Ordinarily, as before stated, it is best to fish with the bait 3 or 4 feet beneath the surface of the water, which is about the depth that a 35-foot length of line will give for a snell of ordinary weight and a trolling speed of about two miles per hour. Should this prove too deep, a small cork float tied to the upper end of the snell, will raise the bait without causing material inconvenience. When the tarpon are near the bottom, attach a lead sinker by a couple of turns of fine copper wire, and troll slowly near the bottom, looking at the bait occasionally, so as to make sure that it is free from weeds. When a tarpon strikes near the bottom, it is apt to come up rapidly and make a high jump, but by that time the hook should be well set. On the first shake of the tarpon's head, the sinker flies off, and the conditions are reduced to those for ordinary fishing.

If, however, the sinker be attached firmly, the fish has something substantial to pull against, and the chances are about ten to one that it shakes the hook out.

I once, before learning about the detachable sinker, lost thirteen tarpon consecutively in one day, when fishing at anchor in a strong tide, and using heavy sinkers, with fully 100 feet of line. There were four others fishing without sinkers close to me, and I had two or three times as many strikes as all of the others combined, showing that the fish were lying deep.

When there is a strong tide and the fish are near the bottom, it is a good plan to put on an extra heavy, detachable sinker, or several light ones, drop the said sinker to the bottom and immediately raise it 2 or 3 feet, then have the boatman row much more slowly than the current, so that the line is some 30 degrees off the vertical, and drift along. When a strike occurs, surge well two or three times, shouting to the boatman to pull hard, for, if he does not, the fish is likely to jump into the boat and raise the deuce all around.

Fishing at anchor is a good thing, in that it eases up on the tired boatman, but, unless the latter be very spry, he is liable to lose the fish by its getting too far off before the anchor is raised. As before explained, by using a buoy and slipping the cable, this objection is avoided. Good sport is often obtained by fishing at anchor.

At times tarpon can be taken by casting, but I have never yet had much luck in this way. It is necessary when fishing from shore.

The latter is much more difficult than fishing from a boat, and the percentage of losses will be higher. I have found a float to be almost a necessity for shore fishing. The last time I tried this method of fishing was a year ago at the channel which empties Mission Bay, near Rockport, Texas. I had six strikes and landed but once. I think that I would have had better luck had I tried the experiment of letting the fish run a little with the bait before striking. The float and the slack line combined to make it difficult to set the hook.

[TO BE CONTINUED.]

Chicago Fly-Casting Club.

At a meeting of the Chicago Fly-Casting Club, held Aug. 10 at Garfield Park, the following scores were made:

	Long Distance Fly,	Bait Casting,
	Feet.	Per Cent.
I. D. Belasco.....	86	83
W. T. Church.....	96	93 7-10
H. Greenwood.....	96	96 1-10
H. G. Hascall.....	109	96 2-5
H. C. Heston.....	85	83
E. R. Letterman.....	111	94 2-5
F. N. Peet.....	111	97 4-5
C. B. Robinson.....	106	89 4-5
G. W. Salter.....	106	93 3-5
A. C. Smith.....	106	96 3-10
F. S. Smith.....	106	85 1-5

Winning scores: Long distance fly, F. N. Peet, 111 feet; bait-casting, F. N. Peet, 97 4-5 per cent.

Canadian Angling Notes.

"Six Thousand Miles for a Six-Pound Trout" is the heading of a story in a local paper, telling how C. B. Wells, a prominent sugar planter of Hawaii, had reached Quebec on his way to Lake St. John for ouananiche fishing, and to Lake Edward for trout. He is accompanied by his family, the members of which are all keen anglers. "Some people may say we are foolish to travel 6,000 miles to go fishing," said Mr. Wells, "but if I get one 6-pound trout I shall return satisfied."

The rush to the ouananiche fishing waters continues. Sir Thomas Gooch is one of the latest arrivals at Lake St. John.

Recent rains and the advent of somewhat cooler weather are the probable causes of an improvement in the character of the trout fishing in our northern waters. One catch in the lakes near Lake Edward a few days ago contained a number of fish running from 1 to 3 pounds each. Some heavy fish have also been taken recently out of the preserved waters on the Auaitchouan River.

Lovers of angling who are specially interested in the preservation of the ouananiche of Lake St. John and its tributary waters will learn with pleasure of the intelligent interest manifested in the artificial reproduction of the fish by the Messrs. Beemer. Several hundred thousand of the young fry, this season's hatching, both Atlantic salmon and ouananiche, are now to be seen in the fish hatchery at Roberval, where they furnish quite an interesting study and attractive object lesson to summer tourists and sportsmen, teaching the latter the necessity and duty of avoiding waste and of aiding nature in her work of reproducing those forms of life most useful to man, so as to ensure the preservation of desirable species. No fewer than 600 adult ouananiche have already been secured in the salmon river at Lake St. John, and are now inclosed in breeding ponds to furnish spawn for the coming winter's operations in the hatchery.

One of the best known of the veteran anglers of New England, Mr. George E. Hart, of Waterbury, Conn., has lately returned home from his first salmon fishing trip, loaded up to the muzzle with youthful enthusiasm and new and thrilling experiences. He took in a number of the Gaspé salmon streams during his outing, experiencing the usual fate with his first salmon, but winding up with a record that, both for numbers and size, far exceeded his expectations. It was my good fortune to share his excitement during his two-hour fight with one fish, a noble male of 31 pounds, hooked foul, just below the adipose fin. The weight and vigor of the fish and the fact that he was played upon a light, split bamboo rod, prevented all Mr. Hart's efforts to lift his tail out of the water, which would necessarily have materially shortened the fight. Despite the length and the fatiguing character of the combat, Mr. Hart promptly declined every offer of assistance, and never let the rod out of his hand from the time he hooked the fish until it was brought to gaff, exactly two hours later, the Indian wading a distance of nearly 40 feet into the river in the shallows below the pool to secure the big fish, which he did while standing almost up to his thighs in the water.

QUEBEC, Aug. 10.

How Shall Dr. Ehrhardt Feed His Frogs?

Just a suggestion, Doctor, from one who knows frogs to some extent. *Imprimis*, don't try to bring them up on the bottle. It won't work. Their mouths are kept clamped, shut like unto a clam shell, opening only for strictly business purposes of the lightning-change variety. Spoons, also, are unavailable, unless to catch a frog, or to amuse a pair of lovers on the banks while four frogs sing unto them sweet carols in emulation of turtle doves.

No; treat your friends like reasonable beings mature in manners and in thought. The infant frog will squeak and skip flipflap across the lily pads quicker at your step than his older, more ponderous, neighbor. Regard his feelings, then.

To begin with, set the table. Your frog has manners. Consider them. Is he a pig, that he should be given a trough? Not so. His ways are sudden, yet is he given to long mediation when deep calleth unto deep, especially when the deepest is a lately swallowed, smaller frog. Then do the large eyes of the outside one stare solemnly skyward, and man knoweth not what thoughts are thunk, what wisdom is enshrouded in that as yet untranslated, ponderous "podunk."

But—to our table. Get a plank, bevel the edge on one side, and to the other side nail one or two short bits of board athwartship. Put it in a pond bevel side up. Freight it with offal, or even molasses, at a pinch. Presently thou shalt see a swarm of flies buzzing around that festive board—influx!—and in due time a row of green heads will appear along the edges, and pink streaks will begin to play upward like a fringe of summer lightning along a murky cloud as fly after fly is nailed by that darting lasso of a batrachian tongue. Sabe?

And the tribe of bald heads that dwelleth round about also will rise and call you blessed.

The Swan Never Sings.

A vulgar error means merely a widespread error, such as even the most refined may easily share, and do sometimes share, maybe yielding a little to their taste, in spite of their better knowledge. The belief that the swan sings herself to death is one of these widespread errors which poets and their next intellectual kin are loath to forego—nay, do their best to keep alive. Tennyson, for instance, speaks of the death song of the swan. So, too, does Phineas Fletcher, who in the days of Charles I. penned an allegorical poem called "The Purple Island," wherein he sings:

"The beech shall yield a cool, safe canopy
While down I sit and chant to the echoing wood,
Ah! singing might I live, and singing die!
So by fair Thames or silver Medway's flood,
The dying swan, when years her temples pierce,
In music-strains breathes out her life and verse;
And, singing her own dirge, dies on her watery hearse."

But truly the difficulty is to name a poet who does not, so to speak, sing this self-same song. You may find it in Byron, Campbell, Wordsworth, Pope, Dryden, Thomson, Milton, Shakespeare, Spenser, and Horace; and I know of only one writer who takes the trouble to tell us that this is all moonshine; and that writer's name is Pliny, who in plain prose says that he has seen swan die, but never heard them sing.—Gentleman's Magazine.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XXII.—Field Trial Judging.

The field trial judge is rarely other than thoroughly competent to properly fill the position. The many years of field trials have given to him a thorough schooling in field trial principles and field trial management. Reporters, handlers and owners have also derived common field trial knowledge from greater experience, so that the field trials of the present are conducted on principles and rules in which all who are properly experienced readily concur. The trials have fully demonstrated that field experience alone is an insufficient schooling for a field trial judge. There is now a sharply recognized distinction between following a dog for the purpose of killing birds over him, and following him to determine how his hunting qualities compare with those of some other dog or dogs, or what they are intrinsically in themselves. There is all the difference between the two instances that there is between a horse drawing a plow and a horse in a race; and yet the man who held a plow all his life very well might not be able to judge in a horse race very well. Indeed, there are many good shooters who can reap the best results from the work of a setter or pointer, yet who cannot explain in detail the essentials of good field work, nor wherein one manner of it is better or worse than another.

The field trial judge should have a perfect theoretical knowledge of the different degrees of the qualities which are recognized as being competitive, each as it concerns itself and as it relates to the others. This knowledge should be broadly supplemented with practical experience, so that he will be able to discern the real from the sham work displayed in actual competition, as, for instance, when two dogs are ranging alike in respect to speed and area of ground covered, yet one is running merely from high spirits without using his nose industriously, while the other is working after the best manner. Again, some dogs will hunt well with a dog which will take the initiative and lead them out. They like company and rivalry. Alone such dogs might not take an independent cast of a hundred yards; in company they go as wide as their leader.

As nearly all field trial managements engage three judges, the third man may be a novice, although he should be an expert as to experience. This serves to graduate new material. With two competent experts, the third man, whether he be competent or incompetent, will have no material effect on the results, for if he be competent he agrees with them, and if he be incompetent they outvote him and decide against him.

Contrary to the estimates of the inexperienced, the mere matter of deciding which is the better of two dogs or the best of a lot of dogs is but a small part of the duties of a judge. He should have a good sense of location, so that after working out the grounds once or twice he will have a knowledge of their topographical features and the habits of the birds. For each heat, when he knows the field trial resources of the grounds he can lay out a course which will equitably divide the grounds which contain birds and those which do not, with a due consideration of open and cover so that there will be a free opportunity to display range and work in cover, the heat proceeding consecutively the while without any disorder.

The unskillful judge, in the matter of locality, is merely drifting about from place to place, running squarely against boundary lines which cannot be crossed, or creeks, or dense thickets, or farm yards, or places which are nowhere in particular and no good at all, with the result that the dogs must be repeatedly called in, the whole party doubling back on itself and on its trail, with a general readjustment to make a new start, with a walk of a few hundred yards or a mile before new grounds can be reached.

The judge whose memory is bad as to locality is generally governed by his vision from point to point, so that instead of a consecutive course planned out, the heat is a succession of disorganized readjustments, which either mars or destroys the competition. The dogs are hardly well started on one course before the handlers are directed to send them on another. The handlers become separated in searching for their respective dogs, or, one dog being well in hand when the new course is given, his handler hurries him ahead on it while the other handler tarries far behind in an effort to turn or find his dog. When the heat ends, this kind of judge does not know where the wagons are which contain the dogs to be run in the next heat, nor where he is himself, so that a long search and wait is entailed before the next heat is begun.

Before a heat is begun the judges should carefully estimate where it will end, and direct the competitors to be at that place with their dogs in waiting. All such matters are now by expert judges managed with a precision which a few years ago would be deemed impossible. Every detail is so provided for that it comes in its proper sequence.

A course when once laid out and the heat begun, should be followed with a reasonable degree of consistency. Any material deviation from it for momentary advantage is sure to result in a serious disarrangement of the general plans. There are many incidents which tend to change the course and disorganize the plans of inexperienced judges, not the least of which is the dramatic cry of "Point, Judges!" made by a handler two or three hundred yards away from the announced course. The novice-judge, nine times out of ten, rides in a furious gallop to see the supposed point, and nearly as many times out of ten there is no point.

It is an old and many times successful device on the

part of the straggling handler to draw the judges near him so that he will not have the trouble of walking back to the judges, nor disturb the range of his dog in turning and working him back on the true course. Nor should the judges gallop out after the dogs which disappear for a few moments in ranging; for when the dogs see the judges they will cast out further and further, working to the horses as they would to their handlers, so that the judge who rides ahead of the handlers at all seriously and directly interfering with the competition.

If the dog is trained properly for the competition, he will range to his handler; hence the spectacular galloping to the front is unnecessary aside from the display of brave horsemanship. If the dog will not range to his handler, it is a matter with which the judge has no concern as an assistant in the handling. Galloping about, right and left, here and there, is undignified and unnecessary. The handlers are entirely responsible for the handling of their dogs; the judges are responsible only for judging the dogs as the handlers display their merits.

When a dog is really lost, as a good dog will be at times when on a point in a thicket, etc., it is a matter of courtesy then to assist in finding the lost dog in an ordinary manner. Half-broken or unmanageable dogs, however, should never induce the judges to leave their places behind the handlers.

The best judging distance is about twenty to thirty yards behind the handlers, in the open fields. The judges can spread out from thirty to fifty yards, taking advantage of rises in the ground, to see the work of the dogs at a distance, and this without interfering with the range or the duties of the handlers. Their effort should be to see all the work done, without interfering in any way with the dogs' opportunities.

If a handler cannot keep his dog on a course laid out for him by the judges, his delinquency in this respect is his own loss. It is unreasonable to expect the judges and all the rest of the field trial interests to follow the erratic course laid out by an unmanageable dog, although the new judge is not at all unlikely to attempt it; less so than formerly, however.

A firm, good-tempered management of the handlers and a strict observance of fairness toward them will win their respect. The judges, however, should be supreme in dictating all that concerns the competition. No interference with their prerogatives should be tolerated.

Any flurry on the part of the judges is certain to have a corresponding effect on the handlers and the competition. If the judges stampede at every cry of "Point," etc., there is sure to be what is termed in field trial parlance "hustling" on the part of the handlers. When the handlers note that the judges will not go in other than an orderly manner, they go in an orderly manner themselves.

A dog which will not hold his point or back till his handler can walk up to him has little claim to winning a field trial, even if he has competitive ability worthy of consideration at all. Steadiness is a matter of test quite as much as is any other quality, therefore there is no reason for unsteadiness on the part of the judges.

A matter of the first importance is to know when a heat is ended; that is to say, when the dogs in it have displayed fully such qualities as they have; and to know when all the dogs in a stake have shown the best competition of which they are capable. Generally speaking, all the competition in a stake, if handled by the judges so that the dogs will display their best qualities, tends to a certain definite climax, which brings certain dogs to the fore as the legitimate winners.

If the dogs are overworked from heat to heat and thereby the natural climax of the competition is destroyed, there follows a series of anti-climax circumstances which destroys all possibility of intelligent decisions. Some of the field trials of the past have not been free from such mistaken management on the part of the judges.

When all the dogs in a stake are run to a standstill, they are all then on the same level as to performance and ability. An analogous case would be if the judges in a horse race insisted that all the competitors should trot till they were all so completely exhausted that they could only walk. If this procedure were kept up heat after heat, it is readily apparent that, from a racing standpoint, there would have been a long departure past the true racing climax.

When the true climax in a field trial is passed, the whole competitive situation begins to change. The judges may know which are the best dogs, but if they have run them to a standstill, dogs of inferior quality may apparently be making a better showing at the finish. Lucky finds, made by poor dogs, will still further aggravate the anti-climax, and a competition which was once well in hand and definite as to its results will then become indeterminate on the competition shown, and nothing is left for the judge but to settle it arbitrarily.

It is a most embarrassing situation for the judges when the best dogs have been run to a standstill, while others, less deserving, are fresher from unavoidable circumstance, and from accidental advantage, such as the cool parts of the day, better parts of the grounds and better opportunities on birds, may make the best final showing.

The last impressions are the most realistic and the best remembered, so that the good work of the best dogs in the commencement of a trial is not so impressive as the good work of any kind of a dog at the conclusion, when the best dogs have been incapacitated from excessive competition.

There is always a small percentage of grumblers at field trials regardless of the wisdom of the management or the decisions of the judges, and of these the shallowest is generally the most assertive and the most malicious. Irresponsibility and moral courage not infrequently go hand in hand as do responsibility and moral cowardice. The "kicker" is not obsolete at trials, though his numbers are not so great as they were formerly.

Some men are constitutional kickers. Whether at play or at business, their selfishness always dominates their will and blinds their judgment. Advertising their dogs, a love of notoriety, faulty information, etc., actuate others, but whatever the opinion of the multitude may be, the judge should not be influenced by it in the least. Just decisions as the judge himself makes them should

be the only consideration, regardless of who approves or disapproves. At best, the opinion of the multitude is of little value. There will be sufficient diversity of opinion in it to prove almost anything.

Canoeing.

'Mid Reef and Rapid.—XVIII.

BY F. R. WEBB.

I sprang out instantly on to the dam, grasping the boat firmly with both hands, and straightening her up in time to avert the imminent capsize, for once the water begins to flow over the coaming in ever so shallow a sheet, the mischief is done, and the canoe is swamped in an instant.

"Now, see what your monkeying around has done!" exclaimed the Colonel in derision, as I swung my boat around off the rocks, and into the shoot and slipped her easily over.

"That's all right!" I exclaimed, as I drew Frankie around alongside the dam, and, stepping aboard dropped into my seat. "Let's see you do it any better! I'll get out of your way," as I spoke paddling around into the lee of a big rock to see the Colonel hang up.

"I can do it," he said, as he veered out from behind the rock where he and Lacy were holding up and shot swiftly out across the current, as hard as he could drive his canoe, for the shoot.

The heavy, sidewise set of the current carried him clean past the narrow little gap, and Mary Lou brought up with a crash on the rocks alongside, and slid up on the dam until her bow projected clear out over the water below for over a third of her length, while her stern settled down until her after deck was under water.

"Yes; that's very good!" said I, as I let go without waiting to see the Colonel get out of his scrape and shot off swiftly down the narrow little channel below, while he proceeded to get out on to the dam, and with much pushing, pulling, tugging and lifting, while Lacy still remained quietly in the lee of the reef above, laughing at his discomfort, he managed to get his canoe clear, and around into the shoot, when she dropped quickly and easily over into the deep, rapid water below.

I found the new channel through the falls below the dam by no means as easy as George and I had estimated. It was deep and swift, but quite narrow, and, as we were in the very heart of the falls, the river along here was a perfect wilderness of rocks, mostly of large size and high out of the water, around and among which the channel twisted and turned, and wound in and out, to such a degree that it was by no means easy to run, and great watchfulness and care were required, in spite of which I very nearly came to grief.

Indecision and vacillation are not specially desirable qualities to possess under any circumstances, and when displayed by a canoeist in shooting a swift, rocky rapid, disaster is sure to follow. The canoeist must be prompt, quick, alert and decided—qualities in which I have not usually been found wanting—but I got rattled at one little place and came within a hair's breadth of scoring a very clumsy capsize in consequence.

The channel led over a particularly ugly line of reefs in a little, narrow, deep, swift shoot, close to the cliff, and two or three boat lengths below a huge mass of rock loomed squarely up ahead, dividing the course into two channels, a short turn to right or left being necessary in order to secure either.

The one to the right was broadest, but seemed to wander off into a mazy no thoroughfare of rocks and reefs, while the one next the bank was narrow and crooked. Neither, however, presented any special difficulty, and I am at a loss to understand why, as I swiftly approached, I was unable to make up my mind which to take. In view of the fact that I was but a couple of boat lengths away and bearing swiftly down upon the rock dividing the channel, it need scarcely be said that this indecision resulted in my taking neither.

I first veered to the right, and then, when the nose of Frankie was within a yard of the rock, I threw her sharply around to take the left. The canoe would have swung around all right and I would have made the left channel by grazing the rock with my right gunwale, but the bow of Frankie caught on a sunken rock just above, and in an instant the swift current had caught the stern and the boat was thrown around squarely across the narrow little left hand channel, until the stern brought up against the rocks on the left bank, and there she hung. The force of the current at once careened the canoe until the water, for the second time on this run, rushed over the decks and came up just level with the cockpit coaming.

I well knew what would happen if that stream should dash over the coaming, and quickly shifted my weight to the other side, which at once went down into the water until I was again all but capsized, when I made the uncomfortable discovery that my keel at bow and stern was firmly hung a couple of inches below the waterline, so that the canoe had practically no bearings, and would not lie flat in the water, and was liable to go over on either side at the slightest motion. Just at this critical and interesting juncture I discovered the Colonel bearing down upon me from above, and a collision was imminent that was absolutely certain to involve a capsize for me.

"Look out, there!" I yelled, in excitement. "Veer off to the right! Don't run into me! A touch will swamp me! Veer off! Veer off!"

"I will if I can!" the Colonel shouted in reply, as he swept the water into swirls and eddies with powerful strokes of his big 8ft. paddle. He slipped by to the right and passed on down, just grazing my bow with the bilge of his big, heavy canoe as he passed.

This danger over I addressed myself to the task of getting out of my predicament. The most strenuous pushing and poling with paddle and pike pole failed to produce any further results than to tilt my canoe down into the water, first on one side and then on the other, with the imminent risk of a capsize at each and every tilt. My keel was too firmly wedged at each end.

Very cautiously I attempted to step over into the water on the down-stream side, leaning my body up stream as

I reached my leg over to preserve the delicate balance of my canoe.

The entire length of my leg failed to develop any bottom. I then cautiously put down my 7ft. pike pole and found the bottom about 4ft. below. Securing a firm hold on the rocky bottom with my iron-pointed pole, I carefully rose, and, steadying myself with the pole, placed my foot on the coaming of my back hatch, and grasping the top of the pole firmly with both hands, sprang lightly out on the rocks astern, landing knee-deep in the water on a projection of the rocks.

Once firmly established here, it was an easy matter to lift the stern of Frankie off the rocks which held it, when, after drawing the bow off the rocks also, the canoe at once swung round into the little channel, and lay docile and obedient at my feet alongside the rocks, when I stepped in and seating myself and was whirled swiftly away toward the foot of the falls, whither George and the Colonel had preceded me.

The falls ends with a particularly ugly and intricate piece of water. A huge, broken ledge extends clear across the river, covering a space of 100yds. in length, with a fall of several feet, down over which the water rushes and roars with great force.

At the bottom it is worn into somewhat of a horseshoe shape, and is peculiarly ugly and hazardous on the left side. The massive line of cliffs ends here in a bold stone promontory which juts out into the scething waters at the foot of the falls, which whirl and moan unceasingly around its base, while it towers aloft imposingly, until lost in the dense, encroaching forest which crowns the brow of the cliff, a couple of hundred feet above. The falls would be easily passed on the right, but that a huge fish dam juts out from this bank, and extends over into the reefs on the left in a long, sharp, V-shaped line, with the apex of the V down stream, of course, where a passage might be made at a good stage of water, but at the present stage this shoot is impracticable, and the only passage is to portage the dam or run the reefs and falls.

This latter George had succeeded in doing as Lacy and I approached, while the Colonel had shot down through the reefs and was lying up under the cliffs on the left above the final plunge of the falls, upon the rocks and reefs of which George had landed from below, to warn him of the dangers of the shoot, and was now coaching him as to the best place to go over, as the falls from his position were peculiarly ugly and hard to shoot.

Lacy and I held back, in the little piece of slack water above the dam, to see the Colonel get out his scrape.

"I don't like that place," said Lacy, as we surveyed the piece of water the Colonel had before him, the inner basin of the horseshoe below the encircling line of falls being a perfect chaos of reefs, rocks and foam crested waves. "I am afraid the Colonel is going to get himself into a scrape down in that ugly hole. Suppose we portage the dam."

"That's all right," said I; "I know a trick worth two of that. Let's see the Colonel get out of his scrape and then just you follow me and I'll guarantee that we'll go through without striking a rock."

The Colonel got under way with a few vigorous sweeps of his bid paddle, and took the falls with a rush.

"Look out! Look out!" yelled George and Lacy in the same breath, as his boat landed in the suds below the falls and made straight for a broad, flat mass of rock which lay directly in his course, and whose upward sloping edge was above water on our side, while it sloped down under the surface on the down-stream side, and the water shot out across it in a smooth, flat sheet, falling over in a little cascade in mid-open.

"By Jove, he's gone!" exclaimed Lacy, as Mary Lou ran bodily up on to this rock. "That's no way to run a place like that! The Colonel's too brash, entirely!"

The force with which Mary Lou slid up on to the rock, however, together with her headway and the powerful set of the current, carried her pretty well across, and she slid easily down the sloping side and over into deep water, and after careening dangerously close to the water's edge she passed safely on down.

"I tell you that was a close call!" said Lacy, as he dipped his paddle into the water to follow me.

"It was that!" I replied. "Now follow me closely, and we won't have a bit of trouble."

I dropped my canoe cautiously down around the open, left-hand end of the big fish dam, back-paddling gently all the time, down among the ledges to the upper verge of the falls. I then drew her gently, stern first, back, close up under the rocky wall of the dam, into a clear little channel, but a couple of yards wide, which led close along down the long, left arm of the V formed by the dam, clear past all the reefs, to the point of the dam, at which place we found ourselves completely below the falls, with deep, smooth, swift water ahead of us, broken only by the heavy, foaming tongue of water out of the point of the dam, and the occasional black head of a rock, projecting above the surface.

"I'll tell you what, Colonel," said Lacy, as we drifted companionly in a bunch down the deep, swiftly moving reach below the falls, the farm buildings of the Keyser place close at hand on the right bank, with the lane leading down from the buildings to the river, just below which was our camping place. Three or four farm horses were coming down the lane at a brisk trot, their heavy harness jingling and clanking in rhythm with their rough, jolting trot, while behind them jolted and jingled another harnessed horse with a young man perched on his back. They splashed noisily into the water, into which they thrust their noses deeply, while the boy looked out on our passing fleet with interest, followed by recognition—he knew us—"I'll tell you what, Colonel, you'll get the most amazing spill one of these fine days if you don't quit rushing these shoots so recklessly."

"That's all right," replied the Colonel. "I notice that I get through about as well as the rest of you do, with your monkeying around. I got through the falls better than the Commodore did, for all his backing and filling."

"That's true," I admitted; "for I certainly made a particularly clumsy run of it; but my mishaps were due entirely to carelessness, and not to my 'backing and filling,' as you call it," I continued, as I paddled gently up alongside a big wooden punt moored at our camp ground, into which I stepped, and then shoved my canoe aside to make room for the others to disembark.

It was 5:30, and never were canoeists more glad to reach camp than were we, and we were quite tired out and in condition to thoroughly appreciate and enjoy the good, stiff lemon preparation which I put up for the boys as soon as the camp duffie was well ashore and the canoes carried up the steep, sandy bank and placed in position for the night, and we went about our camp duties in a listless, lazy manner in keeping with our jaded condition, and it was fully dark before we sat down to a good and abundant supper, to which we did ample justice.

After our pipes and cigars we turned in early, and didn't put in much time reading either, and by 9 o'clock no signs of life were visible about the camp save the faint gleam of the lantern, suspended from one of the poles of the dining fly, while no sound broke the stillness of the night but the drowsy hum of the forest around us and the deep, subdued, musical drone of the falls a quarter of a mile above, borne in rising and falling cadences on the gentle night breeze which rustled caressingly through the leaves above us.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

AUGUST.

- 17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
- 17. Shelter Island, club.
- 17. Moriches, open.
- 17. Wollaston, Quincy Bay, Boston Harbor.
- 17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
- 17. South Boston, club handicap, City Point, Boston Harbor.
- 17. New York, New York Bay.
- 17. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 17. Quincy, handicap, Quincy, Mass.
- 17. Kennebec, club, Kennebec, Me.
- 17. Kennebec, club, Kennebec, Me.
- 17. Winthrop, special handicap, Winthrop, Mass.
- 17. Indian Harbor, annual, Greenwich, Long Island Sound.
- 17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
- 17. Hull-Massachusetts, club, Hull, Mass.
- 17. Savin Hill, club, Boston Harbor.
- 17. Canarsie, Corinthian regatta, Jamaica Bay.
- 17. Columbia, Chicago, Lake Michigan.
- 24. Shinnecock Bay, association regatta, Shinnecock Bay.
- 24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
- 24. South Boston, ladies' day, City Point, Boston Harbor.
- 24. Winthrop, class handicap, Winthrop, Mass.
- 24. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 24. Hull-Massachusetts, club, Hull, Mass.
- 26. Cape Cod, Provincetown, Mass.
- 27. Wellfleet, Wellfleet, Mass.
- 29. Plymouth, Plymouth, Mass.
- 30. Kingstown, Kingstown, Mass.
- 31. Duxbury, Duxbury, Mass.
- 31. Beverly, Corinthian, Monument Beach.
- 31. Westhampton C. C., open.
- 31. East Gloucester, club, Gloucester, Mass.
- 31. Marine and Field, Gravesend Bay.
- 31. Shelter Island, Club.
- 31. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 31. Hull-Massachusetts, club, Hull, Mass.
- 31. Hartford, annual, Saybrook, Long Island Sound.
- 31. Huntington, special, Huntington, Long Island Sound.
- 31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
- 31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

- 2. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 2. Handicap, Quincy, Mass.
- 2. Indian Harbor, special, Greenwich, Conn.
- 2. Annisquam, open, Ipswich Bay, Mass.
- 2. Beverly, open, Monument Beach.
- 2. Duxbury, ladies' day, Duxbury, Mass.
- 2. 3. Corinthian, cruise, Marblehead, Massachusetts Bay.
- 2. Lynn, Nahant, Massachusetts Bay.
- 2. Gravesend Y. R. A., all classes, Gravesend Bay.
- 2. Norwalk, special, South Norwalk, Long Island Sound.
- 2. Sachem's Head, annual, Saybrook, Long Island Sound.
- 2. Larchmont, fall regatta, Larchmont, Long Island Sound.
- 2. Atlantic, special, Sea Gate, New York Bay.
- 2. Pavonia, special, Bayonne, New York Bay.
- 2. Canarsie, ladies' day, Canarsie, Jamaica Bay.
- 2. Seawanhaka Corinthian, Oyster Bay, Long Island Sound.
- 2. Burgess, Marblehead, Massachusetts Bay.
- 2. Chicago, Chicago, Lake Michigan.
- 2. Shinnecock Bay, open, Shinnecock Bay.
- 5. 6. Seawanhaka Corinthian, open special, Oyster Bay, L. I. Sound.
- 7. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 7. Kennebec, club, Kennebec, Me.
- 7. Beverly, open, Mattapoisett.
- 7. Seawanhaka Corinthian, fall regatta, Oyster Bay, L. I. Sound.
- 7. Atlantic, Sea Gate, New York Bay.
- 7. Lynn, Y. R. A., rendezvous.
- 12. New York, autumn sweepstakes, New York Bay.
- 14. Hull-Massachusetts, club, Hull, Mass.
- 14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
- 14. Larchmont, Larchmont, Long Island Sound.
- 14. Indian Harbor, fall regatta, Greenwich, Conn.
- 14. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
- 14. Atlantic, fall regatta, Sea Gate, New York Bay.
- 21. Kennebec, club, Kennebec, Me.
- 21. America Cup race, Sandy Hook.
- 21. New York C. C., fall regatta, Gravesend Bay.
- 21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
- 21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
- 28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

At the annual election of the Sea Cliff Y. C., held at the club house at Sea Cliff on Thursday, Aug. 8, the following officers for the ensuing year were elected: Com., Theo. W. Sheridan, sloop Madcap; Vice-Com., Charles E. Silkworth, sloop Impudent; Treas., C. S. Dunning; Sec'y, C. Sackett Chelborg; Trustees for three years, Samuel Stenson and Dwight W. Pardee. The Treasurer's report showed the finances of the club to be in the best condition since its organization.

Canada Cup Races.

The First Race.

CHICAGO, Ill., Aug. 10.—The racing conditions to-day were superb—the sky bright and clear, the wind fresh and steady, at no time dangerous, and all the time a good sailing breeze. At the start the wind was about ten miles an hour, but it freshened steadily, being perhaps twelve miles at the first turn, fifteen or more at the second turn and twenty miles an hour toward the finish. The course was E.N.E., with the wind at first from a little W. to N., then due N. Then it began to haul to the eastward. This made the first leg of the race one long reach, not involving any actual windward work until just at the turn. The homeward leg was a broader reach.

At the starting gun, Invader, very nicely handled, went across the line 15s. ahead of Cadillac, and at once took the windward berth. It was at this time that Invader made her best showing, and it is to be confessed that the hearts of the Chicago contingent sank throughout the first quarter hour of the race. Invader ran close up into the wind. The skipper of Cadillac did not apparently attempt to point up. He eased Cadillac off a little and allowed her to foot it, which she did handsomely. It was anybody's race for the first 30m. Then Cadillac showed clear ahead, and it was a toss up which would make the turn first. Cadillac had laid a fairly good course for the mark, but was well to leeward of Invader when she came in line with the mark. Cadillac came about into the starboard tack and crossed the bows of Invader by a good two lengths—possibly more. Invader still stood on her original port tack some distance before coming about, Cadillac standing on the starboard tack until well beyond the mark. Cadillac now came around on port tack and turned the buoy well in advance of Invader, which made a smart tack and came around the mark with a sufficiently narrow margin.

The Second Leg—Free Run.

On the second leg both boats broke out spinnakers, and presently balloon jibs also. Cadillac showed the greater spread of head sails, and her canvas drew far better. There was much improvement possible in the spinnaker of Invader, which drew very ill, and which ought to have better set before the next race, for it is in the free work Invader seems to have a chance. Invader was not able to close in on Cadillac, but held its own on this leg very nicely, Cadillac gaining only 18s. on the nine-knot leg of the free run.

This leg, as, indeed, the first one also, was not eventful. Cadillac had not yet shaken off the challenger, and although she carried the hopes of the local yachtsmen, she had done nothing as yet decisive.

The Third Leg—Broad Reach.

From the way in which the wind had shifted around into the eastward, the homeward leg was practically a repetition of the conditions of the first leg, with the exception that it was more of a broad reach. Both boats made it in one reach. Invader at first set out to run well up into the wind, following her original tactics. She seemed later to ease off a bit, and dropped in astern of Cadillac. The boats held on this course all down the home leg, and Cadillac increased her lead, until it was simply a walk-away for the defender.

Cadillac's greater freeboard stood her in good stead, apparently, for in this lumpy sea Invader was all awash. Cadillac seemed to have a way of pushing through and riding over the seas without checking, and she kept on climbing. Invader, on the other hand, leaves the impres-

sion that she checks a bit in a sea and does not hold her way as steadily.

Cadillac gained all sorts of distance on the last leg, and won by more than a mile, gaining 7m. 22s., and winning the race in fast time and by a margin of 8m. 35s.

At the close of the race everybody was willing to declare that the cup would remain where it is. As to this latter conclusion, it is not yet time for it. Invader is a good boat, and if the fin-keel model will do at 35ft., then Invader is not yet to be counted out of the dangerous class. The way in which it eats into the wind leads one to believe that it will give Cadillac all it can do under conditions where there is more windward work. Running free, with head sails properly set, Invader may beat Cadillac the next race. There seems no reason to believe that in stiff wind and on a reach Invader can hold its own with the defender.

The race offered no special features, and, indeed, was uninteresting in its last phases. It is earnestly to be hoped that Invader will make it closer in the next race of the series, which will be brought off next Monday.

Measurements Not Yet Made.

It seems to be one of the peculiar features of these trial and cup races that the boats cannot be measured and their measurements be made known before the sailing of the race. The measurements of the hulls of the boats were completed in dry dock on last Friday, and the sail triangles were taken yesterday. By agreement it was understood that to-day's race will count as one of the races of the series. It is altogether likely that both boats will qualify in the 35ft. class, though both have been built so close to the limit that it will be a near enough thing. Cadillac had $3\frac{1}{2}$ in. taken from the end of its main boom last night. As actual measurements of Invader's boom and gaff do not tally exactly with the figures of the builder, it cannot be said that the owner of either boat is exactly sure of where he is going to come out in the measurements. The judges will announce their conclusions probably not later than Monday, or possibly late this afternoon. It is said that Monday's race will be sailed strictly within the rules, as, indeed, to-day's race should have been.

The judges sailed on the steam yacht Thistle to-day, the steamer Indiana serving as guest boat.

The crew of Cadillac were William Hale Thompson, captain; A. Pettie, Frank Scenter, Ralph Hoagland, Harry Higinbotham, Sidney Russel. Invader: Æmilius Jarvis, captain; J. S. McMurray, V. J. Hughes, C. V. Lowndes, F. A. Turner, W. Fisher. Scrutineers: Ernest McRae on board Cadillac, Wm. Cothroll on board Invader. Judges: E. P. Warner, Chicago Y. C.; E. H. Ambrose, Royal Canadian Y. C.; Oliver Cromwell, New York Y. C.

Detailed Story of the Race.

The boats started under two reefs. Smartly handled by her able skipper, Jarvis, Invader was better placed at the gun, and crossed the line about 15s. ahead of Cadillac, taking the windward berth.

A few minutes beyond the line Invader slips along like a fairy. She gains. Invader catches some puffs of wind and heels well over. She is not so stiff as Cadillac.

SENNEVILLE.
Photo by W. Notman & Son, Montreal.

12:40—About the same. It is a case of boat against boat, or model against model, as thus far the factor of seamanship has not cut much figure under the conditions. They run free down this leg in rather uneventful fashion, Cadillac gaining perhaps a little, but Invader making a very good showing on this point of the weather.

12:50—Cadillac drops spinnaker and balloon jib and sets working jib. She jibes about the buoy. Time, 12:51:30. Invader follows at 12:52:43.

Cadillac now leads Invader 1m. 13s. Cadillac has gained 18s. on the second leg, running free.

The Homeward Leg.

The wind being now well abeam, both boats start sheets and begin to foot it handsomely. Invader again laps her course closer into the wind. Cadillac pursues her tactics of easing off and footing. Invader eases off a trifle and falls astern of Cadillac.

1:20—They hold their courses unchanged. Cadillac is gaining. The wind is now twenty miles an hour, and the weather is quite heavy enough for boats of the 35ft. class. Invader is making very wet work of it. Cadillac seems to meet the seas without slowing up. Invader seems to check a bit as she strikes the seas. Her deck is awash pretty much all the time.

1:30—Cadillac still ahead. She has the race safe. It is a fox chase.

1:40—Cadillac still in the lead and making fine weather of it. Invader is now very little to windward of Cadillac.

1:45—There is nothing to it. Cadillac is winning with surprising ease, making all kinds of gains on this long reach with the fresh wind. Invader is now to leeward of Cadillac and far in the rear.

1:46:30—Cadillac bears off a little and lays course for the line. She crosses at 1:46:35.

Invader holds the same course throughout this leg and crosses the line at 1:55:10.

Cadillac on the third leg gained 7m. 22s. Cadillac wins by 8m. 35s.

	First Mark.	Elapsed.
Cadillac	11 55 40	0 55 40
Invader	11 56 35	0 56 35

Cadillac gains 55s.

	First Turn.	Second Turn.	Elapsed.
Cadillac	11 55 40	12 51 30	0 55 50
Invader	11 56 35	12 52 43	0 56 18

Cadillac gains 18s.

	Second Mark.	Finish.	Elapsed.
Cadillac	12 51 30	1 46 35	0 55 05
Invader	12 52 43	1 55 10	1 02 27

Cadillac gains 7m. 22s.
Cadillac wins by 8m. 35s.

Details of the Two Boats.

Royal Canadian Y. C., Toronto, Ont., challenger. Invader: managing owner, Com. Geo. Gooderham, R. C. Y. C.; designer, Sibbick, Ryde, Isle of Wight, England; skipper, Æmilius Jarvis; crew, Charles Lowndes, Vincent Hughes, James McMurray, Fred Turner (amateurs), Wm. Fisher (professional); builder, Jac. Andrews, Oakville, Ont. Length over all (approximate), 49ft.; length waterline (approximate), 28ft.; beam, 9ft. 5in.; type, fin cutter.

Chicago Y. C., Chicago, Ill., holder of the cup; defender, Cadillac; managing owner, Com. J. C. Shaw, Detroit Boat Club; designer, Hanley, Quincy Point, Mass.; skipper, Wm. Hale Thompson, Chicago; crew, Thomas

11:12—Wind puffy and fresh. Invader well to windward.

11:25—Invader has a big lead and is doing nicely, heeled far over. The chances look bad for Cadillac at this stage of the game. Invader, with rail under, carries a long sailing line, and she seems to like the conditions just now.

11:32—The wind stiffens. Invader far to windward and with a good lead.

At 11:35 Invader has all the wind she wants to carry. Cadillac stands up much stiffer. Cadillac hangs on like a bulldog. Thompson's men seem to be fooling with the balloon jib, and it breaks away and gives trouble. It is at length stowed.

11:40—Cadillac gains. The wind is shifting to the E. and freshening.

11:47—Cadillac betters her position. Cadillac gains. It is a question which has laid the best course for the buoy, the buoy being not yet in sight. Invader would, however, seem to have stood up almost too far into the wind.

11:52—Cadillac far to the leeward and now heading Invader. Thompson lets Cadillac off easily, following the same game by which she won over Illinois. Cadillac can make the buoy on the next tack.

11:52—Cadillac about on starboard tack. The boats rush together, Invader standing on port tack, as she has from the start.

11:53—Cadillac passes the bows of Invader by two boat lengths. Invader still stands on. It is seen that Jarvis will make one of his close tacks around the buoy. Odds are still on Invader, as Cadillac, standing on starboard tack, is now far to windward.

11:54:35—Invader comes about on port tack.

11:54:50—Cadillac spins around into starboard tack and rushes on to the mark.

11:55:40—Cadillac turns the mark.

11:56:35—Invader rounds the buoy.

Cadillac has gained 55s. on the first leg.

The Second Leg.

The course away to the second leg is S., and the boats run nearly free. Cadillac breaks out balloon jib and spinnaker. A little later she drops the balloon jib and comes along under spinnaker. Invader follows with spinnaker. Cadillac shows the greater spread of spinnaker. Invader's spinnaker does not draw so well as it might.

12:15—Invader breaks out balloon jib. Both boats are now under balloon jib and spinnaker.

12:20—The boats about in the same relative positions, Cadillac showing a clean pair of heels to Invader, but the latter coming on very well for her canvas, which is less than Cadillac's. The centerboard stock is rising fast. It was a close thing on the first leg, but as Invader does not close on the run free, Cadillac is thought able to hold her safe.

LAMBKIN.
Manhasset One-Design Class.
Owned by S. W. Roach. Photo by James Burton, New York.

Chilvers, Detroit; Ralph Hoagland, Chicago; Sidney Russell, Detroit; H. M. Higginbotham, Chicago; John A. Rathbone, Detroit (amateurs); Arthur Pettie, Detroit; Geo. Wild, Detroit (professionals). This is two more than the six required, a greater number being nominated than necessary to provide against sickness, accidents, or other causes. Length over all, 48ft.; length waterline, 28ft. beam, 11ft. 6in.; type, centerboard.

History of the Canada Cup.

The Canada cup took its name from the fact that it was won by the Canadian yacht Canada, which was victorious in August, 1896, in the Toledo races. The old Lincoln Park Y. C., of Chicago, challenged the Canadian Y. C., of Toronto, for a series of races. For these races Toledo offered a handsome silver cup and a cash prize of \$1,600, which latter was divided among the competing boats, winner taking 60 per cent. of the money. Com. E. C. Berriman, of the Lincoln Park Y. C., built Vencedor as a challenger for this cup, and the Canadian syndicate built Canada, to which boat Vencedor had to give time allowance, as it was over its class. The first race was sailed Aug. 24, 1896, and the boats did not finish within the time limit. In the second meeting Canada beat Vencedor by 23m. in light wind. The third race, Aug. 26, was won by Canada in good, stiff weather. Vencedor made a mistake and turned around the wrong boat for stake boat in this race, but lost the race by a margin of 26s. time allowance.

The Royal Canadian Y. C. then offered the Canada cup as a perpetual challenge cup for members of the Union of Yacht Clubs of the Great Lakes. It was 1898 before the Chicago Y. C. issued its challenge for a race to be held in 1899. The committees of the clubs then met in Toronto and decided upon the 35ft. class to build to. The races were set for Aug. 21, 1899, at Toronto. Chicago Y. C. held its trial races early in the summer, and among the boats built for the races were Prairie, Josephine, Briar and Gypsy. The Rochester Y. C., of Rochester, N. Y., sent Genesee, a boat built by Hanley, who is also the designer of the present cup defender, Cadillac. In the races decided July 24, Genesee won three out of the five. Beaver was this year selected by the Royal Canadian Y. C. as cup defender. In the first race at Toronto, Aug. 21, 1899, Beaver broke down and Genesee did not finish. The weather continued rather light, and Genesee won all three of the next races, and thereby brought the cup over to America. Last winter the Royal Canadian Y. C. challenged for the cup and sends over Invader to sail the pick of the Chicago Y. C. fleet.

WOODLAWN PARK, Ill., Aug. 12.—Forest and Stream Pub. Co.: Invader won to-day by 6m. 22s. Wind, two to five miles an hour; course, nine miles windward and return; close reach out, broad reach in. Invader gained on both legs. E. HOUGH.

Buffalo Y. C.

The Buffalo Y. C. held a regatta on the four days beginning July 30, all yachts on the Great Lakes being eligible to enter, events to be sailed under the rules of the Yacht Racing Union. By arrangement, the usual regattas of the Lake Yacht Racing Association on Lake Ontario were abandoned this year in order to give the boats a chance to accept the Buffalo club's invitation. As a result, the Lake Ontario fleet was well represented, and when joined to that of Lake Erie, made an excellent muster of yachts. There is good shelter off the club-house, which is located not far from the entrance to the Erie Canal, behind the Government breakwater. The club house is a large, modern structure, containing excellent facilities for the comfort and entertainment of visiting yachtsmen, and at the same time the city, with its hotels and supply stores, is close at hand. Aside from the racing and general doings of a lake meet, there was the Pan-American to be visited, and according to reports, it was well patronized by all hands, only half the fleet racing on any one day, so that each of the crews had a couple of days off.

The races were sailed over a triangle three miles to a side, laid out in Lake Erie, well clear of all obstructions—a little too clear, if anything, for there were times when some shelter would have been welcome. The course was such as racing men on the lakes are accustomed to, and had the weather been at all favorable, there would have been some close and interesting racing. As it was, the wind blew from the S.W. during the whole four days of the racing, and having a clear sweep all down Lake Erie, raised a nasty, troublesome sea, of that short, choppy variety that always makes things uncomfortable. Even when running fair, it was bad enough, but there was a confused backwash from the breakwater that extended out for a mile, and in the edge of this the yachts had to be started and timed. The wind during the races on the first three days varied from fifteen to thirty miles an hour, according to the weather man at Buffalo. The yachts were frequently reefed, and even close reefed, so that much of the racing was little more than a wild scramble round the course, the crews hanging on, trusting to their gear and wondering if Lake Erie was always so boisterous. There were no spectators. A steamer tried it the first day, but the few passengers had an uncomfortable time, and the venture did not pay.

The bulk of the work of organizing and providing for the regatta fell on Mr. Frank B. Hower, who has long been the hardest worker in the club, and is now the Honorary Commodore. In the present case he personally collected subscriptions for the prize money—which was unusually generous—arranged the programme, carried on an extensive correspondence with club secretaries and individual yachtsmen, and on the arrival of the fleet met each boat with a launch and piloted it to a safe berth. It also looked at one time as though Mr. Hower would have to do all the technical work of starting and timing, but Mr. Phillips, the Association officer of the Lake Ontario races, arrived in time to take up that work. Very great credit is due Commodore Hower for his untiring efforts, and by the time the regatta was over he was much in need of a rest.

Tuesday, July 30—Special Class, 40ft. Class, 30ft. Class.

The special class was started at 11 o'clock, with the others at 10m. intervals, all buoys being kept to port, which gave windward work on the first leg, then a spinnaker run

and a reach home. Merrythought and Vreda were out for their usual tussle, the former getting a small lead, with Aggie a poor third, but making a good race with Surprise up to the end of the first round. The wind was fresh and increasing, not dangerous, but it proved uncomfortable for the man in the weather stake boat of the triangle, so that as the yachts were working up to him for the second round, he cut his boat adrift and began to pull for the shore. This threw the whole race into confusion. Some boats rounded him where they found him, others did not. In this way Surprise gained on Aggie and finished third, Aggie afterward protesting. In the 40ft. class Chinook, a new Fife boat, was a clear winner, with Clytie second, but Vivia and Vedette had been in trouble over turning the drifting mark. In the 30ft. class Phalorope was first, the next two boats being disqualified—Veronia for being over the class limits, and Hazard for failure to pass inspection under the scantling restrictions. After the race the Regatta Committee met to consider protests and complaints about the removal of mark boat. A resail would have been the best way out of the difficulty, but as most of the boats had placed themselves clearly on the first round, it was found possible to award all prizes except the third in the special and 40ft. classes. Aggie and Surprise and Vivia and Vedette were instructed to resail for third place in their respective classes, and failing opportunity for a special resail, the results of Thursday's race were to govern. This decision was not accepted with very good grace by the owners of Surprise and Vedette, so they were informed that if any fair arrangement could be made with the owners of Aggie and Vivia, it would be respected by the committee. Nothing was done until Thursday, when Aggie conclusively outsailed Surprise, and was awarded third prize for both races. Vivia also outsailed Vedette, but it was understood that the owners would come to an agreement. The official score for the first day's racing stood as follows:

Special Class—Two Rounds, 18 Miles—Start, 11:00.			
Finish.		Finish.	
Merrythought	1 21 35	Aggie	1 48 20
Vreda	1 25 57	Surprise	1 37 05
40ft. Class—Two Rounds, 18 Miles—Start, 11:10.			
Chinook	1 35 55	Vivia	1 50 30
Clytie	1 39 40	Vedette	1 58 45
30ft. Class—Two Rounds, 18 Miles—Start, 11:20.			
Phalorope	1 59 45	Dorothy	2 08 30
Lucinda	2 04 55	Brenda	Not timed.

Wednesday, July 31—45ft. Class, 35ft. Class, 25ft. Class.

Early in the morning a tug went over the course, replacing the boats at the outer marks with floats and targets. At this time the weather was pleasant, the sea had gone down, and the wind, light to moderate, gave no indication of another blow. By 10 o'clock it began to come in fresh from the old quarter, S.W., and there was some doubt about ordering a start. As the boats were coming out, however, it was decided to go on with the race, reducing the course to one round for all classes. By the time the 45-footers were sent away at 11 o'clock, the wisdom of this was apparent, for the wind was up to twenty-five miles an hour, and everybody was reefing. A tug, with the timekeeper and reporters aboard, had a sloppy time trying to follow the yachts, and finally gave it up, returning to the line to take the finishes, where she was held with great difficulty, burying her nose in the sea and throwing everybody about the deck. It is doubtful if any one saw much of the race—certainly the spectators did not. One heroic reporter lay flat on the engine room transom writing bulletins, which were dispatched by carrier pigeons. The bulletins arrived, and his paper had a loud, if disjointed, report in the evening edition. The yachts did not fare so badly. Zelma parted her throat halyards and withdrew, leaving Canada an easy winner over Sultana. Beaver was quite in her element, making almost as good time as Canada round the course. Canadian sprung her mast and eased canvas just in time to save the spar. The times were:

45ft. Class—One Round, 9 Miles—Start, 11:00.			
Finish.		Finish.	
Canada	12 35 00	Zelma	Withdrew.
Sultana	12 39 45		
35ft. Class—One Round, 9 Miles—Start, 11:10.			
Beaver	12 35 30	Myrtle	12 59 30
Echota	12 59 10	Canadian	Withdrew.
25ft. Class—One Round, 9 Miles—Start, 11:20.			
Vesta	1 12 15	Pet	1 34 00
Pedro	1 24 40	Marie	Not timed.
I'll Away	1 30 00	Caprice	Not timed.
Ko Ko	1 32 00	Beppo	Not timed.

Thursday, Aug. 1—Special Class, 40ft. Class, 30ft. Class.

After two days of bad weather the Regatta Committee decided that Thursday's races should not start until 2 in the afternoon. Local weather prophets agreed that it usually blew hardest between 10 in the morning and 2 in the afternoon, and by starting at the latter hour it was hoped that the yachts would miss the worst of it. The arrangement worked fairly well, the weather being fine all day, with a good deal of wind in the morning, but it lulled after lunch, and a good race was pulled off without any mishaps. Mr. Geo. Chester's sea-going launch was anchored on the line and used by the timekeeper and reporters, who were fairly comfortable and able to do some work. The times were as follows:

Special Class—Two Rounds, 18 Miles—Start, 2:00.			
Finish.		Finish.	
Merrythought	4 22 00	Aggie	4 38 00
Vreda	4 23 32	Surprise	4 46 25
40ft. Class—Two Rounds, 18 Miles—Start, 2:10.			
Clytie	4 50 48	Vivia	5 03 45
Chinook	4 51 30	Vedette	5 06 10
30ft. Class—Two Rounds, 18 Miles—Start, 2:20.			
Phalorope	5 25 38	Sibyl	Not timed.
Cock Robin	5 30 00	Dorothy	Not timed.
Nox	5 31 40	Brenda	Not timed.

Friday, Aug. 2—45ft. Class, 35ft. Class, 25ft. Class.

Following the precedent of the day before, an afternoon start was ordered and all classes instructed to sail one round only. As usual, it was blowing hard from the S.W. all morning, and on calling up the weather man the yachtsmen were informed that gales, squalls and sudden shifts might be expected. At 2 o'clock it was not so bad, so the fleet got under way, expecting to be at the line in half an hour, as there was a fair working breeze. It was dropping rapidly, however, and not until 3:15 was it possible to get the yachts up to the line. Then a start was made in a light air, several of the boats being very late, a matter of no great consequence as it turned out, for the rear guard picked up a breeze and closed in on the leaders. It was

slow work for the first two hours, but for once the fleet kept together, flew kites and made a pretty picture that really looked like a race. Zelma outsailed Canada, and Beaver had quite a lead on Echota, until the latter caught up and passed her in a sensational way on the last leg. The times were as follows:

45ft. Class—One Round, 9 Miles—Start, 3:15.			
Finish.		Finish.	
Zelma	6 29 30	Canada	6 42 00
35ft. Class—One Round, 9 Miles—Start, 3:25.			
Echota	6 47 25	Canadian	7 11 45
Beaver	6 48 00	Eva	7 21 50
Myrtle	7 01 25		
25ft. Class—One Round, 8 Miles—Start, 3:35.			
Marie	7 00 45	Pet	7 24 00
Pedro	7 19 00	I'll Away	7 26 30
Vesta	7 19 45	Ko Ko	7 28 00

PRIZES.

July 30 and Aug. 1.			
1st Prize.		2d Prize.	3d Prize.
Special Class	\$100	\$50	\$40
40ft. Class	100	60	40
30ft. Class	75	50	25
July 31 and Aug. 2.			
45ft. Class	100	60	40
35ft. Class	100	60	40
25ft. Class	75	50	25

Newport Series.

NEWPORT, R. I.

Monday, Aug. 5.

The 90ft. yawls Navahoe, Ailsa and Vigilant and the 70ft. cutters Rainbow and Virginia sailed a most unsatisfactory race on Monday, Aug. 5. Messrs. A. Cass Canfield and Woodbury Kane, of the Regatta Committee of the Newport Y. R. A., served as the judges. The steam yacht Mirage was used as the committee boat. The course was twelve miles to leeward and return. The warning signal was given at 11 o'clock; 5m. later the preparatory signal was given. The wind at this time was N, by E. At 11:10 o'clock the start was made, and the boats crossed in the following order: Ailsa, Navahoe and Vigilant, all three carrying spinnakers. The 70-footers were sent away at 11:15, with Rainbow in the lead, closely followed by Virginia. When these boats started the wind had shifted, so that it was almost ahead, and they had a sharp luffing match that took them well off their course.

When the boats had covered about half the run out to the mark, the wind petered out entirely. A little air from the N.E. came up, and for over two hours the yachts just a little more than held their own against the strong tide. After a tedious drift a fresh northeasterly breeze sprang up, reaching the leeward boats first, and all came down to the mark well bunched. All five of the boats rounded within three minutes of one another, and the turn was one of the most interesting of the season. Ailsa rounded first, followed by Navahoe and Rainbow; then came Vigilant and Virginia, the latter coming around inside of Vigilant, taking the weather berth. The times at the mark were:

Ailsa	2 21 46	Rainbow	2 23 56
Navahoe	2 22 24	Virginia	2 24 51
Vigilant	2 24 23		

It was a broad reach from the outer mark to the finish line. Vigilant cut down Ailsa's lead, but was not able to work into second place. Rainbow held her lead after a number of luffing matches with Virginia, and finished a winner. There was practically no windward work during the race, as the wind shifted so often that the boats were able to go over the whole course with sheets well started. The summary follows:

90ft. Yawls.				
	Start.	Finish.	Elapsed.	Corrected.
Navahoe	11 11 39	4 09 57	4 58 18	4 57 45
Ailsa	11 10 35	4 12 57	5 02 22	5 01 14
Vigilant	11 12 00	4 13 20	5 01 20	5 01 20
70ft. Sloops.				
Rainbow	11 15 00	4 21 14	5 09 14	...
Virginia	11 15 00	4 25 09	5 10 09	...

In the yawl class, Navahoe beat Ailsa by 3m. and 29s. and Vigilant by 3m. and 35s.

In the sloop class, Rainbow Beat Virginia by 55s.

Hempstead Harbor Y. C.

GLEN COVE—LONG ISLAND SOUND.

Saturday, Aug. 3.

The tenth annual regatta of the Hempstead Harbor Y. C. was sailed on Saturday, Aug. 3. There was a fresh breeze blowing, that caused several of the boats to break down. The summary follows:

36ft. Class—Sloops—Start, 12:35.			
Finish.		Finish.	
O Shima San, H. Pratt	Withdrew.		
Memory, W. M. Bavier	3 53 03		
Possum, E. S. Ballou	3 51 10		
30ft. Class—Sloops—Start, 12:40.			
Alerion, A. H. Alker	Withdrew.		
Oiseau, G. L. Peril	3 54 25		
Raceabouts—21ft. Class—Start, 12:45.			
Snapper, A. B. Alley	2 33 33		
Merrywing, H. M. Crane	2 30 11		
25ft. Class—Sloops—Start, 12:50.			
Don, G. Aeros	2 43 35		
Eleanor, S. W. Ford	3 11 16		
21ft. Class—Sloops—Start, 12:55.			
Quoc, A. D. Tappan	Withdrew.		
Montauk, J. S. Appleby	2 57 00		
Rod, Iselin and Law	2 51 35		
18ft. Class—Sloops—Start, 1:00.			
Flim-Flam, A. D. Prince	3 09 35		
Neola, C. D. Mallory	2 55 51		
Opossum, H. M. Raborg	3 05 19		
Sorg, W. Hoey	Withdrew.		
Pandorg, H. D. Towle	3 06 00		
Cricket, H. C. Pryer	2 54 20		
Hope, Adrian Iselin	2 55 05		
Mistral, A. C. Bostwick	3 07 50		
Manhasset Raceabout Class—Start, 1:00.			
Lambkin, S. W. Roach	3 09 26		
Arizona, G. A. Corry	3 08 17		
Bab, W. J. Morgan, Jr.	3 09 00		
Mist, J. W. Alker	3 14 14		
Firefly, G. Standing	3 11 15		
21ft. Class—Catboats—Start, 12:55.			
Arlene, A. E. Rendle	3 07 34		
Vera, R. Smart	Withdrew.		
Kazaza, B. Whiting	2 58 00		
15ft. Class—Special—Start, 1:05.			
Bouncer, G. D. Tappan	2 56 40		
Scout, H. C. Hall	2 50 06		
Wee Win, F. Sherwood	3 35 50		
Fiddler, H. Hulthe	2 58 30		

New York Y. C.

NEWPORT, R. I.
Saturday, Aug. 10.

THE work of rerigging Constitution having been completed, she was able to start in the race on Saturday, and again try conclusions with her old rival, Columbia. The latter boat, although beaten by a small margin, came out of the race with the honors in her favor, for had it not been for an accident during the race, which delayed her over 5m. while repairs were being made, she would have pushed the new production very hard for first place. In justice to Constitution, it must be said that her main-sail was in wretched condition.

The three 90ft. yawls, Navahoe, Ailsa and Vigilant, sailed a race for a special prize, the latter boat winning, although Ailsa broke down when the race was clearly hers.

Virginia and Rainbow raced for Sir Thomas Lipton's cup. This cup was raced for last year and won by Rainbow, but as she was disqualified, the cup was again put up. The Regatta Committee was on board Col. John Jacob Astor's steam yacht Nourmahal, and at 12:40 o'clock signaled that the course would be fifteen miles to windward and return, and then gave the compass course, which was S.S.W. The wind was quite fresh. It was blowing fifteen knots an hour and freshening.

The preparatory signal for the Cup defender class was given at 12:50, and at 12:55 the warning signal was given. Both boats crossed on the starboard tack, with Columbia in the lead. About 15m. after the start Columbia was brought up into the wind, so that some of the slack could be taken in on the bowsprit shrouds. A new bowsprit had been put on Columbia, and the bowsprit shrouds had not been set up tight enough, so that when heeled down in the strong breeze, the stick buckled so badly that it was feared that if the shrouds were not tightened the stick would probably go. Columbia also had difficulty with her steering gear, which caused some loss of time. By the time Columbia had again filled away on her course, Constitution had pulled well into the lead. After getting started again, Columbia seemed to cut down some of Constitution's lead. Constitution rounded the mark on the starboard hand and broke her spinnaker out about 3m. after. On the run back, Constitution passed Columbia to windward. The following is the table for the windward leg of the course:

	Start.	Turn.	Elapsed.
Constitution	1 01 00	2 59 13	1 58 13
Columbia	1 00 46	3 02 06	2 01 20

On this leg Constitution had beaten Columbia 3m. and 7s.

Constitution slowly drew away from Columbia on the run home. Spinnakers were set to port and balloon jib topsails were sent up. Constitution seemed to sail more steadily than did Columbia, the latter boat appearing to spill the wind out of her sails when she rolled in the sea. The table for the run home follows:

	Start.	Turn.	Elapsed.
Constitution	2 59 13	4 17 43	1 18 30
Columbia	3 02 06	4 21 38	1 19 32

On the fifteen-mile run Constitution had beaten Columbia 1m. 2s. She had run home at the rate of a little better than twelve knots an hour. Her actual time over the whole course was 3h. 16m. 43s., and that of Columbia 3h. 20m. 52s., and, boat for boat, Constitution had beaten Columbia 4m. 9s.

Ten minutes after the starting signal for the nineties was given, the 70-footers and the 90ft. yawls were started. Rainbow crossed in the weather berth, and Vigilant crossed first, but to leeward of the rest of the yawls. Shortly after the start, when Ailsa was well in the lead and showing clearly her superiority over both Navahoe and Vigilant in the sea and strong breeze, she was forced to withdraw, the splice on the bobstay having drawn out. Virginia sailed well, and made better weather of it than did Rainbow, as she carried a small club topsail, while Rainbow staggered along under her big one. Virginia rounded ahead of Vigilant and Navahoe at the outer mark. Navahoe dropped well behind Vigilant on the run out. As the boats rounded, spinnakers were set to port. The times on the beat to the windward mark were:

	Start.	Turn.	Elapsed.
Virginia	1 11 53	3 34 00	2 22 07
Rainbow	1 10 33	3 37 34	2 27 01
Vigilant	1 10 28	3 34 15	2 23 47
Navahoe	1 12 29	3 38 12	2 25 43

On the beat Virginia had beaten Rainbow 4m. 54s., and Vigilant had beaten Navahoe 1m. 56s. Virginia had beaten Vigilant 1m. 40s., and Navahoe 3m. 36s.

On the run back Navahoe cut down Vigilant's lead, and Virginia drew away from Rainbow.

Vigilant, on returning into harbor after the race, carried away the jaws of her gaff, and had much trouble in getting off her canvas before coming to anchor. Virginia on the fifteen-mile run beat Rainbow 5m. 9s., and Navahoe beat Vigilant 37s. The summary:

Sloops—Class G.			
Constitution	1 01 00	4 17 43	3 16 43
Columbia	1 00 46	4 21 38	3 20 52
Yawls—Class C.			
Vigilant	1 10 28	4 57 11	3 46 43
Navahoe	1 12 29	5 00 31	3 48 02
Ailsa	1 10 40	Disabled.	
Class H—The Lipton Cup.			
Rainbow	1 10 33	5 06 48	3 56 15
Virginia	1 11 53	5 00 05	3 48 12

In Class G Constitution beat Columbia 4m. 9s. In the yawl class Vigilant beat Navahoe 1m. 19s. For the Lipton cup, Virginia beat Rainbow 8m. 3s.

Monday, Aug. 12.

In a day of light and variable breeze Constitution was again beaten by Columbia. Although the changes in Constitution seemed to have greatly improved her sailing, still she has got to do still better to make her the all-around boat that Columbia is.

Seven or eight knots an hour was the maximum strength of the breeze at any time during the race on Monday, and shortly after turning the second mark the two nineties ran into a calm streak, and at this time the wind hauled to the E., so that the boats could stand for the finish line on one long tack.

The signal was set for a triangular course on the Nourmahal at 11:20, with the compass courses S.E. by S. for the first leg, W. 1/2 S. for the second, and N.N.E. for the

third. This would give a reach, a run, and a beat, as the wind at that time was N.N.E.

The preparatory gun was given at 11:50 from Nourmahal, and the warning gun followed at 11:55. Constitution got the best of the start, and both boats set reaching jib topsails and balloon forestaysails. When running down this leg the breeze headed them a little, so smaller jib topsails were substituted for the larger ones. Constitution seemed to draw away from Columbia quite fast on this leg. The times on this leg were as follows:

	Start.	Finish.	Elapsed.
Constitution	12 00 09	1 03 00	1 02 51
Columbia	12 00 36	1 06 38	1 06 02

Constitution on this leg had gained 3m. 11s.

The wind dropped a good deal after the boats rounded. Constitution set her balloon jib topsail, while on Columbia the spinnaker was used. Constitution set her spinnaker after a while, and Columbia put on her balloon jib topsail. The breeze finally dropped entirely and left the boats becalmed. When the wind came up again it shifted continually, and it kept the men on both boats taking in and resetting spinnakers. Columbia benefited by a shifting breeze and picked Constitution up very fast. Constitution's spinnaker was taken in about 10m. before reaching the second mark; 2m. later she jibed and took in her balloon jib topsail and set a small jib topsail. Columbia changed her balloon for a small jib topsail before she reached the mark. The time on this leg was as follows:

	1st Turn.	2d Turn.	Elapsed.
Constitution	1 03 00	2 44 59	1 41 59
Columbia	1 06 38	2 50 39	2 44 01

On this leg, which was the most fluky of the race, Constitution gained 2m. 2s.

After rounding, both boats made a number of short tacks, and it was here that Columbia saved considerable, as her men seemed to work faster when coming about. After being nearly becalmed for a time, a breeze came up that was a little S. of E. About 3:30 the wind went back to the N., and came in fresh. Columbia worked through Constitution's lee in the freshening breeze. Columbia was on Constitution's lee bow when nearing the finish, and Rhoads kept her there until she had overstood the finish line, then when he went about it permitted Columbia to do the same and stand down to the finish line with started sheets. The times over the last leg of the course are shown in the following:

	2d Turn.	Finish.	Elapsed.
Constitution	2 44 59	4 25 16	1 40 17
Columbia	2 50 39	4 26 16	1 35 37

Columbia on this leg beat Constitution 4m. 40s.

The 90ft. yawls and 70ft. cutters were started at 12:10. Navahoe crossed first, with Vigilant second, and then Rainbow, Virginia and Ailsa. Virginia got ahead of Rainbow soon after the start, and Navahoe drew well ahead of Vigilant and Ailsa. On the second leg Rainbow again took the lead over Virginia. The elapsed times for the first two legs of the course, which were reaching and running, were as follows:

	Start.	2d Turn.	Finish.	Elapsed.
Navahoe	12 11 22	4 04 10	3 52 48	
Rainbow	12 12 50	4 20 12	4 07 22	
Virginia	12 13 42	4 21 30	4 07 52	
Vigilant	12 11 30	4 30 14	4 18 44	
Ailsa	12 15 00	4 32 10	4 17 10	

So far Navahoe had beaten Ailsa 24m. 22s., and Vigilant 25m. 56s. Rainbow had beaten Virginia 30s.

The 90ft. cutters had nearly finished their race before the other boats got to the second mark. The race was very fluky and most unsatisfactory. The elapsed times for each boat over the last leg of the course are shown in the following:

	2d Turn.	Finish.	Elapsed.
Navahoe	4 04 10	5 58 05	1 53 55
Ailsa	4 32 10	6 24 04	1 51 54
Vigilant	4 30 14	6 24 21	1 54 07

Ailsa had beaten Navahoe 1m. 59s. and Vigilant 2m. 13s.

Virginia had beaten Rainbow 4m. 43s. The table of the races follows:

Sloops—Class G.			
Constitution	12 00 09	4 25 16	4 25 07
Columbia	12 00 36	4 26 16	4 25 40
Yawls—Class C.			
Vigilant	12 11 30	6 24 21	6 12 51
Navahoe	12 11 22	5 53 05	5 46 43
Ailsa	12 13 00	6 24 04	6 09 04
Class H.			
Rainbow	12 12 50	6 15 06	6 02 16
Virginia	12 13 42	6 11 41	5 57 59

In Class G, Constitution beat Columbia 33s. elapsed time, but Columbia wins on corrected time.

In the yawl class Navahoe beat Ailsa 22m. 21s. and Vigilant 26m. 8s. elapsed time.

In Class H, Virginia beat Rainbow 4m. 17s.

Newport Special Thirties.

NEWPORT, R. I.
Tuesday, Aug. 6.

WAWA won the sweepstake race that was sailed over a fifteen-mile course in a fresh easterly breeze on Tuesday, Aug. 6. Out of six starters, only three boats finished, the others withdrawing after fouling obstructions. The start was at 3:49 o'clock. The summary:

	Finish.	Elapsed.
Wawa, R. Brooks	5 18 31	1 29 31
Carolina, P. Jones	5 19 08	1 30 08
Esperanza, H. O. Havemeyer	5 19 49	1 30 49
Raccoon, J. R. Drexel	Withdraw.	
Barbara, W. Rutherford	Withdraw.	
Hera, R. N. Ellis	Withdraw.	

Thursday, Aug. 8.

A cup offered for the 30-footers by Mrs. Herman B. Duryea was won on Aug. 8 by Wawa. There was a strong breeze from the S.W., and the course was to Dyer's Island and return, a distance of sixteen miles. The start was at 3:25. The summary:

	Finish.	Elapsed.
Wawa, Reginald Brooks	5 32 14	2 07 14
Barbara, Winthrop Rutherford	5 32 47	2 07 47
Kollywon, Winthrop Rutherford	5 35 31	2 10 31
Esperanza, H. O. Havemeyer, Jr.	5 35 51	2 10 51
Carolina, Pembroke Jones	5 36 29	2 11 29
Hera, R. N. Ellis	5 36 52	2 11 52
Raccoon, J. R. Drexel	5 39 29	2 14 29

Shamrock II. Arrives.

SIR THOMAS LIPTON'S steam yacht Erin with Shamrock II. in tow arrived off Sandy Hook Lightship shortly before midnight on Sunday, Aug. 11, after a voyage of nearly sixteen days from Gourock, Scotland. Both vessels came to anchor just outside the bar a few minutes after they were sighted. Monday morning early she was taken in tow and brought up to an anchorage off Stapleton, Staten Island. It was raining hard, and the weather conditions were generally depressing. Shamrock II. was towed about two-thirds the way across by Erin. The voyage was uneventful, and the only accident to Shamrock II. happened on Friday, Aug. 9, when she ran into a S.W. gale. When it was blowing at its height the topsail sheets parted. This heavy wind picked up a head sea that delayed her some time. Shamrock II. is painted green, as was Shamrock I., and although her topsides show bare spots where the paint has been washed off, still she seems to be much less weather beaten than Shamrock I. was when she arrived in New York.

Shamrock was fifteen days and eighteen hours making the trip from Gourock to her anchorage outside Sandy Hook. The log showed a distance of 3,768 miles, reckoned from noon to noon, covered as follows:

10 A. M., Saturday, July 27—Left Gourock.		Distance.
		Knots.
Noon—Abreast Great Cumbrae		16
Lat. Long. Courses.		
D. M.	D. M.	
Noon, July 28	51 40	7 10
Noon, July 29	48 25	11 56
Noon, July 30	45 07	16 45
Noon, July 31	41 42	21 14
Noon, Aug. 1	38 08	24 59
To the Azores		52
6 P. M., Friday, Aug. 2—Left Ponta Delgada.		
Lat. Long. Courses. Knots.		
D. M.	D. M.	
Noon, Aug. 3	37 56	29 38
Noon, Aug. 4	37 40	35 22
Noon, Aug. 5	37 26	40 48
Noon, Aug. 6	37 16	45 04
Noon, Aug. 7	37 02	51 40
Noon, Aug. 8	37 14	57 06
Noon, Aug. 9	38 20	62 09
Noon, Aug. 10	38 49	67 05
Noon, Aug. 11	39 53	71 27
To Sandy Hook Lightship		118
Total		3,768

Shamrock II. was taken to Robins' dock on Monday afternoon, where she will be put in racing trim. Under her present short and low rig it is difficult to get much idea of the boat.

Bridgeport Y. C.

BRIDGEPORT—LONG ISLAND SOUND.
Saturday, Aug. 10.

THE Bridgeport Y. C. held its third annual regatta on Saturday, Aug. 10. The boats sailed over a triangular course fifteen miles in length. The breeze was light from the S. at the start, but soon freshened up enough to make the race interesting. The Regatta Committee was composed of the following gentlemen: Messrs. Clinton B. Seeley, E. D. Chittenden, Carl Foster and W. M. Richardson. The steam yacht Halcyon served as the judges' boat. The times were:

36ft. Sloops and Yawls—Start, 12:15.			
Defiance, Dr. Keller	3 12 26	2 57 26	2 27 56
Memory, W. M. Bavier	3 04 52	2 49 52	
Titania, W. H. Childs	3 13 06	2 58 06	2 57 49
Yram, P. Bartram	3 13 45	2 58 45	

Defiance and Titania had time allowances.

30ft. Sloops—Start, 12:20.

Alerion, A. H. Alker	3 05 59	2 45 59	
Kit, T. H. MacDonald	3 12 26	2 52 26	
Diana, O. H. Jennings	Withdraw.		
25ft. Sloops and Cats—Start, 12:25.			
Folly, G. S. Hill	3 39 34	2 59 44	
Pampero, R. Bailey	3 44 52	3 19 52	
Vagabond, C. H. Fancher	3 45 27	3 20 27	
21ft. Sloops and Cats—Start, 12:35.			
Exella, T. A. Harrison	2 57 10	2 22 10	
Alice, A. K. L. Watson	3 00 42	2 25 43	
Mercury, C. H. Childs	3 06 15	2 31 16	
Little Joe, S. Lynes	3 06 37	2 31 37	
Dora, G. L. Catlin	3 20 36	2 40 36	
Tout, C. R. Hendricks	3 20 01	2 45 01	

Dora was given 9m. and 11s. time allowance, making her corrected time 2:31:26.

21ft. Raceabouts—Start, 12:35.

Sis, C. T. Bedford	2 28 17	2 58 17	
Jolly Roger, Syndicate	3 33 19	3 03 19	
Manhasset Raceabouts—Special—Start, 12:45.			
Lambkin, S. W. Roach	3 21 53	3 36 53	
Firefly, Guy Standing	3 22 01	3 37 01	
Arizona, G. A. Cary	3 22 53	3 37 54	
Bob, W. F. Morgan	3 24 18	3 39 19	

Half-Raters—Start, 12:40.

Monsoon, H. Fish	3 28 18	2 48 16	
Lotus, T. Fish	3 30 26	2 50 26	

The winners were: Memory, Alerion, Folly, Exella, Sis, Lambkin and Monsoon.

Auxiliary Power Profitable to Owner.

ABOUT two months ago the little fishing smack Roulette was partly burned and sunk off Red Hook in New York Harbor, but was recently rebuilt by her owner. The fire was caused by an explosion of naphtha when a lighted lantern was used to look for a leak in the tanks. Roulette has a gasoline engine, so that she can get a cargo of fish to market when there is no breeze. One of the many advantages of auxiliary power was shown when, on Aug. 7, Roulette was coming up from the Virginia fishing grounds, and off Barnegat her skipper saw the abandoned barge Centipede with many thousand feet of lumber aboard, and heading for the derelict, boarded her and made a hawser fast to her forward bitts. Then she steered a course for port, the breeze helping her a little. The barge was abandoned off Barnegat by the tug Asher J. Hudson on Tuesday night. She was towing astern of another barge, the R. J. Camp, and was bound from Norfolk for this port. The Centipede sprang a leak and soon became waterlogged. Her crew were taken off by the Hudson, which brought the Camp into New York on Aug. 7. The owner of Roulette will get several thousand dollars salvage for bringing Centipede safely into port.

Cruise of the Comet.

I do not recollect having heard his sanity questioned prior to his proposing the cruise of which I am about to write, but afterward—however, I will let the reader pass judgment.

It all came about naturally enough, as it seemed to us at the time. There had been several weeks of the sort of dog-day weather that humanity instinctively tries to escape from. Vacation time caught a half-dozen of us in its alluring toils simultaneously, and one evening we were discussing ways and means, when George Waterbury suggested a codfishing trip.

Of course the proposition was railed at and the proposer gibed most unmercifully.

"I would suggest that we hire out to some farmer for a week in the harvest field as a superior means of recreation," said Charlie Merriman. "Or ship on a whaler." Pop Wells, whose aggregation of years in a measure eked out what he might have lacked in judgment. "What matters the name we give the trip? A trip is a trip under any old name, and it's an outing anyway!" There seemed to be a modicum of reason in this suggestion, and, when George launched into the theme with eloquence and unanswerable arguments, the upshot of the case was a negotiation the very next morning with Capt. Paul, of Cortlandt street, resulting in our chartering the steam yacht Comet for seven days from the following Monday morning.

Following a month of brazen sky and burning sun, when the earth yawned in dusty seams, and vegetation wilted and shriveled, Monday dawned with half a gale from the eastward and a driving Scotch mist. The yacht was tied up at the lumber docks at Derby Narrows, and as we shivered in our mackintoshes in the midst of our traps in the baggage car of the first train on the Consolidated road in the damp, sticky chilliness of the very early day, we consoled ourselves with thoughts of the relief the weather change would bring to landsmen.

The factory whistles were awakening the Housatonic echoes and, incidentally, hosts of weary toilers when our hawsers were slipped from the piling at Derby Dock and the Comet turned her nose, bestrode by a wooden woman sans clothing, Soundward. At a board wharf off Stratford Point we ran alongside and shipped a tub of soft clams for bait, rounded the point and were soon jumping over the white-capped billows, eastward-bound for Block Island.

I will state here that the Comet was an 18-ton (I think I am right as to the figures) steam yacht. She had two decks, a pilot house with bowed glass front, and a cabin in which one could sit comfortably but could only walk in in an attitude of extreme humility. Ranged around the cabin were eight bunks, very snug and comfortable, each with a little dead light at the head. The crew comprised Capt. Paul, Jack, the engineer, and Pete, able seaman. Pete was "able" when eating and sleeping were involved, but, judging from the amount of vituperation hurled at him, his abilities as a sailor seemed to lack something.

By the time we were off the New Haven light the gale had increased to such magnitude that the boat made but slow headway forward, but must have traveled leagues upon leagues in her seasawing over the waves. It was at about this time that Charley was observed to walk unsteadily to the gunwales, where he presently hung over the rail and contributed to the swirling brine from his internal economy. "Won't you have a sandwich, Charley?" asked Toby, our caterer, meanly disclosing some fat ham. If looks could kill Toby would have kicked the bucket in just about the 1-10,000th of a second under the glance Charley turned upon him. "If I ever meet you ashore again I'll—" but the remainder of the threat went overboard with the residuum of Charley's breakfast. "Well, I do think," continued Toby, complacently masticating a sandwich, "that it is little short of sacrilege for a body to be seasick under such glorious conditions as these," comprehending wind, sea and flying spume in a magnificent wave of his hand. He had barely delivered himself of this sentiment when something seemed to set up a disturbance under his waist band. "That confounded ham's too fat for sandwiches," he murmured, with a sickly attempt at a smile. A moment later Toby was acting as counter ballast over the gunwale opposite Charley. The latter took in the situation in a minute, and, staggering across the deck, he gave Toby a hunch, remarking as he did, "I can fix a cure for you in a jiffy; I'll just tie a hunk of this fat ham to a string, you swallow the ham and I'll pull the string." If ever a mortal was avenged for a gibe, Charley was the one. His wicked suggestion was more effectual than a dose of ipecac and stomach pump combined, and for the next twenty minutes Toby was given over to the very "sacrilege" he had so lately deplored.

As night approached the rain came down in blinding torrents. It was apparent that it would be hazardous to continue further, for while the rain beat down the waves considerably, it at the same time hid us from view and enhanced the danger of our being run down by some passing craft. Captain was for hauling out of the track of navigation and anchoring for the night, but Charley and Toby wouldn't have it. Toby swore he'd jump overboard and swim for shore rather than spend the night on the boat. "Why, I've been made a regular milk-shake of all afternoon on this infernal old teeter board," he declared, "and just because my stomach got a bit disturbed I've got to be ridiculed by a puking landlubber," wholly ignoring his self-contributed preface to the "insult." Capt. Paul said he was a trifle leery about making shore at that point, as the geodetic features were strange to him, but when Charley and Toby wailed in chorus that they'd sooner "be split on the biggest rock between New York and New London" than stay on the water, he shifted his course and headed for a quartette of lights dimly seen in occasional lulls of the storm, and which he rightly inferred to be on shore.

Quartermen the waves, the boat pitched tremendously, rolling in a sickening manner the while. As we neared our objective we could see dozens of smaller lights glinting about like fireflies, which the Captain said were lanterns. "There must be something up on board," he said, "to cause such a commotion." Fifteen minutes later we fetched up at a menhaden dock, and were at once surrounded by a score of excited men in oilskins, all talking and gesticulating in an incomprehensible jargon. "What's the row?" we asked, when we finally found an opportu-

nity to get a word in edgewise. One old, grizzled specimen, with a voice like the breaking up of winter, responded: "Wal, if you ain't the goldurndest ijits an' th' luckiest durn fools I ever seen; bet ye couldn't do that trick ag'in in a hundered trys?" The others echoed his sentiment, and then we asked what wonderful trick we had unwittingly performed. We were told that we had entered port by a route never before sailed by mortals; that we had come straight over one of the most dangerous reefs on the coast, whose pointed rocks were visible above the water even at high tide. How we ever weathered it was a puzzler to all hands, and it was finally decided that we were carried straight over the rocky spine on the crest of a big wave. We spent that night in the fish barracks, where the odor was so rank we could almost hear it emit itself, but certain of the party declared that it was preferable "to being shaken to death." Personally, I had rather have spent the night as we are told Noah spent three, than take the guyings inflicted upon Charley and Toby.

Tuesday dawned with a cobalt sky, without a cloud, and a gentle, crisp breeze out of the west. It was very early when we steamed out of Niantic harbor; the sun had not risen, but was hanging streamers on the peak of Watch Hill. We were all in excellent spirits, at peace with all mankind; even George and Rafe forbore making allusions to Charley and Toby's unsailorlike conduct of the previous evening. We made a detour to avoid the reef, which bristled menacingly above the rippling waves. Every face wore a grave and thoughtful expression, and I doubt if there was a man of us who failed to offer a silent thanksgiving for our miraculous preservation from destruction on those jagged rocks.

Shortly after noon we rounded the Government breakwater and tied up in front of the Ocean House, Block Island. Deciding it would hardly pay to make a half-day trip to the fishing banks, we put in the afternoon exploring the island. In one sense Block Island is as much a foreign land as Boora-boora, in the heart of Darkest Africa. Its natives are a race by themselves, and all are bound by more or less remote ties of consanguinity. Society revolves in fixed concentrics about two points—"Old Cap'n Dodge" and "Cap'n Dodge," father and son. Old Cap'n descended from "Old Gramp Dodge," who seems to have been about the first inhabitant, and all to the manner born are more or less tinged with "The Dodge Blood." The people are very proud of their exclusiveness, and no high and mighty order is more jealous of possible encroachment. During the outing season strangers are freely admitted to the sacred precincts of New Shoreham (as the place is officially known), but the circumstances would be untoward indeed, and his credentials iron-clad, if an "outsider" were to pass muster there after Oct. 1. The island is merely a big sand dune, and was once a part of Long Island. But a restless and encroaching ocean ate away the connecting isthmus and, but for the intervention of Uncle Samuel, would have lapped up the island itself and either have drowned the Dodge contingent or sent them as wanderers to the inhospitable wilds of Rhode Island or Connecticut. Hence the Dodes entertain a respect little short of reverence for the mighty breakwater which encompasses their island to the eastward.

We were awakened on Wednesday morning by the roar of the waves on the breakwater, a great wind having arisen during the night, and which now piped merrily out of the east and whistled weird tunes through the cordage of the fishing fleet at anchor in the "Pond." The sky wore a gray aspect, with long streamers of cloud here and there, which Cap'n Dodge said meant more wind. As we gazed at the tumbling whitecaps out on the horizon, the prospect of taking our yacht out to the banks did not present itself favorably. It was then that Cap'n Dodge showed himself to be a philanthropist of the right sort. He had a schooner that was not in use, and if we'd reimburse the crew for their time, we were welcome to the ship. It is not likely that a proposition was ever agreed to in less time than we closed the bargain for the schooner. It was a glorious sail to the banks, with the port gun'ale a foot under water, and we seven (for Capt Paul went along), perched like chicks on the opposite rail, drenched with the spume and searched through by the brine-laden gale. Shortly before noon we anchored on the banks. No land was visible, and all around us great waves shook their fleecy manes and roared and thundered. What time the schooner wasn't kicking up behind or jabbing her nose under water, she was wiggling in a sideway motion that completely upset one's calculations when he essayed to walk. Toby and Charley got lines out, and, in fact, seemed to enjoy the situation, as did Capt. Paul. George started in to make a brave show at fishing, and he and Rafe actually got their lines out, but when a few minutes later, from my anchorage on a coil of rope by the mast, I looked to see what luck they were having, they had ignored their lines and sat looking at each other with expressions of countenance that would have made a permanent reputation for a Puck artist to have depicted. My own feelings were not in a particularly light vein just then, but I believe I would have laughed though I knew I was going to the bottom the next minute. I couldn't resist the desire to remind them of what they said about Charley and Toby on our first night out, and with this laudable motive I tried to walk to them. I changed my mind, however, after letting go my hold of my rope coil. Just then the ship flew up behind and I flew down before, and didn't stop until I fetched up in a gangway. A flight of steps invited descent, and I went down into a little cabin with bunks ranged along its sides. A pot-pourri of odors assailed my nostrils, but I ignored them in a supreme desire to reach a bunk, where I could lie down and hang on. Barely had I gotten myself firmly ensconced upon a fish-impregnated mattress than the motion of the schooner seemed suddenly to stop, and all of its former gymnastic gyrations to be transferred to my internal organs. I know of no language adequate to a description of my sensations for the few minutes that I lay in that bunk. It gained, however, for all sea sufferers every atom of sympathy I am capable of experiencing.

On regaining the deck I found the wind had shifted and was rapidly beating down the sea. Half an hour later all hands were fishing with all the nonchalance of old salts. Feeling a tug at my line, I began to haul in. Before I had half of the twenty fathoms of three-ply twist over the rail my fingers were cut and bleeding, and I was positive I'd hooked an anvil. Pop loaned me a pair of old buckskin

gloves, and at last I swung a 12-pound cod over the rail. Up to this time there had been no more manifestation of game to the fish than would have been displayed by a rubber boot full of sand under similar circumstances. I immediately pronounced against codfishing as a means of sport, and have had no subsequent occasion to alter my decision. Practically the only thing to say in favor of codfishing is that there is a great deal of it, or, in other words, there is no lack of fish, for they bite voraciously, and will keep at it as long as the fisherman does his part. There was such a marked falling off in the wind that the schooner crew declared that unless we cut fishing short and got under way the prospect was good for spending the night on the water. Subsequent developments proved the correctness of the assertion, and during the final stage of the return trip we drifted in on the flood tide. We had upward of a ton of fish—cod, hake, halibut and a big, ugly dog shark. We had no use for the fish, and readily accepted Cap'n Dodge's proposition to take them for the hire of the schooner's crew. One noteworthy effect of the trip was the appetites we took ashore with us. Toby took occasion now to open the commissary box for the first time. The disclosures of this act taught us all a lesson regarding the handling of perishable meats at sea. A dozen beautiful chicken broilers, six ribs of finest porterhouse roast, a lot of crabs and miscellaneous forage were spoiled past redemption. Although there still remained plenty of ice and everything was firm and frosty, yet the whole outfit was bad—actually stunk. One of the sailors who chanced to be present explained that it was a lack of ventilation that caused the trouble; that the gases from the various meats, having no means of exit, simply commingled, fermented and wrought ruin. We were bitterly disappointed, for Toby had given us an intimation of the feast he had in store for us. At his suggestion, however, a couple of plump buck cod were cleaned and boiled till the flesh slipped from the bones; to this he added onions, potatoes and carrots, sliced fine, and placed the whole in a tripod over the fire for forty-five minutes. Then, seasoning the mess, he served it hot, with plenty of good bread and butter, and I am frank to say that I have never relished a dinner more in my life.

After a sound night's sleep at the hotel, we awakened on Thursday morning to find the ocean as smooth as the proverbial mill pond, save for the never-ceasing "ground swell," which rolled a sort of spit-curl surf along the coast line. A fairy track of glistening silver stretched from the breakwater over the mobile brine to the sun just emerging from the sea. Smoke from cottage chimneys and a score of yachts united earth and sky in vertical intercalaries. We were unanimous in declaring it too fine a day to desecrate with anything so distinctly plebeian as codfishing, and decided to run over to Rocky Point, on the Narragansett, and get a genuine Rhode Island clam-bake.

"Better kind o' hug the shore," said Old Cap'n Dodge, shielding his eyes with his hand and scanning the eastern horizon, just as we were putting off. "Ye kin take me fer a groun' mole ef ther' ain't th' biggest kind o' nasty shindy a-brewin' in the ther' mack'l sky," and he hitched his "barn doors" and emitted a brutum fulmen of tobacco saliva.

In deference to the Captain's years and experience, no open protest was made to his prognostication at that time, but once out of earshot we railed at what pleased us to term his croaking without stint or reservation. "Beats all how old sea dogs always scent storms and gales even in the finest weather," sagely observed Toby, and the implied sentiment was acquiesced in by all save Pop, who declared the Old Captain might not be far wrong. "Cause my corns howl to beat the deck, same's they always do when a storm's coming." But we frowned Pop and his prophecy to scorn, and steamed merrily around Beaver Tail and up to the Narragansett, reaching the point in time to see the big bake opened.

Those Rocky Point clam-bakes are too well and favorably known to require the support of my weak pen, but this one fact incident thereto may be properly noted: When occupied in their demolition, one loses all sense of the flight of time. Hence it was that when we emerged from the banqueting tent we found the weather had undergone a marked change. Patches of vapor, as if torn from some storm cloud, were flying out of the east, and the wind came in wild, fierce blasts.

"Reckon Old Cap. come pretty near knowing what he was talking about this morning," said Capt. Paul, as we hurried down to the Comet, which was bowing her nose as if to welcome our return. Orders were given to the engineer to get all the speed possible out of the little six-horse-power engine. "For," said Capt. Paul, "we can't get to Block Island any too quick for safety." I could swear that the corners of Toby's mouth dropped an inch at this remark, but experience had taught me it was wise to make no comment. It was a jolly sail down the bay. The Comet, like a colt turned homeward, did wonderful stunts in speed; the water curled high by her bows, and a creamy wake maintained itself a mile astern. Barely had we passed Fort Adams, however, and sighted Point Judith, than the foaming tops of the tremendous seas breaking on the bar, told us that the Comet could not quit the harbor that day, so we put into Newport and went down to the headland and watched the storm, which increased to hurricane magnitude before night. None of the Sound boats ventured out, and old salts told us it was the worst storm in many years. The upshot of the matter was that we had to stay tied up in harbor till the following Sunday morning, when we made a start at 2 o'clock, got stuck in the mud trying to make a short cut, and lay five hours for the tide to lift us off. The expression of sentiment was not altogether ecclesiastical, despite the day, and cannot be repeated edifyingly. But we hustled when freed from the mud, reaching home soon after midnight. We had four hours of actual fishing in a week's outing.

SAMUEL MANSFIELD STONE.

Messrs. Thomas S. Marvel & Co., who are constructing the handsome, large house-boat ordered by the late Pierre Lorillard, have been directed to stop work on the boat by the executors of the estate. The boat is for sale, and as a buyer might have different ideas as to the interior arrangement, it was decided not to go on with the work.

Mr. Edwin Gould, N. Y. Y. C., has purchased from Mr. Richard Stevens the steam yacht Aileen, which is now under charter to Mr. W. B. Leeds.

Horseshoe Harbor Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Aug. 10.

THE annual regatta of the Horseshoe Harbor Y. C. was sailed in a fresh N.W. breeze on Saturday, Aug. 10. Possum ran on Table Rock and withdrew, but was not damaged. The Regatta Committee was composed of Messrs. Thomas J. McCahill, Jr., W. S. Allen and Harry Bentz. The summary follows:

Sloops—36ft. Class.		Corrected.
Oiseau, C. L. Pirie.....	2 17 24	
Opossum, E. S. Ballou.....	2 17 24	Withdrew.
Sloops—25ft. Class.		
Don, G. Reeves.....	1 38 30	
Raccabouts.		
Merrywing, H. M. Crane.....	1 33 15	
Persimmon, P. C. Dodge.....	1 35 21	
Sloops—21ft. Class.		
Montauk, J. S. Appleby.....	1 43 30	
Sloops—18ft. Class.		
Cricket, Harold Pryer.....	1 44 16	
Sora, W. Hoey, Jr.....	1 49 17	
Catboats—30ft. Class.		
Nymph, W. A. Marble.....	1 36 44	
Catboats—25ft. Class.		
Arrow, A. C. Miller.....	1 49 57	
Catboats—21ft. Class.		
Vera, Louis Dowdney.....	2 02 09	
Punch, F. W. Von Schroeder.....	2 11 31	
18ft. Class.		
Kazaza, B. G. Whiting.....	2 06 34	
15ft. Class.		
Scout, H. C. Hall.....	2 05 12	
Askme, G. G. Tyson.....	2 15 30	

The winners were Oiseau, Don, Merrywing, Montauk, Cricket, Nymph, Arrow, Vera, Kazaza and Scout.

Yacht Club Notes.

On Friday, Aug. 9, in a race from Shelter Island to New London and return, Mr. Mortimer B. Fuller's sloop yacht Helen defeated Mr. Clifford V. Brokaw's Mab II. by 5m. on the run to New London. On the return run Mab defeated Helen by 6m.

The Royal St. Lawrence Y. C. has received a challenge for a series of races next year for the Seawanliaka cup from the White Bear Y. C., of St. Paul, Minn. The Black Rock Y. C., of Bridgeport, Conn., has also sent a challenge.

The annual regatta of the Shelter Island Y. C. was sailed in a strong S.W. breeze on Saturday, Aug. 10. The special race for Commodore and Vice-Commodore's cups also was sailed. Class N boats sailed over the club's inside, twelve-mile course. In addition to the regular prizes offered by the club for yachts of Classes K, L and M, the race also counted in Classes L and M in one leg for cups offered in Class M by Vice-Com. Otto E. Lohrke and Com. Charles Lane Poor respectively. The winners were Dorwina, H. L. Ward; Leda, Harry Maxwell, and Mab II, C. V. Brokaw. Rear-Com. Smith's cup was won by Leda. In the series races, Class I, Effort scored two points, Mira one. In Class M, Marion scored three points, Martha two and Helen one point.

The annual meeting of the Sag Harbor Y. C. was held at Sag Harbor on Saturday, Aug. 3. It was voted to have an open race on Saturday, Aug. 31, and a club race on Saturday, Sept. 7. The race will be for sharpies, catboats and sloops.

On motion the following resolution was passed: "Resolved, That the system of measurement of the Long Island Yacht Racing Association be adopted by this club, to apply to all boats over 25ft., over-all measurement. The present system used by this club to apply to all boats under 25ft. over-all measurement."

The following officers were unanimously elected: Com., James Herman Aldrich; Vice-Com., Addison M. Youngs; Sec'y, John H. Hunt; Treas., J. A. Udall; Regatta Committee, James H. Aldrich, George Kiernan, H. M. La Mont; Official Measurer, Addison M. Youngs; Dock Commissioner, J. A. Udall.

Newly elected officers of the Greenville Y. C. are: Com., Alfred Wenzel; Vice-Com., George Ruffe; Rear-Com., Charles Johnson; Fin. Sec'y, William Brown; Rec. Sec'y, C. J. Leach; Treas., C. P. Boos.

YACHTING NEWS NOTES.

James M. Smith, of Port Washington, L. I., is building, from his own design, a 60ft. launch for Mrs. W. McMills, of New York. The boat will be named Augusta, and will be finished about Sept. 1. Augusta is 60ft. long and is 10ft. beam, with a depth of 4 1/2 ft. Her frame is of white oak and hackmatack. There are 52 2x3 frames, 1ft. apart in the clear. The planking is of cedar, 1in. thick, copper fastened. The engine bed is of yellow pine, 6x12. The bed covers ten pairs of frames, and is strongly riveted through all. The boat will be fitted with a 40 horse-power Standard engine. A shaft extending 6 1/2 ft. beyond the stern post will carry a 3ft. propeller. The cabin will be 37ft. long, mahogany finish, with all the modern improvements. There will be a cockpit 7 1/2 ft. long.

Mr. Russell A. Alger, Jr., has purchased from Markland Molson, Commodore of the Royal St. Lawrence Y. C., his yacht Red Coat, which defended the Seawanliaka cup last year.

Messrs. Huntington & Seaman have sold the auxiliary ketch Cero for Dr. E. M. Culver to Messrs. A. B. Clafflin and A. K. Matthews, of New York. Cero was built by A. C. Brown & Sons, Tottenville, in 1899, from designs by R. M. Munroe. She is 62ft. over all, 51ft. on the waterline, 18ft. beam and 3ft. 6in. draft. She is equipped with a 16 horse-power gasoline engine. Dr. Culver used Cero for tarpon fishing off the coast of Florida. She left Cocoonut Grove on July 12 and made the outside trip as far as Delaware Bay, and then came through the canal, making

the trip to Tottenville in twelve days. The new owners of the yacht will use her for shooting trips on Shinnecock Bay, and later on Chesapeake Bay, and probably Florida.

Mr. Winthrop Rutherford has purchased from Mr. H. Yale Dolan the 30-footer Dorothy, and has changed her name to Barbara.

It is with pleasure that we acknowledge the receipt of a new yachting directory which has been published by Mr. Frank A. Ingraham, of Bristol, R. I. The book is of great value, not only to all yachtsmen, but to the business community as well, or, at least, that portion of it that has to do with the yachting world. The work has been most carefully compiled, is handsomely gotten up and should meet with a prompt and generous sale.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal.—The Columbia Pistol and Rifle Club held its postponed shoot on July 28. Mr. C. J. Barnes, of the Colorado hunt delegation was our guest. He led with the rifle. (He made the most phenomenal run in the hunt shoot, making 14 red flags, 3 inch centers, in 17 shots—8 of them being consecutive. This he did with Young's combination of FFF Semi-Smokeless powder.) W. G. Hoffman led with the pistol, and P. A. Becker with revolver. Scores, Columbia target rifle, 200yds.—C. J. Barnes 48, F. O. Young 51, G. M. Barley 57, W. G. Hoffman 61, Ed Hovey 61, Dr. Twist 110. Repeating rifles, Creedmoor count—Grant 40, Hunterman 38, Stulz 37, Carlin 33, Krasc 33. Pistol, 50yds.—W. G. Hoffman 42, C. M. Dais 43, F. O. Young 44, O. Feudner 47, Dr. Hunsaker 71, Mrs. Waltham 85. Revolver—P. A. Becker 48, Dr. Hunsaker 78, Dr. Twist 111. Rifle, 50yds.—E. S. Washburn 21, Hoffman 22, Mrs. Waltham 24, Allen 38. The above were the best scores of the day—unfavorable weather. Regular shoot, Aug. 4, Ed Hovey led with the rifle, a .38 Winchester, finishing with a 1, the last shot of the day. Dr. Twist felt proud when it was announced that he was high with pistol and .22 rifle, but Dais took away some of his glory in beating his score with the revolver. Best scores: Rifle, 200yds.—Ed Hovey, 48, 65, 74, 65; W. G. Hoffman, 49; A. B. Dorrell, 51, 55, 55, 68, 64; G. M. Barley, 65, 70, 69, 66; F. O. Young, 69, 73, 65; Dr. J. F. Twist, 72, 80, 91; E. A. Allen, 109; Hunterman, 137. Pistol, 50yds.—Dr. J. F. Twist, 48, 49, 57, 60, 61, 63; F. O. Young, 48, 55; W. G. Hoffman, 51, 67, 67, 68; Dr. H. W. Hunsaker, 59, 62, 75. Revolver—C. M. Dais, 46, 58, 63, 64; A. J. Brannagan, 47, 49, 50, 65, 68; F. O. Young, 51, 52, 65; P. Becker, 57, 69; Dr. Hunsaker, 89. Rifle, 50yds.—Dr. J. F. Twist, 23, 23, 24, 24, 27, 28, 29; A. Scott, 78, 79, 81.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Aug. 8-9.—Lafayette, Ind.—Fifteenth annual tournament of the Lafayette Gun Club. Amateur. John Blistain, Sec'y. Aug. 13-15.—Vicksburg, Miss.—Vicksburg Gun Club and Fish and Game Protective Association's tournament; \$300, and \$200 in prizes added. Aug. 14.—Ossining, N. Y.—Merchandise clay bird tournament of the Ossining Gun Club; clam bake; brass band. C. G. Blandford, Capt. Aug. 14.—Trenton, N. J.—Contest for championship of Mercer county, between Messrs. C. A. Comp, holder, and W. B. Widman, challenger. Aug. 15.—Sherburne, N. Y.—Eherburne Gun Club's tournament. J. F. Paddelford, Sec'y. Aug. 14-16.—Colchester Beach, Md.—Sixth annual midsummer tournament, under the management of Messrs. J. R. Malone and J. M. Hawkins, of Baltimore; two days at targets; one day at live birds; added money and merchandise prizes. Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas. Aug. 18.—Oshkosh, Wis.—Fourth annual tournament of the Winnebago Gun Club. Aug. 19-21.—Asheville, N. C.—Three-day tournament under the auspices of Maj. E. P. McKissick and Col. J. T. Anthony; distance handicaps; \$100 per day added. John Parker, Mgr. Aug. 21-22.—Bass Lake, Ind.—Tournament of the Peru Gun Club. Aug. 23.—Pleasant Hill, Mo.—Fifth annual sweepstake and merchandise tournament of the Pleasant Hill Colored Gun Club. T. H. Cohron, Sec'y. Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw. Sept. 2.—Ilion, N. Y.—Amateur shoot of the Remington Gun Club. W. H. Grimshaw, Sec'y. Sept. 2.—Meriden, Conn.—Labor Day tournament of the Parker Gun Club. Also Bristol sheep bake. C. S. Howard, Sec'y. Sept. 2.—Albany, N. Y.—Bluerock tournament of the Forester Gun Club. H. H. Valentine, Mgr. Sept. 2-3.—Union City, Ind.—Tournament of the Parent Grove Gun Club. Sept. 2-3.—Portland, Me.—Maine State tournament, under the auspices of the Portland Gun Club. S. B. Adams, secretary. Sept. 2-3.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association. Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y. Sept. 3-6.—Lake Okoboji, Ia.—Indian tournament, to be held at Arnold's Park; \$300 added. C. W. Budd, Arnold's Park, Iowa. Sept. 19-20.—Alton, Ill.—Two-day tournament of the Piasa Gun Club. Sept. 20-21.—Titusville, Pa.—First annual tournament of the Titusville Gun Club. H. Pfeiffer, Sec'y. Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreih, Sec'y. Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets. Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y. Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon. Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations. Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays. Sept. 10-11.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club; \$750 added.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y. Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Mr. H. Pfeiffer, secretary of the Titusville (Pa.) Gun Club, writes us as follows: "The Titusville Gun Club takes pleasure in announcing Sept. 20 and 21, 1901, as the dates decided upon for holding its first annual tournament. The club was organized one year ago, from entirely raw material, and after about nine months' active practice we have a half-score of shooters who average regularly from 80 to 90 per cent. and better. We are young, but we believe in expansion. We are anxious to try conclusions with some of the 'regulars.' Therefore, we extend a cordial invitation to all lovers of trapshooting to join us on the above dates for a general good time. We have elegant grounds and a fine club house right beside the electric road, and will endeavor to make our guests glad that they came. Programmes are now out and ready for distribution. Address all inquiries to Henry Pfeiffer, secretary." The programme provides ten events each day, at 10, 15, 20 and 25 blue-rocks; entrance \$1, \$1.50, \$2, and \$2.50. Rose system, ratio 8, 5, 3 and 2. Targets 2 cents. Grounds open Sept. 19 for practice; targets 1 cent. All paid representatives may shoot f. t. o. Guns and ammunition forwarded to P. O. Bue, Diamond street, will be delivered on the grounds. For further information, address the secretary.

The programme of the fifth annual merchandise and sweepstake tournament of the Pleasant Hill Gun Club, at Pleasant Hill, Mo., Aug. 23, is for colored shooters, and is sensibly and attractively arranged. White shooters are invited. Two sets of traps will be used, Sergeant system. The division of moneys will be by the Rose system. Targets 1 cent. Shooting commences at 9:30. There are seven merchandise events, open only to colored shooters. There are ten events, open to all, at 10 and 15 targets, 75 cents and \$1 entrance, \$1 and \$1.50 added money in each event. The live-bird championship, with a special match between Messrs. E. R. Nuttall, of Ohio, Neb., and T. H. Cohron, of Pleasant Hill, is one of the main features. Those who desire to enter this event should forward \$6.25 to the secretary, T. H. Cohron, so that he will know the number of entries, and therefore the number of birds to order. Mr. Cohron writes us that "present indications point to bringing together more colored shooters at our coming shoot than ever was known of before, as well as some of the white representative ones, who have promised to be present also and participate with us."

The Winnebago Gun Club, of Oshkosh, Wis., announces that it will hold its fourth annual tournament at Heisenger's Park, on Aug. 18. There are thirteen events on the programme, one of which is at 25 targets, for the Wisconsin championship. There is a total of 200 targets in the events, with a total entrance of \$20. Expert amateurs not residents of the State, and all professionals, will be handicapped 1 bird in 10, 2 birds in 15, 3 birds in 20, and 4 birds in 25 bird events. First high gun in all events will receive \$8; second, \$5; third, \$3. Shooting begins at 9 A. M. sharp. Refreshments on grounds.

Mr. Franklin Stearns, president of the V. T. S. A., Richmond, Va., writes us that the indications are that there will be an attendance exceeding 150 at the Association's second annual tournament, Sept. 2, 3 and 4. There will be \$100 added money to the target events. The handicap live bird event of the third day has been changed to class shooting, instead of high guns. The celebrated expert, Mr. John Parker, will manage the tournament. Over 100 Virginians have signified their intention to participate.

Mr. Oswald Von Lengerke, of the firm of Von Lengerke & Antone, Chicago, Ill., was a visitor in the gun district of New York on Monday of this week. A smooth shave gave him much the appearance of a prosperous bishop, so much so that many of his friends for a moment after meeting him were uncertain of his identity. He mentioned that shooting matters were active about Chicago. Mr. Von Lengerke, while modest in respect to his trap shooting abilities, is an expert of rare skill.

The programme of the first annual tournament of the Dominion of Canada Trap Shooting and Game Protective Association, to be held on the grounds of the St. Hubert Gun Club, Ottawa, Canada, Aug. 15, 16 and 17, offers liberal prizes. The Mail Trophy, valued at \$300, is offered as a prize in the team match on the third day. A handicap will be imposed in all events, save the team match. Agents and experts, free targets only. The secretary is Mr. A. W. Throop.

The programme of the New York State shoot will be ready for distribution in the near future. There will be \$750 in added money, and no percentages taken from the purses for any purpose. There also will be a list of merchandise prizes, each of sterling worth. The president of the New Utrecht Gun Club, Mr. Walter P. Sykes, has been actively engaged for some days in making all the preliminary arrangements, and has them nearly completed.

Aug. 21 and 22, at Auburn, Me., the Interstate Association gives its last target tournament of the season. Mr. Elmer E. Shaner, with Messrs. Shaner, has been taking a vacation in the east between the Providence and Auburn tournaments, a much needed rest, after the strenuous activities and responsibilities incident to his managerial office. The Auburn tournament has ten events each day, at 15 and 20 targets, alternately, \$1.50 and \$2 entrance.

Capt. A. W. Money, Oakland, N. J., offers \$25 reward for the return of his Parker gun, which was stolen from him on July 20 on the train, between Oakland and Paterson, N. J. The gun's number is 90,635. It shows signs of wear, is about 8lbs. in weight, has a 30in. barrel, a Silvers recoil pad, and was formerly owned by Mr. John Hull.

Aug. 24, the contest for the E. C. cup, emblematic of the championship of the State of New Jersey at targets, will take place at Freehold, N. J., between Messrs. Vanderveer and Gardner. A match same day and place will be shot between a team of the Freehold Gun Club and the South Side Gun Club, of Newark.

Mr. Elmer E. Shaner, who is eminent as an authority on all matters pertaining to trapshooting, indorses our views on the subject of "dusted" targets, as will be noted on reference to a communication from him, published elsewhere in our trap columns this week.

In a twelve-man team shoot between the Maple City Gun Club and the Fremont Gun Club, Aug. 8, the former won by a score of 260 to 239, at Fremont, O. Each man shot at 25 targets.

In the contest for the Western Canada championship, at Winripeg, Man., Aug. 1, Mr. P. Johnson, a B class man, tied with D. Bain, an A class man, and won.

In a match at 25 live birds, between Messrs. Cunningham and Gentlemen, at Watson's Park, on Aug. 6, the former won by a score of 23 to 15.

Mr. C. M. Stark, of Dunbarton, N. H., offers a challenge of special interest to the trapshooters of his State.

BERNARD WATERS.

Which?

SYRACUSE, N. Y., Aug. 12.—J. J. H. and S. G. were shooting in a 25-target race, one man up, five unknown traps. J. J. H. had 20 straight and S. G. had 19, five men to shoot. S. G. bet \$1 to \$10 with J. J. H. that he would beat him. J. J. H. missed his last target. S. G. got his last 5 straight, making a tie. S. G. claims it was a draw. Money was paid to J. J. H., as he claimed that S. G. did not beat him, but tied.

Where will a letter reach Sim Glover? FALSTAFF. In the old days, when the trapshooting world accepted its rulings from the horse-racing world, it was held that a tie divided, regardless of the special agreement. Thus it was held that, if A declared he would beat B, the latter, who was passive, was assumed to take the active converse of the proposition—that is, that he would beat A. The modern rulings have been modified, at times. The proposition is as follows: S. G. bets that he will beat J. J. H. Did he beat J. J. H.? He did not. He therefore lost. A letter addressed to S. Glover, care Von Lengerke & Detmold, 318 Broadway, New York, will reach him.]

Broken and Dusted Targets.

PROVIDENCE, R. I., Aug. 10.—Editor Forest and Stream: The article "Broken and Dusted Targets" in your issue of Aug. 3 strikes me forcibly as being correct in every particular. A "dusted target" has certainly been hit by one or more pellets of shot; therefore, if we wish to preserve the equity of the competition it should be scored "broken" just the same as we do a target that has a small "chip" knocked from it by perhaps one pellet of shot. It would seem to me that the time is ripe for a radical change in the trapshooting rules in force at the present time.

ELMER E. SHANER.

UTICA, N. Y., Aug. 11.—According to my experience, the scoring of dusted targets is all wrong, and I want to tell you why. In the first place, if it is a dusted target you want, a modified cylinder choke, No. 11 shot, with a pattern of 4 feet at 30 yards you would have over 90 per cent dusted and not broken.

Gun right, loaded right and pointed right, over 99 per cent will go up in smoke.

What I claim, and a great majority of 90 per cent shots will agree with me, is that a target should be stopped, broken apart, at least a piece larger than any wad. Give the referee no chance to favor friend or foe. Make his duties so simple that a child can referee.

If it is right to score a dusted target, then it is right to score a pigeon that has been shot at and feathered.

Who deserves the credit on a duck pass?—the man that gets the feathers, or the man that gets the duck? Same thing—allow a dusted target to score, you are putting a premium on bad work.

E. D. FULFORD.

[The points raised by Mr. Fulford in the foregoing interesting communication deserve profound consideration, for he is a gentleman of vast experience in trap shooting matters, and has given them profound thought. Nevertheless, we differ radically from Mr. Fulford on the matter in question, and would submit, for his consideration, and for the consideration of other shooters, the following comments on his contention:

First, we do not think that a modified cylinder choke, with No. 11 shot, at 30 yards, 4-foot pattern, would make over 90 per cent dusted targets, and we seriously doubt whether it would dust 50 per cent. A few weeks since, we saw some fairly good shots on the grounds of the Brooklyn Gun Club experimenting with cartridges loaded with No. 10 shot, using their regular choke bore guns, and they could neither break nor dust one in five. If Mr. Fulford cared to give his contention in this respect a practical test, and report upon it, there would then be more accurate data.

That a gun right, loaded right and pointed right will perform well, no one will dispute, but the capabilities of the gun is not the standard by which to measure the skill of a mass of individuals. If the standard is made so high as to be beyond the skill of the average shooter, or beyond the possibilities of his time and means, interest and support will fall away accordingly.

His contention that a target should be stopped, and that a piece larger than a wad should be broken therefrom, and that the great majority of 90 per cent shots will agree with him on this point, is fallacious. First of all a single pellet of shot may knock off a large piece from the edge of a target, where several shot, hitting in precisely the same place, may knock off an equal quantity, or more, yet grind it to dust; thus the dusted target may really be the better hit. Indeed, sometimes an entire target is "snuffed out," nothing being left visible to the eye except a thin film of finely ground dust; thus there is no perceptible piece," and, under a strict enforcement of the rules, such would be a lost target. In a horse race, the horse which wins need not have his whole body ahead of his nearest competitor. He can win by a nose, and sometimes by an eyelid. In a rowing contest, the size of the piece of the board which comes in ahead does not determine whether the race is won or not. If one boat comes in ahead of the other, be the margin ever so small, it determines the winner. In rifle shooting, the merest graze of the bullseye is considered a good hit of it. And so with other competitions; skill and excellence, not quantity of an object, are considered. Moreover, the target, as an indicator of skill, is not a fixed quantity. It has different degrees of toughness, according to the temperature, and presents different surfaces, according to wind and flights; thus a shot which might be an excellent break under certain degrees of target surface and temperature might be a dusted target under certain other varying conditions, and, indeed, might be a miss.

A referee who was required to determine whether a piece was or was not larger than a gun wad would have the beginning of his sorrows. All his troubles theretofore, would appear the merest trifles, if not pleasant happenings. Instead of making "his duties so simple that a child can referee," it would tax his powers to a degree greater than they are taxed at present. Would it not simplify matters to allow him to rule that the target is hit when it is hit, rather than to compare pieces of targets 40 yards away in the air with ideal gun wads in his mind?

Mr. Fulford says above, "If it is right to score a dusted target, then it is right to score a pigeon that has been shot at and feathered." This is rather an unfortunate reference in support of his argument, inasmuch as the question of whether the pigeon is hit at all or not does not determine the merit of the shooter's performance. The question is, can it be gathered within bounds? No doubt but what Mr. Fulford, as well as all other experienced shooters, have seen pigeons gathered and scored as dead which were not hit at all. They flipped up in the air, were shot at while in the air, were missed, yet were gathered, and thereby was fulfilled all that was imposed by the rules.

Sometimes a quarter of a target is blown away in dust. Now, what is the reason that it is not as good a break as if the one-quarter were knocked off in one chunk?

Mr. Fulford referred to the majority of 90 per cent shooters. This is a matter which interests all shooters.]

WESTERN TRAPS.

Garden City Gun Club.

Watson's Park, Chicago, Aug. 10.—The monthly shoot of the Garden City Gun Club had seven contestants in the club event. Palmer and O'Brien tied on 15. The scores follow:

Table with names and scores: Alabaster, 0; Palmer, 1; Rust, 3; Barto, 1; Roll, 0; Young, 1; O'Brien, 1.

Table with names and scores: Palmer, 8; Barto, 9; Roll, 10.

Chicago Gun Club.

Chicago, Aug. 10.—Herewith find the scores of the Chicago Gun Club's shoot of to-day in the weekly 25-target handicap. Steck wins high gun. A. W. Morton wins handicap trophy same event.

Messrs. Edwards, Elias, Colburn, Bitner, and Cop are not members. They belong to the Grand Crossing Club.

In the monthly trophy, handicap in rise, Bowles won at 18yds. The Chicago vs. Grand Crossing team shoot will be held next Saturday, on the Chicago grounds. There will be no shooting on the grounds on that day. The Grand Crossing members will shoot their trophy shoot on the Chicago grounds on that day.

Monthly trophy, handicap:

Table with names and scores: King, 16; Mrs Carson, 16; Mrs Howard, 16; Dr Arnold, 16; Bitner, 16; Elias, 16; Colburn, 16; R B Mack, 18; Bowles, 18; Dr Morton, 18; A W Morton, 18; Steck, 20; Dr Carson, 21; Edwards, 18; Borroff, 18; Borroff, 21.

Bowles wins monthly trophy.

Weekly handicap, 25 targets:

Table with names and scores: King, 8; R B Mack, 20.

Table with names and scores: Bowles, 25; Dr Carson, 19; Mrs Carson, 25; Steck, 21; Mrs Howard, 20; Dr Morton, 22; A W Morton, 25; Dr Arnold, 21; Bitner, 21.

Bowles and A. W. Morton, handicap trophy, tie Steck, high gun.

Second tie: Bowles, 8; A W Morton, 10.

Third tie: Bowles, 10; A W Morton, 10.

Garfield Gun Club.

Chicago, Aug. 10.—The appended scores were made to-day on the occasion of the first trophy shoot of the third series. In the series just closed Class A was captured by Hellman on 92 per cent., Class B by Dorman on 86.4 per cent, Class C by our one-armed amateur on 57.6 per cent. J. S. Boa won Class A trophy to-day on 24, Dr. Meek Class B on 22, W. T. Johnson Class C on 24.

The day was pleasant, as far as temperature was concerned, but a rather stiff wind blew across the traps, making the shooting somewhat difficult.

In spite of the counter attractions of the yacht races and horse races, twenty-two members took part in the trophy shoot, and several others came later.

First trophy shoot, 25 targets:

Table with names and scores: H N Delano, 18; A D Dorman, 18; P McGowan, 20; T A Hagerty, 12; G Adams, 8; J D Pollard, 19; W P Johnson, 14; L Thomas, 19; Dr J A Huff, 13; Dr Meek, 22; Leete, 8; W A Jones, 22; J Monigan, 8; G W Drinkwater, 14; Hodgson, 17; J C Kiscock, 16; J S Boa, 24; Dr Shaw, 20; Mrs Dr. Shaw, 18; T Eaton, 23; W Eaton, 17; A Hellman, 23; T L Smedes, 19.

Table with names and scores: Z Targets, 10; Delano, 15; Dorman, 13; P McGowan, 7; Hagerty, 3; Adams, 4; Pollard, 7; Johnson, 9; Thomas, 8; Dr Huff, 6; Dr Meek, 9; Leete, 1; Jones, 8; Monigan, 7; Drinkwater, 10; Hodgson, 6; Kissick, 6; Boa, 10; Dr Shaw, 10; Mrs Shaw, 8; T Eaton, 10; E W Eaton, 4; Hellman, 11; Smedes, 9.

Dr. J. W. MEEK, Sec'y.

Winnipeg Tournament.

WINNIPEG, Man.—The fifth annual trapshooting tournament, held in conjunction with the great fair of the Winnipeg Industrial Exhibition Association on Aug. 1 and 2, was a great success. On the first day, one of the main events was the Western Canada championship, which was won by Mr. P. Johnson. Another feature of the day's competition was the fine shooting of Mrs. Johnson, of Minneapolis, who broke 92 out of 112. The scores made Aug. 1 are as follows:

Table with names and scores: Events, 15; Targets, 15; Dodd, 8; Peterson, 9; I Iverson, 13; Warren, 12; Lemon, 12; Dr Allen, 15; Carruth, 12; Wood, 14; Hale, 12; A Iverson, 13; Frazer, 13; Manning, 11; McClung, 8; Andrews, 15; Cox, 13; Cavalier, 14; Bain, 13; Britton, 14; Spence, 7; Hirschy, 14; Seymour, 15; Rowe, 11; Evander, 14; Robbins, 15; Moore, 13; Simpson, 14; Du Bray, 13; Muir, 13; Sorenson, 12; Sprague, 13; Smith, 13; Mrs Johnson, 12; Hanby, 12; Houlding, 11; McKeller, 11; Fairburn, 14; R Lane, 15; Dowling, 11; P Johnson, 12; McTavish, 13; Scott, 12; Daly, 11; Patterson, 13; Atkinson, 14; Wellband, 10; Stewart, 10; Cochran, 9; Carruthers, 11; Merril, 7; Miller, 9; D R Warren, 7; Harper, 9; Brydges, 3; Dick, 6; Lightcap, 12; Campbell, 13; Dr Smith, 11; Dr Fleming, 10; C Andrews, 10; Hamilton, 6; Mrs McInnis, 3; Bell, 38; F T Cadham, 42; Jones, 36; McInnis, 12; Putnam, 11; Parker, 10.

Table with names and scores: Smith, 35; McKay, 35; Baldwin, 35; Stapleton, 11; Armitage, 10; Boling, 19; Elliott, 14; Sprunge, 6; H Simpson, 12.

The weather was exceedingly pleasant. The high average resulted in a tie between Mr. Hirschy, of Minneapolis, and Mr. Seymour, of Grand Forks.

The international championship cup was won by C. E. Robbins, of Fargo, with a score of 46 out of a possible 50. G. Evander, of Wheaton, Minn., made the same excellent score, only missing 4 birds. In the shooting off of the tie the greatest interest was evinced, and excitement was high. Both men put up a battle royal, but Robbins won out.

The Ogilvie doubles were won by Baldwin, of Winnipeg, with a score of 21 out of a possible 24. Baldwin is a veteran shot and one of the best in the West.

The international flags were again won by an American team, and for another year the two beautiful silk emblems will repose within the domains of Uncle Sam. The ensigns were won by a majority of 18 birds.

The scores in the nine regular events are as follows:

Table with names and scores: Events, 15; Targets, 15; Baldwin, 12; Campbell, 13; Boeing, 10; I Iverson, 11; Dr Allen, 13; Carruth, 12; Peterson, 7; Hale, 12; Anderson, 13; Britton, 12; Carruth, 12; Bain, 11; Carruthers, 11; Cox, 18; Sprague, 15; Smith, 11; Mrs Johnson, 9; Hanby, 14; McKeller, 11; Hirschy, 11; Seymour, 12; Rowe, 13; G Evander, 9; Robbins, 12; Moore, 11; Simpson, 13; Du Bray, 12; Cavalier, 14; Sorenson, 11; Stanley, 10; Dr Fleming, 11; Fairbairn, 12; Patterson, 9; Wellband, 12; Todd, 11; Stewart, 4; Harper, 10; Harwood, 11; Houlding, 9; Wood, 13; Spence, 10; Kirkby, 8; G Andrews, 14; Dr Bell, 12; J Cadham, 15; Mrs McInnis, 8; Robbie, 10; Spurgeon, 6; Rodman, 11; Atkinson, 14; Lightcap, 10; James, 5; Armitage, 14.

A supper was tendered the guests, the shooters from the States, on the evening of Aug. 2, in which the utmost good-comradship prevailed.

A Challenge.

A Challenge to Any Member of Any Shooting Club in New Hampshire.

DUNBARTON, N. H., Aug. 10.—Some twelve to twenty years ago, I think I could claim to be as good a trap shot as resided in the old Granite State. To-day, and for some years, I have been practically out of trap shooting, with the exception of shooting occasionally on some local grounds. I realize that with advancing years I do not retain my former skill with the shotgun, especially in quickness and precision. I regret to admit the above, but nevertheless it is a fact. The old spirit, however, still lingers, and I am fully aware that if my challenge is not accepted it may be a good thing for me.

As to my challenge, I will shoot the following match with any man who has been a legal resident of the State for six months and a member of any organized shooting club for three months previous to date. One hundred bluecock targets, thrown under American rules, from magaurap; match to be shot on grounds of Concord Gun Club, Concord, N. H. Said match to be for from \$50 to \$100 a side.

Whosoever first accepts the above will be the man I am after. I will require him to cover my deposit of 25 per cent. of the amount, to be put up in the hands of Secretary Sanborn, of the Concord Gun Club. Balance of stake to be put up in some manner on morning of day of match. I will ask for not less than ten days' notice of date my opponent may name.

In case I should win the above match, I will pledge myself to shoot a similar return match within a reasonable time on the home grounds of my opponent, should he so desire. The above means pay or play.

C. M. STARK.

Norwalk vs. Fremont.

NORWALK, O., Aug. 10.—Herewith find scores of match at bluecocks, between the Maple City Gun Club and the Fremont Gun Club, twelve men on a side, shot at Fremont the 8th inst. It resulted in victory for Norwalk by the score of 260 to 239.

The weather was all that could be desired, and nothing marred the pleasure of the occasion.

The Norwalkians say they cannot find words to express their admiration of the manner in which they were treated by their opponents. They were provided with a lunch on the grounds, and after the shoot a fine supper was spread for them, and in every way their stay in Fremont was made exceedingly pleasant.

Table with names and scores: Norwalk, 260; Fremont, 239.

The high score for Fremont was made by Conrad, 25; and the high score for Norwalk by Bascom, 24.

The return shoot will occur in Norwalk on Monday, Sept. 3; Labor Day. Geo. F. Titus.

Catchpole Gun Club's Tournament.

At Wolcott, N. Y., Aug. 2, there occurred one of those neat and satisfactory tournaments that leave more than a pleasant memory.

Earth, air and sky combined to make a perfect weather day, and it is a noticeable fact that Mr. Wadsworth, almost without exception, is favored with sunny skies, when he projects and manages a shoot.

Among those present who make life agreeable were the affable Mr. Knapp, of Wolcott, and the amiable Charlie Tuttle and the persistent Mr. Knox, both of Auburn.

Mr. Dally, who is well known to the readers of this paper as an old-time trapshooter, was cheered as he came on the grounds, and to make the meeting perfect Uncle Ben Catchpole reported on time, and received the congratulations of all present.

Of the talent on duty were Mr. Courtney, of Remington Arms Company, and Mr. Colville, of Dupont Powder Company.

Wolcott is a pretty village of some 1,500 to 2,000 inhabitants, and is situated near three large cities; namely, Rochester, Auburn and Syracuse.

put a set of five expert traps in a first-class trench and trap house, allowing plenty of room for the storing of targets, so as to avoid any delay when once shooting has commenced.

The set of five expert traps is of course directly in front of the club house, a wide and solid platform allowing of handicap events with limits of 14 to 20yds.

The trapping of the targets, as well as the scoring, was just about as near perfection as it could be. Bunks from broken targets were extremely few in number, while "ball-ups" on the scoreboards didn't occur even when No. 1 squad was disposing of the entire three days' programme of thirty events.

brother, C. H. Tucker, along, just to show that there are other Tuckers who can shoot at and break targets.

Eugene C. Griffiths, of Pascoag, R. I. (I like to give him his full title, since he has allocated to himself the two Grand American Handicaps of 1901) was of course in evidence, although he found the Sergeant system rather a Jonah on the first day.

Messrs. Miller and Spofford came over from Haverhill, Mass., while Messrs. Whiting and Coffin, from Whitinsville, Mass., were also among those who came at the start and stayed to the finish.

The home club was well represented by H. W. Bain, president of the club at its inception, and by Messrs. Budlong, Cook and Dr. Hammond, the latter shooting under the nom de fusil of Cran-

CATCHPOLE GUN CLUB'S TOURNAMENT, WOLCOTT, N. Y., AUG. 2.

looms up every once in a while with a rosebud of an affair. Undoubtedly Mr. Wadsworth knows how to project and carry through a tournament.

Appended are the scores:

Table with columns for Events, Targets, and names of participants with their scores. Includes names like Dally, Marvin, M A Merriman, F Steves, Palmer, Burnett, Killick, Burke, Colville, Uncle Ben, Courtney, Mosher, G Steve, Merriman, Jr., Hopkins, McCarthy, Knapp, Tuttle, Knox, Whyte, brigden, J Hunter, Jr., Chapman, Wadsworth, Wride, Denny, Sen-Sen, Weller, McCord, Beyer, Norton, Fowler, Borst, Conner, J C Hunter, and Ditton.

DICK SWIVELLER.

Re Providence Tournament.

NEW YORK, Aug. 10.—Not having the scores of the Interstate Association's shoot at Providence, R. I., in my hands so as to be able to refresh my memory, no figures or statistics can be given.

The tournament was held on the grounds of the Providence Gun Club, Aug. 7, 8 and 9, under the direct management (of course) of Elmer E. Shaner, the Interstate Association's manager.

When the Providence Gun Club first started in its present shape, in the year 1899, a few members of the club put their hands in their pockets and drew forth bills of various dimensions, together with a check or two, and built in about a week the club house, which is to-day as good as it was one day after it was completed.

other squads were stopped to rectify errors on the board, but in each instance it was the fault of the men at the score, who had shot out of turn. There may have been other instances, but I noticed none.

In the cashier's office was the cashier, Bob Root; the assistant cashier, Bob Root, and the compiler of scores, Bob Root. In other words, Mr. Root was the whole thing in the cashier's office, taking entries, sending out the names of the squads for each of the two sets of traps, figuring up the moneys and compiling the scores.

The Interstate Association's new and large tent was pitched halfway between the two sets of traps, one end of the tent being reserved for luncheon tables, presided over by an able caterer, whose piece de resistance was chowder, New England style.

Wednesday, the first day, was a wild one, so far as weather was concerned. The wind blew a gale from the west, and rain came down at frequent intervals, stopping all shooting, sometimes for nearly an hour; yet we finished the programme, with an average of over fifty entries in each event, by a little after 5:30.

Manufacturers' representatives were quite numerous, for Providence is a pleasant place for a few days' stay, while the attendance at the club's tournaments is always large. Tom Keller, of the Peters Cartridge Company, was there on the first day, his place being taken later by C. M. Peters, a young representative of the same firm.

ston. Other members of the club were also present, and took part in the shoot, but with a thermometer rapidly getting up into the 90s, it is not an easy matter to recall all their names.

While the attendance at this shoot was not quite all that had been anticipated—where, for instance, was the Waterville squad?—the Providence Interstate tournament of 1901 was a decided success, and cannot fail to attract even more attention to the sport of trapshooting, even in a State like Little Rhody, where trapshooters are only excelled in point of numbers by the rocks which strew the face of the State in every direction.

On the afternoon of the second day, the programme being shot out early, an event at 25 targets, expert rules, one man up, was started with seventeen entries. Hallowell, Leroy, Glover, Banks and (I think) Griffiths scored 24 each, Leroy losing his 22d or 23d target, Hallowell losing his 25th.

EDWARD BANKS.

Sharon Springs Gun Club.

SHARON SPRINGS, N. Y., Aug. 6.—Herewith find scores of the Sharon Springs Gun Club's shoot, held on Saturday, Aug. 3. Rainy weather interfered with the attendance. Valentinc did some great shooting, breaking 100 out of 105. All events at 15 targets:

Table with columns for Events, names of participants, and their scores. Includes names like Valentinc, Wallburg, Greene, Hotaling, Wagner, A J Smith, A Smith, Arnold, Dr Wessells, O Eigen, Lyke, W T Smith, Lipe, T Mutchling, X Y Z, La Rue, Klinkhart, P Mutchling, and Lehman.

Interstate Tournament at Providence.

THE Interstate Association's tournament, given for the Providence Gun Club, was marked by the enthusiasm and good-fellowship which has been such a conspicuous and pleasant feature of prior shoots of this club.

August 7, First Day.

There was a total of sixty-four entries for the day. The wind blew a gale till midday, with heavy showers at intervals, making conditions anything other than favorable for comfort and good scores.

Mr. Elmer E. Shaner managed the tournament in his usual finished manner. The scores:

Table with columns: Events, Targets, Fanning, Banks, Van Allen, Le Roy, Hallowell, Griffith, Inman, Whiting, Cranston, Coffin, Bain, Smith, Getchell, Doremus, Francotte, Marlin, Norton, Cutler, Budlong, Spofford, F W Arnold, Johnson, Herbert, Kellar, Schortemeier, Glover, Sawin, Cook, Barstow, Seagrave, Sprague, Wisc, Lupus, Dudley, Burke, Hood, Langley, Courtney, Rose, Colville, Gibson, Carlisle, Dickey, Howe, S A Tucker, H C Barstow, Darling, Campbell, Eggers, Grieves, A W Lewis, Mills, Leonard, McArdle, Machler, Moore, C H Tucker, Davis, Crabtree, Thone, Peters, Phctteplace, Slade, Whaley. Includes scores for August 8, Second Day.

August 9, Third Day.

The weather again was pleasant and favorable. Schortemeier made a star performance by breaking 168 out of 175 targets, Dudley being a close second with 166.

After the regular events were completed, four extras were arranged, which afforded the spectators an opportunity to see what the experts really could do. These events were run off under expert rules, and the purses were divided according to the prevailing Rose system.

The next two events were under the same conditions, except that there were only 25 targets, and the entrance fee was \$2. Le Roy won first money, and Griffith second in both of these events.

The fourth extra was at 10 pairs, and Le Roy again took first place with a score of 17, and W. Barstow second with 15 breaks.

Table with columns: Events, Targets, Fanning, Banks, Van Allen, Le Roy, Hallowell, Griffith, Inman, Whiting, Cranston, Coffin, Bain, Smith, Getchell, Doremus, Francotte, Marlin, Norton, Cutler, Budlong, Spofford, F W Arnold, Johnson, Herbert, Kellar, Schortemeier, Glover, Sawin, Cook, Barstow, Seagrave, Sprague, Wisc, Lupus, Dudley, Burke, Hood, Langley, Courtney, Rose, Colville, Gibson, Carlisle, Dickey, Howe, S A Tucker, H C Barstow, Darling, Campbell, Eggers, Grieves, A W Lewis, Mills, Leonard, McArdle, Machler, Moore, C H Tucker, Davis, Crabtree, Thone, Peters, Phctteplace, Slade, Whaley. Includes scores for August 8, Second Day.

Average Money—Experts: Banks and Fanning tie for first and second, \$17.50 each. Dickey and Leroy tie for third and fourth.

Amateurs: Schortemeier, first, \$25; Dudley, second, \$20; Glover, third, \$15; Hood, fourth, \$10; Griffith, fifth, \$5; Sawin and Inman tied for sixth and seventh, \$2.50 each.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., Aug. 2.—The regular shoot of this club was held this afternoon. The weather, aside from a changeable breeze, was all that could be desired. Seventeen different shooters took part during the afternoon, and it proved a very interesting shoot, and every one noted it a thoroughly enjoyable half-day outing.

Table with columns: Events, Targets, Cutler, Converse, Wilder, Esty, Roby, Stickney, Hawkins, Field, Bell, Russell, Lamb, Curly, Dwight, George, Rob, Burbank, Hood. Includes scores for August 8, Second Day.

Gardner—Leominster—Fitchburg.

Aug. 6.—The fourth of the series of six shoots between Gardner, Leominster and Fitchburg was pulled off yesterday afternoon.

It proved to be a beautiful day. The trap worked well. Every one seemed to be feeling finely. Quite a number of ladies were present. This in itself is enough to inspire any crowd to do its best.

This, as usual, was very interesting from start to finish. The first half proved a tie between Gardner and Fitchburg, with Leominster a little in the rear. Each one realized that it was between Gardner and Fitchburg, and every bird must count.

This was a case where the unexpected happened, and the "bell-cow" of the Fitchburg team went astray and rolled up a score of 37 instead of 46 or 48, as usual; but lightning very seldom strikes twice in the same place, and we propose to even up matters at the next shoot.

The total number of birds broken in the four shoots is as follows: Fitchburg 814, Gardner 809, Leominster 781.

This still leaves Fitchburg 5 to the good; but this will be a dead game race for the two concluding shoots between Gardner and this club. May the team that can smash the most clays win the cup!

Table with columns: Gardner, Leominster, Fitchburg. Includes scores for August 8, Second Day.

Trap Around Reading.

READING, Pa., Aug. 10.—The grand, open-air carnival of the Reading Lodge No. 115, B. P. O. Elks, to be held Aug. 19-24, at Carsonia Park, this city, is going to be the finest exhibition of its kind ever held in this section of the State.

Handsome and costly prizes will be shot for in the different events; among them being diamonds for the diamond event. One event that will attract members of the B. P. O. Elks is the individual world's championship of the B. P. O. Elks, for which grand prizes are offered.

consisting of George Kuersten, Brooke Harrison and Henry H. Heilman, extend a hearty welcome to all sportsmen to attend this carnival and shooting tournament, which promises to eclipse anything of its kind ever held in this section of the State of Pennsylvania.

Trap at Charlottesville, Va.

CHARLOTTESVILLE, Va., Aug. 10.—The second annual merchandise shoot of the Charlottesville Gun Club and the University of Virginia Gun Club was well attended, over fifty shooters participating in the different events.

From the neighboring towns of Richmond, Lynchburg, Staunton, Newport News, Washington, D. C., came trapshooters who enjoyed themselves well, and expressed themselves as being pleased with the tournament. Mr. Franklin Stearns, of Richmond, Va., won the Take-down gun in the merchandise event with a score of 23 out of 25, and thereupon, with fine generosity, presented it to the home team, to be shot for under the same conditions, 50 cents entry, the proceeds to be held by the local team.

The manufacturers' agents who were present were of great assistance to the management, and the local team expresses its thanks to them:

Table with columns: Targets, Stearns, Tignor, Dean, Tom Stearns, Hammond, George, Snellings, Kiracoffe, Steinbuck, Thomas, Collins, Wayman, McKilden, Taylor, Marshall, Alexander, Nelson, Poindexter, Waddell, E Bruffey, G Bruffey, Baskerville, W Baskerville, C R Link, J Fox, Tenkes, J W Daniel, Jr., E Daniel, Venable, S F Terry, Nelson, Winchester, Moorman, Scott, Campbell, Dennis, McDonald, Watson, Dr Loyd, Peyton, R Marshall, Summerson, Davis, Irvine, Koyner. Includes scores for August 8, Second Day.

The Indian Tournament.

THE programme of the third annual tournament and pow-wow of the Indians, to be held at Arnold's Park, Lake Okoboji, Iowa, Sept. 3 to 6, inclusive, can be obtained of Mr. C. W. Budd, Arnold's Park. There are three handsome trophies and \$600 in cash added. Shooting commences at 9 o'clock. Targets will be thrown Sergeant system. Class shooting, 40, 30, 20 and 10 per cent. in the 15-target events, and 30, 25, 20, 15 and 10 per cent. in the 20-target events.

Mr. F. C. Richl, as Grand Scribe, has written some poetry for the occasion, in keeping with the legendary theme, under four heads, namely, "The Summons," "The Roster," "The Conclave," and "The Retreat," the two latter of which are presented herewith:

The Conclave.

Now are the Indians once again Encamped on Okoboji's shore, Proud of their heritage as when Their prototypes, in days of yore, Assembled at the Chieftain's call Beneath the soft September moon, To count their trophies, and recall What blessings mark the tribal boon.

E'en so we meet, in friendly strife Where dusky warriors once essayed The conquests of the hunter's life, By tests of valor undimayed, And ve, as they, each to his time, Welding the weapons of his art, Are spurred by Fame's resistless chime To struggle for the victor's part.

So, too, when all the lists are done, Within the wigwam of the chief, We make returns of honors won, And find in feasting glad relief, Mark each responding to his name, A score of earnest, manly men, All tried and true, well known to fame, And happy to be here again.

The Retreat.

Thus having met with friendly zest, We welcome gladly every guest To join in the heroic fray, And all the pleasures of the day, And when the moon's first shadows wake The twilight phantoms of the lake, The camp-fire marks a joyous throng Wrapt in the warmth of light and song; While gay papposes, unrestrained, Engage in warfare ably feigned, And loving squaws with graces sweet Bring cheer to make the hour complete.

Such is our greeting, ye who read; The lists are clear, the feast is set; Come, then, and share the warrior's meed! We want you with us! Don't forget!

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

A. N. CHENEY.

ALBERT NELSON CHENEY died at his home in Glens Falls, N. Y., Saturday morning, Aug. 17. His death was sudden, having been caused by heart disease, and the intelligence of it comes to his friends with all the greater shock because he had been apparently in the most robust health, and there was no premonitory illness to prepare them for the event.

Born a farmer's boy in Glens Falls, about fifty-five years ago, Mr. Cheney acquired at a very early age that passion for angling which abode with him through life, and had a determining influence upon his career. He was not only a fisherman but a student of fish life and of other phases of natural history. He was among the first persons in this country to give attention to the possibilities of fishculture, and his aid was sought by the United States Fish Commission, when suitable sites were to be selected for Government fish hatchery stations. In 1895, when the New York Fish Commission was reorganized and the office of State Fish Culturist was created, Mr. Cheney was selected to fill the place, and at once demonstrated by the efficient discharge of its duties the wisdom of the appointment. In all that related to the practical work of fish propagation and stocking of waters he was in a large sense the Commission. The members of the board recognized his ability and confided in it, throwing upon him the responsibility of the several enterprises decided upon and undertaken, and, wisely giving him untrammelled control of his work. The vast information respecting all phases of fish life, the practical knowledge of methods of fishculture and the interest, enthusiasm, executive ability, sterling integrity and conscience which he brought to the work, all combined to make his administration of the office successful and valuable in an extraordinary degree. A. N. Cheney's record of six years as State Fish Culturist is one of splendid services rendered to New York.

Always an accomplished fisherman, with a special fondness for the trout stream and the salmon river, Mr. Cheney was among the earliest contributors to the FOREST AND STREAM, and for a number of years, up to the time of his death, was regularly associated with it as a contributor of those "Angling Notes" which have been an invaluable feature of the paper. He was an extremely vigorous and able writer, and drew the material for his notes from an inexhaustible store of information, so that in reading them one felt that here was a master of his subject. The "Notes" covered an extensive field, having to do now with the methods of fishculture, and again with some delicate question of angling ethics, with a new observation in the life history of fishes, and again with the mechanical construction of a fishway. He often told us that he wrote his "Angling Notes" because he enjoyed the writing, and found in it grateful diversion from regular work. His prolific contributions to the FOREST AND STREAM, those which were contained in the New York Fish Commission Reports, and other papers, made him widely known as an authority on fish and fishing; his reputation was international, and his name was almost as familiar to the anglers of Great Britain as to those of America. He had an extensive, and at times fairly overwhelming, correspondence with anglers the world over; probably no other single individual in this country, certainly no other one of his generation, has been of practical help to so many people seeking information on angling and fishery subjects. Among the fishing societies and protective associations with which he was identified were the American Fisheries Society and the World's Fisheries Congress; he was President of the Mohican Rod and Gun Club of Glens Falls, Secretary of

the Eastern New York Fish and Game Protective Association, associate member of the New York Association for the Protection of Fish and Game, honorary member of the Fly-Fishers' Club of London, the Anglers' Association of the St. Lawrence River, the Vermont Fish and Game League, and the Northern New York Association for the Protection of Fish and Game.

Mr. Cheney had a winning personality. His friendships were many, his friends devoted and true. They were bound to him not only by the charm of his presence, but by a recognition of those sterling qualities of the man which commanded admiration and respect.

THE BUFFALO REMNANT.

It is a good many years since the first article was written, entitled "The Last of the Buffalo," and there are still wild buffalo, though to-day they are pitifully few in number. No matter how they may decrease, there will still be found murderous spirits, who, for a few dollars of gain, would kill the last buffalo, just as if we had angels here on earth they would pluck the feathers from their wings to sell.

For many years there have been known to be a very few buffalo in Lost Park in Colorado. Protected by law, their feeding grounds have been respected by most decent people, yet it has been known that sometimes buffalo have been killed, and smuggled out of the State, occasionally by the ordinary routes of travel, and more often through the mountains into Wyoming.

News has just been received that the Lost Park herd has been practically exterminated. It is said that the authorities know of the killing of five animals that have been surreptitiously taken out of the State and are now in Chicago, while last week four more carcasses were found by the game wardens and seized.

Game Commissioner Harris is quoted as saying that he believes, from what he can learn, that there are only two buffalo left alive of the Lost Park herd. The event marks the destruction of one of the two little bands of wild buffalo in the United States, outside of the Yellowstone Park. The location of the other band is well known to many people, but it is fairly well protected by the country which it inhabits. To-day its numbers probably do not exceed fifteen or twenty, if they are so many.

It might be thought that a State which has within its borders a little band of wild buffalo would do its utmost to cherish and protect them, and this, no doubt, Colorado has done. It is melancholy to learn of the failure of the effort. Four men are reported to have been arrested in connection with the affair, and it may be hoped that, if found guilty, they will be dealt with to the fullest extent of the law.

SMALL-CALIBER RIFLE IN WAR.

SOME years ago, when small-caliber rifles came into vogue for use in game shooting, there was quite an active discussion among hunters as to their effects on game, and especially as to the differing results which followed the use of the soft-nosed and full-mantled bullets. Various experiments were made by hunters to determine these matters, but without very satisfactory results. Other experiments, careful and scientific, have been made by Prof. Bruns, of Tübingen, Germany. There were some reports of surgeons in the Spanish-American war, but little that was satisfactory.

In a volume recently published, giving certain medical and surgical experiences in the South African war, Messrs. Bowlby and Wallace have given a series of observations on the use in war of modern firearms, which the big-game hunters will greatly value. These writers had many opportunities for comparing wounds made by the Mauser and old Martini rifles, which were used by the Boers, with the later Lee-Metford rifles used by the British. Their observations teach that the full-mantled small-caliber ball causes less shock than the old large bullet, and that the danger of blood poisoning is much less. On the other hand, at short range, the effect of this bullet is very disastrous; the injury is not confined to the immediate track of the ball, but extends far away from it. Moreover, when bones are struck, the ball produces great shattering, and even pulverizes the bone.

On the other hand, at long range, the effect of the bullet is slight; it pierces flesh and bone, but does not injure tissues at a distance from its path. So true is this that a certain proportion of patients shot through the brain at long range completely recover, while in the case of men shot through the brain at close range, the whole brain is disintegrated. Bones penetrated by balls at long range were not extensively fractured; they were merely pierced.

Messrs. Bowlby and Wallace saw nothing to lead them to believe that the full-mantled bullet ever alters its shape within the body. When such change of shape appeared, it seemed always to be the result of contact with some hard substance outside of the body.

Another important conclusion is that the soft bullets do not upset or mushroom when striking the soft tissues, but only when they meet with hard bone. This, we believe, has not been the experience of sportsmen, but, on the other hand, it is suggested that the hair and hide of a big-game animal is compact enough to cause the mushrooming of a soft-nosed bullet, while the human flesh is not.

While these observations are perhaps not of much practical use to the big-game hunter, they are very interesting, and well worth knowing.

SNAP SHOTS.

The sailing for America of the Irish rifle team, which is to compete at Sea Girt, N. J., with the team representing the New Jersey State Rifle Association, recalls the old international rifle matches of twenty years ago. The greatest popular interest was taken in those contests, and biographies of the members of the team, their doings and the targets they made, claimed a good share of the public attention. Since that time the interest in rifle shooting has steadily diminished, and of late years the place of this sport has been taken by a variety of others, which require less time and preparation. Nevertheless there is no finer, more manly, sport than that of rifle shooting, and it may be hoped that the coming of this Irish team and the competition which is to take place at Sea Girt may mark the beginning of a new interest in it. Except for the work of a few individuals, rifle shooting is now confined to members of the National Guard and to a few societies of German-Americans. It should have a wider vogue.

"I saw not a buffalo nor a grizzly on the way across the continent," writes one who has just made one of many trips from the Atlantic to the Pacific, "nor even any antelope where they used to be so abundant. Prairie dogs and sage hens were the only 'game' in evidence." Manifestly at this stage we would not expect to see buffalo or grizzly from the ear window; but the utter disappearance of the antelope from vast stretches of country where it was not so long ago a familiar feature of the landscape, sets one to thinking of the wild life which helped to make the West and give it novelty and attraction as seen through Eastern eyes. We are told about the passing of the Western big game, and we read of it, but not until one goes over the ground for himself and compares the new conditions with the old can he fully appreciate the change.

The pot-shooting Italian is again in evidence. As Mr. Samuel Verplanck and his wife were driving on the Wappinger Falls road near Poughkeepsie, N. Y., the other day, they were wounded by charges of bird shot from an unseen source. The affair was at first supposed to be a murderous attack from ambush, but investigation showed that the shooting was done by some members of a colony of Italians living in the neighborhood, who have been accustomed to potting squirrels and robins, and on this occasion had no intention of filling Mr. Verplanck with stray shot. This appears to be a case where the enforcement of the game law might save the lives of some of the valuable citizens of Dutchess county. If the pot-hunting squatter must have a human victim, let it not be the chance traveler taking a drive on the highway with his wife, and all unsuspecting of gunners and danger, but rather let it be the district game protector valiantly endeavoring to do his duty by tackling the obstreperous pot-hunting, robin-popping son of Italy.

The Sportsman Tourist.

The Appalachian Forest Preserve.

BY CHARLES HALLOCK.

Editor Forest and Stream:

I have been doing the Appalachian Forest Preserve since June. It is a big thing, embracing half a million square miles of mountains, crags and forest areas. Tops of some mountains are clean shaven, smooth as a lawn, with flocks and herds grazing, and on the higher elevations, like Roan Mountain (7,000 feet up and more), the rhododendron and kalmia replace the stunted cedars of most mountain systems and suffuse the beautiful, rounded shoulders with a pink flush, like a senorita's mantilla. Down in deepest gorges, where the whiteness of the torrents shows against the blackness of the rocks, the laurels, azalias and honeysuckles are massed on either side, and banked up like floral tributes in an Easter chancel, mingling with the galix, the phlox and the scarlet pinks, and often they bury the streams clean out of sight, so that we can hear only a murmur of suppressed delight. Fact! What I assert is a blooming reality in the month of June, and not a midsummer's night's dream woven out of fancy. Moreover, some of the laurel and rhododendron stems are a foot in diameter, and your Highlands correspondent, Henry Stewart, who runs a mountain saw mill, tells me that he has sawed them into boards. Later on the forest trees are all a mass of blossoms, the chestnuts, chinquapin, tulip, sourwood and several others waving their fronds like giant plumes and filling the air with fragrance.

Now I submit, in common with all enthusiastic advocates of a national park, whose name is legion: Are not these rocks and waterways and eminences and cliffs, with all their garniture of flowers and foliage, not to speak of the feral fauna, *au couvert* fit material for a national park commensurate with the size, pretensions and ambitions of our country? Secretary of Agriculture James Wilson, who is as practical as he is enthusiastic, prefers to have this proposed magnificent segregation known as a forest preserve, and he is right, by all odds. He says: "The idea of a national park is conservation, not use; that of a forest preserve, conservation by use." Very true! One is simply to please the senses; the other revenue under systematic forestry and axe work.

Official maps define the area which is thought to be immediately available for this reserve. It takes up the great backbone of the Appalachian divide, with its dimpled flanks on either side; but there are contiguous tracts available, and even more desirable from an economic standpoint, and several of these already enjoy a continental notoriety as summer resorts and private domains, the Biltmore estate standing out conspicuous and dominant among all others. Narrow-gauge railways, trolleys and turnpikes penetrate some of the most sequestered, weaving their upward way with sinuous aspirations toward the culminating summits, where all the kingdoms of the earth, the vegetable, mineral, arboreal and faunal, appear at one grand *coup d'oeil*. Going to Sapphire, the carriage drive makes 423 turns in seventeen miles, and up the twelve-mile ascent of Roan Mountain in about the same proportion. In the five mountain ranges designated as the Smokies, Balsams, Blacks, Craggies and the Blue Ridge, there are forty-three peaks in all which are 6,000 feet high and upward, and there are eighty-two others which exceed 5,000 feet, and closely approximate 6,000, while those which exceed 4,000 and approximate 5,000 are innumerable.

From Observation Point on Overlook Park on the outer rim of Asheville, 660 feet above the town level, one can look across the intermediate valley and see the delectable mountains twenty miles away extending in an illimitable range to the right hand, and the left half-way round the circumference of the horizon; and well may the kindled imagination draw fantastic pictures of an allegorical heaven beyond, so soft are the tints and so delightfully splendid are the hues of pearl and blue and gray. It is hard to find its counterpart. Mr. R. S. Howland, of Providence, R. I., who has made this transcendent view more readily available by a trolley line from "the Square" in Asheville, has done the park, as well as the public, a notable service, and one which a very liberal patronage shows is greatly appreciated. This view is no baseless fabric of a dream, no transitory vision, but an established fact. It has not to be created. It already exists. It only has to be enacted. The fiat has only to go forth from the national Capitol. Let Congress speak as the sense of the people dictates. Then all its forested areas, its catch basins, reservoirs, water falls and timber belts will be reserved and preserved secure from vandalism, and when the axe is laid at the root of the tree, it will be for the service of men and the good of the timber which is yet to stand. During July and the first two weeks of August there were twenty-five days when rain fell on the mountains, and some of these showers were torrents, which washed the bottoms out of the country roads in a jiffy. Had there been no forest blanket to retain the downpour, the damage that would have resulted would have been immense, while the quantities of soil and detritus washed down from the denuded rocks would have gone to fill the harbors and river channels of the lowlands, which all the dredging in the world and continuous appropriations from Congress can never keep from filling with the land wash so long as the uplands are disregarded. Let the headwaters be protected and the national reserve will be not only a beauty and a joy forever, but will save the country from droughts and freshets, and bestow upon a grateful land a plenitude of fruition. Then all "the hills will sing together for joy and clap their hands."

Exempt from torrid heat and in perfect bodily comfort, I passed the summer months within its winsome precincts. I have enjoyed its cooling shades, its beds of roses, and its rare exemption from mosquitoes, gnats and noxious insects. I have drunk its limpid waters, caught its speckled trout in mountain lakes and dashing stream, and heard its owls hoot at nightfall. Snakes there are, and wildcats galore, but they are seldom seen unless hunted. Foxes, bears and coons are very numerous, but

those who have no coops or cornfields need not apprehend them. Turkeys and ruffed grouse are fairly abundant on the mountain sides, and deer in the coves and valleys; quail are all over the fields and household premises. Squirrels are seldom seen.

Dr. C. P. Ambler, Secretary of the Appalachian National Park Association, a native of Ohio, and one of the Buckeye contingent set apart like the Levites to serve the people, seems to be the mainspring, pulse and motor—in fact, the whole circulatory system, in these parts, of this important enterprise. He has already prepared and distributed over 200,000 circulars in propaganda work, and secured favorable mention in hundreds of newspapers, and hopes to secure favorable legislation at the next session of Congress. A man so earnest and indefatigable ought to see success, and the project ought to crystallize, and Congress ought to have sense enough to see that it does succeed. Both the Doctor and his wife are accomplished hunters of big game, and their beautiful home on the edge of Asheville is filled with superb mountain trophies of caribou, elk, moose, bear, alligators, wolverines, badgers, foxes, wildcats, wolves, and panthers from Wyoming, Florida, New Brunswick and remote wilderness regions in the Shoshone and Blackfoot countries. Both are superior riders, and it is but a few months since they made a tour of 450 miles on horseback together through the precincts of the Appalachian Park in the course of a six weeks' outing.

Another staunch friend and promoter of the Appalachian Park scheme, of even greater renown, is Capt. William Miles Hazzard, of Georgetown, S. C., who has a summer residence called Beaumont on the apex of one of the near-by knobs of Asheville. His house is filled with trophies of the chase, chiefly of deer killed in South Carolina, perhaps fifty specimens in all, of which a large proportion comprises horns which exhibit strange deformities, and one most interesting pair of locked horns, the combatants being found alive, but greatly emaciated. Capt. Hazzard had the honor of taking President Cleveland during his administration on no less than five ducking trips, under the auspices of the Annandale Club of South Carolina, of which he is a member, and I doubt not the incidents which he relates of the President's outings would have been nuts for the reporters could they have been obtained at the time of their occurrence.

The Swimming Sisters of the Sea.

BECAUSE the wind—the South Sea trade—for every month of the year but two followed a close schedule of time and compass point, all boat voyaging was one of two things, either a dreary drag under a white-ash breeze or else a much more enjoyable dash to leeward with a fair wind and an even keel. Owing to the geography of the chain of islands of the Samoan archipelago, which are strung out nearly in a straight line from east to west, there was never any need to go north or south in any general and long-continued course. Eastward when the trade wind blew, and that, for ten months on end, was from 8 in the morning until set of sun, was almost too taxing a task to impose on the magnificent crew of the consular boat, and only to be justified by some sudden outbreak of revolution calling for immediate official intervention. To go eastward under less pressing conditions was an affair of the soft and silent night, when the foam on the barrier reefs shone like a friendly ghost of danger to be shunned, when the wind had gone to sleep, when the wonderful violet of the sky seemed to brood protectively on the summits of the mountains dimly seen through the obscurity. Then the crew could make good progress to windward in the calm, and taxed so slightly their brawny backs and stalwart arms that scarcely a mile of the open sea on which our voyage sped but did not echo the music of four strong voices in some ancient song which in bygone ages had done like service for whole fleets of ocean-going canoes, and the time was set and marked by the clear click of the loom of paddles on the gunwale of the daring craft.

It was fixed in the law of nature that half of every voyage must be under the laboring oar, but with equal regularity half was the swift slipping from crest to fellow crest of the open sea, sheet and tiller entailing scarcely any responsibility on one sailor, the others lounging on the thwarts, half asleep in the bright sun, singing now and then love songs or interminable chants of dim legends of the past, recounting now and then experiences suggested by the vanishing sight of brown villages nestling under green boughs upon the glittering beach.

Too much cannot be said of the boat in any recollection of Samoan life. The land is so sharp set, the mountains are so jagged and precipitous, the roads are such constricted trails through dripping jungle, that it is of necessity that the boat is the only conveyance. It must replace the horse and the cart, and it gives the otherwise pedestrian greater speed upon his journeyings and certainly far more comfort. Navy-built, at the Mare Island yard, there was surely no better boat than this from end to end of the South Sea. It was four-oared, 22 feet on the waterline, so light that the oarsmen could easily carry it on their shoulders, strong enough to take without injury many a sharp shock on coral reefs, and so fast that it was simply impossible to get a match race on any terms. Best of all, she was as dry as a bone whether under oars or sail, a quality of no little moment when it is recalled that all the voyages were conducted right out on the open ocean. It seems foolhardy in retrospective glance, this trusting one's self for long voyages at sea in a toy boat easily matched for size in the ornamental waters of city parks. Were one to launch such a boat at Sandy Hook and propose an outside trip to Boston, or the Capes of the Delaware, he would naturally be considered a fit candidate for a Bedlam; yet in the islands it seemed the most natural thing in life to set out on ocean voyages of such and even greater length, and to regard such a boat as amply sufficient.

It surely is pardonable to dwell in a little fond thought on the boat, for in it I dashed through all the Samoan waters and learned to know every cape and headland, the mountain gorges where sharp squalls might be expected to steal out upon the voyager and try to catch him napping, the landmarks of reef and fishing ground. All of the Samoan sea and more than half the shore I knew by means of this boat, therefore it must serve as the view-

point of most of the stories which I have brought back from the distant islands which, since that time, have been made a part of our national domain, at least so far as concerns all that is worth having there.

The story of the swimming sisters came to me in the boat, and on a daylight trip, which, of course, means that we were under sail and running free before an eight-knot trade. We were coasting down the south coast of Upolu either on the way home or else directed to some visit of great ceremony, for in addition to the official tulafale or "talking man" of the consulate, I had a tulafale of my own, so old as to be purblind, but as cheery as a cricket, very wise in all things Samoan, and best of all qualifications, he was almost the only Samoan who could get it into his head that, above all things, I wanted to hear the stories of the past. If only I let him have his own way in the telling, I was sure to get the whole of most storics from Ailolo, but it never ran straight, and it was always necessary to reconstruct it into seriatim order afterward.

Tanoa was at the tiller, and I think he was asleep. At any rate that mattered not the least in such steady voyaging. But something woke him from his nodding pose, the scream of some bos'n bird overhead, the scutter of a fleeting shower of flyingfish, the leap and splash of some pursuing bonito. He looked shoreward, a habit of the island navigators, drawn from the ancient days when the open sea was free from danger, the shore must be scanned for sight of hostile canoes ready to set out in pursuit to rob and kill. Just then there was thrown up into sight upon a wave crest a piece of roughly shaped timber adrift, and the rude crotch lashed to one end which we saw, as we passed it close inboard, showed that the flotsam was the simple mast of some sailing canoe that had gone adrift or had been discarded.

"Tilafainga, Tama'itai," said Tanoa, as he pointed out to me the floating wood. So far as Tanoa was concerned, that was a good and sufficient explanation, and I knew by long experience that if there were a story behind the simple statement, from Tanoa or the other boys in the crew I could never hope to get it. But with Ailolo it was a different matter. He could not see the floating timber, but his quick ears caught the word and his chipper brain started to unreel a lot of stuff which it was hard to make sense of at first.

"Tilafainga! Do you know what that means, Tama'itai? the mast was difficult, aue! it was hard, one end sank and her head went under water, and the other end sank with her and her head went under water, and that was how she came by her name. Panga, but that was a swim! And her sister, she swam, too, and found her name in Tutuila, Taema the Glistening Beach. Aue, aue! Where are we now, Tanoa, for you are young and can see the shore, but Ailolo is grown old and blind, and all that he sees is but the things that were these many years ago; where, then, are we?"

"Fanga Safata," replied the boatman; "we have left Siumu far behind; here is the sand point where is Vaie'e-i-tai, and behind the point is Vaie'e-i-uta, and there yonder is Saanapu, and between is Safata Bay."

"Oi, oi, oi!" cackled Ailolo. "The spot of sea is right. It was off Safata that the girl found her name, Tilafainga, and in the same spot you find another difficult mast adrift, but the name was taken up ages ago and we are too late. Isa, what a swim that was! It began in Savaii and the swimming sisters swam far in all Samoa, to Fiji they swam, to Tonga they swam, and back they came to Samoa. And the king is of their family, and so, too is Mata'afa. Pongisa! There never was a swim like that from the beginning and coming down to these nights and forever and forever. But they were scared when the chief threw down the backload of oven wood which he had fetched in because his wife was sick, and they broke apart and jumped into the sea and swam. Aue, it is a hard thing to have a sick wife, and leads a man into many difficulties. Now let me tell you who was the father of the swimming twin sisters and who the mother." Then Ailolo began, as all the really old Samoan stories do begin, with the great gods in the ninth heaven, and thence by an unbroken chain of marriage down to date, a part of the narrative which may be readily omitted. But from the sample foregoing it will be seen that it is never easy to make out the sense of a Samoan story, and many repetitions must be needed before all the elements can be reduced to consecutive narration. In what follows we shall find the legend of the swimming sisters set forth in as straightforward a manner as possible, but lacking the interjections and devious thoughts with which the account, as given by Ailolo, was enriched.

It was in Savaii, on its southern and most iron-bound coast, that the twin sisters were born and grew up to be quite sizable girls. Their parents are said to be of divine descent, probably they were as respectable as any of the elemental savages who the Samoans then were; but all this family history need not concern us. At birth, and, in fact, until the twins fell into the series of events which have made them historic, they seem to have had no names at all, a thing that will surprise no one who knows the importance of the name in Samoa and the looseness of the tie by which it is attached to any given individual. But if in their early career they were anonymous, these young women are sufficiently distinguished to all time by the fact that a deformity united them most intimately; in fact, at the risk of an anachronism, they are best to be described as Siamesed. This fact is so clearly brought out in all the legends as to lead one to the belief that there must be at least this historic basis, that in Samoan antiquity there must have been a pair of twins united more or less extensively by connecting ligaments. Not only is the fact of the junction clearly dwelt upon, but the manner of the attachment is no less distinctly stated. This was by a ligament connecting in each member of the couple a point on the spine high up between the shoulder blades. The sisters were thus brought back to back, when one walked forward the other had to step backward, when one bent over to pick up anything on the ground the other was lifted in the air and borne on her sister's back. In every account of the twins explicit mention is made of these inconveniences and without the omission or alteration of a single material particular.

In the narrative it is expressly stated, and it will be seen in the foregoing quotation from Ailolo, that the mother of these monstrous twins was ill and unable to be

Those Who Go Alone.

Editor Forest and Stream:

It was with deep interest that I read the editorial "Going It Alone" in this week's FOREST AND STREAM. Like a ray of mellow sunshine falling athwart the wings of memory, it recalls other days extending back into FOREST AND STREAM history nearly a quarter of a century. While FOREST AND STREAM has steadily advanced with the times, yet one charming feature of the good old days is missing. And this can in no way be attributed to any fault of our journal, but, in my opinion, it is a fault of the times. I refer to the chronicling of outings of the lone camper, and to cruises of the single-hander.

Nesmuk is dead, and apparently there are no cruises like that of the "Sairy Gamp" to be recorded in these days, and no one to tell them in Nesmuk's charming way. Kunhardt, too, has passed away, and since the ill-fated blizzard of '88, we have waited in vain for his equal as a writer on single-hand yachting, or yachting in general. In my opinion, the account of the "Cruise of the Coot" is the star description of small-yacht cruising ever published in FOREST AND STREAM, and far ahead of anything I have ever read in any other journal.

In FOREST AND STREAM of Dec. 16, 1880, page 396, in writing of those who cruise in partics, Seneca said: "The great pleasure to be derived from voyaging wholly alone, depending upon no one but yourself and your craft for all the comforts of life, communing with no one but nature, and taking all sorts of weather as it comes with zest and enjoyment, whether good or bad, is a pleasure unknown to those gentlemen." I believe these words of Seneca to be wise.

Then there was Kelpie, in such articles as "Outdoors." It seems a matter for regret that no such accounts are to be had in these days.

Then among those who may be termed the lone sportsmen-landsmen, the charming pen of O. O. S. is gone forever. It is a matter of congratulation that Ransacker is still with us, though his articles are few and far between. There are other worthy ones, but they are getting scarce. Somehow it appeals to my notion that those who do go it alone, and live for a time alone, right in the very heart of nature, are the ones whose very souls become impregnated with the essence and wisdom of nature. They learn her secrets in a way that is more vivid and lasting. And, naturally, they are the ones who can impart their knowledge to others in the most charming and interesting manner.

Can it be that the scarcity of such men, and such pens, is attributable to these "commercial" times? The whirl and dance for the almighty dollar is getting faster and faster. People hardly stop to eat and sleep, and when there is a chance for an outing it must needs be cut short. It seems harder to "break away" for two weeks now than for two months fifteen years ago. When one's time is so limited, he naturally wishes to get all out of it possible. Therefore, the guide being the medium through which he can reach the best places in the quickest time, to take a guide and go it alone seems to me the best way under existing conditions.

WILLIAM H. AVIS.

The Barbecue.

It may perhaps be considered quite a bold assertion to state that the "barbecue" in its true sense is a North Carolina "institution," and that the "Brunswick stew," its concomitant, is confined to even narrower limits.

The summer and the early autumn, before the cotton ripens or the chill, which is premonitory of winter comes, is the time and season of the barbecue. Near some spring a shallow pit is dug, say 18 inches in depth and 3 feet in width, and of length proportioned to the number of animals to be barbecued. Generally the latter are medium-sized pigs, locally known as "shots," but not infrequently little pigs, though lambs are also so cooked, and chickens are especially delicate.

Hickory branches, well seasoned, are gathered and a fire made in the pit, and also one outside. Both are allowed to burn until only the coals remain, these being covered with the white and almost impalpable powder which forms the ashes of this particular timber. From the fire, near the pit, the dying embers in the latter are renewed, as often as necessary. The fire in the trench or pit must be glowing, yet not fervent, and absolutely smokeless.

The animals to be barbecued are carefully dressed and split wide open, then spread-eagled by means of hickory sticks, reaching from foot to foot, so they will lie flat. The basting, or the "sop," to use a technical phrase, is made in a pot, and its component parts are of special importance, as upon their just proportion much depends. Vinegar is, of course, the base, and among the other ingredients are butter, red ball pepper, black pepper and salt.

The animals, properly trussed, are placed over the pit, the projecting ends of the sticks not only supporting them but also affording a most convenient means of turning them over.

The genius of the occasion is the "barbecuer," who, be he white or black, professional or amateur, addresses himself to his task and to the obligations of his great function with as much gravity and earnestness as if he were Admiral Dewey at Manila.

The meat cooks very slowly. Its turns are frequent; its basting incessant. Five hours are required to make it perfect. It is then cooked much as primitive man must have prepared it. The people who are to eat it are, for the time being, primitive men. They walk about, minus coats and collars, and take many an anxious look at the barbecuing. Their interest, their anxiety, are quite comparable to that of Charles Lamb's Chinaman about his roast pig. Savory odors fill the air. No palate, however jaded, can remain indifferent to them.

The preparation of the Brunswick stew has gone on with equal deliberation and care. In this most divine of stews, which would make the highest-priced French chef to the last degree envious, are many ingredients; the tender meat of the young squirrel; chicken, boned and chopped fine; butter beans, tender green corn, tomatoes,

finely chopped cabbage, red and black pepper, Irish potatoes, butter, salt and a dash of brandy. The proportions, like those of the sop of the barbecue, are secrets, either evoked in the brain and palate of the maker or else handed down as a tradition.

Not a few of the people who are so lucky as to be "at the barbecue," take more or less frequent preliminary "nips" during their period of waiting, the beverages ranging all the way from lemonade to beer, and thence to the seductive mint julep.

Few people know how to make a julep properly. Into a glass put some spring water, and in this stir a teaspoonful of sugar; add a nugget of ice, put in a sprig of mint, and after stirring it lightly so as to crush the mint serve that at the bottom to get its essential flavor, but leave the top of the sprig or sprigs unruffled; pour in rye whisky; stir slowly so as to mix, and let the completed beverage stand a moment, then drink it, through a straw—only because that makes it last longer.

But to return to the barbecue. The sun is westerning a little; appetites are sharpened to the highest degree; "Line up, gentlemen, the Brunswick is ready," sings out the barbecuer. The Brunswick is served in bowls; the appetite but grows with what it feeds on. Despite the enormous consumption of the stew there is no lack of room and appreciation of the barbecue, when its turn comes. It is served in wooden plates, and the liberal use of pepper in it makes beer or lemonade precisely the proper beverage.

The quantities eaten, both of Brunswick and barbecue, are often so great as to be well nigh fabulous. There is always a rattling fire of conversation; country and town wit shine at their brightest at a barbecue. Wide is the range of talk—from politics to the cotton crop—and all differences are made as nothing by the benign influence of the barbecue. At this great summer function in central North Carolina all men have become equal, whether rich or poor, and townsman and countryman vie in their exploits as trenchermen.

The barbecuer and his assistants pass and repass with long wooden trays, or trenchers, on which are filled the fragrant barbecue, urging the eaters to renewed efforts, or, if more of the stew is desired, it is ladled out of the steaming pots.

The reputation, nay, fame, of a good barbecuer goes near and far, nor does it end even with his death. His name is mentioned with tenderness at many a feast after his mission on earth is ended. He ranks very far above the common cooks, and not Soyer in France bore higher repute than do these professors of the noble and joyous art of "scorching a pig" in North Carolina.

The barbecue is in its glory in only about half the counties in the State; the Brunswick stew in less than a third. The fame of this particular sort of cooking is carried near and far by lucky mortals from other States, who attend these feasts, but they can only tell of their delights; they do not spread the cult of the barbecue. Its votaries are many; its priests but few.

To the epicure, who partakes of barbecue, the head of the pig is the *bonne bouche*; the ribs rank next. The hotter the day the cooler are these big Southern woods, and delightful, indeed, is the association, the comradeship of the people who gather at these woodland feasts, which freshen alike the body and the mind.

Natural History.

The Mosquito Question.

Editor Forest and Stream:

Following on the general lines indicated by the Government and other officials, and by private individuals, I determined some weeks since to test the efficacy of oil vs. mosquitoes. My farm consists of some 200 acres of land, but of this less than half is available for experimentation.

The central plant consists of farm buildings, green-houses, stables, chicken, duck, goose and turkey houses. There is water both running and standing. Two water barrels stand near the cold frames. Near by is a small concrete duck basin, and besides these are the watering troughs for the stock, never completely empty during the summer, and a pond of considerable size in the home pasture lot. This pond has no outlet. The pond is presumably the best adapted for the hatching of the eggs and development of the larvæ of the mosquito. All of these bodies of water were carefully kerosened on July 25 last. At the time the mosquitoes were very thick. It was noted that the air over and about the pond was full of "darning needles" and "dragon flies" at the time, and the borders of the pond swarmed with mosquitoes. A few days later there were no "darning needles" or "dragon flies," and a remarkable dearth of mosquitoes. For more than ten days there existed almost complete immunity from the pests.

Last evening, Aug. 12, the superintendent observed great activity among a flock of young ducks. They seemed to be busy catching insects about a grating, which covered the opening to a large cemented cistern, long since disused. They were very eager in their work. Through curiosity, the superintendent walked over to ascertain the cause of the commotion. He reports that as he came near the opening, he saw millions of mosquitoes issuing from the grating. He describes it as follows: "It looked like a horse's tail, so thick were they—enough mosquitoes to make a plague over the whole State."

In our oiling efforts we had entirely overlooked the old cistern, which was originally built to catch the liquid manure at a time when the cow stables stood near by. Oil was at once resorted to, and I feel that this breeding house has finally and permanently lost its tenants. All other pest holes treated have already furnished admirable ocular results. As directed, through Government suggestions, we used about ½ ounce of kerosene oil to 100 square feet of water surface. I will report again later.

MORTON GRINNELL.

BEAVER BROOK FARM, MILFORD, Conn., Aug. 18,

about her usual duties. Her husband, therefore, took upon himself the cares of the household, and on this particular occasion is represented as bearing home on his back a sufficiency of firewood to heat the hot cobbles in the usual pit oven for the baking of food. The picture is true to life. Samoans are good to their women in proportion to their lights. It is a disgrace, because a blunder, to attempt to discover any of the dainty and refined sentiments which make life sweet and wholesome; it is not in them, and they are unfitted to understand what one would be after, although ready enough to lie about it for a consideration. But in a certain rough and ready way it is true that Samoan women occupy a very good position and have very little of the rough and heavy work to do, it being understood that this applies to work which they themselves would consider rough and heavy, and not at all to what might seem such to our way of thinking.

At the critical moment the twins are represented as engaged in such amusement out of doors as their deformity might leave open to them, the mother sick upon the mats at home, the father just on the point of throwing off from his shoulders the load of firewood which he has just brought home. There is no great likelihood that customs now are different from the early customs of the people; if so, the father would celebrate so unusual a thing as real work by setting up a lusty shout immediately upon the crash of his wood upon the ground. Be that detail as it may, it is expressly stated that the crash of the bundle of fagots terrified them. They jumped apart in their fright, the ligament snapped, and they suddenly found themselves ready to begin individual existence. The father, no less startled than themselves when he beheld them running free, ran after them in pursuit. But the mother from her mats saw the chace of the fleet ones, and called to her man to cease the pursuit, that the power of the gods was in the twin sisters and that they would go far, yet return safely home at last.

The children continued to run until they came to the sea, into which they leaped together and struck out boldly from the shore. The legend is silent as to the first part of their independent career at sea among the bonito and the flying fish. But when they are swimming off the mouth of Safata Bay, being at the least fifty miles from the starting point, and representing a long-distance swim for persons less gifted than these two young women, it is stated that they encountered a floating mast, just as happened to myself at the same spot of sea, thus leading to a knowledge of the old story. Feeling the need of some rest, a rather surprising thing on the part of twins who had swam only half a hundred miles, they rested their arms on the mast at one end, whereupon it sank with them. It should be said that these Samoan canoe masts are nothing but saplings, and never exceed 2 inches at the butt, and the buoyance of such a stick would be very slight. The other end of the mast now coming above the surface, the twins tried to support themselves by it, yet with no better success. After thus establishing the fact that so slight a stick could not sustain them, one of the girls finds in that circumstance the name which for all these years she has been waiting for. Because it is so true to island life and thought, and because it elucidates the absolute inconsequentiality of motive power in many cases of island determinations, I quote here a block of the dialogue in the native narrative:

"Sister," said one of the swimming maidens.

"What would you say, sister?" replied the other swimmer.

"This mast is hard' (to hold on to, being understood).

"Aue! hard indeed."

"Sister, I have found my name."

"What is your name, sister?"

"Tilafainga, the mast that is hard to hold, that is my name."

Having named one of the sisters and finding no particular need for a rest after all, since their swim so far had only been some fifty miles, they struck out eastward still, and the narrative next takes them up at sunrise when they are landing in Tutuila, rather more than a hundred miles from Safata. Here the remaining twin finds her name in the same way and announces it in similar set form. This name is Taema, or Glistening Beach, and she assumes it because the shining of the wet beach in the flat, eastern rays of the rising sun catches her eye and her fancy.

Here on Tutuila, United States, the swimmers settle down for a long enough time to marry chiefs of that island. But after their experience of the freedom which whales and eels enjoy, it would be too much to expect such young women to rest content with domestic life that tied them to the house. So one fine day, and in the legend no reason for breaking away from home is assigned or excuse offered, they slipped into the Pacific Ocean and struck out for new lands. Their first destination was Tonga, the merest dash of 500 miles without interruption. On arrival in Tonga they lost no time in marrying the king of that place, the legend distinctly charging bigamy in this instance. From Tonga they again deserted their royal spouse, eloped with themselves and betook themselves once more to sea. This time they selected Fiji as their destination, having designs on the King of Fiji. This swim measures on our maps about 700 miles. Not a word is said about this greater distance taxing their strength; on the contrary they are reported as arriving all well and in no long time one of them marries Fiji's monarch, and the other chooses a companion of rank. These enterprising adventuresses seem to live up to the old rule of the sea as to one in every port.

From Fiji they swim eventually the 400 miles which part them from their native Savaii. Here they seem to settle down to a quiet life ashore, and to lay aside all ambition to shine as water queens. The names which they have assumed in their swimming are retained, and kings and rebel chiefs and the Samoan nobility at large point with pride to their distinguished ancestors, Tilafainga and Taema, champion distance swimmers of the world.

LLEWELLA PIERCE CHURCHILL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

An Outing in Acadia.—VIII.

BY EDWARD A. SAMUELS.

The biting apparatus of the spider is a most remarkable piece of mechanism, and as seen under the microscope is an exceedingly interesting object.

"No one," says Professor Rymer Jones, "who looks at the armature of a spider's jaws can mistake the intention with which this terrible apparatus was planned. Murder is engraved legibly on every piece that enters into its composition."

Gosse, the eminent microscopist, in describing the jaws, says:

"There are in front of the head two stout, brown organs, which are the representatives of the antennæ in insects, though very much modified in form and function. They are here the effective weapons of attack. Each consists of two joints—the basal one, which forms the most conspicuous portion of the organ, and the terminal one, which is the fang. The former is a thick, hollow case, somewhat cylindrical, but flattened sidewise, formed of stiff chitine, covered with minute transverse ridges on its whole surface, like the marks left on the sand by

Fang of spider showing orifice (a) through which venom is ejected.

the rippling wavelets, and studded with stout, coarse, black hair. Its extremity is cut off obliquely, and forms a furrow, the edges of which are beset with polished conical points resembling teeth. To the upper end of this furrowed case is fixed, by a hinge joint, the fang, which is a curved, claw-like organ, formed of hard chitine, and consisting of two parts, a swollen oval base, which is highly polished, and a more slender tip, the surface of which has a silky luster from being covered with fine and close-set longitudinal grooves. This whole organ falls into the furrow of the basal joint, when not in use, exactly as the

Palpus of Lingphia.

blade of a clasp knife shuts into the haft; but when the animal is excited, either to defend itself or to attack its prey, the fang becomes stiffly erected.

"On examining the extreme tip of the fang, we see that it is not brought to a fine point, but that it has the appearance of having been cut off slantwise just at the tip, and that it is tubular. Now this is a provision for the speedy infliction of death upon the victim, for both the fang and the thick basal joint are permeated by a slender membranous tube, which is the poison duct, and which terminates at the open extremity of the former, while at the other end it communicates with a lengthened oval sac, where the venom is secreted.

"When the spider attacks a fly it plunges into its victim

Palpi of spiders corresponding to antennæ of insects. Palpus of Walkenæara. As seen in microscope.

the two fangs, the action of which is downward, and not from right to left, like that of the jaws of insects. At the same instant a drop of poison is secreted in each gland, which, oozing through the duct, escapes from the per-

forated end of the fang into the wound, and rapidly produces death. The fangs are then clasped down, carrying the prey, which they powerfully press against the toothed edges of the stout basal piece, by which means the nutritive fluids of the prey are pressed out, and taken into the mouth, when the dried and empty skin is rejected."

I have stated that the spider in attacking her prey buries her fangs in her victim and waits with these instruments imbedded until the insect is dead. That this is not always her method of killing is well shown by Mr. E. Holse, an English naturalist, who states that she sometimes envelops her victim in silk immediately after the first incision, and while the insect is still struggling; sometimes she envelops it first and bites it afterward, and, finally, sometimes envelops and leaves the prey suspended without attempting to inoculate the poison at all. If the web contains no other capture, she drags the insect to the center, there to feed upon it at her leisure.

As has been well stated by Dr. L. G. Mills, the rapidity and fatality of the action of the poison has been frequently been a subject of remark. The following simple observation sets it in a clear light: A stout fly became entangled in the web of a spider; quick as lightning out darted the spider and seized the fly, and equally quick was the interference to the rescue. It was relieved and set at liberty. The fly then walked quickly up a window pane, stopped a while, brushed its wings with its hind feet, rubbed its feet and dressed itself. This was the action of a minute. It then walked about again, apparently all right. Presently it stood without motion, and after a few seconds, when touched, it was found to be scarcely able to raise its feet, and after a few seconds more it was quite dead.

In enveloping her prey, the spider, with marvelous dexterity, turns her victim round and round, simultaneously drawing out a row of threads by means of the fourth pair of legs; with the latter she rapidly sweeps them, as it were, over and over the body of the revolving insect; in this way the whole body is very soon surrounded by a sort of cocoon. There are some species of spiders which dispense with the use of any snare by web or otherwise, but, like the predacious animals, rely upon their spring alone in overpowering their prey. Of these, our common black and white spider is a familiar example. When she spies a fly at a distance, she approaches it as a cat does a bird, softly, step by step, and seems to measure her distance from it by the eye; at length, when she judges that she is within reach, she darts on her victim with such rapidity and so true an aim that she very seldom misses it.

Those persons who have seen a spider thoroughly enraged have no doubt noticed the wonderful brilliancy of the eyes: they seem to glow with the intensity of carbon points in an arc light, or of the facet of a fine diamond. The eyes are generally eight in number, and they are arranged on the forehead in various positions, according to the variety of spider and its habits. Professor Owen says the variety in the arrangement of the ocelli of spiders always bears a constant relation to the general conformation and habits of the species. Dujés has observed that those spiders which hide in tubes or lurk in

Eye of Spider.

obscurer retreats, either underground, in the holes or fissures of walls, or rocks, from which they only emerge to seize a passing prey, have their eyes aggregated in a close group in the middle of the forehead, as in the bird-spider, the clothe, etc. Those spiders which inhabit short tubes terminated by a large web exposed to the open air have the eyes separated, and more spread upon the front of the cephalo-thorax. Those spiders which rest in the center of a free web, and along which they frequently traverse, have the eyes supported on slight prominences, which permit a greater divergence of their axes. This structure is well marked in the genus *Thomisa*, the species of which lie in ambush in flowers. Lastly, the spiders called *Errantes*, or wanderers, have their eyes still more scattered, the lateral ones being placed at the margins of the cephalo-thorax.

The spider has no friends, and it has many active enemies. Among these, perhaps the most unrelenting and implacable are the so-called mud wasp and certain varieties of ichneumon flies, of which there are a dozen or more species, which are placed in a number of different genera.

As we, perchance, are watching a spider as it moves, about on its silken platform awaiting the approach of a fly or other insect prey, we notice that it suddenly assumes a nervous, agitated demeanor, and in a few moments endeavors to hide from some approaching enemy. Our attention is now attracted by a wasp-like insect which, in its buzzing flight, draws near, and after circling around the spider, attacks it with a great deal of energy and spirit. A battle royal now ensues, which almost invariably terminates with the wasp as victor.

A correspondent of the late Dr. T. W. Harris thus describes one of these encounters:

"A very large spider was attacked by one of the small, blue mud wasps or dirt daubers, not half his size, and on the ground. The spider seemed much alarmed, and managed to fend off his antagonist, and escaped at a rapid pace, doubling and winding. The wasp seemed to have lost him for several seconds, but presently it circled round like a well-trained fox hound, and on striking the trail ran it closely through all the doublings and windings of the spider, overtaking and attacking him again. This was repeated two or three times, the wasp clearly trailing the spider as a hound would a fox. At length he succeeded in stopping the spider, when a capital fight

ensued, lasting at least a minute. The spider had no chance with his enemy, who soon stung him to death [sic], losing a leg only during the fight. After resting a few moments the wasp circled around again, evidently

Poison gland of wasp. Greatly magnified.

selecting a smooth path, along which he dragged with much difficulty his bulky prey. The moment he met with an impediment, dropping the spider, he circled round again, and invariably chose a smooth path."

The distance traversed by the wasps in thus dragging their prey to the tombs in which they are to be placed is sometimes very great. Don Felix Azara, as quoted by

Wasp's sting and point of a cambric needle.

Darwin, states that he saw one of these wasp-like insects dragging a dead spider through tall grass in a straight line to its nest, which was 163 paces distant.

The spider thus defeated and apparently killed, is not in reality dead, but it is rendered powerless to move, is, in short, paralyzed by the sting of the insect, and in this condition it is carried to a suitable place, where, enveloped in a clay or mud covering, the unfortunate spider, with a number of the eggs of the insect thrust into its body, is left to its terrible fate. In due course of time the larvæ hatch and feed upon the helpless victim.

Probably many of my readers have noticed the little lumps or patches of dried mud in nooks and corners of verandas, and at the bottom of shingles and clapboards on barns and houses, and perhaps have broken them open and found the paralyzed spiders being eaten alive by the newly hatched larvæ.

That the wasps should know the exact degree and manner in which the spiders must be stung is remarkable. Darwin, in commenting on this fact, says:

"Certain wasp-like insects, which construct in the corners of the veranda clay cells for their larvæ, are very numerous in the neighborhood of Rio. These cells they

The Tarantula Killer.

stuff full of half-dead spiders and caterpillars, which they seem wonderfully to know how to sting to that degree as to leave them paralyzed, but alive, until their eggs are hatched, and the larvæ feed on the horrid mass of powerless, half-killed victims."

It has been stated that nearly every type of spider has its special enemy among the mud daubers. Probably the largest of these is the tarantula killer (*Pompilus formosus*); as it is called everywhere in Texas. This insect, which is over two inches in length, is armed with a formidable sting, with which it attacks its terrible foe, one thrust being sufficient to paralyze the great spider, the introduction of its venom being "as sudden as the snap of an electric spark."

Dr. G. Lincecum, in the American Naturalist (Vol. I.), states that on being stung all animation is absolutely suspended. In this condition it is then dragged by the wasp to some suitable place, where she excavates a hole five inches deep in the earth, places the great spider in it, deposits an egg under one of its legs, near the body, and then covers the hole very securely. A young tarantula killer will be produced from this egg, if no accident befall it, about the first of June of the ensuing year.

Dr. Lincecum has found under shelving rocks and other sheltered places daubers' nests that were doubtless several years old. "In some of the cells, where the egg had proved abortive, the spiders were there, still limber, with

Texas Tarantula.

no signs of decomposition about them. They did not seem to be dead, but looked as if they could almost move their legs, and were, perhaps, not unconscious of their deplorable condition."

The sting of the wasp is one of the keenest pointed weapons that can be conceived of, the point of the finest cambric needle, when compared with it, seeming coarse and serrated. This is well shown in the appended illustration, which is a reproduction of a drawing by Dr. N. Lieberkühn, of Berlin.

The poison gland is attached to the sting by a hollow cord of about the length of the gland itself, and the course of the cord can be traced down down the body of the sting. It is similar in shape and size to that of the ordinary spider.

[TO BE CONTINUED.]

The Raven and Other Ravenous Birds.

We must go to philosophy for truth, and as that wonderful young man and rare poet, Keats, wrote, "Philosophy will clip an angel's wing." This may be possibly a foresighted thought of the present condition of things, for now we are studying all kinds of matters on their actual merits, and superstition—using this word in its broadest sense—goes now for nothing. And in regard to some things, most of what we think we know of them is mere superstition. This applies to the bird of ill omen in all ages—the raven—the unclean bird of the old Jewish dispensation and the cruel, vile thing which we now know it is. "Take thy beak from out my heart" is the true expression of the ferocity and cruelty of the abominable bird which another poet, Poe, applied to it in his never-to-be-forgotten poem, "The Raven."

In fact, the raven is not only ferocious, but it is essentially cruel, seeming to torment its weak and helpless victims in the most malignant manner, reminding us of the similar habits of our own race in unregenerate conditions, when malignity was distilled to find the most excruciating torments for the helpless victim of the savage man.

This bird is a member of the crow family, the head of which, although it may not be as black as it is painted, is still cruel and malignant, as might well be the character of the head of all this ravenous family. Doubtless the worst animal living has its use in nature, if only for the purpose of lessening the other, otherwise too rapidly and inconveniently increasing, animals which might be a nuisance if too abundant. It has the excessively cruel habit of first disabling its victim, always some inoffensive, helpless animal—a rabbit, or a hare, or a sheep, or some smaller birds or their helpless brood, so that it may be tortured slowly to death without any hope of escape.

My attention was first turned to this bird by its attacks upon my sheep, pasturing in a field adjoining a large tract of untouched forest in the mountains of North Carolina. The sheep were found in every case to have the eyes torn out, and the body mangled from the anus into the interior. The hind part of the sheep was torn open and the bowels eaten, the carcass being left on the ground untouched otherwise. There were only four of the ravens in the gang, and when two of them were shot the others left. It is a curious fact that a number of buzzards are always seen along with a gang of ravens, their business apparently being to clean up the residue of the carcasses after the ravens have taken their few mouthfuls, never touching the carrion after.

There is always some redeeming fact in regard to most, if not all, other birds of predatory habits. That is, they seem to have been made for the express purpose of preying on other birds or animals, so that what we call

the balance of nature may be preserved, and every race be able to exist so far as to maintain themselves.

Another cruel bird, a relative of the raven and equally cruel, is the bluejay. Its special business during the summer is to feed upon the eggs and unfledged young of other birds, notably the robins. In the grove in which my house is situated there are hundreds of robins breeding year after year, and rearing their two or even three broods within sight of the windows, so that the nest may be seen quite frequently. Some of these nests have been raided by bluejays, which suck or eat the contents of the eggs, or devour the helpless nestlings. Some furious combats have occurred the present summer between the jays and a dozen or more of the robins, united by common interest in driving off the intruders, which, in fact, is frequently accomplished when one of the robins happens to be at home and an alarm is given, and the screams of the mother bird fighting vigorously in defense of her young ones bring immediate help, which is quite often successful. But when a nest is unguarded, the eggs are sucked and the shells thrown down. This bird, too, preys on the nests of the quail. I have seen them feeding on the eggs and also on the young birds, as well as on those of the pheasant or partridge or grouse or by whatever name it may be called, as well as those of smaller birds.

While the bluejay, a noisy fellow, which has all the peculiar habits of its relatives, the crow family, excites pity for the poor, helpless robin whose nest he has raided upon and eaten the eggs, or the young fledglings, is to be discredited for its cruel habits; yet nature has a use for him, unquestionably, and this is to keep the balance of it even, for the general benefit of mankind. In fact everything on the face of the earth seems to have been created, and to be supported for man's use or pleasure. But as a shepherd I must draw the line at the raven, and count him among the creatures to be exterminated. The bird is quite numerous in this locality, and many of the prominent cliffs and rocky ledges are occupied by them as nesting places every year, so that these localities are named after the bird, as Ravenscliff, Ravensnest and other similarly connected words.

We may, I think, trust to nature to some extent for preserving a satisfactory balance in these ways, for it has happened that when mankind has interfered with nature's disposition of things, we have brought trouble on ourselves. And so we may try to steel our hearts against the cruelties we may see enacted, and consider it all as inevitable and as the methods of nature to preserve a balance, so that even animals which might be desirable in some ways may not become a pest by their overwhelming numbers. But let me make an exception in regard to the ravens, for I have an affection for the sheep, and especially for the little lambs, both being inoffensive, helpless, and, as old Fitzgerald quaintly said a good many years ago, "The most profitable animal a man can have." And yet nature, even in this case, permits it to go to the dogs and the birds of prey, unless the shepherds watch and protect it.

I have omitted to say that ravens attack deer in the same way as they do sheep, and I have found the carcasses, eyeless and partly disemboweled, lying in the woods, still warm, and only the ravens in sight on the surrounding trees or cliffs.

H. STEWART.

HIGHLAND, N. C.

Counting Chickens Before They Are Hatched.

MILFORD, CONN., Aug 15.—*Editor Forest and Stream:* Some weeks since one Lorrin Ford was working at some mason work not far from Nigger Pond, a fresh-water lake of small area. His twelve-year-old boy was with him, and while wandering about, flushed a hen quail, and then searching found the nest, which held twenty eggs. He reported his discovery to his father, who said: "We will watch it and see when the young ones come out." The boy visited the nest several times, but finally came to his father and said that the old bird was on the nest and would not fly off as usual, and he thought the chicks were hatching.

The father for the first time went to look at the nest, and, sure enough, he could see the old bird squatting close over the eggs. Curiosity impelled him to come nearer, when he thought that the quail must be asleep, as her head was on one side, drooping over her body. Still closer inspection showed that the hen quail was dead on her eggs, and stiff and cold. Two of the eggs were already picked by the chicks, but all were dead in the shell. A careful examination of the bird disclosed nothing excepting a few feathers gone from the "back of the head." Can you elucidate this tragedy, if it was one?

MORTON GRINNELL.

The Birds of Springfield.

In years past we have had more than one catalogue of the birds found at Springfield, Mass., and at places not far from there, and now comes to us an attractive little volume of more than fifty pages, entitled "The Birds of Springfield and Vicinity," by Robert O. Morris. In it Mr. Morris gives about 255 species of existing birds found within twenty-five miles of that town, together with a dozen other species, some likely to occur but not certainly observed, others introduced, and others, still, extirpated. The list is preceded by three pages of introduction, describing the situation of Springfield and the attractions which it offers to birds, and the species in the list are briefly annotated.

A brief bibliography, a table of errata and a good index conclude the volume, which is well printed on good paper and handsomely bound. We notice more typographical errors than should have been allowed to occur. These are seen not only in the scientific names of the birds, but in other places, as where Brewster is printed for Brewer, etc.

The Professor's Grizzlies.

I WAS nursing a broken leg when my son brought me FOREST AND STREAM of June 27, and had been reading Texas Tom's story of the killing of Old Splayfoot, the big grizzly, which I think is hardly as good a story as the one in your issue of Jan. 19, 1901, under the heading, "In Frontier Days—III," giving the particulars of the killing of Old Splayfoot, several years before, when my old friend, Professor —, just arrived from Oregon, came to see me.

The Professor is a good musician, and had left here many years ago, following his profession of teaching vocal and instrumental music in Florida and Missouri, finally landing in Oregon a number of years ago, where he remained teaching and selling musical instruments, until now, when he returns to revisit the scenes of many years in this State and Ohio, and renew the acquaintance of those who remain of his old friends on this side of the great divide. Like many of his native State of Massachusetts, he takes a lively interest in inventions, and now owns a valuable patent right on an article which he proposes to sell throughout the State of West Virginia, although he is either 74, as he avers, or 83 years old; but with never a day's sickness in his life. He sold me a fine old violin in 1858, which he said his guardian had bought for him in Boston twenty-two years before, when he was 18 years old. I have the record of it made at the time, and this would make him 83. He is a remarkable man physically; his vitality seems about as strong as thirty years ago, but his memory seems a trifle impaired in regard to some things, as shown by the error about his age. When he left Missouri, about a dozen years ago, he first landed at a small town in California, on a Saturday, his finances in a dilapidated condition. Sunday, hearing a church bell ringing, he had a curiosity to see how they conducted religious services in that far-off and primitive section of our country. He was surprised to find a nice, new church, filled with a bright and intelligent congregation. The preacher congratulated the members on the possession of such a good church edifice, which he said, through their generosity, was entirely paid for and likewise a good organ; but, unfortunately, they had no one who could play upon it, and he made the request that if there was any person present who could play he would oblige them much by coming forward. The Professor, after some apparent hesitation, went forward, and, as he tells me, "I don't think I ever played better in my life; the audience seemed carried away as by storm, and the preacher said, 'I did not know that there was such music in that instrument.'" He was invited to make some remarks on music, and the result was that the next day he had eight pupils on the piano, six on the organ, and several on the violin, which, after a time, enabled him to continue on to the northeast part of Oregon, where he bought a home and remained until recently.

"Well, Professor," said I, "you must have been in a pretty wild region. Did you ever come across any large game there—grizzly bears or anything of that kind?"

"Why, yes, there was plenty of large game there; but I never saw but one live grizzly bear. I traveled about a good deal, teaching and selling instruments. One time I came to a house and arranged to stay over night. As it was only the middle of the afternoon, I took a walk of a few miles around to view the scenery, and, as was my habit there, took my repeater with me; and well it was that I did so, because, as I was passing along the side of a clump of bushes, an immense grizzly bear rose upon his hind legs not over ten feet away. I was too close to him to run, and I knew that I had to kill that bear or he would kill me, so I shot him and kept shooting. He did not move after the first shot, until he tumbled over dead. I had killed him the first shot. He was as large as a good-sized steer."

"Well, what did you do with him?"

"We skinned him and took what meat we wanted, it was more than could be used there, and, besides, took a large strip and hung it up on the side of the log house. Meat will keep that way in that climate a long time. That night, hearing a noise outside, I looked out of the chamber window, and in the clear moonlight saw a large cougar sniffing the bear meat hung on the house. Without waking Badgley, who was sleeping in the same room, I shot and killed the cougar (or mountain lion). The report brought Badgley out of bed scared nearly to death. He went down and skinned the cougar. Afterward we shipped the skins to a tannery and had them tanned. I gave the cougar skin to Badgley. The bear skin green weighed 169 pounds. The skins dressed with the fur on brought \$40 for the bear and \$15 for the cougar." This was told by the Professor in the forenoon. Rather late in the afternoon an old Irish friend, a neighbor, called in to see how the leg was getting "jinted up and all right," and was introduced to the Professor with the remark that, as the Professor had been a long time in the State of Oregon, he could tell him something of the big game out there.

"Well, I would loike to hear it; did ye ever see enny big bears out there, and ain't they dangerous?"

"Yes, I have seen some large game. I shot the largest bear that was ever seen out in that part of the country where I lived; at least, all these old settlers said so. At one time an enormous grizzly was reported to be near the foot of the mountain, only a few miles away, where he had done considerable damage to stock, for, so far, no one had been able to kill him, and many did not like to attack him on account of his great size. One day he was seen not far off. Indian boys had seen him in the distance about two miles away and were afraid to shoot at him because their guns were poor ones. It was concluded to try and stop his depredations on the cattle, so a few of us went along, including the Indian boys, to show where they had seen him. The party had not gone over two miles when they found him eating a cow that he had killed. I knew that a grizzly did not care anything for

a man when he is eating, so I went up within six feet of him and shot him just back of the ear, and broke his neck the first shot. They brought a wagon and we rolled him on skids up into the wagon and hauled him to a hay scale and he weighed 1,700 pounds, the biggest bear ever killed there before or since. But before we got the bear away a woman came screaming that something was killing their cattle across the creek. So, unhitching one of the horses, I forded the creek, with others, and found a large cougar on the back of a cow eating it alive. I went close to it and shot it through the head. We sold the skins there for over \$40."

Now I am puzzled about these stories. In the first place the Professor never saw but one live grizzly, which he killed, as has been written. The Professor's memory must be somewhat at fault; he either saw but one bear, and tells the story in two different ways, or he killed two grizzlies and had at the moment forgotten that he had only seen one live grizzly. And then it is strange that in each instance he also killed a cougar. And, in a similar way, the story of the killing of Old Splayfoot may have been told. There must have been two Old Splayfoots, or bad memory must have been the cause of two different tales, or Old Splayfoot's ghost appeared and Texas Tom undertook to slay the ghost.

PARKERSBURG, W. Va.

OBSERVER.

"Bill Chadwick's."

ONE day last week, being at Point Pleasant, N. J., I hopped on the choochoo cars and ran down to Chadwick's to talk snipe with the Applegate and Chadwick boys, and, incidentally, to get one of those shore dinners at the old hotel. Well, I got there, and that's about all I did get. Lemme tell you. What do you think? You may not believe me, but cross my heart and hope I may die if the old tavern wasn't shut up "as tight as a dead pig's eye!" Fact, so help me. First time such a thing has been known to happen in forty years. And not only that; the house has been repaired (now hold on to something), enlarged, painted and decorated inside and out, till you wouldn't recognize it. That's so; it's like the old jack-knife with new handle and new blades. All the blades are shut, too; and what is more, they are not going to be opened this year. No, sir; not till next spring. Old Bill Chadwick's is no more. It has passed into new hands. All the guides are gone, and the cheerful liars who used to keep the chairs from blowin' offen the porch have vanished, also. Even the mosquitoes have, or had, deserted the place, though it is thought to be not unlikely that some of them will return. You see it was this way: About three or four years ago a nice, quiet family, by the name of Stemmler, took a cottage at Chadwick, near the beach, and have been occupying it in summer ever since. Mr. Stemmler's business card (which, by the way, is engraved) bears the name of T. W. Stemmler & Co., Importers and Exporters, with offices and warehouse in New York, and branches in Chicago, Paris and London.

He is a quiet man, Mr. Stemmler is, and during the last three years has been quietly absorbing the land at and on all sides of Chadwick's from the ocean to Barnegat Bay, all of which he now controls, including the famous ducking points and snipe grounds.

Those of the brotherhood who have had designs on ducks and snipe are hereby tearfully informed that there are no hotel accommodations at Chadwick's just now, nor will there be any until next spring. And even then they will have to buy their booze elsewhere, for the manager of Mr. Stemmler's inn will have no license to sell rum, and the nearest bar will be at Point Pleasant, seven miles away, with infrequent railroad communication.

J. L. K.

P. S.—There is another bar near Barnegat Inlet, but hauling schooners over it is quite expensive.

K.

PERTH AMBOY, N. J., Aug. 16.

The Day's Last Shot.

THE sun was only an hour above the mountain as Al and I seated ourselves in an old wood road leading around its eastern base, to watch for squirrels. Behind us loomed the precipitous, oak-clad mountainside; in front, the ground pitched sharply away to a little hollow, where there was a spring of water; on either side our position commanded a considerable stretch of the vista made by the leaf-strewn road through the towering maples and the oaks, from which the great, plump acorns could be constantly heard spattering down among the fallen leaves.

It was an ideal spot for squirrels, and an ideal night to watch for them—clear, still, and not too cool to sit in comfort. But there was one thing to bother—the leaves, which covered the earth in a thick carpet on every hand, were so dry as to rustle loudly at the slightest pressure of the foot. To steal up on a squirrel, wary as they were at this late season, would be impossible. To wait quietly and trust to luck for them to come in range was our only chance. Another unfavorable circumstance, which I had often noticed in hunting in this wood, arose from the hummocky nature of the ground; a squirrel or partridge might move about one for a long time without being seen, save for occasional tantalizing glimpses.

We sat a few feet apart, both facing the hollow. Between us lay three woodcocks and two partridges, trophies thus far of the day's sport. It was the thought of the fine effect a dash of gray would have on the bunch that tempted us thus to prolong our hunt. Ten minutes passed monotonously. No sound broke the stillness save the falling acorns. Pit, pat, they would come down through the branches, then whack! upon the fallen leaves. Gradually I became aware that they were dropping in a rather peculiar manner in a tree some distance to our right. I smiled over at Al, who whispered back, "Squirrel!" Sure enough, we soon heard him slipping down the tree. Then a crash, as he sprang out into the leaves. My blood quickened to the finger tips at the sound. He was quiet for a moment after this, listening, after the practice of the old heads, to see if his racket had drawn the attention of any one. Then he came on toward us—as we knew by the sound, for we could not see him—stopping for a minute in the hollow, doubtless at the spring; then on again, crashing up almost to the very

brow of the rise. Al and I both had our guns at shoulder. Which would be the first to see him when he came over the rise? My heart was thumping so I thought he must hear it. Perhaps he did, for after a minute—that seemed an hour—to our chagrin, he gradually dropped back into the hollow. Meantime another squirrel began barking further down in the wood, while a third came running up behind a big boulder on my right. I turned my attention to the last, thinking he would poke over or around the rock. He did come out on the upper side presently, but quite hidden in a little hollow, in which he even crossed and recrossed the road and back behind the rock, keeping as carefully hidden all the time as though well aware that I was watching for him. It was provoking; and what with sitting so long in one position, and the constant alternation of hope and disappointment of getting a shot, the nervous strain was terrible. It was nothing but squirrels, to be sure, but my experience is that the size of the game has but little to do with the exciting part, so long as one is anxious to get it. I could still hear him poking around behind the rock, and meantime two more began playing in the leaves behind me. I was trying to work around facing these, when, bang! went Al's gun, and off all three scampered. Al had run down into the hollow, and on going down I found he had risked a long shot at his squirrel and had rolled him over, but save for a little blood on the leaves no trace of him could be found.

It was no use to stop here any longer, and swallowing our disappointment, we took our game and moved further down into the wood and sat down in another road. There was but little time left us, for night was coming on. Every minute saw the shadows steal further and further from the thickets, and higher and higher up the tree trunks. Soon they had driven the declining sun's rays out from the topmost branches to the very summit of the mountain, where they lingered for a moment in a golden halo, then sank behind it, leaving it grim and sombre in the gloom of approaching night.

"We must be going in a minute," said Al. "I've a good mind, though, to take a shot at that red first," referring to a slight rustling sound we had heard at intervals some distance in our front. "He's coming into the road now—thunderation!"—slap went his gun to his shoulder—bang!—mingled with the report was a familiar fluttering sound. "A biddy!" cried Al, exultantly; and sure enough it was, and a most welcome addition to our bunch—a big, fat, old cock partridge, thickly feathered and with a fine ruff and tail, that had thus fallen to "the day's last shot."

CORNISH, Me.

TEMPLAR.

Game in Eastern Massachusetts.

LAWRENCE, Mass., Aug. 10.—As the reports come in from different sections of Massachusetts, giving the outlook for the fall hunting, I report the conditions as I found them in July in this section. My family and myself spent the month of July at Cochickewick Lake, in North Andover, and in some of my rambles I found quail in abundance. At our cottage by the side of the lake the familiar call of Bob White was the first heard in the morning and the last at night. It was not an uncommon sight to see three and four perched on the rail fence back of the cottage at almost any time. My little seven-year-old daughter caught during a storm two little chick quail, which were benumbed by cold and wet, and after carefully warming them in flannel by a fire, she gave them their liberty, seemingly no worse for their close acquaintance. Bass fishing in the lake for large-mouth was fairly good. I caught some of 3 pounds, 4 pounds 2 ounces, 5 pounds 6 ounces, and one of 6 pounds 2 ounces. But on account of the lake being high I did practically nothing on small-mouth bass.

This lake also abounds in excellent white perch, and the catches this summer in some instances were large, such as 30, 47 and 65 at a day's fishing, not my record, but by reports of other boats.

S. C. H.

Wood Ducks Breeding in Greater New York.

PRINCE'S BAY, Staten Island, Aug. 16.—I saw a brood of young wood ducks yesterday in a little pond not more than 75 feet square, and not far from a score of dwelling houses. I thought that pretty good for Greater New York. If they are not disturbed they will nest there next year, as the place is in one sense obscure to the casual observer.

A.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

New England Waters.

BOSTON, Aug. 17.—Summer fishing is holding out most remarkably, or else the resorts are being more thoroughly fished than ever before. Certainly the accounts of catches are remarkably good for August. Mr. Harry B. Moore says that he has "found virgin trout waters," and he is much pleased with a recent trip. With his twin nephews, Harold and Waldo Richards, and another Harvard student, he has just returned from a trip to the Holeb, Me., region. The boys were obliged to wait for Harvard examinations for college, and the fishing trip was necessarily late. But they passed with credit, and their uncle took them into the Maine woods for the first time. One can scarcely imagine the amount of enjoyment they got out of it. At the inlet of Little Turner Pond they had their best fishing. This pond is about half a mile in diameter, and is fed by a stream that runs through the woods from Big Turner Pond. Just at the mouth of the stream are lily pads, and just beyond these the two canoes were anchored for fishing. The favorite cast of flies was a Parmachene Bell, a brown hackle and a silver doctor. Mr. Moore says that he never saw such fun and such fishing. The boys "nearly went wild." Doubles came at first from almost every cast, and frequently triples. The size of the trout run from a quarter of a pound to a pound and a half. As soon as a good string had been taken—

all that could be made use of—Mr. Moore called upon the boys to throw back the trout alive, with the exception of a few of the largest. This they practiced every day, and the number of trout caught was great, while comparatively few were killed. Andrew Gillman, of the Boston Herald office, is just back from a fishing trip to the White Mountain region. His best catch was at Cold River, where he took sixty-five trout in two hours' fishing. The trout were rather small, as is the case on all the streams in that region. The summer visitors fish the streams too hard each year. One salmon was taken at Lake Auburn, Me., the other day, the only one for a week or two. It weighed 4 pounds. At the Birches, Mooselucmaguntic Lake, the fishing is holding out very well, indeed. In spite of other attractions, fishing is still at the head there, and is practiced every day; generally with the fly at this season, but not always. A Boston gentleman, a member of the Oquossoc Angling Association, who has just returned from a trip to the Rangeleys, is not pleased with the proposition to stop all trolling on the Rangeleys after July 1. He says: "I don't know what I had rather do than fish, but I will be blessed if I can cast a fly at all, and when you come right down to facts there are very few really expert fly-fishermen who visit the Rangeleys. When I fish I troll, as do the most of my acquaintances. I use a good rod, and when fortunate enough to hook a fish, I play him, as do those who catch them on the fly. I fail to see why trolling with rod and reel is less sportsmanlike than casting a fly. I do object to being rowed over the lake with half a dozen hand lines out. No true sportsman will do that. It is worse than 'plug' fishing, and should not be permitted by law. One line to the fisherman is enough. Some men seem to want every fish there is in the lake. Such men should be restricted in their fishing, and then there would be some fish for all."

SPECIAL.

New Hatcheries for Maine.

BOSTON, Aug. 19.—The Moosehead fish hatchery seems to be assured, and Moosehead fishermen are much pleased. The location proposed is on the Kennebec River, about a quarter of a mile below the dam. The vast spawning beds of the lake above will furnish an unlimited supply of eggs, it is said. The distance is so short that they may be transported to the hatchery in almost perfect condition, leaving chances for very small losses. The location has been looked over by a committee of engineers and experts, representing the Commissioners of Inland Fisheries and Game, and it is thought that the decision, which will be shortly reached, will be favorable. It will be remembered that the Legislature last winter appropriated \$5,000 for a fish hatchery at Moosehead. Late reports say that fishing is rather poor at that resort, but that a change to cooler weather will bring the trout to the surface, when fly-fishing will be good.

No action has been taken yet in regard to a fish hatchery at the Rangeleys, much as it is needed. The Upper Dam is generally agreed upon for such a hatchery, and the next Legislature will be asked to aid the same. Good reports continue to come from the fishing at Haines Landing and other points on the Mooselucmaguntic, but the fishing at the Upper Dam has not been very good. A 7-pound salmon was brought in at Haines Landing last week by a Mr. Coburn. An unusual height of water has continued at all the Rangeleys. It is the season of "Old Home Week" with most of the Maine towns, but it is curious to note that almost every man and boy goes armed with fishing rods. The trout pools that one used to fish are almost sacred in the remembrance of the old home. It is mentioned that stream fishing has been remarkably good in many sections of Maine. The recent showers and heavy rains have kept the streams up to a good fishing pitch. Mr. Brown and Mr. Daniels, of Worcester, have been on a fishing trip to Round Mountain Lake, and they had great fishing at Little and Big Alder. Their record was 150 to 175 trout a day, weighing from one-half to three-quarters of a pound. Let us hope that all the fish not wanted for the table were returned to the water alive.

SPECIAL.

A Peoria Lake Fish Story.

INDIANAPOLIS, Aug. 17.—Editor *Forest and Stream*: This story I clip from the Indianapolis Sun to-day, it having been related to a reporter by George W. Pitts, an old-time hunter and fisherman:

"I heard a fish story once that you and nobody else, nowadays, would say was possible, but I can bring scores of people who will verify it. I didn't believe it myself until I had talked with those who knew the facts. The night of the day Grant was elected over Greeley, a party of us—thirteen in number—went to Pekin, Ill., in a special car, and then down to Spring Lake, below there, on a fishing trip. Our quarters were a house-boat, fitted up as a regular hotel—and it was mighty snug, I tell you. We were all sitting around, resting from our journey, and having something to ward off any possible colds we might have caught on the way down, and telling fish stories. Some of our party had told a few, when one of the Illinois fellows spoke up and said he could discount us—and he did.

"It seems, according to his story, that there was a kind of a take-it-easy fellow who lived down near Peoria Lake, about forty miles below. He tinkered around and didn't amount to much, and did not have anything but a team and a few traps. He was loafing around one day, resting, when he happened by Peoria Lake, and noticed it was just alive with fish. He conceived the idea of putting all he had into one big seine and cleaning up the lake and a good pot of money at one draw. So he sold his team and traps, and had everybody around there working on his seine. It was 1,700 yards long when it was done. Then he made his draw. He had not hauled in long before the fish began to go around the ends so thick that they actually piled over each other. He stopped and began to scoop the fish out and sell them to the people around there for two cents a pound. He drove a rushing trade, hauling in a little on the seine from time to time, until the lake froze over. During the winter he built some barges, and, in the spring, when the ice broke up, he floated his fish down to St. Louis and sold them there at

two cents a pound, and turned them into money fast at the price. When he got his stock of fish cleaned up, how much do you think he made out of it? asked the fellow who was telling the story. Some of our party guessed \$1,000 or so.

"Ho! ho!" laughed the old fellow, "that shows how good you are guessing on fish—why, he made just \$7,000. And he put the money into a steamboat and went sailing up and down the river here, and the first thing he knew his money was all gone."

"I could hardly believe that story, and I made it a point to investigate it down at Peoria, not long afterward. I went everywhere—into the saloons and stores, and talked to women and children, and every last one of them told exactly the same story. Now, there is proof enough for you. No, sir; people now have no idea of how plenty fish were in the early days." F. L. PURDY.

CHICAGO AND THE WEST.

Chicago Fly-Casting Club.

The following are the scores of the Chicago Fly-Casting Club on Aug. 10. The next meet will occur on Aug. 24, which will be the last meet of the season, with the exception of the re-entry day, Sept. 7. Members who have not filled out their scores should be present on Aug. 24, and work off all re-entries possible, so that there will not be left too full a programme to bring off on Sept. 7.

	Long Distance Fly. Feet.	Bait Casting. Per Cent.
I. D. Belasco	86	83
W. T. Church	93	7-10
H. Greenwood	96	96 1-10
H. Greenwood, re-entry	101	..
H. G. Hascall	109	96 2-5
N. C. Heston	85	83
E. R. Letterman	94	2-5
F. N. Peet	111	97 4-5
C. B. Robinson	89	4-5
G. W. Salter	93	3-5
A. C. Smith	106	96 3-10
F. S. Smith	..	85 1-5

Winning scores: Long-distance fly, F. N. Peet, 111 feet; bait-casting, F. N. Peet, 97 4-5.

Great Bass Fishing at Star Lake.

Mr. John D. McLeod tells me that his friend Mr. Hibbard, general manager of the Chicago Telephone Company, has been having some good fishing at Star Lake, Wis. Mr. Hibbard writes that in all his experience he never knew anything to equal the bass fishing there. On one day he and a friend from Chicago caught ninety black bass, sixty of them being caught by Mr. Hibbard.

Star Lake is about fifteen or twenty miles from Minocqua, on the C., M. & St. P. Railroad. It lies a little to the east of Plum Lake. I remember personally spending a few days in the neighborhood of Star Lake some years ago, when out in camp with some trappers. At that time the little settlement of Star Lake was just starting in, and all these people fished industriously summer and winter, early and late. It is surprising that there are any fish at all left in that lake, for there was every reason to believe that it would be exhausted. These Wisconsin lakes which lie along to the south of the northern line of the State were perhaps originally as wonderful fish waters as ever existed on the face of the earth. It is gratifying to have good proof as this that they are far from depleted. There are many lakes where one can get good bass fishing. As to the muscallunge fishing, that is becoming scarcer all the time.

Fishing in Arkansas.

In a letter from Little Rock, Ark., our old friend, Joe Irwin, tells about the different forms of sport, notably bass fishing, in the neighborhood of that very good sporting city.

"I have had a very busy year," he says, "and have not had my usual amount of sport. I stumbled on to some fine bass fly-fishing just this side of the ferry where you and I crossed that morning to old man Pemberton's on the east side of the Arkansas River proper. I can drive there in one and one-half hours in the afternoon and take from eight to fifteen bass in the evening, and be back home by 9:30. I have often shot ducks on this water, but have not investigated it for bass until this season, and it was right under my nose."

"I intended making my third year trip to Colorado, but find too many fishermen going there now, and may try the tarpon again the last of August, unless I run over to Chicago and get you to send me to good bass grounds. I want a change of air, and where I can fish or shoot to amuse myself. I can't be content to loaf and play cards and that kind of thing. Quail crop will be good, I think, this season. Hope to have more time for them coming season. I find I haven't the energy to get up at 3 A. M. and drive twelve or fifteen miles for a little sport as I did year after year. Getting old and losing my grip for the hard side of the game. We did not have much duck shooting last year until late in the season. They were there all winter, but went out long distances to feed, and were late getting back. We finally got an overflow in the Pin Oak flats, and then we had fun for a few days only. I heard the boys after wood ducks last night while I was fishing, but I have not tried them as yet. Flight is short and the drive long and sandy and other excuses."

Going West.

Mr. Carl Von Lengerke, sales agent of the American E. C. and Schultz Gunpowder Co., was in Chicago this week on his first trip to the West in the interest of his firm. Mr. Von Lengerke goes from here to St. Paul and Minneapolis, then, dropping to the south, takes in Omaha, Kansas City, St. Louis and other Western towns. As he will be in this part of the world until the opening of the Western shooting season, it is to be hoped that he will take advantage of the invitations which will, no doubt, be offered him by Western sportsmen. Mr. Von Lengerke has never before been in the West, and will perhaps be surprised to see that there is quite a patch of country west of the east shore of New Jersey. As he is of a keen sporting family, he will enjoy a whirl at our big prairie chickens. He reports business very good, indeed.

Ducks and Chickens.

The C., M. & St. P. Ry. has recent reports from its stations in Iowa, Minnesota and South Dakota, which show fine prospects for duck and chicken shooting. On the James River division in South Dakota the chickens have increased in numbers, since the game laws have been rigidly enforced for several years. As the sloughs are filled with water, they are alive with mallards, redheads, canvasbacks, etc. The open season, it should be remembered, begins Sept. 1.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Tarpon Fishing.—IV.

(Concluded from page 129.)

Handling Tarpon.

As soon as the hook is set, the main thing for the sportsman to do is to hold on to the brake with either his whole force or as hard as the capacity of the line will permit, never giving an inch of line unless forced to, either because of want of strength or because he fears that the tackle is being endangered. Of course, as before stated, when the fish jumps, one should dip the rod to it so as not to have any strain on the line when the fish is in the air, for this is just what the creature wants—something to pull against when shaking his head. But just as the fish falls back into the water, the line should be tautened. The probability is that it will make three or four jumps in a few seconds, during which time the boatman should do nothing except to brace himself for a hard pull, and as soon as the first flurry is over, let him start rowing and get the fish in tow. If it be possible to prevent it, the fish should never be allowed to tow the boat, because it is then master of the situation, and can thus either increase the duration of the fight several fold or else take out so much of the line as to get some slack and escape. Unless a tarpon be unusually well hooked, an instant's slack line will be all that it needs to save itself.

At times a big fish will take out line in spite of all the sportsman's efforts; in such cases the boatman should back water while the reel is manipulated, so as to shorten the line as rapidly as practicable.

The nearer one keeps the fish to the boat, the sooner will the fight be over. Of course there is some danger of the animal jumping into the boat, but this can be avoided by careful watching and casing up of the strain. I often keep my fish so close to the boat as to be drenched from head to foot before it is landed.

While the tarpon is in the first flurry, the rod should be held crosswise, or nearly so, as in trolling, with the tip raised considerably; but the instant it settles down the butt should be slipped beneath the front edge of the cushion or in the leather socket, if the sportsman be using one, after which the rod should be kept as nearly vertical as practicable.

To bring a big fish near the boat, "pump it up" by raising the rod slowly and steadily to the vertical, then dropping it suddenly to near the horizontal, at the same time reeling in rapidly. By keeping this up a short time, the fish will be brought as close as desired. However, this is an easier thing to talk about than to accomplish, for the fish is liable at any instant to make a run and take out in a few seconds line that it has required as many minutes to reel in. When this occurs, the only thing to do is to stop the run as soon as possible and repeat the pumping process.

To tire out a fish, tow it with all the energy of the oarsman's arms, and keep on toying until it turns belly up, when it is about time to think of either beaching or landing in the boat. I often tow a fish with the line reeled up so that the end of the snell is at the tip of the rod. There is danger in such close work as this, and I don't advise the novice to try it, but to content himself with about a dozen or fifteen feet of line and snell between tip and fish.

In order to beach a fish, head for the nearest shelving shore and run the boat on it till she grounds; then, if the fish has not made a run (as it is sure to do, if it be a big one and not too tired), let the boat jump into the water, grasp the snell with a piece of gunny sack or something of the kind to protect his hands from injury by the sharp ends of the wire, and drag the fish high and dry. Then let the sportsman make his measurements quickly, and have the boatman turn the fish back into the water carefully, so as not to injure its scales, thus giving it an opportunity at some future time to afford some other sportsman an exciting quarter of an hour, unless, perchance, the fishermen wants to have it mounted, in which case, cruelty notwithstanding, it should be left to die slowly, because clubbing would injure it for mounting. A skillful boatman, though, can stab it with his sheath knife in the spinal column, keeping the flat of the blade in the medial plane of the fish, and thus not injure it, barring perhaps getting the scales bloody.

If the fish be a big one or an unusually hard fighter, it will be necessary for the boatman, when he jumps into the water, to take with him the gaff, set it into the fish, and drag the latter ashore by the gaff instead of by the snell. When the boatman has hold of the line and the fish makes a run, he should let go, and allow the fisherman to fight it out with the rod until the fish is again drawn into shallow water.

Before landing a tarpon in the boat (unless the fish be a very small one), it is well to shoot it, otherwise there would be no foretelling the amount of damage that might be done to both boat and outfit, or even to the occupants. A live, 6-foot tarpon in a boat would certainly raise Hades there for five or ten minutes. To shoot a fish, draw it up as close as possible, press the line hard with the left thumb (guarded) against the forward brake, reach over quickly with the right hand, grasp the revolver, and, without waiting to cock it, shoot instantly at the fish's head or spinal column near the back of the neck. If the shot be not fatal, the fish will make a run in spite of all the pressure that the thumb can exert. And just here comes in one of the principal advantages of the outgoing drag, in that it prevents the reel from overrunning and the line from fouling thereon while the fisherman is putting the revolver back in its place on the rear seat. An ordinary click is not strong enough to do this, consequently in most cases the sportsman has to be pretty spry in dropping the revolver and resuming control of the reel.

After the fish is dead, or nearly so, no time should be

lost in gaffing it and getting it into the boat. To get in a big one, especially when the water is rough, is a job requiring care, skill and sometimes nerve. The head of the fish should be drawn over the side of the boat amidships, the latter being canted over as far as is safe, and the fish pulled slowly in, the boat being allowed to right gradually by the fisherman's manipulation of his own weight. If this be done carelessly, the boat is liable to slip much water or even capsize, and the boatman is liable to be thrown overboard, possibly into the maw of a hungry shark. As soon as the fish is in the boat, if not already quite dead, the boatman should pound it on the back of the neck with his club till it is out of the question for it to do any damage, after which he should proceed to clean up the mess a little, put another bait on the hook, and go for another fish.

There is a difference in the manner in which small, medium-sized and large fish should be handled. In case of a small one, let it jump itself tired, the closer to the boat the better, then lift it in with the snell. With a medium-sized fish, get it up close to the boat as soon as possible, tow it a little till it turns belly up, and either shoot it and gaff it in, or beach it, whichever is the best way when everything is considered. But with a large fish, as soon as the first flurry is over, settle down for a long, hard tow, and keep at it until the fish is exhausted.

In landing a fish from the shore, the sportsman, as soon as practicable after striking the fish, should put the butt in the belt socket and fight it out that way, or else he should sit down on the ground and shove the butt between his legs and into the earth.

This is hard work, and is by no means as pleasant or satisfactory as fishing from a boat.

There is quite a little art in gaffing a fish, and each new boatman should be taught it at once. In beaching, a fish should be gaffed, if possible, by inserting deliberately the point of the gaff behind the gills and running it up into the mouth, but sometimes the fish is too lively to permit this, so then the gaff should be set in wherever practicable (the nearer the neck the better), by putting the hook beneath the fish with the point up, and surging back hard on the handle. It is not good practice to gaff a fish with the point of the gaff down.

In gaffing from the boat, a dead fish may be hooked in the gills, but a live one should be struck from beneath, as just described. The blow should be given quickly and vigorously, and any tendency on the part of the boatman to do the work gingerly, or as if he were afraid of getting hurt, should be "nipped in the bud."

Measuring and Weighing Fish.

A tarpon should be measured when lying on its sides with its mouth closed, the length being taken from the tip of the lower jaw to a transverse line joining the extreme points of the tail, and the circumference at its maximum. The product of the length in inches by the square of the maximum girth in inches, divided by 800, will give very closely the weight in pounds. Nevertheless, it is well occasionally to weigh a fish or two so as to satisfy oneself that the formula still applies, although this gives a good deal of trouble and occupies valuable time that might be devoted to fishing.

One really needs a small block and tackle to weigh a big tarpon conveniently, besides either some high beam or an improvised gallows or tripod.

Photographing.

The photographing of leaping tarpon should be a pursuit of the deepest interest to any amateur photographer, for it is enticing even to those who, like myself, know absolutely nothing about photography. The gun-camera, designed by me and manufactured by Dr. H. W. Howe, ought to be duplicated by every tarpon fisherman who is also anything of a photographer. The apparatus has been described briefly in a previous issue of FOREST AND STREAM, nevertheless I shall again explain it here for the convenience of those readers who did not see the first description.

Manufacture out of 1½-inch plank a little wooden gun about 3 feet 6 inches long, put a sight on the end of it, and attach a trigger at the customary place. Then suspend and attach rigidly to the gun, just in front of the trigger, a good film camera, and by a simple system of levers make the trigger operate the shutter. Of course the axis of the gun and that of the camera must not only lie in the same vertical plane, but must also be parallel.

To use the gun, set the shutter catch, place the gun to the shoulder with the left hand beneath the camera and right forefinger on the trigger; then watch for the fish to jump, point the gun at it, and pull the trigger.

Next move up a new film, set the shutter catch and make ready for another shot. The apparatus works like a charm, and it is probable that ere long something of the kind can be bought at the photographic supply stores. With it birds can be caught on the wing and animals on the run. It can be used also for stationary pictures to great advantage, because it obviates the necessity for employing the tell-tale.

Snap shots at leaping tarpon can be taken by a photographer located in the bow of one's boat or in the boat of a companion. The sportsman could not well take a picture of his own fish, and the boatman could not be well spared from his regular duties for this purpose. In the case of the pictures of my catch, illustrated previously in FOREST AND STREAM and in Modern Mexico, my companion took them from another boat, and as he was always fishing when I got my strikes, he missed the first two or three jumps of the tarpon, which are nearly always the best ones they make.

If a photographer were in the bow of one's boat, one could shout to him upon the first indication of a strike, and give him time to rise to his feet, get his balance and aim the gun before the fish would be out of the water. A series of pictures taken thus would be of the greatest interest to the fishing fraternity.

General Remarks.

The time required to land a tarpon will depend upon a number of conditions, among which the following are the principal ones:

1. Size of fish.
2. How it is hooked.
3. Conditions of wind and tide.
4. Experience of the fisherman.

I used to figure for ordinary conditions at the rate of one minute for each five pounds of weight; but I have been doing better than that of late, for I have landed in the boat a 6-foot 4-inch tarpon weighing about 120 pounds in fifteen minutes, and I once beached a 5½-footer weighing probably 80 pounds in seven minutes.

If a fish is not hooked in the mouth, it will take more than twice as much time and labor to land it as it would if properly attached. A 5-footer hooked in the back just behind the long fin once nearly wore me out completely, and a 5½-footer hooked in the eye put up a running fight of three-quarters of an hour without making a single leap. I finally had to get out on the beach and pull it in by brute force.

On another occasion my wife, who was in the boat with me, hooked a 5-footer in the cheek. It took our combined efforts for nearly half an hour to bring the fish to gaff.

In respect to the percentage of tarpon landed in relation to the total number of strikes, I would state that this depends mainly upon the experience, skill and attention of the fisherman; but also somewhat upon how hungry the fish are, and whether one is fishing from a boat or from the shore.

At Aransas Pass the average for all the sportsmen is about one out of ten, but from the start, owing to the thorough instructions given me by my friend, Mr. Wm. Dunbar Jenkins, who was for several years chief engineer on the work of improving Aransas Pass, I did much better than that, averaging for the first three outings two tarpon from nine strikes. I now can just reach the limit of fifty per cent., although I once landed twelve out of twenty, losing one to a shark and two more to experimenting on one of Dr. Howe's reels with his patent brake.

The secret of my success is the quickness with which I strike whenever there is even the least suspicion of a bite. Some have told me that by striking so quickly I snatch the bait out of the fish's mouth. Perhaps I do occasionally, but is it not better to do so once in a while than to be losing fish constantly on the first jump?

Just here a word as to the difference between a bite and a strike. When a fish takes hold of the bait and then lets go after showing itself either by leaping or coming to the surface, we call this a "strike"; but if it does not so show itself, we term it a "bite."

One can generally tell when a tarpon has bitten by examining the bait, for the tarpon, having no teeth, crush the mullet and leave a little indentation on each side, while none of the other large, salt-water fishes that I know of are minus teeth.

Many sportsmen maintain that a tarpon always tackles the bait head first, but I do not believe this, as the markings on bait that has been nipped without the hook being touched prove, to my mind at least, that an escaping mullet is seized from behind.

One can nearly always be sure whether it is a tarpon or not that has been hung, because in nineteen cases out of twenty a tarpon will leap immediately after feeling the hook in its mouth. The exceptions to the rule are when the fish is unusually heavy and when it is hooked foul, especially in the eye. Even those hooked foul generally jump once or twice, and a tarpon has to approach pretty close to 200 pounds in weight before it is too clumsy to leap.

There is a decided difference between the weight and the fighting qualities of male and female tarpon of the same length. The male is lighter and more slender, and may leap higher, but the female is more chunky, and puts up by far the harder fight. The latter can nearly always be recognized by the broad back, which, to my eye, appears of a somewhat darker green than that of the male.

Fish are lost in the following ways, and the frequency of their occurrence is about as in the order given:

1. By failure of the hook to penetrate a soft place.
2. By the cutting of a hole in the mouth, from which the hook drops when the line is slackened.
3. By breaking or corkscrewing the hook.
4. By breaking the line owing to—
 - a. Its deterioration.
 - b. Fouling of line on reel by overrunning of the latter.
 - c. Tangling of something by the reel handle.
 - d. Too severe application of the brake or reel handle in order to stop the fish.
5. By breaking of snell.
6. By breaking of rod, generally in the tip, but sometimes in the butt.
7. By carelessness of boatman in gaffing.
8. By attack of a shark.

According to this, the fish has many chances for escape, but they can be guarded against by the sportsman more or less successfully as follows:

1. By setting the hook in quickly, as already herein explained.
2. By taking great care, especially toward the end of the fight, to avoid giving any slack line.
3. By purchasing only the best hooks that are obtainable, and by discarding at once any hook that shows the least sign of bending.
 - a. By drying one's line whenever possible; by turning it end for end on the reel, and, finally, by discarding it before it is entirely worn out.
 - b. By using a strong outgoing drag, and by never letting go of the rear brake without first either grasping the reel handle, or using the forward brake, or pressing against the spool with the guarded fingertips.
 - c. By keeping one's gloves buttoned and leaving no loose ends of anything hanging out that could possibly reach the reel, such, for instance, as the strings of the finger guards.
 - d. By using judgment and not being overconfident in the strength of one's tackle.
5. By using extra strong snell wires, of a material that is not soon injured by the sea water, and that will not kink easily.
6. By buying the best of rods, and by never letting the rod touch any part of the boat when a fish is hung, also by special watchfulness when towing a big fish close to the boat, so that when it makes a sudden rush for liberty the brake pressure shall be relieved instantly.
7. By instructing the boatman as to how to gaff a fish properly, as herein described.
8. By keeping the fish close to the boat when a shark is near, and by making a great noise in order to frighten the brute away. To be candid, though, I must confess

that I don't believe there is much chance of success in case that the shark is hungry and the tarpon a big one, for it gets so frightened by seeing its natural enemy near at hand that one cannot prevent it from running.

As to why tarpon will strike at some times and not at others, I have for several years been trying unsuccessfully to learn. I have seen them in immense numbers when they would not look at a bait, but at other times I have obtained a strike by circling a school. Possibly other fishermen have learned the reason, or reasons, and will give them in *FOREST AND STREAM*.

In respect to what should be considered fair, average sport at tarpon fishing, this will depend upon the locality. It is said that if a man goes to Florida in the winter, stays there two weeks and catches one tarpon, he should go home satisfied. My average of late years at Aransas Pass has been one tarpon per day, and at Tampico over one and a half. On some days the score runs high, while at other

A. N. CHENEY.

times at Aransas there will not be a tarpon landed by any one for several consecutive days. At Aransas I have caught as many as five tarpon in a forenoon, and at Tampico in the same time six tarpon and ten jackfish. My friend, Father O'Dwyer, of Kansas City, has lately landed in four days at Aransas twenty-four tarpon, six jackfish and two large jewfish—an enormous score. But in tarpon fishing, as in life in general, "all is not beer and skittles," so, when the fish fail to strike, the true sportsman must console himself with the expectation of "better luck to-morrow" and bide his time patiently.

And now for a few words of warning to the novice, that may perhaps be the means of saving him some annoyance or discomfort. Beware of letting slip the handle of the reel, or you may have your knuckles skinned, and don't let your thumb get pinched in the reel. Wear a white silk handkerchief around your neck to prevent chafing and sunburn. Keep turned down over your wrists the long sleeves of your undershirt, and thus prevent them from being burned.

When any one of a group of tarpon fishermen hooks a fish, it is the duty of every one else to keep out of his way, even if to do so involves weighing anchor and taking in line. It is the height of discourtesy to foul the line of another fisherman and thus cause him to lose his fish.

When two are fishing from one boat, and one of them gets a strike, the other should reel in his line instantly, not only for fear of fouling, but also to avoid striking another fish. It is hard luck to strike two fish at the same time; for the chances are greatly in favor of a tangle and the loss of both fish. On three occasions have my companion and I struck doubles, and in every case both fish escaped. Doubling is very likely to occur when two persons fish from the same boat, because tarpon often travel in small schools and quite close to each other. It is far better that each sportsman have a boat to himself.

Care of Tackle.

Whenever one stops fishing for an hour or more, he should dry his line thoroughly. At tarpon resorts there are places set aside for this purpose and provided with wooden arms from twenty to forty feet apart, around which the line is wound, or at least as much of it as has gotten wet. These places are generally under shelter from rain. When the driers are not available, one can dry his line fairly well by coiling it on the floor in the corner of a room, where it will not be disturbed.

The patent line drier made of brass and jointed so as to pack into a cylindrical space six inches long by one inch in diameter, (costing \$1.75) is an excellent thing to have, as it can be used either in a room or out of doors. The greatest of care should be taken to prevent one's line, when either wet or dry, from touching steel or iron, as rust will ruin it in a very short time. A dry line stowed in a painted galvanized iron tackle box will take

no hurt, however, but it should be placed in a compartment having nothing else in it but lines.

To test a line, make a loop at the end, hitch it onto the scales, attach the latter to a hook, or have some one hold it, take hold of the line with the hand properly guarded, and pull until either a satisfactory resistance is attained or until the line breaks. The cutting off of weakened parts and the reversing of ends have been mentioned previously. Lines should be examined carefully every day for frayed spots, and when any are found, they should be either cut out or removed to near the axle of the reel, or else the use of the line should be abandoned.

Care should be taken not to let the line either untwist or kink. The cause of such trouble is either an eccentric bait or insufficient or ineffective swivels. To take the kinks out of a line, remove the snell and tow the twisted part behind the boat for a short time.

Above all things, don't let any sand get into the spooled line for, if there be any there when a fish is being handled, the pressure on the brake will cut the line rapidly.

It is practicable to splice two short lengths of line to make one long one; but it is a delicate piece of work, and should not be undertaken by any one who is not expert therein. Occasionally a boatman is found who can make a good splice—generally one who has been a sailor.

All steel or iron portions of one's tackle should be greased often so as to prevent rusting, including gaff, revolver, snell-wires and hooks, and every day or two the axles of the reels should be oiled through the little covered cups on the outside, as should also the click, if there be one.

Hooks should be sharpened the moment that they are found to be dull, using therefor a flat file, a somewhat blunt point being better than a very slender one. The gaff hook also should be kept sharp.

Never use a crooked snell, but straighten it just as soon as it is found to be bent. If a bad kink be discovered, better abandon the snell than attempt to straighten it, for the wire would be very apt to break at the point of straightening.

Never let a rod get very much bent, if it can be avoided. Opinions are divided as to the best way to straighten a bent rod. Some sportsmen reverse the tip in the socket at least once a day; but others never reverse it, preferring to spring back the rod by pressing the tip against the floor and oscillating it gently. Rods are built with double guides for reversal, but some experienced fishermen claim that a rod often reversed will wear out much more quickly than one which is sprung back as just described. From the point of view of an engineer this opinion is correct.

If a rod be sprung or cracked it can often be repaired by winding waxed tarpon line very tightly over, above and below the cracked portion, and fastening the ends thereof so that they cannot slip.

When a reel gets out of order the best thing to do is to send it back to the maker for repairs, unless one has considerable mechanical ability, or there is no other reel to use.

In respect to the tackle-box, one should remember the old adage, "a place for everything and everything in its proper place." When getting it ready for a journey it should be so packed that none of the contents will move about, all valuable portions, such as reels and articles easily injured, being wrapped with cloth. The last remarks apply also to the rod trunk.

In conclusion I desire to remind my readers that for tarpon fishing the best tackle is necessary, and that, unless it be kept in first-class condition, it is pretty sure to give trouble and dissatisfaction.

J. A. L. WADDELL.

Edwin R. Wallace.

EDWIN R. WALLACE, well known as the author of a work on the Adirondacks, died at his home in Syracuse, N. Y., last week. Of the man and the book, Mr. Stanley G. Smith writes in the *Syracuse Post-Standard*:

In the departure this week from this life of Edwin R. Wallace, Syracuse and Onondaga county have not only lost one of their oldest residents, but one of their most interesting characters and gentlest of men. He was always a modest and unobtrusive citizen, or else his success as author and merchant would have made him more conspicuous in this community. He was foremost in establishing a public library before our Central Library was established. His chief literary work, and one which will outlive him many years, was his "Adirondacks."

"Wallace's 'Adirondacks'" is without doubt the best book of reference and history of any similar work of travel and descriptive scenery ever published in this country. It was first issued about thirty years ago in comparatively a humble way, but was gradually expanded and embellished in its various editions to a handsome volume with hundreds of half-tone and other illustrations, and was wonderfully complete in its details and statistics. It has been said that the work was mostly to be found in colleges and public libraries. This is not so, as many of the lovers of and visitors to our State's great natural sanitarium, the North Woods and Adirondack Mountains, have copies of the work, and Mr. Wallace was known throughout the beautiful wilderness better than any other man. Had he cared to prosecute its publication and sale with the same zeal he expended in his business, he could have made a competency from this source alone, and obtained for himself a greater reputation. It was simply a labor of love with him. The strange feature of this authorship was the fact that Mr. W. was not a sportsman, being neither a hunter nor an angler. He simply delighted to visit this wonderfully invigorating region of woods and mountains and to tramp and rest therein.

Such true devotees of the woods as our well-known citizen, former Judge A. J. Northrup, himself an author of books of wood life, and Ernst Held, the grand old follower of Walton, can well testify to the ability and dear friendship of our lamented one. The writer had the great pleasure for the past few seasons to have enjoyed trips to the Adirondacks with this most genial of companions and encyclopedias of information. His work has done more to attract interest to the Adirondacks

than any other source, and consequently has given entertainment and life to many thousands of visitors, sportsmen and invalids.

The Potomac Fishing.

ROMNEY, W. Va., Aug. 16.—*Editor Forest and Stream:* I will endeavor to write you a few items on our summer fishing, which has had more than the usual number of fishermen. The South Branch remained muddy the most of the summer, but as soon as it cleared crowds of campers appeared on the river; but I do not think they have caught very many fish, although I have seen three or four 4-pound bass taken close to town by local anglers. I think that the carp and the fish pots, tie rafts, so many fishing and the two tanneries soon to be in operation on the South Branch have sounded the death knell of bass fishing on the historic South Branch of the Potomac. Your correspondent was an applicant for the position of deputy game and fish warden for this county, but as he understands some toughs from Keyser, who were over here violating the law last fall by running deer with hounds, and whom he tried to get punished for the same, have petitioned the State warden not to appoint him, he supposes he will not be appointed. We will have lots of quail shooting here this fall. Squirrels are scarce; pheasants are plentiful; deer and wild turkeys are only fair; rabbits are thick. JIM BURR BRADY.

Newfound Lake.

NEWFOUND LAKE, Bristol, N. H., Aug. 17.—This lake is noted for the number of large trout annually taken from its waters. This year is no exception, as quite a supply of good-sized trout has been taken by the expert anglers who are summering here. One of the most persevering and enthusiastic fishermen is Willard H. Poole, of Fall River. While trolling from a canoe alone he netted a 3½-pound salmon, a 4-pound trout and a 10-pound trout, the last giving him quite a fight for two hours before passing into the net. Dr. C. C. Rothfuchs, of Boston, secured an 8-pound trout. W. B. Hawes, of Fall River, paying a visit of a day and a half to friends here, took the half-day to go afishing, and ran up against a 13½-pound trout that gave him a self-satisfied feeling after dinner the next day. O. E. Berry and J. N. Moshier are high line on trout this year, they taking a 17-pound trout, which heads the list of large trout for 1901.

The prospect for deer hunting is good, quite a number having been seen near the farmhouses and on the shores of the lake. Partridges have done well this summer, and promise good sport to the man with the gun. S. H.

Louisiana Bayous.

A bright August found the writer on the charming banks of the Courtableau on a trip to the neighboring lakes and swamp islands to look out for the so much talked of plovers, odd and strange dressed water birds with long loose wings which for that reason are called also flap wings, inhabiting the favored regions, which I shall now describe. Not far away from my course I noticed Bayou Fusilier. It is a small stream not more than four miles in length, and would not merit our attention in a system of geography, if it did not form a limit between the grand and magnificent domains of Louisiana, Opelousas and Attakapas. Bayou Fusilier is further illustrative in showing how near the country at this point approaches the real curve of a sphere. The water, as if balanced, seems scarcely able to determine its course. This Bayou Fusilier must not be confounded with another bearing the same name. Both bayous are indebted for their name to the self-same person. The Eastern Fusilier is in reality a stream of much greater importance than the one mentioned in the beginning of this article.

There is a mysterious influence at work in the regions of the Courtableau and Fusilier, which seems to gather the swamp fogs up and hold them suspended above and around the little lakes and petty bayous, shutting them in completely, so that all about the atmosphere is dark. When I approached, meditating about this phenomenon. I found myself suddenly in its densest vapors. A little later in the season large flocks of "golden plovers" alighted on the banks of the Courtableau and made it lively for the grasshoppers, their rich food, which now in great terror rose before me in clouds at every step, and scattered away in uncertain flight before the wind.

A brisk walk found me on the borders of a fresh-water lake. The bottom was covered with a growth of aquatic vegetation, which seems as though it might harbor sufficient insect and reptile life to feed thousands of plovers, while in the shallow water lilies grow in profusion, their dark green leaves crowding each other upon the surface, leaving only scant room for the snow-white petals to shoot up and unfold themselves for the voracious plovers, hunting in the deep and wide nectaries for insects and snails.

It has been observed, when speaking of the Courtableau, that it flows diagonally over an inclined plane. When the spring floods have filled the swamps with water, and when the Courtableau becomes replenished beyond the capacity of retention, it is, though on a smaller scale, similar to the Atchafalaya, its redundancy being carried off by an indefinite number of outlets from the right bank, that mostly lose themselves in the waste of the woods. Some narrow outlets which, having their efflux from the Courtableau, about two miles below the Derbane, pursues a southern course about twelve miles in its windings, and approaching the prairie Grand Chevreuil within a short distance, turns each toward the Atchafalaya, and finally loses itself in the intermixture of lakes that enchain that river on the west side. When the Fusilier assumes its eastern course from prairie Grand Chevreuil, it meanders and becomes still more serpentine. Not a single spot on the bank of this bayou can be rendered secure from the annual overflow of the swamps by the Atchafalaya, and it is a lasting monument of a revolution in the range of waters through this region. It would be not only improbable, but impossible, that water could, in the present state in the country, form a determinate course in this place. At the elevation of the spring floods the swamps are entirely filled with water, and all the small bayous are lost in the universal inundation.—The Times-Democrat.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XXII.—Field Trial Judging (Continued).

Some men will have a better understanding of a dog's work in one season than some other men will have in a lifetime. The matter of brains and natural aptitude governs in this case as it does in all other branches of man's intelligent effort; therefore it is essential that a field trial judge have that somewhat uncommon quality called common sense.

The average man who has not been schooled to concentration by habit, finds great difficulty in concentrating his thoughts on one subject for a prolonged period of time; indeed, without a prior schooling many men cannot do so, and some cannot do so longer than a few moments at a time. Men who are mentally indolent or incapable of concentration of mind are not of the material for good judges.

The field trial judge must keep his eye and mind on the dog's work incessantly. Unless he sees the work done, he knows nothing about it. If he sees two dogs, one on point, the other on back, after they are established, he does not know but what the pointing dog may have stolen the point from the dog which is apparently backing. As for errors, if the judge's eye is off the dogs, they may be made and the negligent judge will never of his own knowledge know that they ever happened.

The good judge must constantly make mental comparisons of the industry, range, bird sense, judgment, independence of action, accuracy, quickness, honest work to the gun, etc., free from crafty coaching by his handler and jealous rivalry of his competitor; therefore to master all the details of the competition he must have a good memory. All this, added to planning the course for each heat and directing the rendezvous for the wagons at the end of each heat, is quite sufficient to keep his mind occupied within and his attention engaged without. Thus it will be noted that a field trial is a much more ponderous affair to handle than is one or two dogs in actual field work.

In laying out a course for a heat, reference to giving the dogs a good consecutive run and reference to good courses for the other dogs should be considered.

Field trial clubs, as a rule, rent their grounds and within such territory they have all the needed rights and factors for giving the dogs the required competitive tests. The grounds vary greatly in character. In parts the birds are in generous abundance; in others there may be none at all. Some parts may be all cover, or mixed open and cover, or open entirely. Creeks, wire fences, swamps, steep hills, etc., are also circumstances which may require consideration. It is readily perceived that if the grounds are worked irregularly back and forth without any fixed plans, or that if the choice parts are worked out first, then the dogs which run in the subsequent heats would work on ground already more or less worked out or they would have to work on the poorest remaining ground. The judge, therefore, must approximately apportion his ground so that each brace will have a trial on unworked ground, dividing the choice and poor parts as equitably as may be, so that each brace will have chances as near alike as intelligent planning can devise. If one dog finds and points a dozen beavies in a certain course, and another dog, working equally as well in another course, finds no birds because there are none in it to find, the former would likely receive the approval of the green judge, who has yet to learn the value of opportunity or its absence. The trained judge has all such considerations in mind.

The next greatest affliction in comparison with the judge who is frantically intent on being everywhere at the same time, right or wrong, is the judge who has no

ideas in respect to going anywhere. He is weak and indecisive, the competition lags and weakens in consequence, because he does not know where to go nor what to do.

Every few moments there is likely to be some matter submitted to him for a ruling, and, however good he may be in an actual day's shooting, if he is not competent as a judge he will be unable to conceal it. Indecision makes incompetency manifest, and the more incompetent he is the more ruling he will have to make, for error begets trouble and disorganization. Brave impartiality and energy when judging imaginary field trials in a circle of friends by the fireside, and the same when confronted by men who are sternly in earnest in a real trial, have quite different aspects.

The ready judgment of the irresponsible spectator who sees but little but whose conclusions are great, is many times at the judge's service if he will but listen to them. It is a mistake to discuss the competition with any on-looker, as it is a mistake, directly or indirectly, in any way, to endeavor to explain apologetically any decision. If a contestant asks in good faith as to how his dog was beaten, it is quite proper to give him the needed information; however, the information being given, no argument concerning it should be permitted.

In taking dogs into the second and subsequent series, the judge should be careful to estimate their performance on its class rather than on a mere matter of detail alone. A dog which shows good class ability will repeat his good performance heat after heat, whereas the dog which made some accidental good work, or good work from advantageous circumstance, may be entirely incapable of repeating it. A man who cannot discriminate as to class will never make an accurate and sound judge of field trial competition. Where class work is considered, the competition works to a natural and definite conclusion; when it is ignored, there may be the absurd spectacle of a low class dog competing for first at the final of a stake, with dogs of much higher ability left out of the competition. Nor should any dogs of inferior quality be taken into a series out of mere compliment to their owners. When a dog has shown himself inferior to other dogs, his part in the competition is determined and should be ended. To take an inferior dog into a series to which he is not entitled on his merits, perpetrates a wrong on the other competitors, however much of a compliment it may be to the owner.

XXIII.—Kennel Management.

The dog's sleeping quarters should be dry, clean, well ventilated and comfortable. He should have ample room in which to exercise, in default of which he should be given a good run night and morning each day. Exercise is indispensable to his physical and mental well-being.

Dogs should never be kept on chain. Old dogs fret and worry, and in time become more or less soured in temper. Young dogs, from standing in a set, strained position at the length of the chain, frequently grow up out of shape; their elbows turn out, their faces are wrinkled and bear an anxious expression, and they become addicted to habitual worry and irritation.

Cleanliness, good food, pure water, exercise and wholesome sleeping places are as necessary to the good health of the dog as they are to the good health of his master. Exercise, in fact, is more essential to the dog, for when he becomes fat his powers quickly degenerate. He then becomes indolent, deficient in stamina and predisposed to disease. With some dogs it is a matter of great difficulty to work off the fat, as they either will not or cannot work enough to reduce it other than by very slow degrees.

The food of the dog is worthy of much greater consideration than is commonly given to it. The table scraps of some families make quite good food, while those of other families cease to be food at all for any animal. There is quite a remove between scraps of good beef, bread, vegetables, etc., on the one hand, and potato skins on the other; that is to say, table scraps, to be of food value, must have food constituents. Sheep's heads, tripe, mutton, beef, roasted rare or boiled with cabbage; turnips and onions, etc., make an excellent food. Cornmeal or any other purely vegetable food is unfit for the dog. He will live a shorter time, grow old younger and cease to be a working dog at an earlier age than he will on any other diet. The dog is carnivorous, and therefore he needs a meat diet. The ill effect of the latter, when such there is, is not from the meat diet of itself, but from over-feeding. In a state of nature the dog gets his meals at uncertain times, perhaps days apart. Once a day is quite often enough to feed him, yet the average dog owner is prone to judge of the dog's needs by his own, and therefore he feeds the dog three times a day with a few morsels, perhaps, between times.

The dog's digestive organs are not adapted to the assimilation of a vegetable diet. On this point, the following, taken from a paper read before the New England Kennel Club, Boston, July, 1884, by Dr. J. Frank Billings, will be read with interest: "No matter in what way we look at it, the dog's ancestors were carnivorous, and the nature of their descendants has not changed in this regard, though, as in everything else, man has succeeded in changing it to a degree. Still, a carnivora he was, and ever will be. He is not a masticator. He has not a grinding tooth in his head. He has nothing but biting and tearing teeth in the front, and crushers in the posterior part of his jaws. He takes no pleasure in eating as the chewers—i. e., the masticating animals—do. His is a feeling of emptiness, and when able he gulps his food, fills his stomach and, when he can do so, retires to a secluded spot to rest. It may be interpolated also that, in proportion to the size of the body, the canine family have the largest stomachs of any known species of animals.

"Critical persons need not think we have any reference to the receptive stomach of the ruminants; we mean the digestive stomach.

"The dog's natural food is meat, and, to avoid giving them a strong odor, we should cook it. Meal and starchy food is an abomination, and totally unfit for dogs, even the most delicate, though all the bigoted ignorance of all the dog men from time to eternity assert the contrary. The dog can live on the stuff, I admit, but it finds no organs for its preparation or digestion until it has passed through the stomach into the intestines. He has no grinders to prepare it in the mouth, and if he had he gulps

it without chewing; his salivary glands are rudimentary, hence he has no means whatever of turning starchy food into sugar and dextrine, which fit them for nourishment, as ruminants have. Starchy food is not acted upon by the gastric juices to any great degree, and so they pass unchanged through the stomach into the beginning of the intestine, where the pancreas or salivary glands of the abdomen have to do all the work.

"Feeding on meat does not ruin the scent of sporting dogs as ignorance so frequently asserts. If it did, the whole wild canine race—wolves, jackals, etc.—would long ago have died of starvation. Feeding meat does not make dogs ugly, but confinement and neglect do. Finally, common sense and the study of the subject in all its details, are better guides than the accumulated ignorance of the world on any subject."

The experience of all the eminent trainers and most advanced sportsmen fully bears out the foregoing. A dog will do more and better work on a meat diet than on any other, and he will also have better health and a longer life if so fed.

Many owners are prejudiced in favor of vegetable food on the matter of economy. There is no doubt of its relative cheapness, but that is quite another matter from its fitness.

Whether the dog is working or idling, one meal a day, at evening, is quite enough. The sympathy of the owner who judges his dog's needs by his own is wasted when he imagines that the dog will suffer from hunger if he has not three meals a day. Actual knowledge is much better than unthinking sympathy.

Official organ, FOREST AND STREAM.

'Mid Reef and Rapid.—XVIII.

BY F. R. WEBB.

KEMPLE'S FALLS, with its prodigal variety of reefs, falls, pools, holes and shallows, is an unusually favored place for bass, and they are quite plentiful here, and rise readily to the fly.

For several years past we have made Capt. Keyser's place, at the foot of the falls, a camping place for a day or so's fishing, with varying success, but always enjoying fine sport, and we remained here all day on Saturday, fishing several hours in the forenoon, lying around our comfortable camp, with book and pipe, during the middle of the day, and going back up into the falls between 3 and 4 o'clock, and fishing until dusk. We had brought a small bucket of "mad-toms" down with us from Bear Lithia, and with these and helgramites (which are plentiful here), and our fly tackle, we were well provided with bait, and our day's sport was most gratifying. We had fish for supper, an abundant supply for breakfast, and sent a fine string up to Capt. Keyser's house.

The fish were fierce and gamy. I had one take a mad-tom from right under my feet, in a clear, little channel through the reefs not over 6in. deep, while I was wading across it, with the "tom" trailing in the water at the end of the shortened line, held loosely in my fingers, and, while fly-fishing in the afternoon, I saw one shoot 20ft. or more through the water, to get my fly, as it dropped lightly out on the surface. He got it, too.

"Well, sir! talk about fishing," said Lacy, as he put a little more sugar in the lemon preparation I handed him just before supper, and stirred it briskly around. "Talk about fishing! I'm no fisherman, and seldom care much about it, but that's the finest fishing place up there that ever I struck. Talk about bass! I never did see so many bass in a place. And so careless, too! They ran around everywhere. Right under a fellow's feet!" here he paused to take a couple of sips of his decoction. "Why, I caught one bass," he continued, "that ran after my angry thomas as I was reeling my line in, and took it right between my feet" (another sip). "I didn't use my rod at all, but yanked the line with my fingers, and hooked him and drew him in" (two or three more sips), "and I actually caught one with my hands. A 2-pounder, too! Fact!" he added, as he finished his preparation and set the empty glass down with a ring on the mess table and looked around at us inquiringly, as though challenging contradiction.

"Oh, get out! What are you presenting us with?" exclaimed George, in disgust.

"Well, it's so," he persisted, earnestly. "He ran out in shallow water after some minnows, and shot clean up on to a little gravel bar where the water was only a couple of inches deep, and while he was floundering and splashing around, trying to throw himself back into deeper water, I dropped my rod and went for him with both hands, and grabbed him and held onto him before he could get away."

He sat down and helped himself liberally to fried bass, fried potatoes and cheese omelette.

"Gimme cup of coffee, Commodore, please," he commanded, with the air of one who, having quite distinguished himself, was entitled to some little consideration therefor.

"Colonel," said I, quietly changing the subject, as I served Lacy with his coffee, "did you hear about the sportsman's badge John Kinney was talking about some two or three weeks ago—before we left town?"

"No, I didn't," said the Colonel, as he reached for his third bass. "What was it?"

"Nice fish, aren't they, Colonel?" remarked Lacy, looking meaningly at me.

"Yes, very," remarked the Colonel, innocently, as he split his fish down the back and liberally salted and buttered it.

"Why, you see," I continued, "the Judge said it was proposed to get up a badge for the sportsmen of Staunton. It was originally designed for the gunners, but there are so many fishermen in town who are also gunners that it was finally decided to include the fishermen also. The design is to be something like this: A lyre—a musical instrument, you know, not an individual—a lyre for the centerpiece, crowned with a wreath, with a fishing rod leaning on one side and a gun leaning on the other—"

"They might put a fellow catching fish with his hands behind it," observed George.

"With a bar suspended below," I continued, "with the inscription, 'I am one of them.'"

"It's a capital idea," said the Colonel.

"And an excellent design," added George.

"Yes," I replied, "and considering Lacy's phenomenal catch to-day, I think, although he modestly lays no claim

his tobacco bag, from which he proceeded to replenish his pipe. "They used to boat all the pig iron from the furnace at Milnes down to Riverton and Harper's Ferry before the railroad was built."

"So I've been told," replied the Colonel. "A cargo such as pig iron or coal is peculiarly heavy and hard to handle," continued the Captain, "and in case of accident the boat and cargo of course sunk."

"Couldn't they be recovered?" asked Lacy.

"Well, that depended on the water," was the reply. "In low water, when a boat was wrecked in a rapid or fall, it was usually not difficult to save the cargo, as the water was not generally deep; and it could be carried, piecemeal ashore; and the boat itself was usually gotten off the rocks and repaired, if not too badly damaged; but if the accident happened in flush water, or was caused by the boat running on a rock or reef in deep water, both boat and cargo were frequently lost—particularly if the cargo was iron or coal—as the water was then too deep, or swift, or both, to handle the boat or get the cargo ashore. Hadn't you all better come up to the house for the night?" he continued, as he rose and knocked the ashes out of his pipe, and started to walk back up the lane. "Those little boats look close and frail to be out over night in!"

We thanked him for his kind invitation, and with the assurance that our tents and canoes were perfectly comfortable and secure, and with kindly good nights all round, he turned away, and was lost to sight amongst the dense shadows of the trees.

The moon was just rising above the lofty tree-tops which crowned the high bluff opposite and above us, and through her topmost boughs her bright rays penetrated, casting over the foreground of river and sloping bank

"THE MASSIVE LINE OF CLIFFS END HERE IN A BOLD PROMONTORY."

to being a sportsman, he certainly is well on the road to becoming a full-fledged one, and is, therefore, fairly entitled to one of these badges."

George and the Colonel acquiesced, heartily, but Lacy made no reply, but got up and walked over to his boat for his bag of tobacco, from which he proceeded to fill his pipe, the which being accomplished, he lighted it, and, resuming his seat on his camp stool, puffed away in silent meditation, until roused by George to come and take part in evening dish wash.

"And so that's Kemple's Falls, is it," said the Colonel, loading his evening pipe for the third time, "that I've heard you fellows talk so much about? Well, I don't think much of the place, as to its great difficulty, I mean. It's no harder to run than plenty of places we've come through above. The Port Republic Falls, for instance. It's a fine fishing ground, though."

"Well, that's as you think," said George, as, dish towel in hand, he polished away at the dripping plates, as Lacy handed them to him. "We have always considered it the worst place on the entire upper river."

"And the oftener we run it the more I am confirmed in this opinion," I added.

"It used to be so considered by the old-time flat-boatmen," said Capt. Keyser, who had dropped down from his house to have a little chat with us. "The place was much dreaded by them, and I've seen twenty boats at a time laid up above the falls, waiting for a chance to get through; they used to always double up, as they came through, the crews of two or three boats going through on each boat."

"How many men composed the crew of a boat?" asked the Colonel, as he struck a match and puffed his pipe into a light.

"Two men to a boat," was the reply. "It is always a wonder to me," said George, laying aside the last plate as he spoke, and turning a pan over the little pile of plates, knives, forks and spoons—"It is always a wonder to me how two men could run one of those boats, especially when loaded. Why, they are as big as a ferry boat!"

"Yes, almost as big," the Captain replied. "They are 10ft. wide and 70ft. long."

"It is wonderful to me how two men could manage them in the strong, rough water of the falls and rapids," said Lacy.

"It does seem so," admitted Capt. Keyser, "but they managed them somehow, for that was the usual complement to a boat. Accidents, however, were of frequent occurrence, and many a boat has been sunk, and many a cargo lost, up there in the falls above. Thanks, yes; I will take another pipeful," as the Colonel proffered him

a beautiful alternation of wavering lights and shades. We finished our pipes, the while we enjoyed the lovely prospect, and then turned in for the night. Lighting my candle-lamp I lay and read for an hour, with the flaps of my tent thrown up on both sides, to admit the pleasant, balmy night air. Reading myself drowsy I blew out my light, pulled down my tent flaps, and dropped off to sleep.

I was restless, however, and didn't sleep well; my last bass, at supper, probably weighing heavily upon me. Finally, after twisting and tossing around for several hours, I rose up, broad awake. I raised the flap of my tent and looked out. I was startled to find broad daylight. All seemed strangely quiet and still, however, with no signs of life in the other tents. I rubbed my eyes and looked again.

A second and more wakeful look demonstrated the fact that my daylight was literally all moonshine! I looked at my watch—it was 2 o'clock. The glorious beauty of the night tempted me out.

The moon rode high overhead in a cloudless sky, with that mysterious, impressive brilliance only noted in the wee sma' hours of the night. She was a little past the full, and one side was a trifle flattened, slightly diminishing the perfect sphere of her outline, but in nowise diminishing her glorious effulgence, which seemed to diffuse itself everywhere, and to penetrate to the depths of the forest immediately around us.

The broad surface of the wimpling river in front was, shining and bright, like a sheet of liquid silver, looking dark and mysteriously suggestive of unfathomable depths underneath the polished, shining surface. Here and there a projecting rock or reef stood at the up stream end of a long, v-shaped furrow, the lines of which danced and sparkled in the moon's rays, throwing them back and forth in wavering lines of living diamonds, while the foam-crested surges at the foot of the falls, a quarter of a mile away, gleamed snowy and white in the delicate, greenish-yellow light. The musical drone of the falls came to my ears remarkably clear and distinct, while above it could be plainly distinguished the deep-toned, dominating roar of the race-path, a mile further up.

The heavily wooded bank on the opposite side of the river loomed up in a solid wall of blackness, while the massive stone promontory, at the foot of the falls, stood out in the bright glare, with every seam and scar in its wrinkled face as visible as in mid-day; and the broad, sloping, barren waste of sand and rocks, on the opposite bank from the cliffs, gleamed as white as a snowdrift, with here and there a black spot, where some bush, or spindling, stunted sycamore, struggling for existence among the rocks, cast its shadow on the barren shingle,

Canada Cup Races.

CHICAGO, Ill., Aug. 12.—As reported by wire to the FOREST AND STREAM to-night, the Canadian challenger Invader turned the tables on Cadillac and won the race of to-day almost as decisively as did Cadillac that of last Saturday. This places the boats on even footing at the second race with three yet to sail. The margin of the victor was in each case much the same. Cadillac won its race last Saturday by 8m. 45s. Invader won to-day by 6m. 22s.

It begins to be apparent that these races are races of types and of conditions, rather than of two boats evenly pitted. Invader won to-day under a wind which never

At 12:00 the wind freshens to perhaps 3 miles an hour, and both boats are in little wrinkles of air. Invader still eats into the wind. It loots a trifle better now, and seems more skillfully sailed than Cadillac. They are now 2 miles on their way to the turn.

At 12:15 both boats are outside the four-mile crib, and they are getting fresher winds.

At 12:20 Invader is 3/8 of a mile to windward, and on this basis has the race won. The wind freshens now to 6 miles an hour.

At 12:35 Cadillac stows her men on the lee rail, to give her a better list. Invader is not so stiff as Cadillac. Invader leads by 1/4 mile.

At 12:45 the wind becomes still fresher, and it is now coming nearly from the E. Cadillac, under these conditions, begins to make her first gains. Both boats are now running nicely.

Instead of this proving a beat to windward it is now seen to be really a close reach, for the wind has again shifted. At this Cadillac should naturally do well. The course, as laid out, is E. by SE., and the wind now nearly due E.

At 12:58 the Canadian shows well down the first leg of the 9-mile course, and is getting ready for the gibe about the buoy. She has a man on the horn getting ready with his head sails.

At 12:58:35 Invader gibes about the buoy. In 5s. her balloon jib is out. Again it seems to set rather badly at the foot.

At 1:03:02 Cadillac gybes about the buoy. In 2s. her balloon jib goes out nicely, even better handled than Invader's.

This changed direction of the wind gives the boats a broader reach home, and both start sheets and begin to foot it. Invader has just what she wants, not too much wind, but plenty for her purposes.

At 1:13:30 Cadillac takes in her big balloon jib and sets a smaller balloon. She foots faster now and picks up a little distance on Invader, but not enough to amount to much.

At 1:40 Invader is running away from Cadillac.

At 1:45:30 Invader is opposite the four-mile crib.

At 1:46 Cadillac takes down her smaller jib and again breaks out the big one. Cadillac is evidently guessing, and these maneuvers hardly show championship sailing.

The wind is now N.E. and about 5 miles an hour. Invader's balloon jib is drawing well and she is footing nicely.

At 2:07 Invader squares for the line.

At 2:08 Invader crosses the line.

At 2:14:22 Cadillac crosses the line.

Start, 11:00.	Windward Buoy.	Finish.
Invader	12 58 35	2 00 00
Cadillac	1 03 02	2 14 22

Invader wins by 6m. 22s. Direction of course E. by SE. Courses of wind E. by SE.; E.; thence N.E. Never over 6 miles an hour.

In this light air Invader footed it like a witch, making no fuss at all. She was trimmed within an inch of her life and handled to the Queen's taste. Cadillac seemed to have her crew pretty far aft and sailed in a heavy and loggy fashion, which latter, however, was really due to the fact that she did not have wind enough for her sort of going.

Invader gained on the first leg a reach, 4m. 27s. On the run home, also practically a balloon reach, she gained 1m. 55s.

Invader, with her long, fine lines, her low freeboard and big sail spread, is as good a light-weather boat as we have ever seen in this port.

The Measurements.

There were some so-called official measurements handed out to the press under which both boats were stated to come in under the 35ft. class. The judges then stated that Cadillac was a trifle under the limit, Invader a little over. The truth is, as known by those who saw the measurements before they were posted for public notice, that both boats are just over the 35ft. limit. They sailed practically by agreement and not strictly under the rules or strictly inside their class. The difference, however, was a very trifling one, and both skippers seemed entirely contented to accept the conditions offered.

Invader Wins Third Race on a Foul.

Aug. 13.—To the regret of all, the pleasure of to-day's race, and, indeed, the success of the entire series, was marred by one of those unfortunate circumstances which occasionally come up to rob sport of its keenest zest and a victory of its sweetest flavor—a foul. Barely over the starting line, Cadillac fouled Invader, and the Canadian yacht a few minutes later was awarded the victory, the judges megaphoning Cadillac to withdraw from the course. Thompson, skipper of Cadillac, complied in part with the request to withdraw, coming about and dropping down to leeward about a mile from Invader, which continued its way about the course. After sailing in this way, paralleling the winning boat for three or four miles, Cadillac was chased off the course by the revenue cutter Morrill. Skipper Thompson at the close of the race filed a protest and did some talking which, perhaps, a more sober reflection would have induced him to cut out under similar circumstances. He accused Skipper Jarvis of fouling him intentionally, and one or two of Cadillac's crew also made statements, which add nothing to the sportsmanlike quality of Cadillac or to the general sweetness of the occasion.

Of course the decision of the judges was final, and the best thing to do was to take one's medicine and be quiet. No testimony was heard in the matter, and the judges made up their decision and announced it within a few moments after the incident itself, and at a time when the contestants were not more than a mile or so beyond the starting line.

Naturally, this matter is to be very much regretted, for popular interest in these races has never been equaled in any similar contest at this point, and every one wished to see the races sailed out on the merits of the two boats. The incident of to-day added to the weight of criticism which has been brought to bear upon Skipper William Hale Thompson, who agreed to sail Cadillac for Com. Shaw during these races. Mr. Thompson has piloted

INVADER.

exceeded 6 or 8 miles an hour. Under these conditions her showing is such that nearly all expert observers agree she has the best show under any winds likely to obtain during the present week. Light breezes have prevailed, and are predicted.

The Start.

The course was laid E. S.E., sailed 9 miles to windward and return—Cadillac's hoodoo. She has lost every one of these windward and return races.

The wind was E. by S., and near the starting line was very faint, not more than two miles an hour. The boats lay idly just back of the line, scarcely perceptibly drift-

CADILLAC.

ing in the light breeze and waiting for the gun. Both, however, were obliged to go about just before the gun. Jarvis, the canny Canadian skipper, as usual, gets a shade the best of the jockeying, and takes the windward berth. Cadillac, however, gets under way first. She has to square off a bit to clear the bows of the judges' boat, Thistle. At this time the water is glassy and unrippled, excepting that at a distance beyond the starting line there are little cats' paws of wind working, into which both boats are doing their best to stand.

At 11:10 both boats are close hauled and on the starboard tack. Invader blankets Cadillac and draws ahead.

At 11:18 Invader is 4 lengths ahead of Cadillac.

At 11:20 Cadillac is standing on the port tack, followed by Invader at 11:22. It is easily observable that Invader can outpoint the centerboard as it likes. It stands close up into the wind, handled beautifully by Jarvis.

One mile off the four-mile crib, Invader shows up a quarter of a mile to the windward of Cadillac, and it has at this station established a lead of at least 10m. should the boats be forced to a test at this stage.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

AUGUST.

- 24. Shinnecock Bay, association regatta, Shinnecock Bay.
- 24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
- 24. South Boston, ladies' day, City Point, Boston Harbor.
- 24. Winthrop, class handicap, Winthrop, Mass.
- 24. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 24. Hull-Massachusetts, club, Hull, Mass.
- 26. Cape Cod, Provincetown, Mass.
- 27. Wellfleet, Wellfleet, Mass.
- 29. Plymouth, Plymouth, Mass.
- 30. Kingstown, Kingstown, Mass.
- 31. Duxbury, Duxbury, Mass.
- 31. Beverly, Corinthian, Monument Beach.
- 31. Westhampton C. C., open.
- 31. East Gloucester, club, Gloucester, Mass.
- 31. Marine and Field, Gravesend Bay.
- 31. Shelter Island, Club.
- 31. Cohasset, knockabout, championship and handicap races, Cohasset, Mass.
- 31. Hull-Massachusetts, club, Hull, Mass.
- 31. Hartford, annual, Saybrook, Long Island Sound.
- 31. Huntington, special, Huntington, Long Island Sound.
- 31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
- 31. Larchmont, special, Larchmont, Long Island Sound.

American Y. C.

NEWBURYPORT, MASS.

Tuesday, Aug. 13.

THE Y. R. A. race of the American Y. C. was sailed off Newburyport Tuesday, Aug. 13, in a light easterly breeze. There were only two Y. R. A. yachts to start, the 25-footer Early Dawn and the 21-footer Circe II. They sailed walkovers. The racing was in the special class and in the dory class. In the special class Thordis finished first, but lost to Toss on corrected time. Ragtime won easily in the dories. The summary:

Class D.	Elapsed.	Corrected.
Early Dawn, J. E. Doherty.....	2 25 23
Class L.		
Circe II., F. L. Pigeon.....	1 26 17
First Special Class—Schooners.		
White Cloud, Shaw & Shelmire.....	2 46 37..
Second Special Class.		
Toss, F. E. Hilton.....	2 08 24	1 29 23
Thordis, W. U. Foster.....	1 57 40	1 30 38
Alberta, H. T. Moody.....	2 05 34	1 39 28
Walrus, F. E. Granger.....	2 10 12	1 43 10
Clara, James Lee.....	2 35 18	1 44 40
Susie, T. Huse.....	2 12 00	1 44 53
Witch, D. Smith.....	2 14 14	1 44 50
Marvel, Lincoln & Reed.....	2 11 56	1 45 22
Eolus, R. Jacoby.....	2 12 16	1 46 10
Spurt, A. E. Emmons.....	2 22 50	1 51 36
Trooper, Nason Bros.....	2 22 46	1 56 31
Emanon	Withdraw.
Third Special Class—Dories.		
Ragtime, E. F. Noyes.....	1 33 45
Trilby, F. W. Marsden.....	1 36 44
Isa, G. H. Storey.....	1 41 18
Indiana, A. B. Brown.....	1 42 25
Idyllia, C. F. Stone.....	Disabled.

Mr. Fred S. Nock, of West Mystic, Conn., has made the following sales through his agency: The sloop yacht Ramallah, for R. H. I. Goddard, of Providence, R. I., to H. F. Maynard, of Utica, N. Y.; the knockabout Vanessa for I. B. Merriman, of Providence, R. I., to Dr. F. E. De Wolfe, of New York city; the schooner yacht Elfin for W. W. Whipple, of Providence, R. I., to P. R. Bonner, of New York city; the sloop yacht Amie for W. H. Morgan, of Providence, R. I., to Wilbur C. Fisk, of New York city.

DIAGRAM SHOWING COURSE OF BOATS BEFORE AND AFTER FOUL, TUESDAY'S RACE, AUG. 13.

different craft, notably Avis II., to victory in the meets of the Inland Yachting Association, and is a skillful skipper with small craft. This was admittedly his first experience in sailing a 35-footer on the bigger waters of Lake Michigan, and in accepting the ticklish task of piloting Cadillac about the course in these races, he assumed rather delicate responsibilities, and also the certain implication of inefficiency in case he did not win. It is all in line with the general maxim, "Vae victis," or "Woe to the vanquished."

As to the relative abilities of the two skippers, Jarvis and Thompson, Mr. Thompson himself would be the first to admit the superiority of the cool-headed Canadian who has come over here to handle Invader. Jarvis' superior as a skipper for this sort of craft probably does not exist anywhere in the region of the Great Lakes. Upon the other hand, Thompson lacks in years of experience, although he is deficient in no particular of pluck and adaptability. In last Saturday's race, in which Cadillac won, Jarvis himself, had he been handling Cadillac, would perhaps have added three or four minutes to her lead over what she obtained as sailed by her own crew. On the way out to the first turn on Saturday Cadillac hoisted a balloon jib, which, on that reach, did not prove a desirable maneuver. When well out on the course Thompson undertook to stow the balloon, and his men had trouble in the operation. The sail broke away from them and streamed down to leeward, causing a great deal of trouble and necessitating the men so far forward that Cadillac was down by the head for a little time, and, no doubt, lost an appreciable amount of distance. Again, in the same race, in the jibe at the second turn, the handling of Cadillac might have been very much better. The main boom, since the boat had been running practically free, was far outboard, and yet, as she came around into position for the close reach home, the sheet block swept the full length of the traveler without any noticeable attempt being made to check it. A less able boat might have lost her stick under the same circumstances. This last leg of the race of last Saturday was the fastest footing Cadillac has done, and this was simply owing to the fact that the boat had the kind of winds she likes. In reporting Saturday's race I spoke of the run home as being a broad reach, and it was indeed broad at the start-in from the second turn. The shifting of the wind caused both boats to haul up a little closer, and Invader, so close hauled, could not make good weather of it in so stiff a wind, pounding and burying her bows continually.

Technical Description of the Foul.

In the race to-day, therefore, the fact remains that in a contest of skipper against skipper, the Canadian out-jockeyed the Yankee. The race bade fair to be an ideal one for both boats—that is to say, one upon which they would be upon an even footing. It was known that Invader would prove dangerous in light airs, say up to six or eight miles an hour, and it was generally believed that Cadillac would win in anything between fifteen and twenty miles an hour. Now, at the start the wind, which was E.S.E., was blowing at ten or twelve miles an hour. The course was the triangular one, and as the wind was this fresh, and as Cadillac had been accustomed to winning the triangular races, she was a hot favorite for the day, in spite of the defeat she had sustained on yesterday.

The boats played back and forth behind the line, both of them handled beautifully, and Invader noticeably quicker in stays. Just before the gun some of the experts called out that Invader had the best of it, and that Thompson would be liable to get into trouble. The positions were these: Thompson had Cadillac just outside the line and to windward of the buoy. Jarvis had Invader far over on the opposite end of the line near the judges' boat, and was lying back in among the tugs and other

craft which had crowded in. It was obvious that Thompson intended to go around on the port tack, turn sharply into starboard, hug the buoy closely and get off on the coveted starboard reach. This was a maneuver which, had it succeeded, would have shown skill and foresight, but it was executed in a manner which showed just the least lack of judgment. Thompson did not give himself room to get out of a possible corner into which the shifty Canadian was in a position to force him. Jarvis himself knew that, in a windward position, on the starboard tack, lying close to the starting line and with just time before the gun to allow him to get well under way, he could sweep the entire line and have the start practically at his mercy. It was as clever a bit of jockeying for the start as one would be apt to find.

Just before the gun both skippers showed that they had their boats timed, each for his respective maneuver, as close as could well happen. A few seconds back of the gun Jarvis started out, getting under full way, and coming along the longer side of a narrow-based triangle, laying his course close for the buoy and naturally in such a way that she would run very close into Cadillac, or else force the latter boat to abandon its original maneuver and pass under its stern, going off on the port tack instead of the starboard tack.

Thompson, with equally good judgment as to the time it would take him to come about, but apparently having left out of the question the factor of the right of way, swung around into the port tack and started the turn at the buoy just in time to see that he was going to run bows into Invader, if he gave the buoy a very wide berth on his port side. Hence, Thompson swung his starboard tack just a little more quickly than he perhaps would have liked. Had his boat been Invader instead of Cadillac, he might have made it around and got away clear. As it was, Invader came on and cut off a part of his wind just at the time he needed it. Cadillac hung in stays for just a fatal instant, and Invader, with the right

of way, came boiling along as though driven by steam. The horn of Invader came over Cadillac's weather quarter, and one of Cadillac's crew pushed the bow of Invader about. Invader then swung into the port tack, abandoning its original line upon which it had the right to stand, and Cadillac got under way and stood on the starboard tack, as originally intended, having cut Jarvis out of the position which he had earned, and having also committed as palpable and unmistakable a foul as could well be imagined. It was simply a case of being outjockeyed, and the judges were not slow to realize the fact that the race was over and that it belonged by rights to the skillful Canadian skipper.

Whether either boat had hoisted a protest flag could not be determined from the press boat. None was seen, however, upon the Canadian boat, and every one commented upon the pluck and sportsmanlike attitude of Jarvis, believing that he intended to ignore the foul which had occurred so close to the start, and to sail the race out on its merits. The probabilities are that, under the circumstances, he would have won even had the race continued, for when the course was half completed the wind began to drop, and the finish was in light airs, which just suited Invader. On this triangular course Cadillac has, upon the other hand, always done very well, and she might at least have made a close thing of it had the race continued. Neither, however, required to hoist a protest flag, for the judges announced their decision about 15m. after the start.

Almost the first windward work of any sharp nature which has been seen between the two boats during the series thus far occurred soon after the start, when the boats split tacks for a time, each showing its best qualities. At this work Jarvis was willing to exchange courtesies, for he knew that every time the two went about, Invader made some slight gain over Cadillac.

At 11:08 the two rushed together for one more trial at position, and it was a moment exciting enough, for Cadillac seemed able to cross Invader's bows. This time, however, Thompson was a little more tender with his craft, and finding that it was going to be impossible to cross Invader's course without danger of another foul, he luffed up and continued on the port tack, Jarvis being then on his weather quarter. Thus situated, the boats gave a splendid exhibition for a time, each of its own best sailing qualities. Invader steadily ate her way up into the wind, whereas Cadillac, eased off a trifle, began to foot it, and to sail 5ft. to Invader's 4. They were standing thus when, at 11:14:30, the judges called to Cadillac that the boat had been disqualified and must leave the course. Cadillac then came up into the wind, swung about, crossed well in Invader's stern, and then, reluctant to give up the race, continued to parallel the course far to leeward. Hailed by the press boat a couple of miles further down the course, Thompson declined to make any statement, except to call out "The judges disqualified Cadillac."

Invader's Performance.

As to the performance of Invader during the balance of the race, of course there was nothing to it except that she must finish in the time limit, and any observation of her sailing was merely in the manner of criticism of her general qualities. As a matter of fact, it looked at one time on the home leg of the triangle as though the boat would not finish inside the time allowance, as the wind had dropped to two or three miles an hour, and at times there appeared oily streaks across the water, showing a complete calm. She, however, likes this kind of thing and finished nicely enough.

The splendid windward qualities of Invader were shown clearly enough in this race. Seeing the sidewalk boat Milwaukee coming along, Invader came up into the wind for a moment and gave Milwaukee the apparent challenge to follow it about. Milwaukee had been much vaunted as a light-weather boat, and, indeed, showed very nice qualities, but she had on her heavy working canvas and was hardly in trim for this particular day. As it was, Invader beat Milwaukee on the long reach to the first buoy, yet more on the similar reach to the second, and fairly distanced her on the run home in light winds, beating Milwaukee by 5½m. over the course which they ran together.

The race, had it been sailed on between Invader and Cadillac, would have resolved itself soon after the start to a long reach to the first turn. After leaving Cadillac, Invader made it at one reach, rounding the buoy and leaving it to port, according to the signal of the judges, at

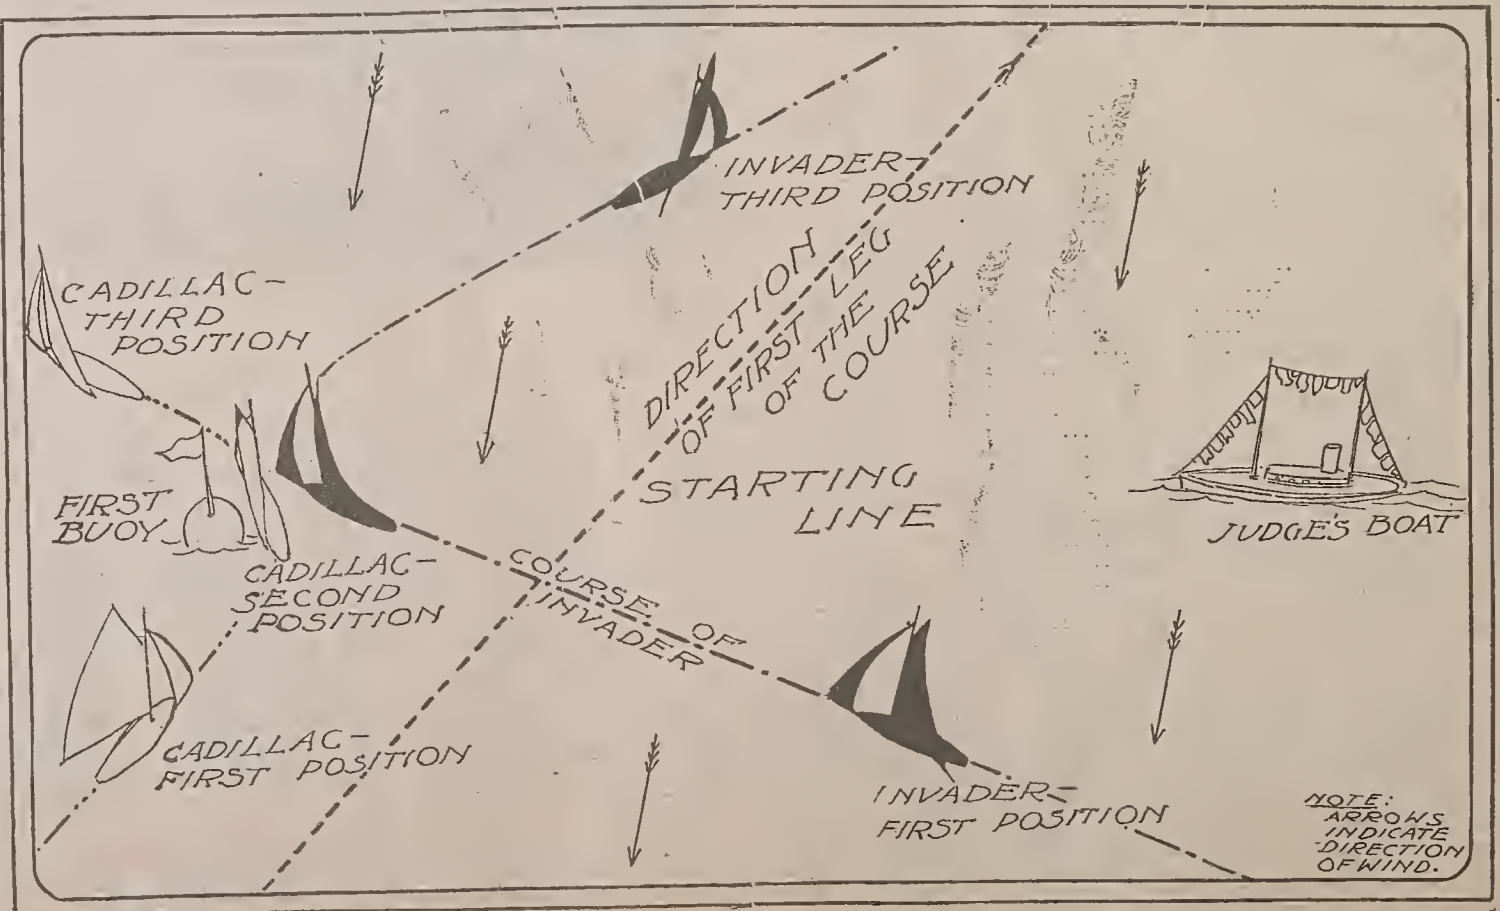

DIAGRAM SHOWING HOW FOUL OCCURRED BETWEEN CADILLAC AND INVADER IN TUESDAY'S RACE, AUG. 13.

12:29:25. She then stood away on the starboard tack, reaching for the second buoy and not being obliged to tack once during this leg of the struggle. The sailing here was very close hauled. Invader jibed about the second buoy at 1:36:30, breaking out spinnaker in very workmanlike manner. She showed a gain of 1m. 15s. over Milwaukee on the second leg, which is something of a commentary on the ability of this Canadian boat, since Milwaukee is admittedly good. The run home under balloon canvas was uninteresting. Invader crossed the line at 2:49:01.

Official time:
Start, 11:00. Second Buoy. Third Buoy. Finish.
Invader 12 29 15 1 36 05 2 49 01
Cadillac Disqualified.

Score by races:
Invader 2 Cadillac 1

Grounds of Cadillac's Protest.

Skipper Thompson, when seen after the race, claimed that Invader could have stood off, but did not do so, and hence forced the foul in a position where Cadillac had not room to make way without fouling the buoy. He based his own protest upon Section 4, Chapter XXVIII. of the rules of the Yacht Racing Union of the Great Lakes:

"A yacht which, in consequence of neglect or violation of any of these rules, shall foul another yacht or compel another yacht to foul a mark or obstruction or run aground, may be disqualified and shall pay all damages; and a yacht which shall wrongfully cause another to luff or bear away in order to avoid fouling, or shall without cause compel another yacht to give room or tack as otherwise provided in these rules, or shall fail to tack or bear away as required, or shall in any way infringe or fail to comply with any of these rules, may be disqualified."

Position of the Foul.

The place where Thompson found himself was near to the stake and just as Cadillac hung in stays. The actual contact of the two boats took place some yards beyond the line, when Cadillac had not yet gathered way on the starboard tack sufficient to allow it to clear Invader, which was coming at greater speed and which, of course, was obliged to luff up on Cadillac's account. The proper maneuver for Thompson, under the circumstances, should have been executed back of the starting line and to leeward of the buoy, when, as he saw Invader coming on under good way, he should not have undertaken to complete his intention of crossing on the starboard tack, but should have stood on the port tack, and paid off enough to cross under Invader's stern. This would have been just a trifle humiliating under the circumstances, but yet it would have been much better than throwing away the race.

Invader Wins the Cup.

Aug. 14.—It is all over. Invader made it three straight to-day and takes home the Canada cup with her. With the boat, skipper and cup go the best wishes of all the sportsmen of Chicago and of America. The Canadians have sent over a good boat; not the best boat in the world, and, perhaps, not the best boat on the Lakes, but certainly the best skipper on the Lakes and a crew of the best fellows in the world. Jarvis and his men have demonstrated beyond a peradventure their superiority as sailormen to the best that Chicago could put up against them.

As to the two boats, the opinion at this later day remains much as it was at first. Invader is a racing machine, pure and simple. She was sent here to win the cup and she fulfilled her mission. Invader is, however, a machine and not a boat. Cadillac, sturdy, stiff and beamy, is fast enough for all intents and purposes, is a weatherly craft and not in the least a bad cruiser as she is to-day. It is not conceded by the Yankees, and probably not claimed by the Canadians to-day, that Invader can outsail Cadillac in all kinds of weather. There was much talk at first that the fin keel was a stiff boat and wanted lots of wind. This is tommyrot. Invader in a wind of eighteen to twenty miles an hour is a strictly dead one. She goes all awash on any kind of a reach in such weather, and makes the worst sort of job of it. Upon the contrary, in light weather up to six or eight miles an hour, she is a perfect fairy of a boat, and it takes a good one to be in it with her.

As between the boats to-day, Cadillac showed an unexpected light-weather quality, which leaves one the only regret pertaining to the series, outside of the unfortunate foul yesterday; that is to say, a regret which goes with the wish that Cadillac had been perfectly sailed. In that case it might have made a pretty even showing with the Canadian yacht, for indeed Cadillac was better sailed at the start, splendidly sailed all down the long reach out to the turn, and only began to fall out of it when the unfortunate mistake was made by Thompson of over-standing the mark. There was also a little delay at the turn, as the boat jibed about and broke out head sails for the run home. The finish shows that Invader gained only 19s. on Cadillac in this balloon reach home, and a good part of that 20s. must have been lost by bad handling of Cadillac's spinnaker and balloon jib shortly after the jibe for home.

The fatal error of the course, however, was made by Cadillac when it stood too far on beyond the buoy on its long reach out. It is a good fault to do this ordinarily, for commonly speaking a skipper will not take distance enough. Jarvis, who, at the beginning of the tack for the buoy, was lying cleverly up in the windward berth, could have made the buoy before he did, but he knew perfectly well what his boat was capable of doing. Skipper Thompson, on the other hand, although we may call him a clever sailorman, was not yet fully acquainted with this particular boat, and did not have so nicely timed her exact capabilities of windward work. Therefore, since he overstood further than he needed, every foot that he had gained on Invader on this long reach out was that much distance lost to him when Invader proved that she was far enough along to make the turn at one tack. Therefore, as the boats swung into starboard tack for the reach of about a mile or so for the mark, Invader, being then in the lee berth, pointed up into the wind, and had little trouble to cross Cadillac's bows, leaving that boat far astern for the first time in

nearly two hours. It was here that the battle was lost for Cadillac, and it is probable that, had Thompson known his boat as well as Jarvis did Invader, and had he utilized the last resources of wind and of position, he could have cut down the 2m. or perhaps have beaten Invader out by half that much. That is to say, that Thompson sailed a perfect race with Cadillac and had Invader sailed the same race it did to-day, Cadillac might perhaps have won. This, however, is only a way of letting one's self down easier. Invader won it, won it fairly, decisively, handsomely, and by superior seamanship of a craft at least as good as Cadillac under the conditions which prevailed.

Details of the Races.

It was Cadillac's hoodoo again to-day, the course of nine knots to windward and return. The direction of the wind was S.E. by E., buoys passed to starboard, and the course was logged out by the judges' boat Thistle on that direction. This made the first leg a beat dead to windward, provided that the wind held as it did. The wind worked around gradually into the E., then into the N.E., being N.E. on the homeward leg, so that that run was made as a balloon reach, the direction being not free enough to allow the use of spinnaker to good advantage.

The wind was perhaps a couple of miles an hour in the basin as the hour approached for the preparatory gun. As it was desirable that this race should be sailed under practical yachting conditions, the judges on consultation delayed the start half an hour, and meantime carried both yachts nearly a mile further out into the lake, making the starting line just two miles E. of Michigan avenue. There is a spar buoy anchored at that point, and this buoy was made one marker for the line, the judges' boat anchoring opposite as stake boat.

There was no gun fired at 10:50, and none at 11, so

very stiff, and it was obvious that Cadillac was being better handled than heretofore, and sailing likewise better trimmed.

At 11:55 the distinctive qualities of both boats began again to come into evidence. Invader stood up into the wind almost as she liked. Cadillac, also on the port tack, eased sheets a bit and began to foot it handsomely. From this time it was a beautiful sailing race for nearly two hours, and all the time from 11:48 onward Cadillac continued to gain on Invader. As the boats passed the four-mile crib, Cadillac was a little to the lee of Invader, pointing nicely, slightly in the lead and gaining. A little shift of the wind, which now began to be irregular and puffy, enabled the boats to haul up close and stand fast out on one long reach, which lasted for more than an hour and three-quarters. Now one boat would get a little slant, and then the other.

At 12:16, after the hottest fighting yet seen in the series and the most exciting half hour of the series, the boats still maintained about the same positions, both sailing on the port tack, and Invader now standing two points closer up into the wind.

At 12:17 Cadillac got a better slant of wind, and for something like 3 to 5m. actually stood up closer into the wind than even Invader. At this unexpected demonstration of weather qualities, the American boat received generous applause. The boats were now about two-thirds of the way out on the weather leg and had drawn to leeward of the course about a mile, or rather about a mile to the south of the course.

At 12:30 Cadillac still led, but had dropped down 300yds. to leeward of Invader.

During the next 5m. the situation was about the same. The wind was steady and was now at about 5 miles an hour. Cadillac was now about 250yds. ahead of Invader, and perhaps an equal distance on her lee. The judges'

CADILLAC IN DRY DOCK.

these preparations left the spectators somewhat mystified, but at 11:20 the preparatory gun was fired, and the judges megaphoned instructions as to the course, etc., to the two yachts.

Now came a very pretty piece of jockeying, in which Skipper Thompson did as handsome work as ever did any master with any sort of craft. He fairly outjockeyed that skillful jockey Jarvis, and defeated him at his own game as handsomely as Jarvis had defeated Thompson on the previous day, though with this exception, that Jarvis did not get himself into a foul.

Two minutes back of the start both boats went on the port tack. At this time two of the sister yachts which have met in the trial races here, Illinois and Milwaukee, came up dangerously close to the starting line. Indeed these two boats, with several others, Nymph, Minota and two or three others, at different times, and more especially on the run home, crowded into the course in a way which would not have been tolerated in any other international cup contest. Probably the skippers of these boats intended no discourtesy, and, indeed, they at no time actually hindered the sailing of the contestants, yet this sort of thing is not properly to be tolerated in a cup race, and it ought not to be tolerated by any club under whose auspices such a contest is held.

As Illinois and Milwaukee cleared back out of the road, it was but a minute back of the gun, and at that time Cadillac showed that it had won the fight in the jockeying. It had gotten over on the line beside the judges' boat in almost the identical position gained by Invader on the day before, having the windward berth and the starboard tack. It was too late for Jarvis to try to fight for this berth now, and as the boats both came around on the starboard tack, they caught the gun and went across the line almost to a hair's breadth, and both practically lapped. Cadillac had Invader directly blanketed, and much applause greeted Thompson at this clever piece of seamanship at the start. Invader was quick to realize the situation, and it did exactly what Thompson should have done yesterday—came into the port tack and crossed under the stern of Cadillac. The latter boat now went on out in a good, long reach, continuing on the starboard tack for nearly 14m. At 11:47:55 Cadillac came about on the port tack. At 11:48:30 Invader came about on Cadillac's weather bow. It was then seen that Invader had established a clean lead on Cadillac, which was about a boat length in the rear of the Canadian. The boats were very close together at this stage, and for a time sailed on as if cabled together, Invader having the weather berth. Then all at once it was observable that Cadillac was coming up through Invader's lee. At 11:52 Cadillac sailed directly into Invader's blanket. It did not stop her, and 30s. later the blunt nose of Cadillac was poked out ahead of the sharp bow of the Canadian. At 11:53 Cadillac sailed free of Invader's lap, and led distinctly. The hopes of the American element arose very high at this point, for the wind was not

boat was now visible in the hazy air which overhung the lake far up to windward and apparently 2 or 3 miles away.

At 12:45 the breeze became still fresher. Two big lake boats came into the course, and one could see, also, the pestiferous attentions of the other boats, Milwaukee, Illinois, etc., which now began to appear near the sailing course. The big lake freighters slowed up and left the course very handsomely.

At 12:50 the hot fight between the rival yachts was still continuing in practically the same phase. Cadillac had been sailed nicely thus far. Thompson now had his men out along the lee rail to give Cadillac her best sailing list.

At 1:00 Cadillac was again pointing better than Invader, apparently not so much as 100yds. to the lee of Invader and at least 200yds. ahead, perhaps more. This was the best position Cadillac obtained throughout the whole race. Every one now began to ask when Thompson would come about and stand for the buoy. Jarvis would probably have preferred to get a little bit farther up to windward, but so long as he had his rival well under his lee, he was wise enough to let well enough alone, and so he stood on with Cadillac, doubtless feeling quite sure that he had Thompson safe, and, perhaps, hoping just a little bit that Thompson would do exactly what he did do.

At 1:03 Jarvis hoisted his mainsail and spars a couple of feet higher, and it seemed to better the footing of Invader. A quarter of an hour later than this the wind began to freshen just a little bit. Cadillac was still surprising every one by the excellent way in which she kept up into the wind. It still drew on ahead of Invader and apparently edged up on Invader all the time.

At 1:30 the boats had been 1h. and 42m. on this one long, close reach. The wind had shifted into the E. The course of the boats was S.E. by E., a quarter E. The course of the shore at Chicago harbor is in a great semi-circle, which stretches out at South Chicago well into the lake and S.E. of the main city front. Thence the shore of the lake, beyond Whiting, Ind., the sand hill country of the Calumet Heights Club, etc., curves on around toward the foot of the lake and the Indiana shore.

At 1:30, therefore, even in the haze which obtained, the sandy beach of the coast below Whiting could be seen looming up, and there was a deadly in-shore calm hanging over the water which made everybody fear that the boats were going into trouble. Naturally the closer that Cadillac ran into this oily streak the worse would be her chances when it came into the starboard tack and laid for the buoy. Thompson, indeed, did come about at length into the starboard tack. This was at 1:33. He had stood on very much farther than was necessary to enable him to reach the mark. Needless to say, the canny Jarvis was not long in coming about also, and one may imagine that the Canadians chuckled in exultation as they saw the situation in which the Yankee skipper had allowed them to take a place. Invader laid a straight course for the buoy, knowing exactly how close it could

point and just when it would reach the buoy. Cadillac now had the long side of the triangle to sail instead of the short side, which reached to the turn. Naturally, under these circumstances, Invader footed directly up into the wind and passed Cadillac without a great deal of trouble, the boats again changing positions and Invader once more taking the windward berth and resuming her old job of sailing into the wind.

The boat Milwaukee, earlier mentioned as accompanying the racers on or near the course, now showed near the course and directly ahead of the racers; not, however, causing any trouble.

At 1:55 Invader was leading unmistakably, the first time for nearly 2h. As the wind was baffling and light, and as Invader was known to be dangerous running free before a light wind, the hopes of the Chicago contingent now received a sudden dampening. They could not understand why it was that Cadillac, which had been for so long in the lead, could now so suddenly, almost in the twinkling of an eye, drop back into Invader's wash. The reason is simple enough. Thompson had simply gone farther beyond the mark than he needed to go and had allowed his opponent to reach that mark by sailing over less water than himself.

At 1:50:30 Invader filled on the port tack, having the buoy safe. At 1:57:30 Invader was to windward of the buoy.

At 1:57:35 Invader gibed about the buoy. Cadillac had filled for the port tack at 1:59:10. At 1:59:30 Cadillac came windward of the buoy and turned at 1:59:35, exactly 2m. back of the Canadian boat. It was now seen that everything was over and that Invader had the cup safe; for if she could gain 2m. in a mile and a half, what might it not do at her own game with 9 miles to sail?

The Run Home.

In just 10s. after the turn Invader had out both balloon and spinnaker. The foot of Invader's balloon at first did not set as well as it should. This sail never sets well when the boat is running nearly free, but when reaching fairly broad it seems to draw much better. Both skippers tried to use spinnaker and balloon jib for the home run, and did not drop spinnakers for some minutes, when both found that the wind had hauled round into the N. a little better, at that time being N.E. It was directly after the turn that Cadillac got into trouble with her spinnaker, which hung in stops and would not break out full for quite a while. She was doing fairly well at 2:00:40, at which time Invader was far down the home stretch and bowling along in good shape.

At 2:03:30 Invader had enough of the spinnaker game, being able to shift it to neither side in such fashion that it would draw, so Jarvis stowed this sail. He was now leading Cadillac by more than 200yds., the latter boat going along still under spinnaker and balloon jib.

It was 2:06:40 when Cadillac took down its spinnaker. At 2:10 both boat were going along on a balloon reach, close hauled, wind well abeam and from the N.E., perhaps 5 or 6 miles strong. They were now footing it faster than at any time yet during to-day's race. Ten minutes later the wind freshened, probably reaching 7 miles an hour.

At 2:30 Invader was in advance, apparently by a mile, having made wonderful gains on Cadillac on this part of the course, although the big balloon jib of Cadillac was now drawing handsomely. At this stage the yachts before named, Milwaukee, Nymph, Illinois and others, resumed their friendly attentions to the racers. They came in front of the course and must have left the spectators along shore very much confused to know which boat was the challenger and which the cup defender.

The situation was now such that the wind was fresher out in the lake and dropping a bit inshore, and although the finish line was now more than a mile offshore the boat closest to it would be getting the faintest winds, whereas the one farther back in the lake would have the fresher air. This was perhaps the reason that Cadillac gained so distinctly in the last two miles of the race.

At 3:05, although Invader was seen to have the cup safe, Cadillac had picked up over a quarter of a mile. The leading boat was then not more than 100yds. away from the line, and, indeed, was squaring for the finish. The Chicago talent was praying for five more miles of sailing, for three, two, or even one mile, in which case, at this same gain, Cadillac would perhaps have closed with the Canadian; since—on this whole 9 miles of the balloon reach—Invader had gained only 19s., including the bungle Cadillac made with its head sails at the turn, and including, also, the fact that Invader at one time was fully a mile ahead of Cadillac on this leg.

It was too late, however, for speculations or possibilities. Amid the customary din of whistles and the hearty cheers of men who like to see a good sportsman and a good boat win, the successful Canadian cup challenger Invader crossed the line a winner at 3:07:30. Cadillac finished at 3:09:49.

As the happy Canadians eased off and swept around to enter the gap at the harbor, the writer was able to hail Skipper Jarvis as he passed close under the bows of the tug. Asked if he had anything to say, Com. Jarvis grinned amiably and shook his head in the negative. He declared later, as the boats drew apart, that he was entirely happy and quite satisfied in every way.

So is every one else satisfied. And if the Canadians want to hold their cup next year, the best thing they can do is to get Jarvis to handle the stick.

Challenges for Next Year.

The moment the gun fire had announced the winner, Com. George H. Gooderham, of the Royal Canadian Y. C., found himself the object of manifold attentions. On board the Pathfinder, at the wharf of the Chicago Y. C., in person, by mail and by telegraph, came challenges for another race next year. The clubs challenging in this way were Rochester, Detroit and Milwaukee yacht clubs out of town, and both Chicago and Columbia yacht clubs of Chicago. It is thought that the Chicago Y. C. won in the race for the challengers, although it is not yet known which will be the first filled by the Royal Canadian Y. C. The terms of the Columbia Y. C. challenge, as stated by Mr. Edward Balcom, chairman of the regatta committee of that club, are for new boats to be

built on both sides next season. There is talk of uniting on a 45ft. class for next year, and should this be agreed upon by both the Royal Canadian Y. C. and the club successful in having its challenge accepted, we may expect races even more interesting than those just closed.

These Measurements Not Correct.

Mr. Cothroll, official measurer for the Chicago Y. C., when asked whether the measurements which had been given out were correct, seemed disposed to evade the question, and stated that they were "practically correct as printed in the daily press." These measurements were given as below, but they are known to be not in accordance with the measurements made by the judges in dry dock. They are given, therefore, not for what they are worth, but for what they are not worth. They were announced the second day after the first race of the series had been sailed:

	Cadillac.	Invader.
Load waterline.....	28.00	28.20
Beam	11.40	9.06
Girth	11.34	13.51
50 per cent. of square root of sail area.....	19.17	19.23
Total	70.00	70.00
Divided by 2, gives racing length.....	35.00	35.00

Cadillac's sail area is 1,471 square feet, and Invader's is 1,481 square feet.

Record of Cadillac.

The record of the trial races off Chicago which resulted in the selection of Cadillac as a cup defender is as follows, and it shows that there was no mistake made in electing Cadillac as the cup defender. It is believed even to-day to be the best all-around boat which appeared in this port this season.

July 20—Milwaukee first by 1m. 27s. over 21-knot triangular course, in light, puffy wind; Cadillac second.

July 22—Cadillac first by 12m. 18s., over 18-knot course, sailed to windward and return, in 20-knot breeze, choppy sea; Detroit second; Milwaukee lost her rudder 1/2 mile from start and did not finish.

July 23—Milwaukee won, beating Cadillac 5m. 42s., over triangular course, in fair wind; Detroit second; Cadillac third.

July 25—Cadillac first by 6m. 10s., over 18-knot course, to windward and return; Milwaukee second; light wind.

July 26—Illinois first, beating Milwaukee, the third boat, by 4m. 33s., over triangular course of 21 knots in wind which was strong at the start, but light and fluky at the finish; Cadillac was fourth, 1m. 24s. behind the Milwaukee.

July 27—Cadillac first by 10s., Illinois second and Milwaukee third by 11m. 45s. Cadillac fouled Illinois just before the finish and Illinois was given the race. Twenty-five mile breeze at start, dying out after buoy was reached.

July 29—Cadillac won by 1m. 5s., Illinois being the only other boat in the race at the finish. Sailed over triangular course. Milwaukee broke her mast 30s. before starting gun was fired. Twenty-knot breeze.

Aug. 1—Cadillac first by 8m. 43s., over 18-knot course, to windward and return, Milwaukee being the only other boat starting. Good wind.

Aug. 2—Cadillac winner by 11m. 13s., over 21-knot course triangular, in two-reef wind. Milwaukee was the only other starter.

Sufficient Record of Invader.

Won the Canada cup, Chicago, U. S. A., Aug. 14, 1901. And good luck to her.

Return of the Cup Winner.

Aug. 16—Invader was sailed to South Chicago yesterday and stowed in her cradle on the flat car which will take her home. The victorious skipper and crew left for home yesterday, and one may imagine they will receive a royal welcome when they reach Toronto. Cadillac will go to Detroit on the deck of a steamer via the Straits. The races are now over, and there is the usual reaction after the season of excitement.

One feature of this reaction is such as to invite unfavorable criticism. There are some grumblers in Chicago, one regrets to say, who begin to talk again about the unfortunate foul between Cadillac and Invader in Tuesday's race. They say that "Capt. Jarvis ought not to have taken advantage of his position and forced Cadillac into a foul, when it was known before the races that Invader was not in the 35ft. class." Now, can any one imagine more unspeakable foolishness than this? Before the races both boats agreed to sail under the measurements as given, and that settled it. The fact that Jarvis knew his boat was outside of the 35ft. class would not have militated against his sportsmanlike qualities even had he forced Invader down upon Cadillac in the mix-up, which was by no means obviously the case. He simply held his course and was entitled to it. All such criticism leaves a very bad impression regarding the Chicago end of this series. One would think it had been a juvenile game of marbles instead of a yacht race among men, and it is to be hoped that the Canadians will not take this talk as indicative of the sentiment of the real sportsmen of Chicago, or of the yacht clubs of that city.

Comet Wins at Pewaukee.

The Milwaukee boat Comet won in light winds at Pewaukee over the four-mile course, Aug. 11, taking the eighth Waukesha beach handicap race. Argo was first to cross the starting line, Comet and Dora 10s. afterward. The first leg was a beat dead to windward in light winds, Argo leading at the turn, Dora second. Argo had a good lead for a good portion of the course when Dora and Comet overhauled it, Comet and Argo finally drawing away from the aluminum boat. Comet outfooted Argo and finished 45s. in the lead. The times:

	Finish.	Elapsed.
Comet, F. Pabst, Jr.....	6 33 12	1 33 12
Argo, R. Giljoahn.....	6 33 57	1 33 57
Dora, W. N. Meyer.....	6 34 09	1 34 09

At a meeting of the yacht club held to-night it was decided to enter Aspirant in the Lake Winnebago races, Aug. 20 to 24, and in the Green Lake races Sept. 2 to 7.

Partial Measurements of Invader.

Aug. 17.—As stated earlier, the actual measurements of Invader and Cadillac were never made public. The following measurements were actually made by the judges, assisted by William Cothroll, on Friday noon, Aug. 9, when Invader was in dry dock. The judges found two of the actual measurements to be, beam 9.26ft., girth 18.19ft.

The rest of the measurements, as made by the judges, are not known, and these actual measurements were not made public intentionally. The measurements of the builder of Invader, James Andrews, were, beam 9.16, girth 17.87ft.

It was part of the articles of agreement between the two boats that the measurements of the yachts should be made at least two days before the sailing of the first race. The computations were not completed until the second day after the first race had been sailed. The above meager but authentic information will, perhaps, show some of the reasons for the nature of the information given out. Invader was a little over the 35ft. class, and this was admitted. It is stated, not with equally authentic confirmation, that Cadillac was also slightly over the limit.

Invader at Home.

To-day's dispatches say that the Royal Canadian Y. C. gave Invader and crew a grand welcoming parade on their return with the cup yesterday. Com. Jarvis is quoted as saying, in a speech:

"The Chicago yachtsmen were awfully fair. At the time of the foul there wasn't a murmur, except from the man who did it. It was only a bluff. He knew his mistake and wanted to let himself down easy. He should have gone round our stern or in our lee and taken his blanketing. It's the first rule we learn. He had plenty of room to get out of the road. Invader is all right, and Thompson knows his business. The foul was just a bluff." E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Views of the Victory.

TORONTO, Aug. 17.—Canadians owe very little to Designer Sibbick, of the Isle of Wight, for the regaining of the Canada cup, and very much to Skipper Æmilius Jarvis, who handled the challenger. Had Cadillac been sailed by Mr. Jarvis she would, of course, have won the first race of the series; she might have lost the second, but this is very doubtful; she would certainly not have lost the third race on a foul, and she would have won the fourth on a narrow margin. Boat for boat, the Hanley craft is the better of the two. Invader defeated her, partly because the majority of the races were sailed under conditions favorable to her, but principally because she had the better skipper.

And never was a good skipper backed up by a better crew than Messrs. F. A. Turner, V. J. Hughes, Charles Lowndes, James McMurray and Wm. Fisher, the professional. The Canadians were marvels of speed in everything from canvas-stowing up and down, but their *piece de resistance* was spinnaker handling. The balloon canvas would be billowing out and dragging the sloop on to victory by the time the mainsail had taken up the slack of the started sheet.

With five challenges on their hands, the Royal Canadian Y. C. is in a quandary. There is a feeling that Chicago, having lost the cup, should have the first opportunity to regain it. There is also the feeling that, as the recent contest was as much with Detroit as with Chicago, the former city's yachtsmen should have a show. Then, again, Toronto yachtsmen have not forgotten Com. Charles Van Voorhis, of Rochester, and his tars, who carried off the cup in 1899, and would welcome another battle with so good a sailor. So that it is hard to say which challenge will be selected.

There has been much harsh criticism of Alderman William Hale Thompson, of Chicago, skipper of Cadillac, and some of it was deserved, possibly, but it is to be remembered that he had an undrilled crew, and that his sailing experience on Lake Michigan has been limited. The skipper of the defender is more at home on the smooth waters of the inland lakes, where the sidewalk craft abound.

All said and done, it was a battle of skippers rather than of boats, and the invasion of Chicago proved successful. The reversal of the ordinary was seen, the centerboard boat being abler in big seas and stiff breezes, and the semi-fin-keel excelling in light winds and smooth waters.

The winning of the trophy and the necessity of defending it almost immediately will give a great boom to yachting on Lake Ontario. Kingston will probably furnish at least one cup defender; Hamilton may furnish two or three, and there will at least be two furnished by Toronto. It is to be hoped that the 35ft. class will again be chosen, because, if you go in for a racing machine you get one with at least some room in the 35-footer, and if she is unsuccessful, she is at least less of a white elephant than a 40-footer; while, if you get a "boat," you have one that is as convenient for an afternoon's pleasure as a sailing skiff, and has at the same time considerable accommodation.

An attempt will be made to bring Canadian designing talent to the fore. There is no reason why such a man as Capt. James Andrews, whose creations in larger classes outsail those of both Fife and Watson, should not have a chance at designing as well as building an all-Canadian 35-footer. That designs from the "old land" will be sought and built from goes without saying. There will be a large fleet of prospective defenders, with Invader to test them, and possibly Beaver, for the negotiations for the sale of the fast, heavy-weather Payne sloop to Buffalo have not yet been completed.

There is a chance of Invader going down to Charlotte after the famous Fisher cup, the oldest fresh-water trophy, which Genesee successfully defended last September. CHARLES H. SNIDER.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Friday, Aug. 16.

CONSTITUTION and Columbia raced under the auspices of the Larchmont Y. C. for a cup given by Vice-Com. Wilson Marshall on Friday, Aug. 16. It was the first of a series of three races. Constitution won by over half an hour, but as a matter of fact, she was greatly favored by shifting winds, while to Columbia they proved a detriment. John F. Lovejoy, Howard W. Coates and Frank Hardy made up the Regatta Committee, and although these gentlemen were ready to send the boats off at the scheduled time, 11:30, they found it impossible to do so on account of there being no wind. At 1:15 it had breezed up a little, and the committee signaled the course. The preparatory signal was given at 1:30. At 1:35 the boats were started, with Constitution first across the line and Columbia following a few seconds later. The yachts were sent over the club's course No. 1, the first leg being E. 3/4 N., six miles; the second leg S.W. 5/8 W., six miles, and the third leg N.N.W., three miles. The wind was S.S.W.

On the reach to the first mark both boats luffed far out of their course. This was done partially to avoid a string of barges coming down in tow, and partially to prevent Columbia from getting up on Constitution's weather quarter. Spinnakers were finally set. The boats luffed by the mark as follows:

Constitution	2 15 48
Columbia	2 17 16

Constitution went off on the starboard tack after rounding, while Columbia held a port tack. Both kept splitting tacks. Columbia made twenty-one tacks to reach the weather mark, while Constitution only made twenty. Columbia would at times draw up on the new boat and then seem to lose all she gained. Constitution and Columbia wore around the mark at:

Constitution	3 25 54
Columbia	3 28 04

It was a reach from this mark home, working jib topsails were set and the three miles were soon covered. The boats jibed around as follows:

Constitution	3 41 08
Columbia	3 43 20

The times over each leg of the course on this first round are shown in the following table:

First Leg—Reach, 6 Miles.			
	Start.	Turn.	Elapsed.
Constitution	1 35 11	2 15 48	0 40 37
Columbia	1 35 23	2 17 16	0 41 50

Constitution gained 1m. 13s.

Second Leg—Beat, 6 Miles.			
	1st Turn.	2d Turn.	Elapsed.
Constitution	2 15 48	3 25 54	1 10 06
Columbia	2 17 16	3 28 04	1 10 48

Constitution in this leg gained 42s.

Third Leg—Reach, 3 Miles.			
	2d Turn.	Home Mark.	Elapsed.
Constitution	3 25 54	3 41 08	0 15 14
Columbia	3 28 04	3 43 20	0 15 16

Constitution gained 2s.

On the first leg of the second round the squall that had been making for some time blew over. On the reach down this leg balloon forestaysails were carried, and a small balloon jib topsail was used on Constitution, while those on Columbia were contented with a working jib topsail. The boats luffed by the mark at:

Constitution	4 13 06
Columbia	4 18 02

Columbia got in a soft spot just before rounding, while Constitution got the edge of a fresh breeze, and drew away from the older boat. The breeze hauled enough to permit Constitution to lay her course for the Prospect Point mark. The times at this mark were:

Constitution	4 52 55
Columbia	5 03 42

To the finish line off Larchmont it was a close reach, and although everything in sight was becalmed, Constitution moved along toward the finish line, holding a little breeze. Columbia had to make a tack to reach the finish. The boats crossed as follows:

Constitution	5 16 20
Columbia	5 49 18

The elapsed times over each leg of the course on the second round are as follows:

First Leg—Reach, 6 Miles.			
	Start.	1st Mark.	Elapsed.
Constitution	3 41 08	4 13 06	0 31 58
Columbia	3 43 22	4 18 02	0 34 42

Constitution gained 2m. 4s.

Second Leg—Reach, 6 Miles.			
	1st Mark.	2d Mark.	Elapsed.
Constitution	4 13 06	4 52 55	0 39 49
Columbia	4 18 02	5 03 42	0 45 40

Constitution gained 5m. 51s.

Third Leg—Reach, 3 Miles.			
	2d Mark.	Finish.	Elapsed.
Constitution	4 52 55	5 16 20	0 23 25
Columbia	5 03 42	5 49 18	0 45 36

Constitution beat Columbia 22m. 11s.

After the race Columbia went over to Glen Cove for the night, while Constitution lay off Larchmont Harbor. The table of the race follows:

	Start.	Finish.	Elapsed.	Corrected.
Constitution	1 35 11	5 16 20	3 41 09	3 41 09
Columbia	1 35 26	5 49 18	4 13 52	4 12 32

Constitution beat Columbia 31m. 23s.

Saturday, Aug. 17.

In a fine, steady sailing breeze, Constitution and Columbia sailed over the same course as on Friday, and the new boat won by the small margin of 58s. corrected time. With the weather conditions fair to both boats, Columbia can give Constitution a hard race in any weather, although if Constitution had Columbia's crew in charge she would be minutes faster.

The race was not started until 1 o'clock, as there was practically no wind in the morning. The wind came

in about noon and soon freshened to a nice sailing breeze. Then preparations were made for the start. The wind was S.S.W., and the course selected was six miles E. 3/4 N., to a mark boat in the middle of the Sound, then six miles S.W. 5/8 W. to a mark boat off Prospect Point in Hempstead Harbor, then N.N.W. three miles to the finishing line. This was sailed twice over. With the wind as it was then, the first leg was a reach, the second a beat and the third a reach.

The boats were started at 1:05, and Constitution was first across, with Columbia 2s. behind on her weather quarter. When about half way to the first mark Constitution had gained a little, but the older boat was sticking to her in a most surprising manner. When nearing the first mark jib topsails were taken in and the boats luffed by the mark as follows:

Constitution	1 37 01
Columbia	1 37 45

Baby jib topsails were now in order, and the wind had hauled a little to the southward, so that the boats held up the Long Island beach, almost laying their course for the next mark. Crossing the mouth of Hempstead Harbor, both boats got a little stronger breeze, but the new boat caught it first and pulled ahead, and let Columbia have the back draft. The times at this mark were:

Constitution	2 20 19
Columbia	2 21 28

Sheets were now eased, and reaching jib topsails were set. On the reach across the Sound Constitution had

THE CANADA CUP.

gained 1s., and at the end of the first half of the race she was ahead by 1m. 8s.

The elapsed times on each leg of the course on this round follow:

First Leg—Reach, 6 Miles.			
	Start.	1st Turn.	Elapsed.
Constitution	1 05 09	1 37 01	0 31 52
Columbia	1 05 11	1 37 46	0 32 35

Constitution gained 43s.

Second Leg—Beat, 6 Miles.			
	1st Turn.	2d Turn.	Elapsed.
Constitution	1 37 01	2 20 19	0 43 18
Columbia	1 37 46	2 21 28	0 43 42

Constitution gained 24s.

Third Leg—Reach, 3 Miles.			
	2d Turn.	Home Mark.	Elapsed.
Constitution	2 20 19	2 36 28	0 16 09
Columbia	2 21 28	2 37 38	0 16 10

Constitution gained 1s.

Constitution made a poor turn at the home mark and lost several seconds thereby. Both boats held well to windward of their course, and finally eased sheets and ran down to the mark. The boats luffed by as follows:

Constitution	3 05 35
Columbia	3 07 25

Both boats stood on the port tack after rounding. Baby jib topsails were broken out and the boats stood along the Long Island shore, as they did on the first. Baby jib topsails were doused just before reaching the Prospect Point mark. The times at this mark follow:

Constitution	4 08 23
Columbia	4 10 43

Columbia set her balloon jib topsail. It drew splendidly, and did good work. Constitution broke out her working jib topsail and set her spinnaker, which was allowed to run well forward to make it draw. Columbia set her spinnaker after she cleared a tow of barges. The times at the finish:

Constitution	4 08 23
Columbia	4 10 43

The elapsed times on each leg of the second round are shown in the following:

First Leg—Reach, 6 Miles.			
	Start.	Turn.	Elapsed.
Constitution	2 36 28	3 05 35	0 29 07
Columbia	2 37 38	3 07 25	0 29 47

Constitution gained 40s.

Second Leg—Beat, 6 Miles.			
	1st Mark.	2d Mark.	Elapsed.
Constitution	3 05 35	3 50 00	0 44 25
Columbia	3 07 25	3 52 10	0 44 45

Constitution gained 20s.

Third Leg—Run, 3 Miles.			
	2d Turn.	Finish.	Elapsed.
Constitution	3 50 00	4 08 23	0 18 23
Columbia	3 52 10	4 10 43	0 18 43

Constitution gained 20s.

Following is the table:

	Start.	Finish.	Elapsed.	Corrected.
Constitution	1 05 09	4 08 23	3 03 14	3 03 14
Columbia	1 05 11	4 10 43	3 05 32	3 04 12

Constitution beat Columbia 58s.

Monday, Aug. 19.

The race that was to have been sailed on Monday was given up owing to the thick fog and easterly gale. The managing owners of the two boats did not wish to take any chances of collision, so the boats went over to Glen Cove and lay under the lee of the breakwater.

Western Yachts.

Double Chicago Regatta.

CHICAGO, Ill., Aug. 17.—Chicago Y. C. and Columbia Y. C. both held regattas to-day. The various classes of the latter club included two or three dozen boats. In the Chicago Y. C. regatta the leading interest centered in the contest between Vanenna, Vencedor and Siren, which all sailed as 45-footers. Charlotte R. challenged Neva to a race for a side wager, Neva winning the latter by 7m. 1s. In the 35ft. class of the Chicago Y. C., the late trial boats of the Canada cup defenders, Milwaukee, Minota, Illinois and Yankee, all started. In the knockabout class of the same club, Cock Robin and Colleen sailed, Colleen winning by 6m. 14s.

In the special class of the Columbia Y. C. 30-footers, Columbia, Nymph, Witsith, Spray, Katie H., Zephyrus and Gloria were among the more prominent.

The wind was N.N.E. The boats of the Chicago Y. C. took the southern triangle to Hyde Park crib, thence to four-mile crib and return. The Columbia boats sailed around the four-mile crib, thence to the Harrison crib and return. The wind was twenty miles an hour, and the signal service warned the boats not to go out, which warning they disregarded.

The feature of the day was the red-hot battle between Vanenna and Vencedor. The course of these boats was a broad reach on the first leg, a beat dead to windward on the second leg, and a broad reach home. Vanenna rounded the four-mile crib just 1m. in advance of Vencedor, and from there home these two boats showed the most clever luffing match that was ever seen in a Chicago race. Vencedor got the weather berth, and every time Vanenna tried to square for the gap in the breakwater, would run down and blanket her. Then Vanenna would nose Vencedor back again. The two got a half-mile out of their course up to windward. At length they fought their way close up to the Government pier. Vanenna squared for the gap, dropping her big reaching jib. This cost her just a little headway, and Vencedor established a lap. Vanenna gave way and the two rushed through the gap, half deck under, the closest finish ever seen on a twenty-mile course, and the hardest battle these two ancient rivals have ever fought out together. Vencedor was sailed by Hank Goble, a Western man, who takes very kindly to that craft.

During the fight of these two big fellows, a big flock of the Columbia craft came winging down toward the gap in the following order: Columbia, Gironda, Ripple, an unnamed boat belonging to Dr. Knight, Katie H., Eleanor E., and a whole fleet back of them in different classes. Gironda and Ripple are two little sidewalk boats which never ought to have gone out in such a sea, but which nevertheless did go.

It was a great sidewalk day, and that sidewalk of all sidewalks, Milwaukee, actually beat out the fleet. Milwaukee started 10m. back of the big fellows, and, carrying jib and mainsail rig, beat by 8m. in the twenty-mile course such boats as Vanenna and Vencedor, which carried mainsail, jib and staysail and gaff topsail. Milwaukee seems to have rounded to just a shade too late as a cup defender, but none the less in very interesting fashion. It wore a new set of sails to-day.

The fin-keel Illinois made a slow race of it and was beaten badly by both Milwaukee and Minota. The sailing times of the above-mentioned boats between gun fire and finish were as below:

Special Challenge Race.			
	Start.	Finish.	
Neva	1 50 00	4 22 46	
Charlotte R.	1 50 00	4 29 47	
45-footers.			
Vencedor	2 00 00	4 07 45	
Vanenna	2 00 00	4 08 47	
Siren	2 00 00	4 08 50	
35-footers.			
Milwaukee	2 10 00	4 09 35	
Illinois	2 10 00	4 21 01	
Yankee	2 10 00	4 42 10	

Knockabouts.

Colleen	2 20 00	4 10 36
Cock Robin	2 20 00	4 16 50

This was one of the most general and most interesting regattas ever held among the local boats of Chicago. It was heavy weather throughout—Cadillac weather, the observers called it. Had weather like this prevailed during the cup races this week, the cup would not be in Toronto at the present writing.

E. HOUGH.
HARTFORD BUILDING, Chicago, Ill.

South Boston Y. C.

SOUTH BOSTON, MASS.

Saturday, Aug. 17.

THE handicap club race of the South Boston Y. C. was sailed off the club house at City Point Saturday, Aug. 17, in a moderate S.W. breeze. There were three classes. In the first Emma C., a 30-footer, sailed against Fantasy, a 17-footer, and won by 2m. on corrected time. In Class V, Vim had an easy win. The summary:

Class A.			
	Elapsed.	Corrected.	
Emma C., P. A. Coupal	1 27 17	1 14 17	
Fantasy, Wm. Allerton	1 51 18	1 16 18	
Class B.			
Black Hawk, Shevlin & Connor	1 24 11	1 20 11	
Dina, C. A. Brackett	1 24 00	1 22 00	
Varuna, C. W. Nodwell	1 31 51	1 25 51	
Nancy Hanks, G. W. Lane	1 29 50	1 25 50	
Ray, B. W. Craig	1 33 56	1 26 58	
Narada, R. H. Anderberg	1 36 25	1 27 25	
Clarada, W. H. Gowey	1 40 13	1 36 13	
Class C.			
Vim, W. W. Kee	1 30 35	1 26 35	
Sylvia, Charles Clausen	1 34 34	1 34 34	

Annisquam Y. C.

ANNISQUAM, MASS.
Friday, Aug. 9.

THE first of the series of Y. R. A. open races, given by the Annisquam Y. C., was sailed in Ipswich Bay, Friday, Aug. 9, in a strong, whole-sail breeze from the S.W. Besides the Y. R. A. classes, there were classes open to yachts in the vicinity of Cape Ann, and handicap classes. In the 25-footers Calypso was first at the line on the start, and she led over the course, finishing with a good margin. In the 21-footers Mildred II. showed up like Calypso in the larger class. She was never headed after the starting gun was fired. In the 18ft. class there were the cracks from the Hull-Massachusetts Y. C. and Susan of the Annisquam Y. C. Susan won by 2s. in the closest and most interesting race of the day. In Class T Nymph withdrew and Plunger finished it out alone. Thordis had local boats to compete with in Class L, and she won by less than a minute, the Herreshoff-designed 25-footer Onda being second. The wins were all easy in the handicap classes, and in the class for sailing dories. There was a race for launches which was very interesting, the finishes being quite close. The summary:

Class D.		Elapsed.
Calypso, A. W. Chesterton.....	1 59 29	
Flirt, Fabyan & McKee.....	2 03 35	
Tarpon, E. S. Grew.....	2 10 48	
Early Dawn, T. E. Doherty.....	2 14 37	
Class S.

Alfred Anderson.....	1 00 20	
Jas. Pierce.....	1 10 30	

Saturday, Aug. 10.

There was plenty of wind for the second race of the Annisquam Y. C. Y. R. A. open series. It was from the S.W. in quantities, and all of the yachts came to the starting line with reefs. It was the story of the previous day, with the 25-footer Calypso and the 21-footer Mildred II., only the victories in each case were more decisive. Thordis won again in Class L, but in the 18ft. knockabout class Bacchante had things all her own way. In a breeze of this kind Bacchante can make them all hustle. A number of the yachts in the small classes found the breeze a little too strong and withdrew before the finish. The summary:

Class D.		Elapsed.
Calypso, A. W. Chesterton.....	2 03 15	
Flirt, Fabyan & McKee.....	2 06 14	
Early Dawn, J. E. Doherty.....	2 17 32	
Class S.

New York Y. C.

NEWPORT, R. I.
Wednesday, Aug. 14.

THE final race for Constitution and Columbia, given by the New York Y. C. off Newport, had to be called off for lack of wind. The race could not be postponed, as both the big boats had agreed to race at Larchmont on Friday.

The Regatta Committee was on board the steam yacht Electra. At 11:30 a windward and leeward race was signaled, with the compass course S.S.E. The prepara-

tory signal was given at 11:35, and the warning signal followed at 11:40. At 11:45 the boats were sent away, and at this time the wind was light, having a strength of not over five knots. Constitution got quite the best of the start. About half an hour after the start Constitution was an eighth of a mile on Columbia's weather bow. Shortly after this the little wind that the boats had at the start dropped, and they lay becalmed with hardly star- age way on. After three hours and forty minutes of this monotonous work, the two nineties withdrew.

In the yawl class Vigilant got away first, followed by Navahoe. Then came Rainbow and Virginia in the order named. Navahoe had caught up with Vigilant when they gave up the race, and Rainbow was well in the lead of Virginia when they quit.

East Gloucester Y. C.

GLOUCESTER, MASS.
Thursday, Aug. 8.

THE Y. R. A. race of the East Gloucester Y. C. was sailed in Gloucester Harbor Thursday, Aug. 8, in pretty much all kinds of breezes. It was about S.W. at the start, but kept backing until it was easterly at the finish. It was light at times and again there was a squall, which sprawled the big fellows all out and made the little ones reef. Calypso took the start in the 25-footers and led over the course. This was the case with Mildred II. in the 21-footers. In the 18-footers Snapshot withdrew and Plunger finished alone. Dorothea won handily in the 15-footers. There were three handicap classes. In the first Circe II. had things all her own way. This was true of Bernice in the second class, and in the third class Comforter was the only boat to finish. The summary:

Class D.		Elapsed.
Calypso, Chesterton.....	1 57 20	
Chewink, Macomber.....	2 00 40	
Flirt, Fabyan & McKee.....	2 03 20	
Nereid, Lunt.....	2 03 36	
Early Dawn, Doherty.....	2 10 09	
Class S.		
Mildred II., Moses.....	2 52 45	
Opitsah III., Foster.....	2 55 54	
Eaglet, Burgess.....	2 56 16	
Tabasco III., Wiggins.....	2 56 17	
Privateer, McConnell.....	2 58 45	
Rambler, Pomeroy.....	Did not finish.	
Coquette, Amsden.....	did not finish.	
Class T.		
Plunger, Will.....	2 50 46	
Snapshot, Perry.....	Did not finish.	
Class X.		
Dorothea, Finlay.....	1 59 49	
Toss, Sterns.....	2 01 52	
Kantelpit, Perkins.....	2 03 59	
Only One, Phelps.....	2 15 41	
First Handicap Class.		
Circe II., Pigeon.....	2 39 11	2 39 11
Alice and Maud, McCurdy.....	2 43 40	2 40 29
Onda, Greenough.....	2 42 37	2 42 37
Alethea, Colby & Smith.....	2 44 30	2 44 30
Miscreant.....	2 50 08	2 50 08
Angel, Cox.....	3 01 16	2 56 30
Polly.....	3 01 23	2 56 35
Widgeon, Horton.....	3 03 59	2 57 37
Lilian, Bates.....	3 02 01	2 58 50
Viola, Hapgood & Prasier.....	3 08 28	3 03 42
Thordis, W. U. Foster.....	Withdrew.	
Mavis, Smothers & Brooks.....	Withdrew.	
Nancy Hanks.....	Withdrew.	
Mazooka, Heard.....	Withdrew.	
Second Handicap Class.		
Bernice, Webster.....	1 39 31	1 39 31
Kamador.....	1 57 12	1 48 22
Ida B., Merchant.....	1 56 29	1 51 01
Class I.

Bacchante, Humphrey & Lauriat.....	Withdrew.	
Miladi, Adams.....	Withdrew.	

Beverly Y. C.

MONUMENT BEACH, MASS.
Saturday, Aug. 10.

THE Van Rensselaer cup was sailed for by the yachts of the Beverly Y. C. on Saturday, Aug. 10, all classes racing in one. There was half a gale blowing from the S.W., and the larger boats had the best of it. They came for the starting line in a bunch, and the champion May Queen soon went to the fore. She led all the way around the course, but was closely pressed by Thorana. Thorana got into a mix up with Pompano, in which Pompano's mast was carried away, but it is thought that May Queen would have won even if this did not happen. There was also a race for 15-footers for a cup offered by Mrs. Stone. The first three boats were very close in this class. Flickamaro winning by over 2m., and Next and Uarda crossing within one second of each other. The summary:

25ft. Class.		Elapsed.	Corrected.
May Queen, D. L. Whittemore.....	1 50 22	1 36 59	
Thorana, T. B. Wales.....	1 52 11	1 38 48

Saturday, Aug. 17.

The club race of the Beverly Y. C. was sailed off the club house at Wing's Neck Saturday, Aug. 17, in a strong S.W. breeze. Almost every boat carried a single reef. In the 25-footers May Queen won from Kalama III. by only 10s. In the 21-footers Radiant beat out the champion Quakeress by 7m. and 30s. In the fourth class, cats, Eunice suffered her first defeat of the year in regular

class racing. Howard beat her by 3½m. In the 15-footers there was a large number of entries, and the racing was good. Uarda again won, but by less than a minute. The summary:

25-footers.		Elapsed.
May Queen, D. L. Whittemore.....	1 56 50	
Kalama III., David Rice.....	1 57 00	
Thorana, T. B. Wales.....	1 57 09	
White Heron, Waldo Forbes.....	2 09 55	
Nokomis, Alfred Winsor.....	2 03 45

Spider, H. B. Stone.....	1 41 38	
Fly, C. A. Coolidge.....	1 44 57	

Wollaston Y. C.

WOLLASTON, MASS.
Saturday, Aug. 17.

THE annual open Y. R. A. race of the Wollaston Y. C. was sailed off the club house in Quincy Bay, Saturday, Aug. 17. Only Early Dawn showed up in the 25-footers, and she sailed a walkover for percentage. In the open 21-footers Hostess started last, but went into first place before the first mark was reached, and held her lead to the finish. In the restricted 21-footers, Mildred II. added another to her list of victories. She stands a good show of winning the championship in her class. In the 18-footers Lobster had a walkover. In the 15-footers Vitesse won from Toss by 1m. and 21s. There was also a handicap class and a sailing tender class for boats owned in the club. The summary:

Class D.		Elapsed.
Early Dawn, J. E. Doherty.....	1 41 37	
Class C.		
Hostess, H. M. Faxon.....	1 45 19	
Romance, Loring Sears.....	1 47 58	
Thordis, W. U. Foster.....	1 49 14	
Theodora, F. Burgess.....	1 55 13	
Hustler, Whittemore & Robbins.....	2 05 00	
Marvel, Reed & Lincoln.....	2 05 37	
Class S.		
Mildred II., S. B. Moses.....	1 46 21	
Eaglet, W. S. Burgess.....	1 48 22	
Opitsah III., S. H. Foster.....	1 48 46	
Class T.		
Lobster, C. J. Hendrie.....	2 26 20	
Class X.		
Vitesse, W. J. Coombs.....	2 05 29	
Toss, J. B. Stearns.....	2 26 50	
Tender Class.		
Splash, H. Waterhouse.....	1 28 21	
K. C., B. Keyes.....	1 29 31	
Dido, W. J. Patterson.....	1 40 12

West Wind, W. M. Chase.....	2 44 58	2 13 17
Premiere, Hayden Bros.....	2 38 23	2 21 18
Sea Gull, A. Shay.....	2 56 40	2 25 27

Misery Island Y. C.

SALEM HARBOR, MASS.
Wednesday, Aug. 7.

THE Misery Island Y. C., which has recently been admitted to the Yacht Racing Association of Massachusetts, gave an open race under Association rules on Wednesday, Aug. 7. There was a rattling S.W. breeze blowing and the racing was very interesting. In the 25-footers Chewink went over the line at the sound of the gun and led all over the course. She had to fight for her victory, however, as Flirt and Calypso pressed her hard. Calypso made the fastest time over the course, but as she was late at the starting line, this did her no good. As they passed the east end of Misery Island the spinnakers of Flirt and Chewink jibed and Flirt's spinnaker pole was broken as it came across her headstay.

In the 21ft. class Mildred II., designed and built by Shiverick, led the class from the first mark to the finish. She was the last boat over the starting line. There was a very hot scrap between Tabasco III. and Opitsah III. for second place. They luffed up into the fleet when near the line, and Tabasco III. pulled over the line 11s. ahead. In the raceabout class Pompelia got the start and led easily over the course. In the special handicap class Oivana won, but lost to Thordis on corrected time. The summary:

Class D—25-footers.		Elapsed.
Chewink, F. G. Macomber, Jr.....	1 34 50	
Flirt, Fabyan & McKee.....	1 35 14	
Calypso, A. W. Chesterton.....	1 36 05	
Nercia, A. H. Lunt.....	1 38 42	
Early Dawn, J. E. Doherty.....	1 42 33	
Cyrilla, W. D. Turner.....	1 45 35	
Class S—21-footers.		
Tabasco III., H. H. Wiggin.....	1 43 05	
Mildred II., S. P. Moses.....	1 45 07	
Opitsah III., S. H. Foster.....	1 45 19	
Privateer, John McConnell, Jr.....	1 46 38	
Eaglet, W. S. Burgess.....	1 50 35	
Class K—Raceabouts.		
Pompelia, R. C. Robbins.....	1 44 55	
Runaway Girl, H. Tween.....	1 46 02	
Idol, F. K. Lothrop.....	1 47 02	
Theresa, L. Davis.....	2 04 40	
Class I—Knockabouts.		

Manchester Y. C.

WEST MANCHESTER, MASS.

Monday, Aug. 5.

THE open race of the Manchester Y. C. for the Crowhurst cup was sailed in Salem Bay, Monday, Aug. 5. All classes sailed as one, time allowance being figured by the Herreshoff table. The 25-footers Flirt and Chewink had things all their own way until the windward mark was reached. Chewink turned this mark first, followed by Flirt. On the reach back to Martin's Rock, the 21-footer Hostess found her weather and came to the front. She easily ran away from the 25-footers and obtained a good lead. Chewink pulled her down on the lay to the finish line, but Hostess managed to squeeze over the line 12s. to the good. Chewink was second, Flirt third and Circe II. fourth, but Circe II. won on corrected time. Circe II. was originally a 21-footer, and raced for the Quincy cup, but her ends have been pulled up and she now races in the 18ft. class. The summary:

	Finish.	Corrected.
Circe II., E. L. Pigeon.....	1 33 42	1 32 18
Hostess, H. M. Faxon.....	1 30 08	1 33 15
Chewink, F. S. Macomber.....	1 30 20	1 39 08
Flirt, Fabyan & McKee.....	1 31 10	1 39 58
Vitesse, W. J. Combs.....	1 46 30	1 40 50
Opitsah III., S. H. Foster.....	1 37 45	1 41 05
Privateer, J. McConnell.....	1 40 10	1 44 00
Khalifa, R. Tucker.....	1 34 45	1 44 33
Pompelia, R. C. Robbins.....	1 41 08	1 45 38
Onda, J. Greenough.....	1 36 13	1 46 01
Bernice, C. E. Lunt.....	1 36 13	1 46 01
Raccoon, A. D. Loring.....	Not timed.	
Rikki Tikki, Loring Bros.....	Not timed.	

Thursday, Aug. 15.

The Y. R. A. open race of the Manchester Y. C. was sailed off West Manchester Thursday, Aug. 15, in a stiff S.W. breeze. This race was scheduled for Aug. 6, and was started on that day, but, as only one class finished, the race was postponed. There were three Y. R. A. classes and two club classes. In the 25-footers Calypso went over the starting line first and led all the way over the course. The race in the Y. R. A. 21ft. class, between Opitsah III., Tabasco III. and Eaglet was very close. They were close together all over the course, but Opitsah III. managed to hold a little lead. She won by less than a minute. Three raceabouts made a pretty race, but Idol, one of the new boats, won by over a minute. In the 18ft. knockabouts Aspinquid got the best of the start and led over the course, winning by 1s. over a minute. In the handicap class Thordis finished first and Onda second, but both lost to Spry on corrected time. The summary:

Class D—25ft. Sloops.		
	Elapsed.	Corrected.
Calypso, A. W. Chesterton.....	1 18 34	
Flirt, Fabyan & McKee.....	1 20 09

Onda, J. B. Greenough.....	1 18 34	1 18 34

Tuesday, Aug. 13.

Only five boats started in the third championship race of the Manchester Y. C. In the 25-footers Chewink and Tarpon went over the starting line together, and Chewink opened up a slight lead to the first mark. On the beat Tarpon drew up on Chewink and turned the mark with her. Chewink managed to hold her lead on the last leg, and finished 57s. to the good. In the raceabout class there were two starters. Pompilia withdrew and Idol finished alone. The summary:

25-footers.		
	Elapsed.	Corrected.
Chewink, F. G. Macomber, Jr.....	2 14 22	
Tarpon, E. S. Grew.....	2 15 19	
Oivana, Reginald Boardman.....	2 21 40	

Raceabouts.

Indian Harbor Y. C.

GREENWICH, LONG ISLAND SOUND.

Saturday, Aug. 17.

THE Indian Harbor Y. C. sailed on Saturday, Aug. 17, its annual regatta. Some forty-one boats started, and the race was a great success in every way. There was a good sailing breeze from the S.W. that held quite steady all the afternoon. The Regatta Committee, F. B. Jones, Charles Simms, Charles Tower and Charles F. Kirby, used the tug Stamford for the judges' boat. The preparatory signal was given at 12:30.

For the 36 and 40ft. class of sloops and yawls the course was from the starting line half a mile S. of the gas buoy off the E. end of Little Captain's Island, to and around a stake boat anchored off the Coms Rocks, near Shippan Point, thence to another stake boat in the middle of the Sound, thence to the starting line, a total distance of nine miles, sailed twice over.

The raceabouts sailed a twelve-mile course, the 21ft. class of sloops and catboats nine miles, and the rest six miles. The table follows:

Sloops—43ft. Class—Start, 12:55.		
	Finish.	Elapsed.
Dorwin, W. L. Wood.....	3 48 02	2 53 03

Sloops and Yawls—36ft. Class—Start, 1:00.		
	Finish.	Elapsed.

Toddie, F. T. Peters.....	1 33 30	2 03 30
Little Doctor, Dr. W. Carmen.....	1 43 03	2 13 03

Class W—Catboats—Start, 11:30.		
	Finish.	Elapsed.
Kinkie, C. Coddington.....	2 21 25	2 09 25
Defiance, W. Ketcham.....	2 28 20	2 18 20

The winners were as follows: Class M, Alcatorda; Class N, Amy Foster; Class O, Wynnabust; Class S, Jupiter; Class T, Dorothy; Class V, Toddie; Class W, Kinkie.

Corinthian Y. C.

MARBLEHEAD, MASS.

Saturday, Aug. 17.

THE fifth championship race of the Corinthian Y. C. was sailed off Marblehead, Saturday, Aug. 17, in a fluky breeze from the westward. It blew quite hard at the start, but flattened out almost to a dead calm at the finish. In Class A, Oivana gave everybody a surprise by finishing 36s. ahead of Chewink. In the raceabouts Idol won by a comfortable margin from Pompilia and Scapegoat. Thistle and Suzanne had a hot scrap in the knockabout class, Thistle winning by a little over half a minute. The summary:

Class A.		
	Elapsed.	Corrected.
Oivana, R. Boardman.....	2 01 05	2 01 05
Chewink, F. G. Macomber.....	2 01 41	2 01 41
Louise, E. McWilliams.....	Withdrew.	

Raceabouts.		
	Elapsed.	Corrected.
Idol, T. K. Lothrop.....	2 08 25	2 08 25

Hull-Massachusetts Y. C.

HULL, MASS.

Saturday, Aug. 10.

THERE were only two classes in the club race of the Hull-Massachusetts Y. C. Saturday, Aug. 10. For the first time the 18ft. knockabouts were given handicaps, but they did not affect the positions of the yachts on corrected time. There was a stiff S.W. breeze blowing, which was much to Malilian's liking, and she managed to beat out Bonito by 50s. In the regular handicap class there were two entries, Holly and Darthea. Darthea was disabled and Holly went over the course alone. The summary:

Class I.—Knockabouts.		
	Elapsed.	Corrected.
Malilian, Pamar.....	4 44 38	2 09 38
Bonito, G. H. Wightman.....	4 45 28	2 10 28
Oriana, A. Douglass.....	4 49 43	2 14 43
Ayaya, Fred Keyes.....	4 54 30	2 19 30

Handicap.		
	Elapsed.	Corrected.
Holly, W. M. Ware.....	4 41 30	2 01 30

Plymouth Y. C.

PLYMOUTH, MASS.

Saturday, Aug. 17.

THE third race of the Plymouth Y. C. was sailed in Plymouth Harbor Saturday, Aug. 17, in varying strength of breeze. It was very light at the start, but freshened toward the finish to such an extent as to make reefs necessary. In the handicap class Dolphin won from Seaview by less than a minute in a hotly contested race. In the 18ft. knockabouts Trouble won handily. Oom Paul carried away her mast in one of the puffs. Fanny D. and Geisha had a hot race in the 21-footers, Fanny D. winning by 12s. The summary:

Handicap Class.		
	Elapsed.	Corrected.
Dolphin, N. Morton.....	1 13 17	1 13 17
Seaview, T. S. Diman.....	1 13 50	1 13 50

Gravesend Bay Y. R. A.

SEA GATE—NEW YORK BAY.

Saturday, Aug. 10.

THE eleventh of the series of races arranged by the Gravesend Bay Y. R. A. was sailed on Saturday, Aug. 10, under the auspices of the Atlantic Y. C.

There was a good breeze from the S., and the boats made good time over the courses. The summaries:

Sloops—36ft. Class—Start, 3:20.	Finish.	Elapsed.
Vivian, S. E. Vernon.....	6 27 45	3 07 45
Akista, George Hill.....	6 52 30	3 32 30
Sloops—30ft. Class—Start, 3:20.		
Squaw, H. J. Heath.....	5 43 20	2 23 40
Sloops—25ft. Class—Start, 3:25.		
Cockatoo, Hendon Chubb.....	4 47 25	1 22 25
Song and Dance, E. F. Luckenbach.....	4 53 38	1 33 38
Sloops—21ft. Class—Start, 3:25.		
Wraith, Calvin Tomkins.....	4 54 20	1 29 20
Spots, D. D. Allerton.....	4 53 44	1 33 44
Sloops—18ft. Class—Start, 3:25.		
Pebble, A. W. Speir.....	5 05 55	1 40 55
Budget, Henry Anthony.....	Disabled.	
Constance, F. D. Prentice.....	Withdraw.	
Marine and Field Class—Start, 3:30.		
Jig-a-Jig, W. A. Hutcheson.....	5 07 35	1 37 35
Kelpie, W. K. Brown.....	5 08 15	1 38 15
Vixen, Baylor & Mahoney.....	5 08 55	1 38 55
Stinger, A. P. Clapp.....	5 10 08	1 40 08
Quinque, L. H. Smith.....	5 12 15	1 42 15
Flying Fox, Cone & Buckman.....	5 12 55	1 42 55

The winners were: Class M, Vivian; Class P, Cockatoo; Class Q, Wraith; Class R, Pebble; Marine and Field Special, Jig-a-Jig.

Cohasset Y. C.

COHASSET, MASS.

Saturday, Aug. 17.

THE ninth race of the Cohasset Y. C. was sailed off the club house in a very light S.W. breeze Saturday, Aug. 17. Two classes of knockabouts started. In the regular class Nereid won by 10m. from Eleanor; the other seven boats which entered withdrew. In the special class Tunipoo won by 15m. The summary:

Knockabout Class.	Elapsed.
Nereid, W. R. Sears.....	2 31 45
Eleanor, Frank Moors.....	2 41 45
Remora, Glover Crocker.....	Withdraw.
Monsoon, J. Knowles.....	Withdraw.
Barracuda, A. C. Burrege.....	Withdraw.
Harelda, Alanson Bigelow.....	Withdraw.
Delta, R. B. Williams.....	Withdraw.
Special Class.	
Tunipoo, W. R. Bremer.....	2 20 00
Fancy, C. W. Barron.....	2 35 00
Fly, C. W. Barron.....	2 43 55

YACHTING NEWS NOTES.

The schooner yacht Fleur de Lys, owned by Dr. L. A. Stimson, N. Y. C., arrived on Aug. 17 from Gibraltar via Madeira, after a passage of twenty-seven days. She left this port on March 8, with her owner and a party of friends on board for a cruise in the Mediterranean. She crossed the ocean in twenty-four days, experiencing very heavy weather, but lost nothing except a sea anchor. Among the ports visited since she left here were Palermo, Malta, Corfu, Cattaro, Venice, Naples and Leghorn. On the way home she made a southerly cruise as far south as latitude 24.

Mr. Frank N. Tandy, who has been associated with Mr. B. B. Crowninshield, the well-known naval architect, for several years, has now severed his connection with him, and has opened an office at 31 State street, Boston, Mass., where he will establish a general marine agency. It is Mr. Tandy's intention to give special attention to the organization and promotion of sailing and steamship companies. He will also buy and sell first-class marine instruments. A rather unique and interesting feature of Mr. Tandy's new venture is to be the exploitation of good schooner property. There have been cases where such vessels have earned and paid over 20 per cent. dividends, and Mr. Tandy is a firm believer in the possibilities of this class of property.

New Publications.

Flowers and Ferns in Their Haunts.

WITH the arrival of the birds, the putting forth by shrub and tree of the first leaflets of tender green, and the coming of the warm spring days, which tempt us abroad, appears the usual rush of spring nature books, which of late years we have become so accustomed to see. One of the most beautiful of these, published by the Macmillans, is from the pen and camera of an author whose name has become familiar—Mrs. Mabel Osgood Wright, author of "Citizen Bird" and other similar volumes. The last arrival is a very charming book, and we are inclined to think, may, perhaps, become more useful than any of its predecessors from her pen.

In it Mrs. Wright takes her reader abroad with her across the fields and along the edges of the woods in search of flowers and ferns. She does not profess to have discovered any new things to point out, but she has eyes, and knows how to use them, and in this respect she differs widely from most of those whom we meet in our daily lives. Moreover, she has in her mind a special thing which she wishes the reader to see—the flower in the landscape, and that flower in its natural place, and surrounded by all its companions of the field, the hedgerow or the forest. In the flowers which she shows to her readers she sees something more than mere botanical specimens, and she endues them with a certain life and personality which the nature-lover who is much abroad and much in contact with uncollected specimens will very readily comprehend. How much more real do flowers and plants seem to him who sits down to rest among them than those same flowers and plants when gathered, thrown in a botanical box, and again taken out for study and preservation. There is much of fact in the remark that "the wild flower and fern is only to be truly known where it creeps, clings or sways, untroubled, in its home."

The volume before us contains a dozen chapters which roughly follow the course of the year. They treat of the coming spring, of the plants along the waterways, of those which have escaped the gardens, of wood flowers, of humble orchids, of poisonous plants, of ferns, of certain flowers that love the sun, of the family of compositae, of flowers that grow along the road, of vines, and lastly of the flowers and fruits of late autumn. Finally the book closes with an index and glossary which give, besides the vernacular plant names used in the text, their Latin equivalents, so that there shall be no doubt as to just what they mean. The story of the book is simply told, a plain description of what is seen abroad, with occasionally a few words about the author's companions. But practically it is all description, yet description of a very charming

sort. It is a story of walks and rides in southern New England fields and woods not easily to be matched.

The volume is illustrated from photographs by the author and J. Horace McFarland. There are nearly sixty full-page and half-tone plates, and no fewer than 125 line drawings, almost altogether of ferns or flowers or plants scattered through the text.

These illustrations are the crowning glory of the volume, and will be a joy and a delight to every botanist and to every nature-lover. One may look over the plates, one after another, trying to decide which among them is best or worst, without being able to make up his mind. Each plate has some special charm of its own, which makes one long to speak of it, and yet the next plate is so beautiful as to drive the last one out of the memory. Not only are the photographs well taken, and the plates beautiful in themselves, but each is taken by an artist, and the views so chosen that, besides the flower and its beauty—and often detail—there are other features of the picture which charm and delight. The volume shows better than almost any that we have seen what can be done in nature work by a true artist with the camera. Price, \$2.50.

Rifle Range and Gallery.

National Rifle Association.

THE twenty-ninth annual meeting of the National Rifle Association of America, the second annual meeting of the United States Revolver Association and the tenth annual meeting of the New Jersey State Rifle Association will be held at Sea Girt, N. J., under the auspices of the last-named association, from Aug. 30 to Sept. 7.

At the same time there will be held two international contests, the first in twenty-three years. One of the contests is for the Palma trophy, representing the world's championship. This trophy has not been contested for since 1880, when the American team won it by defeating a team from Great Britain. This year Canada is sending a team to try and take it across the border.

The other match is a special challenge match between teams of eight men from the Ulster Rifle Association, of Belfast, Ireland, and the New Jersey State Rifle Association; 15 shots for each man at 800, 900 and 1,000 yards, with any rifle.

The Irish team sailed for America on the 21st inst. In the party are, besides the team, the Marquis of Dufferin and six or eight prominent Irish sportsmen, besides several ladies.

Composing the Irish team are men who have been shooting on the Irish "Eight" at Bisley for years. Such men as Barnett, Braithwaite, Henry, Caldwell, Millner, Thynne, Morgan, and Chadwick, whose names are well known in the rifle-shooting world as expert long-range shots, are the material which the young, inexperienced shooters of the New Jersey Association have against them. Not only are the Jerseymen new at this game, but they are also seriously handicapped by not having the proper kind of small-caliber rifles for such shooting. Mr. Foulke, the well-known shot of Philadelphia, is coaching the New Jersey team, and he predicts that Yankee ingenuity and pluck will pull them through victors. Of the men who have been doing the best work on the New Jersey team may be mentioned Capt. Whittemore, Dr. Hudson, Capt. Martin, Baker, Malcolm, Tuttle and Foulke. New Jersey will take good care of the visitors. Col. Thompson, aide-de-camp to the Governor, has placed his steam yacht at the disposal of the entertainment committee, and the Irish team will be met down the Bay and taken to Atlantic Highlands, where they will be taken aboard the train for Sea Girt.

All of the interest in the coming tournament is not by any means centered in the international matches. Never before in the history of rifle shooting in this country has there been so much interest manifested in the annual interstate matches by the guardsmen of the different States. As against six States being represented by State teams, which is the largest number ever before assembled together in competition, there will this year be about eight State teams on the grounds to compete for the Hilton and Marathon trophies.

The United States Marine Corps will be represented by a strong team, which has been training at the navy range at Annapolis for over a month. The Department of the East, U. S. Army, will also in all probability send a team from Governor's Island. Maine has already selected her team, competitors for that purpose having been held at Brunswick, Me., on Aug. 3.

The Pennsylvania State team will be selected from the men making the highest scores at the State shoot at Mt. Gretna, Pa., Aug. 27, 28 and 29. Pennsylvania will also send the winning regimental team and a squadron team to represent her guard at Sea Girt.

New York has selected by competition twenty-five men, who are now practicing at Creedmoor, with the United States magazine rifle. Later on the twelve men to compose the State team will be selected by a second competition.

New York will also be represented by regimental teams from the Twelfth, Ninth, Seventh-first, Seventh, Seventy-fourth, Twenty-third and Thirtieth regiments, and a team from Squadron A and the Naval Reserve.

For some reason not fully understood Massachusetts has decided not to send a team. For a great many years Massachusetts could boast of as fine a body of expert riflemen in her militia as there was in the country, but of late years very little has been heard from her in this respect.

Battery B, Light Artillery, of Boston, will send a revolver team to defend their title to the military team championship, won last year. There will also be several regimental teams from the State.

The Rhode Island team is in training at the Rumford range, and is putting up some very fine scores. Both the District of Columbia and New Jersey will enter State teams, and the usual number of regimental, troop and company teams. The New Jersey Naval Reserve and batteries and signal corps will this year, for the first time, be represented in the matches. The revolver team will also be entered from the Fourth Regiment. Both the District and Jersey teams are shooting with the United States magazine rifle, and are doing such good work that both ought to be near the top of the list when the match is decided. Maryland will be represented by a team from the Fifth Regiment of Baltimore and a troop team in the carbine and revolver matches.

Vermont, New Hampshire, Ohio, Michigan, Minnesota and Delaware will be represented by either a State or regimental team or both, but little is known of the work being done at the local ranges.

Sea Girt will certainly be an interesting place to visit during these national contests. Every arm of the service will be represented, and the encampment will be as near a national camp for our armed forces as we are ever likely to have. The State of New Jersey deserves a great deal of credit for fostering a sport of such national importance as rifle shooting—excellence in which was at one time the backbone of our national strength.

Military riflemen are not going to monopolize all the interest at the meeting. The Schuetzen shooters are also well looked after. The National Rifle Association of America has in its programme a team match for civilian clubs, and all of the larger clubs will send their best men to try and win the pennant and interclub championship of the United States. Such well-known clubs as the Massachusetts Rifle Association, Philadelphia Rifle Association, New Jersey State Rifle Association, Manhattan Rifle and Revolver Association, District of Columbia Rifle Association, Zettler Rifle Club, of New York; Pittsburg Rifle Club, Crescent City Rifle Club, of Scranton, Pa.; Iroquois Rifle Club, of Pittsburg, Pa.; Hoboken Independent Schuetzen Corps, Elite Rifle Club, of Brooklyn; San Antonio (Texas) Shooting Society, Syracuse (N. Y.) Rifle Club, and the Italian Shooting Association, of New York, will be represented.

The success of the Schuetzen shooting end of the tournament is assured by having such men as William Hayes, Gus Zimmermann, Tom Keller, Emil Berckmann, Dr. Hudson, Nathan Sperring, Dr. Stillman, John T. Humphries and Harry Pope looking after its interest.

Revolver-shooting enthusiasts will have their interests well looked after by Dr. Sayre, of New York; Licut. Paine and E. E. Patridge, of Boston; E. L. Harphan, of Chicago, and J. B. Crabtree, of Springfield, Mass. Everything possible has been done to provide interesting matches. An innovation is a disappearing-man target, at which the contestants have only twelve seconds in which to fire their six shots. The railroads of the country, recognizing that there will be thousands of visitors attending the tournament, have made special rates to Sea Girt, beginning Aug. 24. The special-rate tickets may be purchased in any of the following States: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, West Virginia, Ohio, Indiana, Texas and parts of Illinois, Michigan and Ontario, Canada.

Lieut. Albert S. Jones, secretary of the National Rifle Association of America, has received from D. Morillon, president of the Union des Societes de Tir de France, the following communication:

"I have the pleasure of informing you, and beg that you will notify your president and the committee, that the Union of French Societies, while not able to send a team to your great meeting of 1901, has nevertheless been desirous of testifying its friendship for the National Rifle Association of America, and that it has decided to offer for this meeting a bronze medallion of Gloria Victis, framed in oak, and two silver plaquettes in cases."

The above prizes have been received by Governor Voorhees, of New Jersey, from the French Ambassador at Washington, and are now on exhibition at the club house of the New Jersey State Rifle Association. The magnificent range at Sea Girt is being put in complete order for the meeting; more revolver targets have been built to accommodate the increased number of patrons. There are now eight targets at 1,000yds. In all there will be eighty-one targets, at all ranges, in use during the matches.

LIEUT. ALBERT S. JONES,
Secretary N. R. A. of A.

SEA GIRT, N. J., Aug. 9.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road. Conditions, 200yds., off-hand, at the German ring target. Bruns was declared champion for the day with the fine score of 220. Hofer was high on the honor with 66. Weather, clear; thermometer, 90; wind, from 9 to 3:

Bruns	24 22 23 21 21 20 20 23 25 21—220

Honor target: Gindele 52, Payne 43, Bruns 57, Strickmeier 57, Nestler 61, Roberts 61, Trounstine 43, Jonscher 58, Hofer 58, Lux 56, Topf 5, Uckotter 5.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Aug. 11.—Two of the Colorado delegation of shooters are still with us, viz.—C. J. Barnes and D. W. King—and Yeager is in Watsonville. King has concluded to open a shooting gallery in San Jose, and the others may stay here permanently. Barnes, wanted a 50-shot match on the Columbia target, so we gave him a chance to do us up to-day, and he did it. Here are his 50 shots in detail, 200yds., offhand:

C. J. Barnes.....	3 7 5 1 3 6 1 4 2 10—42
	1 6 5 3 14 7 8 4 4 16—68
	6 4 2 3 3 4 8 9 5 7—51
	2 7 9 5 4 8 5 2 7 4—53
	4 6 3 8 2 12 4 11 5 9—64—278
F. O. Young.....	32 58 59 60 72—331
D. W. King.....	63 70 62 68 72—335

Young paid for the refreshments without a murmur. Then the trio, and Hoffman, tried to down Barnes' 42 score. The best King could do was 51; Hoffman made 63, and Barnes' bullets were gone before he knew it. Young made 55 and 48, and finally the following score, which contains more 1's than have ever been recorded in a single score, viz.:

F. O. Young.....1 2 1 7 9 8 1 1 4 1—35

The 7 and 4 were good holds, high shot at 12 o'clock, and probably due to the sun's rays on the back of the target, giving it a luminous appearance. Each shot was spotted by Henderson and Hoffman before the marker could disk them, the holes looking like points of fire on the black. Hoffman has ordered a Pope rifle and will be heard from later. The Native Sons are forming a new club and will shoot on our range at Harbor View. This club will be military in character. Col. Kellogg tells us he is forming still another club of shooters, which will be American from the ground up. The Columbia Pistol and Rifle Club will join the National Rifle Association at its next regular meeting. Some of them felt like attending the national American shoot to see what it would be like to hear their own familiar language spoken, especially when invited into a national meeting of the same. Say, brethren, it does seem proper, now, doesn't it?

FRED O. YOUNG.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Aug. 20-21.—Piqua, O.—Piqua Rod and Gun Club's tournament.
Aug. 21.—Holmesburg Junction, Pa.—Target shoot of second series of Keystone Shooting League.
Aug. 21-22.—Bass Lake, Ind.—Midsummer tournament of the Peru Gun Club. J. L. Head, Mgr.

Aug. 22-23.—Fairmont, Minn.—Target tournament of the Fairmont Gun Club.
 Aug. 23.—Pleasant Hill, Mo.—Fifth annual sweepstake and merchandise tournament of the Pleasant Hill Colored Gun Club, T. H. Cohron, Sec'y.
 Aug. 27-28.—Northville, Mich.—Tournament of the Michigan Trapshooters' League, L. L. Brooks, Sec'y.
 Aug. 27-30.—Okoboji, Ia.—Lak Okoboji amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw.
 Sept. 2.—Cleveland O.—Merchandise shoot of the Cleveland Gun Club.
 Sept. 2.—Ossining, N. Y.—All-day live-bird and target shoot of the Ossining Gun Club, C. G. Blandford, Capt.
 Sept. 2.—Ilion, N. Y.—Amateur shoot of the Remington Gun Club, W. H. Grimshaw, Sec'y.
 Sept. 2.—Meriden, Conn.—Labor Day tournament of the Parker Gun Club. Also Bristol sheep bake, C. S. Howard, Sec'y.
 Sept. 2.—Albany, N. Y.—Bluerock tournament of the Forester Gun Club, H. H. Valentine, Mgr.
 Sept. 2-3.—Union City, Ind.—Tournament of the Parent Grove Gun Club.
 Sept. 2-3.—Portland, Me.—Maine State tournament, under the auspices of the Portland Gun Club, S. B. Adams, secretary.
 Sept. 2-3.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association, Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y.
 Sept. 3-4.—Bellefontaine, O.—Silver Lake Gun Club's tournament.
 Sept. 3-6.—Lake Okoboji, Ia.—Indian tournament, to be held at Arnold's Park; \$800 added. C. W. Budd, Arnold's Park, Iowa.
 Sept. 4.—Holmesburg Junction, Pa.—Target shoot of second series of Keystone Shooting League.
 Sept. 4-6.—Chattanooga, Tenn.—Chattanooga Gun Club's tournament.
 Sept. 11.—Montpelier, Vt.—Montpelier Gun Club's tournament; contest for the Robin Hood international trophy, G. B. Walton, Sec'y.
 Sept. 10-12.—Sidney, O.—Sidney Gun Club's tournament.
 Sept. 11-12.—Warren, Ind.—Warren Gun Club's tournament.
 Sept. 11-13.—Canton, O.—Canton Gun Club's tournament.
 Sept. 16-17.—St. Joseph, Mo.—St. Joseph Gun Club's tournament.
 Sept. 19-20.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.
 Sept. 20-21.—Titusville, Pa.—First annual tournament of the Titusville Gun Club, H. Pfeiffer, Sec'y.
 Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreihls, Sec'y.
 Oct. 1-4.—Detroit, Mich.—John Parker's annual international tournament; three days targets, one live birds; \$300 in money and trophies; distance handicaps.
 Oct. 9-10.—Huntington, Ind.—Tournament of the Erie Gun Club.
 Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.
 Oct. 15-16.—Greenville, O.—Regular annual tournament of the Greenville Shotgun Club, H. A. McCoughery, Sec'y.
 Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club, S. G. Miller, Sec'y.
 Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.
 Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
 Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.
 Sept. 10-13.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club; \$750 added; valuable list of merchandise prizes. Walter F. Sykes, President, 85 Water street, New York.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club, L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 345 Broadway, New York.

The programme of the New York State tournament, which is to be held at Interstate park, Queens, L. I., Sept. 10 to 13, inclusive, under the auspices of the New Utrecht Gun Club, is exceptionally sterling in the conditions of the competition which it offers to the trap shooters, both in respect to the open and State events. The competition arranged for the two classes of shooters—that is, that of the open and State events—is alike in each, with the exception that in the latter, \$20 is added to each event. The sweepstakes for the first and second days, State and open events respectively, are four events at 15 targets, \$1.50 entrance; and one at 20 targets, \$2 entrance. The third day provides six events at 15 targets, \$1.50 entrance; and the merchandise event, which contains a valuable list of prizes of sterling worth and special fitness for the use of sportsmen who shoot or fish. A Lefevre gun, Smith gun, Parker gun, Winchester Repeating rifle, Marlin rifle, revolvers, rods, reels, gun cases, shell cases, etc., form a part of the list. There are a number of objects of art, which will be offered for special events, which will be arranged as time allows. On each of the first three days there will be a handicap by distance, 14 to 25 yards, at 100 targets, \$7 entrance, targets included, \$100 added to each. No percentages are taken from the purses, although there is \$750 added money. The handicap events make \$300 of added money appropriated for the open competition, to which there is a further appropriation of \$75 for the high averages in the entire open sweepstake programme, divided as follows: First, \$25; second, \$20; third, \$15; fourth, \$10; fifth, \$5. The State events also have high average prizes, as follows: First, \$25; second, \$15; third, \$10; fourth, \$5. High guns govern the division of the moneys in the handicaps and the Rose system in the sweepstakes. Targets 2 cents. On the fourth day there are four live bird events, 7, 10 and 15 birds, \$5, \$7.50 and \$10 entrance, respectively, class shooting. The State Convention will be held on the evening of Sept. 10, at 8 o'clock, at Interstate park. The programme contains the Long Island R. R. time table. Send guns and ammunition to Interstate park, prepaid. Mr. Elmer E. Shaner, famous as manager and expert, will manage the tournament. For programme and further particulars, address Mr. W. F. Sykes, president of the New Utrecht Gun Club, 85 Water street, New York. The programme is attractive and generous. Big so-called added money on the one hand means nothing in the way of added money, if it is taken out of the purses, or made by charging a higher price for the targets. The merchandise list also is the result of purchase or club contributions, and, therefore, is free of moral sandbagging.

Programmes are out for the seventh annual Labor Day tournament of the Parker Gun Club, Meriden, Conn., Sept. 2. The competition is open to all. Ten events are on the programme, at 15 and 20 targets, alternately, \$1.30 and \$2.40 entrance. Grounds open at 8:30 A. M. Programme shooting starts at 9:30 A. M. Purses will be divided by the Rose system, four moneys, 5, 4, 3, 2. Price of targets, 2 cents, included in all entrances. Shooters may enter for price of targets only in all events. Take electric cars to Hanover Park. Cars leave depot every fifteen minutes. Loaded shells for sale at club house. Guns and shells shipped to C. S. Howard, prepaid, will be delivered at club grounds free of cost. A Bristol sheep bake. Dinner will be served on the grounds, consisting of baked lamb, sweet potatoes, Irish potatoes, fried sweet corn, etc. Tickets, 50 cents. Apply to the secretary, C. S. Howard. Interstate rules govern.

The Montpelier (Vt.) Gun Club announces its tournament for Sept. 11, commencing the programme at 9:30 o'clock. There are eleven events, at 10, 15 and 20 targets, and extra events will be shot if time permits. Targets, 1 cent, included in entrance. Anyone may shoot for targets only. Rose system. Lunch and am-

munition can be obtained on the grounds. The secretary, Mr. G. B. Walton, writes us as follows: "The Union Gun Club has accepted the challenge made by the Robin Hood Gun Club, for the Robin Hood International Trophy, and the contest for the same will be held on the grounds of the Montpelier Gun Club on Sept. 11. All friends are cordially invited to attend the tournament. Both the Robin Hoods and Unions would be pleased to have other teams enter the contest for the trophy."

Mr. C. G. Blackford, captain of the Ossining (N. Y.) Gun Club, informs us that his club will give an all-day live bird and target shoot on Labor day (Sept. 2), rain or shine. The holiday shoots of this club are popular and always well attended. Ossining is thirty miles from New York City, on the N. Y. C. & H. R. R. R. The shooting will be sweepstakes. Refreshments on the grounds.

The brochure issued by the Indians, the tribe of chiefs which holds a sun and target dance at Lake Okoboji, Ia., Aug. 27-30, and which, in pleasing verse, treats poetically of the members and the forthcoming tournament, is from the pen of Mr. F. C. Riehl, of Alton, Ill., who is known as Chief Piasa, and holds the office of Chief Scribe. It may be obtained on application to him.

Mr. John Parker's annual international tournament will be held at Detroit, Mich., Oct. 1 to 4, three days of which will be devoted to target competition and one day at live birds, and \$300 will be added in money and trophies. It will make a three weeks' circuit with Cincinnati, O., and St. Thomas, Ont. There will be distance handicaps.

The programme of the all-day shoot of the Portsmouth, N. H., Gun Club, to be held on Saturday of this week, has twelve events, at 10 and 15 targets alternately. Events 5 and 6, a total of 25 targets, constitute the team match. Targets 1 1/2 cents. Lunch served free. Loaded shells for sale. All shooters are invited. The president is W. E. Storcer; the secretary is W. I. Philbrick.

Mr. W. P. Markel, of the Markel Shot and Lead Works, St. Louis, Mo., was a visitor in New York for several days in the past week, and made many friends for himself and his company. The latter has become a member of the Interstate Association, America's most national trapshooting Association.

The Hudson Gun Club, of Jersey City, N. J., will offer some prizes for competition at the club shoots, which will be competed for in distance handicaps, and among the members who are mentioned for the back marks are Messrs. Dudley, Schorty, Duke, Bock, Hausman and others.

Mr. R. A. Welch is shooting at the great international tournament at Namur. On July 21, at 29 meters, one-half meter back of the famous Mackintosh, with whom he divided, Mr. Welch killed 21 straight. He and Mackintosh divided 3,000 francs. There were fifty-one contestants in this event, the Prix de Creppe.

Mr. John B. Mosby, chairman of the tournament committee, has issued a circular letter calling attention to the first annual handicap tournament of the Cincinnati Gun Club, to be held on Sept. 24, 25 and 26, and inviting shooters to participate. Mr. Mosby's address is 115 E. Second street, Cincinnati, O.

Mr. H. A. McCoughery, of Greenville, O., announces that the Greenville Shot Gun Club, of which he is the secretary, will give its regular annual tournament on Oct. 15 and 16.

Mr. G. G. Williamson, of Muncie, Ind., informs us that the dates of the Erie Gun Club's tournament have been changed to Oct. 9 and 10.

BERNARD WATERS.

Dusted or Broken Targets.

SINCE the matter of scoring or not scoring to the credit of the contestant a dusted target was discussed in FOREST AND STREAM much interest has been manifested in both by individuals and the press. As was to be anticipated in a subject presented from an unusual viewpoint, it evoked quite opposite opinions. There was the firm conviction of the man whose beliefs were established by the long habit of thinking over the same thing in the same manner, under the same conditions, year in and year out; the man whose veneration for the thoughts and rulings of his predecessors or contemporaries prevented him from having an independent thought for himself, and last but not least, the man who was sure that there is such a radical difference between a dusted target and a broken target that only the latter is worthy of being scored as a merit, while to dust a target is the same as to miss it.

Mr. Will K. Park, trap editor of Sporting Life, while generally very sound in his views, particularly on all matters of which he writes, in reviewing our comments on the subject, seems to have been hasty and superficial in his examination of the matter, for surely he cannot fail to perceive on more careful consideration the fallacy of his contention. Referring to our comments, he says:

"The writer then goes on to ask, 'Why shall not a dusted target be scored to the shooter?' The reason that the target should not be scored to the shooter is because the prevailing rules say that it shall not be. These rules were made years ago by the leaders in the sport of clay-pigeon shooting at that time. Afterward the Interstate Association appointed a committee to revise the old rules and make a set conforming to all occasions of the present day. This learned body of practical trap shots decided that a shooter, to have a target scored as 'dead,' should break a perceptible piece from it. The Interstate Association made these rules for use in their tournaments, and other clubs can adopt them or let them alone, or issue a set of rules of their own."

In reply to the foregoing, it may be cited that a number of scientists some centuries ago agreed that the earth was flat; that the sun moves; that witches were a common product, etc. The only way in which the world progressed in matters of fancy which contravened matters of fact was by changing the matters of fancy, for the reason that a fact is eternal. Now, while it is true that rules were made years ago by the leaders in the sport, it also is true that they have been added to, amended, and changed, and the fact, which Mr. Park urges, that "the Interstate Association appointed a committee to revise the old rules and make a set conforming to all occasions of the present day," is rather against the compliment which he evidently intended to pay the men who were leaders in the sport years ago. Continuing, he says: "This learned body of practical trap shots decided that a shooter," etc. He overlooks the point that the older leaders in the sport had decided this matter, and that the committee of the Interstate Association did not decide it, but adopted what it considered decided. It is hardly to be expected that the Interstate Association or its committee considered that its rulings were beyond criticism, or that they were to stand unaltered through all the ages.

In FOREST AND STREAM of last week a member of that committee endorsed our views on this point.

"Any one can make gun club rules, and many clubs have ground rules to govern themselves quite different from those in general use. In Schuylkill county the rules in live-bird shooting are different from those of any other section. If a club holding a tournament decides to give shooters dusted targets, they can do so by stating it on their programmes. Then the cry will be heard: 'Say, referee, I knocked dust from that bird!' just as you hear it now: 'I got a piece off that target.'"

Granting all the foregoing, we fail to perceive what bearing it has on a matter of fact. A target is hit or it is not. The rules which some club may have on live-bird shooting are not relevant or material to the fact. As a matter of every-day shooting experience the majority of onlookers at a tournament will agree on a target being dusted, whereas there are the most opposing statements in respect to a perceptible piece, an inaccurate statement in itself, for the rules mean a visible piece. A piece may be "perceptible" to the sense of touch or smell or taste as well as to the eye. He further remarks:

"In order to govern any sport there must be fixed rules, and the one covering dusted targets is a good one. If dusted targets were allowed to be scored in the shooters' favor many men would take advantage of it by using a load which would dust the targets even

if it did not break them. By using 1 1/4 oz. of No. 9s or 10s, a quick shot should dust or break every target thrown for him, while a slow shot would be in exactly the same boat he is in at the present time."

It is well known that No. 9s or 10s are inferior for target breaking, particularly on windy days or in summer when the weather is warm and the targets consequently tougher. We do not believe that any target shooter in America can use 9s and 10s and perform up to his average, even if he counts both the dusted and broken targets broken with them. They will neither dust nor break them to the degree asserted in the foregoing. Even if a quick shot of the skill assumed in the foregoing statement were to break every target thrown for him (wholly an assumption, by the way), in what manner would it be different from the accepted method of scoring? The expert practically breaks all, anyway, and very rarely dusts one at that.

"To count dusted targets would be like scoring live birds dead when the feathers were knocked out of them; but in live-bird shooting a boundary line settles the question, and a bird is scored lost even if killed stone dead a foot over this line. By the same rule a bird is scored dead if gathered within this line, even though it has but a single toe shot off, and is otherwise strong and healthy."

The foregoing paragraph contains more fallacy than all the rest combined. Taking the average of shoots, probably five out of ten birds are gathered without being killed. There is no question of knocking the feathers off or even a feather. A visible or a perceptible piece is in this relation not considered. If one shot tips the wing of a bird, it is so crippled that it cannot fly, and the contestant is allowed two or three minutes to chase it about and gather it.

Indeed, there is no question at all under most rules concerning whether it was hit at all. The sole consideration is that it be shot at when it is on the wing, and is gathered within bounds. It is rather an unfortunate argument with which to bolster up a contention for a thoroughly broken target.

A dusted target is not necessarily one which is hit on the edge by an outer pellet of shot. Any one can go over the grounds after a tournament and pick up numerous targets, well hit, with from two to ten shot, and yet which are unbroken.

The area of a target presented to the shooter is a variable quantity. It may be the edge or a large part of its surface; thus it may be a matter of chance under such circumstances whether the target is dusted, broken or missed.

The consistency of the target varies with the temperature. What is a dusted target in summer might be a broken target in winter under precisely similar conditions of being hit.

But, say some of the anti-dusters, the dusted target is not well hit, and should not be allowed to score as being equal to the one which has a perceptible piece knocked off it.

Granting that contention for the sake of argument, then the perceptible piece should not score as being equal to the target which is smashed to atoms. If the piece is better than the dust, then the smash must be better than the piece.

The ruling works a special hardship on the great army of trapshooters who shoot in slow time.

In conclusion, let any one take 100 cartridges loaded with No. 10 shot, in a cylinder bore gun or any other gun, shoot at 100 targets and report on their advantages.

UTICA, N. Y., Aug. 18.—You seem to doubt that targets cannot be dusted purposely. I will wager \$25 that I can furnish a man who can score 90 or better in 100, if you count dust, and not break over 50 per cent.; inclosed find \$5 forfeit. It is not really fair, for it is a sure thing.

In last week's issue you call me to account for saying "If it is right to score a dusted target, it is right to score a feathered pigeon," and call it an unfortunate reference in support of my argument. I mean exactly what I say. If it is right to score a dusted target, it is right to score a feathered pigeon.

At best target shooting is only a makeshift for field and pigeon shooting, as I will prove by the following:

When the game season was closed and the shooters had shot up all the old bottles and tin cans they could get a Mr. Buzzy resurrected what was known as the gyro pigeon, that was wound up and flew a zig-zag course, and when hit hard would fall as a wounded bird would. Then came in at near the order named: Tin pigeon, glass ball, Payne's feather-filled ball, Ligovsky pigeon, Knoxville black bird, Pcoria black bird, blue rock, Keystone pigeon, king bird, dickey bird, bat, red bird, and coast pigeon, and what the above inventors claimed for their product, Mr. Cadl, was that they as nearly as possible represented pigeon and field shooting; and whoever heard of bagging a prairie chicken, quail, partridge, snipe, or duck, by getting a feather? Same thing as scoring dust from a target.

A man who can break 20 straight should be protected from any inexperienced referee, by gunning wads for pieces, dust or imaginary dust, and let men show him honor of first place by making a target that flies the distance, or beyond a certain boundary; say 35 yards from trap, lost, regardless of small pieces of wads, dust, or imaginary dust.

When Paul North was endeavoring to supplant the king bird at the New York State tournaments, the chief argument used by him in favor of the blue rock was that it was necessary to get the blue rock inside the killing circle of the gun to break it, while the king bird could be broken by a single pellet.

The ultimate result was that the king bird had to go and the blue rock has the field to itself, showing which bird was best appreciated.

E. D. FULFORD.

Mr. Fulford ignores the fact that a dusted target may be, and often is, well hit. A dozen shot may pierce a target, in different places within its circumference, and still show only dust as the result. Supposing a chunk as large as a half dollar knocked off the target's edge, and that in one case it is a solid piece, and in the other case it is ground to dust, wherein is the merit of the one hit better than that of the other?

Supposing, now, that Mr. Fulford's unknown can score over 90 per cent. by counting dusted targets, he thereby has no advantage, for the reason that 90 per cent. is well within Mr. Fulford's own capabilities, when counting smashes as pieces. In a sweepstake, his friend would need the extra concession, if such it be, to equal Mr. Fulford's abilities. Again, if Mr. Fulford's unknown were to perform the feat, would it not prove thereby that it could be done quite as well without a bet, as with one. Why doesn't he do it?

That the first attempts at trap shooting were in close imitation of field shooting is conceded; but there came a time when it ceased to imitate, and became a specialty by itself. When the first railroad was devised and installed, the cars were built in imitation of coaches. The evolution of the coach to the modern Pullman has been so great that they are now quite distinct, though the general principle of using wheels remains the same. Still, no one would claim that railroading is a close imitation of coaching. Yet, there is in its relation just about the same relationship as between field shooting and trap shooting. The latter was evolved from the former, and is now a distinct specialty in itself.

With due respect for Mr. Fulford's opinion, there is no analogy whatever between feathering a bird and dusting a target, for the reason that one pellet which pierces the very middle of the target might produce dust only, while if the middle of the bird were pierced in like manner, it would be killed.

We maintain that there is no similarity between pigeon shooting and target shooting on the one hand, and field shooting on the other, excepting that a gun is used in each, and we would be pleased to discuss the issue on that basis with Mr. Fulford, if he will state his affirmative data.]

Sherburne Gun Club.

SHERBURNE, N. Y., Aug. 15.—The shoot of the Sherburne Gun Club was not well attended, as it rained all the afternoon. Events 7, 8, 9 and 10 were shot from the 21yd. mark:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	10	15	10	15	10	15	10	10
Brown	10	13	8	14	9	9	13	9	10	10
Wheeler	9	14	10	13	9	7	13	8	9	8
Paddeford	10	12	10	14	9	9	12	8	8	9
Palmiter	7	11	9	15	8	8	13	9	8	8
Kendall	9	13	8	11	8	8	14	8	8	8
Lewis	8	15	8	11	7	10	12	7	9	9
Bonney	9	10	9	10	8	9	13	9	10	8
P. Adams	8	8	6	10	7	5	11	8	10	8
J. Adams	8	9	3	11	7	6	6	6	7	8
Dally	8	8	15	9	9	14	9	8	8	8
Stevens	8	8	9	5	9	10	9	7	5	8
Peet	9	12	9	14	10	8	8	8	8	9
Stanton	8	8	10	5	6	6	6	6	6	6
Crittendon	3	8	6	7	3	10	10	6	3	8
Plumb	7	7	9	8	8	8	8	8	8	8
Smith	8	8	8	8	8	8	8	8	8	8

J. F. PADDEFORD.

IN NEW JERSEY.

Hudson Gun Club.

Jersey City, N. J., Aug. 17.—Following are the scores made at the last shoot of the Hudson Gun Club. The day was excessively hot, but some good scores were made.

The attendance of members of the club has not been up to its usual standard, and in order to renew interest the club has decided to offer several prizes, which will be given to members on a handicap basis.

The handicapping will be done by a committee, and instead of giving extra targets, will be by yards.

The club has made arrangements to lengthen the shooting platform to 20yds., and several of the topnotchers will have to be moved back. Among this number will be Dudley, Schorty, Duke, Bock, Hausman and several others. Next shoot Aug. 25. Scores:

Table with columns for Events, Targets, and names (Schorty, Jones, George, Hughes, O'Brien, J J Fleming, Boothroyd, Hausman, Shields, Dudley) with scores.

Trap at Yardville.

Yardville, N. J., Aug. 17.—The following match at 25 live birds, \$25 a side, between Messrs. Hendrickson and Weidmann, resulted in a tie, which will be shot off later.

In the match at 50 birds, \$50 a side, between Messrs. Page and Weidmann, the former won, 45 to 43.

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.

Complex table showing trap scores for Hendrickson vs. Weidmann, Page vs. Weidmann, and ten birds, \$5 entrance, high guns to take all.

ON LONG ISLAND.

Jeannette Gun Club.

Interstate Park, L. I., Aug. 16.—There were thirteen contestants in the club shoot at 10 live birds.

Table with columns for Club shoot, names (Job Lott, C Steffens, J Hainhorst, G E Loeble, J Mohrman, C Meyerdiereks) and scores.

In a shoot-off, miss-and-out, for Class A medal Steffens won in the seventh round. H. Geddes won Class B.

Challenge medal, 15 birds: Kroeger, 28. Mohrman, 28.

Table with columns for Team shoot, names (Steffens, Lott, Grieff, Hainhorst, Karstens, Holphs) and scores.

Schortemeier's Shoot.

Interstate Park, L. I., Aug. 14.—The shoot given by Mr. L. H. Schortemeier, at Interstate Park, to-day, had a small attendance, attributable to the warm weather and the absence of shooters on vacations.

Some miss-and-outs, \$1 entrance, were started as preliminaries. No. 1 was at 10 birds, \$6 entrance, three moneys, class shooting.

Table with columns for No. 1, names (Schorty, Super, Kroeger, Van Allen, Dr Hudson, Waters) and scores.

Table with columns for No. 2, No. 3, names (Schorty, Van Allen, Hopkins, Super, Kroeger, Hudson, Hawes, Lockwood) and scores.

Table with columns for No. 4, names (Schorty, Van Allen, Hopkins, Super, Hawes, Waters, Kroeger, Hudson) and scores.

Fort Smith Gun Club.

FORT SMITH, Ark., Aug. 16.—The paid correspondent of the Fort Smith Gun Club has been absent from the city for some time, consequently no reports have been written in regard to the progress of the contest for the Peters Cartridge Company's loving cup, which has been in competition for the present season.

The race grows in interest as time rolls on, and several of the boys have developed a dangerous stride, at times, that threatened the peace and happiness of the leaders. For instance, on Aug. 1 Webber broke 22 out of 25 in the most approved fashion, but after making this very excellent score fell down and could only account for 13 out of the next 20, which spoiled his average for the day.

On Aug. 8 Alf Williams got a streak on, and proceeded to smash 21 and 22 out of two sets of 25 each, but could only account for

14 out of his next 25, which again spoiled what looked like a grand rally.

Kimmons is showing none of the form which made him dangerous last season, and seems for the time to have lost his stride which he had maintained for two seasons.

Walter Mann is shooting steadily, and is fast becoming one of the old reliables.

Williams is bound to come to the front, as he is hard working and painstaking, and never throws away a shot.

The club will probably continue through August and September, but on the first day of October will tie themselves away to the green fields not of Virginia, but the Territory, in search of Mr. Bob White, whose plaintive call now echoes from hill and dale.

The club had for its guest Mr. Jerry McKenna, of Poteau, who had a little score to settle with Mr. Alf Williams as to their respective merits, and if Alf did win out by a nose he has little room to brag, as it was a hair-raising finish. Alf says it is all in the gun, and if Jerry had been shooting any gun but his (Williams') Jerry wouldn't be in his class. Come again Mr. Mc.

Following are the scores for the Peters loving cup up to date:

Table with columns for Shot at, Broke, Av., names (Leach, Echols, Webber, Kirkpatrick, Williams, Kimmons, Oglesby, Mann, Knott, McKenna, Speer, Boyd) and scores.

Midsummer Tournament.

THE sixth annual midsummer tournament, held at Tolchester Beach, Md., on Aug. 14, 15 and 16, under the management of Messrs. J. B. Malone and J. M. Hawkins, was not favored with the best of weather. On the first day, rain interfered with finishing the programme events.

Mr. J. R. Malone was high for the day with 143 out of 145. Floyd, of New York, was second.

Table with columns for Events, Targets, names (Lupus, Floyd, Hood, Hawkins, Berman, Steubner, Malone, Burke, Cowen, Bond, Money, Kellar, Jr., Worthington, George, Barker, Bonday, Massey, Chew, Dixon, Dr King, Cole, H D Jackson, W Jackson, Smith, H S White, Berry, H Barnes, Keyser) and scores.

In the shoot at live birds Ed Burke, John C. Hicks and Charles Floyd made high scores. Three events were shot, one at 5, one at 7 and one at 12 birds. These three men scored 20 out of the 24 shot at.

On the third day, Floyd was high. Storr was second high. Lupus third, Dixon fourth and Capt. Money fifth. Scores made were as follows:

Table with columns for Events, Targets, names (Lupus, Floyd, German, Hawkins, Storr, Hicks, Kellar, Malone, George, Booker, Hood, Capt Money, Hopkins, Burke, Dixon, Bonday, Chew, H D Jackson, Pope, John, Leo, Alberger, Malone, Jr., Steele, Berry) and scores.

Ossining Gun Club.

OSSINING, N. Y.—The scores of the Ossining Gun Club tournament and clam bake, made Aug. 14, follow. The day was very successful from a financial standpoint besides the fun there was on tap.

Altogether, thirty-six shooters participated, while about one hundred and ten sat down to the bake.

George Hunt and Capt. George Washburn, superintending, form a combination hard to beat in the clam-bake line—it was unanimously conceded by those present to be the "best ever," and it was.

Many out-of-town shooters favored us with their presence, among whom were Coroner Perley Mason, of Peekskill; Dr. Martin, of Brooklyn; Gus Grieff, of New York city, the only trade representative present, who, by the way, made some fine scores with his featherweight Francotte; Messrs. Lander, Creighton, Gilson and Potter, of South Nyack; Messrs. Sutton, Gorham, Bailey, Rea, Betti and Wood, of Mt. Kisco, and Mr. Quimby, of the Armonk Gun Club. Warden Johnson came up for a little while, but was on business bent, so he didn't circulate much among his friends.

The star event of the day was No. 19—four picked men of the Mt. Kisco club were matched in a 15-bird event against a pick-up squad composed of Gus Grieff, Dr. Martin and Bedell and Blandford, of this club. The result was a victory for the pick-ups by a handy margin of 7.

The first prize event was No. 5, a can of powder—Robin Hood—won by R. B. Potter, with 10 straight. No. 6, a prize of a box of shells, donated by Barlow & Co., was won by Lander, of South Nyack, with 15 straight.

All the merchants donated who were asked; this in justice to other merchants who may be asked to ante up at some future day.

Table with columns for Events, Targets, names (Creighton, N Tuttle, A Betti, C Barlow, R Potter, Lander, Gilson, A Bedell, R Quimby, C Blandford, F Wood, G Sutton, A Rae, G W Gerlach, W Coleman, A Rohe, J Willi, Jr.) and scores.

Table with columns for names (G Grieff, W Hall, Dr Mason, W Fisher, W S Smith, Dr Martin, F Bailey, H Tonolly, R Kromer, Jr., W Clark, B Fagan, N S Hyatt, D Brandreth, Dr Sherwood) and scores.

Aug. 17.—A few of the boys showed up after the big shoot of Wednesday, 14th. Herewith please find scores:

Table with columns for Events, Targets, names (W Smith, C Blandford, W Fisher, S McBeth, J Doubleday, R Smith, Dr Schafmeister, W Burdick) and scores.

The Ossining Gun Club will give an all-day live-bird shoot on Labor Day, Sept. 2, rain or clear.

C. G. BLANDFORD, Capt.

WESTERN TRAPS.

Garfield Gun Club.

Chicago, Aug. 17.—The appended scores were made on our grounds to-day on the occasion of the second trophy shoot of the third series. Hellman easily carried off the honors of the day by going straight in the main event. Delano won Class B trophy on the good score for a B shooter of 23. Drinkwater won Class C trophy on 17—very good work for a green shooter, he having only shot a few times in his life.

The day was a fine one for trapshooting, barring a stiff cross wind, which caused the targets to dip badly at times.

Twenty-two shooters participated in the trophy event, and others came later.

Attached find scores of a three-cornered stake shoot at 100 targets each between A. D. Dorman and H. N. Delano, of Garfield Gun Club, and J. J. Ellis, of La Grange Gun Club: Dorman 88, Delano 81, Ellis 77.

Table with columns for names (P McGowan, Dr J W Meek, N H Ford, H N Delano, A D Dorman, J Pollard, L Thomas, C H Kehl, Mrs Shaw, G Adams, T Eaton, T L Smedes, W H Jones, Dr Shaw, J C Lee, Kubick, Dr Huff, A Hellman, A Marshall, Hagenbuchere, Drinkwater, W J Balis) and scores.

Audubon Gun Club.

Watson's Park, Burnside Crossing, Ill., Aug. 17.—At Watson's Park the Audubon Gun Club made scores as follows:

Table with columns for names (Johnson, Felton, Lilly, *Creyk) and scores.

Same day, practice: Lilly, Lilly, Creyk, Johnson, Felton, Lilly, Barto, Creyk, Jinks, Ford, Jones, *Visitors.

Bellwood Rod and Gun Club.

BELLWOOD, Pa., Aug. 17.—The Bellwood Rod and Gun Club held its weekly shoot Aug. 16, it being a 25-bluecock contest, and if you have space here is the score: Dr. B. B. Levensgood 17, W. T. Irwin 9, H. G. Laird 2, John Swires 1, Ira Estep 0, J. S. Zimmer man 13, G. E. Raugh 7, W. F. Balsbach 12, Roy Fleming 11, C. F. Moffett 2, Dr. W. H. Morrow 6, William Miller 8, O. S. Smith 10, W. E. Doughman 15, H. C. Taylor 5, J. M. Smelker 2.

PUBLISHERS' DEPARTMENT.

Reduced Rates to Louisville.

VIA PENNSYLVANIA RAILROAD, ACCOUNT TRIENNIAL CONCLAVE KNIGHTS TEMPLAR.

On account of the Triennial Conclave of the Knights Templar, to be held in Louisville, Ky., Aug. 27 to 31, the Pennsylvania Railroad Company will sell excursion tickets from Aug. 25 to 25, inclusive, to Louisville and return, at rate of one first-class fare for the round trip. These tickets will be good to return until Sept. 2, inclusive; but if ticket is deposited by the original purchaser with Joint Agent at Louisville not earlier than Aug. 28, nor later than Sept. 2, and a fee of 50 cents is paid at the time of deposit, an extension of the return limit may be had until Sept. 16.—Adv.

The catalogues of dealers in sportsmen's goods to-day are interesting reading, because of the almost infinite variety of articles which such dealers supply. In looking over the catalogue of David T. Abercrombie & Co., of 2 and 3 South street, New York, almost every usable article is found, from a tent or a pair of shoes to a teaspoon and a lantern. The list of evaporated and compressed foods is especially interesting.—Adv.

No man can be contented himself or endurable to his fellows who does not sleep well at night. This is especially important in camp. A good bed is of prime importance, and the people who manufacture the Kenwood Sleeping Bag think that they have not only a good bed, but the best one of all.—Adv.

The Sylvan Cot is another form of bed, or, rather, support for a bed. Light, strong and comfortable, it will just fit the needs of many campers. That the U. S. Government has ordered 35,000 within the last six months is strong testimony of its usefulness.—Adv.

The old-established fishing tackle and sportsmen's goods house of Chas. Plath & Son, which for many years was at 130 Canal street, has removed to No. 62 Fulton street.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, AUGUST 31, 1901.

VOL. LVII.—No. 9.
No. 346 BROADWAY, NEW YORK.

TERMS, \$4 A YEAR, 10 CTS. A COPY.
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE HOME FEELING.

THE strong attachment felt by birds and mammals for special localities is recognized by all observant people who have occasion to spend much of their time out of doors. Not only is this attachment to locality well known to naturalists, but sportsmen know of it quite as well.

The hunter knows that in a particular piece of swamp or woodland, some certain great buck or doe makes its home, and that in this tract it can almost always be started. The man who shoots birds is familiar with the fact that during the shooting season a certain bevy of quail will always be found in or near the same spot at a particular time of day; or that some old cock partridge dwells on a certain hillside or in a special run, and may be started there day after day, though his wisdom is such that it is almost impossible to get a shot at him. In the same way in the old days of summer woodcock shooting, each gunner knew of special places, where, if there was a woodcock in the neighborhood, it was sure to be found.

In a similar way we know that birds are attached to special localities and that year after year certain pairs—presumably the same or their descendants—return and breed in the same piece of woods, perhaps in the same tree, possibly even in the same nest. We have in mind a place where each spring a pair of owls is as sure to be found breeding in a hole in a certain oak tree as the tree is to put forth its leaves. Authentic cases are recorded where pairs of the great logcock, or pileated woodpecker, for many years have returned to the same forest and reared their broods either in a tree close at hand or in a new hole dug in the same tree, or even in the same hole. Hawks frequently occupy the same nest year after year, and the robins and phoebes and house wrens which help to gladden our country homes in summer, build their nests as nearly as possible on the sites of their last year's homes.

If these things take place among the wild creatures that are most familiar to us, we may take it for granted that they take place also among those of which we know less. And this is true. As has been very truly said, the elk, the deer, the buffalo, and the antelope, are extremely local in their habits. Many striking examples of this have been cited. We recall a case where five mule deer, dwellers about a rocky eminence which was too big and rough for a butte and yet too small for a mountain, were once watched for four or five days by a party of hunters who had all the meat they wanted, and in all these five days the animals did not wander one mile away from the trail which led between their ordinary resting place and the stream where, each day about noon, they went to slake their thirst.

In an article in the FOREST AND STREAM, which related the experiences a good many years ago of Major G. W. Stouch, U. S. A., retired, with buffalo, a case was cited where a herd of nearly 1,000 buffalo remained for about six months within a few hundred yards of the Government post. Once, as it appeared, they made up their minds to go away, and started on their migration, but the movement being detected before they had gone very far, the commanding officer literally sent after them and brought them back.

It would seem as if the love of home, of a permanent abiding place, were implanted in the minds of most living creatures. Possibly this may be only another form of inertia, but we fancy it is much more than this, and that, in birds and mammals at least, a real attachment is felt for special localities. Domestic animals show this not less strongly than wild ones. The dog or the cat transported to a great distance often returns weary and

foot sore to the home from which it has been taken. Cattle driven from the ranges where they have been bred to others with which they are unfamiliar often work their way back to their old range and have to be gathered and once more returned to the new. Many a man on a journey over the plains has been left afoot by the escape of his horses or mules, which have started back home, and have often been recovered after long and arduous pursuit.

Akin to this love of home, yet widely different from it, is the mysterious migratory tendency which, after years of absence in the sea, brings the salmon back into the river where it was spawned; which takes the young bird South not very long after it leaves the nest, and in spring again returns it almost to the same spot where it was bred. How can we know why it is that year after year certain seabirds choose special spots for nesting and neglect others all about it which would seem equally advantageous? Why do the shearwaters breed on only one of the many islands of the Scilly archipelago, or the terns choose one gravel bar sticking up out of the sea to the neglect of all the rest?

And often these creatures will cling to their old home, no matter what changes may take place in it, apparently until the last one of the old stock has been killed. How wide is the field of nature study which lies open before each one of us!

THE COST OF SPORT.

REGRET is expressed betimes by people whose fondness for wholesome sport is in inverse ratio to their means of gratifying it that, as the different forms of it become more specialized in general and more refined in particular, the expense of it increases to a degree so high that their participation is almost prohibited.

In a majority of cases, however, their standard of the sport is based on the fashion of it and the luxuries of it rather than on the substantial factors of it. There is no doubt that the most expensive forms of sport, within certain wise limitations, may be made the most pleasurable, but it does not by any means follow that less expensive forms are therefore devoid of all pleasure.

People who, some years ago, were content to fish or shoot or boat or yacht in their old every-day clothes for a proper costume, and who also were content to use the family "fish pole," or Queen Bess fowling piece, or boat of Noah's Ark model, have become educated up to higher standards of sport, and their tastes and needs are of a higher degree accordingly. Nevertheless, as between the primitive methods and the most expensively refined methods, there are many intermediate stages in which sport can be enjoyed at a reasonable expenditure. The same common-sense principles of finance apply to it that apply to the serious business occupations of life and of living.

People adjust the quality and style of their clothes and homes and foods to correspond to the purchasing power of their incomes, and they recognize that these are the necessities of life and the luxuries of life, and observing the limitations imposed, they manage to live quite comfortably.

Sport has its counterparts of serious life in its necessities and its luxuries. In the serious affairs of life, people recognize that there is a law of supply and demand which determines values, and that there is a limit both in respect to quality and quantity beyond which they cannot venture. The luxuries may be made the most expensive features. As a style of living, no sensible man with a small income would consider for himself that the millionaire's standard of living with all its luxuries was the true one for everybody to follow. The same common sense applies to standards in sport, for in a similar manner it has its necessities and its luxuries. It has its implements of rare material, of mechanical excellence, of artistic design and finish. It has others of equal utility, although perhaps of less elegance, to supply the needs of him whose purse permits him to engage in sport at all.

There is nothing inherently changeful in the sport itself which has made the transition from the inexpensive recreation of years ago to that of the present time. The essentials remain the same. Taste has been cultivated to a higher artistic plane. Skill has improved and demanded finer mechanism. Wealth has become greater and more gen-

eral, furnishing the wherewithal to gratify the craving for the best. The interests of sport have kept pace with the general advancement.

Sport was less expensive some years ago, because at that time one could not make it expensive if one endeavored to do so. There were not the thousand and one implements for the sportsman's need then on the market. It was in a manner analogous to an attempt to busy a highly finished suit of clothes when the spinning wheel and homespun clothes ruled supreme.

The expensiveness of sport, like the expensiveness of living, is much as one makes it. It may be cheap or dear, sensible or foolish, original or imitative, wholesome or unwholesome—it is a matter in which the personal equation dominates. But at no time in the history of sport could its devotees obtain so many essential articles of sport at so cheap a rate as they can at the present time. The true standard is to enjoy life within one's means, a precept which was sound in the years gone by, as it is to-day and will be in the years to come.

SNAP SHOTS.

The owner of a private game preserve, who has imported exotic species to stock his park, is not unreasonable if he asks for the taking and disposition of such game greater privileges than those given for hunting the wild game of the State. As a specific illustration of this, there is a Pennsylvania mountain preserve into which the owner some years ago introduced elk from the West. The elk in Pennsylvania has been extinct for more than a half-century, and there is then no demand whatever for a law forbidding the killing of elk at certain periods and the exportation from the State at any time. There is such a law, however, and the only practical effect of it is to prevent the preserve owner, who happens to live in New York, from bringing his game home with him after he has killed it. The elk which were introduced six years ago, have bred and multiplied, until their number now is such that they have outgrown the food supply, and the only alternative of the owner is to annex more territory or kill some of the herd. Under these circumstances liberty to export the game would be nothing beyond reason.

The communication which we print from Mr. D. C. Beaman, of Denver, relative to the form of a game law, is deserving of careful consideration. Mr. Beaman has given the subject much study, having brought to it a combination of high legal attainments and warm interest in game protection. To him Colorado owes its present admirable law. In the crudeness, complexity and bungling contradictions which characterize them, many of the game laws of the day are excellent examples of all that they should not be; nor may any improvement be looked for until in each individual case the statute shall be made a subject of deliberate preparation before the haste and confusion of the closing hours of the legislature. Of all the laws we have, those relating to game and fish should be the simplest, most readily understood and most easily complied with. It is a reflection on legislative game committees when a carelessly worded statute leaves room for doubt as to its meaning.

The so-called Hunt and Rideout case which has just been decided in the Maine courts grew out of the ambiguity of a special law made by the Fish Commissioners for Greene's Lake. Instead of specifying a particular lake where fishing might begin, the Commissioners set the time when the ice left, and the opportunity was thus given for a difference of opinion as to when the ice actually was out. The law as commonly interpreted was understood to mean that fishing was permissible when it could be done from a boat, for the water is some twelve miles long, with narrows for only a few miles down, so that it is impossible for one at the upper end to tell whether the ice is entirely gone. Messrs. Hunt and Rideout were among several fishermen who had acted upon the quoted interpretation of the law, but they appear to have been the only ones prosecuted, a circumstance which gave color of personal persecution to the case. The affair has ended in their vindication, but it is one which ought never to have occurred. A game or fish law should be simple, plain, direct, one that all may understand, and under which all should be treated alike.

The Sportsman Tourist.

The Three C's.

"If I could put my woods in song,
And tell what's there enjoyed,
All men would to my gardens throng,
And leave the cities void."—Emerson.

A WELL-KNOWN writer has said "that physical health is a necessary condition of all permanent success."

The man who seeks ozone, health and pleasure can secure all that he desires, for very little money, if he will visit the Midland Lake country of the Dominion, lying northeast of Lakes Huron and Erie, and between these lakes and the Ottawa River.

Many parts of this region are seldom visited by pleasure seekers, and the sportsman can find game and fish in abundance. The country is a network of lakes and streams, all navigable by canoe, and here may be seen strange people, and Indians, with bear, deer, beaver and otters for the gunner, while the fly-fisher can take bass, pike and trout, in quantities to satisfy the most exacting. The summer is the close season for many species of furred and feathered game, and the wardens are numerous and vigilant in the enforcement of the laws. This paper will not treat of great hunting feats, nor will any "fish stories" be narrated for the credulous, its purpose being to call attention to the sports of camping, canoeing and the camera practice.

The writing of these words has borne my fancy backward to the gracious past, during the years of which my life out of doors has filled so large a portion. As I trace the, to me, magic words, visions of camping scenes in the far northern forests, beneath giant pines, tempest-twisted cedars, and somber spruces, pass before the eye, where the high-blazing camp-fire cheered a group of four congenial spirits, cruising for health and recreation. Pictures of pleasant bays, where the deer splash and paw the matted lily-pads; sandy beaches with the mists of early morn mounting skyward, where four merry swimmers plunged and gambolled in the refreshing water, like seals in their native element; shimmering lakes, foaming cliffs, rock-ribbed coasts, alternate with sunny hills covered with bracken and shady groves, where trout brooks lave the mossy rocks.

Again in memory the game is stalked on placid waters beneath the bending branches of forest trees, with Indian noiselessness of paddle; or we picture remembered storms in the forest, when

"The rain beat down in sheets, the thunder's roar,
Came very fierce, as vengeful shots from ships of war;"

or happy weeks passed sketching in a mountain sugar camp neath golden maples. We live over again the time spent in the lumber camp, where the jolly shanty boy makes merry. We hear the sturdy prompter as he calls upon all to "clear away for a stag dance," and the African cook tunes his fiddle while singing:

"When de sun puts on his evening gown,
Wid de shiny purple seams,
An' lays him down in twilight town
Fo' to rest in the house ob dreams:
Den I gets de fiddle an' I gets de bow,
An' I sits where de shadows creep,
An' I plays um fas' an' I plays um slow,
An' I plays me mos' to sleep."

Again we are beating up against a stiff breeze, the racing waves crashing with loud reports on the bows; or we toil at the carry, damp with perspiration and the mist from the roaring cataract; all these pass before the dreamer with the vividness of a panorama, as, seated by the evening grate, we gaze upon the camera trophies. Now "nature takes us back once more within the horizon of her magic, and the heart of manhood is born again, and one is put at once into fairyland."

Says the great educator, Horace Mann, "All through the life of the high-minded, but feeble-bodied man, his path is lined with memory's grave stones, which mark the spots where noble enterprises perished for lack of physical vigor to embody them in deeds."

Few American men carry athletic habits into manhood, but a mature man should take far more exercise than boys, if he would keep out the hands of the physician.

The Athenian phrase of contempt for a man who knew nothing was, "That he could neither read nor swim."

While the sports of yachting, horsemanship, iceboating, etc., can be cultivated by only a favored few, because of the heavy expenses attendant, the sports of which I speak can be enjoyed by nearly all.

The "Merry Four" made one trip to a lagoon "where serpents glide and turtles bask," to procure frogs' legs for a camp fry. The bay stretched into the forest for some miles. The party came upon a small, partially cleared space, where stood a residence of logs and bark. The occupants were busy outside, in a costume consisting of a calico apron only, which was distributed unequally among the three, the children being naked. Our noiseless approach gave them no opportunity to hide, and the mother seized a shotgun and stood off the party. Permission to "take" her residence was finally given, "afternoon dress" was donned and the half-tone shows her "home, sweet home." We met boys in the tamarack swamps who had never been four miles from the shanty in their lives. When one thinks of the future condition of such children, it is a matter of much concern. The men work during the summer and fall getting out logs, piling and peeling them for a mere pittance. Their poverty and the toil and privations they endure may be guessed from the photographic record showing their home life. Few occupations call for greater physical strength and endurance of adverse conditions than the work of the lumberman, and there is opportunity for needed mission work among them.

Canoeing upon the great inland lakes is a sport little like the boy play that passes by that name among those who frequent our fish ponds and rivers during the summer. In the wilderness boys or youths would soon come to grief. This is to be expected from the limited opportunity they enjoy for practice.

The Indians accustomed to the craft from childhood are so skilled in its management that almost universally

they challenge one's admiration. They will proceed further in a day and much more swiftly than a white man can travel with a horse, and at the same time as safely as he.

It is a maxim that "ten pounds of cedar will carry one hundred pounds of man." A canoe weighing 100 pounds and twenty feet in length will float safely four average men with all needed luggage. It should be decked in for a space at bow and stern, and should have a good, high coaming of brass or copper, with air chambers at sides—these, with thick cork floats at bottom of each dunnage bag, will float the equipment in event of a capsizing until the swimmers can bale out and embark again. The bow and stern paddlers may use the "pudding stick," but the other two should have double-blade paddles. Thus equipped, it is easy to cover fifty miles daily unless several portages must be made.

A good canoe should be made from timber well soaked in boiled oil before it is finally nailed in place. Copper nails should be used, and it would be wise to supervise the construction in person. It may cost as much as a good horse, but it eats nothing on the journey or afterward, and it requires no more care to keep it in working condition than a horse.

I was a pedestrian for some years, and a horseman for twenty years or more, and I rode thousands of miles in all parts of the country, hence from practical experience I can affirm that the expense far exceeds that incurred in canoeing, while both methods compel one to travel within civilized limits, and the opportunity for the study of natural objects is very limited.

It is, happily, now no longer necessary to "rough it" in the old-time phrase. We may thank the alcohol lamp and the chafing-dish with its possibilities for our emancipation from the filthy oil stove and the dyspeptic frying-pan. Food, both palatable and nutritious can now be prepared, and that quickly. No bricks can be made without straw, and the "Ralston system" and other useful books enable a thoughtful person to provide the proper food to produce "physical bricks." I have collected over two hundred tested recipes for camp cookery, especially selected with reference to the health and the proper nutrition of the body when subjected to great physical exertion.

With food wisely chosen and carefully cooked, the daily exertion of the muscles of the upper part of the body brings back the hunger of boyhood, and "good digestion waits on appetite, and health on both."

It is essential to advance mentally as well as physically, if one would reap the full benefit of the outing. A note book should be carried in the pocket, and a daily record made of all the animals and their habits; the birds that one observes, with their peculiarities; the trees, shrubs, flowers and vines found in the region traversed, to which scientific names should be added. The record-habit once formed, with photographic blue prints of each object, which are quickly and cheaply made, to embellish the pages of the book, will cause the trip to be remembered with rare delight.

Let each have his part of the work assigned, and let the hygiene of the camp be rigidly attended to. The Sundays should be set apart as a "quiet hollow, scooped out of the windy hill of the week." It is a good time to digest an excellent book like Van Dyke's Little Rivers, a book that inspires enthusiasm in any soul not dead.

The daily plunge should not be neglected. I enjoy the tonic bracing effect of the cold water in the early morning, and I "tone up" after the exertions of the day by a good swim in all ways the last thing at night. The daily activity makes the body proof to the cold, and "a cold" as well.

The only persons disqualified for the sports are those subject to rheumatism, grumbling teeth, and those ignorant of the art of swimming. It matters not how dyspeptic, consumptive, or nervous a man may be, the "balm of the woods" will heal him.

I met at Chicoutimi, up the Saguenay River, a lawyer from New York city one day in September, who, by the advice of his physician, entered the wilderness in the early spring. He was a sufferer from weak lungs and nervous prostration, to such a degree that medicines were powerless to aid him. Weak and emaciated, supported by a companion, he entered the forest almost ready to abandon hope. No one would dream that the ruddy-cheeked, stalwart figure now seen could ever have been that of a trembling invalid. When I met them, they had just come through a terrible contest with a bear, at close quarters. Their suits of buckskin were clawed and torn to strings, but they were victors, with some wounds, but none serious.

That there is danger, it will be admitted; so there is danger almost everywhere, except in one's rocking chair or the summer hammock; yet what man would wish to spend his vacation in either? Danger lends the sports exhilaration. "Are you afraid?" says Emerson, to swim that river? Then swim it. Do you shrink from the dizzy height of yonder giant pine? then climb it and "throw down the top," as they do in the forests of Maine. If any man objects to the sports because of the danger it may be concluded that his case is hopeless.

"The wise and active conquer difficulties
By daring to attempt them. Sloth and folly
Shiver and shrink at sight of toil and hazard,
And make the impossibility they fear."

Lastly it must not be inferred that vigor can be stored up in a few short weeks, and doled out during the remaining months of the year. One must keep in condition at all times. Supple the muscles and tendons daily during the winter by dumb-bell exercises, daily runs, boxing gloves, wrestling—any way you choose—only keep up your activity. I, during the winter months, keep my muscles in training for the double blade by the use of a length of iron pipe, weighing 12 pounds. I set my limit to paddle with this 1,000 times daily, through a radius of two feet; this is equivalent to moving some tons one foot high. I use the ring exercises, and the suppling movements for arms, spine and legs daily, and when the summer opens I am fit for fifty miles a day of paddling without stiffness or soreness of muscles.

Begin, if ailing, from any cause, with five or ten miles, and a good rest; then try twelve, and after a week push on to twenty miles. Always stop short of exhaustion, and you will be rewarded with such health as can be secured in no other way so easily and so pleasantly. EIKO.

Sunshiny Spots.

IN the recesses of memory there is one little favored space that I have styled to myself "Sunshiny Spots"—a little place where I store away fond recollections and happy meditations of the days spent afield and afloat.

It is a sort of after-dinner, drawing room, fireplace affair, wherein are arranged all the pretty, delightful scenes, amusing and interesting incidents, notes gleaned; then forgotten till some recurring similarity again calls them to mind; a thorough inventory of these hidden treasures may hardly be taken, scenes, incidents, anecdotes, lessons, teachings, pathos, humor, sentiment, poetry, and what not being carefully shelved, side by side.

Some of the pictures are dimmed by time; perhaps dust-covered in a long period of unbroken obscurity; but at some time, in some manner, a thing we would have deemed long forgotten steps forth, shakes himself, stretches himself, pulls out the kinks and aches contracted in such an age of inaction, and before we have time to realize, this hobgoblin form pirouettes before our astonished gaze, leading us a merry chase o'er meadow, dale, and wood, luring us to sequestered rice lakes, where the gentle zephyrs of springtime and the cool winds of autumn rustle musically 'mongst the dead and dying rushes which furnish us a favoring blind where we catch the wild fowl in its evening and morning flight; in this position, surrounded by bobbing decoys, we enjoy a good, old-fashioned day's shoot, as of yore, hearing by turns the whistle caused by the rapid vibration of countless ducks' wings—the quack, quack of the mallard—the booming of the prairie hen from across the meadows, and the solemn notes of the whip-poor-will.

Following another path, this little will-o'-wisp guide takes us up the dry bed of some time-run creek, where grapevines trail along its sides; as our steps fall on the dry, rustling leaves, whirr, whirr! breaks upon our startled senses, and we perceive a gray object darting away through the tangle of brush and vines, the scene surrounded by a beautiful framework of many-colored autumn leaves, defying description; we follow up, and ere nightfall have our hunting pockets well filled with the gaysome pheasant chap.

Now he will seat us in a boat, and in an incredibly short space of time supply us with a rod, and we are below some moss-covered, age-decayed mill-dam, where the sun, shining on the emerald covering of the old planks and stones, reflects upon the water a sheen, rich and cool. Our lure is cast in the quiet pool, the line deftly guided under some o'ershadowed spot, a shadowy form darts forth, and, after battle royal, the gamy bass is landed—that noble fish of our clear running streams which fights for life, inch by inch, till, the final struggle ended, he is forced to yield, an unwilling and quivering captive.

Then we are led away to the mountain streams; already is the proper fly chosen for us, cast in the most favorable place, the skillful twist given, when a sparkling flash reveals a pair of expanded jaws, vanishing beneath the surface as suddenly as they appeared, carrying with them fly and leader; but after gamy battle our good fairy secures for us the speckled beauty, praised in poetry and prose.

With rapid strides he takes us to the Western prairies, where the late summer winds bend the grasses in gentle and undulating motion, swaying the landscape like a golden, billowy sea. Here we are furnished with a handsome brace of dogs, and have all manner of easy and difficult shots at the prairie hen as it flushes and sails away over the waving grass, furnishing us with statuesque pictures as inspiring and fascinating points are scored by canine intelligence.

Indeed, a prince of entertainers is this little memory gnome of ours. On a bright November morning, when the frost is sparkling on the grasses and the foliage is burning in the dying year, he carefully leads us to some old, weed-grown, tangled brier thicket, in an old-fashioned rail-fence corner. Here the dog soon scents a bevy of quail, and we have fine shooting for the next short hour, in this hard corner and heavy cover, flushing from his retreat this happy companion of boyhood days; as he darts forward with a rush and whirr of wings, and seemingly lightning speed, we forget how in many a long, solitary ramble we have been cheered and entertained by his cheery "Bob White, Bob White," and our guns play sad havoc with these merry, innocent bands.

Again jumping West, we are chasing the antelope over the plains, and, as they go galloping, soon disappearing behind some friendly swell, we wipe our eyes, and thank this little sprite for his wondrous goodness.

But what is that dense, moving, black mass away to the west? Buffalo? Why, so it is; and here we had thought they were nearly extinct; for, as we dash into the herd and fire from the saddle, a huge form stumbles, sways, plunges forward, and it is buffalo, sure enough. As we contemplate the vastness of this herd, we wonder could so sad a fate befall them as is presented to us in a few brief years? But where are they now?

The buffalo left far in the rear, we find ourselves at the foothills; thence we wander into mountain and rocky defile, deep chasm, overhanging cliff, or thicket-bound patches, where the pine and mountain ash form companionship in the shadows of towering peaks. Here we kill the elk; fight the silver tip and black bear, then scale still higher and show our prowess in the chase by bringing into camp the Rocky Mountain sheep and goats, which defy all laws of nature in perilous leaps down the slanting slopes, where foothold seems impossible and distance insurmountable.

Ever restive, we fly on the wings of the wind, to the Northwest, where we battle with the salmon and shoot the Denny pheasant, whose brilliant feathers and extending plumes call forth admiration and delight from the lover of the beautiful in nature.

What a trip! A whole life of brightness called from its hiding place! We all have this little pocket of sunshine in our memories. Shall we allow clouds to hover above and shadow its brightness? Shall we allow these memories to be looked upon as a "matter of course" in our short lives, and accept them as the consequence of our existence? Were it not better to drive the clouds away, keep the sun shining, and look upon them as a teaching from Him, the Maker of Heaven and Earth—

as a life-long legacy from Him, the Father of Nature to us, the children of Nature and men, and as such duly appreciate, happily realize, in the days when our steps grow short and our limbs feeble, that these sunshiny spots are dear to dwell upon? E. K. STEDMAN.

Pisgah Forest, N. C.

BEGINNING at a point eight miles southwest of Asheville, we have in North Carolina a private forest reserve which to-day stands a rival to any forest reserve in the country. When Mr. George Vanderbilt first commenced buying property near Asheville it was not known that he expected to do anything but locate a small country seat, but from time to time he has added to his possessions during the past ten years, until to-day he has in one continuous tract over 160,000 acres of land. Beginning at the mansion, which is located about four miles from Asheville, it is now possible for one to ride in a straight line forty miles in a southwest direction without at any time leaving the Vanderbilt possessions.

The great bulk of this large tract is covered with virgin forests, and only a small portion or corner (proportionately) has been improved or is under cultivation. For several miles on all sides of the mansion the country is laid out as a beautiful park, and has been planted with almost every known growing shrub. This part of the estate is traversed by some of the finest macadam drives to be found in any place in the world, these drives aggregating something over sixty-five miles, the same, during the dry season, being daily sprinkled and rolled to as near perfection as possible. At no point on these roads is the grade in excess of 4 per cent.; they are all under-drained, and on both sides of all these macadam roads have been planted various kinds of shrubbery, as above mentioned. Whole mountain sides which were abandoned before Mr. Vanderbilt took possession of the property are now planted with young white pine and other trees, or with flowers, shrubs and grasses—in fact, there is to-day no place in the country where the botanist or horticulturist could better pursue his favorite study than here. The streams are covered with stone bridges, and at almost every turn of these beautifully kept roads one comes upon some surprise in the way of natural scenery or artificial treasure of forest life.

Three miles from the mansion is one of the finest dairies to be found in the world, which at present contains over 250 head of Jersey cattle; in the opposite direction is the sheep ranch, further on the stock ranch, the apiary, the chicken farm, while on the Swannanoa River, between the estate and Asheville, is situated one of the largest nurseries to be found anywhere in the South. In this nursery are growing hundreds of thousands of shrubs and young trees, all set with the intention of being transplanted into various portions of the estate.

At the main entrance of the estate is the town of Biltmore, which town Mr. Vanderbilt has built as a model village, and, indeed, all those who see it pronounce it as near a model village as is possible to conceive.

Leaving the neighborhood of the mansion and pursuing a southwesterly direction for about seven miles brings one to the beginning of what is the true Pisgah Forest. Here the macadam roads end, and to see the grandest trails of the mountains from this point one must travel on horseback. Eighteen miles in the distance looms up Mt. Pisgah, 5,769 feet. The foothills of these larger mountains were to a slight extent formerly cultivated by small land owners, but since the owners have been bought out their small truck patches have either been planted out in young forest trees, or have been left to grow up as they would. Many of the houses have been torn down, but deeper in the woods are still to be seen the remains of cabins fast going to decay, and one may here travel miles upon miles without seeing a sign of habitation or a human being.

Upon a small portion of the forest itself cattle are allowed to roam. No dogs are allowed. In the more accessible part of the mountains lumbering is being carried on in the most scientific and up-to-date manner.

Dr. Schenck, who fills the position of chief forester, is also conducting a school of forestry, which school is already becoming famous and well known throughout the country as one of the most practical and complete anywhere to be found for the study of forestry in all its details. Here students are taken directly into the woods; they are taught how to build roads, and even the most inaccessible portions of the mountains are pierced. At all times a large force of road builders are actively engaged. The students are taught to lay out trails and are educated in the practical technique of cutting timber out of places difficult of access, as well as the many details of forest growth, measurement, stumpage, watershed, young growth, burnt lands, soils and the hundred and one other things which go to make up a practical knowledge of forestry.

Starting from a point on Bent Creek, about eight miles from Asheville, one can take a trail which enters Pisgah Forest, and after winding through innumerable gorges and valleys, brings one out at the top of the Pisgah range in Yellow Gap, a point some ten miles away. As he ascends this trail, as was our pleasure last week, he goes through the various forms of forest growth which one meets at the different altitudes in this section. The best timber is all on the northern slopes, and is made up principally of poplar, walnut, cherry, oak and chestnut. As one comes out into Yellow Gap the larger trees have long since been left behind, even the rhododendron, laurel and azalias have become stunted in their growth, and up here they bloom much later than in the lower valley, and do not attain near the size which they have lower down.

Descending the opposite, or south, side of Pisgah ridge from Yellow Gap, this trail winds in and out among gorges, valleys, around precipices, over ridges, fords streams and finally brings one out at a point on Bradley Creek, about fifteen miles from the point where he entered the woods. On Bradley Creek is the first signs of human habitation he has seen during the fifteen miles, and never once has he been out from under the overhanging trees.

Bradley Creek is a rushing, roaring mountain torrent, about 15 feet across, and has long been famous as one of the best trout streams anywhere in the Southern Appalachians.

The trail follows the bank of Bradley Creek to its source

in the Pink Beds. These Pink Beds are nothing more or less than a great flat or plateau situated at an elevation of about 3,500 feet, sparsely wooded and thickly grown up in laurel and rhododendron. In fact, it is almost impossible for one to move when he once leaves the trail on account of the excessive growth of laurel bushes. Years ago this was one of the best deer-hunting sections in the whole South, and since Mr. Vanderbilt has established the Pisgah Forest Reserve he has made these Pink Beds a part of the game preserve; the deer and other wild life are rapidly returning.

There has been no shooting in this section now during the past ten years, except what has been done by the owner and his immediate friends. For convenience they have had, about every quarter of a mile, runways or open places cut out, about 20 feet wide, and in many places several miles long. These open places are perfectly straight, and extend across the valley, and are useful not only in hunting, but also act as breaks for possible forest fires, which are ever occurring. These Pink Beds, which are about seven miles in diameter, will, in a few years, be well stocked with game, while the streams at present are fairly alive with trout.

From any of the peaks rising abruptly from one to two thousand feet, and surrounding this amphitheater, one can look as far as the eye will carry, and in any direction see nothing but an unbroken forest. Such lumbering as is being done removes only those trees which are ripe and ready to be cut; they are removed in such manner as will in the least possible way interfere with the young and growing timber.

Dogs of any kind are not allowed in the forests, and hunting and fishing are absolutely forbidden, unless by special permit from the office at Biltmore.

The owner of this vast estate does but little fishing himself, and does not greatly enjoy hunting, although he proposes to make this one of the best hunting and fishing preserves to be found any place in the country. Indeed, we of the South, who are to-day attempting to interest the Government toward the establishment of the Appalachian National Forest Reserve, cannot expect to do better than has the owner of this vast estate. Here is a tract of primeval forest which, under its present management and care, may, for all time, hand down to posterity a tract of primeval woodland, well stocked with all kinds of game and animal life. Here will be seen roads which will compare with any; here are streams, and here cliffs, valleys, gorges and plateaus, high mountains, barren peaks, springs, woodland cover and every woodland creature.

The natives who have sold out their property to the present owner are even loath to leave, and some, after receiving the price they asked, are to-day employed on the estate, simply because they cannot bear to leave the section. The property is all patrolled, and forest rangers make every effort to protect the animal life as well as the forest itself.

We have from time to time had to report the fearful inroads that lumbermen are now making upon the forests of this mountain section, the wide destruction which they have wrought, and the destruction which is also contemplated in the near future. We have shown that the wholesale destruction of the timber of the forests is resulting in a change of climate; many of the streams heading in the Southern Appalachians are now practically dry during the summer, and become raging torrents during the wet season. Water powers are being ruined and the thousand and one other things incident to the destruction of forests have here for the past few years been rife. It is refreshing, however, to be able to see that there is one private citizen who has done more than all the best of the citizens of this and adjacent States in the way of forest protection. Would that there were more of them! Would that more of our money kings could see their way to the establishment of such preserves!

C. P. AMBLER.

Boyhood Reminiscences.

My earliest rifle practice is recalled by the perusal of a letter written by me to my father in March, 1850, when at the age of eleven, while on a visit to my maternal grandmother at Bellona, N. Y., in which occurs this passage: "The other day Uncle Charles and I went to Mr. Barnes', and to the woods where Warren was boiling sap with his book in his hand and Uncle Webster was hunting. We all shot at a mark, first Webster, then Warren and Uncle Charles, then Charley Barnes and myself, and by the time we got through the tree was well covered with bullet holes." Shortly thereafter I owned my first rifle, and when not at school lay in wait for woodchucks, whose hides I would tan and sell for whiplash and belt-fastening material, and with the proceeds obtain powder, lead and percussion pills for fresh forays. Occasionally I would bring in a few black and gray squirrels, and my mother would prepare a stew that was enjoyed by all. Whenever a chicken was wanted I was delegated to obtain it, and would sometimes make a number of shots ere I succeeded in killing, by shooting at the head, at which I always aimed. One day when watching for squirrels on a ridge adjacent to an alder swamp, I heard the drumming of a partridge (ruffed grouse), and my ambition was at once excited to see and, if possible, obtain it. I carefully stalked in the direction, waited until the soul-stirring drum beat was repeated, and was finally rewarded by the never-to-be-forgotten sight of the bird in the act upon a fallen log, not over 20 feet away from the tree behind which I was concealed. I watched him for a time, until my nervous agitation had passed, and then cautiously and carefully aimed and pulled the trigger, and lo and behold! the bird fluttered off the log in its death struggles, and with joy unspeakable I picked up and admired my first partridge, with its neck severed just below the head, and proudly bore it home, together with the squirrels I had secured, and thought the potpie that followed the best of my life.

There was good woodcock cover near my home, and I well remember the occasion when I first saw bird-dogs at work, and birds shot on the wing. Some cousins of my father visited him and brought with them a couple of setters, and my surprise was great to see the work of the dogs, and the expert skill of my cousins, as bird after bird came to bag, and then that feast of broiled woodcock

—the first I had tasted—can never be forgotten. My first experience with hook and line was the catching of bull-heads in a pond on Flint Creek when about eight or nine years old, and many the good mess taken home found their way to the frying pan and were eaten with a relish. One night a bite was followed by a heavy pull, and it required all my strength to hold and finally land my first eel, that was about 3 feet long—and the first I had seen—and which I thought was a water snake, until an older companion otherwise informed me, and killed and removed it from the hook.

A little later I skittered for pickerel with a pork-rind bait on Saturday afternoons with more or less success and any amount of enjoyment. Afterward, in 1853, I visited an uncle at Coudersport, Pa., and caught in the mountain streams of that vicinity and in Pine Creek and the Sinnamahoning waters many a fine string of brook trout. It was also there that I witnessed the greatest flight of passenger pigeons, and was in the slaughter armed with a pole, knocking them down as they rounded a point, together with almost all the rest of the townspeople.

Pierre Stebbins and myself, armed with shotguns, visited a pigeon nesting a few miles away, and after obtaining all the young birds, just able to fly that we could carry, built a fire by a brook and broiled some squabs for our late dinner, and then started for town, but actually after a two-hour tramp in the woods, found ourselves back at the lunch place, having been completely turned around and lost. We then followed the brook, which we knew entered the stream that flowed through town, and finally arrived there all right, but very tired. E. S. WHITAKER.

CARTHAGE, O.

A Pack of Hounds.

EVERY time Harry Reynolds visited the Horseshoe ranch he broke the Tenth Commandment. Among the different members of the canine family that called this ranch their home was a full-blooded greyhound bearing the well-merited name of Queen. She was a beautiful animal, tawny yellow in color, with slender, shapely limbs, deep chested and possessing all the lines that mark a dog as a thoroughbred. As for her speed and endurance—well, there was nothing on four legs in that part of the world that could outstrip her in the race. Taking all these things into consideration, it was no wonder that Harry Reynolds coveted her and longed to call her his own.

How Windy Bill Robinson, manager of the Horseshoe ranch, had become the owner of such a valuable hound was an unsolvable mystery to Reynolds. Windy Bill's answers to all inquiries on the subject were somewhat vague and unsatisfactory.

"A feller got her from another feller, a friend of mine got her from this other feller who was a friend of his'n, and I borrowed her from my friend and ain't had time to return her, not knowin' where my friend went to," was the only explanation he would vouchsafe to give.

Although he did not seem to set great store by the greyhound, still he refused to part with her on any terms half-way within reason. Every time Reynolds saw the dog he coveted her all the more, and of late this covetousness had grown into a fixed determination to gain possession of her by fair means or foul, and settle with Windy Bill afterward, even though the operation bid fair to result in an appeal to arms. He was not without special reasons for this seemingly unworthy resolution. Ever since he had removed Old Duke, the Scotch stag-hound, from Beards Miller's unchristianlike guardianship, the hound had picked up wonderfully, and although, in all probability, he would never entirely recover from the effects of that terrible run through the scorching heat, when he had all but yielded up his life, there was much good stuff left in him. He had lost his former wonderful powers of speed and endurance, but nothing of his matchless courage, and Reynolds' heart went out to him in his present fallen estate.

With the arrival of Old Duke at the Horizontal Bar ranch and his subsequent recovery, Harry saw a chance of raising such a pack of hounds as he had always longed to own, provided he could gain possession of Queen. The mother would furnish the speed, while from Old Duke they would get a fighting strain that would make them a match for any wolf on the plains. He was careful to say nothing that would in anywise arouse the curiosity of the manager of the Horseshoe ranch, so that one day when Queen disappeared mysteriously from her accustomed haunts, Windy Bill never thought to inquire particularly at the Horizontal Bar ranch for the missing hound.

Windy Bill was not greatly disturbed over his loss, and when Reynolds made him a present of a fine bull terrier, as a mere friendly act of sympathy, he felt more than pleased with the substitute, and in a short time Queen became a fast-fading memory.

About a year afterward all of Harry Reynolds' spare time was taken up with the education and disciplining of six awkward, irrepressible puppies, being well seconded in his efforts by Queen, the mother of the family, and, as they grew older, by Old Duke, the daddy of the pack. There was another dog, Sharp by name, on the Horizontal Bar ranch, a big, bony animal, half of greyhound, half bull, and he was of much valuable assistance while the training and education of the young dogs was under way. He it was who taught young Tige his own famous throat hold, from which no creature could escape when once the strong jaws were set in their deadly grip. He also showed the pack many interesting things about a dog's life on the plains, but Tige, because of his pugnacious disposition, no doubt, became his special charge.

The dogs waxed stronger day by day, and passed through their early puppyhood without misadventure. The next year found them tall and well-proportioned and almost fully grown, as fine a pack of wolfhounds—with a little more experience—as a hunter would care to ride behind. They still had much to learn—in fact, their education had only begun, but in Old Duke and Queen, not to forget Sharp, these young gladiators had instructors worthy of the name.

Thus did Harry Reynolds become the possessor of his afterward famous pack of hounds, and he seldom went abroad without some, or, more probably, all of them,

trailing at his pony's heels, nor were they ever far from the sound of his voice, and he blessed the day that he had rescued Old Duke, when that good dog had all but perished after his chase of the antelope. Harry always avoided the Horseshoe ranch when the dogs were with him, and, as the hounds had not as yet begun to attract attention by their exploits, Windy Bill Robinson remained in blissful ignorance of the part Queen had played in bringing them into the world.

One day Harry was on his way home from a visit to a distant part of his ranch, when he had an opportunity to initiate the young dogs into the joys and delights of a wolf hunt. The full pack was with him, following respectfully in the rear. As he ascended a rise of ground he saw a wolf not far ahead limping along on three legs, evidently in trouble. The animal discovered him at the same instant, and immediately broke into an awkward run, unlike the usual swift lope of a coyote when pursued. In answer to Harry's sharp whistle, Queen and Old Duke sprang forward, followed by their puppies. Bounding high in the air, their keen eyes soon detected the fleeing form in the distance, and away they went. This was new sport for the young dogs, and they joined in the chase as though it were some new game planned for their special entertainment. Old Duke soon fell behind the rest, but he had no thought of dropping out of the race. Harry had spoken one word to his pony, and that was sufficient. J. C. understood the game perfectly and needed no urging.

They gained rapidly on the wolf, and as Harry drew near he ascertained the cause of the creature's awkward gait. Fastened to his hind foot was a steel trap, and from the trap trailed a chain with a good-sized stake at the other end. Queen overtook the wolf first. She would never fight at close quarters unless compelled to, but a certain duty devolved upon her in every chase which she never failed to skillfully perform. As she dashed past the wolf, with a lightning-like movement, she turned, seized him by the hind leg and threw him end over end. Having accomplished this feat, she paused, ready to repeat the act if necessary, but she would not attack her desperate foe. The young hounds circled around the wolf, barking vociferously in their wild excitement, and waiting for some one to show them what to do next. Just then Old Duke arrived on the scene, and without a second's hesitation rushed in and sprang upon the wolf. There was a brief tussle, and then Old Duke found his favorite hold and pinned the struggling wolf to the ground. This was enough for the rest of the pack. Tige attempted to follow, out Sharp's instructions regarding the throat hold, and received a cut 2 inches long on his bricket as a reward for his temerity. He retreated with a howl of pain, but he was the son of Old Duke, and his fighting blood was up, so he joined in the fray again. Harry merely acted as a spectator, urging on the dogs and encouraging them with the sound of his voice.

When the unequal struggle was at last over, he threw the dead wolf across J. C.'s back, called in the dogs and rode homeward. He skinned the wolf and boiled the carcass in a cauldron and fed the meat to the dogs with their regular ration of cornmeal. After that there was nothing in the State of Texas, short of a rifle ball, that could stop Harry Reynolds' pack of hounds when once they had sighted a wolf.

As they gained in experience they adopted certain tactics of their own invention. Like a well-drilled company of soldiers, each dog knew his place and just what was expected of him when the game had been sighted and the chase had begun. They ran in the form of a flying wedge, with Queen at the head and Tige close behind her, while the rest of the pack followed in close order, with Old Duke or Sharp—the latter sometimes ran with the pack—bringing up the rear. Queen was always the first to attack, and she never failed to catch the wolf by the leg and throw him. That alone was her part to play, for before the wolf could recover Tige would have him by the throat, and then the other dogs would rush in, each one having his own particular hold, and the days of that coyote were ended. It all seemed to be a prearranged plan with them, and their master never ceased to wonder at their almost human intelligence.

With such a pack of swift-footed hounds to set the pace, with "a fleet steed to follow" wherever they might lead, and you would hunt far and long to find a better one than J. C., with the fresh, bracing air in your nostrils, and the glorious freedom of the broad Western plains all around you, what more could a man desire for his happiness? If any man were well fitted to appreciate and enjoy this life in all its fullness, such a man was Harry Reynolds, owner of the Horizontal Bar ranch, a brave hunter, a fearless rider and an all-round good fellow.

Windy Bill Robinson rode away from his ranch one morning on a visit to certain portions of the range where he had set out a number of wolf traps. The wolves had become very troublesome that year, and Windy Bill had devoted much time in trying to rid his ranch of their presence, but so far his endeavors had met with but poor success. He exhausted his vocabulary—and his was by no means a limited one in some respects, as his name would indicate—in anathematizing the wary creatures that laughed at his every attempt to ensnare them, but he still persisted in his efforts in the hope of hitting upon some scheme that would outwit his wily foes.

He inspected his traps on this particular day with increased feelings of wrathful disgust. Some of them had been sprung, two or three had been ignominiously uncovered and exposed to view, while the rest had been carefully avoided. Windy Bill cursed the wolves with all the vigor of a cowboy's eloquence, reset the traps in different places and started back home. He had just left the hollow where the last trap was placed and reached the level plain when he pulled up short with an ejaculation of surprise.

Coming at full tilt straight toward him and less than 100 rods away, was a large coyote, and following fast on the trail of the fleeing creature, about the same distance behind, was a pack of hounds running in the form of a flying wedge. A single horseman brought up the rear of this strange procession. The wolf caught sight of his new enemy and swerved off to the right. Windy Bill sat spellbound at the thrilling sight, and held his breath as the finest pack of hounds it had ever been his

lot to look upon swept by him like so many gray and yellow streaks of light. He gazed after them in wonder and admiration too great for words, until he was brought to himself by the sound of a familiar voice calling his name, and the next moment a horseman dashed past at break-neck speed, waving his hat in the air and shouting:

"Hi! Yi! Yi! Come on, Bill. Great sport!" Windy Bill needed no urging, but with an answering yell put spurs to his horse and followed the wild rider, whom he recognized as his friend, Harry Reynolds. The pace was furious, but Windy Bill never took his eyes from the pack. How splendidly they ran! And with what mighty bounds did they cover the ground! But the wolf was fast, too, and this was a race for life and by no means an easy one while it lasted.

Gradually, however, the hounds closed in on their prey. Suddenly the leader of the pack shot ahead with incredible speed, and the next moment Windy Bill saw the wolf turn a somersault in the air, and as it landed, all in a heap, the second dog had it by the throat. The other hounds were not far behind, and the two combatants were concealed from view as they rushed up and joined in the fight. Windy Bill pulled up his panting horse at the scene of the encounter in time to see Harry Reynolds lift the dead body of the wolf and throw it across his pony's back.

"Hello! Windy," Harry called out. "Great sport, wasn't it? That wolf gave us a run for our money. What do you think of the dogs? Fine lot, eh?"

"Fine? Fine don't begin to describe it," the other enthusiastically declared. "I never seen anything like 'em before. Where the devil did you get hold of 'em?"

"Raised 'em. The Scotch stag there is the daddy of the pack, and the big greyhound next to him is the mother. It's all one happy family, you see. This is their first season. Just wait till they have had a little more experience and I'll show you wonders."

The dogs were all lying down, in the form of a half-circle, tired after their long, hard run, but they were ready to move at a moment's notice and watched their master for the word of command. Windy Bill cast his eyes enviously over the lithe, shapely forms, and then his gaze became concentrated on the tawny greyhound that Reynolds had pointed out as the mother of the pack.

"Say, Hal, there's somethin' all fired familiar 'bout that greyhound there," he asserted. "Seems to me I've seen her or her double somewhere before."

"Think so? Well, you've never seen a better one, that's certain," Harry answered, in an off-hand manner.

"Seems to me," Windy Bill continued, slowly scratching his head, "seems to me she's a heap like my Queen what I lost a couple of years ago. Remember her?"

"Yes, and she does resemble her, now that you mention it," Harry agreed. "Funny, but her name is Queen, too. I must have been thinking of your dog when I named her."

"Did you raise her?"

"Yes, I 'raised' her all right."

"Where'd you get her?"

"I told you. I raised her."

"Oh, I see. You mean lifted her."

"I didn't say lifted. Where could I have lifted her from? You're the only man around here ever owned a dog like her. If she is your dog she ought to know you. Suppose you try her."

Windy Bill snapped his fingers and called the hound by name, but Queen kept her eyes on Reynolds' face, not even deigning to glance at her former master. She had never liked him, and undoubtedly her instinct warned her that here was a time to feign ignorance. She knew, better than any one else, how cruelly unjust Windy Bill could be when anything displeased him, for he had visited his wrath upon her unoffending head many a time and oft, and Queen had the pride of good birth mingled with a stern sense of justice that never forgave a wrong—traits which her children all inherited. Windy Bill at last gave up his efforts to attract the hound's attention.

"My dog had a small, white spot underneath her jaw," he informed Reynolds. "Damn! can believe that she ain't my Queen, unless I see she ain't got that mark."

"Go ahead," Harry acquiesced, unconcernedly.

Windy Bill swung from his saddle and approached the silent hound. Queen slowly lowered her head, resting it on her forepaws, and gazed steadily at him as he approached.

"Come, old girl. Nice dog. Good dog," Windy Bill began, and stooped to stroke her head. Queen's upper lip curled suspiciously, disclosing a row of gleaming white fangs, and a low growl was her only answer. The growl was repeated in the deep voice of the huge stag-hound lying beside her, and Windy Bill slowly backed away.

"Gosh almighty! They're ugly brutes," he exclaimed, as he remounted his horse. "Think you'd be afraid of 'em."

"Afraid? I sleep with them. They're my bodyguard nearly every night of the year. By the way, how's that bull terrier I gave you getting on?"

"Fine as silk. I wouldn't trade him for that ugly tempered beast there, even if he can't catch a wolf."

"So that, after all, if you had discovered that it was your Queen you wouldn't be any the loser, seeing I gave you the bull terrier."

"Well, I don't know. Look what a pack you got. I'd trade the terrier for one of the pups there."

"They wouldn't leave me, and you couldn't keep one of them on your ranch. I'll tell you what I'll do, though. I'll give you a pup out of the next litter, and you can raise him yourself."

Windy Bill expressed his thanks, and they wheeled their ponies about and headed for home. But the manager of the Horseshoe ranch was suspicious, and cast many scrutinizing glances at the tall greyhound as they rode along. When they came to the parting of their ways, he halted, and at last asked in hesitating tones:

"No offense, Hal, but, honest Injun, ain't that my dog Queen?"

"Suppose I should say it was, would you feel any better?" Reynolds replied, with a slight smile playing about his mouth. "What would you do, I wonder?"

"Nothin' much, only it might take another one of them pups to make me clean forget about it."

Harry's smile broadened.

"Oh! well," said he, "if you want another one of the

pups, I reckon I can spare him, not as a narcotic for your active memory, you understand, but simply to oblige a friend."

"Oh! I understand," Windy Bill hastened to assure him. "I'll be glad to get the pups."

They said good-by and went their separate ways, and Queen gave vent to her feelings in a joyful bark.

"Hal's a foxy boy," Windy Bill soliloquized, as he rode along, "but I reckon I sorter called his bluff that time. He'd be a bad man to get in a row with, though. I'll bet my shirt that dog is my Queen." He looked back just in time to see Reynolds disappear over the next rise, followed by his dogs. "There's one thing sure," he concluded, with a flowery oath, "Hal Reynolds has certainly got the finest pack of hounds in the State of Texas."

FAYETTE DURLIN, JR.

Bring Flowers.

CHARLESTOWN, N. H., Aug. 22.—*Editor Forest and Stream:* Looking over an old manuscript serapbook this morning, I found some verses, written many years ago, which I think might please some of your readers, and I sent you a copy.

My father told me when I showed them to him that I had "plagiarized" from Mrs. Hemans, but I had not seen her poems for many years, and had forgotten them, though some strain of them may have lingered, unknown to my memory, and my garden has recalled my own to-day.

Flowers, Bright Flowers.

FLOWERS, bright flowers! the smiles of the earth,
In the footsteps of angels they sure had their birth,
The charm and delight of the long, summer hours,
Through all life's changing scenes, bring us flowers, fresh flowers!

Bring the "trailing arbutus," first herald of spring,
The roses of June and the violets bring,
Till the gentian's blue eye beams mid autumn's cold showers
As each blooms in its season, bring flowers, fresh flowers!

Bring flowers, fresh flowers, the babe to bedeck,
As it twines its soft arms round its mother's fair neck,
While its deep, searching eyes gaze so fondly in ours,
Strew the pathway of childhood, with flowers, fresh flowers.

Bring flowers, fresh flowers, in wreaths for the bride,
As she stands at the altar in maidenly pride,
While her hopes and her fears dwell on life's coming hours,
Forecast her bright future with garlands of flowers!

Bring flowers, fresh flowers, to strew on the tomb,
In their beauty and fragrance, and brightness of bloom,
Though the spirit has soared so unwithering bowers,
Strew the grave of the mortal with flowers, fresh flowers.

Bring flowers, fresh flowers, the altar to crown,
Where the Spirit of Love on his children looks down,
To the Maker of worlds and the Ruler of powers,
No incense so fit as his own fragrant flowers!

I see with regret in the Tribune the death of our friend, A. N. Cheney, and it is a great loss to fishcultural interests, as well as the fall of another old landmark in FOREST AND STREAM. I only knew him by his writings and by correspondence, but his mother was a native of this town, and the descendant of one of the old families, celebrated in Revolutionary times and in the conflict with New York over the New Hampshire grants, which Rowland E. Robinson has chronicled in his "History of Vermont." The news makes me sad and—old.

Odd Nesting Places.

An Odd Place for a Wren's Nest.

Editor Forest and Stream:

In May last a pair of Baltimore orioles built a nest of the usual shape and size in one of the elm trees in front of the house. The nest was suspended from a small, drooping branchlet, and was rather more symmetrical and closely woven than usual. In due time the young were hatched, reared and disappeared. Now, in August a pair of house wrens, who have already reared at least one brood of young from a nest in one of the veranda pillars, have adopted the oriole's nest, and after patching it up a bit with twigs and so on (as the bottom of the nest seemed a little insecure), the busy little birds have almost raised a second, or third, brood. To-day, on Aug. 22, the young ones are clamoring for food and well feathered. The nest hangs and swings in the lightest breeze.

A coincidence occurred yesterday, when the original builder of the nest, the male oriole, still in spring dress, appeared, and whistled from the elm trees as he did in the early May days. That he is the same bird is beyond question, for his notes are unusual and unmistakable, and in the early summer became almost tiresome.

MORTON GRINNELL.

MILFORD, Conn.

Robins' Nest on Cars.

SAYRE, Pa., Aug. 16.—The cosmopolitan nature of the robin has often been commented upon, but the following seems to bear the distinction of a record breaker. It is from the Philadelphia Record: "Passenger coach No. 4219, of the Philadelphia, Wilmington & Baltimore Railroad, has a regular rider every day in a robin that is so deeply engrossed in maternal affairs that she doesn't in the least mind the rattle and roar of the train. Underneath the car, on a wide beam that supports a portion of the air brake, she has built her nest, and all her energies are bent upon hatching some blue eggs. The car remains at West Chester every night, comes to Philadelphia in the morning, makes a trip to Norristown, returns to Broad Street Station, and makes its last run of the day to West Chester. The bird must have accomplished the work of

building her nest during the brief stops made by the train at the towns to which it runs, but why it should have selected such a place in the beginning is the most surprising part. The nest was discovered several days ago by a railroad man at West Chester. He saw the robin fly from beneath the car and made an investigation, the result of which rather astonished him. The members of the train crews that run the car are awaiting developments with almost paternal anxiety."

Supplementary to the above, I may add that Mr. W. H. Dutton, general foreman painter of the Lehigh Valley R. R., advises me that he once found a perfectly made bird's nest constructed between one of the main truss rods and the bottom of a passenger coach, at the point of the rod's attachment to the sill of the coach. The car was a regular service coach, daily used on a central new branch of the Lehigh system, in a section of country necessitating short curves, and a consequent heavy oscillation and wrenching of the equipment, and how the nest could have been built and made to stay in place without loss of symmetry or injury to the minutest detail of architecture has long been an undemonstrable problem to those who witnessed the unique location of the structure.

M. CHILL.

Summer at the Zoological Park.

AUGUST in the Zoological Park in this year of 1901 is not as Augusts of other years have been. The grass and the foliage are as fresh and green as if it were June. The wild birds are busy and some of them are singing. There is nothing to be seen of the dead and dried-up appearance of the late summer. It is true that it is hot, and that the caged birds and mammals suffer under the torrid sun and in an atmosphere surcharged with humidity. The great buffalo bull, Cleveland, whose wrinkled hide is naked back of the shoulders, pants in the heat as he fights the tiny flies that sting him, and others of his kind, wiser than he, are standing shoulder deep in one of the great pools in the corral.

The elk, too, have gone in swimming, and may be seen with nothing but heads and shoulders above the water in the tank in their range. Although it is so hot, the coats of these animals are thickening up, the horns of the great bull have been newly stripped of their velvet, and the calves have lost their spots. Soon the summer coat will all drop off and the animals will appear smooth and fresh looking in autumnal garb.

Many changes have taken place in the park during the summer. Baird's court has been graded and surrounded by a retaining wall, and on it the very handsome monkey house has been erected, and before the cold weather will be ready for occupancy. Of its inhabitants, the most interesting will be the recently obtained oranges, which now attract so much attention. One of these has been educated to a point where he sits in a chair and eats his food from a table like any white man.

Another important addition to the park is the Rocking Stone restaurant, which is now completed and in operation, to the great satisfaction, apparently, of the visiting public. Its location is an admirable one, for it is in one of the coolest spots in the park, and it seems to be well patronized.

The inhabitants of the beaver pond, which are recent additions to the collections, do not often show themselves to the public, but their works speak for them. These are to be seen in the shape of a house built at the foot of a group of little, soft maples, in the dam which they have erected—and which has flooded a good part of the inclosure—as well as in the devastation that they have wrought among the small trees, cut down for food and construction purposes.

No doubt after a time the beavers, like many other of the wild creatures in the park, will become accustomed to the sight of human beings, and will carry on their operations more or less in the day time. It is interesting to see how the otters, wild ducks, geese and many other mammals and birds have adapted themselves to their situations here. They pay no more regard to the presence of visitors than if those visitors were so many stumps. The ducks continue to dabble in the water, the geese to pluck the grass, the otters to play with each other in the pool and all the different creatures to carry on their various pursuits, even though people are standing within 3 or 4 feet of them.

Among the extraordinary additions to the collections within recent months are a number of huge Galapagos tortoises, animals in which the carapax, or upper shell, is 3 or 4 feet long, and which are big and strong enough to carry on their backs without difficulty two or three men. Their great size, stout, columnlike legs, long, slender necks and small heads, make them extraordinary objects. It is interesting to see them feeding on a heap of fresh, green grass, which they eat in a businesslike way, much as a cow might eat it. Through the summer a considerable number of the tortoises have been removed from the reptile house and turned out in pens on the grass.

Two Cuban crocodiles about 5 feet long, put into the reptile house in the large tank at the end of the turtle crawl, created some excitement recently by their wars. They fought for a long time, and it was impossible to make peace between them. At last one defeated the other, and chased him constantly about the tank, and finally the beaten one, making a tremendous effort, sprang out of the tank and landed on the floor of the reptile house.

The tremendous flying cage, in which is the great collection of birds, chiefly aquatic, such as flamingoes, ibises, ducks, geese, swans, pelicans, cormorants and herons of various sorts, continues to be one of the most attractive things in the park. It is an interesting sight to behold these birds, practically at liberty, walking about or flying from tree to tree, or, as in the case of the pelicans, taking long flights over the water, and all of them apparently as healthy and as independent as so many wild birds in all their natural surroundings.

At the bear dens, always a center of attraction for visitors to the park, there are two curious little, whitish bears, said to be from Corea, which are recent additions. An interesting exotic form died this spring—killed by some one who last year fed it with peaches, which it devoured, stones and all. The death of this rare and costly creature preaches a sermon on the thoughtlessness

of the public, which ought to make some impression. The polar bears, Kadiak, grizzly and black bears are in admirable condition, though all are suffering somewhat from the heat. The polar bears have entirely recovered from their last winter's skin trouble, and are now in superb coat and condition.

From the far East has come a specimen of the small wild cow of Celebes (*Anoa*). It is the least of all the bovine animals, has straight, backward, sloping horns, and looks somewhat like the African eland, though no bigger than a short-legged deer. There is also a tiny Chinese water deer, not very much bigger than a jackrabbit, and a number of other East Indian forms, allied to the sambur and axis deers.

A number of animals have been born in the garden this year. One female buffalo calf, two elk, several deer of different sorts, a number of wild ducks—redheads, mallards, etc.—wild geese and pheasants.

The authorities of the garden have had some good luck and some bad. Their moose have not done well, and two or three have died. The mulc deer seem to suffer greatly from the damp heat, and are thin and somewhat ragged. With the approach of cold weather they are likely to improve. On the other hand, the antelope, which have been a source of constant anxiety to the director and his staff since the park was opened, seem at last to be doing well. They are fat, smooth and in good order. It would seem as if their food problem had at last been solved.

Word has recently been received from Mr. J. Alden

QUAIL'S NEST.
Photo by J. H. Madden.

Loring, the head keeper in charge of the mammals of the park, giving some notion of what he has done during his trip to Alaska. It seems that he succeeded in capturing no less than three of the young of Dall's sheep, but that it was impossible to keep them alive on the food that he could offer them. Notwithstanding this misfortune, it is hoped that he will bring back from Alaska a considerable number of interesting specimens.

It is hardly to be doubted that when autumn comes and all the summer vacationists return to New York, a renewed interest will be felt in the park of the New York Zoological Society. The collections now on exhibition there are well worth the seeing, and members of the Society should make it a point to take their friends thither and show them what the Zoological Society is doing, and to induce them to become members. A great city like New York should furnish ten times the present membership of the Zoological Society, and would do so, if it were generally known what the Society is doing, and what it intends to do.

Review of North American Snakes.

It is nearly ten years since Prof. Cope's paper on the "Characters and Variations of North American Snakes" was published, and only a few months ago appeared, in the Report of the Smithsonian Institution for 1898, his work on "The Reptiles of North America." Now, from the Proceedings of the Academy of Natural Sciences of Philadelphia, we receive "A Review of the Genera and Species of American Snakes North of Mexico" by Mr. Arthur Erwin Brown, the Secretary of the Zoological Society of Philadelphia.

Though extremely interesting, the paper is very largely technical. It is in the main an inquiry into the nature of the variations so commonly found among snakes—and on which so great a number of species and subspecies have been based—and an endeavor to determine how far such variations are promiscuous and without meaning, and to what extent they have relation to progressive modification. Thus, it would seem that the paper is, in a certain way, an object-lesson protest against the tendency of the present day toward the multiplication of species and subspecies.

"I think," said A. Bronson Alcott in one of his conversations, "when a man lives on beef he becomes something like an ox. If he eats mutton he begins to look sheepish; and, if he feeds on pork, may he not grow swinish?" "That may be," said Dr. Walker, of Cambridge, who was one of the listeners. "But, when a man lives on nothing but vegetables, I think he is apt to be pretty small potatoes."—Springfield Republican.

We Are All Human

Editor Forest and Stream:

Some one once remarked that there was a great deal of human nature in people, and we all of us see constantly occurrences which impress this truth upon us.

We are all of us disposed to lay down rules of conduct for our fellow men, but would like occasional exceptions to be made in our own favor. Or we may wish to except from the application of the general rules which we lay down certain persons or creatures, which we particularly like or dislike. In advocating the passage of certain laws or the repeal of others, we are very likely to be governed by our personal interests or our personal preferences rather than by broad consideration of what is for the general good. A man may be willing to acknowledge that spring shooting does harm to the duck supply, but if he believes that his only opportunity to shoot ducks comes in the spring, he is not likely to be an ardent advocate of having the open season for ducks close Jan. 1. The free traders declare that the protectionists want protection merely for the benefit of their own pockets—to enrich themselves at the expense of their fellow citizens; while the protectionists aver that their political opponents are careless of the country's good and wish to see the American laborer crushed by the competition of the "pauper" hordes of Europe.

The letter from Mr. H. Stewart, printed in the FOREST AND STREAM which has just come to me, is an example of the human nature which sticks out of us all so strongly. Mr. Stewart, if I have read his writings correctly, is a true sportsman, and a nature lover, if not a naturalist. Yet he calls the ravens cruel, as nearly as I can understand, chiefly because they kill his sheep and lambs. That the ravens attack the eyes and certain other parts of the animals is advanced as proof of the birds' cruelty, but, of course, Mr. Stewart knows very much better than I can tell him why the birds make these parts especial points of attack. It is because they are soft, and yield most easily to the stout bill.

It has become a fashion in these latter days—and it is a fashion now running riot—to credit animals with human intelligence and reasoning power; to make them, in fact, men, women and children, but clad in feathers or fur and able to run or fly swiftly. This, of course, is highly inartistic, and is a return to the beliefs and stories of our naked ancestors of 2,000 years ago; but it is the present fashion, and must run its course, just as in the recent past the various fads of archery, lacrosse, the bicycle and other sports have arisen, flourished for a time, and then fallen into desuetude.

There is no particular reason for believing that birds or animals have human feelings, nor is there any reason to think that the raven looks at the killing of a sheep with any more regard to the feelings of the sheep than the human butcher has for the steer whose throat he cuts, or the chicken whose head he chops off. Birds and mammals gather food as the farmer gathers corn, and whether that food is a seed, an earth worm, a ruffed grouse or a sheep, makes no difference. It is food, and it is looked upon as food, and not as anything else. From my point of view, therefore, it is simply absurd to speak of a hawk, a raven or a fox as cruel. Each of these animals is struggling to exist, just as, in another way, every human being struggles. I conceive that there can be nothing immoral in the killing of a sheep by a raven, or a ruffed grouse by the hawk, and if we regard it as immoral, it is chiefly because it interferes with our selfish pleasures.

Our human nature establishes in us many selfish prejudices and frequently sways us from our usual lines of conduct. Mr. Stewart is a nature lover, and so a bird protector. Yet he draws the line at ravens, partly because they interfere with his sheep and partly because they interfere with other birds. Am I taking too much for granted in inferring that Mr. Stewart would protect all birds except the ravens and their kin?

I have a friend who is a farmer. Sometimes when I see him and ask how the farm is going on, he makes remarks about the crows, which pull up the newly planted corn and destroy the crop. I have endeavored to convert him and have sent him much good literature on the subject of the crow. I have been unable, however, to convince him that the crow does a great deal of good as well as harm. He thinks only of his spring fields, robbed of their tender shoots of growing corn. Yet this man is one of the most enthusiastic of bird protectors, and on his piazza and in the buildings immediately about the house he owns, there were last spring five or six robins' nests, two peewees' nests and one of a little house wren, besides nests of orioles and scarlet tanagers in the trees immediately about the house.

I have a relative who has what I call a hen ranch, but he more elegantly terms it a poultry farm. His language about hawks at certain seasons of the year I do not venture to write to you. I am quite sure that you would say that it was not "fit to print." I have sent him Dr. A. K. Fisher's valuable little volume on the "Hawks and Owls of the United States," but it is my impression that he regards Dr. Fisher as one of the foremost of American writers in the department of light fiction. He shoots hawks whenever he can. Yet this man is an ardent bird lover and bird protector, and is a game warden—or whatever the term may be—serving without pay in the State in which he lives.

Way up the Hudson lives one of the most genial, sweetest natured and delightful of men. His descriptions of nature, and, above all, of bird life, are among the most charming things that have ever been written in America. If in all this broad land there is one who loves the birds, enjoys their society and takes pleasure in telling to others how much delight he takes in all their wonderful ways, it is John Burroughs. And yet, unless my memory has altogether gone astray, it is not many years since John Burroughs declared in substance that while he likes orioles very much, he likes his own grapes better, and that he protects his grapes from the orioles with a shotgun.

And if John Burroughs falls from grace in the matter of bird protection, what excuses may not be made for us poor folks, who, occupying a plane somewhat lower than his, sometimes or often totter and fall?

J. EDWARDS.

CONNECTICUT.

Too Much of a Good Thing.

As I was walking in the woods one day a little snake slipped out of a tuft of ferns and darted across my path. I stooped quickly and caught him in my hand. It was an adder, about twelve inches long, mottled red and white on the back, and checkered white and black on the belly, and so pretty that I tied him in my handkerchief and carried him home.

A small aquarium that had sprung a leak made an appropriate house for him. A nest of cotton, in one corner, under a bit of bark, was his bed, and the inserted top of a round, silver box his drinking cup. I put in a little earth, with mosses and small ferns, to make things homelike, and placed the whole on top of the piano. He was afraid at first, but soon would let me touch and play with him, and rather liked to curl up in my hand, for warmth, perhaps.

I was taking music lessons at the time, and several hours each day were spent at the piano. I rattled and banged with conscientious fervor, but the snake did not seem to mind, and slept curled up under his coverlet of bark.

One day my teacher gave me a gavotte of Bach's to study. It was hard, but I was determined, and soon the notes flew from under my fingers with some rapidity. I then began to notice that it had a strange effect upon the adder. Almost at the first note his head, with the beady eyes and darting tongue, would peer from under the bark, his body slowly following. Around and around his glass house he would glide, slowly at first, and by degrees faster; then rise nearly his full length, supporting himself on his tail, and fall over like a log. This he would do all the time the gavotte lasted. If I played something else, or closed the piano, he slipped back under cover and coiled up. I had a great regard for the old kapellmeister, but an irreverent friend has since told me that some of his music suggests a basket full of eels or snakes all wriggling in different directions. Possibly the same analogy occurred to the adder. Having heard that snakes are charmed by music, and that Indian fakirs make them dance to sweet sounds, I flattered myself that my interpretation of Bach exercised a charm over one pair of ears at least, and seldom finished a séance at the piano without piping up the gavotte for the little adder.

One day I was showing off his "pas seul" to a friend and played the piece through several times. The next morning I found my adder curled up inside his silver drinking cup, his head under water, dead. M. M.

Buffalo Bred in Captivity.

In the Boston Transcript of Wednesday, Oct. 10, 1900, appeared a very interesting article by Mr. Mark Sullivan, entitled "The Buffalo Still Lives." The article bears marks of careful study, and the writer has evidently made great effort to be sure of the facts. There is, however, one point in it which the writer says was suggested to him, but which he appears to adopt as his own, and this may be stated—for fear of doing him an injustice—in his own words:

"The third influence which menaces the buffalo in captivity was brought to my attention just at the time when I had begun to believe they were safe so far as interbreeding is concerned. It was pointed out to me by a member of the New York Zoological Society—a scientist and man of wealth, who has given freely of his time and money to save the bison. He despaired of the result. His reason he expressed about this way:

"There is a law, just beginning to be observed by scientists, which operates to this general effect. When animals are surrounded by favorable environments and a large majority of the births are females, and the race propagates freely; when the environments are unfavorable, the ratio is reversed.

"It was the operation of this law that caused the enormous increase of English rabbits when introduced into Australia. That Vienna physician had a glimmering insight into it when he announced that the sex of human births could be influenced. For that matter, no scientist has more than a glimmering of it yet, although the man who first mentioned it to me said its operation was so well understood by the members and employees of the New York Zoological Society that no one ever looks for the birth of a female buffalo at Bronx Park; when a birth is announced they take it for granted it is a male, and are never disappointed.

"The idea was so novel to me and its bearing on the fate of the buffalo, so vital, that I set about testing it at once. I made inquiries about the births at several collections where the animals are in more or less captivity, the ranges being from one to one hundred acres in extent."

The result of these inquiries gave a total of 58 births, of which 35 were males; in other words, of the births, 604 were males, 396 were females, or the births are nearly as 3 to 5 in favor of the males. This shows the absurdity of the statement already quoted, and attributed to the scientist who declared that at the New York Zoological Park when the birth of a buffalo is announced they take it for granted it is a male, and are never disappointed. As a matter of fact, we believe that only two calves have ever been born in the Zoological Society's Park. Both were males, to be sure, but the absurdity of generalizing from two births is sufficiently obvious. The matter deserves more attention, since in Nature of Nov. 22, Mr. Lydekker quoted Mr. Sullivan's statement with regard to the tendency to the relative increase of males among the buffalo offspring, apparently with approval.

It is sufficiently well recognized that the abnormal conditions which surround captive animals influence them in a great variety of ways, and it may very well be that this is one of the ways in which they are influenced. Yet the data on which we can figure are so entirely inadequate that any attempt to draw any conclusions from them are as yet absurd.

In the effort to gain further information on this point we have made inquiry among a number of people caring for buffalo, and present the results below.

It is commonly assumed that in nature the birds are equally divided between male and female, but as a matter of fact, absolutely nothing appears to be known on this point, except, possibly, in the case of the fur seal,

which, as suggested to me by my friend, Mr. Arthur Erwin Brown, is of no value here, since the species has not been kept in captivity, and, furthermore, belongs to an aberrant group.

So far as we can learn from the small number of cases at hand—only eighty-five births in all—the proportion of males to females is as 60 to 40.

Dr. Frank Baker, superintendent of the National Zoological Park, Washington, D. C., states (Dec. 27, 1900) that of seven calves born in the park, five were males and two females.

Mr. Arthur Erwin Brown, of the Philadelphia Zoological Gardens, gives me, under date of Dec. 27, 1900, a total of thirty-eight births in his garden from 1874 to 1900. Of these twenty-four were males and fourteen females.

Dr. F. A. Crandall Jr., curator of the Zoo at Buffalo, N. Y., states (Dec. 31, 1900) that the only calf born there was a female.

Geo. W. Burke, superintendent of the Pittsburg (Pa.) Highland Park (Jan. 2, 1901), has had one calf, a male.

Frank M. Chapel, superintendent of Hon. W. C. Whitney's preserve, states (Jan. 4, 1901) that from 1898 to 1900, inclusive, there were eleven births, of which seven were males and four females.

Finally Mr. Austin Corbin, whose record has been kept carefully only for the year 1900, reports for that year twenty-five births, of which thirteen were female and twelve males. It will be recognized, of course, that these buffalo have practically a free range, and are not in confinement.

To summarize them we give the following table:

	M.	F.
Blue Mountain Forest Association.....	12	13
National Zoological Park.....	5	2
Philadelphia Zoological Gardens.....	24	14
Hon. W. C. Whitney's preserve.....	7	4

General Darling's Elk Horns.

The measurements of the elk horns, owned by Gen. Charles W. Darling, Utica, N. Y., are as follows:

The antlers measure 9 feet and 3 inches from tip of beam to tip of beam across the skull, and they have a spread of 53 3/4 inches. They have a beam length of 55 and 56 1/2 inches, and the longest prongs are 16 and 17 inches in length. There are 10 of them. Had these elk horns been differently mounted, with the elk's head between them, they would have had a spread of 24 inches more than they now have. They were picked up at the base of the Rocky Mountains, by a friend of Gen. Darling, many years ago.

Probably there is but one larger pair in existence, that in possession of Emperor William, of Germany. That pair was presented to him by Hans Leiden, the German consul at the Netherlands, and the Director of the Zoological Garden at Cologne. Those horns measure 12 feet from tip of beam to tip of beam across the skull, and have a spread of 62 inches. They have a beam length of 67 and 67 1/2 inches, respectively, and the longest prongs are from 22 to 23 1/2 inches in length, and there are 12 of them.

[The paragraph purporting to give the measurements of these antlers fails to convey to us any idea of their size or character. It is stated that they are on the skull, and below it is intimated that the head is not "between them." They are said to be very large, yet to have only ten points—i. e., to be what used to be called a five-pointer. Are they shed antlers or what? Many years ago in New York there was for a time the largest elk head we ever saw. It was said to be a gift from an enthusiastic German here to the old Emperor William, the grandfather of Germany's present ruler. We do not know that it was ever measured—no one ever measured horns in those days—but the horns were very large and startlingly massive. We believe it was shipped to Germany, as intended.]

The African Game Supply.

A report on the administration of Rhodesia, recently issued by the British South Africa Company, contains matter of great interest to naturalists and sportsmen as well. This is the section devoted to Notes on the Fauna and Flora of Northeastern Rhodesia, by Mr. C. P. Chesnaye. The time covered is from 1898 to 1900, thus bringing it down almost to date.

Mr. Chesnaye's report takes a very hopeful view of the prospects of the survival in considerable numbers of certain larger mammals and reptiles in the district to the west of Loangwa, in the swamps of Bangeolo and Mweru. Owing to the fact that for the greater part of the year it lives in swamps that are quite inaccessible to the hunter, the elephant is still met with in large herds. These are likely to be preserved in the future by the proposed formation of a game preserve to the east of Lake Mweru, since the elephants will probably retire from the hunted districts to those where they are not hunted. The hippopotamus is said to abound in the district, while rhinoceroses are abundant.

In 1893 the rinderpest swept the country, killing off large numbers of buffalo and antelope of one sort and another; but the country is gradually recovering, and many districts are rich in game, especially in antelope of many varieties, of hartbeest and zebras. This would seem to offer still further encouragement to the English authorities to establish on a large scale the game reserves of which so much has been said within the last few years.

A Quail's Nest.

PLAINWELL, Mich., Aug. 15.—I tried to get a good picture for you, but did not succeed to my satisfaction. No. 1 is a picture of the nest, No. 2 the same with the quail on, No. 3 the same with the quail on—it does not show her at all, but she is there. There were fifteen eggs in the nest, and they were hatched Aug. 10; that is pretty late, I guess. J. H. M.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Game Law Form.

Editor Forest and Stream:

The frequent mistakes made in the passage and amendment of game laws, as illustrated by the last law of Illinois in omitting to provide for the protection of quail and woodcock, and the double negative used by the Audubon Society in its draft of laws for the protection of birds, as well as the usual negative form so long used in prescribing seasons when game shall not be taken, calls for a radical change in game law phraseology, including a simpler method in stating the seasons.

The usual form adopted is as follows:

"Every person, who between the first day of February and the first day of October of any year takes or kills, etc., shall be guilty, etc."

This is objectionable because it is uncertain whether the first days of February and October are in the open or close season. Strictly construed, the first day of February is part of the open season on account of the use of the word "between." The period "between" Feb. 1 and Oct. 1 begins Feb. 2, and ends Sept. 30, although the intent of the law was no doubt to have Feb. 1 a part of the close season.

The use of the words "of any year" is also wrong. It should read "of the same year." In the law from which this is taken (California) other sections do read "of the same year," thus using different words to express the same ideas, as evidence of careless drafting.

At the end of every section is also attached a penalty. This is unnecessary and simply adds useless words.

Most game laws are constructed on this plan, being simply copies of those first enacted, no particular thought having been given to improving the phraseology.

In drafting the present game law of Colorado I adopted a method which renders such errors almost impossible. The following is the division of that law pertaining to seasons and limitations:

"Division B. General Regulations—Open Seasons—Number—Quantity.

Section 1. No person shall at any time of the year, or in any manner, pursue, take, wound or kill any bison, buffalo, elk, deer, antelope, mountain sheep or beaver, or any of the following wild birds, viz.: Turkey, prairie chicken, sage chicken, grouse, quail, pheasant, partridge, ptarmigan, duck, goose, brant, swan, crane, water fowl, pigeon, dove, snipe or curlew, or any trout, white fish, grayling, sunfish, bass, catfish, wall-eyed pike or other food fish, or sell, offer or expose for sale, or have the same in possession, except as permitted by this act; Provided, The prohibition in this section as to beaver shall not extend to such beaver as interfere with the operation or maintenance of any canal, ditch or lawful dam.

Sec. 2. No person shall shoot from a public highway at game, or fish or hunt game in any enclosure not public land, without the consent of the owner or person in charge of the same, or fish or hunt in any park, lake or preserve licensed under this act, without the consent of the proprietor or person in charge of the same; and no question of ownership, proprietorship or charge shall defeat a prosecution unless it appears that the accused in good faith has theretofore claimed, and at the time of the commission of the act complained of, claimed to be such owner, proprietor or to have such charge, or to have had the consent of the owner, proprietor or person in charge, and shall establish such claim.

Sec. 3. No person shall have in possession or transport the carcass of any game quadruped or any considerable portion of such carcass unless the same has thereon the natural evidence of its sex sufficient to enable such sex to be readily determined by ordinary inspection.

Sec. 4. Every person lawfully taking any fish alive and desiring and entitled lawfully to retain the same, shall immediately kill it, unless it is intended to be kept alive, in which case it shall be immediately placed in a suitable receptacle containing sufficient water and given proper care and attention.

Sec. 5. No game or fish shall be used for baiting any trap, device or deadfall, nor shall any edible portion of game or fish be abandoned or permitted to go to waste, nor shall the nest or eggs of any game bird be disturbed, destroyed or held in possession.

Sec. 6. No dynamite or other explosive or poisonous or stupefying substance whatever shall be used in the taking or killing of any fish, nor placed in any waters containing fish, except when done by public authority for public improvement, nor shall any ties or timber be driven or floated down any stream, containing fish.

Sec. 7. It shall be lawful to pursue, take or kill, during the open season therefor, in the manner, of the kind, for the purpose and to the number and extent in this section provided, the following game and fish, and the open seasons therefor in each year shall begin and end as follows, namely:

1. The open season for deer having horns and antelopes having horns shall begin August 15 and end November 5 next ensuing.

2. The open season for elk having horns shall begin October 25 and end November 5 next ensuing.

3. The open season for wild turkeys, prairie chickens, sage chickens and grouse shall begin August 15 and end October 31 next ensuing.

4. The open season for wild ducks, geese, snipes, curlews, brants, swans, cranes and water fowls shall begin September 1 and end April 15 next ensuing, except in regions exceeding 7,000 feet above sea level, where the open season shall begin September 15.

5. The open season for wild pigeons and doves shall begin July 15 and end September 30 next ensuing.

6. The open season for trout not less than eight inches in length, and other fish, shall begin June 1 and end October 31 next ensuing.

7. The right given by this section to take or kill game and fish is limited to food purposes, and to fifty ducks and twenty-five other birds and twenty pounds of trout and fifty pounds of other fish for each person in any one calendar day, and no person shall take, kill or have in possession in any one season more than one elk, and one deer and one antelope; or, instead of one deer and one antelope, he may have either two deer or two antelope. Nor shall any person have in possession at any one time more than one hundred ducks and fifty other birds, nor more than seventy pounds of fish.

8. No game or fish shall be held in possession by any person for more than five days after the close of the season for killing the same, except as in this act otherwise provided.

9. No game shall be pursued, taken, wounded or killed in the night, nor with a steel or hard-pointed bullet, nor with any weapon other than an ordinary shoulder gun or pistol, nor shall any fish be taken or killed except in the ordinary manner with a line and rod held in the hand, and the hook or hooks baited with natural or artificial bait; and fishing with snag hooks or trot lines, or lines having more than five hooks thereon, shall not be deemed the ordinary manner of fishing; nor shall any person fish within two hundred feet of any fishway, nor dispose of to another, except by actual donation, any edible part of game or fish taken or killed under the provisions of this section;

Provided, That dogs, blinds, sinks and decoys may be used for hunting birds, and that the provisions of this section in relation to game quadrupeds and fish shall not apply to those in parks and lakes of class A licensed under this act for the keeping and propagation of the same."

It will be seen that Sec. 1 is a general and sweeping prohibition against taking, selling or having in possession, "except as permitted by the act." This section never needs changing. Its prohibitions cover everything, so that

if any mistake should be made in changing the open seasons, by leaving out "quail or woodcock," as done in Illinois, or leaving out any other animal, the effect would be to make the entire year a close season on such animal, and the game fully protected. In short, the open seasons exist only by virtue of clauses permissive in character, and the omission of any of them simply leaves the entire year in the close season.

Other advantages in this form of stating the seasons are in giving the open season instead of the close one, and in using the words "begin" and "end" instead of "between," thus permitting both the dates mentioned clearly in the open season.

When it is desired to change the open season on anything, it is done by merely changing the first or last date, or both.

In regions where the seasons for water fowls and waders should be different, new subdivisions should be made covering the case. The same, if the seasons on any animals grouped in this law in one open season should be made different.

The penal provisions are at the end of the act, and are as follows:

Division G. Penalties—Prosecutions—Fines.

Section 1. Every attempt to violate any provision of this act shall be punishable to the same extent as an actual violation thereof, and any such attempt or violation by an agent, clerk, officer or employe, while acting for a corporation, shall render such corporation liable also, and an accessory may in all cases be prosecuted and punished as a principal.

Sec. 2. The failure by any person or officer to perform any act, duty or obligation enjoined upon him by this act shall be deemed a violation thereof.

Sec. 3. Every person using dynamite or other explosive, or any poisonous or stupefying substance, or pursuing, taking, wounding, killing or having in possession any bison or buffalo, in violation of this act, shall be punished by a fine of not less than \$500, nor more than \$1,000, or by imprisonment in the penitentiary not less than six months nor more than two years, or by both such fine and imprisonment.

Sec. 4. Every person or officer violating any of the provisions of this act, otherwise than as contemplated in section 3 of this division, shall be guilty of a misdemeanor and be punished by a fine of not less than \$10, nor more than \$500, or by imprisonment in the county jail not less than ten days nor more than six months, or by both such fine and imprisonment."

This covers the whole field of violations and saves useless repetition of penalties.

The attention of game protectors is called to this simple method of insuring certainty in game legislation, which usually receives little consideration.

If I had drafted this law with the duck limit as it now is, I would feel bound to apologize to game protectors. The limit as I drafted the law was twenty-five ducks, but the Legislature, at the behest of some influential duck hunters, enlarged it, against my earnest protest.

D. C. BEAMAN.

A Close Call for Dick.

Editor-Forest and Stream:

While throwing together some animal and vegetable matter one morning from which to make a repast in my bachelor quarters, I suddenly became aware of a fine, spike bull elk taking his breakfast out in my meadow.

Now it so happened that I was needing some steak from the hindquarters of a spike bull just at that time very badly. As it was not an everyday occurrence to have so much good steak call on me I lost no time in "unlimbering" my Winchester, and left my cooking breakfast to its fate.

I crawled down the bank into the willows and started up the creek, when I saw he was coming over to and crossing the creek; then I made lively tracks back up the bank and around the house, and for half an hour I raced and crawled, trying to come near unto him. At last he was coming toward me, I being out in the open with nothing but scattered sage brush to protect me from sight, and he browsing along the edge of the timber.

I laid low, and when he got within good range, so I felt sure of getting him, I raised slowly on one knee to take aim. I was pressing the trigger when the wind, moving some bushes, let a ray of sunshine fall on his neck, and my gun dropped. I jumped up on my feet and yelled out, "Come here, Dick, you rascal!" and he came trotting down and stuck his nose in my face, and seemed glad to see me. He was a tame elk, belonging to a neighbor, living a mile and a half away, and had never before gotten out of his pasture.

A red flannel cloth had been placed about his neck, but had become dirty, and was so nearly the color of the hair as to be hardly distinguishable, but a little streak of sunshine made it visible, and saved his steak. He went from my place to another neighbor's, where a tenderfoot was staying, who fired four shots at him at 40 yards' distance, without touching a hair, and then ran out of ammunition.

Dick got home safe and lived to occupy the Zoo at Denver, Colo., and I regulated the inward cravings for elk steak by supplying venison steak.

At another time I was working on a big stock ranch where a tame buck deer was kept. He would leave the ranch about 4 o'clock in the afternoon and wander off to the mountains and return about 9 the next morning, and lie about under the cattle sheds during the day.

One morning I got up at the first streak of dawn, and went out to look for the deer before breakfast. When two miles from the ranch I spied a buck and doe standing together in the edge of the timber, across an open space. I quickly brought my rifle up, but when taking aim for the buck's shoulder, I saw the white cloth about his neck, and lowered my rifle. I did not care to kill the doe, and thought to study them a little. Starting toward them I had not gone a half dozen steps when the doe went off through the woods at full speed, although I was a hundred yards away; the buck never moved out of his tracks until I came up and patted him on the back. After staying with me a moment he started out through the woods on the trail of the doe—the ground was bare and dry—on a long, swift trot, with his nose close to the ground, and uttering a low, bleating noise. I followed as fast as I could go, but in a little while he was out of my sight, and, by following some distance by the trail, I found that he was right in the footsteps of the doe all the time.

I had often wondered how deer and other wild animals could, with so apparent little difficulty, find each

other so readily after being scattered in an almost boundless wilderness, but with the swiftness and certainty with which they can follow the trail of their own kind, they could come together at will.

As it does not become necessary for them to follow the trail of any other creature, we do not know just to what extent they can do so, but an old woodsman and hunter of seventy years ago once told me of being in the woods hunting, on bare ground, when he saw a buck coming on his trail, walking slowly with its nose to the ground, evidently following his trail by scent; no doubt through curiosity, as it was a locality and at a time when men were scarce and deer were numerous, which condition is sadly changed—I say sadly, not because men are not desirable, but because deer are more desirable—since they are the source of less trouble and more fun.

EMERSON CARNEY.

MORGANTOWN, W. Va.

CHICAGO AND THE WEST.

Case Under New Illinois Game Law.

CHICAGO, Ill., Aug. 22.—On Wednesday last there came up at Morgan Park, a suburb of Chicago, the first case of which I have any knowledge under the new Illinois game law which does not afford protection to quail and woodcock. Roy Barrows was the offender in this case, and last Sunday he shot a quail near the edge of the city in the vicinity of 107th street and Kedzie avenue. He was arrested, and prosecuted by Assistant State Attorney Carew, and was fined, the amount of the fine and costs reaching \$34. Attorney Carew insisted that there is no repeal clause in the law of 1901, hence the old law still remains in effect. Justice W. T. Goe, of Morgan Park, was of the same opinion, and the fine was imposed as above stated. It is somewhat gratifying to see that a case of this kind, which would be so injurious to the interests of our game birds, did it go in favor of the alleged offender, has resulted contrary to the general belief of those who intend to go on the supposition that there is no law protecting quail in Illinois. The example will perhaps have a certain deterrent effect and we shall not hear of so many cases of Sunday shooters who go out along the edges of the town and kill every moving thing which they can see.

As to the abundance of quail, there was never anything like it in this State. The crop is one almost startling in its profusion. This is true over practically all of this State, from the upper third south as far as the Ohio River. The truth of it seems to be that Bob White is so good a hustler that he can take pretty good care of himself without much outside aid. Even the most deadly minded pot-hunter cannot kill so many quail along the hedgerows before the time of snow. If he goes out with his dog in the summer time, he finds only a lot of little birds, which even a pot-hunter would not care to shoot. Yet quickly these birds develop wisdom, and by the opening of the season they are keen witted, swift of foot and swift of wing. It is hard enough to kill half your quail even when you have the law on your side, as well as the assistance of the best kind of bird dog, an easy conscience and an open shotgun. Surely it looks as though Bob White had come to stay in this part of the world.

Some Other Workings of the Game Law.

It would seem that our laws are being enforced clear up to the handle, at least in some quarters. Deputy Scottford has notified the Board of Lincoln Park Commissioners that they must set free eight quail and two red-birds which they have in confinement in the park cages. Warden Scottford says that he cannot favor the park and not favor the taxidermists and bird dealers, who sometimes have live birds in their possession, contrary to the law. The commissioners referred the matter to their attorney, and the end is not yet.

The law is likewise laying its heavy hand upon the multitude of perch fishers who line the lake front of Chicago, as they have done from time immemorial. Some of these fishermen use nets and others hand lines or rods of all sorts and descriptions. Almost the only thing they take is perch, and they rarely ever catch a perch which is up to the legal limit in size. Mr. Scottford made a little raid on the fishermen last Wednesday near Twelfth street. He gathered in nine unfortunates, and five others jumped into the lake and swam away to escape him. Nearly all these fishermen know that they are liable to prosecution, yet this fact does not seem to deter them, as there are scores of them out every day. The names of the prisoners taken in this raid were Joseph Smith, Fred Caw, John Zyak, Lawrence Wisniewski, Joseph Zyck, Edward Zielwiesk, John Vara, Joseph Howie and Joseph Forte. Their names seem to indicate the foreign birth of most of these men. It is too bad that they will hereafter be unable to endorse America as the land of the free.

Yet another case of the game laws making easy money is that of Prof. Carl H. Eigenmann, of the Biological Station of the Indiana State University, located at Winona. Prof. Eigenmann is also a vice-president of the Indiana Scientific Society. On Wednesday the worthy professor was arrested by Deputy Fish Commissioner Harris, and was fined \$5 for having a fish net at the station. This net had been used for a long time by the professor and his students in taking fish for scientific purposes. Warden Harris did not look at it in this way. He probably found it hard to catch the Indiana seiners and easy to catch the professor, and so he let it go at that. It might perhaps be thought impertinent for one to suggest to our worthy wardens that there is plenty of big game on foot for them every day in the week in the market-fishing and game-selling quarters both of Chicago and the country towns. For instance, last week there came down from Wisconsin a baggage car which contained several deer in the red coat, killed in the summer and shipped with not even the concealment of boxing. The deer lay in plain sight on the car floor. There's a case worth following.

Big Chicken Year in the Northwest.

Sam Fullerton—may his tribe increase—is not only one of the best game commissioners in the world, but one of the most obliging men in the world to newspaper men, this latter being what the newspaper men themselves consider a highly desirable quality in a game warden or

in anybody else. Mr. Fullerton is good enough to answer a letter of inquiry as to the chicken crop of his State, and one can do no better than to offer his letter in full:

"I don't think that any one can go astray in Minnesota this year in getting chickens if we can only save them until the first of September. I tell you that is very hard work, chickens being good and strong and the harvest being at least two weeks earlier than it has been in Minnesota before; that leaves but little protection to the birds, and gives the farmers more time to get out—that is, the farmers who will violate the law and invite the city sooner out to their places.

"The best reports we have are from Kittson, Marshall and Red Lake counties. Red Lake is, perhaps, the best in the State at the present time for chickens. I am safe to say that it is all right with the chickens this year up back of Thief River Fall and the ceded Indian reservation. The birds wintered well, and the spring was favorable to their hatching.

"Then there are your old stamping grounds in Otter Tail, Grant, Wilkin and Norman counties. To specify particularly, the places to go would be Hallock, Argyle, Stephen, Warren, Fergus Falls, Campbell, Aida, Morris, Thief River Falls, Red Lake Falls and Winnipeg Junction. They are the best places, with, of course, a great many others that it is not necessary to mention.

"I am going myself on the first with our old friend, Jimmie Jones, who is our warden at Fergus Falls. We are going to have along with us four of the best meat dogs in the State—you understand what they are. Judge Orr and Judge Countryman will be my shooting companions for that day, with Jimmie for guide. He reports that the chickens have not been as plentiful in ten years up there as they are now, but, as I said before, it is the hardest work to keep them from shooting that I ever saw. We have an army of wardens in the field, and are making convictions. I sometimes wonder why men will take the chances when we are taking away their dogs and guns. During the last week we have taken eleven guns; our office looks like an arsenal. Five of these are rifles, and were taken from deer shooters. Last week at Moorehead we got three guns and two dogs; at Benson we took one gun and one dog; at Duluth we got two guns; at Brainerd, three guns and two dogs. But, as I said before, men will take the chances, and, outside of losing their dogs and guns, it has cost for each chicken shot an average of \$22.50 each, and some of them are bound over to the Grand Jury, as in the case of Dr. McGee, of Benson. We gave him a chance to plead guilty for three birds—we caught him with nine—but he was bound to fight, and demanded a jury trial. The jury brought in a verdict of guilty, and we fined him \$30, and \$35 costs; then I gave them a little talk in the court room, and told them that, as he was bound to fight, we would accommodate him, so I swore out a complaint for the other six birds, and bound him over to the Grand Jury.

"Two hotel keepers at Ten Strike, which is on the new line of the Brainerd & Northern Road, from Bemidji, were bound over to the Grand Jury on Saturday by our wardens—Stevens, of Detroit, and Saunders, of Brainerd.

"I hope this information will do you some good. Do you think there is any show of your getting up to Minnesota this year to hunt? If you can't get up for chickens, I can absolutely guarantee you the best quail shooting in the world. Last winter was the best winter that we ever had for quail to winter over, and we are seeing it in the increased beves of quail. In a trip of twenty miles a week ago we ran across six large beves in the road through a country that has never been considered a great quail country before. So, if you come to Minnesota, as I would like very much to see you do, I will drop all of our business and give you the hunt of your life.

"I know the law passed last winter was very drastic in regard to the sale and shipment of game. We adopted the FOREST AND STREAM's Platform entirely. But the Commission has made a new rule, which I think is a common-sense one, and that is, although the law says that no shipment shall take place, we will allow private individuals who go out into the field to ship from themselves to themselves at their homes. We think this is a common-sense view. Of course, the minute any one ships for sale the game will be confiscated and prosecution will follow."

The best answer to all the talk which we hear as to the futility of protective measures and efforts to preserve the game is the record of the Minnesota Commission under the charge of Mr. Fullerton. If anybody should drive up and ask you if protection can protect, you are safe in answering that it can, in Minnesota.

North Dakota Birds.

Mr. Ever Wagness, the new game warden of North Dakota, is a resident of Devil's Lake, which certainly is a good place for the home of an active and enterprising game warden, since it is a point very much visited by shooters needing a \$25 license. Mr. Wagness, in reply to an inquiry, states that game was never so plentiful as it is this year all over North Dakota. As to a locality for wildfowl-shooting, one could not do better than to remember Devil's Lake. For chickens, almost any of the points from Larimore west ought to prove good, subject, of course, to the will and pleasure of the sooner, who exists in North Dakota quite as much as anywhere else.

Catfish and Chickens.

I presume there does not exist in all the range of the journalistic world a worthier, better or happier family than the FOREST AND STREAM family. Ordinarily I do not make a practice of printing private correspondence without permission, but since the following letter is from Mr. W. A. Powell, of Christian county, Ill., and hence may be called strictly within the family, I venture to give his last advice from his corner of the world in toto, without stopping to ask his consent, since the matter is too good to keep. The pleasure and divers incidents of a catfishing trip you shall perhaps not see better set forth, even though you search far. The tenor of the letter reminds one somewhat of that famous letter of the cowpuncher, who wrote to inform his boss that he "had to kill the Englishman," but nothing much had happened since the boss left:

"Several of my friends here tell me that the chicken crop is good, and I hope to kill a few of them, and there is a splendid prospect for quail.

"We went to the river fishing last week, and had a lively time. You can talk about game fish and all that, but

the good old catfish is king of them all. He will hang up on a trout line with a No. 4.0 hook in his system, and wait patiently till you come and get him, and then live a week in a crowded live box, and come out for the trip home as lively and sassy as ever, easy to dress and just as good eating as anybody's fish. Horner fished for bass by the hour, but they did not bite, though there is generally fair bass fishing there, and we caught plenty of small bass in the minnow seine. One of the boys stole a man's wife over there, and the man seemed a little put out about it. He came over with a .22 Quackenbush rifle that missed fire oftener than it went off, and made war medicine around our camp considerable. I gave him another box of cartridges, and then took the axe and ran him off. We caught somewhere from 100 to 150 catfish, plenty of turtles and a few squirrels, and all around, the trip left nothing to be desired.

"The weeds are not bad this season, and it won't take much frost to make the shooting good. I don't look for much sport shooting chickens in this country any more, for they stay in the corn all the time after the last of August, and the only way to get them is to walk the corn rows. A dog is no use, only to retrieve.

"How is the fox terrier?"

Illinois Chicken Country.

Over one hundred chicken shooters of Chicago have been out after prairie chickens already, a couple of weeks before the law is out, and it is to be presumed that most of the country shooters have been equally thoughtful and far-seeing, so that opening day will probably see the chicken crop pretty badly broken into.

As to the localities for chicken country in the State of Illinois, from which some pleasure may be had and which are worth remembering, the likelihood is that one would get a little shooting, say half a dozen to a dozen birds a day, at any of the following points, even so late as the beginning of the legal season. Chicken hunting now, as in the past, is much a matter of dogs. That man is very lucky, indeed, who has a good chicken dog these times.

De Kalb county is perhaps the best chicken county in Illinois this season. Any of the little towns of that county will do. Get a rig and drive out five or six miles from town. There have been abundant birds in this location all summer, and the report is that the law has been better enforced than is usually the case in that county.

Another awfully good range to remember is that lying between Koutts and Knox, Ind. A gentleman who drove this week between those two towns put up nine coveys of birds in one day. There is good breeding range in that vicinity, and the birds are by no means exterminated there. This is one of the best points to bear in mind. Remember, it is in Indiana, one of the license States.

Another good and convenient point for Chicago shooters to remember is Lee county, some seventy or eighty miles west of this city. Out of Amboy, Lee Centre or Ashton, one can, in a drive of less than a dozen miles, get into good chicken country. This has been one of the best protected parts of Illinois—in fact, too well protected to suit the average local shooter. Many of the farms are posted.

Out of Bloomington, Ill., there can be had some good chicken shooting by going a few miles into the country. This is in the center of what was originally a fine chicken ground, and the birds still hang about in some numbers.

Mineral is a point worth remembering, both for the snipe shooter in season and the chicken shooter. Get back from the town a little bit, among the fields, and, unless the sooner has entirely cleaned out the crop, you will get some good shooting there the first week of September.

Anna, Ill., is another place which it is well to know. Mason City, lower down in the State, is in the center of a big corn and wheat country, where the birds still may be found in some numbers.

Sheffield, Ill., is a point which is called a very good one by some of the best shooters of the city, and it will be visited the first day of the season by several Chicago gentlemen. Trainers have located a good many covies of birds in the neighborhood of Sheffield, and so late as this week they were not shot down.

Near Elkhart, Ill., and the big Sullivan farm, there may still be found some prairie chickens in a region which was once a splendid one for all sorts of upland game. This was the old Bogardus shooting ground. To-day it is much taken up with corn, but there is this to be said, that this season the heavy droughts have dwarfed the corn so that it is not so thick as usual. Hence one can get some shooting by following the birds in the cornfields.

Localities in Wisconsin.

There is quite a chicken-shooting industry possible in the old State of Wisconsin, and he who knows the wrinkles can get sport in any one of a number of localities in that State. One of the best to remember is Fond du Lac, Wis., at the foot of Lake Winnebago. Near this point are large marshes which serve as breeding grounds. The shooter can drive out from Fond du Lac, and if he has a good local companion, can find chicken shooting which is quite well worth remembering.

Of course there are still considerable numbers of birds hanging around the edges of the big Horicon Marsh. There are quantities of small grain planted by the farmers of that district, and sometimes rattling good bags of chickens are made by members of the Horicon Club, who go up on opening day for a combined duck and chicken shoot.

Sometimes around a much frequented place like Oconomowoc, Wis., one can get very good chicken shooting, and a number of birds are killed not far from that chain of lakes every season. This is comparatively low down in the State.

Further up in the State of Wisconsin, toward the edge of the pine timber country, there are a great many more prairie chickens than is ordinarily supposed. Necedah is a favorite point, and the morning of opening day will probably see anywhere from fifty to seventy-five guns going out from that town. In that neighborhood the shooting is about half sharptailed grouse and half pinnated, or, perhaps, one-third sharptailed grouse. It is an odd thing to see prairie chickens put up on a little open field, flying straight into the pine timber like so many ruffed grouse. This is the country where Mr. Neal Brown, of Wausau, goes for his annual chicken trip, and

where he has invited the writer to join him on opening day.

HARTFORD BUILDING, Chicago, Ill.

E. HOUGH.

The Caughnawana Preserve.

MINEOLA, N. Y., Aug. 20.—*Editor Forest and Stream:* It may interest some of your readers to learn that we are just in receipt of a long letter from our head game warden, who lives on the height of land between the Ottawa and Kippewa waters. He tells us that our preserve has escaped the visitation of the tremendous forest fires that have ravaged the Kippewa district, and that he has never seen in his life such quantities of moose in any one territory as have gathered in ours, as the effect of these fires. We would like to renew through the medium of your paper the notice to the hunting world which you so kindly inserted last year, that our territory, comprising five hundred and odd square miles, covers the entire Maganissippi Valley, starting a few miles north of the Ottawa at Deux Rivieres, and runs north to what is locally known as the Great Lake, and to the edge of Lake Kippewa itself.

Our territory embraces what is locally known as the Hull Lumber Company, Greer, Moore, Hawxbury and Eddy limits, and we must insist that visiting sportsmen respect our boundaries. We feel the greater necessity for giving this notice early publicity, because of the ravages of the forest fires which have destroyed much of the best hunting territory about Lake Kippewa.

It may interest some readers also to know that a number of trout lakes along the northern watershed of the Ottawa are good for speckled trout fishing, almost equal to that of the Nipegon. As a sample of what these lake waters can produce, I may cite a catch made just across the height of land from the Maganissippi waters about the middle of June; twenty-two fish were taken in two afternoons' fishing with the fly; none were returned to the water; all were kept that were caught. There were four small trout among the twenty-two. The twenty two weighed, when dressed, ready for the table, 63 pounds. These fish have an abundance of food, and are of the most brilliant colors. We are informed that the trout fishing of that territory has been most excellent this season, and as it is becoming more and more accessible, there is no reason why lovers of fly-fishing should not enjoy it more fully than they have in the past.

HALSTEAD SCUDDER, Sec'y-Treas.

Currituck.

CURRITUCK, N. C., Aug. 10.—*Editor Forest and Stream:* I was glad to see in your paper that a part of New York State had stopped spring shooting and that the result was a small crop of young ducks. There is no doubt that if spring shooting were prohibited from Currituck to Canada ducks, especially black ducks, mallards, teal, widgeon and sprigtails, would breed in abundance all along the coast; in fact, I think I can prove it. About twenty-five years ago, when ducks were not much hunted late in spring, there were a few pairs of black ducks that remained and raised their young ones here every summer, but the spring shooting was extended until the last duck left our waters, and for fifteen years I am certain not a single pair remained with us. During the past three years the old Currituck Club has protected its marshes during the spring and summer, and, to-day, there are some large flocks of black ducks full grown, and others just beginning to fly. On Aug. 1 my nephew saw a flock of twenty-three, and I am sorry to say could not resist the temptation to shoot at them. He bagged three—all young birds—but they were fully feathered and were very fat and in fine condition.

Our wild celery beds this season are so thick all over Currituck Sound that it is almost impossible to navigate a sail boat unless the wind is blowing very hard. This should give us good shooting in the fall and winter.

Our summer bay bird shooting is quite up to the average, and some fine bags are being made daily. I shot sixty-one last week, one day, and expect to be up at dawn to-morrow morning, as it promises to be cool, and the shooting pleasant.

MORE ANON.

Some Notes from Vermont.

Editor Forest and Stream:

A brief description of the Coon Pond forked tail speckled trout will be found at the top of page 193 in Hallock's Gazetteer. Shortly after that article was written the pond was stocked with the ordinary *S. fontinalis*, which has, as the natives say, run out the fork tails.

I was highly pleased with Mr. Cheney's answer, and it confirmed my own belief, that these fish were the red trout.

Yesterday a flock of plover passed camp, flying high southward. They gave us a greeting as they passed. They were closely followed by a big storm, that rivals the so-called equinoctial storm of a month later.

Here in the upper end of the big Back Bay some good catches of black bass have been and are now being made. Frogs and dobsons are the best killing bait.

Ducks and woodcock have bred here in their usual numbers. Ruffed grouse are scarce. A large covey of quail are reported near North Sheldon, Vt., the result of a planting made there some years ago. If they, unaided, can live through such a severe winter as the past one, they may be regarded as a permanent addition to our list of game birds.

Deer are seen somewhere in this vicinity nearly every day. Recently our local United States collector saw a deer swimming in the lake near his camp. Thinking, or rather hoping, that it might be a Celestial, with \$100 in his pocket, he, with a posse, started with canoes in pursuit. They surrounded the deer, which, as they had him closely cornered, promptly dove and came up outside the circle of boats, and while his would-be captors were motionless with surprise at such an undeerlike performance, he swam ashore, shook the water from his sides, flipped up his white tail in derision and loped away to the bush.

STANSTEAD.

CAMP EAGLE POINT, Swanton, Vt.

Chickens in the Northwest.

CALGARY, N. W. T., Aug. 13.—From all accounts chickens are more abundant than usual, and there are thousands of ducks, so there will be great shooting here later on.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The Boy With the Hoe.

From the Springfield Republican.

In this hot and sunny world of ours
No creature's more forlorn
Than is my young son Johnnie,
When he goes to hoe the corn.
Yet with a will he works away,
For he sees the cornfield's needs—
He smashes all the big clay lumps
And mutilates the weeds.

When he stops at last to take a rest,
At the end of the weedy rows,
The cooling winds come coaxing him
To the woods, where the river flows;
The trees with their branches beckon him
To leave his work for play;
"Just drop your hoe and come to us!"
Are the words they seem to say.

The fun that's found in the shady haunts
The little field hand knows;
He loves to wade the shallow brook
That through the woodland flows.
The "minnie" and the "shiner"
Are dear old friends of his;
He knows the tree where the gray owl sits,
Where the nest of the heron is.

When he slowly turns to work again,
A sight more sad there's not
Than his small figure toiling
In the sun rays fierce and hot.
With my hoe I go to help him,
When, lo! to the woods he's away;
I find his hoe deserted there
'Mid the corn and lumps of clay!

I know I ought to thrash him,
Once or twice, or maybe more;
But as the boy is doing now
His pa's oft done before!
And somehow it is pleasant
To have a feeling sure
That this world of toil and trouble
Still has pleasures sweet and pure.

CHARLES K. FARLEY.

In the Maine Woods.

ALL have heard of the Maine woods. Few realize the extent of the vast forest, which, except for a few small clearings along the eastern part, is still a wilderness. Its area is 15,000 square miles, or 10,000,000 acres. The great State of Massachusetts could be placed in its center and lost. It is covered with a forest of spruce, fir and various kinds of hardwood, is drained by six large rivers and a thousand lakes so connected that one may travel for weeks by canoe, with few carries.

Having arranged to spend my summer vacation in this territory, I found myself at Bangor on Aug. 1, and took the early morning train for Greenville, on Moosehead Lake. This ride is through the forest the greater part of the distance, and gives one some idea of the immensity of the wilderness which he is entering. Small steamers run from Greenville to Kineo Hotel, twenty miles up the lake. Here I met my guide, who had obtained in advance provisions for our trip down the East Branch of the Penobscot River, about 200 miles through the heart of the forest to Grindstone, a station on the Bangor & Aroostook Railroad, in the eastern part of the woods. After dinner arrangement was made with the captain of the steamer to take us to Northeast Carry, near the head of the lake, the balance to be made in that graceful craft, the Maine woods canoe, the same, in an improved form, which served the Indians. They were made of bark, these of cedar wood and canvas. The model is the same. One writer has truthfully said: "Boats are artificial; canoes are natural. In a boat one is always an oar's length and gunwale's height away from nature. In a canoe you can steal up to her bow and peep into her very bosom."

At the carry a team is kept to tote canoes over the trail of two miles to the West Branch of the Penobscot River. Early the next morning the guide and I loaded our canoe and said good-by to civilization and started for a trip of two weeks, or, perhaps, in case of accident, six weeks to Grindstone, miles away on the other side of the wilderness. Nothing to hear from the busy world, alone with nature in all her grandness. That day we saw many deer, but no moose, although their tracks were numerous along the shores. At night we camped about twenty miles down the river, and slept as only he who has slept on a bed of boughs in a hunting blanket has slept. The guide rose early the next morning, looked out of the tent, and turning quickly said to me in a whisper, "Moose!" Stepping quickly out, I saw standing in the river four or five rods away a handsome cow moose. I watched her for some time, took photographs of her and then walked to the edge of the bank, which was some higher than the river, and still she did not see me. I drew my revolver and fired it off, and if Herreshoff could build a boat to equal the speed with which she ran for the woods, Lipton would never hold the Cup. Hearing a noise in the river, I turned around in time to see a large bull run out of the water a few rods away. We had been so interested in the cow we did not see him at all, nor, of course, did he see us until he heard the shot.

The guide cooked breakfast, and, as we sat down to eat, a monstrous bull came out into the river a few rods

above. As we ate flapjacks and drank coffee, he ate lily-pads and drank river water. The field glass which I carried brought him apparently at our feet. He probably weighed 1,200 pounds, and stood 8 or 9 feet at the shoulders, with a spread of antlers of perhaps 5 feet. How much would I have given for my Winchester and open season, that I might obtain that head! He was in the river for half an hour, and then walked quietly away, wholly unaware of our presence. Rarely, indeed, does one have the pleasure of dining with a moose.

That day we moved down to Chesuncook Lake, which we crossed at the head. From this lake the view of Mt. Katahdin—about thirty miles away, is fine. We passed on up Umbazookakus Stream as the guide repeated a poem, the author of which I did not learn, and only a little of which I can now recall, and that running something like this:

"Sportsman for the wild woods bound
Across the boggy ground toward Umbazookakus Carry.
Pray, good guide, do not tarry,
Paddle swiftly along to Umbazookakus Carry."

The second night was spent on Umbazookakus Lake. All along we saw numerous deer and two moose. The next morning we passed over the carry into Mud Pond, which we crossed, and then went down Mud Stream and passed over to Chamberlain Lake. This is a grand lake, about twenty miles long and two miles wide. Our course took us across an arm of the lake. The wind was high, and glad we were to arrive safely across with our provisions. We camped near the foot of the lake. It was a beautiful night; the camp site was perfect. As I lay on

Traveler Mountains. The scenery is beyond description. All I can say is, go and see it. To one to whom the click of the reel and the crack of the rifle are as music it is a paradise. A fit place to echo the sentiments:

"Give me a rifle true, and a rod well tried,
A birch bark canoe in the hands of a trusty guide."

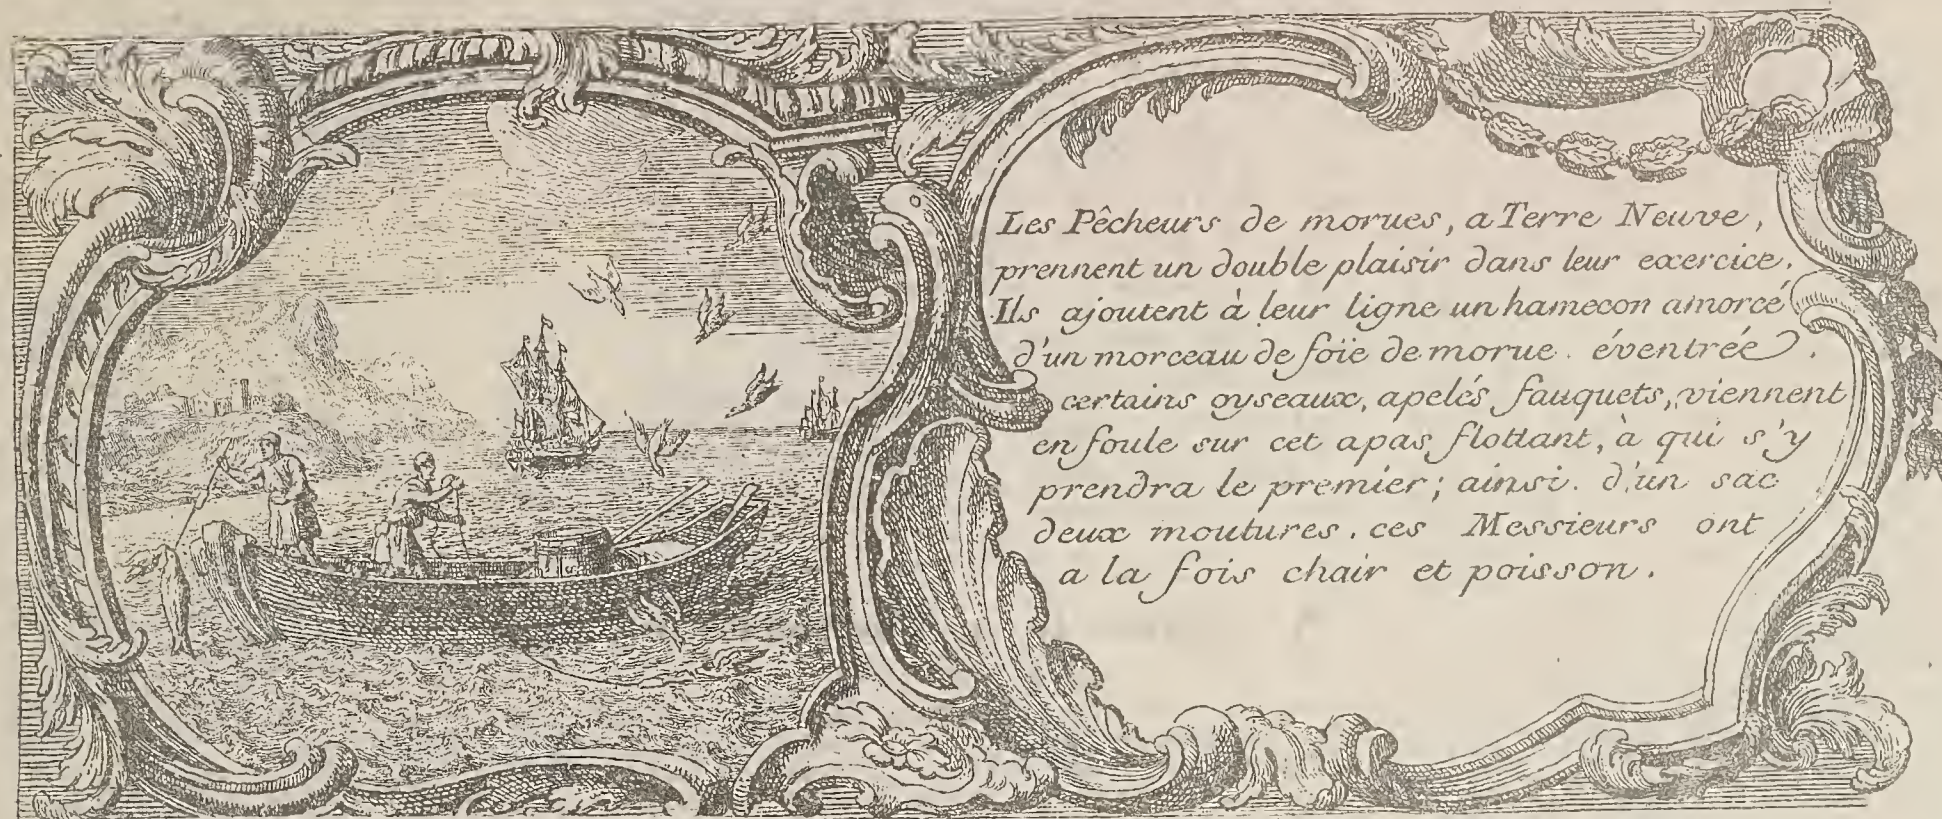

I did not care to fish. It was more pleasure to sit in the bow of the canoe, smoke a pipe and admire the beauty of nature. The next and last lake on our course was grand old Matangamook, with lofty Matangamook Mountain at its foot. This is a large lake filled with beautiful, rocky islands, with numerous trout streams emptying into its southern side. This is the prettiest lake we saw. The only unpleasant incident of our journey happened here. We pitched the tent near the water, and the next morning crossed the lake to fish. A wind and rain storm came up, blew in one end of the tent and thoroughly soaked the blankets. We slept that night on wet ground in wet blankets. Game was not as plentiful here as in the Telos Lake region, although we saw large quantities, including one large bull moose, and in his run through the forest to get away from us, he struck with his great antlers a large, dead tree, which came down with a crash, and the way he ran over and crushed down trees of quite ample proportions demonstrated the great strength of this king of the forest.

The remainder of our trip was down the main East Branch. A part of the distance the stream flows quietly between low banks covered with dense forest. At times the view of Katahdin, about twenty miles away, is fine. In other places the current is swift, over rocks, and none

Fishing for Birds.

FISHING for birds can hardly be called angling; some, indeed, might question the propriety of even calling it sport; but as the chronic angler may condescend to catch perch if nothing else offers, so he who goes down to the sea in ships and does business in the great waters of the Southern Hemisphere will while away an hour or so in catching birds. Taking them as a matter of business, to be used as bait, has long been practiced by the fishermen on "the Banks," and Capt. Collins some years ago gave an account of this in FOREST AND STREAM, and in the Quarto Fisheries Report. That it is an old custom is shown by a very old map of America in the editor's office which has as one of the marginal vignettes an illustration depicting the catching of sea birds for fish bait. This, however, being done for hire, is work, whereas the same thing done for nothing becomes, if not sport, at least play.

Let us suppose that we have been sailing southward from New York, and, after many uneventful days of breeze and calm, have met our first real gale in the stormy region off the Rio de la Plata, better known to sailors as the River Plate. During the night the tramp of heavy sea boots, the thud of coils of rope cast from belaying pins, the clatter of the chain topsail sheets, and the heavy lec rolls of the ship have announced that a gale is on. We go on deck, to find it a raw, gray morning, with the driving scud seeming to just clear the mast heads, and the wind tearing through the rigging, making the taut ropes to vibrate like so many giant harp

The codfishers in New Foundland take a double pleasure in their work. They attach to their line a hook baited with a bit of split cod liver. Certain birds called fauquets come in crowds to this floating lure, each eager to be the first to take it. So it is that from a single sack these gentlemen draw two sorts of grist, flesh and fish.

FROM AN OLD MAP.

*Les Pêcheurs de morues, a Terre Neuve,
prennent un double plaisir dans leur exercice.
Ils ajoutent à leur ligne un hameçon amorcé
d'un morceau de foie de morue, éventrée.
Certains oyseaux, apelés fauquets, viennent
en foule sur cet apas flottant, à qui s'y
prendra le premier; ainsi, d'un sac
deux moutures, ces Messieurs ont
a la fois chair et poisson.*

my blanket near the campfire listening to the calling of the loons, with the beautiful, star-studded heavens above, miles from any other person, surrounded by such beauties of nature, I thought, could I only spend the remainder of my life in such a spot! No care or worry here.

The next morning we passed into Telosmis Lake, and then into Telos, and in a short run of two or three hours I saw thirty-five deer and one moose. I took a photograph of the moose and many of the deer, including one group of seven standing close together. Arriving at the foot of Telos Lake, we found it necessary to cut away some trees which had lodged across the outlet a long time prior, before we could pass. Leaving the canoe, I waded down the stream to catch some trout for dinner, the guide going below to look at the conditions of the stream, which is almost a mountain torrent ten miles long, divided into two parts by Webster Lake, which is three miles in length. It flows in places between walls of granite several hundred feet in height, over boulders and rocks. It did not look as though a log could run through it without being ground into pulp, much less a canoe. We concluded it would be necessary to carry our entire outfit one mile into Webster Lake, and, then, after crossing that, nine miles on down to Matangamookis Lake. We threw away some of the provisions and camp articles, so as to lighten our load as much as possible, but still had ten heavy back loads in addition to the canoe. This required twenty-two miles of walking, with eleven miles of lugging, for each mile of distance covered, and we figured it would require nine days to reach Matangamookis Lake. We soon became tired of carrying, and concluded to take the chance of smashing the canoe and losing the provisions, knowing we could not starve, surrounded by fish and game. After crossing Webster Lake we loaded the outfit in the canoe, to one end of which was attached a strong rope, about 100 feet in length. One of us would wade into the stream with the canoe, and after finding a secure footing behind some rocks, would let the canoe down stream with the rope to the other, who would wade out and take it in the same way, and then repeat the operation. We reached the lake in three days without accident, except occasional duckings in the stream. This was exciting, and we enjoyed it, but still were glad to arrive safely at the lower end of the stream. To have lost our canoe would have meant completing our trip on a raft; to have lost our provisions would have meant living on fish or unlawfully killed game for many days; to have sprained or broken a leg would have been more serious. One morning we were awakened by the snort of a deer. He evidently started for his morning drink and almost ran into our camp before he saw it. A novel alarm, indeed, but one sure to awaken.

Arriving at Matangamookis Lake safe and sound, we passed on through this beautiful lake, with its rocky shores extending back to hills towering on the right in the lofty

but a skilled guide can take a canoe safely through. There are several large waterfalls, around which we carried, in some places ten rods, in others nearly a mile. One night as we were about to retire to our bed of boughs, a bear came near, and from the noise he made one might have thought he was going to devour us for daring to invade his quiet domain, but, like the cowardly beast he is, he was careful to keep out of sight in the bushes. The thirteenth day found us at Grindstone, a village with a railroad station and three houses. This is still a long distance in the woods, and a favored resort for sportsmen in the hunting season. For here canoe and tent were shipped back to Greenville, and with a feeling of sadness I said farewell to my guide and took the train for Bangor. For eight days we had seen no one. My sole companion was my guide, Edgar E. Harlow, of Greenville. A better guide or more congenial companion would be hard to find. Nearly all the Maine guides are such. They are strong, healthy, intelligent, manly fellows, ready for any amount of hard work. Nothing would induce them to change their calling. They love the forests, and I do not wonder that they do. I hope to make this same trip some year in the hunting season, and can now imagine I see the massive antlers of an old bull moose waiting for me on the banks of Telosmis Lake.

WILLARD S. REED.

CORNING, N. Y.

Susquehanna Bass.

SAYRE, Pa., Aug. 17.—The bass fishing at Rummerfield, on the Susquehanna, for the past week has been exceptionally good. George Crawford and a friend passed the greater part of the present week at this point on the river, and he declares that of catching black and rock bass of splendid girth and energy there is no end. Crawford usually nurses an admirable tenor voice, but through his angling experience of the past few days he has acquired a rich bass voice of church-organ volume. Hence FOREST AND STREAM readers are advised that Rummerfield is a few miles north of Wyalusing, and the bass are running plenty between the two points named.

M. CHILL.

Sullivan County Pickerel.

STEVENSVILLE, Sullivan County, N. Y.—A particularly fine catch of pickerel was taken from Swan Lake on Aug. 12 during four hours of the early morning. There were thirty fish, among them three unusually fine specimens, weighing respectively 4, 3½ and 3 pounds. The lucky fishermen, Messrs. Tallman, Driscoll and Schwartz, of New York, guests at the Takoma, are congratulating themselves on having caught the best mess of pickerel displayed here during the present season. Photographs of the party were taken and will be used to verify one of the stories told when summer sports will have become a thing of the past.

strings. The ship heels over to the gale until standing on the wet, slippery deck is quite out of the question, and as the big seas roll under the vessel, leaving her in their hollows, she seems to be lying at the foot of some huge hill of water. The steward anxiously surveys the distance between galley and cabin, watching for a chance to get the breakfast aft between rolls, possibly by an unlucky miscalculation starting just late enough to get half way there as some heavier lurch than usual buries the rail, and the sea comes backing in like water pouring over a mill dam. Landsmen might imagine that the sailors would be hard at work, but the fact is their work was done last night, the sails having been furled, the endless fathoms of wet and tangled ropes coiled up, and until the storm abates there is little to do save to braid sennet and make mats in the shelter of the deck houses.

There is, however, great activity among the sea birds which have come up from the south on the wings of the wind, and they hover about the ship with watchful eyes, keeping a sharp lookout for scraps from the galley. The little Mother Carey's chickens flutter hither and thither like so many black butterflies; the great albatross sails slowly up against the wind with partially closed wings, or shoots off before it like a bolt from a catapult, while the cape pigeons tack back and forth close under the stern, ever present and unsuspecting, and always very hungry. Consequently the cape pigeon is readily taken with a light line and a small hook, baited with a morsel of fat salt pork. To be sure, he isn't of much value after he is caught, and, although sometimes made into a potpie, the dish is not to be recommended to a friend without hesitation. Still the cape pigeon is a pretty bird, with his snow-white breast, black head and spotted back and wings, and as we wish some skins, we get the lines and set about his capture.

The wind carries the line streaming to leeward, the bit of fat pork at the end skipping about like some strange fly, and the chances are that the bait has barely reached the water before it is seized by some hungry pigeon. Or, perhaps at the wrong moment, the cook creates a diversion by emptying a pan of dishwater or a bucket of potato parings, and around it gather all the birds in the vicinity, to quarrel and chatter for the next ten minutes, while the ship slowly forges ahead and leaves them in the wake. Possibly some perverse bird may alight beside the bait, not caring for it himself, but devoting all his energies to the task of driving away all other birds that may venture near. Or, a bird may take the bait, and upon feeling himself hooked, fly directly toward the ship or soar upward, like an animated kite, the result being in either case that he escapes. Still, sooner or later, a bird is certain to be hooked, and as he is pulled struggling toward the vessel his companions either sit and gaze in amazement at what they consider his queer antics or fly after him to obtain a share of the dainty morsel he seems to have secured. "Landing" a cape

pigeon requires some little care, not so much from the very vigorous manner in which these little birds scratch and bite as from the unpleasant habit they possess, in common with many sea birds, of ejecting upon their captor the oily, ill-smelling contents of their stomachs. In fact, the cape pigeon, like the Mother Carey's chicken, must not be examined too closely, for these birds have a strong, musty smell, that endures in full vigor for years; but seen from a little distance, skimming over the water, rising and falling with the waves, they are very pretty to look upon. Other sea birds there are, circling far and near in search of food; the gull-like fulmar, whose dainty plumage seems almost snow-white against the storm clouds, and, in striking contrast, his sooty relative, the big, black, awkward-looking giant fulmar, called cape hen by sailormen. This last is the wisest of all sea birds, and is rarely to be lured into taking a hook. He will pick up loose bits of pork fast enough, but your most tempting bait has no charms for him, and as he sails contemptuously by, he turns his big, yellow beak toward you and solemnly winks one eye. The molly-mawk, own cousin to the albatross, is on hand, too, and last and biggest of all, the albatross himself, the king of sea fowl.

While this great bird could be easily taken in days gone by, it seems to have gained wisdom by experience, and nowadays, unless pressed by hunger, shows a wholesome distrust for any present with a string tied to it. Even when hungry, it is no easy matter to coax an old albatross into taking a hook, and it is usually the young fellows, birds a year or two old, which fall victims to their appetites. The younger birds are easily recognized by their dark brown plumage; the old birds are white, with black wings, and those of intermediate ages are more or less gray on the back.

To catch an albatross requires in the first place a goodly stock of patience, and in the second, 200 feet of line. This much is needed in order that the bait may be well away from the ship, and the last 50 feet should be as light as possible, not only that it may not be noticed by the albatross, but that its weight will not pull the bait under. And, even with the highest line, a float must be attached near the hook or the bait will sink so deep as to be literally beneath notice.

Being of goodly size and portly presence, the albatross seems fully aware of his own importance, and at times his movements are painfully deliberate. Thus, while he may plump himself down beside the bait quickly enough, this is merely to claim possession, and does not imply that he is in any hurry to take it. While he sits there a friend arrives, or possibly two, and the first comer has to explain that the piece of fat pork is his and that he intends to eat it at his leisure. Now even in a gale a ship forges ahead at the rate of a mile or two an hour, and by the time the bait question has been settled, and the albatross is ready to take it, you have come to the end of 250 feet of line, and just as the bird bends forward the pork is jerked from under his nose and disappears beneath the water. This may happen several times in succession, and each time the bird takes several minutes to reflect upon the uncertainty of things, so that the need of a supply of patience is evident. But perhaps after casting a reproachful look at a passing cape pigeon the albatross spreads his wings, makes a half circle, comes upon your bait again, and this time takes it in earnest. Now comes the tug of war. Your fingers are cold, stiff and greasy; the bird strong and heavy; the line wet and slippery, and if you slacken it for half a minute the albatross is off. Still if he pursues his usual tactics and does not resort to the strategy of flying toward you all will doubtless go well. The usual tactics are to sit up, back water vigorously with both feet, and flat his wings, or for a change hold them out, to act as drags. When you remember that each foot is nearly as big as one's hand, and that the wings are 10 feet across, it is easy to see that pulling in a 10-pound bird is something of a task. Once on board, however, he is secure; for while the albatross can breast the fiercest gale, and very likely keep on the wing for days at a stretch, he is quite unable to rise from the deck, and waddles ungracefully about, snapping at any one who may come near.

This great bird's powers of flight are indeed remarkable. Sailors sometimes fasten a tag, duly inscribed with the ship's name, the date, latitude and longitude, to the neck or leg of a captured albatross, and then turn him loose. In the museum of Brown University is a specimen thus tagged which was again taken after an interval of twelve days, during which time he had flown over 3,000 miles. How much over we cannot even guess, but as an albatross circles over the water as a well-trained dog quarters the ground in pursuit of game, it must have been considerable.

It really seems a pity to kill so fine a bird, and if you are mercifully inclined you will turn the captive loose after an hour or so in durance vile, and not deliver him up to the sailors, who will make pipe stems of his wing bones and tobacco pouches of the feet and scrape the skull to preserve the powerful beak as a "curio." But while we have been fishing for birds the morning has sped. "Eight bells" sounds, and we wind up our lines to prepare for dinner.

F. A. LUCAS.

A Voracious Pike.

WHEN trolling for pike in Loch Coulter I hooked on a blue phantom, a pike, of 7½ pounds. On my gillie taking the fish into the boat, he exclaimed, "This rascal has been hooked before," and sure enough I saw a piece of gimp 18 inches long sticking out of his mouth. We killed the fish, and then, taking hold of the gimp, I hauled on it without effect. Taking a knife, the gillie opened up the fish and cut from its inside a trolling tackle, carrying no less than ten hooks, to which was attached as a sinker the hind leg of a toy lead stag about 3 inches in length. I may say that the tackle bore a very home-made look about it, but the bait was entirely gone, showing it must have been in the fish's stomach for a considerable time. Can any other angler say with truth that he has killed a pike with a haunch of venison in its stomach?—London Field.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Some Boston Fishermen.

BOSTON, Aug. 24.—Messrs. W. J. Follett and George W. Brown, with Mrs. Follett and Mrs. Brown, have just returned from a very enjoyable summer fishing trip. These Boston gentlemen, with several of their friends, are owners of a camp in the neighborhood of Sourde brook Stream, some thirty miles up the Penobscot waters above Norcross, Me. They make a trip every spring to their camp, and have great fishing in waters that are undisturbed by the rabble. For some time Mr. Follett has had a summer trip in mind, and to take his wife with him, she being a great lover of the woods and fishing. It was not difficult to induce Mr. and Mrs. Brown to accompany them, since there is a bond of friendship between them such as only camping and living in close communion with nature can develop. But the question was, could the ladies stand a canoe and carry trip of about thirty miles up Twin Lakes and through the carries? The thing has been done, however, and the ladies went from Norcross through to camp in one day; a trip that men have usually been two days about. They had five guides, so that everything was transported in the easiest manner possible. They reached camp at 7 o'clock in the evening, soon after which a tremendous rain set in. The fishing during their stay was all that could be asked toward nightfall, but nothing in the middle of the day, and not up to expectations in the morning. They fished a number of streams in the woods that are fished but very little, if at all; and their success was great. The ladies greatly enjoyed the trip, and are ready to go again at the first opportunity. Only the artificial fly is permitted at that camp, except when Mr. Follett attempts to use his finger for bait. The hook had to be broken over a rock, by the guide, and the point turned out in a forward direction, since it was in so far over the barb. The guide used his partly closed jack-knife for tweezers. Mr. Follett always carries a nice pair in his kit, for just such purposes, but they were at camp, four or five miles away.

Alvin R. Flanders, Jr., of Newton, writes his father here, from Stanstead, Quebec, that he is having a great time fishing. With a couple of young friends, Gardner Stevens and Wilder Pierce, he has been to a trout stream in the woods, some eight or ten miles, and made a day of it. They fished up the stream, and secured fifty beautiful trout. Judging by young Flanders' description, the brook trout of that part of the country amount to something. The brooks are not fished to death. The string was pronounced a fine one for boys scarcely in their teens.

SPECIAL.

A Salmon in a Thunderstorm.

From the London Field.

HOOKING a salmon in a thunderstorm is so unusual an occurrence that an experience which I had during one of the late storms may be of interest. Consequent on a thunderstorm there had been a small flood the previous day, just sufficient to make it barely possible for fresh fish to come up from the sea; but, owing to the dryness of the ground, so rapidly had the water run off during the night that the next morning I found the river low, although still a good color. It was sultry and oppressive; there was no wind, and the sky was completely overcast with dark, lowering clouds, which rolled about in such ominous fashion that one could only speculate as to when and where the first explosion would take place. The light on, or rather in, the water was such as I had never seen before. It seemed to come froil below instead of above, and, although the water was more than usually stained for its size, the bottom was glaringly distinct even at depths where in the lowest and clearest water it would be invisible. Most aptly my gillie described the water as being "full of fire." I wandered on from stream to stream, making a cast or two here and there, but only in a half-hearted manner, and one could not but think of the Tweed fisherman's saying that there are times in salmon fishing when even if one were to "bait the heik wi' the Laird of Coekpen and his hat and feathers they'd no look at him." Presently we came to a pool tail which narrows toward a long, rocky rapid. It has to be fished from a bank some twelve feet above the water, and over dense bushes, which form an excellent screen. Here we smoked and watched the fast-gathering storm for some little time, till suddenly it broke with a tremendous crash overhead. An unpleasantly vivid flash, and then down came the rain in such torrents that the surface of the river, now looking as black as ink, fairly hissed.

Immediately I began to fish, the while half deafened one moment, half blinded the next, we were as effectually drenched as by a shower bath. The fly was a Childers, and we were consulting as to whether it would be worth while to give the place a second run over with something with a silver body, when just above a rock, in midstream, on the very turn of the water above the rapids, there was a strong "rug" under water, and up went the point. A lively fish, but in one sense much too lively, for he performed all those antics which so surely indicate that a fish is lightly hooked. Frequent jumps, interspersed with turning over, kicks on the surface, and short, sharp jags under water, but never a satisfactory run to give one the chance of applying a punishing pressure, and every moment we expected to see the last of him. Fight fair he would not, and that he was lightly hooked we soon had evidence, for, as he lay on his side for a moment the whole of the fly was visible holding by a mere shred outside the lower jaw. A few minutes of this spluttering contest, and then something had to be done, so he was worked toward the usual gaffing spot. The gillie had dropped down through the bushes, and stood ready under bank, but owing to the bushes and bank he was quite invisible to me. The situation, however, was not novel to either of us, as we had dealt with many fish before at the same spot and in the same manner, so I had no difficulty in placing the fish within his reach without seeing him. At that moment there was an awful clap of thunder, followed by flashes which made one wish to be anywhere except under trees, and then I experienced a painful shock, caused by a sudden slackening of the line. I reeled up, and had been

bemoaning my bad luck for some minutes before the gillie appeared, and then was my grief turned to joy, for he carried the salmon, a fresh-run 12-pounder. He had struck the fish actually at the moment that the fly tore out.

I have had to put up with a good deal of chaff from sundry riverside neighbors about what they are good enough to speak of as "that thunder and lightning salmon," and I have even been asked rude questions as to whether it was the thunder or lightning that killed him, and so on. To these scoffers I reply that if they had been fishing instead of sheltering in the midst of the downpour mine might not have been the only salmon caught in that thunderstorm.

A. G. D. G.

A. N. Cheney.

QUEBEC, Can.—Editor, *Forest and Stream*: None but those who have enjoyed the friendship, the companionship and the intimate personal correspondence of such a man as Albert Nelson Cheney can realize the shock caused a day or two ago, when I opened one of the familiar envelopes from the office of the New York State Fish Culturist, bearing the well-known Glens Falls post mark, and found within a clipping from one of the local papers telling of his sudden death. Of Mr. Cheney I wrote in 1896 in all sincerity, immediately after the title page of one of my books: "Because he is an accomplished angler and an authority of repute upon all that pertains to fish and fishing;

"Because of the instruction I have derived from his writings and of the pleasure afforded me by his private correspondence and his entertaining companionship in the Canadian environment of the ouananiche;

"Because of the counsel, aid and encouragement which he has so generously extended to me in the preparation of the present work—

"Above all, because he is my friend and the friend of the ouananiche, I dedicate this book to A. Nelson Cheney, Esq."

Need I say that both the literature and the art of angling and the science of fishculture are enormously the poorer for the death of my lamented friend, whose "Angling Notes" in *FOREST AND STREAM* made him as many friends as the paper has readers? May I also express the hope that means may be found to preserve in book form a collection of the best things from his pen that have adorned the pages of this paper and amused and instructed its army of readers?

E. T. D. CHAMBERS.

STATE DEPARTMENT OF FISHERIES AND GAME, BOSTON, Mass., Aug. 24.—Editor *Forest and Stream*: The announcement of Mr. Cheney's death was to me like a thunderbolt out of a clear sky, for I had not the remotest suspicion of anything of the kind, and only a short time previous had read of his acting as one of the jurors at the Buffalo Exposition.

I quite agree with you that it will be difficult to fill Mr. Cheney's place, and in view of the good work he has done in the years since he has been the Fish Culturist of your State, it is a gratification now to me to recall the fact that I may have had some influence in securing his appointment. I have a personal regret when men like Cheney drop out of the work in which they have not only distinguished themselves, but have added much to the public welfare. It is possible that others may come up to fill the broken ranks, and to fill them acceptably, though we cannot be without a sense of anxiety lest this should not be so in many cases, and particularly where the standard set almost defies approach. That he will be missed I know, not alone in New York, but all over the world where there is an interest in fish and fishculture.

J. W. COLLINS, Chairman.

The Maine Woods at St. Louis.

BOSTON, Aug. 26.—Late Bangor, Me., reports say that the case of the two men who fished Green Lake, not far from that city, last spring before the ice was all out, has been not passed by order of Commissioner Carleton. It will be remembered that the two sportsmen hauled a boat over the ice to where there was a little open water and went to fishing. Some of the residents about the pond were indignant, since the law reads, "When the ice is out," etc. They claimed that the meaning of the law is that the ice must be all out of the waters fished—that is, clear of ice. The fishermen were arrested and brought before a trial justice, who found cause and bound them over to the higher court. Now it seems that Mr. Carleton has decided to construe the law otherwise. At least, he has not seen fit to proceed with the case. Doubtless the next Legislature will be asked to make the law plain on that point.

A commission was appointed last winter in Maine, under an act of the Legislature, providing for the same, to arrange for a Maine exhibit at the World's Fair, to be held in St. Louis in 1903. On this commission are a railroad general manager, a manufacturer, etc. The manufacturer I have seen, and he says that he is most thoroughly in favor of letting the manufacturing interests in Maine take a back seat at that exhibit, and devoting about the whole attention of the commission, together with all the funds at their command and all they can raise, to showing the world what Maine has in the shape of fishing and shooting facilities—in fact, to show up Maine as a pleasure resort. He is aware that Maine has over 20,000 square miles of forest, getting to be well stocked with game, and within this vast forest over 2,000 lakes and ponds, connected with great waterways, all well stocked with game fish. In the upper Penobscot region, for instance, and including the Allagash upper region, there are nearly 1,000 of these lakes and ponds, some of them almost unknown to sportsmen, and virgin trout waters. He would make this vast interest of the State known to the sportsmen of the world through an exhibit that could not fail of being a great attraction. He is sure that the other members of the commission, especially the railroad manager, are with him, and that it will be better to make the sporting facilities of Maine the leading feature. The rest of the country, he believes, does not know what Maine has to offer to the lover of rod and reel, rifle and shotgun,

canoeing and camping. Not more than one-half of it has yet begun to be developed, and still it is already of far greater value to the State than manufacturing—bringing in more money. Even the great timber industry is small compared with what sportsmen and vacationists bring into the State, and this should be doubled—yes, quadrupled. He is right. The love of fishing and hunting, of forest life, is making rapid growth; veritable strides, in fact, and Maine, having the natural opportunity, should draw her share of the benefits. With this growth of sporting interest comes increased patronage of such delightful papers on the subject as the FOREST AND STREAM, and that paper will hold up the hands of the Maine World's Fair Commission in the work they propose to undertake.

Reports say that fishing is quiet at Moosic Lake, Me., though occasionally a big one is landed. Fishermen are making trips to "ponds in the wilderness," and few come back disappointed. In September fly-fishing will be good again, and a number of guests and camp and cottage owners will remain for this fishing. Reports from the Rangeleys mention some catches, most of which are "plugged," however. At Haines' Landing, Lake Moose-lunagantic, last week, Miss Bessie Boswell, the fourteen-year-old daughter of J. H. Boswell, of Greenwich, Conn., landed a beautiful salmon of 6½ pounds. Wilder Anthony, of Brookline, Mass., also took a salmon of 4¾ pounds, at the same lake last week. Vanceboro, Me., reports mention good bass fishing on the ponds thereabouts. White perch fishing is also holding out well.

L. O. Crane, of Boston, has returned from the Megantic Preserve, where he has been spending five or six weeks with Mrs. Crane. Both are fishermen all through. Mr. Crane has fished Big Island Pond, chiefly this year, though he fished L. Pond last year. He kept a record this season up to 1,000 trout caught, and then stopped counting. Other sportsmen must not hold up their hands in horror till he has had a chance to explain. Nearly all of these trout were returned, unharmed, to the water. The largest was 2½ pounds. He did save sixteen beauties to bring home to Mr. Wesley C. Hemenway, his friend and business partner. Mr. Hemenway says: "They were just elegant; as firm as when they came out of the water. I still know how much I appreciate them, chained to my desk all summer as I have been." SPECIAL.

CHICAGO AND THE WEST.

The Leaping Trout.

It goes without saying, at least in Chicago, that the Hon. Carter H. Harrison, Mayor of Chicago, is the red-hottest kind of a red-hot trout fisherman. Mayor Harrison has been spending some time at the Huron Mountain Club, on the south shore of Lake Michigan, and has had very fine success. Last week he broke the club record, and probably also broke his friend Hemp Washburne's heart, by capturing a 5½-pound brook trout in Salmon Trout River, which runs through the club preserve. It is not stated whether or not the Mayor got this trout fair on the fly or landed him with one of Mr. Washburne's combination casts, which latter includes a live minnow, a worm and a few other attractions. It is to be hoped that the Mayor adhered to his creed and killed the fish on the fly. This big fish comes as poetic justice, for, as may be remembered, when Mr. Washburne caught his 5-pound trout last year in the same stream, he captured a fish which had been located by the Mayor and angled for by him patiently nearly all summer. The fiendish glee with which Mr. Washburne recounts even yet to Mayor Harrison the story of that fight with the big trout will, it may be supposed, be somewhat tempered when the Mayor comes back with a fish ½ pound better. There will be doings at the Wishinnee Club when the Mayor and Mr. Washburne meet here in Chicago presently.

The Leaping Tuna.

Mr. J. Greville Wilmot, of this city, asks how high the tuna jumps, and is in search of some one who has had a taste of this famous Catalina fishing of California. Will some one tell him whether the tuna jumps, how high he can jump when he is feeling good?

The Leaping Tarpon.

Mr. J. W. C. Haskell, of this city, shows in the window of his store to-day a mounted tarpon which weighed 17 pounds, and which required five hours' play before it was killed. This fish was taken at Aransas Pass, near Rockport, Tex., in those Texas tarpon waters which are so rapidly gaining prominence.

The Leaping Black Bass

Mr. W. P. Mussey and Mr. Elmer Wilkinson, of this city, figure on starting in a few days for some of the small-mouthed black bass on the Mississippi River, which have been mentioned from time to time in these columns. I have advised these gentlemen to go to La Crosse and secure their guides there, going up or down stream, as the guides may advise. Though no late reports are at hand from that locality, this magnificent sport now ought to be in pretty fair condition.

Remedies for Sleeplessness.

No. 1. Lie flat on your back. Keep both eyes wide open and gaze steadily about you at some imaginary spot on the ceiling. Concentrate your gaze and your mind on that one little spot up above you.

No. 2. Assume the same position, but instead of focusing your gaze intently on the spot above you, roll both eyeballs around in the sockets as widely as you can make them go. Keep it up.

No. 3. Lie in the same position. Inhale deeply and expel the breath slowly. Imagine that you see your breath in the form of white steam. Keep it up.

One of these three remedies will nearly always induce sleep. If all fail, then try:

No. 4. Go fishing.

The philosophy of this thing, as applied to the average city dweller, is this: The waste particles of the system, those particles ground off in the friction of high-gear life, lie like iron filings along the delicate telegraph wires of the nervous system. They irritate. When you focus your attention on something else, you temporarily forget

these particles and you go to sleep. Now, when you go fishing, you are in the open air, where there is much more oxygen. This oxygen burns up these iron filings from your wires and leaves you with a clean set of wires. Your attention is just as much occupied by watching the rise of a trout under a bank or a bass in some deep pool as it is in rolling your eyes and looking up in the dark. Remedy No. 4 has this additional advantage, that it removes the cause of sleeplessness, whereas all these other remedies only make you forget it for a while.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Southern New Hampshire.

NASHUA, N. H.—Editor Forest and Stream: I am glad to say that fine catches of trout, perch and pickerel are being made in the near-by waters around and in this city. The waters are somewhat swollen, but are swiftly going down to their natural position. A few weeks ago I tried for trout, and it was my unlucky day, for I only got three little ones. In my recent little trips into the rural sections I have seen much of nature. Deer are prospering. Not many days ago three were seen up at Mine Falls, and every day come reports that some have been seen. Of squirrels and snipe I have seen many. On June 8 I went trouting again, and was favored with luck. Another fellow named Jack and I secured forty good trout. I caught the big one. He was about 11 inches long, and a beauty. To the Nashua sportsmen I suppose Chase Brook and the Bullet are well-known spots. Some astonishing catches have been taken from these two places. The other day a well-known "boy" took one that weighed a pound and a half from the Chase. A party of four went over to Robinson's Pond for pout, the other night. It rained, and they, having no waterproof covering, had to put inshore for the night, but in the morning all was fair, and they got a mess of perch and pickerel. Many men can vouch for the Pennuchuck lakes as good for pickerel, and, indeed, they ought to be, having been closed for a number of years. A dozen albino salmon have been shipped from the United States fish hatchery in this city to the Exposition at Buffalo. The fish are natural curiosities, being perfectly white. They are few in number, and Superintendent Hubbard desires that they should be returned to this city in order to perpetuate the breed. Many prominent Nashua sportsmen have returned from their trips to Maine lakes and streams, and report having fine luck. Let us hear from some other Nashua men as to their success with rod and gun.

EDWIN C. HOBSON.

Big Muscallonge.

GLEN ISLAND, Ont., Aug. 24.—Editor Forest and Stream: Mr. Wallace Murray, of New York, who is sojourning here, has just captured a muscallonge weighing 37½ pounds. The fish put up a noble fight.

C. A.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

And now we have a batch of finds of human flotsam and jetsam, in which the sportsman appears as a rescuer in time of stress.

69

A mysterious wild woman was found by hunters in the woods near Gordon's Ferry, twelve miles north of Dubuque, Iowa, and the press dispatches ran: She is described as about 20 years of age, with lithe, sinewy form, a receding forehead, and eyes of unnatural luster. Her hair was black and about three feet long. She was almost nude, and wore neither shoes nor stockings. No one in the neighborhood can give any information regarding the strange creature, but it is stated by one of the old residents that four years ago the daughter of a farmer in a small Illinois town, who had been engaged to be married to a well-to-do farmer, had mysteriously disappeared, because of the refusal of her parents to give their consent, and has not since been seen. It is supposed that she subsists on roots and herbs and lives in some cave among the rocks. An effort will soon be made to capture her.

70

Whatcom, Wash., hunters on a cruise to Jervis Inlet found on Nelson Island an old man, blind and faint, prostrate at the entrance to a wrecked hut. He was a one huntsman who three days before, at nightfall, had come upon the cabin and sought shelter there. He went inside and struck a match, and a spark from it fell into a half keg of powder on the floor, which exploded, wrecked the shanty, and almost killed him.

71

A somewhat remarkable find was made by a party of men hunting for game in the Welsh mountains. The dogs, having gone to ground in a hole in a rock, unearthed a man who turned out to be the master of a schooner who had been missing six weeks. He was in a very emaciated condition, and could give no account of how he had lived during the time he had been in the cave, which was only 6ft. by 4ft. in dimensions. One thing is, however, certain, that had he not been found by the dogs, or by some other means, he must soon have been starved to death.

72

Several members of the Mount Adams Gun Club, hunting in the vicinity of New Trenton, Ind., ran across a dilapidated old log cabin that looked as if it had been there for a century. It stands in the middle of 105 acres of as pretty farming land as there is in that part of the country. The men, thinking the place uninhabited, went to the door and pushed it open, when, to their surprise, they found it occupied by two aged women, gray-haired, weazen-faced and decrepit. The floor, which was the bare earth, was the parade ground of a lot of fowls. In one corner the roof was off, and under this vacant

place was a pool of water in which a number of ducks were waddling and expressing their delight with loud quackings. In another corner was an old-fashioned canopy bed. The posts were seven feet high and supported the roof. The women became enraged at the intrusion of the hunters, and, in husky voices, ordered them to leave.

Inquiry among the neighbors revealed the fact that the couple are sisters, named Hayes. Mary Ann is the oldest, aged sixty, and Bridget is fifty-eight. The oldest inhabitants remember them as sisters only. No man was ever seen about the place. How they exist is a mystery. They do not farm. They have a cow, and it is supposed they live on milk and fowl. Bridget is the more eccentric. She goes to bed in October, and never gets up until April, the other sister administering to her every want as though she were an invalid. They will accept no charity, and become fearfully enraged when a male person crosses their property. The land is worth \$50,000, but they resent all proposals for a sale. It is said there is an agreement between the sisters that when one dies the other is to follow immediately by suicide.

Sept. 25.—Toronto, Can.—Dog show of the Toronto Industrial Exhibition. W. P. Fraser, Sec'y. and Supt.

Ambulance and Picket Dogs.

From the London Field.

Owing to the enormous expenditure of ammunition with modern magazine rifles in action, there is plenty of scope for the trained war dog who can fulfil the duty of carrying articles from the carts to the firing line, being more ignorant of danger, far more active, and not so easily shot down as a man, in consequence of his smaller size and greater speed. Most dogs easily become accustomed to gun firing, and the distance between the firing line and reserve ammunition by means of war dogs should, as it were, be materially reduced by the animal's great speed. Also during an engagement the war dog can be employed in connecting the different columns, as in the messenger service, and in bringing word of any sudden development in the fight, especially on ground inaccessible to cavalry. The dog does not require the installment and preparation of a field telegraph.

One of the principal duties of the war dog, for which he is fitted by nature, is the seeking of the wounded and missing among the hedges, ditches and rocks, etc., after an engagement. Experiments on the Continent during the last thirty years have been most successful. The enormous improvements in the modern weapons of warfare have made equally large demands on the ambulance and medical departments. The distances on a modern field of battle, owing to large-range firearms, have in a corresponding manner increased enormously; and if the ground is very difficult the stretcher-bearers are consequently hindered and their work is rendered severe. It is even possible that the wounded, weak through loss of blood, are unable to call for help, and, owing to the ground, are passed by unseen by the stretcher-bearers, or are only discovered when help is too late. Of what use, then, are the latest discoveries of medical science if the wounded are not found? The German general, V. Herget, an eminent military authority, expressed himself as follows lately, while attending a trial of ambulance dogs: "However great the progress of medical science, the latest discoveries are of not the slightest use to the wounded until the wounded are discovered, and the finding of the wounded in night attacks is extremely difficult, and often almost impossible, for the ambulance detachments, and, in many cases, without auxiliary assistance, quite impossible. This auxiliary assistance will eventually be supplied by the trained ambulance war dog. If we examine the figures given during the Franco-German war of 1870-71, the number of men missing and never accounted for was appalling."

In July, 1899, dogs were used for this purpose with the army corps under the supervision of Gen. von Blumenthal. The following is the performance of one of the dogs: Resi, a collie bitch, regardless of the musketry fire, pressed on and delivered her messages, disturbed neither by the marching troops nor cavalry detachments. She also guarded baggage while her keeper went away to a good distance. The officers of the Tenth Army Corps were very pleased with her work in finding the missing, and gave her universal approbation. After the stretcher-bearers had thoroughly examined the scene of the engagement, three men were reported as missing, and not to be found. Resi, the collie bitch, was ordered to search for them in the very wide field of battle. On receiving the word from her keeper, "Seek wounded," the bitch rushed off and scoured the thick covert at the back of the targets, hunting keenly for the missing in the ditches covered with bushes. In a short time she gave signs of having discovered some one. In five minutes more she had found the three missing soldiers, which the stretcher-bearers or ambulance corps had been totally unable to do after prolonged searching. They might have been left in real warfare. Gen. von Blumenthal was delighted with the dog's performance, and the chief of the staff in his report said: "I am convinced that dogs thus trained can save the lives of many poor wounded and missing lying in hilly ground."

Sergt. Brickner, of 74th Infantry Regiment, at Coburg, wrote: "Bello, a collie dog, distinguished himself at the maneuvers. With absolute certainty he took messages to the pickets and guards—nothing put him off, neither game, strangers, nor other dogs—he also took messages across the water. In seeking the wounded he is unrivalled. We also used him on the ranges. Bello took messages from the firing point to the markers, 600 yards off, without the company having to stop firing. He also took messages across difficult country, doing one and a half kilometers in four minutes." Another collie, Tonunka, with the Hussar Regiment King William I., went through the autumn maneuvers, 1899. Her keeper said: "She followed the squadron during the whole maneuvers, and

showed herself possessed of great staying power, which was the more difficult, she being for weeks exposed to continuous rain. She was used to find the missing of the 69th Infantry Regiment with great success, and was also utilized as messenger to the squadron with good results."

The following is a description of a trial of ambulance dogs with the army corps at Coblenz: At dusk on July 27, 1899, the keepers brought out four collies; 200 soldiers were put out to represented wounded, and 500 stretcher-bearers set out carrying torches and lanterns into the darkness. It was an interesting bit of difficult work. Numbers of officers followed on horseback and on foot to watch the proceedings. The work commenced in the Coblenz wood, and a more difficult task could not have been conceived than was that of the dogs, but, notwithstanding the horses and sightseers, the dogs on the left wing saved all their wounded—two other dogs were employed on the right wing and found the wounded in pitch darkness without lanterns. Two hundred more soldiers, representing wounded, had been placed in various parts of the glaciis Coblenz, and, after the stretcher-bearers had come in, reported eighteen men not found. The four dogs and keepers were then brought up, and in twenty minutes the eighteen men were discovered and brought in; otherwise they might have been left to their fate. The staff of the Eighth Army Corps, Coblenz, expressed the greatest satisfaction with this trial. By order of the German War Office the rifle regiments and jäger battalions, which are numerous, are provided with collies, and some of the French regiments have nearly thirty dogs with them.

There are various other uses to which war dogs can be put. In investing a fortress an enormous number of sentries have to be thrown round it, who would be liable to sudden sorties of the enemy in squally weather, fogs, etc. The hearing powers and scent of the dog would render the blockade much more certain, and diminish the number of sentries. On the other hand, the employment of dogs in an invested place would be useful, as they, by their nice sense of hearing and scent, would be able to give such warning as would guard against assaults, and render valuable assistance to the tired sentries in severe weather. They can also be used as messengers at short distances. Regimental dogs, when not on outpost duty, would be employed to guard wagons, gun carriages, and ammunition; also with convoys for scouting in front, and in connecting the sentries at night.

In savage warfare they are extremely useful, and they have been used by both French and Russians. The general system of savage warfare lies in ambushes. In Mexico, in the guerrilla war, a colonel of volunteers trained some dogs which gave the guerrilla insurgents a warm time. If they tried ambushes the insurgents were scented out by the dogs, and their plans failed. If they retreated into the depths of a wood they were tracked out by the dogs, and when they had camped for the night were suddenly attacked by them. War dogs ought thus to be able to prevent them creeping up in the grass and surprising, and could give timely warning, and the march of troops in thick country should be covered by dogs as in the Mexican war, and they could also follow up the scent of the retreating foe.

I may say that I have devoted many years to the study of dogs, and have seen the German war dogs work in their own country. It has struck me as remarkable that we, the most doggy nation in the world, who have had trials of sporting dogs, sheepdog trials, bloodhound trials, etc., have never taken this subject up, although, what is more extraordinary, we supply the material—our collies and other dogs—to foreign countries. It is hardly to be supposed it is a chimerical idea, as Germany, where experimenting has been going on since the war of 1870-71, is largely increasing the number of dogs employed. Capt. Haldane, who escaped from Pretoria, says the greatest danger they had of recapture was from the Boers' dogs, not the Boers themselves; and Capt. Steele, of the United States cavalry, in writing to a New York military journal, says: "The only way my troop was protected against the Filipinos last year was by a dog, who always scented out their ambushes."

J. HAUTONVILLE RICHARDSON (Major).

The Morgantown Hounds.

THE New York Sun, in a recent issue, contained the following:

"MORGANTOWN, Pa.—The last of the thirty-six hounds of the Morgantown Hunt Club was shot this week by the enraged residents, and all of the vagrant dogs of the once famous kennel have been buried in the special cemetery donated by a former member of the club. Several of the members of the club are up in arms against those who shot the dogs. They threaten never to darken the doors again of those who had any hand in the slaughter. Said one of the veteran fox hunters:

"The dogs harmed no one. When they were young they delighted thousands in chasing foxes over the Welsh mountains. Not a kennel in Pennsylvania could beat this pack when Bart Gable rode at the head of them. There was no use killing the hounds at all. True, they boarded around, but the neighbors gladly fed the old heroes of the hills. They didn't scatter fleas any more than the other dogs do. I had no fleas in my house, and I don't know of any one who had—from these hounds at least. They never kept me awake. I can go to sleep with the baying of the dogs. If people can't stand the bark of a dog they ought to move off the earth. It was brutal to see those three men with guns shooting down those hounds in the fields, on the public roads, in back lanes, or anywhere they'd find them.

"Wherever they saw a hound, asleep or awake, they'd just fire away and kill 'em. Why, sir, many a time those dogs saw guns in friendly hands and they never winced. Every one of them was shot over in rabbit seasons, so that when they saw these gunners it was nothing new for those dogs. The hounds thought they were in for a gunning trip. They never suspected. And just as they looked forward to an old-time romp through the woods they received hot lead in their brains and their gunning and sporting days were over.

"If any of 'em had been killed accidentally I wouldn't

care, but to see innocent hounds shot to death by those who were thought to be friends of the poor brutes—why, that makes me sick. I'm sure there will be many an old sport in this region who will often visit that little cemetery where the hounds are buried and think over the old times at fox chasing over the Welsh mountains."

Points and Flushes.

We have received the following communication: "The Pointer Club of America comes out with a programme of its second annual field trials, to be held at Manor, L. I., Nov. 12, 13 and 14, and it is certainly a fine piece of work, for which the secretary, Mr. R. E. Westlake, deserves great credit. It announces a Derby, Members', All Age and a Championship Stake. All stakes are open to members only, except the Championship, which is open to the world, all forfeits being payable with the nomination, the balance the evening before starting. The matter interests many pointer men, and it is well worth their trouble to send their addresses to the secretary at Scranton, Pa."

'Mid Reef and Rapid.—XIX.

BY F. R. WEBB.

SUNDAY is always a comfortable day in a canoe camp. As a rule, we do not cruise on that day, preferring to lie by and rest, although in the abstract, I presume there is but little to choose between lying quietly in camp and drifting quietly down the river; but an idle day in camp now and then is a luxury as well as a convenience. Indeed, such a day can hardly be called idle, there are so many little things to potter around with and look after.

We shaved, wrote letters and washed out a few little things, such as handkerchiefs, towels, etc. I took everything out of the mess chest and washed and sponged it out carefully, and set it in the sun for an hour. The kitchenware was given a thorough overhauling, cleaning and polishing with sand and ashes. Our blankets and mattresses were hung in the hot sun and given a good airing and freshening; the tents were taken down and the wide-open canoes also placed in the sun, and thoroughly aired and dried out, and all sorts of similar little odds and ends were attended to.

The Colonel was obliged to return home on Monday, and we had hoped to reach Massanutton, ten miles below, by Saturday evening, as that point is but four miles from Luray, which is the most convenient point in this vicinity for him to reach the railroad, but as we had not succeeded in reaching there on Saturday evening, a short Sabbath cruise was decided upon, in order to have him there when Monday morning dawned; accordingly the scattered articles were collected and the canoes packed, and by 11 o'clock they were launched, and we were ready to resume the cruise; but we were not destined to reach Massanutton that day, nor, indeed, for several days, for the day's cruise was but a short one, and full of the proverbial Sunday luck in the way of disasters, finally culminating in the capsizing of Lacy had so long and so cheerfully predicted for the Colonel.

It was a beautiful, bright morning and the river looked inviting, as it rippled in the soft, balmy, summer breeze, which rustled the leaves overhead with a musical tinkle, and toyed with the soft, delicate folds of our bright, little, silken pennants, and the sunlight danced and sparkled from the little wavelets, which lapped up under the sides and ends of our canoes with a melodious gurgle. The gentle lowing of cattle from the barnyard above gave a pastoral effect to the scene; a little "sweetheart bird" called his striking little "tweetart, tweetart, tweetart, tweet!" from the trees on the further bank, and all nature seemed bright and joyous. I drew my canoe lightly up alongside of Capt. Keyser's roomy, wooden punt, stepped aboard, dropped lightly into my seat, pushed off into the still, deep water and waited for the others.

"Hello! here's the mischief to pay! I've sprung a leak!" I exclaimed, in dismay, as I chanced to look down into the bottom of my canoe, while adjusting my hatches, and observed the water flowing in a narrow, black stream along down the floor, which was dried and baked to a grayish-white by the previous exposure to the morning's sun.

"That's bad!" exclaimed George, as he paused, with one foot in his canoe. "Does it seem to be much of a leak? I expect we'd better go ashore again and fix it."

"The water doesn't seem to be coming in very fast," I replied, as I watched it closely for a few minutes. "I

don't think it amounts to much. Come ahead! I'll keep afloat until lunch time, I reckon, by stopping to bail out occasionally; it's too much bother to go ashore again and unpack, now that we're just launched and ready to start. I guess I must have gotten the worst of it up in Kemple's Falls the other day."

"Yes, I expect that's where you got it," replied the Colonel, as his canoe swept alongside of mine, propelled by the long, gentle sweeps of his big 8ft. paddle.

"It's not far to our lunch place, anyhow, and we'll make it in an hour or thereabouts," I added.

"Where do we lunch?" asked Lacy, ever alert and ready whenever anybody said anything about eating.

"At the spring at the foot of the Columbian Falls," I replied, "about three miles and a half from here."

"How are the Columbian Falls? Are they any worse than Kemple's?" asked the Colonel, as we swept the water into little swirls with our paddles and got under way.

"Well, they're longer, and, in some respects, more troublesome," I replied, as we rounded the bend to the left, and entered upon the mile-long backset from the Newport dam. "There's a long section in the middle that's very tedious, on account of the interminable reefs, but—"

"Oh! well," said the Colonel, carelessly, "they won't bother me any then. I don't think much of Kemple's Falls, for all the fuss you fellows are in the habit of making over their difficulty."

"Well, that may be," George replied, "but I recommend you to handle your canoe with circumspection—"

"Yes, you want to govern yourself with considerable circumspection," Lacy put in.

"Especially at the lower end of the falls," George continued, "for I assure you the Columbian Falls are no joke."

"That's all right," replied the Colonel, confidently, "don't give yourselves any uneasiness on my account."

We found the Newport dam entirely rebuilt, and the low, easy shoot formerly at the right bank was now closed. The dam is a massive log structure, some 6 or 7ft. high, with a top broad and flat enough to drive a wagon over, so gentle is the inner or up-stream slope. At the present stage but little water was running over the dam, and we beached the canoes along its crest as along a flat bank, and stepped out into the clear, shallow water, which looked like a sheet of amber varnish spread over the clean, gravel beneath.

Over in the middle, where our canoes lay, the water below the dam was deep, and a portage was quickly and easily made by simply sliding the canoes over the dam and dropping them, bow first, into the depths below, the operation being watched with interest by a little group of Sunday idlers, dressed in their rural Sunday best and congregated around the closed and silent mill.

There is, as usual, a short, steep rapid immediately below the dam. A couple of massive log cribs, built to brace and strengthen the dam, extend, buttress-like, down stream from its base, some 10 or 15ft. or more, and around the left-hand one of these the rapid boils and whirls, on its way down the crooked, narrow channel, to still water below. George scrambled down the log face of this buttress into his canoe, and essayed the rapid. As he swung around the corner of the buttress, endeavoring to keep as close in as possible, the swirling current caught him in its powerful grasp and swung him out of his course toward the reefs at the right of the channel. With an herculean sweep of his paddle, he brought the Shenandoah back into line again, but in the effort he snapped the paddle short off in his grasp.

"Confounded be all they that worship carved images!" he exclaimed, devoutly, as he threw away the shorter piece, and, with the single blade, he succeeded in working through the rest of the rapids, and swung in to the bank at the spring, a couple of hundred yards below the mill, to await the rest of us.

Profiting by his mishap, the Colonel and Lacy made no attempt to run the rapid, but pushed across the deep pool below the dam in their canoes, until their keels grated on the gravel beyond, when they stepped out into the shallow water, and led and shoved their canoes down a little, brook-like channel which led down through the rocks and over the gravel bar into deep water below, and in a few minutes the Clyde and Mary Lou were lying cheek by jowl with the Shenandoah at the spring.

Standing on the log buttress, I carefully studied the rapid for a few minutes, then, deciding to follow the course chosen so disastrously by George, I climbed down the face of the buttress and into my canoe, lying quietly at its base. Carefully working my way along its sides and around the corner by holding on to the logs with my hands, instead of using my paddle, and taking good care not to let the swift water get hold of the stern of my boat and throw it out away from the logs, as had happened to George, I succeeded in working my canoe around the projecting end, and around the further corner into the swift little channel, down which, after letting go of the buttress and grasping my trusty paddle, I swiftly shot, dancing and tossing over the surges, into deep water below, without touching a rock.

I paddled in below the other three canoes, and speedily joined their commanding officers at the spring, where we enjoyed that most refreshing of luxuries to the sun-baked, thirsty canoeist, a good, cool drink of water, right out of the spring.

"Well, what's to be done?" said Lacy, turning to George.

"You surely can't continue the cruise with that broken paddle?" added the Colonel, as he lifted the bow of his canoe up on a projecting ledge.

"I can, but I don't intend to," replied George. "There's only one thing to be done," he continued, as he picked up my paddle, "and that's to find a carpenter's shop or bench and make a new paddle. I'll take yours along, Commodore, for a pattern," he added, as he started up the bank toward the mill.

"George is a handy fellow, when it comes to making paddles," said the Colonel.

"Yes," I answered, "he ought to be, for he has had enough experience. He never makes a cruise without smashing at least one paddle, and sometimes two."

"Hold on a minute, George, and I'll go with you," said Lacy, as he bustled around, spreading out on the rocks and bushes to dry the few minor articles in his

canoe that had gotten wet. His clothes bag and blanket bag had been securely tied, and no water had penetrated either.

The Colonel and I watched them as they walked along the road on top of the bank until they reached the mill. We saw them stop and interview the little before-mentioned group of Sunday idlers, one or two of whom could be seen pointing up the road, after which they resumed their walk and disappeared from our view around a turn in the road.

"I expect this will be a good time for me to repair damages myself," said I, as I began to unpack my canoe. "It will take George a couple of hours, at least, to whittle out a new paddle, and I might as well utilize the time in putting a patch over that leak, and so save delay at lunch time."

"It's half-past eleven now," said the Colonel, as he consulted his Waterbury, after which he stepped into the shallow water and took hold of the stern of my nearly empty canoe, while I took the bow, and, together, we carried it up on to the bank, where I busied myself in getting out the innumerable small articles stowed here, there and everywhere, in bow and stern pockets.

"It will, you say, take George a couple of hours to make his new paddle, which will make it half-past one. Why not lunch right here by this spring before we start? This is a good place," said the Colonel.

"It's too public," said I. "Here come a lot of those loungers now," as I observed the little group of men and boys about the mill get under way in our direction. "These people are always good-natured and obliging, but I hate to eat with a curious crowd standing around watching every mouthful as it goes down my throat."

"That's a fact," the Colonel admitted. "I hadn't thought of that."

"We can reach our original lunch place in three-quarters of an hour, which will make it this side of 2:30, and, as we had a late breakfast, that will be time enough." I replied. "Take hold of that end and let's turn her over."

"Yes, that will do well enough," said the Colonel, as he took the other end of my canoe, and, lifting her up, we quickly had her lying in the hot sun, bottom upward, and began an inspection.

"The keel and bilge keels are right much skuffed," said the Colonel, as we surveyed the long, bristling strips of splinters which were doing duty in that capacity.

"I should say so," said I. "These boats stand a tremendous amount of rough usage. Here's a leak!" as I picked out a small spot, in which the grain of the canvas was worn through the paint, and the longitudinal threads stood up in little ridges, the cross threads having given way entirely.

"What's that white-looking spot up there on the bottom?" asked the Colonel, pointing with his pipe stem to a light, square spot 3 or 4 in. long by half as broad, that had just attracted my own attention.

"That," said I, examining it, "is another leak. I cut a small gash there a couple of years ago and plastered a patch over it, and the patch seems to have rubbed off."

"Here's still another small leak!" exclaimed the Colonel, as he detected another small spot about like the first one. "Why, your boat seems to be a regular sieve, Commodore!"

"It does look that way," I admitted, "but the leaks are all trifling, for there was not half an inch of water in her when I landed here. The canvas is getting a little tender, I think."

"How old is it?"

"This is the fifth season for this canoe."

"How long ought the canvas on a canoe to last, I wonder?"

"I don't know," I replied, "but judging from the tender condition of this canvas, I should say about five or six years. I think I could make another cruise in this canoe next year, before putting new canvas on it. The canvas on Lacy's canoe, last year, was very tender, and we had to patch it frequently, and it was then in its fifth season; but it was quite light, and I should think the very heavy canvas used on my boat ought to last a year longer."

"I should think so," he replied.

"I think we'll let this boat lie here in the sun and dry for an hour before putting on the patches." I remarked, as I picked up my camp stool and selected my book from the miscellaneous pile of duffel lying about, and looked about for a shady spot in which to ensconce myself.

"Will we have time, do you think?" he asked.

"Oh! yes," I replied. "George will be two hours, at least, on his paddle, and we can put the patches on in fifteen minutes, and they will not stick well unless the canvas is thoroughly dry."

By this time we were surrounded by a curious little crowd of men and boys, who surveyed the floating canoes with great interest, and poked and prodded the sides and bottom of my up-turned canoe with many expressions of wonder at its construction, and the discovery that it was covered with canvas increased their wonderment.

They picked it up and were amazed at its lightness. They surveyed the pile of duffel lying close at hand, and were astonished that so much plunder could be got in so small a boat. They gave the usual ominous shake of the head about the unfitness of such light, delicate craft for such rough work, with the usual remark that they "Didn't want to take no chances in them dad-blamed little boats," with the usual assertion that the big, wooden punts were good enough for them. They hazarded the usual venture that we were running a race, or working out a bet, or surveying the river—the latter theory, with a possible appropriation by Congress to render it navigable for steamboats, being the most popular, and then they faded away.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

AUGUST.

- 29. Plymouth, Plymouth, Mass.
- 30. Kingstown, Kingstown, Mass.
- 31. Duxbury, Duxbury, Mass.
- 31. Beverly, Corinthian, Monument Beach.

- 23. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

Shamrock II.

ENGLISHMEN are so accustomed to seeing handsome yachts that perhaps as far as a boat's beauty is concerned they are somewhat indifferent, and on that account the press reports that were received on this side from England were not of an extravagant sort regarding Shamrock II., before her arrival here, so that now that we who have seen the boat, both before and after going into the dry dock, are very agreeably disappointed in her, and there is a general feeling that the coming races between Constitution and Shamrock II. will be the closest and most interesting in the history of America Cup racing.

When Shamrock was in dry dock and the water was pumped slowly out and she rested on the keel blocks, little by little more of her underbody was exposed to view; a resemblance to Columbia was suggested, probably because this was rather expected—the influence of the design of the old defender would crop out somewhere in the new Watson boat—but on closer examination the similarity was not so marked.

One of the most noticeable things in the challenger is her low side, her least freeboard being considerably less than Constitution's, but she has less sheer than either Columbia or Constitution; there is more "tuck up" aft. She draws quite a little more water than Constitution, her draft being about 2ft., perhaps a little more. The extreme beam is at the deck, and is given at 25ft. 6in. Although the point of greatest beam is well forward, the accounts regarding this point have been exaggerated. The full bow sections are deceiving on this point. The forward overhang is rather short, and this is accentuated by cutting the end off short at the stern head and inserting a flat piece, this being done to give greater strength and also to make a better holding for the gammon iron. The after overhang is long and graceful and very fine. The area of the lateral plane seems to be greater than in Constitution, and the forward side of the fin is much straighter than that of the American boat. The lead keel is bulbed to a larger extent; its greatest thickness is very near the forward end, and from there tapers aft, where it is the same thickness as the sternpost.

The midship section is particularly well turned, there being a continuous sweep from the deck down to where it turns into the fin. The bilge is low and easy, and the floor has quite a little dead rise. The side shows considerable flare.

Shamrock measures slightly under 90ft. on the load waterline. There are fifty-four frames from the point of immersion fore and aft, and these are spaced 20in. apart, which works out to the original length of 90ft. The after overhang seems to be several feet longer than Constitution's, and the line of overhang runs under the boat and meets the sternpost at about the same point as it does on Constitution. The sternpost is raked at an angle of about 45 degrees, which is practically the same as Constitution's. The rudder is about 3ft. wide at the widest point, and is made of wood and coppered. From the heel of the rudder post forward the lead keel is straight on the bottom for a distance of about 27ft. The total length of the lead keel is about 34ft.; from the bottom of the fin there is a

slight curve to meet the forward side of the fin, which runs upward at an angle of about 30 degrees, until it meets the line of the forward overhang, which runs out to the curve in the stem head almost straight. The stem-head at the deck is just the width of the bowsprit, and although this is the only ugly feature in the boat, the additional strength gained and the weight saved fully compensate for its homely appearance.

The work of construction on Shamrock II. is beautiful, the bottom and topside having a uniform smoothness seldom seen. The plating is lapstreaked, and there are two rows of rivets around each plate. The plating is of immodium, an alloy of copper and tin, which, when polished, gives a wonderfully bright and smooth surface, and combines about all the advantages of Tobin bronze.

The deck line of Shamrock II. shows a fair continuous sweep from the stemhead to the narrow taffrail. The deck is of steel, covered with a composition to give foothold to those on board when the vessel is heeled. There is a rail, which takes the curve of the side of the boat about 15in. inboard, and this is about 3in. high, tapering away forward and aft. All the deck fittings seem to be light, the hatches and ironwork are neat and strong. A heavy brass casting serves as the rudder cap, and into this is socketed the long racing tiller. The length over all is about 137ft.

The mast is stepped between the twenty-fifth and twenty-seventh frames. This brings the mast between 20 and 21ft. aft of the forward end of the waterline. The mast is about 159ft. long. From the upper side of the deck to the mast heel is 8ft., and from the deck to the topside of the boom is 3ft. 6in. The reports came from England that Shamrock II.'s rigging was ugly and clumsy, but, on the contrary, it shows a wonderful improvement in this point over other English boats seen in these waters, and the rig compares very favorably with America's latest productions. The spreaders are of teak and steel, and are about 30ft. extreme width. There are four shrouds on a side, which are made up as follows: Two masthead shrouds on each side lead about half way out on the spreader and set up on the first and fourth chain plate turn buckles; the shrouds leading from the hounds set up on the third and fifth chain plate turn buckles. The topmast backstay leads over the end of the spreader to the second chain plate. There is a forward stay that leads over a strut on the forward side of the mast down to the deck. The bowsprit is 33ft. outboard, which makes the base of the forward triangle about 75ft. There are two bowsprit shrouds on each side, and a heavy bobstay, which, by the way, is a good fault. The mast is of steel, 28in. in diameter, and the boom is also of steel, 112ft. long. The gaff is about 70ft. long. The dimensions given are only approximate, accurate measurements not being procurable.

It is very difficult to make close comparisons between two boats which are very much of the same type, particularly as Constitution's underbody has not been seen since she was launched some months ago. Considering all things, one is satisfied that Shamrock II. is going to give Constitution some hard racing. Shamrock I. is undoubtedly a greatly improved boat this year. She was always good in light breezes, but her spars were too light for heavy weather, and agreeing to this for sake of argument that Shamrock II. was able to beat her in any weather several minutes, we have certainly got a formidable competitor in Shamrock II. On the other hand, we will agree that Columbia is a much improved boat, with the most perfect crew that ever handled any vessel, and that she is sailing faster than she did in 1899. Since Constitution was dismasted and rerigged, she is able to beat Columbia in most any weather by a small margin; it therefore figures down to the fact that Shamrock II. is a greater improvement over Shamrock I. than Constitution is over Columbia, and figuring that Shamrock I. made a very fair showing against Columbia, it is an undeniable fact that the races will be closer than ever before.

Manchester Y. C.

WEST MANCHESTER, MASS.

Thursday, Aug. 23.

THE regular championship race of the Manchester Y. C. was sailed in Salem Bay Thursday, Aug. 22, in a strong breeze from the S.E. The breeze held very steady throughout, and the racing was made correspondingly interesting. There were three classes, and two entries in each. Chewink got the best of Tarpon in the 25-footers and led her all around the course. The best race was between the raceabouts, Pompilia and Idol. Pompilia got the start and led throughout, but Idol pressed her very close, finishing only 41s. behind. In the knockabout class Raccoon had things pretty much her own way. The summary:

	25-Footers.	Elapsed
Chewink, F. G. Macomber.....	1 25 19	
Tarpon, E. S. Grew.....	1 28 00	
Raceabouts.		
Pompilia, Reginald Robbins.....	1 32 41	
Idol, T. K. Lothrop, Jr.....	1 32 59	
Knockabouts.		
Raccoon, A. D. Irving.....	0 49 00	
Rikki Tikki, Loring Bros.....	1 03 00	

Eastern Y. C.

MARBLEHEAD, MASS.

Saturday, Aug. 24.

THE first of a series of special races was sailed by the Eastern Y. C. Saturday, Aug. 24, in rather a fluky breeze. There were three classes all told, but it was necessary to send the raceabouts over the course in the morning. In this class Sintram had a very easy time of it. In the schooner class Barbara won very handily on both actual and corrected time, and in the class for sloops Halaia had a walk over. The summary:

	Raceabouts.	Elapsed.	Corrected.
Sintram, W. P. Fowle.....	1 22 32	1 22 32	
Idol, T. K. Lothrop.....	1 27 17	1 27 17	
Pompilia, R. Robbins.....	1 28 43	1 28 43	
Miscreant.....	1 29 48	1 29 48	
Schooners.			
Barbara, C. F. Lyman.....	1 13 08	1 13 08	
Baboon, A. P. Loring.....	1 30 21	1 27 57	
Colleen Bawn, G. W. Lowrie.....	1 29 25	0 00 00	
Sloops.			
Halaia, Loud Bros.....	1 18 43	1 18 43

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter XI.—Rudders.

THERE are two principal forms of rudder construction now in general use, the first and oldest method being to cut the stem and main piece of the rudder blade out of one solid piece of oak bolting a second piece of the same wood on the after side of the main piece to make up the full area of the blade. This is the simplest way to make a rudder; but such a rudder is very thick and clumsy, and if not made rather heavy, is likely to be weak in the neck, where it enters the rudder trunk. It also necessitates a large rudder trunk, and a thick sternpost. It is a very good form of rudder for larger cruising yachts.

The second and modern method is to make the stem of the rudder of a thick, steel tube (or of a solid round steel rod); the lower end, where it is attached to the blade, being split into a fork and riveted on each side of the blade, the latter being either of wood or metal. The upper end of this form of stem is plugged with a piece of solid steel, and has a thread on it, with a large, flat nut, to form a collar on the deck bearing; and above this is a tapered square to take the tiller, with a thread and nut above it, to hold the tiller in place. It is neater and stronger than the first method, and only requires a very small trunk. As I mentioned in the chapter on rudder trunks, a plain piece of tube screwed into the keel or counter frame, with a flange on deck, is all the trunk required when the rudder is not liftable or attached to the sternpost.

The rudder of the No. 1 design would be equally suitable for a non-liftable rudder. It is composed of a steel tube stem 1 in. in diameter, split at the lower end into a fork, with two arms 1 ft. 2 in. long, which are riveted on each side of a 1/2 in. steel blade of the shape shown.

A shaped piece of teak or other suitable wood is fixed on the deck at the top of the rudder trunk, and it has a gun metal ring let into its upper surface to form a bearing for the top of the rudder stem; the flat nut rests on this ring and takes the weight of the rudder when it is not attached to the sternpost.

The method of constructing the rudders of both the designs is clearly shown on the drawings. The only particulars in which the sternpost rudder in No. 2 design differs from the one described above is that it has a stouter tube for the stem and a hardwood blade, the thickness of which is equal to that of the sternpost on the fore edge and tapers to 1/2 in. or less on the after edge. It is also fitted with a heel bearing, consisting of a gun metal pintle, screwed into a heel plate on the keel of the boat and working in a gun metal socket fixed to the bottom of the rudder blade. There is also an intermediate strap of metal through a hole in the blade and let in flush in each side of the sternpost.

The fore edge of the rudder blade must be rounded to fit a corresponding groove in the back of the sternpost, and the hole for the intermediate strap bearing must form a circle with the rounded fore edge, for the strap to pass freely as the rudder turns.

The accompanying detail drawings will show the method of fitting the rudder head, fork and intermediate strap and keel bearings of the No. 2 design. The details of head, stem and fork for No. 1 design will be the same as in No. 2, but slightly smaller, and a plain steel blade will take the place of the wood. When the tube is split to form the fork, which should be done with a saw, it should not be flattened close to the upper end, but gradually taper from the round tube into flat ends, the hollow fork being filled in with a piece of hardwood before the blade is riveted in place.

There are many other methods of fitting rudders, but the one illustrated is the simplest and strongest. In either boat a solid steel rod may be substituted for the tube as a stem, but it must be reduced in diameter to about three-quarters of that of the tube, or it will be too heavy. It is cheaper to make than the tube stem, but much heavier for a given strength.

Seawanhaka-Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Thursday, Aug. 22.

WHILE Shamrock II. was having her first trial in American waters down the lower bay, Constitution and Columbia were racing off Oyster Bay under the auspices of the Seawanhaka Corinthian Y. C. for a cup offered by ex-Com. Percy Chubb. The Race Committee was composed of Messrs. Walter Kerr and Charles A. Sherman. It was very foggy in the morning, but Columbia sailed up from her anchorage at Glen Cove and Constitution had laid at mooring in Oyster Bay the night previous. A light E.N.E. breeze was blowing when the committee went out to the starting line at 10 o'clock, and the tide was running W. The course signaled was as follows: Three and a half miles N.N.W. to and around a boat, thence E. by N. 1/4 N. 5 1/2 miles to and around a mark boat, thence S.W. 1/2 W. 5 3/4 miles to and across the starting line. This was to be sailed twice over, making 29 1/2 miles altogether. It was to be a one-gun start with 5m. interval between the preparatory and starting signals. The preparatory signal was made at 1:30. The two boats crossed on the starboard tack, with Columbia in the weather berth. Columbia began to draw away from Constitution just after the start. A tow of six barges upset the two boats, and Columbia passed them to the westward, while Constitution went to the eastward of them. After clearing the barges both laid their course again. Just before reaching the first mark, jib topsails were taken in. The boats rounded as follows:

Columbia1 57 30 Constitution1 58 18

Columbia continued on the starboard tack, while Constitution went off on the port tack. Columbia soon set her baby jib topsail, Constitution following suit. Columbia made a mistake on the mark on this leg, and ran well out of her course. She soon found out her mistake and hauled up again for the real mark. This mistake caused her to lose some of her lead, but she soon regained this. Columbia took in her jib topsail just before reaching the second mark, and set her balloon jib in stops. The times at the second mark:

Columbia2 43 45 Constitution2 47 08

Constitution had to make a short hitch to round, while Columbia, with balloon jib drawing, was standing for the home mark. Constitution broke out her spinnaker just after rounding, and Columbia had hers out soon after. Columbia went after better breeze and took in her spinnaker, but instead of finding more wind she got in a flat spot, while Constitution, with spinnaker drawing, was rapidly closing up on her. Before overtaking Columbia Constitution lost the breeze, and she took in her spinnaker and both boats jibed their booms over to starboard. Columbia got the new breeze first, and after taking in her jib topsail, which she had set some time before, rounded the mark on the starboard tack. The times at this mark were:

Columbia3 35 40 Constitution3 40 50

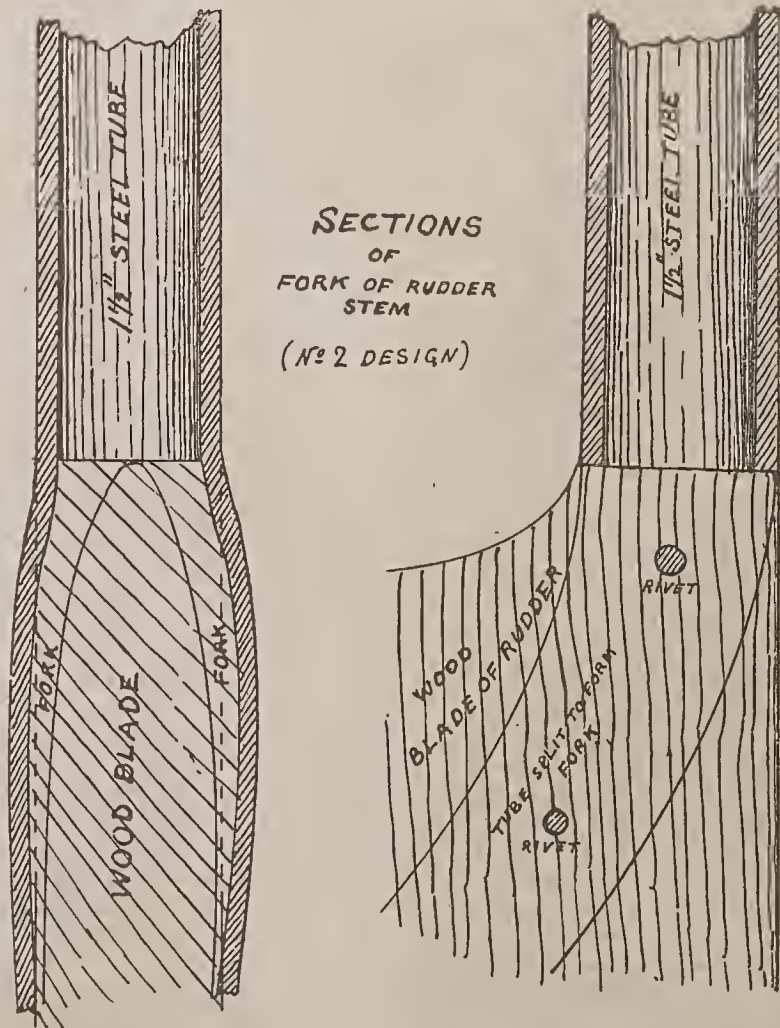

Constitution set her spinnaker and balloon jib, as Columbia had done. Columbia was leading at the end of the first round by 5m. 10s. The elapsed times over each leg of the first round of the course are shown in the following:

HEEL BEARING (No 2 DESIGN)

THIS STRAP IS HALF WAY BETWEEN THE HEEL BEARING, & THE TRUNK.

ONE-HALF SIZE.

SHAMROCK II. IN DRYDOCK.

improved as the race progressed. Her club topsail set badly, and the spars on this sail seemed to be entirely too light. Columbia went back to Glen Cove after the race, while Constitution ran into Oyster Bay and anchored. The summary of the race follows:

	Start, 1:35:00.	Finish.	Elapsed.	Corrected.
Columbia	5 23 32	3 48 32	3 47 14
Constitution	5 25 11	3 50 11	3 50 11

Columbia beat Constitution 1m. 39s. elapsed time, and 2m. 57s. corrected time.

Saturday, Aug. 24.

The race between Constitution and Columbia sailed on Saturday was spoiled by a nasty squall. The rain was heavy and the wind shifted several times. It was after 12 o'clock when the committee signaled the course, which was from the starting line at Centre Island buoy, N.W. 1/2 W., 4 3/4 miles to and around a mark boat, thence E. by N. 1/4 N., 6 miles to and around a mark boat, thence S.S.W., 4 1/2 miles to and across the starting line—distance 15 1/4 nautical miles. The course was sailed twice over, making 30 1/2 miles in all.

The first leg of this course was a reach. The preparatory signal was made at 12:30, and the starting signal was given at 12:35, and Columbia crossed at the windward end of the line, 3s. after the start. Constitution crossed some seconds after, directly in Columbia's wake. It was a reach to the first mark, and the boats had the wind over their port quarters. Columbia drew away from Constitution in reaching over to the first mark, which was off Captain's Island. About 12:30 it began to rain, and this tended to make matters generally unpleasant. Columbia jibed over just before she reached the mark. The times at this turn were:

Columbia	1 02 51	Constitution	1 03 25
----------	-------	---------	--------------	-------	---------

Constitution jibed just as she was rounding, and took in her jib topsail and set a smaller one. Both boats were now on the starboard tack, with sheets well in. Columbia seemed to move much faster than Constitution on this leg. Constitution overstood the second mark, while Columbia just made it nicely. The times at the second mark:

Columbia	1 33 21	Constitution	1 33 58
----------	-------	---------	--------------	-------	---------

The wind had been blowing E.S.E., but at this time shifted to the south'ard, which made the leg to the home mark a close reach. Columbia took in her jib topsail just before reaching the home mark and set her balloon jib topsail, which was broken out shortly before rounding. The times at the home mark:

Columbia	1 58 21	Constitution	1 59 08
----------	-------	---------	--------------	-------	---------

The elapsed times over each leg of the course on the first round are shown in the following tables:

	Start, 12:35:00.	1st Mark.	Elapsed.
Columbia	1 02 51	0 27 51
Constitution	1 03 25	0 28 25

Columbia beat Constitution 34s.

	1st Mark.	2d Mark.	Elapsed.
Columbia	1 02 51	1 33 21
Constitution	1 03 25	1 33 58

Columbia beat Constitution 3s.

	2d Mrk.	3d Mark.	Elapsed.
Columbia	1 33 21	1 58 21
Constitution	1 33 58	1 59 08

Constitution had her spinnaker drawing a little before she reached the mark, and Columbia soon had hers out, but in the meantime Constitution had closed up the gap between them and had Columbia blanketed. After Constitution got very near the older boat, her balloon was taken in and the baby jib topsail was substituted. At this time the squall that had been making up all the morning was working down on the boats with great rapidity. Spinnakers were dowsed on both boats, and Columbia set her forestaysail. Constitution soon jibed over to port, and Columbia followed a little later. Just after jibing, Constitution passed Columbia, and was in

	Turn.	Elapsed.
Columbia	1 57 30
Constitution	1 58 18

Columbia beat Constitution on this leg 48s.

	1st Mark.	2d Mark.	Elapsed.
Columbia	2 43 45	00 46 15
Constitution	2 47 08	00 48 50

Columbia beat Constitution 2m. 35s.

Columbia hauled more on the wind to avoid this, and finally reached down to the mark, still in the lead. Before rounding the mark Constitution took in light sails and jibed. The times at this mark were:

Columbia	4 15 50	Constitution	4 16 55
----------	-------	---------	--------------	-------	---------

Small jib topsails were now in order, as it was a reach to the next mark, and both boats were holding well to the S. of the mark. The wind had shifted back again to S.S.W., and blew stronger. Constitution had picked up a little on this leg, as can be seen by the times at this mark:

Columbia	4 52 40	Constitution	4 53 18
----------	-------	---------	--------------	-------	---------

From this mark to the finish line it was a close hitch, and Columbia, sailing in splendid fashion, again drew away from Constitution and finished a winner. The elapsed times over each leg of the second round of the course are shown in the following:

	Start.	1st Mark.	Elapsed.
Columbia	4 15 50	00 40 10
Constitution	4 16 55	00 36 05

Constitution beat Columbia 4m. 5s.

	1st Mark.	2d Mark.	Elapsed.
Columbia	4 52 40	00 36 50
Constitution	4 53 18	00 36 23

Constitution beat Columbia 27s.

	2d Mark.	Finish.	Elapsed.
Columbia	5 23 32	00 30 52
Constitution	5 25 11	00 31 53

Columbia beat Constitution 1m. 1s.

Constitution's new mainsail set poorly at the start, but

SHAMROCK II. IN DRY DOCK.

	2d Mark.	Finish.	Elapsed.
Columbia	3 35 40	00 51 55
Constitution	3 40 50	00 53 42

Columbia beat Constitution 1m. 47s.

The change in the breeze made the next leg a run, and Constitution is quite at home on this point of sailing. Columbia took in her spinnaker once, then reset it a few minutes later, Constitution was still coming up on the older boat, and at last Columbia's boom was jibed over to port. Constitution shut off Columbia's wind and Co-

the weather berth. A luffing match now followed, Columbia striving to get the weather berth, but unsuccessfully. Both boats jibed over when the squall struck. It blew hard for a moment, and Constitution took the lead at once, a most surprising thing, for she is not considered as good as the old champion under such conditions.

It was now raining so heavily that neither boat could be seen. Those in charge of Constitution thinking it dangerous to continue under the circumstances, and believing the race would be abandoned, withdrew. The wind hauled to the E. and the air cleared, and Columbia was seen beating for the mark. Her time there was:

Columbia2 53 20

The breeze continued fresh, and Columbia made the next two legs in short time, and finished a winner at 4:08:25.

This is the last time Columbia and Constitution will meet until Saturday, Aug. 31, which is the day set for the first trial race. The summary:

	Start.	Finish.	Elapsed.	Corrected.
Columbia	12 35 00	4 08 25	3 33 25	3 32 07
Constitution	12 35 00	Withdrew.		

Newport Special Thirties.

NEWPORT, R. I.
Monday, Aug. 12.

THE first of the series of races scheduled by the New York Y. C. for the thirties owned in the club was held on Monday, Aug. 12, in a light southerly breeze. The boats were started at 3:20 from a line off Brenton's Reef Lightship to the committee boat. The outer mark was set five miles due S. of the lightship, making it a beat and a run back, distance ten miles. Carolina took the lead going out, and rounded first, but on the run home Barbara passed Carolina and won. It was a spinnaker run back from the outer mark. The light wind remained steady throughout. The following table shows the results:

	Start.	Finish.	Elapsed.
Barbara, W. Rutherford	3:20	6 25 40	3 05 40
Hera, R. N. Ellis		6 27 10	3 07 10
Carolina, Pembroke Jones		6 27 33	3 07 38
Raccoon, A. J. Drexel		6 32 35	3 12 35
Wawa, Reginald Brooks		6 35 35	3 15 35
Esperanza, H. O. Havemeyer		6 35 44	3 15 44

Thursday, Aug. 15.

The second race for the 30-footers, under the auspices of the New York Y. C., was sailed on Thursday, Aug. 15, in a fresh S.W. wind. At the time of the start the fog was thick and the breeze was very light, but shortly after the start the weather cleared and the breeze gained strength. The start was at Coddington Cove, and the course was five and a half miles to leeward to a mark off Hog Island and a beat back. On the run out Esperanza held the lead, but she was passed by the other boats. After hauling on the wind, the fog came again and Raccoon withdrew from the race and headed for Bristol Harbor, but soon put about again for home. On the wind Carolina took the lead and won easily. Barbara ran ashore, withdrawing from the race. The summary:

	Start.	Finish.	Elapsed.
Carolina, P. Jones	3:57:00	6 28 18	2 31 18
Hera, R. N. Ellis		6 32 57	2 35 57
Wawa, R. Brooks		6 33 14	2 36 14
Esperanza, H. O. Havemeyer, Jr.		6 34 02	2 37 02
Barbara, W. Rutherford		Withdrew.	
Raccoon, J. R. Drexel		Withdrew.	

SINTRAM.—Designed and built by Herreshoff Mfg. Co. Photo by Jackson, Marblehead.

the helm, led the fleet over the finish line, but, owing to a misunderstanding as to the course, the Regatta Committee decided to call the race off.

Monday, Aug. 19.

In a fresh E. wind the Newport thirties raced on Monday, Aug. 19, for sweepstakes, and Carolina won. The boats sailed twice over a triangular course. Hera got the best of the start, but Carolina worked into the lead at the first mark, and was never headed during the race.

The summary:

	Start.	Finish.	Elapsed.
Carolina, P. Jones	3:50:00	5 28 36	1 38 36
Hera, R. N. Ellis		5 29 16	1 39 16
Wawa, R. Brooks		5 30 31	1 40 31
Raccoon, J. R. Drexel		5 33 19	1 43 19
Barbara, W. Rutherford		5 43 07	1 44 07

Thursday, Aug. 22.

Hera won the race for a sweepstake that was sailed on Thursday, Aug. 22, in a strong S.W. breeze. It was a beat out to Seal Rock and a run back. Carolina led to the outer mark, but on the run back was overtaken and passed by Hera, which boat won by a small margin. The summary:

	Start.	Finish.	Elapsed.
Hera, R. N. Ellis	3:31:00	5 27 12	1 56 12
Carolina, P. Jones		5 27 37	1 56 37
Wawa, R. Brooks		5 27 49	1 56 49
Esperanza, H. O. Havemeyer		5 29 19	1 58 19
Raccoon, J. R. Drexel		5 29 31	1 58 31
Barbara, W. Rutherford		5 31 14	2 00 14

Friday, Aug. 23.

The 30-footers raced from Jamestown to and around Seal Rock and return on Friday, Aug. 23, in a nice S.W. breeze. The course was ten miles in length, and Carolina won. The summary:

	Start.	Finish.	Elapsed.
Carolina, P. Jones	3:33:00	5 30 26	1 57 26
Wawa, R. Brooks		5 32 22	1 59 22
Esperanza, H. O. Havemeyer, Jr.		5 33 17	2 00 17
Raccoon, J. R. Drexel		5 33 49	2 00 49
Hera, R. N. Ellis		5 33 54	2 00 54
Barbara, W. Rutherford		Withdrew.	

Saturday, Aug. 24.

In a southerly breeze four of the 30-footers raced out to Dyer's Island and back on Saturday, Aug. 24. It was a beat out, and Esperanza led to the outer mark, but on the run back Carolina took the lead, and was never headed. The times:

	Start.	Finish.	Elapsed.
Carolina, P. Jones	10:30:00	12 55 12	2 45 12
Esperanza, H. O. Havemeyer, Jr.		12 55 53	2 46 53
Barbara, H. Rutherford		12 56 09	2 46 09
Hera, R. N. Ellis		12 56 16	2 46 16

Monday, Aug. 25.

Carolina won the race for 30-footers that was sailed on Monday, Aug. 25. The wind was light from the S., and the boats sailed twice over a triangular course. Wawa led up to the end of the first round, when Carolina worked into first place. The times:

	Start.	Finish.	Elapsed.
Carolina, Pembroke Jones	4:11:00	6 41 37	2 30 37
Wawa, Reginald Brooks		6 43 20	2 32 10
Hera, R. N. Ellis		6 45 49	2 34 49
Barbara, W. Rutherford		6 45 56	2 34 56
Raccoon, J. R. Drexel		Withdrew.	
Esperanza, H. O. Havemeyer, Jr.		Withdrew.	

Western Yachts.

Macatawa Bay Races.

CHICAGO, Ill., Aug. 24.—A number of Chicago boats met in the regatta at Macatawa Bay, across the lake, yesterday, and they got plenty of sailing weather, the breeze being fresh almost to the point of a gale.

Vanenna and Josephine disagreed over their relative measurements, and withdrew from the races. In Class B the winner was Mawaja, with Hattie B. and Pinta close placed for second.

The race between Vanenna, Josephine and Sallie, to be sailed on the big lake, was called off when Vanenna and Josephine had their misunderstanding over the time allowance, and the race was made a free for all. Columbia had an easy thing, beating Nymph and Martha cleverly.

In Class 2B Mawaja, Hattie B. and Pinta mixed it up lively, Hattie B. taking the second place on time allowance. Snipe won in Class 4B. The times:

Classes 1 and 2A—Open Race.					
	Start.	Finish.	Elapsed.	Allows.	Corrected.
Columbia	10 45	07 00	00 16 17	2 22 00	2 05 53
Nymph	10 45	1 44 30	00 16 45	2 59 30	2 42 45
Class 2B.

Canterbury	3 40	3 37 15	Scratch	0 57 15	0 57 15

At Oshkosh.

At Oshkosh, Wis., the third and deciding heat for the Green Lake cup will be sailed to-day. Minnetitka, of White Bear, has won one race, and Anita, of Neenah, has also won a race. The silver prize of the Oshkosh Club will also be awarded to-day. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Corinthian Y. C.

MARBLEHEAD, MASS.

Saturday, Aug. 24.

THE sixth championship race of the Corinthian Y. C. was sailed off Marblehead Saturday, Aug. 24, in a moderate southerly breeze. In the 25-footers Chewink had it all her own way. The class went over the starting line in a bunch, but Chewink pulled out ahead and held a good lead to the finish, winning on both elapsed and corrected time. In the 21-footers there were but two entries, Eaglet and Opitsah III. They had it hot and heavy all over the course, Eaglet winning out by only 17s. The raceabouts were all bunched until the first mark was turned, when Sintram went to the front and stayed there until the finish. Suzanne had an easy win in the knockabout class, as did Raccoon in the special 16-footers. The summary:

Class A.					
	Elapsed.	Allows.	Corrected.

Mosquito Fleet Y. C.

SOUTH BOSTON, MASS.

Saturday, Aug. 24.

THE last handicap race of the season of the Mosquito Fleet Y. C. was sailed off the club house, Marine Park, on Saturday, Aug. 24, in a light southerly breeze. In the first class Carrie M. finished first, but lost to Ustane on corrected time. In the second class Hoyden finished first by a long margin, but was only 3s. ahead of Myosotis on corrected time. The summary:

First Class.			
	Elapsed.	Corrected.	
Ustane, C. J. Moriarty	1 26 15	1 34 15	
Carrie M., N. C. Robinson	1 23 48	1 35 48

Beverly Y. C.

MONUMENT BEACH, MASS.

Saturday, Aug. 24.

THE Beverly Y. C. sailed a special cup race off the club house at Monument Beach Saturday, Aug. 24, in a light S.W. breeze. In the 25-footers May Queen had a very easy win. In the raceabouts Quakeress was given a surprise by being beaten by Gadfly and Radiant. In the fourth class Eunice was beaten for the second time in class racing. This time it was by Totem, by over 2m. In the 15-footers there was a hot scrap. Flickamarro winning by only 11s. The summary:

25-Footers.		
	Elapsed.	
May Queen, D. L. Whittemore	2 30 12

Annisquam Y. C.

ANNISQUAM, MASS.

Saturday, Aug. 24.

THERE were but two classes in the regular club race of the Annisquam Y. C., which was sailed in Ipswich Bay Saturday, Aug. 24. There was a strong breeze from the S.W., all but Tedesco getting down to reefs. In the handicap class Tabasco III. came in first by a good margin, but lost to Tedesco on time allowance. In the dory class Tabasco I. won handily. The summary:

	Elapsed.	Corrected.
Tedesco, W. H. Pear	2 10 05	1 31 53
Tabasco III., H. H. Wiggin	2 01 10	1 31 15

Marine and Field Club.

GRAVESEND BAY—NEW YORK HARBOR.

Saturday, Aug. 24.

JIG-A-JIG. Kelpie and Quinke sailed a pretty race in Gravesend Bay on Saturday, Aug. 24, under the auspices of the Marine and Field Club. The boats sailed three times over a triangular course, one mile to the leg. The first leg was reached from the club house, starting the round off Bay Ridge to a mark off Sea Gate, thence to a marked buoy in Gravesend Bay, and back to the club house. The summaries:

	Start, 3:05:00.	Finish.	Elapsed.

Trapshooting.

Fixtures.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji amateur tournament, at Arnold's Park; \$400 added. For programmes, address E. C. Hinshaw.

Sept. 2.—Cleveland O.—Merchandise shoot of the Cleveland Gun Club.

Sept. 2.—Ossining, N. Y.—All-day live-bird and target shoot of the Ossining Gun Club. C. G. Blandford, Capt.

Sept. 2.—Ilion, N. Y.—Amateur shoot of the Remington Gun Club. W. H. Grinshaw, Sec'y.

Sept. 2.—Mcriden, Conn.—Labor Day tournament of the Parker Gun Club. Also Bristol sheep bake. C. S. Howard, Sec'y.

Sept. 2.—Albany, N. Y.—Bluerock tournament of the Forester Gun Club. H. H. Valentine, Mgr.

Sept. 2-3.—Union City, Ind.—Tournament of the Parent Grove Gun Club.

Sept. 2-3.—Portland, Me.—Maine State tournament, under the auspices of the Portland Gun Club. S. B. Adams, secretary.

Sept. 2-3.—Richmond, Va.—Second annual tournament of the Virginia Trapshooters' Association. Mr. John Parker, Mgr. Mr. J. C. Tignor, Sec'y.

Sept. 3-4.—Bellefontaine, O.—Silver Lake Gun Club's tournament.

Sept. 3-6.—Lake Okoboji, Ia.—Indian tournament, to be held at Arnold's Park; \$300 added. C. W. Budd, Arnold's Park, Iowa.

Sept. 4.—Holmesburg Junction, Pa.—Target shoot of second series of Keystone Shooting League.

Sept. 4-6.—Chattanooga, Tenn.—Chattanooga Gun Club's tournament.

Sept. 6.—Interstate Park, L. I.—All-day live bird shoot. L. H. Schortemeier, manager.

Sept. 11.—Montpelier, Vt.—Montpelier Gun Club's tournament; contest for the Robin Hood international trophy. G. B. Walton, Sec'y.

Sept. 10-12.—Sidney, O.—Sidney Gun Club's tournament.

Sept. 11-12.—Warren, Ind.—Warren Gun Club's tournament.

Sept. 11-13.—Canton, O.—Canton Gun Club's tournament.

Sept. 16-17.—St. Joseph, Mo.—St. Joseph Gun Club's tournament.

Sept. 19-20.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.

Sept. 20-21.—Titusville, Pa.—First annual tournament of the Titusville Gun Club. H. Pfeiffer, Sec'y.

Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreihis, Sec'y.

Sept. 26.—Cresson, Pa.—All-day shoot of the Cresson Gun Club. C. Wenderoth, manager.

Oct. 1-4.—Detroit, Mich.—John Parker's annual international tournament; three days targets, one live birds; \$300 in money and trophies; distance handicaps.

Oct. 9-10.—Huntington, Ind.—Tournament of the Erie Gun Club.

Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.

Oct. 15-16.—Greenville, O.—Regular annual tournament of the Greenville Shotgun Club. H. A. McCaughery, Sec'y.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 2.—Interstate Park, L. I.—Holiday live-bird shoot of the New Utrecht Gun Club.

Sept. 10-13.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club; \$750 added; valuable list of merchandise prizes. Walter F. Sykes, President, 85 Water street, New York.

DRIVERS AND TWISTERS.

Mr. L. H. Schortemeier, manager, announces an all-day live bird shoot at Interstate Park, L. I., on Sept. 6, under the auspices of the New York County Gun Club. On the arrival of the 11 o'clock train miss and out will be shot till the main programme commences. There are three events at seven birds, \$5 entrance, three moneys, Rose system, 6, 3 and 1 points, and one event at 15 birds, \$10, four moneys, 12, 6, 3 and 1, Rose system. Those who wish may shoot for birds only. All events handicaps. Birds deducted at 25 cents.

The New Utrecht Gun Club has collected a list of desirable and valuable prizes for the forthcoming shoot of the New York State Association for the Protection of Fish and Game, which is held under its auspices at Interstate Park, Sept. 10 to 13 inclusive. This list will be added to materially before the tournament takes place. Five shot guns are already on the list. Programmes may be obtained on application to Mr. Walter F. Sykes, 85 Water street, New York.

Mr. Richard Merrill, of Milwaukee, arrived in New York last Saturday from a sojourn of many weeks in England, where he tarried after the great Anglo-American trap-shooting contest from solicitude for the welfare of his friend, Mr. Chan Powers, who was an invalid eight weeks in London from an attack of typhoid fever, but who is due to arrive this week on the Deutschland. Mr. Merrill is accumulating width, the roast beef and fog of England bestowing ruddy health and added pounds of weight.

The Ideal Manufacturing Co., of New Haven, Conn., informs us that they have entered into an arrangement with the Phil B. Beckett Co., of 114 Second street, San Francisco, Cal., to carry a full and complete of Ideal goods. After Sept. 1, 1901, this company will be the only recognized and authorized agent of the Ideal Manufacturing Co. on the Pacific Coast, and will receive and fill all orders for that company.

The friends of Capt. A. W. Wadsworth, of Boston, will rejoice to learn that he is convalescing nicely at Alexandria, N. H., after his recent dangerous illness. He expects to recover entirely in the course of five or six weeks. In a brief letter to us he expresses kind regards to his many friends in New York, and they number all who know him.

The New Utrecht Gun Club announces a holiday shoot for Sept. 2, at Interstate Park, the main event of which will be a handicap at 15 live birds, \$5 entrance, for an elegant moosehead. Traps ready at 10 o'clock. Moosehead event commences at 2 o'clock, fifteen contestants to enter. The club shoots, at targets and live pigeons, will be held every Saturday thereafter.

The Fitchburg Rifle and Gun Club won the Damon & Gould Cup in three straight wins, the final of which took place at Leominster, Aug. 21, the Leominster team being defeated by a score of 362 to 340. The conditions were 10 men on a side, 50 blue rocks per man. The club winning it is to put it up next year as an individual trophy, the man winning it to hold it forever.

The programme of the Cresson Gun Club's all-day shoot, on the club grounds, Sept. 26, provides target events in the forenoon and live bird events in the afternoon. Shooting commences at 9 o'clock. The events will be arranged to suit the wishes of the participants. For particulars, address C. Wentworth, Cresson, Pa.

The Mail trophy match, a five-man team event, which took place on Aug. 17, at the Ottawa tournament, was won by the St. Hubert Gun Club team, the members and the scores of which were: Higginson 45, Trudeau 43, Throop 44, Boville 42, Johnson 44. Total 716.

Mr. R. A. Welch and wife, and Mr. J. A. R. Elliott, are due in New York on Saturday, of this week. They have been actively engaged in shooting at the great Continental trap-shooting event. BERNARD WATER.

Fitchburg vs. Leominster.

FITCHBURG, Mass., Aug. 22.—Fitchburg wins the cup. The third of the series for the Damon & Gould Co. cup, by the ten-men teams from Fitchburg and Leominster was shot yesterday afternoon.

This was a general "dog day"—cloudy, hot and sultry, but a pretty good shooting day after all, except it was very cloudy and dark when the last string was shot, making it very hard to see a low bird. The conditions of this shoot were ten men on a side, 50 blue rocks to a man, three wins to take the cup, the club winning it to put it up next season as an individual trophy, the man winning it to hold it forever. As Fitchburg had won the two previous shoots, they were anxious to make it "three straight." When the day of the match arrived, we found that four of our best men were out of town, and their places had to be filled by men, three of whom were new at match shooting, but every man took his gun, shells and "nerve" and went down to Leominster and won the shoot just as though that were the only thing to do, thus making it "three straight" for Fitchburg.

Titusville Gun Club.

TITUSVILLE, Pa., Aug. 20.—At the regular weekly shoot of the Titusville Gun Club, held Friday, Aug. 17, the following scores were made, the 25-bird event being a contest for the club medal, which was won by A. Bue, shooting from the 18yd.-mark, with a score of 22 out of a possible 25:

Events:	1	2	3	4	5	6	7
Targets:	15	15	25	15	5p	5p

Dusted and Broken Targets.

CLEVELAND, O.—Your article on "dusted targets" and the letters from Messrs. Shaner and Fulford have attracted a great deal of attention and will, in all probability, bring out a great deal of discussion on the subject.

In the first place, it is well to consider why there should be a rule that a target to be scored "dead" must have a perceptible piece broken from it and that a "dusted" shall not be scored as "dead."

The makers of this rule undoubtedly discussed the matter very thoroughly before coming to the conclusion that it was a good rule.

It evidently has been considered a good rule for many years, as, to the best of my knowledge, your article is the first serious attempt to have it changed.

In my opinion the rule was adopted to save as far as possible any change of discussion or dispute, and if you will stop for a moment you will remember how often you have heard the remark on a shooting ground that the target was dusted and how often the statement was disputed by others looking at the target from another point of view.

I believe that the referee would have his hands full and that there would be far more disputes than there are at present if a rule were adopted calling a "dusted" target a "dead" target.

Of course, there are discussions now as to pieces, but I do not think there are nearly as many as there would be if the rule were changed as you suggest.

It was to save discussion that the rule as to holding the gun was changed from below the elbow to below the arm pit and then to any position the shooter might choose to adopt, and the changing of the present rules should be made along the line of saving discussion and relieving the referee of additional responsibility instead of adding to it.

There is no question in my mind but that a rule making a "dusted" target a "dead" target would lead to endless trouble, and the opportunity for unfair work would be greatly increased, as most anyone at any time would be able to see just a little dust and the fact could hardly be disputed.

I may be wrong, but I believe that men experienced in the sport will take the same position as above and think any change will be a detriment rather than a benefit.

PAUL NORTH.

Mr. Paul North is a gentleman of vast experience and acute powers of reasoning, and is particularly well versed in all the particulars of trapshooting. Yet, in respect to his communication on "dusted targets," we think that his conclusions cannot logically be drawn from the premises which he lays down, as we will suggest, briefly, as follows:

That the makers of the rules undoubtedly discussed the question very thoroughly before coming to the conclusion that it was a good rule, as adopted, we freely concede; but undoubtedly they discussed every other matter, within their scope, quite as thoroughly. Nevertheless, have not changes been made betimes, as the exigencies of the competition and the knowledge which comes from greater experience dictated the need of them?

Whether a target is hit or not hit is a matter relating to a question of fact quite independent of any question concerning what the bystanders may approve or disapprove, and, therefore, it is a question which admits of consideration on its merits. If the question of disputes is to be considered, the same objection could be urged against allowing a perceptible piece as a broken target, for the disputes concerning the latter are innumerable. However, if there were not matters over which there would be differences, a referee would not be necessary.

A dusted target is quite as easily distinguished as a chipped target, and many times much more easily distinguished, and, therefore, perceptible dust is quite as apparent to the referee as is a perceptible piece. In either instance, it is the referee's decision which counts. Outside disputes are irrelevant.

The manner of holding the gun is a mere matter of agreement or convention, and, therefore, quite different from the matter of fact as to whether a target is hit or not. Thus a group of shooters might agree to hold their guns in any manner they chose, and such agreement would be good; but if they agreed that 2 and 2 are equal to 3, they would be trifling with a matter of fact.

If a shooter desires to be unfair, we fail to perceive how restrictions on a matter of fact would put a check on him. From our viewpoint it would seem the better way to recognize fully the matter of fact that a dusted target is a hit target, and, therefore, should be scored, and that an unfair person is another matter of fact and should be barred.

UTICA, N. Y., Aug. 25.—I am willing to abide by the decision of the shooters of the country if I am right or wrong in regard to dusted target question.

I said two weeks ago a referee's duties should be so simple a child could referee. There is no decision necessary on dusted targets, pieces or wads, if you stick a few stakes, say 40yds. from the trap, in a semi-circle. If a target slips out out trap and doesn't go to stakes, it is a no bird; if it goes beyond the stake it is lost, regardless of dust pieces, wads, or imaginary dust.

There is never any trouble with the existing rules with a good referee, but the great trouble, Mr. Cadi, is, as every good shot knows, that many referees give wads for pieces, and are conscientiously honest about it, and it is not right and fair to a good score to let any one get in and tie in first honors by mistaking a wad for a piece. If you will take the trouble to sound 500 of the best shots in this country, you will find, almost to a man, that they will agree with me.

I still believe that trap shooting has a great resemblance to field shooting, and is a very close relative. I have seen experts kill pigeons so dead they never kicked, all day long, and make their targets disappear from view when shot at.

This is done by no chance work, Mr. Cadi; it took years and thousands of dollars to develop the art. And what man would care to shoot under a rule when he blew out of sight a straight by beautiful work, and then be compelled to divide honors with a duster? Yours truly, E. D. FULFORD.

[We agree perfectly with Mr. Fulford, that the experts hit their targets very squarely. Mr. Fulford also claims that a piece is better than a dusted target, though dust is made up of pieces, and sometimes of pieces which, if detached singly, would score. However, we desire to ask the following question: If a piece as large as a dime knocked off a target is a better hit than a dusted target, is not a piece as large as a quarter better than the piece as large as a dime? And is not a piece as large as a dollar still better, and so on? If the hits are to be graded by the size of the pieces, why not have them graded like shot, from dust up to buckshot, and from buckshot to cannon balls?]

Miss. and La. League Tournament.

VICKSBURG, MISS.—The fourth amateur tournament of the Mississippi and Louisiana Trap Shooters' League, under auspices of the Vicksburg Gun Club and Fish and Game Protective Association, was held at Vicksburg, Miss., Aug. 13 to 15, inclusive, and was a grand success; in fact, it was pronounced by those present as being the largest and best shoot they had ever attended, there being as high as 104 paid entries in the first event, regular programme, second day. First day, Aug. 13, sweepstakes were shot. The regular programme commenced Aug. 14, and, owing to the large attendance, was not finished until Aug. 16, at noon; then, \$10 entrances, 50 birds to the man, were shot until late in the evening. Money was divided by the Rose system. We threw in all 35,000 to 40,000 blue rocks, and used a megatrap and one set of Expert Sargeant's system, running both sets of traps all four days.

The weather was against us, as it rained from the first day until the last, but was very cool. Fred Gilbert says we have a summer resort, but a wet town. All seemed well pleased and say they will come again.

The professional class were well represented, and did much to make the shoot a success. The following shots were in attendance: Fred Gilbert, Frank Faurte, Herbert Taylor, C. M. Lincoln, J. T. Skelley, G. H. Hillman, Maurice Kaufman.

The cashier department was under the able management of Mr. Geo. Quarterman, of Natchez, who was ably assisted by Mr. Thos. O'Herin, of our city, and Mr. Geo. H. Hillman, of the Winchester Arms Co., and \$3,000 was distributed in two days' regular events.

The finest amateurs in the United States were in attendance, and those shooting right along in professional form were Livingston, of Alabama; Garth, of Mississippi; Broyles, of Mississippi; Blake, of Mississippi; Cameron, of Mississippi; Erwin, of Mississippi; Frank, of Tennessee; Skannal, of Louisiana; Blunt, of Alabama.

The prize offered for the longest consecutive run was won by Foote, of Mississippi.

The Greenville, Miss., team won the handsome silver loving cup, donated by the Peters Cartridge Co., and the individual trophy, offered by Baker and McDowell, of Natchez, Miss., was won by a Greenville man, Mr. Walter Blake, who is a fine amateur, with a score of 48 out of 50. Gilbert, leading in the professional class, captured the handsome umbrella, offered by the Vicksburg Gun Club. Members of our club who shot through the entire programme were Hayes, Miller, Dinkins, Adams, Henry, Pinkston, Bradford, Collier and O'Brien, and, taking into consideration that the entire management of the tournament was in their hands, their scores, as tabulated, show that they shot very well.

We shot through four days of wind and rain, and the scores would have been much better had we been favored with good weather.

Clever Geo. Hillman was remembered by the club, and presented with a handsome umbrella, typical of wet Vicksburg. Skelley and Lincoln, the latter of U. M. C. Co., rendered us a great deal of assistance. Our citizens gave a handsome purse to the professionals shooting through the entire programme, which was divided equally among them. Jolly Maurice Kaufman, of the Peters Cartridge Co., was forced to leave us Thursday, so did not shoot out the entire programme.

We will give you a grander shoot next May, and hope to see a larger attendance. The weather may be dry then, but Vicksburg will still be a wet town.

Herbert Taylor, with the Du Pont Powder Co., was with us to the end, and made scores of friends. We all missed Du Bray and Irby Bennett.

Scores in regular events, Aug. 14 and 15. Aug. 13 and 16 were devoted to sweepstakes, which do not appear in the following:

Table with 4 columns: Name, Targets, Broke, Name, Targets, Broke. Lists names and scores for various shooters like Gilbert, Faurte, Livingston, etc.

BRAD.

WESTERN TRAPS.

Mt. Sterling Shoot.

CHICAGO, Ill., Aug. 22.—Mt. Sterling Gun Club, of Illinois, will hold their target tournament early in October, the date not being determined at this writing. A nice programme, with \$25 high average money, will be arranged. The shoot will last one day and programmes will soon be out. This is open to everybody, no one barred.

E. H.

Chicago Gun Club.

Chicago, Aug. 23.—Herewith are the scores of the team race shot on the 17th on the Chicago Gun Club's grounds with the Grand Crossing Club's big crowd of shooters. The ladies also were interested, and came out to witness the race. The shooting did not begin until after 2 o'clock, and the old "Maugie" did get there.

The people of the Chicago Gun Club that seemed to get busy were Dr. C. W. Carson, secretary; Dr. Morton, president, and J. L. Jones. They did lots of work in the short afternoon. The shoot was a grand success, and everybody had a good time.

The team race was hotly contested, 15 men on a side; 25 targets each. Seven hundred and fifty clays were thrown for this race, and each team had their best men out. The Grand Crossing started first by shooting their handicap allowance medals Nos. 1 and 2. Both clubs shot their medals together in the No. 3 team race.

Table with 2 columns: Name, Score. Lists names and scores for 25 targets medal, Grand Crossing Handicap in birds.

Shogrew won after shooting out the bunch on 3 tie. A. E. Rupel won high gun trophy after disposing of Elias. No. 2. Both clubs shot together for their handicap trophies at 15 targets, the rise being 16 to 21 yds. Wolf of the Grand Crossing Club won on straight score at 16yds. W. D. Stannard, of the Chicago, won their medal on 15 straight at 16yds.

Table with 2 columns: Name, Score. Lists names and scores for trophy, 15 targets, Handicap in rise.

Table with 2 columns: Name, Score. Lists names and scores for various shooters like A. W. Morton, R. B. Mack, etc.

Tie on Grand Crossing on. Rupel wins. Team race, 25 targets; Chicago Gun Club—Walters 13, Stannard 23, Morton 23, Bowles 19, Adams 20, Dr. Morton 21, Stannard 24, Borroff 19, Mrs. Carson 18, Mart 19, Mack 21, Antoine 21, Steek 20, Dr. Carson 25, Dr. Miller 15, Total 301.

Grand Crossing Gun Club—Rupel 20, Boa 24, Veitmeyer 19, Adams 23, Elias 24, Wolf 19, Boltman 21, Shogrew 18, White 19, Colborn 18, Edwards 22, O'Connor 21, Geary 16, Barnard 19, Bradley 21, Total 304.

Chicago, Aug. 24.—In the scores of the Chicago Gun Club, as given below, you will find E. M. Steek won high gun in the weekly trophy contest to-day, shooting scratch, O'Brien getting handicap trophy. Some events without a tie.

In the monthly contest, 15 targets, with handicap in rise, Dr. Carson won after shooting out O'Brien, the Doctor at 21 yds, and O'Brien at 16 yds. Messrs. Mathews, Sr. and Jr., from Arkansas, were guests of the club's president, Dr. Morton.

Weekly shoot; handicap allowance. Bowles, 4. O'Brien, 5. Steek, 0. Mrs. Howard, 8. Dr. Carson, 0. R. B. Mack, 3. Mrs. Carson, 5. Dr. Miller, 3. Mathews, *. Dr. Morton, 5. Morton, A. M., 3.

No. 4. Monthly, 15 targets, handicap rise. O'Brien, 16. Mrs. Carson, 16. Cunningham, 16. Boltman, 15. Bowles, 18. R. B. Mack, 18. Dr. Miller, 18. Dr. Morton, 18. A. W. Morton, 18. Steek, 20. Dr. Carson, 21. Mrs. Howard, 16.

Ties 10 targets. Dr. Carson wins at 21yds, rise. O'Brien, 16. Dr. Carson, 21. This on handicap from last week. Mack won.

BLUE JEANS. Garfield Gun Club. Chicago, Aug. 24.—The appended scores were made on our grounds to-day, on the occasion of the third shoot of the third series. Dr. Shaw was high gun and won Class A trophy on a straight score of 25. Dr. Week and Dr. Hoff tied on 22 for B trophy, while L. Thomas and W. T. Johnson tied for C on 20.

The day was a perfect one for trap shooting, being pleasantly cool and no wind to interfere with the flight of the targets. Twenty-five shooters participated in the trophy shoot, and several others in the side events.

17th Trophy shoot; 25 targets: Thomas, L. McGowan, P. Ford, N. H. Johnson, W. P. Delano, H. N. Smedes, T. L. Dorman, A. D. Pollard, J. D. Hoff, Dr. J. A. Young, S. E. Meek, Dr. J. W. Drinkwater, G. W. Jones, W. A. Wilson, M. F. Eaton, T. Eaton, E. W. Leate. Mrs. Shaw, Mrs. Hagerty, T. A. Adams, G. Kessick, J. C. McAlister, D. J. Hellman, A. Monigan, J. Thomas. E. W. Eaton. Leate. Mrs. Shaw. Dr. Johnson. Hagerty. Adams. Dorman. Pollard. Huff. Young. Meek. Drinkwater. Wilson. Eaton. Jones.

DR. J. W. MECK, Sec'y.

IN NEW JERSEY.

Fort Lee Gun Club.

FORT LEE, N. J., Aug. 17.—Trophy, shoot, 25 targets: Morrison. Allison. Eickhoff. Merrill. Cathcart. JAS. R. MERRILL, Secretary Fort Lee Gun Club.

Trenton Shooting Association.

Trenton, N. J., Aug. 24.—This date was set for the city championship cup event, but on account of a violent rain all day, it was necessary to postpone until later. Only eight shooters turned out, and on account of the disagreeable weather conditions, shot but little. The most interesting event that occurred during the afternoon was the match race between Wilkes and Farlee, the latter being off form and losing both.

The dusted target problem is attracting some attention, and at the next shoot the experiment of allowing a half (1/2) point for each dusted target will be tried, and the result is awaited with some interest.

Table with 2 columns: Name, Score. Lists names and scores for events and targets.

Team Race at Fitchburg.

FITCHBURG, MASS.—On Aug. 15, Bellows Falls (Vt.) Gun Club held an all-day shoot. Event No. 6 on their programme was a 5-man team shoot for a \$25 cup, 25 birds per man. Bellows Falls, Vt., Winchester, N. H., a team of professionals and paid experts and Fitchburg, Mass., shot in this race. Fitchburg team won the race and took the cup.

Scores: Bellows Falls 99, Winchester 81, Paid Experts 94, Fitchburg 106. Everyone who attended this shoot had a very enjoyable time, for the Bellows Falls boys know how to run a shoot and entertain the crowd.

I. O. C.

Dean Richmond Trophy.

As there seems to be a general lack of definite information concerning this great trophy of the New York State Association for the Protection of Fish and Game, we have taken some pains to obtain the conditions governing it. In the convention records of the meeting held at Batavia, N. Y., in 1873, we find the first official record of it as follows:

At this convention the first Dean Richmond Cup was presented, through the Dean Richmond Club, of Batavia, by Henry Richmond, Esq., son of Dean Richmond, so well known in the history of our State. It was of sterling silver, about twenty inches in height. The bowl was oblong, supported by an ornamental standard resting upon a square base. On either side of the pedestal were chiseled two Nimrods, one in the act of aiming his breech-loader, and the other in the act of charging his muzzle-loader. The lower half of the bowl is chased with designs of leaves. Perched upon the rim are pigeons, and immediately above the rim, in front, is a medallion portrait of the venerable Dean Richmond, whose name it bears. On the reverse are engraved, within a wreath, the words "Dean Richmond Cup, 1873." Its value is about \$800, and it was presented upon the following terms: "To be competed for by teams of three from each club entering therefor, and the club making the best total to retain the cup until the next convention. The club winning it to give proper security for its production the following year. The club winning it three times to become its absolute owner. The entrance fee of each club to be \$30. The proceeds of the year 1873 to belong to the Dean Richmond Club, and after that to be deposited as a cup fund, to purchase another trophy when the first shall have been finally won by any club. The Dean Richmond Club to surrender all right to the cup on the signing of an agreement to the above effect by the president of the State Association on behalf of that body." The cup was accepted upon these terms, and the agreement was signed by the president by authority of the Association. The cup was the subject of contest during the year 1873, and succeeding years, to and including 1877, and was finally, in that year, won by the Forester Club, of Buffalo. By that time the Cup Fund amounted to \$1,150, with which the present Dean Richmond Trophy was purchased.

In the records of the convention held at Buffalo, 1878, under the auspices of the Forester Club, the cup is again officially referred to, as follows:

The Dean Richmond Cup having been previously won by the Forester Club, of Buffalo, the treasurer reported that he had received from contests for that emblem, \$1,150, and that this amount had been expended in the purchase of a new cup or trophy. The conditions of the competition for the second trophy varied from those of the first. The secretary, Mr. John B. Sage, reported that he had been through the State and conversed with the leading members of clubs, all of whom favored the proposed change of terms, which he recommended should be as follows: "The Dean Richmond Trophy to be open to clubs belonging to the State Association; to be held by the winning club, each year, in trust, to be accounted for to the State Association the following year; to be shot for by club teams of three members each, residents of the county in which the club is located; twenty single birds to each contestant at twenty-one yards rise, in accordance with the rule of the New York State Association; entrance \$30, and the sum of the entrance money to go to the winning club making the highest score in the contest." Mr. W. J. Babcock, of Rochester, moved that the conditions be amended by increasing the number in each team from three to fifteen, but this proposed amendment was rejected, and the recommendations of Mr. Sage were adopted. The present Dean Richmond Trophy was, therefore, the subject of contest at this convention of 1878 for the first time. It is a sterling silver punch bowl of elegant proportions and magnificent capacity, being in diameter about twenty inches, and in height from base to apex about thirty inches.

The outside metal is frosted, and the lining is of Roman gold. The base tapers upward from the lion head and paws which support it to the bottom of the receptacle devised for the juice of the grapes which emblematically are suspended from the vines entwined around its curved handles.

Symbolical figures in relief rest upon the pedestal and upon the rim. The cap or cover is elaborately turned, moulded and chased. On one side encircled by a wreath is a medallion of the donor of the original cup for which this was substituted, and whose name it retains. Surmounting the entire piece is a finely proportioned model of a sportsman in the act of taking aim.

At the 28th convention, held in Rochester, Mr. John B. Sage, who had been appointed at the prior convention to obtain the consent of Henry A. Richmond, of Buffalo, to shoot at other things than live pigeons for the Dean Richmond Cup, reported that the desired consent could not be obtained.

At the 32d annual convention, held at Lyons, N. Y., June 12, 1890, there was a lengthy debate concerning the Dean Richmond Trophy. Some held that the conditions should be changed in so far as to compete for it under American Association rules, and that the entrance be reduced from \$30 to \$15. There was a discussion thereupon in respect to whether the cup was the property of the donor, Mr. Richmond, or the association. A committee was appointed to call upon Mr. Richmond and learn from him the status of the cup's ownership, and to arrange the conditions under which it would be competed for at the next State meeting.

At the 33d convention, held at Rome, N. Y., June 16, 1891, Mr. Sage stated that a club could be represented by only one team for the Dean Richmond Trophy. Rule 2, pertaining to the manner of holding the gun—that is, guns below the elbow—was changed so that the gun could be held in any position at the pleasure of the shooter.

The following, signed by Mr. Henry L. Gates, of Utica, N. Y., appeared in FOREST AND STREAM of April 6, 1895:

Utica, N. Y., March 25.—At a recent meeting of the Committee on Rules, of the New York State Association for the Protection of Fish and Game, held at Albany, some important changes in the shooting rules were agreed upon to govern the 1895 tournament at Saratoga. To avoid uncertainty and save disputes, it was agreed to adopt the American Shooting Association Rules to govern both target and live bird contests. Cut the following special rules out and paste them in your copy of American Shooting Association Rules, and you will thus have a copy of the New York Rules for 1895. It was found necessary to adopt some special rules to meet conditions existing here, and the following were agreed upon:

Target Shooting.

American Association Rules shall govern where they do not conflict with the following special rules:

Rule 1. The rapid-firing system shall be used, targets being thrown from known traps at unknown angles, and the angles to be changed after each target is thrown.

Rule 2. In ordinary sweepstake events, the management may permit 10-gauge guns to stand at 16 yards, but in all State events 10-gauge guns must stand at 18 yards, and shoot in separate squads.

Rule 3. No person shall be eligible to shoot on any team contesting for the team championship at inanimate targets unless he shall be—First. An actual bona fide citizen of the State of New York. Second. He shall have been at least thirty days a member of the club which he shall represent. Third. He shall be an actual bona fide resident of the county in which said club has its principal headquarters. If any club shall allow any person to shoot on a team not able to comply with all of the above requisites, such team shall forfeit its entrance money and all rights in the match, and be subject to such penalties as the Association may prescribe. No moneys shall be paid over, or any trophy be awarded, if a protest shall be made by any team contesting, until the same shall be decided, and the tournament president shall determine how the protest shall be considered and decided.

Live Bird Shooting.

American Shooting Association Rules shall govern when they do not conflict with the following special rules:

Rule 1. If any member of a team contesting for the Dean Richmond trophy shall be disqualified from shooting for any cause under the rules, after he shall have fired at one or more birds in the contest, the team of which he is a member shall forfeit all rights and also their entrance money.

Rule 2. Conduct. No person who acts in an unsportsmanlike manner, or who is intoxicated, or who persists in making himself disagreeable to contestants and management, or who wilfully insists upon violating the rules of this association, shall be permitted on the grounds of this association, or participate in any contest on its grounds.

Rule 3. Birds Alighting. Any bird shot at (with either one or both barrels), with sufficient life to light on a fence, tree or cut-building, and close its wings, shall be declared a lost bird.

Rule 4. No person shall be eligible to shoot on any team contesting for the Dean Richmond trophy unless he shall be, first,

an actual bona fide citizen of the State of New York. Second. He shall have been at least thirty days a member of the club which he shall represent. Third. He shall be an actual bona fide resident of the town or city in which said club has its principal headquarters, or of a town or city in the same county immediately adjoining thereto. If any club shall allow any person to shoot on a team not able to comply with all of the above requisites, such team shall forfeit its entrance money and all rights in the match, and be subject to such other penalties as the association may prescribe.

No moneys shall be paid over or any trophy be awarded if a protest shall be made by any team contesting until the same shall be decided, and the tournament president shall determine how the protest shall be considered and decided.

Rule 5. Dean Richmond trophy, value \$1,150. Shall be held by the winning club each year in trust, to be accounted for to the State Association, to be shot for by three members of a club belonging to the association, such members to be residents of the town or city in which the club is located, or of a town or city immediately adjoining thereto, as provided in rule 4. Fifteen single live birds to each contestant. Entrance fee \$20 per team. The team making the highest score shall win the "trophy" and 60 per cent. of the entrance money, and the team making the next highest score will receive the remaining 40 per cent.

Interstate Association at Auburn.

AUBURN, Me.—The Interstate Association's tournament, given for the Auburn (Me.) Gun Club, was a distinct success.

The tournament was arranged by the manager of the Interstate Association, Mr. Elmer E. Shaner.

On Wednesday 12,475 targets were thrown, and the same number of shells exploded.

On Thursday 8,000 targets were sprung, and the same number of shells exploded.

Mr. Shaner has had every sort of a care over it all and so have the Auburn Gun Club boys. It has been a credit to all concerned, and if any compliments were to be passed, they should go to all alike, for all have been as one.

Cashier Joly has been the ideal official, and everyone says a good word for the doctor.

Wednesday, Aug. 21, First Day.

Neal was high, with 171 out of 175, for the first day. Preble was second.

The opening day of the shoot had admirable weather—clear and bright, with a fresh breeze. The grounds are pleasantly situated upon a hill top. It is said to be one of the best arranged and most convenient grounds in the country. All is praise for the Auburn Gun Club and the royal manner in which they are entertaining these out-of-town visitors.

Three sets of traps are run, the event No. 1 (of 15 birds) being from the expert traps at known angles, squads of five shooting, while event No. 2, of 20 birds, is from the Magan traps at unknown angles. Stevens, the caterer, served dinner in the tent. On the grounds were a score or more of ladies, while, all told, 150 persons were present at the opening of the shoot.

Among the "crack" shots who were gunning for the "clay saucers" yesterday were E. C. Griffith, Pascoag, R. I. "Jack" Fanning, of San Francisco, too, is one of the crack-a-jacks of America. B. Leroy Woodward is one of the best marksmen in the business. O. R. Dickey, who was the handicap in Boston in 1896; W. L. Colville, who represents the Dupont powder people; B. H. Norton, of New York, who represents Hazard powder, and Lambert.

The Waterville squad consists of S. A. Green, Samuel L. Preble, Dana P. Foster, Walter Reed and "Stobey." Besides the Waterville regular squad, Dr. Dwinell and Davidson, of that city, arrived on the grounds to carry off their share of the honors.

Then there is Bath, which is well represented at the shoot. Geo. Thompson heads the team from the ship-building city, and will get his share of the birds. A group of Montreal guns are here, while all the old-timers of the Lewiston and Auburn teams are in the procession.

Table with columns: Events, Targets, and names of participants with scores. Includes names like Norton, Colville, Gonzales, Rich, Neal, Hunnewell, Connors, Childs, Noble, Snow, Fanning, Rule, Dickey, Leroy, Lambert, Greene, Stobie, Foster, Preble, Wyman, Griffith, Getchel, Cutler, Davison, Morse, Fletcher, McMurray, McCann, Day, Dwinell, Moody, Barker, Cobb, Randall, Gray, Hinds, Cushman, Jordan, Giddings, R. Stobie.

Thursday, Aug. 22, Second Day.

Concerning the management, the Lewiston Journal, of Aug. 22, published the following: "At precisely 2.30 and a fraction on Wednesday afternoon, Manager Elmer E. Shaner, chief pusher of the Interstate Gun Club meet now in progress at the Auburn Gun Club premises, near the Lewiston and Auburn Country Club, took his specially selected cambric from the unknown angle of his shirt collar, stowed it away in his left hip trap pocket and—the great interstate meet of the gun clubs of U. S. A., under the auspices of our enterprising Auburn Gun Club, was an assured success."

"Just a word right here about Manager Shaner and his abilities to annihilate the peculiar and constant difficulties of a meet of this nature. It was about as much sport to sit and watch him put the 'events' through their paces at any moment of Wednesday's shoot as it was to witness the feats of the marksmen themselves. 'Say,' said one of the noted 'professionals' present Wednesday, 'I wish you would just put it down for me that Shaner is a hustler from the word go. There isn't a better man in the country to handle a big shoot like this.' And we will stake our judgment that there isn't. He just made the guns do a continuous pop-corn cake walk from 9.30 through the entire day, and when the faint echoes of the 6 o'clock mill bells came up from the city, the entire 10 events of the first day's shoot had been finished, and there was time to sit down and talk it all over before taking the personally conducted buckboard for the Elm House."

Mr. Stobie finished with a string of 20 straight, losing 12 birds to-day and 13 yesterday, and beating Hunnewell for the honors of "High Gun" by exactly one bird in the two days' events.

Neal, high gun of the first day, missed three out of the first event at fixed angles, and dropped five more on the next event, two on the next, two on the next, and two on the sixth, making fourteen misses on the first 105 birds. The scores:

Table with columns: Events, Targets, and names of participants with scores. Includes names like Norton, Colville, Thompson, Craig, Gonzales, Hunnewell, Conner.

Large table with columns: Names and scores for various participants. Includes names like Ashley, Noble, Snow, Fanning, Rule, Dickey, Leroy, Lambert, Greene, Stobie, Foster, Preble, Wills, Adams, Neal, Gray, Rich, Hinds, Whitmore, Cecil, Storer, Wheeler, Dunning, Morse, Childs, McMurray, McCann, Jordan, Moody, Barker, Cobb, Weeks, Williams, Davison, Wyman, Jones, Dwinell, Giddings, Fisher, Webber, Footer, Scribner, Perry, Griffith, Getchel, Cutler, Cushman, Collins, Ray, Gould, Vanner, Doten, Ingalls, Knight, Plutzer, Day, Harrington, Eastman, Day, W. C., Askell, Toothaker.

Alexander's Tournament.

GREENVILLE, Pa., Aug. 21.—Herewith find the scores of the two-day shoot, given by "Alexander" at Greenville, Pa., Aug. 14 and 15. It was a success throughout, and reflects great credit upon "Alexander," whose real name is "Papa" McNarg. Everything was in good shape. Tents for the shooters and a large fly tent covered the scoring line.

The second day was rainy during the forenoon, but that did not interfere with the shooting in the least.

Beside the \$75 given for general high average for those shooting through both days, a half cent was taken from the price of each target thrown, and given for high average each day. On the first day Atkinson and Fleming tied for high average. Chlay won high average on the second day, Atkinson second, losing by one bird. Chlay shot brilliantly, having a run of 71 straight. The \$75 purse was divided as follows: Atkinson first, Fleming second, Bates third, Cochran fourth, Snow fifth, Doubles, Event No. 11, 5 pairs; Fleming 7, Chlay 6, Bates 3, Atkinson 10, Jessop 9, Snow 7, Infallible 10, Pills 9. Event No. 12, 5 pairs.

First Day, Aug. 14.

Table with columns: Events, Targets, and names of participants with scores. Includes names like Atkinson, Moore, Quinine, Shaner, Nye, Pills, Hull, Snow, Fleming, Cochran, Blackcloud, James, Alexander, C. A. M., Bates, Bones, Powers, Naylor, Chapman, Osborne, Harper, Andrews, Hippard, Hoobler, Baird, Jessop, Nutt, Park, Lemons.

Event 12, 5 pairs: Pills 10, Fleming 9, Jessop 5, Bates 10, Hull 6, Harper 8, Snow 7, Atkinson 8, Shaner 8, Farmer 5, Nye 4, Alexander 8, Denniker 7.

Second Day, Aug. 15.

Table with columns: Events, Targets, and names of participants with scores. Includes names like Farmer, Atkinson, Shaner, Quinine, Jessop, Pills, Snow, Hull, Fleming, Cochran, Bates, Chlay, Blackcloud, Harper, 76, Powers, Bones, Alexander, C. A. M., Harrington, Jordan, Braby, Hennon, Manning, Williams.

Stark—Langley.

EXETER, N. H., Aug. 24.—The challenge of Mr. C. M. Stark, of Dunbarton, N. H., for a match at 100 birds is accepted by Capt. A. S. Langley, of the Exeter Gun Club. The required deposit has been sent to Secretary Sanborn, of the Concord Gun Club, and the captain names Thursday, Sept. 5, as the date, if agreeable to Mr. Stark. "This means pay or play," and may the best man win. C. H. GERRISH.

The Ottawa Tournament.

The three days' tournament of the Dominion of Canada Trap Shooting and Game Protective Association held Aug. 15, 16 and 17, at Ottawa, on the grounds of the St. Hubert Gun Club, had a large attendance and strong support.

Concerning it, Mr. W. H. Hayes, treasurer of the St. H. G. C., writes us as follows: "We have succeeded in starting something here which will do more to advance trap shooting in Canada than anything ever done heretofore. When our association was organized last spring one of your papers, the Tribune, I think it was, had some fun with our name, claiming it to be contradictory. Now, we conduct trap shooting, likewise we try and intend to keep on trying to protect the game, by having laws improved and existing laws properly enforced, and I can assure you there is need of it. Is there anything contradictory in that?"

Probably the most interesting event of the tournament was the team match for the "Mail Trophy," which was in possession of the St. Hubert Gun Club of Ottawa and was won twice by that organization before the present win. The cup was originally presented to the Ontario Trap Shooting Association, which is not now in existence. It really belongs to the club, but the members of the St. Hubert organization considered that by putting up the trophy for competition again it would additionally stimulate trap shooting in Canada. In doing this the club has acted in a decidedly sportsmanlike manner.

The annual meeting of the Dominion of Canada Trap Shooting and Game Protective Association was held at the Hotel Cecil, officers being elected and other business transacted. Following are the new officers: President, T. A. Duff, Toronto; first vice-president, C. Strangman, Montreal; second vice-president, F. Westbrooke, Brantford; secretary-treasurer, A. W. Throop, Ottawa; committee, T. Upton, Hamilton; G. J. Mitchell, Brantford; R. Fleming, Toronto; Dr. Overholt, Hamilton; C. G. Thompson, Sherbrooke, Que.; W. H. Hayes, Ottawa; R. B. Hutchison, Westmount, Montreal.

Hamilton was selected as the place where the tournament will be held next year and under the auspices of the Hamilton Gun Club. It was decided that the secretary of the club under the auspices of which the annual tournament is to be held will act as assistant to the secretary-treasurer of the association. The usual votes of thanks were passed.

General satisfaction is expressed by the trap shooters from outside places at the way in which matters are being handled, and Messrs. A. W. Throop and W. Hayes, of the St. Hubert's Gun Club, who are two of the local men working hard to make things a success are coming in for lots of praise.

At the meeting of the trap shooters the work of these two gentlemen was referred to in complimentary terms.

First Day, Aug. 15.

Though the conditions were not the best, the wind and light being detrimental to the highest scores, the day's shooting produced some very satisfactory results. Some of the best trap shooters in the Dominion were present, as well as many well-known marksmen from the United States. An easterly wind facing the trap yesterday raised the birds rather high, and thus deceived some of the trap shooters. There was no sunshine either during the day, and the light was, therefore, deceptive. Ten events were on the programme for the initial day, but only nine were finished owing to a late start.

In event No. 6, at 15 targets, the possible was broken by W. J. Spangler, of Columbus, O., and N. G. Bray, of Sherbrooke. In event No. 1, at 15 birds, P. Trudeau, Ottawa, made the possible. A. W. Throop, Capt. Higginson and Trudeau also made very good scores in some of the other events, though the handicap system, which puts the cracks back to 19, 20 and 21 yards, evened matters up pretty much.

Event 1, 20 Targets: C. Summerhayes 15, P. Trudeau 14, C. J. Mitchell 14, N. G. Bray 14, C. G. Thompson 13, Fred Westbrooke 13, J. A. Duff 13, W. E. Deremo 13, S. Dumont 13, A. W. Throop 12, E. L. Greenwood 12, Chas. Hacker 12, Montgomery 12, H. F. Westbrooke 12, Spangler 12, Capt. Higginson 11, T. C. Boville 11, W. J. Johnston 11, W. Slaney 10, Fletcher 10, J. Locke 10, D. Alexander 10, C. Brigger 10, F. Bennett 9, F. H. Thompson 9, J. K. Kennedy 8, Dr. Wilson 8, R. Green 8, T. Upton 8, A. W. Westover 8, H. Irwin 7, R. B. Hutchison 7, J. G. Greene 6, J. W. Deslaurier 6, Anderson 6.

Event 2, 20 targets, and the scores were: Westbrooke 19, Summerhayes 19, A. W. Throop 19, Johnston 19, C. G. Thompson 18, Chas. Hacker 18, R. B. Hutchison 17, J. H. Thompson 17, W. G. Deremo 16, Brigger 16, Dr. Wilson 16, Mitchell 16, Higginson 16, R. Green 16, T. Duff 16, N. G. Bray 16.

Event 3, 20 targets, St. Hubert Gun Club guaranteed purse of \$50; 5 moneys; Rose system; 16 yards; H. T. Westbrooke 13, J. H. Thompson 17, W. E. Deremo 17, L. G. Green 15, I. N. Deslaurier 13, Z. Ketchum 12, Chas. Hacker 17, J. Locke 15, Dr. S. White 15, F. A. Bradley 17, Galbraith 17, 17 yards: A. W. Throop 18, T. A. Duff 15, T. C. Boville 13, W. G. Bray 16, T. Upton 14, Bennett 10, J. K. Kennedy 14, P. Trudeau 12, W. J. Johnston 14, A. D. Alexander 11; 18 yards: Summerhayes 19, C. A. Montgomery 19, R. B. Hutchison 14, Capt. Higginson 14, C. G. Thompson 14, R. Green 16, E. F. Greenwood 12, A. Dumont 11, A. W. Westover 11, D. Brigger 15; 19 yards: W. G. Spangler 17, C. J. Mitchell 18; 20 yards: M. E. Fletcher 17, F. W. Westbrooke 15; 21 yards: F. Westbrooke 19, E. G. White 16.

Event 4, 20 targets, 16 yards: H. T. Westbrooke 17, T. Upton 19, T. B. Bennett 11, R. B. Hutchison 17, Capt. Higginson 18, R. Green 15, E. F. Greenwood 11, A. W. Westover 16, A. Dumont 15, T. C. Green 15, J. K. Kennedy 15, H. Irwin 8, J. Locke 12, C. Brigger 15, W. Slaney 11; 17 yards: J. A. Duff 17, M. E. Fletcher 12, P. Trudeau 16, W. J. Johnston 14, W. J. Spangler 17, J. H. Thompson 15; 18 yards: C. A. Montgomery 17, C. G. Thompson 17, N. G. Bray 16; 19 yards: A. W. Throop 12, W. E. Deremo 16, C. G. Mitchell 13; 20 yards: Dr. Wilson 13; 21 yards: C. Summerhayes 18, F. Westbrooke 17.

Event 5, 20 targets, 16 yards: H. T. Westbrooke 15, T. Upton 19, A. W. Westover 11, T. C. Boville 16, I. N. Deslaurier 14, G. Dumont 15, D. Alexander 16, F. A. Bradley 11, W. Strangman 17, F. A. Henry 14, J. K. Kennedy 15, L. G. Green 10, W. J. Henry 14, C. Brigger 17, R. B. Hutchison 11, Capt. Higginson 11, R. Green 14, Z. Ketchum 9, E. F. Greenwood 16, Dr. S. White 14; 17 yards: C. A. Montgomery 11, W. Spangler 16, T. A. Duff 15, J. H. Thompson 14, B. Rothwell 13, P. Trudeau 13, M. E. Fletcher 13, W. J. Johnston 16; 18 yards: C. G. Thompson 16, N. G. Bray 18; 19 yards: C. J. Mitchell 13, A. W. Throop 15, W. E. Deremo 17; 20 yards: Dr. Wilson 13; 21 yards: Summerhayes 15, F. Westbrooke 17.

Event 6, 15 targets: W. J. Spangler 15, N. G. Bray 15, Capt. Higginson 14, D. Alexander 14, C. G. Thompson 14, C. J. Mitchell 13, M. E. Fletcher 13, W. J. Johnston 13, F. Westbrooke 12, C. A. Montgomery 12, R. B. Hutchison 12, I. N. Deslaurier 12, W. Strangman 12, C. Summerhayes 12, T. Upton 12, E. F. Greenwood 11, F. A. Bradley 11, C. Brigger 11, W. E. Deremo 11, J. H. Thompson 10, H. T. Westbrooke 10, G. Dumont 10, A. W. Throop 10, R. Green 9, A. H. Westover 9, Dr. Wilson 9, Capt. Boville 8, T. A. Duff 8, F. A. Henry 8, Chas. Hacker 7.

Event 7, 20 targets; Westmount Gun Club's guaranteed purse: T. A. Duff 19, F. A. Henry 19, Capt. Higginson 19, C. G. Thompson 18, R. Green 17, D. Alexander 17, N. G. Bray 17, J. E. Deremo 17, W. J. Henry 17, J. K. Kennedy 17, C. A. Montgomery 16, R. B. Hutchison 16, W. Galbraith 16, P. Anderson 16, B. Rothwell 16, F. Westbrooke 16, Dr. Wilson 16, C. F. Mitchell 16, W. Strangman 16, W. J. Spangler 15, P. Trudeau 15, W. Slaney 15, A. W. Throop 15, E. F. Greenwood 15, W. J. Johnston 14, I. N. Deslaurier 14, G. Dumont 14, Capt. Boville 14, J. H. Thompson 12, M. E. Fletcher 12, C. Brigger 11, Dr. Birkett 10, H. F. Westbrooke 8, L. G. Green 8, T. Upton 7.

Second Day, Aug. 16.

The second day produced some excellent sport, and the clay pigeons were broken freely and satisfactorily. The wind was very high and blowing across the traps and made the shooting somewhat uncertain. Twelve events were shot off, including two matches left over from Monday, and in several of the matches possibles were made. There were four guaranteed purses of \$50 each shot for in yesterday's events.

J. S. Fanning, the noted American wing shot, of New York, is taking part in the tournament. He holds a record of 230 blue rocks straight.

Fred Westbrooke, of Brantford, is also another good shot.

Table with columns for Events, Targets, and names of shooters with their scores.

Table with columns for names of shooters and their scores across multiple events.

*Handicaps.

Third Day, Aug. 17.

The principal event was the team competition for the handsome Mail trophy, which has been in the keeping of the St. Hubert's Gun Club of Ottawa for several years, and which, under the old challenge system, they have always been able to hold. This year, in recognition of having the honor of conducting the first tournament of the association, the club hung up the big trophy to be competed for by any teams that saw fit to enter, and the result was a spirited competition, in which the holders defeated Brantford by three birds only. When the teams had shot half the match, that is, 25 birds each, the St. Huberts were eight birds ahead, and their stock went up. Brantford made a plucky fight, as may be judged from the fact that they reduced this lead of eight birds by five. That the team of the winners was admirably chosen may be seen by a glance at the scores, there being only two points difference between the highest and lowest score, whereas there were nine points in the Brantford team, fifteen in Westmount and thirteen in Hamilton. The conditions and result of the match were:

Entrance \$15 per team, 5 men teams, squad shooting, rapid fire, Magautrap, 16 yards rise.

St. Hubert's team, Ottawa: Capt. J. F. Higginson 43, P. Trudeau 43, A. W. Throop 44, Capt. T. C. Boville 42, W. J. Johnston 44; total 216.

Pastime Club, Brantford: Chas. Hacker 40, C. Montgomery 38, C. Summerhayes 47, C. J. Mitchell 42, Fred Westbrooke 46; total 213.

Westmount Team, Montreal: G. Dumont 43, C. Aubin 42, W. Galbraith 29, J. K. Kennedy 44, R. B. Hutchison 40; total 193.

Hamilton Club, Hamilton: M. E. Fletcher 38, T. Upton 40, F. Vallance 28, C. Brigger 33, Dr. Wilson 41; total 180.

The following were the prize winners and the amounts won in the Merchandise match:

W. J. Johnston, Ottawa, \$12; A. W. Throop, Ottawa, \$10; E. G. White, Swanton, Vt., \$8; C. Strangman, Montreal, \$7; W. Slaney, Ottawa; Capt. Boville, Ottawa; Fred Westbrooke, Brantford; J. S. Fanning, New York; Capt. Higginson, Ottawa; R. B. Hutchison, Montreal, \$6 each; S. P. Anderson, Oakville; W. J. Spangler, Columbus, O.; N. G. Bray, Sherbrooke; W. F. Deremo, Lacona, N. Y.; S. N. Westover, Hamilton; G. Dumont, Montreal; C. G. Mitchell, Brantford; T. A. Duff, Toronto; R. Green, Toronto; I. N. Deslaurier, Ottawa; Dr. S. White, Ottawa; Montgomery, Brantford, \$5 each; J. H. Thompson, Toronto; M. E. Fletcher, Dr. Wilson, Hamilton, \$4 each; W. J. Henry, Ottawa, \$3; D. Alexander, Toronto, \$2.

Event No. 1, 20 birds: M. E. Fletcher 19, E. G. White 19, W. J. Spangler 19, W. J. Henry 19, C. Hacker 18, J. H. Thompson 17, Fred Westbrooke 17, J. K. Kennedy 17, T. A. Duff 17, F. A. Henry 17, W. J. Johnston 17, G. Dumont 17, R. B. Hutchison 17, Montgomery 16, C. J. Mitchell 16, D. Alexander 16, T. W. Upton 16, Dr. S. White 16, R. Green 16, P. Trudeau 16, Galbraith 15, Summerhayes 14, T. C. Event No. 7, 20 targets: P. Trudeau 19, F. Westbrooke 19, C. Mitchell 17, F. A. Henry 17, Capt. Higginson 16, T. A. Duff 16, T. Upton 16, W. Spangler 16.

Mississippi Valley Notes.

It has been said that the splendid sport of shooting at the trap is not gaining in favor in proportion to the growth of other modern outdoor sports. It has been the writer's fortune during the present season to manage and participate in many so-called "grand tournaments" in the smaller towns of Illinois, and from experience thus gleaned I am inclined to question the truth of the statement above cited. Perhaps the recent international matches shot by our representative experts in England and Scotland have done much toward directing attention to and popularizing the sport here at home, but certainly I have witnessed the debut since the first of June of several score of new faces at the score, and might designate many who have embraced the pastime with much zeal and enthusiasm.

Perhaps I can best make this clear by citing a tournament held on August 17 by the A B C Club, of Kampsville, Ill. This is within the precincts of Calhoun, the one county in Illinois yet without railroad, telegraph or express office, and while it is rich in natural resources and blessed with a thrifty and intelligent citizenship, trap shooting is as yet in its incipency within the borders of the "Kingdom."

It was a bold thing for the committee to undertake a public tournament, therefore, and not without misgiving did the writer go there in the rôle of general factotum for the occasion. However, the shoot proved in every particular a pronounced success, as the scores below submitted will show. A heavy rainstorm coming up just at noon put an abrupt stop to the sport, but few of the so-called big tournaments of the year have been able to show a roster of forty names of active participants. From all parts of the county they came, men of all ages and with guns of all gauges, from 8 to 16, and of ancient and modern make. Nobody and no gun was barred, no handicaps were suggested and the sweeps were advertised as open to the world. Pin-fire and brass shells were in evidence, and black powder was so largely in pre-dominance that it was frequently necessary to defer shooting "until the clouds rolled by." If a vote had been taken as to the relative merits of black and nitro powder, sentiment would have been overwhelmingly in favor of the former. Races were all at ten targets and moneys distributed under the Jack Rabbit Septum as being best adapted to the circumstances; and what a picnic it would have been for some of the old-timers to participate, full-fledged in the game. Yet they invited any to come and will do so again in another meet to be held at Hardin early in the fall. In consideration of the low average scores it must be remembered

that many of these men had never before seen or thought of shooting at any flying object other than the game and wild fowl of their own fields and marshes. I append the scores:

Table with columns for Events, Targets, and names of shooters with their scores.

The programme for the annual fall tournament of the Piasa Gun Club, at Alton, Sept. 19-20, presents a very inviting list of events. There will be 185 shots daily, comprising ten events, with \$5 cash added to each. Money will be divided at the ratio of 30, 30, 20, 20 per cent., and a fifth prize of valuable merchandise goes with every event. Seven high guns will divide \$50 average money, in the proportion of \$10, \$8, \$8, \$7, \$7, \$5, \$5. All comers will be welcome to shoot for money, the trade representatives paying \$2.50 per day extra, as a purse for equal division among amateurs shooting the programme.

John T. Linkagle, the genial treasurer of Calhoun County, Ill., is the present holder of the Calhoun championship medal for wing shooting.

Life nowadays would become indeed commonplace and insipid were it not for the occasional parentheses of quiet humor which the chronicler puts in between paragraphs. Here's one on two very renowned and genial gentlemen who, recently coming out of the effete East, have taken up their abode among us, to wit: W. Fred Quimby and Harold B. Money. Having established themselves firmly in the good will of the community and incidentally kept up same practice, the story goes that they one day challenged two local men for a match, New York against Illinois, at fifty targets per man. Details are not furnished, but report hath it that the challenging parties left the field at least ten birds to the bad.

Mr. E. H. Ford, one of the energetic young men identified for the past several years with the ammunition and powder business of the West, has resigned his position with the Western Cart-ridge Co., to become general manager of a new powder manufacturing plant in Indiana.

ON LONG ISLAND.

Emerald Gun Club.

BROOKLYN, L. I., Aug. 20.—There was a good attendance and some skillful shooting at the monthly meeting of the Emerald Gun Club at Dexter Park to-day.

PUBLISHERS' DEPARTMENT.

Tour to the Pacific Coast.

ANOTHER OPPORTUNITY TO VISIT CALIFORNIA UNDER THE AUSPICES OF THE PENNSYLVANIA RAILROAD'S PERSONALLY CONDUCTED SYSTEM.

In view of the great popularity of transcontinental travel under the Personally Conducted System, as evinced in the recent Pennsylvania Railroad Tour to the Pacific Coast and Canadian Northwest, that company has decided to run another tour to the Pacific Coast, including in the itinerary a visit to the world-famous Grand Cañon of Arizona, in the early fall. The tour will leave New York, Philadelphia, Baltimore, Washington, and other stations on the Pennsylvania Railroad east of Pittsburg, on Monday, September 23, and reach New York on the homeward trip Tuesday, October 22.

As in former tours to California under the auspices of the Pennsylvania Railroad, a special train, composed of the highest class of Pullman equipment, will be utilized during the entire trip. Excellent meals will be served in the dining cars attached to the train during the entire journey, except during the stops at San Francisco and in Chicago. An observation car will appeal to all who delight in scenery. Few trips afford so great a diversity in Nature's beauties as the one outlined below. Westward bound, the tourists will pass through the wild slopes of the Colorado Rockies, around the Great Salt Lake, and over the fastnesses of the Sierra Nevada. After visiting all the beautiful resorts on the sunny California slopes, the eastward journey will be through the Arizona desert to the Grand Cañon of Arizona. Its beauties cannot be painted in mere words. Magnificent in coloring, awful in its depths, it stands among the natural wonders of the world. Thence across the plains to St. Louis, and eastward through Illinois, Indiana, Ohio, and Pennsylvania, the tourists reach their destination just thirty days after leaving home.

The various transcontinental lines having made low rates on account of the General Triennial Convention of the Protestant Episcopal Church, the Pennsylvania Railroad Company is enabled to offer this superb vacation trip at the low rate of \$185 for the round trip from New York, Philadelphia, Baltimore, Washington, or any point on Pennsylvania Railroad east of Pittsburg, one in a berth; and \$165 for the round trip, two persons occupying the same berth. The rate from Pittsburg will be \$5 less.

Diagrams are now open, and as the number who can be accommodated will be strictly limited, names should be registered immediately.

For further information and descriptive pamphlet, apply to George W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—Adv.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

GENERAL WILLIAM LUDLOW.

By the death of General William Ludlow on Friday last, the United States army has lost one of its ablest and most brilliant soldiers, and the country one of its best citizens.

General Ludlow was born at Islip, L. I., Nov. 27, 1843, and graduated from West Point in June, 1864. He was immediately commissioned First Lieutenant of Engineers and at once saw service in the Civil War, being appointed Chief Engineer of the Twentieth Army Corps during the Georgia campaign. He had held this position only one day when the battle of Peach Tree Creek took place, and for gallantry in this engagement and at the defense of Allatoona Pass, Ga., he was brevetted Captain. He took part in Sherman's march to the sea and in the invasion of the Carolinas, and was brevetted Major and Lieutenant-Colonel for his services.

In 1867 he was made Captain in the Corps of Engineers, and from 1872 to 1876 served as Chief Engineer of the Department of Dakota. From 1876 to 1882 he was engaged in supervising river and harbor defenses in Pennsylvania, New Jersey and Delaware. In June, 1882, he received his majority, and became Engineer Secretary to the Lighthouse Board. In the spring of 1883 he took charge of the water department of the city of Philadelphia for three years, during which time he entirely made over the water system of that city, and put it in splendid shape. For two years he was commissioner and engineer for the District of Columbia. Subsequently he served as engineer of certain Lighthouse Districts, and shortly before the breaking out of the Spanish war was stationed in New York, where he looked after certain harbor improvements.

At the breaking out of the war with Spain he was promoted to the rank of Brigadier-General of Volunteers and commanded a brigade under General Lawton at the battle of Santiago. Here he displayed great bravery and marked ability in handling troops in a difficult situation. Shortly afterward he was promoted to be Major-General of Volunteers.

At the close of the war with Spain, General Ludlow was appointed Military Governor of Havana, and held this position for a year, during which time he absolutely revolutionized the city and its government, and inaugurated changes in sanitary conditions and in the details of the execution of the laws which changed Havana from one of the most unhealthy and badly governed cities in the world to one of the healthiest and safest. Not only did he do this, but as a private individual he set on foot measures to relieve the miseries and the necessities of those non-combatants in Havana who, through the war with Spain, had been deprived of homes, relatives and support. General and Mrs. Ludlow actively took steps to help the orphan children of Havana and interested their many friends in this country, with the result that thousands of little children were helped and saved.

General Ludlow was relieved from service in Cuba early in the year 1900. Previous to this he had been promoted to be Brigadier-General in the regular army. He was now ordered to Europe to study and report on the military systems there, and his report is on file in the War Department. On his return from Europe he was ordered to the Philippines, but on reaching there, was discovered to be suffering from tuberculosis, the result of his long, hard work in Cuba, and was ordered back to the United States by the next transport.

Throughout the army General Ludlow was recognized as one of the best soldiers, most able engineers, most courageous and handsomest men in service. He possessed a superb physique, was over six feet tall, of charming manners and agreeable personality. Unlike many army officers, he feared public criticism as little as he did the enemy in battle. When he believed that his course was right, that he was doing what was for the public good, no amount of newspaper criticism or fault finding by individuals could stir him from his position. He was as good a fighter with the pen as with the sword, and well able to defend himself when circumstances required it.

General Ludlow was a keen sportsman, and during his service in the West in the old days had many opportunities to gratify his love for hunting and fishing. In those days he was a good shot and a skilled hunter.

Such is a very brief account of General Ludlow's official life and some of his characteristics, but it conveys no idea of the man nor of the work he did, nor can it suggest the

feeling had for him by those with whom he was brought in close contact. To each such man in some way he extended the gift of his rare sympathy with a power of helpfulness that the associate never forgot.

To all outward seeming, General Ludlow was as nearly as conceivable an ideal man. A master of his profession, perfect physically, with a mind able and well equipped, unflinchingly devoted to the right, the services that he has performed for his country and his people are great, and would unquestionably have been far greater had his life been spared to full age. Yet it is much that such a man should have lived. It is much more to have known well such a man. The force of his influence and his example cannot be lost; nor will the services that he has rendered be soon forgotten.

A STORY BY ROWLAND E. ROBINSON.

It is a great pleasure to be able to print such a good story as that of Danvis life by Rowland E. Robinson. This was one of the manuscripts left by Mr. Robinson, and it belongs with the best things he ever wrote.

GOVERNMENT FORESTRY.

We have made frequent reference to the extraordinary growth within the past two years of an interest in forestry in this country. This is in no way better shown than by the increase in the appropriations by Congress for the Division of Forestry, which have grown from \$28,520 in the year 1898-99 to \$185,440 for the current year. This increase shows very clearly how the work of the Division of Forestry has impressed itself on the country, and also how rapidly that work has expanded. Congress does not make appropriations unless called on to do so by public opinion, and that it has so largely increased the allowance for forestry work is sufficient evidence of the state of the public mind on the subject.

On the 1st of July the Division of Forestry was made a Bureau of the Department of Agriculture, and this Bureau has been divided into three Divisions, which will represent a vast increase of work in forestry for the current year. These Divisions are those of Forest Management, Forest Investigation and of Records.

The first is in charge of Mr. Overton W. Price, who was superintendent of working plans of the old Division of Forestry. Mr. Price and the force under him will have charge of the examination of tracts of woodland, will ascertain the condition of the timber, the prospects of reproduction, the opportunities for marketing, the best means of lumbering with regard to both the present and the future, and the probabilities of success in working the tract. If, when a report is made to him, the owner should decide that the tract is to be worked, a working plan will be furnished him. This is a continuation of the methods established by the Division of Forestry two or three years ago, and under this plan owners of some 3,000,000 acres of woodland have applied for advice, and about 177,000 acres have been put under management. This land is scattered in large and small tracts all over the country, and is owned by farmers, city men, clubs and corporations. Moreover, several State governments have asked the assistance of the Division with regard to State lands, and the Department of the Interior has requested working plans for all the forest reserve, covering more than 46,000,000 acres.

The Division of Forestry Investigation is under the charge of Mr. George B. Sudworth. This Division, as its name implies, is one of investigation and inquiry. It studies the trees, from the scientific point of view, and also investigates problems connected with tree planting, lumbering, water supply, grazing and fires.

The Division of Records is in charge of Mr. Otto J. J. Luebker. It has charge of office matters, as well as of the library, and of the Bureau's great collection of photographs, which illustrates forest conditions all over the United States.

The work of the Forest Bureau is now being carried on in seventeen States, and by nearly 200 persons. Of these, a large number are college students, who expect to follow forestry as a profession, and who work for the Bureau during the summer, chiefly for the experience that the work gives them.

It would seem that at last the people of the United States had become aroused to a sense of the importance to the nation of the fast-disappearing forests, so that now—

almost altogether through the influence of the old Division of Forestry and its chief, Mr. Gifford Pinchot—efforts are being made to harvest the forestry crop in intelligent and economical ways, and at the same time to keep up the productivity of the forests. Lumbermen and corporations making use of lumber have at last been brought to see that the object of forestry is not to keep the public from having lumber, but to enable it to have constantly more and more lumber. When a comprehension of this fact reached the public mind, no reasoning was required to enable it to see that forest care and forest management were good things and ought to be encouraged.

VACATION SCHOOLS.

A THOUGHTFUL paper on the physician's influence as to vacation schools, by Dr. Helen C. Putnam, was recently published in the Bulletin of the American Academy of Medicine, and deserves a wide reading.

Every American, whether he be a sportsman or not, is interested in the educational problem, on which to so large an extent the future of our country depends. Although our public schools are frequently criticised, they are yet believed to be the best in the world, but, realizing that they might be better, many people are giving much thought to the question of their improvement.

Within the past few years a movement has taken place in cities to establish what are called vacation schools—that is to say, sessions of light school work during the summer vacations—held during the morning only, and at which attendance is voluntary. The object of establishing such schools is to keep the children off the streets during the months of July and August, and to provide for them good associations and improving work which shall be agreeable, in place of the evil influences to which they are likely to be exposed in the city streets. Since attendance is voluntary, these schools, if they are to have any success, must be made attractive to the children. They must be encouraged and helped to do the things that they like.

The schools are for children under sixteen years of age, and such children love to play—in other words, to enjoy themselves. The vacation schools offer in a certain orderly fashion this enjoyment, which not only secures regular attendance at the schools, but also faithful work. Another attractive part of the school work includes fresh-air parties, sojourns in summer camps and at farms, and shorter visits to the country. On such visits something may be taught of nature and nature study, and an interest aroused in such things, which may be followed up by work in the class room with flowers, plants, aquaria, pet animals, and museum specimens.

The excursions which take place weekly may be to the country or to parks or museums, or art galleries. The children who go on them are deeply interested in what they are to see, eager to learn, and so not afraid to ask questions, and have their attention concentrated on the subject of study, which makes it certain that much that they see and hear will remain in the mind.

All this is good as training, but far better in the effect which it has in broadening the child's mind, in giving its thoughts and interests a wider range, and in offering it a choice of subjects of interest, of recreation and of occupation for its future life. Nature study not only trains and broadens and gives pleasure, but it also furnishes to each child an unconscious safeguard from future harm whose importance can hardly be overestimated.

The Spaniards say *Un clavo saca otro clavo*, and it is true that if we encourage in a child a love for nature and deeply interest him in the things of out of doors, there will be left in his mind little inclination to think of evil things, and little time to plot mischief. The small boy whose head is filled with the care and comfort of his pets, or who is deeply interested in collecting butterflies, or flowers, or deserted birds' nests; the older boy who is crazy about fishing or shooting, or who spends much of his time hanging over the bank with his nose close to the water while he watches the movements of the curious creatures who live in it; these are not the boys who get into mischief, who worry their parents by staying out late at night, and who are a cause of anxiety from the doubtful associations which they form.

Great, then, are the vacation schools for the good that they have done, and the greater still are their possibilities for the future. Most strongly they appeal to the dwellers in the great cities, for the happy children of the country do not need them.

The Sportsman Tourist.

Politics in Danvis.

BY ROWLAND E. ROBINSON.

Mrs. HARRIET PIPER'S curiosity was exercised concerning the cause of a peripatetic visit which her husband was enjoying with two influential townsmen who had called upon him one June morning in the imposing array of holiday attire. Brother Foot, a class leader and deacon, wore his bell-crowned hat and black coat of severely formal cut, and his fine calfskin boots, whose toes had acquired a devout upward turn at frequent prayer meetings, and now creaked with something of the Sabbath-day solemnity in their measured cadence as he walked to and fro. His more worldly companion, Roswell Kent, honored the occasion with as much attention to dress. He wore a heaver of the same style, which had not changed in Danvis for twenty years, but his swallow-tailed coat was blue, garnished with shining brass buttons. The deep cuffs were rolled back till the soiled lining was conspicuous above the wristbands of the shirt. Both men wore uncomfortable black silk stocks and broad collars that came high up on their freshly shaven cheeks.

Mrs. Piper's curiosity enhanced the usual alertness of her mien as she craned her neck and pricked her ears to catch a word of the conversation as the trio passed through the yard and walked toward the barn. She was rewarded by no sound but the exasperating creak of the deacon's boots growing fainter, and as the party entered the barn it was succeeded by the alarmed twitter of the swallows, resounding through the empty bays, mingled with the louder cackle of a hen frightened from her nest.

"I should like to know what on airth them men's up tu, a-shootin' hether an' yon, along wi' your father?" the brisk, little woman said to her comely daughter, who was wiping the last of a pile of milk pans. "If it wa'n't for both on 'em bein' here, I should guess like's not they was beggin' for the minister, but they wouldn't come together for that, bein' the Kents is Universalists, which Solomon Foot 'ld jes' 's soon fellership the ol' Scratch. Your father 'ld ortu give suthin' an' not be haounded by all on 'em. 'T 'ld be cheaper an' more sartain. Mebby that's what they be up tu, kinder tirin' one 'nother aout. I du declare, Malviny," she said, as her daughter passed to the open door with a pile of shining tin pans on her arm. "it's turrible aggravatin', the way you go 'raoun', not takin' no more int'res' in what's a-goin' on 'an a post in the fence! Hain't you a-feelin' well?" She noticed the roses in her daughter's cheeks were a little faded, and the luster of her black eyes was less bright than usual, and followed her to the open door, just outside of which Malvina deftly turned the milk pans on their shelf to sweeten in the sunlight. Her mother, ignoring the clatter, called out, "I guess I'd ortu fix you up some boneset or suthin' tu take."

"Shaw! mother, the' hain't nothin' ails me," Melvina laughed, nervously, "but I don't see no use o' stewin' an' s'misin' about what you can't find aout till you know."

"You don't s'pose your father's took it into his head tu sell the place? I'd ortu go an' find the ol' Dominick 'at stole her nest an' come off wi' a mess o' chickens yist'd'y," she said, after a minute's study. So, putting on a sun-bonnet and taking a basin of chicken feed, she set forth to execute this bit of strategy. But before she reached the barn, wading with lifted skirts through the rank barn grass, pigweed and redroot of the yard, her husband and his visitors came out of it and marched toward the hog pen, for, in fact, he was attending to some belated chores, while they bore him company to economize time and enjoy a critical, neighborly inspection of the premises. As they passed, she noticed that the Deacon was notching tallies in the corners of a pine stick which he carried in his hand, but she caught no words and heard no sound save the contented grunting of the swine, and concluded to await what information her husband might be disposed to give when he came to the house.

He deferred this event by a pretended errand to the woodshed, and then came with deliberation.

"Well, what was they a-wantin'?" she asked, after more than reasonable waiting for him to speak.

"Where's Malviny?" he whispered.

"Up in her chahmber. Now, what was it?"

"You can't never guess," said he, with an air of mystery.

"Levi Piper, if you got anything tu tell, why don't you tell it?"

He began impressively, "They want me to run for Legislatur' nex' fall!"

"Squizzle!" she exclaimed, contemptuously. "They're just a-foolin'. They know 't they can't kill off Peck, a ye'rlin', an' you'll git beat an' be aouten the way for good an' all. Foot an' Kent's both on 'em layin' the' corns tu rep'sent the taown."

"Mebby they be at some futur' time, but they're honest naow in a-wantin' me' tu, Har'it. The's lots 'at won't s'port Peck, an' says so, an' Foot an' Kent's got it all figered aout who'll go for me jest tu beat him, an' the's 'nough for tu gi' me a clean m'jority."

"I say as I said afore, squizzle! The're jest a-makin' a stool pigin on ye."

"Wall, naow, you women folks do' know jest haow folks is a-feelin'. Le' me tell ye." Levi took an argumentative position, resting his elbows on his knees, the fingers of his left hand spread and the forefinger of the other ready to count them off. His wife looked at them and permitted herself to listen, with the determination of not being convinced.

"In the first place, the' 's sev'ral of the m'ltia comp'ny 'at don't like Peck for keaptain, an' they'll go ag'in him, twenty on 'em, at the least cal'lation. Then, ther's Clapham won't vote for him 'cause he buys all his groceries tu Vergennes; he'll kerry twenty votes. Then th's all the Bloomers is ag'in him. Hamner an' his gang will; but Joel Bartlett an' what Quakers the' is is ag'in him 'cause he don't come aout flatfooted Anter Slavery. Sam Lovel an' his folks rather favors him, an' so does the Hillses, but th's all the Burtons over in the nor'east corner. Beri's brothers an' 'mongst 'em, 'at 'll go for anybody fust. Foot's got 'em all notched off on a stick, for an' ag'in, an' he figurs me aout a m'jority as high as ten,"

Mrs. Piper shook her head. "Then ag'in," he continued, indicating a fresh finger, "the's sights o' women folks 'll like tu see Mis' Peck took daown a peg, for the airs she puts on, 'caount o' bein' a member's wife, an' they'll hev influence, as you know, an' I know," he added, with the air of one having experience. "You was mentioned by the Deacon an' Kent as one cal'lated tu adorn s'ciety tu the Capital. Them was the Deacon's exack words. It's usuil, you know, for members' folks tu spend a week or so tu Montpelier durin' the settin'." The delicate hint had its effect upon the worthy Harriet, who was not without aspirations.

"There's another thing that I speak on only tu you." He went softly to the stairway to assure himself that Malvina was in her chamber, where he heard her moving about and singing softly to herself. "If you an' me favors Andrew Colby makin' up tu Malviny, with a proper understandin', him an' his'n will s'port me, an' that'll make my 'lection poorty nigh sartain." He placed the tips of all his fingers together and complacently regarded his wife.

"Yes, I know Andrew's fas' for her, but she's turrible sot on Tom Farr, an' I do' know's she can be made tu hear tu reason," the mother remarked.

"Parental authority an' moral 'suasion'll go a good ways, an' the' hain't no comparin' the advantages o' the tew men. Andrew'll hev a good farm an' a sheer o' his father's money 'at's aout tu int'res', an' Tom hain't nothin' but his tew hands."

"Yes, I know, but Malviny don't look at it that way, an' she's sot."

"Wal, you talk her inter it, Har'it," said he. "An' naow, don't you think I'd better just consent tu run, an' put myself int' the hands o' my friends? I lot consid'able on seein' you up tu Montpelier."

"I do' know but what you hed, considerin'," she assented. "If Malviny was tu go up a spell, it 'ld kinder take her mind off'n Tom. She's a-lookin' kinder peaked, an' don't 'pear tu take no int'res' in nothin'."

Approaching footsteps put an end to the conversation, but there was no need of more, as the question of Levi Piper's candidacy was settled as far as he was concerned.

Mrs. Piper took the first opportunity to acquaint Malvina with the part she was expected to play in the coming campaign, and to dazzle her with the glamor of gay life at the Capital, and her silence was taken as consent to offer herself as a bribe to secure the votes of the Colby faction.

In a fortnight the adherents of the two candidates began to fall in line, and as summer advanced the battle was on, and wordy warfare waged on rainy days and evenings at Clapham's, Hamner's and Uncle Lisha's shop. On the highways, teamsters hauled alongside and poured broadsides into each other, and even the Sundays were shattered by political discourses during noons.

Gran'ther Hill maintained, "Peck hain't no sort of a captain, and wa'n't fit for tu rep'sent the taown." At last he allowed himself to become convinced that as no military measures were likely to come before the Legislature, he could give Peck his support. In this he was joined by Joseph, though the latter said, "It did 'most seem's 'ough Peck wa'n't no more fit tu go to Legislatur' 'n' any other man 'at wa'n't no more fit 'n what he was."

Solon's grievance was, "The regular candidate had in some of his speeches in taown meeting used dambiguous words, which wa'n't in his dictionary nor in his vocalgulary, nor yct in the English language, wherefore, on which account, I shall not support the present incumbent."

With this single exception the frequenters of the shop were harmoniously united in politics, Sam being a staunch supporter of Peck and Antoine a noisy partisan, very proud of his newly acquired political rights, in which he proved himself an efficient worker.

"They du say," said Uncle Lisha, after a season of silent meditation, one August evening, when the whole company was assembled in conclave, "that the hull b'ilin' o' Burton's taown corner's goin' for Piper, sole an' uppers, ev'rythin' 'at stan's on tew laigs, even tu ol' Beri's grin'stun 'at's framed int' the side o' his lawg haouse."

"Yes, I s'pose so," Sam assented, reluctantly. "They all suck through the same straw, an' they're as sot as a row o' posts, an' you might's well argy wi' posts."

"Wal, Ah don' care, Ah'll paid for it an' Ah'll can lie jes' nat'ral naow sem if Ah'll was born here," cried Antoine, gesticulating frantically with his pipe in one hand and the other grasping a pipeful of prepared tobacco. "Le's see; taown meetin's was nex' Tuesday. Wal, Monday Ah'll goin' over on dat Burton Corner, me, an' Ah'll goin' for 'lection some."

"Twon't du no good," Sam said. "They're goin' tu put ol' Beri on the justice ticket, an' that'll fix him, sure as guns."

"Wal, prob'ly, Ah'll can' scairt it," said Antoine, pulling at his pipe, now ablaze.

"Young Colby, he's arter the Piper gal, hot-footed," said Peltier, not yet a voter, "so the hull forty-'leven o' the Colbys 'll vote for ol' Piper."

It was, indeed, true that the unfaithful Malvina was bestowing her brightest smiles on Andrew, whom the waning of every Sunday saw wending his way to the Piper homestead astride his handsome gray mare, where poor Tom Farr was sure to find her 'eatin' post fodder, and his own rightful place in the square room preoccupied, as might be known by the streak of candle light not quite hidden at the edges of the painted curtains. It was quite heart-breaking to think of the two, perhaps even then sitting together on the sofa, slipping inevitably closer as they bent their heads over the steel plates in The Keep-sake, the room's sole book. It was a wonder that the baleful glitter of Gran'pa Piper's coffin plate on the mantelpiece, where it occupied a central position between a conch shell and a whale's tooth, did not strike terror to Malvina's perfidious soul.

"Aaour Malviny 'pears tu be conductin' herself tol'lable cute," said Levi to his wife one Monday morning succeeding a prolonged prosecution of Andrew's courtship. "She's fixin' my 'lection; sure an' I hain't a-goin' tu furgit it. I'm a-goin' tu Vergennes an' git the best dress Sutton's got in his store for you, an' the secont best for her, for I don't cal'late tu hev ary one on ye play secont fiddle tu anybody up tu Montpelier."

Mrs. Piper expressed her gratitude effusively, and gave plain directions concerning the style and color of the two dresses. Through the steam of her washing she had visions of social triumphs,

"An' you might as well git you some fine shirt timber an' have Ann 'Lizer make 'em when she makes aour dresses," she said, making silent calculation. "You'd orter hev ye as many as three, for your old ones is as good as wore aout. You'd wear one a hull week up there duin' nothin', an' that'll give you one tu fall back on, in case o' gittin' ketchin' in the rain or anything."

"Peck tol' o' some on 'em lawyers from Burl'n't'n an' sech, as actilly changed th' shirts ev'ry day!"

"Good land o' Moses! Wal, they must be awful dirty cre'tur's! I'll resk but what you'll keep you'n lookin' well 'nough if you wash your neck ev'ry mornin'."

"An' some on 'em flourished clean pocket han'kerchers even oftener'n they changed the' shirts, so Peck says."

"Wal, I guess you've got 'nough o' them tu answer, but about the shirts, you'll want ye nine yards o' bleached cotton cloth an' a yard an' a half o' linen, an' Ann 'Lizer won't charge over'n above fifty cents apiece if she comes right int' the haouse an' makes 'em up 'long wi' me an' Malviny's dresses."

Soon Levi departed out of the steamy precincts of the washing in a radiant halo, out of whose airy fabric he builded not castles but legislative halls that arose and shone before him as he journeyed toward Vergennes and ever seemed a little nearer. He was gratified to be recognized as a candidate by some prominent out-of-town people, and flattered to be consulted concerning proposed legislative measures. In anticipation he already felt a lawmaker when Hamner, reckoned among his opponents, set forth a decanter of choice Jamaica and said:

"Naow, Mr. Piper, when you git up tu Montpelier, I hope you won't forgit the poor tarvern keepers, an' help tu git aour licenses put daown kinder reason'ble," or when Judge Bradley beamed benignly upon him and said:

"Piper, of course you'll go in for a new court house. That old barrack at Middlebury is a disgrace to aour caounty."

Mrs. Piper, when taken by neighbors in the pride and perplexities of dressmaking with her daughter and Ann 'Lizer, innocently declared:

"It's ridic'ous the way I've kep' a-puttin' off havin' me made a dress an' nothin' fit tu go nowheres, wi' no tellin' what may happen. Hevin' Ann 'Lizer, it seemed well 'nough for Malviny tu hev her a dress an' him some shirts, an' make one job on't."

When the elegant dresses were finished, they lay in state for more than a week on the gay patchwork quilt of the bed in the spare bedroom, where they were exhibited with satisfaction to neighborly callers. The gorgeously painted vase of plaster of paris fruit and the lace pincushion founded on the foot of a broken glass candlestick were no longer objects of casual interest as they stood on the curly maple bureau, although tomato, peach and orange still gave forth the same common, pervading odor of oil and turpentine, and the pinheads shone brightly as ever in various designs.

The morning of the first Monday in September broke from a cloudless sky on the hills and vales of Danvis. One of its earliest beams slid from fir-bristling peak to the green depths of Burontown, and gave greeting to Antoine Bissette, where he was plodding merrily along a road that followed the winding of a babbling stream, whose voice arose to mingle with the morning song of the breeze, now astir among the woodland steeps. To these, as he trudged briskly onward, flecking off now and then the leaves of obtruding wayside branches with a coil of rope that he carried in one hand, Antoine added a snatch of an old Canadian song, or his own rendering of some popular ballad of his adopted land. A partridge ran a little way before him and burst into noisy flight, a crow launched itself from a dead trec top and signalled to its comrades the presence of an intruder. As the glen widened and the broad light of a clearing shone through the trees, the clear "Zit, zit" of a meadowlark cut the air to give another token of open fields, into which the fern-edged road now entered.

A log house stood near, and a tall, uncouth man beside it, stood curving his long back over a scythe which he bore with all his weight upon a grindstone, one end of whose frame was mortised into the house, the other into two legs standing upon the ground. A tow-headed boy was wrestling with the crank, while the ungreased shaft in its irregular revolutions shrieked the doleful plaint that he might well have uttered. Searching sky and earth for some object of interest to lessen the weariness of his labor, he caught sight of Antoine, and communicated his discovery to the man, who, after a sidelong glance from the scythe, lifted his weight from it and devoted himself to regarding the stranger.

"Good morning," the latter gave greeting, as he drew near the fence. "Pooty good day dis morny."

"Morning," Beri Burton responded, setting his scythe against the grindstone and approaching the fence, which he hung himself up on while the boy slumped upon the chips in the most convenient place for listening and staring, and wishing the opportunity might outlast his father's intention of scythe-sharpening.

"Ah guess you'll goin' mek finish you hayin' to-day so you could vote to-morry, prob'ly, ant it?" Antoine asked, in allusion to the old saying he had heard reported at the last gathering in the shop, that a man who had not finished haying by election day had no right to vote.

"Hough!" Beri snorted, resentfully. "I goddonc er hayin' more'n er week ergo. Jus' er goin' ter cuddaown er lel bit er raowen. Guess I be all right for 'lection."

"Ah guess so. Ant he too bad dey ant goin' for be no 'lection to-morry?"

"Hain't goin' tu be none? What in thunder ye mean? Oh, you git aout!" Beri mumbled, in considerable excitement.

"Sartain, ant you hear haow dey all got some mally-poxes bus' aout on der Forge Village! Two case full of it on Hamner's Tavern. Clapham Clark he got some, 'one de forge man's got mos' dead of it, an' everybody scare to deat' mos'."

Beri's face grew as pale as uncleanness and sunburn would let it, and he slid hastily along the fence to a safer distance from Antoine.

"Gol dunn ye! You be'n right in ermongst er cursed rotten di'see an' come up here peddlin' of it? Yer orter be shot!" he blubbered out in mixed terror and anger, and the boy, in vague comprehension of danger, scrambled on all fours to the limit of earshot.

"Oh! no sah, M'sieu Burton," Antoine protested. "Ah'll

ant be near it—only hear it—an' Ah'll had him, too, gre't many year 'go."

"Yas, they say ye put three Frenchmans tergether an' they'll breed it," said Beri, reassured and drawing nearer again.

The sound of a strange voice had now drawn to the door his wife, fat, unkempt and slatternly, with a half-grown daughter of like build and general appearance.

"Say, Mum, they all got er smallpox daown ter er vilage, an' ar'n't goin' ter have no 'lection. Say, Mum, haow long ergo were I toxercated?"

"Toxercated! Wall, I reckon when ye hed er las' chance at somebody's jug!" she sneered, and then, in evident alarm, "Who tell'd ye the' was smallpox? I b'lieve ye lie, Be'."

"Him," Beri answered, indicating Antoine with a nod. "He live right handy by er vilage, an' he know. Say, Mum, when were I 'toxercated for er smallpox? I useter hed er mark here some'eres." He pushed his shirt sleeve to his shoulder and began searching the rough skin for a vaccination scar, while his wife gave no heed to his question, but beset Antoine for particulars of the ill tidings.

"Ne' mind," said Beri, abandoning the hopeless search and futile query. "You'll wanter know somep'n sometime."

"An' what brung ye up here for?" Mum Burton asked finally, curiously eyeing the rope.

"Ah'll was tol' you, ma'am," Antoine answered, with great politeness. "Ah'll was lose mah leetly caow, an' Ah'll hear it say he was be straggle off this way. You'll ant prob'ly seen him, ant it?—leetly red caow, mo's' all spot over mid white, so he look more white as he was red an' de bes' caow you never see to beat it, sah. Oh, he brimly over de pail two tam every day."

He looked into her eyes with a piteous imploring for tidings of the lost treasure, but she, briefly searching her memory, answered hastily:

"No, we hain't seen or heard o' no sech," and continued concerning what was uppermost in her thoughts. "Gol damn er ol' small-pox! Can't hev no 'lection, an' it's goo'-bye ter you bein' Square. Be'! It tew plaguey mean, it is, jes' you got er chance tu be somebody, some 'caout."

She strode into the house and gave vent to some part of her vexation and disappointment upon the unwashed kettles and pans that stood in an untidy congregation on the stove.

Beri dug a shovel-like thumb-nail into the soft wood of the top-rail in momentary unabstracted meditation; then, as Antoine moved slowly away, straddled over it and walked on beside him, calling back to the house:

"I er goin' 'long up ter Jonerdab's an' Peleg's, an' 'mongst 'em ter tell 'em what er rip be!"

His wife called back imperatively, "You send a word ter darker by that feller to hyper over here an' impocerate aour sonny an' sis an' all them ter tother haousen what hain't be'n, an' tell that feller not for ter forget."

Antoine did not find his cow; that was safe at home in her ferny pasture, whither he, too, wended his way when assured that the news he brought was imparted to every inhabitant of Burtontown Corners.

Fine weather for September election is the rule in Vermont, and this particular one was no exception, as gold and blue and green as a bright sun, a cloudless sky and fields rank with lush aftermath and fresh pasturage could make it. Such a day could scarcely fail to bring out every voter and, of course, every boy whom some unfinished "stent" did not withhold, and even such was more than likely to break that tyrannical restraint and run away, trusting to luck to escape in the crowd the eye of parent, "guardeen," or employer. Many of the womankind improved the rare opportunity to visit friends who lived on the roads to the town house, or in its neighborhood. Farmhouses that were astir with their own busy life every other day of the year were tenantless to-day, and the hen hawk wheeled low above them, making leisurely selection of the fattest pullets. Fields were so free of human presence that at midday the fox ventured boldly beyond where the wild sunflower shone in the dusky woods.

Mrs. Piper did not fail to improve the opportunity, and rode with her husband to the village, where she might spend the day at her cousin's and be at hand to get the first news of the election. Malvina chose to stay at home, and, when, from time to time, her mother thought of her during the day, she pitied her spending it in the quiet company of the asthmatic house dog, the cat, and the poultry. But as the clock in the kitchen clicked the alarm for eleven, old Lige waddled out to bark wheezily, not in anger or in joy, but in strict accordance with custom, at a smart team which drove briskly up to the horse block and hitching post. The hens uttered a flustered little cackle, the cat jumped upon the window stool to learn the cause of the commotion, but Malvina did not wonder at all when Tom Farr sprang out of a high-boxed buggy. When Andrew Colby drove that way an hour later in the hope of furthering his suit a little, as he went to election, he was dismayed to meet the couple driving in the opposite direction, both dressed in their best, and looking very happy.

"Dam the hull bilin'! I'll larn him tu be foolin' wif me!" he growled back at them over his shoulder. "Not a identical Colby vote does ol' Piper get this day!"

He laid the lash to his horse in his haste to make good his word, while Tom and Malvina bowed merrily on their way to the first minister or magistrate they might find in the next town.

Two hours before noon the dreary old town house, and its precincts, swarmed with the male inhabitants of Danvis. For the most part, the elderly, middle-aged, and staid men, and the town officers, were gathered inside the bare walls, while the younger men and boys chose the more cheerful outdoor atmosphere, some lounging upon the grass in shade and sunshine, some in groups discussing the chances of the candidates, or watching the contest of a pair of wrestlers or stick-pullers. One great center of attraction was a booth of boards built against the side of the town house, where, for sale, were home-made cakes and pies, and cookies, crackers and cheese, highly colored with annatto, popularly known as "otter." There, too, were some jars of candy, in sticks striped like a barber's pole, and balls similarly decorated, and cigars, at a cent apiece. The purchaser of

one was fortunate if it would draw—or, considering the flavor, quite as much so if it did not. There was a box of dry, sugary raisins, a drum of ancient figs, and a basket of pucky pears, and for those who thirsted for milder potations than Hamner's bar offered, there were bottles of mead and a cask of honey-brewed spruce beer. The proprietor was kept busy with a brisk trade, which increased as noon approached and the far-comers grew hungry.

"Hain't got no drawin' plasters ter sell, hev ye, Josh-away?" John Dart asked when struggling with a warped cigar. "No? Wal, you'd ort tu; I want one tu put ont' the back o' my neck tu draw the smoke through this 'ere seegar."

The ancient joke was honored with a salute of laughter not at all relished by Joshua, who declared, "That's baout as good a box o' cigars as ever I hed—most every one on 'em 'll go."

"Wal, this one hain't no exception," said John Dart; "it goes aout every time. Lord, it'll ruin me a-buyin' matches for it. Gi' me a hunk o' that 'ere pink-eye cheese an' a han'ful o' crackers, an' I'll gawe this seegar till I git where the' 's a stiddy fire."

At one o'clock the meeting was opened by the constable, who took off his coat preparatory to the labors before him, and the voting began. The dignitaries sitting in the seat of honor gave him their ballots, which he deposited in their respective boxes, an odd array of makeshifts. Some were square lozenge boxes with sliding covers, some round with covers that slipped on, on each of which a strip of paper was pasted whereon appeared in faded ink the words, "State," "County," "Representative," "Justice." The open space in front of the desk, and then the aisle, were soon crowded; for every one seemed possessed of the idea that everything depended on his vote being cast immediately, and there was some pretty rough elbowing and hustling, but all in the best of humor, for no one took in ill part a trodden toe or a punched rib.

Granther Hill was in the thick of the crowd, without power to move, but as it surged forward or swayed from side to side yet holding his open ballot aloft like a banner.

"Quit yer con-dummed shovin'!" cried a stout young fellow behind him, pushing backward lustily. "You've most squeeze the breath o' lie aout 'n this ol' man!"

"Never you fear, young man!" the veteran growled huskily over his shoulder. "I've stood wus rackets, an' hain't nigh dead yet! 'Tain't a primin' tu gettin' aout 'n Independence! I'll get up ter the breastworks an' gi' 'em a ha' bushel o' Pecks!"

Levi Piper sat in a corner among a group of staunch supporters, looking smiling and confident, spite of the discomfort of wearing his best suit, which he had donned out of respect to his position, when Brother Foot, who had been on a tour of inspection among the assembled freemen, made his way to him bearing a troubled countenance.

"What's the rip?" he whispered anxiously.

"Andrew Colby's a-peddlin' votes for Peck faster 'n a boy a-killin' snakes, an' Beri an' his company hain't one on 'em here, not a identical one!"

The smile faded from Levi's face like sunshine from a landscape beneath a passing cloud.

"Andrew!" he gasped. "Why! he promised me fair an' square, an' I've done all I agreed."

"Can't help it," said Foot, sadly.

"I see him at it a-givin' a Peck ballot to his father an' tew brothers an' a-offerin' on 'em right an' left. 'Peared tu be mad as a settin' hen bacut suthin'. 'Damn his lyn' ol' soul,' them was his words speakin' o' you, the blasphem' sinner. 'Damn his lyn' ol' soul!' Second-hand profanity, being cheap and sinless, had attractions for the Deacon.

"An' the Burtons hes all giggered back on me! I'm a gone goose!" Mr. Piper groaned as if the curse were already taking effect, and he wandered away to Clapham's horse shed to brood over his blasted prospects. All his visions of triumph and honor had suddenly sunk in a gloomy mist, and already he suffered the humiliation of defeat, and reviled himself for the useless and reckless expense of the two new dresses and the three shirts. The black silk dress might serve to assuage his wife's disappointment and the yellow poplin reconeile Malvina to the loss of a lover and the honor of being a representative's daughter, but he could never wear those shirts without being reminded of the high place for which they were intended. He cursed the day in which he had been persuaded to be a candidate, and thenceforth renounced all political aspirations.

From his retreat he could see the voters entering the townhouse and made mental note of the known or supposed preference of each. "The's more'n half on 'em agin me 'at I know on an' I was a cussed fool ever tu run! Blast ol' Foot an' his Metherdist soft soap! He jest wanted tu see me beat! There goes the Farr tribe, all in a chunk, an' all agin me. Cy' an' his boys, Bial an' his'n, thirteen on 'em. All but Tom; wonder where he is? Poor Tom, he's enough sight likelier'n Andrew, an' I'd a good deal druther hev him in the family. Wal, I won't slink araound here like a scairt fool—but I swear I wish 't I was 't hum a pickin' up stun!"

He brushed the cobwebs from his sleeve and returned to the town house, trying to appear unconcerned, though unable to force a smile to his dry lips. The votes were dropping in slowly now, the constable found time to exchange a few words of conversation with the dignitaries beside him or some of the interested group that crowded in front of the desk watching the ballot boxes as if their eyes might penetrate the wooden shells and discover the secrets they held. Joel Bartlett, the town clerk, had a respite for his fingers from the incessant scribbling of names as the constable called them to him and for his tongue from keeping time to the motion of his fingers.

The constable looked at his watch, and called out, "Are your votes all in, gentlemen? The box will be turned in five minutes."

A rapidly driven wagon stopped in front of the door, and in a moment Tom Farr came hurrying in and up to the voting place, where he handed his ballots to the constable.

"Forward your ballots, gentlemen," the constable called again, and then announced that it was three

o'clock and the box would be turned.

After a minute of grace, during which no uncast ballot was offered, the box containing the votes for representative was emptied upon the desk and the counting by the authorized officials begun, while the crowd of self-constituted inspectors pressed closer and craned their necks to see which pile grew the faster as the names of Peck and Piper were added to each.

Since he had become assured of the disaffection of the Colbys, and the no less unaccountable absence of the Burtons, Levi Piper had so fully accepted the certainty of defeat that the first sharp pain of it was over and he was able to meet with a good deal of calmness the ill-concealed triumph of enemies and the sympathy of friends, which were shown in the faces of each, as he sauntered from group to group.

"Hev they got them votes 'baout caouted?" some one asked of another who had just come from the town-house.

"Pooty nigh."

"Be a ch'ice fust time?"

"D' yas—hain't none scatterin'."

"Ary chance for Piper?"

"Daa! The Colbys all turned agin him, an' the' hain't one o' ol' Beri's tribe ben a-nigh."

"Gentlemen, please give your attention," the voice of the constable was heard issuing from the open windows above the hum of many voices.

The whittlers hastily shut and pocketed their knives, the loungers in the grass scrambled to their feet, the story-teller left his tale unfinished, and all made haste to get within closer range of the speaker's voice.

"Hul number of votes cast, tew hundred an' one. Nes'sary for a ch'ice, one hundred an' one. Of these, Piper hes received one hundred an' one—Peck, one—"

The concluding figures were drowned in a tumultuous billow of cheers, and, as it subsided in an echo of belated voices, the constable announced what every one now knew,

"And you have made ch'ice of Levi Piper to sarve you as representative."

Quite dazed and scarcely believing his ears in the confirmation of friendly congratulations, Levi Piper was hustled into the town house, and mounted upon a seat where he vainly tried to recall the speech, once well conned, but now forgotten as useless and never to be spoken. He managed to thank his friends in a few stammering words, and then to deliver to their free raiding all things eatable and drinkable that the huckster's booth still held, for such was the custom of those times, and one which gave quite as much satisfaction to all concerned, especially to the successful candidate, as does the modern reception.

"Well, father an' mother," said Malvina, radiant with smiles and the glory of the yellow poplin as she met her happy parents at the door upon their return, "I run away an' got married tu Tom whilst you was gone, but you'd out tu forgive us, seein' 'at you've got the 'lection, an' it was Tom an' his folkses' votes done it for you."

"What!" her father gasped, sinking into a chair and making no opposition to Malvina sitting on his knee. "You an' Tom merried? Him an' his folks voted for me? Wal, I swear! everything beats everything else tu-day! No, sir; I'm almighty glad you be merried tu Tom, for that Andrew Colby 's a skunk—a mean skunk!"

It was noticed that for some weeks after election Antoine avoided the highways and public places in daytime; in fact, Uncle Lisha's shop was the only place he appeared abroad.

"You don't want to let that ol' Beri Burton git a holt on ye, Anwine," said Uncle Lisha one evening when the company were gathered there.

"They say he's swore tu kill ye for that yarn you told him 'fore 'lection. 'Twas pooty tough, an' I do' know but he'd ort tu."

"Wal, Ah don' care for me," Antoine protested, while he ground the tobacco nervously in his palms. "An' he'll an' want for care, too, 'cause hees man's gat de 'lected, an' he'll was square heesself. Oh, but Ah tol' you, Ah'll was come pooty nigh for beat it, honly for dat gal. She was marry more vote as Ah could scare."

The Legend of Noqualmis, the Thunder Warrior.

I WAS sitting one day on a grassy slope in front of an Indian village. I had been waiting for a certain Indian's return from hunting, so that I could get him, with his canoe, to take me on a few days' trip hunting and fishing. The spring sun shone warmly on the southern slope and the level plateau upon which stood the quaint wooden lodges—150 by 80 feet or thereabouts—of the Indians. In front, the slope fell gently away to the edge of the waters of the bay. A few buffle heads sported in the blue water, the rainbow-headed males prinking themselves and contorting their little bodies in all manner of impossible postures as they strove to tell the graceful, leaden-colored females that spring had come, and that, far, far to the North, was a restful haven and peace and quietude for fond lovers, such as they, while, as they told their story, they fluttered and wheeled and splashed the almost glassy water. But they, the hard-hearted females, would think of nothing but diving for food to fill their insatiable little stomachs, just for all the world like humans. Across the pretty stretch of water, a fringe of crab trees and willows, already bathed in a delicate wash of tender green, with here and there a splash of greenish yellow, adding clumps of elder, made a sweet mass of spring color against a background of somber-hued firs, which, stretching away to distance in undulating swells, turned gradually from a dark chrome green, first to ashy black, then to purplish, then blue; not the blue of heaven, but, rather, that of lapis lazuli. Far to the west and south, rising out of the sea of distance like grim giants, impalpable and unreal appearing, were the mighty mountains; grand, silent, mysterious; the higher peaks snow-capped and outlined against the ethereal blue, symbols of eternity.

Between the two highest peaks of everlasting snow, was a ridge, fashioned like a gigantic Indian lying in death's

repose. His profile showed distinct against the sky, and so perfect was the outline of face and form that the gazer could almost delude himself into the belief that a giant figure, carved from marble mountain top by unearthly hands, was there lying sculptured. I had often looked upon this image, and had conjured many a weird fancy concerning it, but never had I seen it so plain, so human like, as now.

Outside the lodges, reclining on his "sunning board," his dim eyes fixed on the distant figure, was an old Indian, and by his side a boy six or seven years old, perhaps, to whom he was telling, in soft monotone, some legend of long past days. "Noqualmis" was a name oft repeated. The gentle droning of his voice, the enervating warmth of the soft, spring sun and the dreamy cries of the distant wild fowl on the sea, soon sent me into a light sleep, and it seemed to me, as I slept, that the story ran thus:

Boy, son of my brother, listen to the story of Noqualmis. The men of our tribe were always noted as great and daring hunters. From the time when Pahl, the first dwellers of the earth, were dispersed, our tribe has been renowned. Old I am now; feeble and with eyesight dim; but once, young and supple, I used to hunt the deer, the bear, the elk, so that the lodge was ever filled with food and warm furs for clothing. I was deemed a great hunter and brave warrior in the tribe, but greater far than I, greater, stronger, braver than all, was the Thunder Chief, Noqualmis. He it was, who, for twenty long days and nights, sought the "tamanawas" in the wilds and kept watch on the mountain top, without food without clothing, praying to the Thunder God to endow him with the medicine power which would render him the first, the head chief of the tribe. Cedar withes he passed through the flesh of his arms and thighs, then, fastening the bonds to the trunk of a tree, he bore himself against the strain until the strong withes broke or else tore out from his bleeding muscles. With prickly spruce and devil's club, he tore his flesh, until, at length, faint with hunger, thirst, and pain, he lay prone on the ground as one nigh dead. Then the Thunder Bird came to him, fanning with his mighty wings the air upon Noqualmis' face. He spoke:

"Noqualmis! Noqualmis! Noqualmis! your vigil has been kept; your heart is brave, your body strong; for your fortitude, your abstinence, your bravery, the Thunder God bids me tell you that you will be endowed with the great medicine of the Thunder. You will be the head chief of all your people, and long will you reign in the tribe. You will be victorious in war and your arm will be strong, your arrow and spear unerring in the hunt; your eyes will be clear and your feet swift. But, listen! Never doubt the power of the tamanawas given you. Though misfortune may sometime overtake you, as it does all, do not doubt that good fortune will return. Do not think that our power will fail you, and, above all else, seek not the power a second time, else the Thunder which now guides your strength, and health, and power, may one day strike you dead. Oh! Noqualmis." Then, with mighty, flapping wings, the Bird rose from his side and flew across the range to the Great Home of the Thunder God—there! on yonder snow-capped mountain.

Noqualmis raised himself up from the frozen earth. His body was sore. Thirst burned him up, and hunger gnawed his vitals; yet was his heart light, oh, boy! for he had earned what no other living man before him had possessed—the medicine of the Thunder God.

With slow and painful steps, he went his way to the village. The old men of the tribe took him in to the lodge of his family. Tenderly they bathed him, dressed his wounds with sweet balsam, wrapped him up in warm, soft furs, and gave him food—broth of deer, fresh baked salmon, roots of the wild parsnip; and when he was strong and well, with all the wise men and mighty warriors of the tribe, he sought out a giant cedar tree and felled it, slid it far through the woods on smooth skids to the water's edge, floated it to the village with great ceremony, and then they carved it with much design, picturing the stories of the prowess of the ancestors of Noqualmis in war and in the chase, and of his own wild adventures. Thirty long steps it was when finished, and of four steps' girth at base; and at the top was placed the emblem of Noqualmis, a Thunder Bird with outstretched wings. Then all the strong men of our tribe—and they were many, for our lodges reached from river mouth to yonder bluffs, 800 long steps—came and raised the pole upright in the old way, which you cannot see nowadays, and the foot was three steps in the solid earth, set in the hole prepared for it.

Then the messengers were sent to the far-off tribes with calls to a great feast in honor of Noqualmis, and in due time they came, the tamanawas men, the wise women, great chiefs and dancers of renown, all came, and when all were assembled, the great lodge of Noqualmis was cleared of everything but the dais about the four walls inside. Great fires were lighted, ten steps apart and five steps from the dais, all around the lodge upon the earthen floor, and these were kept replenished by the youth of the tribe from the vast stores of wood which had been gathered. Then all the tribe, and all the visitors filed in, the men in their war gear, the doctors in their tamanawas dresses, the women in their finery of brodered skins and necklaces and earrings of shell and of metal, and all seated themselves about the lodge on the great dais, and the song of Noqualmis was begun. Softly, quietly, at first, while the drums and beating sticks gently tapped the rhythm; then louder and fiercer came the song, the high, sweet voices of the women pierced the heart-laden air, the deep tones of the men shook the great lodge, while outside, the tribe's doctors blew wild notes on their war whistles, made from the thigh bones of dead enemies.

Then, at a signal, there leaped into the glare of the encircling fires a great dancer and warrior. His coat was of soft yellow buckskin, reaching to the knees, and strung across both back and front with rows on rows of shells, bits of the rare yellow metal (native copper), feathers of the priceless mountain eagle (golden eagle). Armlets made of bunches of dried deer hoofs, strung on sinew cords, were on his wrists. His anklets were the same. His head dress was of the inner bark of the cedar tree, beaten soft, and glowing red, like blood. Twenty feathers from the tails of the mountain eagles, tipped with fur

of the marten, nodded above all. The war paint was on his face, and the frenzy of the tamanawas made him terrible to behold, and, as he danced, now threading the row of fires, now leaping like the wild deer, now moving with quick, short steps, his bangles rattled in time with the swiftly beating sticks and drums. Another signal, and all was quiet as the grave. Then the dancer began his own war song. The vast multitude assembled took it up, and wilder, higher, rose the strain, quicker beat the sticks, lighter danced the warrior, until at length exhausted, he sank back on the dais among his friends and another took his place.

Then women danced with slow, graceful movement to the refrain of a sweet, wild song. Medicine men danced in their terrible dresses of human hair and teeth, and masks carved to represent every creature in our land and sea.

Then Noqualmis himself, the bravest of the brave, dressed more richly than any, danced and sang his song of the Thunder God, and of what he had seen and endured during his mountain vigil.

Twenty days and nights did the festivities last. By day we feasted on the flesh of elk, of deer, and of seal, salmon, and fish of other kinds; the roe of salmon pressed in the oil of seals; dried berries, shellfish, ducks and geese. Betimes we slept, and then at night was the dance renewed until the end of the time.

Before the gathering dispersed to each and all were given presents—to some, skins of the beaver, the seal, and otter, both of land and sea; to others, blankets woven from the hair of the wild goat. These were torn in strips two fingers wide, and scattered amongst the crowd. These strips were afterward unraveled by the women and rewoven. To others, again, were given bows and arrows, spears, bales of dried salmon, and cakes of dried berries, bladders of oil and cakes of elk tallow; slaves, too, taken from hostile tribes, canoes, and mats of cedar bark, shields of yellow metal, carved dishes of stone and wood, and spoons fashioned from the wild goats' horns, according to the standing of each, so was he endowed.

When all was over, and all presents given, Noqualmis was proclaimed head chief and greatest warrior of his tribe, and he took to wife the daughter of a great chief from the North, and then the visitors all departed, singing praises of our tribe and of Noqualmis, and we were again left by ourselves. After all the vast hoard of presents given, you will think, my boy, that Noqualmis would be poor; but he was young and strong, and mark you, he who gave thus in his declining years received double. So it was with us in the long ago.

After this, it happened as the Thunder Bird had spoken. Noqualmis lived for many years as our head chief and greatest warrior and hunter. One day, when middle-aged, yet still strong and upright as a dart, he came home from hunting with gloom upon his brow. Long he sat, silent and alone, by the lodge fire. Then, at last, his father, an old man and wise, spoke thus: "Why is my son so gloomy; why sits he alone with sadness in his eyes? Speak! Oh, Noqualmis."

Then Noqualmis spoke: "My father, the tamanawas has failed me. Thrice to-day my arrows glanced off the body of the elk; twice my spear struck a tree limb instead of the bear's side; once I stumbled and fell, sorely injuring myself. To-morrow I climb the Mountain of Thunder, to again seek the magic."

Then his father was much afraid, and begged him not to go, but Noqualmis turned away from him and sought his couch. On the morrow, at early dawn, he arose, dressed himself in his war clothes, but without painting his face, tried his trusty bow, filled his quiver with arrows tipped with black stone points. In his girdle he placed his war knife of shining green stone (jade), and when all was ready, he bade farewell to his weeping wife and children, stepped out of the lodge and gazed long to the West at the wild Thunder Mountain. Then, as he stood thus, the wise men and the doctors, the chiefs and the warriors, came to him and begged him not to go. "Remember Noqualmis, what was told you; not to seek the Thunder twice. Try again the hunting, and perhaps good luck will return to you. Think of us here, oh Noqualmis! Who will lead us to war against our ancient enemies; who show us the best hunting and fishing grounds?" But Noqualmis was proud, and his pride had been hurt in that he had failed in the hunting, so he answered:

"The Thunder Bird lied! or, perhaps, he spoke thus to try me. I go." And so he passed from among them and out of the village, and was gone, and all that day the thunder roared and the lightning flashed. And long afterward it was revealed to the head doctor of the tribe that he journeyed on through the forest until he came to the mountain and began to climb. Up, up, ever up, and when he came to the edge of the woods, where ahead was nothing but bare rocks, a huge elk, the largest ever seen, stood barring the way. He spoke thus to Noqualmis: "Turn back; your children cry for you, your wife weeps; your father and the other wise men call for you." But Noqualmis laughed, and, putting an arrow to the string, he shot it, swift and straight, at the elk's broad side; straight to its mark sped the tough shaft, into the dark brown side and out through to the other side; yet the beast moved not, nor showed sign of pain; and as Noqualmis gazed, in growing wonderment and fear, the great elk looked at him with large, sad eyes, but did not again address him. Then Noqualmis fitted another arrow to the polished sinew string and drew it back to the head, when snap! the strong string parted, and the elk, his eyes still fixed on Noqualmis, turned slowly, walked to the foot of the steep cliff, and disappeared like a smoke.

Then Noqualmis was afraid, and would have turned back, but pride and fear of his tribesmen's laughter forbade him, so, pressing on, he threw away the bow and drew his great stone knife to guard himself. Soon he reached a vast chasm, in the rocks, and, at the further end, on a high rock peak, he saw perched the Thunder Bird, who, when he saw Noqualmis, cried out, "Noqualmis, Noqualmis, turn back; remember my warning to you, oh! son of my bosom." But again the madman laughed and pressed on through the dreadful gorge. Then the Thunder Bird, rising on wing from his lofty perch, came flying down the chasm. The sound of his wings was like the roaring wind, and the air turned freez-

ing cold before him. Straight at Noqualmis he flew, crying, "Turn, turn, fool that thou art!" but when he was almost on him, Noqualmis dropped to the earth, and, rising again on one knee, thrust his spear with force at the mighty bird above him. The weapon seemed to pierce through and through, yet the strong barbs held not and the spear came out, while the bird, with mournful cry, flew far off and vanished amid the crags, and, lo! the spear in the man's hands was clean and free of blood.

Again Noqualmis was afraid, but again he pressed on through the gorge and up to the top of the mountain, which was fair and level, but fenced about with great rock pinnacles, and in the center of a pleasant, grassy slope was a huge flat rock, smooth and black, and Noqualmis walked on this, marvelling at its hardness and its smoothness, when the awful quiet of the place was broken by a fearful peal of thunder, and the sharp Fire Sword of the Thunder God struck him down on the great rock, and, suddenly, the air got very cold, and snow fell, covering up the mountain top and the flat rock, and the dead body of Noqualmis, as he lay. And the snow has stayed there ever since, summer and winter alike, and the body of Noqualmis lies there where you see it from here, covered up in its snowy blanket, and no person may climb the mountain again, for the great fields of snow and ice around about it.

A sharp shake of the arm awoke me. I started up and saw Jack's grinning face. I arose, stretched myself, and looked about me. The old man still sat on his board, his dim eyes fixed on the distant image of the snow-covered Indian, now gilt and bejeweled with the rays of the setting sun. I handed him a plug of tobacco. "What were you telling the boy?" I asked. He laughed as he thanked me in his soft, low voice, and answered: "I was telling him of our feasting and dancing in the long ago. He will never see those scenes now. A-la-kas-la." (Good-by.)

MAZAMA.

Notes.

Sunning Board.—The coast Indians have boards of 6 or 8 feet in length by 12 or 18 inches wide, outside their lodges, on the south side, laid with a slight pitch and with a back board at the high end. On these the old people love to recline and sun themselves, whenever inclination urges and weather permits.

Tamanawas.—The ethereal essence or spirit of some beast, bird, or element, which was sought, and supposed to have been acquired, by all young men desirous of becoming great warriors, hunters or doctors (magicians). The tamanawas might be of the deer, the otter, crow, owl, raven, wasp, thunder, snow, and was commonly acquired by rites similar to those described. Much mystery was observed, however, in addition, and whites have never been able to get a thorough record of these. A species of Freemasonry seemed to prevail in these rites.

Frenzy.—At dances, which no doubt partook of more mysticism, the dancer would become in a manner frenzied. This was supposed to be brought on by the potent working of the mysterious "tamanawas" (elixir).

Grit.

When a man dies who has been conspicuous for courage, loyalty and good comradeship in all his relations with his fellow-men, a stone is apt to mark his grave and record his virtues. At the foot of our garden a little mound covers a heart that once harbored all these qualities, but that heart, when alive, beat in the body of a dog.

Sam Patch was a bull terrier of many quarterings in the male line, but, from a bench show point of view, of no account on the distaff side of the house. Blue ribbons go by favor in this world, but "true blue" is better said of the heart than of the blood, so I shall always consider Sam Patch's dam, Nellie, one of the wisest and most genteel old ladies that ever stepped on four paws.

It was a sight to see her play hide and seek with children, with Nellie "It." How she would chase around in feigned bewilderment, and look behind every tree and bush but the right ones! Then, when the last child had scrambled "home," how Nellie would rush up barking in surprise and protest at the evasion, then hide her head behind the barn door, and, I quite believe, shut her eyes, until a shout came to say that the game was on again. Her son, like many men, got his brains from his mother; his shape and fighting qualities from his father—the latter being the cause why that scion of a noble house spent many hours of enforced inaction at the end of a chain.

While Sam Patch dearly loved a fight, his keenness was tempered by the possession of an undershot jaw, that invariably landed him the under dog in every fray. Prudence being the better part of valor, he never deliberately "picked a muss," although he never refused one that was thrust upon him. A large connection of brothers and half-brothers kept him up to the mark, and, being the runt of the family, and undershot at that, he soon learned to accept the rôle of under dog as a matter of course, and, no doubt, there is nothing like a good "licking," taken in the right spirit, to foster gameness—in a dog. We picked him out as the cleverest of the lot, and he grew up a member of the household, a playfellow to the children, and the responsive companion to their elders, whose every mood and tone of voice met an answer in his intelligent eyes, and in the expressive picking up or depressing of his ears. The very wrinkles of his muzzle spoke, and I rather think he did not talk merely because he did not want to.

A lovable rascal, full of endearing faults, he had none of the pomposity of dignity by which big dogs made us feel small. He was greedy and dearly loved his case. His bed was a hair pillow in a nook at the foot of the stairs, but he knew of a down cushion on the parlor sofa that was more to his sybaritic taste. Often have I tiptoed down the stairs, after lights were out, to catch him in "flagrante delicto." Half way down I would hear a scurry of muffled pads across the parquet floor, claws drawn in to avoid noise, and, when my candle flashed across his bed, there lay Patch with the face of a cherub just roused from slumber. A menacing shake of the finger, and he instantly gave up the game, his expression changing to one of heartfelt contrition; but if by chance

I laughed, he cuddled down closer, and his off eye plainly told me that it was all a jolly good joke.

Such a lazy beggar was Patch in his moments of repose, with the bridle off. When anything was doing, he was all alert and alive, from the tip of his snub nose to the end of his rat tail.

In the wagon and on the box seat before the driver had gathered up the reins; in the water before the stick had left the thrower's hand. If a stone flew in place of a stick he dove for it and brought it back, quivering with delight—and, dancing backward to the water's edge, he would turn like a flash, plunge in and catch it again almost as soon as it sank. He dove through heavy breakers with all the easy grace of a champion swimmer; and no doubt if he could have held a cigar in his teeth would have emerged in the trough of the waves with the end still lighted.

His name came to him from the patches of brindle that splashed his white coat and covered one eye, but the great bridge jumper's name was not belittled by Sam Patch's own exploits in diving. A header, in pursuit of a stick, off a bridge twenty feet out of water at half tide, was a mere nothing to him.

But all these feats and frolics were merely those of an amiable little dog of possibly more than the average intelligence. It was the grit with which he met his death that raised him above the general plane of dogs and men. He went for a stroll one day, toward dusk, with a member of the family. The man returned, and, seeing that the dog was not at his heels, left the front door ajar, and sat down by the fire to read the evening papers. Soon he was aware that Patch had come in and was lying at his feet, and he spoke to him without glancing up from his paper. Twenty minutes or more slipped by, and I entered the room. From the hearth rug, two great eyes stared at me above a horrible mass of blood and bones that covered the poor dog's breast. His lower jaw was broken in four. I tied it up to ease the strain, and he did not utter a sound, though his piteous eyes never left my face. They asked for help, and help came in in the only form we could give it—a merciful pistol shot in the base of the brain.

Try how we would, we could never learn how he was hurt, but probably his fighting blood and his undershot jaw were the cause. A fight forced upon him—a human brute interfering to stop the fight, and a kick in the jaw for the under dog.

Natural History.

The Mammoth.

IN the early days of the last century a native of Siberia detected in a great ice cliff on the banks of the Lena River the shape of a vast creature, which seemed to look out at him through the thin film of ice, and which held him spellbound by its monstrous appearance, and its stony glare. Day after day the fascinated man returned to the spot to gaze and to be stared at by the monster, until one morning when he went there, he found that the front of ice that had partly screened it had fallen away, and the gigantic head and tusks of a frozen mammoth were plain to the view.

We all remember how the man treasured his secret, and how, when at last it leaked out and the knowledge of the find had penetrated westward to Russia, and scientific men were sent to preserve the specimen, it was found that its discoverer and others had fed their dogs on the meat of the monster, and that little was left of it save the bones and a quantity of the long, red hair that had covered its body.

Of all the extinct creatures, the mammoth is, perhaps, the one which most appeals to the imagination of the average man. It is one of the nearest to us in time, and we can understand pretty clearly that it is a great elephant, clad in long, reddish, woolly hair, and with tremendous

Mammoth drawn on mammoth ivory by the man of the Reindeer Era. From Dana's Manual of Geology.

tusks, which turn upward and backward as the tusks of no elephant ever did. Moreover, because it has been seen in the flesh, the mammoth seems almost a creature of our own day. The dwellers in Siberia believe that it still lives, but dwells underground, as a huge mole, and that it lives forever, dying only when by chance it comes too near the surface of the earth.

It is easily within the memory of each of us, when stories concerning the occurrence of the discovery of the mammoth in Alaska were current and credited, and but two or three years since, when a popular magazine published a bit of fiction about the killing of the last mammoth in Alaska, it scored a tremendous success, and made a deal of trouble for the authorities of the Smithsonian Institution. By many people the story was taken to be fact, and not fiction, and many letters were sent to the Smithsonian Institution asking for information as to the supposed occurrence.

Northern Siberia is the locality where the remains of mammoths are most abundant. So numerous are they in certain places, that the trade in fossil ivory is the most important of the industries of the district. There is said to be a regular traffic between the Arctic and the South, and mammoth tusks are transported on reindeer sledges as far south as Mongolia, where they are traded for articles brought from the South, and then taken on to China.

Fossil elephants are found in America as far south, at least, as the Middle States, but in no great numbers, and their tusks are usually so changed by exposure to the weather that they have no commercial value, and are very perishable. They are found generally in northern regions in some numbers, and in Alaska there is a tall bluff, which is known as Elephant Point, from the great numbers of elephant remains buried there.

Certain little islands north of the Kolima River in Siberia are celebrated for the great number of mammoth bones found there. In fact, travelers have stated that the islands seemed to be made up entirely of the bones and tusks of mammoth. On other islands on the coast of Siberia, the remains of these mammoths are enormously abundant, and they often are found frozen in the tundra. This is the case with one just discovered—said to be very perfect—to secure which an expedition was recently sent from St. Petersburg, to the town of Kolymsk, on the Kolima River, near which the find was made. The party left St. Petersburg early this summer, and reached Yakutsk, about two months ago. It is altogether probable that before now they have secured the specimen, and may be on their way back with it.

Kolymsk is one of the coldest regions of the world. It lies about 600 miles northeast of what is called the winter cold pole of the Northern Hemisphere, and is, so far as known, one of the places of lowest temperature of the north. Its mean temperature for January is 56 degrees below zero, and it sometimes goes much lower.

In a small town, in Moravia, in Austria, there exists a great deposit of mammoth remains. With these are found remains of man and other animals, and also evidence of fire, as well as tools and implements, evidently made by man. This has been taken as evidence that in this particular place man hunted the mammoth and destroyed him. But Steenstrup has expressed the opinion that the mammoth did not live there at the same time with man, but must have perished long before human beings reached them, and was preserved intact in the frozen soil—just as the mammoth to-day exists in Siberia—until the men of the later reindeer period found it, cut it out of the soil, used its teeth and bones, and perhaps left its flesh as food to the wild animals.

Nevertheless, the bones of the mammoth have so often been found with man's weapons among them, that it has long been believed that man and the mammoth lived together on the earth. Still better evidence is the drawing of the mammoth on a piece of ivory found with bones of pre-historic man, in the caves of southern France. It can hardly be doubted, in view of all the evidence that has accumulated, that man and the mammoth were coeval.

The Ways of an Owl.

EAST WAREHAM, Mass.—*Editor Forest and Stream:* What a pity the meadow starlings have not the beautiful song of the Western variety! The lark of the prairies has a compass and power of voice second to none of our singers. It is hardly to be distinguished from our bird except by its voice—and the same may be said of the Western towhee, only the sexes are not so unlike, male and female being very different looking in our species.

The dusky ducks breed on West Island. Last spring one was shot on Ram Island with a fully developed egg in it, and that duck would no doubt have nested on West Island, if, indeed, it might not already have had a nest there. There are a number of large reservoirs like Old Tuck in Rochester, East Head in Carver, ponds in Plymouth and down the Cape, with some on Martha's Vineyard, near which these ducks breed. The wood duck does nest to some extent here, and loons used to raise a brood at White Island Pond, a beautiful sheet of water between Wareham and Plymouth.

Birds of prey have been quite plenty. Some weeks ago one of my brothers put up and shot a Cooper's hawk. It had just killed a Mongolian pheasant, and had only eaten a little of the neck. This pheasant was an old bird—a male—that had been raised under a hen, as it had scaly leg developed about and below the heels, extending half-way down the tarsi. Wading through snow and slush had checked the progress of the microscopic insects which produce this disease, and the bird's feet were in a normal condition. I have never seen any of our native wild birds attacked by this parasite, and its presence on a pheasant would show that care should be taken to have healthy hens for foster mothers, for this disease, when once seated, is persistent and requires treatment. It is a matter of note that a Cooper's hawk should kill so large a bird—about three times its own weight. A pheasant in the open is noticeable, and would be sure to attract the attention of any hawk. This would be a serious matter in pheasant raising, for Cooper's hawk breeds all through New England, and as far south as Virginia, by my own observation. When located and nesting this hawk will come daily to a poultry yard, and every time take a chicken, and to stop its visits it has to be shot. A brood of pheasants under a domestic hen inclosed by wire would be safe, a brood in the fields would disappear one by one. The sharp-shinned hawk is just as bad, but too small to kill adult fowl. The marsh harrier is a rabbit hunter and will chase meadow larks; it is an indefatigable mouser, but is hardly likely to take game or chickens.

Most owls are mousers, because their time of hunting brings them in contact with mice, rats and rabbits and other furred animals. The great horned owl is an exception to this rule in the matter of prey. I had a visit from one last January; he came in the early morning and entered my hen house. I had failed to latch the inner door, which separates the roosting room from the scratching shed, as the windows of the latter were raised; this allowed him to fly in. When I came out to open up, the fowl were in a great commotion, and I saw that something was wrong. On looking in I perceived that the intruder must be still there by the way the ducks and hens were avoiding the locality of the nesting boxes, and

there I saw on the floor what first appeared to be a Plymouth rock hen just expiring. A second look showed that it was no hen, but some bird with its head pushed under a nesting box and making violent efforts to do something; it seemed to be trying to get beneath the box. Really, it was eating a duck, and did not mistrust my presence until I had firmly grasped its wings close to the body. It struggled fiercely on being drawn out, and then I discovered that it had a steel trap on one foot, the jaws holding two toes, but otherwise loose, there being no chain. It had evidently been caught some time previous and had broken the fastening. Afterward I found an owner for the trap, and heard his story. He had had a hen killed, and suspecting an owl, had watched the following evening, gun in hand, but darkness and cold drove him in before the robber came. However, he tied the hen's body so it could not be carried off, and set a trap. During the night the owl came, sprung the trap and dragged the body about, but was not caught. Determined to catch the owl, the man got three more traps and set all four in a square about the bait. That night the bird came and mused around some, disturbing the arrangement and working about the hen. Two of the traps were large and heavy, but he got into the smallest one, and got away with it.

In a week or ten days he entered my hen roost and was caught. I took him into the house, and with tongs freed him from the trap. In the evening we fed him with raw meat out of hand. He did not seem very savage, and never offered to strike with his feet. This was surprising, as both hawks and owls are very ready with their talons, which must be dulled at once if one means to handle them. We have him now; he lives in the wood house, and has never been tied, or confined, except by the door. He has a perch, which he can fly up to, but sits on the edge of the coal bin or on the wood itself much of the time. He will bear to have his head scratched, and will accept food from one's fingers, but a person unused to him would be shy of offering a small piece, for he grabs as though it were escaping prey. However, he will take tiny pieces of meat from one's fingers and not pinch.

His capacity for swallowing is great, almost snake-like, and is accomplished with effort, a succession of violent jerks, during which he gasps for breath, being necessary to engulf a chicken whole. We call him the Sexton, because he saves us the trouble of burying the unfortunate chicks that meet with untimely deaths by accident. He also disposes of the bodies of such skunks as are caught while trying to get into the hen house, and what muskrats the junior catches. These are skinned, and in the case of skunks, the objectionable feature is removed before they are given him. We place the carcass on the chopping block and he does the rest; if it is heavy for him to handle, he takes it on the floor and stays until nothing is left but the bones, and these he can tear to pieces in most cases. The skull of a muskrat he reduces to bits that can be swallowed.

WALTER B. SAVORY.

Pocaca and the Panther.

Editor Forest and Stream:

I have read with much interest the various experiences of hunters and others with our wild animals, and now beg to offer my mite to the general collection.

So far as personal experience goes, I must say that I never yet, in the course of many years' hunting in this country, have had occasion to fear the attack of any of our wild animals I have come in contact with, and I do not think for an instant that the least danger is to be feared from them save, of course, in instances where one is wounded, has very young offspring, or is brought to close bay. A mouse will attack under these circumstances sometimes.

The story that I wish to relate, therefore, is in connection with an Indian who lived in Saanich, near Victoria, in the '50s and early '60s. He was chief of the tribe of North Saanich Indians, a man of splendid proportions and physique, standing 6 feet 4 inches in his bare feet, and with the strength of two ordinary men.

A story is told of him as having happened some years before I first saw him in '62, to the effect that one day, while out hunting for sandhill cranes among the little, brushy meadows which abounded in the vicinity, he was sprung on and seized by a panther. As he told it, he was creeping through the brush, stalking a bunch of cranes, armed with bow and arrows, and if I remember aright, with a fur robe over his shoulders, when he felt himself seized from behind. He at once saw and felt it was a panther. So, firmly grasping each fore paw, and shrugging his shoulders so that his neck and head were fairly protected from bites by his long, thick hair, he carried the brute a half mile to the sea, where he held him under water until drowned. He then carried the dead animal another mile home in triumph.

He was, of course, badly lacerated, but his body had been partially protected by the robe. But what a strength of arm and grip it took to perform the feat!

Now, in this case, we have a reliable account of a panther deliberately hunting and springing on a man, but there is no doubt in my mind that it was a clear case of mistaken identity, and that the fur robe worn by the Indian deluded the animal into the belief that he was hunting another wild beast, possibly a deer.

Poor Pacaca (Tobacco)! Some years after this happened he went one day to the north side of the peninsula to a small island lying in the strait near the canoe passage to and from the north. He was accompanied by his wife and several girl relatives, and their object was halibut fishing. As they did not return at the appointed time, search was made, and the dead bodies of the party were found in their camp, murdered as they slept, by the savage Yokwiltulths of Cape Mudge. The women lay with cut throats all agape. He, the chief, had had his head severed from the trunk and the member taken away by the marauders.

I shall never forget the feeling of horror I experienced as a child when hearing of this, and long did I miss the chief's familiar presence. That was the last blood feud between the tribes, and was never avenged. Civilization, with her iron hand, soon after pervaded the land, and savage customs faded away.

MAZAMA.

COMOX, B. C., Aug. 21.

Varying Hares.

Editor Forest and Stream:

Every person knows that there is such an animal as the jackrabbit, but very many know little or nothing of their peculiarities, habits, etc.

Climate or altitude has a wonderful effect upon their color. In the Rocky Mountains of northern Colorado and southern Wyoming, at an elevation of 8,000 feet, they are their natural gray color in summer time, and in winter their color changes to pure white; while lower down in the valley, at an elevation of 5,000 feet, within less than a hundred miles, they retain their gray color during all the year. This I know only from observation, and have never heard any one else even mention it, and would like to hear from some one who can give the true cause of this difference. A few years ago, in winter time, when the snows were deep, they would congregate about the corrals of big stock ranches where stock was being fed, to an extent that would hardly seem credible. At such times they do not seclude themselves or keep under cover during the day as ordinarily is their custom, but keep in motion, hopping about continually. I have seen hundreds in sight at one time about these corrals. They seem to be little sought after for their meat where they are so abundant, and I have wondered why, for their flesh, when properly cooked, is equal to that of some small-game animals which are much sought after, and their size would make it an object to kill them for their meat.

Where one depends on the rifle, hunting jackrabbits affords no mean sport, for they are rather shy, and after once being chased up, are hard to approach within easy range, if they find they are being pursued. In their ordinary travel they string their tracks out more as a dog or fox does in galloping than like other rabbits. If they are chased up by a dog or other animal, which pursues them, they go straight up a steep, bare hill or mountain, if such be near enough, for there is where they can leave any foe behind if it be without wings. One of their peculiarities is their power to run apparently as fast straight up a steep mountain as on level ground, and I doubt if any animal can outrun them up a steep hill. Instinct appears to teach them that this is their stronghold in flight, and they invariably take this advantage when pursued.

Jackrabbits are generally thought of as belonging to the prairie country, and I knew not that they were to be found in mountain districts until I found them there myself, and there is where all my observations of them have been made. The statement is often made and believed by residents of the jackrabbit country that when they run they throw one hind leg out behind and up over their rump, swinging it around loosely, changing legs every little while. I had always noticed something swaying from side to side when a rabbit ran, but never believed it to be the leg. By getting very close to one before it ran, I could plainly see that it was the tail which they keep swaying from side to side as they run. Some of the advocates of the leg theory claimed they had not tail enough to be seen, but to prove the length of their tail I killed and skinned one, and the bone of the tail measured just 5 inches, which, with the fur, would make at least a 6-inch tail.

Eagles are the worst enemies of these hares, at least in mountain districts, and I have watched many a contest between jack and eagle, and find that jack does not always lose his scalp, either, for he is not too proud to crawl into a badger hole if one happens to be near. Like most other animals, they can be approached more closely on horseback than on foot, and will sit still until a horse almost steps on them. Once while we were on the trail with a bunch of cattle, one of the cowboys saw one sitting under a sagebrush within a few feet of his horse. He swung his long Mexican whip and snapped the rabbit on the head, killing it instantly.

EMERSON CARNEY.

MORGANTOWN, W. Va.

[There are several species of large hares in the Western country, all of which are loosely termed jackrabbits. Of these *Lepus bairdi* is called also snowshoe rabbit. It turns white in winter, as also does *L. washingtonii*. The jackrabbit of the plains, *L. campestris*, also turns white. On the other hand, the Texas jackrabbit, *L. callotis*, and that of California, *L. californicus*, do not turn white. The two last-named species have the tail black above.]

Pheasant and Bantam.

TRENTON, N. J., Aug. 25.—Editor Forest and Stream: An article which was published the other day in respect to the experimental crossing of the English pheasant upon the common bantam, with the hope that a new variety of game bird could be produced, is interesting in so far as it goes, but it does not go very far. The crossing of the bantam fowl with the pheasant can produce sterile progeny only, as each is distinct in species. Varieties of the same species can be crossed successfully, and several of the most beautiful kinds of the pheasant family have been produced in this manner, but the attempt to produce something new in the game bird line by mating pheasants with bantams can result only in disappointment for the reason stated above. In England, where the pheasant is artificially reared in great numbers, the game bantam females are used to incubate the pheasant eggs, and rear the young. A few days after hatching, the little hen and her brood are taken to the edge of the forest preserves and turned loose, but twice each day, at night time and morning, they are fed by the keepers, and are in a semi-domesticated condition until the shooting season begins. The cross of the pheasant and the bantam hen occurs quite often, but the progeny have proven enuchs when the breeding between has been tried. By the way, there is nothing in the eating line that will compare with a correctly broiled game bantam. Those who have not tried one I would recommend doing so.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

In the Indian Territory.

AIX LA CHAPELLE, Germany.—Editor Forest and Stream: I am the lucky possessor of copies of FOREST AND STREAM from May 1 to Aug. 31, 1894, and would have some more, if I had a chance to get the paper in our bookshops. I left the States in February, 1896.

Many times I read and re-read these few numbers, and thus pass an otherwise lonesome hour with pleasure through reading the hunting and fishing stories.

Now, if you will kindly permit, I will give you a short description of some of my experiences in hunting in the United States. I was a soldier in the regular army, and was stationed at Fort Supply, I. T., from November, 1887, to November, 1892. At that time the part of the Indian Territory within fifty or sixty miles around this post was a real paradise for sportsmen; there were in plenty turkeys, deer, antelope, coyotes, wolves, ducks, chickens, quail and rabbits, and all quite close to the post. We did not care to hunt deer and antelope as long as we had plenty of game birds; and we hunted coyotes, deer and jackrabbits only with some of our seventeen hounds, feeding them with the rabbits.

In November, two weeks before Thanksgiving day, each troop of our regiment used to send a small party of five or six soldiers hunting for the troop; and, as I always desired to go along, and asked for it, too, I was ordered, in 1890, to join this party. We used to hunt along the creeks between the South and North Canadian, and traveled two days, to find a good place for turkeys, hunting along the road, also.

In 1890 we went to the left of the North Canadian, between, or opposite, Benol and Deep Creek, about thirty miles west of Cantonment. There is a place called "Sheridan's Roost," where this gallant officer had some great sport with the turkeys in the seventies. We were four hunters, one cook and a teamster in our party. The boys used to hunt close to camp in the day time, trying to locate some good roost for the evening or early morning hunt, as these men shot the turkeys generally off the roost. I was the only one who had a good bird dog, and in the open season, hunted every hour I had free from service. On the road, traveling, I always shot enough quail, chickens, or ducks, for the evening camp, but when in our steady camp, nothing else than turkey would go.

The shooting of turkeys off the trees, when asleep, did not suit me, so I generally took my horse in the morning, went about two miles from camp, and started hunting through the sandhills, partly covered with berry-bushes. On the first morning after making camp, riding to the top of a little ridge, I spotted a big flock of turkeys, just on the other side. Drawing my horse back, I dismounted, sneaked to the top, and saw the turkeys thirty yards in front of me, close together in a little hollow. The old gobbler, too wary for me, gave a warning note, and sent the flock running in different directions. My first shot, on the ground, killed two of them; and the second shot dropped one, flying, which came down to the ground with a heavy thump.

Following the other turkeys on foot, I hunted about three miles ahead, without finding one of them, though my dog kept on pointing and following the trail of a couple all the time.

At last, getting tired of this, I went about 200 yards to the left, and started back toward my horse, coming within a half mile of the place where my horse was lariat-ed; the dog pointed and flushed a turkey, and I scored a clean miss at 40 yards. The shot started another turkey 30 yards to the right, which I killed. One more turkey rose 70 yards ahead of me, but I did not shoot at it, because I had only No. 3 shells.

The finding of these three turkeys close to the place of their first rise set me thinking how I could outwit the game the next time, and not get so tired out as that day. Thinking is a big fault in many cases, but in this instance it started me on the right road, how to have the fun a little easier and to "get there" anyhow. Striking camp I told the other hunters where I had found the game and thought it would go to roost that night. The men killed five turkeys that evening off the roost, and three in the morning on another place. To keep the birds, we always put them in a tree, and after freezing, in the morning cut the backs open and stuffed the inside with hay.

On the following day I started early to another ridge of hills, on Deep Creek. My dog flushed one old gobbler, which I killed from horseback; then, about 11 o'clock, I saw another big flock of turkeys feeding on some berry-bushes, close to the creek. Dismounting I sneaked through, and on the side of the creek, to about 50 yards of the birds, when I got spotted, and the whole flock started to run. One of the birds got rattled and came the wrong way. I killed it 40 yards to my left, but after the shot I kept in hiding. After waiting ten minutes I mounted the horse, and, riding a circle, galloped about two miles to get in front of the turkeys without disturbing them. Then I hunted on foot back toward the direction the game had run to and walked slowly, holding the dog as close as possible. After hunting a quarter of an hour, my dog went toward some small timber and came to a dead point. Closely following, I passed the dog and flushed two big turkeys, which I knocked down with a right and left at short range. In the same manner I shot four more out of the flock. Perhaps these birds thought they were hunted from both sides, and, therefore, tried to hide; it is possible, but I do not know this. I tried the same way hunting some more times, and had a good result always.

The second day afterward I had a chance to try another way to hunt these birds, which are race runners when followed. One of the other hunters asked to go along with me, and I, having no objection, we started to get to a small ridge four and one-half miles from our camp. There was a cañon 60 yards wide, with a small creek, bordered with a lot of small berry-bushes. After following this up half a mile I got sight of four turkeys,

feeding on the left side of the cañon, 120 yards ahead of us. Cautioning my comrade to get out of sight, we went back 200 yards, and I told him to get on top of the hill and try to get 300 to 400 yards on the other side of the birds to some hiding place. After waiting about fifteen minutes I started ahead to where I had first seen the turkeys; they had fed slowly ahead, and were only 100 yards further on, feeding yet. I sneaked as low as possible, partly on hands and knees, getting to about 55 yards of the birds, when I heard their warning cry. Rising quickly I shot both barrels into them, running, and stopped one; there were seven turkeys in the lot. I followed the others as fast as possible, shortly hearing my friend's repeating gun crack four times; he killed three of the passing six turkeys.

On this trip of ten days, of which four were marching days, we killed eighty-seven turkeys, bringing seventy-two back to the fort.

How this part of the Territory has been for hunting since the opening of the Cherokee Strip, in 1893, I do not know, but I did not care to hunt or fish there afterward. The deer, turkeys, and other large game, must have left this part of the Indian Territory long ago, and have gone to the remaining portion of the Indian reservation, between the South Canadian, Wolf Creek, and Texas, where they have a chance to live and raise their young ones, and are not chased all the time out of the country.

R. M.

The Outing of the Three B.'s.

FOR two months we had been "showing" our wives, who had lately become Missourians, the advantages and efficacy of a man getting away from his family, himself and his business, to drop twenty years of his life and become a boy again for ten days or such a matter. And it was finally settled that early in November we would go to some point where we could find sport that was equal to that "we used to have." So we began casting about for the locality, and, after absorbing the map and a fairy tale of a railroad press agent, we decided that the St. Francis River country, in Arkansas, promised greater variety of sport than anything we had heard of, and we are compelled to admit that the country is "as advertised" to a greater degree than is usually the case in such matters. I wrote to Atlanta, Ga., to my old boyhood friend and hunting chum, Bob, and stated the case to him briefly, believing, however, that he would hardly consent to so long a trip. In due time, I received his reply, with a draft enclosed for his share of the outfit, and saying that he would meet us anywhere at any time on an hour's notice.

For the next three weeks our spare time was taken up with outfitting and receiving the rallyings of our wives and friends, who decided that from the appearance of things we were going to the wilds of Africa to hunt elephants and catch whales on the way. We took their joking as gracefully as possible and continued to load shells for bear, and declared if we met one there would be a fight, or the bear would do the running. All this time the weather continued warm and unfavorable for duckshooting, but we hoped for improvement before our start, and we still were hoping up to the day of our departure. On Nov. 2 we telegraphed Bob, that if he made good connection we would take breakfast with him at Paragould, Ark. We then shipped the outfit and could hardly wait until the next night to start. All next day we received the calls and messages of many friends, who modestly expressed their special fondness for wild ducks, bass, possum or wild turkey, and no one got less than a promise. Saturday evening found us and our wives, who, by this time, were into the spirit of the thing and determined that if their wishes were carried out we would have a successful outing, at the station, and, after many good-byes and good lucks, we were soon rolling along to the southward. On the train we met a sportsman friend on his way to his suburban home, and being quite familiar with the locality of our campaign with the game and fish, he gave us much valuable information regarding conditions, etc. We arrived at Paragould after a fair night's rest and found upon leaving the train the first evidences of frost of the season.

It was still dark, but we found our way to a hotel and bolted for the register. There were plenty of hen-tracks on it, but no sign of Bob having registered. We went up the street to another hotel only to be disappointed again. Going back to our hotel, we sat around a very cheerful wood fire until breakfast was called, which we proceeded to stow away with a will, for it seemed our appetites had improved wonderfully, although we were hardly started. After reshipping our outfit and making the better acquaintance of Mr. W—, express agent, who, by his clever courtesies then and afterward, convinced us that the proverbial Southern hospitality had been born and bred in this gentleman, and meeting one more train from the south, on which Bob might come, but failed to, we left a message for him and boarded the P. & S. E. for Bertig and the Buffalo Island Hunting and Fishing Club, where we would make headquarters. Our train rattled along through forests of cypress, oak and gum trees, with here and there a clearing and an occasional glimpse of water and swamp, which gradually increased as we approached the river. Arrived at Bertig we could have tossed our baggage out of the car into the club house, which is built on a level with the tracks on piles about ten feet above the river. In fact, Bertig is about all built on stilts or on boats, and the native goes about his business in a dugout oftener than in any other way. Steve V—, manager of the club, received us and very soon made us feel at home, and proved to be a genial and accommodating host throughout our stay.

With our party still incomplete, we decided that only prospecting should be done the first day, so Burt volunteered to be "gondolier" or pusher or whatever the man is who propels the dugout, while I was to try and raise a bass with some very flashy flies which had been the cause of much joking by several friends, and Burt, after he had paddled and pushed two miles up the river, joined them in doubting my ability to cast a fly, for I never got a strike. This, to me, seemed remarkable, for prettier bass grounds no fisherman ever saw, and we could see fine specimens down deep in the clear water, but they were not attracted by my bunch of feathers,

so I gave it up and admitted that I did not know how to make a bass strike when he wouldn't. All the way up the river we were interested in the very peculiar conditions. The river, so called, with apparently no particular channel or banks, was a curiosity to us, and a puzzle as well, as there are innumerable shoals, canals or runs where a canoe can be pushed or paddled in any direction, and many a hunter has been quite late to supper on account of losing his way back to the club house. The clearness of the water is what first strikes the admiration of the newcomer, also its varying depth, which may be now a comparatively sandy shallow with a silver ripple, and the next moment, not a stone's throw away, a pool from ten to fifteen feet in depth, with the bottom as easily seen as if there were no water in it; indeed, so plainly does every bunch of moss or aquatic plant, sunken log or sand patch, show in the depths, that one is reminded of a huge glass vessel filled with alcohol and fruit or plants as natural as life. The cypress trees have huge butts some six to eight feet in diameter at the water level, then taper suddenly upward to the trunk, where the tree rises majestically, a mast on a strong foundation. The channels and shallows are bordered with a profuse growth of flags, smartweed, yonkaps and spatterdock—ideal feeding grounds for water-fowl.

Having noted many flocks of traveling mallards, we decided late in the afternoon to take a stand and see if we could not get a few shots, so we pulled into the flags and had just got settled when down the river came a flock of "sawbills," not very much prized among the duck family, but mighty good practice when they are on their way to supper. They gave us a fair shot, and we folded two up nicely and a third set its wings and sailed off a quarter of a mile and fell—not a bad beginning for hunters sadly out of practice. At intervals large flocks of mallards passed over, practically out of gun shot. We saluted them and were surprised when we cut out several at remarkably long ranges. Burt said something about straining our guns, and I made him own up that he was using shells we had loaded for turkeys. After gathering up the birds we started back to the club house. On the way down I asked Burt if he had noticed any unusual blueness in the sky off to the south, and he said he had, and that Bob was laid out somewhere down there, which was a good and sufficient reason therefor. As we glided along, we speculated on the prospect for duck shooting, which was the "paramount issue" with us, and decided that only a spell of weather would insure a killing. Arrived at the club we again found no message from Bob, so decided to eat and increase our store of hope for his early arrival, which came with that satisfactory feeling produced by a good supper and after that a good smoke by the office fire. We had sounded the natives as to what to expect with the unfavorable weather prevailing, and finally decided to make a trip to Bagwell's Lake for wood ducks and bass (with minnows). After securing guides for the morrow's trip we turned in and slept like logs.

The guides were on hand next morning, and we soon had our tackle, guns, bait and lunch loaded on a hand-car, with which we pumped two miles up the track to the boat landing, where we reshipped for a cruise about Bagwell's Lake. After derauling the car and locking it, we started the boats. With the guide standing in the stern, he would, with a long paddle, make the boat fairly swish down the narrow channels among the cypress trees, missing them in a way that was remarkable. We wended our way down the lake perhaps three miles, flushing wood ducks and mallards from time to time, and bagged several, although we found this timber shooting was a game we were not fully up to, and we were much disappointed at the few birds and their wildness. My guide suggested that we fish awhile, and I agreed. Burt hated to give up the shooting, and decided he would go further down for awhile. I had my tackle ready just as he was leaving us, and dropped my minnow down beside a log. As the bobber followed the sinker out of sight, I pulled and landed a clean hook. Burt suggested that that was a bite, and I agreed with him. My guide asked Burt how long he would be gone, and upon receiving the reply, "Not over an hour," he made a statement that I did not believe he could substantiate. "We will have six or more bass when you return. Burt smiled and paddled away, and as they passed around the bend we tossed our lines over the log—but never a strike. "We have made too much commotion around here; you will leave this log until later and try a drift further up," said the guide. He paddled up to this drift without disturbing the brush, secured the boat, and we tossed in our bait again, the guide coaching me that as the shiners we were using were a large mouthful, the fish must be given time to get a good hold, and while he was talking away went his bobber, just as mine had. He let it go until the fish had taken up the slack, then he deliberately walked the bass right out from under the log and soon had him flopping in the boat. Well, that looks more like it, I thought. After he had strung the bass and dropped the same minnow back into the same hole, away went the bobber again, and I remarked that we must be in a nest of them, and out came another one. As he prepared his hook, he suggested that I was a trifle too deep, so I drew in and lowered my bobber. We both cast at the same place, and almost at the same instant down went both bobbers, and in a few seconds more the guide had landed one and I was fighting with a 4-pounder that was loath to be landed without an argument, and he ripped and tore, first under the log, then under the boat, and finally made a break for deep water, and the reel began to sing. I was getting anxious to see this plunger, so I tightened up on him, and finally got him up to the edge of the boat, when the guide had him over the side in a jiffy, the finest bass—of my own catching—I had ever seen. "How do you like it?" asked the guide. "Great!" said I, as he finished baiting up, and I wiped the perspiration from under my hat band.

We cast again and again, and when we left that log we had nine fine specimens. The guide had landed six of them, but I had the biggest in the string, and was happy. At this rate we could double the estimate made Burt when he left. In drifting up to another log the guide told me to drop my line just over the further edge of it, and doing so, I immediately had another fight on hand. This time the water was deep and clear of snags, aside from the large

sunken log under which the bass had lain, so I started the tussle with more confidence than previously, but he did some running and darting, water-cutting, twisting and thrashing that fairly stopped my breath, I was so afraid he would break loose. The guide had shifted the boat so that the bass could not run back under the log, and was much interested in the landing of the prize of the day. He advised me if my rod could stand it to get his nose out of water. I finally succeeded in doing this, the rod bending nearly double, and then worked him over to the end of the boat, where the guide could get hold of the line, when he soon had him in the boat. This one was afterward found to weigh 4 pounds 7 ounces. I shed my coat and began doubling up a stringer, for one was already overloaded, and the prize of the day could not be trusted except on an extra strong stringer. We then decided to eat our lunch and wait for Burt. We had just got a good start when my line, which lay in the water, began running out rapidly, and I grabbed my rod just in time to keep it from being pulled overboard, and in a few minutes had another—a 2-pounder—up to the boat for the guide to land. Before he got it on the string his bobber disappeared and directly he had landed one of the largest crappies I had ever seen. We had baited up and were proceeding with the lunch, when Burt and his guide came up looking disgusted, not having had a shot.

Upon seeing our string, Burt ejaculated, "Holy smoke! give us some minnows and a bite of that lunch." As we divided the bait we explained that we had moved hardly a hundred yards in landing the bunch. Off they went, and in a very few minutes we could hear the familiar and unmistakable sounds that indicated that the string was growing. We worked other logs and caught more bass, and once I hooked what the guide called a pike, weighing about 2 pounds, which made up in fight what he lacked in weight, and I had some fun getting him in. We fished along with good success, until the minnows began to run small, and consequently the "goggle eyes" commenced to bother us. About 4:30 we quit and started back for the landing, overtaking Burt, who we found had a fine string and a hard luck story of a fish "twice the size of his largest" ($3\frac{1}{2}$ pounds) he had failed to land. In proof of its size, he displayed a No. 18 snell hook bent out until it looked like a darning needle, with a barb on it.

We paddled up to the landing, comparing notes, and as thoroughly contented as a party of returning fishermen ever are, but the big one always seems to get away, and leaves a "bad taste in the mouth," so to speak. We replaced the car on the track, pumped back to the club house and there found Bob had arrived during our absence, and had gone out after ducks on his own account and had just returned with quite a respectable bag. After greetings and Bob's tale of woe of how he had to be in Memphis twenty-four hours, having missed his connection by a few minutes, we counted our fish into the ice box and found we had eighty-six bass, one pike and one crappie.

At supper Steve took us into his confidence and advised us to take a trip to Gum Island, where he affirmed that a bunch of deer and a flock of wild turkeys had lately been seen. We concluded to act on his suggestion, and notified the guides to be on hand for an early start the next morning, and then after a most agreeable evening with our pipes and listening to tales of great fishing, turkey shooting, and of ducks having been so thick as to "hide the sun"—a condition that was not on at present—we went to bed to dream of black bass, deer and wild turkeys disporting themselves in ways most remarkable. Next morning we were up with the sun, and away up the river, and although skeptical about killing anything larger than a squirrel on the island, went supplied with shot, from buckshot down to sixes. The weather was anything but favorable for ducks, it being warm and bright, but we thought there might be a chance to pick up a few mallards, so when about a half mile up the river, the procession of canoes scattered, one boat taking the river channel, one Seneca Slough, and the other through Gin Clute and up by Eagle's Nest, all meeting at the appointed hour at Gum Island Landing. In this way we covered nearly all the duck grounds between the club house and the island, about five miles distant, and bagged several mallards. We arrived in good order and on time at the landing and were soon ready for the start.

Dividing the party, we started across the island, so as to cover it as thoroughly as possible, it being but about a half-mile wide by two and a half long. Personally, I considered the chances slim for a shot at a deer or a turkey, as up to that time I had never seen a wild, live specimen of either, and rather considered myself a hoodoo when it came to big game. In fact, I had no idea what deer or turkey signs were, which the guides had had much to say about, but did not care to display too much ignorance by asking many questions. After we had gone several hundred yards, I found some tracks which I concluded were those of a deer, and called the guide, but after a glance at them he pronounced them hog signs. I had seen no hogs and asked him how he accounted for hogs on an uninhabited island, and he explained that some years ago hogs had been kept there and some that were as wild as deer still remained, and with that he showed me where they had rooted around a large oak tree for acorns. A little further on he stopped suddenly and showed me tracks that there was no mistaking for anything but deer, and fresh ones at that, which caused us to be somewhat more alert. We went on, winding our way through the woods and underbrush, but jumped no deer; finally the guide called my attention to the fallen leaves which had been lately disturbed about a tree, and said that turkeys had been scratching there, and to keep a sharp lookout, which I most certainly did. We presently came to a very inviting log, and as I had been stumbling through the brush and blackberry bushes until I was sure that all the game must have left that locality, I suggested that we sit down and rest awhile. While we rested there, watching the gray and fox squirrels, which were about as thick as sparrows on a city street, we heard the boom of a gun to our left and rear, at a long distance, and in a moment another, then five more in rapid succession, which was doubtless the guide with Burt, as he was using a pump gun with black powder, the report of which could not be mistaken. We began to speculate as to what the shooting was about, and I suggested that Burt and guide had treed a coon and were making a sieve of him. We held our guns in readiness, however, for anything that

might possibly come our way, watching and listening intently and starting at every rustle in the dry leaves, which always turned out to be a squirrel scampering about. We refrained from shooting, them, however, as there might be larger game in some near-by, undisturbed thicket.

After our rest we started by a circuitous route back to the landing, where we arrived in due time, not having seen anything larger than a squirrel, which was not altogether disappointing to me, for I had come to the conclusion years before that my luck at even seeing a deer was "on the bum." At the landing a large owl flew off into the timber and lit somewhere near a hundred yards away, and to make sure our turkey loads were all right, I took a shot at him, and was satisfied when he dropped off the limb like a stone. As I started over to where the bird lay, I heard some of the others of the party coming through the brush, but did not see them until I returned with the bird.

When I reached the boats I found Burt and his guide, who had just come in and seemed very warm and weary, but with broad smiles. They said nothing about the beautiful owl I was holding up, and I began to wonder what was up, and casting my eye about, soon discovered it—a fine, yearling buck, with its legs tied together and the sapling which they had brought him in on. What a beauty he was, and how I turned him over and admired him! They were too much interested in bringing in their prize unmarried to draw him before they started, so the guides went to work to put him into shape to keep. Bob and his guide soon came up, and we went at the lunch basket with the usual vim, and listened to Burt's tale of how he got the buck. "Three deer," he said, "jumped from behind a fallen tree, where they evidently had been lying down; two of them disappeared in the thicket to the right with one jump, but the third made for the thicket a little more to the left, where it was not quite so near, and so gave me time to get my gun to my shoulder and a quick pull at the disappearing white flag with a load of No. 4 bucks brought him down." He was shot through the back of the loins, and his right hind leg shattered, but was able to rear up on his front feet when we came up, and the guide, who was an excitable boy with a new Marlin pump gun, seemed to think it his duty to fill his hide with small shot, in spite of Burt's vehement protests. Our lunch having run out—not the story of how the deer was killed, for that isn't finished yet—we lifted the deer into a canoe, covered it with grass and shifted the boat to a sandy nook, took up our guns and were once more lost in the depths of this wonderful little island, where we knew that three deer, at least, still remained, one of the guides having seen a single buck below and further to the east at about the time Burt jumped his bunch, but out of gunshot. Another trip to the extreme end of the island and nothing seen but squirrels, that seemed more numerous even than in the morning, and I became more than ever convinced that my hunting, for anything larger than ducks, was very coarse. We had been standing still, listening, when the guide said he thought he heard something walking in the dry leaves ahead of us, but as we heard nothing further, he decided he was mistaken. We struck out again, but had gone scarcely fifty yards when the guide exclaimed, excitedly, "Look there! Look there!" I glanced at him to note the direction, and was straining my eyes for a glimpse, as I supposed, of a deer in the distance, that I had so far failed to locate, when something dark darted from behind a bush not twenty yards from us, and bang went the guide's gun. At the same time there was a roar of heavy wings, and I began to realize that my first chance at a wild turkey would not last long, and hurriedly covered the bird and fired a load of bucks at him which I had hoped would kill a deer. What beastly managing! for I had a load of BB's in the left barrel, which, if I had used first, would surely have stopped the turkey, whereas, the buckshot with black powder nearly tore a leg off the gobbler, and smoked me out of a chance for a second shot until the bird was fully forty yards away in the timber. I gave him the other barrel, as soon as I could make him out through the smoke, but only made ragged feathers in his wings and others fly from his back, which I could see as he sailed away with his leg swinging like a trolley off the wire. As he disappeared through the top of a large oak, the air in my locality was blue from more causes than black powder smoke. The guide was considerably disappointed, for he had tried his best to show me the birds before they were startled, but was taken so by surprise himself that he was practically speechless. This guide of mine was certainly a fine one. He was thoroughly unselfish, and was always anxious to give the "clubman"—as he dubbed any greenhorn he might be piloting about—the best of it. Upon opening my gun, I found a shell stuck so that I could not get it out with an ordinary extractor, and had to cut a stick and pound it out, after which we tried to locate the wounded birds. We found plenty of feathers where the guide had shot his bird while it was running, but the turkey was not to be found. We then went to the tree, where I had last seen mine, but with the same result. I felt badly, not only at losing my bird, but at its having gotten away wounded. The guide stated that he had seen turkeys, literally shot through and through, fly nearly a mile and then fall dead, and that he knew nothing harder to kill, and his remarks were very forcibly brought to my mind a few days later.

The afternoon was nearly gone, so we headed for the boats, finding the others already there, having bagged a fine specimen of a possum, several woodcock and enough squirrels to supply the club. Our boats loaded, the guides pushed out and we were off for the club house, five miles down the river. The luxury of the trip down this picturesque stream can only be compared to a gondola ride. The guide, standing in the stern, sends the canoe gliding through the water with long, steady strokes, and the passenger, comfortably placed a little back of the bow in a backed seat with his gun across his knees in readiness for a shot at ducks as they rise from the smartweed and flags along the channel, is in a position to enjoy it. On the trip down, however, the ducks were few, and our party soon gave itself up to the charm of the surroundings, and the broad marshes with their tall cypress and their inhabitants were treated to a serenade of the latest popular airs and ragtime coon songs, with now a few old-time melodies, my guide giving a series of wild goose calls, as his part of the

programme, which were certainly remarkable for a human voice. Just at dusk we glided up to the landing, which was immediately covered with guests and guides to see the fine buck and congratulate the successful hunter. At supper there was nearly a rough house, for Burt, who took the honor of bagging the first deer, modestly determined not to take the head of the table, which Bob and I agreed was the proper place for him, and we proceeded to seat him with formalities which promised to upset the table.

BILL.

[TO BE CONCLUDED.]

CHICAGO AND THE WEST.

Opening Day.

CHICAGO, Ill., Aug. 29.—There is no day in all the sporting year the equal of "opening day," that time set by custom and by law for the beginning of the fall season of outdoor sport. We are now almost up to the opening day, and not for very many years has there been an opening day of so much interest and significance as attaches to Sept. 1, this year.

Here in Chicago it seems as though everybody were going shooting and had postponed to the last minute the necessary preparations for this trip. The stores here are packed as they have not been for a long time, and the ammunition trade is something greater than ever known before. For instance, I made inquiries to-day of one firm, that of Von Lengerke & Antoine, as to the relative importance of the ammunition trade this season as compared to last. Mr. Von Lengerke replied that, so near as they could tell, there were nearly six persons going shooting this year to one who went last year. "Of course, we cannot keep absolute check on this," said he, "because our new shell trade we might naturally expect to bring us a certain increase of business. You will remember that we took over the entire loaded shell business so long handled by Mr. E. S. Rice, and we have many thousands of dollars invested in ammunition. We have 70,000 Du Pont shells now on the road, which we wish would reach us pretty soon. Here on our retail shelves there are about 50,000, and in our reserve stock down stairs we have about 200,000 more. I can say from available figures that we will sell about 2,000,000 more shells this year than we did last year. I do not believe that this is all due to an increased line of goods, but think that it is very largely attributable to the general interest in shooting matters and the abundant crop of game."

About 2,000,000 shells! That is a good many of itself, but 2,000,000 "more" than were sold last year—what figures these be! It will be remembered that this is but one firm of many. The shooting industry of this country can be estimated somewhat from these figures. Some one asks where do all the pins go? He might better ask where do all the shot go?

They Stop in Illinois.]

A good many of these shells will be fired at Illinois game this fall; more than for many years past. As it stands now, Wisconsin exacts a \$10 shooting license, Indiana a \$25 license, Dakota a \$25 license, and Minnesota a \$25 license if you live in a license State yourself. Hence, the open shooting regions are very much restricted, since figures like the above render shooting prohibitory to a great many sportsmen, although they do not hinder a great many others going out. The great influx of sportsmen upon the Illinois game fields this fall will be due to the fact that the shooting is too high elsewhere, more especially in Indiana, which has always been a great sporting ground for Chicago shooters and anglers.

As to where they are going, the answer is that they will be in every county of this State where there is grass or corn enough to hide a prairie chicken. A great many will go not much farther than Joliet, Ill., which is in the center of a remarkable profusion of birds this fall. Take the cross-line railroad out of Joliet, and stop at almost any little village ten miles or more from the latter-named city, and you will be practically certain to find birds if you go there soon enough. As to the abundance of the crop, there is no question whatever about it. The local wardens report that they never have seen so many chickens in Illinois as there are this fall.

The great Kankakee marshes will be the center of operations for a great many shooters, and it must be remembered that Indiana does not have an entire monopoly on this crooked stream. Some of the best chicken marsh of Illinois lies along that river. The birds take to the wide, grassy swamps for breeding, and these wet bottoms have always been productive of great numbers of prairie chickens. I have already mentioned Koutts, Knox and other Indiana towns as good to remember, and one may add Lowell, Water Valley, Rose Lawn, and other kindred Indiana points. If one does not care to pay the license and prefers to shoot in Illinois, he should try Momence, Kankakee, or other towns further down along the Kankakee River. De Kalb county is a good tip this week, as it was last. Aurora, about 40 miles west of Chicago, is the home of a great many able sportsmen, and these will have good prairie chicken shooting within carriage drive of town. About 15 or 20 miles beyond Aurora there is good chicken country. Mr. T. A. Hagerty, of this city, is one of those lucky enough to have a friend who is a large land owner, and he has received an invitation to shoot over these practically preserved farm lands. He goes west of Aurora about 12 miles, and should have very decent sport.

Streator, Ill., is another town which should be remembered by one in search of chicken country, although I should prefer the De Kalb or Joliet districts instead, as Streator is a mining town, and sometimes the coal miners shoot ahead of the opening day.

Going Out.

Mr. Marvin Hughitt, Jr., general freight manager of the Chicago & Northwestern Railroad, and his friend, Mr. Robert Cox, have started for the Northwest on one of their annual chicken hunts.

Mr. F. T. Trego has gone up to Neepenauk Club, Wisconsin, where he will shoot on opening day, and probably, with very fair success. At the same club is Mr. J. A. Day, of this city, who is spending this week

fishing and will begin active operations on the upland game next week.

Mr. Joseph E. Pflueger and Mr. Geo. Pflueger, his brother, both of Akron, Ohio, paused at the FOREST AND STREAM shop to get directions for a Minnesota chicken hunt for which they were en route. These I told to take State Game Warden Fullerton's advice as to good local country in Minnesota.

Tremendous Chicken Crop and Cause for Same.

This time we have without doubt or question a tremendous chicken crop. There are birds everywhere in the Northwest, or in every place where there has been any breeding stock at all. Here in Illinois, as I have stated, there are very many more birds than last year, or for some years back. Agent Fullerton's advices from Minnesota show that they have a grand crop also in that State. The State Warden of North Dakota states that the birds are "almost anywhere." To-day I was talking with Mr. West, of the general passenger department of the Chicago, Milwaukee & St. Paul Railway, and he said, "It is simply remarkable what stories of chickens come in from all over our South Dakota line. I wish I could get out myself for a little fun, for, from all I can learn, there are more birds out in South Dakota this fall than ever was known there at any time, and they are full grown now. It is an early season." Asked what specific points were best along the line, he said, "anywhere west of the Minnesota line in South Dakota."

Much the same story as this comes in from Wisconsin, which, also, is having a good chicken year. It would be very pleasing for one to believe that this sudden increase in our game supply is due to the increased respect for the game laws of these Western States. This may be one of the causes for the increase, yet one is constrained to believe it is but a minor cause. The true reason for the great abundance of prairie chickens lies in the fact that we have had an extraordinarily dry spring and summer. Any one who savvies prairie chickens knows that they take to the lowlands to breed, and nowadays almost their only nesting grounds exist in the swamp lands. The hen grouse builds her nest along the edges of the swamps, and, as quick as the spring floods come, the nest is drowned out. Once in awhile she nests again, perhaps with a reduced number of eggs. Now give that same grouse a perfectly dry nesting ground, and she will turn out more than twice as many new birds as in a season of prolonged rains and high waters. A young prairie chicken is a tiny, downy, weak little thing, and quite as subject to death from heavy rain storms as is the domestic chicken, or the young duckling or gosling. This summer, as every one knows, it has been abnormally hot and dry. This was bad for human beings, but mighty good for prairie chickens. The prairie chicken does not really need very much water, and it resorts to these lowlands simply from the desire for shelter, and not from any taste for wet grounds. The prairie chickens live week after week out in a high, dry country, where there is not a bit of water, the dew of the grasses serving to provide all the moisture they demand. I presume every old chicken hunter has seen these birds sometimes, when put up in the middle of the day, fly to a cattail swamp, or has known his dog to find them in such surroundings during the heated hours of the day. Sometimes there will be water in such a swamp as this, but I have nearly always found it well to hunt around the edges of such cover; yet it is an open question if the birds do not go there for shade or protection rather than for water. The prairie chicken is a bird of the high, dry prairies, and it does best when it finds itself situated in something like the old environment. The drowning out of the nests in the spring-time is one of the great causes of the decrease in the supply of these grouse in the West, whereas a dry season means lots of birds. Thus we who have spent the distressingly hot summer in the cities may now have something of compensation in the increased pleasure of trips afield.

If one were asked to name the point most properly to be called the center of the prairie chicken industry of America, he would be obliged to point, without hesitation, to the twin cities of St. Paul and Minneapolis. If you want a taste of real sportsmanship; that is to say, if you wish to find a whole community of sportsmen, visit the Twin Cities. On the morning of opening day there is nothing left but the court house in these towns. They shut up the factories, close the schools, adjourn the Supreme Court, lock up the store doors, and go shooting. If you would go out there next Sunday you would find nobody at home in St. Paul or Minneapolis. The servant would tell you—if the servant had not also gone out shooting—that the head of the family had left for up country, where he intended to do a little shooting on the following Monday morning. The big city of Chicago, just as the big city of New York, is located a little too far away from the shooting grounds to be really a good place to live. A chicken trip, or, indeed, a hunting trip of almost any sort, nowadays, means for the inhabitant of either of those two cities a long and somewhat arduous journey, with all the trouble of shipping dogs and that sort of thing. If you live so far west as Minnesota, you can have a backyard big enough to lick your dog in, and you can raise a dog which will know a chicken when he smells him. Blessed are the men of Minneapolis and St. Paul, and busy enough they are this week, getting ready for the annual hegira.

Assault on a Game Warden.

The vicinity of Willow Springs, on the Desplaines River, near Chicago, has always been one more or less productive of game birds, snipe, ducks, or even quail, and it has been patronized very generally by shooters of the humbler class, who go out on Sundays with their cheap, muzzle-loading shotguns to kill whatever they can find. Five days ago there were four Italians who were out on such a quest as this and who had killed a few wild ducks and half a dozen quail, illegally. As they were wandering about two miles east of the railway station, they were met by Deputy Warden Louis M. Greenwald, who has charge of that part of the country in his work. Greenwald halted these Italians, arrested them, and undertook to take away their game from them. One of the men struck him with a club, knocking him down, the four then running away. Greenwald drew his

revolver and fired at the man who had struck him. He thinks that he hit the fellow, but is not certain. Upon this the other three Italians assaulted Greenwald, beat him into insensibility, and kicked him about the body, breaking several ribs. He was left unconscious in the woods, where he was found later by farmers, taken to the railway station, and brought to the County Hospital of this city, where, at last accounts, he lay in a critical condition.

Very frequently we read of the offenses of this Italian element in the neighborhood of New York and other Eastern cities, and it seems members of that nationality are guilty of similar cases of indecent violence here in Chicago. These Italians furnish a very poor element of citizenship in some cases, and it is persons of this sort who make up a large percentage of ignorant Sunday shooters who defy alike law and decency in their marauding operations about the edges of the city. It is to be hoped that Greenwald will recover and be able yet to have his assailants properly punished.

New Warden at Milwaukee.

Mr. Valentine Raeth has been appointed by State Warden Henry Overbeck as district game warden at Milwaukee. Mr. Raeth is a newspaper man and has for more than ten years been connected in different capacities with the press of Milwaukee. He is an ardent hunter and fisherman, and has always been a firm advocate of game protection. He is the author of the Wisconsin law which empowers game wardens to act as forest wardens, also, which law was passed last spring. It is confidently expected by the sportsmen of the Cream City that Mr. Raeth will fill the bill acceptably as local conservator of protective interests.

Big Illinois Game Preserve.

What is thought to be the largest transaction ever completed in the State of Illinois by way of game preserves was concluded yesterday at Lewiston, Ill. Mr. W. C. Fitzhenry sold to a club of sportsmen the body of water known as Thompson's Lake, long celebrated for its excellence as a fishing and hunting resort. The purchasers were Mr. Henry Bates, Mr. W. P. Ijams, well known in railroad circles; Hon. Harry S. New, National Republican Committeeman from Indiana and a prominent newspaper man of Indianapolis; Dr. Thomas Hill, and others, friends of the above. These gentlemen not only bought Thompson's Lake, but also several thousand acres of marshy lands adjacent to the water, and the consideration was about \$30,000.

Mr. New is a member of the Turtle Lake Club, whose grounds are located about twenty miles from Alpena, Mich. He is an ardent and expert fly-fisherman.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Boston Gunners.

BOSTON, Aug. 31.—The shore bird gunners are not having the best of success of late. They say that the weather has been almost too fine, and the flights have been rather small. Down Chatham way the vacationists have their guns at hand, and go out mornings, with the result of a few dozen small birds. I. L. Kenniston brought up a pretty good bag Thursday morning, the result of a couple of mornings along shore. The birds were mostly summer yellowlegs and peep. In the vicinity of Scituate the gunners have had some sport, mornings and evenings. Local gunners have done most of the shooting so far, however. In the Essex River and Plum Island section the Boston gunners have put in some time, and brought back a few birds. A couple of Boston gunners got over sixty birds in that section last Tuesday. J. H. Jones and a friend have been on gunning trips lately, but their chums haze them with a report that they got no birds. Mr. Jones has secured the gun that he lost overboard while shooting muskrats last spring. The canoe was upset by the recoil of the gun, and Mr. Jones went to the bottom, gun, rubber boots and all. The gun he was forced to drop in order to save himself by swimming. Mr. Leonard Hasson, of Quincy, has been giving considerable attention to the rearing of Mongolian pheasants in captivity for three or four years. This year he has not had the best of success. He put about thirty eggs into the best incubator he could get, but not an egg hatched, all being infertile, though he supposed his male birds were all right. Hence he has not a chick in his coop. The mating and nesting seemed to be as good as the year before, when the eggs hatched. He will change his breeding stock next year. The old birds seem to thrive, since they feed well. He has one solitary quail in his pens that seems to be in good condition. He went gunning off Marshfield way a few days ago, but got only three yellowlegs. But he met a gunner who claimed to have shot seventy plover or the marshes about North River, Marshfield, in one day, recently. Mentioning this story to a gunner, who is thoroughly familiar with that section, having gunned there for several seasons, he laughed at the idea. "Yes," said he, "I have heard of such plover before. I have not a doubt but what they were 'stibs' or 'whitebreasts,' which birds are not much larger than peep. The gunners in that part of the country like to call them plover, because it sounds large. Further down the Cape the gunners call them 'whitebreasts.'" This same gunner says that yellowlegs are really scarce so far this season, but Labor Day Sept. 2, may bring in some bags. That day the gunners will all be out. T. L. Hanscom has just returned from a gunning trip down the Maine coast, in the neighborhood of Biddeford Pool. Summer visitors make it rather uncomfortable gunning in that section. One never knows how near he may be to some sort of a picnic, sailing or boating party, even where the coast appears remote or unsettled. He found that very early in the morning there was little danger from these summer sojourners being in range while that was really the best time for gunning. With a friend who owns a boat, he made some pretty good bags of yellowlegs and peep.

SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Going It Light and Heavy.

Sea and River Fishing.

bass, however, all big-mouths, which I have always persisted in classing "no good" as fighters, when compared with their brethren of the lesser mouth.

Out of Tucker Lake, a small lake nestled in the woods a half mile back from the Fisher lakes, grown up with waterlilies and grasses, the boys took big-mouths and pickerel till they were tired of looking at them.

Brooks' Lake, another little pond of a hundred rods or so in length, lying a few rods back in the woods from Glen Lake, on the opposite side from camp, and a couple of miles above, was another favorite water for the big-mouths, but I think the boys must have cleaned it out, as the last time they went to it they brought back only three measly little cusses that were barely of age—that is, over the length limit.

These smaller lakes were fished when the big lake was too rough to go out in a boat with safety, which was a good part of the time.

Glen Lake is between eight and nine miles long, and near four miles at the widest point, and the zephyrs from Lake Michigan kick up such a sea on it that it was not quiet day, as most of them were in the A, B, C class in handling a boat in rough water—or quiet water, either.

Glen Lake is, I believe, the loveliest lake I have seen in all my meanderin's over upper Michigan, its waters as perfectly clear and blue as the waters of Lake Michigan or Huron, and we were sorry when the time came to break camp and leave it.

But, enough of camp and fishing for the present. I may take a notion to go more into details later on and rehearse a few fish stories that were told us by our outlying neighbors that will move Bre'r Hough to take his bullhead catfish yarn in his vest pocket and hie him to tall timber with enough provisions to last him a year.

After I got home and had the "calamities" put away in the attic and got my "city bearin's," I found three FOREST AND STREAMS waiting for me. I opened up on Aug. 3 and turned to the editorial page. I always start in on that page, for, like the old G. R. & I. Ry., I always find something good on it at both ends and in the middle. When I got to the article, "No Authority," I noticed that my old friend (?) J. H. Jordan had been up to his old tricks, and if Messrs. Geo. B. Carpenter & Co., of Chicago, escaped his wiles, they are lucky.

KINGFISHER.

Practical Hints on Fishculture.

BY DR. JAMES A. HENSHALL.

(Read before the American Fisheries Society.)

In the conduct of any operation the smallest matters are often the most important, and too much care and study cannot be devoted to seemingly unimportant details. Very often, also, the simplest devices give better practical results than those of more elaborate and complicated structure.

In fishculture, especially, is this true, and the more we endeavor to follow the methods of nature, and rely on the simplest means to that end, the greater will likely be our success. Therefore, while the following suggestions may embody nothing not already known to some, or all fishculturists, they are none the less true and worthy of consideration.

Aerating Screens.

To begin with the ovum or egg, air is just as necessary to the well being and development of the embryo as water. In the running water of streams there is air enough for the necessary aeration or oxygenation of the embryo, but in spring water, as it issues from the ground, there is very little, if any, free air.

In fish hatcheries air is furnished usually by a horizontal aerating screen at the head of the trough, being simply a wooden frame with a bottom of perforated tin or zinc. This is all right in theory, but in practice I have found that the small holes in the sheet of tin, being cut very smoothly, do not permit a flow of water through each and every hole as one might suppose. A film or diaphragm of water is thrown over many or most of the holes, preventing the water passing through under the pressure of water usual in most hatcheries. Under these circumstances there may not be sufficient air furnished to the ova or fry, as the case may be. At all events it is well to give them the benefit of the doubt.

After being convinced of the inefficiency of the aerating screen as usually made, I devised one that fully meets all requirements. It is constructed as follows: A piece of soft roofing tin of the desired size is marked with lines an inch apart, both ways of the sheet, and tacked on the frame. Where the lines cross, at right angles, a hole is made with a six-penny wire nail from the inside of the screen. Thus, in a screen of 10 by 20 inches, inside measurement, there will be 200 holes. In driving the nail through the tin a shallow dent or depression is made around each hole, while on the under side the hole has a ragged or broken edge.

The simple driving of the nail produces just the conditions that are needed. The water naturally gravitates into the umbilicated margins of the holes, and, passing through, is broken up by the ragged edges below, imprisoning the air as it falls into the trough. We thus have 200 broken streams of water, the most efficient system of aeration that can be devised, and the most simple. Where the screen is made of the perforated zinc or tin of the shops, the water pours through but a portion of the holes, as before mentioned, and, moreover, has a tendency to cling to the smooth, under surface of the screen bottom, until the water from several holes coalesces, and by its added weight finally drops into the trough in streams of unequal sizes. This condition of affairs is patent to any one who has interest or curiosity enough to examine into it.

I consider the commercial perforated zinc or tin a delusion and a snare for any purpose whatever in fishculture. For foot or guard screens it clogs, for reasons before given, and the smooth, round holes are a constant temptation for fry to worm themselves through, whereas, by using brass wire cloth the flow of water is free and unobstructed, and fry are not so apt to attempt to pass through it, and would fail to do so if the mesh were small enough.

Feeding Fry.

I wish to call particular attention to the remarks of W.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The Kingfisher Camp of 1901.

Editor Forest and Stream:

The Kingfishers returned a few days ago from the twenty-first annual camp in the North Woods, and we are already "layin' plans" for the next one, which, I think, will be at the same place, at the foot of Glen Lake, as we were all so well pleased with the fine camping place, the fishing, the beautiful scenery around the lake, and with our two nearest neighbors, Mr. H. C. Burgess, the best of all neighbors we ever hitched up with, and Mr. Millington, that it will be hard to find a more "satisfyin'" place to make a camp.

We "jest lived off'n the fat o' the land." Bacon, hard tack, pork, beans "an' sech," for a foundation, and the fish and other provender that we ate would have made a dyspeptic long to swap "innards" with us.

Then, new potatoes, cabbage (pork and cabbage), early apples, to eat for "sass," cherries, blackberries, "rozberries," milk, butter, eggs, and chickens for a stew, fresh meat from Glen Arbor when we wanted it, honey, and syrup for flapjacks, and Mrs. Burgess—bless her kindly heart—baked every other day a batch of the very best fresh bread for us, and one evening Millington drove around to camp in his wagon with his wife and boy and took supper with us, bringing with him a bag of green peas and apples, and a two-gallon freezer of ice cream as a treat to the boys. "Sech neighbors, sech neighbors!"

"I'm jest a-tellin' ye all this"—strictly facts, too—to make yer mouth water, and wish you had been with us.

Another feature of the camp that made it pleasant for Old Hickory was the fact that my well-beloved old camp comrade, Kelpie, joined us at Traverse City and went over and stayed with us till we broke camp, saying at the wind up, in his deliberate, quiet way, "Hickory, this is the best and most satisfactory camp that we have been together in for years"; and he meant it. His son, George, came over and was with us for about a week at the last, but if I write down here what the boys said about him, I'm afraid he would have to buy a new and larger cap. Suffice it, that he's a chip o' the old block, and we all "took a notion to him."

I had three or four youngsters along from the post office—Ed. Kluba, Tom Linehan, Charley Rogers and Charley Drott. We called them "the youngsters" because none of them were more than half as old as Kelpie or I, and, as it was their first camp, they enjoyed themselves about to the limit. I would like to say a whole lot of good things about them, but I don't want to swell their heads too much in their "first inning"—most people would say "outing," but somehow I never took kindly to the word.

"They fished, an' fished, an' fished, an' fished, an' then they fished some more," and they worked like beavers on a new dam, and took many a lift of camp work off the shoulders of Hickory (for which I thank them, here in "the den"), and they are all "dead sot" on trying it again next year. C. G. Lloyd, his nephew, Tommy Lloyd, a bright, quiet lad of seventeen years and a good boy "clean through," and Shelley Rouse, also uncle to Tom, were of the party, and were much pleased with the camp and surroundings.

C. G., as he was called in camp, is one of the Lloyd Bros., wholesale druggists and manufacturing chemists of this "village," and is an enthusiastic hunter of mushrooms, toadstools "an' sich"—in fact, he is recognized as an authority on fungi, and takes delight in the fact. He spends a good part of his time while in camp pokin' round through the woods, hunting rare specimens of the mushroom family, and when he finds one he is as pleased as Tom Linehan was when he caught a 3½-pound small-mouth, or Ed. Kluba when he "overcame" a 5-pound pickerel. Tommy, son of John Uri Lloyd, the author, has developed into a "bug hunter," but he only "snared" a few moths and "snake feeders," and maybe a "daddy long legs" or two while in camp, preferring to put in his time with the other Tom (we dubbed them the "two Toms")—early and late with his rod.

Shell Rouse is a prominent lawyer of Covington, Ky., and the most persistent and indefatigable angler that ever wielded a rod. Everybody on both sides of the river knows Shell, and everybody likes him.

Geo. J. Murray, the noted patent attorney, needs no introduction to the readers of FOREST AND STREAM. It is only necessary to remind them that Old Adirondack is "the man who got lost in the middle of the road" while we were in camp a few years ago on Little Manistique Lake. He's been lost a few times since, but we always manage to find him. The fact is, as he says himself, he has no more sense of locality than a three-day-old kitten, and if he starts off in the woods by himself, the only way to get him back is to tie the end of a ball of twine to him, and when he gets lost—which is usually less than a hundred yards from camp—he can follow the twine back and find himself.

Altogether, it was a harmonious, brotherly party, and a camp to call up in the future pleasant memories—one that will bear "doin' over ag'in" next year.

As to the fishing, we caught small-mouthed bass in Glen Lake from 4 pounds down to 1½ pounds, and every one of them carrying 60 pounds of fight to the square inch, and while fishing for minnows in Fisher Lake, we took a good many little fellers, from an inch and a half in length to three and a half inches, which were tossed back in the water to grow up to years of discretion. This might raise the question, Are the 1½, 3½ and 4 inch ones, all of this year's spawning?

We got bass, pickerel, barred perch and some bluegills in the Upper Fisher Lake, a little lake forming a part of the outlet of Glen Lake into Lake Michigan. This lake, and Lower Fisher Lake, were reached by boat through little connecting rivers a few rods in length, the upper Fisher about forty rods from camp, and the lower one a matter of half a mile or less. Tommy Lloyd got some good bass and a pickerel or two out of this lake; the

Editor Forest and Stream:

I read in the FOREST AND STREAM of the 31st inst. an account of a trip in Maine which was made by one man and a guide, who were eight days away from civilization. The trip was made in August, when the weather is usually warm enough to call for but little in the way of bedding and blankets, and was so short that two people need not have carried a great weight of provisions, yet I read that when they contemplated making a portage—I quote it: "We threw away some of the provisions and camp articles, so as to lighten our load as much as possible, but still had ten heavy back loads, in addition to the canoe."

I am not deficient in imagination, but it fails me here. What in the name of conscience do you suppose the man had with him? I do not know what his idea of a heavy back load is. I know what my Indian guides have carried in trips I have made during the last eighteen or twenty years, and what I have usually carried myself, which, with both of us, has depended, so far as the provisions went, on the length of the trip, one of a month requiring, of course, more than one of ten days. On a trip of a month, however, we would only need to make two trips over any portage, including carrying the canoe. I would like to know what sort of stuff a man would want to take to the woods that would give him seven or eight hundred pounds to be carried in addition to his canoe.

CECIL CLAY.

WASHINGTON, D. C., Aug. 30.

Buoy and Ducks.

If the United States Government is not careful it will be arrested for violating the fish and game laws of the State of Maine, fined in court, and made to settle. Down at the entrance of Rockport Harbor, in Penobscot Bay, is a ledge marked by a stone monument, and upon this monument is a spindle supporting a barrel as a day mark.

When the barrel was put up there it was a good, sound barrel, but the winds and waves of years have carried away its top hoops, the head has fallen in, leaving the staves spread apart like the fingers of a giant's hand. The whole region about the ledge is frequented by wild ducks, and recently many of these birds have incautiously poked their inquisitive heads through the slits between the staves, thereby getting caught by the neck and hanging there until dead.

Now, there is a State law, covering all waters within the three-mile limit, which provides that whoever at any time or in any place within that limit shall with any net, snare, trap, device or contrivance other than firearms take or destroy any ducks or wild fowl shall forfeit fines in various amounts, according to the kind and number of birds so taken or destroyed. So the United States is a poacher, and the State of Maine may have the law on Uncle Sam if he doesn't watch out.—Boston Evening Journal.

Forest Fires.

We notice a few fires on the lake shore, in a piece of woods which hitherto has escaped. People who light fires for the purpose of seeing the woods burn up, or, having lighted camp fires, carelessly leave them to spread abroad, are criminally culpable. It may, perhaps, not be known to many that there is a law in force against leaving fires burning in the woods. Under the act even a person clearing land, and, burning, must take due precaution against the fire spreading beyond his slashings. But even were it not so, even were there no law written down against this, there is a higher law, which people of any far sightedness whatever, should rigidly keep, a law of natural economy. The stretches of forest which seem inexhaustible to-day, much of whose timber is to us useless for milling, will one day be of value inestimable. Our children, and children's children, may well have cause to wonder at the short sightedness of their forbears, who wantonly and criminally destroyed a grand heritage. In the east, the fires this season have been so great that timber owners have spent large sums trying to extinguish them, and the whole population in some sections were fighting fire night and day. Fortunately, the season has been wet with us, but should a dry spell come, there is fire enough on the lake shore to spread over the whole country.—Cumberland (B. C.) News.

Opening of the Rail Season.

STRATFORD, Conn., Sept. 2.—Editor Forest and Stream: To-day is the first of the rail shooting on the Housatonic River, and a dozen boats were out. Owing to the rainy weather and the lack of sun through the late summer, the "corn grass" is still green, and its seeds are not ripe. Most of the signs of fall are not here, yet the blackbirds and reed birds are crowding the marshes, the kingbirds are flocking, fishhawks are moving southward and loose flocks of night hawks pass over through the sky.

The easterly storm of Sunday pushed up a very high tide, and this afternoon the tide was fairly good. The shooting was quite lively, and some of the boats should have made good scores. I can learn, however, of none that were particularly high, 21, 17 and 13 being the only scores that have come to me.

It does not seem that any ducks were seen on the river, though there are a few sandpipers and plovers, and, of course, the usual number of little herons were started. A least bittern was seen by a well-known Milford gunner.

LIGHT.

Rail, Reeds and Oats.

SOUTH RIVER, N. J., Aug. 31.—There is a wonderful crop of wild oats on the marshes here, but the seeds are not yet ripe. Reed and rail-birds seem to be scarce as yet, and the few that have been killed are very poor. A good many yellowlegs have been seen this week along the Raritan River.

J. L. K.

T. Thompson on the subject of feeding fry, which may be found in the proceedings of this society for 1900, pages 143-146. I wish to indorse and emphasize what he says concerning the feeding of fry before the yolk-sac is absorbed. I first adopted the plan of feeding grayling fry as soon as hatched several years ago, and afterward trout fry in a similar manner. My plan is to feed the bloody water from finely ground and screened liver by placing it in the horizontal aerating screen at the head of the hatching trough. While no particle of food may be apparent to the naked eye in the bloody water, it is there, nevertheless, and it is carried along with the water at the bottom of the trough, where the fry soon learn to appropriate a part of it as it floats by them. Coral polyps and other marine invertebrates that are not free swimmers depend entirely for their food on the passing current.

By this early feeding of fry the nourishment contained in the umbilical sac is augmented, and when the sac is absorbed and the alevin becomes a free-swimming animal, it has become accustomed to the liver water, and has acquired a taste for that kind of food. The subsequent surface feeding of liver emulsion then becomes an easy matter. The plan of feeding fry before the absorption of the sac is especially demanded where spring water is used, as it contains no natural food, unless it flows a long distance before entering the hatchery. Where spring water is replaced by stream water as soon as hatching is completed, or where stream water is used entirely, and where, consequently, there exists much natural food in such water, the early feeding of fry is not so imperatively demanded. But if considered in view of the subsequent surface feeding of liver emulsion, which is rendered easier by an early acquired taste for it, as mentioned, it would not be amiss to practice the plan in any case.

CHICAGO AND THE WEST.

How They Catch Fish at Meredosia.

CHICAGO, Ill., Aug. 17.—Mr. L. E. Rodgers, of Decatur, Ill., sends the following account of how the big market fishermen of the Illinois River scoop out the fish with their gigantic seines. These Meredosia flats are on the same waters where the Illinois State Fish Commission annually takes out many thousands of young bass and other game fish for distribution. It is perhaps questionable whether any water in the United States is more prolific of fish life. It is an open secret that the Illinois State Fish Commission plays for the food fish interests of this State, rather than the sportsmen's or popular interests. In fact, the work of the Commission is producing many thousands of tons of coarse fish, which naturally bring considerable sums of money for a few market fishermen. When it is cited that legislation in favor of sportsmen is class legislation, the retort would naturally arise that legislation which makes money for a few fishermen is all the more to be called class legislation. It is true that a great many of the poorer classes of the East are benefited by these carp and buffalo fish from the Illinois River, but the sportsmen of Illinois are not so much concerned with the doings of Mott street, New York, which is the great market for these Illinois River fishers. It is naturally to be supposed that in operations like those described, where thirty thousand pounds of fish are taken at one haul, there would be many game fish included. This is how the thing is done:

We boarded a little steamer and were taken up to the bay, where the Graham & Yeck Company were preparing to make a haul with their big seine. This seine is the largest ever constructed, being nearly two miles long. The exact length of it is 3,000 yards. It is 10 feet wide.

A complete outfit is carried by this firm, so that all their packing is done right on the spot. They have a big house-boat with barrels, ice and all that is necessary for getting the fish ready for shipment.

Besides the house boat and bulkheads, there are six big flatboats on which nets and other necessary articles are loaded. This fleet is manned by thirty men and boys.

The fishing ground was the lower part of Meredosia Bay, which is six miles long. The width varies from 100 feet to a mile and three quarters, and it is narrow at each end. The water is from 4 to 5 feet deep, and as blue as that of Lake Michigan. Where the net was started the bay is a mile and a quarter wide. The four barges were distributed along the bay and the net was lowered. There were nets across the ends of the bay to keep the fish from getting out. By the time the net was in place it was 11:30 Sunday morning, and all hands stopped for dinner.

After dinner the work of hauling in the net was begun. The men were divided into three crews, one crew at each end and another on a barge in the middle. Each end of the net was pulled in as the barge advanced, and finally the ends of the net touched the bank. Then the ends were made fast and the men began pulling in the net by loops. They would get hold of the net about 50 feet from the end and pull it in and stake it, and then go about 50 feet further and do the same thing, until they got near the barge.

The barge divided the big semi-circle formed by the net and the bank in half. The loop that inclosed the barge was, of course, the one from which the fishermen expected to make their big haul. It was a sight to behold. It was about 100 feet square and was perfectly alive with fish. The Decatur men had been prepared with big boots and big straw hats by the firm and they waded out into the mess of fish to see what it would be like to have the fish slapping them about the legs. The fish lashed the water into foam and made it muddy, but thousands and thousands of them were in plain view. It was a writhing, seething mass that made one dizzy to look at it.

It was about 10:30 Sunday night when the men were ready to take out the first half of the catch. They jumped in among the squirming fish and gathered them up in their hands and threw them into the barge. They worked very fast and it took till 6 o'clock in the morning to finish that half. About 5,000 pounds of fish were got by that time. Then the work of taking the fish from the other half of the seine was started. This sweep was much the largest and netted about 20,000 to 25,000 pounds of fish.

In all about 30,000 pounds of fish were caught at that one haul of the big seine. It had been the intention to

make a clean sweep of the bay, but a number of things combined to cause a smaller haul than was expected. Another firm had just two days before made a haul there and taken out 18,000 pounds of fish with a 1,400-foot net.

The men all seemed to know their business and worked fast. The buffalo and carp were all taken out of the barges and packed in refrigerator cars and shipped to New York without dressing. The fine fish were put in flatboats and covered with wet, gunny sacks. Later they were taken to the house-boat, where they were packed in barrels in ice and sent away by express.

Great quantities of turtles are caught with each haul of the net. These are all thrown in with the fish and later packed in ice and shipped East for terrapin. Graham & Yeck said that they would net about \$1,200 from that haul Sunday.

Chicago Fly-Casting Club.

The following scores were made by the Chicago Fly Casting Club in the last meet, Aug. 24. Re-entry day, Sept. 7, is next on the list, and the members are invited to turn out in full force:

Name	Long Distance Fly Feet.	Accuracy and Delicacy		Delicacy Bait.
		Per Cent.	Bait Casting Per Cent.	
H. H. Ainsworth	87	95 5-6	..	86 1-2
I. D. Belasco	85 1-2
L. I. Blackman	85 1-2
W. T. Church	92 5-6
H. Greenwood	90	93 1-6	..	91
N. C. Heston	75	92
F. N. Peet	98	95 1-2	..	96 5-6
H. W. Perce	..	87 1-3	..	85 2-3
C. B. Robinson
A. C. Smith	96	95 1-6

Winning scores:
Long Distance Fly—F. N. Peet, 98 feet.
Accuracy and Delicacy Fly—H. H. Ainsworth, 95 5-6 per cent.
Delicacy Bait—H. W. Perce, 96 5-6 per cent.

Every Man His Own Guide.

THE forest, with its lakes and streams, holds a great spirit of fellowship for man, and he who fails to take advantage of its restful attractiveness is unfortunate, indeed, for he misses one of the greatest pleasures this modern world of ours affords. The healthful and invigorating exercise, the consequent appetite and perfect enjoyment of one's food and sleep, and, above all, the freedom from care and the complete mental rest amid the best and most beautiful which Dame Nature possesses—to know these things were a full half of life; and the angler knows them well.

The greatest enjoyment, however, is not always attained from this companionship with nature, because too much dependence is put upon the guide or helper. The ideal way to make an excursion into the forest would be to do each and every iota of the work alone, save for the assistance of one's companion or companions on the trip, even from the selection and purchase of the outfit and provisions to the arrangement of the tackle and the polishing of the guns and the careful putting of everything in its place on the return. The more the work and the responsibility, the greater the fun and the satisfaction.

This scheme of "every man his own guide" is not practicable for many. The country into which the pilgrimage is to be made is unknown, or the vacation is too short to cover the desired territory, or some good reason calls loudly for the assistance of a good guide, in which case engage the best man obtainable, but in letting him do most of the work be careful he does not steal away most of the fun along with it, which is more than likely to happen in most cases.

For example: When a new lake is to be fished, is it not the custom of many people to permit the guide to take the boat to a place where he thinks the fish may be found? Why should this be so? Surely, if the angler knows anything about the fish he is after—and he should find out before he tries to capture them—then he is as capable as any one else to select a likely piece of water. Again, in many instances when a fish is hooked the guide will not only take the boat out of the weeds, but when he comes into the clear water he keeps rowing, making it almost impossible for even a novice to have a slack line for an instant. Fie upon you, sportsmen, who permit this! Stop the boat and give the fish a chance against your skill, and if you lose him, blame yourself, and go after another. Yet many are they who tolerate the method even with bass, but usually with the muscallonge in the waters of northern Michigan and Wisconsin.

Again, the guide—always the guide—will select the hook for the fisherman, who really is no fisherman at all: he attaches it to the line, baits it and then, mayhap, tells his patron how to use it. Verily, I say, when such practices as these hold, the glory of the capture is his also.

Therefore, if a guide is necessary, take one. Let him keep the camp in order and row the boat, but do the fishing yourself and take care of your own tackle. Figure out your own campaign against a fish and make your man assist you in carrying it through to a successful finish. Do not allow him to do the planning and give the orders and meekly follow all his suggestions. If you do your man is doing the fishing, and you might as well be a thousand miles away.

Always bear in mind the maxim: The more the work and the responsibility, the greater the fun and the satisfaction.

EDWARD MORTON HOLLAND.

How to Tell the Age of Fish.

In the Deutsche Fischerzeitung I find a most interesting account of a discovery by which it is claimed the age of a fish can be settled with certainty. Size is no true criterion, as a fish which has been well fed may be twice the size of one of the same species which has been poorly fed, and yet not half as old. I have seen yearling trout which were only a quarter the size and less than a quarter the weight of other yearlings. The rings on the scales of fish are not quite safe criterions, and in many fish they are too small to be seen to any purpose. But according to Prof. Hensen, the rings on the ear, or hearing stones (Gehörsteine), afford a sure clue to the age of the fish in which they are found. These ear stones are of varied forms and sizes, and look like little bits of china. These bones grow with the fish, and a new ring is formed each year, as in the case of trees.—R. B. Marsden, in London Fishing Gazette.

Fishing for the Carp.

THE carp has never found much favor with anglers in this country, but that it is not wholly despised as a game fish abroad appears from this paper on carp capture, which we find in the London Fishing Gazette:

For more than thirty years I have placed carp fishing at the head of all so-called "coarse fishing," for the following reasons: First, they give more sport than any other "coarse" fish with which I am acquainted; second, their extreme artfulness makes their capture a greater triumph than is to be felt by the landing of almost any other fish. In my time I have caught a few salmon and many trout, and my experience teaches me that a carp of from 4 pounds to 6 pounds will give as much sport (though of a different character) as a trout of, say, 3 pounds, hooked on fly. Holding these views, I venture to recommend carp fishing to my brother anglers, and shall in this paper give briefly my idea as to the best method to adopt for their capture. Most of us know that carp will take a great variety of bait—worms, gentles, potatoes, peas, pastes made of bread, sponge-cake, biscuit, honey paste, yellow paste, pink paste, shrimp paste, cherries, bananas, boiled wheat, small fish. In fact, it seems difficult to find a bait they will not take at times. But this "fresh-water fox" has a very fickle appetite, and to tempt him, after he has reached years of discretion, his food must be daintily offered, and in such a manner that he will suspect no "poisoned cup." We very often hear the remark that "at so and so there are lots of very fine carp, but it is no use fishing for them, as they will not take a bait."

I would advise the owner of a water about which this can be said to try the following remedy, which I have known to have the desired effect: Select the most convenient spot to angle from—a spot that will give free scope for the rod and a long run for the quarry, when hooked, before reaching the weeds—any depth of water not less than 2 feet will do, and for months—say from now until next May—throw in food every day. I am told that kitchen refuse, such as vegetable scraps, including potatoes, is good; but in the case that came under my own ken Spratt's dog biscuit was all that was used. Each day two biscuits were broken up and scalded and thrown in at one spot, and for months afterward there was never any difficulty in catching carp there. On several occasions I caught more than I could carry; but my plan was to fish until I had filled a large roach basket, and then transport the carp to another water, a short distance away, and "da ca(r)ppo!" Plain bread paste was the bait used. My (almost) unvarying plan of fishing for carp is to select a short-shanked No. 10 to 12 hook, without an outward bend to it, for the reason that will presently appear. The gut must be fine, and should be stained "khaki" color. Attach the hook to a length of sound gut, that should be, at any rate, equal in length to the depth of the water fished. About a foot from the hook tie one inch of very coarse gut at right angles with the line, and, after considerably enlarging the hole through which the gut trace passes, thread a pierced bullet of the size of a large pea. The object of the inch of gut now becomes apparent. It prevents the bullet slipping down the line, and it is of no weight for the carp to lift when it takes the bait. The reasons that small hooks without an outward bend are recommended are that they have finer gut attached, and that carp, in my opinion, often reject a bait after "mouthing" it, as they feel the coarse gut, or the "core" (which is the hook) inside the bait, the flat hook being less likely to be detected. At one time I always used small triangles, but discontinued the use of them for the following reason: I was carp fishing by the side of a friend, and now and again getting a decent carp, while he, though he often had "touches," never had a "run." After one of these unsatisfactory "touches," I persuaded him to carefully lift his bait to shore, and upon it was the distinct impression of the upper and lower lips of a carp. After changing his triangle for a No. 11 hook, he was no more bothered in this way, but enjoyed some sport. The best float to use in calm weather is a porcupine quill, as it offers a minimum of resistance to the water, and goes through weeds better than any other. Allow the float to be about a foot deeper than the water, measuring from the bullet to the float. This will prevent the line standing perpendicularly over the bullet, and so bring it farther from the bait. The float will, in this case, lie flat. Do not strike until the float has moved away a foot or so. Use a fly rod, with a stiffish top and a very free running Nottingham reel, with not less than 80 yards of line. An undressed silk line, well greased for 10 yards from the point of attachment to the gut trace will float for many hours. The bait (plain bread paste) should not be less than the size of a large damson, and of the same shape, though I have often used bait as large as a small walnut successfully. The object of so large a bait is to prevent the hook being detected. When rebaiting always wash the fingers well. Never touch the paste with the hands when making. The crumb of a loaf of the previous day's baking should be placed in a clean cloth and submerged for a few seconds in clean water, and after most of the water has been squeezed from it, the bread should be kneaded in the cloth until it is of the desired consistency. When carp fishing it is best to use the same bait for ground baiting as that used on the hook, the idea being that the "foxy carps" suspicions are less likely to be aroused; he picks up small pellets of paste with impunity, and simply finds one pellet larger than those he has gobbled. When fishing never throw in ground bait by the handful (ground baiting overnight for the next day would be an exception), but use one pellet at a time, rather larger than a pea.

As a last word, I would say, keep out of sight as much as possible; avoid making the slightest vibration on the bank, and, when you have hooked your carp, let him run absolutely free, your fly rod and free-running reel doing the rest until the first rush is over; then gently feel his mouth, all the while prepared for another 30-yard or 40-yard rush; and when you have safely netted him, I am sure you will agree with me that if carp fishing is "coarse fishing," it is for all that a grand sport. *Carpe diem!* W. F. B.

THE FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

A Troll for Lake Trout.

NEW YORK, Aug. 10.—Herewith I have the pleasure of handing you a photograph of the only really successful artificial bait I have ever been able to find for Great Lake trout. A set was sent to me from the maker to try in Lake Keuka. The result was most gratifying. For instance: The morning I left there I used my "little tin soldiers" (the new bait). Dart and I left the landing at

5 A. M. punctually; at 5:30 we had lines out and a heavy strike. I worked my fish up to the boat and gaffed a 6-pounder, but found some life further down the line. On following on I found another, on the bottom leader, which scaled 5 pounds. Lines were straightened out, and within five minutes there was more trouble; another 5-pounder had snagged himself. And so it went on until I had all I wanted to carry back to New York. We arrived at the dock at 6:15 A. M. with one 6-pounder, five 5-pounders and one 3-pounder. An excellent catch for an hour's work. I caught the noon express and delivered my fish to friends at New York in time for dinner.

Mid Reef and Rapid.—XX.

BY F. R. WEBB.

ONE old gentleman remained, however. He was an interesting old gentleman, possessed of a remarkable flow of conversation. He was also in the interesting and loquacious condition not uncommon with old gentlemen of his type known as "half seas over," from the too frequent and liberal use of a staple production of this region—apple brandy. This artificial condition considerably augmented his natural conversational gifts, at times to the detriment of their coherency, while detracting nothing from their fluency. He was a well-posted old gentleman, possessed of a large fund of misinformation, which he seemed amiably desirous of imparting, and he conversed fluently and at length upon almost every topic, from the doings of the Newport Fishing and Seining Club—to which organization, he informed us with great pride, he had the honor to be secretary—to the doings of the Behring Sea Fishing and Sealing Commission.

The Colonel and I had our books, camp stools and cigars. The morning was a beautiful one. The river rippled and sparkled in front, the swift waters broken into little wavelets, which sparkled in the golden effulgence of the early autumn sun, while its musical murmur, dominated by the drowsy drone of the big dam above, filled the air. We were rid of George and Lacy for the time being. A delightful breeze rippled and rustled in the shimmering leaves overhead. The beautiful Sabbath calm and quiet pervaded all nature, and so did the old gentleman, who babbled away incessantly, not in the least discouraged by so gentle and mild a protest as is usually afforded by a man buried in a book.

He seated himself on the ground, close to the Colonel, and discoursed, and discoursed, the Colonel, meanwhile, going on with his reading and answering at random, until, finally, on some point on which the old gentleman desired

information, the Colonel referred him to me as a recognized authority on the subject, whereupon he left the Colonel to his book and transferred himself to me.

Seating himself upon the ground close to my side, and leaning his elbow on my knee, the better to lay down his proposition upon the grimy fingers of one and with the if possible still grimmer forefinger of the other, he proceeded to enlighten and entertain me upon a great variety of topics. I stood it as long as I could, until he began a dissertation upon the silver deadlock, then occupying the attention of the Senate—which he could easily have settled in a short time if he were there—when I rose and incontinently fled, leaving the Colonel to his tender mercies.

When I reached the mill, I inquired of some of the Sunday idlers, who had returned to that rallying point, as to where George and Lacy might be found, and, on receiving the desired information, I kept on up the road. Turning a bend in the road beyond the mill, which led up along a gorge-like hollow among the foothills of Massanutton and away from the river, I was surprised beyond measure to note that Newport was quite a little village, for the houses, country stores, etc., whose existence we had never heretofore suspected from the river, were strung thickly along both sides of the road for half a mile. I soon found George and Lacy in a small carpenter's shop, the former industriously sawing out a paddle from an inch plank, which the latter was as industriously holding down on the rule trestles. It is quite a job to make a paddle, and George had my hearty sympathy, as, with coat off and the perspiration standing in beads on his forehead, he pulled away with drawing knife and plane, after finishing his sawing operations.

There was nothing that I could do, however, to help him, except to take the job off his hands, so presently I returned to the boats, my boat being by this time dry enough to repair.

I found the Colonel lying flat on his back on his mattress in the last stages of exhaustion, his pipe out, his back fallen from his nerveless fingers, and his eyes half closed, while the old gentleman, who had secured possession of the Colonel's camp stool, by drawing it out from under his unresisting head, was seated on the stool, leaning over the Colonel's prostrate form, one hand on his arm, while the other waved impressively in the air as he developed his views on the tariff question.

I rescued the Colonel by rousing him to assist me in putting the patches on my canoe, and, with the little alcohol stove placed on a flat rock under the open cockpit of the canoe, which was raised up on one side for that purpose, in order to afford a lee from the brisk breeze which was blowing, the patches were speedily prepared and plastered on, the old gentleman meanwhile taking great interest in the operation, as he potted around, full of suggestions as to better ways of doing it.

The remaining compound in the ladle was poured over the patches and plastered down, and the boat replaced in the water and packed, for the compound cools and hardens quickly, and the boat is ready for use as soon as the patch is on, by which time Lacy and George were discovered coming down the road with the new paddle.

"Hadn't we better lunch here before starting?" said Lacy, with his usual fertility of suggestion about anything in the eating line.

"Oh, Lacy! for heaven's sake let me get away from here as quickly as possible," groaned the Colonel, in dismay.

"Yes, this place is too public," I added. "It's less than an hour's run to the spring at the foot of the falls," I continued, as I gave him a nudge with my elbow and pointed out the half drunken old chap, who was busily entertaining George, "and I guess you can hold out a little—"

"Say! Let's get out of here," said George, with decision, as he cut loose from our old friend without ceremony. George is peculiarly susceptible to boredom, and has but scant patience with such characters as the one we had now in stock. "That old fellow will talk us to death," he continued. "Have you noticed him?"

"Have we noticed him, Commodore?" asked the Colonel, appealing to me with an injured air. "Well, I rather think we have noticed him."

"If you had been half an hour longer with that paddle," I said to George, "I much fear me the Colonel would have been too exhausted to get away from here at all."

We rounded the big bend below Newport, and skirted along the base of a massive precipice, from whose face great, shell-like masses of limestone projected their thin, knife-like edges far out into the river, while immense fragments of rock, mossy and bush-grown, stood up high out of the water, as though fallen from the heights above into the depths below, in a vain attempt to stop the flow of the river, in whose still, black, reflective depths they were faithfully pictured.

"There you are, Colonel; there's the Columbian Falls!" exclaimed Lacy, as we slowly swung around the point of the mountain spur to the left, and the great rapid disclosed itself to our gaze, the swift water tossing and leaping in bright, sparkling waves in the sunlight; "that's the beginning of the Columbian Falls."

"Well, it's a dandy, sure enough!" exclaimed the Colonel, as he prudently followed our example and closed his hatches, for the big waves at the bottom of the first shoot—which seemed a greatly magnified edition of the "Devils' Race Path"—half a mile below, could be seen gamboling and tossing their shaggy manes high in air, as though leaping up on each other's shoulders in their eagerness to get a look at us, and welcome us in their tumultuous embraces.

"You fellows hang up here among the rocks and wait and I'll go down first and get a position on the rocks at the foot of the shoot, and get a kodak snap at you as you come through the rough waters," said George, as he pushed ahead.

We accordingly beached our boats among the rocks and reefs at the crest of the falls and watched him as he was caught up in the resistless whirl of waters and was shot swiftly down the long, toboggan-slide-like rapid, his canoe rising and falling gracefully on the undulating, liquid slope. He was caught up in the big waves at the bottom of the shoot, and, for a brief minute or two, all that could be seen was a confused mass of boat, man, flashing paddle blades and showering clouds of spray. He presently emerged, and rounded to in the still water below, and to one side of the shoot, and disembarked.

After a brief interval, in which he could be observed

driving his sharp, iron-shod "jacob staff" into the crevices of the rock, and adjusting his kodak thereon, he waved his helmet as a signal for the rest of us to come on.

"Go ahead, Colonel," I said.

The Colonel backed his canoe off the rocks and pushed out, while Lacy and I watched him shoot down the slope, dash through the huge waves, whose spray flew all over him, and round in alongside of George's canoe.

"Now, Lacy," said I.

Lacy promptly followed the Colonel, and in an incredibly short time his canoe was lying alongside of the other two.

"Now, Commodore, it's your innings," said I, as with a few thrusts of the paddle I drew the nose of Frankie down off the detaining limestone ledge, and swung out into the whirl of waters, which shot me like an arrow down the long slope.

If the big waves looked formidable from above, they looked ten-fold more so in my astonished eyes, as my canoe bore swiftly and irresistibly down upon them, and I instinctively dipped my paddle into the water with a backward sweep, to draw back from them, but, well knowing that there was no possible danger, save an inevitable drenching of my arms and shoulders, and also knowing that there was no escaping the remorseless grasp of the rushing waters, I checked the impulse, and, noting that my canoe was headed squarely, bow on, for the biggest foamer of all, I pulled the waterproof canvas apron as high up on my breast as possible, and, with my paddle balanced across my lap, tightly held down the aft corners of my apron at each side, and let her drive.

She buried her nose deeply into the breast of the first huge wave, which, as she lifted, rolled bodily over her decks and hatches, in a solid sheet of water a foot deep, while the spray struck me full in the face, fairly lifting my helmet, and drenching my arms and shoulders. The canoe was caught up on the huge crest, and lifted high in the air, and appeared to leap bodily across the intervening hollow, and fall into the breast of the next wave, through which I plunged in like manner. With a yell of delight I grasped my paddle and rounded in over the lessening waves below, and joined the others, who were laughing and squeezing the water from their dripping sleeves.

"Did you ship any water?" yelled Lacy, as I opened my hatches and stepped ashore.

"Not a pint," I answered.

"I took about a tubful," said George, as he repacked his kodak.

"I got a bucketful or so," said Lacy, as he drew his boat sponge out from under his floor boards and proceeded to sponge out the half an inch or so of water in the bottom of his boat.

"How did you take it in?" I asked.

"It dashed in around back of the apron, at the aft corners of the well," he replied. "Just look at my legs, how wet they are!"

"Mine, too," said George.

"Why don't you hold your aprons down at the aft corners with your hands?" I asked. "That's the way I did. I'm hardly wet a bit below the top of my apron."

"I did that," said the Colonel, "and I didn't ship any water to speak of."

By this time we were all re-embarked, and had pushed out into the still pool below the rough shoot, and were headed down stream again.

"Is that all of it?" asked the Colonel.

"Well, hardly," replied George; "that is simply the prelude, so to speak."

"Just the vestibule, as you might say," Lacy added.

"Is it any rougher than that shoot above?" he continued.

"Well, it isn't so much that it is rough, but it is the most interminable series of reefs you ever saw," replied George.

"The last half mile is rough enough, too," I added.

"You want to look a little out, Colonel," added Lacy, "and not be so brash as you were up in Kemple's Falls or you'll get a spill, sure enough."

"Don't you worry about the Colonel," replied that individual. "The Colonel's gotten through so far about as well as the rest of you, for all your backing and filling and monkeying around."

We paddled leisurely through the deep pool, and approached the wall-like line of reefs which bounded the lower end of the pool. A broad gap in the middle of the ledge passed the water over in a smooth, deep, swift flow. The river swept majestically to the left around the long mountain spur. As we slipped through the gap in the reefs and began the descent which followed, all that could be seen of the river was a conglomeration of reefs, rocks and islands, down among which the water rushed swiftly, fretted and chafed into foam and spray, with here and there smooth, black channels, covered with white bubbles, indicating openings through the reefs through which we might slip, with good management. The reefs seemed to run with the river, in long, parallel lines, with tolerably clear channels between the lines, and all leading gradually in to the left bank.

We found no regular boat channel, but zigzagged our way through, by slipping over from one parallel waterway to the next, as we approached the bank.

"Where do you suppose the boat channel is through here?" asked Lacy, after half a mile of this kind of work.

"Perhaps it's over near the other side," suggested the Colonel.

"No," replied George, "there never was any channel through here. The backset from the Columbian mill dam covered all these reefs. You note the remains of the dam a quarter of a mile ahead there?" indicating, as he spoke, a long line of piles and broken-down dam timbers, extending out from the left bank and reaching half way across the river.

"What destroyed this mill dam, I wonder?" queried the Colonel, as we approached and paddled past the broken-down dam, and picked our way cautiously through the reefy maze below. The river is very wide here, and correspondingly shallow.

"It was carried out with the mill, and pretty much all the houses around it, in the great flood of 1870," I replied.

"There must have been some loss of life, I should think," he rejoined.

"Yes; there were eight or nine persons drowned here," I replied. "That flood was a terrible tragedy; you can hear of it all along the river—the people are still talking

about it. A great many people were carried away and drowned in the numerous mills and houses that were swept off, and this was one of the most fatal spots on the entire river. Keep close in to that island, George," I shouted, as his canoe emerged from the wilderness of reefs, ahead of the rest of us, and was caught up in the whirl of the final pitch of the falls—a seething, rock-studded half mile of rapids, which, like the final pitch of Kemple's Falls above, is the worst section of the falls.

His canoe darted down the slope, pitching and tossing, rolling right and left in the big waves and throwing the spray in sheets over her bows. She struck a reef about half way down, and swung round sidewise in the full rush of the stream. She careened dangerously close to the water's edge, when the rock let go its hold on her bilge keels, and, after bumping along heavily once or twice more over the sunken rocks, while George used his paddle vigorously in shoving right and left to extricate himself from among the reefs, she straightened out again and dashed along her course, until, reaching the lower part of the island, she turned to the left and was lost to view.

I followed, and, by veering to the left a little, I dodged the ledges upon which George hung, and shot at an exhilarating rate down the rapid, which I succeeded in accomplishing without touching a rock, which difficult feat went far toward removing the chagrin which I still felt over my clumsy miff in Kemple's Falls a few days before.

On reaching the short but swift stretch of smooth water above the big fish dam, which is built on the terminating ledge of the falls, I beheld George standing on the end of the dam, which seemed to come to an end some 20 or 30 ft. from the bank, intently surveying the massive ledge, which extended in to the bank. The fall, which was some 3 or 4 ft., and broken into two or three terraces, was about a boat's length in extent. The water swept heavily over the fall, which, as I approached, looked ominous and decidedly rocky.

"Come on!" he shouted, as I hesitated before approaching too closely into the irresistible "draw" of the water. "Come on! I think you can make it all right."

As I approached I heard a vigorous yell from up the river. The yell was repeated, but my attention was too much absorbed by the work in hand of successfully shooting that ledge, to admit of my looking around. As I approached the verge of the fall I saw that it could not be safely made, but it was then too late to draw back. I was in the remorseless clutches of the flow over the ledge and had no alternative but to make it, so, dipping my paddle firmly into the stream, I put on a full head of steam and boldly made for the fall, while George watched my progress with anxious interest, his canoe, meanwhile, drawn well up on the rocks at his feet in the still water above the dam.

The shout from up the river was again heard, and he turned his head for an instant to look.

"The Colonel is capsized!" he shouted, as my canoe shot out over the fall. "We'll have to go back and help him."

"All right!" I shouted in reply, above the roar of the waters, as my canoe landed with a crash on the ledges in the middle of the fall, and brought up all standing, while the water rushed over my decks from astern, and poured in sheets over the wash board along each side of the cockpit. "As soon as I get out of this little scrape! I may possibly need a little assistance myself."

As my canoe struck the rocks squarely on her keel, I felt her timbers start and crack, and was certain her back was broken; she hung shudderingly on the ledge, while the remorseless rush of water from above caught her by the stern, and began to throw her around across the fall, when a capsize would have inevitably resulted. By strenuous pushing and shoving with my paddle, I succeeded in freeing her bow, and she let go just in time to avert the impending capsize, and groaned heavily down the one or two remaining terraces, and swung free, into the deep, foaming water below, where I rushed her ashore as quickly as possible, to escape swamping, for I had no doubt but that the bottom was ripped clear off the boat. Reaching the bank, which was but a boat's length away, I quickly sprang out, painter in hand, and drew the canoe as high up ashore as possible, and then quickly made an examination from the inside. To my infinite surprise no water was rushing in. There was half an inch or so of water in the bottom of the canoe, now rapidly running aft from the uplifted bow. Evidently the patches put on at Newport had rubbed off, or, more probably, I had shipped the water while hanging on the reefs above, but I certainly had not smashed my boat on this fall. Having made sure on this point, I started off on a run back up the bank to where the Colonel could be observed, standing out in the river, half way to his waist, 100 yds. above, while Lacy was already wading out to his assistance.

The long, tapering bow and stern of Mary Lou could just be seen above the surface of the river, whose swift waters were breaking over her submerged decks and hatches, which were piled high with duff, the Colonel's mattress, coat, seat, mess table, clothes bag, paddle, etc., which he was holding down with all the hands and arms he possessed, struggling desperately with the river, to keep them from being carried off bodily, all the while yelling lustily and impatiently for assistance.

As I ran I was joined by George, who had swiftly paddled across from his position on the dam above the shoot, as soon as he saw that I was safe.

"Get your kodak!" I exclaimed, breathlessly, as I ran. "Good Lord, yes!" he replied, as he turned back and dived down the bank to his canoe.

"Hurry up there, you fellows," shouted the Colonel, as I dashed down the bank, and splashed out into the shallow water; "you're slower than crabs. I'll lose everything I've got! Where in thunder's George? Oh, confound the kodak!" he continued, angrily, as he caught sight of George deliberately pausing on the bank, while he trained that implement of torture on the scene of the disaster. "Don't stop to waste time over those infernal pictures, but hurry on out here, quick!"

"Don't be alarmed, Colonel," exclaimed Lacy, fairly bursting with laughter, as we reached him, and began to secure some of his plunder. "We'll help you take care of your things; go ahead with the pictures, George! Get several exposures while you are about it!"

The situation was truly laughable. Mary Lou lay completely submerged, across a narrow little channel, her nose against one reef and stern against another, while the

water rippled in a swift, transparent sheet across the open cockpit, and over the decks and hatches, piled high with camp duff, which all three of us were doing our best to hold, as we stood, nearly waist deep, alongside of the sunken canoe, to prevent the swift water carrying it all away.

There was no possible danger, and everything the Colonel stood possessed of was already as wet and well soaked as water could make it, so George heartlessly kept him there while he made several exposures, after which he also waded out, and it took the entire strength of the company before Mary Lou could be budged from her rather damp location.

"Well, sir!" excitedly exclaimed the Colonel, as we all straightened up from our work of piling the Colonel's plunder on the rocks, out of our way, before tackling the sunken canoe again. "Well, sir! I had made a good run, and was right here at the bottom of the falls. This was the last shoot I had to make before reaching the slack water above the fish dam there ahead. The shoot through the reefs was over to the right of the channel I was running. I made a bold dash for it, but missed it. My canoe shot past the shoot a little too far to the right, and her bow hung on the rocks. Her stern swung right round across the channel and caught on the rock on the left, and over she went in a jiffy. I jumped out and tried to hold her up, but it was no go. The water made a dash over the coaming, and the mischief was done. You never saw a boat fill and go down so quick!"

"I told you you were entirely too brash, Colonel," exclaimed Lacy, as we pulled and tugged at one end of the sunken canoe, which, full of water as it was and firmly held against the rocks by the force of the swift current, seemed to weigh a ton.

"Not a bit of it," exclaimed the Colonel, earnestly, as, with one final lift altogether, the stern was lifted over the rocks and the canoe instantly straightened out and swung round into the channel at the end of her bow painter.

"Hold on to her, Lacy. Don't let her go," yelled the Colonel.

"I will if I can," replied Lacy, setting his teeth hard and bracing his feet firmly against the rocks, while in spite of his efforts, he was dragged, step by step, down the river by the heavy, water-logged canoe, as she tugged fiercely at the painter in the swift stream.

George came to his rescue, and, together, she was checked and brought round into the lee of a projecting reef, upon which her bow was lifted, while her painter was made fast among the rocks, while with tin cups, paddle blades, footboard and sponge and whatever else came to hand that would hold or throw water, she was speedily lightened of her load of water.

"There was but one way to make that shoot," exclaimed the Colonel, as, with tin cup in hand, he reached down between the floor boards for the last few inches of water, while the rest of us suspended our efforts, "and that was to shoot it quickly, with a rush, and that was what I was—"

"That wasn't the way I made it," George cut in. "I checked my canoe several boat lengths above it, and by back paddling, I drew gently over in line with it, when I let go and dropped easily through without striking a rock."

"That was the way I made it, also," I added. "Yes, that's all right," returned the Colonel, as he proceeded to replace mess table, tent, clothes bag, mattress, etc., in the now nearly empty canoe, which floated lightly alongside of him at the length of her painter, as he stood knee-deep in the swift water. "That sort of tactics will do in some places, but it won't do in this place, I tell you now. You want to take it with a rush, like I did."

"Like you didn't, you mean, Colonel," said Lacy, with a laugh, in which we all joined, the Colonel included.

"Well, like I intended," he admitted. "The principle is correct, but I admit I busted in carrying it out."

He finished his repacking, drev his canoe up alongside of the rocks, and stepped aboard.

"Let's land over yonder on that broad, flat beach, under those trees below the dam, and I will put my things out to dry; perhaps there may be a spring there, and we can lunch while we're resting," he continued.

"That's the place we were aiming to reach for lunch," I replied. "The spring is there, right at those trees on the bank," I continued, as George and I waded ashore.

"The dickens it is!" exclaimed the Colonel. "Then I was shipwrecked in sight of land!"

"That's about the size of it," I replied, as I started down the bank to reach my canoe, followed by George. "Don't try to jump the dam, Colonel," I shouted, as he and Lacy got under way and dropped down toward the shoot.

"I haven't the slightest intention of it, I assure you," he shouted in reply.

"The Colonel's no pork; he knows when he has had enough of a good thing," Lacy sang out, with a laugh.

Royal C. C.

LANGSTON HARBOR.

WORD received from Herman D. Murphy, the Winchester canoeist, shows that, although beaten in the series of races for the challenge cup of the Royal C. C., he made a good showing in some of the preliminary events. On Aug. 7 there was a sweepstake race for cruisers and canoes, in which Mr. Murphy landed Uncle Sam a winner. At the end of the first round Gadfly led Uncle Sam by 26s., the latter passed Gadfly on the reach up to the Saltern Buoy, and the race ended with Uncle Sam leading by 1m. 57s.

On Aug. 8 there was a race for cruisers and canoes. They all started under reefed mainsails or trysails. China won by 7m. Uncle Sam was second and Coral third. Uncle Sam finished fifth on Aug. 13, in a club race for cruisers and canoes. That same afternoon Mr. Murphy had better luck, Uncle Sam finishing first in a sweepstake race for cruisers and canoes. Uncle Sam took the lead before reaching the Sword Buoy, and led all through the rest of the race. Snark several times came up on her, but was never quite able to get the lead, and Uncle Sam won by 55s.

Aug. 14.—The first race for the challenge cup was won by Mr. F. W. Hodges' Snark, Mr. Guy Ellington's China taking second place. Mr. H. D. Murphy's Uncle Sam finished third, 21s. in front of Mr. O. F. Gason's Nana. Snark, the winner of the first race and holder of the cup,

beat the American challenger, Mr. H. D. Murphy's Uncle Sam, by 11m. 10s.

Aug. 15.—The second race for the R. C. C. international sailing challenge cup was won by Mr. Guy Ellington's racing canoe China. Mr. Gason's Nana finished second and Mr. Murphy's Uncle Sam fourth, 10m. 56s. behind the winner. China and Snark were thus left to contest the final, fixed for the following day.

The third race on the 16th was won by Mr. Murphy, the canoes Snark and China not having entered.

HERMAN DUDLEY MURPHY, of Winchester, Mass., who went to England to sail for the challenge cup of the Royal C. C. at Langston Harbor, was defeated. Mr. Thomas W. Lawson, of Boston, was the financial backer of the scheme. The American canoe was named Uncle Sam. Three races were sailed, all of which were won by China, an English racing canoe. According to all accounts this boat developed wonderful speed. The result of the races is a distinct disappointment to the friends of the challenger.

The London Field in commenting on the boats and the races says:

The Royal C. C. has certainly given a very fine exhibition of sailing canoe racing during the past fortnight, fifteen races and fifteen canoes sailing therein. The weather up to the time of writing has not been all that could be desired, for there has been a persistent show of hard winds, and the canoes have mostly been sailed under small spare suits, intended for rough cruising rather than for racing; out of the whole fifteen races only three were sailed under whole racing sails. Then, again, the force of the wind, though it was hard, and even savage, in the squalls at times, was never up to gale strength, and it would have been a very instructive lesson on types and rigs to have seen the performances of the various canoes in a gale; with the closest possible reef in, and a mere rag of a jib set, we should certainly expect the bulb-keeled cruising canoe to beat the plain plate, and in the sea that would be running we should expect them also to beat the sliding-sea light-weight racing machine canoes; but it is still conjecture.

The fresh winds and smooth water experienced in pretty nearly all the races has been distinctly in favor of the racing canoe class; and though it is a fact that some, indeed all of the machines except China, have been beaten by the cruising class canoes, there can be no doubt that a suitably modeled racing canoe built under the very lax rule of the R. C. C. can win every race from the cruisers, except, it may be, perhaps in a gale or a very light air of wind, of course, fluky days excepted. The two types are so utterly different that they cannot be fairly matched; the nearest possible mode of bringing these two types into fair competition would be by awarding sail area in proportion to displacement; that is, motive power for weight; even then the unlimited length of the racer versus the limited length of the cruiser would, in reaching winds and generally in hard winds, be heavily in favor of the racer.

Unfortunately in the question of types, out of the six racing class canoes present at the meet, four are the canoes of the challenging visitors, so the nine cruising class canoes are in no sense racing on fair terms against the challengers. Of the two machines owned by R. C. C. men, one, China, has won every race she has started in, thus debarring the cruisers from first prizes; and the other machine is many years old and by no means of a model which the present rule permits. We have said before that China was absolutely necessary to the club for the defense of the cup, and we believe that it is a very general hope in the club that she is to be the last of the tribe. Even if the classes were separated in the ordinary races, it is absurd that the challenge cup should be given almost of a certainty into the locker of one racing canoe against some ten racing cruisers—that is, leaving out the old machines and the seven or eight non-racing cruisers. Over and above this is the possibility of the visiting racing canoes beating the cruisers, again no match, and therefore not a desirable combination.

The two American canoes, Uncle Sam and Old Glory, we have previously described; they are racing machines pure and simple, and though they are not on quite the same model principles as China, they are quite as up to date in their own way. But in regard to the two other challengers, we were led, by descriptions given of them by their designers, to expect something very novel, nothing less than a "bona fide cruising canoe," built under the racing canoe rule. We examine them in vain to find either real novelty or any special feature suitable to cruising. Even as traveling canoes they appear to be unsuitable, being about the crankiest of the craft in the fleet, even under reefed sail. They are fast on a reach, poor to windward, and very unsteady at running, and their capsizing has been so frequent that we should say that the man who took either of these canoes for a traveling tour would be well advised to stow everything but his day bathing suit in water-tight bags, and especially so if going anywhere in open water.

Of the two above mentioned, Coral, Mr. Howard's canoe, is undoubtedly a fast boat on the reach, and she is a pretty model, evidently entirely intended for racing; but she, in idea of design, comes nowhere near China in taking full advantage of the rule, and thus she falls short of being a perfect racing machine, while she does not, on the other hand, come down either in model or hull fitment to a good form of traveling canoe. The other canoe, Mr. Holbeche's, is simply or apparently built on lines similar to those of Prucas, called a "modified sharpie"—that is, with the ugly, flat sides of the sharpie, but without her flat and stable bottom. In weight of hull this little 16ft. by 30in. canoe compares about level with some of the cruisers which are 17ft. by 42in., and half as deep again in body. The best feature about her is that she is amateur-built by her owner, a very creditable piece of work.

A. C. A. Amendment.

BROOKLYN, N. Y., Aug. 3.—*Editor Forest and Stream.* In accordance with Article 12 of the Constitution of the American Canoe Association, I beg herewith to publish in general terms, to be voted upon by the Executive Committee at as early a day as possible, the following amendment to Article VI., Section 5. of the Constitution:

of fitting the ends of the different spars, with the exception of the roller and boom for a roller jib, which will be illustrated fully in Part II., under the head of reef gears.

The drawing of a bowsprit end will be equally suitable for the head of the mast in No. 1 design, except that in such small boats there is no need for a crantz iron and shoe as well.

Of the three patterns of gaff jaws, the iron or steel saddle jaws are far the best, and can be obtained ready made.

The sketch of the cheek sheeve in the end of the gaff will also apply to the method of fitting the hounds on the masthead in No. 1 design.

Turner's reef gear is shown on the boom ends, but if not required a simple goose neck and cap at each end, of the same pattern, would answer very well. I would strongly advise reef gear on all booms in small yachts.

Note.—The following are the usual proportions of diameter to length for solid spars; but hollow spars and bamboos should be 10 per cent. greater diameter than solid spars of the same length.

Masts.—Length x .022 = diameter at deck.

Diameter at hounds 10 per cent. less than at deck for pole masts, or equal diameters at deck and hounds for a lower mast carrying a topmast.

Diameter at step 15 per cent. less than at deck; the step should be the largest square contained in the circle of the lower end of mast at that point.

The depth of step should be not less than half its diameter.

Booms.—Length x .016 = diameter at sheet. For Turner's or other roller reef gear the boom should be as nearly parallel as possible. If a bamboo is used, the smaller end must be next to the mast. Ordinary booms taper from the sheet to 2-3 at fore end and 3/4 or 5-6 at the after end.

Gaffs.—Length x .018 = diameter at mid length, tapering to 2-3 at outer end and 3/4 at jaws.

Bowsprits.—These vary very much, and no fixed ratio of diameter to length can be given.

Spinnaker Booms.—Length x .015 = diameter in center, tapered to 3/4 at each end.

Spinnaker Booms on Roller Foresails.—Length x .016 to .018 = diameter.

Rollers for Headsails.—Length x .014 to .015 = diameter.

Western Yachts.

The Canada Cup.

CHICAGO, Ill., Aug. 29.—With one of the American international cups taken away, and with the other showing the screws somewhat loose about the base, these be parlous times for Yankee yachtsmen. We are on the challenging side of the game again in the Canada cup matter, and the question is whose challenge shall be accepted. Two days ago it was stated that the Rochester Y. C., of Rochester, N. Y., would have the call in the challenges, and would probably secure the privilege of building the challenging boat for next summer. The members of the Rochester Y. C. thought that Chicago had had her chance, and ought to make way for some one else. The feeling was declared to obtain at Toronto that Chicago would not be preferred over Rochester, and it was stated also that Detroit, having furnished the defender this year, ought to yield to Rochester for the next race.

To-day, however, news is at hand which looks as though Chicago Y. C. might again be the lucky club. Com. Gooderham, of Toronto, is quoted as saying in so many words that the Rochester challenge would not be accepted. Chicago makes the claim that it originated the challenge cup, and hence ought to have a shade more consideration than any other city, and the Toronto men seem to feel that a race between Chicago and Toronto would be in some sense a bigger thing than the same race between Rochester and the Canadian metropolis. Be these things as they may, the yachtsmen of this city are feeling at this writing just a trifle jubilant in the thought that they may get another chance at that cup. It is generally believed that, should Chicago Y. C. be successful in winning the honor, the same class—35-footers—would be favored, and that no trial boats would be admitted except those built by members of the Chicago Y. C.

This latter decision is stated to be based upon the unpleasantness which arose over some situations here this summer during the trial races. There would seem to be no possible ground for this attitude upon the part of the Chicago Y. C. It is to be supposed that its members can treat with courtesy and fairness the owners of all other boats who may come here, and it is equally to be supposed that those owners will be equally gentlemanly and sportsmanlike. There is always a little hot talk in any hot competition, but this sort of thing should carry no memories whatever. What we want is the best boat, sailed by the best man, and we will need both next year, if we are to get back the cup. Chicago ought to have the challenge right if she can get it, and she gets almost anything she goes after. Then Chicago ought to throw her doors wide open again, and get the best boat that we can build in America.

Minnezitka Wins Green Lake Cup.

The Green Lake cup, sailed for Aug. 24, on Lake Winnebago, Wis., was won by Minnezitka, the White Bear boat, which defeated Anita, the local boat, in a hot finish with but 35s. between the two.

At the beginning of the race the wind was S., hauling later to S.W., and on the last two legs it freshened into half a gale. Anita was over-canvassed for this going, and was knocked down more than once, losing considerable headway. Minnezitka was away at 3:10:14, Anita at 3:10:32. The first leg was sailed close hauled, and Anita handed the White Bear craft a beating on this work, turning the first mark 1m. 3s. in the lead. The wind now freshened, and Minnezitka began to close in. The second leg was run under spinnaker, and the third sailed close hauled, the course being sailed twice about. Anita at the first circle of the course led by 30s. On the next leg Minnezitka cut down the lead until Anita was only 5s. ahead. Then, on the free run, Minnezitka broke out spinnaker and balloon jib, Anita going under spinnaker alone. Minnezitka took the windward berth, and on the run home on the last leg beat Anita by 35s., and carried home to St. Paul the handsome trophy. Her time over the twelve-mile course was 1h. 53m. 15s. Anita's time was 1h. 53m. 50s.

In the morning's races the same day for the Oshkosh Y. C. chest of silver, Anita won without much trouble, the wind at that time being light. Skipper Davis handled Anita beautifully, and got her into the best of the slants of air which offered, so that she finished 8m. 40s. ahead of the nearest competitor, Aderyn, of Pine Lake, Minnezitka in this light-wind race being 1m. 21s. behind Aderyn. Back of Minnezitka was Highlander, 2m. 33s. later. Caroline, of Oshkosh, withdrew, as did Aspirant, of Peewaukee, and Meteor, also of Peewaukee Y. C.

HARTFORD BUILDING, Chicago, Ill.

E. HOUGH.

CHEEK SHEEVE AT END OF GAFF

END OF BOWSPRIT

SECTION OF SHEEVE HOLE & CRANTZ IRON

end of the plug to lighten it if desired. A hole through all the webs of the joints down the center of the cane is supposed to prevent splitting; but, while it is probable that it may often save a split, it is not proved to be a positive cure for the trouble. Keep bamboos in a cool, airy place, never bore holes in the shell of the cane if it can be helped, and do not attach any gear or fittings to them, except by bands or wire straps.

The Canadian hollow spars are very neat, and nearly as light as bamboos of the same size, but not so strong weight for weight as a bamboo, up to about 4 or 5 in. diameter; their great advantage over bamboos is that they can be ordered of any shape, proportion or size, while a bamboo can only be obtained of the stock sizes given above, and you must take it with whatever taper you can get.

Both bamboos and hollow spars must be kept well varnished to avoid splitting, and this also applies in a less degree to all spars and woodwork. I should not advise the use of anything but solid grown Norway spars for cruising work, except for a jib-roller or a topsail yard; a bamboo makes the best jib-roller possible up to about 22ft. long, as it keeps its shape far better than any built or hollow-wood roller, and is stronger. The joints of bamboo rollers are generally knocked out with a long 1/2 in. iron rod, through the end of which the roller wire is attached, and the whole affair passed through the cane from end to end. This should be done with the cane in a vertical position, if possible, as the weight of the rod will help to break through the joints, and it is more likely to go through the middle of the joint than it would be if the bamboo were horizontal.

When choosing Norway spars pick those with the smallest knots and finest grained bark; strip off some of the bark and see that the wood is a clean yellow color. If it is a very dead white, the spar is usually wanting in toughness; but if the grain is very marked, and the color a dark reddish yellow, the spar, though probably strong and tough, is sure to be heavy; avoid bluish spars.

All the spars should be picked as near the finished size as possible, so as to avoid waste, and also because the outer part of the spar is the toughest; select the straightest spars.

Clean all the bark off the spar and set out the finished diameter on the butt end, as shown in the diagram. To do this, draw two diameters A-B and C-D at right angles to each other, crossing in a central point, X, as near the center of the rough spar as possible. With X as center describe a circle with a pair of compasses, of the same diameter as the spar is to be, at the largest part; say 3 in., then draw two lines 5-5 and 6-6 parallel to the diameter, A-B, and just touching the circumference of the circle. Draw two more lines, 7-7 and 8-8, parallel to the other diameter, C-D, and at right angles to the other lines. These four lines would, if the rough spar were large enough, form a square exactly containing the required circle of the finished spar, but as the rough spar is chosen as nearly as possible the proper size, the corners of the square will be absent.

To get the octagon shown as containing the circle, divide the diameter of the circle into seven equal parts, and draw the lines 1-1 and 2-2, each 2-7 from the ends of the diameter A-B, and at right angles to it; and the lines 3-3 and 4-4, in a similar manner on the diameter C-D. The points where these four lines intersect the square first obtained will be the angles of the octagon.

Both ends of all spars should be set out in the foregoing manner to their respective sizes, and a center line being marked on the outside of the spar throughout its length. All the various diameters should be set off, half on each side of this line, at their correct distances apart. A chalk line is then struck along the lines 5-5 and 6-6 from one end of the spar to the other, but of course at the various diameters for the different parts of the spar.

The spar is now put in the saw mill, and the slabs outside the chalk lines cut off; or, if no saw mill is convenient, this may be done with a draw-knife. The spar is now roughly squared to the requisite sizes throughout its length, and the lines 1-1, 2-2, 3-3 and 4-4 for the angles of the octagon must be set off for the whole length, the wood cut away with the draw-knife as before; then plane up all the eight faces and finish the rounding, first with a jack-plane, and finally with a hollow-sole, spar-maker's plane and glass-paper. The lower part of all masts which pass through the deck should be left octagonal in section, and must taper sharply to the step, as shown.

The accompanying detail sketches show the various methods

Seeing France from a Boat.

Two young Americans—Charles P. Henderson and Leonard Sibleigh, both of New York—have just passed through Paris on a tour which is as remarkable as it must be attractive.

Desiring to see the real country of France, its peasantry and its out-of-the-way nooks, they started off on a walking tour. But that means of locomotion has its disadvantages.

Driving or automobiling was beyond their means. But Mr. Henderson happened one day to be roaming over a boat yard on the Seine and came across a little river launch, old and in none too good condition, with a little one and a half horse-power steam engine.

The proprietor, seeing Mr. Henderson inspecting the thing, said, casually: "You can have it for \$200."

"Done," said Mr. Henderson, and the bargain was concluded on the spot. The little engine was for a trifle put in order, a sort of awning that could be completely closed so as to make a waterproof tent was fixed up in the fore part of the boat, and our two artists started off to explore the waterways of France.

No country in the world, save Holland, is better provided with canals and navigable rivers. The boat is the home of the two Americans. On it they have lived now for more than six months. There is just room for a couple of mattresses, which in the daytime are kept under shelter; the awning can in a few minutes be made rain proof; there is plenty of locker space for the stowage of baggage, and when the two are a bit tired of their own cooking they splurge to the extent of a dinner at a riverside inn.

The little launch has never once failed them, and they have been able to run it for the munificent cost of 30 cents a day in coal—that is, on the days when they ran it all day. As it draws only 18in. of water or thereabouts, they go everywhere. Mr. Henderson is most enthusiastic in its praises.

"There is no touring like it. An automobile costs a fortune to run, and we should then be confined to dusty roads and be dependent on country inns. This way we have our inn with us, and what we save in hotel bills pays for our fuel and repairs. It's a trifle grimy sometimes cleaning the little old engine, but when you can jump over the side and have a swim that is no great disadvantage."

The country that can be visited by this means is astounding. One may go from Marseilles to Amsterdam without the least difficulty, the Rhine and the Seine being connected by canal. By such a journey, one may follow the summer, so to speak, by starting from the Mediterranean when it commences to get unpleasantly warm in April and coming into warm weather all the way until the North Sea is reached, where it is never too hot.

One may thus go through the very heart of France under the very pleasantest conditions. Mr. Henderson says that villages are so frequent that the question of supplies never becomes important. Only one difficulty they had: in some places the authorities wanted to compel the two artists to take a machinist and a pilot.

"The boat would not hold 'em," as Mr. Henderson explained.

"Then monsieur must show his certificate as a properly qualified engineer before he may navigate the steamship. All steamships on this river must have an engineer and pilot. It is the law, monsieur."

And so on one occasion at least they had to row their "steamship." But generally Mr. Henderson managed to persuade the "authorities" that he had left his certificate at home, whenever they asked for one.

For the information of such Americans, by the way, as may find themselves in Europe and care for yachting, Mr. Henderson states that automobiling is just now so monopolizing the activity of French sportsmen that yachts of all sorts, save the gasoline launch, can be had for a song. Sailing yachts around Paris can scarcely be given away. And yet the Seine is not a bad yachting river, and ends in an estuary at Havre which cannot be bettered as a yachting center anywhere, either for scenery or sailing advantages.—Philadelphia Record.

Newport Special Thirties.

NEWPORT, R. I. Tuesday, Aug. 27.

WAWA won the cup offered by Mr. Ralph N. Ellis for the 30-footers, which was sailed on Tuesday, Aug. 27.

The course was outside, and was from the buoy off Beaver Tail to Seal Rock Ledge and return, twice over.

Barbara took the lead at the start, but Wawa went to the front the first time on the wind, and was never again headed. There was a lively S.E. breeze. The times:

Table with 3 columns: Name, Start, Finish, Elapsed. Includes Wawa, R. Brooks, Carolina, P. Jones, Hera, R. N. Ellis, Esperanza, H. O. Havemeyer, Jr., Barbara, W. Rutherford, Raceoon, J. R. Drexel.

YACHTING NEWS NOTES.

Gasoline in a tank on E. W. Deming's steam yacht Zeta, of New Orleans, lying in the Erie Canal at Exchange street, Rochester, N. Y., exploded at noon on Aug. 26, setting fire to the boat and burning Gertrude Washington, the colored cook, so badly that she had to be removed to the City Hospital. She will probably die. The damage is \$2,000. Only the cook and her husband were on board when the accident took place.

The annual election of officers of the Penataquit Corinthian Y. C. was held on Aug. 21, with the following result: Com., J. Adolph Mollenhauer; Vice-Com., Regis H. Post; Rear-Com., Charles A. Schieren; Treas., R. A. Bachia; Sec'y, J. E. Owens; members of the Board of Governors, Rawson Underhill, B. R. Richardson, Charles

A. O'Donoghue, William A. Hulse, Allan Pinkerton, George W. Burchell, John R. Snyder and J. Campbell Smith.

The following interesting notes are from the New York Sun's foreign correspondence:

Emperor William has decided to build a new 40ft. yacht. He has found that Meteor is in a class by herself, and it is no sport for him to enter her where he has to make up 35m. time allowance. Moreover, there are really no big yachts racing in English waters now, and the two Shamrocks have done nothing in public regattas. Furthermore, the Kaiser would probably not welcome Whittaker Wright, the promoter, who is the owner of Sybarita, as an antagonist.

Lord Dunraven has also ordered a 40-footer. After his experiences in America with Valkyrie III, he soured a great deal on yachting; but he has decided to resume the sport, and a boat is being built for him. He will race himself in 1902.

It is confirmed that the royal yacht Victoria and Albert, which conveyed the royal party to Flushing when they went to attend the funeral of Empress Frederick, was sent home and ordered to take a long sea trial, because she rolled terribly in a moderate sea on the way over. Queen Alexandria and the majority of the members of the crew were seasick. It seems that no tinkering will redeem this vessel, which has already cost almost as much as a battleship. It is doubtful if the King and Queen will ever use this vessel again.

Rifle Range and Gallery.

Conlin's Gallery.

NEW YORK, Sept. 2.—I take great pleasure in informing my former patrons and the general public that I have opened my gallery for the fall and winter at 513 Sixth avenue, between Thirtieth and Thirty-first streets, New York.

It surpasses any public gallery in the city for length of range, light, ventilation and perfect fire arms. A large variety of targets, records of shooting and pictures of celebrated marksmen throughout the world are shown.

Thanking my former patrons and the press generally for their loyal support during the past thirty-eight years, and cordially inviting them and their friends to give me a call and try their skill as marksmen, I am, very truly,

JAMES S. CONLIN.

Trapshooting.

Fixtures.

Sept. 4.—Holmesburg Junction, Pa.—Target shoot of second series of Keystone Shooting League.

Sept. 4-6.—Chattanooga, Tenn.—Chattanooga Gun Club's tournament.

Sept. 6.—Interstate Park, L. I.—All-day live bird shoot. L. H. Schortemeier, manager.

Sept. 11.—Montpelier, Vt.—Montpelier Gun Club's tournament; contest for the Robin Hood international trophy. G. B. Walton, Sec'y.

Sept. 10-12.—Sidney, O.—Sidney Gun Club's tournament.

Sept. 11-12.—Warren, Ind.—Warren Gun Club's tournament.

Sept. 11-13.—Canton, O.—Canton Gun Club's tournament.

Sept. 15-17.—St. Joseph, Mo.—Metropolitan Gun Club's tournament, amateur and professional events.

Sept. 16-17.—St. Joseph, Mo.—St. Joseph Gun Club's tournament.

Sept. 19-20.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.

Sept. 19-20.—Carthage, Mo.—Peters Cartridge Company tournament, under the auspices of the Carthage Gun Club.

Sept. 20-21.—Titusville, Pa.—First annual tournament of the Titusville Gun Club. H. Pfeiffer, Sec'y.

Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreih, Sec'y.

Sept. 26.—Cresson, Pa.—All-day shoot of the Cresson Gun Club. C. Wenderoth, manager.

Oct. 14.—Detroit, Mich.—John Parker's annual international tournament; three days targets, one live birds; \$300 in money and trophies; distance handicaps.

Oct. 24.—Eau Claire, Wis.—Tournament of the Eau Claire Gun Club; two days targets, one day live birds; \$300 added. E. M. Fish, Sec'y.

Oct. 24.—Louisville, Ky.—Tournament of the Jefferson County Gun Club; two days targets, last day live birds; \$200 cash and trophies added. Emile Pragoff, Sec'y.

Oct. 9-10.—Huntington, Ind.—Tournament of the Erie Gun Club.

Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.

Oct. 15-16.—Greenville, O.—Regular annual tournament of the Greenville Shotgun Club. H. A. McCaughery, Sec'y.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 10-13.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club; \$750 added; valuable list of merchandise prizes. Walter F. Sykes, President, 85 Water street, New York.

DRIVERS AND TWISTERS.

The merchandise prizes for New York State shoot, Sept. 10 to 13, inclusive, are as follows: Lefever hammerless gun, Hunter hammerless gun, Parker gun, Remington gun, Syracuse gun, Knockabout gun, Marlin rifle, '95 model, .45 caliber T. D., Winchester rifle, .38 caliber, Marlin rifle, .32-46 caliber, Stevens rifle, Smith & Wesson revolver, .32 caliber, Smith & Wesson pistol, .32 caliber, four shell cases, two gun cases, hunting knife, waterproof hunting shoes, hunting watch case compass, sportsman's field glass, two cleaning rods, khaki shooting suit, 500 Ideal shells, 500 Victor shells, shooting jacket, shooting blouse, two Bristol steel rods, split bamboo rod, three lancewood rods, four Vom Hofe casting reels, Wm. Hofe G. S. reel, bronzes, two large Irish setters, two large English setters, two lions, two lionesses, two tigers, two elk, two buffalo, two small Irish setters, two small English setters, two black bear, two cinnamon bear, toilet set, two steins, case of two flasks, case of three flasks, folding pocket kodak, silver-mounted razor strop, set gold studs, shaving sup, silver; silver match box, two calendar watches, two silver cups, one gallon whisky.

Mr. B. Leroy Woodward, while in New York, en route to Richmond, Va., last Friday, informed us that he and O. R. Diekey will hold a tournament at Wellington, Mass., in the third week in September, the exact date to be decided later. The feature will be a team match, 10 men from Maine against 10 men from Massachusetts, 50 targets per man, \$50 a side. There is also a possibility of ten men from Rhode Island in the contest. Sweepstakes before and after the match. The programmes will be issued as soon as the date is fixed upon.

The Cincinnati Gun Club's programme for its tournament, to be held on Sept. 24, 25 and 26, is attractive in its inducements to competition, and very complete in the scope of its information on all subjects pertaining to the tournament. Interstate rules govern in all cases not otherwise specified. Five dollars are added to each of the eleven events of the first day; \$7.50 to each of the eleven events of the second day, and \$12.50 to each of the first five events of the third day. In the 100-target event the club guarantees a purse of \$500 and all surplus added pro rata. Fifty dollars for the first five high averages, and \$50 for the ten low guns. Targets, 2 cents. Rose system, ratios 7, 6, 5, 4. This is not shot off. Paid representatives pay \$2 extra each day; other shooters \$1. This fund is divided among all amateurs shooting through all the regular events who do not win their entrance fees. Regular entries for the target handicap at 100 targets close Sept. 10 and must be accompanied with \$5 forfeit. Penalty entries after Sept. 10, \$12. Arthur Gambell, the club's superintendent, will manage the tournament. For further information address John B. Mosby, 115 East Second street, Cincinnati.

The programme of Mr. Thos. Donley's fifth annual handicap tournament, to be held at St. Thomas, Ont., Oct. 9, 10 and 11, is now ready for distribution. The live-bird and target competition is open to all. All surplus moneys are added, and \$1,200 in gold are guaranteed. The Handicap Committee consists of Messrs. Emile Werk, of Cincinnati; Jack Parker, Detroit; Bob Emslie, St. Thomas, Ont.; Fred Westbrooke, Brantford, Ont., and Ernest Tripp, Indianapolis. All live-bird and target events will be handicaps. The target events are at 15 and 20 targets, seven events each day, of which four have \$25 guaranteed. Entrance \$1.50 and \$2. The Canadian handicap championship and Donley trophy, 20 birds, \$10 entrance bids extra, \$150 guaranteed, takes place on the first day. The grand international handicap championship for the Gilman and Barnes trophy is on the programme for the second day. There are six other live bird events, at 7, 10 and 15 birds. Mr. John Parker will manage the tournament. Ship guns and shells to Tom Donley, St. Thomas, Ont.

Mr. R. A. Welch arrived in New York on Thursday of last week, looking hale and happy. He had many interesting anecdotes to relate of his trip abroad, one of the most humorous being in respect to an incident at Ostend which rather indirectly complimented the Americans. It seems that in some of the events, wherein several thousand francs are in the purse, \$6 or \$8 entrance only is demanded, and that poor Italians, who can scrape together the needed amount, sometimes enter. As a rule, they win nothing. The Americans were quite successful. After such a contest, one of the poor Italians engaged in conversation with the great shot, Macintosh, and said: "You win sometimes, Mr. Macintosh; I never do." "And why not?" queried Macintosh. "Oh! these Americans," replied the Italian. Then, after pondering gravely a few moments, he continued: "I suppose we have no one to blame but Columbus."

Buffalo Bill's Wild West is circling eastward, and with all its startling attractions, the skillful performance of Miss Annie Oakley holds a first place in the interest and appreciation of the thousands of its visitors. Last week this great Wild West was in Buffalo, N. Y., and concerning Miss Oakley, the Evening News stated: "The programme of the performance includes Annie Oakley with her rifle and shotgun, which she handles with her accustomed dexterity. Scoring the title of champion and refusing all offers of competition, this young woman goes on astonishing the world by her feats with small arms."

The Handy Book, issued by the Peters Cartridge Co., and King Powder Co., Cincinnati, O., has reached its twelfth edition in an improved and more comprehensive form. It describes very fully the company's mills, and their processes and products, with trap shooting rules, systems of dividing moneys, rifle and pistol rules, and much other valuable information both for experts and beginners. It will be sent free to applicants.

Mr. Emile Pragoff, of Louisville, Ky., writes us as follows: "The shoot of Jefferson County Gun Club, Oct. 2 and 3, targets, and Oct. 4, at pigeons, with \$200 added cash, and trophies added, will be held in Louisville. Manufacturers' agents barred from targets. The Rose system will be used in division of money. Pigeon handicaps, 25 to 33yds., open to all. Programmes will be mailed Sept. 10. For further information, address Emile Pragoff, secretary."

At the Fremont (Neb.) Gun Club shoot, held recently, Mr. C. C. Beveridge, known to his many friends as the Dominie, was in his usual good form, breaking 97 straight, and 99 out of 100.

The Peters Cartridge Company, of Cincinnati, announces a tournament to be held at Carthage, Mo., Sept. 19 and 20, under the auspices of the Carthage Gun Club.

BERNARD WATER.

Milton Rod and Gun Club.

MILTON, Pa., Aug. 31.—The scores of the second all-day shoot of our club are appended. This was the largest and best-attended shoot ever held in this section of this State. Forty-eight marksmen were present, some from Williamsport, Muncy, Danville, Lewisburg, Mifflinburg, Benwick, Washingtonville, New Berlin and Milton. We have the best equipped grounds in Central Pennsylvania; the clubhouse has covered standing and improved platforms and magazutrap.

First all-day shoot, July 6, was a great success. The club holds shoot each Saturday and twice a month to compete for club gold medal. Live-bird match once a month.

Table with 14 columns: Name, P. C., and scores for 14 different events. Includes names like W. L. Colville, H. A. Dimmick, W. C. Everett, Geo. Schuyler, A. Lattau, Wm. Whitmore, R. B. Johnson, G. F. Pitt, W. T. Shibe, C. J. Beechem, W. T. Spicer, C. Kent, W. A. Koch, B. Piatt, F. A. Godcharles, W. T. Feever, J. P. McKinley, Geo. Clinger, S. B. Geise, F. L. Lochell, J. A. Lawrence, Geo. Strine, E. E. Frantz, J. Chambers, T. H. Lawrence, W. H. Harris, J. F. Wagner, W. G. Tally, Frank Rangler, Jos. Poulliott, Chas. Flock, F. W. Ely, D. M. Hoy, Wm. Flock, J. S. Mosher, W. H. DeLong, L. C. Deitz, S. E. Benner, O. Rothe, S. B. Coulter, A. H. Woolley, W. H. Schuyler, S. Greer, W. E. Limger, A. E. Seidall, E. B. Derr, G. D. Fox, Dr. Rothrock.

FRED A. GODCHARLES.

Peru Gun Club.

PERU, Ind., Aug. 31.—One of the most successful tournaments ever held in Indiana was the Bass Lake tournament, given under the auspices of the Peru Gun Club, on Aug. 21 and 22, 1901. The tournament was held on the grounds of the Peru Hunting and Fishing Club, at Bass Lake, which grounds are especially fitted by nature for the holding of such an event. It is covered with most beautiful trees and carpeted with a rich growth of blue grass, while the score, facing the lake, gives a clear foreground of a mile and a half, so there is no losing of targets on account of a tree or other obstruction with which so many good shooting grounds are cursed and cannot help themselves, on account of these obstructions being outside their grounds. The Peru club house is a most comfortable affair, having a wide porch running around three sides, which porch made a most excellent lounging place for the shooters between events. The score around the Sergeant system of traps was for the greater part of the day in the shade of the trees, and as the traps worked nicely, everything went off most satisfactorily to the participants and the management. Those in attendance were as follows:

Ernest H. Tripp, John W. Cooper and family, of Indianapolis; H. W. Cadwalader, Danville, Ill.; Geo. A. Elliott, F. H. Cornelius, E. L. Southard, C. Anderson, James Downs, Ed. Feiser, Dr. M. Wilson and R. Sprling, of Rochester; C. M. Townsend, Sid A. Uncapher, Geo. Pettis, Mark Anderson, C. M. Fuller, Bert Townsend, Jack Tarlton, Elmer Butcher, Tarlton, Jr.; Jason Weed, Henry Isford and A. Kueninger, of Knox, Ind.; M. R. Hart and daughter, Miss Bessie, W. D. Hart, Seward Leightner and A. W. Keeny, of Crown Point, Ind.; Mr. and Mrs. Marc W. Reed, of Lafayette, but at present at their summer home at Cedar Lake; W. W. Thompson, O. M. Wright, John Rose and family and Hugh M. Clark and family, of Wabash, Ind.; J. N. Schaefer, Findlay, O.; Rolla O. Heikes, Dayton, O.; Dr. J. G. Senour and family and L. R. Balheim and family, of Troy, O.; Abner T. Hetfield, of North Judson, Ind.; H. J. Smith, Ed. Robinson and O. P. Muckley, of Huntington, Ind.; H. Sparks, Markle, Ind.; Chas. and Ed. Foust and Frank Canaday, of Warren, Ind.; Messrs. Musselman, B. J. Savage and T. Savage, of Macy, Ind.; William Daniels, Frank S. Dunbar and family, J. L. Head and family, all of Peru, and Misses Emma Pugh, Clara Lang and Alice Higgins, of New York. Lafayette, Ind., and Fort Wayne, Ind., respectively, who were visiting J. L. Head and family at the club house. Following are the scores for the first day:

Wednesday, Aug. 21, First Day.

Table with 12 columns (Events 1-12) and 12 rows of scores for various participants like Targets, Foust, Tripp, Muckley, etc.

*Five pairs five singles.

Thursday, Aug. 22, Second Day.

The second day showed something of a falling off in the attendance, as is quite natural where there are so many new shooters, but still the entries hovered around the twenty mark, making, indeed, a very good shoot. The weather continued fine, but within ten minutes after the last shot had been fired in the last event the rain came down in torrents, but as everyone was through shooting, they scattered to the hotels, etc., for shelter, where the scores and incidents were talked over until the various participants departed to their homes, thus ending a very pleasant affair. The scores:

Table with 12 columns (Events 1-12) and 12 rows of scores for various participants like Targets, Foust, Tripp, Muckley, etc.

*Five pairs five singles.

Notes.

The Knox and Rochester gun clubs did themselves proud in point of attendance, and from the performance of some of their shooters they are sure to develop some splendid shots. As it now is, with one or two exceptions, both of these clubs are composed of entirely new beginners, but they displayed a willingness to stay that speaks well for their future. Rolla O. Heikes, daddy of them all, brown as a berry and just from a nice, little rest at his St. Clair Flats Farm, where he raises "plenty black bass" in his back yard and plenty fine peaches in his front yard, was certainly in fine form. Pop had a run of 77 straight on the first day, and as these old targets were sailing out about 55 to 60 yds, the performance was certainly worth seeing. Pop was, of course, shooting for the targets, as he was the only manufacturer's agent present, but that was all right with Rolla. He met a lot of new shooters, and that's where they do the most good. Ernest H. Tripp was attending his first tournament since his return from abroad with the American team. He was in great form, and finished only one target behind Rolla for the general average. The way this man smashes targets, and at the same time keeps a crowd of shooters and spectators in a good humor is pleasing to see. If you don't know Ernie you have something yet to live for. He is a simon pure amateur, shoots solely for

pleasure and the association which it brings, and even those who have known him longest are ever guessing as to what he will do next, as he is most original in his fun.

H. W. Cadwalader, "Cad," of Danville, was third for general average, and was as usual, in good form. It looked for a time as though Cad were going to beat everyone except Rolla, but Ernie Tripp got a gait on him the second day and passed Cad by four targets. By the way, Ernie was not the only thing that passed Cad. If you are well armed ask Cad how far he missed the steamer the next morning.

Capt. John W. Cooper, of the Limited Club of Indianapolis, was a welcome participant. The captain had been at the lake a couple of weeks with his family, and, of course, sent for his gun. For one entirely out of practice, he shot very well indeed.

J. N. Schaefer, "Joe the Dutchman," is a mighty nice man to have at a shoot. Joe never has a kick, takes what is coming to him and thoroughly enjoys every minute of the tournaments. He keeps hammering away until he makes a straight, too, as his scores will show. His kind are always welcome.

The Huntington Club was well represented by Old Reliable M. J. Smith, Secretary Ed. Robinson and O. P. Muckley, one of their new shooters. By the way, some of the boys are talking of getting up a ten-round bout between Ed. Robinson, of Huntington, and Ed. Rike, of Dayton. The latter weighs about 340 pounds and Robinson weighs nearer 40 than he does 340. He is a nifty little cuss, and if he keeps on will make a dangerous man with a gun. He is about the size of Tod Sloan, who makes quite a showing with the gun, but it is dollars to doughnuts that the midget from Huntington can skin him at the target game.

The "game cocks" from Warren, Ind., Charlie and Ed. Foust, were very much in evidence. Ed. Foust is developing into one of Indiana's very best target shots, and he is not afraid of the biggest game that flies. These boys are to have a tournament on Sept. 11 and 12. Their club is a member of the Indiana League, and they will give a fine shoot. Everyone within any reasonable distance should attend.

Dr. Senour and L. R. Balheim, of Troy, came a long way and brought their families, but they found a good shoot, and we hope to see them next year. They were welcome visitors.

Merrill Talbot, of Indianapolis, an old Peru boy, or rather a young Peru boy, was cashier. He is at present visiting at the lake with his mother, they having a fine cottage at the north end, and there is generally something doing in a social way about their home.

When it developed on the morning of the first day that there were too many entries for one man to handle with ease at the cash box, Mrs. J. L. Head dropped her duties as entertainer in chief and ably assisted Mr. Talbot. While the lady is entirely unaccustomed to such work, she kept her head admirably, and always had a pleasant word for the boys. She says she rather enjoyed the work, as she in this way had an opportunity to meet all the boys, and she is a friend to her husband's friends. A man that handles a gun is sure to meet with courteous treatment from this lady.

It was rather amusing to hear the young ladies visiting Jim Head's family comment upon the shooters. These young ladies brought up within the strictest confines of society, had little idea that a gathering of shooters differed from any other gathering of sports. Their minds were soon disabused. Such exclamations of surprise at the gentlemanly bearing, courteous treatment of a competitor, and lack of boisterousness certainly won their admiration. These girls captured Pop Heikes, Ernie Tripp and one or two others of the married men who are old enough to be their fathers and certainly made them feel at home.

The Crown Point gentlemen and Miss Bessie Hart were welcome visitors. Miss Bessie is not only a most accomplished young lady, but is one of the most accurate scorers in the country. She had not long been on the grounds when she was pressed into service. She said she rather felt at home. Too bad their stay was limited to the first day.

Charlie Townsend, of Knox, just got into the game in time to warm his feet again. The boys have at last discovered a man who can break them all when he wants to. Charlie Townsend goes to more tournaments just in time to get in a race where there is no straight and breaks it oftener than any man in this country. He has done this no less than half a dozen times, to the certain knowledge of the writer, within the past twelve or fifteen months. He just got to this shoot in time for event three, broke straight, being about the last man to enter, and collared a nice fat purse of about \$15. He would have repeated the performance the second day and been alone in his first event of the day had not Capt. Cooper borrowed some of Jim Head's good loads and broke straight also.

William Daniels, of Peru, shot the programme through from start to finish, and did very well indeed for a beginner. Will had a good time and is a sportsman from the ground up.

The Macy, Ind., boys are new ones, but they are beginning to practice with the Peru Club, and their scores will improve.

Hugh Clark, of Wabash, always has a good time at the Lake shoot. He brought along Mrs. Clark and the babies this time and made a week of it. Hugh was not in his usual good form as a shooter, but as a gentleman he is always in splendid fettle.

The veteran, Abner T. Hetfield, honest as the day is long, came over from North Judson and acted as referee. He was very satisfactory to the shooters, and thoroughly enjoyed the visit with the old timers, Heikes, Cad and Tripp.

Upon behalf of the Peru Gun Club, the writer desires to express to each shooter in attendance our appreciation of his presence, whether he shot in one event or all of them. We endeavored to treat all alike and to make the occasion one of pleasure to all. Again thanking you, we are, the Peru Gun Club.

FRANK S. DUNBAR, Secretary.

The Okoboji Tournaments.

Annual Amateur Shoot at Arnold's Park.

A noble meet of royal cheer, The greatest, gamest of the year.

When it was announced some months ago that Charlie Budd and Ferd. Whitney, of Des Moines, would manage and conduct the annual Iowa amateur tournament at Arnold's Park, Aug. 27 to 30, every follower of the traps in the middle West at once made up his mind that here was a meet that would be worth going many miles to attend, and when Elmer Hinshaw, of Okoboji, became a collaborator in the enterprise, they further strengthened their position. These names are synonymous with all that signifies good sportsmanship in the grand old State of Iowa, and this week has added freshness to the laurels of many previous achievements.

Okoboji is a beautiful place at any time of year, and especially so in these later summer days, when the air is always fresh and wholesome, and the nights breathe the coolness of delightful slumbers. The shooting range was well selected, on the exact site of last year's tournaments. Two sets of expert traps, arranged on the Sergeant system, spun the targets from the shore line far out over the clear, blue waters of the lake, with miles of its glimmering surface for a background. The score line, 16yds. back, came just on the north side of a grove of natural timber, affording excellent shade during most of the day. Tables, gun racks, benches and cashier's stand were closely grouped at a point central between the two sets of traps, and many little details of comfort and convenience of participants and guests, the little things that bespeak thoughtful management, and make the true success of a tournament, were everywhere in evidence.

Mr. Whitney masterfully conducted the office, while Messrs. Budd and Whitney managed the outside work, assisted by those of the Indians who were present in anticipation of their annual tournament and pow-wow on the following week.

The programme was a business-like proposition, carrying 200 targets each day to the man, \$5 and \$7.50 added in fifteen and twenty-bird events, respectively. Added money was offered aggregating \$85, in ten purses, besides two cups for amateurs, and one for experts shooting the programme.

This was an amateur shoot, but the management adopted a liberal policy, designating as professionals only those paid experts who follow the circuit exclusively as demonstrators of the merits of the various guns and ammunition represented.

Monday Aug. 26—A Little Practice.

By way of sizing up the flight of the targets, about thirty-five of the early arrivals indulged in a series of fifteen-bird preliminary sweeps Monday afternoon. It was a fine, fair day, with not a ripple on the lake. Fred Gilbert led the list, with about 97 per cent. of breaks, while Hughes and Burnside were but a trifle behind, and the common work was well in the 90's. About 3,000 birds were trapped.

First Day, Aug. 27.

The tournament opened to-day in good, sober earnest, and

though many had made up their minds that this would be a shooting match of the good, old-fashioned type, no one expected the crowd of shooters that came from all quarters of the continent, until Fred Whitney's record sheet showed eighty-eight names for the day. The weather was fine, but a brisk lake breeze started early and continued to have fun with the targets all day at the expense of the shooters' scores. It being the first day, the start was a little late, but from 10 A. M. to 6:30 P. M. there was no stop save a brief interval at noon, and when the last gun was fired the targets shot at and scored had made a new record for two sets of expert traps, operated on the Sergeant system.

Crosby and Dan Bray tied for the high average, with 95.5 per cent., with Hughes and Kline second and third. The scores are appended:

Large table with columns for Events (Targets 1-12), Broke, and P. C. (Percentage). Lists names like Mott, Kline, Burnside, etc. with their scores and percentages.

Tournament at Fairmont, Minn.

THE Fairmont (Minn.) Gun Club gave a pleasant and successful two-day target tournament on Aug. 22-23. The attendance was limited to four even squads each day, and all but three men shot through the entire list of events, comprising twelve 15-target races per day. J. M. Hughes, of Palmyra, Wis., won first average, losing but eleven targets the first and six the second day, and having one continuous score of 129. H. C. Herschy was a good winner for second average, Guy Burnside capturing third, and Russell Klein fourth place.

The detailed scores are here given:

Thursday, Aug. 22, First Day.

Table with 12 columns (Events 1-12) and 12 rows of scores for various participants like Hughes, Herschy, Burnside, etc.

Friday, Aug. 23, Second Day.

Table with 12 columns (Events 1-12) and 12 rows of scores for various participants like Hughes, Herschy, Burnside, etc.

ON LONG ISLAND.

Hell Gate Gun Club.

BROOKLYN, L. I., Aug. 27.—In the club shoot of the Hell Gate Gun Club, held to-day, Dr. Roof made the only straight score at 10 birds. He shot from the 30yd. mark. The handicap was by distance and points. Following are the scores:

Table of scores for Hell Gate Gun Club. Columns include names (Dr. Roof, S. Telsle, J. H. Voss, etc.), scores (e.g., 7, 5 1/2, 7), and other identifiers (e.g., 2222222212-10).

Table of five live birds scores. Columns include names (Roof, Klank, Deitzel, Lang) and scores (e.g., 11222-5, 101020-3).

New Utrecht Gun Club.

INTERSTATE PARK, L. I., Sept. 2.—The Labor Day shoot of the New Utrecht Gun Club had two prize events, objects of art being the reward of good competition. In No. 1 event, Thompson, "Armstrong" (R. A. Welch), and Morley tied on straight scores, and the tie was shot off in No. 2. "Armstrong" and Hagedorn again tied, and shot off, miss and out. This resulted in another tie, and was shot off in No. 3, of which a bear's head was the prize, "Armstrong" winning this event and the preceding ones. The weather was cloudy. The birds were a good lot. The scores:

Table of scores for New Utrecht Gun Club. Columns include names (Jack, Creamer, F. A. Thompson, etc.), scores (e.g., 20*2110-4, 2222022-6), and other identifiers (e.g., 1222222212-10).

Shoot off, No. 2, miss and out, a tie. Armstrong 1121 G W Hagedorn 1211. Shoot off, No. 3, miss and out: Thompson* Hagedorn 2210. Jack 0 Armstrong 2111.

WESTERN TRAPS.

Metropolitan of St. Joe.

THE programme of the first annual tournament of the Metropolitan Gun Club, of St. Joseph, Mo., will be held Sept. 15, 16 and 17. The first day is an amateur shoot only. The second is open to professionals and amateurs alike, with \$28 added money to high guns. The third day is also open to professionals and amateurs, \$30 cash average money to high guns. Suitable trophies are also put up in competition, and the event seems to be a very pleasant one in the prospect. Magautrap and expert traps. All open events under handicap. "Dropping for place will not be permitted," says the programme. This is the first time one has noted that warning for a long period. E. HOUGH.

Garfield Gun Club.

CHICAGO, Aug. 31.—The appended scores were made on our grounds to-day on the occasion of the fourth trophy shoot of the third series. Jones won Class A trophy on 21, Dr. Meek Class B on 19. L. Thomas was high gun, and won C trophy on 22. The day was only a fairly good one for target shooting. A cross wind blew directly over the traps, and a heavy smoke bank interfered considerably with a clear sight on the targets. Owing to the game-shooting season opening to-morrow, our attendance was not up to our average, only fifteen shooters participating in trophy events.

Table of scores for Garfield Gun Club. Columns include names (Thomas, L., McGowan, A., etc.), scores (e.g., 11110111111101111-22), and other identifiers (e.g., 111011010011001100111-17).

Nonpareil Gun Club.

CHICAGO, Ill., Aug. 31.—The Nonpareil Gun Club held a shoot at Watson's Park to-day. Three tied on 14 out of 15, and E. Graham won in the shoot-off. The scores follow:

Table of scores for Nonpareil Gun Club. Columns include names (Palmer, Dr. Shaw, W. B. Leffingwell, etc.), scores (e.g., 11221020222120-11), and other identifiers (e.g., 00112*1211*12-11).

Portsmouth Gun Club.

PORTSMOUTH, N. H., Aug. 26.—On Aug. 24 the Portsmouth Gun Club held its annual field and ladies' day by a successful shoot. Nearly 4,000 blue rocks were thrown.

President W. E. Storer was present everywhere apparently, extending to all a cordial greeting in his characteristically hearty manner, and attending to the many duties of such a day. He was ably assisted by Secretary W. I. Philbrick, who kept track of the events and entries and kept things moving right along. Horace Kirkwood, of Boston, was as usual an indefatigable helper, and Messrs. Drew, Merwin, Goodwin, Manson and Charleses, and others of the local club took hold heartily to help.

Over one hundred enjoyed the fine dinner in the big tent, served by Caterer Dennett, assisted by the ladies, under the direction of Mrs. Charleses.

The magautrap worked finely; the grounds are very satisfactory, with an excellent background; the wind was decidedly strong and at times very erratic, somewhat affecting the scores

made. One of the chief events of the day was the team shoot at 25 birds each, which resulted as follows:

Table of team shoot scores. Columns include names (Eastman, Drew, Frizzell, etc.), scores (e.g., 10 15-25, 4 11-15), and other identifiers (e.g., Portsmouth, No. 1, Concord).

Eastman, of the local club, made a fine score of 25 straight; 15 and 10 straight were of frequent occurrence, among those who scored thus being Cutler, of Fitchburg; Kirkwood, of Boston; Martin, of Concord; Drew, of Portsmouth; N. Wentworth, of Dover; Frizzell, of Portsmouth; Morton, of Dover, and others.

Cutler, of the Fitchburg Gun Club, was high man for the day; with a score of 136 out of 150. Kirkwood followed with 129, and Eastman 128. An exhibition of fine fancy shooting with a pump gun was given by Eastman, when in less than a half minute he shot five out of six targets, thrown as rapidly as the magautrap could be worked, and all being in the air at the same time. Later the same feat was attempted by Messrs. Cutler, Morton, Kirkwood, Drew and Manson; the targets were not thrown quite as rapidly, and several scored four out of the six.

Another bit of fancy shooting was when a squad shot from in front of the magautrap, the blue rocks being thrown in every direction over their heads, but even then the targets could not escape the quick eye and unerring aim of the sportsmen, and few but what were reduced to fragments. W. I. Philbrick, using a pump gun for the first time, scored 18 out of 25, in practice.

Dr. Daniel Garsener, of Philadelphia, an enthusiastic sportsman, was among the most interested shooters present, and, although a novice at blue rocks, made some excellent scores and added greatly to the pleasure of the occasion by his presence. Ex-Mayor Martin, of Concord, was also a very welcome guest. The ladies took a great interest in the events, and heartily applauded the good scores made.

It was a great day for the club, and they should be congratulated on the success which attended so fully all their efforts. The out-of-town sportsmen were very enthusiastic over the way in which everything was conducted, and the cordial treatment received, and it was late in the afternoon before the last events were shot off, a number of extras filling the regular programme. A list of the scores made is as follows:

Large table of scores for Portsmouth Gun Club. Columns include names (Kirkwood, Eastman, Cutler, etc.), scores (e.g., 10 15 10 15 10 15), and other identifiers (e.g., Team Shoot, Targets).

Pleasant Hill Gun Club.

PLEASANT HILL, Mo., Aug. 28.—I herewith enclose you the scores of the fifth annual merchandise and sweepstake shoot of colored shooters. I also send you under separate cover a picture of the group of spectators and participants taken during the Nuttall vs. Cohron match.

The fifth annual merchandise and sweepstake shoot of the Pleasant Hill Colored Gun Club took place on Aug. 23. It was the most successful shoot in the history of the club, and drew together the largest crowd of spectators, as well as participants ever known in Pleasant Hill.

Among those from afar was, first of all, E. R. Nuttall, of Ohio, Neb., who is now the champion wingshot of color, defeating T. H. Cohron, of this place, in the inaugural match for the live-bird challenge trophy, emblematic of the colored wing shot championship.

Lem Clay, Frankfort, Kan.; E. F. Sneed, Kansas City, Mo.; A. Gudgell, Chillicothe, Mo.; L. Clark, Independence, Mo., were present, and notable among our white shooting friends from afar were W. A. Smith, Greenwood, Mo.; H. McFerrin, Wm. Nixon, Chas. Berkstresser and J. Zeigler, of Ore, Mo., and others, who indulged in the open-to-all sweepstake events, which herewith follow:

Table of sweepstake events scores. Columns include names (Targets, J. S. Thomas, W. A. Smith, etc.), scores (e.g., 10 15 10 15 10 15), and other identifiers (e.g., Open to all sweepstake events).

The merchandise events, seven in number, open only to colored shooters, were where most of the colored shooters could be found pounding away at a No. 2 set of traps. Nuttall was high gun for the entire programme, and won the beautiful silver lined and trimmed cigar moistener given for best average. The scores of the merchandise event follow:

Table of merchandise event scores. Columns include names (Targets, Dickson, R. Mundy, etc.), scores (e.g., 7 7 7 15 11 8), and other identifiers (e.g., Merchandise events).

Table of scores for T. H. Cohron. Columns include names (T. H. Cohron, Clay, Nuttall, etc.), scores (e.g., 4 8 13 15 13 10), and other identifiers (e.g., 4 8 13 15 13 10).

At 2.30 the inaugural shoot for the live-bird challenge cup began, there being only two who dared to try conclusions for said honor and the Parker hammerless gun. The match was between E. R. Nuttall and T. H. Cohron, 25 birds, 30yds. rise, entrance \$5, losing man to pay for birds. Nuttall won the toss and sent Cohron to the score, who grassed his first bird with the first barrel in grand style and started out the favorite and kept up the stroke until the thirteenth round, when his thirteenth fell dead out of bounds. His fourteenth escaped the aim of both barrels, and his nineteenth fell dead out of bounds. Nuttall also grassed his first bird with the first barrel, but failed to stop his second bird; but this did not upset his nerves, for he then went to work and killed all the remainder of his birds, though his twenty-fifth fell dead out of bounds.

Both men used L. C. Smith guns and Winchester factory loaded leader shells, Du Pont powder. The birds were an exceptionally good lot. The scores follow:

Table of scores for live-bird challenge cup. Columns include names (Cohron, Nuttall, W. H. Allen, etc.), scores (e.g., 12212222222*01221*221222-22), and other identifiers (e.g., 12212222222*01221*221222-22).

A miss and out then followed, \$1 entrance, birds extra. Allen 120 Nuttall 122120. Clay 0 Cohron 21212 W. H.

IN NEW JERSEY.

Trenton Shooting Association.

TRENTON, N. J., Aug. 31.—To-day was the date for the City Cup championship. The morning broke bright and clear, and remained so until noon, when it clouded up, and soon began to pour all kinds of rain.

Fifteen guns turned up and shot a programme of eleven events, despite the rank hand out of J. Pluvius. The secretary intends to advertise for a hoodoo charm and hang it on the flag pole of the club house to break the wet "spell" that has been pursuing us all summer.

Events 1 to 6 were optional sweeps. Event No. 7 brought Vanarsdon and Wilkes together in a 25-bird race for a purse. Considerable interest was shown by the spectators, as Wilkes had defeated Farlee last week, and Van was shooting in splendid shape. Up to the twenty-first bird the men were even, with three misses each, when Van broke straight out, winning with 22 to 20 for Wilkes. Event No. 9 had fifteen entries for the City Championship Cup, Vanarsdon running away from the bunch with 24 breaks, which won. Three straight wins give final possession, and he will go up against a full muster when it comes up on Sept. 28.

Sept. 11 has been selected for Comp, the present holder of the County Championship Cup, to meet Farlee, who challenged for same. If Comp wins this time the club will have to purchase another cup to take its place.

Table of scores for Trenton Shooting Association. Columns include names (Targets, Jaques, Thropp, etc.), scores (e.g., 1 2 3 4 5 6 7 8 9 10 11), and other identifiers (e.g., 1 2 3 4 5 6 7 8 9 10 11).

Events 1 to 6 were optional sweeps. Event No. 7, match race for purse. Event No. 8, cash sweep. Event No. 9, City Championship Cup. Event No. 10, cash sweep, two men. Event No. 11, miss and out for second money.

Titusville Gun Club.

TITUSVILLE, Pa., Aug. 23.—Bad weather did not prevent a goodly crowd of shooters and spectators from attending the regular weekly shoot of the Titusville Gun Club on Friday afternoon, Aug. 23, and, as the following scores will show, some good shooting was done.

W. E. Fertig won the club medal for the week, breaking 21 out of 25 from 14yds., and the three-man team shoot, with Jordan, Schwartz and A. Bue on one side and Kellogg, Andrews and Meyer on the other, was a very interesting contest. Each man shot at 30 birds, and the latter team came off a winner, breaking 77 out of the 90 shot at.

Table of scores for Titusville Gun Club. Columns include names (Targets, Dr. Jamison, C. Meyer, etc.), scores (e.g., 1 2 3 4 5 6 7 8 Shot Broken, Per), and other identifiers (e.g., 1 2 3 4 5 6 7 8 Shot Broken, Per).

No. 846 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

We give a very complete and well-written report of the September outing of the Vermont Fish and Game League at Isle La Motte, Lake Champlain, on Friday of last week. The meeting was one which under any circumstances would have been notable for the speakers, chief among whom were Senator Proctor and Vice-President Roosevelt; and it was made an historic occasion by the tragic climax of the day, when the news was received of the would-be assassin's shot at Buffalo.

THE AMERICA CUP RACES.

ON Saturday, Sept. 21, Shamrock II. and Columbia will meet off Sandy Hook in the first of a series of races that will undoubtedly prove to be the closest and most interesting ever known in the history of international yacht racing.

Since the arrival of Shamrock II. in American waters and her racing rig was put in place, she has been out in the lower bay for a number of trials. Her performances have been watched closely, and her sailing has deeply impressed every one. But the old saying that all boats sail fast when alone applies well in this case; and further than the conclusions one can draw from watching the details of the boat's performance and the way she is handled, no comparisons can be made. That she sails very fast, leaves the water as she finds it and is superbly handled, is generally conceded. Her trials with Shamrock I. in English waters mean little or nothing, for it is not known whether Shamrock I. is sailing faster or slower than she did in 1899; but the natural inference is that she is showing greater speed. In the latter trials against Shamrock I. the challenger has on every point of sailing shown her superiority to quite a marked degree. We would expect this to be the case, for aside from the advancement made by designers in two years' time, here is a boat which is the result of the combined forces of the two greatest designers in Great Britain, namely, Watson and Fife; and in the matter of handling she is to be under the direct supervision of Mr. William Jameson, acknowledged to be the best amateur in England. The selection of Capt. Sycamore as sailing master was a wise one, for he is easily the most intelligent and ablest yacht sailer in his country. The crew is a good one, and is well trained. In addition to all of these factors, a superior suit of sails has been provided, which, together with a boat built in the lightest manner possible consistent with necessary strength, promise a splendid showing on the part of Shamrock II.

The designer of Columbia and Constitution enjoys a most enviable reputation, and is acknowledged to be not only a skillful designer, but also a thorough engineer. He has always profited by past experiences, and his progress has been rapid as well as substantial. Having the design of Columbia as a basis to work from, and knowing her peculiarities, Mr. Herreshoff turned out a boat of improved design when he built Constitution. But perfection of design is by no means the only requisite to make a boat a winner. In the history of yacht racing the tremendous value and importance of perfect sails, spars and handling was never before so clearly demonstrated as it has been in the case of Constitution. The selection of Columbia was due largely to her perfection in these particular features. Added to this was the fact that her skipper and crew had had the valuable experience of the hard racing of 1899, and were thereby capable of getting all there was out of her. Thus Columbia will meet Shamrock II. better prepared and in far better condition than any defender of the America Cup has ever been; and if she shall lose to Shamrock II., the yachting world will be entirely satisfied that she has simply met a faster boat and will have no excuses to offer.

The boats are apparently so evenly matched that a prediction as to the winner would be very difficult. Sham-

rock II. will probably make her best showing in light to moderate winds and a smooth sea; while Columbia will be at her best in heavier weather. But we are satisfied that Columbia will give a splendid account of herself under all the conditions she will have to meet.

THE NEW YORK FISH CULTURIST.

THE death of A. N. Cheney made vacant the office of State Fish Culturist. The position is one of great responsibility and importance, and one of which the good or bad conduct has a direct bearing upon the material prosperity of the State. There are not many men in New York, nor, indeed, in the country at large, who are equipped to fill the place. A man in every way capable is to be found, however, in Dr. Tarleton H. Bean, whose name has long been familiar to the public by reason of his connection with the United States Fish Commission, and various other positions of importance. Dr. Bean was for several years ichthyologist of the United States Commission; he has had charge of the Government fishery department in important expositions at home and abroad, and he was for a time the very capable and efficient director of the New York Aquarium, until put out of office to make way for a political heeler. Dr. Bean has an extensive and practical knowledge of fish, fishing and fishculture, a knowledge which is not confined to the inhabitants of the fresh waters alone, but extends to the fishes of the brackish waters and the sea coast. His range of experience in all these branches has been extensive, and might now with great advantage be employed in the interest of the State. His many equipments make Dr. Bean well fitted for the position of State Fish Culturist, and it is hoped that Governor Odell may recognize this when he comes to fill the vacant place.

SNAP SHOTS.

Rev. Moses Harvey, of St. John's, Newfoundland, died on Sept. 3, aged ninety years. Mr. Harvey had been a resident of St. John's for a half-century, and was greatly beloved by the people of Newfoundland. He was widely known as an author of an historical work on the island, and as a writer on natural history. He was among the early contributors to the FOREST AND STREAM, his most notable paper being a description published in this journal in 1874 of a new species of cuttlefish of gigantic size, the first announcement of the discovery of which Mr. Harvey made to the world of science. The creature surpassed in reality the fictitious "devil fish" of Victor Hugo's "Toilers of the Sea." Its body was between seven and eight feet in length, and the arms measured twenty-four feet, their extremities when spread out being fifty-two feet apart. Afterward Mr. Harvey secured specimens of the fish and sent them to Prof. A. E. Verrill, of Yale, and to the National Museum in Washington.

The third annual meeting of the Appalachian National Park Association was held in Asheville, N. C., Sept. 10. This was the last meeting to be held before the park project shall come before Congress, and measures were discussed looking to a proper presentation of the matter to Congress. Senator Pritchard recently wrote to the president of the Association, urging that every member of Congress should be addressed by letter and made fully acquainted with the plans and purposes of those who are looking for the establishment of the park. This scheme is one which should commend itself unreservedly to Congress, and to the people of the United States speaking through their representatives in Congress.

Vice-President Roosevelt went right to the pith of it when he said at the Vermont League meeting last Friday that the game of the land should be preserved "by the people and for the people." That is sound doctrine. It is the doctrine we have been preaching in these columns for many years, both as to game and as to the fish in the home waters. The men who can afford to travel far into a game or fish country, or to fence in their game and fish preserves and employ keepers for them, may be left to look out for themselves. They will always have game and fish. But if the fisherman and the gunner of moderate means does not look out for the preservation of the game in the home fields and the fish in the home waters, he will be obliged to go without shooting and fishing. "The preservation of the game of the land by the people for the people." That is the pith of it.

Cold Storage.

How many of the readers of FOREST AND STREAM have ever been inside of a cold storage warehouse? Not many, we fancy, and yet it is a most interesting place. It shows the growth of the economies of the present day, as well as almost anything can. In its cold rooms are hung vast quantities of perishable meats, preserved day after day, week after week and month after month, from the possibility of fermentation and decay, and besides this too often there are piled up in it boxes and barrels containing such vast quantities of game as almost to stagger the imagination.

The usefulness of the cold storage warehouse is great, but, like many another good thing, it may be employed for evil purposes. This was done in the case of the Arctic Freezing Warehouse, in which last May and June a seizure of game out of season was made by Mr. J. E. Overton, one of the New York State game protectors. The account given in another column presents facts which are of the very greatest interest and which, if their full significance be taken in by the reader, should arouse all sportsmen to a sense of what is becoming of our vanishing game, and of the importance of showing more active interest in the matter than is usually displayed. Here is an object lesson the like of which we perhaps have never had before.

The sportsman will do well to ponder the facts which have come to light in connection with this seizure. He should try—if he can bring his mind to do so—to consider what 6,000 grouse mean, 5,000 quail, 7,000 English snipe, 9,000 golden plover, 1,000 or more wild ducks, and nearly 10,000 song birds. Let him try to think how many ruffed grouse or pinnated grouse or sharp-tailed grouse may be found in the shooting country with which he is familiar. How many broods of quail it would take to make up 4,500 birds; how many English snipe or golden plover he sees in a whole shooting season. Let him consider that each large city of the country has many of these cold storage warehouses, in which perhaps there may be illegal game in numbers almost as large as was found by Mr. Overton, and that besides the warehouses in the large cities there are many others in the smaller ones. All through the shooting season and long after it is over these places wait, like insatiate monsters with jaws ever open, always ready to receive more, and more, and more. They are never satisfied; they would not be satisfied if the last bird or the last beast had been killed and was in a box and frozen. They would feel ill used because there was not more game to come to them.

From sportsmen all over the land we hear constant complaints of the constantly decreasing supply of game. Gunners of Indiana and Illinois declare that in their States the prairie chicken is almost extinct. A like statement is made about the sharp-tailed grouse in parts of Minnesota, Nebraska and South Dakota. The quail is vanishing from over the land, and the duck shooters lament continually that where once the fowl darkened the air they are now hardly seen at all.

But here in the cold rooms of the Arctic Freezing Warehouse we see very clearly where the birds are going. A single storage warehouse contains, let us say, 50,000 head of game. What is the number of cold storage warehouses in the country which deal in illegal game? Is it fifty, and does each one contain 50,000 head of game—or 2,500,000 head in all? Or, is the number double that? We do not know. What we do know beyond controversy, is that here in a single building in New York city was gathered game enough to have stocked a State, or two or three States, that it had been slaughtered for gain, was held illegally, and not only this, but was probably in large measure killed and shipped illegally.

As elsewhere stated, the mere number of birds, or the number of boxes, containing so many birds each, conveys little meaning to most of us, but if any one will sit down and count up the good shooting days that he can remember and then will add together the bags of all those good days and finally will compare that total with the number of birds seized by the New York protector, he can make himself comprehend in some degree what this seizure represents.

The matter is one which the courts must now act on. There is no doubt that the storage warehouse people will fight hard, for the principle at stake is one which touches their business very vitally. Nevertheless, in view of past decisions by the courts and the growing sentiment in favor

of game protection, it is not to be doubted that the Forest, Fish and Game Commission will be upheld.

So long, however, as the sale of game is permitted in New York State, just so long will there be a constant temptation to the cold storage people and to unscrupulous poultry and game dealers to violate the State laws governing the sale of fish and game. When the time comes—as it surely will come—that the State shall prohibit the traffic in game, then this temptation will be removed.

WHY SHOOTING IS POOR.

THE tremendous seizure of game in the warehouse of the Arctic Freezing Company last May and June excited great attention all over the country, and it may be hoped has not yet been forgotten. It was made by Mr. J. W. Overton, one of the New York State protectors, whose energy in the field is well known to readers of FOREST AND STREAM. The seizure was on a wholesale scale, and it is said that more than 50,000 pieces of game were captured.

Recently a reporter of the FOREST AND STREAM accompanied Mr. Overton to another storage warehouse, where in sealed baskets samples of the seized game are kept, to be used as evidence in prosecution of the warehouse people charged with possessing game illegally. An examination was made of the samples, for the purpose of identifying the species, and the samples were compared with the list made by Mr. Overton and his assistants at the time of the seizure. The quantity of game shown on the list is stupendous, and yet the bare statement of the number of the birds, or of the barrels and boxes containing so many dozens or so many hundred birds, conveys little impression to the average man. He passes over the words "a barrel of grouse," or "a box of English snipe," without much thought. But if he sees that barrel or that box emptied on the floor and takes in with his eye the number of individual birds that it contains, he then begins to realize something of what 1,000 or 50,000 birds may mean. He sees in this barrel or in this box perhaps more than he ever killed in all his shooting. He knows that this barrel or this box is not one-hundredth part of the game received by this particular storage warehouse in a single season, and there is then borne in on him—perhaps for the first time—a realization of what the sale of game means to the game supply of this country.

The samples examined were contained in fifteen large baskets, which, as stated, had been sealed up after they had been labelled and marked for identification at the time of the seizure. Each basket contained from twelve to thirty samples, and the work of going over the lots occupied several hours. Their contents included most of the commoner game of the country. Water fowl were less numerous than upland game, yet there were hundreds of canvasbacks, redheads and mallard ducks; about 9,000 golden plover; about 7,000 English snipe, besides vast numbers of sandpipers and yellowlegs, and a few woodcock. Of quail there were between 4,000 and 5,000. There were nearly 1,000 ruffed grouse, about 1,200 sharp-tailed grouse, and nearly 4,000 pinnated grouse. All these were highly interesting as game, and hardly less so as ornithological specimens, so great was the variety seen in them. The ground color of the sharp-tails varied from distinctly rufous to very dark slate; the pinnated grouse seemed to run through all the forms described, as did also the ruffed grouse.

Besides the birds distinctly game, there were nearly 10,000 song birds, chiefly bobolinks or reed birds and snow buntings. The snow buntings were tied up in dozen bunches and were usually fat and in good order, but the best of the reed birds—which were as fat as butter—were neatly packed in pasteboard boxes, a dozen in each, and were attractive to look at.

It has been stated that the freezer people were carrying on a legitimate business, and had nothing to conceal, but this statement is negated by various marks on the boxes, which show attempts to deceive. Thus, boxes containing quail were marked "5 doz. squab." A box containing grouse and quail was marked "broilers"; another containing ruffed grouse, "small broilers"; a package containing woodcock was marked "B. geese"; golden plover were marked "ducks"; mallards were marked "pidgeon"; grouse were marked "fowl"; snow buntings were marked "fancy squabs"; 300 big yellowlegs were marked "mixed fowl"; 500 quail, "fancy poultry"; 2,400 English snipe, "ducks," and so on to the end of the chapter.

Besides the birds already mentioned, there were of ducks broadbills, pintail, green-winged teal, dusky ducks, blue-winged teal, widgeons, whistlers and ruddy ducks. There were thousands and thousands of sandpipers and hundreds and hundreds of upland plover. English pheasants and deer carcasses were there, the latter readily recognizable by bits of the hide and the tails still attached to the flesh.

Suits have been brought against the freezer company for penalties in large amounts, and if these should be carried to a successful issue, it is hoped that the business of keeping game out of season in New York city will have received a shock from which it will not easily recover. It is certain that nothing that could be done in the way of preserving the game supply would be at all com-

parable in importance with the putting an end to this freezer business. Men will not kill for the market unless they can sell their game, and purchasers of game—even in the cities—will not buy it in great quantities unless they can be sure that it will be preserved.

Attention has already been called in the FOREST AND STREAM to the fact that the game held in cold storage in the rooms of the Arctic Freezing Company was in a double sense illicit. It was held unlawfully in close season, and besides this, it can undoubtedly be shown that it was shipped in violation of the laws of the States where it was killed. While, of course, in the case of many of the packages it would be impossible to determine whence the game came, yet there is evidence in the marks on barrels and boxes that some of it came from Indiana, a State in which the law provides that certain specified game as deer, quail, partridge, wild duck, grouse, prairie chicken and woodcock, shall not be transported by any railroad company, express company or other common carrier beyond the limits of the State. It is, of course, well known that Connecticut, New Jersey, Pennsylvania and other States forbid the export of their game, and such game reaching New York is contraband and cannot be dealt in.

As was said in FOREST AND STREAM at the time when the seizure was made:

"We have here quite the most interesting and important issue that could be made in relation to game protection. The point to be tested is the constitutionality of a law which prohibits in one State the possession in close season of game imported from another State. The New York case is of national interest and of national importance, because the principles involved are of national application. While the entire prohibition of the possession and sale of game in the close season irrespective of the origin of the game is not universal throughout the country, it prevails so generally that it may be said to be a characteristic feature of game protection in the United States, just as it is abroad. It is a factor of such importance as to be absolutely essential to any effective scheme of game protection. Every State, then, which has such a law, and depends upon it to keep its game from the market in close time, is concerned quite as much as New York in the result of this test suit, since upon the outcome will depend the determination of the constitutionality of all such laws."

The Seized Game.

We give below a list of the different lots of birds seized by Mr. J. E. Overton in May and June last, at the rooms of the Arctic Freezing Warehouse. This list, however, does not include the seizures of the first day, which, by order of Police Justice Brann, were sealed up and put back in storage before samples were secured by the game protector. The defendants in the suit brought on the case have asked for a bill of particulars of the birds seized, and the facts for this bill of particulars are given in the subjoined list, except so far as the seizures of the first day are concerned. The lots seized the first day are undoubtedly still in the custody of the Arctic Freezing Warehouse, or if they are not, the Arctic Freezing Warehouse people will be able to tell where they are and why they were removed from the rooms to which they were returned by the Justice.

The "lots" enumerated often consisted of several boxes or barrels, but in the list are given the number of birds in each lot, the English name and the Latin name. The list is commended to the attention of all gunners. It follows:

ROOM 5, LOTS I TO 4.

540 quail (*Colinus virginianus*).
97 grouse (*Tympanuchus*).
2 pheasants (*Phasianus*).
91 quail (*Colinus*).
110 quail (*Colinus*).

ROOM 36, LOTS 5 AND 6.

408 wild birds, golden plover (*Charadrius dominicus*).
400 wild birds, golden plover (*Charadrius dominicus*).

ROOM 37, LOTS 7 TO 10.

4 web-footed wildfowl, broadbills (*Fuligula marila*).
98 grouse, sharp-tail (*Pediacetes*).
60 grouse, pinnated (*Tympanuchus*).
116 grouse, sharp-tail (*Pediacetes*).

ROOM 4, LOT 11.

½ wild deer, not seen.

ROOM 3, LOT 12.

600 wild birds, English snipe (*Gallinago delicata*).

ROOM 39, LOTS 13 TO 31.

23 web-footed wildfowl, green W. teal (*Nettion carolinensis*).
90 grouse, sharp-tail.
26 web-footed wildfowl, mallards (*Anas boschas*).
16 web-footed wildfowl, canvasbacks (*Aythya valisneria*).
62 wild birds, golden plover.
72 grouse, ruffed (*Bonasa*).
1416 wild birds, snow buntings (*Plectrophenax nivalis*).
300 wild birds, golden plover.
10 web-footed wildfowl, dusky ducks (*Anas obscura*).
83 grouse, sharp-tail.
85 grouse, sharp-tail.
75 grouse, sharp-tail.
43 grouse, pinnated.
96 wild birds, pectoral sandpiper (*Tringa maculata*).
29 web-footed wildfowl, canvasbacks.
276 wild birds, English snipe.
43 grouse, ruffed.
240 wild birds, golden plover.
37 web-footed wildfowl, mallards.

ROOM 10, LOTS 32 TO 47.

22 wild ducks, mallards.
90 grouse, pinnated.
67 grouse, sharp-tail.
48 grouse, pinnated.
88 grouse, pinnated.
18 pheasants, English.

288 wild birds—reed birds, bobolinks (*Dolichonyx oryzivorus*).
18 grouse, ruffed.
85 grouse, pinnated.
11 grouse, ruffed.
85 grouse, pinnated.
85 grouse, pinnated.
35 wild birds, upland plover (*Bartramia longicauda*).
26 pheasants, English.
63 grouse, pinnated.
80 grouse, pinnated.

ROOM 23, LOTS 48 TO 53.

52 grouse, pinnated.
97 quail, Virginia.
287 quail, Virginia.
107 quail, Virginia.
107 quail, Virginia.
41 grouse, ruffed.

ROOM 24, LOTS 54 TO 64.

240 quail, Virginia.
12 grouse, ruffed.
8 grouse, ruffed.
48 quail.
72 quail.
51 grouse, pinnated.
18 grouse, ruffed.
96 woodcock (*Philohela minor*).
44 wild ducks, canvasbacks.
¼ venison, Virginia deer.
70 grouse, pinnated.
75 grouse, sharp-tail.

ROOM 25, LOTS 65 TO 68.

28 wild ducks, mallards.
31 grouse, sharp-tail.
72 quail, Virginia.
30 grouse, sharp-tail.

ROOM 26, LOTS 69 TO 89.

108 teal (domestic pigeons).
6 wild ducks, canvasbacks.
48 grouse, pinnated.
21 wild ducks, ruddy (*Erismatura rubida*).
30 wild ducks, canvasbacks.
59 wild ducks, redhead.
800 wild birds, golden plover.
400 wild birds, golden plover.
400 wild birds, golden plover.
400 wild birds, golden plover.
26 wild ducks, brant (*Branta bernicla*).
1152 wild birds, snow buntings.
27 wild ducks, brant.
26 wild ducks, redheads.
77 wild ducks, redheads.
45 wild ducks, redheads.
21 wild ducks, redheads.
400 wild birds, golden plover.
400 wild birds, golden plover.
400 wild birds, golden plover.
400 wild birds, golden plover.

ROOM 30, LOTS 90 TO 104.

100 grouse, pinnated.
11 wild ducks, mallards.
100 grouse, pinnated.
100 grouse, pinnated.
17 wild ducks, mallards.
450 grouse, pinnated.
100 grouse, pinnated.
100 grouse, pinnated.
100 grouse, pinnated.
12 wild ducks, mallards.
9 grouse, sharp-tail.
1 carcass venison, Virginia deer.
2 carcass venison, Virginia deer.
2 carcass venison, Virginia deer.
2 carcass venison, Virginia deer.

ROOM 29, LOTS 105 TO 118.

14 grouse, ruffed.
25 grouse, ruffed.
35 quail.
3 grouse, ruffed.
16 wild ducks, canvasback.
48 wild ducks, pintail.
62 wild ducks, mallards.
64 ruddy ducks.
60 ruddy ducks.
40 wild ducks, brant.
12 grouse, pinnated.
40 wild ducks, brant.
56 grouse, pinnated.
390 quail.
12 wild ducks, mallards.

ROOM 28, LOTS 119 TO 124.

44 grouse, ruffed.
40 wild birds, snipe (*Bartram's sandpiper*).
48 grouse, sharp-tail.
48 grouse, ruffed.
46 grouse, ruffed.
48 grouse, ruffed.

ROOM 27, LOTS 125 TO 129.

3168 wild birds, sandpipers.
18 wild ducks, mallards.
1056 wild birds, English snipe.
60 grouse, ruffed.
240 wild birds, English snipe.

ROOM 41, LOTS 130 TO 146.

11 grouse, ruffed.
720 wild birds, reed birds (bobolinks).
30 wild ducks, ruddy.
5760 wild birds, snow buntings.
53 grouse, sharp-tail.
58 grouse, pinnated.
12 quail.
61 grouse, pinnated.
55 grouse, pinnated.
48 wild ducks, widgeon.
36 pheasants.
408 quail, Virginia.
167 quail, Virginia.
143 wild birds, Bartram's sandpiper.
68 grouse, sharp-tail.
92 grouse, ruffed.
400 quail, Virginia.

ROOM 43, LOTS 147 TO 155.

22 wild ducks, goldeneye (*Clangula clangula*).
46 grouse, pinnated.
2 carcasses venison, Virginia deer.
92 grouse, pinnated.
90 grouse, sharp-tail.
2 carcasses venison, Virginia deer.
227 quail, Virginia.
65 wild ducks, canvasback.
92 grouse, pinnated.

ROOM 44, LOTS 156 TO 164.

10 grouse, ruffed.
36 grouse, sharp-tail.
288 wild birds, little yellowlegs (*Totanus flavipes*).
30 wild ducks, mallards.
28 wild ducks, green-winged teal.
96 wild birds, pectoral sandpiper.
36 wild ducks, canvasback.
150 wild birds, golden plover.
28 wild ducks, canvasback.

ROOM 45, LOTS 165 TO 177.

70 quail, Virginia.
48 grouse, pinnated.
32 grouse, pinnated.
1200 wild birds, Bartram's sandpiper.
77 grouse, pinnated.
48 grouse, sharp-tail.
32 grouse, sharp-tail.
43 wild ducks, canvasbacks.
100 wild ducks, blue-winged teal.
200 wild birds, small yellowlegs.
20 wild ducks, mallards.
48 grouse, sharp-tail.
1000 grouse, pinnated.

ROOM 13, LOTS 178 TO 186.

16 wild ducks, broadbills,
12 grouse, sharp-tail.
15 wild ducks, mallards,
17 grouse, sharp-tail.
15 wild ducks, mallards,
109 grouse, sharp-tail.
6 wild ducks, mallards,
150 quail, Virginia.
49 grouse, ruffed.

ROOM 12, LOTS 187 TO 202.

58 wild birds, golden plover.
5 wild ducks, pin-tail.
40 gray squirrels (*Sciurus carolinensis*).
600 wild birds, sandpipers.
600 wild birds, sandpipers.
600 wild birds, English snipe.
600 wild birds, sandpipers.
600 wild birds, sandpipers.
230 quail, Virginia.
300 wild birds, greater yellowlegs (*Totanus melanoleucus*).
500 quail Virginia.
100 grouse, pinnated.
400 wild birds, golden plover.
600 wild birds, sandpipers.
2400 wild birds, English snipe.
84 wild ducks, mallards.

ROOM 11, LOTS 203 TO 208.

144 grouse, ruffed.
1 carcass venison, Virginia deer.
48 quail, Virginia.
120 quail, Virginia.
1800 wild birds, English snipe.
3200 wild birds, golden plover.

The Sportsman Tourist.

Notes from Central America.—III.

THIS is the middle of August, and, here in the central part of the Republic of Honduras, *invierno*—literally "winter," but throughout tropical America applied to the rainy season—has now been with us somewhat more than two months. During the rainy season the rain falls almost every day—sometimes only in showers, the sun shining brightly for hours and frequently producing, toward evening, beautiful rainbows; while at others it rains most of the day and all of the night. The heavier rains are generally at night. During the month of August there is usually a certain marked intermission in the rains, especially along the northern coast. This is the "*Canicula*," or reign of the Dog Star—corresponding to the "dog days" of North America.

Relative to the climate and other meteorological data of the tropics, a wide diversity of statement will be found in the accounts given by travelers, and even in the information obtained from inhabitants of quite closely connected districts. This apparent discrepancy is quite easily explained, in that marked meteorological variations occur in comparatively limited districts, and depend principally upon geographical location and topographical peculiarities. To illustrate: A person visiting the coast of Ecuador or region of the Amazon in Brazil would certainly be impressed with the tropical heat encountered, but it would be far from the truth to say that all parts of the equatorial zone of South America agree in climate, for quite under the Equator, and between the two localities just mentioned, we find snow-clad peaks of the Andes, upon which one may experience the reality of tropical snow storms—thus illustrating variations in climate due to variation in altitude. Again, as one recedes from the Equator and approaches the Tropic of Cancer or of Capricorn, as the case may be, there is a difference in the time of the appearance of the rains—due, the meteorologists tell us—to variations of atmospheric pressure and local influences affecting the trades and other winds. But these variations are also observable in approximated localities, even in precisely the same latitude—as on the two sides of the Andes—evidently because of topographical peculiarities affecting both atmospheric pressure and the influences of winds which sweep over neighboring seas and plains. So, when one speaks of climate and of other meteorological peculiarities, a general application cannot be made to even the same tropical zones—in a word, they must be made local.

Of course, here, as elsewhere, there are minor variations in the character of different seasons for the same locality, just as in New York one summer—as, for example, the present—may be memorable for severe heat, and another regularly mild and pleasant. So here the rainy season may begin a month earlier or later; may be severe, flooding the rivers and deluging the land, or there may be only moderate rains throughout its entire session. The rains this season began quite a month later than usual in this section, and so far have put in an appearance almost every day, though of a rather mild character. However, some of the hardest rains usually occur here after the *Canicula*, and there is time yet for disturbing floods and rainfalls.

The climate of the tropics is equable: in the low lands regularly warm, at a high elevation regularly cold, and at a moderate elevation—say from 4,000 to 5,000 feet for this latitude (about 14 degrees)—regularly temperate.

So much for the weather—a subject, we understand, that has been much discussed in "temperate" climates this season because of the severity of the heat. The highest point reached by the thermometer here this year was 94 degrees Fahrenheit—as shown by an accurate recording thermometer—and was touched one day last week, about 2 o'clock in the afternoon. By 6 o'clock the temperature had fallen to 78 degrees, under the effect of a cooling shower. It is rare for the thermometer to go above 90 degrees Fahrenheit. We are 3,500 feet above sea level.

Since writing my last communication to FOREST AND STREAM we have had at our Honduras home but two new animal pets—one a cute, little, native squirrel or *ardilla*, and the other a young parrot, or *lorito*. Not a little has recently been written in FOREST AND STREAM, by various contributors, on the intelligence and economy of the squirrels, and those of us who have read Thoreau's writings, as well as the published observations of even earlier naturalists, cannot fail to note that, in some instances, at least, space might have been saved by simply referring the reader to these publications. So, omitting further discussion on the habits, in-

telligence and economy of squirrels in general, let me tell you of a trait possessed by this little native of the Central American *bosques*, viz., gentleness—gentleness to a fault. Never have I seen quadruped more gentle and trustful than this three-quarter-grown squirrel. Of the exact species of the particular *ardilla*, which is the common squirrel of tropical America, I am not certain. It greatly resembles in size and appearance the gray squirrel of North America, but the coloring of the adult squirrel runs more to black, and while in size the body of the animal is somewhat smaller, the tail is longer and less bushy. It is not a rare animal, but, as we say in Spanish, "*Bien conocida*," and my ignorance of its specific name is simply the result of personal non-identification.

But passing these technicalities by, this particular *ardilla* was brought to San Juancito as "supercargo" by a native bringing some cargoes (mule loads) of vegetables or fruits to our market. There six reales (equivalent to about 33 cents United States currency) was paid for it by a denizen of the pueblo, who presented it to the little girl of our household. A short cloth string was already tied about its neck, by which it could be "anchored" to a chair or other place, but the string was hardly considered a necessary feature in order to prevent the little animal taking French leave, as it was frequently not fastened to anything but the squirrel, and at other times was entirely removed. Like other members of his family, this little creature, when not sleeping, was always active—either with his mouth in eating, or with his nimble legs in moving about. As soon as any one approached sufficiently near him, he would jump on their arm and run up on the shoulder. Then he would play hide-and-seek around the neck, poking his nose into one's ears and examining every part of the head within reach; then down the arm, and, with a soft, clucking sound, quickly back again. He would explore the recesses of one's pockets, one's sleeves and sometimes crawl high up the legs inside one's pantaloons. Up and down he would run, always contented when occupied with one of three things—viz., eating, sleeping and associating with human beings. His usual sleeping place was a large cloth, into which he literally rolled himself when darkness came on, but he also enjoyed an occasional nap, and frequently spent the night snuggled in the depths of a knitted woolen slipper.

We did not really know how greatly we had become attached to this little creature until one morning he was found dead beside the cloth in which he had gone to sleep in the early evening. He had never been moody, never "out of sorts," during the weeks he was with us. Never had he attempted to bite—not even when our *criada* (female servant) one day clumsily stepped, with her bare foot, on one of his paws. It was undoubtedly both his cheerful nature and gentle confidence in everybody that made his loss so keenly felt. The cause of his demise is obscure, but doubtless he ate too much sugar cane, or banana, or something of the sort, during the day preceding it.

Of the *lorito*, or parrot, I have little to say. He was brought to me from the south coast. His bright, green plumage was certainly beautiful, but as he wouldn't talk—only sort of quack—and seemed bent on destroying all the morning glory and other vines that had been carefully trained about our *corridor*, I sold him to a native for two pesos. Perhaps his present owner can get him to talk, as the bird is not very old, and they say that practically all the Honduras and Salvador parrots are "talkers." Certainly some that are kept above here are very adept not only at talking, but at laughing and whistling, as well.

DR. J. HOBART EGBERT.

SAN JUANCITO, Honduras, C. A.

How Beardy Miller Lost a Bet.

BEARDY MILLER reined in his pony before the abode of his friend, Harry Reynolds, and gave a loud halloo, after which he swung one leg across the pony's withers, lit his pipe and making himself as comfortable as possible, waited for somebody to appear. Inaction sat well on this man of the plains. Loafing is an art in itself. It is a complete relaxation of the mind and body—a trance-like, quiescent state of immobility bordering on the land of dreams. By dint of long practice and careful study, combined with a congenital aversion to bodily exertion, Beardy Miller had acquired this art in all its perfection. It was only when necessity urged that he laid aside his ponderousness for the time being and became thoroughly alive.

Presently the owner of the Horizontal Bar ranch appeared in the doorway in answer to Beardy Miller's summons.

"Hello, Beardy!" he called out in greeting. "What's up? Why don't you get down and come in?"

"Waitin' to see if you all was to home first," Beardy made answer. "No use takin' unnecessary steps, you know." So saying, he slipped out of the saddle without apparent effort, threw the bridle over the pony's head and slouched forward to meet his friend. The pony, a buckskin mare, immediately dropped her head and went to sleep. This was an accomplishment that greatly endeared her to the heart of her master.

"Pretty day, ain't it?" Beardy Miller yawned, seating himself on the doorstep.

"Fine."

"Good day for huntin', if 'twa'n't so much trouble, eh?"

"Couldn't ask for a better. I was out this morning."

"Get anything?"

"Yes, one coyote and a couple of jackrabbits on the side."

Beardy Miller puffed away at his pipe in silence for a few moments.

"To h— with coyotes," he at length drawled, in lazy tones.

To Reynolds the remark seemed somewhat irrelevant, not to say surprising. He waited for an explanation, but manifestly his companion considered a bare statement of facts wholly adequate for the occasion; not only that, but he took three long puffs at his pipe, and repeated his former statement so as to avoid being misunderstood.

"Why?" asked Reynolds.

"'Cause the only thing they're good for is to wake a man up with their infernal yelping at night. They ain't worth huntin'. They ain't got as much nerve as a 'pos sum."

"Ever run one with fast hounds?"

"Can't say as I have. It don't sound wildly excitin'."

"You ought to have a hunt behind my dogs some day and you would change your tune."

"So? Don't gamble on that, son. Windy Bill Robinson told me that you had a pretty good pack of—wolf hounds, he called 'em."

"Well, he told you the truth."

"What they good for?"

"Oh! wolves or antelope or any old thing, in fact."

"Ever try a cat with 'em?"

"Not yet; but I'm going to some of these days. You see, they are all sight dogs, and I doubt if they could trail a cat."

"I wouldn't give a cuss for a sight dog. Let's have a look at the pack, though. Raised 'em from Old Duke, Windy Bill told me?"

"Yes, they've all got Old Duke's staying qualities, too."

Reynolds led the way to the kennels. He surmised that Beardy Miller's sole object in visiting the Horizontal Bar ranch was to ascertain the truth or falsity of Windy Bill's report. Beardy Miller owned a pack of fox hounds, of which he was inordinately proud, and his jealousy was apt to become aroused when another man's dog was praised. He inspected the staghounds with much interest, and listened to his friend's glowing enumeration of their many virtues until his patience could brook no more.

"Gosh a'mighty, Hal," he at last interrupted, "anybody would think you had the only pack of hounds in the State of Texas. You mustn't forget there's others. There ain't many flies on my dogs, for instance."

"I wasn't saying anything against your dogs," Harry assured him. "But your dogs are only fox hounds. They're not fighters."

"They ain't, eh? Well, you admit your dogs never tackled a cat."

"I've got fifty dollars says they would, though."

"I doubt it a whole lot. A wildcat's a different proposition from a coyote."

"Did your dogs ever kill one?"

"Plenty of 'em," Beardy Miller told the lie unblushingly.

"I never saw a fox hound with grit enough to tackle a cat in a fair fight," Reynolds declared.

"Well, you've never seen mine, then," Beardy Miller retorted.

"It would be a case of seeing is believing," Reynolds laughed. "When you going on the next hunt? I'd like to be along."

"I'll go to-night, if you say so," Beardy responded.

"The moon will be full, and I'll show you some sport."

He was somewhat nettled at his companion's apparent lack of faith in his veracity, especially as he was well aware that it might be questioned in the present instance, and he was therefore correspondingly anxious to justify himself.

"I'll go you," Reynolds readily agreed. "And just to make it interesting, I'll bet you a five spot that the hounds don't kill any wildcat."

"Done," said Beardy Miller. "Get your horse and we'll ride over to my place and have supper and start out when the moon rises."

It took but a few moments to saddle J. C., and in a short time the two men were on their way to the B. Diamond ranch.

Beardy Miller's pack consisted of five fox hounds. There was Music, the best trailer of the pack, but a slow runner. Then came Trump and Sounder, both long-winded, fast-footed hounds, but inclined to be too reckless when following a trail, occasionally making the mistake of running on their back track. Old Loud could make more noise than any two dogs of the lot, and last was Bruiser, the fighter of the pack. Beardy Miller was justly proud of his dog, but a fox hound is never much of a fighter, and Beardy regretted, when it was too late, that he had allowed his pride to get the better of his judgment. His dogs had never killed a wildcat, and he had grave doubts of their ability to do so, but having made his boast, nothing remained save to make the attempt.

The moon was rising over the edge of the plains when they set out for a fork of the Devil's River, where Beardy said he never failed to find a wildcat or two. The night was very still. The moonlight lay bright all around them—so bright that the night seemed turned to day. The coyotes began calling to one another in the distance with their musical voices. Occasionally a dark form would appear on the top of some hillock, sharply silhouetted against the sky for a brief moment, only to vanish like a shadow as the hunters came in sight.

"I'd like to have Old Duke and some of the pups here and I'd show you some fun," Reynolds remarked.

"You'll see it soon enough as it is," Beardy Miller replied, and his words had a prophetic ring, had he but known it. "The dogs will strike a trail pretty soon."

The hounds were running ahead, with noses close to the ground, working in open order like skirmishers of an army of soldiers. Trump was the first to declare himself. His clear voice suddenly pealed forth the bugle note, sounding the charge, and Sounder joined in, with his deeper tones. Old Loud, who held a position on the extreme left wing of the skirmish line, was studying the landscape and waiting for somebody to do something. He never aspired to leadership, and seldom assumed the responsibility of announcing the presence of an enemy; but, as the voices of the other two hounds broke the stillness of the night, he raised his head and made the plains echo with his loud baying, and then he closed in and followed fast on the heels of his brothers in arms. Music satisfied himself that the trail was genuine, then gave tongue, and with Bruiser joined in the chase. As the whole pack led away under full cry, the coyotes ended their evening concert abruptly, and hastened to put a safe distance between themselves and these rival singers of the night; and every creature of the plains within hearing of the hounds paused in alarm, listening to see if the chase were headed in their direction.

"Come on," cried Beardy Miller. "Music says it's all right, so it's a go."

He dug the spurs in his horse's sides and followed fast after the hounds. Reynolds spoke a word to J. C. and passed his friend with a rush.

"No use killing you horse," the latter called after him,

"We ain't after wolves, you know, and this ain't a quarter race."

Reynolds checked his pony and Beardy Miller galloped up alongside.

"As soon as they strike the bottom," he explained, "it'll be slow going. Fine music they make, eh? Just listen to old Loud."

"Could hear him ten miles without listening," Reynolds answered. "He makes more noise than all the rest put together. If they can fight as well as they howl a lobo wouldn't be one, two, three with any one of them."

"Oh, they can fight all right," Beard assured him. "Just wait till they tree the critter, and you'll see Bruiser give a correct imitation of how a dog should kill a cat."

With the hounds in full cry before him, his confidence in their ability to deal with a single wildcat returned.

The trail soon led down into a deep hollow, and here the dogs experienced the first difficulties of the hunt. The cat was employing its most crafty tactics in the endeavor to shake off its pursuers. A dozen times the hounds lost the trail, but Music invariably picked it up again, and slowly but surely they closed in on their prey. At Beardy Miller's suggestion Reynolds followed along the edge of the ravine. From this position he could easily follow the movements of the dogs, and finally he caught sight of the creature they were pursuing. The cat was using all its skill in the hopeless attempt to outwit its enemies, and Harry felt his sympathies go out to the doomed creature. The hounds drew nearer and nearer, and at last the cat took refuge in the top of a crooked mesquite tree, and crouched among the scraggly branches. The dogs rushed up and by their loud baying announced that they had treed their game. Beardy Miller shouted to his friend, and Reynolds rode down into the hollow, dismounted and joined him.

"You'll see the fur fly in a minute," Beardy declared. "Talk about your coyotes. They can't fight in the same class with a lively cat."

The mesquite tree was about the size of a well-grown apple tree. Beardy Miller immediately began bombarding the tree with stones in order to dislodge the snarling cat, glaring down upon them from its insecure place of refuge. A wildcat is anything but a coward, and when one of Beardy Miller's missiles accidentally hit the mark, there was a shrill, piercing cry, unpleasant to hear, and then something happened.

Old Loud was sitting beneath the tree, making as much noise as possible, and consequently happy for the time being. On his upturned, unsuspecting head the bundle of teeth and claws and fur suddenly descended from above, and his notes of rejoicing changed to a howl of pain and terror. Bruiser answered the cry for help and rushed to Old Loud's assistance—Bruiser, the fighter of the pack, on whose prowess his master had staked his hopes and his reputation as a judge of dogs, and Bruiser lasted just thirty seconds longer than old Loud. When, with a yelp of distress, he retired from the conflict, the other dogs lost all desire to form a closer acquaintance with their desperate foe. The wildcat stood crouching in the center of an ever-widening circle, and defied them all to "Come on!" but no dog took the dare.

Beardy Miller shouted and swore, but all to no purpose. The hounds of whom he had boasted so proudly behaved like so many yellow curs. To conceal his chagrin, he drew his revolver and prepared to wreak vengeance on the cause of his confusion, but the wildcat had an unlooked-for champion. Reynolds sprang forward and knocked up his friend's arm.

"Here, Beardy, that's not in the bond," he cried. "The dogs were to kill the cat, and if they can't do it the cat goes free this time."

"Don't be a bloomin' idiot," Beardy Miller retorted. "That oat's got to die."

"Not if I can help it," Reynolds declared. "As referee of this affair I declare that the cat has won the fight against big odds, and ought to go free. Come, Beardy, be a sport. It's fair play always or nothing, you know."

The cat took advantage of this diversion and made a dash for the underbrush. Old Loud was directly in the path of the infuriated creature's flight, busily engaged in licking his many wounds. Glancing up he saw the cat advancing upon him like an enraged fury, and he paused not for the fray, but tucked his tail between his legs and took a back track for home, making the ravine echo with his terrified howls. Beardy Miller was afraid to shoot, for fear of wounding the hound, and was forced to resort to strong language to relieve his feelings. Reynolds stood quietly by enjoying the discomfiture of his friend. The cat was soon lost in the deep shadows of the ravine, and the sound of old Loud's distressful voice grew fainter and fainter, finally dying away in the distance.

"You're a nice sort of a hunter," Beardy Miller exclaimed in disgust. "What do you suppose we came out here for? Just to play pussy wants a corner?"

"I was invited to see the dogs kill a cat, if I remember rightly," Harry answered. "Believe there was some sort of a bet made, wasn't there?"

"The cat wouldn't have got away if it hadn't been for you," the other rejoined. "Twa'n't a fair bet. The dogs got nervous, but they'd have been all right after a bit."

"Maybe so. Want to try it again?" Reynolds asked, good naturedly.

"Not to-night. I've had enough for one night. I'll double the bet for to-morrow night, though."

"I'll go you. Reckon we may as well start for home, if there are no more cats to kill."

They mounted their ponies and were soon out on the open plain, heading for the B. Diamond ranch, with the crestfallen hounds bringing up the rear. They had gone about a mile when a shamefaced dog came slinking up and took his place in the extreme rear of the small procession. Beardy Miller greeted the new arrival with a string of opprobrious epithets.

"If your bite was as bad as your bark, you old fool," he sneered, "you might have some excuse for living. Just now you ain't fit for sausage meat, by Godfrey."

Old Loud—for, of course, it was he—fell back a little further, deeming it expedient to put a safe distance between himself and his irate master. So soon as they came to the ranch the hound went off somewhere in hiding, and escaped Beardy Miller's wrath.

When Harry Reynolds appeared at the B. Diamond ranch the next evening he was accompanied by Old Duke.

"What made you bring him along for?" Beardy inquired, suspiciously.

"Thought you might like to have him give your dogs a lesson or two in fighting," Reynolds replied.

"I don't say so. You forget I owned him before you did, and I know all about him. He never fought anything but a measly coyote or two when I had him. But I don't mind lettin' my dogs help educate him. Old Loud might give him a few pointers on how to make himself scarce when he strikes a cat."

"That was the main reason I brought him along. I confess," Reynolds assured him.

It was an hour or two before the dogs struck a fresh trail that night. When they finally started away under full cry, Old Duke, who had never for a moment left his master's side, looked up in Harry's face inquiringly.

"Not yet, old fellow," the latter commanded. "This isn't your game, though you may take a hand later on."

The staghound could not grasp the situation, but he trusted in his master and curbed his desire to join in the chase.

Old Loud seemed to have forgotten his humiliating experience of the night before, or else wished to make atonement by excelling himself in his usual vocal efforts. The sound of his voice jarred upon his master's ear.

"Listen to that star chamber idiot," he called out to Reynolds. "The old wienerwurz makes me think of Windy Bill Robinson. All blow and no sand. Guess I'll make Windy Bill a present of him. They'd make a good team."

"He has what might be called a strenuous voice," Harry answered. "I've noticed it before."

"Strenuous! It sounds like one of them travelin' Dutch bands back East. I used to think it was great, but since last night—" Beardy Miller was at a loss for words that would properly express his feelings.

A wildcat always takes to the cover in the nearest ravine when pursued. The hunters followed along the edge of the hollow, where the chase was in progress, waiting for the dogs to tree the cat before taking active part in the affair. Old Duke was greatly perplexed at these proceedings. If there was any sport on hand he longed to be in the thick of it, and he kept one eye on Harry, waiting impatiently for the word to "go in." The cat had evidently played at this game before, and knew many tricks that even Music was unacquainted with, for the hounds were repeatedly baffled and thrown off the trail. At last, however, the chorus of canine voices sounded the note that told their masters that the cat had been brought to bay.

The men quickened their pace and drew near the scene of the coming conflict. They dismounted a short distance away and approached on foot. Reynolds slipped his hand under Old Duke's collar to hold him back when the fight began. The cat had chosen a strong position from which to give battle to its enemies. One side of the ravine rose at this point almost in an abrupt ascent to a height of 30 or 40 feet. About 10 feet from the bottom of the ascent a sharp point of rock jutted out, forming a small niche at its base, and in this niche, protected on all sides save the front, the cat had made its stand. The hounds were gathered at a respectful distance from their prey, baying furiously, but afraid to attack. Obviously old Loud was impressed at the similarity of the present situation with that of the night before, for he had taken a seat, an interested, inactive spectator, well to the rear of the contending forces, in an attitude that plainly said:

"You fellows can go up against that game if you want to, but just wait till that thing up there lands on one of you."

Beardy Miller urged on the dogs, but all in vain. Only one dog could attack at a time, and none of them was willing to be the first to encounter those long, sharp claws.

"Give it up, Beardy?" Reynolds called out. Old Duke was straining at his collar, and it was all Harry could do to hold him back.

"Reckon I'll have to," the enraged owner of the fox hounds replied. "That cat's got to die, though, and I'm goin' to shoot him; that is," he added, in sarcastic tones, "unless you want to try Old Duke on him."

"All right. Stand aside," Reynolds requested. "Now, Duke, go in, and show these dogs how to fight."

With a savage growl the big staghound rushed forward. Without a moment's hesitation he shut his eyes and sprang straight at the snarling cat, and, unmindful of the sharp teeth and tearing claws, he dragged the struggling creature from out its place of refuge and pinned it to the ground. With such a leader Bruiser's lost courage returned, and he entered into the fight with a vim. It was all over after a brief conflict, and then the other dogs bravely assaulted the dead body of the wildcat and thought much of themselves, accordingly.

Beardy Miller was strangely silent on the way home. Ever and anon he cast his eyes upon the staghound trotting at J. C.'s side, and shook his head dubiously. As the lights of the B. Diamond ranch appeared, gleaming faintly ahead, he seemed to awaken from his reverie.

"I've changed my mind some about sight dogs," he drawled. "I never used to think they was worth anything. It's another case of a man's hindsight being better than his foresight. I reckon I'll never learn by experience."

"A fox hound isn't supposed to be a fighter, you know," said Reynolds, consolingly. "The dogs ought to be all right at the game after to-night."

"That's all right, but they ain't supposed to be white-livered rabbits, neither, but they are, just the same, and it has cost me ten dollars to find it out."

"But think of the fun we had."

"Think of it?—Oh! I'll think of it all right, all right. I won't think of nothing else for the next month," Beardy Miller growled.

Just then old Loud decided that here was the propitious moment to reinstate himself in his master's good graces. He came bounding forward, and with a joyous bark jumped playfully at the buckskin mare's head.

"As for you," Beardy Miller concluded, turning his attention to the fox hound, "as for you, you four-legged fog horn, the best thing for you to do is to emigrate to Kansas. That's a windy State, and your lovely voice would probably just suit 'em. I don't know you, and I don't want to have nothin' more to do with you, you poor, worthless, onery, lop-eared cuss. Get back where you belong and stay there."

FAYETTE DURLIN, JR.

Field and Camp Comrades.

Editor *Forest and Stream*:

I have read several very interesting articles in your publication treating on the subject of companions on hunting and camping trips. Each year, during the month of October, I am in the woods after big game and the recreation I always get from such an outing—and the true sportsman who looks forward to this annual trip into the forest should give the matter of companions due consideration. For experience has taught me that disagreeable company can make a hunting trip almost a failure so far as enjoyment is concerned. There is no question but one should employ a good guide. They are necessary, and, aside from this, I have found them good fellows who do not bore, but often entertain, and, generally speaking, I like them.

It was my grandfather who had the honor of being my first companion in the woods. He gave me my first lessons in woodcraft, and I always found him a true and reliable guide. It was he who taught me when a boy to make box traps, and how to lure the game into them. He taught me the habits of fur-bearing animals, and how to capture them, and the day he took down the old, long-barreled shotgun, which years before had been a flint-lock, told me to go up in the wood and see what I could do, I think was the proudest day of my life. It gave my mother a shock she did not get over until she saw me back again, but the old gentleman stood up for me, and off I started, a very small boy, with a big gun and great expectations. It was a red squirrel that first chanced to cross my path. He made a bee line for a tall maple and, of course, went to the top; but grandfather had told me the old gun would reach anywhere, so, when at last Mr. Squirrel thought himself out of harm's way and began to chatter at me, I let her go. Possibly I had a touch of "squirrel fever," at any rate, he did not follow the example of the coon, and come down, but went just a little higher, so I loaded up again, took good aim this time, and down came my squirrel. I hustled home to show him up. My grandfather met me in the yard. There was a queer smile on his face, which I knew meant something. "I got him," I said, holding up my prize. "Yes," said the old gentleman, "I see you did; but you had to shoot twice." "He was up very high," I explained, and, after some instructions in the art of careful shooting, it was voted a good shot.

The dear old man has long since gone to the happy hunting grounds. Time has brought many changes, but life in the woods is just as sweet to me now as the day I shot my first squirrel, and there lingers with me still the memory of my first and truest hunting companion. Neither have I forgotten his many instructions, for I never draw a bead on a fleeing deer but I seem to see perched upon my barrel that frisky red squirrel, and, usually, my first shot tells the story.

There is another very excellent companion whose name does not often appear in the hunting and camping directory. How many men who enjoy this life in the woods ever think of taking their wives along? Just ask her once if she would like to go, and, if she makes one bound your way, buy her a good Winchester rifle and take her out for practice. You will find her an apt scholar—quick to learn—and when she shoots she knows the difference between a hunter and a deer, which is more than some men know. After a man has this scheme well started, he is always sure of one companion each season who will never disappoint him. I speak from experience and would as soon think of going into the woods without my rifle as to go without my wife as a companion. Some sportsmen may be inclined to differ with me here, and belittle the ability of the woman hunter. That is all right; you go ahead and have your fun; call her a tenderfoot, and ask her what she would do if she met a bear, climb or shoot? She will set her teeth, probably, and say nothing, but at the close of some fine day she may wander back to camp with a scalp so strange to you that a natural history may be necessary to help you out. But my advice here may not apply to all wives, for there is a wide difference in the taste of these fair beings. Now, if she stops for a moment to consider if a hunting costume will become her, or if she dare take the chance of missing a single pink tea, do not urge her; she is better off at home, and, besides, it might shorten your trip if she were with you.

Going into the woods after game is not the only attraction that should appeal to those who love the sport. There is something charming about life in the forest, where every leaf that flutters tells a story of real life found nowhere else. The city is all right; some one must live there; some one must drink the impure water and eat the adulterated food. We bolt our doors and watch our little all, struggling all the time for the mighty dollar; we tire out at last, and when we can endure it no longer we look around for some place to go where we can get away from it all; and where can we go? I will tell you: Take your wife, she knows all about it now; go to the woods of Maine. There are plenty of good places; but get away from the railroad, the post-office, letters and papers. Go ten, twenty, or even thirty miles into the wilderness; there you will find a comfortable log cabin where you can drop your pack and feel at home. Rest is what you want, and here you will surely find it; but you will soon get uneasy, and want to go somewhere; follow the trail into the forest. If no trail then there must be some spots on each side of an occasional tree; follow those little spots; they will lead you there and back again; they will lead you where everything is real—to springs of water you will never forget, ricks that are ricks—trees that are trees. You have left the beaten path of all that is counterfeit; you are with nature; all is real and grand. Sit down and look about you; give your imagination an opportunity, and you will find yourself surrounded by some of the grandest companions man ever had. The October painter, with his brush of green and gold, has written their names all around you; and these are among the number—The Forest and Stream, The Rod and Gun.

ROXBURY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

A Tragedy in the Woods.

The book of Nature is a volume of huge proportions, and all the years of a long life are not sufficient to more than scan a few of its many pages. From earliest times has man heeded the command to go forth "and fill the earth, and subdue it, and rule over the fishes of the sea and the fowls of the air, and all the living creatures that move upon the earth."

In every age has he heeded the command and striven to familiarize himself with his surroundings and to force Nature to give up her secrets. While the door to many a labyrinth has never been opened, and no key has yet been found to effect an entrance and reveal the treasures contained therein, the record of his success may be read in our high and rapidly advancing civilization.

In that department which is of special interest to the sportsman naturalist may be found the names of many taking highest rank with the most brilliant minds which have made the world their debtors—men who shed the luster of their genius and attainments upon the whole human race, and who won undying fame by the rich legacy left behind and by lifting up their fellow-men to higher levels.

When we consider the years devoted by such men to the patient observation and study of animate nature—fur, fin, and feather—in many climes and under manifold difficulties—the evolution of order out of chaos, and the triumphs of biology—we may well pause in amazement at the results already achieved and which are now so amicable and helpful.

But to no one individual is it given to know all that there is to be known regarding the habits and home-life of any species, even in a given locality, much less as modified by habitat and environment in other parts of the world. Much that has been recorded as true of certain times and places must now be modified to meet later and more extended observation and investigation.

The intelligent sportsman of the twentieth century may discover nothing striking or marvellous in his outings which will be an important contribution to natural history with which his name will be handed down to posterity; but a multitude of important, if lesser, matters may profitably engage his attention which will well reward his efforts and add items of value to the storehouse of knowledge of mankind. There are yet many things in natural history to learn, and many things that are recorded in the books to unlearn—and no one is better qualified for the task than the intelligent lover of rod and gun, who takes his outings with eyes and ears wide open, and who gives to his fellows the benefit of what he learns, which is not known or improperly recorded.

This train of thought has been suggested by a tragedy which fell under the observation of the writer while seeking the gamy trout in a woodland brook during the early months of the open season of the present year, and in which some half dozen crows and a hen partridge were the participants and victim.

It is true that the incident may be well-known to others and so of no moment as a new factor in natural history, but as it had never fallen under my observation before, and never having seen in any work upon natural history that crows make open warfare upon game birds, the onslaught came home to me as a sad discovery, and one worthy of record.

It is true that the crow is considered a bird of ill omen, carnivorous, and an outcast that every man and boy delights to persecute and destroy. From early boyhood has the writer known that crows love to feed upon carrion—and so become the scavengers of the land—and this, with other laudable traits, has, he thought, justified the belief that they were more helpful than detrimental, even though they do pull up and destroy more or less corn in the early spring.

Journeying beside the brook, through a piece of woodland, a great commotion was heard among the crows, and I concluded that some of their young had fallen from the nest, or that the young brood had, for the first time, used their wings in flight. As I proceeded their noise and clamor grew in intensity and volume out of all proportion to their number, when, on arriving at a road through the woods, I saw a great commotion among the crows—some flying hither and thither—some flying upward and wheeling around and darting down again—and again attacking one another—and all doing their utmost to add to the general din. I approached quite near to them before they heeded my presence, when the more timid took flight to the nearest tree top, where they became interested spectators.

One, more brave than the rest, was not to be driven away, but kept striking with his beak and tearing feathers and flesh from his victim. Nor did he desist and take flight until my hand was within three feet of him, when he reluctantly beat a hasty retreat.

There before me lay gasping in death a ruffed grouse hen, from the neck and back of which nearly all the feathers and flesh were stripped. Death came as a relief in a few minutes and closed the scene, unless a brood of young were left to die of starvation, or otherwise. And now, with added knowledge, I no longer entertain my former kindly feeling for the crows.

GEO. MCALDER.

WORCESTER, MASS.

Weasels' Ways.

In certain portions of the West the common weasel, or ermine, frequently takes up its abode in the villages of the ground squirrels, which are such a pest, and preys on the young and perhaps the adult squirrels. If, for any reason, the squirrels desert their village and move onward—as they frequently do, through lack of food—the weasels are likely to migrate with them.

This year the ground squirrels have been a pest on the Blackfoot Reservation, in western Montana, and have devoured many of the gardens, root and branch. There seems to be no efficient way of destroying them, though by means of the trap and a small rifle my friend, Mr. J. B. Monroe, had managed to kill in his small garden about 300 up to July 1.

In this village there were several weasels, and Major

R. A. Allen, who devoted much time to shooting squirrels, frequently saw them. One seemed to have very little fear of him. Sometimes he would see the creature run into its hole, and going there, would hold a dead squirrel down in the hole, and the weasel would come up and seize it with his teeth. At length the little animal became so tame, that it would leave its hole and come to him and reach for the squirrel held above, and would often jump into the air trying to catch it.

Of course, the weasels were never troubled—they were useful in destroying squirrels.

Major Allen told me of a family of weasels which he had observed at his home in Ohio. They had been suffering from a plague of rats and mice, but suddenly all these disappeared, and one day, up through a hole by the hearthstone, a weasel's head appeared. It soon developed that under the house there was a family of half a dozen. They seemed very hungry, and as Major Allen fed them they soon grew very tame. They used to come out and run about the room, and manifested no fear whatever of the family. At last they disappeared.

G. B. G.

A Pious Parrot.

If Coco meant the half of what he said, and was even a quarter as wise as he looked, he was a wonderful bird. I met him in Paris, where he lived with an old English lady, who spent her life in her own apartments between her maid and her parrot. Coco was thus her almost constant companion, her guide, counselor and friend. He had an easy flow of conversation, and said many funny and apt things that I have forgotten, but no one who saw and heard him at his devotions of a Sunday morning, is likely to forget it. His mistress, being unable to attend the English chapel, read the service in her own room aloud, with Coco for congregation, for none ever exceeded the unctious of his long-drawn "Amen," nor the contrite quaver of his "Good Lord deliver us" in the Litany, and when it came to "miserable sinners," he rolled up his eyes and nodded his old head in dismal approval.

It would have been unkind to smile during the performance, for Coco's feelings were sensitive, and, moreover, the old lady found comfort in the thought that he, perhaps, dimly understood. She told the following story in proof of his sagacity:

A friend came to visit her one day, who also owned a parrot. The talk turned upon the rival birds, and the visitor instanced, in proof of her pet's powers, an intricate sentence that he had been taught to say. She repeated the sentence several times, mimicking a parrot's nasal voice. Coco, meanwhile, showed evidence of great excitement. He sidled hand over hand across the back of the sofa on which the visitor sat, puffing out his chest and holding his breath till all of his feathers stood on end. Something was on his mind, and he was straining to get it off. As the visitor rose to go, his efforts culminated, and as she passed out of the door he screamed the sentence after her, exactly as he had heard his rival quoted.

The Opossum in Canada.

ABOUT the middle of January, 1899, an opossum, evidently *Didelphys virginiana*, was taken in a hen house near Port Colborne, on the north shore of Lake Erie, and about twenty miles west of Buffalo. The hen house was situated on the south side of a hill, and near a thicket of hemlock, in which was a hollow tree. The little fellow was evidently hibernating in the tree, and, from the tracks seen on the snow, was making nightly visits to the hen house. He was apparently half-starved, his stomach empty and his tail and ears frozen, the tail only a stump four or five inches in length. He is now mounted and in the collection of Mr. Chas. Hay, of Port Colborne, Ont.

A female of this same species is reported to have been killed a few miles west of Port Colborne, and with her a number of young ones. Again, another specimen is now mounted in a collection in Chatham, Ont., which was taken in 1900 near Rondeau, Kent county, Ont.

As far as I know, this animal is an addition to the fauna of Canada not generally recognized, and it would be interesting to hear if other observers have any record of its occurrence.

G. A. MACCALLUM.

DUNNVILLE, Ont., Aug. 81.

New American Jaguars.

UNTIL very recently the jaguars of South, Central and North America have all been grouped under one species—*Felis onca*, Linnaeus. In August last, however, Dr. Edgar A. Mearns, in the Proceedings of the Washington Biological Society, describes two species and one subspecies of jaguar from Central America. These are: The Central American jaguar (*Felis centralis*), the Mazatlan jaguar (*Felis hernandesii*), and the Campeche jaguar (*Felis hernandesii goldmani*). These species differ chiefly in skull characters, in the extent of the black markings of the skin and in the ground color, which varies from a pallid clay color in the first-named species, to a much more intense tawny yellow in the last.

The Central American jaguar occupies Central America from Honduras to Panama; the Mazatlan jaguar is found in the arid tropical areas of Mexico north to the United States, while the Campeche jaguar inhabits the humid tropical areas of Mexico, perhaps north as far as Texas.

An effort will be made to remove a large red oak tree from the wildest section of Arkansas to Forest Park, St. Louis, for the Louisiana Purchase Exposition. The tree is 160 feet high, and 12 feet in diameter at the base. A double tramway will be built from the tree to the river, where it will be floated and towed to St. Louis. It is estimated that this will occupy six months. The tree will be dug up by the roots, instead of being cut, and none of its branches will be trimmed, so that it will appear on exhibition just as it now stands in the woods.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Outing of the Three B.'s.

(Concluded from page 188.)

SUPPER over, we went as usual to our places around the office stove, and there laid our plans for a duck-shooting trip down the river the next day.

Some one finally noticed that Steve was working away at some scheme, and asked if he were juggling the electoral vote. "Better luck," said Stevens; "I am going to raffle my pump." "Come on with your chances," said Bob. "We are game as long as the numbers run low."

When the numbers had all been put in envelopes and shuffled, the bunch was passed around, and of the ten or more drawn I came within three cents of getting the highest number—the highest-priced ticket. That was my normal luck in this kind of a game, so I was not discouraged. Bob got his chance for one cent and Burt for a nickel more, so we three agreed we would go again, and the others thought they would come in, and the pack of numbers passed around again. Burt got a chance gratis, Bob got thirty nine and I, as usual, above fifty cents. I was getting a little disgusted with this game, and offered to pitch "crackliew" with any one, got a taker right off and won two more chances. Then the storekeeper got the floor and explained that that sort of thing was all right after everybody had enough chances out of the pack, or there were no more to draw, and he had a proposition to offer. He proposed that every one draw, and the one coming nearest to a certain number have all the chances drawn, each one, of course, paying for the number he drew. All agreed, and Steve named 39, and again the bunch of tickets went around, and I won the lot at forty-one cents, which placed my stack of chances at sixteen. We kept at it until we had exhausted the bunch, and I held nearly one-third of the total number of chances, with our party holding about one-half, and we decided we would have a gun ourselves to sell or raffle off before we left, sure, and at once became much interested about the remaining details of the raffle. The managing spirit explained that we would "shoot it off," which remark did not convey a very clear idea of the proceedings to any of us, but at any rate we had the gun won. After getting the cash balanced Steve announced it was up to the "shoot off." The storekeeper left the room and soon returned with the head of a barrel, with a nail through the center, on which the disk would whirl like a buzz-saw. The barrel head had been spaced off with lines running like the spokes of a wheel, and on the outer edge of the wheel the spaces were numbered to correspond with the numbers on the tickets. With this contrivance, a lamp and a rifle, we all filed down to the ice house, where the barrel head was nailed up and whirled to see that it worked properly; then a disinterested guide took a stand ten yards away with the rifle ready, called out, "Let her roll," and as the head whirled, took quick aim, fired, and a saw-mill hand with number 42 owned the best pump gun on the St. Francis River—at least, that is what Steve declares, and what Steve says is so, if it isn't so.

Next morning we started for a day with the ducks down the river. The day promised to be a good one, as the morning broke gray and cold, with now and then a little sleet. With the boats hidden, we had but a short time to wait before along came a pair of mallards. I got one with my first, but rocked the boat so that Bob missed his with the first; then I took a shot at the bird, which I thought would escape, and missed it clean; then Bob did it up brown, for he not only "wiped my eye," but made a clean kill at fully seventy yards. In a few minutes along came a flock, flying directly over us. We dropped one stone dead, and another, which was hit hard, swung over Burt, who doubled him up in good shape for the bag. Then another flock came over, and we had visions of doubles for each, but after the report of six barrels died away one lone mallard, which had climbed to a great height, set its wings and sailed off over the timber, where he dropped, beyond our reach. "We will have to change our lead or get them closer," I remarked. "They were close enough; it's our shooting," said Bob. "I guess that's right," chimed in Burt, from his side of the channel. "Well, I'll bet I will get far enough ahead of the next one," said I. "Get down, here comes one to try," and down the river came a sawbill on an errand and quite high. Burt took a shot at him as he passed, increasing the bird's speed, and, to demonstrate what could be done with a proper lead, I drew fully six feet ahead, and he dropped dead as a mackerel. "Did you see me get my eye wiped?" said Burt. "Lead 'em," said I, and at that moment, Whiz! went a flock of teal just back of Bob, who turned quickly and with a snap shot killed one of them. I giving them a parting shot as they went on down the river, but with no effect. I suggested that we retrieve the dead birds, and had pushed partly out of the flags, when Burt hailed us and pointed down the river, from which direction a flock of fully seventy-five mallards was headed our way. "Darn the luck," said Bob; "if we were only in out of sight!" We crouched as low as possible, and the ducks came on and sailed around, as if to light out of gunshot below us, then rose and came on over us, but evidently too high, for we failed to bring down a bird. We picked up our birds, losing several in the flag, where we could not push the boat or wade, and returned to our blind, Burt having killed a couple while we were gathering our birds.

The shooting continued until about 10:30, when the clouds began to break, and in a short time the sun came out and the flight stopped almost completely. At 11 o'clock we started back to the club house with a fair string of birds, intending to return later in the day. Bob and I in one canoe, and Burt in another up the river, where he was just disappearing around a bend, when up the river to the left came a fine flock of mallards. Bob and I dropped our paddles, grabbed our guns, and, as they came within range, veering off as they saw us, I fired my right barrel just as Bob was getting his aim. During this time the boat, unguided, had swung around in the current, and, as we gave the birds a broadside, the

recoil of both guns was too much for our narrow craft, and over we went into the ice-cold water. We both popped up at the same time, having found we could touch bottom, and, at least, did not have to swim for it. We grabbed the boat, which was drifting off, nearly full of water, and then, as we stood there up to our arm pits, it occurred to me that my Greener was somewhere on the bottom of the river, and I began feeling for it with my feet. I finally located it, and, as I went after it, with the water percolating through my whiskers, Bob became conscious of the humorous side of the affair and went off into a fit of laughter, standing there in the water as if it were July instead of November, which I thought would continue until there would be no further chance of my ever crawling out, for the cold was fast penetrating my marrow. Lucky Bob had put his extra shell boxes into a large, tin pail, and it was put to good use bailing the boat. Bob bailed away and laughed, while I shivered and held the boat, and it seemed to take him much longer to laugh than to bail out the boat.

He finally finished bailing, and the next thing was to get into the boat. (I have explained earlier that there were no banks that we could wade to short of the club house, a full mile away.) Bob held the boat while I tried to lift myself over the side. Not having removed my hunting coat or the shells in it, together with the large, game pockets full of water, the weight was too much for me, and I stuck, only half way over. Bob came to my rescue, and catching me by the foot gave me a boost which sent me sprawling and drenched in the bottom of the boat. Then he laughed again, until I thought the only way to stop him was by a vigorous use of the paddle on him. I was positively freezing stiff.

He finally decided to board the boat, which he did a little more gracefully than I, and we each grabbed a paddle, and if Bob had used his as I did mine we would have been at the club house in short order, but he had to stop every minute and laugh, while I had to keep at work or freeze up.

When we caught up with Burt we berated him for not answering our distress signals—if Bob's roars of laughter could be called such. Burt was rather dubious about letting the guides know of our accident, for fear of ridicule or a dislike to acknowledge that we were not able to manage the canoes ourselves, and finally decided that a story to the effect that we had been obliged to wade in recovering dead birds would be about the right thing. We lost no time in getting into the house and to our rooms, leaving a trail of water from our saturated clothing, which made every one suspicious of an accident in spite of Burt's smooth explanations.

We made no pause for remarks, but shot into our rooms. As we were getting into dry clothes we could hear Burt in the office doing his best to devise likely explanations—that the boys had been doing some tall wading for those mallards, and got good and wet; that he would like to see himself getting into that ice water for all the mallards in the country, etc., upon hearing which Bob had to go off into another spasm, and, as I was feeling better on account of the dry clothing, I had to join him, for really Burt was doing some artistic lying for us old sportsmen, who were too foxy to ever fall overboard. We made so much noise that Steve came in to see what it was all about, and when he saw us and the piles of wet clothing, he went at us, and, finally getting us cornered, made us own up that we had been in all over—and Burt was still in the office "holding the bag." Strange to say, we suffered no ill effect from the ducking, and in half an hour after changing our clothes were ready for another trip, and feeling simply fine. After dinner we went back (with a larger boat) and got more ducks as they came in in the evening.

The next day we went fishing again, but with small minnows, and did not have very good luck, but with quite a respectable string we started back in time to go out on the river for the evening flight of ducks.

In council that evening it was decided that we would make another trip to Gum Island, and, profiting by my previous experience, I determined that I would not be caught napping if I had another chance at big game. Next morning found us upon our way. My old guide was taken sick on the way up, and we decided that it would be best for him to return. I felt sure, however, that I could get about alone or keep along with some of the others. We started out, Bob and I with his guide, and had gone about half the length of the island when the guide motioned me to come over his way. I walked over as carefully as possible, and he whispered that he thought he had seen a turkey just ahead of us about a hundred and fifty yards. Presently I, too, thought I could make out one, but was not sure. The guide then thought he had better go over to Bob, and I could walk up as carefully as possible, and perhaps one of us would get a shot. I started ahead slowly and with as little noise as possible, stopping and listening now and then, and finally could hear the birds scratching in the leaves, but could not see them, and as I was starting forward I saw a big gobbler pass an opening in the thicket, but out of gunshot; then four more, and in a second another bunch, making fully a dozen birds in the flock. They had evidently discovered me, and were leaving. I hailed Bob and told him to keep a sharp lookout, as the birds had gone his way. Then I went on toward the place where they had been feeding and sat on a log near by, thinking Bob and the guide might scare them back my way. In about ten minutes I heard the sound of their walking through the leaves and knew there was fun ahead if I did not move—and I didn't. On they came, and as I caught a glimpse of them now and then and could make out how they were headed, I became fearful lest they should not come close enough for a shot. Half of the flock had passed before the opening, at a distance away which would have made a fine shot for a rifle, but too far for a shotgun, and so I still waited. Finally out of the thicket, about 50 yards away, walked a big gobbler. I could wait no longer, and, as he stood stretching his neck, evidently looking for trouble, I gave him a load of BB's. He rolled and fluttered like the proverbial "chicken with its head off," then got on to his feet, when I gave him the other barrel, and the feathers flew again, and I heard him try to fly and then crash into the brush, where he no doubt gave up. I started for him, loading on the way, and had nearly reached the spot where I had first shot at him, when I was attracted by the snapping of twigs and the noise of

a heavy animal coming through the brush behind and to the right of me. I stopped and looked around, and there, coming toward me at a dog trot, about 200 yards away, was a big, full-antlered buck deer.

Again I stood still, for I had no chance to drop or hide, and decided that my chances for a shot lay in my ability not to move a muscle. On he came, and I had time to note that his tongue was hanging out of his mouth and that his horns were as fine as any I had ever seen. I did not think of it at the time, but I had no sign of "buck fever" which I had heard so much about. What was worrying me was that I had no buckshot in my gun and no chance to get them there. On he came, and still I stood, until he had just passed me, and was as near as I could get to him and not be discovered, I raised the gun, took a careful aim and fired. With a great leap he seemed to turn in the air and was heading directly for me, and at a gait that promised to run me down. I stood ready, however, to get the closest possible shot, when he saw me for the first time, and before I could raise my gun I had nothing but a pair of retreating hams to shoot at, which I did as soon as I could get a line on them, and again the hair flew, but not as far as the buck. The wounded or dead turkey was a side issue now, and I took up the trail of the buck, which was also badly wounded, and followed it to the east end of the island and as far out into the swamp as we could go, but finally had to give it up.

I was much downcast when the others came along, and Bob took up the trail into the swamp, but he, too, came back without having located the buck. I then asked the guide if he could pilot us back to the place where we first saw the turkeys, but he was not sure, and in trying he failed completely, so I had nothing to show for the best day's sport I had ever had with anything bigger than a duck, never having seen a deer in his native fastness before. Having seen woodcock borings near the edge of the swamp, the others went back and bagged several of these fine birds, and on the way back to the boats we killed quite a bunch of squirrels. At the landing we about decided to stay on the island over night, the guides to remain or go home as they chose, but at the last moment we came to the conclusion that as we had no blankets and practically no shelter, it would be the part of wisdom to reconsider the matter, we being no longer young boys who could stand any kind of exposure as we once could, so we paddled back to the club house in time for supper.

That night Bob and I put our wits to work and pulled the No. 6 shot out of several shells and replaced them with buckshot, and, for want of a crimper, borrowed needle and thread and sewed the top wad in. While it was not our luck on our next trip to the island to have an opportunity to use one of these shells, I turned mine over to a gentleman, who killed a fine buck with one of them the next day after we left, so I know the scheme will work.

The Three B.'s had about reached the end of their string; the sands of their vacation time were running low; enough time, however, remained before their train left for them to take a short trip over on to Panther Island to get one or two of those wild turkeys that, according to Steve, had been "using" about a certain clearing not more than a half mile from the club house. They found the clearing, which contained corn, cotton and cockleburs, and the Three B.'s went flitting about from plant to plant, accumulating cockleburs and cotton, instead of honey, and trying hard to see, through the rapidly increasing load, a specimen of the wild turkey family, which doubtless were there somewhere, for Steve had said so. The first cocklebur patch covered their clothes with a very complete layer, and the cotton patch covered the layer of burs, to which was added, directly, another layer of cotton, and the burs stuck to that just beautifully, and soon it was a puzzle picture of three enlarged cotton bales liberally studded with cockleburs, to find that number of turkey hunters. No turkeys were to be found, however, and there is no doubt whatever that if ever a turkey went there it was only for once—and he never went there any more.

The Three B.'s—especially one of them—were very anxious to get a wild turkey, and they wandered back to the club house in such a frame of mind that when they came across a native lying in utter abandon by the roadside with a jug by his side, and, being invited to come and have something by the individual, who was then able to raise his head without assistance, as he volunteered the information that he was drunk "last night," it required their united efforts to prevent each other from accepting the invitation. Turkeys, were scarce and hard to get. The natives couldn't seem to get any, and the Three B.'s couldn't even buy one, so they went rolling homeward singing something like—

It is, most surely, a very hard lot,
When, after a trip, speculation is rife
As to what's best excuse for the boys and the wife,
Since no turks have been killed and none can be bought.

It was enough to make men of even the Three B.'s known character get into the condition the man was last night.

A short trip was made to a neighboring saw mill to investigate the methods of changing a tree into merchantable material, and for the purpose, evidently, of testing the sensations connected with falling down stairs when a soft cushion in the shape of a pile of sawdust is at the bottom to save the bones. One of them tried it—it is presumed it was the one who wanted the turkey the most, he having had considerable sorrow in this connection to put under the overflow.

With nothing but the return trip to recount, the sooner this narrative is closed the better, for the only unpleasant part of a hunting trip is the part where it ends; it would, perhaps, be better not to have any end, but just continue the reality on into an imaginary one to bridge the gulf between the one ended and the one which is in preparation for next fall.

BILL.

Recollections of an Old Hunter and Trapper.

MR. E. C. BARNARD, of Bloomfield, Conn., probably has the distinction of being the oldest hunter and trapper in active service in the State. On Feb. 5, last, he completed his eighty-first year, and during last winter he covered about fifteen miles daily, in making the rounds of his traps, and his catch of minks, and other fur-bearing animals, has been the largest and most profitable he has had in several seasons. On a recent visit, the writer found the old trapper in a reminiscent mood, and in the course of conversation he related many interesting incidents of his long career in hunting and trapping.

"From early boyhood," said Mr. Barnard, "I have had a strong liking for the sports of field and forest, especially that of trapping, and I used to spend my few leisure hours in studying the habits of the birds and animals about me, trying, in boyish fashion, to capture them in rudely constructed traps; but, as my father was a plain, hard-working farmer, who needed all the assistance I could lend him, I found but little time to devote to my favorite pastime. In this emergency I set and visited my traps on moonlight nights, after my day's work on the farm was done. Quails and partridges were plentiful in those days, and there being no game laws, I constructed long hedges and set many snares, often catching in a single round more birds than I could carry home at one time. These I disposed of in the near-by towns, at prices varying from 25 cents to 50 cents each; realizing thus early that my trapping propensity could be turned to good pecuniary account. When I was about fourteen years old, I caught my first mink in a trap I had set for a woodchuck. At that time I did not even know the name of the animal I had captured, but was delighted with its beautiful, thick fur, and from that time to the present I have made the trapping of minks a specialty. As soon as my time became my own, I began to devote the three last months of each year to hunting and trapping, often realizing better financial returns from my game and furs than from all the care and labor of the other months combined; for in those days all furs brought high prices. Beginning in 1860, and lasting for a number of years, prime mink pelts were worth \$15 each. As late as 1870, I sold seven mink skins, the product of four days' trapping, for \$80. Since then the price has gradually depreciated, until to-day prime pelts bring about \$3 each. The largest catch of minks I ever made in one season was in 1895, when I captured forty marketable skins. This catch, though large, only brought an average price of \$3; less than half their value twenty years ago. It may be of interest to know that in trapping for minks I never use bait, my traps being concealed in the runs the animals use in making their journeys up and down the streams they frequent. Minks live mostly upon fish; and the fact that they are very fond of trout goes to show that they are somewhat epicurean in their tastes. Trout are peculiar, in that they deposit their spawn in the fall instead of in the spring, going for that purpose to the head waters of the smaller streams and brooks. This habit the minks are well aware of, and they follow the trout, killing and eating as they go. Minks are voracious creatures, often catching at one time more fish than they can possibly eat; these they place in little heaps by the side of the stream for future consumption, and the trapper who chances upon one of these improvised storehouses knows that its owner will surely return. Then if his trap is properly placed, and cunningly concealed, the trapper will be richer by one mink pelt in the morning.

"The female mink is not particular about her nest, or breeding place, and the young are generally born in a hole beneath the bank of a stream, or in a crevice of a trap-rock ledge. Almost as soon as they are able to walk the little fellows leave the nest and take upon themselves the responsibilities of life, catching their own fish and looking out for their natural enemies, of which man is most to be feared.

"Beside minks I have trapped all kinds of fur-bearing animals known to this section of country, including foxes, coons, skunks, muskrats, and an occasional otter. I shall never forget the experience I had in catching my first otter, of which I have taken only four in all my years of trapping. I was making a little prospecting tour along the banks of the Farmington River, one winter day, when I came across a narrow path in the snow, leading from the top of the bank to the river. The track was hard and smooth, and looked as if it might have been made by a boy with a barrel stave for a sled, such as I have often used myself in my boyhood days. A closer examination revealed the fact that the creature, or creatures, that used the slide, returned to the top of the bank by a different route; the tracks in the snow were those of some animal I was not acquainted with, and very much mystified I reported my find to a fellow-trapper, a man older than myself, who had had experience in Northern waters. He informed me that the tracks I had discovered were those of an otter, and that the path in the snow was an otter slide, it being the custom of that animal to amuse himself by sliding headforemost down the embankment into the water, repeating the performance indefinitely if undisturbed. My trapper friend lent me some traps which were made to catch large game, and instructed me how to set them, but my best efforts were unsuccessful, and in a few days I returned the traps, having come to the conclusion that the otter had departed, it being well-known that they are of migratory habits. In a few days, however, I discovered fresh tracks in the snow near the slide, and determined to make one more attempt to capture the prize. Going to the nearest town, I procured a strong, double spring trap, with a chain twelve or fifteen feet long, attached. Choosing the spot where the otter emerged from the water, in returning to the top of the bank, I set the trap in such a way as I hoped would catch him by the hind leg as he came out; then carefully concealing the trap with dead leaves and bits of driftwood, I fastened the chain to a stout sapling near by, and departed for home with high hopes. Next morning I was early on hand, but found everything undisturbed. Three times in succession I visited the trap, only to be disappointed, but on the fourth morning, as I approached the spot, I saw that a great commotion had taken place, and my heart beat fast with anticipation. Every bush and sapling within a certain radius had been cut down by the

Notice.

powerful teeth of some animal, and the water near the bank was filled with twigs and branches. Laying hold of the chain I found that the trap was held by some heavy body, and clearing away the rubbish, I discovered a splendid male otter fast in the powerful jaws of the trap, and drowned beneath the bushes he had felled upon himself in his rage and agony. That was one of the proudest moments of my life; I felt like a boy who has caught his first woodchuck in a figure 4 trap. The pelt was of excellent quality and added \$15 to my season's sale of furs.

Probably the only fur-bearing animal that has not decreased in numbers during my lifetime is the skunk. It seems to me that the more skunks I catch the more there are to be caught, and no other animal is so easily captured. A piece of fresh meat, fastened to the pan of the trap, is all that is necessary. In war times a good, black skunk skin was worth \$3, but to-day the best of them only bring about \$1.25, but, by utilizing both pelt and oil, for which there is always a ready market, I can still make a very good profit on the unsavory little creature. Fifty years ago a species of white hare were numerous in this locality, though now they are practically extinct. They were much larger than our common gray rabbit, and excellent eating. The city hunters used to consider it great sport to shoot them, and would come at the first fall of snow and engage me to guide them and run the hares. After posting my men, I would take the fresh track of a hare and follow it unerringly, until, in accordance with the unfailing tactics of hunted hares and rabbits, the game would double on its course, when one of the waiting hunters would kill it, and I would take up another track. Some people would not believe that statement, but it is true, nevertheless; and there are men living who have hunted hares with me in that very manner who will substantiate my story. In all my experience I have never hunted with a dog, believing that one dog will scare more game out of the country than the baying of all the guns in Christendom.

In my youth I made a habit of imitating the peculiar calls and whistles of game and became so expert that I could decoy a flock of quail or partridges within shotgun distance, and all my bird shooting has been done in that manner.

"Another kind of game that is now extinct was wild pigeons. At certain seasons they came in such numbers that they fairly darkened the sun in their flight. In a pine wood, near where I lived, was a roosting place, where, year after year, the migrating pigeons would congregate to pass the night, and there all the men and boys of the neighborhood would go and knock the poor birds off their perches, and wring their necks, much after the manner of a latter-day chicken thief. So plentiful were wild pigeons at such times that they sold in the markets at five pence half penny a dozen; about 18 cents in the present currency. Wild ducks were also very plentiful in my younger days, and I always took great pleasure in hunting them, although I never derived any great pecuniary benefit therefrom. Perhaps the narrowest escapes from death I have ever had have been in connection with duck hunting. I have made it an invariable rule, when hunting, to secure at any cost whatever game I may have killed or wounded, and this determination has gotten me into some pretty serious situations. I was once hunting along the banks of a small sheet of water known as Little Pond, when I discovered a pair of ducks in the open water, not far from the shore. My double-barreled gun was always ready for business in those days, and I killed a duck with each barrel; but the question then was, how to secure them? It was in the latter part of March, and the ice in the pond had broken up, and was floating about in various-sized cakes, none of them being large enough to bear my weight. There was no boat near, and a pole long enough to reach the ducks was out of the question. I hesitated in uncertainty quite a long time, but it seemed to me that the one thing necessary to make my life perfectly happy was a roast duck dinner; so, taking off my clothing, I plunged into the water, pushing the cakes of ice out of my way as I swam. I had almost reached the ducks when I realized that I was becoming benumbed, and must make all haste for the shore if I wished to get there alive. I had just strength enough to pull myself on to the bank, by the aid of some overhanging bushes, and was obliged to rest for some moments before I could get into my clothes and start for home, which I reached in a condition that nearly frightened my wife out of her senses. In my wild scramble for the shore I had received numerous cuts and bruises from the sharp edges of the ice, which, in my benumbed condition, were not apparent, but as I warmed up from the exercise of walking, the blood began to flow, and when I reached home my body was covered and my boots well filled with the ruddy stream of life. I was not seriously hurt, however, and the next day I returned and captured the ducks. Another incident of like nature occurred about a year ago. I took down my old gun one day and told my wife that I was going to celebrate the attainment of my eightieth year by having a duck hunt. She begged me not to go, saying that I was getting too old for such dangerous sport; but I was not to be persuaded, and started out, determined to have one more try at the ducks. I followed the river to a point about two miles below my place, and there, sure enough, was the expected duck, breasting the current about midstream. My first shot crippled the creature so that it could not fly, but the swift current whirled it away at a rapid pace, and, being afraid that I should lose my game, I plunged into the water after it, heavy hunting coat, rubber boots, cartridge belt, and all; the water was about waist deep, and the river bottom full of rocks and holes, but I stumbled on, now up, now down; once I was carried off my feet and hurled against a big boulder, but I regained my footing, captured the duck, and, finally, made my way to the shore, very wet, but also very proud and happy. When I walked into the house, dripping from head to heels, gun in one hand and duck in the other, my wife looked up in astonishment, and exclaimed:

"Collins Barnard, how could you do it?"

"Wife," said I, "I never yet lost a duck!"

The near approach of evening reminded me that I must close my visit, and thus end for the time being the narrative of the old trapper, which I doubt not he could

have continued indefinitely, with unabating interest. So, with a warm hand clasp from the inmates, I left Sunny Side, the pleasant home of the Barnards, on the bank of the Farmington River; as beautiful a spot as can be found in the whole realm of nature. Here more than fifty years of their lives have been spent, and here hunters and trappers have gathered for many years to listen to the interesting reminiscences of the old sportsman, and to eat the game dinners for which his wife has become famous through all the surrounding country.

No children have come to gladden their declining years, but friends are theirs without number, and they approach what Mr. Barnard would term the close of the hunting season with that sweet spirit of resignation and content that is the reward of a simple, upright, and congenial mode of living.

Prairie Chickens, Teal and Small-Mouth Bass.

MONDAY, Sept. 2, will be the opening of the season on chickens and ducks, and every man who owns a gun and dog, and who can shut down the lid of his desk for a day or two, is preparing to go afield.

Every other man you meet on the streets of St. Paul is either carrying a gun case or shell case or is leading his dog.

I am going myself to Dalton, and have just come from the Great Northern Railroad office, where they tell me extra sleepers are to be added to the night train to take care of the gunners. There may be game on other railroads than the Great Northern, but that seems to be the line the boys are most using. I have never been to Dalton, where Ten Mile Lake is to be found, but I am told that you can select your own sport. If it is teal you are after you can get them on the pass at the beginning and ending of the day and fill in the interim amongst the stubble after chickens. If you care not for chickens, and prefer casting for bass from your boat, you can fill in the middle of the day with the small-mouthed bass.

It is simply a matter of taking your rod and gun, and a few shells, and doing as the spirit moves you when you reach the grounds.

The teal, no doubt, will prove plump and tasteful after their summer's feeding and tapering off on wild rice, and can be trusted to take care of themselves on the wing against the fellow who fails to hold well in advance of them. They are reported in goodly numbers, and promise fine sport.

The chickens are well grown and will no doubt make those who get them earn their bag. Being strong of wing, they will cover an acre or two after being shot into, instead of dropping again to cover, as fledglings will do, within easy gun shot.

If inclined to try the bass no pleasanter weather could be wished for than we are now having.

The day may come when the ducks and chickens may be shot off should a retrograde movement be made and game protection be done away with. But as long as our State is protected as it is to-day, not in name but in fact, our irred, fanned and feathered game allowed to increase under protection, so long then will the State of Minnesota stand well up in the estimation of the discerning sportsmen of the country.

The man who has never shot a prairie chicken or a sharp-tailed grouse can come to Minnesota and enjoy a new sensation. The quail shooter, when he gets onto a flock of prairie chickens for the first time, finds his wonted quail grown to the size of a barnyard fowl. If he has mastered the art of stopping a sailing quail he will not be found wanting when the chickens break cover.

Minnesota is a great State—now called the "bread and butter state"—because of the superiority of her flour and the excellency of her butter—and amongst her many attractions that of being an ideal spot for the lover of rod and gun is not the least of her claims to public attention.

CHARLES CRISTADORO.

ST. PAUL, Minn., Aug. 27.

The Right to a Blind.

Editor *Forest and Stream*:

Last Friday evening I went down to Barnegat Bay for a couple of days' snipe shooting. We were on the marshes all day Saturday, and lay close by in our catboat on Sunday. Sunday morning two men came out to the blind which we had occupied on Saturday, and which we were intending to occupy on Monday, and seemed to be setting out their stools. They left soon afterward, however, and we thought nothing more of it.

On Monday morning we arose early, to be sure and get this blind which we wanted, and upon arriving there found two or three stools set up and several others—fifteen or twenty—lying in the shallow water on the meadows. Leaving these stools exactly as we found them, we put out our own, considering that, as we were first at the unoccupied blind, the right to shoot there was ours. Quite a bit later, well after sunrise, two sportsmen and a gunner came out on the marshes and claimed the blind as theirs, and demanded that we get out. They said that the right to shoot in that blind belonged to them, as their stools were there. I replied that I knew of no custom in that bay, or any other, whereby a man could set out his stools on Sunday morning and go away and leave those stools, expecting them to retain the place for him to return and shoot at his pleasure. I pointed out to them that following out their principle a man could have a prior right to any good place on a marsh for all summer, provided he left his stools in that place day and night. This their gunner declared was so, viz., that a gunner could put his stools out anywhere and, provided he left them there, shoot at that stand whenever he wanted to, driving anybody out he might find shooting there, although he had not been there himself for two or three days previously. This, I claimed, was as ridiculous as it was unreasonable.

Finally, seeing that there was very little prospect of any shooting for that day, as the birds didn't seem to be flying, I left the blind.

Which one of us was in the right? Is there any custom among sportsmen which permits a man to set out his stools this morning, to go away and leave them, and re-

turn a day or two later and demand that the man shooting in that blind, who has gone through the discomfort of rising early to get that very blind, shall vacate. This blind, according to the statement of their own gunner, was the best on the meadows, and they none of them owned any property there. Does not a man have to hold a blind himself in person, to keep it? I have slept in a gunning box all night when there were as many gunners on the marsh as there were last Monday, so as to be sure to be there first in the morning. These men wanted that blind, but they were unwilling to go through the discomfort of rising early enough to insure their getting it.

MANHATTAN.

[On your statement of the case you are entirely right, and the contention of your opponent is absurd. As you state, if any such rule as your opponent advocates existed, a man's decoys might hold a single blind or point during a whole season. We have never heard of any such rule among gunners, and do not believe that it exists. Physical possession is the only thing that will give a man the right to a blind. We assume, of course, that this was public marsh and not private ground. Of course, different clubs have varying rules with regard to the possession of points on their own grounds, but in a public marsh the right to a blind belongs to the occupant of the blind.]

CHICAGO AND THE WEST.

Iowa Judge Fined.

CHICAGO, Ill., Sept. 5.—There are "sooners" and "sooners," but the soonest kind of a "sooner" is the judge of a court of law who deliberately breaks that law and then tries to excuse himself.

Opening day for prairie chicken shooting in Iowa is Sept. 1, which date this year fell upon a Sunday. On last Saturday Judge Trimble, of Keokuk, Ia., accompanied by Judge Hubbard, of Cedar Rapids, Ia., went to the town of Ledyard, in Kossuth county, for a chicken hunt. They did not wait until opening day or the day following opening day, but started out on Saturday. They returned at noon with five prairie chickens, and were promptly arrested by Deputy Warden Riley and taken before Justice Clarke, of Algona. Judge Hubbard, of Cedar Rapids, offered a novel defense, with which he undertook to browbeat the justice under threat that, if convicted, he would certainly appeal his case to the Supreme Court of the State. Intimidated by the superior rank of the prisoner, the justice allowed him to depart, meantime taking the case under advisement. Judge Hubbard in defense stated that Sept. 1 came on Sunday, that he could not conscientiously hunt on Sunday, and he knew that by Monday the birds would all have been killed. He said that the law did not recognize any fraction of a day, hence he was not violating a law which says it shall be "illegal to kill chickens between the 1st day of December and the 1st day of September in each year."

Justice Clarke, of Algona, on Monday announced that he had fined Judge Trimble, of Keokuk, \$100 and costs—about \$120 in all. There was no evidence that Judge Hubbard had really killed any prairie chickens, and no fine was imposed upon him. It is not known at this date whether Judge Trimble has paid his fine or has appealed his case. The whole matter would seem to be rather a deplorable one, and the example of these gentlemen simply strengthens the position of the other "sooners" whose sole argument after all is that of selfishness.

Iowa Chickens.

As to the chicken crop in Iowa, it seems to have been a good one—since, at so late a date as five days after the opening of the season, one must speak in the past tense regarding prairie chickens. The great drawback to successful shooting was the very hot and dry weather, which no doubt cut down the average of the bags to a very great extent. One of the best bags of which I have heard at this date is that of J. C. Hartman, of Waterloo, Ia., who killed seventeen chickens on Monday, his first day afield. He reports the weather very hot and dry. Waterloo is in a very old settled part of Iowa, and if there are chickens there, there should be many more birds in portions of the country more favorable to their welfare.

Some Chicken Bags.

Sept. 7.—Among other fair bags of prairie chickens made since opening day, there may be mentioned the following:

Dick Turtle and his friend, Mr. F. Atherton, of this city, killed 39 birds near Custer Park, Ill.

Mr. Fred Roberts, of Chicago, killed 29 chickens at Virgil, Ill. Mr. Wm. Kehl killed 7 chickens at St. Anne, Ill.

A very good bag was made by Mr. Geo. Roll, of Blue Island, with Mr. Niebert and a friend, near Joliet, Ill., the total bag being 48 chickens.

Mr. Geo. Glissman and a party of two friends killed 19 chickens near Sycamore, in this State. Yet another good bag, although somewhat mysterious in some of its features, is that made by Mr. Bynon and two friends, somewhere along the Wabash Railroad, within eighty miles of Chicago. These gentlemen killed 56 birds in two days, but do not care to state the exact locality where they were shooting.

Mr. M. E. Moran and his partner, Mr. Wolfersberger, went out to the farm of a friend near De Kalb, Ill., and the party killed 39 birds.

Mr. C. C. Hess shot at his favorite ground near Lorenzo and bagged 9 birds on opening day.

Up in Wisconsin Mr. H. Austin, of Fox Lake, and a friend, bagged 17 chickens on opening day. W. Edgerton and two friends got 19. R. G. Grube and W. Mahoney bagged 12.

From all that can be learned, the above scores are typical of the general success. They are not heavy in comparison with the old-time bags of prairie chickens, but in view of the size and quality of these somewhat helpless birds, they mark a success which is big enough, and as great as might be expected in these days. Incidentally, they prove that the prairie chicken is by no means extinct, even in the thickly settled portions of the Mississippi Valley. What the success of shooters may have been further out to the West, and in the better chicken grounds of Minne-

sota, Dakota and Nebraska, cannot be told, since the stories are not yet at hand; but there is every reason to believe that the early promise of a good chicken crop has been fulfilled.

Wisconsin Law.

The resident license feature of the Wisconsin game law is not yet a popular thing in that State. The farmers object to putting up a license for the privilege of shooting rabbits and squirrels on their own land. Many of them are posting their farms in a general spirit of revenge and spite. All this thing is rather unfortunate, but it shows that the time for stricter protection of Western game is coming, although little by little.

An Actual Lover of Nature.

Of that wide and somewhat uncertain family known as lovers of nature there may be three sorts—lovers for the name of it, lovers for revenue, and lovers for love. Search in that latter class and you shall find gentlemen of the serene sort, shall very often find men who are of great value to the world in that they frequently fill some useful position in that world, and, moreover, add to the total sum of information possessed by humanity.

Very many people in America and in Europe are acquainted with the remarkable photographs of live wild game made by Mr. George Shiras, 3d, of Pittsburg, Pa., son of Judge Shiras, of the United States Supreme Court, and a sportsman of thoroughgoing and modest sort. I conceive it may be very well within facts to call Mr. Shiras a lover of nature for the love of it. His photographs, taken at the expense of years of effort and very large sums of money in special appliances, bear the intangible yet certain imprint upon them that they were taken for love and not for revenue.

Mr. Shiras passed through Chicago this week on his way home to Pittsburg from his camp in Alger county, Michigan, where he has been spending the summer, and whither he will return in the deer shooting season, with certain of his friends, as he has for many years past. As to the plans of Mr. Shiras in his future investigations in these fields, one does not feel at liberty to speak fully, farther than to say he proposes eventually to photograph wild fowl and fur-bearing animals as thoroughly as he has photographed the deer family in its actual haunts. It need not be pointed out how interesting and valuable the results of his loving labor will be to the American public.

In Wisconsin.

The chicken crop in Wisconsin was probably much better than has been known for years. Reports of the success of different parties are slow coming in as yet, as many are still afield, or have returned but yesterday or this morning. Perhaps the success of Mr. Neal Brown, of Wausau, with whom I shot a couple of days, may be taken as a criterion. We shot at Babcock, an old logged-off country, now much running to grassy marshes. There is little or no farming in that district, and almost the sole industry is that of making hay. We found that the birds resorted to the cut marshes, much as they ordinarily do to stubble fields. This is a splendid breeding ground for grouse, and it is a difficult hunting country, perhaps the most difficult I ever saw for the successful use of dogs. The tall grass is much harder for the dog to travel than are the open fields, and under the blazing sun which obtained during our stay, the dogs found it almost impossible to work except in the early morning and in the evening. No doubt we passed over a great many birds which we did not put up, and there will without question be plenty of birds left over in that neighborhood for breeding purposes. Our party bagged forty-six in all, there being four guns—Mr. and Mrs. Brown, Jim Varney, our local friend and the writer. We made the hunt much a family affair, and the ladies certainly enjoyed it as much as the rest of us, Mrs. Brown killing her share of the birds very handsomely. It is practicable here to travel about the country in a wagon, although the going is not very good; hence it was possible for the ladies to be up when the dogs pointed, and to see the whole programme of finding, shooting and retrieving. In this way the hunt was a very enjoyable affair indeed, not the least important feature of it being the mid-day picnic lunches, in which broiled chicken played a prominent part.

We found rather more sharp-tailed grouse in this country than pinnated grouse this year. There had been no illegal shooting around Varney's place, and we found the birds in full coveys.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Plank in North Carolina.

Editor Forest and Stream:

Warren and Halifax counties, North Carolina, have recently taken the only proper step toward the preservation of game birds. The last Legislature of the State passed a law for these two counties prohibiting the sale of game at all seasons of the year. It is to be regretted that this law was not made applicable to the whole State. There has prevailed in North Carolina for several years a law prohibiting the shipping of game out of the State. This law, however, afforded but little protection. Allow the killing of game for the market and there will surely be found a way to ship it where it will bring the best price. The most prevalent way of shipping out of the State is by labeling the box "poultry" and placing a few chicken feathers in the box, taking good care to allow some of them to protrude. It might be said that the same practice may prevail regardless of the prohibition as to killing for the market. All we can hope to do is to minimize the opportunity to do wrong. The game is not shipped by the persons who do the killing, but by the store keepers who buy it of the various hunters. Restrict the hunter, and the store keeper, who, ninety-nine times out of a hundred does not shoot at all, will be unable to procure the game, certainly not in such quantities as to justify the traffic.

The preservation of game is as important as the preservation of our forests. The ruthless destruction of our forest lands is common knowledge. In the same way are our game birds year by year growing less. Unless laws of the nature now prevailing in North Carolina in the

two counties I have mentioned are generally adopted, the time is not far off when the game birds which in past years have been so plentiful will only be found on game preserves. Such a condition will be most felt by our country people. Your New York restaurant which is now taking our quail at any price will, after exhausting our supply, laugh at us and point to the fact that we failed to protect our interests when we had the opportunity of doing so.

Every State that desires to properly protect its game from a final extinction should pass laws absolutely prohibiting the sale of game at all seasons of the year. The shipment of game out of the State by sportsmen should be strictly prohibited. And non-resident sportsmen should not be allowed even to carry away with them game which they have killed. To permit non-resident sportsmen to take away with them the game they kill opens the door wide for innumerable so-called sportsmen to spring up who will make it a business to come from other States, kill and buy all the game they can take away with them, and sell it on their getting outside of the limits of the State.

P. A. AGELASTO.

Boston Shooters.

Boston, Sept. 7.—Labor Day, last Monday, was a great day for gunners, but not a very great day for game. The weather was about all that could be asked for, but somehow the flights of shore birds all along Massachusetts Bay were very small. A gentleman who spent the day at Scituate says that at least twenty gunners went down from Boston by the same train that he did, and there were others there, all bent upon shooting everything, from plover to peep. He says that it sounded much like July Fourth, the popping of guns. Cottagers, who were still at their summer homes, along the beach, complained of the danger from the gunners, and the chances are that they may ask the next Legislature to make a law keeping the season closed on shore birds till later in September, when the cottagers shall have left for the season. At Marshfield the gunners were numerous, but their success was not all that could have been asked. One gunner tells me that he traveled the marshes all the forenoon, with the result of three peep, of which success he is not proud, and hence his name is withheld. He gave up gunning and spent the afternoon in sailing. L. W. De Pass, of the Department of Statistics, Chamber of Commerce, went with a gunning party to his camp at Plum Island that day. Finding no large birds at all, they scarcely took their guns out of their cases. The shores were flooded with gunners, shooting at even single peep and "grayling." By some of the gunners these "grayling" are called "stibs" or "white-breasts." The next morning Mr. De Pass and his friend left for Boston. While waiting for the boat, with guns still in their cases, a curlew flew over. The gunners gave the call, and he circled around within easy range, but the guns were not to be used. At Essex River a great many gunners were out, but very poor sport was recorded. The same report comes from several points along the North Shore. Evidently it was not a good day for shore birds. From Chatham way come rather better reports. There were many gunners out, and some flights of yellowlegs were intercepted. C. H. Brown, of Boston, with a friend, was down, and they had fair sport, shooting several plover.

Sept. 9.—The shooting season at the Megantic Preserve has opened. It must be remembered that quite a portion of that preserve is in Canada, and that in that Province the legal open season on moose, deer and partridges begins Sept. 1, instead of Sept. 15, on partridges, Oct. 1 on deer and Oct. 15 on bull moose only, as in Maine. L. Dana Chapman, Secretary and Treasurer of the Megantic Club, has just received word that W. S. Richards, of New York, who has been stopping at his father's camps at Chain of Ponds, has been up to the Canadian part of the preserve and shot a bull moose with a fine head. The animal is reported to have weighed about 1,000 pounds. Moose signs are abundant on the preserve. Deer are more numerous than ever. Several have already been taken on the Canadian part of the preserve. The first venison of the season was brought in by Dr. A. B. Kellogg, of Hartford, Conn.—a fine buck deer. Word has got out among the hunters about this early opening, and plenty of game at the Megantic Preserve, and the result is that the camps are full, and a good deal of hunting is already being done. The club has a committee appointed to see what can be done for the fish hatcheries of the preserve, and they have already decided to obtain all the trout and salmon eggs possible this season, and enlarge the hatcheries accordingly. It is decided that the extension of the Portland & Rumford Falls Railroad, now being extended to Indian Rock, is to be continued as rapidly as possible, up through the Kennebec and Seven Pond regions and on to the lands of the Megantic Preserve, where it will intercept the Canadian Pacific not far from the Megantic Club houses. It is now felt by the Megantic Club members here that soon it will be possible to leave Boston in the morning, or New York the night before, and land at the club house in one day. The road from Indian Rock will run through one of the best fish and game regions in Maine, about thirty miles, before it reaches the principal home of the Megantic Club.

Mr. W. C. Harding, foreman of the Boston Herald composing room, has recently returned from a fishing trip of several days on the Concord and Sudbury rivers. He was accompanied by a friend, and he says that the bass, perch and pickerel fishing was even better than they expected. He believes in one taking such fish as can be had near home, if long trips to better waters are not possible, and says that a great deal of genuine enjoyment can thus be had. Mr. J. H. Jones, with his father, A. Jones, and his wife and boy, has been taking a week's vacation at Brackett's camp on the Concord River. They had good pickerel fishing, getting all they cared to use, though of rather small size. They took a number of black bass—all they cared for. One, a 3-pounder, cooked, was all they wanted. Mr. Jones, Jr., is an expert canoeist—that is, an expert in tipping it over. It will be remembered that he got kicked out by his gun last spring, when shooting muskrats. This time he charged his wife not to get into the canoe, nor to allow the baby in it. She followed his directions so faithfully that he took it into

his head to let her see how "cranky the thing is," and how well he can manage it. She was ready to watch him. He made a graceful step, landed in the middle of the canoe, but in attempting to sit down it jumped, and in a moment he was out on the further side. His wife offered to hand him a paddle or a stick, but he disdained all assistance and quickly floundered ashore. Now he says that he does not care for the ducking, but hates to have Mrs. Jones tell every friend who calls how smart he is in getting out of the water when emptied out by a refractory canoe. A late report from the Rangeleys says that still the fishing holds out, with the fly-fishing improving every day. Miss Haskell, of Newton, Mass., stopping with her brother, Dr. Haskell, at Allerton Lodge, Mooselucmaguntic Lake, has carried off the honors of the season from all fisherwomen at those waters, on salmon, landing one the other day that weighed over 8 pounds. Mr. Frank Stewart has also been on a fishing trip to some near-by waters that he knows of, and has had good luck with perch.

SPECIAL.

The Bear River District.

PORT HENRY, Sept. 2.—Editor Forest and Stream: I was very glad to read in your last issue, 31st ult., in the communication from Mr. Scudder, secretary of the Coughnawana Preserve, located in the Province of Quebec, that the forest fires that swept the country to the west and northwest of them had not reached their preserve.

I have very recently leased the territory, called the Bear River District, to the east and southeast of the Coughnawana Preserve, and to the north and east of the Maganassippi Preserve. This tract takes in the Bear River and West Branch of the River Dumoine countries, and consists of timber limits Nos. 459, 487, 333, 402, 403 and 408, in the County of Pontiac, P. Q., and contains some 230 square miles.

A small club called the Bear Lake Fish and Game Club has been formed, and will be incorporated and take over the hunting and fishing rights on this preserve as soon as the articles of incorporation can be filed with the Dominion Government.

I trust that all visiting sportsmen will bear in mind the numbers of our limits, and will respect our boundaries, which will be as well protected by guardians as are those of Coughnawana and Maganassippi preserves.

I am told that the fires that swept parts of the Kippewa District this spring, while disastrous to the lumbermen and to the natural beauty of the country, will prove a boon to the sportsmen, as the small sprouts will spring up in greater profusion than before and afford better food for game. I know that red deer will flock into "burnt lands," and am told moose will do the same.

W. C. WITHERBEE.

The Kippewa Country.

OTTAWA, Can., Aug. 30.—Editor Forest and Stream: Mr. Halstead Scudder writes you that forest fires have ravaged other hunting grounds to such an extent as to drive large numbers of moose on to the lands of his club. This is not an isolated case. The fires, of course, were not nearly so extensive as at first supposed, being chiefly in the north-central, and therefore more remote parts of our enormous Kippewa country; but still there is naturally an increase of game north and south of the fires. I am leaving Ottawa to-night for some days on the Wau-bi-ni-nung preserves and options, and will write you from there. We front for several miles on "narrows" of Lake Temiscamingue, and benefit by the reserves of big game in Ontario, where moose and caribou are protected until 1903. It would be a pity to deter any from hunting through any misconceptions.

A. M. CALDERON.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Vermont League Outing.

FROM FOREST AND STREAM'S Special Representative.

THE summer outing of the Vermont Fish and Game League at Isle La Motte, in the northern end of Lake Champlain, came to a dramatic close with the announcement of the dastardly attack on President McKinley at Buffalo. The business had been transacted, the dinner eaten and the speeches made, and the thousand members and guests of the League were gathered in groups on the lawn of the Fisk mansion waiting for an opportunity to shake hands with Vice-President Roosevelt.

The scene was idyllically beautiful. To the west the sun was sinking in a cherry-red wave of glory behind the Chateaugay Mountains, a penciled line of the faintest blue, while nearer other ranges came into darker prominence, till at the mouth of the Little Chazy the sentinel elms stood out almost in silhouette, casting black shadows on the lake glimmering with the sheen of iridescent silk, bluish-green shading into red with glints of azure and lapis lazuli, and, far off, a streak of the faintest, filmiest, ashen-gray.

Vice-President Roosevelt, Senator Proctor of Vermont and other distinguished guests were inside the house, which is of stone, with a long stone wing surmounted by a belfry. The lake washes the lawn in front, while on one hand in the sward tennis court, and on the other, separated by a hedge of plum trees, the deer park, where the dining tent was erected.

Suddenly all eyes turned toward the house as Senator Proctor, followed by President Titcomb of the League and ex-Lieutenant-Governor Fisk, appeared on the stone portico. There was a momentary hush of expectancy, pending the arrival of the Vice-President, but no apprehension of anything wrong until Senator Proctor raised his hand and, in a choked voice, said:

"Gentlemen, it is my sad duty to announce that word has just been received by telephone—I trust it may prove false—that—"

Here a steamboat whistled, momentarily breaking the

thread of the statement and giving the crowd, whose ears were strained to catch the words, time to realize that an event of more than ordinary moment had occurred. In a moment hats were doffed and the assemblage stood bare-headed, waiting anxiously for the name that each one was trying to fit to the fateful announcement.

"At 4 o'clock this afternoon our beloved President was shot twice by an anarchist in the Temple of Music at Buffalo, just as he had finished speaking and was shaking hands."

The Senator stood with bowed head, while a great sigh of horror went up from the listeners. Men's faces paled and then grew red with anger.

Governor Fisk, with tears in his eyes, called out: "I believe it is a lie; we will yet hear it contradicted." His words had little effect, however, for the assemblage was inclined to accept the first statement as true. All were sickened by the conviction that another tragedy had come to stain the fair name of the nation, which, however innocently, had harbored a Booth and a Guiteau.

Senator Proctor re-entered the house, and a few moments later returned and announced that the report of the attack had been confirmed by an Associated Press dispatch, but that there were hopeful features and that the President was resting comfortably and was conscious. The crowd made their way to the steamboat dock, talking in low voices, but before all had embarked a faint cheer went up from the house, and the word quickly passed from mouth to mouth of a later dispatch containing the hopeful news that the President was likely to recover.

Vice-President Roosevelt did not appear until after this last report, when he was rowed out to the Elfrida, Dr. Webb's steam yacht, which carried him at once to Burlington, from which place he proceeded shortly afterward by special train to Buffalo. During the speech-making Mr. Roosevelt had frequently been mentioned as the next occupant of the White House. Little did the orators realize that even as they spoke the act of a crazy fanatic in a neighboring State had made the goal so perilously near!

The Vermont League.

The Vermont League has rapidly sprung into prominence as one of the leading fish and game organizations of the country. The result is chiefly due to the work of one man, the President, John W. Titcomb, of St. Johnsbury. Mr. Titcomb is not only President of the League, but also President of the North American Fish and Game Protective Association, Chairman of the State Fish and Game Commission, and Superintendent of the United States Fish Commission station at St. Johnsbury. From this list of offices his activities in the field of game protection may be inferred.

The Vermont League is the outcome of a smaller organization covering Rutland county, which Mr. Titcomb organized a number of years ago. At the present time it has an active membership of 750, not counting several affiliated clubs, of which may be mentioned the Forest and Stream Club, of Wilmington; the Lakota Club, of Woodstock, and the Wells River Club, of Wells River, Vt.

The League holds annual business meetings each winter in Burlington, Montpelier or Rutland, and for a number of years past has had a summer outing at the picturesque Isle La Motte. Latterly, chiefly because of the prominent guests attracted to the meetings, the summer outing has taken on a pronounced political significance, and, if report is to be believed, the Governor of the State receives his nomination at this time.

Among the highly commendable objects for which the League is working is the abolishment of seining in the northern end of Lake Champlain. Canada has long permitted the use of seines in Missisquoi Bay, which is within the limits of Quebec, and to get even Vermont has given seining privileges in the same neighborhood. This is a favorite breeding ground for wall-eyed pike, and the mischief done by netting can hardly be estimated. The League has asked Quebec to make common cause with Vermont against the seiners, and, for the benefit of the entire lake, it is to be hoped they will succeed.

The Outing on Isle La Motte.

The largest quota of the visiting party to Isle La Motte were taken from Burlington in the steamer Chateaugay, which carried 650 persons. Other boats brought visitors from Swanton, St. Albans and neighboring points, while the Elfrida, Dr. Seward Webb's fine steam yacht, carried the speakers of the day. The deer had been temporarily confined to a barn, and a large pole tent erected in their enclosure. Beneath this shelter were rank upon rank of long tables, and as the guests took their seats on the benches fresh-skinned country girls brought in heaping dishes of chicken pie and other good things, and the guests fell to without ceremony in the commendable task of clearing the field of action. Outside green corn was being boiled in the great black iron kettles that played such an important part in the domestic economy of the early settlers. At each place was a clover flower, the State emblem, with a sprig of cedar or bit of goldenrod for a boutonniere.

When finally the menu had run the gamut through ice cream and coffee, and the distance became mellow through a blue haze of cigar smoke, President Titcomb called a short business meeting, which was soon ended by the election of 150 new members to the League, proposed en masse by General Estey of the Membership Committee.

Then followed the song "To Arms," which was rendered with good spirit by the St. Albans Glee Club, and which, like almost everything else that followed, was aimed at the "hero of San Juan Hill." President Titcomb then introduced the toastmaster of the occasion, Hon. D. J. Foster, prefacing his remarks with an appeal for public sentiment in support of the game laws, without which the laws must be inefficient, no matter how good. Mr. Titcomb also spoke of the necessity for a sufficient appropriation to maintain one or two salaried officers who would spend their entire time traveling around the State looking after the enforcement of the game and fish laws. At present the wardens whose duty it is to detect game-law violators receive no other compensation than half the fine collected upon conviction, and cannot afford to spend much time investigating complaints.

Toastmaster Foster, after stating that Governor Fisk wished him to deny that he had telegraphed the New York Journal that he had purchased three mountain lions

from Forepaugh's Circus for the occasion, introduced Judge Charles H. Darling, of Bennington, who, in a witty speech, eulogized the advantages of the Green Mountain State for sport, and the healthfulness of the pastime.

He was followed by Jeremiah Curtin, the author, who was introduced as having "given us in our native tongue the works of the great Polander." Mr. Curtin's address was largely a eulogy of Theodore Roosevelt. He had some nice things to say about Vermont, the birthplace of "financials, admirals, statesmen, and, I may add, Mormon prophets."

One of Vermont's young men, Raymond U. Smith, of Wells River, told of some of the anomalies of game law decisions by the courts, and cited the case of Dr. Stevens, of Boston, who fished in Lake Willoughby with five set lines, but who was acquitted by the higher court on the ground that each line had only one hook. If he had fished with the five hooks on one line he would undoubtedly have been an offender against the majesty of the law. Mr. Smith said: "Notwithstanding the practical and legal difficulties which it sometimes encounters, the League is undoubtedly restraining in some measure the rapacity of those lawless individuals who want to hunt and fish in season and out of season. It is bringing home to some lawbreakers a realizing sense of the Biblical statement that there is a reason for all things—a time to kill and a time to refrain. And if it succeeds in preserving the facilities of the State for hunting and fishing it will have done a great and useful work."

In introducing the next speaker, Toastmaster Foster said: "Fishermen are proverbial story tellers, and next to telling their own stories they like to listen to others. We have with us to-day a prince of story tellers, who knew Richard Carvel and the heroes of the 'Crisis' more intimately than any other man—Winston Churchill, a citizen of the United States."

Mr. Churchill is a very young-looking man, of good physique, with a frank, open countenance and pleasing smile. His manner of address was pleasing, and carried the conviction of candor, and no one, with the exception of Vice-President Roosevelt, received heartier applause. "I grew up with a feeling of reverence," he said, "and I haven't been able to get over it. When I met Colonel Roosevelt I felt about the size and very much as Tom Thumb felt when he shook hands with President Lincoln. One of my classmates at Annapolis was a man named Bookwalter. He was on the New York at the time of the celebration in honor of the opening of the Kiel Canal. The German Emperor came on the New York. He said he liked to visit the American warships because the sailors didn't knock their heads on the deck when he came on board. He visited the engine room, and when he left Bookwalter picked up, to preserve, a piece of waste the Emperor had wiped his hands on. That is what I call reverence. I heard the Vice-President tell of meeting a man here who claimed he had slept one night in the same bed with him, and who boasted of having slept in the same bed with the Vice-President of the United States. I've been wondering if he kept the nightgown for a trophy—though, perhaps, they didn't use nightgowns out West in those days."

Senator Redfield Proctor said: "I did not know until a few minutes ago why I was called upon to speak, but when I heard the toastmaster explain the object of the meeting was to give the young men a chance, I realized to what I was indebted. The other night I dreamed, probably in anticipation of this dinner, that I departed this life full of years and piscatorial honors honestly earned. I went up to St. Peter at the gate with great confidence, for I felt that my record was good. I told him I was a member of the Vermont Fish and Game League, but instead of this being a point in my favor, he refused to admit me. 'That League has been overrunning us with business of late,' he said. 'It has gone too much into politics and attended too little to fishing. I shall be obliged to refer you below to the Father of Lies. I think his judgment will be pretty good in your case.'

"So I went below to the scaly individual, and he told me he had established a system whereby his visitors were put in a neighboring chamber by themselves and instructed to record all the lies they had ever told on a blackboard with chalk. He looked me over and said: 'I understand you are a good deal of a fisherman and very little of a politician. Perhaps in your case one stick of chalk will answer.' I took my stick and started off and met our friend Foster here with a big basket on each arm.

"Where are you going?" I asked.

"Why," said Foster, "I've used up my chalk and have to go back after more!"

Mr. Chairman, the first evidence of success in fishing is a nibble by a small fish. There is often a large fish waiting to see if the effect is fatal. I will now give the toastmaster the opportunity to land his big fish."

In introducing Vice-President Roosevelt, Mr. Foster said: "Three years ago we had the pleasure of having as our guest the President of this great Republic. To-day we have as our guest the next President of the Republic." There were cheers and a tiger when the Vice-President arose, and when he could be heard he began: "When you greeted me some one called 'Tiger!' At the top of this green invitation which I hold in my hand is the picture of a mountain lion—a delicate tribute, gentlemen, for which I thank you. As I heard to-day, a Swiss admiral is regarded in Europe as a contradiction in terms, but in this country if we want to take an island or sail a war vessel around Cape Horn for a record, we go for a man to do it—and here the Colonel's voice had more than a suspicion of falsetto—"inland, where they grow web-footed people up in Vermont."

"Last winter I sat at the feet of—or, perhaps, it would be better to say I followed in the tracks of—a Vermont Gamaliel, the son of an ex-Congressman and ex-Governor of Vermont, Phil Stewart. I'd like to say seriously when you're proud of Vermont's products, there's a man you've got a right to be proud of. Stewart took the hunt less seriously than I did. I wanted to shoot the lions, but he wasn't particularly interested in that—he wanted to kodak them. There were periods when the lions were up trees, and when one was, by George! Phil Stewart would be up the tree with it, while I stood by nervously with my rifle to interfere if things came to the worst.

"There's a kodak now"—somebody was trying to get a snapshot of Roosevelt, and the speaker leaned over the table and brought his finger to bear on the offender—"I want to point out to the gentleman I'm not up a tree.

"Phil Stewart had a large and catholic taste. He kodaked everything without distinction. When the dogs treed our first mountain lion I rode in ahead, with Phil following. When we got about 50 yards off I could see the lion on the lower branches of the tree reaching down, and every now and then cuffing a dog. My fighting blood was up, and I wanted to shoot that lion, but before I could go further I heard Phil call in an almost agonized voice, 'Wait, wait!' Not knowing what serious emergency might have arisen, I turned, and Phil said, 'There's a rabbit on that stump. I want to get his picture.' I waited, with the hounds baying and that beast snarling up the tree, while Stewart, with the air of a villain in melodrama, crept up on that rabbit and photographed it.

"I want to corroborate Mr. Churchill's story about my long-lost bed fellow. He is here now, and will stand up if you doubt my word. It happened at Miles City, fifteen years ago, and I violate no confidence when I say that that was not a prohibition town in those days. The hotel was jammed to the roof, and the proprietor told me I had to sleep in a bed with another man. I said I was sorry, but didn't know that I was any sorer than the other man would be, and, by the way, Mr. Churchill, I may mention that nightgowns didn't go in that town. We were considered to have complied with the utmost requirements of etiquette if we didn't wear our spurs to bed. I didn't ever expect to see that man again, but he has turned up here to-day, all straight.

"When I was on the Little Missouri one of the reforms I tried to institute was to have milk on the table at meals. You might be on a ranch with 10,000 cows and yet have only condensed milk. 'Here's an outrage,' I said. 'I propose to set a good example and have milk.' So I called my foreman and said to him, 'Merrifield, it's a shame we don't have milk on this ranch. I've noticed that blue cow with a calf down there and I propose that we milk her.'

"Boss, if you say so it goes," said Merrifield, so we ran her about two miles and roped her and turned her upside down and we milked her. I must say I thought the quality of the buttermilk inferior, and I didn't bother to repeat the experiment. It is like some other reforms—best, if you don't go too violently at it.

"They have nice horses and cattle out West, but they have little ways of their own. For instance, a broken horse out West has points of difference from a broken horse in the East. Some of the saddle horses caused me most unaffected misery when I had to ride—and it was the same thing with the driving horses. I used to spend my winters in the East, and when I went back to the ranch I would, of course, want to hear the latest news about my neighbors—who'd been hanged and the rest. My foreman had a grievance against a professor from Ann Arbor, who wanted to see the Bad Lands and had hired a team, which ran away, smashing things up and breaking the Professor's arm. He said that the Professor had made a remark which made him hot. He didn't mind his saying that he had fallen in a den of sharks—because he knew sharks didn't have dens, and, besides, he didn't charge the Professor for the use of the team; what made him hot was the remark that he had foisted on the Professor a team of runaway horses. 'He had no right to call them that,' said the foreman. 'One horse had only been driven twice and could hardly be called a confirmed runaway, and the other—well, there were lots of times when he hadn't run away.'

"And now a word seriously. I came here not only to meet you all and have a good time, but also because I believe in what you are doing. I believe in the gospel of work, but a man works best if he also knows how to play. Among the citizens of our country I have in mind a man of the highest type of citizenship—a man who served with gallantry in the Civil War and was marvelously successful in business, ranking high among the captains of industry, a statesman of note whose deeds and records are indelibly printed on the records of our country, and he has been a better soldier, a better business man, a better statesman, because he had in him the spirit that made him a first-class hunter. I refer to Senator Proctor. Senator Spooner, of Wisconsin, who has just been entertained by Senator Proctor, is another such man. I think he is almost as enthusiastic a hunter and fisherman. When I talk about business or politics Senator Proctor tells me what he knows, but if I want really to interest him, I have to talk about bull moose or fishing.

"Every man will be at his best if he likes a healthy, vigorous type of sport.

"As a man, I am interested in the preservation of furred, finned and feathered inhabitants of the woods and waters, and I am also interested in the preservation of the wilderness itself. These things offset the tameness and monotony that is all too common in our lives.

"One thing I wish to impress upon you is the essentially democratic character of well-executed laws for the preservation of fish, game and forests. If you do not preserve them it means that very soon the only places where they may be found will be the great private preserves where only the wealthy or their guests have access. This can't in any shape take the place of the preservation of the game of the land by the people and for the people.

"I wish we could impress it upon all that it is the small farmers, the mechanics, the men of small means in the cities, that are most interested in the preservation of game. These men depend for the enjoyment of sport and the life of the camp upon good game and fish laws which are properly enforced.

"There are two or three different sides to this question. Deer have increased in Vermont. A dead deer is worth only a few dollars, but a live deer is worth a hundred times as much as a bait for city sportsmen who pay many times over the value of the deer for the chance of shooting at it—and they don't always hit. But more than that, I hope our people will always retain their liking for this good, wholesome, out-door sport. The farmer, the tradesman, the mechanic, can only hope to insure for their sons the enjoyment of their vigorous pastimes by joining hand in hand with such organizations as this in the work of preserving by the people and for the people the fish and game of our land."

My Boy's Surprise.

(Lines on a huge pickerel from the Thousand Islands, St. Lawrence River.)

Oh! he was a princely fish—
Bravely caught;
N'er was such a royal dish
Ever brought.

All hearts leap'd with glad surprise
When he came;
And could hardly trust their eyes,
'Twas so game.

What a giant frame and fin
To behold!
Armor'd scales o'er mottled skin,
Rich as gold.

Long he stemmed the mighty tide—
Swift as light;
Darting through the waters wide—
With delight.

Often near Niagara's roar—
Free as air,
He hath played and kissed the shore—
Prone to dare.

So among the lakes and isles
He hath grown,
Where sweet Nature with her smiles
Loves her own.

Speeding through the waters clear
One bright day,
Lo! there comes revolving near
As at play,

What his vision thinks to see
Fishes small;
And a-hunger'd quick doth he
Take them all.

But, alas! it proves a bait—
Shining bright;
Hooked within his jaws—too late,
Save for flight.

Quick as lightning's flash he turns—
Plunges deep;
Shakes to loose the bait he spurns—
Pain'd to keep.

Tight the line hauls in—by hand—
Thine, dear boy,
Till the struggling fish you land,
Wild with joy.

Yet this lesson, who will learn,
Fish or man—
True from false things to discern
When we can.

ROGER H. LYON.

New England Fishing.

BOSTON, Sept. 2.—The hearing before the Maine Commissioners of Fisheries and Game in regard to regulating fishing in Rangeley Lake was held at Rangeley, Friday. It seems that the petitioners, largely citizens of Rangeley, with well-known sportsmen, who make their summer homes there, have concluded to narrow their request down to Rangeley Lake and ponds in that immediate vicinity, and not attempt to include the other lakes of the chain below. The petition, which is supported by F. S. Dickson, of Philadelphia; L. M. Leach, of Washington, D. C., and many others, asks that Haley and Gull ponds be screened at their outlets; that all trolling and bait fishing be prohibited in Haley and Ross ponds, and that fish may be taken at such ponds only by casting with artificial flies; that all plug or still fishing with bait on Rangeley Lake be prohibited; that all trolling with bait or otherwise, on that lake, be prohibited between July 1 and Sept. 30; that the use of all gang hooks be prohibited on that lake, and that it shall be unlawful to use any device whereby it is possible for a fish to be struck by more than a single hook. The petitioners showed by statistics that fishing in Rangeley is rapidly falling off, a fact which everybody giving the subject careful attention is ready to admit. A number of speakers opposed the restrictions. In one of the strongest speeches of the occasion the speaker said that the way to help the supply of fish is to stop the early spring fishing, or a great deal of it. He would have the season begin late in May, and close Sept. 15, instead of Sept. 30, as at present. The hotel interest, together with the transportation interest, is against any restriction that shall endanger business in the least. Prominent guides also oppose the restrictions asked for by the petitioners. The commissioners reserved their decision. It is not expected that they will grant nearly all that the petitioners ask for, but that something may be done to better protect the trout and salmon, and to increase the stock in that lake.

Boston fishermen have lately been somewhat surprised at the size of black bass of the small-mouthed variety, shown in the window of the Ivers-Johnson store for a day or two last week. The fish weighed 8¾ pounds, and it is agreed that it was a monster for that species of fish. It was caught in Lake Winnepisaukee, N. H., by Mr. J. E. Hill. Fishermen familiar with that lake say that there are more like it there. Fishing at the Rangeleys is reported to be holding out remarkably well. September is looked upon as a favorable month for fly-fishing, and many of the anglers will stay till the first of October, to get deer-hunting. Fishing and camping parties are constantly departing from the principal resorts at Moosehead and the Rangeleys, for the lakes, ponds and streams farther back. These parties generally return well satisfied. But, alas, for the days of corduroy hunting and fishing suits and old clothes! Swell entertainments, with ladies in full dress and gentlemen in dress coats, are common at the Moosehead hotels, and at most of the Rangeley stopping places. Until of late the Upper Dam has been held by the real sportsman, who does not care to dress up for dinner, but a swell function was held there the other evening, with the veteran angler, T. B.

Stewart, of New York, in the rôle of an entertainer. That he did the honors well there is no question, but if he could have seen some of the other veteran anglers behind the camps in the darkness shedding tears because the dreaded dress coat had at last invaded their beloved Upper Dam, he would have wished that he had not done so. A Mrs. Wellman, of Cleveland, broke the salmon record of Pleasant Island Camps one day last week by bringing in a fish of that species that weighed 8 pounds. At the Birches Mr. and Mrs. R. B. Cooley had great sport last week with salmon. At one time they both had fish hooked, and when the fish were landed each weighed 4 pounds. Mr. Cooley also landed a 6-pound salmon. From the same camps Miss Patterson, of Rosemont, Pa., recently landed a trout weighing 6 pounds, and the same day her friend, Miss Chapin, caught one of 7 pounds weight. Mr. and Mrs. William Irwin, of New York, have been stopping at Spring Lake, Flagstaff. Mrs. Irwin landed, while there, a salmon of 5 pounds, the largest taken there for the season. Mr. and Mrs. Arthur Cole, of Boston, have been enjoying the fishing at Reddington. One day they had an experience that was not down on the programme, however. They had just got a big trout over the side of the canoe, when the hook became disengaged. Both were afraid that the trout would go overboard, and both made a grab for him at the same instant. The canoe lurched in the direction they had both leaned and threw one of them out that way. No sooner was it done, when, deprived of the weight of one of them, it as suddenly lurched the other way, throwing the other out on the other side. Both are pretty good swimmers, however, and, coming up on either side of the canoe, they clasped hands over it and found it sufficiently buoyant to sustain them till a neighboring fisherman, seeing their plight, came to their rescue.

Michigan Fishing Waters.

HARTFORD, Mich., Sept. 2.—*Editor Forest and Stream:* Quail are very plentiful and the chicks are very large and strong for this time of the year. I have just returned from the northern part of the State, where I went to try the wary trout, and I had a delightful time. I caught all I cared to; but they ran small; out of 150 trout not one weighed 1 pound. I fished on the splendid Boardman and on Cedar Creek, ten miles west of Traverse City. I fished on Yuba Creek, twelve miles northeast of Traverse City. Trout are very plentiful in all the streams, but an 8-inch trout is considered a good one. The last day of the trip I spent on the Little Manistee, in Lake county, and found it the finest trout stream I have seen yet—just large enough, with swift riffles running over rocks, and deep pools all the way. The Père Marquette Railroad crosses at Iron, seventy miles north of Grand Rapids. There are other streams equally good in the same vicinity. In Pine or South Branch of Big Manistee trout and grayling are plentiful, while in the numerous lakes all kinds of fish are plentiful. One may catch bass and pickerel, green bass, blue gills and perch, till one is sick of it. I was so well pleased with the streams and lakes that I bought forty acres in the Little Manistee just to have a place to go and fish and hunt. There are only fifty waters in the township, six miles square, so fish and grouse are plenty.

SULLIVAN COOK.

A Lobster Conviction.

In a case brought at Port Jefferson, L. I., Sept. 5, against Bruce Nelson and John Casey, of Connecticut, by Game Protector John E. Overton, the defendants were convicted of violating Section 128 of the game laws in taking lobsters near Crane Neck Point, in waters of Long Island Sound belonging to New York State.

The defendants were fined \$20 and ordered to remove their traps.

Camps of the Kingfishers.

CINCINNATI, O., Sept. 7.—*Editor Forest and Stream:* In "The Kingfisher Camp of 1901," this week's issue, there is an omission—typesetter's fault, of course—that destroys the sense of a sentence, as it were. After the word "not," 189th page, line 21 from the top, last column, read "safe to let the youngsters' go out, except on a," etc.

KINGFISHER.

Eels of Japan.

We have received from the Smithsonian Institution, as a reprint from the Proceedings of the National Museum, "A Review of the Apodal Fishes or Eels of Japan, with Descriptions of Nineteen New Species. By David Starr Jordan and John Otterbeim Snyder."

A. C. A. Twenty-second Annual Meet.

Mudlunta Island, Aug. 9 to 23.

WHEN searching for pleasant camping grounds for its annual meets the American Canoe Association is not bound down to any one place, but is free to choose within a very extensive area a new site for each annual camp, if deemed advisable by the administration in power, but, as a matter of fact, they do not as a rule wander very frequently from the vicinity of the St. Lawrence River, as three out of every four meets are held among the islands of the river in question, varied, however, by an occasional visit to some new and distant region. During the twenty-one years of its history and wanderings the association has visited Lake George four times, Lake Champlain four times, the Thousand Islands nine times, the seaside and the Hudson River once each, and the last year the meet was taken up to the far-famed and distant Muskoka region of Canada, and while the meet in that district proved a success in many ways, yet it was the feeling of the majority of the members present that there was not a sufficient difference between the St. Lawrence and Muskoka to warrant a return of the meet to the latter place. The atmosphere of the St. Lawrence is very similar to that of Muskoka, being clear and bracing, and it is also very much more accessible than Muskoka. The question as to what division would have the meet of 1901 proved a somewhat difficult problem to decide. At the meet of 1899 the pros and cons were discussed, and it was decided that if the Northern Division was willing to take the meet of 1900 the Western Division would have the option of the meet of 1901; but on account of the Western Division only having two members in attendance at the meet of Muskoka, and also being a somewhat weak division, there was no indication that they could handle the general meet, hence it was up to the Northern Division to again hold the meet in accordance with the regular rotation, as published in the Year Book. The Eastern Division were not prepared to handle it at present, nor did any of the other divisions, so the Northern Division accepted the proposition and the association elected Mr. C. E. Britton, of Gananoque, Canada, as Commodore, with the understanding that the meet of 1901 would go to the St. Lawrence River.

Considerable difficulty was experienced at the start by the Commodore and Camp Site Committee in securing a desirable camp site, as sites were found to be few and far between, and the administration seemed reluctant to return to any of the previous camping grounds. It was thought for a time that Sugar Island, the island which was chosen by the Executive Committee at the meeting in October, 1900, as the permanent home of the Association, providing it could be secured for a reasonable figure, would be available for the meet of 1901, but, owing to some hitch in the negotiations for purchase, it could not be obtained in time to have it in shape for the 1901 camp.

The Camp Site Committee's troubles were, however, removed by the Commodore coming forward with the offer of the loan of his private island, which offer was quickly and gratefully accepted.

The island in question, Mudlunta (meaning half moon), is one of the prettiest islands of the St. Lawrence. It is one of the Admiralty group, over ten acres in extent, situated about two miles from the town of Gananoque, between the Canadian and the Middle channels, and, as experience proved, made one of the prettiest and most convenient spots the Association has ever camped on. It was exceptionally well laid out, the two camps being separated by a level tract of land of considerable extent, whereon the mess tent, the camp store, barber shop and bath houses were well situated. The main camp comprised some five acres of high and fairly level ground, and so laid out that all tents could be situated in every instance so as to overlook the water, thus furnishing desirable and cool spots for all. There were an exceptionally large number of tents in Main camp, more than making up for that deficiency in the Squaw Point.

The ladies' camp, in Squaw Point, was situated to the west of the level tract of land before spoken of, and proved amply large enough for the needs of those present, as, for some reason unexplainable, the number of ladies in camp was somewhat smaller than usual.

The weather was all that could be asked for; that is, with the exception of the last three days of the meet, and proved an agreeable change from the heat experienced by the campers in Muskoka last year, which was exceptionally hot and oppressive.

The camp itself was in personnel and amusement a most enjoyable one—a pleasant lot of people, many of whom were well acquainted from former meets—and while the proportion of ladies was somewhat smaller than usual, still the time passed most quickly, with nothing very startling or sensational with the possible exception of the very violent storm during the closing days of the meet, of which more anon, but with constant occupation of one sort or another, appropriate to the occasion—paddling about among the islands, fishing, bathing, watching campfires, excursions on the steamers, catch-on parties, dances, etc.

The number registered, about 170, was comparatively small, but was yet rather more than an average camp, as the number in question were all under canvas, and the attendance was not padded by the signing of people from Gananoque and Clayton, as is often the case when the meet is held close to those towns. A very pleasant feature of this year's meet was the rally of a number of the old-timers, such as Past Commodore E. B. Edwards, whose number is 5 on the membership list of over 4,500; also E. H. Barney, Paul Butler, J. K. Hand, R. J. Wilken, F. C. Moore, C. Bowyer Vaux, W. B. Waukerhagen, H. M. Dater, H. M. Stewart, F. C. Wolters, Capt. E. W. Ruggles, W. J. Sparrow, Dan Goodsell, Maj. Lee, and other prominent canoeists from Canada and the United States.

The preliminary arrangements for the camp, such as the construction of the dock, etc., were in the hands of the Commodore and the Chairman of the Camp Site Committee, Mr. C. V. Ketchum, of Gananoque. The latter, however, after assisting in the preliminary work, was unfortunately prevented from attending the meet on account of sickness amongst his office staff, and so, in his absence, and in the absence of the other members of the Camp Site Committee, Messrs. R. E. Burns, of Kingston, and F. H. Dobbin, of Peterboro, the work at camp fell entirely on the shoulders of the Secretary-Treasurer, who had of necessity, to handle it in addition to his other duties. The arrangements in this department were very satisfactory, and extremely reasonable prices prevailed for all the camp necessities. Those who ordered tents, etc., in advance; in fact, those who even ordered same on coming to camp, had their tents pitched or them and camp beds, cots, etc., placed therein.

The Regatta Committee, after their many troubles of previous years, was this year picked by Commodore Britton with great care, and proved to be an exceptionally good committee, although, unfortunately, one of its members, Mr. E. McNichol, of Toronto, was prevented from attending on account of becoming a benedict a short time previous to the meet. Too much credit cannot be given to the remaining members of the committee, Mr. D. B. Goodsell, of Yonkers, N. Y., as chairman, and Harry J. Page, of Toronto, for their successful efforts in this direction. They were much strengthened by Messrs. W. J. English, of Peterboro, as starter, and by F. C. Wolters and H. Bachus as clerks of the course. The judges were both experienced and skillful, and in the hands of the clerks of the course as above the records were kept in perfect shape, every event being carefully recorded immediately on the return of the committee from the day's races. The thanks of the Regatta Committee are due to Mr. Henry Barber, who kindly loaned his steam yacht Wapti to the Regatta Committee to start the races, lay out the courses, etc., thus doing away with the expense of hiring a launch for that purpose. There were few protests, and no general complaints; the races were bulletined and run off as nearly to the schedule as the weather permitted. The paddling course, from a sightseer's standpoint, was excellent, as it lay along the greater part of the island, the finish line being off the dock, whereon the judges at the finish were stationed.

The sailing course, unfortunately, had to be laid out a considerable distance from camp, owing to the proximity of islands and shoals, and so far as the camp was concerned very little could be seen of the sailing events. It would also be better in the future if the sailing races were called for the latter part of the first week, and the paddling races the first part of the second week, as, owing to the scheduling of the sailing events after all of the paddling races were over, and the failure of a sufficient amount of wind, one or two of the sailors had to leave camp before all of the sailing events were run off.

In order to save expense, and in accordance with the wishes of the Executive Committee, a very simple arrangement was this year adopted for headquarters. Through the kindness of Commodore Britton (to whom considerable credit is due for the inconvenience it must have certainly put him, and his family, too), his house was placed at the disposal of the Association for the purpose of headquarters.

In this house the Secretary-Treasurer was located, and as almost always to be found there. The prizes and trophies were displayed therein, and the postoffice was also located there. In the center of the large, front room, a long table of pine boards was built, where pens, ink and paper could be found at all times, a convenience which was duly appreciated by the men and ladies alike. In this large, front room, the business meetings of the association were held, and the wide piazzas in front provided very pleasant lounging places, and were always occupied. The Commodore and family being all located in Squaw Point, the members did not feel diffidence in connection with using the house, as was the case last year, but heartily appreciated the kindness of the Commodore in placing it at their disposal and used it when they felt inclined.

The mess tent was exceptionally well located this year, being situated on the low, level tract of land between the two camps, and the cool, bracing breezes of the St. Lawrence, and the beautiful scenery on every hand, rocky and wooded shores and islands, studded with pic-

turesque cottages, could be both felt and seen while you were enjoying the most excellent repast, provided by Caterer Tasker, of Toronto, who, as the universal opinion indicated, proved himself to be one of the best caterers the Association has ever had the luck to secure.

The work of the Transportation Committee, owing to various circumstances, was practically this year handled by two members, who worked hard on the matter, and brought it to a successful conclusion, although, unfortunately, the members at camp were unable to avail themselves of the privileges thus secured, owing to an insufficient number of certificates being secured by the members attending camp to permit of the usual reduction being granted.

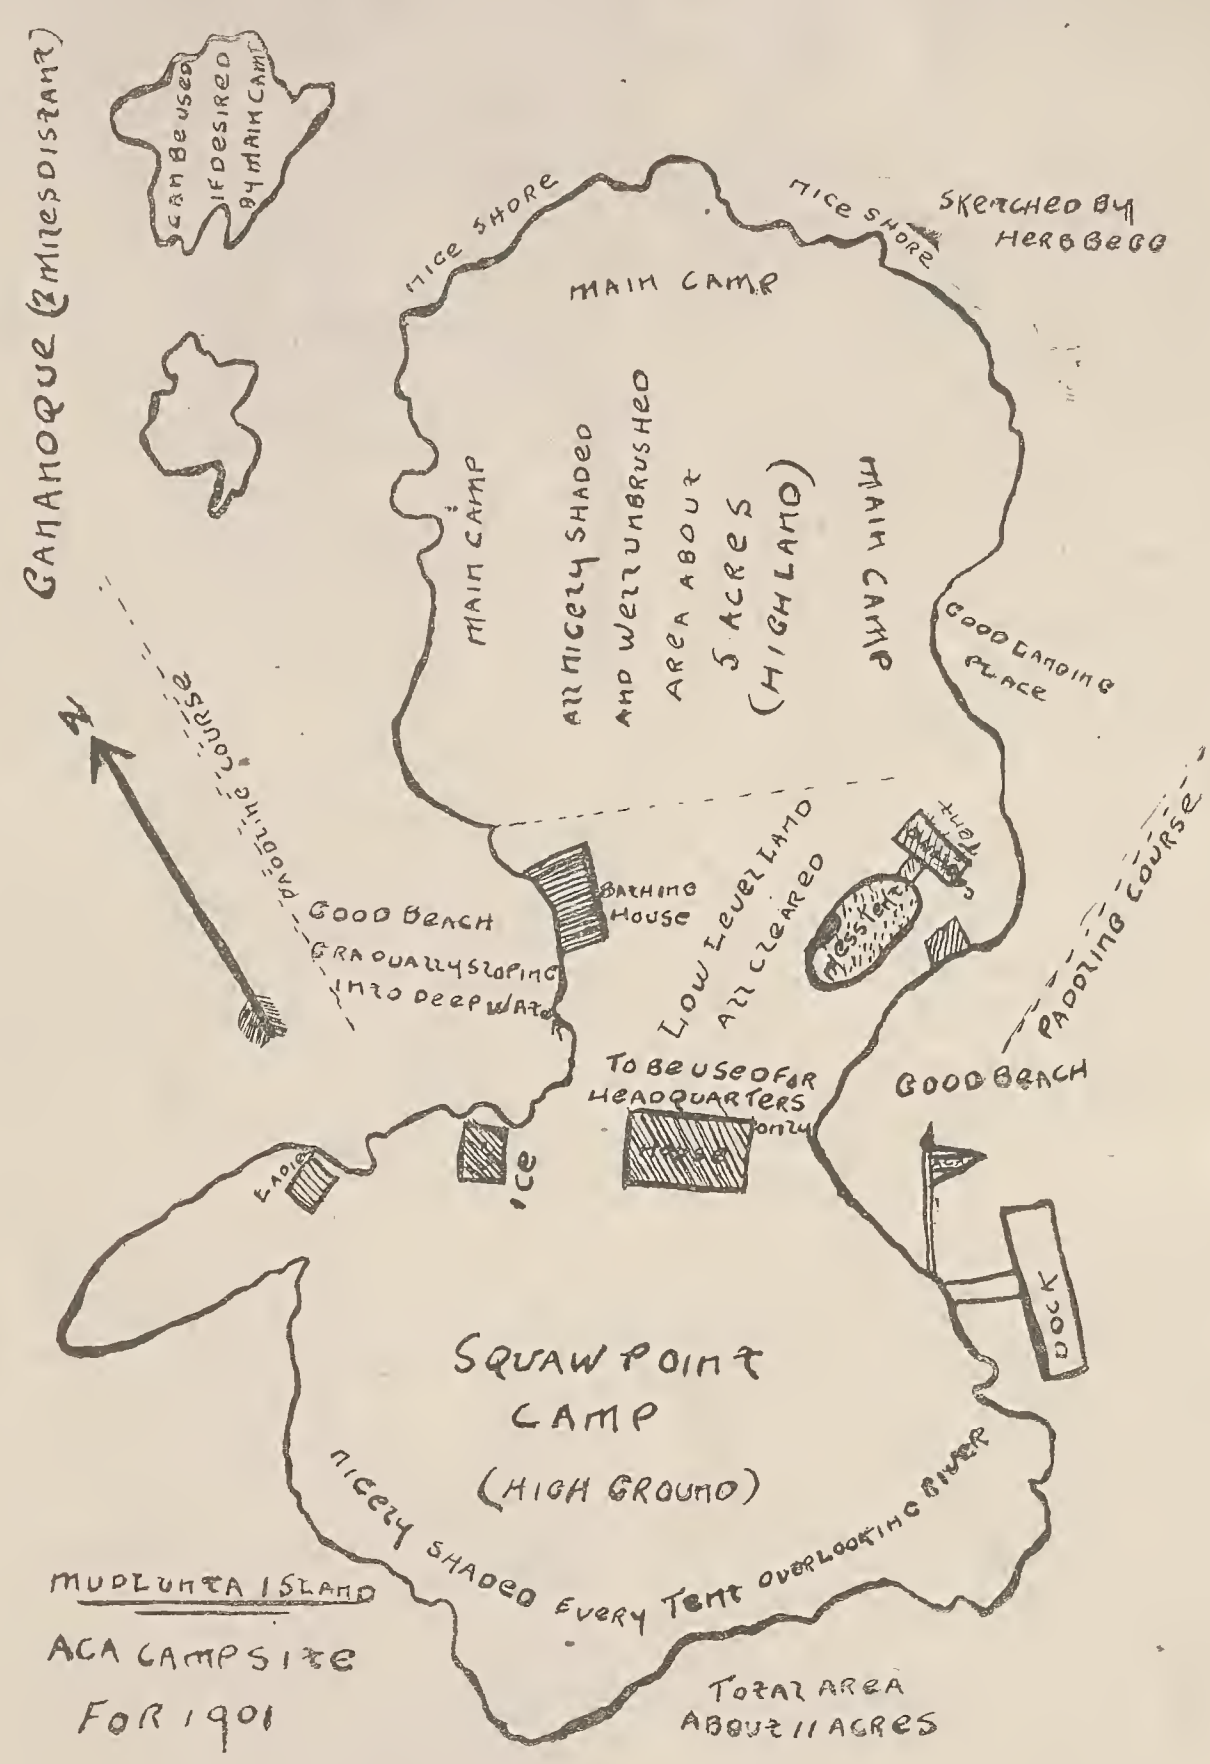

The attendance this year was distributed between the Northern, Atlantic, Central and Eastern Divisions, the Western Division only sending one delegate in the person of A. W. Friese, of Milwaukee, Wis. The Northern Division was naturally well represented, especially from

of Monday's programme, and proved very exciting, as the finishes were all close. The War Canoe Championship of America was again won by the Toronto Canoe Club crew, thus giving them possession of the handsome shield donated for this race for good and all, as two wins constitute ownership, and the Toronto Canoe Club representatives were previously successful at Muskoka last year.

One of the surprises of the sailing races was the win of Farnum F. Dorsey, of Boston (a comparative novice in sailing), of the sailing trophy in competition with such veterans as Paul Butler, F. C. Moore and D. B. Goodsell.

The Dolphin Trophy and the race for the cup presented by the Commodore of the British Canoe Association, were sailed together, and F. C. Moore, of New York, proved to be the successful competitor.

The following is a full programme of the races, with their combined results, viz.:

Toronto and Brockville, but the Eastern Division ran them a close second, as they had a delegation of some twenty-five or thirty men, the majority of whom spent the entire two weeks in camp.

It was thought by the Regatta Committee that, as the sailing men had got their desires, as evinced in the racing petition as presented to the Executive Committee on a mail vote last spring, they would turn out in large numbers and illustrate the practicability of their views as presented in the petition above referred to. But such was not the case, and it surely seems as if the decked sailing canoe (so far as the evidence of the past meet is concerned) is a thing of the past. There were in camp only six decked sailing canoes, and two of these belonged to Mr. Paul Butler, one of which was sailed by a protegee of his, a Mr. Farnum S. Dorsey.

F. C. Moore had a new canoe, Pioneer II., a very handsomely built boat, of Spanish cedar. Though the fleet was a small one, still the interest was good and the contests were very keen.

The great interest this year, as has probably been the case during the past two or three years, was centered in the paddling events, there being an unusual number of paddlers, and some exceptionally good ones in camp, largely from the Toronto Canoe Club, the Y. M. C. A. Athletic Club, of Brockville, and the Britannia Boat House Company, of Ottawa, Canada. A very pleasing feature of the paddling events was the presence in the races of three of the paddling racing men from the Eastern Division, an occurrence rather unusual, and they proved that the Eastern Division can turn out good paddling men, as well as the Northern and other divisions.

The first day's races, Aug. 19, produced some excellent sport, as also did the Tuesday and Wednesday following. All of the events were keenly contested, and the water and courses on the three days were all that could be desired by both contestant and spectator.

The war canoe events were the great spectacular races

- Event No. 1—Paddling and sailing combined, 1/2 mile alternately, total three miles, time limit 1 1/2 hours, start to be made under paddle: F. C. Moore, first; Geo. McTaggart, second; D. B. Goodsell, third; F. F. Dorsey, fourth.
- Event No. 2—Paddling, 1/2 mile straightaway: G. W. McTaggart, first; F. F. Dorsey, second; F. C. Moore, third; D. B. Goodsell, fourth.
- Event No. 3—Sailing, 4 1/2 miles, time limit 2 hours: F. F. Dorsey, first; G. W. McTaggart, second; F. C. Moore, third; D. B. Goodsell, fourth.
- Event No. 4—Sailing, decked or open canoes, 6 miles, time limit 2 1/2 hours: No entries.
- Event No. 5—Trophy, sailing, 9 miles, time limit 3 1/2 hours: F. F. Dorsey, first; Paul Butler, second; F. C. Moore, third; D. B. Goodsell, fourth; G. W. McTaggart, fifth.
- Event No. 6—Dolphin, sailing trophy and British Canoe Association sailing trophy, 7 1/2 miles, time limit 3 hours: F. C. Moore, first; G. W. McTaggart, second; D. B. Goodsell, third.
- Event No. 7—Novice sailing, 3 miles, time limit 1 1/2 hours, open only to members who have not sailed a canoe prior to Sept. 1: No entries.
- Event No. 8—Cruising canoes, 3 miles, time limit 1 1/2 hours: No entries.
- Event No. 9—Open canoes, 1 1/2 miles: G. W. McTaggart, first; Hyam Hoyt, second; H. C. Hoyt, third.
- Event No. 10—Atlantic Division cup, sailed at Division meet.
- Event No. 11—Central Division cup: sailed at Division meet.
- Event No. 12—Eastern Division cup: No entries.
- Event No. 13—Northern Division cup: No entries.

- PADDLING RACES.
- Event No. 14—Trophy paddling, double blades, 1 mile straightaway: E. J. Minnett, Toronto, first; R. N. Brown, Toronto, second; A. McNichol, Toronto, third.
 - Event No. 15—Novice paddling, 1/2 mile with turn, single blades, open only to members who have never paddled a race outside of their own club races: R. Moody, Toronto, first; A. G. Mather, Medford, Mass., second.
 - Event No. 16—Open canoes, single, 1/2 mile with turn, single blades: E. J. Minnett, Toronto, first; A. G. Mather, Medford, Mass., second; A. McNichol, Toronto, third; R. N. Brown, Toronto, fourth.
 - Event No. 17—Tandem, 1/2 mile with turn, open canoes, single blades: E. J. Minnett and A. McNichol, of Toronto, first; A. G. Mather and R. Hunter, of Medford, Mass., second; R. N. Brown and J. J. Vaughan, of Toronto, third.
 - Event No. 18—Decked or open canoes, single, paddling, 1/2 mile with turn, double blades: E. J. Minnett, Toronto, first; A. McNichol, Toronto, second; R. N. Brown, Toronto, third.
 - Event No. 19—Rescue race, No. 1 men proceed in the usual way, No. 2 men to be lined up on shore when a gun is fired.

No. 1 upsets his canoe and No. 2 launches and proceeds to the rescue, picks up his man and tows the capsized canoe across the finish line; open canoes, single blades, ¼ mile straightaway: R. H. Britton and Parmenter, Gananoque, first; E. J. Minnett and A. McNichol, Toronto, second.

Event No. 20—Tandem, double blades, ½ mile with turn, open canoes: E. J. Minnett and A. McNichol, Toronto, first; R. N. Brown and J. J. Vaughan, Toronto, second; H. C. Allen and R. H. Britton, third; A. G. Mather and R. Hunter, fourth.

Event No. 21—Fours, double blades, ½ mile straightaway: E. J. Minnett, R. N. Brown, A. McNichol and J. J. Vaughan, of Toronto, first; R. H. Britton, A. G. Mather, W. Gallow and R. Moody, of Toronto, second.

Event No. 22—Fours, ½ mile straightaway, single blades, open canoes: E. R. McNeill, A. L. Lynch, R. H. Britton and C. Eastmond, of Kingston, second; R. N. Brown, J. J. Vaughan, A. McNichol and E. J. Minnett, of Toronto, third.

Event No. 23—Tail-end race, ¼ mile straightaway: R. Parmenter, first; G. W. Begg, Toronto, second—ten starters.

Event No. 24—Relay race, open canoes, single blades, 1½ miles over sailing course, three men from each club or division: E. J. Minnett, J. J. Vaughan and A. McNichol, first; R. N. Brown, R. Moody and A. G. Mather, second.

Event No. 25—Mixed tandem, ¼ mile straightaway: Miss M. H. Britton and R. H. Britton, of Gananoque, first; Mrs. J. B. Taylor and A. G. Mather, second; Miss English and R. Hunter, third.

Event No. 26—Hurry-scurry, run, swim and paddle, standing up, open canoes: R. Parmenter, Gananoque, first; Ralph Britton, Gananoque, second.

Event No. 27—Tournament: J. McD. Mowat and R. Parmenter, first; J. Howard and A. G. Mather, second; F. F. Dorsey and J. A. Muirhead, third.

WAR CANOES.

Event No. 28—Championship of America, 1 mile straightaway: Won by the Toronto Canoe Club with team as follows: G. W. Begg, coxswain; R. N. Brown, J. A. Muirhead, F. Harrison, W. Gallow, R. S. Dil, A. Hawken, P. J. Syms, C. Simpson, G. H. Dill, A. E. Cuff, A. McNichol, E. J. Minnett, J. J. Vaughan, R. Moody, Y. M. C. A. Athletic Club, of Brockville, second; crew—G. A. Wright, coxswain; J. Anderson, A. N. Clark, H. Bramly, G. T. Emrie, F. Murray, E. L. Kenney, W. Clarke, S. Cuthbertson, J. Whelan, W. Mullen, R. Pitts, F. Yanwood.

Event No. 29, war canoe tug-of-war, one-minute heats, best two out of three: Won by Y. M. C. A., of Brockville; Toronto Canoe Club, second. Crews as above.

Event No. 30, division race, ½ mile with turn, each division may enter any number of teams: No entries.

Event No. 31, Northern Division championship: Y. M. C. A. Athletic Club, of Brockville, first; Toronto Canoe Club, second. Crews as above.

Event No. 32—Record race: G. W. McTaggart, first; F. F. Dorsey, second; F. C. Moore, third.

The first day or two of the meet, as is always the case, was devoted to setting things to rights and becoming acquainted with your fellow-campers. The first entertainment of note was the large bonfire and cornroast, on Wednesday evening, Aug. 14, at headquarters. A very enjoyable evening was spent in song and story, and in going over the many experiences of previous meets. On Friday evening following the canoeists were agreeably surprised by the appearance in camp of the Gananoque Band, comprising some twenty-five musicians, who had come to serenade the Commodore. They were quickly provided with a position where they could dispense their music to advantage; a large bonfire was started, the mess tent cleared, and a very pleasant evening spent in listening and dancing to the strains of the Gananoque Band.

The Saturday night of Aug. 17 was acceptably spent by the majority of the members in attendance at a large fancy dress masquerade ball being held at the Gananoque Inn, one of the largest and most palatial summer hotels of the St. Lawrence, and to which the entire camp was invited. The event proved a huge success, and a very enjoyable evening was spent by those who left the charms of camp to attend.

On the evening of Sunday, Aug. 25, the members attended church in a body at Half Moon Bay, situated about one-half mile from camp. The minister is stationed on shore and renders his service to his congregation, who lie in their canoes, boats and steam launches on the water, which constitutes what is called Half Moon Bay. The idea is quite a unique one, and it is no uncommon sight to see as many as 500 craft congregated there on a Sunday evening to take in the service, which lasts about three-quarters of an hour.

On Tuesday evening, of the second week, the principal entertainment of the meet, a minstrel show, was given. As is usual with all American Canoe Association features, the whole affair was quite impromptu, and gotten up on the spur of the moment. Mr. J. S. Wright, of Rochester, was the instigator and manager of the show, and he was ably assisted by L. A. Hall, of Boston. There were, fortunately, in camp a number of musicians, and, with a little practice, a very creditable showing was made. The entertainment was open to the members and friends of the members, and the latter turned out in goodly numbers to do honor to the occasion. Mr. J. S. Wright, of Rochester, chairman of the Amusement Committee, presided at the piano, and the orchestra was very acceptably served by E. A. Burns, of Toronto, violinist; G. Lewis, of Medford, Mass., guitar, and Ralph Britton, of Gananoque, on the piccolo. Mr. L. A. Hall, of Boston; C. Eastmond, of Brooklyn, N. Y., and Ralph Hunter, of Massachusetts, were duly appointed official interlocutors, and cracked many musty jokes. The chorus consisted of some thirty of the campers, in negro costume, who, considering the limited time had for preparation, acquitted themselves very creditably.

The following evening, Wednesday, was acceptably occupied by a green beer, given by Mr. J. S. Wright, of Rochester, to which all of the members in camp were invited. A green beer resembles in many ways what the fair sex call a pink tea; in fact, it is the masculine for a pink tea. The host of the evening utilized a large open space in front of his tent for the occasion, a large fire was erected thereon, and refreshments were served. Music and song assisted to make the evening fly all too quickly, and the assembly broke up about 11:30, after partaking of a final repast of new, juicy corn, cooked in the dying embers of what had been one of the best bonfires of the camp.

Thursday night, Aug. 22, the Commodore gave a large dance in the mess tent, which was bountifully decorated with lanterns and bunting for the occasion. An orchestra was present from Gananoque, and the evening's proceedings were enlivened by the presence of a large number of residents from the surrounding cottages, who turned out for the occasion on the invitation of the Commodore.

On Friday, the last day of camp, something not scheduled on the official list of entertainments for the meet occurred.

At 2 P. M. on the afternoon of the day in question, the race for the Dolphin Trophy, and also the race for the cup donated by the Commodore of the British Canoe

Association, was scheduled, but was called off on account of lack of wind and the threatening appearance of the weather. Hardly had the contestants and officials got ashore when the rain came pelting down in torrents, accompanied by a hurricane, lightning and terrific thunder, which seemed to combine for an hour together to make one awful siege of destruction and loss. Boats were blown from their moorings and off the various landing docks, numerous small tents were blown away and their contents scattered; but the event of the storm was the total destruction of the large mess tent, capable of covering over 200 seated people. Miraculously no one was injured, although there were Mr. and Mrs. Tasker, the caterers, of Toronto, and their staff of fifteen assistants, preparing for the evening mess therein. Considerable loss was occasioned by the destruction of glass and chinaware, and provisions, which were scattered in all directions, and soaked by the heavy sheets of water, which, combined with the rain, were blown from the river surrounding the camp. Words cannot describe the storm's awful havoc. Although the storm was terrific, and the damage great, the funny and lackaday characteristics of the campers were here asserted. Immediately after the fall of the mess tent, rescuing parties were formed, who worked with might and main to prevent further destruction. When the storm abated, a large flag pole, bearing the stars and stripes, which was blown down, was reerected, with much pride and national sentiment by both British and American canoeists; then the British-American and American Canoe Association colors were dipped, bugle calls blown, royal salute fired from the three battery cannon of the American Canoe Association, and the national anthems of the two nations were sung, after which the Commodore invited the campers to refreshments, served in his own tent, which had also been reerected, after suffering loss from the storm. Campfires were built and a jolly evening was spent in music, song and story.

The subject of rowdyism, which, unfortunately has cropped up in some of the meets of the American Canoe Association, did not by any means take a prominent form this year, though, no doubt, it will be recollected the administration of last year, and also of the year before, experienced a certain amount of trouble with a few members of the Association who came to camp with a somewhat lazy idea as to what an American Canoe Association camp is, and what it is intended for, and therefore sometimes made things somewhat unpleasant for the majority of those in camp by imbibing too much of their favorite brand of liquor and otherwise misconducting themselves. This year's camp was, however, ideal in that respect, as it was in many others, and there was no trouble whatsoever in the direction indicated. Liquor there certainly was, and who would want an American Canoe Association camp without a little? But it was used in such limited quantities that not the slightest trouble was experienced by the administration in the matter, and it surely seems that that question, like the one of dress, once much discussed, has settled itself in the proper manner. Every one conducted himself as a gentleman—and a member of the American Canoe Association should—and the camp of 1901 will go down on the records as one of the best and most orderly in the history of the American Canoe Association.

A pleasing occurrence was the excursion by the steamer Valeria on the second Sunday of the camp to the permanent home of the Association, Sugar Island. Almost every one in camp took advantage of the occasion to view the beautiful island, purchased by the Association largely through the instrumentality of Commodore C. E. Britton, to whom all credit is due for this desirable acquisition to the assets of the Association.

The steamer left camp about 9 A. M., and proceeded to the island, which lies about four miles from Mudluntu Island, and returned in time for dinner.

Sugar Island was found to be a most beautiful spot, some thirty-five acres in extent, and well adapted for the purpose for which it was acquired. It is about four miles from Gananoque, and is adjacent to the old stamping grounds of the Association on Slave and Grindstone Islands. It has many beautiful bays and bathing beaches; three excellent racing courses can be laid off its shore, and, altogether, it will make an exceptionally fine camping ground for the Association for many years to come.

The Association has, without doubt, taken a wise and judicious step in securing a permanent home, as every year it becomes more and more difficult for a camp site committee to secure desirable sites, and there is no doubt whatever that a time will come some day when it will be impossible to secure a suitable site.

Principal among the many troubles of a camp site committee is the choosing of the site, the erection of a dock, and the building of camp floors, etc. With a permanent home these various matters will be disposed of. Once the island is properly underbrushed, a good dock built and headquarters arranged for, camp site duties will be considerably reduced and there will not be the same difficulty as there is at present in securing good men to serve thereon. Considerable money will also be saved, as every year the Association is put to the expense of building docks, camp floors, etc., which expense would be eliminated after the first year's occupation of Sugar Island. The control of the island is vested in the Board of Governors, who propose appointing a committee to assist them therewith.

A topographical survey will be made of the island as speedily as possible, and, if practicable, a copy of same will be placed in the hands of every member. The fact of being the owners of such an island as Sugar will no doubt do considerable toward increasing and maintaining the membership of the Association, and a man will now feel, in paying his annual dues, that even if he is unable to go to either his division meet, or to his national meet, there is a place at his disposal where he can go and camp at any time he feels so inclined. The trouble in the past has been that the majority of the members could not see any value coming to them for their dues, and unless personally solicited in the matter, many annually severed their connection with the Association. That matter is now, however, remedied, and the administration look for a large increase in membership.

The problem of the care of the island is having serious consideration, and the probabilities are that a permanent

secretary will be appointed to look after the property, edit the Year Book, and attend generally to the affairs of the Association.

This year the division meetings were held within the divisions, with the exception of the Atlantic and Northern Divisions, who held their meetings at camp. The Northern Division elected the following officers for the year 1901: Vice-Commodore, Herb. Begg, Toronto; Rear Commodore, W. J. English, Peterboro; Purser, Harry J. Page, Toronto; Executive Committee, E. R. McNeill, Britannia Bay, Ontario, and J. McDonald Mowat, Kingston, Ontario.

The Northern Division have under consideration the question of holding a division meet in 1902, and in that event will, in all probability, select Sugar Island as the camp site. The division has not held a division meet since 1884, and there seems to be a strong feeling existing that it is pretty nearly time to hold another one.

The question of the meet of 1901 came up for discussion at the Executive Committee meeting of the Association, held at headquarters on Monday evening, Aug. 19. The Atlantic Division, in accordance with the rotation, as published in the Year Book, had the option of holding the meet for the coming year. The Eastern Division, however, were extremely anxious to have the opportunity of showing what they could do in the way of a national meet; and the Atlantic Division accordingly waived their right in their favor. The Eastern Division have in view a salt water meet, and if their division meet is any indication of what they can do when some 123 members registered, the meet of 1902 will be one of the largest in the history of the Association. They were not in a position at the present moment to state positively as to where the camp site would be located, but the probabilities are that it will be somewhere in the vicinity of Buzzard's Bay. Louis A. Hall, of Boston, was then elected Commodore, and the question of the election of a Secretary-Treasurer was left over until the October meeting, as the Commodore-elect had no positive candidate in view, and it is very essential that the Commodore secure a Secretary-Treasurer on whom he can rely.

A number of points in connection with the administration of the affairs of the Association were also discussed. The Executive Committee will meet again in October or November, at the call of the Commodore-elect, L. A. Hall, probably in Boston, or some city adjacent to the prospective camp site of 1902, so that the Executive Committee can inspect same and pass their opinion thereon.

A number of photos were taken by the official photographer, H. E. Paige, of Gananoque, some of which appear as illustrating this article.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

SEPTEMBER.

12. New York, autumn sweepstakes, New York Bay.
14. Hull-Massachusetts, club, Hull, Mass.
14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
14. Larchmont, Larchmont, Long Island Sound.
14. Indian Harbor, fall regatta, Greenwich, Conn.
14. Manhasset Bay, club series races for points; open to knock abouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
14. Atlantic, fall regatta, Sea Gate, New York Bay.
21. Kennebec, club, Kennebec, Me.
21. America Cup race, Sandy Hook.
21. New York C. C., fall regatta, Gravesend Bay.
21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
- 21-23-25.—International Races (America's Cup), Off Sandy Hook.
28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

Columbia—Constitution Trial Races

NEWPORT, R. I.

Aug. 31, Sept. 2, 4.

Up to the time that Constitution and Columbia went to the line for the first official trial race, these two yachts had met during this season nineteen times, and sixteen races had been satisfactorily finished within the time limit. One race off Newport was given up because the martingale on Columbia curled up; another race was sailed in a fog and was not finished within the time limit, and a third race was abandoned on account of the wind dying out and leaving the boats becalmed. Out of the sixteen races sailed each boat had won eight; so as far as actual winnings went the boats were on an even basis.

The selection of Columbia by the committee of the New York Y. C. to defend the America Cup against Shamrock II. has been the subject of some criticism, but to those who have followed the racing of these big boats all the season, there seemed to be no other alternative than to select the champion of 1899. It is perhaps a little disappointing to feel that practically no advancement has been made in designing in two years in this country, but it must be remembered that our recent Cup defenders have been the production of one man, and it would appear that he has reached his limit, and it is now hoped that some of our other yacht designers in this country will be given an opportunity. That they are capable of great things is shown in the wonderful sailing of Independence. Here was a man who had never designed anything except racing boats of about 25ft. waterline, yet he jumps to a boat of 90ft. and without any data or information or, most important of all, experience with these big vessels, turns out a boat that was a match for the latest production of the man who was supposed to be the greatest yacht designer in this country.

While Constitution showed wonderful speed in very light weather early in the season, her form did not seem to improve to any appreciable extent as the summer progressed. She went back to her builders several times and they made radical alterations in her rig, but these changes seemed to avail nothing. Three complete suits of sails were given the boat, but none was better than the original suit. The managing owner and sailing master of

Constitution attribute their lack of success to the poor sails furnished them; perhaps this explains in a measure the boat's poor showing, but it is generally conceded that Constitution's crew was not all that might have been desired, and the same discipline was not maintained on Constitution that had always prevailed on Columbia. Several of Constitution's crew left in a body just after she lost her mast, and new and untrained men had to be secured to take their places. All these little things have tended to keep the boat back, but, taking everything into consideration, Constitution was a very inconsistent performer, and for that reason she would have not been a safe boat to defend the Cup. Constitution may be an improvement over the Columbia of 1899, but she certainly is not faster than the Columbia of 1901.

Columbia's sailing this season has been so uniform and so satisfactory, and she has been so perfectly handled, that all American yachtsmen have unbounded confidence in her ability to keep the Cup where it has been for the past fifty years.

First Trial Race.

WINDWARD AND LEEWARD COURSE.

Saturday, Aug. 31.

The Regatta Committee was aboard the steam yacht Sultana, and the start for the race was made off Brenton's Reef Lightship. At 11:20 signals were hoisted on Sultana, and the course was found to be fifteen miles to windward and return, the direction being S.S.E. Before the start the breeze was light from the S.E. A large number of steam yachts—in fact, craft of all descriptions—were out to see the race. Columbia was the first boat in evidence at the starting line. Constitution came out a little later, with Mr. Nat Herreshoff on board. Both boats had been remeasured, and their racing lengths were: Constitution, 104.14ft., and Columbia 101.76ft. Constitution allows Columbia 1m. and 11s. over a thirty-mile course.

At 11:30 the preparatory signal was given, and 5m. later the warning gun was heard. Both boats had set large club topsails and jib topsails in addition to their lower canvas. Columbia was on Constitution's weather, and in their efforts to get the best of the start, both skippers got their boats over a few seconds before the starting gun. Recall whistles brought both boats back. The boats wore around and stood back. The official time for the start was:

Columbia11 41 15	Constitution11 42 00
----------	---------------	--------------	---------------

After crossing, Columbia took a hitch to windward of the lightship. At this time the breeze was blowing about nine or ten miles an hour, and as the day progressed the wind increased. The breeze had shifted a little to the eastward, so as to enable the boats to almost lay their course for the windward mark. Both boats held on the port tack until they had the mark about abeam. Columbia went around on the port tack first, and Constitution followed a minute later. The fact that there were two men at the wheel on board Constitution caused considerable comment. If the boat required two men to steer her in the light breeze that was blowing, surely there must be something radically wrong. A short hitch was made, and then Columbia came about on the port tack again and headed for the mark. Constitution followed a little later, and, as she came up in the wind, her jib topsail was taken in. Columbia's jib topsail was taken in when she jibed around the mark. The following times show the boats' standing at the weather mark:

	Start.	Weather	Mark.	Elapsed.
Columbia11 41 15	1 30 45	1 49 30	
Constitution11 42 00	1 32 45	1 50 45	

Columbia beat Constitution 1m. 15s. on the windward leg of fifteen miles.

Columbia broke out her balloon jib smartly. Her jib and staysail were taken in and a reaching staysail was set. Constitution's crew worked well at this mark with the exception of being slow with the big staysail. Both boats set their working jibs in stops on the stays. Constitution's followers hoped to see her draw away on the reach home, but they were doomed to be disappointed, for Columbia slowly but surely drew away from her. Shortly before 3 o'clock the spinnaker was put on Constitution, but this sail did not seem to help the boat any. No spinnaker was set on Columbia, for, barring accidents, she was so much in the lead the race was easily hers. Nat Herreshoff sailed Constitution on the run home. The times from the weather mark to the finish were:

	Weather	Mark.	Finish.	Elapsed.
Columbia1 30 45	3 02 08	1 31 23	
Constitution1 32 45	3 06 01	1 33 16	

Columbia beat Constitution 1m. 53s. on the leeward of fifteen miles.

Constitution was badly beaten, but there was no ill feeling regarding the result of the race. The summary follows:

	Start.	Finish.	Elapsed.	Corrected.
Columbia11 41 15	3 02 08	3 20 53	3 19 42
Constitution11 42 00	3 06 01	3 24 01	3 24 01

Columbia beat Constitution 3m. 8s. on elapsed time, and 4m. 19s. on corrected time.

Second Trial Race.

TRIANGULAR COURSE.

Monday, Sept. 2.

Constitution and Columbia were unable to finish the second trial race owing to lack of wind. The Regatta Committee was on board the steam yacht Conqueror, and at 11:30 they signaled that there would be a postponement of the start, as the wind was so light. At 12:35 signals from the committee boat announced that the race would be sailed over a triangular course, the first leg of which was a beat of ten miles, E. by S.; the second leg a reach of ten miles, S. ½ W., and the last leg a free run of ten miles N. by W. ½ W.

The tug Unique carried club members and guests. Sir Thomas Lipton, with George L. Watson, the designer of Shamrock II.; William Jameson, the famous yachting amateur; Ratsey, the sailmaker, and Capt. Sycamore, the skipper of Shamrock II., watched the race from the bridge of the steam yacht Erin.

The preparatory signal was fired at 12:50, and the warning gun was given at 12:55. The lightship formed the weather end of the line, and the Conqueror made the leeward end. The starting gun was given at 1 o'clock, and

the two boats crossed exactly together 6s. later. Constitution was in the weather berth, but soon Columbia began to work out of the new boat's lee, and it was not long before she was letting the backdraft of her mainsail flow into Constitution's headsails. Constitution came about 2m. after the start. Columbia followed to draw into the lead, when the boats went around on the starboard tack. Columbia was a good eighth of a mile ahead. Just after 2 o'clock Columbia crossed Constitution's bows. Constitution seemed to lose headway on coming about, while Columbia lost practically nothing. The elapsed times for this leg are shown in the following:

	Start.	1st Mark.	Elapsed.
Columbia1 06 00	3 11 08	2 11 02
Constitution1 06 00	3 16 08	2 15 57

On the ten-mile beat to windward Columbia had beaten Constitution 4m. 55s.

With the wind abeam the boats stood away for the second mark. Reaching jib topsails were set on both boats and balloon staysails substituted for working ones. The wind was now very light, and Constitution seemed to cut down Columbia's lead a little. Columbia, after hunting around for better wind, finally gave it up and set her balloon jib topsail, and those on Constitution immediately followed suit. The race continued to be monotonous until the second mark was rounded. Columbia jibed around the mark at 4:50:40, and Constitution at 4:55:10. The elapsed times for the leg were:

	1st Mark.	2d Mark.	Elapsed.
Columbia3 11 08	4 50 40	1 39 32
Constitution3 16 08	4 55 10	1 39 07

On the ten-mile reach Constitution had gained 25s.

After jibing around the second mark ballooners were lifted over the stays, and Columbia dropped her pole and set her spinnaker, but soon took it in again, which proved a hindrance rather than a help to the boat. It was a dead, flat calm for some time after rounding, and it is under these conditions that Constitution shows up well and proves her ability as a fine drifter. Constitution lowered her pole, but did not set her spinnaker. Constitution ghosted along under her balloon, and finally passed Columbia. The wind came up a little and Constitution increased her lead, but not for long, however, as Columbia at last found herself and again luffed out into the lead, and was well ahead when the time limit was reached, and the race was declared off.

Third Trial Race.

WINDWARD AND LEEWARD COURSE.

Wednesday, Sept. 4.

The weather conditions on Tuesday morning did not hold out much promise for good racing, but as the day wore on the sun drove away the mist and a breeze sprang up from the S.W. At 11:30 sail covers were taken off the boats and preparations were made to get under way. The Regatta Committee was on board the steam yacht Narada, and she took up her position E.S.E. of Brenton's Reef Lightship. A large number of steam yachts were in evidence, and among them was Mr. Anthony J. Drexel's new Marguerite, which recently arrived from the other side. She is a beautiful craft, and, next to the Valiant, is the largest yacht owned by a member of the New York Y. C.

When the two boats reached the lightship the course signals were made on the committee boat. The course signaled was fifteen miles to windward and return. S.S.W. was the course to the outer mark. The sea was very smooth and there was still a little haze hanging around. At 12:50 the preparatory signal was given, and both boats sent up babyjib topsails in stops before the warning signal was given at 12:55. The yachts came down to the line on the starboard tack, with Columbia to windward. Three times Capt. Barr put up his helm and let Columbia stand down almost on top of his opponent, and then he would luff sharply, and by so doing he successfully blanketed Constitution, and yet kept headway on his own boat. Columbia crossed 47s. after the starting gun, while Constitution, for some reason, jibed around and crossed on the port tack 22s. after the handicap gun. Both boats stood in toward the Narragansett shore. Columbia to windward, with a comfortable lead. They held this tack for about half an hour, when Constitution tacked, followed immediately by Columbia. Constitution had on her old mainsail, and it set better than any of the others. Constitution was the first to tack and stand in shore again, but Columbia was about almost as soon. The wind now came in from the S.W., but did not benefit either boat. A number of short tacks were made by both boats, and Constitution, contrary to all expectations, made quite a gain. The mark was rounded, leaving it on the starboard hand. The elapsed times for the fifteen miles' beat out are shown in the following:

	Start.	Mark.	Elapsed.
Columbia1 00 47	3 06 49	2 06 02
Constitution1 02 00	3 07 29	2 05 29

Constitution had gained 33s.

The speed with which Constitution's men set the spinnaker showed great improvement. Columbia set her balloon first and her spinnaker afterward. Constitution had to lower her babyjib topsail and then set her balloon. Constitution now began to close up on Columbia, and after a short while both boats sailed side by side, where they stayed for some time. Constitution finally drew into the lead, but Capt. Barr "nursed" his light sails a little and drew up alongside of Constitution again. As both boats were well off their true course, it was necessary to take in spinnakers. Constitution was first to take in hers, but it got badly tangled and considerable time was lost. Constitution flattened down her sheet and tried to get across Columbia's bows, but the hands on Columbia were too quick, and their spinnaker was doused and their sheets trimmed down. Columbia set a balloon staysail, as did Constitution. At this stage Constitution had a good show to win, when a strong puff heeled the boats well down and Columbia passed Constitution. Just at this time Constitution's balloon split in two, starting to rip near the spreaders. The crew, after some difficulty, got the sail on deck. Profiting by Constitution's misfortune, Columbia took in her balloon and set her reaching jib topsail. It was a very pretty piece of work, and impressed one with the crew's handiness. No effort was made to set jib topsail on Constitution, as she was so near the finish line.

The elapsed times for the run home are shown in the following:

	Outer Mark.	Finish.	Elapsed.
Columbia3 06 49	5 03 13	1 56 24
Constitution3 07 29	5 03 32	1 56 03

Constitution on the reach home had gained 21s.

	Start.	Finish.	Elapsed.	Corrected.
Columbia1 00 47	5 03 13	4 02 26	4 01 15
Constitution1 02 00	5 03 32	4 01 32	4 01 32

Columbia beat Constitution 17s., corrected time. On elapsed time Constitution beat Columbia 54s.

Plymouth Y. C.

PLYMOUTH, MASS.

Thursday, Aug. 29.

THE first of the Y. R. A. open races of the South Shore circuit was given by the Plymouth Y. C. Thursday, Aug. 29. An easterly breeze prevailed at the start, which shifted all around later and finally settled in S.W. It was very light, and, although fluky, it could hardly be said that one boat was more favored than another. In the 25-footers, Flirt and Areyto went over the line before gunfire. The rest went over in a bunch, and, as there were several cries of foul, and the breeze was almost at the drifting point, the class was recalled and started over again.

On the second start Flirt again went over first, with Calypso on her weather quarter. Early Dawn, Thordis and Areyto followed. All tacked inshore except Calypso, and Calypso made a gain by holding her course. Calypso had all the luck for the best part of the course, but the others soon got their share on a shift of wind, and Flirt, Areyto and Early Dawn passed her, Flirt taking the lead. Flirt finished first, with Areyto a close second. Early Dawn came third and protested Flirt and Areyto on measurement. Areyto, in turn, protested Early Dawn. The result of the measurement showed all three to be over the limit, and the race accordingly went to Calypso.

In the 21-footers, Privateer, an old-timer of Hanley design, found new life, and bested her newer rivals, Mildred II., Freyja and Eaglet. She took the lead at the start and kept it to the finish. The race of the 18ft. knockabouts was made most interesting by the very easy win of Malillian, a Hull-Massachusetts boat, over all of the Duxbury boats. In the special class Scamper won easily, and this was also true of Hustler in the handicap class. The summary:

25-Footers.

	Elapsed.
Calypso, A. W. Chesterton2 36 02
Thordis, W. U. Foster2 44 02
Flirt, Fabyan and McKeeMeasured out.

Cape Cod Y. C.

PROVINCETOWN, MASS.

Tuesday, Sept. 3.

THE annual Y. R. A. open race of the Cape Cod Y. C. was sailed off the club house in Provincetown Harbor Tuesday, Sept. 3, in a light easterly breeze. In the 25-footers Calypso turned the tables on Flirt. She led over the entire course and finished with a lead of over 6m. In the 21-footers, Mildred II. found her weather and showed up in more of the style in which she has raced further up in the bay. She won out by a little over 4m. In the 18ft. knockabout class Malillian found a rival in Mustang, which was designed by Crowninshield for Frank Tandy, but which was sold early in the season to D. Horne. They made a good race, Malillian winning by 1m. and 19s. There were also handicap classes for fishing boats and dories in which there was plenty of sport. The summary:

Class D—25-Footers.

	Elapsed.
Calypso, A. W. Chesterton2 18 14
Areyto, L. D. Baker2 24 23
Flirt, Fabyan & McKee2 25 10

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Aug. 31.

THE Larchmont Y. C. held a special race on Saturday, Aug. 31. A fresh easterly breeze blew throughout the race, varying from eight knots strength at the start to ten knots at the time of the finish. At 12 o'clock the preparatory signal was given, and the schooners were sent away at 12:05. The course was triangular, and the E.S.E. wind made the first leg a beat. Quisetta was first away, followed closely by Elmina, but Muriel was some minutes behind. While Quisetta and Elmina were having a luffing match in toward the Connecticut shore, Muriel stood out into the Sound on the port tack. Muriel got a favorable slant while under the Long Island shore, and she was ahead around the first mark. Quisetta and Elmina following as named. At the second mark of Prospect Point, Muriel was still ahead, but Elmina had worked into second place, while Quisetta was last. On the first leg on the second time around, Elmina took the lead, which she held until the finish.

In the imported class, Hester beat Isolde after a well-fought race. Isolde reached the first mark on the first round ahead, with Eelin second, but on the second leg Hester took the lead and won out.

Altair did not show up in the 51ft. class, so the race lay between Humma and Syce, and the former boat won out. In the 43ft. class Dorwina won, beating Effort handsomely, which boat she led from start to finish. The 43's sailed over a triangular course, twenty-two miles in length. The 18ft. sloops in Class R sailed over a triangular course eleven miles in length. Opossum won, Pandora did not finish and Neola was disqualified for being out of her class. The times were:

Class D—Schooners—65 to 75ft. Racing Length—Start, 12:05.		Finish.	Elapsed.
Elmina, J. K. Brewster.....	4 48 25	4 48 25	4 48 25
Muriel, Charles Smithers.....	4 54 45	4 49 45	4 49 45
Quisetta, H. J. Lippett.....	4 56 58	4 51 58	4 51 58
Class I—Sloops—70ft. Racing Length—Start, 12:10.		Finish.	Elapsed.
Hester, C. F. L. Robinson.....	5 06 35	4 56 35	4 56 35
Isolde, F. Hoyt.....	5 18 45	5 18 45	5 18 45
Eelin, P. T. Dodge.....	5 24 00	5 14 00	5 14 00
Class K—Sloops—51ft. Racing Length—Start, 12:10.		Finish.	Elapsed.
Humma, Rogers Maxwell.....	4 06 30	3 56 30	3 56 30
Syce, Cyrus F. Judson.....	4 44 00	4 34 00	4 34 00
Class L—Sloops—43ft. Racing Length—Start, 12:15.		Finish.	Elapsed.
Dorwina, William L. Ward.....	4 11 22	3 56 22	3 56 22
Effort, F. M. Smith.....	4 19 42	4 04 42	4 04 42
Class R—Sloops—18ft. Racing Length or Under—Start, 12:20.		Finish.	Elapsed.
Opossum, M. Hazen Raborg.....	2 49 33	2 29 33	2 29 33

Pandora, H. B. Towle.....	Withdraw.	Withdraw.	Withdraw.
Neola.....	Disqualified.	Disqualified.	Disqualified.

Hester allows Isolde 8m. 59s.

Humma allows Syce 38s.

Neola disqualified, out of her class.

The winners were Elmina, Hester, Humma, Dorwina and Opossum.

A special race between Isolde and Eelin for a cup offered by ex-Com. William S. Ackley, took place, Isolde being the winner.

Monday, Sept. 2.

The Regatta Committee gave the preparatory whistle at 11:30, and the schooners were started 5m. later, and the other classes followed at 5m. intervals. There was a light breeze from the eastward at the start, but it increased to a ten-knot breeze toward the finish. It was the second and final race of a series, for which special cups were offered, including one by Mr. W. S. Alley for the cutters Isolde, Hester and Eelin.

In the schooner class Muriel got away before the signal, and had to return and cross again. This miscalculation cost her about 3m. Elmina was first away, with Quisetta a close second. Muriel did splendid work, considering her handicap, for she overhauled her competitors on the windward leg and took the lead, which she held until, turning the first mark on the second round, her balloon jib topsail sheet got away and it was necessary to luff to secure it, and before it could be trimmed down Elmina had passed her. In the imported class Hester again won. Syce sailed a splendid race against Humma. It is too bad that Syce did not begin racing earlier in the season. She is a smart boat, and still has a lot of her old speed left. Badger and Merrywing sailed a good race, and the former finally won out. The summaries:

Schooners—Class D—Start, 11:35.		Finish.	Elapsed.
Elmina, F. K. Brewster.....	5 31 08	5 31 08	5 31 08

Wellfleet Y. C.

WELLFLEET, MASS.

Monday, Sept. 2.

THE annual Y. R. A. open race of the Wellfleet Y. C. was sailed in Cape Cod Bay, off Wellfleet, Monday, Sept. 2, in a moderate breeze from the N.E. Flirt had the best of it all around among the 25-footers. As usual, Capt. Martin berthed her very nicely at the start, and she opened up a good lead to the first mark. On the second leg the others moved up on her, but she still held her lead. On the last leg she pulled away, and the race was for second place between Calypso and Early Dawn, Calypso winning out by a little less than a minute.

In the 21-footers Opitsah III. sailed a good race and won from Mildred II. by over a minute and a half, but unfortunately she got into a mix-up with Privateer on the first leg, which resulted in a protest. Opitsah III. was at fault, and the clash was witnessed by the judges, so there was nothing left for them to do but disqualify her. Malillian was the only 18ft. knockabout to show up, and she sailed over the course alone for percentage. A handicap class of yachts and three classes of working boats made very interesting racing, the more so because all of the contestants were local boats. The summary:

Beverly Y. C.

MONUMENT BEACH, MASS.

Saturday, Aug. 31.

IN a light and variable breeze from the S.E., the last championship race of the Beverly Y. C. was sailed off the club house, at Wing's Neck, Saturday, Aug. 31. May Queen again won easily in the 25-footers, while in the 21-footers Gadfly beat out Quakeress by less than a minute. Eunice again found her breeze in the fourth class cats, but won out by only 9s. In the one-design 15ft. class the racing was very good, Teaser winning out by 4s. The summary:

Scituate Y. C.

SCITUATE, MASS.

Tuesday, Sept. 3.

A RACE was sailed between the fleet of small boats of the Scituate Y. C. Tuesday, Sept. 3, for prizes offered by Thomas W. Lawson and Dr. Charles E. Davis. There was quite a lively breeze blowing from the N.E., and the race was hotly contested. The run for first place was between Trojan and Big Liz, Trojan winning out by 27 seconds. The summary:

Kingston Y. C.

KINGSTON, MASS.

Friday, Aug. 30.

THE annual Y. R. A. open race of the Kingston Y. C. was sailed off Rocky Nook Point, Friday, Aug. 30, in a very light and fluky breeze. It was S.W. at the start and shifted from there clear around to E. and stopped at various points between the two. The yachts took various positions, as they were favored by the breeze, and the element of luck played such an important part that the actual record of racing was not shown by the result. The summary:

Class D—25-Footers.		Elapsed.	Corrected.

Corinthian Y. C.

MARBLEHEAD, MASS.
Saturday, Aug. 31.

THE first squadron run of the Corinthian Y. C. cruise, from Marblehead to Gloucester, was most interesting. A good easterly breeze prevailed all the way, and there was a fine fleet participating. They were divided up into classes, as on race days, and the fleet made the best showing of any Eastern yacht club cruise for many years. The summary of the racing run:

The regular race of the Corinthian Y. C., which was to have been sailed on Saturday, Sept. 7, was postponed because of the critical condition of President McKinley.

Duxbury Y. C.

DUXBURY, MASS.
Saturday, Aug. 31.

THE annual Y. R. A. open race of the Duxbury Y. C. was sailed off the club house Saturday, Aug. 31. There was a steady, moderate breeze from the eastward, by long odds the best day of the races in Plymouth Bay. In the 25-footers Calypso went over the starting line before gun-fire, and had to recross, but quality in a breeze soon counted, for she caught the leaders before half of the course had been sailed and led to the finish. Areyto finished a close second, but was ruled out on Flirt's protest. Privateer won her third race of the series in the 21-footers, beating all of the new cracks. The 18ft. knockabout class was made up of local boats, Trouble, designed by Fred Lawley, winning handily. Two handicap classes furnished interesting racing. The summary:

Class D—25-Footers.		
	Elapsed.	Corrected.
Calypso, A. W. Chesterton.....	1 50 26	1 50 26

Y. R. A. of Massachusetts.

ANNUAL RENDEZVOUS.

WITH the closing of the racing season the Yacht Racing Association of Massachusetts held its annual rendezvous at Nahant and Hull, Saturday and Sunday, Sept. 7 and 8. There was so little wind Saturday afternoon that many of the yachts of the fleet failed to show up at Nahant. In the morning, after colors, the fleet dressed ship and orders were given to proceed to Hull. There the fleet was enlarged by arrivals from Dorchester and Quincy bays, there being fully 150 yachts gathered by 2 in the afternoon. At 3 the preparatory signal was given from the flagship, and 15m. later the fleet passed in review, the yachts dipping their ensigns as they went under the bow of the flagship. The fleet then sailed around the southerly end of Peddock's Island and passed up the West Way, passing again in review of the flagship off Marine Park pier, after which the fleet was disbanded. It was a beautiful day with light air and smooth sea, and the sight of the yachts coming up the West Way was one that is not soon forgotten. It seemed as though there were nothing in the harbor but sails.

Huntington Bay Y. C.

HUNTINGTON BAY—LONG ISLAND SOUND.
Saturday, Aug. 31.

THE Huntington Bay Y. C. held its special races on Saturday, Aug. 31. Seven classes filled. The 36 and 30 footers sailed over a course of five legs, in all sixteen nautical miles. The other classes sailed twice over a triangular course, in all ten miles. The wind was light from the S.E., but freshened, and the finish was in a good whole-sail breeze. The summary:

Class M—36ft. Sloops and Yawls—Start, 12:25.		
	Finish.	Elapsed.

Keypoint Y. C.

KEYPORT, N. J.
Saturday, Aug. 31.

THE first annual open regatta of the Keypoint Y. C. was held on Saturday, Aug. 31. The races were sailed on Raritan Bay, and a strong, twelve-mile breeze blew throughout the race. Prizes were awarded to the winners of each class. The course was a triangular one. The results follow:

Class A, Open Cats, 16 to 22ft.—Won by Whiff, Sewaren Y. C.; Rascal, Sewaren Y. C., second; Mary, Burrows brothers, Keypoint, third.
Class B, Cabin Cats—Won by Ethel, Sewaren Y. C., beating Dad, of Sewaren, by 22m.
Class C, Cabin Sloops—Won by Com. H. A. Young's Youngster; Mary C., South Shrewsbury Y. C., second.
Class D, Power Boats—Won by William E. Wooley, Keypoint.
Class E, Surf Boats—Won by William Watts; Peter Force, second.
Class F, Open Sloops, 14 to 20ft.—Won by Rita, New York; Rainbow, second.
Class G, Half Raters—Won by Cook brothers' Yes Yes.

Newport Special Thirties.

NEWPORT, R. I.
Thursday, Aug. 29.

MR. HERMAN B. DURVEA offered a cup for the Newport special thirties, to be sailed for on Thursday, Aug. 29. Mr. W. Butler Dunnean, Jr., the managing owner of Constitution, sailed Carolina to victory. The wind was from the S.W. and the course was from Brenton's Cove to Jamestown and then out to Brenton's Reef buoy and return. It was a pretty start, Mr. Duncan crossing with the gun and in the lead, which he increased to the outer mark. On the run home he was crowded by Hera and Esperanza, but he held his position and won by 52s. The start was at 4:22. The summary follows:

	Finish.	Elapsed.
Carolina, P. Jones.....	6 11 50	2 33 50
Hera, R. N. Ellis.....	6 12 42	2 34 42
Esperanza, H. O. Havemeyer, Jr.....	6 12 58	2 34 58
Wawa, R. Brooks.....	6 15 02	2 37 02
Barbara, W. Rutherford.....	6 18 28	2 40 28
Raccoon, J. R. Drexel.....	6 26 15	2 48 15

Marion Y. C.

MARION, MASS.
Thursday, Aug. 29.

A NOVEL race was sailed by the Marion Y. C. on Thursday, Aug. 29. The skippers received instructions from the shore in their skiffs, rowed to the yachts and went once around the course. Then further instructions were received from the judges' boat. Reefs were tied in and they went around the course again. Each boat lost a man overboard, who swam to the judges' boat. It was one of the most interesting races that has been sailed during the season. The summary:

Pavonia Y. C.

NEW YORK BAY.
Monday, Sept. 2.

THE Pavonia Y. C. held a regatta on New York Upper Bay in a light easterly breeze on Monday, Sept. 2. The elapsed and corrected times were not given out. Large boats went over the Swinburne Island course, while open and cabin catboats sailed twice around Robbins Reef Lighthouse from the Bayonne club house. Summary:
Open Catboats—Com. O. F. Roe's Bell beat Mr. William Poland's Emma K.
Cabin Catboats—Mr. George Taggart's H. H. Holmes beat Loretta and Water Lily.
Sloops—Mr. Tate's Nomad beat Wannett and Avona.
Yawls—Mr. Figueria's Zoraida beat Forsyth II, and Avonia.

Canarsie Y. C.

SANDS POINT—JAMAICA BAY.
Sunday, Sept. 1.

THE Canarsie Y. C. held a regatta on Sunday, Sept. 1, off the club house at Sands Point, Canarsie, L. I. Soon after the start Yank took the lead, and held it until the last leg, when, after rounding the buoy of Barren Island Point, Irene, G. Martin, went to the fore, and after a magnificent bit of windward work passed Yank and won the Vice-Commodore's cup in the class for cabin catboats. Irene, Athala and Yank all crossed the finish line within fifty-five seconds of each other. The summaries:

Cabin Catboats.		Open Catboats.	
Start.	Finish.	Start.	Finish.
Irene, G. Martin.....	10 51 45	12 59 37	2 07 52
Athala, Northbridge.....	10 51 55	12 59 52	2 07 59
Yank, C. Fuhy.....	10 52 35	1 00 07	2 08 52
Tassie, Fletcher.....	10 51 10	1 12 30	2 21 20

Emma S., H. Sparr.....	10 56 35	1 08 48	2 12 13

Monday, Sept. 2.

Another race was held by the Canarsie Y. C. on Monday, Sept. 2. The wind was light when the yachts started, blowing from the E., and the water was smooth. The race was open to all club boats. The course was from a stake boat off the club house, through the breakwater, to a mark boat off the Hassock, thence to the club house, three times around, a total distance of twelve nautical miles. Aurora won in the cabin cat class; Ideal was first home of the open catboats, and Athala won from Irene. The summaries:

Cabin Catboats.		Open Catboats—23 to 25ft.	
Start.	Finish.	Start.	Finish.
Athala, G. Northbridge.....	10 37 05	1 36 15	2 51 15
Irene, George Winters, fouled Black Diamond and withdrew.		Tam O'Shanter, D. J. Tinsley, Jr.....	Withdraw.
		The Caddie, E. H. Carr.....	Withdraw.
		Open Catboats—20 to 23ft.	
		Ideal, W. H. Sampson.....	1 58 22
		Vision, C. B. Fitzmaurice.....	1 58 11

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.
Saturday, Aug. 31.

A SPECIAL race between the Seawanhaka knockabouts was sailed on Saturday, Aug. 31, in a light southerly breeze, over the inside triangular course, which is six nautical miles in length, covered twice. Wyntje led nearly all the time from start to finish. The times:

	Start.	Finish.	Elapsed.
Wyntje, Sherman Hoyt.....	3 20 00	5 31 12	2 11 12
Marcia, Dresser and Jacquelin.....	3 20 00	5 35 03	2 15 03
Gowan, J. Sherman.....	3 20 00	5 38 30	2 18 30
Mistral, E. I. Lowe.....	3 20 00	5 47 35	2 27 35

Lucille, H. H. Landon.....	3 20 00	5 59 20	2 39 20
Vagrant, Brown & Lowe.....	3 20 00	6 05 25	3 15 25

Monday, Sept. 2.

The special race of the Seawanhaka Corinthian Y. C. for a trophy offered by Frederic R. Coudert, Jr., was decided off the home of the club, Centre Island, on Monday, Sept. 2. Gowan, owned by F. C. Stewart, and R. W. Gibson, won the prize. The race was sailed in a light southeasterly breeze over a course of six miles to leeward and return. Marcia D., Le Roy Dresser, and H. B. T. Jacquelin came in second, and Wyntje, Colgate Hoyt, finished third.

Bayswater Y. C.

JAMAICA BAY.
Monday, Sept. 2.

THE Bayswater Y. C. held a regatta on Monday, Sept. 2, on Jamaica Bay. The course was from the club house down the channel to a mark boat in Sweetwater, thence back to the starting line. This course was covered twice, making a distance of ten miles. The summaries:

Cabin Sloops—Start, 11:30.		Second Class Catboats—Start, 11:20.	
	Finish.		Finish.
Olga, J. H. Jelson.....	1 54 35	2 44 35	
Robin, D. L. Starke.....	1 57 58	2 46 48	
Mattie, M. L. MacNamara.....	1 59 15	2 39 15	
Meta, H. I. North.....	2 01 20	2 41 20

Marion, B. Moller.....	1 03 02	2 27 02	
Maud, W. Shearer.....	1 04 25	1 03 25	
Pirate, F. Richmond.....	Withdraw.		

The winners were Olga, Mattie, Norma and Marion.

Indian Harbor Y. C.

GREENWICH—LONG ISLAND SOUND.
Monday, Sept. 2.

THE Indian Harbor Y. C. gave a handicap race on Labor Day, Monday, Sept. 2. There were eleven starters, and among them were cats, yawls, sloops and raceabouts. The handicaps ranged from 5 to 20m. It was a ten-mile race over the club course, and the boats made good time in a fair breeze from the E. Cymbra, which started last in the race, crossed the finish line first, 10m. in advance of the raceabout Spindrift. The times were:

	Start.	Finish.
Louie Belle.....	2 05 00	5 27 31
Noggin.....	2 10 00	5 33 49
Stingy.....	2 10 00	*
Bug.....	2 10 00	†

Williamsburg Y. C.

FLUSHING BAY—LONG ISLAND SOUND.

Sunday, Aug. 25.

THE ladies' day regatta of the Williamsburg Y. C. was sailed on Sunday, Aug. 25, in a light N.W. breeze. The course sailed was, starting by crossing an imaginary line drawn between the club house and a buoy anchored off shore; thence to the spar buoy off College Point; thence to the spar buoy off Hunt's Point; thence to starting line. The direction of the wind was such that it made the first leg a beat to windward, the second a reach with booms to port, and the third a run. The summary follows:

Table with columns: Sloop-Class, Start, Finish, Elapsed, Corrected. Lists various boats like Portia, Bertha K., White Rose, Flirt, etc.

The winners were Bertha K., White Rose, Eagle, Cupid, Reckless, Florence and Echo. Edith M. and Little Dean were disqualified.

Jamaica Bay Y. C.

ROCKAWAY BEACH, L. I.

Monday, Sept. 2.

THE Jamaica Bay Y. C. held a regatta for sailboats and launches off the club house at Holland's Station, on Monday, Sept. 2. The race of the launches was to start first, but as several could not be ready in time, the committee decided to send off the sailing yachts ahead of them. The wind at the time the preparatory signal was given, at 3:20, was from the N. of E., which made it a run down to the first mark at the spar buoy, off Block House Point; a beat to a stakeboat at Broad Channel, and a broad reach home. The summaries:

Table with columns: Launches-Class, Start, Finish, Elapsed, Corrected. Lists boats like Cecelia, O. L. Schwencke, Agnes B., etc.

Cohasset Y. C.

COHASSET, MASS.

Saturday, Sept. 7.

THE postponed Labor Day races for the knockabouts of the Cohasset Y. C. were sailed over the regular club courses, off Cohasset, Saturday, Sept. 7, in a light southeasterly breeze. In the regular class Monsoon had a very soft time of it, winning by over 11m. Fancy also had an easy win in the special class. The summary:

Table with columns: Knockabout Class, Elapsed. Lists boats like Monsoon, John Knowles, Elinor, S. K. Moors, etc.

Savin Hill Y. C.

DORCHESTER, MASS.

Monday, Sept. 2.

THE last race of the season between the one-design sailing tenders of the Savin Hill Y. C. was sailed off the club house Monday morning, Sept. 2, for a silk pennant presented by Loring Sears. There was a lively breeze moving from the eastward, and the boats spread out more than is their custom. The McCurdy tender won by nearly 2m. The summary:

Table with columns: Elapsed. Lists boats like H. R. S. McCurdy, H. Skinner, C. T. Leach, etc.

Rifle Range and Gallery.

National Rifle Association.

CAPT. WILLIAM B. MARTIN, of the Second Regiment of New Jersey, won the Wimbledon Cup with a score of 136. The scores were: John Corrie, New York, 124; Lieut. W. W. Cookson, Washington, 130; Capt. S. S. Stebbins, Washington, 129; Robert Byars, New York, 128; George H. Doyle, New York, 123; William F. Leuschner, New York, 125; William De V. Foulke, Philadelphia, 122; G. B. Young, Washington, 118; Horace M. Bell, Washington, 117; William H. Bull, New Jersey, 116; S. B. Welterald, Washington, 114; A. E. Perkins, Philadelphia, 114; Capt. W. F. Whittemore, New Jersey, 114; George Daube, New York, 110; John Mal-

colm, New Jersey, 109; H. J. Cenact, New Jersey, 106; L. Bowen, Rhode Island, 105; George C. Shaw, Washington, 96; W. Tewis, New Jersey, 90; Arthur Rowland, New Jersey, 89; W. C. Cannon, New Jersey, 89. About a dozen other contestants withdrew, not having scores good enough for a possible win.

For the Schuetzen team championship the Zettlers, of New York, entered two teams. The scores were as follows: First team Zettlers, 282; second team Zettlers, 252; Manhattan Rifle Association, 246; Italian Shooting Association, 167.

Those who made up the winning team were: H. M. Pope, F. C. Rous, M. Dowler, L. P. Hansen and B. Busse. On the second team of the Zettlers were E. S. Pillard, C. G. Zettler, G. Schleicht, B. Zettler and G. D. Weigman. Schleicht made the high score, 63.

The Irish rifleman practiced all day Aug. 31 on the 1,000-yard range. As a compliment to them, the New Jersey State Rifle Association, acting on the suggestion made by Gov. Voorhees and Gen. Spencer, has arranged an all-comers' match. Cash prizes of \$500 have been offered. They are divided as follows: \$150, \$100, \$60, \$50, \$40, \$30, \$20, \$15 and \$10.

There were eleven entries to contest for the Hilton trophy. The District of Columbia team won it. The scores of the team were as follows:

Table with columns: 200 yds, 500 yds, 600 yds, Total. Lists names like Major Young, Private Appleby, Lieut. Lizean, etc.

New York, 1,094; Canada, 1,077; New Jersey, 1,037; Pennsylvania, 1,053; United States Marines, 1,014; Massachusetts, 996; Maine, 944; Maryland, 947; Rhode Island, 894; Ohio, 826.

The Schuetzen all comers' match on the standard American target is getting interesting. Dr. Hudson, of Jersey City, has 123; N. M. Pope, Massachusetts, 120; R. Busse, New York, 123; L. P. Hansen, Jersey City, 123; F. C. Ross, New York, 124; Michael Dorrlor, Jersey City, 136; George Schleicht, Guttenberg, 135; George Schneering, Rutledge, Pa., 126.

The centennial trophy Palma match lost none of its public interest. It was a team contest for the championship of the world, eight men to a team, and the members of the various teams participating must be native-born citizens of the countries which they respectively represent, except in the case of teams representing a provincial territory of a government, in which case a residence in the province will be sufficient, providing the member is a native-born subject of the parent country. The rifle used was the national military arm of the country the team represented. Minimum pull of trigger, 4 1/2 lbs. Distances, 800, 900 and 1,000 yds. Fifteen shots at each range by each competitor. Any position without artificial rest. Entrance, \$2 per man. Orthoptic sights allowed. The United States has held this trophy for many years, but lost it to the Canadian team, which surpassed in skill its competitor, scoring 28 points over the American team, the scores being 1,522 to 1,494. On the shorter ranges, 800 and 900 yds., there was a cause for hope that the Americans might pull ahead and win, but on the 1,000 yd. range they were most decisively beaten. Both teams worked conscientiously in practice.

At the 800 yd. range, the Canadians led by 7 points, 532 to 525. The teams tied at 900 yds., so that the Canadians were still leading by 7 points at 1,000 yds., the Canadians gained 21 points:

Table with columns: Canadian Team, 800 yds, 900 yds, 1,000 yds, Total. Lists names like Lieut. Ross, Capt. J. R. Davidson, etc.

On Sept. 6 the special challenge match between teams representing the Ulster Rifle Association, of Belfast, Ireland, and the New Jersey State Rifle Association took place. The conditions were: Teams of not less than five nor more than eight men, 15 shots by each competitor at 800, 900 and 1,000 yds. Any rifle not exceeding 10 lbs. in weight, with not less than a 3 lb. trigger pull and with a maximum caliber of .315. Sights any excepting telescopic. Any ammunition. Any position without artificial rest for body or rifle. The use of gun sling allowed on rifles. In the competition at the second and third distances the American team was distinctly outclassed. Maj. Milner placed his first shot in the bullseye of the wrong target. The scores follow:

Table with columns: Ulster Rifle Association Team, 800 yds, 900 yds, 1,000 yds, Total. Lists names like Thos Caldwell, Robert Duncan, etc.

Total ... 558 549 513 1620

New Jersey State Rifle Association Team.

Table with columns: 800 yds, 900 yds, 1,000 yds, Total. Lists names like Dr. S. I. Scott, W. S. Witherald, etc.

Total ... 550 575 483 1558

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Sept. 1.—Columbia Pistol and Rifle Club held its bi-monthly shoot to-day. The Native Sons also opened their new club on our range, which crowded us. They will shoot on the off days hereafter. Conditions were unfavorable for fine scores, but Brannagan did fine average work with his revolver. Dr. Twist shot a return match with Dorrell with rifle and got beaten, but the Doctor made 56, which is many points better than he ever did before. He and Dorrell crowded Young closely for first honors with rifle. Scores on Columbia target, off-hand:

Rifle, 200 yds.: F. O. Young, 50, 51, 54, 65; A. B. Dorrell, 51, 61, 61, 66, 66, 71, 72; Dr. J. F. Twist, 56, 79, 97, 98, 126; G. Mannel, 64, 72, 75; G. W. Hoadley, 74, 76, 86, 96.

Three-shot scores: A. B. Dorrell, 13, 15.

Military and repeating rifles, Creedmoor count: E. A. Allen, 43, 43, 42, 41.

Revolver, 50 yd. range: A. J. Brannagan, 42, 43, 45, 45, 49, 50, 57, 61; F. O. Young, 47, 52, 56, 57; W. G. Hoffman, 48, 50, 51, 60, 61, 61; P. A. Becker, 54, 60, 61, 63; C. M. Daiss, 70; Dr. Twist, 65, 66, 75, 80, 84; E. A. Allen, 109.

Pistol: F. O. Young, 37; G. W. Hoadley, 48, 50, 57, 59; Mrs. G. Mannel, 61, 65, 75, 78, 80; G. Mannel, 65, 71, 73, 81, 86, 88; A. Baker, 82, 83, 85, 92.

22 rifle: E. Stephens, 56.

Our best team in telegraph revolver match made 1,590, and Light Battery A, of Boston, made 1,445, thus defeating us 145 points. We expect a return match and to do better, as our best six men made 1,415, or 30 points better than their team score. We will be able to select our best men in rapid firing, as this has stirred the boys up to try that style of shooting. We sent congratulations to Battery A on their victory over us and also at Sea Girt.

F. O. YOUNG, Rec. Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, Four-Mile House, Reading Road, Sept. 1. Conditions: 200 yds., off-hand, at the German ring target. Strickmeier was declared champion for the day with the fine score of 228. Weather, cloudy; thermometer, 72; wind, 7 to 9 o'clock:

Table with columns: Name, Score. Lists names like Strickmeier, Gindke, Payne, etc.

Strickmeier did himself proud to-day by beating his former record 4 points; his 228 now stands as his highest to date. How the bouquets are flying in his direction, and he is not averse to throwing a good many of them himself. We hope to see him beat Jayne's record of 232 before long.

This club will hold its annual prize shoot on Sept. 29. Open to all, any rifle over .45 cal. Jacketed bullets and telescopes not allowed. Rest and off-hand shooting. A select list of prizes will be exhibited on the grounds at Four-Mile House, Reading road. Take Avondale or Norwood electric cars.

Broken and Dusted Targets.

CINCINNATI, Sept. 7.—I have read with much interest the recent articles on "Broken and Dusted Targets." I quite agree that a distinctly dusted target should be scored a dead bird. There must needs be, however, a pretty sharp-eyed referee. I note that there is some objection to the dusted target as a dead bird, possibly through a fear that too many 75 per cent. and 80 per cent. shooters would be promoted to the 90 per cent. class.

And while discussion of target shooting is on there is another matter that deserves attention, and that is the position of the gun when target shooting. There are many gentlemen who shoot at the trap during the close season on game, for amusement and practice, who feel that the present style of shooting with the gun fastened to the shoulder, so to speak, is poor practice for field shooting. It is true they have the option of gun in any position they choose; at the same time they realize that they are badly handicapped if shooting against the gun at the shoulder, for the target will certainly fly 10 to 15 yds. while the gun is being elevated and adjusted. Yet they are helpless unless they choose to play solitaire at the trap, which is much less pleasure.

Why do not the lovers of the gun who shoot for pleasure and improvement in field shooting organize clubs where all will shoot with the gun below the elbow until the bird is in sight? Is the matter worthy of discussion? J. S. M.

Trapshooting.

Fixtures.

Sept. 11.—Montpelier, Vt.—Montpelier Gun Club's tournament; contest for the Robin Hood international trophy. G. B. Walton, Sec'y.

Sept. 10-12.—Sidney, O.—Sidney Gun Club's tournament.

Sept. 11-12.—Warren, Ind.—Warren Gun Club's tournament.

Sept. 11-13.—Canton, O.—Canton Gun Club's tournament.

Sept. 15-17.—St. Joseph, Mo.—Metropolitan Gun Club's tournament, amateur and professional events.

Sept. 16-17.—St. Joseph, Mo.—St. Joseph Gun Club's tournament.

Sept. 19-20.—Alton, Ill.—Two-day tournament of the Piasa Gun Club.

Sept. 17.—Winchester, N. H.—Target tournament of the Winchester Rod and Gun Club. F. D. Lesure, Sec'y.

Sept. 18.—Ossining, N. Y.—Shoot and clambake of the Ossining Gun Club. C. G. Blandford, Capt.

Sept. 19-20.—Carthage, Mo.—Peters Cartridge Company tournament, under the auspices of the Carthage Gun Club.

Sept. 20-21.—Titusville, Pa.—First annual tournament of the Titusville Gun Club. H. Pfeiffer, Sec'y.

Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament: \$300 added. Charles F. Dreih, Sec'y.

Sept. 26.—Cresson, Pa.—All-day shoot of the Cresson Gun Club. C. Wenderoth, manager.

Oct. 1-4.—Detroit, Mich.—John Parker's annual international tournament; three days targets, one live birds; \$300 in money and trophies; distance handicaps.

Oct. 2-4.—Louisville, Ky.—Tournament of the Interstate Association, under the auspices of the Jefferson County Gun Club. Elmer E. Shaner, Mgr.

Oct. 2-4.—Eau Claire, Wis.—Tournament of the Eau Claire Gun Club; two days targets, one day live birds; \$300 added. E. M. Fish, Sec'y.

Oct. 2-4.—Louisville, Ky.—Tournament of the Jefferson County Gun Club; two days targets, last day live birds; \$200 cash and trophies added. Emile Pragoft, Sec'y.

Oct. 9-10.—Huntington, Ind.—Tournament of the Eric Gun Club.

Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.

Oct. 15-16.—Greenville, O.—Regular annual tournament of the Greenville Shotgun Club. H. A. McCaughy, Sec'y.

Oct. 16.—Mt. Sterling, Ill.—Tournament of the Mt. Sterling Gun Club. J. Breidenbend, Sec'y.

Newark, N. J.—South Side Gun Club live target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utresh Gun Club—Saturdays.

DRIVERS AND TWISTERS.

The high-gun system governing the merchandise events of the New York State shoot should appeal to all whose sense of equity is greater than the personal viewpoint of self-interest. This system eliminates the absurd possibility of a contestant scoring 24 or 25 and winning nothing, while some other contestant who scores 22 or 23 wins a prize. There are 75 prizes, so that there will probably be a prize for each contestant. It is probable that the best shots will win the best prizes, and it is proper that the best shots should win the best prizes. A competition would be conducted on false principles indeed if the best rewards were given to the poorer performers.

Mr. C. G. Blandford, captain of the club, writes us as follows: "On Wednesday, Sept. 18, the Ossining Gun Club will have another of their popular clambakes. This bake, as before, will be superintended by ex-Capt. Washburn, of the New York police force. Tickets will be \$1.50 each, ladies' tickets \$1. This will be a genuine Rhode Island persuasion, and is mostly for the entertainment of the clay-bird shooters, who are expected to be on hand from 10 A. M. to 3:30 P. M., when the bake will be opened, rain or shine. All shooters will be welcomed."

The Winchester Gun Club, of Winchester, N. H., announces a tournament for Sept. 17. Shooting commences at 9:30. There are twelve events on the programme at 10, 15, 20 and 25 targets. Targets 1 1/2 cents. Event No. 6 is a five-man team shoot, for a \$25 cup. For the high gun there is a \$12 cup. Lunch served on the grounds. Ship guns and ammunition to Mr. F. D. Lesure, the secretary. Magatrap and bluerocks.

Mr. J. Breidenbend, the secretary, informs us that the Mt. Sterling, Ill., Gun Club claims Oct. 16 as the date for its tournament.

In the team race for the club championship of Virginia, Sept. 2, at the Virginia State shoot, the West End Gun Club defeated ten competitors by a score of 225.

The Winchester, N. H., Rod and Gun Club will hold its first annual tournament Tuesday, Sept. 17. A \$25 cup is up for a five-man team shoot, and a \$12 cup for high gun.

Much to his profound disappointment, Mr. Walter F. Sykes, president of the New Utrecht Gun Club, and active in promoting the success of the New York State shoot, journeyed to Europe on Saturday of last week, important business interests there claiming imperatively his personal attention.

The Forester Gun Club, of Newark, N. J., will hold a live-bird and target handicap on Thanksgiving Day. The programme will be on popular lines, and there will be enough of it to keep up the competition all day.

Col. R. S. Terry, president of the Lynchburg Gun Club, was elected president of the Virginia State Sportsmen's Association, and Dr. J. A. Jackson was elected to the office of secretary-treasurer, at a meeting of the Association, held in Richmond, on Monday evening, Sept. 2.

In the match between Messrs. C. M. Stark, of Dunbarton, N. H., and A. S. Langley, of Exeter, N. H., at Concord, N. H., on Sept. 5, the former won by a score of 87 to 86.

The postponed race for the championship of New Jersey between Mr. E. Vandever and Dr. W. F. Gardiner will take place Saturday, Sept. 21, if the present intentions are carried out.

Mr. Elmer E. Shaner, informs us that the Interstate Association will give a tournament at Louisville, Ky., under the auspices of the Jefferson County Gun Club, on Oct. 2, 3 and 4.

The Waterville Gun Club won the State championship for teams of five men, at the Maine State shoot on Sept. 2, with a score of 226. Each man shot at 50 targets.

BERNARD WATERS.

Maine State Shoot.

PORTLAND, Me.—The annual Maine State shoot, which generally ends the trap shooting season in Maine, was held on the grounds of the Portland Gun Club on Monday and Tuesday, Sept. 2 and 3.

Monday, Sept. 2.

The early morning was showery, but later it cleared and the sun shone brightly the rest of the day. There was a light breeze, but not enough to interfere with the scores.

The event of chief interest was the third, which was for the Team Championship of the State, five men to a team, each man to shoot at fifty targets. The Portland Gun Club has held the championship for the past two years.

Table with 10 columns: Events, Targets, and 9 Shot at. Broke. Lists scores for various shooters like Adams, Neal, E. Randall, etc.

Table with 10 columns: Events, Targets, and 9 Shot at. Broke. Lists scores for various shooters like Adams, Neal, E. Randall, etc.

The following are the scores of the various teams which shot for the championship: Waterville—Stobie 43, Preble 46, Foster 46, Greene 45, Reid 46; total 226.

Tuesday, Sept. 3.

The morning opened cloudy, but gradually the clouds broke and by noon the sun appeared for good, and the afternoon's light was good. Again there was a light breeze, which changed the flight of the targets from time to time, but which was not stiff enough to cause them to "duck" and so did not interfere materially with the shooting.

Table with 10 columns: Events, Targets, and 9 Shot at. Broke. Lists scores for various shooters like E. Randall, Neal, Adams, etc.

After the regular programme was finished, the Lovell Badge, which was held by the Waterville Club, was shot for. Under a recent agreement this badge, which is subject to challenge, was to be shot for at each tournament held in the State.

Table with 3 columns: Portland, Known, Unknown, Total. Lists scores for shooters like E. Randall, C. Randall, Neal, etc.

The Shooter's View of Recoil.

From the London Field.

It is an essential introduction to the more practical aspects of the case that the mathematical side of recoil shall be clearly and precisely laid down. Following upon that it is of course useful to show what bearing the resulting experiments have upon gun fitting and the selection of guns and ammunition giving a minimum of punishing effect.

In the first place it will be remembered that all Mr. Griffith's experiments showed the value of recoil registered with a 7.9lb. gun with varying conditions of loading. Now it must not be supposed that this is an absolute quantity which will be met with in every gun, and with every shooter firing a different class of ammunition.

There is a very important bearing of the added weight of the shooter's body which must be taken into very careful account. The recoil of the gun can only be reduced in the manner described, provided the gun is properly bedded into the shoulder during the time that the gun is building up its velocity of recoil.

do materially control the amount of recoil produced, will be known to those who have worked with single-trigger mechanism, where the operation of the parts depends upon an intermediate pull due to the recoil of the gun.

Another form of resistance which practice unconsciously teaches the shooter to bring into play is a sudden forward movement of the body, which causes it to meet the backward movement of the gun. That this exists is apparent to those who have watched experienced shooters when firing with ammunition which hangs fire or fails altogether to go off.

Even though it might be demonstrated that in most cases the gun is not so held as materially to reduce the recoil, it would not follow that the effects would be the same once a given recoil had been established. The initial stages of recoil during the first half inch of travel would in almost all cases bring the gun into close contact with the shoulder of the shooter; and the bringing of this recoil to rest can, as has already been indicated, be regulated to the advantage of the shooter.

The matter must be left at this apparently indefinite stage, because it will be seen that recoil in its more practical aspects ceases to be a subject for exact inquiry by the scientist, and resolves itself into a practical application of principles which have long been established.

Titusville Gun Club.

TITUSVILLE, Pa., Sept. 4.—At the regular weekly shoot of the Titusville Gun Club, held Friday, Aug. 30, the contest for the club medals resulted in a tie between C. Meyer and A. Love, each breaking 19 out of a possible 25, shooting from the 18 and 14yds. marks, respectively.

The weather has been very disagreeable for the past two or three shoots, it having rained very hard; but in spite of that the attendance has been good.

Table with 13 columns: Events, Targets, and 13 Shot at. Broke. Lists scores for various shooters like Jas. Brown, Dr. Jamison, H. Pfeiffer, etc.

Dover Sportsmen's Association.

DOVER, N. H.—Following are scores at Dover Sportsmen's Association's fifth annual, Sept. 2:

Table with 4 columns: Shooter, Shot at, Broke. Lists scores for shooters like Gerrish, Carlisle, Langley, etc.

Langley, of Exeter, N. H., won first prize, \$5. Carlisle, of Exeter, won second prize, \$2.

Pawtuxet Gun Club.

PROVIDENCE, R. I., Aug. 31.—Please find scores of Pawtuxet Gun Club, at regular Saturday afternoon shoot:

Table with 2 columns: Shooter, Score. Lists scores for shooters like Wheelwright, Sheldon, Dr. Inman, etc.

IN NEW JERSEY.

Hudson Gun Club.

Jersey City, Sept. 8.—These scores were made at the last shoot of the Hudson Gun Club. A high wind blew from the north and kept the scores down; day fine:

Table with columns for Events (Targets, 1-14) and rows for shooters: Schorly, Dudley, De Long, Altz, Schields, Van Dyne, Jones, Hughes, Fleming, Hansman, Seeley, O'Brien, Duke.

Weidmann vs. Kuser.

Yardville, N. J., Sept. 6.—The scores of a match at 25 live birds between Messrs. Weidmann and Kuser are appended:

The first match was made between Kuser and Page to shoot at 50 birds, \$50 a side. Page being called out of town on very important business was unable to be present at shoot. He promptly telephoned to Weidmann to take his place in the match, which was agreeable to Kuser, only the number of birds and stake were cut in half.

The attendance of spectators was good, but not many shooters were present.

Kuser and Page will meet this coming week at 50 birds, \$50 a side. The rise was 28yds.

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.

Trap score table for Weidmann and Kuser with columns 1-24 and rows for Weidmann and Kuser.

Shoot-off. Weidmann won:

Shoot-off trap score table for Weidmann and Kuser with columns 1-24 and rows for Weidmann and Kuser.

Forester Gun Club

Newark, N. J., Sept. 6.—This club has made quite a jump among the shooting people. During the year the members have put their shoulders to the wheel and have fixed the grounds so that the shooting is much easier. They are now getting ready to run a live-bird handicap on Thanksgiving morning which will be a 15-bird event for an optional sweepstake. During the afternoon there will be several handicap events for prizes at targets, handicaps to be shot on handicap rise.

Ten events, all 10 birds. Events 5, 6 and 7, handicap for prizes; other events optional sweeps.

It was a capital day for target shooting, although the weather was threatening rain. Every one was shot out of fun, and declared they had a good time:

Table with columns for Events (Targets, 1-12) and rows for shooters: W Smith, Tigh, Ycomans, D Fleming, Jewell, Smith, Fleming, Wiuans, Shraft.

Trenton Shooting Association.

Trenton, N. J., Sept. 7.—The week end shooting matinee was pulled off with the usual accompaniment of squalls and showers. The rain seems to be a permanent fixture with us on Saturday afternoons, but as all shooting is under cover it causes us no discomfort, but it has a tendency to cut down the attendance somewhat. It is all right after one gets to the grounds, but it is the getting there that has to be figured on, and causes the weak-kneed to "fall by the wayside."

The writer will soon be relieved of the duty of jotting notes, as he will decline a renomination as secretary at the annual meeting in October. The duties devolving upon the position interfere to a great extent with his business, and since the protracted illness and death of his little daughter and mother, which occurred within a week of each other, he has lost his grip on the sport.

The shooting to-day consisted of sweepstakes, with private purses on the side. The "Dusted vs. Busted Target" question came up for a share in the programme, several events being decided by a half point, the allowance given for a dusted target. The consensus of opinion was against the innovation, but as some of the members were interested in the matter it was worked in several of the events, for the purpose of practical demonstration.

Table with columns for Events (Targets, 1-10) and rows for shooters: Wilkes, Thropp, Satterthwaite, Applegate, Duncau, Mickel, Hingelcy, Harrison, Widman, Sampson, Sam Kay, Rowan, Vanarsdale, Frank.

Events Nos. 1 to 3, magautrap. Events Nos. 4 to 10, trap battery, with allowance of 1/2 point for each dusted target. The score looks "funny," doesn't it? The referees, one after the other, went on strike.

ON LONG ISLAND.

Trap at Interstate Park.

Interstate Park, L. I., Sept. 6.—The all-day live-bird shoot managed by Mr. L. H. Schortemeier, held at Interstate Park to-day, was well attended, considering that the outing season had barely ended and people were not readjusted entirely to the changes from summer to winter homes.

The 7-bird events had \$5 entrance, three moneys, Rose system, 6, 3 and 1 points. The event at 15 birds had \$10 entrance, four moneys, Rose system, 12, 6, 3 and 1. All events were handicaps:

Table with columns for No. 1, No. 2, No. 3 and rows for shooters: Schorly, Nason, Glass, Hopkins, Super, Seabeg, Morfey, Steffens, P Van, Kroeger, Waters, Lockwood.

Fourth event: Schorly, 30, 222222-6; Steffens, 30, 121212011111-14; Glass, 30, 2222122012222-14; E Steffens, 27, 12121222-222212-14

Table with columns for Events (Targets, 1-14) and rows for shooters: Nason, Hopkins, Super, Kroeger, Lockwood.

The Concord Gun Club.

DUNBARTON, N. H.—My challenge, as published in FOREST AND STREAM of Aug. 17, was accepted by Mr. A. S. Langley, of the Exeter Gun Club. The match was shot on the grounds of the Concord, N. H., Club, at 1:30 of Sept. 5. The grounds of the above club are on the interval on east bank of Merrimack River, about five minutes' walk from center of town.

It is not very easy to make high scores on the above grounds, as local shooters and visitors have found, owing to the background of trees. There were a fair number of trapshooters from Exeter, Dover, Hillsboro, Henniker and other places. Quite a number of sweepstakes were shot. Some won; more did not. The day was good in some respects and poor in others. Hot was no name for it. A hazy light bothered nearly every one—the old-timers the most.

At 1:30 the match started. The conditions were 100 bluerock targets each from magautrap. Both men up. Two targets each from each score, from No. 1 to 5. Langley won the choice and started from No. 1.

In times long past I have shot quite a number of individual matches (none in recent years), but I wish to say that I never shot against a more agreeable, gentlemanly opponent than Mr. Langley. He shot a very plucky race, considering that he was just a little behind nearly all the time. He kept me trotting for all I was worth until the 98th target was broken. His congratulations were most cordial, as I trust mine would have been had he been the victor.

Dr. C. H. Gerrish, of Exeter, was on hand, showing that time was passing by his personal appearance slightly. The Doctor claims, most justly, that he was the captain of the very best team of five trapshooters ever sent out by the old Granite State. I am proud to say I was a member of this team. I allude to the Exeter team of five who went to the first Ligowsky clay-pigeon tournament in Chicago in May, 1884. We won about all there was to win, and never since, and, as the Doctor and I think, never will a similar New Hampshire team do as well.

The Doctor and I had a talk, and we were of the opinion that we were both getting too far along in years to try and defeat the younger members of the fraternity. In fact, I do not think I care to shoot many more individual matches. Of course, under the conditions of my challenge, I am pledged to give Mr. Langley a return match should he wish it. I shall be very glad to do this, and will try my best to push him along, as he did me, and will congratulate him most heartily should he win.

I give the scores, which I think are correct. I know that the totals are:

Table with columns for Events (Targets, 1-8) and rows for shooters: Mr. Langley, Langley, Stark, Langley's total, Stark's total.

The Exeter Club think of having a two days' tournament, and Dr. Gerrish wants to get the old Chicago team together (we are all still on earth) and shoot a team match against as many teams of five as the younger shooters can get together. Langley said: "I suppose, Doctor, you will want to use five traps, targets thrown so low and fast, with the wind blowing a gale, that no one can see what they are shooting at."

The veteran's answer was, "If I can have weather and everything else as I want it, you won't find any real easy shooting in it." C. M. STARK.

Ossining Gun Club.

OSSINING, N. Y., Sept. 7.—The Ossining Gun Club had a little "left-over" match at live birds to-day, besides the regular Saturday matinee at clays. Herewith please find scores. The birds were fair and no better. If they had been better, goose eggs would stand out more prominently:

Ten live birds: C Blandford, 30, 112211111-10; W Hall, 29, 122211212-10; M Dyckman, 27, 222111212-10; W Coleman, 27, 221122122-10

Table with columns for Events (Targets, 1-7) and rows for shooters: W Hall, C Blandford, W Coleman, L Sherwood, M Dyckman, Dr Schofmeister, A Bedell, J Willi, Jr., L Lyon.

The following scores were made at the Ossining Gun Club's Labor Day shoot. While the attendance was disappointing, those who showed up had a good time. A. L. Burns, of Mamaroneck, was king pin of the clay-bird shooters with 92 per cent., including doubles:

Table with columns for Events (Targets, 1-7) and rows for shooters: W Smith, A Burns, M Dyckman, N Tuttle, Hamlin, A Bedell, C Barlow, L Sherwood, J Willi, Jr., B Ganun, J Hitchcock, A Rohr, W Coleman, L Lyon.

Table with columns for Events (Targets, 1-7) and rows for shooters: A Burns, A Bedell, M Dyckman, Dr Sherwood, S McBeth, W Smith, L Sherwood, T Washburn, C Barlow, B Ganun, A Rohr, C Raymond, W Coleman.

Illinois Gun Club Tournament.

THE annual fall target tournament of the Illinois Gun Club will be held at Springfield, Ill., on Thursday and Friday, Oct. 17-18, and the events are open to amateurs only.

The programme is now in the hands of the printer, and will be mailed about the last of September. It calls for twelve events each day—six at 15 targets and six at 20 targets—and the club adds \$100 to the purses. The money will be divided as follows: In the 15-target events, three moneys, 50, 30 and 20, and in the 20-target events, four moneys, 40, 30, 20 and 10.

On the last day, Oct. 18, will occur the Central State amateur target handicap event, which calls for 50 targets, \$5 entrance, with \$10 added by the club. The grounds of the Illinois Gun Club are among the finest in the United States, having been put in superb condition for the last Illinois State shoot, and the State Association was so well pleased with the manner in which this year's tournament was conducted that they unanimously voted to hold next year's State tournament on these fine grounds.

The management of the Illinois Gun Club, in deference to the request of a large number of amateur shooters, will bar the professional shooters at this coming tournament, but will allow them to shoot for the price of targets only, and every courtesy will be extended them should they desire to be present and display their goods.

For any special information relative to the tournament address the secretary, Chas. Schuck, Jr., Springfield, Ill.

WESTERN TRAPS.

Garfield Gun Club.

Chicago, Sept. 7.—The appended scores were made on our grounds to-day on the occasion of the fifth shoot of the third series. Dorman won Class A trophy on 23, Delano won Class B trophy on 22, Johnson won Class C trophy on 20.

The day was decidedly against the making of good scores, being very windy, and the wind gusty at that, making the flight of the targets very erratic, and toward the latter part of the afternoon it was too cool to be comfortable, the shooters all being dressed for warm weather.

Twenty-one shooters participated in the main event, being a goodly number, considering that it was a bad day to shoot and so many of the members were away chicken and duck shooting. Barnard, of our club, killed forty ducks on Swan Lake last Monday:

Table with columns for Events (Targets, 1-24) and rows for shooters: H N Delano, L Thomas, Dr J W Meek, Mrs Shaw, Dr Shaw, A D Dorman, M F Wilson, A McGowan, E Nelson, J Nelson, J Eaton, J D Pollard, H Johnson, L Wolf, J C Kissack, C T Keek, D W Fehrman, Dr J A Huff, S E Young, A Hellman.

Chicago Gun Club.

Chicago, Sept. 7.—Some of the shooters of this gun club have returned to town and came out to break a few targets in the weekly handicap. E. M. Steck won high gun, and Dr. Burcky won the handicap trophy. In the monthly trophy handicap Borroff won. Mrs. Carson did good shooting, considering the strong wind which blew across the traps. On Sept. 14 the Chicago Gun Club will go to the Grand Crossing Club's grounds to shoot a return match with them.

Third weekly shoot:

Table with columns for Events (Targets, 1-24) and rows for shooters: Hardy, Buck, Dr Carson, Steck, Horn, Mrs Carson, R B Maek, Leffingwell, Dr Miller, Dr Morton, Dr Burcky, A W Morton, Borroff.

Fourth monthly shoot:

Table with columns for Events (Targets, 1-24) and rows for shooters: Hardy, Buck, Horn, Mrs Carson, Leffingwell, Burcky, Borroff, R B Maek, Dr Miller, Dr Morton, A W Morton, Steck, Dr Carson.

Baltimore Shooting Association.

BALTIMORE, Md., Sept. 6.—The summer season of the Baltimore Shooting Association closed on Aug. 31. Ten club shoots were held, all well contested.

Capt. James R. Malone won the club shoot with a total of 444 out of 500, while J. M. Hawkins pushed him hard for honors with 443 targets to his credit. Both men were in the A Class. In Class B the contest was even closer, John Hawkins and J. C. Hicks tying for first place with 403. Dixon was third with 395. In Class C Paul was first with 298. According to the conditions of the shoot each man was compelled to participate in ten contests in order to qualify.

The season's scores were as follows:

Table with columns for Events (Targets, 1-44) and rows for shooters: Malone, Hawkins, Lupus, Hood, Storr.

Table with columns for Events (Targets, 1-40) and rows for shooters: Hicks, John, Dixon, Robb, Burk, Chew, Leland.

Table with columns for Events (Targets, 1-34) and rows for shooters: Paul, Edward, Grant, Nicodemus, Franklin.

The following scores were made in two events of 25 targets each: Hicks, 23, 20; Malone, 25, 22; Pensey, 18, 17; Hawkins, 19, 21; Burk, 22, 22; Chew, 15, 19; Collins, 13, 14; Dixon, 19, 22; Leroy, 23, 20; Paul, 12, 16; John, 19, 21; Cox, 15, 19; Franklin, 16, 18.

In the first event Capt. Malone's score of 25 straight is the first that has been made over the new magautrap.

Wollaston Trap Club.

WOLLASTON, Mass., Sept. 3.—A few shooters lined up on the grounds of the Wollaston Trap Club, the morning of Labor Day. The traps have been idle for several weeks, and some of the shooters seemed to be a little rusty from lack of practice.

All events were at 10 targets. Events 5 and 11 were straight-away; event 4, reversed; event 8, 5 pairs, and the remainder, unknown angles. The scores:

Table with columns for Events (Targets, 1-11) and rows for shooters: Whitmarsh, Starratt, Elwell, Muldown, Baker, Prescott, Barlow.

Massabesic Gun Club.

MANCHESTER, N. H., Sept. 2.—The Massabesic Gun Club, commonly called the Stimpell Club, opened its new club house to-day and celebrated the event with a club shoot. The scores of four events are enclosed.

The club house will be open to visitors on holidays and on Friday afternoons during July and August each year. Bring your gun and have a friendly shoot with us:

Table with columns for Events (Targets, 1-24) and rows for shooters: Events, Targets, Fellows, Lovering, Harrington.

Virginia State Shoot.

The second annual tournament of the Virginia State Sportsmen's Association, which was held at Richmond, Va., Sept. 2-4, was a most successful shoot from every point of view, and cannot fail to help the sport of trapshooting in that State.

The programme was a good one for State shooters, and naturally attracted a large number of contestants. On the first day there were 110 shooters who took part in the different events, of whom 74 shot through the entire programme of 150 targets, exclusive of the team race.

On the second day the attendance did not fall off much, there being 90 shooters on hand, 73 of that number shooting through the programme of 150 targets, exclusive of the 100-target championship race, for which there were 80 entries from the State, a few outsiders shooting along in preference to sitting around looking on.

The shoot was under the management of Jack Parker, who had his hands full keeping everything going, particularly on the first day, when the State team championship event, which was No. 5 on the programme, broke up the squads and prevented him getting along with the next events, although he had two sets of traps lying almost idle.

In the cashier's office Mr. P. S. Brine had charge of the entry book, took in the cash, paid it out, and wrote up the squad tickets. Mr. J. F. Stearns received the squad cards when filled out with the scores made, and made up the sweeps, issuing orders on Mr. Brine for moneys due the respective contestants.

As proof that the Lynchburg contingent thought well of the office force it may be mentioned here that all the gentlemen who occupied positions in the cashier's office this year were engaged en masse by the management of the Lynchburg Gun Club, under whose auspices the third annual tournament of the State Association will be held on Labor Day, 1902.

It Was an Amateur Shoot.

Notwithstanding the fact that there were as many as 110 shooters taking part on the first day, there were only 10 manufacturers' agents present, or, rather, 11, if we include the manager, J. Parker, of the Peters Cartridge Co. The others were: Col. A. G. Courtney, of the Remington Arms Company; H. P. Collins and B. Leroy Woodard, of the Dupont Company; L. D. Thomas and J. S. Fanning, of the Laffin & Rand Company; John S. Sanders (not shooting) and C. M. Lincoln, of the U. M. C. Company; A. H. Fox and (on the second day) J. Hildreth, of the W. R. A. Company; Edward Banks, of the American E. C. & Schultz Gunpowder Company.

While Mr. Sanders did not shoot, he was a host in himself when it came to squad hustling and keeping things moving generally. In fact all the manufacturers' representatives turned to with a will and did stunts in the way of squad hustling, refereeing, etc., that were a source of much satisfaction to Jack Parker.

But the shoot was an amateurs' shoot, over 100 being on hand. The bulk of them came from within the confines of the State, as was only natural, there being but slight inducements for outside shooters to come in. Dr. Wilson from Savannah, Col. T. Martin from Bluffton, S. C., and Hood Waters from Baltimore were the most conspicuous among those from outside the State.

First Day, Sept. 2.

The chief feature on this day's programme was the team race for the club championship of the State at targets. The conditions were teams of five men, 50 targets per man, or 250 to the team. Eleven teams entered and competed, the team representing the West End Gun Club, of Richmond, winning, hands down, duplicating the same club's victory in 1900, and thus gaining two legs on the championship trophy, which has to be won three times by the same club before becoming its property. This year the West Enders ran up a total of 225 out of 250, an average of just 90 per cent.

The teams from Lynchburg and from Wytheville, the latter captained by R. L. Peirce, were both touted as dark horses, but neither of them showed to advantage, second place falling to another Richmond club, the East End Gun Club, an organization only a few weeks of age. This team broke 204, Wytheville's team scoring 203. Two teams of outsiders shot along, but neither of them came anywhere near the West End's total, a team made up of Fanning, Banks, Fox, Leroy and Lincoln being nearest to them with 211 breaks. The scores of the teams are as below:

The Team Race.

- West End Gun Club—Franklin Stearns, Jr., 45; Doyle 43; Boyd 48; Hammond 46; H. K. Ellyson, Jr., 45; total 225.
East End Gun Club—Hechler 40; Anderson 39; Boudar 41; Southward 41; C. D. George 43; total 204.
Wytheville Gun Club—Stearns 44; Funk 46; Lawson 28; Otey 42; R. L. Peirce 43; total 203.
Lakeside Country Club—Johnson 41; Colquitt 36; Saunders 46; Mastic 32; Lakeside 33; total 188.
Lynchburg Gun Club—Col. R. S. Terry 39; C. W. Scott 41; Fox 37; W. J. Daniel, Jr., 31; Venable 39; total 187.
Northside Gun Club, of Richmond—Jackson 37; Purdie 38; Coleman 33; Lorraine 41; Warren 36; total 185.
Staunton Gun Club—Merrick 40; Davis 31; Sillings 41; Kiracofe 38; Wayman 35; total 185.
Portsmouth Gun Club—Gallagher 42; Butt 39; Agelasto 29; Bilsoly 31; Byrd 39; total 180.
Ashland Gun Club—G. B. Hutchings 35; Hart 32; Trevillian 40; Cox 34; Blank 34; total 175.
Oakwood Gun Club, of Lynchburg—Nelson 43; E. M. Daniel 43; W. L. Moorman 33; Dennis 41; Campbell 15; total 174.
Deep Run Hunt Club—Vaughan 39; Anderson 31; Wood 33; Buckner 29; T. M. Tignor 30; total 162.
In the programme events, which called for 150 targets, Franklin Stearns, Jr., was easily high man, breaking 144 out of his 150. Dr. Wilson was second with 136, and Peirce came next with 134. The tabulated scores are given below:

Table with columns for Events, Targets, and individual shooter names with scores. Includes names like Dr. Byrd, Grant, Gallagher, Bilsoly, Butt, Courtney, Buckner, Collins, Hood, McKelden, R. H. Johnson, W. H. Colquitt, E. L. Hewitt, W. L. Boyd, J. C. Tignor, F. Stearns, C. E. Doyle, C. W. Saunders, Hammond, Ellyson, R. S. Terry, W. L. Moorman, H. Fox, C. W. Scott, E. M. Daniel, T. F. Nelson, J. W. Daniel.

Table with columns for shooter names and scores. Includes names like W. W. Dennis, W. D. Campbell, J. M. Venable, S. S. Stephens, Funk, J. S. Lawson, C. M. Otey, R. L. Peirce, Fanning, Banks, Winchester, Leroy, Lincoln, J. J. Jackson, J. A. Purdie, H. C. Boudar, L. Lorraine, A. J. Warren, G. W. Bruffey, H. A. George, D. R. Snow, H. T. Nelson, T. S. Baskerville, Edmonds, L. D. Thomas, Agelasto, H. W. Miller, J. H. Walthall, T. F. Stearns, T. K. Latimer, T. M. Tignor, Dr. Charles, N. C., Merriken, J. P. Davis, Sillings, Kiracofe, McDaniel, Wayman, W. D. Winter, T. F. Alexander, T. N. Williamson, E. B. Wilson, Dr. Wilson, Col. T. Martin, J. D. Carrier, E. B. Elson, H. Ellis, Jr., W. T. Trevillian, M. D. Hart, J. E. Cox, T. Hanna, Dr. Bagby, J. W. Young, W. Dickison, G. B. Hutchings, G. D. George, C. M. Saunders, E. P. Southward, H. W. Hix, F. B. Tolson, J. A. Anderson, W. Hobgood, L. Skipwith, E. A. Watson, T. K. Parrish, G. W. Tiller, Lakeside, Doyle, C. F. Cross, O. C. Bell, E. L. C. Scott, H. M. Cannon, W. R. Mastic, W. P. Wood, H. Brown, Vaughan, Coleman, V. Hechler, B. P. Cardoza, H. O. Humphreys, W. M. Hechler, Dr. J. A. White.

The winners of merchandise prizes on the first day are given below. No man could win more than four prizes on any one day, and Stearns, Hammond and R. H. Johnson ran the limit. Stearns going out at the end of the fourth event, while Johnson only reached his limit with the completion of the last event.

First Day's Prize List.

- Event No. 1: F. Stearns, Jr., first; R. S. Terry, second; Doyle, third; J. A. Anderson, fourth; C. W. Scott, fifth; Stephens, sixth; Hewitt, seventh.
Event No. 2: F. Stearns, Jr., first; C. W. Scott, second; Sillings, third; Hammond, fourth; Funk, fifth; Merriken, sixth; Williamson, seventh.
Event No. 3: C. W. Scott, first; F. Stearns, Jr., second; Stephens, third; Hammond, fourth; R. H. Johnson, fifth; Jackson, sixth; Boudar, seventh.
Event No. 4: Hart, first; F. Stearns, Jr., second; H. K. Ellyson, Jr., third; Wayman, fourth; Boyd, fifth; H. A. George, sixth; Southard, seventh.
Event No. 5 was the team race, for which no special list of merchandise prizes were offered.
Event No. 6: H. K. Ellyson, Jr., first; E. M. Daniel, second; Hammond, third; C. W. Scott, fourth; J. P. Davis, fifth; J. C. Tignor, sixth; Dr. Charles, seventh.
Event No. 7: Hammond, first; E. M. Daniel, second; R. H. Johnson, third; Funk, fourth; Bruffey, fifth; Watson, sixth; J. A. Jackson, seventh; Purdie, eighth; Bilsoly, ninth.
Event No. 8: E. M. Daniel, first; Purdie, second; R. H. Johnson, third; Stephens, fourth; E. B. Wilson, fifth; Wayman, sixth; Doyle, seventh.
Event No. 9: R. H. Johnson, first; Purdie, second; Stephens, third; Venable, fourth; Merriken, fifth; G. D. George, sixth; Davis, seventh; T. S. Baskerville, eighth.

An amusing incident in connection with the distribution of the above merchandise prizes was Mr. Hammond's win in the second event, in which he took fourth prize. Turning to the list of prizes he found that he had won a pair of shoes, those same shoes having been won by him at last year's shoot, and being found to be too large for his remarkably small feet were redonated by him as a prize at this year's tournament.

Second Day, Sept. 3.

The weather was again quite warm, and a sharp thunderstorm at midday did not do much to cool things off; it did not last more than a few minutes and scarcely delayed the shooting at all. This being the second day traps, trappers, etc., all worked more smoothly, and Jack Parker had less trouble all round. Ninety shooters were successfully and pleasantly handled, and the ninth, the last, event was shot off in good time, although something like 18,000 targets were recorded as thrown from the four sets of traps.

Individual State Championship.

The main feature on the programme was the 100-target race, event No. 5, on which the individual championship of Virginia at targets rested. There were thirty-one entries, exclusive of some from outside the State, who wished along "for targets only." Franklin Stearns, Jr., again demonstrated that he can break targets with almost monotonous regularity, for he won the championship in a most hollow style, breaking 96 out of his 100. His nearest competitors for the championship were E. M. Daniel, of Lynchburg, and H. K. Ellyson, Jr., of Richmond, each of whom broke 91; R. L. Peirce broke 80. W. A. Hammond, of Richmond, and C. W. Scott, of Lynchburg, broke 86, and Mr. Sillings, of Staunton, landed in seventh place with 84. Of the outsiders, Fanning broke 94, thus coming within 2 of Mr. Stearns' total.

In the programme events 73 shooters shot through, Hood Waters, of Baltimore, and Edward Banks tying for first place with 140 out of 150 shot at; J. S. Fanning and H. C. Boudar, the latter from Richmond, came next with 133 breaks. The scores in tabulated form are given below:

Table with columns for Events, Targets, and individual shooter names with scores. Includes names like Dr. Byrd, Grant, Miller, Bilsoly, Butt, Courtney.

Table with columns for shooter names and scores. Includes names like Buckner, Collins, Hood, McKelden, Johnson, Colquitt, Hewitt, Boyd, J. C. Tignor, F. Stearns, Doyle, C. W. Saunders, Hammond, Ellyson, Terry, Moorman, H. Fox, C. W. Scott, E. M. Daniel, T. F. Nelson, J. W. Daniel, Jr., Dennis, Campbell, Venable, Stephens, Funk, Dr. Wilson, Col. Martin, Peirce, C. N. Saunders, Walthall, Wayman, Hix, L. D. Thomas, Fanning, Banks, Winchester, Leroy, Lincoln, Bruffey, H. A. George, Snow, H. T. Nelson, T. S. Baskerville, Jackson, Purdie, Lorraine, Warren, Boudar, Merriken, Davis, Sillings, Kiracofe, McDaniel, Wilson, W. Baskerville, Whittet, Hart, T. Hanna, H. Brown, Edmunds, Lawson, Otey, G. D. George, Elson, Cross, Winter, Alexander, Carrier, T. F. Stearns, Dr. Charles, Latimer, T. M. Tignor, Gallagher, R. B. Jones, Skipwith, J. E. Cox, Freedman, A. G. Martin, Hobgood, Watson, Dr. Bagby, Hildreth, Anderson.

Second Day's Prize List.

- The list of prize winners in the second day's competition is given below:
Event No. 1—Stearns, first; Merriken, second; Peirce, third; Hammond, fourth; Lorraine, fifth; H. A. George, sixth; Edmonds, seventh.
Event No. 2: H. A. George, first; Peirce, second; Merriken, third; C. W. Scott, fourth; H. K. Ellyson, Jr., fifth; Venable, sixth; Watson, seventh.
Event No. 3: Peirce, first; H. K. Ellyson, Jr., second; Dr. Charles, third; Hammond, fourth; Purdie, fifth; F. Stearns, Jr., sixth; Skipwith, seventh.
Event No. 4: F. Stearns, Jr., first; Merriken, second; Boudar, third; Hewitt, fourth; E. M. Daniel, fifth; Peirce, sixth; Venable, seventh.
Event No. 5 was the 100-target race for the individual championship of the State, for which no list of merchandise prizes was offered.
Event No. 6: Hewitt, first; F. Stearns, Jr., second; Doyle, third; Kiracofe, fourth; W. C. Saunders, fifth; Purdie, sixth; Hammond, seventh.
Event No. 7: Doyle, first; Hammond, second; F. Stearns, Jr., third; E. M. Daniel, fourth; Elson, fifth; Wayman, sixth; Snow, seventh; McDaniel, eighth; T. M. Tignor, ninth; Bruffey, tenth; Dennis, eleventh; Otey, twelfth; H. A. George, thirteenth.
Event No. 8: E. M. Daniel, first; Boudar, second; H. K. Ellyson, Jr., third; Venable, fourth; Hewitt, fifth; Moorman, sixth; Hart, seventh.
Event No. 9: E. M. Daniel, first; Wayman, second; Moorman, third; G. D. George, fourth; Grant, fifth; T. M. Tignor, sixth; Edmonds, seventh.

As was only natural, there were several tied for the different prizes in the ninth event, all of which ties were decided by lot after the shoot had closed, the drawing for them taking place in the store of T. W. Tignor's Sons.

Third Day, Sept. 4.

This was live-bird day, the programme calling for two 10-bird races, \$10 entrance, and one 25-bird race, the latter \$25 entrance. All events were handicaps, class shooting. The 25-bird event did not fill, and its place was taken by another 10-bird race and a few miss-and-outs. Jack Parker killed straight from the 30yd. mark in all three 10-bird events. Col. Martin and R. L. Peirce each accounted for 29 out of their 30. The best work of the whole day was really done by Col. Martin, who shot at over 50 birds and lost only 2—both dead out of bounds. The birds on No. 1 set of traps (two sets were used) flew very well, being hard enough for anybody, but although a part of the same lot of birds, those trapped at No. 2 set were slow to start. The scores made are as follows:

Table with columns for No. 1, No. 2, No. 3, and shooter names with scores. Includes names like Hammond, Stearns, Peirce, Venable, Hutchings, Fanning, Gallagher, Byrd, Nelson, George, Hood, Martin, Banks, Collins, Butt, Ellyson, Parker, Carrier, Funk, Elson, Otey, Buckner, Hobgood.

Next Year's Tournament.

The annual convention of the Association was held in the store of Messrs. Tignor's Sons on the evening of Monday, the first day

of the shoot. At the convention Col. R. S. Terry, the popular president of the Lynchburg Gun Club, was selected to fill the position of president of the Virginia State Sportsmen's Association for the ensuing year.

To the Lynchburg Gun Club was intrusted the management of the third annual tournament, which will accordingly be held on its grounds next September, Labor Day being the first day of the shoot.

EDWARD BANKS.

The Okoboji Tournaments.

Second Day, Aug. 28.

The shooting to-day was much the same as on Tuesday—weather fine and not enough wind to seriously affect the flight of targets. Crosby won high average with 95.5 per cent. on the programme, and Gilbert, who was off form the first day, made a big gain, though Herschy got second place among the professionals with 94.5.

Table of scores for the second day of the Okoboji tournament, listing names, target counts, and averages.

Third Day, Aug. 29.

The wind took a hand in the game to-day and injected a flavor into the pot that played particular smash with the stew. It blew a well-developed gale from the northwest, coming across five miles of open water and striking the targets fairly in the face.

In the face of these difficulties, however, the work of a few men, and particularly of W. R. Crosby, comes out in striking relief. The wizard of the scatter gun dropped but four targets all day, and finished with 98 per cent. But three birds behind him, though, came Gilbert, for the professionals. Of the amateurs, Hughes was high with fourteen lost, while Holden lost fifteen and Kline and Burnside sixteen each.

Table of scores for the third day of the Okoboji tournament, listing names, target counts, and averages.

Table of scores for the fourth day of the Okoboji tournament, listing names, target counts, and averages.

Fourth Day, Aug. 30.

A perfect combination of weather attended the closing of this remarkable tournament to-day. Better scores were made all through, and the average mark was well above 90 per cent.

The attendance held up remarkably well to the very last shot, there being fifty-four names on the roll for the day, and 10,000 targets were consumed. Fred Gilbert, whose mark has consistently improved all week, came to the top with the best score, .975 per cent. It must be said right here that good fellowship and cordiality characterized this tournament throughout.

Table of scores for the fourth day of the Okoboji tournament, listing names, target counts, and averages.

Averages and Trophies.

In the summing up of grand total averages for the four days' mark W. R. Crosby is found to have the lead by eleven birds, and he captures the elegant silver trophy cup given by the management to the professional making the best score.

The figures follow: Scott 92, Kline 91, Burnside 92, Hughes 90, Parmelee 94, Gilbert 91, White 85, Falkner 81, Morrell 93, Herschy 95, Crosby 88, Townsend 87, McDonald 92, Bray 91, Linderman 86, Waddington 85, Loomis 90, Rogers 93, Holden 83, Trapp 83, Marshall 88, Cook 88, Ellett 88, J. A. Smith 88, Deterline 88, Sanders 88, Burk 88, Taylor 88, Stege 88, Barr 88, Rust 88, Patch 88, Duncan 88, Durton 88, Dominic 87, Shear 88, E. Hinshaw 85, Burns 72, Clark 84, Illion 87, G. E. T. 83, Crathcup 92, Dixon 90, Wittleaf 90, Thornton 83, Hayden 83, Lee 83, Baldwin 83, Bird 83, S. A. Smith 83, V. A. Q. 83, G. Marshall 83, McKelvy 83, Stoddard 83, Ady 83.

The last and one of the most interesting features of the long programme was the shoot-off at 50 targets per man to decide the ownership of the two splendid cups given to the class of 85 and over and that under 85 per cent. In the first race Linn Hinshaw, of Okoboji, was the only man scoring 25 over each set of traps, but having some numbers on the programme he was ineligible to compete for the cup.

The next highest score was 49, made by Guy Burnside and J. H. Hughes, and the shoot-off at 25 targets per man required 100 more targets for each before the contest was decided in favor of the Wisconsin man. It was as pretty a race as one would wish to see, and both men are to be congratulated on the work they did.

The contest for the second cup also resulted in a tie between Gittings and Clark, on 46. In the shoot-off at 50 targets the former won. The scores:

Table of scores for the shoot-off at 50 targets, listing names and scores.

And so closes the Iowa amateur shoot, with a record of 52,000 targets scored in four days; and we have a spare day to go a-fishing, while anticipating with keen pleasure the big meet of the Indians next week.

Rhode Island State Shoot.

INCLOSED you will please find the complete scores of Rhode Island's first annual State shoot, held on the grounds of the Pascoag Gun Club; also a short account of the shoot, which I thought you might like to publish. The programme consisted of 175 targets, divided into 10, 15 and 20 target events, including a 50-target three-man team race and a 50-target individual race for the State championship for the year ensuing.

Nos. 4, 5 and 6 were the team race; Nos. 9, 10 and 11 were the championship race, each at 50 targets:

Table of scores for the Rhode Island State Shoot, listing names, target counts, and averages.

Three-man team race: Pascoag—Griffith 47, Darling 38, Inman 43; total 128. Providence—Bain 48, Francotte 31, Budlong 38; total 117. Woonsocket—Getchell 46, Mills 40, Campbell 23; total 114. Saylesville—W. R. F. 23, Jordan 27, Jackson 31; total 81.

Birch Brook Gun Club.

LYNN, Mass., Sept. 4.—The all-day shoot of the Birch Brook Gun Club on Labor Day was a success from start to finish. Visitors were present from Boston, Lowell, Amesbury and Haverhill, Mass. The regular programme consisted of twelve events, 160 targets, in which Horace Kirkwood was high gun, Hilliard second, Collins third, Capt. Allen fourth and Tozier fifth.

Table of scores for the Birch Brook Gun Club shoot, listing names, target counts, and averages.

PUBLISHERS' DEPARTMENT.

Pennsylvania Railroad Reduced Rates to San Francisco.

On account of the Triennial Convention of the Protestant Episcopal Church, to be held at San Francisco beginning Oct. 2, the Pennsylvania Railroad Company will sell round-trip tickets to San Francisco from all points on its line at greatly reduced rates. Tickets will be sold Sept. 18 to 25, inclusive, and will be good to return to leave San Francisco not earlier than Oct. 3, and only on date of execution by Joint Agent, to whom a fee of 50 cents must be paid, and passengers must reach original starting point by Nov. 15, 1901.

Pennsylvania Railroad Reduced Rates to Indianapolis.

For the meeting of the Sovereign Grand Lodge, Independent Order of Odd Fellows, at Indianapolis, Sept. 16 to 21, the Pennsylvania Railroad Company will sell round-trip tickets to Indianapolis from all points on its lines at rate of a single fare for the round trip. Tickets will be sold Sept. 12 to 15, inclusive, and will be good to return, leaving Indianapolis not earlier than Sept. 15, nor later than Sept. 23. By depositing ticket with Joint Agent Sept. 15 to 23, and upon payment of 50 cents, an extension of the return limit may be secured, to leave Indianapolis to Oct. 7, inclusive.—Adv.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$1 A YEAR, 10 CTS. A COPY. {
SIX MONTHS, \$2.

NEW YORK, SATURDAY, SEPTEMBER 21, 1901.

{ VOL. LVII.—No. 12.
{ No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The country still stands appalled at the magnitude of the calamity that has come upon it. For a third time, the President of the United States has fallen by the bullet of an assassin. The mourning is deep and general, for William McKinley the President, and for William McKinley the man. In the universal sadness no one is more entitled to sympathy than he who has taken the place of the murdered President. Happily, he has never been one who feared his responsibilities; happily, also, he has behind him a record of twenty years of well doing in public life, which justifies the supremest confidence in his future course. It should give us all courage and comfort that the mantle of William McKinley has fallen on the shoulders of Theodore Roosevelt.

ANNOUNCEMENT.

We shall begin next week the publication of a serial story by Rowland E. Robinson, entitled "In the Ranger Service," and dealing with the days of Ticonderoga. It is written in the pure and limpid English of which Mr. Robinson was a master, and as a graphic pen-picture of an early period in our American history will take deserved high rank. And there is in it, too, the outdoor and wild-wood flavor which give it a fitting place in FOREST AND STREAM.

THE SEASONS AND THE GAME.

The reports from the different sections, in respect to the supply of game birds, are pleasingly favorable, hence all who love sport with dog and gun have sufficient cause for rejoicing thereat. They unanimously indicate that, as compared with the dearth of some former years, there is an abundance.

The prairie country seems to be specially favored with an unusually great increase in its supply of chickens, and this is the more remarkable since the constant growth of agriculture in the prairie region is antagonistic to their multiplication. Both tilled and wild land are essential to their best preservation: the former to afford a food supply, the latter shelter and concealment. Such is their best habitat. Too much agriculture not only reduces or destroys the places of natural shelter and concealment, but it introduces direct destructive agencies; namely, the local sportsmen with their dogs and guns.

Not less favorable are the reports concerning the quail supply for the season's sport. Long Island seems to have been particularly fortunate in this respect. In that section the breeding season was the best of many years.

While the destructive agencies are practically constant, the increase and decrease of the game birds are in a measure seemingly independent of them. Making all due allowance for the heavy rains of spring drowning out the young birds or destroying the eggs, or the equal harm supposed to result from excessive droughts, etc., there is still remaining the fact that all springs are more or less wet or dry, and that, nevertheless, in some seasons the birds are extraordinarily fertile or sterile, the causes of which are beyond the knowledge of man. However, such fluctuation does denote that a dearth of birds in any one year is not a sure indication of their progressive extermination by the agency of rod and gun, though we must recognize that destruction by man, beyond a certain limit, cripples nature or renders her powerless.

However, in the average of the years there must be a check on the destructive agencies to correspond to the average powers of reproduction, else the destruction which ends in extermination is only a question of time. At

best, the game supply is far from equal to the demands of sportsmen, and to the end that there may be few years or lesser years of dearth, the same moderation should be exercised in the years of plenty.

BLUNDERINGS.

DURING the last session of the Arkansas Legislature the chaplain of the House, in his opening prayer one morning, said, with pardonable unctious:

O Lord, we thank thee that we are not in the lunatic asylum this morning, nor considered fit subjects for the same.

It was about this time that the Legislature was deliberating on a bill to tax non-resident sportsmen \$500 for a shooting license, and the ultimate failure of the measure certainly had its part in demonstrating that sanity for which the chaplain had given thanks. As a rule, legislatures are sane when they are providing protection for game, but the degree of sanity manifested in specific cases is frequently very far removed from common sense. We can forgive an unwise game law, if only it be the result of deliberate consideration and embody the actual intent of its framers, for however mistaken such a law may be, there is still to be ascribed to its makers good intention and a decent degree of care in carrying out that intention. But for the careless and haphazard blundering which gives us in the end a statute which is foolish or worse, we can have and should have no patience whatever.

Take the Illinois quail law as an example. The State pays its representatives in Springfield and its employees in the clerical branch of the service to do their work, and to do it without blundering. For such an egregious piece of incompetence as the omission of a line of the law whereby protection was taken from quail, there may be an explanation, but there can be no excuse. Nor is the error one which may be righted by the course pursued by the Illinois authorities, which is to assume that a law protecting quail exists when one does not exist, and to punish the quail killers as if there were a law forbidding the killing of quail. The protection of quail is of very high importance; but of transcendently higher moment is it to give every citizen of the State protection in his rights, and one right which every citizen of Illinois possesses is that of immunity from arrest and punishment when he has violated no law.

Another blundering Legislature this year was that of Michigan in the law for the protection of quail, woodcock and grouse. Much uncertainty has existed on this point. The section of the law, as amended in 1901 and signed by the Governor, made the open season for quail, woodcock and grouse throughout the State from Oct. 1 to Nov. 30. This was the form published in the *Game Laws in Brief* and embodied in an abstract given out by the Secretary of State as the law in force. Subsequently it developed that there had been irregularities in the observance of the prescribed course of procedure for the passage of the amendment through the Legislature to the Governor's hand, and the Attorney-General has rendered an opinion that because of this irregularity the amendment was void, and that the old law must be considered as still in force. This makes the season for quail, woodcock and partridge from Oct. 20 to Nov. 30, with the partridge season in the Lower Peninsula opening Oct. 1.

Another snarl is in the New Jersey law on flickers, and it is a capital example of the heedless, happy-go-lucky way of Legislatures when they struggle with bird protection. The Legislature of 1901 adopted two separate statutes having application to the woodpecker, known as the flicker or highholder. The first of these was the general law which provides that with certain specified exceptions no wild bird may be killed other than the game birds, and the law goes on to define what birds are game birds. Among the game birds that are classified, the flicker is not included. Accordingly by this law the flicker is protected at all times. But in the face of this plain prohibition the Legislature proceeded to enact another law, in which it is provided: "It shall be unlawful to kill . . . any flicker or highholder, excepting during the months of September and October." And again, "It shall be unlawful to kill . . . any woodpecker (the yellow-bellied woodpecker or sapsucker, however, excepted)."

In other words, in intent, this gives an open season on a bird which in another law adopted the same year is protected always. An important point to note here is that the laws last quoted do not expressly declare that the

flicker (or highholder or yellow-bellied woodpecker or sapsucker) may be killed; it says in one case that it shall not be killed except at certain times, and in the other case it excepts the bird from protected species. Against both of these exceptions the other law forbidding killing at any time holds good. The effect of the law, taken as a whole, is to protect the flicker in New Jersey.

The practical working of the law has been to promote the killing of the birds. The average reader of the law would conclude that it permitted the shooting of flickers, and we have expressed the opinion that punishment for unwitting violation of the law would be harsh. The people of New Jersey should be able to find men to send to Trenton who could frame a simple game law easily understood of the people.

SNAP SHOTS.

That New Jersey flicker law blunder has had the effect of revealing the extent of the popularity of the flicker as a game bird. It is to be so classed, of course, only with those who estimate a bird as game solely by the test of its edibility, and there are those who esteem the flicker not to be despised as a dish for the table. There was a time when the bird was not protected in New York; that was the period when the robin, too, was considered fit for the gun, and the two birds were sought with much enthusiasm by those who knew their gustatory qualities. Jacobstaff has told us of the exciting times in those days on Long Island, when the flicker shooters from New York city would repair to their favorite grounds in the night time and take position within shot of certain favorite trees, where the birds were certain to alight in their migration. The gunners lay through the night and held their positions the following day just as duck shooters take possession of favored points and blinds the night before to be in readiness for the shooting on the next day. If we may judge from the number of inquiries we have received and the reports of the amount of flicker shooting in consequence of this law complication, the bird must have a tremendous popularity in New Jersey. We are not inclined to go so far as President Frothingham of the Fish and Game Commission of New Jersey, who expresses the conviction that a person who would kill a flicker would shoot a quail on the nest, for we have known men who were very good sportsmen in all that pertains to the shooting of game birds who did not disdain a flicker when it came within range. Indeed, it is more a matter of education as to the economic value of the bird than any other consideration which leads to its protection.

The views expressed by Ransacker on the trespass question are of special significance and value because, as he tells us, they are written by one who has contemplated the subject from both sides of the fence. If his recommendation that trespass should be put on a plane with burglary as to the heinousness ascribed to the offense and the severity of the punishment given it, shall appear too radical, let it be remembered that he writes as one who has suffered much and who has abundant personal warrant for entertaining such views, even though they are somewhat in advance of the sentiment of the times. There can be no question of the changing public feeling about trespass. It is all in the direction of our correspondent's change of view. The once universal tolerance of free entry upon land is giving away, and in many localities the opposite rule of resenting intrusion is coming to be almost as universal in application. The change is bound to be progressive. It embodies a recognition of new values and new resources. Just so soon as game is given value, just so soon is it protected for what value there is in it. The solution of the problem of where the sportsman of the next generation is to get his game will be found in the adoption of more stringent trespass systems, and the conservation of game as a by-product of the land.

Every manager of a railroad running into a game country and seeking the patronage of shooters should read with care Mr. Cristadoro's communication on the ways of some baggagemen with the game intrusted to their care. It would take only a word fitly spoken and with authority back of it to insure a full count every time when the sportsman was handed his string of birds from the baggage car. And not a feather less than just this should be made absolutely certain to every sportsman patron of the road.

The Sportsman Tourist.

Roanoke Island.

No spot in all this country is so full of the romance of history as Roanoke Island, on the east coast of North Carolina, where the first English settlement within what is now the United States was made, under the auspices of knightly Sir Walter Raleigh, and all around which cluster some of the saddest memories of the "Lost Colony of Roanoke."

Leaving Elizabeth City in the steamer Neuse the writer made his way southward across Albemarle Sound to the historic island. The sound is like a great sea, separated from the ocean by the "banks," a vast rampart of sand, and, with shallow waters, so fresh as to be little more than brackish, and yellow-colored by the inpouring stream.

It was dark when the steamer reached Skyco, the chief port of historic Roanoke Island. On landing, the first sound which broke the stillness of the night was the exhaust of an ice factory—a truly unromantic beginning of a visit to the most romantic place in all North Carolina. The chief town is Manteo, three miles away. The driver of the vehicle which took me there cried out in cheery tones, "Tranquility House, gentlemen!" The passengers got in a buckboard and moved off. A turn in the road was made, and then the fragrance of the yellow jessamine and burst of song from a mockingbird gave a more graceful welcome to the island. The first part of the road runs across the Confederate intrenchments, at which the battle of Roanoke Island was fought, and at which many North Carolinians were captured.

Early next morning a pilgrimage was made to the center of attraction—Fort Raleigh. Along venerable roads of white sand, beneath pines with which the bright green of the holly is mingled, the way lies to the fort. To the right, after going a little distance, rise in long lines the sand drives, vast mounds and the creation and sport of the winds. The landward slope of these is as steep as 45 degrees, and the climb in the yielding sand is a hard one. From the crest the prospect is grand. To the eastward is the sea, visible here and there through the gaps between the vast dunes which mark the "banks" as they do also the eastern part of the island. There is the sea, green and heaving, and there the curl of the breakers, and borne by the soft wind comes the thunder of the surf, almost like an echo. At one's feet lies the sound, yellow as gold, three miles in width, and so shallow that nearly the entire distance can be waded. It is practically fresh water, and tideless, so far as the sea is concerned, the only fluctuations of level being due to the winds. Unvexed by a sail there is an idle waste of water as far as the eye can reach. Northward is Currituck Sound, almost equally shallow, and the northernmost of the wonderful North Carolina system of sounds. In front are Kill Devil hills, the highest on this coast, rising 100 feet. In full view is the place where the ill-fated man-of-war *Huron* sank, causing the loss of 115 lives. There is Nag's Head, with the big hotel, literally like a toy house between great waves of sand. Looking westward, the island is seen at one's feet. The sand dunes' crest is on a level with the highest pines. The slope is long and far from steep on the water side. A dune advances steadily, remorselessly, ceaselessly, into the interior of the island. Its touch is death. The green tops of the pines project from the inner slope. On the sound side are skeletons of those already overwhelmed. Not long since the skeleton of a man was found in a sitting posture, at the foot of the white, polished skeleton of a once stately tree. Over both the waves and sand had rolled. Poor fellow! When he took that seat he was on the landward side, exhausted, perhaps, in the effort to save his life. When found he was on the seaward side. No man can say how long the sand had entombed him.

The "spill" of the sand down the landward side of the dunes is incessant. Looking down landward into the somber hollow of the pines, it seems quite like an abyss.

Descending from the height the ride is resumed. Past houses, some modern, others gray with age, the road winds. The pines are in blossom and the air is filled with the pungency of their odor. Grape vines entwine the trees, mocking birds are in unusual numbers, and many shrubs are made bright as gold by the jessamine flowers. Presently there appears a guiding hand, bearing the words, "Fort Raleigh." It points eastward, and there, 100 yards away, is the fort.

Surrounded by a worn fence of new pine rails, with a rustic gateway of little, upright poles, is the ruin. In its center stands a severely simple monument, and low posts of granite, a foot high, mark the venerable earthwork. The outlines are perfectly plain. No restoration is needed. The greatest height of the parapet above the ditch is some two feet. Almost an acre is inclosed by the fence and the fort covers little more than a fourth of this area. The colonists' log huts surrounded the fort, which was their refuge. Within the limits of the inclosure are live oak, pine, holly, dogwood, sassafras, water oak, and cherry trees. Up one live oak clammers a grape vine, and at its foot is an English ivy. The monument, or memorial stone, faces westward, and has this inscription:

"On this site in July-August, 1585, colonists sent out by Sir Walter Raleigh built a fort called by them 'The new fort of Virginia.' These colonists were the first settlers of the English race in America. They returned to England in July, 1586, with Sir Francis Drake.

"Near this place was born on the 18th day of August, 1587, Virginia, the first child of English parents born in America, daughter of Ananias Dare and Eleanor White, his wife, members of another band of colonists sent out by Sir Walter Raleigh, in 1587. On Sunday, August 20, 1587, Virginia Dare was baptized. Manteo, the friendly chief of the Hatteras Indians, had been baptized on the Sunday previous. These baptisms were the first known celebrations of the sacrament in the territories of the thirteen original States."

The undergrowth within the inclosure is cleared away. Big pines stand here and there—one a long leaf, the original growth on the island. The land has never been in cultivation, and to this fact is due the marvellous preservation of the ancient earthwork. In America 316 years seems such a very great lapse of time, yet so old

is this little earthwork, which, thanks to the care of the "Roanoke Colony Memorial Association," of which Maj. Graham Davis, of Wilmington, is president, is at last marked. It is evident that the fort was made of two rows of upright palisades, or logs, between which there was earth. The palisades soon decayed, but the earth retains its outline perfectly.

East of the old fort, and less than 200 yards distant, is one of the sand dunes, which has become fixed, as in it is grass with small live oaks, their limbs thrown wildly landward. Sitting there, overlooking the wide waste of yellow water, one hears the death-like stillness broken by a whispering wind from the fort, which brings with it the liquid notes of the mocking bird. No doubt on this height the colonists sat many a day, looking seaward, toward dear old England, hoping for the sight of a sail.

On the return toward Manteo a detour is made in order to view the famous scuppernong grape vine at Meekins' farm. It has four great bodies, or trunks, each two feet in diameter, these being on the north side of the vine, which is trained southward, fully 300 feet. On the dunes are scuppernong vines, and also the vines of the black grape.

It is well to turn back the hand of time's dial-plate and see the first impressions of this island. Amadas and Barlowe were the pioneers, and Barlowe tells the story in his quaint, old English:

"Ye 27th day of Aprile, in ye yere of our Redemption, 1584, departed ye west of England with two barks well furnished with men and victuals. Ye 10th of June we were fallen with ye islands of ye West Indies. On ye 12th day of July wee found shole water, where we smelt so sweet and strong a smel as if we had been in ye midst of some delicate garden abounding with oderiferous flowers, by which we were assured ye land could not be farre distant. Keeping good watch, and bearing but slacke sail, ye 4th of July we arrived upon ye coast which we supposed to be a continent, and we sailed along ye same 120 miles before we could find any entrance or river issuing into ye sca. Ye first that appeared unto us wee entered and cast anchor about three harqueburs shotts within ye haven's mouth, and, after thanks given to God for our safe arrival thither, we manned our boats and went to view ye land next adjoining, and take possession of ye same in right of ye Queen's most excellent majestie. Wee viewed ye land about us, being whereas we first landed very sandie and low toward ye water side, but so full of grapes as ye very beating and surge of ye sea overflowed them, we found such plenty, both on ye sand and on ye green soil of ye hills, as well as on every shrubbe and ye tops of ye high cedars, that I thinke in all ye world ye like abundance is not to bee found."

The colony planted in 1585 was not revisited until 1590. Gov. White tells the pitiful story of the "Lost Colony of Roanoke." His expedition, when it came near the island, "sounded with a trumpet a call, and, afterward, many familiar English tunes and songs, and called to them friendly, but we had no answer." On a tree on the very brow of the sandy bank were the letters, "Cro." "At the fort," says White, "we found the houses were taken down, and the place strongly inclosed with a high palisade of great trees, with corynes and flankers, very fortlike, and one of the chief trees at the right side of the entrance had the bark taken off and five foote from the ground in fayre capital letters was graven 'Croatan,' without any cross or signe of distress." White returned to England, leaving the great mystery unsolved.

Time seems to have solved it. Croatan was on the mainland, in what is now Tyrell county. There the colonists seem to have gone with, or to have been taken by, the Indians. Thence, after the lapse of many years, they appear to have gone to what is now Robeson county. There are many names among the Croatan Indians of Robeson which are on the roll of White's colonists, and the Croatans use daily many old English words, long obsolete in the mother country.

But to return to Roanoke Island in this year of grace, 1901. Back to Manteo runs the route, the traveler thinking on the way of Virginia Dare, and Manteo, the kind and friendly Indian chief, who gave their names to the country and the town. The homes which are passed belong, in some cases, to the Dough and Meekins families, and many other names odd to the up-country ear are heard, but all are good English names, as befits North Carolina, the most American of all the States.

FRED A. OLDS.

The Hunt Fever.

HAVE YOU ever stopped to think why it is that you enjoy hunting? Have you ever analyzed the different sensations which come with the hunt and determined just why it is that you have had such a good time on some memorable hunt—why you no sooner recover from the fatigue of one trip than you are planning for the next, even if it is to be taken a year ahead? What is the "hunt fever"? Is it the desire to kill, to wound, to pursue, to cause suffering or fright in the innocent object of our pursuit that gives us pleasure? Is it the possession of our victim when by our cunning we have accomplished his death, or is it something else which takes possession of us when we are boys and clings to us as old men and urges us on to the hunt?

I have talked with friends and hunters around the fire-side at home; around the camp-fire on the plain; in the birch-bark shack in Canada; with the canoe men in the wilds and swamps of Labrador; when camped in the snow of the far North; when camped among the palmettoes of Florida; among the barren peaks of our Western mountains; deep in the wooded gorges of the Blue Ridge; on the ice of the glacier; when half-frozen on a stand for ducks on the marsh; when the heat of the sun was blistering my nose as we rode for hundreds of miles toward a promised land, but never yet have I met a man who would say he enjoyed seeing his quarry die. There may be those who hunt to kill, who revel in the blood of their victim and who can see any of the magnificent works of God destroyed without a qualm of regret, but I am thankful to say they have never been companions of mine.

The "hunt fever" to me is something more than "to kill." There seems to be something born in all of us which makes us desire that which seeks to escape us. The hunt fever is certainly a manifestation of this, whatever it is. I believe it is the surroundings, man's love of nature,

the freedom, the open air, the trees, the mountains, the valleys, water, heat, cold, hardship, thirst, hunger, and even pain that is a part of the hunt, that we enjoy unconsciously, more than the death or possession of our game. It is that desire on the part of man to cope his cunning and strategy against that of an animal on its own ground that leads him on, that brings him back. In this there is that abandon of cares and worries, and the humdrum daily channels of thought are forgotten; it's this which we unconsciously enjoy. I cannot believe that it's the death or possession of the hunted animal.

Well I remember as a boy the joy to be found in following a rabbit by his tracks in the snow; how I carried a hatchet, but no gun; the delight when his trail was unravelled where it led off from the well-tracked thicket; how it was followed through wood, meadow, back and forth through the worm fence, across the orchard, back to the barn lot; on through the garden patch, where the long jumps could be plainly seen straight ahead; through the sage grass, where it was well to make a circle watching for a lead-off; to the woods; here the snow crust was hard and the trail was lost; now comes the joy of the hunt, a circle, a wider circle, no sign of a trail, back to the point where lost, straight ahead now, when, "Wah-hoo!" almost out from under our feet starts a gray streak, ears laid back, jumps fifteen feet long, and, but say—why did I throw the hatchet at him? The "hunt fever" did it. I would have been sorry had I hit him.

Here is his nest, still warm. Boy-like, we put our finger in it before we take after him again. His jumps soon shorten, and he leads through the frozen swamp, across the sheep lot; he makes for places where the sun has melted off the snow, but further on his tracks betray him; again we jump him, and, with a yell, take up the pursuit afresh. He circles to his starting point, mixes his trail with his first, back tracks the same, side leaps, and away across the woods to a hollow log he knows. We find him and cut him out. As a man, I have been known to kill him, but as a boy, more often to let him go and run him down again, until at last he "holed up" in the ground.

It has been my fortune to kill the largest game we have in America, but to come right down to it, there has never been the pleasure in big-game hunting there was in those rabbit chases. Those pictures are indelible.

As a boy, I was laughed at for letting the rabbit go, but to-day I am glad I did. Yes, I have killed game, large and small, but with me the pleasure has not been in the killing; it was the chase, the freedom, the exercise, the open air. In the man the beast has appeared. We have killed the goose that laid the golden egg.

Why do you hunt? Why do you kill?

C. P. AMBLER.

Moose Hunting in New Brunswick

Editor Forest and Stream:

Though not a subscriber to FOREST AND STREAM, I lay down my ten cents for a copy with the local dealer every week, and have for many years, and hope to for many more. Several years ago, through reading the notes, under heading "New Brunswick Notes," by the late Frank Risteen, I became interested in big-game hunting, and after consulting with successful friends and studying maps, I looked over my list of guides that had been recorded in FOREST AND STREAM as being successful with their parties, and I began a correspondence, with the result of engaging Alex Ogilvy to guide me on the headwaters of the Tobique River, some twenty miles up the right-hand branch, where he has several log camps for the convenience of his sportsmen. This engagement was for 1899, but when the time arrived for me to start, I was sick abed, and my disappointment was worse than the sickness, so I was obliged to send word I could not come. Later on I made everything satisfactory to my guide for his loss of time, and re-engaged him for 1900.

Sept. 29 found me at Perth, one day ahead of time, as Alex was to meet me Oct. 1. I passed a pleasant afternoon and night at the hotel, a very nice, new house, and Mr. Rogers, the landlord, is very accommodating. During the evening I listened to moose stories of very large dimensions by the natives. Every one said I had a first-class guide, so I could only feel pleased with my prospects for a successful trip up at the lakes. When the train came down the Tobique branch from Plaster Rock the next morning, a party of sportsmen got off with several moose heads and one beautiful caribou. I soon learned that the party was the one my guide was with. As soon as he could get everything ready for them to leave on the next train, he started with me, and had our supplies put up, and we took the afternoon train for Plaster Rock. Here we crossed the river on a one-man-power ferry, and loaded our baggage on Mr. Sadler's team, which was awaiting us, and drove some eight miles to his beautiful farm, where we spent the night. The hospitality of these Canadian people cannot be excelled; they make you feel perfectly at home as soon as you step in the door, and are sociable as if acquainted a lifetime. Here I got into my hunting suit and was ready for business.

Everything was put on board a heavy, two-horse wagon and we were off for the green woods, some ten miles. Here we forded the river, and climb up the steep bank and are at the entrance of the tote road. I will not attempt to describe this road. Many writers have tried and failed. It makes one think of Fifth Avenue, New York, it is so different. The guide says it is twenty miles through, and nobody has ever yet doubted his word. Just before dark we arrived at an old loggers' camp, unhitched and put the horses in one used for a stable. We soon had a good camp-fire roaring with birch logs, and the kettle boiling. After supper we spread our blankets on the ground and lay down under the shed roof between the two log houses. It was not long, however, before it was decided to replenish the fire, sound taps and roll up in the blankets and go to sleep. It took some time for me to get fitted in between the stones and roots, so as to lie perfectly easy; and about the time I had all ready to do some good, sound sleeping, Alex informed me that breakfast was ready. After breakfast I took my rifle and started on ahead, leaving Alex and the totter to clean up and follow with the team. I had some hope of seeing some kind of big game, but saw nothing but grouse, and plenty of them. Alex killed two with stones and shot one with a revolver. I had never seen anything like it. They were as tame as

farmyard fowl. It was a novel sight to see those birds sit there until hit, while here in Massachusetts they fly as soon as they can hear you, and some will fly a mile before they stop. Signs of moose and caribou were plenty and fresh. After I had gone about five miles Alex caught up with me, and we made very good time, the walking being much better. We arrived at Trousers Lake camp at 10:30 A. M. Here the wagon was unloaded, being as far as the team could go. Everything was found to be in good condition, greatly to my surprise, after the pounding and shaking up it had received. Here were opened to me the beauties of a Canadian forest in the full blazonry of autumn foliage, again a somber background of spruce and cedar, with hardwood ridges large and small, near and distant, in all directions. It had been my intention to go in still further to Island Lake, but it was decided to prospect in this vicinity before going, as moose works were found disappointing at both Long and Island lakes with the previous party. As soon as dinner was over, my guide said: "We will start right in now and get a moose. They are seldom ever killed in camp." I took the hint and shouldered my rifle. We visited a lake about a mile distant, where moose had been seen often, but there came no answer to the birch-bark horn. Ducks were preening their feathers on a near-by point, and they were the only living game we saw. "To-morrow," said Alex. "I shall

answered immediately somewhat nearer. But darkness came on faster than the moose. The guide said: "Never mind, he will be around here in the morning, and we will come and get him," so back to camp we went, with brilliant prospects for the morrow. We were there as soon as we could see, and so was the moose, though he had changed his base of operations to some ridges further eastward. He would answer every call; sometimes he would be quite near, and the next time further off than ever. He kept going back and forth on this ridge, bellowing for more than an hour, then all was still. Knowing that eternal vigilance was the price of a moose, we kept still and watched. It was not long before I heard a twig snap right in front of us, and in a few seconds we could see his breast and bell; a good, long bell he had, too, but I could not see his horns, and was determined not to kill one that did not have good, big, handsome horns that I could feel some measure of pride in hanging up and showing my friends. So I would not shoot, though he was within 50 yards of us, and with two steps more must surely show us his whole body. We had not the slightest doubt that he would take those two steps, and he did, but they were heels toward us; he only stopped a second or two, but long enough to get our wind; though the wind was not blowing directly his way, being in a cove he got it, and, like the Arab, folded his tent and silently stole away.

my guide cut off this tree below where the beavers had gnawed it off and it still hung, and lugged it on my shoulder five miles to the canoe, and kept a watchful eye on it until safely landed in my den. I do not suppose all little things interest everybody as they do me, but I went to the woods not only to kill big game, but to see and study nature and woodcraft in the primeval forest, where the sound of the logger's axe has never been heard, where nature and the animals reign supreme.

The next morning we tried for our moose again. Got an answer right off, but we could not coax him any nearer; he was "dead on to us," as the saying is; he remembered his previous experience. Some people will laugh at the idea, but let such as don't believe it go and hunt moose awhile and see if they don't find out that he is a gentleman who cannot be fooled every day by all the people. We stayed there for three hours and tried all ways to get him out; the guide took the canoe and went down the lake, calling with the horn pointed away from him, but come nearer he would not, so after we got tired of hearing the bull bellow, we went off and left him as a bad case.

Loading up the canoe, we return to Depot Camp, and the next day, taking fresh supplies and tent, leave again, going up the right-hand leg for the portage to Mud Lake. Alexander's brother, David, and a sportsman from Worcester, Mass., came in the night before and went up to their camp. It began to rain soon after we started, and we got pretty well soaked before the day was over and the tent up, but a good camp-fire soon made us comfortable and supper made us happy. From this on it rained almost continually for eight days. We were now in where there were no logging roads to travel, and to go through the woods was like walking into the lake, so hunting was mostly by canoe. Signs were plenty, but luck and weather were against us. We now could not even get an answer to the birch-bark horn. Finally the guide's patience was exhausted, and he declared that the calling season was over and that we would have to hunt them on the ridges. My time was half up, and I had no moose yet, and things were beginning to take on a bluish cast. I was not discouraged, however; I have been a hunter too long. I had come up there with the firm determination to work hard every day I was there until success crowned my efforts, or my time was up; then, if I did not get my game I could feel that I had done the best I could.

And better luck was in store for me. We opened our eyes on the morning of Oct. 17 to look out and see the ground and trees white with snow. Six inches had fallen during the night. We prepared breakfast as quickly as possible, and were soon headed into the woods. Our spirits were high, for no finer morning could be possible for still-hunting if made to order. We had gone less than a quarter-mile when Alex discovered that a very large caribou had crossed the path we were on. Without making any talk, we took the trail, and it led us directly into a swamp, with trees fallen in all directions and so thick that progress was very slow. Between crossing a stream every few minutes and climbing over windfalls, I think it the worst I ever experienced. After following the trail a little way, it led us through and under some trees where a caribou could never have gone if it had horns, so we decided that it was a cow and left it, only to find that three deer had just crossed ahead of us, and not more than a hundred yards further was a large, very large, moose track, headed into the wind and directly to the top of a high ridge. Following carefully, we came upon him rather sooner than we expected. There he was in plain sight, not 50 yards away, his head behind the up-turned roots of a fallen tree. I soon put a bullet just under his ear, breaking his neck short off. There was a slight shake of one foot and a monarch of the forest was dead. Well, if the people down at the settlement had asked us on our return what all that noise was, up in the woods on the morning of the 17th, I should have known just what they meant, for two happier mortals are seldom seen walking around on this earth. I distinctly remember that we sent up a few war whoops and did a skirt-dance, for here was a moose that would make any man proud, with antlers spreading 53 inches, and 16-inch palms, with twenty-seven points. I think Alex was as much pleased as I was. Surely he made as much noise. I did not make so much as I wanted to, for fear of acting foolishly. But we had worked hard for the game up to this time, and were entitled to all the glory there was. I am not going to tell how much he weighed, for I don't know; it could only be a guess, and I have read so much about the weights of big moose killed by hunters, and I am of the opinion they are inclined to look much heavier than the scales would show, as a rule; so to be on the safe side I say I think this moose about as large as they often grow. Alex judged him to be at least a dozen years old. After our exultation, Alex went to camp for the camera, and I made several views of the moose, and we proceeded to dress him and cut up the meat. The head and scalp we took to camp, bringing the meat and hide the next day. What a feeling of satisfaction and contentment one feels returning to camp just before night with the head and antlers of a big moose hanging out over the sides of the canoe! I was sorry there was no one at camp to see us come in with our prize. People say to me, "You were lucky," and I admit it. Luck is something that plays a very important part in hunting. I know of men who have been year after year hunting hard every day for a moose, and have not even got a chance to shoot at one. One man told his guide when they first started to hunt, that he did not want to get his moose easily; he wanted to work hard for him. He has been working and walking for the last six years and has not got him yet. And there are others.

From this time to the end of my time in the woods we could hardly move without seeing a moose somewhere. I was in the woods twenty-three days and saw twenty-one moose. Alex killed a bull with a very handsome head at Muddy Lakes. Dave and his sportsman came down from their camp with two heads, and when the toter came we gave him one of the biggest loads of horns that ever went down the river. Had we desired, and the law permitted, we could easily have killed two more bulls. I am very confident. If my luck could have been divided up on caribou, I would have been still better satisfied. Most of the parties both before and after me got caribou in this same section; with me, it seemed to be a famine in the midst of plenty.

MOOSE HEAD KILLED IN NEW BRUNSWICK BY E. F. SNOW.

take you to a lake that has never been visited by a sportsman, to my knowledge." I shall not go into detail and tire the reader by asking him to follow me step by step all through my many miles of tramping and canoeing.

We visited the lake, and before reaching it signs were numerous, so much so, that we approached with the greatest caution. Judging by the tracks seen, I would not have been surprised to see a whole drove of almost any kind of animals. It was, and still is, one of the most likely spots I have ever seen, though we saw nothing. It was a small pond of about three acres, and oblong, with a stand about half way, where the hunter could easily shoot his game at any point it might show itself. On one side and one end was a bog some 30 yards wide, and it was a sight to behold. "Ain't it a fright?" as Alex expressed it. Here were moose, caribou and deer tracks, all mixed up, and the bog was literally all cut up. Some of the signs were very fresh, but, of course, most of the tramping had been done during the summer, when all big game spend a great part of the time in the water to feed and rid themselves of the flies.

As we were prospecting, we took the canoe the next day and went to the upper camp at the head of Trousers Lake, on the left-hand leg, a distance of five miles. We took with us provisions for a few days, and just before sunset paddled up to the head. Our camp was a quarter mile below. Alex gave a call, and after waiting about fifteen minutes we got an answer from a bull away up among the hills, as far as we could hear. After at least fifteen or twenty minutes another call was given, and was

Satisfied that it was of no use to try longer there, we struck up among the hills for a small lake. Here we found signs everywhere. At the lake a cow moose came in just as we got there. She was on the opposite side, and we backed out and worked around toward her, until within 75 yards. We stood perfectly still in a moose path, just at the edge of the woods, and she worked along toward us, until she was within 12 feet, the wind blowing fresh from her to us. When we scared her she ran about 15 yards and stopped and looked at us. The next time she started she made the water fly, having decided that we were something dangerous or terrible to look upon.

It would have been a rare chance for a camera, but the day was stormy, so I left it at camp. I have been a photographer long enough to know that it is of no use to try to make snap shots in the woods in cloudy weather at this time of the year. I regretted not having it this day, for here was the largest beaver house it was ever my pleasure to see; it stood over 6 feet high and 10 feet across its base, with as large a pile of birch and poplar trees and limbs extending some 20 feet into the water; all this the beavers had brought from long distances for their winter's supply of food. We found a splendid specimen of beaver cutting. A birch tree about 8 inches in diameter had been felled and all the limbs trimmed off as if done with a dull axe; and about 8 feet of the top was gone. The nice part of the job was that the tree lay flat on the ground, showing the good judgment of the beaver, as standing trees were so thick all around it could not have been felled at all except exactly where it did fall. I had

If there is any place in the Province where big game is more numerous, I don't care to know of it, for here it seems to me that any sportsman who has three or four weeks at his disposal, is properly equipped, and can shoot a rifle well, is practically certain of his moose. There are many things, however, that should be carefully considered and arranged before coming to this country, or any other, to hunt. The most important of all is your guide. Some one has written that a person could go to Fredericton unannounced and in forty-eight hours, be in tow of somebody who knew where the moose and caribou do congregate; then if he did not have moose or caribou for dinner within the next few days it would be a case of bad luck. I can hardly imagine a sportsman making a greater mistake. I had an opportunity this fall to meet one party in the woods who were there on their way down the branch, a party of four, who had been in tow of somebody for four weeks, with nothing to show for all their hard labor and travel. I learned their guides had graduated from a logging camp this season. There are guides and guides, the same as there are lawyers and lawyers, and such as have an established reputation are likely to be engaged in advance; and he who takes his chances without a recommendation from some of his friends or reliable person is more than likely to see the folly of his ways.

The question of rifles for hunting big game is one I am liberal enough to leave for each hunter to settle for himself. As for myself, a .45-90 doesn't stop them any too quickly. From what I have seen I have a very favorable opinion of the .30-40 nitro. There are some things in its favor.

Next, my experience teaches me to advise on the question of shoes, that they be of good, strong make, with bellows tongue and fairly heavy soles, and they should be large enough to permit wearing two pairs of heavy woolen stockings. I am not writing this rambling letter with the idea of instructions for old moose hunters; I profited from the experiences of others, and if it should prove of any interest to others, there its mission ends.

Indeed, this country is all that could be desired, either by the hunter, trapper or fisherman. The lakes are full of trout—I dare not tell the fish stories I heard, for I know what somebody would think, if they did not give expression to their thoughts. Camp can be supplied easily regardless of the size of the party.

Any sportsman wishing to kill a moose or caribou can do no better than to try this section at Trousers Lake.

Alex Ogilvy as a guide and woodsman is all that can be desired. To him the woods are an open book. He has camps and canoes at convenient places, and is a pleasant and intelligent companion in camp, and a gentleman at all times. If this letter were not already long I should like to describe to you his skill in handling a canoe in presence of moose and at close quarters. However, if any sportsman will write me for any further information, it will be most cheerfully given.

E. F. SNOW.

MANSON HOUSE, New Bedford, Mass.

Natural History.

The Sea Lions Breeding in Captivity.

A RECENT number of the London Field contains an article by Mr. J. E. Harting, abstracted from the French *Bulletin du Museum d'Histoire Naturelle*, giving an account of the birth of a sea lion in captivity, which Dr. Harting denominates "an event hitherto unprecedented in the annals of zoological gardens." This statement is, as will be recognized by American naturalists, far too sweeping, since in this country sea lions have been born in captivity on more than one occasion, though we are not sure that the young so born ever reached maturity.

The birth in question took place at the Jardin des Plantes at Paris, and is reported by M. E. Sauvinet. The animal was born in June, 1900, and the birth was discovered at night. The pup is described as "a small, rough-coated animal, bulky and very dark in color, about the size of a Newfoundland dog about two months old." It is further reported that on the morning after it was born, the mother, holding the young one in her mouth, dived with it off the platform.

M. Sauvinet continues: "For five days after that the newly born young one was not allowed by its parent to enter the water. Not until the sixth day did she entice it in, supporting it when necessary with her back. These aquatic excursions were continued daily until the young one found itself strong enough to dispense with the mother's assistance and even permission to disport itself in the water. The arrival of this youngster had the effect of lessening, if not terminating the good terms, on which the two old ones had hitherto lived together. The new mother would not allow her companion to come near the young one; there were perpetual squabbles, occasionally ending even in a fight, and especially at feeding time, when the spectacle was most amusing. Later on, when the young one began to exchange a milk diet for a share of the fish supplied, more friendly relations began to be manifested."

It will be remembered that the young of many of the hair seals are slow to enter the water, while the young of the fur seal does not venture into the water for some weeks after birth. It is interesting to compare this report of M. Sauvinet with the account published in February, 1879, by Mr. Frank J. Thompson, of the breeding of the common sea lion (*Zalophus californianus*) in the Cincinnati Zoological Garden, which is believed to be the first extended report of the occurrence of the birth of a sea lion in captivity.

In the same year a pregnant female died in the Philadelphia Zoological Gardens, as we are informed by Mr. Arthur Erwin Brown, who tells us also that on June 3, 1894, a young one was bred in the same gardens from a pair which had been confined there for three years. The mother was in poor health at the time and failed to freely nourish the young one. Efforts were made to rear it by hand—on the bottle—and everything seemed to go well with it for a time, when, without apparent reason, it began to fail, and died July 11, no satisfactory cause of death

being shown by autopsy. This animal was not, as described by M. Sauvinet, rough coated, but was quite as smooth as the adult. A platform was arranged for it sloping into shallow water, and from the very day of its birth it was fond of getting into the deepest part and wallowing there. The one bred in Paris appears to have lived well through its puppy stage, and it is to be hoped that it is still doing well.

We reprint below the essential part of the article on the breeding of the sea lion in captivity, printed in FOREST AND STREAM more than twenty years ago:

In the early part of June, 1877, I went, sent by the Zoological Society of Cincinnati, to Chicago to receive some black sea lions (*Zalophus gillespiei*) which had arrived there from the southern coast of California. On my arrival I found that the female had calved on the previous night, therefore thought it best to lie over for a day in order that the young might acquire a little extra strength to bear the fatigue of the railway journey to Cincinnati. They all arrived in the garden in fine condition, but had to be kept in their shipping crates for the first few days, until an old beaver pond could be arranged as temporary quarters for them while the large basin intended for their permanent home could be built. During this time, on account of a heavy freshet in the Ohio River, the water in the pond became quite muddy, which affected them so much that they were unable to retain their food, invariably vomiting up their fish some one or two hours after feeding. By giving small doses of Rochelle salts for a few days, all recovered, but the calf died from a violent attack of cholera infantum, caused, no doubt, by its mother's milk being affected by the muddy water.

A short time before the calf was taken sick my attention was attracted to the peculiar appearance of the mother on emerging from the water after taking her customary bath. She was completely covered with a whitish oleaginous substance, about the consistency of semi-fluid lard, which seemed to ooze out all over her. As soon as she got into the crate with the young one, she commenced rolling, so that in a short time the young one and the inside of the crate were completely covered with it. The calf seemed to enjoy it hugely, and rolled about until his coat glistened as if he had just left the hands of a first-class tonsorial artist. It instantly struck me that his mother had been preparing him for the water, and I immediately tested the matter by taking him out and placing him on the edge of the pond, when in a few moments he began to paddle about in the water, something he had never before attempted, although he had been almost daily placed in the same position.

As soon as the large basin was completed, and they were transferred to it, I had a fine opportunity of observing the tyrannical attentions of the male toward the female during rutting season. He constantly swam back and forth along the partition which separated him from another male, frequently endeavoring to get through, splintering and tearing the rails with his powerful canine teeth. If the female attempted to approach the division she was immediately forcibly driven back, when he would redouble his efforts to get through, barking and roaring as if beside himself with rage. This would be kept up until late at night, when the female was allowed to go into the house situated in the center of the basin, when he would follow and place himself immediately in the doorway so as to prevent her egress. He never seemed to sleep soundly, as he invariably kept up a series of grunts and muffled roars, as if he were fighting his battles over again in his sleep. I would frequently annoy him by stealing up softly and then suddenly scraping the gravel with my foot, when he would instantly start up, plunge into the basin, swim rapidly back and forth, barking with all his might, until he was satisfied there was no interloper about, when he would sullenly return to his post and gradually drop off again into his troubled sleep. Frequently at night the two males would climb to the roof of the house, and in their efforts to get at each other through the partition would raise such a din that persons living at quite a distance from the garden would frequently ask me the cause of the uproar.

At the end of two months there was a change, when the female commenced playing and coquetting with the male, frequently pinching him so sharply as to make him snarl with pain, and if he seemed to be much out of humor she would soothe him by swimming up and giving him a good, old-fashioned, conjugal kiss. Finally they quieted down to the humdrum of regular wedded life, and early in October I noticed that the female was suffering from a violent catarrh, which gradually disappeared, followed by a dry cough, particularly at night. It was in March when she first showed signs of pregnancy, and in May, from her appearance when out of the water, I became convinced of it. On June 25 the young one was born, making the period of gestation, as nearly as I could judge, about ten months, and it was some days before the mother would allow me to handle it, and when I did succeed in so doing, it was always at the risk of getting a nip, as he was certainly the most ill-tempered, snarling, little brute with which a dry nurse could be vexed. I soon found out that there was but one way of handling him with impunity, and that was by suddenly catching him just back of the flippers and quickly lifting him clear of the floor, when he would snap and struggle for a few moments and then quietly give up. I frequently took him out of the house for the purpose of showing him to friends, and for the first three or four weeks he never made the slightest attempt to get into the water, although I invariably placed him on the lip outside of the door and loosed my hold in order that he could be fully seen. During this period the mother was let out for a bath twice daily, and after she had played about as long as she wished she would swim up to the closed door, rear up on the sill and bellow until she was allowed to get in to her calf. Invariably in the morning, so soon as I would start across the bridge in order to turn her out, the male would swim up to the door and await her appearance, always exacting his morning kiss before he would allow her to plunge into the water. After playing with her for a few minutes he would commence sentry duty, back and forth along the partition, occasionally making fierce rushes if the other approached too near to it.

In the meanwhile, as the young one never showed the slightest inclination to go into the water, in spite of frequent opportunities to do so, I began to watch for a second

appearance of the oleaginous matter. During the fifth week after birth, on going into the house one morning, I found marks of grease in every direction, and the youngster shone as if he had just emerged from an oil tank. Taking a bucket, I filled it with water, placed it in his way, and he immediately stuck his head to the bottom of it. Fearing an accident, as the water in the basin only reached within a foot of the top of the lip surrounding the house, I had the carpenter construct a small, shallow, wooden tank inside the larger one, with a sloping platform leading into it. So soon as the door was opened connecting with it he followed his mother, and in a short time was having high jinks swimming and diving to his full bent. When he tired he would quietly rest in the water with his head lying across his mother's neck, or he would scramble up on the platform, stretch himself, have a short nap, and then commence his play again. So soon as I thought he had gained sufficient strength the small tank was removed, and he was allowed the run of the larger one, when his wonderful swimming powers came into full play. I have frequently seen him dash off with such velocity that the water would part and fly from each side of his neck with a fairly hissing sound. Again he would dive, and then suddenly make a succession of salmon-like leaps with such rapidity that I could easily imagine with what little difficulty he would be able to capture the swiftest of fish. One of the favorite ways of amusing himself was by taking a chip—several of which were always kept in the basin—out on the lip, lying on his back, and playing with it with front flippers and mouth, almost precisely as an infant would act with a common rattle. At first he was rather shy of the old male, but gradually took the greatest delight in swimming about with him, and trying to induce him to join in a game of romps; but the old fellow was proof against all his wiles, and always good naturedly endeavored to get rid of him.

I noticed that the female's cough disappeared immediately after the birth of the young one; but about the middle of August both her appetite and actions became variable, some days feeding and seeming lively as usual; on others she would either take but little or entirely refuse her food. She gradually grew worse, until Sept. 8, when, on going to the basin in the morning I missed her, and found the male busily engaged in diving at one particular spot. He finally succeeded in bringing the body to the surface, and when the keeper attempted to remove it he repeatedly charged, and it was only by great care and watchfulness that they avoided being bitten. On dissection it was found that tuberculosis, that scourge of all zoological collections, was the cause of her death.

The young one did not seem to notice the loss of his mother until about twenty-four hours after her death, when he commenced to sulk, and obstinately refused to eat, in spite of every effort and stratagem to induce him to do so. He gradually wasted away, and finally died of starvation on Oct. 16, having viciously attempted to bite me a few hours before his death. The old male grieved so over the loss of his mate that for some time I was afraid we would lose him also, and at the end of about six weeks he became so thin that I thought it best to remove him to a small tank indoors. Since, he has been improving slowly up to within ten days, since when he showed a marked improvement.

FRANK J. THOMPSON.

Unpublished Audubon Letters.

EVERY student of Audubon's Ornithological Biography is familiar with the name of Professor McCulloch, of Pictou, N. S., who was a warm friend of the naturalist and was of the greatest assistance in helping him to secure specimens of northeastern birds in their summer dress. The son of this Professor McCulloch was Thomas McCulloch, Jr., of the same place, who was not less devoted to Audubon than his father. He is frequently spoken of by the naturalist and was, if we recollect aright, the correspondent of the late Dr. T. M. Brewer, and in this way comes down almost to the present time.

Mr. Thomas McCulloch, Jr., was frequently called upon by Audubon for assistance in collecting his specimens and for information as to the habits of the wild birds and animals of Nova Scotia, and, through the kindness of Miss Jean W. McCulloch, of Truro, N. S., his niece, there have recently come into our possession two letters from Audubon on these subjects, from which we are enabled to quote.

The first of these, dated at New York, Sept. 12, 1836, contains a request for specimens. It says:

"I am extremely desirous to procure in the flesh (feathers and all, as when shot), as soon as possible after being procured or shot, certain species of Birds more abundant and more easily procured in your section of America than south of it, and now beg of you to fulfill for me the following commission. That is to say, to procure for me all the species annexed on the other side, or as many of these as you can procure, and put in common Rum, or whatever spirits sufficiently strong to save them for putrefaction, in pairs as much as possible, and if not by Twos of each species. To have these put into good casks with a list of the specimens contained therein, and to ship this to New York on the 1st of May next, to Nicholas Berthoud, Merchant, who is my Brother-in-Law, and on whom I now authorize you to draw at sight for the amount laid out by you for the specimens, spirits, & so."

On the succeeding two pages is a list of the land birds and the water birds which the naturalist desires, together with various postscripts, authorizing Mr. McCulloch to spend \$150 in making the collection, apologizing for the trouble caused, but urging him not to fail to assist him. Among the species of water birds asked for are the pied duck (*Anas labrador*) and the great auk (*Alca impennis*). Both as to land birds and to water birds the request, of course, is for northern species. This letter, written before the invention of either envelopes or postage stamps, was folded and sealed with a wafer and bears curious, old-fashioned post marks, and in the upper right-hand corner, where now the postage stamp would go, certain hieroglyphics made with a pen, which were undoubtedly intended to show that postage had been paid on it.

The second letter, dated New York, June 26, 1841, is another request for assistance, but this time with regard

to the quadrupeds of America, on which the naturalist was then engaged:

NEW YORK, June 26th, 1841.

My Dear Friend:

I received your kind letter of the 26th of April, in due course, but have not answered to it, positively because of my having been constantly engaged in the drawing of quadrupeds (viviparous) for my contemplated Work of the animals of that Family which are to be found in North America, and I have made 25 Drawings, containing 40 figures, all the size of nature, within the last Two Months.

In answer about the Horns, Johnny wished to know the price because of their being wanted for an English Gentleman who is a friend of ours; and I also am very desirous to see these horns that I may make drawings of them. I wish for the horns of the Wapiti Deer (Elk), those of the Moose, and also those of the Rein Deer, and should like them as fine and as large as can be procured; let the price be no impediment.

I regret the loss of the Bird, and trust that you will procure others next Spring or Winter. We will send you Nos. of the Work by the next Boston Steamer, and I am glad to know that you will escape the tedious Customs. You speak often of coming here, but when will you come? Our house must be yours while in New York, and I wish you to remember that!

And now, My Dear Friend, that I am not only engaged in a Work upon the quadrupeds of our country, but determined to go through it, in a masterly manner, I want you to assist me as much as is in your power in the way of procuring specimens for me and paying for them whatever you may think proper, and for which I will refund you with great pleasure. I send you now a list of such animals as I think you can get for me, and memorandums of such others as you may see chance to procure: The Wolverine, Pine Marten, Pekan or Fisher, Common Sable, Mink, Weasels and Stoats, Ermine in Summer and Winter pelage, shrews of every kind, and even the common mole, as it is called in this country, although no true mole has been found in America; Hudson's Bay Skunk, Arctic Fox, Kit Fox, Canada Lynx, Bay Lynx, Banded Lynx, Mice and rats of all sorts, Squirrels of all sorts, Lemmings, Quebec Marmot, the Whistler Marmot, Canada Pouched Rat, Canada Porcupine, the changeable Hare in summer plumage, Polar Hare from New Foundland.

I should like whenever it can be the case to have 2 specimens of the same animals. One saved in Rum, the other in the Skin, after the measurements and the color of the eyes are noted, as well as the date, part of the country, etc. Now is the season for the procuring of Hares above named in the summer pelage, and they are abundant with you. If you have Bats about you, do procure some of every sort you can, and save these, as well as all the small rats, Mice, etc., in rum. Send me extra heads of everything you can in Rum, even that of a Moose and Elk and Rein Deer. In fact, do not mind the expense, and have good casks and strong, common Rum. The Horns of the Deer must be sawed off about 2 Inches from the skull and the horns put with the stuffed skins.

If you are acquainted with any one residing in the Islands of your famed Gulph, do write to them and ask of them their assistance in the promotion of a science almost in its infancy, and yet of Immense interest when looked upon as one of the Inimitable portions of Nature's God. I should like you not to wait too long to accumulate a large cargo, but to forward to me by good Vessels as soon as you have some half dozen specimens—recollect that a few hundreds of Dollars may have to be spent upon this, but in my opinion Money cannot be laid out in a better cause. I think that you may be source of bringing forth to the World of Science animals as yet quite unknown.

With the Hope of hearing soon from you, or of seeing you, which would be greatly more agreeable, I will now close my letter with the most dismal portion of it. This is no less than the loss of our own beloved Daughter-in-Law, the Wife of our Son Victor, who died 5 weeks ago of that insidious disease—Consumption. Thus, in 8 months, both our Sons have lost their partners and best of friends.

God help you and yours.

Your Friend,

JOHN J. AUDUBON.

Black Vulture in Maine.

KOKAD-JO CAMP, Me., Sept. 6.—*Editor Forest and Stream:* It may interest your readers to learn that a black vulture was caught alive at Dover, Me., last week. It was feeding at a slaughter house there, and, after being caught, was sent to a taxidermist, and was alive when my informant left Dover. I particularly asked about its head, and found it was black and bald. These birds are commonly called turkey buzzards, but are, as is well known, a different bird. How this bird strayed so far north seems rather remarkable, as there is no record, so far as I know, of such a capture so far away. Dover is about the same latitude as Bangor. So far as my observation goes this vulture does not soar as high as the common buzzard, which at times is lost in the sky, and might get caught in a strong gale. The vulture seems obliged to flap his wings to rise, while the buzzard can rise in curves with hardly any movement of the wings.

CHARLES A. DEAN.

[The black vulture has occasionally been taken as an irregular straggler in Maine, but its occurrence there is very unusual, and always worth recording. The characteristics of its flight are well described by our correspondent.]

Wellington Acclimatization Society.

THE Sixteenth Annual Report of the Wellington (New Zealand) Acclimatization Society carries it through the year ending March 31, 1901.

The financial condition of the Society is most satisfactory, and in all respects the work that it is doing is good. It not only strives to perform what is implied by its name, that is to introduce and acclimatize useful animals, birds, fishes and so on, but it also strives to protect the native and introduced game, and to cause proper game laws to be enacted and enforced.

A considerable portion of its work is the introduction

of exotic game birds and fish. It has imported and turned out red deer in various places in considerable numbers, and these have usually done remarkably well, so that in many sections there is now good deer stalking, and it is even said that "a large illicit trade in stags' heads is being carried"—to be stopped if possible. Two fallow deer have been turned out, and four moose, imported by the Government, were set free and are said to be doing well. Sambur deer were liberated many years ago on the Carnarvon estate, and have become reasonably numerous. Virginia quail and California quail are said to have done well and increased, but many of them are destroyed by eating poisoned wheat laid out to kill rabbits, and natural enemies introduced to reduce the rabbit pest prey also on the birds.

The good work done by the Society in stocking streams with fish, especially *salmonidae*, is well known.

Opossums in Greater New York.

GEORGE E. NASH, who lives at No. 615 East Twenty-ninth street, Vanderveer Park, Brooklyn, on Wednesday night found an opossum lying on his dining room window sill. He secured a club and gave the animal a couple of blows on the head which killed it. It is said that quite a number of opossums have been seen in the Paerdegat woods at various times.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Tale of the Baggage Man.

I LISTENED to a tale of woe from a sportsman who, a year ago, after a successful gathering in of fifty-eight prairie chickens, handed them in a gunny sack to the baggage man at a station far up north. When my friend claimed his gunny sack at the end of the journey, it was very, very light—in fact, contained only fifteen chickens. Who took them, of course, the baggage man who handed, out the bag could not tell. But they certainly were gone. Now, nothing will convince this sportsman but that it is unsafe to trust a bunch of mallards or chickens or grouse to the care of the baggage master.

On my return from Dalton, Minn., on the Great Northern Railroad, I noticed in the morning, as the train reached St. Paul, several gunners take from the porter's closet of the car and from under the seats, bunches of chickens. To carry prairie chickens on board a warm sleeping car all night would be to subject them to quick disintegration, yet the owners of the birds, so they said, were willing to take their chances of their game souring and putrefying rather than risk theft in the baggage car.

I am told that the gunner accepts the situation as simply unavoidable, and when he counts his birds after removal from the baggage car he simply considers himself lucky if the tax has been a light enough one to yet enable him to make a fair showing to his friends.

Imagine the feelings of the gunner who, when opening up his sack of birds after the arrival of the train, finds the half-dozen fine, greenhead mallards gone from his bunch. The baggageman shrugs his shoulders and knows not who took them.

No receipt or check is given for game, it being handed to the baggageman and then identified and claimed by the owner at the end of the journey. Who knows as to the count of the bunch of chickens or the number of ducks in the gunny sack? You have no receipt to show whether your string contained twenty or thirty birds. There may be a bunch of chickens hanging in the car, but a prairie chicken is a prairie chicken, a case, in fact, of "all coons look alike to me." You may think these birds hanging in the car were your missing birds—but prove it. When returning from Dalton I put my ducks into a sack and handed it to the baggageman on the train. My friend used diplomacy. Leaving out a pair of redhead ducks he tied up his sack securely, then stringing the pair of ducks, he attached his card, marking it "For the baggage master, with compliments of ———." But when I counted my birds on my arrival at my house, I found the full number, and so I did not pay toll voluntarily or involuntarily. So, personally, I cannot allege that the custom of helping one's self is in vogue among the baggagemen, although, if I believed the tales of others, I would be led to so think. It may be that all baggagemen on the Great Northern Railroad are above game pilfering, and certainly my experience is not against that theory. Now, if there is anything at all in the hue and cry of the hunters who claim to get back from the baggage car but 75 per cent. of what they handed in when they boarded the train at the up-country station, then some enterprising railroad running through a game country can make capital out of a few such lions in their advertisement as these:

"Patrons of our line can rest assured of a full count of their game being delivered to them at the end of the journey. Any shortage reported will be investigated and loss made good, and baggage master discharged."

When men will stuff their birds under the hot seat of a sleeper for fear of trusting them to a baggageman with a taste for game, they must have some reason for so doing.

And yet, after a man has earned his ducks by the hardest kind of a day's work, risking rheumatism and even life almost to secure them, he does feel chagrined on his arrival home to find his count woefully short.

Imagine the moose hunter returning from Maine with head and saddle, to have the saddle handed out to him and the baggage master to know nothing about the head! In such a case some roaring would be done, and perhaps the head would turn up, but a matter of ten or a dozen birds missing out of fifty would not be quite so serious. Personally, it has been my good fortune to find baggage masters honest in the matter of handing one a full count of game entrusted to them, but if I relied entirely on hearsay evidence, I would say that toll was exacted. Whether the train boys make free with the bunches of game piled upon the floor of the car or who it is I do not know, but raise the question of baggage toll on game

among any gathering of sportsmen and you are sure to hear a tale of woe, with more or less profanity sandwiched in, for cussing seems to be the only relief in the premises, provided what they tell you is so.

CHARLES CRISTADORO.

Carrying on Portages.

Editor Forest and Stream:

I agree with Col. Cecil Clay when, in speaking of the man who, after throwing away "some provisions and camp articles," still had ten heavy loads for an eight-day trip in August. He says: "What in the name of conscience do you suppose the man had with him?" What makes the matter still more mysterious, is that on his whole trip there was no time, except when he was on the Allegash above the Chamberlain, when he could not easily have got to new supplies in a day, and in most cases in half a day. It also beats me entirely as to where he could have kept himself in all the time he says he did not see any one. I can only conclude that he must have spent his time asleep on the back side of some island in Grand Lake, for it is very seldom that one can go half a day on the route which he traveled without meeting one or more parties. I traveled it some ten years ago, and there was but one day when we did not see men, and often several parties in a day, and now there are ten men in our Maine woods where there was one then.

I can imagine how to a man who dares not go out of sight of a camp for fear of being lost, the country he is in may really seem to be "unwritten and unsung" till he discovered it; but the cold facts are that this same country was all so accurately mapped out fifty years ago, that any one could find any pond a quarter of a mile long without fail if he understood traveling by compass. It was hunted all over years ago. I was a late arrival in it, and I was all over it, and ten times what he traveled over, forty years ago; and for a three months' trip did not have any ten heavy loads, though our two canoes and traps and bear traps would weigh 300 pounds, and we had winter clothing, bedding and snowshoes to carry.

But Maine's a State which will bear lots of discovery. There is scarcely a year when some enterprising person does not discover some pond or stream, and give it a new name. To be sure, there are usually old lumber camps near it, and old, rotting dams made by lumbermen; but as Mr. Dooley says of his joke on Niagara, "It's mine, Hinissy. Others made it before me, but I made it las'. Th' las' man that makes a joke owns it." Mr. Steele, when John P. Spearen found him and his guides lost near Upper Munsongan, and got him out and fed him, very promptly discovered the lake as soon as he got his second wind, and named it Echo Lake. One man on Mt. Desert discovered some old Indian graves, and went to get tools to dig in them, when he was informed that they were the graves of some of the Higgins' children. Yes, there are lots of things in Maine for a city man to discover, which the "natives," as this writer calls the inhabitants of Maine, never thought of discovering.

M. HARDY.

Trespassing on Private Grounds.

HAVING had opportunities of studying the subject from both sides of the fence, I would like to record in FOREST AND STREAM my deductions.

Some years ago when living in town it was customary for several of us to go upon shooting expeditions into the country and the mountains. At that time game was much more plentiful than at this, and posted fields were seldom found. When we did find them, we often ignored the notices and almost unanimously condemned the custom, feeling much offended that any individual should have wild game within his domain and prohibit the public from climbing his fences to shoot it. The deer we had found in the mountains, the ducks or quails we flushed on unclaimed ground, or the squirrels our dogs treed, might go into anybody's field or pasture. Were we to lose it on that account? Not much. We believed the wild birds and animals public property, and we asserted the right to kill them anywhere. And this is the belief yet in many parts of the country, particularly in out-of-the-way districts.

And it all seems very reasonable to the fellow who is out for game, and who owns no lands or preserves, and who only goes out of his town limits to kill birds and other game or catch fish. He seems to consider the realms outside of metropolitan boundaries free for all and go-as-you-please. It is not his province to consider that the depredation he is committing is not merely an occasional raid, but that the same thing is being done day by day by thousands. Neither does he consider that all hunters are not necessarily honest or thoughtful.

In later years I have had occasion and opportunity to look at the subject from the inside of the fence. Several of us obtained possession of a few hundred acres of wild mountain land, acquired by the payment of money and the rather rigorous compliance with the homestead laws of the United States. We could scarcely reach our grounds by trail with horses, and it was expensive and laborious to construct a road to them, fence and partly clear the jungle. It was in a district where none had a legitimate reason for intruding without permission of the owners.

Much of the land was cleared of worthless thickets, forest debris and rocks, and many beasts and birds of prey were exterminated. All this took years of time and considerable money. The principal attractions of the place were its isolation, the natural beauties, and notably the wild birds, the game animals and a diminutive trout stream. The game and fish were not plentiful, but by preventing indiscriminate shooting and fishing, both would in time increase, making the place more attractive and affording a small refuge for the game of the locality.

Ten years' experience has demonstrated to us that most sportsmen look alike in the mountains. No sooner was a road opened than it was made a public highway by many fishers and gunners, their principal object and goal being the lands we had made accessible and owned. We could not keep any stock on our premises, for predatory thieves, and it was at times dangerous to be within our own fences, owing to bullets fired from long-range rifles, or to reckless

gunners. If the property was left for a few days without a resident, vandals appropriated everything in sight, camped in the houses and even removed doors and windows. Fires were started either intentionally or carelessly, and two houses were consumed.

Parties would pitch their camps in our dooryards, raid the orchards and gardens, shoot anything with wings or fur or hair that they got sight of, and, after catching every trout possible, they killed the most of the remainder with explosives. At the end of ten years of attempted preservation there is more game in the outside districts, where it is not so easy to reach it. In this time we had a tame deer shot within ten rods of the house, and many half-tamed birds, squirrels and other small creatures potted at our doors. There are few things as exasperating as some that I have mentioned, and this is a statement of facts, and the case is not half exploited. At this time we are endeavoring to prevent vandalism by posting the premises. Our laws pronounce it a misdemeanor, punishable by a fine of at least \$20 to "trespass" on posted and inclosed grounds—but no one ever hears of an arrest.

Instead of feeling offended now when I see grounds posted, I feel that the owner of them has some little humanity, and give him credit for, rather than condemn his selfishness. Any conscientious sportsman who owns or controls wild lands should, from the best kind of motives, post and protect them against vandals. If his game is plentiful he has friends enough worthy to share it upon his invitation. If a man is too poor to have land or friends who have, let him feel not wronged. If half the lands are posted and protected there will be overflow enough for the sportsman without land or friends or anything but a gun and primitive instincts. It is as certain as anything in the world, attested by square miles of proof, that if some protection other than enactment of laws is not extended the game of the country will scarcely be worth words in another ten years.

If at this time I had the framing of a trespass law, I should make it the same offense as burglary or house-breaking to enter posted premises and kill or appropriate or destroy. No man should enter upon another's property with firearms or fishing tackle without permission, any more than he should with skeleton keys, a jimmy or a supply of dynamite. If he does so he should be subject to the same hazard under the law that a burglar is. It is the same offense and has been tolerated longer than any other uncivilized custom of past ages. From the sportsman's standpoint the stringent protection of private lands by potent laws and sensible penalties would do as much or more for the preservation of game than all other efforts combined. Let the private owner realize that his grounds and the animal and bird life upon them are really his property, and there will be plenty of energetic wardens.

RANSACKER.

Flickers in New Jersey.

Editor Forest and Stream:

Considerable comment has been caused by an apparent conflict of the laws passed last year in relation to the killing of the bird referred to in the general fish and game act as the flicker or highholder. The Legislature apparently intended to permit the killing of these birds during September and October, but it is the opinion of lawyers generally that the Legislature did not succeed in carrying out its intention. The gunners of the State looked to the Board of Fish and Game Commissioners for an interpretation of the law, and this Board, at its last meeting, determined to instruct its officers to arrest all persons killing the birds referred to.

The reasons for this action were explained as follows by Mr. Howard P. Frothingham, President and Treasurer of the State Board:

"In formulating fish and game laws there are other circumstances to be considered besides the preservation of fish and game or the pleasure of the sportsman. The sentiment which protects a bird because it is beautiful or because it sings sweetly is laudable, but there is something more substantial than sentiment which has brought about our fish and game laws. Birds are of great value to the farmer and horticulturist, to the man who has but a single tree which he calls his own, and to all who love to see nature in all its glory undiminished. Birds are the natural enemies of insects, just as many of the latter are the natural enemies of vegetation, and this brings me down to the question of the protection of the flicker. The bird is a woodpecker, and its proper name is the golden-winged woodpecker. In various localities it is called yellowhammer, clape and highhole. Highholder is simply an ignorant corruption of highhole, the latter name being frequently given to the bird on account of its nesting high up in holes in trees. The woodpeckers, with the single exception of the sapsucker or yellow-bellied woodpecker, are among the most useful of birds. They devote nearly the whole of their lives to the destruction of noxious insects, and in this way contribute materially to the success of the tiller of the soil, and also to the pleasure of every man who prefers trees with healthful foliage to trees covered with caterpillars or denuded of their foliage by insects.

"This consideration alone should be sufficient to protect the bird at all times. A law permitting the killing of woodpeckers would be a very pernicious one, and I do not believe you can find such a law in any State in the Union nor in any civilized country. That there is no such law in New Jersey is due mainly to accident, and a glorious accident it was. The fourth section of the general fish and game act provides that it shall be unlawful to kill certain birds excepting at certain times; this section provides that it shall be unlawful to kill flickers or highholders excepting during the months of September and October, but it provides no penalty for their killing at any other time. But the section immediately succeeding makes it unlawful to kill woodpeckers—excepting the sapsuckers—at all times of the year. So, according to the law, you can kill flickers in September and October, and you cannot be punished for killing them in any month of the year, but you cannot kill woodpeckers, and flickers are woodpeckers every day in the year. I do not think that the question is a debatable one. The law plainly provides a penalty for the killing of woodpeckers, and that law will be enforced as long as I have anything to say about the protection of birds. The Board of Fish and Game Commissioners has unanimously resolved that Section 5 of the

present law, which plainly prohibits the killing of flickers at all times of the year, shall be enforced.

"For many years we have striven to have a uniform open and close season as far as possible. We have attained this now, the general open season being the months of November and December. To permit the shooting of flickers or any other kind of birds in September and October would mean a great destruction of other kinds of game, for it would be used as a warrant for every violator of the law to be in the woods during those months. It is true that the law permits the killing of woodcock in October, but woodcock are to be found in swamps and marshy places and not where woodpeckers make their homes. I believe that a man who would shoot the useful flicker would shoot a quail on its nest. I am glad that the Legislature did not succeed in its attempt to legalize the slaughter of one of the most useful of our wild birds and I sincerely hope that the next Legislature will wipe out every evidence of any such attempt ever having been made."

H. P. FROTHINGHAM,

President Board of Fish and Game Commissioners of New Jersey.

Game in Maine.

BOSTON, Sept. 14.—To-morrow, Sept. 15, opens the season for partridge shooting in Maine. Letters from guides and others interested are conflicting in their accounts of prospects for that sort of game. In the more settled sections it is very evident that partridges are not plenty—not so many as in former seasons, even. It is plain that the noble grouse is on the wane in the more hunted sections of that State, and it is not strange that it is so when it is remembered that in the cities of Bangor, Waterville, Auburn, Lewiston and Portland, there are more crack shots to the square mile than in almost any other section of the country. Lewiston and Auburn have at least half a dozen crack shots, capable of following up at each shoot 96 and 97 clay pigeons out of a possible hundred. Two or three members of the Auburn Gun Club are tied on score of 96, and with this record they go to the State shoots every season. These shots are all great lovers of actual bird shooting, and some of them own good dogs. It is understood that where these crack shots gun it is almost impossible for a partridge to escape.

Reports from guides and others in the backwoods sections of Maine say that partridges are really very plenty. Many of the fishermen who have stayed at the many Maine resorts for the fall fly-fishing will take in the partridge shooting. A guide writes from the vicinity of Patten, Aroostook county, that the partridges are more plenty than he has ever before seen them. Another writes that on the Megantic preserve the shooting will be excellent, with deer very plenty. The Patten guide just noted says that moose and deer are about the same as last year. From Norcross come reports of great numbers of partridges, with moose and deer as plenty as last year. From the upper end of the Twin Lakes come reports of great chances for bird shooting. Ducks are numerous, with partridges plenty. Moose and deer in the section of Maine between Norcross and the Allaguash waters, are positively abundant. Tourists who have made the celebrated canoe and carry trip from either Norcross, or through the old carry from Moosehead, to the Chesuncook waters, thence up the lakes and over the carry to the Allaguash and down to the St. John, are very enthusiastic about game in that part of the country. All the partridges—both ruffed grouse and spruce—are to be had that one could possibly care for, with black duck, wood duck and teal very plentiful. Prof. J. F. Moody, of Auburn, Me., and his son, J. F. Moody, Jr., returned the other day from a three weeks' trip, starting with a canoe at Norcross, thence up through the lakes and carries to the Allaguash, and down to Frederickton. They write that it was a glorious trip. They paddled their own canoe, camping where night overtook them. They saw 118 deer and eleven moose. The deer, in some cases, would scarcely get out of the water to let them pass, all being in easy range. They frequently paddled up to within 50 feet of big bull moose. They pronounce it a great game country for the hunter who has the time and the courage to make the trip in the open season.

SPECIAL.

CHICAGO AND THE WEST.

The Student and His Friends.

CHICAGO, Ill., Sept. 14.—The desk of the Student is in the room adjoining my own. We told about him on a little quail hunt last fall. At that time we didn't allow him to carry his gun loaded, for fear he would kill somebody. This fall he became permeated with a fierce enthusiasm to go out and slay some prairie chickens. He came in and borrowed my pet chicken gun, which I was going to use myself on opening day—a light-weight affair which has a very good record attached to it—and in company with one or two friends of this city and one or two more of Minneapolis, got out into the chicken country. As luck would have it, he fell into the hands of Game Warden Stephens, of Detroit, Minn., a most fortunate thing for the entire party. It seems that Mr. Stephens had ducks and chickens to burn, and that the little party during their stay killed something like 104 birds, nearly all prairie chickens. The Student was gone from home something like ten days, and when he reached his desk he was the happiest fellow that any one ever did see.

"Just look at my arm," he said, and he stripped up his shirt sleeve, showing an arm absolutely black and blue from shoulder to elbow, and part of the chest hardly less discolored.

"That gun of yours is a corker," said he. (I had told him not to shoot over 2¾ drams in the gun.) "It kicked me pretty near to death, but you ought to see me reach the birds. I killed thirteen birds all by myself that I know of, and that is more than any one else in our party is able to say. Fun? Why, it was out of sight. I never had such a good time in my life. Say, those dogs of Mr. Stephens', they just kept going back and forward like they were machines, and when they came to birds, they pointed them the finest you ever saw. Then the birds

would go up and we would whang it into them. I never had such a time in all my life. That is the furthest West I ever got, but I want you to hear me, hereafter I am going to spend all my vacations out there. We all made a solemn oath that next year would find us up there with Stephens. We went duck hunting for a little while, and I got into the mud up to my waist, and one of the fellows who took the slats out of the bottom of his boat went in so far that we had hard work to find him. You see, the ducks were sitting in the water and wouldn't fly. So I got out and tried to scare them in to the decoys." (Of course he did, and he found you can't drive ducks into decoys.) "I killed one or two teal that came over and one mallard. There was one awful big green-headed mallard that got out of the rushes, and I smashed it to him. I had to take off my clothes and waded into the mud to get that duck, but I wouldn't have taken a hundred dollars for him. It was the prettiest duck you ever saw!

"But talk about dogs! You ought to have seen those dogs. Say, I bought me a dog! I am going to keep it in my house here in the city somehow. I paid Stephens \$5 down, which was all I had at the time, and I am going to give him the rest as quick as he wants it. He is going to finish training it for me, and I will get it some time in October. He is a red sort of dog, Irish setter or pointer, I think they called it; has brown and liver spots. I guess he's Irish. Anyhow, it's a bird dog. At least its brother is, and so is its mother. You hear me, I'm going to have a gun and dog of my own if I don't do anything else. There is something the matter with your gun, though, and I guess I won't borrow it any more. My arm got so sore that on the last day it made me sick at my stomach to shoot any more, and I could hardly open the gun to get a shell in. I had to give it up and climb up on the wagon. I think I'll get a gun that does not kick quite so much. And then when you see my new dog, I think you will allow I am strictly in it. That's the way my vacations go after this, I promise you."

And very much worse spent the Student's vacations might be. Too bad the gun kicked him and spoiled his fun. Next year he will be advanced student enough to know that you must not shoot 1¼ ounces of shot and 3¼ drams of powder in a 6½-pound gun. But the enthusiasm, the youth, the sheer joyousness of the Student's story—how it does carry one back, and how it does, forsooth, carry one ahead! I am very sure that I enjoyed the Student's chicken hunt almost more than I did my own, even if he did have my pet gun along.

Twin Lakes Game Preserves.

Messrs. Dick Mott, Will Read, J. E. Stont and Dr. W. E. Fellows, together with a number of Des Moines, Ia., sportsmen, have bought 500 acres of land adjoining Twin Lakes, in Calhoun county, Ia. There was formerly a hotel at Twin Lakes, and this will serve as a club house, and will be kept open during the hunting season. No one will be allowed to shoot on the grounds excepting club members. Twin Lakes, Ia., are located in one of the old-time hunting grounds of the writer. Calhoun county was formerly not to be surpassed as a prairie chicken country, and numbers of ducks were to be found on the lakes, both local birds and travelers in season. The lakes are of the shallow, mud-bottom variety common to central Iowa, but in the old times used to furnish a certain number of good-sized pickerel. Twenty years ago all this country was virgin grass ground, and the idea of a shooting club or a game law would have been scouted by the few farmers who then occupied the country.

Illinois Chickens.

Reports continue to show that the prairie chicken crop in Illinois was by no means an inconsiderable one. Mr. E. L. Palmer, of Sycamore, Ill., states that a great many birds were killed adjacent to that town this past week. One party of Chicago gentlemen bagged thirty-eight birds, two local men killed twenty-eight, and many others had success of similar proportions.

Dr. C. W. Carson, of this city, says that friends told him that there was fine prairie chicken shooting all over the northern and western part of the State of Illinois, more especially around such points as Geneseo and New Boston, which are near the Mississippi bottoms. At the latter point some splendid bags were made, two gentlemen from Rock Island killing sixty-eight chickens in one day. Dr. Carson says he heard of several other bags of 50, 40, etc., made in one day by respective parties. These bags were sometimes made by two guns, sometimes by as many as three or four guns shooting over the same dogs, but the total numbers are quite sufficient to show that the prairie chicken crop was very far in advance of the average.

Hon. Hemstead Washburne, of this city, hunted with a friend at his favorite grounds near Morris, Ill., not fifty miles out of the town, and bagged nineteen birds on opening day, certainly a very satisfactory showing in view of all the circumstances.

Out-of-Town Shooting.

Mr. J. L. Jones is back from a week's chicken shooting in Minnesota. He was located near the Manitoba line and had very fine sport indeed. He and a friend had a daily average of about 25 birds to the gun—certainly all the sport one could ask.

Messrs. Joy Morton and Paul Morton, of this city, are recently back from a special-car trip over the Santa Fé system, during which they spent most of their time near Port Arthur, Tex. They had splendid shooting on prairie chickens, not far back from the Gulf coast in the big Lone Star State. They declared their intention of going down again a little later to enjoy some of the duck shooting. They say no Northern man has any idea of the quality of the sport in that part of the country.

Mr. John W. Gates, the iron and steel magnate, and his son, Mr. C. G. Gates, last year shot in the same country where the Messrs. Morton have been this fall. At that time they had 30,000 shells sent down to them, and it is thought that their ammunition order for this fall will run at least as much.

Hon. James H. Eckels, formerly Comptroller of the U. S. Currency, leaves for Denver, Colo., next week, well outfitted for a trip in the Rocky Mountains, for which he will make Denver his going-in place.

Mr. W. B. Mershon, of Saginaw, Mich., captain of the

Saginaw Crowd, of famous memories, will head that admirable party of sportsmen to some goose-shooting point in North Dakota in the first or second week of October. Mr. Mershon has just written asking whether one has any knowledge of a white goose decoy. I have referred him to Von Lengerke & Antoine, who handle a papier mâché decoy, which is white on one side and which has a white head attachable. So far as I know, this is the only pure white goose decoy made. Mr. Mershon thought he could rig one out of a profile covered with a goose's skin, but methinks it would be considerable labor to get a big flock of fifty decoys manufactured in this way. It is not yet known what point the Saginaw Crowd will select for their fall pilgrimage.

Jacksnipe.

A friend reports that he saw one solitary, single, lone-some jacksnipe about sixteen miles west of Chicago yesterday. The bird was headed south, and probably in an uncertain and discontented frame of mind.

Not so the reports from Lower Wisconsin, where the jacksnipe flight seems to be at this writing. From Montello, Wis., near the Puckaway marshes, comes a report from Mr. Fetter, of this city, who, a couple of days ago, killed sixty-eight snipe in one day. A dog trainer located at this point reports that the ducks are not yet in at the Puckaway or Neepenauk marshes, but that the jacksnipe have appeared in very considerable numbers. We are having heavy rains here to-day, and the probabilities are that the birds will appear over upper Illinois and Indiana inside of the next three or four days.

Woodcock.

A good many woodcock—that is to say, if there ever was such a thing as a good many woodcock—have appeared along the edges of the Skokie marsh and the little sloughs which lie north of Chicago. Mr. Geo. R. Thorne, of Montgomery Ward & Co., whom I met this morning by chance, was in a very happy frame of mind.

"Do you see that boy over there," said he, "the one holding the dog? Well, that is my dog. I just bought him through an advertisement in FOREST AND STREAM. He is a pointer, two and a half years old, and warranted broke on woodcock. Now you watch me Monday morning. I am going to take out my new dog near my home in Winnetka, just north of town, and if there are as many woodcock there then as there have been this week, you will hear something drop in that neighborhood."

This is within twenty-five miles of the middle of Chicago. Considering that Mr. Washburne's nice bag of chickens was made within fifty miles on the other side of town, we may revive something of the ancient claims of the city of Chicago as a shooting ground.

By the way, Mr. Thorne, with his friend, Mr. John B. Drake, and perhaps one or two other Chicago gentlemen, propose going to Nebraska for a prairie chicken shoot the first week in October, making South Bend, in that State, their stopping point. Now, that is something like a chicken shoot. The law which opens the chicken season at Oct. 1 is not only a wise one, but a sportsmanlike one. At that time the birds are big and powerful, and one cannot kill twenty straight, as he may in the shooting of a month previous. We value only that which is difficult to obtain in this world, and the shooter who stops a big cackling October grouse has something of which he may be far prouder than the loose-plumaged bird which he kills at 20 yards from the muzzle of his gun on the first day of the shooting season.

Wisconsin Ducks.

The Wisconsin duck-shooting season thus far has been valuable simply in respect of numbers of local birds. At Fox Lake George Whitlinger killed eighteen mallards and teal on opening day. The bags on the Horicon marsh were also very decent, though the customary rule prevailed all over the Wisconsin marshes that the second day found the birds dull, frightened and unwilling to move.

The Wisconsin law which forbids open water shooting or chasing of birds with a boat is surely a very wise and beneficial one. It permits the birds to rest, and that allows them to become wonted to a locality and so allows better shooting than would be possible if the birds were perpetually harried morning, noon and night along shore and in the open.

Keep Your License with You.

If you go shooting in Wisconsin these days, it is wise for you to have a license, and not only to have it, but to have it on your person. Mr. Valentine Raeth, the new Milwaukee deputy, this week took a trip to some of the better Wisconsin marshes. He arrested Dell Fletcher, of Waupun, whom he found hunting without any gun license. The prisoner was tried before Justice Williams, of Fox Lake, and Fletcher claimed to have a license. Word was sent to his residence, and he did, indeed, produce such a license, which he had left at home. The warden declared that this was not having the license "in possession." The justice, however, thought that the purchase of a license and keeping it at home was legal possession of the same, and he therefore discharged the prisoner. There was the usual amount of local talk against the game warden, who was, no doubt, entirely free from culpability in the matter. It is his business to find that the shooter has a license, and he took the shortest cut to that end. In order to avoid any such trouble, even should it end in ultimate discharge, it is well for any shooter to remember that the license ought to be upon his own person when he goes afield.

The Roasting of Live Squirrels.

One of the prides of the stately Chicago suburb known as Evanston, located north of town on the Lake shore, is the large quantities of squirrels which live in the great forest trees that adorn so many of the homesteads of that residence quarter. These squirrels are wild and belong to no one, yet they are fed and loved by everybody, just as are the squirrels in the public park at Memphis, Tenn. This week four small boys of Evanston chased four of these squirrels into the hollow limb of a big oak tree. They then climbed up the tree and set fire to the limb, which presently burned off and fell to the ground. The boys then got an axe and split open the burned limb,

finding therein the four dead squirrels. The youthful savages will be prosecuted under a local ordinance which provides a fine for disturbing these squirrels.

After all the Evanston youths should remember that their act is not without precedent. The other day I picked up by chance in a gun store a little pamphlet published anonymously and entitled the "Real and Original Game Hog." It might well have been entitled "A Treatise on Roast Pork," had it been intended as a culinary tract. In brief it was the reprint from the FOREST AND STREAM of two years ago of those magnificently reserved and scathingly accurate articles written by "Didymus," of St. Augustine, in regard to the doings of Mr. George O. Shields in Florida. Among other things Mr. Shields was quoted as having, in one of his Florida journeys, engaged in the pastime of roasting out an opium from a hollow tree in which it had taken refuge. These Evanston boys, therefore, may reflect, even though they are placed temporarily in duress, that they have to cheer them an illustrious example.

The Fixer Worked.

Mr. and Mrs. Albert Bruning are stage people now playing an engagement in Chicago. Mr. Bruning is much an outdoor man, and spends his summers in Maine or Canada. This last summer professional duties took him to California, whereas Mrs. Bruning joined friends at their lodge in Maine. Among the pleasant house party thus made up there was, of course, the ardent amateur photographer, in this case a newspaper man who had once been a military correspondent, and who had a \$100 camera with complete outfit along with him. He made the worst pictures in the world, by the way, which sometimes happens with the highest-priced outfit. This photographer was a hero in a certain little drama which took place in the vicinity of the lodge one day. The heroine was a cow. It seems that the photographer in the course of his operations had exhausted the virtue of his developing and fixing solutions, and he had thrown away a large quantity of the fixer upon the green sward without the door. Enter now the cow, bent, as are all good and amiable cows, upon the absorption of as much green grass as possible. The cow ate freely of this grass saturated with the fixer. It fixed her! The funeral took place the next day.

What Would You Do?

What would you do in a case like this? A very good friend of mine, a novice in field sports, but with his enthusiasm in the right place, came to me yesterday with joy in his face. "I am going out to Minot, N. D.," said he, "with three other advertising men, friends of mine here in Chicago, and whom you know (names omitted at this writing)." "We are going from Minneapolis with a Baptist minister whose names is" (it rhymes with Riley, but I will not tell here just what it is). "He was up at Minot last fall, and said he had awfully good chicken shooting. I have never killed a chicken myself nor seen one fly, and I am tickled to death at this chance."

I told my enthusiastic friend that he was indeed to be congratulated. Then I reached down in the drawer of my desk and pulled out a copy of the Woodcraft Magazine and Game Laws in Brief.

"I suppose you know that you have to take out a \$25 shooting license if you go to North Dakota," said I to him.

"What!" he exclaimed, and he sank down into a chair with beads of perspiration on his forehead.

I showed him the statute in such case made and provided. At once he flew to the telephone, called up all his friends, and conveyed to them the information that a \$25 license was a necessity for this trip.

"Why, P—— tells me," said he, turning from the telephone to me, "that he was out there with the Baptist minister last fall himself, at this same place, and they didn't pay any license. You see the minister stands in with the game warden up there, and the game warden told him that if he wanted to bring his friends up there this fall, it would not cost anybody a cent. The game warden, you see, is a member of the same church that this Baptist minister belongs to. I don't think we would have any trouble if we went up there, would we?"

In answer to this question I took out the North Dakota game laws once more and pointed out that under the laws of that State it is made a misdemeanor for a warden or any of his deputies to issue a complimentary shooting license.

Now what would you do in a case like this? It would be the simplest thing in the world to telegraph to the State game warden and have him meet my friends at Minot and give them the jarringly little surprise party they ever had, more especially the young man who shot at Minot last year under the wing of the church member warden. Of course, it would be a simple thing also to have action brought against the game warden who did this complimentary business last fall. If I did this, all these friends of mine here in Chicago would think I was a real mean thing. What would you do?

The answer is really not a very difficult one under the circumstances. The information came to me from a friend in confidence, he being at that time ignorant of the actual facts. Therefore, I cannot make public these names, or take the action which, from a strict sporting standpoint, might be a good thing.

The entire party of Chicago men set out last night to meet the Baptist minister at Minneapolis, and to journey thence farther out of Minot under the tutelage of the righteous deputy who has apparently forgotten the new clause in the Dakota law. I simply adduce this as showing the way in which non-resident license laws of a State sometimes do not work. As to the minister, it would seem that he really might be in better business. Perhaps he remembers the example of Dr. Thomas, of Chicago, and his Wisconsin summer deer. Obviously the fact of his being a minister of the Gospel is simply an instance, and the censure in his case is no greater than that in any other, only in that capacity he has such a good opportunity to set a good example rather than a poor one.

E. HOUGH,

HARTFORD BUILDING, Chicago, Ill.

Game in the Granite State.

NEVER before in the history of the Granite State has the season opened on birds under similar conditions. New Hampshire has realized the necessity of adopting the Platform Plank of the FOREST AND STREAM, when the present season opens, as it will in a few days. All of us, whether residents or visitors, can shoot all the birds we are able to, but there is no profit in such killing. Some of us (I for one) are pledged to supply some of our Government officials with a few birds. As one of our prominent officials said to me yesterday, I couldn't hit a flock of birds if they sat still, I told him I would try and get him enough to go around, even if his olive branches were somewhat numerous. Well, birds are said to be plenty in this vicinity. This is an old story, which oftentimes fails to be verified. I want about a dozen birds on the opening day (or, rather, on the second day). I think I can get them within a mile of my house. Some of my neighbors who (with the exception heretofore of selling every bird they killed) are good fellows are apparently out of it this season. One does not own a gun, another wants to sell his dog. Some three years since I was drawn as jurymen from this town. It sort of cut me out of some days I would otherwise have spent in the covers. For some unknown reason I was very seldom drawn on cases before the court, and my duties consisted in driving to Concord and driving home again. I was excused for a day and a half by the judge for a good cause, but I put in part of the time in near-by covers, and I was very glad to be able to present to his honor and the clerk of the court quite a bunch of woodcock and grouse (which I do not think either of them could have killed). I did not have any reason to suppose that any of my fellow jurymen knew of it, yet they found it out and kept saying, "So the judge excuses you to go gunning for him." I will give an account later of how our season opens. I think it will not be in such orthodox Fourth-of-July style as heretofore. No market means no hunting for some of my neighbors.

C. M. STARK.

DUNBARTON, Sept. 18.

Wild Rice.

HARWOOD, Rice Lake, Ont., Sept. 13.—I am sorry to say I have had poor luck with the rice this fall. I have barely three barrels. The rice beds were good and heavy. Saturday night, the 7th inst., there came an awful wind with hail and rain, which knocked the rice beds flat on the water, and all the rice seed went to the bottom of the lake. The Indians could not gather it. I am very sorry; so are the Indians. I had orders ahead for forty barrels. That is always the way; when you have not the seed there are lots of orders.

CHAS. GILCHRIST.

Cold Storage Game is Cheaper.

A NEW YORK man and a friend were arrested for shooting partridges a few days ago in the Catskills. They pleaded guilty and Justice Decker then fined them \$20 each and costs, amounting to \$27.50, the total being \$67.50. The New Yorker paid the fine and costs and remarked to the justice that when he wanted partridge again he would buy it from the cold storage in New York and get it much cheaper.

An Adirondack Elk.

CANTON, N. Y., Sept. 11.—*Editor Forest and Stream:* It is reported that on Monday morning, the 9th inst., a Mr. William Barber, living eleven miles from this village, on the Clare road, shot and killed in his cornfield an animal that is pronounced to be a cow elk. It is said to have been a very fine animal of probably 500 pounds weight. Mr. Barber is said to have supposed it to be a very large deer.

J. H. R.

A good many of our older readers will remember the incredulous scorn with which not only the general public, but even expert naturalists, received the early descriptions of the gorilla furnished by Paul B. Du Chaillu, the discoverer of that engaging beast. The gallant and vivacious explorer was denounced as a later Munchausen, and it was a long time before the corroborative testimony of other travelers brought to him tardy and rather ungracious vindication. But his most highly colored pictures of the great ape of the African forest pale before the real terrors of the monster whose stuffed hide and skeleton may now be seen in a Berlin museum. The brute measures six feet and ten and a half inches from the top of his head to the end of his great toe, and his girth and bulk are those of the Farnese Hercules—a figure which has been called an anatomical impossibility. He fell a victim, almost by chance, to the rifle of a German commercial agent, to whom, in a South African settlement, came the report of a gorilla in an adjacent wood. Knowing the negro powers of imagination, he mistrusted the story, but, nevertheless, went out with a crowd of excited blacks in the hope of at least getting a shot at something. Suddenly he caught a glimpse of a huge figure climbing with astonishing rapidity the trunk of a tall cottonwood tree. The natives stood around the base and shouted, ever and again discharging some ancient firelocks. After a long wait the branches parted, and the gorilla, apparently curious, looked out to take a survey of the situation. The German, seizing the rare opportunity, fired, and his bullet, passing through mouth and brain, brought the creature crashing to the earth. It is said to be the largest and finest specimen ever secured.—New York Evening Post.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Fishing in the Bay of Quinte.

NEW YORK, Sept. 10.—My son, Vance, and I reached Glen Island, Bay of Quinte, Ontario, Canada, on the morning of Sunday, Aug. 18, after a week spent at the Pan-American. It is needless to expatiate on the beauties of the Bay of Quinte. Glen Island is situated six miles from Picton and twelve miles from Deseronto. It is a most picturesque place, containing fourteen acres of land, and thickly wooded.

Between Monday, Aug. 19, and Aug. 24, I made three fishing trips around the island with my son, and we were successful in catching many large black bass, weighing from 1½ to 3½ pounds. These fish are tremendous fighters, and on a light trout rod give you all the sport you can possibly imagine. I had engaged Frank Founis, of Adolphstown, as my guide, but, unlike other guides, he declined to go for muscalonge, except when wind and weather were propitious. I must say this for Frank, that he was the most painstaking guide that it has even been my luck to have. On Aug. 24 I received a telephone message from my guide that he would be over early, that the wind was in the right quarter, being from the southwest, and there was a chance of getting muscalonge. We started at about 10 A. M., and trolled back and across the bay and along the Prince Edward Island shore until about 12:30 P. M., catching a few large black bass and pike. Just as we were making a landing at the dock we passed a Methodist minister, who was hauling in an 8-pound pike, and acting as though he were pulling in the bottom of the bay.

After dinner at Frank's house we started trolling back to the island. When about 300 yards off shore, the guide said: "I think it will be a day with no results," and thinking likewise, I began reeling in my lines. Just as I had commenced I felt the rush of a big fish strike my troll on the left-hand rod, and turning I saw a mighty monster leap from the water—Frank says 7 feet—carrying with him across his back my second troll, which had snagged him in the eye. When he struck the water it sounded to me as if a house had fallen into the bay. The muscalonge lashed furiously, running zigzags across my lines, and making deep dives to the bottom of the bay, and then rushing to the top as though he were going to leap out of it again. Three times I had to plunge my rod under the water in order to turn him and keep him from breaking it. All this time I thought he would pull me overboard, he was so strong. I had to play him. I should judge, in the neighborhood of twenty-five or thirty-five minutes, the line paying out and burning my fingers as if it were on fire. Finally I got the fish near the boat, and Frank lunged at him with the gaff, which the fish straightened as if it had been a pin. The next time we were more successful, and, as I got him near at hand, I tipped the boat a little, and the guide, having straightened the gaff into position, made another lunge, and by our united efforts we landed him. Then the fun commenced. As you are aware, muscalonge are thickly coated with slime and are very difficult, especially a large one, to hold. Frank finally succeeded in pinning the fish under the seat, and I attempted to stand on his tail to keep him from knocking out the bottom of the skiff. After beating the big brute with a gaff and sticking a knife into his head, we finally quieted him, but even after we had landed him on the dock he made a snap at the heel of Dugal Dingman's boot. You can imagine how I shouted when I felt sure that we had the fish safe on shore. All the guests of the island flocked down to the dock to see him, and I believe I have the honor of being high hook so far this season. I sent him to Kingston to be mounted. He finally weighed 37½ pounds, after a lapse of some time, during which he was hung on the dock for exhibition to people passing in yacht.

On the next Monday I started out again with Frank at the usual hour of 10, and, after crossing the foot of the island to the bay opposite, struck a very large muscalonge, and after a most exciting play with him, about the same length of time as the big one, we got him into the boat. This fish weighed 34 pounds. While I was landing him I noticed that the same old parson had struck a very large muscalonge, and was employing the same tactics of yanking him in hand over hand, as if brute strength were all that was required. His son-in-law, who was rowing the boat, shouted to the old man, "Don't pull him so like the devil!" and the old man, very much excited, turned and shouted back, "How the devil shall I pull him?" I did not wait any longer, as it was about dinner time, but made the landing, and found Dugal Dingman, mine host and lord of this isle, and by the same token a gentleman of the first water and an artist of no mean ability, searching the shore for crawfish, for an outing with me after the large black bass which we had arranged for the afternoon. My son, coming up at the time, declared that he must go out with us to try his luck with big fish. I had rashly promised to pay him a dollar a pound for every muscalonge he might land that would weigh over 10 pounds. We started at about 1:30, and, crossing the same ground I had fished in the morning, struck a 15-pound pickerel, which fought as I have never yet had a pickerel fight, and deceived, not only my guide, but myself, who thought it was another large muscalonge. This excited my son Vance so much that he was paying very little attention to a hand troll which was dragging out from the rear of the boat. Suddenly the little fellow turned and said, "Papa, I have got him," and commenced to haul, but soon found that his strength was hardly equal to the task. I could see that he had hooked on to a large muscalonge, and that the fish had turned and was making straight for the boat. Frank yelled, "Help the boy, or he will lose the fish." I threw my rod on the bottom of the boat and took hold of the line, when the fish was about 100 feet from the boat, cutting through the water very near the top. Just as it was within a few feet, I employed the same tactics that I had used with my 37½-pounder, and leaned all my

weight on one side, at the same time lifting the line over my head, and succeeded in landing the fish in the boat and nearly swamping us. We had then to turn our attention to going to the nearest point of land to lighten her, as the fish was dousing us, and was very difficult to kill; indeed, we only succeeded in doing this after landing him high and dry. He weighed 25¾ pounds. We then thought we had luck enough for one day, and returned to the island to celebrate. Dugal Dingman, like the good fellow that he is, was more than glad that I had such phenomenal luck. But he insisted that the next day

Muscalonge of 37½ pounds taken in the Bay of Quinte by Wallace Murray.

we should, without fail, have an outing together for the black bass and another try for the muscalonge.

About 10 o'clock A. M. the next day Mr. James McBirney, of Toronto; Mr. Dingman and myself got the sailboat ready, with the intention of crossing to Pleasant Bay, trolling for muscalonge, and then, if we had no success with them, trying for the big black bass. Dingman said, "Get everything ready and I will be down with the bait and some cigars, and will shove the boat off from the dock, so that we will lose no headway." After we had taken on board our supply of bait, etc., the old man caught the boom of the sailboat, and, giving a good shove, made a leap for the boat, but only succeeded in striking the edge, and, falling backward, went overboard, and as he came up, he said, "Boys, I am in." We hauled him in and resumed our cruise. We fished about an hour, having only six crawfish and four frogs as bait, but with these we succeeded in landing nine beautiful black bass, the largest one taken by Mr. McBirney and weighing over 4 pounds. They would average 3 pounds apiece.

This is but a repetition of many days with black bass, and it has never before been my luck to crowd in so many pleasant and profitable hours fishing as I did in the two weeks at Glen Island.

WALLACE MURRAY.

Fish and Fishing.

When Salmon Feed.

To the literature of the much-disputed point as to the feeding of salmon in fresh water, a valuable contribution comes from a French fishery official, M. Paubze d'Ivoy de la Poype, "*Delegue General de la Commission Interdepartementale de Peche des Conseils Generaux du Bassin de la Loire*," or representative of the fishery commission of the basin of the Loire. A publisher of Poitiers has just issued M. d'Ivoy de la Poype's book, entitled "*La Question de la Peche dans le Bassin de la Loire*," which differs from most works by French writers upon kindred topics, in containing a vast amount of original and strikingly interesting information. Dealing in main with the salmon fisheries of the Loire, the author discusses most of the leading salmon problems of the day, as, for instance, whether the salmon is an annual or biennial spawner, the speed at which it travels and the question as to its feeding in fresh water. It will be remembered by those who have closely followed the various arguments on both sides of the last-mentioned question, and the evidence adduced by those advancing them, that Dr. Noel Paton, and his assistants of the Edinburgh College of Physicians, arrived at the conclusion that the digestive organs of a salmon in a river were in such an atrophied condition that no food could be digested. Dr. Paton described them as suffering from a desquamative catarrh of the mucous membrane. The reviewer of the Field cast doubts upon this theory as soon as Dr. Paton's report was issued, and Dr. Kingston Barton subsequently showed the mistake into which the Scotch observers had fallen, and that the

alleged desquamative catarrh was simply a post-mortem change, the fish with which they had experimented having only been examined some time after death. Prof. Schneider, on the other hand, who furnishes to the appendix of the French scientist's work a special paper on this interesting question, took the precaution of placing fresh, in a solution of formaline, the stomach and intestines of salmon which he examined for the author. He arrived at precisely the same conclusions as Dr. Barton, and M. d'Ivoy de la Poype concludes that salmon do obtain nourishment in fresh waters, and only cease to feed when the instincts of procreation are most exacting. Among the salmon that he had examined from the Vienne, a tributary of the Loire, were many containing no trace of food, but among the exceptions was a young male fish of 9 pounds weight, which had in its stomach five small fish in all stages of digestion.

The results of these recent investigations lead us back again to the very starting point of the controversy, and seem to suggest that the cause of scientific inquiry into this interesting question might be materially aided by the observations of American and Canadian salmon fishermen.

Salmon Flies for Trout.

The recent French experiments with the stomachs of salmon and their contents suggest a question that has often occurred to me when fishing for trout with salmon flies. Nobody pretends that fontinalis takes the Jock-Scot for amusement, or impales himself upon a silver-doctor while snapping in anger at the tinsel-bodied lure. Yet when salmon seize the same gay deceits, we are asked to believe that they take the fly from an altogether different motive, and in quite a contrary spirit to that displayed by salvelinus. Who shall decide the question when so many learned doctors differ?

A New Bass Fly.

From Mr. N. P. Howell, of Newark, N. J., I received a few days ago specimens of a new and very promising bass fly. In explaining its *raison d'etre*, its author says: "Thinking that you or some of your friends might have an opportunity to try the inclosed flies in Lake St. John or other Canadian waters, I take the liberty of sending them to you, and asking you to kindly give me your opinion of them, which I would value very greatly. I designed them from some flies which have appeared in great numbers for a few days in June, at Belgrade Lakes, Me., where I have gone for the last two years for the early black bass fly-fishing. They were eagerly devoured by the bass—in fact, every one that I examined while the flies were there seemed to be gorged with them. I am anxious to know if they are any good for ouananiche, trout, etc." I have not yet had any opportunity of testing these flies, but trust that some of my friends may shortly do so, if time and circumstances prevent me going a-fishing again this year. It is impossible to say from the artificial lure before me what fly it is intended to represent, but I hope that next year Mr. Howell will send me some of the natural insects to which he refers, and I will have them classified. The B. A. Scott fly, which has proved such a killing lure for ouananiche, was designed just as the Howell fly was. The fish were found to be ravenously feeding upon the natural insect, specimens of which were secured, and furnished models for the creation by the fly-tyer of the B. A. Scott fly. This fly, which is well known to all anglers visiting Lake St. John, differs but little from the General Hooker. The insect which it is supposed to represent is the male of *Brachycentrus fuliginosus* (Walker). It belongs to the family Sericostomidae, in the order Neuroptera. Together with several other species closely resembling it, it is commonly called the shad fly.

Returning to the Howell fly, I find that it widely differs from any of the patterns of bass flies shown in Mrs. Mary Orvis Marbury's "Favorite Flies." In general appearance it slightly resembles the Governor Alford, though somewhat darker, having the Coch-y-Bouddu body, claret hackle and black wings, with a white spot upon the shoulder. It ought to prove a very killing fly for trout.

Fly-Fisher's Entomology.

The art of tying artificial flies to represent the natural insect is by no means a simple one. If they were so made as to match it when laid alongside of it, dry, it is probable that they would never deceive an educated fish. As an illustration of this statement, let the angler or amateur fly-tyer take up one of the standard authorities, where the illustrations of the natural insect and the artificial fly that represents it appear upon the same plate. Scarcely anything can be more dissimilar, as all will agree who take the trouble to examine the beautiful hand-colored plates in John Jackson's "Practical Fly-Fisher," or Alfred Ronalds' "Fly-Fisher's Entomology."

Interest in the latter work has been renewed by the recent appearance in London of its tenth edition, which has been prepared by Mr. J. C. Carter, a nephew of the author. The latter died in Australia in 1860, after spending the last eighteen years of his life there. Most of the beautiful original plates of flies and natural insects, on copper etchings, have been employed, though they were made sixty-five years ago, the first edition of this standard work having appeared in 1836. One cannot but regret, however, the perpetuation of the original frontispiece—an illustration of trout, parr and grayling, which, as the London Field very properly remarks, can only be described as a libel on these beautiful fish.

The Tuna in American Waters.

"These fish are in American waters now!" This is the statement concerning the tuna which attracted my attention a few days ago in glancing over a correspondent's letter in FOREST AND STREAM, and he asks for information about them, and states that "Catalina Island seems to have had a monopoly of tuna fishing." I confess that the latter statement rather startled me, but upon picking up a number of another sportsman's paper of earlier date a few days later, I thought, and still think, that I had found the authority for Ransacker's assertion. It is contained in a letter describing the sport of tuna fishing about Santa Catalina Island, the writer of which deliberately declares that "the place has become famous because of the fact that only here is this great game fish taken." Nothing could be wider of the mark. In the Atlantic it

occurs as far north as Newfoundland. In the Pacific it is found off the coasts of Japan on the one side, and off that of California on the other. It is the *Scomber thynnus* of Linnaeus, the *Thunnus thynnus* of Jordan and Evermann, and the *Oreynus thynnus* of Dr. G. Brown Goode. The tuna is almost identical with the tunny of the Mediterranean and of the ancients, though upon the Atlantic coast of North America it often attains a weight of 1,500 pounds. In the Mediterranean and off the west coasts of Europe its maximum size is given as 1,000 pounds. Jordan and Evermann's new catalogue of North American fishes leaves no doubt whatever as to the complete identity of the Pacific fish with that found in North Atlantic waters, and they report having examined a specimen from Monterey 8 feet long. The roaming habits of these fish had been observed as early as the Christian era, and Oppian says of them:

"To foreign seas the wanton younglings roam
And travel, infants, from their native home."

Hence, the wide distribution of the species. Ransacker suggests that the ulua of the Hawaiian islands, as claimed by a Honolulu paper, is identical with the tuna, and as they are known to frequent the coasts of both Japan and California, it is quite probable that this supposition will be found to be correct by the scientific expedition about to investigate and report upon the fishes of Hawaiian waters for the United States Government. "No fish more dreads the cold," says Oppian, and it is only in summer that it is found in northern waters.

Fishing for tuna with hook and line in Canadian waters has been practiced for a very long time, so long, indeed, that the sport was described by Dr. Fortin nearly forty years ago, though the fact seems to have escaped general notice. It is also speared and harpooned, both in the Gulf of St. Lawrence and in the Baie des Chaleurs. As long ago as 1878 Captain Henry Webb, of Milk Island, near Gloucester, harpooned and killed thirty of these monsters, weighing in the aggregate at least 30,000 pounds.

E. T. D. CHAMBERS.

On Michigan Trout Streams.

TRAVERSE CITY, Mich., Sept. 4.—*Editor Forest and Stream:* I had the pleasure of entertaining Mr. S. Cook, of Hartford, this State, for a week, beginning Aug. 19, which time was devoted entirely to trout fishing. I had read several of Mr. Cook's articles, published in *FOREST AND STREAM*, with interest and pleasure, especially the one showing that it is "not all of hunting to hunt."

This city is located in the heart of a trout country, having easy access to fine well-stocked streams, in any direction one may wish to go, and for convenience, one could not ask for anything better. We can take an early morning train out north, south or west, and after a good day's sport return by rail in the evening, as the train will stop most any place along the line and pick up fishermen. We started at 6:25 the first morning for Mayfield, a small station ten miles up the Boardman River, on the G. R. & I. Ry. Fished a small creek for a mile down to the river, which we followed down to a flag station, about four miles, giving us a good day's sport, arriving in time for the 6:40 train for home. Mr. C. was somewhat disappointed in the catch that day, as from reports concerning the majestic Boardman, he started in with anticipations of an overflowing creel, consisting of from 1 to 4 pounders. We presumed that the big fellows were off foraging that day for better grub than we had to offer. We met seven other fishermen at the station, all reporting small catches of small fish. But the day before two fellows fished the same ground, returning with full creels and bulging coat pockets, some being of extra size. We got nineteen, running from 6 to 12 inches in length, most all of which were rainbows. That being Mr. Cook's first experience in trout fishing, excepting in a very small brook, where a short line and worms or cut bait were used, he took considerable interest in my fly-casting operations, and his comments were most ridiculous. In relating the experiences of the day and referring to fly-fishing, he said that he had watched my continued manipulation with a 100 feet of line until I got a strike, then reeled in until he was dizzy listening to the continued click of the reel, but when I landed the fish, I had a poor, little fingerling, with the skin all rubbed off both sides of it from being hauled so far over stones and logs, and he couldn't make out whether it was a chub or a smoked herring.

The next day we took the early train for Solon, ten miles down the M. & N. E. R. R. to Cedar River, a swift, well-stocked stream, but very brushy. One would imagine that the settlers in clearing their farms adjacent, had taken the pains to haul all the brush and tree tops and dumped them in the stream, but it has proven a veritable refuge for the trout, for very few fishermen have the courage to penetrate the jungle in quest of them. We stuck to it, however, he with a pluck that would be a credit to a man of one-quarter his years, and were rewarded with twenty-one very nice trout, which were more highly colored than any I have ever taken, their bellies and up the sides being a fiery red. We arrived home at 7:35, and planned for the morrow.

Deciding on Uba Creek, we took the 1:25 P. M. train on the P. Marquette for Bates, ten miles east, where we were entertained for the night by a very religious old farmer, and spent the rest of the afternoon in locating the stream, which runs one-half mile from his farm. We returned for supper, which was served about 8 o'clock, and retired soon after, that we might get an early start on the creek, supposing that farmers were always up with the sun. But not this farmer. Rising at 5, we waited impatiently until 7, and when called in for breakfast found the family assembled for morning prayers, which, with the reading of a few chapters in a droning voice by one of the daughters, took up about an hour of our valuable time, and by the time breakfast was consumed we were three hours behind our calculations. We might have enjoyed the programme under most any other circumstances, but when trout lie waiting to be caught, time is most precious. We started at last for the stream in a drizzling rain, considering that in spite of the old man's supplications, everything was against us; but nothing daunted, we continued through weeds up to our waists and dripping with moisture. Our depressed and dampened spirits were

revived, however, by landing a few trout on the start. The weather soon cleared up, and it developed into an ideal trout day. We soon began to assure ourselves that each cast in a likely place would bring forth a beauty, and were not much disappointed. Our catch for that day numbered forty. Our train was due at 6:15, and at 4:30 we found ourselves about five miles from the station. By continued swift strides, we arrived at the farmhouse at 5:50, which is about three-quarters of a mile from the depot, and as we left the gate we heard what we supposed to be our train, whistling down the line. If you ever saw two rubber-booted, bundle-burdened fishermen make lively tracks for three-quarters of a mile, we were the two. I took the lead, Cook following on a hen canter, and for a man of his age—sixty-seven years—he made most remarkable time. The whistle, however, belonged to a train on the E. R. division, and we had twenty-five minutes to regain our breath before embarking, as the train was late.

I was bushed and ready to take a rest for the next eight months, but the old sport began to plan for the next day's fishing, as soon as comfortably seated in the coach, and by the time we arrived home we had arranged to take the 6:25 A. M. train on the G. R. & I. for Keystone for another day's sport on the Boardman. But we changed our minds in the morning, when we saw the hind coach disappearing behind the freight house when we were within 20 yards of the depot. The train on the P. Marquette having gone at 6 o'clock, we had no option but another day on Cedar River, where we arrived at 9:55, putting in a most enjoyable day, with thirty-six trout to our credit, saying nothing of the big ones that got off our hooks.

Mr. C. acknowledged a most enjoyable week, and I do not question his sincerity.

The outlook for game in this locality is very promising. We saw partridge, woodcock and quail in considerable numbers while following the wooded streams, and the reports from other localities adjacent fill us with hope for the near future.

S. I. PERKINS.

The Tuna's Leap.

PASADENA, Cal., Sept. 7.—*Editor Forest and Stream:* One of your correspondents, Mr. J. Greville Wilmot, desires to know the height of the leap of the tuna. I gave the fish its name "leaping tuna" to distinguish it from the ones of the tribe which do not make spectacular leaps, and should be able to answer Mr. Wilmot's question, as I have seen some remarkable leaps, and have seen twenty in the air at the same time, but I doubt if any one can give an accurate estimate. I believe I have more than once seen the tail of a tuna 15 feet from the water, but I would immediately follow this by the statement that I would not swear to it.

The average leap carries the fish 4 or 5 feet into the air, and on supreme occasions the fish undoubtedly makes extraordinary leaps from 12 to 15 feet. Such a leap is made under the following circumstances: The tuna is swimming 15 feet or so beneath the surface, sees a flying-fish on the surface and dashes at it directly upward. Sometimes he catches it. I have seen them miss it, and send the flying-fish whirling into the air. In any case, the tuna rises vertically upward, poises for a second and plunges down head first in a most graceful dive. When observing the highest jumps I was in a very light boat a mile out at sea; the tunas were in the air all around me, and I expected every moment to see one land in the skiff, hence my judgment was not as calm and judicial as it might have been, but as I stood up, I firmly believe I saw a tuna turn in the air so that its entire body for a fraction of a second was 9 feet above the level of my head; but if Mr. Wilmot requires the figures for any serious purpose, I would not give this as a contribution to the scientific phase of the question, as I was unquestionably excited, and I may have seen things that did not exist, though I can hardly believe that I "saw double."

Regarding the leaping of the tuna, it should be remembered that the fish does not as a rule leap at the strike or after being hooked, though I have seen one such leap, and know of another, but the leaping is all in pursuit of its prey, the large California flying-fish. I have seen the strong west wind strike a school as they rose off the south end of Santa Catalina Island and lift them 20 or 30 feet into the air like a flock of birds high out of reach of the insatiate tuna, whose keen eyes would follow them and rush upon them as they finally struck the water, 400 or 500 yards away.

I have made many attempts to photograph the tuna in the air, but the only successful pictures were made by Harry Elmes, an Avalon boatman. This picture I published in an article on the tuna in McClure's Magazine, I think, of February last. This shows the average low leap of the fish and the foam from the "surging" of many others.

C. F. HOLDER.

Daniel Webster's Fishing Trip.

AMONG a number of original manuscripts of Daniel Webster, in possession of F. N. Barrett, editor of the American Grocer, is one describing a fishing excursion in 1849, in Edgartown Harbor, Nantucket Sound, or along the eastern shore of Martha's Vineyard, which is interesting for other reasons than those associated with its distinguished author:

IBID, Wednesday Morning, Aug. 8th.

My dear sir:

Yesterday morning, I went forth for bluefish. The boat was steered direct for the sound, five miles north, then doubled the eastern chop of the harbor, Cape Poge (called Pogue) where the light is run along close to the shore on the eastern side of the island. The wind was unsteady and baffling and much thwarted and perplexed the boatmen, who intended to make a great day of it. At ½ past 9 o'clock, we found fish and pursued our vocation at intervals, as the breeze would allow till ½ past one. We took 43 fish. I think my takings were 25; the boatmen took few, and the gentlemen with us the rest.

Now, to compare this with Duxbury Bay. The fish are more plenty, the range of going for them larger and they are sure of being found every day somewhere. On the other hand the best fishing is not so much protected by land, as the fishing in Danbury. It is outside as our fishing at home would be, if we fished from the mouth of

Green Harbor River along the shore to Gurnet. This is all very well, where the wind is off the shore; but when it blows on shore the sea of course would be rough.

In point of size the fish are not much different from those we found in Duxbury Bay; perhaps a little larger, but this may be owing to the advance of the season. I thought them remarkably fat, and plump and they pulled like horses. Once or twice we saw schools of them above the water leaping and frolicking. I thought as good fishing as any we had, was, when we lay at anchor, and threw the hook, at the end of a long line, into the foaming and roaring reef.

One thing was new to me. You have seen on the surface of the sea those smooth places which fishermen and sailors call slicks. We met with them yesterday and our boatmen made for them whenever discovered. He said they were caused by the bluefish chopping up their prey. That is to say, these voracious fellows get into a school of menhaden, which are too large to swallow whole and they bite them into pieces, to suit their tastes. And the oil, from this butchery rises to the surface, makes the slick! Whatever the cause may be, we invariably found fish plenty, whenever we came to a slick.

Passing to the southward, we came into the harbor through an opening at the south end, three miles from the town. In reality, this opening is the best fishing ground, and we should have done better to have proceeded to it, directly in the morning. But our captain was ambitious and hoped, I believe, to find greater fish outside. The Island of Chappaquiddick lies opposite the town, here, and very near it, and is generally said to be an island in Edgartown harbor. This is not exactly so. You cannot navigate round the island, keeping within the harbor and not going to sea. In strictness it is not an island, but a peninsula, connected with the main land, on the seashore, at its S. E. corner, by an isthmus. See the map. So much for bluefish catching at Edgartown, Aug. 7th, 1849. Today we have a bright morning after a rather cold night. I am to try my hand at plover shooting at 7 o'clock. Yours truly, whether fishing or shooting.

D. WEBSTER.

MR. BLATCHFORD.

Late Maine Fishing.

BOSTON, Sept. 16.—Vermont waters seem to be noted for the size of the pickerel they afford. F. D. Cloyes, of Boston, reports a couple of big ones, taken last week by his father, John F. Cloyes, and his brother, Dennis P. They trolled for the fish in Otter Creek River. F. D. Cloyes says that one weighed over 6 pounds, when all dressed for the table. He remarks that there are many large pickerel in that river, which is one of the principal rivers of Vermont. A few weeks ago he and his brother, Dennis P., fished a trout stream in Ripton, in that State, with the result of a beautiful string of 161. He says that they struck the stream just right, nobody having fished it much before them this season.

Late Rangeley reports say that the fall fly-fishing is good. At Haines' Landing some good trout and salmon have been taken. Thursday of last week R. W. Johnson and his brother, P. W. Johnson, both landed a salmon of 5 pounds weight. The following day P. W. Johnson caught a 3-pound trout. Saturday, Sept. 7, W. A. Crane, of New York, got a salmon of 4½ and one of 2½ pounds. O. W. Dean, of Washington, D. C., has also made some good catches lately, including a salmon of 5 pounds weight. At Rangeley, Mr. Dorsett, of Brooklyn, N. Y., performed the feat last week of landing a big trout on the fly with a very light rod. Kineo, Moosehead, reports say that the fly-fishing has never been better. A. S. Jerome, of Hartford, Conn., is high line, with a beautiful string, taken off the pier at North Bay, Wednesday morning. The ponds north of Moosehead Lake are still producing some very fine strings of trout. Prominent among these ponds are Spencer and Brassua.

The Commissioners of Fisheries and Game of Maine have decided upon Squaw Brook as the location for the hatchery provided for by the last Legislature. Work has already been begun on the buildings, and the establishment is to be ready for the egg takes this fall. A resident superintendent will be appointed, and it is said that Game Warden C. C. Nichols, of Foxcroft, is likely to get the position. From this hatchery much is expected in the way of keeping up the trout and salmon supply at Moosehead.

As showing how careless people are concerning that which they should be informed about, it is mentioned that Commissioner Carleton, of Maine, has had a number of applications for licenses to shoot deer in September. The persons who applied would have known that the September license law was repealed last winter had they read the *FOREST AND STREAM* and other publications as they should have read them. Even in Maine, and at Auburn and Lewiston, there has been some discussion as to whether the open season on partridges begins on Sept. 1 or 15. No changes were made in the partridge open season last winter, and the old law provided that it should open on Sept. 15. A hard struggle was made by those in favor of preserving the grouse to put the open season off to Oct. 1, but they did not succeed.

SPECIAL.

CHICAGO AND THE WEST.

Few Fishermen.

CHICAGO, Ill., Sept. 14.—The fishing season has reached a stage of comparatively slack interest, although angling for the next thirty days will be better than it has been any time for the last two months. The muscallunge season especially may be expected to prove better this fall than it has been during the past weeks of the heated term. A handsome muscallunge weighing 35 pounds came down from Mr. Bryan, at Minocqua, Wis., to Mayor Harrison this week, and it was served at the regular week-day collation of the Wishinipne Club. One has rarely seen a more beautiful and symmetrical fish than this big muscallunge.

Mr. W. P. Mussey inquires for good bass fishing close to Chicago, and I have suggested that he try the St. Joe River, going in at Buchanan, Mich., and running the river by boat to Berrien Springs. There ought to be

good bass fishing there at the present time, barring too long continuance of the present rains.

Mr. Charles Lawrence, Mr. H. Miner, Mr. Paul Riebe, Mr. Tom Waters, the brothers Strumm and Mr. Winfield, all of this city, are among those who leave this afternoon for the Fox Lake chain for a little session with the big-mouthed bass.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Kennel.

Educating Dogs for the Gun.

IN a previous communication I endeavored to show that it is a mistake to treat sporting dogs as if they were machines, and expect them to do what is required of them without previous training, and to obey you, without taking any pains to understand their various temperaments and dispositions. Some people mistake timidity for stupidity, and scold a dog when they should encourage him; others, instead of allowing the animal to exercise his intelligence, and watch to see the result, will rate him and call him in when they should leave him alone. In this way many a good dog gets spoiled at starting by a too impetuous and unreflecting owner. A few examples will make my meaning clearer.

Bill was a liver-and-white English setter too long in the leg and light in the barrel to catch the eye of a judge, but he had good loins and shoulders, and, consequently, great speed. His head could not be improved upon, and he had a bold, independent, devil-may-care expression of countenance that there was no mistaking. It was one 12th of August, while shooting with some friends, that I saw him first, and became his owner. Birds were wild and scarce, and Bill was the first dog tried. Ranging wide, using the wind well, and carrying his head high, he was not long in finding birds, and made two or three points; but the birds rose to guns that missed them, and after that the dog appeared to take no more trouble, simply running up all the birds he could find, as if he had never pointed one in his life. He was severely punished, but for all the notice he took of the whip the keeper might as well have beaten a carpe, and the moment he was set going again his conduct was as bad as before—even more defiant. Finally he was taken up for good and condemned to death. Having my own ideas as to what was wrong, I offered to take him rather than he should be done away with, and he went home with me by train that night. He was not shot over again till Sept. 1, and then I tried him at partridges, leaving him to range as he liked till he got on to birds. As on the moors, he ranged wide, and began the day by making a perfectly steady point; but, as I killed birds over him, and continued to do so pretty regularly, the result was that he took the greatest pains, and never made an intentional mistake all day. Moreover, he took a proper view of his share of the work. He would put up with a fair amount of nisses, but work for a bad shot he would not. He took the gun on trial, just as the gun did him. If the shooting was to his satisfaction, even though birds might be scarce, he was game to run till he could run no more; but if the shooting was bad, he treated every one concerned with contempt. Having speed, he covered a great deal of ground, and one hot September afternoon I was obliged to take him up. It was my keeper who drew attention to his exhausted condition as he was pointing some partridges in a bracken bed, and warned me that to overwork so keen a dog was to risk injuring him permanently. Bill was allowed to have just that one point, and then, while drawing up to fresh birds, ahead, we slipped the lead on and took him home. He scarcely noticed dead and wounded birds, being of opinion, no doubt, that it was our business to find them, but one day he astonished us in a turnip field. We had been a long time looking for a towered bird, and were about to abandon the search when Bill, who was filling in his spare time by casting about in his usual independent fashion, came galloping past. Just opposite to me, without slackening speed, he dipped his head into the turnips, raised the dead bird for an instant above them, and dropped it, as much as to say, "There's your bird. Why don't you pick it up and come on?"

The previous season I had fallen in with a young Irish setter. A friend who did not keep a kennel had had two given to him, and offered me my choice of one if I would break in both. Meg was of the compact kind, of a placid disposition, and, being slow, we thought she would do useful work inside the wide ranging of Bill. Having been put through some preliminary training, her first day with the gun, Aug. 20, was the making of her. I took her to the moor edge to look for a certain brood of blackgame, but her first point was at a covey of partridges, and I shot a brace rather than disappoint her. Much encouraged, she soon found the blackgame, and lay at her point while I killed three young cocks. On the way home her Irish blood asserted itself, and she pointed a couple of snipe. From the first she behaved like a steady old setter, and no one would have taken her for a youngster; but she had a fault—indolence. So easy was her temper that it was difficult to get her into condition, and sometimes, when she was in a particularly lazy humor, it was necessary to drive her away with the whip before she would range. But one could not be angry with such a sweet-tempered, affectionate creature, and, eventually, her very laziness turned out to be an advantage, for, so cunning did she become in making every use of the wind, so as to give herself the least exertion possible, that nothing was left behind, and I had to thank her for many an odd bird that most dogs would have passed. In short, she exactly answered the purpose for which she was intended, working close and independently of Bill. It is generally a mistake to run two dogs together that do not back, but such was not the case with Bill and Meg, for, although both might be on separate coveys at the same time, either would remain motionless till you had finished shooting over the other. On day, on entering the corner of a 20-acre turnip field, Meg turned sharp down a steep hollow and immediately dropped to a cove, while Bill, ranging straight up the field, was lost to view. I took two rises out of Meg's birds, and, indeed, followed some of them out of the field

before going to look for Bill. The turnips were very heavy, and, on reaching a point whence the whole field was visible, it was some time before we could see anything of Bill, but at last we made out a white speck in the far distance, which proved to be a portion of his head. He was down to a covey, and looking anxiously over his shoulder toward us. It is satisfactory to add that he had his reward.

This was the dog condemned on the moors at the beginning of the game season, and he had not altered in character at all. Aug. 12 came around again, and his late owner asked for the loan of him for the first week. Bill was accordingly dispatched some twenty or thirty miles by rail to the moor whence he had come, and from a different station to that which he had arrived at. A few days after I received a letter from my friend stating that Bill had bolted on the moor with a pair of couples and a chain, and had not been heard of since. I sent for the keeper. "Tom," said I, "has Bill come home?" "Yes, sir; I found him outside the kennel at 4 o'clock this morning with a pair of couples and a chain. He was wet, and, oh dear, he was glad to see me." Bill had found his way home over a country he had never seen, and finished the journey by swimming a dangerous river in heavy flood and in the dark. He never left home again, and with Bill and Meg I commenced breeding.—A. C. in London Field.

The Evidence of a Dog.

IN the Supreme Court to-day there was argument in a State case which is absolutely novel in its character, so far as North Carolina is concerned. The case comes from Pitt county, and the question is whether the evidence of a dog is legal evidence. Bloodhounds tracked a thief to his lair. The jury believed the evidence of the dogs. The thief was convicted. He appealed, on the ground that dogs' evidence is no evidence. The State says it is. The Attorney-General so argued to-day. Able lawyers, including ex-Governor Jarvis, say they stand by the dog in the matter.—Raleigh (N. C.) Correspondence Baltimore Sun.

Canoeing.

'Mid Reef and Rapid.—XXI.

BY F. R. WEBB.

WHILE the other three were easing their canoes by hand down over the villainous set of reefs upon which I had so nearly wrecked Frankie, I paddled leisurely across to the spring, and lauded and inspected the ground, with a view to going into camp, further progress being clearly out of the question for to-day, as it would take all the afternoon to dry the Colonel out.

I was soon joined by the rest of the party, and Mary Lou was drawn up alongside of the bank and emptied of everything, and the last drop of water sponged out. Although, like the rest of us, the Colonel was provided with waterproof bags in which to pack his various belongings, with his usual careless haste in packing, none of these were fastened, and there wasn't a dry thread in his entire outfit. His blanket bag seemed as heavy as lead, as I lugged it laboriously up the bank, and, after I had inverted the bag and dumped the blankets out, I poured a bucketful or so of water, still in reserve, out of the bag, and, as Lacy and I unrolled the blankets and, taking them by the ends, twisted them into huge woolen ropes and wrung them out, the water flowed in gallons from them. In the meantime the Colonel had performed the same duty by the various articles in his clothes bag, and presently all the trees, rocks and bushes in the vicinity were decorated with wet blankets, shirts, handkerchiefs and the miscellaneous accessories usually to be found in a well-regulated gentleman's clothes bag, and technically known to the trade as "gent's furnishings."

This done, the oiled canvas pockets, hung up under the gunwales of Mary Lou, were taken out, and the water, together with their pulpy contents, poured out of them, and the pockets turned inside out to dry. A small bag found in one of them, containing a thick, brownish paste, proved to be the Colonel's supply of smoking tobacco, while another shapeless, sticky mass, in a cigar box, was identified as the remains of the Colonel's cigars.

"Look at this match bottle!" exclaimed Lacy, holding up a small, large-mouthed quinine bottle, full of water of a bluish, sulphurous hue. "The Colonel doesn't even take time to put the cork in tightly."

It was fully half-past two when we got the cargo of Mary Lou finally disposed of, and by this time we were ravenously hungry, and in good condition to do justice to the ample lunch found in the mess chest, and the good, strong lemon preparation I put up as an appetizer before the lunch was peculiarly acceptable, for we were all fatigued, wet and run down, as well as hungry.

We found ourselves, when we had leisure to look around us, on a very beautiful camp ground. A cold spring gushed out in a strong flow of water from under the roots of a clump of trees, and ran rippling over a bed of sand and bright pebbles into the river, a few yards away, from which the ground sloped gently up to a height of some 12 or 15 ft., in a fine, hard, sandy beach, overgrown with a thin, coarse, wiry grass. A short distance back, the ever-present limestone cropped out in great, flat ledges, covered with dry moss and lichens. A fine grove of trees spread over the place, the soil among which, as well as among the ledges, was a firm, hard, white sand. Fifty yards back from the river the ground descended again, into a dry, rocky gully, with here and there pools of clear, brown, dead water, in which little black specks of tadpoles darted and wriggled by thousands—the place was evidently an island at periods of high water. In front the river rippled and murmured musically, while the drone of the water, tumbling down the foot of the falls, and over the big fish dam 100 yards above, fell upon our ears in a drowsy, soothing cadence, rising and falling on the gentle breeze, which rippled the placid waters in front, and rustled through the shimmering leaves overhead.

It was a lovely spot for a tranquil, quiet Sunday after-

noon. It was a fatal spot, however, and had a sad history, for where the gently sloping sand bank now lay was once a high, bluff-like bank, upon which stood the Columbian mill, which, with all the houses round about it, quite a little village, as is usually the case with these Shenandoah milling neighborhoods, was carried away in the great flood of 1870, which rushed in unparalleled height and fury, and with appalling suddenness, down the river, leaving ruin, devastation and death in its path from the elevated lands of Augusta county to the Potomac, some eight or nine lives being lost at this one place alone. The very bank itself was cut out and carried away, leaving only this gently rounded sand bank, while back of the gully, and for half a mile or so up and down the river, and 100 yds. wide, is a broad, barren trail of loose boulders, rocks and stones of all conceivable sizes and shapes where once had been rich, smiling corn lands. Fifty yards below the spring and the spot selected for our camp, a few blackened, splintered, weather-beaten posts stood up out of the sand. These marked the location of the mill—mute, appealing monuments to the disaster of twenty-three years before.

The canoes were leisurely unloaded of their cargoes, and, drawn ashore and located for the night on a level, sandy shelf, close to the river and some 4 or 5 ft. above the water. Frankie was again leaking a little, so, before making up the bed and tent for the night, she was turned bottom upward, and an examination revealed the fact that one of her new patches had rubbed off on the rocks of the falls above. The leak was a very small one, however, and, not caring to take the trouble of again patching it, I simply daubed the place heavily with asphalt, rubbing it well in with a small, stiff brush, extemporized by cutting a 1/2 in. twig from the nearest sycamore, and pounding one end into brush-like slivers with a stone. The leak attended to, the canoe was righted, and the bed and tent made up, along with the others. While I was fixing my canoe, George and Lacy had erected the dining fly over the mess table, up under the trees, some little distance up the sloping ground above the canoes, and the place had a comfortable, camp-like aspect.

"I shouldn't like to be caught out here in high water, much," said Lacy, as he adjusted his campstool under one end of his mattress, and, with book in hand and pipe in mouth, dropped into a comfortable attitude upon it. "We would most likely be cut off, as the water would quickly run through that gully behind us, there."

"Yes, it would be very apt to," said George, "and the high land is a quarter of a mile away, with one or two rail fences between. However, we are not likely to have any particularly high water, with this dry weather, so we won't worry about it," rising as he spoke and sauntering down to his canoe with his own mattress in mind.

His eye rested on his fishing rod, leaning across one end of his tent. He picked it up to take it down for the night, but before untying the line from the leader he stepped idly to the water's edge, and, with a light cast, laid the flies out evenly on the smooth, clear surface. There was a rush and a splash, which sent the water in widening circles out over the level surface, while the line tightened, and the steel-spring-like rod bent into a crescent. Without a word George reeled in and landed the 1 1/2-pounder, and placed it in his fish bag, which he made fast to a stake driven in at the water's edge. After one or two more casts, which met with no results, he returned to his tent and took down his rod and stowed it away. Lifting his mattress and bedding out of his canoe, which, as usual, was foisted in a compact mass and encased in a black, rubber sheet, he rejoined the rest of the party, and proceeded to make himself comfortable. The delicious, golden afternoon was too seductive to admit of more than lying round, with book or writing materials, pipe or cigar, and simply enjoying the luxury of living and breathing in it.

The public road ran along the further bank of the gully, back of our camp, and, toward evening, a constant stream of vehicles of every description, interspersed with horsemen, horsewomen and pedestrians, returning from the "Association" meeting at Luray, a few miles distant, passed by. Our tented canoes attracted a great deal of attention, and not a few were the hails we were called on to answer. A foot path ran right through our camp, under the trees along the river bank, and parallel with the road, along which pedestrians occasionally passed.

"Git on to the dood!" exclaimed George, in an undertone.

We looked up quickly. A colored gentleman was swinging briskly along the path in our direction, with a jaunty, springy step and air. He had on tan-colored shoes, pointed at the toes, and well-polished, in spite of the dusty roads, having evidently flecked the dust off of them with his handkerchief, one corner of which protruded from his breast pocket, after leaving the road and turning into the by-path. Above the tan-colored shoes appeared a pair of well-fitting trousers, of a well-marked green and gray stripe, in a high state of crease; a brown, cutaway coat, in the lapel of which was pinned a bright, buttonhole bouquet; a white shirt with high collar, encircled by a bright, blue tie of the four-in-hand persuasion, and a dark, chocolate face, ornamented with a natty moustache, well curled at the ends; the entire outfit surmounted by a broad, flat, fresh-looking straw hat, encircled by a bright, red ribbon, and set jauntily on one side of his head.

He carried a new-looking guitar, swung round his neck with a broad, green ribbon, upon which he was carelessly strumming as he swung along, humming, meanwhile, a fragmentary air.

"Hi, there!" exclaimed George, sharply, as he swung past us, glancing curiously right and left at us and our outfit, without turning his head.

He brought up all standing, at this peremptory summons, looking apprehensive and ill at ease, as though in the hands of suspicious characters.

"Lemme see that guitar," commanded George, rising from his recumbent attitude to a sitting posture, and reaching out for the instrument.

He slowly and reluctantly lifted the broad, green ribbon over his head, first carefully removing the straw hat with the bright, red band, and, with many misgivings, handed the cherished instrument over to George, as though doubtful if he would recover it again from such a burly, disreputable-looking individual.

George is a skillful performer upon all stringed instru-

ments, and after a few preliminary pickings and tunings and fragmentary chords, he dashed into a rollicking, barcarole movement, the like of which the colored gentleman had probably never heard before.

"Look at that expression," said Lacy, nudging me and the Colonel with his elbow.

We turned our attention from George to the colored gentleman. His face and figure were a study. Rapt attention, entire self-forgetfulness and absorption in George's playing were expressed in every line and curve, from head to foot. His eyes were fastened on George as though riveted, his head drooped forward, his mouth half open. He was a most comical picture of complete absorption; withal, there was something pathetic about it, too, and we quite sympathized with his rapture. He stood there, without moving a muscle, while George, who had "caught on," played piece after piece, redoubling his efforts to captivate and entrance the darky—the meanwhile we all enjoyed to the utmost his rapture.

"You could hang your hat on his lower lip," whispered Lacy, while the Colonel and I snickered our assent.

George finally gave him back his guitar, as abruptly as he had taken it from him, and fell back on his mattress again, and the fellow awoke with a start from his trance, and, after plying George with a few questions, he again placed the broad, green ribbon around his neck and went on his way, and was soon lost to sight among the trees.

A short, heavy-set man, with full, black beard, who came quietly into camp, with one or two others, proved to be Mr. Martin, the owner of the place upon which we were camped. He made us welcome, and, after sitting and chatting awhile with us, they took their leave.

While we were eating supper, Lacy, who could be safely trusted to make important discoveries of this character, informed us that there was a distillery for the manufacture of apple brandy, located just across the road, 100 yds., from our camp, and, after finishing our supper, we all strolled over to have a look at it. Distilleries, both for the manufacture of brandy and whisky, are by no means uncommon all through this region, as well as in our own neighborhood, Augusta county whisky being widely and favorably known, yet none of us had ever been in a distillery—a fact which George considered very singular, and scarcely credible, all things considered—therefore, we found this one quite interesting. It was but a crude affair, merely a shed erected over two or three copper stills, like huge bottles, with long, curiously twisted necks, terminating in great coils of pipe in large tanks of water, with a huge furnace, surmounted by a rude, stone chimney, in the middle of the aggregation. A magnificent lithia spring lay along one side of the shed, in its dimensions almost rivaling the great pool at Bear Lithia, and whose pellucid waters lay like a sheet of transparent varnish over the bright, shining pebbles in its bottom, and in whose mirror-like surface the full moon shone again, while in the outflow—a large brook—slowly turned a huge, primitive water wheel, of the "undershot" pattern, along one side of the rim of which was strung a row of tin cans, which, submerged in the wheel trough at the bottom, lifted the water, until, by the revolution of the wheel, they were inverted at the top, where the water—or most of it—was caught, in a simple trough arrangement, which carried it in a steadily running stream over the tops of the casks containing the worms—as the coils of pipes are termed—where it was distributed.

A rude bunk in one corner, filled with straw, furnished not uncomfortable sleeping accommodations to the two or three men who ran the distillery; for it was kept going night and day for seven days in the week.

A pile of musk melons and canteloupes at one side of the inclosure, gathered for the morrow's marketing, attracted our attention, for canteloupes are a staple article of diet with us in our August cruises. I selected four nice ones.

"How much?" I asked of Mr. Martin, who, as the owner of the place, had courteously shown us round.

"Oh! five cents, I guess," he replied, carelessly, glancing at them as I showed them.

"Five cents each?" I asked, hardly comprehending him.

"No, five cents for the lot will do," he replied.

"That's cheaper than stealing them," remarked Lacy, as I paid the nickel, and we all filed out of the place on our return to camp.

"This locust tree here," said Mr. Martin, placing his hand on a tree a foot or more in thickness, growing just inside the inclosure around the distillery, and pausing as he spoke, while we all stopped to note what he had to say.

"This locust tree here grows right in the cellar of the Kite house, and marks the place where it stood."

"Why, how is that? What do you mean?" asked Lacy, in perplexity, the which we all shared.

"I mean the house which the Kite family lived in—of Noah Kite and his family, some seven or eight persons in all—stood right here on this spot. Oh! Mr. Kite owned the mill, and the house went out when the mill went, and the whole family was drowned but two—this tree grows right in the cellar of the house."

"Is that so?" I exclaimed, with interest, for that memorable tragedy possessed a peculiar fascination for me.

"The house was carried away, with the mill, in the flood of 1870, wasn't it?" asked the Colonel.

"Yes," was the reply.

"Were you here at the time?" I asked.

"I was," he replied, "and witnessed the disaster, or as much of it as could be witnessed, for it took place in the night."

"Which made it the worse," observed George, "for, no doubt, people were drowned who might have escaped, if they could have seen where they were being carried."

"That's right," Mr. Martin assented. "I was workin' fur ol' Mr. Kite then, an' I—"

"Then you must have been the man who rescued the boy from the house," I put in. "I have heard that the entire Kite family were drowned except one boy, who was carried out of the house, shortly before it went, by an employee of Mr. Kite, who waded in and got him."

"I'm the man, an' your story's purty near correct," he replied.

"How did you do it?" asked Lacy, as he opened the big gate, and we passed out into the road. "Walk back over to camp with us and tell us all about it; it isn't late."

"Yes, do," I replied. "I've heard the story several times, but would like very much to hear it direct from one who was an actor in the event."

"Well, I don't mind," he replied, good naturedly, as we crossed the road, and picked our way across the rough, rock-lined gully, back to our camp.

"These posts here," he continued, as we passed the blackened, weather-beaten landmarks of the ill-fated mill, "was the fore bay of the mill; it stood right here."

Reaching camp, our campstools were produced, pipes and cigars were lighted, and we settled down to hear Mr. Martin's story, which promised to be interesting.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

SEPTEMBER.

- 21. Kennebec, club, Kennebec, Me.
- 21. New York C. C., fall regatta, Gravesend Bay.
- 21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
- 21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
- 26-28-Oct. 1.—International Races (America's Cup), off Sandy Hook.
- 28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

THE death of the President has cast a gloom over the entire world, and gentlemen sportsmen throughout the United States have shown proper respect by postponing any events that might take place before the funeral. The yacht racing among the smaller boats is pretty much over with for this season, and the interest is now centered on the coming international races. The New York Y. C. has changed the date of the first race from Sept. 21 to Sept. 26. A longer postponement would have been practically impossible owing to the obligations they were under to Mr. Lipton and his associates. The New York Y. C. has shown its usual good taste and judgment in this matter.

A LITTLE incident which tends to show the tender regard for the President among yachtsmen was observed by the writer on Saturday, Sept. 14, the day of Mr. McKinley's death. Coming out of Oyster Bay early in the morning of that day, just after the sad news had been announced at the Seawanhaka Corinthian Y. C., a yacht with its ensign at half mast overhauled a small cruising sloop off Huntington Bay, bound west. The skipper was in the act of taking down his side light boards; when he noticed the flag of the approaching boat at half mast, and learned that the President had passed away, he hastily lowered his mainsail, the reason for so doing not being apparent at the moment. It was soon discovered that his ensign was sewed to the leach of his sail, and, in order to half mast his ensign, he had to lower the sail and resew the flag in its proper place. The incident was rather touching and showed plainly how the man was affected. Here was a man who had been sailing single-handed all night and who was pretty well tuckered out, but his love and admiration for President McKinley was so great that he did not hesitate an instant to show his personal feeling, although much labor was involved by so doing.

An Avoidable Danger.

THE frequent reports of appalling accidents caused by the explosion of gasoline on the newly developed and very popular gasoline launches should not fail to teach the lesson of caution to each individual who has to do with such vessels.

Properly handled, gasoline is no more dangerous than a dozen other things with which men are brought into daily and harmless contact, but its use as a propelling agent is novel, and to-day a thousand people handle this violent explosive to one who did so ten years ago.

A lighted match thrown in a waste paper basket may cause a dangerous conflagration. Gunpowder thrown in the fire may blow the window out of a room. Firearms are enormously dangerous, but the great bulk of people who handle them are so well aware of this fact that they exercise extreme care in their use. The young boy who goes out with his first gun is usually accompanied by an older person who warns him continually to avoid certain acts and so, after a while, the boy becomes impressed with the importance of a particular course of action and forms careful habits.

The dangers of gasoline, however, are not comprehended by the average man, and each one, perhaps, regards himself as competent to start an engine and keep it running. He does not realize what he is doing, nor does he commonly comprehend the precautions that should be taken. He does not think, either, of the frightful horrors of an explosion on board a boat, nor that he may be blown to pieces or enveloped in flames which he can escape only by going overboard, where there is every possibility of his drowning. He does not think of these dangers for himself, nor for his family or his friends who may be on board the boat. So, perhaps, he works about his gasoline tank with a lighted cigar in his mouth or looks for a leak with a lighted match, with results to himself and to others so terrible as to be heartrending.

It is painfully true that we learn things only by experience, and it is altogether possible that a certain number of people must be destroyed by gasoline explosions before the lesson of caution shall have been generally learned, but it is certainly worth while to warn people over and over again that tanks are likely to leak and gasoline to escape, that gasoline is a terribly dangerous thing under certain conditions, that it will certainly explode if brought in contact with fire, that the vapor arising from free gasoline is terribly explosive, that the presence of free gasoline may be told by the smell given off by the evaporated gas, and that where this smell is detected there is the very greatest danger, in case fire is anywhere about.

Certain obvious protective measures may be employed against these dangers. One of these is to have the gasoline tank surrounded by an outer cell, which shall prevent the escape of the fluid, even if the inner tank leak. Kept from the outer air, the fluid is not dangerous, because light cannot get at it.

Another protective measure, which causes little trouble, is to look under the floor boards of the vessel daily, to see whether there has been any escape of the fluid. If any is found, it should at once be removed and the bilges sponged off, and an effort made to find where the gasoline came from. Of course, if, in filling the tank, the fluid overflows or is spilled, it should all be removed from the bilges.

On the part of many men who believe that they know more or less about mechanics, there is a tendency to tinker with the engine; to endeavor to change things somewhat for the better. This should not be done. It rarely improves matters, and is a source of actual danger, as possibly starting some leak or loosening a joint through which the oil may escape. It is much better to avoid fooling with the engine and to follow closely the instructions sent out with the boat by the manufacturer.

Finally, it is of the highest importance to recollect that this fluid now in such general use is dangerous and that only constant watchfulness and care will prevent accidents. If the man who is running the engine will constantly keep this fact in mind and will see that the same caution is used about it that must be used about handling anything that has dangerous possibilities, such as firearms, the danger of accident will become very slight.

If a leak should be found in tank or pipes, through which gasoline is escaping, it can be temporarily stopped, if a small one, by the use of a bit of soap squeezed on it, or, if larger, it may be plugged with a peg of wood, which may be made tight by soap.

It is worth while to remember that where a fire—not an explosion—starts from gasoline, water is often of no avail in extinguishing it. It is a safeguard—and not a troublesome one—to have on board the boat, and preferably in bow and stern, buckets of sand or earth, which, if thrown on a fire, will at once smother it, while throwing water on the flame might serve only to spread the fire and so increase the danger. Ammonia thrown on a fire of this kind will at once extinguish it, and two or three bottles of commercial ammonia kept at various places in the boat may prove useful, since they can be smashed over a flame in an instant.

After all, however, the best remedy of all is prevention—to form the habits of extreme caution in handling so dangerous an article as gasoline.

If the owner of a gasoline launch finds a smell of free gasoline about his vessel, let him at once send from it all people whose lives and well-being he cares for and let him take measures to find out whether the gasoline is escaping from the tank, or has been spilled in filling the tank, and lies free in the bottom of the boat. Until this free gasoline has been removed and its source discovered, the vessel is unsafe. Above all, a man should no more have fire in a vessel where there is the slightest smell of free gasoline than he should go through a powder magazine filled with open kegs, lighting matches to see how full each keg is.

A New Class of One-Design Boats.

THE spring of next year will see a fleet of new Herreshoff 30-footers on Buzzards Bay which promise to be the fleetest and the most comfortable boats of the kind that this designer has ever turned out.

Nine of these boats are in process of construction at the present time, and it is not unlikely that orders for some more will be placed.

The general dimensions of these new boats are 30ft. waterline, about 47ft. over all, 10½ft. beam and 5ft. draft without the centerboard, which will house under the cabin floor.

The total sail area will be about 1,400ft. The light sails will consist of a balloon jib, spinnaker and probably sprityard topsail.

These boats are designed to be comfortable cruisers, while at the same time they are to be fast racers. They will differ in many respects from the Newport 30-footers, which were built by Herreshoff, but more especially for racing.

The new Buzzards Bay boats will probably, under all conditions, excepting, perhaps, the very lightest airs, be faster than these half-dozen Newport one-design 30-footers.

The new boats will have a comfortable deck and low cabin house, in contrast with the narrow deck and high cabin house of the Newport boats. They will be built in the best possible manner. The cabins will be furnished in white pine and mahogany.

It is expected that these new boats will handle easily with a crew of four men.

This new fleet of sloops is destined to make Buzzards Bay a famous yachting ground in the future.

In addition to the nine which are in process of construction at the present time, two others have already been spoken for, and it is expected that, before the class is closed, there will be twelve in the fleet.

The nine owners of these new boats are W. F. Harrison, John Parkinson, John Hitchcock, H. E. Converse, E. M. Farnsworth, Charles Whittemore, C. H. Taylor, Jr., and W. O. Taylor, Robert Winsor, R. W. Emmons 2d.

These boats are to be so exactly alike in every respect that the owners are going to draw lots for them instead of having a specified boat built for a particular owner.

Challenge for Seawanhaka Cup Accepted.

Mr. Thomas H. Macdonald, chairman of the regatta committee of the Bridgeport Y. C., received word on Sept. 6 that the Royal St. Lawrence Y. C. had accepted the challenge of the Bridgeport Y. C. to race for the famous Seawanhaka challenge cup, and the race will be sailed on Canadian waters the latter part of July or early in August, 1902.

Challenge for Canada Cup Accepted.

At a joint meeting of the sailing and executive committees of the Royal Canadian Y. C., on Sept. 11, the challenge of the Rochester Y. C. for a race for the Canada's cup in 1902 was accepted.

Date Set For First America's Cup Race.

At a conference of the Committee on Challenge of the New York Y. C. and a committee representing the Royal Ulster Y. C., held at the house of the New York Y. C. on West Forty-fourth street, on Monday, Sept. 16, it was decided to postpone the first race for the America Cup one week after the burial of President McKinley, or on Thursday, Sept. 26, the second race to be sailed on Saturday, Sept. 28, and the third on Tuesday, Oct. 1. Should other races be necessary, they will be sailed on alternate days thereafter, Sunday being excepted.

The proposition for the postponement was made by the committee of the Royal Ulster Y. C., composed of Vice-Com. R. G. Sharmon-Crawford, H. M. McGildowny and Hon. Sec'y Hugh C. Kelly, in the following letter:

New York, Sept. 16, 1901.—J. V. S. Oddie, Esq.: Dear Sir—As the committee of the Royal Ulster Y. C., we write with reference to the date of the sailing of the international races.

The committee feel that in view of the death of your revered President, whose loss the whole world unites in mourning, there would be a want of respect to his memory if the races should commence so soon, as would be the case if the date now fixed were adhered to.

We, therefore, write to suggest that the date of the first race should be changed to Thursday in the week following; the races would then commence on Sept. 26.

There will, perhaps, be some who would desire that the postponement should be longer, and were our own feelings alone concerned we would propose a later date. But in naming the date suggested we have been compelled to consider not only the fact of the very large number of persons who have come to this country with the challenger to help in various capacities, some of whom have duties at home demanding attention at the earliest possible date, but we have also felt that we had to remember the many charters, hiring, and other contracts involving large sums, made by citizens of this country, and the thousands of persons who in one way or other find work and employment in connection with the races, many of whom we have reason to know would suffer heavy loss by a protracted delay.

There are various other minor considerations which will readily occur to you, such as the convenience of the very large body of visitors who have made the voyage from Europe especially to witness the international contest, which have also had some weight with the committee.

We may mention that we have consulted Sir Thomas Lipton, and he leaves himself entirely in the hands of the two committees, and he will be happy to comply with any decision whatever which they may come to. Yours truly,

(Signed)

R. G. SHARMAN-CRAWFORD, Vice-Com. R.U.Y.C.
H. M. MCGILDOWNY,
HUGH C. KELLY, Hon. Sec'y.

This communication was laid before the Committee on Challenge of the New York Y. C., which is composed of Com. Lewis Cass Ledyard, Rear-Com. C. L. F. Robinson, former Com. E. M. Brown, Sec'y J. V. S. Oddie, Archibald Rogers and C. O. Iselin, which met to consider it. The following is the answer of the New York Y. C. committee:

NEW YORK Y. C., 37 West Forty-fourth Street, Sept. 16, 1901.—Gentlemen: On behalf of the committee of the New York Y. C., upon the challenge of the Royal Ulster Y. C., I beg to acknowledge the receipt of your letter of this morning.

The committee of the New York Y. C. desire me to assure you of their appreciation of the feeling which prompts your suggestion that the races for the America Cup should be postponed.

Your suggestion is that the date of the first race shall be postponed to Thursday, Sept. 26, a week following the date fixed for the President's funeral.

As we have frankly stated to you in the conference that we have had upon this subject, our committee would have preferred a longer adjournment out of respect to the President's memory. We recognize, however, that you are the best judges of the conditions in which you find yourselves, and we cannot doubt, after reading your letter and after the further statements which you have made to us in conference, that you have fixed the latest day which, in your judgment, it is possible for you to name, and, of course, the conditions are such that we must accept your decision without question.

We are quite sure that all American yachtsmen and the public in general will accept as a graceful courtesy on your part the suggestion that you have made that the races be postponed in view of the terrible affliction which has come to our country. Respectfully,

(Signed) J. V. S. ODDIE, Sec'y.
Vice-Com. R. G. SHARMAN-CRAWFORD, the Hon. Sec'y
Hugh C. Kelly, H. M. McGildowny.

Clear Course for Cup Boats.

CAPT. SHOEMAKER, chief of the revenue cutter service, has made public the following rules and regulations, which will be enforced by the United States revenue cutters during the international yacht races:

"The attention of all parties concerned, owners and masters of yachts, excursion boats, and of all craft carrying passengers to view the international yacht races, is called to the following act of Congress, approved May 19, 1896:

"Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That in order to provide for the safety of passengers on excursion steamers, yachts, oarsmen, and all craft, whether as observers or participants, taking part in regattas, amateur or professional, that may hereafter be held in navigable waters, the Secretary of the Treasury be, and he is hereby, authorized and empowered in his discretion to detail revenue cutters to enforce such rules and regulations as may be adopted to insure the safety of passengers on said excursion steamers, yachts, oarsmen and all craft, whether as observers or participants taking part in such regattas."

"Under the aforesaid act of Congress the following

rules and regulations for the government and orderly management of all water craft, and for the safety of passengers thereon upon the occasion of the races referred to, having been submitted by the regatta committee of the New York Y. C., with the approval of Capt. Thomas D. Walker, U. S. R. C. S., the officer in charge of the patrol fleet, the same are hereby approved and have all the force of law, viz.:

"Rule 1. Observe carefully the movements of the patrol vessels and carry out promptly and cheerfully the instructions received from them. These vessels will fly the revenue flag at the masthead, and these only have authority to enforce the rules.

"Rule 2. A clear space of half-a mile about the starting line will be maintained until the race has started. To accomplish this the vessels of the first or left division of the patrol fleet will be formed in column, extending from the vicinity of the starting line to the left in a direction four points from the wind. The second or right division will form a similar line four points to the right of the direction of the wind. The two lines of patrol vessels will thus form a right angle. All vessels except the judges' boats, or vessels carrying the patrol flag, must be kept outside of the patrol lines. The space inclosed in the right angle thus formed will be reserved for the competing yachts.

"Rule 3. If, after crossing the line, the competing yachts stand on the port tack, the second division will form column and stand on a course parallel with them. All vessels outside the second division will take the same course. The first division will form line and take the same course as the competing yachts. All passenger vessels outside of this line will head in the same direction and be careful to keep astern of the line of patrol vessels. The entire fleet of vessels will thus be heading the same course with the yachts, and will be entirely clear of them. When the yachts tack all patrol vessels will at once change course and steer the course taken by them. Passenger vessels will do the same. The second division will find themselves in line in this case, and the first division in column.

"Rule 4. When the competing yachts turn the stakeboat for the run in, all patrol vessels will head for the vicinity of the finishing point. The first division in column, inverted order, will head for a point half a mile to the right of the finish line. The second division, in similar formation, will head for a point half a mile to the left of the finishing line. Thus a clear space one mile wide will be maintained astern of and to windward of the competing yachts.

"But whether this space for the movement of the competing yachts be more or less than one mile wide, all vessels present for sightseeing purposes must keep outside of the patrol lines. Any intrusion within the patrol lines, irrespective of the distance of the latter from the competing yachts will be held as a violation of these regulations, and the offender will be rigorously dealt with.

"Rule 5. All passenger vessels will be careful not to cross astern of or crowd in upon the competing yachts on the run in, but will remain on the outside of the line of patrol vessels, and they must also avoid crowding about the finish line. This is imperative.

"Rule 6. If the race be to leeward and return the patrol vessels will form two parallel lines one mile apart, first division to the left and second division to the right, and in this formation head the course steered by the competing yachts. Passenger vessels must keep outside of these lines and observe Rule 5. Until reaching the outer mark Rule 4 will apply. When the yachts turn the outer mark and start on the beat back, Rule 3, with the patrol in inverted order, will be observed.

"Rule 7. Should the wind shift during any of the races, patrol vessels will immediately indicate the line to be formed, as in the rules above laid down, and passenger vessels must keep outside of these lines with as little delay as may be consistent with safety.

"All seafaring men will understand the difficulties of the way of keeping a triangular course clear, and it is hoped that the public will be patient with rules which must, from the necessities of the case, bar them from following the entire course. The fact that the competing yachts will be faster on the second leg of the course, with their sheets eased, than a majority of the vessels carrying passengers, renders it impossible to allow these vessels to follow the entire course. Therefore, the following rule becomes imperative, and must be carefully observed:

"Rule 8. When the competing yachts reach a point on the first leg of the course, to be determined by the officer in charge of the patrol fleet, the patrol flags will be lowered to half mast and the steam whistles blown on all patrol boats. When this signal is made all vessels carrying passengers will run at full speed for a position to leeward of the last leg of the course, and as near the second stakeboat as may be without approaching it nearer than half a mile.

"The patrol boats will in this case establish a single line, the first division in the lead, to the leeward of the line on which the competing yachts will run in, and all passenger vessels must find themselves to leeward of this patrol line before the yachts turn the second stakeboat. On the run in all vessels must be careful not to cross the sailing line of the competing yachts, either ahead or astern of them, but keep to leeward of the patrol line until the race is finished.

"Note.—The movement of the patrol fleet, steam yachts and excursion boats, across the triangle from the first leg of the course, presupposes that the first or windward stretch of the competing yachts is to the right from the starting point. In the event that the direction of the wind is such that the regatta committee selects the left leg from the starting point as the first leg of the course, the movement of the patrol fleet, the steam yachts and the excursion boats—when the signal is given by the flagship—will be across the triangle to the right, or the reverse of the movement described.

"Rule 9. A blank cartridge fired from any one of the patrol vessels will indicate that some vessel is persistently violating some rule. Prompt attention to this warning signal will obviate the necessity of sending the offender back to New York in charge of an officer of the revenue cutter service and the revocation of the license of the master.

"All masters and owners of water craft of all de-

scriptions are hereby warned that any violation of the foregoing will be under penalties for violation of the navigation laws of the United States, to wit: Fine and forfeiture of license.

"O. L. SPAULDING,
"Acting Secretary of the Treasury."

Small Yacht Construction and Rigging.

BY LINTON HOPE.

XIII.—Deck Fittings and Iron Work.

Most of the deck fittings can be purchased ready made from any of the principal yacht chandlers, and most of the accompanying illustrations are taken from their catalogues. There are, however, several parts of the ironwork which must be made to fit the boat by the local smith, such as the gammon iron on the stem head, which also carries the chain sheave for the cable; the strap for the heel of the bowsprit, which takes the place of the old wooden bitts; the shroud and runner plates, bobstay plate, and the pin rail at foot of the mast, to which most of the running gear is belayed. All these fittings must be made to suit the boat, and fitted to their place by the smith.

The following deck fittings will be required. (Those which are only for No. 2 design are marked with an *, the remainder being suitable for all types of small boats):

- *1 gammon iron and chain sheave (Sketch).
- 1 pair fair leads, right and left on bow (Sketch).
- *1 "Dufferin" winch (Sketch).
- *1 mooring bollard (Sketch).
- *1 bowsprit heel strap (Sketch).
- 1 set shroud and runner plates (Sketch).
- *1 pin rail at foot of mast (Sketch).
- 1 pair fore sheet fair leads (Sketch).
- 1 fore tack (No. 1 Design) leads (Sketch).
- 1 deck plate for fore tack (Sketch).
- 1 pair fore sheet cleats (A) (Sketch).
- 1 pair fore tack cleats (A) (Sketch).
- 1 pair runner cleats (A) (Sketch).
- 1 pair spinnaker guy cleats (A) (Sketch).
- *1 pair main sheet cleats (B) (Sketch).
- *1 pair main sheet lead blocks (Sketch).
- *1 main sheet buffer (Sketch).
- Or, 1 main sheet horse (Sketch).
- 1 flush deck pump, or semi-rotary pump (Sketch).
- 1 binnacle and spirit compass (Sketch).
- 1 anchor and chain cable (Sketch).
- 1 small anchor and warp (Sketch).
- 1 chain pipe on deck (Sketch).
- 1 tricolor lamp (Sketch).

Iron Work on Spars.

- *1 crantz iron, bobstay, rod and rigging screw on bowsprit.
- 1 set of rigging screws for shrouds (Sketch).
- 1 spinnaker boom gooseneck (Sketch).
- *1 mast-band and main-boom gooseneck (Sketch).
- 1 pair saddle-jaws for gaff. (See illustrations for spars.)
- *1 main halliard bolt. (See illustrations for spars.)
- *2 peak halliard bolts. (See illustrations for spars.)
- 1 set of Turner's reef gear on boom. (See illustrations of reef gear.)

The above list covers all the fittings in general use, but everyone has their own fancies, and will be able to get any other fittings they may require, either ready made, if of stock patterns, or made to drawing by the smith. All the fittings illustrated above can be obtained from the yacht fitters. A list of firms will be given later, from whom all the materials can be obtained for building these boats and fitting them out complete.

The following notes may be useful when fixing the deck fittings in place:

The gammon-iron must fit the stem well, and the upper bolt should pass through the chain sheave and top of stem, and be set up with a nut. The other two bolts should be clenched.

The bowsprit heel strap (or fore tack fair lead in the case of the smaller boat) must be secured by through bolts and nuts to a stout deck beam.

The shroud plates, etc., should have an oak timber worked inside the planking, between the ordinary timbers, and they should be through bolted at the top, and through fastened with stout copper nails at the bottom.

All fair leads and cleats should be well secured. They may either be screwed to beams, or, if there is no beam at the proper place a piece of hard wood should be placed under the deck to take the screws. If fixed to coamings, they should be through fastened with stout copper nails or rod clenched over rings.

The pin rail must either go through the mainmast beam, or else have a pair of fore and aft carlines fitted to the beams to take the bolts. This also applies to the main sheet horse or buffer, and its leading blocks; also the winch, or any of the deck fittings that have very heavy strains on them.

Western' Yachts.

Rochester Gets the Cup Race.

CHICAGO, Ill., Sept. 12.—The decision of the Royal Canadian Y. C. to honor Rochester Y. C. by the acceptance of their challenge for the Canadian cup has created a slight feeling of discontent here in Chicago. Chicago Y. C. dearly coveted the privilege of building a boat to sail against the best craft the Toronto men could build. However, it was quite within the province of the latter gentlemen to determine which challenge should be accepted. There is some talk that the Chicago men will hereafter ignore the Canadian cup and will start a trophy of their own, but this is not to be regarded in too serious a light. The Canadians won the cup fairly, and the probabilities are that they will defend it under sporting conditions. When it comes to an American challenge for a cup which has gone abroad on a temporary visit, the temporary holders of the aforesaid cup would do well to rivet it down pretty fast, for it is very liable to get lifted and brought back home again.

Penataquit-Corinthian Y. C.

GREAT SOUTH BAY.

Saturday, Sept. 7.

THE Penataquit-Corinthian Y. C. held a special regatta on Saturday, Sept. 7. The 30-footers were competing for Mr. E. C. Blum's \$500 cup. The summary follows:

Mixed Class—Start, 11:00.		
	Finish.	Elapsed.
Schowandasee, Mr. Post.....	12 28 00	1 28 00
Avylon, Edward Thorne.....	12 29 30	1 29 30
Avocet, W. Brewster.....	12 30 50	1 30 00
Anita, W. A. Tucker.....	12 40 00	1 40 00
30ft. Class—Start, 1:10.		
Treasure, C. G. Covell.....	4 17 04	3 07 04
Pinkie, Allan Pinkerton.....	4 18 52	3 08 52
Lillian, C. F. Rotchild.....	4 18 45	3 08 45
Marie, Aymar Johnston.....	4 20 45	3 10 45
Grotona, H. H. Hollister.....	4 21 15	3 11 15
Zelenda, F. Ackerman.....	4 25 10	3 25 10

We are indebted to the secretaries of the Annisquam, White Bear, and Rochester yacht clubs for copies of their club books.

Inland Lake Yachting Association.

Green Lake Y. C. Regatta.

GREEN LAKE, Wis., Sept. 2.—The preliminary local event of the meet of the Inland Lake Yachting Association was the Green Lake Y. C. regatta, which was sailed to-day, bringing out most of the contestants for the interlake championship. The race was really won by Imp, owned by C. D. Peacock, Jr., of Chicago, which led by 6m. 19s., but which was disqualified by the judges, the race being given to Caroline, of Oshkosh, which finished second.

Mr. Peacock protested the decision of the judges, taking it up to the Regatta Committee of the Green Lake Y. C. The latter sustained the decision of the judges. It was Mr. Peacock's defense that the race was started at a different time from that earlier announced, and that he was not notified. He, therefore, towed his boat up to the line instead of sailing up after the preparatory gun. The boat was disqualified for coming to the line under tow after the gun. As a matter of fact, it crossed the line 4m. behind the others.

The wind was light and very fickle, so that it was much a matter of luck, as it frequently is on these inland waters. The starting line was made very short, and at an awkward angle to the first leg, so that the yachts were badly bunched at the start. Meteor, in avoiding a foul, got in irons, and hung there until passed by most of its competitors.

Tegie, Walter Dupee's boat, of Chicago, was first away, followed close by Minnesitka and Meteor. The first leg was under spinnaker, and nearly all the skippers hauled the spinnaker over the stay, using it as a balloon jib. They were almost without exception, however, taken back and handled as spinnakers on the last half of the first leg. The first boat around the mark was Harriet H., of Pistekec Y. C., the next in order being Emanon, Aderyn, Anita and Mahoohoo. Minnesitka and Evelyn were about a quarter of a mile astern of the main bunch.

Coming home, Imp and Caroline stood on starboard tack, well over toward the north shore, where they found better sailing wind. Caroline, however, stood in too far, and although it was given the race, actually ran second to Imp. Caroline is the famous bootjack model, which created such excitement at the Inland Lake regatta at Lake Geneva last year.

Class B.

In Class B there were three entries, Nokomis, of White Bear, Minn., beating all others in any sort of a finish. This class was started 5m. behind Class A, and sailed over a six-mile triangular course, whereas the Class A boats went five miles and return. Of the smaller boats the order was Nokomis, Helen and Flying Fox at the start, but at the turn Helen had fallen back into third place, Nokomis keeping the lead. On the run home Nokomis continued to gain. The wind was light, and the sailing conditions of the day on the whole unsatisfactory. The following are the times:

Class A—Start, 10:00.		
	Finish.	Elapsed.
Imp, Chicago, C. D. Peacock.....	1 00 36	3 00 36
Caroline, Oshkosh, F. H. Libby.....	1 06 55	3 06 55
Anita, Oconowoc, W. L. Davis.....	1 06 40	3 16 40
Tegie, Oconowoc, W. H. Dupee.....	1 18 56	3 18 56
Algonquin, West Geneva, George Braun.....	1 19 20	3 19 20
Harriet H., Pistakee, H. L. Hertz.....	1 19 24	3 19 24
Lerion, Wawasee, Lilly & Hicks.....	1 19 35	3 19 35
B. & F., Green Lake, McCullough.....	1 19 58	3 19 58
Adeyrn, Pine Lake, Brumber.....	1 21 43	3 21 43
Aspirant, Pewaukee, Wollaeger.....	1 22 21	3 22 21
Emanon, Wawasee Racing, Zook.....	1 23 29	3 23 29
Mahoohoo, Lake Geneva, H. H. Porter.....	1 25 35	3 25 35
Henrietta, Delavan, Ed Davis.....	1 30 35	3 30 35
Minnesitka, White Bear, Griggs & Bunn.....	1 32 27	3 32 27
Evelyn, Fox Lake, E. C. McDonald.....	1 35 14	3 35 14

Class B—Start, 10:05.		
	Finish.	Elapsed.
Nokomis, White Bear, Clarkson.....	12 45 55	2 36 45
Flying Fox, Fox Lake, Lyford.....	12 48 20	2 48 20
Helen, West Geneva, Paul Veder.....	1 20 00	3 15 00

Inland Lake Races Postponed.

Sept. 3.—The unsatisfactory conditions of yesterday obtained to-day, and prevented the sailing of the first race of the Inland Lake Association. At 9:30 the blue and white flags were hoisted by the judges, and three guns were fired, to indicate the postponement of the race. The time was changed to 2 o'clock in the afternoon, but again a dead calm rendered it necessary to call off the race.

The annual meeting of the Inland Lake Yachting Association was held at 8 o'clock. It was decided to hold the fifth annual regatta at Pewaukee Lake, Wis., in the latter part of August, 1902. Thereafter, commencing in 1903, it was determined to hold the annual regattas permanently at Oshkosh, on Lake Winnebago. These smaller lakes do not seem to offer wind enough to warrant skippers bringing out boats for a regatta which does not start. Lake Winnebago furnishes practical sailing conditions all through the summer, and the decision in making that the headquarters of the Inland Lake Yachting Association is no doubt a wise one.

There was a proposition offered to allow the 20ft. class to carry a loaded centerboard. Referred to the executive committee. Mr. Porter moved the executive committee report next year on a rule compelling all contesting boats to be in the water twelve hours before the first race, and to remain there during the series.

The following officers were elected for the ensuing year: Pres., H. L. Hertz, Pistakee Y. C.; Sec'y-Treas., Ed Rosing, Green Lake Y. C.; Executive Committee—Homer Clark, White Bear Y. C.; George M. Conway, Pewaukee Y. C.; Benjamin Carpenter, Chicago Y. C.

First Championship Race Won by Emanon:

Sept. 4.—Two boats all the way from the Hoosier State, Emanon and Lerion, of Wawasee Lake Y. C., showed their heels to the rest of the tidy fleet which started to-day in the first championship race of the Inland Lake Association. Emanon, the winner, is designed by Jimmie Jones, of Jones & Laborde, of Oshkosh. Lerion is designed and owned by Dr. Hicks.

Once more the unsatisfactory conditions which have obtained during the week came up to mar the beauty of the sport. Green Lake Y. C. last year made all sorts of promises as to the sort of sailing weather it would offer its guests in case the meet was awarded to Green Lake. There seems to have been a misunder-

standing between the club and the weather clerk. Today the race was called off at 10 o'clock and set forward until 3:30 in the afternoon, at which time they all got away over the six-mile triangular course, sailing it twice around in a breeze fresh enough to allow them to finish well within the time limit.

There was wind enough in the afternoon to try out the boats fairly well, although it was not what one would call heavy weather in the least. The two Indiana boats had it all their own way, Emanon holding it safe almost from the start. Lerion, which finished second, had much to do to get second place until well on the second leg of the course, when it collared and passed its most dangerous rival, Henrietta, formerly owned by William Hale Thompson, of Chicago, and sailed as Avis II. The good showing of the latter boat, which is by no means a new one, shows that these rule-beating racing craft have not so materially improved in the last few years.

B. & F., sailed by Ed Rosing, was first over the line, closely followed by Emanon, Lerion, Harriet H., the whole fleet crowding together so closely at the starting line that they seemed to go off practically in a bunch. Between the winning boat and the tail-ender, Algonquin, there is so pronounced a difference as to leave them out of the same class, and since Emanon beat such good ones as Henrietta, Caroline, Harriet H., Anita, etc., from 9 to 10m., it may be seen to have considerable quality in this sort of weather.

Class B.

In Class B the three entries of yesterday came to the line again, and once more Nokomis won. Nokomis had something of a mix-up with Flying Fox on the run to the first buoy, but on the long reach to the third buoy led Flying Fox and finished well ahead of the Fox Lake boat. Nokomis in actual sailing time beat four of the Class A boats—certainly a good performance for the little one. Caroline, the bootjack wonder from Oshkosh, bid fair at first to make trouble in the Class A again. It stood well up to windward and led at the first turn, but was passed by three of its competitors. The following are the times:

Class A—Start, 3:30.		
	Finish.	Elapsed.
Emanon	5 01 42	1 31 42
Lerion	5 03 59	1 33 59
Henrietta	5 10 15	1 40 45
Caroline	5 11 05	1 41 05
Harriet H.	4 11 12	1 41 12
Anita	5 11 20	1 41 20
B. & F.	5 12 16	1 42 16
Meteor	5 13 31	1 43 31
Aderyn	5 14 17	1 44 17
Minnesitka	5 14 48	1 44 48
Mahoohoo	5 15 22	1 45 22
Tegie	5 16 09	1 46 09
Aspirant	5 18 47	1 48 47
Imp	5 18 53	1 48 53
Evelyn	5 19 31	1 49 31
Algonquin	5 21 09	1 51 09

Class B—Start, 3:35.		
	Finish.	Elapsed.
Nokomis	5 22 35	1 47 35
Flying Fox	5 24 21	1 49 21
Helen	5 32 40	1 57 40

Second and Third Championship Races.

Sept. 5.—For a wonder the wind freshened to-day and blew a twelve-mile breeze, so that not only one but two of the championship races were sailed.

If the State of Indiana was lucky yesterday, it was surely unlucky to-day. Emanon, winner yesterday, was dismasted, and came back under tow. Lerion, the second Indiana boat, was disqualified for approaching the line from the wrong side after the starting gun had been fired. Lerion forced B. & F. out of its position and was disqualified for these tactics.

Still more exciting was the protest filed by the crew of Minnesitka against Walter Dupee, owner of Tegie. It was charged that Mr. Dupee was carrying professionals in his crew, in violation of the rules. The judges referred the matter to the executive committee, and the latter allowed the protest against one of Mr. Dupee's crew, who was barred for the future.

The course was five miles to windward and return, and in this fresh going Caroline, winner of the Green Lake prize on Monday, and Minnesitka, of White Bear, took first and second places. Aspirant was first over the line, followed by Tegie, Mahoohoo and Caroline. Algonquin, after 10m. of the rough sea, had enough of it, and came back home. Shortly the race was seen to be a fight between Caroline and Minnesitka, respectively of Oshkosh and White Bear. Both these boats kept close in shore to the south, but as they came out toward the middle of the lake Caroline was seen to be picking up. The latter held her port tack until well to weather of the buoy, rounding the latter at 10:57:40. Minnesitka turned the mark at 11:00:40. Tegie, Lerion, Adeyrn, Meteor, Henrietta, Anita, and Harriet H. turned the second mark in the order named.

Harriet H. passed Anita and Henrietta, and running close up to the latter boat luffed to keep away, and at that time was caught by a heavy puff of wind and capsized. Howell, one of the crew, went into the water in order to get at the spinnaker boom, and as the boat righted he was left swimming. He was picked up later in a much exhausted condition.

The race of the morning was sailed in fast time, the leader beating out in less than an hour and coming home in 29m. Minnesitka, the plucky White Bear boat, gained nearly a minute on Caroline on the run home.

Class B.

In Class B, as well as in Class A, the fresh weather seemed to cause a shifting of values. Helen, which in the light airs of the earlier part of the week, has been the tail-ender, now finished well in the lead, with Flying Fox second, and Nokomis, the winner of the earlier two races in which these boats met, finished third. Nokomis proved better in the windward work. The following were the times:

Class A.		
	Finish.	Elapsed.
Caroline	11 26 37	1 26 37
Minnesitka	11 28 55	1 28 55
Tegie	11 32 25	1 32 25
Lerion	Disqualified.	
Henrietta	11 39 22	1 39 22
Harriet H.	11 35 57	1 35 57
Meteor	11 35 57	1 35 57
Adeyrn	11 36 41	1 36 41

Anita	11 40 49	1 40 49
Aspirant	11 41 31	1 41 31
Evelyn	11 41 54	1 41 54
Mahoohoo	11 44 23	1 44 23
B. & F.	11 46 38	1 46 38
Imp	11 47 15	1 47 15
Algonquin	Withdraw.	
Harriet H.	Capsized.	
Emanon	Dismasted.	

Class B.		
	Finish.	Elapsed.
Helen	11 47 38	1 42 38
Flying Fox	11 47 51	1 42 51
Nokomis	11 51 26	1 46 26

Third Championship Race.

They got off for the third race of the championship series at 3:30 in the afternoon. The wind was still fresh, but had shifted a little bit to the eastward. The course was twice around the six-mile triangle, and the winner of the race was Tegie, which made the phenomenal time of 1:22:26. The bunching of the yachts at the windward buoy made it almost impossible to avoid some sort of foul, but no protest was filed by any of the boats.

At the start Emanon led, followed by Minnesitka and Caroline, and they turned the second buoy in this order. It was at this point that Tegie made her great showing. She had not heretofore shown much quality; but now began to reach in beautiful shape, and running up from sixth place overhauled the three leaders and led half-way down to the third buoy. Tegie was well sailed, carrying but her working jib. Emanon, with her spinnaker used as a balloon jib, and Minnesitka and Caroline, both carrying balloon jibs, were clearly canvassed too heavily forward, and buried their bows badly, whereas Tegie, by the simple maneuver of lessening headsails, was taking to the seas very nicely. Caroline, the half catamaran model, would be picked out as the very boat of all others which could not be capsized. Yet none the less, as she jibed the third buoy she did go over. Her crew handled her beautifully, and in 30s. she was up and under way again, not losing her position in the race. On the second leg Minnesitka split tacks with Tegie and Emanon, and worked into the weather berth. Tegie, however, was eased off and footing it too fast for all of them, and turned the second buoy first, followed by Minnesitka and Emanon.

Emanon passed Minnesitka on the second reach, and came in second. Algonquin capsized and her crew had to be picked up and carried ashore early in the race. Henrietta had the misfortune to rip her mainsail in shaking out a reef, and was obliged to withdraw.

The final race to decide the championship will be sailed to-morrow (Friday) between Emanon, Caroline and Tegie in Class A, the winner to be declared champion. In Class B Nokomis and Helen will sail together. Should Helen win, she will be winner of the series; but should Nokomis win, another race will be necessary.

Class B.

In Class B to-day, in the second race, Helen again won, Nokomis this time running second, and the Fox Lake boat, Flying Fox, dropping back into third place. The following are the times:

Class A, Start, 3:30.		
	Finish.	Elapsed.
Tegie	4 52 26	1 22 26
Emanon	4 53 58	1 23 58
Minnesitka	4 54 32	1 24 32
Caroline	5 01 46	1 31 46
Aspirant	5 02 52	1 32 52
Adeyrn	5 05 18	1 35 18
Evelyn	5 05 33	1 35 33
Harriet H.	5 05 36	1 35 36
Meteor	5 05 50	1 35 50
Anita	5 06 17	1 36 17
Lerion	5 06 19	1 36 19
Mahoohoo	5 06 37	1 36 37
Imp	5 08 29	1 38 29
B. & F.	5 09 24	1 39 24
Algonquin	Capsized.	
Henrietta	Disabled.	

Class B—Start, 3:35.		
	Finish.	Elapsed.
Helen	5 10 55	1 35 55
Nokomis	5 11 23	1 36 23
Flying Fox	5 11 47	1 36 47

Emanon Wins Championship.

Sept. 6.—Emanon won the championship of the Inland Lake Yachting Association for 1901 this morning in a ten-mile breeze over the course twice, about the six-mile triangle. Caroline, of Oshkosh, finished second. Dupee's Tegie, of Oconowoc Y. C., winner of yesterday's race, was withdrawn, its owner considering that the executive committee had too much ruffled his feelings by their decision in regard to professionals.

In the start Emanon was over the line 40s. to the good of Caroline, but in the beat to windward Caroline cut into the lead of Emanon by 15s., and showed her superior qualities in windward work. It was the old game between a pointer and a footer, and Emanon, seeing that she must reach fast to win, eased off good and full, and trusted to its superior speed. Thence on Emanon began to gain, and at the end of the first leg led Caroline by a minute. Coming into the windward leg for the second time, Emanon made rather better weather of it than on the first time out. On the second broad reach she still bettered her lead, and finished 2m. 58s. ahead of the bootjack. The race was a close and interesting one. Both boats were built by the same man, Jimmie Jones, and the latter sailed Caroline during this race. Thus, singularly enough, the championship goes to an inland State, where yacht racing would seem to be almost an unknown quantity—Indiana, the home of the Wawasee Y. C.

Class B.

Helen could not repeat her fresh-water performance of yesterday, and finished 15m. 34s. back of Nokomis. Helen was trimmed up pretty close, and might have done better had the wind been fresher. No decision was announced in Class B; therefore, since Nokomis and Helen had won two races each, the tie was to have been sailed at 2:30 to-day, but the wind failed, and the race was carried forward until to-morrow. The following were the times:

Class A—Start, 10:00.		
	Finish.	Elapsed.
Emanon	11 47 17	1 47 17
Caroline	11 50 15	1 50 15

Class B—Start, 10:35.		
	Finish.	Elapsed.
Nokomis	12 26 06	2 21 32
Helen	12 26 06	2 21 06

INDEPENDENCE.

Cadillac—Detroit Race Called Off.

Sept. 5.—Mr. Mark W. Allen, chairman of the regatta committee of the Detroit Y. C., announces that the sweepstakes of that club will be sailed Sept. 9. The special race between Cadillac and Detroit has been called off, since both have sent in their entries for the free-for-all. The committee have increased the prizes from four to six, raising the amount of cash to \$560, which will be awarded as follows: First, \$200; second, \$110; third, \$100; fourth, \$75; fifth, \$50; sixth, \$25.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Our Boston Letter.

BOSTON, Sept. 6.—On account of the death of President McKinley, all of the yacht races that were scheduled to be sailed in Massachusetts Bay on Saturday, Sept. 14, were cancelled. Odin B. Roberts, Secretary of the Eastern Y. C. Regatta Committee, sent out the following notice: "In recognition of the death of President McKinley, the Regatta Committee of the Eastern Y. C. cancelled the races set for Saturday, Sept. 14, and cancels the races scheduled for Sept. 28. On account of the approaching end of the racing season, these races will not be postponed, but are finally declared off."

This is but an example of similar notices that were issued by the regatta committees of the Hull-Massachusetts, the Corinthian, the South Boston and many other yacht clubs. Such actions might have been expected, but coming as they did, as official announcements of profound legislation by those in power in the different clubs, the spirit shown has been all the more touching, and is one of the many traits which makes New England proud of her yachtsmen.

There is only one scheduled event in yachting in Massachusetts that will not be cancelled or postponed, and that is the breaking up of Independence. From the time the announcement was made that the yacht would be broken up, there have been many who have doubted whether her owner would stick to his original decision, the thoughts that he would not no doubt being kept alive by a desire to see the boat remain whole; but there is now not the slightest doubt that the yacht which might have been shown the fastest 90-footer in the world will be consigned to the junk heap.

Her owner must have some particular use for the metal of which she is constructed, for he has given orders that every scrap must be saved. It is said that with a portion of her plating a massive tablet will be cast, which will be a monument to her memory. But Mr. Lawson must have some particular use for the metal, or he would not be so careful to have it saved.

Since the Fishermen's race for cups donated by Thomas W. Lawson, when Independence went out for her last spin, so that the people of Massachusetts might have one more chance to see her under sail, she has been lying at the Commonwealth dock. Here her running and standing rigging were taken off and later her mast was taken out. On Friday morning she was towed to Lawley's basin and the work of breaking her up was started in earnest. Work was begun below decks, and her hatches and combings taken off. Part of her metal deck fittings have been removed, and the rest will follow in a few days.

It is the programme to strip everything from her, even to the aluminum and steel deck, leaving nothing but the outer skin and its framework of steel. She will then be hauled up in the yard and the rest of the destruction carried on with top mauls. The crew was discharged Friday night, each man receiving a bright \$20 gold piece for conduct money that was promised early in the season.

Since Independence has been at Lawley's basin the wharf has been crowded with sightseers, who have come to take a last look at her while she still resembles a yacht. All day Sunday there was a steady stream of visitors. It is expected that this will be kept up during the rest of the week, as it is not thought that she will be ready to be hauled ashore until the first of next week.

There was something almost pathetic in the sight of this racer lying just inside the basin on Sunday, with everything stripped from her, even to hatch combings, awaiting the final scene in which she will be broken up. Just outside the dock was her tender, the barge Penokee. Where the Penokee has been alive all summer with flitting sailors in white or blue suits, she was deserted, save for her captain and steward. The companionway forward and the hatch aft through which the sailors passed below decks, were locked, and all that remained to make the scene more realistic was perhaps a sign "To let." Independence's big steel spar is lying on the dock near the Penokee. It has been given a new coat of paint, and will undoubtedly be preserved, as will the other spars which have been stowed in the yard.

Thus, in a few weeks what was Independence will be nothing else, practically, except a heap of junk. It is a sad ending of a model which many still believe to be the fastest of any of the 90-footers. Many have regretted that she should come to such an end, but there is now no other way out of it. Her owner is determined that she shall exist no longer, and if he desires that she should be destroyed, it is his privilege to have those orders carried out.

JOHN B. KILLEEN.

Newport Special Thirties.

NEWPORT, R. I.

Monday, Sept. 9.

Wawa won the cup offered by Mr. William Payne Thompson, which was sailed for on Monday, Sept. 9. The wind was strong from the S.W., and the boats went around Brenton's Reef Lightship and back. The start was made at 3:35 o'clock. The summary:

	Finish.	Elapsed.
Wa Wa, R. Brooks.....	4 54 31	1 19 31
Caroline, P. Jones.....	4 55 57	1 30 57
Hera, R. N. Ellis.....	4 57 29	1 22 04
Esperanza, H. O. Havemeyer, Jr.....	4 57 29	1 22 29
Pollywog.....	4 58 38	1 23 38
Barbara, W. Rutherford.....	Withdraw.	

Tuesday, Sept. 10.

BARBARA won the cup offered by Mr. Cornelius Vanderbilt for the 30-footers, on Tuesday, Sept. 10.

The boats sailed over a triangular course, and after a

close race Barbara won by the narrow margin of 18s. Caroline finished second. The start was at 3:25. The times follow:

	Finish.	Elapsed.
Barbara, W. Rutherford.....	4 30 21	1 05 21
Caroline, Pembroke Jones.....	4 30 39	1 05 39
Hera, R. N. Ellis.....	4 32 27	1 07 27
Wa Wa, Reginald Brooks.....	4 32 32	1 07 32
Esperanza, H. O. Havemeyer, Jr.....	4 35 12	1 10 12
Raccoon, J. R. Drexel.....	Withdraw.	

Wednesday, Sept. 11.

Mr. Winthrop Rutherford offered a cup for the 30-footers, which was won by Carolina on Wednesday, Sept. 11. The course was from Brenton's Cove to and around the lightship and back. The wind blew strong from the S.W. The start was at 3:20. The time follows:

	Finish.	Elapsed.
Caroline, P. Jones.....	4 55 20	1 35 20
Wa Wa, R. Brooks.....	4 56 20	1 36 20
Esperanza, H. O. Havemeyer, Jr.....	4 58 08	1 38 09
Barbara, W. Rutherford.....	4 58 55	1 38 55
Hera, R. N. Ellis.....	5 02 30	1 42 30
Raccoon, J. R. Drexel.....	5 02 32	1 42 32

Thursday, Sept. 12.

The 30-footers sailed a pretty race on Thursday, Sept. 12, for a cup offered by Mr. John R. Drexel. The course was to Dyer's Island and return, and the breeze was from the S.W. The race was one of the most interesting of the season, and Hera won by 2s.

The start was at 3:16. The summary follows:

	Finish.	Elapsed.
Hera, R. N. Ellis.....	5 35 31	2 19 31
Barbara, W. Rutherford.....	5 35 33	2 19 33
Carolina, P. Jones.....	5 35 50	2 19 50
Esperanza, H. O. Havemeyer, Jr.....	5 37 34	2 21 34
Raccoon, J. R. Drexel.....	5 38 28	2 22 28
Wa Wa, Reginald Brooks.....	Withdraw.	

There was also a special race between Nishe and Sigma. Sigma, Mr. Goelet's boat, is British-built, and was brought over on the steam yacht Nahma. It is very fast for a boat of its size, and only met its match today in a much longer craft of the knockabout class. The course was over a triangle of eight miles. The start was at 3:26. The summary follows:

	Finish.	Elapsed.
Sigma, G. Lorillard.....	4 46 44	1 20 44
Nishe, R. W. Goelet.....	4 47 53	1 21 53

The 15-footers also started at 3:26 and raced over a triangle. The summary follows:

	Finish.	Elapsed.
Eaglet, W. Grosvenor, Jr.....	4 45 43	1 19 43
Hawk, W. Gammell, Jr.....	4 46 21	1 20 21
Breeze, W. G. Roelker, Jr.....	4 46 37	1 20 37

Friday, Sept. 13.

Carolina won a Newport Y. R. A. cup on Friday, Sept. 13. The wind was S.W. and the course was to Dyer's Island and return. The start was at 3:25 o'clock. The summary follows:

	Finish.	Elapsed.
Carolina, P. Jones.....	6 19 28	2 54 28
Wa Wa, R. Brooks.....	6 21 40	2 56 40
Barbara, W. Rutherford.....	6 23 02	2 58 02
Esperanza, H. O. Havemeyer, Jr.....	Withdraw.	
Hera, R. N. Ellis.....	Withdraw.	
Raccoon, J. R. Drexel.....	Withdraw.	

Yacht Club Notes.

On Monday, Sept. 2, the annual meeting of the Sachem's Head Y. C. was held, and the following officers were elected to serve for the season of 1902: Com., John Elton Wayland, New York; Vice-Com., Robert C. Mitchell, New York; Secy. and Treas., Robert P. Seward, New York; Flag Capt., Charles R. Clark, Plainville, Conn. The secretary and treasurer reported a most successful season. New additions have been added to the club house on Chimney Corner, affording sleeping accommodations and enlarged restaurant facilities. The club membership has materially increased, over 50 per cent. of the members being yacht owners.

At a meeting of the Governors of the Newport Y. R. A., held on Sept. 7, the following officers were elected for the ensuing year: Pres., George L. Rives; Vice-Pres., Herman B. Duryea; Secy., Arthur T. Kemp; Treas., Frederick P. Sands; Racing Committee—Herman B. Duryea, A. Cass Canfield, Royal Phelps Carroll, Reginald Brooks, Winthrop Rutherford, Woodbury Kane and Harry O. Havemeyer, Jr. Next season the Association will probably hold a week of racing for all classes, continuing its policy of this year to make Newport a yachting center.

An adjourned meeting of the fourth general meeting of the New York Y. C. was held at Delmonico's, Beaver street, on Thursday, Sept. 12, with a large attendance of members. The special purpose of the meeting was the election of forty-five members who desired to avail themselves of the provision made by the club to view the races for the America's Cup. The new members are as follows: Lieut. James E. Walker, U. S. N.; Paymaster Samuel McGowan, U. S. N.; W. H. Bennett, Edward Shearson, Arthur B. Clafin, Frank M. Dick, W. L. Ward, Ralph Emerson Forbes, Robert M. Riddle, Chas. J. S. Miller, Robert S. Towne, Robert W. Stuart, Lieut. Stuart Farron Smith, U. S. N.; Capt. J. B. Coghlan, U. S. N.; August Roesler, Ernest Carter, Lieut. Francis Winslow, U. S. N.; Ensign Herbert G. Sparrow, U. S. N.; Assistant Paymaster T. W. Lentze, U. S. N.; William A. Dick, Edward Lowber Welsh, Frederick H. Stevens, John Smithers, Edward L. Tailer, Richard Charles Velt, Clinton Gilbert, Horatio R. Harper, Lieut. J. M. Poyer, U. S. N.; E. B. Alvord, Walter Dixon Ellis, Lieut. Edward McCauley, U. S. N.; Willard P. Mack, Herbert Barber, Robert B. Seward, Arthur Gibb, Chas. H. Dale, Edward L. Fuller, Mortimer B. Fuller, William H. Jackson, Seneca D. Brown, Richard A. Bachia, Horace Hatch, William H. Hull, John D. Archbold and Lieut. R. de L. Hasbrouck, U. S. N. It was announced that the steam yacht Why Not would convey yacht owners and guests during the Cup races from Pier 1, North River, to the club station at Bay Ridge each race day, leaving at 8:30 o'clock. Those who wish to see the Columbia in the dry dock on Sept. 16, 17 and 18 can go by the Why Not, which will leave the same pier at 1:15

and 3:15 o'clock each afternoon. The stages from Fifty-eighth street and Third avenue, Brooklyn, to the yacht station at Bay Ridge will be run on the days set for the races at intervals of twenty minutes during the morning and in the afternoon return trips will be made after 3 o'clock.

Sec'y J. V. S. Oddie read a letter from Evelyn P. Baldwin, commanding the expedition to the North Pole, thanking the club for being allowed to carry the club burgee. A letter was also read from Lieut.-Col. Burbank, of the United States Artillery Corps at Fort Hancock, tendering to the club members the use of the telegraph and telephone stations at Sandy Hook.

YACHTING NEWS NOTES.

Wallin & Gorman have recently completed a large power launch at their shop on Gravesend Bay for a Port Washington yachtsman, who will use her on Long Island Sound. The boat measures 35ft. over all, 8ft. 6in. beam, and has a draft of 3ft. The forward part of the boat is fitted with a cabin trunk 12ft. long and 6ft. wide, and has 6ft. head room. Aft there is a big cockpit 10ft. long. The cabin is finished in hardwood and will accommodate six people. In construction the frames, stern and sternposts are of oak, with yellow pine planking. The engine will be of ten horse-power, and is expected to develop nine miles an hour speed.

Messrs. Cary Smith & Barbey, who recently received an order for a schooner yacht for the Emperor of Germany, have awarded the contract to the Townsend & Downey Shipbuilding Company, of Shooter's Island, Staten Island. She is to be completed in time for next year's racing season. The new craft will be 160ft. over all, 120ft. on the water line, 27ft. beam and 15ft. draft, and built of steel. The contract was signed on behalf of the Emperor by the Naval Attaché of the German Embassy at Washington, and the craft will cost in the vicinity of \$150,000. The keel will be laid within a few days.

Mr. Oswald Garrison Villard's sloop yacht Hilgarda, with the owner and a crew of three men aboard, was struck by a squall inside Sandy Hook on the morning of Sept. 8, and her mast was carried away. She was two miles northwest of the Spermaceti Cove life-saving station at the time. The life-saving crew went to the Hilgarda's assistance and towed her in to the mouth of the Shrewsbury River.

Mr. Warren Shepard, the marine artist, is about to have a large cruising ketch built, in which he proposes to cruise through European waters. Mr. Shepard has made several trips on sailing vessels to various parts of the world in search of subjects for his pictures, but has been unable to go to just the places he wanted to, and to this end has designed a yacht which will combine safety, comfort and speed. The ketch will measure 53ft. over all, 14ft. beam, 7ft. 6in. deep, and have a draft of 6ft. 6in. She will be a keel craft, with outside ballast and sheathed with copper. The yacht will have a spoon bow and short counter, with a slight tumble home to her topsides. As the yacht is to be purely a sea-going craft there will be but three openings in her deck. A hatch will lead to her forecabin forward and an immovable skylight built in the top of her cabin trunk, and a companionway from the cockpit to the cabin. The cockpit is to be self-baling. The cabin trunk is to be 16ft. long. Below them are four bunks in the saloon, and forward two, and a toilet room. The pole mainmast will be 50ft. from step to truck. The order to build the yacht will be given to Rigby, at Canarsie.

Mr. A. Homer Skinner, of Fall River, who recently disposed of his auxiliary schooner Penelope, intends building during the coming winter an auxiliary cruising yawl. She will be a centerboard boat 58ft. long over all, 14ft. beam, and will draw 5ft. 6in. with her board up. The auxiliary power consists of a 16 horse-power gasoline motor made by Murray & Tregurtha, of South Boston, Mass.

The following sales have been made through Messrs. Huntington & Seaman's yacht agency: Sloop Alys, W. Barklie Henry, Philadelphia, Pa., to Daniel Bacon, this city; pole mast sloop Marguerite, Chas. G. Lincoln, Hartford, Conn., to Mr. Geo. G. Bell, this city. Seawanhaka knockabout Karma, W. H. Crossman, this city, to Mr. W. Barklie Henry, Philadelphia, Pa.; knockabout Frances, Geo. G. Milne, of New York City, to C. G. Lincoln, Hartford, Conn.; sloop Kittywake, Cleveland H. Dodge, this city, to W. H. Crossman, of New York City.

The Earl of Crawford has bought the auxiliary steam yacht Valhalla, owned by the Comte and Comtesse Boni de Castellane. Valhalla is a three-masted, full-rigged steel ship, the only yacht afloat rigged in that way, and has auxiliary steam engines. She is steel armored, and is 239.6ft. over all, 37.2ft. beam and 20.7ft. in depth. Her mainmast is 125ft. long, and her mainmast 141ft. Valhalla was built in 1892, and has more the appearance of a war vessel than a pleasure craft. Valhalla originally belonged to Mr. Jos. F. Laycock, an English banker, who used her to train boys for the royal navy. It was chartered from him by the Comte and Comtesse de Castellane in July, 1897, for a cruise to Norway and Sweden which proved so pleasant to them and their large party of guests that negotiations were opened for its purchase which were concluded soon after.

The owners of the 30-footers have completed the Newport season's racing for the cup offered by Mr. Almeric Hugh Paget, and the honors rest with Mr. Pembroke Jones' Carolina. The Paget cup must be won by the same boat two seasons in succession. It was offered in 1899, and

that summer Carolina was first. Last year Mr. Reginald Brooks' Wawa made the best record, and this year Carolina again stands ahead, but under the conditions the trophy will be raced for next season as usual.

According to the rule, two points are given for a win and one point for finishing second, the season of racing lasting from July 4 to Sept. 15. The record for the season just closed follows: Mr. Pembroke Jones' Carolina, 67; Mr. Reginald Brooks' Wawa, 47; Mr. Ralph N. Ellis' Hera, 46; Mr. Harry O. Havemeyer, Jr.'s, Esperanza, 28; Mr. Herman B. Duryea's Vaquero III., 19; Mr. Winthrop Rutherford's Barbara, 18, and Mr. John R. Drexel's Racoon, 5.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

- Sept. 18.—Ossining, N. Y.—Shoot and clambake of the Ossining Gun Club. C. G. Blandford, Capt.
Sept. 19-20.—Carthage, Mo.—Peters Cartridge Company tournament, under the auspices of the Carthage Gun Club.
Sept. 20-21.—Titusville, Pa.—First annual tournament of the Titusville Gun Club. H. Pfeiffer, Sec'y.
Sept. 24-26.—Cincinnati, O.—Cincinnati Gun Club's annual handicap target tournament; \$300 added. Charles F. Dreih, Sec'y.
Sept. 25-27.—Omaha, Neb.—Sixth annual tournament of the Dupont Gun Club, for amateurs; targets and live birds. H. S. McDonald, Mgr.
Sept. 26.—Cresson, Pa.—All-day shoot of the Cresson Gun Club. C. Wenderoth, manager.
Oct. 1-4.—Detroit, Mich.—John Parker's annual international tournament; three days targets, one live birds; \$300 in money and trophies; distance handicaps.
Oct. 2-1.—Louisville, Ky.—Tournament of the Interstate Association, under the auspices of the Jefferson County Gun Club. Elmer E. Shaner, Mgr.
Oct. 2-4.—Eau Claire, Wis.—Tournament of the Eau Claire Gun Club; two days targets, one day live birds; \$300 added. E. M. Fish, Sec'y.
Oct. 2-4.—Louisville, Ky.—Tournament of the Jefferson County Gun Club; two days targets, last day live birds; \$200 cash and trophies added. Emile Pragoff, Sec'y.
Oct. 9-10.—Huntington, Ind.—Tournament of the Erie Gun Club.
Oct. 9-11.—St. Thomas, Ont.—Tom Donley's fifth annual tournament; live birds and targets.
Oct. 15-16.—Greenville, O.—Regular annual tournament of the Greenville Shotgun Club. H. A. McCaughery, Sec'y.
Oct. 16.—Mt. Sterling, Ill.—Tournament of the Mt. Sterling Gun Club. J. Breidenbend, Sec'y.
Oct. 22-24.—Raleigh, N. C.—Shoot under auspices of the Raleigh Gun Club. J. G. Ball, Sec'y.
Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Cafe and hotel accommodations.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utresh Gun Club—Saturdays.

DRIVERS AND TWISTERS.

Some of the daily papers, concerning the 100-target handicaps at the New York State shoot, have such remarks as the following: "Some of the star professionals kept out of the contest, declaring that when placed at 21yds. they were handicapped in such a way that the target usually beat the gun, making a break doubly hard." No doubt a new and valuable phrase will thus be added to the long list of excuses which explain just how the shooter is not responsible for his own misses, but is fully responsible for his own hits. When we consider that 21yds. was the back mark in the New York State handicaps, and that 22yds. was the back mark in the Grand American Handicap at targets, it will be noted that 21yds. is not extreme. When we further consider that in 1900 Mr. R. O. Heikes broke 91 from the 22yd. mark in the G. A. H. at targets, and that good scores have been made from the 30yd. mark, we may consider that the term "target beating the gun" is to be construed in a Pickwickian sense. The target may beat the gun, but it depends on who is shooting the gun, and this qualification applies to any mark, be the same 14 or 25yds. If the target cannot beat the gun of one shooter at the 21yd. mark, and can beat the gun of another shooter at that mark, the inference is that one shooter can beat the other, and that there is a question of excellence and superiority between the contestants, as well as a question between man, gun and target.

The programme for the Interstate Association's trapshooting tournament, given for the Jefferson County Gun Club, Louisville, Ky., Oct. 2 to 4, inclusive, has target events for the first two days, ten for each day—seven at 10, three at 20 targets, entrance \$1.50 and \$2. Rose system, 5, 3, 2, 1, will govern. The third day is devoted to live birds, of which there are two events—one at 7 birds, \$5 entrance, birds included, 30yds. rise, four moneys, 40, 30, 20 and 10 per cent., high guns. No. 2 is the Jefferson county handicap, 20 birds, \$15 entrance, birds included, handicaps 25 to 33yds., four moneys, 35, 30, 20 and 15 per cent., high guns; \$50 cash added, and the winner of first also receives a trophy valued at \$25. Other events will be arranged to suit contestants. Targets, 2 cents. Guns and ammunition forwarded to Mr. Emile Pragoff, 422 West Main street, Louisville, will be delivered on the shooting grounds free of charge. Address him also for further information. Lunch, free to shooters, will be served on the grounds. No entry will be received after the tenth gun is fired. Grounds open for practice after 2 P. M., on Oct. 1. Reduced railroad rates on all lines entering Louisville, Oct. 1 to 5, on account of Louisville horse show, held on those dates. Shooting commences at 9 o'clock. Hotel accommodations engaged for those who desire by Pragoff Brothers, 422 West Main street, Louisville, Ky.

Mr. J. A. R. Elliott, who, as all shooters are aware, shoots a Winchester repeating gun, narrates a humorous incident of his trip abroad. It seems that in Europe there is a class differing from men at large, inasmuch as they are called noblemen. It was known that Mr. Elliott would shoot a match, he having signified his intention to meet all comers. One of the noblemen expressed a desire to shoot a match with him, but wished to see him shoot first, and he was so favored. Afterward he declared that he would shoot the match if Mr. Elliott would use one hand. Mr. Elliott naively remarked that he did not see how he could handle his pump gun with one hand unless he worked it with his foot.

The Dean Richmond cup, the great trophy of the New York State Association, was won at Interstate Park, Sept. 14, by the Emerald Gun Club three-man team. It and the Jeannette Gun Club tied on 56 out of a possible 60. In the shoot-off, 5 birds per man, the Emeralds killed straight. Mr. J. P. Keenan, of the Emeralds, was the only man to kill straight of the twenty-one contestants. He had been elected unanimously president of the New York State Association a few minutes before the trophy event commenced, so that he proved that not only was he popular personally but that he was also skillful with the scatter gun.

The O. G. C. has issued the following announcement: "The Ossining Gun Club will give another of their very popular Rhode Island clam bakes on Wednesday, Sept. 18, at 3 o'clock P. M., on the club grounds, near trolley power house. Tickets for gentlemen, \$1.50; ladies, \$1. Separate tables will be reserved for parties applying for same not later than the 14th inst. The bake will be first class in every particular. Clay birds will be shot from 10 o'clock A. M., until the bake is opened. For tickets and other particulars, address any of the following committee: C. G. Blandford, chairman; Dr. J. A. Schafmeister, Joseph Willi, Sr."

Mr. E. Hough, writing from the live-bird center, presents some interesting live-bird news in "Western Traps," it being no less than a high-gun contest at 100 live birds for \$100. There are signs that the corn and wheat crops of the live-bird center will be hypotheated; for, outside of a very limited group in this neck of woods, a race at 100 live birds for \$100 per man, is something that would startle the effete dead-bird center, yept the effete East. But how about those big Chicago dead-bird, cold-storage cinporiums?

The competition for the trophy emblematic of the championship of Mercer county, between Mr. Comp, the holder, and Mr. Farlee, the challenger, took place on the grounds of the Trenton Shooting Association, at Trenton, N. J., and was shot in a rain storm. Farlee won. Score 42 to 37. Mr. Van Arsdale challenged the winner, and Oct. 9 was considered a good date for the race. Sept. 10 was fixed upon for the Association's cup championship.

In handicapping it is exceedingly difficult to so handicap that every contestant will be a winner. This was done, however, in the merchandise event of the New York State shoot at Interstate Park last week, but there were seventy-five prizes, a greater number of prizes than there were of entries. Also it is still more difficult to so handicap the contestants that they will not miss.

Mr. J. R. Ball writes us as follows: "Grand tournament to be held at Raleigh, N. C., Oct. 22, 23 and 24, during the weeks of the State fair. Twenty-five events, \$5 added money in each event. Money divided Rose system. The shoot will be held under the auspices of the Raleigh Gun Club. Write for catalogue. Jas. I. Johnson, president; J. G. Ball, secretary-treasurer."

Mr. H. K. Ellyson, of Richmond, Va., has entered into an engagement with Lafin & Rand Powder Company, of New York, to represent them in their Eastern territory. Mr. Ellyson is not unknown to our readers, his excellent scores at Interstate Park and elsewhere in the recent handicaps distinguishing him as an excellent trap shot.

There is now a New York State Association in fact. It should now give material evidence that it has a mission. Having so earnestly and valiantly striven for game protection in the past, it should now devote some of its energies to the promotion of trapshooting in the future.

The great Indian massacre of targets, at Lake Okoboji, Ia., was a successful event, and is fully described elsewhere in our columns by Mr. F. C. Riehl. A number of new braves have been added to the tribe, the limit to membership having been extended to a maximum of fifty.

Mr. Emile Pragoff, of Louisville, Ky., writes us that the Jefferson County Gun Club adds \$200 in cash and trophies to the Interstate Association's tournament, to be held Oct. 2 to 4, at Louisville, Ky., for the club before mentioned.

Mr. H. S. McDonald, manager, informs us that the Dupont Gun Club, of Omaha, Neb., will hold its sixth annual tournament on Sept. 25, 26 and 27. It is for amateurs. The programme contains both live-bird and amateur events.

In "Western Traps" Mr. E. Hough informs us that the fifteen-man team match between the Chicago Gun Club and the Grand Crossing Gun Club, of Illinois, has been postponed from last Saturday to a later date.

Sept. 14, in a team race between the Boiling Springs Gun Club, of Rutherford, N. J., and the Westwood Gun Club, of Westwood, N. J., eight men on a side, 25 targets per man. Boiling Springs won. Scores, 155 to 143.

It was rumored that when Mr. J. Brewer was barred from participation in the New York State shoot he looked displeased.

The next New York State shoot will be held at Rochester. No added money is promised.

BERNARD WATERS.

WESTERN TRAPS.

Team Match Postponed.

Chicago, Ill., Sept. 14.—Owing to the death of President McKinley, the fifteen-man team match which was to have been shot to-day between Chicago Gun Club and Grand Crossing Gun Club has been postponed to a later date.

Proposed Hot Live-Bird Tournament.

Mr. C. R. Stephens, vice-president of the Illinois State Sportsmen's Association, of Moline, Ill., has taken in hand a proposition for a big winter live-bird shoot to be held at Watson's Park, Chicago, some time in the coming month of December. This is much in the nature of John Watson's midwinter shoot, and would take the place of that customary event, or would, rather, amplify that event into one of yet greater importance in the live-bird world. Mr. Stephens has sent out to a great many shooters in different parts of the country the following prospectus, so to speak, of the big shoot, and adds his personal assurance that he hopes and expects to see a big number of the best live-bird shots of America present on the date determined, for the purpose of trying out some of Uncle John Watson's tin-clad birds. Mr. Stephens deserves the utmost credit for his hustling conduct of this campaign.

Mr. Stephens sends out the following answer to candidates, stating handicaps, etc. All in all, it is to be supposed that we shall see a phenomenal live-bird shoot held here in the month of December, and the more the merrier. Chicago is without question the live-bird center of the West, if not of America, and a midwinter shoot in this city is bound to be, this year as heretofore, the live-bird clearing house of the year. Well, anyhow, hats off to Stephens, and may he have to send out many answers to applicants like the following:

"Moline, Ill., Sept. 12.—We want to give the shooting fraternity of this country an opportunity to get up against a real warm proposition, and have decided to pull off the real thing at Watson's Park, Burnside, Chicago, Ill., early in December, 1901; the race to be 100 live pigeons, \$100 entry, birds included at 25 cents each, Watson Park rules, same distance handicap as awarded at the Grand American Handicap of 1901, high-gun division of money, four places for each ten entries. Shooters who were not entered in the Grand American Handicap will be handicapped by special committee selected from among the most popular shooters, who will endeavor to place every man fairly on the mark where he belongs. The range of the distance handicap will be from 25 to 33yds.

"I have talked with some fifty or sixty different shooters about this record-breaking race, and have received from forty-three of them a verbal promise to enter. I want you to consider this matter carefully, use your imagination a heap, and see how it feels to cop off the top end of a \$7,500 purse. Shake it around in your pocket a little, and get all ready to spend it, and then write to me and tell me that if I can get fifty entries you will enter also. This will enable me to judge how the shooters feel about so stiff a game, and as soon as I hear from the 1,800 invitations (like this) I am now mailing I will be in shape to write each one who has signified his intention of joining the game, telling how many have promised to enter, what mark he will shoot from, and ask him to

send in \$25 forfeit for bird money, to insure his presence. In case of sickness preventing an entry attending and competing, we will refund his forfeit, but for no other cause, except in case less than fifty entries are received, in which case all forfeits will be returned and the race declared off.

"Post entries may be made at any time before the last bird is shot at the end of the first round. Fee for post entry will be \$125. "I have made arrangements with Uncle John Watson, of Burnside (you all know him) to carry out this big shoot, he to assume all the responsibility and retain all the profit. All I agree to do is to blow myself for postage and get you all lined up and primed up for the game. This being the case, when the time comes to send in your forfeits, you will make the checks payable to John Watson, and while they will be sent to me, in order that I may conclude from the number received whether the shoot is a go, I will turn them over to John Watson as soon as we receive the required number to cinch a success.

"Now, my dear friends among the shotgun cranks, every one of you would rather go against a good gamble, with the chance for a heap of coin if you win, than to go against ten \$10 shoots, where if you kill straight maybe you get down \$7, \$8 or \$9. Sell your corn, hay, hogs, railroad stock, board of trade margins and any other old thing, dig up one hundred plunks and get busy. I am confident we will hand you the hottest pigeon game ever dealt in this country, and the short-mark men will surely carry off the long end of the coin, for it is on record that the Grand American Handicap was never won from hack of the 29yd. mark, and all professionals and other big fellows will shoot at from 30 to 32yds., so all us juveniles need to fear are our neighbors only.

"We will bar no man on earth who is white in color and shoots a 12-gauge gun or smaller. No added handicap will be allowed for smaller bore than 12-gauge, but we will bar 10-gauge guns and soft coal. I am very positive we can find 100 dead game boys who will buy a stack and play the game. Maybe more. After examining your wallet and consulting your rabbit's foot, write me quick, and tell me if the game is of your liking, and as soon thereafter as possible I will advise you of the number who agree to go in, name your handicap, state day of the shoot, and ask you to dig up the forfeit.

"I am exceedingly anxious to participate in the hair-curling game, else I would not blow myself and my time to try and get us all up together, and I hope to find a whole lot of you just as big a blame fool as I am. Sincerely,

"C. R. STEPHENS."

Louisville Interstate.

Mr. Emil Pragoff, secretary, announces that the Louisville shoot, Oct. 2-4, will be an Interstate Association tournament and managed by Mr. Elmer Shaner. The local club adds \$200 in cash and trophies. This is an event very well worth keeping in mind.

E. HOUGH.

HARTFORD-BUILDING, Chicago, Ill.

Garden City Gun Club.

Watson's Park, Burnside Crossing, Sept. 14.—The regular monthly handicap shoot of the Garden City Gun Club, held here to-day, was well attended. Straight scores were the rule. The following presents the results:

Regular monthly handicap shoot:

Garfield Gun Club.

Chicago, Sept. 14.—The appended scores were made on our grounds to-day, on the occasion of the fifth trophy shoot of the third series. The event was shot in a steady, heavy rain. Notwithstanding, the scores were good. Midgley and T. W. Eaton both made 25 straight, and in the shoot-off at 10 targets Midgley won by 1 target, thereby capturing Class A trophy. Class B trophy was won by Dr. Meek on 22, and Class C trophy by C. T. Keck, the one-armed amateur, on 19. Owing to the rain which poured down steadily, all the afternoon, the attendance was the smallest of the season, only twelve shooters putting in an appearance.

DR. J. W. MEEK.

[We regret that the manifold copy of the scores sent us was so illegible that we could not decipher it.]

Norwalk vs. Maple City.

NORWALK, O., Sept. 14.—Inclosed find scores of return match between the Maple City Gun Club, of Norwalk, O., and the Fremont, O., Gun Club, shot on the Norwalk grounds Sept. 13.

Each man shot at 25 targets, three expert traps. Norwalk won by the close score of 260 to 253.

Several of the Norwalk boys were decidedly out of form, shooting far below their average. The Maple City Gun Club have recently ordered a magautrap, so as to keep up with the procession, and in a few days will have it in position:

Geo. F. TRAPS.

Millbrook Gun Club.

MILLBROOK, N. Y.—Herewith find the scores made by members of our club, on Saturday, Sept. 7. The main event was the 100-bird race for the county championship. E. J. Foster was the challenger. Mr. Stephenson won easily, and it looks as if he might hold the medal for some time.

In the sweepstakes Mr. S. S. Stephenson carried off most of the honors:

Targets:
Tallman 25 10 10 10 10 10 25
Baldwin 23 10 8 9 7 5 21
Gross 13 4 4 3 7 5 13
E Foster 15 6 6 9 7 7 14
F Stephenson 7 7 20
G Stephenson 9 8 21
Medal race, 100 birds; F. Stephenson 87, E. Foster 70.

I. TALLMAN.

Montpelier Gun Club.

MONTPELIER, Vt., Sept. 11.—The tournament here to-day under the auspices of the Montpelier Gun Club was a gloomy affair, so far as weather was concerned. In all my experience in trap-shooting I never saw or went through with more disagreeable conditions. The morning dawned with rain at intervals, and under the pall of a black sky, and this continued all day, and to make matters worse a mist and fog hung over the valley in which the grounds are situated, making it extremely difficult to see or gauge the flight of the birds from the swift expert traps set to the Sergeant system. Notwithstanding these distressing and depressing conditions, good nature and cheerfulness reigned supreme while it rained outside. They were a jolly lot of fellows, making the best of miserable surroundings for a day's shooting.

Montpelier is a nice little town, the gem of Vermont, so Montpelier folks think, and I guess they are pretty nearly right. There are a whole lot of go-aheadiveness and steady-going among its citizens and representative men. Its streets, its private residences and public buildings are most attractive. Here, too, are found the New England pie, the baked bean and doughnut in their pristine beauty. Some time there will another shoot here, when the sun is shining.

The attendance at this shoot included men from Champlain, Swanton, Rouse's Point and Barre, and in event No. 9 teams made up from the above places competed for a silver cup trophy, which was won by the Robin Hood men from Swanton. They used for most part the Robin Hood ammunition. The other teams used E. C., L. & R. and Dupont. Mr. Barrett, of Montpelier, won the high average, using Dupont Smokeless.

It would be quite impossible to make personal mention of all the shooters present. I wish, however, to compliment Messrs. Walton and Barrett on their untiring efforts to conduct the tournament to a successful close, and under the depressing weather conditions to be cheerful. I have the pleasure of specially mentioning Mr. Kelton, who acted as referee the entire day, and preserved his temper, for in the uncertain light and through the mists and fog, against a dark green background, it required not only good eyesight and judgment but a whole lot of common sense. Appended are the scores:

Table with columns for Events, Targets, and names of shooters like Colvill, Eastman, Holcombe, Bennett, White, Port, W. Eastman, Barrett, Walton, Briggs, Scrivner, Burroughs, Bredenburg, Saddler, Brown, Richardson, Wiseman, Cummins, Shepard, Hicks, Ward, B. F. Paine, Fraser, J. H. Paine, Stoddard, Dickinson, Houghton, Griffin, Gordon.

No. 6 was lunch. No. 9 was team race for Robin Hood international trophy.

DICK SWIVELLER.

Massachusetts Amateur Shooting Association.

PALMER, Mass.—Herewith please find the scores of the team shoot of the Massachusetts Amateur Shooting Association for the season of 1901.

The team race was composed of five clubs—Springfield, Quapoag (at Palmer), Union (at Brookfield), Winchendon and Holyoke. Each club held one shoot. Each team was composed of five shooters, and each shooter shot at 25 targets at each shoot. At the end of the third tournament the Union and Holyoke teams dropped out of the race. Springfield, Winchendon and Quapoag finished the shoot at Holyoke. Winchendon won first by a score of 474 out of 625; Springfield second with 469; Quapoag third, with 441.

Not until the last man had shot was Winchendon sure of victory. Commencing the team shoots in Holyoke, Winchendon was but 1 bird ahead. During the five tournaments over 22,000 blue-rocks were thrown from magautraps:

DR. S. E. KEITH, Sec'y.

Walkerville Gun Club Tournament.

WALKERVILLE, Ont.—The Walkerville Gun Club held its fourth annual tournament on Labor Day, Sept. 2. The day was a perfect one for the enjoyment of the sport, and as usual with the Walkerville Gun Club tournaments, there was a large attendance of shooters from points in Ontario and Michigan.

The programme consisted of nine sweepstake events of 140 targets, besides a three-man team race. The silver loving cup offered for high average was won by W. A. Smith, Kingsville, Ont., with a score of 124. The second high average prize, also a silver loving cup, was won by P. C. Wood, Detroit, after shooting off the tie with Husher, of that city. Both scored 122 and then proceeded to shoot off the tie. This proved the most exciting event of the day, as it required four consecutive events of 15 birds, each to decide the winner, Wood finally winning by 1 bird. Husher took third prize, 83.

The team race was won by the Detroit team with 41 out of 45, Walkerville being second with 37. The following are the scores:

Table with columns for Events, Targets, and names of shooters like Wood, A. Reid, Brodie, Swift, Clark, Mutter, Webster, Payson, Bent, Wear, Allen, Husher, Stanley, Smith, Perdue.

Table with columns for names and scores: Conover, Moore, Scane, Peters, Marks, Don, Black, Rush, Morton, Parent, Bauslaugh, Hitchcock, Walsrode, Rundle, Dale, Lex.

Team Race: Detroit—Stanley 15, Husher 14, Marks 12; total 41. Walkerville—A. Reid 13, Clark 12, Mutter 12; total 37. Kingsville—Conover 13, Smith 10, Perdue 9; total 32.

F. H. Conover attended the shoot as the representative of Dupont Smokeless Powder Company, and was consequently barred from participation in the sweeps. He shot a good race all day. Joe Marks, Detroit, did good work at one stage of the game, breaking 49 out of 50.

"Rush," whose other name is M. K. Cowan, M. P., one of the best field shots in the country, shot a 6lb. Clabrough, and did not have his usual success at the mud pies.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., Sept. 11.—A large crowd was on hand to witness the race between Comp, holder, and Farlee, challenger, for the Trenton Shooting Association \$50 silver trophy, representing the championship of Mercer county. J. Pluvius, Esq., must certainly entertain a grudge of some sort against us, or resent the flippant allusions to him made by the secretary, for he never fails to be on hand with choice samples of his wares whenever we get together. If we lived in Kansas it would be just the thing; but as it is, we fail to appreciate the services rendered.

The Mercer county championship race calls for 50 targets per man, unknown. When the men got together the rain was falling in sheets, and the light was very poor. The covered scores kept the shooters and spectators dry. If Comp had landed the trophy to-day it would have become his personal property, but he was not in his usual form, and Farlee won by 42 to 37.

Comp's backers came to the grounds with plenty of the green, but it was covered as soon as offered by Farlee's admirers, who freely offered 10 to 8 on their man, with no takers. Farlee gained a lead in the first string, which he held through the race.

Van Arsdale challenged the winner, and the match will probably be shot Oct. 9.

Thirty-one guns took part in the other events. The badge contest brought out twenty-four members. The gold badge was won by Wilkes after tying with Thomas, Van Arsdale, Bond, Daly, Farlee and Applegate. The silver badge was captured by Dr. Rowan. Three wins entitle the holder to claim permanent possession.

Sept. 28 brings the city cup championship event upon the carpet. It is open to any resident of the city; entrance, cost of targets only; 25 singles. Three straight wins obtain permanent possession.

Table with columns for Events, Targets, and names of shooters like Dale, Bond, Wilkes, Harrison, J. R. Taylor, Thomas, Ellis, Applegate, Mickel, Rowan, Widmann, Thropp, Maddock, Satterthwaite, Broker, Jaques, Daly, Smith, Burtis, Cole, Dr. Pardoe, Mickel, W. Park, Farlee, William, Jackson, Sinclair, Ex-Mayor, Mark, Frank, Carson.

Events Nos. 1, 2, 3 and 4, optional sweeps. Event No. 5, badge shoot, 15 to qualify. Event No. 6, gold badge. Event No. 7, ties for gold badge. Event No. 8, silver badge.

Mercer county championship, Trenton Shooting Association \$50 cup, 50 targets per man:

Westwood Gun Club.

Westwood, N. J., Sept. 16.—The Westwood Gun Club held its first annual clam bake at Westwood, N. J., on Saturday, Sept. 11. It was a decided success.

Shooting commenced at 10 A. M., and at 3 P. M. there was a match race between the Boiling Springs Gun Club, of Rutherford, N. J., and the Westwood Gun Club. Following are the scores, 25 birds per man:

Boiling Springs—Krebs 23, Collins 20, Oxford 21, Scaley 17, Proctor 17, Van Horn 14, Lenone 21, Huck 22; total 155. Westwood—Haring 14, Collignon 20, Freder 17, Speth 9, Hasbrouck 21, Schneider 20, Gruman 22, Van Buskirk 20; total 143.

Immediately after this match the clubs were formed in line, headed by the Westwood cornet band, and marched down to the grove, where a genuine Rhode Island clam bake was served. There were plenty of eatables and accessories which go to make up a first-class clam bake. At 8 P. M. the Boiling Springs Club was escorted to the depot by the band and home club.

V. VAN BUSKIRK, Capt.

The Lehigh Rod and Gun Club.

BETHLEHEM, Pa., Sept. 8.—Please find enclosed the scores of the monthly club event of the Lehigh Rod and Gun Club, of Bethlehem.

Mr. D. S. Daudt carried away the honors of the day by breaking 23 out of a possible 25. The day was a pleasant one, and could not have been finer if ordered:

Table with columns for names and scores: Hahn, Smith, Kepler, Hankey, Heiser, Miller, Koch, Sobers, Daudt, Benner, Rcese, A. J. Daudt.

H. F. Koch, Sec'y.

Pawtuxet Gun Club.

PAWTUXET, Sept. 7.—The scores of the Saturday afternoon shoot of the Pawtuxet Gun Club follow:

Table with columns for names and scores: Monteth, Armstrong, Sheldon, Wheelwright.

W. H. SHELDON, Sec'y.

New York State Shoot.

The New York State shoot was held at Interstate Park, L. I., Sept. 10 to 13 inclusive. The competition of the first three days was at targets, the fourth at live birds.

The programme was one of the best ever offered. There were \$750 in cash added, and over \$800 value in merchandise prizes, a few of which were donated. The greater number were bought by the club. Targets were thrown at 2 cents, and nothing whatever was taken out of the purses as a fund for the high averages or anything else. With such a sterling programme, and such complete equipment for the running of the tournament, the light attendance is inexplicable.

The attendance from up the State, considering the great number of shooters of that section, was noticeably light.

The moneys in the sweepstake events were divided by the Rose system, in the ratios 8, 5, 3 and 2. In the handicap events high guns governed, and therefore ties were shot off.

The programme for the State and open target events were alike, except that in each of the State sweepstake events \$20 were added. On the first two days there were four sweepstake events at 15 targets and one at 20 targets. On the third day there were six sweepstake events at 15 targets. The short races made a handicap unnecessary, as 12 out of 15, an 80 per cent. performance, held a contestant in the money.

While \$20 was added in each of the State sweepstake events, \$100 was added each day in the open handicap events, so that there was about the same amount of money added respectively in the State and open events. There was a handicap at 100 targets each day, namely, the New Utrecht Gun Club handicap, the Brooklyn Handicap and the Coney Island handicap, the conditions of each being alike; namely, 100 targets, unknown angles, handicaps 14 to 25yds., high guns. The number of moneys into which the total purse was divided was determined by the number of entries, two places being provided for each ten entries, or fraction thereof. Entrance \$7, targets included.

The tournament was managed by the famous expert, Mr. Elmer E. Shaner, manager of the Interstate Association. The success which has always marked his office as manager was also conspicuous at this tournament.

The cashier's office was in charge of Messrs. J. K. Starr and H. H. Stevens.

The office of compiler of scores was in charge of Messrs. J. D. Regan and J. B. Mockridge.

The referees were: No. 1 set of traps, Mr. F. C. Snyder; No. 2, G. W. Morris; No. 3, F. E. Gildersleeve.

Scorers: No. 1 set of traps, W. M. S. Dobson; No. 2, G. E. McManus; No. 3, Silas Kemble.

Messengers: Messrs. H. L. Merrifield, No. 1 set of traps; C. S. Sanders, No. 2; and L. B. Van Wart, No. 3.

Squad hustlers: Messrs. Mel. Hayes and W. H. Purcell.

Blackboard man: Mr. John Wright.

Locker man: Mr. H. F. H. Dressel.

Most of the foregoing have had a thorough experience in the Grand American Handicap, so that the different offices were managed in respect to themselves and each other with the regularity of clock work.

The convention was held Tuesday evening in the Assembly Hall of the Casino at Interstate Park. There was a good attendance and much interest was manifested in the proceedings. Judge Cornelius Ferguson presided. He made a brief address, explaining the absence of the president, Mr. Walter F. Sykes, and that he had been appointed by him to preside at the convention.

The clubs represented were: New Utrecht Gun Club, Long Island Gun Club, Brooklyn Gun Club, New York County Gun Club, Emerald Gun Club, Rochester Rod and Gun Club, Oneida County Sportsmen's Association, Union Gun Club, of western New York.

The delegates present were: New Utrecht Gun Club—Geo. E. Poole, A. A. Hegeman, T. W. Morley, G. R. Schneider and E. E. Shaner.

Long Island Gun Club—J. H. Hallock, H. J. Kivency, B. H. Norton, F. A. Thompson and W. H. Thompson.

Union Gun Club, of Western New York—F. D. Kelsey.

Brooklyn Gun Club—Edward Banks and B. Waters.

New York County Gun Club—L. H. Schortemeier, C. W. Floyd, H. W. Gray, J. H. W. Fleming and A. R. Metz.

Emerald Gun Club—Dr. J. P. Ruyal and Dr. G. V. Hudson.

Rochester Rod and Gun Club—J. F. Norton and L. Y. Beyer.

Oneida County Sportsmen's Association—Henry L. Gates.

New Clubs elected were: Oceanic Rod and Gun Club—No delegates present.

Electric Gun Club, of Hammondport—Charles Wagner.

Jeannette Gun Club—F. H. Ehlen, G. E. Loebke and W. H. Sanders.

Rockaway Point Rod and Gun Club—Major E. Spott.

New York German Gun Club—J. F. Wellbrock, Emil Steffens and J. P. Dannefeller.

Hell Gate Gun Club—J. H. Voss, E. Doeinck, Phil Woelfel, Jos. Selg and P. Albert.

The minutes of the last meeting were not available, and on motion of Mr. Gates, the reading of them was dispensed with.

Mr. H. L. Gates called attention to the imperfection of the Association in respect to the matter of constitution and by-laws, and the loss of its identity as theretofore conducted, and presented the following resolution:

Resolved, That the chair appoint a committee of five to report upon a proposed new constitution and by-laws, at a meeting of this Association, to be held at Interstate Park Assembly Hall Thursday, Sept. 12, 1901, at 12 o'clock M., and that when we adjourn it be to meet at that time and that the election of officers be postponed to that date.

The resolution was lost by a vote of 18 noes to 17 ayes. The motion permitting the delegates of the newly elected clubs to vote at the meeting was carried.

Mr. Schortemeier asked why the New Utrecht Gun Club did not hold the convention in June, as it had been held for forty years past. Mr. Banks explained the failure of the Pan-American shoot at Buffalo, and that other dates were so taken that it could not well be held at any other time. The discussion being irregular was cut off.

No applications were made for the shoot next year. However, the delegate from Rochester, Mr. J. F. Norton, stated that Rochester would take the shoot and give the best one possible without adding any money. On motion the request of the Rochester Gun Club was granted.

The chairman, Judge Ferguson, explained that the Association as conducted at present was an association in name only. He advocated cogently the need of an actual association, with an identity of its own, as in times past, and suggested a reconsideration of Mr. Gates' resolution. Mr. Keenan moved a reconsideration, which was duly seconded. The resolution was carried unanimously.

The chair then appointed a committee on constitution and by-laws as follows: Messrs. Gates, of Utica; Norton, of Rochester; Courtney, of Syracuse, and Keenan and Waters, of New York. The meeting adjourned to Friday at 12 M. Judge C. Ferguson presided at the adjourned meeting. The following gun clubs were represented: New York County, Emerald, Long Island, New Utrecht, Rochester Rod and Gun, Oneida, Union, of Hammondport, Hell Gate, Rockaway Park, Oceanic, Jeannette, New York German, Greater New York.

The chairman of the meeting called for a report from the committee on constitution and by-laws, whereupon Mr. H. L. Gates, its chairman, submitted a draft of a new constitution and by-laws. On motion, the constitution and by-laws as read were adopted.

Election of officers under the new constitution was next in order. Mr. L. H. Schortemeier nominated Mr. J. P. Keenan; Mr. J. H. Hallock nominated Mr. H. L. Gates, who declined the nomination; Col. A. G. Courtney nominated Dr. Weller. The nominations then closed.

A ballot was then taken, and Mr. J. P. Keenan was elected president, and Dr. Weller was elected vice-president.

Mr. Gates nominated Mr. F. E. McCord, of Rochester for secretary, and he was elected.

Col. A. G. Courtney, of Syracuse, was elected treasurer.

Mr. Gates nominated for board of directors, Mr. Walter F. Sykes, Mr. H. L. Gates, Hon. C. Ferguson, Jr., Mr. L. H. Schortemeier and Mr. J. H. Hallock. This board was elected unanimously. The meeting then adjourned.

The new constitution and by-laws were much needed, for as theretofore conducted the New York State Association had a vague identity. The officers of the club which gave the shoot were the officers of the State Association, so that as the shoot changed from place to place year by year, and local officers, more or less unfamiliar with State interests, were in authority the Association rapidly lost all State significance. The only link which held the present to the past was the Dean Richmond trophy, and even concerning that fine trophy, valuable in itself, its traditions and its associations, there were many differences of opinion concerning the conditions which govern the competition of it. The new constitution and by-laws are not yet so broad, nor the

legislative machinery so complete as the needs of the Association.

First of all, the State Association must have some State interests; it must have the power to safeguard its interests, and it must have its legislative and executive machinery so complete that if it has an actual existence always.

As to the tournament, Mr. Shaner managed it well. As to the handicapping, it was received with a great deal of dissatisfaction. This is quite to be expected, when the narrow lines of self-interest cramp the judgment.

Tuesday, Sept. 10, First Day.

The number of shooters fell far short of that expected, and far short of what so important a tournament deserved.

The event of the day was the New Utrecht Gun Club handicap, at 100 targets, unknown angles, entrance \$7, targets included; \$100 added; high guns; small silver cup to first, in addition to first money.

Mr. Jack Brewer was barred in some of the earlier events, but was allowed to shoot in the last three sweepstakes and the handicap.

The weather was pleasant, although a hazy atmosphere and a bright light made rather difficult shooting.

Table of State events for Tuesday, Sept. 10, First Day. Columns include Events, Targets, and various shooter names with their scores.

Table of Open events and New Utrecht Handicap for Tuesday, Sept. 10, First Day. Includes scores for various shooters in multiple events.

Wednesday, Sept. 11, Second Day.

The weather was pleasant, but unfavorable for good scores. There was a hazy light. A stiff wind blew across the traps from right to left, making high right-quarterers and low left-quarterers, with erratic flights in other directions.

The Brooklyn handicap, at 100 targets, \$7 entrance, targets included, \$100 added, high guns, and the four-man team championship were the main events.

The handicap was won by Mr. L. H. Schortemeier with a score of 89, and first money was \$60.

Two clubs entered for the State championship at targets, the New Utrecht and the New York County, the latter winning by a score of 87 to 74.

testant, and the entrance money was divided into 60 and 40 per cent., first and second respectively. The scores follow:

Table of State events for Wednesday, Sept. 11, Second Day. Lists events, targets, and scores for various shooters.

Four-man team championship: New York County Gun Club: Schorty 22, Glover 22, Dudley 23, Van Allen 20; total 87.

New Utrecht Gun Club: Banks 19, Morfey 19, F. B. Stevenson 18, Keller 18; total 74.

Table of Open events and Brooklyn Handicap for Wednesday, Sept. 11, Second Day. Includes scores for various shooters in multiple events.

Thursday, Sept. 12, Third Day.

The weather was favorable for shooting, though toward midday rain threatened, and in the early afternoon there was a heavy downpour for a short time, delaying the merchandise and Coney Island Handicap slightly.

There were 47 entries in the merchandise event, and there were 75 prizes on the list. The conditions were 50 targets, high guns, entrance \$4. Prizes to be awarded in the order of their value, as set forth in a list prepared by the management.

The weather conditions for good shooting were favorable, there being an even, good light, though the sky was cloudy during the merchandise event.

Table of State events and Merchandise event for Thursday, Sept. 12, Third Day. Includes scores for various shooters in multiple events.

Table of Open events and Coney Island Handicap for Thursday, Sept. 12, Third Day. Includes scores for various shooters in multiple events.

Friday, Sept. 13, Fourth Day.

Table of State events for Friday, Sept. 13, Fourth Day. Lists events, targets, and scores for various shooters.

General Average Prizes.

In the State Events.—To the four contestants who made the four highest aggregate scores in all the State target events collectively, except No. 6 (State championship), on the second day, and No. 7 (merchandise event), on the third day, there was given, in the order of merit: To first, \$25; to second, \$15; to third, \$10; to fourth, \$5.

In the Open Events.—To the five contestants who made the five highest aggregate scores in all the open target events collectively, excepting the three 100-target events, there was given in the order of merit: To first, \$25; to second, \$20; to third, \$15; to fourth, \$10; to fifth, \$5.

The winners were as follows: State events: Glover 231, Fulford 222, Dudley 218, Kelsey 217. Open events: Glover 236, Fulford 233, Stearns 229, Dudley 228, Fanning 226.

The fourth day of the New York State shoot was devoted to live-bird competition exclusively. The programme provided three open events, of which No. 1 was at 7 birds, \$5 birds extra; all at 30 yds., two moneys, class shooting. No. 2 was at 10 birds, \$7.50, birds included, handicap, three moneys, class shooting. No. 3 was at 15 birds, \$10, birds included, handicap, four moneys, class shooting.

The State event, and the one of greatest significance as such, was the Dean Richmond trophy. It was for three-man teams, 20 birds per man, entrance \$20 per team, birds extra. The cup and 60 per cent. of the purse to first, and 40 per cent. to second. This event was refereed ably by Mr. F. C. Snyder, Mr. G. W. Morris refereed the open events with skill. In fact, both referees were spoken of highly for their alertness, fairness and knowledge.

Table of Open events for Friday, Sept. 13, Fourth Day. Lists event numbers, shooter names, and scores.

Table of Open event No. 3, 15 birds for Friday, Sept. 13, Fourth Day. Lists shooter names and scores.

The Dean Richmond Cup.

The weather was favorable for good scores, though the weather conditions were not favorable for careless shooting, a moderately stiff quattering wind helping the birds out if they were not promptly shot.

Seven teams entered the competition, namely: New York County Gun Club, Hell Gate Gun Club, Oneida County Sportsman's Association, Jeannette Gun Club, Emerald Gun Club, New Utrecht Gun Club's teams Nos. 1 and 2.

The race was very close. On form, the New York County team seemed to have the greatest chance of winning, its members being redoubtable performers with the gun, namely, Messrs. Van Allen, Schortemeier and Glover; but strange to relate they finished last. The race was shot from the 28yd. mark, too close for a standard championship.

The birds were mixed in quality, the good ones predominating, and they offered sufficiently difficult shooting to try out the contestants thoroughly, as the scores will show, as follows:

Table of scores for The Dean Richmond Cup. Lists shooter names and scores for various teams.

Table of scores for New Utrecht Gun Club No. 1 and No. 2, listing names like Morfey, Kline, Burns, etc., and their scores across 12 events.

The Indians.

Third Annual Tourney at Lake Okoboji.

For each was here to do his best, To conquer or defend; To try conclusions with the rest, And know no foe nor friend.

The Indians opened their third annual tourney here Tuesday morning, Sept. 5, under most auspicious circumstances. Of the tribe there appeared three new faces at the score from last week in the persons of Heikes, Bingham and Neal.

Table of scores for the Indians' tourney, listing names like Burns, Kline, Burns, Wittleaf, etc., and their scores across 12 events.

Annual Indian Pow Wow.

The annual pow-wow of the Indians was held Tuesday afternoon, a la aborigine, under the spreading shade trees on the south shore of the lake. It was voted to amend the constitution and raise the limit of membership to fifty.

Wednesday, Sept. 4.

Attendance was the same as upon the first day, with the addition of C. R. Stearns, of Moline, Ill., who came to help out the Illinois contingent. The weather was bright and clear, but that eternal mischief-maker, the wind, was busier than usual.

Table of scores for Wednesday, Sept. 4, listing names like Burns, Kline, Burns, Wittleaf, etc., and their scores across 12 events.

Thursday, Sept. 5.

Attendance was undiminished to-day, and weather conditions were exactly the same as on the preceding two days of the week. Crosby again took the lead, losing only 9 birds. Gilbert and

Linderman came next, Parmelee and Burnside next, while Rogers and Herschy tied for fourth place. Score:

Table of scores for Thursday, Sept. 5, listing names like Burns, Kline, Burns, Wittleaf, etc., and their scores across 12 events.

Friday, Sept. 6.

At 4 o'clock this afternoon the last gun was fired in the third annual tournament of the Indians. The record of this week's work is pleasant to write, because it constitutes a story of success in all that the word implies.

The weather to-day was again fair, after a shower in the morning which delayed the shoot until after 9 o'clock. Fred Gilbert was first and Crosby second for the day, which gave the Spirit Lake expert first place for the tourney. Just ten men finished with a total average above 90 per cent.

In the shoot-off for trophies in the three classes, Gilbert won first, Crosby second and Ed Bingham third. Each class trophy was a dozen handsome solid silver teaspoons. Much interest was manifested in the team race arranged in imitation of the Anglo-American match.

Table of scores for Friday, Sept. 6, listing names like Burns, Kline, Burns, Wittleaf, etc., and their scores across 12 events.

General averages:

Table of general averages for Sept. 3, 4, 5, 6, and Total, listing names like Burns, Kline, Burns, Wittleaf, etc., and their average scores.

Table of trophy contests, shoot-off, and class averages (Eighty per cent., Seventy per cent., American vs. English style match).

Odd Shots.

On Thursday evening the newly chosen Indians were taken away to the big tepee of the Chief and put through the initiatory ceremony as prescribed by the committee in charge of this branch of the work.

The Indians have already been offered a handsome inducement to take their tournament to French Lick Springs, Ind. This will be a great gathering wherever it goes, with forty-three Indians to guarantee its success from the start.

J. L. Head, the new Indian from Indiana, was quite ill during the week, and could not shoot through the programme.

The weather turned severely raw and cold on the last day of the meet, and the shooters were glad to get away.

Several nice game dinners of redhead, mallard and prairie chicken were the result of the prowess of Ed Bingham, Gene Abrams and Ray Windsor during the closing week.

The dear "squaws" had many a royal trip together on the lake and round about the country while the braves struggled for honors and wampum. It was a great reunion all round.

Dick Linderman expressed himself in a quiet way as of the opinion that he got the wrong end of the initiation ceremony. But Dick is a good Indian, and never demurs.

Rolla Heikes, Elmer Neal and Guy Burnside, with their families, remained over a few days to enjoy the fishing on the lakes.

The division of moneys, 40, 30, 20, and 10 in 15-target events, and 30, 25, 20, 15 and 10 in 20-target events, worked very satisfactorily indeed, and it may be doubted if for a tournament of such proportions, this system could be beaten.

It is but due courtesy to W. B. Arnold, Ira Allen and all connected with this pleasant resort to say that their uniform courtesy and help in many small ways did much toward making the stay here the success that it was.

W. D. Townsend, of the Townsend Gun Company, Omaha, probably sold more loaded shells on this occasion than were ever before disposed of at any single tournament on the shooting ground. The natural inference is that the boys have confidence in Billy and his goods.

Although a full car load of targets had been provided, it was again found necessary to order a second shipment by wire.

The fact that this was the first gathering in the West of the American team members since their return from England, made the individual shooters objects of much general interest, and there was always a group gathered whenever and wherever either one was inclined to detail conversational fragments of their experience across the water.

C. C. Beveridge, who likes to be known in the shooting world as the Dominic, was one of the popular men at the big meet. Recently on his home shooting grounds he made the noteworthy score of 99 out of a possible 100 in the club handicap shoot, including a run of 97 straight.

Crosby's run of 147 straight in the wind storm of the 29th was the individual record work of the week. The squad record in the amateur shoot was 75 straight, on Friday, by the Omaha squad, headed by Crosby and including McDonald, Townsend, Bray and Linderman.

Russel Klue, who knows all the ins and outs of "fishermen's luck" on these waters, headed a party of shooters who spent the 31st on Spirit Lake; and it is said they brought in several hundred pounds of fish and experience. For this, however, the writer does not vouch.

The handsome embossed programmes of the Indian meet, with accompanying poetical souvenir pamphlet, were in such demand that the edition of 1,500 was exhausted early in the week.

The masters of the pretty steamers Okoboji, Queen and Hiawatha, and the sailboat Golden Rule, have the thanks of the shooters and their wives for delightful complimentary trips upon the lake.

Lucky Dick Linderman got the only straight alone during the first week, and it netted him \$24.30. And Dick declared that he is not above needing the money.

The park management inclosed the shooting ground in a neat canvas fence, erected a grand stand and charged a 25-cent admission fee to non-shooters. There were some demurs raised to this by local residents, but the arrangement was on the whole very satisfactory.

Why should one not pay to see a shooting tournament, just as he would and does at baseball, racing, and other similar sports? Unquestionably one of the reasons why shooting is not more generally popular is that too low a value has been placed upon it by those directly interested.

The Indian "squaws" made up a tally-ho party to Spirit Lake and return on the 31st, and they do say that the trip was one of many pleasant incidents that will make it long remembered.

Mr. and Mrs. Frank Parmelee gave a lake steamer party to all shooters and the wives and squaws on Monday night of the Indian week, on board the pretty launch Hiawatha, Rolla Heikes with his banjo and Mrs. Falkner with her splendid voice rendering popular songs.

Tom Marshall, the Dominic and others contributed to an impromptu entertainment that was a delight from beginning to end, leas and cake were served, and the two hours' trip seemed to occupy but the space of a few minutes.

Mr. W. Fred Quimby was a very welcome visitor over Sunday and Monday, and it was a regret to all that he could not remain through the week.

The Dominic preached a special sermon Sunday morning by request, from the text "The Kingdom of Heaven is like unto a target shoot; a few go straight, but many go astray."

The little booklets contributed by the Scribe, detailing the tribal history for the past year, and presented in pleasing exemplification of the printer's art, were in much demand, as souvenirs of the meet.

F. C. RIEHL.

J. F. Weiler Gun Club.

Table of scores for J. F. Weiler Gun Club, listing names like Schlicher, Straub, Acker, Weiler, etc., and their scores across 25 targets.

Answers to Correspondents.

Notice taken of anonymous communications. R. B. G., New York City.—Will you please tell me through your next edition the difference between a woodchuck and a ground hog, if there is any? Ans. These are two names for the same animal (Arctomys monax) in the East. We should suppose a heavy woodchuck might weigh ten or twelve pounds.

J. A., Providence, R. I.—Twelve men shot at 20 targets each for a purse of \$25. A broke 15, B and C broke 13 each, D broke 12, E broke 10. Do B and C take third money, or do they divide? Ans. If it was class shooting, as we presume it was, they divided. If it was high guns, they take second and third, first shooting off the tie for pace.

PUBLISHERS' DEPARTMENT.

The Union Metallic Cartridge Company's exhibit at the Buffalo show is large and impressive. Besides ammunition of all sorts and the various articles that go to make up ammunition, is an exhibit of pine boards showing the comparative penetration of various military projectiles. The exhibit is in the East Ordnance Building at the Buffalo Exposition.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, SEPTEMBER 28, 1901.

VOL. LVII.—No. 18.
No. 346 BROADWAY, NEW YORK

ANNOUNCEMENT.

In the Ranger Service.

AMONG the completed manuscripts which were left by Rowland E. Robinson was the serial entitled "In the Ranger Service," of which the publication is begun to-day. It has to do with a period of New England and New York history which was full of incident and color; and the story was one to come only from the pen of a writer like Mr. Robinson, who had his sympathy with the times and the people, and that rare insight into nature which makes up so much of the charm of all that he wrote. As was said last week, "In the Ranger Service" is notable for its pure and limpid English; and there is reason for confidence that it will have a warm welcome and will add to Mr. Robinson's fame as a writer.

Adventure in Tropical America.

We shall begin in our issue of Oct. 5 the publication of a series of "Stories of Adventure in Tropical America," by Dr. Francis C. Nicholas. The recent alliances of the United States with its Southern neighbors has had the effect of increasing interest in those countries, and directing attention to them. Because of this these relations of experience there will be of special timeliness. Dr. Nicholas has spent many years in travel and exploration in Tropical America, and his life in the forests and on the mighty rivers, among savage and sometimes hostile and treacherous tribes, has been full of perils and hairbreadth 'scapes. His stories as here told give vivid pictures of rough life in the wilds, and the announcement of them here is an assurance that for weeks to come the FOREST AND STREAM will have in them an attractive feature.

In the Faroe Islands.

In strong contrast with the tropical setting of the stories by Dr. Nicholas are the bleak and chill islands in the northern seas, of which Miss Elizabeth Taylor writes in her sketches of life in the Faroe Islands, whose inhabitants maintain their hold only by a strenuous and unremitting warring with the elements. The four chapters in hand are a continuation of the first one which we published last summer, and will appear in early issues.

This is to note only a few of the many good things which are in store for the coming weeks—a generous measure of entertaining material which will maintain the FOREST AND STREAM'S character as the American sportsman's favorite journal.

THE DOG IN THE FIELD.

THE season of the year is now here when the setter and the pointer possessed of any commendable working abilities afield suddenly are awarded a place on the pinnacles of their owners' most distinguished consideration, in respect to sentimental, utilitarian and monetary values. The owner's indifference of the close season gives place to the most lively interest of the open season. There, indeed, may be a sudden revival of interest in the owner himself, on the part of friends, or friends' friends who own no dogs or guns at any time, and who wish to borrow them only during the open season. Some friendships, torpid during the close season, are subject to fervid revivification sometimes, when dogs and guns are so useful as adjuncts to good sport. It is a season when the useful and the sentimental may be most happily blended; when recreation of the best form may be enjoyed and friendships, neglected, may be renewed, and friendships not neglected may be made stronger. Nor is this new interest manifested on one side only. The dog, observing the significant unearthing of sporting toggery, anticipates the pleasures of forthcoming field work, and displays extra affection toward the person of his master. It has come to a time when in a way there is a certain community of interest between man and dog in the pleasures of upland shooting, in anticipation.

However, few sportsmen consider that, let the pleasures of pursuit and capture be divided ever so equally, there is no equal division in the amount or fatigues of the work. Galloping up and down hill, through cover and open, over ground wet or dry, smooth or rough, with the interests of the gun to observe and ever to keep in mind, the dog has a task which is laborious in its execution and varied in its requirements. He must skillfully beat out the ground as his master walks through it, and, when the birds are found, he must take a subordinate, yet earnest,

part in assisting his master to effect possession of them.

Yet, after a day of such fatiguing labor, the dog may be scantily fed, or fed abundantly on food which he detests, and then left to shirk as best he can for his sleeping quarters. If he is ravenously hungry, he may seem to enjoy a bad supper; but a good supper for a dog is easily provided if a little forethought is exercised concerning it, and the best fed dog, all else being equal, will do the best work. A thoroughly fatigued dog is likely to lie down anywhere, but the seeking for rest should not be construed as an expression of contentment. In the matter of comfort and healthfulness, the tired dog has no judgment. The immediate needs of the moment are all that he considers. If he curls up by the side of a haystack in the early evening, it may be a good selection for the time being; later in the night, if frost or rain set in, no more uncomfortable place could be found.

There is no more pathetic sight in the incidents of field shooting than that of a dog which, muscle sore and wearied when he begins his outdoor rest, wakes tremblingly stiff and unrefreshed in the damp and chill of the morning, and tries to wag his tail and look pleased in his effort to cheerfully greet his master, who has slept comfortably.

Let the sportsman dwell where he may, in his own home or the home of others, in city or country, it is not a difficult task to provide some kind of comfortable sleeping quarters for his canine servant. There is generally abundance of hay everywhere, and with it a most comfortable bed can be quickly made. The side of a stake can readily be made into sleeping quarters by making a bed of hay beside it, then erecting a lean-to over it, all generously covered with hay or straw.

The neglect of the dog, so often an incident of hunting parties, is the result of thoughtlessness, not of intention. A little forethought and prevision are not extravagant returns, however, for the services which the setter and pointer at work render their masters. Some dog cakes, some lean beef, and a place to sleep comfortably, are humble requital in return for strenuous services, aside from the affection and devotion which the dog has for the master he loves. The merciful master should see that his dog suffers not from any neglect, first of all because he is in affection and devotion more than a servant, and, secondly, because, in a day of effort afield, he earns his keep a thousand fold.

SEPTEMBER CHANGES.

SEPTEMBER'S sunshine is brilliant and the shorn fields lie warm in its yellow light. Some are green with fresh-grown ragweed, others, later reaped, still show golden stubble and shocks of grain not yet garnered. About their borders, the fences and stone walls are hidden behind veils and traceries of ivy now growing yellow, or Virginia creeper, turning to flame, or clumps of browning blackberry vines, or stiff crimson spikes of sumac. Above the damp spots along the edges of the woods the cardinal flower beckons with its startling scarlet, but search is needed to detect the modest blossoms of the fringed gentian hiding among the ranker growth about them.

Down in the swamp the soft maples have begun to turn, though a touch of frost is needed to bring out their full color, brilliant though short-lived. The undergrowth has matured, and one by one its leaves are letting go their hold, and in the still air twirl slowly to earth, which they touch at last as lightly and noiselessly as a thistle-down which drops on the surface of the placid river. Soft leaves cover the ground, those of by-gone years wet and rotted, while those fresh fallen are still full of moisture and crush noiselessly beneath the foot.

By the river's margin, the yellow wild rice is broken down now by the boats of the rail shooters and the work of the birds that feed upon its abundant seed. The cattails are yellowing, the jewelweed which overhangs the stream has lost its beauty and seems shrunken, and only the docks stand up, stiff and ungraceful as ever.

Now migrating birds begin to fill the air. At night are heard their calls and the whistling of their wings, and by day they are seen loitering on river, in fields and along hedge rows, picking up a living as they move southward on deliberate wing.

Acorns, chestnuts and beechnuts are falling to the ground, and the squirrels are gathering them and hiding them away against the winter time, when the earth shall

be bound in fetters of frost and covered by a mantle of snow.

A little later than this, loose flocks of brown quail will be wandering through the ragweed fields and along the borders of the swamp, feeding on the ripening seeds and trying to decide where they shall make their winter home. Now truly their journeyings will disappoint many a man who has watched a brood from the egg to full growth and strength of wing; for the little family, deserting its summer home, will move off, and when the hard frosts come will have chosen some new domicile, perhaps far away. Food, water and shelter are needed for this winter home, and in the search for this combination the family may wander far. It may be found in the dooryard, or walking along the village streets or crossing its green. Sometimes the birds may fly into the open windows and startle the busy housewife with their roar of wings and impetuous dartings to and fro, in utter disregard of furniture and its arrangement. No one can tell what strange things the quail will do now nor where they will be found.

As with the quail, so with the ruffed grouse, for, indeed, when autumn comes all feathered life seems to be seized with a vague feeling of unrest, which, among most birds, finds its expression in the southward journey, but with gallinaceous birds is confined to this "shifting," which is invariable, and is recognized by most sportsmen.

As the weather grows cooler and the leaves fall, the ruffed grouse families break up into little groups, and each bird sets out on its travels to find a home. While moving about in this search, they are found in most unexpected quarters; in roads, under apple trees in open lots, sometimes among the branches of trees in the village street, or again—moved by what impulse we cannot know—starting on long flights from one piece of woods to another, perhaps in their course to dash themselves against the side of a house, to be picked up dead a little later, and to cause unending speculation among the finders as to what may have caused this eccentric action. There are many sportsmen of long experience and keen habits of observation who believe that at this season of the year the grouse become crazy, for they seem to lose all their proverbial cunning, and act in strange and unnatural ways. Some times when flushed they will leave cover and alight in bare pasture lots, and if started again will again alight in the open, wholly neglecting the shelter of the forest.

During this time, when the quail and the grouse are changing their homes, the sportsman cannot hope for much success in their pursuit, but later, after these homes are chosen and the birds have settled down, his opportunities improve.

In September these birds are often too small to be shot, and within a day or two we have heard of broods of partridges not yet three-fourths grown, and so tame that they might almost be killed with sticks. Nor are all the quail full grown, and in some sections one reason for the scarcity of birds is that the shooting season opens so early that all young birds in a brood may be killed.

A SPRING SHOOTING DEMONSTRATION.

AN ounce of demonstration in practice is worth a ton of theorizing. In his letter to-day, Mr. W. H. Tallett gives us the demonstration. When the Jefferson County Sportsmen's Association were contending last winter for a law to protect their wild duck breeding grounds in spring, they urged as an argument to secure their end the theory that if the summer ducks were given immunity they would breed in New York and multiply for the fall shooting. The law was secured, the immunity was given, and the ducks "did the rest." "Never within the memory of the oldest sportsman," writes Mr. Tallett, "have there been so many of these ducks in this county on the opening day."

This is an ample, complete and unanswerable demonstration of the soundness of the theory advanced by the Jefferson county sportsmen. It is a demonstration for Jefferson county. It is a demonstration for every county in the State which has breeding grounds for wild ducks. It is a demonstration for every State in the Union which has wild duck breeding grounds, and which can muster up enough common sense among its legislators to prohibit spring shooting, and to give the ducks a chance. It is a demonstration also that if a State will not prohibit spring shooting, a single county which is more enlightened than its neighbors may, by dint of the active, determined and persistent effort of its local association, secure to itself the benefit of an anti-spring shooting law.

The Sportsman Tourist.

Gens des Bois.

C. C. Dow.

UNDER the shadow of Potato Hill in the town of Danvers, or Lincoln, as it is called on the maps, lives Chivey Chase Dow, a big-framed, kindly mannered woodsman of the old school. Himself a type that might have stepped directly from the pages of one of Rowland Robinson's books, he had gained, through reading, a wonderful admiration of the author, but though living less than a day's drive away, he had never summoned up courage to call on Mr. Robinson until one day last summer, when it was too late. On his return to his mountain home his grief that he had missed the chance of knowing Mr. Robinson was so great that he broke down and cried. His daughter in relating the fact excused her father by saying: "He's eighty-three now, and perhaps a little childish"; but such an explanation is not needed for those who have met the old man and recognized his simple kindness and brightness of heart.

Mr. Dow is a very modest man, and not given to discussing his hunting achievements. He is probably the best-known bear trapper in Vermont, and one of the best-posted in matters relating to the habits of wild animals. It would take a long acquaintance with him, however, to unlock his store of knowledge, and the following sketch is merely an outline.

Mr. Dow, it should be said, is marvelously preserved for his age. His teeth, hearing and eyesight are all good, and his hair still dark, and that his physical powers have not decayed is indicated by the fact that last summer he cut, split and piled a cord of hardwood from the log in four hours. In stature he is just under six feet and he weighs 180 pounds.

March 15, which was the one hundred and eleventh consecutive day of sleighing for the past winter, I crossed Lake Champlain on the ice to Vermont and traveled east into the Green Mountains on a little spur railroad which struggles bravely upward till brought to a standstill by a bit of landscape which is pretty nearly straight up and down. Under this rock escarpment lies the town of Bristol, celebrated for its maple sugar and woodworking industries. Here I made inquiries for Uncle Chivey Dow, and was told that he was stopping with a married daughter, Mrs. Briggs, two miles and a half further back on the road to Lincoln.

I secured passage for the Briggses with the Lincoln mail carrier. I was wedged in behind a leather mail sack, which made a tight fit in the limited space in the cutter. A sugar snow was falling—big, feathery flakes, gyrating slowly downward. The air was mild, and already some enterprising farmers were at work in their sugar orchards tapping the trees. About a mile out from Bristol the mail carrier looked hard for some minutes at a man in a cutter talking out of the depths of his fur coat to one of the sugar makers. Little besides the man's nose and a curling moustache could be seen, but just as we passed the mail carrier established to his satisfaction the identity of the stranger, and drew up his flea-bitten mare with a jerk. "That's Billy Briggs right now," he announced, and twisting around as far as the mail sack would permit, he called out, "Say, Billy, is Uncle Chivey to home?"

The upper part of the fur coat turned half-way round in our direction, and from the opening under the hat Mr. Briggs asked, "What's that?"

"I've got a man here that wants to see Uncle Chivey."

"What does he want to see him for?"

The mail carrier looked at me inquiringly, and I took up the dialogue.

"I want to have a talk with Mr. Dow about hunting. I understand Uncle Chivey is a great hunter?"

"He is right smart. He's off hunting now."

"When will he be home?"

"Not before night. Better turn around and come up to-morrow. He'll be home then, I'll warrant—so lame he can't walk."

Learning that Uncle Chivey was only out after rabbits, and assuming that he would not be far from the house, I pushed on. The mail carrier left me at the hanging rocks, where the road passes through a narrow gap between two immense boulders, and taking a left-hand forking road I climbed one of the steepest hills that man ever tempted Providence by building a road upon.

From time to time I caught glimpses of the flea-bitten mare toiling up a considerable hill below, in a course nearly parallel to my own, but where she climbed one foot the road I followed ascended two. At the top of the hill was a plateau hugging the base of another rocky, wooded mountain, and here was the house. The door opened, in answer to my knock; and a loose-jointed hound flopped out and cavorted around in an extravagant appeal to be taken hunting.

"No, father hasn't come a-back yet," said Mrs. Briggs. "He won't be home till night—not if I know him."

I inquired the course he had taken when leaving the house, and was directed to a wood road leading up the mountain. When I spoke of following his trail in the snow I noticed that she smiled.

The Trail of a Rabbit Hunter.

It was then 11 o'clock. Refusing an invitation to dinner, I walked out past the barns and across a meadow to a barway into the woods. Briggs or some one had been drawing logs from the mountains, and there was good footing in the hard-beaten sleigh tracks. The road ran through a maple growth skirting a ledge of gray-lichened rock, while far below one could look over the tops of a sea of evergreens and picture the ice-locked brook that tumbled down between this and the neighboring mountain. There was a sugar house under the ledge, with its pile of half-rotten firewood indicating it had not recently been used, and if further proof was wanted that the sugar industry had languished, the tap holes in the maples were grown up and obliterated. In the soft snow were many squirrel tracks, crossing and recrossing to favored trees, and the string of fleur de lis of a walking partridge, ending with the fresh imprint of its wings,

where it had taken flight. Skunk tracks and fox tracks were common, and then I came upon muddy woodchuck tracks, radiating from the hole in the brier thicket, where the chuck had passed the coldest third of the year below the frost line.

By and by Uncle Chivey branched off from the road and went higher up the mountain side. I felt sure of the trail because it was punctuated occasionally by the impressions of his gun stock. Up and up it climbed, till I realized the warmth of the day and took off my overcoat. Presently the trail led into a dense thicket of young firs, and I was kept busy mopping my face and neck to remove the perspiration and snow which showered down from the trees.

At first the crust had been sufficiently strong to bear a man's weight, but under the evergreens it began giving way, and letting one down half-way up to the waist. Fortunately I had a broken trail to follow, but I could not help pitying Uncle Chivey wallowing through the deep snow. I had nearly two hours of such traveling before coming up with the object of my search. The trail crossed and recrossed itself, and had it not been for the continued snowfall which enabled me to single out the most recent foot tracks and avoid the detours, I should have been much longer in finding him. For some time I had heard a beagle barking in a thick growth of cedars, interspersed with little open glades, and presently, as I advanced, I caught a glimpse of a brown hunting coat and saw a man, gun at ready, peering under the boughs for a sight of the rabbit.

The rabbit passed safely by in the thick undergrowth, and the old man turned and walked toward me. He shook hands and upon my mentioning his visit to Rowland Robinson's home, he spoke regretfully of his failure to meet the man he had set his heart on knowing. "Procrastination is the thief of time," he remarked, with an accent that made the words seem fresh once more. "I waited for a more convenient season, which didn't come." There was a pause, and Uncle Chivey waited, uncertain what was wanted of him, yet too polite to learn at once. I asked him if he would tell me something of his life.

"Yes," he said. "I was born in Weare, Hillsboro county, N. H., in the month of May, 1818. I moved to Lincoln—my folks did; I moved with them, of course—when I was six years old, in 1824, and I've lived here ever since—hum, excepting there was a couple of years I was in the northern part of Kansas."

Uncle Chivey had taken out his pipe and filled it as he talked, and now he opened his canvas coat and drew the sulphur match down the dry surface of his vest. After a few starting puffs at his well-worn pipe, he continued:

"My name is C. C. Dow. I was named after Chivey Chase. There was a place in Scotland where there was a fight—the clans fit. You know, I think the name sprung from that place. Chivey is spelled with an i—yes, always—the old man was looking over my notebook. "One think about that book of yours, if you lose it you're safe. No one else can read it."

"Yes, I've ketch'd a few bears—twenty or thirty, perhaps, never did much at it. I've hunted ever since I was pretty small, but it never amounted to much. I got a few blackcats, saps and the like, too, but I never killed a catamount, and never killed a wolf."

Uncle Chivey evidently had a deadly fear of being thought a boaster. He had a way of stating the fact contained in the first part of his sentence, and then trying to hedge by a second, apologetic sentence. To turn the subject from his prowess as a hunter, he wound up with the remark: "But there used to be, fifty or sixty years ago, pretty nice fishing for trout in these rivers."

I brought the subject back again to bears by asking if he had had any luck with his traps last year. "No, I got no bears," said Uncle Chivey, and then, with deadly afterthought, "I set a couple of traps late and caught my neighbor's dog, and I didn't set no traps ag'in."

In the Good Old Days.

I mentioned having seen a map of the town of Lincoln which had marked upon it records of certain bears and deer at various places during the last century. Uncle Chivey had not seen the map, and was interested.

I told him that one of the records were of a woman who killed a deer in 1869 between Lincoln and South Lincoln. Uncle Chivey's face had such a vacant expression that I imagined he had not heard. It struck me that the date was much earlier, and I corrected my statement, putting it back to 1829. At once the old man's face lighted, and he said, emphatically:

"That'll do! I know who it was. It was Esther Hoag. Her folks wasn't home. The dog ketch'd a deer going through the fence, and she took the axe and knocked it in the head. It happened half a mile from us, but what year I can't just say."

I remarked that the woman had done well to secure the venison.

"Yes, sir," said Uncle Chivey; "wimmen in them days waa'nt afraid of their shadder—wimmen waa'nt. Wimmen didn't have the luxuries they have now," he continued, "but I think they enjoyed themselves as well as they do now. I'm sure they did, for I—" The rabbit was coming our way again, and Uncle Chivey raised his gun to his shooting shoulder, which is his left.

Bear Habits.

Getting back again to bears, in the abstract Uncle Chivey said that he never baited his bear traps, but preferred to set them in the bears' paths. In July and August the male bears are in search of mates, and travel long distances after them. The females with their cubs keep a much more restricted range, and in all his trapping Uncle Chivey has only captured one female bear.

Uncle Chivey says the bears bite their sign trees during the mating season. He has followed their trails four or five miles at a time by the worn ground and bitten trees. At this season the bears are overheated and love to wallow like hogs in the mud. They do not care for clear streams or ponds, but frequent the same mud holes year after year. One bear Uncle Chivey admitted having followed three days after it had broken the trap's chain and gotten free from the clog. The bear had smashed a dog's ribs which came too close, and gave indications of being an ugly customer, but just as the affair promised to develop into a good story, Uncle Chivey recollected himself and gave the credit of the killing to other hunters.

A Gunsmith of the Old School.

Uncle Chivey's gun was a single-barrel, muzzleloading shotgun, with straight, rifle-shaped stock and rifle sights on the barrel. I asked him if it were not an old rifle rebored. He said it was not, that it was a gun made, lock, stock and barrel, by Pat (or Albert) Gove, of Lincoln. "He made it all," he continued, "and can make the best of rifles and shotguns, but nowadays it's cheaper to put on machine-made barrels, so he buys them. He's a very ingenious man; he'll be missed in Lincoln when he's gone."

While talking, Uncle Chivey, who was keeping a strict record of the dog's whereabouts from place to place, from time to time broke through the crust.

"It's been pretty tough going to-day," he remarked on one of these occasions. "I thought I'd a gin half a dollar for a pair of snowshoes. I'll be eighty-three next May if I live, but I can give young men some points in traveling yet." He puffed once or twice on his pipe, and then came the apologetic second sentence for which I had been waiting: "Oh, well, they ain't used to it like I be!"

Uncle Chivey looked up and smiled. "Well, now, if you're through, I guess I'll go and kill a rabbit."

J. B. BURNHAM.

In the Ranger Service.

I.—In Old Connecticut.

BY ROWLAND E. ROBINSON.

SINCE the infirmities of age have robbed me of the busy activity of life and most of its idle pastimes, I find myself dwelling more among the scenes of youth and prime than in the dullness of these later years. Alack! I am but a useless old man, no longer able to wield axe or rifle, fit for nothing but to dream of the past, and tell my dreams to my grandchildren. Dreams, indeed, they must appear to them who, dwelling in the midst of peace and comfort, can scarcely realize that but a generation stands between these piping times of peace and those troublous days of barbarous warfare that were our continual experience, nor that these fruitful fields were, within the memory of living men, a barren wilderness, howling with the voices of ravenous beasts and more cruel men.

I am no clerk, having been an infrequent handler of the pen. I fashioned my first pot-hooks and trammels in a dame's school, yet it is not without pleasure that I set myself to the task of writing down some of my experience of those days for my grandchildren, well knowing that they will be kind critics when they take account of an old man's good intention, and may the reading lighten for them some tedious hours as the writing may for me. I have so often told them of my childhood in the town in old Connecticut, how I was left an orphan at a tender age and went to live with my uncle, that I need not repeat it again, for the simple tales of childhood that entertained childish ears would prove but dull to maturer minds.

My uncle was a hard, stern man, and though I was comfortably housed, clothed and fed during the years that were spent in his household, I do not pleasantly remember them. He was a just man, according to his light, and treated me as he did his own children, apportioning to us equally our hard tasks and our rare holidays. Those days are the brightest ones in the memory of my earlier years. Then I was given my choice either to join the other boys in their sports, or to behold the military pageant of training day, or to take a boy's noisy part in the bustle of election day. I would go a-fishing in the clear trout brooks or, when I had grown old and strong enough, go hunting with my father's rifle, which, with his love of its use, had fallen to me.

The region had been so long settled that it was held to be quite safe from dangerous savage beasts and from the attacks of Indians, though we often heard frightful rumors of their depredations away to northward on the border of the great wilderness, so that I was free from every risk but of getting lost when I ranged away into the forest in pursuit of small game with the hope of killing a deer, or followed the back trails of the brooks into fastnesses of the hills, to where, I fancied, no human eyes but Indians had ever beheld the sparkle of their downward leap, nor other ears listened to their continued, unchanging music.

My holidays were of more profit to the household than those of my cousins, for while theirs but emptied their pockets of hoarded pennies, mine furnished the table with many a mess of trout, and savory pigeon pot pies, rabbit stews, broiled partridges, and, upon one long-remembered occasion, a grand roast turkey. Yet from my love of such solitary pastime, I got the name of being a solitary, surly fellow, and, for an occasional stolen indulgence on the Lord's day, gained the evil repute of being an ungodly youth.

In the winter we went to school, and a great company of us there was gathered in a log schoolhouse to take our turns of freezing in the corners and of roasting at the huge, wide fireplace, as well as warmings not infrequent with the master's rod and ferule. Though I was not overfond of my books and learned little of them, I did learn one lesson in my school days which much concerns this story, if so plain a narrative be worth the name. It was a pleasant lesson in the earlier chapters, though it cost me grievous heartache before the end was come to. When we were but children, my little schoolmate, Mercy Walden, was my best-loved companion, dearer to me than my only sister, who was early separated from me, being sent to live in the distant home of another relative on the death of our parents, so that we saw each other no more than twice during our youth, and on those rare occasions were as shy as strangers. Mercy was a timid little maid, and, having no brother to take her part against rough boys, or what I reckoned worse antagonists, domineering, bigger girls, I, being a stout, resolute youngster for my years, became her champion. Perhaps it was through this relation that I became so fond of her and she of me, that neither of us was so happy as when we were together. As we grew older our attachment suffered no abatement of warmth, though arrived at an age to understand that our love was not that of a brother and sister, and our elders fell into a way of their heads wisely nodding when they saw us together, so that we grew shy and ill at ease in their presence. We began

making plans for the future with the perfect hopefulness which ever lights the path of youth—a path that opens a broad, clear way to every desired object. Alas! it grew rough and steep before we had traveled far along it. It was unfortunate for our case that Mercy was the daughter of an austere pious man, our parson, and her lover an unrighteous person. No sooner did the nature of our affection become apparent to her family than her father declared war against me, and my pious uncle was no more amicably inclined toward me. An alliance with the minister's family was an exaltation which such as I had no right to aspire to. If any young man of our community was to be so honored it should be my uncle's eldest son, a person of good standing in the church and with tangible prospect of earthly, as well as spiritual, welfare.

I could not but believe Mercy loved me truly, yet she was so conscientious in her duty to her parents, that she would not for a moment listen to me when I urged her to go secretly with me to a distant part of the colony, or, what better suited me, to one of the new settlements to the northward on the Connecticut River, where we might live in peace beyond reach of our kindred, even if in peril of the common enemy. All my pleading, joined to the inclination of love, could not swerve her from filial obedience, even when she was come of age and to the right to choose for herself. Only so far would she go as to meet me in secret of rare evenings and rarer Sunday afternoons, the more delightful meeting times to me because I could then behold her face, so fair and comely that it was a delight to any eyes.

"We must wait," she would say, "till God in His own time softens my father's heart toward you, or in some manner opens the way for us. We must wait and hope."

So she told me for the hundredth time one evening when I met her in our trysting place, which was behind a wall at the foot of the parsonage orchard, where a thicket of sumacs pitched a tent for us, now of green, now of scarlet, till it was struck in chill blasts of November and no longer gave us shelter or hiding.

"I will not wait any longer," I declared. "Come away with me, Mercy, and we will make a home for ourselves in one of the new settlements far up the river, where our people will never find us. Squire Bassett will marry us in spite of your father and my uncle, and then we will take a week's provisions and go up the river in my boat in search of a home. It will be an easy quest, for there is no end of fine land waiting for settlers, and game enough for an Indian's heaven, so the hunters tell me. And such a happy voyage—Mercy, you and I alone together in this pleasant fall weather."

I saw in the dim light such a faraway look in her soft eyes, as if they already beheld the new home in the land of promise, as gave me more hope than ever before that I was about to prevail over her scruples and I beset her with greater earnestness. But she shook her head with slow decision, and held as steadfastly as ever to her resolution.

"You are hard and cruel," I burst out, angrily. "You do not love me as I love you or you would forsake kindred and friends for me! What are your father's pious whims to my love? You will wait and wait and make me wait till my heart breaks, and when I am gone, and they have found some one rich and godly enough to be your mate, they will marry you to him, and that will be the end on't."

"It is you who are cruel, Paul, for you know that I never loved any one but you, and so I never will, but will wait for you. But you will not be patient."

My anger melted away before her gentle upbraiding, and her tender, reproachful eyes beamed with the soft light of love, and I answered:

"Yes, I will wait, Mercy, but I cannot wait here. I cannot bear it. I must be in some stir of life, or in some way busy my hands to dull this heartache and longing. I will go to the army or up into the wilderness and begin making a home for us."

"You must do as seems best to you, Paul," she sighed. "It will be the hardest for the one who stays, but I can bear it, if it is easier for you to go than stay. But do not go to the dreadful war. I shall never have peace for thinking what might befall you."

"The wilderness has its dangers, too," I said. "I might go to sea, but that's as perilous, and I have, of all things, the least liking for it, though I know nothing of it but by hearsay."

"Alas!" she sighed again. "A poor maid knows not which way to turn when she must choose what peril her lover must dare. You must choose for yourself, and may God keep you safe and send you back to me."

"I shall not choose in haste to repent at leisure, and I shall see you before I go to let you know where I go," and with this we parted with never a thought but that we were to meet again, and under such common circumstances as marked our usual meetings.

I turned a little way along my secret path and looked back through its pillared and arched vista to see her standing outside the sumac bower motionless as a carved image, with her hands clasped against her breast, the full harvest moon shedding its light upon her golden hair and half-upturned face, and I knew that she was praying for me. Little I bethought me what years of heartache should pass before I again beheld her, nor how my heart should be hardened against her.

[TO BE CONTINUED.]

It stands to reason that the managers of railroads would resent the purloining of game which their shooting patrons may have intrusted to the baggagemen. Such treatment of passengers is not good business. We may be sure that wherever the abuse exists it will be stopped speedily enough, once it has come to the attention of those in authority. The sportsman who has been imposed upon in this way owes it to himself and to others to prevent a repetition of the abuse by reporting it to headquarters.

Carrying on Portages.

Editor Forest and Stream:

I notice an article in the FOREST AND STREAM of Sept. 7, by Cecil Clay, criticising me because I had so much luggage on the trip through the Maine woods of which I wrote under date of Aug. 31. I am free to admit that I took with me more than was absolutely necessary. He wonders what my idea is of "a heavy back load." Evidently he considers 70 or 80 pounds about a fair amount. I have carried such loads in the woods, and can do it when necessary, but the man who does this or asks his guide to thus make a mule of himself when on a pleasure trip such as I described, when time is of no importance and pleasure everything, has ideas very different from mine. We did not have one-half the weight he imagines, but still thought it best to divide it into ten loads, which could be carried with ease, rather than to make horses of ourselves. Had I been in a hurry, perhaps we would have carried more at a time, but 40 pounds, in my opinion, is a "heavy load" for one on a pleasure trip.

I also notice the article by Mr. Hardy in the issue of Sept. 21. He concludes I must have slept most of the time and allowed persons to walk over me. A reference

A PAIR OF IOWA BULLSNAKES.

to my article will show we were thirteen days on the trip, not eight days, as this gentleman seems to think. We slept only during the hours intended for sleep. I do not know what Mr. Hardy saw in this territory ten years ago; I do know that out of the thirteen days there were eight days we did not see any one, and we were not asleep, either. I did not discover any lakes or new territory and I did not claim to have done so. I was not afraid of getting lost in the woods, though I have been lost on other occasions. I did not spend my time running through the woods to find "natives" from whom I could obtain food, but took plenty with me instead.

I did not make the trip to see how heavy a load I could carry, nor to depend upon the generosity of the people whom I might find along the way to obtain supplies. I went to get rest from business, and took with me ample in the way of provisions and outfit, and spent my time in more pleasant recreation than tramping through the woods in search for lumber camps or "natives" from whom I could get food.

The Ways of an Owl.

MR. WALTER B. SAVARY sends these further notes of the captive owl whose ways were described in our issue of Sept. 7:

He fluffs out his feathers when approached, and snaps his bill and hangs to his game with one foot. He never strikes with both feet, but will use both to hold a tough piece of food while tearing it apart. His grip is something fearful. A small chicken or mouse is squashed almost to pulp, but he can let go at will, though stories are told of other birds getting their claws fixed in fish too heavy for them to lift, and being taken under and drowned. Another tells of a darky who climbed to a fish hawk's nest and the mother bird struck into his wool and was brought down by its frightened and unwilling captor. Our bird is very fond of house rats, and takes one quickly, shifting it from his bill to a foot and then flying to his high perch; if he is not hungry he will sit on the rat all day. We have tried to see what he could do in the swallowing line. He bolted the heads of two bantam cocks, then their four shanks, feet and all; the leg bones were broken so they would take the bend of his throat. He ate the Cooper's hawk clean to its bones, and swallowed the shanks—broken—feet, claws and all; this was a feat indeed, and probably the most indigestible food he had ever eaten. Here it may be said, that all bones, hair or feathers are thrown up in a wad or plug after the flesh has separated from them by the stomach's action.

One of the most difficult things for him to swallow whole is a dead chicken—one about three weeks old. He has to be "worked" to make him do it. Given the chick head first, he will make an effort to bolt it, and must be kept busy by prodding with a small stick, or he will shift the bird to one of his feet and then tear it to bits. If kept at it, he makes some violent contortions with his head, his ear tufts are laid flat, his tongue protrudes and breath comes hard, his eyes glare and slowly the chicken goes down. When it has passed his mandibles he will rest, but it is not over yet. A few more jerks, and only the feet remain sticking out from either side of his bill.

With another effort these disappear, he straightens up, raises his horns and is ready for another. The solemnity with which he opens and shuts his eyes—one at a time—after bolting a refractory mouthful is amusing.

Owls do not drink, and pay little attention to their feathers, never washing or combing them—hawks wash and dress their plumage—hence, our bird does not like soft, mushy food; viscera he rarely eats, and shellfish are usually rejected, but we have coaxed him to eat a lob-worm—one of those big fellows that are found in the clam flats. These worms are elastic, with a leathery skin, ornamented with two rows of tuft-like excrescences along one-third of their length. As the bird swallowed one end a good deal of fluid ran from the other. Our owl hoots once in a while in the evening, and sometimes when he has just taken a chicken while it is yet in his mouth. He occasionally makes a little whistling sound, but is generally quiet, unless approached; then he hisses and snaps his bill.

The horned owl is built for killing, strong and very solid for his alar extent, with prodigious legs and feet for grasping and holding. It can kill any American bird outside of the Raptores. If they were diurnal these owls would be among the worst enemies to our feathered game, but they are strictly crepuscular, and are not very rapid

fliers, but can sustain a long flight. I saw one this winter that the crows teased until he went up into the air at least 500 feet, and then flew off over Buzzard's Bay out of sight; that is the only time I ever saw an owl go up to a great height.

A year ago I had an owl that was much smaller than the present one, and without ear tufts, except two tiny points which were rarely shown. He could depress the feathers around his head and neck and look quite hawk-like. He had a good spread of wing, and slender legs and feet, with very long, sharp claws.

I filed the points from his talons first thing after I got him home. He was wing-tipped with a shot, but soon recovered, and became quite gentle, and could be handled; would sit on one's hand and eat a variety of food, liked scallops and swallowed rams, soft parts and all. This bird had the run of the woodhouse, and often came into the kitchen; afterward he was transferred to the barn, and got out somehow and was never seen again.

The mottled owls make very nice pets. They are a little larger-bodied than a robin, and grow very gentle. I had one that would sit on my finger while I scratched his head. He would eat gingerbread and other cooked food and showed no desire to attack anything. I think it likely that these tiny owls may catch insects. They are much easier to keep than the larger varieties, who demand raw meat and are unpleasant to handle. WALTER B. SAVARY.

A Flock of Loons in Aerial Evolution.

Editor Forest and Stream:

Yesterday morning, at 7 o'clock, I was leaving my home to inspect the farm. As I left the back door my ears were saluted with the plaintive but unmistakable cry of one or more great Northern divers or loons. My house stands two miles from the salt water of Long Island Sound, and two miles from the fresh water of the Housatonic River. Looking upward, in the direction of the sounds, I descried against the background of a clear, blue sky, the forms of five loons, who were describing large circles in a manner similar to our hawks. They seemed to try to preserve about the same distance one from the other, and one seemed distinctly the leader. From time to time the leader (presumably) would let go his cry, and one or two of his companions would answer in more subdued tones. I timed them, and after eight minutes of circling, the leader gave a signal, and they got together and took a Northwest line toward the Housatonic River, preserving a somewhat regular alignment in triangular form with the leader at the apex. My superintendent (a sportsman and naturalist of some note) and my gardener were witnesses of the above occurrence, and would make affidavit that the birds were loons. They were some 1,000 feet in the air.

MORTON GRINNELL, M. D.

MILFORD, Conn., Sept. 22.

A Pair of Iowa Bullsnakes.

NEVADA, Ia.—*Editor Forest and Stream:* I inclose a photograph of a pair of Iowa bullsnakes. The one shown on the left my father caught in the act of robbing an old turkey's nest. My father had missed eggs from the nest several days, and finally caught the old fellow coiled up in the nest with an egg partly swallowed. When he struck the snake with a stick it disgorged the egg, which was returned to the nest and hatched out a turkey. The other snake was killed near by the same day. They measured over 4½ feet in length.

The King of the Forest.

FAR in the North where the pine tree grows,
And the tall spruce covers the land,
Near where the turbulent river flows,
Are moose tracks in the sand.

The hunter comes a bit too late,
And there he bends down low;
He shakes his head, for he must wait
For moose tracks in the snow.

The moose has learned from the years that have passed
That the summer and spring are his own;
But the first fall of snow may be the last
That will quicken him thro' to the bone.

Over the mountain and far beyond
He wanders aimless and free;
He stands by the shore of the forest-bound pond,
And is monarch of all he can see:

The winter comes with ice and snow,
And he's filled with fear and pain;
He longs for the summer; for winter to go,
Till he's tracked by the hunter and slain.

Oh, evergreen forests and hills afar,
Way up 'mid the pine and the spruce,
Long in thy depths, where fit beauties are,
May wander the antlered moose!

J. SEABURY.

Squirrel Hunt "Episodes."

CHARLESTOWN, N. H., Sept. 19.—*Editor Forest and Stream:* The shooting season for all upland game opened in New Hampshire last Sunday, with a pouring rain, which undoubtedly kept all the gunners at home who did not stay there out of respect for the day, but Monday began with a heavy fog here in the Connecticut Valley, clearing at 9, bright, still and warm, which sent my memories back to my boyhood days and awakened a cloud of pleasant reminiscences, which haunt me yet, but are too far in the distance to describe in detail. Your correspondent, Mr. H. Avis, gave us a delightful account of a squirrel hunt, in your columns, a year or two since, which I enjoyed hugely, for it was true to life, to the letter, and I wish I could recall the incidents of some of mine as clearly, for it was my favorite sport, next to trout fishing, for many years, and many a happy day have I spent on the hills of New Hampshire and Vermont, in pursuit of the active, bushy-tailed nut-eaters, sometimes alone, sometimes with companions who have all gone to the happy hunting grounds, except my own sons, who are now engaged too deeply in the cares of business life to have time for shooting, and one old friend, over in Manchester, who, like myself, has "hung up the fiddle and the bow" and placed the old double-barrel in the closet corner, where it will probably rest with the other old muzzle-loaders.

My boyhood memories go back to the days when Andrew Jackson was still President of the United States, when "turkey shoots" such as Rowland Robinson has graphically pictured were the favorite autumn sport in New England, and when "the boys" looked with contempt on a "shotgun," and aspired to pick off their game with a single bullet of the size of a large pea, or weighing sixty or eighty to the pound. So was my first gray squirrel brought down, to say nothing of scores of red ones and chipmunks, on which I practiced before I attempted the larger game. After a few years at this I became the possessor of my first fowling piece, an antiquated flintlock, and from that rose to percussion caps, on an old family relic, which had been altered over, and became a pretty good shot on all stationary game, though my early rifle practice always hampered me more or less in wing shooting. But, as I said, Monday last brought back the old days, when dressing by candle light and making a hasty breakfast of bread and milk, with whatever else was handy, left on the kitchen table the night before, I started out in the heavy fog at early dawn, climbing the hills so as to be up among the oaks at sunrise when the squirrels were out for their breakfasts, and sometimes taking a lunch in my pocket and making a day of it, or dropping in at some friendly farmhouse for dinner. Of those early days I can recall no distinct memories as to their results, and it is not until 1851, when I returned from England the happy possessor of a 12-gauge double-barrel, that I begin to recall my tramps more clearly. At that time my younger brother, who now sleeps in a Western cemetery, the victim of disease contracted during the Civil War, had grown to man's estate, and was for two seasons my constant companion.

Our favorite route led us from the village up an old, disused road to a long pasture at the base of the hills, at the entrance to which was a big farm gate, overshadowed by two or three huge oaks and butternuts, and here we always expected to get, and usually did get, our first squirrel. Sloping down from this gate toward the river road was a grove of oak, chestnut and butternut, into which we went next, and sitting down on a rock or fallen tree watched for the dropping nuts and swaying branches, telling us of the presence of another of these agile marauders. Sometimes this cover "drew blank," and we then turned our footsteps in the opposite direction, right up the hill toward the sunrise by an old trail, along an old rail fence by the side of a deep ravine, filled with oaks and butternuts, where we were very apt to pick up one or two more, but aiming to reach the crest of the ridge and another old trail, which led down along the back side of it by another old rail fence about the time that the sun broke over another higher ridge further to the east.

These ridges were covered with old oaks and chestnuts, and in the little valley in which we now were were a number of beeches, and the old rail fence was a favorite runway. Further down the valley had been cleared, and a long stretch of open pasture ran away to the south, dotted here and there with huge old chestnut trees, which had escaped the axe. It was an ideal squirrel ground, and

well do I recall the picture as I have sat on the gnarled roots of some old oak and looked down the valley, shimmering in the haze of an Indian summer sun, while I listened for the sound of dropping nuts or watched the tree tops for the swaying branches which marked the spring of the desired game.

Frank Forester scoffed at squirrel shooting. Nothing was game to him which did not wear feathers and require the help of a dog to find it, but although many people employ a dog in squirrel shooting I was not brought up in that way, and preferred to trust to my own skill in woodcraft, and stalk my own game. A favorite method in those young days was to hunt in couples, one armed with a small-bore rifle and one with a shotgun, and the squirrel could not evade us by dodging round a tree, while the rifle would bring him down if he got up so high as to be out of shot, or only showed his head among the branches. As I said before, these days are too far distant to recall the details of any particular tramp, but many a pleasant day have I spent along the old trails, at intervals of many years, first with schoolmates, later with my brother, and twenty years later still with my sons. The old hollow chestnuts and oaks are all gone now, and save a small stretch of the ridge, there are very few large trees left, but some half-dozen years ago I took my gun one afternoon and strolled down over the old route, more for the sake of the reminiscences than with any expectations of finding game, and I was not disappointed, when I found the old rail fence all rotted away, the once well-worn footpath obliterated by a growth of young pines and hemlocks, or obstructed by the decaying limbs of some ancient chestnut, which wind or lightning had brought down across the path. I reached about the usual limit of our old, old morning tramps, and came to the place where formerly grew a giant oak, and where I once shot the largest gray squirrel I ever saw, about as big as a cat, and sat down on a mopy stone, half-hidden by a branching hazel. As I sat there watching the tree tops I heard a rustling in the leaves near me, and looking down there was a squirrel hunting for nuts, not 20 feet from me. My tan-colored coat and drab felt hat were so near the color of the yellowing leaves that he did not notice me, and I sat some minutes watching his graceful movement as he foraged among the leaves. He was too near to shoot at, and I was so much interested in his operations that I lost all desire to kill him. At last I moved my hand to brush away a fly, and he discovered me and was off through the trees like a skyrocket. My thirst for game was over. I shouldered my gun and took the back track for home, emptied both barrels on my way at the knots in a board fence, and have not pulled trigger since, except to send a charge of bird shot this spring after some overneighborly hens, who were scratching up the newly planted seeds in my garden. The old gun rests in the corner of the attic, still in good condition after fifty years' service, but in these days of breechloaders and cartridges is hardly likely to be called into service again.

These "squirrel hunts" were but "episodes," as Kingfisher calls them, in the course of many busy years, and at long distances apart, and it has so happened that my holidays have occurred at periods when the rod was more available than the rifle or smooth-bore, and being "my first love" has been more frequently and more lovingly wielded, but, then, bright, autumn days bring back the old memories, and I hope that their recital may awaken similar ones in others.

VON W.

The Passing of the Ducks.

WE were off on the 8:30 evening train on the Great Northern, pulling out of St. Paul, bound for the Coast. There were others burdened with gun cases, shell boxes and traveling bags, who were by no means going through to the Pacific Ocean, but whose destination was anywhere along the road approximating two hundred miles or so from town.

Some were after chickens and others were after ducks. Because of the notion of our game warden, Fullerton, of appropriating gun, dog and game of the sooner hunter very little previous shooting was done this season, and reports of chickens well grown and plentiful in unbroken coveys made the boys sanguine of great sport. Our station was Dalton, train due about 2:30 A. M.; so we turned into our berths, leaving orders with the porter not to overlook us; when time arrived, that we be called. This injunction to the porter was neither a formal nor a superfluous admonition. Porters ere this have dozed, and men have been carried by.

I remember one case where a porter carried a peppery German going out after "docks and shickens" beyond his station, awakening him about half an hour too late. The whole thing was a tableau. The German, the moment he realized the situation, let loose on the porter with such idiomatic profanity that the negro turned an ashen paleness. The porter had nothing to say, nothing at all to say, because the passenger monopolized the situation. I do not think I ever heard German cussed in real elegant form until that particular morning.

While I was intently, in my dreams, marking a bunch of teal coming low on the lake and up wind, wondering how many would fall to my lot, some one seemed to be tugging at my coat tail, and sure enough our dusky attendant was trying to impress upon me that "next stop is yours, boss; train's late; running like de debil; yer ain't got long to dress afore we're there!"—and we came to our senses and feet the same instant, and were soon on the platform with our dunnage. One of our party, through masterly activity in failing to present his checks at the door of the baggage car—it was a flag station, and no one in charge at the depot to receive baggage—had to resign himself to the fact that his outfit, with the exception of his gun, had gone up the road. But with offers of an extra coat, extra rubber boots, freedom of our shells, etc., we calmed down our irate member, and clambering into the rig were speeded along the prairie road to Bushnell's camp, at Ten-Mile Pass.

A change of apparel and a cup of coffee made us ready to take our stations upon the pass.

With the first streak of dawn a flock of teal could be seen making their way toward the pass, coming up wind. They were high, entirely too much so, yet in their anxiety to warm up their gun barrels some of the boys tried the distance. No. 6 shot as a rule will not do much execu-

tion upon ducks 80 or 90 yards up in the air, and the general rule held in this case. The birds scattered momentarily at this discharge, bunched again, and sped on higher than before.

But teal, canvasback, redhead and now and then a mallard came our way. The birds were native birds, and finding no fusilade awaiting them this spring rested in our near-by lakes, and made their nests and reared their young.

Mark right! An old mallard. Watch him come, craning his neck and smelling out danger. His course has been near the water's surface, but as he nears the pass a glint from a gun barrel or a moving head has warned him, and up, up, he goes. But he has been too late to make his upward course carry him without gunshot, and as he passes our cover the first shot kills him cleanly in midair, and he falls, a confused bundle of neck, wings, legs, body and head, not 20 feet behind us.

A flock of eight blue-winged teal are coming low upon the water, and as they swerve slightly upward Dunn and Nolan each use both barrels in quick succession, and the eight teal fall to earth, some winged and others dead. Our friend from Rockford, to the left of Nolan, had counted on a pair from this flock, but when he got ready to pull his triggers, the birds had already begun their descent to earth, and there was nothing of the flock left to shoot at. Some of our birds fell into the lake back of us—we were shooting on a ridge between two lakes, but the wind at times blew them on shore, making it unnecessary to pick them up from a boat.

A number of times the flock would continue its flight by and beyond the pass, seemingly unharmed, when, without warning, one—sometimes two—of the birds would fold their wings and come tumbling to water a thousand feet out in the lake.

The failure on the part of a gunner to judge of distance means many a wasted shell, and often a crippled duck falling far out of sight and reach.

One man will contend that in duck shooting care should be exercised to take only those shots where it means a clean, out-and-out kill, making it possible to retrieve every bird stopped in midair. Another argues that in duck shooting you take only the sure and safe shots there is absolutely no fun or sport, the fun and excitement concentrating upon the long, doubtful shots, which, when one makes successful, incline him to feel proud of his gun. To watch a crowded and popular pass, easily accessible to all kinds and sorts of gunners, reminds one of the old pigeon-match days, when men and boys with all sorts of guns stood a dozen deep beyond the bounds to finish the missed or crippled pigeons.

To see a solitary mallard approach the pass, unconscious of harm, until just about within gunshot, and then to see that bird climb for the moon, the shots following it as if it had a pack of giant crackers tied to its tail, is indeed a grand sight!

Up, up, it goes, as if having a charmed life, still free and seemingly untouched, when, as a sort of finishing salute, after all the rest have fired both barrels and "pumped fire" after the soaring bird, you hear the boom of the big-gauged, heavy-shotted, black-powder gun, and our fleet-winged bird comes tumbling to earth out of the sky. But by this time the boys have put new shells in, and as that already dead bird falls toward earth he is greeted with, as it were, a volley over his grave, and he is finally picked up by the most agile sprinter, and claimed as his own. To find yourself on such a pass and in such a crowd permits of your at once doing but one thing—going somewhere else. Birds, especially teal, have a way of cutting right close to earth, overtopping the bushes and cover on the pass, and it is under such circumstances that gunners get maimed. A crowded duck pass is interesting to watch from a distance, but a very unsafe spot to patronize. Then, too, the arguments over ownership of fallen birds are apt to be warm and somewhat dangerous when all concerned carry loaded guns in their hands. But we shot in peace at Bushnell's Pass, and when the morning flight was over, strolled up to the house and enjoyed our breakfast.

The birds moved not until after five, when the sport continued until the evening flight was over. The birds showed more wariness, and long before they reached the pass, inclined their flight upward. The shots were long ones, and instead of No. 6 shot, No. 4 were substituted. To have reached some of the wary old greenheads that passed overhead BB shot would not have been heavy enough.

The shooting was confined entirely to native ducks. When the ice begins to form up North, driving down the big ducks and geese, on a blustery, sleety day, one can stand on this pass and shoot until his gun barrels get too warm for comfort, his birds being selected shots for there do the ducks fly low, much less alert to danger than when the air is still and the sun shining brightly in the heavens.

CHARLES CRISTADORO.

In New Jersey.

MILHURST, N. J., Sept. 17.—*Editor Forest and Stream:* The prospect for gunning through this section was never better. Flocks of quail are much more numerous than in past years. From all places hereabouts I hear this same report, but many of the birds seem to be small yet. It is not much of a pheasant section around here, but to the south of us I learn they are more numerous than the average. Squirrels are very plentiful, seemingly. Perhaps this being a hickory nut year they show up on that account more than last year. Like the quail, very many of them are yet small, no larger than chipmunks, this showing them to be of the second litter. During my thirty years' residence in this State I have never seen rabbits near so plentiful. One can scarcely take a walk in any direction without coming across from one to half a dozen, and I also hear the same report from all sections in this part of the State—the result, undoubtedly, of the law forbidding the tracking of them in the snow, and also of dogs running them out of season.

So, taking it altogether, with us it is to be an A No. 1 gunning season.

A. L. L.

In the Rockies.

Editor *Forest and Stream*:

During the summer and fall of 1880 I was employed in a timber camp in southern Wyoming, getting out fencing and building timber for the Big Creek Live Stock Company, or, as it was more commonly called, the Hunter Ranch.

One afternoon in early autumn I was about the camp, and my employer, Mr. P., had gone out to hunt for his oxen, which had strayed away—the oxen being the favorite power for "snaking" the timber out to the wagon roads. He came rushing into camp about 3 o'clock, saying he had scared up a monstrous bull elk about eighty rods from camp. We were in need of meat at that time, and the old man was very desirous of getting that elk, as he declared it was a "whopper."

I took my rifle and went with him to the place he had seen it, and there were the tracks, which showed him to be big sure enough. I knew of a point about a mile away where I thought he would pass, from the direction he had started. I therefore told Mr. P. to wait there about ten minutes and then trail it through, while I would watch for him.

After getting to my stand and waiting fifteen minutes, I knew my scheme wasn't working. I went back where I had left the trail, and found it had only gone a few rods until it turned and went in the opposite direction.

I could see where Mr. P. had followed it a very short distance to where it had gone down into a swale or draw, as they are called there, which was covered with grass and weeds, so that it left no trail. By investigating I found that it had turned and followed up the draw, knowing by instinct that it could not be trailed there. I knew that Mr. P.'s inexperience in trailing would land him out of the chase, and I started in to finish it myself, rightly judging that he had gone back to his work.

Crossing to the further side of the draw, I followed up to its head about sixty rods, and in going around above it I found just what I expected, the track of the elk coming up out of the draw. I followed on through the heavy timber, then out into the jack pines, which grew about 10 feet high and very thick. Being uncertain as to how far he would go, I was ready to receive him at any time.

Suddenly he was up and off through the jack pines like a runaway locomotive. I fired the instant he started; then he swung around and went quartering away from me, giving me four more shots before he got out of sight.

After having seen the animal, I did not wonder that the old man was so excited about it, for it looked a monster indeed, with immense antlers. I examined the magazine of my rifle and found I had just one cartridge left.

I soon found drops of blood along its trail, and knew by its actions that it was badly wounded. It took to the heavy timber, and just before I entered the woods I saw a fine buck deer about 100 yards away, standing looking at me. How I did want to take a shot at him, but I was compelled to save my last shot for the elk, or give him up. I went reluctantly on, leaving the buck standing there offering a shot which was tempting indeed. Shortly after coming into the woods I met Mr. P., who had been at work near by, and judging from past experiences, he supposed of course when he heard me shooting that I had killed the elk, and instead of bringing his gun, as I had hoped he would, he brought the axe to help cut it up.

I told him it wasn't ready to cut up yet, and for him to engage himself industriously in keeping dark till I should get in my last shot. I hadn't gone far, when I saw through some alder bushes a bulk of some sort on the bank across a little creek, and thought it looked like an elk. I got on my hands and knees and crawled about 25 yards nearer, when he turned his head, and I saw it was him. And as I had a plain view of his great black neck I took careful aim at the center of that and fired. His head dropped back on the ground, and I knew the shot had broken his neck, and he was ours.

Never before or since have I seen such a magnificent specimen of a big game animal. It was before the rutting season; he was sleek, with his new winter coat of hair, with all the fat he could carry and a magnificent set of antlers, which were perfect in symmetry. As he lay there I almost repented having killed such a noble-looking animal.

In speaking of weights of game, that was a very large elk, and as fat as they can possibly get, and after the forequarters were trimmed very closely and dried for nearly forty-eight hours they weighed exactly 500 pounds, which of course is much above the average weight of elk.

I killed one larger elk, but it was in poor flesh, and of course was not nearly so heavy.

Several years later I, with my father, traveling in the West, visited the old deserted timber camp. I found this spot and the tree on which we had hung the meat, but I went away feeling sorrowful rather than gratified. All the familiar places which had been so dear to me, where the axe had never defaced nature's arrangement, and where the wooded mountain sides had been furrowed with the solid-beaten trails of elk and deer, were now stripped of all serviceable timber and checkered with timber roads, so that nothing looked natural or inviting. The open mountain sides, which had been abundantly covered with tall, rich grass, on which our stock had kept sleek and fat while we were working them, without the use of grain or hay, were now bare and brown, and overrun with cattle. When we see such changes we feel melancholy, and inclined to blame somebody.

Who is to blame? Did I not swing the axe to help deface this beautiful spot? Did I not help to hunt and kill the game and to herd and care for the cattle, which increased and multiplied until all accessible range was necessary for their sustenance? But why lament for that which is inevitable; that which must come in the natural order of things? As civilization and cultivation advance into the remote regions, the wild animal life which required the food, as well as the solitude, for their well being, must give place to the new order of things. The two conditions cannot exist together.

When I beheld for the first time the almost boundless expanse of uninhabited territory of the Rocky Moun-

tains, from the lofty peaks, and considered that this was all ideal game country, well wooded and watered, with abundance of feed, and that a greater portion of it would always remain uninhabited, I thought, "The game supply can never be exhausted here!" A few years of observation made plain the truth to me. All the game that was hunted and killed during the hunting season in the mountains would never have depleted that country of its game, but it was the occupation and settlement of the lower valleys, to which the game was compelled to migrate in winter, that reduced its numbers so fast. Elk and deer were compelled to go into the lower valleys during winter or starve. In doing so they congregated in great bands and thus became an easy prey to all their persecutors, being for the most part in open country; then, as if to hasten their extermination, cattle and sheep were put on their winter range, cleaning up every particle of feed, which left nothing but starvation for the game. No doubt the passing away of the elk in the past fifteen years has been as rapid, or nearly so, as that of the buffalo during any fifteen years of their history; not of course in numbers, but a relative proportion of their original numbers.

Were it not for the deep snows necessitating the big game abandoning the higher altitudes in winter, their condition might remain unchanged for a long time. In this, the great game regions of Maine and New Brunswick have a great advantage over the hunting grounds of the Rocky Mountains, for where the Eastern game live there they get their winter food; where they cannot be disturbed by the inroads of settlers; and long after all public hunting grounds of the Rocky Mountains are depleted of their game, the Eastern hunting grounds, where hunting was done many years before the great West was settled, will still be the hunting grounds of our land.

EMERSON CARNEY.

MORGANTOWN, W. Va.

A Spring Shooting Demonstration.

Editor *Forest and Stream*:

Last winter the sportsmen of Jefferson county secured the passage of the following law:

Section 20a. Web-footed wild fowl shall not be taken in the county of Jefferson from February 1st to August 31st, both inclusive; or taken in the night from sunset until sunrise.

This law was signed by Governor Odell April 6, and, by energetic effort on our part, was extensively advertised, and went into effect immediately, with the result that the birds driven through the rest of the State by the spring shooters, found a safe refuge in our county, and, in a short time, our waters were alive with all species of wild-fowl, from the great, gray goose of Canada to the little blue-wing teal. All through the months of April and May they rested and fed and enjoyed themselves, and became as tame as domesticated fowl.

Imagine yourself in an open boat drifting through an immense flock of that most wary of birds, the Canada goose, the birds simply swimming out of the way of the boat, and so near that you could see their eyes, and not one of them taking refuge in flight. This was a common occurrence on Black River Bay. In all our open waters—the St. Lawrence River, Lake Ontario and our large bays—there were not only large flocks, but acres of wildfowl.

These birds stayed here until June, gradually diminishing in numbers as they left for their nesting places. We have claimed as an argument for the passage of this bill that if the fall ducks or divers were unmolested in our waters in the spring, they would find choice feeding spots, and would return earlier and in larger numbers and stay longer in the fall—a fact which yet remains to be proven. We also claimed that if the summer ducks, the black duck, the mallard, the wood duck, and the teal, were unmolested, they would remain with us and nest and rear their young. That they have done so this year is an undisputed fact, as never within the memory of the oldest sportsman have there been so many of these ducks in this county on the opening day.

On Black River Bay is a marsh consisting of hundreds of acres of wild rice, interspersed with patches of flag quill weed, podalders and bullrushes, with plenty of water to push a sharpie, and it is one of the best feeding spots on Lake Ontario for the black duck and mallard. One mile above, on the Black River, is the village of Dexter, two miles further up the village of Brownville, and four miles more brings one to Watertown, the county seat, a thriving city of 25,000. These three places are connected by trolley. This marsh, being so easy of access, is the favorite hunting ground for this section of the county, and on opening day, Sept. 2, was crowded with shooters, from the small boy with the Zulu and the twenty-rod gun man, to the city shooter with his 400 Greener. The small boy shot blackbirds, the twenty-rod man, when he failed to reach ducks so high in the air that they looked like blackbirds, blamed the load and went to soaking mudhens. Everybody had a good time, and fired his gun at something, and this same fusillade has prevailed ever since the opening day.

Those sportsmen who know the habits of the black duck and its extreme wariness can judge of the number we have, when I say that during this first week over 150 black ducks were killed, and all were killed in broad daylight, as shooting after sunset is prohibited in this county. A few wood duck and mallard and a large number of blue-wing teal were also brought to bag.

Nine miles north of Watertown is Perch Lake, a small lake with an extensive marsh on its northern border. This marsh is not accessible by boat. Its south side is quite heavily timbered. The outlet of this lake is Perch River, a very crooked stream which empties into Black River Bay, nine or ten miles distant. The river winding its way through woods and low, marshy flats, its banks lined with almost impenetrable buck brush, alders and willows, with immense patches of smartweed along its entire length, has always been a favorite resort for the black duck, mallard, wood duck and teal. Upon the south shore of the lake lives Dan Arnold, who, for years, has earned a precarious living by hunting and trapping. His noiseless paddle has guided the silent sharpie down the winding river for three generations of sportsmen, and his most valued possession is an old lifter-action Parker, given him by ex-Governor Roswell P. Flower many years

ago. Uncle Dan says that the black duck, mallard, wood duck and teal have nested along the river and lake by hundreds, and that never in his life has he seen such an abundance of ducks at this time of the year.

Dr. Glen Coe, of this city, formerly a resident of Theresa, N. Y., tells me that the same condition prevails along the Indian River and the many lakes in the vicinity of Theresa and Redwood. From all parts of the county where there are suitable water and nesting places comes the same report of an abundance of ducks.

We have settled for all time the question (in this county, at least), Will the wild duck breed in this State? We can furnish any amount of proof that they will.

There are a few shooters here who contend that night is the proper time to shoot black ducks—that they are night feeders and can only be shot successfully at that time.

My experience has been that in no way can the black duck be driven from a favorite feeding place quicker than by night shooting, and I believe that if night shooting were allowed in this county a large part of the birds which we now have would be driven away from here. This is a question of interest to every sportsman, and I should like to have some of the many readers of *FOREST AND STREAM* give their experience and their opinion on this subject. On Black River Bay, the black ducks come in every night by the hundreds, at sundown or shortly after, while it is yet daylight. Suppose we shot a half hour later, would they continue to come as they do now? Suppose we shot an hour later, as permitted by law in the rest of the State, would they still continue to come in at sundown, or shortly after? Suppose we should do as we always have done until this year: Have a shooter in every bunch of quillweed, or rushes, and bang away as long as he could see a black blur in the sky, would these ducks still continue to come? Suppose this same condition of things existed all through this country; how long would these birds stay here? Could we shoot day and night, and still retain these birds which our self-denial last spring has given us?

There is another law which has been a dead letter in this county ever since it was enacted, viz., the law which forbids the shooting of wild fowl from any boat propelled otherwise than by hand. We wish to give due notice that we shall use every effort to secure the enforcement of this law in the waters of this county in the future.

This letter is not written for the purpose of inducing the rest of the State to stop the spring shooting of wild fowl. It is a matter of indifference to us. If you do not want the birds, drive them up here. We know a good thing when we have it.

W. H. TALLEY,
President Jefferson County Sportsmen's Association.

WATERTOWN, SEPT. 9.

West Virginia.

ROMNEY, W. Va., Sept. 19.—*Editor Forest and Stream*: Two gentlemen living near Pleasant Dale, in this county, were killing wild turkeys before the season commenced. They were arrested, and brought before Justice Maloney, who promptly fined them \$25 and costs, which made their turkeys expensive eating. Another man was indicted by the grand jury on last Tuesday for the same offense. On Wednesday last a warrant was sworn out for a man from Mt. Pleasant, Pa., for hunting without a license. He was taken before Squire Maloney, who fined him \$25 and costs, and as he only had killed one squirrel, it was surely an expensive one.

These laws are on our statute books, enacted by our Legislature, and should be enforced or repealed. The Legislature gave our game warden power to appoint deputies, but he has failed to do so. A deputy who would enforce the game and fish law in Hampshire and Hardy counties is sorely needed.

The fishing in the South Branch has been very poor this season. The river has been muddy a greater part of the time, but the fish are not here any more, and it is not surprising, when one thinks of the number fishing and practically no protection or restocking of this once fine black bass stream. The tanneries on the Capon River destroyed it for fishing purposes, and there is one in operation at Petersburg, Grant county, on this stream now, and it is discharging its refuse into a small creek which leads to the river a half mile away. One is being built at Moorefield which will be in operation in the near future; and if they are both allowed to pollute this stream, bass fishing in the South Branch is doomed.

Our wild turkey season opened on last Monday, and Rev. Gibbons killed four at one shot, from a blind, on that day. Several others have been killed since then. The turkey season in this State commences two weeks too early, as the turkeys are entirely too small to shoot. Partridges are plentiful, but squirrels are scarce. The selling of game here causes loss of it to be destroyed. We hope the day will soon come when it will be unlawful to sell game.

J. B. BRADY.

The Old Shotgun.

Now comes the season when the brown quail's call
Pipes in the early morning fresh and cool;
When red and gold the leaves of autumn fall,
And children loiter on their way to school.
I heard a fox squirrel barking before the sun arose,
Out yonder where the woods are sere and brown;
I think he's in that burr-oak tree; no matter, tho', here goes,
I'll take the old shotgun down.

Now comes the sportsman from the city's din,
With dog and gun to wander o'er the hills;
To loiter in the meadows where the flowers have been,
To drink the pure ozone that nature here distills.
And the fever is upon me to mingle in the chase,
With the fellows who have come out from the town;
I in fancy see Dame Nature with a smile upon her face,
As I take the old shotgun down.

The old shotgun my father gave to me!
I've kept it hanging there upon the wall
Through all the summer months, but now I see
That autumn's brought again the Bob White's call.
I heard a fox squirrel barking before the sun arose,
Out yonder where the woods are sere and brown;
I think he's in that burr-oak tree; no matter, tho', here goes,
I'll take the old shotgun down.

MOUND CITY, KANSAS.

WM. FELTER.

CHICAGO AND THE WEST.

The Duck Flight.

CHICAGO, Sept. 20.—The ordinary date for the arrival of the first flight of teal at this latitude is Sept. 22. This year the birds made their appearance somewhat earlier than usual, and on Wednesday of this week, Sept. 18, they appeared at different places along the Illinois River. At Hennepin Club Mr. W. W. McFarland in one day bagged 145 teal and wood ducks, one of the largest bags ever made in that club, and the largest of which one has personal knowledge at any point near Chicago for many years. It is impossible to state whether these were Northern birds, or simply the collections of local birds of the adjacent marshes, where the shooting had been more general than on the preserved ground.

The following letter of inquiry as to duck shooting dates is from Mr. Thos. E. Tallmadge, of Chicago:

"I was at Rice Lake, Wis., last October. We did not fish the lake at all, as none of the guides seemed to think that there were fish in it. We, however, secured good duck shooting—wood duck and mallards—as they came there to roost in the evening. What, in your opinion, is the best time in that locality to shoot ducks? We had very warm, wet weather, and on the last day we were there (Oct. 15) occurred a great flight of mallards, which made me think that possibly we were there too early for the best shooting. The ducks were all in large flocks, preparatory, I suppose, to migration. They decoyed easily. As I wish to return this fall to that locality, I would be most obliged for your opinion as to the proper time. What other lakes are good for ducks in Northern Wisconsin?"

The best reply for Mr. Tallmadge is to ask him to read the columns of the FOREST AND STREAM regularly. In these days the duck flight is a spasmodic and somewhat transient affair, more especially in these lower latitudes, and it depends altogether on the state of the weather in the North. Cold storms drive the birds down, and if they find a good marsh, showing good feed and good protection, they drop in there to rest until the cold weather catches them again. Thus localized for the time, they work about more in rough weather. Given a few days of good duck weather, they usually get such a pounding that they get up and leave for some other place. Hence, an available flight is only a matter of a few days.

In the farther North these conditions do not obtain in all regards, as the birds are less disturbed. I have already mentioned an early flight of teal below Chicago. It would seem fair to suppose that the last week of this month and the first week of October would be a good time to visit Rice Lake. As to the locality of this particular Rice Lake, it is difficult to tell, for a county which is located in Wisconsin or Minnesota, and which does not have a half dozen "Rice Lakes" in it, is in rather hard luck, yet, in general terms, it is pretty safe to head for any lake which is named Rice Lake, for the name comes from the wild rice plant, which is the best possible feed the ducks can obtain in the Northern country. Given big beds of wild rice and one is safe to have shooting. The Manitowish River of Wisconsin has such rice beds, and there are lots of ducks in these at this writing.

Out in Minnesota, in the wild rice lakes, near Cabela camp, visitors are killing a dozen birds a day without any trouble. There is no more delightful form of wild fowl shooting than that offered on these wild Northern lakes, such as that which Mr. Tallmadge mentions. Usually there are not so many guns present as prevail at this latitude, the birds work nicely, and are fat and delicious from feeding on this bountiful and beautiful wild grain.

More Ducks.

Sept. 21.—Mr. Chas. Muercke, of Nippersink, on Fox Lake, Ill., came down town to-day in a very much excited frame of mind. He says that the teal are there simply in thousands. He killed 40 day before yesterday and 60 yesterday, and says that any one who came up there right away would have good shooting. The birds come in late in the evening and go out early in the morning, departing to some unknown region during the day.

Carp and Canvas Backs.

A Wisconsin paper, the Fox Lake Representative, predicts a good duck season at Fox Lake, Wis., for the singular reason that the carp have eaten up nearly all the wild celery of Lake Koshkonong, the once famous canvasback water, and that hence the birds will take up with Fox Lake instead, the latter having a good stock of wild celery, and no carp.

If it be indeed true that these pestiferous fish have ruined the feed on the formerly magnificent wild fowl water of Koshkonong, then, indeed, there should be written against the carp one of the bitterest protests ever yet penned. It is well known that the carp have destroyed many and many a good duck marsh in Illinois and Indiana. One recalls very well how Col. C. E. Felton, of this city, was laughed at, in a meeting of the Illinois State Sporting Association, for introducing a resolution against the German carp as a destroyer of duck marshes; yet the passing years have proved the justice of that contention. If these fish have ruined Koshkonong they have done a bad job, indeed, yet they could ascend the Rock River from the Mississippi and reach that water directly.

Plenty of Quail.

Law or no law, Bobwhite holds his own in Illinois. For this fall, at least, there will be as good shooting as we ever had in this State.

Minnesota Congressional Trip.

Congressman Tawney, of Minnesota, who held prominent part in the Congressional expedition two years ago in the interest of the Minnesota National Park, has been in charge of a similar expedition, which was to have started this week for the same country which was formerly visited. Congressman Tawney had more than twenty Senators and Representatives in his party, and there exists no doubt that all of these would have been

delighted and benefited by their journey to what little there is left of the ancient Minnesota wilderness. The death of President McKinley put an end to all present plans for this trip. Col. John S. Cooper, of Chicago, the original parent of the Minnesota National Park, is at present at his country place near Oconomowoc, Wis.

News in the Rockies.

Billy Hofer writes from Gardner, Montana, under date of Sept. 17, telling how the sad news of the national calamity has penetrated into the Rocky Mountains. It is well known that Mr. Hofer guided President Roosevelt on one or two of his hunting trips in the West. The locality to which he refers is probably in the neighborhood of the Two Oceans Pass. He writes as below:

"Have just returned from a trip with a Baltimore party, B. N. Baker and others. Was camped where I had been with Mr. Roosevelt when I heard of the shooting of President McKinley.

"One of the party, E. Stanley Garry, got a cinnamon bear, not as large as yours, that took nine shots to kill, mostly 30-30. It came for them (Collins was Garry's informing guide) from the first shot, putting its head between its hind legs and rolling down hill to within twenty feet of Garry, when it stood up. Then Garry shot it in the head. Quite a number of bear. We did not have time to hunt."

Nearly Across.

Mr. Graham H. Harris, President of the Board of Education of Chicago, is back this week from an extended trip in the West which occupied the greater part of this summer. He did some fishing in the Yellowstone Park, and then headed straight West, and did not stop until he got to the Sandwich Islands. Mr. Harris spent considerable time with the Honoluluans, and says that the country is not without its charms, though the climate he did not like. He says he was so nearly across the Pacific he could see the Filipinos from where he was.

Mysteries of Illinois Game Laws.

We have just seen the wisdom of Judge Trimble, who pleads that Sunday is the same as Saturday; of course, we remember the famous Texas justice of the peace who decided that the liquor law was "unconstitutional"; now we have yet another instance of legal wisdom in the case of Justice D. Browne Armour, of Carroll county, Ill. Mr. E. K. Stedman, of Mt. Carroll, Ill., graphically reports the instance as below:

"On Aug. 7 I arose early and started for a day's fishing. I walked along the shore about a hundred yards, laid my rod by while filling my pipe, had just lighted it and was ready to begin operations, when two gentlemen of sporting tendencies—viz., John Johnson and Henry Ripple—threw a trammel net around the log beside which I was going to drop a line. Then up one side of the bayou and down the other they went, setting their net around every brush pile, log and fallen trunk until they had made a complete canvass of every 'hang out' for game fish. I went home, fishless, disgusted and mad.

"I wrote a letter to our mutual friend, Dr. S. P. Bartlett, of the U. S. Fish Commission, stating the facts. Dr. Bartlett forwarded the letter to President Cohen, of the State Commission, with a kind endorsement, and in a few days Mr. S. D. Sites, a State game warden, introduced himself to me. I went with him to the scene of operations, and we captured two trammel nets, one seine and two hoop nets. We made seven arrests, of which four pleaded guilty, paid their fines and costs, and the other three stood trial.

"Here a funny thing occurred. The lawyers found an amendment had been added to our fish laws which made it permissible to seine anywhere at any time with anything on or in any waters within the jurisdiction of the State of Illinois. The State's attorney and the Justice of the Peace before whom the case was tried said it was so. But out of pure good-heartedness and love for their fellowmen, they made these men who were not guilty of any wrong-doing pay the costs of constable's and justice's fees, and dismissed the case for 'No cause for action.'

"I take great pleasure in stating that this decision was rendered by D. Browne Armour, of Carroll county, Ill., hoping that any members of the bar who do not think such decisions can be made will see wherein they err. W. S. Marley was State's attorney in this wonderful case, and, as I said before, sometimes they do and sometimes they don't convict when it comes to fish laws.

"I wish to say that Mr. Bartlett and Mr. Cohen acted promptly and courteously on my request; that the man sent me, Mr. Sites, was a first-class man in every respect, and performed his duties in a gentlemanly and business-like manner. But what can a man do when he bumps up against such wisdom as that which makes an innocent person pay costs of prosecution in a criminal case, which is dismissed for 'want of cause for action'? I might add that the justice who rendered the decision in the case has been taking a vacation ever since 'without any [apparent] cause for action.'

The same writer is good enough to add some facts regarding the game supply and game laws in this vicinity, which is naturally a very good sporting region, but which seems to be much infested by law-breakers:

"I have noticed two coveys of prairie chickens on our bottom lands during the past month, and there were some ducks here, but they are all gone now. Been gone about two weeks. Ducks are migrating, so I suppose they migrated.

"One day a couple of weeks ago while at Sand Slough, I found a boat with fifty dead snipe and plover and four ducks, also dead, under the seat. I know the number, for fish were not biting well, so I stopped and counted them. No one seemed to own the boat. I waited an hour and nobody came to claim the game. There are about fifty people camped at this place, but none of them knew who had such a boat. They had none of them heard any shooting. Maybe those birds were migrating also—I don't know.

"There has not been any satisfactory hook-and-line fishing around here this season—seines everywhere. I never remember, though, of having noticed as many snipe and plover breeding here as there have been this season. The banks of the lakes and creeks are thick with them.

"And here is another curious thing. I took down the statutes the other day to look at the snipe law, and here is the way it reads:

"It is hereby declared unlawful to hunt, kill, etc., any jacksnipe, Wilson snipe, sand snipe, plover, etc., or any other kind of snipe and plover, etc., * * * between the 25th day of April and the 1st day of September, of each succeeding year.

According to that I can kill them, not this September nor next September. It really places a prohibitive law on snipe and plover, or, at least, that's the way I sense it.

"Lots of quail here, and every farmer has his farm posted, and they mean business, too. If the lawmakers of this grand State can't protect the quail, the farmers can. If our brainy, gifted and eloquent Assemblies won't look out for the game, we will have to ask the farmer to help us out, and I hope that every farm in this county will be posted, and honor each farmer who will stick by it.

"The water in the lakes is very low. There is not much duck food here at present. There may be a flight in late October or early November. I hope so, don't you?"

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Shore Bird Shooting.

THE true sportsman who has a natural love for the gun and the exhilarating pleasure derived from hunting in the upland partridge and woodcock, or on the salt meadows where small bunches of sandpipers in July may be seen, up to the larger sicklebill curlews which fly rapidly south, skirting the clouds in September during a heavy northeast storm; the enthusiast who specially delights in shooting shore birds over decoys and who sits for hours in the blind scanning the four points to catch sight of or to hear the call note of a solitary specimen, will, at times, under the most favorable conditions, be doomed to disappointment, and his patience be well nigh exhausted. The great salt meadows, so-called, lying between Plum Island on the south and Hampton River on the north, over which I have shot a number of years, cover an area of two miles in length and three-quarters in width, bordered on the left by a heavy growth of pines, and on the right by the Atlantic Ocean, with its numerous pond holes thereon, form a grand place for the birds to feed on in their journey from the north.

In July sandpipers and summer yellowlegs will be seen; in August winter yellowlegs, golden plover, and black-breasted, will fly in fairly good numbers; while September brings grass birds and curlews, with straggling wintens, which remain to the last.

These birds are early risers, and are on the wing scurrying and calling from one pond to another long before the gunner in the blind can discern them.

Early morning and evening afford the best shooting, and he is a wise shooter who does not take up his decoys until the sun sinks low and the shades of night appear.

Seldom will it come to the experience of the sportsman to witness a large flight of these birds. The only true flight, as far as number and variety go, occurred on these meadows during the line storm of September, 1884, between the 11th and 14th. This northeast storm commenced at 10 A. M. and at 3 P. M. was a blinding and bewildering tempest of rain. I was alone in the blind, rafts of birds filled the air at all points, including sandpipers, grass birds, yellowlegs and curlews, wheeling like a long column of soldiers in mid-air, completely dazzled by the storm. Bunches of golden plover flew by the blind not over ten feet high, paying not the slightest attention to the call or decoys. All night the storm continued, and at 7 A. M. clouds of grass birds could be seen flying hurriedly south. At 10 the storm broke, the sun came out, and at 11 not a bird was to be seen. I never before or since observed such a sight. The number I killed was eighty-six birds, and the smallest was a grass snipe.

But the sportsman's imagination must not run too high as regards the number he will kill; he should be able to detect readily the kind of birds that approach the decoys, and know how to whistle correctly their call note.

The size of the bag greatly depends on this, besides, of course, knowing what to do and how to shoot when the birds alight.

On the whole, if the birds fly fairly well, a week spent on these meadows is well enjoyed. One will delight in the beautiful scenery, the sound of the surf as it breaks on the beach, the splendor of the sun as it sinks in the horizon and, last, the prevailing stillness as it creeps over the meadow as he journeys homeward from the blind.

JOHN LEARY.

CAMBRIDGEPORT, Mass.

Maine Game.

SOME excellent hunting reports are just coming in from Megantic Preserve. Mr. W. R. Buckminster and Mr. J. E. Crawley have made a record there of 84 partridges, 1 bear, 1 buck and 1 doe deer. The partridges were all shot with the rifle; the result of a hunting trip covering a period of three weeks. The birds were all used for the camp table. It is further reported that partridges are very plenty on that preserve. Mr. L. G. Burnham, of Boston, is at the Club House, Megantic Preserve. Partridges are reported plenty at the Middle Dam, Richardson Lake, Me., and at York's Camp, above Rangeley. Dr. E. H. Stevens and Stillman F. Kelley and son, of Cambridge, Mass., have recently returned from a fishing and hunting trip to Carry Ponds, Me. They had good sport, and are much pleased with the location, which is not a new one to Dr. Stevens, by any means. The region is a remarkable one, on the upper Kennebec waters. The ponds, under Old Abram and Saddleback Mountains, are over 2,000 feet above sea level, and take their name Carrying Place—shortened to Carry Ponds—from the fact that they are in the track celebrated in history as traversed by Benedict Arnold, on his way to Canada. There are three or four of these Carrying Place Ponds, and they have long been known to fishermen of the towns below. The march of improvement has put up fine camps there within a few years, and doubtless the trout fishing is doomed, but never the wonderful mountain scenery and exhilarating atmosphere.

SPECIAL.

Game in Baggage Cars.

IN conversation with Mr. Chas. S. Fee, the general passenger agent of the Northern Pacific Railroad, this matter of game losses en route was brought up in a general way. Mr. Fee was unaware of any such practice on the Northern Pacific line.

He held that if such a practice was in vogue on any line, the sportsmen, by failing to report their losses to the proper railroad authorities, were in a measure to blame themselves. The quickest and easiest way to put an end to this state of affairs would be to report, in writing, to the general passenger agent of the road, stating all the circumstances connected with the shortage, giving date, etc. While reporting your loss would not at the time restore the lost birds by any means, yet the result of each sportsman reporting such loss would in time insure immunity from further depredations. If purloining of game was regularly going on it was the easiest thing in the world for the railroad company to stop it in time, provided the sportsmen took the trouble to promptly report their losses in writing.

From those who claimed to have suffered with whom I have talked I would infer that they felt a good deal like the old woman's eel, that didn't mind being skinned because it had gotten used to it. When counting their bag, dumped out upon the kitchen table at home, they have simply shrugged their shoulders and thanked their stars that it had been no worse.

But no first-class road, that spends many thousands of dollars annually advertising its game possibilities to the hunting fraternity, would tolerate such toll taking on the part of its employees if it knew it. And as long as the hunters pocket their losses in silence the powers that be behind the offending roads are innocent of any knowledge, and cannot bring about the desired reform. So, if the remedy for such things is to complain to the authorities of the road, so long will this condition of affairs continue if those who are interested suffer in silence. Railroads are run on system, and the receipt of complaints because of shortage in the count will not go unnoticed, and in the end undoubtedly will bring forth reform along these lines.

The remedy would seem to rest entirely with the hunter. If he does his duty the guilty baggageman next season will have to either shoot or buy his game instead of picking it up from the floor of the baggage car, because the latter opportunity will be taken away from him.

CHARLES CRISTADORO.

A Quest of Bear.

Joe Kipp's Bear Outfit.

As threatened some time ago, I got away the first week in May, after my long-lost grizzly, which Joe Kipp, my friend, at Blackfoot, reported to be not far from his place on the Blackfoot reservation. Joe Kipp was to have been with us, also old Joe Brown, formerly of the Hudson Bay service. Joe Kipp got tangled up in a horse round-up and could not get away for the hunt. Joe Brown got a wrong direction from some source or other, missed our camp on the Two Medicine, and for a week wandered around in the St. Mary's country, looking for us. Our party, as it started out, was made up of Madam and her 22, Billy Hofer, Collins Anderson, a young man of the reservation who knows the mountains very well; Abe Craton, the cook, and myself. Old John Monroe and his wife blew in later, and so did Jack Monroe, the best hunter on the reservation, much to our subsequent joy and satisfaction.

Now it has ever been a part of my personal creed that all a man needs in the mountains is a tomato can and three cartridges. How it ever happened that I got caught out with the layout we carried I don't know, though maybe Joe Kipp and the Madam could explain. There was snow in the Badger Creek Cañon, Joe reported, and we would have to go to the Two Medicine country. Hence we could take a wagon just as well as not, and of course if we could take a wagon we could take a whole lot of things, all the comforts of home. They put a cook stove in the wagon, and a wall tent, 14 by 16 feet in size, one of the reservation round-up tents, big as a house. Moreover—oh! shame be it said—they put a feather mattress and two pillows in the bed outfit for the little wall tent. At the start from Chicago Madam had insisted on taking an umbrella, though I pointed out in despair that it was a certain hoodoo, and cited many cases at law to prove the same.

We only got stuck on one hill that day, but we had to camp at the old Bull Corral, three miles below Two Medicine Lake, the first night, six miles from the bait which Collins had put out; at which, just eight days before, he had seen a big grizzly eating, and had hence wired me to hustle on out to the reservation. Our team was played out that first night, and could not ford the river, as we would have been obliged to do three times had we gone up further. Then the river rose. The folks pitched the tent, with its face to the wind. It snowed a foot one morning. It blew. The big round-up tent leaked, because the cowpunchers had in idle moments rainy days shot its roof full of holes, just for the fun of the thing. This was the worst tenderfoot camp I ever did see in my life, to which effect I frankly declared myself. We were four miles from the railroad, and could hear the trains of the Great Northern Railway go by at all hours of the day and night, Midvale station being only four miles away down stream. Now, wasn't that a fine prospect for a long-lost grizzly? I wouldn't have believed it of myself if I hadn't seen it.

But now, here is where the odd part of it began to come in. While the others were making camp that first night Collins and I took a fast ride up to the place where he had seen the grizzly a week before. We got there just before dark. The carcass of the horse was gone!

We searched the little glade over carefully with the glasses before going near the place where the bait was left. At last we saw a little black bunch of something on the snow, and on the backs of snow near by tracks—very large tracks. We descended to the little coulee and examined the spot.

The bear had been there, that was sure enough. It had dragged the body of the horse 50 yards down into the

coulee, and cached it carefully, rooting over it a lot of dirt and grass, as a dog would cover a bone. Then it had come again, and had continued to come at different times until it had eaten that horse up entirely! It had torn apart the frame, split apart the skull, stripped the bones, crushed the leg bones even, and broken up the backbone. Only a few narrow strips of hide were left. It had been a very big, very hungry, and very strong grizzly, which had done this work in the little coulee. All about were evidences of the tremendous size and power of the creature. Its trail lay in the snow. Here was where it had lain down in the snow—a vast imprint. Here were its tracks, deep as a horse's hoof-print, long as a gun stock.

Here had been the chance for my grizzly, an easy chance, and for a splendid bear. How I did curse all umbrellas and feather beds! For, easily enough, I could see that I had forfeited my right to the long-lost bear, which otherwise I should have killed in twenty-four hours after pitching camp.

Well, it was no use. Opportunity does not knock twice at any man's door. I had tried to save a little time by waiting till they sent for me, and the little time had cost me my grizzly. I was madder than any grizzly that ever trod the hills.

There had now been two horses put out after my bear, both under Joe Kipp's advice. The first one was put out early in April, and it was eaten up by coyotes. The second one, which Collins had gotten thus far into the hills over the snow, only after the hardest of hard work, had been placed just where Joe Kipp had said the first grizzlies would come, near a certain high, bare ridge. His judgment was verified perfectly by this mass of tangled hair and bones which made the remnant of the unfortunate cayuse. Now there was still another crippled horse back at the reservation. Two Indians tried a day to get it up to us, but failed. Faithful Collins got on his sagacious little claybank Bucky, and the next day this third offering to the rapacious grizzly was lying at the same spot where the first bear had done his work. After that, it was simply a case of sit down in Camp Tenderfoot, enjoy the wind that blew in at the face of the tent, listen to the little birds sing, and hope, hope as hard as we could. It had been at least three or four days since the bear had eaten the last of the bait, and though of course he might hang around and check up there at some later date, the probabilities were that he would not show up for some days at best, if indeed at all. Those were days in which I made Camp Tenderfoot a desolation, a byword and a reproach, until at last Madam had to take me in hand. "But see, now, you brought an umbrella," I could not help adding always. "You brought an umbrella on a trip for a grizzly bear! We've got a cook stove, and a wall tent, and we're after a grizzly bear! We've got a feather bed, and want a grizzly! Avaunt! Tell it not in Gath! Whisper to me, would any self-respecting grizzly be killed by a duffer who takes a cook stove and a feather bed, and camps with the wind in his face, where he can hear the railroad trains?"

Bear and Beaver Sign.

CAMP WIND-IN-THE-FACE was located directly on the bank of the Two Medicine River, in a little, open glade directly below the mountains, a spot as beautiful as one could ask. We found that the trout would not yet rise to fly or bait, and the country round about seemed to show very little sign of game. We saw some "beaver sticks" which had lodged along the stream near the camp, and discovered that the entire flat opposite to us across the river was occupied by a series of beaver dams. Whether or not one could have done some business in peltry on the other willow flats between our camp and the upper end of Two Medicine Lake was something which we had not time to prove.

The weather was very cloudy, and on one morning it set in to snow, and kept at that industry with a steadiness and precision to be found nowhere except in the Rocky Mountains. We had more than a foot of snow by night, and on the following morning the entire landscape was dazzlingly beautiful in its covering of white. By the means of glasses we could see tracks of some sort of game crossing a little, open park two or three miles up the mountain. On the day previous I had made a solitary pilgrimage some four or five miles up the slopes and back again, and I had found fresh elk sign and also the track of one black bear. On this day Collins and I resolved to make another exploration. We found the snow too wet for successful snowshoeing, but were able to pull and plunge through it in some way until we got high enough up on the mountains to strike the old snowdrifts, where we found the footing was firm enough to allow us to walk directly over the old snow. We had a delightful climb, albeit the wet snow soaked us thoroughly. From a high point, above the timber line, we looked over the surrounding country carefully, but could find no trace of mountain sheep, elk or bear in our vicinity. When we started down through the heavy timber toward camp, a journey of some four or five miles, we ran across the fresh sign of five elk. One of the trails spread out off from the rest, and, following this, we found the trail of a big mountain lion, which was evidently interested in the same business as ourselves. As this elk seemed to be heading up toward the Two Medicine Lake, we did not allow our curiosity to lead us very far, as we were not looking for elk. We did, however, find the trail of a black bear, probably the one I had seen before.

At last, after a week of shilly-shallying around this impossible location, we summed up fortitude enough to move camp. The stream was low enough to be forded without damaging any of our household goods, and Madam, with her escort, was able to get up to the lake without fording the river, which latter she declared a thing absolutely impossible. We, therefore, pitched camp late that day, but in a delightful little glade on the banks of one of the prettiest lakes to be found in the Rockies. Here we found the trout in more amiable mood, and on one day Billy Hofer and Billy Ellsworth, who came up to visit us from Midvale Station, took something like twenty-eight very nice trout, which we found were exceedingly good to eat. Here we were visited also one morning by old John Monroe and his wife, the same couple whose tepee we found four winters before, located close to where our camp now stood. Old John is getting

pretty feeble, and is no longer able to do much mountain hunting. He said that he had come up the lake to do some fishing, as they were out of meat at his house. He went back with a couple of dozen trout, which our folks caught for him, as well as certain other things which seemed to delight him somewhat. He promised to come up again and help us in the bear campaign, and his counsel we valued very much.

Collins and I were very much disturbed over the fact that no bear came in to eat at our second bait. One morning when we went up we saw a couple of big coyotes eating at the horse, and as coyotes are worth five dollars apiece, Collins thought he would like to take their pelts into camp. I had by this time grown entirely discouraged, and did not think we were going to see any bear, so I consented to the experiment of coyote trapping at our bear bait. We put three steel traps out here, under the tutelage of old John Monroe, who shook his head dubiously over this way of going bear hunting.

"Myself," said he, "s'pose I want 'um bear, I not put trap here. But s'pose bear come, probably he not mind trap. S'pose he smell 'um trap, probably he make some scare. Myself, I do not know."

This we figured out to mean that leaving wolf traps at a bear bait might or might not scare away the bear if he came into that neighborhood. I was so disgusted and desperate by this time that I had given up the bear and was willing to catch a coyote or anything else. In furtherance of this same scheme, Collins and I cut off a fore shoulder of the bait and made a drag of about five miles through the most desperate and tangled forest that one ever went against. We hung up this forequarter upon a sharpened stump about a mile from the falls of the Two Medicine. Into it we threw an abundance of strychnine, and then we only hoped that some coyote or mountain lion would be fool enough to come and mingle with our flesh meats. We did not think it very likely that the bear would trouble the forequarter, and even if it did, I had been told that no such event was ever known as a bear being troubled by eating strychnine, as it seems to agree with them. We had no way of proving this, although we were taking rather unsportsmanlike chances in the matter, for, although the poisoned bait remained on the sapling for three or four days, nothing ever bothered it. Our coyote industry seemed to be as unfortunate as our bear hunt.

Lucky Jack.

"If Jack Monroe would come up here," said Abe Craton, the cook, "you'd see things change mighty quick. He's the luckiest man you ever did see about hunting. It don't make any difference what time of day or night he starts out, he always has meat when he comes back. Now, you mark what I tell you, if Jack comes up here, you'll get something."

Well, one evening Jack himself appeared at the camp, as blond-moustached, smiling and good-natured as ever he was some years ago, when he was on at New York for the Sportsmen's Show. He came driving into our camp a couple of horses which he said he had picked up four miles below on the river. It is needless to say that we fell on his neck and told him that he was our prisoner. Nor, indeed, did he get back home for a week, although he had told his people that he was only going away over night.

And now witness the accuracy of Abe's prophecy. From that moment the luck began to change. On the first morning after his arrival in camp, Jack, Collins and myself lit out bright and early, and started in on a campaign of hard work, which never let up so long as Jack Monroe remained around. The doctrine of good luck and that of hard work are very much alike. Jack Monroe certainly is a worker in the mountains. I never have seen a more indefatigable hunter nor a better mountain climber. He hunts because he loves to hunt, and no man is fit to be called a guide who does not have that same hunting instinct with him. Jack Monroe might be seventy, eighty or a hundred years old, and yet on the last day of his life he would be as eager to go afield as he was when he was a boy.

We now started out on a campaign of drags. We went up to our foreshoulder near the Two Medicine Falls, and cut out a section from the back of the shoulder and made a good, heavy drag. Then we started directly up through the tangled timber toward the foot of the mountain where I first killed my sheep four years ago, and which the boys called after me. How the horses got through is something which I cannot understand, but they patiently plodded along, and we laid a wide trail of scent behind us. When we had gotten up to the foot of the slide rock, still on horseback, we dismounted, and Jack, on foot, started across the cañon which separated us from the foot of Rising Wolf Mountain. He said he wanted to get the drag completed across the mouths of all these cañons, which led down into the valley from back in the mountains. "Then, if any bear comes down in and strikes our drag, he will be sure to follow it around to the bait," said he, in explanation.

I could see that he was covering practically the same territory as that indicated by old John Monroe as the natural traveling range of the bears. When he returned from the slope of Rising Wolf Mountain, he said he had found the trail of a grizzly and two cubs, which had apparently gone on in around the shoulder of Rising Wolf, and up above the upper lake. He also saw the trails of four or five sheep, which had crossed a snow bank not very far up the mountain. Collins that morning saw a white goat on Rising Wolf, and on the day previous Collins and I had seen a very fine big-horn ram upon the mountain on which we were now stopping. All in all, it began to look as though there might be some game in the country.

We three now laboriously completed the wide circle of our drag, following around the skirt of my mountain and crossing over the narrow, knife-backed ridge which marks the pass between the Cut Bank country and the Two Medicine country. Here we could look far down, on either side a sharp declivity. Below us lay black timber, heavy enough and wide enough to hold many bears. This country we crossed on horseback, following an ancient trail which Jack told me was the old Kootenai Indian hunting trail. These Indians used to come on horseback over a pass which lay back of us. Then they followed around the edge of this Two Medicine Valley, crossed the

Cut Bank Pass at the foot of the great lateral moraine which marks the edge of the valley at that place, and so went on down into the prairie country where lay the buffalo and their dear friends, the Piegiens. A little bunch of Kootenais would make trouble for quite a good-sized party of Blackfeet in the old days, and it is said that the presence of the Kootenai war parties added to the reluctance of the plains people to go into the mountains. The Piegiens have never been a race of mountain hunters, and there are only a few of them who care to go into the mountains even to-day.

The ancient trail was an admirably engineered affair, and it led us around some beautiful heights and presented to us some magnificent views. The plucky little plains horses held it, and the drag still followed us, making a wide trail which he who ran might read, were he bear or coyote. We passed on the high ridge near the Cut Bank Pass and the old camping ground of the Boundary Survey party, or perhaps that of the Geological Survey. It was located in a little flat on top of a beautiful eminence. Near this we crossed the very face of the big mass of half-cemented slide rock which marks the edge of the moraine. Here there had been a landslide which had quite obliterated the trail, yet the horses managed to pick their way across and up the face of this acclivity in a fashion very wonderful to witness. So now at length we gained plenty of elevation and could see entirely over the Two Medicine Valley. In this valley we had laid an irregular semi-circle of trail, leading out from and back to our bear bait, and covering all a distance of perhaps ten or twelve miles. We finished the work of that day by coming in above the bear bait and leaving our drag at the bait.

Curiously enough, we found one of the steel traps at the bait sprung. Also we found tracks in the soft ground—tracks as though some one had put down a piece of mud on the steel trap with his hand. "Here's where old John put his hand when he was setting this trap," said Jack Monroe. "I must study the old man's way of setting steel traps, for he's pretty near headquarters on trapping things."

So much for reading sign when we were off our guard. We now started down through the thick wood toward camp, following the drag which Collins and I had first laid. About a mile and a half down the wood old John Monroe, Collins and myself had built a dead fall for the little black bear which was reputed to be infesting that neighborhood, and which I took to be the same bear whose sign I had seen across the river. We had by this time given up the notion that there would be any bear at our bait, and were resolved to catch this little fellow at any hazard. I would rather see old John Monroe build a dead fall and catch a little black bear any day than to shoot the same little fellow myself. I was, it must be remembered, only looking for grizzly myself. Well, we had not gone half-way down to this dead fall, which, by the way, we found untouched, when we saw bear sign right along the trail of the old drag, and this sign was heading up toward the bait.

"I'll bet a thousand dollars," said Jack Monroe, with the sudden solemnity of conviction, "that it was that bear sprung the steel trap. Now, what shall we do, go back and take up those blasted traps, or go on to camp?"

It was growing late, and we were all very tired, so I told the boys we would go on to camp and let the steel traps take care of themselves. We had before this time reset the trap and hence there still remained the original bait, surrounded with three steel traps and with a ten-mile drag out through the best bear country of that region. I must admit that this was a most tenderfoot performance, to trip to trap coyotes at a bear bait, but no one could be blamed for it except myself, and I had by this time abandoned hope, as before mentioned.

At camp Jack Monroe read to me a long lecture on the virtue of never abandoning the aforesaid hope. "You want to remember that the last day in camp gives you ten times as good a chance as the first day," said he. "You are then just getting acquainted with the country, getting your drags all laid, and, besides, are by then just giving your game a chance to get in on your bait. I'll bet you anything you like that we'll get a bear yet."

I brushed the sad tears from my eyes and told him that I admired him, but that his judgment was pretty blamed poor.

Yet on that very next morning note what happened.

Collins, Jack and I again started out to see what was going on at our bear bait, being now satisfied that there was at least one little black bear in that valley, and devoutly hoping that he would get his back broken in the dead fall and not go fooling around our bear bait, as we did not want to shoot him. We all three went up to our lookout point above the bait on the high hillside, something more than a quarter of a mile away from the horse. Here we sat down and carefully inspected the bait with the field glasses.

"It looks as though there was something had kind of covered up the neck of the horse," said Collins, after a long study of the bait. We all looked, and sure enough there seemed to be a little grass, or something, which seemed to cover the neck of the horse from complete view.

"It may be that blamed little bear," said Jack, but Collins thought that perhaps the coyotes had been kicking around in the grass there again. Nothing seemed to have bothered the steel traps, and, after a careful look, we concluded that there had been nothing at the bait. Collins then mounted his faithful little "Bucky" and started off up through the woods to do some more dragging, it being our deliberate intention to cover that entire country with so many meat trails that no guilty bear could possibly escape.

Jack and I went down to the bait to make a personal inspection of it. To our intense astonishment, we found that the glasses had not shown us the entire truth. There, against the neck of the horse and along its back bone, was a little covering of grass and dirt. There were marks in the moist earth of the little glade as though some big hog had been rooting there, carelessly indifferent. On the side of the horse there were some fresh strips of flesh torn away from the rib. Item, there were three steel pens, every one of them sprung!

"By the great old Harry!" cried Jack Monroe, "He's been here, sure as you're born! Now look at those in-

fernal steel traps! He's sprung every one of them, and like as not pulled his freight to kingdom come."

"And just look at his footprints!" said I, myself, my heart sinking within me and my spleen rising at my own infinite folly as a bear hunter. There in the soft dirt was an imprint as though some elephant or mastodon had passed by. We figured that it was eight inches across the pad. At last, here was our bear! Grizzly, perhaps, but anyhow a big one. And, big or little, grizzly or not, probably a bear now vanished forever!

"Oh, Jack, Jack!" said I, sitting down in very despair. "Why didn't you break off a branch and slug me yesterday when I passed by those beastly steel traps? Why don't you kick me now? Why don't we both go jump in the river? Our bear has been here, and now he has gone, and will never, never, come back again! I surely expect that I am the most infernal idiot that ever came west of the Missouri River."

Jack calmly agreed with me in these details, and then after a while we began to question what was best to be done. Every steel trap had been sprung, and we could not discover any evidence that the bear had even had a toe pinched by the traps. His big foot had apparently covered up the entire No. 3 trap and it had probably snapped under him without hurting him in the least. He had not dug up the traps or thrown them away, and Jack, after balancing the matter in his mind, finally expressed it as his opinion that the bear had not cared any more for those traps than if they had been mosquito bites.

"He'll come back again, sure," said he, in his optimistic fashion. And bearing in mind the indefinite mental attitude of old John Monroe in regard to bears and steel traps, I at last tried to hope that perhaps this bear might be heard from again.

"You see this grass and straw along the horse's side?" said Jack. "Well, that means that this bear had put his brand on this horse. He says, 'This is my meat, and don't you bother it, for I'm coming back again after awhile.' Now the thing for us to do is to get away from here as soon as we can, and to take these blamed steel traps with us."

With a ghastly attempt at humor, I suggested that maybe the bear would miss those traps if he came back, and so become suspicious of our intentions. We, however, pulled up all the traps, cut loose the horsehair wisps with which we had tied them to the carcass, and so, making as little human sign about the place as we could, got to horse again and moved away. We went back up the hill, it being now about 11 o'clock in the morning. Under Jack's instructions, we cut some little evergreen trees and made a sort of blind just at the crest of the hill, or, rather, at a point upon its slope, where one could just see the bait in the little coulee below. The sun was now shining bright and warm, and as we were dressed in comfortable woolen, we suffered no inconvenience from the weather, and, in point of fact, we both lay down and went to sleep. We dozed along for hour after hour, after eating our lunch, taking things generally easy. Presently Collins came back from his quest and we explained to him the situation.

"Oh! that bear won't come back before night," said Collins, "if he comes at all." In this we all agreed with him. We had no idea that, after feeding the night or morning just passed, he would come in again very soon. Collins said he thought he would like to run down to Midvale and get the mail, and as there seemed no prospect of any fun with the bear, I agreed that he do this, and he rode on his way, expecting to meet us at camp after dark, unless we decided to wait until late into the night at the bear bait.

Left alone, Jack and I lay down and resumed our occupation of dozing in the sun. Once in a while one of us would waken, sit up and peer through the evergreen branches at the bait below. In some sort of fashion the afternoon wore on. I think I must have slept pretty nearly an hour the last time, and it was about half-past four in the evening when I was awakened with a sudden wrench at my arm which nearly took that member out of its socket.

"Get up," said Jack, "The bear is there!" I sat up, rubbing my eyes, which were full of sticks. I could not see anything, and, for a moment could not realize where in the world I was. My sleep-confused brain could not tell what in the world it was that made Jack Monroe's eyes shine, and what made him so excited.

Without saying anything further, he handed me the glasses and pushed me up close to the space between the evergreen boughs. I looked, and then I saw the cause of Jack's sudden interest in surrounding affairs.

There, far down below us, more than a quarter of a mile away, but plainly visible even to the naked eye, and looming up in startling fashion in the field of the powerful glasses, was the bear! He had come back after all. There he was, ripping away at the carcass of the horse. I could see the long, red hair rolling on his shoulders as he worked, his head down and his fore feet well in front of him.

It was, then, not a grizzly. It was not a gray bear nor a silver-tip bear, and, apparently, not a black bear. Its hide, which I could readily see was a splendid one, was covered with a thick coat of deep, red-brown fur.

"It's a cinnamon," I whispered to Jack. "A cinnamon sure, and maybe he'll give us a scrap."

That was the one thing Jack and I had been longing for all along. We wanted a bear, a big bear, a big grizzly bear, and we wanted him to put up a fight. Jack said he didn't think it was a cinnamon. "It's a brown bear," he whispered, as we turned away.

Now, whatever the scientists might have called this bear on the hoof, or whatever they would have called him after a closer inspection, I cannot say. They tell me that scientists now admit that there is a distinct species to be known as the cinnamon bear. Yet all Western hunters know that, at least in the lower parts of the Rocky ranges, the grizzly bear may be what is known as the cinnamon; that is to say, a long-clawed bear, and may have a deep, red-colored hide. I had not yet had more than one look at the bear through the glasses, and the most I could see was his great, broad back, rolling and waving like a field of wheat in the wind. I could not tell whether or not he had long claws, but I hoped, as I think Jack did also, as we started down the hill on our long stalk, that this fellow might have long claws and that he might charge us and raise all the trouble he blamed

please. By this time we were irritated from lying around and waiting so long without any sport, and now that we had gotten thus close to the bear, we wanted him to do something to even up matters.

"How's your nerve?" whispered Jack, as we started down the hill on the detour which was to bring us into the mouth of the little coulee. I answered by pulling up the rifle and taking a sight or two. I still had to rub my eyes to get the sticks out of them.

Personally, I can answer that going up to a bear at a bait is a very simple matter. One does not get very much excited, or, indeed, very much interested in the matter. He has been waiting around so long that he has lost the capacity for great excitement and simply takes things as they come.

Jack and I made a careful stalk, trying our best to get to a certain little pine tree which we knew would be within seventy-five yards of the bait. Thence, if one were very careful, he might get up behind a bush, and, if everything went well, be then within fifty or sixty yards of his game. This first pine tree was just back of the ridge which crossed the mouth of the coulee at this place. We were never destined to reach even this first point of vantage. We were still on the upper ridge and just coming to the shoulder of the hill which blocked that side of the coulee, when I heard Jack whisper behind me, excitedly: "There he is! Hurry up!"

At the instant my head was down, as I was in the act of crawling along behind the ridge. I glanced up through the thin fringe of grass in front of me, and there I saw the bear. He seemed an enormous sort of thing, as large as a meeting house, or larger. So far from charging us, or making any trouble for us, he was fifty yards away from the bait and walking directly across a big snowdrift on his way through the little opening in the wood, from which there sunk swiftly a deep coulee, once within which he would be out of our sight entirely. There remained perhaps ten yards of open space between the bear and the edge of the wood. He was walking quite rapidly, but not looking around. Perhaps some chance whipping around of the wind up the coulee had carried to him our scent, careful though our approach had been.

Here, then, was the bear, a big bear, a red bear, a cinnamon bear, but in that swift flash of the eye which showed him, there came the sudden and disappointing knowledge of quarters rather sloping and not blocky and square, like those of the grizzly; of a head large and massive enough it is true, yet showing the concave contour, not of Ephraim but of his humbler cousin, the short-toed citizen.

Once, twice, and three times I tried to find sight through the waving grasses, never breathing once during that time and wondering intensely every second whether the bear was going to get into cover before I was able to find the proper sight. When you are shooting a rifle it is no use pulling the trigger until you know the sights are right, and I had sense enough to keep this fact prominently in my consciousness. At last I got the tall foresight down, got the little ivory bead deep down into the rear sight. It caught a bunch of red fur, caught it somewhere in the middle, leaving abundance of fur on every side of it. They tell you you must shoot your bear through the heart, through the brain, through the shoulder. Any one who has ever killed a bear can tell you just how you ought to do it. Don't pay any attention to these people. They do not know what they are talking about. The way to do is just to shoot him, and shoot him the best way you can under the circumstances. At any rate, that is just what I did with my bear. It was such a bother to get a good sight at all that I didn't trouble myself about shooting him through the brain, or through the shoulder, or anywhere else in particular. There was no time to shoot specified locations on that bear. It was just a case of shooting the bear itself and letting it go at that, with no time left to think it over.

I felt the trigger loosen with a smooth, even pull and naturally was sure that I had hit the bear. Yet, so far from his rolling over and bellowing, and so far from his charging at us open-mouthed and roaring at us with rage and pain, he simply gave a little, crouching squat and tremendous leap, whose swiftness and speed I could not have conceived possible in so large an animal. Then, on the instant, he disappeared under the cover of the trees and was gone over the brow of the coulee! I sprang up and fired a second shot, this time finding the long fore sight of the .30-40 a great inconvenience. I had not time to catch aim and where this shot went I do not know, but I had no notion at the time that it had touched the bear. It was simply sent after him to show that there was no coldness.

Now, again my heart sank within me. I again reviled myself as the most unlucky person in all the world, and one deserving no atom of success. After fate had set aside the coyote-trapping perversity and had at length brought to me my bear, I had now missed him like a rank tenderfoot. Surely luck was against me.

"You hit him," said Jack, to my intense and delighted surprise.

"No, I didn't," said I. "If I had hit him with that bullet, it would have stopped him."

"Well, you hit him all right," said Jack, "anyhow; didn't you see him squat down, and didn't you see him throw his head around toward where the bullet hit him? You needn't worry any, you landed on him all right."

"Then, if I landed on him," said I, "he's our bear. I'll bet you that much. So far as I could tell, I ought to have caught him about midship, and if that bullet ever went through his ribs, we'll come up with him sure."

This much, as we hurried over the ridge down into the coulee and up to the snow bank, on which we could now see the vast footprints of the bear. There was no hair or blood visible—though later on we did find a little piece of hair, cut out by the bullet, and fallen on the snow. We hurriedly followed into the cover, not caring whether or not the bear was dangerous, but simply because we had still lost our bear. Here and there we could see a deep footprint in the hard earth, as deep as a horse would make in running. On one leaf Jack found a little, tiny drop of dark blood, not bigger than the head of a pin. "You hit him," said he again, and with still greater conviction in his tone. We trailed on and on, slowly, getting perhaps fifty yards in the direction lined out. All at once I looked down into the foot of the deep coulee below us. There, seen dimly through a dead

evergreen tree, lay a vast, brown object, so big that I could not believe it was our game. "What is that, Jack?" I asked, pointing down into the coulee.

"By the Lord!" cried Jack. "There he is!" So now we shook hands, as only two hunters could do under such circumstances, and then plunged on down the steep incline.

There, lying vast and shapeless, inert and soft looking, still gasping and perhaps still dangerous, was our bear. He had run perhaps one hundred and fifty yards, or, rather, had perhaps run fifty yards before he stumbled and fell with his first breath. We later found a vast quantity of blood where he had first fallen, probably blown from his lungs when he first breathed. Thence he had tried to cross along the steep side, had stumbled and staggered and finally dropped just in the little stream of water which ran down the coulee.

The whole world now seemed changed. So far from this being a vale of tears and an abode of grief and sorrow, we both decided this earth to be a spot of joy and gladness. We jabbered like two school children as we went to work to take care of our meat. Knowing that it would be too late to get the others up from camp, and too dark for any photographing, we decided simply to open the bear and come back the next morning with the others of the party and make some photographs of his bearship.

When we opened the carcass we found evidence enough of the terrible quality of this hollow point, steel-jacketed .30-40 bullet. The shot had entered through the side, rather high up and well back in the flank. It had torn the liver into pieces, cut the entrails, and blown the upper part of the lungs practically into bits. This much we found in our hurried examination of that evening. When, on the following morning, we brought up the entire party, Madame and all, to see the fallen game, we found upon skinning the bear that the wound had been even more serious than we had first supposed. Upon the far side of the carcass, just back of the shoulder, there were two holes, either of which was larger than the first one made by the bullet on its entry. A part of the metal base of the bullet we found within the body of the bear. Two other parts of the bullet had passed on clear through the bear, probably a part of the metal jacket making one hole and the lead of the bullet making the other. One of the ribs was shattered. Two holes were about eight inches apart upon the farther side of the body. Old John Monroe, who came up with us the next morning, gravely assured me that I must have shot the bear twice, as there were two holes. Yet the wound was made with a single charge. Strangest of all, after removing the hide, we came upon a great blood-stotten mass of flesh, which lay outside of the ribs. Here the bullet had some explosive effect. The flesh was simply blown into pulp, and one could take his hand and scrape away from the ribs all their covering for a space of eight or ten inches.

It is supposed that these hollow point .30-40s do not go through the game, and Billy Hofer thought that the fact of this bullet having traversed the entire body of so large an animal was due to the fact that it was shot at rather long range. I was about one hundred and twenty-five yards from the bear when I shot it. At thirty, forty, or fifty yards, the bullet probably would not have gone through, and its effect would have been still more terrific.

After studying the nature of this wound, I came to the deliberate conclusion that I was not afraid of the biggest grizzly bear that ever ran the mountains. One of these times I hope to meet him face to face and in the open, and if he ever starts toward me and I have this same gun and same load, he'll be the very worst mussed-up bear that ever was. I do not believe that any bear can stand a single shot from one of these hollow-point bullets at close range, provided that the shot be delivered anywhere within the hollow of the body. It would blow a bear's head to pieces, I imagine. Of course, when a bullet passes through the body of an animal, it lessens the shock very much. It is impossible to suppose that any animal could take the full impact of that blow within its body and then have strength enough left to come on. The only wonder to me was that this bear was able to go so far after being hit so hard. The shot would not ordinarily be called a good one; that is to say, a well-placed one, as it was far back and through the bowels. Yet it was good enough to land the meat with this cartridge, as we now had plenty of proof.

That night we made merry at our camp on Two Medicine Lake. As I have said, John Monroe and his "human" were there, Jack Monroe was there (no relative of John Monroe, it should be remembered, but a pure Anglo-Saxon, albeit as keen a bear hunter as even the old Hudson Bay man); we were all there, and since I had now become more tolerable as a camp associate after killing the bear, there was a sound of revelry by night.

In the morning, when we tried to make some photographs of our bear the weather was not quite so favorable. Rain was falling nearly all the time, and the valley from Rising Wolf to the upper lake was filled with storm after storm. Yet, wonderful to see, and one more of those wonderful things which are continually happening in the Rockies, there was a vast rainbow, not quite perfect but tremendous in its size, reaching from the bottom of the mountain to its top, a glorious, bright-painted rainbow, which swung not in an arch, as does the rainbow of the prairies, but lay like an enormous blanket, flat on the side of Rising Wolf. This was, perhaps the most remarkable spectacle ever afforded us by this mountain, the mountain which is called Mahquecapah, or the Wolf That Stands.

Old John Monroe proved the main beneficiary by our bear hunt. We kept out one ham, which was all we cared to retain of the meat. John and his "woman" deftly butchered the rest of the carcass, and somehow managed to pack it on a couple of horses, with which they forthwith started out for home. I gave the hide to Mrs. Monroe for tanning, and the last I saw of it it was stretched on a big pole frame, nicely grained and promising to make a splendid robe. I found no fault with it except that it was not the hide of a grizzly nor the hide of a bear which died fighting. As to that latter part, I do not believe one is very apt to find any bear in the Rocky Mountains which will make much of a fight these days. They are all busy seeking to take care of their own hides, as, indeed, they have a very good right to do. This

bear hide, when spread out over "Bucky" Collins' all-suffering little cayuse, proved pretty nearly big enough to cover him up. We took it to be about seven feet in length. When stretched on the frame and partly dried, it was as wide across as I could span with my outstretched arms. The feet were peculiarly large on this bear. The track in the snow was as long as the comb of my rifle, which we afterward measured and found to be eight inches. It was eight inches between the eyes and built all round like a hired man. Everybody told me, as everybody has told me since I came back, that I had no right to complain about the success of my bear hunt, and had every reason in the world to be congratulated.

My bear made the fourth which had been killed between the Great Northern Railroad and the British line this spring. A man by the name of McNeil got a splendid silver tip in the St. Mary's country the same week that I killed my bear, but this bear was killed by means of a set gun, which was left at the bait, and not shot in the open by the hunter. Another man by the name of Purdy, whom I met at the Agency before I came away, had two good skins, one a black and one a silver tip, the black bear being larger than the silver tip. He and some friends had shot both these bears, which were bayed up by a dog. The grizzly skin, I think, was not a very large one, not so large as the black bear, and, according to Purdy's story, not six feet in length. These were the only bears I heard of being killed during the season at the time I left. Tom Dawson and a party last fall, while hunting around the upper lake, ran into a bunch of four grizzlies, and of these they killed two very nice ones.

My trip was now nearly at its natural end, for time was growing short. I felt much disappointment at not having landed my grizzly, and hung on like grim death, taking Jack Monroe's advice in regard to the last day of the hunt. Nothing came in again at the bait, and nothing bothered our Hudson Bay dead fall, which we continually hoped would produce the hide of that little black bear which was roaming the wood back of our camp and whose trail we saw nearly every time we came down the mountainside. We waited two more days, and, on the second day, Collins, Jack and I again went up through the woods to see the dead fall. Coming down through the little parks at the edge of the lake to take ship again in the canvas boat in which we had come part of the way on our journey from camp, Jack sat down with his field glasses, and, following his usual custom, began to search the mountainsides for game. He was examining some little open parks or dark-colored slides on the face of the mountain across the lake and about three miles away from us, when all at once he stopped and uttered an exclamation.

"Four bears!" said he, "and all in one bunch! Well, wouldn't that kill you?"

He handed me the glasses and I looked where he indicated. Sure enough, there were four bears—one black bear, or a dark-colored one, and two smaller ones, also dark in color. The fourth bear was as big as all the other three together. He was a yellowish, whitish, pepper and salt color. This I could see distinctly. All at once he turned and ambled off across the open face of the slide, where he had been digging, and then, in a flash, I saw the square, blocky head, the square-cut quarters, the high shoulders and the unmistakable back of the grizzly bear. There he was, the very bear in all likelihood which had eaten up the first horse, and the very bear on whose trail we had been camping thus long!

On the day before, Jack Monroe and I had been over on that part of the mountain and we had trailed a bunch of four bears through the fresh snow clear down to the foot of the lake, just opposite to where we were sitting at that time. We had taken it that these bears were all black bears, although one of them was a very large one. This fourth black bear we now missed, but his place was taken by this big grizzly, on what sort of basis only the bear family itself could have told us. Yet here he was, and he was a grizzly just as sure as we were sitting there.

Under these circumstances, although it was now late in the evening, and although Collins and Jack were in their shirt sleeves, we did not hesitate for an instant. We hurried to the boat, and in spite of the stiff wind, were soon across the lake and on our way up the steep mountain side. Then I saw a specimen of mountain climbing such as I had never before witnessed. If I had not been there, Jack and Collins would have gone clear up without a single pause. It was more than two miles and about forty-five degrees, over all sorts of going, and much of the way over deep, wet snow. I found it imperative to stop and rest very often, and, of course, this delayed the others. Had I been as fast as Jack Monroe, for instance, we would probably have gotten that grizzly, but there are few such sets of lungs and legs as these with which I was now in friendly competition. I do not know how long it was before we got up to the little, open place where we had seen the bears, perhaps an hour.

Here we met with another piece of that bad luck which seemed to hang over me all the way through the trip. We got up above the first slide where we had seen the bears. There were two other little, open spaces or parks on the face of the mountain, all within a quarter of a mile, and we had figured out that, as the bears were feeding toward us, they would probably show up on one of these other open places by the time we got up there. Yet we could not get any trace of them. Losing our way in the dense forest, out of which we could not see the spurs of the mountains in order to range ourselves, we appeared on the first park where we had seen the bears instead of the last one, where we expected to see them. As a matter of fact, we were standing within twenty-five feet of the trail of the bears when we looked down into that first open place. This we did not know, so we swung around and spent an hour and a quarter in traveling over that steep country in the hope of taking up the trail of the bears after they had left the slide. At last we were obliged to come out into the open country ourselves. We saw the great holes which the bears had torn in the soft soil of the earth slides where they had been looking for little roots and pieces of green vegetation. Again we had occasion to admire the tremendous power of these great animals. Here we could see the foot mark of the big bear and note his excavating operations,

I had sized this bear up against a big rock which was located in the middle of the slide. He looked pretty nearly as big as the rock, but when I got to the rock, it seemed so large that I could hardly credit my own vision.

We spread out at this point, fully an hour behind the game, and began to cast around for the trail, there being only patches of snow here and there. At last we found that the bears had gone straight up the mountain instead of along its face. We at length lined out their trail and followed it up until it struck continuous snow along the face of the rocks, just at the edge of the timber line. We had proof enough here of the accuracy of our original conclusion. With this party of bears, three black bears, without peradventure, there was one tremendous grizzly bear. We figured that he had probably driven off the big black bear which was with this same bunch the day previous. He was following along behind the others, sometimes a little at one side. Collins had a foot of rather generous proportions, at least, a number ten. He stepped into the track of the big fellow's hind foot, and there was enough of the bear's footprint showing in the snow in front and behind the rubber overshoe enough to prove that he was a very big grizzly indeed. Where he had struck the snow banks, he plowed through much as a herd of cattle would, or like a steam shovel through a bank of mud.

At last we had located a real grizzly and a good, big one at that. I need not say that we strained every muscle in our attempt to get up with this game. We now did a nice piece of still hunting as I have ever seen, and one so well planned and executed that it deserved success. Under Jack's leadership, he being far and away the best hunter of us all, we did not follow along this trail, but paralleled it, only going into it every half mile or so, and keeping the wind in our favor as much as possible. The trail, as obvious as a pack train could have made it, could be seen at some distance through the woods on the surface of the snow. It wound and zig-zagged and led off on and up, as well as off to the eastward. I do not know whether or not the bears had seen us when we crossed the lake, but thought it very unlikely, as a bear cannot see more than a half or three-quarters of a mile at most, according to the old hunters. The bears did not seem to be alarmed, and we followed them until nearly dark, over the snow banks, through the worst of timber, and at last over a vast blowout of ragged rocks, where the trail could not be seen at all, though we picked it up upon the other side. At the top of this blowout we made our one error, and a fatal one. For perhaps one hundred yards we followed directly along the trail, because the going was better at that place and because the trail was plainer. Fatal mistake! We were then, although we did not know it, less than three hundred yards from the bears. That infant black bear ran up on a little hillock of snow, as we saw by his tell-tale footprints. He turned around, and then he either saw us or smelt us. This news he communicated to the others. There lay the record on the snow. We went along a little way and saw that, instead of walking and playing and rolling around in the snow, as the bears had been doing previously, they had now broken into a long gallop.

"It's all up," said Jack. "It's no use scaring them any more. We'd just as well go back to camp."

So, drenched to the skin, cold and shivering in the cold, night wind in spite of our exertions, we again turned down the hill and reported at camp the last of our story of ill-fortune.

I would not weary the readers of *FOREST AND STREAM* with a mere record of personal doings. Our time was now up, and although I much longed to spend a week or ten days more and get that grizzly, as I am satisfied we could have done, I decided that on the second day thereafter we must break camp and start for home. Yet we fought it out to the end as gamely as we could. On the next morning after that long trail in the snow, Jack and I rode forty-five miles among the Indian houses below, until at length we rounded up in the woods, high up on the mountains, with a poor and broken-down cayuse, whose merciful end we made serve us as yet another temptation for the wandering bear. This time we put out our bait far to the east of where we had left the bunch of bears the day before, hoping that they might not have fled far out of the country, and have turned back and continued to feed along the range of mountain where we had seen so much bear sign; namely, that vast, black slope of timber which lies on the northern or upper part of the Two Medicine Lake. We had left two nights and one day as the sum total of time in which we could land our grizzly. While Jack and I were doing this work, the others broke camp and moved down toward the Agency, camping in a little coulee on the high ridge, where there was water and wood. Here, after our long day in the saddle, Jack and I slept.

The next day there came a bitter cold rain, which fell steadily for more than twelve hours, and we did not think it worth while to go up into the mountains under the circumstances. The next morning camp was broken and a start made for home by the wagon outfit. Jack and I rode up to visit our last bait. Nothing had touched it, and so, with a final sinking of the heart, I gave it up and started for the settlements. Collins, whom we sent up to visit the old bait about six miles above and on the lower side of Two Medicine lake, reported that he had seen nothing at the dead horse, but had seen a black bear at the dead fall. He said that he destroyed the dead fall, according to our orders. We laughed at him and told him that he was "seeing things," and asked him why he didn't shoot the bear according to instructions. He declared that he had come down and tried to find us so that I could kill this bear. I had no more use for black bears, and after finding that we were not going to land the big grizzly, whom we had christened "Old Pete," the subsequent proceedings interested me very little.

That same night Madame and I started east for the busy city. Billy Hofer went west to Seattle, and Jack Monroe and Collins resumed their activities among the coyote population. Jack had landed two litters of coyote puppies, 15 in all, worth \$5 apiece. I told him to watch those baits, and if he saw "Old Pete" to kill him sure and send me his hide, for if I couldn't kill him myself, I owed him a grudge for having led us the dance he had for all these many days. I don't think Jack would kill the bear or tell anyone else where the baits

were so that anyone else could kill him. He would rather get someone like myself, who has lost a grizzly, to come out and do the killing than to shoot the old fellow himself.

At Joe Kipp's we learned of everything that had happened in the past two weeks, how Joe Brown had missed us and gone up the St. Mary's and how Joe Kipp himself had been detained by the horse roundup. I do not know how I can sufficiently thank big-hearted Joe Kipp for all his kindness on this trip, which was certainly a busy one and which all my friends tell me was a very lucky one.

Curious and eventful enough all this must have seemed to Madame, who thus made her first visit to the inimitable region of the Rockies. I hear of little items regarding incidents experienced there every day and expect to continue to do so for years to come. Madame's bravery began to rise about the time we were nearly across Dakota. I can truthfully say that she was scared almost to a finish every minute of the time she was up in the mountains. Yet her own experience is proof enough that a lady can go into the Rocky Mountain country with perfect ease, safety and comfort, and can have an experience worth remembering for a life time.

Some little items regarding our outfit and experiences may prove of service to those who intend going on a bear hunt—and I surely hope someone will go out and kill that grizzly of mine, since it is not likely I can get out again after him very soon.

Madame's clothing was made up of wool. In this mountain country the side saddle is unknown, and a woman must ride astride in the only sensible fashion. We, therefore, tabooed the encumbering skirt and made a pair of roomy trousers, fitted close around the ankle and loose above the ankle. These trousers were of heavy cloth, about the weight of a mackinaw. A mackinaw coat of the same pattern as that worn by men and a broad, white hat, with stout shoes and overshoes, made up the rest of the costume, which was found entirely comfortable and serviceable. Madame gained the name of "the Sergeant" around camp, but in time came to glory in the freedom of bifurcated clothes. I do not think any woman can be comfortable climbing about in the mountains with any sort of skirt to hamper her.

As to the bear gun, I found my .30-40, with the hollow point steel jacket, all the bear gun that anyone could ask and the one which I am going to use after this. I do not think these bullets are generally on the market. The packages are marked "Specially loaded." I got them on Billy Hofer's suggestion and sent direct to the factory for them. They certainly made a tremendously destructive load. And yet I found that my gun handled these charges beautifully up to one hundred and one hundred and twenty-five yards, beyond which I did not try them. They are said to be not so accurate at long range as the soft-nosed bullet.

Now, some points as to putting up a bear bait, and these are points learned from bear hunters like old John Monroe and young Jack Monroe, than whom I presume there are no two better bear hunters in America to-day. The ordinary impression is that you can take your bear bait out almost anywhere, kill it in almost any kind of locality, and safely expect that the bear will find it. Let me disabuse the tyro's mind of this impression. There is much to be done in the skillful placing of the bear bait. In the first place, Joe Kipp showed us the long bear ridge where he told us the grizzlies first appeared in the spring. This was very well, though, after the snow has begun to go, I think the bears retire to thicker cover, more especially the black bears. The grizzly bears cross the little open parks and root around in the softest dirt they can find. But I believe that nowadays almost any kind of a bear is apt to remain close to cover and not to show himself in the open any more than he can help.

The first thing, then, in putting out a bear bait, is to get on the range of the bears. Collins had done this admirably with his first bait, though that spot was not so good later in the season as it was at the time he put out his first bait. Moreover, he had been especially fortunate in other regards. He had placed the bait where it could be seen from a considerable distance, and also where it could be approached at close range by the hunter when stalking for his shot. It must be remembered by the novice in bear hunting that he does not stay close to his bait while waiting for his bear, but on the contrary, keeps off a long way and watches the bait with his glasses. Moreover, when approaching his lookout point, the blind, as I may call it, he must very carefully scan all the country around him, especially in the neighborhood of his bait. A bear, when approaching to feed, looks all about him carefully, and sometimes make a circuit or two around the bait to assure himself that there are no enemies about. He may feed for awhile and then go off and lie down a short distance from the bait. Hence, if the hunter shows himself against the sky line, he may scare the bear while he is half a mile away. At both of our baits we had a good lookout ground and a good shooting ground. We found that the first bait was badly located in one vital regard. Supposing that cover of the bears was to be found in the five or six miles of black forest which lies around the Two Medicine Lake, then this bait should have been located four or five miles farther up in the direction of the prevalent wind. As it was, the prevailing winds did not carry the scent of this carcass in the direction of the supposed hiding place of the game. This is a question which should always be regarded by one in putting out a bait.

There are two things which must be kept in mind also from the standpoint of the bear. He must have thick and continuous cover near by the bait, and he must have running water not far away. So you see there are many points to be studied when locating your bear bait.

In approaching a bear, even when it is busily engaged in feeding, the hunter needs to use just as much caution as he does in stalking a sheep, an elk or a deer. To reiterate, I do not believe any of these bears are dangerous in these modern days. The thing to be remembered is, that the bear is a very shy creature, continually on the alert and possessed of a very keen scent. His eye sight is not very good, but his nose is very keen. Hence, in coming up to the bait, one must be sure to stalk up

wind. His bait must be laid out in such a way that this is possible.

Most bear hunters do not disembowel a horse where it is put out as bait, thinking that the odor is stronger when this is not done. Jack Monroe differs from these. He always opens the carcass, saying that this allows the scent of the blood to sweep across the country at once, whereas otherwise one might have to wait for nearly a week before the carcass gave out much odor.

A very important part of this kind of hunting is the drag. This obviates a large part of the necessity for having the wind blow from your bait across the cover. We think that the bear I killed certainly followed in the drag we had laid out before, and we are sure that the little bear which first came in at the bait followed the drag which Collins and I had run the day previous to that. Wolves, we know, will follow this drag, for one drag which Jack and I laid out we found the next morning entirely eaten up by coyotes.

I regret very much to state that many of my illusions regarding the ferocity and dangerous qualities of the grizzly bear have been dispelled. It is a very easy matter with a modern rifle to kill a very big bear with a single shot. Your trouble will not be to kill the bear, but to find him. If, in the shooting, you "have some scares," as John Monroe expresses it, then, indeed, you must be still rather tender about the fact. There is no use whatever in being scared of bears in these scientific times. If you are very close to a grizzly in thick cover, and if you shoot him clumsily, he might come at you and make you trouble. Jack Monroe recounts two such cases in his own life, and he speaks respectfully of the grizzly. Dan Doty, the old Kallispel bear hunter, says that he shot a trapped grizzly three times through the body near the heart before he killed it, and he also has a certain respect for so difficult a proposition. Yet none of these men were tangled up with bears shot through with the hollow-point bullet which I have described. I believe one such shot is enough for the best of them. This conclusion, I must admit, is based upon a very small experience; to wit, that of only one bear. Some time, let us hope, the experience may be more extended.

As to putting out steel traps for coyotes when you are bear hunting, or walking around close to your bait, or touching it, or putting out strychnine for wolves anywhere in the neighborhood—I can only decry these practices as possible to none but the worst sort of a tenderfoot! If luck breaks down such a hedge of folly, then it is simply your good fortune.

As to the prospect for bear, we felt all along that we were in a poor bear country and in a poor game country, for the Two Medicine showed little enough sign. And yet, when we began to go out and work and not stand around and wonder about it, we saw that after all there was some game in the country. We saw signs of one little band of elk, one very good bull. We saw two white goats, one splendid big horn ram, eight ewes and yearlings, to say nothing of much other sign of sheep and elk. The country seemed to be pretty well occupied by little bunches of elk, mostly cows and yearlings. The bears we saw unmistakably proved that one big brown bear and one smaller bear were at the first bait. We repeatedly saw sign of what we took to be these same two bears on the lower side of the lake in the timber back of our camp. It must be remembered that, the first day I went out, I saw the sign of a black bear, and Collins and I saw the same trail, or another one, on the day following. Jack Monroe and I in one of our hunts followed the trail of four bears in one bunch, and on that day we saw three other bear trails, so that we figured there were perhaps seven and certainly six different bears on that mountain side at that time. He also saw a trail of a grizzly and two cubs, as earlier mentioned. On the very next day after that, as I have above recounted, we saw four bears in one bunch, and one of these a splendid grizzly. It is possible that this was the only grizzly in on the Two Medicine this spring. It was a remarkable specimen. Now add all these unmistakable evidences of bears, the two grizzlies and one black bear which were killed in the St. Mary's country, and you have what is probably as good a bear showing as you would be very apt to find in the Rocky Mountains.

It is all a matter of luck and hazard, this bear hunting. Old John Monroe said he liked the Heart Butte range and the Badger Creek country, which was east of where we were, and where we intended to go in originally. Jack Monroe said he didn't care to go into that country at all. Jack Monroe said that he had three horses eaten up slick and clean last summer not far from where we had left our last bait. He thinks this may have been done by black bear. I am perfectly clear in my mind that, had I been able to stay a week or two longer in that little valley, I should have gotten my longest grizzly. There may be some bear hunter who has likewise lost a bear, and, if so, he may, perhaps, be able to get him right where I was, and get him before the first of July. It is very well worth while keeping in touch with Jack Monroe in regard to these matters. I would not ask a harder man to follow in the hills, on foot or on horseback, nor did I ever see one more unfailingly good-natured. He and Collins Anderson surely put up a pretty strong bear campaign together. I hope that some day—but what is the use of hoping? I suppose I ought to be entirely satisfied with the big robe which one of these days is going to come in from the beloved Blackfoot country and adorn the tepee of Madame, the neophyte.

HARTFORD BUILDING, Chicago, Ill.

Long Island Note.

PATCHOGUE, L. I., Sept. 10.—*Editor Forest and Stream:* Is it true that wild pigeons are to be found in the eastern part of Long Island? I saw a flock of ten or twelve birds near Shinnecock lighthouse last week, which my man said were passenger pigeons, and I am inclined to think that he knows the species perfectly. I will make further inquiries during the present week, and may learn something definite upon the subject. Shore birds above the size of ringnecks are extremely scarce, although we saw about a dozen lesser yellowlegs in Quonic Bay a fortnight ago. Black ducks have begun to fly westward in very small numbers.

F. H. B.

Good Dogs Wanted.

A NUMBER of subscribers who are preparing for the fall and winter sport ask where they can obtain various breeds of dogs.

Two or three desire to secure good beagles; enough for one or more packs.

One wishes to know where he can find good Scottish terriers, while one desires a bear dog. The dog dealer's harvest time is here.

On New Jersey Meadows.

BAYVILLE, N. J., Sept. 18.—There has been so much rain, with high tides, that there has been very little hay cut on the meadows, so very few bay birds stop over. I am afraid the snipe will be very scarce this season.

Camp-Fire Flickerings.

"That reminds me."

Mississippi Criticises Vermont.

Editor Forest and Stream:

Mr. J. B. Burnham, a writer of well-established ability in the columns of FOREST AND STREAM, has treated your readers to a very interesting narrative of the Vermont League outing, with his accustomed felicity of style, in your Sept. 14 number. I have so often heretofore read the contributions of Mr. Burnham in your pages with entire approbation and much enjoyment, that it is now with feelings of profound regret that I am constrained from a sense of duty to call attention to what appears to be an unwarranted exhibition of imaginative exuberance which occurs in the said latest contribution of Mr. Burnham.

It was natural and proper that he should introduce Tigers and Mountain Lions on the stage of the League's proceedings, in view of President Roosevelt's prominent connection with the affair; but, in his graphic description of the banquet on the Isle La Motte, he exceeds the bounds of forbearance in making "fresh-skinned country girls" a feature of the menu, the cannibalistic implication of which, even recognizing the President's well-known strenuous proclivities, is carrying a joke to unjustifiable length, and ought not to pass without rebuke.

Mr. Burnham may plead that the skinned girls were only introduced to give additional éclat to the occasion, and were used solely as the bearers of chicken pie, etc.; but why they should have been skinned at all, a feature that is further emphasized by their being "fresh skinned," still remains for explanation.

COAHOMA.

MISSISSIPPI.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

In New England.

BOSTON, Sept. 21.—Mr. Frank N. Ganong and a friend have just returned from a hunting and fishing trip to the Megantic preserve. To say that Mr. Ganong is disappointed hardly expresses his feelings. A busy man, it is hard for him to get away, and, naturally, he prizes his short outings, and hopes for some good results. This time he "struck it rough," as fishermen and hunters often will. They fished Spider Lake all one day, with the result of two little bass. The next day everybody said that they should visit Arnold Pond, where the trout live in thousands, and are only too anxious to be caught, two and three at a cast being the rule. They landed there in good order. They cast and cast, and then cast and cast again, but not a trout would rise. All day they fished, taking two little trout that the guide said were too small to keep. The next day they resolved to try for a deer. They went up on to the Canadian part of the preserve, where the open season begun Sept. 1. They tramped and tramped all day long, but not so much as a glimpse of deer did they see.

Mr. and Mrs. W. J. Follett, of Newton, are both experts with the rod and reel, and seldom do they take up these implements without some good results. Mr. Louis B. Goodall, a manufacturer, of Sanford, Me., invited them down to his place the other day to enjoy the bass fishing. Mr. Goodall is at the head of the Maine commission that is to arrange for a Maine exhibit at the St. Louis World's Fair in 1903, already referred to in the FOREST AND STREAM, and it is he that is urging that Maine make an exhibit there of her woods and water resorts, her hunting and fishing privileges and her summer outing facilities. He says that good progress is being made, and that everybody is pleased with the idea. Mrs. Follett caught seven beautiful bass the first afternoon, from the lake about the dam. The next day it rained in torrents, but Mr. Follett is too much of a fisherman to let that keep him indoors. He went out with a guide below the dam. With a helgramite for bait and a light rod, he would cast as far forward as possible and then draw the bait in slowly. The bass took hold finely. Mr. Follett says that he never had better sport in his life. In a short time he had fourteen handsome bass, from 2½ to 4 pounds. More might have been taken, but Mr. Follett gave some of them slack line, "just to see them shake out the hook." He is much pleased with Sanford for bass fishing and Mr. Goodall for an entertainer. Mr. Goodall has been a great lover of the rod all his days, and he will go to work at a fish and game exhibit at St. Louis with all the enthusiasm of an expert.

Boston, Sept. 23.—Still the late fishermen are at it. Considerable fitting out for the fall fishing has lately been done at the tackle stores, and it is plain that there will be no rest for the trout and landlocked salmon, particularly in Maine waters, till Oct. 1 shall close the season. At the Upper Dam a number of the old-timers are

assembled. Messrs. T. B. Stewart, R. N. Parish and E. S. Osgood are there, and they may be considered as the most earnest and successful trio of fly fishermen to be found in this country, or any other, if the size of the trout taken has anything to do with success. Each has a record of big ones, and a good many of them—up to 7, 8 and 9 pounds, all perfect *Salmo fontinalis*. Other fishermen of note are there, including Mr. J. F. Leech, of Washington, D. C.; Mr. and Mrs. T. L. Barber, of South Framingham, Mass.; Mr. and Mrs. George P. Beare, of Lewiston, Me.; Mr. and Mrs. L. A. Reese, of Philadelphia; W. W. Seymour, of New York, and many others. Mr. Seymour is another old-timer, and has taken one of the largest trout so far this season—one of 7½ pounds. Mr. and Mrs. I. O. Crane, of Boston, have visited the Upper Dam for several seasons, and the temptation is too great, both being great lovers of the fly-rod and lure, and they are off for the Upper Dam. It may be noted that the number of trout taken thus far from the Great Pool this season is greater than last, but the size is not up to former seasons. Nothing under 3 pounds goes on record, and every fish recorded must be weighed by Landlord Chadwick, and with the same scales. He will permit of no "buncomb" about the weight of fish on the Upper Dam record. SPECIAL.

A Week's Vacation in Jersey.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* Ever since the first warm days of spring we all have wished for the time to come when we could get away from the noise, heat and hustle of the city, and repair to some favored spot in the country with rod and reel and settle down to solid enjoyment with the bass and trout in the lakes and streams of New England or along the shores of old ocean.

Last summer it was my good fortune to spend two weeks at Webster Lake, in New Hampshire with my son for a companion, and while we did not make large catches we laid in a good stock of the health and energy that country affords, and we enjoyed that trip greatly. This year I longed for something different, and a short time ago I had an opportunity to take a rather odd trip for a week with a friend and neighbor.

Leaving this city one Sunday evening we were soon flying shoreward, our destination being Cape May. I fancy I hear some of my readers say, How can any one have any sport at that famous resort? That place is only intended for the people with time on their hands that they do not know what to do with; to idle away on hotel porches or in the surf, with a round of hops and board walk promenades. But we discovered something else there, or rather a short distance seaward, and as the funny man says in the show, "Just listen and I will tell you all about it." Having a mutual friend in Capt. John Rooney, we had notified him to be on the lookout; we were not to be disappointed, for he was on hand at the station to meet us. A short walk took us to his home, where we passed a very pleasant evening with the jovial captain and his wife. Very early the next morning, breakfast being disposed of, we made our way to the beach, taking along our duffel in a push cart, such as is used by all fishermen along the Jersey coast. At the beach we found the captain's boat, a staunch Seabright, new last season. The captain gave a squint at the horizon, letting his eye travel slowly around until it reached southwest, and said, "By the looks of things, we will try McCreis," which is a small shoal located southwest from Cape May, about ten miles. There was very little surf, and with a light breeze and an ebb tide we were soon on our way. The breeze died out early, and then it was a white-ash one to the bell buoy, which we reached about 8 o'clock, when we anchored in eight fathoms of water, and proceeded to bait up with menhaden or mossbunker which was a little ripe for sensitive nostrils. Our lines had scarcely reached bottom, when there was a series of sharp tugs, and in a short space of time all hands had all they wanted to attend to. The fight was on in earnest, and the way the Seabright was filling up was all that could be desired. There was the usual demand for the knockout clubs for the dogshark or skate; but the sea bass, flounders and big porgies were getting their work in in spite of them; and after about four hours of good sport and hard work we started in for home with a good, stiff wind. Two of us, the captain's man and friend Pettit, busied themselves cleaning a few fat flounders for supper as we came along.

Now there is something in the dressing and cooking of a flounder that was a revelation to me, and as Capt. Rooney says, it is the only way, and as I have always found him a man of truth, and have tested more than one flounder after his receipt, I have come to the conclusion that he knows what he is talking about. Here is the receipt: First, scale and remove the head, which will also remove the stomach. Then lay the fish with the white side down, and with a sharp knife follow a line down the backbone. Now lift the left hand upper corner of flesh and trim out to side fin, leaving that fin attached to ribs and backbone. Then proceed in the same way with the right side. Then turn the fish over and proceed in the same way with that side. This gives four steaks without a bone. Next prepare an egg and cracker dust batter, and have plenty of hot fat in the kettle, the whole being well seasoned, and you have a dish that will make you wish you had known how to prepare it long ago. The captain's wife can testify that we appreciated her efforts in the culinary line.

After supper we set out to obtain fresh bait for the morrow. This is procured with a small seine, by surrounding a school of mossbunkers, packing them on ice, and all is ready. The next morning we left the beach with a good breeze, and steering south-southeast about twelve miles, where there is an old wreck which had been buoyed with a small stick with a rag fluttering from it. But it was like looking for a needle in a haystack to sight such a small object, and a haze was spreading over the water, almost obscuring everything. But this finally lifted, and we were able to discover the alcoh-vapor launch Rest-a-While at anchor at the wreck. The wind had died out, and it was flat calm. We rowed up alongside and anchored in about four fathoms, with a shell-and-mud bottom, the ideal home of the bass and flounder. As it was the last of the tide they were not

taking the bait readily, and for about an hour time was passed in loitering and yarn spinning. Then the young flood began to come, and with it the fish. Suddenly there is a sharp tug on the captain's line. "What is it, Cap.?"

"A big bass—a monster!"

He is hauling in by liberal reaches. The fish is a long way down, and is doing its best to shake loose. The fish suddenly ceases resistance, and coming near the surface, is seen swimming in large gyrations through the clear water, nearly belly uppermost. It is not a bass by any means, but a shark about 6 feet long and striped like a tiger. As it comes to the surface it is being drawn toward the boat, when suddenly it takes it into its head to seek bottom again, giving a fierce snub to the line, but is eventually brought alongside, and by the aid of the club and gaff is dispatched. In the meantime the boat is filling up with the strange sea creatures, their ungraceful mouths parted and dull eyes staring in the scumblance more of sorrow than anger, but decidedly more in anger than with sorrow to begin with. Each new arrival seemed the occasion of protest from those already domiciled there. The sun shines out hot, and as Capt. Hand, of the Rest-a-While, kindly offers us a tow in, we go aboard and proceed to fulfill the launch's name. She takes us in in about two hours, and is withal a very handy boat. This closes the day's work, and we retire to sound and restful sleep.

Our trips up to this time have been accompanied by bright skies and light airs; but on this day we have a change. We are at the wreck early, and in a calm until about noon, where there is a fresh breeze from the northeast, gradually increasing in force until the captain says, "Boys, we must be moving." Then it is up anchor and make sail, and away we go in a mad race for the shore, with a strong flood tide under us. There is a thick haze that obscures the well-known light and objects ashore, and for a while we are taking chances—also barrels of water over the bows. We are drenched to the skin in a minute, with the wind still freshening. Suddenly the captain shouts, "In with the jib!" But before the order can be executed the jib has carried away, and we fall off in the trough of the sea, which by this time is running high. Finally the jib is secured, and on we plow. We are chilled to the bone, but the boat is making good weather of it, when an extra hard puff strips the mainsail from the mast; and after a deal of slatting and banging, it is secured, and we anchor, while Rooney proceeds to repair damages, which he is able to do, and we proceed under a lugsail. But the haze has not lifted, and we know by the way the tide is carrying us that we must be nearing the Crissy Wick Shoals. Will we clear them? The little skiff is as high in the wind as she will go, with the peak slatting and banging and making a terrible racket. Suddenly the haze that has obscured the light lifts, and we can make it out, also the shore line. We have cleared the shoal by a few lengths; and now as we are nearing shore we down sail and out oars, and go through the surf without our usual caution about getting wet, for we are drenched.

This ends our vacation, and we pack up a large basket of the fish to give to friends who have not been able to get away, and say good-by, hoping to be able to return soon and enjoy it all over again.

H. L. SHAW.

Plaster Casts of Fish.

I WILL describe as well as I can how to take a cast of a fish in plaster, to show one side only, or what is called a one-piece mould, so that it may be hung against the wall. I have never attempted casting a heap of fish—that is a difficult job, and must be done in gelatine, which I have never handled.

Apparatus required: A pail, a quart basin, a tablespoon, a flat ¾-inch bristle paint brush, a gill of linseed oil, a gill of spirit polish, a piece of ¾-inch board unplanned (about 2 inches longer and 2 inches wider than the fish), some strips of millboard 2 inches wide, some tin tacks and superfine plaster, and some soft clay; get these ready, and work near a tap if possible, as a great deal of water is required, and do not forget to put on a large apron.

First catch your specimen fish, then well oil the surface of the board, using the brush, then place the fish on it, fill up the angle between the fish and the board with clay, slightly raising the head, fill the mouth level with the lips, block up the dorsal and ventral fins, then, when the fish is in the required position, nail the millboard round the outside edge of the board, to form a flange so that the plaster shall not run over, and you are ready for the plaster; then place the pail under the tap and let the water run, about half fill the basin with water, take a spoonful of plaster and shake it into the basin, repeat this four or five times, then pour off the clearest part of the water and stir up the mixture quickly—it should then be about the consistence of cream, not thicker, take a spoonful and pour it quickly over the top of the fish, then blow it about smartly, take another spoonful and blow that into all the crevices, and repeat until the fish is covered with a thin coat; wash the basin out, mix some more plaster, and ladle it over quickly and evenly, and repeat until fish and board are covered to the thickness of about ¾ inch, then flatten the plaster slightly on the top so that it will stand firm when turned over. In about ten minutes it will be sufficiently set, then strip off the cardboard, turn the mould upside down and lift off the board, easing where necessary with a thin knife; you will then have the fish half embedded in plaster; take out the clay, and you should then be able to lift out the fish. If it does not come away easily cut away the plaster a little round the edge, the mould should then look like this:

Now for the cast. When the mould has been made about an hour brush out the inside with soap and water, then brush it over carefully with the polish, which will stop all the pores; then oil it thinly, but carefully, mix

some plaster as at first, and do not forget to blow it well about. When the mould is covered the plaster may be poured out of the basin and spread even with the spoon until it lies about half an inch thick on the mould. Let it set, and then the cast ought to come clean out of the mould; if it catches at the edges, it is because you have not cut away enough at the part marked A in the diagram, cut away a little more of the mould till the overlapping part is released. When the cast is got out successfully it should be touched up with the point of a penknife, and the part corresponding to the clay cut away with a chisel. If it is to be colored, give it a coat of the polish when quite dry, and paint with tube colors thinned with Macgillip.

I hope I have made myself sufficiently clear, and that these directions will be of assistance to those of your correspondents who asked for them.—W. T. Lawrence in London Fishing Gazette.

The Illinois Fish Law.

From a letter written by Commissioner Nat H. Cohen to Seymour Bower, Secretary of the American Fisheries Society.

It may be of interest if I convey to you some idea of the improved situation under which we expect to find ourselves under the operation of the amended law in Illinois. To begin with, the law will now empower the Commissioners to compensate the wardens when on errands of duty. But above all, the new law has an ample provision for the seizure and destruction of such devices for taking fish as are declared by the act to be unlawful. This will have a most salutary effect on all violators of the law. Hitherto it has been a practical impossibility to secure convictions in our river towns. Local sympathy ran almost uniformly with the fishermen, in consequence of which justices, juries and State's attorneys seemed impelled to override evidence, and the result was that the rights of the people were ignored and the statutes practically nullified, so that the destruction of the fish supply went on almost without let or hindrance. This exasperating state of affairs naturally demoralized the warden service. It was useless to send a warden to make an arrest, because the failure to impose and collect a fine merely operated to bring the law still further into contempt. The Commission was, therefore, constrained to abandon prosecutions in localities where conditions such as these existed.

These exigencies inspired the Commission to seek a remedy in the Legislature by having introduced a new measure, the one to which I have already referred as coming into effect July 1, prox., a measure much better calculated to cope with the situation. After convincing the members of the utility of and the necessity for such legislation as the measure asked, but little difficulty was experienced in securing its passage, to take effect as already stated. One of its wisest provisions in my opinion, and the one that will yield the best result, is that which prohibits fishing within 400 feet of any dam between the 15th day of April and the 15th day of June. I mention here a single instance that came under my personal observation, illustrating the destructiveness of the practice which this provision is intended to cure. It was at the Waldron dam, in the Kankakee River, where one rod in a single day took 135 bass, most of them females. Can there be anything in the way of protective legislation more productive of good results in the perpetuation of our game fishes than the positive prohibition of this barbarous method of taking the parent fish while on their journey seeking a place to propagate their young? We are simply endeavoring to bring the law to the assistance of these pretty and useful denizens of the water in their efforts to perpetuate their species for the benefit of mankind. The destruction of game fish by indiscriminate angling from April to June 15 below dams is the fruitful cause of the depletion of many of our inland streams. In a word, it is the paramount evil that has retarded the increase of game fishes in our waters.

Fish leave their winter quarters, ascend the streams early in the spring, and find their progress retarded by various obstructions, dams being the chief and most formidable. Before these obstructions the fish congregate by thousands, unable to proceed further. A few succeed in getting ahead by means of fishways, where such provisions are made; but the great body of them are at the mercy of the unscrupulous angler, who never leaves the spot so long as a poor, helpless, hungry denizen of the water will consent to be landed in his creel. He goes home with his enormous catch, and ignorantly gloats over the destruction of millions of fishes which future generations ought to enjoy. He is unable to see an inch ahead of his nose, and to recognize the fact that he is taking out of the water the multiplied and multiplying progeny of these helpless creatures, the stock which nature is striving to supply for the years to come.

I ought to mention that the stipulated limitation here noted—the sixty days between April 15 and July 15—is a compromise. It was the desire of the Commission to make the limitation cover the entire time from April 1 to July 1, but the opposition was so determined that it was deemed expedient to agree to the sixty-day limitation, rather than incur the risk of having the bill defeated in toto. It is wise to recognize the fact that measures of a drastic character must be brought before the people by degrees.

Another feature of our new law which we regard as of vital importance is the provision which prohibits the taking of bass with any device other than hook and line, thus making the angler the sole beneficiary of this species.

Presumably, if the sportsmen of Illinois could have the opportunity to legislate upon the question of the use of nets or seines, there would be a practically unanimous vote in favor of abolishing their use entirely. But what would be the result of that? In Illinois there are thousands of people who earn their bread almost entirely by taking the coarse fishes that the angler despises. These people would be practically thrown out of employment, and many of the river towns would feel the effects of losing a considerable portion of their population. Thousands of dollars that are invested in tackle and boats would lie and rot on the banks, and vast sums of money that come from Eastern markets in the purchase of these

coarse fishes would cease to pour in, for the fish that refuse to be ensnared by the angler's lure can only be taken by net or seine.

It is evident that the industry in these coarse fishes must be fostered. It is a matter of no small commercial importance. Over 14,000,000 pounds of this class of fish were taken last year within the jurisdiction of Illinois. The laboring man, earning a dollar a day, cannot pay 25 cents a pound for the finer fish taken by the angler. Carp, the much-abused Cyprinoid, that has not had a word of praise from any mortal since its introduction in this continent—vilified by every sporting paper from Maine to California, a nightmare for the angler, and a general all-around Jonah—will yet loom up like a phoenix in the piscatorial horizon as the future cheap food supply for the generations that are to come. Permit me to set down here a little anecdote illustrating my opinion of the carp as a food fish, and showing that the tirade against it is mostly prejudice. Some two years ago my esteemed colleague, Col. S. P. Bartlett, and myself were at Springfield, endeavoring to convince the Legislature that it was necessary for the Fish Commission to have a new boat, because the old one lacked capacity for the accomplishment of the work laid out for the year then ensuing. We thought we were meeting with fair success, until one of the members arose and cried out, in a ponderous voice: "That's the man," pointing to Col. Bartlett, "who introduced those infernal Dutch carp that killed all other fish, and aren't fit for a dog to eat." We supposed we were lost; but the bill was only on its second reading, and we had another chance. Col. Bartlett went to Meredosia for a 20-pound carp, turned it over to the chef at the hotel, and gave instructions to have it well prepared and put on the menu as "red snapper." The instructions were followed, and it came on in artistic manner. When dinner was served, not less than twenty of the members called for "red snapper" from two to three times. After they discovered they had eaten carp our bill passed without a dissenting vote. We never heard anything more in the way of tirade against carp during the session. I give this anecdote to show that it takes a connoisseur at least to distinguish carp when properly prepared. Suppose we grant that it was a mistake to introduce these fishes into our waters, is it not better to take them also under the protection of our laws, to regard them as a real money producer and a source of cheap food for a large class of our people, since all this can be so readily accomplished without detriment to our game fishes?

In a word, now, our new law gives the market fisherman an opportunity to realize his revenues from Aug. 1 to April 1, in the rivers used for commercial navigation only; all other streams and lakes will be left for the angler. With the proper enforcement of the amended law of which I have spoken, there is every reason to expect that the coarse fish will remain abundant in our waters, and that the game fishes will increase from year to year. Thus I trust you will be able to get a faint glimpse of the fact that we are striving to do a good work in Illinois in preserving and enlarging the means which God and nature have placed in our hands for supplying an inexpensive and healthful food for the table of the masses and a dainty for the tables of the rich and the well-to-do. In this important work we shall progress the more the better the people—the source of our authority—understand the methods by which and the ends to which our efforts are directed.

Novel Fishing in Burma.

FISHING nowadays is such a fine art that there is little new or unknown which can be written about it. The following experience, however, seems to me to be so unique, and at the same time such a cute method of outwitting the finny tribe, that I send you an account of the fishing in the hope it may be of interest to your readers.

The scene was laid in Burma, and the methods employed are eminently characteristic of the Burman and his indolent ways.

We, a party of three, had gone off some two miles inland from the river Irrawaddy to look up a small jheel, and see if we could get a few ducks for the benefit of our larder. Arrived at the jheel, we found a fairly deep piece of water, surrounded by thick jungle and khine grass, without a single duck or teal to be seen on it, and, on inquiry from some fishermen who had a small encampment on the borders, we were told that there were none there, the water being evidently too deep to afford the requisite feeding for them. Having come so far we were, however, not to be discouraged, so, after a deal of persuasion, we got three boats and a fisherman each, and proceeded to explore the sides of the lake. The boats were of the ordinary dug-out type, rather larger, perhaps, than usual, and, at first, we took little notice of the peculiar fittings rigged up in each of them; the fisherman poled them along, the water being about 8 or 10 feet deep. After a short while, we found that there was really nothing to shoot, and it was then that we turned our attention to the fishing, and asked the boatmen how they caught their fish. The boats were about 20 feet in length, and each end was stiffened with some mud or sand ballast. On one side, nearly the full length of the boat, was a net stretched on a framework of bamboos, and this stood up at right angles, or nearly so, to the water. On the opposite side was another framework of bamboos, with thin strips of boarding fastened closely to it, the whole framework and covering looking like a huge door floating alongside.

The upper surface of the door was whitewashed, and the whole was so arranged that it could be inclined from the gunwale of the boat to a point about 3 feet under the water, or raised to float on the surface. This, then, was their stock in trade, but how it was to be used to catch fish we could not imagine. But we were soon to see. At our request two of the boats arranged themselves abreast, with their "doors" lowered or inclined downward, toward each other, forming V in the water, and the boats were kept just far enough apart to allow the lower edges of the "doors" to about touch.

In this position they poled them along in about 6 feet of water, and very soon we had a shoal of small fry

boxed up between the boats. When this was the case, the fish never seemed to try and escape at each end of the trap, which they might have done, but proceeded to leap over the white surfaces of the inclined "doors," and, of course, landed in the boats, those which had taken a big enough jump to clear the boat being caught by the net walls on the other gunwale.

It was most surprising. In a short half-hour the whole floor of the canoes were covered, and, sitting in the center as I was, the fish simply showered on me, and pockets and cartridge bag could have been filled where I sat by the simple method of opening them. The fish were nearly all small, like sardines, and very good eating, as we proved next morning, but occasionally a large one got trapped and came flapping in, and there were six in my boat when I got back about ½ pound each. And I was not sorry to get back, for at the rate they came in the boat, which had about 2 inches of freeboard, would soon have been unpleasantly loaded. Such was the result of about half an hour's fishing, as understood by the wily Burman. He simply stands and poles the boat along, and the fish jump in—simplicity itself. I would fancy him smiling at the results obtained by a fly fisherman at home in the same short time.

Afterward we saw the women folk chopping up the evening's catch into small pieces, and, making a sort of bundle of them, inclosed in lengths of coarse grass, and for each of which they said they got eight annas. But the evening air (just about there) was a bit heavy and scent laden, so we left quickly, having seen one of the most ingenious fishing dodges ever invented, and not wanting to gain any further information as to how the fish are turned into that evil-smelling Burmese delicacy called Bala-choung or Nappee.—Correspondence London Fishing Gazette.

CHICAGO AND THE WEST.

Who Can Help Mayor Harrison?

CHICAGO, Ill., Sept. 20.—Mayor Carter Harrison, of Chicago, wishes some information in regard to the planting of rainbow trout in deep lakes, and since he has been unable to secure answers to his question thus far, he comes to FOREST AND STREAM in further search. I have confidently promised him that no one ever came to this paper yet who did not get what he wanted, and it is to be hoped that readers will advance any information they may have upon the question proposed.

The facts are these: On the property of the Huron Mountain Club, of the Upper Peninsula of Michigan, of which Mayor Harrison is a member, there exists a large, deep and cold lake known as Mountain Lake. This lake is between three and four miles long, and 45, 50 or 60 feet in depth over a large part of its extent. In places the granite shores run sharp off into the water. The lake is perhaps spring-fed, or, at least, the temperature in the summer time at a depth of 20 or 30 feet is always low enough to enable a trout to live there. Yet the lake is not settled by the brook trout, which inhabit a little stream which empties into it. It has, indeed, no fish in it excepting perch, suckers, chubs and the like, which abound in considerable numbers. The lake is drained by a small stream which, not far from the foot of the lake, drops in a fall of 45 feet, making it impossible for trout to ascend from Lake Superior, into which, through the medium of the club streams, the lake empties.

The Huron Mountain Club has often discussed the question of stocking this lake. Some have advised the use of the ouananiche, others believe in trying the brook trout yet further. Mayor Harrison has rather entertained the opinion that the rainbow trout would be the proper fish. He thinks the lake is hardly cold enough for brook trout, but that it would be cold enough for rainbow trout. What he wishes to know, therefore, is whether the rainbow trout has been known to flourish in a landlocked lake of this nature; how cold the water of such lake would need to be; how large the rainbow trout would perhaps grow in such surroundings; what have been the results of planting rainbow trout in such lakes? Is the rainbow native to any of the lakes of the Western regions, and if so, what are the conditions of water, habitat, etc., in such locality?

These questions of planting new fishes are interesting ones, and also are very important ones, as must be any attempt to alter the natural fauna of a region. Mayor Harrison thinks that the rainbow trout could not descend over the 45-foot fall and establish itself in the club streams, where it is not wanted. On the other hand, here is this big lake which offers no trout fishing and which might be put to very good advantage, should the experiment of planting prove successful. Now, will the good readers of FOREST AND STREAM, scientific and otherwise, counsel us of their wisdom and experience?

Good Fishing.

By the way, it was Mayor Harrison, as will be remembered, who broke the Huron Mountain record, and also Mr. Hempstead Washburne's heart, by killing a 5¼-pound trout on the main club stream last month. The Mayor had yet another fine fishing experience at the club this summer. Fishing in the backwater of a logging dam, in a pool which seemed to be spring-fed, he ran into a pocket of nice trout, and in two and three-quarter hours caught 168 of them, very many running a half-pound. They came in doubles and trebles time after time. Not needing so many fish, the Mayor returned nearly all the catch to the water. He thinks this is some of the liveliest fishing he ever saw.

To show the extent of trout fishing possible in preserved streams, one may add an item regarding the little stream which flows into Mountain Lake, above mentioned. This stream was planted some years ago, and has been regarded as sacred ground by all the club members, who supposed it was not fished by any one. This summer a trip was made to the stream to see how the trout were getting along. To the surprise of the club members, they found a beaten path on each side of the stream, and learned, among other things, that on the preceding day a lumber jack and his wife had caught 180 trout on this sacred stream, and you can gamble they didn't put any of them back, either. The club has been putting up a good

thing for the adjacent residents, who, no doubt, appreciate the circumstances very much.

In speaking of this same club, it might be stated that Hon. Hempstead Washburne is just back from that country, and states that a big, black bear was killed the other day not far from the cottages. Mr. Washburne is some subdued since his trout record was broken, but is consoling himself with starting a shooting club of his own not far from Chicago. He has killed fifty-nine prairie chickens himself on the country which he is thinking of turning into a preserve.

Grayling in Michigan.

The following letter is at hand, from Traverse City, Mich., commenting upon recently published statements regarding the grayling supply in certain streams of Michigan:

"I notice in FOREST AND STREAM of the 14th inst. a letter from Hartford, Mich., stating that there are trout and grayling in the Pine, or South Branch, of the Big Manistee. This is news to me, so far as the grayling are concerned. I have been under the impression that there are no grayling in the Pine. It was once a good grayling stream. Will the gentleman from Hartford please tell the readers of FOREST AND STREAM how many grayling he caught in the Pine in 1901? There are a few grayling in the Manistee above Sharon (formerly known as Jam 1). I camped and fished for them in August of this year on this river. I am told that there are a few grayling left in the headwaters of the Pigeon River, some sixteen to eighteen miles from Wolverine, Mich., but I have not fished this part of the Pigeon. There are also a few grayling left in the headwaters or tributary streams of the Au Sable River, I am told, and that is about all there is left of the grayling in Michigan, so far as I can learn. Grayling fishing on Pine River, in the northern part of Lake county, Mich., ended about 1895. There are some fair-sized trout in this stream, and there would be more but for dynamite, lime, etc. This is the great curse of the Michigan streams. Thousands of trout are destroyed each year by illegal methods, and there seems to be no remedy, unless the State is willing to pay deputy fish and game wardens a reasonable sum for their services.

"I have no use for the rainbow trout. They are driving the speckled trout out of the streams of Michigan. They are poor fish for the table. Under 2 pounds they are taken with the fly. Over this weight, say, 2 to 4 pounds, they are mostly taken with bait. Above 5 pounds they are taken with dynamite and spear, with few exceptions. I know where there are rainbows of large size in Michigan waters that can only be caught by illegal methods. A few years ago a rainbow was speared near this place that weighed 10 pounds, and it is probable that more of them could be caught the same way. N. F."

There would seem to be warrant for the belief that the grayling has a ghost of a chance in several of the Michigan streams. I do not doubt that a specimen or so has been seen in the Pine River, and it is known that young grayling have been seen in the upper waters of the Manistee. Three fine, adult specimens were taken by Mr. Geo. Alexander, in a deep and heavy part of the Au Sable River, thirty miles below Grayling, Mich., this spring. As to the Pigeon, one cannot state, but I know one other stream in Michigan, whose name I am not at liberty to give, while last summer and the summer before that very good takes of grayling were made.

As to the rainbow trout, it is likely that the residents of Michigan would quite agree with N. F. It will, no doubt, drive out the speckled trout in any stream in which it is planted. I have several friends who have taken rainbow trout on the fly in weights of 4 and 5 pounds, and it seems quite true that the age and weight of the fish do not prevent its taking the fly to the same extent as in the case of the brook trout. The guides of the Au Sable, for instance, state in general terms that the big rainbows will rise to a fly, but the big brook trout will not. No doubt some very heavy fish are lost by breaking the tackle of the angler, and even a small rainbow is hard to stop; yet it is no doubt true, as N. F. states, that the largest specimens recorded were more apt to have been taken on the pitchfork than on the fly.

Rainbow Against Brook Trout.

As bearing upon the value of the rainbow trout compared with the brook and speckled trout, there may be offered the following communication from a gentleman who writes from Kalamazoo, Mich., and quotes a letter from North Carolina. These statements seem to cover the question pretty fully. When first introduced into Eastern waters the rainbow trout is hailed by the local anglers with joy. It is really a better sporting fish, as seen in the Eastern streams, than the native brook trout, but it does not wear so well in the estimation of the anglers. It is believed that in most cases the latter regret, and commonly too late, the introduction of the rainbow trout, which practically drives out the smaller, but not less desirable, species. The letter referred to reads as follows:

"In the FOREST AND STREAM of Nov. 17, 1894, there was published a letter from W. M. Brown, of Florence, S. C., in which he says, in reference to the trout streams in the mountains of North Carolina, the following:

"I would, however, sound a warning note to those who love the native brook trout better, but may be tempted to plant rainbow trout among them as an experiment. Let them forbear. Close observation on the Culu-sagee River proves that as the rainbows increase in size the native fish decrease in number. In this stream seven years ago it was no trouble to kill a creelful of the beautiful fontinalis in a few hours, but every year since they have been gradually getting scarce and more scarce, until this past summer the creel would not contain ten per cent. of this species. I cannot assign any other reason for this than that the rainbows, being a fiercer, more voracious and much more active fish, are steadily cleaning them out by preying on them."

"My experience and observation with the trout streams of Michigan, south of the Straits of Mackinaw, are about the same as those of Mr. Brown in North Carolina. No one who has had much experience with the rainbows in the streams of Michigan will question their game qualities, but as for eating them, I do not think they are any better than the common sucker from the same stream."

Muscullunge.

Mr. H. G. McCartney stated this week that in the seven days preceding there had been ten muscullunge killed at Kabekona camp, all over 20 pounds, and one weighing 31 pounds.

Lures for Muscullunge.

I happened to find Mr. Caldwell deep in preparations for a muscullunge trip. Mr. Caldwell has had an extended experience in fishing for muscullunge, and usually has pretty good luck. He agrees with me that, although the muscullunge is far less numerous than it once was, we are still in the infancy of our art, so far as angling for it is concerned.

"I am going to try a few new wrinkles on the old boys when I get up there this next week," said Mr. Caldwell. "Here you will see a dozen different spoons, which I have been making purposely for this trip. You will see they are larger than you can buy in the makes of the standard spoons, yet they are of lighter metal. Some of them are cut with a narrow point and others with a broader wing for the spoon. I calculate that these spoon blades will run near the top of the water. Of course the sharper-pointed ones will revolve closer about the shaft of the hook. I think they ought to stir up something, for they will cut a big swath in the water.

"Here is another kind of spoon I have made. It is a propeller-blade spoon, or, rather, two propellers. One runs one way, and the other in the opposite direction at the same time. You will notice that they are of bright metal, and that they are small. I intend to use these above bait, and it is my experience that a small, bright spoon above a bait is a good thing.

"You will observe that I have done away with the triangle and am using instead a tandem made of hooks as large as tarpon hooks. You will also observe that I have painted the shanks of these hooks white. This white tandem of shark hooks has done me good service in the past. I bait my perch or sucker through the mouth on the upper hook, and put the lower one back of the fin. I can use this bait either in trolling or casting.

"Now here is another idea of the same sort. You will note the big, upper hook, or lip hook. To this are wired two long, shanked, big hooks, which are soldered together, at an angle of about 60 degrees. Fastened to the shank of these double hooks is a baiting needle. I take a sucker or wall-eyed pike weighing a pound or two pounds, bait him on the lip hook, and run in the baiting needle under the belly skin. Thus the two big, lower hooks lie directly against the belly of the bait fish. This makes the whole outfit practically weedless, and I can cast it in the weeds or anywhere else. It can be used under a small, bright spoon, as I intend to use it. It is my theory that a muscullunge can eat a 4-pound pike at a bite if he wants to, and hence it is pretty hard to get too big a bait for him.

"Here are some other things," and he threw down a dozen split-tails of the white-tail deer. "I intend to take one of these deer tails and bait it on my double hook tandem, and to use it both for casting and trolling. You will see that it makes a bait nearly a foot long. I have often found this to be a good bait for muscullunge, where other lures fail.

"I think a muscullunge likes a little red in a bait. It seems to stir him up. Yet, all said and done, I have had about as good luck with pork rind as anything else. I use a spoon, with a tandem of big hooks below, and I cut my strip of pork rind at least a foot long, cutting it into two good, long legs at the lower end. This sort of bait has a kind of tremulous wiggle in the water, which seems to stir up musky more than anything else. I agree with you that the muskies are so used to seeing ordinary spoon hooks nowadays that they will not rise to them. You want something to make a wake in the water about as big as steamboats. Now I am going to Tomahawk Lake, where the Fish Commission of Wisconsin operate. Each spring they take in their nets a lot of muscullunge that weigh 30, 40 and 50 pounds. I know they are there, and I am going to see if I can't wake 'em up.

"As showing how stubborn and how fierce a big 'lunge is," continued Mr. Caldwell, "I will tell you what happened to me once, and it happened when Frank Brandis, of Mercer, was rowing me. You know Brandis very well. I had a strike from a small 'lunge, which weighed about 4 pounds, and was starting to pull it out into deep water away from the weed bed, when I saw a big muscullunge strike the hooked fish. It caught the little fellow midway of the body, and at once dived down into the weeds. I waited at least five minutes, all the time telling Brandis to pull out into deep water. He thought I was joking, as he had only seen the little fish. At last we did get out into deep water, and, thinking that I had the big fellow hooked by this time, I began to shorten line. I got him up within 20 feet of the boat, and then I could see that he still had his jaws set on the other fish, and had not taken the hook at all. When he got that close, he opened his mouth and disappeared. This fact, as much as anything else, led me to believe that a big muscullunge needs a big bait. Also, he will strike that big bait right in the middle, and there's where your hooks want to be—good, big ones at that."

It would not be surprising if Mr. Caldwell were on the right track with his muscullunge experiments. What he says about the big fellow holding on to the bait is quite in accordance with pike habits. Sometimes a pike will catch a minnow or a small fish and hold it thus, crosswise, in his mouth for several minutes before he swallows it. English anglers counsel waiting sometimes as long as ten minutes for a pike to "punch" the bait before striking. I believe good English pike anglers could come here and catch our muscullunge with bait. A wait of ten minutes is something unknown in American angling methods, yet I believe if one would use this very large bait in some of our better 'lunge waters he would now and again get a strike. The thing to do then is to turn loose the line and wait ten or fifteen minutes for the muscullunge before striking. Even a bass should be struck on the second run, when one is casting frogs, and the bass is by no means so fierce a fish as the muscullunge. In short, it would seem that one cannot wait too long after the 'lunge has struck the bait. Once he has swallowed it he cannot disgorge it, and he is not apt to reject it if the bait is properly hung.

I once had a little personal experience which leads me

to believe that Mr. Caldwell's idea of a big bait is not far wrong. I was a boy at the time, not more than twelve years of age, and was fishing with my father on the old Skunk River, of Iowa. As I was not a very skillful angler, and as the bait was running low, I was left alone at camp, with the precaution not to use too many of the bass baits. There was a big sucker in the minnow can, a fish which would weigh perhaps half a pound or more, and this I felt at liberty to use. Passing the hook through the mouth and out at the gills, I thrust it through the body below the back fin, and started out to do a little trolling on my own hook. The bait, thus placed on the hook, naturally doubled up into a letter S, and, as it revolved in the water, made a wake about 15 inches across. I walked along the bank, dragging this outfit behind me, and all at once was surprised to see that the gyrations of the dead sucker had ceased. I was using a float, of course, and I could see the red top of this float slowly walking off across the stream. All at once it disappeared, and then occurred to me that I might have on a fish. Boy-like, I threw the pole behind me in the grass, and began to do the hand-over-hand act. The float began to come to me again, showing just below the surface of the water, and the fish, whatever it was, offering no resistance, apparently. I was on a 4-foot cut bank, and, stooping over, I undertook to lift my prey up on to the ground. It would not lift. I strained and tugged, and so all at once there appeared a vast, green form, which, by main strength, I pulled a foot or so up the bank. It heaved, writhed, turned over against the bank, broke the hook and disappeared, leaving a very much scared boy staring into the water. I think this fish was, in all likelihood, a muscullunge, and that it weighed at least 25 or 30 pounds. My father once took a muscullunge in this river which weighed 26 1/4 pounds, and we used to hear of such weights occasionally in the early days. In nearly every instance these fish, when taken on bait, rose to an unusually large bait, trolled somewhat as I have described. My bait was small enough for the fish to swallow readily, yet had I waited a little longer I should have landed my game. He had the hook in his jaws, instead of in his stomach, and hence was in a position to break off the wire. It is one of the pike habits to strike a bait, then to retire to its customary resting ground, where it lies for a time before it swallows the food. If you ever get tangled up with a muscullunge on a big bait, wait, and then keep on waiting. Personally I should think a spoon hook above the bait would be a disadvantage. One could not get the hooks too big. A triangle is not so desirable for bait-fishing.

It is Mr. Caldwell's theory that muscullunge, like bass, lie with their heads pointing toward the shore. He often takes them from around logs and fallen tree tops, and he casts inshore and reels out. He does not think that the fish go to the bars and lie facing out toward deep water until the cold weather of fall sets in. He admits, however, that this is but theory on his part. We may wait with considerable interest the result of his fall experiments. Personally, I fully believe that there are lots of muscullunge yet in Wisconsin, but that we know mighty little about fishing for them. The old spoon hook game would seem to be pretty well played out so far as the big fellows are concerned, though comparatively few persons go after muscullunge with anything but the spoon hook.

Speaking of big baits for muscullunge, Mr. F. N. Wood, of this city, tells me that he once killed a 19-pound 'lunge, from which he took a 2 1/2-pound wall-eyed pike. Many anglers report seeing bass, wall-eyes, etc., gashed by the teeth of the muscullunge.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

A Day on the Philadelphia.

WEST ROXBURY, Mass.—It was a jolly crowd of us—seven in all—that met just before 10 A. M. on the Philadelphia, a small steamer which goes to the fishing grounds just outside Boston Harbor, every morning. We were Jake, a young fellow about fourteen; Uncle Lisha, Charlie, the Boss, Peter, Bill and myself. Lines, bait and a fish chowder are furnished, and the fare is reasonable. It is a good plan to have your own lines and bait, as they are then reliable.

Two pools were made up, and almost everybody on board entered one or both. One was a 25-cent pool; the captor of the largest cod or haddock got two-thirds of the money, and the biggest fish on board brought its owner the other third. The other, a 10-cent pool, was awarded for the biggest fish.

The boat reached the grounds about 12, and then the anchor was dropped and fishing began. Chowder was waiting for those who wanted it. Although everybody on board had fair luck, it was "up to us" to make the best catch.

Hake and silver hake were biting in great style, and a few cod, haddock and pollock made it more interesting. Peter swore Bill was a Jonah, and Bill swore that Peter owned that distinction. Peter vindicated himself, however, when he pulled up a 40-pound skate, the largest fish on board. There were about fifty-five fish in our crowd. Jake had only caught one, for the roll of the boat had given him that funny feeling, and Uncle Lisha only looked on. A 7 1/2-pound pollock got a foul of my line. If I had that fellow on a silk line with rod and reel, instead of a cod line, there would have been some fun. The other fish ranged from 1 to 5 pounds weight.

A 12-pound cod took two-thirds of the 25-cent pool, but Peter was satisfied with a third, and the small pool besides.

The steamer started for the city about 4:30. We took home about twenty-five fish, and gave the rest to paper boys and bootblacks on the wharf, who were glad to get them. Everybody voted it a good day's sport, and went home happy.

MUSHKODASA.

A Fish That Was Loaded.

This is a characteristic anecdote of Crispi in his early years of storm and stress. In 1856 he was at Paris, assisting in the publication of the *Courrier Franco-Italien* and conspiring against Napoleon III. Mazzini used him for propagating his writings in France. One morning the porter came into his editorial room with the announcement, "M. Crispi, a large fish has come for you." The

date was April 6, and Crispi replied at once, "You are six days late, my friend, in trying to fool me." But it was true; there was the magnificent fish, sent from Antwerp, where Crispi knew nobody. When opened in his presence it was found that it was "stuffed" with thousands of Mazzini's leaflets, carefully wrapped in oilcloth. An hour later they were traveling, each in its wrapper, to the four corners of France. Presently the police discovered them, and Crispi was arrested. But nothing could be proved against him, and the then Prefect of the Paris Police, the famous Pietri, exclaimed, "Crispi is worse than his master, Mazzini. He never writes anything."—London Fishing Gazette.

Official organ, FOREST AND STREAM.

'Mid Reef and Rapid.—XXII.

BY F. R. WEBB.

"Well, you see it was late in September," he began; "September, 1870. A heavy storm broke up above an' come down the river, an' it rained tremenjous for two days—mebbe some of you rec'lect it?"

"I do," replied the Colonel. "There was a regular cloud burst all over Augusta county, and all the streams were flooded."

"It was some years before I came to Staunton," I added, "but I've often heard of it, both in Staunton and along the river. Lewis Creek pretty nearly swept the lower portion of the town, I have been told."

"Yes," replied the Colonel, "it did a great deal of damage in the lower part of the town; the streets were washed and gullied out very badly in many places."

"Commodore," said George, "I've heard you speak of this flood often; perhaps you know something about it."

"Well," I replied, "on our various cruises on this river I've heard a great deal about it. It was probably the most memorable event in the local history of the river valley, even eclipsing the stirring events of the war in some respects, and the people—at least, those who are old enough to recollect it—still talk of it with interest, and at every hamlet or farmhouse along the river you can hear some thrilling story of adventure and escape, or sad tragedy connected with it."

"I haven't never heard much about what it did other places 'en our neighborhood," said Mr. Martin, "but I s'pect more lives was lost here'n enny one other place on the river."

"Yes," I replied. "You're right. This was probably the most fatal place on the whole river."

"I'd like to hear somethin' about it," Mr. Martin continued. "an' ez you've b'en all along the river, mebbe you kin tell somethin' about its doin's other places."

"Well," I replied, "I can by no means give you anything like a complete history of the flood, but I've picked up a few points about it, here and there. The rise was the greatest ever known in all the traditions of the river—"

"Yes," said Mr. Martin, "nobody hadn't never rec'lected nor heard of sich a rise before—that's why so many houses an' mills was built so close to th' river; nobody never dreamed ther' was any danger. They don't build so close an' low now, no more."

"The rise was very sudden," I resumed. "At Rippe-toes, up on North River, Polk told me teams were fording the river in the forenoon, and by 2 o'clock in the afternoon the water was soft, deep on that high bank along the right, and the mill and all the houses were gone."

"Great Scott!" exclaimed Lacy. "Why that bank's 30ft. high!"

"Yes, fully that, I should think," replied the Colonel. "The bridge at Port Republic was carried off, and the town more or less flooded, I've heard," said Lacy.

"Yes, so I've understood," I replied. "Over on South River, at Weyer's Cave," I continued, "Len Mohler told me that mills, houses, bridges, etc., went by all the after-

noon, on the flood, and during the night which followed this awful day a house went by, and a woman in the wreck could be heard screaming and praying."

"Dreadful!" exclaimed the Colonel. "Couldn't they help her in any way?"

"No," I replied; "there was no boat at hand, Len said. The one they had had been carried off by the flood, and even if there had been, it was as much as one's life was worth to venture out on that flood in one, even in daytime, and, at night, simply suicidal."

"That's correct," said George.

"I suppose, of course, the poor creature was drowned?" said Lacy.

"Beyond a doubt," I answered. "At Riverbank the mill was carried off, and Mr. Lambert rescued his family from the second-story window of his house in a boat before the house went also. At Shenandoah, or Milnes, as it was then called, before the name was changed in the palmy days of the 'boom,' the iron works and furnace and the entire village, with the exception of that big brick house surrounded with trees, with the observatory on top, which you all have probably noticed in passing there, were carried away."

"But, Commodore," protested Lacy, "I don't understand! How could that possibly happen? Why, the furnace is a mile inland, and the town is up on the hills so high that the river would flood the whole State before the town could be reached. Noah's flood wouldn't be a circumstance to it."

"That's true," said I, joining in the general laugh that went round at this protest, "but at that time the town wasn't built on the hills, but on the river, and the furnace stood down about where the present rolling mill now stands."

"Oh! that was the way of it, was it?" he replied. "But why did they build so low, I wonder?"

"Well, you see," said Mr. Martin, "ther' hadn't never b'en no high water before that carried off houses an' mills, an' people never dreamed o' no danger; an' the furnace was built close to th' river so's to load the pig iron onto the gunaloes handy."

"What was the matter with the railroad?" continued Lacy.

"Ther' wasn't no railroad then," Mr. Martin replied.

"That was before the railroad was built," the Colonel added, "and at that time the entire output of the furnace was boated down the river to the railroad at Riverton or Harper's Ferry."

"Was anybody drowned there, I wonder?" Mr. Martin continued.

"I don't know; I have never heard," I replied.

"I think it quite likely," the Colonel added.

"At Riverton," I continued, "the old Manassas Gap Railroad bridge, with its trestlework approaches, was carried out, and the track on that high 'fill' along North Fork washed out almost to the depot, fully half a mile, and the—"

"Great Scott, Commodore!" Lacy protested, "that bridge's 40ft. above the water."

"Yes, perhaps it is," I admitted, "but the rise was 47ft. at that point, as afterward marked and measured on the side of the mill, a couple of hundred yards above the bridge."

"Was the mill carried off?"

"No, but it was damaged to the extent of about \$5,000."

"Was anybody drowned there?" queried Mr. Martin.

"No," I replied, "but there were several narrow escapes. The rise was very rapid. For a while it was at the rate of a foot a minute, and the residence of Mr. Lent—the first house at the foot of the high land, on the right as you go up into the village—was surrounded so quickly that the family were not aware that they were in danger until the house was surrounded and flooded, and they had to be roused in boats from the second-story windows."

"I wonder—" exclaimed Mr. Martin.

"One of the citizens, Capt. Harris," I resumed, "walked down to the river upon a ridge, or eminence, about 8ft. above the water, and stood there a few minutes, watching the rise, and, when he turned to go back, he found that the water had cut him off, and that he was on a small island, but a little above the water. The little island was quickly flooded, and it was with the greatest difficulty that he succeeded in swimming out."

"That was a close call," said Lacy.

"It surely was," assented Mr. Martin.

"At Blakemore's, four miles above Riverton," I continued, "there were eleven people took refuge in a house there, and only four of them were rescued. Dr. Roy and Mr. Richard Baily, of Front Royal, got in a boat and went to the rescue of the party, and succeeded in reaching the house and getting several of them into the boat. You understand, of course, that in a flood like this, the current rushes in a tremendous sweep right across the lowlands, and houses, mills, trees, etc., stand out like islands in this irresistible sweep of waters, and when you also consider that the water is literally covered with the wrecks of houses, bridges, fences, etc., together with uprooted trees and all sorts of driftwood, logs, etc., it is not only difficult, but highly dangerous, to put out in a boat and attempt to reach one of these houses. Well, when the party left the house in the boat, it was found to be overloaded and unmanageable. They were swept in among the trees which lined the river bank, and, while passing under a large sycamore, some one—doubtless crazed with fear, and undoubtedly ignorant of the management of boats—clutched an overhanging limb and held on, and the boat, of course, swung round across the current, and was swamped. Dr. Roy, Mr. Baily and one other man succeeded in getting into the tree, but the rest of the occupants of the boat were drowned. The three in the tree remained there all night, and were rescued next morning. The people gathered on the banks opposite them, on each side of the river, and built big fires and staid there all night, singing hymns and songs, and shouting to them words of encouragement to keep up their spirits and prevent their going to sleep and falling from the tree into the river. At earliest dawn a boat was manned and sent to their relief, and, after several fruitless attempts, succeeded in getting to them and taking them off, thoroughly chilled and exhausted, and more dead than alive."

"Ther' experiences was mos' or quite as bad as our'n," said Mr. Martin.

"Yes," I replied, "but tell us about your experience here," I continued. "We want to hear your story, and I've been doing all the talking myself."

"Well, that's all right," Mr. Martin rejoined. "I'd ruther hear about what happened to other people any-ways, for I know what happened to us heer. You see, it was this way: It was a tremendjus storm, an' hed b'en rainin' a couple o' days stedly. The river was low, though, an' teams was fordin' an' doin' business at th' mill; wagons loadin' an' unloadin' in spite o' the rain. This bank was high then, and hadn't never b'en overflowed. Th' mill stood right on th' bank, an' they was houses aroun' with people livin' in 'em, like es you see in enny millin' neighborhood. A gunalo lay at th' mill, an' Alf Kite an' a man named Aleshire hed loaded it with 125 bar'ls o' flour to boat down to market. I was workin' then fur ol' Noah Kite, who lived jes' b'low th' mill, an' hed jes' sold th' mill to Jarvis Martin. Well, the river begun risin' an' kem up very fast. Es th' river come up th' gunalo was tied up higher an' higher, but th' people wasn't uneasy. By night th' river was up over th' bank en in th' mill en th' houses, en things was beginnin' to look purty skeery, but still th' people didn't leave. We was gittin' skeered, though, an' I begged ol' Mr. Kite to git out, but he sed he'd lived ther' all his life an' th' river hadn't never reached him afore, an' he guessed th' house would stand, an' he wouldn't go. Ther' was eight of th' Kite famby in th' house—ol' Mr. Kite en Mis' Kite en two daughters, one on 'em married; Erasmus, a grown son, an' three boys, an' a Mr. West, of Richmond was ther'—he was collectin' State bank money, an' hed stopped ther' for th' night; that was nine people in th' house. When they wouldn't go, I waded out myself, but about dark I went back agen, wadin' up to my waist to git ther', an' begged 'em to come out, but they wouldn't go. George Kite, one o' th' boys, about eleven or twelve year ol', sed he'd go, an' I tuk h'im on my back an' kerried him out, an' thet was th' last I seen of any o' 'em. Some time in the night, jes' when nobody don' know nor never will know, 'xceptin' 'twas after midnight, th' mill went, an' th' house went, an' they was all drowned 'xcep' Rasmus, who left th' house afore it went to pieces, an' got off on a floatin' log, from which he clum' on a straw rick, which was found several miles below, in Philip Long's bottom, acrost th' river, from which he was tuk a couple o' days later. Mis' Kite's body was afterward found in a tree top, down near Long's mill. Th' married daughter an' Eddy Kite an' Mr. West wasn't never found."

"Couldn't the gondola be used?" asked the Colonel, as Mr. M. paused in his narrative. "I should think they might have got aboard that and been saved."

"It was used," Mr. Martin replied, "but it was of mighty little sarvice in such water. It was moved higher an' higher as th' river come up, 'til it was finally made fast just behind th' ol' storehouse th' miller lived in, which by now was full o' people, thinkin' 'twas safer'n the'r own houses. Es night wore on an' th' river kep' a-risin' Alf Kite an' Aleshire dumped th' flour in th' river an—"

"Why didn't they replace the flour in the mill?" Lacy interrupted.

"Th' mill couldn't be reached," was the reply. "With the water comin' down in sech a flood, an' all covered with drift—trees an' houses an' bridges an' mills—it was a awful sight, I tell you! About midnight th' parties in th' house—ther' was 'leven of 'em, men, wimmen an' children; two of 'em was babies in arms—lef' th' house an' got on th' gunalo. Th' water was well up to th' tops o' th' winders, an' they got out by steppin' on th' winder-sill an' squeezin' out between th' top o' the winder an' the end o' th' boat outside. It was pitch dark an' still a-rainin', an' th' huge piles o' drift an' big trees would come a-crashin' ag'in th' house with a noise like thunder, an' a-jarrin' it to its foundations, an' they feared that every knock 'ud be th' last. They hadn't more'n all got on th' boat when th' house toppled over 'n' away they went. If it hed 'a' b'en daytime they might 'a' stood some chance o' runnin' th' river in th' gunalo, an' gittin' out summers, but it was es'black as a black, rainy night cud be, an' all they cud do was to let th' boat go—"

"Why didn't they paddle the boat ashore, I wonder, instead of trying to run the river?" queried Lacy.

"They cudn' do nothin' with it, in such a rush o' water 'xceptin' jus' let it run with th' flood. You see it's some distance acrost that flat to high ground, an' th' water was rushin' an' roarin' down over th' flat th' same as it was out in th' river, 'n' all covered with drift an' trees an' houses floatin' down an' crashin' in among th' trees an' th' mill an' houses, which was standin' like islan's out in th' river, 'n' they cudn' do nothin' 'xcep' jes' drift helpless with th' rush o' water. They managed to cle'r th' trees along th' bank b'low th' mill, an' git out in th' river, but in a little while th' gunalo struck ag'in a big drift among th' trees. Alf Kite was pitched overboard, an' th' boat went over him, but he kem up on th' other side, an' managed to git on th' drift. The rest o' th' party hed jest barely time to scramble up on th' drift afore th' gunalo went to pieces like kin'lin' wood. When mornin' come th' people on th' bank—they was down opposite Long's—tried to rescue them, but 'twas not untell nex' day thet they got off. Aleshire and Jack Stoneberger got drowned here in tryin' to git off."

There was a pause as Mr. Martin finished his tragic narrative.

"How many people, all told, were drowned from here?" Lacy finally asked.

"Well, ther' was ol' Mr. Kite and Mis' Kite and two daughters an' two boys, an' Mr. West, from Mr. Kite's house; an' Jack Stoneberger an' Aleshire from th' gunalo; that was nine people, all told," he replied.

"That's a terrible story," said the Colonel.

"It is, indeed," said Mr. Martin, impressively, as he rose to leave for the night, "an' one thet no one livin' round heer is apt to furgit soon."

The recital of the tragedy made a deep impression on our minds, and, after sitting in silence for a short while longer, while we finished our smoke, we quietly betook ourselves to our tents and turned in for the night.

The great storm of August, 1893, was a memorable one. Forming in the West India region it swept up along the

Atlantic seaboard with tremendous violence, dealing death and destruction as it hurled itself along the coast. It reached the region of Virginia some time during the night of the 27th, and the good people of that historic old Commonwealth awoke on Monday morning, the 28th, to find it raging in fury. The mountains of the Virginias broke its force to a great extent, and checked its inland progress, but clear out among their remotest fastnesses its presence was felt. It swept in floods and torrents over the Augusta county high lands, converting little brooks and dry runs into raging rivers; carrying away fences and outbuildings, and in which men, women and animals were caught, and in some instances drowned. The streets of Staunton ran like rivers from curb to curb, the water reaching to the hubs of the wheels of vehicles, and the lower parts of the city were inundated, while all day long the storm swept over, and the rain fell, not merely in showers, but in torrents, and in great, blinding sheets of water.

We awoke at 5 o'clock on this memorable morning to find it raining heavily, and, as there was no hurry, the Colonel having arranged the night before with Mr. Martin to have himself and Mary Lou carried over to Stanley, on the railroad, to return from there instead of from Luray, via Massanutton, and a start being out of the question anyhow, we sank back into our snug little cabins again for a delicious morning doze of an hour or so more, and it was after 7 o'clock when we straggled out, one by one, into the shelter of the fly, and it was fully an hour later when we finally sat down to a good, comfortable breakfast of fried bass, bacon, fried potatoes, soft-boiled eggs and coffee.

The weather did not improve as the morning wore on. The storm was more or less intermittent, seeming to come from below, and to sweep up the river valley in relays, occasionally breaking away until the mountains, which swept away close at hand on either side, down the river from us in receding perspective in two long, parallel ranges, became visible, beneath the dense, low-hanging canopy of clouds, which writhed and twisted overhead, again closing in in a dense, drab curtain of rain, with slanting, wavering lines, sweeping up in solemn grandeur, in whose steadily advancing folds the mountains receded from view and were blotted out, and even the dense forest which crowned the bluff on the opposite side of the river loomed up in wavering outlines, vaguely distant and indistinct.

About the middle of the forenoon, Mr. Martin drove his big farm wagon down to the camp, and Mary Lou was lifted up and laid on a comfortable bed of straw. The Colonel bade us good bye all round and climbed up alongside of Mary Lou, and was driven away. The last seen of him, before he was lost to view in a turn of the road, he was standing up in the wagon, behind the driver's seat, with the rain streaming down over his long, black, glistening, rubber coat, and running in streams down its folds and hollows into his shoe tops.

We were sorry, indeed, to lose the Colonel, and his genial, breezy presence was missed by us for many a day, and we felt particularly lonesome after he had left us this dismal, gruesome day.

After the Colonel had gone, I put on my own rubber coat and sou'wester hat, and, picking up the empty coal-oil can, made a pilgrimage through the storm and the mud to Alma, half a mile distant, to mail our letters and procure a fresh supply of coal oil, which, always useful around the camp stove, is absolutely indispensable on a rainy day, and I was well aware that there would be no more meals in camp until that can was filled—at least while the rain lasted.

On my return I found Lacy undergoing a tonsorial operation at the hands of a rather good-looking young fellow, who had strolled up from Alma to see the camp; while George, with his little, double-decked meerschum in his mouth, was sitting idly by, enjoying the performance. He appeared to be a young man of great conversational ability, coupled with a fertile imagination, rich in suggestion and invention, which placed him above the necessity of confining himself to such little details as exact facts in his statements, while his ease and self-possession were only equalled by his nerve. He was exercising these little gifts with great fluency, as I came up and deposited my oil can on the rocks alongside of the camp stove, the while he lathered and scraped away at Lacy's face with careless ease.

He greeted me affably, as I ducked in under the fly out of the rain, and seated myself on my camp stool, after hanging my dripping rubber coat on the aft standard supporting my tent.

"Commodore," exclaimed George, as he removed his pipe from his mouth and blew the smoke in little spirals from his lips—"Commodore, this man says we'd better pull out of here. The river's bound to rise and will flood us out."

"Yes, it will," replied our visitor, as he wiped and closed Lacy's razor, and put it in its case. "The water'll be 10ft. deep all over them fields out there by night."

"How about Martin's distillery there?" asked Lacy, as he toweled his face, after removing the remains of the lather from it with his wet boat sponge.

"There won't be any distillery," he replied. "The river'll carry it clean, plumb off."

"Oh, I guess not," I exclaimed, for I had by this time taken the measure of our man. "I have no doubt but that the river will rise several feet, but that land is higher than this, and is fully 20ft. above the present level of the river, and it isn't at all likely to be covered, nor this, either."

"You don't know this river," he continued.

"Well, I'd ought to," I replied. "I've run it oiten enough to be tolerably familiar with it in most of its aspects."

"Well, you'll see it in a new one before many hours more or I miss my guess. I've seen it rise 20 or 30ft. many a time after a rain like this," he persisted.

"That may be," I answered, "but it will hardly rise 20 or 30ft. to-day, nor to-night."

"Do you see those posts down there in the sand?"

I admitted that they were sufficiently visible.

"Well, sir," he continued, impressively, "right there stood one of the largest and finest flouring mills on the river. It was on just such a day as this—"

"Yes, I've heard that Columbian mill anecdote before." I interrupted, rather abruptly, spoiling his climax. "I've

heard it often, and can tell you all about it, from the time the teams were fording the river in the morning and delivering wheat at the mill, and getting flour, and trading and doing business generally, until Mr. Kite and his family were carried off in their house that night."

"Well, all the same I advise you to pull up and get off this low, flat here," he continued, in a different key. "Down yonder half a mile below the ford the ground's higher, and you'll be safe there."

After our friend's departure—he was in his shirt sleeves like the two or three other natives who had visited us during the morning, and who came and went with an indifference to the storm which surprised us—we sat down to lunch, at the close of which Mr. Martin joined us, in company with one of the men from the still house. Both were in their shirt sleeves, and, of course, wet to the skin, to which fact both were apparently indifferent. They joined us under the shelter of the fly, taking the proffered stools, and sat and smoked and chatted with us for an hour or so.

"Yes," Mr. Martin replied, in answer to a query from Lacy. "I've run this river often in th' ol' flat-boatin' days. No, I didn't never run a boat; I was a helper. What was that? Well, you see, two men's th' crew of a boat; one stan's at th' bow, an' th' other at th' stern. A great, long sweep's hung at each end, an' th' boat's han'led by these. Th' man at th' bow he runs th' boat. That is, he has th' management of it, an' th' man at the stern's th' helper, an's under th' other man's orders. Yes, we've often run boats when th' water's es low es 'tis now; but it's hard tejus' work, an' it takes twict er three times es long to git through t' Riverton's it does on a better stage. No, we don't like to run in cle'r water; we'd rather hev it a little muddy, so's we can't see th' rocks; they look so clost they bother an' confuse us. You see, we run by th' riffles an' surface signs, an' not by seein' th' rocks. Whenever a rock's clost enough to th' top to bother us it makes a riffle, er break, an' we dodge th' riffle—yes, if we can, fur we don't allays make it in tryin' to dodge 'em in swif' water, an' when a rock's deep enuf b'low not to make no break it's too deep to bother us, an' we don't care to see it, fur seein' it only confuses us. You know in cle'r water th' rocks looks so clost when th' water's reely sevril feet deep on top of 'em."

"Yes, we've often noticed that, and I've often said that for flat-boating, muddy water was probably preferable to clear on that account," I remarked.

"So have I," assented George.

"Nevertheless, I much prefer clear water for a cruise," remarked Lacy. "The river is so much more beautiful, and I like to see the rocks and reefs slide smoothly up stream under me."

"Oh! unquestionably," I exclaimed, "for cruising I infinitely prefer clear water."

"Same here," added George. "There's no fishing when the water is muddy."

"Wal, fur a pleasure trip, like yourn," Mr. Martin assented, "of course cle'r water's better ev'ry day, but it was business with us, an' we didn't want no cle'r water."

"I suppose you boatmen had lots of adventures," suggested Lacy, as he hunched his stool a little further under the fly to escape the drip from its lower edge.

"Oh! yes," he replied, laughing; "we didn't hardly ever make a trip 'thout gittin' more'n one duckin'. I recleck a good one I got onct, at Bixler's dam. P'raps you know wher' that is; 'bout fifteen er twenty mile b'low th' White House. Yes? Well, we was tryin' to make that shoot. Th' bow man swung his end over to th' shoot an' yelled to me to swing th' stern aroun' into line. I reched my big sweep aroun' to one side to git a bite on th' water an' jes' then one corner o' th' gunalo struck ag'in the side o' th' shoot, an' she stopped. Th' river was up a little, an' runnin' strong, an' th' force o' th' water swung th' blade o' th' sweep right roun' under th' end o' th' boat, an' lifted me overboard es neat es you please, an' drapped me into th' river foft. astarn o' th' boat afore—"

"Why, couldn't you hold it?" exclaimed Lacy, as we all laughed.

"Hold nothin'!" he replied, as he laughed again at the recollection; "three men couldn't a held that sweep with th' water a-comin' agin it like that! Th' rain's comin' on harder'n ever," he continued, as he rose, and the two started back to the stillhouse. "We'll hev a wet night of it. You all'd better pack your things and come up to th' house an' stay all night—I'm a-feer'd you're not comfortable here—you'll git wet, sure!"

We thanked him, and assured him that our quarters were both comfortable and weatherproof; with which assurance he was fain to depart.

It was about 2 o'clock, and the more or less intermittent rains of the morning gave place to a hard, steady downpour, which beat fiercely on the fly overhead, and blistered the smooth surface of the river, which now began to be streaked with long lines of muddy water, although, as yet, there were no signs of a rise. Violent gusts of wind accompanied the rain, driving it in fierce, slanting lines, and under the pressure of which the fly rose and fell overhead, and tugged wildly at the restraining lines, which we quickly tightened and made as secure as possible, and before which the tents on the canoes yielded and shook, and swayed from side to side, but stood firm in their places; for nothing short of a hurricane could tear them from their fastenings.

Having by this time exhausted the outside resources of the camp, including each other's society, we betook ourselves to our respective cabins, to lie and read, smoke or doze, as the mood suited us. Hastily raising the flap of my tent, I ducked quickly inside, where I took off my wet canvas shoes and long, woolen stockings, put on dry ones, and ensconced myself snugly in my blankets, which, considering the fact that the steady rain caused the day to be quite chill, as well as dull and cheerless, were very comfortable. After tightly buttoning my tent all round, and extra securing the fastenings at the bottom of the tent to the stout screw-eyes under the gunwales, as an added precaution against the howling blasts of the storm without, which, laden as they were, with great sheets of heavy rain, hurled themselves against the sides of my tent with considerable weight and force, and adjusting my head-rest and pillow, I stretched myself out at full length in my blankets, and lay and read in a sense of delicious comfort, pulling away, meanwhile at a good cigar; the snugness and comfort of my cozy little cabin trebly heightened and enhanced by the pandemonium outside.

My cigar smoked out, my book presently fell from my fingers, and I dropped off into a delicious doze, conscious all the while of the roar of the storm, and the beating of the rain on my tent; much as one sleeps snugly in the berth of a sleeper, to the roar and rattle of the train, awakened and disturbed only by the quietness incidental to the stops at the stations.

Finally I awoke to find it half past five, and, with the supper problem in my mind, I pulled on some dry, heavy clothes, including a pair of stout leather shoes, and stepped out.

Hastily jerking my rubber coat off of the rear end of my tent, and throwing it across my shoulders, I made for the shelter of the fly, and took a look around me at the prospect.

It was still raining fiercely and heavily. Night was fast closing in. Nothing was visible through the fast gathering gloom—no mountains, no hills, no landscape, no clouds—everything enveloped and obscured in the dense, impenetrable leaden gray cloud of rain, which wrapped us around in its heavy folds as it drove before the blasts, wreathing and whirling in vapory masses, or driving in fierce, slanting lines, through which the lofty, tree-clothed bluff across the river loomed up vague and far away, a little darker than the rest of the sky; and the trees around us wandered off indistinctly in the gloom above, as they swayed and tossed their branches in the storm; the air seemed saturated with falling water, as though the storm cloud were driving along right on the ground around us.

I was speedily joined by George and Lacy, who, with rubber coats over shoulders, came scurrying through the rain to me under the partial shelter of the fly, where we proceeded to hold a council of war.

"Well, what do you think?" asked George.

"It looks quite like rain," said Lacy, with a feeble attempt at facetiousness, which proved a failure. It wouldn't do—the subject was too serious, and he couldn't even laugh at his own joke.

"We'll undoubtedly have a rise to-night," said I, "and it won't do to leave the canoes where they are, down there by the river."

"No, that it won't," said George; "and the question is, will they be safe anywhere on this flat? With that gully behind us we will be on an island, if there is anything of a rise."

"I wish we were over there, across the river, on the side of that bluff!" sighed Lacy.

"So do I, with all my heart!" was my earnest reply; "but we're not over there, and we couldn't move over there without getting everything wet in the attempt."

"Couldn't we manage to paddle across there, with the rubber sheets well wrapped around the bedding, and with the tents up?" he continued.

"It can't be done!" said George, decidedly. "In such a storm as this you couldn't keep your bedding dry with the cockpit open, sheet or no sheet, even if you could paddle across with the tents standing, and you—"

"Well, why not paddle across with the tents standing?" Lacy persisted.

"How are you going to see through the front wall?" replied George, conclusively, "even if you could get the boats over without their being capsized by the wind before you could get a quarter of the way across?"

"That's so," admitted Lacy; "and then there's all the camp duffle—the fly, the stove, the cooking things, provisions, etc.—that cannot be carried unless properly packed. I at first thought maybe the things might be piled on the decks and ferried across, but—no, it won't do!" he concluded.

"Here comes Mr. Martin," said George; "we'll see what he thinks of it."

"Well, we'll hev a rise, an' you all's too clost to th' river, down ther," he said, in answer to Lacy's query, as he reached the shelter of the fly, and took off a huge, yellow oiled coat from his shoulders, and shook the water from it. "I come down to see you about it," he continued. "I don't feel easy about you."

"Do you think it will reach the highest point of this island?" I asked.

"No, I don't hardly think it will," was the reply. "This piece of ground ain't never overflowed 'ceptin' in th' highest floods; an' I think it'll be safe enuff ther' if you c'n move yur tents up 'thout gittin' ever'thing wet."

"That's easily done," said I, as I put my rubber coat on and took a turn up over the highest ground to prospect for a new site for the canoes.

"There's nice ground for them up there, on top of the bank," said I, as I rejoined the group; "and we'll just pick the canoes up and carry them bodily up there, tents and all, just as they stand."

"Can you do that?" asked Mr. Martin, as we all walked down to the boats.

"Oh, yes," I replied. "You notice that the tents are fast all round to the boats, and not to the ground, and all that is to be done is to carry the boats up, tents and all."

"Oh, yes, I see," he replied, admiringly; "I hedn't noticed that before."

The canoes were accordingly picked up, tents and all, just as they stood, without the least disarrangement of anything, and carried, one at a time, up the long, gentle slope, and placed in their new positions for the night, and securely wedged in the sand, with rocks placed under their bilge-keels to render them firm, care being taken to place them in positions as free and open as possible, without limbs or overhanging branches to catch the tops of the tents in case the boats should be afloat before morning. The upstream painters were then made fast to the trees as high above the ground as we could reach.

"How about the fly?" asked George, as we returned to its shelter, after completing our moving.

"Well, I think that's safe enuff wher' it is," Mr. M. replied. "It's a good deal higher'n wher your boats was, an' is a'most es high es wher they is now. You might put them loose things up a leetle higher"—indicating the camp stove, cooking utensils and other camp impedimenta—all of which were scattered around on the lower side of the fly. They were picked up and carefully placed on higher ground.

"Now I think yer safe enuff!" he said, as he threw the big, yellow oiled coat over his shoulders, and took his departure, and was almost immediately lost to view in the blackness of the stormy night that was closing in around us.

A. C. A. Membership.

THE following have been proposed for membership to the A. C. A.:

Central Division—Oscar J. Steiner, Harris Buchanan, W. F. Benkiser, Ralph Heeren, George W. MacMullen, H. W. Cromer, all members of the Duquesne C. C., and all of Pittsburg, Pa.

Eastern Division—George F. Lewis, of Boston, Mass.

Yachting.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

SEPTEMBER.

26-28 Oct. 1.—International Races (America's Cup), off Sandy Hook.

WHILE Columbia was being put in the finest possible shape for her coming contest with Shamrock II., Constitution was at Bristol being dismantled, preparatory to being laid up. Some of her sails and spars were utilized on Columbia, but the balance of her gear was placed in the lofts of the Herreshoffs. The steel mast has been removed and there is now nothing left on deck or below. Constitution will be towed to New London, where she will be put in winter quarters. All but two of the crew were discharged, and they were retained as ship keepers. It is stated that in the event of Shamrock II. winning the Cup a challenge will be at once forwarded by the New York Y. C. to the Royal Ulster Y. C. for a series of races to be sailed next year off Belfast. Constitution is to be named as the challenging boat.

MR. W. BUTLER DUNCAN, JR., will represent the New York Y. C. on Shamrock II., and it is said that Mr. Robert Ure will act in a similar capacity for the Royal Ulster Y. C. on board Columbia.

Our Boston Letter.

BOSTON, Sept. 22.—Even though the racing season is yet scarcely closed, active preparations are being made for next season's racing throughout New England. While the yachts that have been contesting throughout the summer are being hauled out, their owners are deciding upon improvements or have given orders to different designers to turn out new boats. As the field, particularly in Boston, is very large, there is an immense opportunity of showing some radically different ideas in models that will be seen in the racing arena next season.

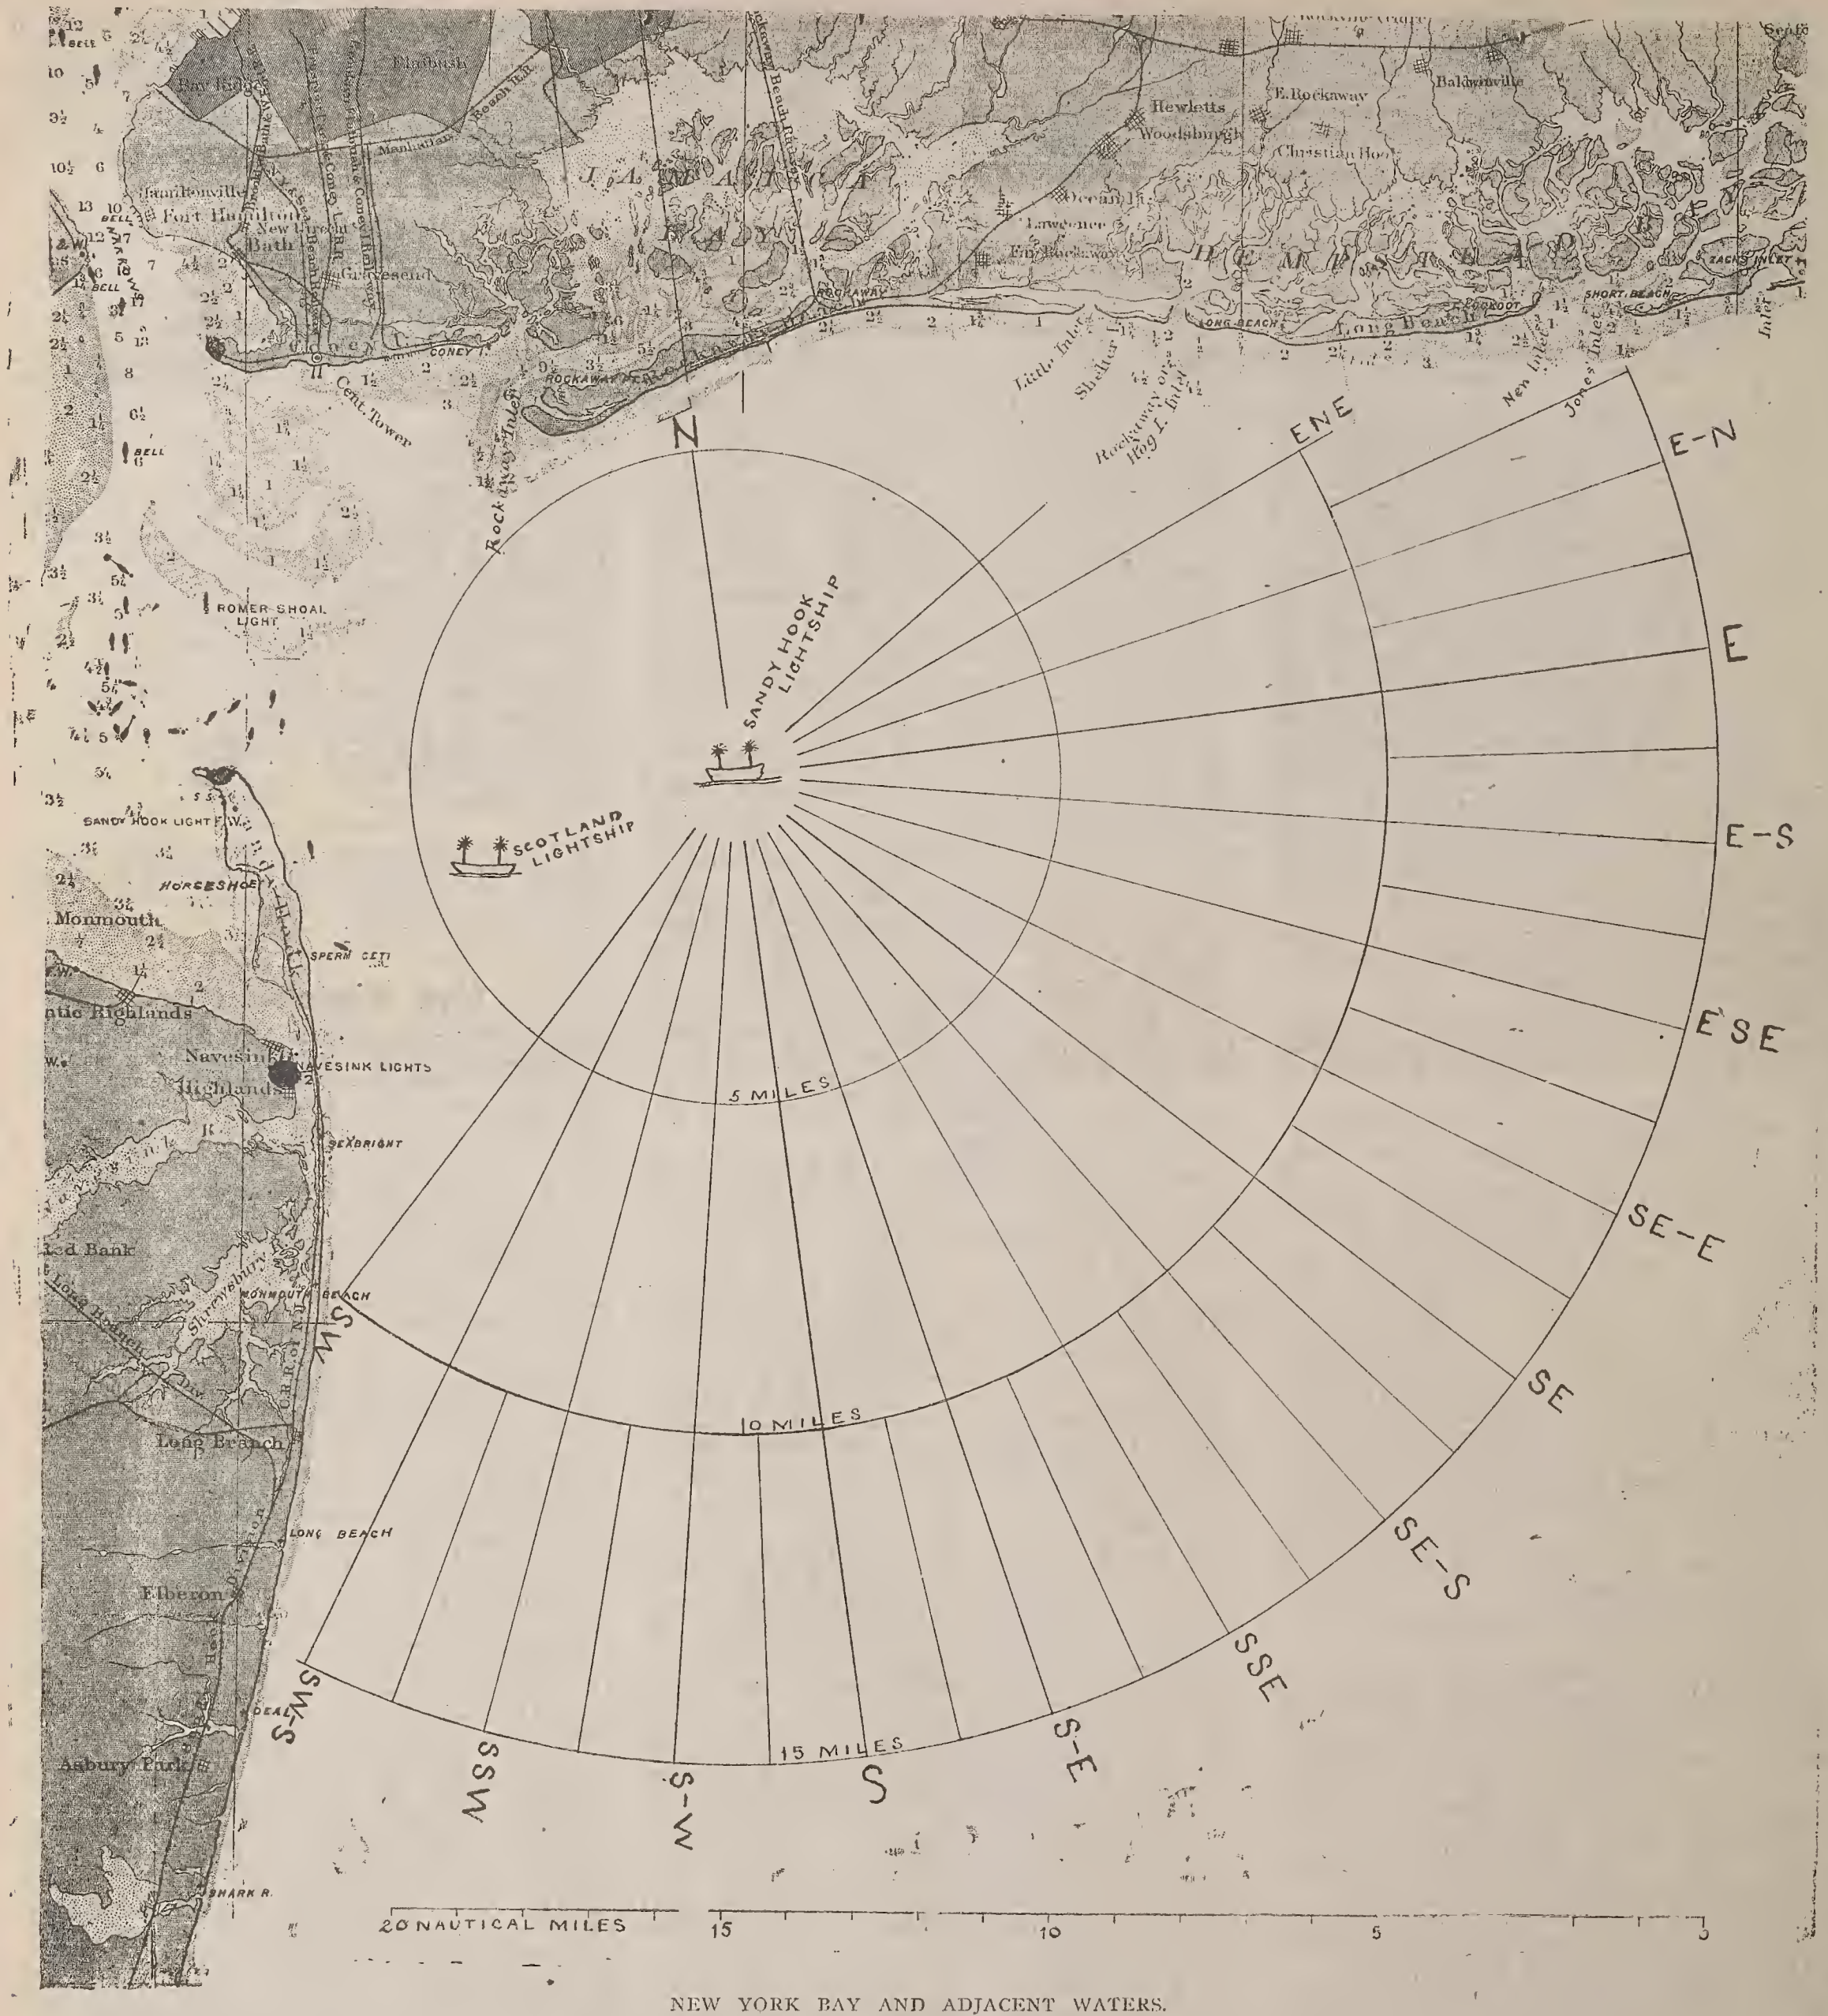

The racing season in Massachusetts Bay, of the Yacht Racing Association of Massachusetts, and of clubs whose races are not sailed under the rules of the Association, has been very successful, and the result is that there is an increased interest in all directions. There is quite a flock of yacht designers around Boston, and, in consequence of the interest that has been stirred up in the sport, it is likely that all will have a chance to show what they can do next year in the line of speed.

Crowninshield is already well stocked with orders for yachts for next year, for all parts of the world. He has dropped 90-footers for a short time, at least, and has settled down to hard work on all kinds of models. Among the new ones he is working on is a 30-rater for T. L. Parks, of New York. This yacht is to be built under the new and lengthy rating rules of the Seawanhaka Y. C., and will race in Long Island Sound. There is a 21-footer for I. Bergman, of St. Petersburg. This boat will greatly resemble the American raceabout. A small cat is being turned out for Chas. H. Davis, of South Yarmouth. Lines for a 22ft. keel cruiser are being turned out for F. H. Wringe, of California, who summers at Marblehead. The yacht will be sailed in the waters around Marblehead. A 30-rater is being turned out for Rev. Chas. E. Whitcomb, of Hamilton, Ont. This yacht will be yawl-rigged and will measure about 25ft. on the waterline.

Yachtsmen in Massachusetts are now waking up to the fact that, although Independence was unsuccessful in beating the other 90-footers, the showing she made has been very creditable to her designer. He has, no doubt, convinced the majority that the principle of Independence's model is the most speed-producing in the bunch. It was hardly to be expected that Crowninshield, in his first attempt, should master all the little difficulties of balance which his contemporary has found out only after many years of practical demonstration. Independence, however, was coming all the time and showed improvement with every race, and it is much to Crowninshield's credit, even though she did not get over the line in first position once, that he came as close as he did.

Starling Burgess is already rushed with orders, and bids fair to get practical experience enough in a few years to make him a fitting successor to his illustrious father. He is a deep student, and works hard and faithfully to get the most out of a design. He is now at work on the lines of two Y. R. A. 21-footers, one of which is for Sumner H. Foster. Mr. Foster raced Opitsah III. in this class during the past season, and has done much to revive the class. Opitsah III. was third in her class on the season's work, and Mr. Foster is evidently intending, with his usual persistency, to keep at it until he gets one that will top the class. Mr. Burgess will not state for whom the other 21-footer is being designed, but it is strongly suspected that she is for himself. He is also designing two Y. R. A. 25-footers. These, too, are dark horses, although one is thought to be for his uncle, Walter Burgess. Besides these, he is at work on the lines of a 25-footer, a 28-footer and four 19ft. speed launches.

Fred Lawley is another fortunate who has plenty of work cut out to keep him busy all the winter. He has a number of large boats to design, as well as a few for the Y. R. A. classes. The 56ft. schooner which he designed for Mr. Twombly has been completed, and is now ready for rigging. He has also turned out a 102ft. steam yacht, which is now rapidly nearing completion. In Lawley's basin, the new steam yacht Aquilo, owned by W. P. Eno,

NEW YORK BAY AND ADJACENT WATERS.

and built from lines by C. H. Crane, is being fitted out in a rush for the Cup races. She was launched a few weeks ago.

The following is the table of percentages of the yachts in all the classes of the Yacht Racing Association of Massachusetts, as compiled by the Secretary, A. T. Bliss. Only races sailed directly under the supervision of the Association are counted in figuring the percentages, and it is assumed that in each class a yacht has started at least half as many times as any yacht in the class. This will account for some of the averages being smaller than the individual percentages might show:

Class D—25ft. Cabin Yachts.							Total.	Average.
Starts.	1sts.	2ds.	3ds.	Pins.	Bks.			
Flirt	19	7	4	1	0	1310	.68	18-19
Calypso	19	10	2	3	3	1280	.67	7-19
Chewink	9	1	4	4	0	530	.53	
Early Dawn	20	4	3	4	9	870	.43	1-2
Areyto	4	1	1	1	0	265	.26	
Marion	4	0	1	0	3	110	.11	
Jingo	2	0	1	1	0	100	.10	
Little Peter	5	0	0	1	3	80	.08	
Tarpon	4	0	0	1	2	65	.06	1-2
Cyrella	2	0	0	0	2	30	.03	

Class C—25ft. Open Yachts.							Total.	Average.
Starts.	1sts.	2ds.	3ds.	Pins.	Bks.

As I have before stated, the racing season of the Association has been very successful, and the work of the individual yachts most interesting. On this account a lack of space prevents a detailed account of the work of all classes at this time. Therefore, I shall endeavor to give an account of the work of the yachts in each class every week, and thus give all the credit which is their due. Not only will the records of the yachts of the Yacht Racing Association of Massachusetts be treated in this manner, but I will also endeavor to give the results of the season's work of the yachts of yacht clubs whose races have not been sailed under Association rules.

JOHN B. KILLEEN.

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Sept. 21.

QUISETTA, Elmina and Muriel sailed a race for the Larchmont cup on Saturday, Sept. 21, and Quisetta won by good handling. The race was to have been sailed on Saturday, Sept. 14, but was postponed a week on account of the death of the President.

The race was sailed in a light N.W. wind, once around a triangular course. The first leg was E.N.E. 3 miles, the second leg S. 3/8 miles and the third leg N.W. 3/8 miles. The boats were sent away at 11:35 o'clock, and Quisetta had the best of the start, being first across the line, fol-

lowed by Muriel and Elmina in the order named. With booms to starboard, the boats reached to the first mark, and the boats rounded the stake boat in the same order that they started. The times at the first mark were as follows: Quisetta, 11:59:11; Muriel, 12:00:14; Elmina, 12:01:45. It was a run from here to the second mark in Hempstead Harbor, and Quisetta set her spinnaker. Elmina carried her balloon jib topsail and soon passed Quisetta. At the Hempstead mark the times were: Elmina, 1:28:23; Muriel, 1:32:18; Quisetta, 1:37:16. From the Hempstead mark to the finish it was a beat. Elmina stood on the starboard tack to the westward, and the strong tide swept her down toward Execution Light. Muriel was pocketed in Hempstead Harbor, and could not seem to get out. Quisetta, in the meantime, stood to the eastward on the port tack, until she was well up toward Matinicock Point, when she went about on the starboard tack and was able to lay her course for the finish line. The summary:

Start, 3:15.	Finish.	Elapsed.
Quisetta, H. F. Lippitt.....	3 17 15	3 42 15
Elmina, F. K. Brewster.....	3 43 03	4 08 02
Muriel, Charles Smithers.....	Withdraw.	

Rules Governing the America's Cup Races.

MESSRS. S. NICHOLSON KANE, Chester Griswold and Newbury D. Lawton, who compose the Regatta Committee of the New York Y. C., issued on Saturday, Sept. 21, the sailing instructions that will govern the international Cup races, which begin on Thursday, Sept. 26. The instructions are printed on a four-page circular; the code flags that will be used in signaling are printed in colors around the edge. Mr. E. D. Morgan's private signal and the burgee of the New York Y. C. head the page, while on another is Sir Thomas Lipton's private signal and the burgee of the Royal Ulster Y. C. A chart is also given which shows the courses over which the yachts will sail. The instructions are as follows:

START—Will be made from Sandy Hook Lightship at as near 11 A. M. as will be practicable, the preparatory signal being given fifteen minutes in advance. But always with the understanding that should the direction of the wind prevent laying the course from the lightship, the starting line will be shifted to the nearest available point, and that in this case the preparatory signal will be given about half an hour later than the time set for starting from the lightship.

COURSES—No. 1 (Letter C).—From the starting line to and around a mark fifteen miles to windward or leeward and return, leaving the mark on the starboard hand. No. 2 (Letter D).—From the starting line, ten miles to and around a mark; ten miles to and around a second mark, and ten miles to the finish line, leaving the marks on the outside of the triangle, to port or starboard, according as the vessels are sent around. Starting and finishing lines will be between a point on the committee boat indicated by a white flag and the mainmast of the lightship or other stakeboat if the start is shifted from the lightship. These lines will be at right angles with the outward and home courses respectively. Compass courses (magnetic) will be set before the preparatory signal is given. The signals for Course No. 2 must be read beginning forward.

MARKS—Will be white floats carrying a red ball with horizontal white stripe showing the letters N. Y. Y. C. in blue, and surrounded by a flash cone. The position of each mark will be indicated by a two-masted tug lying about 100 yards beyond and swinging a red ball from the triatic stay. Should a mark be wrecked, its place will be taken by its marking tug, which will display a red flag with diagonal white stripe in addition to the other indications, and in turning the tug the directions for the mark will govern.

STARTING SIGNALS—Preparatory.—A gun will be fired, the club signal lowered and the blue peter set at the fore. Warning.—Ten minutes later a second gun will be fired and a red ball hoisted. The Start.—Five minutes later a third gun will be fired, the blue peter lowered and a second red ball hoisted. Handicap Time.—Two minutes later a fourth gun will be fired and both balls will drop. Should a signal gun miss fire, a prolonged blast of the whistle will be given. At the finish, a short blast will be given as each vessel crosses the line.

SPECIAL SIGNALS—C—Assent. D—Negative. P—Preparatory. *Recall—Three short whistle blasts and the display of private signal. G—Do you assent to postponing race until later in the day? H—Do you assent to calling race off for the day? J—Race postponed for the day. K—Race postponed until later in the day. N—There will be a race to-morrow. R—Race is off. S—The start will be shifted from the lightship. T—Accident.

NIGHT—After dark at the finish line the committee boat (and the stakeboat if the start has been shifted from the lightship) will show four red lights horizontally; the guide vessel will show four white lights in a similar manner—and the second mark on the triangular course will hang two white lights vertically.

FOG—At three-minute intervals the marking tugs will give five short whistle blasts, with two-second intervals between the second and third, and the fourth and fifth; and if the start has been shifted from the lightship, at the finish line the committee boat will strike five strokes upon the bell.

Best three out of five races, each thirty nautical miles in length, over ocean courses, outside of headlands, and with a time limit of five and one-half hours; the first, third and fifth races being fifteen miles to windward or to leeward and return, and the second and fourth around a triangle ten miles to a leg. In every case the outward course shall be laid to windward, if possible, from Sandy Hook Lightship. The races shall be sailed on Thursdays, Saturdays and Tuesdays, commencing on Thursday, Sept. 26. An unfinished race of one kind shall be repeated until decided. The starting line and compass bearings shall be announced as early as practicable, and the vessel laying the course shall be started ten minutes prior to the preparatory signal. In case of serious accident to either vessel prior to the preparatory signal, she shall have sufficient time to effect repairs before being required to start, or if such accident occurs during a race, before the next race is started. Each vessel shall stand by the consequences of any accident happening to her after the preparatory signal, and upon the occurrence of any such accident disabling either vessel, the other shall sail out the race. The committee may postpone the start in case of accident, as stated; if the course cannot be laid from the lightship; if in their opinion the space around the starting line is not sufficiently clear; in case of fog; and if both vessels agree to a postponement, in which case the committee shall determine the time of start. But no race shall be started after 1 P. M.—From the Mutual Agreement.

The committee boat, the Navigator, will display the committee flag, and at the finish she will also display a red ball. The courses will be laid by the Edward Luckenbach. The Buecancer will be the guide vessel, and in running the courses she will display two red balls hung horizontally at the fore. The Unique will serve as an emergency vessel, and should the start be shifted from the lightship, she will serve as stakeboat and, like the committee boat, will display a red ball.

Instructions with regard to the maneuvering area and the methods adopted for preventing interference with the competing vessels, will be announced later.

A special chart for the America's Cup races, on a working scale, with the magnetic courses laid down and prepared from data furnished by the United States Coast and Geodetic Survey, has been published by the club, and can be obtained at the club house, 37 West Forty-fourth street, at \$2 each.

The club steamer, the Chester W. Chapin, will leave Pier 19, Fall River Line, foot of Warren street and Hudson River, at 9:15 A. M., and will land there on returning. Details as to tickets, etc., can be obtained from the steamer committee at the club house. Duplicates of this circular can be obtained from the regatta committee at same address.

The steam yacht Varuna, Mr. Eugene Higgins, N. Y. Y. C., arrived at Newport, R. I., from Southampton, England, on Sept. 18. The yacht encountered bad weather throughout the passage. Ten days and fourteen hours was the time it took the yacht to make the trip.

Newport Special Thirties.

NEWPORT, R. I.

Friday, Sept. 20.

THE 30-footers sailed an interesting race on Friday, Sept. 20, for money prizes offered by the owners of the boats. The crews and helmsmen were made up entirely of professionals, no amateurs being allowed on the boats. The course was laid from Brenton's Cove to Dyer's Island and return, a distance of sixteen miles. A stiff N.E. wind prevailed throughout the race, making it a beat out and a run back. The boats were well bunched at the start, and Esperanza got away in the lead. She held first place till the weather mark was nearly reached, when she was overtaken and passed by several of the boats. Wawa rounded the outer mark ahead, and she gradually drew away from the rest of the boats and finished a winner by a good margin. The time was the fastest ever made by these boats over the course—1h. 47m. 20s. The start was 9:46. The summary follows:

	Finish.	Elapsed.
Wa Wa, Capt. Knutzen.....	11 43 02	1 47 02
Hera, Capt. Peterson.....	11 45 44	1 49 44
Carolina, Capt. Sam Seaman.....	11 46 06	1 50 06
Raccoon, Capt. E. Carter.....	11 46 14	1 50 14
Esperanza, Capt. James Wilkie.....	11 46 53	1 50 53
Vaquero, Capt. Nic Peterson.....	11 48 27	1 52 27
Barbara, Capt. Morton.....	Withdraw.	

The racing between the Newport special thirties closed for the season of 1901 on Saturday, Sept. 21. There never has been a class of one-design boats that has given the general satisfaction from any standpoint that these boats have, and the racing in the class has been very keen ever since the boats were launched. The boats were well built in the first place, and have stood the racking which continuous racing gives a boat in fine shape, and they are fast and able. During this season the boats started sixty times in races; four times they were forced to give up on account of lack of wind. Then there were two races that were not included in the season's average—once when the boats were sailed by mixed crews and once by professionals. This leaves fifty-four races finished, against fifty-eight of last season.

Although Carolina won the Paget cup for points, Wawa is entitled to first place for the season's work. She has thirty-four winning pennants to her credit, against Carolina's thirty-three, and she started in several more races than Carolina. The greatest number of starts was made by Barbara and Esperanza, both fifty.

During the season three boats have changed hands. Dorothy was sold by H. Yale Dolan to Mr. Rutherford, who renamed her Barbara. Mr. Rutherford had previously purchased Pollywog from Mr. Paget, but late in the season he sold her to William G. Roelker, Jr., who changed her name to Breche, and will race her in the class next season. The record of the boats for the year is as follows:

	Starts.	1sts.	2ds.	3ds.	Total.
Wa Wa, R. Brooks.....	46	11	13	10	34
Carolina, P. Jones.....	40	21	9	3	33
Esperanza, H. O. Havemeyer, Jr.....	50	4	12	11	27
Hera, R. N. Ellis.....	44	7	10	10	27
Barbara, W. Rutherford.....	50	4	7	8	19
Vaquero III., H. B. Duryea.....	10	6	0	1	7
Raccoon, J. R. Drexel.....	27	1	2	3	6
Pollywog, W. Rutherford.....	9	0	2	1	3
Dorothy II., H. Y. Dolan.....	6	0	1	2	3

The cups were won by the boats as follows:

Carolina—The Walters, Griswold, Havemeyer, two New York Y. C., three Newport Y. R. A., Duryea, Rutherford, Brooks and Paget cups.

Hera—The Rhode Island Y. C., three New York Y. C., Mrs. Jones and Drexel cups.

Wawa—The Ellis, Mrs. Duryea, Thompson and Tournament cups.

Barbara—The New York Y. C., Mrs. Drexel, Vanderbilt and Dolan cups.

Esperanza—The Norrie cup.

Vaquero III.—The Jones cup.

England's Yacht Sailors.

DURING the summer and autumn many of the villages and towns around the Essex coast are entirely without able-bodied men, save, of course, for the presence of such indispensable personages as the clergyman, doctor, and one or two shopkeepers. A typical example is the village of Tollesbury.

Although Tollesbury boasts a population of considerably over a thousand inhabitants, the nearest railway stations, Kelvedon and Maldon, are nearly ten miles away, and from May until toward the end of September, it is simply a village of women and children. This is owing to the fact that all the men, and most of the boys over sixteen years of age, earn their living as yacht hands, and when the summer commences they start every year for a cruise of several months' duration, rarely seeing their homes again until late in the autumn.

By the end of this month the mud flats which lie between Tollesbury and the deep sea will be a forest of masts of pleasure yachts which lie up here for the winter, when the hands are paid off and the men return to their village. During the winter the staple industries of the place are fishing in smacks, oyster dredging and dredging for starfish, which latter are of considerable value for manuring purposes.

Men of Tollesbury were among the crew that Sir Thomas Lipton took across the Atlantic to sail Shamrock I., and several of them will take part in the forthcoming contest.—London Daily Mail.

Colonel Astor's New Steam Yacht.

THE already large fleet of American sea-going yachts is to be strengthened by the addition of a new vessel. Messrs. Gardner & Cox, of New York city, whose steam yachts compare most favorably, both in beauty and utility, with the English-designed boats, have been commissioned by Colonel John Jacob Astor to design and superintend the construction of a steel, twin-screw steam yacht that will take the place of Nourmahal, his present boat. The boat is to be delivered complete to her owner in the spring of 1903, and, when finished, will be one of the finest steam yachts in the world.

The superficial dimensions of Nourmahal, for it is the

intention of Colonel Astor to retain the name by which his old boat was known, are as follows: 227ft. on the waterline, 32ft. beam and will draw about 13ft. of water. The yacht will be built at some yard in the vicinity of New York city, as Colonel Astor, who has considerable knowledge of mechanics, wishes to watch the construction of the hull and machinery of the vessel as the work progresses, so that he may make suggestions and changes if he thinks advisable.

Nourmahal will have two steel decks, and on the main deck there will be a continuous steel house, covered with mahogany. In this deck house, amidships, will be the owner's quarters, which will consist of a stateroom 20ft. square, a large dressing room, private sitting and bath rooms. The dining and breakfast rooms, together with the galley and pantries, will be located in the forward end of the deck house. Aft of these is to be located a music room, the owner's study—a passage will connect these apartments with his living quarters. There will also be on this deck a drawing room, library and three staterooms, with connecting bath rooms.

In the after end of the main deck-house, and directly below, will be eight staterooms, all having connecting bathrooms. The after end of the berth deck will be given up to owner's and guests' maids and valets. The officers' and crew's quarters are to be located in the fore and aft ends of the yacht, while the space through the middle is reserved for the owner's and guests' rooms.

The yacht will be equipped with two sets of four-cylinder, triple-expansion engines of 4,000 horse-power, and steam will be supplied by four Scott boilers.

Elaborate electric lighting, drying and refrigerating plants will be supplied—in fact, she will be complete in every detail when furnished.

Keystone Y. C.

WOODMERE—WOODSBURG BAY.

Saturday, Sept. 14.

THE last regatta of the season of the Keystone Y. C. was held on Saturday, Sept. 14. The course was to windward and return, each leg being five miles in length. There was but a very light wind all day. The start was made at 3:17, and the race was finished by 6:00. The summary:

	First Class—Sloops.		Elapsed.	Corrected.
	Start.	Finish.		
Dollie	3 27 28	6 03 22	2 35 54	2 31 29
Ellen	3 27 20	5 58 23	2 31 03	2 27 48
Jupiter	3 30 30	3 56 40	2 26 10	2 26 10
Second Class—Sloops.				
Ripple	3 33 40	6 11 08	2 32 38	2 32 28
Grace	3 37 56	6 10 06	2 32 10	2 30 25

The winners were: Jupiter and Grace.

Yacht Club Notes.

At the regular yearly meeting of the Island Heights Y. C., held Saturday evening, Sept. 14, the following officers were elected unanimously to serve the ensuing year: Com., J. Harvey Gillingham; Vice-Com., Edward J. Schoettle; Sec'y, Herbert M. Harlan; Treas., Alexander Rennick; Executive Committee, Robert Shoemaker, Jr., Arthur Letchworth and Charles J. Beck; Trustees, Dr. H. H. Davis, Francis F. Milne, Charles J. Beck, S. Edwin Megargee and M. F. Middleton, Jr.

The annual meeting of the St. Regis Y. C. was held at Paul Smith's, in the Adirondacks, on Saturday, Sept. 14. Officers elected: Com., Anson Phelps Stokes; Vice-Com., Dr. E. L. Trudeau; Sec'y, L. Bayard Smith; Treas., S. J. Drake; Meas., Samuel V. Hoffman; Directors, Dr. Thomas R. French, Edward Penfold and Archibald Rogers.

YACHTING NEWS NOTES.

The steam yacht Aphrodite, Col. Oliver H. Payne, N. Y. Y. C., anchored off the New York Y. C. station, foot of East Twenty-third street, New York city, on the afternoon of Sept. 14. Very bad weather was encountered on the passage from Southampton and Fayal. Aphrodite left New York some two months ago, and has spent most of the time cruising in the Baltic Sea. On Aug. 30 she left Southampton and stopped at Fayal, which port she left on Sept. 6. Gales shifting from S.E. to S.W. were met with, and on Sept. 8 a hurricane was encountered, which lasted twelve hours. The heavy sea that was running frequently broke over the yacht. The chief engineer was knocked down and injured, and two seamen narrowly escaped being washed overboard. The seas flooded the cabins and part of the port rail was smashed.

The schooner yacht Hildgard, owned by Mr. Geo. W. Weld, has been sold to Mr. Edward R. Colman, through the agency of Messrs. Gardner & Cox.

Those who go to see the America Cup races, when almost every notable steam yacht afloat in American waters will be about, will have the opportunity to become acquainted with one of the rarest flags that has ever entered New York Harbor. The flag flies over the taffrail of Sir Thomas' steam yacht Erin, and it is a very striking one, being that of the British Naval Reserve, with the "Bloody Hand of Ulster," the emblem of the Royal Ulster Y. C., sewed into it. The flag is dark blue. In one corner is the British Union Jack, and in the field, lower down, is the "Bloody Hand," on a small field of white.

Mr. Frederick S. Nock, of West Mystic, Conn., has sold for Mr. Robert E. Smith, of Providence, R. I., the race-about Namquit to Mr. L. K. Merrill, of New York city. Mr. Nock has recently completed designs for a 35ft. open launch for Mr. D. N. Perry, of Wyandotte, Mich., and a soft cabin launch for Mr. E. A. Russell, of New York city. Both these boats will be built during the coming winter. The 21ft. hunting launch that Mr. Nock designed for his brother, Mr. Leo. F. Nock, which was built by

the Detroit Boat & Oar Co., has arrived in Providence, R. I., and is now at the Mead Gas Engine Co.'s works, where the boat will be equipped with one of that firm's latest-pattern, 8-horse-power, double-cylinder motors.

Mr. Charles H. Fuller, of Pawtucket, R. I., owner of the steam yacht, The Senator, is to have a new boat, which will be built by the George Lawley & Son Corp., South Boston, Mass. The yacht was designed by the builders and will be used for cruising in Southern waters. She is to be built of wood, and will be schooner-rigged. The principal dimensions are as follows: 128ft. over all, 103ft. waterline, 16ft. 4in. beam and 6ft. 9in. draft. The yacht will be equipped with triple-expansion engines, which will drive her at a cruising speed of about 12 knots. The deck houses, planksheer, rail, etc., will be of teak, while the interior will be finished in mahogany. The yacht will be named Thetis, and she will carry two launches, one 21ft. long, and the other 16ft. long; she will also be furnished with a 14ft. dinghy.
