest allowable age. Then they can be given quite a thorough training the fall and winter of their first season, beginning their second season as trained dogs prepared to take a post graduate course and to enlarge their practical experience.

In handling a dog in competition, the trainer should attend strictly to his own affairs. Any attempt to supervise or dictate to the opposing handler is impertinent and useless. Any captiousness or insubordination militates against the handler's success. If one handler obeys the judges' instructions and the other does not, the judges will possibly after awhile leave the disobedient handler to go where he pleases and do as he likes, the disobedience and refusal to follow the instructions being considered as inability to do so. The judges will always give a respectful hearing to any complaints of interference of one handler with another, if they be not frivolous or prejudiced in their origin. However, it is much better to go through the competition looking out for the best interests of the dogs in charge rather than to engage in looking for trouble.

Some handlers school their dogs to disregard the whistle, or to go out the faster when they hear it, and this to guard against their being called in or turned at

improper junctures by the whistling of the opposing handler. There are but few handlers who do not whistle to and order their dogs too much when in competition. The less noise made, the better.

Between heats the dog should be carried in a wagon. After a heat he should have all the burrs, etc., picked out of his coat and from between his toes, and if the weather is at all cold or raw he should be blanketed and made comfortable.

New Publications.

The Girl at the Half-Way House.

It is good that at length the old-time West is coming to have a place in the literature of the land. The day, to be sure, is late; most of the contemporary witnesses of its early history have passed away; yet the time is not so distant but that many fragments of that history may be saved, to serve at a later day as material for him who shall write at large the story of the trans-Mississippi region from the time of Lewis and Clarke down to its modern civilization.

It was a most happy circumstance that Mr. Ripley Hitchcock, of D. Appleton & Co., should have conceived the thought of preparing a series of volumes to be published under the title "The Story of the West." These cover a variety of types—the Indian, the soldier, the cowboy, the miner and others—and it was a circumstance hardly less happy that Mr. Hitchcock, the editor of the series, should have pitched upon Mr. Emerson Hough to write "The Story of the Cowboy." How well that story was written, and how strongly the cowboy's true character appealed to a public which had imagined a character very different, is well known to the many thousand readers of the book. The description was a true, vivid and interesting picture of a type that has already passed away.

Mr. Hough is one of the writers who long ago yielded himself to the potent charm of a West which was "wild," and so natural, and in his latest volume, "The Girl at the Half-Way House; A Story of the Plains," he has again depicted scenes most of which belong to that now distant past. It is not necessary to tell readers of the FOREST AND STREAM of the charm of Mr. Hough's literary style, nor to inform them that his book is well written and his story is pleasingly told. What may better be done is to explain in some degree what it contains.

It is divided into four Books, treating of different times, though times that follow closely one upon another. The first Book is the Day of War, in which he introduces to his readers the heroine and the hero of the tale at the taking of Louisburg, near the close of the Civil War, and tells the melancholy and touching story of the march of the victors over the bloody field while the band played not a triumphant hymn of victory nor a thoughtless strain of joy, but that old sweet song, long loved in the old time South, which begins

Maxwellton braes are bonnie.

Book II. deals with the Day of the Buffalo, the day of the end of the track, the day of the new settlers, and of canvas and sod houses. The scenes of this new country and new life are vividly pictured. The roughness and the helpfulness, the brutality and the tenderness, the carelessness and the deep feeling of these people who had fought their way into an unknown world among unknown neighbors, and were not yet sure where they were or how they felt. Here there was hunting, fighting, and struggling of many sorts, and through it all the hero is learning himself the lesson of life and his own strength. Here, too, he meets again the heroine, and learns to love her, but his love is not returned.

In Book III. it is the Day of the Cattle. The buffalo had gone. The long trail is furrowed by thousands of thousands of slow feet working constantly to the North. People have settled down a little bit more into their places. They begin to belong to the soil. The hero's love story does not prosper.

Last of all comes the Day of the Plow. The cattle have followed the buffalo and the Indian out of the pages, and following the cattle has ridden the cowboy, too. Land is now what all men desire. The story moves on rapidly, still in Kansas, and then suddenly in the last chapter the scene changes to an old Southern city, and then comes the end—a happy ending.

Mr. Hough has written a story very unlike the conventional novel. It is full of action and movement, yet we may imagine that after all the love story which runs through its pages was intended to serve as little more than a moulding on which to hang three broad canvases, paintings of phases of the quickly changing life in the early West, from the time when the settlements began until the days when the question of settlement had become a matter of long ago, and the people had settled down into the commonplace—and happy—life when history is no longer made.

The canvases are broad, the lights strong, the shadows deep. We have here an artist who sees beneath the surface, who paints with deep sympathy, and who has depicted well scenes that every American should be glad to know of.

In and Around the Grand Canyon.

Most marvelous but as yet least known of the wonders of America is the Grand Cañon of the Colorado. One might say that it is only a little more than thirty years ago that it was discovered, for it was then that Maj. J. W. Powell, with his little band of heroes, faced the perils of this rapid, rushing, almost underground, river and traced its course from Green River on the Union Pacific Railroad southward through untold difficulty and danger. Long, long before that the Spaniards had crossed the stream near its mouth, and the upper reaches of the two rivers which unite to form the Colorado had long been well known. In 1835 or '36 a party of trappers under the leadership of one Fremont descended the river, and one of that party still lives—or a few years ago did live—in Wyoming. Again, in 1855, Ashley, who gave his name to Ashley Fork and Ashley Falls, attempted the descent,

but to the scientific world nothing was known of the river or its dangers until Maj. Powell accomplished his trip, and the general public was more than twenty years behind the scientific world.

Within the last dozen years, however, knowledge of this cañon, and of its beauties, as seen from above, has gradually filtered into the public mind, and the construction of railways to some of the best known view points makes it clear that before long the Grand Cañon may be as well known as the Cañon of the Yellowstone. A volume recently issued by Little, Brown & Co., of Boston, is likely to contribute much to this knowledge.

This is "In and Around the Grand Cañon," by Geo. Wharton James, who for ten years has visited "the most sublime spectacle of earth." His work is not an ordinary book of hasty travel, but the accumulated results of much study, during which a great extent of country has been traversed on foot and on horseback. Mr. James has many times climbed back and forth over most of the trails which lead from the lofty plateau down to the river's brink, has camped in many localities where white man, perhaps, never camped before; and he has filled his soul with the mysterious spirit of the cañon about which he writes so graphically and so lovingly.

Aside from its interest as a series of graphic descriptions of most marvelous scenes, the book demands special praise for the system on which it is written. Any one who purposes to visit the cañon must read the volume to comprehend the geography of the region which he is approaching, and to view its spectacles intelligently. Thus Mr. James describes first of all the Colorado River and its series of connecting cañons; then after some historical matter devoted to the various exploring parties he describes how to reach the cañon, and then he takes his readers down many of the trails to the river, describes other cañons, has something to say about the almost unknown Havasupai Indians and their surroundings, and concludes with chapters about the botany and geology of the Grand Cañon and the impressions that it made on him. A short bibliography of the region closes the volume.

The book is copiously illustrated with photographs of very great beauty, and is handsomely printed on coated paper. It is a volume which should appeal strongly to every American.

North Americans of Yesterday.

It is curious to observe the constantly growing interest in the North American Indians, as indicated by the fact that more and more material about them and their primitive ways is constantly finding its way in print. Now that the Indians as a race—a people set apart by their own culture from the newly arrived white people of this continent—have passed away, civilization begins to find that they are interesting and desires to know something about them.

The most recent volume issued on the North American race at large is Mr. Frederick S. Dellenbaugh's "The North Americans of Yesterday; A Comparative Study of North American Indian Life, Customs and Products on the Theory of the Ethnic Unity of the Race." The volume is based on a series of eight lectures delivered before the Lowell Institute, in Boston in 1894, and these have now been expanded to nearly 500 large pages, adorned with an extraordinary wealth of illustration drawn from a great variety of sources.

As will be well understood, however, even by those who have paid but slight attention to the subject, this large and beautiful volume can hardly do more than touch upon some of the more striking characteristics of the people who have so long inhabited a continent, cut off from all intercourse with that world which we call Old. Nevertheless the facts of the book and the beautiful illustrations make it a volume extremely interesting and valuable; and likely to lead casual readers to the pursuit of more special and detailed study.

Mr. Dellenbaugh's first knowledge of the Indians began thirty years ago, when, as a member of Major Powell's Colorado Cañon Expedition, he visited the Southwest—Arizona, Nevada and New Mexico. The studies then begun have been continued in more recent years, his actual contact with Indians having been chiefly with those of the Southwest and to some slight extent with the natives of Alaska. He is, however, familiar with much of the literature devoted to these people, and in his preface acknowledges his indebtedness to other workers in the field.

The great range covered by the work is indicated by its contents. The author treats of languages and dialect; picture writing, sign language, wampum, cupped stones; Mexican and Central American writings, inscriptions and books; basketry and pottery; weaving and costume; carving, modeling and sculpture; shelters, dwellings and architecture; weapons, armor-implements and transportation; mining, metallurgy and science; musical instruments, music and amusements and games; works and agriculture; customs and ceremonies; myths, tradition and legend; organization and government, and origin, migrations and history. An appendix containing a list of North American stocks, sub-stocks and tribal names closes the volume. This list, by the way, is likely to prove exceedingly useful to the reader who desires to carry his investigations further as giving him at once the stock to which any tribe belongs.

Interspersed with the facts concerning the Indians—who, by the way, Mr. Dellenbaugh calls Amerinds, making use of the recently coined term which appears to have found favor with many students of ethnology—the author intersperses a variety of views and theories concerning these people, many of which are novel and will hardly be at once accepted by Americanists. He certainly has the courage of his convictions and boldly announces them even if he does startle the public by them.

The book is replete with information, and cannot fail to prove useful to the reader, whether merely interested in Indians in a general way, or a student of some special group who desires to look up facts with regard to others.

Of the 350 illustrations in the volume, many are from the author's sketches, others from the United States Bureau of Ethnology, others still from the American Museum of Natural History, the Field Columbian Museum and photographs of the Harriman Alaska Expedition and from other sources. They are of great beauty,

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

JULY.

- 20. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
20. Quincy, handicap, Quincy, Mass.
20. Columbia, club, City Point, Boston Harbor.
20. Westhampton C. C., club.
20. Hull-Massachusetts, club, Hull, Mass.
20. Savin Hill, club, Boston Harbor.
20. Winthrop, Winthrop, Mass.
20. Duxbury, ladies' day, Duxbury, Mass.
20. Beverly, Corinthian, Monument Beach.
20. Winthrop, open, Winthrop, Mass.
20. South Boston, club handicap, City Point, Boston Harbor.
20. Norwalk, club race, South Norwalk, Long Island Sound.
20. Stamford, annual, Stamford, Long Island Sound.
20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
20. Burgess, Marblehead, Massachusetts Bay.
20. Pass Christian, club, Pass Christian, Miss.
22. New York, cruise, rendezvous, Glen Cove.
22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
22. Canarsie, open, Canarsie, Jamaica Bay.
23. New York, cruise to the eastward.
24. Seawanhaka, cup race, Lake St. Louis.
24. East Gloucester, evening race, Gloucester, Mass.
25-26. Erie, regatta, Erie, Pa.
27. Beverly, open sweepstake, Monument Beach.
27. Bay Waveland, club, Bay St. Louis, Miss.
27. Shelter Island, ladies' regatta.
27. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
27. Shinnecock Bay, special, Shinnecock Bay.
27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
27. Northport, annual, Northport, Long Island Sound.
27. Winthrop, special handicap, Winthrop, Mass.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
29. New York, Astor cup races, Newport.
29-30. Burgess, open, Marblehead, Massachusetts Bay.
30-Aug. 3. Pan-American regatta, Buffalo, N. Y.
30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

- 1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Southern Gulf Coast, Y. R. A.
3. Beverly, Corinthian, Monument Beach.
3. Winthrop, special handicap, Winthrop, Mass.
3. Indian Harbor, club, Greenwich, Conn.
3. Moriches, association regatta.
3. Atlantic, Sea Gate, New York Bay.
3. Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.
3. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
3. Quincy, handicap, Quincy, Mass.
3. Kennebec, open, Kennebec, Me.
3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3. Manhasset Bay, special, Port Washington, Long Island Sound.
3. Hull-Massachusetts, club, Hull, Mass.
3. Savin Hill, club, Boston Harbor.
3-5-7. New York, trial race to select cup defender, Newport.
5. 6. Manchester, West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
8. East Gloucester, Gloucester, Mass.
9. 10. Annisquam, Ipswich Bay, Mass.
10. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
10. Beverly, Van Rensselaer cup, open, Monument Beach.
10. Winthrop, class handicap, Winthrop, Mass.
10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Shelter Island, open.
10. Beverly, Van Rensselaer cup, open, Marion.
10. Hull-Massachusetts, club, Hull, Mass.
10. Bridgeport, annual, Bridgeport, Long Island Sound.
10. Horsehoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
12. 13. American, Newburyport, Massachusetts Bay.
17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats. Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
17. Shelter Island, club.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
17. Quincy, handicap, Quincy, Mass.
17. Kennebec, club, Kennebec, Mass.
17. Kennebec, club, Kennebec, Me.
17. Winthrop, special handicap, Winthrop, Mass.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Hull-Massachusetts, club, Hull, Mass.
17. Savin Hill, club, Boston Harbor.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
24. Winthrop, class handicap, Winthrop, Mass.
24. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
24. Hull-Massachusetts, club, Hull, Mass.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31. Beverly, Corinthian, Monument Beach.
31. Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31. Marine and Field, Gravesend Bay.
31. Shelter Island, club.
31. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
31. Hull-Massachusetts, club, Hull, Mass.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.
31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats. Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

- 2. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
2. Handicap, Quincy, Mass.
2. Indian Harbor, special, Greenwich, Conn.
2. Annisquam, open, Ipswich Bay, Mass.
2. Beverly, open, Monument Beach.
2. Duxbury, ladies' day, Duxbury, Mass.
2, 3. Corinthian, cruise, Marblehead, Massachusetts Bay.

"Yes; that's true," the Colonel admitted. "When they give you good country-cured ham, or shoulder, I don't care for any chicken; but 'middlin' is neither ham nor shoulder, and that's what you get at a good many places, and when it comes to that, I think I prefer chicken."

"Yes; speaking of chicken," Compton remarked, as he refilled and lit his little brierwood, "reminds me of a funny little experience I had some years ago, while a student at the university. I went down into Rockingham with a friend to spend a couple of weeks in the country during the summer. He was one of the kind the Colonel refers to, who supposed he would get chicken, eggs, etc., in the country three times a day, for seven or eight days in the week. In fact, he expected to live on chicken—he liked chicken. Well, the table was very good, indeed; but, singularly enough, we didn't have chicken at all, although there were plenty of them running about the place. Poor Johnson was quite upset about it, and grumbled to me considerably. From that he began to throw out hints to the landlady, but all to no purpose. Finally, we were all sitting on the porch one evening, and a chicken was browsing about the doorway, picking around here and there in the grass, after the manner of the fowl. Johnson said to me: 'What is that, Compton?'"

"What is what?" I replied, not catching his drift. "That thing there," he said—"that peculiar looking thing poking around out there in the grass."

"Oh, shut up, Will," I replied, in confusion. "Don't make an ass of yourself! That's a chicken, as you very well know!"

"Yes," he persisted: "but what's it for? Mrs. Wolf," he continued, raising his voice, and addressing that lady, "what is that thing flitting around loose out there?"

"Why, la! Mr. Johnson!" she replied, innocently, "that's a chicken! Why do you ask such a simple question! Didn't you ever see one before?"

"Well, I haven't seen one lately," he answered, rather pointedly. "What's it good for, Mrs. Wolf?"

"Why, they lay eggs, as you surely must know, Mr. Johnson. Their feathers are also occasionally used in pillows," was her rejoinder.

"Yes; but ain't they good to eat?" he persisted. "What do they do with eggs? Are they good to eat, also?"

"Oh, come off, Will!" I said in disgust, pulling him off the porch. "I can't stand such a racket! Let's take a walk!"

We took a walk, but the next morning we had fried chicken for breakfast, and during the rest of our stay Johnson got all the chicken he wanted.

Bear Lithia Springs belongs to the class of modest little resorts which are scattered all through the mountain regions of the Virginia, and which furnish a quiet, pleasant retreat at a moderate price, to those whose means or inclinations lead them to avoid the more pretentious, gay and high-priced resorts. It has a capacity for about sixty guests, and its appointments are comfortable and home-like. The spring itself is a great pool, or miniature lake, of Lithia water, 150 feet long by half as wide, and some three or four feet deep, with board walks built over and across it, from which one may look down through the glassy depths and see the water welling up in countless little tumbling and working mounds of golden sand, and streaming in little globules and glassy bubbles to the surface.

The surroundings of Bear Lithia are very beautiful. Lying, as it does, in a most picturesque, attractive and fertile part of Rockingham county, the rolling, well tilled fields, fine, handsome farmhouses and general evidences of thrift and home comfort that seem to pervade the entire region are very attractive; and, while the landscapes, viewed from any point, are very beautiful, as viewed from the gentle elevation on which Bear Lithia stands, the prospects are unusually so.

The bold, precipitous walls of Massanutton, densely tree-clothed to their very summits, tower squarely across the western vista, while the higher but more gentle slopes of the Blue Ridge roll upward in successive foothills and ridges, one behind and above the other, until the grandly swelling domes of the great mountain range seem to reach the clouds, in which they are, indeed, frequently lost to view.

These mountain slopes present the most charmingly beautiful alternation of meadow and forest, with here and there a farmhouse perched high up on some gigantic shoulder, like a little white box, lying on the great green expanse, for these swelling slopes make fine grazing lands, and, as a rule, they are cleared and utilized in this region clear to their summits.

The narrow valley between the ranges presents an exquisitely beautiful appearance, as it rises and falls in gently swelling undulations, the rich, green fields vieing with the deeper, more somber tints of the alternating forests, while the river winds in and out through the lovely valley, its course well defined by the fringe of trees along its banks.

Numerous fine old country places lie scattered here and there, and adorn the landscape in this favored section of old Rockingham.

The old Bear mansion—now a part of the springs plant—a fine old stone and brick structure of the old school, which is over 100 years old—the old brick residence of Adam Bear, a couple of hundred yards away and on the margin of the great spring—the old Walker place, a fine old brick mansion a mile away and right on the bank of the river, now owned and occupied by Mr. Coffman; the Harnsberger place, a mile from Shenandoah, all are fine old country places, and add dignity and beauty to the landscapes; while further up the river the stately old mansions on the Weaver and ex-Governor Walker places are worthy of attention, as is also Lewiston, the old Lewis residence, a little further up, on the battlefield of Port Republic, where, on whose lawn and around whose thick walls for hours the hottest of this sanguinary fight raged, and whose final capture and retention by the Confederate forces terminated the fight, and gave them the victory.

and it is very gratifying that they should have in this way been introduced to a wider public than they could reach in the publications of any of the institutions mentioned.

The cover stamp is exceedingly effective, and it is needless to say that the mechanical part of the book is quite beyond praise.

LIFE AND SPORT ON THE PACIFIC COAST, by Horace Annesley Vachell, is a volume which will appear to sportsmen and to pretty nearly everybody else who has any sense of humor and is attracted by the observations of an open-eyed and keen-witted foreigner upon his own people.

Mr. Vachell's book may fairly be called charming. It is written with the kindest spirit, but the author is quick to detect the foibles of those with whom he is thrown and does not hesitate to point them out, though in so pleasant a fashion that we are disposed to laugh at ourselves rather than to be angry with the critic. It is long since we have read a book of this character so delightfully written. It has to do almost entirely with California, which it calls the land of to-morrow, deals with the men, the women and the children of the West, with ranch life and business life; with the foreign population; and with big game shooting, small game shooting, and fishing both in fresh and salt water. Besides that, there are Appendices giving most useful information to the visitor to California, and altogether the 400 pages of the book constitute the most useful as well as the most interesting compendium in regard to California that we have seen in a long time. The volume may fairly be recommended to people, whether they desire to be entertained or informed. Dodd, Mead & Co., New York.

THE MONK WINS is a racing story by Mr. Edw. H. Cooper. The scene is laid in England, and the story is well told and interesting, there being movement from beginning to end. Herbert S. Stone & Co., Chicago.

Official organ, FOREST AND STREAM.

'Mid Reef and Rapid.—XV.

BY F. R. WEBB.

"We aim to feed them on chicken, eggs and fresh vegetables mostly. When people come to the country they expect to get plenty of chicken, fresh butter, milk and eggs; and I aim to provide these in abundance, and generally find my guests pretty well satisfied," said Will Compton, the next evening, as we sat on the lawn in front of the hotel, after a not particularly successful day's fishing, enjoying our after-supper cigars, and the delicious, golden sunset behind the towering peaks of Massanutton a few miles away across the river, in answer to a query propounded by the Colonel as to how—and with what—he supplied his table in the country.

We had remained over all day at the springs, and had put in the day fishing, taking an ample lunch with us, which we had disposed of at the big spring in the river bank, at Coffman's, where we had laid by at noon, for an hour or so.

The bass is a most capricious fish. The fishing ground we had gone over is an unusually fine one, and I have fished over it frequently, with varying success, but always making good catches; but to-day, although we went over pretty much the entire ground, and were provided with an abundance of the best bait, in the shape of mad-toms, minnows and helgramites, our catch was but half a dozen, while George, although he forsook the boat and whipped the water industriously at the various rifts and rapids, did not get a rise to his flies.

We had a fine day, however, and we enjoyed it to the utmost. The storms of the day before had all vanished, and the sun shone from as cloudless a sky as if there had been no rain for a month.

"Speaking of chicken," remarked the Colonel, as he knocked the ashes out of his pipe, placed it carefully in its case and restored it to his pocket, and produced and lit his inevitable cigar; "speaking of chicken, the popular idea that some people have that if they go to the country they will have chicken fixings, and eggs and things, three times a day for seven or eight days in the week, is a great delusion, and on trying the experiment they are apt to awake to the reality that they are much more likely to live on fried 'middlin' and corn-bread."

"Well, it depends on the place," said I, as I threw away the smoked-out stub of my cigar. "I've had some country experience, and I find that, as a rule, the country people give you a very good table. There's nothing better than good, country-cured ham; and, with vegetables and fruits right out of the garden, a man needn't want any better fare."

THE poor showing made by Shamrock II. in her earlier races against the old challenger, Shamrock I., was a source of considerable disappointment to all those who had hoped to see some close racing this fall in the contests for the America Cup. When Shamrock II. was dismantled her chances seemed poorer than ever, as it was generally believed that the delay caused by rerigging her would prove fatal; but on the contrary instead of being a detriment it has proven to have been a most fortunate occurrence, for it gave her designer an opportunity to make some changes in her rig that were apparently what she needed, and the handy way in which she has beaten Shamrock I. since the accident shows that the boat is in better shape and is sailing faster than ever before. In her last race with Shamrock I. in English waters Shamrock II. showed a fine turn of speed, and proved her superiority over the older boat on every point of sailing. The prospects now are that some good sport will be seen when Shamrock II. meets the American boat next September.

THE photograph of the raceabout Badger that appeared in our issue of last week was taken by James Burton, of New York. The photograph of Athene, which also appeared in that number, was taken by N. L. Stebbins, of Boston.

WE are indebted to the secretaries of the Rochester Y. C., the Biloxi and Pass Christian Y. C.'s for copies of their club books.

A copy of the club book for 1901 of the Corinthian Y. C. of Philadelphia has just been received at this office. The book is large and well bound in tan canvas. There are one hundred and twenty boats enrolled in the club's fleet, and there are over two hundred resident members and a large number of non-resident and flag members. The club is in a most prosperous condition, and has done much to make Philadelphia one of the yachting centers of the country.

THE following is from the foreign correspondence of the New York Sun: "A departmental committee appointed to inquire into the costly blunders which attended the building of the new royal yacht, lately reported to the Admiralty, which now, it is unofficially stated, distributes the blame among six officials, including Sir William White, Director of Naval Construction, who is found guilty of an error of judgment in designing the yacht; Senior Chief Constructor Deadman, who is condemned for gross negligence to lose his rank, and Chief Constructor Smith, who is found guilty of carelessness."

THE Vossische Zeitung announces to-day that Emperor William's yacht Meteor has been sold to Prince von Fuerstenberg.

It is stated on excellent authority that Independence has logged nearly fifteen knots when reaching. The following article from the London Field on the speed attained by yachts is of interest:

There is no doubt that in the course of the Ailsa Craig match Sybarita covered several miles at a rate of not less than fourteen knots an hour, and, so far as we know, the average speed of 12.3 knots per hour has never been beaten in a yacht race. In a match of the Royal Victoria Y. C. at Ryde on Aug. 12, 1885, Irex went round the Isle of Wight, a distance of fifty miles, in a strong reaching wind in four hours eight minutes, or an average speed of 12.1 knots. Satanita, in a race on Aug. 3, 1893, at the R. Y. S., Cowes, averaged 12.3 knots for the full course of forty-five miles, a speed equal to that of Sybarita. In the Satanita's race the water was smooth, and the yacht carried a jibheaded topsail over a single reefed mainsail, whereas in the Ailsa Craig race the sea was very heavy for more than half the course, and Sybarita had a housed topmast and a close-reefed mainsail until the last twenty miles, when one reef was shaken out. It is very difficult to estimate the maximum speed attained by vessels when racing, but we think that Satanita in the course of the race inside the Wight for a part of the distance attained an even higher speed than Sybarita.

The late Mr. Dixon Kemp, writing on the subject of the speed of yachts, mentions some apparently well-authenticated reports upon the speed attained by large schooners. In a passage across the Atlantic the American schooner Sappho is said to have logged 13.1 knots for a distance of 315 miles on Aug. 5, 1869, and her greatest speed is mentioned as 16 knots per hour; but naturally in hard winds the maximum speed attainable is chiefly a question of waterline length. Broadly speaking, the greatest speed attained by a sailing yacht may be quoted as 14 knots per hour; this rate was actually logged by the

schooner Guinevere, a vessel of 121ft. on the waterline, and in the days of schooner racing Guinevere was generally considered to hold the record. When this famous old schooner logged 14 knots she was owned by the late Mr. Thellusson, and it is a somewhat curious coincidence that his nephew, Mr. Percy Thellusson, was in charge of Sybarita in the Ailsa Craig race on June 11.

The speed of clipper ships is far greater than that of yachts. In 1855 the clipper James Baines, on a voyage to Australia, is credited with having averaged 17.9 knots for a period of twenty-four hours.

A correspondent who follows closely the speed of yachts and their performances calls our attention to the enormous speed attained by the schooner Rainbow in 1898. In the Heligoland race for the German Emperor's cup in that year Rainbow sailed the distance from the Borkam Lightship to the Heligoland mark boat, 60 knots, in four hours, and during that time twice the log registered 16½ knots. Again Rainbow did a record in the Royal Yacht Squadron race at Cowes on Aug. 3, 1898. Starting at 10 A. M., she sailed forty-seven miles, and finished at 1:52:46, the others being: Ailsa, 2:5:40; Aurora, 2:15:28. Bona gave up. The average speed in this race was approximately 12.3 knots, which is the same as that of Sybarita in the Ailsa Craig match.

How the Commodore Rowed Ashore

BY C. G. DAVIS.

THE scene Echo Bay presented, as the sun went down, was a treat for the eyes of any yachtsman. The small, well-sheltered anchorage was crowded with sailing yachts, for, besides the fleets of the two local clubs, there was assembled at that time, now many years ago, a whole squadron of yachts about to start on a cruise. All day long and far into the night they kept dropping in one by one, the most miscellaneous looking lot of craft ever congregated under one flag. Sloops forty feet long to fifteen, catboats of all sizes, yawls, cutters, periguas, schooners and even sailable row boats. But all flew one flag, a blue cross, and all were full of enthusiastic sailors off for a week's jollity.

The center of attraction of all this marine picture was a little white cutter—a miniature man-o'-war for trimness and tidiness. Every rope was as taut as a fiddle string. Her spars were stayed to a hair, sails rolled up in their whiteness and as smooth as bolsters. Brass works, from stem to taffrail, where hung the ensign, shone like gold and enhanced by contrast the snowy whiteness of her holy-stoned decks.

She was, as several girls remarked, the "cutest little boat in the bay," and her Commodore the cutest little man, with his immaculate white ducks, turned up on top of pipe clayed sneakers, blue pilot coat and white cap, resplendent with gold. He in stature was well mated to the tiny cutter and the nautical symmetry was perfect so long as Olsen, a big, raw-boned sailor, stayed below. But it was too much to expect of a six-footer to stay long under the deck of such a toy, and when Olsen sat in the fore hatch smoking, his feet nearly touched the floor, his head seemed half way up to the cross-trees, and the bay was his spittoon. Every craft that came in the Commodore saluted with a gun; some returning the salute in same, some with such remarks as, "Get on to de Commodore!"

Olsen did nothing but load that gun and wipe brass work from morning till night, and heartily glad was he when the last—the sunset—gun was fired and the fleet, some thirty strong, quieted down for the night.

But the ghost of mischief walked that night, although the sun came up just as usual over the low hills of Long Island next morning and gave every promise of a perfect Sabbath. Six o'clock found nature, as well as all the yachtsmen, asleep. Seven o'clock a few early risers were moving, but by eight o'clock the aroma of boiling coffee and sizzling ham and eggs floated up into the quiet air as hungry jaws played havoc with the grub; but hungrier eyes from every craft in the harbor were fixed upon the flagship. That stately little craft had been groomed down by Olsen and seemed to hold her head up in a most haughty manner, and yet it was the tiny 5ft. dinghy that the tide held away at painter's length from the taffrail the eyes were focused on rather than the cutter.

Small as was the flagship and the Commodore, this dinghy was the smallest of the lot. At just two bells the eager audience of 200 pairs of eyes beheld the first sign of the Commodore, upon whose appearance more than usual attention seemed manifested, for Olsen came aft, untied the dinghy and held her at the starboard quarter, ejecting enough tobacco juice into the bay to kill all the fish therein in his efforts to suppress a smile as the Commodore briskly, but stately, stepped in and carefully seated himself on the one and only seat.

Of course, plumbers, carpenters, tinsmiths, mechanics and tradesmen of all branches are not supposed to be versed in sea ethics, so it fell to the Commodore's lot to instruct the 200 protégés of his into the proper training of a man-o'-war's man. Holding both oars apeak without having to look up to see if they were plumb, he waited until the Swede gave him a shove, wiping the back of a big paw across his mouth to hide a smile as he did so. Then, with perfect precision, both oars dropped like magic into the oarlocks—were held poised parallel to the water, blades horizontal for a second—and then, with a most perfect stroke, the Commodore gave way for the club house.

I'll bet if those 200 men were boilers, with a capacity of 500 pounds, that each and every one's gauge would have shown a pressure of 499 pounds at this moment, for not two seconds later—and every one seemed to know just when to expect it—a most startling thing happened.

Just as the Commodore gave a vigorous stroke the stubby little punt came to a sudden mysterious stop. So sudden, in fact, the Commodore slid backwards off the seat, and all but capsized her. The pressure went up another half pound with a jump, while the Commodore carefully regained his equilibrium, readjusted his oars, his hat and his features and started once more for the shore. The punt had slid back toward the cutter in the meantime, but when she got about the same distance away she stopped again—so did the Commodore, just for a second to glance over his shoulder, for he did not dare turn around very far, and then she gave way strong, to push aside whatever it was he had run into. By that time not only his own fleet, but the other yachtsmen, were attracted by the commotion, and there was the Commodore, resplendent in gold lace, flushed to the color of a beet with the exercise and indignation, digging water in vain, until he tumbled to the joke. Then he stopped and plucked at his short mustache, the picture of mortification. Shout after shout of uproarious laughter greeted his surrender. Dignity was at a discount.

Only one boat did not go alongside the cutter to claim a drink, and that one was ours. The reason was, the boys who took it during the night, as it was the only skiff large enough to carry the rocks with which they anchored the Commodore's dinghy, forgot to return the oars.

Annisquam Y. C.

SQUAM, MASS.

Thursday, July 4.

THE first race of the Annisquam Y. C. was sailed off the mouth of Squam River on Thursday, July 4, in a light southeasterly breeze. The course was four-legged, with reaches all around. The race of the day was in Class A, in which H. H. Wiggin's Tabasco III., designed by Crowninshield, made her first appearance. She won by nearly 9m. The summary:

Class A.	
	Elapsed.
Tabasco III., Harry Wiggin.....	1 30 20
Grayling, Langland.....	1 39 00
Tedesco, Pear.....	1 47 27
Susan, Bent.....	1 48 10
Shiek, Friend.....	1 48 20
Gertrude, Whittemore.....	1 51 23
Bonnie, Davis.....	1 52 10

Class B—Dories—Over 17ft.

Oceanus, Olsen.....	1 55 30

Duxbury Y. C.

DUXBURY, MASS.

Thursday, July 4.

THE Duxbury Y. C. held a regatta on Thursday, July 4, in which two classes entered. A good whole-sail breeze from the northeast prevailed. In the 18ft. knockabout class a good race was sailed, Oom Paul winning. In the handicap class, the old 21-footer Rooster, which the Adams boys made famous, was scratch boat and won handily. The summary:

18ft. Knockabouts.	
	Elapsed.
Oom Paul, Geo. P. Cushman.....	2 18 13

City of Boston Races.

OFF CITY POINT.

Thursday, July 4.

ACCORDING to a custom of years' standing, the city of Boston gave an open race on July 4. It was conducted by the Yacht Racing Association of Massachusetts, and the races in Association classes will count for the season's percentages. It was the first time for many years that so large a number of yachts started, and Dorchester Bay looked as in the old days, when it was difficult to see from one shore to the other on account of the number of sails. One hundred and eight yachts entered formally, and of this number seventy-three entered the races. Only three dropped out after the start. A light easterly breeze was blowing, and the racing in all classes was good. The summary:

Class D—25ft. Cabin Class.

	Elapsed.
Flirt, F. W. Fabyan and McKee.....	1 42 45
Early Dawn, J. E. Doherty.....	1 43 15

Corinthian Y. C.

MARBLEHEAD, MASS.

Thursday, July 4.

THE second championship race of the Corinthian Y. C. was sailed off Marblehead, Mass., Thursday morning, July 4, in a light easterly breeze. In the 25ft. class the new Crowninshield boat Chewink had an easy time, none of the other Y. R. A. cracks being entered. The old Herreshoff raceabout Sintram and the new Crowninshield-designed Indian sailed a close race, Sintram winning. In the handicap knockabouts Suzanne, scratch boat, won handily, and in the special 15-footers Raccoon won after a hard race. Elvira sailed a walkover. The summary:

Saturday, July 13.

THE third championship race of the Corinthian Y. C. was sailed off Marblehead Saturday, July 13, in a light southeasterly breeze. The 25-footer Crewink again had no cracks to deal with, and won by a long margin. Sintram repeated her work of July 4 in the raceabout class, and Raccoon had another victory in the special 16-footers. In the handicap knockabout class Suzanne finished first, but lost to Thistle and Fifi on corrected time. Class A did not finish. The summary:

Columbia Y. C.

SOUTH BOSTON, MASS.

Wednesday, July 3.

THE annual Y. R. A. open race of the Columbia Y. C. was sailed off the club house at City Point, Wednesday, July 3, in light to moderate breezes. In the upper bay the breeze was fairly strong, but down in Quincy Bay it grew materially lighter. The race of the day was between the restricted 25-footers. The Hanley-designed Calypso, the Shiverick-designed Early Dawn and the two Crowninshield boats, Chewink and Flirt, had it warm all over the course. Another victory was added to Calypso's list, while Early Dawn beat out both Crowninshield boats for second place. It was by long odds the best race of the season in this class.

In the restricted 21-footers Zaza won handily from the new Burgess boat, Eaglet. In the open 25's the old Romance at last found her breeze and walked off with first money, although on the windward, both Hustler and Thordis beat her. Tacoma found no competitor in the 21ft. open class, and went over the course alone. Only four of the 18-footers entered, and Aspinquid had no difficulty in heading these. Her hardest rival, Bonito, was not present. The summary:

Class C.

Manchester Y. C.

WEST MANCHESTER, MASS.

Tuesday, July 9.

THE first championship race of the Manchester Y. C. was sailed Tuesday, July 9, off Salem Bay, in a fairly strong southeasterly breeze. Chewink led last year's champion Flirt and Khalifa around the whole course, but was ruled out for crossing the starting line before gunfire. In the raceabouts Pompilia won her first race, and in the knockabouts Rikki Tikki, a 15-footer, had a walkover. The summary:

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter VIII.—Laying the Deck, Coamings, Etc. (Continued).

The cabin top on No. 2 design looks a formidable undertaking for an amateur, but it is not nearly so bad as it looks. A mould should be made at the after end, similar to those used in building the boat, and from this mould a fore and aft center mould must be fixed for the whole length of the cabin-top, and it must be of the same shape as that shown in the sheer plan. When these two moulds are in place, two intermediate moulds must be made, having a similar curve to the after mould, but flatter as the center

JOINTS AT ENDS OF COAMINGS

heights get less at each mould as they approach the forward end. The simplest way to get the proper curve for all the cross moulds is to make all of them semi-ellipses; taking the width across the cabin top at each mould, as the major axis of that particular ellipse, and the height at the center above the sides as half the minor axis. Then draw the curve of the ellipse in the following manner: Draw the major axis on a suitable piece of wood, and the minor axis through its center and at right

METHOD OF DRAWING AN ELLIPSE WITH THREE NAILS & STRING

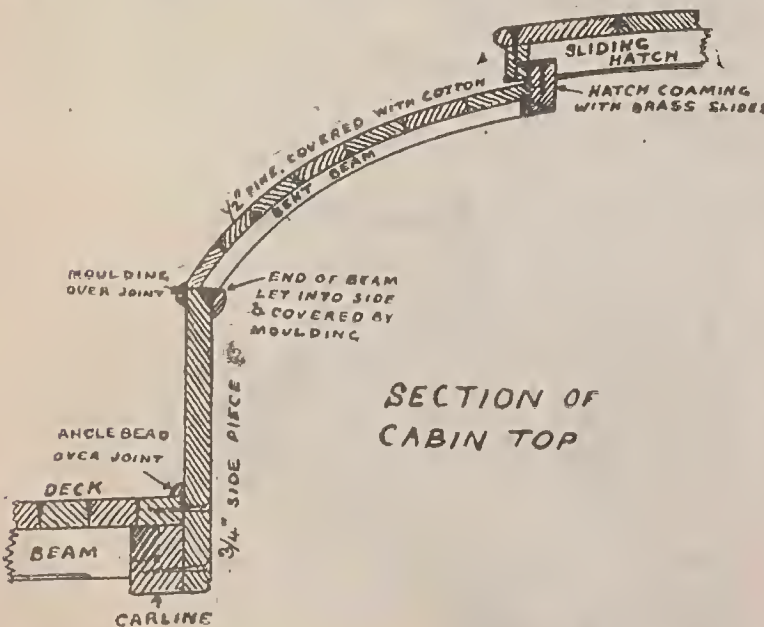

angles to it; then, with half the major axis as radius, and one end of the minor axis as center, describe an arc of a circle, cutting the major axis into points, which are called foci. Now drive three small nails into the board, one at each focus, and one at one end of the minor axis. Tie a piece of string tightly round the three nails and then withdraw the nail at the end of the minor axis. By placing a pencil inside the string, and running it round at the full stretch of the string, an ellipse will be drawn,

CABIN TOP IN FRAME.

passing through the ends of the two axes. The diagram will show how this is done, but is much simpler to do than to describe, and is very useful for many other purposes.

Having got the moulds in place, as shown in the accompanying sketch, bend three or four battens over the moulds, and fasten their ends to the after mould and the fore end of the cabin top. By means of these moulds and battens you have now got a frame work similar to that on which the boat was built, and the

SECTION OF CABIN TOP

rest of the work is carried out in a similar manner, steaming and bending the beams inside the battens, and letting their ends into the top of the side pieces. When bending in the beams, cut rough holes through the central fore and aft mould to let them down to their proper places below the ribbands; also put in a stout beam, of twice the sectional area of the others at the end of the hatchway; but let the rest of the beams run right across the opening, and plank over it. Be careful that the tops of the

beams and moulds are kept low enough to allow for the thickness of the planking at the sides and end, otherwise you will have the planking projecting beyond the sides.

Plank over the beams with narrow 1/2 in. spruce or cedar, working an 1/8 in. bead on one edge of each plank to show underneath. As soon as the planking is on and fastened, cut away the moulds and battens, then fit fore and aft carlines of twice the siding and moulding of the beams at the sides of the hatchway, letting them over the beams, and through fastening them. The after ends of the planks will have been fastened to the after bulkhead at each side of the hatchway and the ends sawn off flush. The hatchway can now be sawn out to the carlines and after side of the stout beam, and the inside cleaned off.

I should have stated that the after bulkhead is cut off to the shape of the after mould, before the planking or battens are put on.

The cabin top will be cleaned off, stopped, and painted; and the calico stretched over it and painted, in the same way as the deck of No. 1 boat was done; a moulding being nailed over the calico at the joint between the top and sides, and the inside of the hatchway, lined with teak to match the slide.

Teak runners must be screwed over the calico at each side of the hatchway, and they should have brass plates on the top as shown in the sectional sketch; they should extend the whole length of the cabin top, to form hand rails; but the runner plates should only go far enough forward to let the slide open to the full extent of the hatchway.

A band of half-round brass, or galvanized iron, 1 in. wide and 3/8 in. thick, should be worked from the deck beam, up the inside of the sides, along the under side of the stout hatchway beam, and down the other side to the deck beam again. This band must be well screwed from the inside to deck beams, carlines, cabin top, and sides, and to the hatchway beam, and it will then tie the whole structure firmly together.

Where an oval hatchway is required the hole must be framed in the same way as the fore-end of the opening in the deck for the cabin top, and coamings must be steamed to the curve and scarphed. They should be in two thicknesses with the joints on opposite sides, and the inner thickness should stand 1 in. above the outer thickness to form a rabbet for the hatch to fit over. The rim of the hatch is shaped out of the solid in four pieces, and screwed to the under side of the hatch. A small strip of brass on the top of the inner thickness of the hatch coaming and a similar strip on the under side of the rim of the hatch will keep everything in place, and makes a neat finish.

Answers to Correspondents.

I have been asked by the editor to reply to the numerous letters on these articles which have been received from readers in various parts of the country, and as there are too many of them for a separate reply to each, I will try and answer the main points only.

H. E. K.—Yellow pine, Oregon pine and red pine are all suitable woods for planking. Yellow pine is very light, but is not much lighter than cedar, and is not so durable, while it is more difficult to get in long lengths. It is very suitable for dinghies, etc., but is very soft. Oregon pine is an excellent wood for planking if it is to be used of not less than 1 in. in thickness, but when cut thin it is liable to split. Red pine, like Oregon pine, is rather liable to split when thin, and is inferior to it in many ways. Both these woods show the seams badly if not very well seasoned, and they shrink and swell a great deal. Larch is very good for planking when it can be obtained fairly large and clear of bad knots, but it is difficult to get hold of in most places. It is exceedingly tough and durable.

S. P. (Glasgow).—As I said in answer to a previous query, the No. 1 design could be fitted with a bulb fin, and should do very well, especially if care is taken to get an equally effective area of fin and the center of lateral resistance is not altered.

Table of Offsets, Etc.—A complete specification and table of offsets for each boat will be published shortly.

LINTON HOPE.

The Seawanhaka Corinthian Cup Boats.

THE small yacht Grey Friar, with which Mr. Lorne Currie hopes to carry the Seawanhaka cup into English waters, arrived at Montreal aboard the Allan liner Australasian on July 8. The boat was in good condition, and

no time was lost in putting her overboard, where she was taken in tow by the Royal St. Lawrence Y. C.'s launch for the trip up the Lachine Canal to Dorval, the club station, where she will fit out. With the boat came Mr. Maudsley, helmsman; Mr. Fletcher, jib-sheet man, and a paid hand. The owner, Mr. Currie, sailed from Liverpool by the Oceanic on July 10, and was accompanied by Mr. Pike, another of the crew, and Dr. Ward-Humphreys, who will represent the Island Sailing Club and act as one of the judges. The representative of the defending club will be Mr. W. Q. Phillips, of the R. C. Y. C., Toronto. Mr. W. P. Stephens, of New York, has been unanimously selected as referee or third judge. The first race will take place on July 24, and there will be five, if necessary, the winner of three taking the cup.

Grey Friar is 47ft. over all, 8ft. beam and carries 498 sq. ft. of canvas. Her waterline is stated to be 25ft. 6in., which would enable her to increase her sail area, if necessary, and still be well within the 25ft. limit. She was built by Stevens Bros., Southampton, and was selected as the best all-round boat.

At the time of writing there is a strong probability that the defense will be undertaken by Red Coat, last year's winner, as she has made the best showing in the trial races. Great difficulty has been experienced in getting this year's boats into good racing form, the sails especially giving a lot of trouble.

It has been decided that the first of the races for the Seawanhaka Corinthian cup shall be sailed on July 25, instead of 24, as previously announced.

The steam yacht Theresa, owned by Mr. G. Sidenberg, has been chartered through the agency of Mr. Frank Bowne Jones to Mr. Isaac W. Jeanes, Corinthian Y. C., Philadelphia.

Newport Y. R. A.

Constitution, Columbia and Independence.

Wednesday, July 10.

OWING to very little breeze and a great deal of fog, the race that was to be sailed between Constitution, Columbia and Independence on July 10 was abandoned, as the boats were unable to finish within the time limit. This race was to be a windward leg of fifteen miles and a run of fifteen miles, making a total of thirty miles. The preparatory signal was given at 12:45, and the boats were sent away at 12:55. There was very little strength to the southerly breeze that was blowing, but the sea was very smooth. Constitution crossed first with Columbia a little astern, but to windward, and Independence was to leeward of both. Several tacks were made in the first few minutes' sailing, but it took Constitution only a short time to work out into the weather berth and gain a substantial lead. About 1:30 the fog began to roll in from seaward in great banks, and shortly all three boats were obscured.

Just after 2 o'clock Constitution was withdrawn from the race, as it was not thought to be advisable to continue in the thick fog when there was a possibility of an accident. Columbia and Independence kept on, the former rounding the weather mark at 3:59:30 and Independence followed at 4:32:30. The wind petered out soon after Independence rounded and there was little air left. Everything possible was done on Columbia to finish within the time limit of six hours, but it was impossible to do so, and as the fog was banking up again, both Columbia and Independence were taken in tow back to their moorings. Henry Johnson, a bowsprit end man, was knocked overboard by the parting of the tow line on Independence. He had presence of mind enough to grab hold of a bobstay and was soon brought on board. Dr. John Bryant, who was aboard Independence, attended the man and found him badly injured. The man was removed to a hospital in Newport, where it was found that he was seriously, but not fatally, injured.

Thursday, July 11.

Independence's poor showing since her arrival at Newport has greatly surprised the yachtsmen who had sailed on her previously, and in the race on July 11 she showed that she has some speed, for she sailed a pretty race with Constitution and Columbia. When Independence's crew got into better shape and the boat is balanced to her designer's satisfaction, we believe she will give a good account of herself, and give her competitors some close racing in any weather. As the race of July 10 was not finished within the time limit, it was postponed until July 11, when it was sailed over the same course as the day previous—that is, fifteen miles to windward and return. The weather conditions were slightly better than on the day previous; about 10 o'clock a southwest breeze and the sun combined to dry up the fog that was still hanging around.

The start was made from Brenton's Reef Lightship, and the mark laid was S.S.W. The wind was from the S.S.W., and blowing about seven knots, and there was a long swell coming in from the S. The preparatory signal was given at 12:20. Independence crossed a few seconds after the starting signal, with Columbia on her weather and Constitution to weather of Columbia. Both the Herreshoff boats set their jib topsails, but Independence did not use hers on the beat out. Capt. Haff held his boat on the starboard tack, while Constitution and Columbia held the port tack, standing toward the Narragansett shore. When Independence was well on her opponents' weather she also came about and followed them. Haff made several tacks inshore, where he avoided the tide and forced Constitution and Columbia about when they drew together. Independence had both her rivals now under her lee. Independence presented a different shaped bow when she was heeled down and made good weather of the long sea. Columbia gradually drew ahead on Independence and made better weather than either of her rivals. The times at the windward mark follow:

	Start.	Turn.	Elapsed.
Columbia	12 25 21	2 56 26	2 31 05
Constitution	12 25 43	3 01 23	2 35 40
Independence	12 25 08	3 01 21	2 36 13

Columbia beat Constitution 4m. and 35s. and Independence 5m. and 8s. Constitution beat Independence 33s.

Columbia broke out her spinnaker 2m. after rounding the mark. Independence made a sharp turn around the mark after again besting Constitution, and had her spinnaker set 1m. after rounding. After Constitution had rounded and set her spinnaker all three boats set ballooners. Constitution sailed fast on the run home, but could not overtake Columbia. The times on the run home were:

	Outer Mark.	Finish.	Elapsed.
Columbia	2 56 26	4 55 00	1 58 34
Constitution	3 01 23	4 58 42	1 57 19
Independence	3 01 21	5 01 05	1 59 44

Constitution beat Columbia 1m. and 15s. and Independence 2m. and 25s. Columbia beat Independence 1m. and 10s.

The summary of the race follows:

	Start.	Finish.	Elapsed.	Corrected.
Columbia	12 25 21	4 55 00	4 29 39	4 28 22
Constitution	12 25 43	4 58 42	4 32 59	4 32 59
Independence	12 25 08	5 01 05	4 35 57	4 35 14

Columbia beat Constitution 4m. and 37s. and Independence 6m. 52s. corrected time. Constitution beat Independence 2m. and 15s.

It was a fine race, and in justice to Mr. Crownshield the reports that his first big yacht was a failure should be emphatically denied, for she made a wonderful showing. Independence is leaking slightly, and when she goes in dry dock again this can be remedied. Undoubtedly this has had something to do with the poor showing she has made in the earlier races.

Friday, July 12.

The race that Independence sailed on July 12, the last day of the racing under the auspices of the Newport Y. R. A., in a strong breeze and with topmast gone and badly crippled, surprised the croakers that had called that boat a failure. She is now pretty generally acknowledged to be a formidable competitor for both Columbia and

Constitution in a breeze, and after a few changes can be made will undoubtedly give a good account of herself in a light breeze.

The lightship was settled upon as the starting point and the legs of the course first south, second northeast by east and the third northwest by west, each of ten miles. The first and third were broad reaches, the second, or off-shore leg, to windward. The preparatory signal was given at 11 o'clock and the starting signal at 11:10. Columbia crossed first and Independence close behind. A tug forced Constitution to keep off and run down to the leeward end of the line and crossed 21s. after the handicap signal. Independence was pushing Columbia hard for first place and was sailing in grand fashion when suddenly her topmast sprung forward and broke off at the cap and fell to leeward. In a moment she was clouded in broken and twisted gear, and slatting sails. After the big topmast spar and the club topsail and sprit were secured, it was still hard work to clear up the tangled gear, which was finally cast adrift and picked up by the tug Wrestler, chartered as a tender to Independence. All of 25m. was lost by the accident, but nevertheless Independence pluckily kept on. Columbia beat Constitution 1m. and 38s. and Independence 7m. and 52s. Constitution beat Independence 6m. and 14s. on the reach to the first mark. The times were:

	Start.	Turn.	Elapsed.
Columbia	11 11 36	11 59 49	48 13
Constitution	11 12 00	12 01 51	49 51
Independence	11 11 51	12 07 56	56 05

When the boats hauled on the wind the breeze seemed to strengthen, and it was a splendid test for the spars and rigging on the boats. Constitution was sailing very fast and pulling up on Columbia. In the ten miles beat Constitution made thirteen tacks, while Independence made only three. The Herreshoff boats overstood the mark and both were beaten by Independence. Independence beat Constitution 57s. and Columbia 2m. and 23s. Constitution beat Columbia 1m. and 26s. The times were:

	1st Mark.	2d Mark.	Elapsed.
Columbia	11 59 49	1 25 32	1 25 43
Constitution	12 01 51	1 26 08	1 24 17
Independence	12 07 56	1 31 16	1 23 20

From the second mark home it was a reach, with the wind over the starboard quarter. It was now blowing as strong as it did in the early part of the race. Balloon fore staysails were set and Columbia continued to draw away from Constitution. On this leg Columbia had sailed at a rate of over fourteen knots. Columbia beat Constitution 50s. and Independence 4m. and 41s. Constitution beat Independence 3m. and 51s. On the reach home the times were:

	2d Mark.	Finish.	Elapsed.
Columbia	1 25 32	2 09 33	44 01
Constitution	1 26 08	2 10 59	44 51
Independence	1 31 16	2 19 58	48 42

The summary follows:

	Start.	Finish.	Elapsed.	Corrected.
Columbia	11 11 36	2 09 33	2 57 57	2 56 40
Constitution	11 12 00	2 10 59	2 52 59	2 58 59
Independence	11 11 51	2 19 58	3 08 07	3 07 24

Columbia beat Constitution 2m. and 10s. and Independence 10m. and 44s. Constitution beat Independence 8m. and 25s.

Larchmont Y. C. Race Week.

LARCHMONT—LONG ISLAND SOUND.

Saturday, July 13.

THE first day of the week's racing at Larchmont opened under most promising conditions. Over fifty boats started, and the fresh easterly breeze made the racing interesting and lively.

In the 75ft. class for schooners, Elmina got the best of the start and sailed a grand race, and finally won by a large margin.

Mr. Philip T. Dodge's recently imported cutter Eelin sailed her first race in American waters. She had Hester and Isolde for competitors. Hester is nearly 10ft. longer on the waterline than either Isolde or Eelin, and her extra length was of great advantage over a course where there was so much reaching and running to be done, and she more than saved her time over Isolde, which was 8m. 56s. Eelin sailed a nice race, and there should be some keen sport between her and Isolde.

Huguenot in the 51ft. class showed up in good shape, and at the end of the first round she was in the lead, and it looked as if she had Humma and Altair where she wanted them. Now that Huguenot has had three of her five tons of lead removed and her sail area slightly increased, she shows that she will be a dangerous competitor for Humma and Altair. On account of the poor showing Huguenot made before she was in racing trim she was condemned by many (as was Independence) as an utter failure, but if she can continue to perform as well as she did in this race it will be conceded that she is a wonderfully fast boat.

The new Gardner & Cox boat Dorwina, ably sailed by Mr. Addison Hanan, had no difficulty in beating Effort and Ludeah in the 43ft. class.

Merrywing, the new raceabout designed by Mr. Clinton H. Crane for his brother, Mr. H. M. Crane, is showing remarkable speed, and again beat her competitors with ease. The summary follows:

Class D—Schooners—Start, 11:40:00.		
	Finish.	Elapsed.
Elmina, E. K. Brewster	3 56 49	4 16 49
Amorita, W. G. Brokaw	4 21 04	4 41 04
Quissetta, H. F. Lippitt	4 14 24	4 34 24
Muriel, Charles Smithers	4 22 02	4 42 02

Class D—Schooners—Cruising Trim—Start, 11:40:00.		
	Finish.	Elapsed.
Katrina, James H. Ford	4 43 20	5 03 20
Hildgarde, J. Bergen	Did not finish.	

Class I—Sloops—Start, 11:45:00.		
	Finish.	Elapsed.
Isolde, Fred Hoyt	4 28 23	4 43 23
Eelin, Philip Dodge	4 25 28	4 40 28
Hester, C. L. F. Robinson	4 17 34	4 32 34

Class K—Sloops—Start, 11:45:00.		
	Finish.	Elapsed.
Altair, Cord Meyer	2 59 31	3 14 31
Humma, J. R. Maxwell	2 55 10	3 10 10

Class L—Sloops—Start, 11:50:00.		
	Finish.	Elapsed.
Dorwina, W. R. Ward	3 13 34	3 23 34
Hebe	Did not finish.	
Effort, F. M. Smith	3 19 56	2 29 56

Class M—Sloops—Start, 11:50:00.		
	Finish.	Elapsed.
Leda, H. T. Maxwell	3 28 00	3 33 00

Possum, E. S. Ballan	3 42 32	3 52 32
Anoatok, J. E. Martin, Jr.	3 47 00	3 57 00
Spasm, E. D. King	3 40 10	3 50 10

Class M—Yawls—Start, 11:50:00.		
	Finish.	Elapsed.
Memories, W. N. Bavier	3 48 33	3 58 33
Sakana, A. B. McCreery	4 18 35	4 28 35

Class N—Sloops—Start, 11:55:00.		
	Finish.	Elapsed.
Enpronzi, Alfred Peats	3 56 30	4 01 30
Alerion, A. H. Alker	4 03 24	4 08 24
Oiseau, G. L. Pirie	3 54 55	3 59 55
Lorelei, J. M. Elsworth	4 58 03	5 03 03
Kit, T. H. MacDonald	4 21 39	4 26 39

Special—Larchmont 25-Footers—Start, 11:50:00.		
	Finish.	Elapsed.
Nei-San, John M. Woodbury	4 27 57	4 32 57

21-ft. Raceabouts—Start, 12:00:00.		
	Finish.	Elapsed.
Snapper, A. B. Alley	2 15 48	2 15 48
Merrywing, H. M. Crane	2 08 32	2 08 32
Viper, A. D. Hennen	2 13 58	2 13 58
Rogue, F. T. Bedford	2 22 04	2 22 04
Badger, Thorsen & Jones	2 18 33	2 18 33

Class Q—Sloops—Start, 12:05:00.		
	Finish.	Elapsed.
Ox, W. N. Bavier	Disqualified.	
Rod, R. G. Sand	2 41 58	2 36 58
Montauk, J. S. Appleby	2 45 13	2 40 13

Class P—Sloops—Start, 12:00:00.		
	Finish.	Elapsed.
Don	2 19 27	2 19 27
Smoke, T. J. Bowns	Disabled.	
Rochelle, Edward Kelley	2 09 02	2 09 02

Manhasset Raceabouts—Start, 12:05:00.		
	Finish.	Elapsed.
Mist, J. Walker	2 54 14	2 49 14
Firefly, Guy Standing	2 51 50	2 46 50
Arizona, G. A. Cory	2 49 50	2 44 50
Lambkin, S. W. Roach	2 53 19	2 48 29
Balc, Phillips & Morgan	2 56 26	2 51 26

Class R—Sloops, Under 15ft.—Start, 12:05:00.		
	Finish.	Elapsed.
Nike, Guy Forbes	2 47 55	2 42 55
Cricket, H. Pryor	2 46 02	2 41 02
Neola, C. D. Mallory	Did not finish.	
Nora, Lewis Iselin	2 47 31	2 42 31
Mystral	2 48 09	2 43 09
Hope, C. O. Iselin	2 44 53	2 39 53
Sandpiper, R. Belmont	2 50 30	2 45 30
Kingfisher, A. Belmont, Jr.	2 46 58	2 41 58

The corrected time of the Nike is 2:39:35.

Class T—Catboats—Start, 12:10:00.		
	Finish.	Elapsed.
Mongoose II, Simeon Ford	2 32 48	2 22 48
Vera, A. M. Bradley	Did not finish.	

Class V—Catboats—Start, 12:10:00.		
	Finish.	Elapsed.
Kazaza, T. J. McCahill, Jr.	Did not finish.	

The winners were Elmina, Katrina, Hester, Humma, Dorwina, Sakana, Oiseau, Rochelle, Merrywing, Nike, Rod, Arizona, Mongoose II. Nei-San took a sail over.

Monday, July 15.

The morning of the second day's racing at Larchmont broke with anything but promising weather conditions, but as the morning progressed the fog lifted, and as the weather cleared a fresh southwesterly breeze came up.

In the 75ft. schooner class Muriel, Quissetta, Elmina and Amorita had one of the most interesting races of the season. After rounding the first mark the wind dropped flat, and when the breeze came up Muriel caught it first and fought the race out with Quissetta and Elmina. Muriel held her lead in the windward work until nearly up to Matinicock Point, where Quissetta crossed her bow and took first place. Elmina finally drew away from both Muriel and Quissetta and won by a narrow margin.

Hester again beat Eelin and Isolde. In addition to the race between these three boats, there was a special race between Eelin and Isolde. Eelin was well in the lead at the end of the first round and Isolde withdrew.

Huguenot carried away her gaff in the windward work of the first round.

The course for the schooners and large sloops was a six-mile run with spinakers to starboard, a six-mile beat to windward and a close reach of three miles. This course was sailed twice around. The small sloops sailed twenty-two and the raceabouts eleven miles. The times follow:

Schooners—Class D—Start, 12:35—Course, 30 Miles.		
	Finish.	Elapsed.
Amorita, W. G. Brokaw	5 45 54	5 13 54
Elmina, F. K. Brewster	5 35 12	5 00 12
Quissetta, H. F. Lippitt	5 36 15	5 01 15
Muriel, Charles Smithers	5 42 54	5 07 54

Sloops—Class I—Start, 12:40—Course, 30 Miles.		
	Finish.	Elapsed.
Isolde, Fred Hoyt	Withdraw.	
Hester, C. L. F. Robinson	5 40 02	5 00 02
Eelin, Philip T. Dodge	5 52 05	5 12 05

Sloops—Class K—Start, 12:40—Course, 22 Miles.		
	Finish.	Elapsed.
Humma, J. R. Maxwell	4 46 09	4 06 09
Huguenot, Edward Kelly	Disabled.	
Altair, Cord Meyer	4 33 18	3 53 18

Sloops—Class M—Start, 12:45—Course, 22 Miles.		
	Finish.	Elapsed.
Leda, H. L. Maxwell	5 14 36	4 29 36
Spasm, E. D. King	5 28 49	4 43 49

Larchmont 25ft. Sloops—Start, 12:50—Course, 22 Miles.		
	Finish.	Elapsed.
Nei-San, John M. Woodbury	Withdraw.	

Raceabouts—21ft. Class—Start, 12:55—Course, 11 Miles.		
	Finish.	Elapsed.
Merrywing, H. M. Crane	3 51 03	2 56 03
Viper, W. B. Hennen	Withdraw.	
Snapper, A. B. Alley	3 56 49	2 51 49
Persimmon	3 54 31	2 59 31
Badger, Thorsen & Jones	3 40 48	2 54 48

Sloops—Class R—Start, 1:00—Course, 11 Miles.		
	Finish.	Elapsed.
Hope, C. O. Iselin	4 32 02	3 32 02
Nora, Lewis Iselin	4 38 38	3 38 38
Neola, C. D. Mallons	4 38 47	3 38 47
Sora, W. Hoey, Jr.	4 31 41	3 31 41
Opossum, H. M. Raborg	4 33 41	3 33 41
Cricket, H. C. Pryer	Withdraw.	

Manhasset Raceabouts—Start, 1:00—Course, 11 Miles.		
	Finish.	Elapsed.
Bab, Phillips & Morgan	5 35 20	4 35 20
Mist, J. W. Walker	5 20 30	4 20 30
Lambkin, S. W. Roach	5 39 09	4 39 09
Arizona, G. A. Cory	5 10 24	4 10 24
Firefly, Guy Standing	5 06 04	4 06 04

The winners were Elmina, Hester, Altair, Leda, Badger, Sora, Firefly and Eelin.

Penataquit-Corinthian Y. C.

BAYSHORE, L. I.

Saturday, July 13.

THE second race of the series for the Lighthouse cup was sailed on Saturday, July 13, off Bayshore, L. I. The course was twelve miles in length. The summary follows:

	Start.	Corrected.
Wanda, J. R. Suydam	2 05 00	2 14 40
Amy Foster, J. Campbell Smith	2 05 00	2 19 06
Marie, Aymar Johnson	2 05 00	2 19 48
Pinkie, Allan Pinkerton	2 05 00	2 19 56
Treasure, C. H. Covell	2 05 00	2 21 51

Robert A. Granniss, of the N. Y. Y. C., has chartered the schooner yacht Intrepid from F. L. Lewis, through A. Carey Smith & Berbey. The schooner being designed by this firm for the German Emperor will be 120ft. long on the waterline.

Newport Special Thirties.

NEWPORT, R. I.

Tuesday, July 9.

THE course for the race between the special thirties that was sailed on July 9 was twice around a mark placed near Bishop's Rock. The wind was light from the N.E. The distance was about seven miles. All crossed well bunched on the port tack, with Dorothy leading, but in the beat out she and Hera got hung together in tacking ship and they withdrew from the race. Esperanza then took the lead, which she held to the finish.

At the end of the first round Esperanza led Wawa by 2s. and they had a hard fight on the wind, at one time Wawa having the windward position. At the end of the first round Barbara got foul of a lobster pot and withdrew. The summary follows:

	Start, 3:55.	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 17 22	5 17 22	1 22 22
Wawa, Reginald Brooks	5 17 31	5 17 31	1 22 31
Barbara, W. Rutherford	Withdraw.		
Hera, Ralph N. Ellis	Withdraw.		
Dorothy, H. Y. Dolan	Withdraw.		

Thursday, July 11.

The race sailed on Thursday, July 11, was over a triangular course eight miles in length. The wind was light from the S.W., making the first leg a reach, the second a run and the third a beat to windward. Carolina pulled into the lead early in the race and won. The times:

	Start, 3:30.	Finish.	Elapsed.
Carolina, Pembroke Jones	4 28 00	4 28 00	1 58 00
Esperanza, H. O. Havemeyer, Jr.	4 28 25	4 28 25	1 58 25
Barbara, W. Rutherford	4 29 04	4 29 04	1 59 04
Dorothy, H. Y. Dolan	4 29 58	4 29 58	1 59 58

Sunday, July 14.

The special 30-footers went to Potter's Cove July 14, where, under the auspices of the Rhode Island Y. C., they raced for a cup valued at \$100, offered by A. E. Austin. Hera won. She was sailed by Ralph N. Ellis. The wind was from the southwest, and the course was a triangular one. Summary:

	Start, 2:40.	Finish.	Elapsed.
Hera, R. N. Ellis	5 51 10	5 51 10	3 11 10
Dorothy, H. Y. Dolan	5 53 55	5 53 55	3 13 55
Wawa, R. Brooks	5 54 40	5 54 40	3 14 40
Carolina, P. Jones	5 55 12	5 55 12	3 15 12
Barbara, W. Rutherford	5 55 50	5 55 50	3 15 50
Esperanza, H. O. Havemeyer, Jr.	5 57 17	5 57 17	3 17 10

Western Yachts.

CHICAGO, Ill., July 13.—It seems that Cadillac, the Hanley candidate, is, after all, to come on to Chicago and sail in the trial races among the proposed defenders of the Canadian cup, which races will begin on July 20. The boat left Detroit, Mich., on the deck of a lake steamer yesterday, and barring accidents, the steamer should arrive here Sunday afternoon—to-morrow. During the voyage around through the lakes workmen will be busy on Cadillac making the corrections and improvements which will be necessary, so that she will be ready for launching as quickly as the steamer reaches Chicago. Mr. C. C. Hanley, the designer of Cadillac, is going around with the boat, and will sail on her in the trial races. Cadillac reached Detroit last Tuesday evening from Quincy, Mass., after a checkered voyage by rail, canal, etc. Those who have seen the boat state that it looks quite the racer and shows great strength of line. On deck Cadillac is said to be not pretty, nearly straight sided, with the bluff of the bows well forward. On the waterline Cadillac's lines are pleasant, and although the yacht would seem to pound in a heavy sea when on an even keel, when listed she presents fair lines to the water and travels like a bird. The length of the boat is 34.8ft., which crowds the 35ft. limit pretty close, one would imagine. It is 40ft. over all, 27.75ft. waterline, 11.4ft. beam, and the draft of the hull 16in., and the normal canvas 1,488.5 sq. yds. Cadillac has two tons of inside ballast.

Orion's Crew.

The crew that will sail Orion in the trial races at Chicago a week from to-day will be composed of Rene Hilbert, skipper; Carl Hilbert, Fred P. Cook, Horace Enos, Rudolph Moreback and Bruno Nordberg, Jr.

Columbia Y. C.

Lady skippers will sail several of the boats which will start this afternoon in the weekly regatta of the Columbia Y. C. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Gravesend Bay Y. R. A.

SEA GATE—NEW YORK BAY.

Saturday, July 13.

THE fifth race of the series of the Gravesend Bay Y. R. A.'s regatta was sailed off the Atlantic Y. C. at Sea Gate on Saturday, July 13. The wind was fresh and there was a lump of a sea on. The triangular course was covered twice, making twelve miles. The times were:

Class	Start	Finish	Elapsed
Class M—Sloops—Start, 3:05:00.			
Akista, George Hill	4 49 47	1 44 47
Class N—Sloops—Start, 3:05:00.			
Vivian, S. E. Vernon	4 46 28	1 41 28
Squaw, H. J. Heath	4 56 22	1 51 22
Bonita, Haviland Brothers	4 58 31	1 53 31
Class P—Sloops—Start, 3:10:00.			
Song and Dance, E. F. Luckenbach	4 27 58	1 17 58
Cockatoo, Hendon Club	4 23 03	1 13 03
Class Q—Sloops—Start, 3:10:00.			
Wraith, Calvin Tompkins	4 28 58	1 18 58
Broncho, F. C. Moore	4 25 37	1 15 37
Spots, D. D. Allerton	4 26 40	1 16 40
Wink, W. A. Barstow	4 28 35	1 18 35
Marine and Field Knockabouts—Start, 3:10:00.			
Vixen, Baylor & Mahoney	4 37 15	1 23 15
Kelpie, W. K. Brown	4 35 18	1 25 18
Quinque, L. H. Smith	4 35 15	1 25 15
Stinger, A. P. Clapp	4 34 15	1 26 15
Jig a Jag, W. Hutcheson	4 36 20	1 26 20
Flying Fox, Buckman & Cone	4 41 20	1 31 20

The winners were Akista, Vivian, Cockatoo, Broncho and Vixen.

Columbia Y. C. Races.

Saturday, July 13.

WIND, N. E. First leg, close reach; second leg, beat; third leg, spinaker and balloon jib run. One of the features of the races was the fact that Mrs. E. T. Balcom had the stick on Wizard and won first race Wizard has won in competition this season.

Dates Changed for the Atlantic Y. C.'s Cruise.

THE changing of the dates for the races for the America Cup has caused Com. David Banks, of the Atlantic Y. C., to alter the time for the club's annual cruise from July 6 to 13 to Aug. 23 to 30, and to that end he has issued the following orders, through Fleet Capt. George Hill: Aug. 23, Friday—The fleet will rendezvous at Larchmont during the day. Aug. 24, Saturday—First day's run of the fleet. Start at 11 A. M., crossing the Sound to Lloyd Point, finish at Norwalk Islands; 16 1/4 miles. Aug. 25, Sunday—Fleet will remain at South Norwalk. Divine service on board the flagship. Aug. 26, Monday—Second day's run of the fleet. Start at 9 A. M., passing south to Stratford Light, finish New Haven breakwater, Morris Cove; 29 miles. Aug. 27, Tuesday—Third day's run of the fleet. Start 8:30 A. M., Morris Cove to New London; 38 miles. Aug. 28, Wednesday—Fourth day's run of the fleet.

Start to A. M. New London to Shelter Island; 15 1/2 miles.

Aug. 29, Thursday—Fleet will remain at anchor at Shelter Island, where there will be water sports consisting of gig races, dinghy races, launch races, swimming races, tub races, etc.

New York Y. C. Cruise.

THE programme of the annual cruise of the New York Y. C. has been issued in general orders No. 2, from the flagship Corona. The rendezvous of the squadron will be at Glen Cove, on Monday, July 22, when there will be a race for the Commodore's cups. Squadron runs will begin the next day and continue eastward until Vineyard Haven is reached, on Friday, July 26, when there will be a return to Newport. On Sunday, July 28, the squadron will remain at anchor in that harbor, and the next day the races for the Astor cups will be sailed. The orders in full are as follows:

FLAGSHIP CORONA—GENERAL ORDERS NO. 2.

Monday, July 22, 1901, the squadron will rendezvous at Glen Cove at 11 A. M. There will be a meeting of the captains on board the flagship.

The programme for the cruise, weather permitting, will be as follows:

Monday, July 22, race for the Commodore's cups, from Glen Cove to Huntington Bay.

Tuesday, July 23, squadron run, Huntington Bay to Morris Cove.

Wednesday, July 24, Morris Cove to New London.

Thursday, July 25, New London to Newport.

Friday, July 26, Newport to Vineyard Haven.

Saturday, July 27, Vineyard Haven to Newport.

Sunday, July 28, the squadron will remain at anchor at Newport.

Monday, July 29, races off Newport for the Astor cups.

Tuesday, July 30, there will be a meeting of the captains on board the flagship at noon.

During the cruise there will be the usual races for the owl and gamecock colors, and a race for launches.

The Regatta Committee will furnish details for the runs from port to port, and for all other racing events.

Captains are requested to provide their vessels with N. Y. Y. C. night signals, also to send to the Commodore a list of the names of their guests.

The captains and their guests will be welcome on board the flagship when in harbor.

By order of the Commodore,
ROBERT BACON, Fleet Captain.

July 15, 1901.

Pierre Lorillard.

MR. PIERRE LORILLARD, well known the world over as a prominent yachtsman and turfman, died on Sunday, July 7, at the age of sixty-eight years. Mr. Lorillard was a member of the Union Club, the Racquet Club, the Knickerbocker Club, the New York Y. C., the Grolier Club and many others.

Mr. Lorillard was a devoted yachtsman, and did much toward the advancement of the sport. He was one of the first to realize the advantages of Newport as a center for yachting and yacht racing. His liberality in offering cups did much to keep up an interest in yacht racing. He owned the schooner Vesta, and he sailed on her in the race from Sandy Hook to Cowes against Fleetwing and Henrietta. It was a sweepstake race for \$10,000. Later he had the steam yacht Radha built, and she was one of the largest and finest yachts of her time. Mr. Lorillard was one of the first to realize the possibilities of house-boating, and ten years ago he built a magnificent house-boat for use in Southern waters. She was known as Caiman, and her owner entertained a large number of guests every winter on her. Caiman was destroyed by fire about a year ago, and an order was immediately placed for a larger and more elaborate house-boat. Although Mr. Lorillard has not been particularly active in yachting circles during recent years, still his loss will be keenly felt among yachtsmen in general, and he will ever be remembered as a man who has done much to promote the world's noblest sport—yachting.

YACHTING NEWS NOTES.

Charles S. Hamilton, of New Haven, Conn., has purchased the schooner yacht Fearless from F. M. Welles, of New York, through the agency of Huntington & Seaman.

Mr. Archibald McNeil, of Bridgeport, has sold through the agency of A. Perry Bliven his sloop yacht Whitley to Mr. R. L. Tuck, of the Brooklyn Y. C. The latter has also purchased the former yacht Lucia from George A. Coles. Mr. C. E. Simmons has chartered his steam yacht Vivid to Mr. John Smithers, of Huntington, L. I., and the steam yacht America has been chartered to Mr. W. G. Crenshaw.

Mr. J. H. Ladew, of the N. Y. Y. C., has chartered his steam yacht Columbia to Mr. Randall Morgan, of Philadelphia, through Messrs. Gardner & Cox. Gen. Francis V. Greene, of the N. Y. Y. C., through the same agency, chartered his auxiliary schooner Wild Duck to Senator Nelson W. Aldrich, of Providence, R. I. Mr. William Armory Gardner, of Boston, has chartered his schooner yacht Mayflower to Mr. Samuel C. Davis, of St. Louis, Mo., through the same agency.

Com. A. S. Bigelow, of the Eastern Y. C., has placed a contract with the Bath Iron Works for a steam yacht, which is to be ready for sea early next season. The new steam yacht, which will be named Pentwoset, was designed by Naval Architect W. J. J. Young, of Boston, and now in the employ of the United States navy at Fore River. The new steamer will be one of the handsomest in American waters. She is intended for ocean-going purposes, and in her Com. Bigelow will make a trip next winter in the Mediterranean, and in the summer to Cape Nore. She is 211ft. over all, 175ft. waterline, beam 27ft., draft 13ft. She will cost a quarter of a million.

The only yachting catastrophe reported for July 4 was the burning of the 62ft. schooner-rigged yacht Seminole near Barren Island in the afternoon. The fire was caused by the explosion of a gasoline tank, but what caused the explosion is not known. There was no loss of life. Seminole was valued at \$11,000. She was originally fitted up somewhat elaborately as a pleasure craft, but was bought a few years ago by William and Warner Dour, who have a fishing station at Rockaway Beach.

While Arthur Clemence, second mate, and Fred Brown, seaman, of the yawl Vigilant, owned by Percy Chubb, of Glen Cove, were returning from Mamaroneck, N. Y., to the yacht Vigilant, which is anchored off Glen Cove, in a naphtha launch July 5, they were overtaken by a severe thunderstorm. A bolt of lightning struck Clemence in the left temple, ran down his left side and came out of his knee, killing him instantly. Brown was rendered unconscious. The launch was not touched.

The Atlantic Y. C. has chartered the sea-going steamer Gay Head for the international races.

The sloop yacht Ashmet that was in collision off the Jersey coast a short time ago and was abandoned by her crew, was towed into New York Harbor on July 15 by the schooner William Neely. Although her rigging and deck fittings are badly damaged, the hull is intact and can be repaired. Ashmet was designed by Hanley and was owned by Gouverneur Paulding, 2d.

Mr. Frank Bowne Jones has recently sold the following yachts through his agency: The 30-footer Oiseau for Mr. John R. Maxwell to Mr. Gordon L. Pirie, Mr. Maxwell taking the raceabout Oonagh in the transfer; the yawl Wewinit for Mr. F. M. Randall to Mr. E. A. Palmer; the Seawanhaka knockabout Anawan for Mr. Frederick A. Bourne to Mr. F. G. Stewart, and the knockabout Petrel for Mr. C. Lewis to Mr. H. A. Hall.

Rifle Range and Gallery.

Fixtures.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, July 7.—Pape did phenomenal rifle shooting at the Columbia Pistol and Rifle Club's shoot. He tied Young's 34, and in a run of 20 shots made 66, which is a 3.3in. ring average. Pape and Mannel challenged Dorrell and Young to a 50-shot match and Young shot off of his injured arm, which is just out of splints, while Dorrell is also crippled with rheumatism; but the cripples won out with 90 rings to the good. The scores were: Pape 263, Mannel 417; total 680. Young 281, Dorrell 309; total 590. Pape kept tab on his German point shooting to-day and made 203 in 100 shots. They will have to shoot to beat him for king in the bund if he continues his superfine work. In the last six months he has run down to 377 for 10 best scores, or 3.77in. ring average.

Becker led with revolver with 38, just two points away from club record. The wind blew a gale. The range was crowded with rifle shooters.

Names	Score
A H Pape	3 3 4 2 6 3 3 6 2 2-34
	5 3 1 6 7 2 3 2 5 7-41

F. O. YOUNG, Rec. Sec'y.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

July 18.—Williamsport, Pa.—All-day tournament of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.
July 23.—Mount Kisco, N. Y.—Tenth annual tournament of the Mount Kisco Gun Club. A. Betti, Mgr.
July 24-25.—Detroit, Mich.—Third shoot of the Michigan Trapshooters' League, under auspices of the Pastime Gun Club. John Parker, manager.
July 25-26.—Cambridge Springs, Pa.—Tournament of the Cambridge Springs Gun Club. Clark D. Eckels, Sec'y.
July 27.—Freehold, N. J.—Championship of New Jersey for E C cup between Messrs. E. J. Vanderveer and J. J. Fleming.
July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.
July 30-31.—Bowling Green, O.—Target and live bird tournament of the Bowling Green Gun Club. John H. Lincoln, Sec'y.
Aug. 6-7.—Brantford, Can.—Target-tournament of the Brantford Gun Club. A. B. Cutcliffe, Sec'y.
Aug. 8-9.—Lafayette, Ind.—Fifteenth annual tournament of the Lafayette Gun Club. Amateur. John Blistain, Sec'y.
Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; \$1,000 in money, trophies and medals. F. W. Heubach, General Manager.
Aug. 14.—Trenton, N. J.—Contest for championship of Mercer county, between Messrs. C. A. Comp, holder, and W. B. Widman, challenger.
Aug. 14-15.—Sherburne, N. Y.—Sherburne Gun Club's tournament. J. F. Paddelford, Sec'y.
Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas.

Echoes of the Anglo-American Match.

NEW YORK, July 13.—Editor Forest and Stream: My brief dispatch from Boston, dated the 9th inst., which appeared in your issue of to-day, told the boys that the majority of the team which left this city for England on the morning of May 26 had got back home again. Paul North, who acted as manager, is expected home this week, having stayed behind for a lengthy trip in the Emerald Isle; H. H. Getchell, of Woonsocket, R. I., who came back with us, met Paul while in Ireland, and says that he (Paul) had even then acquired quite a brogue, and was considerably at home twirling a blackthorn shillalah.

Since our return we have heard nothing of either Merrill, Powers or Elliott; the latter may be sailing on the steamship Canadian the 17th of this month. If so, so, Capt. Hill, of that ship, will look after him, all right. If, however, Jim has continued shooting pigeons as well and as profitably as he started out to do, it may be Aug. 20 before the Canadian receives him as a passenger.

Midwinter in Midsummer.

From the day we sailed from Liverpool on the Cestrian, Sunday, June 30, until the day we landed in Boston, July 9, we had just about as chilly a time as ever fell to the lot of seafarers during the month of July. Cold winds, and plenty of them, made sitting out on the deck most uncomfortable, unless heavy overcoats and thick traveling rugs enveloped one. Cozy corners out of the wind were also necessary for one's enjoyment of the open air. Rains—sometimes heavy ones—and fogs of a denseness that varied from a semi-opaque veil to a thickness that could be bitten, troubled us about two-thirds of the entire nine days. Little wonder then that, with such an excuse for keeping under cover and out of the wet, Tom Marshall and Frank Harrison had much company at their little table in the smoke room every spare hour of the voyage.

On Friday afternoon, the 5th inst., just after lunch, and while the sun was shining brightly, a large iceberg was sighted abeam of us on the port side—that is, to the south of us. It was a sight we had all been looking for, and the boys piled out of the smoking room, gazed at our visitor or fellow traveler, and judged nautically or unscientifically as to its size, distance from us, etc. Jack Fanning, an authority on such matters, by reason of his intimate acquaintance with the life of a fur sealer, poured forth data of an interesting nature in reference to icebergs and such like.

About an hour or two later a heavy fog bank suddenly fell on us, and one could scarcely see the bow or stern of the vessel from amidships. It grew rapidly colder and the fog gained in density, making life aboard the ship chilly and comparatively hazardous. The whistle was kept blowing every minute or so, while the engines were sometimes shut down to "dead slow"—about six miles an hour, just enough to give her steerage way. It went on this way all night, but we all slept fairly well—that is to say, those whose staterooms were not too near the whistle—while Capt. Thomas, our skipper, and his first, second and third officers took our ship along in safety. During the night the thermometer fell to 40 degrees, within 8 degrees of freezing, making it certain that ice was somewhere close to us, and also making it necessary to heap on bedclothes, and any other clothes handy, so as to keep at all warm.

Our Passenger List.

It being the slack time for transatlantic travel westward, our passenger list was quite small, comparatively speaking. Our party consisted of sixteen souls, to which may be added seven other passengers. The full list was as follows: Mrs. and Mrs. Edward Banks, Mr. and Mrs. E. H. Tripp, Mr. and Mrs. C. A. Burgess, Mr. and Mrs. W. R. Crosby, Mrs. Wilcox, Miss May Bell Dobie, Miss Annie Lemon, Messrs. J. S. Fanning, H. E. Getchell, Fred Gilbert, F. S. Harrison, Rolla O. Heikes, Tom A. Marshall, F. S. Parmelee, D. F. Pride, A. G. P. Segur, J. B. Walker, B. Leroy Woodard.

Mrs. Wilcox was the doctor's wife, blessed with a sweet voice that was always pleasantly listened to, particularly when the song was such a one as "Annie Laurie," Mrs. Wilcox being a Scotchwoman who could interpret the words and pronounce them as only a Scotchwoman could.

Chicken Broth and Afternoon Tea.

The entrance of Walter, the smoking room steward, at 11 A. M. every day was the signal for a general cessation of whatever hostilities might be in progress at any of the tables in the smoking room. His arrival meant chicken broth—and plenty of it—served in cups which contained, as Tom Marshall put it, "ridiculously small quantities." Still three cups were generally all Mr. Marshall tackled each morning.

At 4 P. M., Walter again made his appearance, but this time it was "afternoon tea," with all kinds of sweet fancy crackers and ginger snaps. (N. B.—Billy Crosby found a few damp ginger-snaps in the pocket of his "Indian" coat when he put it on at Interstate Park this afternoon. He came up to some of us, concealing something in his right hand, and said, "I'll bet I brought something away from the Cestrian none of you other fellows did!" So far as I know Billy is quite correct in his assertion.)

Well, it would have made the multitude of trapshooters who know all the boys so well stand agape if they could have seen how soon "this jack pot" was decided so as to clear the decks for "afternoon tea"! Some had one cup, some two, and a few had more. Walter's customers were many and well pleased. Chicken broth and afternoon tea were institutions well patronized in the Cestrian's smoking room.

Was the Sea Rough?

It is a question that is scarcely likely to be settled to the satisfaction of all the Cestrian's passengers on this trip as to whether or not the sea was what might be called rough. Those of us who had good sea legs and solid internal equipments are liable to argue that the voyage, although inclement, was a smooth one. On the other hand, there are others, several of them, who, less fortunately outfitted, are likely to argue contra. They had headaches, cold hands and feet (some of the well people had "cold feet" of another kind occasionally); in fact, they had all the symptoms of seasickness, which demand a rough sea as an excuse for such unnatural conditions.

Hear both sides: Jack Fanning, the sailor of the party, par excellence: "Well, it was not rough to call it rough. Just a little kick now and then. I've seen it far rougher than we had it."

Fred Pride: "No, I wouldn't say we had any rough sea. Give me a light, please, somebody, thank you."

Frank Harrison: "It didn't bother me any. Who says it was a rough trip? Lord, I've crossed when it—." (The boys choked him at that point.)

Ed Banks: "It depends on how people feel as to whether they think the sea rough or not. As for myself, I've been hungry all the time. May I smoke?" (This latter part addressed to some one who can't stand tobacco smoke on board ship.)

Now, some of the others: T-Bill Crosby: "Say, if I ever go over to England again, it'll be to stay there. I'd never come back over this bit of water again. When I put my feet on the dock at Boston I'll jump up and crack my heels together and take a fall out of Fritz Gilbert there, just to show what I think of this ocean traveling. Land's good enough for me. I don't know whether it's been what you might call rough, but it has been as rough as I want it."

Fred Gilbert: "Some of you ducks may think it's not been rough, but I don't want it any rougher. Remember that night when I was handicapped three yards more than I thought I was? Well, if you don't remember it, the steward does. You mayn't call it rough; perhaps it hasn't been, but I'm mighty glad it's been no worse."

R. O. Heikes: "Some of you people make me sick even now to hear you talk. Rough? Of course it's been rough. But if it hadn't been for my lumbago I'd have been in evidence at meals more than I was."

Tom Marshall: "I don't think it has really been very rough, but there's been enough sea on to satisfy all my demands." Then in an aside he added, "Pride, I wish you and Harrison would put up your old pipes; you do smoke the worst tobacco," etc.

Chorus from Getchell, Leroy, Budd and others: "Yes, this room may be a smoking room, but you fellows needn't smoke all the time just because you feel well."

F. S. Parmelee: "I know it's been rough, but I've not been sick a minute. You fellows all thought I would be, and so did I, but I fooled all of us. Where's Walter? Somebody ring the bell."

E. H. Tripp, after refusing to be interviewed on the subject, courteously withdrew his objection, but was quite non-committal in his remarks: "What with sleeping, eating and playing shuffleboard, I've had no time to consider weather conditions nor the state of the ocean. My few spare moments have been taken up with examining the chart of our route in conjunction with Fanning, who can put his finger in an instant on the exact spot on that chart where our boat is. Jack's a good sailor, as well as a good shot." Now, was the sea rough or was it not?

A Flavor of Paris.

After the shoot at Glasgow was over, Messrs. Marshall, Heikes, Fanning, Leroy and Gilbert went over for a brief visit to Paris. Their tales of life in Paris must really be heard to be appreciated. While there they met Mr. Emile Werk and his daughter (two of our fellow passengers on the Canadian), and were Mr. Werk's guests at a dinner one evening.

Tom Marshall was full of his trip when we first went aboard the Cestrian, and made us all believe he had been interpreter for the crowd. Gilbert wouldn't stand for such talk, but said: "Tom never spoke of French all the while we were in Páree; except once or twice, when he said, 'We, we,' reminding me for all the world of a comic man on a stage trying to squeak like a small pig!"

But those who went to Paris sincerely regretted that "the whole bunch" had not been along. They were enthusiastic about everything they saw and did, saying that the Paris part of the trip was the best portion of the whole.

How They All Feel About It.

The boys are really glad to be back again, but are unanimous that the "European trip of 1901" made by American trapshooters will be more and more appreciated by each member of the party as time goes on. Nothing is more tiring than sightseeing combined with a rush that is due to extremely limited time. Days in England are long at this season of the year, and hours for sleep are proportionately few. The boys got tired at the start. Meals had to be taken at irregular hours, and when and where they could be obtained. The members of the team never got fully rested up, and they soon began to ache to get back home again. They are now beginning to appreciate more fully what a time we've had.

The trip was a success, too—successful in the very highest degree. Not a match was lost, and not a trophy got away from the Americans. Crosby won the open Anglo-American pigeon trophy, at the Welsh Harp grounds at Hendon, and owns a very handsome cup in consequence. He also won a cup in open competition at the Middlesex Gun Club's grounds the day after the final in the Anglo-American team race. Gilbert won an extremely handsome and valuable trophy on the same day, the cup being presented for competition among the members of the American team only. Parmelee won a live-bird trophy in open competition at the Welsh Harp grounds the day previous to the first of the Anglo-American series, and also won a silver cup put up for open competition at Glasgow the day before the match with the Scotchmen.

Why We Won.

Since the team made its records in England and in Scotland the English sporting papers have with a unanimity that is remarkable laid the extraordinary success of the team at the door of the guns and ammunition. Most of them seem to refuse to acknowledge even a possibility that American skill with the shotgun had as much to do with the series of victories as had the superior ammunition and guns of the members of the American team.

It is true—and each member of the team will agree with me in this—that our guns and our ammunition were better adapted for target shooting than those of either the English or the Scotch. But our boys knew the game so much better than did their opponents; they have, by dint of long practice, gained a degree of skill that stood them in good stead when they went up against the hard conditions they had to combat in the matches in London.

Targets were thrown in a manner never seen over here, yet the boys did not fail to "catch on" quickly. With only two scanty half-days of practice, and within a week of getting ashore, they mastered the game sufficiently well to stand up and concede heavy odds successfully. It seems to me that showed skill of the highest class.

Both the English and the Scotch used guns really unsuited for the sport; and their loads were often "squibby." The latter phase was only the natural outcome of using guns too light for the job they had to perform. When we go out to break targets, we try to break as many as possible—no dropping for place. Why not, then, use guns and loads that will enable one to break more targets than one can score with lighter guns and smaller loads? What is the use of going after elephants with a game gun and snipe loads?

As for the more sporting appearance of the position of the English and the Scotch at the traps: When one is at the traps the idea is to break the targets or grass the bird as surely as possible. Why then adopt a position, however, much prettier, that gives either target or bird a good start?

One Idea of Inanimate Target Shooting.

Over here it seems to me the idea of inanimate target shooting is to give those who are fond of a gun a chance to use and show their skill in competition when the law relating to close seasons on game forbids such use and exhibition afield. It is also to acquaint a shooter with the swing of a gun, lead on a bird, etc.; in short, to familiarize him with handling his gun and getting used to pulling the trigger when he is right. This we claim for target shooting to a very large extent.

I have a personal acquaintance with men who never fired a gun until they shot at "inanimate birds"; yet they, after a short while, could go out into the woods and do good work alongside of an old-time field shot. Of course they didn't go along through the brush or in the field with the gun firmly fixed at the shoulder; but then there was no swiftly thrown target to be sprung from a trap 18yds. away, and no pigeon to be liberated from one of five traps 5yds. apart and 30yds. away from the shooter.

Nine-tenths of our game is put up within 20yds. of the man with the gun, and the same proportion, I imagine, is killed within 20yds. of the gun muzzle. My experience in England while shooting all kinds of game is precisely the same, with the possible exception of driven grouse, partridges and pheasants. Again my belief is that less pellets of shot will bring down a wild bird than would stop a pigeon within bounds or grind an inanimate target to dust. An inanimate target, too, starts far faster than any bird can, but it soon reaches the limit of its flight; but that limit is generally beyond the range of any gun and ammunition belonging to a 12-gauge.

It has been said in some of the English sporting papers that because our boys could break targets with a precision that was remarkable, and score pigeon after pigeon with a regularity that performed victory in its train, it did not follow that they were good shots on game. This may certainly be said, but I can vouch for it from personal experience with members of the team that, whether in America, in England or in Scotland, and whether at our quail, ruffed grouse or ducks; at a cover side in the Old Country or knee high in a field of wurzels with a covey of birds well scattered; or in a mantlet on a moor with grouse whizzing by and over, I do not believe there was one member of the team that won the honors in London or in Glasgow that would not be found a worthy competitor, and one hard to beat, in the friendly rivalry and exhibition of skill to be witnessed in all such situations.

While the criticisms above referred to were offered in the best of spirit, it seems to me that there ought to be something said on the opposite side, for surely there was much that could be said. What I have written was not placed on paper with a view to belittling the skill of the opponents of the American team, but rather with an idea of placing the latter in what I consider to be their rightful position in the ranks of skillful marksmen. I wrote it, too, not from the standpoint of a competitor, for better men than myself did the work, but rather to give the ideas of one who watched the shooting of all the men, whatever their nationality, with equal care and with every intention to be thoroughly impartial.

As for our hosts, too much cannot be said as to the hospitable manner in which we were entertained from the moment we set foot on the landing stage at Liverpool. Mr. A. H. Gale and his fellow members of the Middlesex Gun Club, of England, and Mr. F. Ingram Annan and his compatriots, who looked after our comforts so thoughtfully while we were in Glasgow, will long be remembered with the best of feelings by every member of the American party, both ladies and gentlemen. If we can only persuade some British trapshooters to come over and pay us a visit they can rest assured that, no matter how far distant the day, they will find that "London and Glasgow in 1901" has not been forgotten.

A Possible British Invasion.

Apropos of the above, there is some chance that a team of English, Scotch and Irish trapshooters may find their way over here in the near future, for the purpose of making a tour and trying conclusions with us once more—but this time on our own soil. The matter was broached at the Middlesex Gun Club's grounds during the international shoot, and the suggestion that a team should come over met with much favorable comment. Let them come, and we will do our best to show them that two can play at the game of hospitality.

And if they should beat us, they will find that we can take a licking in the right manner and in the proper spirit, as they did, doing our best to rival them in that respect. The generous and open-hearted way in which they applauded our victories over them is something in itself well worth remembering.

EDWARD BANKS.

Interstate Association Tournament, Jamestown

JAMESTOWN, N. Y., July 11.—I will say for the shooters in general and the talent in particular they have made one of the greatest errors of their lives by not attending the tournament just closed at Jamestown, N. Y. In the first place, the city itself is well worth a visit, situated as it is upon Lake Chautauqua, where the summer days are pleasant and the evenings cool, inviting restful sleep under a blanket. If one is so inclined, a visit to Celeron-on-the-Lake, offers amusements in a variety of forms to suit the most fastidious tastes. An evening sail on the lake is a realistic dream. Jamestown is a city of some 30,000 inhabitants, a manufacturing town, containing many beautiful buildings, and situated at the southern end of Lake Chautauqua, and is classed as a very charming summer resort.

The Jamestown Gun Club, a comparatively new organization, contains some fifty members, many of whom are not yet accustomed to shooting at the traps. Some of them feel that they were not in high enough class to compete in an open tournament. They are practicing, and we will hear from them later. The tournament was a success in every particular, the weather was fair, and all participants concurred they had had a most enjoyable time.

Among the visitors from out of town I mention the Messrs. G. F., F. E., S. T., and L. E. Mallory, of Parkersburg, W. Va.—and fine gentlemen they are; Mr. Bates, of Oil City; Mr. L. F. Fleming, of Pittsburgh; Mr. North, of Alleghany, Pa., and Mr. H. Kirkover, of Buffalo, N. Y.

Among the talent present were Mr. Courtney, of the Remington Arms Company; Mr. Hull, of the Parker Gun Company; Messrs. Keller and Mackie, of the Peters Cartridge Company, and Mr. Colville, of the Dupont Powder Company.

The executive committee of the Jamestown Gun Club were very solicitous that their visitors should have an enjoyable time, and to that end a private launch was chartered under the direction of Mr. Arbuckle. A party of visiting shooters were taken for a twenty-five-mile sail on the lake Wednesday night, and I will say that those of the shooters who failed to be with the sailing party, but preferred other amusements, have missed a pleasurable experience that should fill them with regret.

Appended are the scores:

July 10, First Day.

Table with columns for Events, Targets, and names of shooters (F. E. Mallory, S. T. Mallory, F. S. Bates, etc.) and their scores across 10 trials.

July 11, Second Day.

Table with columns for Events, Targets, and names of shooters (F. E. Mallory, S. T. Mallory, F. S. Bates, etc.) and their scores across 10 trials.

DICK SWIVELLER.

The Western Canadian Exposition makes a conspicuous feature of the trapshooting tournament to be held at Winnipeg on Aug. 1 and 2, on the last two days of the great industrial fair. There are twelve target events provided each day, a total of 240 targets on the first day, and 234 on the second, with an entrance, \$23, alike for each day. There are \$1,000 added in money, trophies and medals. All purses will be divided by the Rose system, ratios 4, 3, 2 and 1, unless otherwise stated. The Western Canada championship is one of the main events. With the consent of the Robin Hood Powder Company, the Association has decided to make it a sweep-stake, \$4 entrance, \$25 added to the purse, which will be divided as follows: To the holder of the trophy if present on the grounds each year, 10 per cent. of the purse; to the winner, 40 per cent.; the balance to the next three high guns in the ratio of 25, 15 and 10 per cent. The international team shoot is for four-man teams of Canada and the United States. The international championship and the "Ogilvie doubles" are also star features. The folder containing the shooting programme bears the following cordial invitation: "Our American Cousins: We want you to be sure and pay us a visit this year, for we know you will be so well pleased with your entertainment that in the years to come we will have you with us often. We promise you that you will have no trouble with the customs at either Gretna or West Lynne. From present advices we expect to have fully 100 guns entered in the several events. Bring your gun, even if you never shot at the traps before. Our programme enables you to enter at a very small cost. Examine it."

WESTERN TRAPS.

CHICAGO, Ill., July 13.—Our club shooters are enjoying themselves these summer months in the sport at the traps, which is practically the only sport possible at this season of the year.

Among other interesting social features of the Chicago trap clubs are a couple of interclub team races, which will come off to-day and to-morrow. The first, that which is to be shot to-day, is between the Garfield Gun Club and the La Grange Gun Club, and will occur at the grounds of the latter club.

Grand Crossing Gun Club sends a team to Calumet Heights Gun Club to shoot a race on July 14. The regular medal shoot of the Grand Crossing Club will be carried forward to Calumet Heights grounds and there decided.

The grounds are directly upon the lake front, and the shooting is done on the beach in front of the spacious club house.

There cannot be too many of these social races between different trap clubs, and this is a form of the sport which makes it more interesting than the regular club shooting or the hackneyed sweepstakes, which ordinarily go to the minority of names and the majority of skill.

Duluth Ninth Annual.

The secretary of the Central Gun Club, of Duluth, Minn., incloses the following report of the ninth annual tournament of the club, recently held at Duluth:

The ninth annual tournament of the Central Gun Club, of Duluth, Minn., was held on the club's grounds on July 5 and 6. Like all the preceding tournaments given by this club, it was a success in every way.

Hughes, of Palmyra, Wis., carried off first average with a percentage of 97.66. Hirschy, of Minneapolis, was second, and Morrison, of St. Paul, was third.

The better a man shot, the less money he got, although the money was divided on the percentage system, which is supposed to favor the crackerjacks. The trouble was the whole crowd was in one class, and there were but few shooters who were not shooting into the money all the time.

First Day.

Table with columns for Events, names (Morrison, Wilkinson, Smith, etc.), and scores (1-10, Broke).

Second Day, Central Gun Club Tournament.

Table with columns for Events, names (Morrison, Wilkinson, Smith, etc.), and scores (1-10, Broke).

Garfield Gun Club.

Chicago, July 13.—The following scores were made on our grounds to-day on the occasion of the fourth trophy shoot of the second series. The flight of the targets was very unsatisfactory during the trophy shoot, and as a consequence the scores are away below grade.

Our team and a large delegation of other members went out to see and take part in the match with La Grange Gun Club, and as a consequence only sixteen of our members showed up on the home grounds.

Dr Meek won in Class A, Marshall in Class B, C. T. Keck and C. H. Kehl tied in Class C. The scores:

Table listing names (W T Johnson, Dr Meek, J D Pollard, etc.) and their scores for the Fourth trophy shoot.

Garden City Gun Club.

Chicago, Ill., July 13.—In the monthly handicap shoot to-day Young, with a handicap of 2, and Weber, with a handicap of 3, scored the limit, and tied for first prize.

Monthly handicap: Alabaster, 0. Krueger, 1. Pumphrey, 1. Weber, 3. Gillis, 0. Schellenberger, 3. Barto, 1. Young, 2. Price, 3.

Table listing names (Alabaster, Krueger, Pumphrey, etc.) and their scores for the Monthly handicap.

Twenty-five-bird match: Frolick. Geo Leffingwell.

Table listing names (Pumphrey, Barto, Young, etc.) and their scores for the Twenty-five-bird match.

Table listing names (Pumphrey, Shellenberger) and their scores for the Match at 25 birds.

Chicago Gun Club.

Chicago, Ill., July 13.—Dr. Carson won the high gun trophy in both the weekly and monthly trophy shoots of the Chicago Gun Club to-day. Bowles won the weekly handicap trophy with a handicap of 5, and Dr. Carson, shooting from the 2lyds. mark, won the monthly trophy. Scores:

Table listing names (Mrs Carson, Dr Carson, E M Steck, etc.) and their scores for the Chicago Gun Club trophies.

Champlain Gun Club.

CHAMPLAIN, N. Y., July 12.—The two-day shoot of the Champlain Gun Club was a success. The pair event at 30 targets on July 4 was won by Fort and Scriver, with a score of 23, beating Holcombe and Weisman, whose scores were 21; Denison and Douglass broke 19, Norton and Thompson 22.

The international match of 100 targets between Canadian and American teams was won by a score of 84 to 80 in favor of the Americans. The Canadian team was composed of Messrs. Bates, J. H. Payne, Van Vliet, Braithwaite and A. H. Scriver. The Americans were represented by Messrs. Denison, Fraser, Holcombe, Bredenberg and Payne. The gold medal for the best aggregate score in the two days was won by R. B. Dennison, of Boston, Mass. The following are the complete scores:

Thursday, July 4.

Table listing names (Events, Targets, Fort, etc.) and their scores for the Thursday, July 4 shoot.

Friday, July 5.

Table listing names (Events, Targets, Douglass, etc.) and their scores for the Friday, July 5 shoot.

Table listing names (Nye, Burroughs, Dickinson, etc.) and their scores for the Garfield Gun Club shoot.

Mississippi Valley Notes.

THE Danville Gun Club gave a successful and enjoyable tournament July 11 at its grounds, east of that flourishing city. There were altogether twenty-nine participants, and a total of 230 targets were shot. The targets were bluerocks from a magautrap of great range and distributive powers, and considering this and the extremely hot weather, scores were very good.

Events: Wiggins. Cadwallader. Clark. Boa. Riehl. Bell. Seekatz. Maxfield. Detrich. Ragel. Slow. Thompson. Kingham. Webber. Samme. Snell. Vandevor. Haskins. Zeller. Hahne. Keffer. Jenkins. Oehley. Applin. Matzebach. Oswald. Hartshorn.

Hail to the Victors.

We had no fear of evil hap When erst we saw them sail; We knew our Indians, every chap, Would twist the Lion's tail. Yet, though we knew these warriors well, And guessed how they would shoot, We did not know, how could we tell, 'Twould be such easy fruit? We scanned with eager, hopeful eyes The papers day by day; And every time they won a prize The Eagle cried, "Hurrah!" And now, the print's at hand that brings The Briton's tale of woe, The good bird gaily flaps his wings And screams, "I told you so."

But, setting levity aside, 'Twas nobly done, indeed, And pauses all the land with pride To grant the victors' meed Of cheer from cot and dome; Rejoicing as our sturdy band Comes sailing proudly home. Theirs is the glory, ours the end, And now the work is done; Ten thousand marksmen would defend The trophies they have won. Do any seek yet broader schools? We cite them man for man To contest under any rules, And conquer if they can.

The Massachusetts Amateur Shooting Association.

PALMER, Mass.—The Massachusetts Amateur Shooting Association held its third shoot of the season at Brookfield on July 4. The lowest scores during this year were made.

In the team shoot, five men, 25 birds per man, Springfield was first with 93, Winchendon 88, Palmer 82, Brookfield 77, Holyoke 60. The standing of the clubs in the Association to date is Winchendon 281, Springfield 278, Palmer 271, Brookfield 258, Holyoke 240.

The next Association shoot will be held at Winchendon, Aug. 14.

Table listing names (Events, Targets, Coats, Peck, etc.) and their scores for the Massachusetts Amateur Shooting Association.

PUBLISHERS' DEPARTMENT.

Austin Shotgun Cartridges.

We are putting on the market an entirely new and complete line of shotgun cartridges, in paper shells, comprising a high grade smokeless; an intermediate grade smokeless called the "Flash"; and a black powder cartridge, the "Crack Shot," which is superior to anything in the market. Ask your dealer for our goods, and you will have the most perfect ammunition of the day. Austin Cartridge Company, Cleveland, O.—Adv.

A novelty for fishing rods is advertised in the columns of FOREST AND STREAM this week. It consists of a revolving tip, which is particularly well adapted to casting and fly-fishing. This tip can be attached to rod by any one in five minutes.—Adv.

Sergeant's Dog Remedies, manufactured by the Polk Miller Drug Co., of Richmond, Va., have won their way on their merits, as shown by their general use and the testimonials of eminent breeders and owners.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, JULY 27, 1901.

VOL. LVII.—No. 4.
No. 346 BROADWAY, NEW YORK

TERMS, \$4 A YEAR, 10 CTS. A COPY, {
SIX MONTHS, \$2. }

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Fly-fishing holds the same relation to bait-fishing that poetry does to prose. Not only the fly but every implement of the fly-fisher's outfit is a materialized poem.—James A. Henshall.

THE ADIRONDACK FORESTS.

At the request of the New York Forest, Fish and Game Commission the Division of Forestry of the United States Department of Agriculture has prepared a forest working plan for Township 40 in the Adirondacks. The plan is and can be a plan only, for under existing conditions the scheme may not be put into operation. It is, in fact, designed to be only an object lesson, to demonstrate what might be done under different circumstances.

In its forest preserve New York possesses a timber supply of immense value, and one from which if it were wisely administered a large and constant revenue might be drawn for generations to come. But the chief value of the forest is as a storage reservoir for the water supply, and its function in this respect is of such transcendent importance that it is the one first to be made secure and perpetuated for all time. So well comprehended was this value of the forest for water storage purposes that in 1894 the people of the State adopted by a great popular vote an amendment to the constitution declaring that "the lands of the State now owned or hereafter acquired constituting the Forest Preserve as now fixed by law shall be forever kept as wild forest land. They shall not be leased, sold or exchanged or be taken by any corporation, public or private, nor shall the timber thereon be sold, removed or destroyed." It was felt at the time by those who were informed in forestry that this was not altogether the wisest forest plan to adopt as a lasting policy; but there was an overwhelming conviction that, with the forests menaced as they then were by the interests which were eager to seize and convert them for private aggrandizement, the very safest course was to make sure that not a tree should be touched. And so by this clause of the constitution the State forests are protected to-day, and so they will continue to be protected so long as the constitutional provision shall be retained.

The working plan prepared by the Division of Forestry for Township 40 is intended to show what the practical result might be if, the constitutional prohibition having been removed, the Adirondacks and Catskill public forests were administered in accordance with the principles of practical scientific forestry as developed and followed abroad.

Township 40 forms part of the town of Long Lake, in Hamilton county, and is one of the largest and most compact blocks of State land within the limits of the Adirondack Park. It has an area of 25,660 acres. Of the three watersheds within the township, the most important contains Raquette Lake, which is a part of the Blue Mountain River drainage, and receives the waters of Blue Mountain Lake, one of the principal sources of the Blue Mountain River, through Eagle Lake, Utowana Lake and Marion River, together with several other important streams. A second watershed is tributary to Forked Lake and Brandreth Lake Outlet, and a third drains into the Big Moose Lake system. The township is well wooded with hardwood and soft wood trees, the latter predominating. After a thorough study of the forestry problems involved, the Government officials have prepared this report, of which the conclusions may be summarized in brief as follows; we use in part the language of the report:

Under the systematic and conservative system of management advised in the plan, there would be no interference whatever with the value of the forests as a conserver

of the water supply. In this statement Mr. F. H. Newell, Hydrographer of the United States Geological Survey; joins with his authority after a personal examination of the township.

There is on the township a sufficient stand of mature spruce, pine and balsam to insure profitable lumbering under economical and conservative methods.

The township is covered with virgin forest, in which the annual decay of the over mature trees offsets the annual growth, and each year many large trees die or are blown down and decay; whereas if they were harvested they would mean a considerable revenue, and the producing power of the forest being unimpaired, the conditions of growth would be improved. With conservative lumbering successive crops might be cut from the forest at recurring intervals for an indefinite period.

Under practical forestry, then, the tract would yield a sustained revenue without in any way interfering with the objects for which the Forest Preserve was created and without injury to its natural beauties.

The report lays down as a rule which would insure the safety of the forests and preserve their functions as a conservator of the water supply and public recreation ground, that no trees should be cut except such as should have been determined upon after a thorough study of the effect of the cuttings upon the forests, and after such trees should have been officially marked by the State officers in charge.

Thus it is seen that in effect this report sustains the wisdom of those who at the time of the adoption of the constitutional amendment, while thoroughly approving and working for that amendment, were convinced that the policy of permanent absolute protection should not be the course to be maintained by the State. The last ten years have witnessed a wonderful growth of popular intelligence in regard to forestry, both as to the value of the forests as water storage reservoirs, and as to the distinction which exists between lumbering and scientific forestry. The time will never come when the people of the State will rescind the forest clause of the constitution, to give the public land over into the hands of unrestrained lumbermen. But the time may come, and at no distant day, when New York will be ready to exchange the present absolute prohibition of tree cutting for an adequately safeguarded system of scientific forest administration; it will come indeed just as soon as the people shall have confidence that their forest resources can be administered with intelligence and honesty.

A vast change is working in this country with respect to forestry. The end is at hand of the old régime of wasteful destruction by the lumberman. The day of the forester is about to be ushered in; and under his control and direction private and public forests alike will be conducted in the same way that European forests are managed, so that year after year and from generation to generation of trees and men the mature timber will be cut, but the forest will never be impaired in productiveness and value.

SHOOTING AT THE TRAP AND IN THE FIELD.

THERE is no doubt that trapshooting, particularly that branch of it called target shooting, was originally devised as a kind of substitute for field shooting, and also as a kind of useful training for the field. In accord with that theory, the conditions governing the flights and manner of shooting were made as nearly similar to those governing field shooting as the circumstances permitted. Thus in the first days of trapshooting at targets Bogardus claimed that his glass ball and glass ball trap were "for wing practice." Indeed, to give a semblance of realism to target shooting, Ira A. Paine invented and patented a feather-filled glass ball, for which he claimed the merit of its being "the only substitute ever invented for a living bird."

Consistently with the theory of wing practice, the shooter was required to stand with his "gun below the elbow" when at the score ready to shoot, the purpose being to place him in the same unprepared condition at the rise of the target as he was supposed to be at the rise of the bird in actual field shooting. Since those days of simple beginnings, target shooting has advanced to a stage at which it is an art in itself.

However, resting on the assumption that trapshooting, either as an art or as a means of sport, was practiced truly in its early days only, and that all departure therefrom in practice is detrimental or pernicious, there are those who periodically call attention to the decadence of trapshooting as it is conducted at present. It is particularly insisted by the old-time critics of the present that in those unstable and vague periods of time, strung along through the ages from time immemorial, referred to as "the good old days," things were so different. The crude and tentative beginnings are accepted by them as the true standards of development and procedure for all time. Change to them denotes decadence, though change is the essence of progress.

By them the evolution in the manner of holding the gun at the traps is specially deplored. They maintain with constant insistence that the old way of holding it—that is, "gun below the elbow"—was the correct way, for, say they, what a sorry figure a man would cut walking around in field and cover with his gun glued to his shoulder as it is when he stands at the traps. Such critics entirely overlook the fact that field shooting and trapshooting are two distinct specialties. Each style of shooting contains some elementary principles which are alike in both, but, in the main, the practice must be governed by the distinct circumstances peculiar to each form of shooting.

Target shooting, even when practiced after the ancient manner, is not an imitation of live-bird shooting, for, in practicing the latter, the bird in most instances is flushed within a few feet of the shooter, who then has ample time to adjust his gun and kill the bird at close range. In quail shooting, by far the greater number of birds are gathered within twenty-five yards of the shooter. The flight of the game bird at the start is its slowest; the flight of the target at the start is its quickest. The game bird may rise a few inches from the shooter's feet; the target is sprung at a certain number of yards from the shooter.

However, starting as a school of practice in shooting, as the details of target shooting were more and more perfected, it was found to have all the inherent qualities of a sport in itself, apart from all considerations of field shooting. Experience demonstrated that the methods which were good in field shooting were not good in trapshooting, and therefore the newer and better methods were adopted. Trapshooters hold their guns to their shoulders for two reasons when shooting at the traps, namely, to save time from unnecessary motions, and to have the gun more steadily aligned. The conditions are made so difficult that, even when the greatest care is observed, many misses are made. Nor does the shooter hold his gun so stiffly to his shoulder that it may be described as "glued." He, on the contrary, must hold himself at ease so that he may swing in any direction with the greatest freedom. He does not maintain that his position when shooting targets is the correct one for shooting quail, but it is the correct one for shooting the target.

There has been a great evolution in target shooting since its beginnings, and he who criticizes it from the viewpoint of "the good old days" is a good many years behind the times.

Again, live-bird shooting at the traps requires quite a distinct style of shooting from target shooting. The skillful shooter needs to readjust his practice according to the governing circumstances when he changes from field shooting to target shooting, from target shooting to pigeon shooting, and from pigeon shooting to field shooting.

Nevertheless all trapshooters do not hold their gun firmly to their shoulders when ready to shoot at the traps, and this is particularly so in respect to pigeon shooting.

Yet, while having its well-defined and distinctive features as a sport, trapshooting is a great aid as a preparatory schooling for the field. It is absurd to assume that all the skill possessed by a shooter when at the traps is lost when he attempts to shoot afield, and it is equally absurd to assume that a thorough schooling in trapshooting qualifies one fully for field shooting.

Let the field shot and the trapshot remember respectively that they have a form of enjoyment, distinct and perfect in itself, and that what may be good for trap shooting may be poor for field shooting, and vice versa.

The Sportsman Tourist.

Further Notes from Central America

EVER since I have been old enough to comprehend the economy of living things, I have had a fondness for the observation and study of nature, and this tendency of the youth remains to-day in the man, augmented by indulgence and strengthened by a better knowledge of natural laws and natural phenomena. But during my entire residence in Central America, almost every hour of the day—and many of the night—have, thus far, been claimed by professional duties, and yet in a land like this, replete as it is with material to engage the attention of the naturalist, one cannot but note in passing at least some of the wonders of both animal and vegetable worlds which are constantly presenting themselves. Thus, granted the opportunity, one might write volumes concerning the beautiful moths and butterflies that are here encountered, the curious beetles, exceedingly various and interesting *Orthoptera*, including the *Mantida*, that family of strange forms known here as *Madres de las culebras* (mother of the snakes), and in the States as walking-sticks, camel crickets and the like, all of which are here in numbers; of spiders, scorpions and centipedes that come unbidden to our houses; of unfamiliar land crabs; of *amphibia* and *reptilia*, from climbing toads (*Sapos*) that make themselves at home almost anywhere during the rainy season, and bright, gay-colored *pechetes* (lizards) that scamper along the paths on sunny days, to the monstrous frogs (*Ranas*) that clamor in the creeks and rivers, and the ungainly iguanas and *garrobas* of the coast and valleys; of large rattlesnakes, still larger boas, pretty, but dangerous coral snakes, whip snakes and many other less well-known ophidians, together with hundreds of other creatures too numerous even to suggest.

Nor could we omit the birds, many of which one recognizes either as the same species or very close relatives to those with which he has been acquainted in the States, while others are entirely new or known only to the Gringo as objects of domestication or properties of museums or bird fanciers. Large, bright-colored, vociferous macaws, chattering parrots and paroquets; toucans with enormous bills; quetzals and other birds of rare plumage; new species of hummingbirds, and some among the wrens; doves in abundance, and wild pigeons—once so numerous in the United States, but now almost never seen north of Mexico—are here encountered.

But aside from the wild creatures in the mountains and valleys, and those, such as climbing toads, lizards, scorpions, spiders, pretty brown rats, as well as the ordinary rodents, opossums which live under the house and catch young chickens, blood-sucking chinch bugs—the worst form of bed bug—moths and bats which seek the light, birds passing in and out of open windows, etc.—aside from these and others that come unsolicited to my Honduras home, I want to write in brief about some which have been taken there—either for diversion; observation or, as we say in Spanish, *por lastima*. These have afforded some recreation for the family, have been cared for with gentle tenderness while living, and, in event of death, have been given a sympathetic burial and a little wooden cross has generally been placed, by the younger member of the family, temporarily in the garden, marking the spot of interment—crosses being always more or less associated with either death or the devil in this part of the world.

Where one falls with mortal wound or dies, there some *amigo* invariably erects a cross, and each passing friend ought, according to custom, at least to add a stone to the pile, which, in a short time, collects at its base. Naturally, in a land professedly Catholic, crosses of all sizes and shapes exist in those places set apart for the burial of the dead. As for the devil, crosses are employed to keep him at a distance. They are, therefore, placed on top the roofs of houses—especially those in process of erection, in order that they may be completed without the devil's visitation, while little wooden crosses are common objects of adornment within practically every native home. The cross—i. e., the material object—is a part of all Central American natives. They wear it suspended from their necks, they place it beside their couches, in front their *puertas*,* on top their *casas*,* and yet it is evident that the great lesson of the Cross is not understood, and the mental, moral and spiritual applications, so necessary to true service of the Crucified, do not enter into their lives. The cross itself is almost deified. It is to them a talisman, a charm. It drives away the devil and prevents disease and death. It seems to me the devil is far better understood by these people than is their God. They locate him, however, in particular places—and these places can be invaded in safety only under protection of the cross. The following incident is illustrative.

Having heard of the existence of a certain rare plant in a mountain about two leagues distant from my home, I, one afternoon while visiting a patient in that vicinity, made a trip up the mountain in search of the desired specimen. Returning to my home rather late, and being asked by my native cook the cause of my tardiness, I told her that I had gone that afternoon almost to the summit of Peña Blanca.

"Oh, no," she replied—our conversation being, of course, in Spanish—"it is not possible that you went alone up that mountain."

"And why not?" I contested.

"Because had you done so you would not have returned."

"Would not have returned! And what would prevent my returning?"

"The devil lives in that mountain and would certainly have caught you had you gone up there alone."

"But, Maria," I argued, "that is nonsense, for I myself saw where the woodchoppers had been at work well up in the mountain, and I haven't heard of any of them being caught by the devil."

"That may all be," she calmly replied to what I sup-

posed would be a concluding argument on the subject, "but they are different. The devil doesn't take or kill them because they never go into that mountain without placing the thumb over the index finger, so [showing me with her own hand], thus forming a cross which keeps the devil at a distance. But you, I know, would not do this, and without a cross the devil would surely kill you and throw you down the steep sides of the mountain should you ever climb it."

Already I saw that it would be difficult to convince her by argument, but I could not resist answering this explanation of the security granted the woodsmen, and so I said, "But, Maria, men cannot chop trees and hew logs with their hands engaged in forming crosses."

To which she readily responded, "Certainly not, so soon as they come to the place of work they at once make a little cross of two sticks, or mark with their axes one on the bark of the tree, and thus remain in safety." Then I desisted.

But to return to our text. The first creature coerced into sharing our abode was a small nestling, brought to our door by a native woman who had taken it from its nest in El Monte. That the bird was too young to live separated from its parents and natural environment was evident, but, humanely considered, it seemed best to accept the gift, make it as comfortable as possible, and speak to the woman of the impropriety of thus pillaging nature—all of which I did. The little bird was what is here known as *el caserito*—an insectivorous passerine of general brown color and of not the slightest value in captivity, neither pleasing by song nor plumage. It was given a soft nest of cotton, its ever-hungry throat was stuffed with flies, moistened bread and tortilla, but, as was expected, its little life passed in somewhat less than three days, and it was buried in the garden.

The next creature that was domiciled with us was accepted with more pleasure—in fact, a small fee was paid for it. It, too, was a bird, but one full grown, pretty in appearance and an agreeable and not unwilling companion. Special description is unnecessary, as the *paraquito*, or paroquet, is a common object in park museums and on city street corners—in which latter places it tells fortunes and otherwise amuses the children. Along the coast and in the valleys of Central America these birds are quite numerous, flying in flocks, with much clamor, and devouring quantities of ripe fruits and nuts. This particular little animated ball of bright green, having the primaries of one wing cut, could not fly—a fact which, I believe, determined his death. He was particularly fond of attention and of being carried about on the hand, and when left on his perch—which was rather too high, I fear—would frequently jump down, with the result that, being unable to fly, he struck heavily upon the hard floor, evidently injuring himself, for, one morning after he had been with us about a week, he did not announce the break of day with his usual vociferations, and investigation showed that he was indisposed, and while the morning was still new he died and was buried alongside the *caserito* in the garden.

Next came the fawn, a cute little Central American *vernadita*, which was brought to me from a distance of four leagues by a *moso*, who carried it all the way. This deer had been already some weeks in the house of a native and was perfectly tame. Her ears had been cut so that she would not exercise her fleetness of foot, and neither chain nor inclosure was necessary to keep her within the limits of a proper range. But she had been carried too far, and, perhaps, too carelessly, for on the day after her arrival she developed symptoms of peritonitis, from which affection she died the following morning. Fawns are common pets in many parts of Central America, and grow up very tame and docile. With the ears uncut, however, after reaching a certain age, they take to the mountains as naturally as a duck to water, and are seen no more.

Now came a tougher customer, a creature not unfamiliar in the States, looking somewhat like an overgrown parrot whose feathers had somehow got changed in color, mostly to red; whose head had been flattened somewhat; cheeks denuded of the feathers; beak enlarged, particularly the lower mandible, and tail feathers greatly lengthened out. This bird, known in Spanish as *guacamayo*, and in English called macaw, is not a disagreeable companion when properly reared. This particular one is of the better class—does not disturb the neighbors by much screaming, nor tear to pieces everything within reach; does not bite with his strong, pointed beak, unless unduly molested, and talks quite clearly. He frequently calls *el doctor*, and says such common expressions as "a Dios," "venga para aca," "no tengo cuidado," etc. He likes to sit on my arm or shoulder and also to climb the *aguacate* tree that stands in front our door. His primaries being cut, he cannot fly. At present writing he appears in excellent health, though a few days ago when General Sierra (President of Honduras) and suite paid a visit to San Juancito, as guests of our superintendent, and much dynamite was burned not far from our house in honor of the event, it did seem as though Mack, as I call him, would jump out of his feathers at each shot, and his nerves were under tension for a couple of days after.

Another creature which still survives is a *conejo*, or native rabbit. In size and appearance it greatly resembles the coney rabbit of the States, and is doubtless the same species, although its fur is, perhaps, of a slightly darker and richer brown. It is a cute, timid little thing, content to sit all day and scarcely move, but as soon as night comes it begins to roam about, and, when allowed the liberty, runs all over the house. That rabbits are animals of nocturnal habits is well known, but those who have observed only the habits of the so-called tame rabbits, have little idea of how strictly this is true of the wild ones. They make rather indifferent pets, although pretty and interesting.

The hummingbirds of tropical America are beautiful and of various species. Passing along the road in the warm summer days the attention is frequently directed to their brilliant plumage, radiant with iridescent color, shimmering in the sunshine; but even in the rain have I observed them flitting from corolla to corolla. Content to watch them in the enjoyment of their liberty, a slightly closer acquaintance with the "little emerald hummer" was forced upon me one day last week by the appearance at my office door of a boy who held in his hand a wee nest

of softest fabric, containing a full-grown hummingbird. "Compra un gorrión?" he queried. I asked the price, not because I needed the bird, but because I wanted to give it its liberty. "Un real," he said. So I bought the little creature, believing it well worth 12½ centavos (the equivalent of about 5 cents United States currency) to liberate it. But, alas, already the youth's ruthless hand had plucked the primaries from one wing, and the poor thing was powerless to fly! And how, forsooth, can a hummingbird exist without the power of flight? As well, almost, deprive it of air. *Pobrecito!* I knew its hours were numbered, but took it to the house, where it was fed with sweetened water and guarded with gentle care. How hard it tried to use its bright, mutilated wings! Gentleness and beauty were in it combined to a degree extraordinary. Perched upon one's finger, or the side of its nest, with its eyes half-closed, it seemed quietly waiting the inevitable. In the morning it died, its wee life passing for want of freedom. Species of *Trochilidae* are found in the cold wastes of Tierra del Fuego, in the region of snow-capped peaks in the Andes, and in other places where the possession of a power of resistance apparently incompatible with their frail structure is necessary to existence, and yet deprived of free flight, death is a question of only a few hours.

And now as I write these closing lines there comes to my door a native carrying a huge snake. I will examine it and tell you something about it. It is what is here known as *la zumbadora*, a non-poisonous serpent which has a reputation for making a whip of itself. It is said to stick its head in the ground and slash about with its tail. This is, in part, true, for these snakes will strike with the tail and are capable of hitting quite hard. In general habits it somewhat resembles the black snake of North America. The *zumbadora* is here said to belong to the boas, but this particular one, I am convinced, is a colubrid and probably *Spilotes corais melaurus*. It is six feet long—lacking about half an inch—and has a maximum circumference of about nine inches; is of general brownish color for the anterior two-thirds of its length, which deepens to a dark shining lead color in the caudal third. The belly is a dirty white. The head is neither small nor prominent, and covered with regular plates, while the caudal fourth of the reptile is well rounded. On each side of the neck a distinct blackish bar is obliquely placed. The tongue is dark, heavy and widely forked. The teeth are small and regular, and there are, of course, no poison fangs. This specimen is alive and will be kept for further observation.

DR. J. HOBART EGBERT.

SAN JUANCITO, Honduras, Central America.

Old Splayfoot.

Texas Tom's Story.

TOM would listen to the yarns the other boys told and grunt. He was a privileged character and grunted when he chose. Once in awhile he spun a yarn himself; woe to any one who grunted then. The boys had orders to call me whenever Tom began to talk, so when Missouri Bill stuck his head into my shack, saying "Old Tex's gittin' steam up, Jedge," I dropped my pen instanter.

Queer, ain't it, said Tom, pulling his thin, gray beard, the bad blood betwixt old Johnny Bull and Pollyvoo? Always been that way, I've hearn, since Bonypart, or some other old Pollyvoo king, tried to swaller ther island hull, and found he'd bit off more'n he could chew. Mebbe it's so, and mebbe it ain't. I don't know much history 'ceptin' Fourth o' July and the racket down yonder.

Well, that's neither here nor there. What I was goin' to say, was, that I s'pose it was that same old bad blood that kept young Ridgewood everlastingly pickin' and peckin' at Victor. Sit and poke fun at him by the hour, he would, and Victor p'raps would look mad a minute and then go off and sing

Alongs onfongs der ma pattery,
Le zhure der glaw ate arrivay.

Ridgewood said it was the Pollyvoo Yankee Doodle. It didn't sound a mite like Yankee Doodle, but it wasn't a bad tune for all that.

We were at a trading post up in the Siskiyous. Some of us were hunting varmint, and some were hunting gold, and some were lyin' round, waitin' for a job. Victor did the cookin' for most of us, and I tell you he knew how to cook. He was a pretty fair doctor, too, and that counted when you were fifty miles from anybody else that knew arsenic from assyfetiddy. Better yet, he could fiddle; why, he could yank music out of a fiddle by the yard.

He kept some pigs, that he called "peeks," and a lot of chickens that were tame enough to fly into the skillet. He'd go skippin' round on his toes with his bushy, gray wig parted plumb in the middle and his mustaches talc'd till they stuck out each side of his face like they'd been wired. Oh, any other chap with his peccol'arties 'd have been kicked out of camp in a week, but he was a kind-hearted, soshorable little feller, and he could fiddle and cook. That fixed him.

Old Ridgewood came over from England to look after his intrust in some mine or ruther, and the youngster come along to hunt. The first time he sec Victor, teterin' round, carryin' a kettle of soup, with an old hen on his shoulder that he was talkin' Pollyvoo to, and his mustaches sharp enough to stab her, he said "Oh, my eye!" and I thought he'd have a fit.

But that wa'n't nothin' to the way he went on when Sunday come and Victor dressed up in a white shirt and a stiff collar. They were the only togs of that kind in the camp, and Hong Wah, our Chinese boy, laid himself out on that collar. It stood up like sheet iron and Victor's mustaches stuck straight out across the top.

Ridgewood made a picture of him—pretty good likeness it was, too—with a rooster crowing away out on one o' them waxed ends, and a pig sprawling across t'other. It was enough to make a cat laugh, and some smart Alec showed it to Victor.

He'd seen the rest of us grinnen', and he grinned, too, till he had the picture in his hands. Then all of a sudden his face turned kind of yellow and his eyes looked like a hawk's. I thought there'd be a rumpus, sure, for Victor

*The Spanish "puerta" serves better here than the English word "door," as it signifies the entrance rather than an object for closing the entrance—which latter many of their abodes lack; and the word "casa," which means place of abode, is better here than "house," "cottage" or "shack," for it comprehends them all.

was an old soldier and had plenty of sand, for all his chassayin' and waxed ends.

But in a minute he whispered to himself, "Bah! it is but a boy—a boy!" Then he hunched up his shoulders, bowin' and smilin', and says he, "Ah-h, Meester Ridgewood he have no moostarsh."

And that was one on Ridgewood, for his face was as smooth as a girl's.

I went about with the youngster a good bit, and he wasn't half a bad un. Green—so green you could see him sprout—of course; but willin' to own up once in a while that a man that had hunted over the mountains a dozen years might know ther alphabet.

"Tom," said he one day, "can't you find me a grizzly?" "Well, I hain't lost no grizzly that I know of," says I, "and I don't feel no call to look for one."

"Pshaw!" says he; "I want a grizzly's skin to take home with me."

"It's an even chance if the grizzly don't take an Englishman's skin home with him," says I.

"I s'pose the only thing to do if you don't fetch him the first shot is to climb a tree," says he.

"Yes," says I; "and lively, too, for he can run like a horse. If you get any time for observation, which ain't likely, take one that'll give you the easiest perch, for you may have to stay up there some time."

"So I get my grizzly, I don't care," says he.

When we got back to camp that night, there was Victor, doctoring a man named Roberts. Roberts had been up in the mountains campin' on a sort of shelf above a pretty sizable brook. He said that the night before he was comin' home and stepped out from some brush near by to find his things scattered from Maine to Ballyhack, and the biggest bear he ever see, sittin' in the midst of the wreck. Before Roberts could think "shoot," Mr. Grizzly riz up and hit him side o' the head with a paw like a skillet, and that was the last Roberts knew till he found himself lyin' in the water with his right ear gone.

We old-timers looked at each other and nodded. "Old Splayfoot, I reckon," said Montezumy Mike. "I wouldn't go back after that ear if I was you."

"Don't reckon I will," says Roberts. "I've been kinder wantin' to see old Splayfoot, and I'm satisfied, gentlemen—I'm more'n satisfied."

"What about Splayfoot?" asks Ridgewood, and a dozen of 'em begun tellin' him at once. I see there wa'n't no use of my tunin' up, though I knew as much about Splayfoot as any of 'em, so I lit my pipe and set down for a smoke.

I suppose old Splayfoot was as big a grizzly as ever traveled the mountains. "King of the Siskies," they called him; and a meaner, slyer, smarter old varmint never snored in a caw cave. According to the yarns told that night, he carried nigh a hundredweight of lead in him already, but every ball only made him uglier, while as for traps, he'd spring 'em for capers and go off with a grin. The Injuns always spoke of him very respectful, and any white man that see him and got away alive, did the same. He was lame in one leg and sprawled the toes of that foot when he set it down—that's how he got his name.

When the powwow was over, Ridgewood came to me quite wild. "I'm goin' after Splayfoot," says he.

"Think you'll like that way o' dyin'?" says I.

"Look here, Tom," says he; "I've hunted tigers from elephants' backs in India."

"But you hain't never hunted grizzlies from treetops in Californy," says I. That made him mad, and he went off with Montezumy Mike, who trotted him about down among the foothills, where there was as much chance of finding a crockerdile as a grizzly. They were gone three days—shot four rabbits and a goat; then he came back to me and said Mike wasn't worth the powder to blow him up.

Next morning Victor was fairly tearin' his hair. Two of his pigs had been killed, and another one carried off. Plenty of marks the thief had left behind him—tracks as big as a dinner plate; three of them set down solid and the fourth one sprawled. Old Splayfoot, by George!

"Why don't you go after him, Alphonse?" asked Ridgewood. He called Victor that half the time to plague him.

"Ma fwoi!" says Victor, waving a big fork and a pot-lid. "That I die shall not my peeks bring back. No, no, Mossyer Bear," I say; "you have my heart torn, my peek pen disoley, but va-tong, go, Mossyer Splayfoot—veet, veet! Better a peek than Victor."

Ridgewood laughed in his face and Victor's eyes turned like a hawk's again. He was gettin' tired of the youngster's sass, and when he was tunin' his fiddle, after a bit, and Ridgewood asked him, "Alphonse, can you dance?" he answered pretty sharp; "Yes, Mossyer, I can dance; I can also shoot."

He could, too. There wasn't a better shot in camp. I hauled Ridgewood off and told him he'd have a spell of lead fever if he kept on.

We started out next day for a couple of weeks higher up in the mountains. Ridgewood left word that he'd pay any feller well to bring his mail up to my shack, which was six miles or so from the camp. We'd go back there to load up for the second week.

"I will bring eet," says Victor, quite over his miff. "I will bring eet. Who knows but I shall also have a shot at Mossyer Splayfoot, eh?"

"Oh, do, Alphonse," says Ridgewood, and I had to haul him off again. We packed our outfit on a burro, left half of it at my shack, then tramped a good bit further on and camped.

There was plenty of bear sign, but we didn't see nothin' of the beasts themselves till the third day; while we were fryin' some bacon for dinner, here come two right on us. I skinned up a tree in a hurry, and Ridgewood did the same so quick that he forgot his gun.

I killed one at the first shot, but the other took four bullets and prowled round half an hour before it made up its mind to die. And all the time Ridgewood sat perched up in the tree, callin' himself all the fool names he could think of because he'd forgotten his gun. First thing he asked me when he came down was whether either of the bears was Splayfoot.

"Lord," I said "you could put both of 'em in Splayfoot's hide and have room for another."

The sixth day we went back to the shack.

"Did you leave that door open, Tom?" says Ridgewood.

"No, sir," says I; "did you?" And then I gave a yel like a Choctaw, for out of the shack, almost in our faces, bounded a grizzly, half as big as an elephant.

"Climb, man, climb," I hollered, takin' my own advice. When I'd got pretty well up, I looked round, and there was that fool Englishman behind a tree drawing a bead on the bear.

"Climb, you fool, climb!" I shouted. The gun cracked as I said it and Ridgewood hugged the tree. He wa'n't quite quick enough; the bear reared up and slapped him across the leg, fetchin' away his boot and a strip of meat three fingers long. It was a mercy he wa'n't torn loose; but he held on and dragged himself up out of reach.

He was game, that Englishman, but as he leaned over to fire again, the bear whacked himself against the tree so hard that Ridgewood lost his balance and dropped his gun. You orter have seen the grizzly pulverize that gun.

By that time I had given him two shots, and that was all I had. Ridgewood tried to throw me his cartridges and out of the lot I caught one. It only brought the old fellow bang up against my tree, which wasn't so big as I wished it had been after he'd slammed up agin it half a dozen times.

He growled and prowled back and forth between us; sometimes going away to nose round the shack, but if I made the least motion of sliding down, back he'd come galloping, sit up on his hunkers and waggle his paws as much as to say, "Come on, old man; I'm ready for you."

There's pleasanter fixes than sittin' astride a two-inch perch with a mad grizzly waitin' for you underneath; but I was comfortable 'longside o' Ridgewood with that leg o' his. I heard him groan once in spite of himself, and when I asked him he said he was gettin' kind o' faint and dizzy. I told him to tie himself fast if he had to strip his shirt to do it, and it was well that he did, for he lost his head half the time after that, and would have tumbled out like a nut if he hadn't been tied.

It got to be 'long in the afternoon, and there was no more sign of the bear's goin', off than if he had just come. He'd growl and lick the spots where the bullets hit him and then settle down watching harder than ever. By and by, a good way off, we heard some one singin'; pretty soon it got near enough for us to make out:

Allongs onfongs der ma pattery,
Le zhure der glaw ate arrivay.

"My God! it's that fool, Alphonse, with the mail, says Ridgewood, and in spite of the pain he was in he laughed. "Holler to him to run back and send us a man. The bear will swallow him whole."

We was on the side of a gully and right across was a bare place on top of a spur that Victor would have to cross to reach the shack. When I saw him come out on it, I swung my hat and yelled "Bear, bear, Splayfoot!" as hard as I could yell. He stopped a minute with his head on one side, waved his hand, and turned back into the woods.

"Think you can hold on a spell longer!" I asked, for Ridgewood was groanin' again.

"Why, I'm tied on, Tom," says he, laughin'. Oh, he was game.

And just then I see Victor come stealin' up through the woods way off to the right. He'd gone round so's to come up against the wind; but he hadn't nothin' but a little light rifle, just about big enough to shoot rabbits.

"Lord, man; you can't do nothin' with that popgun," says I. He kept stealin' closer and closer, like a cat, and I broke off all the wood I could reach and pelted the bear so's to keep his eye on me till Victor wa'n't fifty feet away.

"Bien," says he, and whistled. The bear turned his head, and Victor put two of them popgun bullets right in his nose.

I tell you dust and leaves flew about pretty lively for a minute, but they were both center shots, and he was a dead bear.

The old King of the Siskies. We'd found that out when we set up there a-watchin' him. "Aha, Mossyer Splayfoot! kill my peeks, will you?" says Victor.

By the time we got Ridgewood down he didn't know anything. We took him back to camp and Victor nursed him like a mother for six weeks.

One day when he was on the homestretch Montezumy Mike was in to see him. "You'll have to make another picter of Victor, Ridgewood," says he. "Since he killed Splayfoot his mustashers have growed an inch and he starches 'em stiffer than ever."

"I don't care if he laps 'em behind his head and ties 'em under his chin," says Ridgewood. "Somebody'd better make a picture of me."

Victor came in with a bowl of somethin' or other for Ridgewood to eat and he scolded because we were in there talkin'. "Ees eet that you vill keel my patient, genteelmen?" says he dancing about. "He moost have the quiet, I desire that you will imme-diately at once go away."

Mike went out, winkin' at Ridgewood, but the Englishman reached out and got hold of his nurse's paw. "You're a brick, Victor," he said.

"I am a genteelman, sare," says Victor, and I guess that was about the size of it—eh, Judge?

M. C. SKEEL.

This statement of furs and skins is contained in a letter written by John Jacob Astor in 1792. Smith was a pioneer at Fort Schuyler, now Utica:

PETER SMITH, Merchant,
Canajoharie, or Old Fort Schuyler.
Acct of Pelts per Mr. Kipp—

67 Otter skins.....	£134
1 do of very little value.....

257 Beaver.....	£142.4
9 very bad bears.....	£2.5

A Camp on the Lost Channel.

ONE hazy Saturday evening in August, 1898, we left the Iron City camp on Go Home Bay and went south about thirty-five miles to Waubaushene in the camp tug. On landing we immediately made our way to the Hotel Wilson and engaged a room and board until Monday morning, when we expected to start on our cruise up the Severn River. The hotel is situated on a hillside back of the town, and overlooks the bay. The house is quite home-like, and the surroundings beautiful.

Among the guests at the hotel were Mr. and Mrs. C., from Pittsburg, with whom we were acquainted. They had both been sent here by the doctor for their health. As soon as they learned of our intention to start up the Severn River Monday morning they were eager to accompany us. We had our canoe and cruising outfit with us, so my husband and Mr. C. started out to procure two guides, a canoe and a tent. They engaged two young men for guides who were good woodsmen and, fortunately for us, expert canoeists.

We spent a quiet and very pleasant Sunday at the hotel, not caring to attend church in our cruising garments.

Monday morning we were up early and had an excellent breakfast. When we were about ready to start, the driver brought around the wagon, and all our duffel was taken to the store where we intended buying our provisions. Mr. and Mrs. C. had been liberally supplied with provisions and blankets at the hotel.

When we had purchased our supplies they were placed in the wagon and taken to the dock. We followed, accompanied by the proprietor and his wife, to see us off and wish us bon voyage. They treated us with the greatest kindness, and I shall always feel indebted to them for the basket of new potatoes, fresh eggs and, spring chickens they gave us.

The guides loaded the canoes, and we crossed Matchedash Bay in the early morning and were soon portaging around the dam at Port Severn, near the mouth of the Severn River. The dam was broken and the river was very low. A short distance above the dam is a rocky ledge extending from shore to shore across the bed of the river. Over this ledge the water was so shallow that only in one place—a narrow channel about 3 feet wide—was there water enough to float the canoes.

Around a bend a short distance above this ledge the river bed widens, forming a large lake. The shores of this lake, owing to the broken dam, were mostly swamps covered with driftwood and drowned trees. The lake itself was full of deadheads, all pointing down stream, and near the center was a great round-topped boulder about 3 inches below the surface of the water.

Beyond the lake the river runs through a swamp covered with drowned trees and channels running in various directions. We had no difficulty keeping in the main channel, and were soon in Gloucester Pool. This is a great lake, eight miles long and from two to four miles wide.

On Gloucester Pool we found the waves running high, and a stiff breeze. But our guides were skillful, and even with our heavy loads, we had no difficulty.

A tug runs from Port Severn to a dock at the head of Gloucester Pool, but we had been too late for the first trip, and the tug stood moored to the dock at the head of the pool.

We kept to the right, and entering the narrows, passed Camp Comfort. This camp seemed to be well named. The location was beautiful, and the campers were evidently enjoying themselves. They were at dinner.

We were now in the gorge below the little chute, where the river breaks through a ridge of granite hills. We landed at the foot of the chute, which is also the foot of the portage. All our duffel had to be carried up that narrow, rocky trail, which could be seen going up over the hill, through the trees, toward the sky. When you reached the top of the hill you might get a rest, but the train turned and went right straight down the other side of the hill. As my eye followed the narrow trail up the hillside I thought the only thing I could carry over that portage, with any degree of comfort would be the family pocketbook. Watching the guides carrying the canoes up the steep hill, I thought of the old song about King George's men—

"When they were up, they were up,
And when they were down, they were down;
But when they were only half way up,
They were neither up nor down."

While the guides made the portage we prepared the dinner. A 2-pound bass that had been caught on a troll was cooked with the bacon, and we made some coffee. There is no need to explain about our appetites, for those who have gone cruising know how it is themselves, while those who have never gone could not understand it anyway.

Everything was over the portage at last, and we were on our way up the river. Instead of going to the Big Chute we kept to the left, and crossing a portage about a half-mile long, were ready to embark on Six Mile Lake. This is a beautiful body of water. It lies in a great basin, surrounded by low, forest-covered hills, and numerous islands dot its surface.

When about half-way across this lake we turned to the right, and were soon entering the Lost Channel. The Lost Channel is a part of the Severn River that leaves the main stream and starts off across the country alone. I do not know how much of a detour it makes, nor how long it is; but it empties into Six Mile Lake, and this lake empties into the Severn River near the Big Chute.

When we turned toward the Lost Channel into Six Mile Lake, a solid wall of rock, 30 or 40 feet high, and apparently unbroken, lay before us. As we drew nearer the shore we could see a stream of water pouring out of the rock, and finally the channel, where the water had cut its way through, wearing the rock down to the level of the lake.

A short distance up the Lost Channel are rapids, and part of our duffel had to be portaged; but the guides took the canoes up with some things in them.

While the guides were making the portage, the Doctor and Mr. C. caught 15 pounds of bass in about thirteen minutes. Wetting their hands, they removed the hook without taking the fish from the landing net (Major Mather's method), and only the injured ones were kept;

the others were returned to the water. When on a cruise it has always been an unwritten law with us to kill no fish we cannot use.

Mr. C.'s rod had been put in the canoe without being taken apart. In some way the rod was thrown overboard at the foot of the rapids, and the reel took to the bottom. As it was now 4 o'clock, and we were anxious to reach a suitable camp ground, we pushed on up the Channel, for it seemed useless to attempt to recover the rod. The next morning the guides went down to the rapids, and after swimming around in the eddy two or three times, one of them located the rod, and diving came up with it, took it between his teeth and swam ashore.

Above the rapids we came to another stream that leaves the Severn, breaks through the hills and comes dashing down, over rocks and boulders, into the Lost Channel. On exploring this stream we found a lake just above the falls, with an island of rock in the center. On one side the shore rises gradually, and on the other a sheer wall of rock from 40 to 50 feet high. Proceeding on our way up the Lost Channel we came into a beautiful basin, surrounded on all sides by high granite hills, shutting it off from the rest of the world.

We camped at the head of this basin, where the river breaks through the hills. The tents were pitched on a flat rock about 30 feet above the bed of the river, and at the foot of Crocodile Rapids.

Supper over and the tents up, the Doctor, Mr. C. and the guides went to cut balsam for beds. Mrs. C. and I were enjoying the beauty of our surroundings, when we heard a great commotion in the woods on the hill back of us. It sounded as though it might be a stampede of wild animals, but proved to be only the men leaving a balsam tree to the exclusive use of some hornets, whose nest they had unconsciously tried to cut down. Like Josh Billings with the snake, they said to themselves, "That tree belongs to those hornets."

The floors of our tents were covered a foot deep with balsam boughs, the tips all pointing the same way.

This was Mr. and Mrs. C.'s first experience under canvas. The wildness of the surroundings, the knowledge that we were at least thirty-five miles from civilization, and the fear of snakes kept them from fully appreciating the comforts of a good balsam bed.

The next morning, after a breakfast of fried chicken, we started out to explore our surroundings. We caught small-mouth bass and wall-eyes, returning the uninjured ones to the water. We saw where the deer had come down to drink, but did not see the deer.

In the afternoon we built up stones so as to inclose two ponds about a yard square. These were along a rocky shore, in shallow water, and about a half-mile apart, the wall rising a foot above the surface of the water. That evening all the fish we caught weighing 2 pounds and over were put in these ponds.

We fished about an hour each morning and evening while we remained in this camp, putting the largest uninjured fish in these ponds. Those under 2 pounds were returned to the river. One evening a pike about 15 or 16 inches long was put in one of the ponds. After swimming around two or three times, to our amazement it jumped over the wall and swam off. We were all standing by the pond at the time, and Mr. C. looked up and said, "That fellow jumped the fence."

Wednesday morning we packed our cooking outfit, provisions enough for our dinner, and started out to explore Hungry Bay, and, incidentally, catch frogs.

As we came down the Lost Channel, Six Mile Lake came gradually into view—a most beautiful sheet of water, surrounded by forest trees in all their summer glory, and the whole wrapped in the cool, silvery mist of early morning.

"With liquid pace, less heard than seen,
The waters glide along;
The woods are all a mist of green,
The air a sea of song."

We found the water in Hungry Bay very low, but frogs were plenty and large.

The tip was taken off a steel rod and a small trolling spoon tied on a short line was attached to the butt of the rod. This enabled us to drop the spoon in front of the frogs, while we were some distance away. We had great sport, and the excitement ran high for a while. When the red feathers would drop down in front of a frog he would blink once or twice, unless very hungry, then open his mouth and take it quick. One very large frog was caught, and when taken from the hook another frog half as large as himself jumped out of his mouth into the water, and was gone. Our big frog had evidently just eaten his breakfast.

When we had caught enough frogs for dinner we tried to find the portage from Hungry Bay to Black River. We wanted to go back to the Iron City camp by this route, while Mr. and Mrs. C. would go back to Waubaushene, the way we came. We could not make the portage, for the low water had left a half-mile of swamp that we could not possibly cross.

When on a cruise we have always taken time enough to make comfortable beds and to cook at least fish (if we have any), bacon and coffee. To-day we had for dinner a box of Armour's sliced bacon, fried crisp and brown, canned tomatoes, canned corn, bread, butter, cheese, pickles, coffee, and, crowning it all, a great heaping plate of frog legs delicately browned, with canned peaches for dessert. Our table cloth was made of paper napkins, of which we always take an abundant supply.

Talk about the hardships of a cruise! After the frog legs had disappeared under the influence of our appetites, I was not surprised to hear one of the men say he would be ashamed to ever look a frog in the face again.

While we were sitting around in the shade some one remarked that our bait was about done, and that we had better catch some frogs for evening fishing, so we started around the island after bait. This was my first experience catching little frogs, and I found them very elusive. I never knew when they were going to jump, and they never jumped the way I expected them to. I would see a frog sitting on a rock, slip up on it, and make a grab. But the frog was not there; in fact, it didn't seem to be anywhere. After repeating this performance a number of times I became more successful. But we had great sport, and somehow got all the bait we

needed. The chase of the nimble frog affords a rare opportunity to lead "the strenuous life."

Thursday morning we broke camp and prepared for our return trip. It was with regret we watched the guides take down our tents and destroy our fragrant balsam beds.

The fish in the ponds were to be caught and killed, for Mr. and Mrs. C. to take with them; a task that fell on one of the guides, and furnished much amusement for us.

After following them round and round in the water he would at length succeed in catching one, but would not take time to kill it. The live fish would not stay in the basket, but seemed very much in evidence on shore. Four or five were flopping around on the rocks, and it took some lively scrambling on the part of the guide to get them back in the basket before they would reach the water and swim off. We had fifteen fish, weighing from 2 to 4 pounds.

On Six Mile Lake we parted with our friends, who turned to the left on their way back to Waubaushene. We continued straight across to Crooked Lake, from which we expected to portage into Black Lake and go back to camp by way of the Muskosh River.

On our way across the lake we passed a party fishing, who, in answer to a fisherman's greeting, "What luck?" showed us a string of about a dozen bass, ranging from 2 to 5 pounds.

The channel connecting Crooked Lake with Six Mile Lake is only a few yards long, and in one part not over a yard wide, and contained scarcely enough water to float the canoe.

Just as we entered Crooked Lake we saw what we took to be a bear swimming from an island across a channel to the mainland. The revolver was loaded, and everything gotten ready to shoot. Then we started after him, but to our disgust found it to be only a deadhead. The current in the channel made a ripple around the log that gave it the appearance of moving.

Crooked Lake is well named, for anything more crooked than its shore line could not well be imagined.

We did not know where the portage was, so turned to the left and followed the shore in and out around the bays. Looking across some of these bays we saw the groves described by Parkman as resembling a pleasure ground or orchard laid out and planted by the hand of man.

About noon we came to a deserted lumberman's shanty, where with some difficulty we succeeded in making a landing.

The guide climbed to the top of a rock back of the shanty, and hiding behind a log motioned for us to follow. Looking across a ravine we saw a doe and fawn quietly grazing on the hillside. The doe soon became restless, and throwing up her head was off through the woods like a flash, followed by the fawn.

Not finding the portage, we cooked our dinner and again pushed off to continue the search.

Early in the afternoon we landed on a rocky point, where we could overlook the lake. A party of Indians had cooked their dinner here, for there was still a low fire. A tent was lying on the rock, rolled up and tied with basswood bark, and their cooking utensils were hanging on the trees. We rested a while, hoping the Indians would soon return and direct us to the portage.

As we sat in the shade and looked out over the expanse of water, reflecting a shimmer of white light, the rocky islands rising from its surface gloomy and silent, we seemed to have entered "the sanctuary of solitude and silence."

The day was a peculiar one. We had the intense heat of noonday in midsummer. The air, the leaves and the water appeared to be absolutely still. Nature seemed waiting with bated breath. Even the solitary cry of the loon, as it came to us from distant parts of the lake, seemed to sound a note of warning.

As we sat in silence and watched it all a haze came up out of the west and covered the sun like a thin veil.

It was now 3 o'clock, and we were compelled to give up our search for the portage and return to camp by the Severn River and Georgian Bay. We had planned to go on a cruise with another party the next week, and must be in camp Saturday to complete our arrangements in order to start Monday morning. Embarking again we soon paddled into Six Mile Lake.

While crossing this lake we heard the low rumbling of distant thunder. There was no appearance of a storm, and we pushed on, intending to camp for the night on a beautiful island below the Big Chute. By the time we had reached this island the thunder had ceased; there were no clouds in the sky, and it was yet early. After consulting with the guide, we decided we could reach Port Severn that night. We pushed on rapidly, making good time, but unfortunately stopped at the Little Chute long enough to cook our supper, losing valuable time.

When about half-way across Gloucester Pool we again heard thunder. Clouds began to gather in the west and roll up black and ominous. The thunder increased in volume, with occasional flashes of lightning. Our canoe was heavily loaded, and the prospects of a storm on this lake were not reassuring. But the storm passed to the north and relieved the tension.

We had crossed Gloucester Pool and were almost half-way through the swamp, with its numerous channels, when night drew her "sable curtain" over it all.

We were not certain that we were in the main channel, and we could not make a landing. The only thing to do was to push on, which we did in silence. Occasional flashes of distant lightning could be seen in the west, followed by low thunder, increasing our anxiety. With a feeling of relief we emerged from the swamp into the open lake, but here an even greater danger confronted us.

The storm was coming closer, the thunder was growing louder and the flashes of lightning were more brilliant, intensifying the darkness.

A lake full of deadheads, with a treacherous rock directly in our course, lay before us.

The storm would surely strike us before we could make a landing. If accompanied by a high wind—and it certainly would be after such a day—our prospects were good for landing, first on a deadhead and then on the bottom. I was cheered and encouraged by such advice as: "If we slide upon a deadhead, sit still. If the canoe is upset, don't try to save anything, but hold fast to the canoe. If we strike a snag and the canoe fills with water, keep hold of the canoe."

Our progress was slow, the guide waiting for a flash of lightning when uncertain what was before him; then paddling swiftly when sure of his course. One flash that we had waited for revealed the sunken rock not 3 feet away. The storm was coming closer and closer; the lightning was more intense. Could we make a landing before it was upon us?

Our trip had resolved itself into a race with the storm, and everything seemed to be in favor of the storm. If only it would hold off a little longer we would be in comparative safety.

The lightning was blinding. To me, sitting in the bow of the canoe, there was nothing but a wall of intense blackness ahead.

Could we possibly win?

But in the dead calm that precedes a terrific blow we pulled up beside the tug, and I was told to climb on it.

We had won the race, thanks to the skill and courage of our guide.

The tug had an upright boiler, and the deck along the sides was about a foot wide. I had landed on the fireworks end, and there being plenty of fire I was afraid to get down for fear I would start something going.

The guide held the canoe, while the Doctor handed me some of the duffe. I soon got the candle and matches, and on making a light we saw that the tug was moored close against the side of an old house-boat. I crept around the deck of the tug, while the Doctor took the candle to see that the floor of the house-boat was safe, and the guide took the canoe to the opening in the end. As the last of the duffe was being lifted in, drops of rain began to fall; in a few minutes the storm broke in all its fury. We were safe, but we had taken a foolish and unnecessary risk, had learned what we thought we already knew—that nature is relentless, and her moods not to be trifled with.

Both ends of the house-boat were open, but her side lay toward the storm, so we were fairly well protected. There was a pile of hay in one corner of the boat, and with this we made comfortable beds. The roof leaked and the water was soon dropping down on my face. I suggested moving our bed, but the Doctor was tired and sleepy, and told me to open my mouth to catch the drops and keep still. This was a new way out of difficulty, and I laughed, the next drop landing right in my mouth.

I did not like the sensation, and jumped up, saying that I would not be a rain barrel for any man. Just then there was a terrific peal of thunder, and I dropped down, grabbing tight hold of the Doctor.

There are just three things I am afraid of—horses, snakes and thunder.

I know thunder is not dangerous, but it is noisy, and I never know when it is coming.

Occasionally the wind would catch the boat and carry it to the end of the mooring chain, and give such a lurch that I thought it would be torn from its moorings.

The wind abated about midnight, and we enjoyed five hours of good, sound sleep. As soon as it began to grow light the mosquitoes swarmed into the house-boat and awakened us. The morning was calm, and the air full of gray mist; everything indicated rain.

Being anxious to reach Muskoka Landing in time for the afternoon boat, we launched our canoe and were soon moving swiftly down the river, past the still sleeping town, to the portage around the dam. In Matchedash Bay we landed on an island, on which were piles of cordwood. Well down in one of these piles we got enough dry wood to cook our breakfast. The commissary stores were now about exhausted. We had only bread, bacon and coffee. Supplies could have been procured at Port Severn, but we hoped to reach Honey Harbor in time for dinner, and the Iron City camp for supper.

When we came out into more open water, the sea was running very high, and we discussed whether to camp on Potato Island or with our heavily-loaded canoe to cross the open water and round Point à Pas in such a sea.

A French Canadian and his wife, in their fishing boat, were taking up their nets not far away. The guide hailed them, and the following conversation took place:

"Is it rough out on the bay?"

"Yas, some tam' him one big wave!"

"Do you think we could cross the bay and round Point à Pas?"

"Yas, him one good canoe; he no upset."

"Do you think there is any danger of us getting drowned?"

"Somtam' one big wave, he break and mak' you wet all over, mebbe."

Thanking the fisherman, we landed on Potato Island, and the guide carefully trimmed the canoe. I still sat in the bow, but was now facing the guide, and a rolled up tent was placed between me and the gunwale for a back rest.

We were not long in the open until I began to appreciate the change in my position. If I had been facing those big waves, like the Irishman's bears, I would have been "scared." When the waves broke, as they frequently did, the tent kept a great deal of water out of the canoe.

A drizzling rain was now falling, but we did not seem to mind it. The waves came in series, each wave increasing in volume to the last of the series, when they would start over again. When the big wave came the guide would hold the canoe steady, let it ride over, quartering the wave, thus shipping but little water. When we came to Point à Pas it did not seem possible for us to round it in safety. Lying out from this point of rock is a reef of rock, with only a narrow, shallow channel between. All along the shore the breakers were dashing high against the rocks. The guide paddled slowly up to the channel, and there held the canoe till the last wave of the series came, when with a few quick strokes we went through on the receding wave. The dangerous part of our trip was over, and we were soon out of the open, and traveling on quieter water. We had shipped some water, and the cushions were getting wet, but the guide rejected my offer to bore a hole in the bottom of the canoe and drain it off.

We reached Honey Harbor by 12 o'clock, and had a good dinner at the hotel. The proprietor told us there was a tug about ready to start for Midland, and we could go on it and get the steamer City of Toronto there. Not caring to cross the open water to reach Muskoka

Natural History.

Fighting Brutes.]

It is really only the man who is somewhat brought in contact with animals in a state of nature who knows much about their mode of warfare, and how and why they fight. In the old cattle days cow punchers used to delight to bring together bulls from different quarters of the range and to watch their ponderous but harmless battles. To the horse wrangler, the fights of range stallions are more or less an everyday matter. The sheep man wonders how his bucks can come together with such force and still escape cracked skulls and broken necks, while the hunter, rarely coming across a pair of locked antlers, or more frequently in rutting season seeing two male wild animals fighting, gains an insight into the temper and warlike methods of our wild species.

The general proposition may be laid down that among the hoofed animals only the males fight among themselves. Females are selfish, and crowd, and push, and strike with heads and horns to clear a path for themselves or their young, or both, but they do not wage formal combats. The one attacked commonly makes way at once, or if she turns in anger the other promptly retreats. On the other hand, the mother will fight in defense of her young. Not always, of course—since no doubt there is as much difference in temperament among four-legged mothers as among those who walk erect—but often. This, however, is but the courage of despair, since all ungulates trust for safety to their legs rather than to any weapons of defense with which they may be provided. The fawn or calf or colt running with its mother, and pursued, sticks as close to her as it possibly can, running almost under her belly and obviously depending on her for safety.

The protective habit of most of our native ruminants by which the mother, for some time after the birth of the young, hides it, during a part of the day, saves a vast number of these small creatures from the attacks of carnivorous animals; and it is only after they have reached an age of considerable strength and are able to run swiftly, that numbers of them are killed by wolves and coyotes. In the old days, when there were buffalo, the cow hid her calf, just as the deer and the antelope hide theirs to-day, and after the calves had attained some size and had begun to eat grass, they usually collected in groups by themselves, a little to one side of the herd of buffalo to which they belonged. A similar habit is noted with the elk, and old hunters will recall the great bunches of calves that were to be seen in late summer, in the vicinity of herds of cows, and the extraordinary noise of their screaming and bawling.

The domestic cow and the buffalo cow in defending the calf uses the horns. The cow elk, deer or antelope strikes with its feet.

In considering the battles between male ungulates, or hoofed animals, we are struck at first by the perfection of the weapons with which they are provided. The horn of the perfect buffalo is long and sharp, and propelled by its vast power and weight, can shear through any living thing. The points of the deer's horns are sharp and hard, admirable cutting instruments, while the white goat bears poniards on its head and the mountain sheep a battering ram. All are weapons of great effectiveness. On the other hand it must be remembered that these weapons are precisely as effective for defense as they are for offense. When two great animals weighing each a thousand pounds or more come together head to head, the least vulnerable portion of each meets the least vulnerable portion of the other, and the battle, however fierce it may appear to the human spectators, may be absolutely without injury to either contestant.

When domestic bulls fight, they struggle and strain and push, and while the horns of either may bruise the forehead of the other and enough blood may be shed from the disturbed epidermis to stain the white horns of either, no harm is likely to be done so long as the push is direct. As he attacks his enemy the bull defends himself with his head, and so in practice do all our horned animals. When, however, one of the combatants is the weaker and is thrust back, the stronger may very likely turn him so as to get a thrust at his side. It is here that the danger lies. But even a heavy, clumsy animal like a bull shows surprising quickness in a case like this, and when he sees that his flank is to be turned takes to his heels, and thus, even if he is overtaken, receives his punishment on the hips, which are by no means vulnerable.

It is not very long ago since I saw a contest of this kind in a corral between two old and ugly bulls. They could not be separated, and when finally one got the best of it, and his weaker antagonist was forced to flee, he bolted straight for the corral fence, and, hesitating for a second as he reached it, received the full force of his pursuer's blow on the hips squarely from the rear, and flew through the bars of the corral amid a shower of kindling wood, and did not stop his flight or his roaring until he was out of sight a mile away on the prairie.

Horses, being hornless, of course fight in an entirely different manner—with feet and teeth. Any one who will watch young colts at play may see the method in which stallions fight very well represented. Commonly, they bite at head, neck and withers, striking with fore feet, or, if overcome, turning about and lashing out with the heels. But kicks with the hind feet seem to be very ineffective when received on the opponent's body. By far the most terrible weapons are the teeth. It is not to be doubted that the mane, and the thin crest of ligament and skin from which the mane springs, are protective—an armor to save each horse from the bites of the rival with which he fights.

It is in the rutting season that most animals fight with vigor, and it is only at this time that serious injuries are received. Most of us have seen the locked antlers of Virginia deer, and all have read stories of these animals being found fastened together dead or dying. The horns of moose and elk being widely spread are not likely to become locked under any circumstances, yet occasionally one reads of locked moose antlers; but such stories are probably apocryphal. A pair of locked elk antlers are

understood to be now in the Smithsonian Institution, or possibly the National Museum, having been presented by Dr. C. Hart Merriam, who received them from J. W. Schulz, by whom they were collected in northern Montana. They are probably quite unique.

It is well known that in the rutting season the mating instinct in animals of the deer tribe becomes so preponderant as largely to change the animal's nature, so that the males lose the timidity which characterizes them for the greater part of the year. Cases have been recorded where white-tailed deer have attacked men at this season, and—if we are to believe the stories in the newspapers—the trees in portions of the Maine woods where moose and people are both abundant become, during the month of September and part of October, smooth and polished from being frequently climbed by individuals striving to escape infuriated bull moose. Elk and deer confined in parks become very savage and dangerous at this time, and in old times in the mountains whistling wild bull elk would often rush up quite close to any one who broke a stick or made almost any noise that he could hear.

When deer and elk fight they come together with a short, sharp run, with the heads held low, the points of the antlers directed well forward and the plane of the face almost parallel with the ground. The horns clash sharply, but the spring and bend of antlers and neck do away with any considerable shock, such as must be felt by goat or sheep or domesticated buffalo bull. They push and push, each striving to press the other backward, and if it is early in the season, and both bulls are fat, both soon become winded, and their tongues hang out and water drips from their muzzles. In a contest like this, weight tells, and it is usually the heavier bull that forces his opponent slowly backward, striving to make him yield more and more and to turn him so that a stroke may be made at his unprotected flank by the long, keen antler. But elk and deer are quick on their feet, and are protected by tough hides, and usually when the weaker of the struggling pair feels that he can hold out no longer, he springs quickly back, turns, and is off at full speed with his heavier antagonist lumbering in the rear.

I have never seen antelope fight in the extremely active way described by Audubon. Such combats as I have witnessed have been much less stirring. The animals stood head to head, feinted a little with their horns, which then met, and a pushing match ensued, in which the defeated fighter, after yielding a little, sprang back and ran off, being followed only a short distance by the victor.

On one occasion, as I have elsewhere said, I saw two bucks—one very large and stout, the other apparently much younger—following two does in the month of September. The bucks were walking nearly side by side, the older one a little in front, when the smaller buck without warning darted on the other and gave him a vicious prod with his horns, which caused him to stagger. The young one then wheeled about and ran away, and was followed for fifty yards or so by the older. This same thing was repeated three times while I watched the animals. As soon as the older buck stopped the pursuit, the younger one stopped also, and turned about, and when the big buck returned to the does the little one followed him. Now and then the big buck would stop and look at the little fellow, and when he did so the little one stopped, but gradually the latter edged up to the older animal, until he had opportunity to give him a second and a third blow.

I do not know how the mountain goat fights, but that it does so there is no question. At best it is a short tempered and rather cross grained animal, and very much disposed to stand up for its rights. It can easily defend itself against a dog, which has no chance at all against the sharp awl like horns. The Indians say that the goats are great fighters, and these animals have occasionally been killed carrying horns broken off from other bucks in the thick skin of the hips.

Besides using his antlers as weapons against his fellows, the bull elk employs them in another way. They are constantly brought in play during the rutting season to force the cow to do what he wishes. Your bull elk has no consideration for the female. He is a wife beater, and if any cow of his band does not start as soon as he thinks she should, or does not take the direction he wishes, he prods her savagely with his horns if he can overtake her.

Yo.

Midsummer Bird Notes.

Editor Forest and Stream:

Our friends in Quaker garb, the catbirds, put in an appearance hereabout on May 13, keeping under cover of the low shrubbery, as is their custom, for a few days, on arriving. May 16 two bobolinks were filling the air with song, as they hovered about the vacant fields at Sixtieth street and Twenty-first avenue.

To think of the thousands of these rollicking songsters that used to frequent the meadows about us in the old days. Now their presence is so unusual here as to require a special note in my journal. As stated in report of Seaboard Air Line in your issue of May 18 last, "there was an unusual rush of migrants." These had mostly left by May 20, but one hardly realized their passing in the crowd of residents they left behind them. All our old friends are still with us in numbers largely in excess of late years. On July 2, that day of awful humidity, when men and beasts simply wilted and went down in the city streets, I counted forty-three robins crowded in and about the bird tank on the lawn, jostling one another for a place in the water. There was a continuous stream of arrivals and departures, but these forty-three were present at one time by actual count, in the water or perched on the edge of the tank. Humid weather always increases the attendance at the batch, but this is a record for our tank, as far as my notes go.

Our noisy tropical friends, the great crested flycatchers, have favored us in numbers to an unusual extent, and an occasional woodcock has dropped in on us during the past two weeks. Grackles have raised large families this season, and this brings to mind a peculiar habit of these birds. As may be generally known, there are many birds whose nestlings void the excrement enclosed in a glary, mucous-like sack or envelope, which is removed at once by the parent bird. In the case of the

Landing, and being wet and chilly, we gladly boarded the tug and went to Midland. While on the tug we got thoroughly dry and warm, and the engineer dried our cushions. We arrived in Midland in good time, and before we were on board the City of Toronto the mist had lifted from the lake, the blue was peeping through the gray clouds, and we caught an occasional glimpse of the sun. We left the steamer at Split Rock Landing, where the camp tug was waiting. When on the tug our friends all crowded around us, anxious to know what kind of a time we had. We could answer truthfully that we had a most delightful cruise. Had they known about the storm the night before or how wet we had gotten that morning they would not have understood how any one could enjoy such a trip. That we had been caught in the storm was our mistake, not the fault of the storm. The wetting we did not mind. We knew before we started that we would get wet, but we were not taking any chances on our lives, and did not even have a cold as the result. Besides, we got back to camp in time to complete our arrangements and start on another cruise Monday morning.

"There is a pleasure in the pathless woods;
There is a rapture on the lonely shore;
There is society, where none intrude,
By the deep sea, and music in its roar."

A. W. C.

Whom Shall We Take With Us?

Editor Forest and Stream:

Two weeks ago an article on the above subject by some one whose name escapes me appeared in your columns, and I had looked for prompt attention to it by numerous abler pens than mine. I am surprised to find that the only response noted, in the main merely assented to it, so to parts of it I reluctantly feel it a duty to file a protest.

I sincerely trust that the article in question belies its author, and that he did not realize what cold type deductions it must bring to the mind of a thinking man. I hope that the writer's life is on lines diametrically opposite to the inferences which otherwise must be drawn from his argument, if taken at face value; for, crystallized, do they not stamp the holder as having omitted from his category one exceedingly objectionable type of a man to associate with?

Do they not set up as an ideal a man whose way must be law in all things? who "won't play" if he cannot have his way; who will not allow that his neighbor can know anything because he himself can supply all the knowledge needed by the community; who is so utterly selfish as to others' rights—especially in money matters—as to have apparently no conception of the principle "noblesse oblige," who, because the majority have others depending on them in some way for whom they must be self-sacrificing and must therefore keep to some carefully planned expense-programme, says in the most cold-blooded manner, "all such have no right in the world"? In the name of the Almighty Dollar, who gave that man the right to arrogate to himself the publication of such a judgment?

Now, brothers, let me show you a better way. Destructive theology is valueless unless it be followed by constructive.

I have been a lover of the rod and the forest from my youth up. I have taken trips with and without guides and companions; with those who knew more and those who knew less than I did; and I can say for a fact that the best times that I have ever had in the woods were those when, as a luxury which I felt I had earned from life, I took with me a well-bred tenderfoot, and saw him enjoy it. The times we live for ourselves are joys of the moment. They are gone and forgotten. The pleasures we give to some others are things we remember perhaps when the men themselves are dust. Try this, plutocrat, for a season! Suspend judgment, at least, until you have tried it; for otherwise you are not in the least qualified to judge; and, meanwhile, next time that you want your own way, which will add materially to the expenses of a trip, consider that if that way is so valuable to you it is worth paying for—and pay the extra expense yourself, instead of letting five or six men each chip in a collectively-considerable sum for your special rich benefit.

But I am glad to be able to say that there are also others, although their deeds are not heralded. My own tenderfeet paid their own expenses; I could afford to give only some spare experience. But at least one wealthy man I wot of, although I know him not by sight, who regularly each year invites to his well-appointed camp a young fellow who is passionately fond of the life and has not the wherewithal otherwise to enjoy it. Just what his host gets out of it cannot be measured without knowing the man; but, fortunately, it is a known fact in humanity that it is absolutely impossible for a man to send a younger one away after such an outing so radiant with health and happiness and gratitude and not himself to have had his share while bringing that result to pass. Scrooge himself could not!

So I feel assured that verily that man hath his reward. Now, brothers, the weather is hot. I haven't had my outing yet—it comes next week. So, perhaps, I too have hit out too hard from the shoulder. Hot weather and fly-time are not good elements for placidity. Acidity, mebbe! So, if I've said what I have to say too strongly just remember the weather and—forgive me. But remember it in another way, too, I beg of you, and—perhaps not every year—sometimes, at least, just "take the tenderfoot along." Truly, you can have no end of fun—and then, afterward, you can tell us all about it, and we can have some, too. That's partly what our beloved FOREST AND STREAM is for.

J. P. T.

BOSTON, July 20.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

grackles, these sacks are quite large and chalky white in color. The old birds have an odd habit of taking these sacks to the bird tank and dropping them in the water, flying some distance in order to deposit them therein. These grackles are the only birds I have seen do this, others seeming to be content to remove the sacks from the immediate vicinity of the nest. While the young grackles occupied the nests one might see the parent birds flying to the water with these white things in their bills, carefully depositing them and flying off again.

Abnormal spring weather seems to have encouraged the insect hordes. The aphids have swarmed over all foliage, infesting the tulip tree (*Liriodendron tulipifera*) till all the leaves were gummy with the "honey dew" of these pests. Millions of gnats and other minute gauzy winged creatures that brushed their sticky surfaces were trapped and perished in the unwonted supply of sweetness. I noted hundreds of ants thus caught and done to death, in spite of the fact that the aphid and ant are such great friends that the latter carefully tend the former in order to feast on their exuded sweets. Truly it would seem in this case that "one could and did have too much of a good thing." The little green vermin also devoted themselves to the maples, and for many days before the heavy rain washed them away the leaves grew limp and wilted under their sticky burden, finally falling in showers. When trodden upon they would often cling to the sole of one's shoe, as though smeared with bird lime. Of all our native trees the beech, with us, has hitherto escaped all insect plagues to a marked degree. But this year they have suffered with the rest. The leaves at first turn a light rust color, shrivel slightly and flutter down. Examination reveals swarms of aphids in every case on the under side. The heavy drenching of the trees by the late frequent thunder showers appears to have checked the defoliation to some extent. I certainly trust it will be effectual, for should it continue a few weeks will suffice to leave the trees entirely bare.

There are several broods of seventeen year locusts scattered about the country, and the one that has selected this part of Greater New York is due this year. Their last appearance in 1884 was on time exactly, and the low hum of their swarming millions began at dawn, never ceasing till far into the night. One chap I captured then attracted my attention by his frantic efforts to fly with a spiteful scr-e-ek! He would dash into the air, gyrate wildly a few times, and come down with a thud. This crazy performance I found was caused by one of his wings being full one-third larger than the other. A penknife soon remedied the defect, and my friend speedily departed with a biz-zz of thanks.

And now, in closing, though we are rapidly becoming so cityfied that the bobolink rarely comes near us, we may still find pleasure in watching the sunset gambols of a big gray squirrel that lives in our huge chestnut, and listen with some of the old-time emotion to a stray whippoorwill that wakes the half-forgotten echoes from their sleep.

WILMOT TOWNSEND.

BAY RIDGE, July 18.

The Little Ermine in New York.

ABOUT the middle of last month (June) I visited Fordham for the purpose of making a few collections for my aquaria. The locality I worked in was that patch of rough land situated about twenty rods beyond the terminus of the street railway. It is a rocky, bush-overgrown spot, a few oaks, elms and maples being the only trees growing there. It is traversed by a small brook, which flows from a reservoir a few rods away, and gurgling down the slight decline, crosses the street under a culvert and is lost in the swamp on the other side.

As I was busy with my collecting net in one of the small pools which abound in the brook I heard a shrill twittering, and scurrying about in the bushes near me, and in a few moments I saw a striped squirrel, or chipmunk, running for his life, closely pursued by two other small animals, which proved to be a pair of the little ermine, or weasel. The unfortunate chipmunk was almost overtaken when he made a detour in my direction, ran between my legs, and, jumping the brook, scrambled up the trunk of an elm tree near by.

One of the little carnivora instantly disappeared from sight, but the other paused for a few moments on a boulder in the brook and looked at me with evident resentment, his eyes glistening like little black beads, as he stood regarding me. As soon as I recovered from my surprise I made a dash at him with my net, which was, of course, futile, the little scamp darting away like a flash.

Now, that a pair of the little ermine should be left among the *feræ naturæ* of Greater New York seems to me rather remarkable, and the fact should go on record. There can be no mistake as to their identity, for I had a good opportunity for examining them.

Of course the chipmunk, together with his family, have long since been gathered in, for hungry weasels make short work of those unfortunate rodents, whose burrows they can find.

EDWARD A. SAMUELS.

Collection of 30,000 Eggs.

JOHN LEWIS CHILDS, of Floral Park, L. I. who purchased the Jean Bell collection of eggs in Philadelphia intends to add it to his own collection, which will give him what is supposed to be the most complete collection of native North American birds' eggs in the world. The collection will number between 30,000 and 35,000 eggs, ranging in size and value from that of the great auk to the common crow. With the collection of eggs comes about 400 nests of the rarest birds.—New York Evening Post.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen. Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 246 Broadway, New York.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Three Stages of It.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* In reading reminiscences of sportsmen and noting the fondness with which they dwell on the different stages of the hunt I wonder sometimes which affords the greatest pleasure, the anticipation, the realization or the recollection.

Some dwell long and fondly on the anticipation; the getting ready for months before the time of starting; getting together each needed article as its use presents itself to mind, time and again taking down the gun and looking through its sights, reviewing the proposed plans with our companion, and dreaming by night of the buck that we failed to kill because at the critical moment the gun wouldn't work right, and then consoling ourselves next day with the maxim that "Dreams always go by contraries." Then comes the realization, with about a dozen disappointments for every success, until we are led to wonder sometimes why the craving should be so strong and persistent for a pastime which is so productive of tired legs, discouragements and disappointments, and yields so little, apparently, in return. Coming into camp in the evening wet, tired and unsuccessful in so much as seeing anything, we think before supper that we really wouldn't care if we never saw a gun again, and wonder why we were ever so enthusiastic over the trip. As we sit by the camp-fire and eat as only a hunter can eat, and exchange notes of the day, our feelings gradually change; we know not just when or how, but by the time supper is over and pipes loaded we are filled with that same enthusiasm with which we started out.

The pleasure which is experienced in the realization of a successful hunting trip is of a more intense degree than that of anticipation or recollection, but it is of such very short duration. The joy of standing over the fallen big game after all the anxiety and uncertainty of the pursuit is supreme for the moment. One man whom I guided when he killed his first buck deer was so overjoyed at finding it lying dead after thinking he had missed it that he got down on the ground and hugged it. After the intense wave of pleasure passes, then it is that we are confronted with the laborious task of taking care of the game, which is sometimes of such a nature as to almost make us wish we hadn't killed it. I have figured out to my satisfaction that it is after the fun is all over and we are going about the regular duties of life that the real and lasting joy of a hunt begins.

Time can dim the memory along some lines, but to the man who has inherited a strong passion for the gun and the woods—for such things are inherited, not cultivated—the recollection of the hunt becomes more vivid as time goes on, and other occurrences are forgotten; and we have found the old pioneer in his last days wax warm and in spirit become young again in relating his hunting experiences, the relating of which was a never ending source of pleasure and gratification to him.

One who has lived for some years amid nature's wild domain, where he can steal out quietly some morning before breakfast, or start out at daybreak some morning on a fresh tracking snow, when everything is most favorable for a little hunt, and kill a good fat deer, and be home before dinner, hang up the gun in the corner on the rack of antlers, and feel that he has a supply of meat to last for a while, and is constituted as to enjoy every minute of such a life, obtains a richness and fullness of experience and opportunity for observation, which, compared with that of him who takes a couple of weeks' vacation from his regular work each year and goes off to some hunting camp, with the weather perhaps of the most unfavorable kind, and trails around with a guide, after his quota of game, is like riding a merry-go-round on a wooden horse as compared to riding a good saddle pony over the trails and through the parks of the Rocky Mountains. True, to the person who only has opportunity to ride the wooden horse it beats no ride, but to one who has ridden the real live horse, and then is forced by circumstances to straddle the wooden horse or get no ride, the words of Ransacker in the close of his excellent article "There's Enchantment There" appeals most strongly. He says, "A man may live such a life for ten years, and possibly break away, but I do not know that it is worth the effort."

Where one has broken away from such a life against the cravings of an unsatisfied nature, such a one lives not in the present, nor the future, but in the past, living and feasting on the recollections of the past. He thinks of the morning he started up the creek on a fresh little snow to get venison, and after going about a mile crossed what was supposed to be a fresh deer track, leading back toward home. How queer it seemed to walk, trailing its feet in the snow, as no well-bred deer would do; then further puzzling him by walking straight over the top of a large flat rock, where any polite deer would have gone around it, and then suddenly lifting the cloud of mystery by jumping on top of a high log and off at the other side in crossing it, as no deer would do. It's a mountain sheep! Of course. Why didn't I think of that sooner? And headed straight for a high rocky point close to and overlooking the meadow. There was no other likely place for it to be. Leaving the tracks and circling around the point and out of sight of it to see if it had gone by, I found no tracks. After coming two-thirds of the way around and climbing through a nearly impassable mass of rocks, logs and jack pines, I saw it away on the highest peak of rocks, standing like a statue. I must get nearer, and so scrambling under logs and keeping out of sight, I came within fair range, and fired a careful shot at the shoulders. Nothing was seen or heard after the shot, and after a hard climb I got there and found it had been shot dead, and had fallen ten feet down between two big rocks, where I had a hard tussle to get it out. Oh! such meat. After it was skinned, it was as white as snow, being covered all over with tallow. After the hide was dressed it made a most excellent rug for several years, which was a grateful thing for the bare feet to touch when getting out of bed on a cold morning, where carpets were unknown.

Success did not always attend efforts to get venison, even if it was needed badly, or I might rather say "especially" if it was needed badly. I went out one morning on a deep, soft snow, greatly hoping to run afoul of a deer without going far. I tramped steadily through the snow till noon without seeing a track. I came to a little stream of water, and thought to quench my thirst, then eat my lunch. I stood my gun against a tree, lay down and drank my fill, and then looked about for a suitable place to sit. A log about 30 feet away looked inviting if I would scrape the snow off and lay my hat on it for a cushion, as was my wont.

Just as I reached the log, I looked up, and there, not 50 yards away, stood an immense buck, broadside, not a twig between us, and looking hard at me. Directly beyond and within 5 feet of him stood a doe so exactly in range that one shot could hardly have helped killing both deer—an opportunity of a life time, and one which I had many times wished for, but which I never had before nor since. Oh, fool! Where is thy gun? Standing back there 30 feet, but might as well be thirty miles. I thought fast, and decided quick what I would do. They saw me, and to try to sneak quietly back was folly. I could see only one chance—make a rush for my gun and rely on a running shot. I did so, and haven't seen the deer since. But it is fitting to draw the curtain over such a scene. It makes me tired to think of it.

EMERSON CARNEY.

CHICAGO AND THE WEST.

Illinois Quail Law.

MR. A. M. CORBIN, Secretary of the Galesburg (Ill.) Gun Club, asks for information regarding the status of the present Illinois quail law. For his benefit it may be again stated that the State Game and Fish Commissioner believes the omission to have been through an error of a clerk in the committee room. Quail and woodcock, under the reading of the new statute, have no protection—that is to say, they can't be shot. They cannot, however, be held in possession between the old dates of the closed season, which were for quail Dec. 20 to Nov. 1, and for woodcock Dec. 1 to Sept. 1. It will therefore be hard lines for any one found with a quail in his possession before Nov. 1, or a woodcock before Sept. 1. There is talk of an attempt to call an extra session of the Legislature, but there is not the slightest likelihood that anything will come of this talk. There is also talk of contesting the cases of possible violation of the old game law under a somewhat obscure technicality, which might give the protectionists a chance to carry the case to the Supreme Court. Very little faith should be put in this either. We have to face the fact that our game law is a very imperfect and dangerous one.

About New Brunswick.

I am not quite clear whether New Brunswick ought to come under "Chicago and the West" or not, but every Western man who met the New Brunswick guides at the Sportsmen's Show here last winter will be interested at hearing anything about them. Mr. Adam Moore, of Scotch Lake, New Brunswick, writes that he is back from his spring bear trapping expedition, and that he got an even dozen bear. He says: "We went down through the Bathurst lakes May 29, and put our traps along the Nepisquit River. We found the trout hungry, and it took but a little while to catch all we could use, and ye gods, what trout! From 2 to 4 pounds each. Three hungry men can eat a lot of trout in three days, but there is a limit, and I had to stop fishing or waste fish, and we don't do that."

"We saw as many big bulls as ever, both moose and caribou, and far more deer. I saw one moose with a five-foot head, very heavy and even, and several of four feet or better. It was a pleasure to look at them and tell them to meet me later. But it was bears we were after, and we got a nice bunch of them—in fact, I have formed a nasty habit of getting what I go after."

E. HOUGH

HARTFORD BUILDING, Chicago, Ill.

The Adirondack Deer.

Editor Forest and Stream:

An article in your issue of July 6, written by a Mr. Hull, relative to the game law as governing the killing of the Adirondack deer, prompts me to send the following, trusting it may receive similar recognition. Whenever I read articles of this sort I can scarcely refrain from sending an immediate reply, for they seem, in the main, to be absolutely so inconsistent with the situation at hand I repeat a statement I made, in an article you once published a few years ago on this same subject, viz., "That those who lived in the mountains steadily from year to year, being in consequence thrown in contact with these guides and natives, were the only ones, strictly speaking, who are competent to form a satisfactory opinion in the matter of a just form of law relative to the protection of Adirondack deer."

I can thoroughly appreciate every statement Mr. Hull makes, for I have done some hunting myself, having been obliged to reside in the heart of the North Woods, owing to ill health, for twelve years past, almost constantly, so naturally feel I am entitled to a little recognition of this subject. I quite agree with him when he says that, "Many who write on game protection in the North Woods have never been nearer their subject than Newspaper Row"; also that the "administration of the game laws is a farce," at least in many cases. When he says a dead deer is worth but \$3 to a guide, he should qualify his statement. I have known guides to get \$20 and \$25 for a carcass, including head of course, and not try very hard either.

To sum the condition up in a nutshell: Our Adirondack deer will never attain that number they ought until the guides take a different course both as to reference to themselves in the matter of breaking the law and also in using their influence with the sportsmen, and particularly the novice. Take as an illustration the State of Maine. Sportsmen tell me who have visited there, that it is impossible to bribe a guide to give one a chance at a moose or deer out of season, and in fishing just the same. The

popularity enjoyed by Maine to-day in offering such superior inducements to the sportsman is due more to the strict observance of the game laws by the guide than any other source. I wonder if Mr. Hull is aware that the later in the season the deer are hunted with hounds the more deer are killed. What guide of any experience will not acknowledge how much quicker an old buck will take to water on a cold and frosty morning with a dog after him than if pursued earlier in the season during the warmer weather? and in consequence how much easier his runway is located? The race is invariably a short one, and the hound, fresh for another one. This is the reason why there is such a "hue and cry" among a certain class every time the matter comes up in the Legislature to have the hounding season extended to a later date in the fall, for they know full well how easy it is to drive a deer to water. If all sportsmen and guides were equally conscientious in the matter of always shooting their deer from the shore of the lake into which they are driven or take their stand on a runway, then we might adopt some of Mr. Hull's suggestions with success. I have made a study of this matter of non-hounding for several years, and from observations and contact with the guides and natives have concluded there is but one way to raise the standard in the matter of deer protection, and that is to stop hounding indefinitely.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Fly-Rods and Fly-Tackle.

It seems difficult to find an excuse for the existence of some books alleged to be devoted to fish or fishing or fishing tackle or all combined, as one turns the leaves and finds palpable inaccuracies and pages padded with antiquated beliefs, theories and methods handed down in books since Walton's time through generations of anglers, and valueless in this day. To be just, however, such books are not common, but I had labored partly through such an one just before the second edition of Mr. Henry P. Wells' "Fly Rods and Fly Tackle" came to me, and the contrast between them was marked; hence these tears at the opening of this note. Sixteen years ago Mr. Wells presented us with the first edition of his most valuable book, and there was need of it, and of all men that I knew, the author was peculiarly fitted to prepare it. Never was a book more thorough in all its parts; speculation has no place in it, and the results of careful, painstaking experiments are given instead of guesswork, and it is a master workman's and master angler's production. The new edition contains nearly one hundred pages more than the first, all as practical and void of theory as the original matter. That the book has been out of print for ten of its sixteen years of life is perhaps better evidence of its value than any commendation from my pen, and it is a pleasure to praise a book like this in unqualified terms without a single mental reservation, and it is one of the very few angling books that I have read from introduction to finish. The first edition was attractive, with its cover design of a trout in the meshes of a landing net; but I think the second even more attractive, with its cover design of a page of a fly-book—Mr. Wells' own invention, by the way—with flies in colors. The frontispiece, a picture of the author standing in the doorway of John Danforth's old Camp Caribou at Parmachenee Lake, will bring back pleasant recollections to many of the readers of the book.

Salmon and the Dry Fly.

Some readers of my "Angling Notes" will recall a suggestion of mine that it might be profitable to try the floating fly on the waters of a salmon pool when the water was very low and very clear and the salmon would not rise to the ordinary salmon fly worked in an orthodox manner. I say a few will recall the suggestion, because some friends have had a little quiet fun at my expense for making it, and I have been perfectly contented to let them have their fun, for there are occasions when those who laugh last laugh best. This was how it came about: I was visiting at a country house, and so was Mr. Oliver W. Bird, and he told me that while he and Mr. F. O. Beach were fishing the Vanderbilt water on the Ristigouche they saw salmon rise slowly in the water and suck in midge flies from the surface, scarcely disturbing the water. This was when the pools were very low and very clear, and salmon would not come to the salmon fly. My suggestion came in at this point, but I never intended that the little trout flies should be used, as our salmon fishing friend intimated to me when we were both fishing in the Ristigouche, for I said that the flies would of necessity have to be specially made for this experiment. Now, I will call the attention of several gentlemen who have written and talked to me about salmon and dry fly-fishing to the Fishing Gazette, London, of date June 29, and on the first page, first article, under the caption, "Occasional Notes by the Editor," will be found a sub-caption "Salmon and the Dry Fly." I do not suppose any of them will read the item when they get that far; but to cut off further communication to me I will copy what the editor of the Gazette says:

"South West writes to me to say [and right here I desire to say that South West is Major Carlisle, one of the best English anglers, which includes salmon fishing]. 'I have read your extract in Fishing Gazette from FOREST AND STREAM, and thought that perhaps Mr. Cheney would be interested to know that salmon in the Test have often been caught with a floating May-fly. They rise at the natural fly just as the trout does. I have never known any one fish a pool over on chance with a floating fly for salmon, but those caught have been seen to rise, and in some instances no doubt the angler thought he was casting for a big trout. I can give an instance of this, as

was told me by a friend. He was salmon fishing one day on the lower Test, and had done nothing. Seeing what he thought was a trout or grayling rise, he asked a brother angler, who was passing, if he had a trout fly in his book. On looking, a chub fly was discovered, a good-sized Palmer. This was substituted for the salmon fly, and the cast made. Up came the fish and fastened, when there was a battle royal, for it was a salmon of, if I remember rightly, 26 pounds, and was duly killed. I quite agree with Mr. Cheney that it would be worth while trying a floating fly for salmon when the river is dead low, but I do not think the idea has presented itself to salmon anglers. I quite believe that salmon do sometimes go for floating objects on the surface. I myself have seen them in the Usk rise at dead leaves floating down the river in October."

I make my salutation to South West, and I am very glad that such an eminent authority comes to my rescue, and my friends who thought my suggestion so amusing may find food for reflection in the extract I have quoted. Long ago I discovered that it was not safe to say that fish would not do certain things that others claimed that they had seen them do, simply because I had not myself seen the fish do them. Twenty-four years ago I caught a small-mouth black bass weighing 8¾ pounds, and the fact got into print. Such weight was never before known for this species of fish. Those who knew me thought the scales were wrong (the fish was weighed on four different scales in the presence of more than a dozen men); those who did not know me and said anything about it thought I was a monstrous prevaricator. Some thought it must have been a big-mouth, and one gentleman collected evidence from a lot of anglers who had caught thousands of small-mouth bass, and all declared that they had never caught or seen a bass so large as the one I caught, so the weight of mine must be wrong. In fact, not until I sent to FOREST AND STREAM and exhibited in Blackford's market a few years after a small-mouth bass that did weigh in New York city 8¾ pounds were some of the unbelievers silenced. Since that time I have seen a small-mouth black bass caught in the same water that furnished mine that weighed 10 pounds, and I have had a rest about my fish, or the skeptics are dead who doubted that this species of fish grow to 8¾ pounds. It is the man who first does or sees the unusual thing who has to get on the witness stand for a cross examination as to truth and veracity and previous condition, but when two or more have seen it or done it the bricks are thrown in so many different directions that the first man can dodge some of them and not be obliged to take them all in the pit of the stomach.

Black Bass in Salt Water.

Recalling to mind the controversy over the weight of black bass reminded me that in my big blue envelope I had a clipping about black bass, cut some time ago from the London Fishing Gazette. It would seem that friend Marston had entertained an American angler in London, and the American had heard of the difficulty that Marston, the Marquis of Exeter, and perhaps others had encountered in trying to acclimate the black bass in Great Britain, and from Pittsburg, Pa., he wrote to the Gazette, making some suggestions and giving the habits of the black bass. The American says that at a dinner given by a piscatorial society he learned from the speeches that the reason the planting of black bass had been a failure in England was that the fish ran down to the sea and never returned, and then he tells how it should be done. "In the first place, it will be necessary that you select a stream or lake or pond, or, in fact, any body of water which is clean and clear, whether adjacent to or beyond the reach of salt water. * * * In the early spring, during the months of April and May, and as late as June and July, the fish leaves the deep water, where he has been all winter, and seeks the shallow and warmer water at the head of the streams, and having found a suitable spot, he will proceed to fan out with his tail a clean spot in the middle of the stream, and from the small gravel which he uncovers he will proceed to build his nest by piling up the gravel in a circular form of from 18 inches to 2 feet in diameter and several inches high, according to the material he may have in hand. Having cleared it from all rubbish, he will then bring his mate, and having inspected it, she will proceed to lay her ovary upon this nest, while the master remains down the stream, protecting her from any violence or interference. Having deposited what ovary are ripe, he will proceed to deposit his milt upon the nest, whereby the eggs become impregnated, and when they have become exhausted from the operation above described they will remain in the vicinity of the nest until the warm heat of the sun and also the warm water have completely hatched out the contents of the nest. They then remain in the vicinity of the nest until the fry appear or until the sac is completely gone or disappeared, and the fry move off to other fishing grounds, the old ones accompanying them, protecting and caring for them until they are able to maintain and feed themselves, the older ones then taking their departure. * * * During the winter months he will have no desire to seek the salt waters if food is plentiful and there is no disturbing cause to drive him from the place he is in. One cause to drive him from a pool or pond or river is the constant stirring up of the mud by the ground feeding fish which would be constantly rooting up the mud and keeping the water in a muddy condition."

I have an idea that our friend is a German-American from some of his expressions, and while he has a general idea of the spawning habit of the black bass he is specifically incorrect in a few particulars. For instance, it is the female black bass which prepares the bed, and during the act of spawning the two fish are close together, and it is the male black bass which broods the young after they are hatched and until the brood separates; but these are minor matters, as compared to two questions which arise from reading the article: Do black bass build nests by piling up stones several inches high? and do black bass have the habit of going down to salt water? The circular spawning bed of the black bass is made by the movements of the fins and tail of the female in scouring it, and she will remove some stones with her mouth, but this, it has been believed, was simply for the purpose of getting them off the bed, and not for the purpose of building a fortification around the bed,

It is recorded that (in Michigan, I think; it is in one of Henshall's books) some nests were found built on brush several feet above the bottom of the stream or pond, but these nests or spawning places were composed of water weeds and moss, as I recall it, and the black bass were observed in them, but not in the act of building. This is the only evidence that I have ever noticed of nest building, literally, of the black bass. It is well known that they will remove anything placed on their beds after they are prepared, and this they often do, to their destruction by poachers. The suggestion that black bass run down to salt water is something new. If they do ever go to the sea it is not in winter, for in winter they hibernate, and consequently they do not feed during the hibernating period, so it is not necessary for them to seek new pastures in the winter season.

Does any reader know positively of black bass going to sea for a time and returning to the fresh water?

A. N. CHENEY.

A Bass Fishing Incident.

A UNIQUE and unusual incident befell two Chatham anglers on Tuesday, July 16, while they were fishing for black bass at Eriean, Ont., a summer resort on the north shore of Lake Erie, situated on Rondeau Harbor. These waters are noted among the followers of Walton as the best for black bass fishing. Here are caught the largest and finest specimens of this grand game fish. In no other fresh water are such beauties taken, and for this reason this spot is often the rendezvous of American experts with rod and reel. Rondeau, with its black bass fishing, is well known to Judge Brown, Col. Kress, Harry Reymer and other Clevelanders with a national reputation as fishermen. Rondeau is the resort of Chatham, Ont., nimrods, and on Tuesday, July 16, A. C. McKay, business manager of the Chatham Planet, and E. J. MacIntyre, a leading Maple City jeweler, went fishing to the Eau. About 9:30 A. M. Mr. MacIntyre had a strike, but after playing the fish a few minutes his line parted. About 20 yards of Mr. MacIntyre's line accompanied the bass to the depths below. Quite a number of black bass were secured before luncheon, and when the two fishermen went to eat, they left their lines set on the pier. When they returned Mr. MacIntyre found all the bait gone from his hooks, but Mr. McKay found a fish on his line. After playing it for a while he landed a nice black bass which weighed 3 pounds 7 ounces. What was his surprise however, to find in the mouth of the fish Mr. MacIntyre's hook and the piece of line lost in the morning attached. The catch was one of the most remarkable in the annals of Rondeau fishing.

There was a friendly dispute, though, between the two fishermen as to who owned the fish. Mr. MacIntyre claimed the fish, saying he had hooked it first, and his line was still attached to the fish when taken from the water by Mr. McKay. The latter, however, declared the fish his because he had caught it and taken it from the water, and that Mr. MacIntyre had neither caught the fish nor seen it. Mr. McKay even went further and claimed salvage on the hook and line. The ownership of the fish is still in question between the two, and they would like some authority to decide for them the ownership.

Mrs. Noble, a Cleveland lady staying at the Pavilion, was the only witness of the catch outside of the two participants. She happened to be fishing on the pier at the time.

J. W. YOUNG.

Down in Maine.

BOSTON, July 22.—Many of the Maine papers are after Fish and Game Commissioner Carleton for his speech at the recent gathering of the Maine Sportsmen's Fish and Game Association at Kineo. They are particularly disturbed by his calling the remarks of an agricultural paper upon the administration of the fish and game laws "the veriest rot," and terming the writers of such criticism "demagogues and ranters." The Maine Farmer (agricultural) says: "If Mr. Carleton was in earnest his remarks were unfortunate, and when the day comes that the voters of this State cannot question the course of legislation or criticize public officials, the State of Maine is on dangerous ground."

Another leading daily journal says: "Incidentally we may here mention that neither the farmers of Maine nor the Journal wish to upset the game laws of this State. They are willing to encourage anything that brings any business to our State. All they ask is that those laws shall be reasonable, and their enforcement placed in the hands of men whose heads are not swelled by their own importance. This happy condition of affairs does not exist just at present and hence all this unpleasantness. The servant has usurped the position of the autocrat and the people are getting excessively wearied."

Bass and white perch fishing absorbs a good deal of the attention of the summer boarders at many of the Maine resorts. At Maranacook the summer cottages and the hotels are most occupied. There are thirty-two cottages on the shores of that lake, and two or three hotels, or summer camps, where anybody can be entertained. Fishing is the leading sport morning and evening. The Readfield, Smithfield and Belgrade lakes and ponds above Maranacook are well patronized by summer guests, all armed with fishing rods. Perch and bass enough are easily obtained for the tables. Anabessacook and the Monmouth ponds below are also well patronized. The general verdict is that white perch fishing is good, when the weather is not too hot. At Cobboscontee the summer guests are mostly fishermen. Still the Sabatis Pond is well patronized by the white perch fishermen. The request that the number of perch taken in one day be limited is likely to be granted by the Fish and Game Commission. China Lake, at China, Maine, is noted for its bass and pickerel fishing, and local fishermen, as well as guests from Waterville and Vassalboro frequent that lake a good deal with rod and reel. At Windham, Maine, reports say that the fishing is good there, and that many large bass and white perch are being taken.

The story is out that 2 short time ago the two sons of a Mr. Hines, of Bigelow, northern Franklin county, Maine, found a very small fawn in the woods. The boys

took the little fellow home, where they cared for it, nursing it on a bottle till it became very tame, and strong and hearty. Game Warden Phillips learned that they had the little deer, and came and took it away, much to the displeasure of the boys. He attempted to ship it to Commissioner Carleton. The journey of the deer was uneventful as far as Strong, where it was turned over to the American Express Company. But that company refused to take it, since there is a law that transportation companies shall not ship deer, either dead or alive, during close season. The deer was sent back to the game warden, and it will have to await a special order from the Commissioners for its disposal.

There are even more than the usual big stories of big game in Maine this year. A guide at Norcross writes: "A. M. Houston and myself started from my camp at Pamadumcook Lake and went around Rainbow Lake, out by Roach River, and on to Katahdin Iron Works. We saw nine moose and twenty-one deer on the trip, and found where bears had killed two deer." In the Rangeley region deer do not seem to be as plenty as a year ago. Still they are very frequently seen. The hot weather has driven them into the lakes and ponds a good deal. A big cow moose has been seen very frequently in the neighborhood of the Thayers' fish pond, by the keeper there. At Metallic Pond there are several moose. The deer continue to come out into the opening to feed at Upper Dam, where they may be seen almost any pleasant evening by the guests who will take the trouble. In the Megantic Preserve deer are reported unusually plenty, with a good report of partridges.

SPECIAL.

More About Frog Farming.

BEARDSTOWN, Ill.—*Editor Forest and Stream*: In the last issue of *FOREST AND STREAM*, the article on frog farming by E. Hough particularly attracted my notice, for the reason that I am now conducting an experimental frog pond near Beardstown, Ill.

I am familiar with several natural frog ponds in this vicinity that yearly produce a number of the bullfrogs. But the general or whole supply in this region is not sufficient in a commercial sense to pay the individual wishing to embark in such an enterprise.

The large marketable bullfrogs are scarce, and this is not strange when one studies the creature's struggle for existence, apparent from the spawn stage to adult size. The favorite spawning grounds are usually small and shallow pools near a larger marsh or lake. Here the spawn is deposited early in the spring and is hatched in a few weeks. The resulting tadpole has a hard time of it. First the summer droughts dry up nearly all the small pools, and the tadpoles perish. Again, they are the prey of a number of aquatic birds, fish, snakes, crawfish, turtles, and lastly, but chiefly, the frog himself.

It is not strange that the adult frog is such a scarce commodity. The bullfrog and spring tadpole remain such the first season, and it is not until the following spring or midsummer that the transformation to the frog state takes place. Of those that survive to go into winter quarters, the great majority are killed by extreme cold.

Now I wish to tell your readers of my experience in frog raising up to date of this writing. In spite of the knowledge that I had acquired regarding the many difficulties besetting one who will attempt such a foolhardy venture, I resolved to test the matter from a personal observation. Fred Mather said that he had traveled from Maine to California looking for reported successful frog farms, but had failed to find one. He claimed that they were a myth, that it could not be done, and the person who told you so he denounced as an Ananias. The last Government report contains an exhaustive article by F. M. Chamberlin. This authority gave me a little encouragement in so far as he thought that possibly if sufficient attention to the details be observed in the raising of frogs, as that employed in fishculture, it might succeed.

I too am after more information regarding the habits of the *Rana*, and suggestions from your readers on this subject I will highly prize.

My frog farm comprises an area of three acres, of which two-thirds is water and one-third shore land. The water at its deepest has a depth of three feet; it has an abundance of water plants, as the water lily, the lotus, many grasses and mosses. It is an ideal spot for frogs, and for many years they have made it their home. It abounds in crustacea, crawfish and myriads of insects conducive to frog growth. I first diked this pond, and upon this dike I built a seven-foot board fence. On the shores I excavated two tadpole ponds 25 by 100 feet, and inclosed these with one-fourth inch mesh wire fences three feet high.

Early this spring I gathered millions of last year's tadpoles and placed them in the small inclosure and fed them on ground wheat, corn and liver. Not knowing at the time how to distinguish the bullfrog tadpole from that of the spring frog or the common small frog, I placed them all as I found them, large and small, in these pools. Later as they developed I found that I had procured but one batch of the bullfrog variety, but of these there were several thousands. Later I procured about five hundred adult bullfrogs (*Rana aurora*) for breeding purposes. Examination showed that nearly all the females were charged with spawn. These I soon found, would climb the wire netting surrounding the tadpole ponds, and they did this in such numbers as to devour nearly all the tadpoles. I then nailed boards flatways on top of the fence, which was effective in keeping them out.

The metamorphosis is now taking place in the tadpole pond, and I have several thousand young bullfrogs, and many more of the common spring frog. These last will have no marketable value. I have now arrived at the critical period, in so far as supplying these young frogs with food. They must now have live food, and how to supply this in sufficient quantity will test the success or failure of my venture. They will not now eat the meal or liver they existed on in the tadpole state. When I throw them bread crumbs or grains of wheat, and as it rolls down the banks of the pond, they snap it while in motion, but will not eat it when it rests.

Field rats, snakes and moles burrow under my fence and destroy some. Aquatic birds also do damage. But the critical test is to provide live food that manifests itself by motion for the frogs remaining. I cannot yet let

them out in the large ponds to feed off of the natural food abounding there for fear of the large frogs destroying them.

The old adage seeing is believing has taught me many truths in my undertaking. I have seen the frogs climb up to the top of the wire fence and tumble over. I have seen the large frogs swallow the smaller frogs, tadpoles, crawfish, snakes, minnows, dragon flies and many bugs. R. Putman, who has charge of my carp and terrapin farm, has held post mortems on many aquatic birds this season, and in all of them found both bullfrogs and spring frogs. I have seen a snake swallow a dozen small frogs in succession. The snapping turtle destroys many frogs. The muskrat and crawfish tunnel through my dikes, leaving avenues of escape for the frogs. It is my opinion that to raise frogs commercially it will be necessary to fence them in entirely, sides, bottom and top. Then they will have to be separated according to sizes to prevent the large frogs eating the small ones. Of course the food question would have to be solved.

The adult frogs that I placed in my pond are still there, but I have not yet discovered any spawn or tadpoles as a result. It may be that they have not yet spawned. Their "chant d'amour" is heard nightly, and it is like the bellowing of a herd of Texas steers. My pond is near the town, and the civic authorities have many complaints to hear on account of this free Wagnerian opera music so near by. But I intend to stay with and protect these songsters at least for one year more. Probably then I will wish I had hearkened to the advice of Fred Mather and say with him—it can't be done.

H. EHRHARDT, M. D.

FORT COLLINS, Colo., July 20.—*Editor Forest and Stream*: I am informed that you can tell me how and where to get large bullfrogs (or the spawn), and as I have some fine lakes here in the Rocky Mountains, and while frogs are plentiful, there are none, native, of the bullfrog species. I shall greatly appreciate all information as to place of getting some, the price and any other information you can give me on the subject.

NETTIE C. POORE.

[You probably can buy some bullfrogs from Dr. Ehrhardt. The "Manual of Fish Culture," issued by the United States Fish Commission, has a chapter on frog farming, the gist of which is that the farming as practiced consists in collecting frogs and letting them grow big.]

Squidding for Bluefish off 'Sconset.

TWENTY years ago I went to Siasconset via Nantucket. As these towns were then, I presume they are now. I know that for absolute quiet Siasconset was the ideal place, a sort of a rest-cure haven where doctors could safely send their nerve-racked patients and feel safe that undue noise and excitement would be only noticed by their absence.

My stay was limited so much that I had taken neither rod, line nor reel with me. In the early morning I saw the fishermen come ashore in their dories and unload their catch of bluefish, subsequently packing them in barrels and sending them up to Boston.

I learned on inquiry that the fish were running along shore a mile or so beyond the breakers in comparatively shallow water and the fishermen anchoring their boats used the squid and bluefish line to land their fish.

The next morning I was around early and arranged to go out with one of the boats. A little careful handling and we were plowing our way through the surf, finally getting into comparatively smooth waters, and soon throwing out our anchor.

Allotted to me was perhaps 150 feet of heavy bluefish line on the end of which was a heavy hook running into a shank of bone, perhaps twice the length of the forefinger, over which was drawn an eelskin.

It was explained that the line should either be coiled and loosely held in the left hand, or coiled carefully upon the bottom of the boat, the squid to be held by a couple of feet of line, whirled around the head and thrown at the proper moment down the tide as far as your strength would permit.

The moment the squid touched the water, to succeed, it was necessary by long and steady overhand reaches to draw in the line. The movement of the hook through the water crowned with the eelskin covering proved as alluring to the bluefish as a spoon to a muscallonge. Sometimes the lure was struck the moment it touched the water, and again not until it was close up to the boat. The fish were of good size, from 10 to 15 pounds, and when they struck there was no mistaking the tug on the line. They, when struck, if I remember correctly, rarely broke water. When they did not attempt to rush ahead and get slack line they worked to right and left, and by main force attempted to tear out the hook or break the line. As long as the line was rapidly and steadily taken in they rarely got loose, but the least let up on the draft of the line would almost invariably result in the loss of the fish.

It was monotonous work. The fish were running in large numbers and taking the squid as freely as offered. One's arms soon began to feel the strain, and the hard spun line soon began to cut into the hands and bring the blood.

The two lines in an hour sufficed to cover the boat's bottom with great flopping bluefish, and we quit and pulled for the breakers and the shore beyond.

Yet had one been supplied with a good casting rod the story might have been different, and perhaps not so many fish might have been landed.

And again this would have been tame work compared with handling a 15-pound bluefish from the stern of a swiftly moving yacht with rod and line.

The natural sequence after catching would be the eating of a bluefish, and in this connection I might admit to eating bluefish but once, and that on board a yacht, the fish being upon the broiler in less than five minutes from the time it was unhooked and lay flopping upon the deck.

No \$10,000 chef can put into a bluefish what is lost between the ocean and the ice house. Sydney Smith, I think, once said that to properly prepare a lettuce salad the lettuce should be cut from its root under the shade

of an umbrella, hurried to the kitchen, washed and placed in the bowl upon the table. The same rule should almost apply to fish.

To land your boat upon the beach at noon, to watch the guide slip a bass off the live string, and with a few deft strokes of the knife behead, bone and skin the fish, leaving two sections of boneless fish to be dusted with cornmeal and sprinkled with salt and pepper and then done to a turn in the swimming, sizzling bacon fat over the camp-fire, then and only then does one eat fish as it should be eaten. To compare such a fish dinner eaten under the shade of the trees, the lapping of the waters and the rustling of the leaves supplying the music, the balmy wind adding a zest to every mouthful, with one eaten in a gilded restaurant, accompanied with Hungarian music and breezes from electric fans, is to compare sixteen karat gold with the pinchbeck article.

But then this is a digression, so I will desist.

CHARLES CRISTADORO.

CHICAGO AND THE WEST.

The Fishing at Galveston.

CHICAGO, Ill., July 20.—Mr. George E. Mann, of Galveston, Texas, commenting on the recent letter of Mr. J. A. L. Waddell regarding the tarpon fishing at Aransas Pass, sends some interesting information regarding the tarpon fishing in the vicinity of Galveston, Texas. Mr. Mann is president of the Galveston Tarpon Club, and is well qualified to speak of the habits of the local game fishes, as he does below:

"The name tarpon warms the cockles of Mr. Waddell's heart, and he wrote to me some time ago, as present president of the Galveston Tarpon Club, to know about tarpon at Galveston. I had to confess that the club was named the Tarpon Club on the *Lucus a non lucendo* principle, as we do not fish for tarpon, and find them a great nuisance in fishing for Spanish mackerel, trout, redfish, etc. Our fishing is so unique that it must interest all fishermen. The Federal Government in improving the harbor and giving the port of Galveston 28 feet of water where there was scant 13, built parallel jetties of rock, capped with granite blocks, many of them cubes of 5 feet smooth surface. These jetties extend into the Gulf, the South Jetty over six miles long and the North Jetty parallel to it, and about a mile and a quarter apart. In ordinary weather, the water is smooth on the lee side of the jetties, and a man can stand on the flat rock five miles out at sea and fish for Spanish mackerel, redfish, sea trout, June (or Jewfish), and occasionally in the lottery draw a pompano, blackfish or a kingfish, and have a thirty-minutes fight in between with a 20-pound jack, that has more game and fight to the square inch than anything that swims, tarpon not excepted. Sharks, stingrays, are thrown in for laniape.

"It is the only place in the world that such fish can be caught from a rock five miles at sea. Familiarity breeds contempt, and when we lose from two to six hooks of an afternoon when fishing for mackerel from the tarpon loafing around the rocks, it is not surprising that we generally put on brake and turn tip down, and say good-by to tackle when tarpon take the bait, and they seem to have a special fancy for a piece of shrimp, and we never know until it jumps that we have a tarpon, not a mackerel, hooked. Every one knows that to fish tarpon successfully a small boat that it can tow and a good boatman is part of the game. Occasionally we get a tarpon well hooked, and with an O'Shaughnessy mackerel hook and new linen line we can land a tarpon on the rocks, but we are only mackerel fishermen, and I want to see some of the silver king slayers try it from the rocks.

"I was on the South Jetty a short time ago, when the tarpon were so thick on the lee side that those who were with me would not fish on that side, as they did not want to be bothered with them. There were dozens of them in sight within an hour. I had a new small linen line of about 500 feet and an O'Shaughnessy hook, and I made a cast and hung a tarpon at once. The line was so small and the pole a one-joint 12-foot reel, and the reel not an expensive one, that it took about an hour to kill him. He leaped only three times, took it out in going down deep, and running, he turned on his back and showed the white flag (his belly) twice and then rested, reconsidered and commenced again; finally I had him so near dead that when a big wave lifted him and in receding landed him on top of a flat rock, he was gaffed without a flap of the tail. On examination the hook was found under a muscle of his jaw and tongue, and where he could not shake it out. I do not think I had over 25 pounds pressure on him at any time. I was afraid of rod, line or hook—all small.

"Two evenings later I went out and landed, after a fight of fifteen minutes, a kingfish 43 inches long by measurement. The kingfish is a quarter-horse, but while his strength holds out is the fastest fighter in salt water. He makes a straight shirt-tail for the other side of the ocean as if he had heard that his house was on fire, or is going for a doctor to extract the hook; about 300 feet of lightning speed and smoking reel, and he is ready to yield and change his course under gentle persuasion of the reel.

"The mackerel fishing has only been fairly good so far this season. A few days ago Dolph Rogers, of the Tarpon Club, caught forty mackerel from one rock inside of an hour. That is what I call fishing, and he will hold the record for some time to come. Any one who has fished Spanish mackerel will appreciate the feat; it was great work."

Fishing Country.

Mr. G. A. Probst, of Chicago, wants to know of a practical working paradise, good for a party of six, for a period of two weeks. He wants large game fish, no insect trouble, etc. On the whole, I would advise him to go in at Manitowish, Wis., or at Fifield, Wis. In either one of these localities he can find, by going back from the railroad twenty-five or thirty miles, good fishing for bass and wall-eyed pike, and as good a chance at muscallonge as he will get anywhere. At Fifield he will need to take a ride of twenty miles or so, either east or west of the railroad station. At Manitowish he can at once get on the river and lake system, which take him eastward into

a series of lakes which were formerly good for muscalunge and now produce abundance of wall-eyed pike and black bass. Still another delightful trip would be to go to Alexandria, Minn., and fish the chain of lakes there for black bass exclusively. These black bass are the genuine small-mouths, and have a more than local reputation for game qualities.

As to the season of the year to go, anywhere is better than the city at this season, but by all odds the most pleasant and successful time for camping and fishing trip is in fall, say from Sept. 15 to Oct. 15. The woods are then at their best, the nights are cool and the mosquitoes are gone. The mosquitoes do not bother much in the pine woods of Wisconsin and Michigan after the first two weeks in August, and indeed the last week in July sees them beginning to lessen.

A Plague of Bullheads.

The veracity of that piscatorial saga, the Kekoskee bull-head story, receives the most comprehensive proof in the reports which come to hand this week from Waterville, Minn. In short, Waterville is having a touch of Kekoskee all over again, and is suffering from a redundancy of that affable fish, the bullhead. The town has seen fit to appeal to Governor Van Sant for relief. There are two large lakes and several little ones near Waterville. The State Fish Commission has ruled that the bullhead is entitled to the protection of the law the same as his nobler cousins, and under this ruling the bullheads have increased to such an extent that they are practically taking the country. Last spring the local Board of Health scooped out and buried 25 tons of bullheads, and now they are obliged to do something further, as the dead fish have accumulated in such numbers that life in Waterville is not what it should be. The president of the local Board of Health says that the State must do something to improve the sanitary conditions of the town.

It was formerly the custom of the citizens of this village to ship bullheads all over the United States, and since the State Fish Commission has abridged this industry the erstwhile fishermen are disgusted with the Commission and everything else. They request that the Attorney-General pass a dictum that bullheads are neither "game nor food fish," in spite of the fact that they formerly sold them in such quantities for food. In this way they hope to be allowed again to seine and sell as food the fish which they want the Attorney-General to declare are not food. Anyhow, although the logic of Waterville seems to be mixed, these citizens seem to be in possession of abundant proof that protection does protect, and that bullheads are strictly Biblical in their multiplication.

Fox's Fly Dope.

The recipe is here reprinted with the admonition to all readers of FOREST AND STREAM to cut it out and paste it either in their fly-books or tackle boxes. It is as follows:

Oil pennyroyal, oil peppermint, oil bergamot, oil cedar, F. E. quassia aa zi; gum camphor ziv, vaseline yellow zii M. S. Dissolve camphor in vaseline by heat; when cold add remainder. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Canadian Angling Notes.

It may be of some assistance to those who intend fishing the waters of the Grande Décharge of Lake St. John in the latter part of July and the early days of August to quote what I have already said in the "Anglers' Guide to Eastern Canada," respecting the artificial lures that will be found most useful there at this particular season:

"The Jock-Scot, silver-doctor, green-drake, grizzly-king, Seth-Green, professor and coachman, which are used in such large sizes for this earliest fishing, must be gradually reduced in bulk, even in the early part of July, as the water grows clearer and lower, and the temperature both of the air and of the water becomes higher. In the latter part of July the ouananiche in the pools of the Grande Décharge has become an epicure. He wants the daintiest of flies, and wants them in small sizes, too. If a couple of flies are used, the tail one may be a silver-doctor or Jock-Scot tied on a No. 8 hook. The dropper may be an equally small professor, queen-of-the-water, Reuben-Wood or hare's-ear, or better still, perhaps, a B.-A.-Scott or General-Hooker."

There are some grand spots for camping out on the islands of the Grande Décharge, a few miles below the Island House, far from the ordinary haunts of men. One of the most picturesque of these is the Isle Maligue. The rapids around the island and the whirlpool at its head make its approach an exciting piece of canoeing, but the guides thoroughly know and understand these waters in all their wild and variable moods. The fishing is good throughout the summer, both at the head of the island and also along its southerly shore, the ouananiche generally abounding in the pools which there alternate with the rapids. There are also several other good pools before Isle Maligue is reached, while between it and the Vache Caille, and again in the Gervais Rapids, some miles below, the angler can usually count upon good sport.

July and August are good months in which to make the trip to Lake Tschothagama. The waters of the Peribonca are lower and less violent than in the spring of the year, and the poling up the rapids is consequently less difficult, while the lake is so little fished that it yields good creels to the troller and fly-fisherman alike. Ouananiche have been taken on the fly here up to 8 pounds in weight, and on the troll very heavy lake trout and monster pike may be secured.

Among the latest arrivals on the ouananiche fishing grounds at the Grande Décharge are Messrs. Kingsland Jones and Alfred N. Fuller, both of New York. After some weeks' stay at Lake St. John these gentlemen propose to spend some time at Lake Edward.

I hear that Mr. J. J. Hill and his guests, Grover Cleveland, D. Lamont and others, had very good sport this season on the St. John, and Mr. Ievers W. Adams, of Boston, and party, have done exceedingly well on the Moisie. E. T. D. CHAMBERS,

QUEBEC, July 20.

Two Weeks Among the Thousand Islands.—I.

Few spots on earth offer so great an attraction to the angler as that part of the St. Lawrence River known as the Thousand Islands. It has always been, and will ever remain, one of the waters where a good catch of fish can be depended on, or rather it will remain so as long as Lake Ontario exists to feed it. It naturally follows that the best fishing grounds are up toward the head of the islands near the lake, so we shall confine our articles to this section. Here we find the mighty muscallonge, the gamy bass and the greedy pickerel, or rather pike (*Lucius lucius*). There are two modes of fishing—trolling and live-bait fishing. When trolling for muscallonge and pickerel two set poles are used with heavy lines. These are supplied by the guide, and spoons as well, such as they are. Artificial baits are used when trolling for bass, but so small that a light rod is quite stiff enough for them.

Tackle.

Muscallonge.—Rod, a good, reliable 10-ounce bait-rod; reel and line, A 3" multiplying reel with 100 yards of 12-thread cuddehunk line; hooks, a large Archer spinner for bait; spoons, Skinner's Nos. 8 and 9, copper, silver and brass.

Pickerel.—An ordinary bait rod, with the same reel

Richelieu & Ontario steamboats. Clayton is the natural gateway to all points of the Thousand Islands, for from its docks steamboats leave regularly for all points and hotels among the islands.

We have made for the benefit of anglers charts, showing where each day can be profitably spent. On these charts grounds are marked showing where each variety of fish can be located, so that the angler can go at once to the right ground for the kind of fish he wishes to catch. As a matter of fact, a day can be well spent in any one of the many bays, and a single chart gives ground enough for a week's fishing, if the angler does not care for varied scenery. We will give twelve charts for the twelve days' fishing, each day taking the angler to new ground, with added charms to that which he has already seen.

Muscallonge grounds are marked thus: ♀ ♀ ♀ ♀

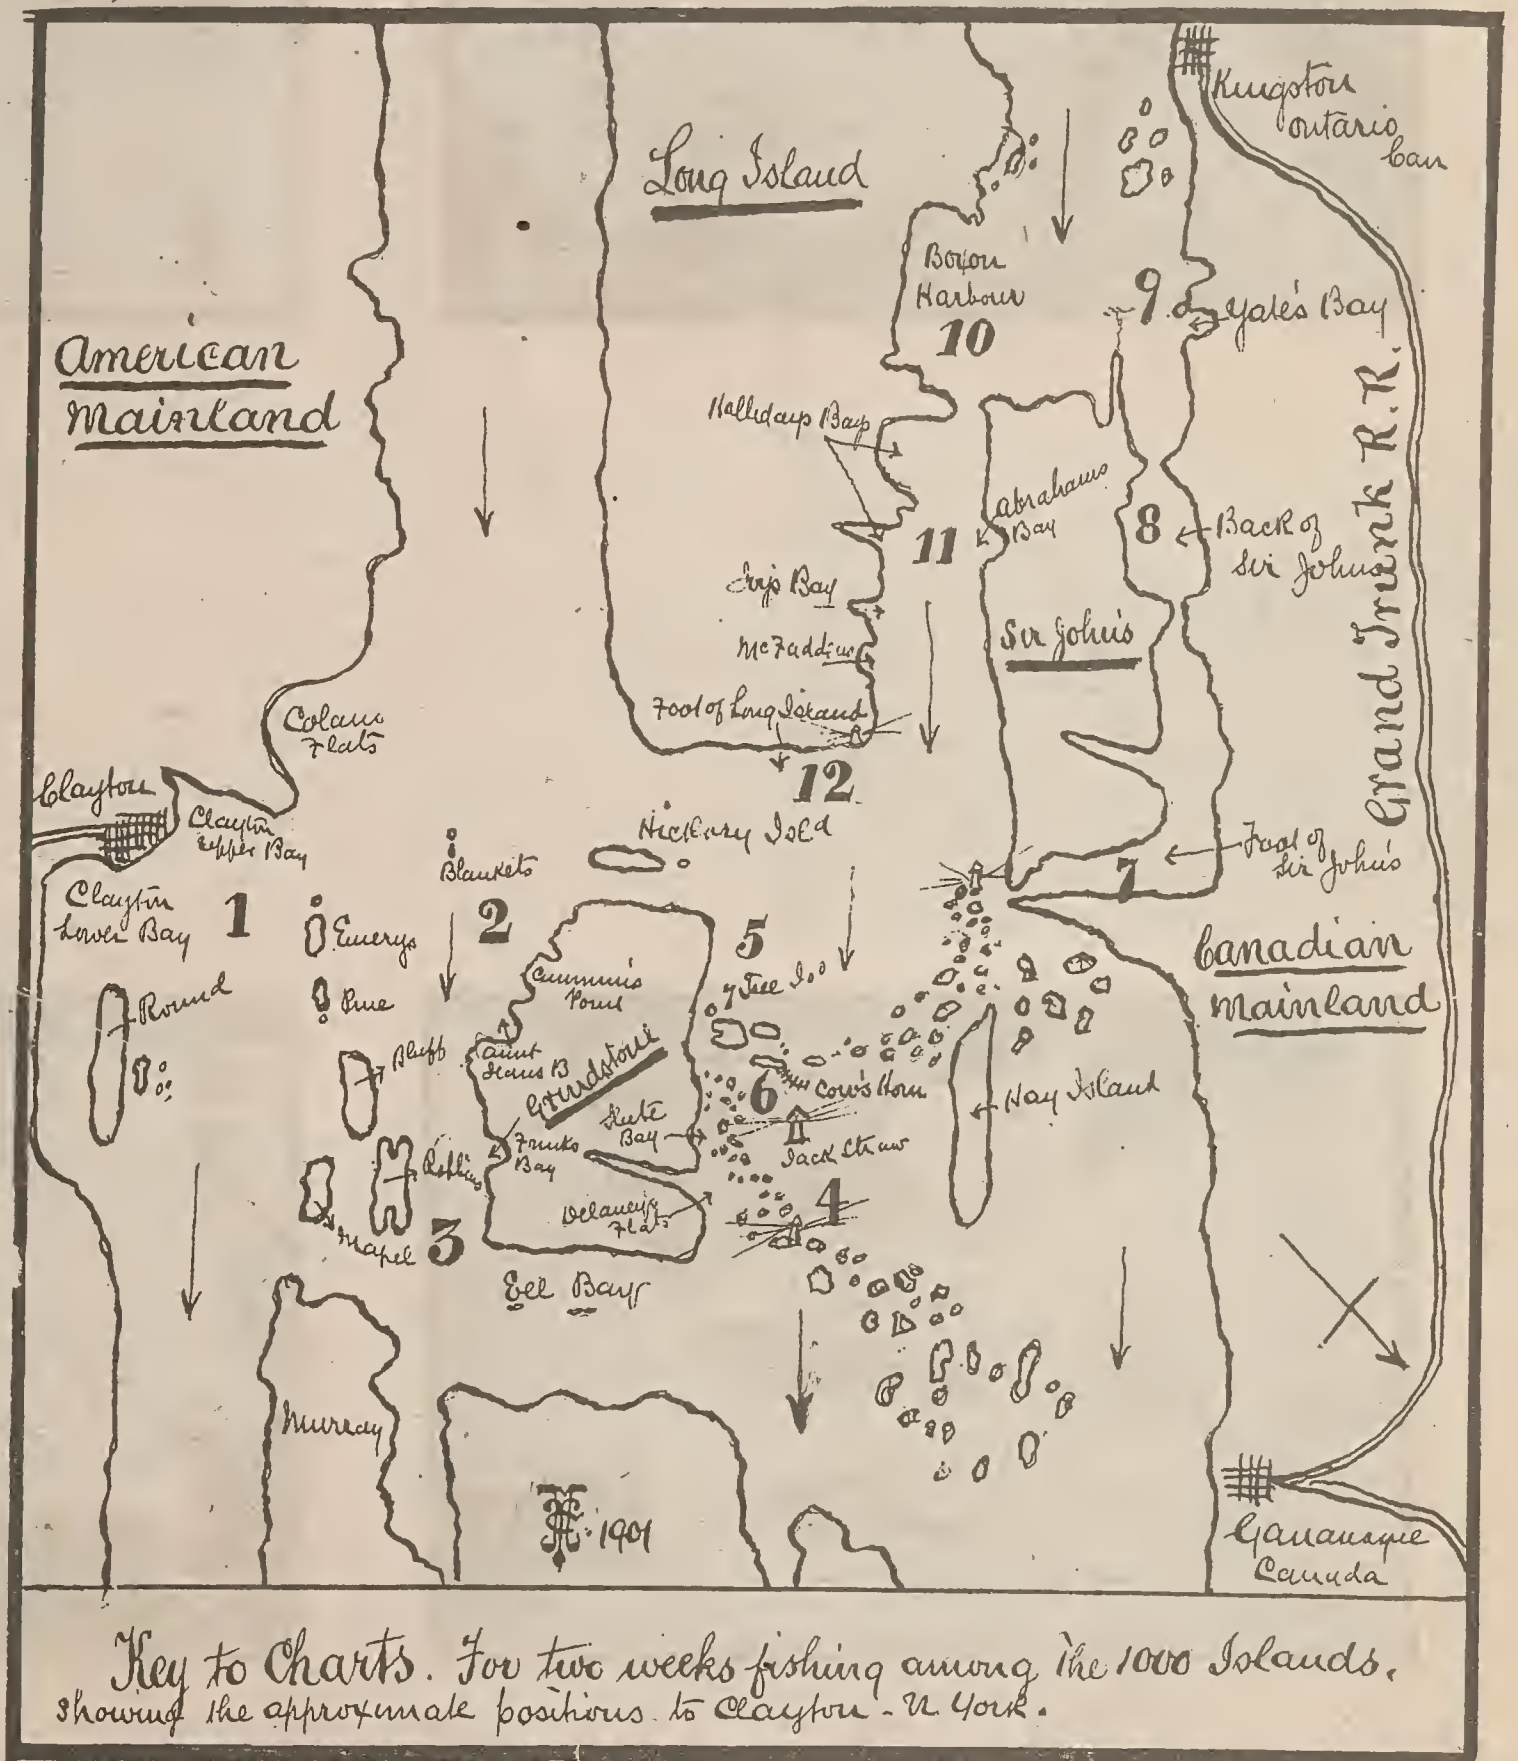

Pickerel: — — — — —

Bass: x x x x

As we cannot say whether our angling friends will troll or fish with live bait, we will simply go over the chart and state as we move along what fish we expect to get from each reef, flat or bay. It will be noticed that we avoid the channels at all times.

Chart I.—First Day—Clayton and Surroundings.

Arriving in Clayton in the early morning the angler has to go to his hotel, unpack, hire his guide if not already done by letter, and make sundry preparations, so that

Key to Charts. For two weeks fishing among the 1000 Islands, showing the approximate positions to Clayton - N. York.

and line as for muscallonge; leaders, double or treble gut, one yard long; hooks, Nos. 4°, 5° and 6° on heavy gimp snelling; sinkers, a few swivel sinkers. ½ ounce, ¾ ounce, 1 ounce, 2 ounces, 3 ounces; spoons for trolling, Skinner's Nos. 6 and 8, copper, silver and brass.

Bass.—A light bait-rod about 7½ feet long, 5 or 6 ounces in weight; a multiplying reel carrying 100 yards G. silk enameled line; leaders, 3-foot single gut (salmon); hooks, Nos. 1° and 2°, on either strong single gut or double gut snellings; sinkers, ⅓ and ¼ ounce swivel sinkers.

Trolling Baits.—Out and out the best trolling bait for the Thousand Islands is the Delaware-belle. We consider it better than the best of minnows. The dark-belle and Johnny-Wright's-fancy make good seconds. Half a dozen No. 2 Skinner silver casting spoons should also be taken, as they are great killers in front of a minnow.

The above selection of tackle, with a good reliable gaff and landing net, makes a pretty complete outfit for the Thousand Islands.

We will make the village of Clayton our headquarters, as it is the most convenient spot from which to reach the best grounds. The town is plentifully supplied with good hotels and boarding houses, while the Clayton guides are the best and most reliable on the river. Clayton is reached from the East, West and South by the New York Central & Hudson River Railroad. From Canada by the

an hour or two is spent before he can make a start, so that to get as much time fishing as possible, we will make it the home day and commence fishing as we leave the dock. Strange as it may seem, some of the best fishing in the river is within a couple of miles of Clayton, notwithstanding the amount of steamboat traffic constantly passing up and down.

On leaving the Clayton dock we head our boat up stream and pass through Clayton Upper Bay, which is A1 pickerel water. Around Bartlett Point we strike the bass along shore, then pass out into Colan's Flats, which is a first-class pickerel water, with an occasional muscallonge. Across the channel from Bartlett Point we strike Governor's Island. A fine reef a mile long runs out and up stream from the head of this island. On the channel side of this reef a muscallonge may be picked up, while on the inside will be found good bass grounds. Just across from the point of this reef is a clump of rocks called the Eagle's Wings. It is good bass fishing among and around them. Going back to Governor's Island, we shall find a very deep hole close to the shore on the Clayton side. This hole owes the writer two large fish, or one twice over, we can't say which. We dallied with two there for nearly half an hour, resulting in at last their getting away. What they were we cannot say, as they both kept well down all the time. This hole is a good one for large live bait.

We will now pass down to the foot of Emery's Island and strike Emery's Flat. This is a first-class piece of pickerel water. At the foot of the flat is a reef. There are always muscullonge on or around this reef. Chapman's Shoal is out a little toward the channel. We always get some pickerel there, and on two occasions muscullonge. Pine Island lies at the foot of Emery's Flat. On the channel side is pickerel ground, and on the inside bass. A few yards down from Pine Island we come to Bluff Island. The pickerel fishing along the head of this island is in very deep water, and yields large fish. Muscullonge have several times been taken at the mouth of the little bay. Leaving Bluff Island, we strike a little fellow called Papoose or Baby Island. It always gives up a few bass. Crossing the channel we come across a little clump of islands called Hog's Back and Pig's Feet. It is exceptionally good pickerel ground around and between them.

mins' Point, but close to shore. A little distance out from the point in 17 feet of water is a large weed bed, where a good catch of pickerel can be got. In the next bay there is good bass grounds all along close to shore and among the rocks and islands all the way down to Aunt Jean's Bay. In the mouth of Aunt Jean's Bay and well out is magnificent pickerel ground. Just about the center of this run is a clump of rocks. Muscullonge have been taken from them. Once when fishing for bass at this point, we got a nice bass of about 2 pounds within 10 feet of the boat, when out rushed a muscullonge, seized the bass, ran all the line off the reel and then snapped the leader.

Pickerel fishing continues very good from Aunt Jean's Bay all the way down to Frink's Bay, which will be shown in to-morrow's chart. The water is about 17 to 20 feet deep, bottom very weedy and the fish large and plentiful.

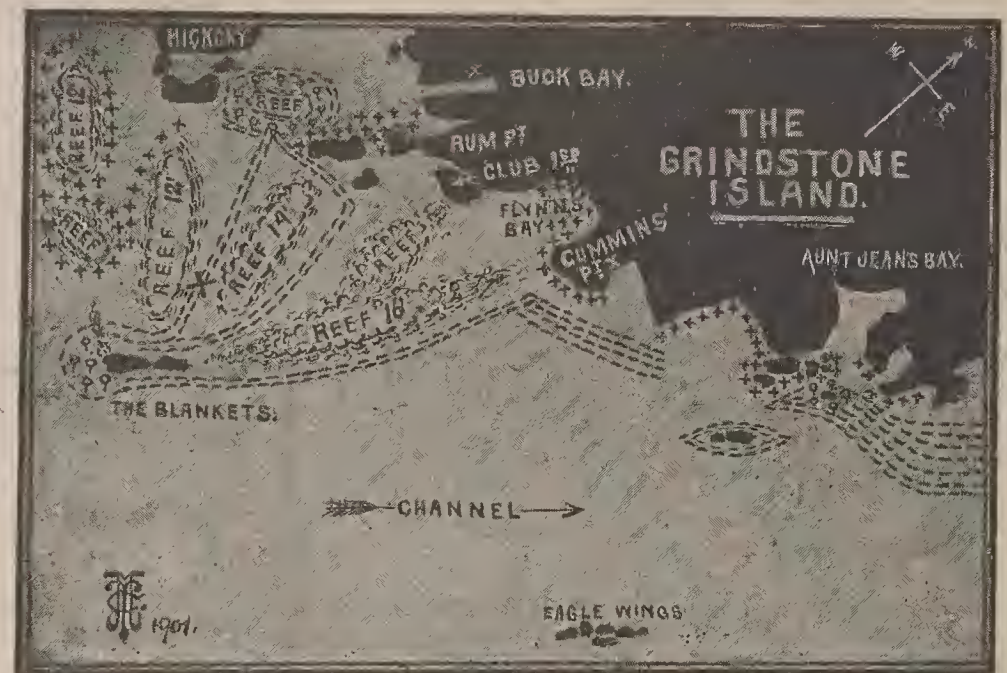

which are situated just around the corner of the Grindstone Island from Eel Bay, shown in yesterday's chart. The fishing in the bay is for pickerel, and plenty of them. Standing in the mouth of the bay is a small island; in a direct line between this island and Delaney's farmhouse are two reefs. There are generally some very large pickerel on them, or a muscullonge. If they are located right a boat can be taken between them with a couple of running spoons.

Leaving the flat proper, we will work our way up the channel to Slate Bay. The channel fishing results generally in producing larger fish than the flat. We have taken three muscullonge in this channel.

Slate Bay is an A1 piece of water for pickerel, averaging about 5 pounds apiece. All around the shores of the islands running through the center of the chart are fine bass grounds; they are literally alive with the little red-

FIRST DAY—CLAYTON.

SECOND DAY—SOUTHWEST CORNER OF GRINDSTONE.

A few yards further on from these islands we come across Little Round Island. The pickerel fishing on the flat below this island is always first-class. At the foot of the flat we turn in at the foot of Big Round Island. Just in the center is a reef in 12 feet of water. It is a good spot to expect to find a muscullonge. The slack water at the back of Big Round Island has always been an excellent pickerel ground, so also is Clayton Lower Bay, reaching from the head of Big Round Island to Washington Island. A good large reef runs out from the head of Big Round Island, and is always well stocked with bass. Along the mainland shore from about the center of Big Round Island all the way up to the back of Washington Island is as good a piece of bass ground as one can find in the State of New York. Arriving at Washington we are virtually home again, as we are within one-quarter mile of our dock. We need not take the lines in yet, as we are just as likely to pick up three or four more pickerel along the steamboat docks on our way to our own. To-

At 5 P. M. we hoist our sail again, pass the lower end of the Eagle's Wings and in half an hour are at home in Clayton, anticipating a good supper and some first-class fish yarns on the hotel veranda afterward.

Third Day.

Yesterday evening we left off fishing after giving Aunt Jean's Bay a good pounding. We will set sail this morning and make straight for the point where we left off, and then commence and fish for pickerel all the way down to Frink's Bay, taking in the points below Aunt Jean's Bay for bass. The pickerel fishing lies from 50 to 500 feet from shore over a continuous weed bed in from 17 to 25 feet of water. When we arrive at Frink's Bay we find good water for muscullonge at the mouth of the bay from the stone quarry at the upper end to the outer rock at the lower end. On the inside of this imaginary line is A1 pickerel water; among the rocks at the lower end good bass water. From Frink's Bay we run down the channel

eye variety: being Canadian, the catch is limited—which is right—for there are fish hogs as well as four-footed ones. Outside of the islands is Hay Island and MacDonald's Flats. This is as good a pickerel ground as there is among the Thousand Islands. The water is too shallow and too weedy for good trolling, so that the best results are always obtained by bait-fishing.

At the head of Hay Island is Huckleberry Island, from which the Cow's Horn Reef springs. As this is one of the most celebrated muscullonge grounds among the Thousand Islands, we shall in a day or two give an enlarged chart of the reef, with instructions how to fish it.

J. CHURCHWARD.

NEW YORK.

Newfound Lake.

NEWFOUND LAKE, Bristol, N. H., July 20.—The fishing for landlocked salmon and lake trout still continues at

THIRD DAY—EASTERN CORNER OF GRINDSTONE.

FOURTH DAY—NORTHERN CORNER OF GRINDSTONE.

morrow at 7 A. M. we will make a start for the southwest corner of the Grindstone.

Our Second Day's Fishing.

Yesterday our northern limit was the Eagle's Wings, shown at the foot of to-day's chart. The breeze being fresh and favorable, our guide twists his 7 yards of snow-white canvas and away we fly over the sapphire-blue waters of the St. Lawrence. This morning we leave the Eagle's Wings to our right and take in sail as soon as we arrive at the Blankets. We fish around the channel end of the big Blanket for muscullonge. Then try up the channel to Hen Island, round the central reef and back through the outer channel. Some years since at the point where we have placed a cross, thus X, in the chart, we struck and landed the biggest pickerel we ever saw—22 pounds. Having fished these channels for pickerel, we will take the outer reefs for bass, and shall find them exceedingly good ground. Leaving these bass reefs we cross the foot of Hickory Island and strike another smaller reef, in a line between Rum Point and the small island below Hickory. This is an exceptional reef; one can always depend on some good fish, either large pickerel or a muscullonge. From this reef in as far as the shores of the Grindstone is first-class bass grounds,

Taking in our lines at Rum Point, we row back over the shallows until we reach Flynn's Bay; here we find another good bass ground, which continues good all around Cum-

close to the Grindstone, taking here and there both pickerel and bass. At the foot of the island we turn into Eel Bay, at one time the standby of Thousand Island fishermen, but of late years one of the most uncertain waters among the islands. We have taken fifty fine pickerel there in a couple of hours; again, we have only succeeded in getting three or four in the same length of time. There are two clumps of rocks shown in our chart. In days gone by this was where almost every muscullonge that came into Clayton was caught. We have not heard of one being caught there for a very long time; but it is still one of their resorts, as we have repeatedly seen them come to the surface, but could never tempt one with our lures.

We will now turn back and fish up the Robbins' Channel close to Robbins' Island, turn in at the head and fish the bay for muscullonge and pickerel. From this bay we will try our luck along the northern shore of Bluff Island for bass, and then across the gut to the other point of Robbins' Island. After leaving this first-class bass ground we will take in one more pickerel ground before leaving off for the day, Maple Island Flat. It is an exceedingly good bit of water for pickerel, with a good chance of muscullonge; at either of the points many have been taken here. A two-mile run up river and we are home in Clayton again for the night.

Fourth Day.

We shall start fishing this morning at Delaney's Flats,

this lake, quite a number of large fish being taken by summer guests who have never before fished where there were such large trout, which makes business good for the hatters, as the headgear is too small when the summer boarder carries from the boat landing to the hotel piazza a large trout of about 10 or 12 pounds. No tabloid fisherman about him when the ladies ask, "Did you catch that?" A good catch was made July 12 in a forenoon's fishing by G. E. Guthrie, of Somerville, while trolling from the steamer Pioneer—two trout of 12½ and 9¾ pounds, respectively. G. W. Claffin, of Cambridge, a day or two before that brought in three trout, 7½, 4½ and 3½ pounds each.

For thirteen seasons, with but one exception, we have had during the spring fishing as one of our most expert fishermen. General Paul Lang, of Oxford, N. H., consul to Sherbrooke, Canada. This summer the General has taken unto himself a wife, and thought it proper to show Mrs. Lang where good fishing may be had; but the bride thought that "proof of the pudding was in the eating," so prevailed upon the General that they try deep water trolling. The result was that Mrs. Lang beat the General on his own grounds by capturing a 13½ pound trout to one taken by him of 5½ pounds.

At E. T. Rike's, one of the well-known stopping places for fishermen, is kept a record of total weight of game fish brought in by fishermen of the house: For the year 1899, 925¼ pounds; 1900, 1,182 pounds; this year to date, 1,084¼ pounds. And yet there are as good

fish in the lake as ever yet, etc., because the Fish Commissioners see to it that the lake is replenished every year with fry.

A 15½ pound trout, caught by Frank Kennedy the other day, while he was trolling for pickerel near Black Brook, so surprised him that he did not care to fish any more that day. "Got fish enough," as he tersely expressed it.

Fish Commissioner Nathaniel Wentworth was at the lake July 13 swapping fish stories with General Paul Lang.

The Kingfishers Are Anticipating.

Editor Forest and Stream:

"THE Kingfisher gang" will hit the G. R. & I. Ry.—the old "fishin' line"—on July 30 for Traverse City, and from there to Glen Lake, twenty-one miles northwest, where we will make our twenty-first annual summer camp in the North Woods. Glen Lake is not yet quite fished to death, and as always, before a trip to the "bresh" we are "chuck full o' plans and expectancy" for a good time and good sport with rod and line.

Expectancy is one of the chief comforts of the old angler in planning for a camp, and the younger ones of our party are "jst a-bilin' over with it." Without the anticipation and preparation before the start to the woods a trip would hardly be worth a "string o' white suckers." The tents are all packed in the old canvas bags that have seen many years' service; the Cree camp stove ready in its box; the frog box packed full of minnow buckets; reels cleaned and oiled, rods and lines and other necessities all in order, axes and hatchets ground and in the tool box, and so on to the end of the chapter, and we are only waiting for the day when we will take the trail that leads to the "smell o' the pines" and the melody of the rippling waters. The latch string is always out at the Kingfishers' camp, for ye honest angler who may happen along.

Never Talked Again.

A young man of smart appearance entered a restaurant, followed by a French poodle that seemed intelligent above all his race. The master selected a table and sat down at one end, while the poodle sat up on a chair opposite to him and waited. After conning the bill of fare the master ordered steak and onions. Then the dog remarked, "And the same for me, please."

Nothing can astonish a waiter, but a gentleman sitting near by heard the dog's remark and played double astonishment for the waiter and himself. Seeing this, the owner of the talking dog asked of the animal, "What wine, Mossoo?"

"Mumm, '93," replied the poodle, laconically, looking a trifle bored. This was too much for the astonished gentleman. He rose and, apologizing, said to the owner of the dog:

"It is marvelous to what a pitch of perfection one can bring a good poodle. I've seen some dogs in my time, but I've never heard one talk as plainly as yours does. Will you take \$250 for him?"

"Well," replied the young man, "I really don't want to sell him."

"Take \$500?" pursued the other.

"Well, well, if you really want him I will. I can easily train another to talk in the same way."

The bargain was made, and the dog changed hands. But as the new master was leading his purchase out of the restaurant by a string, the poodle cast a reproachful look on the ventriloquist and said, with a world of pathos in his words, "You've sold me! You've sold me! I'll never talk again!"

And he didn't!—Exchange.

Points and Flushes.

"The Show Dog," by Mr. H. W. Huntington, of Providence, R. I., treats elaborately of all the recognized breeds of dogs. Their origin, uses, standards, merits and faults are set forth in a pleasing manner. Half-tone cuts of specimens of the different breeds illustrate the work,

'Mid Reef and Rapid.—XVI.

BY F. R. WEBB.

WE got an early breakfast at the hotel on Friday morning, and by 8 o'clock were again afloat, with Keyser's, at the foot of Kemple Falls—twenty miles away—as our objective, where we designed spending a day in fishing over the exceptionally fine fishing ground afforded by the falls.

A large party of ladies and gentlemen from the springs accompanied us to the river, to see our canoes, and to see us start; and our first pitch, down over the old mill-dam, was interesting and exciting to them.

Our little stay here was a delightfully pleasant episode of the cruise, and our hospitable treatment will long be remembered and appreciated. In addition to our entertainment our failing supplies were not only freely and abundantly renewed, but we were also provided with many little luxuries and delicacies quite foreign to our regular bill of fare.

We had a rattling, lively five-mile run to Shenandoah; for, while this section of the river contains several broad, still reaches, very beautiful in their lake-like repose, with bold, bluff-like banks and overhanging cliffs, this five miles is mostly rapids; bold, swift, rocky and very rough.

The mile and more of rapids just above, as well as those opposite, Shenandoah, are very rough; and, at the present stage, somewhat hazardous; and while we all made a brilliant run—not one of us even touching a rock—I drew a long breath of relief when we were safely through and had beached the canoes on the shingly bar opposite the long, straggling, wooden village.

Shenandoah is not a representative old Virginia town. It is entirely too new, and still smacks of the "boom," and looks more like the railroad town which it really is.

The classic old town of Luray, Front Royal, Strasburg and Charlestown are but a short distance inland, and the contemplative canoeist in search of the picturesque will be well repaid for the time spent in lying by a day opposite each place long enough to make the trip over and take a stroll through their quaint, old-fashioned streets; and if he is the fortunate possessor of a kodak—and no well regulated canoeist should cruise without one—he will find ample use for it in the many interesting subjects which will present themselves. While not so near the river, Winchester, the historic old town which changed hands more than eighty times as the fierce tide of war surged up and down through its streets, in which the dead were piled up like cordwood, and in whose cemeteries the blue and the gray lie in thousands, is well worth a visit; and Staunton, with its female colleges and State institutions, while not on the river, is the place from which the canoeist will make his start, and will be found very interesting; and the canoeist, on finishing his cruise, can well spend a day or two at picturesque, historic old Harper's Ferry, with its wealth of wondrous scenery, its quaint, alley-like streets cut in the solid flanks of the mountain, at the foot of which it nestles, and up over whose gigantic shoulders of solid rock it climbs and straggles, and at whose feet the rippling "Daughter of the Stars" is lost in the glad embrace of the Potomac.

We had a lively time at Shenandoah, as, while here, we fell into the hands of old friends, who speedily helped us to make new ones, and the hour passed here flew quickly by. While here we received and mailed letters, and at 11 o'clock we repaired to the river front again, accompanied by our friends, who wished to see the canoes, and to see us start. We would gladly have accepted their invitation, so urgently given, to stop over for dinner at Brown's, but it would have detained us at least three hours more, and we had fifteen miles of rough, difficult water to navigate in order to reach Keyser's by evening, so, with cordial adieus on both sides, we stepped aboard our boats, pushed off, and turned our bows down the swift flowing river, our friends standing on the bank and watching us as long as we could be seen, until we turned a heavily wooded point, which shut us from view.

We swept swiftly down a long, rock-studded reach to the left a few miles below, which carried us close in to the Massanutten Mountains, where, as the river swept in a great semi-circle to the right, squarely around until it doubled on its course, it impinged against the foot of the mountain, which rose directly out of the water in a steeply sloping line a couple of thousand feet or so to the summit of the range. This slope—if the nearly perpendicular mountain wall could be called a slope—was densely clothed with a perfect mat of evergreens and hardy, scrubby oaks and other undergrowth, whose fibrous, claw-like roots gripped tenaciously among the points and crevices of the solid rock, which, loosely cov-

ered in places with a thin, poor soil, composes the vast bulk of the mountain. It was a bold, imposing bit of scenery, and, after we had turned our backs on it and were shooting swiftly down the long, two or three mile reach below, and directly away from it, the mountain loomed up more and more impressively, and its long, wall-like crest seemed to rise higher and higher up into the sky, as we got further out from under its overshadowing base, while light cloud-wreaths lingered caressingly around its beetling brow.

We found the glare of the afternoon sun on the water in this reach to be most intolerable, as it was directly in our faces, and we quickly dived into one of those indispensable pockets under the cockpit coaming of each canoe and produced our colored glasses and put them on, after which we suffered no further inconvenience from the sun.

A pair of colored glasses is an indispensable part of a canoeists outfit, for there is hardly a morning or afternoon when the sun shines that he will not cruise on reaches of the river where they will be needed. They are specially useful on the Shenandoah, with its innumerable series of east and west bends, and letter S loops, in its efforts to break through the mountain walls which hem it in, and buffet it back and forth, from side to side of the narrow valley. I recall one occasion when George and I were making a little cruise on Middle River, early in July, when the days were long; when we had to go into camp at 4 in the afternoon, simply because we had a three or four mile reach almost straight away ahead of us, full of reefs and leading squarely against the declining sun; and, in addition to the blinding glare, which speedily became unendurable, we were utterly unable to distinguish the channels and gaps through the reefs, and were, therefore, unable to proceed.

"Look out, there, Commodore!" Lacy sang out. "I don't think we can get down that right hand channel; there ain't water enough. You'd better head to the left of that gravelly island."

"Oh, yes we can," I replied, as I pushed ahead. "You see, in a place like this that broad reach to the left over there will be correspondingly shallow, while this narrow shoot to the right will have more water in it."

"Yes, that's all right; but I tell you you can't get through there; there isn't enough water," he insisted.

The river below Shenandoah is bold, swift and full of rocks.

"Now, look here, Lacy," I replied, asserting the Commodore's authority; "you can't tell me anything about this river; I've cruised it too often. In such places as this, you'll always find the most water in the narrow shoots; it spreads out broad and shallow in the wide shoots."

"All right, go ahead," he replied.

"I intend to," I answered, as my canoe slipped over the head of the rift and began the descent of the swift, narrow channel to the right of a flat, gravelly rapid, very broad on the left side. "Now you see I was—" just then my canoe brought up all standing, hard and fast on the gravel bar.

"Yes, we see," said George, dryly, as the Shenandoah ranged up alongside, cheek by jowl with the Frankie, and promptly stuck fast also.

"Yes; you'll always find the deep water in the narrow channels," the Colonel contributed, as the Mary Lou buried her nose in the gravel.

We all sat still and looked at each other for a few moments without a word, while we took in the situation.

"It's a good thing we didn't take that broad, shallow channel over there to the left, as I suggested," said Lacy, as he gravely stepped out into the two or three inches of water rippling down over the bar and around the hopelessly stranded canoes; and picking up the stern of his canoe shoved it, bow first, down over the twenty or thirty yards of gravel reef to deeper water below, while the rest of us quietly followed his example. "You see," he continued, "you can see by that wagon crossing the ford there opposite us that it is quite shallow—the water doesn't come quite to the tops of the front wheels!"

"Well," I put in, "I insist that the principle is correct, even if—"

"Yes, but you busted in the application of it," interjected the Colonel.

"That may be," I admitted. "We'll say no more about it, and when we get back to town you may order what you please at my expense."

This arrangement appeared to be satisfactory, and the boys considerably let me off.

At about one or half-past we reached the Grove Hill spring, where we laid by for an hour for lunch and rest. The Colonel surprised the party by producing a bottle of beer apiece from the capacious depths of his big canoe, which he had laid in at Shenandoah, and which were placed in the spring for half an hour before drinking, along with three or four nice canteloupes which George had picked up as we came down the river.

The river below Shenandoah is bold, swift and full of rocks, reefs and rough, heavy rapids—indeed, the worst part of the entire upper river lies in the twenty-five miles between Shenandoah and Massanutten, which includes the five miles of very rough, difficult and troublesome river known as Kemple's Falls and the Columbian Falls, which lie close together, and, of course, at a very low stage

this kind of water is much more difficult to navigate than at a better stage. Consequently, our afternoon's cruise was arduous and fatiguing, and when we finally reached our camp at the foot of Kemple's Falls, at dusk, we were all pretty well tired out.

We had to portage the Roudabush dam, of course, and we found a couple of most excellent new fish dams that were not built last year, and which were fully as high and massive as many of the mill dams, and which were constructed solidly across the river from bank to bank, although the fish law requires that a space of not less than 30ft. shall be left clear at one end. Consequently a portage was necessary at these dams also.

The river seemed to grow wilder as we proceeded, and, as it wound away from the Blue Ridge side of the valley and approached the Massanutton Mountains in a series of short curves, each reach seemed wilder and rougher than the last. Long lines of massive cliffs appeared here and there, which reared their stern, rocky fronts from 100 to 200ft. above the water, their harshness and severity toned down by lichens, and delicate green vines, which trailed in graceful festoons across their rugged faces.

The railroad, which had been accompanying us for miles, scrambling along the riverside in a succession of high fills and ugly red clay cuts, high up in the green flanks of the mountain spurs, and leaping across the deep, chasm-like ravines in a succession of tall, spiderly trestle bridges, finally left us, turning off to the right, as the river swept away to the left into a cliff-lined, rocky gorge, down which the water tumbled and piled in a furious rapid.

"I'll tell you what!" said the Colonel, as we successfully reached the foot of the rapid, and wiped the spray from our faces with our handkerchiefs, the while we skirted along the base of a massive, imposing precipice along the right, over the still, black water, in which the cliffs were reflected so faithfully that we seemed suspended like bubbles in mid air, as we silently glided along. "I tell you what! I thought I was a goner that time! You know that broad, flat ledge at the head of the rapid? Well, I was carried squarely on to that, and to save my life I could not help myself, and just—"

"I kept off from it easily enough by back paddling, and the current carried me gently enough right around it," said George, reflectively, as he pulled the string on his kodak, preparatory to gathering in a particularly imposing promontory, jutting out from the cliff into the river.

"Yes; that's all right," replied the Colonel. "That back paddling foolishness you fellows are so fond of will do very well for some places, but you don't want such monkeying around in a place like that. Well, just as I thought I was about to be swept onto it and was making ready to jump before my canoe capsized over it, the water seemed to bank up against it a little and held me off, and I just grazed along it and slipped around the lower end of it. I tell you it was a close call!"

"It not infrequently happens that the water does that at some ledge or rock," I answered. "It seems to pile up against it and rebound a little, forming a cushion, so to speak, which holds the canoe off. I have on several occasions, during my various cruises, been saved from a smash or capsizing in this manner."

"I don't believe Kemple's Falls is any rougher than that, is it?" continued the Colonel.

"You'll soon find out," said George.

"How much further is it?"

"Just yonder at that bend," said I, as the river swept around a low, heavily wooded point to the left, and brought up squarely against a towering wall of cliffs, turned to the right and disappeared down hill.

[TO BE CONTINUED.]

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

JULY.

24. Seawanhaka, cup race, Lake St. Louis.
24. East Gloucester, evening race, Gloucester, Mass.
- 25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
- 25-26. Erie, regatta, Erie, Pa.
27. Beverly, open sweepstake, Monument Beach.
27. Bay Waveland, club, Bay St. Louis, Miss.
27. Shelter Island, ladies' regatta.
27. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
27. Shinnecock Bay, special, Shinnecock Bay.
27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
27. Northport, annual, Northport, Long Island Sound.
27. Winthrop, special handicap, Winthrop, Mass.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
29. New York, Astor cup races, Newport.
- 29-30. Burgess, open, Marblehead, Massachusetts Bay.
- 30-Aug. 3. Pan-American regatta, Buffalo, N. Y.
- 30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

- 1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Southern Gulf Coast, Y. R. A.
3. Beverly, Corinthian, Monument Beach.
3. Winthrop, special handicap, Winthrop, Mass.
3. Indian Harbor, club, Greenwich, Conn.
3. Moriches, association regatta.
3. Atlantic, Sea Gate, New York Bay.
3. Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.
3. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
3. Quincy, handicap, Quincy, Mass.
3. Kennebec, open, Kennebec, Me.
3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3. Manhasset Bay, special, Port Washington, Long Island Sound.
3. Hull-Massachusetts, club, Hull, Mass.
3. Savin Hill, club, Boston Harbor.
- 3-5-7. New York, trial race to select cup defender, Newport.
- 5, 6. Manchester, West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
- 7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
- 9, 10. Annisquam, Ipswich Bay, Mass.

The Canada Cup Challengers.

TORONTO, July 13.—The judges appointed by the Royal Canadian Y. C. for the trial races of the Canada cup challengers have selected Invader as the craft to carry the Royal Canadian burgee in the contest at Chicago next month.

The selection of Invader does not, of course, come as a distinct surprise to any one, although it can scarcely be said that the selection is one which meets with unanimous approval. The trial races were too limited in number to bring out all the merits and all the defects of the three contestants. The first two were sailed in light zephyrs, and Invader was certainly the better boat. The next race was a three-mile beat to windward and a run back, in a whole-sail breeze with a fair amount of sea rolling. Beaver showed herself clearly the superior of Invader, although not by a large margin. An attempt was made to sail a fourth race, as the wind had freshened. Beaver was piling up a lead when she broke down, and the test was discontinued.

This ended the trial races for the first week in July. Canadian, the Hamilton craft, not being considered a factor in the races, sailed home. The judges made public the statement that they considered further trials necessary, but did not fix the date. The second week in July commenced to slip away. No race was held on Monday or Tuesday, as had been suggested. On Wednesday the R. C. Y. Co's special committee held a meeting, after which it was announced that Invader had been chosen as the challenger.

The announcement was not, apparently, expected by the owners of either boat, for the two yachts had been hauled out for scraping and black leading, in preparation for further racing. Beaver, in fact, was on the marine railway at the time of the decision. Her buckled spreaders of bicycle tubing had been replaced by stout ones of oak of the same sort as Invader's. It was the buckling of the port spreader that had brought the trial races to an abrupt termination.

There was \$600 in prize money to be divided up among the three contestants in the trial races. Invader received \$300 of this amount, Beaver \$200 and Canadian came in for the balance, \$100.

Speaking candidly, the chances of Invader bringing back the Canada cup are not of the first order. The boat has many good qualities. Her looks are in her favor—a low freeboard, graceful sheer, handsome overhangs and generous and shapely sail area combining to give her a racy appearance. Her highly polished black topsides with the gilt sheer ribbon and scrollwork and the smooth mahogany covering board and deck fittings add to her beauty. Invader is not, however, a toy yacht, and she has more than good looks in her favor. She is fast in light winds and in running and reaching. In short, she is a keel boat excelling in those points in which centerboard boats usually are superior. If the Chicago Y. C. choose a centerboarder to defend the cup, it will probably be a very even match. There is great room for doubt, however, as to Invader's chances against a keel craft, should one be selected as defender, if the races were sailed in anything like heavy weather.

The above is a fair statement of the chances of the challenger. It is quite possible that the Royal Canadian Y. C. has made the best selection under the circumstances, but the selection is still open to question. Beaver is a two-year-old boat with less sail area than Invader, but there is no doubt of her superiority to the latter in windward work or in a seaway. A very small reduction in her ballast would permit of her sail area being increased until it would equal Invader's. The addition of a tiny top-sail improved Beaver in light winds in the two preceding seasons. If the additional 150ft. of canvas needed to make her sail area equal Invader's were incorporated in a large jib and mainsail sail plan, the boat would have the benefit of it under all conditions, instead of only when off the wind, as was the case with the topsail. There are many yachtsmen who think that Beaver, under these circumstances, would be unquestionably superior to Invader.

Immediately after being selected as challenger, Invader was once more taken out on the marine railway. Com. Gooderham, her owner, and Capt. James Andrews, of Oakville, her builder, held a consultation, and under their supervision an alteration was made in the boat's ballast. An irregular quadrilateral of wood, of which the forward edge of the fin and the upper edge of the original ballast formed the forward and under sides respectively, was removed, and replaced by lead. The change in the ballast was not very great, the addition in weight not exceeding 250lbs. The extra ballast is placed, however, just where it is most needed. Invader has, as before stated, not been floating on her calculated waterline. She has been down to it aft, but her bow has been 3 or 4in. out all along, and the boat has accordingly carried a slight quartering wave, as she has been trimmed by the stern. The additional ballast brings her down to her true form, and, of course, makes her slightly stiffer.

While the trial races for the selection of the challenger were very limited in number, it is not the intention of the Royal Canadian Y. C. to send the boat to Chicago without first giving her the benefit of all the trying out possible. Beaver has shown herself quite capable of giving Invader all she needs in the way of a trial boat. She was given a thorough overhauling when on the dock this week, and while she may not be as fast as she might be with the alterations suggested, she is now in excellent sailing trim.

Invader's measurements have already been published. The alterations in the ballast will change them slightly, but as the boat had a good margin there is little probability of the increase sending her over measurement. Com. Gooderham stated that it would not be necessary to make any alterations in her sail plan.

The date of Invader's departure for Chicago is yet uncertain. There is not enough time left to sail her up and be sure of arriving in plenty of time. Towing has been suggested, but it is not a satisfactory method of going up the lakes, being very hard on the boat. It is altogether probably that Invader will be taken out of the water and shipped to Chicago by rail. Illinois reached that city in this manner and did not appear to be any worse for her shaking up in a railway accident. Com. Gooderham is at present making arrangements for a 60ft. car for the conveyance of the yacht westward. She will be stripped

of her spars and rigging, but her fin will not be removed if it is at all possible to ship her otherwise. It would not be advisable, the Canadians think, to take the chance of being able to replace the fin and get the yacht into proper condition in the few days at their disposal after her arrival in Chicago. She will not be shipped until the last week in July. Such at least is the present intention. As the first race in the Canada cup series is scheduled for Aug. 10, this does not leave very much time for getting the yacht into shape, especially as she will be far from her builder.

The skipper and crew of the challenger have not yet been selected definitely. Com. Gooderham has not yet made up his mind whether he will sail her in the cup races or not. He has devoted all his time to the boat since her launch, and to a business man this means a considerable sacrifice. His magnificent schooner Clorita has lain at her moorings practically all season. He has only been out in her once this year. Should he decide to sail Invader at Chicago it would mean that he would have to spend all his time in her from now to the end of the cup match. There is a possibility of Mr. Æmilius Jarvis being the skipper of the challenger.

Beaver and Invader were both out for a spin on the afternoon of Saturday, July 13. The wind was light, from the eastward, about seven miles an hour. The yachts were not together long enough to indicate the effect of Invader's increased ballast. It did not appear to have deadened her at all, for she traveled at high speed in the light airs, returning to her moorings ahead of the Payne sloop.

July 20.—With their own brief trial races safely over and their challenger selected and tuned up to the best sailing pitch, the Canadian yachtsmen are watching with interest the outcome of the trial races at Chicago for the selection of a boat to defend the trophy. They would like to see a centerboarder selected, for it was a centerboarder that carried away the cup, and they would like to win it back from a centerboarder. The only means the Canadians have of gauging the abilities of the would-be cup defenders is by comparing their performances with that of Minota. The little ex-Canadian has not been beaten badly enough at any time to make Toronto yachtsmen feel that the Chicago sailors will have the cup a month from now. Invader is certainly a faster boat, under any conditions, than Minota. Moreover, a sailorman just returned from Lake Michigan is responsible for the statement that Minota has not been sailed, or has not been sailing, as she was when on Lake Ontario—two different causes which would produce the very same result.

The alteration in Invader's ballast, made last week, has not had a very marked effect on her. She still holds her head well up, although floating much closer to her calculated waterline. There is some talk of removing the added ballast and also taking off a little aft, and giving her a larger mainsail of United States make. The boat is not stiff enough any way to hope to win by "ragging on." She will have to reef as soon as her opponent anyway, and it is felt that she will gain more by having a big spread of canvas for light airs and running than by having less canvas and more ballast to enable her to hang on to whole sails while her competitor has to reef. The additional two hundredweight of ballast which Invader shipped recently has not made a very appreciable difference to the boat, but it has some advantages. She does not heel so easily, and she goes to windward better.

Torontonians are eagerly looking forward to a brush between Invader and Genesee, the craft that carried away the Canada cup two years ago. Mr. Charles E. Van Voorhis, of Rochester, N. Y., Commodore of the Rochester Y. C., was a visitor at the Royal Canadian Y. C. the other day. He was out for a sail in the Canada cup challenger and was highly pleased with her. He promised to send Genesee, then lying in Cobourg, up for a spin with Invader.

Even since Genesee carried off the Canada cup, Canadians have been longing to see her beaten. There seemed a probability of it at Charlotte, N. Y., last September, but Minota broke down when winning. Genesee will again meet Canadian 35-footers, after her brush with Invader at the Buffalo Y. C.'s contests at the end of the month. A large contingent of Canadian yachts will be there, and the 35ft. entries will include Beaver and Canadian, the two rejected candidates in the Canada cup trial races. Beaver's owner has long been anxious to meet Genesee, and it appears that he is going to have a chance. Canadian, by the way, has shown a marked improvement as the result of alterations in her fin and sail plan. Her performance in the Canada cup trial races was not very encouraging, but it sufficed to show where changes should be made. The changes have been made—some of them, at any rate—and the craft with the concave bottom is showing up well, having defeated by a substantial margin the boat at the top of her class in the Hamilton fleet of 35-footers.

It is scarcely possible for Invader to take part in the contest at Buffalo, for she would not have very much time left in which to reach Chicago. Whether she gets the new mainsail or not she will leave Toronto before the end of the present month. She will be lifted from the water bodily by means of a derrick, after her spars and rigging have been removed. The derrick will place her on a 60ft. flat car, specially provided for the occasion, and she will be shipped through to Chicago. William Fisher, the sailor who has been in charge of the yacht from the hour of her launch, will superintend the shipment and will look after her after her arrival in Chicago. He will also see to the work of refitting her, and will be the one professional in the crew of six who will sail her in the final races.

The Royal Canadian Y. C. has nominated Mr. E. H. Ambrose, of Hamilton, Ont., as their representative among the trio of judges who will preside over the contest at Chicago next month. The Chicago Y. C. will be represented by Mr. E. P. Warner, of Chicago. Both gentlemen are well known to followers of international yachting. Mr. Ambrose was asked by the Canadians to be one of the judges of their trial races, but was unable to spare the time just then. The third judge is to be the mutual selection of Messrs. Ambrose and Warner. He will probably be from the United States side of the line.

There is still some uncertainty as to the skipper of Invader in the contest at Chicago, but there is a strong

probability of Mr. Æmilus Jarvis being at her tiller. So, at least, it is reported, although Mr. Jarvis has been fully occupied with his splendid 50-footer Merrythought, which cruises under a yawl rig and races under a cutter rig on twenty-four hours' notice. It is almost certain that both Mr. Jarvis and Com. Gooderham will be in the racing crew, but it has not yet been decided which shall be in command. G. Herrick Duggan, of Montréal, of both Seawanhaka and Canada cup fame, has been mentioned as a possible skipper for the challenging yacht, but in contradiction of the rumor that he was going to sail her it has been stated that he has not even been approached on the subject. Mr. Duggan designed the Canada cup defender Toronto in 1899 and sailed in her. There is no doubt that he would make a good skipper.

Invader has been sailing nearly every day since her launch, except when on the dry dock. The result is that she is a known quantity to those who will have to sail her. Some of her recent performances have been decidedly encouraging. After receiving her extra ballast she was out in a stiff breeze with Beaver. The latter boat has never yet met her equal in heavy weather, but Invader hung on to her and made a much better showing than she did in the last trial races, when there was considerable wind. On July 19 Invader had a tilt with Canada, which shows her abilities. The famous winner of the international trophy, to which she gave a name, was standing down Toronto Bay with a light southerly breeze. Invader overhauled her and commenced to pass to windward. Being a smaller boat, she could not completely blanket Canada, the latter's jib topsail and gaff topsail being beyond her reach. The inevitable luffing match followed, but Invader kept to windward and slowly edged out ahead. When Canada had dropped two lengths astern she came in stays and started back up the Bay. Invader wore instead of staying and started after the cup bringer again. She rapidly overhauled her and passed her to leeward, and then, crowning indignity, crossed her bows and got to windward of her, thus completing the circle that she had sailed around her opponent.

Of course Canada was not out prepared for a race. Neither was Invader, for that matter. There is a difference of nearly 10ft. racing measurement between the two boats, and the smaller one certainly behaved in a way to make her owner feel proud.

CHARLES H. SNIDER.

Meeting of the N. Y. Y. C.

THE fourth general meeting of the New York Y. C. was held on July 18 at Delmonico's, Beaver street, with Com. Ledyard in the chair.

The constitution of the club was so amended that the Secretary shall hereafter have the appointment of the yachting superintendent in his gift. This amendment must be approved at another meeting before it becomes valid.

The following were elected members of the club: John T. Little, Robert McCreery, Dr. J. L. Adams, Clarence Morton Whitman, Lieut. Casey B. Morgan, U. S. N.; Lieut.-Commander J. T. Smith, U. S. N.; Ensign W. H. Reynolds; Ensign David C. Hanrahan, U. S. N.; John B. Dennis, Dr. Ernest Fanestock, Frederick J. Parker, Rear-Admiral N. Von H. Farquhar, U. S. N.; George L. Carnegie, Henry M. Campbell, Evelyn B. Baldwin, Samuel Todd Davis, Jr., C. Arthur Comstock, Lieut.-Commander E. F. Qualtrough, U. S. N.; F. B. Mackay, Lieut.-Commander R. M. Doyle, U. S. N.; William L. Harkness, Commander Albion V. Wadhams, U. S. N.; Andrew W. Smith, M. Burr, Jr., H. Paine Bartlett, H. M. Sweet, T. H. Macdonald, Commander John C. Boyd, U. S. N.; Capt. C. H. Rockwell, U. S. N.; Capt. Henry Leonard, U. S. M. C.; Lieut.-Commander F. Turnbull, U. S. N.; Frederick B. Underwood, W. Hull Wickman, J. Fred Zimmermann, F. K. Pulsifer, Capt. Charles M. Thomas, U. S. N.; S. H. Mason, George Lauder, Jr., William R. Thorsen, Henry Champion Deming, William S. K. Wetmore, Henry D. Lewis, William S. Scott, Louis F. Henlein, Henry S. Norris, Frederick B. Esler, Edward de V. Morrell, Orville Oddie, Jr., Charles Hayden, Alexander S. Clarke, John Pierce, Karl G. Roebing, Henry L. Shippy, Lieut.-Commander A. C. Baker, U. S. N.; Benjamin B. Tilt, Frederick B. Carpenter, Lieut. E. R. Pollock, U. S. N.; Edwin S. Hooley, Otto Magnus, Lieut. H. G. Gilmour, U. S. N.; John M. Goetchius, Jr., Thomas S. Hathaway, Randal Morgan, J. Frederick Kohl, William H. Russell, Cornelius Roseman, Nelson W. Aldrich, Lieut. Commander V. L. Cottman, U. S. N.; John Langdon Erving, Lion Gardiner, Herbert Seymour, S. Montgomery Roosevelt and Paymaster Charles S. Williams, U. S. N.

The Regatta Committee announced the following special classes for the squadron runs during the cruise:

Class G, Sloops—Constitution and Columbia, in racing trim.

Class G, Yawls—Vigilant, Ailsa and Navahoe.

Class D, Schooners—Amorita, Elmina, Muriel and Quisetta.

Supplementary sailing instructions may be obtained from the flagship Corona at Glen Cove on July 22.

It was also announced by the Regatta Committee that the squadron run prizes will be given in each day's run for steam auxiliaries and motor auxiliaries respectively using sail only. They must sail in their usual trim with all their fittings on board and in place.

Steam auxiliaries must have their boilers full of water and at least three days' supply of coal in their bunkers.

Motor auxiliaries must have at least three days' supply of fuel in their tanks.

The race for the Commodore's cups on July 22 will not be considered a squadron run.

The following letter, received by Com. Lewis Cass Ledyard, was read by Sec'y Oddie:

NEWPORT HARBOR FETE COMMITTEE,
NEWPORT, R. I., July 17, 1901.

Lewis Cass Ledyard, Commodore New York Y. C., New York.

Dear Sir: On Tuesday, July 30, the citizens of Newport will give a harbor fete in honor of the North Atlantic squadron and New York Y. C. The features are as follows: Cutter race at 10 A. M. between crews of the North Atlantic squadron; an exhibition by the Holland torpedo boat at 11 A. M.; 2 P. M., a parade of sailors,

marines, United States regulars, local military and naval Gen. Joseph Wheeler, U. S. A., with aides who served organizations.

in the Spanish-American war, will be chief marshal. A general illumination of the entire lower part of the city and harbor will take place between 8 P. M. and 11 P. M.

This is the first opportunity we have had since the Spanish-American war of honoring the North Atlantic squadron and your fleet, and we are, therefore, most desirous in having it a complete success. The North American squadron, torpedo and training station, War College and Fort Adams will give an elaborate display.

We ask your hearty co-operation in this illumination. We are, respectfully,

F. P. GARRETTSON.

The owners of yachts are expected to provide themselves with N. Y. Y. C. night signals and quantities of fireworks, which will lend additional beauty to the Newport display.

The meeting was adjourned until Aug. 22, to permit of candidates for membership being voted upon before the trial races for the America Cup.

Quincy Y. C.

QUINCY, MASS.

Friday, July 19.

THE Quincy Y. C. had rather hard luck in its open race, sailed off the club house Friday, July 19. While there was a breeze all the time, there was a thick fog which shut down over the whole bay, closing the racers from the view of those on the shore. Notwithstanding this, the racing was good. The breeze was from the eastward, fairly strong at the start, but becoming lighter as the fog shut down.

Most of the interest was centered in the 25-footers, of which there were but two to finish, Calypso and Chewink, Hostess being disabled. They went over the starting line at about the same time, but Chewink hauled inside Calypso and took the weather berth. Calypso was footing faster, but Chewink was so close that the centerboard could not get away. Finally Chewink tacked, and Calypso immediately went about under her stern and walked through her lee. After this Calypso had things all her own way.

In the 21ft. class a new comer made her appearance, Mildred II., designed by Shiverick for S. P. Moses. She got the best of the start and led Zaza all around the course. In the 18ft. knockabouts there was a good race. The finish between Aspinquid and Nethla was very close. In fact, all four boats entered finished within 1m. There were also two handicap classes which furnished good sport. The summary:

25-Footers.		Elapsed.
Calypso, A. W. Chesterton.....	2 08 16	
Chewink, F. G. Macomber, Jr.....	2 17 23	
Hostess, H. M. Faxon.....	Disabled.	
21-Footers.		Elapsed.
Mildred II., S. P. Moses.....	2 17 54	
Zaza, G. P. Shute.....	2 22 57	
Vitesse, W. J. Coombs.....	Withdrew.	
18ft. Knockabouts.		Elapsed.
Aspinquid, W. A. Comey.....	1 23 40	
Nethla, C. W. Cole.....	1 23 48	
Ayaya, W. P. Keyes.....	1 24 07	
Malillian, B. S. Permar.....	1 24 40	
Class A—Handicap.		Elapsed.
Hustler, Robinson & Whittemore.....	2 41 11	Corrected.

Mudjekeewis, A. L. Baker.....	2 43 46	2 06 34
Molly, Robert Ellis.....	2 42 58	2 18 03
Moodyne, W. H. Shaw.....	2 59 40	2 21 11
Goblin, E. F. Ricker.....	Withdrew.	
Ariel, E. Johnson.....	Withdrew.	
Annie A.....	Withdrew.	
Class B—Handicap.		Elapsed.
Hector.....	1 25 31	1 02 42
Whisper, W. C. Harrison.....	1 25 45	1 02 56
Apache, L. C. Wade.....	1 21 20	1 04 18

Duxbury Y. C.

DUXBURY, MASS.

Saturday, July 20.

A LADIES' day race was given by the Duxbury Y. C. on Saturday, July 20, one of the conditions being that each yacht must carry at least one lady in the crew, and to the women members the prizes were given. The racing was interesting throughout, and the rivalry seemed even more intense than on regular race days. The summary:

21-Footers.		Elapsed.
Fanny D., A. E. Walker.....	2 30 44	
Scamper, Reed Bros.....	2 34 30	
Geisha, W. T. Whitman.....	2 38 30	
18ft. Knockabouts.		Elapsed.
Oom Paul, George P. Cushman.....	2 34 19	
Miladi, F. R. Adams.....	2 42 27	
Trouble, Heint.....	2 50 37	
Dazzler, Goodspeed Bros.....	2 51 21	
Lobster, C. C. Clapp.....	2 51 32	
Handicap Class.		Elapsed.
Rooster, B. B. Baker.....	2 22 23	
Dolphin, N. Morton.....	2 31 25	
Fedora, Simmons Bros.....	2 32 08	
Aureolus, Kellog.....	2 35 40	
Satana, J. Foster.....	2 42 56	
Imp, N. K. Norwood.....	Withdrew.	
Frolic, J. L. Dawes.....	Withdrew.	

Cohasset Y. C.

COHASSET, MASS.

Saturday, July 20.

THE regular club race of the Cohasset Y. C. was sailed off the club house, July 20, in a very light breeze from the southeast. Three classes started, but Fancy was all alone in the special knockabout class. The summary of the other two classes is as follows:

Knockabout Class.		Elapsed.
Delta, R. B. Williams.....	1 35 20	
Eleanor, F. J. Moors.....	1 36 30	
Barracuda, A. C. Burrage.....	1 39 12	
Remora, G. Crocker.....	1 39 28	
Harelda, A. Bigelow.....	1 50 03	
Handicap Class.		Elapsed.
Otter, D. James.....	1 09 10	
Merlin, R. Townsend.....	1 17 40	

Winthrop Y. C.

WINTHROP, MASS.

Saturday, July 20.

In the Y. R. A. race of the Winthrop Y. C., sailed in Boston Harbor, Saturday, July 20, the 25-footer Calypso added another victory to her already long list. She beat both Crowninshield keel boats Chewink and Flirt. In this class all were bunched at the start, with Calypso in the weather berth. She established a lead before one-sixth of the course had been sailed, and kept it to the finish. Both keel boats followed close after her.

Hostess made her debut in the open 25ft. class, and succeeded in getting away with the Cape cat Thordis and Romance with ease. In the 21-footers Mildred II. repeated her performance at Quincy on Friday, and this time won from the whole bunch of cracks. The little Fantasy entered the open circuit for the first time in this race and won handily. In the 18ft. knockabouts Malillian won in a close finish with Aspinquid. The new 15-footer Tess won from the champion Vitesse by over a minute. There were two handicap classes made up of the regular handicap fleet of the Winthrop Y. C. In the first class Alert won and in the second class Henrietta took the money. There was a good, whole-sail breeze from the eastward. The summary:

Class D.		Elapsed.
Calypso, A. W. Chesterton.....	1 35 20	
Chewink, F. G. Macomber.....	1 36 50	
Flirt, Fabyan & McKee.....	1 38 28	
Little Peter, G. B. Doane.....	1 40 00	
Early Dawn, J. E. Doherty.....	1 40 24	
Class C.		Elapsed.
Hostess, H. M. Faxon.....	1 31 00	
Thordis, W. V. Foster.....	1 39 45	
Romance, L. Gears.....	1 42 19	
Class S—21-Footers.		Elapsed.
Mildred II., S. P. Moses.....	1 46 10	
Harriett, L. T. Harrington.....	1 47 05	
Opitah III., S. H. Foster.....	1 49 31	
Zaza, G. H. Shute.....	1 50 32	
Treyja, C. H. Goddard.....	1 54 40	
Coquette, B. D. Anderson.....	1 54 44	
Privateer, J. McConnell.....	1 55 00	
Class T—18-Footers.		Elapsed.
Fantasy, J. and W. Allerton.....	1 56 29	
Cathryn, J. I. Young.....	2 02 05	
Pioneer, W. Kelley.....	2 12 39	
Lobster, C. J. Hendrie.....	Disabled.	
Class I—18ft. Knockabouts.		Elapsed.
Malillian, B. S. Permar.....	1 55 24	
Aspinquid, W. A. Comey.....	1 56 44	
Ayaya, W. P. Keyes.....	2 02 55

South Boston Y. C.

SOUTH BOSTON, MASS.

Saturday, July 20.

THE regular handicap race of the South Boston Y. C. was sailed off City Point Saturday, July 20, in a very light easterly breeze. The wind was so light and uncertain in direction that but little was shown by the actual result. The greatest interest was manifested in the sailing tenders. The summary:

Class A.		Elapsed.
Golden Rod, G. E. Bruce.....	1 22 33	Corrected.
Emma C., Peter Coupal.....	1 37 52	1 22 33
Bohemian, Geo. Field.....	3 00 10	1 35 22
Class B.		Elapsed.
Duster, J. T. Ball.....	1 29 43	Corrected.
Nancy Hanks, Geo. Lane.....	1 36 40	1 25 43
Varuna, Chas. Nodwell.....	1 38 02	1 30 40

Mosquito Fleet Y. C.

SOUTH BOSTON, MASS.

Saturday, July 20.

THE regular handicap race of the Mosquito Fleet Y. C. was sailed off City Point Saturday, July 20, in a very light easterly breeze. So light was the breeze that much of the interest was taken from the race. Ustane won first place by a long margin. The summary:

Elapsed.		Corrected.
Ustane, C. J. Moriarty.....	2 12 53	2 20 58
Carrie M., N. C. Robinson.....	2 19 17	2 31 17
Myth, J. T. Powers.....	2 47 20	2 52 20
Aleyone, F. Coombs.....	3 06 50	3 06 50
Ariel, C. P. Mooney.....	Withdrew.	
Kismet, David Byford.....	Withdrew.	
Rebel, D. E. Noonan.....	Withdrew.	

Larchmont Y. C. Race Week.

LARCHMONT—LONG ISLAND SOUND.

Tuesday, July 16.

TUESDAY was the day set aside for the dinghy and launch races, and also for the water sports. The club house was open to ladies during the day and evening. The Regatta Committee, Messrs. Lovejoy, Coats and Hardy, managed the races, and Frank Fullgraft with Eugene Gianinni the water sports.

The prize for the four-oared gig race was the Hen and Chickens colors, and for the pair-oared gig race the Dauntless colors. The summaries:

Table with columns for race name, boat names, and times. Races include Naphtha Launches, Windora, Dorothea, Schem, Fortuna, Atlantic, Crusader, and Aleo-Vapor Launches.

Table for Four-Oared Gig Race for Hen and Chickens Colors. Lists boats like Schem, Katrina, Atlantic, and Barracuta with their respective times.

Table for Two-Oared Gig Race for Dauntless Colors. Lists boats like Isolde, Wenonah, Crusader, Carlotta, Idalia, Hildegard, and Intrepid.

Table for Dinghy Race for Execution Colors. Lists boats like Paladin, Fortuna, Amorita, Dot, Intrepid, Carlotta, Zara, Atlantic, and Muriel.

100yd. Scratch Swimming Race for Boys Under Sixteen—Won by W. J. Andresen, P. Chunt second. Time, 1:12.

100yd. Scratch Swimming Race for Boys Under Twenty—Won by W. W. Swan, Jr., R. C. Becroft second. Time, 1:08.

200yd. Handicap Swimming Race for Boys Under Twenty—Won by W. Nichols (5s.), B. Whitney second (10s.). Time, 2:44 2-5.

Tub Race, Open to All—Won by W. Whiting, D. Codrington second. Time, 2:27.

The winners were Intrepid, Atlantic, Katrina, Schem, Isolde and Paladin.

Wednesday, July 17.

The second open event of race week was given on Wednesday, and a large fleet was on hand when the preparatory signal was given at 11:30 o'clock. The wind was light from the S.W., and the air was rather thick and hazy.

The schooners were started at 11:40, with Elmina in the lead, Quissetta next and Muriel last. The English cutters and the 51-footers were sent away next, Isolde in the lead in her class and Altair leading Humma and Huguenot. Dorwina crossed ahead of Effort in the 43ft. class, and these boats made a pretty race the first time around, but on the second time around Dorwina beat Effort handily.

The southwesterly breeze brought a squall out of the N.W., and it struck the boats after most of them had been around the course once. The squall did not prove as vicious as it looked, but it rained very hard for a time. After the squall the wind came out of the S.W. again, but was very fitful and light.

The time limit is set for one-half hour after sunset, which made it 7:36 o'clock. Quissetta, after a long, hard day's racing, finished a little over a minute after the time limit. The English boats were also unable to finish. The summary follows:

Table for Schooners—Class D—Start, 11:40:00. Lists boats like Elmina, Quissetta, and Muriel.

Table for Schooners—Class I—Start, 11:45:00. Lists boats like Hester, Eelin, and Isolde.

Table for Schooners—Class K—Start, 11:45:00. Lists boats like Humma, Altair, and Huguenot.

Table for Schooners—Class L—Start, 11:50:00. Lists boats like Dorwina and Effort.

Table for Schooners—Class M—Start, 11:50:00. Lists boats like Anokatok, Cymbia, Possum, Spasm, and Leda.

Table for Schooners—Class N—Start, 11:55:00. Lists boats like Memory, Oiseau, Enpronzi, and Alerion.

Table for Schooners—Class P—Start, 12:00:00. Lists boats like Don, Rochelle, and Merrywing.

Table for Schooners—Class Q—Start, 12:00:00. Lists boats like Badger, Snapper, Viper, and Persimmon.

Table for Schooners—Class R—Start, 12:05:00. Lists boats like Lambkin, Arizona, Bab, Mist, and Firefly.

Table for Schooners—Class G—Start, 12:05:00. Lists boats like Rod, R. G. Sand.

Table for Sloop Class R—Start, 12:05:00. Lists boats like Neola, Sora, Mystral, Nike, Opossum, Hope, and Moya.

Table for Catboats—Class S—Start, 12:10:00. Lists boats like Dot, Windora, and Mongooose.

Table for Catboats—Class T—Start, 12:10:00. Lists boats like Vera and Kazaza.

Table for Catboats—Class V—Start, 12:10:00. Lists boats like Kazaza and Echo.

Table for Lark Class—Start, 12:15:00. Lists boats like Streak, Flirt, Go To, and Yellow Jacket.

Table for S. C. Y. C. Knockabouts—Start, 12:00:00. Lists boats like Wyntje and Ruby.

Table for Cats—Class W—Start, 12:10:00. Lists boats like We Win, Bouncer, and Barnacle.

The winners were Humma, Dorwina, Leda, Oiseau, Don, Merrywing, Bab, Rod, Sora, Windora, Mongooose II., Gloria and Wyntje.

Thursday, July 18.

Thursday's weather was very much like the day previous, for the boats started in a light southwesterly breeze and finished in a squall from the N.W. Muriel crossed first in the schooner class, followed by Quissetta and Elmina in the order named at 11:35 o'clock. Quissetta led at the end of the first round, but Muriel drew away on the second round and Quissetta finished last.

In the class for English cutters Isolde beat Hester and Eelin boat for boat. Isolde's recent fine showing in light weather is more or less of a surprise to every one, as she was considered a heavy weather boat.

Humma beat Altair and Huguenot in the 51ft. class after a close race between the two former boats. Dorwina beat Effort again in the 43ft. class by over 5m. The summary:

Table for Schooners—Class D—Start, 11:35:00. Lists boats like Muriel, Elmina, and Quissetta.

Table for Schooners—Class I—Start, 11:40:00. Lists boats like Isolde, Hester, and Eelin.

Table for Schooners—Class K—Start, 11:40:00. Lists boats like Huguenot, Humma, and Altair.

Table for Schooners—Class L—Start, 11:55:00. Lists boats like Dorwina, Effort, and Anokatok.

Table for Schooners—Class M—Start, 11:55:00. Lists boats like Possum, E. S. Ballou, and Viper.

Table for Raceabouts—21ft. Class—Start, 11:45:00. Lists boats like Badger, Merrywing, Snapper, Persimmon, and Joker.

Table for Larchmont Special—Sloop Class—Start, 11:45:00. Lists boats like Nei-San, Hope, Opossum, Nike, Sara, Nora, and Neola.

Table for Manhasset Bay Raceabouts—Start, 11:50:00. Lists boats like Lambkin, Firefly, Mist, Bob, and Arizona.

The winners were Muriel, Isolde, Humma, Dorwina, Possum, Persimmon, Opossum, Bob and Nei-San.

Friday, July 19.

Over twenty boats started in the race on Friday, but owing to lack of breeze only very few of the yachts were able to finish within the time limit. The S.E. breeze made the first leg a beat, the second a reach and the third a reach. The boats lay becalmed for hours, and at about half past five when a light breeze sprung up from the S.W., Muriel and Quissetta were so far in the lead that Elmina was withdrawn. Hester, Eelin and Isolde gave up the race and were towed to Larchmont. Dorwina managed to finish, beating Effort and Katonah. The table follows:

Table for Schooners—Class D—Start, 3:05:00. Lists boats like Muriel, Quissetta, and Elmina.

Table for Schooners—Class K—Start, 3:10:00. Lists boats like Humma, Altair, and Dorwina.

Table for Schooners—Class L—Start, 3:10:00. Lists boats like Effort, Katonah, and Memory.

Table for Schooners—Class M—Start, 3:15:00. Lists boats like Merrywing, Badger, and Snapper.

Table for Manhasset Raceabouts—Start, 3:20:00. Lists boats like Bab, Arizona, Mist, Firefly, and Lambkin.

Table for Schooners—Class R—Start, 3:20:00. Lists boats like Hope, Pandora, Opossum, Nora, and Neola.

The winners were Dorwina, Badger and Opossum. The others did not finish within the time limit.

Saturday, July 20.

Race week at Larchmont came to an end on Saturday. The week has been a success from the number of boats entered, but a failure from the standpoint of weather conditions. It has been a week of light, baffling winds, with fog, thunder squalls and calms sandwiched in.

In the schooner class only Quissetta and Muriel started. Elmina having gone to City Island to haul out to clean before the New York Y. C. cruise. Quissetta won easily from Muriel.

Hester, Eelin and Isolde met again, Isolde and Eelin sailing for a special prize. Isolde, beautifully handled, again beat Hester and Eelin boat for boat.

The old cutter Wenonah and the sloop Hildegard sailed a special race. Wenonah drew ahead when near the finish and won. Humma won with 9m. to spare in her class. Dorwina, the wonderful 43-footer, sailed in rare fashion, beating the 51-footer Altair by several minutes.

Cartoon made her first appearance in the racing on the Sound, but owing to the lack of breeze was almost 15m. late in crossing the line, so was out of it with Oiseau and Alerion. The breeze was so light all way she did not have a chance to show what she can do.

Don, the new boat in the 25ft. class, designed by Charles D. Mower, beat Rochelle. The times:

Table for Yawls—Class G—Start, 11:35:00. Lists boats like Vigilant, Ailsa, and Quissetta.

Table for Schooners—Class D—Start, 11:40:00. Lists boats like Hester, Isolde, and Eelin.

Table for Schooners—Class I—Start, 11:45:00. Lists boats like Humma, Altair, and Dorwina.

Table for Schooners—Class K—Start, 11:45:00. Lists boats like Leda, Anokatok, Possum, and Spasm.

Table for Yawls—Class M—Start, 11:55:00. Lists boats like Memory, Alerion, Oiseau, and Cartoon.

Table for Schooners—Class N—Start, 11:55:00. Lists boats like Snapper, Badger, Merrywing, and Viper.

Table for Schooners—Class P—Start, 12:00:00. Lists boats like Ruby, Rochelle, and Don.

Table for Schooners—Class Q—Start, 12:05:00. Lists boats like Rod, Ox, and Montauk.

Table for Manhasset Raceabouts—Start, 12:05:00. Lists boats like Mist, Arizona, Firefly, Lambkin, and Bab.

Table for Schooners—Class R—Start, 12:05:00. Lists boats like Cricket, Moya, Opossum, Sora, Mystral, Nora, Nike, Neola, and Hope.

Table for Catboats—Class S—Start, 12:10:00. Lists boats like Dot, Windora, Mongooose II., Kazaza, Vera, and Punch.

Table for Catboats—Class T—Start, 12:10:00. Lists boats like Snaeker, Echo, Yellow Jacket, Skidoo, Gloria, and Go To.

Table for Special Race—Cruising Trip—Start, 11:45:00. Lists boats like Hildegard, Wenonah, Isolde, and Eelin.

Table for Special Race—Start, 11:45:00. Lists boats like Isolde, Eelin, and Memory.

The winners were Vigilant, Quissetta, Isolde, Humma, Anokatok, Oiseau, Snapper, Don, Montauk, Arizona, Neola, Dot, Punch, Echo, Wenonah. Sail overs, Dorwina, Memory, Ruby, Mongooose II.

Savin Hill Y. C.

DORCHESTER, MASS.

Saturday, July 20.

THE second of the series of club races of the Savin Hill Y. C. was sailed in Dorchester Bay Saturday, July 20, in a light easterly breeze. In the handicap class Spray won easily. In the one-design sailing tenders Leach was an easy first. These yachts, having no names, are known by the names of their owners. The summary:

Table for Handicap Class. Lists boats like Spray, Vive, Jeurez, Eleanor, and Wide Awake.

Table for Tenders. Lists boats like Leach, McInnes, McCurdy, Scott, Smith, Robinson, Skinner, Keppers, Howland, and Wills.

Western Yachts.

First Trial Races, Canada Cup Defenders.

CHICAGO, July 20, 11 A. M.—The first of the trial races for defenders of the Canada cup will be sailed this afternoon around a triangular course of twenty-one nautical miles. Weather is bright and fair, and the likelihood is that easterly and southeasterly winds will prevail, with a probable velocity of eighteen or twenty miles, barring changes in the weather conditions during the next few hours.

There are nine boats scheduled to start this afternoon—Minota, of Chicago, skipper, Dr. Pinckard; Detroit, of Detroit, Mich., skipper, A. I. McLeod; Illinois, of Chicago, skipper, G. M. Pynchon; Orion, of Milwaukee, skipper, R. Hilbert; Briar, of Chicago, skipper, not determined at this writing; Cadillac, of Detroit, skipper, Com. Shaw; Prairie, of Chicago, skipper, D. V. Griffiths; Milwaukee, of Milwaukee, skipper, W. Davis; Yankee, of Chicago, skipper, W. H. Thompson.

History of the Boats.

Of the starters to-day, five boats are owned in Chicago, two in Milwaukee and two in Detroit. Of the entire fleet, Cadillac is the hot favorite, her performances, as gauged by the meager opportunities of the past few days, seeming to give the local men a very good impression of her speed. The presence of Mr. Hanley, builder of Cadillac and of Genesee, last year's winner, is something to add to the general belief that Cadillac has the best show in the fleet to-day.

Prairie and Briar, built for the 1899 races, do not appear to awaken much enthusiasm, and of the local boats, Illinois, the Crownshield boat, which has been here since May, is the favorite, although there is nothing to indicate that Illinois has as yet had its best handling or made its best possible showing.

Minota, which was built in Canada in 1899, was bought by Dr. Pinckard, of Chicago, that year and brought to Chicago. Minota was badly beaten by Beaver, the Canadian champion, and there was nothing on the face of its performances to indicate that it was a winner. There are those among Chicago yachtsmen who fancy that Minota has not had its best possible handling. The boat was docked and pot-lead this week. There is talk that Minota will not qualify under the 35ft. measurements.

Yankee, of Chicago, is a syndicate boat which thus far has proven rather a disappointment. Attempts have been made to bring it under the measurement rules for the cup defenders, but it is likely that the boat is not down to rule even yet. It will not be measured until the conclusion of the races to-day, where perhaps its showing may warrant the trouble of measurement.

Orion, of Milwaukee, is not at this writing considered much of a factor in the race to-day. Milwaukee, the second boat from the Cream City, is fancied very much. Milwaukee is of Skow type, as is Detroit, and the owners of these boats claim that they can take any kind of sea which may show.

The Detroit men have evidently come here with the intention of capturing the honors. Com. Shaw, of Detroit Y. C., owns Cadillac. He is by this time well acquainted with the boat, and it is pretty well agreed that, although other boats may be a trifle faster running, no yacht here makes so good an appearance on the wind or is so fast in stays. The crew of Cadillac, as well as that of the other Detroit boat, are picked men, and although they have not been in possession of their craft in either case very long, it is thought that they are able seamen enough to master the individual peculiarities of their boats, and that they will sail a perfect race this afternoon. The Chicago crews have had ample opportunity to learn the idiosyncrasies of their respective boats. Some money is going up on Illinois this afternoon, but the local enthusiasm is not very much in evidence, it being at this writing all Cadillac. Favorites have been beaten, however, and a few hours we shall see how it goes with this favorite.

The judges for to-day are the members of the Canada cup committee, Mr. J. Berriman, G. Warrington and Ed Rosing. The time gun will be fired at 12 o'clock noon, the preparatory gun at 12:20, the starting gun at 12:30.

The Race in Brief.

Both the unexpected and the expected happened. Cadillac, the Detroit boat, made a splendid showing. Milwaukee, which was expected to give a good account of itself, did better than was thought probable, and defeated the favorite by a close margin after a very interesting race.

The first leg of the twenty-one mile triangle was a beat to windward. The second leg was a run with the wind slightly on the quarter, which was practically the condition in the last leg. At the second turn Milwaukee began to show as a very good possibility. The last leg and the finish offered plenty of exciting sport. Two-thirds down this leg a Grand Haven steamer came along over the course and blanketed the two leading boats, Cadillac and Milwaukee. The last portion of this leg was a luffing match between the two, and at this work Milwaukee, beautifully handled, had the better of her rival, crossing the line winner by a scanty margin.

Illinois, the local favorite, made a gallant enough struggle, but the impression to-night is that she has no special show against either of the two out-of-town boats. The end, however, is not yet.

The wind to-day was fairly good on the second and third leg of the triangle, but the start was tame, with light airs. Time:

Minota	12 31 31	2 05 00	4 10 00
Detroit	12 35 05	2 11 10	4 11 10
Illinois	12 31 00	2 03 35	4 01 50
Briar	12 31 33	2 13 14	4 25 30
Prairie	12 33 02	2 05 00	4 10 00
Cadillac	12 31 50	1 57 58	3 52 22
Prairie	12 36 30	2 26 00	4 21 57
Milwaukee	12 32 12	2 01 02	3 50 55
Yankee	12 34 30	2 05 00	4 33 50

The Race in Detail.

The Chicago favorite, Illinois, was first over the line, with Orion, Minota and Cadillac close after and so well bunched that a foul was feared. Milwaukee came 60s. after Cadillac, then Briar, Yankee, Detroit and Prairie.

Prairie started under mainsail, jib, jib staysail and jib topsail. There was not air enough aloft to warrant the supposition that the boats would finish within the time limit. The time on the first leg was slow, everything going close hauled and praying for a wind.

Illinois stood out in the lead, Milwaukee working into second place. At 12:41 Illinois came about. Her chances were well liked at this time and she seemed still to have something of a show, when the wind shifted and increased to double its original velocity. Minota began to make a good impression at this point. Detroit and Yankee following after, far to the leeward, were not considered factors on the first leg, although Detroit at 12:46 came about on the port tack and sailed across Yankee's bow. The latter named boat thenceforward had little rating in the race.

Cadillac, under the freshening wind, began to foot it nicely, and showed in the lead, but the square-nosed sidewalk from Milwaukee liked these light airs and declined to be denied, working up so close upon the Detroit crackerjack that even at this early stage of the race it was seen that the chief interest would center between Cadillac and Milwaukee. Detroit was so far to leeward that it was hard to figure her chances, although she sported a lot of canvas and behaved very prettily. Detroit at one time had a little trouble with her peak halyards, but the trifling accident was soon overcome.

At 1:43 Cadillac came about on the starboard tack and ran again close hauled. Five minutes later she again came about, Milwaukee still standing on the starboard tack. The wind was now light, from E.S.E. Cadillac with a short tack went around the first mark at 1:57, and immediately broke out balloon jib, reaching with mainsail and balloon jib to port. Milwaukee made the first mark at 2:01, and at once followed suit with balloon jib and set out after the fleet-footed Detroit racer. Illinois, making a very good showing, came about at 2:03, and smartly setting her balloon jib, trailed in behind Milwaukee. Minota, the underestimated Canadian boat, came in fourth and Detroit fifth. Detroit sprung a balloon jib which threatened to do all sorts of things to the others, since it contained a thousand square feet of canvas. Orion, Prairie, Briar and Yankee came about in order named. The times at the first mark were as below:

	Start.	1st Mark.	Elapsed.
Cadillac	12 31 50	1 57 58	1 26 08
Milwaukee	12 32 50	2 01 03	1 28 13
Illinois	12 31 00	2 03 35	1 32 35
Minota	12 31 31	2 05 00	1 33 29
Detroit	12 35 05	2 11 10	1 36 05
Orion	12 31 33	2 13 14	1 42 41
Prairie	12 36 30	2 26 00	1 49 30
Yankee	12 34 30	2 05 00	1 33 50
Briar	12 33 02	2 05 00	1 32 58

The Second Leg.

Starting down the reach on the second leg, the boats at first had very little air to encourage them, but soon a stiffish breeze from the south came up and they began to bowl along in something like yachting fashion. Detroit, under her big canvas, took kindly to this sort of thing, and set a hot pace. Milwaukee pushed her flat nose along merrily enough, and at this going it was seen that she was crawling up on Cadillac. The times at the second mark:

	1st Buoy.	2d Buoy.	Elapsed.
Cadillac	1 57 58	2 57 55	0 59 57
Milwaukee	2 01 03	2 58 30	0 57 27
Illinois	2 03 35	3 08 15	1 04 40

The Finish.

When it was noticed that Milwaukee had actually gained on Cadillac in the second leg, the stock in the former boat took a sudden boom, for the conditions on the last leg were much the same as those of the second. What might have been the case had the breeze stiffened up considerably cannot be determined, but under the existing conditions Milwaukee crowded up and up on Cadillac, until it was uncertain from the judges' boat which boat really led. At 3:15 Milwaukee tried to blanket Cadillac; and the latter promptly returned the compliment, there ensuing a tidy little luffing match at this stage of the race. Milwaukee fell slightly off to leeward. Cadillac broke out a spinnaker to port, a bad maneuver, since it did not fill and was lowered in a few moments. Both boats were at this stage handicapped by a lake steamer which passed along to windward of them and blanketed both. Cadillac seemed to gain way the earlier, after the steamer had passed, though Milwaukee, after a similar troublesome experience with a spinnaker, soon set her jib and began to follow hard on the Detroit boat. A fresh wind came along at this moment, most luckily for Milwaukee. Well heeled over, the big platform came pushing on with an unexpected speed and laid a straight course across Cadillac's bow, thus for the first time taking first place in the race.

The actual times of the three leading boats on the last leg were as follows:

	2d Buoy.	Finish.	Elapsed.
Milwaukee	2 58 30	3 50 55	0 52 25
Cadillac	2 57 55	3 52 22	0 54 27
Illinois	3 08 15	4 01 50	0 53 35

The victory of Milwaukee was, of course, received with applause, although there are not lacking yachtsmen who do not rejoice in the victory of this scow, sidewalk, raft or square-nosed type of boat. Milwaukee is a racing machine pure and simple, designed to get the best of the rules and to win this competition if it be a possible thing. She had to shorten boom and gaff in order to get in under the measurement. Her skipper, W. S. Davis, admits that the conditions to-day were quite to Milwaukee's liking, but he says that he can show a thing or two even in stiffer wind than this. It cannot be said that Milwaukee's victory to-day has made her favorite for the place of final winner and cup defender. Cadillac perhaps remains the betting favorite to-night, and Illinois has moved up into a better position than was accorded her before the race, although not to the rank of popular favorite. Com. Shaw announces himself as full of confidence for the next trial and hopes that there will be a bit better wind, so that his boat may get what he considers a real trial of a sailing yacht.

The Second Trial Race.

The second trial race of the series will be sailed Monday, nine knots to windward and return.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter IX—Caulking, Stopping and Painting.

The seams of the planking and deck, when the latter is not canvased, should be caulked with cotton, which may be obtained in balls ready for use from the ship chandler, or yacht fitter.

Go over the seam to be caulked with a small caulking iron, so as to open it sufficiently to receive the cotton. Then, starting at one end of the boat, drive the cotton into the seam, twisting it lightly as you drive it in, and taking care not to bruise the edges of the seam. When driving in the cotton, place the caulking iron across the yarn and draw it over the seam, leaving a little slack between each drive of the iron, so that at first the yarn appears to be in short loops in the seam. These loops are then driven in, and the whole hardened down with a narrow, hollow-edged iron, which will level the cotton and leave the seam ready for stopping. Do not drive the cotton in too tightly, especially when first working it along the seam, or you may force it through the planking. A well-made seam should show a smooth surface of hard cotton, about an eighth of an inch below the surface of the planking. It is important that the cotton should be as even as possible and free from lumps. These can only be avoided by care in placing the cotton in the seam when starting and hardening it evenly. Oakum is used for large seams, where it can be driven tightly, but is not suitable for small yacht work. It is also much more trouble to prepare and to use.

There is a good deal of knack in caulking, and it will be found very tedious at first; but it should be done carefully, or it will not be of much use. If the seams are to be payed, or filled, with marine glue, the caulking iron should be dipped in naphtha; but if ordinary putty or white-lead stopping is used, then raw linseed oil is the best to keep the iron from sticking.

When all the seams of the planking and deck are properly caulked, they and all nail heads and cracks and holes of all sorts must be filled with stopping of some sort, all the nails having been previously punched in about 1/16 in. below the surface of the wood, a heavy hammer or "holder on" being held inside while each nail is punched.

For all painted or varnished work, where oil stopping or putty is used, a coat of priming paint or varnish must be given before the seams and holes are stopped, and the priming or varnish must be well rubbed into all the places where the stopping is to go. When this coat is dry get some putty, colored to match the wood if it is to be varnished (always bearing in mind that the wood will darken with age), or plain white putty if it is to be painted. Force the stopping well into the seam or hole, and scrape off the surplus with the putty-knife. Leave it to harden a night, and next day rub it down with glass paper, which should first be rubbed over with whitening, to prevent the stopping sticking to it. The work is now ready for painting, but before speaking of this I will explain the method of paying the deck seams with marine glue.

Jeffery's marine glue is sold by all ship and yacht chandlers, and is in a solid mass in small wooden boxes, from which it must be broken with a hammer, as required. It is then melted in an iron pot or pitch kettle over a slow fire, great care being taken that it does not burn, as it will spoil it completely if it is overheated.

A warm dry day should be chosen, if possible, for this work, as the glue will keep fluid much longer than on a cold day. It is dipped out of the melting pot with a long spouted pitch ladle, and poured carefully into each seam, drawing the ladle along the seam at such a pace that the glue runs out and just fills the seam. When all the seams are payed, pour water over the seams to harden them, and then scrape off all the superfluous glue with a sharp scraper. Look carefully for any "holidays" or gaps in the glue, and pay these over again, and after a final scraping, plane up the whole deck, rubbing the bottom of the plane with naphtha to prevent the glue from sticking to it.

A well laid deck, such as I have described, should be kept scrubbed, and not varnished; but if scrubbing cannot be done often enough to keep it white, it will be better to varnish it. All the teak work about the deck should be kept varnished, and it will form a good contrast to the white scrubbed pine, and black glue in the seams.

When painting or varnishing the boat, use none but the best paint and varnish, which should be specially prepared for yacht work, to stand the water.

At least four coats of paint should be used over the priming coat and stopping, with a final coat of varnish, or paint and varnish mixed. If the work is to be varnished only, it will take six coats to get a good body and surface, and it is very false economy to stint the paint and varnish on a new boat, as, if she once gets bare and the weather gets into the wood, it can never be got right again.

Before putting on a coat of paint or varnish, the last coat must be rubbed over with whitening, and well rubbed down with fine glass paper; dust it off thoroughly with a clean dry brush, and wipe over with a damp chamois leather, and apply the paint or varnish at once.

Paint should be laid on thin and well rubbed in with the brush, finishing as smoothly and with as few brush marks as possible; but varnish must be laid on thickly, and then rubbed in with the brush till it can hardly be moved; but though it is laid on thickly it must never be allowed to run into streaks, and, above all, see there is no dust about, and that the atmosphere is not cold or damp, or it will never dry with a good gloss.

The bottom of the boat should be primed, as described above, but with three coats instead of one. Over the priming there should be two coats of anti-fouling composition.

There are many kinds of anti-fouling paints, and of these I should recommend either Blake's "Algycide" or Jesty's Composition. Both of these are applied like ordinary paint, and last very well.

The best coating of all, for salt water or fresh, is copper powder, but it is expensive and troublesome to use. When properly put on, it is exactly like copper sheathing and keeps bright of itself in salt water, with a perfect surface. The copper powder can be bought at any good oil and color shop, and is used just like gold leaf; that is to say, after the bottom has been primed and rubbed down to a smooth surface, a thin coat of best varnish is put in to the height to which it is intended to carry the copper, then when the varnish is almost dry, or "tacky," the copper powder is applied with a pad or soft brush till all the varnish is covered, when it is softly brushed all over, till it is worked into the varnish, and a smooth surface is obtained, like a sheet of metal. When the first coat is quite hard, a second and third coat is put on in the same way, and with three coats properly applied a boat should be all right for three months.

Black lead is applied in the same way as the copper powder, but it is hardly so good a surface; it is not an anti-fouler, and, of course, does not look so well, though much cheaper.

Various enamels and black varnishes are used for the bottoms of racing boats; they all require a lot of attention, and do not prevent weeds or barnacles growing; though they have a very fine gloss when freshly put on.

When painting, or varnishing, always use as large a brush as possible, and one that has been used a little and got into good working order. A good plan is to buy good second-hand brushes from the local painter, if he can be persuaded to sell them, as they are worth a lot more than new ones, if they have been well broken in.

See that your paint has plenty of oil in it, and not too much turpentine, and that it is fairly thick; but thoroughly strained through muslin, and free from skin and lumps.

Never attempt to paint in the open air unless it is a fine, warm, dry day, and do not paint or varnish after about two hours before sunset, or the work will be spoiled by the dew and cold air. Frost will prevent any paint or varnish drying properly.

It is usual to have a narrow gold line round the boat just under the covering board, if there are no bulwarks. It is in a shallow hollow moulding or groove which is worked in the top strake with a small round plane. The line is marked out with a long batten tacked to the planking, and this batten acts as a guide to the plane. The groove should be rubbed down smooth with glass-paper, and primed like the rest of the boat, and when all hard and dry it is gilded.

To prepare it for gilding the whole of that part of the paint or varnish work is dusted over with whitening to prevent the gold leaf sticking, and the part to be gilded is painted in with gold size and yellow ochre. When the gold size is nearly dry gold leaf is applied, and adheres to the "tacky" gold size, but not to the rest of the boat where the whitening is. It is rubbed lightly into the hollow with a pad of cotton wool or a soft brush, and the surplus dusted off when it is all hard and dry.

Gold leaf can be bought in small books, with each leaf on a sheet of waxed paper, to enable it to be easily handled. A coat of varnish preserves the gold leaf, but spoils the brightness considerably.

Newport Special Thirties.

NEWPORT, R. I.
Tuesday, July 16.

In a sweepstake race sailed from Brenton Reef Cove to Dyer's Island in a strong S.W. breeze, five of the 30-footers started. Barbara got the lead at the start, but in the run up the bay she was overtaken by Wawa, which when once in the lead was never headed. The summary:

	Start, 3:24:00.	Finish.	Elapsed.
Wawa, Reginald Brooks.....	5 41 17	2 17 17	2 17 17
Hera, Ralph N. Ellis.....	5 41 37	2 17 37	2 17 37
Esperanza, H. O. Havemeyer, Jr.....	5 42 43	2 18 43	2 18 43
Carolina, Pembroke Jones.....	5 45 22	2 21 22	2 21 22
Barbara, Winthrop Rutherford.....	5 46 54	2 22 54	2 22 54

Thursday, July 18.

In a strong S.W. breeze Carolina won the sweepstake race on Thursday. The course made it a run from Brenton's Reef Cove to Dyer's Island and a beat back.

The 15-footers sailed over a triangular course, starting at 3:40. Breeze won. Summaries:

30-Footers—Start, 3:22:00.			
	Finish.	Elapsed.

Friday, July 19.

A squall made the race for the special thirties very interesting on Friday. Only three boats finished out of the seven starters. The boats sailed twice over an eight-mile triangle; the wind being from the S. at the start, made the first leg a reach, the second a run and the third a beat. The squall struck when the boats were on the second round. The wind shifted to the N.E., bringing with it heavy rain. The times:

Start, 3:17:00.			
	Finish.	Elapsed.	
No Name, W. Rutherford.....	5 17 55	2 00 55	2 00 55

Barbara, W. Rutherford.....	Withdraw.		

Saturday, July 20.

On Saturday the 30-footers and the 15-footers had some good racing in a fresh southwesterly breeze. The 30-footers sailed over the Dyer's Island course. Mr. Frank Jameson sailed Pollywog. The thirties started at 3:08. Summary:

	Finish.	Elapsed.
Wawa, Reginald Brooks.....	5 54 06	2 46 06
Barbara, Winthrop Rutherford.....	5 58 49	2 50 49
Raccoon, John R. Drexel.....	6 00 41	2 52 41
Esperanza, H. O. Havemeyer, Jr.....	6 03 21	2 55 21
Pollywog, Frank Jameson.....	6 03 50	2 55 50

The 15ft. class had a race of eight miles over a triangular course in the bay. The start was at 3:18 o'clock. The time follows:

	Finish.	Elapsed.
Hawk, William Gammell, Jr.....	4 40 02	1 22 02
Eaglet, W. Grosvenor, Jr.....	4 40 20	1 23 00
Breeze, W. G. Roelker, Jr.....	4 41 00	1 23 00

Beverly Y. C.

MONUMENT BEACH, MASS.
Saturday, July 20.

THE regular race of the Beverly Y. C. was sailed off the club house, Wing's Neck, Saturday, July 20, in a very light easterly breeze. In the 25-footers the champion May Queen had an easy victory. In the 21-footers the new Gaffly beat out Quakeress by over a minute. W. O. Taylor's Eunice again won in the fourth class cats. This yacht has won every race in which she has been entered. In the one-design 15-footers Teaser won in a closely contested race. The summary:

25-Footers.	
	Elapsed.
May Queen, D. L. Whittemore.....	3 44 14

YACHTING NEWS NOTES.

THE fleet of the Knickerbocker Y. C. will rendezvous at the club anchorage, College Point, L. I., on Saturday, Aug. 3, for the annual cruise. The same day there will be an informal run to Sea Cliff.

On Sunday, Aug. 4, there will be an informal run to Black Rock.

On Monday, Aug. 5, there will be a squadron run from Black Rock to Thimble Islands.

On Tuesday, Aug. 6, the fleet will remain at Thimble Islands and dress ship. There will be gig races and swimming matches in the afternoon and fireworks in the evening.

On Wednesday, Aug. 7, the second squadron run from Thimble Islands to Shelter Island will take place.

The course for races at Shelter Island will be decided upon on Thursday, Aug. 8.

The Commodore will give three prizes to yachts making the best run from Thimble Islands to Shelter Island. In addition to these prizes, the Newman cup will be raced for.

The club book for 1901 of the New York Y. C. has recently been issued. The publication of the book was delayed about a month this year by a resolution of the club. This was done so that the book would be more complete, which now contains matter that could not have been put into shape for printing at an earlier date. The book is splendidly printed, handsomely bound and very complete, and more attractive than ever before, if such a thing were possible. The membership of the club is rapidly increasing, there being now very near two thousand. The club's fleet contains considerably over four hundred boats. The non-yacht owners' private signals have this year been omitted from the book, and in their place have been put clear half-tone pictures of the club's numerous stations.

Zinita, owned by Mr. E. M. Padelford, N. Y. Y. C., has arrived at Greenport from England. Zinita was designed by Wm. Fife, Jr., and built at Fairlie, Scotland. She is a fin keel craft, 66ft. over all, 46ft. 5in. on the waterline, 12ft. 8in. beam and 9ft. draft. Mr. Padelford is a member of the British Embassy at Washington.

A. Homer Skinner has sold the auxiliary schooner yacht Panelve, through Huntington & Seaman, to John Langloth, of this city. She was designed and built by Read Bros. last year. She is 57ft. over all, 39ft. over waterline, 14ft. beam and 6ft. draft. Panelve is equipped with a sixteen horse-power gasoline engine.

J. Edward Addicks has purchased the sloop yacht Ilderim, which Cornelius Vanderbilt, Jr., had built for him some years ago.

The 25ft. sloop Great Republic, of Gloucester, Mass., with Capt. Howard Blackburn aboard, bound for Lisbon from Gloucester, whence she sailed on June 9, was spoken in latitude 40.27 north, longitude 41.06 west, by the British steamer Mohawk, which arrived at Galveston from Rotterdam. Capt. Blackburn signaled he wished to be reported "all well."

Capt. Blackburn sailed from Gloucester with the intention to cross the Atlantic in forty-five days. The distance of his outlined trip is estimated to be 2,800 miles.

Alfred Van Santvoord died July 20 on his yacht, Clermont, at the anchorage of the Atlantic Y. C., off Sea Gate. His death was due to old age, he having been in his eighty-third year.

He was an enthusiastic yachtsman and spent much of his time in cruising. He was a member of the New York, Seawanhaka, Atlantic and American yacht clubs.

The bark-rigged steam yacht White Heather, owned by Harrison T. Drummond, of St. Louis, arrived at Rockland, Me., on July 16, for repairs. Mr. Drummond states that his yacht was in collision on July 14 with the steamer Navahoe, of the Clyde Line, off Cape Cod, during a dense fog. White Heather lost bowsprit, stays, and figurehead.

The race of the 25ft. class of knockabouts of the Bar Harbor Y. R. A. was sailed on July 13. The race was won by Cherub, owned by W. L. Green, of Albany, N. Y., which defeated Antonio Y. Stewart's Bobs by 2½ minutes.

The Boston knockabout Iroquois ran on a sunken ledge while preparing for the start.

In a fog off the Jersey coast at Sea Girt, at 10:30 o'clock on the night of July 14, the Clyde freight steamer Benefactor, from New York for this port, ran into the yawl Spalpeen, owned by Robert M. Riddle, of the Corinthian Y. C. While attempting to board the yawl again, Francis Fisher, a nephew of Mr. Riddle, was drowned.

The Newport Y. R. A. has issued sailing orders and instructions for its regatta of Thursday and Saturday, Aug. 1 and 3. There will be no time limit to the races. The classes will be started in the following order: The 90-footers, the yawls; class H, sloops; class D, schooners; class I and class K, sloops. The course will be an equilateral triangle, ten miles to the leg, the start and finish to be across a line between the committee boat and Brenton Reef Lightship.

Gen. Francis V. Greene's auxiliary steam yacht Wild Duck, now under charter to Senator Nelson W. Aldrich, of Rhode Island, collided with the Joy Line steamer Tremont early in the morning on July 17. The accident occurred on Long Island Sound, between Cornfield Light and New London. The weather is said to have been thick at the time. The yacht tore a big hole in the starboard bow of the Tremont and the latter began to fill rapidly. The yacht was not seriously injured. No one was hurt on either vessel, but that there was no loss of life is accounted for by the ready help that was given to the 300 passengers on the Tremont by the steamers City of Lowell, City of Worcester, Connecticut and Massachusetts, all of which happened to be in the vicinity. The Tremont was towed into New London, where she was beached. The yacht was able to proceed to the same port under her own steam. The side-wheeler Tremont is the property of the Boston & Portland Steamship Company, and was under charter to the Joy Steamship Company. She was built at Greenpoint, N. Y., in 1883 for the Portland Company. She is 1,023 net tons burden, 260ft. in length, and 37ft. beam.

Wild Duck is a centerboard steel auxiliary schooner. She was designed by Edward Burgess and built at the Atlantic Works, East Boston, in 1891. She is 125ft. on the waterline, 154ft. over all, 23.5ft. beam and 12ft. draft.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Rifle Range and Gallery.

Fixtures.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road. Conditions: 200yds., off-hand, at the German ring target. Mr. I. Strickmeier, with a score of 221, was declared champion for the day. Weather, hot; thermometer, 106; wind, very little:

As all our best shots are in San Francisco and seem to be doing well there, so we are content to shoot as the sweltering heat would let us.

A. D., Sec'y.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

July 24-25.—Detroit, Mich.—Third shoot of the Michigan Trapshooters' League, under auspices of the Pastime Gun Club. John Parker, manager.

July 25-26.—Cambridge Springs, Pa.—Tournament of the Cambridge Springs Gun Club. Clark D. Eckels, Sec'y.

July 27.—Freehold, N. J.—Championship of New Jersey for E C cup between Messrs. E. J. Vanderveer and J. J. Fleming.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

July 30-31.—Bowling Green, O.—Target and live bird tournament of the Bowling Green Gun Club. John H. Lincoln, Sec'y.

Aug. 2.—Holyoke, Mass.—Holyoke Shooting Club's annual target tournament. J. R. Blamey, Sec'y.

Aug. 2.—Walcott, N. Y.—Target tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.

Aug. 3.—Sharon Springs, N. Y.—Sharon Springs Gun Club's first target tournament. Andrew Smith, Sec'y.

Aug. 6-7.—Brantford, Can.—Target tournament of the Brantford Gun Club. A. B. Cutcliffe, Sec'y.

Aug. 8-9.—Lafayette, Ind.—Fifteenth annual tournament of the Lafayette Gun Club. Amateur. John Blistain, Sec'y.

Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; \$1,000 in money, trophies and medals. F. W. Heubach, General Manager.

Aug. 14.—Ossining, N. Y.—Merchandise clay bird tournament of the Ossining Gun Club; clam bake; brass band. C. G. Blandford, Capt.

Aug. 14.—Trenton, N. J.—Contest for championship of Mercer county, between Messrs. C. A. Comp, holder, and W. B. Widman, challenger.

Aug. 14-15.—Sherburne, N. Y.—Sherburne Gun Club's tournament. J. F. Paddelford, Sec'y.

Aug. 14-16.—Colchester Beach, Md.—Sixth annual midsummer tournament, under the management of Messrs. J. R. Malone and J. M. Hawkins, of Baltimore; two days at targets; one day at live birds; added money and merchandise prizes.

Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas.

Aug. 19-21.—Asheville, N. C.—Three-day tournament under the auspices of Maj. E. P. McKissick and Col. J. T. Anthony; distance handicaps; \$100 per day added. John Parker, Mgr.

Aug. 23.—Pleasant Hill, Mo.—Fifth annual sweepstake and merchandise tournament of the Pleasant Hill Colored Gun Club. T. H. Cohron, Sec'y.

Aug. 27-30.—Okobojo, Ia.—Lake Okobojo Amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw.

Sept. 2.—Meriden, Conn.—Labor Day tournament of the Parker Gun Club. Also Bristol sheep bake. C. S. Howard, Sec'y.

Sept. 2.—Albany, N. Y.—Bluerock tournament of the Forester Gun Club. H. H. Valentine, Mgr.

Sept. 2-3.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association. Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y.

Sept. 2-3.—Richmond, Va.—Tournament of the Virginia Trapshooters' Association, under auspices of the West End Gun Club.

Sept. 15-16.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.

Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreih, Sec'y.

Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 10-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Mr. L. J. Gaines, of Meriden, Conn., writes us as follows: "The Parker Gun Club, of Meriden, Conn., will give their annual clay-bird shoot at their grounds, near Hanover Park, on Labor Day, Sept. 2, 1901. Dinner will be served on the grounds, and be known as the Bristol sheep bake. A good programme will be arranged, and it will be ready for distribution about Aug. 15. For further information, apply to C. S. Howard, secretary."

Messrs. J. R. Malone and J. M. Hawkins, of Baltimore, announce a tournament Aug. 14, 15 and 16; two days at targets, and one day at live birds; added money and merchandise prizes. They further state: "The tournament will be held at Tolchester Beach, Kent county, Md., which is about two hours' sail from Baltimore on fine steamers, which leave Pier 16, Light street wharf, at 8:30 A. M. and 2 P. M. daily. First-class hotel accommodations will be found on the grounds for those wishing to remain during the tournament. No finer place could be selected in the country for holding a summer tournament, as the shooting grounds are located on a high bluff, over 30ft. above tidewater, where a cool breeze from the broad Chesapeake Bay is always to be had. As the tournament will be held on Eastern Shore, we have decided to give a handsome gold medal for the champion shot of Eastern Shore of Maryland at 50 targets. There will also be a ten-man team race, Eastern Shore vs. Western Shore. Residents of Baltimore City barred. Programmes will be ready about Aug. 1."

While some of the contestants may have felt that they were handicapped very severely—that is, if they did not happen to win anything—the following, taken from the Richmond Dispatch of July 18, shows that handicapping as an art is pregnant with still greater possibilities as to distances, etc. It is as follows: "Elijah D. Fulford, of Utica, N. Y., outshot a field of 78 contestants in the preliminary handicap at 100 targets per man at Interstate Park, L. I., to-day, and won the event—\$750, and a silver trophy valued at \$50. He broke 97 out of 100 targets. He stood at 80 yards. His closest opponents were John W. Hoffman, of New Jersey, and D. W. Sawin, of Gardiner, Mass., each of whom broke 92 targets from the 70 yard mark, Sawin winning on the shoot-off. The next best score was 91, F. A. Inman, of Pascoag, R. I., who stood at 150 yards. None of the back markers, such as Crosby, Gilbert, and Fanning, shot up to their scores in England recently, but they were heavily handicapped to-day, as they stood at 200, 210, and 25 yards."

Mr. C. G. Blandford, captain of the club, writes us as follows: "The Ossining Gun Club will give on Wednesday, Aug. 14, a grand clam bake. This will be the first of a series of entertainments to be given by the Gun Club, and every effort will be made to make of it a most enjoyable occasion. The day's fun will start at 10 A. M. with a merchandise clay-bird tournament. In each event a special merchandise prize will be offered, not to be shot for, but drawn for by those entering in the events, so that the casual shooter will have the same chance as the more expert one. Sweepstakes will be divided in the usual manner. Shooting will continue throughout the afternoon till 6 o'clock, when the music of Doyle's Ossining band will announce that the sea weed has been raked away, and that the bake is ready for the tables, together with all the accessories which go to make up a first-class clam bake. Ossining is thirty miles from New York city on the N. Y. C. & H. R. R. R."

The following is taken from an exchange: "King Edward, of England, can handle a gun with the best field shots. When in India he went in for that most exciting of sports, tiger shooting, and it is on record that when out with Sir Jung Bahadur in Nepal he brought down six tigers in one day." It is a matter of deep regret that King Edward was not included in the membership of the English team in its recent contest with the American team. King Edward, wearing his Sunday crown for a shooting cap, would have been no small factor in making better gate receipts than were in evidence. The foregoing excerpt, however, is rather suggestive of what might have happened if Sir Jung Bahadur, whose name indicates that he would concede that when they both fired at the same tiger the kill was the King's, had remained at home. In a tiger shoot an official referee and scorer are essentials for official records.

Mr. W. H. Hayes, of Ottawa, Canada, writes us as follows: "At the request of Mr. A. W. Throop, secretary-treasurer of the Dominion Trapshooting and Game Protective Association, under whose auspices the St. Hubert Gun Club, of Ottawa, is holding the first annual tournament on Aug. 15, 16 and 17, as announced in your 'Fixtures,' I write to inform you that the programme is now in the printer's hands, and will be ready for distribution toward the close of next week. There will be two events each day, seven guaranteed purses of \$50 each, with added money. There will be some merchandise prizes, but the main feature of the extra series match will be cash prizes to value of \$150. All events will be shot over the magatrap, except extra series, which will be shot over five expert traps. Grounds are first class and easy of access. It is cool up here in the shadow of the Laurentides."

On July 13, the third, and, as it proved, the final contest of the series for the cup, was shot between five-man teams of the Exeter, Dover and Portsmouth Gun Clubs. The Exeter Gun Club was victorious for the third time. In the acceptance of the cup Mr. Gerrish, of the Exeter team, stated the sentiment associated with the cup was most prized, and that the cup was now open to teams from any clubs in New Hampshire, or even the United States. Each man shot at 20 targets, thus making a total of 100 possible. The scores were: Exeter, 95; Dover, 83; Portsmouth, 78.

The Sharon Springs, N. Y., Gun Club announces that its first shoot will be held on Aug. 3, commencing at 10 o'clock. A magatrap and bluerocks will be used. There are 15 events on the programme. Entrance \$1.25, targets included. Rose system, 5, 4, 3 and 2. Agents may shoot for targets only. Mr. Andrew Smith is the secretary.

Many articles have first and last been written on the matter of trapshooting and its unlikeliness to field shooting. It is held by some sportsmen that, being unlike field shooting, it is accordingly wrong. The matter is discussed on the editorial page of FOREST AND STREAM this week.

The two-man team match fixed to take place at Interstate Park on Saturday of last week between Messrs. Van Allen and Morley on the one side against Messrs. Applegate and Stevens on the other, 100 birds each, \$200 a side, was postponed to Aug. 5.

On July 19 the Fitchburg Gun Club 10 man team, defeated the Leominster Gun Club 10 man team, by a score of 368 to 329, each man shot at 50 targets. The contest took place on the ground of the Fitchburg (Mass.) club.

Mr. Thomas Donley, of St. Thomas, Ont., under date of July 19, writes us as follows: "I intend holding my fifth annual tournament here on October 9, 10 and 11; live birds and targets."

Mr. Paul North was a visitor at Interstate Park on Wednesday of last week at the target tournament. He was in excellent health after his long trip abroad.

The Catchpole Gun Club, of Wolcott, N. Y., announces, through its secretary, Mr. E. A. Wadsworth, that it will hold a target tournament on Aug. 2.

The Portsmouth (N. H.) Gun Club will hold a grand shoot on August, the programme of which will be issued in ample time.

The Holyoke (Mass.) Shooting Club will hold its annual target tournament on Aug. 2. Mr. J. R. Blamey is the secretary.

BERNARD WATERS.

WESTERN TRAPS.

St. Paul Sixth Annual.

CHICAGO, Ill., July 20.—The sixth annual tournament of the St. Paul Rod and Gun Club, of Minnesota, held last week, was a satisfactory affair, the attendance being beyond what might have been asonably anticipated. Mr. H. C. Hirschy was in charge of the office, but seemed to have time enough to shoot also, and out

of a total of 450 targets shot at he scored 96 per cent., in spite of some little difficulties with a new gun, which he had just begun to use. Other officers of the club who assisted in the duties of running the shoot were Paul Gotzian, Paul Hauser and J. C. Highhouse. Two sets of expert traps were used, and the birds were thrown at a very stiff clip, which made the shooting hard. Hughes, of Palmyra, Wis., made a good second to Hirschy. In the Minnesota championship there were twenty-two entries, the trophy being won by Hirschy, who shot out McDowell and Parker in the tie. On the second day the team shoot for the Hirschy trophy was pulled off, teams being entered from St. Paul, Eau Claire and Minneapolis, Minneapolis winning with the fine team record of 91 targets out of 100. The following are the scores in the regular tournament events, as reported by "Dr. Bill":

First Day's Shoot.

Table with columns: Events, 1-12, Broke. Lists names and scores for various events like Muir, Baldwin, Vance, etc.

Second Day's Shoot.

Table with columns: Events, 1-12, Broke. Lists names and scores for various events like Baldwin, Schultz, Frazier, etc.

HARTFORD BUILDING, Chicago, Ill.

Chicago Gun Club.

Chicago, Ill., July 20.—Steck won the high gun trophy to-day. A. W. Morton won the handicap trophy. Chas. Antoine won the monthly trophy. The weather was too hot for comfort.

Weekly trophy, 25 targets. Table with columns: Name, Broke, Hdcp, Total. Lists Mrs Carson, Dr Carson, R B Mack, etc.

Ties on 25: R B Mack.....110111110—8 A W Morton.....111110111—9

Monthly trophy, 15 targets, handicap rise. Table with columns: Name, Broke. Lists Mrs Carson, Dr Bureky, etc.

Race, 20 targets. Table with columns: Name, Broke. Lists Mrs Carson, Dr Morton, etc.

Targets: Mrs Carson..... 10 10 * * * Targets: A W Morton..... 10 10 * * * Lists other names and scores.

Garfield Gun Club.

Chicago, Ill., July 20.—The appended scores were made on our grounds to-day on the occasion of the fifth trophy shoot of the second series. W. P. Northcott carried off the honors by being the only one to go straight in the trophy event. Dorman and Marshall tied for Class B medal on 22, while Silas Palmer won Class C medal on 20.

The day was too hot for comfort, and was a little too windy; still thirty-five shooters took part in the trophy event, and over forty shot in the various events of the day. It was also the occasion of the third match against La Grange Gun Club, and the third successive defeat for them. We heartily wish them success and prosperity, as they are made of the right stuff, and we wish to assure them of a cordial welcome at our club always.

La Grange Gun Club.

Garfield Gun Club.

Table with columns: Name, Score. Lists T P Hicks, Dr Shaw, A Hellman, etc.

Fifth trophy event, 25 targets. Table with columns: Name, Score. Lists T A Hagerty, A Hellman, S E Young, etc.

Sweepstakes:

Table with columns: Name, Score. Lists Shaw, Pollard, Northcott, Dorman, etc.

DR. J. W. MEEK, Sec'y.

Trap at Watson's Park.

Chicago, Ill., July 14.—The following are the scores made at my park to-day. While we expected more people, we presume the hot weather kept many away; but those who did come were treated to some rare birds, considering the summer weather.

We will hold another all-day shoot on July 28, and as we will have plenty of good birds, we no doubt will have a much better crowd, and the cars will then be running to my door, so no more long walks:

Seven birds, \$2 entrance: Wm. Wilburn 6, Joe Frey 3, Gus Man 5, Dave Lloyd 5, J. M. Blockenger 6, Harry Bennett 5, Jas. Robb 6, J. M. Howe 7, H. Woolsey 2.

Ten birds, \$3 entrance: Wilburn 10, Ross 7, Man 9, Jos. De Planzo 9, Frank De Planzo 8, J. P. Harry 1, Lloyd 7, Bennett 9.

Five birds, \$1 entrance: Wilburn 4, Bennett 4, Man 5, Robb 4, Howe 3, Woolsey 2, Blockenger 4, Frey 1, Jos. De Planzo 4, Frank De Planzo 3, Lloyd 3, Bloss 1, Cerro 2.

Two pairs doubles: Jos. De Planzo 1, Frank De Planzo 2, Wilburn 2, Man 3.

Match for price of 25 birds: Jos. De Planzo 22, Frank De Planzo 20, Wilburn 20, Man 17.

Seven birds, \$1 entrance: Robb 4, Woolsey 4, Wilburn 6, Jos. De Planzo 7, Frey 5, Lloyd 6, Bennett 5, Howe 3, Blockenger 5, Harry 2, Cerro 0, Clark 0, Bengel 4, Kidd 0.

Fifteen birds: Bennett 12, De Planzo 11, Robb 7, Wilburn 14, Man 15, Lloyd 11.

ITALIAN JOE.

Lafayette Gun Club.

LAFAYETTE, Ind., July 12.—There was a fair crowd out to-day to witness the practice shoot of our club at their beautiful shooting park. The wind was blowing directly across the traps on the start, which made the shooting difficult. It settled down toward evening, when a most enjoyable contest set in. Our boys are practicing faithfully for our tournament on Aug. 8 and 9, when we look for a large attendance. I herewith append scores:

Table with columns: Events, 1-12, Broke. Lists John Johnson, Lockwood, Boone, Knowles, etc.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Annie Oakley, Challenges and Championship.

Editor Forest and Stream:

During Annie Oakley's shooting career I think she has received more so-called challenges than any one in the same line, with the possible exception of Dr. Carver. Now, as it may interest some of your readers, I send a few samples of these challenges, and I will leave it to the sportsmen of America if she is right in her determination not to use that much-abused word. But right here let me say that not one of these challenges was accompanied by a dollar to back it up; but as they went the rounds of the press I suppose they served the purpose for which they were intended.

Although I have not my scrap books at hand, I well remember the first challenge. It was during her first engagement at the Olympic Theater in Chicago, a woman who killed her husband, a Mrs. Jesse James, challenged Annie for all kinds of shooting. I had much to learn in those days, but as I had just \$100 in the world I deposited \$50 with a sportsman's journal; then I was fool enough to make a flying trip to Milwaukee, where I found her posing in a dime museum. On making myself known and asking if she was Mrs. Jesse James, I was staggered with the reply, "Who the—do you think I am?" I returned to Chicago with less money, but a little more sense, and as I had not learned to kick myself when I made a mistake, I butted the knobs of the wash stand instead.

I need not say that the party was an impostor and in no way related to the real Mrs. Jesse James, who I have since learned is a lady in every sense of the word.

Along about 1879 or 1880, before Annie Oakley commenced shooting, two women were touring the country, giving exhibitions of rifle shooting, during which they shot apples off each other's head. One night, while doing this trick, one killed the other. As it was known that they had quarreled that same day some claimed it was done purposely, but the one responsible proved that she was intoxicated, and not accountable for the accident. Two weeks later she was billed as the "Woman Killer." She has been appearing under different names since then, and has more than once challenged Annie Oakley.

During one of my visits to London there was a woman shooting in one of the music halls under the name of Winona. She never missed ringing the bell, and was making quite a reputation, and as a matter of course, issued the usual challenge. A few days later she called on Annie Oakley in her dressing tent. During her visit I took pains to show her some American rifles, in which she seemed to take little if any interest. I think she must have had a brandy and soda more than was good for her, for she grew quite confidential, and more than surprised me by saying, "Pon my word, Miss Oakley, I don't know a thing about rifles. My cartridges are all blank, and my husband rings the bell by pulling a string." Now, this may seem strange, but I have seen many of the shooting acts on the English stage worked on the same principle, and not only the audience but the managers as well swallowed bait, hook and all. I saw the same thing worked in a New York theater last winter, but more than one in the audience caught on to the game.

During my last visit to London, an exhibition shot made a proposition which was certainly original. He was a self-styled captain, and always proved he was using single bullets by showing his wife's hands, which were minus some fingers. One day he called on me at the hotel, and this was the plan outlined by which we could make some money. As well as I can remember, it was like this: "See here, old boy, you are in this business for the money. So am I. Your wife has a great reputation, and my missus can shoot a bit. Now, I was talking to the manager of a music hall, and I told him my idea. He blooming well fell in a fit, and I know we can make a tidy bit out of it. Now here it is: Let your wife shoot one hundred shots against mine. Each to take a drink of ale or beer at the end of each ten shots; that will be something new and pack the blooming shop." I told him that Annie Oakley would stand no chance in such a contest; and to this day he is telling it in the third-class barrooms how his missus challenged Annie Oakley.

One woman who often challenged Annie Oakley has three living husbands, or said to be such, and I have clippings from Western papers which, if half true, would keep any respectable man or woman from entering into any contest or controversy with her.

Now, just a few more lines, and I am through, having already taken up more of your space than I had intended doing. Annie Oakley is always glad to meet ladies, either at the trap or in the field, and should they make a better score than she, it will make no difference in her friendship toward them; in fact, some of the best lady shots in the country to-day are counted among her dearest friends, and as she is the pioneer in that line she is always proud when they score well. For what better monument could she leave behind than lady shots and lady gun clubs?

But let me say right here, and once for all, that no woman with a shady past or doubtful reputation can ever enter into a personal contest with Annie Oakley while I am managing her, as she values her private reputation far more than her shooting one, and as for the word champion she will never use it.

Once more I ask in her behalf that her friends will omit it in connection with her name. FRANK E. BUTLER.

Echoes of the Anglo-American Match.

NEW YORK, July 20.—Editor Forest and Stream: Since my return to America from the trip of the American team to London and Glasgow, I have been asked so many questions about different matters connected with and met with on that trip that it seems as if it would not be taking up your space uselessly should you decide to print what follows:

In the first place, many people have wanted to know what "the Welsh Harp" is; its distance from London, etc. "The Welsh Harp" is the name of an inn, or road house, as it would probably be called here, about eight miles from the center of London, taking the street called Strand as a possible center. The grounds used by the Middlesex Gun Club, where the international races were shot, are "just across the road" from the Welsh Harp—that is to say, a highway and a line of the Midland Railway separate the two grounds.

At the Welsh Harp a set of traps is arranged and maintained solely for live-bird shooting, the equipment being up to date. Fast birds are trapped, and with a summer boundary of 30yds.—50yds. in the winter—high scores are seldom made. Betting on individual shots cuts quite a prominent figure at all shoots held at the Welsh Harp grounds; and the same may be said of all shooting grounds in England and on the continent of Europe. In fact, it would often appear to an outsider as if pigeon shooting on all such grounds was merely an incident, the laying and taking of odds being the main feature, with the value of the sweepstake as a sort of side issue. Any shooter troubled with nerves would find it a hard matter to get schooled so that the noise made by those who endeavor to get a bet on his shot didn't bother him. There are a few men on this side whom I have known to object to any loud talking while they were at the score. It would be amusing to see how such requests for silence as I have heard made here would be received on the other side of the Atlantic. I'm afraid there would be but little diminution in the offers to take and lay odds.

All bets on individual shots are made "on the nod"—that is, no money changes hands until after the referee's decision on the shot has been rendered. For instance: At the Welsh Harp on the Monday after the International series of target races, June 17, there was a grand gathering of pigeon shooters and spectators, the main feature on the programme being a contest for a very handsome trophy, purporting to be the international live-bird trophy, a competition which I have already described and in which first honors and the cup were carried off by Billy Crosby after a shoot-off with Parmelee, Heikes, Powers and Elliott, Parmelee losing his 17th bird dead out of bounds. Betting on each shot was very active, particularly at the start, when the English betting men were quite willing to take what seemed to our boys absurdly low odds. One Englishman, a prominent live-bird shot himself, expressed himself loudly as willing to take "four to one" on the gun; in other words, more easily understood here perhaps, he was willing to wager one to four on the bird. The Americans, rooters and shooters, promptly accommodated him with a bunch of bets (the man at the score being one of our team), the total value of which was worth while considering. Yet not a cent was put up! The shot being successful, the taker of the odds satisfied all his liabilities, and went to work on the same lines as before on the very next shot. It was simply a case, "I'll take," etc., and "I'll lay it you in." As Frank Parmelee put it, that was one place where "mouth bets went."

A matter of interest in connection with this competition were the conditions of the contest. There were: 12 birds per man, entrance fee (in American equivalent) \$10, re-entries to the number of four each being allowed up to the end of the fourth round, \$500 guaranteed, with handsome cup to the winner. As there were ninety-eight entries and re-entries all told, the management netted a nice thing out of the shoot, nothing but the cup and the \$500 guaranteed going to the shooters. The Americans took the \$500, but there was not much margin left after all expenses had been paid.

Again, I have often been asked why it was that the scores made by our team in the international series in London were so low comparatively speaking. My answer has always been that some of the scores, though apparently low on paper, were really as good as many of the 98 and 97 per cents. often recorded over here.

It must first of all be remembered that the members of the team had only had two half-days in which to practice on targets thrown very hard against a decidedly poor background. Shooters stood at the score on ground slightly higher than the traps, thus shooting down hill. The field in front of the traps sloped off rapidly down to a hedge and ditch, and then rose again quite as rapidly, making it extremely hard to gauge the speed of a target. The traps were screwed up to throw a target fully 60 to 65yds.; at least such was the impression of all our men. To the right was the 60ft. tower from which targets are thrown overhead to represent "driven pheasants," etc. The timbers of this tower were well peppered with shot, targets frequently crossing in front of it, and passing away beyond it also. The "high right-quarterers" from Nos. 4 and 5 traps were generally to be classed in the hoodoo category, as, in addition to crossing the tower, they were against a long viaduct constructed on several brick arches, which added to the difficulty of properly locating the targets.

As regards the heights at which the targets were thrown, they were thrown fully up to the limit of "12ft. 10yds. from the traps," the agreement being that they were to be thrown "not less than 6 nor more than 12ft. high 10yds. from the trap." They were thus a lot of very high targets; as the boys said, "You've got to bury the straightaways to make sure of them."

Every shooter knows the value of shooting in a squad with a uniform gait. Nothing is so liable to break up a squad as to have an extremely quick or an extremely slow shot in its ranks. The quick shot is far preferable to the slower one. Had our boys been shooting in squads by themselves scores would almost certainly have been correspondingly higher. As it was, they were sandwiched in—first an Englishman, then an American, and so on. It was a little disconcerting, too, perhaps to have a man alongside of you blowing off both barrels now and then.

Anyway, whatever the scores were, when all conditions are taken into consideration, the totals of the American team made at the grounds of the Middlesex Gun Club during the international series would take a lot of beating. Given another week's practice, there would of course have been an improvement; but as it was, the scores were really very good indeed, and reflect great credit on those members of the team who made up the honored "ten" on each of the three days.

Up in Scotland conditions were different. It was a case of "known traps and angles" in the match with the Scotchmen at Glasgow. While there was no sky background, the lack of it was more than made up for by the fact that both trap and angle were known to the shooter when he called, "Pull." The traps were placed in a pit, or rather, trench, at the foot of a hill which rose rapidly in front of the traps. Thus it was really impossible to throw a target very far as a straightaway, for it plunged into the hill as it were. Left-quarterers could not be thrown at an acute angle on account of some workmen who were excavating foundations for a new hospital on the brow of the hill to the left. The only acute angle target was the right-quarterer from No. 1, which skated along low and fast to the right, and was probably the most missed target of any of them.

Another reason for the higher scores in Glasgow was probably the better condition of the team, which had had plenty of time to get rid of its sea legs, and accustomed to late hours for eating and the English cooking. As a matter of fact, the whole team was feeling fit and well when it took into camp our Scotch friends; 969 breaks out of 1,000 shot at speaks for itself.

I don't believe I have ever mentioned that at the Glasgow shoot there was no pulling apparatus—each boy pulled his own trap. The shooter had thus to call, "Pull" in a loud voice so as to make himself plainly heard in the trapper's pit, 18yds. away. At first Fred Gilbert thought this would handicap him: "My boyish voice never will reach them; I'll get all kinds of balks." The exact reverse was the result. Fred's high-pitched "Pull" penetrated the Scotch atmosphere like the whistle of a locomotive, and the boys pulled their traps at once. EDWARD BANKS.

Mississippi Valley Notes.

SPORTSMEN generally will be pleased to learn that the tangle over the faulty section of the new Illinois game law with regard to the taking and killing of quail is at last so far defined as to enable the State wardens and deputies to take a firm stand in the protection of this favorite game bird. The saving clause lies in that section of the general law making quail, in common with all other native birds, the property of the State. This gives the officers the right to arrest for confiscation, and State Game Commissioner Lovejoy has issued an order to all wardens, backed by the advice of Attorney-General Hamlyn, ordering the most rigorous enforcement of this section, as also that relating to trespass, between Dec. 20 and Nov. 1 of every year. This position will meet with the unanimous indorsement of sportsmen of the State, and thus it is believed that quail will have practically the same protection as under the old law, which increased their numbers ten-fold in two years.

State Game Commissioner Lovejoy, of Illinois, has established his headquarters at Roscoe, where all communications in relation to this subject should be sent. He is rapidly reorganizing his force of wardens and deputies, and expects within a few weeks to have the State well policed with men whose business it will be to see that Bob White and his little brown mate are not molested in their merry summer home.

Throughout this Western Valley, wherever two or more men meet who love the shotgun and its uses, the foremost theme of conversation and mental pride is the performance of our representatives who so gloriously vindicated American marksmanship in the recent contests abroad. Nothing that has happened in the shooting world for years had or can have a broader influence in promoting interest in this splendid national sport.

"Old man" Dietrich, of Waveland, Ind., took all the boys over the rough road at "Cad's" recent Danville shoot. Mr. Dietrich wears his sixty-five summers with all the grace of a man of thirty, and in the long races he made the only 25 straight, pocketing a \$15 purse, and completing a string of 50 odd straight kills.

Charlie Wiggins, of Homer, is one of the newer lights in Illinois shooting circles, whom the boys significantly designate as "a comer."

The nearby cities of Taylorville and Morrisonville, Ill., have been mixing it lately in a series of alternating challenge matches. To date honors are even, and each club has recently provided new traps and grounds, the better to prepare its members for future battles.

Dave Elliott gave his usual semi-monthly shoot at Dupont Park, St. Louis, on the 14th inst. Attendance was above the average, and the average at Dave's shoots is always good.

And the next thing will be the fixing of dates for the annual Indian pow-wow and tourney. Recent developments should insure this being a record meet.

Harold Money is getting quite well acclimated to the tone and spirit of the Western shooting game. He has been doing the South and Southwest lately, and so far as we can learn has given no one an opportunity to do him in the matter of good scores.

The marked success of the recent floating tournament, given by the Mt. Sterling Gun Club, on the Illinois River, is likely to result in other events of the same kind soon. The sportsmen of the Beardstown Gun Club are arranging for an all-day "excursion shoot" in connection with a local merchants' carnival some time during August.

J. K. Cadwallader is authority for the statement that a three-day target and live bird shoot will be held in that city late in the fall. Fred Schiess won the Class A and Henry Phinney the Class B medal at the July 12 shoot of the Piasa Gun Club, Alton.

The Progressive Gun Club, of East St. Louis, will hold its regular monthly tournament and medal contest on June 4.

In Frog-Killing Time.

Come, write, said the Colonel, a song-of-release From midsummer madness—a metrical rhyme, That brings to the spirit a message of peace, A lit of the pleasures of frog-killing time.

Away with dull routine of office and shops, Where avarice strives and ambition would climb; We're off to the pond where that old monarch stops, The king of the season of frog-killing time.

With rife and gig as the barb of deceit, We lure the sly imp from his home in the slime, And nothing that tickles the palate can beat The fruit of our labors of frog-killing time.

The croak of the cynic may float like a log, Low down in the current enveloped with grime, But nothing can tempt from their camp in the bog, Amphibious nimrods of frog-killing time. F. C. REHL.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., July 17.—The regular shoot of the club today had fifteen events, all at unknown angles, from a magatrap. The scores:

Table with 15 columns (Events 1-15) and rows for Taylor, Cutler, Wilder, Dix, Donovan, Hawkins, Churchill, Esty, Dwight, Rob, Russell, Bean, Curly.

July 19.—Special match shoot. The team race was at 50 targets and is included in events 8, 9 and 10:

Table with 15 columns (Events 1-15) and rows for Taylor, Cutler, Donovan, Stickney, Converse, Wilder, Farrar, Powers, Andrews, Beau, Whitney, Esty, Sanders, Bell, Dix, Rob, Dwight, Russell, Curly, Rice, Gates, Burbank, Wood.

The second of the series for the Damand & Gould Company cup, ten-man teams, from Leominster and Fitchburg, was pulled off this afternoon, on the grounds of the Fitchburg Club. The weather conditions were perfect.

Targets were thrown from magatrap, 60yds.—quite different shooting from targets at 40yds.

The Leominsterites' shot much below their average, for they are generally able to compete with the best; but they will prove themselves good losers when they become a little more accustomed to it, for in former years everything came their way.

The Fitchburg men seemed to let up on the last half, probably because they saw they had the race sure.

Cutler was an exception, for he is shooting for a record, and as usual shot better than 90 per cent. This makes two straight wins for Fitchburg. Three wins takes the cup.

Table with 15 columns (Events 1-15) and rows for Taylor, Rob, Donovan, Beane, Dix, Russell, Esty, Converse, Wilder, Cutler.

Table with 15 columns (Events 1-15) and rows for Farrar, Wood, Sanders, Powers, Stickney, Burbank, Andrews, Gates, Rice, Whitney.

I. O. CONVERSE.

Maple City vs. Milan Gun Club.

NORWALK, O., July 18.—The score of the live-bird match, made between teams of three men each from the Maple City Gun Club, of Norwalk, O., and the Milan Gun Club, of Milan, O., shot on the grounds of the Maple City Gun Club this day, five ground traps, 28yds. rise, \$30 a side, was as appended.

The shooting was witnessed by a large crowd, notwithstanding the intense heat.

The second match will be shot at Milan, Wednesday, July 24, when the Norwalk boys will endeavor to duplicate to-day's victory.

Table with 15 columns (Events 1-15) and rows for Norwalk (Gallup, Reiley, Lankin) and Milan (Lundy, Purcell, Steck).

GEO. L. TRUES.

Ossining Gun Club.

OSSINING, N. Y.—Herewith please find scores of the Ossining Gun Club, made at the regular weekly shoot, Saturday, July 20. The attendance of the club members was small, as many are out of town. Some of the Mt. Kisco Gun Club boys came over and took a fall out of us. Betti is a mighty man with the scatter gun, with Sutton a close second. Betti scored 48 out of his last 50.

There were ten events shot, all sweeps. No. 5 was at 5 pairs. The Mt. Kisco boys are coming to the merchandise clay bird shoot and clambake on Aug. 14. They will be counted on to keep the talent hustling for straight breaks to get into the money.

Table with 15 columns (Events 1-15) and rows for A. Betti, G. Sutton, R. Gorham, F. Bailey, C. Blanford, W. Hall, C. Barlow.

C. G. B.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

The Grand American Handicap at Targets.

The second Grand American Handicap at targets was held at Interstate Park, L. I., on July 16, 17, 18 and 19.

The first day was devoted to sweepstake shooting, of which ten events were provided—five at 15 and five at 20 targets, entrance based on 10 cents per target.

The second day was devoted to the Grand American Handicap, and the Consolation Handicap, these handicap events being the only parts of the competition open to all, professionals and amateurs.

The weather was sultry and oppressive, owing to the high degree of humidity. A light 2 o'clock wind blew in the faces of the shooters.

There were 14,239 targets thrown on the first day; on the second, 16,620; on the third, 16,590; on the fourth, 11,983; total, 59,432.

The main interest in the tournament centered in the handicaps, of which there were three, and the most important of these was the Grand American Handicap at targets, shot on the third day.

As to the handicapping, it was received as well as could be expected, when the personal interests of the shooters, the over-estimates of each other and underestimates of themselves, etc., are considered.

The weather was most uncomfortably sultry. No more unfavorable dates could have been selected, in respect to weather.

There were no averages or high averages in the programme, so that averages have no other than personal significance.

Fanning, J. R. Malone, Leroy (B. Leroy Woodard), Winchester (A. H. Fox), I. Z. Laurence, Phil (C. W. Phellis), L. C. Squiers, E. D. Rike, E. C. Fort, O. R. Dickey, H. S. Wells, G. R. Schneider, T. H. Keller, J. J. Hallowell, A. G. Courtney, E. D. Fulford, Horace (H. C. Kirkwood), W. K. Park, T. E. Doremus, L. D. Thomas, Capt. A. W. Money, G. E. Greiff, A. E. Lard, Neaf Apgar.

Mrs. W. K. Park, and Miss Mamie Hyland shot for targets only. All others were required to enter in full.

Tuesday, July 16, First Day.

The weather was sultry and oppressive, owing to the high degree of humidity. A light 2 o'clock wind blew in the faces of the shooters.

There were ten events on the day's programme—five at 15 and five at 20 targets, entrance \$1.50 and \$2. All events were at unknown angles.

Table of scores for Tuesday, July 16, First Day. Columns include shooter names and scores for 15 and 20 target events. Includes names like Hicks, Baker, I C E., Anthony, Remsen, Gardner, Hoffman, Apgar, Glover, Piercy, Heikes, Gilbert, Crosby, Banks, Fanning, Dudley, Shorty, Dalley, French, Gregory, Lupus, Hawkins, Storr, Hood, Malone, Hammond, Ellison, Stearns, Le Roy, Winchester, Cartledge, Burke, Laurence, Snow, C Wagner, Phil, Squier, Sanford, Mingo, Rex, Tallman, Blackbird, Seitz, Mink, Geoffrey, Leland, Howe, Sawin, O'Rourke, W Hopkins, Van Allen, J Douglass, W H W., Welles, T W Scott, Courtney, Morris, Pumphelly, McCord, Sen Sen, Rike, Billings, Sinnock, Fulford, Kelsey, G G Stevenson, Dupuy, Mrs Park, W K Park, Collins, Barnard, Schmidt, Busby, Potter, Moller, J J Hallowell, Mack, Griffith, Capt Money, Ridge, Whitin, Bain, Inman, E Leek, L Thomas, Dr Martin, F B Stevenson, E C Fort, Keller, Marsh, Dr Hudson.

Wednesday, July 17, Second Day.

The weather was again sultry. Rain set in about the middle of the afternoon, and made the shooting about an hour later in consequence.

The total amount of the purse in the Preliminary Handicap was \$458, and the winners in their regular order and the amounts were as follows: Fulford, \$73.28; Sawin, \$64.12; Hoffman, \$50.83; Inman, \$41.22; Dudley, \$36.64; Dickey, \$22.06; Ellison, \$27.45; Glover and I. C. E., \$22.00 each; Tallman, \$18.32; Snow, Crosby and Remsen, \$13.74 each; Mink, Howe and Whitman, \$9.16 each.

Table of scores for Wednesday, July 17, Second Day. Columns include shooter names and scores for 15 and 20 target events. Includes names like Events, Targets, J C Hicks, Baker, I C E., Anthony, Remsen, Morley, Hoffman, Apgar, Glover, Heikes, Piercy, Gilbert, Crosby, Banks, Fanning, Dudley, Shorty, W Hopkins, French.

Table of scores for Thursday, July 18, Third Day. Columns include shooter names and scores for 15 and 20 target events. Includes names like Gregory, Lupus, Hawkins, Storr, Hood, Malone, Hammond, Ellison, Stearns, Le Roy, Winchester, Cartledge, Burke, Lawrence, Snow, Wagner, Griffith, Phil, Squier, M Sanford, Mingo, Rex, Tallman, Kruger, Dupuy, Geoffrey, Mink, Fort, Sawin, Whitin, Courtney, Fulford, Dalley, Morris, Pumphelly, Howe, Dr Martin, Leland, Kelsey, Simmins, Halscy, Van Allen, Capt Money, Douglass, Rike, Mrs Park, W K Park, Greiff, Ridge, Mack, F Stevenson, G Stevenson, Collins, J Martin, C W Scott, Cowan, C Weinman, W H W., D Sanford, Inman, Merriman, A Betti, Bain, L D Thomas, Sen Sen, Mc Cord, Hallowell, R Rahm, Paddleford, Miss Hyland, Leek, Franklin, Barnard, A E Lard, Super, Sanders, Schneider, Dickey, Creamer, Lard.

Ties on 92: Hoffman 21, Sawin 21. Second tie: Hoffman 19, Sawin 23. Ties on 90: Dudley 21, Ellison 17, Dickey 22. Ties on 89: I. C. E. 23, Snow 15, Tallman 20. Ties on 88: Remsen 25, Mink 23, Whitin 21, Howe 23. Second tie: Mink 23, Howe 22.

Thursday, July 18, Third Day.

The weather continued sultry, with but little breeze to relieve the discomfort of the heat and humidity.

There were three post entries. Mr. E. C. Griffith, of Pascoag, R. I., won the handicap with the excellent score of 95, scoring 22, 25, 24 and 24 from the 15yd. mark.

Table of scores for Thursday, July 18, Third Day. Columns include shooter names and scores for 15 and 20 target events. Includes names like Events, Targets, J C Hicks, A H Baker, I C E., J B Anthony, J S S Remsen, C Mink, J W Hoffman, S M Van Allen, Sim Glover, G H Piercy, R O Heikes, F Gilbert, W R Crosby, E Banks, J S Fanning, Dudley, Leland, Shorty, H French, D Gregory, J M Hawkins, H E Lupus, E H Storr, Hood, J Malone, W A Hammond, H K Ellison, F Stearns, Leroy, Winchester, A B Cartledge, Burke, I Z Lawrence, F H Snow, C Wagner, Phil, L C Squiers, M Sanford, Mingo, Rex, I Tallman, A C Krueger, A M Seitz, H W Dupuy, E Rike, E C Fort.

Table of scores for the first day of the tournament, listing names and their scores across various events.

Friday, July 19, Fourth Day.

The Consolation Handicap had forty-nine regular entries and ten post entries. The winners and winnings were as follows:

The Consolation stake, open to all, 100 blue rocks, \$7 entrance, targets included, handicaps 14 to 25yds, high guns, \$100 added to the purse.

The weather was hot, with hardly any breeze. The scores follow:

Table of scores for the fourth day of the tournament, including consolation handicap results.

Ties on 95: Kelsey 18, Morris 16. Ties on 92: Heikes 23, Le Roy 23, Shorty 23. Second tie: Heikes 21, Le Roy 24, Shorty 24.

IN NEW JERSEY.

Cape May Gun Club.

Cape May, N. J., July 20.—Events 1 and 2 at 25 targets, resulted as follows:

Table of scores for the Cape May Gun Club tournament.

Table of scores for the first day of the Arkansas State Sportsmen's Association tournament.

Arkansas State Sportsmen's Association.

PINE BLUFF, Ark.—The eleventh annual tournament of the Arkansas State Sportsmen's Association, held at Pine Bluff, Ark., July 9, 10 and 11, has come and gone, and one more pleasant memory is stored up for future recollection.

The Pine Bluff ground is ideally situated for such sport. The shooter is always in the shade, while the targets fly into the open sunlight. Meals, refreshment and everything necessary were provided.

Among the trade representatives present were Messrs. F. M. Faurote, Dallas, Tex., and G. H. Hillman, Nashville, Tenn., of the Winchester Arms Company; C. M. Lincoln, New York, of the U. M. C. Company; T. F. Norton, Kansas City, of Peters Cartridge Co., and Herbert Taylor, of the Dupont and Hazard powder companies.

Two of these gentlemen, Messrs. Hillman and Lincoln, were new men, but their modest business-like manners favorably impressed all.

Of Mr. Faurote it need only be said that the company he represents is well represented, and he is, besides, a crack shot.

Mr. Norton was not feeling well during the shoot. I think he worried so as to whether those using Peters shells were getting on all right that it spoiled his own shooting. He is a pleasant, genial gentleman, and we wish him and his goods success.

The first day was so unusually quiet compared with other first days that no one understood it. When Herb Taylor "blew in" the next then all were reminded, and said, "No wonder." Thereafter, as Chris put it, "Den it was not any more now so quiet already." He still persists in claiming that Dupont and Hazard "is the stuff to fix 'em with."

The following from a distance were in attendance: W. H. Joyner, Abe Frank, H. P. Poston (Parks), W. D. Thompson, Memphis, Tenn.; W. A. Leach, J. P. Matthews, Fort Smith, Ark.; G. W. Terry, Clarendon, Ark.; F. Draper, G. Broadway, R. L. Ambrose, A. P. Glympse, G. Matthews, J. Bowman and E. A. Peterson, Jonesboro, Ark.; J. L. Daniels, Mer Rouge, La.; J. F. Welch, Robeline, La.; J. H. Boisseau, Shreveport, La.; Drs. S. P. Collings and A. W. Williams, Hot Springs, also Mr. Rix, of same place; A. B. Franklin, Little Rock, from which ballkick came also Paul Litzke, W. B. Powell, English, Ark.; J. W. Erwin, Greenville, Miss.; W. Arnold, Greenville, Miss.

That Memphis crowd is a fine body of gentlemen from any high standard. They are always on hand and always shoot. Abe Frank will have to be induced to travel for some shell or gun firm, so he cannot compete. He is strictly a non-producer at a shooting match.

Shooters must grow in the woods around Jonesboro. What a strong delegation that burg sent! Mostly good ones, too. In Broadway they have a coming champion. Boisseau and Erwin also are coming experts—mark this prediction.

Joyner and Daniels shot especially strong the last day, each increasing his first day's score by about 20 birds. Broadway came forward with a rush, capturing first the last day.

The Pine Bluff boys did not begin to shoot till the second day. The air was then full of broken asphalt and powdered clays. Pine Bluff can pick a squad that can hold its own with any similar squad picked from bona fide membership in the country.

From wearing red caps they are called the woodpeckers—and right merrily do they tap the targets when once a-going. One of the most gratifying features of the tournament to his friends was the shooting of W. A. Leach. He constantly improved, and the last day, we believe, he was shooting the race of his life.

What a strange reversal in form a few hours may show was witnessed in this as in all other tournaments. Dr. Williams went the first half at a 96 per cent. gait; the second, the figures were reversed. Wright was breaking everything that flew for a half-dozen events or so.

The medal contests brought out some beautiful work. In the two-man team race Leach and Matthews, of Fort Smith, won on 45, Matthews making 25 straight and shooting with excellent nerve.

When the result was announced Tom Norton's face wore a grin as broad as Jenkins' when he heard his mother-in-law had become deaf and dumb. Leach and Matthews shot Peters shells, you see.

Mr. Speers' race for the individual medal was a remarkable one. The writer has never seen finer work. He broke the first 25 straight and 24 out of the next, making 49 out of 50. We believe this is the highest score ever made in these contests. The target lost was "dusted," showing perfect alignment of gun and steadiness of nerve.

In spite of the fact that he said he was nervous, I doubt it, as he was to all outward appearances as cool as the proverbial ice wagon. It was a popular victory, as every one who meets John becomes a friend. He is a genial, whole-souled, gentlemanly sportsman. No higher compliment can be paid. This includes all the better elements of manhood.

Faurote and Abe Frank, shooting in the two-man team medal race, made 49 out of 50. Mr. Faurote scored 25. Being non-residents, the score was not counted.

The three-man team race for medal was won by the Pine Bluff team, Clements making 25, Coles 23, Lloyd 21, a total of 69. This trio is a hard aggregation to beat. We doubt if any club will ever be able to remove the medal from Pine Bluff soil.

So you see 25-straight was a drug on the market here. The writer has seldom witnessed as exciting a race as an extra shot at the close of the tournament the last day, 20 targets, \$5 entrance, ten entries. The shooting was quick and snappy. Faurote and Matthews got 20 straight, Boisseau and Lloyd 19, Powell 18.

Gov. Davis came down and shot a few events, making 14 in one event. The boys are always pleased to have the Governor around. The five high men first day were Abe Frank, 145; F. M. Faurote, 143; Clements, 142; Welch, 140; Broadway and Wright tied for fifth on 136.

The following straights were made on this day: Clements, Faurote, one each; Broadway, two; Wright two 15s and a 20; Daniels and Welch one each.

Second day Faurote was high with 150, Frank 149, Boisseau 145, Clements 143, Speers 142.

The straights were: Speers, Frank, Broadway, Draper, Williams and Collings, two 15s each; Faurote, four 15s; Clements, three 15s; Coles, Lloyd, Daniels, Welch, G. Matthews, Cauray, Wright, Boisseau, Erwin, Wells and Thompson, one each; Frank and Wright made a 20-straight each.

On third day Broadway was high with 145, Faurote 143. Howell, Speers and Joyner tied for third on 141; Clements and Daniels fourth on 140; Frank fifth on 139. Clements, Broadway, Frank, Ambrose and Taylor made two straight 15s this day, while Howell, Speers, Coles, Vick, Erwin, Faurote, Joe Matthews, Thompson, G. Matthews, Bowman, Daniels, Welch and Boisseau made one each.

Speers; Vice-President, Dr. S. P. Collings; Treasurer, E. A. Howell; Secretary, Paul R. Litzke. Mr. Litzke certainly has a hold on the hearts of the convention, and deservedly so, as he is a hard, painstaking worker in the interests of the Association. As Dr. Williams remarked, "We can't get a better, so keep him where he can do the most good."

First Day, July 9.

Table of scores for the first day of the Arkansas State Sportsmen's Association tournament.

Second Day, July 10.

Table of scores for the second day of the Arkansas State Sportsmen's Association tournament.

Third Day, July 11.

Table of scores for the third day of the Arkansas State Sportsmen's Association tournament.

Table of scores for the fourth day of the Arkansas State Sportsmen's Association tournament.

This table includes number broken each day, with totals and percentage. As only those who shot through the entire programme of 480 targets could properly be ranked, the averages of others do not appear.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, AUGUST 3, 1901.

VOL. LVII.—No. 5.
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Did you ever know of a true angler who felt that his life was rounded out, unless when his hair had become gray and his step less buoyant he could once more visit the stream he had first waded and where he felt the thrill which he enjoyed as he took his first trout with the fly? And did you ever notice how frequently after years of experience he looks for the same success he enjoyed when a novice, and departs sadly disappointed, perhaps never to return?
J. S. Van Cleef.

BADLY ADVISED.

In Illinois, as the *Game Laws in Brief* says, "there is no law as to killing or possessing quail, except that quail killed in the State may not be sold, possessed for sale or exported for sale." That is to say, one may lawfully kill quail at any time and may lawfully have them in possession at any time except for purposes of sale.

This unfortunate condition was brought about by the action of the Legislature, which in revising the law last winter omitted quail from the list of birds for which a closed season was named. This was a serious omission on the part of the Legislature, but in seeking to remedy it a grave mistake has been made by the Attorney-General and by the State Game Warden, acting on the Attorney-General's advice. In an opinion given to the Game Warden, the text of which is printed in another column, Attorney-General Hamlin finds substantially:

1. That there is no close season for killing quail.
 2. That the law is still in force which provides that after quail have been killed they shall remain subject to regulation by the State as to use and disposition.
 3. That the only such regulation by the State now in force is one which prohibits sale.
- Or, as stated in the *Brief*, one may lawfully kill quail at any time, and may lawfully possess them at any time, but never for sale.

And yet in the face of these conditions, the Attorney-General advises the State Game Warden as follows:

I would recommend that you instruct your deputy wardens to take possession of any quail killed by any one at any such times in the year as in your judgment would best protect the quail in Illinois from destruction, and under the law, as it now stands, your deputies will be fully authorized to take such possession.

In other words, there being no close season, he tells the Warden to make one, and to confiscate any quail any one may possess in that close season. This is astonishing advice for a State legal adviser to give to an executive officer. Attorney-General Hamlin must know that Warden Lovejoy cannot exercise legislative functions to create a close season for quail. He must know, if he has read it, that nowhere in "the law as it now stands" can be found a single word to authorize the deputy wardens to "take possession of any quail killed by any one at any such times in the year" as the State Warden may choose to specify. The only warrant the statute gives for seizure by the deputies is of game unlawfully in possession, that is to say, under the present law, in possession for sale; and such seizure may be made at any time of the year, irrespective of close season dates. Wardens who should take possession of quail because killed at a certain time would be acting outside of the law. This advice of the Attorney-General, then, is an incitement to lawless acts, and if the deputy game wardens shall attempt to follow it out, they will probably find that they are "fully authorized" only to make trouble for themselves.

Of course the opinion may be only a part of a bluff arranged between the State Game Warden and the Attorney-General, and promulgated for the very commendable purpose of protecting the game. If we are to understand this to be so, putting aside consideration of the manifest want of appreciation of the dignity of his office which

would forbid the Attorney-General being a party to such bluffing, it is a serious question if the end justifies the means. Would it not have been more dignified, and in the end have made for respect of the game laws, if the Illinois authorities had accepted the quail law for what it was, instead of pretending that it was something else, which it was not?

Mr. Lovejoy has been badly advised, and we believe that upon more mature consideration he will realize as much and will not put into operation the high-handed proceedings contemplated in his instruction to all wardens and deputies "to take possession of any quail killed by any one between the 20th day of December and the 1st day of November of the succeeding year." The game law of Illinois gives him no shred of warrant for any such action, the opinion of the Attorney-General to the contrary notwithstanding.

THE SALE OF GAME IN CLOSE TIME.

We print the full text of the decision rendered by Judge Bellinger, of Oregon, in the Deininger case. Deininger, the manager of a fish company in Portland, Ore., was prosecuted for selling in the close season fish imported from Washington. His defense was that the Oregon statute forbidding the sale of game or fish from another State was a restraint upon interstate commerce and void.

In the clear, concise and logical decision Judge Bellinger exposes the fallacy of this contention; and in a single paragraph he states the principle which governs:

The right to legislate without restraint, so far as the game within the State is concerned, is not questioned. When game is brought from another State, by whatever means, or for whatever purpose, or in whatever condition, it becomes, upon the moment of its introduction into the State, a part of the game of the State, and subject to the control of its laws.

The decision takes its place with others as a contribution to popular education in this field. We shall never come to the ending of disputes about the possession of game until the public shall appreciate the principle of the peculiar and restricted character of property in game, whether the game be live or dead. It is to be hoped that before many years shall have elapsed we may have before the Supreme Court a case involving these points for final adjudication there.

It is interesting to note in this connection, as we learn from Jos. B. Thompson, Esq., of this city, that Judge Bellinger is himself an ardent sportsman in the true sense, and has given much thought to these questions of game protection.

SHEEP ON THE FOREST RESERVES.

We reported at the time it came up last year the California case of a sheep herder named Blasingame, who was prosecuted for having grazed his sheep on the Sierra Forest Reserve, contrary to the regulations by the Secretary of the Interior for the protection of the forests. Blasingame was charged with criminal trespass, and it was sought to inflict upon him the penalty provided by the act of Congress for violation of the Interior Department regulations governing the forest reserve. Blasingame made the demurrer that the regulation which he was charged with violating was not binding, since it was a rule made by the Secretary of the Interior, who was without constitutional authority to legislate in the premises. Judge Wellborn, of the District Court of Southern California, before whom the case was argued, sustained the demurrer, holding that the act of Congress conferred legislative power on the Secretary of the Interior and was for that reason unconstitutional.

At the time of the prosecution for criminal trespass, civil suits also were instituted against Blasingame to recover damages for trespass on the reserve, and this new case has just been heard before Judge Wellborn on a demurrer, and has gone against the trespassing herder. Judge Wellborn held that the forest reserves "were the private property of the National Government, in the same way that other land is held privately, and could be defended from trespass."

The application of this principle will enable the Government to protect its possessions in the forest reserves by invoking the trespass laws of the State in which a reserve is situated. The Government stands on the same footing with an individual land owner.

THE DYNAMITER.

The dynamite fisherman is a constant and continuous pest to Michigan fishing waters, and he enjoys practical immunity because the punishment for dynamiting is so slight that it simply adds a spice of danger to the occupation without seriously diminishing the profits. The penalty, when an offender is caught, is a fine of \$5, and the professional dynamiter who is detected, say once in twenty-five times, can well afford to pay this. It is an open secret that not far from Baldwin professionals have long made a business of dynamiting fish and shipping them to Chicago, and the proceeds of a single shipment of brook trout would pay several fines of this kind. A strenuous effort was made last winter by a number of sportsmen of the State, and especially by Mr. Robert Porteous, of Manistee, to induce the Legislature to make the penalty so severe that it would deter the dynamiters; but the effort failed. Once in a while, as at Baldwin the other day, a man is fined, but as a rule the fish killers have it their own way, and one stream after another is ruined.

NO AUTHORITY.

MESSRS. GEO. B. CARPENTER & Co., of Chicago, send us a letter from J. H. Jordan, of Camp Jordan, Eel River, Mexico, Ind., in which he incloses his card designating himself as "special correspondent representing FOREST AND STREAM," and asking to have a tent shipped to him, in return for which, he writes, "I will endorse qualities of same in my correspondence for the different sporting journals I will represent. Will send you marked copies; what I say will be good ad." Mr. Jordan is not a special correspondent representing the FOREST AND STREAM. He is not authorized to procure goods of any character and pay for them by "blowing them off" in FOREST AND STREAM. No one anywhere is authorized to do this, and if any one claims that he is, he should be put down as a fraud. Manufacturers, dealers, passenger agents, hotel proprietors and others who receive propositions of the Jordan character are requested kindly to communicate them to this office.

SNAP SHOTS.

This is the proposition, whether a man is to be accounted a selfish churl who seals his lips to his brother sportsmen when he strikes a trout or bass find; or whether he shall be called a chump if he does not keep quiet and reserve the good thing for himself. Of course one thing upon which the answer will largely depend is whether the find is so big that to "give it away" would mean its ruin by the rush that would follow.

S. Newton Dexter, whose death occurred at Seaconnet, R. I., last Saturday, was a man of large attainments in natural history fields. He accompanied the famous Agassiz expedition up the Amazon, and afterward returned to the same region in the interest of the Smithsonian Institution. Later he spent a number of years among the Indians in the West. He was an extensive traveler, and his life was devoted to his chosen pursuit of natural history study. The FOREST AND STREAM has in years past been favored with many contributions from his pen.

Betting is universally condemned by the moralists, but we beg to be permitted to rise to defend it as an useful factor in the acquirement of ichthyological information. There are two characters whom we have come to know very well by correspondence, for through a long series of years they have been bobbing up serenely at frequent intervals and from various quarters. They are the two friends who bet. The bet is always about the brook trout. It may be a one-pound trout, or a two, three or four pound trout, or even in rare instances a six-pounder, or a ten-pounder. One friend always bets the other that there is no such fish, and they write for information to decide the bet. Now it is perfectly clear that if they did not bet they would never find out about the big fish, and we will all agree that the big trout is something well worth knowing about, and as the man who acquires his knowledge of it by betting would never find out about it in any other way, it is a most commendable thing for him to bet and learn. Thus betting promotes the diffusion of a knowledge of ichthyology.

The Sportsman Tourist.

At the Farm.

It was dusk when we landed at the little flag station of R., among the hills of Western Massachusetts. Farmer Bailey was there to meet us with his hearty voice and hard hand of welcome, and he soon had us and our traps stowed away in his broad, old-fashioned buggy. The road was as rough as the path of virtue, but the little man went it at a spanking pace that threw us about like corn in a popper, and for a few minutes no one spoke for fear of losing the tip of his tongue. When our balancing muscles were in play the questions came out like shots in a warm corner.

"Never was such a dry year," replied Bailey. "Ain't water enough to wet shoe leather. It's as scarce as money in these parts. Never see the birds so hard to find. It's bad on the dogs, too. Their tongues hang out with thirst so's they trip on 'em."

He clucked to his horse. We had just reached the crown of a considerable elevation and were on the brink of a depression looking as deep and dark as Avernus. Bailey always made up for lost time going down hill. We tried to brace ourselves as the buggy ricocheted down the descent. Shooting the chutes was nothing to this.

"Gol ding it, if I ain't had lots of trouble this year," roared Bailey above the rattle of the wheels. "Bought a lot er shells down to the grocery store and couldn't hit a thing with 'em. Not a blame thing! Pattered 'em on the barn at forty paces and couldn't find a shot-mark. Had a feller with me and he said he saw the shot roll right outer the barrels and drop in the grass. I believe him, too, though most generally he's a liar."

We struck a little plank bridge at the foot of the hill and apparently knocked it into kindling wood, but the buggy still went on.

"My best dog, Hal's, lame, too. Feet and legs all swelled and blistered. It's the first time he was ever troubled that way. Something's Jonahed me for sure. Well, here we are! Smell that supper?"

We threaded the littered barnyard without the slightest diminution of speed and brought up with a spine-paralyzing jerk by the milk can rack on which were impaled a ghostly array of great cans. Thankfully we alighted and stretched our tortured limbs. The voices of dogs arose about up from different quarters. The mouth of the great barn yawned cavernously, breathing forth a soft perfume of clover-scented hay that was even more grateful to our senses than the appetizing odor that stole from the lighted kitchen. How quiet the hills were. How velvet the dusk. How petty it all made the city seem with its ceaseless fret and fume, and its sputtering lights soiling the majesty of the night.

Mr. Bailey turned over the mare to a small boy who had seemingly sprung up, mushroom-like, from the earth. "You'll want some supper," he said. "There's ma waiting for you on the piazza. I ate mine early because I've got some trading to do this evening. Come out when you're through and see the fun."

Mrs. Bailey gave us a cordial welcome and swept us into the warm kitchen. "Set right down," she said. "Everything's nice and hot. Never you mind about me; I like to wait." She hustled from stove to table distributing viands and conversation with equal lavishness.

"My, but I had a time last night," she exclaimed. "Mr. Bailey was down to the village and there was nobody here but me and Joe (the small boy) and Louis. Who's Louis? He's one of them French-Canadians, and if he's a good sample then I call 'em a mighty poor lot. Well, as I was saying, us three were all alone when up drives that worthless Bill Thompson, from down C—way. Louis had just finished milking the cows and was sitting on the woodpile sorter singing to himself in that daffy way he has. Bill, he pulled up and I see that he was drunk as a blind owl, but Louis never paid no attention to him; went right on singing that outlandish language. Bill seemed sorter interested at first, but by and by he got mad.

"I'll learn you not to call me names," he said, climbing down out of the wagon and walking over to Louis.

"Louis looks bad enough to frighten anybody. He's about twice as big as Bill, and his face is all covered with black hair, like a pirate. I expected to see him take Bill and throw him over the barn, and I hoped he would, too. But, lands sakes, it was just the other way. Bill made a punch at Louis when he was about ten feet off and that onery critter fell back on the woodpile just 's if he'd been hit. Then he jumped up and ran across the yard, took that stonewall like a heifer and went up the hill as hard as he could go. Bill started to follow, but he hit against the chopping-block and it kinder unsettled him.

"I don't know where Joe was, but he must er seen the whole thing, for he came into the kitchen on the run and went up the back stairs three at a time. Then I heard him get under his bed. A pretty parcel of men folks, thinks I to myself.

"After Bill had sassed the chopping-block for a spell he started for the kitchen. I was mopping up the floor with that mop over there, and I gave it an extra good souse in the bucket of hot soapsuds, and I got to the top of the steps just as Bill had his foot on the lowest one.

"Walk out of here," says I, "or I'll take more'n the dirt off your face."

"I shoved the mop, which was steaming like a kettle on the boil, under his nose.

"Bill never did like water, hot or cold, and he stepped back and let out some awful language. It made me so mad I clear forgot myself and charged right down on him.

"I have to laugh when I think of the way that little drunken critter put for his team. He got into it on the jump and turned it round so quick he cramped the wheels and almost tipped over.

"I ain't the kind to lay hands on a lady," says he, "but if Frenchy'll come down off'n that hill a minute, I'll make him look like a picked chicken."

"He shook his fist at Louis, who was a-setting 'way up there on that big rock and dared him to come down; but Louis, he seemed to think he was pretty well off where he was and never budged a mite.

"Those darned Canadians haven't got any spirit," says Bill. "Well, I guess I'll be going. There's a man down the road a piece I've got to lick."

"My, wasn't Mr. Bailey mad when he got home. He turned right around and drove all over the country looking for Bill, but he never caught up with him. I'm glad of it now. There's no use having any more fuss with people than we can help. You don't mean to say you've finished? Why, you haven't eat a thing!"

We insisted that we had not only eaten, but eaten well, and leaving Mrs. Bailey, smiling broadly over our just praises, to "clean up," we lighted our pipes and started for the barn.

A lantern sputtering in the center of the floor threw Rembrandtesque splashes of light and shadow throughout the interior. Half a dozen farmers, seated on pails and feed boxes, formed a ragged circle about the upright figure of Mr. Bailey, who, hands in pockets and chest thrown out, was fervidly descanting upon the merits of a certain Jersey. Just without the group stood a tall, old man, leaning upon a pitchfork. With his aged hound at his feet he might well have posed for an effigy of Natty Bumppo resting on his rifle. Marvin had been a famous hunter in his day, and even now his lean legs could out-tire many a younger pair, while his keen eye had yet to find its equal in the district. He had taught Bailey all he knew of woodcraft and was rightly proud of his pupil, whom he still called "the boy."

As we joined the old man he threw back his head in a noiseless laugh that more than ever emphasized his resemblance to Cooper's hero.

"Jest listen to the boy," he exclaimed. "He's as slick as the coat of a prize heifer. Lord! he don't know no more about when the cow'll calve 'en Benjy does." He indicated the hound with a downward nod.

The unconscious Bailey again declared in his best Bryanesque manner that within two months the Jersey would become the happy mother of the finest calf, sired by etc., etc.

"So you're going to try the birds again this year," said old Marvin, his eyes half closed and the group seemed to glide away from before him like the slides of a magic lantern, while he looked into the past. "Well, there's a few left, I expect. I've seen most of the four-legged critters go. This place was good ground for them once, but the farms have eaten the heart out of the woods now. I'm not complaining; I've had my share of sport from kidhood up. Hunting was about all I ever was good for and there's some'll say I wasn't so bad at that.

"During the war," he continued with a reminiscent smile, "I uster shoot quail while I was in picket duty. Jest a pinch a powder and a bullet cut up to serve as shot. The birds were most almighty tame.

"It's an odd thing, but I wasn't hit once during the whole scrap, and I've been shot all to hell since. There's a dozen number eights in that hand now, put there by a feller who thought he could shoot woodcock. The back of my head's like a nutmeg grater. Two of us were out after pa'tridge in an alder swamp not far from here. We had pretty nearly covered the ground and was jest swinging together when a bird got up between us, heading straight for me. I turned so's to take him as he went by and the next thing I knowed a charge of shot took me in the back of the head hard enough to lift me off my feet. When I came to my friend was kneeling in the moss, wringing his hands and crying: 'I've killed you, Jim Marvin!'

"Not yet," says I, "but you've made a pretty good try. Get some water, quick!"

"Well, he got some, and by and by I was able to crawl down to the brock myself and soak my scalp. There was five holes through each ear, and that shows you how well he centered me. We was some time getting back to the wagon. On the way we flushed two or three pa'tridges, and I told him to shoot. 'Not me,' he says; 'I've fired a gun for the last time.' He must have meant jest that day," added the old man with a twinkle in his eye, "for he was out next week sure enough.

"I've got three or four buckshot planted in this left arm. It happened at one of these combination shoots one Thanksgiving. Usually I'm pretty good, but that day I couldn't connect with anything. Finally I got mad and poured in a big charge and topped her off with a fist full of double B's. I leant the gun against a fence and I guess I must have left both barrels cocked. While I was talking to a member of the committee some meddlesome mink knocked the gun over, or done something to her. He never could say just what. At any rate she went off—kerwhang—and I felt 's if I had got in front of a charge of grape. I jumped 'round and the first thing I see was this mink spinning like a top. He spun 'round about four times and dropped with a yell. Then I heard another howl and blame if a small boy half way crost the yard didn't begin to spin, too. When he keeled over I took a couple of turns myself.

"However, things weren't so bad as they looked. The jay had a piece taken out of his leg and the kid was only grazed. I'd collected most of the shot. There was a blacksmith shop near there and they lugged me over and dug a good many of the B's out with an awl. But some was tucked in too deep, and whether it was them or whether I got blood poisoning from the awl I didn't know. Anyway it was months before my arm got well. It kept aching and swelling, and every little while a sore would open up and out would pop a buckshot. After that I began to think war was the only safe thing for me."

During the old man's reminiscences Bailey had been doing some silver-tongue work. One of the farmers had offered a certain number of sheep for the Jersey, but Bailey was not quite satisfied.

"Throw in a couple of dollars and she's yours," he remarked.

More haggling ensued, moistened by frequent attacks upon a stone jug of wild-cherry rum. Finally the farmer offered to throw in a pair of hogs to make up the difference, and upon this basis the trade was completed. A dollar apiece struck us as cheap for hogs and we were ready to believe that our host had the better of the bargain.

There was no more trading done that night. The farmers took a farewell swig of wild-cherry rum and left the barn. Out in the yard they paused a moment, faces lifted to the sky, while they snuffed the pregnant odors of the night. Wet weather was prophesied for the morrow. Then the horses were unhitched and one by

one they rattled away in the misty darkness, the new owner of the Jersey towing that reluctant animal in the rear of his buggy.

The morning dawned with a fine rain falling. Patches of mist lay in the hollows between the hills, eddying like slow smoke; now rising and spreading abroad in thin blue veils, now condensing into banks of pure snow. Breakfast was prolonged in the hope that the weather would clear, but when the last piece of bacon had vanished and the pipes were produced Mr. Bailey came in with the disheartening information that the fog was good to hold all day. He fussed aimlessly about the room, shedding drops of moisture from his glistening rubber coat until his wife could stand it no longer.

"You're jest ruining this floor," she remarked with some asperity. "For goodness sakes find what you want and run out."

"Oh, I ain't after nothing in particular," he said, retreating to the doorway. "Leastways—" he paused and a rueful grin rose to the surface—"if you boys are all through p'rhaps you might like to come out in the yard a minute."

We signified our willingness and donning our shooting coats followed him toward the barn. When we were out of earshot of the kitchen he gave us another rueful smile.

"It's them hogs!" he exclaimed. "I didn't want the old woman to know, but he's surely done me on them hogs. They just came this morning. One of 'em's got tuberculosis and the other—, well, the other's a sight. Come and look at 'em."

He led the way to the pen under the barn. In the darkness we could vaguely distinguish two forms recumbent on the steaming manure. One of them—a white one—staggered to his feet and began a retreat to the opposite end of the pen, but his strength gave out and he fell in the muck, breathing stentorously.

"That's the tuberculosis one," said Bailey. "Now look at this critter."

The other, black save for a pallid spot or two on the rump, had also arisen to its feet and stood eyeing us—or trying to. Its head was joined to its body at an angle of almost 45 degrees. It looked as if some one had tried to wring its neck and desisted when half through.

"It's a Phattacia Upsidownia," he exclaimed, misquoting Lear.

"Maybe," said Bailey. "I never heard the scientific name before, and I never see one like it, either. They're butes, both of 'em, ain't they?"

They certainly were unique. The bacon we had just eaten lay heavily on our stomachs as we gazed.

"What are you going to do with them?" we asked at length.

Bailey's expression became more cheerful. "Oh, I reckon I can trade 'em off somehow," he replied. "I'm going to get rid of the rest of my cows to-day, and there's sure to be some suckers along. They only stand me two dollars, anyway."

"You're a wizard if you do it," we said.

We pattered about the barn an hour or so, visiting poor Hal and his eager little sister. Finally it was decided that wet or no wet we would take a short tramp. With Lady ranging joyfully ahead we crossed the pasture at the rear of the house and entered a long swale, where in times past we had always found a few birds. The brook was stone dry, however, and the covert had probably not been used for some time. The only thing that Lady found to interest her was a forlorn turtle laboriously crawling through the brush in search of some pool.

As the day lightened a little we kept on toward a good-sized sheet of water a couple of miles distant, which we judged had resisted the drouth. To a certain extent it had, but it had shrunk mightily—was a mere frog-pond in a setting of black mud. One tiny rivulet still trickled into it and following the course of this Lady came on her first quarry. She made a very pretty point on my side of the brook, the bird—a young cock partridge—lying well. Thanks to the open nature of the ground, I scored a clean kill.

Half an hour later I made an inexcusable miss. The bird flushed on the edge of the woods and flew directly across the pond, the charge from each barrel rippling the water behind her. This was the last partridge we saw, and having completed the circuit of the watershed, and eaten our lunch under a dripping pine, we returned to the farm wet through and somewhat out of sorts. My companion had not had a shot.

Bailey was out and he did not come in to supper, though we heard him drive into the yard. Presently Joe entered in a state of excitement with the announcement that the hogs had been traded. We asked what Bailey had got in exchange.

"Fourteen hens," he replied, exultantly; "and they're worth fifty cents apiece. He's gone off to get 'em now."

We stepped out on the veranda to see the man who would give seven dollars worth of hens for a pair of dollar hogs. The pigs were crated and in the wagon. The farmer, a long, lank individual, in winter overcoat and arctics, held aloft a lantern, while his hired man nailed down the top slats. The hogs seemed ominously quiet. As the last nail went home Mrs. Bailey's voice was heard hospitably inviting the men to come in and take a parting drink of the wild-cherry rum, it seeming that no trade could be binding without this ceremony.

We all filed in, the hired man ridding himself somewhat regretfully of a large cud of tobacco, and stood around the hot stove while Mrs. Bailey filled our glasses. When we had crooked our elbows the hired man withdrew, while his master lingered for a few moments' gossip. He was becoming logical under the influence of a second glass, when an uproar from the yard interrupted him.

"That's Bob," he said. "Wonder what's the matter?" We ran out. Bob, in an attitude of despair, knelt on the wagon seat, peering into the crate.

"Suthin's the trouble with the white hog!" he exclaimed.

We clustered about the wagon, while the farmer held up the lantern. The white hog lay motionless on the bottom; the other, his forefeet on the flank of his prostrate friend, seemed to have a certain sad knowingness in the cast of his head.

Bob ripped off a couple of slats and fetched the victim of tuberculosis a smart rap with his hammer. There was not a quiver in response.

Natural History.

My Raccoon.

"By gum!" he ejaculated in a hollow voice; "he's dead."
"Dead!" said the farmer. "He was alive all right when we put him in."

"Well, he's dead now just the same," retorted Bob. There was a moment's solemn pause. "I've made a hell of a good trade, I have," said the farmer at last. "Probably the black one'll die 'for' we get him home." After a little grumbling and swearing they drove off with their bad bargain. Strangely enough they seemed to blame themselves rather than Bailey. In fact, Bob seemed rather to admire the latter's keenness. Apparently all was fair in trade to these people.

The night had set in clear and myriads of stars lit the dusky vault. The earth smelt fresh and clean after its bath. We lingered awhile snuffing the pleasant odors of the country. My companion began to quote:

"Though every prospect pleases
And only man—"

"P'rhaps we didn't make a good trade on them hogs!" broke in Joe's shrill voice from the direction of the barn, and Louis' muffled laughter completed the interrupted quotation.

FISHER AMES, JR.

Outing Companions.

MT. CARROLL, Ill., July 27.—*Editor Forest and Stream:* The recent communications in FOREST AND STREAM as to who make the best outing companions, has set me thinking.

When one sits down and begins to think out for himself the necessary requisites for an ideal "pardner," there comes before his vision old camps, old friends and new-found friends, whose presence around the camp-fire has strengthened into a friendship stronger than words can portray.

My first camping companion was my father. He it was who taught me the principles of holding on and holding ahead, pointed out the deep holes where watched the gamy bass, first showed me how to arrange the decoys in life-like array, taught me how a blind was constructed so as to deceive the crafty waterfowl; told me the necessity of digging the drain around the tent, to tighten the guy ropes in dry weather, and to slacken them in case of rain. He taught me the signs of mink, rat, coon and other fur-bearing animals; then educated me in the knowledge of their ways and how to outwit them with trap and snare. In odd times on our trips he would stop by some old tree and tell me of the wild pigeons that once roosted there, show me the place he had once killed a turkey or deer; paddled me down some quiet, tree-girted creek in quest of woodcock, or, as we traversed the margin of some rush-bordered bayou, would tell of the geese which once fed there in their annual migrations. It was he who taught me to lay the back log to fry potatoes, to sizzle bacon, how to concoct slapjacks from cornmeal, flour and baking powder.

In fact, as I look back, it seems as though all my wild woods love was derived from this source, and it was all given in such a simple, modest way that I can think of no one I would rather have as a "pardner" than my father. He belongs to the old school—one who crossed the plains in the age of the gold fever, who lived here when deer, turkey, pigeon, wildfowl and all manners and species of game and fur-bearing animals were so plentiful as to be a nuisance.

Then came a new "pardner"—one of the opposite sex—a brown-eyed, quiet little woman, who soon learned from her husband to love the beauties of nature, who humored him in his hobbies of rod, gun and dog; who found pleasure in the gentle woodland breezes, whose eyes dimmed with tears as the rifle or shotgun brought some wild woods inhabitant to death, which same eyes spoke volumes in the way of hunters' fare and appetite as she relished the game dinners in camp. Who, when it rained, would say, "We had a nice day yesterday, and it will probably be nice tomorrow, so let's rest up to-day." Who added a new pleasure by her presence, and brought a more wholesome air into the cooking; who, though not versed in woods ways, lost her heart in the perfect freedom of the camp.

And now, this year, we have another companion—little Hunkie, as papa calls him, much to his mamma's disgust, when visitors are at the house. He is not yet two years old, but this autumn when Frosty Jack has killed off the mosquitoes and knocked malaria sky high, and when the leaves are turning and the nuts falling, when the evening brings the ducks to the lakes to feed, when the autumn tempered days make angling just about right, when squirrels and quail and snipe are ripe, come to our camp on the banks of the northern Mississippi, where the grapes hang in purpled clusters for the ruffed grouse, and our tent is pitched in a good location; look at my companions—father and grandfather in one, the teacher and guest, then the wife and son, and, I don't know what you fellows think about it, but I do know who I think are the best companions to take camping out.

E. K. STEDMAN.

Color Did Not Set.

Frank Furman, who lives at Jamaica, L. I., recently acquired a liver-colored setter, and is now greatly excited and looking for redress because the liver color won't stay on.

Mr. Furman dwells on Clinton avenue. While taking an inventory of his things recently he discovered that he had too many saddles and not enough liver-colored setters. So he advertised that he would swap a saddle for a dog.

His advertisement was answered by a man who lived in Philadelphia and had a Quaker name. He wrote that he could give references and was ready to exchange one liver-colored dog worth \$100 for a Mexican saddle worth \$75.

Mr. Furman shipped a saddle by fast freight. In a few days a box full of liver-colored dog arrived, marked "express charges collect, \$5.50."

Mr. Furman's suspicions were aroused when he saw the liver-colored dog running yelping around the yard pursued by a hen. Then came a rain storm, which washed most of the liver color off him.

Some beautiful black dots on the animal, which Mr. Furman supposed were symptoms of his good descent, proved to be merely symptoms of black paint, for they disappeared under the influence of the weather.

His suspicious were now quite aroused, and Mr. Furman ordered a warm bath for the liver-colored creature, which proved when the paint dissolved to be merely a yellow dog that would be dear at ten cents.

Thereupon he wrote a letter to the Philadelphian, but has received no answer.

"I suppose he's too busy riding around on my saddle to attend to his mail," Mr. Furman says, sadly.—New York World.

COONEY'S young eyes opened upon a hard world, and it is no wonder that an early acquaintance with the wiles of man trained his wits to be as sharp as his nose, and his keen eyes and quick ears to be ever on the alert for a chance to get even with the enemy.

A shot from a rifle killed his mother one summer's evening, and smoke from the fire that the man with the rifle kindled in the hollow tree that had been the home of this unlucky raccoon family sent the young ones scrambling into the branches for air. It was an easy matter to capture three such babies.

Perhaps the heart of the man with the gun was less black than it must have looked to Cooney and his brethren, or a closer view of the three scared little balls of fur may have altered his first intention, which I rather think was wholesale massacre in expiation for raided hen roosts and depredated garden beds. Suffice it to say, the man adopted one young raccoon, gave another to his gardener, and, remembering my fancy for odd pets, boxed up the third and sent it to me. Now I had had presents of pets from my friends before, and when a telegram came to say that I was to receive another, a long line of beasts and reptiles seemed to raise their heads and look at me; weird dogs and alligators, matted and horned toads, into whose beady eyes I had vainly looked for a responsive gleam of intelligence. Therefore, when my box arrived by express, I opened it with misgivings, which, however, vanished once for all on my first sight of Cooney. About the size of a well-grown kitten, soft gray fur (his tail had not yet attained the five-ringed splendor it reached later on), delicately frilled ears, and the most rascally eyes that ever peered along a sharp, black muzzle. Then his hands! How they grasped and caught, and how cleverly they handled all they touched! A monkey's hands are hardly more clever. Nor is a monkey's mind more alert and inquisitive. Prying into cupboards, picking keyholes with eager forefinger, peering into the receiver of the telephone, in never-ceasing effort to get at the true inwardness of things—such was Cooney, and with it all as neat as any Shaker. Hands washed before and after, and during the course of every meal, and not only hands, but food as well, if clean water was within reach.

Acting upon the supposition that a wild animal required a cage, I had one built, five feet square and about four high, the front of wire netting, with a small door for entrance and exit. The back could be raised on hinges for purposes of cleaning out. Inside an inverted box with a hole cut in the side, well filled with wool, formed his bed. The cage was placed upon the piazza, but Cooney never went near it except at night. He preferred to roam at will about the house and piazzas. About three times a day, however, my little daughter would suddenly grab Cooney by the nape of his neck and retire with him to the cage, which she could enter from the back, and, curling up in a corner, and holding Cooney firmly against her small body, she would gravely insert a nursing bottle in his mouth, and he would as gravely empty it. But business over, Cooney was ready for play again. There was always a dog or two about the house. We had seven just then, and Cooney loved them all. The two pointers only tolerated him, but the bull terriers were his chums. They romped together in perfect accord, and if the dogs grew too rough or Cooney got bored, he climbed a tree, and waited in the branches until the dogs strayed off. This good fellowship continued for over a year, and might have lasted longer but for an accident that brought out the latent savagery in him, turned him into an Ishmael, and caused some members of the family, and most of the neighbors, to declare him to be possessed of a devil.

A strange dog strayed into the place one day, and seeing Cooney loping across the lawn, fell upon him. The snarling and yelping that ensued attracted our dogs, and led away by example, they followed suit. Lo! there was Cooney on his back fighting for life with teeth and powerful hind legs, and with thin, formidable claws, while his old, familiar friends tore and bit him. It was over in a moment; for the coachman ran to the rescue with a club, with which he cracked all the dogs impartially over the head. I lifted the poor little raccoon from the ground and carried him into the house. It was autumn and chilly, so I laid him on a pillow by the library fire and washed and dressed his wounds as well as I could. His back was badly torn, and he must have been hurt internally, as he made no attempt to move, but lay panting on his side. I thought he would die, but he did not. He lay for several days on his pillow without moving, then he began to creep lamely about the room, and at the end of three weeks Richard was himself again. It was during this period of enforced inactivity that I got a glimpse of the softer side of his complex nature, recognized in him a quality which I sometimes think is almost peculiar to animals, namely, gratitude, and tacitly formed with him a sort of alliance offensive and defensive against all comers, which we maintained so long as the poor little chap lived.

Cooney was very sick, and he knew it. He refused all food at first, but soon would lap a little milk or beef tea if held so that he could reach it without raising his head. It dawned on him, perhaps, that I had had no hand in his undoing, but was trying to help him. He began to look for my coming, would raise his head and stretch out his paw. It seemed to comfort him so much, that I often sat on the floor beside him, reading a book and holding his hot little paw in my hand, feeling it nervously twitching, till by degrees it relaxed and Cooney was asleep. Kind old nature pulled him through after all. His wounds healed, his high spirits returned, and with them his old rascality. Indeed it seemed as if the original devil must have gathered unto himself at least seven more. There was no more roaming at large for Cooney. The sight of a dog would drive him to fury. He would rise on his hind legs, swaying his body to and fro, emitting an eager whine, while his eyes blazed red. We had to keep him in his cage, or tied to a stake that could be moved about under trees or near the house for company. Whenever I came out he stood up so eagerly and meant so plainly "Do take

me along!" that it was hard to disappoint him, and although a walk with him involved tuggings to get ahead and sudden stoppings to investigate any object of interest, I often did take him along. When tired of his antics, I would always perch him on my shoulder, where he sat up in perfect content. If I drove, he often stood beside me, his paws on the dashboard, sniffing the wind, and seeming to enjoy the scenery.

I could stroke him while he fed, and tease him by pretending to pull away a chicken bone or a bunch of grapes—his favorite morsels. He merely gathered together what was left with his paws, and went on with his meal, glancing meanwhile at me out of the corner of his eye, as if he would say, "Oh! that's all right; you don't count." But if another hand attempted the same liberty, a snarl and a bite down to the bone was the penalty.

Another person from whom he stood liberties within certain limits was our coachman, whom he looked upon as a necessary evil, to be borne with philosophy. When the man seized him by the nape of the neck to carry him stableward, Cooney hung limp and resigned, for he knew that it meant cage and bedtime.

His Sunday bath was another dispensation to be patiently endured. A thorough lathering with soap, which often got in his eyes, and a cold douche from the hose, were hardly to his fancy, and his stolid attitude plainly showed that he regarded the whole business as some foolish fetish of simple minds.

The ultimate fate of Cooney is wrapped in gloom. They tied him to his stake under the trees one afternoon as usual, but at bedtime the cord that had held him was cut and Cooney gone. No trace of him was ever found. I have always linked in my mind the disappearance of Cooney with a gang of chattering Italian laborers who were macadamizing a road not fifty yards from the spot where he was tied. They knocked off work at 6 o'clock. They are a frugal race, and meat is dear. Might not fat raccoon stew be a tempting variation on dandelions and macaroni? Whatever his fate, I mourned for him, for there was never a more amusing or engaging little creature.

M. W. M.

The Beaver.

PORTLAND, Ore., July 20.—*Editor Forest and Stream:* One of the last things I did in Boston before taking train for Oregon was to leave directions to have my FOREST AND STREAM forwarded to me.

I have just read in the issue of July 13 the interesting letter of Mr. E. P. Jaques, giving some more observations on the beaver. Mr. Jaques kindly refrains from mentioning my name, but refers to my story of carrying a 46 pound beaver six miles without putting it down, in a way that plainly shows he thinks me a candidate for high honors as a member of the "Ananias Club." He says "The man who carried the beaver six miles without stopping to rest can get a fair donation toward a medal commemorating the feat by addressing N. B. Beardslee, Hennessey, Okla. T.," Mr. Beardslee being the man who had such a hard time carrying the soft, but yielding and slippery body of a beaver on one occasion, this deceptive load having been unguardedly chosen in preference to a saddle of venison. Now, in telling my own beaver story I mentioned my carrying my beaver the distance named merely incidentally and without any thought that it was anything extraordinary in itself.

I did remember that it was a very fatiguing experience and that at the time I felt it was a pretty good lug and that I had some pride in bringing the beaver through in that way.

I can easily sympathize with Mr. Beardslee in his troublesome undertaking, but I undertook nothing so difficult, and Mr. Jaques' mistake lay in his supposition that there was no other way to carry a dead beaver than the simple but very difficult one he adopted.

My beaver was inside the stout old "Kennebecker" of my guide, T. W. Billings—of blessed memory—which was securely strapped to my shoulders. If either Mr. Jaques or Mr. Beardslee have any more beavers to carry, and don't know what a "kennebecker" is, I shall be nappy to explain—and so would any man familiar with life in the old times in the Maine woods. I carried my beaver—and my quite clear and distinct recollection is that it weighed just 46 pounds—from Randall Brook, where we caught him, through the woods to the old "tote road," and down that to our canoe on Eberne Lake, and my recollection is that the distance is six miles. And I as distinctly remember some feeling of complacency that I had not once put down my load.

Now, I have always admired the candor of Artemas Ward, who, having occasion once in a lecture to give the number of rats existing at that time in the United States, immediately after naming the figure, added: "I speak entirely from memory."

I think there is an old note book—one of a "Maine Woods series"—in my desk at home, where these and many other experiences of mine were faithfully recorded at the time of their occurrence, and when I am again privileged to do so I shall, for my own satisfaction, look this matter up. For the present, however, "I speak entirely from memory," though I must believe my data were originally much more definite than Artemas Ward's could have been.

I was a "husky" young fellow then, able to do a good piece of "woods work," and delighting in "roughing it" in the wilderness.

I wish I could tell of the feats of Billings in carrying loads with that old "kennebecker"—of the actual weight of blankets, hard tack and salt pork, bear traps, otter traps, and other impedimenta which he would pack into and strap upon it, and bending forward, till he was fairly under it, stride off for hours at a time without stopping. His own expression in regard to himself in those days was always—"I was strong as a moose." That he injured himself in this way there was no doubt, and when even his extraordinary powers began to wane, and the kidney trouble came, his regret for his lost strength was pathetic.

But I wander from the maine question, and from one which I wish to raise, viz.—as to the average weight of a full grown beaver. My beaver was a comparatively young one: I used to discuss such questions with Billings and I am sure I recall his telling me more than

once of killing "on the Tobique," beaver weighing 80 pounds or more. Now, does that take any one's breath away? All I can say is that it is a datum that has long been in my memory, and I would like to hear expert testimony about it.

C. H. AMES.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Illinois Quail Law.

STATE GAME COMMISSIONER LOVEJOY has issued a notice to his deputy game wardens, reading as follows:

ROSCOE, Ill., July 1.—To whom it may concern: Acting on the authority of Attorney-General Hamlin, of Illinois, I wish to say, that while it is true that under the law as it now stands, a person may kill quail at any time of the year after this date, but in so doing he consents that the title to such quail shall remain in the State, and if such quail is killed or in his possession for any purpose prohibited by law, any game warden or deputy, may take possession and dispose of same, as provided in sections 20, 21, 22 and 23 of the original act, which are still in full force and effect. I therefore instruct all wardens and deputies to take possession of any quail killed by any one, between the twentieth day of December, and the first day of November of the succeeding year.

Under the law as it now stands you are fully authorized to take such possession.

By section 29 of the original act which is still in force and effect, it is made unlawful "for any person or persons, to hunt with dog, gun or net within or upon the ground or the land of another, without his obtaining from the owner, agent or occupant of such ground or land, his, her or their permission so to do."

I wish to urge the enforcement of the above. Respectfully,

A. J. LOVEJOY, State Game Commissioner.

The opinion of the Attorney-General, upon the authority of which this opinion is based, reads as follows:

SPRINGFIELD, Ill., June 21.—Hon. A. J. Lovejoy, Roscoe, Ill.: Dear Sir—Replying to your inquiry, "Does the statute, for the protection of game, approved May 10, 1901, and in force July 1, 1901, repeal the first section of the statute for the protection of game, approved April 24, 1899, and in force July 1, 1899?"

The chief difference between the two laws consists in the omission of the word "quail" in the law of 1901; whereas quail was protected by the law of 1899.

Except some slight changes as to the time to hunt, entrap, etc., game, and the punishment for the violation of the law, the two sections are substantially the same, save that the word "quail" is left out of the law of 1901.

The statute of 1901 provides that section 1 of the law of 1899 shall "be amended to read as follows:"

The general principle laid down in the text books and often declared by the Supreme Court is: Repeals by implication are not favored.

Section 2, however, of the recent act of 1901 is as follows: "All acts and parts of acts conflicting herewith are hereby repealed."

It is apparent that the two laws do conflict, and so far as they do conflict, the law of 1901 is an express repeal of the law of 1899.

Besides other repugnancies between the two acts, the punishment is entirely different. In the law of 1899 the punishment for each offense is not less than \$5 nor more than \$25; in the law of 1901 the punishment is not less than \$15 nor more than \$50. There is, therefore, such a repugnancy that it is impossible to reconcile the two acts.

Whenever a law has been amended in this particular manner the Supreme Court has uniformly held that the amended law is repealed.

When an amendatory act declares a certain section "shall be amended that it shall read as follows," and then makes a distinct provision, that operates to repeal the section of the amended act named.

In the People vs. Young, 38 Ill., 490, the Supreme Court says: "A form of amendment of the section of the statute that it shall be 'amended to read as follows,' setting out in words how it shall read, of necessity repeals all of the section, as it before stood, which is left out of and not included in the reading which is written in the amendatory act for the section to have." To the same effect is Goodal vs. The People, 123 Ill., 389-394; L. & N. R. Co. vs. The City of East St. Louis, 134 Ill., 661.

In the case of Palmer vs. the City of Danville, 166 Ill., 49, the Court held: "The amended act declared that the statute should be amended to read as therein provided, and it is operated to repeal the original action and to substitute the amended section."

I am, therefore, of the opinion that section 1 of the law of 1899 is repealed by the law of 1901.

I am of the further opinion, however, that sufficient of the act of 1899 remains, if rigidly enforced, to protect quail.

By section 2 of that act, which is still in force, it is provided it shall further "be unlawful for any person or persons at any time to sell or expose for sale or to have in his or their possession for the purpose of selling, any quail, etc., that shall have been caught, ensnared, trapped or killed within the limits of this State."

It is further provided in section 11 of the original act, which is still in full force, "that the ownership of and title to all wild game and birds in the State of Illinois is hereby declared to be in the State; and no wild game or birds shall be taken or killed in any manner, or at any time, except the persons so taking or killing shall consent that the title to said game shall be and remain in the State of Illinois, for the purpose of regulating the use and disposition of the same after such taking or killing."

By section 29 of the original act, which is still in full force and effect, it is made unlawful "for any person or persons to hunt with dog, gun or net within or upon the ground or the land of another without his obtaining from the

owner, agent or occupant of such ground or land his, her or their permission so to do."

While it is true that under the law as it now stands a person may kill quail at any time of the year, but in so doing he consents that the title to such quail shall remain in the State, and if such quail is killed or in his possession for any purpose prohibited by law, any State game warden or deputy may take possession and dispose of the same, as provided in sections 20, 21, 22 and 23 of the original act, which are still in force and effect.

I would recommend that you instruct your deputy wardens to take possession of any quail killed by any one at any such times in the year as in your judgment would best protect the quail in Illinois from destruction, and under the law, as it now stands, your deputies will be fully authorized to take such possession.

I remain, very respectfully yours,

H. J. HAMLIN, Attorney-General.

Some Moose Heads.

As moose measurements Mr. G. E. Armstrong has kindly furnished me the following list of statistics of moose shot in his camps during the last three seasons, with permission to send them to FOREST AND STREAM for publication. This record seems to me noteworthy. For obvious reasons of delicacy, the names of the individual sportsmen, which are given to the editor in full, are here replaced by initials:

Moose Shot at G. R. Armstrong's Camps in the Seasons of 1898, 1899 and 1900.

W. O. ATWATER.

The Eastern Shore.

STOCKTON, Md., July 24.—Once more the soft whistle of the yellowleg sounds from the marshes, borne on the breeze that waves the long salt grass like the billows of an ocean—mile on mile of undulating green, full of ponds, inlets and bays, stretching away until lost in the shadow of the dark, unbroken line of pine woods as far as the eye can see. On the ocean side uprises a border of glistening white sand dunes, piled high by the even pounding surf. Over this wide expanse of marsh and islands pass thousands of shore birds, stopping to feed in the half-dry ponds or following the waves up and down over the flat ocean beach. What a mixed lot they are—willet, yellowlegs, dowitchers, greybacks, hay birds and sandpipers and plovers of many kinds. There is no quarreling, no chasing or picking each other; all are intent on the one business of capturing as many snails, bugs, shellfish and worms as their quick eyes can detect in the mud and shifting sand. They are always moving, always eating, seemingly never full.

Mosquitoes, you say? Certainly we have mosquitoes! Who ever heard of a salt marsh without mosquitoes? Not only one kind, but nine or even more, we are told, each with its own particular way of cultivating your acquaintance. Now in the mountains and North Woods you have the black flies; in the Southern woods you have green flies, sheep flies and ticks; on the Southern coast you have midges, and over the fields and farms, North and South, you have the harvest midges. But go where you will, if there is a pond, lake or river near, you have the inevitable mosquito. We are not the only spot. However, a netting thrown over your head as you walk to your pond, saves all blood shedding; then when you are quiet in your blind, your decoys all out, the mosquitoes settle away again and you are little disturbed, unless you persist in getting up and running about through the grass.

Generally the flights stop and feed in goodly numbers, keeping the marshes well worked from the middle of July until the middle of August. Then the late flight is on, which often is here far into September. Then again the feeding conditions do not seem to suit the birds, and flight after flight will pass on down the coast to be seen no more until spring. Plenty of fresh rain water on the marshes holds the yellowlegs and other marsh feeders; low tides and bare mud flats draw the other flight birds. If the birds are moving well, the shooting is fast, and the sport something to be remembered, but if birds are scarce and not flying, the sun gets very hot, the marsh smells bad, the mosquitoes bother and the whole thing is mean.

The whole country here is full of quail. I have never seen so many old birds in early summer, and as we have had no rain to hurt since the first of June, I do not think the young birds can now be in any danger. Driving four miles along our road last week, I counted eighteen birds that I saw on the fences and in the road, and I heard as many if not more whistling back in the fields and along the edge of woods. I look for good shooting this fall, and as the season does not open until Nov. 10, the birds will be big and strong.

O. D. FOULKS.

CHICAGO AND THE WEST.

Sad Death of John L. Collins.

CHICAGO, July 24.—Mr. John L. Collins, for many years cashier in the Chicago office of Messrs. E. I. Dupont, De Nemours & Co., met his death this morning in an elevator accident at the Masonic Temple. The offices of the Dupont Company are on the fifteenth floor of that building, and Mr. Collins was going up to that floor. The elevator boy opened the door to let off a woman at the thirteenth floor, and it is likely that Mr. Collins at this moment believed that it was the fifteenth floor. Without stopping to think, he sprang past the elevator conductor and got part way through the door just as the car started up. He was carried to the floor above and crushed between the car and the floor, his body falling the full length to the basement, death, of course, being instantaneous.

Mr. Collins was favorably known among the shooters of Chicago as a man diligent and attentive to his business, yet always affable and pleasant. He was fifty-two years of age, married and the father of a nineteen-year-old son. Mr. Collins was a son of the late Rear-Admiral Napoleon Collins, of the U. S. Navy.

In Town.

Mr. Charles Porter, of the Marlin Fire Arms Co., New Haven, Conn., is in town this week upon business connected with the trade.

Out of Town.

Messrs. A. S. Trude and W. S. Forrest, two of the leading criminal lawyers in Chicago, start this week for Jackson's Hole, Wyo., where they will fish and perhaps later hunt for large game. Mr. Trude has a lodge not far from that point, and makes a trip to the Rockies every year.

Mr. Martin Andrews, of this city, leaves this week for an extended stay at Plum Lake, Wis., where he will fish and rest.

Mr. John D. Coleman, of San Francisco, Cal., outfitted in Chicago this week for a trip of some extent in the lake region of Minnesota, where he will fish for black bass and muscallonge. Mr. Henry D. Bushnell, of this city, outfitted extensively this week for a trip to Old Mexico.

E. HOUGH.

The State's Right to Prohibit the Sale of Imported Game.

FOLLOWING is the text of the decision handed down by Judge Bellinger in the Deininger case. The point at issue was the right of the State to forbid the possession for sale of game or fish lawfully killed in another state and lawfully exported therefrom:

In re Deininger. (Circuit Court, D. Oregon, April 17, 1901.) No. 2,670.

Bellinger, District Judge. The petitioner was convicted in the State Court of having in his possession trout for sale, in violation of the game laws of Oregon, and was sentenced to pay a fine of \$35. In default of payment, he has been imprisoned by the sheriff of the county. He therefore makes this application for a writ of habeas corpus, and this hearing is for an order upon the sheriff to show cause why the writ should not be granted. The facts in the case, briefly, are that the petitioner is the manager of the Chlopeck Fishing Company, doing business in Portland, Ore.; that said company conducts a retail fish market in Portland; that the trout in question were purchased in the city of Seattle, in the State of Washington, where they had been lawfully caught, and were shipped from that State to the market of the company in Portland, for sale there.

It is contended for the petitioner that the law of Oregon which makes the possession of trout for sale, lawfully caught in another State, unlawful, is a restraint of interstate commerce, and is therefore void. In the case of Geer v. Connecticut, 161 U. S., 519; 16 Sup. Ct., 600; 40 L. Ed., 793, it is held that a law of Connecticut which provides that no person shall at any time kill any woodcock, ruffed grouse, or quail for the purpose of conveying the same beyond the limits of the State, or shall transport or have in possession, with intent to procure the transportation beyond such limits, any such birds killed within such State, is legislation which it is within the constitutional power of the State to enact. In that case, as in this, it was contended that the act of the State of Connecticut was in restraint of interstate commerce, since it made the possession of the birds in question for the purpose of conveying the same beyond the State illegal, notwithstanding the fact that said birds were lawfully killed in the State of Connecticut. The decision is based upon the fundamental distinction that exists between the qualified ownership in game and the perfect nature of ownership in other property. If game when reduced to possession became an article of property, in the ordinary sense of the word, it would belong to commerce; otherwise, it is a subject of control by the State, in the exercise of its police power. There is, in my opinion, no room to distinguish between the right to take game out of the State and the right to bring it within the State. Interstate traffic is affected as much in one case as in the other. It is not material that in one case the killing of game is discouraged by the limitation which the law puts upon its use, by prohibiting its exportation, while in the other the enforcement of the law against the taking of game is rendered practicable by making its possession for sale unlawful. The ultimate object sought in each case is the same, and the law in each case is a legitimate exercise of the police power of the State. The taking of game is not an industry. It is merely a diversion. If it is ever anything more than this, it is under primitive conditions of society, when industrial enterprise and commerce are not yet established. It is wholly immaterial whether the game was lawfully caught within the State of Washington or not. The violation of the laws of Washington imposes no duty in respect to the particular matter upon the State of Oregon. Its right to prohibit the possession of the interdicted game does not depend upon what has been done in another jurisdiction, but wholly upon the limited right of property which exists in game birds, animals, and fishes.

The right to legislate without restraint, so far as the

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Elvers.

My good friend, Dr. Robert T. Morris, has been very prompt to reply to my query in regard to the run of elvers, whether they have actually been observed to run on both banks of a stream at the same time. This is his letter:

"Your query about elvers ascending a river on both sides simultaneously had never occurred to me as a matter of interest. I have often watched the eel ribbon at some one point without making a note of it; but your query brings to mind one occasion when I was fishing the Washshecoolat River, in eastern Quebec, some five or six years ago. One morning, about July 20, I noticed the eel band passing the falls at the head of the first salmon pool, and the run lasted for at least three of four days. The young eels were ascending the river on both sides simultaneously at the falls, and were making their way over rocks wet with spray, as the current was too swift for them.

"In the early morning, when the rocks and moss were wet for a considerable distance from the stream, the young eels were traveling through the wet moss in a wide path, but as the sun dried the rocks more and more during the day the eel ribbon narrowed to a little string. The eels attracted numbers of gulls, ducks, crows, Canada jays, and perhaps other birds, but I have forgotten about others. There were two families of young dusky ducks, one family of young butterbill scoters, and one family of young red-breasted mergansers, that spent nearly the whole of the time during each day feeding upon the young eels during their run over the rocks. In the water above and below the falls there was a swarm of brook trout, young sea trout, salmon parrs and smelts, all engaged, apparently in feasting upon young eels. In spite of all the attacking parties, a constant stream of eels was escaping upstream. Eels are such persistent spawn eaters that it occurred to me that the stock of game fish in the river would be largely increased if one were to place fine nets to catch all the ascending eels every year, but on the other hand it is always risky to disturb the balance of nature. It is possible that the young eels furnish an important or necessary food supply for young fish of other species, or that they destroy other enemies of fish."

Just about the time that I received the letter from Dr. Morris (it is post marked in Maine, July 9) the elvers were running in the Hudson River at Mechanicville, or, to be precise, on July 8.

The eel question is one that has disturbed a number of English anglers not a little during the past year, judging from the angling papers, and one thing stands out in bold relief in several communications, and that is that so many writers have disputed that eels do not travel over land or rocks, because they have not seen it. Last January one English writer concluded that some eels breed in fresh water because he saw elvers running downstream; and I studied over the situation as he described it until I could make neither head nor tail of his story. It seems that a weir was being built somewhere, and that there was a concrete foundation and some iron work, but all that I could make out of it was that there was an obstruction in the stream and elvers were seen coming down instead of going up, and without investigating to find why, the writer of the article jumped at the conclusion that the elvers were born in fresh water and were going down to sea. If he was to suppose something, it would have been, it strikes me, far more natural to suppose that the recent obstructions had turned the elvers from their course upstream, and they were trying to find a new channel, that they might resume their upstream movement; but he did not seek the cause of the elvers' running down, simply smoked his pipe for an hour, although the double obstruction was practically under his eye. This gentleman's communication is followed by one in which the writer prefaces his remarks with these words: "As one who has lived all his life in a district where the eels descend and the elvers ascend in their appointed time." The subsequent issues of the paper were examined carefully, but I could find no comment on the supposed downward movement of elvers, and perhaps it was not considered worthy of comment.

The Steelhead.

A few years ago I planted some fry of the steelhead trout in Lake George, New York, but up to this time have no knowledge that is reliable that the fish have been caught; but it is possible that some have been. The lake also contains landlocked salmon, and this year I have heard of some landlocked salmon being taken that weighed about 3 pounds each. In other lakes, where the salmon have been planted, they have not been caught until of a greater weight than 3 pounds, and before the introduction of steelheads into Lake George I did not hear of a salmon being taken as small as 3 pounds, and so I more than suspect that some of the 3-pound salmon may have been steelheads.

Mr. Edwin C. Kent, who some time ago furnished me with information about the steelheads planted in the waters of the Tuxedo Club, has very kindly furnished me with more information, which is of interest, in reply to queries I put to him:

"Some of your questions I can answer definitely, but about some I can only make deductions which may not be correct.

"My opinion on the value of the steelhead as both a sporting and food fish, is unchanged; in fact, after the experience of the past year it is even higher than it was. They are a much stronger and more game fish than the landlocked salmon, and are quite as good on the table. A 2½-pounder this spring took about 40 yards of line off my reel in one dash, a thing which never happened to

me before with any fresh-water fish in still water (bar Atlantic salmon).

"I do not know whether they try to reach salt water. The outlet of our lake has always been screened, and this spring I noticed once or twice two or three steelhead lying in the suction of the outlet. The spring freshets compelled us to take away the screens to lessen the pressure on the dam, but after carefully examining the waters of the lower ponds, I cannot find that any took advantage of the opportunity, as I have heard of only one being seen below, and that one may have escaped from the hatchery.

"I think there is no doubt about their spawning naturally in fresh water."

(I framed this question badly, but Mr. Kent understood me, and it will be better for me to explain that as the steelhead is a seagoing fish on the Pacific, and it was questioned if it would spawn when it did not have access to salt water and was confined exclusively in fresh, the question was put briefly, but blindly, now that others are to read the answers.)

"During the season of 1900, I was in Europe, and no one seems to have taken the trouble to watch the fish, but last fall I determined to try, and worked the nets. We caught about a dozen fish, but they then showed no signs. However, we kept then in one of our hatchery pools to await developments. This spring, as you know, the rains were very heavy, and during the latter part of March and the first of April we found the little brooks which run into the lake literally jammed with steelheads in every stage, from ripe to completely spent. We took about 25,000 eggs, stripping the fish on bank of the brook. Those which we had kept in the hatchery also yielded a fair number of eggs, but very inferior in quality, being small and white, and although they hatched out successfully, the fry are comparatively small and weak. The eggs which we took from the free fish were large, almost as large as those of the land-locked salmon, and a dark red, and have developed into strong, healthy fry.

"The boatmen and others have repeatedly told me that they have seen numbers of steelhead yearlings in the lake, but as I have not seen and examined the fish myself I cannot be sure that they have not confused them with the salmon fry, as I know that the salmon are spawning naturally. Judging, however, from the actions of the fish this spring, I think they are probably right in their statements.

"I cannot answer your question about the fly-fishing very well, because they have never been given a fair trial. The mode adopted has invariably been to troll for them with a spinner or natural minnow, with two or three flies hitched above the spinner on the leader, but my experience has been that almost as many have been taken on the flies as on the spinner. * * * The fish have all moved now into the deep water, but I confidently expect they will be up again next fall and then I intend to give them a full trial with the fly. The average growth of the fish is remarkable. We turned them into the lake in the late fall as two-year-olds, about four to the pound. The following year none were taken. Next year they were caught running from 1 to 1½ pounds. This year, including those I weighed after stripping them, they weighed from 2 to 2½ pounds. I cannot guess how much larger they will get, but they have already far outstripped the salmon. I imagine that it is a question of the food supply, and I am watching with great interest the result of planting the whitefish we got from you in exchange last spring. I am beginning to think the much hated German carp are of great value for furnishing food to the steelheads and salmon, for the lake is swept clear of minnows and dace, and yet the steelheads and salmon are in good condition. I fished for salmon this spring at Grand Lake Stream, Maine, but could see no difference between those I took there and ours. Perhaps the reason you have not heard of the steelhead you planted as fry is that time enough has not passed. We at Tuxedo did not see or take a single fish until they were four years old."

Some five or six years ago I was rather inclined to take a gloomy view of the fitness of the steelhead for Eastern coast waters, but I became satisfied that the meager information I obtained from the Pacific coast regarding the habits of the fish was not based upon an intimate knowledge of the fish and its breeding, and the more I found out about the steelhead the more it impressed me as a fish to be cultivated, and I have desired to do it justice because I came very near doing it an injustice from my imperfect knowledge of it. In the report of the U. S. Fish Commission, printed last year, Mr. Ravenel quotes some of the results from planting steelheads:

"Particularly gratifying reports have been received from Minnesota with reference to the introduction of the steelhead trout in Lake Superior. Mr. L. E. Baldrige, foreman of Duluth Station, Minnesota, reports, under date of March 13, 1899, that large numbers of steelhead trout, varying in length from 7 to 28 inches, were caught during the summer and fall of 1898 along the north shore of Lake Superior, between Duluth, Minn., and Rossport, Ont. Mr. D. J. Greensword, treasurer of the Duluth Fly-Casting Club, informed him that a number of members of his club took over 400 steelhead trout from Sucker River, in two days' fishing with hook and line, and that he had captured eighty-five in a single day. He further states that not less than 2,200 steelheads were taken in the same manner from the French and Sucker rivers, and that they will take the fly as readily as do the brook trout. The fishermen operating gill nets along the north shore for lake trout have also captured a number, varying from 14 to 18 inches in length. * * * Dr. James A. Henshall, superintendent of Bozeman Station, Montana, reports that during the past year a number of steelhead and Eastern brook trout have been taken in Bridges Creek, which runs through the station grounds, and which is a natural trout stream about 20 miles long and 30 feet wide. * * * Steelheads have also been captured with the fly in Bozeman Creek, which was accidentally stocked in the fall of 1897 by a can of fly jolting from the wagon into the stream from a load of fish intended for Mystic Lake. * * * Mr. E. S. Whitcomb, of Underhill, Vt., also reports the capture of a steelhead trout in Brown's River, Essex, weighing 2½ pounds, and 19 inches long, and another weighing 3¾ pounds, also a number of small ones. They have frequently been reported from Lake Champlain and its tributaries."

A Winter Time Outing.

CAMDEN, Del., July 24.—Editor Forest and Stream: There is perhaps no recreation practiced by many that gives to its devotees so much that is satisfying as the yearly outing. After weary months of confinement in a close and stuffy office, shut in by endless masses of masonry, sweltering with heat and worried with business cares, what can be more restful to one than to run away from it all for a few weeks, and with gun or rod in hand wander over forest or stream and hob nob with nature? What music so sweet as the merry ripple of the water, the rustle of the wind among the trees, the quack of the duck or the honk-honk of the goose, the shrill call of the quail or the bugle notes of Hector and Driver as they come straight to your stand with a noble buck? What nectar so sweet and life-giving as the pure atmosphere of the forest? You throw back your shoulders and fill your lungs to their greatest capacity, confident that the air you breathe is pure and fresh from nature's laboratory. What a feeling of rest and comfort to know you have nothing to do for a season but enjoy all these blessings!

For many years I with my family have taken to the woods each fall and spent the winter there, and already we begin to count the days to when we shall start again. Doubtless there are thousands of FOREST AND STREAM readers who would gladly partake of the joys pictured above if they but knew where to go and how. I will gladly answer questions from any such who will inclose stamp. My business is such that I can only leave in the winter months; so, like the birds, we fly to the southward each fall, and, while our friends are shivering in snow and ice, and the mercury is trying to creep out at the bottom we are wandering in forests of perpetual green, where the white mantle of snow is seldom spread. Perhaps there are those who would like to join us there. If so, the latch string hangs out, and we always have an extra bed in our camp and a vacant chair at our table for brother sportsmen who chance to wander our way.

S. H. THOMAS.

On the Santa Fe Trail.

THE scribblers who write of the braves of the West,
Their glory in story and rhyme have expressed—
Have lauded the scouts to the heavens, and sung
Of the deeds of the soldiers with rapturous tongue.
The fearless frontiersmen in picturesque dress,
The fellows who rode on the pony express,
Were heroes, but never a hair-raising tale
Of the boys who whacked bulls on the Santa Fe trail.

Over deserts that flickered with midsummer heat
They plodded along on their sand-blistered feet,
And kicked up the echoes with pops of their whips
And oaths that were flung from their alkalied lips.
Their menu was often but bacon and bread,
A sage root the pillow that rested the head,
Their lullabys but the coyote's drear wail,
While crossing the plains on the Santa Fe trail.

For them there was always a dare-devil charm
In springing from bed at the midnight alarm,
When the watchers had heard the hoof-beats on the plain
That told that the redskins were after the train.
Then every brave whacker was ready for fight,
The flash of their rifles lit spots in the night,
And they fought with a courage that never would fail,
Those boys who whacked bulls on the Santa Fe trail.

The graves of the dead were soon leveled again
By the hoofs of the buffalo swarming the plain;
Forever they're hidden, and there they will lie
Till the trumpet rings out the last call from on high.
No parson was there with a burial word;
The graves were unmarked by a slab or a board;
Not a visible sign that would tell the sad tale
Of the whackers who fell on the Santa Fe trail.

The bards and the Western historians aim
Their volleys of praise at far loftier game;
And yet the red fields of the West never gave
A picture of heroes more recklessly brave,
Undaunted they all held their lives in their hands,
Their law, but the trainmaster's spoken commands;
And never an imminent peril could pale
A whacker's brown face on the Santa Fe trail.
—James Barton Adams in Denver Post.

A FISHING FANCY.

From the Illustrated Sporting and Dramatic News.

It seems to be pretty well established that the steelhead trout is a very game fish; that it thrives in ponds or lakes as well as in streams; that it takes the fly in streams quite as readily as the brook trout, and in ponds quite as well as the landlocked salmon; that it spawns in fresh water where it is cut off from access to the sea, and that it has not the disappearing habit of the rainbow trout, though it has a family connection with the rainbow. In the State ponds it is often difficult to separate the yearling steelhead from the red throat (*Neykess*) and the rainbow, but the more mature steelhead is spotted from head to tail, dorsal, adipose, caudal, anal and ventral fins (all fins except the pectoral), with black spots, but not so round as the spots on the other two species. Just now we desire to know all that can be known about the fish in waters where it has been planted, particularly in Eastern waters. The point that Mr. Keit makes that the eggs from confined fish are smaller and whiter than the eggs of wild fish is also true of other species of trout, and I wrote of a marked case of this sort which came under my observation last fall, and it will be of interest to know the results of hatching the steelhead in some of the Western hatcheries. I regret to say that in one instance I have known that hatchery fish did not produce strong fry, but this may have been an exception. Nevertheless we wish to know all that we can about the steelhead.

Sequel to a Fishing Accident.

The daily newspapers have had a more or less accurate account in brief of a fishing accident on Lake George, July 18. Mr. E. Burgess Warren, of Philadelphia, owner of the fast steam yacht *Ellide*, has another steam yacht on Lake George named *Cyric*, and both are used for fishing, the latter being about 60ft. long. Mr. Warren, his fisherman and pilot, Alec Taylor, his engineer and his valet, were on board the *Cyric* fishing for lake trout. Dinner was about to be served when a storm came up. The curtains on the sides of the boat were fastened down to keep out the rain, but the wind was so severe that it rolled the boat until the water came in and the steam had gotten so low that the boat could not be headed into the wind. After twice rolling the boat went down by the stern, but a water-tight compartment in the bow held the bow out of water. Mr. Warren and his valet in the stern of the boat were caught in a trap, but the valet cut the curtain and released Mr. Warren and himself, and the valet and crew passed a line around Mr. Warren and held him on the bow. The men were washed off again and again, and were pounded against the boat by the wind and waves, and one of Mr. Warren's ribs was broken before men in small boats put out from the shore and rescued the entire party after they had been in the water nearly an hour. I understand that Mr. Warren begged the men to let him go and save themselves, but all were saved, and the boat afterward towed ashore. I cannot yet understand how the *Cyric* was capsized, although I know what the wind can do on Lake George, for I cannot comprehend what Alec Taylor was doing without steam.

Mr. Warren was about to eat his dinner when the storm came, and he had put his waistcoat, containing a valuable gold repeater and a pocket knife, which he had carried nearly forty years, on one of the seats, where there was a quantity of fishing tackle. Everything that went out of the boat went down in more than one hundred feet of water, and the waistcoat and contents went down. Yesterday, the day after the accident, some fishermen saw some cork fishing floats on the water near where the yacht capsized, and they rowed to there and secured them, and found they were attached to a fishing line or lines, for there was a mass of them; pulling them in, they found a weight on one, and this proved to be Mr. Warren's waistcoat, with the watch and the knife still in the pockets, and they were promptly returned to him. The cloth of the waistcoat had caught in some hooks, to which were fastened lines with cork floats, and thus the watch and knife were saved. Real fishing stories are often more extraordinary than imaginary ones.

Fly Tyers.

Much as is said and written about artificial flies, and the excellence or killing qualities of one or another, and how one pattern differs from another, and so on to the end of the chapter, it is rare, indeed, that anything is said about those who make flies. A few days ago I cut an item from a newspaper that I was reading on a railway car, which is intended to pay a fitting compliment to those who dress the flies that anglers use. It is quaint enough to have come down from Walton's time; and, in fact, the phraseology seems to have been borrowed from a period earlier than the present, but none the less it is a tribute to the fly-dresser that should have greater currency than an obscure corner of an evening paper:

The trade of artificial fly-making is the lightest-fingered business in the world, and it is not one man or woman out of 5,000 who can learn to tie flies. These tyers are remarkable for the beauty and delicacy of their hands, and only the cleverest of fingers can deal with the "wiggling" work of knotting hairs that can hardly be seen."

As a matter of fact the clever fingers do not knot hairs, but it is a pity to criticize the facts or lack of them in the compliment. My thoughts go to one woman's fingers as I have watched them for hours tying flies, and they were all the writer of this item would imply, and then I think of a veteran Yorkshire fly-dresser, over eighty years of age, with his knotted, heavy hands and fingers; so there are fly-dressers and fly-dressers.

A. N. CHENEY.

REPORT YOUR LUCK
With Rod and Gun
To FOREST AND STREAM,
New York City.

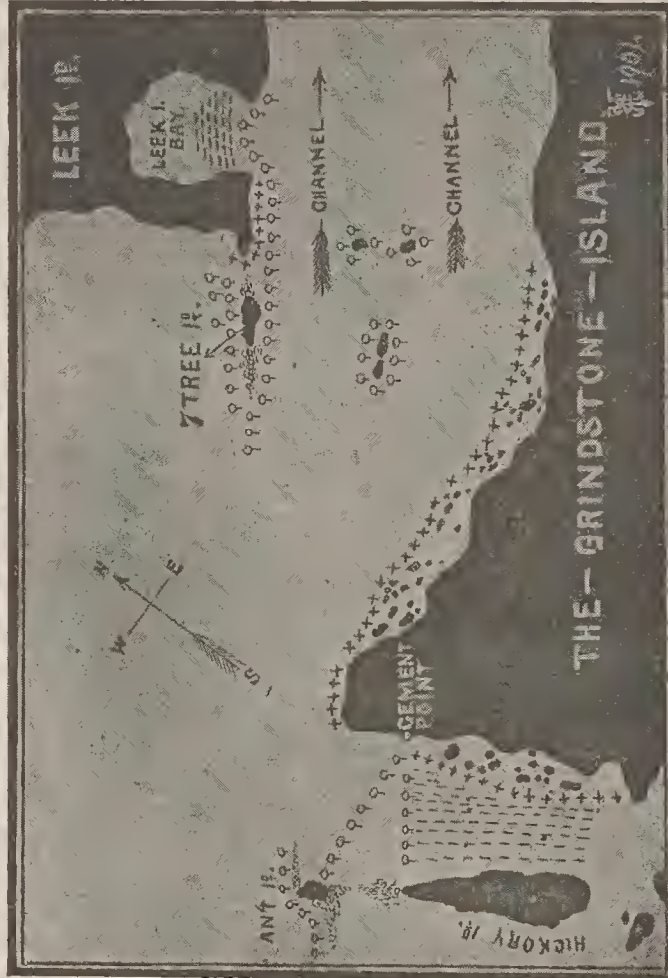

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Two Weeks Among the Thousand Islands.—II.

(Continued from page 70.)

Fifth Day—Western Corner of Grindstone.

We shall now take the last part of the Grindstone Island—the western corner—which is the outer corner, at the head, from Clayton. We will commence fishing at Hickory Flats for pickerel. The water is 45 feet deep and large fish the result. From Cement Point to the outer end of Hickory Island, and from Cement Point to Ant Island, there are two large weed beds. These weed beds have yielded dozens of muscallonge first and last. At the head of Ant Island there is a deep hole along-

FIFTH DAY—WESTERN CORNER OF GRINDSTONE.

side a reef; this is one of our favorite spots for muscallonge. We have nothing now to note except bass fishing all the way down to Seven Tree Island. But the bass fishing, as shown in the chart, is exceptionally fine. The best result to be obtained is by trolling with Delaware-belles. Standing out from the first large island we strike, which is Leek Island, is a very small one called Seven Tree Island. More muscallonge have been caught around this island than any other grounds ten times the size; every season it gives its quota. We have distinctly marked these grounds, so that no fisherman going there shall miss a trick.

Just below Seven Tree Island is Leek Island Bay. The bay is full of pickerel. At the mouth and at the

the boat in about 6 feet of water. We have now located the inner end of the reef. Turn out sharply and quickly and follow the reef around until it disappears in the channel. The two most likely spots (marked by crosses) for a strike are when you locate the reef and turn out, and again as you round the point at the channel. After going over the ground three or four times without success, follow down the channel from the point close to the Hay Island Flat weed bed. They often leave the reef and work down there to feed. If one is out on the feed you are almost sure to get him.

After fishing the Horn thoroughly, come back to the head of the island and turn in around the upper shoal. There is a hollow under this shoal, which is also a good spot.

Take a turn around the little bay and get a couple

SEVENTH DAY—FOOT OF SIR JOHN'S ISLAND.

pickerel for dinner. Then take a run along the channel between Juniper and the reef. This is also good muscallonge ground. When this is fished it will be dinner time. Have dinner and go over the ground again after dinner in the same way as before. You will either go back to Clayton with an empty fish box or something that you will be mighty proud of.

Seventh Day—Foot of Sir John's Island.

From to-day we shall commence and work the fishing grounds up river from Clayton, and all of the time in Canadian waters. Foot of Sir John's is ten miles from Clayton, directly across from the head of Grindstone Island. It is essentially a pickerel ground, and they run

SIXTH DAY—COW'S HORN REEF.

lower point is good muscallonge ground. On one occasion at the point we had a strike. It stopped the boat, smashed a clean ash set-pole 1 1/8 inches in diameter, and then another rush and a 28-thread linen line broke. What fish it was or the size of it has ever been a matter of conjecture and wonder.

Sixth Day—Cow's Horn Reef.

This day we are going to devote to muscallonge; therefore set sail at Clayton, run along the head of the Grindstone, shake out the sail a bit and round the western corner and run down before the wind to Huckleberry Island. As soon as we pass Juniper we will take in sail and let out a pair of lines with No. 8 spoons on them; if the day is bright, copper and brass; if dull, copper and silver. We work and keep in close to the edge of Huckleberry until the foot is reached, then turn our boat in swiftly and close to the point until we see rocks under

EIGHTH DAY—BACK OF SIR JOHN'S.

below the average of St. Lawrence fish in size; but the quantity that can be caught is simply determined by the feeling that you have enough.

Along the shore, by the Pine Bluff, is a run where a great many muscallonge have been taken.

About three miles above the lighthouse is Chockrow Flats. This is a celebrated pickerel water, the fish running from 5 to 10 and 15 pounds. The water is over 50 feet deep. Bottom large boulders, with long weeds growing between them. Deep water runs up close to shore. It is an easy matter to tell a Chockrow Flat fish when you see it—comparatively short, very thick and deep; back almost black, and belly and markings yellow instead of white.

Eighth Day—Back of Sir John's.

From the foot of Sir John's we will run up alongside the Canadian mainland for five miles, which will bring

us to the celebrated muscallonge water, known as Back of Sir John's. The reason why it always contains plenty of these fish is that it is one of their breeding grounds. On the Canadian mainland side it is one continuous weed bed. The principal grounds lie alongside these weeds. There are three good spots in the weeds, which if worked properly will almost to a certainty bring a strike.

The first is a hole in the weeds just above Grass Island. This hole can be located by bringing a clump of bushes on the shore in line with the cottage above. This hole is about 150 yards long by 75 feet wide. We once drove a stake on the end of the upper bar. It remained there for a long time, and may be there now, or another in its place.

The second is a hole about 1,000 feet from shore, directly out from the clump of trees. This hole is about 300 feet square and quite deep. We have taken many a bouncer out of it.

The third is a hole about 300 feet out from the Quarry. This hole is only about 100 feet square. The way to fish it is to shorten lines up to 75 feet, come down from above, and as soon as the hole is struck, turn out and dash over or through the weeds which lie between the hole and channel. If a fish is struck in this hole, do not let up on him at all, but drag him out into the channel by main force. It is the only way of saving him.

These are the principal grounds, but others almost equally good are to be found below. The runs are as follows:

From the center island in the narrows to the dock,

From the center island in the narrows to the mouth of Grass Bay. Circles from the dock to the mouth of Grass Bay. This is deep water, and if a fish is struck it is generally a big one. One more run is worth fishing; this is across the mouth of Foley's Bay. There is some excellent bass fishing just below Grass Bay among the rocks, and again from Foley's boat house down to the point. We once took forty bass in this run of 100 yards after 4 o'clock one evening on a pair of Delaware-belles. Foley's is a nice place to stop at to fish this water.

J. CHURCHWARD.

From Northeast Maine to Lake Chinquasabamtook.—I.

THE Maine wilderness that lies far west of Allegash and Churchill Lakes was unwritten and unsung until the writer penetrated its mysteries in the fall of 1900. It was in the shadow of old Katahdin that a strange guide told me of a wild region over toward Chinquasabamtook that abounded in moose, deer and trout. While hunting and trapping in this solitude we had traversed most of the wilderness around Crescent Pond and the Big Lake. His account of this sportsman's paradise fired my imagination, as there are precious few of such places left now east of the Rocky Mountains; so when the next season worked around I engaged him and his friend Lyman Hunt, of Lincoln, Maine, to meet me at Grindstone, on the Bangor & Aroostook Railroad. I left New York about the last of August. There is not much to interest the sportsman until he gets beyond Oldtown. After passing Milo Junction the country along the line begins to put on a wild and rugged aspect, the clearings are blotted out, one by one, and presently the skirmish line of the great North Woods is encountered. By the time West Seboois is reached the train is running between a solid wall of forest. The fearful work of fire and the axe is seen in acres of dead and dying trees that stretch out ghastly arms, as if in mute protest against the invasion of this once happy hunting ground. In the early days of the Bangor & Aroostook Railroad the night train collided with a moose, near Crystal Station, killing the animal and crippling the engine. This experience is not likely to be repeated at the present time, as nearly all the moose and deer have fled before the shriek of the locomotive and the merciless rifle of the camp sportsman. The train halts at Norcross and Millinocket, mere gashes in the forest, and then hurries off through the woods. Presently a vicious scream from the locomotive told me that my time had come—the charming view of the East Branch, from the bridge, was quickly snatched away, as the train pulled up at the little station beyond. Here I dropped off, and meeting my guides we all adjourned to the Grindstone House to talk it over. There is black bass fishing near by, in the East Branch, and trout further back in the woods, Schoodic Brook and Salmon Stream Pond are all accessible to a good pedestrian. The next morning we prepared for our long journey to the far away Allegash country. After laying in our camp supplies we launched our canoes above the bridge that spans the East Branch and hastened on our way up the beautiful still water. A good country road follows the river for about two miles, and then trends northeast to Stacyville. Soon after passing Mud Brook the paddle was exchanged for the setting pole. Burntland, Rips and Whetstone Falls were easily disposed of. A few miles above the falls we came in sight of a large clearing. Stopping on our way to quench our thirst at a spring of Arctic coldness, we continued on past the beginnings of a hatchery and reached the old Hunt farm about sundown. On a slight elevation above the river stands the ruins of the old homestead, a mournful reminder of the happy past, when its hospitable walls echoed to the merry songs and jests of the lumbermen and hunters. In startling contrast to the old ruin is the smart little Matagon house. Here we found shelter for the night. A few nearby stragglers dropped in during the evening and helped make things cheerful. In the morning we were informed that there was nothing to pay, and we were presented with the freedom of the potato patch. Taking advantage of this kind offer we helped ourselves liberally. The beautiful Wassataquoik joins the East Branch close to the clearing, its head far back in the mountains; it has probably seen its best days as a trout stream, as there are two lamps on it. Passing the mouth of the stream in the early morning we soon sighted the East Branch ferry. There is a sportsman's camp a little back from the river, and a farm house close by. The lamp looked deserted, but when the hunting season sets in the woods around the clearing are alive with hunters. This is the last clearing on the river this side of Grand Lake, for which let us be thankful. The coolness of the morning was fast giving place to the intolerable heat of

midday. There was no escaping the fiery darts of Old Sol save where the channel sought the shady side of the river. Every cold spring and brook paid its tribute to us as we fought our way upward. Toward evening we drew near to the mouth of a pretty trout brook, and here we pitched our first lamp. Early in the morning we started off through the woods to find a trout pond that lies well back from the river. The guides, after a careful search, found an old canoe, and, paddling out on to the pond, I cast the fly into every likely place. I got plenty of rises, but no trout. As we had no angleworms it did not seem worth while to remain any longer. In the stream below I found the trout both plenty and willing. The pond has no doubt suffered from the attacks of the lumbermen, as there is a deserted camp near by. On our return trip we caught a fleeting glimpse of a deer and ran into a large covey of ruffed grouse that were as tame as barnyard fowls. This halt by the way put the guides in excellent trim for the hard work before them.

The next day it was a fight with rapids and falls from start to finish—we were never at any time out of sight of white water. Such places as Hulling, Machine, Grand and Hollister's Pitch had to be carried around. Betwixt and between were numerous rapids that were surmounted with more or less difficulty. An incident occurred during the day that shows the danger of river navigation. A wicked looking piece of wild water confronted us near the Grand Pitch. After landing to lighten up the canoe I followed a path along the shore that led up to a bluff that overlooks the river. I could see the guides far below me fighting their way upward through the boiling rapids. Presently the canoes appeared at the head of the swift water. I was losing all interest in their proceedings, when suddenly Lyman commenced to make frantic passes with his setting pole. Cram had his hands full, and could give him no assistance. Slowly the canoe swings around, the rapids almost have it in their grip, when at the very last moment the iron shod end finds a holding place, and putting all his strength into one mighty effort, the canoe flies free from the brink like a startled deer, and seeks safety on the opposite bank. Lyman Hunt can handle a canoe better than any guide I know of. I have seen him ascend a piece of rough water on the West Branch with comparative ease, while a good canoeist that preceded him was swept back and nearly capsized. And now the wild song of the rapids is drowned out in the mighty voice of the Grand Pitch, as it hurls itself in thunder and foam through a narrow cleft in the rocks to the depths below. Never pass by without stopping to gaze on the mad whirl of waters, imprisoned in their rocky settings. The angler is not likely to meet with any response as he drops his Parmachenee-Belle near the foam patches below the falls, save from small salmon, or a few undersized trout. The river drivers and natives got in their fine work on this river long before the railroad came. We camped that night on the Dead Water, above Hollister's Pitch. Canoeing from the Wild Strife below it deemed a haven of rest to the tired guides. I intended it should be so in more senses than one, as I proposed to spend a quiet Sunday in this beautiful spot. There was a party stopping at a private camp above us and the mouth of the little brook near our camp was whipped unmercifully by them. The few unhappy little trout that jumped at their flies are all that are left to represent the big, squaretails that used to haunt the Dead Water. Lyman told me a barrel of trout was taken out of here in the good old times, or rather had ones for trout. The merciless bait-fishing by the river drivers and natives accounts for the scarcity of the big speckled fellows up and down the river. Sunday was spent by me in strolling around the falls and admiring the beauties of forest and stream.

Early in the morning we started up the Stillwater at a good pace, that soon landed us at the foot of Stair Falls. The water falls over two sets of steps and this makes the illusion perfect. Carrying around we embarked on the placid surface above. The magnificent forests that lined the banks provoked the admiration of that true lover of the woods, Lyman Hunt—would that more of the guides had his refined tastes. We occasionally got a glimpse of the beautiful Travelers who persisted in accompanying us on our journey. After awhile we came in sight of a party of foolish anglers that had paddled their canoe into the center of the pool, off the mouth of Big Fish Brook, thereby ruining all their chances. Turning our backs on this burlesque on angling we proceeded on our way and soon fetched up at Grand Lake Dam. There are very few left of the glorious trout that used to throng the eddies of the pool. No wonder, when every crevice about the dam, or likely place for large ones to hide, is carefully investigated by the bait fisherman. Grand Lake, with its superb mountain views, easily takes precedence over all the lakes between here and Chamberlain. Harney's Camp, on the north shore, near the head of the lake, is a cozy farm house, where the sportsman will receive every attention. The country over toward Sordnahunk Lake is dotted with numerous trout ponds; deer are often seen feeding along the edge of the ponds or bounding through the woods. The region north and south of the lake, and over toward Chamberlain and Eagle, abounds with deer, with here and there a canning old bull that is perfectly familiar with the wiles of the hunter.

Resuming our journey we glided past Moose Cliff and Louse Island, and soon reached the head of the lake. The tortuous thoroughfare that connects Second Lake with Grand is a good place to ambush ducks. There is about four miles of this crooked navigation before coming to the lake. Second Lake is about three miles long; and apart from its wildness has no particular claim to beauty. Here we bade farewell to the Traveler Mountains. The day was departing when we entered the inlet, seeking a place to camp. After paddling up stream some distance we stopped at the foot of a high bluff. Climbing to the summit we found ourselves in a beautiful forest glade. Here we pitched our tent and made everything snug and comfortable for the night. The morning light saw us on our way to the Indian carry. Here we left the East Branch, and carried over to Webster stream. This wild forest brook, with its singing cascades, appeals to every lover of the beautiful. The upper waters of this lovely nook of the woods abound with trout and deer. The brook was very dry. This was anything but a blessing to the guides, although it put the stream in prime order for fly-fishing.

As our canoes receded from the carry our troubles closed around us. The eight miles of pitches, rocks and bars between us and the lake promised to make it interesting for the guides. Wading, dragging and lifting the canoes over obstructions made our upward progress slow and laborious. Deer were frequently seen staring from the banks, ready to wave their white flags on our closer approach. Along toward sundown I started in to whip the brook. The stream gave no sign of life until the light had faded from the sky; then the trout rose fast and furious. Nearly every cast of the fly impaled a hungry squaretail. The shades of night were fast descending on the stream when I came in sight of the camp-fire. As I drew near and gazed on the light within the shadow I was impressed with the charming picture of wood life, in its framework of white birches and darkening forests. The forms of the guides could be seen flitting about in the demoniac glare of the camp-fire, adding huge birch logs to the pile, causing the flames to leap upward, turning night into day, and chasing the shadows into the darkness beyond. We soon had the trout sizzling over the glowing embers; and biscuit, pork, potatoes and coffee completed our woodland repast. The trout were delicious; so were our slumbers. Early in the morning I started out with Lyman to try our luck. It was fly versus pork bait. I chose down stream. The pools were alive with hungry trout, that rose well to a rather large orange body blue-hackle of my own tying. When I finished up in front of the camp I had a nice lot of trout—the largest about 12 or 14 inches. Lyman's string was nearly the same, but he claimed to have lost some big ones in the stream above. We had no time to investigate further, as we had a long journey before us, so, striking camp, we headed up stream.

After worrying along a few miles we left the canoes and started up a wood road toward Webster Lake. On arriving at the dam we found a gang of lumbermen in possession. After the guides had departed to bring up the canoes I amused myself watching these human beavers at work on the structure, and noted their accurate balancing on slippery logs and timbers, varied by plunging into the chilly waters of the pool and swimming out after stray timber that had lost its momentum. No wonder most of them sooner or later fall victims to that curse of the lumberman, rheumatism. I have seen the floor of the lumber camp strewn with bottles. The Socalexis brand from Oldtown appears to be the favorite remedy. I was aroused from my reverie by the appearance of the guides with the camp stuff. Leaving the pool and its trout in possession of the gang we paddled out into the lake. Webster Lake is less than three miles in length, and is very narrow. The presence of the dam and carry detract much from its wildness. We soon made a landing, near the Telos canal, and leaving the canoes started up the carry that leads to Cooper's Camp. This old road is the last link that binds us to civilization. It runs from Telos Lake, along the south shore of Webster, to Trout Brook Farm, thence to Patten, on the Bangor & Aroostook Railroad. W. C. SQUIER, JR.

How the Parsons Put Trout in Crater Lake.

SARATOGA, Cal.—*Editor Forest and Stream:* Somewhere about the time I gladly sent a dime to buy one of the first copies of FOREST AND STREAM, I read with a Yale man's pride how my classmate, Maj. Dutton, who had gone into the regular army, had surveyed and written up a wonderful lake in Oregon. I promptly registered a vow to follow his steps and see the wild wonders he was so enthusiastic about.

Three summers ago two of us voted our camp on Rogue River a little too tame and started with an old prospector and miner, Theodore Pendleton, of Table Rock, to drive around Mt. Pitt. This two hundred mile drive we accomplished, notwithstanding the beautiful gray horse of the team was "funny" and often kept us waiting before he was willing to pull his share of the load up hill. The strangest experience of that trip was finding about twenty-five thousand flies between the new Minneapolis blankets we had spread out on our camp bed before going out for some of the monstrous trout of Klamath Lake. Can any camper explain this fly fact?

The wildest, weirdest body of water I ever saw was the famous Crater Lake. Maj. Dutton's modesty has not preserved for himself a copy of his scientific report to the United States Government, so I can only give FOREST AND STREAM general but conservative figures. Crater Lake lies about one hundred miles east of Ashland, a station of the San Francisco & Portland branch of the Southern Pacific Railroad. It is fifty miles east of Klamath Lake. I cannot pass that lake without mention. If you will patiently follow my fish-line I'll lead you into the snows of Crater Lake. Both lakes are notable. Klamath Lake, fed by the snows of Mt. Pitt, is the center of the best hunting country it has been my fortune to see. Except elk, mountain sheep and wild goats, everything is found there to delight a sportsman's heart. Particularly trout. Bears, mountain lions, deer, pelican, cranes, geese, ducks, are abundant. But trout! I have seen shoals of fishes in the salt sea, but never before shoals of great lake trout. The north shore of this Klamath Lake is of hard white gravel. The great springs, fed from Mt. Pitt, pour out in the clear lake bottom tumultuously. The eager sportsman needs not the glass-bottomed boats of Catalina to detect the schools of fish beneath him. They swarm. His boat prow drives them before him thick as the kids who strew flowers before President McKinley in Santa Clara county. They bite, too. Our first trip on our one spare day brought us cranes, ducks, geese and trout. The largest for our party fell to me that memorable afternoon—6½ pounds. But when I took it to the house to weigh the man in the other boat had a 10 pounder. Little Beth Scudder, whose father was one of the persons I am writing about, two years ago hooked a 12½ pound trout, and was obliged to ask Rev. J. K. Harrison's help to get it into the boat.

I won't write any more about Klamath Lake, but when I tell you Mrs. Denis' beds were comfortable, her biscuit light, her coffee clear, and her cream unstinted, you will appreciate the sportsman's spirit which led men whose vacation days were only ten to push on

from teeming, satisfying Klamath Lake that they might plant trout for future generations to enjoy in the wild and distant Crater Lake. This was our ambition last October—we could not go before the middle of October. The Southern Pacific said we could not accomplish the feat. Ambitious men had tried it in June and failed. The railroad company gladly did all we asked them to do to help us. They carried the transportation cans and nets which the California Fish Commission loaned us. They gave us letters to agents and to fish hatcheries. They promised to build us a monument if we would stock Wood's Lake—a beautiful body of water near the stage road, forty miles from Ashland, seemingly as easy of access as a Connecticut sunfish pond. It turned out that a storm hindered the easy task, which we did not accomplish, and exceptional weather with good, straight push of men in earnest made the difficult task possible.

On the sunny October days the marshes to the east of Pelican Bay, on Klamath Lake, alive with mallards, were hard to leave. Crater Mountain looked cold, but we noticed the snow melted. There was not enough snow for the hunters who were going to Mt. Pitt for the winter supply of venison. A challenge to public-spirited Mr. Dennis that we would give our time if he would send his team started him. Bert Dennis might go with the tough farm team. The ranch was alive. There was no faith on the railroad that the parsons could win, so we had brought no trout fry. The trout net was delayed by some expressman's mistake. The parsons—I mean the other parsons—had so many valises and black clothes and winter supplies were in such demand in case of a snow storm that we simply had to leave the Fish Commission fish can at Ashland—our team was loaded down. But we had voted to "take the drop of the crater," and our "spirits rose to the occasion." Mr. Dennis found a deep milk can in the milk house. A gunny sack tied over this would let in air and water, and hold in the fish. What fish? The fish we were going to take to Crater Lake. We had not consulted them. It looked for ten hours as if the scheme must fail for lack of fish co-operation. Soon as the vote to go was taken, a boy was posted on horseback for a net at the lumber camp. Then five boats and a dozen men and boys set out to net twenty or thirty pounds of trout, if they pleased. They did not please. We dragged that net up and down Dennis Creek. We roiled the water and surrounded the enemy. We poled and splashed, but every trout evaded us and the net result of two hours' fun a line was one chub. We let him go. Not enough seed for Crater Lake. Fortunately I had bought at Ashland a bolt of mosquito netting, stout cord, and some bar lead. I had made minnow nets at Lake Minnetonka; our fingers flew for this one. Big fish could dodge us. The huge spring at head of Dennis Creek was alive with little trout and chub. Clearing out snags and wading deep we filled our pail with trout of a finger length, and chubs enough to grow food for them in Crater Lake.

I'll not describe the ride over Dead Indian trail. Happy men who take it with dog and gun and time. We hurried. Our milk can splashed and wet our outfit. But those fish had two days of kingship. We set the can at night, head up, in cool streams. When we rested the horses we aerated the waters with our hands. When we found snow we snowballed our proud little fish. The jarring turned soft chub belly up, but the plucky little trout bunched in the middle of the can as if they knew they were to be the pilgrim pioneers of region's famous lake. Thursday morning, Oct. 20, 1900, we stood on the snowy crest of the crater, ten of our number seeing it for the first time. Who were we? Rev. Cephus Clapp, of Forest Grove, Ore., to whom we all take off our hats as a champion fisherman; Rev. W. W. Scudder, of Alameda, Cal., who moves to Seattle, Wash., next week, who will answer courteous questions about desirable camping grounds, for he plays as generously in vacation as he works his noble calling when duty orders. His son, Joy, rode the pony which carried our overcoats and our lunch to the top of the mountain, for we had to leave our wagon team when the snow got deep. Bert Dennis was teamster and strong man—certainly the physical hero of the occasion. If my yarn is not too long, I'll mention "my good dog Rex" later on.

We were at the snowy summit and our trout were alive—about three dozen of them. We saw the cold, gray lake, nine miles long, seven wide. For most of the way the sides are too precipitous to climb, and it is 2,000 feet to the water. The lake basin is the crater of an extinct volcano into which the tip-top of the mountain seems to have fallen back. It makes an island seemingly of ashes. The bluff shores are steep as El Capitan in Yosemite. Leaping from the summit you might, from many points, leap into the water 2,000 feet below. The wind was blowing and a storm threatening. We did not tarry long. Happily the snow was soft and sticky. There was no fear of avalanche à glissade. We prudently lashed ourselves together lest we fall into crevices and wallowing in the snow from knee to shoulder deep were soon at the water's edge. Bert led the procession and carried the precious bucket. But we all put our hands on it and shared the honor, for such we felt it to be, of planting noble fish in the grandest lake in Oregon. It is 2,000 feet deep by Dutton's survey, in places. Imagine yourself in a boat with such sea-room playing a trout as large as a salmon. Don't marvel, boys, that we sang the doxology, and in a hearty prayer about a minute long, asked God to prosper our little pioneer fish and bless all who should follow us in happy excursions to come. Fellows who can fight their way to success and victory have a right to praise and pray. As we turned up the snowy hill one audacious little trout swam out from the cover of the rocks and seemed to say "Good-by, come again, we will give good account of ourselves." No other sign of life was there. On two trips I saw no eagle, crane, duck, buzzard or bird on shores of Crater Lake—only a devil's darned needle in the summer of '98. Yet President David Starr Jordan and others who have studied the lake say there is fish food there in abundance. He adds: "The only risk about their successful propagation is that of finding each other in so large a body of water at mating time." They will have to assume that risk. The parsons have set them up in housekeeping in generous apartments.

Just a word for "good dog Rex," great grandson of Minneapolis Don, of 1873-1885. We took a big ball of twine to lower our bucket in case the snow had blockaded

us. It rolled down the mountain and made a big snow ball. He did not see it. But when he was sent for it he took the trail, struck the snow ball apart and brought us the twine. My alpcnstock, probably the gunwales of the boat Maj. Dutton had dragged to the lake, glissaded down the trail. Rex brought it and all the boys praised him until his old master's heart grew soft and proud. We do not claim we have "stocked Crater Lake." We honestly and laboriously planted it. If you essay the magnificent trout of Klamath Lake you can, if you will, in summer, when fish bite, plant mature fish in Crater Lake. Doubtless you can catch them in Anna Cañon. I only hint at the glories of Southern Oregon. May you live to see them!

EDWIN SIDNEY WILLIAMS.

CHICAGO AND THE WEST.

The Famous Au Sable River.

CHICAGO, Ill., July 20.—"See the Au Sable and die" might be a good enough proverb for any Western-American angler, were there not possible, the better alternative of seeing the Au Sable and living. Mr. John D. McLeod and myself saw the Au Sable this week, and we lived, a great deal better than anybody could who was left behind in Chicago or Milwaukee. True, we got a part of the prevailing hot wave, yet on Thursday night there came an agreeable cool wave all down the Au Sable, and on Friday morning there was a covering of frost on top of our tent, so thick that one could write his name in the cool rime. When I told this to my sweltering friends here in Chicago to-day, they thought it was only part of the fish story.

Mr. McLeod and I arrived at Grayling, Mich., at 4 in the afternoon, and were much disappointed to find that our friend, Mr. George L. Alexander, could not accompany us. Mr. Alexander, however, had, with his customary kindness, arranged everything for us in advance. We were told that thirty miles down the river there was a camp waiting for us, in charge of Reuben Babbitt, the best guide and best camp man on the whole Au Sable River. Moreover, here was Ernest Babbitt, nephew of Reuben, and Leon Babbitt, son of Reuben, all members of the famous Au Sable Babbitt family, guides for generations, and now waiting to give us a touch of real life on the famous river. It is hardly necessary to state that the Babbitt family was on the Au Sable River when the latter was first discovered. It was the grandfather Babbitt—that is to say, the grandfather of Reuben Babbitt—who was the first member of the family to guide anglers on that stream in the days when no one knew what the grayling was, and where certainly no one could foresee the extinction of that species.

Our young men, Ernest and Leon, were waiting for us, each with a typical Sable boat, a long, narrow, flat-bottomed craft, which has been evolved especially for the exigencies of this river travel. This boat is about 20 feet long, and I should think less than 30 inches beam, pointed at both ends. It is a most useful boat, readily amenable to the paddle in going down stream or the setting pole in going up. In the forward end of the boat there is built a live box or well in which one's fish are kept. On either side of this live box there is a little side pocket with a hinge cover, in which pocket one keeps his fly-books, leaders and other odds and ends. The top of the live box is the angler's seat, and a legless chair is provided, equipped with cushion, for the ease and comfort of the fisherman.

This brings one naturally to a review of the conditions of sport on this much patronized stream. It is to be seen at once that the ways of wealth and luxury and comfort have prevailed here. The typical Au Sable River camp is a great affair, in which one can be quite as comfortable as he is at home. Thus I found that Mr. Alexander had sent before us his own private tent, a canvas house nearly 20 feet square, provided with a 3-foot sod cloth and floor cloth, which buckles around the edges of the tent inside, and an enormous awning which projects so as to afford an air chamber above and a porch in front. The flaps of this tent were made double upon one side, this double flap concealing a row of hooks. The edge of the other half of the tent is provided with a row of eyes. You get inside of the tent, which is already mosquito proof as to the floor, by virtue of the aforesaid sod cloth. You engage the hooks of the side flaps inside the double covers of the opposite flap, and there you are, in a house absolutely mosquito proof, so tall that an 8-foot man could not touch the ceiling, with room enough for a dozen men, cool by reason of its spaciousness and its big overhead fly, and insect proof to a greater extent than is possible in a house provided with screens at door and windows.

Besides this big house which Mr. Alexander had sent, Reuben Babbitt brought down just a few tents of his own; one mammoth fly or awning, which he stretched to use as a dining room; one 10 by 12 wall tent for himself and the other men; one 10 by 10 cook tent in which to keep the provisions, etc. It was all very magnificent. There were five of us in our party, and we had four tents, total extent pretty near a quarter of a mile, and total accommodations about enough for forty men. We had a big open camping place on one of the high bluffs known as Young's Camp. There had been others before us, but we were alone at the time. It was magnificent here again. Two well charred upright crotches held a cross beam above two other big logs, which had evidently served as side logs for camp-fires. From the support hung a series of pot hooks, which Rube extracted from his mess kit, and he soon had stewing, simmering and sizzling enough cooking utensils to run a ranch round-up. As to the cookery, both Mr. McLeod and myself, who think we ought to know, agree that Rube Babbitt is the best camp cook that ever stepped in leather, and this bars no one.

For the pure luxury of camp life, where everything has been thought out in advance, and every provision made for one's comfort, I have never seen the equal of camping as it is done on the Au Sable. This is the accumulated result of all the generations of the Babbitts' experience, backed by that of many sportsmen. There are guides and guides, but if you want to be perfectly happy break into the Babbitt family and try the Au Sable. If you want to get Rube Babbitt next May, you would better write to him now, or at least not later than

February, as that is the month in which he makes most of his summer contracts.

From this it may be imagined that the Au Sable is something of an attraction. Indeed it is. I asked Mr. Alexander how many people annually visited this stream, and he replied that without doubt it would foot up somewhere between 500 and 1,000 each year. It is difficult to obtain exact figures, as so many leave town directly for points down the river, and do not stop at any local hotel. Thus it will be seen what trout fishing can do for a community—that is to say, for both a town and farming community. If the trout fishing on the Au Sable should play out, there would be fifty abandoned farms between the town of Grayling and Connor's Bridge, thirty miles below. Grayling has some lumber mills, a proposed salt mill or so, a few other local industries—and the Au Sable River. It is no exaggeration to say that the sporting quality of this stream is what has proved the practical support of several scores of persons for many years, and what has given the town of Grayling more than a local reputation. This is the greatest instance of the cash value of sport which has ever come under my personal knowledge. The lesson of the Au Sable River ought to be a good one for local men in other sporting localities.

The Stream.

Now as to the stream itself. It was a bold, rapid, rushing little river, even as we saw it when we got off the railroad train, but Mr. Alexander laughed when we expressed admiration for it. "Wait until you get down the stream twenty miles," said he. "You will find the Au Sable twice as big, and moreover, twice as cold. The greatest number of streams come in below this town, and it is there you will find your best fish." All of which proved to be quite as he had said.

It was somewhere between 5 and 6 o'clock when at length he got our little odds and ends together and set off down stream, it being Mr. Alexander's advice that we push on to camp, although we could not get there before 11 o'clock that night, even provided that all went well. The distance was reported to be about thirty miles, and I presume that the speed of our boats was somewhere between five and six miles an hour, although the water itself seemed to be flowing as rapidly as that, and although the boys both paddled steadily all the way down.

The Voyage in the Night.

It is the custom to start from Grayling in the morning for this river voyage. This may be perhaps a little safer or a little more customary, but let Mr. McLeod and myself advise all prospective visitors on that stream to make the run at night. To be sure, the water is a trifle cold, and in places over one's head, but the guides are very trustworthy and know perfectly well how to handle a boat; so that even on the darkest night the passage can be made in safety, in spite of sunken logs and overhanging "sweepers." Most of the latter are now trimmed out.

The delights of such a voyage are not to be catalogued. It was a novel, an exalting experience, this night ride down the Sable, which we had. As the darkness came on the whole appearance of things changed. Now and again came a glimpse of the shimmer of water running straight on ahead and apparently losing itself in the impenetrable wall of blackness, there being not the least ray of moonlight to lighten up the scene. Then, just as the boat was pushing its nose into this black wall, would come a shift, a swirl and a change. The sea of ebony blackness set in all around the boat. One could not help wondering how the skillful paddler in the stern was making his way in such a mysterious haze, all the time borne swiftly down upon the surface of the rapid and somewhat ticklish stream. Yet little by little one's own eyes became accustomed to the gloom. He could make out the wall of forest on either side, could believe that this black cathedral of shadow, this noble dom of ebony, or this corridor of sable shades might be penetrable both by vision and by boat. It was wonderful, mysterious, fascinating, this ride down the Sable, and if you have not taken it, do so when you can.

Rounding one point of the river, Ernest Babbitt and I heard a splashing in the water and a crackling in the brush. "Do you know what that is?" he asked, and of course I told him that I knew it was a deer.

"We'll light up the headlight," said he, "and perhaps we will run across a deer coming down stream." This we did, the headlight, with its big reflector, casting a good light for some distance. We had run perhaps two or three miles down stream with the light, when all at once we heard a splashing in the water ahead of us. Both of us then lapsed into silence, for we both knew what it meant. Presently we drew down to the shallow whence the splashing came, and saw a magnificent buck threading his way diagonally across the river. He stood looking at the light curiously, but not taking any fright or evincing anything but extreme curiosity. His eyes now shone glittering red or weirdly green in the rays of the light, and we could see his antlers, already grown but still in the velvet. It was a superb picture of wild life. We passed within 10 or 15 feet of the buck, but for some reason or other he did not take alarm, even after we had gone by. When Mr. McLeod's boat came on behind us the case was otherwise. Mr. Buck seemed to have gathered his wits, and saluted the new arrival with snorts and whistles, which continued until he had made his escape over an adjoining ridge.

We found our camp at last, with Rube Babbitt in charge, it being then about 11:30 at night. We did not attempt to ferry across the river to Young's Bluff, but slept where Rube had made a temporary camp. We were tired that night, and did not attempt any fishing on the following morning, but pitched camp, and that evening went out to see what fun we could have with the rain-bows.

The Fish of the Au Sable.

It is perhaps well known to most readers of FOREST AND STREAM that the brook and rainbow trout have now quite taken the place of the grayling which formerly made this stream famous. The local guides and anglers think that the grayling would have become much scarcer even had the trout not been introduced, and believe that the spring spawning of the fish made it a victim of the spring lumbering operations to a great extent. The

brook and rainbow trout were planted by the Fish Commissions of Michigan and of the United States at about the same time, but since then each fish has in a way established for itself its own habitat in the stream. Thus the brook trout belt, which in May extends up to Grayling, in late July begins a dozen miles below Grayling, and it terminates at this season of the year a few miles above the place where we were now in camp, which is near the spot known as Connor's Bridge.

At this part of the stream in the months of July and August the brook trout is rare—indeed Mr. McLeod and I did not see one in our entire trip. The rainbow has selected for himself these deep, long pools, and whether or not the temperature of the water or the presence of the rainbow is uncongenial to the brook trout, the latter is not so often found in that portion of the stream. The guides, and Mr. Alexander also, thought that the ratio there would be about 20 per cent. brook trout to 80 per cent. of rainbows. We found this percentage much less in our own specific case.

Everybody told us that we would not catch any trout, that the hot weather had killed the fishing, and that all we could hope for would be to get an hour or so of fishing in the evening or in the very early morning. We found this to be true, and although we fished in mid-stream the first day of our stay we did not repeat the experience, because it was useless. On the first evening we had a little fun with the rainbows, and it was then that I got my first good specimen, a fish running perhaps close to a pound, and which gave me quite as much of a fight as any 2-pound brook trout I ever saw. I took four of these fish that evening, all of them splendid fellows, and I must say that my eyes were opened as to the quality of the rainbow trout in his fighting capacity. The brook trout simply is not in the same classification, and I should say that a half-pound rainbow would fight twice as hard as a half-pound brook trout. This is true on the Au Sable, though anglers of the Pacific Slope say the rainbow is but a very dullard. On the table, or at least as found on Rube Babbitt's table, the rainbow trout is a good eating fish. This was contrary to the impression which Mr. McLeod and I had formed regarding this fish, which heretofore we had both found soft and rather tasteless. Perhaps it was the cookery, but more likely it was the Au Sable River environment. At any rate, the fish were good to eat, and perfectly beautiful to catch. Mr. McLeod, as usual, came in that night with more fish than anybody else. He had about a half dozen, and of these there were three which would run over a pound, and which were truly magnificent fish. He said that in the deep pools, below camp, where he had been fishing, he struck one fish that seemed to offer the same resistance as a muscullunge, and he could do nothing with it. Specimens of the rainbow have been killed in the Au Sable up to 8 pounds, although 3 pounds is in the neighborhood of the usual weight for the big ones. The fish which we took were about of the average, and we did not kill any very extraordinary ones, nor indeed did I strike any fish larger than those which I was lucky enough to kill.

On the next morning Ernie and I went out early, and we did a little business with the rainbows before Rube had breakfast ready. We got away about 6 o'clock, and I think had we been away at 5 we should have had even better fun. We brought in four more nice fish this trip. Of course, on the preceding evening, and on this morning, we took several fish which were less than the legal limit of 8 inches, but not very many. The average size in these waters is very large. There is a little board nailed on the front of the live box of the Au Sable boat. In this board there are two sawed lines, and the space between the sawed lines is split out. If your fish is a little bit doubtful as to size, you put it in this measuring rule. If it is not able to touch nose and tail to the sides of this hole, you put back your fish in the river, and no monkeying about it. The 8-inch law goes on the Au Sable, and the guides are as positive about its enforcement as the game wardens, which latter are very vigilant and effective.

Mr. McLeod went out on the evening of this second day loaded for bear or big rainbows. He had not fished in the morning, but declared that he was going to "do business" with some big ones that night. He rigged a bass hook and a swivel or two, and announced that he would send a live minnow down a certain pool. He did so, and he lost his tackle, and as he had left his fly-rod at home he got no fish at all! Ernie and I were very lucky, and we met some very fine sport indeed. The net result was seven fine rainbow trout, the largest running about a pound, all, of course, over 8 inches, and I think none less than 10 inches. I raised perhaps as many fish as I got, and had several exciting experiences with fish which broke away in the rapid water. On the whole, I was very glad to make this my first acquaintance with the rainbow trout, and to see it in what may be called a typical environment. Neither Mr. McLeod nor myself had any great fishing, nor did we expect it at this time of the year, which is the worst which could be selected, and which in our case was made yet worse by the unspeakably hot weather, although, strange to relate, our last night in camp was a very cool one. I presume that had we stayed after that we might have had some very fair fishing. As it was, I had the biggest average of fish I ever had on any Michigan stream.

Game, but Not a Favorite.

Mr. McLeod and myself both agreed that the rainbow as we found him was a "sportier" fish than the brook trout. We asked the guides what they thought of the rainbow, and they all said that they would much rather the fish had never been introduced in the Au Sable. They admit that it outfishes the brook trout, but for some reason or other they do not like it so well, partly because, no doubt, it is not quite so good upon the table. There is this to be said in favor of the rainbow as found in the Au Sable: It is a much heavier fish in the average than the brook trout; it is a much better fighting fish; it is a much better fly-fishing fish than the brook trout. The guides all told us that they did not try to fish for rainbow-trout with bait, simply because they could catch more rainbows on the fly than they could on bait. They all admitted that bait-fishing was far more destructive on brook trout than fly-fishing, but declare such is not the case with the rainbow. They all think that even the

large rainbows feed freely on the surface, and hence can be taken with the artificial fly, whereas the brook trout, after it reaches a pound or so, becomes a heavy fish, a bottom feeder, and rarely rises nicely to the fly.

As to the surface feeding qualities of the rainbow, we had ample proof. In the evening we could see them leaping just before sundown on every hand, and in water where during the day one would not have thought there was a fish in existence. This feeding time usually extends quite into the night, until it has become altogether dark, and sometimes, on moonlight nights, nearly until midnight. Hence fly-fishing for the rainbow on the Au Sable in midsummer classifies itself sometimes as a night sport. In our case we found that the fish ceased to rise in about an hour after they began—that is to say, they stopped rising somewhere between 7 and 8 o'clock. Our guides said that this was very unusual, and that the feeding spell in the evening usually lasted for three or four hours at least.

The Eight-Inch Law.

I have stated above that the tourist traffic on the Au Sable amounts to about 1,000 persons annually, and that it practically supports all the local population below the town of Grayling, since the farmers find their market for their vegetables at the tents of the campers, and since the wages received for guiding constitute the main cash revenue of the farming class in that neighborhood. Hence the question of this 8-inch law was a very nice one for the dwellers along the Au Sable. Mr. Alexander was the author of the measure which established an 8-inch limit this year on the Au Sable and its tributaries, and also established a limit of fifty fish as the maximum amount to be taken away by any one party. When we asked the guides privately what they thought of this new law, they without exception said that they thought it was the best thing which could have been done for the Au Sable River. Asked as to whether it had cut down the tourist traffic, they replied that it certainly had, and that there were not half as many parties on the Au Sable this year as there have been in the past. A great many anglers do not like to put back any fish, and a good many do not like to put back a fish which is 7 inches and just short of 8 inches. At Bay City I saw many anglers who have gone to the Manistee this summer instead of the Au Sable as was their habit. In spite of the fact, however, that the law is keeping away their traffic, these guides pluckily and wisely insist that the 8-inch law is the best thing that could have happened. Two years ago one man from Saginaw carried away 1,500 trout when he went home. That man is since deceased, but there are many others of his sort who are not deceased. The guides say that, wonderful stream as the Au Sable is without doubt or question, it was being fished too hard. Now they know that every 6 or 7 inch trout put back this summer will be an 8 or 10 inch trout next year. In short, they, the most interested persons, know that protection can protect, and that protection is a benefit. So much for a bit of contemporaneous history on the angling stream which, of all those of the West, is best fitted to be called the most prolific and remarkable.

That Mr. McLeod and myself were delighted with our two days' sojourn on this splendid river need not be said. There is a peculiar impression of individuality about this river which one finds it impossible to describe. You fish all sorts of trout waters, and they run very much alike. Fish the Au Sable, and you carry away an impression that you have been in surroundings different, distinct, peculiar and impressive. As there was never a trout stream more prolific than the Au Sable, certainly was there never one more appealing, more mystical, more fascinating. Long may it prosper, and the good anglers who know it and love it.

For Mr. Alexander, the local attorney who framed and was largely instrumental in getting through the Legislature this 8-inch law, too much cannot be said by way of credit. Here and there such a sportsman stands up in this naughty world and does abundant good for other people. There does not exist in all northern Michigan, nay, nor in all southern Michigan or all the rest of the West, a broader minded or more public spirited angler than George L. Alexander. His work on this grand river is something which entitles him to the respect of thousands of his fellow men, and which ought to win him the admiration of his fellow men, whether or not they are ever able and lucky enough, as Mr. McLeod and myself, to make a personal visit to this sweet stream.

Tackle.

The proper rod for so heavy a water as this is perhaps one not lighter than 6 ounces. I used a 4-ounce rod and Mr. McLeod one of 3¾ ounces, and although we stopped our fish, we might have had trouble with very heavy ones. I had the best luck with the Wickam's fancy No. 8, with a gray hackle for dropper, the latter No. 10. The smaller flies seem to do better on this stream at this season.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Chicago Fly-Casting Club.

SCORES of contest held at Garfield Park, July 27. Owing to a strong wind blowing during the contest, the casting was not up to the usual standard.

	Long Distance Fly. Feet.	Accuracy and Delicacy. Per Cent.	Bait Casting. Per Cent.

Winning Scores—Long distance fly, I. H. Bellows, 104 feet; accuracy and delicacy fly, F. N. Peet, 95 per cent.; bait-casting, I. D. Belasco, 97 per cent.

N. C. HESTON, Sec'y-Treas.

New England Fishing.

BOSTON, July 29.—Mr. M. L. Crosby, of Boston, who has been stopping at Jackson, N. H., spent Wednesday at Double and East Branch rivers, where he had good fishing. He took one trout 14½ inches long. There are bitter complaints of the disregarding of the law limiting the catch of white perch to twenty-five to each person at Sabatis Pond, Me. There are complaints of "whole boat-loads of perch." Persons who have been there say that the fishing has been great, but no pond on earth could supply so many fish for a very long time. Black bass are also rising well. The bass fishing is good at Great Point, Belgrade, and at East Pond, Oakland. A Mrs. Rowe is reported to have made a score of twenty-five bass at Great Pond in one day, and to have done about as well at East Pond another day.

Lake Maranock, Me., reports continue good as to bass and white perch fishing. Dr. and Mrs. W. W. Kirby, of Providence, and Mrs. E. E. Shannon, of Boston, have been spending some time at that lake. Dr. and Mrs. Kirby made some good catches of bass. Mrs. Shannon is a good fisherwoman, and succeeded in landing a bass weighing 5 pounds, the largest taken there for a long time. A Mr. Wright is reported to have taken a salmon out of that lake this season that weighed 8 pounds. Monday noon a fisherman brought in five bass that would each tip the scales at about 2½ pounds. He had only fished a part of the forenoon. Mr. Alvin Townsend has taken a pickerel there that weighed 4 pounds. Mr. A. C. Clapp has lately taken a bass of 4 pounds. It is claimed that there is now really pretty good fishing at Lake Auburn, Me., for those who have the patience to try for it. But only a few fish, the season being considered to be over. Now and then a good salmon is taken. At Bridgton and Harrison, Me., good catches of white perch are being made. Black bass are plenty and bite well, but the local fishermen care little for them. It will be remembered that Harrison is at the head of Long Lake, a body of water tributary to Sebago, and separated from it by the Songo River. At Bridgton there are several ponds, most of them well stocked with bass and perch.

Mr. Walter L. Hill, whom many will remember as so very successfully connected with the first Boston Sportsmen's Show, starts this week for a camp in Pond-in-the-River, just below the Middle Dam, Me. What makes this fishing trip of special interest to Mr. Hill is that he takes his two boys, of ten and twelve years—their first trip into the Maine woods. "Like father, like son," they are both fishermen. SPECIAL.

American Fisheries Society.

THE thirtieth annual meeting of the American Fisheries Society was held at Milwaukee July 19 and 20, thirty members being present. Among the papers read were those by Gen. Edwin E. Bryant, discussing the power of the State to regulate fisheries and the taking of fish; by W. C. Marsh on the trout disease, Charles G. Atkins on the diseases of fishes, James Nevin on muscullunge propagation, and C. H. Townsend on life at the depth of the sea.

The next convention will be held at Put-in-Bay in August, 1902. The officers for the year are: President, Gen. E. E. Bryant, of Madison, Wis.; Secretary, George F. Peabody, of Appleton, Wis.; Vice-President, Eugene G. Blackford, of New York; Corresponding Secretary, John E. Gunckel, of Toledo, O.; Treasurer, C. W. Willard, of Westerly, R. I. The following named gentlemen were elected as the Executive Committee: John W. Titcomb, of St. Johnsbury, Vt.; George T. Mathewson, of Thompsonville, Conn.; J. H. Dunlap, of Washington, D. C.; Henry O'Malley, of Baker, Wash., and W. H. Boardman, of Central Falls, R. I.

The Smooth Puffer in the Hudson.

MR. C. L. ROGERS, of Closter, N. J., has sent us for identification a specimen of a strange fish, which proves to be the smooth puffer salt-water species, which ranges from Cape Cod to Brazil, but is rare north of Cape Hatteras. Mr. Rogers reports that eight of the strangers have been caught in the Hudson River at Piermont.

Everyday Birds.

UNDER this title Messrs. Houghton, Mifflin & Co. have published a little volume of 100 pages, by Mr. Bradford Torrey, well known as a charming writer on natural history subjects. It tells in a popular form a number of facts about certain of our commoner birds, and is illustrated by twelve reproductions from Audubon plates, by the three-color process.

Mr. Torrey's sketches are always attractive, and children and grown-ups, too, will enjoy this volume. The chapter on "Winter Pensioners" is especially worth remembering against the time when the bitter days shall come again. A little effort in providing food for the winter birds pays for itself many times over during the months of cold.

We confess to a little regret that Mr. Torrey should use the term chipper for the to us more familiar and as we had supposed almost universal "chippy." No doubt it is a local term.

This is one of the many attractive nature books of the day, and should do good.

"Sam Lovel's Boy."

HAVE just finished reading Rowland E. Robinson's charming book, "Sam Lovel's Boy." The character of "Uncle Lisher" appeals to one very strongly; don't you think so? In my humble opinion this little volume is much superior in its style and conception to many of the recent novels that you see advertised on the street cars and elevated railway stations. It deserves its success, and I am glad to have had my attention called to it in the columns of FOREST AND STREAM.

FAYETTE DURLIN, JR.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

The Kennel.

Fixtures.

Sept. 25.—Toronto, Can.—Dog show of the Toronto Industrial Exhibition. W. P. Fraser, Sec'y. and Supt.

Jennie.

NEW YORK.—It was seven years ago in September that my old friend Lewis came sauntering into the office close on to lunch time and took up his "sideways" position in a straight-back chair and converted it into a rocker, and asked me how I felt. I told him I felt very like buying a bird dog. "Well," said he, "I guess I have one that would suit you."

"All right. I'll take him, or her, or—well, what is its name? How much? Here, I'll just give you a check for it now and bind the bargain."

He protested, reminded me of the pig in the poke, etc., but I bought the dog, and then found it was a blue belton named Jennie—plain Jennie.

Two days later I went home and found Jennie in the kennel alone. On looking her over I determined her pretty spots were worth what I paid for her, and that check would have bought a fair horse too. Since that time she has been the inspiration of many hunting romances—in the mountains playmate, room mate and bed fellow in the South, principal, professional, most proficient in the hunt, going on when others quit, measuring her gait by the sun, a bit speedier at sundown than sun up, though foot sore in four places, and would have been in six had she had them. A companion intelligent and faithful at home; one of the family that only missed the soup course, because soup is served hot. We all loved her, just as much out of hunting season as in.

But Jennie is dead! And now memory—at times inconvenient memory—plays its pranks, its overwhelming with good things that can never occur again, thus the inconvenience, then the sadness—the world is full of Jennies, but only one is the average lot of man.

She is the first love in the animal world. We will be faithful to her memory; we can't help it, with the passing on. The old zest is coated, and a little rust on the gun barrels doesn't seem to worry me so much.

We may hunt on for years, and shoot over all kinds of dogs and own some good ones—in fact, from a field point of view, some better than Jennie—but when the hour glass is mostly run out and we look back, think back, dream back, of those days afield, pre-eminently above and beyond, and in a class of her own, will stand Jennie.

I see her still, jumping from rock to rock sideways at times; that nose, so full of delicate and tender tissues, on which the faintest scent makes an impression, well into the wind, speeding here, hesitating there, as that wing-tipped grouse speeds on from danger, seeking security among the rocks, her nostrils open, they drink the wind, it's tainted a second and gone; she changes her course, and the impression grows stronger; her legs shorten; the body lengthens, her mouth closes, respiration ceases; it makes too much noise; she slides on up straight as an arrow close to a high flat rock; she hesitates, looks up, measures distance, crouches, springs into space, the front paws hold, the hind ones claw the soft rock, and she is up and on; but only for a second, mounted on nature's pedestal there in full view, with the upper hip drawn in, one front paw drawn up under her body, her tail and head on a graceful level, still, very still, all that moved was the heart; I think its pumping worried her, stood that mottled statue. This is one of the pictures that helps me in her loss.

I have another Jennie, and a most promising one, but the truth is best told by the innocent ones at home. She hasn't as many pretty spots as dear old Jennie, and I—well I fear she never will have.

THOMAS ELMER.

Philadelphia Dog Show.

PHILADELPHIA, Pa.—The third annual show of the Philadelphia Dog Show Association will be under the supervision of the following Bench Show Committee: Clement B. Newbold, Edward Moore Robinson, Alexander Van Rensselaer, Louis A. Biddle, Marcel A. Viti, S. Boyd Carrigan, Reginald K. Shober, D. Murray Bohlen, Francis E. Bond, Mitchell Harrison, Jay B. Lippincott, C. Leland Harrison, Sidney W. Keith, George R. Packard, Henry Jarrett, John W. Geary, James W. Paul, Jr., and Robert Toland.

The prizes will be uniform throughout, \$15, \$10 and \$5 in all puppy, novice, limit and open classes. The entries will close Nov. 11. Specialist clubs and individuals who intend offering special prizes are requested to communicate with

MARCEL A. VITI, Secretary,
320 Witherspoon Building.

The Irish Setter Club.

LANSDOWNE, Pa., July 26.—*Editor Forest and Stream.*—The Irish Setter Club of America offers \$30 to the first Irish setter and \$20 to the second Irish setter winning an undivided first, second or third prize in any State of any bona fide field trial in the United States or Canada during the season of 1901-1902, prior to Feb. 11, 1902.

GEO. H. THOMSON, Sec'y I. S. C.

'Mid Reef and Rapid.—XVII.

BY F. R. WEBB.

"THAT is the head of the falls," said George, as we paddled leisurely through the still reach above, down toward the cliffs.

"How long is it?" asked the Colonel.

"Well, the whole rapid is a mile and a quarter long," I answered, "but it is not all swift water; there are several short, still reaches in it. The worst places are the middle of the falls—the part known as the Devil's Race-path and the extreme lower end. Now you must all be careful, and not run too close together, for the falls are at their worst in low water. It is not that the water is so terribly rough, although rough enough in several places, but the place is so rocky and the boat channel so obstructed with reefs and fish dams and the water is so swift and strong that caution is necessary."

We paddled leisurely up to the remains of the old navigation dam at the head of the falls, which formerly threw all the water in a deep, contracted flow down over the reefs at the head, close to the cliff along the left bank, and took a good look down the long, narrow, cliff-lined gorge, the Colonel in particular studying with interest the place about which he had heard so much.

A towering wall of massive cliffs loomed up out of the water on the left and stretched away in a gloomy, frowning, diminishing, down-hill perspective along the riverside for a mile or more, with here and there a bold, rocky point jutting out from the wall into the river. A straggling, ragged mat of low, scrubby trees and bushes covered its brow, and trailing vines and creepers hung in unkept festoons down over the face of the cliffs. The river spread out to a considerable breadth, and the right bank sloped away gently out of the water in a barren, water-washed waste of white, glistening stones and gravel as far back from the river as we could see, testifying to the fury and impetuosity with which the river rushed down through this gorge in high water. Back of this beach the high land rose up to a level fully equal to that of the cliffs, but with a gentler slope, and further back from the river.

The bed of the river was a wilderness of reefs for the first hundred yards, through and among which the water rushed and chafed impetuously, fretting itself into foam. We slipped through the remains of the old navigation dam and cautiously threaded our way among the reefs without much difficulty, as we were familiar with the somewhat crooked and winding channel. Below this was a reach of still, black, sullen looking water, in which the beetling crags were reflected somberly, and upon whose surface the bubbles floated, sharply white and distinct.

We paddled slowly and carefully through this reach, keeping a sharp lookout for the ever-present, submerged reefs.

"Now for the Race-path," exclaimed George, who was in the lead, as we approached a long fall of nearly half a mile in extent, down which the water rushed and roared through a conglomeration of ledges and reefs, absolutely impassable, except for a small, narrow canal, which led close along the foot of the cliff, hardly a boat's length in width, and down which the water shot with arrow-like swiftness, turning a little to the right at the bottom of the fall, where the river broke up into huge waves as the rush from the canal and the falls met the deep, still water below. A massive, crag-like buttress projected into the river in a sharp point from the foot of the cliff, around which the surging waters whirled and foamed in fury. This wild shoot was not inaptly termed the Devil's Race-path by the old-time boatmen, since everything wild, rough or savage seems to be the special property of his satanic majesty, as the too numerous to mention Devil's Punch-bowls, Devil's Backbones, Devil's Slides, etc., found in almost every community would seem to indicate.

We had an exhilarating shoot down this little canal, and the cliffs, rocks and bushes shot by us up stream with dizzying velocity, as we whirled swiftly past, and the big waves got in their work to good advantage, as we were shot out of the mouth of the race into their tumultuous embraces.

"Commodore, do you remember that little channel we discovered last year along the face of the cliff through the falls ahead while we were fishing along there?" said George, as we paddled leisurely along over the smooth but swift stretch below, and approached the last and worst half mile of the falls—the Kemple's Falls proper of the old-time boatmen, which is a conglomeration of reefs, ledges and dams, compared to which those above the Race-path were but as child's play. A long navigation

dam put out from the cliff on the left at the head of the reefs, and sloped away, down and across the river, until it ended a few yards from the right bank in an open passage, around and down which most of the water of the river rushed in a powerful sweep.

This was the remains of the old boat channel which passed through the rest of the falls on the right side, a chaos of reefs lying to the left, and along close to the cliff, through which led the little channel we were now discussing.

"Yes; I remember we made a note of it and decided that if we could slip over the dam it would afford a better passage through the falls than the regular boat channel over to the right," I answered.

"Why, what's the matter with the boat channel?" asked Lacy, as we paused to inspect the dam.

"Well, just at the end of the dam," I replied, "the old channel is filled up, and the water now sweeps around sharply to the left in an irresistible current. The right bank is lined with reefs; the channel to the left is narrow, and a mass of reefs lies squarely in the middle of it, just where it is calculated to do the most good, and it is impossible to dodge the reefs in the middle without going ashore on the reefs at the side. Also, just below is a fish dam with an impassable shoot at its point. I hung up there last year and narrowly escaped a capsizing, and George and I decided next cruise to try the new channel next the cliffs."

"I think we can slip over the dam over there to the right," said George, indicating a little gap or depression in the rocks and reefs of which the dam was composed, through which the water poured in a perpendicular little cataract, down the face of the dam, which was some 2 or 3 ft. high. It was a peculiarly difficult shoot to make, as owing to the long down-stream trend of the dam the current swept swiftly along its face as along a wall, instead of setting squarely against it, therefore it was necessary to take the little, narrow shoot at an angle, otherwise the strong current would carry the stern around out of line with the shoot, and a hang-up and probable capsizing would result. It need scarcely be said that it required nice calculation to get the exact angle of approach.

George started in first, while the rest of us hung up in the slack water in the lee of a big line of reefs above, gently back-paddling to maintain our positions, while we watched him. Dropping cautiously down along the face of the dam until the bow of his canoe was within a yard of the desired shoot, he held her stationary by back-paddling, until by patient, skillful maneuvering he got her into the desired position, with her nose lying in the little gap, when he let go, and as the powerful sweep of the current swung the stern of his canoe around, she slipped gently and easily over, without touching anywhere, although the gap was hardly a yard wide, and dropped, with a gentle splash, into the deep, swift water below, where she was caught up and whirled away down the crooked, swift little channel, dodging around here and there to avoid the rocks, most of which were of considerable size, and stood high out of the water.

I followed and dropped down toward the shoot, pretty much as George had done.

"Hurry up there, Commodore. Don't keep us holding back here all day," said the Colonel, whose boat was heavy and hard to hold, and who didn't take much stock in our back-paddling methods, generally preferring to take his shoots with a rush.

This rattled me, of course, and I took the shoot before I was fairly ready, and although the bow of my canoe reached the gap all right, instead of slipping easily over as George had done, the set of the water carried my canoe out of line to the right, and her keel hung on the rocks at the side, squarely amidships, and she swung round as on a pivot, until right across the dam, when she lodged and careened until her decks were awash and the water just level with the top of the coaming.

[TO BE CONTINUED.]

A. C. A. Meet.

The Twenty-Second Annual General Meet, Aug. 9 to 12.

THE twenty-second annual meet of the American Canoe Association will take us back again to the ever-popular islands of the St. Lawrence River.

The Camp Site.

The Commodore has kindly placed at the exclusive disposal of the Association his island of Mudlunta for the meet of 1901.

The Island of Mudlunta (meaning half moon) is one of the prettiest islands of the St. Lawrence. It is one of the Admiralty group, is over ten acres in extent, and situated about two miles south of Gananoque, between the Canadian and middle channel, and is believed will make one of the most attractive and convenient sites the Association has ever had the pleasure of camping on.

Headquarters will be very conveniently located in the Commodore's residence (which will be used exclusively for that purpose only during the two weeks of camp), within easy access from the main and ladies' camp and dock.

The main camp will lie to the east of headquarters on a high and level tract of land, and will embrace such a space that desirable spots can be secured by all.

The ladies' camp, or Squaw Point, will be situated to the west of headquarters, and while the portion laid out for this purpose is not as large as that of the main camp, still a sufficient number of beautiful and desirable spots will be found to accommodate every one.

The Camp Store.

The exclusive privileges of the right of sale on the camp grounds have been awarded to Messrs. Johnston and Hale, both of whom have been in the grocery and supply business in Gananoque for years, and were also camp storekeepers at Stave Island, giving general satisfaction. It is hoped that the members will patronize them exclusively. They will build a commodious store in the vicinity of headquarters, and will endeavor to serve to the best of their ability the wants of the members. They will also supply ice if required.

The Mess Tent.

This will be most advantageously situated on a level

stretch of land lying between two bays. It will be to the west of headquarters, and very convenient to both the ladies' and main camp. A capable caterer will have charge of this department and guarantees satisfaction. The rate will be as usual, \$1 per day.

Camp Site Committee.

The following articles can be had at camp if early notice is sent to the chairman, who will try to procure other size tents if required:

- Rent of Tent.—7 x 9, per week, \$2.25; 8 x 10, per week, \$2.50; 10 x 12, per week, \$2.75.
- Rent of Tent Floor.—7 x 9, about \$2.50; 8 x 10, about \$3.50; 10 x 12, about \$4.25.
- Sundries per Week.—Camp bed, 60 cents; camp stools, 25 cents; camp chairs (backs), 35 cents; mattress, 75 cents; wire cot and mattress, \$1.50.
- Porches.—6 x 10, for term, \$2.50.

If sufficient notice is given floors can all be built and located and tents put up when members arrive in camp. The choice locations will be given to the earliest applicants. Tents must be located by the site committee before their erection. Write early to

C. V. KETCHUM,

Chairman Camp Site Committee, Gananoque, Canada.

Transportation Arrangements.

The Trunk Line Association, New England Passenger Association, Central Passenger Association, the Grand Trunk Railway system, the Canadian Pacific Railway, and the Richelieu & Ontario Navigation Company, have granted the customary concession, viz.: A round trip of one and one-third fare to Clayton and Gananoque. Members will pay full fare to the points named, obtaining from the selling agents certificates which, when indorsed and viséd at camp, will enable the holders thereof to return to the point of starting by continuous passage at one-third of the regular rate. Tickets may be purchased three days prior to, and during the camp, and certificates will be honored for return trip (without stop over) for three days (Sundays excepted), after the close of camp, Aug. 19.

All certificates must be indorsed by the secretary-treasurer and special agent.

The special agent of the Trunk Line Association will be at the camp to visé certificates on Monday, Aug. 19, 1901.

Members arriving at Gananoque or Clayton by rail via R. W. & O., or by steamers of the Navigation Company (from Hamilton, Toronto, Kingston, Deseronto, Belleville, Brockville, Prescott, Montreal, Quebec, and intermediate points), will find the steamer Valeria at the railroad dock, running on the following schedule. The Valeria does not run Sundays, but the A. C. A. launch will connect with trains on those days.

Leave Gananoque at 6:00 A. M., arrive at Mudlunta Island 6:15 A. M.; leave Gananoque 2:25 P. M., arrive at Mudlunta Island 2:40 P. M.; leave Gananoque 4:30 P. M., arrive at Mudlunta Island 4:50 P. M.; leave Clayton 10:20 A. M., arrive at Mudlunta Island 11:00 A. M.; leave Clayton 3:25 P. M., arrive at Mudlunta Island 4:00 P. M.; leave Clayton 5:45 P. M., arrive at Mudlunta Island 6:15 P. M.

The rate on the steamer Valeria will be, from Clayton to Mudlunta Island and return, 75 cents per passenger, which includes one canoe and duffle. From Gananoque to Mudlunta Island and return, 50 cents per passenger, which includes one canoe and duffle.

Round trip tickets from either Gananoque or Clayton will be furnished by purser of steamer Valeria.

All canoes, duffle, baggage, freight or express matters, should be prepaid and plainly marked: Clayton, N. Y., or Gananoque, Ont., A. C. A. Camp, Mudlunta Island, via steamer Valeria.

Any other particulars regarding transportation will be gladly given by the undersigned and the committee would be pleased to help clubs or members in securing favorable transportation from the railroads in regard to handling canoes and duffle. The Transportation Committee.

- J. N. MCKENDRICK, Galt., Ont., Chairman.
- L. A. HALL, 71 Equitable Bldg., Boston, Mass.
- W. C. JUPP, Detroit, Mich.
- H. C. ALLEN, Trenton, N. J.

Racing Programme.

The Regatta Committee have arranged the following attractive list of paddling and sailing events. War canoe racing will again be made a feature, and special attention will also be paid to the sailing races. The Committee hope to see large entry lists in all the races, as the prizes are both numerous and costly, and well worth the effort of contest.

Record.

Event No. 1. Paddling and sailing combined, 1/2 mile alternately; total 3 miles; time limit, 1 1/2 hours. Start to be made under paddle.

The same seat shall be used as in event No. 3.

Event No. 2. Paddling, 1/2 mile straightaway.

Event No. 3. Sailing, 4 1/2 miles; time limit, 2 hours.

Note.—The rules governing the record events will be found in rule 6 of the racing regulations.

Sailing.

Event No. 4. Decked or open canoes; 6 miles; time limit, 2 1/2 hours.

Event No. 5. Trophy sailing, 9 miles; time limit, 3 1/2 hours.

See rule 6 of racing regulations.

Event No. 6. Dolphin sailing trophy, 7 1/2 miles; time limit, 3 hours.

The canoe winning first place in event No. 5 will not be allowed to compete in this event.

Event No. 7. Novice sailing, 3 miles; time limit, 1 1/2 hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1900.

Event No. 8. Cruising canoes, 3 miles; time limit, 1 1/2 hours.

See rule 1 of racing regulations.

Event No. 9. Open canoes, 1 1/2 miles.

Event No. 10. Atlantic division cup.

Event No. 11. Central division cup.

Event No. 12. Eastern division cup.

Event No. 13. Northern division cup.

Note.—In event 10, canoes must conform to regulations governing canoes for paddling races. Events 10 to 13 will only be held if not sailed at division meets. Regatta committees will arrange their own races.

Paddling.

Event No. 14. Trophy, 1 mile straightaway.

Event No. 15. Novice, 1/2 mile with turn, single blades, open only to members who have never paddled a race outside their own club races.

Event No. 16. Open canoe, single, 1/2 mile with turn, single blades.

Event No. 17. Tandem, 1/2 mile with turn, open canoes, single blades.

Event No. 18. Decked or open canoes, single paddling, 1/2 mile with turn, double blades.

Event No. 19. Rescue race. No. 1 men proceed in the usual way. No. 2 men to be lined up on shore, when a gun is fired. No. 1 upsets his canoe and No. 2 launches and proceeds to the rescue, picks up his man and tows the capsized canoe across the finish line. Open canoes, single blades, 1/4 mile straightaway.

Event No. 20. Tandem, double blades, 1/2 mile with turn, open canoes.

Event No. 21. Fours, double blades, 1/2 mile straightaway, open canoes.

Event No. 22. Fours, 1/2 mile straightaway, single blades, open canoes.

Event No. 23. Tail end race, 1/4 mile straightaway, open canoes, single blades. Paddler to kneel in stern and paddle stern first, with the wind.

Event No. 24. Relay race, open canoes, single blades, 1 1/2 miles over sailing course, three men from each club or division.

Starters paddle to and around first buoy, pass an article to second men, who paddle to and around second buoy, passing to third men, who paddle to finish.

Event No. 25. Mixed tandem, 1/4 mile straightaway, open canoes, single blades.

Event No. 26. Hurry scurry, run, swim and paddle, standing up. A short portage will be introduced in this event if practicable.

Event No. 27. Tournament. Poles will be provided by the committee.

War Canoes.

Event No. 28. Championship of America. One mile straightaway.

Event No. 29. Tug of war. One minute heats, best out of three heats.

Event No. 30. Division race. One-half mile with turn. Each division may enter any number of crews.

Event No. 31. Northern division championship. A valuable trophy will be put up for competition by the northern division, providing three or more clubs enter teams.

Notes.

All canoes for paddling race will be measured and weighed.

All events in which less than two entries present themselves will be cancelled.

In events where less than three start only one prize will be given.

In paddling races all turning buoys will be left to port.

In event No. 28, in addition to the war canoe shield typical of the war canoe championship of America, individual shields will also be given to crew winning first place.

In events 5 and 14, trophy paddling and sailing, an appropriate flag will be given in addition to trophies and individual shields.

The committee reserves the right to add to this programme at the meet, by notice posted.

- D. B. GOOSELL, Chairman.
- HARRY J. PAGE.
- E. McNICHOL.

Mails will be distributed in camp at headquarters by the secretary-treasurer. Address United States mail and express matter, A. C. A. Camp, Mudlunta Island, Clayton, N. Y., and Canadian mail and express matter, A. C. A. Camp, Mudlunta Island, Gananoque, Ontario, Canada.

Customs Regulation.—The same arrangements that have prevailed in former years have been again made with regard to the free entry of canoes and duffle coming from the United States. Duty must be paid on provisions.

Signals.—The A. C. A. Signal Code will be used to convey all intelligence from headquarters to the entire camp. Copies of the code may be obtained from the secretary.

Cruises.—Several short cruises will be arranged for under competent guidance to some of the many beautiful spots of the Thousand Islands, and it is hoped that many of the members will come prepared to take part. Among other cruises in prospect may be specially mentioned one up the Gananoque River to Marble Rock, a trip that is acknowledged by all who take it as one of the most beautiful and enjoyable.

Special efforts are being made to make the coming meet one of the most successful in the history of the Association and every member is strongly urged to attend and assist toward its successful conclusion.

C. E. BRITTON, Commodore,
Gananoque, Ont.
HERB. BEGG, Sec'y-Treas.,
24 King St. West, Toronto, Can.

American Canoe Association.

Atlantic Division.

INSTRUCTIONS to members attending the A. C. A. meet at Mudlunta Island, St. Lawrence River, Aug. 9 to Aug. 23, 1901:

For the convenience of members of the Atlantic Division, A. C. A., a special transportation car has been arranged for and will carry canoes and duffle free of expense, to Clayton, N. Y., and return. The car will be stationed at the Manhattan Station of the New York Central & Hudson River Railroad Company, 130th street and Hudson River, on Sunday, Aug. 4, and Monday, Aug. 5; at Yonkers, Tuesday, Aug. 6, and at Ossining, Wednesday, Aug. 7. Canoes and duffle may be loaded on the

car at any of these points, the car remaining all day at the stations.

Mark all canoes and packages, plainly with your name, and address care "Henry M. Dater, Transportation Car for Clayton, N. Y., A. C. A. Camp." Advise the undersigned, No. 68 Broad street, New York city, as soon as possible of the number of canoes and packages you will have, and from what point you will ship, so that proper arrangements may be made for handling and stowing the same. Be sure to prepay all freight and express charges to the car.

Members from points on the Delaware River will ship via Pennsylvania Railroad, marked as above, also marked via "Lighter to 130th street, New York Central & Hudson River Railroad."

Members are requested to purchase tickets to Clayton at office of N. Y. C. & H. R. R. R. Co., No. 415 Broadway, New York city.

With the return of the Association to the St. Lawrence again, there seems to be every reason for anticipating one of the largest and most successful meets in the history of the Association. An especially attractive racing programme has been provided, and a prize has been offered by the Commodore of the British Canoe Association, which will be raced for at the meet. The Atlantic Division has always sent a large delegation to the St. Lawrence, and it is hoped that this year it will surpass its already excellent record.

Any further information desired will be gladly furnished on application to the undersigned.

HENRY M. DATER,
Vice-Com., Atlantic Division, A. C. A.,
68 Broad street, New York City.

NEW YORK, July 18.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

AUGUST.

- 1-3. Corinthian, Marblehead, Massachusetts Bay.
- 1. New York, trial race to select cup defender, Newport.
- 3. Duxbury, club, Duxbury, Mass.
- 3. Southern Gulf Coast, Y. R. A.
- 3. Beverly, Corinthian, Monument Beach.
- 3. Winthrop, special handicap, Winthrop, Mass.
- 3. Indian Harbor, club, Greenwich, Conn.

- 31. East Gloucester, club, Gloucester, Mass.
- 31. Marine and Field, Gravesend Bay.
- 31. Shelter Island, Club.
- 31. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 31. Hull-Massachusetts, club, Hull, Mass.
- 31. Hartford, annual, Saybrook, Long Island Sound.
- 31. Huntington, special, Huntington, Long Island Sound.
- 31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
- 31. Larchmont, special, Larchmont, Long Island Sound.

THE Canadian boat, Senneville, sailed by Mr. G. H. DUNNAN, has successfully defended the Seawanhaka cup by defeating the English boat Grey Friar in three straight races. Our Canadian correspondent will forward detailed accounts of the races, which will appear in our next issue.

SHAMROCK II., Sir Thomas Lipton's new challenger

for the America's Cup, sailed from Gourock, Scotland, for New York on July 27. The steam yacht Erin will escort the challenger across. Shamrock II. will come over under a reduced cutter rig, and it is thought that she will make the trip in seventeen days.

New York Y. C. Cruise.

Rendezvous, Glen Cove.

GLEN COVE TO HUNTINGTON BAY—COMMODORE'S CUP.

Monday, July 22.

THE fleet of yachts that congregated in the harbor of Glen Cove on the opening day of the cruise of the New York Y. C. was undoubtedly the largest ever seen in any harbor in the world. The picture was a beautiful one, and almost every type of pleasure vessel was represented. The old schooner America was present, and there was excellent opportunity to compare her with Constitution and Columbia and note the development that has taken place in yacht designing and building in the past fifty years.

The following boats will follow the racing fleet:

Schooners—America, Butler Ames; Atlantic, Wilson Marshall; Carlotta, Charles F. Ulrich; Clytie, Henry C. Ward; Columbia, Joseph De F. Junkin; Crusader, Seymour L. Husted; Grampus, S. F. Houston; Montauk, William H. Langley; Nirvana, George G. Tyson; Priscilla, Robert J. W. Koons; Ramona, B. M. Whitlock; Sachem, Fred J. Adams; Sea Fox, Alanson Tucker; Sylph, H. D. Cheever; Varuna, Frederick F. Amos; Water Witch, David Banks; Wayfarer, W. M. Ivins.

Schooners, with Auxiliary Motors—Adrienne, William G. Titcomb; Cachalot, Richard T. Wainwright; Seneca, W. T. & R. A. Caine; Viking, James D. Smith; White Rose, Frederick C. Penfield; Calypso, J. F. O'Shaughnessy.

Single-Masted Vessels and Yawls—Awixa, W. L. Brooks; Bedouin, J. Murray Mitchell; Drusella, Augustus C. Tyler; Fern (yawl), John Hyslop; Flying Cloud (yawl), James Laughlin, Jr.; Hildegard, James C. Bergen; Iztaccihuatl (yawl), H. C. Tinker; Jessica, M. R. Schuyler; Julnar, Reginald Norman; Kestrel, J. B. Mills; King Philip, H. B. Torrey; Kraken, Nathaniel Hathaway; Pawnee (yawl), J. E. Wayland; Queen Mab, Lucius H. Smith; Sauntered, Thomas H. Smith; Tigress, C. A. Appleton; Umbria, John P. Elton; Vinita, G. D. Provost; Volunteer, J. Malcolm Forbes; Xara, George W. Scott.

Steamers—Agnes, William H. Watrous; Aileen, W. B. Leeds; Akela, W. Hadwin Amos; Albatross, Ellison & Carstairs; Aloha, D. W. and A. C. James; Altair, E. D. Trowbridge; Alvina, Charles Fletcher; Amabel, D. A. Loring; America, William Zeigler; Anita, George B. Wilson; Aphrodite, Oliver H. Payne; Aquillo, William P. Eno; Aurora, Dudley L. Pickman; Avenel, W. S. and J. T. Spaulding; Barracouta, Edward Kelly; Bellmere, Samuel T. Shaw; Bo-Peep, E. H. Townsend; Buccaneer, Frank T. Morrell; Cayadetta, George B. Watson; Cayuga, F. L. Humphreys; Chetolah, Albert J. Wise; Claymore, Jarvis B. Edson; Clermont, A. Van Santvoord; Clinton, J. S. Dickerson; Colonia, Frederick G. Bourne; Columbia, J. Harvey Ladew; Corsair, J. Pierpont Morgan; Duquesne, James G. Sutter; Electra, Elbridge T. Gerry; Elreba, Henry Darlington; Elsa, Evans R. Dick; Elsa, Miss Eloise L. Breese; Fedalma, Augustus C. Tyler; Felicia, E. H. Harriman; Florence, A. H. Alker; Genesee, J. Sibley Watson; Hanniel, C. H. W. Foster; Hiawatha, Julius Fleischmann; Hope, Guy Norman; Ibis, Samuel C. Lawrence; Idalia, Eugene Tompkins; Idler, Henry T. Sloane; Intrepid, Lloyd Phoenix; Ituna, Albert S. Bigelow; Jathiel, Charles M. Pratt; Josephine, P. A. B. Widener; Juanita, J. H. Ballantine; Kalolah, H. W. Hagins; Kanawha, Henry R. Rogers; Kathales, C. L. F. Robinson; Kismet, J. Rogers Maxwell; Ladoga, J. Stewart Kennedy; Lagouda, Edward Browning; Lavrock, W. J. Matheson; Linta, Walther Luttgien; Lorna, W. L. Stow; Margaret, Isaac E. Emerson; Margaret, John H. Rutherford; Marietta, Robert A. Carson; Marjorie, Mrs. A. S. Van Wickle; Maspeth, C. M. Meyer; May, Alexander Van Rensselaer; Mirage, Cornelius Vanderbilt; Narada, Henry Walters; Narwhal, C. B. Osgood; Nautilus, G. B. Linderman; Niagara, Howard Gould; Nirvana, W. R. Sands; Norman, Frank Tilford; Nourmahal, John Jacob Astor; Oneida, E. C. Benedict; Ozhesta, E. V. Douglas; Palmer, F. K. Sturgis; Parthenia, A. Hart McKee; Peerless, C. W. Harkness; Reverie, J. B. Thomas; Sagamore, E. C. Lee; Saghaya, Howard C. Smith; Sapphire, A. L. Barber; Satanella, Perry Belmont; Scout, August Belmont; Seneca, Charles Fletcher; Speranza, O. D. Wilkinson; Sultana, John R. Drexel; Surf, C. K. G. Billings; Talisman, S. B. Sexton; Taro, Thomas & Post; Taurus, John H. Hanan; Tillie, F. L. Osgood; Trophy, F. M. Smith; Varuna, George F. Dominick; Vinita, E. C. Schaefer; Virginia, Isaac Stern; Wachusett, Edward Weston; Wacouta, James J. Hill; Whisper, Thomas Manning; White Heather, H. I. Drummond; Wild Duck, Senator Aldrich; Willada, William Hester; Zara, Harrison B. Moore; Alcedo, Daniel G. Reed; Christabel, Adrian Iselein, Jr.; Gunelda, H. A. Hutchins; Lady Godiva, H. C. Rouse; Radha, W. L. Bull; Sagitta, J. R. De Lamar; Tuscarora, R. F. Ballantine.

The race for the day was for the Commodore's cups, one for the schooners all in one class, one for single-masted vessels and yawls in one class in cruising trim and a cup for Constitution and Columbia in racing trim. The race for the Commodore's cup not to be counted as one of the regular squadron runs.

At 2:15 the Regatta Committee—S. Nicholson Kane, Chester Griswold, and Newbury D. Lawton—gave the preparatory signal. Course No. 3 had been signaled for all classes, and was from a starting line off Matinicock Point eleven miles N.E. by E., 1/2 E., to and around a mark; thence five miles W.S.W., 1/2 E., to and around the second mark, thence five and a half miles E.S.E., 1/2 E., to the finish line. With the wind from W.S.W., this gave the yachts a run on the first leg against a flood tide, a beat to the second buoy and a broad reach home.

Ten minutes after the preparatory signal came the start for the single-masted vessels and yawls, and with spinnaker poles dropped they came down to the line. Navahoe crossed first with Ailsa a few seconds behind, followed by Athene, Rainbow, Eelin, Carmita, Vigilant, Mermaid,

Hester, Humma and Bedouin, the two latter boats being handicapped. The schooners were sent away next with Quissetta well in the lead of the boats in her class. The other schooners crossed in the following order: Katrina, Muriel and Elmina; Amorita, Columbia, Marguerite, Wayward and America were handicapped.

Constitution and Columbia were started at 2:45. Columbia got the best of the start, but Constitution moved along in wonderful style in the light breeze and soon passed Columbia. Constitution set her spinnaker to port, while Columbia had hers on the starboard side. It was generally thought that Columbia was handicapped by having her spinnaker to starboard, as neither her mainsail or spinnaker drew as well as Constitution. Constitution moved through the fleet in fine style, and at 3:30 had overtaken the big yawl Navahoe. Light sails were taken in some time before reaching the leeward mark and luffed around the mark and came on the wind on the port tack. The times of the boats on rounding are as follows:

Constitution	4 00 50	Humma	4 10 24
Navahoe	4 02 51	Muriel	4 10 59
Rainbow	4 03 34	Quissetta	4 11 12
Vigilant	4 03 55	Elmina	4 11 32
Columbia	4 04 22	Amorita	4 14 09
Ailsa	4 04 45	Altair	4 14 34
Athene	4 07 00	Mermaid	4 14 44

It was risky business at this mark, as there were so many boats rounding at about the same time, but no accidents happened. The leg to windward was a short one, and was soon over. Navahoe sailed a splendid race, and beat Ailsa and Vigilant handily. Rainbow led in her class across the finish line. Elmina won in the schooner class. Muriel led at the first mark, Quissetta second and Elmina third. Quissetta lost some time by getting her jib topsail in the water when taking it in. The table showing the race of the 90-footers is as follows:

Class G—90-footers.			
	Start.	Finish.	Elapsed.
Columbia	2 45 58	5 17 31	2 31 33
Constitution	2 46 35	5 13 50	2 27 15

Constitution beats Columbia on elapsed time 4m. 18s., the distance of the course being twenty-one miles.

From Start to First Mark.			
	Start.	First Mark.	Elapsed.
Constitution	2 46 35	4 00 52	1 14 17
Columbia	2 45 58	4 04 22	1 18 24

Constitution gained on this leg of eleven miles, 4m. 7s.

From First to Second Mark.			
	First Mark.	Second Mark.	Elapsed.
Constitution	4 00 52	4 47 30	0 46 38
Columbia	4 04 22	4 51 05	0 46 43

Constitution gained in this leg 5m. 5s.

From Second Mark to Home Mark.			
	Second Mark.	Finish.	Elapsed.
Constitution	4 47 30	5 13 50	0 26 20
Columbia	4 51 05	5 17 31	0 26 26

Constitution gained in this leg 6s. First leg, 4m. 7s.; second leg, 5s.; third leg, 6s.; a total of 4m. 18s.

Finish of Other Races.

The official summary, giving the winners of the cup for schooners and the cup for single-masted vessels and yawls, is as follows:

Single-masted vessels and yawls; all in one class:				
Class G—Yawls.				
	Start.	Finish.	Elapsed.	Corrected.
Navahoe	2 26 07	5 29 44	3 07 37	3 07 22
Ailsa	2 26 10	5 36 18	3 10 08	3 09 07
Vigilant	2 29 03	5 36 42	3 07 39	3 07 39
Class H.				
Rainbow	2 26 29	5 32 09	3 05 40	2 59 34
Athene	2 26 17	5 40 54	3 14 37	3 14 37
Bedouin	2 30 00	6 15 13	3 45 13	3 37 15
Class I.				
Hester	2 30 00	5 55 56	3 26 56	3 16 22
Eelin	2 26 42	6 02 22	3 35 40	3 18 55
Isolde	2 30 00	6 04 06	3 34 06	3 29 17
Class J.				
Carmita	2 27 57	6 11 35	3 43 44	3 22 15
Altair	2 30 00	5 54 16	3 24 16	3 22 15
Humma	2 30 00	5 50 01	3 20 01	2 55 07
Class K.				
Mermaid	2 29 44	6 28 57	3 58 53	3 33 22
Class A—Schooners—All in one class.				
Columbia	2 35 00	6 22 45	3 47 45	3 22 45
Class B.				
America	2 35 00	6 23 48	3 48 48	3 23 48
Class C.				
Marguerite	2 35 00	6 08 30	3 23 30	3 08 30
Class D.				
Amorita	2 35 00	5 56 45	3 21 46	3 16 07
Katrina	2 32 50	6 07 20	3 34 30	3 29 10
Quissetta	2 32 28	5 48 52	3 18 24	3 13 04
Elmina	2 34 47	5 48 23	3 11 36	3 05 58
Muriel	2 33 32	5 48 15	3 14 43	3 14 43

Humma wins the Commodore's cup for single-masted vessels and yawls, defeating Rainbow 4m. 27s., corrected time.

Elmina wins the Commodore's cup for schooners, beating Marguerite 2m. 32s., corrected time.

Second Day—First Squadron Run.

HUNTINGTON BAY TO MORRIS COVE.

Tuesday, July 23.

The first of the squadron runs was tiresome and disappointing on account of calms, light and variable winds. The run was from a point off Eaton's Point, L. I., to Ludington Rock, near the entrance to Morris Cove, the outer harbor at New Haven, a distance of twenty-eight miles.

A number of new yachts joined the fleet before the start, among them the schooners Shamrock, Hildegard, and the handsome new auxiliary Idler, designed by Messrs. Tams, Lemoine & Crane for Mr. Henry T. Sloane. The start from the harbor was made at 10 o'clock. The Reverie with the Regatta Committee on board had a long wait at the starting line for the yachts to cross, as the light breeze made it almost impossible for them to get down to the line. The preparatory signal was made at 11:05.

The committee announced that several extra races were on the programme. The auxiliaries, which were to be sent off after the Cup defender class, were divided into two classes. One was for square-riggers, and in this class were Perry Belmont's Satanella, Nelson Perin's Enterprise and Henry Rouse's Lady Godiva. These three are English-built yachts and are brigantine rigged. The other class was for fore-and-aft rigged vessels, and in it were Henry T. Sloane's Idler and Lloyd Phoenix's Intrepid, a

three-master. Another class was made of the schooners Shamrock, Katrina and Latona. The schooners Loyal, owned by Robert P. Doremus, and Wayward, owned by Frank B. Durvea, sailed a race by themselves. The old-time cutters Bedouin and Wenonah made another special class with the old sloop Hildegard.

The starting signal for sloops was made at 11:15, and the English cutter, Eelin, was the first to cross, a minute later followed by Ailsa and Hester. The boats were hanging around the line without breeze enough to buck the tide and cross. Vigilant was badly handicapped by crossing the stakeboat on the wrong side, and had to return and recross the line. The rest of the single-stickers and yawls were very late in getting away. The starting signal for schooners was given at 11:20, and Quissetta was the only one to cross before the handicap gun was fired. Wayward, Elmina, Katrina, Muriel, Latona, Emerald, Corona, America, Kirin, Uncas, Shamrock, Loyal, Marguerite, Woodmansie and Columbia followed. Constitution and Columbia were started at 11:35, the former first and the latter just under her lee. Columbia drew out from Constitution's lee, but shortly afterward was overtaken by Constitution. About 1 o'clock both boats were about abeam, and had overtaken Ailsa. A little after 2 o'clock the nineties had passed everything in the fleet. When off Stratford Shoal Constitution was about a mile in the lead of Columbia. About 4 o'clock the breeze came out of the N.W. rafter fresh and enabled the boats to finish. Quissetta led the yachts in cruising trim across the finish line, followed by Rainbow, Corona, Athene, Navahoe, Ailsa, Emerald, Muriel, Vigilant, Elmina, Katrina, Latona, Humma and Hester. This is the summary of the day:

Class G—Sloops.				
	Start.	Finish.	Elapsed.	Corrected.
Constitution	11 35 35	5 36 41	6 01 06	6 01 06
Columbia	11 35 53	5 42 15	6 06 22	6 06 22

Class G—Yawls.				
	Start.	Finish.	Elapsed.	Corrected.
Vigilant	11 20 00	6 13 36	6 53 36	6 53 36
Ailsa	11 16 15	6 04 25	6 48 10	6 46 52
Navahoe	11 18 00	6 02 22	6 44 22	6 42 56

Shamrock	11 25 00	6 56 28	7 31 28	7 31 04
Latona	11 25 00	6 23 40	6 58 40	6 58 40

Class F.				
	Start.	Finish.	Elapsed.	Corrected.
Indra	11 25 00	6 53 06	7 28 06	7 28 06
Uncas	11 25 00	7 35 10	8 10 10	8 10 10
Loyal	11 25 00	7 35 40	8 10 40	8 10 40
Wayward	11 25 00	Withdrew.		

Constitution beat Columbia. Navahoe beat Ailsa and Vigilant. Rainbow wins in Class H. Hester wins in class I. Eelin beat Isolde. Humma won in Class J. Effort beats Mira. Cymbra wins in Class M. Corona wins in Class B. Quissetta won in Class D, special. Katrina won in Class D, ordinary. Indra won in Class F.

Third Day—Second Squadron Run.

MORRIS COVE TO NEW LONDON.

Wednesday, July 24.

The morning of the third day of the cruise opened with no breeze at all, and all hands were pretty well disheartened, but about 9:30 a little air sprung up from the S.W., increasing until it had a strength of about ten knots, sometimes blowing a little harder and then with less strength.

The Regatta Committee were the guests of Mr. Henry Walters, on board the steam yacht Narada. The starting line was from a boat anchored off the breakwater to the steam yacht Narada. The run to New London was about forty miles in length. The preparatory signal was made at 11:35, and ten minutes later the single-masted vessels and yawls were started. Navahoe was the first over, followed by Ailsa, and Vigilant last and to leeward. Effort was next across, and the rest crossed in the following order: Eelin, Salome, Altair, Carmita, Hester, Isolde, Hildegard, Humma, Isolt, Bedouin, Athene, Petrel, Rainbow and Mira.

The handicap gun for single-masted vessels and yawls was the starting signal for schooners. Corona crossed in the lead, Emerald, Latona, America, Muriel, Katrina, Shamrock, Loyal, Kirin, Columbia, Uncas, Marguerite and Quissetta following. In the start for the 90-footers Capt. Barr showed his ability in such a manner as to impress and startle every one who saw it. Capt. Rhoades was trying to put Constitution on Columbia's weather quarter, so that he could cross to windward in the better berth. Capt. Barr kept on his course, not wishing to be caught in such a predicament. Finally Constitution went about on the starboard tack. Columbia followed suit and

stood for the line with a free wind, but to secure the windward position Capt. Barr put Columbia on his opponent's weather quarter, which meant that he had to cross between Narada and Constitution. The space was so narrow that a collision seemed unavoidable. Columbia was kept off for a moment, and the boom came over as if for a jibe; when she was luffed up the boom went back and Columbia crossed with but a few feet to spare on either side. It was a close fit, and the start will be remembered as one of the prettiest ever seen. The auxiliaries were started next, and they crossed in the following order: Laurus, Cachalot, Intrepid, Enterprise and Lady Godiva, the two latter being handicapped.

Constitution was leading the fleet at 3 o'clock, and she was the first to pass Bartlett's Reef Lightship. Columbia passed it 8m. later. Corona was third boat at the lightship, but Navahoe passed her just at the finish line. The summary follows:

Sloops—Class G—Over 90ft.			
Start.	Finish.	Elapsed.	Corrected.
Constitution	11 05 08	3 37 35	4 32 27
Columbia	11 05 11	3 46 01	4 39 10
Yawls—Class G.			
Vigilant	10 45 30	3 54 07	5 08 37
Ailsa	10 46 25	3 55 12	5 09 47
Navahoe	10 45 17	3 52 55	5 07 38
Sloops—Class H—70 to 80ft.			
Rainbow	10 49 07	4 00 00	5 10 53
Bedouin	10 48 06	4 41 25	5 53 19
Athene	10 48 38	4 31 05	5 42 27
Sloops—Class I—60 to 70ft.			
Hester	10 46 57	4 23 55	5 36 58
Hildegard	10 47 29	4 39 30	5 52 01
Eelin	10 46 03	4 31 53	5 45 55
Isolde	10 47 02	4 48 26	6 01 24
Sloops—Class J—51 to 60ft.			
Carmita	10 46 45	Withdrew.	
Petrel, yawl	10 49 00	4 47 26	5 58 26
Isolt	10 47 55	5 23 02	6 30 06
Altair	10 46 27	4 25 39	5 39 12
Humma	10 47 49	4 21 23	5 33 34
Sloops—Class L—36 to 43ft.			
Effort	10 45 37	4 45 54	6 00 17
Mira	10 49 28	5 01 54	6 12 26

Quisetta	10 54 29	4 08 36	5 16 20
Elmina	10 55 00	4 14 57	5 19 57
Schooners—Class F—Under 65ft.			
Loyal	10 52 43	4 52 00	5 59 17
Indra	10 54 33	5 09 55	6 15 22
Uncas	10 54 19	5 33 02	6 38 43
Auxiliaries—Class 1.			
Intrepid	11 16 25	5 20 23	6 03 58
Class 1.			
Satanella	11 17 00	Withdrew.	
Lady Godiva	11 17 00	Withdrew.	
Class 7.			
Cachalot	11 14 14	5 18 54	6 04 40
Laurus	11 13 37	5 52 32	6 14 55
Crossed With Schooners.			
Marvis	10 54 05	5 24 14	6 31 09

The winners were Constitution, Navahoe, Rainbow, Hester, Humma, Effort, Columbia, Corona, Marguerite, Katrina, Quisetta, Loyal, Intrepid and Cachalot.

Fourth Day—Third Squadron Run.

NEW LONDON TO NEWPORT.

Thursday, July 25.

The fourth day of the cruise opened with a strong N.E. breeze, and it was a source of considerable satisfaction to the racing men after the light airs that had prevailed during the earlier part of the week. The big fleet got under way about 9:30, and ran out to the starting line. The preparatory signal was given at 10:55. Ten minutes later the single-masted vessels and yawls started. Six seconds after the signal Vigilant crossed. Isolde crossed next, followed by Petrel, Bedouin, Navahoe, Hester, Altair, Ailsa, Effort, Eelin, Virginia, Rainbow, Athene, Senta, Hildegard, Isolt, Humma, Sistre and Mira. The schooners were started at 12:10, and Quisetta crossed 6s. after the signal, followed by Corona, Emerald, Marguerite, Latona, Elmina, Shamrock, Columbia, Indra, Loyal and America. In the goft. class Columbia crossed ahead and to the windward of Constitution. The latter boat was handicapped by a catboat filled with sightseers that was on the line, and a bad accident was narrowly averted. After avoiding a collision with the catboat, Constitution was forced to jibe to avoid hitting the utility tug Unique. These two incidents lost her the advantage she had over Columbia. As the breeze freshened Columbia would draw ahead, and when it dropped a little Constitution would draw up a little. Constitution struck twice on a ledge off Race Rock, and although she continued in the race she seemed sluggish afterward. It was a beautiful race, for the two boats fought it out the entire forty-mile beat with hardly any distance between them. They got mixed up with a tow off Point Judith, and it was here that Columbia opened up clear water between her competitor and herself, and finally won by over 3m. It was a day of accidents, and Mr. Charles Smithers' 75ft. schooner Muriel met with disaster over a mile east of Race Rock Light. The wind was blowing hard from the E., and in an extra hard knockdown her fore topmast was carried away and fell alongside with the foremast, which was broken in two places, as was also main topmast. The yacht was a mass of broken and tangled rigging, and it is remarkable that no one was injured. The revenue cutter Gresham towed Muriel back to New London. The next vessel to get in trouble was Cornelius Vanderbilt's 70-footer Rainbow. She ran ashore twice when off Watch Hill, and was taken in tow by the auxiliary Lady Godiva and brought to Newport.

The big yawls and schooners had a fine race, and Vigilant, after a hard race with Navahoe, won by 1m. and 50s. Virginia beat Athene. Elmina won from Quisetta by 8s. Isolde and Altair were the only boats to finish in their classes, and Katrina was the only schooner to finish in her class when the time limit expired at 8 P. M.

Mr. W. O. Gay's 70-footer Athene ran aground on Goat Island when running into Newport Harbor. She came off at high water undamaged. The summaries follow:

Sloops—Class G.			
Start.	Finish.	Elapsed.	Corrected.
Constitution	11 25 45	6 24 16	6 58 31
Columbia	11 25 29	6 21 55	6 56 26

Adrienne	11 14 32	Withdrew.	

Constitution was taken to Bristol and hauled out, when it was found that she was not seriously damaged.

Muriel was towed from New London to Greenport by a tug, where she will receive new spars.

Fifth Day—Fourth Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Friday, July 26.

Fifteen single-masted yachts, two yawls and eight schooners left Newport Harbor and started off Brenton's Reef Lightship for the squadron run to Vineyard Haven. At the start the wind was from the N.E., and rain fell at frequent intervals. Neither of the 90-footers started, as Constitution was hauled out at Bristol for examination, and Columbia, not having a competitor, did not enter. The absence of these boats detracted considerably from the interest of the occasion. When the fleet reached Brenton's Reef Lightship the wind hauled from N.E. to S.E., and the sun came out.

The preparatory gun was fired at 11:40, and the single-masted vessels and yawls started 10m. later. These yachts crossed in the following order: Athene, Isolde, Mira, Vigilant, Senta, Effort, Virginia, Altair, Hildegard, Carmita; Bedouin and Navahoe were handicapped. The schooners started on the handicap gun for the cutters and yawls, and they crossed in the following order: Quisetta, Corona, Katrina, Shamrock, Elmina and Indra; Cachalot and America were handicapped.

At 11:15 the wind veered to the S., and instead of beating to Vineyard Sound Lightship, the yachts were able to lay a straight course for the lightship. Shortly after the wind lightened up and the boats made slow progress, and it was nothing more than a drifting match at 2 o'clock, and up to this time the yachts had only covered about ten miles. Athene at this time was in the lead, with Virginia second and Vigilant third. Quisetta led the schooners, with Corona second.

Late in the afternoon the breeze came up a little, but the boats did not gain much, nor were their positions changed to any extent. When darkness came on the fleet was still some distance from its destination, and it was late in the night before many of them reached Vineyard Haven.

Sixth Day—Fifth Squadron Run.

VINEYARD HAVEN TO NEWPORT.

Saturday, July 27.

The few yachtsmen who made the run from Newport to Vineyard Haven were favored with a fresh N.E. breeze for the run back to Newport. The owners, guests and crews were tired out after the long, tedious drift of the day before, but the fresh breeze soon revived all hands. The course for the thirty-seven miles was W. by S., twenty miles to Vineyard Sound Lightship, and W.N.W., seventeen miles to Brenton's Reef Lightship. The breeze was so far astern that it enabled the boats to carry spinakers.

The preparatory signal was fired at 9 o'clock, and the single-masted vessels and yawls were started at 9:10. Vigilant crossed first, breaking out her spinnaker before reaching the line. Ailsa crossed next, followed by Eelin, Effort, Hester, Isolt and Navahoe; Vigilant, Altair, Athene and Hildegard were handicapped. Athene was swept by the strong tide on the wrong side of the committee boat, and as she was unable to make headway enough to return and cross the line, stood away on her course for Newport.

The schooners were started at 9:15. Katrina crossed first, and next came America. The rest went over the line as follows: Indra, Vigilant, Shamrock, Elmina, Altair, Cachalot, Quisetta, Corona and Hildegard. Corona was also caught in the tide and was swept across the line sideways. Navahoe and Vigilant were disqualified for interfering with the committee boat Reverie. The

tide carried Navahoe down on Reverie, and Navahoe's boom snapped the bowsprit short off. Vigilant was also swept along by the tide, and the committee boat had to alter her position to avoid a collision with her. Elmina carried away her throat halyard block on her foresail and had to lower away that sail while repairs were being made.

Navahoe was the first to finish, closely followed by Vigilant. The rest of the fleet finished as follows: Quisetta, Elmina, Ailsa, Hester, Virginia, Eelin, Effort, Katrina, Shamrock, Bedouin, Idler, Cachalot, Altair, Rondina, Indra, America, Hildegard, Kiowa and Cherokee. The summary follows:

Yawls—Class G.			
Start.	Finish.	Elapsed.	Corrected.
Ailsa	9 12 15	2 17 18	5 05 03
Vigilant	9 15 00	2 08 13	4 53 13
Navahoe	9 15 00	2 07 06	4 52 06
Sloops—Class H.			
Virginia	9 11 06	2 30 56	5 19 50
Bedouin	9 11 43	2 56 43	5 45 00
Athene	Did not cross.		
Sloops—Class I.			
Hester	9 14 22	2 28 43	5 14 21
Hildegard	9 15 00	3 06 22	5 51 22
Eelin	9 12 25	2 37 29	5 22 29
Sloops—Classes J and L.			
Effort	9 13 22	2 44 23	5 31 01
Altair	9 15 00	3 04 00	5 49 00
Sloops—Class M.			
Cherokee	9 15 00	3 15 47	6 00 47
Kiowa	9 12 35	3 10 44	5 58 09
Schooners—Class B.			
Corona	9 20 00	2 48 22	5 28 22
America	9 16 55	3 04 27	5 47 32
Katrina	9 16 26	2 51 32	5 35 06
Shamrock	9 17 47	2 54 20	5 36 33
Schooners—Class B—Special.			
Quisetta	9 19 14	2 13 28	4 54 14
Elmina	9 18 12	2 15 51	4 57 39
Schooners—Class F.			
Rondina	9 20 00	3 04 07	5 44 07
Indra	9 17 23	3 04 23	5 47 00
Auxiliaries.			
Cachalot	9 18 50	3 01 30	5 42 40
Idler	8 49 35	2 59 09	6 09 34
Intrepid	9 07 00	Did not start.	

The winners were Ailsa, Virginia, Hester, Effort, Corona, Katrina, Quisetta and Cachalot.

Seventh and Eighth Days—Astor Cups.

NEWPORT, R. I.

Sunday and Monday, July 28-29.

After a week of hard work all hands were glad to have a good rest on Sunday. It blew hard all day, and only one or two boats ventured outside, where there was a heavy sea running. The schooner Troubadour came into the harbor with her foretopmast gone.

The Astor cup races are the most prominent events in the yachting season at Newport, and the large fleet of fine steam yachts were filled with guests. Nourmahal, with the Regatta Committee on board, blew signals, meaning that the Block Island course had been selected. This course was first to a mark boat anchored one mile due E. of Block Island Buoy, then to another stake boat two miles S.W. by S. from West Island Light, and then to the finishing line at Brenton's Reef Lightship. The first leg was 13½ miles S.W., ¼ W.; the second, 18 miles N.E. by E., ¾ E., and the third, 6½ miles W. by N., ¼ N. The wind was N. by E., and with it holding in that direction the first leg was a run with spinakers, the second a beat and the third a reach.

The preparatory signal was given at 11 o'clock. At 11:05 the starting signal was given. Constitution was first across at the leeward end of the line, with Navahoe next at the windward end, with Columbia on her weather quarter. Senta, Hester, Isolde and Eelin followed in the order named. The course made it a free run, booms to port and spinakers to starboard.

The schooners were started at 11:10. Corona crossed just after the gun, with Quisetta next, a little ahead and to windward of Elmina.

Great interest was centered in the race between Constitution and Columbia, and much to the surprise of every one Columbia beat her opponent handily on every point of sailing. In anything besides a very light air the old defender has shown her ability to beat the new boat on almost every point of sailing. The elapsed times over the first leg of the course are shown in the following:

	Turn.	Elapsed.
Columbia	12 39 55	1 31 36
Constitution	12 39 46	1 36 08
Navahoe	12 45 08	1 36 52
Hester	12 49 19	1 40 19
Eelin	12 51 26	1 42 07
Senta	12 53 10	1 44 34
Isolde	12 54 52	1 45 38
Schooners.		
Corona	12 47 04	1 36 29
Elmina	12 50 36	1 37 38
Quisetta	12 51 56	1 39 18

When hauled on the wind Constitution was in the windward berth, but on this leg Columbia gave a fine exhibition on sailing and gained 2m. and 19s. The following table is of interest:

	First Mark.	Second Mark.	Elapsed.
Columbia	12 39 56	2 25 20	1 45 25
Constitution	12 39 46	2 27 30	1 47 44

On the reach home they had the wind about abeam, and the nineties moved so fast that the best of the steam yachts could not keep up with them. Columbia raced across the finish line amidst the screeching of whistles some time ahead of Constitution.

	Second Mark.	Finish.	Elapsed.
Columbia	2 25 20	2 54 38	0 29 18
Constitution	2 27 30	2 56 51	0 29 21

Columbia had gained 3s. on this leg and had beaten Constitution over the whole course by 2m. 54s. elapsed time.

In the meanwhile the other boats were on the way out to West Island mark, Corona in the lead, followed by Navahoe and Elmina, with Quisetta a long distance behind. The English boats were fighting out a close race among themselves. The times for the second leg of the course for these boats are shown as follows:

	First Mark.	Second Mark.	Elapsed.
Navahoe	12 45 08	3 11 15	2 26 07
Hester	12 49 19	3 36 00	2 46 41
Senta	12 53 10	3 40 50	2 47 40
Eelin	12 51 26	3 41 50	2 50 24
Isolde	12 54 52	3 44 00	2 49 08
Schooners.			
Corona	12 47 04	3 10 43	2 23 41
Elmina	12 50 36	3 25 00	2 34 24
Quisetta	12 51 56	3 44 30	2 52 34

The leg from the second mark to the finish line was soon covered. Isolde picked up a little on Eelin and Senta, and Corona drew away from Elmira, but not enough to cover the time she allowed the latter boat.

Navahoe wins the cup offered by the owners of the cutters. Ailsa would have started, but she ran on Goat Island and could not be got off in time to start in the race. The elapsed times over the last leg of the course follow:

Sloops.			
	Second Mark.	Finish.	Elapsed.
Navahoe	3 11 15	3 44 30	0 33 15
Hester	3 36 00	4 13 43	0 37 43
Eelin	3 41 50	4 21 47	0 40 57
Isolde	3 44 00	4 23 32	0 39 32
Senta	3 40 50	4 20 28	0 39 38
Schooners.			
Corona	3 10 45	3 42 58	0 32 13
Elmira	3 25 00	4 00 14	0 35 14
Quissetta	3 44 30	4 22 00	0 37 30

Columbia beat Constitution 4m. 28s.; Navahoe, 39m. 5s.; Eelin, 45m. 51s.; Isolde, 47m. 32s.; Hester, 49m. 17s., corrected time, and Senta, not measured. Elmira beat Corona 3m. 14s., and Quissetta 32m. 31s.

The table of to-day's races follows:

Sloops—Cup, \$1,000.				
	Start.	Finish.	Elapsed.	Corrected.
Constitution	11 07 38	2 56 51	3 49 13	3 49 13
Columbia	11 08 19	2 54 38	3 46 19	3 44 45
Navahoe	11 08 16	3 44 30	4 36 14	4 23 50
Hester	11 09 00	4 13 13	5 04 43	4 34 02
Eelin	11 09 19	4 21 47	5 12 28	4 30 36
Isolde	11 09 14	4 23 32	5 14 18	4 32 17
*Senta	11 08 36	4 20 28	5 11 52
*Not measured.				
Schooners—Cup, \$500.				
Corona	11 10 35	3 42 58	4 32 23	4 32 23
Quissetta	11 12 38	4 22 00	5 09 22	4 51 40
Elmira	11 12 58	4 00 14	4 47 16	4 29 09

Western Yachts.

Second Trial Race, Canada Cup Defenders.

CHICAGO, July 22.—As reported by wire to-day, Cadillac won the second trial race in very clever fashion, beating her closest competitor by 12m. and 18s. Detroit was second, and close to Detroit came the Chicago boat, Illinois, which lacked but 25s. of collaring her rival. Minota came in fourth, but made no showing, which would seem to indicate that she deserves further place in the races, she being 25m. and 30s. back of the winner. Seventeen seconds back of Minota came Prairie, the fifth boat.

An unsatisfactory feature of the race was the fact that in the fresh wind the winner of the first trial race, Milwaukee, met with an accident and did not finish. Milwaukee lost its rudder, and as it did not complete the course, but fell out on the first leg, there was no means of getting a line on its relative ability in airs such as prevailed to-day, the wind being about twelve miles in velocity.

Under these conditions Cadillac made a beautiful showing, and had the race cleverly in hand practically throughout. There came near being a collision between Cadillac and the judges' boat, Thistle, just before the starting gun. As it was, Cadillac carried away a part of the port rail of Thistle, and a serious collision was narrowly averted.

The Start.

The first five boats got over the line well bunched, practically all at 1:30. Prairie followed 1m. 30s. later, Minota following Prairie by 15s. Detroit showed three reefs in its big mainsail, Milwaukee carried two and all the others at least one reef, all going under jib and mainsail, on the port tack.

Illinois and Cadillac were first to go about. Milwaukee, Detroit, Orion, Yankee, Prairie and Minota stayed on the port tack, Minota and Detroit following Cadillac and Illinois on the starboard tack about 3m. later. In the next short tack Milwaukee appeared in the lead, but a few minutes later Cadillac, Illinois and Detroit showed ahead of Milwaukee as they came into the port tack and crossed its bows. It was at 1:53 that Milwaukee met with the accident, which put it out of the race, Milwaukee being then on the weather quarter of Detroit and well up with that boat. Cadillac at this station was well in advance, Illinois in second place and to the windward.

At 2:33 Cadillac finished its long port tack, and as it came about it crossed Illinois' bows with apparently a full mile of blue water between. Cadillac needed to come about but once more, and shortly jibed about the buoy at 3:06:42. At this time it was simply a question of what would be second and third, for Cadillac evidently had the race won. Thence forward Cadillac held its own, the run home being without incident other than the close finish between Detroit and Illinois.

The race was nine miles to windward and return, the wind a steady one from the N.E., estimated at twelve to twenty miles an hour, and the yachting conditions better than those of the first trial race. The following were the times:

Start, 1:30.	First Buoy.	Finish.	Elapsed.
Cadillac	3 08 00	3 59 32	2 29 32
Detroit	3 20 20	4 11 50	2 41 50
Illinois	3 18 10	4 12 15	2 42 15
Minota	4 25 05	4 25 05	2 55 05
Prairie	4 25 35	4 25 35	2 55 25
Orion
Milwaukee
Yankee

Third Trial Race.

July 23.—Milwaukee won the third trial race which was sailed to-day. The course was the triangular one of twenty-one nautical miles, and the race itself the most interesting one which has hitherto been sailed. It was figured that the wind was blowing about eight miles an hour at the start, from the N.E. The wind was lighter than on the previous day, but stiff enough to prove that Milwaukee is perhaps something better than a mere drifting machine. Milwaukee made a good impression to-day, and there is plenty of reason to believe that she will be close in when the finals are read out.

Illinois, in spite of a close brush with Cadillac, made no such showing as to warrant considering it a dangerous factor from this time on in the race. Minota seems also to have shot her bolt, and Orion and Prairie do not seem to figure henceforward. So far as can be told at this writing, the three visiting boats—Milwaukee, Cadillac and

Detroit—will have to fight it out between themselves, with the chances probably in favor of Cadillac in case of stiff sailing weather, and of Milwaukee, should the prevailing conditions continue of light and baffling airs. Illinois was a close fourth, and crowding Cadillac, losing by but 3s., but the impression is that Cadillac would lose Illinois in a stiffer wind.

The sidewalk boat from Milwaukee, as it is called, came in 3m. 30s. ahead of Detroit, the second boat, and the latter boat, Detroit, liking this sort of going very well, led the other Detroit craft, Cadillac, by 2m. and 12s.

The Start.

The first leg of the triangle lay to E.N.E. Milwaukee was first over the line, 10s. after the starting gun, the order then being Cadillac, Illinois, Detroit, Prairie, Minota and Orion. They all went on the starboard tack, close hauled, except Minota, which laid a long port tack from the start.

The boats kept closer bunched than they had at any race before to-day; and on the first leg it was long uncertain which would win the honor at the mark. Illinois proved to be the victor on the first leg, then Milwaukee, Detroit, Orion and Cadillac in order, the times at the first mark being as follows:

	Start.	First Mark.	Elapsed.
Illinois	1 30 35	3 04 50	1 34 15
Milwaukee	1 30 10	3 10 50	1 40 40
Detroit	1 30 36	3 11 33	1 41 57
Orion	1 31 15	3 12 50	1 41 35
Cadillac	1 30 20	3 13 05	1 42 45
Minota	1 31 10	3 13 40	1 42 30
Prairie	1 30 41	3 20 30	1 49 49

Second Leg.

The second leg was a fair spinnaker run, and the boats presented naturally a very handsome appearance as they went away with spinnaker and big balloon canvas aloft. Illinois for some time contented itself with mainsail and spinnaker, not breaking out the balloon jib, and for a time it seemed to travel nicely so. The wind came up fresher, rising to twelve miles. Illinois now broke out spinnaker, but Milwaukee and Detroit, the two light weather boats, seemed to take to this fresher wind surprisingly well, and they crawled up steadily on Illinois and outsailed her decisively on this point of the wind. Times at second mark:

	First Mark.	Second Mark.	Elapsed.
Illinois	3 04 50	4 10 15	1 05 25
Milwaukee	3 10 50	4 09 25	0 58 35
Detroit	3 11 33	4 12 40	1 01 07
Cadillac	3 13 05	4 14 44	1 01 39

The Finish.

The third leg was a close reach, and the wind was good and strong all down the finish. Milwaukee for a time had a trifle of trouble with its balloon jib, yet it traveled like a bird at this sort of work, somewhat to the surprise of those who had claimed that the model was good for nothing but drifting. Detroit broke out a beautiful balloon jib and continued to cut down the lead of Illinois, until it was seen that Detroit was an easy second, if not first, in the race. The fighting between Detroit and Illinois was now transferred to Cadillac and Illinois, Cadillac finishing like a thoroughbred, at last nosing out Illinois a few fathoms back of the line.

This race is rather unsettling and leaves a still greater interest attached to the concluding races of the trials. There was talk that Milwaukee had violated the rules by setting its spinnaker boom too far outboard, but there is to be no protest over this, and the better sentiment prevails that Milwaukee is unexpectedly good. There are many, however, who still back Cadillac for the final winner, as the weather indications point to a break in the calm hot weather and perhaps conditions offering stiffer and more steady winds. The times were as follows on the third leg:

	Second Mark.	Finish.	Elapsed.
Milwaukee	4 09 25	4 52 00	0 44 35
Detroit	4 12 40	4 57 30	0 44 50
Cadillac	4 14 44	4 59 42	0 44 50
Illinois	4 10 15	4 59 45	0 49 30

Times for the course, twenty-one miles:

Start, 1:30.	Finish.	Elapsed.
Milwaukee	4 54 00	3 24 00
Detroit	4 57 30	3 27 30
Cadillac	4 59 42	3 29 42
Illinois	4 59 45	3 29 45
Minota	5 08 41	3 38 41
Orion	5 11 50	3 41 50
Prairie	5 13 50	3 43 50

Fourth Race.

July 24.—The fourth race was abandoned to-day, the judges' boat returning shortly after the starting time. The weather conditions were either calm or very light and puffy winds, and it was decided not to attempt to sail the course.

July 24.—It was Cadillac with ease to-day, it finishing 6m. and 10s. ahead of the nearest competitor, which again proved to be the sidewalk boat that has cut so prominent a figure in the races heretofore. Illinois, Detroit and Milwaukee had the fight of the day for second place.

The weather conditions promised to be fine, a twelve-knot breeze blowing at the start, but the wind dropped midway of the race and the run home was under light and baffling breezes, which did not give the most sensational features to the second leg of the course, although it afforded ample opportunity for jockeying between the close-matched boats, Milwaukee, Illinois and Detroit.

The course was nine miles to windward and return. The boats got off in good fashion, Milwaukee well in the lead. The latter boat got the gun just back of the line, went about like a racing pony and crossed the line at the start well in advance of the others. Detroit stood to starboard soon after crossing, indeed, Detroit and Cadillac both standing on into a deep offing, which for a time left their actual position in the race much in doubt. All the boats went under a single reef except Orion, which double reefed. The latter boat did not finish the first leg, and may practically be counted out of the races henceforward. Milwaukee, feeling sure of a strong lead, at length came about on the port tack, coming in toward shore. At this time the wind shifted further into the N., and this temporary flaw gave Cadillac and Detroit a good lift, whereas it was not so much to the advantage of Milwaukee, which caught but the edge of the flaw. A few minutes after 2 o'clock Cadillac showed that it had cut down the lead established by Milwaukee earlier on the

leg and sailed fair across Milwaukee's bows. The Chicago boat, Illinois, which was also well sailed and left very good opinions both of the boat and its handling to-day, followed Cadillac's suit and likewise crossed the bow of the sidewalk from Milwaukee. Cadillac and Detroit after this laid a S.E. course. The wind had dropped at this stage to half its velocity at the start, and all the boats now shook out reefs and whistled for more wind.

At the turn Cadillac led everything, and although there were some who hoped that the light-weather boats could cut down this lead on the run home, the latter boat maintained a handsome lead to the finish.

The second leg of the course was rather a broad reach and was run under spinnaker. Detroit, sporting a cloud of canvas, began to foot it handsomely on the run home in spite of the shift in the wind, which proved that it was not to be a run free. Cadillac, well sailed, came on cleverly. Illinois also making a nice finish. Detroit gained nearly 2m. on this part of the course on Cadillac. The approach to free run also suited Milwaukee, which now overtook Illinois, closing up a gap of over 1m.

The skippers of both Illinois and Detroit seemed rather to have it in for Milwaukee, or at any rate they showed no mercy in the blanketing game. Milwaukee, however, was handled by able seamen and proved that she could give as well as take a little grueling of this sort. Standing higher into the wind, Detroit lay next to Milwaukee with her vast canvas cutting off the much-needed wind, and yet to windward of Detroit lay Illinois, eagerly watching for a chance to push in ahead by the second or so advantage which was now seen to be all remaining possible. Milwaukee at this stage was handsomely handled. It edged up on Detroit as the latter laid a straight course for the line, and like a flash the long shovel nose crossed the bows of Detroit. Here it ran into the lee of Illinois and was forced to ease off a bit, the three boats now making for the line as though tied together. A few fathoms from the finish Davis, the plucky Milwaukee skipper, threw his tiller hard astarboard, caught all the little wind there was back of him, and so was able to cross the line scarce half a length ahead of Detroit. Illinois, in the weather berth, finished 13s. back of the others.

The victory of Cadillac, clean and decisive as it was in mixed conditions of fair breeze and semi-calm, raises the stock of that boat yet higher and strengthens the impression that this should perhaps be the proper defender of the Canada cup. Illinois and Detroit are performing beautifully, but their battle would seem to be rather for third place. Barring accident, it would seem that Cadillac will take the series, with Milwaukee a probable second.

What the Canadians Think.

Com. Gooderham, of the Royal Canadian Y. C., has been keeping track of the trial races at Chicago. He says that he does not think Invader, the Canadian challenger, can give Minota a beating of 25m. in eighteen miles, as Milwaukee did last Monday. He says, however, that Minota is not properly handled, that she needs tuning up, requires another set of sails and in many ways might be better in her showing. As to Milwaukee, Com. Gooderham expressed the hope that this boat would win the series here, and be appointed defender of the cup. He declares that Invader will carry sailing canvas in a wind up to thirty-five miles, and believes that these racing machines will go to pieces if there should prove to be any sort of rnde weather.

As to the trials here between Cadillac and Milwaukee, it is to be admitted that it is largely a question of weather. The Milwaukee boat is fast, but she carries no great weight of belief in her ability to sail in a stiff breeze, even provided that she should hold together. Her owners stoutly declare that they can stand rough weather as well as anybody, but the fact remains that Milwaukee has not yet been subjected to a real rough-weather test. All the boats were well handled to-day, and it is a pleasing thing to see the Chicago boat, Illinois, if not in the first flight, at least well in the second.

The times of the starters to-day were as follows:

Start, 1:30.	First Buoy.	Finish.	Elapsed.
Cadillac	3 08 38	4 23 00	2 53 00
Milwaukee	3 14 00	4 29 10	2 59 10
Detroit	3 16 48	4 29 11	2 59 11
Illinois	3 13 18	4 29 23	2 59 23
Orion

Fifth Race.

July 26.—This was a day of surprises. Cadillac made the poorest showing it has yet put up during the trials. Illinois, never rated better than a candidate for third place, took first. Milwaukee, classified as a boat which could only travel going free and which could not beat to windward, proved its ability to outfoot its competitors close hauled. Surely here was a chapter of what might be called yachting revelation.

The placing of the boats at the finish was not a matter of naval architecture, nor of able seamanship, but purely a matter of luck in regard to the prevailing winds. It was luck pure and simple, which gave Illinois the victory on the last leg, that boat, hauled closer to windward than any of the others, being the first to catch a puff of wind, which continued strong enough to carry it over the line.

There has not been in all these races one single day which could fairly be called a good yachting day—one in which a steady and strong wind has prevailed throughout the race. The winning of Illinois to-day necessitates at least one more race, which will be sailed to-morrow. There is little reason to believe that any material change will take place in the weather conditions for to-morrow. Later in the season, after this hot weather spell shall have been broken, we may have stronger and more regular winds; at least it is to be hoped so, but all that can be said to-day is that the hot wave is still with us, and that we are entitled to expect light and intermittent breezes, perhaps stronger in the morning than in the afternoon, as has ruled the case throughout the week.

The boats were well handled for the start, but in the jockeying Milwaukee had the best of it, going over the line first, Illinois second. The wind was at this time stiff from the N.E., and the boats reached well off to the sound. Detroit and Illinois stood up higher than their competitors, Detroit thinking it advisable to reef its mainsail, but gaining little at this maneuver. Thirty minutes after the start Illinois sailed clean across Cadillac's bows, and, as it came about, proved to be a full minute to the

good of Cadillac, and that in a game wherein Cadillac had conditions much to its liking. Milwaukee also was able to cross Cadillac's bows. Detroit was last to come about, and was at this station standing further out into the lake.

Splitting tacks again with Illinois and Milwaukee, Cadillac was seen to be falling out of it for some inexplicable cause, and at the first turn Cadillac was last to go about.

On the second leg of the triangular course, reaching under balloon jib, Milwaukee clearly had the best of the little fleet, and it had nearly rom. of a start at the second turn, with the race apparently entirely at its mercy. Then came the unexpected.

The last leg was also practically a reach, and Milwaukee took to it very kindly. Cadillac trailed Milwaukee, standing well off to the S. Illinois held highest into the wind of the four, Detroit apparently laying a straight course for the line, and determining to tack late on in the leg. The boats were thus placed at about a mile from the second turn, when they ran into perfectly still water, the wind having dropped to an absolute calm. Thence on it was simply a puff now and again or here and there, and the luck of a boat's place gave it or lost it its opportunity.

It was therefore luck which cut Milwaukee out of the race at this stage. Illinois was most favored and Detroit next, and thus these boats, which heretofore failed to take a first, were able to outfoot both Milwaukee and Cadillac, winners of the previous races. Under these conditions Illinois got a steady puff of air, which heeled it well over and gave it a pronounced start before its rivals were able to get out of irons. Detroit was over second, but the two earlier winners were out of a place when finally they got a breath of air, and came in racing handsomely, the sidewalk boat again beating the Detroit craft.

The triangular course was laid out, with the first leg E.N.E., practically in the eye of the wind; the second leg S. by W., nearly free; the run home W. by N., with any sort of wind you cared to call it. The following were the times:

	Start.	First Buoy.	Second Buoy.	Finish.	Elapsed.
Illinois	1 30 11	3 00 25	4 01 30	5 22 48	3 52 37
Detroit	1 31 15	3 04 32	4 01 45	5 24 40	3 54 25
Milwaukee	1 30 10	2 58 54	3 51 25	5 27 20	3 57 10
Cadillac	1 30 40	3 02 26	4 00 40	5 30 14	3 59 34

Sixth Race.

More surprises turned up to-day, but incidentally there was a day of splendid yachting conditions, and the race was throughout the most interesting of the series. To the surprise of every one, Illinois appeared prominently in the running a half mile back of the line and finished nose and nose with Cadillac, overlapping Cadillac two-thirds of its length and crossing the line not more than 4s. back of Cadillac, although the judges timed the boats as 10s. apart. To spoil the effect of so sporting a finish as this came the claim of a foul, lodged by Skipper Pynchon, of Illinois, a few fathoms back of Cadillac in the last maneuver a few moments before the run over. At this writing the judges are considering this foul, with the chances of allowing it. Thus at least one more race will probably be needed to establish a cup defender or the ownership of the Chicago Y. C. cup.

Conditions.

The wind was twenty-five miles an hour at the start inside the breakwater, where, for some peculiar reason, it is always a trifle stiffer. Outside the wind was slightly less. It dropped to eighteen or twenty miles when the race was half over, and at the finish it had fallen to ten or twelve miles an hour, but it continued steady throughout and offered conditions under which the sport might be seen at its best.

The Light Weather Boats Beaten.

The race to-day practically established the fact that such light-weather models as Milwaukee or Detroit have no business in stiff weather. Detroit and Milwaukee did the worst to-day that they have in all the races, and on the run home, beating to windward, made a showing which ought to give one very great hesitation before electing either as a cup defender.

Illinois appears to be sailing better every day. Whether this be due to improvements in the boat itself or to its handling it would be hard to say. Skipper Pynchon to-day sailed a very canny race, and his knowledge of the air currents of the lake front stood him in exceedingly good stead.

Cadillac was handsomely sailed, and proved itself a capable boat, both before and on the wind. It was sailed cleverly and in sportsmanlike fashion throughout by Skipper Shaw, who is as sportsmanlike a man as ever trod a deck.

The Start.

Under the stiff breeze prevailing all the boats began jockeying for the start with two to three reefs in their mainsails. One minute and a half before the starting gun Milwaukee shook out a reef. The boats were timed to start at 1:30 sharp, the actual starting times being as follows:

Cadillac	1 30 17	Illinois	1 30 20
Milwaukee	1 30 18	Detroit	1 30 30

The race was nine miles to leeward and return, and the first leg was a spinnaker run. Detroit sent aloft a cloud of head sails which seemed to draw in every inch, and the pools showed Detroit a hot favorite for the first leg, running with the wind. Detroit footed it best for the first few moments across the line.

At 1:40 Milwaukee broke out a balloon jib, having heretofore used its spinnaker as a square sail. All the boats now stood under spinnaker and balloon jib. The wind outside the breakwater was probably fourteen to eighteen miles an hour.

At this leg it was conceded that Detroit and Milwaukee would make the strongest showing, but Cadillac proved unexpectedly good inside the first half hour on this first run.

At 1:50 Cadillac hauls up on Illinois, but does not cross its bows.

At 1:55 Detroit seems to hang back and has dropped back into last place. At 2:06 Cadillac leads, Milwaukee second. At 2:10 Detroit begins to travel, her head sails drawing in most beautiful fashion. At 2:19 Detroit at-

tempts to blanket Milwaukee, but the latter hauls up into the wind. Detroit is apparently trying to drive Milwaukee over into the tender mercies of Cadillac. Milwaukee sneaks over like a driven sheep toward the other boat, but pauses midway and makes straight for the goal.

At 2:28 Milwaukee has dropped its balloon jib and set a working jib for the run in for the turn. It is a close battle between Detroit and Milwaukee, the others being further to windward and just back of them.

Just back of the buoy Detroit fouls Milwaukee, which, cleverly placed just to windward, crowds Detroit stubbornly for the buoy.

At 2:30 Detroit is first, Milwaukee second, Cadillac third. At 2:31 Milwaukee shows first, Detroit second. At 2:32:30 Detroit is first, and an instant after this there occurs the foul between Detroit and Milwaukee. The spinnaker boom of Detroit scrapes across the shrouds of Milwaukee just before the turn.

The times at the first turn are:

	Turn.	Elapsed.
Detroit	2 33 28	1 03 28
Cadillac	2 34 53	1 04 50
Milwaukee	2 33 25	1 03 25
Illinois	2 35 30	1 05 30

Thus it may be seen that there was very little to choose between these four boats running before the wind. The showing of Cadillac as against Milwaukee was unexpectedly good, and even Illinois was in a better place at the turn than was accorded to her in advance.

The Run Home.

Illinois whipped at once into a port tack and laid a long leg far to the leeward of the others, standing apparently deep in shore and going hull down in the offing.

The other boats continued for some distance, but at 2:42 all went on the port tack. At 2:51 Milwaukee goes about and crosses Cadillac's bows. A few seconds later she again comes about into the port tack. Milwaukee now holds the weather berth of the fleet.

At 2:55 the position of the boats is, Milwaukee furthest to windward and Cadillac close to it, Detroit further to leeward, and then Illinois.

At 2:51 Detroit seems to be in trouble. She sends a man aloft. She drops her mainsail. Detroit reefs. Detroit seems to be having trouble with her peak halyards.

Cadillac has stowed in one more reef than Milwaukee, but is skinning Milwaukee on a square challenge.

At 3:10 the wind is eighteen miles an hour. Milwaukee has been praying for wind to show what she could do. She is getting her wind now and is likewise getting the worst of it.

At 3:15 Cadillac is blanketed by the big steamer Northwest and slows up, but soon gets under way again. Milwaukee seems to have on too much canvas.

At 3:33 they are all on the port tack. The position of the boats now is, Cadillac far to the windward, near to her is Milwaukee, near Milwaukee lies Detroit, with Illinois further to leeward and standing far inshore on a long reach.

At 3:34:35 Illinois comes about on the starboard tack. At 3:38 Illinois crosses the bows of Detroit. Milwaukee is now in the rear and still standing on the port tack.

At 3:38 Cadillac is about on the starboard tack. She crosses the bows of Milwaukee by nearly a mile lead.

At 3:46 Milwaukee goes about, followed at 3:51 by Detroit. At 3:55 Illinois stands on the port tack. At 3:55:15 Cadillac follows on the port tack. Cadillac and Illinois are now apparently working well inshore. It is freely prophesied that Pynchon, the local skipper of Illinois, is cleverly seeking for the slants of wind which always lie close inshore under the lake front of Chicago.

At 4:00 the boats stand thus: Illinois further to windward and pointing up stiffly; Cadillac is in the lead, a little to leeward of Illinois; Milwaukee and Detroit are fighting it out far in the rear, Milwaukee close inshore. They are all on the starboard tack, and the wind is now about fifteen miles an hour. Illinois is handled badly. It may be well enough for her to get inshore, but she is wasting time in short tacks. Milwaukee now seems to be hunting for smooth water and is standing inshore.

At 4:06:10 Cadillac is about on the port tack. At 4:09 Detroit is sent on the starboard tack and is now not leading Milwaukee. Illinois is now making a surprising showing, although Cadillac has kept a lead of perhaps half a mile.

At 4:10 Cadillac passes Illinois. Her lead seems to be not more than one-quarter of a mile. At 4:10:20 Cadillac again drops back into the starboard tack. At 4:10 Milwaukee goes about.

At 4:16 Illinois is close inshore, hauled up stiff and starving for wind. One cannot approve of such seamanship as this, as Illinois now has an excellent opportunity. This boat points beautifully into the wind, but her skipper seems to take delight in showing what she can do in pointing, rather than in sailing.

At 4:23 Milwaukee is seen to have her jib down. She stands inshore. She leads Detroit. Both boats are now far out of the race.

At 4:23:20 Cadillac has got inside the breakwater. She stands on a short port tack. Illinois seems still nearly a quarter of a mile back.

At 4:26 Detroit seems in trouble. She has dropped her mainsail.

At 4:31 Cadillac goes about again to port for a short tack. Illinois is still held up stiff into the wind, but might be making better time in the fine berth which she has secured.

At 4:37:30 Cadillac again makes a short tack. Cadillac cannot stand so close up into the wind as Illinois. This is Illinois' opportunity.

At 4:39:30 Cadillac is on the starboard tack, with Illinois apparently gaining strongly. The boats rush together, Illinois having made up a lot of distance in most unexpected fashion. It is very close now between Illinois and Cadillac. Illinois tries to take the weather berth of Cadillac. Then she seeks to come through her lee. She fails.

At 4:32 a grand finish begins. Illinois stands to weather, still hauled too close, still losing her chance to ease off and run down in front of Cadillac, which maneuver she has at her mercy.

At 5:44 comes the most exciting incident ever seen in a yacht race at Chicago. Illinois stands up beautifully and is coming on like a tiger. Cadillac thinks she cannot

quite make the line between the judges' boat and the buoy without a tack. She goes up into the port tack and crosses the bows of Illinois by something like two to five fathoms of clear water. Cadillac dares not stand for an instant on this tack, as the line is but seconds distant. Therefore Cadillac wears quickly as a cat. She times the maneuver a fraction of a second too soon, and hence seems to lose the fruits of her daring and skillful seamanship. This is the time at which Illinois claims that the boom of Cadillac raked across her fore stays. Illinois claims that she had to send a man forward to fend off the boom of Cadillac.

Cadillac, as she wears, finds Illinois with an overlap established, as the latter boat has rushed on strongly. They come down neck and neck and cross the line still overlapped, the bow of Illinois two-thirds up along the length of Cadillac.

The judges gave the time of Cadillac 4:45:30, Illinois 4:45:40. This places 10s. distance between the boats, which is 5s. more than actually existed.

Also Sailed.

Milwaukee and Detroit also sailed. Milwaukee came in without any jib at 4:57:25. Detroit still later at 5:12:42. Illinois hoisted a protest flag.

Elapsed Times.

The elapsed times at the finish were as follows:

Cadillac	3 15 30	Milwaukee	3 27 25
Illinois, official	3 15 40	Detroit	3 42 42

The judges will pass on the protest this evening.

The Banquet.

To-night at 7 o'clock the Chicago Y. C. entertains at the Victoria Hotel the skippers and crews of visiting yachts. E. Hough.

HARTFORD BUILDING, Chicago, Ill.

Newport Special Thirties.

NEWPORT, R. I.

Monday, July 22.

THE sweepstake race for the Newport 30-footers was sailed over a course from Rose Island to and around Brenton's Reef Lightship in a fresh S.W. breeze on Monday, July 22. It was a beat out and a run back with spinakers. Wa Wa got the best of the start, but was soon overtaken and passed on the beat out by Esperanza, which boat held the lead to the finish. The English yachtsman, Mr. Frank Jameson, sailed Polly Wog. The times were:

Start, 3:14.	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	4 51 54	1 37 54
Hera, R. N. Ellis	4 52 36	1 38 36
Barbara, W. Rutherford	4 53 21	1 39 21
Polly Wog, W. Rutherford	4 54 29	1 40 29
Wa Wa, R. Brooks	Withdraw.	

Tuesday, July 23.

Esperanza again won a sweepstake race sailed in a light S.E. breeze on Tuesday, July 23. The course was to a mark three miles to leeward and return. This course was sailed over twice. Wa Wa got the best of the start, but was beaten by Esperanza. Polly Wog was again sailed by Mr. Frank Jameson, and he pushed Esperanza hard for first place. The summary follows:

Start, 3:18.	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	4 31 17	1 13 17
Polly Wog, W. Rutherford	4 32 44	1 14 44
Wa Wa, R. Brooks	4 33 11	1 15 11
Hera, R. N. Ellis	4 33 43	1 15 43
Barbara, W. Rutherford	4 34 29	1 16 29

Wednesday, July 24.

In a strong S.W. breeze Wa Wa won the sweepstake race sailed between the thirties on Wednesday, July 24. The course was from Brenton's Cove to Dyer's Island and return, a distance of eighteen miles. Barbara crossed the starting line first, but the boats sailed very evenly, and at the first mark all were well bunched. It was a beat home, and Wa Wa secured the windward berth and crossed a winner by 18s. ahead of Esperanza. The finish was very close, three of the boats crossing within 47s. of one another.

There was also a cup race between two of the 15-footers, which was won by Breeze. They sailed over a triangular course of ten miles. The table follows:

30-footers—Start, 3:11.		
	Finish.	Elapsed.
Wa Wa, R. Brooks	5 20 31	2 09 31
Esperanza, H. O. Havemeyer, Jr.	5 20 49	2 09 49
Barbara, W. Rutherford	5 21 16	2 10 16
Polly Wog, W. Rutherford	Withdraw.	
15-footers—Start, 3:21.		
Breeze, W. G. Roelker, Jr.	5 25 07	2 04 07
Eaglet, W. Grosvenor, Jr.	5 27 08	2 06 08

Friday, July 26.

Hera won the sweepstake race between the 30-footers that was sailed on Friday, July 26. The boats sailed once over a triangular course eight miles in length. The wind was light from the S. Wa Wa got the best start as usual, but was passed by Hera on the run to the first mark, and held her lead till the finish. The second leg of the course was a beat, and the third a reach. Esperanza lost all chance of winning by getting hung up on a lobster pot. Summary:

Start, 4:00.	Finish.	Elapsed.
Hera, R. N. Ellis	5 12 21	1 12 21
Wa Wa, R. Brooks	5 12 24	1 12 29
Barbara, W. Rutherford	5 13 02	1 13 02
Esperanza, H. O. Havemeyer, Jr.	5 17 21	1 17 21

Saturday, July 27.

The 30-footers sailed a race for a cup offered by Mr. Harry O. Havemeyer on Saturday, July 27. The S.E. wind made it a run up the bay to Dyer's Island and a beat back. Carolina crossed the starting line first, and was never headed, winning from Hera by the narrow margin of 17s.

The 15-footers sailed around the bell buoy off Castle Hill. The summary is as follows:

30-footers—Start, 3:42.		
	Finish.	Elapsed.
Carolina, P. Jones	6 01 41	2 19 41
Hera, R. N. Ellis	6 01 58	2 19 58
Wa Wa, R. Brooks	6 02 31	2 20 31
Barbara, W. Rutherford	6 02 37	2 20 37
15-footers—Start, 4:06.		
Eaglet, W. Grosvenor, Jr.	5 44 07	1 38 07
Hawk, W. Gammell, Jr.	5 44 08	1 38 08
Breeze, W. G. Roelker, Jr.	5 44 28	1 38 28

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter IX.—Caulking, Stopping and Painting (Continued).

For those who wish to cast their own lead keels or bulbs the following hints may be of use, but I should strongly advise any one to get the lead cast at a foundry, as it is a very troublesome business and requires a good deal of care to turn out a good casting.

To make a mould for a lead keel of the size required for No. 1 design, about two cart loads of moulder's sand must be obtained from a foundry, ordinary sand being useless, having no cohesion.

should be carried back on the plate for a distance equal to three times its thickness, dying gradually into the flat surface. The edges cannot be too sharp. Bull's metal is the best material for centerplates for all purposes, but it is expensive and often sent out very badly buckled, unless specially ordered to be planished. Next to this metal, saw blade steel is the best for very light plates, or mild steel for heavier plates, which are to be galvanized. Do not try to galvanize saw steel or it will buckle badly, and cannot be straightened.

The above remarks apply equally to all centerplates of any form, and also to bulb-fin plates and rudder blades.

There are four types of centerplates now in general use, and many modifications of these general types. In addition to these there are lifting bulb-fins and ballasted centerplates, which most of them come under one of the four main types.

These four classes are:
First—The rectangular, with a vertical hoist by means of handles or one or more wires or chains.

well, and was used in one of the competing boats, but she was not very good to windward.

The first type of a rectangular plate, though not nearly so effective for a given area and weight, is essential under a rating rule which taxes the vertical drop of the plate heavily, and is also the best form for a lifting bulb or ballasted plate.

The triangular plate lifted from the after end is hardly ever seen now, as it is ineffective for its size, as compared with the fourth class of plate, and does not conform well to the rating rules, like the first and third classes. This type of plate is in use only on very weedy waters, where a plate with a vertical or nearly vertical fore edge could not be used; even when it is used now it is usually lifted from the fore end like the No. 4 type.

The fore edge of the No. 1 type is sometimes cut at a sharp angle to get rid of weeds, but of course it leaves a gap in the fore end of the case, when raised, unless it is raised in a direction parallel to the fore edge, which requires a long case forward of the slot in the keel.

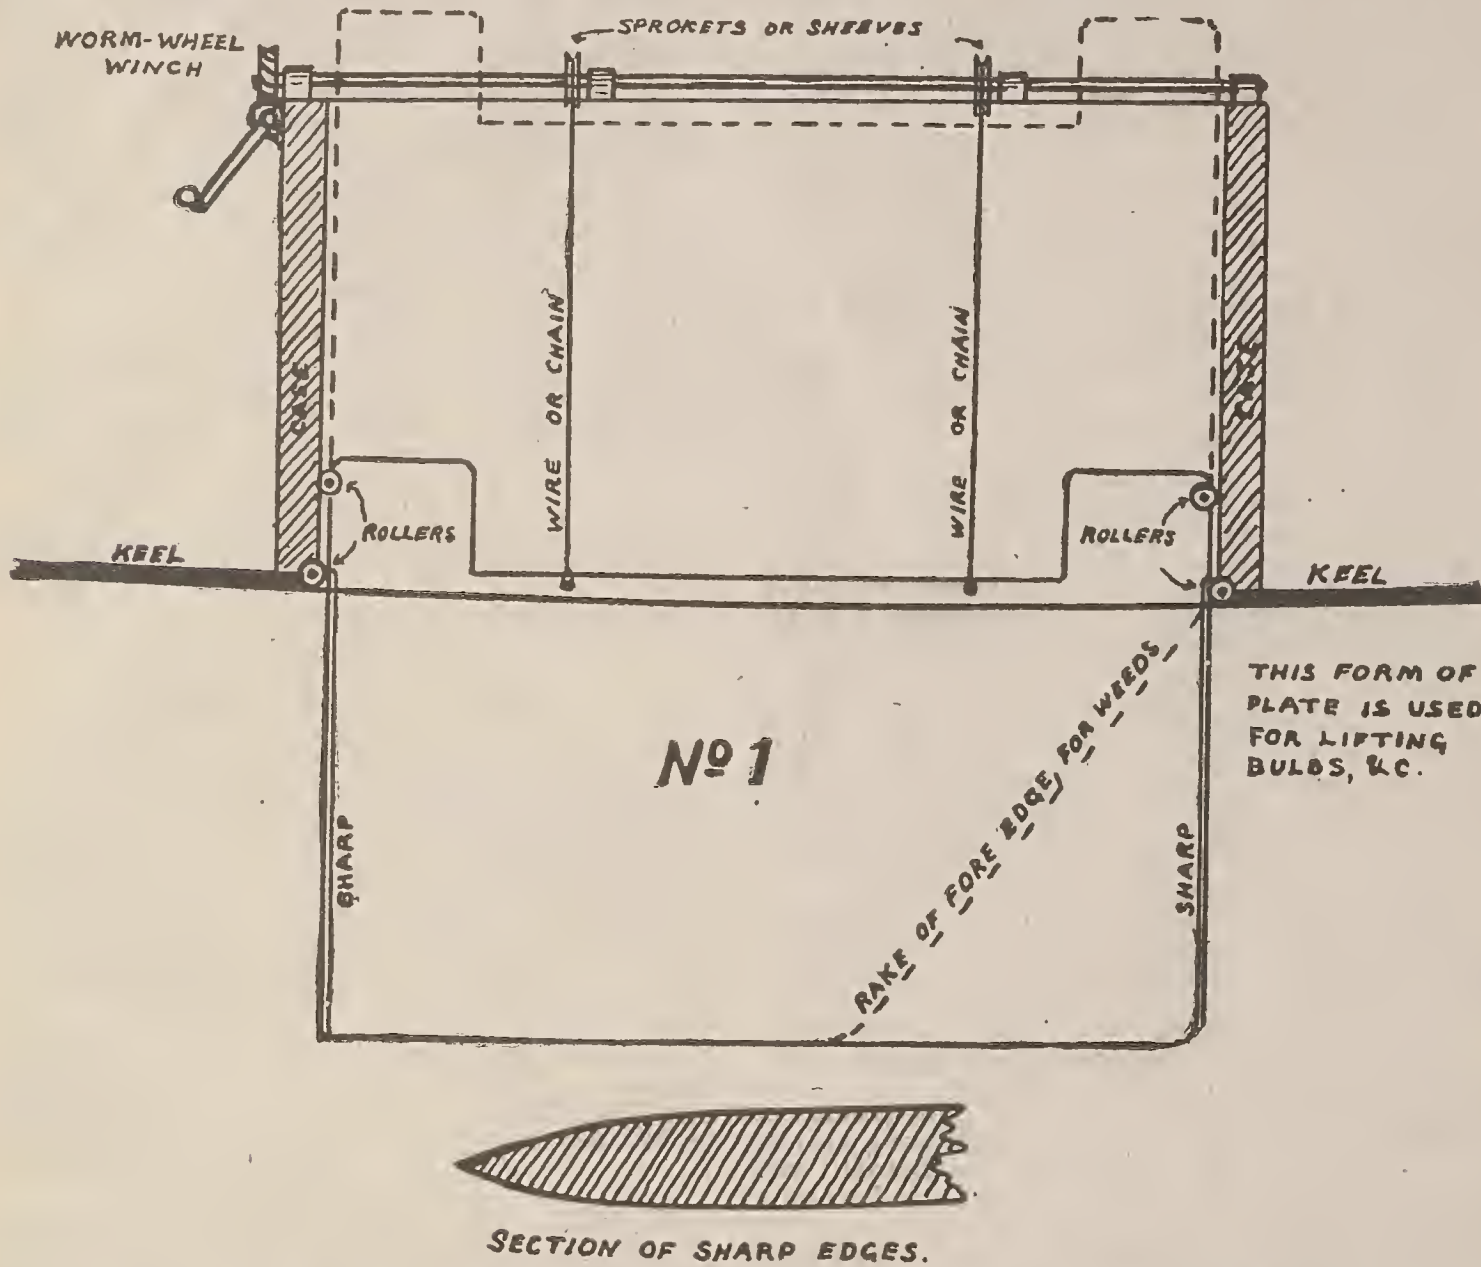

Of the lifting bulbs or ballasted plates, the simplest and most efficient is the No. 1 type plate, with a raking fore edge to clear weeds, etc., and a lead bulb of pear-shaped section and suitable weight. By means of such a plate a small boat can be made uncapsizable, and carries her ballast in its most effective form, while she is not debarred from shoal waters like a fixed bulb keel boat would be; the only disadvantage of this form being that the bulb projects below the keel when the plate is hoisted, unless a very large slot is cut in the keel and a wide box case fitted with some form of self-closing arrangement to stop up the gap in the keel, and hold the plate firmly when it is lowered. This is best done by having a loose wooden block on each side of the plate weighted sufficiently to keep it at the bottom of the case, till raised by the top of the bulb striking it on rising, and prevented by a slightly overlapping keel band from falling through the slot when the bulb is down. These blocks must be hard wood, teak for choice, and at least twice their width in depth, to prevent them from jamming in the case.

Such a ballast plate as this should be lifted by two flat link, bronze, bicycle pattern chains, passing over sprockets on a central spindle along the top of the case, the latter being actuated by worm wheel gear. By gearing of this sort a bulb and plate up to several tons may be lifted, but the whole affair is very costly, and requires a good builder to fit it, and can only be made by a competent engineer.

The Canada Cup Challenger.

TORONTO, July 27.—Stripped of everything above decks Invader, the Royal Canadian Y. C.'s backer of the Canada cup challenge, stands on a flat-car, ready for shipment to Chicago. Monday, July 29, is the date of her prospective departure from Toronto, and Wednesday, July 31, is the date of her prospective arrival in the Illinois town. The yacht was taken to the Bertram Engine Works Company's yards, in the western part of the city, and there shorn of her spars, sails and rigging. Then the hull was carefully lifted out of the water by a huge crane, and flung over to where a special flat-car, 60 feet in length, was waiting for her. A gang of carpenters and other workmen was in readiness, and at once commenced preparations for the yacht's safe journey by rail. She was lowered until the bottom of her lead bulb rested on the flooring of the car and carefully shored up and braced in all directions. The ballast was not removed. After the hull had been properly secured a ridge pole was run from one end of the car to the other and a canvas cover fitted over. The yacht's spars and rigging were placed beside her on the flooring, the one car carrying all that there is of Invader.

The yacht does not go westward with the prospect of a week or two of fitting out ahead of her. She is all ready to race as soon as her spars are in place and the canvas bent. It will not be necessary to use a paint brush on her before she touches the water. All that work has been done. Her bottom has been smoothed and blacklead, and a silver band painted around her waterline. Above that is the black enamel of the topsides, relieved by a gilt sheer ribbon with scrollwork forward and aft. On the black transom the name Invader appears in letters of gold, for the first time. Canadians are singularly reluctant about letting the names of their yachts be seen, but the experience of Aileen, at Chicago, years ago, when a tin name-plate had to be tacked on before the big cutter was allowed to race, has been borne in mind. The silver band above Invader's waterline alters her appearance wonderfully, making her look much

There are two methods of making the mould. First (and best) by digging a hole in the ground about 6in. deep, 1ft. longer, and 1ft. wider than the pattern to be cast, and filling it up with the moulding sand round the pattern. The second way is to build a strong box of 3in. deals to contain the sand, but without either top or bottom. This box is filled with the sand round the pattern in the same way as the hole in the ground, but is liable to burst with the weight of the lead, and requires a special trench or shoot for the lead from the furnace or melting pot, whereas the other form of mould simply has a gutter cut in the sand, along which the lead flows. The advantages of each of these are cheapness, simplicity and perfect strength and safety of the first, as against portability of the mould, ease of handling and getting out the casting, and possibility of using the mould on wood or brick floor of the second method. The latter must be very strongly made to stand the enormous strain of the lead.

Whichever plan is chosen, the method of making the mould will be the same. Fill the hole or box about 6in. deep with moulding sand, well rammed down, as hard as possible, ramming each layer of say an inch in depth, till the whole mass is solid. Place the wood pattern on this bed of sand, with the top face, which is to fit next to the wood keel, exactly horizontal, and levelling it carefully in all directions. Support the pattern exactly in this position, and pour in sand, ramming it tightly as it is put in, till the whole mould is full and a bit above the level of the top of the pattern. Take a trowel and level the sand exactly to the surface of the pattern, and cut a groove or gutter for the lead to run into the mould at the thinnest end; the pattern can now be removed, but it should have a couple of screw eyes in the top to lift it out of the sand. Before lifting it out, tap it all over sharply with a hammer to loosen it in the sand, and then lift it out carefully and slowly, so as not to injure the sharp edges and angles of the mould. These instructions only apply to patterns which taper, and can therefore be easily withdrawn from the sand. Bulb-shaped keels must be cast in a mould in two halves, which is beyond the amateur's power to make, as it requires special boxes to contain the sand, and considerable skill in moulding, to turn out such a casting.

Having prepared the mould, a melting pot or furnace must be constructed. This should consist of an iron pot (wrought iron for choice), which will hold at least a ton of lead, but if possible large enough to contain the whole amount required, and a few hundred-weights extra for waste. This melting pot must be set in a ring of fire bricks, with one or two openings at the bottom for firing, and several more at the top to create a draft, or it may simply stand on three fire brick piers and have an open fire all around it. In either case a large coke fire will have to be maintained for some hours, under and round the melting pot, which should be filled with lead in as small pieces as possible at first, larger pieces being added as the mass of melted lead increases, till the whole amount is melted, or the pot is full. A pouring hole or tap should be fixed in the bottom of the pot if possible, and should consist of a hole or pipe about 1in. in diameter, which is stopped from the outside with a clay plug, to be knocked out when the lead is ready to pour. A gutter is made from this hole to the runner or groove in the mould, the whole being on a good slope, so that the melted lead flows freely.

If a melting pot with a pouring hole or tap cannot be obtained, a common cast iron pot can be used, and the lead dipped out in long-handled ladles, and poured by hand into the mould. This is a very trying job, owing to the great heat of the fire, and several hands must be employed to pour in the lead fast enough to keep it melted in the mould till it is all in, as if it partly cools a division or flake will occur and spoil the casting. In no case is it possible to obtain such a good casting by means of hand ladles as by running direct from the melting pot, though I have seen a 20-ton keel cast entirely by hand ladles, and it turned out fairly well.

To get a really good casting the lead should be very hot and fluid, and run into the mould as quickly as possible; also all dross and scum will be avoided if it is run from a hole at the bottom of the pot. The hotter the lead is when run the denser the casting will be, and consequently the casting which is run very hot will probably come out a bit heavier than one run at a heat when the lead would only just pour. A little rosin should be thrown into the pot just before running as a flux. Don't forget, a casting of a ton or more will take many hours to cool.

The centerplate must be ordered from the smith with the other iron and metal work, and a full size template of thin wood should be made to the drawing, with all holes and sharp edges, etc., marked clearly on it. Particular instructions should be given with the order, as to sharpening the edges, and also stating that the plate must be absolutely flat and true, and a bent or buckled plate is quite useless, and cannot be straightened by an ordinary smith.

The edges should be sharpened to a long, easy bevel, which

Second—The triangular plate, pivoted at the fore end, and hoisted by a handle, wire or chain at the after upper corner.

Third—The semi-circular plate, pivoted in the center of its straight edge or diameter, and hoisted by a handle on one end, the slot in the keel being only half the length of the plate, but the case inside being the whole length. This is the easiest plate to raise of its weight.

Fourth and most generally used now—The deep rectangular or knife-shaped plate (commonly called a "dagger" plate), and lifted by a lever and tackle from the forward upper corner. This plate was introduced in this country by me in 1894, in the 1-rater Sorceress, and is very effective, but requires a long case and slot in the keel. I have used this type of plate of many shapes, from the original knife form of 6ft. drop and 2ft. wide to a plate of only 3ft. drop and 2ft. 6in. in width, in the case of Scotia II., the winner of the French international 1-tonner cup in 1901. The object of the shallow plate in this case was to evade the tax on the radius of the plate, taken from the pivot to the furthest point in the plate. The semi-circular plate No. 3 type evades this rule very

longer and taking away some of her sheer. Silver and black have been the Royal Canadian Y. C.'s boats' racing colors for some years, although the club colors are yellow and dark blue. Canada came out with black topsides and a white bottom, although subsequently black-leaded to the sheer-strake. Beaver wore black and silver in the Canada's cup races of 1899—and lost. Minota was in the same guise in the next international match, the Fisher cup race at Charlotte—and lost. The colors are not of particularly good omen, but they seem favorites with Mr. Æmilius Jarvis, who sailed the boats just mentioned under them. His own big cutter, Merrythought, is similarly painted.

It has now been definitely settled that Mr. Jarvis will sail Invader. Com. Gooderham and his syndicate have handed the boat over to him, and his word is law. The selection of Mr. Jarvis as skipper is the wisest one the challengers could make, although better results would have been obtained had the arrangements been made

former one, and it is claimed that it allows the boat to point better in windward work.

After being placed on the flat-car brass plates were screwed to Invader's bottom, all along the rabbet line. Before this brass plates had been screwed to her forebody, just below the foot of the mast. The boat opens up very easily and the sheathing is to prevent her spewing her oakum.

CHARLES H. SNIDER.

Sea Cliff Y. C.

HEMPSTEAD BAY—LONG ISLAND SOUND.

Saturday, July 27.

TWENTY-EIGHT yachts, representing nearly all the clubs on the western end of Long Island Sound, started in the annual regatta of the Sea Cliff Y. C. on Saturday, July 27. The start was made at 1:05, and at that time the breeze was N.W., but about 2:30 it shifted to S.W. and blew

The Yawl Venitzia Lost.

One of the saddest yachting accidents that has occurred in recent years was the sinking of the yawl Venitzia off Great Captain's Island on Long Island Sound on Thursday, July 18, when five lives were lost. Those drowned were Arthur T. Colburn, of Philadelphia; Miss Annette Colburn and Miss Ida E. Colburn, two daughters of Mr. Colburn; Capt. Flint, of Brooklyn, the yacht's sailing master, and Fred Nixon, a sailor. Those saved are Mrs. Walter J. Sprankle, another daughter of Mr. Colburn, and the yacht's steward, James Stanbridge.

The party left Delaware City on Monday, July 15, for Bar Harbor, Maine, and intended to stop at several ports on the way.

It is generally believed that the accident was due to the stubbornness of Capt. Flint, who refused to order the mainsail taken in when requested to do so by Mr. Colburn. Mr. Colburn was an able yachtsman and was well known along the Delaware River. He had taken many long cruises in the Venitzia, and his friends are at a loss to account for this dreadful accident except on the ground of Capt. Flint's incompetency. The bodies of Mr. Colburn and his two daughters have been recovered, but nothing has been seen of that of Capt. Flint or of Nixon, the sailor. Owners of boats owe it to themselves and their friends to employ only the ablest men as sailing masters.

Venitzia was built at Mystic, Conn., in 1880, and is one of the old-fashioned shallow-bodied boats, a type too well known in American waters. She is 54.5ft. long on the waterline, 63.4ft. long over all, 18.3ft. beam and 5.5ft. draft.

Edward Kelly.

EDWARD KELLY, commodore of the New Rochelle Y. C., died suddenly at his country home on Premium Point, New Rochelle, on July 27. Mr. Kelly was thirty-nine years old. He was a graduate of Yale College, and besides being commodore of the New Rochelle Y. C. he was a member of the Larchmont, American and New York Y. C.'s. Mr. Kelly owned the auxiliary steam yacht Barracouta, and the racing yachts Rochelle and Huguenot. It was through Mr. Kelly's liberality that the New Rochelle Y. C. had been able to charter Harrison Island, where the clubhouse is now located. Mr. Kelly did yeoman's work in carrying supplies on his yacht Barracouta to the American forces in Cuba during the Spanish war.

A copy of the Seawanhaka-Corinthian Y. C. club book has been received at this office. The club now has 488 members, and there are 300 boats enrolled in the club fleet.

months ago. Mr. Jarvis will do well with Invader, but she is, and will be, a new boat to him. This is the one weak point on the challenger's side. Their boat has been sailed continuously, until she is in excellent trim, but she has not been sailed by a regular crew of six amateurs and a professional all the time. The crew that will handle her in Chicago will be selected from Messrs. Æmilius Jarvis, F. A. Turner, Charles Lownes, J. S. McMurray, V. J. Hughes, Wm. Fisher (professional) and Com. Gooderham.

Invader goes to Chicago in charge of two professional sailors—Wm. Fisher and Fred Stoner. Capt. James Andrews, of Oakville, Ont., who built her, superintended the work of getting her ready for shipment, and will go to Chicago to look after her refitting. If all goes well she will be afloat by the end of the week and ready for sailing. It is Skipper Jarvis' intention to have a clear week of sailing for his crew before the contest. The first race being on Aug. 10 means that Invader will have to be refitted without any hitch if the skipper's programme is to be carried out.

The probable selection of a centerboard craft to defend the cup agrees well with the wishes of the challengers, for Invader excels in those points in which a centerboard boat usually has the heels of a keel craft—running and reaching—and light-weather sailing in general. At the same time she sails well enough in brisk weather and in windward work to give any keel boat a good argument, so that she should be able to hold her own with or prove superior to a centerboarder under these conditions. Of course, Genesee defeated Beaver in windward work two years ago, and the Payne boat's best hold is in beating, but the match was sailed in such light airs that it was not a good indication of the real abilities of the centerboarder or of the deep-draft, short-canvassed, Payne sloop.

Beaver once more showed her ability to get away from Invader in a breeze, in two informal races on Toronto Bay on July 21. Dr. Crawford Scadding, one of the owners of Beaver, handled her, while Invader was at the tender mercies of Wm. Fisher, her professional sailor. The new boat worked out a lead of a minute on the first leg of the triangle, with a soldier's wind, and stretched it out to three on the next, a run with the wind over the port quarter. Then the two hauled up for the beat back to the starting buoy, and Beaver showed her fine points. She worked up the bay in two long tacks and a short one, while Invader made half a dozen short boards. Beaver rounded the starting buoy with a lead of a minute, having beaten Invader by four minutes in a mile of windward work. The two then squared away and ran down the bay. In the mile run Invader only gained about four lengths. She sailed better in the beat back this time, but Beaver had a lead of nearly two minutes when she reached the starting buoy.

Such performances have not filled the Canadians with confidence, but they feel sure that Invader would do better pitted against a centerboard boat under the same circumstances. It was not blowing hard, during these two brushes—twelve miles an hour at the outside, with a small, choppy sea.

Invader's mainsail was blamed for her poor windward work. It had been setting well, but it stretched too much in the puffs, so a new one was ordered from Wilson & Silsby, of Boston. It arrived in time to be bent and used in a few trial sails. It is of the same dimensions as the Canadian mainsail, but of heavier material. There is no doubt it will do better work when reefed than the

fresh. For the sloop Hebe, the yawl Memory and the 30ft. sloop Oiseau and Possum, the course was from the starting point to and around Execution East Buoy, then around Matinicock Buoy and home. The smaller classes sailed twice around a four-mile triangle, with Mott's Point Buoy and the Larchmont mark off Prospect Point as their turning mark. It was a run, a reach and a beat. Snapper, well sailed by Mr. A. Bryan Alley, defeated Viper in the raceabout class. Don, designed by C. D. Mower, defeated her competitor in the 25ft. class. Summary follows:

Sloops and Yawls—36ft. Class.		
Hebe, E. C. Seed.....	5 12 35	4 07 35
Memory, W. N. Bavier.....	5 20 00	4 15 00

"Small Boat Sailing."

MR. E. F. KNIGHT, well known to readers of yachting literature as the author of "The Cruise of the Falcon," "The Cruise of the Alert," "Where Three Empires Meet," "A Desperate Voyage" and many others, has written another book entitled "Small Boat Sailing." Perhaps no yachtsman or writer on yachting subjects has had such varied and extensive experience with yachts, both large and small, in all parts of the world as Mr. Knight has had, and he is particularly well fitted for the work he has undertaken. The book in question was written more especially for the novice at yachting rather than the boatsailer of experience, but all interested in boats will find the book most interesting and instructive. To make certain points clear, Mr. Knight cites experiences of his own to better illustrate the case, and in that way he has made the book attractive all through. Mr. Knight begins with a chapter on the selection of a boat, and from there on dwells upon all the important points required in yachting, both in open and still water, covering all points in a comprehensive and lucid manner. The book is handsomely bound in green buckram, and profusely illustrated by Mr. H. Warrington Smyth with drawings made under the direction of the author. E. P. Dutton & Co. are the American agents for the book.

YACHTING NEWS NOTES.

The English-built steam yacht *Catania* arrived at New York on July 26 from Cowes, which port she left on July 11, stopping at St. Michaels for stores on July 16. The yacht is under charter to Mr. R. A. C. Smith, N. Y. Y. C. *Catania* is one of the finest and most noted yachts in England. She was designed by Mr. G. L. Watson and built by D. and W. Henderson, at Glasgow, in 1895, for the Duke of Sutherland. She is a single screw vessel with two pole masts and one funnel. *Catania* is 225 ft. over all, 26.7 ft. beam and 15.37 ft. deep. She has a maximum speed of 14 knots and carries a crew of thirty-five men.

The steam yacht *Buccaneer* went ashore on Great Ledge when attempting to enter Wood's Holl Harbor on July 25. She was floated off by the tug *Unique*, now under charter to the N. Y. Y. C. The yacht is apparently uninjured. She is owned by Mr. Frank T. Morrill, of New York, but is now under charter to Mr. A. A. Low, who was aboard with his family when the yacht went ashore.

Word is received from Glasgow, Scotland, of the death of John Henderson, the famous shipbuilder. He was born in 1846. Mr. Henderson was the nephew of Thomas and John Henderson, who started the Anchor Line Steamship Company. He built all the more recent vessels of the Anchor line, and many famous steamships plying between English ports and the East, the cup challenger *Thistle*, and also both the *Valkyries* and the *Shamrock I*.

The Lake George Regatta Association was incorporated at Albany on July 24 to encourage yachting and boating on Lake George. The principal offices are at Hague. The directors include Edward Barr and Delvan Bloodgood, Brooklyn; W. K. Bixby, St. Louis; A. Nelson Cheney, Glens Falls; Benjamin Day, West Hoboken; Albert Lowther, East Orange; R. K. Quayle, Albany; W. H. Tippetts, Caldwell; E. Burgess Warren, Philadelphia, and Joseph Wilkinson, Troy.

The Assateague life saving station of Lewis, Del., reports that the schooner yacht *Monhegan* went ashore on July 26, and is in a bad position. The crew was taken off by the life savers. *Monhegan* was formerly owned by Mr. Clark A. Miller, but was sold this spring to J. P. Story, Jr., of Washington, D. C.

Mr. Robert Jacob is having built at his yard for his own use a hunting launch from designs made by Mr. Charles D. Mower. Forward is a trunk cabin 8 ft. long, with 4 ft. 6 in. headroom. On each side is a berth, with hanging closets aft, and forward is the toilet room. The cockpit is 14 ft. long and has seats running the full length. She will be used generally for a day boat, but her cabin accommodations will permit of her being used for cruising.

The schooner yacht *Thistle*, which was built at the Townsend, Downey & Co.'s shipyard, Shooters' Island, S. I., from designs made by Mr. H. C. Winteringham, was launched on the afternoon of July 27. She was built for Mr. Robert E. Tod, N. Y. Y. C. The boat is constructed of steel and has a clipper bow and an overhanging counter. The design shows a powerful vessel, that should show considerable speed. She is 144 ft. over all, 110 ft. on the waterline, 27 ft. 10 in. beam, and 18 ft. deep. The yacht has a raised deck aft and all skylights and companionways are of teak. The cabins are finished in mahogany. There are accommodations for the owner and ten guests.

Title was passed on July 22 to representatives of the N. Y. Y. C. in Locust Lodge, at the extreme end of Huntington Bay, and the property will be immediately improved and made one of the chain of stations from New York to Newport. The Lodge is one of the finest pieces of property on the Sound and off it is ideal anchorage ground.

The new royal yacht, *Victoria and Albert*, was placed in commission on July 23. The Hon. Hedworth Lambton, who commanded the cruiser *Powerful* and distinguished himself at the beginning of the war in South Africa, is the captain of the yacht.

All communications intended for **FOREST AND STREAM** should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

- Aug. 1-2.—Winnipeg, Man.—Fifth annual trapshooting tournament, under the management of the Winnipeg Industrial Exhibition Association; \$1,000 in money, trophies and medals. F. W. Heubach, General Manager.
- Aug. 2.—Holyoke, Mass.—Holyoke Shooting Club's annual target tournament. J. R. Blamey, Sec'y.
- Aug. 2.—Walcott, N. Y.—Target tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.
- Aug. 3.—Sharon Springs, N. Y.—Sharon Springs Gun Club's first target tournament. Andrew Smith, Sec'y.
- Aug. 4.—Grand Crossing, Ill.—Grand Crossing Gun Club's live-bird tournament.
- Aug. 6.—South Auburn, Neb.—South Auburn Gun Club's tournament.
- Aug. 6-7.—Birmingham, Ala.—Alabama State Sportsmen's Association tournament, under auspices of Birmingham Gun Club.
- Aug. 6-7.—Brantford, Can.—Target tournament of the Brantford Gun Club. A. B. Cutcliffe, Sec'y.
- Aug. 6-8.—Monroe, Ga.—Monroe Gun Club's tournament.
- Aug. 8-9.—Lafayette, Ind.—Fifteenth annual tournament of the Lafayette Gun Club. Amateur. John Blistain, Sec'y.
- Aug. 13-15.—Vicksburg, Miss.—Vicksburg Gun Club and Fish and Game Protective Association's tournament; \$300, and \$200 in prizes added.
- Aug. 14.—Ossining, N. Y.—Merchandise clay bird tournament of the Ossining Gun Club; clam bake; brass band. C. G. Blandford, Capt.
- Aug. 14.—Trenton, N. J.—Contest for championship of Mercer county, between Messrs. C. A. Comp, holder, and W. B. Widman, challenger.
- Aug. 15.—Sherburne, N. Y.—Eherburne Gun Club's tournament. J. F. Paddelford, Sec'y.
- Aug. 14-16.—Colchester Beach, Md.—Sixth annual midsummer tournament, under the management of Messrs. J. R. Malone and J. M. Hawkins, of Baltimore; two days at targets; one day at live birds; added money and merchandise prizes.
- Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas.
- Aug. 19-21.—Asheville, N. C.—Three-day tournament under the auspices of Maj. E. P. McKissick and Col. J. T. Anthony; distance handicaps; \$100 per day added. John Parker, Mgr.
- Aug. 21-22.—Bass Lake, Ind.—Tournament of the Peru Gun Club.
- Aug. 23.—Pleasant Hill, Mo.—Fifth annual sweepstake and merchandise tournament of the Pleasant Hill Colored Gun Club. T. H. Cohron, Sec'y.
- Aug. 27-30.—Okobojo, Ia.—Lake Okobojo Amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw.
- Sept. 2.—Meriden, Conn.—Labor Day tournament of the Parker Gun Club. Also Bristol sheep bake. C. S. Howard, Sec'y.
- Sept. 2.—Albany, N. Y.—Blue-rock tournament of the Forester Gun Club. H. H. Valentine, Mgr.
- Sept. 2.—Lake Okobojo, Ia.—Indian tournament, to be held at Arnold's Park.
- Sept. 2-3.—Union City, Ind.—Tournament of the Parent Grove Gun Club.
- Sept. 2-3.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association. Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y.
- Sept. 15-16.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.
- Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreih, Sec'y.
- Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.
- Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.
- Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.
- Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

- Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
- Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.
- Sept. 10-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

- Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.
- Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Cincinnati Gun Club's tournament, Sept. 24-26, has on each of the first two days eleven events of 180 targets in all. On the third day there are ten events at 175 targets in all. Every event has a handicap, distance 14 to 22 yds. All who shoot over 85 per cent. will be handicapped; all others will shoot at 14, 15 and 16 yds. To the five highest averages \$50; to the ten low guns, \$50. No one will be allowed to shoot for targets only. Commencing at 1 o'clock P. M. on the third day events 6, 7, 8, 9 and 10 will be shot as the Cincinnati Gun Club's annual grand target handicap, 100 targets, \$10 entrance, for a guaranteed purse of \$500, and all surplus added. Regular entries to this close on Sept. 10; \$5 forfeit. Penalty entries, \$12. "All paid representatives, whether paid in shells, money or otherwise, and all those connected in any way with companies manufacturing guns, shot, shells, powder, targets and traps, shall pay \$2 each day extra, and every other shooter will pay \$1 each day extra, and this money will be divided among all amateurs shooting through all the regular events who do not draw their entrance fees out. The decision as to who such paid men are shall be left at all times to the manager, whose decision shall be final. Souvenir programme will follow. For further information address John B. Mosby, chairman tournament committee, 115 East Second street, Cincinnati, O. Grounds open for practice Monday, Sept. 23. Targets 2 cents. Ten-gauge guns and black powder barred."

The last of the series of Interstate target tournaments for the season of 1901, given for the Auburn Gun Club, Auburn, Me., Aug. 21 and 22, has a programme similar to those of its predecessors. There are ten events each day—five at 15 and five at 20 targets, entrance \$1.50 and \$2 respectively. Shooting commences at 9:30 o'clock each day. A bus will leave the shooters' headquarters, the Elm House, each morning for the grounds, and return in the evening. The Rose system, in the ratios of 5, 3, 2, 1, will govern the division of the moneys; \$50 high gun money will be divided as follows: \$20 to first high gun, \$15 to second high gun, \$10 to third high gun, and \$5 to fourth high gun. The high gun money will be open to all who shoot through the entire programme. Guns and ammunition forwarded to L. A. Barker,

Auburn, Me., will be delivered to the shooting grounds free of charge. First-class loaded shells will be for sale on the grounds. Price of targets, 2 cents each, included in all entrances. Any contestant may shoot for price of targets only. A good dinner will be served on the grounds each day. The Interstate Association's rules will govern all events.

The Vicksburg, Miss., Herald presents the following information: "The Vicksburg Gun Club and Fish and Game Protective Association have completed all arrangements for their grand shooting tournament to be held Aug. 13, 14 and 15. The first day will be devoted to sweepstake and practice shooting. The regular programme will begin Aug. 14. The club adds \$300 cash and \$200 in prizes in regular events; \$100 goes to highest gun averages. The club has an active membership of fifty members, and expects forty or fifty visiting sportsmen. Under the able management of the tournament committee, J. W. Hayes, J. J. Bradfield, W. H. Miller, Pat Henry, T. J. Hossley and L. A. Pinkston, the shoot is bound to be a success. Programmes are now in press, and will be distributed soon as finished."

Mr. John A. McNary, of Greenville, Pa., writes us as follows: "At the request of the shooters of western Pennsylvania, western New York and eastern Ohio, Alexander will hold his first annual tournament at targets in Greenville, on Aug. 14 and 15. The shoot will be held on the Packard Park grounds, which are conceded to be the finest and the coolest in the State. The fact that Alexander is so widely known in this section, and is also one of the oldest shooters in the United States, will insure a large attendance and lots of sport. An elaborate programme has been prepared."

The programme of the midsummer shooting tournament of the Catchpole Gun Club, Wolcott, N. Y., Aug. 2, provides ten events, a total of 160 targets, with a total entrance fee of \$13.40, targets included at 1½ cents. Also there is added money in five of the events. Moneys divided 40, 30, 20 and 10 per cent. Shooting commences at 10:30. There is a prize for the first average, and one for the lowest average of the entire programme. The committee extends a cordial invitation to shooters to attend. Mr. E. A. Wadsworth is the secretary.

All the indications point to a large attendance at Providence, Aug. 7, 8 and 9, at the Interstate Association's tournament, given for the Providence Gun Club. Guns and ammunition forwarded care of C. Pope Company, Providence, will be delivered on the shooting grounds free of charge. It would be wise for all appreciative shooters to fast a few days before arrival, in view of the toothsome and bountiful clam bake with which the shooters will be regaled. Mr. R. C. Root, of Providence, R. I., is the secretary.

Were not Mr. E. D. Fulford, always a serious man we might fancy that he was a bit ironical in reference to his poor shooting, in a letter to us as follows: "I have been shooting so very poor of late that I wish you would bring out the fact that I led in the grand average in the three 100-target races at Interstate Park, as follows: 95 at 18 yds.; 82 at 21 yds.; 94 at 20 yds.; total 271."

Mr. G. G. Williamson, secretary-treasurer of the Trapshooters' League of Indiana, Muncie, Ind., writes us as follows: "Sanction has been granted the Peru Gun Club for a tournament at Bass Lake, Ind., Aug. 21 and 22; and the Parent Grove Gun Club, of Union City, Ind., for a tournament at Union City, Sept. 2 and 3."

The Ossining Gun Club, of Ossining, N. Y., is actively preparing for its merchandise clay bird tournament, to be held on Aug. 14. A clam bake and brass band will enhance the pleasures of the event. It will be held rain or shine. For further particulars, address the captain of the club, Mr. C. G. Blandford.

The Cincinnati Gun Club announces that during the Cincinnati fall festival in September, it will hold the largest tournament held in the West this year. In one event, \$300 will be added, and a purse of \$500 will be guaranteed. The dates will be Sept. 24, 25 and 26. It will be open to the world.

The group of shooters whose portraits are presented elsewhere in our trap columns were at the Trenton Shooting Association's shoot, July 10, on the occasion of the Comp-Thomas contest for the \$50 T. S. A. trophy, emblematic of the championship of Mercer county at targets.

The communication, published elsewhere in our columns, from the pen of Mr. Paul North, will be read with keen interest by all trap shooters. Mr. North suggests the same conditions which were observed by the American team in its recent match with the English team.

The championship of New Jersey, of which the E C cup is the emblem, was contested for between Messrs. E. I. Vandever, of Freehold, and J. B. Fleming, of Newark, on the Freehold Club's grounds, July 27. The score was 42 to 41 in favor of Vandever.

The Comp-Widmann contest for the county cup will take place on the grounds of the Trenton Shooting Association on Aug. 14, and on that day the first contest for the new cup, which is a monthly trophy, will also take place.

Mr. J. T. Paddelford, secretary of the Sherburne, N. Y., Gun Club, informs us that his club will hold a one-day tournament, Aug. 15, instead of a two-day tournament, as heretofore announced.

The programme committee of the New York State shoot will hold a meeting some day this week. Its members are Messrs. Sykes, Shaner, Banks and Waters.

The Indian shoot will be held at Arnold's Park, Lake Okobojo, Ia., in the first week of September.

BERNARD WATERS.

Mt. Kisco Gun Club.

Mr. Kisco, N. Y., July 27.—Herewith please find the scores of the summer tournament of the Mt. Kisco Rod and Gun Club, held July 23.

The weather was very fine, but the attendance was not very large. We cannot understand the reason of the absence of the several brother shooters who promised the manager surely to attend this tournament, and who have failed to be present. I am sure that we have a most magnificent ground, and a fair club house on the Harlem Railroad, and we are a very short distance from New York city.

Among the trade representatives present were Messrs. J. S. Fanning; Carl Von Lengerke, of the E C & Schultze Powder Company; also I. Tallman and Mr. Stevenson, of the Millbrook Gun Club; S. W. Hoffman, of New York city.

Mr. Fanning shot, as usual, in great form, breaking 156 out of 165 targets, with Tallman a close second.

A. BETTI, Manager.

Dusted and Broken Targets.

In respect to the rules which govern competition, the shooting world is notably conservative. Whether sound or fallacious, the ideas of the first makers of the rules, as embodied in the rules of the present time, are still in use.

birds and animals. Reports of young quail and rabbits found dead in regions where water is scarce are being freely circulated. A revival of interest in the old and far-famed gun clubs of Mt. Carmel and Mt. Vernon, Ill., is likely to manifest itself ere the summer passes, in a series of intercity matches.

we try to break bluerocks according to the rules which govern trapshooting since it has been "more and more perfected." Our experience has led us to the belief that "change, which is the essence of progress," has, in the matter of trapshooting, led to a very undesirable situation.

In my judgment a target for trapshooting should break regularly when struck fairly with shot. It should always present the same area of surface to the shooter, and not vary from an almost invisible streak to a great, round cart wheel standing almost stationary. It should be thrown at all angles, which should be unknown to the shooter.

SHOOTERS AT TRENTON SHOOTING ASSOCIATION'S SHOOT.

a break. Sometimes a dozen or more shot will be found to have pierced a target without meeting the arbitrary and unreasoning exactions of the rules. Unfortunately this rule militates against the interests of those who can least afford to carry a penalty—that is to say, the shooters who shoot in slow time, for the further the target is away from the shooter at the moment of firing at it, the more likely is it to be dusted.

Shooting at the Trap and in the Field.

GANSEVOORT, N. Y., July 29.—Editor Forest and Stream: I read with much interest your article under the above heading in FOREST AND STREAM of July 27. The article interested me because, like many other old-timers, I believe that in the matter of trapshooting we have "progressed" backward.

If I am successful in this, I shall be entirely satisfied, even if I have to stand as the sole target for the "brickbats" which are sure to be thrown. JOS. W. SHURTER.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Mississippi Valley Notes.

DAVE ELLIOTT has done wonders for the shooting game in and around St. Louis, but he now frankly admits that as a moulder of fashion in shooting apparel he is not a success. At least he avers that since the Missouri State amateur meet he does not think that knickerbockers and shirt waists go well together.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., July 20.—The Saturday matinee was greatly enjoyed by those participating. The weather was all that could be desired. Good scores were the rule and not the exception, and consequently every one was happy.

Some ladies did us the honor to call, and were pleased with the experience. A number of ladies have visited the grounds at different times, and their visits have always been appreciated, and to encourage the attendance it is proposed that a date will be set apart for them to visit the grounds during the club meets, and be made a permanent fixture, as "ladies' day."

The day's high average was made by Secretary Thomas, 89 2-3; Widmann, 86; J. R. Taylor, 82; J. E. Thropp, 81.

In the team matches Hingeley and Thropp distinguished themselves by breaking 24 and 23 out of the 25.

Interest in the new cup to be offered at the regular monthly meeting Aug. 14 continues to increase, and the indications point to a large entry list.

The Comp-Widmann match for the county championship trophy is also set for the same date, and a big crowd will no doubt be on hand to witness the shooting.

Table with 2 columns: Events and Targets. Lists scores for various participants like Thomas, Wilkes, Taylor, etc.

Event 8, team race, 25 targets: Team No. 1—Widmann 22, Taylor 22, Wilkes 17, Maddock 19, Howard 17; total 95.

Team No. 2—Thomas 21, Thropp 21, Hingeley 20, Daly 16, Trueman 16; total 94.

Team No. 1—Widmann 22, Taylor 19, Wilkes 19, Maddock 20, Howard 16; total 96.

Team No. 2—Thomas 21, Thropp 23, Hingeley 24, Daly 11, Trueman 10; total 89.

The Trenton Shooting Association, at a meeting held recently, arranged the conditions that will govern the clay target championship cup for the city of Trenton, as well as arrange a programme for the coming big shoot of Aug. 14.

The city championship event will give the local cracks all sorts of opportunity to get together frequently, and hold first-class events without challenges and other cause of blocking many matches.

The cup conditions will practically make it possible for a meeting of all the crack shots in this city at least once a month.

Secretary Thomas is so well pleased with the prospects that he looks forward to having the greatest clay target event ever held between local shooters.

Conditions of the Cup.

This trophy will be known as the Trenton Shooting Association perpetual open championship cup for the city of Trenton, at targets.

Condition No. 1.—Twenty-five targets, unknown angles; entrance cost of targets.

Condition No. 2.—All contests for the cup shall be shot on the grounds and under the auspices of the Trenton Shooting Association.

Condition No. 3.—The cup will be offered for open competition the fourth Saturday in each of the several months of each year.

Condition No. 4.—The winner will hold same for the time he wins it until it is again contested for the succeeding month.

Condition No. 5.—The holder will give some satisfactory guarantee for the safe keeping of the cup and its production when required.

Condition No. 6.—All members of the Trenton Shooting Association, and also all bona fide residents of the city of Trenton, will be eligible to contest.

Big Day's Events.

The programme that will be shot Aug. 14 will have the four-cornered match between Clarence Jaques, J. R. Farlee, William Vanarsdale and Charles Cole, as well as the Comp-Widmann and challenge shoots.

The official programme as arranged by the board of directors for the day is as follows: Events Nos. 1 to 5, optional sweeps; No. 6, medal shoot; No. 7, Comp-Widmann match for Trenton Shooting Association \$50 silver trophy for the championship of Mercer county; No. 8, first contest for the Trenton Shooting Association silver loving cup for the championship of the city; No. 9, four-cornered match shoot, \$10 a side, between Vanarsdale, Cole, Farlee and Jaques; No. 10, optional sweeps.

The directors admitted C. C. Brokaw and W. H. Rickley to associate membership and received the applications of William A. Poland, Howard Heath, Adam Exton and W. P. Conard.

WESTERN TRAPS.

Garfield Gun Club.

Chicago, July 27.—The following scores were made on our grounds to-day on the occasion of the sixth trophy shoot of the second series of the Garfield Gun Club.

Table with 2 columns: Name and Score. Lists participants like P. McGowan, C. P. Richards, etc.

Sweepstakes: Targets: 15 10 10 10 * 10 10. Dr Meek: 4 4 6 5 3 3 6.

Table with 2 columns: Name and Score. Lists participants like Ford, Pollard, Johnson, etc.

Table with 2 columns: Name and Score. Lists participants like Bonnell, Delano, Leets.

DR. J. W. MEEK, Sec'y.

Chicago Gun Club.

Chicago, July 27.—The scores made at the Chicago Gun Club's weekly shoot to-day are appended. In the weekly event, at 25 targets, Mr. Ed Steck won by a clean score. He broke them admirably. A strong wind was blowing across the traps. Mr. Steck only missed a few in the whole day. Dr. Morton captured the handicap trophy in the same event. Dr. Carson won the monthly trophy on a fine score of 14 out of 15 at 21yds. rise. A. E. Rupel, of the Grand Crossing Club, also broke 14 from the 18yd. mark.

Weekly handicap, 25 targets, handicap in birds: Walters 16, Dr Morton 16, Steck 16, R B Mack 16, Dr Carson 16, *Horn 16, Bowles 16, A W Morton 16, Weart 16, Dr Burcky 16, A E Rupel 16.

Table with 2 columns: Name and Score. Lists participants like Walters, Dr Morton, Steck, etc.

Monthly shoot, 15 targets, handicap: Walters, 16, *Horn, 16, Dr Burcky, 16, Dr Morton, 18, R B Mack, 18, Bowles, 18, A W Morton, 18, *Rupel, 18, Ed Steck, 20, Dr Carson, 21.

Dr. Carson wins monthly trophy at 21yds. rise. Rupel, visitor, tied his score at 18yds.

Team race, 15 targets per man, five men per team: First Team: Walters, Steck, Dr Morton, Rupel, Horn. Second Team: Bowles, Dr Carson, Mack, A W Morton, Cop.

Targets: 10 10 * 5 9 5. A W Morton 7, Dr Morton 5, Steck 10, R B Mack 6, Horn 3, Weart 8.

*Five pairs.

Nonpareil Gun Club.

Chicago, Ill., July 27.—The Nonpareil Gun Club's shoot to-day resulted in the following scores:

Table with 2 columns: Name and Score. Lists participants like Leffingwell, Dr Shaw, Head, etc.

Ties on 14: Dr Shaw 120, Barto 2222, Palmer C S Graham 22220.

Practice: Leff 232201010122002-12, Lamberton 1102*120111122-12.

Miss-and-outs: Head 20, Scott 0, Stephens 112, Barto 222, Scott 220, Shaw 212121, Palmer 0, Meyrick 22220, Dunn 0, Creyk 0, Leff 22220.

Targets: 10 10 5p 15 10 5p 10 10 5p 10 10 10. Frank 18, Barry 16, Lane 16, Fairbanks 16, Atwood 16, Williams 16, Philbrook 16, Elwell 16, Retwood 14, Fredericks 14, Henry 16.

Prize match, 25 unknown—15 singles and 5 pairs—distance handicap: Fairbanks 16, Frank 18, Barry 16, Lane 16, Atwood 16, Williams 16, Philbrook 16, Elwell 16, Retwood 14, Fredericks 14, Henry 16.

Winners of summer series, 1901, five best scores out of ten to count; distance handicap: Woodruff 22, Horace 23, Frank 21, Ford 24, Barry 21, Spencer 22, Lane 19, Williams 20, Benton 12.

Boston Gun Club.

Boston, July 17.—The last shoot of the Boston Gun Club's summer series for 1901 was held on their Wellington grounds to-day, and though the rain put a stop to the sport for a short time and made things look dubious for the afternoon, twelve shooters seemed to reap full advantage of the afternoon's pleasures.

Between drops thirteen events were run off, much to the consternation of the trapper, who had just discovered a leak in the trap house roof.

The prize match brought forth the usual amount of interest, and was finally won by a representative of the Watertown Gun Club, who made his initial performance on the club grounds one of the best. Frank was not much outdone, however, coming in 1 target in the rear, with Lane next with 1 target lead over Barry.

The series which ended to-day was one of universal interest, nine shooters finishing the necessary five shoots. Woodruff was the final leader, shooting throughout in old-time form, which means very few misses on the score card. Horace was next with 2 targets less, just scratching in the five scores, and not availing of the chance to throw out any poor scores. Frank with 99 was in third place, closely followed by Barry with 97, who had the honor of making the highest individual score in the five counting ones. Barry was fifth with 94, pushed hard by Spencer with 93. Lane was seventh with a good margin over Williams and Benton, who occupied eighth and ninth respectively.

Scores follow. All shooting handicap distance and unknown angles: Targets: 10 10 5p 15 10 5p 10 10 5p 10 10 10.

Prize match, 25 unknown—15 singles and 5 pairs—distance handicap: Fairbanks 16, Frank 18, Barry 16, Lane 16, Atwood 16, Williams 16, Philbrook 16, Elwell 16, Retwood 14, Fredericks 14, Henry 16.

Winners of summer series, 1901, five best scores out of ten to count; distance handicap: Woodruff 22, Horace 23, Frank 21, Ford 24, Barry 21, Spencer 22, Lane 19, Williams 20, Benton 12.

Why the American Team Won.

DUNBARTON, N. H., July 24.—Mr. Banks has answered the above to a certain extent. I say they won because we Americans invariably win, whether in war, friendly international contests at shooting, yacht racing or other sports. We do not rely entirely on what we have done in the past. That is a matter of history. (We have good cause; however, to be proud of our record.)

What we can do now is what counts. The American team won because they were composed of the material that cannot be beaten (or at least very rarely).

In an elaborately illustrated work on guns and gun making a prominent English gun maker describes our American-made shot-guns as "a conglomeration of wood and iron, illy fitted and worse balanced. The shooting of one (said to be a full choke) was found to be much inferior to a well made English cylinder bore." Yet a recent match an English paper speaks of the American guns, as used by our team, as being extraordinary close shooters, putting the whole load of 1 1/2 oz. of shot in a 1 1/4 in. circle at 40yds. Whoever saw such a close shooting gun of any make? I will venture to say none of our team ever did or ever will.

All honor to our team, although they only did what we felt sure they would. I know some of them personally. Budd and I were sort of partners oftentimes at tournaments in the past. I do not think he has forgotten me any more than I have him.

There is one thing, however, the omission of which I blame the American team. Why in the world did you not (after winning the match you went so far to shoot) propose the following: One hundred targets each, for any stake your opponents would name? You would have won it most assuredly. The foreign team to use the American guns and ammunition, use of one barrel, 1 1/2 oz. of shot. Our men the English guns, both barrels, 1 1/2 oz. of shot? I think this would have settled the question of the advantage of one barrel with its load as against two with their load.

It is true a close, hard shooting gun is needed to score the elusive, well trapped target. The very best shooting gun ever made will not do it alone. The man behind the gun must do his part. Otherwise the combination is a dead failure.

The American team had the guns, the ammunition and the men, and that is why they won. C. M. STARK.

Maple City vs. Milan Gun Club.

NORWALK, O., July 24.—The second and deciding match at live birds between the Maple City and Milan gun clubs was shot to-day, the Maple City boys winning by 3 birds. The birds were a much better lot than were used last week, many of them getting over the fence and out. Purcell is the only shooter improving on his score of last week. His record for the two shoots is a 90 per cent. clip.

The Maple City boys are much elated over this double victory, and another series of matches will no doubt be arranged soon. The scores: Norwalk.

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co. 4 5 1 1 4 1 2 2 4 3 1 2 1 2 3 5 2 4 4 2 5 4 1 4 5.

America vs. America.

CLEVELAND, O., July 26.—Editor Forest and Stream: Previous to the departure of the American team for England, during their absence, and since their return home, there has been considerable talk in regard to the possibility of selecting another team of ten men to defeat the ten men that composed the team.

While I am not authorized in any way by the members of the American team to speak for them, I feel that a match of this sort would be acceptable to the team, and that any ten men in the United States wishing to try conclusions with them could be accommodated.

Such a match would be interesting, and if it could be brought about to be shot in Cleveland I will be pleased to furnish the grounds and trap the targets for the match free of charge to the contesting teams.

The match will be the best two in three or three in five, ten men on a team, 100 targets per man and 18yds. rise, use of one barrel for both teams.

In view of the fact that Mr. Chan. Powers, one of the strongest members of the American team, is seriously ill in London, and Mr. Richard Merrill is with him, the right to select two men in their places would of course be only a reasonable demand on the part of the American team.

The match could undoubtedly be made for \$500 to \$1,000 a side. Such a match would create the utmost interest throughout the country, and I sincerely hope that it can be brought about. PAUL NORTH.

Winchester Rod and Gun Club.

WINCHESTER, N. H., July 26.—The regular shoot to-day had the appended scores. Nelson made a record of 95 out of a possible 100, which we shall class as the amateur record of the State until proved to the contrary. The conditions were perfect:

Table with 2 columns: Name and Score. Lists participants like Nelson, Curtis, Lesure, etc.

Hudson Gun Club.

JERSEY CITY, N. J., July 29.—Following are the scores of the Hudson Gun Club's shoot:

Table with 2 columns: Name and Score. Lists participants like Schorty, C Henry, Duke, etc.

Ossining Gun Club.

OSSINING, N. Y., July 29.—Herewith please find scores of the Ossining Gun Club, made at the regular weekly shoot, Saturday, July 29. All events were at 10 singles, except No. 5, which was at 5 pairs:

Table with 2 columns: Name and Score. Lists participants like C F Brusie, C G Blandford, etc.

THE PERCY SUMMER CLUB.

THE affairs of the Percy Summer Club have been brought to public attention anew by reported progress of the litigation in which the club has been involved for many years. The case is one of much interest because of its bearing upon the growing absorption of fishing waters by individuals and clubs, and because in it are involved considerations of the respective rights of the public and of the owners of waters which are posted. The story of the Percy Club has already been told in our columns, and in view of the new interest in it aroused by current publications, may be reviewed briefly here.

The Percy Summer Club was incorporated under the laws of New Hampshire in 1882 for the purpose of acquiring a private preserve to which its members might resort for rest and recreation. The club acquired by purchase a lake of 350 acres in extent and about the same amount of land at Percy, in the town of Stark, Coos county. The lake was renamed Christine Lake. When the club made its purchase it was careful to secure title not only to the lots immediately adjoining Christine Lake, but also strips of land on both sides of a stream running into the lake, reaching to and including its source, and also land bordering the outlet to the point of its juncture with the Upper Amonoosuc River.

At the time of the purchase the laws of New Hampshire provided that any pond or body of water reserved for the propagation or preservation of fish might be preserved for private use by posting with the proper notices, and a heavy fine for trespass was attached. It was under this law that the corporation was originally established. There was at that time no recognized acknowledgment fixing a limit to the size of lakes which might thus be preserved for private use. Later, however, the Legislature passed a law declaring all lakes of more than twenty acres in extent public waters and excluding them from the privileges of the previous section.

But the club claims to hold its original title from the King of England, tracing it back to a time before the State had existence, and this title conveyed not only the land surrounding the lake, but the water and the land under the lake. Consequently, the club maintained, the act of the Legislature declaring waters of certain size open to the public could not apply to Christine Lake, because the club's title to the lake went back to a time before the State had anything to do with it. The Legislature thereupon passed a law to the effect that any person arrested for trespass in crossing wild lands to visit public waters could not be held answerable for costs unless the damages amounted to more than \$13.33. That was equivalent to throwing the costs of prosecution on the club, and deprived it of redress against trespassers. Having in the New Hampshire courts received adverse decisions, the club transferred its property to a corporation formed under the laws of New Jersey, and proceeded against the trespassers in the United States Courts. The litigation which followed extended over several years, and cost more than the property did originally.

Finally there was an attempt made in the Legislature of New Hampshire to have the State assume the cost of the litigation, that had heretofore fallen on the trespassers, and that action led to a compromise by which the State gave the members of the Percy Summer Club, of New Jersey, the right to form a new corporation under the laws of New Hampshire, and to buy or lease interests belonging to the Percy Summer Club, of New Hampshire. The club agreed to admit the right of the public to fish in the lake under restrictions which should also apply to its own membership, and received from the State a charter which made trespass on the lands of the club other than passage over a prescribed path punishable by a fine of

\$25 for the first offense and \$50 for the second. The public obtained no right to leave boats on the lake or to camp on its shores. They were obliged to bring their boats with them and carry them away when they left.

Shortly after the club got under way under its new charter (having leased the property from the New Jersey corporation, with whom it must be noted the title still remained), the United States Courts decided that the Percy Summer Club of New Jersey did own the lake and had the right to control fishing in it. The members did not immediately avail themselves of this decision. The New Hampshire law protected their land so thoroughly from trespassers that they were disinclined to surrender their charter. They lived under it three years. The open fishing, however, attracted so many visitors in the early part of the season, and they succeeded in depleting the lake to such a degree, that there was no fishing for anybody. In 1899 it was practically decided to surrender the New Hampshire charter and resume the rights accorded by the United States Court decision, and under these rights of absolute ownership in the property it sought to shut out fishermen by means of an injunction against two of the trespassers, Joseph and Jacob Astle. By a special act of the New Hampshire Legislature the Attorney-General of the State was ordered to assume the defense; and current reports state that Attorney-General Cushman has just filed his brief in the United States Circuit Court.

IN OTHER DAYS.

WHAT man is there who, separated by distance and years from the scenes of his boyhood, has not a standing resolution that he will revisit them some time when the strenuous struggle relaxes and there comes a week or two of spare time. No waters seem so beautiful as those wherein one, as a boy, caught his first fish, or rowed or sailed. No woods seem so beautiful as those wherein the first squirrels were sought, or the first expedition organized for the robbing of birds' nests. No fields seem so beautiful as those wherein pursuer and pursued played hounds and deer.

The men of to-day whose youth was spent in the West have memories of boyhood days—of sport with gun and dog and rod and reel—which the boys of to-day can never have. There then was a frontier, long since pressed westward by civilization further and further away. Civilization in turn pressed from the West toward the East, till at last the frontier became a vague thing, then passed entirely away.

The section then called the West was the West in fact, and it was a formidable undertaking to journey then from the East thereto. It is still called the West, but the term now rather denotes a point of the compass than a section.

In those days the great prairie region of the West lay open and free to all alike. Minnesota, now teeming with its agriculture, its surface divided up into farms of proven ownership, was then an area of wild land, owned by the Government, and offered to all who would take on terms so nominal in respect to price that a farm was almost a gift. As in other sections of that great fertile region, game abounded everywhere. The killing of one hundred prairie chickens in a day excited no special comment. The great lakes abounded with fish. The muscalonge was one of the most common fishes at that time in those waters.

The prairie as it then existed is now a thing of memory. The swarms of chickens, for in some sections they fairly swarmed, no longer exist, and only by stringent laws are they saved from utter extermination. The muscalonge have been exterminated in many waters, and are now rare even in many other waters in which they most abounded.

These are memories, associated with the days of a game abundance, which can never be known from experience by the boys of the present. The market-hunter, the man who killed for count, which is an euphemistic expression for slaughter, and the man who killed without cessation because it was a gratification to kill and continue killing, stripped the earth, east and west, of what should have been a nation's heritage, till now there is but a mere fragment of what once existed so bountifully.

These are memories which should carry their warnings into the present. Leave something of the game birds and the fish so that the boys of future years will have something pleasurable with which to associate their boyhood days, when they are building up pleasant memories for manhood's years.

SNAP SHOTS.

The supply of silkworm gut for leaders comes from Murcia in Spain. We have in this country a silkworm, the *Attacus cecropia*, which yields a gut far superior to the Spanish; and there are on record isolated instances of the successful drawing of the gut. Dr. Theodatus Garllick once drew a leader eight or nine feet long and strong enough to hold a salmon. Writing in 1884, in one of the chapters of his book on "Fly-Rods and Fly-Tackle," Mr. Henry P. Wells detailed what had been done in this direction, and expressed a hope that others would take up the enterprise and so establish a new and profitable industry in this country. In the new edition of his work, Mr. Wells tells us that the hope expressed sixteen years ago has not been realized. Several attempts to make good gut from the American silkworms have resulted in failure; but there is nothing in the past to prove that the American manufacture of silkworm gut leaders may not some day be achieved. The culture of the silkworm is an enterprise which has repeatedly engaged public attention, and many of us can remember the silkworm craze. A new attempt to establish a silkworm farm is making in South Carolina, where in the vicinity of Charleston, an Italian, Duke de Litta, has imported a stock of mulberry tree from Italy, which have been grown most successfully, and the actual culture of the silkworm will be undertaken next season.

The monumental liar who has been roaming around the country and reporting in the newspapers his discoveries here and there—a skeleton team on the arid desert with horses and passengers done to mummies, shrieking children carried off by panthers, tender infants devoured by bears, and an aged woman transfixed by the hoop snake—has now struck Sayville, on the Long Island shore, and is picturing that quiet village in such lively colors that its people do not recognize it when they find it described in the morning paper. The Sayville sea serpent, 100 feet long and ferocious in proportion, was followed by the Sayville shark, a real man-eater of prodigious girth and given to crushing rowboats; and now comes a fish story of the Great South Bay packed with weakfish, which residents and visitors haul in by boatloads and barrels and dump for fertilizer on the cornfields. The people of Sayville were unmoved by the sea serpent and the shark, but they rise in indignation to deny the charge of wanton waste of food fish. There is good fishing in the bay, that they admit, but it is not just the Sayville way to use food fish for manure. And as for the monumental liar, he is invited to move on.

In the large picture by the Irish artist Daniel Maclise, which has for its subject "The Sacrifice of Noah," depicting the scene of the offering by Noah after leaving the Ark, Shem is represented as a shepherd-huntsman equipped with spear and hunting knife. In the background are shown the creatures coming out of the Ark; the domestic animals are grouping themselves together near the human beings, while the others are dispersing, the giraffes, lions, panthers, tigers and elephants going east and south, and the elk and deer north, while a group of chamois and ibexes stand on a cliff. In like manner the domestic fowl are settling down near the Noah family, while the others fly off to the four points of the compass. Looking at the picture one cannot help thinking that if Shem, leaning on his spear, is half the sportsman the artist has painted, he is losing the opportunity of his life. If he had had the instinct of some hunters of the present day he would have settled for all time the destiny of some races of animals then and there.

There was warm discussion of the Sunday fishing law in Massachusetts during the last session of the Legislature, and it all resulted in retaining the prohibition against fishing on that day. The law has been persistently violated, in particular by the salt-water anglers, just as similar statutes are disregarded by them elsewhere, and now the Fish Commissioners have issued a notice to their wardens and deputies, instructing them not to attempt to enforce the law, except as to certain streams. This is a recognition of the fact that in Massachusetts public opinion classes the Sunday fishing law with the prohibitions against pleasure driving, wheeling, yachting and other open-air recreations. As we have repeatedly urged a Sunday fishing law which cannot be enforced by public sentiment should be taken off from the statute books.

The Sportsman Tourist.

Mingo—A Silhouette.

MINGO was brought from Rhode Island as portable property, a part of the marriage portion of his young mistress. When he came to his majority he came also to his freedom under the laws of our State, and then, somehow, he drifted into my grandfather's family, in which he held an intermittent membership for many years.

In our early childhood my brothers and sister and I believed him to be the only black man in the world, for there were no resident negroes near us, and our enlightenment first dawned when the underground railroad dropped a dusky passenger at our house, which was for years a station of that subterranean thoroughfare. Whoever it was my sister saw, she ran to our mother with the news of the advent of "another Mingo."

Time proved that there could never really be another Mingo for us, so fond of us, so kind, so indulgent, so forgiving, so loyal to our family, nor one so wise nor so funny with proverbs and saws for every occasion, such knowledge of signs, such mimicry, such tricks, such wit, mostly second hand, such a fund of unguessable riddles.

There were then many old-fashioned free negroes in the North—alas, that there are none now!—who possessed many of Mingo's traits and accomplishments. Others might be as black and as bald, but not one bore his proud and distinguishing marks on forehead and chin. These were two horizontal lines made by the teeth of his old master's stallion—a scion of the famous Narragansett breed. We never tired of hearing the story of this adventure, which Mingo told as often as asked, with the modesty becoming a hero, albeit a vanquished one. At least he learned how trenchant were such weapons, for he used them with effect on two occasions. One of these was an encounter with an Irish veteran who had fought with Wellington on the Peninsula. Mingo was victorious and was wont to declare, with a cannibalistic gusto, "The ol' Paddy's souse tasted swe-e-t!"

None but he could make our kitchen garden, no one tend it so carefully nor compel such growth of vegetables, nor absence of weeds, even "pussly" would die for him, though when pulled by other hands it lived and grew with its roots in the air.

He knew where the earliest "cowslops" grew, for the first dish of spring greens, always found the first strawberry that ripened in the pine meadows; as why should he not, with eyes so keen they could detect every pin in the dirt of the road? It was one of his most enjoyed pastimes to hunt for these. He would walk slowly along the path or highway, with body bent and arms behind his back, until one of the sought-for treasures was discovered, when the stumpy black fingers would descend upon it and transfer it to coat lapel or the pin box of hollowed elder stalk, he, all the while, humming the plaintive measure of Bonaparte's march, in a deep, mellow voice that was the sweetest music to our untrained Quaker ears.

He had profound knowledge of medicinal and edible roots and herbs, especially such as flourish in the shade of the woods, whence he brought pockets full and bundles of "sarsaparil pigmit," "jingshang," princess pine and wintergreen, and a delectable bulb that he called "a taller ball," fitly named, for it cleaves to one's teeth exactly in the agreeable manner of cold mutton tallow. For some reason he never fulfilled a promise to bring us "groun' nuts," concerning whose excellence we often speculated. A later acquaintance with this delicacy inclines me to a belief that we suffered no great loss by the postponement.

He trapped "woochucks" for their skins, which he taught me to tan in soft soap, so that they made the best of ball covers and whip lashes. He trapped skunks because they were skunks, and for the oil, for their skins were then of no value but to the original owners. These animals were his only game.

He was a devoted angler, so endowed with patience that he would sit all night in his boat, quite regardless of the assaults of mosquitoes, while he nodded serenely over his tightly gripped pole between bites, and was wide awake when a fish took hold. During one of these piscatorial vigils Mingo caught a twenty-five-pound catfish—the largest, if not the only, specimen ever taken in Little Otter—and he proclaimed the achievement with a shout that awakened every sleeper within a mile of him.

He went with me to the woods for my first fish pole, which he peeled with his tobacco-clotted jackknife, and when the horn beam sapling was partially seasoned in the April sun, he gave me my first lessons in the gentle art. They were simple enough, but I was very proud of mastering them; to properly impale the worm, never forgetting to spit upon it; to sling the whistling line straight out to its full length; to deliver the ounce sinker with a resounding spang that might awaken the curiosity of all the fish in Little Otter; to wait patiently for a bite and then, hardest of all when it came, to refrain from striking until the same motion should tear the fish from the water and land it behind me after a parabolic flight the length of the pole and line.

Voyaging with him on the placid stream, within sight of Shellhouse, I was well content, though the distance from the home fireside seemed full half the township. Presently I caught my first pickerel, when but for his strong, helping hand the fish might have caught its first boy, who was barely a foot longer than itself. Mingo played his fish as the Irishman his fiddle, "by main stren'th." As practiced by him, it was not a gentle art.

If night overtook us before we had enough of fishing, he would build a fire of flood wood and we would dwell awhile on an island of light in the midst of a vast ocean of night—an ocean that I voyaged at last under safe convoy of my black consort, guided by the beacon light of home.

If it came on to rain, Mingo would remark, with cheerful resignation, "We'll du as they du in Spain—we'll let it rain." The land of the Cid afforded him another saying in a threat to make the transgressors "walk Spanish."

There were no evenings of more perfect enjoyment than those spent by the great kitchen fireplace when the home work was done and Mingo presided there, roasting ears of corn on the slanted tongs and onions and potatoes in the hot ashes. On all these he kept a watchful eye, as well as

on the blubbing camp kettle swung on its hook from the crane, while he told us of the grand old days in Rhode Island, when his father was elected governor of the negroes of the Commonwealth. Perhaps it was he whom his master, the real Governor of Rhode Island, told, after repeatedly defraying the election expenses of both, that one or the other would be obliged to decline the honor in future. Prince was the black dignitary's name, and it should have been his title, for he said that in Africa "My father had a gool iron pot an' gool iron 'tep 'tone."

When our tidbits were roasted and we sat snatching hot morsels of them from burning fingers, Mingo propounded riddles that he alone could answer, for who could ever guess "A hill full, a hole full, can't ketch a bowl full" was dew, or others equally blind and senseless? If the secret had been previously imparted to one, he declared it with the pride of an original discoverer, otherwise Mingo divulged it with the air of an inventor. The evening's entertainment regularly closed with the performance of his three most popular feats—putting a lighted candle in his mouth, mimicking the chatter of a red squirrel and popping his cheek with his forefinger. Then he covered the fire with a heap of ashes and lay down for the night on his favorite bed—a buffalo skin spread upon the broad, gray, stone hearth, with a stick of firewood for a pillow.

Notwithstanding the democracy of our rural community and the fact that in our family prejudice against color was considered a crime but little less cruel than slave holding, he had a fine regard for class distinctions, and held to a close observance of their proprieties. Any gathering of white people on "seventh day evening" brought forth the contemptuous comment, "Sat'd'y night's niggers' night." It was the common custom for all the members of farmers' families to take their meals together, but he could not be induced to sit at table with the "quality," though he held himself equal of hired white folks, and if a hired girl assumed airs did not hesitate to remind her that she "wa'n't nothin' but a pot wrestler."

Upon occasion he claimed a sort of kinship with us, for once, when having drunk too deeply, he lay in the ditch and a passing samaritan offered a helping hand, he resented it as an unwarranted interference with his rights and cried out, "G'way an' le' me 'lone; I'm some o' Rowln' Rob'son's relation."

When at last, full of uncounted years, he was quietly falling into the final sleep, a dapper young negro came to his bedside and asked if he knew him.

"Who be yo'?" Mingo asked.

"Mister Deming," was the answer.

"Mister Deming!" Mingo repeated with withering contempt. "Oh, you get out!"

ROWLAND E. ROBINSON.

Fires in the Yellowstone.

MAMMOTH HOT SPRINGS, Yellowstone Park, July 31.—*Editor Forest and Stream:* For over a month the weather in the mountains here has been unusually dry and hot. Everything is as dry as a tinder, and the consequence is that we have three very bad fires in the Park. Great clouds of smoke are rolling up from a fire started by the side of the road near the Upper Geyser Basin; it was started by a cigar or cigarette stub thrown from a passing wagon or stage by a thoughtless person. A very bad fire in the Pelican Creek country was started by lightning. This was seen from a boat. The other fire was started in Gibbon Cañon, ten miles from Norris Geyser Basin, by a Mexican whom the soldiers are after to arrest. Every available soldier and all the other men are out fighting fire. To me the task looks hopeless unless we have rain to help the fighters. Capt. Goode has been out for several days, and had the fires under control, as he supposed, but they broke out again. High winds during the day drive the fire through the timber faster than men can cut it off. Every stream and water course is so low that little help can be had from that source; besides, the fires rage far from water. Capt. Pitcher left this morning for the fire at Gibbon Cañon, after telegraphing for all the men available. He has little hope of doing much more than has been done. Axes and shovels are about the only weapons of use in the Park now. Water buckets are the best "side arms" a soldier can carry—more useful than guns here.

The air is not as full of smoke as usually at this time, the wind carrying it to the east out of the Park. The smoke that hides everything when it is thick here is from fires to the westward of the Park.

Capt. E. Lindsley will soon be here with forty men of his troop from Ft. Keough. They will reach here about Aug. 5, and will go direct to the Geyser basins and fight fires if there are any left.

The elk, mule, deer and antelope at the Springs are looking well. Only one young antelope has died so far.

Work on the roads is progressing. A new ditch is being dug to bring water from Glenn Creek for Ft. Yellowstone. Just now water at the Fort and Mammoth Hot Springs is very scarce. If fire should break out here very little could be done to stop it.

I saw in a ride through Hayden Valley about a month ago between 800 and 1,000 elk—cows and calves. They were in two bands, besides small bands of twenty to thirty. There is a very large crop of calves. Nine of the calves took our saddle horses for their mothers, for they left the band and came to within a few yards of us. I helped them a little by trying to call them. They did not run off when quite close, but were standing still when we rode away. Later, when the packs came along, they had found the cows.

I saw a good many mule deer and antelope, and the usual number of coyotes hanging around them. Many of the doe antelope had but one young, showing that the coyotes or some other enemy had found them.

The Park is full of visitors; every wagon and rig in the country seems to be in use, with more coming.

There are now and then little local thunder showers, but they do no good. The lightning with them is apt to set fire to more timber. We are all hoping for a general storm of rain or snow.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

To Lake Chinquasabamtook.—II.

(Continued from page 57.)

COOPER'S CAMP is hemmed in by dense forests, which afford a safe retreat to the deer and grouse from the advancing buckboard. After making arrangements about hauling our canoes over, we speedily forgot all our troubles before a blazing wood fire. The beds looked very enticing after sleeping out night after night, and the welcome call to supper found us ready. The camp owner told us about a near-by pond that abounded with large speckled trout, and all doubts were dispelled at sight of a water pail full of the largest trout I had ever put my eyes on. They were all caught with angleworms, and must have averaged close to 2 pounds. The next day we were off in search of this wonderful pond. We reached it, only to find our hopes blasted by the furious wind that tore up the surface. As if to add to our gloom, a fine buck was floating around, shot, no doubt, by some miscreant out of pure wantonness. We returned to camp and passed the time examining our strange surroundings. The refining touch of woman was seen in the beautiful arrangement of flowers that bedeck the main camp. Good fare, comfortable beds and the best of fishing for lakers and brook trout make this a very desirable place for the old angler and his friend. Here they can renew their youth amid the merry trout of Webster Stream, or the heavy-weights of the pond. Cooper hauls parties to Sordahunk Lake and Webster Stream. The lake is only six miles from camp, and is one of the loveliest in the Katahdin region. Here you are within striking distance of Slaughter, Kidney, Dacey and many others. Kidney Pond is much resorted to, consequently the trout run small. Most anglers work over as far as Little Rocky and then quit. Dacey Pond is said to hold some good ones; the trout average larger in the Slaughter Pond country. The tourist can make the ascent of Katahdin from Kidney Pond on a new trail that Irving Hunt has bushed out. He has a nice little camp at the pond. Hunt's magnificent team can tackle 'most anything that comes along. You can be hauled to the West Branch, Sordahunk Lake or over into the wilds of Slaughter Pond. Lost Pond (named by the writer) lies close up to Katahdin, and is as beautiful as a dream. Trout are very numerous in most of the ponds, but seldom exceed three-quarters of a pound. The crowds are giving the preference to the Katahdin region. They are on the right scent, as no section in Maine can compare with it for magnificent scenery and fine mountain trout. I hope a decent class of anglers will follow my advice, but I suppose some others will nibble at the bait I have held out. If they come, may their cheap, split bamboos snap between the ferules, their hooks and leaders go up at the critical moment, and, last, but not least, may they wind up their outing by falling into the clutches of the game warden. With this digression we will now return to Camp Cooper.

We were now to sever our connections with the outside world and take to the "bresh" (as Kingfisher has it). The region we proposed to invade has no camps or somber farms to fall back on in case of need, so turning our backs on civilized beds, buckboards and roads, we paddled out on Telos Lake. The prospect for the day was anything but reassuring, as the wind was getting up. This made us do a powerful lot of thinking, for the Big Lake was close at hand. Moosehead, Chesuncook, Chamberlain, Eagle and Churchill lakes stretch themselves as a barrier between the east and west. The steamer has robbed Moosehead of its terrors, but navigation on the upper lakes is still in a wild and primitive state; the voyageur who attempts to cut across country has generally to reckon with one or the other of them. A furious wind is likely to descend at any moment; under its influence the peaceful surface of the lake changes as if by magic into wrathful white caps, that threaten disaster and death to the unfortunate canoeman caught out far from a sheltered headland. The hollow roar of monstrous waves breaking on the rocks, to the shrill accompaniment of the gale, may well appal the stoutest heart. Under these conditions none but a reckless fool will give battle to this giant of the waters, and he will be quickly consigned to a watery grave, or else hurled contemptuously on the beach with his belongings, a madder and a wiser man.

We were now fast approaching Chamberlain. This lake is twelve miles long, and in some places three miles in width. It is not a very attractive body of water, as its shores are quite low, and this gives the wind a pretty good sweep. Leaving Telos and Telosmis in our rear, we drew near to this Cerberus that stands guard between the East Branch and the Allegash country.

All doubts as to our reception were quickly dispelled. At the display of the grinning teeth of white caps and the ominous sound of breaking waves, determined to make the head of the lake by sundown if possible, Lyman and I took possession of one canoe, leaving Cram to shift for himself. I had for my mate a man of great experience, who can be depended on to meet any emergency that may arise. A roll of blankets with a board for a back rest constituted my seat in the bow. The bow seat is a dangerous one in rough water, until the knack of balancing has been acquired, otherwise a lurch of the canoe may fire your overboard, as there is practically nothing in front to catch hold of. Paddling out into the turmoil of waters, we soon found plenty of excitement and danger in dodging the attentions of the big fellows. They raced in like wild horses, each with its white-crested mane, and flung themselves upon us, causing the canoe to pitch and lurch fearfully. Meeting their attacks bow on, we foiled every attempt they made to board us, but if the canoe had ever struck a sunken rock when it settled in the hollow of the waves, the chances are we would have had to swim for the shore through the raging waters, which would probably have claimed one of us at least as a victim. We made as much use as possible of the sheltered headlands; but sooner or later we had to come out and face the music. Keeping up the fight for about four miles brought us opposite the Lumber farm. Any attempt to cross over to the opposite shore and add to our stock of provisions would have consigned us all to the bottom of the lake, as nothing short of a miracle could keep a canoe from capsizing amid the big white caps that had invaded the center of the lake. All this time Cram had been toiling along bravely in our rear, having about as much as he wanted to do to keep his canoe right side up. Passing by the entrance to Mud Pond, we soon came in sight of the locks

on the opposite shore. Memory was busy with the past as I gazed on the familiar surroundings. I had not visited the lake since 1891, when I made my first trip north of Moosehead. As the canoe stole quietly along the south shore, I looked in vain for the hunter's cabin where I had passed the night with my guide, but soon caught sight of familiar ground at the head of the lake. Urging our canoes onward through the fast quieting waters, we entered the inlet. The marsh on either side abounded with ducks, mostly sheldrakes; the scenery improved as we glided along, looking out for a good camping place. Passing a party off the mouth of a brook who reported no luck, we ran the canoes ashore near some high ground that answered our purpose. This ended a hard day's work with the paddle. Every one of us must have paddled at least sixteen miles, most of the way in the teeth of a strong wind—in fact, a little addition to it would have held us up at the foot of the lake. After supper we lay around the camp-fire basking in the delicious warmth, until finally tired nature asserted itself, and we dropped off one by one.

The morning dawned cold as Greenland, with the ice close at hand. The fire had died out while we slept, and our open tent gave ready access to the cold. The guides soon had the fire going, and after making a vicious attack on our provisions, we were ready for the fray as we descended to the stream. The woods and water were shrouded in mist. Changing from a cold, deathly gray to the rosy tints of dawn as it soared aloft and caught the faint morning zephyrs, it opened to disclose enchanting views of forests bathed in the splendor of the rising sun. I fairly hugged myself in ecstasy and cold while gazing on this beautiful effect of sunlight and shadow. The grating sound of setting poles came out of the mist ahead, causing the timid buck about to slake his thirst to flee in dismay from the ghostly apparitions, not to return until the canoes had passed onward and upward. The low water held us back considerably. An exasperating carry only a few yards long showed up ahead. There was no getting around it, so we had to unload and move over. The music of falling waters heralded our approach to beautiful Allegash Pond. Carrying around, we put our canoes in the quiet water above the falls. A wary old buck eyed us suspiciously from the far shore of the pond, and promptly resented a closer inspection. I met no response to my frequent casts, as we drifted out into the inlet. The sun was getting low as we came in sight of the dam. While the guides were fixing up the camp I managed to secure enough small trout for my supper.

The next morning was ushered in by a discharge of firearms above us, and around the bend came a poor sheldrake, fleeing on whistling wings. The party soon hove in sight, and fetched up at the dam. Leaving them in possession, a few strokes of our paddles brought us to the lake. Allegash Lake has considerable claim to beauty. Far to the west mountains loom up here and there on the horizon; on the north shore are some interesting caves that were discovered a few years ago by a lumber explorer. Careful was the word as we shoved out into an ugly cross sea; but we soon worked out of it, as it was only a narrow belt of wind. As we drew near to the head of the lake we gazed with ever-increasing interest at the great wilderness that stretched out to the far-away horizon, every stroke of our paddles bringing us nearer its heart. Entering the inlet we pulled up at a lumber camp on the right bank. A cat came forward to welcome us. We found the camp well stocked with supplies. The only spoil I carried away was an old pair of overs for rough work. We went into camp a short distance above, and started off to find Johnson's Pond. The stream that comes from the pond was almost dry. Placing our canoe in this miserable apology for a waterway, we urged it ahead. I have been in many tough places with a canoe, but have never seen the equal of this. The stream trickled through a quaking marsh that was alive with snipe, making me long for my shotgun. The canoe slid along through this delectable mixture of about two parts mud to one of water, until finally it defied the most desperate endeavors of the guides to budge it. There was no help for it; we had to trust ourselves to the treacherous surface of the bog, that threatened to sink beneath us at every step. We kept this up for some time before a glimpse of the pond rewarded our efforts. This beautiful trout pond is completely shut in by the forest; it is seldom visited, except by a few hardy anglers and hunters. The surface looked inviting, so I went to work with the fly-rod. I tried very likely looking places in vain. The trout would not rise, and that settled it. The return trip was uneventful, aside from having to bridge the bog with the canoe to get to the timber.

The next day the guides started off to try their luck, armed with the deadly spoon, and returned about dusk much crestfallen. Cram mourning the loss of his hunting knife. The pond had made it "two straight." There is no doubt plenty of trout in Johnson's Pond, and most of them propose to stay there. Our troubles soon went up in the smoke of the camp-fire. After a good night's rest we came up smiling. Frank Cram took the lead, as he was the only one of the party who knew about the country we were heading for. Putting our canoes in the still water in front of the camp, we paddled gaily up stream. This lasted about as long as the Irishman's descent from the steeple, when that curse of the canoeeman, low water, brought us to a standstill. The canoe, relieved of our weight, slid along a few yards and then brought up against the bottom for good. The guides proved equal to the emergency; getting down into the brook among the stones, they soon scooped out a channel with their bare hands. The stream for miles above was choked up with fallen timber, reinforced by rocks and gravel bars. Undaunted by this formidable array of nature's forces, the guides fought their way up stream, demolishing one obstruction after another. At rare intervals the canoe glided into a quiet reach, where beauty thronged about us and lured us on with its siren song of restful ease, to end abruptly at the sight of some giant of the forest barring our passage up the brook. At times the water got so unmercifully low that a channel had to be dug out with the paddles. We were hardly out of this scrape before we were up against another. The axe was mightier than the paddle, as fallen trees proved to be our worst enemies. Cutting a narrow passage for the canoes was hard and exhausting work. After this enemy was conquered others showed up in front, ready to dispute our advance, and so on and so forth.

Late in the afternoon I started on ahead with my fly-rod. Pool after pool was tried in vain; no rise followed in the wake of the struggling fly. I could not understand this, as the stream was every whit as alluring as Webster Brook. The fallen timber and other obstructions were mute witnesses to the fact that no one had invaded this solitude for a long time. The trout were here, but resolutely refused to embellish the frying pan. Fly-fishing is fascinating sport, and is full of hope and promise. As daylight faded, absorbed in the pursuit, I soon became oblivious to my surroundings. I must have gone a considerable distance up stream before I awoke to the situation. Then, as I looked about me, I experienced a sort of creepy feeling. A rampart of fallen timber cut off my view ahead, so I concluded I would settle the matter by hailing my guides. To my consternation and amazement an indistinct murmur of voices drifted down from above. Climbing over the obstruction, I sighted the main stream a short distance beyond. Hurrying along as fast as possible, wondering all the time how they had managed to get above me when I had left them far down stream, and seeing no sign of them anywhere above, I began to grow suspicious of the sounds I had heard; so halting in my tracks, I shouted until the forest rang again. A prompt response came from below. After a while the guides came in sight, dragging their canoes. I mentioned the incident to them, but they failed to solve it. I am inclined to think that a bear replied to my hail. Their cry is said to resemble the hallo of a man. These woods are full of mystery. If I had kept on up stream and taken the wrong fork, I might have traveled far out of reach of my guides and been hopelessly lost. Bears are seldom seen in the day time. The shadows of night were creeping through the forest when we came in sight of the forks. The left fork leads into an almost unknown wilderness; the right trends north to Mud Pond. Moving a few yards up the right fork, we went into camp. Soon the sound of the axe resounded through the woods, quickly followed by a splintering crash, as some noble forest tree yielded up its life. After setting up the tent and boughs, we turned our attention to supper. Alas! we had no trout, but we made out pretty well with flippers, pork, potatoes and coffee. We wound up the evening by piling on the logs until we had a roaring camp-fire, that shot sparks and blazing brands above the tree tops, paling the stars. After lying around a while the conversation flagged, and one after another we fell asleep on our beds of balsam, leaving the camp-fire to its own destruction.

W. C. SQUIER, JR.

Companions on Outings.

Editor Forest and Stream:

A few weeks ago FOREST AND STREAM published an article of mine under the heading of "Companions on Outings." In that article I advanced a few opinions gained from personal experience, and offered a little well-meant advice to the novice. Soon after Mr. Charles Christodoro coincided with my views, in the main, because he had evidently met with similar experiences to my own, therefore was capable of judging from my standpoint.

But my article seems to have affected in a different way J. P. T. This correspondent seems inclined to judge my experiences from the standpoint of dissimilar experiences of his own.

As I have said before, I have found outings with untried companions to be lotteries. Once one fellow stole from a member of the party, and sneakingly put the blame on the guide. Another member of the same party passed mutilated money on the same guide, and it gave me satisfaction to call the guide's attention to the fraud. An untried companion, who is now superintendent of a large sanitarium, made it a point to go deliberately and maliciously out of his way in order to break fences and rip limbs off fruit trees in order to steal the fruit. Another made it a practice to blow trespass signs to pieces, while yet another, with more mouth than gray matter, regaled me by telling how he would "break the law and mop up the ground with the game warden if he interfered." There are others too numerous to mention here, but these are among the worst cases. One trip with each was enough for me, and most of them were tenderfeet.

But there are others, and good friends, too, with whom I would not care to go into the woods or on the waters again; and, no doubt, they entertain the same feeling toward me—and I hold no grudge against them for that feeling. Their tastes and my tastes are so diametrically opposite that it would bore each to be in the other's company again—on an outing.

Here is an extract from a letter which I am proud to keep. The writer was Fred Mather. I had invited him on a shooting expedition, and this is part of his letter of acceptance: "Provided, that you assure me that you are not like a friend of mine—a man who can talk only upon the salvation of the heathen. But—hang the heathen, I'm one of them, and I have no interest in their future welfare more than I have in their present existence. If you are that kind of man, you will never enjoy my company. I am not young, but like a lively companion—because I am mentally lively. This is, of course, plain talk; but better this than a week's horror. I think you will appreciate my candor—it is better thus than later discoveries." What honest, manly and sound logic! From experience I had learned that Mr. Mather was right. I did appreciate his candor, for there was the very essence of truth in it. Professor Dean, of Columbia University, joined us, and there were ten golden days of fun. These were capital prizes in the lottery of companions on outings.

The tried companions with whom I would care to spend a week in camp or longer do not number more than a dozen. I have slept and camped with them in Florida, on yachting and sailing trips, in duck shooting and other bird shooting, and they are reliable companions and faithful friends. Some are naturalists and biologists, some mechanics, and others sailors, guides, etc.

I cannot apologize to J. P. T. for expressing my honest opinions, and I still adhere strictly to my first article. I am not rich, nor even "well fixed." I like good wages, and believe in good wages for others—guides included. Whether I am considered "selfish as to others' rights,

especially in money matters," or not, does not alter my opinion that any man who would luxuriate at the expense of a guide's bread and butter, by paying him starvation wages, ought to be kicked out of the woods. Give the guide what is right, no less, just a little more rather than less; and—"go it alone with your guide unless you know your companion from the ground up."

WILLIAM H. AVIS.

HIGHWOOD, Conn.

Natural History.

The Sea Elephant, South and North.

AMONG the great mammals of the world which have been exterminated, or nearly so, by the greed of man, is the sea elephant, formerly extremely abundant over a considerable stretch of the Pacific coast, from southern California down into Mexico. It was also found in great numbers on some of the islands on the borders of the Antarctic seas, as Kerguelen Island, Heard's Island, the Crozets, and perhaps at other points. It is an animal of vast size, and is said to be from eighteen to twenty-five and even thirty feet in length, and with a circumference of from twelve to eighteen feet. Its general aspect is seal-like. It has little power of bending the back and cannot bring its hind flippers up under it as do the eared seals, which include the walrus, the sea lions and the sea bears; but having a more or less stiff vertebral column, it crawls by dragging itself along by movements of its fore flippers, going slowly and with difficulty.

Nearly fifty years ago the sea elephant was almost exterminated in California and Mexico, and Captain Scammon, who wrote about 1852 of Cedros Island, off the coast of lower California, says: "Seals and sea elephants once basked on the shores of this isolated spot in vast numbers, and in years past, its surrounding shores teemed with sealers, sea elephant and sea otter hunters. The remains of their rude stone houses are still to be seen in many convenient places, which were once the habitations of these hardy men."

Within twenty-five years, a few sea elephants were still found at Santa Barbara Island, off the coast of California, but to-day there is probably not a single living one in North America.

The sea elephants have many times been almost exterminated in their far southern haunts; those gloomy, verdureless and rock-bound islands, which lie near the borders of the Antarctic Ocean. Time and again, they have been killed off there, until the search for them became unprofitable, and then, having been neglected for a term of years, have increased and become sufficiently numerous once more to tempt man's cupidity.

In Volume XIX. of FOREST AND STREAM, appeared two articles written by Mr. John Easmond, the mate of a sailing vessel cast away on the shores of Kerguelen Island, where the writer spent more than a year before the opportunity came to escape from his prison. In this account—which, for quaintness, terseness and force, reads like a chapter from Defoe—is given much interesting information about the sea elephant and its habits, and at the present day it is to those islands that we must go to see these vast creatures at home.

Such a visit was recently made by Mr. Robert Hall, of Australia, who has contributed to the October Zoologist a very interesting article on these monsters. He says:

In the summer of 1897-98 I paid a visit in the brig Edward to this island of the South Indian Ocean. I did so by the invitation of Mr. Hans Gundersen, and acted in the capacity of naturalist.

The southern seals are not so strong in species as those of the northern seas. The distribution of the total twenty-five species, including a walrus, is four in the southern hemisphere and twenty in the northern. One is peculiar to both, and this is the one under present consideration, and specially called *Macrorhinus leoninus*. It is to be found in California, and is probably circumpolar in the Australis.

Certain of the seals are very local, and have reached peculiar places on the earth. One is confined to the Caspian Sea, and another to Lake Baikal, each bearing characters apart from all others of the Pinnipedia.

A considerable trade in the skins of these animals annually passes through the salesrooms in Europe, and bears, leopards, lions and elephants are vernacular names with which the various markets are familiar. Seals are eared or earless. Of the former there are nine species; of the latter, fifteen species; and an intermediate mammal, familiarly known as the walrus, completes the complement.

Kerguelen Land is a large island of about ninety miles by forty miles, and full of fjords, on the coasts of which the sea elephants congregate in number, more especially on the west coast, where they are secure, owing to its ruggedness, dangerous winds and currents. It is thought they arrive to rear a family in August, and our observations lead us to believe the departure is timed for February and March. During these months they are very restless, and remain no longer the listless creatures of December. A sea elephant is contrary in nature to a sea lion, for, while the former on this island is docile and languid, the latter on the Auckland is active and savage. The elephant, on observing a stranger, shows a restless eye, but quickly goes to sleep again. You may then walk through a herd of fifty sleeping animals, and merely disturb one or two for a moment. These hot-blooded creatures vary in size from 6 feet to 20 feet 6 inches, and we found a skeleton of a young one about 4 feet in length. The largest were exceedingly difficult to handle; but, as the enterprise of our ship was principally a commercial one, the business faculty was quickly brought to bear upon any awkward and unwilling customer.

Many of the animals would weigh approximately two to six tons. No five men could turn a large bull over without special levers, and it needed seven sealers to haul half a skin along the sand to the boat in waiting. As for dragging a whole skin, that was quite out of the question under the circumstances. For museum purposes we made a preparation of one, and this we feared would break the

tackle while being drawn on board from the end of a tow line. Its length was only 14 feet 9 inches, with a girth of 10 feet 10 inches about the pectoral girdle. From shoulder to shoulder it measured 5 feet 6 inches. The circumference at the base of the flippers was 3 feet 6 inches.

To the great bulk there was a mouth, with a breadth, at the angle, of 9 inches only, and a tongue (which we found later to be excellent eating) quite filled it. Dr. Stirling has this specimen mounted in the South Australian Museum. While the blubber ranges from 2 to 6 inches in depth, it varies in weight. Six men were employed in changing the position of one fatty skin while on the skinning board. This is a fair example of a male, which is always larger than the female. The congregation in harbors was generally systematic. The bulls occupied one part of the beach, and the cows formed a colony in another. There were always several colonies in a harbor, and they seldom appeared to intermingle. The young were not numerous. They had probably set out on their southerly migration before our arrival on Dec. 27, or were scattered promiscuously along the beaches.

It is the general impression that these mammals lie in their rookeries for days or weeks together, and do not feed otherwise than on their fatty tissue. With this view I do not altogether agree, for most of the seals are daily to be seen in the water, either coming in with the full flood, or going out with the early part of an ebb tide. That a young sea elephant 6 feet in length can live a month on its own fat was proved by one we brought to Melbourne, and which was lodged in the aquarium, but died a few months later.

One day as many as eighty may be counted; the next day the same beach may only contain ten, with other heads poking above the floating weed, and showing glassy round black eyes, quite wide awake. Our men have often shot as many as sixty at one time, and found next day another twenty had come up among the dead, simply because it was their chosen lair. This species dislike expending energy on land, and they will lie in a group of twenty to sixty in some grassy spot with a sandy landing. Some few will ascend to an inclined distance of 150 yards, and there they are not so active as those below, and probably do not go out daily. The energy would be too much for them, as they are slow crawlers, using only two flippers, and the snake-like action of vertebræ and muscles.

The first anchorage of the brig was at Royal Sound, and before we removed from a beach of four miles in extent we had collected 426 skins. Our two anchors were lifted for a second harbor on Jan. 17 (Greenland Harbor).

During the first day sixty to seventy were killed, and similar results often followed. To shoot more at one time was inadvisable. An average of forty per day was considered good, and this allowed time to ship and "speck"—i. e., take the blubber from the skin.

The finest herd we visited just before leaving the island. In all there were twenty-four magnificent animals, roughly averaging 19 feet in length. For the first time, in 904 seals, I saw the rugged nose of "Anson's plate," figured in Moseley's "Challenger Notes" (p. 201). The plate of Lesueur, reproduced on p. 202 of the same work, does not quite agree with the animals noticed by us in respect to the eyebrow bristles. The "elephants" here have no conspicuous eyebrow, but rather have the cheek hairs more developed than this plate exhibits. Before introducing ourselves, I noticed one great "elephant" take a short cut over another, and a quarrel arose. Both growled and stood partly supported by their shoulder flippers. Another disagreement arose elsewhere, but it seemed to me there was more bark than bite, as animosity was quickly lost in sleep. One unfortunate animal had a badly torn nose, in all probability a dental evidence of past troubles. One of the crew gave me a tooth some 7 inches in length, the greater portion of which lies within the gum (e. g. 4.9 inches). When disturbed the belching of each of these old bulls was objectionably strong, for it can scarcely be called a roar. So great is the exertion that blood appears in the pharynx, and this occurred when I was engaged near its head, measuring the trough in which it lay. This lair along the convex part was 32 feet in length, the breadth 7 feet, tapering toward each end. The depth of these, mostly dry mud holes placed among the grasses, ranges to about 2 feet, seldom deeper; but they were placed in natural depressions—i. e., extra to the artificial ones. Many of the troughs are continuous, and intersect each other, so that a large lair may appear netted, which is uncommon.* This place soon showed an unfortunate change. Rifles were presented within 6 feet of each bull, and the bullet sped through the brain box, partly flattening on the blubber of the opposite side. Now slits with sharp knives are run dorsally in the long direction, and out rushed venous-like blood to stain the little bay in a few minutes. From one seal some sixty fountains of blood rose in oblique directions to a height of 2 feet, and all from the single cut on the back. Against the sky line this miniature double line of fountains looked strange, and the spray of a city corporation water van is not to be compared to its delicate and colored sprayings. In the viscera I was surprised at the length of the small intestine, which I found to be 255 feet in length, and capable of rough haulage. It stood the pulling over the grass from the carcass with only a small distension.

The method of procuring "elephants" is a simple, though not an easy one. Three boats, each with a crew of five men, row from the anchorage to the shore, haul up their boats, prospect the field, and, with four loaded rifles, drive the animals down to within a few yards of high-water mark, and shoot them. There they lie for the coming of the tide, and get anchored temporarily in a few feet of water. Some of the seals give considerable trouble before they will leave the high lands (100 yards from the beach on a medium incline), and as many as three hours may be spent in annoying them with the lance before they decide to go. If the seals carry their own skins down it saves much labor and time of the men. The boating is quite enough trouble to bear, as the harbor winds are treacherous and strong; so powerful are they that I have observed half the body of a "waterfall" blown back many yards before it could leave the ledge where gravity was strongest. Should a gale prohibit the boats leaving the ship, the

*In one trough there are very often two bulls or two cows, the broad part of one and the tapering part of another at one end, and the corresponding parts toward the opposite pole. This insures the trough being well filled.

crew will sleep in during the day, and with the lull toward midnight leave for the scene of operations. Many a time they have had to row miles against a tempest to save being out all night, and many hours it has taken. Under such conditions boats have been swamped, the skins floated overboard, and a landing arranged for fresh efforts. I shall not be likely to forget one intensely cold night while going on board with my birds and cameras. The helmsman got a renewed attack of tropical fever, and, almost collapsing, I was given charge of the helm. For three hours mittens and oilskins seemed like a miserable calico, and then I fully sympathized with the men who had their wellingtons partly filled with icy water.

Daily the boats wend their way in much the same manner, and in exactly the same way the skins are taken from the bodies. Roughly speaking, each skillful man can skin the smaller seals—ten in two hours and a half, or fifteen minutes for each. This time is for animals which are not too large for a man to handle. The carcasses in our takings were generally of large size. The following is a case of quick work: After a 1 o'clock dinner (of plum duff) the boats were rowed three miles. Seventy-two seals were killed, and all but fourteen skinned. Twenty-three of the largest were taken on board, and the last was upon the windlass at 9:30 P. M. Two skins of fair size are enough for a small boat, or one of a large bull. The last trip

THE SEA ELEPHANT.

in the above raid took two hours and a half in rowing three miles; this wasted time and much more was spent in endeavoring to get round a certain point. We agreed without a dissenting voice to call this headland Cape Horn of Royal Sound.

This uncharitable point is the type of many another. To leave a harbor for a second one is the event most trying to the constitution, for one never knows until the anchor is safely dropped where the howling wind will drive you. Altogether we tried six harbors, of which four were well worked. The fifth (Swain's Bay) took us three days to enter, and, after being ten minutes inside trying to get up the channel, our clever captain put his ship about, and thanked his lucky stars he had got safely out of the treacherous "hole." Down this fjord the wind without notice struck the foresails, while the wind astern drove her forward. Here the trouble started, but fortunately quickly ended by good management and good fortune. Had we touched the entrance island the ship would at once have been broken into matchwood. From this place I carried pleasant recollections, more on account of the bold contour and strangeness of the island than because it pleased my friends to chart it as a tribute to myself. Strange as it may read, among the finding of shipwreck remains there were letters and bottles from a sealing captain mentioned in Prof. Moseley's "Challenger Notes" twenty years ago. Capt. Fuller is an old hand at the business, and evidently has the indomitable pluck of the American in the making and losing of fortunes in rough waters! As for ourselves, we managed to quit the land safely on Feb. 18, although for a few hours we could not get over a severe loss we made at the last moment. Having on the 17th killed, skinned and anchored a batch of skins to the value of £250, all hands on board heaved anchors next morning to stand into a near bay to take them off. Two storms now showed their effects: one in driving all the skins ashore and burying them in the sand; the other in driving us off the bay altogether.

With a threatening sky our tight and dry little brig, the Edward, now headed for Melbourne, and we started a direct homeward course of 3,400 miles. This was duly accomplished in twenty-two days, and we experienced a phenomenal wind for the latter fourteen days, which was from the north instead of the prevailing one from the west, a circumstance of exceedingly rare occurrence.

By far the best accounts of the sea elephant in North America have been written by Captain Scammon, and almost all authors have copied his account, and no doubt will always continue to do so.

He says: "The habits of these huge beasts when on shore or loitering about the foaming breakers, are in every respect like those of the leopard seals (that is, the Pacific harbor seals). Our observation of the sea elephants of California go to show that they have been found in much larger numbers from February to June than during other months of the year. But more or less, we at all times found them on shore, upon their favorite beaches, which were about the Islands of Santa Barbara, Cerros, Guadalupe, San Bonitos, Natividad, San Roque and Asuncion, and some of the most inaccessible points on the mainland, between Asuncion and Cerros. When coming up out of the water, they were generally first seen near the line of surf, then crawl up by degrees, frequently reclining as if to sleep; again moving up or along the shore, appearing not

content with their last resting place. In this manner they would ascend the ravines or 'low downs,' half a mile or more, congregating by hundreds. They are not so active on land as the seals, but when excited to inordinate exertion, their motions are quick, the whole body quivering with their crawling, semi-vaulting gait, and the animal, at such times, manifesting great fatigue. Notwithstanding their unwieldiness, we have sometimes found them on broken, elevated ground, 50 or 60 feet above the sea.

"The principal seasons of their going on shore are when about to shed their coats, when the females bring forth their young (which is one at a time, rarely two), and the mating season. These seasons for 'hauling up' are more marked in southern latitudes. The different periods are known among the hunters as the 'pupping cow,' 'brown cow,' 'bull and cow' and the 'March bull' seasons, but on the California coast—either from the influence of climate or from some other cause—we have noticed young pups with their mothers at quite the opposite months. The continual hunting of the animals may possibly have driven them to irregularities. The time of gestation is supposed to be about three-quarters of the year. The most marked season we could discover was that of the adult males, which shed their coats later than the younger ones and the females; still, among the herd of the largest of those fully matured (at Santa Barbara Island in June, 1852), we

found several cows and their young, the latter apparently but a few days old.

"When the sea elephants come on shore for the purpose of shedding, if not disturbed, they remain out of the water until the old hair falls off. By the time this change comes about, the animal is supposed to lose half its fat; indeed, it sometimes becomes very thin, and is then called a 'slim skin.'

"In the stomach of a sea elephant a few pebbles are found, which has given rise to the saying that 'they take in ballast before going down' (returning to the sea). On warm and sunny days we have watched them come up singly, on smooth beaches, and burrow in the dry sand, throwing over their backs, the loose particles that collect about their fore limbs, and nearly covering themselves from view. But when not disturbed, the animals follow their gregarious propensity, and collect in large herds." Elsewhere he speaks of 165 as the largest number he ever saw together in one herd.

Among the earless seals, the sea elephant appears to stand quite alone, in the very great difference which exists in size between the male and female. This is almost as great as that between the sea lion bull and his cow.

The sea elephant takes its name from the long, wrinkled proboscis or extensible snout, which is seen in the male. Just what the purpose of this may be does not appear to be known.

The Indian Devil.

My companion and I were sitting late one afternoon at a beaver lake, waiting for the sun to get near the tree tops before pushing our canoe into the lake to watch for beaver. They generally break water near the lodge about sundown and swim along shore to cut their food, and one has usually a chance of a shot.

All at once we heard back in the bush a cracking and breaking of branches, readily understood as done by a large animal running through the underbrush at a high rate of speed. The noises came nearer and nearer, a little off to our right, and I grasped my double-barreled gun which lay beside me and waited events.

A few moments after we saw a large caribou break cover about one hundred yards to the right and spring into the lake. But what was that black object clinging to his neck? Surely some animal!

The caribou struck out as fast as it could swim, heading for the further shore, and we jumped into our canoe and gave pursuit. The keen eyes of the animal on the caribou's neck having detected us, it relinquished its hold, dropped off into the water and turned for the shore the caribou had left.

The canoe was immediately headed to cut off his retreat, and when within proper distance I shot it with one barrel and left it there dead on the surface of the lake, while we continued on our chase.

This diversion had taken our attention from the caribou, but now, when we had resumed the chase, we found the animal was getting through the water very slowly, and as we were paddling in its wake, we perceived the water at each side of the canoe was bloody. By the time we reached the caribou it was dead.

On examination we found the jugular vein had been cut by the fierce animal on its back, and it had bled to

leath, fleeing with what strength it had to the last drop of the poor thing's blood.

We threw a string over its horns and towed it back to the portage, picking up in passing our floating black animal, which proved to be a very large wolverine, carcajo or Indian devil, the beast going under all of these names with hunters and traders.

The carcajo, when he loads for deer, goes down to one of their runways, or on a road leading to a salt lick. He climbs a tree and gets out on some branch overhanging the rack. Here he flattens himself out and waits. Yes, he is a record waiter. He can give points to even the girl who is waiting and watching.

Time is no object to him; his inwards may be shriveling up for want of food, but there he remains. Once he has taken up that position nothing but a deer will make him show the least sign of life. He is to all intents a part of the tree limb, and the knowledge that all things "come to him who waits" is strongly fixed in his devil brain.

The deer passes, he drops on to him like a rock. Should he strike too far back, his cruel claws grip his way up toward the neck, and there he settles himself, a fixture, and puts away at the large veins till the poor deer bleeds to death.

As soon as the deer feels this foreign weight on his back and the cruel teeth cutting into him, he at once runs into and through the thickest part of the forest trying to rub the incubus off his back. But the carcajo has the tenacity of the bulldog, and his own skin would be ripped and lacerated before he would let go his hold.

The deer, realizing this mad rush through the bush is useless, makes for the nearest water in the hope that this will rid him of his enemy. But vain hope, the wolverine is there to stop, and only opens his jaws when the deer is dead, or, as in my instance, through fear for his personal safety.

Our beaver hunt was spoilt for that night, so we moved back on the trail and camped. There we passed our time drying the deer's meat and skinning the Indian devil.

MARTIN HUNTER.

Some Musings.

MR. SAMUELS' delightful article in FOREST AND STREAM of July 20 struck a keynote in my memory and awakened a chord which, after three score years, vibrates as full as ever it did since my early life (and which was strung in my heart by my mother), and after all these long years as vividly as at the beginning, when she trained my young mind in the first steps of wisdom. For she awakened a habit of inquiry in it, which has never since been dormant, but has been the keynote of my life. We don't think half enough of our mothers, we men who think ourselves the lords of creation and everything in and out of it. For forty years I have been studying this matter of maternal influence in the animal, as to ourselves and our domestic creatures, before I dared venture to put my ideas in print, but I have done so recently and I am gratified to know that scientific men, so far, all acquiesce in my belief, that the mother is the most influential parent of the two; that she receives the vital influence, only, from the father; but the growth and character of the progeny are due to her solely, as the parent of the living germ which grows within her, is nurtured by her, and thus receives the impress of her character. What great man has not acknowledged the influence of his mother on the formation, the development of his character and disposition! History carries down with it the memory of the mother in regard to all our great men, and so it is all through animal life. For we are animals first and last, as to natural organic functions, and the brain's of course are the most important of all these. And when in my old age I think of any successes made in my life, the thought of the ability to have succeeded turns back to my mother's lessons, admonitions and instructions, on which all acquisitions since have been founded. And a spirit of inquiry was thus early awakened in my life which since has been the guiding principle to me. And thus, when I see or read any information in which the fullest particulars are not given, I hark back to the time when my young mind was never satisfied until I had got the whole story. So when I read that interesting article referred to, I felt impelled to supply what in my early life would have been the first inquiry.

As to chewing the cud by a ruminating animal, the explanation does not come up to my methods of telling a story, for it lacks the how it all done. We are told what is done, but how it is is the main gist of the matter to me, and doubtless to many of your readers not well versed in animal physiology; and I hope our friend, the writer of that article, will not think I am putting a finger in his pie if I explain this from the point of view of a student of anatomy. The food, he truly says, is received into the first stomach, and passes into the second, and finally into the fourth, where it is digested. This is only the tantalizing point to my mind, for we want to know how this is done; the machinery of the stomach of a ruminant, in fact, by which this work is performed.

The simple facts are these: The food is hastily swallowed, as described by Mr. Samuels, and goes into the rumen or large sac, which has a capacity of several bushels. Connected with the rumen is the reticulum, commonly called the honeycomb on account of its cellular lining, and this is a mere adjunct of the rumen, and appears to serve the purpose mostly of a reservoir of water by which the food is moistened and reduced to a fine pulp between the leaves of the next compartment, called the omasum or maniplies; so called because of the numerous leaves with which it is furnished, and between which the food is ground and macerated into a soft, semi-fluid pulp. From this the food passes into the abomasum, or true digestive stomach, in which it is partly dissolved by the gastric fluid here secreted.

Now let us go back to the food hastily swallowed by a ruminating animal. Right at the junction of the three first divisions is a curious bit of machinery, called the esophageal groove. This is a small sac or tube, a few inches in length, which connects the first and second divisions of the stomach with the third. This groove has a slit in it, through which the hastily eaten food—moistened by the water in the reticulum—is forced by

a contraction of the stomach, easily visible when the cow is ruminating, into this small canal; and by a process of regurgitation is carried to the mouth. This small quantity of food is the cud—supposed by a majority of feeders of animals to be some functional substance which may be lost, and then must be supplied to the animal. But it is simply a wad of food, forced, as described, into the mouth, where it is chewed at leisure, and with evident comfort and pleasure by the healthy animal, and, being reduced to a semi-fluid condition, is swallowed and goes into the omasum, or maniplies, on account of its numerous leaves between which it is macerated into a fluid which then goes into the fourth part of the stomach, where it is mixed with the gastric fluid, the solvent of the food, and then becomes nutriment, completely, when acted on by the bile in the duodenum. But the white curd mentioned by Mr. Samuels is not formed until the food is finally dissolved and decomposed in the bowels, where, by absorption by an infinite number of minute vessels, called the lacteal vessels, of the nutriment, it passes into the great lacteal vein, which runs up the backbone, conspicuously, and is poured into the heart. There it mixes with the blood, which is forced into the lungs, through which it passes and is oxygenized by the air, and then goes into the heart again (a special part of it) from which it is forced by the heart's contractions into the great arteries, and thence to the small ones, and so on until it reaches those minute blood vessels, the capillaries, which connect the arteries with the veins, and then, having given up to the body the vital nutriment by which the animal is supported, the devitalized blood goes back again to the heart, and gets a fresh supply of nutriment; and so on from birth to death, at every pulsation, this nourishment is carried to every part of the body, and so supports the animal heat and repairs the waste of vital action and motion. Now all this is of vast interest, and I think these facts should be taught in the schools, if only that farmers and feeders of animals may get to the deeply interesting facts in this connection; and every young person might learn what an important matter it is to all of us to know how we live, and have our being, through the food we eat.

I was going to tell you something about ravens, and our rainbow trout, and other things, of which I have had the extreme pleasure of talking with your Mr. Hallock, of whom to say I have at last met and swapped stories with him is one of the most pleasant occurrences of my life. But it is too serious a matter for me to crowd into the tail end of this letter, and is reserved for another opportunity.

HENRY STEWART.

HIGHLANDS, N. C.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Ojai Valley Notes.

NORDHOFF, Cal.—Southern California, at nearly any time of the year, offers sport for the lover of gun and rod. In summer the snap shot may steady his aim on individual doves flying about the stubble and find shooting them no mean test of his skill, or, with larger ambition, go to the cañons for deer, perhaps to meet there a surviving member of the grizzly family, bent mightily on persisting in his survival; and in winter this same gun will have for his delectation wild pigeons in the forests, ducks wherever water abounds, or that supreme of all game, the great American quail, which here are found wherever there is cover. The angler may catch trout through the hot months, and sea monsters almost any time of the year.

Excepting the use of pump guns, the deer hunting is done here in the most primitive way. Hounds are seldom employed. The sportsman still-hunts the likely cañons, those with either water or acorns, and shoots from the slope opposite the quarry, should it attempt to climb up the mountain, tactics that bring the whole action into view, often to keep it there for a time, rather an exhilarating dénouement to my mind, though to that of your readers it may have lost this quality because so familiar. The man who makes these drives, his way closed in with burning walls, as he climbs over loose rock and boulders his thirst often terrible, deserves a delightful finish to his toil, and he usually has it. I am afraid, though, that my preference is for the chase on the level, baying of hounds, a single shot—the only one. But the hunting here in the mountains is more primitive.

In my rather limited experience I have never known deer to be tamer than they are in this country. This is probably because the does, which are here protected by law at all seasons, acquire a fearless disposition toward man, a confidence that has caused unfortunate stags to approach within civilization, on several occasions almost to enter town, as some one remarked, "as if to inquire for a letter." An acquaintance who lives within half a mile of the post office told me of a recent case. A fine stag, doubtless from the nearest hill, was observed one morning as he came across back fields, leaping barbed fences readily, his pace an easy lope, till he landed among the milch cows in the home lot, where shooting him later seemed almost murder. Through the spring I have never had to search long for signs where deer had been budding the fruit orchards near town. As a matter of principle, no one should try this during the close season if he carry a gun; it is much wiser to forswear all chance of being tempted.

Shooting at doves, which is permitted here after July 15, is considered by some of the inhabitants, especially by the small boy, as being not only exciting, but legitimate, and for a while I concurred in this belief, but discovery as late as August of several nests of fledglings along the foothills and elsewhere convinced me that an error had been made by somebody. Though to my mind the common dove had seemed almost a game bird, now in summer it is allowed to fly its course, a privilege it had formerly taken without my consent. The band-tailed pigeons arrive here through October. Because of their stupidity

the shooting they afford is mere slaughter. They resemble the Antwerp type, and are nearly as large. Several specimens weighed a pound apiece and measured 27 inches across, thus exceeding the spread of our passenger variety by 4 inches.

The manner in which I obtained my first band-tailed specimens showed the unwarnedness of these creatures. One hot October day I had assumed a high seat on a summit, from which the live oaks of Camp Comfort and miles of creek road were visible. A flash of steel-gray disappearing into the foliage beneath was at first surmised to be a dove, then a pigeon. Immediately I fell down several hundred yards of bluff, accompanied by large drifts of detached shale; but the pigeons, three, only flushed to a sycamore top a short distance down stream. Shooting at them afterward and bringing down a brace was brutal. Both individuals had iridescent hackles and otherwise resembled the blue type of our tame variety. The chopped-off tail gave a decidedly pigeon look. Yellow back, yellow tarsus and absence of wing bar were, so far as I had observed, peculiar to this local forester. Lack of fear would result in extermination but for the flocks inhabiting inaccessible country. I could not deny at home that I had shot a pair of tame pigeons—very tame.

Ducks come into the Ojai Valley during wet winters. Ponds offer fine shooting at such times. So far I have seen none of it, because we have had successively what are termed only dry years. As the weather has been more favorable this fall, a few ponds have formed, but as yet have grown little feed. The flocks are around, though, for recently we found a teal impaled on a barbed fence. During the hard storm a few days previous to our discovery, flights may have been plentiful. But why had the victim avoided the open air to hit a fence?

While returning from a walk several weeks ago to a likely pond four miles down the grade road, I climbed a hill to spend on the large mesa up there a few such hours as had been familiar to me when the hunting was over Maryland covers. The grass and rough growth of the hill top had been full of cottontail rabbits; now all the land up there except a brushy corner had been plowed. There must have been at least eighty acres of open and ten of cover. A random shot fired while I was beating the first thicket started rabbits in all directions, and afterward a kick into any of the lilac clusters started another panicky fugitive. I brought two home. They seemed very small, and had diminutive cottontails, though both were evidently matured specimens. Their flesh, being flavored with wild sage, was delicious. Beagles would have made that hill top resound with tonguing.

Newspapers—what are they? A short time ago Ranger Herbert, in patrolling the mountain fifteen or twenty miles from here, saw a bear disappearing into a cañon. After dismounting he shot five times before he discovered that it was old Club Foot, the grizzly. It was a mistake to shoot. The pony proved to be a fast runner. When Ranger Herbert ventured up that way nearly a week afterward he found the bear dead and brought the feet home as souvenirs. Missing toes from one of these identified the grizzly. But now the Los Angeles Times discredits the kill by declaring that old Club Foot, who has been killed so often and so variously, will not mind the late unpleasantness, but will soon be stealing calves or colts again somewhere between San Diego and the north end of this State, which, to say the least, is an unneighborly way of putting it.

During the winter, out of doors in this land of sunshine, with bracing air, fine scenery and the song of birds to delight one, is very captivating to the senses of man. Did you ever hear the Western lark (*Sturnella neglecta*), the California type of the meadow variety? Since the rain our valley has been full of these birds. Their notes are as various as those of an expert fife player. As musicians they are far superior to the Eastern kind. No two individuals sound just alike. The extreme to which they carry their ecstasies at times is hysterical. I always pause to listen when I happen upon a field of these wild Wagnerians.

H. R. STEIGER.

Massachusetts Partridges.

BOSTON, Aug. 5.—Game reports are excellent in this State. Already the law prohibiting the sale of partridges and quail at all seasons is showing its beneficent effects. A gentleman living in Essex county, a careful observer of game, and a lover of hunting, tells me that there are 20 partridges in the woods in his section where there was one last year. This increase he attributes entirely to the non-sale law, which went into effect last year. He says that one man, living near him, a desultory worker at his trade, has always made a practice of gunning almost every day as soon as the law was off on partridges and quail—gunning for the market. He would send in to market from one to a dozen birds almost every day, under the old law. Last year he stuck to his bench, gunning but one day that my informant is aware of, and killing but three partridges, against many dozens on other seasons. Mr. C. H. Tarbox has a story equally good from the section of Byfield. Both partridges and quail are unusually abundant, the effect, he believes, of the birds not being all killed for market last year. He has a flock of 13 young partridges not far from his buildings, that he has watched from the eggs forward. On Sunday mornings, his dog, who first showed his master where the nest was, by pointing the old bird on the eggs, will come, and through signs, understood by his master, suggest that they go down and see the birds. They go out, and the dog comes to a point half a dozen times, perhaps, and then wonders why his master does not shoot. He never went nearer the old bird on the nest than to come to a good point, and has never offered to flush her on the young.

SPECIAL.

Bay Birds at Barnegat.

BAYVILLE, N. J., Aug. 3.—There are plenty of bay birds about the inlet, curlew and willet having been going south for the past month. I saw a large bunch of black duck and about thirty wood duck yesterday on the Double Trouble ponds. Lots of weakfish biting.

HERB.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Three Rifles and a Shotgun.

FOREST AND STREAM is read by so many firearm enthusiasts and experts that I suppose it would not be possible to publish in it an article containing a single piece of true information that would be new to every reader. But I remember well, when I was a boy, with what keen delight I pored over descriptions of firearms and their performances, and what pleasure and help and knowledge I got from articles that I now know contained no facts new at that time, but merely old knowledge dressed in new words. So it is for the boys and beginners of to-day that I write, and not for the experts. For these older and knowing gun lovers I merely offer this photograph of four of my cherished firearms.

Let us first take in hand this pretty rifle with the small bore, because it is .22 caliber, and that is the boys' own size. It is rather large and heavy, isn't it, for so small a bore? The barrel is 28 inches long, and the piece weighs 9 pounds 2 ounces. You see, I am still a boy in spirit, and yet I wanted an arm more suited to my size and strength than any boy's rifle on the market. So I had the Winchester Arms Co. assemble one according to my ideas. No doubt there are .22's which would shoot just as well up to 100 yards, but my belief is that this long and heavy barrel would shoot more accurately at 200 yards. At any rate, it does shoot accurately at long distances, and such other .22 calibers as have shot against it did not equal its performance. It even won a prize at a shooting match away from a .30-30, .303, .32-40, .38-55 and other arms of various calibers. One reason for having a long and heavy barrel is that the longer the barrel, the truer the alignment of the sights with the bullseye. To this reason one of my humorous friends replied, "What you want, Sawyer, is a barrel that will reach from you to the bullseye." But you mustn't mind him—he's a joker.

In purchasing for yourself a .22-caliber rifle for general use, you may find some of these suggestions useful. First, suit the weight to your strength, and the shape to your length of arm and neck and droop of shoulder. Suit the exterior finish to your pocketbook. But be sure that the inside is all right; it must be clean and bright as polished steel can be; be sure that the polishing of the inside at the factory has not worn it out while it is yet new; the grooves and lands must be clean cut and sharp edged. The rifle had better take the long-rifle cartridge, if it is built for a rim-fire action, because if it is made for that cartridge it will shoot well at a distance, and allow you a variety of ammunition for short range; while if your rifle is made for the short .22-caliber, it will shoot nothing larger. The long cartridge (.5-35) is freaky at distances beyond 50 yards—sometimes it hits where it is pointed, sometimes it does not—and, if your barrel is rifled for this cartridge, it will not shoot the long-rifle cartridge (.5-40) well, because the twist is not rapid enough to keep the long-rifle bullet point on. So, the rifle chambered for the long-rifle cartridge is best. And just see what a variety of ammunition you can then use in one arm—the long-rifle, long, long hollow point, short and short hollow point, all black powder cartridges. All of these but the first are duplicated with smokeless powder charges, making nine different cartridges for one rifle. Besides these are the shot cartridge, and the two bullet breech caps. But neither of these last three should be used in a good rifle. Twenty-two-caliber cartridges are made by different great cartridge-making companies, no two similar productions of which shoot alike; that is, if your fine new rifle is targeted with the long-rifle cartridge, say, of the Union Metallic, Winchester and Peters companies, you will find that one of these makes of cartridges gives better results in your particular rifle than the others. No two of these cartridges are alike, though bearing the same designation. Also, different makes of rifles are rifled differently, and, strangest of all, no two rifles of the same make shoot just alike. If you and your twin brother buy two rifles alike, you expect them to shoot alike. They were made by the same workmen, of the same kind of materials, on the same machines, according to the same formulae, and perhaps on the same day. They look alike, yet they do not shoot alike. They have their peculiarities, just as you and your brother have yours. So, try different makes of cartridges.

Another reason for having a long and heavy barrel is that it holds steadier in a wind. Still another reason, is the lessened report—it takes up the sound and vibration just as a safe does when a burglar cracks it. In this rifle a smokeless, short, hollow point makes about as much noise as a snap of the fingers—you would not notice it 50 feet away. Absolute noiselessness of person and the least possible noise from your firearm are the greatest aid in hunting. It used to seem marvelous to me the way squirrels and partridges paid no attention to the report of this little cartridge. An amusing incident of last summer will well illustrate how slight is the report. My friend and I in the country were lying on the side of a knoll one day waiting for woodchucks to come out of their holes in the field beyond. We fell asleep. I awoke first, and, sitting up, saw a 'chuck. Without rising I reached for my rifle and took a shot over my friend's body. The woodchuck dropped, but kicked vigorously, so I took a shot at its head. That quieted it. My friend still slept peacefully. That is all I need to say to illustrate that point.

When you get a new rifle, the first thing to do is to target it. Of course you have already practiced at guessing distances, and verifying your guesses. Find the point blank of your rifle, and between that and the practical range limit—200 yards for your .22 caliber—make intervals of 25 yards. Fire from a rest on the target from each distance, and make a note on paper what your sight elevation is. Thus: 50 yards, point blank; 75 yards, rear sight one notch, front sight against lower edge of bullseye; 100 yards, rear sight two notches, front sight on top of bullseye; 125 yards, rear sight three notches, front sight on center of bullseye, and so on. I give these holdings as they would be likely to come. The best way to aim, when rear sight permits, is to hold the front sight against the bottom of the bullseye for any range. Make a note of your sight holdings and commit them to memory. Then, if you go to a shooting match, where the known range is 90 yards, and you put up your sight two notches and hold front sight one-half inch below bullseye, your bullet will not be far off. In other words, know your rifle.

A small-bore rifle is the most difficult of all arms to

keep in good condition, and it seems as if the smaller the bore the greater the difficulty. Remember that if your rifle bore becomes rusty or remains leaded, it is no good. Therefore, treat it with all the care a mother gives her baby if you wish it to keep perfect and serve you well. Never, never, let it be dirty over night, and never let it be fired many times without being cleaned. When you give it the final cleaning, do not spare time or pains to get it clean. One rag will not do it, two rags will not do it, three will not do it properly; use half a dozen. The first one or two rags can be dipped in soapy water, to clean out black powder residue, squeezed pretty dry in a cloth between the thumb and fingers, and inserted by the ramrod at the breech end. Let me emphasize breech end. That is where the greatest diameter of the bore is, and a rag inserted at the muzzle is squeezed to the size of the bore, and, on reaching the chamber, does not swell enough to clean it. The breech end of the barrel is the dirtiest, and should receive the clean, wet rag. The breech end is subject to the greatest heat and wear, and is more liable to rust, therefore, breech end first. Cotton flannel—known to women as canton flannel—seems to be the best rag. The fuzzy side is the right one. Tow is without doubt the best of all cleaning mediums, but ramrods for small-bore rifles are seldom made with jagged tips—they usually have slotted tips, suitable only for a rag. Cotton flannel is thick, and the fuzz seems to have a bite to it which a linen or woolen rag does not have. For convenience it is well to keep a supply of rags all precisely alike. The best shape seems to be rectangular, about 1½

an ordinarily but a commonplace rifle shot; this was merely one of those unaccountable runs of luck that happen occasionally to every rifleman. The conditions also happened to be perfect—light, temperature, moisture and calm air. I cite this circumstance merely in illustration of what this remarkable little cartridge did once.

The film that the smokeless leaves can be removed by a little putty pomade, or razor sharpener, or jewelers' rouge, applied to and by a rag. Then, after wiping again with a clean rag, grease thoroughly. Never use a coarse, mordant-like sand or emery. If your barrel becomes a trifle leaded, the putty pomade will generally remove it. If not, use mercury. Either use it on the rag, or let it stand a couple of hours in the barrel, plugged, covering the leaded place. This treatment I have never known to fail.

But, in spite of all care, patience and skill, a much-used .22-caliber barrel has passed its prime in two or three years. No amount of knowledge, skill and loving care will indefinitely put off the appearance of the dreaded rust and pitting. When that happens to this Winchester, as the heavy barrel can be rebored, and the action is amply strong, I shall have it rebored to the next diameter, and then my collection of firearms will have added to it a .25-21 and a new .22.

One day I was in a gunsmith's shop poking around for relics or curiosities. The gunsmith brought me this Sharps rifle, saying, "Here is a rifle you want, for it is a 'Jim Dandy,' and it's dirt cheap." He was right—I wanted it. The story to it, as well as I know it, is this:

THREE RIFLES AND A SHOTGUN.

inches by ¾ inch; but you need to find the right size for your rifle by experiment. It should need a medium pressure to pass it through the bore. The rag should be split from each of the narrow ends toward the center, leaving a quarter inch of the center whole. After passing into the ramrod slot, open out the four flanges equally. The object here is to cover the ramrod equally, and so clean the entire circumference of the bore. A large darning needle, inserted head first sufficiently to hold it firmly, into the woodwork of the room where you clean your weapons, makes an admirable impaler for your cleaning rags. You can keep fifty or sixty on it at a time.

When you attempt to clean your .22-caliber rifle after using U. M. C. smokeless cartridges, you had better substitute ammonia for soap and water, to neutralize any acid residue. No matter what the moisture is, soap and water, ammonia, alcohol or kerosene, there remains a something in the barrel which I can only describe as a film. It appears to have a great affinity for moisture, for a barrel left with it, ungreased, for a couple of hours on a summer day, will show a trace of rust. Left over night it would be ruined. Ruined for you or me, that is, because the finished surface of the bore would be gone forever, and no amount of care would prevent the frequent recurrence of rust. And when your rifle bore gets rusty or pitted, sell it at once, for the most you can get for it, to one of those individuals who uses his firearm for a walking stick, a lever or a club; who throws it around, lets it get wet, gives it never a thought and never cleans it. The world is full of those individuals, and your old gun is just as good for him as a new one. These U. M. C. cartridges just mentioned, in spite of their rust-producing quality, are next to ideal. Their slight report I have mentioned; their range and accuracy are beyond belief. So little is said of them in catalogues that you would be likely to regard them as considered inferior to black powder cartridges by the same makers. My experience has been that they are far superior, long-rifle excepted. Consider, for instance, the short mushroom smokeless. Here is a tale that sounds like a story of Oriental jugglery; but it is true: One summer afternoon in 1899 a country boy and I came in sight around a bend in the road of an abandoned farmhouse. There was a sixteen-light window of 7 x 9 panes, with the four top panes whole. I fired from where I stood, using the short smokeless mushroom, and broke all four panes without a miss. We paced to the house, and found, to my astonishment, that the distance was 224 and a fraction long steps. We then measured the panes, and paced again, and came out, I two steps more, he three steps less, which means, I think, that the range was about 225 yards. The rifle used had a turn in 18 inches. The Winchester of this picture has a turn in 16 inches, which is not so good for the short smokeless mushroom, but better for the long-rifle cartridge. You must not suppose I am in the habit of doing such shooting. I

It was made to order for a member of the Press Rifle Club, of Boston. Cataracts came on his eyes. When he found his shooting days were over forever, he sold his firearms one by one, until only the favorite Sharps remained. Finally that, too, was put upon the market. I have thanked my lucky star many a time that I happened along just then. And perhaps the old gun, too, was lucky, for it never had a more ardent admirer. It has, as you see, fine lines. They differ but little from the regular lines of the Sharps sporting model—just enough, probably, to fit the gun to the former owner. The stock is a beautiful piece of fancy walnut. The weapon is as bright and new looking as when it left the factory. The target sights are simply unsurpassed. The front sight is a wind gauge, with spirit level and interchangeable disks. One of the disks holds the finest thread and ball or pinhead sight that I have ever seen. The accuracy of the weapon really charms one.

I have three friends who are also firearm enthusiasts. The four of us go, as often as possible, for an afternoon's shoot. A favorite place is a ledge with an open space before it, and we shoot against the ledge. We call it the Cathedral, and, as a preliminary to the rifle play, we decorate it profusely with statuary in the way of tin cans, (c)old bottles and brickbats. We shoot from 90 to 200 yards, one shot each, in turn. First the Editor, say, then the Sculptor, then the Schoolmaster, then yours truly. After the "statuary" is reduced to bits, we shoot at the bits. When a fragment is so small that it remains after a couple of rounds, some one remarks—generally the Schoolmaster, for he beats the rest of us, as is proper—"Sawyer, let me take the old Sharps." Then there is a careful aim from a rest, and the "hand cannon" emits its mighty roar. You would be pretty safe to wager your life that the fragment has become but a puff of dust. Once by agreement we wore old hats to the ledge, each to shoot at the other's hat, and each to wear his hat home. We took an electric car homeward from that part of the country to the railroad station, and the other passengers greeted our entrance with smiles and smiles. The victim of the bullet from the Sharps was most deserving of smiles. When that ponderous bullet passed through the hat and smote the granite behind it, such a cloud of chips and splinters of rocks rebounded through the hat that there was little left but the wire of the brim and a few rags that barely held together. The charge for the Sharps is nominally .70-330. Really, the shell holds but 65 grains of black powder, I presume because the modern shell is thicker at the base than the original. If King's C. G. semi-smokeless is used, 70 grains can be put in by gentle tapping. As we all usually shoot small-bore rifles—from .22-5-40 to 32-40-165—the recoil and report of the .40-70-330 seem tremendous, and the light barrel freely gives us all there is of both.

The third rifle, as you see at a glance, is a muzzle-

loader. It is an extremely good specimen of the gun-maker's art. It was doubtless a high-cost weapon, and has had good care. The remarkable thing about it is that there is not a name, nor a date, nor a mark of any kind, to tell who made it, when, or where. I judge it was made to order for some target shooter of the New England States by a local gunmaker about 1840. It weighs 16 pounds. You would not want to lug it far, would you? And you would not be likely to, for the weight forward makes it to unwieldy to be used for a hunting rifle. In the days when this rifle was in use target shooting was a fad, and was carried to such an extreme as to make shooting no shooting, in one sense—that is, extreme accuracy at a known range was the sole object. To this end, ponderous weapons were used from a rest, and telescopic sighting was done with such deliberation as would make a modern rifleman nervous to see. A small powder charge was used, with a heavy bullet, giving extreme accuracy, but so high a trajectory that a difference of a few yards in the range made a great difference in the location of the bullet hole.

This rifle has better lines than most of its kind that I have seen. The Kentucky-shaped stock is very graceful. It is cast off about $\frac{3}{8}$ of an inch—that is, bent to the right—the better to present the rear sight to the eye. The fitting of parts is very good, and the engraving on the lock plate very free and firm of line. The oval on the cheek piece shows a deer running for his life across a forest glade. The mountings appear to be solid silver, except the butt plate, which may be an imitation. The trigger has a set screw. The trigger guard is the celebrated Freeman design. The loading funnel on the muzzle is the design of Alvan Clark, the great telescope maker; he was also an able rifleman. On its muzzle a circular recess, the size of the patch, insures centering the patch on the bore and on the bullet. To insure the removal of the loading funnel before shooting—otherwise it would be blown away—a leaf blocks the sight. The woodwork has a handsome grain, and age has given it a beautifully rich color. The caliber of this rifle is .40. There are eight lands; the grooves are very shallow. There is no step rear sight or slot where one could go, as there would have been for a hunting rifle of its date. The shot in the barrel for the front sight takes either a telescope holder or a globe front sight. The elevating rear sight has a turn-table on top, on which is a cylinder, which serves at the same time as a telescope holder and a peep sight by adjusting a disk. The turn-table is also a crude wind gauge.

Another time, when I was in the shop of the same gunsmith, he brought out from under the counter, with the remark, "Here is a sight good for sore eyes," a long sole-leather case. Unbuckling an end he slipped out a mahogany box, inlaid with brass at corners, locks and handle. Opening the box brought to view, in compartments lined with purple velvet, the finest muzzleloading shotgun I ever saw. In the same state of luxury lay a complete set of equipments—shot pouch, powder flask, jointed cleaning rod with slot tip, jagged tip, sponge wipers, greasing puff, wire brush and corkscrew wormer. There was also a pocket field tool, comprising in one instrument a screw driver, nipple wrench, picking needle and a set of spare nipples, which were in the hollow ends of the handle. Besides these were Eley's thick metal waterproof caps, and wire-wound cartridges for long-distance shooting—neither of which can be bought now—and Eley's grease-soaked pads (wads) and a wad cutter. Everything was in the pink of condition. I slipped the barrels onto the stock; they assembled as quickly and smoothly as those of the best breechloader. My heart went out to that gun. The market is full of antiques—miserable things when they were new; rusty, defaced and broken now. They catch the pennies of the unknowing, but not your money, I trust, and certainly not mine. On the other hand, a collector may watch for years for a perfect antique and not find one then. This gun, almost as new looking as the day it left its maker, is a beautiful specimen of the cap-lock muzzleloader. The locks alone would tell a blindfolded expert a whole tale; the hammers move with the smoothness of two pieces of silk rubbed together; they are absolutely without looseness; the tumblers meet the sear with a clear, musical ring; they rise with absolutely the same strength, and yield to exactly the same trigger pull; the yield of the trigger is instantaneous, without a trace of drag. I saw that the hammers struck the nipples in the center of the cups, and that they stood just alike at half and full cock. They are Purdy's pattern—the most beautiful, to my mind, of all hammer shapes. And the whole gun is as good as the locks. The outline is easy and graceful, with refined curves. The stock and fore end, of one piece, show the same color, grain and pattern in the grain; the grain runs with the top and bottom of the stock, converging toward the grip; the wood is dense and hard. The fitting of all parts is simply perfection, and wood and metal join as if they grew that way. The engraving was done by a workman so skilled he did not fudge; every curve was done right with one sweep of the tool—a clear, clean line. The checking of the wood is beyond any that I ever saw before, so regular and clear cut; even the magnifying glass shows no imperfections. The barrels have two patterns of twist—Damascus was not in favor in those days—one pattern, like spirally wound fern leaves, for about 12 inches of the rear end, the other pattern like Jack Frost sometimes makes on the window panes, for the rest. The ramrod is a piece of solid ebony, with a gunmetal rammer and a brass capped and fitted wormer on the tip.

This outfit was made to order by Wm. Ellis, a London gunmaker, whose exact dates I do not know, except that I have seen one of his guns dated 1846. The barrels bear both Birmingham and London proof marks, from which I judge that Ellis did not make his barrels in his London shop. He was one of the world's great makers. The most fashionable makers of that time were probably Purdy, Lancaster, Long, Moore and Ellis, in the order named. Of the last four, one's production was doubtless as good as the other's, the only difference in his fame being due to the amount of his patronage by the nobility. Later, about 1855 to 1861, Ellis made cheaper guns for the American trade—good, strong, serviceable pieces, but plain. I have seen but one of Purdy's guns for sale. That was not in half as good condition as the Ellis gun, and the amount asked was \$125, which seemed to me

exorbitant. The original cost of the Ellis gun I do not know, but it was probably much in excess of 38 guineas (\$190), as that was the price of Long's cheapest gun in 1852, while this was probably one of Ellis' high-grade guns. I bought the Ellis gun and outfit for a mere nothing, and can only say, in justification of the amount asked me for the Purdy, that it was a flintlock—not necessarily on that account much older than the Ellis—and that Purdy was the foremost maker of the world.

The remarkably good condition of the Ellis gun is due to the fact that its owner was too old to use it much, and it was his custom to send any gun—he had a whole battery—immediately after use to a near-by gunsmith to be cleaned and put in condition. Since the owner's death, many years ago, the gun has lain unused. The executors of the estate disposed of the whole battery for anything they could get. I concluded to take this gun to the country with me last summer to see how it would shoot. The proper load, named on the case, is $2\frac{1}{2}$ drams and $1\frac{1}{4}$ ounces No. 6. It seems a ridiculous load to moderns for an 11-gauge gun. In old times little was known of choke boring, so a small powder charge in proportion to the shot used was needed to get a close pattern. The load named, at 40 yards, gave surprising penetration, but a very open pattern, though regular. By experimenting with powder and shot charges, kinds of powder and sizes of shot, and wads few and many and of various kinds. I finally got excellent results. The barrels are bored perfect cylinders, and they are so smooth and true that a wad cannot be forced down on top of a charge already covered by a wad, unless the wad has a nick in it to let the air pass. The Eley wads in the case have nicks, and the wad cutter has an indentation to produce a nick. I used modern factory-made wads, and had to use my rifle on every one if I got it home. Of course after I got over the fun of trying wads, I one evening nicked all I had to save time. I used the gun for a couple of weeks on partridges. Its shooting ability was all any one could ask. A few birds the first part of the time got away because I forgot about having to raise hammers before the gun could go off. It was necessary, too, to have both hammers constantly full cocked, because the size, shape and position of the hammers when down, although beautiful to the sight, are so awkward to the untrained thumb that the gun must be removed from the shoulder to raise the hammer for a second shot, and partridges do not wait while one does all that.

In order to preserve this fine gun from rust and scratches, before using it I gave it a couple of coats of waterproof varnish over all metal. It seems to me very odd that I have never known varnish to be proposed before. Perhaps it is because a weapon so treated does not look gunified. But it is a very simple matter to wash the varnish off at close of shooting season with a sponge dipped in spirits of turpentine. Manocitin, rust preventives, gun greases, oils, and other such, are all viscous, soft, or fluid. They come off at a touch, and the exposed metal is then as subject to erosion as if it had not been treated. The best waterproof varnish, I know by years of experience in shooting in the country and at the sea shore, to be a perfect preventive. It covers the joining of wood and metal, fills flush the engraving and barrel patterns, is smooth, hard and adhesive. It is proof against sultry heat, fog, rain and salt water, and wears like iron.

To use the muzzleloader a good deal of paraphernalia was needed, so that no matter how warm the day, a shooting coat had to be worn. There were the powder flask, shot pouch, wads of two kinds and caps. Lugging all these, in sagging pockets. I could not help thinking what improvements in simplicity have been made in firearms in a few years. It is not so very long since the flintlock muzzleloader was in use. The flintlock musket, known as the Brown Bess, was issued to the British army as late as 1842. And what a hue and cry rose among the sporting gentry when the innovation was proposed of substituting caplock for flintlock! That was during the first quarter of 1800. At first they wouldn't have it. The flintlock was good enough for their fathers, and it was good enough for them. But some sensible leaders among gun experts—Colonel Hawker was one of them—saw the advantages of the new system, and then, slowly, the others got used to it. Then, about 1851, came another hue and cry. Lang, gunmaker of London and Birmingham, placed on the market a breechloading shotgun using a cartridge. The sportsmen of the time couldn't find enough abuse for it. They called the principle an absurdity, the gun a gimcrack fit only for a dilettante, and the cartridge utter nonsense. Yet it was the prototype of what we of to-day consider perfection. It is curious, isn't it, that in each period of firearm development—primeval matchlock, wheel-lock, flintlock, caplock and cartridge breechloader—the people of the time considered that their arm had reached perfection. We of to-day, with our weapons built on the latest scientific principles, raised on high upon the mistakes, imperfections and crudities of those of our ancestors, can see no radical improvement beyond. Yet we are not so obtuse as to believe that there will be no improvement. Our grandchildren will no doubt use a very different weapon from ours. What it will be, none can foretell.

CHAS. WINTHROP SAWYER.

Rhode Island Notes.

PROVIDENCE, R. I., Aug. 4.—The farmers in many sections of Rehoboth and Seekonk, Mass., and in East Providence, say that they never saw the foxes so bold and plentiful as they are at the present time. They have become so numerous that they are a nuisance, and so bold that they sometimes steal chickens in broad daylight. Recently one farmer near Nayatt, R. I., lost 200 chickens from a flock of 263 in one night.

F. S. Cole, who lives on the Blackstone Boulevard in this city, shot an albino blackbird Friday last. He saw the strange specimen from the window of his house. It was in an open field with a large flock, and conspicuous for its color, being a white specimen among 500 or more of crow colors. The bird is to be mounted and an effort will be made to obtain it for addition to the collection of Rhode Island birds at Roger Williams Park.

Squiteague are commencing to bite in goodly numbers in Narragansett Bay, the Warren River being an especially good fishing ground. They are running of a larger size than usual.

Pennsylvania Shooting.

Depredating Hares.

OFFICE OF THE BOARD OF GAME COMMISSIONER OF PENNSYLVANIA, Harrisburg.—*Editor Forest and Stream:* The last Legislature passed an act empowering the owners and lessees of real estate to kill hares or rabbits upon their own premises at all times of the year. This act is intended to authorize the killing of these animals only where it is found necessary to kill them as a protection to growing crops and fruit trees, and for no other purposes. Now, as I understand it, the natural law of self-defense permits a man to defend his property as well as his person from injury of all kinds. Section 33 of the Game Law of 1878 (unrepealed) says, "Provided that nothing in this act shall prevent any person killing any wild animal or bird when found destroying grain or fruit on his or her lands." The right then existed last year, both by common law and by statute, to kill a rabbit or any other wild animal or bird that was a menace to the interest of the farmer or the fruit grower, just as he may to-day kill a robin or catbird from his cherry tree. This bill was unnecessary and makes no change in the law of last year.

In many sections the rabbit is a source of extensive food supply; especially is this so in our mining counties. To the poor man all over the State the rabbit means a nutritious, cheap meal, no matter whether he kills it or buys it in the market. He is prevented from securing it at pleasure by the game laws. The rabbit is classed as game, and as such belongs to the people of the State in their collective capacity, and not to the farmer or landlord upon whose premises it may be found. The Legislature as the representative of the people may say what disposition shall be made of the rabbit, or any other game, but it has no right, under the constitution, to say that the farmer or the fruit grower or land owner may kill game to the exclusion of the miner, the man who lives in the city, or the man who is lucky enough to own no real estate. This, it seems to us, would be class legislation, and this act was intended to give no rights conflicting with the general game law of the State; and unless the rabbit be destroying the property of the man who kills it, it does not come within the provisions of this act; and no one in the State may kill a rabbit and use it for food except during the time allowed by said general game law. There can be no objection to the farmer killing a rabbit found destroying his property; but if he kills it for any other purpose or reason, I take it he exceeds the authority given by this bill, No. 42, and is liable to prosecution for violation of the provisions of the game law of 1897.

Non-Resident Shooters.

I also inclose an act requiring non-resident gunners to secure a license before hunting in Pennsylvania. This bill is not a Game Commission measure, and is of that kind that appears to a great many people to be unfair and unjust, imposing great hardship upon numbers of our people, for instance upon the man who is visiting his farmer friend or relative for a few days during the open season for game.

Especially does this law appear unjust when we consider that while the State owns the game, the many farms of the State are individual property, and a license granted by the State gives no right to enter any of these farms without permission of the owner; and so a person possessing a license under this act might still be prevented from shooting in this State. To illustrate, one of the bills recently signed by the Governor forbids hunting upon posted cultivated land without the consent of the owner, under a penalty of five dollars and costs, or, in default, imprisonment in jail. So that this license in reality gives no authority whatever to hunt or shoot in this State. Yet by the farmers, with whom it originated, it was considered an absolute necessity (especially in the border counties) as a protection against the irresponsible gunner, who, as soon as the game season opens, swarms from the cities and larger towns across the border, shoots everything in sight without limit, including the farmer's stock and poultry, open his gates, tears down his fences, starts fires, and commits other depredations too numerous to mention, swearing at and insulting the farmer when he dares to raise his voice in protest, then quickly slipping across the border into his own State, secure in the knowledge that he is unknown and that even were his victim so disposed, he in all probability would refrain from pursuit because of the consequent costs and trouble necessary to reach him. Under this law non-resident gunners will soon learn that they are liable to arrest and punishment immediately upon beginning to hunt in this State unless they are in possession of the before-referred-to license. Any constable or game warden can arrest without warrant upon refusal to display this authority, upon demand, and where the license is taken out a record has been made that in all probability will lead to the arrest and punishment of the offender when he fails to conduct himself as a sportsman and gentleman.

I also inclose a copy of bill 173. This is the only law drafted and supported by the Game Commission that reached the Governor. Upon it I have no remarks to make, except that we look upon it as a great stride in the right direction, and which will greatly aid in the enforcement of the law.

For general information I desire to say that the Game Commission of Pennsylvania and the Fish Commission are two entirely distinct and separate bodies. Letters of inquiry relative to fish should be directed to the Fish Commission; letters on game subjects to the Game Commission. If this is done much time will be saved to the writer.

JOSEPH KALBFUS,

Secretary of the Game Commission.

[Bill 173 referred to by Secretary Kalbfus empowers game protectors to arrest without warrant, and to seize game and guns and shooting appliances.]

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Illinois Quail Protection.

I SEE articles about the quail in the State of Illinois. I send you a clipping from the Geneseo News that shows how they understand the law:

"Farmers will be glad to hear that there is no open season at all now for quail. They are under the State protection, the same as song birds. There has been an open season of a month or two for a good many years. They are now off the list as game birds, and are listed with song birds, and may not be shot or trapped at any season of the year. The penalty for killing them is the same as that for killing song birds, which is \$5 for each and every bird, half of which fine, we believe, goes to the informant, and half to the school fund of the township in which the birds are killed. Deputy Warden Harbaugh says that he is determined that the law shall be strictly enforced."

MRS. EMMA J. JACQUES.

The New York Cold Storage Case.

IN the noted cold storage case, the Arctic Freezing Co. have been served with a complaint and summons, demanding penalties of over one million dollars. An effort has been made to have the real owners' names of the stuff revealed, and sue them instead of the Freezing Co., but this having failed by amicable means, the fight will go on against the Freezing Co., during which the storers' names will come to the surface through legal inquisition. The storers have employed Guggenheimer, Untermyer & Marshall to defend their interests. There is no question that the publicity given and the importance of this case will inure to the benefit of game law restrictions all over the country. It is said that it will be carried to the U. S. Supreme Court.

On Dakota Prairies.

GALESBURG, N. D., July 29.—The feast of the green corn is at hand up here, and nature's bounty is very lavish this year. Vegetation is luxuriant and wears its richest greens. The outlook across the prairie is extremely lovely just now. The weather is about perfect. The sloughs are full of water and there are ducks in all of them. Going to be a good many chickens, too. Hope to look at a few over my old Remington myself, and a little later on a platter also. If you want to see Dakota at her prettiest, now is your chance.

J. P. W.

"The Real and Original Game Hog."

UNDER the title of "The Real and Original Game Hog, Drawn by Himself," the Marlin Fire Arms Co. have reprinted from the FOREST AND STREAM the Didymus correspondence relative to G. O. Shields, or Coquina. This, it will be recalled, was in the main an exposition of the doings of Mr. Shields, as related by himself, in Florida. The Didymus letters attracted much attention at the time and, as now distributed by the Messrs. Marlin, will doubtless interest a new circle of readers.

Maryland Bay Birds.

STOCKTON, Md., Aug. 1.—There are a good many birds moving, mostly yellowlegs. Some of my patrons have been down and got all the shooting they wanted. Last year I did not have anything like room for all who answered my advertisement in FOREST AND STREAM, but I have now.

O. D. FOULKS.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Bass in the Gatineau Country.

A REGION that is destined within the next few years to become one of the most famous in the world for black bass lies to the north of Ottawa, Canada. The Gatineau country, as it is called, is as yet unknown to the majority of American anglers, probably because of the fact that it has not been exploited, as have been the more familiar resorts, both on this side of the line and in Canada. The Gatineau country is within easy reach of New York, via Ottawa, and the Ottawa, Northern & Western Railway, but after reaching the terminus of the latter, at Gracefield, some sixty miles to the north of Ottawa, the visitor, if he desires to fish the almost unknown lakes to the north, must rough it, so far as transportation goes; although, as a matter of fact, he can live very comfortably at the homes of settlers scattered here and there, or camp, according to his desire. But no matter which course he pursues, he is certain to find some of the most magnificent bass fishing in Canada.

I made the trip last summer in company with Chas. Genslinger, proprietor of the Hotel Cecil, Ottawa, and while I am an expert angler, as the term goes, my experience may prove of interest to those who have been looking for a region where fish exist in reality, and not altogether in the hotel and railway books. Leaving Ottawa one morning, a pleasant trip over the Ottawa, Northern & Western, brought the party, about noon, to Gracefield, the terminus at present, although the system is to be extended north in the near future. At Gracefield a local hotel keeper furnished what is known as an "express," but which is only an ordinary spring wagon, and at about 3 P. M. brought our party to the lower end of Blue Sea Lake, ten miles, more or less, distant from Gracefield. Blue Sea Lake some day will be a famous resort. It is an exquisite sheet of water, eight or nine miles long, dimpled with islands, and perfect in its present solitude. There are half a dozen settlers scattered the length of the lake, who, while they are not in the boarding house business, will accommodate fishermen with such as can be offered. But Blue Sea Lake was not the destination of our party. By previous arrangement our guide, who lived at the upper end of the lake, met the "express" and conveyed us to his home by boat. The weather was bad for fishing or anything else that after-

noon, but a dozen fine bass were taken on the trip up, trolling. As many more might have been secured, but the guide had been instructed to make speed and no particular attention was paid to the matter of fishing. Blue Sea Lake offers many beautiful spots for camping; and, in fact, it is to be the center some day of quite a summer colony. The superintendent of the Ottawa, Northern & Western, P. W. Reeseman, who is a New Yorker and one of the most energetic and able railway officials in Canada, hopes to provide a fine hotel at this point soon, for the influx of American visitors which is certain to follow; and he has also planned to improve the facilities for reaching the upper Gatineau country. In the meantime, however, those who delight in fleeing from the tourist crowd can reach, in twenty-four hours from New York, a region as wild and primitive as any in Canada, and find fishing unsurpassed. The bass in Blue Sea Lake grow to large size, and 5 pounders are common to the expert angler.

Our party, as stated, did not spend any time on this lake. After a night at the house of the guide, Eachie, who has lived on the shores of the lake for years, a trip was taken the next morning to a small lake lying a mile or two to the east, which we were told offered chances for very large bass. And the information was correct. Mr. Genslinger and the writer caught in this little lake, nameless and unmapped, no less than twenty big bass in two hours' fishing. Several of these bass ran close to 4 pounds, two went several ounces over 5 pounds, and none were kept weighing less than 3 pounds. There are many other small lakes in the vicinity quite as good as the one visited; in fact, they ought to be better, for they are never fished, except by an occasional settler, or an Indian from the reservation to the north. It is rather difficult to reach some of these lakes, but to those who want wilderness fishing these waters can be recommended without qualification.

Following a prearranged programme, we left Eachie's in the late afternoon, via an "express" route through the woods and arrived at Maniwaki, a town of considerable pretensions, some thirty miles distant from Gracefield, in the evening. Here is a village far removed from railway travel, yet the scene of great activity from a trade standpoint. It is the base of supplies for the great lumber camps of the far north, it boasts of fine churches, schools, and one store, at least, which rivals those of the large cities. The town is the creation in part of the genius of the late Charles Logue, a very wealthy trader, whose business is now continued by his brother, Charles, an affable and cultured gentleman, who finds relaxation from the monotony of solitude in occasional trips to Europe. It was surprising to find in this town, remote from civilization, water works, acetylene gas, a hotel with porcelain bath tubs, and every evidence of a refined local life. The improvements are due to the Logue family, who own thousands upon thousands of acres of the surrounding farm and timber lands, and whose wealth is reckoned—but that has nothing to do with fishing.

The morning following our arrival found us flying behind Mr. Logue's magnificent private coach team toward Hardwood Lake, a beautiful sheet of water some fourteen miles to the east and north. This was our destination. Hardwood Lake is one of a chain of beautiful sheets of water that extend north and south for miles. The lake itself is leased by a number of residents of Maniwaki, from whom it is necessary to secure permission to fish. Even in that country of black bass it has a reputation for gamey fish, and it deserves it. Putting up at the farm house of Mr. John Kenny, a settler, we were, as events subsequently proved, in the center of the finest black bass fishing in all Canada. Hardwood Lake is seldom fished; many of the other lakes are virgin, except for occasional visits from the Indians, and on several no white man except the writer has ever wet a line. To detail the sport these lakes afford will not be attempted by one who does not claim expert ability in angling. But the plain truth is that the veriest tyro can here make a record in weight and number of bass if his conscience permits. Two hours' trolling any morning meant seventeen to twenty bass, and by bass two and three pounders are meant, as that was minimum weight agreed upon. There was nothing to do with the fish, when caught, and they were, with the exception of two or three, returned to the water as soon as brought to the canoe. What a "fish-hog" could do in these waters in the course of a week's work is a subject fearful to contemplate, and, it is hoped, one that will never have to be recorded as an actuality. Frequently, in paddling over the clear waters of these lakes, the writer has seen, on the bottom, dozens of bass of great size, and in reeling in one fish, it was not unusual to have several follow the unfortunate victim to the very landing net. Woe betide the frog that escapes from the bait bucket in a canoe on Hardwood Lake! His first jump into the lake is followed by a swirl in the water, the splash of a broad tail, and the disappearance of the frog down the throat of a hungry bass. This happened frequently, and again, when the hooked bass in his struggles to escape shot the bait half a dozen feet up the line, there was a race between several of his fellows in the water to secure the tid-bit. This may sound exaggerated, but it happened on more than one occasion during that week of splendid sport. Our party went out to break no records; we did not even see how many fish we could catch, and compromise with conscience by returning them to the water. It was quite sufficient to take the few we wanted, and that done, to spend the remainder of the day exploring the nooks and corners of the lakes, or in contemplation of the beautiful mountain scenery for which the region some day will be famous. The only "fish story" that I will attempt will be to say that on one pleasant afternoon, when the wind was right and conditions were otherwise favorable, I caught, in quick succession, three bass which tipped the scales at 5 pounds and—well, a few ounces—each. That was enough. There are many there which are larger, and it is my hope this year to make their acquaintance. If I don't, no matter; it is quite sufficient to know that they are there, and long life to them!

As to the matter of bait, we found small frogs good for trolling, and minnows, either live or artificial, a very tempting lure. But the bass are not capricious; they will

bite at anything, and as to gaminess, they are a revelation. The heavy bass that will not make three and four leaps high out of water, when permitted, is the exception, and the savage rushes and lunges that these denizens of the cold, springlike waters of the northern lakes indulge in, once hooked, are still a thrilling memory.

The country cannot be visited to best advantage unless previous arrangements have been made, and Mr. Reeseman, superintendent of the Ottawa, Northern & Western Railway, at Ottawa, or Mr. Genslinger, of the Hotel Cecil, himself an enthusiastic angler, should be consulted by intending tourists. The accommodations are primitive, and it is somewhat of a shock to the average city fisherman to find the women of the houses where he stops using spinning wheels, and to meet adults who have never seen a railway train, to whom the multiplying reel and the eight-ounce jointed rod are a mystery, and the little conveniences of modern life a sealed book. Yet they are intelligent, honest folk, hospitable, and in their simple, monotonous lives are working out the destiny of our sister nation. The pioneer of our own frontier lives again in these northern woods, and is the empire builder in the same sense that Daniel Boone and his contemporaries opened this continent for us.

In closing it is perhaps proper to say that the Gatineau country is the natural home of the red deer, and in the proper season furnishes sport beside which the hunting of the Adirondacks is tame, indeed.

C. A. HAZEN.

ANGLING NOTES.

Red Drum and Channel Bass.

MR. THOS. J. CONROY, of New York, writes me a letter from which I quote: "To settle at least twenty-five or thirty disputes I have had over my counter within the last week or so, will you, in your notes in FOREST AND STREAM, tell us about the channel bass? A man told me recently that the Aquarium here advertised the fish as a red drum or channel bass. You may remember that I asked you some time last year when you were in the store, and if I remember correctly you told me there was no red drum, but there was a black drum, but I was not positive enough to quote you in the matter. It is a fish that has been caught extensively along the New Jersey coast, and it will settle many disputes to decide what the fish is, and I will cut out your answer from FOREST AND STREAM and put it up here in the store where customers can see it."

Mr. Conroy must have misunderstood me, for I cannot think I would have said there was no red drum, for there is a red drum, and it is called channel bass, and it is the fish which he refers to.

It is more than possible that I said we had no black drums, for though there are two black, one is found off the coast of South America and the other off the coast of southern California, where it is known as red roncadore and also as black croaker, but as they are not found in Atlantic coast waters, it is quite likely I did say we did not have the black drum.

The red drum, or channel bass, *Sciaenops ocellatus* (Linn.), is a fish found on the coast from New York to Texas, and particularly in Florida and Texas, is highly regarded as a game fish and important as a food fish. Jordan and Evermann give its coloring: "Color grayish-silvery, iridescent, often washed with coppery red; each scale with a center of dark points, these forming rather obscure, irregular, undulating brown stripes along the rows of scales; a jet black ocellated spot about as large as eye at base of caudal above, this sometimes duplicated."

I noticed specimens of this fish at the New York Aquarium very lately, but do not recall the names, though Mr. Conroy's friend quotes them correctly.

Red Trout at Pan-American.

I have at last seen the red trout of Canada alive in water. It was only a week or so ago that I said something about this fish in reply to a correspondent, and then, if memory serves, mentioned that I had made two journeys to distant lakes in Canada to find them and had failed; but I saw them in the tanks of the United States Fish Commission exhibit at Buffalo. In another tank near by are saibling or golden trout from Averil Pond in Vermont, and these saibling have been pronounced identical with the Sunapee saibling of New Hampshire. Commissioner Titcomb wrote me on his return from Canada that he had eleven of the red trout, and later that two, the largest fish, had died. I found seven still alive when I reached Buffalo, and side by side it is no wonder that at first glance the red trout of Canada is taken to be the same as the Sunapee saibling; but it may be wondered in this month of July why the trout from Canada is called red trout. The most striking difference between the two fish is that the Canada trout has a forked tail and the Sunapee saibling a square tail, and the broad white marginal fins of the Sunapee fish are absent in the Canada fish, although the latter has a fine white line on margin of some of the fins, but entirely absent on the pectorals. In general appearance the two fish are very like in shape and coloring, slender bodies and olive-greenish backs, but no one would suspect that at spawning time the Canada fish puts on a color that rivals a sunset's glow and well entitles it to the name of red trout. As the two fish will later be described by an ichthyologist who has studied them more closely, with more specimens at his disposal, than any other man, I only call attention here to the fact that visitors to the exposition may see the fish for themselves and compare them as they swim in their respective tanks, and as the exhibit as a whole is the best that has ever been made at any exposition, it will be well worth visiting for features other than the living fish.

Michigan Grayling.

One of the tanks at the exhibit in the Government building contains some live grayling from Michigan, and it offers the only opportunity that many will have to see what has now come to be a rare fish. The practical extinction of the Michigan grayling followed so closely upon its discovery that I was surprised to find such fine examples of the fish at Buffalo. As all efforts to cultivate the grayling artificially were failures, the fish seemed to

be doomed from the very first, and the scores that anglers have made and published of grayling killed must now haunt their makers. To me the short history of the Michigan grayling borders on the pathetic. Possibly I have idealized the fish until it has become something more to me than a vertebrate with fins and scales, and fills the place of a martyr among fishes. Certainly I rejoice to find that there are still enough of the grayling left to make an exhibit at Buffalo, and this gives one faith to believe that there may be streams where one may yet entice a very few with the artificial fly and have the honor of catching one of the most shy and delicate of fishes, and then return it to the water.

A Working Fishway.

A most instructive exhibit in the collection of the U. S. Fish Commission is a working model of an improved Cail fishway, the improvements being made by Wm. H. von Bayer, engineer and architect of the United States Fish Commission. It is this pattern of fishway that the Forest, Fish and Game Commission of New York is erecting in the Salmon River near Pulaski, to enable the salmon which were found there as the result of planting fry in the stream to find their way to the upper waters, from which they were barred by four dams. The model of the improved fishway demonstrates its practicability before the eyes of the visitors to the exposition. Young rainbow trout, as they are hatched and after the sac is absorbed, are placed in the water at the foot of the fishway and many make their way up through the fishway to the pool above it, and every morning they are returned to the pool at the foot, only to repeat the operation of ascending through the fishway, showing most conclusively that the fishway will perform what is claimed for it. It is a case of seeing is believing. There are many other features of the exhibit of the United States Commission worthy of extended notice at another time. A. N. CHENEY.

Tarpon Fishing.

TARPON, Texas, July 26.—*Editor Forest and Stream:* I have looked in vain for an expression from the tarpon critics on the able paper of my friend Waddell on tarpon tackle. Though I claim the honor of being his pupil, I am not prepared to follow him to the full extent of his comprehensive outfit or to allow his paper to go unchallenged as a possible deterrent to those who may wish to try the sport.

I have read his paper with pride and profit. Having undertaken to give a list, he must be excused for being comprehensive, though he may have enumerated many things which under certain conditions would be cumbersome and unnecessary. In summer time especially there is no need of hunting coat or other heavy clothing. The lighter the latter the more comfortable. I prefer to get my feet wet occasionally to inclosing them in a pair of waders. No doubt Mr. Waddell and others who can frequently enjoy the sport as he does will find abundant use of everything in his list. My lot is to be content with a few weeks in the season with the tarpon, and I know of no more enjoyable or profitable manner of spending the short time that one can snatch from more serious affairs. My object on those occasions is to throw off all care and burden and to set out with rod and reel and small valise containing a few changes and a little tackle. I fear that Mr. Waddell's list, entailing an initial expense of two or three hundred dollars, would scare the average beginner. This I know was not intended, however, for when he furnished me with a list of the outfit necessary in my case, it consisted of a \$20 reel, a \$12 rod, a Hall line No. 27, a dozen Van Vleck hooks and three dozen large barrel swivels; and with these I was content, until I saw his list and Mr. W. B. Leach's outfit, from which I propose to cull for future use—a small vise, some strong wire, wire cutter, a pair of flat pincers, a pair of round pincers, a file, a screw driver, an oiler, a sheet of emery paper and some old line. This, with my present outfit, is all that is necessary, in my estimation, for a pleasant outing.

I am glad Mr. Waddell has called attention to the fact that tarpon tackle is too light. In nineteen days and a half that I fished this summer, I broke the wire snell six or seven times; the Van Vleck hook three times; in ten days that I was compelled to use the 27 Hall line it broke three times. The balance of the time I used a Hall 37 with entire satisfaction. It is very discouraging to lose so many of the largest and most coveted fish of one's catch. Judging from the number of complaints that I have heard from all sides, even this is not a fair average of the loss occasioned by light tackle. I wish the manufacturers would take the matter into consideration and furnish a stronger article to those who desire it. The manufacturers, however, are not entirely to blame; some men will not use heavy tackle, and we are all apt to compare the lightness of our tackle with the weight and strength of the fish, paying thereby an indirect compliment to our own skill.

I have not seen Mr. Waddell's paper on where to fish. I trust he has not slighted Aransas Pass. I can give no opinion on its relative merits, having no experience anywhere else, but from what I have heard and seen, few places, if any, would have furnished me the sport that it has this season. In nineteen days and a half I landed fifty-eight tarpon, four sharks, eight jackfish and two Jewfish without any extra skill or other advantage over the ordinary every-day amateur. I never enjoyed such recreation. To my mind it is the pink of perfection. I don't know where to go nor what to do to improve on it. If you add to the above the balmy sea air and an occasional bath in the surf, it would be difficult to surpass it.

Now let me say a word in behalf of the tarpon himself. I have heard a great deal of discussion in regard to the fate of those landed on the beach. I incline to the opinion of the majority, who hold that they invariably die or are devoured by the sharks. I am inclined to think so, because of the number cast upon the shore, and because of the thumping they give their heads on the ground occasionally, causing blood to flow from the mouth. So dazed are they when returned that they cannot make their way to deep water; the boatman has generally to steer them out. Frequently they float on their backs as long as

they are in sight. Fish that are intended to be returned should not be landed on the beach. The hook should be taken from them at the end of the boat in deep water. I have done it and have seen it done in this way. When the fish is ready to land he is reeled in to the end of the boat. Then the boatman takes his gaff, passes back and holding the snell with the left hand passes the point of the gaff through the thin skin under the tongue and immediately behind the lower jaw and jabs it against the boat. Here it is easily held by the fisherman until the hook is removed. Then the boatman takes the gaff again, estimates the length and weight of the fish and sets it free. Compare the fate of this fish with the one landed on the beach and you can readily see that his chances for life are a thousand to one. In fact, except for the exhaustion of the struggle, which a few hours' rest will dispel, and a small hole in his mouth, which closes immediately that the gaff is removed, and which in a few days will heal up, he is just as he was before he struck for the bait. My boatman at first protested that this could not be done, but after a little patient coaching he was delighted to find that it could be, and frequently in half the time that it would take to land the fish on the beach.

If I have hereby obtained for the silver king at the hands of his friends more humane treatment, of which, indeed, he is so worthy, and encouraged others to try this most enjoyable and beneficial recreation, and pleased my friend Waddell, I feel grateful for having done through your good will what I set out to accomplish.

M. J. O'DWYER.

Brown Trout in the Adirondacks.

BOONVILLE, N. Y.—*Editor Forest and Stream:* A recent remarkable catch of a 5-pound trout in the waters of Mill Creek, a stream flowing through this village, and which has yielded a most prolific supply of small trout for the last century, has created no little excitement among local anglers. The creek runs into the northerly part of the village from the west and flows in an easterly direction, being one of the many tributaries of Black River, some three miles distant. In wet seasons the waters of the stream turn the wheels of a half dozen mills located in the village, but the greater part of the year the waters are shallow, especially so in the summer months. There has been no stocking of the stream for the last ten years, but catches of trout of a pound weight are not infrequent, though the average weight of those caught does not exceed 4 ounces. The largest brook trout taken from the stream heretofore weighed 2¾ pounds.

For several years anglers have brought home well filled baskets, but always with the doubtful tale of the big fellow that got away. The big fellow referred to above was captured by Dr. Webster S. Seavey, of this village, last Friday afternoon. Out of a cold spring hole he drew him with a 7-ounce rod, leading him into shallow water and drawing him thence to the shore. The bait used was an ordinary minnow. Many persons viewed the prize, which was caught forty rods east of the corporate limits of the village. Various opinions were expressed as to the variety of the trout caught. Dr. Seavey claimed it to be a speckled or brook trout, but other well-known anglers insist that it was a hybrid. The weight of the fish was 5 pounds, and length 25½ inches. It had the appearance of having been hooked in the mouth several times, the upper jaw being out of shape, and with no teeth on the left side. The upper jaw from the corner of the mouth was ½ inch shorter than the lower, the latter measuring 4 inches. The trout was of a dark color, with large red spots on sides and dark yellowish specks about the head and back, the red spots appearing on about two-thirds of the distance between head and tail. The flesh was pink in color, firm and of good flavor; in fact, similar in appearance and taste to a brook trout. It is possible that the trout at some season of high water had come up Mill Creek Stream from Balck River, and remained in the shallow waters to baffle the efforts of the many anglers who frequent the prolific waters in which it was caught.

FRANCIS A. WILLARD.

[The fish described by Mr. Willard, and of which he sends a photograph, is the brown trout of Europe, introduced into this country, and often incorrectly called German brown trout, and by the U. S. Fish Commission called Von Bahr trout, after the distinguished German who early sent the eggs to this country. A mark by which the brown trout (*Salmo fario*) can always be recognized is a pink spot on the adipose fin, for no other trout has it.]

About "Giving It Away."

ST. PAUL, Minn.—*Editor Forest and Stream:* Your remarks about giving away the good fishing spots to the outside world lead up to the practice of secretiveness in fishermen. The man who as a rule can keep a secret will suffer the tortures of a Byrnes third degree, and come out with the secret of his favorite trout stream or bass lake entombed in his breast. I think there are some fishermen who would be shot first before they would divulge the whereabouts of their particular stream. Well, in all this I presume there is the natural principle of keeping what you have. A miner would not proclaim to the world his newly found pay gravel or rich outcropping until his claim had been entered and duly filed, giving him exclusive ownership. Now the fisherman as a rule does not own his stream, and when he finds a stream back in the wilderness choked with big trout, why, he keeps as still as death about it, trusting that no one may find it out and thus will the stream remain undisturbed until a year hence.

And here is where the art of medicine differs from the art of fishing. If the physician finds some new remedy of greater service than any heretofore known, he tells his brother practitioners all about it, so humanity can be helped. Not so the angler. When he makes a discovery he keeps it to himself and sees that the rest of fishing humanity do not "get on to it."

But I have never yet found a good spot but I was willing to let the other fellow know about it, be it lake or stream—a foolish thing to do in the opinion of many, but nevertheless I have so done.

CHARLES CRISTADORO.

CHICAGO AND THE WEST.

They Got Muscallunge.

CHICAGO, Ill., Aug. 3.—One of the most successful muscallunge parties to leave Chicago this summer was that engineered by Mr. W. T. Davis, of Chicago, representative of the Kansas City Star, which party has but recently returned from the Manotowish chain of Wisconsin. The party, as made up, was something of a family affair, Mr. Davis being accompanied by his daughter and son, Mr. Budke, of St. Louis, taking along his family, and there being also in the party the Misses Caldwell, Miss Lulu Perkins, Miss Flossie Cowgill, Miss Susie Thompson and Miss Lucas. Dick Brandon, of Lord & Thomas; Mr. George Williams and Mr. John Walker, completed the list. The party made a stay of three weeks, driving seven miles from Manotowish Station to Rest Lake, and then going up the river to Manotowish Lake. They comprised, it is true, quite a number of rods, and had several days of fishing, but the results seem to be better than those of any other party that has been in there this season.

The largest fish weighed 25 pounds, and was taken by Miss Cowgill, a lady who had never before wet a fish line in all her life. She had been fishing but a short time before this fish struck, and naturally had rather an interesting time for a while. Mr. Brandon was in the boat at the time with Miss Cowgill, and in attempting to gaff the 'lunge got it only part way inboard, and then told the guide to row ashore. At this moment the fish struggled and broke away from the gaff, going again into the water for a little run. Fortunately the hooks still held, and the 'lunge was finally boated and secured.

Mr. Davis himself was fortunate in taking a fish weighing 24½ pounds, although it was 3½ inches longer than that taken by Miss Cowgill, which fish, although heavier, measured but 44½ inches, whereas that taken by Mr. Davis ran 48 inches full. Mr. Budke had several nice 'lunge, his largest being 43 inches in length and weighing 20 pounds. Miss F. Caldwell killed one handsome fish of 40 inches length and 16 pounds weight, and Miss Lucas took one weighing 12 pounds. Mr. Davis' son, F. G. Davis, killed a handsome 'lunge of 16 pounds, and different members of the party had fish of 10, 11 or 12 pounds. At one time this party, or rather three boats of the party, came down in front of the hotel at the same time, and each boat was playing a muscallunge. Fishing of this kind is not ordinary in these days on our muscallunge waters. It is thought that the water in the river was getting a little low, as the dam was open, and that the fish were just beginning to be uneasy and were moving back into the lake. The party were delighted with their trip, and purpose repeating it next year. Mr. Davis, who is the best fellow in the world among those good fellows, the newspaper men, gets up one of these big parties nearly every year. Dick Brandon, of Lord & Thomas, went along to tell them how to fish for muscallunge, and he seems to have been about the only one in the outfit who did not get any good muscallunge. Such is life.

The Waterville Bullheads.

The howl which recently arose from the village of Waterville, Minn., at the cutting off of their ancient bull-head privileges by the State Fish Commission, has resulted rather unexpectedly in favor of the bullhead-infested community. After a long and hot argument before the State Fish Commission, where a delegation of the citizens of Waterville presented a petition for relief from the too numerous numbers of bullheads, the Commission finally granted permission to the citizens of Waterville to resume their former industry of shipping bullheads, this industry, however, to be carried on only under a special bullhead inspector. Mr. L. L. Blair, of Waterville, has been appointed to this onerous position and will receive his pay from the citizens. The latter claim that they ship \$1,200 worth of bullheads every month, and submit that the State Fish Commission will cost the life of every able-bodied citizen of Waterville unless the latter be permitted to continue in their favorite calling of shipping this succulent product.

Western Men on the Cascapedia.

Messrs. Watts Humphreys and C. E. Davis, of Saginaw, are just back from ten days' fishing on the Cascapedia River. Mr. Humphreys had the good fortune to kill two handsome salmon, and to raise three others. This was unexpected luck, for the salmon season was practically over. The gentlemen went for the trout fishing and had magnificent success. The largest trout taken was 5½ pounds, but each had many which ran from 4 to 4¾ pounds. These gentlemen were guests of Mr. W. B. Mershon, of Saginaw, who in the following week will probably send down to his lodge on the Cascapedia his friends, Major Lyons and wife, also of Saginaw. Mr. Mershon will hardly be able to attend his guests, a multitude of business engagements making this impossible.

Must Not Seine.

Mr. Nat H. Cohen, President of the Illinois Fish Commission, issued the following notice regarding the observance of the new Illinois fish law, for which as great publicity as possible is requested:

"The Board of Fish Commissioners have instructed the various fish wardens of the State to prosecute all persons seining or netting fish in the rivers of the State and other waterways which are not used for commercial navigation. This action of the board is taken under Section 1 of the act of 1899, still in force, according to the following opinion by one of the most eminent attorneys of the State:

"The act of May 11, 1901, prohibits all kinds of fishing except with hook and line between the 15th day of April and the 1st day of August, and for bass, pike and pickerel at all times, except with hook and line. The provisions of this act leave in full force and effect the provisions of Section 1 of the act of June 11, 1897, prohibiting fishing at other times, except in accordance with the provisions of that act, and it is therefore lawful between the 1st day of August and the 15th day of April to seine with meshes not less than 2 inches square in the waters of the State used for commercial navigation."

Chicago Fly-Casting Club.

The following are the records of the Chicago Fly-Casting Club on the date of July 27, also for the re-entry events of July 13 and July 27. The next contest of the club will be held on Aug. 10.

	Long Distance Fly. Feet.	Accuracy and Delicacy. Per Cent.	Bait Casting Per Cent.	Delicacy Bait. Per Cent.
H. H. Ainsworth.....	80	90 5-6	90 1-2	..
I. D. Belasco.....	88	88 1-3	97	..
I. H. Bellows.....	104	92 2-3	94 1-5	..
L. I. Blackman.....	80 9-10	..
Re-entry, July 13:				
Bellows	110	95 1-6	89 3-10	97 1-6
Bellows	94 2-3
Belasco	92	84	88 1-2	94 2-3
Belasco	90 1-6
Blackman	91	81 1-6
Blackman	89 9-10	72 2-3
Church	85	..	72 2-3	93 1-3
Robinson	85 9-10	88 1-6

F. S. Smith.....	76 8-10	..
Re-entry, July 27:				
Hascall	93 5-6
Perce	88 1-2

Winning scores: Long distance fly, I. H. Bellows, 104 feet; accuracy and delicacy fly, F. N. Peet, 95 per cent.; bait-casting, I. D. Bellows, 97 per cent.

Got Some Rainbow.

Mr. H. G. Hascall, one of the most enthusiastic anglers for the rainbow trout which we can furnish in Chicago, is recently back from a successful trip on the Père Marquette River of Michigan. He had some splendid fish, one running over 3 pounds, and is as enthusiastic as ever over the magnificent sport furnished by this fish. The rainbow trout is certainly coming up very rapidly in the opinion of Chicago anglers.

The St. Joe as a Bass Stream.

Everybody in Chicago knows where the St. Joe River is. Its name in full is the St. Joseph River, and it flows into Lake Michigan well toward its foot, opposite Chicago. This is the stream which was formerly ascended by the voyageurs who reached the Mississippi by way of the Illinois and the Kankakee, the portage being near South Bend, Ind. The St. Joseph River is a clear and bright stream, and has always been a good bass water, although punished hard enough by local and visiting anglers. Flowing into Lake Michigan, it no doubt receives a great many of its fish from that lake, which, contrary to the understanding of many anglers, still contains a good many black bass, although no one fishes for black bass in Lake Michigan. Mr. F. N. Peet and a friend returned last week from a bass trip on the St. Joe, and they report very fine sport indeed, killing a couple of dozen of nice bass each day they fished. They used spoon hook and pork rind for bait, and found the fish eager and gamy, taking many bass over 3 pounds, and some between 4 and 5 pounds. They describe the river itself as being lovely as an angling stream. They took boat at the station on the Michigan Central Railroad, which is located at the St. Joe crossing, and thence ran down stream in that most delightful of all angling fashions, drifting with the current.

Death of Mr. Woodford.

Mr. Philip R. Woodford, generally known among Chicago sportsmen as Phil. Woodford, died this week at his country home in Glencoe. Mr. Woodford for many years was director of the Wells-Nellegar Co., wholesale hardware dealers, and had always a great deal of fondness for the sporting goods department of the trade. He was a lover of the sport of upland and marsh, as well as an enthusiastic hunter of big game, and an angler of skill. More than all this, he was a man of that big and broad nature which is so often found among sportsmen, a lovable and unselfish soul, and withal one much to be missed by his many friends.

Cannot Sue a State.

Game Dealer E. W. Davis, of Detroit, Minn., during the former administration of Executive Agent Betner, got a judgment against the State of Minnesota for \$100, with costs of \$81. The suit was brought on account of seizures of game in the northern part of Minnesota, which Davis claimed, and apparently proved, were made illegally. Now Mr. Davis wants his \$100 and costs, and inasmuch as the matter was about game, he writes to the present executive agent, Mr. S. F. Fullerton, to pay to him the \$100 and costs. Mr. Fullerton has referred the matter to the Attorney-General, who advises Mr. Davis that the State cannot be sued, and that his judgment is not worth the paper on which it is written on the docket. Mr. Fullerton has also advised Mr. Davis in accordance with the foregoing decision. He has suggested to Mr. Davis that he levy on the Attorney-General himself or the person of the Governor of the State, or take such action as may seem to him desirable in the premises. It would seem that there are certain advantages in being a State which can sue and cannot be sued.

New Minnesota Hatchery.

Work was commenced this week on the Willow Brook State fish hatchery, near St. Paul, Minn., which, when completed, is to be one of the most complete hatcheries in the country. There is abundance of clear, cold water for this hatchery, and the location is perfect. It is thought that the construction will be completed by November. The State Fish Commission has in the lower pond at present about 6,000 steelhead and rainbow trout, and about 1,500 black bass in the upper pond. The new ponds which will be constructed will hold much greater numbers of graded fish. The grounds about the buildings will be parked and well cared for, so that the entire hatchery grounds will form a most beautiful and pleasant place for visitors.

Will Take Sooners' Wagons.

It was the State of Minnesota that inaugurated the somewhat drastic but very effective protective measure of confiscating the dogs and guns of sooners caught in the act of hunting before the opening of the season. This year the Commission has decided upon yet more herodian measures. They have decided that if a party is caught shooting birds out of season, not only the dogs and guns will be taken from them, but also the wagons in which they are traveling. The same rule will be applied to any big-game shooters. Dogs, guns, boats and entire camp outfit, even provisions, and horses and wagons, will be seized by the warden. This will certainly make times mighty interesting for the sooners who go out to kill chickens in the egg shell or deer in the red coat.

HARTFORD BUILDING, Chicago, Ill. E. HOUGH.

The Sea Trout of Canada.

Editor Forest and Stream:

In Hallock's Sportsmen's Gazetteer is a description given by me of a forked-tail speckled trout, found in a little mountain lake called Coon Pond, in the eastern townships of Canada. I have recently caught this same variety of trout in Lake Manitou some sixty miles north of Montreal. These fish do not run large, seldom over a pound in weight. They are a slim, forked-tail trout, dark back, silver sides, white belly, with a fine but sharply defined jet black lateral line running from the tail to the gills. On each side of this line are several rows of light colored spots about the size of a small pea, while near the tail these spots are oblong in shape. There are also a few—very few—faint crimson spots on the fish, and numerous black spots about the size of a pinhead.

These fish are called by the natives white trout, and are as gamy as possible for a fish of that size to be. It is a favorite trick when hooked to roll themselves up in the casting line and tear the fly out of their mouth. Early in the season they were caught with bait, but after the middle of May they rose freely to the fly. The Montreal and white-miller are the favorites.

The water of Lake Manitou is cold and deep, and also contains the ordinary *S. fontinalis*. The fins of this white trout were when seen, about June 1, tinged with red.

The Coon Pond trout spawned after the ice had formed late in December, and I presume that the Manitou fish spawn at the same season.

Kindly place this fish for us. STANSTEAD.

After reading Stanstead's description of the forked-tail trout I naturally turned first to Hallock's Gazetteer for the description of the forked-tailed trout from Coon Pond, but do not find it in my copy, which is the fifth edition, printed in 1879. I will be glad if Stanstead will give me the page on which mention is made of the fish he calls the Coon Pond trout. I am strongly inclined to believe this trout from Lake Manitou is the "sea trout of Canada," about which I have written in this paper on several occasions.

My first introduction to the "sea trout" came from a specimen sent to me by Mr. J. G. A. Creighton, from Ottawa, though the fish itself came from Lac de Marbre, in Ontario. This fish was pronounced by Prof. Garman a new species, and I was asked to name it, and did name it after Mr. Marston. Other specimens were sent to me and spoiled en route. I made two journeys in search of red trout in Canada, and the fish turned out to be male *fontinalis* in breeding colors, although in each instance it was promised that I would see a "red trout" with forked tail. Finally specimens came to me (also spoiled) from a new region, the Fourile Club waters. Then they were found in St. Bernard Club waters. Really, to be correct, I think they were discovered in these waters before they were found in any other waters, except it be Lac de Marbre. Specimens were sent from there again and again, chiefly to be spoiled on the way; but last winter Mr. Simpson, who has a preserve adjoining the St. Bernard Club waters, brought six fine specimens to me, and I got them off within an hour of their receipt to Prof. Garman, and I wired to Denton to go to Cambridge and paint them. This he did, and I received colored drawings of the young and adult.

Last fall Commissioner Titcomb, of Vermont, went to the Simpson preserve to hatch the fish artificially, and again this year to fish for them for the Pan-American Exposition. He was successful; the fish are now alive in the fish exhibit, Government Building, Buffalo. The fish that Denton painted will make an automobile shy and jump the fence should it meet them on the turnpike, and one never need to ask why they are called red trout, once the picture is exhibited. It must be remembered that Denton's paintings are of breeding fish in November. The paintings will be reproduced in the Fifth Annual Report of the Forest, Fish and Game Commission of the State of New York. Prof. Garman will have a specific description of the fish, and Commissioner Titcomb will have a popular article. Prof. Garman has not yet given out his final opinion of the red trout, for which he has compared them with the big specimens of the Sunapee saibling and the Aviril Pond saibling, the same species. He wished small immature Sunapee fish for comparison before finally describing them. Stanstead's description of spawning time, appearance and habits fit the red trout in all particulars, except the deep red coloring, and that is peculiar only to spawning times, so that it is more than likely that his trout is the red or Marston trout.

A. N. CHENEY.

Fyke Nets in Rockaway Pond.

STATE GAME PROTECTOR OVERTON, of Suffolk county, N. Y., has been called into Nassau county to stop illegal fyke netting in the East Rockaway Pond. After spending several days and nights there, he succeeded in securing evidence sufficient to arrest Wm. Webster, John B. Smith and Peter Terrell. The two former pleaded guilty last Tuesday when arraigned before Justice Hawkins, of Lynbrook, and the justice let them off upon the minimum fine of \$10 each. Terrell has elected to stand trial, and will probably have to pay much more.

Two Weeks Among the Thousand Islands.—III.

(Continued from page 87.)

Ninth Day—Yates' Bay and Surroundings.

THIS water lies about a couple of miles above the back of Sir John's. We get up at Foley's, have an early breakfast and start for Yates' Bay. The angler can either make straight for the bay, under sail, if the wind is favorable, or he can row and troll along the Canadian mainland. It is good fishing for pickerel all the way. Yates' Bay is a mighty good piece of water. Every year a number of muscallonge are taken from it; they are generally taken just off the smooth rock at the lower outer point. About a mile above there is another bay. Muscallonge are often taken alongside the quarry; the water is deep close up to shore. Just across the channel is Milton's Island, at the foot of which is a small flat, a

great place for large pickerel of 12 or 15 lbs. The choicest bit of muscallonge water in the River St. Lawrence now before the fisherman; but it requires locating, as it is the end of the reef running out from Sir John's. At the end there is a cross-reef forming the letter T. You can either strike the reef and follow it out to the end, two miles from the head of the island, or you can locate

it by bringing the church spire on Sir John's Island in line with the point on the one hand and directly looking up the valley at the back of Yates' Island on the other. The cross reef lies in about 16ft. of water, and is the home of some mighty monsters—in fact, some of the largest fish ever taken out of the St. Lawrence have been taken from this reef, and we believe never a small one. It is also a great bass reef. On one occasion we were fishing it for bass and catching them just as fast as we could tire them out on a very light rod and tackle. All at once this ceased, there was not a bite, and directly the head of a muscallonge showed above water. We lifted anchor, put out our trolling rigs and in half an hour were playing a pair that scaled 34 and 35 lbs. each. Half an hour after we got them into the boat and the place had quieted down again, the bass came on and remained feeding in first-class style until we had got all we wanted. Wilson's Bay sometimes yields some very fine fish, both pickerel and muscallonge.

Tenth Day—Boxon Harbor.

After fishing the reef at the head of Sir John's, we can go up to Knapp's Point and stay the night there, with fair recommendation, go over to Harris' with but poor accommodation, but close to our ground, or go back to Foley's and make an early start in the morning for Boxon Harbor, the old stand-by for muscallonge. The principal grounds in Boxon Harbor are just above Harris', known to the guides as "off the dining grounds."

ELEVENTH DAY—ABRAHAM'S BAY.

side of Oak Point. From the point a reef runs down. At the point of the reef is a bit of muscallonge water. On the inside of this reef, and all along the shore, is a bit of good bass ground. Some distance on there is a barn to be seen; take this barn as a starting point and bring in line the little hut showing amongst the trees on Holliday's Point. This run is the only bit of good muscallonge water in the bay, although they are occasionally taken on the outside of this line.

We will now go back to Oak Point and troll down along the shore of Sir John's; it is good pickerel ground all the way. Just opposite Holliday's Point is the celebrated water known as Abraham's Bay. It is only a small place, but has produced a vast number of muscallonge, and some bouncers at that. There are two runs in this bay:

First—From the upper point along the shore down to the cheescry; the boat should run about 60ft. from shore, just where the weeds join the bouldery bottom. Most of the big fish come from this run.

Second—Take the little white hut on the lower point and bring in line the upper point. Just about the center of the mouth of the bay is a large, deep weed bed. This is the spot where you may expect to find them. It is as well to try all the way out to the channel from the mouth of the bay, as often a big fellow is found lurking around outside of the weed bed.

Twelfth Day—Foot of Long Island.

From Abraham's Bay we will cross the channel and strike Long Island again. About a couple of miles down is Joy's Bay, a deep piece of water. From the upper point, where there is a farm house, a large reef runs out. All around the point of this reef is muscallonge ground, and many a fine one has been carried home to Clayton from here. The bay itself is full of large pickerel. About a mile below Joy's Bay is McFadden's Bay. At the lower point a reef runs up all around, and inside of this reef is A1 bass grounds. Outside of the reef is a flat in 70 to 75ft. of water. It is always questionable what you will get from this flat. We have taken a couple of 35-pounders from it one day; 14 pickerel another, every one over 10 pounds and the largest 16 pounds; again we have trolled it without getting a strike of any description. This flat continues in alongside the upper shores and 20 feet from shore it is 50 feet deep. One of the largest muscallonge ever taken at the Thousand Islands was taken in the corner of the bay, 50 feet from the barn; it went something over 60 pounds, as well as we can recollect. At the foot of the island there is good pickerel fishing among the old piers. At the Light House point there is always the possibility of a muscallonge.

We have now given twelve charts and twelve days' fishing, but two months could be well spent at these grounds.

We have given them as following each other; but circumstances might suggest alterations in the rotation of fishing. For instance, if a nice southerly breeze were blowing on the second or third day we would hoist sail and make either Boxon Harbor, Abraham's Bay or back of Sir John's. As winds are variable, we should avail ourselves of the wind, and take the ground it would carry us to. You would then arrive with a guide fresh and ready for work, instead of one who has spent half a day's energy in getting there.

J. CHURCHWARD.

Cocagne River Trout.

MONCTON, N. B.—Editor Forest and Stream: We have in our neighborhood a stream known as the Cocagne River, emptying into the Straits of Northumberland. Years ago this was a famous sea trout river, but the erection of a saw mill and dam at the tideway prevented the trout from ascending the stream; but quantities are still to be caught at the foot of the dam as large as two pounds in weight, and there are plenty of small trout to be caught on any part of the stream above the dam, but these rarely exceed half a pound in weight, the greater number being mere fingerlings.

The river is some twenty miles in length and is well shaded, running almost its entire length through unsettled land. Within twelve miles of the city there is a stretch of natural meadow of two or three miles through which the river flows, forming splendid pools and still-waters of an average depth of 4 feet, and in the deeper holes perhaps 8 feet of water may be found. Most of these pools are well shaded with alders and birch. I understand that it was at this meadow that the best fishing was to be had fifty years ago, before the dam was erected.

The distance from this point to the head of the tide where the saw mill is situated is about ten or twelve miles. A year or two ago a driving dam was put in a short distance below the meadow referred to, and helps to deepen the water at this point.

The dam is only used in the spring to assist in driving the lumber, and this lumber is always out long before the sea trout strike in. There is no sawdust in the stream or tideway. The mill at tideway is the only one on the river, and of late years has been run by steam power, the dam being only used to form a pond for log booming purposes.

The height of the saw mill dam is about 15 feet, and the driving dam is some 8 feet high. We are thinking of putting fishways in both of these dams, and I shall be obliged for your opinion as to the best fishway for our purpose, and also whether you think the fish will return to their old haunts if thus enabled to do so. If sea trout spawn were put in the stream at the meadow referred to do you think the fish will return to this portion of the stream after they have visited the salt water?

The small trout in the stream are apparently the same stock as the sea trout. Do they go over the dams and are unable to return, or will they not grow any larger than the size mentioned, say half pound in these waters?

J. W. Y. S.

To begin with, the ordinary sea trout of Canada is the common brook trout (fontinalis), which has acquired a sea-going habit, and while at sea and on its return journey to fresh water has a silvery livery overlying its spots and spangles, but this silvery coat wears off after the fish has

been for a time in fresh water again. This fish has a square tail, whether it is for a time sea trout or common brook trout. There is another sea trout, also a char, found in the Trinity and other rivers, which has no spots, and has a slightly forked caudal fin. This may be the Greenland char (Stagnates), or the Arctic char (S. alpinus arcturus), but in all probability the sea trout of the Cocagne River is the common brook trout that has been to sea for change of food. The building of fishways in the dams that have shut the trout out of their original habitat will without doubt restore the fish to their accustomed haunts and breeding places, and it will not be necessary to plant the sea trout above the dams after the fishways are constructed, for they will very naturally seek the upper waters of the stream through the fishways.

The Rogers fishway is a most excellent fishway, and it accomplishes its purpose. In fact, the most timid of fishes, the shad, will pass through a Rogers fishway, and where a shad will go any fish will go. The Rogers fishway would cost, approximately, \$3,500 in a dam 15 feet high, but specifications might change these figures somewhat. The improved Cail fishway is of a different construction, and costs less for its erection. The improvements are those made by the engineer of the U. S. Fish Commission, Mr. Von Bayer. The State of New York is now erecting Cail fishways in the Salmon River for the passage of salmon, and when they are completed I will say more about them.

A. N. C.

Boston Anglers.

BOSTON, Aug. 5.—An Allen's Mills, Me., report gives the taking of a salmon of 12 pounds weight. The fish was 30 inches long, and was taken by Mr. F. B. Morgan, of East Orange, N. J. This is a remarkable fish for Clearwater Pond, considering that these waters have been stocked with landlocked salmon only a few years.

The Megantic Preserve management is after the person or persons guilty of killing a deer on their lands this summer; also a moose, that has been found dead in the woods. A reward of \$50 is offered. L. O. Crane, who is still summering there, with Mrs. Crane, writes that the fishing is holding out remarkably well in Big Island and other ponds. Salmon fishing is promising great things, the way restocking and protection is being carried out. The recent cooler weather has helped the fly-fishing at Moosehead Lake. Good black bass and white perch fishing are still reported from Lake Pushaw, near Bangor. At Sebasticook, near Newport, Me., great bass fishing is reported. The biggest landlocked salmon ever taken at Green Lake was brought down to Bangor the other day by William Givern. It was 29 inches long and weighed 13 pounds.

The Massachusetts Fish and Game Commission has just issued the following order in regard to Sunday fishing. The order is especially addressed to the wardens and deputies:

"By order of the board, it is not deemed incumbent upon the commission to attempt the enforcement of the Sunday fishing law, and prosecutions under this law now pending will be withdrawn. This is not to be understood as preventing the arrest of parties fishing on Sunday in ponds closed to fishing on that day under chapter 208, Acts of 1897, or in brooks wherein fishing is prohibited on Sundays under chapter 284, Acts of 1900. Until otherwise ordered, the deputies of this commission will not attempt to prevent trout fishing during August in any part of the commonwealth. Deputies are earnestly enjoined to carefully observe this order."

The trouble about enforcing the Sunday fishing law seems to have largely grown out of the persistency with which harbor and other coast line salt water fishing has been indulged in on Sunday. Parties go out every Sunday when the weather permits, and during the smelt fishing season persons boldly went out with their tackle, taking the South Shore trains and electric cars. Now this fishing can be followed on Sunday without fear of arrest.

Mr. Ward O. Perkins, of Boston, summering at Camp-ton, N. H., is reporting a good trout record, taking 22 one day and 29 another.

SPECIAL.

Rangeley Lake Fishing.

BOSTON, Aug. 3.—Mr. T. J. McDonald, of Lowell, has just returned from a trip of eight days to his new camp at Black Point, Mooseluckmagantic Lake, Me. He was accompanied by a brother-in-law. They fished in deep water, and besides all the trout they wanted for the table, they took twenty-two good ones to bring home.

From Smithfield, Me., ponds I have reports of white perch biting very well, indeed. At North Pond recently Frank Cotton, a local fisherman, made a catch of a 12-quart pail full of perch in less than half a day. At Lake Auburn they continue fishing, and a salmon of 4 pounds and one of 3 pounds were reported taken last week.

Now the Rangeley guides, the hotel keepers, and the old-time sportsmen are in somewhat of a wrangle. The Fish and Game Commission has been petitioned to stop all fishing in Rangeley Lake, with bait or spinners—all trolling and "plug fishing," after July 1. In other words, no fishing is to be done on that lake, except with artificial flies, after July 1 of each year. Meetings are being held, and the discussion is warm. The advocates of the request say that the fishing in Rangeley Lake is rapidly "playing out"; whereas, if only fly-fishing were allowed after July 1, the fish would increase and the sport be much greater. On the other hand, the friends of trolling and bait fishing say that the trollers and bait fishers pay them a great deal of money, both as guides and hotel and camp keepers, and to stop this fishing altogether, even after July 1, would mean a great loss to them, and a loss of pleasure to the fisherman. They say that it would be particularly hard on women and old men. The women hardly take kindly to fly-fishing; some of them never can learn. A number of old fishermen, who have visited Rangeley Lake for years, for the sake of trolling and bait-fishing, say that they can never learn fly-fishing. The petition also calls for the screening of the outlet of Rangeley Lake, to prevent the fish from running down into the lakes below. This is likely to meet with a good deal of opposition from guides and camp owners interested in the lakes below.

SPECIAL.

yards further on and a little to the right. These clumps of weeds are great spots for muscallonge. We have mentioned two spots in Boxon Harbor, but that does not take in all the fishing; in fact, muscallonge are annually taken all over the bay; but most come from the places mentioned. As a bass ground Boxon Harbor has but few equals. Commencing in under Knapp's Point, along

TWELFTH DAY—FOOT OF LONG ISLAND.

the clay banks, and all the way down to Harris', is excellent ground. Just inside Oak Point, alongside the neck of land, is a long, wide reef in about 8 to 10ft. of water. When the bass are on the reef no one needs to go any further than this reef for all the bass he wants to catch. But it is quite a common thing on this reef to have a muscallonge dispute your right to the game even after you have hooked it. The largest muscallonge we ever got hold of in Boxon Harbor was in this way: We were trolling along the reef when a bass took the spoon; when within 15ft. of the boat the musky took the bass. We let him have it and after 15 minutes gave him a good, rattling strike. This bait weighed close on 5lbs.

Eleventh Day—Abraham's Bay and Surroundings.

In this day's fishing we have some thoroughly good bits of water and a great deal only medium. We will commence at Holliday's Upper Bay, directly on the other

Canadian Angling Notes.

THE outlook is very bright for the fall fishing season, according to the reports of the various fish and game clubs in this district. Some ten parties of Americans are already booked for this month at the club house of the Tourilli Club, and a large number of members of the Triton, Metabetchouan and Nomantum clubs are expected shortly at headquarters. Mr. Nathan Bill, of Springfield, has joined the Iroquois Club, and will be at his camp on the club's preserve in the course of a few days.

Since the subsidence of the extreme heat, the trout in some of the northern waters are again rising to the fly, and a catch of fish running from 1 to 3 pounds each is reported from some of the smaller lakes in the vicinity of Lake Edward.

The Grande Décharge continues to yield very fair sport to ouananiche fishermen, and some beautiful specimens of the fish have recently been exhibited in the windows of the local fishing tackle shops.

The Marquis de la Gaudara, of Rome, who is on his way to Manitoba and the Northwest for the fall hunting, has gone to Lake St. John to fish for ouananiche while awaiting the arrival of European friends. Last winter the Marquis hunted in Newfoundland, and next year he will go to Alaska.

Lake St. Joseph is much frequented at present by bass fishermen, and the sport afforded is extremely good. Trout fishing ought to be splendid in the Lake Edward district by the middle of the month.

Salmon fishing during the latter part of the season has been exceedingly poor, and in some of the larger streams it has been poor all summer. This is the substance of the reports from the Ristigouche, the Cascapedia, the St. Johns of Gaspé, the York, the Natashquan and the Nepisiguit. The fish are by no means scarce. On the contrary, they have been seen by hundreds in all the rivers. But on account of the absence of rain and the extreme heat, producing exceptionally low water, the fish were so sluggish that they absolutely refused to look at the fly. In the Moisie, the Trinity, the Mingan, the Pabos and Grand River the fishing has been fair.

I hear that Mr. J. J. Hill has been let the St. Paul or Esquimau River from the Quebec Government for \$500 a year. Mr. Hill also pays \$3,500 a year for the St. Johns on the North Shore.

It will be good news to anglers that the Dominion Government has in preparation a series of revised regulations regarding the size of game fish, such as black bass, trout, etc., to be taken by sportsmen, as well as the limit of number to be taken each day during the season. In order to frame regulations upon these and similar points, a large amount of information is being gathered, throughout Canada, and a general desire has so far been expressed that such regulations should apply to all the Provinces. When full reports have been received from all of them, effective regulations will be at once promulgated.

E. T. D. CHAMBERS.

QUEBEC, Aug. 3.

White Landlocked Salmon.

THE stories of the "white trout" that are given to the public from time to time through the medium of the press are regarded by anglers generally somewhat in the light of fish stories or fairy tales. But the United States Fish Commission's exhibit at Buffalo contains twenty white landlocked salmon. From their birth at the Green Lake Station of the Commission more than two years ago these beautiful creatures have attracted widespread attention, which now culminates at Buffalo, for which place they were destined almost from the beginning of their strange career. Sedulously cared for and guarded against their many enemies, they have developed into fine specimens of the ouananiche, gifted with all the beauty, endowed with all the courage and strength which make them so much sought for in their native haunts. In one respect only—that of color—do they differ from their brethren of Maine and Canada lakes; the usual neutral color is replaced by a dazzling, silvery white, which in some of the specimens takes on a light golden hue, forming a most striking background for the customary black and red spots.

These beauties have had an unusually eventful career; the striking color that made them so attractive to sight-seers in their old home "down in Maine" made them a shining mark for their natural enemies. During the winter of 1899-1900 minks somewhat lessened the original number. In February of the latter year ten of them were sent to Boston, where they were the feature of the fish exhibit at that most successful Sportsmen's Show; the rest were forwarded to the New Hampshire station for safe keeping. Here again their strange color was the means of their undoing. A monster turtle took up his residence in the large pond in which they were placed along with a number of their more soberly garbed brethren, and before his presence was discovered by the attendants a few more of the albinos had been destroyed.

Albino fry are so rare as to attract attention in the hatchery troughs. These freaks—for freaks they are—rarely attain any size or age.

WILDWOOD.

Photographing a Grouse.

WATSONTOWN, Pa., Aug. 2.—I inclose two photos of a ruffed grouse on her nest, which were taken during a recent outing in camp on the mountains near Trout Run, Lycoming county, Pa. The nest was located about 50 yards from our cabin, and was discovered shortly after we arrived. We observed it daily for nearly two weeks, when, upon going to it one morning, the grouse had disappeared, leaving no trace—not even the shells of her eggs. We are somewhat puzzled to account for this, and would like some one better informed on the habits of this game bird to explain.

The pictures were very difficult to obtain on account of the thick underbrush. One shows the grouse fairly distinctly, and we value them as rare representations of this very shy bird.

C. C. F.

Long Island Weakfish.

THE weakfish are in Great South Bay in immense numbers, and parties going out from Sayville have made good catches.

San Francisco Fly-Casting Club.

MEDAL contests, series 1901, Saturday, contest No. 8, held at Stow Lake July 27. Wind, strong west; weather, foggy:

Susquehanna Bass.

SAYRE, Pa., Aug. 2.—Nathan Hanford, Edward Ingalls and Leroy Van Kirk, of Ithaca, N. Y., were in Wyalusing one day recently and took from the Susquehanna 100 black bass, the largest weighing 4 pounds. The water is now in good condition, and some fine creels of bass should be reported from the Susquehanna during the next fortnight.

On these same waters, between Athens and Ulster, a Mr. Little and friend took forty-five black bass one day last week, and another local angler is credited with a string of twenty-five for one day. As a matter of fact, good bass fishing now abounds on the Susquehanna from Athens to Wyalusing. Small live bullheads constitute the most effective bait for river bass, minnows and grasshoppers and helgramites coming next in order.

From Owego Creek word comes to me that not a few fine California trout are being caught in that stream. A few exceptionally large trout of this variety are said to have been recently caught.

A line from Union Springs, on Cayuga Lake, tells me that splendid perch fishing is now being enjoyed at Canoga, opposite the Spa. Trolling for pickerel is also bringing satisfying results just now at Canoga.

M. CHILL.

Florida Tarpon.

TARPON SPRINGS, Fla., Aug. 2.—I inclose clipping from Tampa Weekly Times. It has a fish look, but may be true:

"County Treasurer Isbon S. Giddens was one of a party that spent a short time at Sarasota this past week, fishing for the beautiful silver kings. He put in twelve hours and a half fishing there, and landed seventeen fine specimens of tarpon. The waters are literally alive with these fish around Sarasota, and so many were never seen there before."

Certainly tarpon were never so plenty in this vicinity in the seventeen years that I remember. And, alas! they are the only fish one can catch here now. We have had so much rain, that all other fish are off for deep water. Well, it's too warm to fish, anyway. We have had it up to 96 several times this summer, and once up to 98, but never a sunstroke, and when I look over the New York papers, telling of prostration, sunstrokes and death, I am reconciled to Florida. Everything is growing, the birds are singing, and it's cool enough in the shade.

TARPON.

The Insinuating Hagfish.

IN Current Proceedings of the United States Museum Dr. David Starr Jordan gives this description of the hagfish, a marine, lamprey-like animal that burrows into the flesh of fishes on which it feeds:

The hagfish fastens itself usually on the gills or isthmus of large fishes, sometimes on the eyes, whence it works its way very rapidly into the inside of the body. It then devours all the flesh of the body without breaking the skin, so that the fish is left a living hulk of head, skin and bones. It is especially destructive to fishes taken in gill nets. In gill nets, in summer, these empty shells of fishes are often obtained. When these are taken from the water the hagfish scrambles out with great alacrity. It is thought that the hags enter the fishes after they are caught. A fish of 10 to 15 pounds weight will be devoured by them in a single night.

The Tuna in Honolulu Waters.

A HONOLULU paper of recent date has an article about tuna fishing, saying that these fish are numerous outside the reef at that port. The Hawaiians call them the ulua, and they are said to abound in the deep water around the islands. Hitherto it appears they have not attracted the attention of sportsmen, but the Honolulu market is supplied with them by the Japanese net fishermen. Considering that these fish are in American waters now, perhaps it is in order for Mr. Cheney to investigate and let the readers of FOREST AND STREAM know more about them (if he has not done so heretofore). Catalina Island seems to have had a monopoly of tuna fishing, but if the ulua is the same fish we may soon have accounts of American sportsmen playing them about the Hawaiian reefs.

RANSACKER.

Wild Parsnip.

Editor Forest and Stream:

In your issue of July 13 I find this in "The Woodman's Wild Garden": "The wild parsnip, found in May and June growing along water edges, is fully as palatable as the cultivated variety, and is an excellent appetizer, fried or browned in the camp spider."

I have always been led to believe that the wild parsnip is poisonous, and that the cultivated variety would run wild and also become poisonous the second year. Now is this another tradition handed from our grandparents, with no foundation in fact, or does your correspondent affirm something he knows nothing about?

I have never tried the wild parsnip, and if it is not poisonous, I have lost a great opportunity, as the wild ones grow larger than the cultivated ones just beyond my garden fence.

MRS. EMMA JAUQUES.

A British Columbia Rainbow Trout.

IN the Victoria Daily Colonist Mr. Walter Langley, of Ashcroft, reports his capture of a rainbow trout weighing 22 pounds 4 ounces, and measuring 37½ inches from tip to tip, with a girth of 20 inches. It was taken on a silver spoon, and thirty-five minutes were taken to land it.

Mosquitoes, Midges, Et Al.

HERE are some receipts from "Hints and Points for Sportsmen" and other sources. We give them all because one remedy may be more readily secured than another. If you have anything better than these send it in:

Mosquito-Proof Tent.

The top is formed with a light hoop, about 2 feet in diameter, covered with muslin, like the head of a drum. Two strong pieces of tape are sewn from side to side of the hoop, crossing each other at right angles, and at the center, where they meet, is attached a thin rope, about 10 feet long. To the muslin at the rim of the hoop is sewn a quantity of coarse cheesecloth or "tarlatan," descending so as to form a bell 6 feet in height and 8 feet in diameter at the ground. Around the lower edge, at intervals of 2 feet, are small tape loops for pegging out wide when two or three people wish to sit inside. The whole article weighs only about 2 pounds, and can be folded flat, so as to go inside a bag when traveling. When required for use the rope at the top is thrown across the branch of a tree and drawn up just enough to let the lower edge of the cheesecloth or "tarlatan" rest on the ground. Danger from fire can be avoided by soaking the screen in a solution of tungstate of sodium.—J. J. M.

Head Mosquito Net.

Make some tarlatan into the shape of a bag, open at both ends, from 15 to 18 inches long and 2 to 2½ feet in circumference. A piece of fine elastic cord is run in the hem at the top, to clasp the body of the hat, while a similar cord in the hem at the bottom secures it around the neck. The hat rim keeps it out of the face. If a low-crowned hat is worn the bag may be closed at the upper end.

Mosquito Gauntlets.

Sew linen cloth cuffs to the wrists of a pair of gloves, and run an elastic cord in the hem at the top of the cuff to clasp the arm underneath the coat sleeve.

Mosquito Dopes.

Make a preparation of 3 ounces sweet oil and 1 ounce carbolic acid. Let it be thoroughly applied upon hands, face and all exposed parts (carefully avoiding the eyes) once every half hour, when the flies are troublesome, or for the first two or three days, until the skin is filled with it, and after this its application will be necessary only occasionally. Another receipt equally efficacious is: Six parts sweet oil, 1 part creosote, 1 part pennyroyal.

Simmer together over a slow fire 3 ounces pine tar, 2 ounces castor oil, 1 ounce pennyroyal oil, and bottle for use. Rub it in thoroughly at first, and replenish it on the exposed skin from day to day.—Nessmuk.

Fox's Fly Dope.

Oil pennyroyal, oil peppermint, oil bergamot, oil cedar, F. E. quassia aa zi; gum camphor ziv, vaseline, yellow, zii. M. S. Dissolve camphor in vaseline by heat; when cold add remainder.

Mosquito Smudges.

Evaporate a piece of gum camphor, one-third the size of an egg, in the tent or room by placing it in a tin vessel and holding it over a candle or other flame, taking care that it does not take fire.

From the side of a fallen cedar log, dry but not rotten, cut strips of bark about 6 feet long, enough to make a bundle a little larger than two hands can span. From the white inner bark of a growing cedar tree make long, pliable strips, with which bind the dead bark at intervals of 9 inches into a compact mass. Ignite one end of this and leave it to smudge in the tent like a cigar. The smoke is fragrant and agreeable. When the mosquitoes are routed let the smudge remain all night at the tent door and none will enter.

Our Dumb Animals, which does not believe in killing mosquitoes, but rather in driving them gently away, suggests: "To expel mosquitoes, take of gum camphor a piece about one-third the size of a hen's egg, and evaporate it by placing it in a tin vessel and holding it over a lamp, taking care that it does not ignite. The smoke will soon fill the room and expel the mosquitoes, and not one will be found in the room next morning, even though the windows should be left open at night."

The British Angler Has His Troubles.

It may be possible to keep off the casual midge of the Thames-side tennis lawn and the Hampshire trout stream with eucalyptus and other oils, but these balsams have little efficacy on a moor in August about 4 or 5 o'clock on a calm afternoon. It is not uncommon in Sutherlandshire for the sun to be partially obscured by the dense swarms, so as to be easily looked in the face, as though shining through a mist. In Donegal I have known peat cutters driven off a bog by midges, though I cannot vouch for the story that in the Orkneys business is sometimes suspended, and the very townsmen go to bed early in order to avoid the pests. Now, when midges are as thick as this it is physically impossible for them to be deterred by the so-called deterrents. I have bathed my face in eucalyptus to no purpose when fishing a loch in Sutherlandshire. The stifling smell and the smart were very unpleasant, but apparently not to the midges, which seemed to enjoy even the weather-beaten gillie when thus medicated. Perhaps they did not bite so fiercely when our skin was wet, but the irritation caused by their presence in eyes and nostrils is always the worst part of their tortures, and they soon resumed the banquet. In short, to keep off midges is, I believe, beyond the power of any application, and of all the prescriptions to prevent them from biting I find the best to be the well-known anti-mosquito specific—Stockholm tar diluted with olive oil.—London Field.

Sulphur Taken Internally.

One of our readers informs us that, having seen a statement in some English medical journal to the effect that sulphur, taken internally, would protect a person against flea bites, it occurred to him to try it as a preventive of mosquito bites. Accordingly he began taking effervescent tablets of tartar-lithine and sulphur, four daily. He provided himself with several lively mosquitoes, and having put them into a wide-mouthed bottle, inverted the bottle and pressed its mouth upon his bare arm. The mosquitoes settled on his skin, but showed no inclination to bite him. If this gentleman's experience should be borne out by further trials, it might be well for persons who are particularly sensitive to mosquito bites to take a course of sulphur during the mosquito season, especially in view of the growing opinion that the mosquito is the common vehicle of malaria.—N. Y. Medical Journal.

The Kennel.

Fixtures.

Sept. 25.—Toronto, Can.—Dog show of the Toronto Industrial Exhibition. W. P. Fraser, Sec'y. and Supt.

Points and Flushes.

The Derby and All-Age Stake of the Monongahela Field Trial Club close on Sept. 1. The Derby for pointers and setters whelped on or after Jan. 1, 1900. First forfeit in each stake, \$5; second forfeit, \$5, payable Oct. 1; \$10 additional to start. The judges are Maj. J. M. Taylor, W. S. Bellard, N. Wallace. The secretary is Mr. A. C. Peterson, 216 Sixth avenue, Homestead, Pa. The trials will be run at Senecaville, Guernsey county, Oct. 29.

The Derby and All-Stage Stake of the Brandon Kennel Club, of Brandon, Man., close on Sept. 2. Two other stakes are on its programme, namely, the Manitoba Stake and the Puppy Stake. The Honorable Secretary-Treasurer is Dr. H. James Elliott, Brandon, Man.

Entries to the Continental Field Trial Club's Derby for 1902 close on Aug. 15. The purse is \$500—\$250 to first, \$150 to second and \$100 to third. First forfeit, \$10; second forfeit of \$10. is payable Sept. 15; \$10 additional to start. Forfeit money and breeding certificate must accompany entry. The trials will commence on Feb. 8, and will be run at Grand Junction, Tenn.

Dr. Geo. W. Clayton, Box 914, Chicago, Ill., superintendent of the Texas Kennel Club's fourth annual dog show, to be held at Dallas, Texas, Oct. 7-10, informs us that the premium list is now ready and may be obtained of him. He further informs us that he is mailing ten thousand premium lists this year. The judges are Mr. John H. Naylor, Mount Forest, Ill., and Major J. M. Taylor, New York. Entries close on Sept. 25. Address all communications to the superintendent.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

AUGUST.

7. Misery Island, Salem Bay, Mass.
- 7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
- 9, 10. Annisquam, Ipswich Bay, Mass.
10. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
10. Beverly, Van Rensselaer cup, open, Monument Beach.
10. Winthrop, class handicap, Winthrop, Mass.
10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Shelter Island, open.
10. Beverly, Van Rensselaer cup, open, Marion.
10. Hull-Massachusetts, club, Hull, Mass.
10. Bridgeport, annual, Bridgeport, Long Island Sound.
10. Horsehoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
- 10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
- 12, 13. American, Newburyport, Massachusetts Bay.
17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
17. Shelter Island, club.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
17. Quincy, handicap, Quincy, Mass.
17. Kennebec, club, Kennebec, Mass.
17. Kennebec, club, Kennebec, Me.
17. Winthrop, special handicap, Winthrop, Mass.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Hull-Massachusetts, club, Hull, Mass.
17. Savin Hill, club, Boston Harbor.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
24. Winthrop, class handicap, Winthrop, Mass.
24. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
24. Hull-Massachusetts, club, Hull, Mass.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31. Beverly, Corinthian, Monument Beach.
31. Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31. Marine and Field, Gravesend Bay.
31. Shelter Island, Club.
31. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
31. Hull-Massachusetts, club, Hull, Mass.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.
31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

2. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
2. Handicap, Quincy, Mass.
2. Indian Harbor, special, Greenwich, Conn.
2. Annisquam, open, Ipswich Bay, Mass.
2. Beverly, open, Monument Beach.
2. Duxbury, ladies' day, Duxbury, Mass.
- 2, 3. Corinthian, cruise, Marblehead, Massachusetts Bay.
2. Lynn, Nahant, Massachusetts Bay.
2. Gravesend Y. R. A., all classes, Gravesend Bay.
2. Norwalk, special, South Norwalk, Long Island Sound.
2. Sachem's Head, annual, Saybrook, Long Island Sound.
2. Larchmont, fall regatta, Larchmont, Long Island Sound.
2. Atlantic, special, Sea Gate, New York Bay.
2. Pavonia, special, Bayonne, New York Bay.
2. Canarsie, ladies' day, Canarsie, Jamaica Bay.
2. Seawanhaka Corinthian, Oyster Bay, Long Island Sound.
2. Burgess, Marblehead, Massachusetts Bay.
2. Chicago, Chicago, Lake Michigan.

3. Shinnecock Bay, open, Shinnecock Bay.
- 5, 6. Seawanhaka Corinthian, open special, Oyster Bay, L. I. Sound.
7. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
7. Kennebec, club, Kennebec, Me.
7. Beverly, open, Mattapoisett.
7. Seawanhaka Corinthian, fall regatta, Oyster Bay, L. I. Sound.
7. Atlantic, Sea Gate, New York Bay.
7. Lynn, Y. R. A., rendezvous.
12. New York, autumn sweepstakes, New York Bay.
14. Hull-Massachusetts, club, Hull, Mass.
14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
14. Larchmont, Larchmont, Long Island Sound.
14. Indian Harbor, fall regatta, Greenwich, Conn.
14. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
14. Atlantic, fall regatta, Sea Gate, New York Bay.
21. Kennebec, club, Kennebec, Me.
21. America Cup race, Sandy Hook.
21. New York C. C., fall regatta, Gravesend Bay.
21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

SHAMROCK II. arrived at Ponta Delgada, Azore Islands, on Thursday, Aug. 1, a little after 5 o'clock in the afternoon. Erin arrived about an hour later. Up to the time of the arrival of Shamrock II. at the Azores pleasant weather had been experienced, and she had only been towed by Erin when there was no wind. She has covered the 1,300 miles from the Clyde to St. Michael's Island, Azores, in five days, which makes her average speed 260 miles a day. In the event of her being able to continue at this speed, she should arrive in New York about Aug. 10 or 12.

The steel mast, boom and a number of other spars belonging to Shamrock II. that arrived on the Anchor Line steamer Astoria on Aug. 4 have been conveyed to Erie Basin, where they will be stored until the challenger arrives here.

CONSTITUTION has been at Bristol for some days past, where some radical changes are being made in her rig. The poor showing that Constitution has made when racing against Columbia in moderate and strong breezes has prompted her designers to make alterations that it is hoped will improve her under the conditions of weather just mentioned. Her new rig will be shorter on the base and more lofty, but there will be very little difference in the actual sail area. The new mast, which is one of the longest ever built for a yacht, is nearly 115ft. in length, and weighs about five tons. Riggers are now completing their work, and she will be ready for the races at Newport on Saturday. One of the principal changes in the new rig is the changing of the position of the peak halyard blocks on the masthead; it is hoped they will now lead better and the gaff will not sag off to leeward to the extent that it did before the changes were made.

The Canada Cup Challenger.

TORONTO, Aug. 3.—The announcement that Cadillac had been chosen to defend the Canada cup was received by Mr. F. J. Ricarde-Seaver, Honorary Secretary of the Royal Canadian Y. C., Saturday night, and was met with the formal announcement that Invader would be the Canadian representative—not a very startling piece of information, as the yacht was already in Chicago. The announcement of the challenger and defender came just in the nick of time. The conditions governing the contest state: "The challenging and the challenged club shall each name its representative yacht by written notice to the other at least one week prior to the races." The two telegrams may be considered as written notices, for it is scarcely possible for letters to pass between the two clubs in time, the first race being on Aug. 10.

The challengers are well satisfied with the selection of Cadillac, arguing on general principles that Invader, being a keel boat excelling in the strong points of a centerboarder—running, reaching and light-weather sailing—would have a better chance against Cadillac than against Illinois. At the same time, they remember the name of Cadillac's designer. They would have been much better pleased had the sidewalk Milwaukee been chosen to defend the cup, but they are not downcast at the prospect of having to do battle with the Hanley centerboarder. They pray for stiff breezes and mounting seas, although such weather is not to Invader's liking when she is in company with other keel boats. But they think that she can vanquish any centerboarder under such conditions.

Toronto yachtsmen are very much disappointed at Invader not having had a brush with Genesee before leaving for the West. Mr. Van Voorhis, owner of Genesee, expressed his intention of bringing her to Toronto for a race when she was lying in Cobourg, about sixty miles away. Genesee's arrival was anxiously awaited, but she came not. A telegram was received, stating that lack of wind prevented her leaving her moorings.

Toronto yachtsmen consoled themselves with the prospect of a match between Beaver and Genesee at the Buffalo Y. C.'s regatta, commencing on July 30. Hundreds went to that affair for the sole reason that Beaver and Genesee were expected to meet there. But they were doomed to disappointment. It was understood that Genesee had abandoned the proposed match with Invader, so as to have plenty of time to spare for preparations for the Buffalo regatta. Genesee, however, did not race. Beaver was in splendid form, and had practically a walk-over in the stiff blow of the first day's racing. Every one said that she would have defeated Genesee that day. She certainly did some remarkable sailing, covering the course within 30s. of the time of the famous Canada, a heavy-weather cutter half as big again.

The Canadians sent a strong contingent to Buffalo, and captured nearly everything worth taking. What is particularly gratifying to them is the fact that locally designed boats, such as Merrythought, of Toronto, or Clytie, of Hamilton, defeated the creations of such famous old-land designers as Fife and Watson. Merrythought, the splendid cutter that swept everything in the special class, was designed and built in 1895 by Capt. James Andrews, of Oakville. She was known as Winnetta, and was a failure in the racing line until Mr. Æmilius Jarvis acquired her. He has made her new name famous all over fresh water, and she has beaten everything of her size, and yet she was not intended for a racer, and is only used as such upon

occasion. As a cruiser she is one of the most comfortable afloat. She substitutes the yawl rig for that of the cutter when not racing. Clytie, the Hamilton 40-footer that defeated the brand-new Chinook, of Fife design, was built by Weir, of Hamilton, as a 35-footer, to defend the Canada cup in 1899. The boat was under-canvassed, and when she got enough sail area—2,000 sq. ft.—she was away over the 35ft. measurement, so she was run in with the 40-footers, and, like all the Weir boats, has been giving a good account of herself ever since.

Invader's crew goes to Chicago with no little prestige, for nearly all the members have been sailing in the stiff breezes of the Buffalo Y. C.'s regatta, where the Toronto and Hamilton boats met with such marked success. Skipper Æmilius Jarvis has had a bad run of luck in international matches since his famous Toledo victory. He lost the Canada cup in 1899 through not having enough wind, and he failed to win the Fisher cup in 1900 through too much wind, when the race seemed sure to go to him. His recent victories in the races at Chicago should prove encouraging, however, both to the skipper and to his crew. Neither skipper nor crew has had enough experience with Invader to satisfy every one, but there is the prospect of a week of sailing before the races, and they will make the best of it.

The cup over which the match is being held is not an ancient trophy, although the most important one. Its story is as follows:

In 1896 the Lincoln Park Y. C., of Chicago, Ill., challenged the Royal Canadian Y. C. for an international match. The challenge was accepted, and Fife, of Shamrock I. fame, designed Canada for the Toronto syndicate that looked after the acceptance of the challenge. Toledo, O., offered the greatest inducements, and there the match was held, Canada, sailed by Mr. Æmilius Jarvis, of Toronto, defeating Vencedor, the Lincoln Park Y. C.'s representative, and winning the silver trophy, besides a considerable amount of prize money. The syndicate, composed of Messrs. George Gooderham, Geo. H. Gooderham, S. T. McKinnon, Frank J. Phillips, J. H. Plummer, James Ross and Æmilius Jarvis, donated the cup to the Royal Canadian Y. C. in 1897, for a perpetual international challenge trophy. "The said cup," the first clause of the deed of gift says, "shall be known as the 'Canada cup.'"

The cup rested quietly in Toronto for a couple of years, but the Chicago Y. C. challenged for it, and it was wrested from the holders in 1899. Beaver, a marvel of speed in heavy weather, was helpless in the light breezes that prevailed in the match, although Genesee, the challenger, did not win by extraordinary margins. Genesee belonged to the Rochester Y. C., but she won the trial races and was chosen by the Chicago Y. C. as their challenger. She proved a wise selection.

The Canadians promised not to let the cup rest in Chicago, but nearly a year passed before the Royal Canadian Y. C. challenged the Chicago Y. C. Com. Geo. H. Gooderham and a syndicate backed the challenge by building Invader, from the designs of Sibbick, of Cowes. Invader won the trial races, her only competitors being Beaver and the Hamilton craft, Canadian. Invader has not yet shown herself superior to Beaver in a stiff breeze, although there is no question of her superiority in light weather.

CHARLES H. SNIDER.

Caress Must Pay Tonnage Tax.

MR. W. BARTON HOPKINS, the Philadelphia yachtsman who bought the 60ft. yawl Caress in Scotland last May, must pay a tonnage tax of about \$30 every time she puts into a custom house port until she is regularly entered as an American vessel.

Considering the large number of English-built yachts, both steam and sail, that have been brought over to America this year, it seems remarkable that Caress should be picked out of all these vessels to be made an example of.

The New York Sun, commenting on the affair, says: Caress arrived at Marblehead under command of Capt. John Barr several weeks ago, and differences of opinion arose as to whether the yacht was subject to a tonnage tax. Thereupon the customs collector wrote to the United States Navigation Bureau for instructions, which have been received from Acting Commissioner T. B. Sanders.

After referring to the fact that Caress was brought to the port without any other papers than a bill of sale to an American citizen and citing the statutes, Mr. Sanders says:

"Regular tonnage dues should be levied on Caress at the maximum rate under Section 11, Act of June 19, 1886; tonnage tax of 50 cents per ton should be assessed under Section 4,219, Revised Statutes, and light money of 50 cents per ton should be collected under Section 4,225, Revised Statutes. The payments may be made under protest if the private persons concerned think proper."

Savin Hill Y. C.

DORCHESTER, MASS.

Saturday, Aug. 3.

THE third of the series of the Savin Hill Y. C. for the handicap class and the sailing tenders was sailed off the club house at Savin Hill on Saturday, Aug. 3, in a light S.W. breeze. The races were not so close as usual, the Coming and the Leach tender winning by fairly good margins in their classes. The summary:

Seawanhaka Cup Races.

THE series of races for the Seawanhaka cup began on July 25, the challenger, Mr. Lorne Currie, and his party having been at Dorval, the station of the Royal St. Lawrence Y. C., for some time previous getting their boat into racing condition. Mr. Currie was accompanied by his helmsman, Mr. Maudsley, and two other amateurs, Mr. Pike and Mr. Fletcher, and in addition his party included Mr. Southley and Dr. Ward-Humphries, who acted as judge for the Island Sailing Club. The boat Grey Friar arrived at Montreal in good order on the deck of the steamer Australasian, and was towed up to Dorval, rigged and put into racing shape without any delay or accident.

Grey Friar is in many respects quite unlike previous aspirants for the cup, possibly on account of the elastic rule used this year, which restricted only one factor, the sail area, to 500 sq. ft., leaving the designer free to take all the length he cared for. The waterlines were not measured at all, Grey Friar's being about 24½ft., but the overall length is enormous, some 46ft., caused principally by carrying out overhangs at each end to a chisel-like edge, the uses of the extreme ends of which are not very apparent. The freeboard is low amidships and drops rather than rises at both bow and stern, the whole sheer showing a reversal of what until a few years ago was the invariable practice, and looking decidedly scanty and attenuated. The under-water body is by no means full, and one is inclined to pronounce the boat crank and lacking in power, although this is not the case, and she stands up better than would be expected. As a whole, her model is sweet and fair, with small wetted surface, and suggestive of easy driving. The construction and finish are first rate. Frames are ½in. by ¾in., spaced 3in., planked with ½in. stuff, the deck being 7-16in. and canvassed. She is fitted with hollow spars, made by the Spalding St. Lawrence Co. In rig, Grey Friar is peculiar, having a mainsail cut so as to top the boom very high, the object being, so it is said, to secure a high and effective peak. The sail is really up in the air, and one result is a high center of effort. It is supposed to be effective in light airs, but the advantage was not very apparent in the first day's race.

The boat chosen for the defense, Senneville, is the property of R. B. Angus, of Montreal, and is one of the boats designed this year by Mr. Duggan. The final selection of this craft was dependent more on details than on any question of distinct and decisive superiority. So far as the trial races went, the steadiest winner was last year's boat, Red Coat, with Thorella, Whitecap, Black Sheep and one or two others among the possibilities. The worst trouble was with the sails, and one of the final features of the trial races was a general exchange of sails and spars. Skippers and crews had been exchanging all season, and as one local authority remarked, there was little left to exchange except centerboards. The final combination evolved was Senneville's hull, White Cap's sails and a picked crew.

On the day before the first race the judges were busy measuring sails and weighing crews, the results standing as follows:

	Grey Friar.	Senneville.
Area mainsail	373 sq. ft.	394 sq. ft.
Area headsail triangle.....	109 sq. ft.	102 sq. ft.
Weight of centerboard.....	350lbs.	340lbs.
Draft with board down.....	5ft. 6in.	6ft.
Weight of crew.....	731lbs.	731lbs.

The agreement called for a crew limit of 650lbs., but as Mr. Currie found it impossible to secure a crew of middle-weight men, it was agreed that the limit should be raised to 735lbs., the Royal St. Lawrence representative voluntarily promising not to sail with less than 700lbs. The weights were made up as follows:

Grey Friar's Crew—Lorne Currie, 195lbs.; H. Fletcher, 192lbs.; M. Pike, 166lbs.; A. Maudsley, 178lbs. Total, 731lbs.

Senneville's Crew—W. T. Angus, 192lbs.; F. P. Shearwood, 151lbs.; C. Routh, 169lbs.; Herrick Duggan, 156lbs.; Herrick Duggan, Jr., 63lbs. Total, 731lbs.

The crew of Senneville being so much short of weight, Mr. Duggan took his son aboard, a bright, active boy and a most enthusiastic sailor, whose weight was exactly the thing required to even matters up.

First Race—Thursday, July 25.

July 25 was fine and hazy, with light airs during the morning and early afternoon. A windward to leeward course was chosen for the first race, the leg to be two miles, if possible, but, although a start was made from the Beaconsfield buoy, well in toward the shore at Point Caire, it was possible to go only a mile and a half, the water shoaling rapidly beyond. This required four rounds for a twelve-mile course. A start was made at 1:40, the wind being light, but fairly steady. Grey Friar came about neatly on starboard tack just at gunfire, crossing well timed and with a weather berth. Senneville was a trifle ahead and to leeward, and so far the advantage lay with Grey Friar. It certainly ended there, for Senneville at once began to show the way, pulling out a clear and decisive lead in the first ten minutes. The middle of the lake was full of soft spots, into one of which Grey Friar ran, Senneville having better luck, but taking nearly an hour to beat to windward, a mile and a half, the times at the weather buoy being:

Senneville	2 29 30	Grey Friar	2 39 15
------------------	---------	------------------	---------

Running back the wind improved a trifle, and on the second round it began to shift, and by the time it was completed had got well into the opposite quarter, making the course one to leeward and return. Through all these chances and changes luck had favored Senneville, to what extent may be inferred from these times at the end of the round, which marked the completion of half the course:

Senneville	3 55 00	Grey Friar.....	4 18 40
------------------	---------	-----------------	---------

The boats were really a whole leg of the course apart, and as a spectacle the race was a failure. Many hoped such an unsatisfactory affair would not be finished in the time limit, but the wind continued to improve, working up to a good breeze, the third round being timed:

Senneville	4 37 45	Grey Friar	4 54 30
------------------	---------	------------------	---------

This showed a great gain for Grey Friar, the luck of the wind having for once been in her favor. On the final round she lost again, the times at the finish being:

Senneville	5 10 57	Grey Friar.....	5 30 12
------------------	---------	-----------------	---------

Second Race—Friday, July 26.

Triangular course, four miles round, three rounds making twelve miles.

A start was made at 1:50, with a light wind, the boats being instructed to keep all buoys to starboard, which gave windward work on the first leg of the triangle. Senneville led at the start, standing off on port tack, and after a short hitch on starboard tack got Grey Friar nicely under her lee. The wind was paltry at best and not very steady, Senneville going along well enough, but Grey Friar neither pointed nor held on well. The first leg took a long time, and it soon became evident that without a better breeze the race would not be finished in the time limit of three and a half hours. Senneville gained steadily the first round, being timed:

Senneville	3 11 00	Grey Friar.....	3 15 15
------------------	---------	-----------------	---------

Conditions were more promising at the beginning of the second round, and for a while the boats went along nicely, the gap between them ever widening, especially on the second leg, when Senneville led by 14m. At the completion of the round the times stood:

Senneville	4 31 10	Grey Friar	4 58 20
------------------	---------	------------------	---------

The wind had now fallen very light indeed, and the race was practically off. Senneville drifted over the first leg of the third round, completing it at 4:59. The time limit expired at 5:20, with no chance of a finish, so the boats were taken in tow and the day's work was over.

Third Race—Saturday, July 27.

The prospects in the early morning were little better than the day before, and up to noon there was little wind. The launch with the crews and judges left the club house, towing the boats for the course as usual, and rather hoping against hope, but a working breeze came up rapidly, so that it was safe to give the first signal at 1:30, making a start at 1:40, over the triangular course, leaving all buoys to port. This gave a spinnaker run to the first mark, a reach to the second and windward work home. Grey Friar led over the line, but was slow in getting her spinnaker drawing, and the boat seemed to have no way on.

Senneville came up with everything drawing beautifully, passing Grey Friar with ease and working out a clear lead of 14s. at the first mark. The next leg was a reach in smooth water, with a fair working breeze, conditions under which every one hoped to see Grey Friar do better, instead of which she dropped over half a minute. This was not so bad as on previous days, and the affair really looked like a race so far. On the windward work of the last leg the boats spread out and Grey Friar seemed to be losing again. When the times were taken at the end of the first round, they stood as follows:

Senneville	2 27 20	Grey Friar.....	2 31 15
------------------	---------	-----------------	---------

showing a lead of 3m. and 55s. for Senneville. Then followed the spinnaker run, and for once Grey Friar picked up and reduced Senneville's lead by 25s. On the following reach she kept it up, gaining another 15s., but there the good work stopped, the boat losing heavily on beating the last leg, the completion of the round being timed:

Senneville	3 15 30	Grey Friar.....	3 24 50
------------------	---------	-----------------	---------

Then came the third and last round, Grey Friar about holding her own on the running and reaching of the first two legs. It was clearly Senneville's race, but for a wonder Grey Friar made a substantial gain on the last and windward leg, the finish being timed:

Senneville	4 08 50	Grey Friar.....	4 16 20
------------------	---------	-----------------	---------

Mr. Currie attributed this good work at the last to a stronger breeze, saying it was really the first taste they had had of conditions at all favorable to the boat. Throughout this race Grey Friar was steered by Mr. Pike, who handled her very well, especially considering that he had never steered the boat before. The change of helmsman was the result of a good deal of criticism of Mr. Maudsley's handling in the first two races, some of it in the local papers, and as a result he requested that, in fairness to all concerned, some one else should take the stick, if only for an experiment. The fact is that on the first two days the conditions were trying in the extreme, and the best skipper might easily have done the wrong thing at times. The wind was never of that comfortable working strength that gives a man the best control of his boat, and considering that Mr. Maudsley was on a strange course, it is little wonder that he at times made an error of judgment, especially when sailing a losing race. There is no disguising the fact that in light to moderate breezes Grey Friar is no match for Senneville, at all events on Senneville's own waters. What they might do on the Solent or in rough water and fresh breezes is another question altogether.

Fourth Race—Monday, July 29.

After the very conclusive work of Senneville on Thursday and Saturday, interest in the match declined, Senneville being regarded as a sure winner, and the conclusion of the series of races was looked upon as a mere perfunctory affair. What was chiefly desired for Monday was a good breeze free from flukes and soft spots, something that would at least keep the boats near one another, and in addition Grey Friar's possible showing under more driving power was worth investigating. Both Mr. Currie and Mr. Pike were sure that the boat only wanted wind, but the general opinion was that Grey Friar was, if anything, a light-weather boat, and with little to sail on in a strong breeze. The morning promised nothing particular in the way of weather. It was simply fine and settled, but by 1 o'clock there was a breeze of fair working strength blowing up the lake, the best possible direction, as it allowed a windward course of the prescribed two miles to be laid.

The club launch St. Louis broke down soon after leaving Dorval, so the competing yachts sailed up to the starting line, while the judges were kindly looked after on Senator Drummond's steam yacht Wild Rose. A start was made at 2:25, and at once Senneville forged ahead. The boats broke tacks, but Grey Friar lost heavily on the windward work, the times at the weather buoy being:

Senneville	3 04 40	Grey Friar	3 09 42
------------------	---------	------------------	---------

Running back she gained 47s., and the wind began to

come abeam during the second round, Grey Friar scarcely holding her own, and the completion of the round was timed:

Senneville	4 09 45	Grey Friar.....	4 16 20
------------------	---------	-----------------	---------

The race continued with little change in relative positions, the end of the first leg of the last round showing Senneville over 6m. ahead, but in the home stretch she picked up a little, the finish being timed:

Senneville	4 52 42	Grey Friar.....	4 57 38
------------------	---------	-----------------	---------

This last race was on the whole the most satisfactory of the series. The wind held well, keeping the boats moving, and they were never so widely separated as in previous races. While the result was never in doubt after the first round, the occasional gains made by Grey Friar were interesting, if difficult to account for.

As usual the technical work was intrusted to three judges selected outside of the club membership. Dr. G. H. Ward Humphreys represented the Island Sailing Club, Mr. W. Q. Phillips the Royal St. Lawrence Y. C., and Mr. W. P. Stephens was third judge or referee.

Western Yachts.

Plot Thickens Among Cup Defenders.

CHICAGO, Ill., July 29.—As reported by wire to FOREST AND STREAM to-day, Illinois was allowed her claim for a foul in the race of Saturday, the judges ordering Cadillac and Illinois to start again to-day, Milwaukee also to sail, it being conceded that these three boats now had the best chance.

As to the justice of the decision of the judges in thus allowing Illinois to win the race under foul, there is still very much discussion. As to the rule, there is no doubt at all. It reads: "If two yachts are converging by reason of the leeward yacht holding the better wind and neither can claim rights of a vessel being overtaken, then the yacht to windward shall keep clear."

The judges on the Thistle could not pass upon what they did not see, but other testimony was admitted, showing that the foul was committed by Cadillac, not as she came out into her final starboard tack, but later on, when, as windward boat, she started sheets a bit to run, and so crowded Illinois, which was at this stage decided to be sailing on the shorter leg of the triangle. Com. Shaw claimed Illinois was the overtaking boat. For Cadillac to luff and keep clear when she was herself close hauled and crowded by the better windward quality of Illinois, would perhaps have lost Cadillac the race. In the last desperate instant her boom, not far outboard, just touched the stays and jib of Illinois, as the boats raced on, almost hull to hull. No one on the judges' boat saw the foul or knew why the protest flag was raised.

Cadillac Wins Monday's Race.

In Monday's race it might have been a case of poetic justice that Cadillac should defeat Illinois once more. At any rate, she did so again, by only a close margin. The boats were sailed in a thoroughly plucky and sportsman-like manner on both sides, and Cadillac's margin showed clearly enough that Illinois is coming up out of nowhere into a rightly earned second place. Skipper Pyncheon received many compliments on his able handling of Illinois. The result, however, argues little in favor of Illinois as a cup defender. It is all the worse for Milwaukee, which boat, while beating about back of the line, 10s. before the gun, had the misfortune to lose its mast, and hence could not start at all. Milwaukee requested that the race be postponed, but as by this time it was already in the hands of the judges, the latter could not accede to this request. The contest therefore resolved itself into a battle for blood between Cadillac and Illinois.

The race was over the triangular course, with very favorable weather conditions, the time made being more than 6m. better than Milwaukee's winning time in the first race. At the start the wind was 20 to 25 miles an hour, W.S.W., and it continued steady for the first two legs, though dropping slightly in the last leg.

Illinois was first over, crowding the gun within 10s. Milwaukee had been dismasted only a few seconds before the starting gun, and at the gun Cadillac was near the wreck of Milwaukee, going across the line 30s. later than Illinois. The course was laid S.E. by E., and both boats were double reefed and under mainsail and balloon jib. Although Illinois had a pronounced start, Cadillac began to steadily overhaul her, and 15m. from the start had established a lead over Illinois. Illinois at this time had broken out spinnaker besides balloon jib. At the first turn the times were as follows:

	Start.	First Buoy.	Elapsed.
Cadillac	1 30 00	2 17 21	0 47 21
Illinois	1 30 00	2 18 17	0 49 17

Cadillac gained 1m. 56s.

On the second leg Illinois' balloon jib did not seem to behave any too well. Both boats stood under mainsail and balloon jib to the second mark, where both took in balloon jibs and hoisted working jibs. Cadillac again demonstrated its superiority to the fin-keel on this point of the weather, and gained 1m. and 19s., making a total gain of 3m. and 15s. in the fourteen miles of the first two legs. The times at the second turn were as follows:

	First Buoy.	Second Buoy.	Elapsed.
Cadillac	2 17 21	3 14 38	0 57 17
Illinois	2 19 17	3 17 53	0 58 36

Cadillac gained 1m. 19s.

The greater interest began as the boats swung into the last leg of the triangle, a seven-mile beat to windward home, under which conditions it was generally conceded Illinois had its sole hope for the place of a cup defender over Cadillac. Illinois indeed once more proved its superiority in the windward work, and made a good finish toward the close of the leg.

Both boats laid a long port tack and came well in toward the lake front opposite Lincoln Park before they went about. Cadillac at 3:17 concluded that she could stand a little more of the lighter wind, and shook out a reef. Cadillac stood on the port tack for 34m., and when well over inshore stood to starboard, holding this course for 5m., and then going again into the port tack, apparently having learned something by the lesson of Saturday, and being anxious to get well inshore and well to

windward, the wind being, oddly enough, stronger inshore than out in the lake.

Illinois, with a baby jib, had been standing up well. It stood on the port tack until 3:55, and as Cadillac came into the starboard tack, it was apparent that Illinois had closed up something of the gap. The two boats now had practically the same fight that they had on Saturday. Illinois was outpointing Cadillac, but the latter was outsailing its competitor.

At 4:07 Cadillac shook out yet another reef, and at 4:11, standing on the starboard tack, passed the Carter Harrison crib to leeward. Illinois showed her windward quality by passing the same crib to weather.

Cadillac now tacked to port inshore at 4:23, and thus challenged Illinois smartly, crossing the bows of the latter boat at 4:27 with a lead of what seemed to be a quarter of a mile. When Cadillac came to starboard at 3:46 she was 200yds. to weather of Illinois. The latter boat was coming on nicely, and the conditions of Saturday seemed apt to be repeated. Had Cadillac been obliged to tack once more, Illinois could have challenged her at the line and perhaps have nosed her out. Skipper Shaw, however, good sailor that he is, this time had timed the thing too nicely. He did not have to tack, but laid a straight course for the line and luffed across just 1m. and 5s. ahead of Illinois, which also luffed up and went over a very good second indeed, after making up 2m. and 50s. on the windward leg. The times at the finish were as follows:

	Second Buoy.	Finish.	Elapsed.
Cadillac	3 14 38	4 44 00	1 29 02
Illinois	3 17 53	4 45 05	1 27 12

Illinois gained 2m. and 50s.

Milwaukee was taken to the yards of George B. Carpenter & Co., ship chandlers, and will have a new stick put in her by to-morrow.

Unfortunate Complications.

Immediately after the race there was a meeting of the judges, and Cadillac was declared winner of the Chicago Y. C. trophy, Illinois taking the dinghy for second place. The judges, however, declared that this did not decide a cup defender, and that they would order the boats to sail further races, two or perhaps three more, during the course of the present week.

Hearing this, the patience of that very good sportsman, Com. Shaw, seemed for the first time to forsake him. He protested that his friend, Mr. Pyncheon, would have withdrawn his protest on Saturday had the judges allowed him to do so. In his temper he declared—what, perhaps, he does not mean, although the same thing has been repeated all over Chicago this week very frequently—that it looked to him as though the proposition were to get Illinois a chance to win somewhere and to gain the place of cup defender. Com. Shaw declared his boat—as, indeed, nearly every yachtsman in the harbor is satisfied to be the case—the best boat in all-round weather, and the most likely boat to win against the Canadian challenger. He said that the trials of the boats for the past two weeks proved this conclusively, and as for himself, he did not intend to stay here and sail races until some other boat might, by accident or otherwise, be able to beat him. He declared his intention of leaving for Detroit, and for a time even threatened to take Cadillac with him and withdraw it from the competitions. Then at last he said he would turn Cadillac over to the committee, washing his hands of the whole thing, and let them use his boat if they needed it. He said also that he thought it would be equity to himself to have Milwaukee and Illinois sail a series and then for Cadillac to sail against the winner. The owner of Milwaukee, Mr. Nunnemacher, of Milwaukee, stated modestly that his boat, although it has been pretty generally roasted by everybody, had done a bit of sailing of her own; that she was dismasted by sheer accident just before the start to-day, and that if the committee pleased he would be glad to have one more try, just to show that his boat was not so black as she was painted.

Under these circumstances it might be seen that the position of the Chicago Y. C. was anything but an enviable one, and there seemed, it must be in candor admitted, some little danger that the cup offered by the local club would seem a little oxidized, to put it mildly, and that the victory of the cup defender, as ultimately determined, ran danger of being similarly somewhat tarnished.

The Final Solution.

Yet after all it was to be supposed that the spirit of fairness which animates all good yachtsmen and all Western gentlemen would eventually prevail. Com. Shaw stated that he had important business engagements which would necessitate his going back home and prevent his appearing this week to sail his own boat. Capt. Pyncheon stated that he was content to leave the matter quite in the hands of the committee. The latter, to a certain extent, reconsidered their first decision and decided that Illinois is not safe to pick as a cup defender, and have ordered Cadillac and Milwaukee to sail three more races, Thursday, Friday and Saturday. Com. Shaw places Cadillac in command of William Hale Thompson, of Chicago. He says that he does not in the least object to meeting Milwaukee again, and does not want to take any advantage of breakdowns on the part of a rival. Milwaukee is at this writing ready to sail again after stepping a new spar and rerigging completely. Cadillac went to dry dock to-day.

Should Cadillac win in the contests with Milwaukee and eventually be chosen as the cup defender, it is very likely that William Hale Thompson, of Chicago, will sail Cadillac against the Canadian boat. Mr. Thompson, and indeed all of the yachtsmen of this port, agree that Cadillac does not offer a lead pipe cinch against the boat which the Canadians will be sure to send over. In fact, the races have been extremely close between several of the boats—too close, as has been regretfully pointed out, for the comfort of all concerned. Milwaukee is by no means out of the running till these races are over.

Cadillac Beats Milwaukee.

Aug. 1.—Cadillac beat Milwaukee to-day in very hollow fashion in the first race between these two boats for the determination of a cup defender. The course was nine knots to windward and return, and the wind, E. by S.E., was about twelve to fifteen miles an hour, the course

being laid E. by S. Under these conditions Milwaukee ought to have been able to give a very good account of herself, and perhaps she would have done better had she carried a reef on the windward beat. As it was, Cadillac gained 8m. and 50s. on the run out, and running home, where Milwaukee ought to have had everything quite to her own liking, the latter boat could gain only 7s. on Cadillac.

This victory practically certifies Cadillac as defender in the minds of the more experienced yachtsmen of this port. Surely Cadillac has been the most consistent performer seen in the races here. She has won nothing by a fluke, but, on the contrary, has lost one victory by a fluke, or, rather, by a protest, to Illinois, and another race to Illinois where every one admits that it was simply a chance flaw of wind that brought Illinois in victor.

As to Milwaukee, it is a boat which deserves something better than contumely, and the impression strengthens that it might be handled a little bit more skillfully in the windward work, where it has thus far been too heavily canvased in two of her defeats.

The likelihood is that in the race to-morrow Cadillac will be apt to make it two straight, as the hot weather has broken and we are having a series of winds from the N. and N.W. which promise to continue fairly steady and fresh.

Cadillac was sailed by her new skipper, William Hale Thompson, of Chicago. Cadillac carried Detroit's balloon jib and Yankee's spinnaker.

The Race.

Cadillac was first over the line, Milwaukee following 5s. later. Both went out on the starboard tack, jib and mainsail, Cadillac with a single reef. Cadillac took the lee berth for 5m. and then began to point a trifle higher. The boats stood to starboard 45m., Milwaukee coming about first and Cadillac following shortly afterward. Cadillac seemed to stand up better than her rival.

At 2:42 Milwaukee came about again into the starboard tack, and 3m. later was seen to pass astern of Cadillac.

At 3:10 both were standing on the port tack, Cadillac half a mile in the lead. At 3:16 Cadillac came about into the starboard tack and was seen to have half a mile lead over her rival. The times at the turn were as follows:

	First Mark.	Elapsed.
Cadillac	3 36 40	2 06 40
Milwaukee	3 45 30	2 15 30

Cadillac gained 8m. and 50s.

On the run home Milwaukee promptly broke out balloon jib and spinnaker and began to foot it handsomely. The breeze was now fresh. At the 4-mile crib Cadillac kept her pronounced lead, and it was impossible to tell whether or not Milwaukee had made up any distance. This leg was a procession, the time being as follows:

	Buoy.	Finish.	Elapsed.
Cadillac	3 36 40	4 53 00	1 16 20
Milwaukee	3 45 30	5 01 43	1 16 13

Milwaukee gained 7s.

Time for the course:

	Start, 1:30.	Finish.	Elapsed.
Cadillac	4 53 00	3 23 00
Milwaukee	5 01 43	3 31 43

The Canadian Challenger Arrives.

Aug. 2.—Invader, the handsome Canadian boat which visits Chicago with the purpose of taking home the Canada cup, reached South Chicago yesterday in perfect condition. Barring a little dust accumulated on the journey, she shows nothing the worse for her trip by rail. She was stowed on a flat car very carefully, and so far as can be told has reached Chicago without the slightest perceptible injury.

Invader, on a hurried first look, makes a good impression upon the Chicago talent, and if truth be told the local feeling is rather to the effect that Invader will prove dangerous. The recent good showings made by the fin keel Illinois have rather overcome the depression of stock in that model. Upon the other hand, there are many who bring up the Invader-Beaver-Minota comparisons. Minota was able to do something with Beaver. Beaver, in the preliminary trials, seemed able to take care of Invader. Minota has been nowhere in competitions with Cadillac, Milwaukee, or even Illinois. This comparison causes hope to spring in the breasts of the Chicago yachtsmen.

There is no doubt whatever that Invader will do better here after being tuned up than she did in her trials with Beaver at home. An unprejudiced outlook would seem to place the betting odds about even at this stage between Invader and Cadillac. Given conditions such as have prevailed here for the last month, light airs and shifting winds, the center board type should prove rather a favorite in spite of the opinion of the Canadians in regard to that model as shown in the selection of Invader. On the other hand, should we have what is possible here on Lake Michigan any day of the year, and much more likely in the latter part of August than it is in midsummer—stiff winds, with perhaps squalls—then the fin keel ought to show its superiority as a big water boat. We have been having, in fact, in these trial races here, big water boats sailing under inland lake conditions. This sort of thing will not last. It is probable that in the luck of the conditions will rest the victory for the one type or the other, or the one boat or the other, in the final cup races.

Invader will go into the water to-day, and will be accorded a royal welcome when she sails to her anchorage in the Chicago harbor.

Yachting has attained a prominence in this city during the present season which could never before have been accorded it. Meantime there are continuous regattas among the fleets all over our inland lakes of Wisconsin, Michigan and Minnesota. The sport seems surely a growing one in the Western region.

Cadillac Chosen as Defender.

Aug. 2.—Cadillac made it two straight over Milwaukee to-day and was elected cup defender, leaving her rivals bearing a strong facial resemblance to thirty cents.

Invader, the beautiful new Canadian boat which has come over to lift the Canada cup, if possible, sailed up from South Chicago during the afternoon and was sighted from the judges' boat before the conclusion of the race

between Cadillac and Milwaukee. The visiting boat was received with all manner of salutes from the craft in the harbor, the steam whistles giving the customary greeting, while the crews at the club house and on the different boats joined in lusty cheers. Invader was under working canvas, carrying a lot of extra spars, etc. It will soon go out to get acquainted with the local conditions. This boat has before been fully described in FOREST AND STREAM, and all that remains to be said regarding it is the story of its performances later in the following days.

Cadillac's Victory Decisive.

Milwaukee had made some changes in center board and ballast preparatory to this race, putting in a wooden board and laying aboard 1,400 pounds of ballast. As a matter of fact, Milwaukee sailed the triangular course of twenty-one miles in faster time than she has made in any of her four early trials over the same course, beating its best time by over 14m. The weather conditions had much to do with this, the wind being stiff, from twenty to twenty-four miles an hour. Cadillac sailed the course 20m. faster than on last Monday, when it defeated Illinois. She defeated Milwaukee to-day by 11m. and 13s., which performance would certainly seem to give Cadillac the premier rank among all the boats which have been gathered for the competition. This race, in a good, fresh wind, taken in conjunction with the race last Saturday, sailed also under good, stiff breeze, would seem to put a damper on the hopes of the shovel-nose model as an all-around boat. It was admittedly faster running free, and in spite of all that has been said regarding the windward qualities of this model, it does not seem to deliver the goods under the actual test of windward work. There would seem to be no doubt that the selection of Cadillac for the cup defender is the wisest possible choice which could have been made by the committee. The Hanley boat has proved a wonderfully consistent all-around performer. Its show running free is remarkably good for a boat which can beat so well, and the impression to-day, after seeing the decisive victory over Milwaukee, strengthens the growing belief among the experts that the cup is going to stay where it is this year.

The First Leg.

The course on the first leg was E. N.E. and was run as a broad reach, with wind abeam. Milwaukee went across the line 5s. ahead of Cadillac and took the weather berth. Cadillac was close reefed, Milwaukee carrying two reefs in its mainsail. For the first 6m. Milwaukee seemed to gain. Cadillac then set a balloon jib, Milwaukee following at once with its balloon jib. Milwaukee seemed to be gaining still. At 1:53 Cadillac shook out a reef, and presently yet another. She now seemed to foot better and hold her own with the shovel-nose. At 1:56 Milwaukee broke out spinnaker, the wind by this time having dropped, as is nearly always found to be the case farther out ashore at this port. At the turn it was seen that Milwaukee had not much better than held its own in the latter half of the first leg. The times were as follows:

	Start, 1:30.	First Mark.	Elapsed.
Milwaukee	2 11 20	0 41 20
Cadillac	2 13 46	0 43 46

Milwaukee gained 2m. 26s.

Second Leg.

Both boats broke out spinnaker and balloon jib after the turn, carrying headsails wing and wing. Milwaukee now let go a reef, but in spite of this Cadillac liked this point of the weather and began to crawl up slowly, the wind being now light and from the N.W., and Cadillac holding the weather berth. For 20m. the boats held as they were. At 2:30 Milwaukee crosses the bows of Cadillac, but the latter seems to be closing slowly. Milwaukee catches fresher breeze at 2:55. It spurts away from Cadillac.

At 3:04 both boats take in spinnakers. Cadillac's canvas seems to set nicely. Two minutes back of the second turn Milwaukee sets a storm jib, and before the turn drops the balloon jib. The times at the turn are:

	First Mark.	Second Mark.	Elapsed.
Milwaukee	2 11 20	3 14 40
Cadillac	2 13 46	3 16 47

Cadillac gained 19s.

The Windward Finish.

Soon after the turn into the last leg Milwaukee got into trouble, catching a quick slant of wind which sent her far over, so that her main boom dipped deeply, while center board and rudder both showed nearly clear. Finally the boat righted, and Skipper Davis got it in hand again, avoiding what looked like a capsiz. It is possible the new ballasting of Milwaukee left her crew less acquainted with the boat. The old center board carried by Milwaukee had 800 pounds of lead, but this was replaced by another board and by ballast.

Meantime Cadillac had taken the windward berth, but did not hold it, and though footing faster at the end of 14m., had dropped to leeward of Milwaukee. The wind was N. by N.W. and growing fresh at this time.

At 3:55 Milwaukee drops its jib. Cadillac passes Milwaukee and takes the weather berth. At 3:40 Milwaukee puts out a baby jib. Cadillac is now leading steadily. At 4:10 the boats split tacks, and at 4:17 they repeat this maneuver.

At 4:22 Cadillac, with all kinds of a lead, comes about and lays course for the line, crossing shortly later a victor in any kind of fashion, Milwaukee finishing nearly a quarter of an hour later. The times:

	Second Mark.	Finish.	Elapsed.
Cadillac	3 16 47	4 24 55
Milwaukee	3 14 40	4 36 08

Cadillac gained 13m. 20s.

Cadillac was announced as cup defender by the judges at the Chicago Y. C. club house immediately following the close of the race.

In concluding the running comments which have been made upon the Hanley boat from time to time, it is enough to say that every yachtsman of Chicago is satisfied that she is a better boat than any which sailed against her in these competitions. She is a most desirable com-

bination of windward and running qualities, and the boat which beats her will need to rank somewhere in the phenomenal class. Cadillac has been sailed by an able mariner and a thorough sportsman, Commodore Shaw, of Detroit. It certainly cannot be said that she has had any favors shown to her or that she has won by any flukes, any more than it can, on the other hand, be said that any of her competitors have profited in any wise except through their own ability or through the chance conditions of wind and water. Picked as a winner when she first sailed into Chicago harbor, and before her performance could be rated by any available comparisons, Cadillac has been a favorite from the start, and she has even more than made good the favorable impressions gathered regarding her at the first. She has clearly outsailed the other boats here, and no sportsman can for a moment grudge her her victory. In the belief of the Chicago yachtsmen, founded before they have yet seen Invader sail or had any opportunity of getting a line upon her abilities, Hanley has for a second time designed a cup winner.

HARTFORD BUILDING, Chicago, Ill.

E. HOUGH.

Corinthian Y. C.

MARBLEHEAD, MASS.—MIDSUMMER SERIES.

THE midsummer series of races of the Corinthian Y. C. were quite successful. There were four days' racing in all, counting the open race for the wind-up. The number of starters varied from forty-six to fifty-two, which is the largest number of starters in any single race sailed in Massachusetts Bay this season, with the exception of the city of Boston race on July 4. There were the usual light breezes for which Corinthian Y. C. races are noted, but there was not a single day of fog. This feature was an exception that could not pass unnoticed.

Wednesday, July 31.

The opening race of the series was sailed in a very light westerly breeze. It was also very fluky. In the 25-footers Chewink, Flirt and Calypso were the favorites. The breeze suited the two keel boats, and they both finished ahead of Calypso. Flirt was a close second to Chewink, but was disqualified because she was sailed by a professional. In the other classes the boats were well bunched at the start, but soon spread out, the best light-air sailers being at the heads of the classes. The summary:

Thursday, Aug. 1.

On the second day of the series there was a good breeze from the southward, and the racing was close and interesting from the start. On the windward work the keel boats showed their superiority over the centerboards more than they have before this season, and in the 25-footers the keels were at the top of the list at the finish. In all classes the races were hard fought and were well sailed from start to finish. The summary:

Class A.

Friday, Aug. 2.

In the third and last race of the midsummer series there was a very light easterly breeze. It was best suited to the keel boats Flirt and Chewink in the 25-footers. They sailed a very close race all over the course, Flirt winning out by less than 2m. The closest race of the day was between the 21-footers, in which Eaglet finished 15s. ahead of Opitsah III. The racing was good in the other classes, but on account of the extremely light air the times were slow. The summary:

Class A.

Saturday, Aug. 3.

For the annual open race, which always follows the midsummer series, the Corinthian Y. C. had another of those fluky S.W. breezes for which Marblehead is noted at this time of the season. There was a good breeze at the start, but it flattened out soon afterward, and was uncertain in strength all through. The times were slow in all classes. The event of the day was the win of Nereid in the 25-footers. She is a new boat, owned by C. H. Lunt, of Gloucester. She made a good showing in the other races, and this time she went to the fore. In the 21-footers Eaglet, designed by Starling Burgess, had another close finish with Opitsah III, Eaglet crossing the line less than a minute and a half to the good. The summary:

Class A.			
	Elapsed.	Corrected.

Newport Y. R. A.

NEWPORT, R. I.

Thursday, Aug. 1.

THE Regatta Committee of the Newport Y. R. A. offered prizes for the Cup defender class, 90ft. class of yawls, 75ft. class of schooners and the 80, 70, 51 and 43ft. classes of sloops for races to be held on Thursday, Aug. 1, but only three classes filled, and there were only six starters. Columbia and Independence started in the Cup defender class. Constitution was at Bristol being re-rigged. Vigilant, Navahoe and Ailsa started in the 90ft. class for yawls, and Elmina and Quissetta started in the schooner class. None of the boats started in the class for English cutters. This was due to a disagreement that has arisen among the owners of these boats. There are now four boats racing in this class—Hester, Isolde, Senta and Eelin. The three latter boats are practically the same racing length—about 60ft.—while Hester measures about 70ft. The racing rules state that boats built since 1896 shall be considered to measure and race at the top of their class, without time allowance, but those boats built previous to 1896 shall receive time allowance. Eelin and Senta, both having been built during 1896, do not receive any allowance from Hester, while Isolde, having been built previous to that time, receives 8m. and 56s. over a thirty-mile course. As these boats were built to race under the English rule and not under the American rule, the owners of Eelin and Senta object to racing under the present conditions, and as their case is an exceptional one, they believe they should receive special consideration.

The breeze in the morning was light and uncertain from the N.W., and it finally died out, leaving the boats becalmed. The Regatta Committee was aboard Col. Astor's steam yacht Nourmahal, and it postponed the race for a time, but about 11:30 a strong S.W. wind came up and course signals were hoisted. The course was a triangular one, the first leg being S.W. by S., the second E., and the last N.W. The start for Columbia and Independence was given at 11:40 o'clock. The breeze was now quite fresh, and Columbia and Independence crossed almost together, the former defender being in the weather berth. At 11:45 o'clock the yawls were sent away, Navahoe ahead, but at the leeward end of the line, Ailsa second and Vigilant third, but to windward. At 11:55 o'clock the schooners started, with Elmina in the windward berth. Columbia and Independence held the starboard tack off shore, while the yawls and schooners stood in on the Narragansett shore.

About 1 o'clock Independence came about; Columbia stood on and crossed her bows, finally coming about well on the weather bow of the Boston boat. Independence began to move faster, but Columbia reached the weather mark first. While the two big cutters had been fighting the race out off shore, the yawls had got the better breeze inshore and rounded first. The times of rounding the first mark by Columbia and Independence were:

Table with 2 columns: Boat Name, Time. Includes Columbia (1:31:44), Independence (1:32:53), Navahoe (1:26:16), Elmina (1:41:58), Ailsa (1:23:31), Quissetta (1:50:02), Vigilant (1:29:12).

The yawls and the schooners were timed: It was a broad reach to the second mark. The balloonier was set on Columbia, while on Independence a reaching jib topsail was used. This move seemed to be an error for Independence, as Columbia began to leave her very fast. After a time a spinnaker was set on Independence, but this sail did not help her to any appreciable extent. The times at the second mark were:

Table with 2 columns: Boat Name, Time. Includes Columbia (2:35:03), Independence (2:41:35), Navahoe (2:37:07), Ailsa (2:45:23), Vigilant (2:38:01).

Elmina was well in the lead in her class, and she rounded the second mark at 2:52:15. Quissetta followed at 3:10:00.

On the run to the finish Columbia moved away from the yawls in great shape, and Independence also went through their lee and left them well behind. Independence caught the first of the freshening breeze and picked up considerably on Columbia, but not enough to make her dangerous. The yachts as they finished were timed as follows:

Table with 2 columns: Boat Name, Time. Includes Columbia (3:22:57), Independence (3:27:40), Navahoe (3:29:07), Ailsa (3:37:16), Elmina (3:50:52), Quissetta (4:05:39).

Summary table for Sloops-Class G—Under 90ft.—Start, 11:40. Includes Columbia (3:22:57), Independence (3:27:40), Navahoe (3:29:07), Vigilant (3:28:23), Ailsa (3:37:16).

Summary table for Yawls—Class G—Over 90ft.—Start, 11:45. Includes Navahoe (3:29:07), Vigilant (3:28:23), Ailsa (3:37:16).

Summary table for Schooners—Class D—65 to 75ft.—Start, 11:55. Includes Elmina (3:50:52), Quissetta (4:05:39).

Columbia beat Independence 4m. and 43s. elapsed time. Independence, on account of her new racing measurement, which is 102.79ft., allowed the old champion 31s., which increased the latter's victory on corrected time to 5m. and 14s. Vigilant beat Navahoe 2s. and Ailsa 7m. and 26s.; Elmina beat Quissetta 15m. and 7s.

Saturday, Aug. 3. The Regatta Committee was again on board the steam yacht Nourmahal, and after making a starting line from the lightship, at 10:35 o'clock set signals for the triangular course of thirty miles, ten miles to each leg. The first leg was S.W. by S., the second E., and the third N.N.W. The wind was strong from the S.S.W., so this made it a beat to the first mark, a broad reach to the second and a close reach home. A little later a temporary postponement flag was hoisted on the committee boat, as some of the boats had started to take in club topsails, as the breeze had freshened so much, and the committee wanted the boats in all classes to start on time.

At 11:15 o'clock the warning signal was given, and 5m. later the preparatory signal followed for Columbia and Independence. Columbia at this time was to windward of

the line, with Independence some distance to leeward. Columbia came about and crossed the line, and then tried to luff on Independence's weather quarter, but owing to a miscalculation the mainsail of Columbia scraped the fore rigging of the Boston boat. No damage was done and no protest was made. Independence crossed the starting line to leeward just as the signal was given, 12s. ahead of Columbia. Both boats stood in on the Narragansett shore, and were moving finely in the jump of sea, but Columbia was drawing a little ahead. It was almost 12 o'clock when Columbia came about and crossed her opponent's bows. The times of these boats at the weather mark was:

Table with 2 columns: Boat Name, Time. Includes Columbia (12:42:30), Independence (12:45:20).

On this leg Independence had been beaten 3m. and 50s. It was a broad reach to the next mark, with the wind coming over the starboard quarter. Independence was gradually picking up Columbia on this leg, and she gained 1m. and 35s. The times at the second mark:

Table with 2 columns: Boat Name, Time. Includes Columbia (1:30:00), Independence (1:31:15).

Owing to the pounding that Independence had gotten in the earlier part of the race, it was now found nearly impossible to steer her, for the plates around the rudder post were badly wrung, and the rudder seemed to jam in its sleeve. Another thing which helped to lose the race for her was the fact that her compass was several points off, and consequently she stood well off her course, and set wrong sails, which she soon had to take in and head up several points to make the finish line. On the leg home Independence was slowly but surely decreasing Columbia's lead, and had the finish line been a little further away she would have undoubtedly been a winner; but Columbia had just lead enough to carry her across the finish line a winner by 40s. on elapsed time and 1m. and 11s. corrected time. It was undoubtedly the hardest race Columbia had ever sailed, and the rare performances of Independence are now beginning to command respect from all quarters. Columbia crossed at 2:16:48, and Independence at 2:17:28.

In the yawl class Vigilant crossed before the signal, and she had to return and cross again. Navahoe crossed at the leeward end of the line, and had to tack to clear the lightship. Navahoe was handicapped a minute, Ailsa a minute and a half and Vigilant three minutes. Ailsa sailed in the fine form that she showed in the N. Y. Y. C. race down the bay, when she beat Vigilant handily, again running away from her rivals, and finished a winner by a substantial margin. Ailsa finished at 3:10:26, Vigilant at 3:14:23 and Navahoe at 3:15:36.

In the schooner class Quissetta and Elmina crossed together at 11:40:00. Elmina worked into the lead early in the race and finished a winner at 3:58:22, while Quissetta crossed at 4:03:06.

In the class for English cutters, Hester, Isolde and Senta started at 11:45 in the following order: Hester led all through the race, but Isolde held her close enough to win on allowance. Hester finished at 3:57:46, Isolde at 4:02:01 and Senta at 4:08:54. The table follows:

Table with 4 columns: Boat Name, Finish, Elapsed, Corrected. Includes 90ft. Sloops-Class G—Start, 11:25; Class G—Yawls—Start, 11:30; Class D—Schooners—Start, 11:40; Class I—Cutters—Start, 11:45.

Ailsa beat Vigilant 5m. and 22s. and Navahoe 5m. and 53s.; Elmina beat Quissetta 5m. and 4s.; Isolde beat Hester 4m. and 38s. and Senta 7m. and 30s.

Newport Special Thirties.

NEWPORT, R. I.

Tuesday, July 30.

IN a light S.W. breeze Esperanza won the sweepstake race for the 30-footers on Tuesday, July 30. The start was made off Jamestown, and the boats ran to Dyer's Island and back. Wawa was first across the starting line, but after rounding the leeward mark and the boats hauled on the wind, Esperanza worked into the lead and finished a winner. Summary:

Table with 3 columns: Boat Name, Finish, Elapsed. Includes Start, 3:33; Esperanza, H. O. Havemeyer, Jr. (5:51:47); Wawa, R. Brooks (5:52:46); Hera, R. N. Ellis (5:56:04); Barbara, W. Rutherford (5:56:36).

Wednesday, July 31.

Esperanza won the cup offered for the 30-footers by Mr. A. Lanfear Norrie on Wednesday, July 31. The race was sailed in a light S.W. breeze over a triangular course eight miles in length. Four boats started and all crossed within 3s. of one another, with Hera in the lead. The first leg was a broad reach, and Hera rounded first. From the first mark it was a spinnaker run to the buoy off Bishop's Rock, and at this mark the boats were well bunched. When the boats hauled in the wind for the beat home Esperanza showed her fine windward qualities and soon took the lead, winning by 20s. The times:

Table with 3 columns: Boat Name, Finish, Elapsed. Includes Start, 4:02; Esperanza, H. O. Havemeyer, Jr. (4:56:42); Hera, R. N. Ellis (4:57:02); Carolina, P. Jones (4:58:09); Barbara, W. Rutherford (4:59:04).

Thursday, Aug. 1.

Hera beat Esperanza handily in a match race that was sailed over the Dyer's Island course in a fresh southerly breeze, making it a beat to the first mark and a run home. Hera led from the start and won by a handsome margin. The 15-footers sailed a match race over a triangular course. Breeze won by a few seconds. The summary:

Table with 3 columns: Boat Name, Finish, Elapsed. Includes 30-footers—Start, 3:23; Hera, R. N. Ellis (5:44:12); Esperanza, H. O. Havemeyer, Jr. (5:50:22).

Table with 3 columns: Boat Name, Finish, Elapsed. Includes 15-footers—Start, 3:33; Breeze, W. M. Roelker, Jr. (5:35:05); Eaglet, W. Grosvenor, Jr. (5:35:20).

Monday, Aug. 5.

The 30-footers raced around Brenton's Reef Lightship and back to Brenton's Cove, a distance of twelve miles, on

Class T.

M. Y. R. A. Percentages.

THE following are the percentages of the yachts in the different classes of the Yacht Racing Association of Massachusetts to date, as compiled by the secretary, A. T. Bliss:

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Thordis (5 starts, 1st 33.3%, 2nd 0%, 3rd 0%, Avg 33.3%), Hustler (3 starts, 1st 33.3%, 2nd 0%, 3rd 0%, Avg 33.3%), Romance (6 starts, 1st 16.7%, 2nd 16.7%, 3rd 0%, Avg 33.3%), Widgeon (2 starts, 1st 50%, 2nd 0%, 3rd 0%, Avg 50%), Hostess (2 starts, 1st 50%, 2nd 0%, 3rd 0%, Avg 50%), Theodora (3 starts, 1st 33.3%, 2nd 0%, 3rd 0%, Avg 33.3%), Carrie M. (2 starts, 1st 50%, 2nd 0%, 3rd 0%, Avg 50%), Acme (1 start, 1st 100%, 2nd 0%, 3rd 0%, Avg 100%), Eleanor (2 starts, 1st 50%, 2nd 0%, 3rd 0%, Avg 50%), Rival (1 start, 1st 100%, 2nd 0%, 3rd 0%, Avg 100%), Walrus (1 start, 1st 100%, 2nd 0%, 3rd 0%, Avg 100%).

Class C—25ft. Open Yachts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Calypso (8 starts, 1st 12.5%, 2nd 12.5%, 3rd 12.5%, Avg 37.5%), Flirt (8 starts, 1st 12.5%, 2nd 12.5%, 3rd 12.5%, Avg 37.5%), Early Dawn (9 starts, 1st 11.1%, 2nd 11.1%, 3rd 11.1%, Avg 33.3%), Chewink (5 starts, 0 2d, 2 3d, Avg 40%), Marion (4 starts, 0 1st, 1 2d, 3 3d, Avg 25%), Jingo (2 starts, 0 1st, 1 2d, 1 3d, Avg 50%), Little Peter (5 starts, 0 1st, 1 2d, 3 3d, Avg 20%), Cyrilla (1 start, 0 1st, 0 2d, 1 3d, Avg 33.3%).

Class D—25ft. Cabin Yachts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Calypso (8 starts, 1st 12.5%, 2nd 12.5%, 3rd 12.5%, Avg 37.5%), Flirt (8 starts, 1st 12.5%, 2nd 12.5%, 3rd 12.5%, Avg 37.5%), Early Dawn (9 starts, 1st 11.1%, 2nd 11.1%, 3rd 11.1%, Avg 33.3%), Chewink (5 starts, 0 2d, 2 3d, Avg 40%), Marion (4 starts, 0 1st, 1 2d, 3 3d, Avg 25%), Jingo (2 starts, 0 1st, 1 2d, 1 3d, Avg 50%), Little Peter (5 starts, 0 1st, 1 2d, 3 3d, Avg 20%), Cyrilla (1 start, 0 1st, 0 2d, 1 3d, Avg 33.3%).

Class L—21ft. Cabin Yachts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Hostess (1 start, 1st 100%, 2nd 0%, 3rd 0%, Avg 100%), Bud (1 start, 1st 100%, 2nd 0%, 3rd 0%, Avg 100%), Tacoma (2 starts, 1st 50%, 2nd 0%, 3rd 0%, Avg 50%), Cleopatra (2 starts, 0 1st, 2 2d, 0 3d, Avg 0%), Problem (1 start, 0 1st, 0 2d, 1 3d, Avg 33.3%).

Class S—21ft. Cabin Yachts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Opitsah III. (8 starts, 3 1st, 2 2d, 2 3d, Avg 56.2%), Zaza (7 starts, 3 1st, 0 2d, 2 3d, Avg 42.9%), Mildred II. (4 starts, 2 1st, 2 2d, 0 3d, Avg 50%), Harriet (4 starts, 1 1st, 2 2d, 0 3d, Avg 25%), Eaglet (9 starts, 0 1st, 5 2d, 0 3d, Avg 55.6%), Tabasco III. (3 starts, 1 1st, 1 2d, 1 3d, Avg 33.3%), Coquette (5 starts, 0 1st, 0 2d, 3 3d, Avg 60%), Rambler (2 starts, 0 1st, 1 2d, 0 3d, Avg 50%), Privateer (4 starts, 0 1st, 0 2d, 1 3d, Avg 25%), Freyja (2 starts, 0 1st, 0 2d, 0 3d, Avg 0%), Tarpon (2 starts, 0 1st, 0 2d, 0 3d, Avg 0%).

Class T—18ft. Open Yachts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes *Dauntless (3 starts, 2 1st, 1 2d, 0 3d, Avg 66.7%), Fantasy (5 starts, 3 1st, 2 2d, 0 3d, Avg 60%), *Circe II. (2 starts, 1 1st, 1 2d, 0 3d, Avg 50%), Plunger (2 starts, 1 1st, 1 2d, 0 3d, Avg 50%), Vitesse (1 start, 1 1st, 0 2d, 0 3d, Avg 100%), Lobster (4 starts, 0 1st, 1 2d, 0 3d, Avg 25%), Cathryn (1 start, 0 1st, 0 2d, 0 3d, Avg 0%), Flip (1 start, 0 1st, 0 2d, 0 3d, Avg 0%), Hector (4 starts, 0 1st, 0 2d, 2 3d, Avg 50%), Pioneer (3 starts, 0 1st, 0 2d, 1 3d, Avg 33.3%).

*Measured out of class.

Class X—15ft. Open Yachts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Vitesse (5 starts, 4 1st, 1 2d, 0 3d, Avg 80%), Tess (4 starts, 1 1st, 3 2d, 0 3d, Avg 25%), Dorothea (1 start, 0 1st, 0 2d, 0 3d, Avg 0%), Melodie (1 start, 0 1st, 0 2d, 0 3d, Avg 0%), Elsa (1 start, 0 1st, 0 2d, 0 3d, Avg 0%).

Class I—18ft. Knockabouts.

Table with 4 columns: Boat Name, Starts, 1sts, 2ds, 3ds, Per C't, B'ks, Per C't, Average. Includes Aspinquid (7 starts, 3 1st, 2 2d, 2 3d, Avg 42.9%), Mahillian (5 starts, 2 1st, 0 2d, 2 3d, Avg 40%), Bacchante (6 starts, 1 1st, 1 2d, 1 3d, Avg 16.7%), Bonito (2 starts, 1 1st, 1 2d, 0 3d, Avg 50%), Nethla (3 starts, 0 1st, 0 2d, 0 3d, Avg 0%), Ayaya (6 starts, 0 1st, 1 2d, 4 3d, Avg 16.7%), Oriana (4 starts, 0 1st, 0 2d, 1 3d, Avg 25%), Miladi (1 start, 0 1st, 0 2d, 0 3d, Avg 0%), Barbara (3 starts, 0 1st, 0 2d, 0 3d, Avg 0%).

In this table neither the races of the Corinthian Y. C. nor the club races of the Hull-Massachusetts Y. C. are figured. In figuring the percentage of each yacht it is assumed that she has started in at least half as many races as any yacht in her class. This will account for the difference shown in the actual wins and the percentages of some of the yachts.

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, Aug. 3.

EIGHT boats started in the annual memorial races for the Center cups, which were sailed off the Seawanhaka Corinthian Y. C. on Saturday, Aug. 3. The course was twelve and three-quarter miles in length, the mark boats being anchored off Plum Point, Middle Ground Shoal, Center Island Point and Lloyd's Point. It was a close reach to the first mark, a broad reach to the second, a run to the third and from there a beat to the finish. A fresh southerly wind blew throughout the race. The boats were sent away at 3:05 o'clock, with Joker ahead and to windward. On the first two legs Joker and Persimmon fought it out for first place, but the latter boat's chances were spoiled when she hauled on the wind by losing her bowsprit, and she withdrew. Wyntje overtook Marcia before reaching Middle Ground Buoy and finished a winner. Summary:

Table with 3 columns: Boat Name, Finish, Elapsed. Includes Raceabouts—Center Memorial Prizes—Start, 3:05; Joker, Walter Jennings (5:31:09); Persimmon, E. J. Clarke (Withdrawn).

Knockabouts—Start, 3:00.

Table with 3 columns: Boat Name, Finish, Elapsed. Includes Wyntje, Sherman Hoyt (5:42:55), Nakodo, C. W. Wetmore (5:45:50), Mistrail, E. I. Low (5:46:42), Lucille, H. H. Landon (5:47:55), Vagrant, Brown & Low (5:49:18), Marcia, Dresser & Jacquelin (5:49:38).

The winners were Joker and Wyntje.

Sorceress, and is very effective, but requires a long case and slot in the keel. I have used this type of plate of many shapes, from the original knife form of 6ft. drop and 2ft. wide to a plate of only 3ft. drop and 2ft. 6in. in width, in the case of Scotia II., the winner of the French international one-tonner cup in 1901. The object of the shallow plate in this case was to evade the tax on radius of the plate, taken from the pivot to the furthest point in the plate. The semi-circular plate No. 3 type evades this rule very well, and was used in one of the competing boats, but she was not very good to windward.

The first type of a rectangular plate, though not nearly so effective for a given area and weight, is essential under a rating rule which taxes the vertical drop of the plate heavily, and is also the best form for a lifting bulb or ballasted plate.

The triangular plate lifted from the after end is hardly ever seen now, as it is ineffective for its size, as compared with the fourth class of plate, and does not conform well to the rating rules, like the first and third classes. This type of plate is in use only on very weedy waters, where a plate with a vertical or nearly vertical fore edge could not be used; even when it is used now it is usually lifted from the fore end like the No. 4 type.

The fore edge of the No. 1 type is sometimes cut at a sharp angle to get rid of weeds, but of course it leaves a gap in the fore end of the case, when raised, unless it is raised in a direction parallel to the fore edge, which requires a long case forward of the slot in the keel.

Of the lifting bulbs or ballasted plates the simplest and most efficient is the No. 1 type plate, with a raking fore edge to clear weeds, etc., and a lead bulb of pear-shaped section and suitable weight. By means of such a plate a small boat can be made uncapizable, and carries her ballast in its most effective form, while she is not debarred from shoal waters as a fixed bulb keel boat would be, the only disadvantage of this form being that the bulb projects below the keel when the plate is hoisted, unless a very large slot is cut in the keel and a wide box case fitted with some form of self-closing arrangement to stop up the gap in the keel, and hold the plate firmly when it is lowered. This is best done by having a loose wooden block on each side of the plate weighted sufficiently to keep it at the bottom of the case till raised by the top of the bulb striking it on rising, and prevented by a slightly overlapping keel band from falling through the slot when the bulb is down. These blocks must be hardwood, teak for choice, and at least twice their width in depth, to prevent them from jamming in the case.

Such a ballast plate as this should be lifted by two flat-link, bronze, bicycle-pattern chains, passing over sprockets on a central spindle along the top of the case, the latter being actuated by worm wheel gear. By gearing of this sort, a bulb and plate up to several tons may be lifted, but the whole affair is very costly, and requires a good builder to fit it, and can only be made by a competent engineer.

Trapshooting.

Fixtures.

Aug. 8-9.—Lafayette, Ind.—Fifteenth annual tournament of the Lafayette Gun Club. Amateur. John Blistain, Sec'y.

Aug. 13-15.—Vicksburg, Miss.—Vicksburg Gun Club and Fish and Game Protective Association's tournament; \$300, and \$200 in prizes added.

Aug. 14.—Ossining, N. Y.—Merchandise clay bird tournament of the Ossining Gun Club; clam bake; brass band. C. G. Blandford, Capt.

Aug. 14.—Trenton, N. J.—Contest for championship of Mercer county, between Messrs. C. A. Comp, holder, and W. B. Widman, challenger.

Aug. 15.—Sherburne, N. Y.—Eherburne Gun Club's tournament. J. F. Paddelford, Sec'y.

Aug. 14-16.—Colchester Beach, Md.—Sixth annual midsummer tournament, under the management of Messrs. J. R. Malone and J. M. Hawkins, of Baltimore; two days at targets; one day at live birds; added money and merchandise prizes.

Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas.

Aug. 19-21.—Asheville, N. C.—Three-day tournament under the auspices of Maj. E. P. McKissick and Col. J. T. Anthony; distance handicaps; \$100 per day added. John Parker, Mgr.

Aug. 21-22.—Bass Lake, Ind.—Tournament of the Peru Gun Club.

Aug. 23.—Pleasant Hill, Mo.—Fifth annual sweepstake and merchandise tournament of the Pleasant Hill Colored Gun Club. T. H. Cohron, Sec'y.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw.

Sept. 2.—Ilion, N. Y.—Amateur shoot of the Remington Gun Club. W. H. Grimshaw, Sec'y.

Sept. 2.—Meriden, Conn.—Labor Day tournament of the Parker Gun Club. Also Bristol sheep bake. C. S. Howard, Sec'y.

Sept. 2.—Albany, N. Y.—Bluerock tournament of the Forester Gun Club. H. H. Valentine, Mgr.

Sept. 2.—Lake Okoboji, Ia.—Indian tournament, to be held at Arnold's Park.

Sept. 2-3.—Union City, Ind.—Tournament of the Parent Grove Gun Club.

Sept. 2-3.—Portland, Me.—Maine State tournament, under the auspices of the Portland Gun Club. S. B. Adams, secretary.

Sept. 2-3.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association. Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y.

Sept. 15-16.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.

Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreihls, Sec'y.

Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 10-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

The programme of the sixth annual midsummer tournament to be held at Tolchester Beach, Kent county, Md., Aug. 14, 15 and 16, provides for two days at targets and one day at live birds. Merchandise prizes and added money \$50. Gold medal to high average. Tolchester Beach is about two hours' sail from Baltimore, on fine steamers, which leave Pier 16, Light street wharf, at 8:30 A. M. and 2 o'clock P. M. daily. Mr. A. R. Middleton has made known his intention to take the shooters on his steam yacht up the bay after supper of each day of the tournament. The tournament will be under the able and popular management of Messrs. J. R. Malone and J. M. Hawkins. It is open to all. The programme, concerning the amusement features, states: "Those wishing to bring their families or their lady friends will find this a very pleasant place, as no intoxication or disorder is allowed on the grounds. All the amusements found at the seashore, such as bathing, boating, dancing, etc., can be had at this beautiful resort. Two cents will be charged for targets in all events except the merchandise event. Live birds twenty-five cents each. Ship your shells to J. R. Malone, care Tolchester Steamboat Company, Pier 16 Light Street Wharf, Baltimore, who will see they are delivered on the grounds. Handicap committee will consist of Messrs. J. C. Hicks, Hood Waters and Dr. H.

E. Lupus. Plenty of first-class loaded shells can be had on the grounds. Shooting will commence each day at 10:30 A. M. All shooters will be handicapped by distances from fourteen to twenty yards, according to their ability. The management reserves the right to change handicaps any time during the tournament. Two sets of traps—a magatrap and one set of Sergeant system—will be used—targets thrown from known traps but unknown angles. The division of money will be by the Rose system, with a ratio of 5, 3, 2, 1, as that system seems to give the best satisfaction wherever used. In the merchandise event no entrance will be charged, except price of targets, which will be three cents each in this event. High guns win the prizes." The merchandise event is at fifty targets. The management has arranged for a team race of ten men from the Eastern Shore against ten men from the Western Shore at fifty targets per man—Baltimore City residents barred—to determine which side of the bay can boast of the best county team. The live bird events are at 5, 7 and 10 birds, and miss and outs. The first and third days will be devoted to targets, in respect to which there are ten events, five at 15 and five at 20 targets, with entrance of \$1, \$1.30, \$1.50 and \$2. The prizes are, a handsome gold parlor clock, a leather re-enforced dress suit case, a gold mantel clock, a silver butter dish, a silver bread plate, a silver cream pitcher, a half dozen silver dessert spoons, two silver berry spoons, a silver clothes brush, a fine pocket knife and a hand protector. The shooter making the lowest score will receive one hundred empty shells.

Mr. L. H. Schortemeier writes us as follows: "On Wednesday, Aug. 14, an all-day shoot at live birds will be held at Interstate Park, under the auspices of the New York County Gun Club and under my management, beginning on the arrival of the 11 A. M. train from East Thirty-fourth street, New York. On the arrival of the 11 A. M. train, miss-and-outs. On the arrival of the 12:20 train the first regular event: 10 birds, entrance \$6, three moneys, class shooting, 50, 30 and 20 per cent.; second event, 7 live birds, entrance \$4, three moneys, class shooting, 50, 30 and 20 per cent.; third event, 10 live birds, entrance \$6, three moneys, Rose system, 6, 3 and 1 points; fourth event, 7 live birds, entrance 4, three moneys, Rose system, 6, 3, and 1 points. Ten dollars added, \$5 of which to go to man killing most birds in the regular event, a possible 34 birds; \$3 to second, and \$2 to third. All events handicap. Visitors may shoot for birds only. Birds deducted at 25 cents each. This will be a good chance to practice on the grounds for the Dean Richmond cup at the New York State Association shoot in September."

The programme of the amateur shooting tournament at Arnold's Park, Aug. 27 to 30, is now ready for distribution. The programme is alike for each day, namely, twelve events—eight at 15 targets and four at 20 targets. Entrance \$1.50 and \$2. Five dollars are added to each of the 15-target events, and \$7.50 to each of the 20-target events. Three cups and \$375 are added. There are \$65 for general averages. One cup will be awarded to contestants 85 per cent. and over; one to contestants below 85 per cent. All ties for cups will be shot off at 50 targets, entrance, price of targets. A cup will be given to the manufacturer's agent making the highest average through the programme. Shooting commences at 9 o'clock. American Association rules govern. Targets 2 cents. All ties divide. Ship shells care of E. Hinshaw, Arnold's Park. Arnold's Park is situated on the C. M. & St. P. Ry., five miles south of Spirit Lake, on Lake Okoboji. Ask for reduced railroad rates. Chas. W. Budd, of Des Moines, manager. Elmer C. Hinshaw, of Okoboji, secretary. Fred C. Whitney, of Des Moines cashier.

The Philadelphia Times states that D. Sanford again outshot the field in the Keystone League inanimate-target tourney on their grounds at Holmesburg Junction, July 31, breaking 43 out of 50 from the 18 yard mark. Cartledge and Luther, shooting from the 16 yard mark, broke 41. The conditions were 50 targets, 20 from the magatrap, 20 from the set of expert traps at unknown angles, and five pairs of doubles. Over the magatrap Cartledge and Luther were the high scorers, both men making straight scores.

Mr. Tom A. Marshall, of Keithsburg, Ill., writes us as follows: "I am just in receipt of a letter from Mr. Theron Powers, to the effect that the condition of his brother, Mr. Chan. Powers, warranted the statement that he was entirely out of danger, and would be able to accompany Dick Merrill home, sailing on Aug. 23, all of which will be hailed as excellent news by Chan's host of friends."

In a match at 15 live birds per man, said to be for \$200 a side, between Messrs. Och Jones and George Wolfgang, at Mahanoy City, Pa., Aug. 1, Jones killed 10 to 8 for Wolfgang. Nothing is said concerning whether the referee was persona non grata, or otherwise, or whether the position was less strenuous than ordinary in that region.

The clambake, merchandise shoot, pink tea and conversazione of the Hell Gate Gun Club, held at Dexter Park, Brooklyn, on Tuesday of last week, was a success. There were so many shooters that the day was hardly long enough, and there were so many eaters that the tables were hardly long enough. It was a great day taken big and large.

Mr. F. C. Riehl, in "Mississippi Valley Notes," in FOREST AND STREAM this week, tells of the Indian anniversary, shooting events in the West, and of the willingness of the Indians to accept any shooting proposition, as set forth by Mr. Paul North in our issue of Aug. 3.

The first tournament of the Holyoke (Mass.) Gun Club was held on Aug. 2. Messrs. Leroy, Fanning and Griffith shot from the 20 yard mark and were amongst the makers of high scores throughout the programme. Mr. J. R. Blarney is the secretary.

At the old mill, in Brooklyn, last week, a match was shot at 50 targets by Messrs. J. D. Nager and A. P. Atchley, of the Empire Rod and Gun Club. Each shot from the 18 yard mark. Mr. Nager won by a score of 46 to 43.

The live bird shoot, to be held at Interstate Park, on Aug. 14, will give an opportunity for some preparation concerning the contest for the Dean Richmond trophy, which is a feature of the New York State shoot.

July 31, at South Atlantic City, N. J., Mr. Chas. Cummings, of the Keystone Gun Club, and W. Z. Adams, shot a match at live birds, which was won by the latter, by one bird.

The annual Maine State tournament will be held under the auspices of the Portland Gun Club, Sept. 2 and 3. Mr. S. B. Adams is the secretary.

At the monthly shoot of the Ambler (Pa.) Gun Club, Aug. 1, Mr. Pflieger won the Ambler medal with a score of 24 out of a possible 25.

The Remington Gun Club, of Ilion, Herkimer County, N. Y., has announced an amateur all-day shoot, to be held on Labor Day, Sept. 2.

The programme of the New York State shoot is nearly prepared, and will be ready for distribution in the near future. BERNARD WATERS.

ON LONG ISLAND.

Hell Gate Gun Club.

Brooklyn, L. I., July 30.—The clambake and fifth annual trapshooting tournament of the Hell Gate Gun Club, held at Dexter Park on July 30, was largely attended and was a pronounced success. Two sets of traps were used, both Sergeant system. The main events were not concluded till well toward evening. The gun and ammunition event and the merchandise events were the main ones. Re-entries were allowed in the former up to 4:30 P. M. The first prize was a Marlin repeating take-down shotgun; second prize, a target pistol or revolver. There were prizes up to a total value of \$75. The clambake had a full entry list. A monster pile of clams, uncovered from a heavy layer of seaweed, canvas, etc., was the first course at the dinner after the shoot, followed by delicious fish, chicken, lobster, etc., in abundance for all. The Hell Gate Gun Club's system of handicapping is such that allowances are added to totals of the shooters, thereby permitting

the making of more than a possible possible. Thus, in a 20-target event, if a contestant had 5 allowance and broke 19, his score would be 24. It is an absurd system, since the contestant who shoots as scratch man cannot possibly hope to win, even if his score be perfect. The ties are shot off among those scoring over the 20, and each contestant therein is not out till he has missed as many as he broke over 20.

Following are the scores of five events shot on No. 2 set of traps; entrance in each \$1, targets included. The allowances follow the names of the contestants. A number shot for targets only.

Only one of the five 15-target events, \$1 entrance, on the programme for No. 1 set of traps was shot, and in it the scores were as follows: Vos 12, Muench 11, Schoverling 11, Carlough 10, Count 11, Van Allen 13, Schorty 12, Glover 8, Short 7, Klank 8, Doenick 7, Kroeger 8, Ernst 2, Greiff 9, Hawes 12, Albert 7, Sands 10, Wellbrock 7, Wehler 8, Meckel 6, Pfander 9, Von Lengerke 10, Hainhorst 8, Datjen 8, Roberts 10, Scott 6.

No. 5 is the allowance in No. 6, the gun and ammunition event, 20 targets, entrance \$1.50. No. 7 is the allowance in No. 8, the merchandise event, and Nos. 9 and 10 are the same event, re-entries.

In the gun and ammunition event Schorty and Schoverling divided first and second, and the other winners were in the order following: Muench, Koegel, Voss, Doenick, Hendrickson, Kroeger, Klenck, Roberts, Lebohner, E. Steffens, Trostel, Ficken. In this event Schorty re-entered, scoring 24 with an allowance of 5. Carlough also re-entered, scoring 21 with an allowance of 2.

Table with columns for Events (1-10) and rows for various shooters (Voss, Muench, Schlicht, etc.) with scores.

National Gun Club.

MILWAUKEE, Wis., July 26.—The following is the result of the regular monthly prize shoot of the National Gun Club, which took place this afternoon:

Table with columns for names and scores for the National Gun Club shoot.

The birds were as strong a lot of fliers as has been let loose from the National Gun Club traps in many a day, and some fine shooting was the result.

Following are the scores of the same club at its June shoot, which for some reason failed to be sent out at the time:

Table with columns for names and scores for the National Gun Club June shoot.

WESTERN TRAPS.

Trap at Watson's Park.

Watson's Park, Burnside Crossing, Ill.—In a 50-bird match, between Messrs. Barto and Creyk, to-day, the former won by the score of 46 to 30. In the two sweepstake events Levi and Neal shot Creyk and Barto for the birds. The scores: Fifty-bird match: Barto.....221022222222022022211221-22 22202222222122121121122-24-46 Creyk.....101101021100111200111*11-17 000010110110011102022021-13-30 No. 1. No. 2. Garfield Gun Club.

Chicago, Ill., Aug. 3.—The appended scores were made on our grounds to-day on the occasion of the seventh and last shoot of the second series of the trophy season. The day was a perfect one for shooting, being delightfully cool and no wind. A. Hellman won medal in Class A on a score of 24. A. D. Dorman made a similar score and won Class B medal. E. W. Eaton won Class C medal on 18. The shooters will all be reclassified before next shoot. Not having had time as yet to figure up the scores for this series, I am unable to report the winners in the various classes, but will do so next week. Twenty-two shooters took part in the trophy event to-day, and several others came too late to enter that event: Trophy scores: Dr Meek.....1011111110111111111111-23 L Thomas.....01101111110111111110011-20 W P Johnson.....01101111101110011111101-19 P McGowan.....110111110111110011011-20 C P Richards.....1110111101010111011111-20 A McGowan.....1010111111011011011111-20 J D Pollard.....1011111101111111111011-22 C H Kehl.....101001001010010101000001-9 C T Keck.....1010100001001010101011-14 A Marshall.....1101111111111011011011-21 Dorman.....1111111101111111111111-21 J Monigan.....0111001011111111000010-15 Drinkwater.....1010001010100000100111-12 Ford.....111111110111111110101-22 J C Kissick.....1000001000010000000100-5 E W Eaton.....111111111111010101001-18 T Eaton.....111111110110001101011-19 S E Young.....111110111111111110111-23 Dr Mathews.....111000001010100101111-15 A Hellman.....111111111111111111110-24 W A Jones.....111011100111111111011-21 Barnard.....1110111110101000000010-13 Sweepstakes: Targets: 15 10 * 15 15 10 Dr Meek.....11 8 * 15 15 10 L Thomas.....10 5 5 11 13 14 W P Johnson.....11 9 8 13 10 10 P McGowan.....12 7 9 11 15 15 C P Richards.....14 8 14 13 13 13 A McGowan.....8 7 4 13 12 12 J D Pollard.....14 9 9 11 11 11 C H Kehl.....11 6 9 7 7 7 C T Keck.....9 6 8 14 12 12 A Marshall.....9 6 8 14 12 12 A D Dorman.....13 9 6 10 14 14 J Monigan.....11 7 8 9 9 4 Drinkwater.....5 5 1 6 9 9 Ford.....8 6 6 10 9 9 J C Kissick.....7 2 3 11 8 4 E W Eaton.....11 8 3 11 8 4 T Eaton.....13 8 7 15 14 10 S E Young.....12 9 7 12 14 8 Dr Mathews.....13 9 7 11 11 11 A Hellman.....7 8 15 13 8 W A Jones.....9 8 11 14 8 Leasure.....0 0 9 9 Roberts.....0 0 0 0 Redington.....2 4 0 0 Barnard.....4 5 8 8 *Five doubles.

Chicago Gun Club.

Chicago, Ill., Aug. 3.—Herewith find Chicago Gun Club scores. E. M. Steck did good work to-day; same old trick, broke 25 straight in the weekly handicap in birds. Dr. Morton won the handicap trophy in the same event. In the monthly trophy event Dr. Carson at the 21yd. mark broke 15 straight. The weather was cool and the day was fine for shooting. Cop and Hardy, who are not members of the club, shot for birds only. Several miss-and-outs were shot, Antoine winning first and Morton the second. Weekly shoot: Broke. Hdcp. Total. Steck.....11111111111111111111-25 0 25 R B Mack.....01100111011111011011-19 4 23 Mrs Carson.....11101011110111011011-20 5 25 Dr Carson.....11111101111111111111-24 0 24 A W Morton.....11111010011110111110-20 4 24 Dr Morton.....11111111011111111110-23 5 25 Antoine.....11111111111110111111-24 1 25 Hardy.....011101100110110111011-18 0 18 Cop.....1111110111111110001111-21 0 21 Second tie on handicap trophy: Dr Morton.....011011101-7 2 9 Antoine.....111111110-9 0 9 Third tie: Dr Morton.....111111100-8 2 10 Antoine.....111011111-9 0 9 E. The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Mississippi Valley Notes.

THE Piasa Gun Club, of Alton, Ill., has decided to change the dates for its annual shoot to Sept. 19 and 20. There will be 175 targets on the programme each day, in 15 and 20 bird events; \$5 added for each race. In addition there will be \$50 average money for four high guns for the tourney. The shoot will be wide open to all comers, but experts will be charged 25 cents extra in each event, the amount thus accruing to go equally to amateurs shooting the programme. Sergeant system and class shooting will prevail, moneys being divided on the ratio of 30, 30, 20. Alton is splendidly situated for an event of this kind, and a large attendance is anticipated.

The Indian Anniversary.

The Indians, after their successful work abroad and their royal welcome home, have now gotten down again to the routine of work in their own hunting grounds. Chief Tom A. Marshall, acting by authority of the Council of Chiefs, announces that the annual conclave and tournament of this world-famous tribe will be held this year, as last, on the beautiful shores of Lake Okobojo, Ia. The Indian shoot will follow immediately upon the Iowa amateur tourney of Messrs. Budd and Whitney, at the same place, beginning on Sept. 2 and continuing four days, to the 5th. The programme will be practically the same as in 1900, but more money will be added and better inducements offered to shooters all over the world. Wives and papposes will there, and the brave who appears on the rendezvous alone will have to give a very satisfactory explanation, or pay the customary fine, \$50. The recent victories abroad will give this gathering a national significance, and it is needless to say that every member of the tribe will be on hand to answer "Here!" at roll call. The programme is now in the hands of the printer, and will be a handsome souvenir, keyed to the legendary theme, which made the programme last year so popular.

This is a "shooting week" in the middle West, there being tourneys slated as follows: Aug. 8, at Harrisburg, Ill., annual meeting of the Saline County Gun Club; Aug. 8, Beardstown, second midsummer shoot of Brennan and Elliott; Aug. 8-9, annual midsummer shoot of Springfield, Mo., Gun Club; Aug. 8-9, annual meet of Lafayette, Ind., Gun Club.

Dove shooting season began in Illinois on Aug. 1. The birds are very plentiful this season, and afford excellent sport to those who have the hardihood to shoulder a gun in the prevailing hot weather.

We note Mr. Paul North's suggestion in FOREST AND STREAM of Aug. 3, that there are shooting experts in America who would like to try conclusions with the individual members of the recently returned American team, who so nobly represented this country abroad. While the writer has no special authority to speak for the Indians, he will say as Grand Scribe of the tribe that they will welcome, collectively and individually, any fair proposition that will tend honestly to promulgate interest and for the general advancement of the sport of trapshooting in the United States. Mr. North was largely instrumental in bringing about the matches abroad, now so gloriously terminated in our favor, and evidently he is not weary of the good work.

The article "Broken and Dusted Targets," in the Aug. 3 FOREST AND STREAM, will meet with the hearty and unqualified indorsement of a large majority of trap shots. Certainly one of the things that this sport most needs is a common-sense and comprehensive revision of the rules now in common use. Some one in authority ought to take this matter promptly in hand, and it behooves those interested to designate such authority and demand that it be done. F. C. RIEHL.

Wapello Gun Club.

KNOXVILLE, Ill., July 29.—Herewith are the scores of the Wapello, Ia., shoot. The club should have had forty shooters at least, as their programme was a good one. It was very hot the first day, and kept some from shooting in all the events.

W. Weetleaf, of Nicols, Ia., won first average, \$10, and Guy Burnside, of Knoxville, Ill., second, \$7, and Fred Ellett (Reuben), of Keithsburg, Ill., third, \$5.

On the second day a little cyclone came up and blew the spectators' tent over, and the center pole fell and struck one of the party in the back of the head; but, as luck would have it, no serious damage was done, but it surely did make the targets jump around some while No. 1 squad was at the score.

Mr. Hawkins thought the extremely hot weather kept a great many away, as last year they had upward of thirty-five entries all the way through.

July 25, First Day.

Table with columns: Events, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, Total. Rows include: Ady, Rulvis, Ross, Hawkins, A Cook, Croutcup, Nichols, L Foley, W Weetleaf, G Weetleaf, Charbonneau, Black, Campbell, Reuben, Cool, Burnside, Wyman, Prouty, J Foley, Langford, Jackson, Nicola, Herr, Hofer, Wilson, Carlson.

July 26, Second Day.

Table with columns: Events, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, Total. Rows include: Ross, Hawkins, A Cook, Croutcamp, Nichols, W Weetleaf, Charbonneau, Black, Campbell, Reuben, Cool, Burnside, Wilson.

Table with columns: General averages, 1st day, 2d day, Total, Av. Rows include: W Weetleaf, Burnside, Reuben, Black, Campbell, Croutcamp, Ross, Cook, Nichols, Charbonneau, Cool.

Ossining Gun Club.

OSSINING, N. Y., Aug. 3.—Herewith please find scores of the Ossining Gun Club, made at the regular weekly shoot, Saturday, Aug. 3. Messrs. Burns and Case, of Mamaroneck, were with us to-day. Mr. Case, an expert rifle shot, made his initial attempt at breaking clay birds, and with very good success. It is the eye after all, with plenty of practice, to develop speed, that counts.

Table with columns: Events, 1, 2, 3, 4, 5, 6. Rows include: N Tuttle, C Blandford, A Bedell, A L Burns.

Cambridge Springs Gun Club.

CAMBRIDGE SPRINGS, Pa., July 25.

Table with columns: Events, Targets, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10. Rows include: Atkinson, Alexander, Shaner, Cochran, Flemming, T E Mallory, S T Mallory, J T Mallory, A J Stancliff, M L Krider, W A Baird, W J Lehr, Crozier, W L Locke, Kellog, J R Hull, E L Day, Seth Clover, J A H.

Friday, July 26

Table with columns: Events, Targets, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10. Rows include: Atkinson, Alexander, Shaner, Flemming, Hull, F E Mallory, S F Mallory, W Baird, J T Mallory, A J Stancliff, Crozier, Woodgar, E, Johnson, Hall, J A H.

IN NEW JERSEY

Cape May Gun Club.

CAPE MAY, N. J., Aug. 3.—Event one was won by J. W. Allison for the Challenge cup of the Cape May Gun Club. In order to retain this cup, it must be won five times during the year. Hence the present winner must defend it against all members of the club.

Event No. 2, for a silver cup, was won by Mr. T. S. Dando. Mr. A. H. Fox of the Winchester Repeating Arms Co., was present, a guest of the club, and showed the effectiveness of Winchester loads by powdering 71 straight.

Table with columns: Event No. 1, Tull, Porter, Shcarer, Jr, Scott, Darp, Allison, Kirk, Dando, Rutchman.

Table with columns: Event No. 2, Tull, Kirk, Dando, Rutchman, Darp, Shearer, Porter, Allison.

Trenton Shooting Association.

Trenton, N. J., July 27.—A little family party attended the matinee to-day. The weather was cool and pleasant, and some good scores resulted. Thomas made the high average for the day, with Vanarsdale and Comp following, in the order named.

In the first 50, Thomas broke 46, Vanarsdale 45 and Comp 43. The Aug. 14 programme will bring out a crowd, and also it is hoped stir up shooting matters in the vicinity. Along with the city cup, which will be offered for the first time, the match between Comp and Widmann for the county trophy will also be contested.

Table with columns: Events, Targets, 1, 2, 3, 4, 5, 6, 7. Rows include: Thomas, Comp, Maddock, Applegate, Bundy, Vanarsdale, Daly, Gaskill, Sheim, Rowan.

Mt. Kisco Rod and Gun Club.

Mr. Kisco, N. Y., Aug. 5.—The scores of the Mt. Kisco Gun Club's tournament are appended. By an oversight, they were not sent with the account of the tournament, published in Forest and Stream of Aug. 3.

Table with columns: Events, Targets, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12. Rows include: J S Fanning, J Tallman, G Sutton, R Gorham, C Stevenson, C Von Lengerke, F Bales, A Betts, H Dielh, E Martin, J W Hoffaman, R Quimby.

Table with columns: Extra Events, Targets, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 10. Rows include: W Vail, F Behemer, Al Rae, R Scoles, E Martin.

Mr. R. A. Welch has been at Spa, Belgium, since July 14, and Mr. J. A. R. Elliott since July 24. The latter divided a 1,000-franc event the day after his arrival. In some of the contests Mr. Welch was set back one-half meter further than Mr. McIntosh, 29 meters to 28½ for the latter. Mr. Welch has won about 5,000 francs since he arrived at Spa. From the latter place Messrs. Welch and Elliott go to Namur, where large cash prizes, amounting to about \$40,000, are offered. On July 17, forty-seven contestants, Mr. Welch divided 5,000 francs with Comte de Robiano, Baron de Coppins and Marconcini. On July 20, twenty-three contestants, Messrs. Welch and Naumann divided 1,000 francs. On July 22, thirty-two contestants, Mr. Welch and Journu divided. On July 24, fifty-one contestants, Messrs. Welch and McIntosh divided. It thus will be noted that the American shooters are performing excellently well abroad.

Answers to Correspondents.

No notice taken of anonymous communications.

Thos. J. Lynch, East Brookfield, Mass.—Please give me the present address of Mr. Peter M. Gunter, the noted Canadian trapper, or the address of some trapper who traps the Laurentian hills of Canada. Ans. We cannot give the address; some of our readers may.

CANADIAN ANGLING PERMITS.

WE print to-day a communication from Mr. J. B. Townsend, Jr., of Philadelphia, relating his unpleasant experience with the Dominion authorities upon the occasion of a fishing trip to Nova Scotia. The recital should have the careful attention of all American anglers who may be contemplating a visit to Canada, and who, unless they shall forestall such an event by taking out a fishing license, may have a like indignity put upon them.

Mr. Townsend reviews the circumstances so fully that little remains to be said in comment. It is pertinent to remark, however, that Mr. Townsend appears to have been at all times and in every particular desirous of conforming to the law as he understood it, as it was interpreted to him by those who might be presumed to understand it, and as it has actually been construed in practice. It is this phase of the affair which makes the action of the authorities at the time and their subsequent course appear so harsh and inconsiderate.

The whole case turns upon the meaning of the provision that "foreigners temporarily domiciled in Canada and employing Canadian guides, boats and boatmen shall be exempt from the regulation requiring permits." As Mr. Townsend's counsel points out, the self-contradictory term "temporarily domiciled" can be interpreted only to mean "temporarily present," and the regulation then provides that if visiting anglers employ Canadian guides, they shall be exempt from the license requirement. If this is not the meaning of the regulation, it would be difficult to discover that it had any meaning at all. This has been the construction of it in practice; permits have not been required of American anglers employing Canadians; Mr. Townsend is only one of scores of Americans who have fished in Canadian waters without a license because instructed by the authorities that under the circumstances no license was required.

Mr. Townsend's experience, however, demonstrates that at any time and in any particular isolated case the Canadian officials are likely to arrest the unwitting foreigner, and until the test case which is pending to determine the matter shall have been decided, the only safe course for the visiting angler, to insure immunity from trouble, will be to take out a fishing license.

GOING IT ALONE.

WE have had recently several expressions of opinion about desirable and undesirable companions for outings, and some of the writers have urged that one would do better to go alone. It is to be noted, however, that all of them apparently have taken for granted the employment of a guide. Has it come to this, that the art of woodcraft is dying out and forgotten except by such as follow the pursuit as a business? Are there no longer sportsmen who go into the woods, packing their own outfit, selecting their own routes and camping places, making their own shelter, building their own fires, killing their own game, catching their own fish and making their own beds? It would appear to be so, judging from the ubiquity of the guide, his manifest importance, and the trustful dependence put in him by his "sport" or "party."

It is better to go with a guide than not to go at all; and in ninety-nine cases it may be better to go with one than without. But the hundredth man who goes it alone, or the party of comrades who go alone, will surely get the most from the outing.

He gets most who does most.

That is, within reason, if he has the physical strength and the knack. If he does not, as the phrase goes, "do himself up" with fatigue produced by over-exertion, or insomnia caused by the hard bed he makes for himself, or indigestion caused by the impossible food he sets before himself.

We talk about a wilderness excursion as a getting back to nature. It is a getting back to the childhood of the human race. The camper who goes alone is confronted by the same necessities and problems that his primeval ancestor met and solved. He must have shelter. For 365 days in the year he has lived in houses built by other men; now he must make one for himself. He must have something to eat. For 365 days in the year he has sat down at a table to eat what some one else has provided, cooked and set before him; now he must find it and prepare it himself. He must make a place to sleep. All his life he has had beds made for him; now he must contrive one for himself. In all these things, at every step, the artificial

man of to-day, with his dependent nature acquired by centuries of living in a house in a town in a community, finds himself in the position of man the beginner. Partially in that position, it must be said, for rarely does one recede so far back into the past as not to have a modern gun or fishing rod or frying pan. But the point we wish to make is this, that the more nearly the person who is playing at being a savage actually comes to being a savage, the further back he gets toward the simplicity of living, the closer does he get to nature, and the more satisfaction and profit does he win.

There are not many who have the physical stamina, the taste or the knowledge to "go it alone" without a guide. In a great majority of cases where such an experiment is tried, the result is not such as to encourage a repetition. The great world movement constantly in progress which draws population as with some great centripetal force into town and city is converting the modern man into a dependent creature, who, when in the woods, must be guided and guarded and sheltered. It is for him to go with a guide or not at all.

THE MOSQUITO WAR.

FOR untold ages the human race has borne patiently the torture inflicted on it by the mosquito, but at last it has now rebelled, and has declared war on the tyrant. What the result will be is as yet doubtful. We cannot tell whether man's rebellion will be spasmodic and short lived, or will be carried on year after year with a grim determination to conquer which shall at last be crowned with success; but in any event we may feel sure that the struggle will continue for years before it is ended.

It seems an extraordinary thing that no general interest was aroused in the mosquito and its ways until the discovery that the insect is the vehicle through which certain diseases are conveyed from man to man—from the sick to the well. The petty annoyance of bites, the nightly disturbance of his rest and the injury to his live stock was meekly endured, but when—only a few years since—it became established that malaria and possibly yellow fever and other diseases were communicable only by means of certain species of mosquito, it became evident that something must be done.

In previous years, and, indeed, running back nearly for a century, complaints against the ravages of the mosquito had been frequent, but they had been only complaints, and man had come to believe that the insect was a necessary evil—one of those things which, like the winter's cold, or the fierce heat of the summer sun, might be complained about, but could not be avoided. But within the past few years the mosquito evil has been taken up seriously by many people in this country, and on other continents, and among the Americans who have striven to learn his ways and so learn to fight him most effectively, Dr. L. O. Howard, of the U. S. Department of Agriculture, stands easily first.

It is, of course, well understood that the mosquito breeds in water, the female laying her eggs during the night on its surface in masses containing from 200 to 400 eggs. The eggs hatch in from sixteen to twenty-four hours, and the exceedingly active larvæ emerge—the "wrigglers," which are such familiar inhabitants of still pools, of water butts, and generally of standing water. For about seven days they inhabit this water, constantly in motion and continually rising to the surface to breathe and again sinking toward the bottom. It appears that their specific gravity is slightly greater than that of the water, and the larva's tendency thus is always to sink. This tendency must be overcome, for without frequent breaths of the surface air it will drown. It seems like a contradiction in terms to speak of the drowning of this water-inhabiting larva, which has never known any other home, yet as a matter of fact many of them do drown.

After about seven days of the larval condition the insect transforms into the pupa stage, and about two days later emerges from the water a complete insect. The total period, therefore, from the laying of the egg to the emergence of the insect, is about ten days, but this time may be lengthened by unfavorable weather conditions. The female mosquito is now ready to perform her allotted task of biting, and singing to the human subject if she can find him.

Since a considerable period of the mosquito's life is passed in the water, it is obvious that it is at this time and

at this place that it should be attacked, for here it cannot get away. It has natural enemies enough to somewhat reduce its number, yet not enough to seriously keep it in check. Small fish devour the larvæ in goodly numbers, and so do certain predatory water beetles, while larval dragon flies prey on the larval mosquitoes as the transformed ones do on the adults.

As long ago as 1812, in a work entitled "Omniana or Horæ Otiosiores," the following suggestion is to be found:

The mosquito, which is of all the race of flies the most noxious, breeds in the water. Might it not be possible at the seasons when they emerge and when they deposit their eggs upon the surface to diminish their numbers by pouring oil upon great standing water and large rivers in those places which are most infested by them?

For many years petroleum has been used in Europe by a few individuals to destroy the larvæ of the mosquito, but this remedy had attracted no general notice until Dr. Howard's extensive experiments within the past few years. Nowadays this remedy, together with dyking and draining lands where standing water has commonly been found, promises in many localities to greatly reduce the numbers of the pests. Localities which have for years been notorious for the number and ferocity of their mosquitoes have been almost freed from the insects in a comparatively short time. The method of applying the oil is simple. A small quantity—from half a teaspoonful to a cupful, according to the surface to be covered—is poured in the water, and is likely very soon to diffuse itself as a thin, but effective, film over the whole surface of the water.

The effect of such a treatment is very interesting. In a recent case under observation, a water barrel in which the water for the plants in a small green house was held contained thousands of larvæ; a tablespoonful of oil was poured on the surface. The next morning the water at the surface was thick with the dead larvæ, and besides, there lay dead on the surface a great many adult mosquitoes, which had apparently alighted on the water to deposit their eggs. There were no living larvæ in the barrel.

A drinking trough in a barnyard was seen in the morning to be alive with larvæ. Many of them were at the surface and were seen sinking slowly to the bottom and again struggling upward. A tablespoonful of kerosene oil was poured on the surface, and lay all together in one flattened globule. Two hours later it had diffused itself over the whole surface of the water; many dead larvæ were at the surface, and many hundreds of others could be seen resting on the bottom of the trough dead. No living ones could be discovered. Besides, there were fifteen or twenty dead flies floating on the surface, whether killed by the fumes of the oil or by drinking of the tainted water could not be determined.

A specific has now been found for the mosquito—one which is within the reach of every one, cheap and easily applied. There is no reason, therefore, why one of the small, yet really serious, annoyances of summer life in many places should not be largely abated.

The question of the spread of disease among people by the mosquito is another and broader one.

We congratulate the Massachusetts Fish and Game Commission upon the ruling of the courts and the Attorney-General, that the Sunday fishing law in that Commonwealth must be considered an act for the better observance of the Lord's day, and not one for the protection of fish. This immediately takes from the Commission the duty of enforcing the statute and transfers it to the police. This is a welcome way out of an unpleasant complication. The protection of fish has no proper or logical connection with the observance of the Sabbath, and any fish commission which concerns itself with the Sunday question is out of its field; there is quite enough for it to do in the single work of fish propagation and protection. We have always felt that the Sunday fishing question was one which should not be made a part of fish protection, nor a subject of discussion in sportsmen's conventions, for the feeling on both sides of the controversy is always very strong, and the topic is closely connected with religion, which, along with politics, is taboo.

We have just learned with deep regret of the death of N. D. Elting, of Central City, W. Va., who for more than twenty years had been a frequent and valued contributor to the FOREST AND STREAM.

The Sportsman Tourist.

August Days at Mabellon.

If you should happen to own a peach farm, or are fortunate enough to have a friend who does, I know of no place more agreeable to camp at for a week. The mountain sites are usually chosen with us in Alabama, and anywhere on a mountain is always superior to the lowlands for camping. The breeze has a charm in it inducing forgetfulness and bringing evening and morning a quality as individual as that of the sea. The birds one sees are of a shy and engaging sort. What more restful sound than that of the beautiful white and black woodpecker, or the flicker beating his tattoo call on a dead chestnut limb at sunrise! And who does not think a day well begun when the inquisitive titmouse hangs on the tent door, and, turning his head on one side, asks how this great, white, hollow tree has grown up so quickly! Long after the cardinal has ceased to sing in the valley, because of the heat and the advancing season, you can hear him in the hollows near the crest piping the most joyous strain of all. The one exception to this is the wren's song—to me a type of the joys of the world. He likes to potter around the cliffs and make believe he is finding a nest site during any month in the year, and he never fails to stop and fling out a few bars of spring notes with a faith which always convinces me at least.

Mabellon is an iron ore spur lifted up from a fertile valley, and it commands a wide view of other ore ridges and Lookout Mountain on one side, and Coosa River on the other. Take away its charm of history and the view from the ramparts of Sterling Castle in Scotland is not greatly its superior. On the north side, where the peaches are generally planted, the Elbertas are colored a deep red; on the south-side, from a thinner soil, a light red. This year, although the crop where little or no attention has been paid to it is poor, indeed, ours is very good.

My tent is stretched just above the orchard in a grove of hickory and oak trees, with an opening in front, toward the valley. My first night out I am sure I was subjected to inspection by some of my wild friends of the woods. Before I went to sleep I heard a cautious approach extended to a half circle around my tent. Then, evidently satisfied that I was of the fraternity, I was left in the restored silence of the forest, the moon penetrating the thick shadows with shafts of light.

I have rarely felt so triumphant as when I had finished a very good breakfast and washed up the dishes the next morning. I had to devise some means of keeping the ants out of my supplies, so, in the ever-resourceful woods, I got a little chestnut tree, cut forks from the branches all along and then planted it alongside my back tent pole. It was soon hung like a Christmas tree with sacks of various groceries, and was also used as a towel and clothes rack. My dining table was a providential flat rock in front of the door, already spread with gray lichens. The spring is some distance away, but it was always a pleasure to go to it, however heavy the bucket might feel before I got back. It came out very quietly from the bluff, and flowed over a red marble bottom on down the hill, and, gaining in volume and assurance, it gave louder voice when it had reached the trillium beds and the violet banks of the hollow below.

All day long as I sat in the shade, came, at frequent intervals, a bar of song from one of the old negro pickers—just one bar, with sometimes one variation, repeated over and over again, like the monotonous chant of the preacher's vireo. This negro was interpreting, in his barbaric refrain, the peaceful and uneventful charm of the place. His satisfaction with the day, as it came, was so genuine that one variation was enough. One song was enough, too, I thought, as I went to sleep my last night in camp with the rain pattering on the tent roof.

E. M.

LAURONE, Attalla, Ala., Aug. 7.

Old Doc, the Tote Horse.

THIS was what the toter called him—Old Doc; and he had the general appearance of being nothing but just an ordinary old tote horse, until stepping in front of him you chanced to look at his head; then you noticed his large, expressive, brown eyes, as well as his short, finely pointed ears, and you would immediately exclaim, "There is a horse that knows something!" and your last opinion would not be far from correct.

During three successive winters I had the pleasure of his acquaintance, and during that time never did I regret our fellowship—nor did he in any manner disappoint me in my first impressions of him.

He was the most intelligent horse that I ever saw, and many is the man I have met who didn't know half as much as Old Doc.

Noticing him as he passed my camp in the early morning, going out after a load of supplies, I observed his massive build as well as his sleek, white coat of hair, and after a while, as David, the toter, stopped to say *bon jour*, I formed the habit of stepping out of my shanty with a lump of sugar for the old horse, and thus it was that I first noticed his eyes.

After I had given Old Doc sugar three times, I was just as sure of a morning caller as the tote team was sure to go out to the settlement; nor could David get the horse by until I had given him his sugar. When Doc got to my camp he would stop and either paw or whinney until I came out.

As the days passed I grew more and more fond of the horse, as also did his driver. Often I would jump on the tote team for a ride out to the settlement after my mail, and walk back behind the loaded team.

On one occasion as we were going down a very sharp pitch, the tote sled jumped out of the road and brought up against a large beech, but David and I kept right on—David over old Doc's head, I on his neck, and the way he looked at me as I was picking myself up after my fall was a caution.

It was in February that David asked me to ride out to the "States" with him. This was a railroad terminus, with a few log houses, in one of which was a kitchen stove and

post office. In the winter the train generally left from one to three passengers at this metropolis, called in that section "The States." Of course the arrival of the train each day was a matter of great importance to the natives, and the entire community would be on the platform to inspect whoever might arrive, and speculate as to their business plans and future movements.

On this particular day we were out unusually early. Quickly loading the tote team, we awaited the arrival of the train to get our mail. This we had at last secured and had already started toward camp, when we were asked by the new and only arrival on the train that day, if we knew the way to Chase's camp.

"Oh! yes," said David. "Just beyond where I stop."

"Can I go with you?"

"Oh! yes," answered David, and made a place for him on the load of grain and hay, so we started on our trip over the mountain in company.

We had proceeded but a short distance, when the stranger produced from his kennebecker two one-quart bottles of whisky, and urged us to drink, at the same time setting us a most lavish example of the quantity to be taken. The amount of urging that it took to start David was surprisingly small. The amount that he drank was surprisingly large. As I had never drank a glass of liquor in my life, under those conditions I did not propose to begin.

As we slowly ascended the mountains, to my dismay it began to be overcast and to grow very cold. In a short time, as the liquor began to work, the men began, first, to be silly, and then drowsy.

Before we had reached the top of the mountain Old Doc and I were doing the best we could in a howling blizzard—he in hauling two drunken specimens of humanity. I in trying to hold them on the top of the loaded team.

The stranger was very thinly clad, and I soon saw that his hands and wrists were beginning to freeze. Chafing them with snow, then thrashing my own arms to keep from freezing myself, and every now and then covering up David with the horse blanket, we began the descent of the further side of the mountain.

I could not drive, for the moment I let go of the men they would fall off the team, for by this time they were dead drunk. How Old Doc got us as far as he did that day with no one to rein him was a miracle. With my voice I guided him as best I could, while every moment the cold was growing more intense, and the faces of the men were beginning to freeze.

We had accomplished about two-thirds of the distance to camp, when, to my horror, on going down the last sharp pitch, the whole outfit jumped out of the road, and one of the runners of the sled, striking against a maple tree, was snapped in two. For one moment I was bewildered; it was a question of moments now, and a very few at that, for I had on my hands at least one man who was freezing to death—possibly two.

Then, as I worked, I talked with Old Doc as I never expect to talk with another horse. Cutting the tangled traces, I at last got him out in the road. Freeing the leather reins from the bridle and tying one end of them under the arms of the stranger, and keeping his head out of the snow as well as I possibly could, I dragged him off the load and into the road behind Old Doc. Making the other end of the reins fast to the traces, already severed, and keeping the man's head well up by fastening it to the taut lines, I led Old Doc as he slowly dragged him to camp.

As about six inches of snow had fallen during the previous night, with the exception of a few bruises, my man was little the worse for his rough ride. It was a long, tedious job to bring that man out of his part-drunken, part-frozen stupor, and when, at last, he did come out of it, he immediately asked for rum, and I hardly blamed him, after his ride behind Old Doc. A part of the crew hastened back and got David, whom I had left on the sled covered with Old Doc's blanket. For two weeks the stranger was a very sick man, and it was a long time before he could use his hands, which were badly frost bitten.

David came out of the scrape in better shape, as he was more warmly clad. His face was severely frozen, however. They were very appreciative and kind to me, as well as to Old Doc.

The stranger afterward became cook of the camp where David stopped, and as the cook of a camp is always monarch of all he surveys, whenever I went up I was granted the freedom of the premises, including the doughnut firkin and pie box; nothing was too good for me, and often as I sat out in the cook room sipping a dipper of tea, the cook would exclaim, "You one fine feller, Jose; only you don't drink rum, not a little bit," and he would always add, "I glad you don't—me and David."

When at last the crew broke camp in the early spring, and Old Doc, on his way out, stopped at my shanty and whinnyed for his last lump of sugar. I went out, and there on the tote team were David and the cook, unbinding five large firkins, which they left for me.

I afterward found one to be full of doughnuts, one of biscuits, one of mince pies, one of sugar cookies and one of sweet bread—large, 50-pound buckets, full. The cook had sat up most of the night to cook these for me, so that they should be fresh.

Giving Old Doc his sugar and patting his fine neck, I bade him good-by, as I supposed, for the last time. Bidding David and the cook *bon voyage*, I went into my shanty and closed the door for fear that I might show them how badly I felt.

It was during the following November that I ran across Old Doc under the most singular, as well as laughable, circumstances.

On breaking camp in the spring, his owner had decided to put all the horses out to pasture for the summer, instead of taking them down river, as he intended logging in the same town the following winter; he would thus save the railway freight, and my putting his horses in a good pasture and in the care of a good man, have them in prime condition for the next winter's work. Having found such a place, he left them. They all did finely, and at the end of the summer were fat and sleek, but as the feed in the pasture grew short and the fall nights frosty and cold, Old Doc made up his mind that it was about time for him to be on the tote road during the day and at night in a good, warm hovel. Possibly he

remembered the hay and oats that had been left in the hovel for use the next winter.

Be the case as it may, he jumped the pasture fence, and after traveling many miles of road, found his old beat. As the old winter tote road crossed three ponds on the ice, and as these ponds had not yet frozen over, Old Doc was obliged to travel away around them in order to come into his road again. After much hardship, and to his great satisfaction, I imagine, the old fellow found himself in his old quarters, with plenty to eat inside the hovel, a beautiful spring of clear water just outside, and no one within miles to say him nay.

At the close of a hard day's hunt, I found myself in the vicinity of the old logging camp of the previous winter, and thinking that I would like to see the place once more, I wended my way in that direction. How familiar the place looked, and as I opened the door and walked in, lowering my head a little to save it a bump, I could almost recall each face of the merry crew. As I sat in the cook room, wishing for some of the cook's nice, hot doughnuts or a piece of his fine mince pie, I heard a noise out in the hovel. Grasping my rifle and cocking it, I rushed out of the camp. What did I see in the hovel door, slowly munching some hay but Old Doc! I really believe that he was as glad to see me as I was to see him; he whinnyed and came right up to me, as if expecting a lump of sugar.

"Why, Old Doc!" I exclaimed. "Where did you come from?"

After I had recovered from my surprise I decided that it was best to lead him back to my camp at any rate. He followed me back home like a dog, and the next day I led him out to the settlement. In a few weeks he was toting every day past my camp in the same way as the previous winter, nor did he forget his daily lump of sugar.

The third and last time that I saw Old Doc was one year later, and on that occasion, as I could hear him long before I could see him, I surely thought him to be a moose.

I was up hunting in the region of the old camps, when clack! clack! clack! I heard something away off in the distance, but surely coming nearer every moment. The noise very closely resembled the approach of an old bull moose as he often strikes the trees with his immense antlers. With rifle at ready, I anxiously awaited his approach, when, behold! the moose was white, with Old Doc's head, and just behind him were four men.

Having cut all the timber in that section in previous winters, the owner of Old Doc had just completed a new set of camps over on the south part of the town, and had sent this crew of four men across country after the stoves, which had been left the previous winter in the old camps. The sounds which I had heard were occasioned by the axe men occasionally cutting a small tree as they swamped a road, over which to haul the stoves on a woods jumper.

After a luncheon with the men and watching the loading of the stoves, I bade Old Doc good-by for the last time.

If alive, I hope that he is well cared for. If dead *requiescat in pace.*

JOSEPH A. THOMPSON.

To Lake Chinquasabamtook.—III.

(Concluded from page 108.)

THE next morning the guides appeared uneasy. By some means they had discovered that some one was below us. It may have been some party that followed us up from Allegash Lake, keeping out of sight and having a comparatively easy time, while my guides were doing all the hard work. As we had no idea of letting them follow us in to Crescent Pond, we struck camp in short order. After hiding away one of the canoes, we started up the trail that follows the brook. It was only five miles to the end of the trail, but we made it all of fifteen, as we had to retrace our route so often, in bringing up the camp stuff. The trail was blocked up in many places, and this made our progress slow and exasperating. It was a sight to see Cram mount a barricade of fallen trees, balancing himself with all the confidence of an acrobat, and carry the heavy canoe safely across, with never a slip. Late in the day it commenced to rain. I expected we would have to camp out in it, but Cram had a surprise in store for me. Striking off through the woods, we presently came to a trapper's cabin that Cram and his mate had lived in at one time. It was a welcome change from the wet woods. Leaving me ensconced in my comfortable quarters, they started off on a cruise, and returned about dusk with a splendid lot of lakers and brook trout fresh from the cold waters of Crescent Pond, which furnished a welcome addition to our bill of fare. After supper we gathered around the fireplace, with its primitive chimney of logs. When the logs are green this arrangement works pretty well; but when they dry out there is danger from fire. Our fears were soon realized, but the fire did not make much progress; so after throwing a few dippers of water up the chimney, with little success, we ceased to give it a thought. The contrast between the comfort within and the gloom without was delicious.

All hope of making the cabin our headquarters was blasted by the tough navigation between Mud and Crescent ponds; so, abandoning the cabin, we followed a path that leads to the brook, and the canoe soon glided out of the stream into Mud Pond. The contrast with the pond above is like that between an ugly old hag and a beautiful forest maiden. The canoe was hardly clear of this receptacle of mud and water before it brought up on the bottom of the inlet. After a spell of wading and dragging, we caught a glimpse of the promised land. The pond was all smiles as we paddled across to Cram's old camp ground, where the sight of a bark camp aroused my suspicions that some party had been ahead of us; but Cram informed me that it was his own handiwork.

For some reason the guides fought shy of the bark camp, preferring to pitch their tent in the usual manner. Cram warned me to be careful in my movements or I might wander where no help could reach me. The grim forests are a veritable death trap to the unwary, as many an unfortunate's bones that bleach in the depths of the woods bear witness. It was only a few months ago that a game warden nearly lost his life in attempting to

reach a camp on the far-away St. Johns. Far from human help, he broke down. Fortunately he did not despair, but made a brave effort to extricate himself from his grim surroundings. After a while he got so played out that he blazed the trees behind him, so if any one chanced along they might follow the marks and come to his assistance. Keeping up his fight with the grizzly spectre that always confronted him, he finally came in sight of a lumber camp on the edge of the woods. It took him hours to reach it, more dead than alive.

Here is another close call: It was in the depths of winter that Cram's mate started off alone through the woods to reach some distant point. Far back in the forest, he lost his bearings. After trying in vain to find the lost trail, he concluded to follow his back tracks in the snow. The woods abounded with deer, but somehow, they managed to keep out of his reach. With little or nothing to eat for two days, he plodded along, never relaxing his heroic efforts to extricate himself from this living grave. Fortune smiled on him. The third day a deer fell to his rifle. Driven desperate by hunger, he made a meal of its raw flesh. After this truly hunter's feast, he braced up and managed to stagger into camp, presenting himself before his horrified companion like one risen from the dead. The woods have claimed two victims lately. One of them, a woman, strolled into the woods back of Stacyville and was never seen again; the other, a man, was lost on the southern edge of the forest. A most determined search was made, but it availed

would steal forth like beasts of prey from the darkening forest, and invade the clearing, to be quickly routed at the first glare of the camp fire. We were prodigal with our wood, and soon had a fire that roared like some monster, casting brands and sparks far into the heavens, illuminating the tall columns of trees that encircled the camp, like grim sentinels, ready to bar our outward progress. The hole in our canvas tent spoke eloquently of the danger from sparks and blazing brands. Our tent is shaped so as to reflect the heat. This was anything but a blessing when an extra supply of fuel was heaped on the fire. At such times we would retreat to the back of the baker, imagining we were human biscuit. In a short time it would die down and allow us to return to our old lounging place on the blankets, where I would lie, watching the effects of firelight or listening to the guides relate some incident of wood life.

One evening we paddled up to the head of the pond. Here Lyman gave an exhibition of moose calling through his hands, commencing with two or three short blasts, the same repeated after a pause, or else varied by a prolonged note, ending in a muffled roar that pierced every crevice of the woods. A weird charm brooded over the scene. The forest stood out in dark relief against the evening sky, while, ever and anon, the mournful cry of the loon rose and fell. After a while the chilly air of night asserted itself, so we sped back to camp. If I remember rightly, we visited the spot next day, and found the fresh tracks of a moose. Moose calling is a

the surface of this lonely lake. In fact, the whole region is given over to the wandering hunter and trapper. At rare intervals a band of hardy sportsmen hurry through the wilderness. It has been years since any party worked in to the lake. Many of the moose that are hidden away in these forests are no doubt battle-scarred veterans that have been driven out of northeast Maine by the army of sportsmen that annually invade its choicest hunting grounds. There are no wolves in this region to persecute the deer, nor Indians to play havoc with the moose. The wilderness boasts of no lofty mountains; its chief attraction is its vast expanse of unbroken forests, far from the haunts of man.

It was now about the middle of September. A subtle change was stealing o'er the scene, changing the landscape from grave to gay. At the magic touch of frost the maple quickly dons its scarlet coat; and its brave example is soon followed by the other hardwoods, until the forest is ablaze with orange and gold, while from every hilltop autumn waves its gay banners, as if in defiance of the advancing hosts of winter. And so it will be until pitiless blasts strip the forests of their glorious raiment, while the mournful refrain of wind and waves chants the requiem of their vanished beauty. The waning light reminded us that miles of dark forests were between us and the camp, and it was time to be going if we expected to pull through before dusk. So farewell, beautiful lake with the Indian name; may none but the brave lover of the woods ever gaze on thy beauty. The woods closed around us. A snapping of branches; voices dying away in the forest, and we were gone on our long journey, leaving the lake to its solitude and moose. We found our camp undisturbed by bears or humans.

It was getting about time to retreat out of this wilderness, as our stock of flour was nearly played out, with potatoes about gone. One biscuit a meal was the order of the day; and help yourself to the pork or anything handy. Before leaving, Lyman and I had an experience with a spike buck. We happened to be out on the pond, drifting about, when a young buck was sighted feeding along the shore. Silently the canoe approached the unsuspecting animal, and only a few strokes of the paddle separated us, when up went his head, and we were all turned to stone. After a long stare at the strange apparition, he resumed feeding, but soon paused and looked us over again, with mingled astonishment and alarm. The canoe was almost upon him, yet still he lingered, a beautiful woodland statue set against the dark background of forest. The speaking attitudes he threw himself into expressed wonder, fear and curiosity, while nearer and nearer came the canoe, with its silent figures. Fear at last gained the mastery. Wheeling about, he made a few graceful bounds, and waved us a mocking salute with his white flag, as the woods closed around one of the most beautiful of God's creatures. It is doubtful if either of us ever before had made such a close call on a deer. The buck probably had never seen a human being until he sighted us, as Cram had done no trapping hereabouts for some time.

This incident brings to mind the buck that we stalked on the Upper Sordahunk last season. We were handicapped by loose stones, that were liable to sound the alarm at every footstep. This put us on our mettle, and between us it was about as pretty a piece of work as we ever had done. Not a sound drifted down to him to warn him of our approach, and we got quite close before he was aware of our presence. Lyman and I have acquired the art of stealing noiselessly through the woods; in fact, we are both built for the work, as we are of a tall, slim, athletic build, fast-gaited and capable of paddling and tramping from sunrise to sunset.

White Deer was the name given our camp. I could think of nothing more appropriate, as I was so fortunate as to catch sight of one of these albinos from the landing. The eventful morning of departure dawned at last. Before leaving, I scrawled our names on a convenient tree, with an account of the moose we had seen on the Big Lake. Silently, like shadows, we stole out of the little clearing, down the path to the landing, only to be brought up all standing on the shore. The pond seemed determined to bar our way out, finding a real ally in a strong wind that kicked up a wicked cross-sea. Undismayed, we shoved out into it and headed for the outlet. Cram had doubts about our getting through, as the canoe was loaded nearly to the water's edge. Wave after wave tried to come in over the side, but was balked by superior paddle work. As we neared the foot of the pond, they drew off their forces, and left us in peace. The tough navigation of the outlet and the pond, whose name is Mud, were soon left in our rear. We took to the woods a short distance below, and striking the old trail, arrived at the Forks, with plenty of daylight to spare. Leaving the busy guides, I strolled off into the woods, to visit a bear trap. Imagine my disgust to find that a thief had taken nearly every article I had stowed away in it on the up trip. While stopping at the cabin the guides heard two rifle shots not far away, so it seems to be due to our friends who had camped on the stream below us to explain matters.

The next morning I was agreeably surprised to find that recent showers had raised the brook considerably, and as we floated down stream to the lake, I tried likely-looking places, but met with no response. A large brook trout that we found dead in the stream showed that they were there; perhaps angle worms might have tempted them. It was a trout famine here, but a feast awaited me at pretty Allegash Pond. But I am getting on too fast. Along toward sundown we glided out on to Allegash Lake. Parties work in from Chamberlain and Cangomgonasc, but seldom or never go further, as the condition of the stream that we came out of bears witness. There are no choppings west and north of this lake. The steady clip we kept up soon brought us to the dam. As soon as we had things in shape Cram and I started out to make war on the trout. Cram took charge of the dam, while I attended to the pool. His pork bait went into nearly every crevice where trout were likely to hide, and soon he had a goodly lot of them flopping around. They were hidden away under the dam out of reach of the fly. The bait came out far ahead of the fly both in numbers and size. This shows how destructive bait is compared to the fly. Persistent bait-fishing will ruin any

AT SUNSET IN THE WOODS.

naught. The woods had swallowed him up and left no sign. Let this be a warning to the sportsman to stick close to his guides and depart not from the narrow path of safety. So much for the dangers of the forest.

The chilly air of morning that invaded our blankets made early risers of us all. After breakfast I strolled down the path, keeping a sharp lookout for grouse. At the landing I exchanged the rifle for the rod. The surface of the pond looked very tempting, and we knew that its depths swarmed with lakers and speckled trout. I had had a feast of fly-fishing the season before in the Slaughter Pond country, but now a famine confronted me. The magical wand was waved in vain; not a rise could be invoked out of its depths. Flies that would have brought great, speckled giants to the surface in the Big Fish Lake region were worthless here. The reason was not hard to find; the pond was alive with little fish that resembled small mackerel. After gorging themselves with this dainty fare the trout had little inclination for anything else. Seeing they were not disposed to rise, I stowed the rod and gave my attention to the wild scene before me. This beautiful home of the trout and deer is completely encircled by unbroken forests that reach out toward the horizon. To see its placid surface, bathed in the sunset's glow, with every grassy point and meadow thronged with happy deer which know not the ways of the hunter, and every atom of forest life faithfully shadowed in this mirror of the woods, is to gaze on a scene that will live in your memory long after old age has barred you out of the wilderness. The almost impenetrable forest that closed around the little clearing warned me to beware how I followed the skulking grouse or vanishing deer. The smoke of our camp fire, ascending in the blue, met with no response. We were alone in our glory; for narrow is the trail and rough the going, and few there be that find their way into this haunt of the moose.

I made many attempts to beguile the lazy trout. I sent the feathery cheat in to every spot that seemed likely to harbor them. It was of no use. They spurned the fly, but not the spoon; we soon found out that by fishing the pond hard with this deadly implement we could generally secure a fair supply of lakers and speckled trout. It was pretty aggravating sport, as a large percentage broke away after being hooked. We had intended bringing in a supply of angle worms from Cooper's camp, but forgot them at the last moment. The laker fresh from these cold, Northern waters contests the honors of the frying pan with the brook trout. The guides had a hard time of it trying to keep the camp supplied with fish. Presently I took a hand in the game, but soon gave it up in disgust, as it was too long a time between strikes. I much preferred prowling around the clearing with the rifle, occasionally penetrating as far as I dared into the mysterious woods. At nightfall shadows

thing of the past in Maine, and soon will be in New Brunswick.

Chinquasabamtook, a few miles to the north, was ever in our thoughts. Cram was the only one of the party who had ever seen it. The glowing accounts he gave of the lonely lake filled us with a strong desire to see its attractions; so early one morning we left camp in light marching order and started for the head of the pond. Leaving the canoe, we plunged into the dense woods, with Cram in the lead, and following a trappers' line trudged solemnly in Indian file behind our leader, stopping occasionally to slake our thirst at the icy brooks that trickled through the forest. These magnificent woods are unmarred by the axe; their solid phalanx of tree trunks repels the light of day. The denizens of the forest fled in dismay before the uproar we made in smashing our way through thickets and fallen trees; after keeping this up for some time, we came to what appeared to be an ancient logging road; it probably belonged to the remote past, when the craze for the white pine brought prospectors and lumbermen in to cull out the choicest specimens. All the old camps, if there ever were any, have disappeared. The beaver is the only chopper now that haunts the Bamtook country. As we hurried along, Cram told us that he had never been to the lake without seeing moose. This made us cautious in our movements, for the lake was not far away. Presently a rustle in the bushes ahead brought us to a halt, and quietly mounting a fallen tree I looked around carefully. I was soon rewarded by seeing the head of a beautiful doe appear from behind a tree. Slowly the sight on the rifle fell in line; a slight pressure and her life would have gone up in flame and smoke. Not on my life. Lowering the rifle, I watched the pretty creature fade away into the forest. The gleam of water ahead warned us to be careful. One of the guides stole cautiously forward and took a careful survey of the lake, and presently he beckoned to us. As we joined him he pointed out two moose about three-quarters of a mile above us. One was standing on the shore, while the other was out in the lake, feeding. Lyman tried calling, but it wouldn't work; if the bull had been alone he might have paid some attention to it. Getting tired of this long-range acquaintance, we started up the lake shore, keeping well under cover. Hardly had we got under way, when he left the water and disappeared in the forest; but he was not alarmed, as there was no friendly breeze to favor him with a scent of the human. Disappointed, we retraced our steps and gathered on the shore to take a long, last look at the wild expanse of water set in a sportsman's paradise. This lake is wildly beautiful, and extends for nine miles through a wilderness that abounds with moose, deer and bear. Its waters swarm with the choicest fish, as likewise do most of the ponds scattered through the woods. A canoe is seldom seen gliding over

stream or pond in time, and accounts for the small size of the trout in many parts of the Maine woods. We had a feast of square-tails that night, but the short ration of flour was still on. After breakfast we raised the gates and sent a flood of water humming on its way. After letting it get a good start we put the canoes in and went down stream like a shot. It did not look very promising for trout, and none showed itself until we had nearly reached the pond, when we discovered trout breaking in the stream below us. Stepping ashore, I commenced casting, and was overjoyed to find I was "in it" and no mistake. I soon fastened to a fine one, that was netted after a brief struggle; others quickly followed, but after a while they grew suspicious and refused to rise. My hopes ran high, as we came out on the pond; everything was in my favor, as the sun was veiled in clouds. Flushed with success, I lost no time in getting to work, fearing the morning might change for the worse. The pretty fly that frequently kissed the surface of the pond seemed destined to find no admirers, when all at once it vanished in a mighty swirl, and I was fast to the trout of my fancy. The whippy Bethabara bowed in obedience to the summons he sent along the ever-taut line, that cut viciously through the water. I made him fight for every inch of line, as I did not propose to have him hang me up on lily stems or snags. After a few vain efforts to catch me napping and snap the delicate leader, he found a resting place in the fatal net. He was the best trout of the trip, and looked all of 2 pounds. I soon hooked another good one, but lost him directly. They now commenced to rise all around us. The best place was near a stick of timber, well out toward the center of the pond. I managed to gather in several fine specimens before they awoke to the situation, and slacked off. Meanwhile our old friend, the buck, had put in an appearance, and eyed our proceedings with manifest disapproval. Drifting down to the falls, I found the upper pool alive with small trout, and soon had enough for camp use.

My rod and flies are my own make, and never fail me. The sliding loop prevents the fly from stripping; it is my own contrivance, and has been tested by an enormous speckled giant in McCloskey's Pool, Fish River. This trout must have weighed close to 6 pounds. I lost him after a prolonged struggle, but he failed to strip the fly or slip the loop. Flies tied on the old-fashioned plan may be safe enough when new, but are liable to strip. After being in use a short time the fly will often look bright and new, when the gut is so worn at the head as to render it useless. When the gut gets worn at the head of the loop it will take you about one minute to cut above the tender spot and tie in another loop. I have tried both kinds, and speak from bitter experience. The sliding loop was placed before the angling public some years ago. It met with a chilly reception from a class of anglers who were too indolent to give it a fair trial. If the other sort are interested, I will cheerfully give all the information required in FOREST AND STREAM.

The prospects for supper were rather one-sided; it was a feast of trout and a famine in flour. Cram had the mate to my big one, but I am inclined to think the fly came out ahead this time, in numbers at least.

At break of day we hurried down stream and went into camp on Chamberlain Inlet. Stowing my precious rod in a hollow log, to protect it from the fast-falling rain, I watched the guides trying to coax the timid flame with birch bark and other devices. They succeeded after a while in starting a roaring fire that bade defiance to the elements. As we reclined in our tight little tent, listening to the patter of the rain, a delicious sense of warmth and repose stole over us, as we watched the fast-dying fire.

Old Chamberlain was all smiles in the morning, and sent us on our way rejoicing. Cram kept the spoon going, while urging his canoe forward, and when we brought up at the foot of the lake for lunch he had managed to secure a fine laker. While strolling around waiting for grub I noticed the guides gazing at some object on the north shore of the lake. Joining them, I saw a dark spot up against the background of woods. Almost imperceptibly, it changed its position, and proved to be an immense moose moving along the lake shore. As we paddled out into Telosmis, a cow moose was sighted. She eyed us suspiciously, and retreated before our advancing canoes disappeared in the forest. In due time we arrived at Cooper's, and our troubles were over, as far as provisions were concerned. The remainder of our trip has little to interest the sportsman. No moose nor deer were sighted on the way down, and we found precious few trout; Bill Fish Brook was deserted; I had no rises at Hollister's Level; in fact, the fishing on the river is beneath contempt, as far as my experience goes. Thinking to better my fortunes, I tried Sunsoos Pond. I found a comfortable camp here, but no trout. When one of these abominations fastens itself on a trout pond the fishing soon shrinks to nothing. Camps and lumbermen have done more to ruin the trout fishing than any other cause that can be named. Large speckled trout are not often met with outside of Big Fish Lake, a famous resort a few years ago—and may be yet. The water was fearfully low, and kept the guides guessing. This trouble gradually passed away, as the canoes caught up with the water that passed by in the early morning.

My faithful guides, Frank Cram, of Staceyville, and his friend, Lyman Hunt, are both good moose hunters, and know more about the forest than most of the guides. I was determined to have one more layout in the woods before donning the garb of civilized life. We found a place that suited us, near the deadwater. Here we gathered around our fire for the last time. The merry jest and story were lacking to-night; an air of mournful resignation pervaded the camp; the glorious life in the woods had come to an end; the next night I would exchange the balsam boughs for the cramped quarters of the sleeper—the wild song of the rapids for the roar of traffic. Good-by, old woods! the care-free life we lived beneath thy shade will not be forgotten while memory lasts.

W. C. SQUIER, JR.

Cruising—From a Woman's Point of View.

We had been disappointed in our previous plans for making the cruise of the Muskosh and Moon rivers, and, owing to the scarcity of guides, it was beginning to look as though we would be disappointed again. We had been in camp with a large party on the Georgian Bay nearly two weeks, when my husband finally procured a seventeen-year-old Indian boy for a guide. Taking our canoe, provisions, tents, and blankets, we boarded the steamer City of Toronto on Monday morning. When we reached Go-Home Bay, where we intended leaving the steamer and commencing the canoe voyage, we found a high wind and heavy sea; these, with a cold rain that was falling, decided us to remain on the steamer till evening, when she would run in to Madawaska Dock.

About 4 o'clock in the afternoon we started on our cruise up Go-Home River, and camped at the first falls that night. The rain was over before we left the steamer and we had no difficulty putting up our tents and getting balsam for beds. Then we sat around the campfire and ate our supper and watched the stars come out and take their places in the sky.

We had closed up our tent for the night, and I thought how soft and fragrant these balsam boughs are and what sleepy music comes from the falls. Then I opened my eyes. The birds were singing, and it was morning. I was not sleepy now. I only wanted to see how it looked outside. What a morning! Yesterday was dull and stormy, with a dampness and chill in the air that sent us to the cabin. When the boat stopped at the dock it was with some misgivings that we left the comfortable steamer for canoe and cruising tent; but this morning all is changed. The whole atmosphere is filled with softest rose tints. The clouds, the tree tops, the mist rising from the river, and even the spray from the falls, are tinted with the same rosy hue. As I stand entranced by this more than beautiful scene, "Old Sol" rises above the hills, sending his first slanting rays across water and woods, and the rosy hues are changed to yellow and green.

After breakfast we packed up our tents, "like the Arab," but were on the wrong end of a hard portage to "steal away silently." Finally everything was loaded into the canoe again and we paddled up Go-Home River into the Muskosh, crossed Flat Rock portage, and were soon on Sandy Grey Lake.

The log chute at the next falls was washed away lowering the river above and making the portage long and difficult. From this log chute to the Big Eddy is a beautiful stretch of river. In places the banks are densely wooded. The tree tops seem to meet and form a green arch overhead, while the shores are fringed with bright red lobelia cardinalis; all of which are reflected in the water over which we were swiftly and silently moving.

As we came around a sharp bend in the river, the Big Eddy lay before us in the form of a small, circular lake, surrounded by tall hemlocks, and having a beach of clean white sand on one side. At these falls the water is gathered into a narrow gorge and comes rushing and tumbling down over the rocks, which are worn, so as to leave what seems a massive curved stone balustrade on one side. One can easily imagine the water tumbling down over a great stone stairway. After spending some time at this place we crossed the portage, which, although a long one, is not difficult, and were soon on our way to the next falls, where we intended to camp for the night.

We came to quite a large island, with falls on each side. The channel on the left of the island is filled with great rocks and boulders that have fallen from the high bluff. Above this island is another falls, and the bluff has become a steep hill, covered with a thick growth of pine and hemlock. Here the river sweeps around in a great curve, inclosing a tract of level land which has been cleared. This tract is a deserted Indian reservation. Our camp for the night was opposite the upper falls, about two hundred feet back from the river and near an old log cabin on this clearing. When our guide was carrying the canoe up from the river, an Indian called to him from the woods on the other shore, but our Indian did not understand what he said, as he belonged to a different tribe.

It was now getting late, and the men went into the woods, three or four hundred yards back of the clearing, for pine and tent poles. I watched the Indian across the river to see what he would do. He got on a log, and, by some method known to Indians, commenced to paddle himself across. When I saw that he was going to get over, I sat down, took an empty revolver in my hand (I did not know where the cartridges were, and, covering it with my hat, thought I would at least guard the provisions. The Indian got safely over, climbed the steep bank, and said "Good Evening," as he passed near where I was sitting. As I watched him follow the trail across the clearing, with his rifle over his shoulder, I laid down the empty revolver, thinking the provisions were probably safe. I now turned my attention to making bread and butter sandwiches, with a feeling that I understood this work better than acting as guard.

The men returned with the pine and our tents were soon ready for the night. The guide prepared the supper, which we ate as the sun sank below the tops of the pines.

As we sat in the midst of this clearing, and our campfire had become a bed of red coals, we could trace the windings of the river by the white mist that rose, soft and mysterious, against the pine-covered hills on the opposite shore. The sky was like ebony set with millions and millions of diamonds, so numerous were the stars. Back of our camp, standing a few feet apart, were two dead pine trees that seemed, in the darkness, to reach to the heavens and hold them aloft. The almost oppressive silence, broken only by the falling of the water, the rugged grandeur of the surroundings, together with the brilliancy of the sky, made the night one never to be forgotten.

The next morning as we were leisurely packing up, we heard an unearthly war whoop, and, looking round, saw four men from our camp, with their Indian guides, crossing the portage. They had only been able to procure guides in time to start Tuesday morning.

We now hastened our packing and were soon afloat in company with the other canoes. Stopping at the Ragged Rapids, we cooked our dinner, and in a short time had left the Muskosh and were floating down the Moon River. The scenery on the Moon River is wilder than on the Muskosh. There are high hills on both sides of the river. The falls are higher and more numerous, but the general characteristics of many of them are the same. The water is gathered into a narrow gorge, and makes a first leap of several feet, striking boulders and broken rocks, over which it rushes at an angle of from 45 to 60 degrees, churning the water into foam and dashing spray high in the air, till it reaches the foot of the declivity, where it forms a large eddy.

Late in the afternoon we traversed a beautiful stretch of river above Lunge Point. The surface of the water seemed to be without a ripple. The blue sky, flecked with fleecy white clouds; the steep hillsides, covered with forest trees; and the shores, dotted here and there with bright red flowers, were reflected so perfectly in the water that we appeared to be floating in space. It took an occasional war whoop from some of the boys to reassure us, for it seemed as though we had gotten lost in fairy land. But we reached Lunge Point at last, and proceeded to make camp for the night.

After supper the Judge took his rod and went down to the river to try his luck, which, so far, had been good, and this venture proved no exception, for he soon returned with a large bass. The Judge and I, deciding to have that fish broiled for breakfast, hung the landing net, with the fish in it, high up on a tree. But "Mr. Coon" came around in the night hunting a lunch and carried off fish, landing net, and all; first walking over our tin dishes in his bare feet. After quite a search the Doctor found the landing net in some bushes the next morning.

That night the wolves were out late, and they gave a concert on their way home. About the time they arrived opposite our camp we were very wide awake, and glad to hear their music, especially as they were on the other side of the river. From the volume of sound I thought there must be a hundred in the pack, but when I asked the Indian in the morning, he only shook his head and said, "Ugh, 'bout five, six."

The next morning we went to Lunge Lake, which, tradition says, abounds with big fish; but experience taught us that if the fish are there, both big and little ones intend to stay. We had given up and were about to return to camp when the Judge caught a 3-pound muscallunge. The rest of us had to be content with looking at this fish, for we did not even get a strike.

After an early dinner we were again on our way. Our hardest portage was on this part of the river, around a series of rapids and falls known as the Seven Sisters. It was quite exciting to watch the Indians going over the rapids, standing in their frail craft, their paddles poised in the air ready to steer them away from dangerous rocks. A short distance below this portage we came to a recently deserted camp. The board tables and seats were well arranged, and everything was clean. Beaching our canoes, we made ourselves comfortable for the night.

After dark the boys gathered around a chart of the Moon River, spread out on a corner of the table, which they were intently studying by the light of a candle. There not being room for my head in the circle, I thought I would liberate six or eight half-grown frogs we had in a tin can. Quietly removing the lid, I turned the can a little to one side, and the frogs, by a common impulse, made a leap for the light, landing on the heads and shoulders of the thoroughly astonished group. I was sorry for my rash act the next day, when, fishing at the foot of the falls we saw an immense 'lunge following "Lucky Jim's" bait, but it would not strike at the little frog. I knew his chance for catching a 15-pound 'lunge would be much better if he only had one of those large frogs. That night we were again awakened, about 4 o'clock, by the barking of a wolf in the distance.

The next day, after passing through some wild and rocky country and portaging around some beautiful falls, we came to a sharp bend in the river and were facing the narrow gorge, with its high, rocky banks, above the Moon Falls. As we looked out through the gorge the whole country seemed to have dropped down, the tops of the trees being away below us. The effect was weird and unreal.

I could not describe these falls if I would, but if you go to see them you will be well repaid for your trouble, even if you have to do as we did; portage around a log boom in the mouth of the river. I realize that it is superfluous for me to advise men to make this cruise, for they go any way, but I would advise every woman to go that can. I always accompany my husband when he goes on a cruise, and I have never had one wholly unpleasant day nor uncomfortable night.

As we came through Capt. Allyn's Straits, the three canoes abreast, we seemed to be floating on enchanted waters. The sun, like a great red ball, sank below the horizon, coloring the sky and water a bright orange, which slowly deepened into purple, then faded to gray.

When we approached the main camp many of the party were out in skiffs, and the sound of their singing and laughter, as it came to us over the water, lent an additional charm to the surroundings.

What a change! We had left camp Monday morning in the mist and rain, and, after a delightful trip, returned Friday evening in the golden glory of a Canadian sunset.

Teacher—What is the meaning of the word "excavate"? Small Pupil—It means to hollow out. Teacher—Correct. Now form a sentence in which the word is properly used. Small Pupil—Stick a pin in a boy and he will excavate.—Chicago News.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Natural History.

North American Mammals.

NEVER has so much work been done in biology as at the present time. Never before has there been so much study of the life of the globe which we inhabit, such a gathering of the facts concerning it. While to the layman much of the work done may seem to have no direct bearing on the well-being of humanity at large—to be “of no use” in other words—the practical value of other investigations is sufficiently obvious, even to the least informed person.

An important and useful work has just appeared in the Zoological Series of the Field Columbian Museum. It consists of a large volume of nearly 500 pages, entitled “A Synopsis of the Mammals of North America and Adjacent Seas,” by Daniel Giraud Elliot, F. R. S. E.

This is intended to be a complete list of North American mammals to date, and is thus one of the most useful works that could have been presented to the working mammalogist, to him who is interested in natural history and desires to keep up with the times, or merely to the man of general culture who desires a volume to which he can refer for general information as to our mammals.

Not a few eminent workers in science believe that one result of the great mass of work now being done is the hasty and ill-considered multiplication of new species; the giving of distinctive rank to too many forms; the naming of species, sub-species and geographical races or differences which to some appear to be merely those variations likely to occur between individuals within a group. Such critics believe that among mammals, birds and reptiles, new species are continually being described which ought not to be described, because they are not valid—i. e., permanent as they see it—divisions of the group. This, of course, brings us back only to the old and vexed question, what is a species? the answer to which is likely to be long waited for.

Dr. Elliot is one of those naturalists who deprecates the tendency to species making and in his preface he objects to the apparent readiness of some mammalogists to magnify slight differences, and to base distinction on variations which can be recognized only when the specimens in question are compared with the nearest allied forms, and he expresses the belief that not a few of the names in his book will ultimately serve only to swell lists of synonyms.

Over this matter we may leave the scientific men to worry, secure in the faith that some student of the future will unravel the knots that have puzzled those of today, and will relegate all the different described forms to their proper systematic position. Meantime, we may be very grateful to Dr. Elliot, who has done an immense amount of work in order to include in his synopsis all the described forms. It undoubtedly represents very closely the list of described North American mammals up to the close of the year 1900, yet it must be remembered that a volume of this character is hardly put on the press before it is out of date, and since the beginning of the current year a number of new species of mammals have been described—among them several of especial interest to the big-game hunters.

The order followed by Dr. Elliot is from the lowest to highest, beginning with the marsupials and passing up through the edentates, sirenians—or sea cows—whales, ungulates—all grass-eating big game—the rodents—squirrels, rats, mice, porcupines, hares and so forth—carnivores—cats, wolves, bears and weasels—the seal group, the insectivores—shrews and moles—and the bats. There are more than 600 species and 115 genera listed, besides a great number of subspecies and geographical races.

The volume is very fully illustrated by nearly 100 photographs of skulls and teeth of very nearly every genus and subgenus of North American mammals. These illustrations add greatly to the volume's usefulness to the student, and make it very desirable to big-game hunters. Of these very effective photographs, many are larger than a full page, and form a folded plate. In an appendix are included a number of species which were described after the volume went to press and added later, among them new foxes from Alaska, described by Dr. Merriam.

It is not easy for the casual reader to comprehend the vast amount of labor involved in the preparation of a volume such as this—the infinity of books to be turned over, the vast number of references to be hunted up, the necessity for constant vigilance, both in the preparation of the manuscript and in the reading of the proofs. That some mistakes shall occur in a work of this nature is inevitable, but in Dr. Elliot's volume they appear to be few, and most of them are corrected in an errata table.

Even to the uninformed layman this volume is extremely interesting, for it gives, as already said, a list of all the North American mammals that have been described, and which are generally considered as entitled to some kind of recognition. As here understood, North America extends from the North Pole to the boundary which separates the United States and Mexico, and, of course, includes the seas which wash these shores.

A Tragedy in Sparrow Life.

MR. A. D. WYDEVELD, of 592 Palisade avenue, Jersey City, N. J., tells us of witnessing a very curious incident of bird life. An English sparrow, which was flying with some twine into a crevice in a stone building, became entangled in the twine and was hanged. The mate of the sparrow, the female, coming soon after, discovered the plight of the bird and sought to release it from the coils of the string by biting through the string above the suspended bird. Failing to do this, it flew away in great perturbation, then immediately returned, perched on a wire and acted as if it were endeavoring to sharpen its bill on the wire. It then went to the string and again endeavored to cut it through and release the hanged bird. Mr. Wydeveld, who is an artist of great skill, and known to many as a delineator of fishes, was so impressed by the incident that he has transferred it to canvas, on which he has pictured the dead bird and its mate in the several stages of its endeavor to rescue by cutting the string. The fidelity of the painting is much admired by the friends of Mr. Wydeveld, who, with him, witnessed the incident.

An Outing in Acadia.—VII.

BY EDWARD A. SAMUELS.

SUNDAY was passed rather quietly, although the Doctor and I took a short ramble in the forenoon. On climbing the hill near the house a good view of the settlement and the surrounding country was obtained. For many miles in all directions stretches of forest were to be seen, dotted here and there with clearings and farm buildings, and ending in blue lines of hills and mountains in the dim distance.

“What a grand location for a cottage!” I exclaimed, as we reached the summit. “One would never tire of such a glorious panorama as that which lies around us. I'm afraid, though, it would be pretty bleak and cold in winter.”

“Yes; one would need pretty thick walls to his house in such an exposed position as this. Imagine the wind blowing a gale, with the thermometer showing twenty degrees below zero, a not uncommon temperature here. It is glorious air, though.”

We paused for a few minutes to enjoy the beautiful view and watch the cloud effects as their shadows fell upon hills and pastures, forests and cultivated fields. As we stood on the greensward we noticed a great many gossamer webs and presently we saw a number of spiders flying, or rather drifting, through the air, impelled by the light breeze that was blowing from the south.

A dozen passed us in a very short space of time, and the air seemed to glisten with the fragile filaments which supported them.

“There seems to be a migration of spiders,” said the Doctor, watching the little aeronauts as they drifted by. “I never saw so many on the move at one time; probably there will be a change of weather soon, for they are very sensitive little barometers, and they may desire to find new quarters before the storm breaks.”

“But where do they all come from, Doctor?” I inquired. “They seem almost numberless.”

“Oh! they are quite abundant in all these stretches of sward and grain fields; there are, no doubt, many thousands on every square rod of land around us; they are greater wanderers than most people are aware of, and they often travel distances that we would hardly suspect them of covering.”

The spiders were all of one species—the common field spider—and as far as we could see they were of almost uniform size, and were probably females, for they averaged larger than the ordinary males that we had met with.

Although spiders are to the casual observer unattractive and sometimes even repulsive in a high degree, they are to the naturalist among the most interesting of creatures. The phenomenon that we witnessed of the moving hordes was an example of the instinct which at certain seasons of the year impels them to travel sometimes quite considerable distances in a sort of migration or rather change of locality.

The method by which they perform their flight is simple, but most efficacious. The spider selects a bright day, one that is calm or with but a slight breeze in motion, and climbing to the top of a bush or a tall weed or grain stalk or fence post, it begins to emit its silky filament, which is carried along lightly by the breeze.

Sometimes as much as 200 yards of the delicate thread are needed to support the little aeronaut in safety. When it ascertains that there is enough of the cable out to buoy it, it drops from its resting place, and hanging to the filament, is borne off by the wind, perhaps for many miles.

If it finds itself coming down near a body of water, it throws out more of the silky thread, and thus obtains a more upward movement and passes by the dangerous element; but if it finds that it is ascending too high, it draws in the cable and descends by lessening the buoyancy of the filament.

That the spider has the power of projecting its silky thread in almost any direction, provided the air is still, has been proved by a number of good observers.

Mr. H. M. J. Underhill, an English naturalist, who has devoted much time to studying the habits of the spider, states that one calm afternoon he was amusing himself by keeping a spider on a short piece of stick, by just winding up her thread as fast as she let herself down. The thread when broken and left hanging showed no tendency to blow out. But the spider soon got tired of being teased, and after having several times, by breaking the thread, dropped herself to the ground, only to be picked up again, she tried a new expedient. Still hanging by her thread, she shot out several others, each composed of many detached threads, which blew about at once, and one of them catching in a twig near by, she seized it, cut off the other filament and escaped.

Another scientist in corroboration of this fact states that all spiders are able to eject and attach lines of web just where they wish. He obtained a cocoon half full of house spiders, one end of the soft, silken ball appearing quite black with the number of busy spiders huddled together, while the other half was filled with the empty shells of the eggs from which they had lately emerged. With the point of a needle he made an aperture in the cocoon, and let a number of the little creatures free, being anxious to see whether they would exercise their web-spinning power soon after their entrance upon life. It so happened that he allowed them to escape on to a book which was laid across the end of a marble mantel-piece. The spiders immediately began to run about, and several let themselves down by lines a few inches from where the edge of the book projected beyond the mantel-piece, as if to reconnoiter, but quickly returned again. Suddenly he perceived that from one of the small creatures, after being for a time motionless, a line of web of exquisite fineness had been put up, at about an angle of 45 degrees, to the edge of a terra-cotta vase which stood on the other side of the book, and was about ten inches high. The line was taut and firmly fixed, although so fine. No portion of it hung over the edges of the base, and the web had exactly impinged on and adhered to the outer angle of the rim. The young spider was about a line in length, and the web it had sent up was rather more than ten inches in length, therefore it was evident that these new-born creatures, before being nourished by food, possess the power of ejecting a line one hundred times their own length, and are able to attach it to exactly the spot they desire, while the matter ejected preserves its

stickiness sufficiently to adhere to the spot after its passage through the air. The spider next ran up the line, carrying with it a second line, attached to the edge of the book. Other spiders followed its example, and soon a lovely band of innumerable silvery threads were formed between the book and the outer angle of the rim of the vase, and extending about an inch and a half round its circumference, the little creatures traveling up and down with incredible celerity and industry until it was formed. The writer, in commenting on this wonderful performance, says: “I had no difficulty in understanding the following autumn how a large *Epeira diadema* had been able to send out a line two and a half inches in length from a trellis to exactly the corner of a projecting balcony, and another from that corner back to the trellis, so as to form an angle within which his splendid, large, wheel-shaped web was formed.”

The question is often asked, “How does the spider make its web? Does it travel back and forth to all the various points to which it is attached, or has it the faculty of projecting the filament of the frame and fastening it se-

Garden Spider and Web.

curely without going to and fro to all the places of attachment?” This is a difficult question to answer, because the work is done in the evening or the early morning at a time when we may have but little chance of witnessing it.

The web of the *Epeira* or garden spider is almost perfectly geometrical in shape, and from this fact the species is often called the geometrical spider. That the rays of which it is composed are not all attached to their points of contact by the direct touch of the spider is proven by the fact that the web is sometimes built over a running brook which the creature could not possibly cross.

An observer notes this fact as follows: “Two or three years ago I was walking by the side of a small mill stream, when my attention was arrested by a very large spider's web stretching across the stream from bank to bank, and attached to the stems of grass and other herbage. The stream was not less than three feet in width, and the web itself would not be less than four by six feet in length. The web itself was constructed on

Spider's Foot.

the mathematical principle, and resembled a cart wheel in general outline, a number of diverging spokes proceeding from a central point or nave, and these spokes were united by concentric circles of threads about a quarter of an inch apart, over the whole structure. The domicile of the spider was exactly in the center of the web and over the middle of the stream, and, when I saw it, the spider was hanging by a thread about a foot from the running stream. The spider itself was about the size of a dried marrow-fat pea of the same color. Now this remarkable sight excited my wonder and curiosity to comprehend how an animal that neither flies, leaps, nor swims, could accomplish such a feat, and I am still in the dark as to its mode of operation in making its web.”

The building of the web is well described by Mr. J. H. Emerton in the *American Naturalist*, Vol. II. In this article he says:

“The feet of spiders are wonderfully adapted for walking on the web. Each foot is furnished with three claws,

Claws of Spider.

the middle one of which is bent over at the end, forming a long finger for clinging to the web, or for guiding the thread in spinning. The outer claws are curved and toothed like a comb. Opposite the claws are several stiff hairs, which are toothed like the claws, and serve as a thumb for the latter to shut against.

“When a spider wishes to build a web she usually selects a corner, so that the structure may be attached on several sides. She then runs a few threads along the objects to which the web is fastened, to facilitate her passage from point to point. The web is commenced by a line or two across the point where the center is to be,

which is not usually the geometric center, but nearer the top than the bottom. Radiating lines are then spun from the center in all directions. In doing this the spider often crosses from one side of the web to the opposite, so that the finished portion is always tightly drawn, and the tension of the completed web is the same in every part.

"Having finished the framework, the spider begins near the center and spins a thread spirally around the web to

The Third Spinneret of *Epeira*.—*a*, common spinning tubes. *b*, large spinning tube. The glands, *c*; *e*, caeca or gland tube. *f*, glandular epithelium. *g*, the outer skin of the gland. *h*, duct. *d*, ducts belonging to the large spinning tubes (*b*). Magnified 40 diameters.

the circumference, fastening it to each radius as it crosses. The distance between the spirals varies with the size of the spiders, being about as far as they can reach. This spiral thread serves to keep the parts of the web in place during the rest of the process, and is removed as fast as the web is finished. It also furnishes a ready means

scaffolding previously prepared. She gradually destroys as she proceeds, until in the finished web only a few turns in the center are left. The thread of the circles last spun is covered with viscid globules, strung upon it like beads at short distances. If an insect comes in contact with the thread it immediately adheres, and its struggles only bring a larger part of the body into contact with the web."

A description of the apparatus by which the silk is produced will be interesting at this point. The silk is contained in a series of glands within the spider's abdomen, in close proximity and attached to the spinnerets. These glands communicate, according to Mr. Underhill, with the silk tubes by ducts. Each gland has its own duct and silk tube. On the first pair of spinnerets there are about sixty silk tubes; on the second pair, although the spinnerets are smaller, about eighty. The silk tubes on these two pairs are alike; but they differ in shape from those of the third pair, and are much larger. There are nearly 220 tubes on the third pair, thus making altogether about 360 on the six spinnerets.

The silk secretion in liquid form passes through the gland tubes, and from there it is conducted by the duct to the spinning tube, and then by the spinnerets they are united in filaments, from which the web is spun.

The spinnerets are the exterior parts by which the web is spun. They are, I believe, usually six in number, and are arranged in pairs. The illustrations of the spinnerets of *Epeira* show the characteristics of each, and indicate how each pair differs from the others. The offices of these three different pairs of specimens are varied, each having its peculiar product, the first pair making the thick threads which form the beams or foundation of the web, the second pair producing the spiral and crossing line, and the third pair making the viscid thread which forms the

Fang and poison bag of spider. Magnified 50 diameters.

outer lines of the structure. Mr. Emerton gives the following very interesting account of the habits of the spider after her web is made: "When the web is finished she stations herself in the center, where a small circle is left free of the adhesive threads. Her usual position is head downward, with each foot on one of the radii of the web, and the spinners ready to fasten themselves by a thread at the least alarm. She often remains in her hole with one foot out and resting on a tight thread connected with the center of the web, so that any vibration is quickly detected. If the web be gently touched the spider will rush into the center and face toward the disturbed part. She will then jerk smartly several of the radii leading in that direction to see if the intruder is a living animal. If this test is followed by the expected struggle, she runs out toward the victim, stepping as little as possible on the adhesive threads, seizes it in her jaws and, as soon as it begins to feel the effects of the bite, envelops it in a silken covering, and hangs it up to suck at her leisure."

[TO BE CONTINUED.]

Life Saving from Drowning.

First—Impress upon parents the necessary duty of having their children taught to swim, and upon all young persons the great importance of knowing how to swim. At every important place on the waters of this State our volunteer life-savers can be found to give them lessons that may ultimately save their lives in some unlooked-for disaster—the ability to even hold one's self up for a few minutes until help may come every year saves many lives.

Second—Go out in no pleasure boat of small or large dimensions without being assured that there are life-saving buoys or cushions aboard sufficient to float all on board in case of an upset or collision.

Third—With a party be sure you are all properly and satisfactorily seated before you leave the shore—particularly so with girls on board. Let no one attempt to exchange seats in mid-stream, or to put a foot on the edge or gunwale of the boat to change seats. This, by rollicking girls, has upturned many a boat and lost very many lives every year in the waters of this State. Where the waters become rough from a sudden squall or passing steamers, never rise in the boat, but settle down as close to the bottom as possible; keep cool until the rocking danger is past. If overturned, a woman's skirts, if held out by her extended arms, while she uses her feet as if climbing a stairs, will often hold her up while a boat may pull out from the shore and save her. A non-swimmer, by drawing his arms up to his side and pushing down with widely extended hands, while stair-climbing or treading water with his feet, may hold himself several minutes, often when a single minute means a life; or throwing out the arms, dog-fashion, forward, overhand and pulling in, as if reaching for something—that may bring him in reach of help. One of our best swimmers upon the Hudson got his first and best lesson by being capsized in midstream and compelled suddenly to strike out for himself.

Fourth—In rescuing drowning persons, seize them by the collar back of the neck; do not let them throw their arms around your neck or arms. If unmanageable, do not strike them, but let them drop under a moment until quiet, then tow them into the shore. If unconscious, don't wait a moment for a doctor or an ambulance, but begin at once. First get the tongue out and hold it by a handkerchief or stocking to let the water out; get a buoy, box or barrel under the stomach, or hold him over your knee head down and jolt the water out of him; then turn him over side to side four or five turns, then on his back, and with a pump movement keep his arms a-going from pit of stomach overhead to a straight out and back fourteen to sixteen times a minute until signs of returning life are shown. A bellows movement on the stomach at the same time is a great aid. Of course you will at first loosen collar and all binding clothing. Let some one at once remove shoes and stockings, and at the same time rub the lower limbs with an upward movement from the foot to the knee, occasionally slapping the soles of the feet with the open hand. Working on these lines our volunteer life-savers have been successful after two hours of incessant manipulation, but generally succeed inside of thirty minutes. Spirits of ammonia to the nostrils or a feather tickling in the throat often helps to quicken, but we rarely need anything more than the above mechanical means. Use no spirits internally until after breathing and circulation are restored; then a moderate use of stimulants or hot tea and a warm blanket or bed is of the first importance.

The U. S. Volunteer Life-Saving Corps of this State has distributed several thousands of its illustrated "Rescue and Resuscitation Cards," through its life-saving members, and per mail will furnish them to any one on receipt of the cost of postage and mailing tube, five cents. But if any of your readers will cut out this article from your paper and study its instructions and carry it with them, they will be able to meet any emergencies that may occur upon the waters.

J. WESLEY JONES.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Snared Partridge and the Rocketing Grouse.

It was in Connecticut, as tramping along a ravine. I espied ahead of me a magnificent cock partridge suspended in midair. As I neared the bird I saw the horsehair that, attached to a sapling, had choked out its life.

The slender hair had quickly done its work, the noose holding the bird at the base of the head. Not a feather was ruffled. The wings were closely drawn to the body, and the legs distended and held close to the feathers. The dark neck plumes lay closely in place. So smooth and compact was every feather as to lead one to imagine how a falcon might look when dropping upon its prey with distended head and neck, and closed wings.

I stood and admired the gamy bird come to an inglorious and untimely end. He had for the last time outwitted the dog and gunner. He had led the dogs through brush and tangle for the last time, and the roar of his wings thirty yards away among the hemlocks would be heard no more. Fate had decreed that no more should he startle the dogless gunner by bracing cover at his heel with a roar, and immediately dart behind a convenient hemlock, to the chagrin of the hunter.

And when I had feasted my eyes upon his beautiful form and lines, I forthwith detached the noose from his neck and dropped him into the game pocket of my coat—taking care to kick the snare to pieces and breaking the horsehair line and noose. A little hard, perhaps, on the pot-hunter, who missed a good dinner, but such things as snares were against the law, and what else was there to do but appropriate the game and destroy the trap that caught it? So much for the dead partridge; now to the living grouse.

It was on the Minnesota prairies, and sharp-tailed grouse were our quest. They were plentiful, and were found in the stubble fields usually, except during the middle of the day. While one could walk within range of them, and perhaps get several shots before the birds had all flown, to allow the dogs to work ahead of us meant the flight of every bird in the field beyond gunshot approach.

In crossing a stretch of high prairie grass, quite a distance ahead we could see a depression where the grass grew sparsely, and in the center of which was a patch not three feet square of such grass as one would see on a lawn.

When we were within about eighty yards of this spot, out from the surrounding grass walked a cock grouse directly to this oasis of velvety grass, and, arriving there, stood still. We had been seen by him as he entered the open, and there he stood, like a bird statue, watching us coming closer and closer. The tramping of our boots upon the prairie sod may have warned him of some lurking danger, and perhaps he had gone to this open spot to look around. But there he stood, his legs, body and neck rigid, his eyes following our every movement. We walked nearer and nearer, expecting to see him flush at any moment. Realizing that the time would come when his discretion would master his curiosity and he would take wing, we discussed as to whom the chance of shooting should be given. Hutch had been "wiping the eye" of some of us on some long shots, cleanly killing—after we had gotten through with our second barrel—so we agreed that he should keep a pace in advance and take the shot as the bird flushed. We were now about forty yards away, and for a few moments the grouse had shown a restlessness that clearly betokened flight, when, crouching to the ground, with one bound and a whirring of wings he was instantly up in the air. Hutch fired one barrel, and quickly followed with the second. Up, up, up, the bird darted, cleaving the air and following a line of flight as nearly perpendicular as one could imagine a bird to fly. Higher and higher he mounted, seemingly a hundred and fifty feet in the air, when instantly his course was arrested, his head now pointed downward and toward us, his wings became set as he took his downward flight. He was surely covering the isosceles of a triangle. His flight had been perpendicular, and now he was darting almost like a hawk to the earth at a long incline. It was as perfect a piece of bird rocketing as I ever witnessed, as when finishing his flight that bird dropped dead at our very feet.

One single shot had entered its brain.
CHARLES CRISTADORO.

Boston Gunners.

BOSTON, Aug. 10.—The law went off on shore and beach birds July 15. At first the weather was too oppressively hot for gunning, but lately it has been more favorable, and some good bags of summer yellowlegs have been made off Scituate and further down on the cape. Several gunners are now at Monomoy and Chatham. Along the North Shore there have been some good flights already, with more looked for. Ipswich Bay is a favorite resort. L. T. Caswell made a bag of 25, mostly yellowlegs, the first day he was out. C. H. Tarbox was down on the marshes the other day and got 38 birds. About the first of the season he counted twenty gunners on the marshes in one day; they got from 2 to 20 birds each. L. J. De Pass, who is at Plum Island Camps, with his mother, writes his father, L. W. De Pass, of the Chamber of Commerce, that he took his gun along when he went on an errand the other day. He says: "I saw four yellowlegs circling around. Pretty soon they li down on the marsh, and I crept up to them. I waited till they were all in a bunch, but before I could shoot, one flew off. I fired and killed the three left; then turned and took the fourth one on the wing. Soon after two more flew over. I shot one with each barrel." His father thinks that such shooting is not bad for a boy of fourteen. The next day he was out and shot 20 sandpipers. He is also very proud of having shot 1 plover the first of the season there. Every letter gives some account of shooting. His father is training the boy for a wing shot; tells him that any body can shoot a bird

The first spinneret and the second pair of spinnerets of *Epeira*.—*aa*, common spinning tubes, *bb*, large spinning tubes. *cc*, ducts leading to the glands of large tubes (*b*) of first spinneret. *d*, duct leading to gland of the large tube (*b*) of second spinneret. *ee*, some of the glands and ducts of the common spinning tubes. Magnified 40 diameters.

of crossing from one radius to another where they are furthest apart. All the thread spun up to this stage of the process is smooth when dry, and will not adhere if touched with a smooth object.

"The spider, having thus formed the web, begins to put in the final circles at the outside, walking around on the

sitting, but the true skill is in taking them on the wing. He has allowed the boy to use a little 16 gauge just as he pleased since he was twelve years old, and he has never had the shadow of an accident. He objects to his gunning with other boys, however.

Aug. 12.—Ex-President Grover Cleveland's fishing is always a matter of interest to the ubiquitous reporter of the daily press, and if a big catch cannot be truthfully recorded, why, he just makes one up. A Winsted, Conn., dispatch says that Grover Cleveland, John R. Proctor, Richard Watson Gilder, and some of the Ex-President's Waterbury friends spent Friday at Goose Pond, Otis, Mass. Most of the day was passed with line and rod, but only one perch came to Mr. Cleveland's creel. Some of the papers gave him a big creel, however.

The petition from the citizens and guides of Rangeley, Me., recently noted in the FOREST AND STREAM, has been put in form and forwarded to the Fish and Game Commissioners. It asks that the outlets of Haley and Gull ponds be screened; that all fishing on Haley and Ross ponds be prohibited except with the fly; that all trolling in the Rangeley Lakes be prohibited after July 1; that "gang" hooks be prohibited in the Rangeley Lakes at all times; that all "plug fishing" in Rangeley Lake be prohibited. Owing to the resignation of Commissioner Oak, a hearing cannot be had till his successor is appointed. Notice will be given of the time and place of the hearing. The proposition to stop trolling in all the Rangeley Lakes after July 1 is likely to meet with a good deal of opposition. There is a feeling among the camp owners and hotel people on the lakes below Rangeley Lake that the guides and people around that lake should not attempt to control all there is below them. Last year the Rangeley Lakes Guides' Association and people of Rangeley attempted to screen the outlet of Rangeley Lake, after urging the people interested in the lakes below to contribute toward the restocking of that lake.

Mrs. A. W. Walker, of Malden, Mass., had a novel experience with a salmon at Mooseluemaguntic Lake last week. The fish, when hooked, proved to be a very lively one, leaping out of the water many times. At last he leaped once too far, landing squarely in the boat. Sturgeon fishing is said to be reviving on the Kennebec River. One party of fishermen have taken 32 fish already between Greene Ledges and Gardiner Bridge. One fish weighed 247 pounds. There are thousands of white perch in Maranocook, Anaboscocook and the other Winthrop, Me., lakes and ponds, so the reports say, but they have bitten only poorly for a week past. Fishermen and boatmen frequently run over large schools of perch that will not bite at all. They come back wishing that they had tried some other sorts of bait or rigging. Mr. George Frothingham and Mr. H. C. Goodwin, of Boston, took two bass there last week, weighing 3 pounds each. The Poland Springs guests and Mechanic Falls, Me., people are having some good fishing at Tripp Pond. Mr. H. T. Sands landed a pickerel last week that was 22 inches long; one of the largest ever taken there.

Codfishing for sport, off the Massachusetts shore, is not as good as usual this season. Mr. Matthew Luce, who fishes a good deal off Scituate, says that he has not yet taken his usual number this year. He has one of the best boatmen and is very fond of the sport after spending the forenoon in Boston. Some mackerel are being taken with hook and line at several points along shore. Capt. Sol. Jacobs, a celebrated authority on mackerel, accounts for the fact that all the mackerel are nearer shore than usual this year, by the fact that the water is unusually cold farther out to sea. He remarks that enormous icebergs are seen off the banks, rendering the water remarkably cold there. He believes that the cold water has driven the mackerel in shore. SPECIAL.

CHICAGO AND THE WEST.

Good Game Season.

CHICAGO, Ill., Aug. 10.—The present summer has been a very dry one in nearly all of the West, but so far from this proving injurious to the chicken and quail crop, it has proved, as is usually the case, to be rather beneficial than otherwise. It is not easy to get a line, that is to say, a legal line, on the chicken crop before opening day, yet all available reports state that there are as many birds this year as there were last. A friend recently back from Minnesota states that the shooters of that State and North Dakota are counting upon lots of birds this fall. Mr. George Thorne, of Montgomery Ward & Co., who, with some friends, will take a trip in a special hunting car the first of September, and who is looking out for good chicken country in the Northwest, says that he has advices that birds are unusually plentiful along the Great Northern Railroad. I would counsel shooters to get as far north as Larimore, N. D. If one can get so far west as Buford, he may count himself sure to get nice shooting at sharp-tailed grouse in the river bottoms twelve to twenty-five miles from that point.

Mr. Neal Brown, of Wausau, Wis., who extends his annual invitation to join him on a hunt on opening day, says that he hears of a good many chickens around Necedah, Wis.; also a good many quail.

Mr. W. A. Powell, of Taylorville, Ill., says they have a good many chickens this summer even in that far southern region.

Quail are reported everywhere in great numbers, and our quail shooting in this part of the world will probably be as good as it has been for years, in spite of our blundering Illinois law.

Will Charge for Carrying Dogs.

A railroad ruling which will affect large numbers of traveling sportsmen this fall is that issued this week by the executive committee of the Western Passenger Association, which instructs baggage agents to charge the same rates for carrying dogs as are charged for baby carriages or bicycles. Heretofore sportsmen have, on many roads, had their dogs carried free, or at least free of any definite charge, though a little gratuity to the train baggagemen was expected. Some sportsmen have protested against this ruling, but it has not been rescinded and is in force.

Going West.

Mr. Frederick N. Peck, of Chicago, who has a ranch near Helena, Mont., started this week for a trip to that country which will last several weeks. He will incidentally spend some time fishing in the Yellowstone Park.

Going North.

Mr. Charles R. Wolf, of Akron, O., asks where he and a friend can get a good, comfortable fishing place in Northern Wisconsin, where they can get bass and muscallunge, a good bed at night, and fair meals during the day, with boats and guides. I would suggest that these gentlemen go to Manitowish Lake, via Manitowish station, Wis. They will find a hotel on that lake, and the fishing there should be good if the run of muscallunge in that water has continued. Mr. G. E. Hutchins, of this city, is lately back from Lost Lake, Wis., and he had very good fishing for muscallunge at that place, and fair accommodations. This might be a good place for the Akron men to try. Lost Land Lake is something like twenty-five miles from Hayward, Wis. I believe the muscallunge fishing has been better there this past month than at any place I have heard of. Mr. Hutchins, during his two weeks' stay, had a number of fish over 15 pounds, and some over 22.

Going Southwest.

A pleasant little party of three will start next Friday for an extended trip in Arizona. There will be of the party Mr. H. G. Maratta, the artist of the Grand Cañon which was displayed at the Chicago sportsmen's show and the Buffalo Pan-American Exposition; Mr. Robert Stites, manager of Rector's restaurant, and Dr. W. H. Knapp, of Rochester, N. Y. The party will go first to Gallup, Ariz., where they will be met by Mr. J. L. Hubbel, the famous Navajo blanket man. They go then to Ganada, and from that point to the Cañon de Chille, where they will stay for a little while. Then, going back to Ganada, they move thence to Kean's Cañon. From this point it is about twelve miles to the Moqui mesa, where the famous snake dance of the Moquis is to be held. About 100 tourists saw this snake dance last year. It is thought that this ceremonial dance will this year be the best that has been known for four or five years, and, perhaps, the last that will ever be held. The government, as well as the missionaries, is attempting to discourage the Indians from holding these dances. It is devoutly to be hoped that neither the government nor the missionaries will be able to stop the dances, for these ceremonies constitute one of the most unique features of the wild life of the West, and make one of the few remaining living records of the old West which is passing so rapidly away.

Messrs. Maratta, Stites and Knapp will fish and photograph, beside seeing the snake dance. They will have 4,000 miles of railroad travel and 200 miles of a wagon ride. They will stop at Holbrook and Williams coming out, and will run 70 miles by wagon from Williams and have a look at the Grand Cañon. They stop also at Laguna and Acoma, the latter point 18 miles from the railroad. Thus they will be on some of the most historic and most interesting soil which is to be found on the American continent.

Plover Coming In.

Plover have appeared in considerable flocks at the outskirts of Evanston and on the fields adjoining the Skokie marsh, north of the city.

E. HOUGH.
HARTFORD BUILDING, Chicago, Ill.

Arkansas Fish and Game.

WINSLOW, Ark., Aug. 5.—The drouth that has been so disastrous to many of the Western States has at last been broken in western Arkansas by good rains. But the streams are lower than they have been since 1874, and many fish have been destroyed, both by the hogs that we use to make bacon and by fishermen. The three streams that make White River have their source here in the Boston Mountains, and are good fishing streams, being clear and cold. The water is full of black bass, perch and several other kinds of fish, and they furnish good sport to the angler. But it will take a rise in the streams and the restocking of most of the pools to get them in shape to furnish good fishing in the future, I fear. I have caught many good strings, both with live bait and with the fly, this summer. But in many places where, in the past, there was good fishing, there is no water nor any fish. The dry weather has been a great aid to the quail. There are more of them in western Arkansas than ever before. In fact, they are so abundant that shooting them will be the easiest kind of work. The fields, the meadows and the orchards resound with the calls of Bob White as never before. Mr. Jack Harrigan, who owns an apple orchard a half-mile from Winslow, estimates that there were hatched and raised in his orchard four hundred quail this season. Squirrels are plentiful in the mountains, and just now are feeding on the hickory nuts, and shooting them is good sport; I bagged seven nice ones one morning last week in a short time. South of here thirty-five miles on the Arkansas River the wood ducks breed around the lakes, so that in September they furnish good shooting. We have some deer and wild turkeys near here, so that, taken all together, western Arkansas furnishes good sport to the lover of rod and gun. I also have excellent sport fox hunting, there being both red and gray foxes and wildcats in great numbers in the deep gorges and bluffs near here. At some future time I will give the readers of FOREST AND STREAM a history of an exciting Arkansas fox hunt.

J. E. LONDON.

The Shag and the Water-Hens.

During a recent trip through the lower western section of the country, I believe I discovered the laziest and most stupid form of life to be found anywhere on the globe. It was an aquatic fowl, with a big, clumsy-looking beak, and with a form something like the dodo, now extinct. I have spent much time in watching this fowl, which is found in some of the shallow lakes, and the chief point of interest to me was the startling stupidity displayed. They call them shags, I believe, out West. They generally squat on stumps or logs in the lake and watch for the smaller fish that play around the surface of the water. They are fairly clever in catching what they want, and they throw out their bill with considerable precision when they gig for game. But they never get to eat what they catch until they have fed at least one—and maybe more than one—member of another kind of water fowl.

Whenever a shag begins to catch fish, a long-legged, long-necked water hen will take a place immediately behind him. When the shag lands a fish the water hen simply reaches over and gets it. Without any show of resentment, and without turning around, the shag will continue its watch for fish, and this is kept up until the water hen has finished a meal, and then, if no other enterprising member of the same tribe comes along, the shag is permitted to enjoy the product of its own sleepy efforts. I have on one occasion seen one shag feed as many as three water hens before eating a single fish. It is certainly a singular display of stupidity, and after having watched the performance a number of times, I am convinced that the shag is actually too dull to even know that the water hen stands behind it to steal the fish out of its mouth.

—New Orleans Times-Democrat.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canadian Non-Resident Anglers' Permits.

PHILADELPHIA, Pa., Aug. 5.—*Editor Forest and Stream:* I have not forgotten the promise which I made you over a year ago to advise you fully of the facts connected with my arrest for fishing in the inland waters of the Province of Nova Scotia without having previously secured an angling license from the proper officials. You will recall that, while my name was not mentioned, the arrest was reported in your columns over the nom de plume of Special, and that I wrote you, asking a suspension of any discussion of the matter in your columns pending the decision of the Department of Fisheries and Marine of the Dominion of Canada, upon the request which I submitted that—as a matter of grace and in view of their ruling upon my communication to them in 1899, of which a full abstract is hereinafter given—they should allow me to appeal from the decision of the police magistrate before whom I was convicted, notwithstanding the fact that, through my lack of representation by counsel at the hearing, and my ignorance of the provisions of the Dominion law, the time had elapsed within which I should have perfected an appeal. Despite the fact that I have in person and through able counsel repeatedly requested a decision by the Minister upon this point, none has been rendered, although repeatedly promised. I, therefore, feel that I am guilty of no discourtesy in laying the entire matter before you and your readers, believing, as I do, that the question is one which should interest every one who visits the Province for the purpose of fishing.

As a preliminary, however, let me briefly state the law relative to the points at issue: In June, 1894, the Dominion Parliament passed an act which provided that "no person not a British subject shall fish in Canadian waters for bass, pike, perch or trout without an anglers' permit," the fee for said permit being fixed thereby at \$5 for three months and \$10 for six months, and a penalty of \$20 for violation of the provisions of the act being thereby imposed. Upon Aug. 1 in the same year, however, it was "ordered in Council" that "Foreigners temporarily domiciled in Canada and employing Canadian guides, boats and boatmen" were not required to take out such a permit. The full text of this order is as follows:

Aug. 1, 1894: Whereas, it has been deemed advisable to amend the fishery regulations approved in Council on Saturday, June 30, 1894, so as to exempt under certain conditions foreigners domiciled in Canada from the regulations requiring permits, the said order is hereby amended by adding thereto the following clause: "10. Foreigners, when temporarily domiciled in Canada and employing Canadian boats and boatmen, shall be exempt from the regulations requiring permits."

The inconsistencies involved in this order in Council will at once strike the trained legal mind, and I can do no better than quote here the opinion which I have received from my senior Provincial counsel upon the proper interpretation of the order:

"It is to be noted here that the recital (which by the way is not published in the Dominion statutes, but is to be found only in the Canada Gazette of 1894) is wider than the enacting words. The former speaks of 'foreigners domiciled in Canada,' while the latter speaks of 'foreigners temporarily domiciled.' In my view, while the recital of a statute cannot bind those not in the enacting part (see *Edinboro vs. Linlithgow*, 3 Macq., 704), yet it may be used in construing an ambiguous phrase in such enacting part. The phrase 'temporarily domiciled' is ambiguous enough, it is true, but I do not think the recital can enlarge it so as to make it read 'domiciled' only; for, if we apply the technical meaning to the word 'domiciled' in the recital, we then must cancel the word 'temporarily' in the enacting part, since no residence which is temporary can create domicile, nor can domicile coexist with temporary residence. It is of the essence of domicile that it is permanent. I think, therefore, that the phrase 'temporarily domiciled,' since it has no accurate legal meaning, must be read as having been used in a popular sense, and as meaning temporarily present in the Province. No space of time is required for this temporary thing, and, therefore, it cannot alter the question that a foreigner has been here for a few days only. We are really dealing with a contradiction in terms, and I can make nothing more of it than that foreigners shall not come to this Province and fish by themselves, but must employ Canadian boats and boatmen. There is no warrant for saying that a short residence of say a year can create a temporary domicile, any more than the residence of a month or a day. There is no rule of law to warrant such a distinction, and hence I think you fall within the exception. If, as you say, they have passed a recent order in Council, making the thing clear, this would seem to show that they could not succeed under the old. Finally, as the statute is a penal one, it must receive a strict construction, and I cannot think that any court would construe such a phrase as meaning more than it could strictly be said to mean if it were a 'term of art.' * * * I may add that, in addition to the question dealt with above, there is also a very serious question as to whether the order in Council or the statute on which it is founded is constitutional. It is now claimed that the inland fisheries

are under the jurisdiction of the Provincial and not the Federal Parliament."

Ever since 1892 I have been visiting the Province of Nova Scotia, as well for the hunting as for the fishing. In every instance I have advised the local deputy of my intended shooting trip; of the steamer by which I expected to arrive; and have requested him to have my license in readiness; and upon the occasion of my first trip for the purpose of angling, and at two or three different times subsequent thereto, I volunteered to him to pay for an angling license, if I, not being a British subject, were required to take out one; but in every instance I was told that, inasmuch as I employed Canadian guides and boatmen, I came within the provisions of the order of Council of 1895, and was not obliged to take out a permit.

In 1899, however, in company with two friends, I made a trip to the Liverpool waters in Queens county, instead of to the Tusket, which I had heretofore visited, and the day before we started into the woods I was approached by the local official of the Fish and Game Association for the district of Liverpool with a demand that I should take out an angling permit. I told him of what I had been previously informed by the authorities in Yarmouth county, to wit: that as I employed Canadian guides and boatmen I was not obliged to take out a permit, and suggested that he should write to the proper authorities and ascertain whether we were, as a matter of fact, amenable to the provisions of the act of 1894, and not entitled to the benefit of the proviso as set forth in the order of Council. To this he agreed; but when we came out of the woods no demand was made upon us for the license fees, nor were we able to find the officer who had demanded them.

After my return from Liverpool to Philadelphia, I wrote to the Department at Ottawa, stating the facts of the case, and volunteered on behalf of myself and my companions to pay the license fees if it were adjudged by the Minister that we were amenable to the act. The gentleman to whom the decision of the case was delegated by the Minister replied in terms that, as we had employed Canadian guides and boatmen, we were not amenable to the provisions of the law, but were entitled to the benefit of the order of Council. Notwithstanding this, in the month of May, 1900, I was arrested upon the high street of Yarmouth by a uniformed police officer and taken before a stipendiary magistrate and justice of the peace for the county of Yarmouth, on information lodged by one Hatfield, whose official position is that of Deputy Fishery Overseer for the Dominion, which is entirely distinct from the office of Deputy Fish and Game Commissioner of the Province. He charged that I had violated the laws of the Dominion by fishing in Canadian waters without a permit, I being at the time the alleged offense was committed a citizen of the State of Pennsylvania. At the hearing before the magistrate, which, I should add, was ex parte, Hatfield not having put in an appearance, I admitted that I had been fishing in Canadian waters, but claimed that, in view of the preceding ruling, as made in 1899 by the Department of Fisheries and Marine, I came within the provisions of the Order of Council, and was therefore not amenable to the act requiring the purchase of a permit; but, notwithstanding this, I was adjudged guilty and sentenced to pay a fine and costs, which I did under protest. Inasmuch as my arrest occurred but an hour and a half before the time fixed for the departure of the steamer by which I was compelled to return to the States, I had absolutely no opportunity to secure adequate legal advice, and by the time I had established communication with local counsel the period within which my appeal should have been taken had elapsed, as above stated. I forthwith addressed a personal letter to the Minister of Fisheries and Marine, requesting that, in view of their ruling of 1899, I should by some appropriate action be relieved from the odium of public arrest, or at least that the department would waive the expiry of the time for my appeal and allow me to test the legality of my arrest under the verbiage of the above-recited order of Council, but the only reply which I received was a curt note from an underling in that department indorsing the action of the local Fishery Overseer, without any effort to assign a reason for the reversal of the ruling which they had made in the Liverpool case the preceding year. It seems impossible, in view of the lapse of time, to hope for a fair-minded action by the department upon the question involved, and I can therefore only appeal to the tribunal composed of yourself and your readers for justification.

I hope, however, in the near future to be able to send you a report of a case which will finally settle the amenability of those who occupy the same category as I with reference to the provisions of the fishing license law. Under the advice of counsel, three of our party who visited the province this spring refused to take out angling permits, to the end that a test case might be made which, under the management of local counsel, could be fought through to the appellate courts of the Dominion. The Deputy Fishery Overseer was advised in advance of their intention to refuse to comply with his demand, they were arrested upon information lodged by him, a fine was imposed by the magistrate, from which sentence an appeal was duly taken, which will, if necessary, be prosecuted to the courts of last resort. Then, and not until then, I suppose, can we secure a final interpretation of the act and of the order in Council, and until this result has been obtained, every angler from the United States who visits any one of the Canadian provinces, is liable to be subjected to the same annoyance and inconvenience as I was. Each, therefore, must determine for himself whether he will submit to the payment of the license fees or subject himself to danger of arrest.

I cannot close without stating in justification of my course, past, present and future, in connection with this matter, that I am receiving the heartiest and most courteous co-operation from the officials of the Nova Scotia Game and Inland Fisheries Protection Society. These gentlemen have expressed the greatest indignation at the action of the Dominion officials, and maintain that I am entirely within my rights, and have urged upon me and the others of my party the prosecution of our appeals to the highest tribunals in the Dominion.

J. B. TOWNSEND, JR.,

Ingenuity Got the Fish.

OKLAHOMA CITY, O. T., Aug. 3.—*Editor Forest and Stream:* Mr. M. A. Pryer, a well-known business man of this place, is responsible for the following account of an unusual method of taking large catfish, and offers to produce plenty of witnesses who will vouch for the accuracy of the story.

Mr. Pryer relates that about two weeks ago he was spending a few days at the town of Coyle, a small trading point on the line of the Eastern Oklahoma R. R., about fifteen miles from Guthrie, on the Cimarron River. The prolonged drouth had caused a very low stage of water in the river, and what little remained lay in pools ranging from a few inches to two or three feet in depth, and from fifty to one hundred yards long. In these pools there were frequent logs and stumps projecting out of the stagnant water. Some fishermen discovered several enormous specimens of river catfish lying perfectly still in the water close to the logs, their mouths just even with the surface. The fish were opening and closing the jaws with a regular movement, sucking in the turbid element and ejecting it through their gills, probably for the purpose of obtaining air. They were apparently much stupefied by the hot and lifeless water, and would allow persons to approach near enough to touch their bodies, but floundered off with a great splashing and commotion on being roughly handled. Many of the fish were from four to five feet long, and the problem was, how were they to be secured, as no one of the party was equipped with tackle half strong enough to land fish of such size and weight. Many suggestions were made, but it remained for a hitherto silent, but observant, member of the party to propose the means which finally proved successful. He had noticed the regularity with which the huge fish opened their wide mouths, sucked in and ejected the muddy water through their gills, and this gave him the idea. A boy present was sent to a near-by farmhouse for the family clothes-line, which, being secured, was unraveled and frayed out for about six inches at one end. This end was then carefully floated close to the gaping mouth of one of the largest fish. At the very next gulp the rope end disappeared; a moment later it was cast out of one of the gill openings of the big fish, and was promptly grasped by a stout man, while a second hauled away at the other end of the rope, and by the united efforts of both the big cat was dragged ashore and landed. Many more were taken in the same manner, and catfish steaks were common in Coyle for days afterward.

As an old fisherman, I was much interested in the incident, which was an excellent illustration of the ever-ready resourcefulness and ingenuity of the average Westerner, or American citizen anywhere, for that matter, and it bears also the added charm of novelty. No one to whom I have related the story has been able to recall a case where similar methods were employed in taking fish, and so far as I have been able to learn, the means used were entirely new.

J. C. C.

Massachusetts Sunday Fishing.

BOSTON, Mass., Aug. 10.—*Editor Forest and Stream:* Recently much that is misleading and inaccurate has appeared in the press regarding the order relating to the enforcement of the Sunday fishing law issued by the Commissioners on Inland Fisheries and Game.

As a result of this there is apparently a misapprehension on the part of the public of the proper relation of the Fish and Game Commission to the law referred to, and its right or duty to enforce it. For this reason it seems desirable and timely that the public should be correctly informed regarding the matter.

Section 1, Chapter 97, of the Public Statutes, provides that "all laws relating to the culture, preservation, capture, or passage of fish shall be known as the laws relating to inland fisheries," and Section 3, of the same chapter, provides, among other things, that "each of the Commissioners may personally or by deputy, enforce all laws regulating inland fisheries."

These provisions of law have heretofore been deemed sufficient warrant by the Commissioners to conclude that they might justly assume that the law "relating to Sunday fishing (Section 11, Chapter 98, of Public Statutes) was a law relating to the * * * preservation" and "capture * * * of fish," and, therefore, that it was not only their right, but that it was incumbent upon them, to enforce this law. As a consequence, the law has been as vigorously enforced as any fish and game law on the statute books, until it was considered necessary to take other action.

But recent rulings of the law courts, backed by a decision of the Attorney-General of the Commonwealth, establish beyond question the fact that the statute prohibiting Sunday fishing "is not a law relating to inland fisheries," and that the enforcement of this act (P. S., Chap. 98, Sec. 11) is no more the duty of one of our deputies "than the enforcement of another section of the same act found in P. S., Chap. 98, Sec. 10: 'Whoever on the Lord's day discharges any fire arms for sport * * * shall be punished by fine not exceeding ten dollars.'" A later statute (Chapter 116, acts of 1899) gives the Commission full authority to prevent hunting on the Lord's day, and this will be enforced, but this law gives no power to the Board so far as Sunday fishing is concerned.

The Fish and Game Commission has no choice but to act in accordance with law, as interpreted by the courts and the highest official legal authority in the State, nor has it any purpose other than to abide by such decisions. Its authority for the enforcement of law being definitely limited to Fish and Game Laws, and the recent rulings and decisions having established the fact that the law relating to Sunday fishing is "An act for the better observance of the Lord's day," and not a fish law; it was manifestly our duty to instruct our deputies not to enforce a law which we have no right to enforce. To ignore court rulings and the decision of the highest legal authority in the State would be manifestly an error, to call it by no harsher name, consequently, the action taken by the Commission is in strict compliance with law, and the wild tale that it has attempted to "set aside or repeal" the laws of the Commonwealth is too absurd to merit notice.

J. W. COLLINS,

Chairman of Fish and Game Commission,

Tarpon Fishing.—III.

How to Fish.

THIS paper will be divided into the following nine topics, each of which will be treated separately in the order given on the list:

- 1st. Rigging up.
- 2d. Baits.
- 3d. Best places, conditions and times for fishing.
- 4th. Methods of fishing.
- 5th. Handling tarpon.
- 6th. Measuring and weighing fish.
- 7th. Photographing fish.
- 8th. General subjects.
- 9th. Care and repair of tackle.

Rigging Up.

Before starting on an outing, there is much to be done in getting the tackle ready. Part of the work, such as mounting hooks, putting lines on reels and attaching brakes, can be attended to at home; but the fastening on of reels, jointing rods, reeving lines, attaching snells, screwing on gaff, etc., have to be done at the fishing grounds before making the first boat trip.

In mounting hooks, cut the wire into 2-foot lengths, if it be not already so cut, and see that all the pieces are straight; then set up the table vice, bend over at least 2 inches of a wire with the round pincers, slip on the hook, set the loop tightly in the vise at one end of the jaws, then with the fingers or the flat pincers twist the end of the wire around half a dozen times and cut the remaining end off close. Next attach a swivel to the other end of the wire in the same way, then fasten another wire on to this swivel, then another swivel, another wire and another swivel. This will make a snell about 5 feet long, having three links and three swivels. Finally, see that all the links are straight. By following these directions there will result the best possible snell for tarpon fishing. Any much greater length than 5 feet will prevent the sportsman from bringing the fish as close to the boat as is necessary for gaffing or shooting; and any shorter length would involve the risk of the line being cut by the tarpon's sharp scales. Three swivels are required to prevent the untwisting of the line.

In putting a line on a reel, see that it is tied firmly to the axle, and that it is spooled regularly and tightly. This can be done by having one man turn the reel and another let the line run through his hand, guarding the latter with a piece of cloth or soft leather. It will be found convenient to mount the reel temporarily on the butt of the rod before putting on the line. The click or drag should be set as soon as the line is on, in order to prevent it coming off or getting tangled. Never fill a reel quite full, because when the line is wet it will swell and thus require more space.

It is well to double the line back for 10 or 15 feet, so as to provide extra strength toward the end of the struggle, when the fish is near the boat. To attach the end of the line to the body, untwist about 6 inches of it and cut off two of the three strands, wax the third strand, lay the end of the line close alongside, and wind the waxed end around tightly in a backward direction. To fasten the end thereof, lay it backward, wind the small loop around, pull the main loop through, and, finally, after sufficient turns have been made, pull the waxed end through. Next straighten out the long loop, so as to make the two lines pull equally, and bind it at intervals of about 2 feet by winding with waxed linen thread.

To attach a rubber or leather brake to a reel, first cut it to proper dimensions, so that it won't strike the forward bar or touch the sides of the spool before a good deal of the line is taken out; then punch four holes along the rear edge, and attach to the rear bar with strong tarpon line, so that the brake will not turn easily on the bar. The sides of the brake should be trimmed to a slight bevel.

To attach the forward brake to the rod, cut a strip of rubber 1 inch wide and 3 or 4 inches long, and punch two holes at each end, then attach tightly to rod with strong tarpon line. If the rod tip be reversed in the socket, it will be necessary to either turn the forward brake half-way around each time or have a piece of rubber on each side.

If it be desired to use Ed. vom Hofe's patent "Joker," this forward brake will have to be omitted. There would be no need for the joker if a strong outgoing drag could be put on the reel without involving an incoming drag also, and such a drag will surely soon be invented. It is said that Wm. Mills & Son, the New York tackle dealers, have one in process of evolution.

To fasten a reel to a butt, put it in place and drive the ring on as far as it will go, using a hammer and a small piece of hardwood so as not to disfigure the metal; then wind on enough waxed tarpon line to prevent the ring from slipping off, pulling the end of the line back underneath by means of an auxiliary loop. This winding can either cover only the space between the top of the ring and the metal shoulder, or it can be carried from the latter clear down to the reel seat, then below for a couple of inches. The former method is the simpler, and is all right for a good reel seat; but the latter will strengthen a weak one. Some reels have patent attachments that dispense with this tying-on process, but I have never tried such reels, so cannot report on their merits or defects.

Never put together a rod without first greasing well the joints; for, if you do, you will probably experience great trouble in unjointing. If you are so unfortunate as to have a loose joint in your rod, insert a piece of paper, but do not omit the lubrication.

In reeving a line, be careful that there is no turn of it around the rod, otherwise grief will surely ensue.

In attaching snells, my custom is to simply run the loop through the swivel and pull the snell through the loop. Although this method has been criticised adversely by several sportsmen, I have never yet had a line fail at the attachment of the snell. Boatmen sometimes attach by means of a bowline, but this will not apply where the long loop is used.

Before screwing on a gaff hook, grease well the screw end, so as to insure its unscrewing readily, and always put in the little set screw to stop it from turning off. Be careful to prevent sand from getting into the screw socket,

Before starting out in the boat, see that the boatman is the full equipment, of which a list was given in my last paper, and that the rowlocks to be used are tied on. In addition to the said equipment, the sportsman will require in the boat the following:

- 2 tarpon rods, fully equipped and ready for service.
- 1 smaller rod, ditto.
- A supply of mounted hooks of all sizes.
- 1 gaff.
- 1 cushion.
- 1 rubber coat, or poncho, if there be any possibility of it raining.
- 1 pair rubber boots, ditto.
- 1 hunting coat, containing in the pockets the following:
 - Revolver and cartridges.
 - Supply of assorted sinkers.
 - Several floats of various sizes.
 - Some cord or stout string.
 - Cutting pincers.
 - Flat file.
 - Disgorger.
 - Knife.
 - Oiler (filled).
 - Leather case supplied with hooks, etc.
 - Pocket tool box.
 - Spool of fine copper wire.
 - Leather socket for chair, if there be one.
 - Large and small weighing scales.
 - Bottle of vaseline.
 - Guards for thumb and fingers.
 - Gloves.
 - Artificial bait, if desired.

This seems like a pretty large outfit, but any part of it is liable to be needed at any time.

To arrange everything properly in the boat, first lay the two spare rods along the sides so that they will not be in the way of the boatmen, and so that they will not be struck by a fish either when the latter is being taken in or afterward; then attach socket to chair and put cushion in place; then load revolver and lay it on the port side of the stern seat within easy reach; then lay the gaff so that the boatman can snatch it quickly; then place the spare mells where they will be safe, convenient and out of the way, and stow the rubber coat and boots in the bow, so that they will lie beneath the anchor, rope and buoy. The hunting coat, with its contents, should be placed at the sportsman's feet. Next put on the gloves and tie the thumb and finger guards on the left hand; then put on a bait and you will be ready for the fray.

Bait.

The best kind of bait for tarpon is nearly always mullet, but at times shiners or menhaden are very effective. If neither of these be available, any small fish, excepting catfish, about 6 inches long, will do fairly well, and even cut bait can be used when nothing better is to be had.

There is a diversity of opinion concerning the relative merits of live and dead-bait, most sportsmen preferring the former. My choice, though, is the latter, for the reason that it spins better when trolling, thus making more display, and that it gives no false alarms as to strikes. On the other hand, the dead bait cannot be kept as long as the live, and when fishing under certain unusual conditions, the latter is sometimes a necessity. For instance, if there are many live mullet in the water, a tarpon is not likely to take a dead one. Again, when fishing from a bank in a sluggish current, live bait is preferable.

In respect to best size of bait, I would quote a saying of one of my boatmen, "If a man wants strikes, let him put on a large bait; but if he wants tarpon, let him put on a small one." My experience confirms this statement, for I find that a mullet 5 or 6 inches long gives the best results, and that using a much longer bait causes the loss of many a fish. The objections to a very small bait are that it is not so readily seen, and that it does not offer so much temptation as a larger one.

If the sportsman be reduced to cut bait, let him trim it into the form of a fish, and use as tough a piece as possible. The skipjack or ladyfish, though rather tender, makes excellent cut bait, as does also the belly of a shark. I have known tarpon to take broken-up crab, which was being used as bait for other fish. It is a good plan, when tarpon are present and not striking well, to cut one open so as to ascertain upon what it has been feeding, and bait accordingly.

The best way to keep bait alive is to have built in the boat amidships a box that has small openings in the bottom. So long as the boat remains in deep water, the bait will live pretty well, but they are prone to die quickly if the boat be left in shallow water. It is strange that a mullet will often live several hours when attached to the hook and trolled around, while at the same time other mullet in the bait box will die. Mullet are generally caught with a circular cast net, and nearly every fisherman along the Gulf coast either owns one or can procure one readily. If, however, the sportsman be going to some entirely new fishing ground, concerning which he is not posted, it would be a wise precaution to take along one of these cast nets.

In putting either a live or a dead bait on the hook, insert the point of the latter below the under lip of the fish not more than 1/2 inch back, and press it upward through both lips, taking care to have the central plane of the hook and the vertical plane of symmetry of the fish coincident. This will prevent any tendency to unduly great rotation of bait and consequent twisting or untwisting of line.

Very few artificial baits have been tried on tarpon, but it is known that at times they will strike at any glittering lure. I once tried for a short time just before sunset a large, phantom minnow having a tarpon hook at the tail, and had a strike from a heavy 6-footer that started straight for the Gulf, jumping about every twenty yards. After taking out fully 100 yards of line, it shook out the hook on the fourth jump. I used up that bait the next day on jackfish, after landing on it four or five fine ones.

A manufacturer has made for me two rubber mullets, each having a single Van Vleck hook at the tail, and I have presented one of them to my friend Dr. Howe; but neither of us has yet given the bait a trial. Unless they can be manufactured so that the hooks can be removed and replaced when bent or broken, this type of bait will not become popular, as the price (about \$1.75 each) is almost prohibitory.

Best Places, Conditions and Times for Fishing.

In any tarpon fishing ground there are certain places that are better than others, but these change from time to time. The best spots are generally the following:

- 1. Close alongside of rock jetties.
- 2. At mouths of tributary rivers or streams.

- 3. At the junction of clear and muddy waters.
- 4. Close to shallow oyster beds, where the water deepens suddenly.
- 5. In narrow tideways that join large bodies of water.
- 6. At promontories in the shore line, around which the currents pass swiftly.
- 7. In midchannel of passes when mullet and shiners are running there.

In general, the best spots to catch tarpon are those where their food fishes are to be found. Mullet travel usually close to the jetties and shores, but are often found scattered over the deep water of the pass. They also frequent the narrow tideways between two large bodies of water, in order to pass from one to the other.

The reason that mouths of rivers and junctions of clear and muddy water are so good is because the tarpon lie in wait in the clear water close to the junction, so as to catch the mullet that are bewildered in passing suddenly from a dark to a clear medium. For a similar reason the tarpon lie in the deep water close to shallow oyster beds, so as to spring up and catch the mullet just after they pass the shallows.

Sometimes there is good fishing to be had out on the Gulf, especially just beyond the ends of the jetties, but it is not always practicable or safe to go there. If there be a portion of a jetty submerged, it will pay to try trolling along it, as the tarpon are often there.

When shiners or menhaden are traveling in mid-channel, the tarpon will generally be found among them; but at such times they do not strike well, owing to the great supply of food. However, a lively mullet or shiner then will often call attention and procure a strike.

Tarpon often travel in certain lines, and one small school after another, even when the intervals between schools are great, will follow in almost exact line. If one is fishing at anchor and sees such a line indicated, it will pay to up anchor and move over to the line of travel; or, if trolling, it will pay to follow such lines.

As a rule, the best tarpon fishing is found within 3 or 4 feet of the surface, but there are times when the fish lie close to the bottom, so if, after a fair trial, one fail to obtain strikes near the surface, it is well to put on a heavy, detachable sinker and try near the bottom, even at the risk of hooking a shark, jewfish, stingray, sawfish or other sea monster.

In respect to best condition of water for tarpon fishing, as a rule the clearer the water the better the fishing, probably because the fish can the better see the bait; but there are times when the water is clear and the tarpon are absent, so no hard and fast rule can be laid down about water conditions.

When a muddy tide works slowly against a body of clear water, one should troll in the latter close to the dividing line; if they don't strike well there, try the muddy water, but still near the said line.

I once had an hour and a half of excellent fishing in water so muddy that it looked like pea soup, and which carried masses of sea weed, sand and dirt, getting eight strikes and landing two fish. Catching tarpon under such conditions is exceptional, but it is well to try them when the luck is bad everywhere else.

The water in tidal ways between shallow lakes or bays is generally more or less muddy; but the tarpon will strike there fiercely at certain times, especially about change of tide.

In respect to the best time of day for tarpon fishing, nothing certain is known. On the whole, I have had the best luck in the forenoon, but sometimes the afternoon is better. For some particular place there may be some time of day that is best; but I think the fishing depends more upon the clearness of the water and the state of the tide than upon the time of day. At Shellbanks, about halfway between Rockport and Aransas Pass, in an artificial channel, the tarpon congregate and strike between sunset and dark, and this condition, I am assured, holds good for many continuous days, irrespective of conditions of water and tide.

It is said that tarpon will strike on moonlight nights, but of this I am not certain, as I have never tried night fishing. It would appear to me to be unsatisfactory sport, because one would not be able to see the action of the fish, and the holding or losing thereof would depend almost entirely upon how well the hook be attached, with the chances greatly against the sportsman.

Methods of Fishing.

After the sportsman has arranged his boat, seated himself on his chair, with the cushion beneath him, pulled up between his legs so as to form a fulcrum for the butt of the rod, reached the fishing ground and baited his hook, let him put out slowly from 35 to 40 feet of line, the boatman pulling at the rate of two miles per hour, or a little faster. In order to get out the approximately correct length of line desired, one should learn how to pull from the reel with his left hand as nearly as possible one foot of line at a time, so that by beginning at 7 (6 feet being usually the length of line already beyond the tip), and counting up to 35 or 40, he will get out just about what he wants. This method of putting out the line will soon become almost automatic, and will require but little thought.

If one use a longer line than 35 or 40 feet, it will be difficult to set the hook, on account of the spring of the line, while, if he use a much shorter length, the bait will be so near the boat that the latter may frighten the fish, although at times I have seen a tarpon take the bait with not more than 15 feet of line out.

After the line is out, one should sit with the rod nearly horizontal, and at right angles to the length of the boat, but pointing very slightly aft, the butt in the right hand with the right thumb on the rear brake, and the left hand holding the rod about 15 inches ahead of the reel seat. One should keep his mind constantly upon the business on hand, and should never let it wander, for, if he does, when a strike comes he will be unprepared, and the fish will throw the hook out of its mouth before it is set. Some fishermen think that they can chat, smoke or even read a book when trolling for tarpon, but these are the ones who average one fish landed out of about ten strikes. The last time I was out I fished for a couple of hours one morning with all conditions apparently favorable, but without getting a strike, so concluded that it was an off day, pulled a book out of my hunting coat and began to read. I had not read quite one page when I got a strike from a big fellow, but, by the time I had dropped the hook and gotten my hands in readiness for striking, the

fish was in the air, and the hook was out of its mouth. How often I see a companion lose a fish, and when I ask him the reason, receive the reply, "Oh! I was lighting my pipe," or "I was fixing my glove," or "I was shoving on my hat," or "I was thinking of something else." Certainly at times one's hands are needed for something else than holding the rod in due expectancy, but at such times one should anticipate a strike and be prepared for it by either gripping hard the forward brake with the left thumb and letting the butt rest against the right side of the body, or by holding the rear brake extra hard, with the right thumb, and bracing the butt against the right elbow. In either of these positions one can strike fairly well, but not by any means as effectively as he can from the regulation position.

Tarpon strike differently on different days and in different waters. Sometimes they hit the bait fiercely and rush off with the line, but at others they give a most gentle nibble—no stronger, in fact, than the pull from a live mullet. Whatever kind of a bite or strike one may get, there is but one thing to do—viz., surge back heavily on the line by throwing forward the tip of the rod and holding on to one or both of the brakes firmly, but not so hard as to break the line. Surge two or even three times if you can do so before the tarpon jumps, and, when he is in the air, dip the point of the rod toward him without easing up much on the brake, then as soon as he strikes the water, hold him as hard as you can without smashing the tackle. Some fishermen will claim that this is not the orthodox method of striking a fish, and that it should be given time to get the hook well into its mouth before striking. I have tried all kinds of ways of hooking tarpon, and find that the manner just described is by far the most successful. The reason therefor, in my opinion, is this: the chances are many to one that, when a tarpon seizes the bait, the point of the hook will strike a hard portion of the mouth, and will but barely penetrate the thin skin that covers it. A sudden strike will drag the point along the bone, tearing the skin until a joint or soft place is reached, where the hook will enter a little deeper. A second surge on the line will then set the point in probably beyond the barb, the fish all this time keeping his mouth shut, so as not to lose his prey, for he does not have time before the bark is sunk to feel either pain or that something is wrong. On the other hand, if one waits after feeling a nibble, bite or strike, to let the tarpon partly swallow the hook, the fish has time to learn that he has gotten hold of something unusually hard, so he opens his mouth and lets the bait drop out; or else, if the hook has caught slightly, makes a sudden vertical jump, opening his mouth and shaking his head violently, and ejects both hook and bait, unless by accident the former has encountered a joint or soft spot in his anatomy.
