So far none of the North Providence hunters, professional or amateur, has met with even reasonably good success, and the scarcity of partridges is very marked. Quail are quite numerous, but are extremely difficult to find, and woodcock have not been so plentiful for some time, and these birds afford good sport, but are the least valuable of the game birds.

W. H. M.

Kansas "Snowbirds."

WELLINGTON, Kan., Nov. 2.—*Editor Forest and Stream:* To-day at the eating station at Caldwell, Kan., the passengers on the south-bound train were asked if they would "have some snowbirds," and on assenting were served with cooked birds, one of which—mine—was manifestly a quail. That served to my neighbor on the right seemed to be a dove. Can you tell me why this unusual name was applied to these birds? If I had with me a copy of the *Game Laws in Brief* I could perhaps answer the question for myself, but I have left mine behind.

I recently learned that in another State, which has a law forbidding the sale of game, a hotel keeper who had been out shooting and secured a good bag of prairie chickens, had them cooked and served to his guests. He was arrested for a violation of the game laws—selling game—and fined \$25 per bird. If Kansas has a law prohibiting sale that might explain the name given at the eating station above named to the birds served at the table.

Thanks, very largely to the efforts of FOREST AND STREAM, the non-sale law in Nebraska seems to be quite generally respected. Of course, there have been some attempts to violate it, but several such attempts have been stopped by the express companies, which appear to have taken up in good faith the question of enforcing the law as to shipping game. These common carriers are the most effective assistants the game protectors can have.

A consignment of game recently shipped from a point not far from North Platte, Neb., was examined by the express agent, and when the boxes were found to contain game, the whole consignment was returned to the shipper. Thus, daily, the road that the market-shooter has to travel is made more rocky.

As yet few ducks have come on from the North, for the weather continues warm. Prairie chickens are few and far between, but quail are abundant hereabouts.

KANSAS FARMER.

Resist the Gun Borrowers.

Editor Forest and Stream:

I observe in the FOREST AND STREAM of Nov. 2 an article entitled "The Gun Borrowers."

Let me add a word of encouragement to the contributor. May the good work go on. I would not only include the gun, but it applies equally well to the rod.

I am the fortunate possessor of a 20-bore gun. Not long ago I was asked the loan of it for a few days by a particular friend. After some hesitation and the usual caution, "Take good care of it," away went gun and man, leaving me in a doubtful and dissatisfied frame of mind. My friend in due course appeared with gun, reporting no game or sport. Looking through the gun I found dirt and rust. "Have you cleaned it?" I inquired. "No," he replied, with perfect candor and innocence, "I only fired twice and did not think it worth while." He had been camping four days—two raining. You can imagine the condition of the gun. He has since bought one. My experience no doubt is a common occurrence.

It should be an unwritten law among sportsmen not to lend gun or rod. If once broken, they are rarely ever repaired satisfactorily, and if used for years very hard to replace.

In discussing this question, I trust it will be brought to the notice of some who may be in the habit of shooting with borrowed arms and show them the error of their ways. May I thank Gun Borrower for drawing attention to this matter through the columns of your valuable papers? Let me be one to back him up in his not too harsh, but reasonable, statements.

X. Y. Z.

MONCTON, N. B.

The Ziegler Party in Canada.

OTTAWA, Nov. 1.—*Editor Forest and Stream:* The report emanating from Ottawa that Mr. William Ziegler, of New York City, and Judge William J. Gaynor were being pursued through the wilds of northern Canada by the sheriff turns out to be a hunting story pure and simple. The annexed statement signed by Mr. N. E. Cormier, Provincial Game Warden of the Province of Quebec, and by Mr. H. Scudder, Secretary of the Caughnawana Fishing and Hunting Club, of which Mr. Ziegler is a member and on whose preserves Mr. Ziegler and Mr. Gaynor were hunting, gives the proper version of the matter.

HULL, Quebec, Nov. 1.—The report that Judge Gaynor and Mr. Ziegler were to be arrested grows out of a misunderstanding as to the liability of members of hunting clubs to take out licenses for helpers. All proper attention has been paid to the requirements of the game laws of the Province of Quebec by the parties concerned.

(Signed) N. E. CORMIER,
H. SCUDDER.

Importation of Game Heads.

BROOKLYN, Oct. 29.—*Editor Forest and Stream:* Sunday evening, Oct. 20, I was a passenger on a Delaware & Hudson railway train from Montreal to New York, returning from a hunting trip to Canada, and had with me the antlers and scalp of a moose.

The United States Inspector of Customs informed me that moose heads were dutiable, and wanted to know what valuation I placed upon my trophy. I declined to place any value on it, and told the inspector that I had repeatedly brought moose heads (unmounted) into this country, and had never been required to pay duty on them. The inspector insisted, and said that he had collected the duty on as many as ten moose heads since the present season began. In one case the owner valued

his unmounted moose head at \$50, and that he had collected the duty on that valuation.

Finally I told the inspector that he could assess the duty at any amount he saw fit, and that I would get it refunded without any trouble whatever. The bluff went. No duty was collected.

Now, what I should like to know is this: If the inspector was right in demanding duty in the first place, why did he not insist on making me pay it; and if he had no right to collect the duty on my moose heads, was it not an imposition on those sportsmen whom he did make pay?

METAPEDIA.

[Mounted heads of animals are dutiable at 20 per cent. ad valorem, unmounted heads at 10 per cent. ad valorem.]

Long Island Ducks.

NEW YORK, Nov. 11.—*Editor Forest and Stream:* While down at East Quogue, Shinnecock Bay, L. I., last week, Mr. E. W. Reynolds, of the New Utrecht Gun Club, myself, and E. A. Jackson, guide, killed about sixty-five ducks, including spoonbill, teal, broadbill, widgeon, sprig-tail, whistlers, mallards, coots, black ducks and four canvasbacks and a few snipe. We were very lucky in securing canvasbacks, as Mr. Jackson said he had not shot any in twenty years.

ALBERT A. SCHOVERLING.

EAST QUOGUE, L. I., Nov. 8.—*Editor Forest and Stream:* Since I can remember, there never was as many ducks in Shinnecock Bay as at the present time, and there are ducks that I have not seen in twenty years. At present time of writing, I would judge there are from 40,000 to 50,000 broadbills in the bay.

E. A. JACKSON.

The Safe Way.

ST. PAUL, Minn., Nov. 9.—Coming down from Hazelhurst yesterday (100 miles above Wausau) the cars showed plenty of patronage from the deer hunters. Naturally I overheard much of the conversation, and not a little of it was along the lines of personal danger and past experience when they came near being shot. One chap stated that he intended to wear a red head covering of some kind to "make sure." He'll make a good target and no doubt will get plugged before he returns.

But what's the use! It is safer to remain home and be presented with a haunch of venison than to take your life in your hands and hunt the live animal in the woods.

Pictures from Forest and Stream.

PICTURES FROM FOREST AND STREAM.—A series of pictures of Nature and Sport in America. Forest and Stream Pub. Co. New York. Price, \$2.

This beautiful volume comprises 32 pictures, handsomely printed on heavy plate paper, illustrating various phases of outdoor life and nature. There are reproductions of nine of Audubon's bird portraits, a series of the primitive hunting methods of the North American Indians, and pictures of shooting, fishing and yachting, and spirited portraits of the chief game animals of the continent.

Camp-Fire Flickerings.

"That reminds me."

Mallards and Limburger.

I ONCE went on a duck-hunting trip with two Germans. We were to get pass shooting, so were burdened with no decoys, nor did we give any attention to boat, etc. Arrived at the pass before daybreak, we adjusted our blind and awaited the coming of the mallards with the first streak of dawn. The day proved to be one of those "lowery" ones, with a strong wind blowing, and until nearly noon the birds flew low and in good numbers. The shooting was all that could be wished for.

At noon we left our blinds and walked down the pass a short distance to a spring, where we dived into the lunch basket. When I had satisfied my appetite and was about walking to the spring for a finishing drink, I was urged to wait a minute, as the best part of the lunch was yet to come, one of my companions at the same time reaching into the basket and bringing forth a long, oval tin. I scanned the tin closely as the cover was being removed, and read the words "Limburger Kase" upon the label. This was confirmed by my sense of smell when the lid was removed, for it appealed to Heaven.

I sat at a distance and saw the contents of that can gradually disappear amidst exclamations of gustatory approval, until finally the emptied tin was thrown one side. The fact that I was repeatedly informed that I did not know what was good in no wise shook my refusal to join them.

A couple of hours spent in conversation, smoking and repairing our blind brought us close to the beginning of the early afternoon flight—in fact, before we had stowed our dead birds snugly away the cry of "Mark!" directed our gaze toward a string of mallards, mere specks in the distance, coming up wind. Straight as an arrow they followed the water course, until they had come within a hundred yards of us, when they cut off at a sharp angle to the right, avoiding us entirely. Funny! And this was repeated a second time. Something wrong with the blind; an open, exposed spot was suggested, and while the cover was quite as close as during the morning shoot, yet more dead grass was brought and the blind was made closer still. "Mark again, a lone mallard coming!" Straight as a bullet he made for our blind, flying low and hopefully within good gun shot when he reached our cover, when again this lone bird, taking warning at something, towered when within a hundred yards of us, so that as he passed over our blind a rifle only would have reached him.

Something was the matter with the blind. What it was we could not make out. Again we made an attempt at improving it. More bunches of mallards came in sight, only to swerve to the right or to the left, well out of gun shot.

When the next and the next flock came, we lay flat upon our backs close up to the blind, keeping our guns

under us, but this made no difference, for again did the birds go sailing by to the right or far to the left.

We sat up and held a council of war, as the birds still came up wind only to rocket up in the air and pass out of gun shot. Our afternoon shooting was certainly hoodooed from some unknown cause. I got disgusted and started down toward the spring for a drink, and, walking too far, I had to come up wind again toward the blind, and in doing so I got directly in line with that discarded can of Limburger. Gee whiz! but it was strong and odoriferous. And the closer I got to it the more I thought. I got my drink, located the near-by tin, and when found I dug a deep rut with my boot heel in the black soil, kicked in the can, stamped on it, scraped in the earth, and packing it down started once more for the blind. My friends were yet in consultation, and stood bolt upright as a low-flying flock of mallards approached. On they came, closer and closer, but instead of either rocketing or swerving to the right or left, they continued their course and came straight for us, passing nicely over our heads and giving us an opportunity each to get in two barrels and have the satisfaction of seeing six mallards drop upon the open prairie.

Suffice it to say that the birds now flew steadily and low; there was no more swerving; the shooting was simply excellent, and toward sundown the birds kept coming in one continuous, steady stream.

I almost exploded a dozen times at the various explanations offered because of the changed conditions, but until the flight was over I said nothing about the burying of the Limburger tin. But while we could yet see, I asked my companions to come to the spring, and then and there I kicked up the dirt and exposed the buried tin, and then I gave my explanation. I told how, when I left the blind for a drink, I got too far down, and in turning I faced the wind blowing directly from that tin, and I said to myself, "I don't blame the ducks, I would dodge it myself. It is enough to stop a cattle stampede, let alone mallards, and I at once buried it. Did you not notice that I had hardly reached the blind before the birds flew low and right over us as in the morning? The moment they got wind of the unburied can you saw just how they acted. They knew something was dead somewhere ahead of them, and they simply steered away from it. The case is as clear as a pike staff. There can be no argument whatever. We had good shooting while the can was unopened in the basket during the morning, and we had good shooting after the empty tin was buried, but you know yourselves that we had no shooting while the can lay upon the ground, and the mallards had to fly up wind over it."

There was silence for a few moments after I had finished, when, as if in one voice, my friends exclaimed, "May be that was so after all."

CHARLES CRISTADORO.

Snakes and Snake Stories.

Editor Forest and Stream:

Coahoma puts me in mind of old Joe Lewis. Joe was drinking pretty hard, and his friends, among whom was a physician, went to him one day after he had been on a little spree and told him the signs were about right for him to have an attack of delirium tremens the next time he touched liquor. The warning availed not, however, and in a week or two he was at it again, and his friends called upon him in a body the next morning about headache time, finding him in bed, as they anticipated, with a wet towel wrapped around his head. The last man to enter the room carried a live rat in a wire cage, and while his companions greeted the sick man, he turned the rat loose and it ran under the bed. The men made Joe believe they were really very much alarmed at his condition, and as they talked to him they kicked under the bed and out ran the rat.

"Look at that rat!" cried Joe, when he saw it. The men pretended they saw nothing, but that they were even more alarmed about their friend than ever. The rat had landed under the washstand, and when the doctor went there to wet the towel, he kicked him out again, whereupon Joe sprang up in bed and swore there was a rat.

"Now, Joe," said the doctor, as he and his confederates grasped him and held him down in bed, "you've got 'em at last. There is no rat!"

The poor fellow sank back in terror, and in a few minutes he had sworn never to touch liquor again. The door was opened a crack in the meantime, the rat scampered out when Joe was looking, and the men prepared to leave, and were going out the door when Joe called them back and exclaimed: "Say, fellows, I know I've been drinking too much, and I intended to swear off all the time anyhow, and I mean to stick to it, but I'm just going to let you in on a little joke. It's on you. I didn't see any rat at all!"

Now I fully expected Coahoma to say it was not so about that snake crawling on the picture moulding, and that he was just joking with us. That he didn't see any rat at all. But here he comes with a new story in which there are more snakes, and in greater variety, than in any case mentioned in the text books. He sees an old lady sitting in a cage with all those snakes, one at least of an extinct species, and one of them holding up his head to have his chin tickled!

I notice that he enviously speaks of my 10-foot snake as two 5-foot ones, and I now regret not having said it was eleven, as he would then have had to hire some figuring done for him or else let my snake alone. And why can't a man tell his own snake stories and let me tell mine?

In this connection the fair and impartial reader of FOREST AND STREAM will recall that some time ago Horace Kephart told a story about a snake crawling up a big white oak, like a fly crawling up a window pane, and I want to know if that man with his pneumatic tired snake didn't start all the trouble? And him a librarian of a big library, and every night when he locks up he can sleep on a stack of learned and reliable books, some of them on zoology! When I think of his trick snake and Coahoma's extinct viper that bites with his gums, I wonder that I am able to speak of either of them with that absolute calm which must be apparent to any one who reads this.

GEORGE KENNEDY.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The Trout Stream.

FAIR river, flowing swift and free,
From fragrant realms of spruce and pine,
Where hemlocks wave their sombre plumes
And balsams turn the air to wine.

Now rippling on with music sweet,
Like some bright stream from fairyland,
While silken weeds like pennants green
Wave softly o'er the yellow sand;

And where thy course with graceful curve
Forms near the shore a crystal pool,
The lofty pines like minster towers
Reflect their shadows green and cool.

Now sweeping round a pebbly shoal,
To glide beneath some mossy bank,
Where the wild rose in beauty blooms,
And brakes and ferns grow green and rank.

Or rushing down with sweep and swirl,
Thy flashing waters laughing go,
Foaming among the mossy rocks,
To seek the quiet pool below.

Here, when the evening sunlight throws
Its dappled tints of green and gold,
The red deer seeks thy flowering moss
And drinks thy ripples clear and cool.

While from the silver beeches' towers,
Where day's last radiance lingers long,
The hermit thrush with voice divine
Pours forth its matchless even-song.

Here far removed from dust and crowds,
The greed and strife that never cease,
I come to find amid thy scenes
The healing balm of rest and peace.

To lightly cast the tempting fly,
And hear the music of the reel,
Or see the rainbow flash of trout,
And all an angler's rapture feel.

Flow on, fair stream, through coming years,
By forest green and flowery lea,
While other pilgrims seek thy shrines
In summer days I shall not see.

But let me feel thy charm to-day
And rest upon thy fragrant sod,
Here find my boyhood's faith again
And hear "the still, small voice" of God.

PRAIRIE RIVER, WIS.

HENRY J. SAWE.

A Day on a Trout Stream.

EIGHT o'clock on a beautiful morning last June found Diana and me jogging along over the road behind one of Hobbs' horses. Our destination was a little trout stream of which we had heard, but had never seen. The occasion was particularly interesting to us, from the fact that Diana had never caught a trout, and was also to christen her new rod. I had just broken the "chain," and looked forward to two or three days of freedom from the cares and worries inseparable from business.

The fresh morning air and sunshine, and the beauty of the distant mountains produced such a feeling of exhilaration that care rolled from our minds and left us as light-hearted as children.

We soon reached a place where a stream ran under the road, and judged it to be the one for which we were looking. Inquiry at a near-by farmhouse confirmed this, and, as we drew up into the yard, a young farmer who appeared on the scene told us it was the Nineteen-Mile Brook. He was clad only in a pair of trousers and a sleeveless shirt, but he also had on a beautiful coat of sunburn.

While putting up the horse I inquired as to whether our quest for trout was likely to be a success, also asking where, in all probability, we would have the best luck. After sizing up the outfit he slowly drawled, "Wal, most of them city fellers don't fish up any further than the woods, and they don't get many trout, either."

I replied that neither Diana nor I was afraid of a tussle with the underbrush, and asked him if there were any trout in the brook up in the woods. His reply, "Oh! there's trout there all right," seemed to give us the assurance that we need not return empty handed.

The horse made comfortable, we started off over the fields hand in hand, feeling that we had not a care in the world. We crossed a pasture with quite a high knoll in the center, and on arriving at the top, somewhat out of breath, we stopped, speechless as well with admiration of the beautiful view outspread before us.

A hard shower the night before had cleared the air, and the glimpses of the blue waters of the lake and the magnificent view of the distant mountains caused us to forget that we had only recently left the hot, dusty city.

Tearing ourselves away from the lovely view, we plunged into the woods at the foot of the knoll, and, crossing bogs, climbing blow-downs and pushing our way through underbrush, followed the course of the little brook at least a mile, noting with blissful anticipation the pools and ripples of the beautiful little stream.

Finally, not being able to pass any more likely looking spots, we dropped our lunch basket and other duffel on the ground and I jointed up Diana's Leonard for the first time, our plan being to fish down stream and let the line float ahead of us.

Putting on the leader and impaling a barnyard-hackle on the hook, I pulled off a yard of line and told Diana to cast into a little pool and let the bait float down the current.

I then started to joint up my own tried and true split bamboo, but had scarcely put on the first joint when I heard an exclamation. Looking quickly around, I beheld

Diana standing on the bank, her rod held high in the air, and dangling from the end of the line a lusty little mountain trout.

Diana's eyes were sparkling, and she exclaimed, "Oh, Nimrod! my first trout on my new rod"—I doubt not it was the proudest moment of her life.

I dropped my rod, and quickly disengaging the struggling beauty from the hook, laid him on the grass, where he was duly admired. After a few moments' admiration, pity seemed to take the place of exultation in Diana's gentle breast, and she remarked, "Oh, dear! what a shame to kill such a beautiful little fish."

When it reached this point I quickly gathered some wet moss and rolled the trout up in it, and told her to go ahead and get another one. She obeyed to the letter, and with baiting her hook and taking off the fish, it was well along in the forenoon before I was able to get jointed up so that I might do a little fishing on my own account.

The time passed all too quickly, and after having our lunch, we still had about half a mile of stream to fish.

We started in, Diana going ahead and first fishing the pools. She soon came to me, however, the appearance of which, to my mind at least, was a sure guaranty of a trout; but Diana only saw the swirling water and the submerged roots and snags, with which she had by this time become too well acquainted. She demurred at dropping her hook into this pool, saying she was sure she would get snagged. "But," I insisted, "there is surely a trout in that hole."

"But I am sure my line will get caught," she repeated, and so, knowing from long experience that further argument was entirely useless, I dropped my own hook into the upper edge of the pool, steering it clear of snags, and letting it sink to the bottom, in the dark, swiftly flowing water.

Instantly a savage rush took the line out, and as it straightened I pulled out on the bank the largest trout yet, eight inches to a dot, almost black on the back, and with crimson and orange spots on his beautiful sides.

I shall never forget the look of mingled shame, chagrin and envy on Diana's comely face. She almost wept.

"Now, why," she naively remarked, "didn't I know enough to do that?" Man fashion, I retorted, "You would have if you had taken my advice, but as you didn't, Diana, I wiped your eye." She wanted to know what that meant. On my explanation she said she would catch another one out of that same place, but it was not to be—there were no more there.

We continued taking here and there a lovely, spotted darling of the mountain stream, Diana minding not in the least the savage attacks of mosquitoes, or being obliged to climb over the piles of brush and fallen trees with which the banks of the stream were lined.

The sun was well down in the west when we finally emerged from the woods. As we found we had twenty-four splendid trout, every one well over the legal limit, and not caring particularly to fish the stream through the meadow, along which we could see the "city men's" path, we somewhat reluctantly unjointed our rods, both agreeing that the day had been a red-letter one.

We walked back to the farmhouse, hitched up the horse and were soon on our journey to the hotel which was our temporary stopping place, with glorious visions of a supper of broiled trout, which were afterward realized to the full.

NIMROD.

Weights of Salmon for Inches of Length.

MR. E. STURDY writes in the London Fishing Gazette: Though the possibility of arriving pretty closely at the weight of a salmon from one easily-taken dimension, like that of length, must have suggested itself to most old anglers, I do not remember to have seen the thing put in very definite shape, which I shall now endeavor to do.

My attention was drawn seriously to the question many years ago in this way: Towards the close of a season, when for a week or two I had only been getting grilse, sea-trout and small salmon, I landed one morning a very long-looking, ugly old male fish. My companion and my gillie, both very experienced, pronounced it a monster, the biggest we had ever caught, etc., and I myself, seeing it reaching nearly to the heels of the little man as he carried it some quarter mile to the boat, began to share their hopes. In the boat, however, was a spinning-rod, on which was marked the length of a 44-pound fish, and the new capture was found to be shorter than this by more than four inches. Calculating that the difference alone would make 12 pounds less than 44 pounds, and seeing its wretched condition, I did not hesitate to bet it was under 30 pounds, which it turned out to be, only scaling 28 pounds.

Some further observations showed me that even a very imperfect system was a great aid to the unassisted eye, and I set to work to find a suitable standard. First I tried and used for years the rule that the pounds were equal to two-thirds of the cube of the length expressed in feet. This system, which gives 18 pounds as the weight of a 3-foot fish, worked fairly well with small fish, and with very old ones, but gave too small a weight for well-conditioned fish, and was besides troublesome to work.

Looking around, then, for something more suitable in both these respects, I found that for simplicity of calculation nothing approached a scale based on a 50-pound fish measuring 50 inches. It was only necessary to multiply the cube of the inches by four, dot off the last four figures as decimals, and the thing was done—just one minute's work. This theory, which assessed a 3-foot fish at 18 2-3 pounds, still under-estimated the weight of a well-conditioned salmon, but answered my purpose sufficiently well, inasmuch as the only fish whose weight I was in a hurry to know were the very big ones, nearly always old males, light for their length.

Now for average fish. I have prepared the accompanying table for lengths from 30 inches to 50 inches, based on the supposition that a salmon measuring in a straight line 3 feet from tip of snout to fork of tail weighs 20 pounds. I selected this standard as being simple to remember, and as agreeing very closely with the proportions of the fish of which I was landing the largest numbers—namely, those of from 15 pounds to 24 pounds.

A comparison of the table with the actual proportions of a considerable number of fish from 11 pounds to 41 pounds showed the following results: Under 15 pounds the weights were rather below the standard; from 15 pounds to 24 pounds, both inclusive, the weights were very near it, rising to 6 per cent. over; at 28 pounds they were 10 per cent. over; from 29 pounds to 33 pounds they were from 10 to 24 per cent. over; at 36 pounds and 37 pounds they were 20 per cent. over. Of heavier fish I had only two, one of 39 pounds, which was 6 per cent. over, and one of 41 pounds, which was 2 per cent. under the standard.

At first sight, a system requiring an adjustment of from 5 per cent. under to 25 per cent. over would appear of small value, but in practice, knowing what a fish would weigh if it were in average condition, is a very great help, and will safeguard even a novice from the excessively wide guesses we have all made when estimating the weight of a fish much larger or much smaller than those to which we had become accustomed.

From the divergencies between the proportions of the fish experimented upon and the scale, some very obvious deductions as to the condition, or rather as to the shape of salmon at various stages of their growth, might be drawn, but such is not the object of this paper, nor might it be safe to seek to base any general law on a limited number of trials, carried out only for part of one season on one river.

Inches.	Pounds.	Inches.	Pounds.
30.....	11.574	41.....	29.544
31.....	12.770	42.....	31.759
32.....	14.046	43.....	34.082
33.....	15.404	44.....	36.516
34.....	16.848	45.....	39.063
35.....	18.379	46.....	41.725
36.....	20.....	47.....	44.506
37.....	21.713	48.....	47.407
38.....	23.522	49.....	50.432
39.....	25.428	50.....	53.584
40.....	27.435		

Writing on October 23, 1901, Mr. Sturdy says: "Most the fish of over 40 pounds caught in the last four years on the same water, by his tenants and himself, have closely approached the standard, and one of 44 pounds, which measured 45 inches was nearly 13 per cent. above it."

An Idaho Fishing Trip.

ON our trip to Fall River Meadows in the southwest corner of the Yellowstone Park, we reached St. Anthony at sundown on the first day out. When we started we intended to go to Island Park in the vicinity of Henry's Lake, for fishing, but after an interview with Mr. Fred Rising (leading taxidermist of St. Anthony), who kindly volunteered information in regard to the fishing, we changed our minds, and the next day continued up the north fork past Marysville and camped in the cañon where Warm River joins the north fork of the Snake. The next morning early we hustled back a mile or so and turned eastward. About 1 p. m. we passed Rising's cabin and that night camped at Wyoming Creek, near the park line. In the morning we pushed on four or five miles and coming out into beautiful Fall River Meadows pitched our tent on the west branch of Fall River, which was our permanent camp for two weeks.

Talk about fishing! A man who could not catch trout there is no fisherman. Although we were amateurs in fly casting, we had our 20-gallon crock full when we returned to the ranch. Not a single trout was wasted, each fish was weighed before being dressed and a record of it kept. The largest ones weighed 3¾ pounds, and the average was slightly under two pounds. Another party caught five-pounders, which was nothing remarkable in the absence of scales. We think there were none there at that time larger than we caught.

While we were there three bull elk and a moose came out into the meadows within 200 yards of where we were fishing on the east branch. The moose moved back to the timber when he saw us, but the elk showed no sign of fear and finally lay down.

Three days later the crash of some smokeless rifles tolled their death knell. At least we suppose this the case, as we heard the shots back in the timber near where we saw the elk and when we got back to St. Anthony a party told us that some hunters had recently come out from that country with three elk heads which they sold to him. The soldier and a marshal who had been camping near us moved out to the northwest a day or two before the shooting. There was also a bunch of 26 elk up the west branch about three miles above our camp.

There were plenty of beaver signs on both branches and duck and geese quite plentiful.

A. A. PAYNE.

Ohio.

My Angling Friends.

MY ANGLING FRIENDS.—A second series of "Men I Have Fished With." By Fred Mather. Forest and Stream Publishing Co. New York. Price, \$2.

This is a second series of the delightful character sketches Mr. Mather wrote for FOREST AND STREAM. The "Friends" number twenty-eight, and include a number of well-known anglers—President Arthur, Grand Duke Alexis, Congressman Cummings, Ned Buntline, Charles Hallock and Thad. Norris. This new book has all the characteristics that gave Mr. Mather's "Men I Have Fished With" such popularity—the same insight to human nature, the experience-taught philosophy of life, the kindly humor, and the touch that stirs to deeper feeling and moistens the eye. The interest is sustained throughout, and there is here, too, a quality which has been often remarked of Mr. Mather's writings, his faculty of imparting a vast fund of instruction in natural history and the art of angling without being in the least pedantic or assuming to set himself up as an instructor.

A. N. Cheney's Fishing Tackle.

MRS. BEATRICE R. C. LEAVENS, of Glenn Falls, N. Y., sends us a priced schedule of the fishing tackle which belonged to her father, A. N. Cheney, and which some of his friends might care to possess themselves of.

The Megantic Trout Hatcheries.

BOSTON, Nov. 9.—Fishermen have been having great sport in taking trout from Big Island Pond, Megantic Preserve, for breeding purposes. The Commissioners gave permission to take trout for this purpose on the fly. They have risen very freely at times, and it has been rare sport for those who have enjoyed the privilege. For hatching purposes, the superintendent writes that 125 trout have been taken, weighing 250 pounds. Some of the trout weighed as high as 3 pounds. It is expected that at least 400,000 trout eggs will be secured for the hatchery, part of which are already taken. The managers of the club hatcheries are convinced that they have a good source of trout in Big Island Pond. Fish and Game Commissioner Carleton says that the Commission is now liberating small fish at the rate of about 30,000 a week. They go to all parts of the State, for restocking various waters. Applications for the young fish are more than can be supplied. It is already planned, however, to send 25,000 to the Commodore Club, Moose Lake, Hartland, Me., and about as many more to Holeb Pond. These lots are about all the young fish left to be distributed.

SPECIAL.

Big Output of Salmon Fry.

FROM the present outlook more young salmon fry will be turned into the Columbia River this fall than ever before in one year. Master Fish Warden Van Dusen has returned to Astoria from visiting the hatcheries on the Clackamas and Sandy rivers. He found that the State hatchery on the Clackamas will have about 4,000,000 eggs, and that on the Sandy 2,000,000. The United States hatchery on the former river is expected to turn out 8,000,000. The total amount of young fish which will be turned into the Columbia River this year is estimated at about 60,000,000, of which experts believe that at least one-tenth will go to sea, mature and return to this river. At the present time the annual pack of the Columbia River, allowing three salmon to the case, represents about 1,000,000 fish. Sixty times this amount will be released this year, with a good prospect of 6,000,000 returning. This estimate, of course, does not take into consideration any but artificially propagated fish. With the agencies now at work the output of the hatcheries in another year should be nearly double that of the present.—Portland Oregonian.

"My Angling Friends."

WEST WINSTED, Conn.—I am much pleased that you have published "My Angling Friends," for which I inclose \$2. "Men I Have Fished With" and "My Angling Friends" are almost priceless to those of us who have been among the scenes and have known the men Mr. Mather has so aptly described. It is sad to think that we never shall have anything more from his pen.

The Kennel.

Fixtures.

BENCH SHOWS.

Nov. 27-30.—Philadelphia, Pa.—Philadelphia Dog Show Association's third annual show.
Dec. 15.—New York, N. Y.—Ladies' Kennel Association of America's inaugural dog show.

1902.

Feb. 4-6.—Providence, R. I.—Rhode Island Kennel Club's annual show. George D. Miller, Sec'y.

FIELD TRIALS.

Nov. 12.—Chatham, Ont.—International Field Trial Club's thirteenth annual trials.—W. B. Wells, Hon. Sec'y.
Nov. 12.—Hampton, Conn.—Connecticut Field Trial Club's trials. F. M. Chapin, Sec'y, Pine Meadow, Conn.
Nov. 19.—Robinson, Ill.—Illinois Field Trial Association's third annual trials. W. R. Green, Sec'y.
Nov. 19.—Ruthven, Ont.—North American Field Trial Club's trials. R. Baughan, Sec'y, Windsor, Ont.
Nov. 20.—Manor, L. I.—Pointer Club of America's annual field trials. R. E. Westlake, Sec'y.
Nov. 23.—Newton, N. C.—Eastern Field Trial Club's twenty-third annual trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. 25.—Paris, Mo.—Missouri Field Trial Association's fifth annual trials. L. S. Eddins, Sec'y.
Nov. —Paris, Mo.—Interstate Championship Field Trial Association's inaugural trials follow M. F. T. A. trials.
Dec. 2.—Glasgow, Mo.—Western Field Trial Association's inaugural trials. C. W. Buttes, Sec'y.
Dec. 4-7.—American Pointer Championship Field Trial Association's inaugural trials. Robert L. Dall, Sec'y.
Dec. 11.—Glasgow, Ky.—Kentucky Field Trial Club's second annual trials. Dr. F. W. Samuels, Sec'y.

Monongahela Field Trial Club's Trials.

SENECAVILLE, O.—The seventh annual trials of the Monongahela Field Trial Club began Oct. 29 with the Membership Stake, this being the first time a members' stake was run by this club. The trials were advertised to begin on Tuesday. The club therefore decided to use Monday for a members' stake, and to draw the grounds. It proved a wise move on the part of the club, as the grounds change each year by reason of cultivation. This enabled the judges to look over the grounds. There were five entries, drawn to run as follows:

Rod's Chic with Spectacle.
Mars Chan with Hal's Hope.
Dan Shirley a bye.
Result: Hal's Hope first, Rod's Chic second, Mars Chan third.

The Derby was drawn Monday night, and had twenty-six starters, as follows:

Gipsy Maid, setter, with Miss Wickliffe, setter.
Jingo's Nellie II., pointer, with Piet Joubert, pointer.
Dick Darrah, setter, with Penn Earl, setter.
Winnie D. II., setter, with Verona W. Gladstone, setter.
Rod's Dick Byers, setter, with Honest John, pointer.
Diomed, setter, with Verona P. Gladstone, setter.
Tony von Puhl, pointer, with Brimstone, pointer.
Duchess Honor Bright, setter, with Col. Sport, setter.
Hopeless, setter, with Count Oakley, setter.
Sister Babe, setter, with Mark's Sport, setter.
Blue Dan Stone, setter, with Major S., pointer.

Cuba, Jr., pointer, with Big Injun, setter.

True Blue, setter, with Lena Antonio, setter.

The attendance was large. Among those present were: C. K. Brown, Franklin, Pa.; W. P. Austin, C. R. Austin, Mansfield, Pa.; D. H. Darrah, Bellaire, O.; J. W. Phillips, New Wilmington, Pa.; Robert Gibbs, Homestead, Pa.; M. N. Cecil, Wheeling, W. Va.; G. O. Smith, Wheeling, W. Va.; H. E. Carroll, Middleburg, O.; Macabee Shaw, New Comerstown, O.; G. I. Hammond, Canton, O.; John Morledge, New Bedford, O.; Jos. Brown, Middlebranch, O.; G. E. Gates, Marietta, O.; Major J. M. Taylor, New York; N. Wallace, Farmington, Conn.; W. S. Bell, Pittsburg, Pa.; W. H. Bezell, Mrs. W. H. Bezell, Homestead, Pa.; A. M. Wise, Litchfield, O.; Nat. B. Nesbitt, Chesterville, Miss.; D. C. White, F. H. Gilchrist, Alabama; Dick Fox, Harriburg; A. C. Peterson, Homestead, Pa.; C. S. Walker, Uhrichville, O.; R. M. Dodge, Bakersfield, Cal.; Frank Richards, Stewart, Minn.; A. B. Caldwell, Alledonia, O.; Harry Brown, Albany, O.; E. D. Garr, Louisville, O.; Tide Houston, Logan, O.; J. Bell, Carmichaels, Pa.; C. W. Tway, Irwin, O.; A. Albaugh, Farmington, Mo.; W. W. Updike, Robinson, Ill.; A. B. Ferguson and T. J. Day, Seneca, O.

The weather was warm and dry—conditions that made the work very difficult—the scent being poor.

The club provided the teams for conveying the dogs to and from the grounds, same as last year. The stakes were skillfully judged and handled. Every dog was given a thorough trial. The judges were: Major J. M. Taylor, New York; N. Wallace, Farmington, Conn., and W. S. Bell, Pittsburg, Pa. Their decisions gave universal satisfaction, as no word of complaint was heard.

The club has made another forward step by abolishing the useless rule of requiring first and second dogs to be run together.

The Derby had twenty-six starters, and was won by Miss Wickliffe, a black, white and tan setter of medium size, full of quality, speed and range, working earnestly and independently, carrying a high head and going to her game promptly. She was closely pressed for the place by Cuba, Jr., a liver and white pointer, owned by the Stockdale Kennels, Bakersfield, Cal.; he is an earnest worker, handles easily, and is perfectly broken. Gipsy Maid, orange and white setter, is a diligent searcher, ranging fast and wide, employing every minute looking for game; is staunch and steady. Sister Babe, black, white and tan setter, shared third, equal with Gipsy Maid, is a bitch of wonderful speed. When her handler brought her up for the start, he held her in his arms. Some one asked him if this was to be a flying start; he nodded assent. When she was loosed it looked as near flying as possible as she darted away; her speed was well maintained.

The All-Age Stake had thirty starters—sixteen setters and fourteen pointers—but when finished it looked like a pointer stake, and certainly was a pointer victory, as first, second and third were won by pointers.

King Cyrano, first, is a lemon and white pointer dog of grand style and intelligence; he is perfectly trained and thoroughly reliable.

Alix II., liver and white pointer, winner of second, is a grand bitch, fast and wide; withal, she hunts well to the gun.

Queen Mab, third, is a liver and white pointer of good range and speed, and fairly won her place by good, clean work.

Lad of Jingo, unplaced, is a dog of rare quality, but was unfortunate in not getting on birds in either heat. He is a dangerous competitor in any company and at all times. There were a number of very high-class dogs in this stake that were unplaced, and when they meet again conditions may change the order of their positions.

The purse was \$800—\$400 in each stake—divided as follows: \$200 first, \$125 second, \$75 third. The club is prosperous, having a good balance in the treasury.

The Derby.

Gipsy Maid, orange and white English setter bitch, handled by A. C. Peterson, and Miss Wickliffe, black, white and tan English setter bitch, handled by A. M. Wise, were put down in wheat stubble at 7:45, and ran until 8:27, both good speed and range. Two beves of birds were flushed; on the singles Gipsy got two points, Miss Wickliffe one. Both steady.

Jingo's Nellie II., black and white pointer bitch, handled by Harry Brown, and Piet Joubert, black and white pointer dog, handled by Nat. B. Nesbitt, were put down in cornfield at 8:35. Piet flushed a bevy, and afterward pointed a single. Nellie backed. Up at 9:29.

Dick Darrah, black, white and tan English setter, handled by A. B. Ferguson, and Penn Earl, black, white and tan English setter, handled by Dick Fox, were cast off at 9:30 in stubble, and worked in weed field and woods. Dick found and pointed a bevy; Earl backed; both steady; worked on the singles. Earl secured two points, both steady to wing and shot. Up at 10:29.

Winnie D. II., black, white and tan English setter bitch, handled by A. B. Ferguson, and Verona W. Gladstone, lemon and white English setter bitch, handled by Frank Richards, were cast off in cornfield at 10:36. Verona flushed a bevy, pointed a single, which she flushed before her handler reached her. Winnie best in range and style. Up at 11:15.

Rod's Dick Byers, black, white and tan English setter, handled by Wm. Walker, and Honest John, black and white pointer, handled by Jack Bell, were cast off in clearing at 2:10. Up at 2:40, neither showing any merit. Dick was sick, and permission was granted to take him up.

Diomed, black, white and tan English setter, handled by E. D. Garr, and Verona P. Gladstone, black, white and tan English setter, handled by Frank Richards, were put down in large weed field, and worked to stubble. Diomed pointed twice; no birds flushed to points, but a bevy was flushed by handlers a short distance from where point was established. Verona best in speed and range. No opportunity on birds. Ran from 2:45 until 3:35.

Tony von Puhl, liver pointer dog, handled by E. D. Garr, and Brimstone, black and white pointer dog, handled by W. H. Bezell. Cast off in large bottom at 3:45. Both started well, but soon slowed down. Brimstone pointed bevy in good style, and afterward a single, which Tony flushed. Brimstone steady. Up at 4:15.

Duchess Honor Bright, black, white and tan English setter bitch, handled by Harry Brown, and Col. Spot,

black, white and tan English setter dog, handled by A. M. Wise, ran from 4:15 to 4:30. Taken up on account of darkness.

Wednesday, weather warm and dry. While the early hours were comfortable, the noon hours became oppressive.

Duchess and Col. Spot were put down in orchard to finish their heat, and ran from 6:45 until 7:30. No birds were found. Both good speed and range. Col. Spot best.

Hopeless, black, white and tan English setter bitch, handled by A. C. Peterson, and Count Oakley, black, white and tan English setter dog, handled by C. W. Tway, were cast off at 7:45 in large, open field. Hopeless cut out the work in earnest, but did no bird work. Count Oakley flushed one bevy, then across the creek pointed a bevy staunchly, and on singles got one good point. Up at 8:40.

Sister Babe, black, white and tan English setter, handled by E. D. Garr, and Mark's Sport, orange and white English setter, handled by A. Albaugh, were put down in same field where Hopeless and Oakley were taken up, and Sister Babe made her flying start, and was soon on a good bevy point. Mark backed. Taken on singles. Sister Babe dropped to point. Mark backed, broke his back and pointed a different bird. Babe steady and Mark unsteady to flush. Down from 8:41 to 9:18.

Blue Danstone, blue belton English setter, handled by H. J. Gilchrist, and Major S., black and white pointer, handled by A. C. Peterson. Ran from 9:24 until 10:05. Nothing found; neither showed merit.

Cuba, Jr., liver and white pointer, handled by R. M. Dodge, and Big Injin, black, white and tan English setter, handled by W. H. Bezell, ran in open woods and large weed field. Cuba found and pointed two bevies. Big Injin backed both points. Both steady. Cuba made excusable flush of a single in very heavy cover. Down at 10:22; up 10:55. Cuba was very industrious, with good range and speed.

True Blue, black, white and tan English setter, handled by D. C. White, and Lena Antonio, black, white and tan English setter, handled by T. J. Day, were cast off in large bottom land at 10:57, and ran until 11:45 without finding. Both displayed good range and searching qualities.

Second Series.

Miss Wickliffe and Winnie D. II. started at 3:55; up at 4:25. Miss Wickliffe made one good bevy point and one single-bird point. Steady to shot and wing. Winnie flushed one single. Both good speed and range; Miss Wickliffe best.

Verona P. Gladstone with Brimstone ran an indifferent heat; neither up to first trial. Nothing found. Down at 2:25; up at 3:00.

Piet Joubert with Dick Darrah. Joubert ranged out and hunted well, excelling Dick in every way. Down from 3:05 to 3:35.

Gypsy Maid, with Jingo's Nellie II., was started at 3:36, and ran until 3:51. Gypsy soon proved best in every way, outclassing her competitor.

Thursday, weather still, dry and warm.

Cuba, Jr., with Sister's Babe, ran an even race in range, speed and covering ground. Although no birds were found, both will certainly be carried further. Down at 6:55; up at 7:25.

Lena Antonio and Penn Earl ran from 7:25 to 7:45. Nothing found, and both fell behind their first trial.

Count Oakley and Duchess Honor Bright both failed to embrace opportunities on birds, and are out of further competition. Down from 7:46 to 8:16.

Col. Spot, with Hopeless, ran 38 minutes in good ground, and both went well. A bevy was seen in the air. Both dogs out of sight and could not tell which was responsible. Col. Spot pointed a single; steady to shot.

Mark's Sport, with True Blue, ran from 9:03 until 9:20 in stubble. Mark pointed, jumped in and flushed, True Blue joining in the fun.

A short consultation and the judges started the third series.

Third Series.

Miss Wickliffe, with Sister Babe, started in stubble at 10:15. Miss Wickliffe soon had a good, single point. Steady to wing. Sister Babe pointed; no birds found. Both maintained good speed and range. Up at 10:30.

Piet Joubert and Cuba, Jr., started at 10:40. Joubert made game in oak thicket and passed beyond birds. Cuba, turning to left, pointed bevy staunchly. Steady to shot. On singles Cuba secured three good points. Up at 11:00.

Gypsy Maid, with Col. Spot, ran from 11:10 until 11:40. Both sustained their former speed and range. Col. Spot was hard to keep on the course.

Hopeless was put on marked birds to give her an opportunity on game. She flushed and chased, putting herself out of the race.

The judges, after a short consultation, announced the winners as follows: Miss Wickliffe, first; Cuba, Jr., second; Gypsy Maid and Sister's Babe, third.

After lunch the All-Age Stake was started, with thirty entries, as follows:

Elena B. Rush, pointer, with Sport's Maid, setter.
Nightingale, setter, with Queen Mab, pointer.
Jingo Charlie, pointer, with Eve Jingo, pointer.
Paul Boone, setter, with Petronella, pointer.
Verona Beauty, setter, with King Rap, Jr., pointer.
Alix II., with Antonio Chance, setter.
Della Blad, setter, with Verona Diablo, setter.
Dolly Manners, setter, with Hal's Hope, setter.
Annie B., setter, with Dot's Daughter, setter.
Gorham's Jig, pointer, with Verona Cap, setter.
Rip Tick, pointer, with Daughter Noble, setter.
Gray's Pearl, pointer, with Bow's Son, pointer.
King Cyrano, pointer, with Pride's Blanche, setter.
Lad of Jingo, pointer, with Warsong, setter.
True Blue, setter, with Sam's Bow, pointer.
Elma B. Rush, a liver and white pointer, handled by E. D. Garr, and Sport's Maid, a black, white and tan English setter, and handled by C. W. Tway, were started at 2:01 in a large weed field, and ran until 2:55. Elma best in range, speed and searching. She flushed one bevy. No work on singles.

Nightingale, a black, white and tan English setter, handled by Dick Fox, and Queen Max, a liver and white pointer, handled by Tide Houston, were cast off on the

Doyle place at 2:56 in a large, open bottom, and ran until 3:42. After crossing the road Queen Mab found and pointed a bevy, Nightingale backing. Nightingale found and pointed two bevies, Queen Mab backing both times. Queen found and pointed one bevy and one single. Both dogs have good range and speed. Up at 3:42.

Jingo Charlie, a liver and white pointer dog, handled by Nat B. Nesbitt, and Eve Jingo, a liver and white pointer, handled by Tide Houston, were sent away at 3:45 in large stubble, and working toward a large weed field. In some willows on the edge a bevy was nicely pointed by Jingo Charlie, and backed by Eve Jingo; both steady to wing and shot. Birds not followed. In large, open stubble, Jingo Charlie pointed another bevy; steady to wing; and then Jingo Charlie pointed two singles and Eve Jingo one single. Both dogs backed and both were steady to shot and wing. Up at 4:18.

Friday.

The sun shone out bright and warm, and the dry weather continued. The heat seemed more oppressive today than any day since the trials began.

Verona Beauty, an orange and white setter, handled by Harry Brown, and King Rap, Jr., liver and white pointer, handled by G. E. Gates, were cast off at 7 o'clock in an orchard. They ran until 7:30 without finding, neither of them showing much merit.

Paul Boone, a black, white and tan setter, handled by T. J. Day, and Petronella, a liver and white pointer, handled by R. M. Dodge, were cast off in a large corn bottom at 7:33. Both showed good speed and range. Paul Boone the best. They hunted until 8:28, and were then taken up.

Alix II., a liver and white pointer, handled by Nat. B. Nesbitt, and Antonio Chance, an orange and white setter, handled by A. B. Ferguson, were sent off at 8:30 in an open stubble. Alex ranged good, and was seen on bevy point, and was backed by Chance. Both steady to shot. The course was changed up a big bottom, which they hunted without finding birds. Both showed good speed and range. Taken up at 9:08.

Della Blade, a liver and white setter, handled by A. B. Caldwell, and Verona Diablo, a black, white and tan setter, handled by Frank Richards, were cast off in a large cornfield at 9:25. Diablo flushed one bevy. About fifty yards distance he pointed another bevy, which Della Blade had passed. Steady to shot. Both were fair in range and speed. Up at 10:22.

Dolly Manners, a black, white and tan setter, handled by W. H. Bezell, and Hal's Hope, a black and white setter, handled by A. C. Peterson, were cast off in a large weed field at 10:30. Both dogs started fast and wide, and were soon found in a thicket, from where a bevy was seen to flush. Hal made one point on a single, and Dolly was not near enough to back. The course was then changed toward the road, and the weather was more oppressive. The dogs were taken up at 11:22, and the party went to lunch.

After lunch, at 12:50, Annie B., a black, white and tan setter, handled by A. M. Wisc, and Dot's Daughter, an orange and white English setter, handled by W. H. Bezell, were started in the same field where the former brace of dogs had finished. They worked through this and open woods into a field of stubble. Dot's Daughter made two points, to which no birds could be found. Annie B. was fast in range and speed, and worked her ground with good judgment. Taken up at 1:43.

Gorham's Jingo, a liver and white pointer, handled by E. D. Garr, and Verona Cap, a lemon and white pointer, handled by Frank Richards, were started on the Miley place and worked toward town. Jingo pointed twice, to which no birds could be found. Cap backed to order and Jingo again pointed, but no birds were raised. About fifty yards away Cap pointed a bevy and Jingo backed, both dogs being steady to shot and wing. They ran from 2:03 to 3:07.

Rip Tick, a black and white pointer, handled by C. W. Tway, and Daughter Noble, a black, white and tan setter, handled by W. H. Bezell, were started at 3:08 in a large cornfield. Both started out well, and before going a hundred yards Rip was on point and Daughter Noble ordered up to back. Cast on opposite side of bevy and pointed; moved in and flushed two birds; balance of bevy near Rip. Both steady. Worked on singles; each pointed twice. Daughter Noble is best in speed and range.

Gray's Pearl, a liver and white pointer, handled by A. M. Wise, and Bow's Son, a liver and white pointer, handled by R. M. Dodge, were cast off in a stubble field at 3:51. Pearl flushed a bevy and Bow's Son flushed a single. Both fair in pace and range. Up at 4:25.

Saturday.

Weather was cold and frosty. An early start was made. King Cyrano, a lemon and white pointer, handled by W. W. Updike, and Pride's Blanche, a black, white and tan setter, handled by A. B. Ferguson, were cast off at 6:12, and ran until 6:56 without finding birds. Cyrano ranged fast and wide, and hunted out a lot of territory. Pride's Blanche went well at times, and at times potted considerably.

Lad of Jingo, a liver and white pointer dog, handled by A. Albaugh, and War Song, a black and white setter, handled by W. H. Bezell, were started at 7:05 in a stubble field. Jingo led off at a good pace, and War Song followed for about ten minutes, when he gave it up and hunted independently for the remainder of the heat. It ended at 7:55. No birds were found. Lad of Jingo had a good pace, and covered the country well. War Song has only a fair pace and range.

True Blue, a black, white and tan setter, handled by D. C. White, and Sam's Boy, a liver and white pointer handled by R. N. Dodge, were started in a large, open bottom. Soon after starting True Blue got lost in a thicket. Sam's Bow was sent on the course, and True Blue was soon brought around the thicket. Two bevies of birds were flushed, but were not followed, because they crossed the creek. Down at 8:10 and up at 8:52. Only fair in range and pace.

Second Series.

Annie B., with Dolly Manners, was put down in corn bottom at 9:20. Dolly found and pointed two singles and one bevy. Annie B. flushed one bevy and two. Both had good pace and range. Up at 10 o'clock.

Paul Boone and Hal's Hope were cast off at 10:15 and ran until 10:40. Both went fast and wide. Hal's Hope kept to the course, while Paul Boone seemed to be out for a run.

Alix II. and Diablo were put down in a large weed field and hunted into a stubble field. Alix II. pointed a bevy staunchly. Steady to shot. Birds not followed. They ran from 10:40 to 11:07. Alix II. was the best in every way, sustaining the former trials.

Nightingale and Jingo Charlie were next cast off at 11:20, and Jingo Charlie flushed a bevy. Worked on singles, each secured a point. Nightingale also flushed one bevy, but the birds were not followed.

Rip Tick and Antonio Chance started at 11:45, and ran until 12:07. Rip pointed a bevy and Chance, brought up, shared the bevy point. On singles Chance got one point, and both were steady to shot.

Lad of Jingo and King Cyrano were put down at 1:40, and both started out at a good pace. In a few minutes Cyrano was on a nice point, which Jingo backed. Both were steady to shot. The birds flew among the horse-men and were not followed. The course was then changed. In a stubble field Cyrano pointed another bevy, which Jingo backed. Both had good speed and range throughout heat. Up at 2:18.

Elma B. Rush and Queen Mab started at 2:15, with good speed and range, which they maintained throughout the heat. Queen Mab found and pointed two bevies. Elma B. backed both points. Up at 2:47.

Petronella and Verona Cap were called at 2:55 and ran until 3:10 without finding birds. This ended the second series. A short consultation of the judges followed and they announced King Cyrano as first, Alix II. second and Queen Mab third.

National Beagle Trials.

THE field trials of the National Beagle Club of America were run on the estates of Messrs. T. F. Hitchcock and W. C. Whitney. The judges were Messrs. T. Griffiths and T. Shallcross. In Class A, beagles, 13 to 15 inches, the winners were: First, J. L. Kernochan's Fabrian (Fearless—Florist); second, C. H. Stevenson's Swifter (Lee III.—Beauty); third, J. H. Caswell's Lottery (Langdon's Jack—Fan).

In Class AA, bitches 13 to 15 inches, the winners were: First, W. G. Rockefeller's Lucy L.; second, W. G. Rockefeller's Blanche; third, Somerset Beagles' Flossie Tyler.

Class B, all ages, was for dogs 13 inches and under, and resulted as follows: First, Wadingfield Beagles' Orator; second, Wharton Beagles' Wharton Champion; third, George Post's Rector; reserve, Rock Ridge Kennels' Caution.

Class BB, for bitches, 13 inches and under, resulted as follows: First, Bridget B.; second, Treble; third, Madcap; reserve, Ida Novice II.

The National Challenge Pack Stakes, for packs of four, was won by Charles F. Brooks' Bridget B., Bessie B., Bonnie B. and Cicely B. This pack also won Class E, for packs of four bitches, under 13 inches.

The National Derby was won by D. F. Summer's Florist; second, Geo. F. Reed's Thornfield Lester; third, D. F. Summer's Frank Summers; fourth, Geo. F. Reed's Toxie; reserve, J. W. Appleton's Freedom.

The annual election was held on Nov. 5 at Mineola. The following officers were elected: President, George B. Post, Jr., New York city; Vice-Presidents, William G. Rockefeller, Tarrytown; A. J. Purrington, Boston, and Charles R. Stevenson, Haddonfield, N. J.; Secretary and Treasurer, J. Mifflin Wharton, Islip; Delegate to the American Kennel Club, J. W. Appleton, New York city; Executive Committee, F. E. Thurton, Islip; George F. Reed, Boston, and J. W. Appleton, New York city. The judges elected for the season were: W. G. Rockefeller, G. Mifflin Wharton, J. W. Appleton, George F. Reed, George B. Post and A. J. Purrington.

Points and Flushes.

Mr. R. B. Morgan, his son, Mr. G. Dan Morgan, of Pryor Creek, I. T., informs us, died from heart disease after an illness of three weeks. He was about fifty-four years old. He was buried at Cleveland, O., on Oct. 26. Mr. Morgan was one of the most famous dog trainers of the United States. Some years ago he was a regular patron of field trials, North and South, but in the past few years he devoted his efforts mostly to breeding and training shooting dogs. He had a host of friends, who will deeply mourn his death.

Yachting.

Boats for the Seawanhaka Cup Trial Races.

As the season progresses it is very evident that the Bridgeport Y. C. is to receive the hearty support and co-operation of the other clubs on Long Island Sound in its endeavor to win the Seawanhaka cup.

The races will be held under practically the same conditions as were the races this year. Several minor points are under consideration by the Bridgeport and Royal St. Lawrence yacht clubs, and as soon as they are definitely settled the decision will be published.

It is already assured that four boats will be built, and there is a possibility that three or four more may be built.

Mr. Charles D. Mower and Mr. Albert B. Hunt will have a boat built from a design made by Mr. Mower.

Mr. T. M. MacDonald, a prominent Bridgeport Y. C. man, has ordered a boat from Hanley at Quincy Point, Mass.

A syndicate headed by Mr. De Ver H. Warner will have Mr. B. B. Crowninshield design a boat for them.

Another syndicate, made up of Stamford and Bridgeport yachtsmen, will have a boat built by one of their local builders from designs made by one of the gentlemen interested in her.

Mr. L. D. Huntington, of New Rochelle, is working on the design of a boat for this class, and it is expected that he will close the order shortly. Mr. Huntington has had considerable experience with boats for the Seawan-

ALOHA.

LADY GODIVA.

Photos by James Burton, New York.

haka cup trials, and if he does turn out a boat it is believed that she will make an excellent showing.

Mr. H. P. Clark, of the White Bear Y. C., is considering sending a boat on from the West. The yachtsmen on White Bear Lake have made great advancement in the designing of fast skimming dishes, and it is hoped that a boat may come from White Bear in order that comparisons can be made with our Eastern boats of the same type.

Aloha and Lady Godiva.

SATURDAY, June 29, the third and last day of the series of races held by the Seawanhaka Corinthian Y. C. off Oyster Bay, Long Island Sound, was made most interesting by a match race between the American auxiliary Aloha, owned by Messrs. D. W. and A. C. James, and the English auxiliary Lady Godiva, which boat at that time was owned by Mr. H. C. House, but has since been sold to Mr. Tracy Dows.

It is seldom that one sees these boats under sail alone, and it is unusual for them to race against one another. For this reason we believe that the accompanying picture of Aloha and Lady Godiva will be of very general interest. Aloha won the race.

Aloha is an auxiliary screw brigantine. She was designed by Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, and was built of steel in 1899 by Messrs. J. N. Robins & Co. at Brooklyn. She is 160ft over all, 139ft. waterline, 27ft. beam and 14ft. draft.

Lady Godiva is a steel auxiliary topsail schooner. She was designed by Mr. St. Claire Byrne and built by Messrs. Laird Brothers at Birkenhead in 1890. She is 138ft. waterline, 23ft. beam and draws 13.35ft.

Our Boston Letter.

BOSTON, Nov. 11.—The past week has been a very quiet one for Eastern yachtsmen. Work in the shops has not yet commenced to be heavy, although it is expected that within a few days things will commence to boom. The designers have been busy since the close of the racing season, and there is no doubt that there will be enough new ones to keep all the builders busy.

Perhaps the most wonderful feature that has been shown thus far is the great interest that has been aroused in the Y. R. A. restricted 21-footers. Burgess has received an order for another of these boats, making three that will come from his board. For whom she will be designed and built is another one of those mysteries with which this class is surrounded, and it is likely that she will remain a dark horse until the work of construction has been started on the rest of the new ones for the class. It has developed within a few days that two more new ones for this class will probably be heard from. It will undoubtedly be the largest class of 21-footers that has ever been seen in Massachusetts Bay.

There were still many yachts at their mooring in Dorchester Bay last week, but undoubtedly the cold wave, which struck Boston yesterday, will drive these hardy mariners to the beach or basin. The first bunch of yachts to be put out in the spring is generally seen in Dorchester Bay, and it is always in these waters that the last straggler is seen late in the fall. The yacht clubs in the vicinity are not closed soon after the sailing season is ended, but are kept open all winter. Every day and evening a few members may be found in each, while on Sunday there is sure to be a gathering. They arrive early in the morning and by noon there is scarcely a subject connected with yachting that has not been thoroughly gone over. City

Point was the birthplace of yachting in New England, and it is quite probable that there is no other place on the coast where such a large aggregation of practical yachtsmen may be found.

Strangely enough, there have been very few yachts for the Y. R. A. restricted classes built and owned by members of the clubs at City Point or Dorchester. The majority of the yachts are cruisers, which are raced only in the handicap classes. On both sides of the bay there are classes of sailing tenders which take the place of the 15ft. over all class, which was so popular in these waters only a few years ago. The sailing tender class was started by the South Boston Y. C. three years ago, and was the cause of the development of the one-design sailing tender class at the Savin Hill Y. C. this season. A series of races was sailed between the South Boston Y. C. tenders for the championship, which was won by Eugene E. Merrill. The championship was awarded on points—10 for first, 6 for second, 4 for third, 2 for start and 3 for finish. The record of each boat is as follows, the boats having no names, are known by the names of their owners:

Name.	Points.
Eugene E. Merrill.....	52
Dr. W. L. Colson.....	50
F. O. French.....	41
H. L. Stickney.....	37
J. F. Trotman.....	24
C. M. Dolbeare.....	16

In former years there was a class of boats 15ft. over all, most of which were owned by members of the Mosquito Fleet Y. C.; in fact, it was to foster small boat racing that the Mosquito Fleet Y. C. was organized, and that is where it gets its name. Since the advent of great overhangs, interest in the class has been lost. Like the sailing tenders now, this class of the old days was raced mostly by the youngsters, and some of the cleverest racing skippers in the East had their first schooling in these little boats. A good school it was, too, for the skill required in keeping one of them on her feet and making her go was much greater than is necessary in any of the modern restricted classes. They invariably carried very large rigs. One of the most misproportioned was that of the Skipper. She was 14ft. 11in. on top, but her main boom was 22ft. and her jib 17ft. on the foot, truly a marvelous amount of sail for so small a craft. It was expected that this class, with a 15ft. over all limit would be revived again by the Colonial Y. C., many of whose members raced the little fellows in former years, but nothing has been heard of it up to date. The class is probably extinct, but there are few of the yachtsmen who will forget Tantrum, Katydid, Bessie, Princess, Skipper, Midget, Nellie, Baby and many others of the Mosquito Fleet.

The work of breaking up Independence was finished last week. Her frames and floor plates are lying all about the west shop at Lawley's, but her plating has been carefully laid away. Because the easiest and best method of taking her apart, that of cutting away the rivets, and all of her plates laid away systematically and whole, that they would be more saleable articles, one scribe has discovered that this looks like grounds sufficient for the belief that she will be rebuilt from the same plates and frames. Poor old Independence! She is not allowed to rest quietly in her grave. There does not seem much likelihood of her coming to life again, either with old plates or new ones.

Among the new orders of the Boston designers are several cruisers, the yawl being the popular type. Small Bros. have two, one an auxiliary, 50ft. on the waterline, and the other a sailing yawl, 31ft. on the waterline. Both are wonderful examples of what can be done in getting a

large amount of room below decks. Stirling Burgess has turned out a 30ft. yawl for his uncle, Vice-Com. Walter Burgess, which should prove a comfortable cruiser. Com. Burgess intended building a yawl 28ft. 6in. on the waterline, rating 25ft., Y. R. A. rules, to see what could be done with this type in the restricted class, but he later decided to add to the waterline and get a straight cruiser. The new boat is 30ft. on the waterline, 43ft. 4in. over all, 11ft. 10in. beam and 4ft. 8in. draft. She is a center-board and there is much bulk to her hull, her displacement being 23,000lbs., but her appearance above water will not indicate this, as her freeboard is quite normal and she has good but very moderate overhangs.

She is very well laid out below. There are two large hanging lockers, besides numerous smaller ones, while the space under the berths and transoms is all utilized for stowage. There is 6ft. 3in. headroom in the main cabin, which takes up most of the space under the trunk. There are two full-length berths on either side, in front of which are wide transoms. A stateroom could easily have been provided, but the owner desired to have the cabin open. There is a good galley forward, in which is a three-burner Primus stove, ice chest, water tank and lockers, while further forward is a stationary and a swinging berth. This space will be well lighted and ventilated. Her sail area is 1,314 sq. ft., and is well balanced. She will carry a sprit topsail, the sprit being set forward of the pole mast, and the lower end made fast by a heel lashing, thus giving the appearance of a small topmast.

Crownshield has an order for two 30-footers for the Long Island Sound Yacht Racing Association. One of these is for De Ver H. Warner, of Bridgeport, Conn., and the other for T. L. Park, of New York.

The new west wing of the South Boston Y. C.'s big house is fast going up, and will be entirely closed in within a few weeks. It will contain several lockers, besides bowling alleys and billiard room.

Small Bros. are turning out an open racing yawl for G. S. Mashek, of Cornell, Mich. She is of the semi-keel type, 20ft. on the line, 31ft. over all, 8ft. 9in. beam and 2ft. 6in. draft. They also have an order for a 15-footer for C. H. Kelley, of the Winthrop Y. C.

Burgess has turned out plans for four 18ft. knockabouts, Y. R. A., on the same lines. They were ordered by F. Hopkins Smith, and are intended to form a one-design class at Casco Bay, but two of them will follow the Y. R. A. circuit next season. They are now being built by Graves, of Marblehead. They will have mahogany planking and will be finished bright.

JOHN B. KILLEEN.

Yacht Club Notes.

At the annual election of the Jamaica Bay Y. C., the following officers were chosen: Com., I. R. Jagger; Vice-Com., William Sehoer; Rear-Com., Joseph F. Sabin; Fleet Capt., A. P. Marion; Fin. Sec'y, A. C. Christopher; Cor. Sec'y, C. P. Daly; Treas., M. H. Christopher; members of the Board of Directors, John J. Jones, Benjamin F. Daly and James E. Lent; Chairman House Committee, Frederick H. Plate; Chairman of Regatta Committee, John C. Lefferts; Chairman of Membership Committee, C. V. Dykeman; Chairman Entertainment Committee, James E. O'Donnell. Owing to the fact that the proposed 70ft. highway, which the P. H. Flynn syndicate are building across the waters of Jamaica Bay, will cut the present course in two and make it very difficult to hold regattas, it was decided to move the club house, float and estate nearer the ocean. Several sites were visited, but the one that found the most favor was at Rockaway Park.

TWENTY-FIVE-FOOT WATERLINE FAST CRUISER—SAIL PLAN.

Twenty-five-foot Waterline Fast Cruiser.

THE plans of the 25ft. waterline sloop that appear in this issue were made by Mr. William H. Hand, Jr., of New Bedford, Mass. The boat was designed for Mr. J. C. Hartwell, of Providence, R. I. and she was built by Messrs. Read Brothers, of Fall River, Mass. The owner wanted a comfortable boat with large cabin accommodation, but still with some speed. The designer has met the owner's requirements, and the boat has proven herself fast, as well as comfortable.

Below decks the boat is most roomy, and the cabin has been laid out to give the greatest possible comfort to four people while cruising. A 12ft. transom runs along each side of the cabin, arranged so that two persons can sleep on each side. The cabin floor is 3ft. 4in. wide, and there is 5ft. 11in. headroom under the cabin trunk, while under skylight there is 6ft. 4in. headroom. There are two lockers in the after end of the cabin. In the forward end on the starboard side is the sideboard and book shelves, while opposite on the port side is a hanging locker. The toilet room, which is forward of the cabin on the starboard side, is furnished with a closet and a folding basin. Lockers for linen, etc., are located in the toilet room. On the port side of the boat opposite the toilet room is the galley, which is fitted with the usual ice chest, dish and provision lockers, and stove. In the forecabin there is a pipe berth and ample room for the storage of lamps, paint, etc. The dimensions are:

Length—		
Over all	40ft.	8 in.
L.W.L.	25ft.	
Overhang—		
Bow	7ft.	1 1/2 in.
Stem	8ft.	6 1/2 in.
Beam—		
Extreme	10ft.	5 in.
W.L.	9ft.	10 1/2 in.

Draft—		
To rabbet	2ft.	6 3/4 in.
Extreme	4ft.	8 in.
Board down	7ft.	6 in.
Freeboard—		
Bow	3ft.	4 3/4 in.
Taffrail	2ft.	6 3/4 in.
Least	2ft.	3 1/2 in.
Sail Area—		
Mainsail	775 sq. ft.	
Jib	168 sq. ft.	

Total	943 sq. ft.
Displacement	12,819 lbs.
Ballast outside	5,000 lbs.

The cockpit is watertight and very roomy. The deck and flooring of cockpit are of pine laid in narrow strips. The boat is strongly constructed throughout, the entire frame being of white oak; the planking is of 1in. long leaf pine. The cabin house and cockpit are finished in mahogany. The lead keel is fastened to the boat with Tobin bronze bolts.

The centerboard is small and houses in a slot cut in the lead and wooden keels. Although the centerboard does not interfere in any way with the cabin accommodation, it is a question whether it is large enough to be of material benefit. The centerboard pennant will lead under the cockpit floor to after end of cockpit, so that the man at the wheel can easily control the board without leaving the helm. The board is of oak and weighted so that it lowers easily. A plate is placed in the cockpit floor just over the pipe, so that if the board gets jammed a rod can be run down and the board started.

The sail plan is moderate when the power of the boat is considered.

The steel cruising schooner building by the Gas Engine and Power Company and Seabury & Co., is for Mr. George W. Weld, of Boston, the former owner of the schooner yacht Hildegarde.

SAIL PLAN

CRUISER 25' L.W.L. FOR J. C. HARTWELL

DESIGNED BY W. H. HAND, JR. DEC 27-1900

SCALE 3/4" = 1'

Yachts in Winter Quarters.

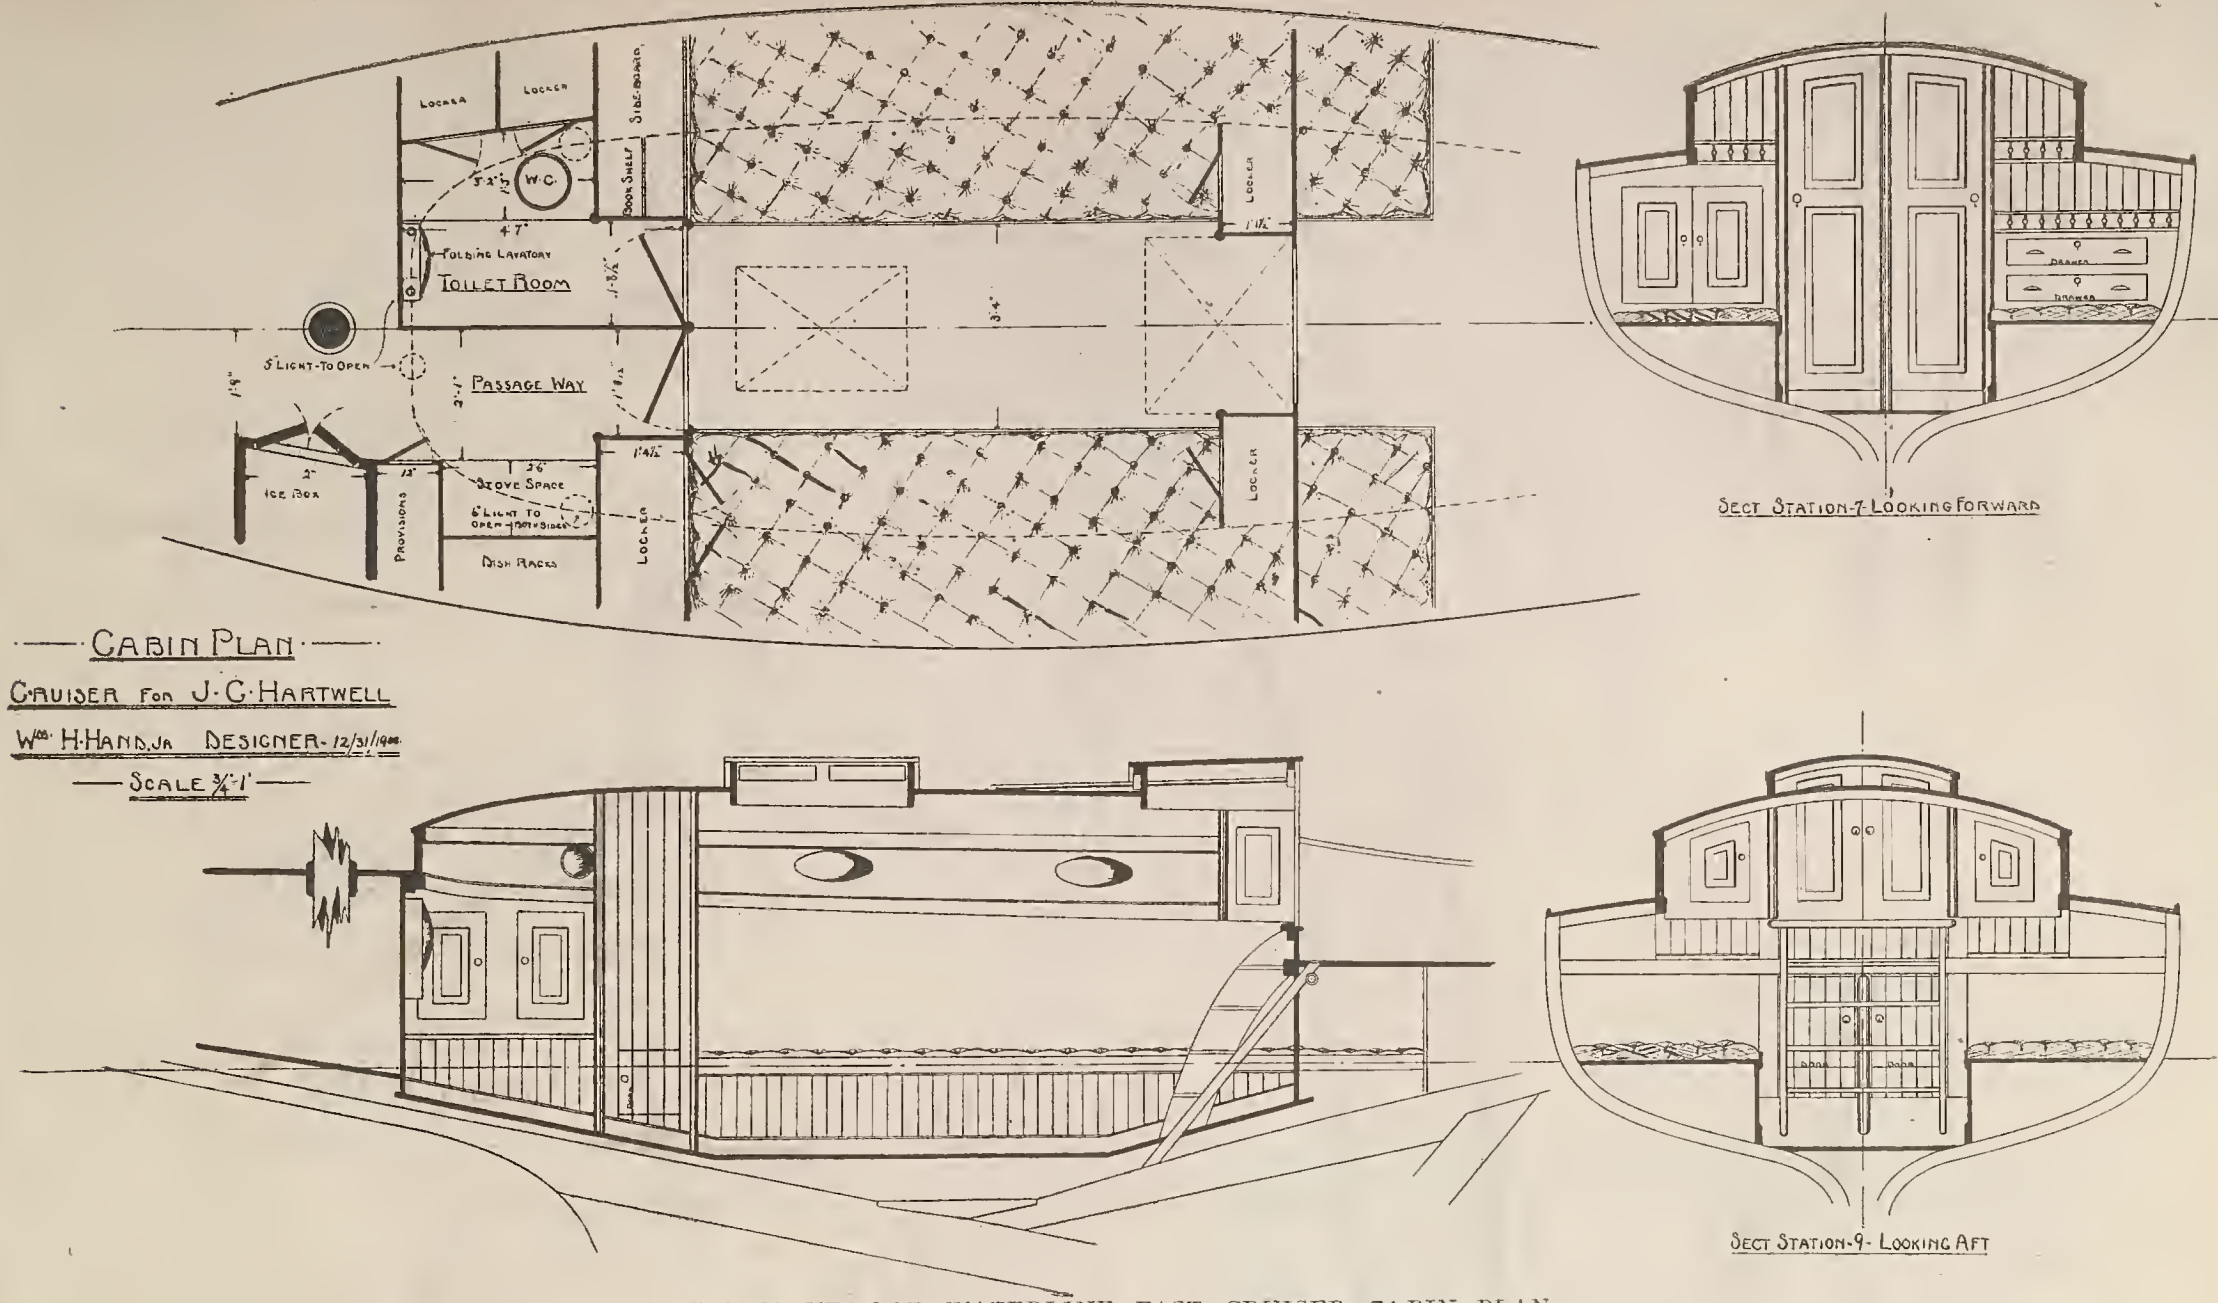

At Tebo's basin, South Brooklyn, the following yachts are laid up: The steam yachts Virginia, Electra, Surf, Leonora, Sapphire, Sultana, White Heather, Alcedo, Lavrock, Nada, Arrow, Osceola, Thetis, Wadena, Kismet, Papoose, Linta, Buccaneer, Sentinel and Susquehanna. The schooner yachts Alcyon, Latona and Sylph. The yawls Gaviota and Cachelot. The auxiliaries Edris, Satanella, Genesee and Aloha.

At McIntosh's basin, South Brooklyn, the following steam yachts are laid up: Halcyon, Elsa, Priscilla, Wanda, Laurena, Sappho, Lotus and Embla. The following schooners are also in the basin: Coronet, Orithyia, Triton, Laurel, Verona and Wayward.

The following yachts have been put in winter quarters at the Morse Iron Works and Dry Dock Company's basin, South Brooklyn: The steam yachts Vamoose, Clifton, Paradox, Say When, Gladys, Carmen, Scud, Seneca and Aileen. The schooners Comet, Kiawaso, Wanderer, Tioga, Wayfarer, Half Moon, Meteor and Julia. The sloops, Rosalie, Viking, Delfa, Isolda, Ulma, Mermaid, Fad, Wasp, Cockatoo, Frolic, Minerva, Hildegarde, Vinona, Argonaut, Foam, Schemer, Sayanara and Chispa. The yawls Huron, Taormina and the Cachelot, and the house-boat Ulma.

In Manning's Erie basin there are a large number of yachts laid up for the winter. The steam yachts include Whisper, Camilla, Spindrift, Marion, Maita, Mydia, Lucille, Avoc, Taro, Anita, Enterprise, Falcon, Aphrodite, Sagamore, Emeline, Lagonda, Conqueror, Cosette, Elizabeth, Wauchusett, Neckan, Seneca and Grace R. The schooners include Neera, Leslie, Fleetwing, Vesta, Cavalier, Crusader, Intrepid and Fleur de Lys. Among the sloops are Daphne, Saracen, Kelpie and Yvette.

The Greenport Basin and Construction Company, of Greenport, N. Y., has under way the lengthening of Mr. William Gillette's house-boat Aunt Polly. She will be enlarged by the addition of 39ft. amidships, and the entire interior will be remodelled.

TWENTY-FIVE-FOOT WATERLINE FAST CRUISER—CABIN PLAN.

The steam yacht Turbese, N.Y.C., Mr. A. Schwartzmann, will be rebuilt by the same company, very little of the present boat being allowed to remain. The yacht when completed will have a flush deck and be 137ft. over all. The owner's quarters will be finished in mahogany, maple and butternut. The deck houses, skylights, etc., are to be of mahogany. The after house will have stairs leading to the main saloon, and the forward house is to have a dining room and pantry, with bridge and steering arrangement on top.

This company has a contract to build a cruising sloop yacht, 32ft. over all, 23ft. on the waterline and 5ft. draft. She will be ready for delivery in the early spring.

The following yachts are laid up in winter quarters at the Greenport Basin and Construction Co.: The steam yachts Turbese, Aunt Polly, Willada, Altair, Magnolia, Alto Presto, Whim, Lucy, Claymore and Helys. The schooners Atlantic, Katrina, Miladi, Muriel and Fenella. The sloops Isolde, Effort, Mira, Bijou, Zenobia, Martha, Thalia, Wimpooy, Gretchen, Vorant II., Spasm, Altair, Marion, Senta, Katrina, Peri, Aloha, Lineta, Hebe, Sabina, Consternation, Drone, Minnie Rogers, Surprise, Lynx, Natalie, Poco, Asthore, Hermes, Winnie Wish, Helen, Arrow and Zenita. Also the yawl Vigilant.

YACHTING NEWS NOTES.

Messrs. Huntington & Seaman have sold for Mr. Marcellis C. Parsons, of New York city, the 40ft. waterline cutter Kiaora to Mr. H. R. M. Cook, also of New York city. The yacht's rig will be changed to that of a yawl, under direction of Mr. Charles D. Mower. She will receive new sails and spars. The work will be done at Cold Spring Harbor, where the yacht is laid up for the winter.

The steam yacht Halcyon, owned by E. C. Potter, was sold at auction on Nov. 6 by Adrian H. Muller & Son, auctioneers, at the New York Real Estate salesroom. Bidding was started at \$1,000, and went up slowly to \$1,700, at which price the yacht was knocked down to the Manning Yacht Agency. The Halcyon is 125ft. over all, 106ft. 3in. on the waterline, 16ft. beam, and 6ft. 6in. draft. She has two masts, two large deck houses, four state-rooms and bath, and a large main saloon. Her coal capacity is ten tons, and her speed twelve miles. The Halcyon has not been in commission for the last two seasons. In the sale all the equipment and furnishings went with the yacht, including a large quantity of silver, linen, bedding, etc., as well as the sailing equipment. Manning's Yacht Agency have sold Halcyon to Mr. F. F. Ames for \$2,500.

The London Times states that Sir William Henry White, Director of Naval Construction, has resigned his position on account of ill health, and was not removed from office as the result of blunders made on the royal yacht Victoria and Albert.

Mr. Fred W. Martin, of Waukegan, Ill., has a large amount of work on hand. Among the orders for yachts already placed are the following. A steam yacht for Mr. Vernon C. Seaver, of Chicago, Ill., owner of the gasoline launch Kid that was blown up in Chicago Harbor off the Chicago Y. C. house last August. She will be 78ft. over all, 63ft. waterline, 14ft. beam and 4ft. 3in. draft. Mr. R. H. Adams, of Philadelphia, Pa., has ordered a keel schooner, which will be 50ft. over all, 35ft. waterline, 13ft. 6in. beam and 5ft. 6in. draft. Mr. F. J. Rogers, of Chicago, Ill., has ordered a keel cutter to be 32ft. over all, 21ft. 6in. waterline, 8ft. beam and 5ft. draft. This boat is designed to stand the heavy weather of Lake Michigan, but still to have some turn of speed. A cen-

terboard jib and mainsail boat has been ordered by Mr. W. C. Wheeler, of Ballard, Wash. This boat is 40ft. over all, 25ft. waterline and 11ft. beam. Mr. Martin has orders for two house-boats, and he is also designing a large number of smaller craft.

Mr. John D. Archbold has placed an order with the Gas Engine and Power Company and Seabury & Co., Morris Heights, for a steam yacht 100ft. long. The owners' country home is at Tarrytown-on-the-Hudson, and the yacht will be used to convey Mr. Archbold to and from New York city. In order to make the trip in a reasonable amount of time, it was necessary that the yacht should be fast, and a speed of twenty-one knots is guaranteed. The cabins will be fairly roomy, and the dining room will be in the forward deck house. The saloon, owner's cabin and bathroom are below decks aft, while the galley, officers' and crew's quarters will be forward of the engine space. The yacht will be driven by two triple-expansion engines and a Seabury water tube boiler.

Mr. Thomsa W. Lawson, of Boston, has presented to the Hull-Massachusetts Y. C. a \$10,000 silver trophy to be raced for by 90ft. sloops. It represents a historical record of the past half-century of America's Cup racing, and is claimed to be the most beautiful trophy of its kind that artists' modelers and silversmiths have yet produced. It consists of a superb punch bowl stand, a set of drinking cups and a punch ladle.

Each of the cups represents a chapter in yacht racing, and bears an etching of one of the winning years, with name and date of race, as follows: America, 1851; Magic, 1870; Sappho, 1871; Madeline, 1876; Mischief, 1881; Puritan, 1885; Mayflower, 1886; Volunteer, 1887; Vigilant, 1893; Defender, 1895, and Columbia, 1899.

The dimensions give an idea of their massiveness and extraordinary size for a work of this character. The bowl and stand measure 25in. in height, the bowl has a capacity of seventy pints—almost nine gallons—and the entire set contains 1,360oz. of sterling silver—something over 113lbs.

Mr. Thomas Ratsey, the famous English sailmaker, sailed for America on Nov. 9. He is coming to the United States to complete arrangements for opening a sailmaking plant in this country. Americans wishing to have English sails on their boats have in many cases been prevented from so doing on account of the heavy duty placed on them. The great cost of these sails, however, has not prevented a number of owners from using them on their boats, and Mr. Ratsey will undoubtedly do a large business should he carry out his project of establishing a factory in Brooklyn.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Part II.—Chapter III.—Various Rigs.

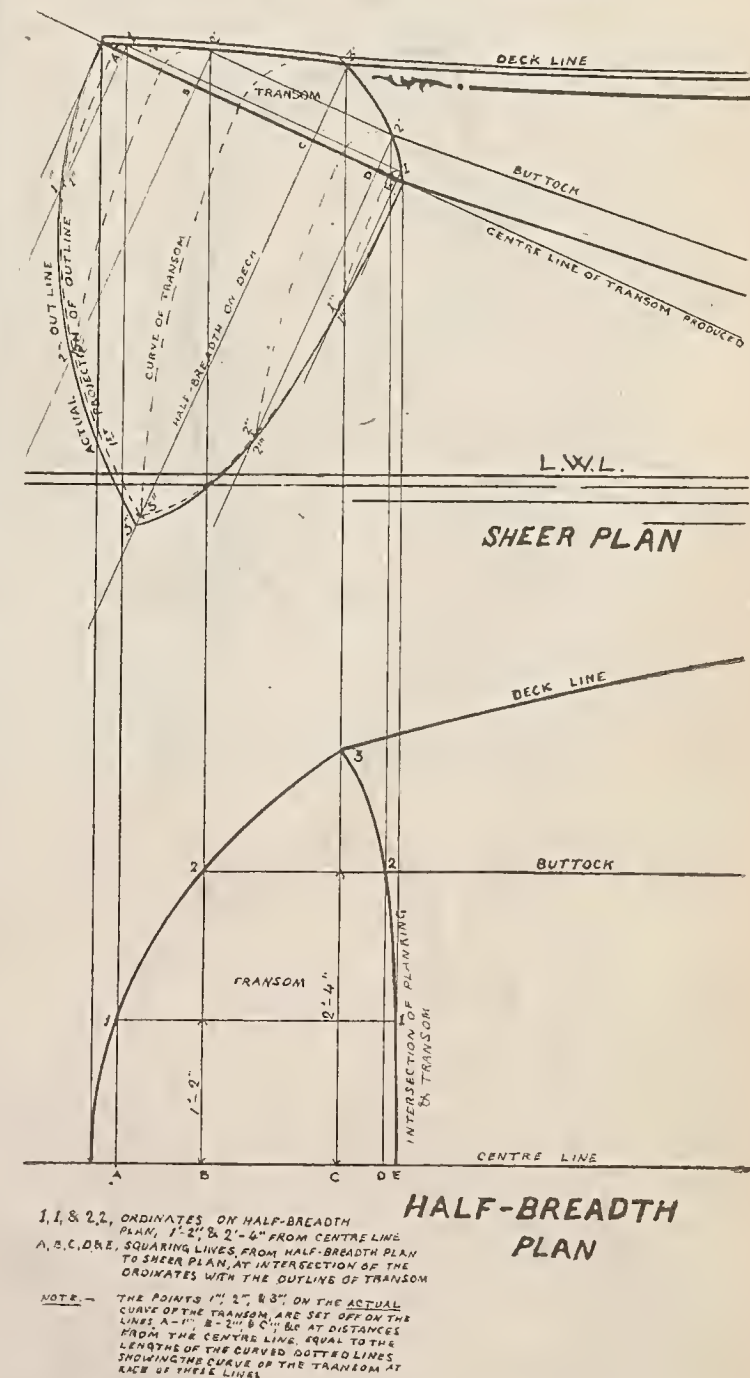

Among the various types now in use on small yachts and boats the most popular rig for either racing or cruising is the sloop, whether it is of the simple, two-sailed type, as shown in No. 1 sail plan, or the more elaborate arrangement with jackyard topsail and large spinnaker carried by the racing cruiser No. 2.

Other nearly allied varieties of the No. 1 type of sloop are the so-called gunter lugs and Solent or Clyde lugs, in place of the high-peaked gaff sail of No. 1. All these three are very much alike, and have been developed from the old standing lug still used by the fishermen. This development has always been in the direction of higher peaked sails, with smaller and smaller proportions of the sail forward of the mast, the Clyde lug having only a very small piece of the sail forward, while its next stage, the Solent lug, has only the heel of the yard alongside the mast, and nothing forward of it. This heel of the yard is hauled round the

after side of the mast every time the boat goes about, so that it is always to leeward; and to do away with this the heel of the yard was fitted with jaws to keep it on the after part of the mast and alike on both tacks, the result being a combination of the old sliding gunter and the Solent lug, generally known as a gunter lug. This sail is a great improvement on the Solent lug, but has one fault, and that is that the jaws occasionally get round to one side of the mast and stop there.

To get rid of this very annoying habit, various plans have been tried, and among them the most successful is to sling the yard by

LAYING OFF A CURVED TRANSOM.

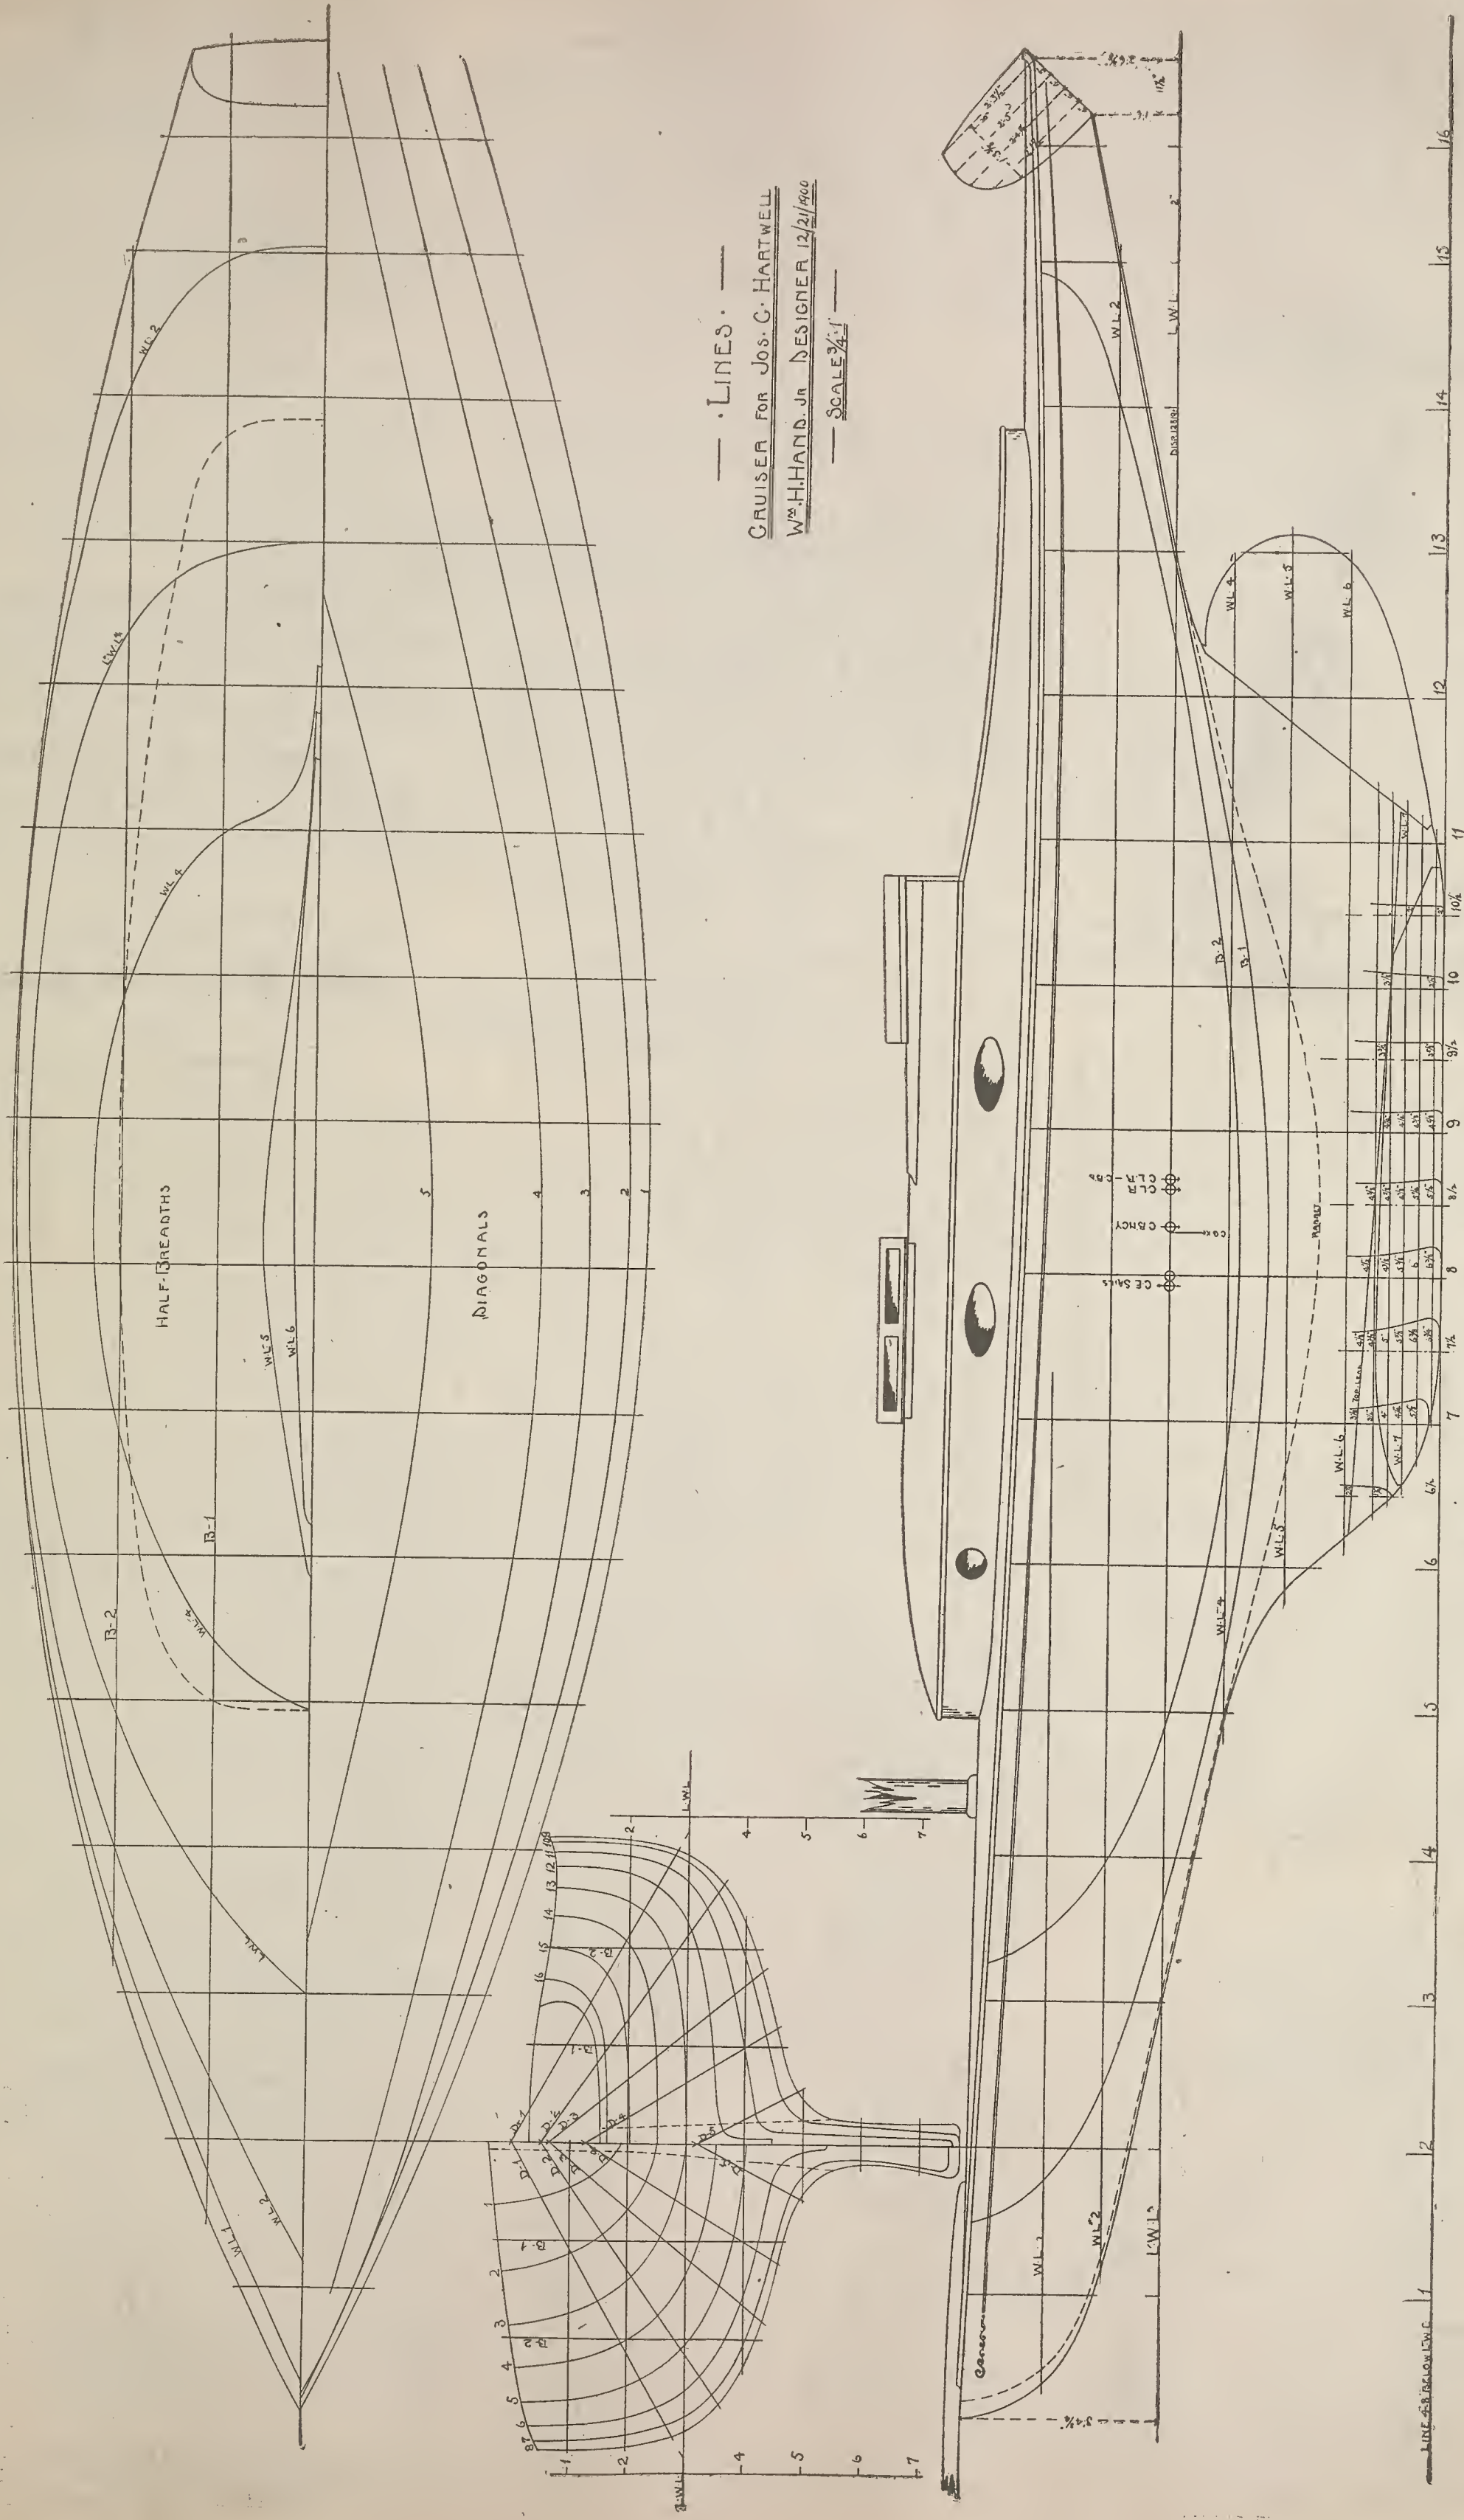

a long wire span fastened to the jaws and to the usual place for slinging the yard, with a shackle spliced into it at a point which will allow the yard to sag away from the mast at the slings for some few inches more than its proper position for setting the sail the yard being drawn into the mast to the correct place by a parallel line from the slings of the yard. This method answers admirably, especially if long battens are used attached to the jaws, as shown in the sketch; but as it requires two lines—viz., the halyard and the parallel—it is now considered better to use two separate halyards for throat and peak, which practically converts the sail into a true gaff sail, though it still has the same shape as before. The peak halyard is shackled to a long, tight wire span on the gaff, and in reefing, only the throat halyard is eased up, the peak halyard traveling up the wire on the gaff and always keeping the gaff at its proper angle with the mast. The throat halyard should be rove through a block as close to the jaws of the gaff as possible, to keep them from twisting round the mast; they will

 — SCALE 3/4" = 1' —

TWENTY-FIVE-FOOT WATERLINE FAST CRUISER—DESIGNED BY WM. H. HAND, JR., FOR JOS. C. HARTWELL, 1900.

take the whole strain of setting the sail, the peak halyards merely holding the gaff into the mast.

There have been many heated arguments among experts as to the respective merits of gaff vs. lug or gunter lug, and the partisans of the gaffs have increased the angle of the peak till the two sails are now identical, except in the halyard arrangements just mentioned.

The only objection to these high peaked gaff sails is that the whole of the sail area must be carried in two sails, and for cruising purposes this is very inconvenient, on account of the long and heavy spars required to set enough sail to drive the boat at a fair pace in fine weather.

The dipping lug is the most lifting sail known, and the gear is simple, but it requires a large and expert crew to work it.

Part II.—Chapter IV.—Reef Gears.

Roller reef gears of various sorts are now in general use in small yachts, whether used for racing or cruising, and Turner's reefing gear for the boom is probably the best known and most satisfactory.

There is no need to describe the various batten reef gears, as

Use the line of the transom on the sheer plan as a center line and set off the half-breadths on deck and L.W.L. at right angles to this new center line, from their points of intersection with it on the sheer plan.

The line of the transom should be produced downward till it cuts L.W.L. and all heights above L.W.L. marked on this line, taking them perpendicularly to L.W.L. and setting off their distances from the center line at right angles to the line of the transom from the point of intersection of the heights above L.W.L.

If the transom is curved as well as raked, as in No. 2, it is usually laid off in the foregoing manner first; but such a drawing only gives the shape as if it had no curve, all the half-breadth being incorrect.

To get a true drawing of it from this, a section of the curve must be shown forming a plan, of which the first drawing is an elevation.

To obtain this section of the curve take the distance at right angles from the center line of the transom on the sheer plan, to where the transom and planking meet at the deck. This is the depth of the curve, and must be set off on the center line of the transom, from the point of intersection of the half-breadth line of the deck, and the curve drawn through this point and the half-breadth, set off at right angles to the center line.

OMITTED FROM NO. 1 TABLE OF OFFSETS.

Table with 11 columns: Nos. of Sections (1-10) and Transom. Rows include Half-breadths on D 1 and D 2 with measurements in feet and inches.

Intersection of D1 with center line, 2ft. 3/4in. above L.W.L. Round of deck beams—1/2in. in 6ft., at point of greatest beam, or 3/4in. to 1ft. of beam.

these are only used on canoes now and are fully illustrated in many of the books on that branch of the sport.

The most important reef gear of all is the roller headsail. In spite of many complaints of the liability of the rollers to get out of order and the extra windage, etc., there is little doubt that they are far superior for cruising purposes to any other in yachts of under about 8 tons T. M.

The smaller rollers should always be made of bamboo, as nearly parallel as possible, and the lower end must have a firm bearing either on the end of the spinnaker boom or on the stemhead or

bowsprit, according to the arrangement decided on. The lack of this rigid bearing at the bottom of the roller is the main cause of all the trouble with them, and the method illustrated will work without any likelihood of getting out of order if ordinary care is used and the following rules observed:

Always leave the sheet very slack when it is rolled up. Keep a light strain on the roller line when rolling. See that the lead for the roller line is right and runs the line on the middle of the drum.

In conclusion, I must apologize for the rough-and-ready way in which these articles have been written, and can only offer as an excuse my entire lack of experience as a writer. I trust, however, that I have been able to make the instructions clear enough to enable any one to work from them.

between a number of opposing conditions, and this should always be borne in mind by both designer, builder and sailor.

I also wish to state that I am indebted to Mr. P. C. Crossley for the drawings of No. 1 and 2 designs made from my rough working drawings, and to several of the yacht fitters for the small illustrations taken from their lists.

Note to Part I.—Chapter III.—Laying Off.

To lay off the correct shape of a transom when it is not perpendicular to the L.W.L.:

Omitted From No. 1 Specification.

Beams.—After the words "the beams are only let into the inwale for half their depth, with a dovetail on one side only," add "and these dovetails will be cut only half-way through the thickness of the inwale, so that the ends of the beams do not go right through the inwales, as shown in the half-breadth construction drawing." This was an error.

Omitted From No. 2 Table of Offsets.

Intersection of D 1 with center line, 2ft. 2in. above L.W.L. Intersection of D 2 with center line, 1ft. 10in. above L.W.L. Intersection of D 3 with center line, 1ft. 1 3/4in. above L.W.L. Intersection of D 4 with center line, at No. 2 W.L. Round of deck beams—3in. in 6ft., at point of greatest beam, or 1/2in. 1ft. of beam.

FINIS.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Oct. 20.—The Columbia Pistol and Rifle Club's regular shoot had conditions unfavorable for high scores. A. B. Dorrell led with fine rifle, Ed Hovey with repeater in military and repeating rifle match, Young in the pistol match, Brannagan in revolver match, and Dr. Twist in .22cal. rifle match.

Rifle, 200yds.: A. B. Dorrell, 49, 51, 53; F. O. Young, 56, 61; W. G. Hoffman, 63; G. W. Hoadley, 86, 92; E. A. Allen, 117.

Military and repeating rifles, Creedmoor count: Ed Hovey, 47, 47, 36, 44, 44, 44, 44; E. A. Allen, 42, 42.

Pistol, 50yds.: F. O. Young, 44, 47, 48, 48, 49; G. W. Hoadley, 54, 54, 55; H. A. Baker, 52, 53, 61, 67, 67, 69, 72, 74; Dr. Twist, 55, 65, 64, 68, 73; C. M. Daiss, 56, 57, 64.

Revolver: A. J. Brannagan, 44, 47, 50; P. Becker, 63; W. G. Hoffman, 78, 81.

Twenty-two caliber rifle, 50yds.: Dr. Twist, 21, 26, 22, 34, 34; F. O. Young, 29; W. C. Prichard, 31, 39.

Our president, Mannel, is very ill, and Young came to the range on one foot, having a bad case of blood poisoning in the other from a pin thrust in it.

Nov. 3.—Our regular shoot took place to-day. Our president is pronounced out of danger. Dorrell is away in the mountains looking for bigger game. Young hobbled on one foot to the range and did good work for one foot, one hand, one optic; but Ed Hovey was the boss, shooting his Winchester .30-20 repeater. He made 13 straight 8in. bullseyes and 97 out of possible 100 Creedmoor, with 5 scores to his credit, only 1 point short of 48 Creedmoor average. Young made two 50-shot trials and 100 consecutive for records with his Sharps military. He made 233 on first 50 and 226 on record, or 459 in 100 shots. Hovey holds the record with same rifle, 236, made several years ago. Hoffman led in the .22 rifle match, beating Dr. Twist in 50 shots for a dinner by 20 points, with a total of 112. Young beat his own record with the pistol, making 31. A. H. Cady was high with fine rifle, and Becker led with revolver. Brannagan changed his .38 for a .32 barrel, and it loaded so he could not get good work. He bagged fifteen quail and twelve rabbits yesterday, however, with shotgun. Scores:

Rifle: A. H. Cady, 56, 86, 96, 98; G. M. Barley, 62; W. G. Hoffman, 79, 83; Gimmel, 113, 133, 186, 194; Allen, 119, 120.

Military and repeating, Creedmoor count: Ed Hovey (.32-20), 49, 48, 47, 46, 45; F. O. Young (100 shots), 46, 46, 47, 46, 48, 47, 43, 46, 45-459. Young made 58 and 66 for best two ring scores, which, with his pistol score, 31, placed him ahead of the all-round record made by himself and Pape; Dr. J. F. Twist (Krag), 44, 43, 42, 41, 40, 29, 28.

Pistol, 50yds.: F. O. Young, 31, 44, 45, 47, 48; G. W. Hoadley, 47, 53, 53, 58; H. A. Baker, 52, 53, 63, 67; C. M. Daiss, 49, 56, 62; Dr. Twist, 60, 75.

Revolver: P. A. Becker, 53, 65.

Twenty-two caliber rifle, 50yds.: W. G. Hoffman, 18, 20, 21, 24, 25; A. J. Brannagan, 21; Dr. Twist, 24, 24, 26, 28, 30.

H. Kroeckel, of the Stockton Pistol and Rifle Club beat our club and the Coast .22 rifle record, making 1, 1, 2, 2, 2, 1, 2, 1, 1-15, using Marlin rifle and .22 long rifle cartridges, Peters, I believe. We do not know that Kroeckel's score has ever been beaten under similar conditions.

Hovey used Winchester ammunition, and cleaned after every shot. Young used King's powders, and no cleaning.

F. O. YOUNG.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, Nov. 10. Conditions: 200yds., off-hand, at the standard target. Strickmeier was declared champion for the day with the good score of 90. Weather, clear. Thermometer, 55. Wind, 10 to 2 o'clock:

Table with 2 columns: Name and Score. Lists scores for various participants like Strickmeier, Payne, Gindele, Nestler, Hofer, Trounstone, Bruns, Roberts, Drube, Hoffman, Lux, and Topf.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

a topsail and large spinnaker when required. On the other hand, it is not quite so close-winded as the No. 1 sail, and with the extra sails, etc., entails a lot more gear.

Among the other rigs in general use the cutter is most popular for racing and cruising in yachts of over 8 tons T. M., the single headsail of the sloop being too unwieldy in anything over this size. The cutter is practically the same in every way as No. 2 sail plan, except that she carries two headsails instead of one, and the outer sail is set flying, while the sloop's single headsail is set on a stay.

As the vessel increases in size the pole mast of No. 2 would give place to a topmast, and the whole of the gear would be more complicated; but, as these details do not apply to small yachts, there is no occasion to go further into the matter.

A yawl is merely a cutter or sloop with a short boom and a mizzen mast stepped aft of the rudder head. This is a very popular cruising rig, as it reduces the size of the working sails and enables the boat to be handled under a mizzen and headsail only. Whether this compensates for the trouble of setting and taking in another sail and looking after the extra gear is really a question for individual taste to decide; but there is no doubt that a yawl is inferior to a cutter to windward.

The yawl may have any of the foregoing types of sails and either one or two headsails, topmast, etc., according to size and the owner's fancy. The size of the mizzen may also increase in proportion to the other sails, to reduce the labor of working a big mainsail, till by stepping the mizzen mast forward of the rudder the rig becomes a ketch. This is considered an ideal rig for cruising by some people, but it is less efficient to windward than the yawl and is very ugly, its only advantage over the yawl being a further reduction in size of the mainsail and increased efficiency when sailing under mizzen and headsails only.

This may be carried to a still further extreme by making the vessel into a schooner, which is little less efficient to windward and much smarter looking than the ketch. A schooner is undoubtedly the best rig for a large, sea-going yacht, but is quite out of place in small craft.

Other rigs used on small boats are the balance lug, largely used on the Upper Thames raters; the spritsail, used on watermen's boats on the Lower Thames and many other parts, and the Dipping lug, used on the large fishing luggers all round the coast and on ships' boats.

The balance lug is a very flat-setting sail, with simple gear, but is pressing and requires strong and heavy spars.

The spritsail is only useful for boats going alongside other vessels, etc., when the sprit can be removed, leaving nothing to get foul aloft; it is a bad sail to windward and very pressing.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Nov. 20.—Sistersville, Va.—Fall tournament of the Sistersville Gun Club; \$60 added money. Ed. O. Bower (Dade), Sec'y-Treas.
Nov. 22-24.—St. Louis, Mo.—Contest for the St. Louis Republic championship cup (Nov. 23) and three-day open tournament. Herbert Taylor, Sec'y, 1004 Chemical Building.
Nov. 25-28.—Phoenix, Ariz.—Ninth annual tournament of the Arizona Sportsmen's Association, under the management of the Phoenix Gun Club. W. L. Pinney, Sec'y.
Nov. 28.—Ossining, N. Y.—All-day target shoot of the Ossining Gun Club. Roast Turkey. C. G. Blandford, Capt.
Nov. 28.—Cleveland, O.—Shoot of the Cleveland Gun Club.
Nov. 28-29.—Milwaukee, Wis.—Tournament of the South Side Gun Club.
Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Nov. 20.—Interstate Park, Queens, L. I.—Shoot given by Mr. S. M. Van Allen, who donates a Daly gun; \$10, 20 birds, latter extra; high guns; handicap; all entrance money goes into the purse.
Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Cafe and hotel accommodations.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.
1902.
Jan. 14-17.—Hamilton, Ont.—Twelfth annual tournament of the Hamilton Gun Club. F. B. Vallance, Cor. Sec'y.
May 6-9.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.
May 7-10.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.
May 13-16.—Oil City, Pa.—Annual meeting of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. F. S. Bates, Cor. Sec'y.
May 30-31.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

A recent issue of the Philadelphia Times states that "it was definitely decided Nov. 8 that a shooting tournament would be held in connection with the Sportsmen's show, which begins in the exposition buildings, opposite Franklin Field, on Nov. 27. There will be practically two separate tournaments, as in one of them none but real amateurs will be allowed to compete. Those familiar with shooting know the very lax definition that is generally accepted for an amateur at that branch of sport. Many of the so-called amateur tournaments are for money prizes, which, according to any definition of any regular amateur, such as the A. A. U. or the I. C. A. A. A. A., would at once debar from further competition. The events that will be held have not as yet been definitely decided upon, but they will be settled on at once and given publicity, so that all may enter. The shoots will take place outside the buildings, where there is every facility for such an event. The amateur tourney is given with the intention of encouraging the sport among our schools and colleges, and among such athletic clubs as the Philadelphia A. C., many of whose members have never shot for anything but a real amateur prize."

Dr. Geo. N. Thomas, the general manager, informs us that the programme of the Trenton Shooting Association's shoot, to be held at Hutchinson's Pond, near Yardville, Nov. 13, offers the following: "No. 1, match, 50 targets per man, for the Mercer county \$50 challenge championship trophy, between Wm. F. Vandersdale, holder, and John E. Thropp, Jr., challenger. (Lots of ginger in this.) No. 2, members' match, 30 targets per man, for gold and silver badges. (All to the mustard.) No. 3, first contest, 50 targets per man, for the T. S. A. challenge team cup (recently presented by a doctor of pharmacy.) This event is a free-for-all. Entrance, cost of the targets only. Open to any number of teams of five men each in Mercer county. (Very tobacco.) The captain of the winning team will hold the cup, subject to challenge, as per conditions published in the local press. The balance of the shooting will be 10 and 15 target events, arranged to suit. Our Thanksgiving Day programme will soon be on your desk. Live birds and targets for valuable prizes."

As showing the power of a high wind in blowing goose eggs into the scores of shooters, the following is taken from the Philadelphia Public Ledger of Nov. 5: "Three live-pigeon shooting matches were shot at Pottsville yesterday. The first was a team shoot between Peter Maurer, Mark Doland, Howard Smith and Edward Haffner on one side, and Frank and William McSurdy, William Evans and Thomas Golden on the other. Forty birds were shot at, but owing to the high wind, only 15 were grassed, the first team winning by a score of 8 to 7. In the above shoot Maurer and Evans tied with 4 birds each. Twelve birds were used in the shoot-off, and only one was killed, that by Maurer. The third event was a team shoot between Dolan and Smith on one side, and Evans and Golden on the other. The former won by a score of 3 to 2."

From Richmond, Va., a correspondent writes us as follows: "Mr. Franklin Stearns' many friends in the shooting world will regret to hear that he was the victim of a very painful shooting accident a few days ago, when in pursuit of quail. A bird flying toward Mr. Stearns was shot at by a gentleman who was with him, and both of Mrs. Stearns' hands were badly injured, the right one having no less than fifty pellets in it. He hopes to be able to use a gun again in about a month; meanwhile he is taking his sport second-hand, as he sat alongside of Mr. W. A. Hammond on Nov. 8 and saw him pull down duck after duck. He says he did not enjoy it much."

The contest for the Daly gun arranged by Mr. S. M. Van Allen, of Jamaica, to take place at Interstate Park on Nov. 20 is exciting a high degree of interest among trapshooters, and it promises to be one of the star events of the season in respect to New York. The beautiful gun is a donation, independent of the entrance, the latter going into the purse. The conditions are 20 live birds, \$10 entrance, birds extra, high guns, handicap.

On Dec. 4, at Interstate Park, there will be inaugurated a shoot called the Eastern Championship. The conditions are 25 live birds, price of birds only, \$10 sweep optional, handicaps 25 to 30yds., for a handsome trophy, donated by Interstate Park Association. Shooting will commence at 9 o'clock A. M. A 15-bird preliminary event, \$10 entrance, high guns, will be shot.

Mr. Hood Waters, erstwhile of Baltimore, Md., well known as a skillful and popular trapshooter, was in New York on Monday and Tuesday of this week, after a successful trip in the North in the interests of his company, the Laffin & Rand. He reported most gratifying success, and success he merits.

Mr. W. L. Rhodes informs us that on Nov. 16, at the Middlesex club house, South River, N. J., commencing at 1 o'clock, there will be a match, 100 birds per man, between Messrs. S. M. Van Allen and J. E. Applegate for a purse of \$200, loser to pay for birds. Also, there will be a handicap shoot for an 800lb. hog. Stages will meet all trolley cars from New Brunswick and South River at Tetter's Corner.

The three-man team contest between Messrs. Banks, "Ramapo" and Piercy on the one side and Messrs. Morfey, "Armstrong" (R. A. Welch) and "Fifty-five" on the other at Interstate Park on Thursday of last week resulted in a victory for the former. Each contestant shot at 25 birds. The first effort resulted in a tie on 63. The shoot-off, same conditions, resulted in a score of 66 to 65.

Capt. A. W. Money and Mr. C. McDermott scored the first win of the series of contests for the Sykes cup, at the Crescent Athletic Club's shoot on Saturday of last week. They scored 88. It is a two-man team event at 50 targets per man, handicap allowances. Capt. A. W. Money and Mr. H. M. Brigham at the same shoot tied for the November cup with a score of 47 each out of 50.

At Interstate Park on Thursday of last week a match was arranged between Messrs. Ed Banks and G. H. Piercy on one side and Messrs. R. A. Welch and T. W. Morfey on the other; 25 live birds per man, the latter two standing at 30yds.; their opponents at 29yds. The match is arranged to take place early in December.

The contest for the E. C. cup, emblematic of the championship of New Jersey, concerning which Mr. Geo. H. Piercy, of Jersey City, is the challenger, hangs fire. Mr. Piercy, though ready to shoot, and waiving one forfeiture, is still uncertain as to the date on which Dr. W. L. Gardiner, the holder, is pleased to shoot.

It is not unlikely that Mr. Geo. H. Piercy and Dr. W. L. Gardiner, the holder, may contest for the championship of New Jersey on the 27th of this month. Dr. Gardiner has been immersed in business cares, which prevented him from giving the championship matter the attention which he personally feels in it.

Three members of the Fountain Gun Club, of Brooklyn—namely, Messrs. Wynn, Lurgan and Stewart—shot at Interstate Park on Thursday of last week. The main event was at 15 birds, in which Dr. Wynn scored 14, Lurgan 13 with two dead out, and Stewart 8 with three dead out.

The forty-fourth annual tournament of the New York State Association for the Protection of Fish and Game will be given under the auspices of the Rochester Rod and Gun Club, Rochester, N. Y., June 9 to 13, 1902.

The last shoot of the Great Northern Hotel cup series by the Garden City Gun Club was held at Watson's Park, Chicago, on Nov. 9. Four contestants tied on two wins in the series. In the shoot-off Mr. Comley won.

In the second contest for the Goodspeed diamond trophy at Denver, Colo., on Nov. 4, Mr. H. H. Dorsey scored a second win. With his handicap, he scored 98 out of 100.

BERNARD WATERS.

ON LONG ISLAND.

Trap at Interstate Park.

THREE-MAN TEAM MATCH.

The match between Messrs. T. W. Morfey, R. W. "Armstrong" and "Fifty-five" on the one side and Messrs. Edward Banks, "Ramapo" and G. H. Piercy on the other was shot at Interstate Park, L. I., on Thursday of last week. The match was originally arranged to include Capt. Money and ex-Sheriff Frank D. Creamer, both of whom are redoubtable artists with the scatter gun, but other affairs engaged their attention, thus leaving it a three-man contest instead of four.

The birds were a good lot. The contest was close, and stubbornly met, man against man. Each shot at 25, and each scored 68 out of a possible 75. This was through an unfortunate decision of the referee, Mr. B. Waters, who ruled a no-bird in a case wherein it was unmistakably a lost bird. The latter, though shot at on the ground, escaped out of bounds. But for this error the scores would have been 68 to 67 in favor of the Banks-Ramapo-Piercy team. However, as it was a friendly match, the contestants retained their good nature, and agreed to shoot off the tie at 25 birds under the original conditions, and this again resulted in a close contest, it being decided only in the last round, and then only by one bird. Piercy, Banks and Ramapo won by the score of 66 to 65. The tie was shot off in a sweepstake, but for the sake of clearness it is presented apart by itself, though a part of the sweepstake also.

The weather was clear and there was almost a calm—ideal conditions for good scores.

Team match, handicap, Ramapo two misses as kills:
T W Morfey, 30.....21212211111121121212*12*2-23

J H Hawes, 27.....11101012**22212200112210-18

A few sweepstakes also were shot, in which C. H. King distinguished himself.

The final event was a miss-and-out, which resulted as follows: Welch 6, Waters 6, Van Allen 5, Ramapo 5, Fifty-five 2, McConville 2, Piercy 1. McConville and Piercy's second bird respectively were hard hit and were dead out.

Greiff-Carman.

Baldwins, L. I.—On the grounds of Mr. Geo. A. Barker, at Baldwins, recently a match between Mr. Gus Greiff and Dr. Carman resulted as follows:
Dr Carman, 28.....000110202222221212*-14
Gus Greiff, 30.....222221222101*1222122-19

Crescent Athletic Club.

Bay Ridge, L. I., Nov. 9.—The Sykes cup was a prize of keen

interest, and the first win on it was scored by Capt. A. W. Money and Mr. C. McDermott by the excellent score of 88. It is a two-man team contest, each man shooting at 25 targets from the magautrap and 25 from the expert traps. Owing to an injury to his gun, Mr. McDermott was obliged to use a strange gun. The scores for the Sykes cup, handicap allowances, follow:

Table with columns: Name, Expert Hdcp., Expert Broke., Magautrap Hdcp., Magautrap Broke., Total.
Money 2 22 1 24 49
McDermott 3 19 2 15 39-88
Marshall 6 19 4 18 37
Palmer 9 18 7 19 50-87
Brigham 1 22 0 23 47
Keyes 5 16 3 16 40-87
Banks 0 18 0 22 40
McConville 9 17 7 6 33-78
Hopkins 5 13 4 13 36
Chapman 8 8 6 11 33-69

Mr. H. Brigham and Capt. Money tied for the November cup on 47. The conditions were 25 targets at the magautrap and 25 at expert traps, handicap allowances added. Scores:

Ossining Gun Club.

OSSINING, N. Y., Nov. 6.—The scores herewith appended were made on Election day, Nov. 5, at Ossining. There was no shoot advertised by the club for Election day, but one of the sporting papers got our Thanksgiving shoot confounded in some way with Election day, and called it an all-day live-bird and clay shoot.

Mr. H. S. Welles, of the Ballistite Company, was misled by the garble, so came up expecting to meet a shooting crowd. Luckily some of the boys came out, so it was not a blank day after all. Mr. Welles was shooting his 24-grain target load from the 30yd. mark at live birds, and did excellent work.

Table with columns: Events, Targets.

Frankford Club Shoot.

Nov. 9.—The Frankford Gun Club inaugurated a new series of club events at their grounds at Somersdale, for a gold medal. Conditions: 50 targets per man, handicap allowance of one-quarter of a target for every target missed at the previous shoot; unknown angles, 16yds. rise. This being the first shoot of the series everybody shot from scratch. Rodney King was high gun with 41 out of 50. The scores: King 41, Felix 40, Redifer 39, George 38, Hart 31, McMichael 29, Smith 25, Bang 25. On Saturday, the 30th inst., there will be a team shoot between the several clubs for the Frankford Club trophy.

Limited Gun Club's Tournament.

INDIANAPOLIS, Ind.—The tournament of the Limited Gun Club, Oct. 30 and 31, had its usual programme of target and sparrow events. The main event was the Grand Hotel cup contest at 50 targets, and this distinguishing honor was won by Mr. H. J. Sconce, of Sidell, Ill., by a score of 49 out of 50.

First Day, Oct. 30.

Forty contestants participated in the programme of to-day. Sconce was high gun, breaking 156 out of 160 shot at. The main event, the Grand Hotel cup, begun to-day, was unfinished, and further competition in it was postponed till 2 o'clock to-morrow. The scores:

Table with columns for Events, Targets, and names of contestants with their scores for the first day.

Second Day, Oct. 31.

There were thirty-six entries to-day, all told, and for this reason and the early darkness it was necessary to declare off two target events of 15 each. Sconce was again the high gun. He made the best score ever recorded on the Limited Gun Club grounds. The shooting was of a high order. The visiting shooters all expressed a desire to attend the next tournament of the Limited Gun Club, which will be held in February. The scores:

Table with columns for Events, Targets, and names of contestants with their scores for the second day.

*Events 6, 7, 8 and 9 were sparrow events. Grand Hotel cup event, 50 targets: Sconce 49, Neal 48, Faust 47, Comstock 47, Kirby 46, Partington 46, Clark 46, Blake 45, Michaelis 45, Parry 44, Link 43, Arnold 42, Tripp 41, Cook 40, Dunbar 38, Moller 33, Squiers 47. Squiers shot for targets only both days.

The Recoil Due to Gas.

We recently had the pleasure of inspecting a device for recording the recoil of a gun on the principle of the ballistic pendulum. It had been erected in the testing laboratory of the Kynoch Company, and was the special design of their Mr. Housman. The methods of taking the recoil of firearms have been many and various. Naturally recoil itself, from the energy point of view, varies according to the weight of the recoiling mass, but in any case efforts have been made in many directions to obtain an exact measure of recoil, whether in foot-pounds relating to a given weight of recoiling mass or in momentum (the product of weight and velocity), which provides a common ground of comparison for all weights of recoiling parts. Mr. Housman's line of research has been especially devoted to the separation of the recoil at the moment of the exit of the shot from the total recoil measurable after the gases have become free from the gun. It will be remembered that Capt. Journée and Mr. Griffith have both worked on the lines of measuring the velocity of recoil of a freely suspended gun, having a weight approximately equal to that of an ordinary firearm. For measurement of these small intervals of time a chronograph of the best possible construction is a necessity, and although many factories possess such chronographs, they cannot as a rule be applied to the measurement of recoil, since recoil measurement, to be of any value, must be accompanied by shot velocities, which must be taken simultaneously. The Broullé chronograph and its modern prototype, the Holden instrument, are those most frequently met with, and neither of them is capable of taking more than one time record in single operation. The Smith chronograph, on the other hand, can take as many as five simultaneous records. For instance, it may take the time from hammer to muzzle, from muzzle to the point fixed for taking shot velocities, and the two remaining styles may be appropriated for recording the recoil velocity of the gun itself. Consequently, those laboratories which are equipped with the Smith chronograph have a ready means at their disposal for making systematic investigations in recoil by means of the velocity method. For laboratories equipped with the falling weight chronograph another method of measurement is available, and it is the one which has been turned to account by Mr. Housman. He has built a gun—in fact a cannon—some 30in. long and 3in. in diameter. The gun has been most delicately suspended by means of four wire ropes, connected at their ends with a system of geometrical suspension bearings, which eliminate friction and other sources of error as far as is humanly possible. With a gun so heavy the amount of recoil experienced is very slight; in fact, an ordinary charge only swings the pendulum a matter of 9in. The

length of swing, taken in relation with the length of the pendulum and its mass, may be mathematically analyzed, so that by the use of a constant the distance recoiled, which is suitably registered on a scale, may be read off in terms of momentum. This reading is, strictly speaking, the total value of recoil of the gun. The whole of the energy of recoil, so far as is practicable, has been utilized in raising the weight of the gun, the amount of rise being directly ascertainable from the majestic swing of the gun, which compares in a marked degree with the buck-jumping action of Mr. Griffith's lighter weapon. In order to make the record as complete as possible plugs have been fitted to this gun, and across the muzzle is an attachment for taking velocity. The effect of this combination is that pressure, recoil and shot velocity may be directly measured. The elementary laws of motion have enabled us to derive from the shot velocity the value of recoil at the moment when the shot leaves the muzzle, and these are applied in the ordinary way to the readings obtained from this instrument. In this way Mr. Housman has provided an entirely separate means of determining recoil, which will prove a very valuable auxiliary to the velocity instruments working to produce the same result. At the present moment we have not had an opportunity of studying in detail the readings obtained by Mr. Housman; but we hope at an early date to be in a position to institute some interesting comparisons between the two systems that are now available in addition to the spring method, which was so long exclusively used in our own testing department.—The Field (London).

Professional and Amateur.

New York, Nov. 8.—Editor Forest and Stream: The article on "Amateurs and Professionals," in your issue of the 5th, causes one of the 80 per cent. amateurs, as you term them, to stop and think a little. This question has caused quite a lot of discussion and a lot of thinking, and most of it that I have heard is from the class below and some above 50 per cent. shooters, and this class seldom air their grievances through sporting papers. The experts are a fine lot of gentlemen, as far as I have met them, and I like them very much; but, as you seem to think they are the drawing card to a shoot, it is a pity that some arrangement cannot be made whereby the expenses of the expert should be lessened. But let me say to you that some of the novices do not think as you do. I know of one instance where a novice refused to continue to shoot a powder that he was shooting fairly good with, because he had just learned the expert was employed by the powder firm that made the powder that the novice was using.

You know, Mr. Editor, it is almost impossible to beat the builder or maker, and if I am to be beaten I would rather be beaten by one of my own kind, for then I will think I am not as proficient as the fellow that beat me. You know, Mr. Editor, what it means to spend weeks in the factory testing loads, and you no doubt know what constant practice means with a gun, or you wouldn't have written such an article. Don't you think that a fellow would be foolish to lay his money against such odds? Will you, through the FOREST AND STREAM, tell me and a lot of other amateurs why the manufacturers allow their agents to shoot for money? Is it to help pay their expenses, or to convince the novice he is shooting the wrong powder? I have no kick coming myself, for my money has always been up, except once; if I had that to do over I would shoot with him; but there are others.

Mr. Editor, I am a firm believer in handicap proper, and am always willing to give to the poorer shot a chance for his shooting, but it is a hard question to solve correctly; and as you must be up in the art yourself to write such an article, I am going to give you a problem to figure out, one that I gave to one of the best expert shots this country can boast off, but I won't give you the rule he used to figure it out with: Example: If an amateur breaks his targets 25yds. from the trap, standing at 16yds. from the trap, and the expert breaks his targets 20yds. from the trap, standing at 21yds. from the trap, now what handicap has the amateur over the expert? Or if an amateur kills live birds 8yds. from the trap, standing at 28yds. from the trap, and the expert kills live birds 4yds. from the trap, standing at 32yds. from the trap, what handicap has the amateur over the expert? Rule to figure by: The amateur seldom shoots; the expert shoots for a living. DUDLEY.

[The foregoing luminous exposition in respect to handicapping seems to refer to Dudley in particular rather than to handicapping in general, since it embodies the arguments which he uses in private in respect to his personal interests in shooting. He shoots in middling slow time, yet has expert results—namely, 90 to 95 per cent.—and also he dislikes to be put back of 16yds. When there is any setting back to be done he magnanimously concedes superiority to the other fellow, and that the other fellow be set back accordingly. To show the fallacy of his rather circular process of reasoning, let us assume a competition in which there are two men, A and B, each shooting from the 16yd. mark and each breaking 95 targets out of 100. Let us further assume that A breaks his targets 6yds. nearer the trap than B does. Then, if a handicap was made according to Dudley's theory, A, who broke his targets 6yds. nearer, should be set back to 21yds., while B remained at 16, so that in theory both would break their targets at the same distance from the traps. Dudley overlooks the fact that A has new problems to solve when set back quite as much as B has. The exact number of yards, feet and inches at which each contestant breaks his targets from the traps is, as data, not of so much importance in estimating handicaps as is the number which each contestant can on an average break. B's skill in pointing his gun accurately may more than compensate for A's quickness. The results are what determine the relative degrees of skill, as shown by the scores, and not the number of yards, as set forth by Dudley.

Our contention that the professionals are a material benefit to trapshooting we still maintain. Outside of the average amateur's immediate circle of friends and acquaintances but little interest is manifested in his performances at the trap, while the performance of the professional thereat is of general public interest. Moreover, we are firmly convinced that the professional has a right to live.]

Maple City Gun Club.

NORWALK, O., Nov. 8.—The second annual tournament of the Maple City Gun Club was held at Norwalk, O., Nov. 6. There were ten events at targets and three at live birds.

The targets were thrown from a magautrap; ground traps, 28yds. rise, 50yds. boundary, for live birds. The day was an ideal one for a shoot, and the many taking part in the tournament enjoyed it to the utmost. Good, of Bellefontaine, was high man, closely followed by Frank, of the local club. A. C. Holliday made a very efficient score, and Fred Cole, as a squad hustler, kept things moving along in good time. Altogether it was one of the best shoots ever given by a local organization, and the boys feel proud of the record made by the Maple City Club.

Table with columns for Live birds, Events, Targets, and names of contestants with their scores for the Maple City Gun Club.

Table with columns for names of contestants and their scores for the Western Traps.

WESTERN TRAPS.

Garden City Gun Club.

Watson's Park, Burnside Crossing, Ill., Nov. 9.—The main event was the last contest of the series for the Great Northern Hotel cup. Messrs. Comley, Barto, Levi and Steck tied for it with two wins each. Steck was absent to-day, so the other three winners contested the ties for it. Mr. Comley killed 10 straight in the shoot-off and won. The scores for the Great Northern Hotel cup follow:

Table with columns for names of contestants and their scores for the Garden City Gun Club.

Keystone Shooting League.

HOLMESBURG JUNCTION, Philadelphia, Pa., Nov. 9.—The weekly event was the club handicap, and the semi-monthly event was the live-bird championship of Philadelphia and vicinity. In the latter F. W. Van Loon and C. Fitzgerald made clean scores, and the former won in the shoot-off. Mr. I. W. Budd, the holder, was absent. The conditions of the championship event were 10 birds, 25yds. rise. The scores:

Table with columns for names of contestants and their scores for the Keystone Shooting League.

Shoot-off: Steck Absent. Barto 212101121. Levi 222221100. Comley 212101121—10.

There were thirteen entries in the club handicap. Henry, Fitzgerald and Swartz made straight scores; Fox, Van Loon, Mason, Johnson and Busby scored 9. Van Loon lost his ninth bird dead out. The scores:

Table with columns for names of contestants and their scores for the Keystone Shooting League.

Rochester Red and Gun Club.

ROCHESTER, N. Y., Nov. 11.—The members of the Rochester Red and Gun Club are trying to revive the shooting here. The last shoot of the club, held recently, was quite a success. It is the first of a series. The championship was won by Dr. J. L. Weller, who broke 47 out of 60 targets, a 94 per cent. performance, besides making several straight scores in other events.

William Karle did the best shooting for the handicap medal, and as a result he now wears it. He broke 25 out of 28 targets shot at. Willey, of Dansville, also shot well, making one run of 42 straight, and missing only 5 out of 105 targets. Every shooter is invited to come out and compete for the medals, whether a member of the club or not. The scores: Championship medal shoot, at 50 targets: Weller 47, Borst 42, Thakleton 36, Willey 48, Kershner 45, McCord 20, Bonbright 18. McCord and Bonbright withdrew on their 25th bird. Handicap medal shoot, at 25 targets, with handicap:

Table with columns for names of contestants and their scores for the Rochester Red and Gun Club.

PUBLISHERS' DEPARTMENT.

Winter Tourist Rates, Season 1901-1902.

THE Southern Railway, the direct route to the winter resorts of Florida, Georgia, the Carolinas and the South and Southwest, announces excursion tickets will be placed on sale Oct. 15 to April 30, with final limit May 31, 1902. Perfect Dining and Pullman Service on all through trains. For full particulars regarding rate, descriptive matter, call on or address New York Office: 271 and 1185 Broadway.—Adv.

Quail Shooting in North Carolina.

An experienced sportsman and regular visitor to the North Carolina hunting grounds has the following to say of the quail prospects this season: "Reports from the different sections of North Carolina credit quail as being more plentiful this year than they were last year, which was an off season. But this has been a favorable breeding season, and so the crop of this royal game bird is back to normal, and normal applied to quail in North Carolina means from one to two dozen birds a day to a reasonably diligent hunter with fairly good dogs. Topographically, there are two hunting sections in the State, the Piedmont or that part of it comprised in the foothills and rolling lands, and that east of it, which is level to the coast. As far as birds go, there is little choice. In the foothills there are fewer briars and sand burrs, rather more open-cover shooting, and more exercise. The level section is easier getting over, and so location is a matter of choice. In the river sections of the Piedmont the better hunting will be off the river bottoms, owing to the numerous and very high freshets this summer, washing the bottoms out and destroying the corn and wheat, and driving the birds back; but as these bottom lands are narrow, it will make no material difference to the sportsman in regard to their location. The open season of North Carolina begins Nov. 1, and the birds are then less wild and break into less difficult cover; but they soon get experienced and become wary, and such conditions give the sportsman and good shot the most pleasure. A full-grown, strong quail that has learned what it means will tax his skill and give him more enjoyment, even when the quail gets the better of him; hence many sportsmen prefer December for their annual quailing, both on this account and that the climate is more bracing for field work. In many regards it is the most desirable month of the season to choose for a quail hunt in North Carolina. "The Southern Railway has issued its 'Hunting and Fishing' for 1901-1902, which gives localities and stopping places, and it would be well for those not informed to open correspondence with some of those named. The book is without bias, and aims but to help the hunting fraternity." ALEX. S. THWEATT.

THE BASIC PRINCIPLE.

THE game of this country belongs to the sportsman. By the designation sportsman as here used is meant the shooter who shoots for sport, not for the market. Do not make the mistake of assuming that the sportsman is the town dweller alone. He may live in the town or he may live in the country, in the city or in the most remote backwoods, or in the middle of the prairie. Wherever his dwelling, whatever his eminence or obscurity, his wealth, clothing, manners, outfit—if only he rejoices in the tastes, sentiments and practices of those who follow sport for sport's sake, rather than for what they can make out of it—if a sportsman, the game is for him. It is his, and he shall have it. To give it to him, to assure him in the privilege of its enjoyment, to secure that privilege to his children and his children's children, is the purpose of the FOREST AND STREAM'S Platform Plank—*The sale of game should be forbidden at all seasons.*

And that is the basic principle of all wise and defensible game legislation in this country to-day. It is the object and the justification of game laws.

Once this basic principle—the game for the sportsman—is understood by the people as it should be, the task of closing up the game markets will be simple and speedily and easily accomplished.

It is good doctrine to preach. Let it be proclaimed, repeated, reiterated, until even the men we send to our Legislatures shall comprehend it and act upon it and embody it in the laws they enact.

THE DOCKED TAIL.

THE daily press recounts that President Roosevelt, who is adding to his equine properties as becomes the Chief Executive of a great nation, will not purchase any horse which has had its tail docked. To the good men and women who have a warm place in their hearts for our dumb friends, and who have minds which abhor needless cruelty—and the number comprises the great majority of the people—this determination of the President, with its implied censure, will be appreciated as a beneficent gain in the cause of humanity in the present, and a source of hopefulness for still greater gain in the future.

There is nothing, past or present, either to justify or to condone the horrible mutilation called docking. It originated and has been perpetuated to gratify a mere whim of fashion. It is the more deplorable since, in most instances, those who sanction it, procure it and perpetuate it, are of the higher walks of life where wealth, refinement and leadership abide, and therefore where one might justly expect to find the best standards and the best exemplars of life in all its bearings.

It is but charitable to assume that, in view of the munificent donations for the cause of humanity and the rigorous laws on the statute books to enforce humane treatment, the full measure of cruelty, of which the docked tail is the exponent, is not comprehended by those who procure it, if it is by them comprehended at all.

As an operation, docking is one of inconceivable torture. An analogous operation would be if a man's foot were cut off with a huge pair of shears. Such is the manner of docking the horse, and it often is so excruciatingly agonizing that the horse shrieks and groans from the torture. Many days of pain are suffered before recovery.

While the tail thus docked to gratify a silly vanity designates that the docked horse is owned by some one who wishes to be exclusive even at the cost of mutilation, it also designates that the docked horse is defenseless against flies, gnats, etc., for life. The horse's tail is a most useful member in guarding against the ceaseless attacks of such insects. Nature provided it as an essential to his comfort and his well being.

It is presented, as being in favor of docking, that the horses so mutilated are cared for so well that flies cannot annoy them, and this may to a certain extent be true so long as they continue to be the servants of wealthy owners; but when they are cast out of the world of fashion into the world of drudgery, then the need of a

protecting tail is constant, and conversely its absence is a calamity indeed.

The practice of docking horses' tails, aside from its inhumanity, is further to be deplored since it violates the law of the land. It and other related forms, such as for instance the cropping of the ears of Great Danes, bull-terriers, black and tan terriers, and the docking of the tails of fox-terriers, spaniels, etc., are penitentiary offenses in the eye of the law, and also punishable by fines. When a conviction can be obtained, the punishment almost always follows to a certainty.

We anathematize the ruffian and his fellows who conduct dog fights in some sequestered place where the law cannot reach. The dog fighter, when engaged in his amusement, from necessity seeks concealment. He avoids openness and respectability. When the horse's tail is docked the operator does precisely what the dog fighter does in the matter of secrecy. He seeks darkness and seclusion. If the dog fighter is caught, conviction is swift and certain. If the docker is caught, the chances of conviction are remote indeed, for he is very likely to make the defense that the horse's tail was diseased, and that the docking was a necessary surgical operation in consequence.

However, the remedy for this permanent cruelty and injury, after all is said and done, is in the hands of the owners themselves. The veterinarians dock horses merely as a matter of business. The owners need not follow the behests of a cruel and ephemeral fashion. Then, in respect to docking, there would be no cruelty, for it would cease to be practiced.

It had its origin many years ago in aping of English fashions in that respect. Some years before her death, the lamented Queen Victoria prohibited docking in her own stables and discountenanced it in others, so that it has since been rapidly on the wane in that country. Also the mutilation of dogs was prohibited by the English Kennel Club some years ago, so that in matters of humanity to our dumb animals, we are at present a long way behind our friends across the ocean. However, with such a shining example as that set by our illustrious President, with its far-reaching beneficence, there is every reason to hope for rapid advancement in this special branch of humanity, and in the furtherance of so good a cause let every one do his best.

The horse is one of the noblest of all animals. Strong, courageous and docile, he has been an invaluable ally of man in man's rise from barbarism to civilization. By man he was made to bear the heaviest burdens of peace and to face the brunt of war. For his services to man from time immemorial as well as for his native nobility and dignity, no one should mutilate him for the gratification of an idle whim. "A righteous man regardeth the life of his beast; but the tender mercies of the wicked are cruel."

MORE DEADLY THAN WAR.

THE most prominent items of hunting news in the daily papers have to do with the killing of human beings by mistake for game. The fatalities this season will equal in number or surpass those of former years. Twelve casualties have been reported from Maine to date, and more than that number from Minnesota. They are of daily occurrence. We have in some instances received lists of the killed and wounded, but it is beside the purpose to give such lists in the columns of FOREST AND STREAM.

The most pressing necessity in the whole domain of sportsmanship to-day is the devising and application of the preventive of this horrible man-killing in the woods; or rather of a number of preventives, for it is certain that no one expedient can be discovered effectually to stop the slaughter. Several suggestions have been made. One is that every hunter should attire himself in a hunting suit rivaling the rainbow in color scheme, and should don a red hat whose fiery glow may give due notice to others that its wearer is a man and not a deer. This is effective in a degree as is related by a correspondent in another column; and all deer and moose hunters of America would do well to enroll themselves in the Order of the Red Hat.

Another expedient put forward is the legal prohibition of the long-range rifle in certain designated districts where its use is known to imperil the lives of men. This, if put into effect, would diminish the peril and in a measure shorten the death roll. There is no question about the

constitutionality of such a law. We have restrictions now in our game codes limiting the size of guns, and a limitation put upon the rifle would be of the same character and could be enforced.

Another proposed remedy is a law to make the shooting of a human being by mistake for game a punishable offense. This has been done in Maine, but the simple enactment of the law has not stopped the slaughter; nor can it be expected to accomplish anything until the penalty prescribed for the offense shall have been imposed in a way to impress upon public consciousness the penal character of the offense. The Maine authorities who are ignoring the law in this respect are making themselves in a measure responsible for the man-killing to follow. Is human life held so cheaply in Maine that the punishment fixed for taking is not in any instance to be enforced?

Mr. Rightmire expresses surprise that we should have shown a way in which live quail may be exported from the Indian Territory without violating the law. Such a suggestion, he opines, is not in keeping with our well-known position as to the sale of game. We are opposed to traffic in dead game, but we have never gone so far as to advocate stopping the sale of live game for stocking purposes. As to the Indian Territory quail, we believe that the very best use a proportion of them could be put to would be their netting, shipment and liberation to replenish the supplies in districts where quail are scarce. And if this may now be done lawfully, the traffic should not be broken up arbitrarily or by an assumption that the territorial law or the Lacey Act affects the situation, when it actually does not affect it. If there is nothing in the applicable section of the United States Revised Statutes or in the Lacey Act to forbid the exportation of Indian Territory live quail, there can be no justification for interference with it. On the other hand, if the export under pretense of stocking purposes is made a cloak for the shipment of birds to market, the proper course to remedy the situation is to change the law in such a way as to stop the export to market, and to restrict it to export for propagation. It certainly cannot be beyond the ability of Congress to frame a measure which would accomplish this purpose and provide for the shipment of live birds from the Territory under supervision of Government officers charged with the duty. This, we repeat, is the proper remedy to apply. There is no justification in the case of the Indian Territory quail, no more than in the case of the Illinois quail, for the executive branch of the Government to arrogate to itself the law-making power, and to make and enforce regulations according to its notions. Congress and the Legislatures are intrusted with the making of laws. It is for the executive officers to enforce the law as they find it.

Commissioner Titcomb's report in our last issue on the Vermont deer shows that the supply has steadily increased, and gives promise of continued increase in the future under the continuance of an extremely restricted open season. This experience of Vermont is a demonstration of the fact that even in the oldest settled Eastern States we may have a deer stock if only we care enough for it to give it the necessary protection. Mr. Titcomb, it will be noted, does not commit himself to a denial of the statement that in some parts of the State the deer have multiplied to such an extent that they have become a nuisance to the farmer; and it is bruted that the next Legislature will be asked to take some remedial action. In the end doubtless a way will be found to establish the proper balance of interests.

A notable event in journalism was the celebration last Saturday by the *New York Evening Post* of the hundredth anniversary of its establishment on Nov. 16, 1801. The *Evening Post* is, as Mark Twain proclaims of himself, "very old and very wise." Through the century of its existence it has been potent as a force making for progress, moral and intellectual growth, good government and high ideals in private and public life.

We invite a careful reading of Senator Hoar's exposition of the principle underlying Sabbath legislation in this country. It is well to have a clear understanding of this in order that the subject may be discussed intelligently when Sunday shooting and Sunday fishing are involved.

The Sportsman Tourist.

The Boy and the Apple.

A Study.

In a most curious and interesting book entitled "The Child," recently published, the author (W. E. Chamberlain) dwells on the fondness of boys for apples, and deduces from this the fact that apples must have formed a large share in the food of primeval man. However this may be, it is certain that the boy loves the apple. His love, indeed, may be said to amount to a passion, for is he not prepared to run all sorts of risks or dangers—nay, to take his very life in his hand—to gratify it?

The period at which the passion develops varies according to the temperament and physical constitution of the boy, but usually it is between the ages of five and seven, and thereafter it continues to twelve or fourteen. It is a nice question whether the passion would develop if the boy were never to see or taste an apple. My own opinion is that it would—being, in fact, largely hereditary. I can imagine a boy born at the North Pole, say, having vague visions of an orchard and hungering to be at large therein.

It has often been a cause of wonder to some why the boy loves the green apple so much more than the ripe one. The matter is easily explained. The green apple is the first to appear—the first to catch the boy's eye. He promptly lavishes all the desire of his open nature upon it. It is his first love. Later, when the apple is ripe and far more fair to the eye and sweet to the taste, the boy has been surfeited—well, not exactly surfeited, but pretty well satisfied.

I believe it has never been mathematically ascertained how many green apples a boy can eat. Some contend that the number is countless, but of course this is an exaggeration. There is no doubt, however, that the boy's capacity in this respect is very great, and there is certainly no doubt that his desire far exceeds his capacity.

The more or less painful results of green-apple dissipation make practically no impression on the boy's mind. I have seen a boy writhe in agony and howl so that he could be heard all over the neighborhood, in consequence of a dissipation of the kind referred to, and yet the following day I have seen that same boy accept with a smile an apple so green and malevolent looking that it might have been taken for the eye of jealousy. If painful physical experience is so quickly forgotten by the boy it is hardly necessary to say that warnings or admonitions stand no chance at all of being remembered. There is no time employed by a father or mother so likely to be absolutely fruitless (paradoxical, as it may seem), as that in which she beseeches—often with tears—her youthful son to avoid green apples. 'Tis truly love's labor lost. The boy can no more resist the green apple than can the moth the flame.

I pity the boy that does not live in the neighborhood of an orchard, as I also pity him that lives in the neighborhood of too many. The ideal state is to have one or two (preferably one) situated about a mile from the boy's home. Then all the conditions necessary to the gratification of the boy's predatory instinct exist. No sooner has he become cognizant of the orchard than he marks it for his own. No tree—no single apple—in that orchard shall escape him. Thus does his infant mind, swayed by limitless desire, determine. Then with remarkable acumen he takes his bearings. If the orchard is surrounded by a wall (as is sometimes the case), he observes the part most easily scaled; if by an iron railing with spikes he calculates how to get over these without being impaled (and he never gets impaled); if by an ordinary fence he simply chuckles at the ease with which he can force his way through. Then he takes the angle of the house, or of the windows looking upon the orchard, and lays out in imagination a route among the trees in which he shall be most hidden from observation.

Having done this, the boy, in a state of delicious excitement, proceeds to make his raid. It is extremely likely that during this first raid he will have no sooner got foot in the orchard than he will take alarm (even by the very beating of his own heart) and scurry back in all haste. But this failure only whets his appetite, and he returns a second time, determined to do or die. However, he is still a raw recruit, so to speak, and any slight noise, such as the fluttering of a bird, or the jumping of a squirrel, is apt to scare him, but instead of scurrying back as before he now only crouches, throwing his fearful eyes about him. When the noise ceases (if it be no more serious than that indicated), he advances cautiously under the nearest tree, plucks off a few apples within reach, or gathers up a few windfalls, and with these beats a retreat. The third time he makes his attempt he is far more bold, and actually shakes the tree. The noise of the falling apples, if any should fall, gives him a great shock, but he quickly gets over it, fills his pockets to their utmost capacity, likewise his cap, and makes his exit, glowing with a sense of victory.

The boy may now be said to have seen service, following our simile. With each succeeding raid he becomes bolder, until finally he will sit in a tree within full view of the windows and munch an apple. But the contemptuousness of this proceeding breeds trouble for the boy. One day he hears a shout—a most terrifying shout—or he may even hear the report of a shotgun. At this, the apple falls from his grasp—his shining cheeks, which vied with the color of the apple, become pale as death, and he really thinks that his last hour has come. But after that awful shout, or report (for of course it was only intended to scare off the boy) all becomes still. Urged by the instinct of self-preservation the boy drops rather than climbs down from the tree and like an arrow is out of the orchard.

One would think that this adventure ought to put the boy out of conceit with his amusement, but it does nothing of the kind. It only teaches him prudence. He now finds out all about the comings and goings of the owner of the orchard, and bides his time for a raid. As for the women of the household, he does not fear them in the least. 'Tis true he will fly if they disturb him, but he will fly plucking fruit as he goes and laughing scornfully. If, perchance, the owner should be too long with-

out making a trip from home the boy grows desperate and will even brave the shotgun, or what is still more extraordinary, he will get up at dead of night and brave ghosts and hobgoblins to get an apple, for the apple he must have.

Oh, that stolen apple of boyhood! How its taste lingers in the memory! It is recorded of an epicure who was wont to dine on the choicest productions of the cuisine, that having been asked what particular thing he had most relished in his life, he answered: "A green apple."

FRANCIS MOONAN.

Florida Lakes.

FOREST AND STREAM has many friends. Some of them may at present anticipate a visit to Florida to spend this winter in its climate. The peninsula wins more tourists to it every year. The sunny days are irresistible. Down there mockingbirds sing in every grove, and quail call through all the wild glades; wheels plow sand melodies, forests intone drowsily, and lakes wash shore-lines to lazy response. South Florida is only a nest of lakes, all of them round, each its own shade of blue, a magnificent clutch of eggs in which the hatching is but slightly separate. Shoals have in them fish that look to be suspended in air, and blue iris growing in connecting runs welcome approach with a friendly hello. The visitor to this part of the State, if he wish to have a pleasant time, besides providing himself with gun and tackle, should own a light boat, if only a cheap canvas canoe.

Plans for canvas craft are plentiful. FOREST AND STREAM advertises a number of pamphlets on the subject. With such help even a tyro can build a fairly good boat. Make it light for work on small lakes, if portages are to be accomplished, but spread the beam to at least thirty inches for stability. Ten ounce duck is a suitable canvas for cover. We bought a supply directly from the home mill, as the Southern market offered only slazy goods. Nearly every Florida settlement had its sawmill, at which framing could be had for little more than the asking, and paint or other necessary material could be purchased cheaply from any of the local merchants. As there was some difficulty in dressing the lumber with such tools as we had on hand, stout square frames extending from gunwale to gunwale, also six feet in length, served as coaming, this form of cockpit giving great strength to decks. Some of the boats had outriggers and oars, while others were driven with home-made paddles.

The three double-enders full in view of the photograph were covered with canvas. The one to the left was my first attempt at canoe building. When new it was yellow with oiling and nearly transparent. Uncle John, the husband of our laundress, seeing us afloat on the yellow thing, cautioned us against trying the lake on a pine plank. Our first trip is well remembered by both of the crew. A flight of bubbles and ripples discernible through the floor of our boat as they fled sternward impaired our confidence. We went up the home lake, through a run, across Sawmill Lake, down the outlet a short distance, then homeward, a pretty trip surely, but one on which neither of us saw much scenery, because of our close attention to the bubbles passing beneath the canoe. In time this view appeared less dreadful.

Of course our new idea aroused comment of an unfavorable kind. New ideas always do. Our fleet became the object of derision, and in heart-to-heart talks dearly loved friends called our boats ragbags—said they were pretty enough, and fast enough, but so dangerous that we ourselves ought to be looked after, if not everlastingly confined. A pleasing little episode during a stormy day, on which the smallest canoe went to the rescue of a large wooden boat, quieted somewhat popular censure. Defeating the Judge's large sailboat afterward with a small canoe, and driving Judge to his orange grove and flowers for future divertisement, also had a noticeable effect on the general public. The Judge might often be seen up in his yard looking wistfully seaward, but he never came out again, at least while there could be described in the offing the tiniest sort of small sail. We often wondered what he had in mind, if he was pronouncing life sentence on the designer of canvas canoes.

None of us had the slightest reason to be boastful. From the real estate man with his large umbrella to the most adventurous sailor with six feet of lateen, our extremists in area of spread, all would have been scorned by cruisers thought to be slow on other waters. In local parlance, we were "new" beginners, who had but little knowledge of proper rig, had discovered for ourselves the primary principles of navigation, through experiment or disaster. It became clear, even to our intelligence, though, after one or two disconcerting mishaps, that a mast stepped too near the bow caused our ships to catch the wind with heels dangerously, but stepped nearer the stern caused the bow to head toward wind safely. Even our best cruisers, having but minimum of keel, in windward work drifted so far that destination became a matter of conjecture, a pleasing uncertainty, in which the aim was ambitious but the result surprising, repeated ventures an argosy. The size of cockpit on larger boats enabled one to steer by shifting his weight, a desirable quality in stalking duck, also if the skipper wished to sail recumbent, with clouds for his gaze, dreaming of the yesterdays and plotting gay tomorrows.

Though we exploited more distant water, some that had never been tried with hook and line, the fishing in our home lake was fair, and the best of it was readily discovered by cruising. I do not remember a more delightful pastime than that we had while urging slowly along, our casts barely reaching the grass edge, or while at anchor in a productive cove and taking our bass fighters from either side. Minnows were caught by using a mixture of dough and cotton, or with bits of sawyer grubs found under the bark of deadened pine timber, on hooks smaller than I have ever seen except at the local stores. The best fishing, both bass and speckled perch, began with February.

The duck shooting to be had through the winter, though it seldom results in over-filled gamebags, will be found a test of marksmanship, as the sport begins when the flocks come from the flatwoods to the lakes after sunset, or at a time that affords only a half-light. Their speed is terrific, most of the flights being of the bufflehead or *Clangula* variety, nearly the swiftest flyer known

to hunters. Between lakes the best stands are in scrub from which a long view ahead enables the watcher to see approaching game. If the hunting party has been too eager in arriving at the place selected, there will be a long period of waiting for sunset, perhaps of sitting around on stumps and smoking, often until the after-glow has mounted overhead, when some one will exclaim "mark forward," or to other point in view, as signal for every one to be at attention. Then swiftly coming specks away off yonder will grow to size, become a streak above, receive a fusillade, and pass on, too frequently with none of their number missing. There was a good stand on the far shore of our home lake. Sailing over there with the sunset breeze, we returned with the first movement of night air, if very dark our course laid by town lights, the party well satisfied if any of us had secured even a brace of game, though better bags were made. At times we whiled away the afternoon with trying for bass in a brushy run, or carried a canoe overland to fish in the second lake; afterward to shoot at ducks from our unstable position.

But just idle drifting, especially on hot days, the canoe a shuttle, passed gently here and there, breeze whimsical, lazy fish rising at intervals, sound and view everywhere reduced to soothing perfection, course always heading for shores of mockingbird song, this boating is ideal enough to suit the most exacting fancy. Sunshine from above kindles sunshine in the heart. To avoid over-storage one has the shore trees, great mountains of lace, from whose shade there is such a pretty outlook through moss streamers, mirage often giving to all within sight a pleasing unreality. During the intense heat many bass, perch, slimmers, and soft-turtles, besides rarer creatures, come for shelter to the grass edge and the dark shoals, where gliding the canoe reveals all of them to sight, and on retired lakes huge alligators exhibit for contemplation. The mind of human under these conditions, affected by heat and surroundings, knows not actuality from dream, nor does it care in the least for its confusion, or for its drifting subject only to the whim of fancy through regions of languor, through a voluptuous placidity, along sleep route in the domain of lazy-hazy or wake-me-not.

Toward evening, our own lake became more animated. Boating parties appeared. Shore teams plunged into the water of fords. Fishermen took position. One family waded neck deep into the cove and cast floating rods. Those afternoons were delightful. Bob White declared himself from every coast. Sirens on piers sang sentimental ditty to which mariners dared not pay heed. Cattlemen in the surrounding hills yodled unctiously as they approached, passed along our coast, then lost themselves in extreme distance. Twilight, the voice of chuck-will, and bright stars at last became signal for crews to hurry home, our boats roaring.

At those times, however, when wind sweeps the moss along shore into lashing throngs, the lake into a field of drifting plumes, one heads his canoe over white tumult, tossed high, just hitting unusual crests, the spray to strike his face a delicious bath. Crew bids good-by to land, cradles a short while amid seas, rushes toward the far coast, then comes about to repeat until a point of shore well to windward has been attained, when a grand race with the waves may be taken, the boat on its headlong course running on even keel without plunge. On stormy nights, with place of sail a conjecture, with uproar of water like outcry from a great mob, direction a matter of uncertainty and no care, one sails at random, with his soul full of supernal bliss, a joy that grows through close sympathy into a near comradeship with turbulent nature; and when he has landed one hears the lake plead with him to come back—come back and play forever, the whole being an experience to renew in dreams.

H. R. STERGER.

In the Ranger Service.

BY ROWLAND E. ROBINSON.

XL—Coos Meadows.

Next morning I shot a sheldrake in the stream, that gave us a full meal, and soon after setting forth we came upon the trail of a large party, and at night reached the camp of a number of our people, made up of small parties who had chanced to come together. They had all suffered such hardship as we had endured, but were now in high hopes of soon reaching the Coos. I was rejoiced to find Borden and Porter, whom I had given up for lost, among them, very weak and miserable though they were, for I doubted not they, as many another, had met such a fate as poor Murphy.

It was not a little to us that we were again under the lead of the commander, in whom we had such faith. He encouraged and strengthened every one by his own example of cheerfulness and fortitude, and, though he fully shared all our hardships and privations, he was still the strongest man among us. Before next noon we were gladdened by the sight of the open light of day and the gleam of the broad river shining between great trunks of pine, almost to their roots, and a glad sight to see the thin smoke of a camp-fire drifting up among the branches, for it assured us that our deliverance was at hand. All order of march was broken, and every one struggled forward in disregard of commands, the stronger thrusting aside the weaker in their eagerness to be first succored. Supporting my weaker charge, we came almost last to the river bank, and there beheld such a scene of rage and despair as I shall never forget. Some were cursing madly, some had thrown themselves prone upon the ground, some stood mute, others waded out into the river to gaze vainly past the nearest bend down the empty reaches. The relief, after brief waiting, had departed so lately that their fire was yet blazing; odors of cooking still lingered in the air, and cast away fragments of bountiful meals were strewn about or charred in the embers, in cruel mockery of starving men. The fragments were snatched eagerly out of the ashes and hurriedly eaten. Guns were fired to recall the men who had been sent for our relief, but only served to hasten their retreat, they believing them to be fired by the enemy, as we afterward learned. I never saw our brave commander so nearly disheartened, at one moment dumb with dejection, at the next breaking forth in fearful imprecations.

"Miserable cowards! Heartless scoundrels! Recreant to the duties of soldiers and humanity!"

But he soon recovered command of himself and of us enough to parade our starved crew in forlorn ranks and make us listen to him.

"Men," he said, in a clear, steady voice, that was in itself a strength to us, "I am going down the river to bring you help. If I do not overtake the relief party, I shall go to Number Four and get help there, and if I live I will bring it or send it to you in ten days. Such brave men can hold out as long as that. Obey your officers' orders, be helpful to each other; I will not fail you if God spares my life."

He instructed one of his officers in the Indian method of preparing for food a certain lily root that abounded here on the banks, for he was as wise as any Indian in every manner of woodcraft. He chose to accompany him on his dangerous voyage Captain Ogden and the Indian boy captured at St. Francis, whose name was Dodosun, and me, also, to my surprise and great satisfaction. It was a mark of the commander's trust that any might be proud of.

The first thing in the order of going was to provide a raft. This was done with all speed by many willing hands, in spite of waning strength and gnawing hunger. I parted very tenderly with Mercy, and sadly enough, too, though I knew she could not be left in better hands, for Angeliqne could find the lily roots when none of our company might, and was so fond of her mistress that she would spare no pains to provide for her. When we had said our farewells, with some constraint, though she did show extraordinary concern for my safety, she still detained me as if burdened with some weighty matter, which she would fain impart, yet hesitated through womanly modesty. After a little waiting, without further speech, I turned and went my way.

The raft was no sooner built than we set forth on our voyage, all the company gathering on the shore to bid us Godspeed. It was strange to see the man whom I had heard coolly ordering the death of a wounded prisoner so tenderly moved at leaving those who stayed at Coos.

XII.—The Voyage to Number Four.

Guiding and urging our clumsy craft with pole and paddle, we sped swiftly with the current, the unchanging shores seeming to glide on either hand in an endless, grim procession; now in silence, now singing the solemn psalm of the wind, beating time thereto with stately bowing of lofty heads and gesture of branches.

After a time the rush of the river from blending with this song of the wind arose above it to a sullen roar, ever growing louder, so that we knew we were coming to a fall, and so made for the right shore that we might disembark and in some way contrive to let our raft down easily. This we attempted to do with a long rope of withes, but to our grief and consternation it broke when the raft was in the midst of the cataract, where it was dashed to pieces and the fragments scattered beyond recovery. We were almost in despair, and knew not what to do, for we were too weak to chop logs in length for a new raft.

In this strait the ingenuity of the Indian boy came to our aid. He explained by signs and his few English words that we might burn off the logs at proper length.

The sun being not yet set, Major Rogers and Dodosun at once began burning off logs of dry driftwood, and I, by the Major's orders, went into the woods to hunt squirrels, which were the only game to be found, and they very scarce, just because they were wanted, so it seemed. When I was guided to one by his snickering, or his rasping of a hemlock cone, and discovered him sprawled head downward on a tree trunk, jerking out his scoffs at me, or with arched back and curved tail, chipping out the cone seeds, I was more nervous over my aim than ever I was when drawing a bead on a fat buck, or on an enemy where my life depended on the chance of a hit or a misfire. I must hit only the head to save all the precious meat, but I must hit at all events. So, in great trepidation, I did somehow have the luck to kill three little red squirrels, which made us a good supper. My portion nearly choked me for thinking of my poor mercy, and somewhat of the others, with nothing better than root broth to appease their hunger. But I was nursing my remaining strength for their sakes, and so picked every slender bone clean, and crunched it for its thread of marrow.

Next morning while the Major, the Captain and I bound the logs together with blue beech withes, Dodosun stole away with bow and blunt arrows. When we were ready to embark, as we were fearing he had deserted us, back he came as quiet as a shadow, with five squirrels in his belt—"mequasese," he called them. It took the conceit out of me—a grown-up Ranger with a rifle. It was our salvation more than once that our commander had brought this brown imp with us.

That day we voyaged prosperously, coming again to falls, over which we had the good fortune to ease our raft in safety, and again drifted along on a smooth current. Dodosun discovered some mussels on a sandy beach, whereof we laid in good store that served to fill our stomachs.

Fortune continued to favor us on our hazardous journey, though more than once we came perilously near being wrecked on hidden rocks. On the third morning we descried a smoke rising among the trees at some distance before us on the right bank, and our hearts beat fast with hope that we were about to overtake our unfaithful relief party, or at least some sort of help. But when we came to it, it was but a dismal, smoldering camp-fire, theirs of last night, no doubt. We fired our guns, which we afterward learned were heard by the party, but only served, as in the first instance, to hasten their speed, for they thought it the enemy in pursuit. Mocking our starvation were the fragments of their full feeding, pork-rinds and crusts of bread which we searched or more eagerly than if they had been gold, and devoured ravenously to the last burned morsel raked from the ashes.

That day our young hunter shot a muskrat, which gave us the fullest meal of our journey, and was as sweet meat as ever I ate. Dodosun had the best of us, for he added the entrails, which he roasted and ate with great relish. He was not over-nice in the cleaning, and we did not begrudge him the extra ration.

We met with no further adventure, and on the after-

noon of the fifth day arrived at Number Four. Many curious and anxious eyes watched us as our strange craft and crew hove in sight of the landing. Gaunt with meagre fare, tattered and torn with rough travel, and besmirched with the smut of our burned logs, we created much astonishment and stir among the good people.

A Walk Down South.—V.

WATERVILLE lies at the junction of Little Pine Creek with Big Pine Creek. It is tucked down in a cradle of high hills. On the railroad sidings are cars loaded with taubark. Somebody had an idea threabouts one time that a certain stye of house was the proper kind to dwell in. No one else had any ideas on that subject, apparently, so the buildings look alike in the main. They belong neither to the farm country nor to the mountains. No where, save in a level village, could such an array of "cottages" look in place. Not once have I seen a building that was beautiful in a beautiful country. With enough rocks and stone slabs in a single hillside to rebuild the castles of the world, they draw their hemlock and knotty spruce, cart white lead and yellow ochre, stick it on the roadside, put the barn a story higher and the pig pen above all, with the well at the bottom of the hill, and then look to see if the porch timbers cannot be sawed in two and thus save half.

Some few show appreciation of the bounties of nature. The jobber in timber left hundreds of miles of second growth oak behind him.

"When I'm done with it," said Marshall Carson, of a great virgin hemlock hillside, "there won't be nothing left but red sandstone and fire weed."

When Carson is "done" next year, from Liberty to Waterville the valley of the Little Pine will revert to the original sandstone and the lovely fireweed. Here and there nature is remedying the ravages of steel and fire. Threads of silver birch are on many of the steepest inclines, and where destruction was wrought a score of years ago hemlock and pine spread dark green cones at intervals high above the level of the road at the bottom of the valley.

I asked at English Center why land owners did not plant hemlock seeds on their property.

"Do you know," was the reply, with a quizzical look, "I don't believe I ever saw a hemlock seed."

"I have," said the insurance agent, "it's them things red squirrels eat."

"Oh-h!"

The effect of a thousand bushels of hemlock seed judiciously planted in Lycoming and Clinton counties would open the eyes of property holders who are now selling their land for a state "forest" reserve at \$2.00 an acre, and are proud of their bargain. Not even the thrifty tannery owners have looked so far ahead. They are now bidding to see which can get the most of what is left.

At Waterville I lost my hold on the lay of the land. Hitherto my route has seemed to shape itself. The map showed nothing. There were little round dots with meaningless names scattered all over it. It said nothing of mountains into whose shadows one walked at mid-day as if under a cloud of snow. Of roads that followed "runs" or gullies for miles up and up to pikes on ridge tops, or down to rivers; of historic names there was no indication. I "guessed" that I would go to Caldwell from Waterville. It had never been heard of there, so far as I could learn, certainly no road led to it from there.

M. T. Renn and F. F. Stryker, of Williamsport, Pa., were at the hotel. They "hefted" my pack, and said I was making an old man of myself carrying it. Why didn't I go down to Jersey Shore and get a skiff in which to float down the Susquehanna River? It was a tempting suggestion. It meant a turn aside from my direct route, but I cared little for that. A heart-breaking rise was before me on the compass route to the southwest. I must turn to the left or to the right; and the left meant down grade and a boat ride clear to the Chesapeake Bay.

It was about four o'clock in the afternoon when I sat down to write some letters in the Waterville hotel office. Guns stood in two corners, and a bunch of ten or twelve pheasants hung from a rail near one of the guns. Renn and Stryker had killed them on the steep side hills over dogs, then whining behind the stoves, and drawing in their feet as if to get out of the way of the stone bruises and briars in the pads. But let any one touch a gun and the ears and eyes lifted eagerly. Here were brave hearts.

In the morning I took all the developing material apparatus from my pack, boxed it up and sent it home. This six or eight pounds was enough to turn the tide. I got into my harness and went to the right; three-quarters of a mile up Pine Creek I crossed the Iron Bridge and a quarter of a mile further turned west up a run. One may know how steep the road was by the fact that I heard the running water nearly all the way.

Ordinarily a steep grade is the most discomforting thing for a walker on a long journey to face, but the time comes when it is a pleasure to buck over, and October 26 was one of the days when it was a pleasure for me to sweat'er out. I stopped twice in four miles to talk, and then I came to an old portable steam sawmill, which is waiting for logs to grow again somewhere near. The mill hands had two shanties there, both of which have had some boards torn off to serve some repairing purpose somewhere else. On one of these a long while ago some one nailed the end of a two-inch plank and then tacked heavy paper on it. This was inscribed:

HOME
of the
FRIENDLESS.

I laughed at the way the thing gibed with my feelings that morning, and while my grin died away a wagon came along. Together the driver and I drank some of the sweet water that came out of the hillside into a bark spout, and then I rode for two miles further up and up the hill, till we came to the pike.

The pike is the old state road from Jersey Shore to Coudersport. Seventy or more years ago it was laid out through a howling pine wilderness. The pine has long since followed the pike to the mills, but the wilder-

ness remains in part. Where the wagon crossed the pike were two women. They were splitting wood with double-edged axes, and swung their blows so that their arms looked like those of men.

I turned up the pike and came to Harveyville—one of the villages to be recognized by the church. Otherwise I might have passed by unawares of my proximity to a name. The store was in a farm-house parlor. Bags of shot and an iron keg of powder were on the counter. I couldn't get a candle there for my dark-room lamp, which showed that it was not candle-wild in that region.

At the house where the well seemed furthest from contaminating influences I got some water in my five-pint graniteware pail, and beside a combination fence of stone and up-turned pine roots, built a fire. It was after three o'clock. I had worked and traveled for eight hours in an effort to get up an appetite, and it was come at last.

With oak leaves, hemlock twigs and chestnut limbs I builded a fire. While the flames gathered their strength I stirred my pancake batter. Sitting there I was spied by one of those saddening unfortunates whose minds are less well formed than their crippled bodies. He watched me, wide-eyed and silent. He longed to use my rifle, and almost saw that I would not harm him. Then Henry Cryder came down the pike with his hands in his pockets. His clear boy eyes took in at a glance what was in the situation. It was nearly night, and he knew of a barn where I could sleep.

He turned and walked back with me, sizing me up. A chipmunk was on a fence rail beside the road, a chance to shoot my little rifle. Twice he fired and come "blamed clost to it," and then I fired twice, the last time with fatal effect. I dressed the chipmunk, and the way my knife cut brought forth the information that his dad's cut just like that.

It was nearly dusk when we reached Cryder's home. "Bill" Cryder's it was, Henry being the oldest son. I sat down on the bench-like seats under the door shelter. The house was unpainted and small, but it, the table, and the best the place afforded were thrown open to me. Bill was there to welcome me, but there was a pheasant down back of the house most generally at sunset. He took a double-barreled muzzleloader from the wall, a powder-horn and leather shot pouch from the shelves, and a box of caps from a hold-all. He thought he might get a shot if he had good luck. But he did not—then.

In the morning Henry took the big gun down. We must go hunting, he said. So we did. Henry is just a developing hunter. He is in the chipmunk, the little bird, the anything-for-a-mark stage. At two rods he blowed junco to smithereens, and we couldn't find it in the oak leaves on the ground. Another was shot to try 'tother barrel. The healthy instinct to practice was upon him. His father, a hunter, his mother a good shot, Henry is a "likely" woods lad.

In spite of leaves and brush we spied a pheasant walking on a stone fence three rods away. He fired, but it was a pretty big bird, and besides there was a rock to catch a lot of the shot intended for the bird's body. It flew away, who can tell how badly injured? Henry nor his father ever waste a load on flying birds.

Soon I spied a black animal fifteen rods away, running and hopping. As much like a marten as anything else to me. It was the first black squirrel I ever saw. It treed and laid along an oak limb, where the boy's eye spied its back. He fired and it came down the trunk with tail straight out behind, its eyes looking very large for so small a creature, I thought. My bullet went wild. On the tree trunk, and on the leaves were blood and hair, but the animal escaped.

Then I saw a "ncw" bird in a distant tree. At 75 yards I brought it down—a stepped-off 75 yards—and in my hands it was still a stranger. We guessed that it was a dove, or something; and our guess was about the same as Bill Cryder's. It certainly was a dove or something, very pretty and very eatable, which travels in flocks. Wild pigeons are seen in this country occasionally, it is said, but this was not one of them.

We had no lunch, but hunted on with enthusiasm in spite of the chicken dinner to be had at home on the usual hour. It was nearly dark when at last we came back, munching some apples. We had killed enough for a cat's breakfast, but that was all; yet all had a taste and sighed for more.

On the next day we tried again, playing a waiting game, but saw only red squirrels as wild as gray ones and a pheasant beside the pike. This bird I plumped through the center of the body, in spite of which it flew to parts unknown. The pheasants all along the pike seemed tame, and would make great sport over a good dog I am sure. Mondays, Thursdays and Fridays the stage comes up from Lockhaven, and carries the mail to Harveyville, up through the Black Forest to the Pump Station. The pike, so far as I saw it, seemed to invite the wheelman gunner.

Everyone on the pike seems to know how to use a gun. Deer and bears are heard about from every lip. On the tracking snow bears are hunted to their dens. On Sunday night, returning from meeting, one of the boys told of seeing a bear wallow that day in the mud of a swamp east of the pike, a "regular hog waller, all clawed and dragged." Cryder and two neighbors once killed a bear whose meat filled a pork barrel full. It was a sheep killer, with a record of forty or eighty dead in a night. The bear squeezed under a rock, where it was shot, then it took hours to dig it out.

One time a catamount (lynx?) stole Cryder's finest chicken in broad daylight. It got into a trap and for two days eluded pursuers. At last Cryder broke down into a brush heap and was surprised to land on the cat. When he came back after his first jump or two, Cryder shot the beast dead.

Cryder hunts partridges in their feeding grounds by standing still at dawn or dusk. The noise of the birds' walking draws his gaze aright, and then he kills, usually. He got one in this way on Monday evening.

On Tuesday I started on. For six miles my path was along the pike on the broad back of the ridge, one slope of which is in Lycoming county the other in Clinton. A house or two, vacant, and two or three inhabited, with a school house, the iron pipe line of an oil

company and its telephone line comprised the evidence of civilization beside the road. In the sand were many cat tracks, for the makers of which I watched in vain. I longed for a couple of light-footed, large-jawed dogs with the proper dog idea of cats well developed. In those barrens cat hunting must be the ideal sport.

At Shives (the old Borden place) I got a drink of milk and some cookies. In return I tackled a sap-heavy, wind-toughed section of oak bottom with a dull buck saw—tackled it successfully; but it seemed too wasteful to burn wood with such a grain as that log had. Nevertheless I reduced it to proper stove wood, and then took the down grade to Hyner Run. It was five miles or more to the next house, but on a brook three miles down I found a deserted hemlock cutters' camp. I built a fire there, and made an extra large mess of pan cakes. I ate them all.

I fixed up a table and wrote on it for a couple of hours, and then, as it was a valley where the day dies slowly, went to bed in the straw-filled bunk upstairs. At dark a buggy passed by—it was not so wild after all! But I went to sleep listening to the cries of foxes on the hills, and straining my ears to catch the broad-chested yeowl of a tawny dweller in the scrub oak thickets.

A thick fog came over the moonlighted landscape, obscuring the view, and chilling the air, so that twice I awakened and drew a coverlid of straw over me to drive out the chill.

I ate breakfast—pancakes—at 10 o'clock a. m., basking in the sunlight meantime. My offer of pancakes to a driver and two pretty girls was rejected. They "missed it," for the cakes were good, though my month-old, fire-melted, sun-thawed, frost-bitten tinned butter is getting pretty strong. By the way, sugar is not so good in pancakes for "browning" as molasses. A spoonful of rich molasses is good eating, too, on pancakes. A four-ounce bottle will last weeks.

I intended to stay two nights at the lumber camp, but the day lured me on. I aired my tent and blanket, packed all, and, after a little writing, with my rifle handy for bluejays, I started on. I shot two bluejays, and too soon was back by the railroad at Hyner. Three miles away was North Bend, and I reached there late in the afternoon. I did not know which way to go from there, so I went to the most reliable atlas to be found—the loungers in a hotel barroom.

There I heard of a road 26 miles long without a house upon it, only some old hunters' camps, likely to be occupied on the first of November, when deer hunting begins. That road I propose to follow now.

The pack has been pretty heavy and on the thirty-first a doctor, O. R. Davis, relieved a distressed mind by saying it had not broken me down in the small of my back, a section which a pack-carrier does well to observe.

RAYMOND S. SPEARS.

NORTH BEND, Pa., Oct. 31.

Natural History.

American Ornithologists' Union.

THE nineteenth congress of the American Ornithologists' Union convened in New York city, Nov. 11, and continued until Thursday, the 14th.

Monday was devoted to a meeting of the Council at Mr. Dutcher's, and to the evening or business meeting of the Fellows, which was held at the American Museum of Natural History. The public meetings, commencing Tuesday, Nov. 12, were also held at the Museum.

The Fellows present were: Drs. J. A. Allen, Jonathan Dwight, Jr., and R. W. Shufeldt, Messrs. Frank M. Chapman and Wm. Dutcher, of New York city; Drs. C. Hart Merriam, A. K. Fisher and T. S. Palmer, Messrs. E. W. Nelson and Wm. Palmer, of Washington, D. C.; Chas. F. Batchelder and Wm. Brewster, of Cambridge; Dr. A. P. Chadbourne, of Boston; Prof. Witmer Stone, of Philadelphia; Dr. E. A. Mearns, U. S. A., of Newport, R. I.; Dr. Louis B. Bishop, of New Haven; Ruthven Deane, of Chicago, and John H. Sage, of Portland, Conn.

The members and associates present during the sessions were: Mrs. Olive Thorne Miller, Miss Mary Mann Miller, John Irving, Miss Eliza S. Blunt, Geo. K. Cherrie, J. Alden Loring, Louis Agassiz Fuertes, Miss Lucy F. Meyers, Philip J. McCook, Mrs. John R. Reynolds, C. Wm. Beebe, C. W. Crandall, H. C. A. Lentlof, C. C. Young and W. A. Johnson, of New York; Mrs. Elizabeth B. Davenport, of Vermont; Walter K. Fisher, of California; Dr. Wm. C. Rives, W. H. Osgood and H. C. Oberholser, of Washington, D. C.; Mrs. Julia Stockton Robins, W. E. Clyde Todd, Wm. L. Bailey, Geo. Spencer Morris, Samuel Wright, C. J. Pennock, Dr. W. E. Hughes, of Pennsylvania; Walter Deane, Mrs. Anna B. Phelps and W. R. Davis, of Massachusetts; Rev. H. K. Job, Dr. Edward F. Bigelow, Judge John N. Clark, W. G. Van Name and James H. Hill, of Connecticut.

Dr. C. Hart Merriam was re-elected President; C. B. Cory and C. F. Batchelder, Vice-Presidents; John H. Sage, Secretary; William Dutcher, Treasurer; Frank M. Chapman, Ruthven Deane, Jonathan Dwight, Jr., A. K. Fisher, E. W. Nelson, Thos. S. Roberts and Witmer Stone, members of the Council.

Outram Bangs, of Boston; Joseph Grinnell, of Palo Alto, Cal.; Dr. T. S. Palmer and Prof. F. E. Beal, of Washington, D. C., and Dr. Louis B. Bishop, of New Haven, Conn., were elected Fellows. Montague Chamberlain, of Boston, was elected to corresponding membership. Fifty-five associates were elected to the new class, known as members, and eighty-three new associates were elected.

By the adoption of certain amendments to the By-Laws, five classes of members are now recognized by the Union, and are known as Fellows, Honorary Fellows, Corresponding Fellows, Members and Associates.

A technical paper of great importance was Dr. J. A. Allen's "The Present Outlook for Stability in Nomenclature." He dwelt upon the American method and its gradual acceptance by foreign ornithologists as well as by workers in other branches of science.

Mr. Deane spoke on "Auduboniana," and showed books and other relics from his own library which were once

the property of John James Audubon. Some original paintings by the artist-naturalist, belonging to the American Museum, were also exhibited.

From the report of the Committee on Protection of North American Birds, we gather that satisfactory results had been obtained the past year.

Mr. Dutcher spoke of the great good obtained for protection, made possible by the Thayer Fund—money obtained through the efforts of Mr. Abbott H. Thayer. Dr. T. S. Palmer and Mr. Dutcher had appeared before legislative committees in many States and new and bet-

YELLOWSTONE PARK ANTELOPE.

ter protective laws had been passed. Mr. Chapman referred to the abundance of bird life on Gardiner's Island, N. Y.—the result of rigid protection.

Rev. H. K. Job showed some remarkable lantern slides from photographs of birds taken in North Dakota. Mr. Job spent several weeks in obtaining the pictures. Ingenious expedients had to be resorted to to secure good results.

Mr. E. W. Nelson described a collecting trip which he took through portions of Yucatan. He discovered in that country, occupied until recently by hostile Indian tribes, more than one hundred birds new to science.

Prof. W. W. Cooke traced the routes of bird migration across the Gulf of Mexico, bringing out many new and interesting facts.

On the afternoon of the 14th a joint meeting of the Union and the Audubon Societies of the United States was held in the large lecture hall of the American Museum.

The New York Zoological Society invited the mem-

YELLOWSTONE PARK ANTELOPE.

bers of the Union to visit its park, and many availed themselves of the privilege on Friday, the 15th. Director Hornaday was on hand to conduct the party through the grounds.

The next annual meeting will be in Washington, D. C., commencing Nov. 17, 1902.

Following is a list of the papers read at the sessions:

- The Present Outlook for Stability in Nomenclature. J. A. Allen.
- The Plumages of the American Goldfinch (*Spinus tristis*). Jonathan Dwight, Jr.
- Routes of Bird Migration across the Gulf of Mexico. W. W. Cooke.
- On Methods in Museum Bird Exhibits. Frank M. Chapman.
- Ornithological Notes from Northern New Hampshire. John N. Clark.
- Some Impressions of Texas Birds. Louis Agassiz Fuertes and H. C. Oberholser.
- The White-winged Crossbill in Captivity. James H. Hill.
- The American and European Herring Gulls. J. A. Allen.
- Auduboniana. Ruthven Deane.
- The Moults and Plumages of the North American Ducks (*Anatida*). Jonathan Dwight, Jr.
- A Naturalist in Yucatan. Illustrated by lantern slides. E. W. Nelson.
- Photography in North Dakota Bird Colonies, etc. Illustrated by lantern slides. Herbert K. Job.
- A Reconnaissance in Manitoba and the Northwest. Illustrated by lantern slides. Frank M. Chapman.
- Are Hummingbirds Cypseloid or Caprimulgoid? Hubert Lyman Clark.
- List of Birds of Wequetonsing, Mich. Otto Widmann.
- Notes on the Ornithological Observations of Peter Kalm. Spencer Trotter.

Report of the Committee of the Protection of North American Birds. Witmer Stone.

Results Obtained Under the Thayer Fund. William Dutcher. National Bird Protection; Its Opportunities and Limitations. T. S. Palmer.

Gulls of the Maine Coast, and Miscellaneous Notes. Illustrated by lantern slides. Wm. Dutcher and Wm. L. Baily.

Some Results of Bird Protection. Illustrated by lantern slides. Frank M. Chapman.

Park Animals for Washington.

GARDINER, Park Co., Mont., Nov. 4.—*Editor Forest and Stream:* I spent a day or two with Captain Pitcher at Fort Yellowstone. I was there to see about the animals for the National Zoological Park, as they are to be shipped soon. The antelope and young mule deer are very tame and interesting little pets. Everyone became very fond of the antelope especially. All the people at the post regret the fact that they are going. "Billy," one of the antelope, will watch people playing lawn tennis for hours, appearing to wish to join in the sport. The young deer and antelope have great times playing together, running races and dodging each other. When anyone enters the inclosure they gather around for something to eat. In the two pictures with this they had eaten all the oats and they were enjoying a feast of wild rose leaves. These they are very fond of. Capt. Pitcher gives me the pictures for FOREST AND STREAM.

I see bands of over two hundred antelope nowadays. The last snow sent them down off the high country they use in summer, Specimen Ridge and the country between Hell Roaring Creek and Slough.

In this part of Montana we are in want of a game warden. The coal miners, coke burners and others from around the camps below here do not understand the game laws of the State, it appears, or are unable to read them or any English print; for the other day two men came up from about Horr and killed two antelope, which are protected for the next few years by law, with no open season at any time. Measures are being taken to get after these people with officers from Bozeman or Helena.

E. HOFER.

Snakes as Climbers and Swallowers.

Editor Forest and Stream:

If our friend George Kennedy has any doubts about snakes being expert climbers he can easily satisfy himself by experimenting with a real live snake of almost any kind. I am convinced that blacksnakes can do wonderful stunts in climbing moderately rough surfaces. A tame six-footer which I had last year climbed to a windowsill and then up the casing and over the top of the sash. He took advantage of the groove in which the inner sash and cord runs, but did not twist his body around the cord. After that I repeatedly made him climb up the bark of a soft maple eighteen inches in diameter. He did not attempt to encircle the tree, but made slow progress upward by careful undulating, using his sharp tail in crevices and apparently getting a grip upon the bark with his belly plates, which he seemed to have the power of pushing out at an angle from his body. At one time the snake was almost horizontal, clinging to the tree with his neck and head raised from the bark. On several occasions he slipped and fell, but quickly tried to climb again when released from the hand at a height of four or five feet.

HARRIMAC.

NEWARK, N. J.

BUFFALO, N. Y., Nov. 10.—*Editor Forest and Stream:* Mr. J. E. Loudon in last week's FOREST AND STREAM writes about snakes swallowing their young, and relates a case he saw of seventeen young ones entering the old one's mouth. I can go him nineteen better. My brother and I when boys one day had landed on the river bank to catch some small frogs for bait, when but a few feet from the boat we saw two large black water snakes. We started to kill them, when, to our surprise, we saw the ground alive with young snakes about four inches long, which were crawling into the mouth of the smaller of the large snakes as fast as they could crowd in. After they had all entered we killed the two large ones, and then counted thirty-six small ones that had entered the old one's mouth.

Your clipping from the Philadelphia Record this week in regard to bullfrogs eating birds, reminds me of another time while trolling we saw a bullfrog grab a spotted sandpiper, and by the time we got there had swallowed it all but one wing, which was crosswise in his mouth. He tried to get under the water, but was unable to do so, and we easily caught him. I have been attracted by the cries of a frog being swallowed by a snake that had too much of a mouthful, but never knew of another instance of a frog swallowing birds until I read of it in this week's FOREST AND STREAM.

W. P. DAVISON.

Albino Chipmunk.

LOCKPORT, N. Y., Nov. 15.—*Editor Forest and Stream:* I have just read in this week's issue of FOREST AND STREAM of the three albino red squirrels from Madison, N. J., which reminds me that I failed to report to you of an albino chipmunk brought to me a few weeks since by Mr. B. C. Covert, of this city. The specimen was pure white. I sent it to a taxidermist to be mounted, who reported that it had been dead too long. Mr. Covert said that he thought it was a weasel when he saw it. I hardly think he would have found a white weasel in October. Mr. Covert is the same gentleman who reported to the FOREST AND STREAM the good joke on himself of trying to shoot a deer while he had a live porcupine hanging on his gun over his shoulder. Mr. Covert certainly had plenty of time to find out that the deer was not a man while he was trying to drop that porcupine, which during the excitement had slipped down against the sweater on his back; and the deer was not waiting to see the finish of the hot time Mr. Covert was having. Mr. Covert knows a porcupine from an albino chipmunk after he gets them in hand.

J. L. DAVISON.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Hunting Caribou in Newfoundland.

ON Oct. 12th, C. W. W. and the writer left Boston on board the steamship Yarmouth bound for Newfoundland. We arrived in Halifax, N. S., the next night and left there the following morning for Hawkesbury, C. B., where we arrived in due time; there we spent nearly twenty-four hours waiting for the provincial express, which finally arrived, late, and we were whirled through to North Sidney, C. B., at the rate of fifteen miles an hour. At North Sidney we went aboard the steamship Bruce, which is a beauty, but the crankiest craft I ever saw; at any rate, I soon lost track of time, and forgot where I was going. We arrived at Port-aux-Basques, Newfoundland, next morning, much the worse for wear, but a day's ride on the railroad sort of revived us, so that when we arrived at Deer Lake station and found the one who usually takes charge of things had gone away on a vacation, and no one there to meet us, we did not drop dead, but took possession of the only house in sight and found it contained one full-sized bed. This we utilized to good advantage. When I awoke, it was to see my friend pounding the wall with his shoe. On close examination I found many red spots. He said I looked pale, but I think he was mistaken. Next morning I discovered, on a stick near the track, a telegram I had sent from Hawkesbury two days before. I asked my friend how it got there; he replied, "Wireless telegraphy."

We then decided to separate. He said I could walk to our guide's house, about four miles through the woods, and send a boat over after him. I went, arrived there about noon, and enjoyed a good chicken dinner. After a while I said to our guide, "There is another fellow over across the lake, who must be getting hungry, as he has had nothing to eat since last night; perhaps you had better go after him before dark."

I retired early, so did not see much of my friend until morning. A good night's rest had put him in good humor again, and no references were made to happenings of the day before. We soon started for camp, our guides and cook having everything in readiness for the trip up the Humber River to the hunting ground, twelve miles distant. It rained most of the day, but we didn't mind this as we were well protected by oil skins.

Much is to be said in favor of the beautiful scenery along the Humber River, where it empties into the Gulf of St. Lawrence, at "Bay-of-Islands," and extending to its source above Adie's Pond. It is the Hudson of Newfoundland.

We arrived at camp in the afternoon, without mishap, although it is a wonder to my mind how the guide could pole a canoe up some of the rapids through which we passed, but this was apparently accomplished with the greatest of ease, by an expert hand. The only game sighted going up the river was a seal and some ducks. The former we shot at, but missed. We were informed that many seal inhabit these waters during the spring and summer months. They live on salmon, which are very abundant in the Humber River. Next day it snowed and blew so, it was almost unsafe to remain in the woods, so we moved on up the river, to another and better camp, where we spent seven days.

The shooting is done on the barrens or marshes, where caribou cross during their migration. These boggy places are generally covered with a kind of white moss, on which the deer feed during the late summer and fall months. Caribou usually travel single file, headed by the old doe of the herd, and the old stag brings up the rear. It is a fine sight to see them traveling across a barren on a brisk walk or tireless trot, their broad, flat feet clattering as they go.

The first caribou were sighted on the day of our arrival. There were nine, quietly grazing, almost in sight of camp. We were very anxious, of course, to kill one for meat, but we scored a clean miss, although several shots were fired. We had been told that caribou could run, but it was a revelation to us to see how quickly those white balls of hair disappeared, although we could see them for half a mile. We were told by a conductor on the Newfoundland railroad that a herd came up to the train, ran past and crossed the track ahead of the engine when the train was going at the rate of twenty miles an hour. This seemed a big story at the time, but we are ready to believe it now. Next day my friend was ill and did not leave camp; so I went out alone and secured a good head before dinner. The following day I remained in camp, and C. W. tried his luck, returning with a fine stag and doe. The third day he also carried off the laurels by securing two of the finest heads killed on the trip. On the fourth day one stag was killed from a bunch of a dozen. The fifth was a blank. The sixth day three stags were killed, two of them having record heads. These deer were killed at one hundred and eighty, two hundred and twenty-five and three hundred yards respectively. One was a very old and very large deer, probably the largest one killed on the trip. He was almost a pure white and his antlers very massive, and had a wide spread, but only twenty-one points. The other was a fine specimen of the middle aged stag, with thirty-one points to his antlers, and a very handsome brow pan, having the appearance of clasped hands. The last day we were in camp, only one deer was killed, just completing our lawful number.

Perhaps one of the most satisfactory outings one can take, from a sportsman's point of view, is a trip to this interesting country in quest of caribou. This representative member of the deer family is so abundant there that herds of fifty, or more, are often sighted crossing, or quietly feeding on the barrens. I have noted that some hunters claim caribou shooting in Newfoundland is no sport, because they are so plenty; but I think this is a mistaken idea. They are cautious, wary animals, keen of scent and hearing, and they take advantage of everything in their favor. The only point of vantage the sportsman has, is the fact of their appearing in sight sometimes three-fourths of a mile away. They move very rapidly,

and a run of one-fourth of a mile to gain a good position does not tend to improve one's marksmanship, and as the range is usually from two to three hundred yards, you will see that they are not so easy to get after all. You would be convinced of this when you had secured a good position just in time to see them disappear from your view, two or three hundred yards away at a 2.01¼ gait. The writer had this experience several times, and the grand old stag trotted out of sight with bullets flying in his direction.

An interesting sight is a fellow sportsman chasing a wounded stag across one of the bogs, or so-called barrens. He starts in with attack of "back fever," of course, or he would never have undertaken such a thing. He goes about twenty yards, sinking in a foot at every step—then falls; he gets up bare-headed, shoots once or twice, then takes another run, his eye on the stag, and not where he is going. This up and down and forward movement goes on for a few minutes, when all at once there is a splash and a yell, and he finds himself in about three feet of mud and water; this dampens his clothing, but not his ardor. He scrambles to his feet out of breath and in no good humor, staggers rather than runs to a hummock a short distance away, on which he rests his gun and takes deliberate aim—pulls the trigger—and—snap—there are no cartridges in his rifle. He is now in about the same condition as the stag, more dead than alive. Not being able to go a foot further they both fall to the ground, one from exhaustion, the other to rise no more. But a few restoratives soon raise the fallen hunter, and he hastens to the spot where lies one of the finest deer of the season, a beauty, indeed, having forty-five points and double brow pans. This deer, I have no doubt, will adorn the home of my friend and fellow

A LODGE IN THE WILDERNESS.

sportsman, and will, I am sure, in the future be a pleasant reminder of his visit to Newfoundland, and "Camp Indigestion."

Several snowstorms and cold nights were signs not to be ignored, so we decided to break camp on Oct. 27. The trip down the river was much enjoyed, and we left Deer Lake the following day homeward bound, with a feeling of intense satisfaction. There were none of those disagreeable features present usually met with in camp life.

In concluding this article, it is no more than fair for me to speak of our guides. They were trustworthy men, well versed in woodcraft, boating, and the requirements of sportsmen. Their aim seemed to be to please, and they were entirely successful. To sportsmen who contemplate a trip to Newfoundland will say that they can do no better than secure the services of George A. Nichols, Deer Lake. A letter to him will receive careful attention, and any statement he may make can be relied upon.

-45-70.

Sunday Laws.

IN view of the growing agitation of a change in the Sunday law of Massachusetts to permit shooting, golf playing and other sports on that day, the following exposition of the principle upon which Sunday legislation is based is of timely interest. It was written by Senator George F. Hoar for the Defender, which is the organ of the New England Sabbath Protective League:

"I wish to state in a few sentences the true principle, as I understand it, upon which what are known as Sunday laws can be maintained without violation of religious freedom. I have not undertaken to go into the argument, or to define my position. I merely state it as if I were stating in a headnote the principle of the decision of some court. The people of Massachusetts do not mean to compel any man to any religious observance by law, or to prevent by law any religious observance which the conscience of any person demands of him, unless it interferes with the rights of others. No church sect, doctrine or creed is to be permitted to wield the powers of the State. So it is no good reason for maintaining our Sunday laws that it is believed by a large number, or even a large majority, of the people, that to keep the Sabbath day holy is a Divine command.

"But we have a right to establish holidays and to secure them against disturbance. We have the right to limit the hours of labor. And we have the right to secure our dwellings against disturbing noises in the streets or on other men's premises. We have the right to secure the quiet of the night. Nobody questions the lawfulness of this exercise of power by the State, and nobody deems it an undue restraint of individual conscience or individual liberty.

"Now the Sunday laws must rest upon this principle, if at all. If in any particular they go beyond, they are so far, I think, illogical, and should be amended to conform to it. Experience has convinced a majority of our people that a rest from labor of one day in seven is not only desirable but essential for the mental and bodily health of men and women in general. A great many persons think that that day of rest ought to be devoted to a consideration of spiritual interests, of the relation of man to

his Creator and the hopes of a future state, to the religious training of the young and the religious improvement of persons of mature age. The State has the right, I think, to secure this period of rest by law. There is the same right to do it as there is to secure the quiet of the night. Whether the curfew law be wise or unwise, I suppose no man would claim that such a law would be tyranny.

"Now, to secure the opportunity for that large proportion of the people who desire to devote one day in seven to rest, to religious study and meditation, or religious instruction of their children, it is not enough to enact that they shall not be disturbed in their houses or their churches. If business be permitted to go as usual, if the factories and shops may be opened, if teams are to go along the streets, and every kind of secular business may proceed at will of the individual, it will be impossible for those who want the religious holiday to get it. If Jordan & Marsh keep open on Sunday, every clerk who desires to have his Sunday as a day of rest, must lose his place, and every other dealer must keep his own store open in order to maintain his competition.

"The right to prevent this rests on the same principle as the laws which prohibit men, women and children in factories from working more than a certain number of hours in the week and requiring fourteen or sixteen hours of the day to be let free. There are many persons who might be willing to work twelve hours a day or fourteen hours a day, and could do it for considerable periods of time without suffering. But the law prohibits the factory owner from employing the individual operative more than eight or ten hours. This is simply to secure the remainder of the day for rest. Whether it be wise or unwise, no man claims that it is beyond the reasonable power of the State.

"Now the law which secures Saturday afternoon to workmen in the factory may for the same reason secure Sunday to all citizens alike.

"I suppose nobody would have deemed it an act of tyranny for the legislative power of the State to require the public to abstain from ordinary secular business on the day of the funeral of Lincoln, or Garfield, or McKinley. This would not be because the State would claim the right to compel men to profess to reverence the dead President whom they did not reverence, or to pay any hypocritical tribute to his memory. But the right of the citizens in general to pay such a tribute cannot be exercised while secular business is going on, and it is a reasonable use of the authority of the State to require men to desist from ordinary business.

"The factory bell and the steam whistle must be silent during the hours of the night. The trade procession or the torchlight procession shall not be allowed to pass my home at midnight. The trip hammer may properly be compelled to cease its din in the neighboring factory, that my family may sleep. The lot which is vacant next to that whereon I dwell shall not be used by its proprietor for boisterous games at unreasonable hours. The State has the right to compel the citizen, within reasonable limits, to respect the holidays of a majority of the citizens, and it may require a like respect for the holy days, whether other men consider their observation a religious duty or not, I consider it a religious duty, and also a necessity of my spiritual, moral, and indeed my physical nature.

"I do not therefore undertake, in advocating moderate and reasonable Sunday laws, to put any restraint upon the conscience of my neighbor or compel him to any religious observance which his own conscience does not demand of him. I do not enter into the question of whether the Fourth Commandment was a Divine commandment at all, whether it was for Jews alone, or whether it relates to the seventh or the first day of the week. I concede that the legislative power of the State has no right to be discussing such questions or acting upon such reasons. But I think the State may secure for its citizens reasonable periods of rest, and reasonable opportunity for worship, religious meditation and religious instruction, which, if desired by a large enough body of citizens, may be secure from interruption by the prohibition of secular business."

Montreal Sportsmen.

MONTREAL, Que., Nov. 6.—*Editor Forest and Stream:* While things are done in a quiet way here in this Canadian metropolis in the fishing and game shooting line, there is probably a greater number here who indulge in these sports than in Greater New York with its millions of inhabitants. In the early part of the season the railway trains running back into the Laurentian country are crowded with devotees of the rod and line. Now it is deer, duck and ruffed grouse shooting. Saturday morning, Nov. 2, there were seventy-two deer shipped from one station north of this city. It was the end of the dogging season. A few more years of this kind of work and our deer will be like the buffalo—a thing of the past.

In September quite a number of both woodcock and grouse are shot on this island on grounds that are easily reached by the street car lines—in fact, the largest woodcock that we have ever bagged were found but a short distance from the city limits. Some good bags of black and wood ducks have been made, but the weather has been too fine to get satisfactory sport with the migratory duck—bluebill and redhead. A few canvasback have been shot in this vicinity; they are a rare duck here; now and then one is found among their cousins, the redheads.

Nov. 16.—For the past week we have been in the midst of a howling snow storm, which will make it, or, rather, makes it, great still-hunting weather. Every north-bound train is taking several or more of the boys back to their favorite haunts. Woe be to any stray, half-starved hound that they find running loose through the woods after deer.

It may interest some of your readers to know that the city of Sherbrooke, Que., stands on the ground where Major Rogers' Rangers ambushed the French and Indians, "more Indians than French," as mentioned in Robinson's historical story, "In the Ranger Service."

In the Tobique Moose Country.

Editor Forest and Stream:

One-legged men don't often go up Tobique to hunt moose, but this fall the people up there actually saw a one-legged man on his way into the woods for moose, and when he came out he had his moose head and antlers to take home with him. He did not do as some two-legged sportsmen do—let the guide shoot it, but he shot it himself.

Our one-legged sport was known as Grandpa to his two friends, who accompanied him, and who, with three guides and cook, reached camp near the Right-Hand Branch on Tuesday evening, Sept. 17, 1901, wet, cold and hungry.

Our camp was a new one, having been put up in June by our guides for our use. Last year the Doctor and I decided we would rather have the camp where we could get some fishing when we could not hunt.

It is located near the end of the smaller of two lakes, which are divided by a narrow strip of land about 100 yards wide. Both lakes are full of fine trout, and the surrounding country is full of moose.

The morning after we got to camp the Doctor started out for a few days' hunt, going into the section of country we hunted in last year. I remained in camp to get things fixed up, such as cleaning up around the camp, putting up a veranda over the front door, bushing out the path to the lake and cleaning out the carry between the two lakes, and putting in some light landings in the lakes so Grandpa could get in and out of his canoe easily.

Saturday the Doctor returned, but had nothing but a kodak full of calf moose pictures, which have turned out very good. He hunted and called, and called and hunted, but no use—the wind was too high all the time he was out.

I made up my mind it was about time I was doing something, so told Charley we had better fill up the old pack with grub and light out for a big moose, as it was big moose I was after. The Doctor decided to try it again, so we both got away about the same time, but separated soon after we left camp, he going over to some ponds beyond the Branch, and I to a pond over near Square Lake. Charley and I took down an old lumber road for two and a half miles, then up over a ridge and along an old trail for four or five miles to the Branch; across that and out another old road for a mile or more, and fetched up at a bridge across a brook, where we stopped to "bile" the kettle and eat a bite or two.

While eating Barker remarked that his father used to tell him that there was a large lake at the head of the brook we were on. Charley said he had never been able to find it, although he had looked for it several times. I asked him if there was any reason why we could not take a look. He said no, if I would try it, and as that suited me, we were soon under way. We had not gone far before we found ourselves in a large alder swamp, that seemed to have no end to it, as the more we walked the worse it got. Having kept this up for four hours, I about made up my mind that the lake was a fake, and told Barker he had better shin up a tree and see if he could see any high ground or mountains. He was soon in the top of a big, white birch, and shortly called down to me that he could see an opening near by, and in it stood a cow moose and two bulls. The cow soon went into the alders, taking the small bull with her, leaving the larger bull in the opening. Barker came down and we went over, getting there just as the bull was leaving. I did not regret his going, as he was not just what I wanted. His antlers spread about 50 inches, but the blades were narrow and the points few.

The opening was a narrow piece of marsh, and as we looked up it we saw water, which we soon found belonged to quite a large forest lake about 500 yards wide by 800 yards long. That years ago had been the home of the beaver, as we could see the remains of many a beaver house and dam. This was the lake Barker's father used to trap on thirty or forty years ago. I don't believe many hunters or lumbermen have been on the lake in years, as there are no axe marks nor signs of fire to be found anywhere around it. We named it King Barker Lake, and left our mark on the side of a big tree on the north shore, so that if others get in there years hence they will know they are not the first.

It was an ideal home for moose, and will be for some time to come, if hunters don't get in there too often.

After taking a good view of the lake and the surrounding forests, we walked along the shore, and finding a good place to sit down under some bushes, where the ground was dry and the cover good for calling, we availed ourselves of the chance and were soon making the woods ring with the call of the cow moose. It was not long before, from back across the lake, came the deep, deep grunt of an old moose. Only old moose can grunt deep. He was slow in showing himself, but at last out he walked and stopped to take a good, long survey of the entire lake, so as to locate the cow, then, with a low, deep grunt, he walked to the water's edge and took a good, long drink—the old fellow was thirsty. It was a grand sight to see the great creature with his magnificent antlers standing there moving his head slowly from side to side. He looked over at us long and closely, as he had heard the call from our direction, and no doubt thought it very strange he could not see the cow. He was a long time making up his mind whether he would walk around or swim across, and at last decided he would not do either. Barker said I would have to shoot him from where I was. I said, "All right," but it was a blamed long shot for an old scrub like me. Still I would do the best I knew how. When he turned to go into the woods I let him have it. He jumped, turned and landed in the same position he had been standing before he turned. The second shot fell short, the third, fourth and fifth either struck him or went in the woods—500 yards is a long way. After the fifth shot he walked into the water and swam across a narrow cove and went out in the woods. We saw he was hit hard, but left him until morning.

The sun found us up the next morning, breakfast eaten, and everything ready to look up our moose. The first thing we found at the place where he had left the water was a small bunch of stones covered with blood, then some leaves spotted with blood. We worked the trail slowly up into the woods until we came to a place a little more open than the rest of the undergrowth, when we heard a jump, and, by running ahead a short

distance, I could see him swinging along on one side, like a broken down locomotive. A .30-40 in his shoulder rounded him up, and another, to make sure he was safe, dropped him dead. He was a big moose and carried one of the finest set of antlers I ever saw—well worth the hard tramp through the alder swamp.

The head was soon ready for carrying and we started on our long tramp out to the home camp. The day was warm and the loads were heavy, but we pegged away and by night were on the top of the ridge across the Branch, only five miles from camp.

We fixed up a place for the night and cooked our supper. While we were eating it, we heard near by two bull moose fighting, and as everything was dead quiet we had a fine chance to hear them bellow and roar and ram their horns together, making a noise that sounded like two locomotives hitting one another head-on. The sight of a fight of this kind in daylight must be a great thing, if you are provided with a seat on the grandstand out of the way of the fighters.

The next morning we were underway by 5:30, and at camp by 9:30. The Doctor arrived an hour or so later, not having seen hair or hide. I suggested that he take Charley Barker and go to "King-Barker" Lake and get one of the bulls we left there. He agreed to it, and the next day they left with grub for a four-days' stay.

I stayed around camp a day or two with "Grandpa," fishing and shooting partridges with .22 rifles, but this got slow after a while, so I took the Doctor's guide and we went over to our last year's camp, looking for caribou. Saw moose and deer galore, but no caribou. Called in a nice young bull, and had a large bull coming in behind the youngster, but he got my wind and turned back. The youngster came up to within 30 feet of me.

On return to camp found that "Grandpa" had killed a moose. He had been on the big lake fishing and had crossed over to the small lake bound for camp. "Grandpa" had a guide about the size of Pickwick's fat boy, who thought he was a great moose caller, so was at it all the time, but rarely ever got an answer. This time two answered—a young fellow near the head of the small lake and a large one on the ridge at the foot of the lake. The youngster came out first and "Grandpa" dropped a couple of .30-30's into his shoulder which caused him to lie down. "Grandpa" was about 250 yards away and made a fine shot. The moose was slick as a barber's cat, and carried a very pretty set of antlers.

On Sunday the Doctor and Barker got in with a fine moose head. They had had a hard time and been over a big section of country and seen a good many moose, but nothing to suit the Doctor. At last they ran across a bull with a cow and calf. The cow objected to the bull going to the new call, but the bull insisted, so the cow settled it by agreeing to go out into the opening first, which she did, marching from end to end; next came the calf, trotting after his mother, and Grandpa Moose brought up the rear, grunting and making some objections to showing himself in an open place so early in the day. The Doctor did not give him long to decide, as he downed him with a .30-40 as soon as he got out of the alders.

As we each had a moose, of course our moose hunting was over for this season; but there were still caribou, and as I wanted a caribou I was not satisfied until I should get one, and get him I did.

Charley and I started out one morning fully intending to be back before night. We did not hunt much, but kind of loafed along, expecting the game to come to us—which it did. The first to show up was a young bull moose, pretty as a picture, that came up to within 25 feet of us and stood and looked at us for fully five minutes. He had a head of antlers of about 36 or 40-inch spread, and 15 points with a 6-inch blade. He was a dandy. On our way home in the evening, as we were hammering along over a ridge at a breckneck gait, we ran upon a cow and bull caribou. The bull had a nice set of antlers and I shot him. This broke up getting to camp that night, as it was dark by the time we got the head and hide off; so we built our fire there, ate the little we had, rolled up in the caribou's hide and slept until morning, when we got an early start and were in camp before the boys had waked up.

The Doctor tried for caribou several times, but could not find them, and gave it up.

As there was nothing more to keep us in camp, we decided to break up and start for home. We made such fine time going out the 18 miles to Riley Brook that we were able to reach Jack Weaver's the same evening at 7:30, where we found good grub and good beds. The next morning we left Plaster Rock at 6:30 on our long journey home.

The Upper Tobique is a great moose country, and full of moose, but they do not all carry 55 and 60-inch spread of antlers. A man can get the big heads if he will hunt hard, but he can't find them in the camp yard.

Charles L. Barker, of Riley Brook, N. B., has guided me two years, and I consider him one of the best of woodsmen and guides. You will get no better anywhere. Sportsmen going to the Tobique will be in luck to get him.

W. W. KING.

NORFOLK, Va., Nov. 5.

Dutch Crow Catcher.

THE following unique trap is in vogue in Holland for catching crows, of which there is a gray variety as well as black:

Fill paper cornucopias one-third full of corn, and set them out in the fields or wherever crows frequent, having first applied bird lime or a narrow strip of fly-paper to the inside of the rim. The crow who attempts to pick out the corn will carry off the whole outfit! No crow ever fails to get caught around the neck or back part of its head. Now is a good time for the country boys to try them when the food supply is becoming short.

C. H.

Proverbial Philosophy in the Woods.

"He laughs best who laughs last," chuckled the loon as it dived for the forty-ninth time.

With the Boston Sportsmen.

BOSTON, Nov. 16.—A gentleman of long experience in game affairs in Maine, says the boasted increase in big game in that State is all nonsense. The increase in the number of deer killed is owing to the great increase in the number of hunters. A few years, at the present rate of slaughter, will utterly wipe the moose and deer out of that State. Firearms are remarkably cheap, and every man and boy is crazy to kill big game. In Maine, especially, everybody of the male persuasion owns a rifle. The slaughter is simply tremendous; not only bucks, but does and fawns are destroyed. The hunters of Maine alone would soon exhaust any possible game supply, to say nothing of the great number of sportsmen from other States. The sad accidental shooting, he believes, is but the natural result of letting loose such a volume of firearms, in the hands of irresponsible novices. He would make it a penal offence to shoot a doe, a fawn or a cow moose. "Such a statute," he says, "would serve a double purpose. It would check the wanton slaughter of the females and young of these animals, and it would compel even the amateur and hairtrigger sportsmen to find out what they were firing at before shooting."

The Merrymeeting Zoo has been sold to the New York Zoological Society. The entire menagerie of animals that has for several years been one of the attractions at Merrymeeting Park, near Brunswick, Me., now goes to New York. The collection has constantly been added to, under permission from the Maine Fish and Game Commissioners, and from its numbers the several Boston Sportsmen's Shows have drawn a great many attractions. But for some time it has been a burden on the shoulders of its owners. The collection sold includes three buffalo, three elk, two caribou, one moose, four deer, one pronghorn antelope, two black bears, three timber wolves, one cross fox, one ocelot, one red fox, besides porcupines, raccoons, squirrels, as well as wild swans, geese and ducks.

Three farmers of North Attleboro, Mass., have been arrested and brought into the district court of that town for shooting and having deer in their possession. They disclaim any intention of wrong, and contend that the deer, a doe and a fawn, had been shot at and wounded by other hunters. One of the men claims that he found the doe in the very throes of death, and shot it, to end its misery. The men all testify that they heard shooting, and went to the woods to ascertain the cause, where they found the wounded deer. Their case has been continued. Chandler Moore, of Bingham, Me., is said to be the first man legally authorized to shoot a cow moose in that State. The animal was discovered in the town of Mayfield, with one leg broken. The finders dared not kill her, though in a shocking condition from the broken limb. Commissioner Carelton was notified, and he has directed Mr. Moore, who is a registered guide, to go into the woods and shoot the moose, said to be a very large one. Mr. Harry A. Chapman, of Bangor, Me., has lately returned from a month's hunting trip to the Barrenlands of Newfoundland. He brings home seven fine caribou heads, and says that the animals are still very plenty there, although being badly hunted.

A representative party of Boston sportsmen will spend a couple of weeks at Taylor Camp, Moose River Valley. The members are Dr. Heber Bishop, W. T. Farley, Dr. Rolfe, and Dr. H. H. Hartung. They left Boston this morning. The camp is beyond the Megantic Preserve, at the foot of the Boundary Mountains, in one of the best moose sections of Maine, where Dr. Bishop has taken at least half a dozen. Neither are the other gentlemen tenderfeet, else they would find the twelve or fourteen mile tramp from the last possibilities of a conveyance, out of their line. Mr. Farley has been there with Dr. Bishop before, and says that it is but the work of a few hours' hunting to get one's full legal quota of two deer. Both the hunters are after moose.

Snow in Maine has set big-game hunting off with still more vim. At Bangor, one of the biggest days on record has been noted. Friday 146 deer were passed by the wardens. The highest previous record at that point was on Oct. 23, 1899, when 133 deer were sent down. To Saturday night the shipments of deer through Bangor, for the season, had reached 2,413; with 131 the number of moose. This is a tremendous record, and becomes more astounding when it is remembered that Bangor is but one of the great arteries through which outside sportsmen send home their game, and does not include more than half the big game sent out from Maine. Then it is certain that fully as many more moose and deer are killed by local gunners and consumed in camps, that never appear in the records at all. It is not an unreasonable estimate that at least 10,000 deer have been slain in Maine, up to the present date in 1901. Concerning moose, the Bangor record cannot be multiplied in like manner, since there are not many of these animals taken in sections other than above that point of shipment. The real question is, Can the game supply stand such slaughter? At least it is well to sound a note of warning, and suggest to the Maine Legislature of next year that the number of deer to the hunter be limited to one instead of two.

A few deer are being taken in New Hampshire. William Hall, 80 years of age, shot a deer last week in the Connecticut Lake region. B. W. Kilburn and Mr. West were driving through the Franconia Notch last week, when they came across three deer. Each shot one, leaving the third to escape. Frank Sargent, of Tilton, has come out of the woods with a deer and a big bear. He found his game in the vicinity of Stark. William Stevens and Ralph Dodge have secured a fine buck in the vicinity of Mud Pond.

William B. Eaton and four friends from Boston, have been having good luck shooting at Mr. Eaton's preserve, near Buzzard's Bay. Mr. Eaton's preserve covers a tract of nearly 1,000 acres, and is close to the preserve of Grover Cleveland and Joseph Jefferson. These sportsmen are frequently the guests of Mr. Eaton. Along the South Shore and on the Cape the week has been a very quiet one, by reason of the weather and high winds. Besides, the cool season is about over. Still the gunners are having some sport with the ducks, belated flights of which frequently appear. But they stop but a day or two at the best, when they are off for farther south. The cottages along Duxbury beach still shelter a good many

Boston gunners, who are after ducks. Black duck shooting is reported to be fair on the inland meadows and bays in the vicinity of Monomoy.

It has cost a Boston sportsman \$33 in fines for attempting to pass out a box of partridges, the result of his Maine hunting trip. They were seized at Bangor. A peculiar specimen of a deer head came out through Bangor the other day. It was taken at Greenville, and belongs to Mr. Henry Allen, of Natic, Mass. It is the head, evidently, of a good-sized buck deer, but has antlers more like those of a moose, being considerably palmed.

Boston gunners are getting some quail shooting within from twelve to twenty miles of the city. James H. Jones has been out several times in the vicinity of Lowell and Billerica. He has the best success in the morning, or early in the day, when the birds are in the fields feeding. He skirts along the edge of the woods, just inside, till his dog points the birds; when their flight is pretty sure to be in the open, giving a chance for good shots.

SPECIAL.

Spring Shooting.

Editor *Forest and Stream*:

I am receiving letters from many counties in the State asking for advice as to how to proceed to get a law stopping spring shooting of wild fowl. I had intended to give the patient readers of *FOREST AND STREAM* a resting spell on the duck question, but the results are so great in Jefferson, and the appeals so urgent for information as to how we did it, that I ask the indulgence of *FOREST AND STREAM* and its many readers once more. The greatest opposition to the county bill was from Clayton and Alexandria Bay. I inclose clipping from Clayton correspondent to *Watertown Daily Standard*, Oct. 24:

"The Brown-Tallett duck law is winning over some of the early opponents to the closed season in the spring. There is now the best duck shooting in years, and it is attributed by the observing and fair-minded sportsmen to the natural increase in numbers. Eel Bay is a favorite resort for hunters, who are bagging some fine braces in the vicinity of Dr. Sargent's cottage. In two years there will be some old-time shooting if the law is in operation. It has been suggested, Mr. Brown, that it being a good thing for Jefferson county, why shouldn't it be a good thing for the State? Therein lies the only argument for those who so vigorously condemned the law at its passage."

Although this law met with great opposition, and we had a hard fight to push it through, I do not know of a shooter in this county who is not entirely satisfied with the result this year. All over this county where there was suitable water and feed we have such an abundance of duck and snipe as none of us ever saw before. I inclose a letter (one of the many received), also my answer, which can be applied to every county in the State. It is the duty of every sportsman to do all in his power to create a public sentiment in favor of game protection, for without public sentiment in favor of these laws we cannot pass them, or enforce them when passed.

W. H. TALLETT.

"AUBURN, N. Y., Nov. 6.—W. H. Tallett, Dear Sir: I take the liberty to write and ask your advice and assistance in passing a law prohibiting the sale of game in New York State, and also to stop spring duck shooting in Cayuga county, and also in New York State, if possible. I do not hesitate to write you in regard to this, as I know of the good work you have done for Jefferson county, and I think you can give me some pointers in regard to stopping spring shooting, and co-operate on stopping the sale of game. The condition of weather and water was such that few ducks were killed here last spring, and the result is that we have had the finest duck shooting this fall for past few years. In regard to sale of game, this nice duck shooting has caused from six to ten duck shooters, or rather market shooters, to fix their boats with canvas, etc., and for the past six weeks they have stayed on the shooting points of our two ponds in Montezuma marshes both night and day. They have sold hundreds of ducks and have frozen out the sportsmen who like to get out about once in two weeks and get a little duck shoot. Our people here are unanimous in favor of prohibiting the sale of game, but some may oppose prohibiting spring shooting. I am getting some petitions printed, and shall circulate one here, and also write to every county and see if each county can not get such a petition to their Assemblymen. With united effort we can get this bill through. My motto is, 'No Spring Shooting. No Sale of Game. Law Open on All Kinds of Game from Oct. 1st to Dec. 1st or 15th, and no guns in the woods at any other time.'

Truly yours, JOS. N. KNAPP."

"Jos. N. Knapp, Auburn, N. Y., My Dear Sir: I am pleased to know that there is one man in Cayuga county who wants the spring shooting of wildfowl and the sale of game stopped. There are sixty-one counties in this State, represented by fifty Senators and one hundred and fifty-two Assemblymen. The sportsmen of each of these sixty-one counties are responsible for the action of their representatives at Albany. If the representatives of any county are opposed to these laws it shows one of two things, either that his constituents are spring shooters and market hunters, or that the sportsmen have failed to do their duty.

"You had better do as I have done here in Jefferson. Form an association with yourself as president. Then pull off your coat and get into the fight. You will get very little help from the rest of them. (That, at least, has been my experience.) Get your arguments before the people through the local press. Convince the people that you are right and the other fellow is wrong, and they will help you. Ask every man of influence you know to write the members. Get out a neat circular-letter, have them sign it, and mail it yourself. After you have placed your arguments before the people, and you feel that a majority of them are with you, ask them to sign a petition, and you will be surprised at the number who will respond.

"Confine your efforts to Cayuga county. Pin your members down to the fact that you want these laws for Cayuga county and they will work all the harder to get them for the rest of the State. There are sportsmen

enough in each county of this State, who, if they would get into the fight, could secure the support of their members to stop the spring shooting of wildfowl and to stop the sale of game at any time of the year.

"W. H. TALLETT."

WATERTOWN, N. Y., Nov. 8.

CHICAGO AND THE WEST.

Deer Hunting Casualties.

CHICAGO, Ill., Nov. 15.—In commenting last week upon the opening of the deer hunting season, it was stated that we should presently begin to hear of the customary numbers of casualties in the deer hunting country. The fatal list begins even so early and runs into appalling figures before the second week of the season has gone by. What the total of killed and wounded men may be in the deer hunting country of Wisconsin, Michigan and Maine no one can at this time determine. Probably there will be at least 100 victims in these three States.

From Ashland, on November 12, came report that two men were killed in Bayfield and Douglass counties by stray bullets fired by unknown parties, and traveling unknown distances. Similar news comes regarding a killing near Mason, in Bayfield county. In addition to these, there is the matter-of-fact statement that the woods of Ashland county alone contained in the early part of this week more than 3,500 hunters. Unconfirmed advices state that more than 1,000 licenses were taken out at Bayfield.

The writer today heard of another fatality which took place not far from Bayfield. Two hunters were out after deer and sat down upon a log to rest, one of these men wearing a fur cap. The customary idiot with a rifle came by, and seeing the fur cap, fired upon it, shooting the hunter through the head and killing him instantly.

Near McGregor, Minn., on Nov. 11, County Commissioner J. C. Jones was accidentally shot and killed. He was hunting with a party from Chicago. One of these Chicago men was removing the shells from a rifle, and while so engaged accidentally shot Mr. Jones through the chest. Death was instantaneous.

Two days ago a strange accident happened near Stephenson, Wis. A hunter by the name of George Richardson shot at a deer, the bullet passing through the body of the deer and striking a tree. Thence it glanced and struck a hunter named William Everhardt, first passing through Everhardt's wrist, then striking his gun stock, glancing up and entering his mouth through his cheek, lodging in his neck. The wound is a serious one. It shows well enough the danger of flying lead.

Advices from Wisconsin newspapers read like the casualty list of a battle. One special item to a Chicago paper reads as below: "The wounded hunters reported today are George Richardson, near Stephenson, Mich., seriously; Charles Gardner, Reedsburg, shot in the head, probably fatally; Adam Pleate, 11 years old, Junction City, shot through the body, will recover; Arthur Voyer, Stevens Point, will recover."

Yet another news item in a Chicago paper this morning is as below: "The first fatal shooting of the deer hunting season in Lake county occurred on Tuesday, when, in the company of Attorney-General Douglass, of Minnesota, a Minneapolis hardware clerk named J. E. McLean, was killed by George Jentisch."

There was some talk among a group of Chicago sportsmen today to the effect that the sportsmen of the State of Wisconsin are agitating a measure for the suppression of the use of a certain small bore rifle in the woods.

Deer in Minnesota.

The season opened in Minnesota with a very large number of men preparing for deer hunting. The number of licenses issued by County Auditor Johnson, of St. Paul, was, on the 10th of this month, only 172, and of these there were only two non-resident licenses. This is not in excess of the number issued last year. By this time the issue of licenses is doubtless very much larger than at the date specified.

Reports from the Iron Range territory, from Beltrami county, St. Louis, Cook and other good game counties, state that moose are abundant. The five days open season on moose in Minnesota is almost prohibitory for the non-resident.

The high power rifles are popular ones in Minnesota this fall. The .30-30s, .303s, .30-40s, etc., are in demand far in excess of all other arms for deer hunting in Minnesota. This demand has been existing in the local sporting goods stores for more than three weeks past.

One of the notable hunting parties to go out in Minnesota this week was that of Consul E. H. Hobe, who had as his guest Baron Straale, Secretary of the Swedish and Norwegian Legation at Washington. The party went into the Iron Range country, and will try to secure a moose. Among others on the special train were Gen. Brandt and Gen. Gjertsen, of the Governor's staff; President A. L. Alness, of the Scandinavian-American Bank, H. J. Boyesen and Dr. H. Sneve.

Western Men in New Brunswick.

Mr. Alfred Marshall, Mr. Harry Lee, and Mr. Nash, all of Chicago, are men who have been slated to take trips in New Brunswick this fall, though none of them has so far started for his trip. Mr. I. W. Morton, of St. Louis, and his daughter Alice were out with Henry Braithwaite and Tom Pringle on the Miramichi, and each got a good moose, the head of the young lady's moose having a spread of 48 inches. This party saw 30 caribou in one day. Henry and Mr. Irland left on Nov. 5 for a month on the Miramichi, well outfitted for a hard siege. Adam Moore, who will be remembered by everyone who visited the Sportsmen's Show here last winter, left for the Upsalquitch Lake country on Oct. 24, with Mr. George P. Bishop, of Cleveland, Ohio. Mr. Bishop had killed a caribou and the two were then looking for moose and bear.

Mr. W. H. Allen, of Peniac, N. B., had out three parties, covering twenty-six days, this fall, and the parties each got moose, Mr. Allen stating the average spread of antlers to be 52 inches, certainly a very good showing. Three caribou were also killed, but none of these had very

good heads. All the guides of that country seem to agree that big game is as plentiful or more so than was ever known before. Allen has a special commission from the Government to kill two pairs of fine specimen moose for exhibition purposes. The exhibit which was here at the Chicago show has been sent to England. It is not altogether likely that the New Brunswick men will favor us again this winter, but they say that in the following year they may come to see us once more in case there should be a Sportsmen's Show.

Western Ducks.

At last we have got a little cold weather. Snow fell for a few moments in South Chicago today and the temperature is low over a considerable area to the north of us. The main flight of ducks is now well below this place, on the marshes on the lower Illinois River country. This includes pretty much all the northern flight except the last flight of mallards, which ought to be along within the next few days if the cold weather holds above here.

Very good shooting has been enjoyed at the Hennepin Duck Club and at the best of the preserved marshes near that point. The members believe that a spurt of mallards is about all there is left of the season for them now, but there are considerable numbers of birds hanging around in that neighborhood.

Swan Lake Club has had considerable fair shooting, several bags of a dozen to two dozen having been made.

Tolleston Club, just at the southern edge of Chicago, has had as good sport as any shooting club of the city. Indeed, the numbers of ducks rafting off the lake front in Lake Michigan are greater now than have been known here for several years. A great deal of hammering of the birds is done at long range from the different city piers along thirty or forty miles of the lake front from Fort Sheridan to South Chicago. Once in a while a very decent bag is made in that way. A great many of these Lake Michigan ducks work across the sand dune country and drop in to feed on the Tolleston marsh. About the only shooting the Calumet Club has had has been upon these travelers passing between Lake Michigan and the Little Calumet marshes of the Tolleston Club.

A Legal Duck Blind in Illinois.

A great deal of discussion arose today among members of a little gathering of sportsmen over the construction of the Illinois statute in regard to artificial blinds. The Game Laws in Brief says: "It shall further be unlawful at any time to kill any wild goose, brant or other water fowl, from any fixed or artificial ambush beyond a natural covering of reeds, canes, flags, wild rice, or other vegetation above the water of any lake, river, bay, inlet or other water course wholly within this State." It was stated by one sportsman that State Game Commissioner A. J. Lovejoy had made a ruling that he would not permit the use of any artificial blind whatever. Mr. Lovejoy may perhaps be wrongly reported in this, and it is not stated herein that he has made any such ruling. This, however, left open the question as to what was the edge or limit of a natural covering of reeds, etc., above mentioned. Some thought that a blind could be built only where the covering was thick enough to hide the boat. Others pointed out that no blind would there be necessary. Yet others, and these seem to have the best of the argument, since there has been no test case so far as known to decide the matter, hold that if the shooter could find a single spear of bulrush, reed, cane, flag, wild rice or other vegetation, he could legally build his artificial blind at that point, provided that such vegetation was growing from the bottom, and projecting above the surface of the water. This gives the shooter pretty much all the liberty he needs in the artificial blind business. The law is not of severe consequence at many parts of Illinois except on Fox Lake, and it was probably put upon the statute books because of the open-water blinds which were destroying the duck shooting of Fox Lake. These blinds were made of burlaps, attached to poles, and the boats were anchored inside of practically a solid wind-proof blind.

How to Make a Blind.

By the way, if you want to know how to make a very good and practical blind, take a section of woven wire fence made of light wire, in a length a little more than double that of your boat. This woven wire can be rolled up and carried in a fairly compact bundle. It is heavy enough and stiff enough to stand up in the water. Place this around your boat, fastened by stakes, and then execute your blind by weaving cane, rushes or grass into the meshes of this fencing. You had better ask Game Warden Lovejoy about the place where you set this blind, however, else you might get into trouble.

Small Bores.

Mr. Robert P. Allen, of the New Brunswick Guides' Association, under date of Nov. 6, wrote as below: "I address you at the request of our mutual friend, Henry Braithwaite, who is anxious to enlist your services in promoting a cause which is very dear to his heart. He wants you to have a whack at these small bore rifles which seem to be so popular with the sportsmen across the line. Henry declares that they are unsuitable for big game, and is prepared to cite cases wherein they have proved to be a dead failure. He has had three parties, consisting of six gentlemen and a lady, out so far this fall, and the casualties consist of three caribou killed and sixteen moose killed and wounded, as the war correspondents say. No less than eleven moose were hit by .30-40s and could not afterward be found. One was seen a few days later by a lumberman, dragging one hind leg behind it, and he made an unsuccessful effort to hamstring it with an axe. Henry claims that the .30-40 does not make hole enough in the moose's anatomy, consequently it does not leave a blood trail by which it can be successfully tracked. He is talking of agitating for a law to prohibit the use of small bores for big game, and wants you to discourage their use. Henry thinks that the percentage of eleven wounded moose to five dead ones is altogether too large, and that something will have to be done soon or the devil will be to pay."

The attitude of Henry and his friend, Mr. Irland, in regard to large bore guns is a generally known one among the sportsmen of the East. Doubtless there is

much justice in the contention which they establish, but I fear there is nothing can stop the triumphant march of these wicked little small bore guns. The proportion of crippled game mentioned above is a large one, and it seems to me an unusually large one. No details are given as to the kinds of ammunition used. With solid jacketed bullets, of course everyone knows that is no test of the stopping qualities of the small bore rifle. Nor is the soft-nosed bullet, much superior as it is to the solid jacket, a perfect test of the arm. Sometimes the soft nose acts differently from what it does under other conditions. Probably the best of these bullets is the hollow point .30-40, which has during the past year been used by a few American sportsmen.

There is little reason to believe that we shall ever be able to do anything to stem the popularity of these small bore arms. For myself, I should not care to go back to the old .45-90 or even the .45-70. You may tell a hunter that these guns are dangerous, and indeed so they are, but you cannot wear him from that flat trajectory. A good English double rifle costs a pretty penny, and the average man when confronted with the price will not hesitate when shown the cheap and deadly American repeater.

We shall for some time hear discordant reports regarding the results with the .30-30 and .30-40, but the average of opinion seems to show that they are good guns when properly understood, properly loaded and properly aimed.

Quail.

The cold and windy weather of last week has made quail shooting much a matter of sprinting. The birds do not lie as well as they should to the dog, not having as yet become used to the first cold of fall weather. Presently they will begin to come in from the prairies and corn fields to the creek bottoms and timber. Hence we will probably see better shooting next week than there was last week.

Among those who go out for quail this week are Mr. W. L. Wells, Mr. C. S. Dennis and Mr. George Walker, all of Chicago, who leave tonight for New Boston, Ill., for a hunt along the Mississippi River. They will probably find ducks and they have advices that quail are abundant in that vicinity.

Keep Your Hands Off The Muzzle.

Mr. Jacob Bernardy, of Porterfield, Wisconsin, while hunting on the afternoon of November 1, stopped to rest and placed both hands over the muzzle of his shot gun, just as you will see the trap shooters do. "In some mysterious way," says the account, "both barrels were discharged." Both his hands were blown off.

Buffalo Jones Still Alive.

Nov. 16.—C. J. Jones, or "Buffalo Jones," was surely born to an unusual life. Among the extraordinary privileges accorded him by kind fortune has been that of twice reading his own obituary, at dates separated by several years. When Jones was in the Barren Grounds country after musk ox, he was reported dead, the news coming to his people by long and devious route from the North. On Nov. 7 and 8 of this year he was again reported to have departed this life, the newspapers of the country generally printing extended notices, and some of the Chicago papers playing up the news with a good story and portraits. It was with sorrow that I sent this news to the FOREST AND STREAM, and with pleasure that I discovered it to be erroneous. The following dispatches addressed to the writer by Kansas newspapers yesterday will explain the origin of the mistake, which is this morning corrected by most of the Chicago newspapers. It will be observed, however, that the initials given do not tally in the two reports, so, after all, it remains somewhat uncertain just who is dead.

SALINA, Kas., Nov. 15.—Buffalo Jones, whose death was reported, was H. L. Jones, an early settler in this county, and not Buffalo Jones, of national fame.—Republican Journal.

TROY, Kas., Nov. 15.—Salina Buffalo Jones is J. R. Jones, a local character, died Nov. 6; got his name when in the Legislature; represented more buffalo than people. Buffalo Jones, the national character, is C. J. Jones, headquarters now in Topeka, Kas.—Troy (Kas.) Chief.

I wired Buffalo Jones asking him if the report of his death was correct, but have no reply; hence I have addressed him the following letter, which I think C. J. will accept as explanation:

I see all the papers had you dead again last week. In common with the others, I printed a very feeling obituary, which I take pleasure in inclosing you herewith, together with similar article from the Chicago Tribune. I am sorry that I did not have any portrait to run, as it would have made the matter more complete. You seem to be born to a long life, and I do not doubt you are destined to land something big before the final reckoning comes. Meantime, you had better look out for infringements on your title out in Kansas. It seems that the real Jones concerned is H. L. Jones, of Salina. Of course, you will understand that I do not claim this is such a very good obituary, but I will try to do better next time.

At Hennepin Club.

Messrs. J. V. Clarke, Lou Clarke, W. W. McFarland, Geo. Davis and one or two others, of this city, all left for Hennepin Club tonight. They ought to meet pretty good mallard shooting.

By the way, some of these Hennepin men speak of the last flight of mallards as being the "long-billed mallards," and sometimes speak of them as the "yellow-footed mallards." They claim that these late birds are bigger than the early flight. So much for hunters' natural history. No doubt there is some foundation for the notion of the late flight, though most of us are apt to believe the length of bill of the adult mallard is pretty much a fixture, and the feet of the average mallard an orange color. As to the latter, however, I imagine most hunters have seen mallards with red feet, not orange and not yellow. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

To Alaska for One Caribou.

CANON CITY, Colo., Nov. 16.—Editor Forest and Stream: I returned some time ago from Alaska, where I went to kill one bull caribou for my collection. I killed a fine big fellow in the Kenai Mountains. I saw some others, but fired only at this one. Got some good photos and may write you short article later.

DALL DEWESE.

In Minnesota.

The Deadly .30-30.

So much has been said of late in connection with the use of the far-reaching smokeless, small-caliber rifle in the woods that the gun stores are displaying gaudily colored worsted head gear with the label attached, "Wear this and avoid the deadly .30-30 bullet."

While the small-bore smokeless is entirely out of place in the timber and thick undergrowth—unless one is hunting the grizzly et id omne genus—yet all the maimings and killings of human beings should not be charged up to it. Any kind of a rifle, if held straight at a human being moving through the brush (but which the other fellow is sure is a deer), will kill, let it be an old flintlock or of up-to-date make. Therefore, to wear red, white and blue head gear is just as necessary to ward off the death-dealing-black-powder-propelled bullet as the one of smaller caliber. It is when the unseen man is killed that the smokeless rifle gets in its deadly work. The man a mile or more away who drops wounded in his tracks and without the satisfaction of even hearing the report of the rifle, is almost invariably the victim of the .30-30 rifle.

The season for deer hunting opens to-day. I came down from the woods yesterday, where I had been on a business trip, and saw many parties "going in," and am pleased

coup de grace with a hunting knife behind the shoulder, was not Roosevelt the sportsman truthful? And yet, had we not his San Juan Hill record in front of us for bravery and absolute fearlessness, would we not think when he recited his cougar hunt that he was a little enthusiastic? He relates his experiences in a matter of fact, natural and withal intensely interesting manner, and no man questions or doubts the tales.

But as a broad proposition, I say confound the hunter or fisherman who cannot tell a story without some enthusiasm in it, for it would not be worth listening to otherwise.

Fooling the Game Warden.

Shipping game to market in Minnesota has become hazardous in the extreme. All sorts of expedients are resorted to in the way of containers. Coffins, milk cans, trunks, carpenter's tool chests, vegetable barrels with partridges and cabbages in carefully arranged layers and other packages too numerous to mention, have been used to carry the game safely to the cold storage house.

The local game wardens on duty at the depots have made good records, and have done some work in the way of pulling birds out from strange and odd places.

But in one case, as the story goes, the warden missed a trunk filled with ducks. It was up country. The local warden knew of a trunk filled with mallards being made ready for shipment to St. Paul as baggage. He was at

AS THE ST. PAUL PIONEER PRESS SEES IT.

to write that the old black powder rifles were in the ascendancy. I saw many rainbow-hued mackinaw jackets and much resplendent head gear, in all of which there seemed to be much method.

Well, the dual slaughter in this State commences to-day, and the list of human casualties will be duly reported in the daily press side by side with the record of deer slain.

An Echo from Heron Lake.

I talked with a friend who had tried to shoot ducks at Heron Lake when the gang, lately broken up by Game Executive Fullerton, was in control. So bold and grasping were these market-hunters that over night the blinds of the visiting sportsmen were destroyed, boats sunk and decoys ruined. And while Heron Lake was one of the best spots in the State for canvasbacks and redheads, yet was it left severely alone. The two or three years of this drove the regular sportsmen frequenters of the lake away. But all this is ended now, and the State is richer in fines and guns and boats and tents and decoys by and through Fullerton's nerve, pluck and attention to business. Heron Lake is again open to the legitimate sportsman.

Do Fishermen Lie?

Well, I don't know! I think when a fisherman tells a good story he may show an excess of enthusiasm, but I do not see why the same should be tortured by the listener or readers into a lie.

How about the man who tells you about the 150 prairie chickens he has shot, all of which but six spoiled before he could get to the cars with them? The man who killed his deer that weighed 1,500 pounds, woods-dressed?

Let us call all this enthusiasm, and that being allowed then is it not a case of enthusiasm on the part of the hunter as well as the fisherman? Enthusiasm and mendacity should not be confounded. I think if a drag net were thrown out and the contributors to the FOREST AND STREAM were housed under one tent with their feet under the festive board, one might be expected to grow enthusiastic over one's cigar. In fact, I could imagine much enthusiasm passing round. One man might get enthusiastic on snakes, another on fish, another on quail, grouse and woodcock, and yet another on big game. When our President—the man after our own hearts—jams his rifle stock into the mouth of a dog-infested-clawing, biting cougar and deliberately gives the ferocious beast the

depot, and he saw the game-laden trunk duly checked. Noting the number of the check, he at once wired Mr. Fullerton: "Look out for trunk No. 7852, due depot 8:30 to-morrow morning." The man who owned the trunks could read the ticking of the telegraph instrument by ear, and read the message as the ticket seller and operator ticked it off. He looked at his own check and found it read 7852. He did some quick thinking. Looking at his watch, he said that he had thirty minutes before the train was due. Going across the street to the village store he bought a small and very cheap trunk and carried the same to the depot, getting a check for it. Watching his opportunity when the baggage master was busy elsewhere, he changed the checks upon the two trunks; and when the game-laden trunk passed the ordeal and when the trunk 7852 was inspected, instead of game, old papers and rubbish were found. Whether this recital is based on enthusiasm or cold facts I cannot say, but I give it as I got it. CHARLES CRISTADORA.

A Wolf Hunt on Ski.

WHEN traveling across the dreary fields of Norsk Finnmarken we one day came across sign of a wolf, and that evening by the camp fire one of our Lapps, a smart, active, young man of about thirty, described how on one occasion he and a companion succeeded in running down and killing two of these beasts in midwinter. As the Lapps are admittedly the most expert ski runners in northern Europe, and as even among them such a performance is looked upon as highly creditable, a brief description may be of some interest. The men were in charge of a herd of some 1,800 reindeer pasturing on the inland wastes somewhere in the neighborhood of Kantokimo, and all had been going well. There was plenty of snow and good fore (i. e., going); the wolves had done little or no damage, and the deer, being undisturbed by the presence of these marauders, had given the minimum of trouble to the watchers. One day in the middle of February, however, the latter, on approaching the herd on one of their rounding-up visits, found that the enemy had been there during the night; there was a lot of blood on the snow, several deer had been killed and others wounded, while the rest were frightened and scattered all over the place. The Lapps had nothing in their knapsacks except some coffee beans, but they were five or six

miles from their headquarters; time was of great value, as after such a repast as they had indulged in, the wolves would in all probability lie up shortly, and they determined to chance it on this scanty provision. After following the tracks for some five miles at best pace, these led to a wooded hill which appeared worth investigating closely, and there, as a matter of fact, they found the place where the object of pursuit had taken his siesta, and from which their arrival had caused his abrupt departure. Encouraged by this, the two ski runners put on the steam, and after traversing five or six more miles they met the wolf returning on its own tracks. One man now went for the beast with his ski-stav, the other with an axe, but the former weapon broke, and they failed to stop it. After another severe run, however, they got close enough up to throw a lasso (suopunkin, as used for the reindeer) over the now exhausted brute, and dispatched it with the axe.

Perspiring freely from their exertions, the hunters had now to protect themselves from the effects of the cold by building a fire, but of fuel there was none on the spot, and in order to procure it they had to return to the wood where they had found the wolf, and on the way thither came across the track of a second. Darkness coming on, nothing further could be done, so the two Lapps built themselves a good fire, cooked their frugal meal of coffee only, and spent the night in the open. At dawn the following morning they took up the fresh spoor, and after following it for some ten miles, caught sight of the brute making for the protection of a wood. Before, however, it had time to reach this place of shelter the pursuers got up. Twice was the lasso thrown, but on each occasion the wolf bit it through with its teeth. One Lapp then tried to head it off, and so drive it toward him with the lasso, but the animal attacked, and both rolled over in the snow, the man cramming his broken ski-stav down his assailant's throat. His friend then came to the rescue with the lasso, and the *coup de grace* was dealt with the axe. The hunters then spent another night in the open, and next day performed the long journey back to where they had left their reindeer. With proper food this would have been a highly creditable exhibition of pluck and endurance, but supplied as the men were during the three days' severe work with a little coffee only, it was a most meritorious one.—Snowfly in London Field.

A Modest Nimrod.

CHARLES HALLOCK sends us the following characteristic personal mention of a gentleman (native of Ohio) whose prowess is noteworthy:

"Dr. Chase P. Ambler, Secretary of the Appalachian National Park Association, whose efficient propaganda work in its behalf is so commendably outlined by Prof. McGee, of the Washington Geographical Society, in the November issue of *The World's Work*, is not only an earnest conservator of the forests, but a forest ranger of no mean abilities. His pursuit of big game extends from ocean to ocean. The hall, library, dining-room and study of his ample suburban residence in Asheville, North Carolina, are made attractive by trophies of moose from New Brunswick, alligators from Florida, mountain lions from Colorado, grizzlies from Wyoming, and numerous deer, antelope, elk, foxes, badgers, raccoons, and other lesser varmints from regions afar off and nearer home. But the most remarkable phase of it all is that none of this revelry has been exploited in any publication that I know of; except that I called attention to it in a letter to the *FOREST AND STREAM* which was written last August, after a visit to the doctor's house, and for this he was inclined to take exception. Since that date the doctor has been on the warpath again, the results of which are partially summed up in the following extract from a letter just received. Although the quarry is notable, the hero vaunted not himself, and is not puffed up. He seems to make as little of his exploits as if he had shot a dog.

"My trip to Colorado and Idaho (he writes) was cut short by the illness of my wife's mother. I first went to Meeker, Colo., and from there to Marvin Lodge with John Goff. The hunting in that region with dogs was not good, for the reason that the weather was extremely dry. We saw thousands of deer, but were after mountain lion. The hunting being so poor there we left that part of the country and went over into the Bear River section, where we had better success; from there we crossed west into Idaho, then followed south along the Idaho-Colorado line, coming out again at Newcastle, Colorado. I secured my lion along the State line, and also secured a very fine antelope and two deer."

Long Island Duck Netting.

NEW YORK CITY, Nov. 15.—*Editor Forest and Stream*: Knowing you are interested in the welfare of sportsmen in general and the destruction of waterfowl, I have written this letter in the hope that it will be published in your valuable paper, and in this way come before the proper authorities.

It is against the destruction of vast numbers of wild ducks in Shinnecock Bay, Long Island, by men who claim to be sportsmen. There is a clique of men at Canoe Place who make a business of "netting" wild ducks, as I would call it. They stretch large nets in the bay, and when the ducks start to feed they are caught in the net and drowned. It is a known fact that as many as two hundred ducks have been caught in this manner in one day.

A gentleman from this city had occasion to go to Quogue duck shooting over Election day, and on the morning of Nov. 5 started out with his guide for a day's shooting. He was placed in a good position in what is called the East Bay, but as soon as the men from Canoe Place found he was in a position to get some game, one of them came out in his boat and sailed around his battery all day. Consequently there was no shooting to be had that day. Thus not content with slaughtering ducks by the hundred, they begrudge a stranger the few birds he may shoot.

There seems to be an understanding between some of the guides that they will not put a battery and gunner in the middle of the bay; no doubt this is where the nets are placed.

I hope to see this letter published in your next issue, but

if this is impossible, will you kindly give the name of the proper person to go to, to have this wholesale slaughter stopped?

Is it a wonder our game birds are rapidly diminishing when such a thing is allowed to go on? Also the spring shooting of snipe, etc., on the meadows of Jamaica Bay.

E. KING.

[Netting ducks is forbidden by the law. We advise you to communicate with District Game Protector J. E. Overton, No. 1 Madison avenue, New York.]

In the Old Home Fields.

MACOMB, Ill., Nov. 13.—*Editor Forest and Stream*: I have just returned from the town of Orland, Hancock county, Maine, where I first saw the light of day. I went into a field which was a part of the old farm that my father once owned, about one mile from where I was born. It was just about light in the morning, and I thought I might find a deer there. I found the deer, but was not so fortunate as I was in 1856, when I shot two in this field by moonlight. This field contains about twelve acres, surrounded by a thick young growth of timber. I walked to the edge of the timber quietly, where I had a good view of the field and nothing could I see. After waiting a while I went into the middle of the field, where I found an apple tree filled with apples. The deer had been there through the night eating apples, and in a few minutes, in the edge of the timber, I heard an old buck blow his whistle; I just got a sight of his tail and off he went. I could hear him run for a half mile, striking his horns against the thick young trees. My disappointment was very great, as I had traveled some fifteen hundred miles to my old home, and I thought I would return to the west with a fine buck.

So the elapsing of forty-five years has not made much change in big game in Hancock county. A few days before I arrived there a moose came within a mile of Masson's Mills near my old home. The hunters got after him and ran him into the town of Bluehill. The last moose that was in this town was killed by Daniel Osgood one hundred years ago. I hear that two moose were seen near Dead River, in Hancock county. It looks as if the moose were coming out of the backwoods to the settlement. I shall try my luck in that section another year and hope for better success.

W. O. BLAISDELL.

The Pennsylvania License Law.

"ONE of our constables last week had \$88.44 as his profit for one Sunday's work in arresting violators of the game laws, and what he did could be readily duplicated by other constables, if they were only willing to keep their eyes open and do a little hustling."

The speaker was Dr. Joseph Kalbfus, Secretary of the State Game Commission.

"The game laws are being openly violated, not in isolated cases, but by the wholesale," continued Dr. Kalbfus. "Game is being carried out of the State, and the non-resident gun tax is flagrantly avoided. The act of 1899 made all constables ex officio fire, game and fish wardens. They have the power to arrest without a warrant, to search a man's baggage and person whenever they meet him, and have jurisdiction over the entire county. By the act of 1897, the constable received half of the fine imposed. The act of 1899 has added to this perquisite \$10 extra for each successful prosecution of a game law violator. If the party is found guilty and does not pay any fine, but goes to jail, even in this case the constable would get the \$10, and that is paid half by the county and half by the State.

"The trouble is that these constables are afraid to do their duty, as in many cases they would have to arrest the very men who vote them into office. Some of the letters I receive from the constables are rather amusing. One of these worthies wrote: 'I found a gentleman violating the gun tax law. When I spoke to him he became very indignant, in fact downright angry, so I decided that it was best to let him continue his shooting, and acted accordingly.'"—Harrisburg (Pa.) Patriot.

Ohio's Queer Law.

GERMANTOWN, O., Nov. 13.—*Editor Forest and Stream*: I have never noticed anything from our locality, so I send you this as a view of the situation in Ohio, as taken by a common hunter. The hunting season opened here Monday last, and with it the much-discussed and also cussed question of game protection. The season opened well; quail are more plentiful than at any time in the last ten years, and rabbits are on the increase. It is surprising the number of good bags that have been made, considering the increased number of hunters. On the first day there were over a dozen parties of four or more from our town who reported a bag of twenty or more quail and as many rabbits. And I almost forgot to mention one lovely fox squirrel! Don't laugh; he was killed in season—that is, according to our law. I, for one, prefer squirrel hunting to any other; but it is a dead letter in this State. The writer in *FOREST AND STREAM* who said the Ohio laws were a muss was wrong; they're worse than a muss. It seems as though all other hunting has been sacrificed to protect the quail. The southward flight of ducks has commenced. Whenever a duck appears in sight I grab my gun and climb up to the roof and pray for him to pass in range. The law won't allow me to shoot him on the creek.

J. V. M.

The Vermont League.

BRATTLEBORO, Vt., Nov. 14.—The annual meeting of the Vermont Fish and Game League was held at the Brooks House last evening, President John W. Titcomb presiding. The report of the treasurer showed a surplus of over \$1,000 on hand.

The following officers were elected: President, John W. Titcomb, of St. Johnsbury; Secretary, Edward Bradley, of Swanton; Treasurer, Charles F. Lowe, of Montpelier; Vice-Presidents, F. L. Fish, of Vergennes; N. W. Fisk, of Isle La Motte; Edward C. Smith, of St. Albans; W. S. Webb, of Shelburne; Redfield Proctor, of Proctor; J. J. Estey, of Brattleboro; O. E. Luce, of Stowe. Executive Committee: J. M. Chapman, of Middlebury; W.

E. Hawkes, of Bennington; I. R. Styles, of St. Johnsbury; F. H. Wells, of Burlington; P. H. Dale, of Island Pond; H. J. Hublee, of Montgomery; E. S. Fleury, of Isle La Motte; H. G. Thomas, of Stowe; Horace W. Bailey, of Newbury; S. M. Brady, of Newport; Ira L. Allen, of Fair Haven; L. Bart Cross, of Montpelier; F. W. Childs, of Brattleboro; J. E. Pollard, of Chester.

It was voted to set aside \$500 of the surplus on hand as the nucleus of a fund to be used as a forest or game preservation or for such other purposes as may be deemed advisable. It was voted that the league entertain the North American Fish and Game Protective Association at a banquet to be held in connection with their first annual meeting in Vermont in January.

The question of admitting ladies to membership in the league which was laid on the table at a previous meeting, was voted down on motion of Mr. Chapman.

The attendance was not as large as on some of the former meetings as there was no banquet, but it was one of the most interesting business meetings that the league has held.

Red Hats for Safety.

DETROIT, Nov. 11.—*Editor Forest and Stream*: Will you kindly permit me to make a suggestion which I think you in your good judgment will favor and will warrant you supporting in your paper. That is, that all parties hunting will wear red hats. I believe without a doubt that in our State alone during the twenty days of deer hunting, when twelve to fifteen men are killed every year, 90 per cent. of them would have been saved if they had adopted the simple fashion.

I have for some years insisted on parties shooting with me in bird season having red hats. It saved my life once from my companion, who is one of the most careful men I shoot with, just as he was shooting seeing my red hat a few feet away—not seeing me, as one's hunting clothes resemble so closely nature in the woods at that time of year.

I have just returned from Turtle Lake Deer Club, one of the best ones in America, and they do not allow a member to go out without a red hat.

It is one of the most important things, to be in the game laws of each State, if it were possible, to compel every one to use a red hat when hunting. If one who has not had occasion to notice how far a red hat can be seen in the thick popple, partridge shooting or deer hunting, will only try it once, he will never allow any one to shoot with him without having one in the future.

Another example of a man being mistaken was in seeing a deer and not shooting, when a few moments later he saw the horns of a deer, and then was convinced he was right, when, as he pulled up his gun to shoot, one of the party stepped out with a dead deer on his back. A red hat would have settled it at first glance.

CHARLES A. RATHBONE.

Massachusetts Game Notes.

WAKEFIELD, Mass., Nov. 18.—*Editor Forest and Stream*: We are on the last half of our gunning season. Not much game or gunners here. It's more rifle target shooting than the shotgun. Some go down in Maine and shoot a deer or two. Mr. W. W. Tillson just brought a big buck from Dead River camp. There has been very good duck shooting on our lakes; more mallards shot this year than I ever heard of before. It's generally black and dusky duck, and the smaller species of scup duck and teal. Mr. Henry Eastic has just returned from a successful duck shoot at Merry-Meeting Bay, Me.; he is an old hand at this shooting, using live decoys of his own raising and training.

More quail this fall than ever before, but they have mostly been small, half-grown birds any decent gunner would not be guilty of shooting at. Saw one pot-hunter who says he has shot eighty so far. I hope they will forbid sale of quail as well as they have woodcock and grouse. I shot two woodcock Election day. We expect them to be all down south by this time. Haven't seen any geese going along as yet.

Mr. I. Newton Babbitt, of Dighton, Mass., is dead, aged seventy-one years. He was a gunner of the old school, and has probably shot more game and tramped more miles of woods in Bristol county than any other man. One by one they drop out, and their old pet gun is willed to their favorite relative and is hung up over the door as a relic of by-gone days. Peace to his ashes.

JOHN W. BABBITT.

Indian Territory Quail.

COTTONWOOD FALLS, Kan., Nov. 16.—*Editor Forest and Stream*: I am greatly surprised to read in your issue of this date, under heading of "Indian Territory Live Quail Export," your editorial indicating a manner in which live quail can legally be shipped from the Indian Territory, as you have so long been the advocate of the preservation plank, "The sale of game shall be prohibited at all seasons." It is not more than one year ago that I called your attention, in a letter, which you published, of a shipment of quail from Purcell, Indian Territory, to Pittsburg, Pa., of six crates of about 2,000 quail, alive, with crates marked "Strictly for breeding purposes," and the next issue of your paper contained a report of a banquet at Pittsburg where 1,200 plates were laid, and the first entree on the menu was "Quail on toast," and 1,200 quail were served. By the way, have you ever had any account of any club or preserve locating or liberating in western Pennsylvania the 2,000 and more quail in that one shipment to Pittsburg "strictly for breeding purposes"? I am glad that the Lacey law has been so construed that it stops this illegal shipment of quail "strictly for breeding purposes" to grace banqueting halls as "quail on toast," and hope it will still be enforced in spite of your "plea in abatement." Yours for game protection at all seasons of the year.

W. F. RIGHTMIRE.

Rhode Island Sportsmen.

PROVIDENCE, R. I., Nov. 18.—Foxes and raccoons are more in evidence than usual in the vicinity of Swansea and in East Providence, three of each having been shot thus early in the season. Two foxes were recently killed

in one day by Henry H. Chase, and the same number of raccoons were brought down from one tree.

Duck shooting in the vicinity of North Pappoosequaw Point, Narragansett Bay, is followed now a great deal. The ducks are beginning to come inshore from the bay, but not many of them have been shot so far.

A prouder and merrier party of deer hunters never returned from the deer country than Elisha Buffington, his brothers, Ray and Paul, and George Young, of Swansea, who have been gunning in Flagstaff, Somerset county, Me., for a couple of weeks. Their headquarters were at the Ray Hill camp. Cliff Wing, a trusty guide, was the sportsmen's companion, as in previous years. Seven deer were shot by them, as follows: Elisha Buffington, an eight-pointed buck, weighing 162 pounds; Roy Buffington, an eight-pointed buck and a doe, weighing 174 and 100 pounds, respectively, also a small buck; George Young, a six-pointed buck weighing 116 pounds. Four deer were brought home by the party. A dozen or more partridges were also shot, but according to the law these could not be taken from the State. W. H. M.

In New Jersey.

NEWTON, N. J., Nov. 18.—We are now enjoying one of the most successful shooting seasons we have had in some time. Of quail there are many fine flocks of full-grown birds. Rabbits are plentiful. The woodcock flight this fall has been good, and the birds were all large and fat. We have a few English grouse up here in Sussex, and I was fortunate enough to flush a flock of six on Nov. 1, killing one. They are not a very satisfactory bird to hunt; those I flushed would not lay to the dog, who followed them the whole breadth of a large stubble field, and finally flushed when they came to a stone fence; they also make very long flights. The bird resembles a quail in many points, being about the size of a small ruffed grouse. Many of our local and city sportsmen are making fine bags daily. Among our most successful local sportsmen are A. B. Brickner, Lewis Morford, Theo. Morford, O. Westbrook, W. W. Woodward, Jr., Jas. E. Baldwin, R. Foster and O. Simpson. JAS. BALDWIN, JR.

The Blooming Grove Park Case.

HARRISBURG, Pa., Nov. 14.—Cases alleging violation of the Lacey National Game Law, which forbids game to be shipped out of the State unless properly labeled, brought six New York and New Jersey sportsmen, members of the Blooming Grove Park Association, of Pike county, before the United States District Court Grand Jury yesterday, and true bills were found against them. They will be tried at the March term of the Federal Court in Scranton, and from every indication there is to be a national fight and a thorough test made of the law. Former Auditor General Gregg and former Attorney General Kirkpatrick are attorneys for the defendants.

Long Island Deer.

THE four days of Long Island deer hunting this season yielded a normal quota of heads and haunches. The youngest hunter to score a success was the fourteen-year-old son of Dr. Robinson, of Sayville, who had the luck and the nerve to bring down a big buck, and there was not a prouder and happier boy on Long Island. As illustrating the good fortune of some favored hunters, it is told that a bayman got one deer in the morning and a second one in the afternoon.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Can the Sea be Fished Out?

From the Nineteenth Century.

Is the harvest of the sea ever likely to be exhausted? This question has frequently been asked, especially since steam has so greatly increased man's power, not only of getting in the harvest, but of distributing it rapidly to places far away from the coasts. Steam has opened up fresh mines of fish food, and created fresh markets for it.

The London papers of the 6th of April last published a note to this effect:

EASTER FISH—A RECORD.

The fish supply sent from Grimsby on Wednesday for Easter surpasses all previous records, the supply of fresh cod and halibut being unprecedented. One railway alone, the Great Central, sent 331 trucks, made up into several special trains.

This was only a fraction of the supply sent to London, and London is only one of thousands of places to which supplies were sent and are sent continually. How long will the sea be able to supply this great demand is a question which directly or indirectly affects everybody, inasmuch as any increase or diminution of one kind of food must affect the price of other kinds.

Until very recently it has generally been supposed that, immense as is the amount of fish life existing in the sea, there is a certain maximum beyond which Nature cannot go, a certain balance on which man can draw which she places to his credit on certain banks, limited both in number and extent. To make an overdraft on Nature's fish supply has long been considered by many well qualified to judge as not only possible but probable; they say, and there has been hitherto little but conjecture to contradict them, that as compared with its extent the ocean is a desert, a Sahara with a few oases on which alone fish life is possible. Further, they say that these oases are not only limited in extent, but also in their capability for supporting fish life, and that they are at the mercy of man, because they are confined to the comparatively shallow waters near the coasts on which he lives.

That some kinds of sea fish, especially flat fish, can be practically exterminated in certain localities is proved by the fact that in many of the in-shore fisheries round our coasts it no longer pays to fish for them; and because

they have been destroyed and the fishermen have year by year to go farther afield, or rather afloat, in the pursuit of them, it has been argued, on the *ex pede Hercules* basis, that eventually the limit of the fishing grounds and of the supply of fish will be reached.

Not many years ago the lobster and crab fisheries on the East Anglian coasts were seriously threatened through over-fishing, and Sir Edward Birkbeck, to whom our sea fisheries generally owe so much for wise legislation in their interests, got an Act of Parliament passed for restricting and regulating the fishery. But what man does in the way of destroying a fishery is child's play as compared with Nature's work in that direction. Within the last year or two a countless octopus army has advanced along the northern coasts of France, and, for a time at any rate, absolutely destroyed the crab and lobster fisheries; lately we have heard of them on our own southwest coast. Some years ago the menhaden fishery of the South-Atlantic coast of the United States was almost destroyed by some submarine disturbance—for some time ships sailed through a sea of dead fish. But not all were destroyed, and Nature is refilling the void she had created.

Some years ago a strange thing was witnessed on the most northerly coast of Scotland. For days a vast army of emaciated codfish, helpless, exhausted, drifted past with the current; one could only conjecture the reason for this pitiful procession. Had the fish been driven away from their usual feeding-grounds by the attacks of dog-fish or sharks or other sea pirates, or were they simply poor neighbors crowded out?

Only of very recent years has the subject of marine biology* been studied on any systematized plan, and with any definite object; but now that the North Sea has been mapped out for observation by an International committee of biologists representing the nations interested in its fisheries, British, German, Dutch, Scandinavian, etc., it is certain that we shall learn many things we did not know, and have to unlearn many things which we thought we knew to be facts, but which have proved to be fallacies.

It would be difficult, for instance, to over-estimate the value of the discoveries made last summer by the Norwegian Marine Biological Expedition in the steamer Michael Sars, under the direction of Dr. Hjort, a most interesting account of which has recently been published by another Norwegian biologist, Dr. Knut Dahl. Dr. Dahl reminds us that as far back as history extends there have been accounts of great fluctuations in the results from the Norwegian fisheries. In the time of the sons of Eric, the people almost perished of starvation owing to a total failure of the fisheries; they even sold their weapons to get food. The fisheries of Norway have always been subject to uncertainty, one season bringing a glut of fish to the coasts and the next perhaps a dearth of them. But never have the fisheries been worked so systematically and extensively as in recent times, and never has the sea furnished such a large proportion of human food as at present, and never have the complaints that the sea would be fished out been so loud as of late.

It is curious that this cry of the fisheries being destroyed and the sea fished out should be loudest at a period when the sea is giving us far greater supplies of fish than ever man has had from it before. There must be some ground for this persistent protest which is heard—last year in England, this year in Germany or Scandinavia, and presently we shall hear it again here. It is like the warning we in this country hear from time to time of the possibility of war bringing famine to our shores in place of foreign-grown bread. Never were bread and meat and fish and food of all kinds so cheap and plentiful as at present.

According to Dr. Dahl the reason for the fear of exhaustion of the sea fisheries rests on incorrect theories, due chiefly to the results of scientific investigations of the last forty years. Much the most important result in connection with this subject was the discovery, during the present generation, that most of our sea-food fish produce an enormous number of eggs, several millions, and that these eggs after being laid ascend through the water, the milk of the male fish ascending with them and fertilizing them, and that they develop while floating just under the surface of the sea. When hatched the young fish is carried about for a time hither and thither by the currents until it comes near the coast, when it seeks the bottom, and gradually as it grows older wanders out into the depths. For this reason it was said that the young brood of the food-fishes was never to be met with elsewhere than in the immediate neighborhood of the coast, where the nets of the trawlers sweep it up and destroy it wholesale.

Remembering, then, on the one hand that the mother fish produced an endless number of eggs, and on the other that a great proportion of these eggs is swept by the currents so far from land that the delicate brood when hatched would have no chance of getting near any coast, it was supposed that Nature's object was that only a limited number of eggs should survive. The principle of reproduction must require these millions of eggs being spread over the surface of the sea—the greater part driven out into the sea to be destroyed, the smaller number which remained near the coasts to grow to be decimated by enemies and to suffice finally to replace their parents in the ordinary course of Nature.

The aim of Nature in this fish reproduction was only, it was supposed, to make good the loss, and this was so from the beginning. According to this view, there existed a fixed relation or proportion between the numbers of each species, and reproduction only sufficed to maintain the balance between them. So soon as a new factor appeared, causing increased diminution in the numbers of a species, then the balance would be destroyed and could not, without artificial help, be set right again.

The whole theory may be set out thus:
a is the stock of fish with its chances of reproduction.
b is the amount caught by man and the destroyed chances of reproduction of the fish caught.

But, as Dr. Dahl points out, if this view was correct,

* One of the most recent discoveries of Prof. Hensen, the German State marine biologist, is of bacteria which keep the sea fresh by attacking the surplus organic matter in it. Other researches in Plankton show that in some places the sea is a mass of liquid food, which fish and birds inhale, as it were. Even round the Arctic and Antarctic Poles this minute life exists in such a quantity as to permeate and color the seas.

the final result of abstracting *b* from *a* would long ago have been 0. "No, not yet; but it will come!" we are told. And in the meantime the fisheries exist, and have always existed, and never before were such quantities of fish caught as now.

The untenable nature of the theory referred to has led several investigators, as a result of their investigations into marine economics, to adopt widely different views and conclusions. In Great Britain Professor William C. McIntosh, the leading British marine biologist, has strongly supported the view that the resources of the sea are practically inexhaustible; and in Norway Dr. Hjort and Dr. Dahl are stout apostles of the more hopeful prospect as regards our sea-food supply, and have demonstrated that a dearth of fish in some waters arises from the brood being carried away from them by currents, but that the great mass of brood on the coasts, and the great multitudes of fish which periodically visit them, point to anything but to a general dearth of fish in the sea. They could not, it is true, until recently, give any direct proof of the riches of the sea, as a vessel and means for investigating the open sea were wanting; but last summer, in the newly built fishing steamer Michael Sars, they were able to carry out experiments in the Norwegian seas and the Skager Rack, and to make what, in the opinion of Dr. Dahl, belongs to the most important zoological discoveries of the nineteenth century, and which justifies the hope that we are within measurable distance of the solution of many vexed questions in connection with our fisheries.

An Undreamt-of Discovery.

Undoubtedly the most important result of Dr. Hjort's researches was that he found the brood (fry) of all our round food-fishes in immeasurable quantities, not dead, as it ought to be in theory, but alive, and spread over the whole Norwegian sea and the Skager Rack. No one had the least idea that this was the case. That the young of cod, haddock, coal-fish and whiting could live out in the open sea would have been considered impossible a year ago. It was thought that they were only to be found quite in-shore near the coasts, as that was the only place where they had been found.

Dr. Hjort's discovery shows that there are many million times more young fish in the sea than man had any idea of, and the theory that the young brood carried out to sea perished is proved to be a fable. Nature is shown in her true light, not as the unnatural step-mother destroying all but a favored few of the brood of our food-fishes, but as designing that as great a number as possible should come to maturity. We now know that the rearing grounds of the young fry are not restricted to certain limited areas near coasts, but extend to the open sea itself. We may well exclaim with Spenser—

Oh! what an endless work has he in hand
Who'd count the sea's abundant progeny,
Whose fruitful seed far passeth that on land,
And also theirs that roam in th' azure sky,
So fertile be the floods in generation,
So vast their numbers, and so numberless their nation.

In view of this discovery, as Dr. Dahl says, all former speculations as to the exhaustibility of our sea fish supply fall to the ground.

But it was not only fish brood or fry that Dr. Hjort found in his investigations of the North Sea. He made the further remarkable discovery that away out in the open sea, where it was several thousands of metres in depth, he found fish, as it were, in layers or ocean strata. Some required a line as long as the Monument to reach down to them, others were in still lower depths which would submerge St. Paul's and the Monument on top, and with many thousand feet of water below them. There, in these still and dark and hitherto supposed barren regions of the sea, he caught great cod and haddock and coal-fish, sometimes in quantities. The importance of this discovery is that it proves that not only fish brood, but mature fish, also, exist out in the ocean, and that what have been looked upon as typical "ground fish" and "local" sorts are to be found at other places, as well as near the coasts. Not of least significance is the finding of cod in the deep places of the sea, as in this discovery we have the key to solve the mystery as to where the cod abides when he withdraws from the coasts. In the great cod fisheries off the coast of Newfoundland the fishermen find the fish at the commencement of the season in April in the shallow water near shore, and use lines of thirty or forty feet, increasing the depth as they find the fish receding, until they have to fish at over two hundred feet for them in December.

It was formerly supposed that the killing of a cod in roe meant the destruction of more than two million potential codfish. Now, as Dr. Dahl says, it merely looks like improving the life-chances of the progeny of another cod. Formerly it was considered that the fish production of the sea was a fixed quantity, which was being continually decreased by man's inroads on it. Now it would appear to be an organism on which the attacks of man can make no real impression. It seems probable, indeed, that in every second, every minute, and every day more fish is produced in the sea than all humanity combined could devour in the same time.

Who knows? At any rate, the marine biological investigators of the new century need have no fear that the ocean will not continue at least to provide them food for reflection. The more success they have like the discovery which Dr. Dahl has described (which applies more or less to the whole of the seas of the world), the more will governments, and let us hope ours among them, be inclined to encourage and support their efforts by substantial "grants in aid." It is a disgrace to our nation, depending so entirely as we do upon the sea for our existence, that we do less than almost any nation to encourage and support our fisheries, both inland and sea.*

Apart from the question of national defence—for our fishing fleets afford the finest recruiting ground for our fighting fleet—no one who knows the benefits which the United States of America derive from the great National and State Fisheries Departments but must regret that the United Kingdom does practically nothing in this way

* A correspondent of the Pall Mall Gazette at Antwerp, writing recently, says: "Few realize that eight millions sterling is extracted from the North Sea in fish, and fewer still, perhaps, that more than half this great sum is secured by England."

beyond providing a gunboat or two for police duty. I do not believe in "grandmotherly legislation," but in a wise national development of our natural resources; such a policy, in fact, as has placed America first among the nations.

R. B. MARSTON.

A Reminiscence of Willewemoc Lake

Editor Forest and Stream:

In looking back over my troutng trips of thirty or forty years I am often reminded of some occurrences which after the lapse of many years strike me as rather comical, although I did not so regard them at the time—and I know of none more so than a trip I took about 1869.

At the request of a mutual friend I had invited the Rev. Dr. E——, a minister then living in Brooklyn, to join me in a two weeks' trip to the Rondout and Willewemoc Lake, and we took our trip in the month of June.

We arrived at David B. Smith's on Saturday, and on Monday, leaving the rest of our party behind, we started for the lake, which was full of large trout. After traveling some twenty miles we dismissed our team, and with our packs on our backs followed a trail two miles to the lake where a man whom I had engaged was waiting to serve and care for us.

Our accommodations were ample, but quite crude; our shelter consisted of a shanty made from hemlock bark some ten feet long by eight feet deep, which was open to the west, but with a profusion of hemlock boughs for our bed and a large camp fire in front, we had a most charming home and spent a most delightful week.

On the way some one asked the Doctor if he would not preach on the next Sunday, but he declined on the ground that he was not well and needed absolute rest.

The Doctor had brought with him a copy of the Bampton Lectures just issued, which I tried to master, but I soon found myself suffering from an acute attack of theological dyspepsia, and resigned the book to him.

On Sunday morning the Doctor, after an early breakfast, was quietly resting in our shanty with his Bampton Lectures in his hand, while our man of all work had gone off to look for a beech tree, when I heard a man on horseback coming around the edge of the lake.

Presently he drew up in front of us, and after hitching his horse, said to the Doctor: "I have come for you according to your agreement to preach for us to-day."

"I have made no agreement to preach to-day."

"But the people in the neighborhood all understand that you will."

"How far from here is the church?"

"About two miles, and when I left, about eight o'clock this morning, the people were all flocking to it."

"But how could I get there?"

"You could ride my horse."

"But your horse is very small, and then you have no saddle, and I weigh 250 pounds."

"But there is a sheepskin on his back; I think the horse could stand it if you could."

"I am very sorry to decline to go, but if I should do so it might cost me my health, perhaps my life."

Just then the man remarked that he must go to the spring behind the shanty for a drink, as he was very dry, and on coming back said to the Doctor that after thinking the matter over he felt that he was right, and that he would hurry back and scatter the people who were coming to hear him—and in a few minutes he had disappeared in the woods.

After the man had gone the Doctor said: "It is very strange that anyone should expect me to preach to-day."

To which I replied:

"No one has expected you to preach."

"But he said that the people were flocking to the church when he left."

"Do you think the people would flock to a church at 8 o'clock for 11 o'clock services?"

"Where is this church?"

"There is no church within six or eight miles."

"But how about his neighbors?"

"He has no neighbors. He lives in the woods and the nearest resident is fully a mile away."

"Do you mean to say that this man was guilty of willful pervarication?"

"It is all a lie, Doctor—all a lie."

"What did he come out for, then?"

"Simply for a drink of whiskey, that was all—I met him at the spring."

POUGHKEEPSIE, N. Y., Nov. 12.

More About the Lake Trout.

Editor Forest and Stream:

In the last paragraph of an article in FOREST AND STREAM of Nov. 9, page 370, in defining the distribution of "The Lake Trout," you include "Henry Lake, Idaho." This is an error, as the lake trout does not exist in Henry's Lake, nor elsewhere in Idaho, so far as known; neither does Bulletin 16 or 47, United States National Museum, include Idaho as its habitat, but both mention Montana, which is correct. I am aware that in one of the Bulletins of the United States Fish Commission, though I cannot put my finger on it at this writing, the lake trout is said to inhabit Henry's Lake, Idaho. The error occurred in this way: A number of years ago Mr. J. Sherwood and Mr. Sawtelle, of Henry's Lake, took some trout in Elk Lake, Montana, twenty miles distant, and on the other side of the Continental Divide, which were new to them. They sent some specimens to the Smithsonian Institution for identification, and which were pronounced lake or Mackinaw trout (*S. namaycush*). I presume the gentlemen referred to did not specify the waters from which they were taken, and the presumption was that they came from the postoffice from which they were forwarded—Henry's Lake, Idaho. I am quite familiar with both lakes, as we have auxiliary stations for collecting eggs near each of them. I have seen fine specimens of the Lake Trout from Elk Lake, which also contains grayling, but neither species inhabits Henry's Lake, which is, moreover, quite shallow, while Elk Lake is a very deep mountain lake.

JAMES A. HENSHALL.

CHICAGO AND THE WEST.

Wisconsin Twenty Pounds Law.

Relative to an item in last week's FOREST AND STREAM, stating that wardens have in some instances made what seemed to be unwarranted seizures of fish belonging to Chicago anglers en route through Milwaukee, Mr. T. A. Buckstaff, of Oshkosh, Wis., has the following to say, which is worth the attention of all Chicago anglers who have been subjected to what they considered impositions or injustice at the hands of Wisconsin wardens:

"I was a member of the Wisconsin Legislature in '95, and was responsible for putting into the law the 'twenty pounds or two fish' clause. I was very much interested in protecting our waters from net fishing and one way to do it was to prohibit the shipping of fish out of the State. The bill was first drawn to limit the shipments to twenty pounds, but a letter from a keeper of a fishing resort in the northern part of the State led me to add the 'two fish' clause. He wrote: 'Non-residents often catch several muscallunge that weigh 25 to 35 pounds each, and, of course, are anxious to take them home. It costs them about two dollars for every pound of such fish they catch, and we get the two dollars.'

"If such shipments of two fish are being seized by our State wardens they misinterpret the intention of the law."

"GEO. A. BUCKSTAFF."

How to Use Fly Dope.

Dr. Herbert Kent Porter has made one of those little discoveries which every fellow would have made for himself in just about fifteen minutes more. He describes it as below, and his tip is worth remembering.

"Concerning fly dope, that I believe you recommended in FOREST AND STREAM a goodly number of moons back. I have hit on a scheme that adds to its efficiency and convenience—a scheme so simple that I wonder at my having so long used the usual wasteful and clumsy method of bathing in it. I think a great deal of my dope, but am ready to confess that it is not the most satisfactory toilet lotion. I find that by carrying my immediate supply in a bicycle screw-top oil can I can easily add a fresh coating whenever needed, and it is about bug proof when fresh. It also cuts down my supply necessary for trips about three-fourths. Perhaps you can help some of the blundering 'outer.' But I think the trick must have occurred to hundreds before, it is so simple and self-evident."

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Sawdust in the Tobique and Maine Streams.

FROM time to time comments from sportsmen have appeared in your journal relative to the throwing of sawdust into salmon and trout streams, and I was surprised to find on a trip through Maine and New Brunswick, this year, such notorious violations of the law in this respect, particularly at Plaster Rock, on the Tobique River, where there is a sawmill, and along some of the smaller streams emptying into the St. John River. Also along some of the streams in Maine sawdust was noticed floating on the water. It is a wonder that the Tobique Salmon Club does not make a vigorous protest against the state of affairs at Plaster Rock.

CAMPER OUT.

Rhode Island Trout Distribution.

PROVIDENCE, R. I., Nov. 17.—The close season on lobsters went into effect on Friday last, and from Nov. 15 until April 15, the breeding season, it is a violation of the law to catch, sell, eat or even have in one's possession any lobsters. The effect of the law is to take them out of the market entirely between those dates.

During the season just past, Fish Commissioner William H. Boardman has distributed more than 5,000 young trout in brooks where it was deemed best in various parts of the outlying districts. He has now another thousand to distribute, and if any person knows of any brook where they are wanted, Mr. Boardman will be pleased to accede to his wishes in the distribution.

W. H. M.

Free Fishing in New Jersey.

SUSSEX COUNTY, N. J., voted the other day, and sustained by a majority of 1,000 the Roe bill to make possible access by the public, for fishing purposes, to the following lakes situate in Sussex county: Swartswood, area, 505 acres; Culver's Lake, 486 acres; Long Pond (Owassa), 209; Puder's, 117; Losee, 137; Morris Lake, 136; Reservoirs, Stanhope, 339; Cranberry, 154; Wawayanda, 240.

"In the early days a British admiral by the name of Coffin, who was born in Nantucket, in returning to America told a fellow voyager that when he got to Nantucket he would show him lobsters a yard long. Well, the admiral's friend questioned it, and they made a wager. When they reached Nantucket he could not produce any lobsters of the required length, so he furnishes himself with affidavits made by many fishermen that when they and the admiral were boys the lobsters in Nantucket were a yard long, and on the faith of those affidavits the admiral claimed the bet. Naturally it had to be referred to arbitration, and the verdict of the arbitrators was, 'Affidavits are not lobsters.'—A New York Campaign Story.

Dec. 4-7.—American Pointer Championship Field Trial Association's inaugural trials. Robert L. Dall, Sec'y.

Dec. 11.—Glasgow, Ky.—Kentucky Field Trial Club's second annual trials. Dr. F. W. Samuels, Sec'y.

For Dog Protection.

Mr. W. G. L. Tucker, former Secretary of the Society for the Protection of Dogs, is now engaged in business in Duluth, Minn., and is already energetically engaged in promoting the welfare and advancement of man's best friend by taking the initiative in forming a new society. On this point the News-Tribune, of Duluth, states that "The object of the proposed society is the protection of dogs and the fostering of an interest in their breeding, by an annual bench show to be held alternately at Duluth and West Superior, and Mr. Tucker thinks the organization ought to be a success. Mr. Tucker said:

"The object of the projected society is primarily protection for dog owners. In this State dogs are personal property, and taxed as such. But if a dog is stolen the police make no particular effort to find the thief, and the matter is regarded a good deal in the light of a joke. With all other property it is different. If thieves take a horse valued at \$10 they are hunted down and generally get a term in prison. A dog may be five times as valuable, but people seem to think that it is no crime to steal him.

"The society should give no reward for the return of the dog, but should offer a reward for the detection of the thief or person concealing the stolen animal. This policy was found most satisfactory by the old society.

"With such a society in working condition it is next to impossible to steal a dog, and keep him concealed. The dog diagram, first used by the old society, when intelligently employed, is an almost certain tracer. The markings on the stolen dog are inserted in the diagram sent broadcast to the members of the society and the police, who are thus furnished with a picture of the animal. This, together with the name he responds to and his height and weight, make identification very easy. In the formation of such an organization one of the principal things is to secure a good attorney as a member, one who will prosecute dog thieves to the full limit of the law. There are no doubt many such lawyers in this city and Superior, men who love a rod and a gun, and admire a good dog, who will employ their best efforts for the animal's protection.

"Along with the annual bench show there might be annual field trials, but this is a detail which can be discussed later. The society should be distinctly social in its scope and no profit whatever should be derived from it. The meetings would bring together a large number of gentlemen, lovers of animals and outdoor life, and at each meeting the good and bad points of a given breed of dogs could be discussed. This would result in great improvement of the canine pets in the two cities.

"I hope to see the organization successfully formed, as I believe it is a good deal of a necessity, and will be of great benefit to dog owners in Duluth and Superior."

Points and Flushes.

The second annual event of the Pointer Club of America, held at Manor, L. I., last week, produced something sensational in the way of a winner, the latter described as a "yellow unknown," owned by Mr. F. E. Norton, of Patchogue, L. I. Mr. W. Ferguson's Frederica won second, Mr. C. Carter's Fred C. won third. It was stated that the contestants were all anxious to learn the winner's pedigree, with a view to obtaining some of his kin, but they may overlook the fact that good field performance is largely the result of actual field work, in which the matter of pedigree may have but incidental value.

The winners at the trials of the Ohio Field Trials Club, whose trials were held at Washington Court House, Ohio, are as follows: Members' Derby—1st, H. L. Brown's Jingo Osceola; 2d, C. W. Tway's Count Oakley; 3d, F. R. Murphy's Czar; 4th, W. H. Stambough's Mr. Jim. Members' All Age Stake—1st, C. W. Tway's Rip Tick; 2d, C. B. Wolfe's Queen Mab; 3d, H. L. Brown's Duchess of Honor Bright; 4th, Dr. D. W. Boone's Paul Boone. Open Derby—1st, H. J. Hoover's Mars Ben; 2d, Stockdale Kennels' Cuba, Jr.; 3d, O'Connell & Erwin's Col. Spot; 4th, Mendina Co. Kennels' Miss Wickliffe. Open All Age Stake—1st, C. B. Wolfe's Queen Mab; 2d, W. H. Dillman's Glen of Noble; 3d, C. W. Tway's Rip Tick; 4th, equal, L. Stuchmer's Count Whitestone and J. A. Morton's King Cyrano.

The Michigan Field Trial Club's trials, held on Nov. 5, resulted as follows: Derby—1st, C. M. Greenway's setter Count Holmes; 2d, Reynold & Perkins' setter Korin Noble; 3d, L. Hilsendegen's Little Cassino. All Age Stake—1st, Clugstone & Monroe's setter King B.; 2d, C. E. Sisson's Petrel's Count; 3d, divided, F. Holmes' Honest Monk and Clugstone & Monroe's Tony's Count.

A correspondent writes, says the London Field, that he has been aware that dogs dread the dark, ever since his

early days when, as a member of the committee of a certain dog show, his share in the management consisted in sitting up at night to see that the ordinary watchman did not slumber at his post. There were dogs which seemed to be able to slip their collars at will, including a great black and white Newfoundland, a savage brute under ordinary circumstances, which ought not to have been allowed unmuzzled. Time after time he got loose from his bench, invariably making his way quietly and fearfully to the small office in which watch was kept, attracted by the dim light. He whined outside for human company, and when this was obtained, the whilom ferocious beast became as quiet and as kindly as any pet lamb. The same correspondent goes on to say that he finds our London fogs, of which we are having such sad experience, seem to be detested by the dogs as much as darkness. Hardly one is seen about where the fog hangs thickly, and the two or three he keeps at home are disinclined to leave their comforts for the murkiness of the streets. We have noticed the same thing, and in our suburban quarters have not, during the prevailing period of typical November weather in town, been disturbed by the yelping and whining of the neighbors' terriers, nor the conflicts between Great Danes and collies, which are, under ordinary circumstances, of daily occurrence in our streets. Still, after all we could put up with the troublesome dogs if the unhealthy fogs would depart.

Canoeing.

'Mid Reef and Rapid.—XXIX.

BY F. R. WEBB.

THE river swept in a majestic curve around to the left. The valley closed in, and became a defile, and the defile became a gorge as the river ate its way down into the depths to join the Potomac, but a few miles below. A mile below Watson's Falls lie the Brick Mill Falls, the intervening reach being a conglomeration of reefs and swift water, only less difficult to navigate than the falls themselves, and requiring nerve and skill to avoid shipwreck. The boat channel, which formerly led along the left bank from lock to lock, is now, for the most part, abandoned and filled up, consequently we were unable to make any use of it, and had to take our chances in the open river.

The long, low, straggling mill dam, just above the falls, was finally reached, and was easily portaged by sliding our canoes over it; Lacy even made the trip without getting out of his canoe, and the head of the falls was reached. The river swings around sharply to the left, and a great reef extends across in line with the left bank, after the manner of many of the mill dams above.

The absolute chaos of rocks, reefs and islands here was confounding. In a word, the river simply disappeared from sight in a wilderness of rocks and bushes. Where it went to we could form no idea. We were bewildered, confused, and had apparently reached the end of it. That it went somewhere the swift, strong volume of water, steadily moving into the labyrinth with undiminished force, and the heavy, pervading roar of falling water gave ample evidence, and warned us to beware how we approached too near in our frail, canvas craft. The massive ledge was worn into fissures and crevices innumerable, through which the chafed and fretted waters made their way, and between which what remained of the ledge stood up in masses of stone of every conceivable variety of shape and size, fantastic beyond description. We had no idea—no conception—that solid rock could be worn into such a variety of shapes by the action of water.

The ever-present tough, hardy bushes—their roots gripping the barren rocks with a tenacious grasp—clothed and subdued everything in a mantle of living green the while they rendered the confusion and chaos the greater.

"Lacy and I made it without touching."

"Great Scott!" cried Lacy, as we paused in utter bewilderment as to where to go next, "I wish I was up a tree, or on top of a mountain, so I could look down and see what has become of the imprecated river."

"Well, we've got to go somewhere," said George, paddling desperately out above the wilderness. "Let's get out and take a look at it somehow or other."

We followed him, but the strong flow of the current down into the unknown labyrinth warned us not to be too rash, so we let our boats drift down upon a low, rocky island, which lay at the head of the ledge near the left side, and seemed to extend down over it, upon which we made a landing to take an observation, if possible.

"I'll tell you what," said George, taking a turn of his painter around the gnarled and twisted stem of a tough little bush at his feet as he spoke. "I'll tell you what. Suppose we shoot that channel there," pointing to a heavy volume of water, which shot around the head of the island between us and the left bank, and, pitching sharply over the ledge, turned to the right, and, with undiminished

force, disappeared from sight among the shaggy, little islets a short distance below. "Look sharp for those rocks, there in the elbow of the bend; bring the canoes round to the right of them and then—"

"It will be hard to do," ventured Lacy, "and I don't know where we'll bring up when we do it."

"Yes, it's hard to do," George admitted, as he plucked a bunch of leaves from the bushes at his feet and chewed at the tough stems meditatively, "but it's all we've got to do, as far as I can see, and it must be done or there's liable to be a capsize or a smash. Well, we'll land on that point of rocks there to the left, 50yds. below, at the end of the shoot, or what we can see of it, and see what to do next."

There appeared to be nothing any more feasible in sight, so, after re-embarking and back paddling a little distance up into the clear, swift water above, to get well in line with the shoot, we essayed it, George first, I next and Lacy last. The run was successfully accomplished at the expense of a few severe thumps all round on the dangerous rocks before mentioned, which were located exactly where they were hardest to dodge, and where they were calculated to get in, their work to the best advantage, and the shipping of a few gallons of water apiece from the big waves as our canoes careened heavily on the rocks.

After landing on the high rocks indicated from above, we found ourselves below the first pitch of the ledge, and in position where we could get a partial view up the falls above. The water comes down over the ledge, not in a long, steady, sloping rapid like Watson's Falls, but in a literal cataract, some 6 or 8ft. in height. The fall was not a smooth, mill-dam-like pitch, but a series of irregular, little, brook-like cascades, through channels and crevices among the huge masses of rock, which completely filled

"My canoe was seized by the remorseless rush and whirled away."

the river bed, so that no open water was visible, above, and it looked as though one might step across from rock to rock, although in reality some of the channels were 20 or 30ft. wide. All, of course, was impassable for any kind of boat.

From our new point of view numerous islands filled the river above and below, but a tolerably broad stream, formed by the union of numerous small streams and chutes over the falls, led away below. The channel down which we had just arrived led around the lower end of the rocky islands above and debouched into this main channel at a right angle. A huge ledge obstructed the exit into this channel, over which the water plunged in a foaming sheet, too shallow to admit of our shooting it.

"Now," said George, as he picked up his paddle from the bushes, where he had carelessly thrown it on landing, "we'll portage this ledge and make that point of rock there, on the left, where the channel seems to turn around it, and land and reconnoitre again."

"We can shoot it over at the right-hand end, beyond that mass of rocks, there," said Lacy, as he clambered down off the rocks and into his canoe.

"All right, go ahead," said George; "I don't think it worth the trouble, myself."

The shoot was rough, but deep, and Lacy and I made it without touching, while George, from his position on the rocks, drifted his canoe over the ledge by maneuvering her with her bow and stern painters, and we shot swiftly down to the rock indicated.

From our new point of observation the open channel, broadening as it went, led straight away for a quarter of a mile, until it finally rippled out into the smooth, open river below, whose lake-like expanse, with the little ripples sparkling in the sun, as it was caressed by the breeze, smiled tantalizingly at us, as we hung up on the rocks but half-way to its smooth haven, for, while we were below the falls, this channel was a rapid, so rock and reef ribbed that it was out of the question to attempt to run it; although close around its right side, or along the left side of the long, tree-clothed island, in midstream, which extended from above the falls to the still water at the foot of the rapid, a tolerably practicable shoot seemed to present itself.

"Ah, here we are!" I exclaimed in delight, as I hastily scrambled down into my boat again, as, having surveyed this rough, unpromising channel, my eye, in swinging across to the left side, upon which we stood, rested upon a sharp, little rapid which swung around to the left at our feet, swinging around the head of an island just below us, while, at the point where it was lost to sight, embowered among the trees and bushes on the mainland on the left, could be discerned the massive stone walls of an old lock, from whose open portals a swift, little stream of water shot out, and mingled with the stream below. "There's the boat channel again! We'll shoot this rapid and then we'll be in it, and I'll wager a beer to a biscuit we'll reach the mill without further trouble."

This view was, of course, shared by the other two, and, hastily re-embarking, we pushed out into the current and shot swiftly over the head of the rapid, and danced merrily down its rough slope.

As we passed the old, disused lock and straightened out around the bend, we saw that my prognostication was correct. We were in a swift, clear, little channel, over-arched with big trees on each side, which led straight

away for a quarter of a mile, at the end of which loomed up the walls of the brick mill on the left bank of the river, which we knew to be at the foot of the rapids below the falls, and, in a few minutes more, we made a landing on a sandy, shady beach below the mill, and sponged the water out of our canoes, where we were speedily surrounded by a little crowd of employees and idlers from around the mill, who listened with interest to our story, told while we were eating our noonday lunch.

After lunch I lit a cigar and wandered up to the mill—a large, brick structure—and took a look at it, and at the thrifty, little hamlet surrounding it, after which I crossed the race on the logs spanning the forebay, and strolled along up its shady banks a few hundred yards, until I came to the old lock before mentioned. It was substantially built, with stone walls, and, although out of use for years and years, could have easily been put in good repair again by the construction of a pair of lower gates, the upper gates still remaining intact and in good condition. It led from the race—into which the boat channel evidently debouched somewhere up above the dam—into the river below, and was some 15 or 18ft. deep. Returning to the mill, I passed through its lower floor. A horizontal line on its whitewashed brick walls up near the ceiling of the first floor was pointed out to me as the high-water mark of the great flood of 1870; the high-water marks of ordinary years do not come nearer the mill than to wash its basement walls.

"Boys, I've got an idea!" I exclaimed, as I rejoined the party, and seated myself on my camp stool.

"You surprise me," Lacy responded, looking up abstractedly from his book, and utilizing the interruption by knocking the ashes out of his pipe against the heel of his shoe, and replacing the pipe in his pocket.

"Get it out quick!" exclaimed George. "It might expand if you keep it too long, and do you some damage in your thinking fixings."

"That's all right," I responded, lighting a fresh cigar from the stump of the old one. "I have them frequently, and never experience any ill effects from them. It is this," as the stump of my old cigar fell hissing in the water, while a tiny curl of steam hovered over the little ripple, where it floated. "The next time we come down over those falls just above there, we won't do it; we'll come down the mill race from above the dam until we reach the mill, and then carry the canoes down the bank just above the mill, into the river again. It's infinitely easier, and there's no sport in running the falls, and I, for one, have been cruising too long to care for working through such places just for the glory of it."

"Right you are, Roderick!" exclaimed Lacy. "That's not a bad idea," said George. "When and where did it strike you?"

"While I was looking around up above there," I responded. "The mill hands told me the flatboats used to come down the race to the lock just above the mill, and the race is perfectly free and open from the dam clear down to the mill."

"How far is it?" asked Lacy.

"A half or three-quarters of a mile," I replied, "every foot of which is difficult and dangerous in the river."

"It is that," assented George. "Now, just to give you some idea of the fall of the river in this distance, you can see by the overflow from the race there that it is some 15 or 20ft."

"Yes, and there is a good, stiff current all the way down the race, too," I answered, as I picked up the mess chest and replaced it in my canoe. "I was told at the mill that the fall of the river, from the old stone factory at the head of Watson's Falls to this mill here, about a mile and a half, is 37ft.," as I finished my repacking and closed and fastened my hatches.

"It isn't but four or five miles to Harper's Ferry," said Lacy, as he laid his book aside, and settled himself comfortably back on his mattress, "and it's only a little after 1 o'clock, now; what's the matter with lying by here a couple of hours or so and taking a comfortable siesta? We've had a hard morning's work, and I'm tired, and there's no occasion for our rushing off so hurriedly."

"It won't do," said George, decisively, as he also set

"She was seized by the big surges and buffeted violently right and left."

about his repacking and other preparations for departure. "The distance is not great, but you've got the biggest afternoon's job cut out for you you've had yet on this cruise to get to Harper's Ferry this evening."

"All right," said Lacy, as he picked up his book and reluctantly rose from his mattress. "Just as you say, but it certainly seems to me there's plenty of time."

The river flowed broad, still and deep, a quarter of a mile wide or thereabouts, for two or three miles—a noble, majestic stream, in whose mirror-like surface the mountains, as they crowded in around us on every side and reared their great, green shoulders in stately confusion from the river, were faithfully reflected, their outlines broken in curious, quivering distortions by the long, gentle furrows that led away in wavering, V-shaped lines from the bows of our canoes.

As we rounded a stately bend to the right, we noted the tracks of the Baltimore & Ohio Railroad winding

Nov. 23, 1901.

down out of a little chasm-like ravine in the mountains at our left, out of whose depths a little stream came brawling and foaming down into the river. The road, like the brook, seemed glad to join the river, and glided smoothly along the left bank in company with the stream down the gorge.

A familiar scream saluted our ears as we entered this reach—the first of the kind we had heard for some days—and a passenger train came spinning up the incline, and, with much bell-ringing, whistling of air brakes and hissing of steam, came to a stand at the little station opposite. Our graceful, little fleet, floating idly in the placid river off the station, and in full view of the train, attracted considerable attention and much waving of handkerchiefs from the passengers, one of whom was seen to rush out on the rear platform and energetically wave his handkerchief at us until, with a few sharp coughs and considerable slipping of drivers on the steep, up-hill track, the train got under way again and disappeared up the ravine. "Some Staunton man who recognizes us, probably," said Lacy, replacing his helmet on his head, after vigorously returning the friendly demonstrations.

"Yes, or possibly some traveling canoeist, who recognizes the kindred spirits in us," I answered.

The broad, still reach ended in a heavy rapid, or fall, so full of reefs that it looked from above, as we approached it, as though the river ended then and there. There is a good boat channel, clear, but very rough and swift, leading down, close along the railroad, down which we swiftly shot, and we were soon below the rapid, and in the short, smooth stretch just above Bull's Falls.

"I think we'd better all go ashore here and examine the falls," said George, beaching his boat on a broad, flat rock as he spoke.

"Yes," I replied, as I landed and stepped out on the rock alongside of him. "We'd better all take a good look at this place, and the rapids below as well, for they are fully as bad as the falls and in some respects worse."

We accordingly climbed the high, perpendicular stone wall upon which the railroad is sustained, and walked down the river on a tour of investigation.

Bull's Falls consists of a massive stone ledge, some 6 or 8 ft. high, extending diagonally across and down the river, from the right bank to the left, upon which we now stood. The water pours in foaming masses through gaps and crevices in its surface, rounded and worn smooth by the floods and storms of ages, while for a quarter of a mile below the river rolls and tumbles in a furious rapid, almost as rough as the falls. Close up under the railroad wall, a narrow, little canal, some 30 or 40 ft. long, leads around the end of the falls, from which it is separated by a long, narrow, tree-clothed island. The descent, of course, is equal to that of the more perpendicular falls outside, and the water rolls and pitches down this narrow, little incline with irresistible violence, while the foam-crested surges pitch and toss from side to side in a manner very threatening to the equilibrium of such delicate craft as ours.

The mountains closed in on either side, rearing their almost perpendicular, rock-ribbed sides sheer from the water, far up toward the light, fleecy clouds overhead, until the cañon became a mere defile, along the bottom of which the river chafed and fretted its way, while far away, at the end of the long, down-hill vista, the perpendicular cliffs and ledges of Maryland Heights, on the other side of the Potomac, closed squarely across the prospect, and the houses and spires of Harper's Ferry were faintly visible, looking like little, white, pasteboard boxes, scattered around here and there over the giant mountain flanks.

At the bottom of the defile the river turned and twisted and rolled and tumbled, as it worked its way, far down at the rock-ribbed bases of the mountains, on its way down to the level of the Potomac.

"The shoot's all right," said George, as we reached the foot of the rapid below the falls and turned to retrace our steps, "and the rapids are all right."

"Yes, but both are horribly rough," replied Lacy, "particularly the shoot."

"We can run it safely enough," I answered, "and the rapids also."

"Oh! yes," he replied, "there's no question of our making the run safely enough."

"Now," said I, as we paused a little, to take a final look about us, "I move that we run the shoot and then the rapid, and then pause here, in this little basin above that fish dam, just below there, and then take another survey, and see what's ahead of us before going on."

"I think that will be best," said George, as we walked back up along the railroad toward our canoes. "This gorge is not to be run carelessly without investigation."

"That it is not," I responded.

"Now you fellows wait a little," said George, as we again stood on the wall above the foaming boat shoot around the falls, "and let me go up and get my canoe and drop down to that still water just above the falls. I'll land there and work down along the rocks at the water's edge, and get a position on that broad, flat rock, there, just below the head of the shoot, and take you with the kodak as you go down."

No one objecting to this reasonable and thoughtful proposition, George departed, and was soon in position on the rock indicated.

"I tell you it's rough," he shouted up at us, as we still stood on the wall above, looking down at him, "but it's clear of rocks, and can be safely run. Come ahead, one at a time, and close your hatches tightly."

Lacy and I returned to our canoes and clambered down the wall and re-embarked, and pushed out into the still water, setting strongly down toward the falls. He went first, while I, after reaching a good position where I could see him go down the shoot, held my canoe stationary by back paddling, to see him go.

With a friendly shout to George he entered the canal and dropped over the verge of the fall. As I watched I noted him drop down in a series of little jerks or plunges; first his canoe disappeared; next only his head and shoulders were visible; finally, with a lunge, in which I got a fleeting glimpse of the uplifted stern of his canoe, he disappeared entirely from view.

[TO BE CONTINUED.]

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Yachting.

Designing Competition.

IN view of the continued and increasing interest in yachting, a designing competition will be opened in the columns of FOREST AND STREAM. In America the yachting season is comparatively a short one, and such a competition as has been determined upon will serve to stimulate the interest in the subject during the winter months. The competition is open to both amateur and professional designers. Three prizes will be given for the best designs of a yacht conforming to the following conditions:

- I. A pole mast sloop.
- II. 25 ft. load waterline.
- III. Not over 4 ft. draft (with centerboard hoisted).
- IV. At least 50 per cent. of ballast outside on keel.
- V. 5 ft. headroom under cabin carlins.

All abnormal features must be studiously avoided in the design; and the construction, sail and cabin plans should be of the simplest character. It was our idea in laying out the conditions of the competition to make them simple as possible, so as not to hamper in any way the designer, and yet convey to all that we wished to produce a safe, comfortable cruiser on which two or three amateurs could live with comfort for a period of two or three months and cruise along our eastern seaboard from New York to Halifax with safety. A centerboard boat of moderate draft was decided upon, as so many more harbors would be accessible to a boat of that type.

DRAWINGS REQUIRED.

- I. Sheer plan, scale 1 in. = 1 ft.—showing center of buoyancy and lateral resistance.
- II. Half breadth, scale 1 in. = 1 ft.
- III. Body plan, scale 1 in. = 1 ft.
- IV. Cabin plan, scale 1 in. = 1 ft.
- V. Sail plan, $\frac{1}{4}$ in. = 1 ft., showing center of effort.

The sails should consist of a jib, mainsail, spinnaker and balloon jib. No top-sail will be carried.

A table of offsets and an outline specification must accompany each design. The drawings should be carefully drawn and lettered. All drawings should be made on white paper or tracing cloth in black ink (no colored inks or pigments should be used). The designs must bear a nom-de-plume only and no indication must be given of the author. In a sealed envelope, however, the designer should inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than February 28, 1902. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all the designs.

The prizes offered are as follows: 1st prize, \$25.00; 2d prize, \$15.00; 3d prize, \$10.00. Mr. Theodore C. Zerega offers an additional prize of \$10.00 for the best cabin plan. Honorable mention will also be made of meritorious designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has kindly consented to judge the designs and make the awards. Mr. Crane's professional standing is so high that he needs no introduction, and every confidence will be put in his ability and fairness.

Y. R. A. of Long Island Sound.

AN adjourned meeting of the Yacht Racing Association of Long Island Sound was held on Friday, Nov. 15, at the Hotel Manhattan, New York city. A committee which had been appointed by the Association to confer with the Larchmont and Seawanhaka Corinthian yacht clubs regarding some modifications that might be made in the new measurement rule that was under consideration for adoption by the Association, reported at this meeting. It was found that the rule was perfectly satisfactory to both the Larchmont and Seawanhaka Corinthian yacht clubs, and they did not see their way clear to make any modifications.

After some discussion the rule was unanimously adopted by the different clubs belonging to the Association. The rule we reprint for the benefit of those who are not familiar with it:

$$\frac{1}{2} L.W.L. + \frac{1}{2} \sqrt{S.A.} + L. = R.L.$$

i.1

The quantity L is to be obtained in the following way: B is breadth of load waterline plane at $\frac{1}{8}$ of its length from forward end.

B' is breadth of load waterline plane at $\frac{1}{8}$ of its length after end.

B'' is breadth (greatest) of LW plane.

C is any excess of (B + B') over B''.

D is draft at MS + 2-5 of any greater draft aft, and all of any greater draft forward.

E is any excess of (B'' + D) over $3 \cdot 1 \cdot 3 \sqrt{MS}$ submerged.

C + E = L.

The rest of the rule as modified reads: Any yacht launched before Jan. 1, 1902, whose measurements are made under the rule of the previous year, brought her within the limits of a class, shall continue to be eligible to race in such class, although when meas-

ured under the rule of 1902 she may exceed the limits of such class, or may fall below it, and all such yachts shall be rated for time allowance at their actual measurements under the rule of 1902. All such yachts may be entered and raced during the season of 1902 under their measurements made under the rules in force in 1901, or under the rules of 1902, at the option of the owners.

Yachts launched after Jan. 1, 1902, shall not be entitled to time allowance except from yachts launched prior to that date whose measurements may exceed the class limit. Yachts launched after Jan. 1, 1902, shall allow time to smaller vessels launched before the date named.

Western Yachts.

Both Want the Fourth.

CHICAGO, Ill., Nov. 15.—The Columbia Yacht Club and Chicago Yacht Club have rather fallen afoul of each other in the matter of the date of July 4. This is the date which was formerly accepted as the annual regatta day of the Lake Michigan Yachting Association. It has been held by the Columbia Yacht Club for its annual regatta for the last two years, and the latter claims that since it has invited Sir Thomas Lipton to be present at the regatta July 4, 1902, it cannot now surrender this date. Chicago Yacht Club asked for this date at the annual meeting of the Lake Michigan Yachting Association at the Briggs House this week. No conclusion was reached, but it is to be hoped that the matter will be amicably settled between now and the date of the next meeting, Dec. 9.

Chicago Yacht Club is in a highly flourishing condition and thinks of increasing its membership to 500 instead of 400. The dissolution of the injunction which so long forbade the building of the club house has had a very salutary effect upon the club's affairs. Several new boats are planned for next year, and all in all the club seems to be on the best footing it has ever known since its beginning. It is probable that the anchorage for the boats of the Chicago Yacht Club will be moved to the southward next spring, and that the present anchorage will fall to the use of Columbia Yacht Club. There were something like seventy yachts in Chicago harbor last summer, and the number will be largely increased next season. The new club house of Chicago Yacht Club is now being rushed on in an attempt to finish it before extremely cold weather sets in.

E. H.

A New Marine Turbine.

IN a recent issue of the Scientific American there appeared the following interesting account of a steam turbine that was designed by Colonel John Jacob Astor. It is expected that the new turbine will be an improvement over the famous Parsons engine with which the greatest speeds have been made:

"The Astor turbine is distinguished broadly from the best known existing forms by the fact that it has no stationary parts other than the journals and foundation frames which carry it, the casing of the turbine revolving as well as the shaft, but in an opposite direction. The general construction of the motor consists of an interior shaft which extends from the forward journal through to the rear propeller. Upon this shaft is formed a series of spiral blades, which have a steady increase in diameter from the forward or admission end of the turbine to the rear or exhaust end. The shaft and blades rotate within a flaring, funnel-shaped casing, around the inner surface of which is formed another series of spiral blades, also of increasing diameter, whose twist is in the opposite direction to that of the blades on the shaft, the two sets of blades or vanes being respectively right and left handed. The tubular casing is drawn down at the exhaust end to form a hollow shaft, which incloses the central shaft, and extends through the deadwood and the sternpost. The propellers are right and left handed to match the direction of the blades of the respective shafts to which they are keyed, the two propellers thus rotating in opposite directions.

"The casing increases in diameter at the proper rate to secure an even rate of expansion of the steam, which is conducted from the exhaust through a length of piping formed in the keel of the launch, the keel thus being made to serve the purpose of a condenser. The condensed steam collects in a well from which it is drawn by the boiler feed pump. Steam is admitted to the forward end of the turbine, and, striking on the two sets of blades, the shaft is rotated to the right and the outer movable casing to the left, the respective propellers being, of course, driven in corresponding directions."

YACHTING NEWS NOTES.

Mr. Fred S. Nock, of West Mystic, Conn., has been commissioned by Mr. Wilbur C. Fisk, of New York city to make plans for the alterations to the sloop yacht Annie, changing her from sloop to yawl rig, lengthening her eight feet and installing a gasoline motor. Mr. Nock has also gotten out plans for a 30 ft. half-cabin launch for Mr. W. E. Pearson. Mr. Nock has recently made the following sales: The sloop yacht Tally-Ho for Mr. Edward G. Anderson, of Providence, R. I., to Mr. Ulric Dahlgren, of Princeton, N. J.; the launch Sitka for Mr. F. A. Bayer, of Newport, R. I., to Mr. E. J. Mills, of Boston; the 40 ft. launch Spray for Mr. E. W. Coon, of Westerly, R. I., to Mr. John E. Beebe, of Mamaroneck, N. Y.

The Electric Launch Company, of Bayonne, N. J., have made numerous improvements in their plant. A marine railway has been built and when the new cradle is completed boats up to 200 tons and 10 ft. draft can be hauled out. This firm is now building a 50 ft. launch for Mr. J. D. Johnson. The boat will have two pole masts and will be schooner rigged. She will have a clipper bow and an overhanging stern. A 16 horse-power Globe motor will furnish the motive power. The following yachts are either hauled out or lying in the basin at the Electric Launch Company's works: Yawls, Alcatorda, Kitten and Jester; sloops, Desiree, Annie and Wahnetta; raceabouts, Ora and Alice; catboats, Fugitive, Drift, and Arab. In addition to this list there are a number of launches in winter quarters from 50 ft. waterline down,

Alcatorda.

THE auxiliary yawl Alcatorda, the plans of which boat appear in this issue, was the first sailboat built by the Electric Launch Co., of Bayonne, N. J. She was designed by Mr. Charles G. Davis, the designer for the company, for Messrs. Eugene and E. D. Lentilhon, of New York city.

After a season's constant use the owners speak most highly of the boat, as she has proved fast and able under all conditions of wind and weather. Alcatorda won the only race she was entered in, which was one of the regattas held by the Penataquit Corinthian Y. C., of Bayshore, L. I. The rest of the time she has been used for cruising between New York and Newport, R. I. Her best point of sailing is to windward in a strong breeze of wind, and under such conditions outpoints and outfoots other boats of her size.

Her dimensions are as follows:

Length—	
Over all	55ft.
L.W.L.	35ft.
Beam—Extreme	15ft.
Draft—Board up	3ft.
Freeboard—	
Least	3ft.
Bow	5ft. 11in.
Taffrail	3ft. 9in.
Overhang—	
Bow	8ft.
Stern	12ft.
Sail Area—	
Jib	200 sq. ft.
Mainsail	1,200 sq. ft.
Mizzen	320 sq. ft.

Total 1,720 sq. ft.
 Displacement 13.5 tons
 The motive power is furnished by a 10-horse-power Globe motor, which propels the boat at a speed of eight

miles an hour. Her gasoline tanks have a capacity of seventy gallons.

Alcatorda's sail plan is very moderate considering the boat's great power. It is very seldom that it is necessary to reef, and the boat sails in a very erect position.

The interior arrangement is shown clearly on the cabin plan, and may be open to some criticism, but it was laid out to meet the requirements of the owners. There is 6ft. 3in. headroom under the cabin house. The cabins are fitted with raised panels of light figured cypress with stiles and rails of dark cypress. The balance of the cabinet work is of mahogany.

The hull has an oak keel, stem, deadwood, tail feather and false transom. The frames are steam bent oak, not beveled, but bent square to the plank while hot. The frames are 1 3/4 in. by 1 3/4 in., spaced 11 in. on centers. The planking is of long lengths of yellow pine, 1 1/2 in. thick when finished, screwed to frames and plugged. The clamp and shelf are of heavy yellow pine. The chain plate timber is of double size, with another timber bent inside of it running in one piece from shelf to shelf and riveted to the heavy timber.

The chain plates are of white metal straps let into outer face of timber, being inside the planking. The deck is laid in narrow strips of 1 1/2 in. by 1 1/2 in. white pine. The sides of the cabin house are of oak. The cabin top is of pine covered with canvas. The cockpit is staved inside with mahogany. Skylight and companionway is of mahogany.

The spars are of clear spruce and the standing rigging is of plow steel wire rope, set up with turnbuckles. The bobstay is of phosphor bronze 3/4 in. in diameter.

Two boats are carried on the davits. All the ballast is inside. Her crew consists of one man and a boy.

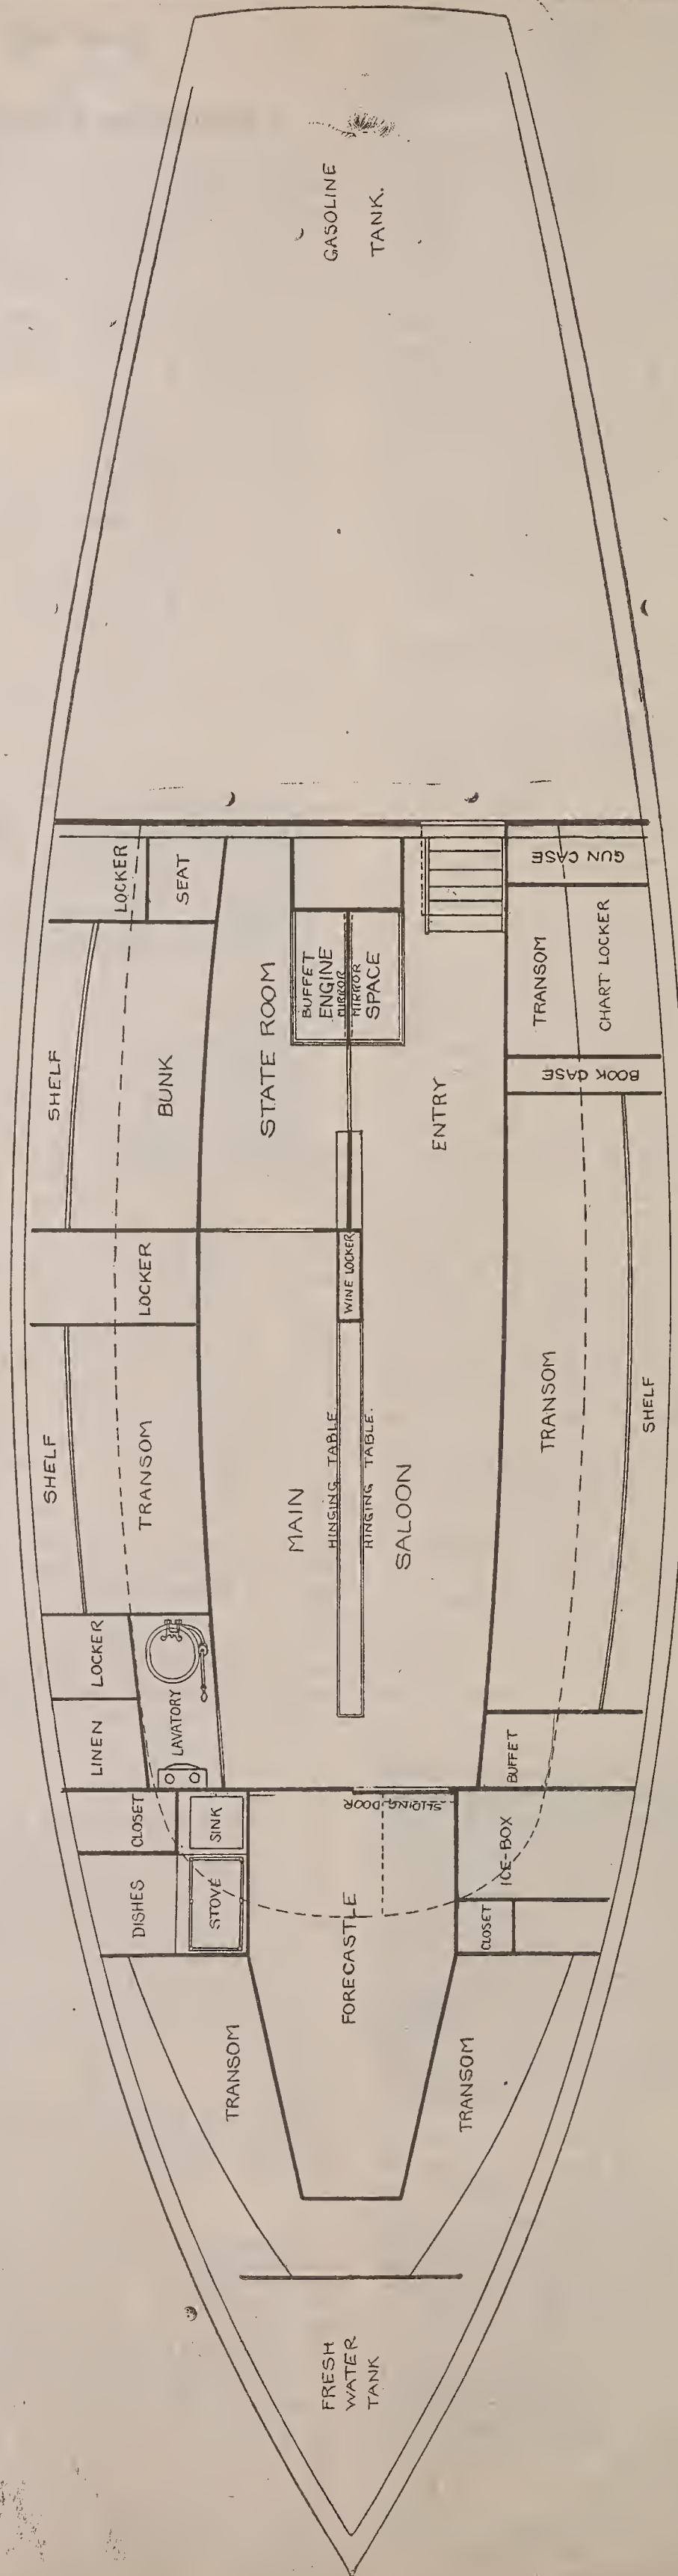

Alcatorda was started on March 10, 1901, and launched on May 8, 1901. Although this may seem a short time to turn out so large a boat, she is a splendid piece of work and a credit to her builders.

Yacht Club Notes.

The fifth general meeting of the Seawanhaka Corinthian Yacht Club was held at Delmonico's on the evening of November 12. Mr. Frank S. Hastings presided. Resolutions of regret at the death of Mr. Frederick H. Benedict were adopted. It was decided to hold monthly meetings throughout the year. Supper was served to the forty members who were present after the meeting.

The work of transferring the club house of the New Rochelle Y. C. from its old location in Hudson Park to the new site on Harrison Island was completed on Friday, Nov. 8. The work of getting the building in shape for the trip across Echo Bay took nearly a month. Mr. J. C. Burdsal, an architect, has drawn plans which call for the connection of the club house and the old Harrison mansion, and when the work is completed the New Rochelle Y. C. will have one of the finest club houses on Long Island Sound. The club has leased Harrison Island from Mr. Adrian Iselin for ten years.

The Seawanhaka International Challenge Cup.

WE reprint in full the circular issued by the Bridgeport Y. C. regarding the conditions governing the cup and the general regulations governing the match and trial races for 1902. It reads as follows:

The Royal St. Lawrence Y. C., of Montreal, Canada, having accepted the challenge of the Bridgeport Y. C., of Bridgeport, Conn., for the Seawanhaka International Challenge Cup for Small Yachts, and the conditions governing the match having been arranged, the Bridgeport Y. C. can now announce both these conditions and those that will govern the trial races for the selection of its representative yacht.

The contest being an international one, the Bridgeport Club hopes to interest other American yacht clubs in its effort to regain the cup. To this end it proposes to hold open trial races for the selection of the challenger, in order that the fastest possible American boat may be sent to Canada next year. A cordial invitation is extended to all American yacht clubs to enter boats in the trial races which will be held off the Bridgeport Y. C. on June 30 and July 1, 2 and 3, 1902. Suitable prizes and a trophy for the yacht selected will be awarded to the winners in the trial races.

For the information of any who may be interested in the subject, and especially for the guidance of those who may contemplate making entries in the trial races, the Regatta Committee announce the following general conditions governing the cup, which are extracts from the Deed of Trust executed by the Seawanhaka Club, and the following general regulations for the control of the match which have been agreed upon with the Royal St. Lawrence Y. C.

Conditions Governing the Cup.

Article I.—The cup shall be known as the Seawanhaka International Challenge Cup for Small Yachts, and shall be preserved as a perpetual challenge cup for friendly competition between foreign countries. The term foreign as used in this instrument shall be so construed as to permit contests for the cup between any country and its colonies and dependencies and between such colonies and dependencies themselves.

Article II.—Any organized yacht club in good standing in any country, foreign to the country of the yacht club in whose custody the cup may be, shall always have the right to challenge for the cup and to sail a match therefor, provided that such challenge shall be made and such match be sailed in accordance with the terms and provisions of this instrument.

Article III.—Matches for the cup shall be limited to yachts propelled by sails only, whose racing measurement or size shall not exceed the maximum limit of the so-called "Twenty-five-Foot Racing Length Class," or fall below the minimum limit of the so-called "Fifteen-Foot Racing Length Class" of the Seawanhaka Club, as such classification exists at the date of this instrument, or whose racing measurement or size, according to the rules of the club having, at the time of the challenge, the custody of the cup, falls within limits of size substantially corresponding to the limits above specified.

Article IV.—All matches shall be sailed between a single yacht on behalf of the challenging club and a single yacht on behalf of the challenged club. Neither club shall be required to name its representative yacht in advance of the races, but the match shall be sailed to a conclusion between the yachts selected for, or sailing the first race thereof, and no substitution of one yacht for another shall be permitted after the preparatory signal of the first race has been given.

Article V.—A match shall be constituted of not less than three or more than five races, and shall be awarded to the club whose representative yacht shall win a majority of such races.

Article VI.—The representative yachts of the challenging and challenged clubs must be designed and constructed in the respective countries of such clubs. Centerboards or plates, or sliding keels, shall always be permitted in construction, and no restriction shall be placed upon their use. All ballast must be fixed.

Article X.—The helmsmen, sailing the representative yachts in the match, must be amateurs and must be residents of the countries of their respective clubs. The challenging and challenged clubs must name, in writing, each to the other, or to their respective representatives, at least twenty-four hours before the day appointed for the first race, the helmsmen who will sail their representative yachts, and such helmsmen shall sail such yachts in all the races of the match, unless prevented by illness, or other substantial cause, in which event substitutes will

be allowed.

Article XI.—The challenging and the challenged clubs may by mutual agreement fix and decide all the terms and conditions of the match, whether relating to dates, courses, rules of measurement, sailing regulations, notices or any other matter whatsoever pertaining to the match or preliminary thereto, and may also by mutual agreement waive for such match such of the provisions of this instrument as would otherwise govern the match or the preliminaries thereof, provided, however, that the limit of the racing length or the size of the competing yachts shall in no event exceed the maximum limit as established by this instrument in Article III. thereof, unless the consent, in writing, of the Seawanhaka Club to so increasing such limit shall first have been obtained.

The following general regulations governing the match for 1902 have been arranged by the Bridgeport Y. C. and the Royal St. Lawrence Y. C., subject to such modification of detail as may hereafter be agreed upon between the clubs.

General Regulations Governing the Match and Trial Races for 1902.

Article 1.—The course shall consist of a triangular course, and a course to windward or leeward and return. Each leg of the triangular course shall be one and one-third nautical miles in length, and shall be sailed over three times, making a total of twelve miles. The course to windward or leeward and return, shall have a total of twelve nautical miles; each leg shall be, if possible, two nautical miles, and shall not be less than one nautical mile.

Article 2.—The match shall be awarded to the yacht winning three of five races. The races shall be sailed alternately over the triangular and the windward or leeward and return courses. The first race to be triangular, or windward and return, as the winner of the toss may elect.

Article 3.—The races shall be sailed under the management of three judges, one shall be appointed by each club and the two so appointed shall elect a third on or before July 1, 1902. They shall act as judges and timekeepers, shall direct laying out the course, shall decide whether the contestants come within the prescribed measurements and scantling restrictions, and shall settle all disputes. The decision of a majority shall be final in all matters pertaining to the contest.

Article 4.—Each club shall name its representative yacht five days before the first race.

Article 5.—The start shall be a one-gun flying start, with a preparatory signal.

Article 6.—The races shall be sailed without time allowance.

Article 7.—Yachts must not exceed 25ft. racing length, measured under the following rule: L.W.L., plus the square root of the sail area, divided by two, equals the racing length. Yachts shall be measured without crew on board, but with a deadweight of 450lbs., which shall be carried amidships, approximately at the center of buoyancy during measurement. The sail area must not exceed 500 sq. ft., as determined in Article 8. A yacht's draft of hull or keel shall not exceed 5ft., and with centerboard down shall not exceed 6ft. Draft shall be determined when yachts are in trim for racing. Center-

boards shall be so constructed that they can be wholly housed without leaving any projection below the hull or keel.

Article 8.—The factor of sail area used in determining racing length, shall be ascertained by adding to the actual area of the mainsail computed from its exact dimensions, the area of the foretriangle. The hoist of the mainsail when measured, shall be plainly marked on the mast, and its outer points on the boom and gaff or other spars used to set the sail, and the sail shall not be set beyond these limiting points. The foretriangle shall be determined by the following factors: (1) The perpendicular shall be the perpendicular distance between the deck and a point on the forestay, where the line of the after leech of the jib intersects the forestay, above which the jib shall not be hoisted. (2) The base shall be the distance between the forward side of the mast at the deck and the point of intersection of the forestay with the bowsprit or hull. Any jib when set must not extend beyond the upper and forward points above defined. Sails shall be limited to mainsail, jibs and spinnaker. The total area of the mainsail and foretriangle shall not exceed 500 sq. ft. The area of the spinnaker measured as a triangle, whose base is the length of the spinnaker boom measured from its out end, when set to the center of the mast, and whose perpendicular is the distance from the deck at the fore side of the mast to the spinnaker halliard block, shall not exceed twice the area of the foretriangle. All jibs and spinnaker must be triangular sails, but each may have a small club on the head, not exceeding five per cent. of the base of the foretriangle.

Article 9.—The spinnaker boom, when used in carrying sail, shall not be lashed to the bowsprit or stem head, nor

shall the spinnaker boom be allowed to rest against the forestay, but a yacht shall not be disqualified if it go forward by accident and is not allowed to remain.

Article 10.—Shifting ballast shall not be allowed. (Centerboards shall be considered as fixed ballast.)

Article 11.—No outrigger or other mechanical device for carrying live ballast outboard shall be allowed.

Article 12.—Centerboards shall not be loaded except to overcome flotation, but metal plates may be used under the following restrictions. The centerboard may be of steel, or iron plate, of practically uniform thickness, and not weighing over 450lbs. The centerboards, if of brass, bronze, or metal other than steel or iron, may not be over $\frac{3}{8}$ in. thick at any point; shall be of uniform thickness, and shall not weigh over 300lbs.

Article 13.—Yachts must sail throughout the series of races with the same amount of fixed ballast, and center-

of trust.

Article 18.—The provisions of the Declaration of Trust, so far as the same are inconsistent with the foregoing articles, are hereby waived, but in all other respects shall govern the match.

Trial Races.

The trial races will be held off the Black Rock red spar buoy on June 30 and July 1, 2 and 3, 1902.

The courses will be alternately triangular and to windward and leeward and return. The legs of the triangular course shall be one and one-third nautical miles each, and the windward and leeward course shall be two nautical miles.

In the trial races the committee will stop the boats at the end of each round of four miles. Five minutes after the last boat finishes the second round will be started. The third round will be started in a like manner. Three rounds will be sailed each day.

Starts and Signals.

The start will be a one-gun flying start with a 5m. preparatory signal, and will be made at 12 o'clock noon across a line between Black Rock buoy and the committee steamer.

First Signal—Preparatory. The club burgee on the committee steamer will be lowered and a blue peter hoisted.

There will be an interval of 5m. between the first and second signals.

Second Signal—Start. The blue peter will be lowered and a red ball hoisted.

Note.—Attention is called to the fact that the flags and balls constitute the signals; the guns merely calling attention thereto.

Special Conditions.

(1) The yacht selected to represent the club shall be the one, which, in the judgment of the Regatta Committee, shall be the best adapted therefor, and not necessarily the winner of a majority of the trial races. The committee will exclude from competition any yacht possessing peculiar or "freak" features, which in their judgment are objectionable and unfair. Additional races may be ordered by the committee between such contestants as they may select.

(2) The owner of each yacht entering for the trial races must on or before June 28, 1902, furnish to the chairman of the committee, the racing measurement of his yacht certified by the measurer of the Bridgeport Club.

(3) Each yacht must carry a racing number, fastened securely on both sides of the mainsail.

(4) In the event of any race being postponed or ordered resailed, it will be sailed at as early a date as may be practicable.

Entries.

All entries for the trial races must be made by the clubs to which the owners of the respective yachts entered belong. Clubs intending to make entries are requested to notify the chairman of the Regatta Committee, and will be furnished with printed or written blanks, upon or in accordance with which entries must be made, and full instructions relative to the match, and, at the request and upon the responsibility of any club entering a yacht to compete in the trial races, all the privileges of the club house at Black Rock will be extended to the owners and amateur crew of the yacht so entered during the period occupied by the said races, upon the same terms as to members of the club.

T. H. MACDONALD, Chairman,

W. M. RICHARDSON,
Regatta Committee Bridgeport Y. C.

Mr. Peter Donaldson, the famous Scotch yachtsman, has purchased the composite cutter Bona.

One of the Buzzard's Bay one design 30-footers has been launched from the Herreshoff yard at Bristol, R. I., and a few days ago had a trial trip. The boat was in charge of Mr. Nat. Herreshoff, and showed up well under sail.

Rifle Range and Gallery.

One Hundred Shot Rifle Championship Match.

On Election day, Nov. 5, there was a match of unusual interest shot at Greenville Schuetzen Park, Greenville, Jersey City, N. J. This contest was for the 200yd. outdoor championship of Greater New York and vicinity. This match has been shot for several years past, and is regarded as one of the great events in the match rifle circles of this country.

While this particular contest is confined to New York city and vicinity, riflemen in different parts of the country have become so interested in the event that it is customary to shoot a similar match, elsewhere, in order that their scores may be compared with the Eastern experts.

The event this year was a hard-fought contest for supremacy. It was won by F. C. Ross, of the Zettler Rifle Club and the Elite Schuetzen Corps, formerly of Brooklyn, N. Y., but now of Chicopee Falls, Mass., his score being 2,238 points. The conditions of the match were 100 shots on the German ring target, at 200yds. off-hand—a severe test of skill for any marksman.

Mr. Ross, Dr. W. G. Hudson, of New York city, and L. P. Ittel, of Pittsburg, Pa., the two latter winners of second and third places respectively, used Kink's Semi-Smokeless powder. The records of the contest show that the first nine men used this powder, and out of the sixteen contestants in the match, fourteen used it.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Nov. 20.—Sistersville, Va.—Fall tournament of the Sistersville Gun Club; \$80 added money. Ed. O. Bower (Dade), Sec'y-Treas.

boards shall be so constructed that they can be wholly housed without leaving any projection below the hull or keel.

Article 8.—The factor of sail area used in determining racing length, shall be ascertained by adding to the actual area of the mainsail computed from its exact dimensions, the area of the foretriangle. The hoist of the mainsail when measured, shall be plainly marked on the mast, and its outer points on the boom and gaff or other spars used to set the sail, and the sail shall not be set beyond these limiting points. The foretriangle shall be determined by the following factors: (1) The perpendicular shall be the perpendicular distance between the deck and a point on the forestay, where the line of the after leech of the jib intersects the forestay, above which the jib shall not be hoisted. (2) The base shall be the distance between the forward side of the mast at the deck and the point of intersection of the forestay with the bowsprit or hull. Any jib when set must not extend beyond the upper and forward points above defined. Sails shall be limited to mainsail, jibs and spinnaker. The total area of the mainsail and foretriangle shall not exceed 500 sq. ft. The area of the spinnaker measured as a triangle, whose base is the length of the spinnaker boom measured from its out end, when set to the center of the mast, and whose perpendicular is the distance from the deck at the fore side of the mast to the spinnaker halliard block, shall not exceed twice the area of the foretriangle. All jibs and spinnaker must be triangular sails, but each may have a small club on the head, not exceeding five per cent. of the base of the foretriangle.

Article 9.—The spinnaker boom, when used in carrying sail, shall not be lashed to the bowsprit or stem head, nor

boards of practically the same weight as carried in the first race.

Article 14-A.—Yachts must be so constructed that on a cross section taken at any point, no part of the hull shall be sensibly below the center part of the hull exclusive of the false keel or skeg.

Article 14-B.—The cockpit area must not be more than 30 per cent. of the area of the deck.

Article 15.—Yachts shall be constructed in accordance with the following restrictions:

1. The planking of hulls shall not be less than $\frac{1}{2}$ in. thick at any point.

2. The frames or ribs shall be of oak, elm, or other hard wood, and shall not be less than $\frac{1}{4}$ sq. in. per lineal foot of length; they may, however, be spaced as desired. Example: Frames may be $\frac{1}{4}$ x1, spaced 12in. c. to c., or $\frac{3}{8}$ x1, spaced 6in. c. to c., or $\frac{5}{8}$ x $\frac{3}{4}$, spaced 2 $\frac{1}{4}$ in. c. to c.

3. The deck plank shall be not less than $\frac{1}{2}$ in. thick if without covering, but where covered with canvas may be $\frac{3}{8}$ in. thick. The deck beams shall be not less than $\frac{1}{2}$ sq. in. per lineal foot of length. Example: Deck beams may be $\frac{1}{2}$ x1in., spaced 12in. c. to c., or $\frac{1}{2}$ x $\frac{1}{2}$, spaced 6in. c. to c.

Internal bracing, floors, knees or other stiffening members shall not be included in the area of the frames or deck beams.

Article 16.—The total actual weight of the crew, including all clothes, personal apparel and belongings worn by them or carried on board during the race, shall not exceed 650lbs.

Article 17.—The helmsman and crew shall be amateurs, and members of the respective clubs, and the helmsman shall be named in writing as required by the declaration

May 30-31.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

June 9-13.—Rochester, N. Y.—Forty-fourth annual tournament of the New York State Association for the Protection of Fish and Game.

June 10-11.—Muncie, Ind.—Indiana Trapsshooters' League's annual tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

A long and attractive target programme has been issued by the Interstate Park Association, Queens, L. I., for the season of 1901-1902, from Nov. 19 to March 27, inclusive. Many of the events are handicaps by distance from 14 to 25yds. The Interstate rules will govern. Targets, 2 cents, and their price is included in the entrance fees. The Sergeant system will be used. The competition will begin each day on the arrival of the 12:24 train from New York. There will be several distinct series of events, such as monthly cup contests, special trophy contests, team matches, and the Metropolitan Individual Championship, the latter a weekly event, the winner of which scores three points; second winner, two points, and third winner, one point. At the final shoot on March 27 the contestant having the highest total number of points shall be awarded the trophy. The winner of a weekly shoot shall have 50 per cent of the entrance money; second, 20 per cent; third, 15 per cent. Fifteen per cent of each week's entrance will be retained for the purchase of the championship trophy. The programme for Thursday of this week is as follows: Fifteen targets, \$1.30 entrance, high guns; Interstate Park Handicap, 25 targets, \$1.50 entrance, Rose system; Metropolitan Individual Championship, 50 targets, \$2 entrance, high guns; 15 singles and 5 pairs, \$1.50 entrance, high guns. The programme for Tuesday of next week is as follows: Trophy shoot, 20 targets, \$1.40 entrance, high guns; Jamaica handicap, \$1.50 entrance, Rose system; November handicap, 50 targets, \$2 entrance, high guns; 15 targets, \$1.30 entrance, high guns. For a copy of the programme, address Interstate Park Association, Queens, L. I.

The Trenton Shooting Association has arranged a most attractive programme for its Thanksgiving Day shoot. The live-bird events will be in charge of Mr. Wm. B. Widmann, assistant manager. Of these there are three—one at 5 birds, \$3 entrance, class shooting, handicap, 60 and 40 per cent. division of the moneys; one at 7 birds, \$5 entrance, class shooting, handicap, 50, 30 and 20 per cent., and one at 10 birds, \$5 entrance, handicap, high gun, 40, 30, 20 and 10 per cent. Birds included in the entrance in each event. In the 7-bird event there also is a Parker hammerless to first; \$10 in gold to second; \$5 in gold to third. Ties miss-and-out. Handicaps, 25, to 31yds. The bluecock events number ten, at 10, 15 and 20 targets, 50 cents, 75 cents and \$1 entrance. Rose system, ratios 5, 3, 2, 1. The main target event is the Winchester Handicap, at 10 bluecocks, first prize being a Winchester repeating shotgun, 12-gauge, \$30 grade. Shooting commences at 9 o'clock. Lunch served at 12 M. at a nominal price. Shells and guns shipped care of E. S. Applegate & Co., express prepaid, will be delivered on the grounds free. Shells for sale on the grounds. Take electric car marked Yardville to Hutchinson's Pond. For further information, address the General Manager, Dr. Geo. N. Thomas.

Col. A. G. Courtney, whose home is 202 Leavenworth avenue, Syracuse, N. Y., has severed his business connection with the Remington Arms Company, which company he has ably represented during several years past. While the Colonel is famous as a man of nimble wit, and a good performer with the scatter gun at the traps, he is also famous as an earnest and successful worker. He has a large acquaintance with the trade from ocean to ocean, and both with the trade and his brother shooters he is one of the most popular of the useful body of men who devote their talents to the commercial interests of the manufacturers.

The Tunkhannock Rod and Gun Club, of Tunkhannock, Pa., announces a Thanksgiving Day (Nov. 28) target shoot, with a few live-bird events added. Bluecocks, 1 cent. A magautrap will throw the targets. Manufacturers' agents may shoot for targets only. Shooting commences at 10 o'clock. A light lunch will be served on the grounds. There are fifteen events on the programme, at 15, 20 and 25 targets; entrance 50 cents, 75 cents, \$1; and two events at \$3 and \$5 respectively. Guns and ammunition shipped to the secretary, Spencer D. Reed, will be delivered on the grounds free of charge.

The daily press recounts the death of Henry Trenchard Chanfrau, the actor, but best known to trapsshooters as the manager of Elkwood Park during the period when that place was famous in the annals of the trapshooting world. Mr. Chanfrau died at the home of his father-in-law, at Long Branch, N. J., on Saturday of last week. His death was due to consumption. In the plays of his father, the "Arkansas Traveler" and the "Octoroon," he took leading parts after his father's death, and for two seasons he supported Mrs. James Brown Potter in her plays.

We have been informed that ex-Sheriff Frank D. Creamer, of Brooklyn, well known among the trapsshooters as one of the most popular and skillful of their number, met with a serious accident one day the latter part of last week. While out driving, whether from a runaway and a collision or a runaway, we did not learn which, Mr. Creamer was thrown and his shoulder was severely injured. While the injury is severe, we are glad to know that it is only temporarily serious. Time and Mr. Creamer's magnificent physique will no doubt pull him through all right.

The Ossining (N. Y.) Gun Club's programme for its Thanksgiving Day shoot presents eleven events, at 10, 15 and 20 targets, entrance 50 cents, 75 cents, \$1 and \$1.50. Shooting commences at 10 o'clock. Targets, 2 cents; to manufacturers' agents, 1 cent. Trolley cars direct to the grounds, from N. Y. C. & H. R. R. R. Fine lunch served at lowest prices. Loaded shells can be obtained on the grounds. Shells shipped to L. A. Sherwood, Ossining, will be delivered on the grounds free. Mr. Charles G. Blandford is the captain.

Capt. J. A. H. Dressel, of the Union Metallic Cartridge Company, was recently the recipient of a beautiful jewel, a present from Altair Lodge, of which Capt. Dressel is a member, and which was presented in commemoration of his advancement to the Thirty-third degree, an honor conferred on very few. It is a heavy, beautiful work of the jeweler's art, in gold and enamel, emblems of the order forming the main features of the design, all worked in symmetrical harmony.

Dr. A. A. Webber, who has five wins on the Dewar trophy, informs us that he has entirely given up shooting at the traps, and is willing to waive all claims on said trophy if it is put in open competition and the contests for it started anew. Otherwise he will hold to his wins. The conditions have been so vaguely enforced, he says, that it is difficult to determine the real status of the matter. Dr. Webber starts for Pennsylvania early next week for an outing in the mountains.

The following, taken from the Philadelphia Public Ledger, recounts a soul-stirring test of endurance and nerve: "Adam Maley and Harry Showers shot a live-pigeon match at 9 birds each for a purse of \$50, at Pottsville, yesterday. The match was won by Maley, who grassed 3 to his opponent's 2 birds. After the match William Roscop, a crack shot, killed a veteran bird of many matches, winning a side stake which was put up."

Mr. F. G. Hogen, of Cleveland, O., writes us that the Ohio Trapsshooters' League claims June 3, 4 and 5, 1902, as dates for the league's tournament, to be held in Cleveland, O., under the auspices of the Cleveland Gun Club Company; and that every possible effort will be made by the Cleveland Gun Club Company to make the 1902 meet the most successful in the history of the league. Mr. Hogen is the league president.

In the 25-live-bird race at Peru, Ind., on Nov. 7, Mr. W. R. Crosby, from the 32yd. mark, killed straight, Messrs. Head and Wiggins being next with 24 each with a bird dead out. Mr. Crosby's was the first straight score in a 25-bird race ever made on those grounds. On the first day, in the 5, 7, 10 and 7 bird events, Crosby and Gilbert, from the 32yd. mark, killed straight.

In FOREST AND STREAM of last week was published the substance of a communication from Mr. W. L. Rhodes, of South River, N. J., concerning a 100-live-bird match for \$100 a side between Messrs. S. M. Van Allen and J. E. Applegate. Mr. Van Allen informs us that Mr. Rhodes' statement as aforementioned was wholly unauthorized, as no such match was made.

In the contest for the November cup, at the shoot of the Crescent Athletic Club, Bay Ridge, L. I., on Saturday of last week, Capt. A. W. Money, Dr. H. L. O'Brien and Mr. H. B. Vandever scored 50, the limit. The two-man team shoot for the Sykes trophy was won by Messrs. J. N. Borland and C. G. Rasmus, with a score of 92.

Mr. Frank Harrison, of Newark, N. J., the popular traveling representative of the Troisdorf Powder Company, contemplates a trip to Florida, leaving for that land of game abundance on the 30th inst. While in the far West this fall he enjoyed some duck and prairie chicken shooting, with results satisfactorily successful.

The Philadelphia Times states that "a match at 25 live birds, for \$300 a side, Hurlingham rules, will be shot on Nov. 20, at Black's Island, between Daniel N. Black and Harry Williams. These two crack shots have met once before, when Black won by a close margin, and Williams, not being satisfied, arranged this contest."

The many friends of Mr. C. M. Lincoln will grieve to learn that he is afflicted with typhoid fever, in Atlanta, Ga., in which city he made his headquarters as a representative of the U. M. C. Co. While the affliction is a most grievous one, there is consolation in the report that he is not considered as being in serious danger.

The team contest to be held at Interstate Park on Dec. 11 is assuming important proportions, for there is a probability that there may be twenty or more men on a side. The managers are earnestly endeavoring to bring out their best men. The contest is likely to be very evenly contested.

Mr. John S. Lewis, secretary, informs us that the Chelsea Heights Gun Club will hold a live-bird shoot on Nov. 28, at Bullshead, Staten Island, and at the latter place, on Saturday of this week, there will be a live-bird contest for the championship of Richmond county.

Messrs. W. Losee and Ted Riley, noms de fusil of two eminent members of the New Utrecht Gun Club, arranged to leave on Wednesday of this week for the coast of Virginia, where the ducks congregate in great numbers and where the shooting is accordingly good.

An all-day shoot will be given by the Boiling Springs Fishing and Gun Club on their grounds in East Rutherford, N. J., Thursday, Nov. 28. Live bird and target shooting for turkeys are on the programme. Shooting will commence at 10 A. M.

A match was shot between Messrs. H. H. Stevens and J. E. Applegate, at South River, N. J., on Saturday of last week, for a consideration not specified. The conditions were 25 live birds. The scores were Stevens 23, Applegate 17.

Mr. A. Schoverling, secretary of the Richmond Gun Club, informs us that the next target shoot of the club will be held on Thanksgiving Day, at Silver Lake, Staten Island. Shooting will take place from 10 to 4 o'clock.

At a recent meeting, the Gilbert Rod and Gun Club, of Amityville, L. I., elected a list of officers as follows: President, Beers Frost; Vice-President, Richard Shannon; Treasurer, N. K. Gilbert; Secretary, T. M. Tompkins.

Mr. Wm. Dutcher, of Paterson, N. J., informs us that the Jackson Park Gun Club, of Paterson, will give an all-day live-bird and target shoot on Thanksgiving Day, open to all. The competition begins at 10 o'clock.

Mr. J. A. R. Elliott has signified that he will name place and date for his contest with Mr. R. O. Heikes, of which the Review championship cup is the theme, as soon as his business engagements will permit.

Mr. Carl Von Lengerke, traveling representative of the American E. C. & Schultze Gunpowder Company, started on a short trip through New England in the interests of his company the latter part of last week.

The Richmond Gun Club, of Silver Lake, Staten Island, will give an all-day shoot at targets and live birds on Thanksgiving Day. Mr. Albert A. Schoverling, 302 Broadway, New York, is the secretary.

The Oceanic Rod and Gun Club, Rockaway Park, L. I., will hold a target shoot on Nov. 24. Targets, 1½ cents. Trains leave East Thirty-fourth street and Flatbush avenue at 9 and 11 A. M.

The East Side Gun Club, of Newark, N. J., announces an all-day live-bird shoot, open to all, on Thanksgiving Day. Competition commences at 10 o'clock.

Dr. F. L. Judkins won the championship medal, the prize of a series of contests inaugurated by the Lynn (Mass.) Gun Club the past season.

Mr. T. W. Morfey has challenged Dr. A. A. Webber, of Brooklyn, to contest for the Dewar trophy.

BERNARD WATERS.

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., Nov. 16.—There was not a large attendance of members, but those present were quite active. A number of short matches were made and shot off, and a number more were proposed and declined. The club event at 7 birds was won by J. P. K.

Club contest, 7 live birds, for trophy:

Keystone Shooting League.

HOLMESBURG JUNCTION, Philadelphia., Nov. 16.—The birds today were a good lot. The three events made a total of 25 birds, and of these, Hallowell, McCoy and Geikler killed all. The club handicap, 10 birds, resulted as follows:

Sanford, 29*22222222-9	Hallowell, 292221221222-10
Davis, 282220112221-9	McCoy, 29222222222-10

Ridge, 271211221212-10	Geikler, 27222222222-10

First event, 8 birds, handicap rise: McCoy 8, Russell 8, Geikler 8, Hallowell 8, Brewer 7, Waters 7, South 6.

Third event, 7 birds, handicap rise: Hallowell 7, South 7, McCoy 7, Van Loon 7, Sanford 7, Brewer 7, Geikler 7, Russell 6, Davis 5, Huttenlock 4.

Florence Gun Club.

FLORENCE, Kans., Nov. 6.—Fine weather and \$105 in added money brought out a fine field of shooters at our tournament today. High average was won by Ed O'Brien, of Florence. Second high average was won by E. W. Arnold, of Larned, Kans.

A banquet was given in the evening, and a concert by the Florence band helped to entertain the shooters. Every one voted that Ed O'Brien and the rest of the Florence Club knew how to carry out a shoot and take care of the shooters.

The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	15	10	15	10	15	10	15	15	15

*Means member of All America team who shot in Great Britain. When not otherwise stated, measurements, etc., of all of above guns are strictly trap guns.

Table listing names and scores for a trap shooting competition. Includes names like Hugg, Johnson, Williams, etc.

Kentucky, one is almost sure to get the very best of pigeons—birds that fly to the last gasp and that start the very instant the trap is opened. Any pigeon ground exposed to the sweep of the wind is apt to be a last one, especially when there are buildings in front of the traps; and better still, if the coops are in that direction.

secured by that time, and that the shoot may then be considered a certainty. It is much to be wished that the big shoot may be pulled off as planned.

St. Paul Review Cup.

Following are the scores for the St. Paul Review cup at Inter-city Shooting Park, St. Paul, Minn., Nov. 10:

Table showing trap scores for the St. Paul Review Cup. Includes names like Morrison, Hirschy, Dr. Bill, McKay, Wilkinson and their respective scores.

Wilkinson won. The initial shoot of the season for this cup brought out only a small crowd, but the wind blew 25 miles an hour, and the birds were good. The cup had been won three times by Minneapolis shooters, J. O. Gilfillan winning it twice and French once.

Audubon Gun Club.

Watson's Park, Chicago, Nov. 16.—The day was dark, cloudy and cold. The scores made by the Audubon Gun Club members follow:

Table showing scores for the Audubon Gun Club. Includes names like Jim Crow, C. E. Felton, C. S. Wilcox, etc.

Garfield Gun Club.

Chicago, Nov. 16.—The appended scores were made on our grounds today by members of the Garfield Gun Club on the occasion of the fourth trophy shoot of the series. Dr. Shaw carried off the honors of the day and won Class A trophy on a straight score.

The day was a fine one for pigeon shooting, not being too cold for comfort, and there being just enough wind to make the birds lively. The birds were a good lot, only three sitters developing in the whole afternoon shooting.

Table showing scores for the Garfield Gun Club. Includes names like L. Thomas, P. McGowan, C. H. Kehl, etc.

Richmond Gun Club.

SILVER LAKE, Staten Island, Nov. 16.—Following are the scores made by the shooters who participated in the shoot of the Richmond Gun Club to-day:

Table showing scores for the Richmond Gun Club. Includes names like A. Schoverling, W. Schoverling, Geo. Bechtel, etc.

WESTERN TRAPS.

Hopes for the Watson Handicap.

Chicago, Ill., Nov. 15.—Mr. C. R. Stephens, vice-president of the Illinois State Sportsmen's Association, writes from Moline, Ill., under date of the 11th inst., that he now expects to be able to advise, not later than Saturday, Nov. 16, that the trapshooting table will be spread full, as per original schedule; that is to say, that the 100 signatures for the big \$100 sweep will have been

Measurements, Etc., of a Few Celebrated Guns.

Editor Forest and Stream:

Thinking it might interest your readers, and perhaps serve as a guide to some beginners (many of whom are desirous of information), I beg to submit herewith a table giving measurements, weights, etc., of guns now in use by many of our most prominent trap shots.

The writer is but too well aware that two men of identical build may use guns with entirely different stocks, and that others of very different size, weight, length of arm, etc., may still use stocks of very similar bend and length; but as a general broad rule he believes that some good may be derived by studying this table, and if for no other reason, submits it as a matter of statistics, heretofore unpublished.

As an illustration of how men's opinions, or, rather, what habit and long-continued usage may do regarding the length of a man's gun stock, I need simply point to the fact that Messrs. Crosby, Heikes and Dickey have theirs at 14in., while Mr. Fulford's is 14½. I do not know Mr. Crosby's height, but at a rough guess I would say over 6ft.; Heikes' say 5ft. 9in.; Dickey about 5ft. 6in., and Fulford 5ft. 8in. So, if Crosby's gun stock is right for him at 14in., then Dickey's should, if all men held their guns alike, be not over 13in., and Fulford's about 13½in.

Now, as these men have gone through the entire gamut of length, bend and shape of their gun stocks, and as each one is an expert of rare ability, it goes to prove that he at least knows what suits him best; but it may also happen that, having when a youth used a short stock, Crosby, for instance, has not deemed it advisable to change, and as it is probable Heikes and Dickey have not grown very much in height or length of arm since they commenced shooting, they also have adhered to about the same length as they used when beginners. Many of our best shots, when shooting targets, use their left barrel exclusively, and in pigeon shooting, where both are allowed, use it first and reach forward for right trigger. This method enables one to use a longer stock than when habitually shooting the right barrel, and furthermore, it allows of a more comfortable hold being had of the grip of the gun, as the hand is not stretched out to enable the forefinger to press the front trigger. Here again habit rules; but it makes a stock appear more crooked if one uses the rear trigger. So if a gun is too straight at the bend, the use of this trigger may be an advantage, and vice versa with too crooked a gun.

In the matter of weight for a trap gun, the consensus of expert opinion places it at say 7lbs. 10oz. to just under 8lbs., as experience has proven that for long-continued shooting, especially at flying targets, when from 200 to 300 shots a day are sometimes fired, a light gun causes discomfort from its excessive recoil when loaded with its most killing loads. Large loads are in general use among the best shots; excessive ones seldom if ever.

A moderate target load for a 7½lb. 12-bore is about 3 to 3¼drs. of bulk nitro powder and 1½oz. of shot, cases ranging in length from 2½ to 3in., wadding to vary accordingly. A well wadded and properly crimped case holding from 3½ to 3¾drs. of standard bulk nitro powder and 1½oz. of shot will do all that any greater load can accomplish when shooting at targets, especially at 16 to 18yds. rise, and many great records have been made on these with less than 3drs.

If, however, the shooter can withstand recoil without discomfort, and the gun makes steady, even and close patterns when using more powder, even up to 3½drs. may be used, but such excessive loads, when target shooting, are not to be thought of unless the shooter stands at the extreme distance of handicap or if using a much heavier gun than 8lbs. Even then it is extremely doubtful if any advantage is gained by going over 3¼drs.

So much depends on the gun's performance and the shooter's ability to shoot continuously without flinching—and really it is the writer's firm belief that more men have gone off in their shooting from using excessive loads and consequent flinching than from all other causes combined.

To break targets with regularity at long rises—say 21 to 23yds.—one must have a very close, even pattern, and furthermore one must be able to shoot without the least bobble or trepidation; and as heavy, kicking loads are certainly not conducive to steadiness in holding or accuracy in shooting, they should be avoided if good scores are to be made.

When pigeon shooting, the standard charge may be put at 3¼drs., though many use less in the first barrel, and some only 1½oz. of shot; this reduces the recoil and increases the speed of the load as well as facilitate the placing of the second barrel in case the first one fails to stop the bird.

Shooting at some of our crack Eastern pigeon clubs is of a very different order from what one generally gets at tournaments or on many grounds where very little of this work is done. At Watson's, for instance, in Chicago, one is almost sure to get first-class birds, and at the Cincinnati Gun Club they are now doing much better than formerly; but at the Westminster Kennel Club, Carteret, certain days at Riverton, and by the way, at Mr. Norvin T. Harris' private grounds on his glorious Hurstbourne Farm in

WORKING OF THE LACEY ACT.

THE report of the Secretary of Agriculture for 1901 summarizes the work of the Biological Survey under the Lacey Act, and the record is one which demonstrates the practical usefulness of the measure. An important branch of the work has to do with the control of the importation of birds and animals from foreign countries. Under the rules in force all importations are inspected by agents of the department, and the operation of the system has been successful in securing the main purpose of the law, which was to exclude undesirable species, such as the mongoose. There were issued during the year 186 permits for importation, which covered 350 mammals and nearly 10,000 birds. The birds were mostly cage birds from Germany, China, Japan, Australia and Mexico. There is a large traffic in pheasants from Canada, which goes chiefly to small pheasantries and to the stocking of game preserves. A business of which the proportions are not generally appreciated is that of bringing live quail from China to the San Francisco market for consumption by the Chinese, who, it is not unlikely, relish the birds from their Asiatic home with something of the sentimental regard an American in China might feel for Bob White. If the Chinese birds would make a desirable addition to the game supply of the Pacific Coast, it is manifest that here is an opportunity to secure the material for the experiment without much trouble or expense.

A no less important division of the work is concerned with the regulation of interstate commerce in game. It is said in the report that fifty-seven cases of illicit transportation have been investigated, of which twenty-seven have been referred for action to the Department of Justice; but as a rule the evidence has been submitted to the authorities of the State concerned. "For the first time in the history of game protection," says the report, "it has been possible to secure convictions in cases involving illegal shipment of game months after the offenses were committed, and with evidence obtained a thousand miles or more from the point of shipment." The results attained in the operation of the Lacey Act have been due in large measure, it is popularly known, to the activity of Dr. T. S. Palmer, Assistant Chief of the Biological Survey, who has been the active agent in the work.

THE PHEASANTS OF ST. HELENA.

A ROMANTIC incident of the acclimatization of the Chinese pheasant in various parts of the globe was its introduction into the island of St. Helena. In the sixteenth century St. Helena belonged to the Portuguese, and was even then used for a place of exile. Fernandez Lopez, of the Portuguese army at Goa, in the East Indies, deserted from his command and was banished to St. Helena, with a band of negroes. They were supplied with roots and seeds and poultry and pheasants, which upon their arrival they put out. This was in 1513.

In the later years of the century, 1588, John Cavendish on his way from China home to England, called at St. Helena, and in the pages of Hakluyt he has left us a most enticing picture of the island with its valley, "marvellous sweet and pleasant, and planted in every place either with fruit trees or with herbs"; the "fig trees which bear fruit continually and marvellous plentifully for in every tree you shall have blossoms, green figs and ripe figs all at once, and it is so all the year long," and in the same way the orange and lemon and the pomegranate and date trees. According to Cavendish, the island was a richly stocked game preserve; there was great store of swine, very wild and very fat and of a marvellous bigness, and which kept together upon the mountains and would very seldom abide any man to come near them. There were thousands of goats, very wild, and sometimes seen "in a flock a mile long," some of them "as big as an ass, with a mane like a horse and a beard hanging down to the very ground," and they were given to climbing up the cliffs, "which are so steep that a man would think it impossible for any living thing to go there." Of birds there were "a great store of Guinea cocks," and "a great store of partridges"; and of the pheasants introduced by Lopez it is noted: "There are likewise no less store of pheasants on the island, which are also marvellous big and fat, surpassing those which are in our country in bigness and in numbers of a company."

Three centuries later we find a like report on the

pheasants in Melliss' "St. Helena," written in 1875, in which it is recorded that "they still exist abundantly and quite maintain the characteristics mentioned by Cavendish. They are protected by game laws, which permit them to be killed, on payment of the licenses, for six weeks in the summer or autumn of each year, and hundreds of them are generally killed during one shooting season."

Thus the desertion of a Portuguese soldier from his command in the sixteenth century gave to St. Helena a stock of game birds brought originally from China, which has afforded sport to the inhabitants of that lovely spot to the present day.

AMATEUR AND PROFESSIONAL.

THE American Athletic Union, by the promulgation of a recent ruling, the purport of which is to define what constitutes a professional trap shot and to govern him accordingly, has evoked a lively public interest, both in respect of the novel idea which the ruling embodies, and of the authority of that distinguished organization to make any such ruling at all. It is reported to be as follows: "Resolved, That a trapshooter who shoots for a sweepstakes is a professional athlete."

The foregoing resolution has several distinctly suggestive features. It suggests more of the novice than of the amateur. It in a way is a possible attempt from a well-meaning body to benefit trapshooting, and it in a way may be a possible attempt of that body to benefit itself. Such inference is fairly to be drawn from the peculiar wording of the resolution.

So far as it concerns trapshooting in general, it may fairly be assumed to have no significance of material importance, and indeed, the more so for the reason that the A. A. U. does not assume that it can legislate on the subject outside of its own membership. But, even under that limitation, as a matter of fair criticism, it is open to discussion. To ascertain the value of the ruling, we may ask some questions in respect to the causes which brought it forth and the manner of bringing it forth.

It seems to have had its origin in a letter from Mr. J. H. Daggett, captain of the Boston Athletic Association Gun Club, to the A. A. U., in which he referred to the rapid growth of trapshooting as a sport of amateurs, members of colleges and athletic clubs, many of which had teams in the field, and in that connection asking for advice on the question of what makes a professional trapshooter. As a result, the A. A. U. ruled as quoted.

Were the members of the committee who by rule so limply transformed a trapshooter into a professional athlete for a possible ten-cent, ten-minute cause, thoroughly conversant with the practical phases of the subject? If they were not trapshooters or were not thoroughly informed concerning all the details of trapshooting competition, it is possible that they were no better qualified to pass upon the true merits of the question of trapshooting professionalism than they are to pass on the question as to the best route to reach the North Pole.

If they, however, were ruling upon it purely as a Union matter—that is to say, for the furtherance of the organization in the matter of power, prestige, revenue and jurisdiction—it has no particular technical significance even within Union limitations. Organization politics cannot be truly representative of sportsmen's interests at large.

Even within the A. A. U. jurisdiction the ruling should have come from a committee representing practical trapshooting interests rather than from athletic academic theorists. From even the view point of amateurism, there should be an observance of what is correct and what is just to all.

Considering for a moment the matter of accuracy of statement as set forth in the ruling, what is more absurd than solemnly to declare that a shooter, who shoots in a sweepstake, is a professional athlete? The subject and the predicate are not necessarily related, and in fact, in a majority of cases a trapshooter is not an athlete, either amateur or professional. The real significance seems to be that the A. A. U. in reaching out for a phantom peg whereon to hang a pretense of jurisdiction—and greater jurisdiction implies greater revenues—was forced to use the term "professional athlete" notwithstanding its self-evident absurdity. To have resolved that a trapshooter who shoots in a sweepstake was a professional trapshooter might, when so worded, at once raise a question in respect to jurisdiction, but if such shooter was declared a professional athlete, the A. A. U. might risk the

absurdity for the possible advantage of arrogating jurisdiction.

However, the question, stripped of all the fancies, politics, possible revenues and powers with which it in some places is encumbered, is exceedingly simple. There is much long-time usage pertaining to the subject and, in the present, much common sense, all of which concurs in this: That any shooter may contest in a sweepstake without any prejudice whatever to his amateur standing, so far as mere sweepstake circumstance alone is concerned, and this also without any danger to the amateur interests of the sport in general from the inroads of professionalism.

The analogies of professionalism as they concern other sports and as they relate to trapshooting are so remote or unimportant that they are not sound data from which to make deductions or rulings.

If the A. A. U. can arrogate to itself supervision over any acts of its members which are competitive, simply by virtue of a resolution, then it would be an easy matter for the world at large to become athletes by asking the A. A. U. for a ruling on a game of marbles or a game of euchre.

Nevertheless, this new and peculiar phase of the question will not in the least affect trapshooting at large, as it concerns amateurism and professionalism. Matters of trapshooting for a long while in the future will continue on the lines of the past and present. Until the trapshooting world has a central trapshooting body, duly recognized as authoritative, no accepted ruling need be expected from any other source.

The directors of the Maine Sportsmen's Association held a meeting in Augusta on Monday last to provide for a public meeting in Bangor on Jan. 7 to agitate for the imposition of a license fee of \$10 on non-resident hunters. They manifestly have the not uncommon notion that the foreigner is a "good thing" and should be taxed all the traffic will bear. They sustain their proposition by the assertion that the non-residents travel on "foreign railroads" bring in their own supplies, refuse to employ licensed guides and cart away immense quantities of game without leaving any money behind them. And the Maine people, these directors say, ought to get at least \$10 out of every visitor, and ought to make sure of it by collecting it in advance.

Without wishing now to dispute the view here taken of the general unprofitableness of the Maine visiting sportsmen, we venture to point out that the argument advanced is in direct conflict with the one upon which the Maine Commissioners have for years founded their pleas for fish and game appropriations. Their contention has been (see their report for any year) that the sportsmen brought into Maine immense sums of money, and that because of this considerable and important revenue the Legislature would be warranted in appropriating generous sums for game protection. Was all this revenue to the Maine people a pure invention of Commissioner Carleton and his associates? It must have been if we are to credit this new reasoning that the visitor leaves nothing behind him and must be made to disgorge in advance for his license.

Numerous holders of real estate suitable for fish and game preserves, who have used the advertising columns of FOREST AND STREAM for bringing their properties to the notice of purchasers, have found the agency a very satisfactory one. To advertise in this journal is the simplest and most direct way of getting into communication with the right parties. The demand for tracts of land and water which may be used for sporting purposes is greater to-day than ever before, and it is continually growing. The owners of really desirable tracts may reasonably expect to dispose of them to individuals and clubs. Many people, however, who have farm or wilderness territory which is absolutely worthless from a game or fish point of view, appear possessed of the notion that when they can find no other use whatever for their land, they can work it off on sportsmen for a preserve and the price expected in such cases is usually in inverse ratio to the worthlessness of the property. There must be something to a tract whether of land or water, some native attraction of scenery, and a well-determined adaptability to the support and harboring of game, if it is to commend itself to the sportsman.

The Sportsman Tourist.

Adventures in Tropical America.

VI.—Alone in an Indian Village.

In camp when troubles come, life is a serious problem. A party of us were in the Honduranian jungles, miles away from anywhere. The superintendent of our expedition had gone to look for men to help him on some impossible plans of navigation with heavy boats up the Rio Patuca, which the Indians living near us said would be an impossible task. On account of their fear of these boats the Indians refused to come near our camp; the engineer was dangerously sick, and the cook objecting violently to the burden of work. That morning he said to me: "Mr. Frank, it ain't no ways reasonable, me to be cooking and cleaning, cutting wood and fixing stores; and with him sick and kicking mor'n' enough, there won't be no getting along with it." Then he sent the axe crashing into the log he was chopping, and shouldering a quantity of wood, marched away to the kitchen. Just then I heard the engineer asking for water, which I hurried to give him. Something had to be done. Salt provisions and heavy work promised to make us all sick. It was still early in the morning. I knew that seven to nine miles across the jungles and savannas there was an Indian village, and I resolved that I would go there and find help. I took my rifle, gave some directions to the cook and hinted to a little Spaniard who hung around camp that if he would mind his own business it would be appreciated. Then I hurried out on the trail to look for help. I had never been alone in the tropical jungles, and was all excitement with a sort of fear because of the unknown in the wilderness about me. Gradually this feeling wore off, and as the day passed my only anxiety was that night might come before I could find the Indian village. I knew that it was a long way before I started, but now as the narrow trail led me on and on, sometimes through a dense jungle, again in and out and among the great trees of an open forest, or through tangled bushes along the edge of the savanna, it seemed as though I would never reach the end, and now anxiety and fears of a lonely night in the jungles were my constant companions. I was alone, and, perhaps like a lost man, becoming panic stricken, yet I hurried on, and late in the afternoon saw a group of trees and little houses some distance ahead across the savanna. Urging my steps, I presently reached the village, tired and hungry, only to find the place deserted. Sometimes the Indians go away for days, and I looked anxiously for signs of life. Then from one of the houses I heard voices, and on hurrying to the door and looking in, I saw one of the most beautiful examples of Indian life that I have ever known. The house was full of children, little and big, all perfectly contented, talking together and laughing pleasantly. The boys were mending bows and arrows, or swinging in hammocks. The girls were busy at miniature housekeeping, and the very little ones were either asleep or staring contentedly at the others. Outside it was all burning sun, but in the hut there was subdued light and cool air, like that of the deep woodlands.

For an instant I watched the half-naked children, as healthy and graceful as little wild animals; then they saw me. The bigger boys caught up their knives, their bows and their arrows, and stood defiantly in front of the girls; but just for an instant; the next moment some of the boys who had been at our camp recognized me, weapons were thrown aside, and I was receiving a welcome such as can be had only in the boisterous good will of healthy children. Then some got a hammock for me, others took off my boots, while still others ran to bring fruits and cool water. In a very short time I was most comfortable, and had quite forgotten the burning sun and long tramp. Presently some of the children came, bringing an old woman—the grandmother of all the village. She could speak a little English, and on learning that I wanted some men, said that they had all gone hunting, but would come back at night. Then she had the children gather up my things, and we all went to her house, where she and some younger women immediately began preparing a good dinner for me.

When all was ready I was brought a large wooden plate, and the food was placed around my hammock in gourds, each presided over by a bright little Indian child armed with a forked stick, with which to pick up the food and transfer it to my plate as I might want it. I had boiled chicken, rice, yams, plantain, smoked wild pork, yucca and various fruits. The children were eager in their service, and it was a beautiful dinner. Before me was the intense sunlight and deep blue sky over the open savanna; around me a pleasant shade and soft breeze blowing in at the wide open door and the children, pretty little creatures, laughed and climbed together, each eagerly pressing me to eat of what he or she had to offer, while the old Indian woman sat looking on all smiles at my enjoyment of her things, her satisfaction increasing every moment, and I must confess that I did eat a lot, but then there was plenty. After dinner I saw the people showing them my watch, compass and the few other things I had with me, and presently evening came, and with it the people of the village; men laden with game from their hunting, and women bearing fruits and vegetables from their gardens and cultivations among the woodlands.

So soon as my Indian friends learned that the superintendent had left camp, they were all quite ready to go with me, but I wanted only two men, and having picked out a pair of sturdy-looking fellows, we all went to the chief's house to sit around and have a talk. The children came, too, but now they were quite subdued in the presence of the men, and sat meekly looking on. From time to time women came in to look at the white stranger; each carried a torch, and generally an arm full of gourd dishes, all very much alike, which probably they had been washing; these were all laid on the ground in front of the house, while the Indian women came in to satisfy their curiosity. Presently one came along with her torch and a good supply of gourds in her arms. She placed them on the ground with care, laying the torch beside them, and came stalking in with a savage look at the boys. Evidently she was no favorite with them; there was a whis-

pered consultation, then the little scamps sneaked cautiously out of the door, went to her torch, and carefully made two torches of it, putting each in a separate place a little distance apart; then they divided her gourds, placing some by each torch; after that they hid behind some bushes and waited. Presently the woman, having satisfied her curiosity, went out, and walked up to the nearest pile of gourds with a puzzled expression; she had brought eight, now there were only three, with a small torch, and hers had been a big one; then she went to the others, then she came back to the first, and went angrily toward the others again. Evidently she wished to be careful about touching what might not belong to her, and now stood looking about her with an angry, puzzled expression. Then a stifled laugh came from behind the bushes; instantly she seemed to grasp the situation; with one sweep of her long arm she gathered up her gourds and made a dash for the boys, but they were too quick for her, and, scattering in all directions, the half-naked little scamps went dancing about among the houses, screaming with laughter and delight at her efforts to catch them. For some time she kept up an angry, determined chase, but finally gave in and went to her hut, with loud expressions of opinion that sounded like very bad words. The men laughed heartily, and, encouraged by this, the boys came with doubtful steps into the house, but the chief made a sign to the young men, and the boys made a wild dash for the door. It was no use this time; they were soon caught, their ears were soundly boxed and for a time lamentations filled the village.

I talked with the Indians late into the night, and then slept on a mahogany board under a good mosquito net, and would have been comfortable if only I could have found one soft spot on that board. In the morning I and my two men tramped back to our camp, where the Indians soon made us comfortable. FRANCIS C. NICHOLAS.

In the Ranger Service.

BY ROWLAND E. ROBINSON.

XIII.—Succor.

Two canoes put out to meet us, and, coming along side, took us on board. Then there was no more paddling for our weary arms, nor ought to do but lie at lazy length munching the biscuits that were prudently dealt out, and answering questions that were put with less stint. But questions were few compared with the curses that were bestowed on the faithless wretches who had been sent to succor us. If they could have been delivered into the hands of the rescued survivors and their friends at Number Four, the trouble and expense of a court-martial would have been saved, and a juster measure of punishment dealt out.

Captain Ogden being sick, Major Rogers did me the honor to send me up the river with the relief party, as it was needful the Major should remain at Number Four to prepare his report and dispatch it by a messenger to General Amherst at Crown Point. There never was a kinder nor a braver leader than Major Rogers, nor a more useful service than that of his Rangers. Years afterward, when fortune frowned and slander befouled his name, I could not forget the cool courage, the ready change of plans to suit sudden contingencies, the steadfast holding to his purpose, that distinguished this foremost of Rangers and master of woodcraft.

Two boats laden with ample provisions, and manned by strong and faithful crews, were despatched at once for the relief of the sufferers at Coos, while other boats proceeded more slowly up the river on the lookout for stragglers who might strike shore below. Some such were found who had followed the small streams down to the great river, and were delivered from the jaws of death at the last moment.

We made good progress, but to me who could but dwell upon Mercey and her scant fare of lily roots and birch bark tea and whose desire outran all possible speed of water craft, it seemed as if boat never moved so sluggishly. We made long days, borrowing beginnings and ends out of the night, and before the close of the fifth day, well within the Major's promised time, had the happiness to come to our people whose forlorn camp now became a scene of rejoicing. All were in better heart than seemed possible for men in their plight.

One like to another in weary waiting, their days had passed. The stronger ones had built shelters of boughs and bark, wherein they passed the nights and rainy weather, and the sick moped out the unchanging dreariness of their hours. Those who were able went hunting with little profit, or dug the roots which were their main food. But one of our people had died since my departure. Three who had wandered away during the retreat had meantime come straggling into the rendezvous more dead than alive. These took most nursing to restore, and we did trouble to prevent all doing themselves more harm in gorging than they had got in starving. Though it wrenched us sorely to persevere in cruelty that was kinder than indulgence, yet we withstood prayers as bravely as curses. During the whole St. Francis expedition, over two score of our force were killed by the pursuing enemy or died of hunger and hardship.

Mercey had borne up bravely, so Angelique said, till near the last, when, very weak and despondent, she took to her bed of hemlock with the notion she was never to leave it. I did the best that so sorry a being as I felt myself and must have looked, to cheer her out of this mood, but she shook her head feebly, and said: "No, Paul, I am near the end of my troubles. They have been heavy to bear of late, not so much for my body as my heart, and that concerning you. Oh, I cannot leave you forever without telling you of it, and asking—"

I was sure she was about to confess and ask my forgiveness, and had no mind that she should torment herself with such an unpleasant duty.

"You need tell me nothing!" I broke in. "I know it all, and I bear you no ill will, as I hope I have proved. I will hear no last words. We shall soon be on our way down the river, and before a month goes by you will be safe with your husband."

She looked at me in amazement and almost affright.

"Poor Paul," she said, as if to herself, "are you, too, getting light-headed with all these trials? 'Safe with my husband?' What can you mean?"

"Why, Mercy," I cried, both grieved and angry that she should longer try to hoodwink me. "I heard of it almost as soon as you were married to Lot Witherell. Poor Billy Jarvis told me just before the Ticonderoga fight, where he was killed."

"And you believed it? O, you poor, poor boy!" She put her arms about my neck and drew my face to hers, and fell to kissing me and crying, for all Angelique was looking at us in great wonderment.

"And that is why you were so cold and hard at St. Francis, and it was not a week since I waked myself thrice one night, calling your name! If I had believed the tales told me I would have been as merciless as you. Nay, I would not have spoken to you at all. Paul, how could you believe I would ever forsake you?"

Then, indeed, I besought her to live that I might prove an equal constancy in the future, and I greatly blamed my haste to believe poor Billy's lying story that he doubtless repented of as he lay dying at Ticonderoga. Food and hope and a happy heart did much to mend the ravages of famine and despair. We were soon ready for our voyage down the river, and we bade a willing farewell to Coos. I little thought that so many happy years of my life would be passed in a homestead on these same meadows, but not till I had played my part as Ranger in the Revolution.

The separation from my poor girl that had seemed to me more hopeless and final than death, was ended. Now there was naught that could put us asunder but death, nor that even save for a little while, so we told each other as we voyaged leisurely down the beautiful Connecticut. There were days when the lowering sky hung low over the river, whose dark sameness was unvaried by no reflection, though the scarlet flames of the last maples still blazed here and there along the shores. Then came other days of Indian Summer, when the November sky arched the sparkling stream and the wide forest from snow-capped eastern hills to the western range with as soft a blue as a sky of June; and as we, resting in comforting laziness in the gliding batteaux's stern, looked abroad on the day of gloom or the day of sunshine, we saw in neither the shadow of separation, and the river shone before us like a path one might journey on to the gates of eternity.

A Cruise on the Connecticut.

SPRINGFIELD, Vt.—Six o'clock on a clear fall morning found us on board the electric, with carefully packed outfit and spirits keyed to the highest pitch. On the six-mile ride to Charlestown, N. H., we saw from the car three deer—a handsome buck and two does—which we took for a good omen. We were still viewing the world through rainbow glasses when the early accommodation train for the north drew into the station. The outfit was thrown aboard, the canoe carefully lifted and shoved into the baggage car—almost. Turn it as we would, there was two feet too much of that canoe. "She won't go. Pull her out. All aboard." We hadn't looked for this; it was a bad case of "rattled." The train had gone with our luggage, and we stood on the platform with an eighteen-foot canoe, and said nothing. There was nothing to say. The English language was never designed for emergencies like this. The next train was five hours later. We were very happy.

Well, we killed those five hours, but they each contained sixty of the longest minutes we had ever known.

If you buy a canoe to travel with, don't let it be over sixteen feet long, or a combination baggage car is likely to interfere with your plans.

The noon train came, only an hour late. A full-length baggage car took the canoe all right, and we rode for the next few hours along the beautiful Connecticut and studied the river as carefully as we could from the car windows in the hope of getting valuable information for the return trip.

At Wells River we change, again at Wing Road, where the good wife of the station agent got two hungry men a supper that warmed their hearts.

We started again at 8:10, changed at Whitefield Junction, again at Coos Junction, and here we struck the Maine Central Railroad, which landed us at West Stewartstown, N. H., at 10:16, right on time. During all these changes we had looked after the canoe ourselves, and although an 18-foot boat is a mean thing to shove on to a hurried baggage agent, we everywhere received the most courteous treatment, and for our part we saw to it that the boys lost nothing out of it. Good cigars placed where they would do the most good made the canoe slide very smoothly.

Hotel Pike, at West Stewartstown, is the headquarters for visiting tourists and sportsmen. We were warmly welcomed by the genial proprietor, Mr. Pike, and every want was supplied; he can give sportsmen full information, as he knows the country thoroughly.

After breakfast the next morning, with a two-seated wagon and pair, and Jim Duranty holding the ribbons, we left at 8 A. M. for the twenty-six-mile drive to Second Lake. It was a beautiful morning, clear and cool; the foliage was just commencing to turn, the fields were yet green, and the bright sunlight flooding the hills made the old earth seem a very good place to live in. As we followed the winding stream and breathed the dry air, fragrant with the odor of balsams, we felt very "fit," and wished we were already in the woods. The horses seemed to share in the exhilaration, and took us along at a rattling gait.

Seventeen miles from West Stewartstown is First Lake, the largest of the chain of three lakes which form the headwaters of the Connecticut River, about five miles long and one and a half miles wide. It is a fine body of water, and I understand that the fishing is good; but for a man who wants to get away to the woods there are too many people here. Camp Metallack, nicely situated on the shores of the lake, is the best place to stop if you come here. To me it is the least beautiful of the three lakes, as the shores show the effect of the raising of the lake by the big dam at the outlet, made by the lumbermen for the purpose of storing the water to run logs down the river.

Second Lake is nine miles further in. The roads are

as good as the average country roads anywhere, and the drive is charming all the way, especially the last part through the woods.

We arrived at Coon in four hours, the usual time for making the trip. Idlewild is a comfortable camp, capable of accommodating thirty guests. Mr. O. C. Bumford is running the Second Lake camp this year, and we everywhere heard the highest praise for him as a landlord. The fishing commences as soon as the ice goes out in the spring, from May 20 to June 20 being the best time for the lake trout, tunge, which are taken best with a troll on a light rod. The last season was most successful; there was not a single party but what caught all the fish they wanted. There is good stream fishing, and several bogs and inlets where speckled trout can be taken with bait, and only six miles away is Third Lake, teeming with beautiful speckled trout; but more of this lake later.

Second Lake is approximately one and a half miles long and one mile wide, surrounded by hills, unmarred by the lumberman's axe, with the forest stretching unbroken for hundreds of miles across Maine and Canada. Here is found as wild country as any man can wish; here you can get away from civilization, and also get lost. No stranger should enter the big woods without a compass; a guide is safer. The woods come clear to the water's edge, except where the sandy beaches and low bushes make ideal places for the deer to come in.

This is a great deer country; seventeen were in view at one time from the piazza of the camp one day last summer. The house possesses an excellent glass, and to watch for deer is one of the diversions of the guests. It is not given to many to enjoy the solace of an after-dinner pipe on a shady veranda and watch wild deer come down to the water. Opportunities for photographing are excellent, and if you have never done it, it is exciting to have a skillful guide silently paddle you within snap-shot distance of a group of six or seven beautiful deer.

The afternoon of our arrival was rainy, and we sat around the cheerful fire in the great stone chimney and smoked, occasionally poking the great open fire to warm the backs of the two little British red coats who form the curious andirons. Mr. J. O. Reynolds is connected with this camp as guide. Jimmie has guided here for years, and knows the country as well as your milkman knows the way to your back door. There are many other good guides near here who can be secured on short notice, and if more are wanted, Mr. Bumford will hitch up the old mare and have one for you in two hours.

Next morning Jimmie filled his pack with the few necessities and we got into an Indian rock, as they call the Adirondack boats, rowed across the lake and up the stream a mile, then took the trail for Third Lake. This trail is kept in good condition; a number of ladies went over it this summer, and we made the five miles in two hours.

A trail through an unbroken forest always has a fascination for a lover of the woods, and a five-mile tramp through these forests, fragrant with the smell of the beautiful balsams so common to the woods of northern New Hampshire is alone worth the price of admission. Deer tracks were numerous, and we saw one of which I would have given much to see the maker.

At Third Lake are two log cabins, one set boldly out on the lake front; this is furnished with bunks, which fold up against the wall out of the way; good springs and mattresses with an abundance of blankets make them very comfortable. An open fire adds to the cheerfulness. A little back is a larger cabin, equipped with cook stove and all the necessities of the art of camp cookery. These cabins will accommodate a party of six with guides.

Third Lake is a gem, the prettiest of the three, 500 feet higher than Second Lake, about a half-mile wide and three-quarters long, surrounded by high hills covered with both hardwood and spruce; it lies like a diamond in an emerald setting. The virgin forest comes clear to the water's edge. This lake is very deep in some places, and is full of trout, but the nature of the shores does not make it a good deer country.

There is a so-called Fourth Lake a short distance from here, but it is nothing but a duck pond, and we did not visit it.

After dinner we cross the lake and take the trail for the "Settlement." After about half a mile we cross the boundary line between the possessions of Uncle Sam and John Bull. Here are two square iron posts, on the four sides of which are east the following legends:

Boundary, Aug. 9, 1842.

Albert Smith, U. S. Comsr.

Treaty of Washington.

Lieut.-Col. I. B. B. Estcourt, H. B. M. Comsr.

Another landmark is a new wooden post, replacing an old rotten one, which lies at its foot, marked:

SOPHIE.

Grave of an Indian Woman.

This squaw was with the surveying party which laid the boundary line, and the sign marking her burial place has, strangely enough, been preserved.

Coming out of the woods we have a magnificent view over part of the domain of King Edward, Jimmie has an errand in the Settlement, whose scattered houses lie far below in the valley, so while he is away, Tom and I wander down to the first farmhouse with the intention of buying a chicken to increase the camp fare. I put on my most winning smile and inquire of the dark-eyed, healthy-looking young woman who comes to the door if I can buy a chicken. She shakes her head. I offer to pay liberally, but while she looks willing, she says nothing. It suddenly dawns on me that this is Canada, and I address her in French, and presto! her tongue is loosened and she talks a streak.

Inside the rough frame house is a most interesting sight—four generations, great grandmother, grandmother, mother and two sturdy, rosy, cheerful youngsters. The three women are all at work combing, spinning and weaving, making the gray homespun which you have to travel far to find these days. They bring out a pair of trousers priced at four dollars. How soon can they finish a pair from the cloth on the old hand loom? Two days. The trade is made; my measure is taken with pieces of yarn and it is arranged that Jimmie shall call and get them the next time he comes to the lake and send them out to me. I haven't got them yet, and am just a little curious to see the fit.

I bargain for that chicken now, but as the cockerel will not hold his head still I have a good deal of leg work, and burn considerable powder before I succeed in shooting him. Jimmie comes up with a huge loaf of French bread under his arm, and we make a quick return to the lake.

It is near sunset, and with a light rod and three small flies I have an hour's good sport. It is still, and the trout are rising all over the lake. Two at a time, sometimes, oftener one; beautiful trout are taken, running from one-half to one and a half pounds. All but four are returned to the water, and even these proved to be more than three hungry men could eat.

The fishing here in the spring is said to be fine. The trout are taken then with bait or troll; the fly-fishing comes at the end of the season. We dined royally that night. Tom made himself a birch bark horn and went outside and gave moose calls till a great horned owl across the lake started a rival entertainment; Tom imitated him until the bird got so mad he would do nothing but squawk.

In the morning a helldiver on the lake furnished us an animated target for the rifle. Tom distinguished himself by hitting his bobbing neck at 100 yards, and he went out with the boat and gathered him in as another addition to our collection.

The camp put in order, we struck the homeward trail a resounding whack. On the way I had a chase after a sheldrake, which couldn't rise in the limited space he found and bumped awkwardly into old logs and finally escaped by hiding up under the bank. When we were nearly to the boat six or eight partridges crossed the trail; the old cocks with tails and ruffs spread seemed angry at the intrusion; their contempt added three plump birds to the camp fare.

When we reached the lake a strong head wind was blowing, and after a hard pull across we reached Idlewild in time for one of Mrs. Bumford's splendid dinners.

THE MIDDAY LUNCH.

After a good tramp and paddle, supplemented by a hearty dinner, a pipe of Dill's Best before a great open fire makes a man feel like giving away all his money.

Next day at 4 P. M. we row across the lake, walk a mile and a half by trail to what is called the East Inlet. At the dam we take an old flat-bottomed boat and paddle a mile and a half up the winding stream. Here we are treated to a rare sight; the clouds break away and in the east is a beautiful double rainbow. As we carefully work our way, following the current around old stumps and fallen timber, a great blue heron asleep behind a bunch of tall marsh grass rises with clumsy haste and flaps away over the tall dead trees. Three whistlers shoot away over our heads, and to the observant lover of nature the forest and stream are full of interest.

Further up, the stream becomes still more tortuous, the banks more grassy and less wooded. We suddenly come on a snug little cabin beside the stream; the old boat lays her nose up on the sandy beach, and we get out a bit stiff and chilly. We have made the trip up, it is nearly dark and we have seen no deer.

Jimmie's cabin is about 8 x 15, built of boards, roofed with bark, tight and warm. The bulk of the floor space is occupied by a bunk filled with fragrant freshly cut hay, in which four men could sleep comfortably. A little fiend in the shape of sheet iron stove, which devours birch bark and dry wood ravenously and roars for more, serves to heat the cabin and cook the grub. Jim spends part of his time here in the spring trapping muskrats, sable (pine martin), mink, fishers and bears. Plenty of bedding and cooking utensils make this camp a good place for any one who wants to get away from the crowd, the best hunting and fishing grounds are at your very door.

Hot tea and luncheon put us in fighting trim, and putting on all our clothing we take our places in the old red boat, which proves to be, as Jimmie says, "like a singed cat, better than she looks." For the next two hours we have rare sport, although the night is too clear for using the jack to the best advantage; we see four deer and hear two others. It is a strange trait in the character of these timid animals which holds them spellbound at the sight of the bright light.

New Hampshire has a wise law prohibiting shooting with the jack, and the writer always failed to see the sport in approaching the game in this manner and killing it with a shotgun loaded with buckshot.

There is something fascinating in being on the water at night—the strange noises that occasionally break the deathlike stillness, the little musquash silently swimming or feeding on the bank and disappearing with a loud splash as your boat comes on him suddenly, the frightened ducks rising noisily, and what your ear is constantly strained to catch—the splash, splash, splash of a deer among the lily-pads. Our first deer is seen soon after leaving camp—a small doe with a fawn. We round a sharp bend and come on her suddenly; she floundered around and finally succeeded in mounting the steep bank, and when safe behind the alders stamped and whistled,

whereupon her fawn gave a tiny imitative snort and we saw his small blazing eyes peering at us through the bushes.

We saw next a big doe which splashed through the stream to a small island, where she stood while we worked our way silently nearer and nearer. Soon a great head and ears with blazing eyes were outlined against the sky. We approached within 30 feet before her fear overcame her curiosity, and with her immense leaps her white flag sailed over the high alders on the bank.

The fourth one must have been an old hand at the business. From his whistle we took him to be a large buck, for he went off snorting and blowing with a noise like a small express.

Two more we heard further behind the alders, but their curiosity was evidently satisfied, for they kept back in the bush.

It was growing chilly, the fog was now so thick we could feel it, and the grateful warmth of that little sheet iron stove appealed to us, so we made a quick return, Jimmie handling the old scow with rare skill. It was an art the way he kept in the only clear channel, winding and twisting in and out among old dead stumps and trees, never losing his bearings for a moment, while half the time Tom and I couldn't tell whether we were going up stream or down, and it was all done as quietly and easily as you climb your own front stairs with your shoes in your hand at 2 A. M. Another luncheon, another pot of tea, another pipe and sleep—such sleep.

The morning dawns clear, and as we paddle homeward with the genial warmth of the sun on our backs, we see the great North Woods in all the beauty of a fall morning. The old blue heron is discovered at breakfast, and makes another wild break of life. Two helldivers eye us curiously and apparently at a given signal disappear, leaving only a few widening circles to mark the spot. We look in vain for their return; without doubt they are watching us from behind some clump of marsh grass. A flicker flies from one tall stub to another; a small hawk gives chase, but is either not quick enough or hungry enough, and gives it up. A kingfisher sounds his rattle on ahead. The marsh is full of life. We reached Idlewild at 9 A. M. Later in the day the sky became overcast and promised rain. Just before supper we paddle down the lake to see what we may see. Rounding the point into South Bay, we discover a deer feeding near shore; his head is under water, and when he raises it, behold a buck, and a beauty! Jim paddles us to within 75 yards before his majesty catches sight of us out of the tail of his eye. He raises his noble head and takes a long look, then plunges ashore and disappears over the fallen tree trunks.

In the open season a man with a cool head and steady hand might have had that head to hang over the fireplace in his den; but then in the open season he would not have been there. Our only regret was that the thick weather prevented our getting a photograph.

Saturday was cold, with gray clouds driving hard from the northwest, which we hoped meant that the last night's storm had ended the equinox. We spend the day taking pictures and paddling around the lake shores. We once got within 50 feet of a small doe, but she jumped just before I pressed the button and the negative was a blur. Jim Duranty came in at 6 P. M. with our team, bringing welcome letters from home. I found but one important entry in my note book for this day, it reads, "We are running out of tobacco; this is serious."

Sunday morning is frosty, and our heavy sweaters feel very comfortable on the drive out to West Stewartstown, where we arrive at 1 P. M., and after a substantial dinner with Landlord Pike we go across the street to a grocery store, which the proprietor kindly opens for us, and buy supplies for our trip down the river. Our outfit proved in every way admirable.

The 18-foot canoe (which should have been 16 feet), canvas covered, cedar planking, was built by the Indian Old Town Canoe Co., their Guides' Special Model and extra light, weighing 68 pounds. As will be seen later, we gave this rough usage, and it came out better than we had a right to expect.

The tent, a 7 x 6 Baker shelter tent of waterproof silk, which rolled into a bundle 6 x 20 inches, with ground cloth, was made by the David T. Abercrombie Co., as were the waterproof clothes bag and food bag; the latter with its twelve small bags for food is the most convenient scheme we ever used. From the same firm we had a cooking outfit of aluminum, all nesting nicely together, light, durable and easily cleaned.

Our canoe cushions we found very comfortable for the bow man, who paddled on his knees and at night they made the best of pillows. From the same firm again came our camp lantern, of aluminum weighing 4½ ounces, folding up flat and burning "non-drippable" candles, which received unstinted praise on the whole trip.

The above, with extra clothing, blanket, ponchos, guns, fishing tackle and camera weighed about 70 pounds.

We believed we had an ideal outfit in the most compact and lightest form. I will be glad to give any reader who is interested full details regarding any of our equipment.

We left West Stewartstown at 2 P. M. We found the river very low, and ran the first night to Colebrook. The next forenoon the river below Colebrook grew more shallow and full of rapids, through which we ran, and in spite of our best efforts, giving the canoe hard knocks, it was often exciting; but as we neared North Stratford about noon the river became one continuous shallow rapid. We ran for several miles, but concluded we would be unwise to subject our canoe to more such treatment, so we went ashore, and I made a sortie in quest of a farmer with a pair and hayrick. At the first house I was evidently mistaken for a suspicious character, and as the good housewife did not seem to be enjoying the interview, I tried another place with better success. Here the farmer was just sitting down to dinner, and pressed me to accept his hospitality. We had paddled since early morning; it was half a mile from Tom and the canoe, and I reasoned that he had the grub bag any way—so I let him wait. After dinner we drove back, and loading everything aboard the hay wagon went to the railroad station in good form.

From our experience I would not advise any man to put his canoe in above Wells River. From Wells River down the stream is larger, the rapids have water enough, the carries are not bad, the current is most of the way very appreciable, and one will find the trip altogether delightful.

We put in one night at White River Junction, and camped the next near Windsor, under the shadow of Ascutney Mountain. Next morning we dropped down to the village, drew the canoe up on the bank, changed our moccasins and lumberman's stockings for more civilized footwear and visited the Vermont State Prison. Windsor is a beautiful old Vermont town, where many New Yorkers have beautiful summer homes. Across the river is a colony among whom are today's popular novelist, Winston Churchill, and St. Gaudens, the sculptor.

At 3 P. M. we were under Cheskin Bridge, between Charlestown, N. H., and Springfield, Vt., and soon had our baggage by the track waiting for the electric.

The canoe upon examination showed several cracked planks and much lost paint, but the canvas was unbroken, and so far as service goes as good as new. The trip, especially the latter part, was eminently satisfactory. The weather was fine all the way down the river. We found ducks quite plentiful, and other game, which afforded much sport for the rifles. We tried trolling for pickerel, but you cannot troll down stream.

We were as brown as Indians, could sleep all night on the sand, and each had an appetite like a hired man's. If one knows how to camp it is much pleasanter to go as we did than to stop at hotels. These are often far from the river bank, your canoe must be hidden, a risky operation, or carried somewhere for safe keeping, and you lose the close contact with nature in all her varying moods, which is half the charm.

The farmers along the river may be depended on for eggs, milk and bread, or, in fact, almost anything, and so many towns are passed it is not necessary to carry a heavy stock of provisions. I had tried to give a brief account of the run down the river without wearying with detail.

One could write columns on the scenery of the beautiful Connecticut Valley, the river, the life along the shores, the fun at every camp, the delights of the noonday lunch, with the pipes afterward, and all those things which so delight the heart of the lover of outdoor life and make a trip like this linger long in the memory.

W. W. BROWN.

SPRINGFIELD, Vermont.

A Walk Down South.—VI.

At this writing I am somewhere in the Pine Barren which fills that part of the map of Pennsylvania in the loop caused by the north sweep of the Susquehanna River between Lock Haven and Keating. My exact location, geographically, I don't know, and I am waiting for some one to come along and set me aright, rather than go back the eight or nine miles to Renovo, which probably would be necessary to find some one able to direct me aright. As I could follow my back track to Renovo, I don't consider myself lost, but this is no sign that I will not be if no one happens along to tell me which way to go. According to my map Beech Creek lies a little east of south of Renovo. If I strike due south, compass in hand, I will get to that village, which is about twelve or fourteen miles from here.

I left North Bend on Friday, Nov. 1—two days ago. I followed up the Susquehanna River a couple of miles, most of the way along the side hill. I was in good spirits, in spite of the fact that there was medicine in my pack prescribed by a Dr. Davis of that village. He had assured me that I could travel on without danger—relieving a sort of panic which had seized me a day or so before, at which I laugh now, for I never was so strong nor more healthy than at present.

Some men were making a new bridge at Paddy's Run. I hoped from the name on the map that Paddy had climbed a tree, or something of that sort after he had fled awhile. But I was disappointed. Up in the Adirondacks we would have called Paddy's Run Paddy's Brook, or creek, and no one unfamiliar with the vernacular would have mistaken it as the memory of an adventure. The men set me aright, though none knew who Paddy was.

I had a ride for the pack from Paddy's Run to Renovo. A small boy with a horse and a wagon load of wood was overtaken. He gave the pack a ride and asked the usual question as to how much the rifle cost. When the village came in full view from the top of a little grade in the road, there was a surprise. Instead of a clump of houses and a name, here were dwellings for thousands—four or five. It is one of the delights of a traveler to find the unexpected. I shouldered my pack after a bit and walked for a mile through this place. It is a railroad town; the passenger and freight divisions of a railroad begin and end there. Such a town was Sayre, Pa., and, like Sayre, it lies by a stream at the foot of steep mountains.

At a meat store I bought a little bacon and a little pork—half a pound of each. On the street that leads to the bridge I bought some oatmeal and baking powder. I was about to venture into the wilds and needed to prepare for it.

They said at North Bend that the road from Renovo to Beech Creek is twenty-two miles long, and that for eighteen miles there was only an occasional hunter's shanty-at intervals. Moreover, it was no common wagon road. Wagons had been driven over it, but not often. If I "kept to the blazed trail it would be all right," otherwise I might come out at Glen Union or Keating, or any other place save Beech Creek. But I was assured, if I once got to Peddler's Hill all would be well. Beyond that I could not miss the way.

I crossed the bridge over the Susquehanna about 11 o'clock A. M., and asked an old man on the South Renovo side for the road to Beech Creek. He had heard of it, but not lately. At the store I had better luck.

"Get on one of the prop wagons and they'll point the way for you," I was told. So I waited till some wagons engaged in getting out jack pine timbers to be used in the coal mines came along. They went only a few rods, and then stopped at their shanty for dinner, of which I partook, for one cannot stop at a lumber camp at meal time and not have a chance to cat. The meal was astonishing. There was an abundance of fresh, sweet milk and apple dumplings—none of the dried apple affairs, but fresh-picked apples, and there were at least two dumplings for every person present. Added to this, there was a pie. For the rest, the fare was similar to other lumber camps that I have visited—tomatoes, potatoes, fried smoked meat, bread, coffee or tea, etc. If it hadn't been for that

eighteen-mile stretch of road with no dwellings along it, I should have applied for a job at once, on the strength of the milk and new-apple dumplings. After dinner the boys stood around awhile before hitching up—more of the remarkable!—and then I put my basket in the reach of the wagon of a man who looked most talkative, and was ready to move.

The wagons were blocked in front of the shanty to prevent their backing down into the Susquehanna, a hundred rods down hill, and for almost an hour there was not a place where a wagon could stand unblocked. No one rode up the hill. The wagons weigh about a ton—the reach is a white oak tree trunk 25 feet long and 6 to 8 inches in diameter—and the horses sweat before the empty wagon on that hill. It was a big lift I got when my pack was carried up there.

The driver hadn't killed many rattlesnakes this year—only five or six. He was going hunting Saturday, and had a man engaged to take his place. His brother-in-law (another driver) had seen deer tracks overlooking Renovo the other day—fresh tracks, too. It is hard getting them still-hunting, he said, and they were watching dogs pretty close. Even with dogs it is not so easy, for deer don't come to water like they used to; just "play" over the mountains till they lose the dog in the tangle. Bears were plenty. One man above Renovo got five in traps from Sept. 1 to Oct. 28. The driver's wife knows how to cook bear meat—"most women hereabouts is pretty good at cooking game," he said. "They has lots of it to do. Now, my wife's father and mother are both good shots, and, of course, she learned to cook, and since I've had her she hasn't got out of practice any."

Near the top of the hill the driver suggested that I go to a camp a few rods down in the woods from there. I was glad to do that, for I was in no hurry. The wilderness was all about me, and I could now see a change from the semi-wild life which so far marked my route.

The camp was a board shanty. It once belonged to a hill top saw mill, but now only hunters live in it, if any one. The bunk room was boarded up tight, and the door braced shut. The place was hay-softened and had a suspicious old quilt as a cover. In the light the suspicions proved groundless. Having seen that the place was fit and found for passing the night, I took my rifle and went on a walk. Twenty rods away where the ground was wet I found in the mud the tracks of a cat; each track was over an inch across. On both sides of these tracks were those of some kittens—two or three, I judged by the number. It was a genuine pleasure to think that I had such untamable neighbors as wildcats. I wished I could see one, and looked, but I succeeded in killing only a chipmunk; for the cats are night prowlers.

Toward night I built a fire in the middle of the camp road, far from the dry leaves. I sliced up a potato which I had carried clear from Eaton, N. Y., where I dug it while in the employ of Mr. Johnston. Fried with bacon this vegetable brought back pleasing memories of miles I had covered. I scattered the dying embers of jack pine branches and prepared to go to sleep for the night. I laid my woolen blanket on the bunk, folded over, and on top drew the ragged cotton-stuffed quilt, then I propped the outside door shut and tied the inside one shut with a cotton string. I crawled in between the folds of my woolen blanket and dozed for a while. Soon I was asleep.

Suddenly there was a loud bang and jangle, while a bright light stared into my eyes. I had visitors. Two hunters, brothers, left Renovo at 7:30 o'clock, and by the light of a lantern found their way over the familiar trail to the shanty to spend the night. It was then 8:45 o'clock. Every night that I have slept in a barn or open I have wondered at least once what effect a sudden visit in the night by strangers would have on me. I did not doubt that it would make me tremble for a moment, perhaps unnerve me completely. In spite of their noise the visitors did not awaken me till they were at my feet; but if they had been bent on mischief they would have found a lot of it to do, for I was on my feet before my eyes were able to see, ready for the emergency.

But it was handshakes instead of blows that I had awakened to, and although one of the pair was on the under side of a liquor bottle, they were good company. We ate bread and butter, and for the second time since I started, I tasted liquor because it seemed churlish to think of refusing the good-natured offers. At hotels I find no difficulty, by pleading the truth—that alcohol would weaken me under the pack.

They told me that in the previous spring berry pickers found a dead wildcat in the shanty we were in. It had got in through the stove pipe hole in the roof, presumably, and died upstairs, unable to get out.

We rolled in for the night. The old quilt was used by one to wrap up in; the fellow who was drunk took a thin coverlid of large size, which I had not noticed. I doubled up under my own blanket. At 5 o'clock A. M. they stirred up and built a fire in the box stove. The chimney only went to the next floor, but the smoke went out all right. I fried some bacon and at dawn we ate bread and butter, bacon, coffee and molasses. They had a half-pint can of molasses with them; everywhere hereabouts I find sweets, and nowhere do I enjoy them so much as in the woods. I think it must be because one uses up so much fat when at woods work, at least at physically hard work.

At sunrise the two went on, with fine shot in their guns. I suspected their dog of deer hunting proclivities. They said, however, that it was just a young house dog.

I loitered around for a couple of hours, and then started on. One of the prop teamsters put me on the right road. Strong coffee which I made for the two visitors tasted good and freshened me for the walk. I felt sure.

It was bright and clear. The spiders' webs glistened among the tree branches toward the sun. I saw nothing to shoot along the road, which led up side hills and over the back of a long ridge—the ridge that is shown in maps on the south side of the Susquehanna River. Scrub oak and jack pine were the principal trees; the latter were conspicuous as individuals, but the former as underbrush, covered every hill and valley that I could see for miles—brown, dry and rattling constantly in the wind.

I reached Peddler's Hill without doubt. There was the watering trough by which I could identify it, but I did not see the grave of the unfortunate buried there. Twelve or fourteen years ago in the spring the body of a man with a peddler's pack by it was found at the trough dead

and far decayed. He had carried too big a load and frozen to death there during the winter. He was wrapped in a table cloth and buried "between a tree and a stump on the up-hill side."

I followed the ridge top, then, for nearly two hours—say five miles. The road came down hill always, doubling from west to east in its effort. Near the foot two great ruffed grouse roared into the air and flew majestically away, the best chance for a double at that bird I ever saw. I leveled my rifle for a shot even with that, but out of the corner of my eye I saw a cock on the ground twelve feet from me. On him I turned the sight and fired. He flew with both legs hanging, and only with strong effort. But it took the bird over the crest of the ridge eighty yards away, and I could not find him again. This was the second pheasant I have shot through with a .32 rim fire long bullet to get away this trip.

Thirty rods beyond I came to the forks in the road, one branch leads southeast, the other southwest. The one southeast seems well traveled, considering. The other is blazed and each blaze is painted white. I was told to follow "the blazed trees" road.

An old camping site suggested dinner, and I ate pancakes, wondering which way I should go. The pancakes were of flour and broken wheat—"oatmeal." They were exceedingly good. I used bacon grease for shortening and molasses for browning. I tried sugar this side of Waterville, thinking to lighten my load an ounce or so, but at North Bend I got a four-ounce bottle of Swain, the druggist, and had it filled with table syrup (maple flavored) at the hotel. Rich molasses I am sure now is the best sweet for the woods. It has a flavor, and variety is what one craves. I now want something strong or rich. I never could eat onions, but within a week I have swallowed them fried with relish. Ruskin attributed the condition of European peasants to their garlic. I wonder if Ruskin ever worked as the peasants work, in the open with axe and hoe from dawn to dusk for a month at a stretch? Judging from my own feelings, Ruskin would have loved garlic and not blamed it for the appetite created by his own labor, had he done so.

While I was eating I wondered what I should do. I took the rifle and went back to the forks—ten or twelve rods—and followed the southeast for a ways, but could see no blaze marks on the trees. That seemed to settle the matter, but inside of ten rods the other trail became a mere foot path with blazed trees—all the gashes being painted white. I kept on and inside of fifty rods I came to a tent, twelve feet square. I put my pack on the table and waited for the owners to come back. It was then 2 o'clock.

Hour after hour passed. At 5 o'clock I built a fire six rods from the camp and put two bluejays and a chipmunk into a pail of water on it. I parboiled them, and then into the new water put some oatmeal. I stirred up a thick baking powder, flour, salt and water batter in a cup, and dropped the dumplings into the pail and covered it over. At the end of twenty minutes I began to eat. But I made two mistakes. The game did not need parboiling, and the oatmeal overcame the other flavors. Nevertheless it was pretty good, and I ate all but a little—say a quart. The rest I gave to a lame-footed dog that came up while I was eating, and seemed to indicate the coming of the campers.

In the last shades of dusk I entered the tent. Everywhere was the evidence of recent occupation. A dish pan was hung to a tree, bread crumbs were on the table, the dishes were upside down and dirty; a rag was on the gun cleaner; in a kettle was some potato peelings. The dog indicated an early return of all hands.

I built a fire in the box stove (sheet iron), and, after a while went to sleep, expecting the coming of the hunters. I hoped that they would be good natured and not blame me when they found that it was to learn my way that I stopped and made myself at home in their tent.

RAYMOND S. SPEARS.

The Doctor's Turkey Shoot.

In all our experience in the woods I do not recall a time when we were favored with such perfect weather as we had that year. It was almost too warm for hunting during the first two weeks of our stay, and November had set in before a sign of frost was visible. We loafed about camp, or took long tramps through the woods, contenting ourselves with such small game as crossed our path. The days slipped by unheeded by us until one day Jack broke the spell.

"Say, do you know," said he, "that next Thursday will be Thanksgiving Day? We'll have to be thinking about getting back, because this weather won't last forever."

"And leave without a single deer?" I remonstrated.

"We must take some venison home with us," the Doctor chimed in.

"Jack is right," Jim asserted. "It doesn't seem possible that we have been here a month or more. You see, our wives—"

"I understand," I interrupted, "but I intend to stay here till I kill a deer if it takes all winter."

"And I'll stay with you," the Doctor cried, enthusiastically.

"We'll compromise," said Jack. "We'll stay until Monday, and if we are any good we can get a deer in that time." After some hesitation the Doctor and I agreed to this proposition, and the four of us then laid our plans for a big hunt to begin on the morrow.

During the night the wind shifted around to the north, and by morning it was cold enough to make a man step lively while dressing. Jack shot a deer that day—a good-sized doe—and felt very proud, and wanted to break camp immediately and start for home. The next day I killed a big buck. Jack emphatically declared, with a mild oath, that he would be blanked if he returned without shooting a buck also. Thus it came about that Monday morning found us still in camp with no thought of immediate departure.

Tuesday morning the cook thrust his head in between the tent flaps and aroused us with the announcement that it was "Snowin' like the very devil, an' was a-goin' t' snow wusser, b'gosh." We sprang out of bed, dressed hastily and stepped outside. The cook had not exaggerated. The ground was white with snow, and the air was filled with the flying flakes.

"I told you we ought to have broken camp last week," this from Jack, who secretly rejoiced because of an evil prophecy fulfilled. "I knew such weather couldn't last. We're in for it now, and no mistake."

"How about that buck?" I began, but he interrupted me. "He'll have to wait, that's all," he asseverated. "I'm going home."

"But how beautiful the woods are," cried the Doctor. "It's worth being snowed in to see such a sight."

I heartily voiced the Doctor's sentiments, for truly the forest looked very lovely in its new winter mantle. It was a new world upon which we gazed, and the fast-falling snow was rapidly changing the picture before our very eyes. The branches of the pines and hemlocks hung drooping beneath their unaccustomed load like great white plumes; even the stunted jack pine took on an added beauty of its own; contending for second honors with the more stately spruce; a muffled stillness seemed to envelop the wilderness like a heavy pall shutting us off from the rest of the world, and our voices sounded loud and unnatural.

"One of us will have to go to Hale's for the team," said Jack.

"Let me go," Jim quickly responded. "I hate breaking camp."

Hale's place was five miles away on the Peshtigo River. He was our nearest neighbor, and had agreed to haul our outfit to the Junction when we were ready to leave. So soon as we had finished our breakfast Jim wasted no time in arguing, but set out on his journey accompanied by the Doctor, a self-invited companion.

The breaking up of camp is never a very delectable task, and in the present instance was attended with more than the usual discomforts of mind and body. The snow got into everything and melted before we could brush it off, consequently all of our belongings were more or less in a state of humidity. We made but slow progress, and Jim and the Doctor returned with Hale and his team before we had the tents down.

"Guess you'll have to put up to my place to-night," said Hale when the wagon was loaded and ready to start. "I'll have to git the runners on the box afore I kin make the trip to the Junction. Ef we don't git a blizzard out'n this I'll miss my guess a lot."

This prophecy was not conducive to gaiety. We were glad to assent to his proposition, however, as he had ample accommodation for us a this place, and it was with a feeling of thankfulness that we gathered before the big fireplace that night and listened to the fierce wind howling about the cabin walls. A tent would have been a poor shelter in such a storm. By the next morning our snow storm had developed into a full-fledged blizzard—a blustering nor'wester. Jack sulked in his bunk, morose and uncommunicative, puffing at his pipe like a veritable Wouter van Twiller, and occasionally arousing himself from his dejection long enough to consign the weather to regions where snow is not supposed to abound; Jim employed the time in vain recriminations, the burden of his song being, "Three hundred miles from home and Thanksgiving Day to-morrow! What will my wife say?" The Doctor entertained me with wonderful stories of his experiences in Dakota during one winter, where, he informed me, such a storm as was now raging outside would be considered a mere flurry—a boisterous zephyr. In this wise did we pass the long, gloomy day.

Thanksgiving morning dawned clear and cold. When Hale had shoveled the snow away from the door, we were glad to step outside and breathe the fresh, bracing air. The light, fluffy snow was piled up in great drifts on all sides, and fitful gusts of wind whirled it about and sent it flying in our faces and down our necks. Winter had come upon us with a rush. It was an abrupt change from balmy Indian summer to cold mid-winter weather.

"No use tryin' to make the Junction to-day," Hale informed us. "Ef we could git thar afore dark 'twouldn't do no good, 'cause the cars'll be stalled. They ain't no injine puffin' could keep a-goin' in this yere weather, an' that's what."

"Don't know as it makes much difference," Jack growled, "so long as we get home before Christmas. Our wives will mourn us as dead, but of course that won't matter."

"Their joy will be all the greater when you finally appear," I assured him. "Can't we do something to while away the time?"

"When I came down with Jim for the team," the Doctor replied, "I saw some turkeys walking around here. Why can't we get up a turkey shoot—an old-fashioned Thanksgiving turkey shoot? It would be just the thing to relieve the monotony. What do you all say?"

"Great idea," Jim declared. "I second the motion."

"There might be some sport in it," I added. "What do you say, Jack?"

"Anything to kill time," the latter responded. "Bring on the turkey, Doctor."

"You have some turkeys, haven't you?" the Doctor inquired, turning to Hale.

"Yep. Four or five," Hale made answer.

"Where are they?"

"Hard tellin' jest now. See that onusual big snow bank over thar near the barn?"

"Yes."

"Waal, that's the hen house—that's t'say thers a hen house somewhar thar'bouts. Like's not the turkeys is in thar—that's t'say ef they ain't over in that other big drift whicht was onced the corn crib whar they was fond o' roostin'. I reckon we'll find 'em in one o' them places alive or friz to death. Want t' dig 'em out?"

"Of course," the Doctor cried enthusiastically. "Get us another shovel and we'll help."

"You'll excuse me, won't you?" Jack requested as Hale went in search of the other shovel. "I'm troubled with rheumatism, you know, and shoveling never was in my line."

"There's no sense in all of us trying to work with one shovel," I added. "I think I'll go inside with Jack. He might get lonesome. Call us when you're ready."

"You fellows are quitters," Jim declared. "I am going to see this thing through to a finish. Come on, Doctor."

Headless of Jim's scorn, Jack and I sought the warmth of the cabin, where we hugged the fire and smoked our pipes in unsociable silence. In the course of an hour or two Jim burst into the room, closely followed by the Doctor. They looked like two snow men.

"Well, we found the turkeys," Jim announced in breezy tones. "We'll thaw out a bit while we make arrangements for the shoot."

"Were the turkeys alive?" I asked.

"Oh, yes!" he replied. "They were a little numb from the cold, naturally. We're going to use the liveliest of the bunch for the shoot."

"What are the rules for this shooting match, anyhow?" Jack inquired.

"The turkey belongs to me," the Doctor promptly answered. "Jim loaned me the money to buy him. He cost one fifty. I am going to charge fifteen cents a shot at sixty yards until one of you kills the bird. To the victor belong the spoils."

"But you have to kill the turkey," Jim added. "A mere wound doesn't count. By virtue of my loan I get five shots for nothing."

"We don't want to take unfair advantage of you," the Doctor continued. "The turkey is pure white, so I shall stand off to one side and call your shots—that is, whether you are too high or too low."

"That sounds like a fair proposition," I remarked to Jack.

"I'll bet you a dollar I kill the bird," was his only reply. Of course I was obliged to take the bet.

"Get your rifles ready," said Jim. "The Doctor will place the turkey. He has asked me to keep score and collect for the shots in advance."

The Doctor hurriedly left us, and we got down our rifles and sallied forth to exhibit our skill as marksmen. I was doubly anxious to kill the turkey and win Jack's bet, because of his air of self-assurance, but there was that in his manner which warned me I would have to shoot my best in order to accomplish my purpose. As we emerged from the cabin we caught sight of the Doctor wallowing through the snowdrifts some distance ahead of us with the turkey under his arm.

"That fowl is the dearest live thing I've seen in some time," Jack observed.

"It's the cold," Jim informed him. "It makes it all the easier for you. He won't flop around so much."

The Doctor paused and looked back at us.

"It's just sixty yards to this stump," he shouted.

"It's the longest sixty yards I ever saw," I shouted in answer. "How did you measure it?"

"I just paced it off. It's exactly sixty yards."

"It's all right," Jim interposed. "The snow makes the distance deceptive. It really isn't quite sixty, I should judge. He didn't count right." The Doctor placed the turkey behind the stump, leaving nothing but its head and neck exposed, and withdrew to one side.

"Blaze away whenever you're ready," he called to us.

I fired first.

"Too high," the Doctor announced.

Jack laughed, struck an attitude and raised his rifle to his shoulder.

"Four feet too low," was the Doctor's report on Jack's shot, and it was my turn to smile.

When we had each fired three times without scoring our interest became aroused.

"I don't understand it," I paused to remark. "It must be the snow."

"It's the color of the turkey," Jack disagreed. "I can hardly see the blame thing. He hasn't moved an inch since the Doctor stuck him up there."

"All the less reason for your poor shooting," Jim replied. So far he had taken no part in the affair, but stood off to one side, keeping score on the back of an envelope, and incidentally favoring us with advice.

Jack and I fired a dozen shots apiece, and still the turkey went unscathed. By that time I had become suspicious of the Doctor's coaching, and without commenting on the fact ceased following his directions; but aim as I would, I was either "too high or too low, or just a trifle too much to the right or left." And then Jim stepped forward and announced that we had had our chance and that he would now show us how to shoot. He fired twice without giving us a practical demonstration of his skill, and just then Hale called to us from the barnyard:

"Say, ef you boys want that thar turkey fer dinner," he shouted, "you'll have to bring him in right away. It'll take an hour t' thaw him out—that's t' say, ef they's anythin' left t' thaw."

Jack and I exchanged meditative glances.

"What in thunder does he mean?" Jack inquired, suspiciously.

"Give it up," Jim responded, and hastened to add:

"Let me have just one more shot. I've got the range now, I think."

He took quick aim and fired.

"You killed him that time," the Doctor shouted. "Hit him just below the neck."

He held up the turkey and started toward us.

"With his whiskers and that queer-looking fur cap, the Doctor resembles some sort of a retriever," Jack observed.

Jim received his prize from the Doctor's hands with unnatural modesty.

"Let's have a look at him," Jack requested. "For a freshly killed bird he's the stiffest proposition I ever ran up against."

"I don't believe Jim hit him at all," I asserted.

"Yes I did," Jim retorted. "I plunked him square in the gizzard." He raised the feathers and showed us where the bullet had entered. "Hale is waiting for the turkey," he went on. "We can settle the question later as to who shot the bird."

He hurried away in the direction of the barnyard without giving us a chance to examine the turkey.

"Something tells me that we are a couple of simple-minded suckers," Jack murmured in my ear as we followed the Doctor into the cabin.

"Ditto, hic," I assented. "There wasn't a drop of blood on the bird. Did you notice?"

"I did. And we fell for a dollar eighty apiece," he sighed.

In due course of time Hale's "missus" summoned us to partake of our Thanksgiving dinner.

"Sorry to hev kep' you waitin' so long," she apologized, "but that turkey was froze solid. I swan I jest thought he never would thaw."

Jim turned red and the Doctor began to fidget about and look uncomfortable. Jack, who had insisted upon carving, winked at me and smiled grimly.

"Is that why you punched him so full of holes?" he asked, turning to Mrs. Hale.

"Fer ever sakes! You don't think I done that, do you?" she questioned in reply. "Jest as ef you men folks didn't shoot the poor bird all t' pieces yer own selves, an' him dead's a door nail the hull time. I declare t' goodness I don't see why you done it."

Jack rose to his feet and glared accusingly at Jim and the Doctor, like a judge about to pronounce sentence.

"Of all the scheming, foxy, nervy bunco-steerers, you two are the limit," he declared. "Doctor, I am surprised at you. How many times did I hit that bird?"

"I couldn't swear to a single shot except Jim's," the Doctor unblushingly replied. "You see, the stump was hollow and I set the bird inside of it, and the bullets must have gone right through the stump, bird and all."

"Well, just ante up some of that dollar eighty I paid you, then. You can't convince me that this wasn't a put up job, you know."

"Don't give up a cent, Doctor," Jim interposed, struggling to keep from laughing. "Why should he?" he added, turning to me.

"Why should he?" Jack broke in in scornful tones.

"Why should he? Why, because we shot that turkey full of holes before you fired your rifle once, that's what for. Laugh, if you want to. What you holding in for?"

"The agreement was that one of you was to kill the turkey," Jim rejoined. "How could you kill a dead bird? It had been frozen for hours," and Jim gave way to his mirth.

"That's what I call a skin game," Jack began.

"A mere friendly bit of fun," the Doctor interrupted. "Come, we'll leave the matter to Hale. If he says refund, why, we'll refund."

Thus appealed to, Hale thrust his hands in his pockets, threw his head back and gazed reflectively at the rafters.

"How much did your shootin' cost you?" he asked, after a moment's pause.

"Three sixty," Jack and I replied, in unison.

"Waal, this is Thanksgiving Day, ain't it?" he continued. "I wouldn't a-knowned it ef you boys hadn't happened 'long here to-day, cause I ain't celebrated Thanksgiving since my old man died, fifteen years ago it was. I fer one am thankful you had yer turkey shoot, an' it seems t' me," he lowered his eyes and gazed at Jack and me, "seems t' me I wouldn't say too much 'bout that thar three sixty. I'd fergit it, and jest be thankful it wasn't more. Ef it hadn't been fer the missus here you'd be shootin' yet, I reckon. And that reminds me, jedging from her looks, that the turkey's gittin' cold."

"He's right, Jack," said I. "It is on us, and a good one, too. Carve the turkey."

FAYETTE DURLIN.

Natural History.

Animals and Men.

It goes almost without saying that animals and men have always dwelt together here on the earth since the very long time ago when both first had an existence. Of course I do not mean that they were from the first as well acquainted with each other as some of them are now—that the primitive man had a well trained and lovable riding horse which carried his master around with evident pride—that he had a friendly dog so closely attached to his skin-clad person, and a domestic cat so in love with the little ash-heap which then constituted his fire-side, that neither of them could be driven away even with a club. I only mean that the same localities which were occupied by man were also frequented by numerous representatives of the wild animal creation; and that when the animal left its den, lair or nest, and the man left his cave, grotto or hole-in-the-ground, the two were liable to meet. In this sense, each dwelt "in the presence of" the other.

I think it equally clear that the first or original relationship between animals and men was one of hostility. Neither party loved the other, and in fact had at first no occasion to. Primitive man wanted clothing and food, and doubtless got both by the chase. The carnivorous animals (which were largely dominant) wanted food, and a specimen of genus homo, served rare, was, as we may reasonably believe, as acceptable to the tiger-taste then as now. Possibly it was then first acquired, and by constant use has become little short of an inherited instinct.

Out of this relationship of mutual hostility, there have been evolved three very singular developments:

1. The talkability of animals as a part of the once current belief of mankind.

2. The institution or cultus which we now know as "Totemism."

3. The investment of certain selected animals with a sacred character.

Now, so far as I am aware, there is no existing human record, nor any extant reliable tradition which shows, or even tends to show, the origin or beginnings of any one of the characteristics of animal life involved in these three phases of development. An inquiry as to their origin involves many matters of interest, but in making such an inquiry, our only guide is (1) conformity to collateral facts which are known, and (2) reasonable probability.

Let us take first the question of talkability. What can be safely said as to it?

In the slow evolution of humanity from a state of savagery—and probably during the era of barbarism—there was a time when a belief in the power of animals to make intelligible use of human language was a part, and a somewhat important part, of the common thought of the race. And so common was this belief that intelligent and instructive conversations between animals and men were not regarded as matters of wonder or even surprise. They talked with each other, or were so represented, on subjects of common interest, as freely and as sensibly as men with men. Nor was it a sign language that is said to have been used, but veritable human speech.

These conversations, also, as usually narrated, had this noticeable feature,—they were strictly characteristic of

the parties; that is to say, each animal is always represented as talking just as that particular animal might reasonably be supposed to talk if, being still an animal, it had acquired in some way a knowledge of language and the gift of speech. The mistake is never made of representing an animal as talking just as a man would talk. We can usually recognize some animal trait in animal speech as reported, even though in some cases some men may possess and express the same or a like trait. Neither does one animal habitually talk just like another animal of a different species. The individual traits of the particular animal crop out in its speech. Nor yet again, are there any incongruities in respect of age or sex. A wolf never talks like a horse, nor is a young fox represented as possessing the matured wisdom of its ancestor; while a mother wolf which, like "the modern woman," should strive to ape masculine ways, would be a strange anomaly indeed.

It is true, however, that while animals in such conversations are represented ordinarily as possessing many traits which are common to them and to men, such as cunning, craftiness, deceit, etc., at the same time still other traits, peculiar to humanity, and rarely if ever found in animal life, are also attributed to them, such as honesty, good faith, a sense of justice toward others, etc. These latter not infrequently enter largely into the narratives. But what is a more singular fact (of which more will be said presently), the animals not infrequently exhibit, according to the stories told of them, the possession and exercise of still higher traits, such as border closely on the superhuman—sometimes using their superior wisdom solely for their own benefit, and sometimes for the benefit of their friends in human shape, or for the punishment of their enemies.

I do not think that I need to stop to illustrate and prove what I have thus said. Our literature is full of both illustrations and proofs—the books of Folk Lore, Æsop's Fables, Uncle Remus, Little Red Riding Hood, or any one of the dozen other equally familiar books. In fact, the Bible is an excellent authority on some of the points suggested, as we will shortly see.

Now, how and when in the growth of civilization, did this idea arise and become a part of the common belief of men—that animals could talk—when everybody knows, and always did know, that they cannot? It is an old saying that:

"The impossible cannot be done,
And very seldom comes to pass."

But in respect of this matter, "the impossible," if it did not actually "come to pass," was believed in as implicitly as if it had; and men who understood the impossibility, still thought, believed and acted as if it were not only possible but also true.

Beliefs, whether true or false, do not exist in the absence of a sufficient cause by which to account for their origin. We may not always know the cause, but we may be sure that there once was one.

It almost goes without saying that this belief in the talkability of animals, as a portion of or one element in a human cultus, belongs necessarily to an exceedingly early period of human development. There is no place for it in the life and thought of a civilized or even of a semi-civilized people, except as a relic of an earlier age. It is not based, however, on the first or earliest impressions which men in a state of savagery would or could acquire from their observations of the habits and capabilities of wild animals. Such early observations would indicate the existence of a feeling of hostility rather than of friendship; while, as a general rule, the conversations as reported clearly imply the existence of a friendly relation between the parties, either real or assumed. Conversation on a friendly basis necessarily implies friendship, and friendship is not the growth of a day, especially as between a wild beast and an equally wild man.

Hence it cannot be assumed that the first Nimrod was the first inventor of animal talk. Time must first be allowed, and probably many centuries of time, for the creation and growth of friendly relations between men and animals. We may reasonably conjecture that the taming and domestication of the first progenitors of our domestic animals, marked the inception of such friendly relations. This work itself must have required several centuries—we cannot even guess how many—for while even yet individual members of a wild family of animals are sometimes easily tamed, man had not within the historic period, covering several thousand years, so far domesticated any wild animal so as to establish in its progeny a well secured trait for himself, as an instinct or trait from its birth. At least I know of no record of that kind. Such efforts have been made within the past two or three centuries, notably with the zebra, the bison, the muskox, and sundry singing birds, but without success. All our domestic animals were tamed and brought into friendly relations with the lords of creation long prior to the existence of any known records of human history—and some of these records are very old.

We must therefore premise the existence of somewhat intimate friendly relations between men and animals before the idea of friendly conversations between them could possibly arise; and such friendly relations could only follow complete domestication, not necessarily of all, but at least of some. And when the gift of speech became, in common thought, a trait of domestic animals, it was but a step to the further idea that non-domestic or wild animals could also talk, as in Little Red Riding Hood, and in the Biblical story of the temptation of our Grandmother Eve.

After men became sociably intimate and on terms of good-fellowship with a domestic animal, say with his dog, it is not at all surprising that he should wish to talk with it, especially if cut off from other company, as in long-continued hunting or herding; or, on the other hand, that he should imagine that it wished to talk with him. And if a man really wanted to talk with his favorite and faithful dog, he would have no difficulty in getting up an imaginary conversation, which, if sufficiently interesting to others, might easily become, in time, a part of the folk-lore of his people.

Nothing is more common in childhood, even now, than for a little girl to extemporize an imaginary con-

versation with her doll; and the subject which we are discussing necessarily takes us back to the childhood of our race.

Now, I do not pretend to say that this is the way in which was originated the opening chapter in our voluminous records of animal folk-lore. As to this, we have no positive knowledge whatever—nothing but theory, and theory is but another means for guess-work. But I feel safe in saying that it is a possible way, that it is the best I can think of, and is much more probable than any other yet suggested, so far as my reading has gone.

It is possible that our primitive ancestors at some time formed the conception (to a certain extent true) that animal vocalization, though unintelligible to human ears, really constituted a means of conversation as between themselves; that is, as between one animal and another. With this conception, well formed, the next step—imaginary conversations between animals and men—might naturally follow. That is, after relations of friendliness or good fellowship had been established, but not before. In support of this as a possible theory, Holy Writ informs us of a belief, once existing, that the trees could talk with each other—in fact could consult with reference to the furtherance of their common interests, and decide and act. (Judges 9; 8-14.) If trees could talk, why not animals?

As we are now in the field of pure speculation, another possible conjecture will do no hurt.

In the early conceptions of barbarous nations, it was generally believed that every existing object or thing had a life or spirit of its own. Every growing tree not only was alive, but it had, in popular thought, a life separate and distinct from its physical structure. In Hebrew thought, this belief continued to exist even down to the time of our Saviour, as appears from the account of His cursing the barren fig-tree (Mark 11; 12-14, 20-21).

Life of this kind in a tree, as well as anywhere else, would imply, or naturally lead in course of time to a belief in an accompanying intelligence; and a belief in intelligence having thus arisen, the idea or conception that such intelligence must find expression in some form, in a highly imaginative age, naturally follows as a necessary inference. And when barbaric thought had reached that point—which, however, may have taken many centuries—imaginary conversations for the expression of such intelligence would be a natural sequence; and the frequent repetition of such conversations would produce a resultant belief in their genuineness among the non-skeptical people. I have heard even civilized persons repeat impossible stories of exploits and adventures until they seemed to believe them themselves.

Next, what about Totemism?

This subject is one which possesses peculiar difficulties. How the idea of allying one's self by blood or by descent with a wild animal, and of making such alliance the basic fact of both religious and social organization, ever entered the mind of man, savage or civilized, is a question which has puzzled our best sociologists and antiquarians—and, so far as I know, it has not been satisfactorily answered. Starting, however, from totemism, the theory is somewhat generally held that all our animal cultus—animals as talkers, animals in religion, animals in art, animals in heraldry and animals as national emblems—are but relics of an exceedingly old totemism which prevailed among the ancient Aryan and Semetic tribes while still in a state of barbarism, but which, except as to the features thus preserved, completely died out and was forgotten prior to the discovery of writing as a means of preserving knowledge in the earth.

If we could account for the origin and existence of totemism, and could show that it was prior in point of time to all other developments of animal folk-lore, the theory above referred to might perhaps be accepted, as at least highly probable; but it is of no use to say, as was said in an old cosmogony, that the world rests on an elephant, and the elephant stands on a tortoise, so long as we have nothing for the tortoise to stand on. We gain nothing by attributing animal folk-lore to totemism, so long as we can neither account for totemism, nor prove even the probability of its prior existence.

But there is one thing which I think that we are safe in saying—that totemism could not have arisen during the primitive period when men and animals were universally hostile. In totemism the relations of men and totems, usually, if not always, are relations of friendship at least. The idea of any normal or continuing hostility between a man and his own totem is utterly foreign to the system. In fact, they are more than friendly: an intimate relationship by blood or descent is believed to exist. The very idea of a totem carries with it a belief in the beneficence of the totem; and the believer in the totem responds to this feeling of beneficence by the way in which he treats and regards all animals of his totem class. He carefully refrains from doing them any harm, and protects them from injury so far as he can; nor does he use them for food unless driven thereto by extreme hunger, and then only with manifestations of great sorrow.

If I am right thus far, I think we may safely conclude, at least as something highly probable, that out of the original hostility of man and animals there was evolved: First, domestication; second, friendly relations; third, talkability; and that totemism comes in somewhere later in the evolutionary process.

To find a place where it might have come in, let us go back a little.

In discussing the conversational powers which have been associated with animal life, I referred to the very singular fact that some animals, at least, were believed to possess a wisdom or intelligence that were superhuman—that is to say, that certain animals, and more particularly the serpent and the raven, possess a much larger knowledge than man in respect of those things which ordinarily are thought to lie outside of or beyond human cogitation and control. From all we can gather on the subject, this idea lies at the basis of serpent-worship, as formerly practiced by many nations, and as even yet resorted to not infrequently among the Hindoo peasantry. By such the serpent is thought to have an intelligence and knowledge which is in some way super-

human, and consequently its favor is to be purchased or its hostility placated by the usual acts of worship. The account given us in the Bible of the temptation of Eve, presupposes or assumes that on the subject then under consideration the serpent knew more than Eve did. No matter that the serpent lied and knew he was lying. Eve, as is represented, believed that his knowledge was superior to her own, and trusted him accordingly. Liars never deceive except on the assumption of possessing superior knowledge.

By the time writing was invented, the idea that animals could then talk had for the most part dropped out of human thought, though it was still believed that in earlier times they could, and hence the earlier traditions of their doing so were preserved. The case of Balaam's ass, however, (Num. 22) is an exception. The art of writing had at that time been long in existence, but a relic of the old belief that animals could talk still lingered, and was there used, partly, at least, to state and illustrate the other fact (which was still believed) that animals in point of knowledge and discernment, were superior to men. For the ass, even though it was nothing but an ass, is represented to have had better powers of observation and to have known more than its master—and this, too, notwithstanding the fact that its master was a genuine prophet of high rank and international reputation.

We are so accustomed to looking to the Bible for our religion that we frequently overlook the fine irony sometimes incidentally concealed in its pages.

Holy Writ also gives us another case in point, some five or six hundred years later. By this time, the raven had lost, in popular apprehension, its supposed ability to talk, but when in the reign of Ahab of Israel, the Prophet Elijah had made things rather hot for his own safety at court, and consequently had been compelled to fly and hide, though his friends could not find him, nor the King, either, the ravens looked him up and fed him—"bread and flesh in the morning, and bread and flesh in the evening." 1 Kings: 17; 1-7.

In selecting incidents from Biblical history for the purposes of illustration, I do so for the reason that a Bible is supposed to be easily accessible to every man, while books specially devoted to animal lore are sometimes less so. There is a good deal to be learned from the Bible besides religion.

How, now, did the idea that animals exceeded men in knowledge and wisdom, get into human thought? I do not know, and I can only suggest one or two possibilities.

The idea already alluded to, that everything which lives, moves or grows, had some sort of personal life of its own, independent of its physical organization, was very old, and also, in an ignorant, credulous and highly imaginative period of human existence, would be very natural. The blooming of a flower, the formation of a leaf, or even the springing of a shoot from the ground, would involve a mystery which to the primitive man would be explicable only on the theory that some superhuman agency—some spirit—caused it, and he would naturally locate the spirit in the flower, leaf or shoot. So, also, as to a spring or fountain bubbling up from the soil. It, too, must have a spirit. Naturally all nature would come to be pervaded with spirits, and as they were invisible, they were believed to be in concealment—in the depths of the waters, in thick forests and mountain glens and caves. But these places were the ordinary and natural dwelling places of the animal creation. What more natural than that the animals should learn from the spirits of the forests and of the waters and of the mountains, things which to human apprehension were unknown? The birds, too, were in apparent fellowship with the spirits of the sky, of the sun, the wind, and the tornado. They, too, should know more than men.

It is also true that animals have a wonderful, though silent, power of expression. A common dog, standing by my side at table, and looking up wishfully for food, appeals to me more strongly by his eye, attitude and tail, than the neediest and most persistent human beggar, with the possible aid of a pathetic voice. Was the primitive man less susceptible to such silent appeals than I am? Might he not naturally conclude that the silent dog knew more than the vociferous beggar?

A number of like citations could be made; but as I am not seeking to prove a rule, but only to illustrate a probable theory, the above will suffice.

Now, while suggesting this as possibly, if not probably a correct theory to account for the fact, I do not mean to intimate that the primitive man ever followed any such line of thought, step by step, from premise to conclusion. Nor was it necessary that he should. Untutored minds, in the presence of facts, commonly reach results without apparent or consciously thinking at all, and apparently by some process which closely resembles what we call instinct.

Now if, as I believe, we are justified in concluding that in the evolution of animal folk-lore a belief in the superior wisdom of animals generally, or even of some animals, preceded the rise of totemism, then the latter system can be easily accounted for, as also that feature of religious and sacrificial systems under which some animals were held to be sacred and others not. It then became simply a question of rank and classification. If the animal ranked high in wisdom, he might easily become a favorite tribal emblem and grow in time to the position now held by the totem. In the degeneracy of totemism, undesirable animals would naturally be picked up and appropriated, until the whole system would become a degrading superstition, as is now the case among the aboriginal tribes of Africa and Australia. Or developing in another direction, in the cultus of nations where sacrifices became early a part of religion, the animals especially esteemed or valued might naturally come to be regarded as the proper objects of sacrifice, as in ancient Judaism or even of worship as in ancient Egypt.

But all these things go back to an exceedingly remote period in the world's history. Take, for example, the account of the temptation of Eve. Regarding it, as I do, as allegorical—as much so as the parable of the prodigal son, and for pretty much the same reasons—I do not feel bound to date it, as does Bishop Ussher,

B. C. 4004. The human race is much older than that, but how much older nobody knows. But even back of the date of the story, no matter what its date may be, many centuries must be allowed for the conception and slow evolution of the ideas involved (1) that animals can talk at all, (2) that they can talk intelligibly with each other, (3) that they understand and can use human speech and talk intelligibly with men, and (4) that they excel men in a knowledge of human affairs. Allow a reasonable time for each of these and count back of any date which can possibly be assigned to the Adamic story, or back of the date at which a somewhat similar story appears in the old records of ancient Babylon, and it will be found that we are dealing with something which must greatly antedate any known existing human record or any extant historical tradition—and antedate, too, by years which in number must be counted by the thousand.

In a general way I would conclude, at least tentatively, as respects the evolution of the relations of animals and men:

First. That there was originally a state of normal hostility.

Second. That this was followed by the domestication of our home and farm domestic animals.

Third. That the supposed or imaginary talkability of animals as an evolutionary step came next.

Fourth. That through or along with domestication, and the evolution of talkability, friendly relations were established between man and the domestic animals, and in the course of time such friendly relations came to be conceived of as possible and as sometimes existing with wild animals also.

Fifth. Out of these conditions and relations and the facts incident thereto, there was evolved the further idea that animals, or at least some of them, possessed a wisdom that was super-human.

From a belief in the super-human wisdom of animals there was evolved:

Sixth. Totemism, and,

Seventh. Animal sacrifices.

The last two, however, representing and following diverging lines of thought.

Eighth. That totemism, in so far as the lower animals are included as parts or elements of its cultus, represents a degeneracy of the system. And,

Ninth. That all this antedated any known human records or extant traditions; and while not capable of proof or disproof, may be accepted as probably true, at least until some theory more perfectly consonant with known facts is submitted. GEORGE H. CHRISTY.

PITTSBURG, Pa.

Antlers Locked in Death Struggle.

WANANISH, N. C., Nov. 18.—Deer are fairly plentiful in this section. Lands are generally posted. Myself and party of five killed four on the 14th, 15th and 16th. While following the hounds on the 16th I found two large bucks with their horns locked, one of which had apparently just died, while the other had the appearance of having been dead a few days. The backs of their necks were together, with noses pointed in opposite directions.

Fixtures.

March 5-19, 1902.—Eighth Annual Show of the National Sportsmen's Association at Madison Square Garden, New York.

The Safe Use of Arms.

PORTLAND, Ind., Nov. 22.—*Editor Forest and Stream:* This shooting of men for animals is a terrible thing to contemplate, and to one who loves to tramp the woods in quest of game, and who has taken and continues to take his chances for life or death, it becomes a burning question.

One of your contributors suggests that hunters wear red hats. I am acquainted with a party who goes him one better. They all wear red shirts over their other apparel. They admit that a deer can see them more readily, but as a preventive against being mistaken for a wild animal it is the best thing conceivable.

As for being hit by stray bullets, all colors must take their chances, and so far I have escaped in a green coat. But it makes one feel a little nervous when he reads of the many accidents that are happening to those who go into the woods. Greater caution would curtail the death list measurably. No person is justified in carrying a gun at full cock, nor in any manner that it could injure anyone should it be discharged by accident; nor in leaving a cartridge in the chamber for any great length of time, especially if he has occasion to cock and uncock his gun a number of times, as the continued touching of the primer may have it on the point of explosion.

A sad accident occurred to a party that went from here to near Brownsville, Me., this season. Five of the party met by appointment about a mile from camp, reported their luck and separated. Two of the men struck into the woods, leaving the other three discussing the plan for a return hunt toward camp. One of the three was holding his gun under his right arm, the muzzle pointing downward. He chanced to be standing directly in the rear of a smaller man, and as he made a move to turn to one side the muzzle of his rifle struck the leg of the man in front of him and was discharged, the ball, a large explosive one, going through the leg of his unfortunate friend above the knee. Luckily the bones were not injured, and the man was brought home, and is now on the road to recovery, but the accident ended the hunt prematurely, and it was a sad party that returned. The immediate cause of the cartridge exploding is still a mystery. Possibly the hammer caught under the hunter's belt, was pulled part way back and then released. And again, the hammer may have been let down on the plunger or firing pin a number of times with such force that the jar caused the gun to be discharged. While this

case was purely an accident, there was a lack of caution.

As for mistaking a man for something else and shooting him intentionally, there is certainly no excuse. I see no grounds on which I could possibly acquit a person of the criminal charge of manslaughter. The rule should be, and is with me, shoot at nothing without first seeing the object distinctly and knowing just what it is. This extreme caution saved the life of my hunting companion two years ago, and I would much prefer to lose all the game in the woods than kill a human being by mistake.

No animal in the game woods looks like a human being. If you see a man sitting on a log and he looks like the bear you would give a piece of money to get to kill, watch him until he changes his position a few times; he will look different when he gets on his feet and begins to move away. If you see a fur cap that looks like a lynx, coon, turkey or anything your excited imagination pictures, wait; don't be in a hurry; let it show its shape; it may be a part of a human being.

If you saw the weeds or bushes moving you would show yourself to be a very poor hunter if you pulled up your gun and emptied it in that direction. If you saw something just the color of a deer, and making just about the noise a deer would make, moving along on the other side of some brush, and you felt almost certain it was a buck, and you would get him sure if he kept on coming, and for fear he might change his course and escape you caught a bead on him through one of the thinnest spots and dropped him, you would have done the reverse of what I did, and you would have killed a man.

Two friends were hunting ten miles southeast of Republic, Upper Peninsula of Michigan, two years ago this month, and became separated. One was sitting down and saw his friend draw his gun to his face and fire; the ball whistling by or the fact of the gun being pointed toward him caused him to spring to his feet and throw up his arms as a signal to his friend. The friend, however, for reasons known only to himself, quickly fired a second shot with fatal aim. What excuse could he possibly have had for such a deed?

As to certain guns being outlawed, it would not be a bad thing if they could be. The poorest are deadly enough. A poor workman finds fault with his tools, and a poor hunter, or poor marksman, will charge his failures to his gun. It doesn't take the hardest hitting gun to stop the game, if the ball is properly placed. I have tried them from .32-20 to .45-90 on deer, and dropped them with the pop-gun, as the boys called it, and I found I could not kill them any deader with the big gun. If hunters would make it a point to hit their game in a fatal spot it would necessitate their seeing the game, and they would not shoot into moving bushes or at indistinct objects. Accidents may happen, but there is no necessity for looking into the muzzle of a gun or pistol, or pulling a gun through the fence or brush, carrying it full cock, setting the breach on a log or stump, much less pointing it at a human being, or shooting at an indistinct object.

The man behind the gun in a game country will get game to his credit. The fool behind the gun is liable to kill anything, to his discredit.

G. W. CUNNINGHAM.

BOSTON, Nov. 21.—*Editor Forest and Stream:* The hunting season of 1901, which is drawing near to its close, seems to have been a most successful one, so far as game is concerned, but a decidedly unfortunate season, when we stop to contemplate the many accidents causing injury and death to human beings. Probably the so-called accident list for the year is not yet complete, but enough have been reported to convince everybody that fear of Maine's new law makes no difference with reckless men. Now, we must wait and see if this law will be enforced as it should be, trusting it will lessen the danger in the future.

Considerable has been said and written on this subject of late, and some of your correspondents seem inclined to sympathize with the careless hunters, because they have been in similar positions. In my opinion there are no words in the English language suitable for framing a reasonable excuse for the man who shoots another in the woods in the manner this shooting is usually done. Nearly every instance of fatal shooting in the woods of Maine comes to us tagged with the time-worn excuse, "I thought it was a deer." It is most strange how closely men resemble deer and bear in their movements, while there is not the least thing human about the moose or caribou. Of course, there is a reason for this distinction. Hunters must not kill caribou at any time, so this animal roams the woods in safety; neither is he ever mistaken for deer. If a hunter kills a cow moose and is detected, the law says he must settle, and the law is enforced. This state of things is rather unfortunate for the man who goes into the woods prepared to shoot everything that moves, for he finds his range of big game down to a disagreeable limit—deer, bear and men.

Now, if we accept the Darwin theory, that man descended from the monkey, we might assume that men, while in the woods, look and act like our ancestors. Then the hunter, wishing to add a head of this description to his collection, might be excused for killing a human being. There certainly is no other plausible reason, but the monkey is usually at the safe end of the gun, and, with natural cunning, always avoids injury to himself.

A man who does this kind of sight unseen shooting might reasonably be expected to fire the contents of his gun into the show window of a millinery store, thinking he saw a flock of birds.

If there is any one time in a man's life when he forfeits the right to think, it is when he raises his rifle to shoot at some moving object in the woods. That is the time he should know, and know for a certainty, what he is shooting. Let the law be enforced in such a manner that it will keep out of the woods, or severely punish, the man who can easily see all protected game, but readily kills a friend, rather than take a chance of losing what he thinks may be a deer.

ROXBURY.

Editor Forest and Stream:

READING J. A. Thompson's account of his narrow escape from shooting a friend, brings to mind something that happened in the Minnesota woods a few years ago, while I was hunting deer up there. I was stopping at

the Lamere place in Aitkin county, Minn., during the open season on deer. Ben Lamere was the best still-hunter I ever knew, and could get three or four deer to my one, as it was my first effort at still-hunting in the big woods.

One day Ben came in from the hunt looking harried and nervous, but no one said anything until supper, when his daughter asked what the matter was. "Well," said Ben, "I came very near to shooting Mr. J. (naming a neighbor) today."

It had happened like this: Ben was following a deer track in the snow when the track led into a thicket. It was a likely looking place for a deer to lie in during the day and Ben made a complete circuit of the thicket, and, finding no track leading out, he started in to find the deer in its bed. When Ben found the thicket a deer was lying in, he carefully located and shot the deer in its bed without his own presence being detected by the deer. Peering this way and that, Ben soon saw the deer lying behind a fallen tree-top; watching it intently, to make sure he saw a slight movement, and throwing his rifle to his face pulled the trigger, and at the same instant the deer straightened into the form of a man. Ben just had time to tilt his rifle a trifle and sent the bullet whistling harmlessly through the woods; but it was a close call, and scared both pretty thoroughly. The man had crossed Lamere's track and entered the thicket after Ben had made part of his circle, and of course his track had not been seen by Ben. In the thicket he had stopped and stooped over to lace his boot, and was sighted in that position by Ben. It was a treacherous combination of circumstances, but hardly an excuse for shooting a man for a deer.

Again, in early days, I was hunting elk in the Loup River country in Nebraska. There were four of us, and we halted one noon on the river bank near a small willow island or tow head. The day previous we had scared five elk from a similar island by shooting at some sandhill cranes sitting on a sand bar. At another time we had scared a deer from one while fooling round and not expecting any game. In this case I made up my mind to investigate and see if there was any game on the tow head. Taking my rifle I slipped away and made a circle round the thicket, using up some time in peering into the willows. At last I heard a crackling, as of something moving through the bushes. Later I saw the tops of the willows shake as though something moved along. It came toward and passed me. At one place, through a small opening, I saw something move along like the top of a deer's back. I waited with rifle at ready for the something to walk out on the bar.

When it did, it proved to be one of the boys from camp. I was startled, but never thought of it as a close shave. The true hunter does not shoot at a deer, but at some vital spot of the deer's anatomy. Neither does the true sportsman shoot at a flock of ducks, but at some member of the flock. Anyone not having this quality stamped on the label should be shunned as a base imitation.

At another time I was out with one companion; we had only a pack outfit, and camped at night in a deep washout or pocket in the edge of the hills, some hundred yards from the river. The deep pocket made a good wind-break, and there was no danger of rain. It was in a wild country, and we had been out for weeks without sighting strangers. My companion was a trapper, and we had a few traps along. He was also cook, and after supper, while he was straightening up, I cut a dry, red willow stake and started out to set a trap on a beaver slide I had previously located. I had left my gun on the top of the bank above camp, and when I started out I climbed the bank to get it. When I reached the top I was surprised to see a hunter (a veritable Daniel Boone in a coon-skin cap) crouched almost astride my gun, with his own leveled at my head. He was fully as much startled as I was. He was hunting, and as he came along the bank had heard me coming up, and, expecting some game animal, had crouched in waiting. The trap stake I was carrying with its prong made a very good imitation of an elk's horn, as they poked up ahead of me, but he did not shoot at the horn. When the head appeared it had a felt hat on it and he stayed his hand. Though almost astride my gun, he had not seen it, and did not know there was anyone else in the hills.

He stayed all night with us, and kept us awake until near morning, telling some of the most outrageous hunting and shooting stories I ever heard, and almost made me wish he had fired when he had a less excruciating drop on me.

Now, this is not intended as making any excuse for shooting a human being for a deer, but quite the contrary. Had Mr. Thompson or any of the men in the cases I have cited, fired and killed their "man" it would surely have been murder. The man who fires at something with intent to kill and said something proves to be a man and is killed, it is surely murder. It cannot fairly be classed as an accident, where the deed was done with full intent. Where a deer is sighted and shot at and an unseen man is killed, it is pure accident, and the unfortunate one who did the shooting is entitled to full sympathy, though there is no reason why he should not pay the victim's heirs the value of an ordinary life insurance policy, just the same as he might be expected to pay for a horse he had killed in the same way.

No sympathy should go to the man, however, who allows his gun to "go off" by accident and kill someone, though such cases cannot be denied the privilege of being classed as accidents. I have no love for the man who, while he frowns darkly at others, and accuses them of carelessness, leaves his own gun loaded about camp, or, after he has established a reputation by accusing others, forgets himself and swings his gun in all directions, and points at everything in sight, animate or inanimate. I like the man who studiously avoids allowing his gun to point at anyone, and says little. There are many men who would be safer companions afield if they would let their heads work more and their tongues less.

I remember two cases, both of which I saw, where the man, who is careful with his mouth met reverses. One happened when I was sixteen years old. I was out hunting with a muzzle-loader, when I met a party of

men out hunting. I had a much better gun than the average of that day. One of the men requested to be allowed to examine it. While he was looking it over, he engaged in a tirade against allowing boys to trapse about the country with a gun. Before he had finished the gun was discharged, and narrowly missed blowing a companion's head off, the shock rendering him deaf for several days. In the other case, I was out riding with a man who had a Winchester rifle along. Coming to a town, we drove into a livery barn and put the rifle in a corner of the office. There was no cartridge in the barrel of the rifle, but several in the magazine, where they were perfectly safe. A loafer about the barn, seeing the rifle, picked it up, and finding cartridges in the magazine resolved to teach the owner not to leave loaded guns standing round by taking the cartridges out and keeping them. Working the lever he got a cartridge into the chamber with the gun cocked, of course, and then pulled the trigger and sent a bullet up through the mow floor and through the calf of a leg of the liveryman, who was in the mow throwing down hay. The poor fellow who did the shooting had to hunt another fire to sit by that winter.

I once knew a farmer who had two sons who did not always agree on all subjects. One morning at milking time he saw them throwing clubs about the cow yard in a very spirited way. At breakfast he asked them which won the fight. The boys said they were not fighting. At this the father flew into a passion and gave both a thrashing, warning them, meantime, that he would repeat the operation every time he caught them throwing clubs when they were not fighting.

The moral is, Don't point your gun at anyone unless you mean it; then the other fellow can understand you, and act accordingly. There is no trouble if one will set their head to it. Make up your mind that you will not allow your gun to point at any animate thing you don't intend to shoot—not even your favorite dog. This will require some mental effort at first, but will soon become a habit, and no further effort will be required, any more than it requires a mental effort to put on your hat when you go out into the sun. With the best of training, accidents are liable, but I have no sympathy with the charity that calls shooting a man for a deer an accident.

E. P. JAGUES.

Birds the Novice Didn't Shoot.

A MORNING in the early part of November found three eager sportsmen and their three dogs about to enter a peach orchard in quest of that much sought after American gentleman, Bob White. The scene was laid in Orange county, N. Y., in a region made famous in gun-lore by the pen pictures of that charming writer of long ago, Frank Forrester. Of the men, the Veteran was the guest of honor. This veteran, though nearing the three score and ten mark, has retained all his fondness for dog and gun and still has the faculty of placing shot where it does the most good. The second member, the Expert, was the breeder and breaker of the dogs, and a better shot or truer sportsman I have never met. The last of the three was the Novice. The dogs, Imp, Belle and Jim (English setters), were all high bred, and a glance at their pedigrees discloses the name of more than one of our noted crackjacks.

Imp was first over the fence, and landed plump into a half-dozen birds, which flushed and flew into a patch of woods above the orchard. In making for this woods, four more birds flushed out of shot, taking the same direction. This bevy had apparently been scattered by rabbit hunters, as it was almost too late for them to have been feeding. Almost all the birds found that day had been previously disturbed, were badly frightened, and wouldn't lie worth a cent.

Passing through the woods and reaching the upper edge we found Jim on a point at a brush heap and Imp backing him. The Veteran, walking in, put up a single bird, which he hit hard, but failed to stop. This bird reached a thick scrub oak lot, and the most diligent search failed to bring it to light.

Leaving the woods, Jim flushed two more birds, but no one got a shot. Master Jim was here warned to be more careful or something would drop. We were unable to raise any more of these scattered birds, and left that locality.

The field yielded the next covey, which, sad to relate, Jim shot, but within reach of the Veteran, and the Novice, and the Veteran killed a bird. How about the Novice, you say? My friend, the Novice made the maximum amount of noise and the result was nil. Here Jim got what was coming to him in the form of a good thrashing. I often wonder if a little of the same medicine wouldn't improve the Novice's work.

After a vain endeavor to find these birds, which took an extremely long flight, we were crossing a young orchard when the Veteran walked up to another bunch of birds, killing one. Following the direction these birds took, and passing through a wooded ravine, a rabbit started in front of the Novice, running up hill through the brush, but offering a good mark. The right barrel was fired in a fit of buck ague before the rabbit had fairly cleared the end of the gun (spasmodically, as it were), but at the crack of the left the quarry sank to rest in a grass patch on the hillside. Not waiting to reload, this mighty huntsman rushed forward to secure the prize, when, to his utter disgust, the beast broke cover and went bounding over the hill, unharmed. It had merely squatted at the second shot to "wait till the clouds rolled by." Peals of unrestrained mirth from the ravine below told the disappointed one that the little scene had not lacked an appreciative audience.

Leaving this woods and passing into an open field, Jim pointed. Belle came up fast, and not seeing Jim's point crossed twenty yards in front of him, swung half round and also pointed. Imp backed both dogs beautifully, the whole making a very pretty scene, and the Veteran added to the completeness of the thing by killing the single bird that rose.

Several single birds were after this found and killed by the Expert (none over points, however), and several more were found by the Novice, and were not killed.

The last incident of the morning, or, as it might more properly be termed, a tragedy, occurred while on our way back to the wagon. Traversing the lower end of the scrub-oak lot of which previous mention has been made, a woodcock rose and, weary of the life of the hunted, deliberately committed suicide by flying into the space at that instant occupied by the contents of the right barrel of a gun in the hands of your humble servant,

THE NOVICE.

NEW YORK, Nov. 22.

Fox Trapping.

Editor *Forest and Stream*:

I might occupy much space by talking about the devious ways and home life of the crafty gentleman under consideration, as I have made him a study for many years, and, to quote from Mr. Wells' very excellent article on the cougar, "I know how he lives, what he eats, how he catches his game and what he does with it after he catches it," but so much has been written of late by close students of animal life that the field has been pretty well covered.

For many years I followed trapping and fur buying as an occupation, my field of operations being the northern wilds of Wisconsin, then an unsurveyed and unsettled country. The sound of an axe had never at that time been heard on the since denuded tributaries of the great Wisconsin river, and for my training as a woodsman I was indebted to friendly Indians of the Chippewa tribe, who were in the days I speak of—prior to the Civil War—the finest and most intelligent body of Indians alive. I had many good friends among them. We had many beaver in that country, and with otter, mink, martin, lynx and an occasional bear, we had heavy packs of well-cured peltries when we came down each spring to Lacrosse or Prairie du Chien to mingle for a season in the busy haunts of men. Yes, we had foxes, too, and occasionally I would get one in a trap set perhaps for fisher or cat, but little I then knew of the ways of Reynard; and my dusky companions, although "up to beaver," were not able to teach me anything about the fox. In fact, I never learned him till years later, when I lived in a well-settled and sparsely timbered country, where he alone of all the fur wearers held his own with man.

And now, with your permission, I will give in detail my way of trapping the fox, a part of which I must claim as the result of observation, and much of which was taught me by a trapper by the name of Kittridge, whose death some years ago excuses me for publishing the secrets he taught me. First I will make a diagram of trap and surroundings as used in what is called the water-set—the only reliable method of trapping the fox.

ARRANGEMENT OF FOX TRAP.

This will show you at a glance my method of setting the trap. No. 2 is the steel trap, with a very thin sod on trencher or pan. No. 1 is the sod on which bait is placed. The fox comes up at No. 3, as that is the nearest point to the bait which he has located by smell, and notices the nice dry sod at No. 2, which seems to have been placed there for his especial benefit. He steps on this to avoid wetting his feet, and meets his Waterloo. I have seen this drawing published somewhere, but without the details to enable one to get his fox, and it is the minute details that count in this contest of wits. No. 4 and 5 is a brooklet, which has been enlarged by digging, as explained in another place. A very small brooklet, even a few inches wide, can be enlarged to answer the purpose, or any open water can be used until it freezes. A small stream can often be led off from a larger one by digging a trench. The place should be prepared during the month of September or before, and trapping begin about Oct. 1; this gives the premises time to take on a natural appearance, by reason of rains, etc., and if anything is to be avoided it is the appearance of nature having been disturbed. When preparing your place for trap, step into the stream and follow up or down until you find a place where the ground is dry and the grass short (a pasture usually contains such places) and with a very sharp hoe dig out a place as shown in the drawing. If the grass is high, you can cut it close, giving it the appearance of having been eaten off by animals, and be very careful to leave no mud on banks or grass. The place should be quite shallow, and when the trap is set, about 1½ inches deep. When ready to begin trapping, enter the water as before some distance up or down, and at one edge set your trap. Have the water cover the trap about ½ inch, then carefully cover trap and chain with fine mud, so no part of it can be seen. Then with your hoe cut a sod with short grass and the same general appearance as the grass on the land where the fox comes up. Have the sod about ½ inch thick and somewhat smaller than the inside of the jaws of the trap. This sod must be of good solid and natural appearance, and, as I said, with grass short, as though cattle or sheep had grazed it closely. Lay the sod on your trap carefully by means of the hoe. Place another larger sod at No. 1 for the bait, and you will see by drawing that only one sod is placed where the fox can step on it, and that is on the trap. As a fox will never wet his feet when he can avoid it, he steps on this sod to reach the bait. The sod, No. 1, must also have short grass on it and be laid so that it just appears above the water, and on this sod you lay a piece of bait the size of your fist, also a drop or two (no more) of scent. Put no scent on bait or trap, and above all, put nothing on land where fox is to come up. Then carefully cover the bait by digging up small pieces of sod with the corner of your hoe. This gives the bait the appearance of having been covered by a fox. The ground should be as smooth and level as pos-

sible, and the land at the side where the trap is must be very little higher than the water, thus—side view:

SIDE VIEW ARRANGEMENT OF FOX TRAP.

If you have the sod on trap much lower than where fox comes up, you will have no luck, or if grass is long at No. 3 the fox will not be trapped. This point is very essential.

Never step on the land at No. 3, and if you put a foot on the land anywhere within ten rods of your trap it lessens your chance of success. I never fasten a trap, but put a heavy weight on the chain—a big stone will answer, fastened by a strong cord, and must, of course, be covered with mud, same as trap and chain. If your trap is dirty or rusty, clean it and sandpaper it bright, then heat it quite hot and smear every part, chain and all, with bee's wax. This kills the scent of the iron and prevents its rusting, and is not necessary more than once a year. Always wear a pair of light gloves when trapping. They must be clean to begin with, and should be worn to handle trap and when skinning game, but for no other purpose. Never let them touch a gun or a pipe, and if you use tobacco be very careful. A fox won't excuse anything of that kind.

For bait use common house cat if you can get it; muskrat or skunk also is good. Don't shoot your animal for bait, as the shot will give it a powder scent. Skin the bait with your gloves on, cut off head, tail and legs and divide rest of meat into pieces size of a goose egg. Now place the meat in a slow-running stream or swampy place for a week or longer. It wants to get old and give out a strong smell. Never touch the meat with your hands after putting it in the water. Use a sharp stick and place on sod No. 1 as directed. You see how careful you must be to leave no scent of hands or feet.

The best scent I know of is the dog bag from a female fox or dog in heat preserved in alcohol. Muskrat scent is also good, and it should be obtained in the spring and mixed with oil from a muskrat, raccoon or fish. A little skunk's musk added is an improvement. The fish oil is obtained by cutting up small fish and exposing them in a well-corked bottle for several weeks to the sun. You will get a small quantity of very highly perfumed oil which can be used as above and which by itself is the greatest known attraction for otter, mink or coon. The scent from any of the musk pouches will be improved by standing all summer in the oil or alcohol. When you catch a fox he will scent the spot so strongly that it will attract others a long distance, and your chances at that place be much improved.

Never carry a gun when trapping the fox, and do not spit on the ground. The main and all important thing in trapping wild animals is to leave no human taint where you wish the game to come. There are various ways of trapping the fox on dry land, and I guess I have tried them all. By some methods I can catch a fox once in awhile, but the chances are largely in favor of the fox. With the plan I have endeavored to explain, Sir Reynard has very little show. I have caught as many as thirty-eight in one season between Oct. 1 and frost, and I never used more than a half-dozen traps at a time. Do as I have told you and think no detail too small to be important, and you will catch your fox without a doubt.

TRAPPER.

The Maine Woods.

BOSTON, Nov. 23.—A party of six Boston bankers and merchants, consisting of J. L. Richards, John Toulmin, C. L. Dennison, Charles Carter, Mr. Parker and Mr. Richards, is just out of the Maine woods. They had great success with deer, and considerable hardship. They went into the Sebois Lake region before the recent heavy snowstorm. They found the leaves so dry and noisy that they got only occasional glimpses of deer, shooting one or two as they ran. Two of the party got discouraged and came out. The others were caught in 15 to 18 inches of snow. Then their troubles began. It is true that they readily secured their full quota of deer, but saw no moose. The moving about was terrible. They could scarcely make more than a mile a day in some cases, while the weaker ones of the party were soon completely exhausted. They say that there is game enough in that celebrated section, but they never want to encounter 15 inches of light snow in the woods again. Other big-game hunters in Maine also suffered from the unusual depth of snow for the season. Mr. W. Hall was found dead in the woods at Skinner Saturday morning. He, with two other men, started out hunting Wednesday forenoon from Lowelltown. At night two men returned, but Mr. Hall was not with them. They had been separated from him in the woods, and as he did not come in that night, they concluded that he was lost. Thursday morning a searching party was formed, but it was with great difficulty that the men could cover much ground. It continued to snow till nearly two feet had fallen. Mr. Hall was not found till Saturday morning. He was dead, doubtless from exposure. He had evidently wandered about a good deal, as he was nearly three miles from where he had left the other hunters. Novices should avoid the Maine woods, and even hunters and guides should carry a compass, and follow it, if occasion requires. Not only is the big-game hunter in danger from the weapons used, but life is frequently sacrificed from being lost. Two instances are recorded this season, and it happens every season. I suggested yesterday the red-hat scheme, proposed in the *FOREST AND STREAM*, to a gentleman just returned from a deer-hunting trip. He laughed, and remarked that doubtless it might prevent other hunters from shooting the wearer, but it would also "scare the deer all out of the woods." Another hunter says that he has tried it this fall, and that he was unable to see that it scared the deer at all. He got his full quota, and shot almost the first ones seen. Two Auburn, Me., hunters have lately returned from a deer hunting trip to Shelburn, N. H. They secured two fine deer, one a buck, apparently five years

CHICAGO AND THE WEST.

Bigger Man than President Roosevelt.

CHICAGO, Ill., Nov. 22.—We have not heard much of late of the Minnesota National Park, though the matter cannot yet be called outside of the realm of news interesting to sportsmen and those in favor of the partial preservation of the American forests. As to the future of the park, that is much a matter of politics, or rather politics and lumbering interests combined. It has earlier been shown in these columns how the treachery of Tom Shevlin, of the Shevlin-Carpenter Lumber Co., of Minneapolis, practically defeated the original purposes of the Congressional expedition to Minnesota two years ago. Mr. Shevlin, as the hero of the "split train" of the abandoned expedition, deserves at least the credit which belongs to a successful schemer.

That, however, is ancient history. Here is a bit of modern history, which goes to show that Mr. Shevlin has expanded in his ambitions of late, and has perhaps grown even more confident in regard to his own accomplishments. Never mind how the news got out, but these are the facts: One day this fall Mr. Shevlin, while speaking with a friend, was accosted by the latter in regard to the possible attitude of President Roosevelt toward this same Minnesota National Forest Reserve. "Roosevelt?" said Mr. Shevlin. "Don't you be afraid about him. I hold Theodore Roosevelt in the hollow of my hand!"

That is something of an assertion. President Roosevelt has not yet been heard from in regard to the matter.

More Deer Hunting Casualties.

On Nov. 18 Wm. Kampf, of Chippewa Falls, Wis., while hunting near Boyd, in the same county, saw something moving in the bushes and fired upon the object. It proved to be Wm. Shaffer, who was struck by the ball and killed. Here is the curious part of it, for in fact the same bullet killed two men. In the hunting party was James White, an old man perhaps troubled with some affection of the heart. As he stood over the dead body of Shaffer he suddenly threw up his hands and fell prostrate, dying almost immediately after.

There is considerable of a stir up in Wisconsin among the Chippewa Indians of Marinette county. The superintendent of the Peshtigo Lumber Co. reports that these Indians are very much excited over the killing of one of their number, who was shot by some unknown white party who took the Indian for a deer. Search is being made for the body of the Indian reported killed, and it is said that if the Indians find it, they purpose to take vengeance on the white hunters who are in the woods in that neighborhood. On Nov. 18 all the hunters were warned to leave the woods in that country as soon as possible. The early termination of the deer season at that date would perhaps take them out at any rate, but it would be pardonable of the Indians if they did make some sort of demonstration. It need hardly be said that the Indian is not guilty of such criminal carelessness in his hunting operations.

Warden and Fishermen War on Lake Michigan.

Deputy Warden C. E. Brewster, of Michigan, has this week been cruising with a party of armed deputies near the foot of Lake Michigan, close to the Indiana line, in search of net fishermen who are alleged to have been fishing illegally in Michigan waters. Brewster on Nov. 19 had seized a few nets and was making ready to annex an unlimited quantity in addition. On the 18th the warden's tug gave pursuit to three fishing boats accused of illegal fishing. One of these boats was rammed by the tug and the other two taken into custody and ordered to report at St. Joseph. Only one of the three, the tug Edwards, turned up as ordered by the warden. The defense was made by the fishermen that they were in Indiana waters at the time of the raid.

On the 19th Brewster found the fleet of fishing boats all lined up well across the Michigan line in Indiana waters. Brewster himself stood pat, well inside the Michigan line. It is reported that in case he goes across the line he will be attacked by the whole outfit, and certainly these men are in a bad humor and disposed to make trouble. The nets seized on the 19th made a considerable bundle, but the largest mileage of nets had not yet been tackled.

Later information shows that on yesterday, Nov. 21, the plucky deputy returned from his cruise in the big waters of Lake Michigan. Success had crowned his efforts. The seizure of nets is the largest one ever made in the Great Lakes. The capture included eighteen miles of new netting belonging to A. Booth Co., of Chicago, representing a value of \$10,000. It is alleged that these nets were all found well within Michigan waters, and were set there in direct defiance of the laws of the State and the officials, delegated to execute those laws. The Booth fishing tug Harrow was sighted during the day, but no conflict took place between the two. Brewster went out again yesterday with a full force of armed deputies, and the probabilities are that, if any of these fishing tugs tangle up with the warden, there will be a serious difficulty as result. About 5,000 pounds of fish were confiscated with the nets.

The fishing tug Edwards, which surrendered a few days earlier, is still in charge of the warden, and the tug Perry, which was also obliged to strike its colors, came into St. Joseph yesterday.

All these seizures are made under the game and fish laws of the State of Michigan. It is not the first time that Deputy Brewster has met trouble with lake fishermen, and his experiences among the Beaver Islanders at the upper extremity of Lake Michigan were sufficient to give him considerable experience in the game with which he is now engaged.

The Small Bores Again.

This week I had a little talk with Mr. Alfred W. Church, earlier mentioned as a member of the Peary Relief Expedition of last year. Mr. Church's battery while in the icy North was composed of a .30-40 rifle with Lyman sights, and he used both the hollow point and the soft-nosed bullets prepared by the Winchester Company for that arm. This armament he tried on the large game of the North, killing deer, bear and walrus. The latter animal, of course, offers the hardest test for the stopping

qualities of the rifle. Much to my surprise, Mr. Church said that he did not find the hollow-point bullet so effective on walrus as the soft-nose. He thinks that it is necessary that the hollow-point strike a bone in order to get its full efficiency. In one case he fired three shots into the neck and head of a walrus. One hollow-point went through and lodged against the skin of the neck on the opposite side, not striking any bone. A soft-nose, which had almost the same course, was found much more mushroomed and battered down than the hollow-point. The third bullet, a soft-nose, was properly placed in the head of the walrus and destroyed the animal at once. Mr. Church said that in shooting deer very frequently he would hear the hollow-point sing on its way after passing entirely through the body of the deer. Much to my further surprise, he stated that the .30-30 in his opinion was a better game gun than the .30-40, and he declared that in case he went to the far North again he would take a .30-30 rifle, leaving the .30-40 at home. Here be contradictions indeed, and an experience entirely the opposite of that of the average shooter of these days. Every one knows what a horrible looking gun the .30-40 is, and how hard to use in running shots on game, on account of its tall foresight, yet I imagine few would be disposed to believe that the .30-30 in stopping quality surpasses the heavier arm.

Lieut. Peary himself, commander of the expedition, uses neither the .30-30 nor the .30-40 in his big-game hunting. And what weapon do you suppose he chooses out of the long catalogue possible to-day? Nothing else than the old-time little .44-40 Winchester carbine. Lieut. Peary uses this simply as a killing tool, and he finds it efficient. On one hunt he killed eleven musk ox and one polar bear with thirteen shots from this gun. He said he would have killed the bear with one shot had not the animal moved his head just as he fired. Of course this kind of shooting is possible only at close range, and the close range can only be made possible by the use of dogs, which bay up the animals and allow the hunter to approach very close. Lieut. Peary uses this little carbine for reasons of portability. He has even cut away the stock of the gun until it is a mere shred of wood, barely strong enough to support the recoil of the charge. In that desperate Northern country ounces count for a great deal.

Southern Ducks.

Mr. J. M. Muldon, of Pensacola, Fla., writes: "A friend and myself intend to go to Texas in December on a duck shooting trip, and would like snipe shooting if the two can be secured close together. From your articles in the FOREST AND STREAM I judge that you will probably know the best part of Texas for good shooting, and shall be obliged if you will advise me regarding same. A friend suggests Winnie, in Chambers county, and I also hear Aransas Pass mentioned."

I have advised Mr. Muldon to take the Chambers county location in preference to Aransas Pass. All that country back of Galveston is good snipe country under certain conditions, and at the same time it is good duck country. The Moody preserve does not include all the brackish lakes and bayous twenty-five or thirty miles out of Galveston, although it covers the best of the canvas-back shooting—that at Lake Surprise. Upon the contrary, while Aransas Pass would offer splendid duck shooting and while Rockport, the entering port for the Pass, is a fine place to outfit for the coast shooting and the Madagorda Island, etc., it is not ordinarily the case that good snipe shooting can be had in that vicinity. The Bludworth boys told me that sometimes they had snipe shooting along there, but not very often. Aransas Pass itself is located in nothing but a vast sand key, where a snipe might perhaps properly burnish his bill, but would find it a long time between worms.

Closing the Season.

There has been a sudden freeze up along the Illinois River, and the hunters just back from Hennepin Club state that there was 2 inches of ice all over the marsh. The Clarke brothers, just back from Hennepin, killed one mallard each, and considered themselves very fortunate at that. They state that it was an oversight on their part not to take along skates instead of rubber boots. Swan Lake is closing in, and it looks now as though our duck season was pretty much tapering off, although a rain to-day seems to be softening things up to some extent. A few shooters have gone down to Swan Lake to close the week in the hope that they may get a whack at the last flight of mallards.

Private Car Trip.

Mr. Frank Peabody, owner of a number of coal mines in the lower part of this State, will, on Monday next, take his private car and make a run over the C. & E. I. R. R. with a number of friends for a hunt in lower Illinois. Among the number will be Mr. C. S. Dennis, Mr. Orton Wells, Mr. Pringle and possibly Mr. J. V. Clarke. The stop will be made not far from this side of Cairo. The gentlemen expect to find quail, mallard ducks, and, if fortune should be especially kind, a few wild turkeys. This is the same locality visited last fall by some officials of the C. & E. I. R. R., who killed five wild turkeys, mention of which fact was made at that time.

How the Indiana Law is Observed.

A shooter of this city, in the course of conversation this week, remarked that he had been shooting quail in upper Indiana and had killed something like seventy or eighty birds in all. Asked if he liked the idea of taking out a license, he said he didn't have any license. "They haven't caught me yet," said he. "Hope they will," said I. "Hope they won't," said he.

Sport in the Magazines.

The monthly literary magazines continue to come out once in a while with some heavy information on sporting topics. My friend, Warren Powel, points out an instance of recent date. "I notice a story in a November magazine," said he, called 'Nigger Jeff,' wherein a sheriff kept a mob at bay with a 'double-barreled Winchester.' Later on they close in on him and he 'pulled both triggers,' but they knocked the gun up and the loads went 'whistling in the air.'

"In another November magazine," says he, "there is a cock fight story, which is pretty nearly as bad. It is illu-

of age. One of the ears of this animal had evidently been snipped by a rifle ball, since it was slit out something the same as farmers mark sheep. The wound had been healed for some time. One of the hunters told the crowd that was examining the game on his return that the slit was the private mark of the New Hampshire Game Commissioners.

BOSTON, Nov. 25.—The week ending Nov. 16 was a great one for deer hunters in the Maine forests, but last week shows a greater record; the greatest ever known. For the week there passed through Bangor 616 deer and 18 moose. For the season there have been shipped through Bangor already 3,191 deer and 151 moose. The total shipments of deer through Bangor for the year 1900 was 3,183 and 138 moose. Hence the record of this year is almost up to that of last in deer, and already 13 moose ahead. For the whole year 1899, the record-breaker on Maine deer, the total shipments noted at Bangor were 3,444 deer and 139 moose. This year has already eclipsed 1899 in moose, and bids fair to go far ahead in deer. It would be nice if we could believe that this increase in big game came from an actual increase in the animals, but it must not be forgotten that the increase in the number of hunters is far greater than in the amount of game taken, while the game is being pressed farther and farther back each year by improved means of reaching the more remote sections and the establishment of trails and camps.

Other sections than Bangor show an increase in the number of deer taken last week, doubtless largely due to the body of snow on the ground, which makes tracking easy, and is also causing deer to congregate into yards earlier than ever. The hunter has but to find, by easy tracking, where a deer yard is being established, when he is sure of his game, if he only remains in that vicinity. The deer may start off in alarm, but they are pretty sure to return; if not that day, certainly before the end of twenty-four hours. It is true that novices and tenderfeet have suffered a good deal in getting about in snow anywhere from fifteen inches to two feet in depth, but snowshoeing has been good, and some of the hunters have greatly enjoyed the exercise. A party of Boston hunters returned early in the week from the vicinity of Stacyville, Me. In the party were two ladies, Mrs. C. F. Forristall and Mrs. M. I. Southwick. They were accompanied by their husbands and Mr. S. P. Smith. The party brought home nine deer, of which Mrs. Forristall shot two and Mrs. Southwick one. J. C. Spellam, D. P. Power, J. F. Muldoon, J. N. Muldoon and F. A. Barney, of Boston, got back Friday night from a successful hunting trip to Irving Hillard's camp, Connecticut Lake, N. H. They brought home six deer. H. B. Good-enough, of Boston, shot two deer in Dorchester, N. H., last week. C. F. Priest, of Boston, came home Thursday from Enchanted Lake, Holeb region, Maine, with two deer and a moose. A great many deer were shot in the Kingfield and Carrabasset regions last week, the snow making good hunting for local hunters and guides, accustomed to getting about in deep snow. But tenderfeet found it hard work, and generally employed local hunters to bring down the game for them. Over twenty deer have been shipped out from stations along the Franklin and Megantic Railroad within a few days; one to F. B. Smith, Boston, and one to C. B. Chandler, of the same city. W. F. Jenkins, of Boston, had a tough time at Joe Merry Lake last week. He was caught there in about thirty inches of snow. With the help of two guides he succeeded in reaching the railway station, after battling with the elements all day, with only a few miles to make. He secured two good deer. J. F. Francis and J. Meddley have been on a hunting trip to North Twin Lake. They secured their full quota of deer.

Calais returns a great record of big game shipments from Washington county. The Washington county railway has opened a good deal of game country that is comparatively new. One day last week eighteen deer and one moose came out over that road tagged to Boston hunters.

Boston gunners are having good sport on Nantucket. The rough weather and storms seem to have caused a great many birds to seek shelter in the vicinity of the island. A half dozen gunners went down Friday to remain over till Monday. They encountered the gale of Sunday, which made things too lively for hunting, and kept the wicked ones in camp. SPECIAL.

Buzzard's Bay Ducks.

WILLIAM B. EATON and four friends from Boston have had good luck shooting at Buzzard's Bay. Within a few days they have bagged forty redheads, mallards and black ducks. The game was shot on Mr. Eaton's preserve, located at Eagle Hill, Bourneville. It covers a tract of 1,000 acres close to the property of Grover Cleveland and Joseph Jefferson, who are frequent guests of Mr. Eaton during the summer.

Eagle Hill is one of the most beautiful in Barnstable county. Among historical curiosities are two English holly trees, said to have been planted by Myles Standish. They are very large.

The house, 100 feet above Manomet Lake, gives a beautiful view, including the little village of Cedarville, made famous by "Cape Cod Folks." Manomet Lake is three and a half miles long and about a mile wide. At the north end, connected by a river, is Little Herring Pond, about 100 acres in area. Primeval forest surrounds it. In these lakes ex-President Cleveland and Joseph Jefferson find good sport, with the gamy black bass as the objective.

Massachusetts Bay is a mile away, and Peaked Cliff two miles away. Eagle Hill, so named for the large number of eagles seen there, contains forty acres of cultivated land, including two fruit orchards and a big cranberry bog. The place has a comfortable shooting box, and the shooting is fine. The house contains many souvenirs of Mrs. Eaton's foreign tour.—Boston Herald, Nov. 17.

A Timely Hint About Christmas.

FOR Christmas giving one would look long and far for a better gift than a paid-up subscription to FOREST AND STREAM. If the subscription is so dated that the first number will reach him Christmas week, that will be only the beginning of a whole year of good reading, new and fresh every week.

trated with pictures of Dorkings or Leghorns, or something of the sort."

Protective Matters in Chicago.

The New State Game Commissioner, Mr. A. J. Lovejoy, is not saying much these days, but is splitting a heap of wood all the same. He has appointed more than 400 deputy wardens all over the State, and has what is probably the largest force of deputies ever enlisted in the work of protection in the State of Illinois. He has collected a lot of license money and raised the biggest protective fund ever yet known in this State. He has also made more seizures of game in the city of Chicago than were made last year, and seems to be lucky in getting advance notices of illegal game shipments. Mr. Lovejoy is a man of good balance and judgment, and is making a cracking good executive officer. All the game dealers report that game is scarcer this year than it ever was in the history of Chicago. Partridges this week brought \$10 a dozen, prairie chickens \$9 a dozen, venison 30 cents a pound. Ducks are the only sort of game which bring moderate prices. Quail are reported in good demand. The wardens here meet the same devices which are employed at St. Paul for the evasion of the game laws. The latest scheme is to ship quail in butter crocks, with a layer of about 3 inches of butter on top of the birds. One such seizure as that was made here in Chicago not long ago.

Mr. M. R. Bortree has been appointed Special Deputy U. S. Marshall for the District of Northern Illinois, and also Congressional Warden for the Seventh District of Illinois. Mr. Bortree will have authority to make seizures of game shipped contrary to the requirements of the Lacey Act. The reputation of this gentleman in protective work is too well known to require comment in these columns. On the whole, the outlook for an air-tight market here is better than it ever was.

As to the amount of game left alive in the fields, opinions differ. The men of New Boston, on the Mississippi River, say that last spring there were as many ducks as they had seen for twenty years. That may all be for one locality, and yet there may not be all together one-half the number of ducks alive that there were ten years ago. There would seem to be more hope eventually for the upland game than for the wildfowl. In parts of Wisconsin game is more abundant than it was three or four years ago. For instance, at Post Lake, where there is a little shooting club, there is now no market-hunting, and the partridges are quite abundant. The partridges (ruffed grouse) were nearly shot out in that locality. In South Dakota this fall the game supply seemed to be picking up. In Illinois the quail supply is not cut down seriously. Upon the whole the upland game of this group of Western States seems to have a very good chance of survival. The probabilities are that the trend will be toward increased strictness in the game laws and a greater respect for the laws as the days go by. The first stages of the battle for the protection of Western game have been won.

Pretty Good Fine.

As instancing the occasional seriousness with which the game laws are accepted in the courts of this State, one might cite the case which was brought before a certain Illinois justice of the peace of one of the lower counties this fall. A man was convicted of having 100 quail in his possession, and the justice promptly fined him \$4,000. The man said he thought that was a little high, and the justice finally let him off with an imprisonment of fifteen days in the jail. The J. P. seemed to think, on second thought, that it would be just as well to restore this offender to his family as to keep him in durance for the rest of his natural life. This is not such a bad sort of an enforcement of the laws, when you come to reflect that quail are not protected under the statutes of this State.

Where the Forest Went.

On the morning of Nov. 19, at Marinette, Wis., the Menominee River Lumber Co. saved its last log and quit the lumbering business. A mill was located on the present site of the company so long ago as 1851, Jesse Spaulding, of this city, being interested in the enterprise from that time to this. This mill has been burned down two or three times, but replaced. It has cut over one billion feet of lumber from 150,000 acres of land, this lumber being valued at over \$15,000,000. This mill is one of many. Presently we shall hear of yet others going out of business. The great pine forests of Michigan, Wisconsin and Minnesota are being wiped out with greater rapidity than the average man realizes.

Davy Crockett's Powder.

Having occasion this week to do a little reading about that pioneer Western hunter, Davy Crockett, I ran across one of his political speeches in which he remarked regarding a certain gentleman, Mr. P. B. Barbour, "I'll be blamed if that man Barbour isn't quicker than Dupont's treble." I wonder if he meant the old Dupont treble FG which a good many of us knew in our boyhood days? Reading further, I discovered that when Crockett was on his trip to the North in 1834 he was asked by "Mr. Dupont, the powder manufacturer," if he would accept a few canisters of powder. Davy said he would, and he was later the recipient of a dozen canisters of powder, as history goes on to state.

Old Time Rifle Man.

By the way, speaking of old-timers and old-time riflemen, one just receives the following letter from Mr. G. W. Cunningham, of Portland, Ind. "I send you a local paper containing a sketch regarding my worthy sire, who followed west in the wake of General Wayne's victories. He was one of the finest rifle shots in the country, and today is not bad when at the business end of a gun." The portrait of Isaac Cunningham above referred to, is that of a hale and hearty man now past eighty years of age. He followed the front across the Ohio, over the line and into Indiana, and saw the days of turkeys, deer and Indians. In those days they used to train up rifle shooters. I don't think that any of us repeating-rifle, blaze-away, hit-or-miss sort of shooters are worthy to be called rifle shots as compared to some of the handlers of the old-time muzzleloaders.

HARTFORD BUILDING, Chicago, Ill.

F. HOUGH,

Hunting and Game in Alaska.

FIVE years ago Mr. Geo. G. Cantwell, a young taxidermist whose push and capabilities are well known at the Smithsonian Institution, started for the Klondike with his rifle and camera, after having spent some two or three years in field work along the coast of southeastern Alaska, with headquarters at Howkan. The result of his efforts in the higher latitudes involved a deal of hardship from exposure, and a modicum of danger, and are now presented to the public with most vivid and impressive force through the medium of a "Klondike Souvenir" of 300 half-tones, put into attractive form by San Francisco artists and pressmen, and far surpassing any emanations in this direction from that sub-Arctic region. The illustrations not only cover the summer and winter aspects of every phase of social and industrial life with its natural environment and meteorological adjuncts, but present in consecutive orders the coming and going of the gold seekers and their camp followers and parasites, their mining methods, the vicissitudes of the old-timers and the comforts of the new, the phenomena of the weather, the amusements of the people in the long winter nights, the life of the soldiers, the wonderful evolution of Dawson, the mountain and river scenery, the aborigines in native costumes, the camps of the hunters and the game of the country with methods of chase. Sun dogs, parhelia, the aurora borealis, moonlight, and even the bones of the mastodon are faithfully shown. As a whole, the matter presented is an astonishing revelation, even to men who have read much of this region.

No one could have dreamed five years ago of the wonderful introduction and spread of civilization and its appliances into such a remote and inhospitable country. All the frosty rigors of that zone have been mitigated or counteracted, so that life and existence is as tolerable there as in most other places. The gloom of interminable winter has been dispelled by electric light and social functions—pianos, bicycles, dress suits, department stores and even pleasure craft are no more novelties. The transformation is unsurpassed in the tales of the Arabian Nights.

Now, as to that particular section of Cantwell's "Souvenir" which comes within the scope and embrace of FOREST AND STREAM, we find realistic pictures of the big-horn sheep and its pursuers in almost inaccessible haunts among the high mountains; the abundance of trophies demonstrating the courage, tact, skill and perseverance which is indispensable to success. Once it was disputed that this animal existed in Alaska. It was said to be confounded with the mountain goat which makes a large portion of the coast range its habitat. The camera, however, is truthful. One specimen, shown in the picture of the hunter's camp, represents dead sheep standing erect, the intense cold having frozen it stiff in that position. In the half-tone which illustrates a caribou hunt is the snowshoe pattern, which is different from any on view at the National Museum. Another pattern of shoe is shown in the photo of the dying moose taken some dozen years ago by Hartmann and Weinland, the Moravian missionaries. Cantwell's sketch of a moose country is very graphic, and tells its own story. The bunch of ptarmigan on the rock side above timberline is a great triumph of art and perseverance in climbing mountain heights, and recalls our Admiral Beardslee's descriptions of Alaska hunting scenes published in the early volumes of FOREST AND STREAM some twenty-five years ago. Bears, however, seem not to have engaged the camera's attention.

CHARLES HALLOCK.

Sowing Wild Rice.

PORT HOPE, Ont., Nov. 18.—*Editor Forest and Stream:* I see in your issue of Oct. 19 that you would like to have full directions for planting wild rice. I buy the rice from the Indians, as they gather it in their canoes. They fetch it to me every evening. I spread it on the floors of my drying house (no fire in the house), and my man turns it four times a day for nearly three weeks, until it is perfectly dry. I then put it through a flouring mill and take out all dirt and chaff and then I pack it in barrels.

Directions for Planting.

Put the rice in coarse linen bags. Sink the bags in water over night before sowing, and let the rice soak until morning. The husks are dry, but after being soaked the rice will sink at once to the bottom into the mud. Take the rice out of the bags and scatter it on the water. Sow in water from 6 inches to 6 feet deep with soft mud bottom, or low marshy places where it is covered with water the year round. If sowed in lake, sow in the bay. Drowned lands make a good place when there is water the year round. All the drowned lands round Rice Lake are full of rice. Once get it growing and it will crowd out all other weeds.

The best time to sow the rice is just before the water freezes and the diving ducks have gone south, such as redheads, bluebills, canvasbacks and whistlers. They are sure to find it, and will pick every seed from the bottom if a small quantity is planted, and is planted in October or fore part of November.

I received a letter from a man fifty miles north of here last year to send him a barrel. I sent it to him in October and gave him directions for sowing. I warned him about the ducks finding it. I received a letter from him this fall saying he had a fine bed of rice and a big crop, but he had had hard work to save it. The ducks found it. He went to the place where he had sowed it the next day and he said there were several hundred ducks on the bed diving for all they were worth. He and his son had to be there all the time. He killed a good many, and finally drove them away.

The great trouble with parties getting rice is that they have some persons sow it, hired help, who don't care how they sow it, on gravel beds or in 10 to 15 feet of water. I sowed two barrels in a pond hole three miles from here fifteen years ago. The pond is about 400 yards long and 150 yards wide. I sowed it the 20th of November, and the pond hole froze up that night. It is about four feet deep. The next spring the rice all came up. It seeds itself every fall, and comes up in spring. Last report it was a big crop of rice.

I have given about all I know about planting rice. If parties who get rice will follow these directions they will have no trouble in rearing good crops.

CHAS. GILCHRIST.

Virginia Shooting Notes.

CUMBERLAND COUNTY, Va., Nov. 22.—Not within the memory of the perennial oldest inhabitant of "Cumberland county" has there been anything in the way of a dry spell at this time of year which has exceeded, in length and persistent severity, the drought that prevails throughout this part of the State. No rain has fallen since the latter part of September, and at the present writing none is in sight. Day after day the sun shines out of a cloudless sky upon fields and forests long since bereft by the winds of any moisture. Night after night the moon and stars look down at a frosty landscape, on which the rising sun throws its warm melting beams, and so it goes. Cutting out all poetry, the cold fact is that the "sacred soil of Virginia" is desiccated (accent on second syllable, please), and pulverizes under the foot of man or beast. A rifle ball shot into a wheatfield kicks up a cloud of dust, and much of the seed wheat sown six weeks ago has not begun to sprout.

Streams are running nearly dry, and many wells also. The Appomattox River, which last June rose more than a foot above the wagon bridge at Farmville, is now far below ordinary low-water mark. The tobacco industry, of which Farmville is an important center, is at a standstill owing to dry weather. Hundreds of thousands of pounds of tobacco in the leaf, possibly millions, hanging in the numerous barns throughout the surrounding country, is so dry and brittle that it cannot be handled, and prices are rising in consequence. What all this dryness means to the sportsman must be obvious, at least to sportsmen. Quail, known here as partridges, are abundant—in fact, more plentiful than they have been in years. Yet the dogs find them with the greatest difficulty, especially after the covey has been flushed and scattered. The cover is very dense and heavy, and the woods are thickly strewn with dead leaves, which rattle loudly at every movement of man or dog. Moisture is essential to a dog in scenting game, whether furred or feathered, hence the quail, rabbits and foxes have had a comparatively easy time of it this fall so far. The Farmville fox hunters have not had a meet in over a month, as it is idle to chase old Reynard over dry and dusty ground. A good rainstorm, however, will change all this. Three of us with a good dog got only twenty-one birds in a six-hour hunt yesterday. We would have killed fifty or sixty had the ground been moist, and we will do it, too—after a rain.

J. L. K.

Nov. 23.—You may "kill" all that drought stuff I sent you yesterday, if you want to. The Lord has sent a gracious rain upon His inheritance, and refreshed it when it was weary.

K.

New York League.

SENECA FALLS, N. Y., Nov. 20.—*Editor Forest and Stream:* The annual meeting of the New York Fish, Game and Forest League will be held at the Yates Hotel, Syracuse, N. Y., at 10:30 A. M. on Dec. 5, 1901, and a full attendance is hoped for.

The objects of this Association are to create and foster a more general public sentiment in favor of fish, game and forest protection, to procure the enactment of laws for the protection of fish and game, and for the preservation of our forests, and to promote the observance of such laws.

In order to carry out these objects, we most earnestly ask the co-operation of all fish and game clubs and associations within this State, who are not already enrolled in the League, and urge upon them the great desirability of joining forces with us in order to secure yet more united effort in attaining these objects.

The initiation fee of \$5, including as it does, the dues for the year commencing on the first Thursday after the first Monday in December, when our annual meeting takes place, gives to each club the privilege of sending two delegates to the annual meeting.

The game laws of our State are at present in much better shape than they were a few years ago.

The constant tinkering by the Legislature with the game law is, however, a serious menace to fish, game and forest protection. Bills are constantly being introduced which, aiming to grant exceptional privileges to certain localities, create a general feeling of distrust, and seriously interfere with the enforcement of good measures.

The careful weighing of the merits or faults of proposed game legislation by the persons most interested, the indorsement of what is deemed desirable, and the opposition to what is deemed objectionable, in the main business that comes before our annual meetings, and after election of officers for the ensuing year, and one adjournment of the said meeting, our Legislative and Law Committee keeps careful watch, during the entire session, of all proposed legislation affecting the game laws. In order that they may be fully discussed at the annual meeting, all proposed amendments to the present game laws should, if possible, be forwarded to the chairman of the Legislative and Law Committee, Mr. Charles H. Mowry, Journal Building, Syracuse, N. Y., prior to the first day of December, 1901.

Applications for membership should be made to the secretary, who will gladly give any further information which may be desired.

ROBERT B. LAWRENCE, President.
ERNEST G. GOULD, Secretary.

New Hampshire Deer.

BRISTOL, N. H., Nov. 23.—Deer hunting is now the rage with our local hunters, as after a light fall of snow, which came the first of the week, they were all out, and good results were shown, deer being brought in from Cardigan Mountain, Bridgewater Hills, Tenney Hill, Crosby Mountain, Kimball Hill and other places, all within a radius of ten miles from the post office.

S. H.

An Heroic Measure.

MILWAUKEE, Wis.—I am sending you, under separate cover, copy of Milwaukee Sentinel, showing the casualties in the State of Wisconsin for the hunting season. Query: As it is impracticable to kill off all the fools that go shooting, would it not be better to exterminate the deer than to allow such a loss of life?

M

Notes.

The Watertown Standard reports that in the vicinity of Gouverneur, the farmers in the old Scotch Road settlement have had many cattle killed by the deer hunters. Many hunters have mistaken heifers for deer, and the loss has been so great that the farmers have posted signs on the trees forbidding further hunting on their lands. Some of the shots which killed the cattle have been spent bullets, but to the novice a red heifer may resemble a deer at a distance.

Ex-President Grover Cleveland has recovered from a cold which threatened to develop into pneumonia. It was contracted when on Monday of last week Mr. Cleveland was on a hunting trip at Cape Charles and lay for many hours in a duck blind.

President Roosevelt went on a duck hunting trip down the Potomac last week, going by the Government vessel Sylph to the club house on the island owned by the Metropolitan Club, of Washington, in the mouth of Chappawsic Creek, near Quantico. The weather was such as to prevent any shooting, however.

The twenty-eighth annual banquet of the Cuvier Club, of Cincinnati, was held in the club house on Nov. 20, and was in every way a most successful affair. President Alex. Starbuck and his fellow officers welcomed the more than 200 guests. The game on the menu comprised venison, prairie chicken, ruffed grouse, snipe, quail, blue-winged teal duck, wild turkey. The object of the Cuvier Club is not simply, as this great banquet might lead some to assume, to feast on the good things of the land once a year; it has other and more serious aims. Its purposes are to preserve, protect and increase the game and fish of Ohio, rigidly enforce the laws concerning them, to promote and advance field sports, and to create a meritorious museum, for the benefit of the public and public schools. The organization also holds that spring shooting of birds when breeding, or the taking of fishes when spawning, is most reprehensible and should be absolutely abolished. It also holds the non-export laws and license for non-resident sportsmen, should receive due attention and that a uniform system of laws should prevail as the most efficient means of protection to our rapidly disappearing game and fish.

Elmer Butler, a well-known Adirondack guide, when near Aden Lair Lodge in the town of Minerva, on the Boreas River, one day last week, came upon a bear, which he killed with a single bullet through the base of the brain. These dimensions are given: "The bear weighed 515 pounds, measured 17 inches from the top of the head to the tip of the nose, 12 inches from eye to eye, 7 feet 3 inches from tip to tip, and 5 feet 4 inches around the body. It was apparently about four years old. The bear was jet black, except about the nose, where it was brown."

Robert J. Schoonmaker, the proprietor of the Hunter's Home at Black Lake, near Monticello, N. Y., and well known to many sportsmen of New York city, committed suicide on Nov. 22. It is recalled that ten years ago his father, Smith Schoonmaker, was gored to death by a bull, and three years ago his brother, who was then a member of the New York Police force, was killed by the accidental discharge of his gun while hunting.

A number of new animals have just been added to the New York Zoological Park, including a pair of Kuldscha bears from the northwest of China, a pair of Russian brown bears and a pair of sloth bears, two Gelada baboons, three mandrill baboons, two Barbary apes, two blue-gray lemurs and two entellus or sacred monkeys, a pair of Egyptian geese and some fifty other water birds.

Wild Life in Maine.

AUBURN, Me., Nov. 20.—Mr. W. P. Davidson says that he hardly thinks that Mr. Covert would find a white weasel in October. But the weasels are white in the northern Maine woods in October. While I was at Roach River I went picking beech nuts, which were quite plenty. I found the red squirrels very numerous, and they had piled beech nuts in piles of half a gill to half a pint in small hollows in the ground; but the nuts were always covered over with leaves or dead wood. We picked several pints of these nuts that had been piled up by squirrels. They were always good nuts. It is said that the red squirrel never lays by a winter store, but it would seem that they do. I got a ten-pointed moose with a finely proportioned head, with a spread of 45 inches. This is a fine moose country, with the best of camps and guides at B. A. Runnels, twelve miles from Lily Bay. We saw many bear signs and more moose than five years ago. I believe the moose have increased the past few years in Maine. GEO. W. CARTER.

Currituck Ducks.

CURRITUCK, N. C., Nov. 15.—Our opening day for ducks, geese and swan, Nov. 11, was "a winner." I estimate the total number killed at ten to twelve thousand. In many instances 200 to the gun were killed. The largest bag to a single gun so far reported was 243. There were more mallards and redheads killed than I have seen before in many years, and I never saw ducks in finer condition. It is next to impossible to give you the individual bags at this time. Will write more on the subject later. I hear of one club that killed nine hundred. I think, altogether, we shall have the finest sport we have had at Currituck in many years.

MORE ANON.

The Kind They Were.

Two men, claiming to be from Boston, have been staying at the farmhouse of a well-known and well-to-do farmer in the foothills of the Adirondacks. They have spent several weeks this fall hunting, and seemed to be in good circumstances. Having related their places of business, address, etc., to the host, they were considered guests whose wants should be well attended to.

One day last week one of the men went into the woods

hunting with the farmer's son, who was also enjoying the company of the metropolitan acquaintances. In the meantime the other hunter said that it was very queer that he had not received a check from home, but went further to say that if he was out of coin his partner would have it.

Evening found the sportsman back to their hostelry, and in changing his clothes he was very surprised to learn that he had lost his pocketbook.

The farmer, of course, offered them money, which they declined, saying it was unnecessary and they would probably receive a check before they needed it. Next day one of the men asked the farmer for a few dollars, which the host went to his strong box and procured. The men ate supper and said they would probably go camping in the evening.

When Friday morning came the men were not back to the farmer's. He and his family were somewhat worried. Knowing how easy it is for those not accustomed to the woods to get lost, he concluded that perhaps that fate had befallen them. The day was then spent in search of the hunters, but all effort to find them was in vain. By chance the man went to get some money, but found the box empty. There had been about \$40 taken by the city guests. The farmer and his son are now wearing out some of the old clothes which they cherish in memory of their friends who were lost in the woods.—Watertown (N. Y.) Standard.

A Massachusetts Partridge.

WHITINSVILLE, Mass., Nov. 18.—*Editor Forest and Stream:* I send inclosed a photograph of setter dog and partridge which I think is good enough to be illustrated in FOREST AND STREAM. The partridge is an extra large one—an old cinnamon back—and was one of a nice bag of four that a friend and myself secured on a short half-day's trip a few days since. It was by far the largest bird of the lot.

We do not find partridges as plenty this fall as we had

A BIG FELLOW.

hoped for here in this section of South Worcester county. I do not hear of bags of over five or six partridge to two guns for a day's shoot, and not often so many as that. Perhaps the old market-shooters get more, and I hear that in some other sections near us there are more birds, but here all agree that partridges are scarce and seem to be more so than last year. We have had quite a number of woodcock for us, more than usual, and quail are met with often enough to give quite a taste of the sport. Quail should be plenty next year with a good winter, as there will be a good many left for seed.

C. A. TAFT.

Indian Territory Quail Again.

Editor Forest and Stream:

Mr. Rightmire is all wrong. His letter reads "six crates of quail containing 2,000." There never was a coop made that contained over sixty—total 360, instead of 2,000. They were shipped to Pittsburg two weeks before the shooting season opened. After the law was off, four gentlemen bagged thirty-one birds. The banquet spoken of as numbering "1,200" was just twenty-two, and "quail on toast" was roast quail à la turkey. PHILIP.

Gun Borrowers.

THERE is an old English saying in a sporting journal, "Never loan rod, gun, dog or wife." L. I. P.

Long Island Deer.

It is estimated that 125 deer were killed on Long Island this year.

"Forest and Stream" Sells Real Estate.

MOODUS, Conn., Nov. 22.—Please stop my advertisement and send bill. The preserve was sold through the FOREST AND STREAM advertisement to Mr. Lanier, of New York. F. C. FOWLER.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

76

Mr. Charles Hallock contributes to our list of sportsmen's finds a soldier's priming wire, which had been lost near Fort Capron, Fla., in the Seminole War, and was found in the crop of a wild turkey in 1878. It is now in the museum of the Military Service Institution on Governor's Island.

77

Charles Hallock also refers us to a collection of curiosities which Capt. J. W. Collins once showed, and which had been taken from stomachs of codfish at sundry times while being split and dressed by the bank fishermen off Newfoundland, the process usually taking place on deck. Among the lot were a splitting knife with a wooden handle and blade 6 inches long, a small brass-handled knife of quaint workmanship, a rough piece of red granite weighing 3 or 4 pounds, an old felt hat, two counters and part of a euchre deck (five cards), a fragment several inches long which the scientists thought was lignite, and a brass lamp! Talk about the gorge of an ostrich! It isn't a circumstance in comparison. There is an undercurrent of whisper that the lamp fell overboard while lighted and was swallowed and fed for a time on cod liver oil, but that the supply failing, it went out and left the stomach of the cod in gloom, with a general feeling of goneness about the diaphragm. With regard to the so-called lignite, it is more probably a fragment of charred wood which fell overboard from some vessel and became heavy with the salt of the ocean, it being the habit of the fishermen to make wood fires on deck in large tubs filled with sand.

78

Two hunters in the woods near South Meriden, Conn., found a hermit eighty-four years of age dying of starvation and exhaustion. This is only one of numerous hermit finds by sportsmen.

79

Two New Brunswick, N. J., fishermen fishing in the Raritan River thought they saw a turtle, and pulled it out with a hook, and then found it was a mail bag, the top of which was cut off. In it were two bundles of letters, water-soaked, and an iron railroad brake. The letters were from Baltimore, and the pouch had evidently been thrown in the river that morning. It was delivered to Postmaster Price, who notified the Post Office Department.

80

All sweet things come to the soldier. Asa Witham, on his return from hunting, was met by a summons to join his company. He threw his hunting coat on a tree and started. This was in Maine in the May of the Spanish War year. On his return from hard living at Chickamauga he found a swarm of bees in possession of the coat, drove them off with a smudge, and reaped a harvest of 22 pounds of honey from the pockets.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Winning from Adverse Conditions.

WHY is a fisherman so constituted that the successful attainment of what others deem impossible yields more contentment than the largest catch in favorable weather, under favorable conditions? This is a question that has been constant with me this evening of Nov. 22, while thinking of my fisherman's luck yesterday afternoon and this forenoon.

Your columns in other years have borne articles from my pen praising the Cottonwood River of Kansas as the home of that "lord of streams," the large-mouth black bass; but the excessive drought of the past summer has stopped the springs and smaller tributaries from their usual musical flow, and with low water in the river this fall's fishing has been very poor, and a catch of a half-dozen bass or a dozen crappies for two men in a day's fishing has been counted a lucky catch. I have always been partial to that portion of the river below the mill dam, and my boat is kept there; but friends who use the boat and have fished below several times with poor success have urged me to let them "put the boat above the dam, for the bass have all left or been caught out below and there are none down below," until I was almost ready to grant their request, but concluded that I would investigate for myself before the boat was taken above the dam.

Having leisure from the duties of the law office yesterday afternoon, I spent an hour with a minnow net on the rapids turning over rocks, and finding, after the most tiresome hard work, that I only had fourteen chub minnows, but saying in thought "if there are no fish I have plenty of bait, and if there are fish, and the old saying is true about an east wind, I have enough bait anyway." I started down the river with a minnow dragging after the boat, and for a mile and a half of river no sign of a fish was apparent. Finally, in the deepest hole in the river my hook caught on a snag, and in working to loosen it I made the discovery that the bottom of the river resembled a forest "windfall" from the trees and limbs strewn over it. Adjusting the float, a small piece of soft pine, but slightly larger than a penholder, just large enough to support two No. 000 shot, to the depth of the water, I let the boat drift over the submerged forest, and caught two fine two-pound bass. As I was turning the boat to pass over the fishing ground again, I saw the approaching boat of a market fisherman with four poles over the stern, and to my question, "What luck?" he answered, "Not a bite." While I plead guilty to wishing him at some other place—on the river—he

showed by his eyes bulging in surprise that my small float was a new idea to him, whose four floats were two inches in diameter, resplendent in red and green paint, and as I raised my hook, a No. 1 Sproat snell, and he saw its size and the two small three ooo shot sinkers, he gave me the gratuitous advice, "You'll never get a darned thing on that hook of yours, for them sinkers won't take your minner down, and if it did and a big minner bit it he'd break that hook mighty quick. I'll tell yer, Judge, you can't catch any bass with that ther' fool rig." How much more advice he would have given if uninterrupted I will never know, for seeing a slight movement of the float I gave a twist of the wrist holding the bamboo, and then a few turns of the reel, and lifted into the boat a good three-pound bass. As I looked at my fisherman friend, his eyes were "bulging out," to use an apt western expression, and to my question, "What do you think of that?" his only answer was, "Well, I'll be hanged." His boat was kept near to mine as I passed back and forth over the good fishing water, but without a bite as far as I could see, until in pity I asked what kind of bait he was using, to be told, "Black suckers, and there hain't no better bait for bass," but I persuaded him to put one of my chubs on each of his hooks, and was sorrowful when I saw his hooks, No. 5-0 Carlisles, but it made no difference in the result, as he caught nothing, and my supply of ten chubs was soon used. But I had seven good bass and a giant crappie in the boat, all caught on a hook so small that he had said "A good minner will break it."

This morning brought a cold, stiff north breeze, with a cloudy sky, and one of the editors of a Topeka paper, who called at the office, and opened up with, "So you made a big catch of bass yesterday, the boys have told me, Judge. Can you go down with me a little while today and show me how it is done?"

Fearing for my laurels, I spoke of the unfavorable weather, and of work that ought to be done; but my partner stopped all excuses by saying: "I will do all the work there is to do, and you can go without any trouble on that account."

Realizing that I could find no available excuse, I soon had on the rubber boots and overcoat, with woolen mittens, and started with the editor. After about two hours of hard work turning over the stones on the rapids, I found that I had in my minnow basket thirteen chubs and seven black suckers—"hoodoos," as to numbers. Entering the boat I rowed directly to yesterday's fishing ground and found it so exposed to the wind that waves more than a foot high were ruffling the surface of the water. Dropping the anchor of the boat, we fished and froze for about two hours until the chubs were gone, and we had learned that, although my friend of yesterday had said "there hain't no better bait for bass than black suckers," the bass would not even notice them. We then returned to town, bringing ten good bass, of which it had been my luck to catch eight. We were in time for my editor friend to catch his train for home, taking with him as fine a string of bass as has been caught here this fall, and what was on, to all appearances, one of the most unfavorable days that could have been selected.

While the catch on either day was small, as compared with results in other years on this stream, and on other bass grounds that I have fished, yet tonight I cannot recall any other two days' sport with bass, that gave such complete satisfaction as these two days have given in the retrospect. Hence, the question stated at the beginning of this article, and my solution is that the adverse circumstances that contended against success, in being conquered, have added to the pleasure of the victory.

Hoping that some of your contributors can give a better solution if I have not found the right one, I am tonight, at least, a satisfied black bass fisherman.

W. F. RIGHTMIRE.

COTTONWOOD FALLS, Kan., Nov. 22.

League of Salt-Water Fishermen.

NEW YORK, Nov. 21.—*Editor Forest and Stream:* At the regular meeting of the Protective League of Salt Water Fishermen, held at 106 West Thirty-first street, President Albert Baywood in chair, about 125 members were present. Mr. A. N. Hoxie, of Massachusetts, who is and has been fighting against pound netters setting and maintaining pounds in navigable waters as a public nuisance, etc., addressed the boys in his able manner, and at the finish a rising vote of thanks was tendered to him. We also had Mr. Chas. A. Shriner, of Paterson, N. J., with us, and were very much pleased to hear his address to the boys. New life was put in the League at once. The League is in need of funds to help us carry on this fight, and our financial secretary will be glad to hear from any one who has some sportsman's blood in him. So please send in your little mite, no matter if small; it will surely help a great cause. Our fight is against pounds in navigable waters; no other nets are mentioned, as they do not obstruct anything. Come, boys, send in a check of any amount, and you may rest assured it will be used for the purpose named, and the donor's name will be withheld from the public if desired. If you cannot subscribe something, do help us by becoming a member of the League; it costs only one dollar per year, and that is all, so do join us if nothing more. You know the wrong that is being done right along, and you wish to help stop it, so here is a chance for each salt-water fisherman of New York to show himself in his true color. United we stand and divided we fail. Help us to swell the funds that some of the generous have started; write to the office for any information desired.

At the close of the speaking a novel surprise was sprung on the members present, when ex-President T. Biedinger unveiled a frame with the officers' pictures in it. In fact, it was such a surprise that even our President found it hard to find words to express his admiration of the work, but he said enough to thank the donor (the ex-President) in behalf of the League. Mr. Biedinger responded in a few well-chosen words, saying that he had been prompted to show his good will toward all the officers and members. A rising vote of thanks was extended to ex-President Biedinger for the kindness shown, and the hope was expressed that we would live many years to enjoy the fruits of our efforts to restore good fishing in our near-by salt waters, a thing that so many believed would never

be accomplished, but which they now see will be done in the very near future. Pounds are no longer visible, and they will be known and treated as the modern pirates. The time is near.

The frame was an elaborate affair, which bore as decorations the button of the League, trolling spoon, pearl squid hook, float, sinker, crossed hooks, fishing rod, reel and line, landing net and gaff, eel spear, clam shell, tarpon scale, starfish, horseshoe crab, skate egg, mussel shell and high-water mark. There were also set forth the League's objects as follows:

The objects of this League are, namely, to obtain legislation looking to the enactment of beneficial laws for the protection of salt-water fish, the co-operation of fishermen at large in conforming to and enforcing the same, and, generally, in furthering and aiding all lawful methods looking to prompt action in all violations of law appertaining thereto.

The portraits contained in the design were of the officers and directors:

Officers for 1901-2—A. Baywood, President; H. Kotzenberg, Vice-President; J. M. Wheeden, Recording and Corresponding Secretary; E. Flidner, Financial Secretary; D. A. Nesbitt, Treasurer.

Directors—T. Biedinger, Chairman; J. Taxter, H. Berge, F. Hochgraef, Sr., H. Graeter, J. Demand, A. E. Medard.

T. BIEDINGER.

Tame Fish in Upper Burma

WHEN in camp the other day I was riding through a village, when the village headman asked me if I would like to see "the fish." I, not knowing what the headman meant, at once went with him down to the banks of the stream, followed by several villagers with baskets of sesanum and paddy mixed together. Then the Thuggi called "Lay, Lay, Lay, Lay," for a few moments, when, lo and behold! a large herd of ngatwê, or big, short, flat-fish came up just under our feet, and were promptly fed by the Burmans. The fish were amazingly tame, and tolerated being stroked and petted even by me! There were in all about thirty-three of them, varying in size from 18 inches to 3½ feet long, the larger ones having a girth at the gills of about 30 inches or 36 inches. They would go away, and come back whenever they were called.

The villagers told me, and I see no reason to doubt what they say, that these same fish come up against the monsoon flood at the end of June, and go away about October every year. They can recognize individual fish by marks, scars, etc., which they pointed out to me.

The Môn is nearly dry in the cold and end of the hot weather, and the fact that these fish return to this one village landing stage every year regularly, and never go or more to any other is quite worthy of remark. A villager who kills any of them has to undergo a penalty of 10s. by common consent, and great care is, in consequence, taken of them.

The ngatwê of Upper Burma is a very short, thick fish, tapering very rapidly from behind the gills to the tail, has long feelers on both upper and lower lip, and has no noticeable teeth. He makes very good eating, and has but few bones. I have often heard of tame fish in tanks, but a herd of tame fish in a monsoon river connected with the great Irrawaddy is a very *bizarre* phenomenon.

Another question, answered in the negative by an eminent authority in Burma on fish, is whether the fish hear the human voice or feel its vibration, or whether they see people on the bank through the pea-soupy water.—Burman Correspondence London Field.

The very interesting note by Mr. E. D. Duckworth recalls to my mind the similar observations made by the late Dr. John Anderson during the expedition to Upper Burma in 1874-75. The short description given by Mr. Duckworth of the tame fish of the River Môn points to a silurid or catfish, probably allied to, if not specifically identical with, the one described by Dr. Anderson as *Rita sacerdotum*. This fish, Dr. Anderson tells us, was observed in the long reach of the Irrawaddy in which the pagoda of Thingadaw occurs, where it was considered very sacred, and was under royal protection, a mandate of the sovereign existing which made the death of one of these fishes by hook or by net a very serious offense, and fishing for three miles above and below the little island of Thingadaw was prohibited. The fish were daily fed by the priests who resided on the small rocky islet, and also by passing devotees. The most interesting feature, however, connected with this fish is its peculiar habit of responding at great distances to the call of tit-tit when off repeated. After many calls of tit-tit, Dr. Anderson observed the fishes, at some considerable distance off, rise to the surface, apparently answering to the call by making straight for the banks of the island, where they soon showed themselves. Many were of great size, measuring, in all likelihood, nearly 5 feet in length. They were so tame that they raised their heads above water to be fed, and even permitted him to introduce his hand into their mouths. They also offered no objections to their barbels being felt and pulled, and the devout Burman was wont to adorn their heads with golf leaf as a work of merit.

There is no doubt that most fishes are sensitive in the water to noises made on the banks, as all anglers know, and the Romans are credited with having trained some fishes to answer their call. Catfishes, like *Rita*, are especially sensitive to sounds, the vibrations being conveyed to the acoustic nerves through the air bladder, which is in direct contact with the thinned skin of the sides of the body above the pectoral fins, and connected with the ear by a chain of ossicles, the so-called Weberian apparatus which is common to them and the cyprinid and characinid fishes. Many among the silurids are also provided with sound-producing organs.—G. A. Boulenger in London Field.

"Kentucky" and "Frankfort."

THE courts have just decided, after long litigation, that Messrs. B. C. Milam & Son have the exclusive right to use the names "Kentucky" and "Frankfort" as applied to fishing reel.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

The Campers.

THE Woody Printing Co., of Kansas City, Mo., send us a copy of their Proof Sheet, which is devoted to a chronicle in verse and picture of the summer vacation experiences of the eCampers, in their Uneeda Rest Camp, which is reached by handcar from a railway station in northern Minnesota.

Mr. Sidney F. Woody, who figures in the story as Sinless Fabrica Woody, sends us one of the cuts, a "Pretty Face," and we quote the Act. II, just to show how the Campers camped, and how the Kansas City Shakespeare handles his subject:

ACT II.

Scene I.—A camp in the woods near a lake. Scipio getting wood to build a fire. Time, early morning.

Enter the Doctor.

The Doctor. Come, Scipio, unjoint thy city slothfulness and hasten breakfast, while I wake up this sleeping camp. (Goes to tent where Hercules and Justus are sleeping.) Come, wise maker of a nation's laws, and honest Justus, wake up! Come out and let this biting air brace up thy limping livers.

The Judge (within). I am awake, good doctor, nor have I slept this night. The noble Hercules hath snored so loud that not a wink of sleep hath closed my eyes.

The Lawgiver (within). So am I awake, friend Melampus, and so I have been all night long, for never hath mine ears heard such sounds as Justus makes in sleep. Sometimes 'twas like a winter's wind sighing through a leafless forest; then, gathering

A PRETTY FACE.

force, 'twould seem as though some awful storm was sweeping through the trees, and mountain waves were thundering on some rocky shore.

The Doctor (moving away). Oh, I heard you both, and could, had I not half an ear. (Goes to Romulus and Petronius' tent, sticking his head in.) Hello, my merry Nimrods, know ye not morning is here? Arise, and let the hoary frost drive out thy wish for sleep; and this may help you up. (Raises the cover and throws a cake of ice in their bed, then retires; a great noise with much tumbling about within.)

Voice of the Professor. By golly, was that the north pole? The Doctor (coming to Sinless and Isabella's tent). How now, happy Sinless and sweet sister, why slumber on when every fish in yonder lake is waiting but the chance to take your hook.

Isabella (within). Good brother, my worthy mate has been gone this good hour, and said he'd bring a fish, that we might have some meat for breakfast.

Scene II.—All up and strolling about the camp or washing their faces in the lake.

Enter Sinless, coming from lake with large fish. Sinless. Good morning, friends and fair companion of my joys and ills, you see I've kept my word, and here's as fine a fish as ever stretched a line. Here Scipio (gives it to Scipio), have it broiled to taste and do it soon, for hunger presses on my appetite.

Presently Scipio appears and announces that breakfast is ready, and all go into cabin.

Newfound Lake.

NEWFOUND LAKE, Bristol, N. H., Nov. 23.—The State Fish Commissioners have finished their annual work of taking spawn from the large fish in this lake for artificial propagation. From the lake trout have been taken about 40,000 eggs; from the salmon from 60,000 to 70,000.

There have been taken for exhibition purposes from these waters eight lake trout, averaging 15 pounds each, also six landlocked salmon, it being the intention of the Fish Commissioners to have them placed in tanks at the Sportsmen's Show soon to be held in Boston, to let the angling fraternity know that there are plenty more in Newfound Lake just as good as these. If the intentions of the Commissioners do not miscarry next year and future years, we may expect to have fingerling salmon and trout placed in our waters, when even a better result will be expected and attained than from the usual method of dumping in thousands of young fry on the live or die principle. The fingerlings will be large enough to take care of themselves until later years, when the boy with the "hoe" and the fish pole, or the man with the hackle and fly-rod comes along.

New York Fish Commission.

At the meeting of the Forest, Fish and Game Commission Nov. 19, Commissioner Babcock, who has charge of the distribution of fish from the hatcheries of the State, made a report. The number of fingerlings distributed is by far the largest ever made by the Commission in one year.

During the period, 1,631 applications for fish were received and 1,259 were granted. The number of petitions rejected was 193, which included ninety-two for black bass, twenty-seven for pickerel, four for bullheads, four for rock bass and three for catfish, none of which the Commission has for distribution. The summary of the fish distributed from the various hatcheries of the State during the year beginning Oct. 1, 1900, and ending Sept. 30, 1901, is:

Shad, 19,675,000; whitefish, 32,250,000; pike, 46,900,000; mascollonge, 4,520,000; frostoffish, 4,900,000; shrimp 158,000; ciscoes, 100,000; tom cods, 35,000,000; bullheads, 50;

perch, 4,500; bass, 1,500; lake trout fingerlings, 399,210; lake trout yearlings, 46,450; rainbow trout fingerlings, 132,325; rainbow trout yearlings, 109,975; brown trout fingerlings, 131,600; brown trout yearlings, 102,475; brook trout fingerlings, 351,500; brook trout yearlings, 65,368; lake trout fry, 2,405,000; rainbow trout fry, 20,000; brown trout fry, 1,187,000; brook trout fry, 2,262,000; Scotch sea trout yearlings, 1,700; redthroat trout yearlings, 13,350; steelhead salmon, two years, 12; redthroat fingerlings, 22,000; lake trout, four years old, 12; rainbow trout, five years, 76; brown trout, five years, 507; brook trout, five years, 646; total, 150,760,856.

He Would Take Something Off.

EX-CONGRESSMAN BEN CABLE, of Illinois, recently told this story of a titled Englishman, who spoke at a dinner party, of a tiger he had killed in India. It measured, he said, twenty-four feet from nose to tail-tip. Everybody gasped a little, but nobody ventured to express lack of faith in the accuracy of his memory for figures. However, there was an old Scotchman present, who proceeded to cap "my lord's" tiger tale with a fish story. He said he had once caught a fish which was so heavy he could not land it. He had to call on six of his friends to help him bring it to the shore.

"It was a skate," he said, "and it covered two acres." The tiger-hunting nobleman glared at the unmoved Scot for a moment, and then left the table in a rage. The host flew after him, and returned much disturbed.

"Sir," he said sternly to the Scot, "you have insulted my lord, and I beg you to apologize."

"I dinna insult him," declared the Scot.

"Yes, you did," persisted the host. "That two-acre fish story of yours was a gross reflection on him—an insult. You must apologize."

"Weel," said the Scot, "just you go back to the injured gentleman and tell him that if he will tak' ten feet off that tiger's tail I'll see what I can do with the feesh."—New York Times.

Yachting.

Designing Competition.

IN view of the continued and increasing interest in yachting, a designing competition will be opened in the columns of FOREST AND STREAM. In America the yachting season is comparatively a short one, and such a competition as has been determined upon will serve to stimulate the interest in the subject during the winter months. The competition is open to both amateur and professional designers. Three prizes will be given for the best designs of a yacht conforming to the following conditions:

- I. A pole mast sloop.
- II. 25ft. load waterline.
- III. Not over 4ft. draft (with centerboard hoisted).
- IV. At least 50 per cent. of ballast outside on keel.
- V. 5ft. headroom under cabin carlins.

All abnormal features must be studiously avoided in the design; and the construction, sail and cabin plans should be of the simplest character. It was our idea in laying out the conditions of the competition to make them simple as possible, so as not to hamper in any way the designer, and yet convey to all that we wished to produce a safe, comfortable cruiser on which two or three amateurs could live with comfort for a period of two or three months and cruise along our eastern seaboard from New York to Halifax with safety. A centerboard boat of moderate draft was decided upon, as so many more harbors would be accessible to a boat of that type.

DRAWINGS REQUIRED.

- I. Sheer plan, scale 1in. = 1ft.—showing center of buoyancy and lateral resistance.
- II. Half breadth, scale 1in. = 1ft.
- III. Body plan, scale 1in. = 1ft.
- IV. Cabin plan, scale 1in. = 1ft.
- V. Sail plan, 1/4in. = 1ft., showing center of effort.

The sails should consist of a jib, mainsail, spinnaker and balloon jib. No topsail will be carried.

A table of offsets and an outline specification must accompany each design. The drawings should be carefully drawn and lettered. All drawings should be made on white paper or tracing cloth in black ink (no colored inks or pigments should be used). The designs must bear a nom-de-plume only and no indication must be given of the author. In a sealed envelope, however, the designer should inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than February 28, 1902. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all the designs.

The prizes offered are as follows: 1st prize, \$25.00; 2d prize, \$15.00; 3d prize, \$10.00. Mr. Theodore C. Zerega offers an additional prize of \$10.00 for the best cabin plan. Honorable mention will also be made of meritorious designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has kindly consented to judge the designs and make the awards. Mr. Crane's professional standing is so high that he needs no introduction, and every confidence will be put in his ability and fairness.

LATE in the afternoon of Saturday last the northeast wind that had been blowing for several days previous increased greatly in force, and all Saturday night and Sunday blew with unabated fury. The gale has caused much damage to yachts all through New Jersey, New York and Connecticut, and although detailed reports are difficult to obtain, the losses in the vicinity of New York alone will probably reach over \$100,000. Fortunately, almost all pleasure vessels had been put out of commission and were either hauled out or lying dismantled in the basins at the different yards, but the usual precautions taken when laying up did not protect them, for the tide rose to such great height that in many cases the boats were floated and hurled about in great disorder, injuring many of them beyond repair.

Charmer.

THE many new orders that the different designers have received this fall for schooners of moderate size show plainly that this rig has met with very general satisfaction.

For a number of years the Burgess schooner Monhegan, a boat 46ft. on the waterline, was about the only schooner of moderate size on Long Island Sound. Then Mr. Arthur Binney turned out Columbia, a boat of 40ft. waterline length. Then several of the old 40 and 46 footers were altered from cutter to schooner rigs. All these boats proved so successful that it was not long before a one-design class of schooners was started. These boats were 46ft. on the waterline, and several were built from designs made by Mr. A. Cary Smith. Then the Eastern designers began to get frequent orders for boats, schooner rigged, varying from 35 to 50ft. waterline length, until now there is a large fleet of these vessels. To meet the demand for designs of this type of boat, we began to publish in our issue of Oct. 19 the first of a series. In that number were the plans of the schooner Clarissa, a flush deck boat, 54ft. on the waterline. In this issue we publish plans of a cabin house boat with schooner rig 46ft. on the waterline. In a short time we will publish plans of a still smaller boat, 33ft. waterline, which is also rigged as a schooner.

The schooner that is illustrated in this issue is called Charmer, and she was very properly named, for she is a most attractive little ship in many ways. She was designed by Mr. B. B. Crowninshield and built by the Geo. Lawley & Son Corp., at South Boston, this year for Mr. T. Parsons. The dimensions are as follows:

Length—	Over all	67ft. 3 in.
	Waterline	46ft. 0 in.
Overhang—	Forward	9ft. 2 1/2 in.
	Aft	12ft. 1/2 in.
Beam—	At deck	15ft. 7 in.
	At waterline	14ft. 10 in.
Freeboard—	At stem	5ft. 4 in.
	At taffrail	4ft. 0 in.
	Least	3ft. 0 in.
Draft—	Extreme	6ft. 6 in.
	To rabbet	4ft. 3 in.
	Board down	12ft. 3 in.
Displacement		65,780lbs.
Outside ballast		24,835lbs.
Pounds per inch at L.W.L.		2,590lbs.
Area—	Lateral plane	257.5 sq. ft.
	Wetted surface	808.6 sq. ft.
	Sails (four lower)	2,054.0 sq. ft.
	Rudder	18.6 sq. ft.
	Centerboard	27.5 sq. ft.
Ratio—	Ballast to displacement377
	Sail area to wetted surface	2.54
	(Stem to C.B.) to L.W.L.540
	Overhangs to L.W.L.462
	(Stem to C.L.R.) to L.W.L.555
	C.E. to C.L.R.) to L.W.L.0435
	Rudder to balance lateral plane078

The lines show the very healthy character of the design, the boat having large internal accommodation on very moderate draft.

The trunk is quite low, but it still gives full headroom throughout all the cabins. The cabin plan gives a fair idea of the internal arrangement, but the cabins are far more attractive in reality than the plans indicate.

The finish in the staterooms and cabins is of white enamel paint, while the doors and some of the trim are of mahogany. The simplicity of the fittings throughout is most restful and attractive, quite a relief from the usual ginger-bread work found in the interiors of nearly all yachts.

The main saloon is 12ft. long; on each side are wide transoms or lounges. Behind the transoms are berths; forward and aft of these berths are large lockers for clothes, linen, wines, etc. At the forward end of the cabin on each side are sideboards with drawers for silver, etc. Above these are the doors to the china and glass lockers. In each of the doors are leaded glass panels of simple design. There is a large skylight over the main saloon. A door opens from the forward end of the main cabin into a passageway, on the starboard side of which is the owner's stateroom, an apartment of good size and fitted with a wide double berth, hanging lockers, set basin, sofa, etc. On the port side opposite is the lavatory, and here in addition to the usual water closet and basin are located lockers for linen, etc. Just forward of the lavatory is a space for the stowage of luggage, which is a great improvement over the usual custom of permitting it to lay about the floors or in the bunks. Next forward is the galley, which is of good size; directly overhead is a large skylight, which makes the room very light and cool. Opening from the galley on the starboard side is a room for the sailing master. Next forward is the forecabin, which has accommodation for four men. In the after end on the starboard side is the crew's water closet.

The cockpit is water tight. All trim on deck is of mahogany. The deck and cockpit flooring is of white pine. Two boats are carried on the davits.

What there is of the centerboard trunk above the cabin

floor is just forward of the mainmast, and the cabins were so arranged that one does not realize that the boat has any centerboard at all.

The rig is clearly shown on the sail plan and requires no explanation.

Remarks on the Rating Rules for Yacht Racing.

BY THALASSA.

THE New York Y. C. has often done yeoman's service for the sport of yacht racing, and seldom better than in its recent action of appointing a special committee to investigate and report upon the much-debated question of the rating rule, under which racing yachts are measured for competitive sailing.

Mr. G. L. Watson commenced a most interesting chapter in the Badminton Series, headed "The Evolution of the Modern Racing Yacht," by emphatically declaring the immense importance of the rating rules on the history of the development of racing yachts.

This forms a complete answer to those who consider it funny and witty to revile and ridicule those whom they describe as "rule mongers." Yachtsmen who really care for the efficiency of the sport they pursue should be only too thankful to the small number of enthusiasts who have given a rather dry subject so much attention and laborious investigation.

It is not necessary to examine the very numerous rules which from time to time during the past fifteen years have been proposed for adoption.

The following rules, however, should be known because the development of the racing yacht has been intimately connected with them all.

"Thames" tonnage is expressed in terms of L. = length of hull from forward side of stem to after side of sternpost on deck, and B. = the extreme beam of hull. Thus:

$$1 \quad \text{Tons} = \frac{(L - B) \times B \times \frac{B}{2}}{94} = \frac{B^2 (L - B)}{188}$$

This was used as the racing rule in British water from 1876 to 1878, on which latter date a change was made by measuring L. on the waterline, the rule still being employed for racing until 1880, inclusive. This rule is still the usual method employed for gauging yachts for sale or charter, and gives her "tons," by which most of the yachts in Lloyd's Register are described.

The Yacht Racing Association produced a new tonnage rule for racing in 1881, and it lasted for six years, viz., till 1886, inclusive.

$$2. \quad \text{Tons} = \frac{B(L + B)^2}{1730}$$

Under this rule very long, deep, narrow boats with heavy keels and outrigger channel plates were eventually produced, and the type not being very favorably regarded, a change was again made in 1887, which lasted for six years, until 1893, inclusive.

$$3. \quad \text{Tons} = \frac{L \times S}{6000}$$

S. being the sail area in square feet.

Prior to this, however, in 1882, the Seawanhaka Y. C. in America had adopted a similar rule, but expressed in sailing length (feet) and connected with a rectified time scale.

$$4. \quad \text{Sailing Length} = \frac{L + \sqrt{S}}{2}$$

and in 1883 the New York Y. C. adopted a modification, viz.:

$$5. \quad \text{Sailing Length} = \frac{2L + \sqrt{S}}{3}$$

The evolution under these three length and sail area rules was very similar, and Mr. Watson's remarks on the English edition (which the late Mr. Dixon Kemp claims to have first proposed in 1880) may be accepted as applying equally to its American cousins.

He wrote in the Badminton chapter already referred to, that under this rule the variety of type which successfully competed was enormous. "Broad, narrow, deep, shallow boats with centerboards and boats without: * * * plain keel, fin-keel bulb keel * * * have each had its successes." And he added, "But few of these types could have succeeded under the old tonnage rules, and few of them may be successful under rules yet to come." This, written as it was in the early nineties, was almost prophetic—foreshadowing as it did the shape rules of the present day—rules which aim at the forcible adoption by all designers of those particular forms of mid-section which the framers of these rules for the time being believe to be the best possible. The apostles of this creed—Mr. R. E. Froude, F. R. S., and Mr. Benzon, the former with a great following in England, and the latter with numerous disciples in Germany and Scandinavia—have, for the last decade, persuaded European yachtsmen to adopt the present reactionary systems.

The French were the first to employ a shape rule for tonnage, which varied as G.² (2 L. — B.), the item G. being greatest girth from top of deck planking post, round keel to starboard, plus extreme beam; and in 1892 the Union des Yachts Français adopted a modified rule for racing tonnage, which varied as

$$6 \quad (4L - G) \sqrt{S}$$

This introduction of sail area into the French rule was no doubt copied from the English and American rules.

But G. was the defective item in the French rule—especially for small yacht racing—because it cramped the draft and tended to reduce grip and seaworthiness. In larger vessels its ill effect would not be equally observable, for the very simple reason that their draft is thoroughly kept within moderate bounds by the depth of water over the bars of the harbors and estuaries they frequent. The tax on G. was the thin end of the wedge, was the commencement of the pernicious shape rules.

In 1894 the Y. R. A. (British) introduced B. and G. into the L. and S. rule—in fact, copied the French rule in this respect, for the French G. contained B., whereas the English G. did not.

"Tonnage" rules, however, went overboard, and the

"sailing length" of the American rules was introduced as "linear rating," and this varied as

$$7. \quad L + B + \frac{3}{4}G + \frac{1}{2}\sqrt{S}$$

The division employed to bring it to feet was 2, the variables in the formula being exhibited in feet or square feet.

This wonderful rule, the outcome of immense labor on the part of Mr. R. E. Froude, F. R. S., was fully expected by him and by most of the British professional experts to produce a wholesome and seaworthy type of craft, whereas during its six years of life it produced precisely the contrary—a shallow-bodied, lightly ballasted and lightly built craft, with a large-sail plan. On the one hand the power to carry sail was attacked by the rule through G., and on the other hand an increased S. was encouraged, both by reducing the sail tax 50 per cent., and by adding other taxes to accompany it, so that its proportional reduction in taxation was much more than 50 per cent. The inevitable consequence was a crank and unseaworthy boat that sailed on her side in anything but the lightest airs, and required a very competent crew and helmsman to sail her at all, even in smooth and landlocked waters.

The resulting craft became speedily unpopular, and racing under the Y. R. A. rule of rating was soon restricted in the small classes to the Solent—all the small yachts racing elsewhere in England, Scotland or inland being either for restricted boats—in boats built to some local rule of restrictions, or for handicaps. In short, the Y. R. A. rule was inoperative so far as the small classes were concerned, except on the Solent, and there the numbers of boats in the various classes became greatly reduced as compared with those which came to the starting guns under the length and sail area rule.

The rule was an evident failure—and the final outcome, say the Sakuñala in the 36-footer class, although very speedy under a few favorable conditions, was simply a terror in a strong wind and lumpy sea.

Many men who had pioneered small yacht racing in England left the Y. R. A. classes and organized classes of one design, or of restricted design, or of one design as regards hull, but optional as to rig—like the Redwings on the Solent.

In the large classes the change of rule and its effects were not so easily or quickly observable, but there can be little doubt that the same tendencies would eventually have worked in a similar manner as in the smaller classes.

Such being the state of affairs, the Council of the Y. R. A. were urged to change or modify the rating rule, and after a somewhat hasty and hurried examination of experts in camera, the present rule was pressed upon the Association and passed into law. Do a thing in a hurry and repent at leisure is an old English maxim, and the latest rating rule of the Y. R. A. will be no exception.

It is a shape rule pure and simple, and quite throttles design. It is true that Mr. Herreshoff, Jr., has in Nevada produced a fairly successful boat that really defies the rule in all its apparently essential particulars, but it is extremely doubtful that she will continue to do so when other boats are built to profit by the peculiarities of the rule. She is for sale. The linear rating by this new Y. R. A. rule varies as

$$8. \quad L + B + \frac{3}{4}G + 4d + \frac{1}{2}\sqrt{S}$$

all the variables being expressed as in the previous Y. R. A. rule and d. added—this new item being found by measuring chain girth and skin girth near the midsection, d. being their difference.

A mathematical examination of this item discloses the fact that the tax is unimportant so long as the sagitta between the hollow of the boat and the girth measuring chain does not exceed one-twelfth of the chord, but the tax becomes rapidly increased when this limit of hollowness is exceeded.

The rule has only been in force for one year, and it is consequently no easy matter to foretell the evolution which it will produce in British racing yachts. It will heavily handicap yachts of hollow section, like Meteor, Sybarita and the two Shamrocks. In the smaller classes its worst effect will be the heavy tax it puts on any form of projecting keel, and the consequent loss of seaworthiness which small racers had attained under the L. and S. rules, both in England and America, and which they need so greatly.

Mr. W. Fife, Jr., has so far been the most successful designer under the new rule, and an examination of the elements of his boats, as published in the Field tables of certificates, displays the fact that he takes plenty of L. and S. and reduces the other variables as much as possible. Probably he reduces G. by giving his hull a keel raking aft at a steep angle, like his Red Lancer, which, when beached for a scrub, looked like a terrier half down a rabbit hole.

The same description of rating rule has been adopted for German and Scandinavian racing, and it is quite on the cards that the new British rule will be adopted for these northern waters.

There is, however, a new French rule which has taken a novel departure, and has adopted the broad idea of Mr. Herreshoff's proposal in 1892, viz., to put a premium on tonnage.

The new French rule rates by tonnage, which varies as:

$$[(L - \frac{1}{2}P) \times P \times S + \sqrt{M}]$$

P. being extreme chain girth from waterline to waterline plus extreme beam, and M. being the area of the yacht's immersed midsection.

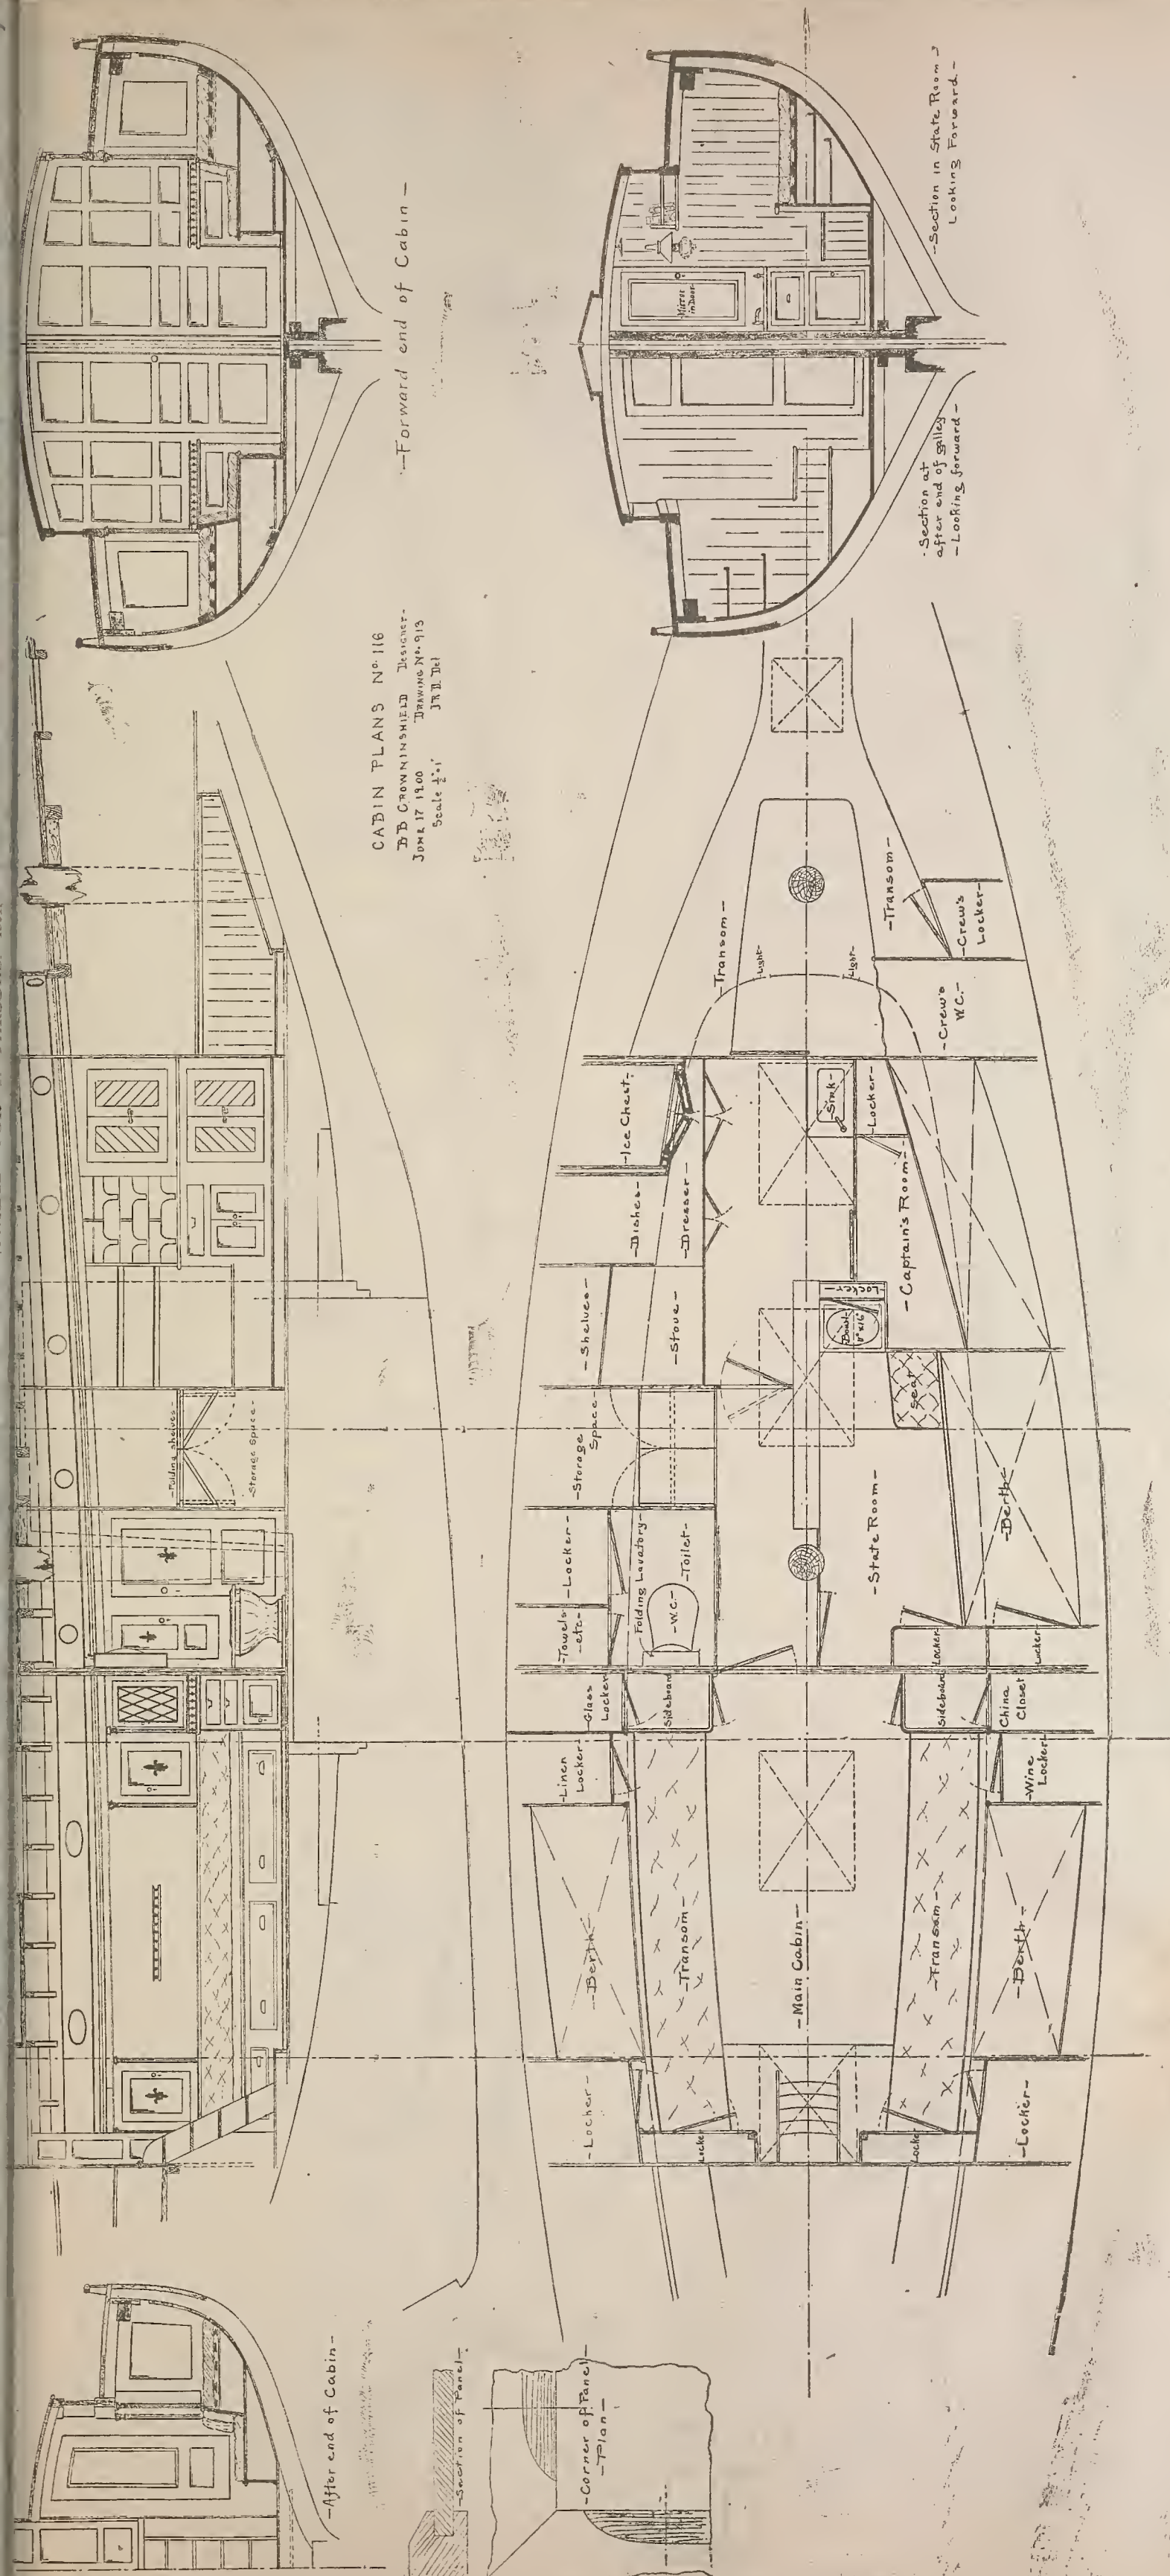

The divisor employed in this rule ought to have an excellent effect. It will certainly give boats built of good scantling and possessing a fair amount of ballast a much better chance than was possible under any of the recent rules of rating. It is a good rule, but it might have been better.

The manner in which M. must be measured is complicated and troublesome. I read over the detail three times carefully, then lay the paper down with a sigh, as my head began to swim. Moreover, the employment of $\sqrt[3]{D}$

instead of $\sqrt[3]{D}$ (the cube root of displacement) is not to be recommended. A premium on M. tends to produce short hulls, whereas a premium on D, tends to produce long hulls. A little consideration will confirm this statement. Of course they both tend to produce heavy hulls, whether the tendency be strong enough to overcome the

CHARMER. DESIGNED BY B. B. CROWNSHIELD FOR T. PARSONS, 1901.

CABIN PLANS No. 116
 D. B. CROWNINGSHIELD Designer
 June 17, 1900 Drawing No. 913
 J. H. Bell
 Scale 1/2" = 1'

speed-giving power of small weight remains to be seen. Putting it broadly, there are three principal speed producers in the sailing yacht:

- I. Sail area—the motor.
- II. Length of hull—the wave minimizers.
- III. Smallness of displacement—without infringing on the amount required for holding up the motor.

This being so, is it not evident that any logical rating rule for yacht racing should tax these three speed producers?

Yet we find that with the exception of the new French rule, smallness of displacement has never been taxed in any rating rules actually adopted for employment.

The rule I should like to see adopted, or, at all events, tried with view to adoption, if successful in some class, say of 30-footers, is one in which the linear rating varies as

$$10. \quad L + \sqrt{S} - 16 \sqrt[3]{D}$$

D. being displacement in tons (of 2,240lbs. avoirdupois); thus a boat weighing eight tons when hauled upon a weighing machine, and carrying 1,296 sq. ft. of sail on a hull length on waterline of 30ft., would rate at $30 + 36 - 32 = 34$ sailing length.

This is a simple rule, which in no way or manner fetters design, and can be remembered by the following doggerel:

'Tis easily done, for her rating will come
 From her waterline length on the sea;
 And her square root of S, then discover their sum,
 And deduct the cube root of her D.

Of course such a rule can be expressed in a multiplying form, as Mr. Herreshoff recommended in 1892, thus:

$$11. \quad \text{Linear Rating} = \frac{L \times \sqrt{S}}{\sqrt[3]{D}} \times \text{Constant.}$$

I feel sure, however, that the plus and minus form is better, at all events for experimental purposes. All multiplying rules are so rigid and therefore so difficult to deal with after a few years' experience has shown that a change in a certain direction is advisable. For instance, after trying the rule, I suggest for a year or two in one of the open classes, it might be found desirable to introduce a tax on beam.

It could be done at once by the following change:

$$12. \quad \text{Linear Rating} = L + B + \sqrt{S} - 20 \sqrt[3]{D}$$

But how difficult would it be to introduce B. in the above multiplying formula of Mr. Herreshoff's.

My modification is practically identical, but is mathematically more convenient. That is all. But the proposing of a formula (whether in 1892 or 1902) is not everything. The more important action is to support a proposal by arguments which are sound and convincing to a degree sufficient to persuade those in authority to try the proposal. Mr. Herreshoff has let the matter drop. I, on the other hand, have preached it for years; have published pamphlets explaining the object of the proposal; have enlisted the help and cordial assistance of a first-rate scientist, mathematician and expert in mechanical and ship engineering (Lieut.-Col. Thomas English, R. E., retired, and at one time managing director of Palmer's Shipbuilding Co. on the Tyne); have constantly advocated it whenever a chance occurred, both in the public press and in the Yacht Racing Association. It is true that the proposal has never yet been tried, but the matter was carefully considered by the Rules Committee of the Y. R. A., when the last change was under discussion in October, 1900.

It was thrown overboard because the committee considered that the displacement encouraged by such a rule "would not of necessity be put into a form of underwater body that would give good living accommodation."

"Numerous instances of this were afforded by the designers, and it was their unanimous opinion that displacement would probably be taken in a form other than the form we desired."

I begged to give evidence before the committee, but the chairman refused. Had the committee allowed me to speak I should have pointed out that "good living accommodation" is a matter of no consequence whatever to the small classes of racing yachts, say up to 30ft. linear rating, or even 36ft. linear rating, by the British rule of rating, for the simple reason that these raters are never employed by their owners except for racing, and occasionally as day boats, many owners, however, never using them for the latter purpose, but boarding them just before first gun in their steam or oil launch, and quitting them at the termination of the race in like manner. Of what possible utility is "good living accommodation" to such owners, or, indeed, to any owners of these small racers?

Years before the small classes degenerated into the present light displacement hand boxes, it was the same. When the old 5-raters were started on the Solent by Lord Dunraven, Mr. P. Percival and myself, the boats were somewhere about 5 tons of displacement on 33ft. of L.W.L., but we never thought of living on board, and used them simply as day boats, just as the lighter and more costly 36-footers are used now. We don't want living accommodation on board small racers. It is moonshine. The desiderata we require are:

- I. Cheaper construction.
- II. Smaller maintenance.
- III. More competitors and better sport.

The existing rules (except the new French rule) in almost every particular avoid these desiderata. For instance, the Y. R. A. rule in no way tends to lessen the cost of construction. On the contrary, the lightest possible hull per unit of hull area will, *ceteris paribus*, have a distinct advantage under the rule. Moreover, the Y. R. A. rule taxes sail so lightly that enormous sail plans are employed, requiring large crews of expert professionals to sail them, thus raising the cost of racing abnormally and keeping men of moderate means out of it.

Indeed, the sum total of the requirements in small yacht racing may be uttered in the one word, Sport—i. e., racing sport, which is not in the smallest degree connected with the hotal accommodation under the main hatch.

This broad fact the Council of the British Y. R. A. cannot or will not see, and the result has been the practical ruin of small yacht racing, so far as the Y. R. A. classes are concerned. But, some may exclaim, how will a rating rule with a premium on displacement alter mat-

ters? The reply is simple—that such a rule will at all events give those yachts which are heavily constructed (and they can be built far more cheaply than the light displacement boats) a much better chance of winning prizes than they have had for the past ten years, and if the rule also taxes sail area in a reasonable manner, the present cost of a racer's annual upkeep would be greatly reduced, both as regards hands and gear.

I, for one, deny that an L., S. and D. rule would produce a wide hull and shallow depth at quarter beam, although five leading English designers apparently anticipate such a result, and I base my disbelief on the comparison of *Pente* and *Flat Fish*, the former designed by myself and built for a very moderate sum, indeed, and the latter built in a great hurry, and therefore of good scantling.

In the following year, *Sea Shell*, designed by Mr. Watson and built in the north, of light scantling, cost more than twice as much as *Pente*, and raced on very level terms under the L. and S. rule. Had they raced under a rule giving a reasonable premium on displacement, *Pente* would have beaten *Sea Shell* handsomely by the time allowance, or have carried more sail and have beaten her actually. *Pente* was not designed to give "good living accommodation"—far from it—but she was an ideal day boat, very handy, fast (for her sail area) and weatherly.

A man and a boy for paid crew was ample, whereas the 36-footers, which have replaced the old 5-raters, now carry four paid hands, and want them.

If wide hulls are to be discouraged, the introduction of a tax on beam in her formula is perhaps advantageous.

Thus, comparing *Edie* with *Heartsease*, two 36-footers built when the late Y. R. A. rule (the girth rule) was first introduced:

Sail	1499.00	1804.00
√Sail	86.90	86.12
Length	88.41	81.28
Beam	8.27	9.14
Displacement	9.87	5.10

8. Late Y. R. A. rule, L rating	86.00	86.00
10. Thalassa's rule without B tax	88.55	88.40
12. Thalassa's rule with B tax	88.45	42.02

Edie is the type of yacht to be encouraged in the 36ft. class, and it is therefore evident that from this point of view a tax on B. is advantageous. But care must be taken not to unduly encourage a very narrow beam, with the deep hull of the yachts evolved by the early Y. R. A. rules, which gave enough "living accommodation" in all conscience, and too much of the article, the cavernous space of 8 or 10ft. depth below the cabin floors, which those vessels carried in the large classes being useless for comfort, and the whole ship producing a most wet and comfortless dwelling place in windy weather, and a slowly moving one in light breezes.

A heavily ballasted, narrow boat is a terror whether as a cruiser or as a racer, whether a 90-footer or a 19-footer.

On the whole, therefore, I think that the simpler formula containing only the three variables—L., S. and D.—is preferable.

If American yachtsmen are thinking of introducing a new rule, let them try some special classes under different rules for a year and see how they answer. It is really the only way to get at a good rule. The ablest yachtsmen and the most profound mathematicians are not able to say with certainty what a rule will or will not bring forth as the most successful type or types under its taxation.

Then try two or three of the most promising rules in two or three different localities in small and special classes and note carefully the apparent evolution produced by each rule. Compare these types and then decide which is the best to encourage. Unfortunately one year is often quite insufficient for this purpose, and the real child of the parent only appears after an incubation of several seasons of hard, competitive racing.

Of one thing, however, we ought to be fairly sure—viz., that an international rule, if such a desideratum be ever achieved, must be simple and deal with the principal elements of a yacht in a broad manner, leaving design unhampered by the rule as much as possible. It should also be constructed so that it will be applicable to differing climatic conditions, and even to differing national types of vessel, so that the same racing rule might be used with equal sufficiency on American, European and Asiatic shores, for the competitive sailing of yachts.

Thus, to take a very extreme example, I think a good rating rule should be applicable for the racing of a catamaran against an English or American yacht; should be applicable for the competition of centerboard boats against keel boats, or of barges with lee boards against fishing boats of equal size.

All this can be done by my simpler form of rule; but the addition of a tax on B. would at once prevent the catamaran from racing against an English yacht, or a barge against a fishing boat.

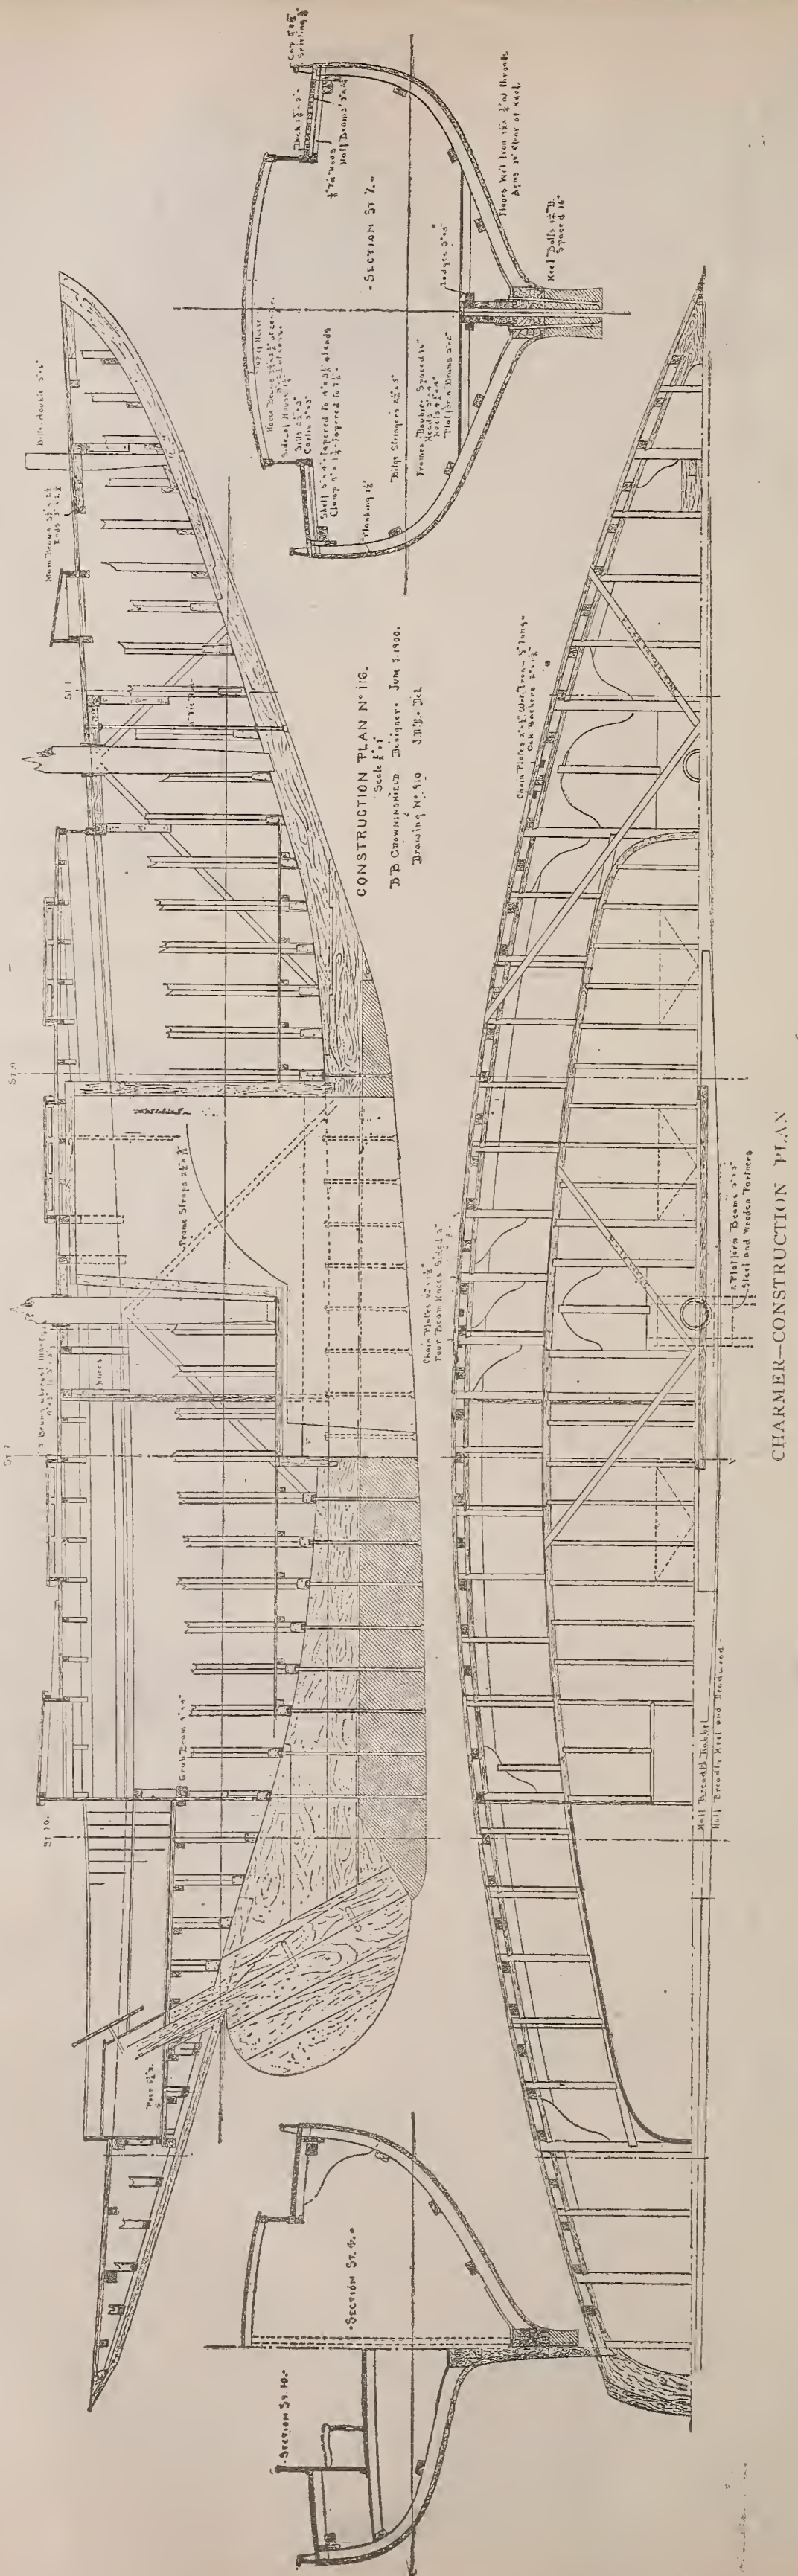

These, of course, are only stated as extreme examples. But in designing to a new rule, a knowledge of such extremes, and of their speeds under various conditions, is essential for the production of, for instance, either the modern scow, or the up-to-date Cup challenger.

As regards difference of climatic conditions, it is absolute nonsense to suppose, as some have done, that a rule which succeeds in producing a good type of yacht on one side of the Atlantic may fail on the other, or, on the contrary, that a rule which on trial has failed, say, in Long Island Sound, will ever succeed on the Solent.

Different climates will cause small variations in type under the same rule, but a good rule anywhere is a good rule everywhere, always assuming that the main objects of attainment are acknowledged.

The British Y. R. A., curious to relate, is the main obstruction to an international racing rule. The Council of this Association occasionally has expressed an academic desire for such a rule, but this wish is invariably accompanied by the idea that the British rule should be adopted by other yacht racing peoples. Directly any outside attempt has been made to commence a pow wow on a new rule for universal adoption, the Council has managed by various excuses to avoid the discussion.

It, therefore, appears that if the American clubs really desire an international rule, the best procedure will be to scientifically examine the subject with the assistance of efficient mathematicians and to adopt a rule founded on broad principles, which would probably last much longer than the usual life of a rule, which averages only five to

CONSTRUCTION PLAN No. 16.
Scale 1/4"
D.P. Cunningham's Design, Nov. 2, 1900.
Drawing No. 410 J.B.P. J.L.

CHARTER-CONSTRUCTION PLAN

CHARMER—SAIL PLAN.

six years. A great market is often captured in commerce by the production of an excellent article. So, in yacht racing, a really good rule, when so acknowledged, might be universally adopted. But it must be tried and proved for several seasons before such adoption can be hoped for, and in the meantime any attempt to produce a rule by international "pow wow" is highly improbable, the various cooks differing so greatly in their ideas on the required taste of the ragout.

In America many classes race, I believe, under the sole rating of the length of hull on waterline, as we did on the Solent many years ago, and for all such classes I would urge the expediency of allotting sail area according to same function of the displacement, so that a heavy boat might in that length class carry more sail than a light boat. Such a rule removes all difficulties *re* the scantling question, for men would indeed be foolish to build weak hulls under the restriction suggested, which for the small classes might follow the equation

$$18. \quad S = 800 \sqrt[3]{D^2}$$

and linear $R = L.W.L.$ for classification. Thus, if $D = 10$ tons, $S = 1,392$ sq. ft., etc., as shown in the following table:

D.	S.	D.	S.	D.	S.	D.	S.
tons.	sq. ft.	tons.	sq. ft.	tons.	sq. ft.	tons.	sq. ft.
0.5	189	2.5	552	5.0	879	7.5	1,150
0.55	201	2.6	567	5.1	890	7.6	1,160
0.6	213	2.7	582	5.2	901	7.7	1,170
0.65	225	2.8	596	5.3	912	7.8	1,180
0.7	237	2.9	610	5.4	923	7.9	1,190
0.75	248	3.0	624	5.5	934	8.0	1,200
0.8	259	3.1	638	5.6	945	8.1	1,210
0.85	270	3.2	652	5.7	956	8.2	1,220
0.9	280	3.3	666	5.8	968	8.3	1,230
0.95	290	3.4	680	5.9	980	8.4	1,240
1.0	300	3.5	693	6.0	991	8.5	1,249
1.1	320	3.6	706	6.1	1,002	8.6	1,259
1.2	339	3.7	719	6.2	1,013	8.7	1,269
1.3	357	3.8	732	6.3	1,024	8.8	1,279
1.4	375	3.9	744	6.4	1,035	8.9	1,289
1.5	393	4.0	756	6.5	1,046	9.0	1,298
1.6	410	4.1	768	6.6	1,057	9.1	1,308
1.7	427	4.2	780	6.7	1,068	9.2	1,317

1.8	444	4.3	793	6.8	1,078	9.3	1,327
1.9	460	4.4	805	6.9	1,088	9.4	1,336
2.0	476	4.5	817	7.0	1,098	9.5	1,346
2.1	492	4.6	829	7.1	1,108	9.6	1,355
2.2	507	4.7	842	7.2	1,119	9.7	1,365
2.3	522	4.8	854	7.3	1,129	9.8	1,374
2.4	537	4.9	866	7.4	1,140	9.9	1,383

For the small classes, under a L.W.L. rating, the above table would probably fulfill all requirements, and it avoids the necessity of making calculations. Thus, if a boat in racing trim weigh 30cwt., and carrying three hands, then, allowing $1\frac{1}{2}$ cwt. for each hand, her D. is 1.72 tons, and the S. she would be allowed is $427 + 0.2 (444 - 427) = 430$ sq. ft., which figures are seen at a glance on the above table.

This method of allotting sail in a pure L.W.L. rating class differs in no essential detail from the rating rule described in doggerel verse. It would be somewhat less elastic, because all boats in a class would be of the same length on waterline, whereas under the rating rule they might differ in L. considerably, although rating at the same sailing length.

In either case, a special scantling rule would be unnecessary, and therefore avoidable, and in either case a healthy amount of ballast would be encouraged and would certainly be carried.

Mr. Watson, for whose opinion on all matters connected with yachts I have greatest respect, fears that there might be some difficulty in discovering displacement by official measurements. No doubt he refers to boats larger than the small class day boats, all of which can readily be hauled up and weighed: With the big fellows it would be necessary to abide by an approximation (just as in the case with sail area measured by the American plan), such, for instance, as D (tons) $= L \times M$, divided by 60 where $L = L.W.L.$ and $M =$ area of immersed mid-section in square feet, found by any of several different methods of measurement, each of which would be sufficiently accurate for the purpose, and one of which is followed by the French in connection with their new rule; or, it would be necessary to accept a certificate from the designer of the yacht's D. at a given calculated waterline, and her correction per vertical inch at that waterline. This certificate should, I think, be subject to the scrutiny of an official expert, who would examine draw-

ings confidentially, countersign the certificate if correct and receive a fee from the Racing Association.

Whatever may be the difficulties, they should be overcome, as the introduction of displacement into the formula for rating racing yachts has become an absolute necessity.

Our Boston Letter.

BOSTON, Nov. 25.—One of the longest drawn out championships in local waters has been that in the restricted 25ft. class of the Yacht Racing Association of Massachusetts. The first report given out after the close of the season was to the effect that Flirt had received the largest percentage. It later developed that a protest of Chewink, which had been decided against Calypso in the open race of the Columbia Y. C. on July 3, had been appealed to the executive committee of the Association and that the fate of each boat hung upon the committee's decision. The committee refused to act upon the matter, and it was referred back to the judges of the race. Another hearing was given by them to the contesting parties, at which new evidence was introduced. This turned the tide in favor of Calypso, and the original decision was reversed, and Calypso was given first place in the race, with 100 per cent. This, however, was far from being satisfactory to Chewink, who immediately appealed from the final decision of the judges to the executive committee of the Association. Last week a hearing was given on Chewink's appeal, with the result that the appeal was not sustained by the committee, and Calypso still remains champion of the 25-foot restricted class for the season of 1901.

There will be lots doing in the 21ft. restricted class next season from the present outlook. At present there are thirteen new ones which are known to have been ordered for the class. Starling Burgess has five of these, Crowninshield four, Small Bros., two, and Fred Lawley and Hanley one each. One of Burgess's latest ones is for F. H. Adriance, of Hartford. It is likely that she will not be raced throughout the entire season in Massachusetts Bay, but will be in the waters around Bristol, R. I., part of the time. Mr. Adriance summers at Bristol, and spends much of his leisure time upon the waters of

Narraganset Bay. His 21-footer will be built by Fenton, of Manchester. Another of Burgess's 21-footers is for Reginald Boardman, of the Manchester and Corinthian Y. C.'s. It is likely that she, too, will be built by Fenton; in fact, four out of the five Burgess boats will be built at Manchester. Smith, of Quincy, has started work on the C. H. W. Foster 21-footer, designed by Crowninshield and the Crowninshield designed 21-footer for Hon. Charles Francis Adams 2d, will be laid down at Lawley's this week.

It is expected that work will be started very soon on the 21-footer designed by Fred Lawley for Vice-Com. H. H. Wiggins, of the Annisquam Y. C. The 21-footer which is to be turned out by Hanley, was not heard of until last week, but the information was received from a yachtsman who is in close touch with the Quincy builder, and there is little doubt that the news received is authentic. It is likely that one of the Crowninshield 21-footers will be built by Fenton.

There is not quite such a lively interest shown in the restricted 25ft. class. There are three new boats so far. One of these is from Crowninshield's design for F. G. Macomber, Jr., of the Burgess and Corinthian Y. C.'s. Mr. Macomber is greatly interested in the class and is doing all he can to boom it. He has been endeavoring to interest a number of Marblehead yachtsmen to such an extent that they will build new ones and it may be that more will be coming before the winter is over. Burgess has two boats for this class, but it is not known for whom they are to be built. Even with only three new ones there will be a very respectable showing in this class for next year. Besides the new ones there remain Flirt, Jingo, Chewink, Tarpon, Early Dawn, Marion, Cyrilla, Little Peter and Areyto.

Cruising boats are taking up much of the attention of the designers and builders, fully one-half of the orders received being for either straight or auxiliary cruisers. At the different offices there is much to be seen of ingenious contrivances in utilizing room in this type of boat, and in some of the designs the results gained seem wonderful. In the designs for cruisers every inch of available space is used for some practical purpose, overhangs and all. A 46ft. schooner for W. S. Eaton, Jr., of the Eastern Y. C., by Fred Lawley, is one of the neatest that has been seen.

This boat will be called Agatha, and will take the place of the 40-footer which was built at the Marblehead Yacht Yard for Mr. Eaton in 1900. The old Agatha has been sold and her name changed. The new schooner resembles John M. Richmond's 46ft. schooner Indra, except that she is a trifle easier and is expected to show a little better turn of speed. She is cut up below decks much after the style of Indra, only more available space has been utilized. She is flush decked with companionways leading to the main saloon and to the galley. There is a skylight over the main saloon, while entrance is gained to the forecabin through the fore hatch. Aft of the main companionway there is a large stateroom taking up the entire beam of the boat. This is fitted with double berths and transoms, while under the companionway stairs there is a wash bowl. On the port side of the main companionway there is an oilskin locker with chart locker above, and forward of this is a bath room and linen closet. On the starboard side of the main companionway is the owner's stateroom, fitted with berth transom, bureau and wash bowl. A door leads to the main saloon, which is fitted up with berths, transoms, bookcases, buffets and lockers, while there is plenty of space for an extension table. A door also leads from the main saloon to the galley, which is very roomy, and is fitted up with every convenience for cruising. A steel bulkhead shuts off the galley from the forecabin, but there is a slide through which food may be passed. The forecabin is quite roomy, and contains four hanging berths, while there is good room for stowing chains and other anchor gear.

This is but one of many that are being turned out by the Boston designers, of all sizes and types. The auxiliary cruiser is gaining popularity in this district as well as in other sections, and there are several new ones which will be turned out this winter. Small Bros. have rather a remarkable 25ft. cruiser, which contains a fair sized main saloon, a stateroom, and quite a roomy galley, with hanging berth forward for a deckhand and plenty of room for stowage.

The table of percentages of the 18ft. knockabout in Duxbury Bay has kindly been furnished me by Com. L. H. Goodspeed, of the Duxbury Y. C. From the records of the boats it seems that the racing in the bay has been very even throughout the entire season. Miladi, which took the championship, is one of last year's boats. Trouble is a new boat, designed by Fred Lawley and built by Shiverick of Kingston. She did not get started early in the season, and, in consequence, was not in very good tune during her first races. When she got into shape, she proved slightly better than the old boats. The Eighteen Foot Knockabout Association was started by members of the Plymouth, Kingston and Duxbury Y. C.'s, who have raced for the local championship under the auspices of the Duxbury Y. C. The following are the records of the yachts figured on the same percentage basis as that which has been used by the M. Y. R. A.:

	Starts.	Ists.	2ds.	3ds.	Fins.	Bks.	Per Cent.
Miladi, F. R. Adams.....	11	5	2	3	1	0	68 2-11
Trouble, J. H. Hunt....	9	3	1	2	3	0	53 3-9
Oom Paul, G. Cushman..	11	3	2	1	3	2	46 4-11
Kittiwake, H. M. Jones..	11	0	3	3	5	0	34 1-11
Dazzler, Goodspeed Bros.	12	0	4	1	6	1	32 1-12
Lobster II, C. C. Clapp..	11	1	0	2	8	0	26 4-11

Crowninshield is designing a 45ft. launch for W. F. Beal, which will be built by Roger Eccles. He is also at work on three 18-footers, one for W. B. Rogers, another for William Russell and a third for New York parties. It is expected that all three will be sailed on Lake Champlain. One of Crowninshield's latest orders is for a 50ft. steam launch for Rt. Rev. Robert Codman, Episcopal Bishop of Maine. Bishop Codman owns an island in Casco Bay, and will use the launch in traveling to and from it. The same designer has also been commissioned to make alteration plans on the 50ft. schooner Woodmansee, owned by B. Farquhar Curtis, of New York. Her freeboard will be increased, her stern lengthened out slightly and she will be given a yawl

rig. The work will be done by Davidson and Griffin, of Portland.

At Lawley's the Eaton 46ft. schooner is planned and her deck is being laid. An 18-footer has just been finished. Work is very quiet in the shop yet, but it is expected that within a few weeks both sheds will be filled. The auxiliary 30-footer for C. Bancroft Davis will be started this week, also two Y. R. A. 21-footers and a 103ft. waterline steam yacht.

JOHN B. KILLEEN.

The Yachtsmen's Club.

At a meeting of the Yachtsmen's Club, held in the Hotel Manhattan on Wednesday, Nov. 20, it was voted to reduce the dues to \$6 yearly, instead of \$20, as heretofore.

This decision is the result of one year's trial of the idea that a club with quarters could be maintained in New York city, and which would bring into closer relationship the members of the various yachting organizations in the vicinity. Experience has shown that the chief obstacle to the success of the undertaking was the fact that there were already too many clubs in New York city. The quarters in the Hotel Royalton, while not large, were especially well adapted for the purpose intended, expensively furnished and well provided with books and current periodicals devoted to yachting, yet except on the evenings when informal "talks" were given, it was the exception to find a member about the club's rooms.

The experimental stage of the club's existence demonstrated that the measure of success had been due to these "talks," which were well attended, because the knowledge gained was mainly of a technical character which could not easily be secured in any other way. This being the case, the necessity for maintaining expensive quarters did not exist, and it became possible to reduce the annual dues to merely a nominal amount, sufficient to cover the expense of a lecture room when required, printing, etc.

The lectures given last winter by acknowledged experts on the various subjects covered, proved a notable success, among them being:

"Sails; Their Construction, Care and Handling," Gilbert H. Wilson, Esq.

"A Talk on Navigation," Capt. Howard Patterson.

"Marine Engineering," Prof. C. C. Thomas, New York University.

"Cruising Yachts; Their Design and Construction," Clinton H. Crane, Esq.

"The Racing Yacht; Its History, Development and Design," William Gardner, Esq.

"The Measurement Rule," John Hyslop, Esq.

"Ocean Steam Vessels and Their Management," Capt. P. C. Petrie.

"High Speed in Steam Vessels," Charles D. Mosher, Esq.

"Methods of Determining Position at Sea," Commander Henry H. Barroll, U. S. N.

"The American Yacht; Its History, Development and Design," Thomas H. MacDonald, Esq.

"The Samoa Disaster," Capt. H. W. Lyon, U. S. N.

The first "talk" of this season will take place on Wednesday evening, Dec. 18, and the entire programme, which is now being arranged, will shortly be announced.

The only qualification for membership in the Yachtsmen's Club is membership in a recognized yacht club, and it is believed that the very nominal amount of the dues, coupled with the unquestionable advantages offered by the course of lectures, will result in a largely increased membership. Application blanks will be mailed on request by E. M. MacLellan, Sec'y, 90 Water street, New York city.

YACHTING NEWS NOTES.

Messrs. Huntington & Seaman have sold the following knockabouts: Star, owned by Mr. Renne Martin, to Dr. Forbes Hawkes, of New York city; Reverie, owned by Mr. Charles A. Winter, to Dr. W. H. Clayton, of New York city; Nirvana, owned by Mr. F. W. Robinson, to Mr. E. C. Griffin, of New York city.

The Earl of Rosebery has purchased the steam yacht Zaida from Mr. Alfred Shuttleworth. She was designed by Messrs. J. S. White & Co., Ltd., and built in 1900. Zaida is 136.7ft. on the waterline, 22.8ft. beam and 12.3ft. deep.

The London Field states that Mr. Whitaker Wright's racing yawl, Sybarita, which is hauled up at the yard of White Brothers, Ithen Ferry, has been purchased by Mr. M. B. Kennedy, owner of the Maid Marion, cutter. It is rumored that Sybarita will go to the Mediterranean for the Riviera regattas.

Rifle Range and Gallery.

The Savage Club was recently organized at Martins Ferry, O., of which Dr. Diven is the secretary. The Savage Arms Company presented a silver cup to the club, to be shot for by the members.

In this column last week, under the caption "One-Hundred-Shot Rifle Championship Match," by a misprint King's Semi-Smokeless powder was referred to as "Kink's Semi-Smokeless powder."

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Nov. 28.—Tunkhannock, Pa.—Thanksgiving Day shoot of the Tunkhannock Rod and Gun Club. Spencer D. Reed, Sec'y.

Nov. 28.—Bullshead, Staten Island.—Live-bird shoot of the Chelsea Heights Gun Club. J. S. Lewis, Sec'y.

Nov. 28.—Trenton, N. J.—Thanksgiving Day shoot of the Trenton Shooting Association; live birds and targets. E. S. Applegate, Sec'y.

Nov. 28.—Silver Lake, S. I.—Live-bird and target shoot of the Richmond Gun Club. A. A. Schoverling, Sec'y.

Nov. 28.—Paterson, N. J.—Thanksgiving Day shoot of the Jackson Park Gun Club; live birds and targets. Open to all. Garry Hopper, Sec'y.

Nov. 28.—Ossining, N. Y.—All-day target shoot of the Ossining Gun Club. Roast Turkey. C. G. Blandford, Capt.

Nov. 28.—Cleveland, O.—Shoot of the Cleveland Gun Club.

Nov. 28-29.—Milwaukee, Wis.—Tournament of the South Side Gun Club.

Nov. 28-29.—Topeka, Kan.—Topeka Gun Club's amateur tournament.

Dec. 3-6.—Brantford, Can.—Pastime Gun Club's tournament.

Dec. 4.—Holmesburg Junction, Philadelphia.—Competition in third target series of Keystone Shooting League.

Dec. 7.—Wellington, Mass.—All-day target tournament of the Boston Shooting Association.

Dec. 11.—Interstate Park, L. I.—Team contest, New Jersey vs. New York.

Dec. 18.—Holmesburg Junction, Philadelphia.—Competition in third target series of Keystone Shooting League.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Dec. 4.—Interstate Park, L. I.—Eastern championship, 25 live birds; \$10 sweep optional. Trophy. Entrance, price of birds.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

1902.

Jan. 14-17.—Hamilton, Ont.—Twelfth annual tournament of the Hamilton Gun Club. F. B. Vallance, Cor. Sec'y.

May 6-9.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.

May 7-10.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.

May 13-16.—Oil City, Pa.—Annual meeting of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. F. S. Bates, Cor. Sec'y.

May 30-31.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

June 3-5.—Cleveland, O.—Tournament of the Ohio Trapshooters' League, under the auspices of the Cleveland Gun Co.

June 9-13.—Rochester, N. Y.—Forty-fourth annual tournament of the New York State Association for the Protection of Fish and Game.

June 10-11.—Muncie, Ind.—Indiana Trapshooters' League's annual tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

One of the New York visitors to the Maine woods this season is P. D. Froeligh, superintendent of the Iron Steamboat Company, of this city, and also one of New York's most enthusiastic trapshooters. "Super's" duties during the summer months, when all New York and half the surrounding cities want to get down to Coney Island, keep him too busy for any sport with the shotgun or rifle. But he gets even in the winter months, and has just returned from Maine with a full bag—that is to say, with all the deer and moose the law allows. Deer were, he states, so numerous and troublesome that they had to keep a man in camp to prevent the hungry animals from eating the bedding. His moose story shows that luck figures considerably in hunting. He was camped, let us say, Trout Lake. From Trout Lake he and his guide went one day to another camp at, let us say, Mud Lake. The camp had not been used for weeks, and the country all around was quiet. Right in front of the door of the camp was a sign left there by a large bull moose. As the leaves were a foot thick everywhere, and everything dry and noisy, they returned to, let us say, Trout Lake once more—and waited for snow. The snow came in a few days, and the return trip to, well, Mud Lake was made the next day. Camp was reached in good time, and early the following day Mr. Froeligh and his guide started out to look for "the big bull." Almost immediately after leaving camp his tracks, freshly made, were struck, and, as Mr. Froeligh puts it, "within fifty-five minutes from leaving camp I had my moose!" He is enthusiastic about the head; the spread he gives as 52in., while the horns are very massive, and the palmation very broad. The trophy will be on exhibition at the Sportsmen's Show, in Madison Square Garden, next spring.

The latest illumination of the somewhat hazy line which differentiates the amateur trapshooter from the professional comes from the A. A. U., in the form of a resolution recently promulgated, as follows: "Resolved, That a trapshooter who shoots for a sweepstakes is a professional athlete." While the intention of the A. A. U. is evident, the expression of it borders on the absurd. First of all, trapshooting does not come under the head of athletic sports. Indeed, a trapshooter may be first rate in point of skill and yet not be an athlete at all. According to the resolution, the trapshooters are the most athletic body in existence, as all of them having shot for sweepstakes, all therefore are professional athletes. According to the resolution, a man may be a cripple at one moment and a professional athlete the next, by virtue of a sweepstake. It would have been more accurate if the A. A. U. had resolved that a trapshooter who shoots for a sweepstakes be subject to the rules which govern professional athletes, and it would have been much more sensible if the A. A. U. had not meddled with it at all. It is true that the colleges have trapshooting clubs, but it is equally true that they have private societies and a lot of other interests which would strain the powers of any one body which attempted jurisdiction over all. Further comments on this subject are presented on the editorial page.

On Thursday of this week at Interstate Park, Queens, there will be target and live bird shooting. There are five target events on the programme—one event at 15 targets, the Interstate Park trophy event at 25 targets, the Thanksgiving Day handicap at 50 targets, a trophy shoot at 25 targets, and the Metropolitan Individual Championship. The target programme at Interstate Park next week is as follows: Tuesday, Dec. 3.—Interstate Park trophy, 15 targets, entrance \$1.50; Long Island Handicap, 25 targets, entrance \$1.50; first shoot for December cup, 50 targets, entrance \$2; team race for teams of two, 25 targets per man, entrance \$1.50 per man. Thursday, Dec. 5.—Interstate Park Handicap, 25 targets, entrance \$1.50; Metropolitan Individual Championship, 50 targets, entrance \$2; Interclub match, open to all gun clubs, 50 targets per man, three men to constitute a team. A club can enter more than one team if it so desires. Entrance \$2 per man; Interclub Handicap, 25 targets, entrance \$1.50.

The New Utrecht Gun Club announces that, "Commencing with December, two midweek shoots will be held each month, the trophy for each day being a silver cup. Conditions will be advised later. First shoot Dec. 3. On Thanksgiving Day the usual all-day shoot will be held, the moose head now in the club rooms being the trophy for the principal event of the day. If ten entries are received for this, the club will pay for balance of the cost. Commencing with December a monthly cup will be shot for. No entrance fee will be charged, and this will constitute one event in each Saturday's programme. This cup will go to the member making the best average during the month, participation in at least three of these events being necessary for qualification." The club holds its shoots at Interstate Park.

On the grounds of the Carteret Gun Club, at Garden City, L. I., on Thursday of last week, Mr. R. A. Welch, of New York, defeated Mr. C. S. Guthrie in a match at 100 live birds, for \$250 a side. Mr. Guthrie was shot out in the 95th round, at which time Mr. Welch had scored 88. The boundary of the Carteret Gun Club's grounds is 30yds.

Mr. F. C. Riehl, from St. Louis, Mo., under date of Nov. 25, sent FOREST AND STREAM a telegram, as follows: "Mr. C. R. Stevens, of Moline, Ill., is here to-day, and authorizes the announcement that the big 100-bird sweepstake which would have been held in Chicago next month, is declared off. He could secure only forty-six entries; fifty-nine guaranteed. The contest therefore is withdrawn. All forfeits will be returned immediately." This is to be deeply regretted, as it gave promise of being a grand affair in the trapshooting world. However, forty-six entries would have made a very good shoot in itself, under the conditions, 100 birds, \$100 per man.

Mr. Fred Gilbert, of Spirit Lake, Ia., has recently added another shooter to his family list, the last one being Annie Oakley Gilbert, who weighed 10 1/2 lbs. on the second day after the arrival of the official stork. Miss Annie Oakley (Mrs. Frank E. Butler) has sent her namesake a very valuable present. Thomas Marshall Gilbert, who antedates the recent arrival by about two years, is a strong, alert boy, who is likely to follow in the footsteps of his illustrious father, Mr. Fred Gilbert, as he shows the keenest interest in firearms and their use. There is plenty of room in this broad land for more shooters.

Under date of Nov. 25 the following two telegrams were received by us from Mr. F. C. Riehl, of East Alton, Ill. The first one: "Stevens wires to-day from Moline, 'Stop report calling off shoot; have enough entries if Watson will consent; have wired him.'" The second one: "Stevens wires this evening that John Watson will not extend time, and that the big Chicago shoot is off for sure."

The Boston Shooting Association announces that it will hold an all-day tournament on its grounds, at Wellington, Mass., on Dec. 7. Targets 1 1/2 cents. There are twelve events on the programme, at 10, 15 and 20 targets, various angles; a total of 165, with a total entrance fee of \$11. Shooting commences at 10 o'clock. Lunch served on the grounds.

On Dec. 4, at Interstate Park, there will be a two-man team match between Messrs. Edward Banks and George H. Piercy on the one side, and Messrs. R. A. Welch and T. W. Morfey on the other side; 25 live birds per man. The race, so far as the date is concerned, is contingent upon the circumstances as to whether Mr. Welch can arrange to attend.

Mr. Fred Gilbert, in a warm competition, won the final contest for the Republic cup at St. Louis last week, the account of which, written by Mr. F. C. Riehl, will be found in our trap columns. Three—Messrs. Elliott, Gilbert and Burnside—tied for it on 24 out of 25. In the shoot-off Gilbert won in the 44th round.

Stormy weather was an unfavorable condition at the St. Louis tournament last week. Mr. W. R. Crosby committed a noteworthy event by missing one target on the first day, there being 150 targets on that day's programme. Mr. Herbert Taylor made a run of 100 straight.

In the contest for the championship of West Virginia, on Nov. 20, between Messrs. Ed. O. Bower and W. A. Smith, the former retained the medal emblematic of that honor by a score of 78 to 72. Neither contestant shot near up to his average form.

The gun which was won at John Wright's shoot some weeks ago, was raffled off by a gentleman who purchased it, and one ticket was purchased for Mrs. O'Grady, Mr. T. W. Morfey's fat fox-terrier, and in the draw, Mrs. O'Grady won.

On Wednesday of this week Mr. Geo. H. Piercy, the holder, and Dr. W. L. Gardiner will contest for the E. C. cup, emblematic of the championship of New Jersey, if nothing occurs to prevent.

On Wednesday of next week, at Interstate Park, L. I., the cup donated by the Interstate Association, emblematic of the Eastern Championship, will be a matter of contest, the first of a series.

The Cincinnati (O.) Gun Club was recently the recipient of a Parker gun, presented by Capt. A. W. du Bray on behalf of his firm. It will be a prize of a series of club contests.

Capt. A. W. Money, of the American E. C. & Schultze Co., left for St. Louis on Thursday of last week to take part in the tournament to be held in that city.

The Haverhill (Mass.) Gun Club announces an all-day shoot for Christmas Day. The programme will be issued at an early future date.

BERNARD WATERS.

Sistersville Gun Club.

SISTERSVILLE, W. Va., Nov. 23.—We are sorry to have to report that our fall tournament, which was held here on Nov. 20, was not a howling success. With \$5 in cash added to each of the twelve events, we feel that we should have had a better attendance. Of course, now that the shoot is over, we can see where we made a great mistake in trying to get the boys to turn out during the hunting season. In Ohio, where they only have twenty days open season, they naturally want to be in the field as much as possible, and we certainly cannot blame them. We have learned that several of our West Virginia fellows were kept away because of sickness, so we must love them still. Mr. F. E. Mallory, one of our old reliables, had the misfortune to get his face badly poisoned and was compelled to go to the hospital. From a letter just received we learn that another one of the regulars was detained on account of the serious illness of his wife. He, however, promises to come to our next shoot, even though he has to walk. While we had expected at least twenty guns, we had but seven. We must confess that we are feeling just a shade blue to-day, but we are not going to give up. We will get up another programme and try to get the boys together during the holidays. If they don't come then, we will think they don't like us.

Mr. Howard Sergen, of the Lafin & Rand Powder Company, was the only trade representative present. Howard, after plastering Lafin & Rand stickers all over our club house and on all the nearby fences, acted as referee and general manager. He was also appointed special policeman and legal adviser, and the Sistersville Gun Club feels under many obligations for his valuable services. He was also elected to honorary membership in our club, and will be known hereafter as Judge.

Mr. L. B. Fleming, of Pittsburg, with Winchester gun and Lafin & Rand infallible combination, carried off the honors by breaking better than 90 per cent. Lou did very well, considering that he wore his hat during the entire shoot and had on a new pair of shoes. He tried to tell us that he wore the new "kicks" to make sure of getting back home in the event that he had to walk; but he didn't find a ready sale for his stock in this kind of talk. We have never been out with him yet that he didn't go home in the parlor car.

Messrs. S. T. and John F. Mallory were close on to Mr. Fleming, winning second and third places. Sid was always lucky to fall into a hole all by his lonesome, and to-day he is giving us the laugh because he carried off some of our good money. He had better make good use of it until the holidays, for it will all come back then.

The race between Dade and Mr. W. A. Smith for the championship of the State, was very much of a disappointment, both contestants shooting away below their usual average. Dade retained the medal by breaking 78, while Mr. Smith scored but 72.

Other scores follow: Events: 1 2 3 4 5 6 7 8 9 10 11 12 Targets: 15 15 15 20 15 15 20 15 15 15 20 Broke: L. B. Fleming, 11 14 13 18 12 14 14 18 14 15 15 19 177 S. T. Mallory, 12 14 14 17 12 13 15 13 15 14 12 18 174 J. F. Mallory, 15 13 15 15 12 14 13 16 14 10 14 16 167 Dade, 13 14 13 20 14 14 14 13 13 12 11 15 166 J. Y. McNaught, 15 11 13 18 12 11 13 14 8 13 11 17 156

Table with 2 columns: Name and Score. J. W. Stewart, 12 11 15 19 11 14 8 17 9 9 8 16 149; W. A. Smith, 13 12 10 13 13 11 11 18 9 9 11 12 142.

Mr. Smith, while shooting in exceptionally bad form all day, rejoices in the fact that by capturing low average he wins the only prize we had to offer, a fine silk umbrella, worth \$6. It usually rains whenever we undertake to give a shoot here, so it possibly occurred to him that he might be able to use this prize to pretty good advantage before he got out of town. ED. O. BOWER.

WESTERN TRAPS.

Intercity Shooting Park.

Chicago, Ill., Nov. 22.—At the Intercity Shooting Park, midway between Minneapolis and St. Paul, on Nov. 17, there was held the second shoot for the St. Paul Review trophy. The birds were a good lot, and the scores are therefore creditable. Hirschy again took the cup to Minneapolis.

The shooting grounds are open for matches at any time, as well as for private practice. The St. Paul Review trophy is shot every Sunday at 10 A. M., at 25 live birds, \$5 entrance, birds extra, Riley handicap system, 26 to 32 yds. Mr. R. McNeill is manager of the park.

The practice sweeps at this park during the past week were of a good order. The following are the scores of the events mentioned:

Table with 2 columns: Name and Score. St. Paul Review trophy: Morrison, 29, 12212212222220*20122110-21; Hirschy, 29, 2222112221*21 22*2221222-23; Bull, 29, 212122221212102202021121*-21; Dr. Bill, 27, 111000122011010w; Mulligan, 28, 222112222102201221*1112-22; French, 28, 0 20221*2222222122220202-20.

Table with 2 columns: Name and Score. Preliminary sweep, high gun: Morrison, 30, 222221222-10; Bull, 30, 2201122111-9; Hirschy, 30, 222222222-10; Brown, 27, 2211210011-8.

Table with 2 columns: Name and Score. Nov. 13.—Ten-bird sweeps: Adams, 30, 2220212221-9; Moore, 28, 1222*02202-7; Hirschy, 30, 222222102-9; Monk, 27, *221011210-7; Bull, 30, 122202211-9; Parker, 28, *2*1201212-8.

Table with 2 columns: Name and Score. Nov. 16.—Twenty-five birds: Monk, 27, 11121111121101012111212-23; Hamilton, 27, 221101110*1221110222012-20; Bill, 27, 0002*1101201000001011011-12.

Garfield Thanksgiving Shoot.

Dr. J. W. Meck, the present secretary of the Garfield Gun Club, of Chicago, paid the FOREST AND STREAM office a pleasant call. He wore an expansive smile and attributed his good feeling to the fact that he had just been using some of the new E. C. powder, the most recent output of the E. C. & Schultze Powder Company. He said he thought he liked it better than anything he had seen for quite a while. Incidentally, he said that everybody ought to go out to Garfield grounds on Thanksgiving Day. There is to be a big turkey shoot for the members of the club, and open sweepstakes for the public. There will be an old-fashioned Garfield time, and that is full enough description. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Trap at Watson's Park.

Burnside Crossing, Ill., Nov. 23.—To-day, in a four-cornered match, 25 birds, \$10 entrance, birds extra, high gun to take the purse, Elbert killed 25 straight and won. The scores:

Table with 2 columns: Name and Score. McGinty, 20, 220221222222222201011102-20; J. H. Amberg, 24, 22212212222122221022212-24; J. B. Barto, 22, 020212111121222112120222-22; Elbert, 25, 2222122221212211111212222-25.

Same day, practice: W. B. Lefingwell, 19, 0211112211212121212-19.

Table with 2 columns: Name and Score. Nov. 19.—Day clear; light, outgoing wind; birds good: J. M. Sellers, 24, 1212121222121*121111112-24; 211212212121212222121-25; *1212121212211211211-24; 1212121212121221110222-24-97.

Table with 2 columns: Name and Score. Nov. 20.—Practice: A. E. Rupel, 13, 22*21221201122-13; Chas. Grass, 11, 12020*1000*020122020*0220-11; Chas. Grass, 9, 220002212100110-9.

Table with 2 columns: Name and Score. Nov. 22.—Practice: A. E. Rupel, 13, 2022112122221*-13.

Table with 3 columns: Name, No. 1, No. 2, No. 3. Sweepstakes: Hoyt, 8, 1120112120-8; Sellers, 10, 1121212211-10; Drake, 8, 1111*1101-8; Thorn, 6, 1010022110-6; Thompson, 8, 212222020-8. Birds: Hoyt, 15 10 10 5; Sellers, 13 8 9 4; Drake, 11 6 6.

RAVELRIGG.

Keystone Shooting League.

HOLMESBURG JUNCTION, Philadelphia.—At the shoot of the Keystone Shooting League on Saturday of last week Mr. F. W. Van Loon won the challenge championship live-bird trophy in a closely contested race. The scores:

Table with 2 columns: Name and Score. Challenge cup match: Henry, 9, 222222222-10; McCoy, 9, 220220w; Van Loon, 8, 220222221-10; Anderson, 9, 222222222-10; Bowers, 8, 2122220*2-8; Sanford, 6, 222222222-10. Shoot-off: Henry, 9, 221 221 222 222 222 122 212 202 022; Van Loon, 8, 221 222 222 221 221 211 222 *12 222.

There were twelve entries in the club handicap, each shooting at 10 birds, handicap rise. Geikler and Leck killed out straight, and Jones, Russell, Bower, Anderson and McCoy scored 9. The scores follow:

Table with 2 columns: Name and Score. Geikler, 9, 222222222-10; Brewer, 9, 220222020-7; Jones, 9, 2122011122-9; Darby, 9, 2122022022-8; Leek, 9, 2221212222-10; Busby, 6, 120*222102-7; Russell, 28, *212222212-9; Bower, 26, 222222201-9; Van Loon, 28, 021122210-9; Anderson, 28, 2222220222-9; McCoy, 30, *2*202221*-8; McGrath, 29, 200200020-8.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Nov. 25.—Herewith are the scores of the last shoot of the Rochester Rod and Gun Club. There seems to be a good deal of interest shown at these shoots for medals. It is bringing out a good many of the poorer shots. These medals are to be shot for each week, and the one winning the most times during the year has the medal to hold for good. The club is making an effort to have a good State shoot next June.

Table with 2 columns: Name and Score. Following are the scores made for the handicap medal: Shot at. Broke. Moshier, 29, 17; Weller, 26, 24; Borst, 28, 23; Wray, 32, 24; Kershner, 36, 22. Shot at. Broke. Meyers, 25, 22; Broeker, 30, 16; Bonbright, 27, 25; Karle, 35, 21.

Bonbright, of Colorado Springs, won the medal with the score of 25 out of 27—excellent, considering conditions. Wray and Weller were next. Weller has done some very good shooting of late, with a new gun which he recently purchased, and the boys have to do their best to keep up with his pace.

For the championship medal there were eight entries. Bonbright put up a score of 24 out of 25, but as he is not a resident of Monroe county, was not entitled to the badge, Kershner winning it with a score of 23 out of 25. Following are the scores, each man shooting at 25 targets: Moshier 20, Karle 18, Kershner 23, Weller 20, Broeker 19, Borst 22, Meyers 22, Bonbright 24.

The next contest for the medals will take place next Wednesday afternoon. Every shooter is invited to compete.

OOM PAUL.

The Hamilton Gun Club.

HAMILTON, Canada, Nov. 26.—There has been no shooting over the traps of the Hamilton Gun Club since the opening of the game season, but our members are now home from the field, and preparations for our twelfth annual tournament are moving steadily ahead.

The plans for our new club house have been accepted, and the building will be erected on the grounds occupied by the club for the last two years. The scores will be moved to higher ground. We wish to place our traps in their permanent positions before the frost sets in, and would like to have a house warming about Christmas or New Year's Day.

The programmes are nearly ready, and shooters desiring a copy of them will kindly drop a card to our secretary, Mr. Geo. Crawford, Hamilton, Ont., he will be pleased to forward it, along with any information desired.

American shooters wishing to have ammunition forwarded from warehouse or factory should have shipments made not later than the first week in January, and if our secretary is promptly advised, we will be able to handle the goods satisfactorily to parties concerned.

Ducks have been more plentiful in Hamilton Bay this season than for some years past. Many excellent bags have been reported, but Harry Dynes has proven the most successful over the decoys.

Our president, Tom Upton, Charlie Brigger and John Hunter went to Quebec with Jeb Ketchum, of Ottawa, for deer, and returned after a pleasant trip to complete arrangements for a little pigeon match between Charlie Brigger and Tom Upton, as they did not care to quit on drawn honors. Dr. Overholt was chosen as referee, but fearing that John Hunter might be lonely and the Doctor might get tired watching them, their two names were dropped into the hat, and the boys drew for partners and arranged to shoot off the match on an early date.—Overholt and Upton vs. Brigger and Hunter. The match to be shot at 25 birds each, for the suppers and incidentally one plunk per.

I am dead out, and must quit. BEN IT.

Woodlake Gun Club.

WOODLAKE, Neb., Nov. 20.—The initial shoot of the Woodlake Gun Club was given to-day at the club grounds, just east of the stockyards.

There was a goodly attendance, and much enthusiasm was manifested, which promises well for the future of the new club.

Considering that only two of the eleven entries had ever shot over the traps before, the shooting was high-class, and demonstrates the fact that good shots at game will always make creditable scores at the elusive saucers.

The writer, in all his experience as a gun club organizer, has never found a crowd of novices who took so readily to the game.

Two hundred and seventy-five targets were thrown, and of these, 143 were broken, or 52 per cent., which is quite marvelous when it is remembered that new expert traps were used and the birds were thrown hard and at extreme angles.

There will be a practice shoot on Nov. 28, Thanksgiving Day, to which all who care to take part are cordially invited. Targets will be thrown at 1 cent each, as also at future shoots, which will be run off each Wednesday.

Mrs. and Miss Dennis and Mrs. W. A. Leach were interested spectators, the latter lady doing acceptable service as score keeper.

At the next shoot, and at each following shoot, a medal, representing the club championship, will be contested for, the man winning same to hold it as long as undefeated. The medal belongs to the club, and must be returned to the club at the end of the shooting season.

Following are the scores, each man shooting at 25 targets:

Table with 2 columns: Name and Score. W. A. Leach, 21, 011010011111111111111111-21; Le Roy Leach, 18, 101010111111111110010110-18; J. Day, 15, 0101111010111000001110-15; W. Dennis, 13, 1100101010001101001011-13; W. L. Chrysler, 13, 10011000010010101011011-13; J. Dennis, 12, 11100010010000100100101-12; C. Hagen, 12, 10110100101010001000-12; D. Dennis, 11, 0001100100110000001111-11; F. Day, 10, 0010010110000101001000-10; C. Kinkead, 9, 101100000001100001011000-9; C. Day, 9, 010101000001000101001100-9.

W. A. LEACH.

Rahway Gun Club.

Rahway, N. J., Nov. 23.—The main event was a merchandise prize shoot at 25 targets, 50 cents entrance, handicap, the scores of which follow:

Table with 3 columns: Name, Hdcp. Broke, Total. Capt. Bunk, 24, 1101111111111111111111-24; Gaskill, 17, 1100100011110110101011-17; Browne, 21, 1110010111011111110101-19; Housman, 23, 0010000000000000000000-23; Dunn, 8, 000011001-011101010101-8; Oliver, 23, 110110010001011101111-17; Acken, 21, 110010101111100011100001-14; Way, 19, 100110100100001000100010-10; Gibson, 15, 0010000001100100110111-11; Crowell, 12, 0000001000001000000000-2.

Shoot-off for second prize: Browne, 8, 0101010101-6; Oliver, 9, 0110111001-6.

First prize, Powers' cleaning rod, Capt. Bunk; second prize, Tomlinson cleaner, Oliver. Merchandise shoot, 15 targets, handicap:

Table with 3 columns: Name, Hdcp. Broke, Total. Capt. Bunk, 13, 11111111100111-13; Gaskill, 15, 11010101011111-12; Browne, 13, 01010101011111-11; Housman, 7, 00000000000000000000-7; Dunn, 15, 11101001011111-11; Oliver, 11, 0101100100101-8; Acken, 12, 10010001110101-7; Way, 7, 0000000000000000-7; Gibson, 13, 10001101001011-8.

Shoot-off: Gaskill, 10, 011010011-8; Dunn, 7, 11010000-4.

First prize, canvas sunning coat, Gaskill; second prize, leggins, Dunn. Geo. B. GASKILL, Sec'y.

Ossining Gun Club.

OSSINING, N. Y.—A strong, gusty wind, blowing across the grounds, was responsible for a lot of goose eggs at the regular Saturday afternoon shoot of the Ossining Gun Club. The scores were as follows:

Table with 2 columns: Name and Score. Events: Targets: 10 10 10 15 15 15 10 5p. G. Edgers, 5, 3 5; H. W. Bissing, 4, 5 5; E. D. Garnsey, 10, 9 11; C. G. Blandford, 8, 7 8 12; Wm. Clark, 5, 4; A. Bedell, 6; J. Willi, 4; I. Washburn, 7 13 12 14.

Prize events, 15 targets, scratch allowance, handicap: C. G. Blandford, 13; Ed. Garnsey, 13; I. T. Washburn, 14 12 11.

C. G. B.

Take inventory of the good things in this issue of FOREST AND STREAM. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

The St. Louis Tournament.

ST. LOUIS, Mo., Nov. 24.—The tournament incidental to the final shoot-off for the Republic cup, pulled off here this week, proved a pleasant affair, but the dates were unfortunately chosen, as the long season of beautiful Indian summer weather which had prevailed here through the fall came to an end Thursday, and was succeeded by a cold, raw northwest, which made shooting anything but a comfort, and greatly cut down the attendance.

A good programme at targets and live birds was arranged for Friday, the opening day, and was faithfully followed. While the conditions were not favorable to good scores, some splendid work was done in the target events. Will Crosby lost but one in the ten 15-bird sweeps, with a run of 96 straight; Herbert Taylor made a run of 100 straight. Frank Rogers lost 3 and Fred Gilbert 4 all day. Moneys were divided in this event on the Rose system, so that with the small entry and high average scores the winnings of the topnotchers were inconsiderable, but losses, on the other hand, were correspondingly light, so that, on the whole, the result was probably quite satisfactory. The scores are appended:

Table with columns for Events (Gilbert, Burnside, Rogers, Fanning, Crosby, Mermod, Marshall, Spencer, Taylor, Orvis, Dr Sims, Parmelee) and scores for 1-10 birds.

The first live-bird event was a miss-and-out, with four entries. All killed 5 and divided. Second event, at 10 birds, high guns, had ten entries, and seven straight.

In the third event Gilbert, Crosby, Sims and Burnside divided. The scores: First event, miss-and-out: Gilbert 22121-5, Burnside 22122-5, Marshall 22222-5, Crosby 22221-5.

Second event, 10 birds: Marshall 122221222-10, Parmelee 121222221-10, Taylor 12120w, Money 222222222-10, Gilbert 111110w.

Third event, 5 birds: Gilbert 22111-5, Crosby 11112-5, Sims 12212-5, Money 02222-4, Burnside 12211-5, Orvis 22010-3.

During the day a meeting of the four men interested in the Republic cup—Parmelee, Elliott, Gilbert and Burnside—was held, and the boys decided to open the trophy to one more general contest, to be shot Saturday, under the original rules, except that 25 per cent. of the net purse should go to the present winners of the cup.

Saturday, Nov. 23.—Weather continued raw and cold, with clouded sky and northwest wind sweeping over the range in the faces of the shooters. On account of the open contest for the Republic cup, the target programme was made a secondary matter, and attention for the day centered in the live-bird circle. As an opening warmer a \$2 miss-and-out was shot, with eleven entries. The birds were fast, and it took just 20 minutes to decide the contest, Gilbert, Crosby and Stevens dividing on the eighth round.

In the second event, 10 birds, three moneys, Parmelee, Gilbert, Burnside, Stevens, Capt. Money, Harold Money, Dr. Sims and Spencer killed straight; Orvis, Crosby, Mermod and Riehl scored 9, and Fanning was alone with 8. The straight men decided upon a shoot-off. As only one man lost out, and finally on account of time, seven divided \$23.

Owing to illness of Mr. Elliott, as he did not feel that he could stand the strain of two long races in one afternoon, it was decided to call off the open race for the Republic cup, and the tie match between the four men interested and present was shot, beginning at 2 P. M. Charlie Young, the first winner of the cup, was unable to attend the tournament, and therefore forfeited his rights in the match.

All contestants stood at 30yds. The birds were a very good lot, with only two sitters during the match.

Parmelee was the first to lose on a low driver, which was hard hit with the second and died outside. In the next round Gilbert lost a swift incomer, also dead out. Elliott then lost a hard right-quartering driver from trap 3. The match then went merrily on without a mishap until Burnside drew a corking incoming curver on the 21st round, and lost it hard hit. Elliott dropped his second bird on the 22d round, and finished with 23. The other three contestants finished on a tie with 24.

The three remaining contestants agreed to decide the tie in a series of shooting in blocks of 5. Parmelee was the first to lose a corkscrew of an outgoer from the center trap. Gilbert and Burnside continued to the 44th round in the shoot-off, when the latter lost a hard right-quartering towerer, and Gilbert, killing his next bird, won the match and trophy. It was a hard-fought battle throughout, and characterized by some splendid work by all parties in the match.

The remainder of the day was devoted to live-bird miss-and-outs and several informal target sweeps. The scores:

Table showing trap score type—Copyright, 1901, by Forest and Stream Pub. Co. with scores for Elliott, Gilbert, Parmelee, Burnside.

Table showing Shoot-off on ties of 24, same conditions, 5 birds, in frames of 5. Scores for Gilbert, Burnside.

Table showing Ten birds, three moneys: Scores for Parmelee, Orvis, Gilbert, Burnside, Crosby, Fanning, Stevens.

Table showing Shoot-off ties on 10: Scores for Parmelee, Gilbert, Burnside, Stevens.

Table showing Miss-and-out, \$2 entrance: Scores for Parmelee, Burnside, Stevens, Crosby, Gilbert, Fanning, Capt Money, Rogers, Mermod, Orvis, Fanning.

Old Shots. The shoot was in charge of Alec Mermod and Billy Mason, managers of Dupont Park, and the boys earned the commendation of the crowd by the courtesy, promptitude and careful attention that characterized the service.

Dinner was served in the club house, and was one of the very successful features of the meet. J. A. R. Elliott was not at all well Friday and Saturday, but shot splendidly under this physical handicap.

The birds were throughout better than the average, and the Fulford underground traps worked to perfection.

KILLMORE.

ON LONG ISLAND.

Van Allen's Shoot.

Interstate Park, L. I., Nov. 20.—The Daly gun and the prospect of good competition brought out an extraordinary attendance at Mr. S. M. Van Allen's shoot-to-day. In the main event, there were forty entries, many of them famous as skillful trapshooters. The gun event was at 20 birds, \$10 entrance, handicap, high guns. The gun went to first high gun, and the moneys were divided among eighteen high guns.

Table showing No. 1, miss-and-out, 28yds., \$2 entrance; all at 28yds.: Scores for B W Le Roy, T W Morfev, S M Van Allen, J R Hull, Capt Jack, Apple Jack, C G Blandford, G H Piercy.

Table showing No. 2, miss-and-out: Scores for J J Hallowell, W Hopkins, J R Hull, C Steffens, J P McKay, Apple Jack, Hood Waters, L H Schorty, J C McCoy, G H Piercy, Morris, E Banks, J C Kroeger.

Table showing No. 3, 7 birds, handicap: Scores for S M Van Allen, G H Piercy, C G Blandford, J R Hull, Apple Jack, J Martin, T W Morfev, Capt Jack, B W Le Roy, W Hopkins, D S D, F W Creamer, J C Kroeger, G H Piercy, I McKane, V McCoy, C Steffens, E Banks, C F Ramapo, J Fischer, C F Lenone, D Mohrmann, J P Swecney, J R Hull, Capt Jack, D S D, L H Schorty, W H Sanders, E Steffens, W A Sands, J Martin, Hood Waters, J H Hoff, C E Langdon, J H Lowell, T W Morfev, C Von Lengerke, J E Applegate.

Table showing No. 4, gun event, 20 birds, handicap: Scores for S Glover, Dr J D Carman, H Morris, Capt Bunk, Dr G V Hudson, J P McKay, S M Van Allen, C G Blandford, B W Le Roy, W Hopkins, W P Supcr, F W Creamer, J C Kroeger, G H Piercy, I McKane, V McCoy, C Steffens, E Banks, C F Ramapo, J Fischer, C F Lenone, D Mohrmann, J P Swecney, J R Hull, Capt Jack, D S D, L H Schorty, W H Sanders, E Steffens, W A Sands, J Martin, Hood Waters, J H Hoff, C E Langdon, J H Lowell, T W Morfev, C Von Lengerke, J E Applegate.

Table showing No. 5, 10 birds, handicap: Scores for H Kryn, W J McConville, F D Creamer, R W Haff, T H Keller, G W Hagedon, W Edey, C A Ramapo, J P Kay, C Cattus.

There were four ties, which were shot off miss-and-out, as follows: Creamer 22222122-9, Ramapo 1121221100-8, Schneider 222222*2-8, J P Kay 00000000-0.

Westmount Gun Club.

MONTREAL, Que., Nov. 18.—During the winter months several feet of snow, a dickness of a blow, with mercury near zero, is proverbial Westmount Gun Club weather for their practice shoots. Saturday afternoon, the 16th, was, however, an exception to the general rule, as there was only about 1/2 ft. of snow, with a mild, calm atmosphere, though cloudy and dark.

There was a slim attendance, as many of the boys are still out after game, feathered or four-footed. Another couple of weeks will bring them in; then we can look for a house full every Saturday afternoon.

The fourth event was a contest for the individual trophy between R. B. Hutcheson, Esq., and C. J. Cleghorn. Mr. Hutcheson had a handicap of one bird, and as he broke 19 straight, after missing his first, he landed a winner with a full score. Mr. Cleghorn, who is the secretary of the Province of Quebec Fish and Game Society, shot in fine form, centering his birds well, excepting the one that he dropped.

These grounds are very hard and deceptive for strangers to shoot over, as there is a sharp drop away in front, as well as from the left to the right. This makes the right-quartering birds look as though they were towering high in the air, and the left-quartering birds as though they were plunging into the ground, or at least very near it. This causes many to under shoot the left-hand targets, and over shoot the right-hand ones.

The boy who ran the trap was a scorcher, judging by the way the targets flashed out into the space—regular hummers. Below are the scores. Next Saturday Mr. Lyne, the Toronto crack, will have a try for the trophy:

Table showing Events and Targets for Westmount Gun Club.

Sheepshead Bay Rod and Gun Club.

Sheepshead Bay, L. I., Nov. 21.—The club event, a handicap at 7 birds, was won by Mr. Wm. Van Pelt, who tied with Mr. D. J. Heffner with a straight score. In the shoot-off, miss-and-out, Van Pelt won. The scores:

Table showing Scores for Van Pelt, R Smith, I McKane, E Garrison, G Morris, E Voorhies, M Rauscher, G Greiff, H Montanus, D Heffner, Ira McKane.

Jeannette Gun Club.

Interstate Park, L. I.—Job Lott won the Class A trophy at the shoot of the Jeannette Gun Club, held at Interstate Park recently. Class B was won by Mr. Rohlf's. The scores:

Table showing Scores for F H Ehlen, Job Lott, M Rust, W Sanders, G Greiff, Meyerdiereks, J H Kroeger, C Peters, Challenge medal, 15 birds: Meyerdiereks, Schumacher, Team race: Ehlen, Greiff, Kroeger, Karstens, Schmidt, Rust, A Schumacher, F Karstens, F Gerdes, H Koch, W J Seaton, Dr Hill, D J Heffner, Dr Wood.

Crescent Athletic Club.

Bay Ridge, L. I., Nov. 23.—Mr. L. I. Palmer was the successful contestant for the November cup at the shoot of the Crescent Athletic Club to-day. He now is in the lead. The final contest for this cup will take place on Saturday of this week. The conditions were 25 targets, expert trap; 25 targets, magautrap; handicap allowances added:

Table showing Scores for L M Palmer, Jr., Dr J J Keyes, L C Hopkins, H B Vanderveer, L C Hopkins, C G Rasmus.

Shoot for trophy, 15 targets, expert traps: Scores for L M Palmer, Jr., Dr J J Keyes, L C Hopkins, A M Boucher, H B Vanderveer.

Shoot-off, same conditions: Scores for L M Palmer, Jr., Dr J J Keyes, L C Hopkins, F E Miendies.

Sweepstake, 15 targets, magautrap: Scores for Rasmus 11, Palmer 9, Hopkins 8, Vanderveer 5.

Sweepstake, 10 targets, expert traps: Scores for Keyes 9, Vanderveer 8, Rasmus 5, Boucher 5.

New Utrecht Gun Club.

Interstate Park, L. I., Nov. 23.—There was a good attendance at the New Utrecht Gun Club's shoot-to-day. In the club events ex-Sheriff Frank D. Creamer shot in remarkable form, scoring all his birds save one in the club events and ties, 41 in all. Mr. G. R. Schneider also was in good form, killing straight in the 10-bird event and 9 more in the shoot-off. The average of the club members on live birds is quite good. The scores follow:

Table showing Events Nos. 1, 2 and 3 were at 7 birds each, for club prize: Scores for H Kryn, W J McConville, F D Creamer, R W Haff, T H Keller.

In event No. 1, Mr. F. D. Creamer won. In event No. 2, shoot-off, miss-and-out, Mr. Haff won in the third round. In event No. 3, Mr. F. D. Creamer won the shoot-off, miss-and-out, in the eighth round.

Event No. 4, 10 birds, for club prizes: Scores for H Kryn, W J McConville, F D Creamer, R W Haff, G R Schneider.

There were four ties, which were shot off miss-and-out, as follows: Creamer 22222122-9, Ramapo 1121221100-8, Schneider 222222*2-8, J P Kay 00000000-0.

Winter Tourist Rates, Season 1901-1902.

THE Southern Railway, the direct route to the winter resorts of Florida, Georgia, the Carolinas and the South and Southwest, announces excursion tickets will be placed on sale Oct. 15 to April 30, with final limit May 31, 1902. Perfect Dining and Pullman Service on all through trains. For full particulars regarding rate, descriptive matter, call on or address New York Office: 271 and 1185 Broadway.—Adv.

Mexico and California.

PERSONALLY-CONDUCTED TOURS VIA PENNSYLVANIA RAILROAD. The Pennsylvania Railroad Company's Personally Conducted Tour to Mexico and California will leave New York on Feb. 11, visiting St. Louis, San Antonio, Monterey, Tampico, San Luis Potosi, Guanajuato, Irapuato, Guadalajara, Queretaro, City of Mexico, Aguas Calientes, and El Paso.

At El Paso tourists for California only, who will leave New York Feb. 25, will join the party, and the Mexican tourists who do not care to go to the Pacific Coast will return to New York. The California party will visit Los Angeles and the Southern California coast resorts, San Francisco, and on the return trip, the Grand Cañon of the Colorado in Arizona. Tourists will have thirteen days in Mexico and nineteen days on the Pacific Coast, the California tour returning to New York on March 27, the whole tour covering forty-five days. The rate, covering all necessary expenses during the entire trip, will be \$375 from points on the Pennsylvania Railroad east of Pittsburgh. For Mexico only the rate will be \$350, and for California only \$375. The party will travel over the entire route in a special train of Pullman drawing-room sleeping cars, compartment, dining, smoking, and observation cars. California-only tourists will use special care to El Paso, and Mexico-only passengers will use special cars returning from El Paso. For detailed itineraries and full information, address Geo. W. Boyd, Assistant General Passenger Agent, Philadelphia, Pa.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

NEW YORK, SATURDAY, DECEMBER 7, 1901.

VOL. LVII.—No. 28.
No. 846 BROADWAY, NEW YORK

A little feather droops downward to the ground—a swallow's feather fuller of miracle than the Pentateuch—how shall that feather be placed again in the breast where it grew? Nothing twice. Time changes the places that knew us, and if we go back in after years, still even then it is not the old spot; the gate swings differently, new thatch has been put on the old gables, the road has been widened, and the sward the driven sheep lingered on is gone. Who dares to think then? For faces fade as flowers, and there is no consolation.
Richard Jefferies.

THE FOREST RESERVES AS GAME PRESERVES.

Two subjects of great interest to the western country, and to sportsmen and naturalists at large, ought to receive attention at the session of Congress which has just opened. These are the enlargement of the Yellowstone National Park and the care and government of the Forest Reserves. While long steps toward the preservation of our game, our forests, and our water supply have been taken within the last few years, a vast deal remains to be done, and the need of action becomes constantly more pressing.

Few people recognize the completeness of the extermination of wild game in the West, in all settled countries, or how rapidly that extermination is continuing in regions where there are as yet but few inhabitants. It is obvious that when a region once wild is cut up into farms, with inhabitants, domestic animals, fences, and all that, there is no longer any place for large game. A region which is full of people cannot contain wild animals. In States where of old great game was most abundant, it is now all gone. Many people fondly imagine that game is still found in abundance on Indian reservations, and that the Indians still subsist by hunting. This is not true. For the most part, these reservations have been swept bare of wild animals, and not only are the Indians unable longer to kill game for food, but even the buckskin desired for moccasins or clothing is imported from the East, and the Indians have reached a point where they dress beef hides, horse hides and hog hides for moccasins, and also use canvas patched with fragments of old boots and shoes, if they can obtain either, for this purpose.

Practically the wild game is gone from all regions, except the high mountain or the absolute desert. The only situations in which it is still found are those protected either by their inaccessibility or by the stern hand of the Government. Thanks to the Hon. John F. Lacey, of Iowa, an effective law was passed some years ago for the Yellowstone Park, but not, unhappily, until after the practical extermination of the buffalo there. The country south of the Yellowstone Park was formerly a great winter range for the herds of elk which summer within the Park, but it is now being fenced in all directions, so that the trails by which they have descended to their winter range from the higher mountains can no longer be passed over, and it is also being turned into a dry and dusty desert by vast hordes of domestic sheep driven into it by persons from the south, many of whom are wholly irresponsible, and do not own a foot of land, but who drive their herds over the Government domain, sweeping it bare of vegetation, making it unfit for game to pasture on, expelling the cattle and ruining the small ranchers who are striving to make for themselves and their families a subsistence and a home. The Yellowstone Park should be enlarged, and should be extended south, at least as far as Big Piney, and it is to be hoped that persons interested in this subject—and they are many—will get together during this session of Congress and will agree as to the detail of how this should best be done. The claims of settlers within the region should be purchased by the Government and thus the pleasure ground for the whole people should be enlarged and protected from the aggressions which now threaten it on the south.

In the western country there are something like 47,000,000 of acres of forest reservation, for the most part valueless for purposes of settlement. On the preservation of the forests which clothe the greater portion of this vast area depends the water supply of a great population. To-day we hear constantly of some of the greatest rivers of the West going dry, because their flow is taken out near their heads to supply the farmers there, with the re-

sult that the people who live lower down on their banks are without water for irrigation, and are likely to lose their crops and to suffer. If it was worth while to establish these forest reservations—and about that there exists to-day only one opinion—it is worth while also to manage them to the best advantage and not to neglect them until the carelessness or greed of irresponsible persons shall have so injured them that hereafter many years of care must be expended to repair the damage done now. The present Congress should enact a general law providing for the government of these reservations, forbidding the cutting of timber, except by proper authority, absolutely forbidding hunting on such reservations, and in general providing for all contingencies likely to arise in connection with these reservoirs of nature. The present slipshod method of throwing the responsibility of caring for these reservations on the Secretary of the Interior, who lacks sufficient authority to enforce his regulations by punishing those who infringe them, should not be continued.

It is not to be doubted that if Congress will act in this matter and pass a reasonable bill covering the subject, the various States in which the reservations lie will do their part, and will work together with the general Government to make the most of these reservations, which for every dweller in their neighborhood, and more remotely to every inhabitant of the whole country, have such an enormous economic value.

These two subjects may be commended to the thoughtful attention of sportsmen and sportsmen's associations all over the country, and every confidence may be felt that if such an association as the Boone and Crockett Club shall take hold of this matter it will find persons eager to work with them throughout the length and breadth of the land.

BOB WHITE.

IN our supplement this week is portrayed one of America's chief game birds, *Ortyx virginianus*, provincially known as quail in the North, partridge in the South.

Quite the equal of any of its congeners in physical symmetry and perfection, alertness, power of wing and beautiful coloration, it possesses other qualities peculiarly its own, which enhance its value to sportsmen, and which endear it to them and all others. For of all the game birds, it is the only one which deigns to make its habitat near the domicile of man. From early spring till fall it is a part of the active life of the cultivated areas. It makes its nest with little pretense of concealment; and the farmers' crops afford a good part of its food supply. Then, any kind of cover of reasonable area is approved by it for shelter and protection.

In the breeding season, its ventriloquistic whistle of "Bob White," uttered mostly in the morning and evening hours, is musical to the ear, and suggestive of sport with dog and gun afield at a later time when autumn is yielding place to winter.

From the sportsman's viewpoint, if we consider the abundance, variety and high character of the sport which the quail affords, it should be esteemed as the best of game birds.

While the ruffed grouse, feathered wizard of the dense woods, affords a high grade of sport, its habitat is limited to a relatively small area in comparison with that of the quail, whose range is from the ocean on the East to the far West, and from the far North to the far South.

The prairie chicken is strictly a child of the open. There are no trees, no dense covers, ledges, old walls and fences wherewith to complicate the game of hide and seek. As a matter of sport, there is much of a constant sameness to it which makes it monotonous and tame. Under the same conditions, the ruffed grouse would find itself equally helpless, and afford sport equally commonplace. The quail, however, affords sport which is a compromise of both. In its pursuit betimes one encounters all the difficulties of ruffed grouse shooting, and all the ease of prairie chicken shooting, as the pursuit varies from cover to open, and vice versa. If one chooses to hunt with the greatest comfort, the saddle horse and broad plantations of the South afford the maximum of sport with a minimum of effort. On the other hand, the rugged fields and tangled swamps of New England offer fatigues and difficulties enough to win the esteem of the finest athlete.

A bird of the cover and open, swift of wing and cunning of device, beautiful in form and color, and toothsome withal, the quail is worthy of the sportsman, the artist, the epicure.

NEW JERSEY FREE FISHING.

THE free fishing question is exciting much interest in Sussex county, N. J. There are in the county several lakes of considerable size and well stocked with fish, but which by reason of private ownership are closed to the public. In the old days, before fishing had come to be so esteemed, the waters were open to everybody, and resident and summer visitors alike enjoyed them; now that the lakes have been posted, the Sussex county people have sought to have them opened again by the State. A measure was adopted at Trenton last winter, known as the lake and park law, which provided for the appointment of a commission to condemn the lakes as public parks, and to determine the proper compensation to be paid as indemnity to the owners. The measure was made operative conditionally upon its ratification by the county; and at the last election the county vote endorsed it by a majority of 1,112. The commission has now been named and the condemnation proceedings would have followed, but have been interrupted by the action of Mr. Andrew Albright, of Newark, who is the owner of the greater part of Swartswood Lake, one of the waters affected, in the township of Stillwater; and who has secured a writ of certiorari to forbid the commissioners to act, and so to test the constitutionality of the law. The opponents of the measure declare that it can be overthrown because it is special legislation, and an unwarranted taking of private property.

The situation in New Jersey has its parallel in other States, where the conflict between public and private interest in fishing waters is every year becoming intensified. We have mentioned before the Percy Summer Club case in New Hampshire, which has been dragging along in the courts for years and the settlement of which appears to be a long way off.

The fawn may be docile and pretty, as a pet, but the full-grown deer is by no means the timid and defenceless creature he is supposed to be. Quite recently several instances of assaults of tame deer upon their keepers have been recorded in the newspapers, all of them "more or less fatal," the latest being that of the vicious attack of a pet deer upon the well-known California breeder, Mr. C. T. Boots, at his paddock near San Francisco, on Nov. 3, the horn of the animal goring the breast and penetrating one lung. The buck elk in particular needs no odds in a scrap. He is a match for the predatory beasts of the forest and plain—bear or catamount—in a fair and open field.

One of the best illustrations of his prowess is depicted in a bronze group at the Corcoran Gallery in Washington, where one of these stalwart cervidæ has given a mountain lion his *coup de grace* by thrusting him through the breast with his prongs.

In the case of Mr. Boots the assault was aggravated and unprovoked. As he was leaving the paddock, after feeding his herd of black-tails, one of the ingrates chased him, and before he could leap the inclosure had him impaled. Doctors regard his injury as serious.

The leasing to the United States Fish Commission of the lakes on the Grand Mesa in Colorado, owned by William Radcliffe, presumably brings to an end a bitter trespass feud. Mr. Radcliffe, an Englishman, had converted these lakes into a fishing preserve, and provided guards to keep out trespassers. Last spring one of the guards killed a man who was trespassing, and this aroused intense feeling among the people of the locality. Mr. Radcliffe was driven out of the country, and his buildings were destroyed. He appealed from the Colorado authorities to the National Government, and on the strength of being a Briton sought to enlist Great Britain in the securing of his rights. In all of these efforts he had been unsuccessful, so that the taking over of the waters for Fish Commission purposes means the dawning of peace on the Grand Mesa.

The Sportsman Tourist.

In Idaho.

THE town of St. Anthony lies on the eastern side of the State of Idaho, not far from Jackson's Hole. Jackson's Hole, which catches the overflowing or migratory bands of elk from the Yellowstone Park, is well filled annually with hunters, divided by the natives into two main classes—dudes and Mormon meat hunters. Possibly some of the meat hunters may rank themselves under other religious teachings, but they are all lumped as Mormons for the purposes of popular nomenclature.

In the early part of October I found myself in St. Anthony, and, as I was not very desirous of killing elk in Jackson's Hole, either as a dude or a Mormon, I engaged a spring wagon and started to drive west across the State. I had with me Lon Dawe, an excellent and efficient companion, four horses in harness and an assorted load of 900 or 1,000 pounds weight, the assortment including oats, pack saddles, riding saddles and the two men.

There are some interesting features about central Idaho which are set forth doubtless in scientific reports, but seem fresh to the layman. The soils of the eastern part of the State for the most part overlies deep gravel deposits. The streams, like Birch Creek, Big Lost River and Little Lost River, rise perhaps at a little distance from the mountains, whose drainage is fed to them mainly by underground percolations and not by surface flows. A line of willows in the center of the valley may mark the watercourse, which continues on until the plain widens out, and then sinks again into the spongy subsoil, to reappear perhaps in the distant Snake.

The sinks of Birch Creek—three days' drive west of St. Anthony—hardly make a mark on the broad desert of gravel and sage brush, while a few miles further on the former location of the sink of the Big Lost and Little Lost rivers is indicated by a dusty flat of 100 acres extent or more. These two rivers, rising on opposite sides of a long mountain ridge, after flowing around the end of the range, almost or quite united in a common point of disappearance in earlier times. Since the development of irrigation, however, there has been a great change of conditions. The porous soil requires much water to raise crops, and so many ditches and canals are taken out that few streams in the farming regions reach their former sinks, and even the great Snake went dry this year at Blackfoot.

Aside from the ranches, which become less numerous as you go west, the country is in great part a waste of sage brush and gravel, frequented by the domestic sheep and seamed by long mountain ridges, which, until you reach the tributaries of the Salmon River, are singularly bare, showing a few trees now and then in some gully, but for the most part stretching their yellow flanks unshaded even by brush.

We started from St. Anthony in a drizzle, and saw only one prairie chicken, properly called a pintail grouse, I believe, and one jackrabbit, with a rather long black tail. All the jacks I met on the journey had tails like this, though my memory called for tails of grayish color on the jacks of my early acquaintance.

Three days more of driving by a southerly bend brought us into the valley of the Little Lost River, beyond the plain, where the southern horizon hid the range except "where misty island peaks or purple domes loomed in the distance."

The rains had made the roads fine, but the country we had passed was almost lifeless, and we were glad to get through. We were now out of grain, but rather than

marsh of mud. Cattle were rather numerous, and bands of sheep were disgustingly plenty.

Deer thus far had not been seen. The country throughout seemed good for deer or antelope, but in the eastern part the cover was very scanty, and elsewhere cattle had driven back the deer, while the more recent advent of sheep had forced away the antelope, who do not dislike cattle, and had done much even to dislodge the cattle themselves. Great white-tilted sheep wagons fitted with stoves and bunks and all the apparatus of the herders rolled over the country like the moving habitations of the Scythians of old, while the flocks ate the pasture clean and cowboys swore strange oaths.

The rifles of cowboy and herder and the pressure of these waves of domestic invasion have made the game of Idaho wonderfully scarce and shy, and the hunter who gets trophies in that region is likely to earn them.

There were still a few antelope around the hills of the Pah-sim-e-roye, and we saw eight or ten at various times in the distance, but bagged none.

We set out for our first hunt by riding up the west fork of the creek till we got about ten miles from camp, and then starting to climb the mountain. The cañon was

HEAD OF PAH-SIM-E-ROYE.

clothed with small fir timber, and, at first, the slope was easy, but finally we reached the slide rock and began to rise in earnest. Patches of grass, banks of snow, plentiful sheep sign, and then more rocks led us on up, against the cold wind, till at last our heads were above the rim of a little open rocky basin, and down in the bottom of the basin were four sheep, stretching up their necks to learn who was intruding. There were no good heads among the sheep, but we were thus far meatless, and were entitled by the laws of Idaho to poor heads if we could get them. Lon did some fine shooting at a running sheep, which he finally captured, and I, after a preliminary miss, got a small one for my share. These victims were dressed and hung up, and, as it was now too late to bring up the horses, we hastened homeward, and got late to camp after twenty-five miles of travel, enlivened by incident.

The next day Lon went with a friendly cowboy to bring the game down, and I hunted another branch of the stream. This fork lay nearer, and on this day I climbed over the snowbanks of the crest and went a little way among the forbidding precipices around the head of the Big Lost River. There was no fresh sheep sign, however, and at last I got to my horse and prepared to seek a new route back to camp. Now, this horse was a tall animal of gentle habits, recommended as a hunting horse. So far I had found him of meditative disposition, prone

leader too hard and too often after that, I am sure he was quite unjust.

The next day I went for the hams, and found them after an extended search. I was looking for the ribs on the ground, as the more easily to be seen, when at last I found the hams hanging right before me, and no ribs anywhere in sight. The hard gravel showed no tell-tale footprints to explain this, but I had seen the old tracks of a small bear in the snow before, and I fancy that he was the robber. If so, this was the best bear sign of the trip. I had on this day seen two grouse and a coyote, and Lon had seen a lynx, but no other game nor fresh sign thereof.

There still remained a province of sheep land untried up another fork of the stream, and we determined to inspect it.

The great bare cliffs showed the geologic history of the region like an open book, if one only knew how to read it. Thick ledges of limestone, slate, quartzite and perhaps other rocks stretched long even lines for a certain distance, and then twisted and folded into most intricate contortions.

We went up through the snow for a mile or more, and finally got on to the crest of the ridge, so as to view the adjoining valley, but we saw no game, and no fresh tracks, only where the snow had been blown off the slide rock there were hundreds of little depressions such as the sheep stamp out for beds, seeming always to prefer a resting place lined with jagged stones utterly cold and bleak. I remember once noting a similar trait in the seals of the Gulf of California, for the herds there "hailed" at all times on the rough boulders of the shore, and never once went to the sandy, grassy, protected cove that lay just adjoining.

While we were on this ridge I took a snap of Lon standing on the landscape and inspecting the chasm over the edge, which was filled at the time with nothing but a strong wind.

Our return trip was diversified by the rather rare sight of a badger out in daytime. His color was not of the proverbial gray, but brown, nearly as dark as a lady's muff, and he looked very like such a muff undulating up hill at a great rate.

One more observation I made, which sounds like a paradox. When a chipmunk sits up he stands up. That is to say, an erect chipmunk does not touch the ground with tail or stern, but is supported by the metatarsal bones with the hock on the ground, so that, as the hock represents the human heel, he may be said to stand.

By this time we were getting restless, and I decided to leave the Pah-sim-e-roye neighborhood and strike for Stanley Basin by way of the Salmon River.

It was a long drive, and the first day only found us on the Thousand Springs Creek, which feeds the Big Lost River. We camped in a pasture lot and soon received a visit from a young woman. Our acquaintance ripened fast. Within five minutes I knew that her name was Laura Lucille North, that she was "going six and a half" (this doubtless referred to her years), that her poppa had two guns and her momma was a "crank" and had "licked" her. This was encouraging news. I now felt that I had entered the realm of lawful order, and therefore assumed the dominant position due to superior weight and age.

The only real fault that Laura Lucille found as she munched our provisions was that we had no butter.

From Thousand Springs Creek we drove over a divide to an extensive plain called Antelope Valley. The name is probably more of a memory than a fiction, but there are no antelope there now, nor, in fact, anything else.

Pursuing our route, we reached the east fork of the Salmon in the afternoon, and driving down that and up the main stream came to the village of Clayton quite late.

LON ON THE LANDSCAPE.

THE OUTFIT AT THOUSAND SPRINGS.

leave our road to look for it, we made a long march and found a worthy German, who sold us abundant oats and told us about Sherman's march, which he shared. He had found out, too, that the "salt grass" land, hitherto supposed to be useless, was better than the "sage" land. You only needed to keep plowing it continually for a couple of years, harrowing carefully and picking out all the roots of the salt grass with your hands! Truly his German thoroughness deserved success.

The next day after this we saw some packs of sage chickens quite wild, and very, very far off glimmered the flanks of a few antelope, just discernible through the field glasses. I got out and walked after the antelope, while Lon made camp, but they had already passed a mile beyond the point where the land hid them when I reached that place, and I had to take comfort in the healthiness of my exercise.

A long march next day brought us across the divide, at the head of Little Lost River, and down the slope of the watershed of the Salmon.

We turned south to the headwaters of a creek called the Pah-sim-e-roye on the maps. The name is said to mean "Two Waters." It is pronounced as if you had begun to say p'simmon and ended with "rye." We made a poor camp at a spring of good water rising from a

to pause and ponder before each step, especially in going down hill, but I was soon to see a great light on this subject.

We had hardly gone a mile through the timber when I saw a deer, got off and shot it, and then tied the horse while I dressed the game. It was not a large deer, but it weighed more than I could lift, limp weight, so I put a rope around the forequarters and began to pull them up to the saddle horn.

Just here the hunting horse began to show uneasiness, so I blindfolded the animal, which did not help matters at all. I then tied up a foreleg, leaving the blinders on, and skinned out the forequarters of the deer, leaving a load that I could lift on the saddle. Meanwhile, the old horse awakened to temporary activity. He was tied to a tree, blindfolded and three-legged, but he pulled back so earnestly, against very forcible remonstrance, that he broke his tie rope and in some way smashed his bridle, coming up standing, still blindfolded and on three legs. After that I hung up the hams, tied the loins and liver in the hide, strapped that behind the saddle, got on myself and get back by unsparing exertions just before Lon brought the sheep in. I was displeased with my horse to a high degree, but I never told him so, and if he imagined that, when I was driving, I flicked the off-

The Salmon is a clear, brawling river, perhaps 60 yards wide, and 3 or 4 feet deep at low stage of water at Clayton. It flows here through a fine rocky gorge, and once deserved its name. Even last year there was a small summer run of fish at Clayton, but this season none have been observed there, though I was told that a few had been noticed in a pool in a brook in Stanley Basin above. It may be concluded, however, with substantial truth, that the salmon of the river have gone to join the antelope of the valley in the land of myth.

Beyond Clayton we stopped for several days at a Bar once famous for its placer diggings. We were told that the entire hill, which constitutes the Bar, stood on timbers put in the bed rock workings made in early days when miners were actively burrowing here. A few old-timers still wash the dirt here for scanty returns, and live partly upon ancient memories. Some twenty years ago precious metals were mined in considerable quantities with much enthusiasm in central Idaho. Now even the landmarks of that day are vanishing. The town of Crystal, though it figures on the map, has not a building left; you can just see a few foundations. The towns of Vienna, Sawtooth and Galena have buildings to be sure, with roofs, crushed by the snows of winter and gaping holes for windows, but there is not a human inhabitant

in either of them; only the sage hen and the coyote hold revel there, if so minded.

But we have not yet reached Galena. We are at the Bar. Here we made a fine camp in the firs, and after receiving and disregarding some mistaken advice about the haunts and habits of game animals, we set out on a hunt. Our friends at the Bar had lots of stories, but no venison, and we hoped to supply both.

By mid-day we had left our horses well up the mountain, and had passed on foot up a long wooded basin furrowed by a frozen stream. There were quite a number of tracks, as if a band of deer on the march had passed that way, but there were no indications that we were on a regular feeding ground. We advanced, noting a small bear track and a squirrel nearly black, which I collected later, thinking him an instance of melanism. He was not a perfect specimen, however, for the middle of his back was only a dark brown.

And now as the sun began to decline rather fast, we were thinking of return, when Lon's sharp eyes saw a deer dart from the timber far in front of us and go quartering up the steep slope on our right. When he got high enough to feel secure, he stopped to investigate, though he had really come much nearer to us than his

.30-30 about an inch less. The wood was frozen, and this may have influenced the result.

These incidents summarize our pleasant drive. The October weather was cold and splendid. Ice formed nightly on the pail in our tent, sometimes very thick, but we had a stove inside, and the morning fire made the bath a luxury instead of a mere sanitary shivering fit. The inhabitants of Idaho that we met were, in the language of Brigham Young "a white and delightful people," and the dogs were fine, cordial tail-waggers, who would put their heads on your lap and look at you with eyes full of brown benevolence.

Game was either absent or scarce and shy throughout, yet we got enough, except, perhaps, for trophies, and were able to give much meat to deserving friends. We delighted especially in seeking sheep. Though we got few, we went joyfully wandering amid their haunts, the high, rocky swales with frozen tricklets of water and scanty grass and moss, the stunted trees below, the snowy steeps above, the lofty cliffs, the slants of slide rocks with the sheep's nests hollowed out in them. We saw their network of trails up the ridges and their tracks, and we felt that we had lived among the mountaineers.

Some wise man has said that if he held all truth in

last glowered at her from the thicket of hollyhocks, nor has she felt his presence; yet without any help of witchcraft he may have come near, for black cat skins have a market value and there are mercenary boys and furriers who are no honestest than other people.

A lady told me that her furs were "river mink." They were handsome enough, but not the thickest. When blown upon, there was a wide parting of the fluffy under fur upon the skin. I knew who originally wore them, for I had been at the first owner's house, a well-built if not handsome structure in the edge of the marsh, with plenty of water on one side and an abundance of food, lily-roots, and sedges, on the other.

When the mink has eaten his flesh that perhaps becomes mink, but his fur is always that of a muskrat, and though in his life and habits he is much more interesting than the mink, his raiment is not so fine nor valuable. Yet it has long been in great demand, formerly for the manufacture of hats, now mostly for export, to be made up into cheap furs, its offensive name and dull color changed to more attractive ones that better suit the taste of fashion.

If these humble creatures could know to what estate their furs would be exalted, the sounding names given

THE GOODNIGHT HERD.

starting point was. With his flank presented and his high head turned to gaze, "he stood like Germany in arms facing embattled France."

His distance was at least 250 yards from us, and any friend who wagers that I will consistently hit the center at that range, will probably want his money back very soon. On this occasion, however, the shot struck home, to the loud astonishment of my companion, and perhaps some silent surprise of my own, and the deer, after trying to steady himself a moment, toppled over backward and rolled a hundred yards down the slant. We climbed the rest of the way to meet him and found a fine buck with a rather good head.

I will not estimate his weight, but when he was dressed, headless and frozen stiff by a night's exposure, two men had hard work to get him on to a pack horse. The tips of the two most distant tines of his horns (the second ones) were 28 inches apart.

Both the deer killed on this trip were mule deer, and I noted that the body of the tail above the black tip was entirely white in each case—that is, that there was no black line down the back of it such as is usually or always seen in the small California variety, and sometimes seen in other individuals.

It was my intention to take measurements for the sake of getting a basis for comparisons, but I found that my steel tape had been left behind, so I only got some dimensions of the horns, and the breadth of one forefoot, which the men brought down, and which was three inches across.

While at the Bar we made a brave endeavor to penetrate another province of sheep land, and after a climb, which I confidently estimate at 3,000 vertical feet, we reached an eminence that gave us a view of cold, snowy, rocky basins of encouraging appearance, but the land of promise, though not very far in an air line, was a great way off if measured by hours of effort, and we did not reach it.

From the Bar we went to Stanley Basin, and made two expeditions in that vicinity, looking for the foundations of certain bear stories told us by scarred veterans of the chase. Wounds made by fangs or claws of bears were shown me on the person of one old gentleman, though I am bound to say that the stains of his daily toil had hidden the scars. At all events, we searched for these foundations, and though we discovered that they had been used up in propping rainbows, and that more bears would be usually seen on Fifth avenue.

We prospected in several places and panned out clean gravels and desperately pure granite sands without a trace of color; we also looked casually at some mines run on the assessment plan, though we did not have time to visit the good ones, and, among other curious things, we saw in a little lake on the very crest of the divide between Cape Horn Creek and the waters of the Payette River, a lot of good-sized fish that looked like trout. Now this lake had no inlet nor outlet, and was quite a distance from any running water. Were the fish planted? Did they come overland or are they relics of the glacial age?

There are two other fish problems of interest near Stanley Basin. One is the existence of a redfish netted annually for about a month in Redfish Lake, one of the supply reservoirs of the upper Salmon; and another is the existence in another similar lake of a fish 9 or 10 inches long, which the natives call a smelt. This fish limits his season to ten days each year, when he runs up the inlet to spawn. Except for these brief periods the fish go into retirement, and are not seen or captured.

A few penetration tests were made with .30-40 and .30-30 rifles, using soft-nosed bullets at close range. A flat surface was hewn on a fir tree, which was afterward cut down. The .30-40 had penetrated 6 inches and the

his hand, he would let it go that mankind might be elevated and strengthened by searching for it.

So, if I held in my grasp the whole tribe of mountain sheep, I would, after taking certain measurements and photographs, send them back to their secure fastnesses that future generations might behold the ideal of self-reliant freedom.

H. G. DULOG.

Fact and Fancy.

A FAIR fur-wearer, day-dreaming over her soft wraps, lets her fancies run far northward and gives her thoughts an arctic airing. In the shadowy frost pictures she sees a Hudson Bay Company's hunter making the slow round of his traps in a wintry waste beyond the farthest post; then, bringing in his furs and spending in one reckless week the hard earnings of months; or Indians in Alaskan wilds, setting their primitive springes for their four-footed brethren but little wilder than themselves; or exiled wretches begrudging their traps the meagre bait in the frozen hell of Siberia.

It will take some of the romance from her pictures to make them more truthful, but it may not entirely spoil them. New England mountains from which the lumberman and wood-cutter have reaped their tall harvests these fifty years, grassy hillsides of farms, trout brooks known to many a city angler, meadow rills where school-boys catch minnows with pin-hooks, marshes shorn by the husbandman's scythe when the upland hay crop is short, and streams troubled by the frequent keels of traffic, shall form the tamer landscapes of these pictures.

The figures, less picturesque than the half wild Hudson Bay hunter and the wholly wild Alaskan savage, and with nothing of the tragic in them, shall be only a matter-of-fact Yankee who is a farmer many more months of the year than he is a trapper; the ruddy and tan farmer's boy, whose few steel traps and deadfalls furnish the purchase money for his new jack-knife, his skates and his first gun; an Indian of St. Francis, briefly visiting at rare intervals the hunting grounds of his fathers; these are our trappers, and their spoils make a considerable share of the furs exported and manufactured.

The one who by birthright first wore the mink furs of the fair lady, took his frequent baths and fares of small fry in the same stream wherein her brother casts his fly every summer, only a day's journey from the city.

The original wearer of her "Alaskan sable" two years ago was doing the farmer good service in digging the grubs in his fields and an ill turn by sucking his eggs and stealing his young chickens. He was always in bad odor, yet his fur, deodorized and dyed, does not proclaim his name to ears polite. The trimming of her cloak was once the coat of a robber of cornfields whose call to his brother bandits may have been mistaken in August evenings for the screech-owl's uncanny note.

The fashionable boa of a year ago, with the pointed black ears and the fluffy white-tipped bush, when adorning its first owner, never coursed over Russian snows in the long Arctic night; but once clad a cunning thief who stole the spring chickens our lady's host had raised for her and the turkey which might have found its way to her Christmas feast. That bright Christmas was a holiday for her, but not for him, with the farmer's hounds bellowing on his trail, a melodious storm that drove him to destruction. With his life and his tawny pelt he paid for misdeeds and a still more satisfactory price in the sport of his pursuit.

Of the rural household, she may remember one of whom she stood in awe, for he was a witch's familiar, black as a starless night. She has had no tidings of him since he

them, and the gentle wearers they would warm and grace, possibly a sigh of content would mingle with the shriek and moan as the trap's jaw pinches or the trapper's blow descends.

ROWLAND E. ROBINSON.

Adventures in Tropical America.

VII.—A Race Against Adversities.

CONTENTION is rarely of any benefit, yet who can always avoid it? On one of my expeditions to Central America I found myself in the depths of the jungles of Spanish Honduras, miles away from where I should have been. I was striving to serve the interests of some New York capitalists, yet I was not the leader of this expedition, my mission was simply to smooth the way, and make an effort to see that the party reached certain mines, where it was supposed a fortune awaited. We were in the jungles now, and to the best of my calculations were trying to reach the mines by an impossible route with no prospect of getting on. Then contentions arose. I wanted to go on with the Indians, who offered to take us in canoes up the Rio Patuca, and then across country to the mines; but the leader of the expedition had designed some clumsy boats, which he now declared in tragic words should be forced up the river even if the expedition remained there for months; and, in order to accomplish his purpose, he now demanded that I should make heavy drafts on New York. He had about exhausted our supplies of money, and his proposition did not look like good business; I agreed, however, that if he would go on with the Indians I would sign the drafts, but how he expected to get money for them in the jungles was past my comprehension. Nothing would suit his purpose except money to spend in efforts to force his clumsy boats up a river in which all the Indians said such boats could never live. I consulted carefully with the Indians, and finally decided that no more money could be spent on those boats.

Then there was a scene, threats and wild language; the leader had been drinking, and was little better than a mad man. Presently his thoughts centered on an idea that he would go back to the settlements, and up the road to the interior, and there revoke certain transfers of property before I could have them registered. This registry was one of the most important matters that had been entrusted to me. The question was rather serious, and I consulted with others before answering him; while he, all complacent, thought I was cornered.

I was assured that if he went back to the coast he could not get through the dead line, because yellow fever was raging in the settlements. The dead line is a rather peculiar though effective quarantine; a line is drawn across the road from an infected place, and a notice is posted up; a guard stationed to protect the line, and who ever attempts to cross from the infected side is immediately shot. I hardly believed this statement, but I was convinced that there was some impediment to travel, and that to reach the interior from the infected coast would be difficult, and probably slow work. Fortunately we were above the dead line, and I determined to make my way across the wilderness to the capital; if my companion came with me I could claim the right of registry, and if he went by way of the coast I could probably beat him in.

Once more I tried to persuade him that our best interests were to go on, but words were useless, and a race for the mines was in order.

I arranged as best I could. Of the money we had, I took \$150 in silver, and gave the balance, several hundred

dollars, to the engineer of our expedition, telling him to remain at camp till I could send help from the capital. Then with the few things packed which were to be my outfit, I waited anxiously for an opportunity to begin my journey.

The next day a crew of Sumo Indians came up the river and stopped for the night at our camp. They agreed to take me with them as far as they were going, but did not think I could succeed in getting over the mountains. They said that there were plenty of men at their village, a place called Gualpatante, and as I felt sure I could arrange with some of them, I determined to push on.

I got my things together and next morning we started. Their canoe was unusually large, made from a single mahogany log, and capable of carrying six or seven tons.

Eight men made up the crew, rough looking fellows, such as I had never seen before, and I wondered what was to be my fate with them. The captain of the crew was old and bent, looking almost like a hunchback; his arms reached down below his knees; his neck was long, skinny and protruding; he had only one tooth, which had grown up to the length of a boar's tusk; one eye was knocked out, his nose and chin almost met, his long, unkempt hair hung about his naked shoulders; and to make his appearance more frightful, one-half his face was painted black, which brought his protruding cheekbones into peculiar prominence.

I looked at him in astonishment, not unmixed with fear, and he was in truth a strange, forbidding looking object. The Indians quickly put my things in the canoe, the old Indian motioned me to a seat and my journey had begun, my companion sneeringly remarking that he would wait for me at the capital, where I would find the property made away with, and all because of my headstrong folly in refusing his orders. The time for words was past; I invited him to go with me, but he would not; and then the men pushed out in the stream, and began a vigorous paddling which soon took us around a bend in the river, and I was alone with these strange, half-naked Indians, perplexed and doubting the wisdom of the course I was pursuing.

I was not long in finding out that I was in good company, and the strange old Indian was as careful of me as if I had been his child. I soon forgot my fears in the novelty of my surroundings, and then anxiety gave place to thorough enjoyment.

As we ascended the river the scene gradually changed, and presently we were among the first undulations of the mountains, and after two days had reached the lower foothills, and were surrounded by all that one could dream of in a tropical paradise. At night we camped on the sandbars, and in a few minutes the Indians would have game and fish in abundance. Then we would eat, and it seemed as if I could not get enough, and fortunately there was no end to the supply.

Two days more, and we reached the Indian village, a place called Gualpatante; the men took my things to one of the larger houses, and the people crowded around to see me.

I immediately began negotiations for men to take me on my way, and was meeting with some success when all my hopes were ruined at a sign from the old Indian, whose name, I learned, was Fusa. He was a most remarkable person; the oldest people in the village said that when they were children he was just as I found him—old, temperate in all things, and powerfully strong. While we were coming up the river the men had on several occasions been unable to make headway against the current, which at times was very swift. Old Fusa carried a great paddle, bigger than himself, and at these times he would give one long sweep with it deep in the water, and the great canoe would tremble at the force; then another sweep of his broad paddle, and the canoe would move ahead slowly; then the men would get it in control again, and we would sweep steadily on to quieter water; the old Indian making himself comfortable in a lazy attitude in the stern of the canoe. And this was the man who had me in his power, and I began to be anxious again, and wonder why he was unwilling that I should go on.

I was well treated, and if I could have spoken to them fluently or understood what they said, I felt sure that all would soon be arranged; but my few words of the Indian language seemed to be lost on old Fusa, who spoke only a very little English and Spanish. Conversation was not brilliant. Each morning old Fusa would come down to see me and say: "Where going to-day?"

"Up the river," I would reply.
"No, can't go."
"But I want to—I must," I would protest.
"No, can't go."
"But I will," I would say, angrily, at times.
"No can't go. Where going to-day? Stone tings; flower tings; butterfly tings; hunt what?"

I was interested in collecting specimens, and would generally choose one or the other excursion proposed. The old man would give a satisfied grunt, and then, after a brief direction to one of the young men, who apparently never thought of disobeying him, I would be taken out in the woods; and game, insects, botanical or geological specimens would be found to my fullest satisfaction.

But as the days accumulated, I gave up going out, and all my thoughts were concentrated in getting away from that old Indian. He would have taken me back to the camp down the river at any time, but he would not take me on, nor would he let me go, and I began to fear that he had an understanding with the superintendent to detain me. Twice I nearly succeeded, but he stopped me each time, and I grew more and more anxious.

What he meant to do I could not tell, and I was in despair, even expecting that later he intended to have me killed.

The Indians were drinking a good part of the time, and how I learned to hate those drunken feasts. Fusa never went to them, but the other men would soon become hopelessly intoxicated, and then would promise to take me anywhere, and that would be the end of it, only promises. They drank fermented sugarcane juice which was prepared by women who sat around a big trough chewing cane and spitting the juice till they had filled the trough; then it was allowed to ferment. When properly fermented, the boys would gather with their reed pipes and the men would drink to the accompaniment of their droning music, just the same thing over and over again, all in disorder, yet not displeasing in its effect; and finally

the men would fall into a helpless drunken stupor, though at times angry quarrels would take place, and the Indians, wild with drink, would threaten all sorts of violence. At such times old Fusa would hurry over to my house, and forbid my going out. Usually he staid with me until the row was over, and I could not understand why he was so careful of me, and yet kept me so closely guarded.

A few days later I learned why this was. I had lost three weeks when a large canoe came up the river filled with Indians, but among them there was a white man, a fine fellow who was building up a trade in rubber with the Indians. I had been living in his house, and old Fusa proposed to deliver me safe and sound to my host. This he did with but little ceremony, and as he went out of the door he said to me: "Now can go," and walked off entirely satisfied.

My new friend said that the old Indian had done me a great service, as I would certainly have been killed if I had gone on without being properly prepared; and as it was he did not think it would be possible for me to get through, and advised me most seriously to go back, and give up the idea. It was no trip for a white man not accustomed to the most trying exposures. Then, if one did not die from the exposure, there were the wild animals; and if not these then the Indians, almost as dangerous, and altogether he thought it would be impossible for me. But when I explained the situation, he said he thought it was taking big risks, but he would do the best he could for me.

He told me I might take my choice of evils. He could give me Mosquito men who would take me up the rapids safely, but might lose their way in the woods, which would mean death; then he could give me men from his village, but though they knew the trail well, they would perhaps have an accident in the rapids; which, if it did not kill me, would certainly mean the loss of all my things; or he could give me the wild men, who would be coming down with their rubber the next day. These were perfect river hands and sure woodmen; but they were murderous, and not to be depended on, yet if I was careful with them they would probably take me through safely. I determined to cast in my lot with the wild men, and then my friend gave me careful directions how to treat them. Their last murder had been to secure \$40 silver, quite a fortune to them. I now had only one hundred dollars silver, little enough with the journey ahead of me. This I was not to show on any account. Then I was not to give them directions, but simply allow them to take me. I would fall in with a tribe called the Piyu Indians, some of whom were very dangerous, and though cowardly would sneak up to one at night, cut one's throat and run; and on no account was I to sleep in their houses till I got to the interior valleys; when there they were perfectly reliable, and I would be safe.

Then I gave my friend the money to pay the men, and he proposed to tell them he was advancing it to me, and that I had none. He said he would engage three men and two women as my guides and pack bearers, because the men rarely murdered a person when the women were near.

All preparations were quickly made, and, true to their appointment, the men came down next morning, a whole lot of them, with several canoe-loads of rubber. I was glad to see that a number of women were with them, and was overjoyed to learn that they proposed to go back to their mountains the next morning. They looked as wild as monkeys, but their stout muscles spoke well for their ability as wood and river men.

A bargain was quickly made; my friend gave them their money, and, after making some presents, in which old Fusa was especially remembered, I set out again with a fair prospect of reaching the interior settlements. The first day the men did excellent work, and the next reached the Wampo River, and continued on the way to their village at a junction with it and the Po River. It had been a long, hard day's work for them, and just as I was congratulating myself on our quick time they announced that they must rest one day before starting out again.

There was no help for it, and so I determined to amuse myself as best I could, and when night came I began to think the time had not been a loss, for these were a strange people, and it is seldom the lot of a traveler to fall in with them.

That night the etiquette of the woods required that I should hand my fire arms to my host, to prove my confidence in him; usually they are handed back at once, but this Indian kept them, and I began to wish I had not been so particular, and I missed my good friend, as I call my pistol, sorely that night, though I didn't have any occasion to use it; yet there is something companionable about a pistol, and I would have slept more soundly if it had been by my side.

The following day the men continued resting, but in the afternoon I was delighted to see them making preparations to start the next morning. A little later I threw the town into a state of excitement because of some paper pin wheels that I made to amuse the children. The men wanted them at once, and I used up numerous pins and nearly all my paper before they were satisfied. When all were supplied, it was an amusing sight as these fully grown men pranced and ran about among the houses, shouting and kicking up their heels like a lot of children; the women following around after them equally delighted, and full of excitement. The fun lasted for about an hour, and then the pin wheels wore out, and the village settled down again.

The next morning the chief said they were ready to go on, but to my surprise and alarm I found that five men were to be my companions, and that the women were not going at all. There was no help for it, now; to return was impossible, and if they intended to murder me I could not escape them by going back; so I made the best of the situation and we started. The men made good progress and about noon we reached a little Indian village called Po. Here my chief and the chief of Po sat down to have a talk together.

After a time the chief of Po said to my chief, "Well, are you going to kill this one?" To which my chief replied, "I don't know yet; I must get him up in the woods first and see if he has any money, and besides the trader takes care of him and perhaps he will only die in the woods." I could understand some words of their language, but they fell to talking about other things, which I could not understand, and I went to sit alone and con-

sider my prospects. It did not seem very encouraging, but the road led on, not back.

We soon were under way again, following the river as it wound ever on up, and still up among the mountains.

Sometimes the rapids were really dangerous, and it was wonderful to see the way in which those Indians managed the shallow dugout or pet pau as they called it. One stood in front of a long pole to keep it off the rocks, two paddled, one bailed the water out, and one stood behind steering with a long pole. When we came to a rapid they would shout to me to sit still, which was all I could do, I was so frightened I scarcely dared to breathe, while those men, shouting with excitement, made their way along the sides of rapids, which to me seemed impossible.

At times we would come to long stretches of quiet water, and then to other rapids, and so on up and up, the men shooting iguanas and catching turtles and fish as we went.

Iguana is said to be very fine eating, but after a time I could not bear the sight of it, though it seemed good at first. There was plenty of turtle at all times, however, and so I got along very well.

It was strange to see the Indians catch turtles and fish. A turtle would slip off a log into the water, and at the same time an Indian would dive lightly from the boat, and it was rarely indeed that they missed them. A certain Indian named Wee Wee was particularly expert, and if he saw a frightened fish hide itself as we passed on up the river, he would slip quietly over the side of the canoe and nearly always succeeded in catching it.

At one part of the journey we found ourselves in a deep ravine, which was so high up among the mountains that we could look back out of it over a great stretch of country and lower mountains, and as we sat in the cool shade of the cañon, where the water was still and deep, and where the rocks were all covered with orchids, ferns and mosses, it seemed, looking out over the distant country, as if something was about to overwhelm us or that we were soon to be swept over a cataract, it was all so strange and unearthly.

One morning, after sleeping by the river bank, I noticed two little red spots on my arm, considerably above the elbow; at times they were very painful, and after a day or two became almost unbearable and had grown quite large. I tried to press them out, thinking they were boils, and that the sun made them hurt so severely. I was sure something was in there, so getting a bunch of flesh up between my fingers I pressed with considerable force, and to my astonishment a white thread-like worm began to appear, and as I pressed harder a large grub popped out and fell in my hand. It looked like a bottle with a long neck tapering to a thread, and had black hair at the folds of its skin. Then I took another out of the smaller sore and thought I would have no more trouble with them; but in this I was mistaken, and my arm began to swell rapidly, aching miserably, while green matter collected in the openings left where the grubs had been. After a time these conditions became so alarming that I showed my arm to the chief, who said it was very bad, that it was the mosquito grub, and that I should have told him sooner. Then he went to the woods and brought back a root, which he masticated with some chewing tobacco and placed the mass in the sores, after which they healed with what I thought unusual rapidity. I am told that I made a lucky escape, as the sores following the expulsion of these grubs are at times dangerous, rarely so, however, if taken out while they are yet small, and only those who are ignorant in respect to them suffer any damage.

It is said that a long black mosquito lays the eggs that produce these grubs. How, nobody has any idea, and at times they are very annoying. After that experience I was careful to sleep under my mosquito bar, and have been careful to do so ever since while traveling in the tropics.

After we had gone a short distance further the Indians stopped, saying that we had reached the limit of canoe navigation, and must now make our way across the mountains on foot. Our things were soon landed, the canoe drawn well up on the bank, and then the men said they would have to rest for three days. Here was more trouble. We had been unusually slow ascending the river, we had rested a day and a half at Wampoo, and I had lost three weeks at Gualpatante. With such progress as this it seemed only reasonable to expect that my rival would gain the victory and destroy the company's titles before I could succeed in having them registered.

I was anxious enough, and tried every possible means to start the men on, but it was of no use, and we lost the balance of that day, and there seemed no prospect of moving for all the week.

Next morning I tried again, and offered to throw away a lot of my things and make their packs lighter, but it was of no avail. Then I thought of a bottle of brandy in one of my cases, and offered it to them for the evening if they would go on.

This suited their fancy. They will do anything for whisky or brandy, and arrangements were soon made. I threw away a lot of my things and gave a woolen shirt to one of the young men, who was really sick from cold and exposure, and I threw away all the things in his pack, so he had nothing to carry. Among my clothes was a canvas hunting coat, having the usual brass buttons with animals' heads. The chief took a great fancy to it, saying, "Give me this," a number of times. I was not well pleased, and told him I would see him further first, yet he took such a fancy to it, going back time after time to look at it, all the while regarding me with glittering, envious eyes that I thought if this man would murder to secure \$40 from a person who trusted him as guide, he would probably do as much to secure the coat that he fancied so avariciously, consequently I gave it to him, and then all were contented.

It was a pity to throw away so many useful things, but regrets were unavailing, so shouldering my rifle, which I had been told never to trust out of my hands, we started, the chief leading the way.

At first the trail was easy, and I began to think that reports were exaggerated, but presently we came to a stream that must be forded. I started to undress, as it was deep, but the chief said, "No use; can't stop; must walk river," which was literally true. We had to scramble along its rough banks, in and out of the water, make thirty-three deep fordings and climb up and down all sorts of places.

The novelty kept up my enthusiasm, but about the middle of the day I became very tired, and once slipped over quite a precipice, and would have fallen headlong if one of the young men, who was just below me, had not caught me in his arms. I fell right into them, and though I am pretty heavy, his strength did not yield to my weight. It seemed as if I had fallen against a well-braced pair of posts, and then the way he lifted me to a safe place, as though I weighed nothing, made me regard him with unusual respect, and there was something about the care with which he handled me that made me feel much more secure with these wild men.

After struggling on for a short distance, we fell in with a number of wild hogs. I was too tired to shoot, but telling the chief how to use the sights I handed him my rifle, knowing that in the excitement of the moment he would think only of the wild hogs. He took careful aim, and to my surprise his first shot with a rifle was a success, and we had a large wild hog that would give plenty of meat. We now pushed on higher up among the mountains, and finally made camp in a grove of giant mahogany trees.

The men built a rancho of broad vijou leaves, and then asked about the whisky I had promised them. I told them we would have it as soon as I put on some dry clothes.

Then they went to work preparing the pig, and presently I called them to me, holding up a bottle covered with a neat straw case, so that they could all see it. They came at once crowding around me, and I stood there holding the bottle, still covered with its straw case. It was a scene that I will never forget, and even now I can fancy, almost, that their wild excited faces are pressing close about me. It was a repulsive sight, with the cords of their necks rigid, their bloody hands clutching their great knives, their eyes protruding, indicating the intense strain of beastly anticipation. The Indians stood with their whole beings rooted hungrily on that covered bottle.

I held it up for an instant, and then with a flourish drew off the straw case—and found that the bottle was empty.

The dark rage of disappointment that came over those faces sent my frightened wits to the winds. For an instant my life was not worth a cry to save it, nor could I realize what was happening. In his rage, the chief standing next me, raised his knife, but, as he was bringing it down on me, the instinct of self-preservation caused me to start back, and to accuse the man at my side of stealing the whisky; then the knife that was intended for me was turned and thrust at him, and but for my interposing my hand he would have been killed. He had carried the pack containing the whisky, and now the maddened Indians turned on him, giving no heed to his protests; he had carried the whisky, and it was gone. His face changed with fright to a brownish gray, and then my wits coming back, I threw myself between him and the threatening knives. Now I saw what had happened; the top of the bottle was broken, and I led the men over to my pack; they followed, probably expecting a fresh bottle. Then I showed them my clothes soaked with brandy, and their rage turned to despair; they almost wept, and the five sat on a log together, a pitiful sight in their disappointment.

Taking advantage of the lull in the storm, I promised them that, on reaching the settlements, they should have as fine a drunk as the law would allow. They were quieted at this promise, and with a sort of mournful acquiescence went dejectedly to work again preparing the pig and getting dinner. We had roast pig and a kind of biscuit that they made out of flour, salt and water; the dough rolled up in thin strips, protected by leaves, and roasted over the fire.

The dinner was good, and we ate nearly the whole of that pig and all the biscuit. I was soon ready for bed, and on turning in took the precaution of getting under my mosquito net and keeping my pistol in my hand.

The men were holding a consultation together in subdued voices, but I did not notice this, and presently they all went to bed. I fell asleep holding my pistol in my hand, and I can remember indistinctly that a torch was held near the net so as to light up the inside for a time, and half-awakened I seemed to see ugly faces peering through at me. Perhaps they saw the pistol, and so kept off, but it might have been that I was only dreaming.

A Walk Down South.—VII.

ON Sunday morning, Nov. 3, I awakened. The tent was damp, cold and still. The fire of dry oak long since had died away. Moisture from my breath glistened on the cotton fibers of the thick quilts and every respiration caused a cloud of steam. It was some time before I could recall where I was, and then probably the same feeling which early explorers had in the caves of the cliff dwellers came to me. Everywhere was the evidence of occupation and recent presence by men, and yet nowhere was there a man whom I could see. All that day it was the same—every moment expecting some one, and yet no one came.

I fried some potatoes from a sack at the head of the bed, and we—the dog and I—ate generously of them.

The dog was black, with a white tip to his tail and light-colored feet—a short-eared, smooth-coated mongrel. I thought I would try him. A note left pinned to my pack told any visitor not to be in a hurry. Where I shot the partridge the dog displayed some interest, but over the hill where the bird must have fallen, it showed no sign. The dog looked up into trees, ran on logs, nosed under brush heaps. One moment it seemed to be a squirrel dog, the next a fox or rabbit. For a couple of hours we rambled around, and at last reached the top of a ridge grown to jack pine and thick with scrub oak. Suddenly the dog was missing. I listened. Around near the foot of the ridge I heard a yelp, followed by a long-drawn bay. Away went the dog barking on a trail in a fashion that brought to mind hunts in Adirondack forests. It was a deer hound yelping after its natural prey. In an hour or less the dog came back, out of breath, and soon began prancing around the root of trees, with now and then a sniff at distant hillsides, and then the playful-looking beast would part its lips over clenched teeth. I suspected that the camp owners would not return while I was there.

I went back to camp and made a soup of turnips, onions,

potatoes and bacon. Both of us relished it, especially with some bread just beginning to mould, which I found in a box, under another. The lawlessness of the dog made me reckless. I would wait till the owners came. I chopped up some jack pine branches and then took a crosscut saw and sawed a dozen lengths from a 9-inch fire-felled oak tree. I split each length in four and piled it at the tent entrance.

After noon I went to the forks of the trail again to study out the problem there presented. A little guide board nailed to the tree at the junction did not help me. On one side was drawn with pencil:

"PACKER & WELSH."

On the other:

"STATE ROAD 128"

The hand pointed along the painted blaze trail. Even with this evidence it was with difficulty that I determined to follow the mere footpath in that direction, instead of the wagon road, should I go before any one came.

Living there in the wilderness "alone" with the myriad scrub oaks, the many jack pines and the sense of isolation given by unknown routes was a kind of luxury. Repeatedly I looked at my compass and map, and almost wished I would have to travel a compass course, but to have done so needlessly would have been rather too reckless.

I watched the day wane and felt the first chill breeze of the dusk. It came while the sun was still in view. The jack pines felt it, too, and seemed actually to shiver under its influence. There was something pathetic in the spectacle of these trees just far enough apart to be individuals, obliged to stand alone, and travel down the weather, through all seasons, entirely unsupported. It is no wonder that these pioneers are rough barked.

I stirred up the fire and drew down the tent flaps and put on a mess of oatmeal. By using a basin half full of water to set my oatmeal pail in, I was able to cook it without burning. I lighted the coal oil lamp and enjoyed the luxury of a bright light. On my oatmeal I ate some of the thick, amber molasses, which was in a jug under the box cupboard, and the dog ate his with a bit of pork for seasoning. The stuff was filling and satisfying, but before we went to sleep both of us were hungry again, so we ate some bread, butter and jam.

Meantime a large basin of water on the stove grew warm and then hot. In spite of the strong frost outside the tent became cosier every moment. Soon after 8 o'clock I bathed from head to foot, washed out my clothes and then turned in to sleep for the night. I watched the flickering of the lights from the stove for a long while, regretting the steady advance of drowsiness which I could feel. At last, there was no one in camp to see the time fly.

Long after daybreak I awakened. It was a dull, leaden morning. It was raw and rain-like. The sturdy purpose of the jack pines—to travel far in time—seemed more apparent than ever. I looked at them sharply to see if they expressed a thought about the weary migrants. They were far from me on that morning. I was lonesome, and not until I ate a great mess of well-cooked—parboiled—beans, was I able to shake off the feeling. It disappeared only when I attacked a log with saw and axe. Before 10 o'clock I decided to start on the following day—Tuesday—and take my chances on the trail of painted blaze marks.

At noon I took the axe and began to split some kindling—jack pine. At the fifth blow, or thereabouts, the dog sniffed. Two men were coming, and I met them. One was Albert Tripp, of Shintown, Pa. To him the tent belonged. The other said he was F. F. Bender, of Renovo. To them I explained my presence, which I judged was not entirely welcome. I was told that I could get clear to Beech Creek before dark, down the wagon trail. The painted blaze marks was the State land line merely, and lost itself in a windfall a few miles away.

I ate what was left of my beans—a half-dozen spoonful—and prepared to start. They assured me that a few miles down the trail I would find other hunters with a large camp. They expected a wagon with six or seven companions, who would fill the tent to overflowing, and they would have to put up another tent. There was no place there for me at best. At 2 o'clock I started, with rain just beginning to fall.

I knew when I started that the difficulties of my route had not been exaggerated by the two. I made haste along the road lest night overtake me upon it. Usually I walk twenty minutes and sit down for five. Now I had traveled for an hour steadily, while the rain poured down. The rubber blanket drawn over my pack and shoulders protected me to the hips, but the scrub oak, which covered all save where the wagon tires had beaten the ground, saturated my legs from their clinging brown leaves.

The road led mile after mile along a ridge top, gradually ascending. It was grown over with the inevitable oak bushes and the jack pine, the latter sometimes in quite thick clumps. For the most part I could see to the right and left for miles, between showers. I watched for the camp of the hunters, but did not see it. Nor was there a brook or spring at which I could camp, though I might have found one down in the draws or runs off the ridge.

In an hour I came to a sign which said, "Two miles to Beech Creek, Alfred Rupert." It was at a wood's crossroad, and there was nothing to indicate which way the creek was. I kept straight ahead, according to directions, the reliability of which I suspected. A fresh wagon track was to be seen at the sign—a light hunter's wagon, doubtless—and this indicated that the hunters had driven far into the woods for a day's sport. I must hurry on to reach the shelter. I presumed.

At 4:30 o'clock there was no change in the woods or grade. Soon the hidden sun went down, and for fifteen minutes the whole west was aglow with rich yellows and gold, the setting of a gray-blue cloud, very somber to look upon. No direct ray of the sun came through to the wilderness. During this interval a distant mountain range showed up running at right angles to the ridge upon which I was tramping. I knew that in the valley between was my goal.

It grew dark slowly, but far too fast for me to make the valley before dark.

At last I raised the crest of the ridge, and my road began to descend; shale rock, white, gray sand, yellow

sand, rock and red sand—down these strata I made my way until at last I could see the road only as a line before me. Fortunately it was a smooth road, and the novelty of the situation was one to stir the pride rather than to dismay. The rain had ceased, and it was not very cold.

There was a brook across the road at the foot of the first long descent, and I was tempted to camp there, in spite of the wet, but thought better of it. Some ways beyond there was a clearing, and here I saw what seemed to be a pile of lumber a dozen rods down hill to the right. It proved to be a shanty nailed up tight, so back to the road I went and followed the road a few rods. It vanished in the grass, for no driver had followed another in or out. I could not see where the road entered the woods again. I returned to the shanty, wrenched off the board that nailed the door shut and entered.

By the light of a match I saw a number of wheelbarrows, a lot of hay, and beside the door a large tin can, likely to contain benzine, oil or some other explosive or inflammable substance. I extinguished the match instantly and wished I had a lantern.

In the dark I stripped off all my wet clothes, put on thick woolens, shoved a wheelbarrow one way, hauled hay another and then curled down to sleep, having eaten a raw potato for supper. In spite of a bed full of edges and corners, and in spite of hunger, sleep soon came, which lasted dreamless and refreshing until morning at sunrise—a bright clear one it was.

A good fire drove the morning chill away, but for fear of a cold I foolishly drank some whisky. Some beef tea I made a few minutes later would have done best. I followed the tea with many oatmeal and flour pancakes, stirred up with water from a spring a couple of rods from the shanty.

The shanty was equipped with blacksmith's tools, and near by was a brush horse shed. Its object I was unable to tell. About 9:45 o'clock I nailed it up and started on again. Within a couple of miles the road crossed a brook three times; it was rough, stony and full of roots. It was fortunate I did not find it the night before. My compass indicated that the course was nearly southeast, which was about right. At 11 o'clock a man driving a team said that I was really on the Beech Creek road. Half an hour later I came to a crossroad on top of a ridge. One led on along it, one to the left and the other down a draw to the right. The one to the right seemed likely to get somewhere soonest, and so that was my course. It was a steep down hill—the kind that explains the brakes on every wagon one sees in central Pennsylvania. It led almost due south for a ways, then turned to the west along the face of a valley nearly 200 feet up. Then I saw plainly the Muncy Mountains, which continue the Bald Eagle Ridge on the northeast end.

I went down to the farm land, and at the first house inquired my way. Woodchuck skins and tails were nailed to the woodshed, and hanging to a fence was a 'possum hide. I not only learned the way, but received a great meal of potatoe, pork, coffee, bread, apple, milk and butter.

While we ate the farmer and his son told about their hunting. Only four gray squirrels were killed by them this fall. They got the 'possum in the chicken coop, and not infrequently killed coons among the corn shocks at night. The boy, a large lad of fifteen, with another youth, caught two coons one night a while ago. The .44 repeater was reinforced by a rifle and double-barrel shotgun, both "pops" or muzzleloaders. Here, as everywhere in the barren region, I heard that bears were plenty.

After a while I went down to the village of Beech Creek, nearly two miles away, where I received and sent mail. In a couple of hours I was ready to start on again. It was Election Day, and as I tramped for a couple of miles through Beech Creek and the adjoining village of Eagleville, there were many observers who turned to look twice at me. I added a pound and a half of bacon to my provisions at Eagleville.

An old man met me above Eagleville a little way. "Good evenin', stranger," he said. "Where mout you be goin'?"

"Evenin'" at 3 o'clock in the afternoon—it was certainly a sign of the South. So, too, he wanted to know what kind of a "shooting iron" I carried, and dodged when I cocked and unbreached the rifle to show him. "Some mighty clevah people down the road," he assured me as we parted. It was with new interest that I looked up the valley of Bald Eagle Creek to the south of west.

After a while I stopped at a house and asked for the privilege of earning or buying some bread and milk. If I would wait till the men folks came I could have dinner. I waited, and from the farmer learned the reason for the many cattle signs and tracks I had seen clear across the pine barren from Renovo to Beech Creek Valley.

That is a cattle range. The farmers around the borders of the wilderness turn their steers and young cattle, or cattle for beef, loose there to live for the summer. In the old days a cowman used to tend a herd for the season for a dollar a head. He lived with from 200 to 300 cattle during the summer, aided by a dog, a gun and a salt lick to live and keep the herd together. But the farmers discovered that a salt lick alone was as good as the man. They turned their cattle loose with metal tags in their ears to identify them. The cattle returned every day or so to the lick, and there every week one or other of the farmers saw them, while renewing the supply of salt.

The cattle do not get very wild as a rule, but occasionally a bunch ranges far from its home lick and is found ten or twenty, even more, miles away. The meat takes on a flavor imparted by the browse that satisfies the farmer's taste better than any other meat; but a butcher whom I talked with a few days later told a different story. He said the cattle came off the range lean and useless for the shop, to his way of thinking.

A couple of years ago some men over at Snowshoe took to hunting their neighbor's cattle for market. They shot and sold several head, and then some farmer-woodsmen found their trail and ran them into the penitentiary.

After supper I went to the barn to sleep in the hay, and after a breakfast I loaded corn shocks till noon, and was nearly buried in the mow in an attempt to pass the shocks as fast as they were thrown at me. Chicken, biscuit, mashed potatoes, coffee, pumpkin pie, apple butter, jelly, etc., rewarded my labor, and soon after noon I started on. It was hard to leave—hard to face the unknown when the known was so pleasant.

RAYMOND S. SPEARS.

Natural History.

The Final Flight of the Pigeon.

A GLORIOUS spring morning in the middle seventies! The dun and emerald slopes south of Ithaca, N. Y., were aglow with the radiance of the sunshine.

On a farm located along the Ithaca and Owego turnpike traversing this section of country a certain alert youth and his bewhiskered uncle were preparing to unearth a huge bank of potatoes, which, as was customary at that date, and perhaps even now, had been buried beneath buckwheat chaff, straw and earth during the winter months. The work was progressing satisfactorily, when suddenly, as if tossed out of some vast inclosure, a great mass of writhing, twisting, swift-speeding birds darkened the eastern sky. This tremendous movement of birds was a blood-stirring spectacle, and for hours there was a steady flight of pigeons, moving in companies, battalions, regiments and tens of regiments. The man with the hoe and his sportive assistant viewed the kaleidoscopic picture until the spirit of the hour moved them to hurry to the near farm house and unlimber a ponderous double-barreled shotgun, to properly handle which great prowess and strength were supposed to be necessary. A single-barrel gun, chiefly noted for its kicking propensity, was there, too; and after considerable hesitation on the part of the family gathered in conference over the matter, the writer was permitted to carry it abroad.

Powder and shot were a precious commodity those days, and so, while pushing across meadow and stubble and pausing amid interspersing wood lots, we played a waiting game, hoping thereby to get a more favorable line of shooting than was offered by the flying squadrons whirling through space at every point of the compass. But none came, and as the call of the dinner horn clamored for our return it found us empty handed. For an hour preceding the dinner call, I had been stationed on the south side of a piece of timber, then known as the Rhodes woods. At regular and quick intervals there came from the north boundary of this cover the loud, fierce boom of a 10-gauge, evidently loaded to kill.

It was later learned that a pair of Ithaca gunners had during the forenoon been located in the north edge of the timber, the land from which pitched down sharply into a level reach of country, and from this point of vantage shot a bushel basket full of birds. The flight swept around the base of the hill, then uprose with the incline of the land to the line of timber to clear which the birds made lightning convolutions specially adapted for a deadly raking fire. Into this mass of birds, as it ever and anon rolled together that spring morning, to clear the tall pines, the two gunners poured a terrific cross fire. What the slaughter would have been had these men been outfitted with modern breechloaders is a question not pleasant to contemplate.

But the birds have disappeared, leaving not even the shadow of a substance, and the writer, as he reverts to the wondrous beauty of that morning, and last great flight of the lovely passenger pigeon, as it swept in a mighty host across central New York, is heartily glad that he failed to ruffle a feather.

To have browsed in the gracious field of nature; to have seen much that outdoor life has to offer; to have breathed the clean, fresh, pure air that broods over a fair land, without having contributed to the annihilation of a species of bird life the practically total extinction of which sportsmanship deplures, is a compensation more satisfying than gold—yea, than much fine gold.

M. CHILL.

SAVRE, Pa.

A. O. U. Bird Protection.

THE American Ornithological Union sends out this appeal for assistance in the work of bird protection:

"The few people who really care whether our seacoast birds disappear forever, or increase to their former beautiful throngs, are now summoned to rally about the standard, unless the noble work for which their subscriptions have backed the American Ornithologists' Union committee in the past two years is to be undermined or undone. The great achievement of this committee has been the procuring of effective State laws and effectual wardening of all remaining sea-bird colonies along our Atlantic coast. The American Ornithologists' Union committee has begun several suits in New York State, with good hope of success, but this winter's fight looms big before them, and is wholly dependent on the subscriptions for which we are now soliciting.

"Short-sighted dealers have in the past few years changed, from New Jersey to the Gulf, a beach thronged with millions of exquisite white sea-birds, filling the air with their wild voices, to a waste, silent but for the sound of the surf, and where there is little hope that a distant object will prove to be anything more inspiring than an old shoe.

"This devastation (wrought by attacking the birds in their breeding colonies, as they madly hover over the invader) was only complete as far northward as New Jersey, while in Long Island, Vineyard Sound and in Maine good colonies, both of terns and gulls, remained. These, and some remnants in Virginia and Maryland, the dealers were about to finish, when, two years ago, they found themselves confronted by a system of wardens, paid by subscriptions of this small body of beauty-loving Americans. Our triumph has been complete. Nearly every colony has greatly increased each year.

"The dealers plead that we are crippling an industry. That which passes like a blight across the fields, leaving no seed for the morrow, is not an industry.

"Half our work is the securing improved laws, and then watching them to see that they be not scuttled in the next Legislature by amendments instigated by the dealers.

"The American Ornithologists' Union committee, consisting of two men who can ill spare the time and who give their services gratis, will conduct the whole warden system and be present at the meetings of Legislatures all over the United States east of the Mississippi, if we

can raise the money for their expenses. The committee have used almost the last of our remaining funds, and every one who wants the work to go on must send them at once any money he can spare, as their winter and spring campaign will involve heavy expense.

"There is every reason to believe that a few years' struggle will put this cause on a more stable and less expensive basis, if not wholly abolish its need, but in the meantime we are in crying need of an organization and funds enough to meet emergencies, and any one promising to stand by us with a certain annual contribution will do yeoman service.

"The Legislature work is to cover the protection of all birds threatened by milliners, and to watch for violations of this protection and of the Lacey Act of Congress, which prohibits sending unlawfully procured bird-skins from State to State.

"Sea-birds are wholly essential as scavengers of the coast and harbors, and as pilots for fishermen to schools of fish. English fishermen allow no one to kill them.

"The work already accomplished is only a beginning, and if the committee can get the money they will extend the protection to the breeding colonies of the Gulf Coast and those of Nova Scotia and New Brunswick, as well as to inland breeding colonies, and will strengthen the protection of the Florida pelicans and the comparatively few herons that remain there. Sportsmen, too, will find themselves indebted to our wardens, who have not only protected sea birds, but, equally, rails and shore birds.

"The smallest subscriptions will be thankfully received, and if every one east of the Mississippi who has even a slight desire to perpetuate this beautiful form of nature would send a small contribution, the aggregate result would go far toward accomplishing the desired end.

"The whole work of patrolling our coast from New Brunswick to Southern Virginia, Louisiana, and the long journeys to visit Legislatures and inspect the work of wardens cost about \$2,000 during the past year.

"Money should be sent either to William Dutcher, 525 Manhattan avenue, New York City, or to the undersigned, ABBOTT H. THAYER, Monadnock, N. H."

Frogs and Snakes.

I HAVE been reading of frogs swallowing birds, and snakes climbing trees and swallowing frogs, etc., and would like to add an incident of which I was a witness. I was born in the country, in the State of Connecticut, and when a stripling of fourteen years was owner of a .22-caliber rifle; and on one of my frog shooting trips over at a mud hole called Spalding's Pond, one mile due east from the village of Wauregan, a favorite ground of mine, I shot the largest frog I have ever seen, even to this day. There were the remains of an old wall running into the pond, and close up to it sat the big fellow. I fired, and knew I must have hit it at the short distance away, but instead of sprawling out with all fours, as usually they do when hit, he never moved. I was surprised, and walking out on the wall, got directly over him and shot him through the head and picked him up. On account of his large size, I cut him open, and found two young robins, one pretty well digested and the other one perfectly fresh and probably just eaten. I have told this story, and have refrained from telling it on several occasions, for I don't believe I ever told it without some of my hearers doubting it.

About snakes swallowing their young: I was after huckleberries over at Green Hollow, Conn., when a small boy, and saw a blacksnake open her mouth and swallow twenty-seven young ones, but I did not kill her—I did not get a chance. I have also seen snakes climb trees when closely pursued, but not the tree trunk; they went around on the limbs which stood out of young pine trees and rested across them when near the top.

I know people who follow up the woods and streams see many remarkable things which it is hard for others to believe. Only last month I was pickerel fishing, and a fish took my live minnow and also my friend's, and we both struck at the same time. My friend hooked the fish and my hook brought up his minnow nicely hooked alongside of my bait. Of course we did not know it was the same fish until we struck.

SELDOM.

PROVIDENCE, R. I.

Citron for Snake Bite.

IN "A Neue Herbal, by Wylliam Turnour, Anno 1551, Imprinted at London by Steven Mierdman, and they are to be soolde in Paules Churchyarde at the sygne of the sprede Egle," is this useful little story of the citron and the serpent:

There was a certayn sherif in Egypt whiche tooke ij. naughty murthuring robbers and condemned them to be slayn and poisoned to deth of serpentes in the great theatre, that all men myght se them dye. But whylse they were led of the souldyers to the place of execution, ther met them a woman that had a citron in her hand, the which the murderers begged of her, and she clove it in two peces and gave ech of them a pece, the whiche they eat very gredely. But when as they came into the appoynted place and were caste amongst the myddes of a grete hepe of serpentes and aspidess they abode unhurt, and receyved no harm of them, and so came hole and sound forth agayn, beyond all men's lokyng for. Then the sherif axed diligently of them that kept the thieves, what they had done or what myghty preservative they had taken. But they answered that the thieves had eaten nothing sayving theyr accustomed pottage, and sayd further that they eat a citron by the way. Then the sherif commanded them to go to the prysone agayn, and the one sholde eat only hys accustomed potage, and the other sholde only eate citrones. These thynges done, the theves were agayn brought into the great theatre. And there he that eat the citrones continewed all the daye safe and sounde, although certayn of the serpentes had bitten him. And the other who had but eaten hys common meate, at the bytyng of one serpente fell down sterked ded. Athineus, a very noble and ancient autor, wryteth that he saw thys hys own self. Wherefore it were wisdome that men that are bydden to dynner of theyr enemies or suspected frends, before they eat any other thyng, should take a pece of citron.

Brünnich's Murres in Erie Canal.

LOCKPORT, N. Y., Nov. 24.—*Editor Forest and Stream:* Yesterday I was called into a place to identify some "queer ducks" that Mr. Ephraim Elwood had killed in the Erie Canal, about two miles east of Lockport. They proved to be Brünnich's murres. The first occurrence of this species so far inland was reported Nov. 9, 1894, when three birds were taken on Niagara River below Buffalo. On the 8th of the same month and year a young friend living on Red Lake, Theresa, N. Y., reported to me that he had killed "four ducks unlike any he had ever seen," and "they had bills like crows, and smelled so fishy they could not be eaten." I asked him to send me a head, wing and foot. I identified them as Brünnich's murres. November, 1896, two specimens were taken at Point Breeze (Lake Ontario), Orleans county. The species have also been reported on Oneida Lake.

J. L. DAVISON.

Stragglers.

TORONTO, Ont., Nov. 26.—On Monday, Nov. 18, a good specimen of the little auk was shot just outside of Toronto Bay in Lake Ontario by a local fisherman, and a few days ago an American three-toed woodpecker was shot by a boy on the outskirts of Toronto.

Both these birds are so extremely rare here as to justify their coming under the above heading. In fact, a taxidermist informed me that the last-named bird was rare everywhere.

There have been three or four cormorants about Toronto Bay at different times during the past two months, and while they cannot be called rare, still, they are only occasional visitants in this locality. Wildfowl of all kinds seem to have been more numerous than usual this fall in this vicinity.

The Duck Shooter's Lament.

A MISTY morning on the beach,
A lonely cross, a reedy reach,
A solitary bittern's screech,
And deep in meditation
A hunter stood before the mound
Whereon the cross, and in it found
Sad theme for speculation.

Long whiles he mused, and nothing broke
The silence save the bittern's croak,
Whose sad, sepulchral cry scarce 'woke
Faint echo's imitation.
Long whiles he mused, and who shall say
On what sad themes one's thoughts will stray
When standing mute at break of day
Before a nameless grave;

Thought of the devouring deep,
The wild, resistless, engulfing sweep,
The cruel, crawling, cowering creep
Of treacherous wave.
The rising sun dispelled the hosts
Of gloomy, soul-confounding ghosts
Of morbid mind's creation;

And then as he the cross drew near,
And read thereon its legend clear
He said, "If this ain't sheer
Emotional insanity;
To think I've shed a silent tear
O'er a 'Posted' sign, 'No hunting here.'"
His subsequent remarks, I fear,
Savored of profanity.

FRANCIS J. HAGAN.

Adirondack Notes.

Editor Forest and Stream:

As usual, I spent part of the summer and fall in the Adirondacks, and from long acquaintance there think I know something of the real conditions.

The past season witnessed an unusual scarcity of deer in some quarters, and unusual numbers of them in other places. This is believed to be due to the many lumber jobs in operation. Indications were not wanting that the lumbermen had plenty of trout and venison in camp when they wanted it. Also that their presence and operations had served to drive out surviving deer from many sections, massing them in more remote and undisturbed places.

The average sportsman did not, therefore, find his usual reward, in Hamilton county at least. Or, if he did, he had to go much further back for it.

On the other hand, partridges were abundant and in fine condition.

The tenderfoot was in evidence, as usual. One had a personal experience worthy of record. He had a penchant for going into the woods without a guide. With two friends he searched out a pond neither had ever visited before. Starting after dinner, night overtook them on the edge of a swamp, and they were obliged to camp. Next morning he climbed a tall tree, discovered the pond, and six minutes' walk brought the party to its shore. A deer was in a clump of bushes opposite. All could see the movement, but not the deer. Rightly, they would not shoot till they could see what they were shooting at. The deer got away, and they saw only his tracks.

The tenderfoot had to leave camp. Monsieur Tenderfoot, with his compass, piloted them out of the woods and then went back and spent four days alone in the woods. He hunted diligently, and saw seven deer, but did not get a shot. A momentary glimpse of the animal, or more often a whisk of the flag was all. But he had a good time, and learned much about the habits of our noble game.

Another tenderfoot was taken into the woods by the writer to a familiar and promising place. The new man had a double-barreled gun—rifle and shot combined. After a long watch a fat and beautiful deer came into view about 100 yards distant. "Shall I shoot?" "No; wait for a broadside." "I think I can fetch him now." (The deer was feeding toward us.) "Well, wait; you will have a better chance. Then aim high; let both barrels go at the same time." I did not feel the assurance of my friend regarding his skill, so told him to aim for the junction of neck and shoulder and shoot both barrels at once. Soon the broadside was on, and I said, "Now." After much effort to pull trigger and a long wait, the old gun roared. The deer looked, hesitated a moment, saluted merrily with the flag, and was off. My friend looked up in amazement. I had listened in vain for the sharp rifle crack, and said, "What's the matter?" "I—I—guess I pulled the wrong trigger!" The rifle barrel was still cocked, and the unexploded cartridge in place. The woods rang again, but this time to explosions of laughter. He wants to try again next year, and as he is a good fellow he will be welcome in our camp.

The game law, as it now stands, is neither respected or observed by a large number of the residents in the Adirondacks. Whether guides or other residents, the great majority view the present law with disfavor. Its operation creates dissatisfaction about guiding and the opportunity to earn, and disgust as to the preservation of game. One guide told me, "For seven years before this law I had earned on an average \$250 by this time, and now I have earned only \$50." He had a family to support. Another guide with a family said, "The deer are not worth anything to us, except what we can eat. Why should we take an interest in their preservation?" This is substantially the view of most. I was told, "Not one man in twenty thinks differently." Let it not be supposed that these views are peculiar and confined to some narrow locality. These statements represent conversations with men from widely scattered places, and among the most noted hunting resorts. One guide said, "The law will have to be changed, or in ten years there will be no deer to speak of outside the private preserves." I beg, therefore, to suggest some provisions for a new game law.

1. Open season, Aug. 15-Oct. 31, both inclusive.
2. No person to be allowed to kill more than one deer each season; except a man with a family resident in the Adirondacks, to be allowed two deer.
3. Jacking to be allowed Aug. 15-31, inclusive.
4. Hounding to be allowed Sept. 25-Oct. 15, inclusive. Only bucks to be killed before the hounds.

I am aware that these provisions are liable to opposition; nevertheless, I believe such a law would make for the real preservation of the deer, and I beg to offer the following considerations in support of the suggestions:

1. Such a law would suit that large class of sportsmen who are obliged to take their vacation in August and return home early in September.
2. Would suit the many who believe in hounding.
3. Would give opportunity for selection of bucks and sparing of does. (A few years ago, during a big hunt with dogs, seven does were thus spared in one day.)
4. Would suit the still-hunter by giving him the best of the season.
5. Would greatly lessen the liability of the accidental shooting of men in the woods.
6. Would suit the great majority of residents in the Adirondacks, whose sympathy with the game law and its enforcement are indispensable to that end and to the preservation of our noble game. Many said to me this fall, "Such a law as you propose would be respected and generally observed."
7. Would promote the happiness and well-being of the greatest number, which is the professed object of all law.

JUVENAL.

In Camp on Spanish Peak.

ONCE upon a time five of us had got together at my ranch on Rita Azul, Colorado, and had been on a succession of hunts during October and November. We had killed deer, turkeys, mountain grouse, and a good deal of time. We at last rounded up at the home ranch with a wagonload of game, and very tired, so the boys concluded when I proposed to go to Trinidad and sell what meat we did not want that I had better go, and decided that they would stay at home and rest. We skinned out about thirty hindquarters of deer and antelope, and Madam Inez (my home cook), an Indian lady of uncertain age and by no means an uncertain temper) put each one separately in a clean 50-pound flour sack. We put some hay in a big wagon, laid in an open wagon sheet and packed the venison carefully so as not to bruise it; also eighteen grouse and about a half dozen turkeys; then covered them with the rest of the sheet and my camp blankets to keep the dust out. On top of the load went two big bucks whole, and it was ready. My foreman, Miguel, hitched up two Texas ponies and I saddled another. Dearden, Ted and York each gave me a list of what they wanted, and we pulled out.

I rode in the wagon to keep my horse fresh, and just before we got to town I dug up some of the grouse and tied a couple on each deer horn and laid two turkeys between the deer. It pays to have a load look attractive. I got on my pony, who was fresh and felt just lovely, and we drove into town and stopped before Davis & Sherman's supply store. I did not want anything just then, but we wanted the load to attract attention. Miguel held the horses and looked as wise as possible, while I went in and got a cigar and saw Smith, the chief clerk. When I came out my load was being looked over by several men who were asking Miguel questions. I knew them all but two men who were examining the deer. One of the strangers was a big, rosy, red-faced man, the other was small, thin and wiry looking; both were dressed in corduroys that fitted though they were old and camp and travel stained. "Is this your wagon?" inquired the little man. "Where did you get the game?"

"Killed it forty to eighty miles east of here."

"What have you got?"

"Thirty hindquarters of venison, six turkeys, eighteen mountain grouse, and the two bucks."

"Did you and the Mexican kill them?"

"Not all of them. There are five of us that hunt together. We killed these and more in the last ten days."

"Are you a cattleman?"

"Well, yes, I guess so; I have got a ranch and about 150 head."

"Oh, you are a Yankee, ain't you?"

"Yes; but why did you think so?"

"Because you said guess instead of reckon. I would like to see you this evening and make your acquaintance."

He dug up a card which said, "Lieut. W——" and handed it to me and I told him my name and told him that the only card I had on me was the ace of spades. He looked a little queer and the rosy man grinned.

"If you hadn't said you were a Yankee, I wouldn't have offered you that card." And I at once apologized, and told him that I was only joking, and that I had a card case at home, but that most people here do not use them.

They went away with an "Au revoir" from the rosy man, who seemed to understand me and I knew we would be friends if we ever got acquainted. The little man was a trifle stiff, like most army officers. After I had given away a little game to a few friends, we sold the rest to a butcher for about \$60. Miguel went to the Mexican quarters to see his Compadre with five Mexican dollars in his tobacco pouch, and I went to the hotel, where I met Messrs. W. and T. They wanted to go up to the head of the Purgatoire (Rio de Las Animas) on a hunt; were expecting an eastern man on the stage that night and wanted me to go up there with them in a day or two. "Well, gentlemen, I will tell you how I am fixed. My three hunting companions are down on my ranch; I can't go without them. We have a big outfit of wagons and horses. If you would like to have us all go, I guess they would like to go along. I have an Englishman named Dearden, Ted Harwood, Gen. Harwood's brother, my most intimate friend, and Addison J. Whitman, commonly called New York. He is a cowboy who is a good hunter. They are all good fellows. York works for me summers, Dearden is rich and is trying to pay our expenses, though we don't let him always, but is very peculiar—as clean as a cat, bathes every day, and is rather fussy. He is paying New York wages at present, though I don't know exactly what for. Pretty much all York does is take off his hat and look wise when he does anything for him, and Dearden accepts it without a smile. I am—" Then I told them who I was.

Mr. W. studied a moment. I thought he was studying expenses, and told him, "If the boys go they will have a wagon and separate outfit and I don't expect you to pay any of their expenses."

"I was not thinking about that. T. and I can get along with anyone; but, excuse me for saying it, you people seem to be a queer combination, and our other man is—well I am not well acquainted with him. He will be my guest and I want him to have a good time."

"Well, I don't know; but if the boys want to go I'll take chances, and if Mr. X don't like my style I'll fetch you back to Trinidad at any time."

"All right. When can we start?"

"I'll start Miguel for home in half an hour and the boys will probably be here to-morrow night and start the next morning."

I found Miguel in a Mexican tendahoon (saloon) discussing various things with his Compadre, told him what I had done, and in a few minutes he rode up to the hotel on my pet horse, took my letter to the boys and disappeared down the road bound for the ranch.

"You seem to have that Mexican well trained," said T.

"No, he is my friend. He would do anything I asked him to; but I also generally do anything he asks me to do for him. He is my cook. A good hunter. None better. Honest and a good man in the way that a Mexican is good."

"Is there good hunting at the head of Purgatoire?"

"Yes. Sometimes very good when the deer commence to come down from the snowy range for winter, and this is about the time. I propose, if it suits you, to camp near the head of the north fork of the Purgatoire, between the Spanish Peaks and the snowy range. There is timber, good water and the deer cross from one mountain to the other quite often."

W. went to his room and T. and I went out down town and proceeded to get acquainted. I took him to every place of interest I knew in town, wise and otherwise. He was a very nice fellow, and at about 12 o'clock we finished the evening by going into a Chili restaurant and eating some tamales and a bowl of chili, and went home to the hotel to bed.

Barlow & Sanderson's stage from Kit Carson rolled up at about 7 next morning, and Mr. X. alighted with a travel-stained grip and a .45-70 Sharp's rifle in a well-worn leather case. I am not going to describe him for you, Mr. Reader, might know him, and I am going to tell a true story. I respect him for his good qualities and I never will go hunting with him again for reasons which I will hereafter set forth in this story. In all probability he would rather go out with five Brazilian apes than go again with our crowd. He was duly introduced to me. We had several mutual acquaintances in the East, but I didn't talk much to him. He had been on the stage from noon one day till 7 A. M. next morning without sleep; but after a bath and breakfast he was as fresh as a daisy, and looked fit to fight his weight in wildcats. We went down street and he and W. proceeded to buy supplies for a two weeks' hunt. W. had a tent and camp outfit and they proposed to hire Miguel if he came back as a cook. I told them that Miguel would be back at 5 P. M. if he was alive and his horse didn't get away from him. He came to the hotel at about 4, on my horse, and driving his hunting jackass packed with his blankets and mine, and my 12x14 tent with the poles dragging Indian fashion. Diabalo (the burro) looked rather sad, as Miguel had cracked him through at a fast gait for thirty miles, and my good little horse was a little tired. When X. saw old Miguel with his long muzzleloading rifle across the saddle in its case of buckskin, with its long cleaning rod sticking out of the muzzle, and his foot-long knife in his belt, he smiled for the first time.

"Is that your man, Mr. D?"

"Yes."

"Well, if he is as good as he looks we will have a good hunt. Can he talk English?"

"No, not much; but he can understand if you talk slowly and distinctly. Do you speak Spanish, Mr. X?"

"No."

I didn't tell him so, but I was glad of it.

"Where are the boys, Miguel?"

"Coming, will be here in an hour. In the big wagon; York is driving the saddle horses; Ted is on the wagon; Al. is asleep."

"Go put up the burro and Lead." Lead was my horse; his full name was Leader because he used to lead a band of horses, but his pet name was Lead. I will not tell you all his good qualities, but I hope to see his bright eyes and his beautiful form again when I end this weary journey and take my place in the happy hunting grounds with Miguel and my other friends, good men and true, that have gone before and left me here alone—for I am old in years though still young in spirit, and they are almost all gone.

The wagon came in after awhile. The boys went to clean up while I took their wagon down to the store and put in the supplies that Dearden saw fit to order. When I came to supper, I introduced the gang to each other, and we proceeded to get acquainted. Mr. X. cottoned to Ted and my little Englishman, but I could see he didn't like me one bit. Perhaps I talked too much. T., York and I went out after supper and did the town, ably assisted by Miguel, and had a funny time. I hate to go to bed and equally hate to get up, and when the boy called me next morning and I had driven him away and York came up, he told me that Mr. X. was anxious to start. So I told him to hitch up and pull with the wagons and Miguel; that they could all start if they wanted to, only leave me Lead and my saddle and that I'd be there by the time they were ready to camp. Miguel knew the road. I still felt sleepy, and so slept some more and got up and at dinner put on my old clothes and by dark rode into camp. They were all there, well up the north fork, camped in a beautiful saucer-shaped meadow by the side of the swift-running water under some big cottonwoods. The camp looked homelike as I rode up. W.'s tent, Dearden's little bedroom tent and my old big one were all up, and I could smell meat broiling and the delicious aroma of good coffee and frying bacon. The horses were eating grass, they had all been fed grain and Miguel's burro was standing tied to a tree, and occasionally sounding his trumpet with a loud hee-haw.

I told the boys that we had better move six miles up stream to within about a mile of its head; and in the morning we moved and camped in a glade of about twenty acres, with the stream running through it at the southwest corner of the southern Spanish Peak. There was good hunting all around. There are some mountain sheep around the Peaks. At that time they were not protected by law, and Ted and I crawled around on those confounded old mountains for three days after them, and then we got a stand on six. Ted killed a ram at about 200 yards with his .50 caliber needle gun; I devoted myself to a fat, dry doe and she fell over a bank about forty feet and was, as Ted said, "Somewhat mushed." We had to cut them up and pack them about two miles on our backs. The ledges were so rough that we made two trips, and hung the meat in a mountain oak. Ted took his horns into camp and I packed in a hindquarter of the doe for a change of meat. Mr. X. killed a black-tail deer the first day and one or more every day he was up there. But how he worked—up at 4 o'clock making life miserable to Miguel till he got breakfast, out before light on foot or horseback, not in till after dark. He had a wonderful sense of direction, and could come straight to camp in the dark from anywhere. W. and T. did not hunt much, but moved around with hammers and magnifying glasses, pounding rocks and making notes. In the evening Ted, Dearden, York, Thompson and I used to play poker till quite late, and at times make a little noise. X. said it reminded him of a pack of hounds in full blast, and that he couldn't hunt all day and stand such an infernal racket all night; so we moved our tent about 200 yards on the other side of the little grove from X.'s, and continued our innocent pastimes.

X. told Mr. W. that he didn't believe that I amounted to much as a hunter; he said that a man who played poker all night and slept half the day in a good hunting country had poor taste. It got to me, of course, next day, and it made me study some, for it was about true. So I told my troubles to Miguel. That night we went down to the Plaza, horseback, leading Diabalo; bought 200 pounds of salt at five cents a pound, by the way, and took it up a side cañon where there was a spring and an alkali lick that the deer used some, and salted the lick good. I knew that if X. didn't find it I'd be all right, so I got York to stall him off over toward the head of the Huerfano, northwest from camp, for a couple of days. X. almost walked the legs off poor York both days, but the deer found the salt and told their aunts, uncles and cousins all about it; and the evening I went there with Miguel the mud around the spring was all cut up with deer tracks. We took the big square camp lantern with a reflector and a heavy blanket to cover it, Dearden's 8-bore double shotgun and my rifle, Winchester model '73. We picked the horses away back, and got on the bank about forty feet away from the spring, as far off the trails as we could get. The wind came down the cañon in fitful blasts, and it was dark and inclined to be stormy. The rocks and banks made the air change and eddy at times and some of the deer got a smell of us, but finally they began to come in right, and when I punched Miguel with my foot he pulled off the blanket. The light glared down in to the lick and showed six or seven very much surprised blacktails. I got two and Miguel one out of that bunch. Then we went down and carried them up the bank before we bled them. We had a crack at several bunches before day, and when we hung them all up we had ten. Miguel had to go back to get breakfast, so we put for camp, and I went to bed. Miguel called me up for breakfast. I remarked that I thought that it was about time for me to go out and get a load of deer, for we must go home pretty soon. I got York to cook for the day in Miguel's place, and we went out and trimmed up the deer so that the buck-shot wouldn't show, and Miguel killed another buck with his own rifle. We then packed them all down to where we could reach them with a wagon, got them down to camp and had the forequarters out and the saddles hung up on a long pole by night. That evening we packed

Diabolo with all the forequarters we had in camp that were cut out and not needed for our own use, and went down to the Mexican plaza and traded them for various things; and then made a dance. Thompson seemed to think it was very funny. W. and X. did not go. X. asked me the next day how many of the deer Miguel killed. I told him two, and he told me that he believed I could hunt, but that there was something queer about it, for the boys laughed when they talked about it, and that Dearden said that I was a Yankee and then grunted and wouldn't talk.

The next evening Don Jesus Perea came into camp in his ambulance on the road to Walsenburg from Bernalillo. He had heard I was up there hunting and knew he was always welcome at my camp. We had quite a seance that night. We had a nice breakfast next morning and the Don went north with our good wishes, declaring that he would stay right there with us till we quit if he could, but that he had to go. He and his family have many thousand sheep and cattle and horses on a hundred hills. He was a fat, jolly Mexican gentleman, but has gone before. God bless him; he was as good a man as they make.

The next morning we decided to pull for Trinidad. We tore up camp and started the wagons for Trinidad, driven by Miguel and York; and the rest of us saddled up and drove Miguel's jack ahead of us as hard as we could tear for Trinidad, and got in a little after dark. The wagons came in next day all right. We had quite a time with the jack going down. He went everywhere that he ought not to and got the whole pack off once. We had some grub and a cooking kit on him, also a few other things.

The night we got in Mr. X. told me that he thought \$5 a day for me was about right, and I told him that I didn't want pay; that I never guided anyone for pay; and that I just went for mountain air and a change of scenery. He then told me that if he had known that he wouldn't have been so dictatorial, as he thought that I was hired by Mr. W. He then warmed up and said that he would like to go out and see my ranch. So he and I rode out home the next morning. We went out that afternoon on fresh horses, looked over the cattle and then went hunting, and he killed a whitetail at 250 yards. The next day we went out again and X. almost walked me down. He was as strong as a horse and a good man, but as stubborn as Miguel's jack, and the worst of it was, to tell the truth, always in the right.

But I wouldn't go hunting with him again for \$25 a day. He is too much inclined to make work of play. He went back to Trinidad next day in my buckboard, and I have never seen him since. There, I haven't half told you the story. I meant to when I started, but my heart has failed me. We all tried to be as mean as possible to tease X., and we were rather worthless. If I told you who X. was this would perhaps interest you more than it does; but I won't.

W. J. D.

Grouse Shooting on the Manistee.

On the morning of Nov. 11 Verne Moore and wife and myself took the 3:18 train for Wellston, Manistee county, to shoot quail and grouse and take a casual glance at deer tracks. No railroad in Michigan extends greater courtesy to hunters than the Pere Marquette. Arriving at Baldwin the train made a twenty-minute stop, and we took supper with our old friend, H. C. Crosby, who is a great lover of the dog and gun, and a first-class shot. After leaving Baldwin we changed our minds about our stop and concluded to get off at a little station called Bretheren. Leaving the car at 9:10, looking in every direction for a light, we saw one in the distance, and found that it came from a house recently built by an enterprising man by the name of May, who is preparing to keep all comers. We found the family had just moved in, and were ill prepared to entertain strangers, but they gave us a hearty welcome and the best accommodations they had. I slept on a cot with an open wire mattress, covered by a blanket, my only cover being another blanket folded. The wind was blowing a perfect gale from the northwest, and bringing snow with it. My weight took the cot down about four inches in the center and left the cover resting on the edge. It made the most perfect ventilation for sleeping that I've ever found inside a house. The people were astir early in the morning, and at 7 o'clock we sat down to a good substantial breakfast. After breakfast Mrs. Moore donned her short skirt and full hunting outfit, and we started for a cedar swamp, which was plainly visible three-quarters of a mile away. When we reached the swamp we turned neither to the right nor the left, but plunged into its dark, mysterious depth, expecting every minute to hear murmuring or expressions of disgust from the lady. But not a single complaint did she make, no hanging back from climbing over logs or brush, but a merry laugh when some roguish branch snatched off her hunting cap. For two hours we kept up our line of march, going as near southeast as we could judge, and at last came out of the swamp where the ground was dry and the burnt pine stumps were thick, and where poplar and white oak brush were scattered. We were making our way toward the home of Frank Hendricks, an old acquaintance, who has a log house and barn on the north side of the Big Manistee River, and in sight of that crooked and muddy stream, on an eminence 200 feet above the water. To the east and northeast from this place we could see the clusters of jack pines and the roofs of the houses of settlers six and seven miles away. We could also see from his home the bare bluff where the Pine River, or what is there called the South Branch, whose waters are full of trout and clear as crystal. It almost seems to hesitate to mingle its bright and sparkling waters with the muddy Manistee. Frank Hendricks and his good wife Netta gave us a hearty welcome. At dinner the son, Alpha, came in. He said he was glad we came, because there were so many partridge and quail around there they were a nuisance.

As soon as dinner was over, Verne and I took our guns and started afield, thinking that Nina would want to rest after the long walk of the morning, but not so. We were not fifteen rods from the house when the old dog, Krankie, by motions we understood, told us there were birds very near. Within fifteen rods of the barn she anchored, immovable as a statue. We walked up to her side, and with a roar up went twenty or thirty quail.

There were five quick reports and five beautiful birds lying in the stubble. We followed them a short distance and got six more; then thinking of what our friend Hendricks had said, that he "hoped we'd leave enough for seed," we desisted from an attempt to kill any more that day. Making a short detour through the woods adjacent to the field, we flushed several grouse without getting a shot at them. The dog in trying to locate the grouse raised a large white rabbit, which we shot as it ran by us. It was a novelty to my companions, who had never seen one before.

The next morning bright and early we started out. The ground was covered by an inch of damp snow, sufficient for tracking partridge, quail or rabbits. Following the directions of Alpha, who told us there were plenty of grouse in the thick timber a mile to the north, we had not gone far along an old trail among pine stumps and logs before the dog said there were grouse very near, and he came to a point but a few feet from the wagon track among some sweet fern and burnt chunks. The boy Alpha said: "I see her. Shall I shoot?" He had never shot on the wing, and did not have much chance among so many guns, so I told him to hold high and "let her have it." He barely raked the top of her head. It did the boy more good than it would have done an old hunter to kill a dozen. We then went on to the body of heavy timber, consisting of beech, elm, basswood and an occasional hemlock. We had barely entered the timber before Nina—Mrs. Moore—said she could hear a partridge flying ahead, so we went in the direction she gave and there the tracks showed that they had been feeding and running in every direction. I told them the birds had in all probability taken refuge in the scattered hemlocks, and if so, none but the keenest eye could detect their whereabouts. While discussing the matter, Whirr! right above our heads, went two or three of the swift-flying beauties. Verne has eyes as black as coal and bright as stars, and he said he believed he could find them, knowing where to look, and that he and Nina were not so proud but they would shoot at a standing bird. After looking for a short time, Verne said: "Hold on" (we were all looking up into the thick tops of the hemlocks). "I believe I see one." Bringing his Marlin pump gun quickly to his shoulder, the sharp ring of the nitro powder had hardly reached our ears before we saw tumbling from the top of a near-by hemlock one of those wary birds, and Verne and Nina never desisted from scanning those dark, mysterious-looking trees till they had eight grouse in their hunting coats.

The next morning while the snow was soft, as I was hunting alone, for I prefer shooting on the wing, I counted forty-three grouse tracks crossing the track I was following in going sixty rods. As it had snowed until daylight, and it was now 8:30, the tracks must all have been made that morning. We hunted in this locality from Monday noon until Saturday night, and the next day Verne and Nina wanted to go and look for the light-footed deer. Bright and early Alpha had their sleek team hitched to the double wagon with a good supply of hay and corn in the box, and all taking our dinners in our pockets we climbed into the wagon, and arriving at our destination, a deserted lumber camp, put the team into a small log stable. We started out through a beautiful two-inch tracking snow, and had not gone far when we came upon the track of a small deer. Following this for a short distance, we came upon the track of a much larger deer, which we judged by the track had been gone but a short time. Following the newly made track a short distance, we came upon the tracks of three more. Alpha and I told Nina and Verne we would make a short detour and try to drive one by them if they would remain there. We started out, and returning after a two hours' tramp, we found them pretty well chilled. We were all tired and sick of tramping except Nina, and so concluded to make back tracks for home. Going the mile back to the team, we crossed several deer tracks made since we had been over the route. It was about 3 P. M. when we left the barn, where we had put the team, and we arrived home before dark, after a good day's sport. In going over the route in the morning we started a grouse every now and then, and went on telling them we would "see you later."

As Verne had put in all his vacation, he and his wife started for home the next morning, but I stayed and hunted a couple of days longer. They brought with them forty-one birds.

That the readers of the FOREST AND STREAM may know something of grouse shooting on the Manistee, let me say we shot away almost 300 cartridges, and with the exception of four rabbits and twenty quail, were all used for grouse. I would say to any one who wishes to shoot grouse to their heart's content, although the bird is wild and wary, and will often lie close to the dog, there is no better sport than grouse shooting in Manistee and Wexford counties. We have engaged board and lodging for next season. We came home on the train with a party of five hunters from New Buffalo, who had seven deer. They were, so they said, readers of the FOREST AND STREAM. The largest ones weighed 305, 265 and 220. They were a nice lot, and were killed in the Upper Peninsula.

SULLIVAN COOK.

Providence Sportsmen.

PROVIDENCE, R. I., Nov. 24.—The new line of cars between Providence, R. I., and Danielson, Conn., has opened up some new hunting and fishing ground to our sportsmen, and each Sunday a special car is run for their convenience, and it goes out and comes in crowded with men, guns and dogs, and some game, too. But not every one who hunts gets game; it is just like fishing, the more some people fish a place the better it is for some others, as some go just to feed them.

Birds seem to be scarce up that way, but a few foxes, a good many rabbits and quite a number of coons have been shot. A man showed me two pheasants which came from Narragansett Pier way a week ago. The law is not off them until 1903. Game wardens, keep your eyes open; the gunners are shooting your close-season birds.

A man told me a short time ago of his getting fourteen trout, the largest 11 inches long, down in the vicinity of Wood River Junction. I suppose it is every one's duty to make trouble for this illegal poaching, but one hates to get his friends in trouble.

SILDON.

Experience with Big Game.

MORGANTOWN, W. Va., Nov. 22.—*Editor Forest and Stream:* It is little wonder that heated discussions so often arise in regard to wild animal life, hunting, etc., when the experiences of different people, of equally good authority, have such a wide range of variation.

Only recently I read the writing of one of our very best authorities on big game and its pursuit, and one whose experience has in a general way come nearer to harmonizing with that of my own than any one whose writings I have ever read.

In speaking of deer, he said that deer, when startled, would frequently run twenty miles before they would stop. Now, to me this seemed ridiculous, as in all the hundreds of deer which I have followed after they have been startled, none ever went half of that distance, and I dare say very few have gone a fourth of that distance. It is hard for us sometimes to even conjecture how people who are perhaps much more experienced than we, can arrive at a positive conclusion and assert the fact, where to us it may seem an utter impossibility for such to be correct, according to our observations. Where distance is one of the factors coming into dispute, it might be accounted for largely by the great elasticity of hunters' miles, which, we may safely say, range in distance from 100 rods to 500 rods to the mile, varying according to grade, growth of timber and bushes, absence or presence of rocks, logs, etc., kind of weather, condition of the stomach, mental and physical condition generally, and many other environments.

Charles Cristadoro, in a recent issue of FOREST AND STREAM, in commenting on the portrait of an elk by Wallihan, says, "He stands there, an elk in all his grandeur and beauty, sleek and graceful." My imagination can only see him as being anything but "sleek." He is certainly very poor, as the picture will indicate, and, as would be the natural condition in midwinter, as this evidently is, his long coat of hair is rough and shaggy, and he has that far-away, dreamy look in his eyes which all elk have in midwinter, when they are poor—so different from the bright, alert look of the early fall, when they are fat, strong and vigorous. That is the feature of the picture which appealed to me most strongly; and had his eyes had that keen, alert look, and his coat been sleek and smooth, with the surroundings showing midwinter, all would have been unnatural.

Truly, Mr. Cristadoro is justified in commenting on this picture, for no picture has ever come to my notice which so vividly and naturally shows the elk at home. It is a warrant of my appreciation of the picture to say that it occupies a conspicuous place in my scrap-book, which I have been working at for years, pasting therein only the very choicest of illustrations, and reading matter, all pertaining to game and hunting; a large portion of it clippings from FOREST AND STREAM, starting with E. Hough's "How Fur is Caught," in seven chapters.

One who has hunted much and observed closely the hunted animal, will notice some striking peculiarity at a particular stage of the animal's contact with the hunter, and will learn to look for and expect to see that certain peculiarity until it becomes so common to him that he comes to regard it as one of the well-known characteristics of the animal, when perhaps not one in fifty hunters have ever noticed the same trait in the animal at all, while at the same time the others may have, during their experience, been attracted by some other just as noticeable peculiarities, which we have failed to notice. For instance, I noticed among the first deer I killed a certain little action which they performed when shot through the shoulders or heart, and I learned to watch for that, and if I saw it, I was as sure of that deer as if I had it already packed on my horse. It was a vicious bound in the air and kicking straight out behind with both hind feet; then of course always dashing off a few jumps before falling dead. While many may have noticed this action, I have never yet heard it spoken of, and yet a large percentage of the deer I have killed have gone through exactly the same performance. This experience only refers to black-tail. Hunters of white-tail tell me that a sure sign of one's being hit hard is for it to drop its tail. Of course their big, white tail, being so conspicuous when they have it raised, would make it an easy matter to determine whether its tail was up or down; but the tail of a black-tail, not being noticeable, it would be hard to determine whether or not the carriage of their tail would indicate whether they were or were not hit.

A person may hunt for years and kill much game, and perhaps some one individual animal may "cut a caper" entirely different from all others. It would be hard to explain why. One fall I was helping my near neighbor to do some work. His brother and wife from the city came to visit him, and found us out of meat. One evening I suggested that I go over to my cabin, about eighty rods, and bring over my rifle and go out next morning at break of day and try for some venison. The city people thought it most remarkable to think of trying to kill a deer before breakfast. It was sundown when I started over, and when I got my gun, an extra pair of boots and some other things and started back it was getting quite dusk. Looking across the meadow along the edge of the green timber, I saw three deer coming out into the pasture to feed. Dumping my duffle down in a pile, I lay down flat and started to crawl toward them, and they were coming toward me. By lying flat and keeping in the lowest places, I managed to keep out of their sight till I got within 50 yards of them—it was by that time getting so dark that I had to get close.

Of course, I had to rise up in their sight to shoot, but had a good idea that they would tarry just about long enough in their astonishment to give me a quick shot. I cocked my rifle, got all ready, and then rose up in position for a knee rest. The nearest one to me was so startled at my sudden appearance in the very midst of them that it went off a few jumps, then stopped to look. As it turned around, facing me, I shot it in the breast; then it did what no other deer in all my hunting experience ever did: It bounded high in the air; higher than I ever saw any deer jump, and lit on the ground on its back, making the ground fairly quake. I thought the way it sounded the critter had burst wide open. It jumped to its feet, made three or four bounds, and fell,

then got almost on its feet again and dropped dead.

The difference between the actions of a deer and elk when struck by a ball is remarkable. While a deer shows in a very lively way when it is struck, an elk, on the contrary, seldom ever flinches, so that you may be watching it closely and yet not know whether or not it is hit.

A great difference is also shown between the two animals when wounded and being followed. No matter how badly a deer is wounded, it is hard to approach, always using its usual caution in selecting a place to lie down, while an elk with a mortal wound will often lie down with its head behind a log or tree, so that its head is hid from view as it is approached from behind, while its body may be exposed to view, thus giving the hunter every advantage.

Before reaching the age of having opportunity to be among big game, I eagerly read everything I could get on the subject, either in the way of natural history and information concerning their habits and living, or simply narration of experiences; but found most of my reading of no practical benefit when it came to getting into the woods among the real, live game; and only by hard experience can we learn fully of their ways.

The old maxim, "Learn to do a thing by doing it," would apply to no pursuit better than that of hunting. A novice who was very desirous of learning how to hunt bees once traveled many miles to see old Peter Fyock, one of the old-time veteran hunters, who was the last of such characters of my acquaintance to pass away, to secure from him the desired information. After learning his mission, old Peter said to him, in his slow, deliberate way, "Oh, it's a trade, and you have to learn it!" That was all the information he received for his trouble.

It was always my habit when hunting on snow to follow the first track of game I came to, no matter whether it was fresh or not, so long as its direction did not conflict too widely with the general direction I wished to hunt. Once, while following an old track of a single buck, I crossed a very fresh track of a fawn. The tracks crossed at right angles, the fawn going directly toward home. I halted and reasoned with myself thus, "If I keep on after this big deer, old as the trail is, I may get it, and the chances are about equal that I won't get it. If I switch off after this fawn, it being alone, I can be sure of getting it, but I won't have so much when I do get it. Which shall it be?"

After weighing the chances and balancing them with the weight of the deer, I decided that, as I needed some meat at once, I had better be sure of a small piece than take chances on a larger. I started after the fawn, full of confidence. In an hour I had it scared up, without having seen or heard it. For six hours I pushed on after it, with a grim determination to have it. After dark I tramped wearily home without having seen it. I declared that I would not be outdone by a fawn, and before the sun was up next morning I was on its trail where I had left it, and by 9 o'clock was so close to where it was feeding that I found its droppings still smoking. It was an ideal morning to hunt; the sun was shining warmly and made the snow soft; but notwithstanding all the favorable conditions, and my extreme caution, that blamed critter got out from under my very nose without my seeing or hearing it; and all day long I followed it, using all the caution and strategy I knew, and at night I left it about where I had the night before, and went home, tired, but so much wiser than I was two days before.

Two years of argument could not have convinced me that a fawn with five or six months' experience, alone in the woods, on a good tracking snow, could so completely outwit me, with several years' successful hunting experience, that in two days I could not so much as get a fleeting glimpse of it or even hear it; but two days of hard experience did the business. I hope it is living yet, a wise old deer, successfully baffling all pursuit.

EMERSON CARNEY.

Maine Hunting.

BOSTON, Nov. 30.—Still the big-game hunters who have suffered from the deep snows and early winter weather in Maine are coming in. Mr. William G. Harding and Mr. Theodore Ripley, both of the Boston Herald mechanical force, have just got home from their annual hunting trip. They went to Patten, Me., and thence to the Sebois region, as they have done in each other's company for several seasons. Last year, it will be remembered, that Mr. Ripley shot the big moose, an account of which appeared in the FOREST AND STREAM at the time, and early this season a most readable article concerning the same hunt. This fall they intended to go in fourteen or fifteen miles on foot, toward the Allaguash, further than the transportation of twenty-five miles by buckboard from the railroad. They took tents, and intended to make a thoroughly out-of-door trip, away up the East Branch of Sortle Brook. But the first day in the woods it snowed, at which they were much rejoiced. The second day it snowed, and snowed nearly two feet, at which they were considerably disturbed. They came upon a deserted camp, after making not one-half the distance they had intended from the buckboard road, and concluded to stay in this camp. They did not pitch their tents at all, as the snow lasted all the time they were in the woods, with occasional augmentations. They easily got their two deer each, handsome bucks, while the guides took a couple for food at the camp. They saw a number of moose of the spike-horn sort, but these neither wanted, as both have splendid moose heads to their credit already. The novelty of buck deer fighting they looked upon with wonder, seeing the battles several times. In the midst of one of these battles Mr. Harding shot one of the bucks. The other got away, after giving his fallen foe a parting gore. Partridges were unusually scarce, and Mr. Harding attributes this to the great abundance of foxes, black cats or fishers, sables and weasels. They at once found their camp infested with weasels—little white fellows with only tips of brown at the end of their tails. They tracked sables and saw a number of foxes. Fishers they tried hard to get sight of and within shooting distance, but did not succeed. They say that they had little idea of the amount of such game in that region till they saw the tracks on the fresh

snows. Breaking camp and tramping out to the buckboard road was particularly difficult for men not accustomed to wading through two or three feet of snow, but they came out alive, and feel well repaid in experience and the novelty of being in the woods with so much snow on the ground. They are not just ready to try it again, however.

Maine gunners have been reaping a harvest of deer since the snows have fallen. The animals are being killed nearer to the settlements than ever before. It is certain that the number of deer killed by Maine citizens is greater than the number killed by non-residents, and still there is talk of taxing sportsmen who come from outside of the State.

MOLUNCUS, Me., Nov. 29.—Here we are in the Maine deer country. The snow is deep—nearly two feet—but there are sportsmen here, and they are getting game. Nearly seventy deer have been forwarded from James Millmore's place this fall, and eight go to-morrow morning. Sportsmen have no trouble in getting their full equal quota. Mr. and Mrs. W. J. Connell go out with four deer to their credit. Mrs. Connell shot one yesterday herself, and Miss N. Knight, of Newburg, has shot two this fall. Both women are brave about the weather. They go out dressed for braving the snow—rubber boots and sweaters. The best feature of this point is that the deer are to be found within a mile of Millmore's place. Dr. Chapin, of Springfield, also goes out to-morrow with his full quota of deer. A sister of Miss Knight had a funny experience last fall here. She is accustomed to the woods; shoots partridges every fall. Last fall she came up with a lady friend, also in love with shooting. Miss Knight took her friend around the woods, hunting, and they had good luck partridge shooting. Somebody told the story down at Bangor. They informed the game warden that Miss Knight was guiding without a license. The warden came up to investigate. He looked into the case, and wisely concluded to let the lady hunters alone. Prof. J. F. Moody, of Auburn, is here, and out after deer.

SPECIAL.

Some Thoughts Upon Moose Hunting.

A FORTNIGHT ago, while sitting with a companion beside a New Brunswick barren, I discovered a cow moose and her calf feeding toward us. We had a small but hot and almost smokeless fire made of branches of dry juniper. The day was raw and the sky overcast. It was noontime, and we had just finished our luncheon. The moose were not more than 100 yards away and were absolutely in the open. We arose, and when I saw that there were no horns, I laid down my rifle and got out my camera. The cow was large, probably weighing 900 pounds, and to my surprise, she had a good-sized bell. The calf (perhaps a yearling) was nearly as tall as the cow, but of course slender. They fed slowly to within 70 or 80 yards of us, then turned about and finally wandered again very slowly in our direction. We were standing in plain view. The cow came on, while the calf seemed to have found particularly attractive ground and lingered behind. At 60 yards the cow observed us, looked intently a few moments, then resumed her feeding and advanced slightly to one side. She looked several times, and at last, when 25 yards away and exactly down wind, receiving both the smoke from the fire and our scent, she looked at us, laid back her ears, and we thought had a generally cross expression. After smelling and looking, she went on feeding. It has been suggested to me that the smoke may have destroyed or obscured our scent.

In the meantime I had made three exposures, and as the calf came on turned and snapped him. He saw my movement, looked a moment, then trotted toward the cow and nearer to us. She appeared alarmed at his action, and together they trotted perhaps 40 yards, then walked on through scattering trees and out of sight.

Last year a woodsman met a bull moose coming out of a thicket into a logging road, and not over 20 yards ahead of him. The moose saw him, looked a little while, then stepped out into the road, apparently to get a better view, and stood gazing until shot. This year the same man met a bull moose in such a road, and having a heavy pack on his back, and not wanting a moose, he stood and waited for the animal to leave. The bull moose showed no fear, and at length the man slipped his arms out of the pack straps, laid down his burden, and after giving his lordship ample time to escape, shot him. The moose turned partly around and fell dead.

These and similar experiences lead me to the following suggestions:

First—That the moose is not particularly keen of vision, and is warned of danger chiefly by hearing and smell.

Second—That the knowledge of man's presence, gained by sight only, and in the open, does not greatly alarm the moose and does not spell danger. I take it that man appears rather insignificant, is regarded with curiosity, and so long as he remains in sight, excites little fear. However, once let him vanish after being seen, and the moose departs in haste.

Third—That the moose, unless frequently shot at and concurrently followed or hit, has little regard for the noise of a gun; in other words, he pays no attention to the report unless it be accompanied by other signals of danger. I know a gentleman who some years ago fired an old army musket twelve times at a moose in the open about 250 yards away, without disturbing his feeding, though he looked about once or twice. Of course, the moose would have been alarmed had the bullets struck under or near him, but they plainly went high and struck far beyond, and he heard only the report of the gun. Of course, the moose does not comprehend the nature of man's weapon, nor the flight of a death-dealing missile, nor possible injury to himself from a creature at a distance, but he may know by bitter experience, or more likely the noise of bullets striking objects near alarms him.

Fourth—It is my belief that the moose fears, more than all other enemies, the bear, which constantly destroys the young, and often attacks even the cows. Of course

the bear travels silently and stealthily, and the first warning of his presence is often the fatal rush. Therefore, let the moose hear any unusual sound when he cannot see its cause, and he waits not an instant; he says, "Bear!" and flees in a panic.

I suppose in the cases mentioned above, where the woodsman shot the moose, had the man been wearing a fur coat and walking on all fours the moose would instantly have shown great excitement and would either have charged at once or have fled.

It should be remembered that moose, like men, have various dispositions, and that the same moose at different seasons or in varying states of health will behave diversely. A rutting bull moose of mature years fears nothing which lives in the woods, nor even man, while at other times he may show much caution. There are times, as in summer, while there is no shooting, when all moose seem to realize a truce with mankind. At a lake I know a few miles from a New Brunswick village, both bulls and cows frequently appear unconcernedly on one side while men and boys gather cranberries on the other side only a few hundred yards away in plain sight.

I heard a good deal of complaint regarding the small-bore rifles, and rumor had it that Henry Braithwaite's parties had this year wounded and lost many moose, much to his disappointment as well as sorrow. Further, that he attributed the loss to the use of the small-bore rifles. The question to my mind is one largely determined by the temperament and experience of the hunter. The cool and experienced shot will kill cleanly and surely with either style of gun, and naturally prefers the lighter weapon with low trajectory. The average sportsman, however, is inexperienced, is usually under excitement which is often increased by the nervous anxiety and hasty and copious advice of his guide, and is likely to shoot, if not wildly, at least inaccurately and without deliberation. I met a gentleman returning from his first moose hunt—one of the crack trapshooters of the States—who confessed to having killed his moose with seven shots from a Mannlicher, no one of which struck the heart or lungs, and his caribou with the thirteenth shot from the same gun, having missed the other twelve. Comment would be superfluous. The gentleman realized that such shooting was inexcusable; and I predict that he will some day be as expert with the "queen of weapons" as he now is with the scatter gun. I would give to the cool and certain shot a small bore, but the ordinary hunter will be less cruel and have less disappointment if he uses the large bore. The .30 is a lancet, deadly indeed, but allowing the animal not hit in heart, lungs or spine, time to travel beyond reach. The large bore, on the other hand, is a club which paralyzes by concussion, and bleeds for tracking. Humanity, as well as success, fellow sportsmen, require that we do not shoot until we have used all possible ingenuity and skill to get to close quarters with the game, and then that we shoot deliberately and unerringly.

M. F. WESTOVER.

Protection Near New York.

MR. J. E. OVERTON, who has become famous for his pursuit of game and fish law violators on Long Island, has continued his good work through the autumn.

In September he had three St. James men fined \$25 for taking scallops before the open season. In October he caused a Bay Shore man to pay \$100 for offering for sale ruffed grouse before the season opened.

During the deer season on Long Island he watched the deer grounds very closely, and the general belief is that very few were taken illegally. About 100 were killed during the open season, and among them some very good bucks.

Mr. Overton recognizes the importance of breaking up the shipping of game to market from Long Island. On Nov. 11 he took two boxes in the express car of the Long Island Express Company, on the morning train from Wading River, and found five partridges and twenty-one quail. He has begun actions against the shippers for the recovery of \$385 in each of the two cases. On attempting to repeat his inspection the next morning the express company refused him entrance to their car. A visit to the express company by Mr. Overton's attorney produced during the day a telegram announcing that the refusal had been reconsidered, and that their cars might be inspected. Since then no opposition has been offered.

Also on Nov. 11, Mr. Overton seized three grouse in possession of a newsboy on a train from Greenport. These were pinnated grouse, and evidently snared birds, and may very possibly be birds turned out by some preserve or club people near Greenport, on Shelter Island. The destruction of such rare and valuable birds by the pot-hunter is shameful and also discouraging. Mr. Overton has also recently arrested a Jerseyman taking scallops in Peconic Bay in violation of Section 128, and two other men for throwing starfish into the waters of Peconic Bay. One of the latter is in jail for thirty days.

The cold storage people's attorney had entered a demurrer to the game protector's complaint, and there is no telling when the case will come to trial.

Newfoundland Caribou.

BOSTON, Nov. 25.—I note your request to readers of FOREST AND STREAM to report their luck on shooting and fishing trips. My trip was to the Grand Lake barrens of Newfoundland in the latter part of last September, caribou shooting. I secured three. The largest weighed between 400 and 500 pounds. The head has thirty-five points, and is perfect. The next largest has twenty points, and one doe seven points.

SAMUEL WAX.

President Loubet as a Sportsman.

IN his youth, President Loubet was an indefatigable hunter, and has kept up this love for the sport. His favorite occupation at his country place, Rambouillet, is hunting. He is a tireless walker, and is fond of going off with a single game-keeper in search of his game. "You may smoke your segar, Joseph," he will say, and chatting pleasantly, the two set forth, the president forgetting the cares of state in his pursuit of the feathered or furry prey.

CHICAGO AND THE WEST.

Game in Lower Michigan.

CHICAGO, Ill., Nov. 27.—Mr. W. B. Mershon, of Saginaw, under date of Nov. 23, chronicles some of the doings of the Saginaw Crowd, that representative gang of good ones. The only bad news he mentions is an accident to Mr. Watts Humphrey, and Mr. Humphrey's very many friends will regret to hear that he is to be laid up and will miss the closing days of the shooting season:

"On our Dakota trip we had a good time, every one was well, the weather delightful, and we got all the ducks we really needed. It has been a good many years since I have seen the quantity of mallards that I saw in North Dakota this year. Some of our nicest shooting was over decoys in the barley stubble, where we would blind among the shocks of grain and kill these fine birds on the hard ground.

"The Saginaw Crowd put the car in commission, and went out a week ago last Tuesday. Humphrey got his foot in a rabbit hole and dislocated his ankle, and had to crawl on his hands and knees half a mile to get a farmer to take him home. His foot is in a plaster cast, and he will be laid up a long time. The boys stayed down there about a week, going and coming. Mr. Briggs had good luck. You remember last year he did not go far away from the car, for he cannot stand much of a tramp, and after the others were gone, about 9 or 10 o'clock, he would hunt around the car, and did not miss a day but what he would have six or seven partridges.

"The country has been cleared up so you would hardly recognize it since you were there a year ago, and the boys did not get many birds; yet, from what I can learn, there were some patches of woods where they really did see a good many, but did not brag much about their shooting qualities. I could not go with them, for I had a lot of business that week, and besides I was a little stale, for I had put in about three days elsewhere the week before, trimming up twenty partridges and eighteen quail. But last Monday night they tempted me, and I joined the gang as they passed through Saginaw for a point up on a logging road west on the P. M. R. R. We arrived at our destination about 8 in the evening, and were up and away at 7 next morning, driving eventually seven miles from the car, stopping at one or two places on the way. We had to learn the ground, Briggs and Lyon, 'the two old men,' as the driver called them, hunted around the car, and as usual came in with six or seven birds. The rest of us missed a good many. We found them too close to the cedar swamps, where they would dart in out of sight in an instant, and it was impossible to follow them. I think when I counted up that night the party of nine had twenty-six partridges and about thirty quail.

"It is strange how the quail have thrived in that northern country. Their entire habits have been changed. They are now wood birds, very wild, frequenting swamps to such an extent that one never can kill more than two or three out of a covey, and I never saw such large birds. Some of them are fully double the size and weight of those I have shot in the South.

"The next day we concluded we had gotten on to the territory, and were going to have good shooting, and it turned out we did very well. I had my shooting clothes on, and killed fifteen partridges and four quail, and had a long tramp all by myself. I had old Bob, and every bird was killed over his point, and it is a strange thing, but I did not once during the day walk on to a bird. Every one I put up was one that the dog was pointing. Twice I got three out of a bunch, being able to slip in the third shell before they had gotten away. There were times when I found a bunch of five or six together, and twice I made a double, two leaving the ground at the same time. When we all got in that night we had fully as many birds as we had the day before, and some had drawn a blank. The next day was delightful, but we got out of the good territory and only had fair shooting. So you see that was a good hunting trip. The car is out of commission for the year, and every one feels pretty well satisfied.

"The general report is that quail are very scarce, and partridges are rapidly becoming extinct, unless you go away up North for them."

Deer in Southern Illinois.

Mr. W. A. Powel, of Taylorville, Ill., this week sends news of a very unusual sort from his part of the world. He says: "Fred Langley and I had a deer hunt last week and got a spike buck after quite a chase. We trailed him several miles, and finally Fred shot him. He probably got away from somewhere, but we have not heard of any one losing any deer anywhere near."

It was five or six years ago, if memory serves correctly, that Mr. Powel killed another deer a few miles from Taylorville, and the event was made much of at the time, as no such animal as a deer had been seen in that part of the country for perhaps thirty years. It was supposed that this deer in some way crossed the Mississippi River from Missouri and worked its way up across the less settled portions of Illinois. Taylorville is in an old farming country, and the timber has given way to corn and wheat these many years past, only a few strips of timber here and there around the creek bottoms reminding one of old days. Strangely enough, an occasional wolf is seen even yet in that neighborhood, and the sportsmen of that county now and then have a run after one. Mr. Powel has the skins of two or three which he has killed inside of ten miles of town.

Illinois Takes Up the War.

Emulating the activity of Deputy Warden Brewster, of Michigan, the Fish Commission of this State has taken up the matter of prosecuting infractions of the Illinois fish law, of which several of the market-fishers of Chicago have been guilty recently in the waters of Lake Michigan. Deputy Warden Ratto, of this city, has been ordered to stop the taking of whitefish and trout in Illinois waters of Lake Michigan, and has been authorized to charter a tug, and if necessary to take with him an armed posse. Mr. Ratto has evidence that lake trout are being caught somewhere in Lake Michigan by different members of the fishing fleet of this city. He has not yet

had evidence that these depredations were committed in Illinois waters. Between now and the end of this week, when the closed season for whitefish and trout ends, Mr. Ratto will be actively engaged in watching the commercial fishermen. During the week Mr. Ratto was to confer with wardens Overbach, of Wisconsin, and Morse, of Michigan, as to the best course of co-operation against this fleet of lawless fishing tugs. The trouble is that Indiana has no closed season corresponding to that of Michigan and Illinois, and the defense of all these fishing boats is that they were operating in Indiana waters. Some of the largest concerns in Chicago have been guilty of this law breaking. There was never better proof than this of the wisdom of uniform game and fish laws throughout a group of States adjoining each other and offering practically the same conditions in regard to fish and game life.

Another Requisition Under Game Law.

It is stated in the daily dispatches of this week—with what accuracy it is impossible at this writing to determine, that requisition papers would be taken out to-day in Wisconsin for the arrest in Chicago of Charles H. Dahlgreen, a Chicago man, who is charged with the attempt to transport game through the State contrary to the law. Mr. Dahlgreen claims that he killed two deer at one shot, and that, although he broke the law, he did so unwittingly. (He had already killed one deer.) The Government of the State of Wisconsin is supposed to take the stand that he could not be unwitting in bringing three deer instead of the legal number of two out of the State. It is alleged that he shipped two of the deer by express and put the hide and saddle of the third deer in a trunk which he undertook to get through. Mr. Dahlgreen will be prosecuted under the Lacey Act, which entails a heavy fine in case of conviction. It is stated that he is not the only Chicago man who has had game confiscated under the charges of illegal shipment from the State of Wisconsin, and there is a very good possibility of other cases receiving prompt and thorough investigation. It is not yet ascertained that the requisition from the Governor is to issue without fail. Should it issue, and should Mr. Dahlgreen be taken from this State to the scene of his offense, the precedent will be one of most vital importance to all sportsmen, whether of the witting or the unwitting class. As soon as it is determined that a man can be taken from the bosom of his family and hauled back to another State and forced to square himself for the infringement of the game laws, it may be considered as a moral, legal and actual certainty that he will be mighty careful how he breaks game laws after that; and so will every one of his neighbors who hears of his misfortune. It is no use "hollering" against the game laws. The time of greater strictness in these statutes is coming, and coming mighty fast in this part of the world.

Buffalo Jones Not Disappointed.

The following letter, just at hand from Mr. C. J. Jones (Buffalo Jones), would seem to finally prove in somewhat conclusive manner that Mr. Jones is neither dead nor disappointed. It is mighty nice to hear from him in the same old way from Topeka, which is west of the Missouri—this side of the Jordan. He is a man of big ideas, is Jones; and although he has been quiet about himself for a couple of years, it seems it has been simply because he was elaborating something he had up his sleeve, so to speak. May he live to see all his big plans succeed:

"On my return from the Pan Handle of Texas, where I have been a few weeks at the Goodnight ranch, superintending the cutting out of calves for weaning and grading the catalo, etc., I find your letter and obituary clippings. The clippings, and many others, had reached me prior to yours, and had caused me much annoyance in contradicting them. * * * You say no doubt I died a disappointed man. To rescue America's greatest animal was one of my chief aims. This I have fully accomplished. Another was to originate a race of cattle by crossing the buffalo and cattle; this I also succeeded in, and named the new race catalo. 'Cat,' the first three letters of cattle, 'Alo,' the three last letters of buffalo. This race of cattle will some day ere long surprise the world. The herd of 100 now at the Goodnight ranch is simply wonderful. Some of the grades from the black polled Angus and Galloway cows have robes that sparkle more brilliantly than a thousand dewdrops in the morning sun, while the animals carry a third more meat than native cattle, and the best of all, they never require nor will use artificial shelter, and do not require artificial food to keep them hog fat the year around. Do you suppose I would die a disappointed man after such great achievements?"

"Again, I always had a desire to be instrumental in making the desert to bud and blossom like the rose." It looked at one time as if that too had been accomplished, but the people of Colorado diverted the water from the Arkansas River and the great system of irrigating canals constructed in southwestern Kansas by myself became worthless, and the fields of those happy and prosperous people, whom I had induced to settle there, became dried and barren as Jonah's gourd vine. This gave me much worry and many regrets, and caused me to set about to overthrow the disaster that had rushed upon myself and friends. Thus, while away in the frigid zone, the cold was so severe it drove me into my little cabin. There, with nothing to read and no one to converse with, I was compelled to employ the long nights in some way, and as the wind was constantly from the barren lands and Arctic Ocean, I determined to invent some method of raising water by means of nature's own power, the wind, and for seven long months I whittled and whittled, endeavoring to arrest the wind with some kind of an appliance, to secure a direct pressure, all of which I accomplished; and to-day I have an air motor running with all the ease of a sewing machine, with power beyond computation. The one now in operation here draws, or elevates, nine barrels of water per minute, 18 feet high in a 16-mile wind, with ease. The capacity I can double by an outlay of about \$4. The power also drives corn shellers and grinders, saws wood, runs the grindstone, churn, washing machine, and no doubt will generate all the electricity needed on the farm and ranch for all kinds of use, in-

cluding heat and power for automobiles. I have a patent covering every detail, and will have the motor on sale in the spring. It will be salvation to the people I located at and near Garden City, as the water there, 7 feet below the surface, is inexhaustible.

"Now, do you suppose I am disappointed in life?"

"To be sure, I have other aims, and greater measures which I hope to accomplish, but I never have as yet wasted any time and energy on impossibilities. I have next to my heart now the establishment, by the Government of the United States, of a preserve for the bison and other American herbivorous wild animals. I shall again this winter ask Congress to set aside a tract of the barren and desolate waste of New Mexico to such a purpose, and feel sure our grand and noble President, Col. Roosevelt, will join in with his big and liberal soul to make sure of such a grand enterprise.

"I send you some photos of very recent date of the herd."

Why He Is President.

From time to time mention is made in these columns of that singular body of sportsmen known as the Wishininne Club. It is part of the constitution and by-laws of this club that any man to be eligible to membership must be either a shooter or a fisher. The club has no treasury and its only officer is a president. In very many ways the Wishininne Club is a pure democracy. Among its members are a mayor, an ex-mayor, three bankers and many others of prominence in the business world of this city. While all of these are present at the table—the Wishininne Club is not in official session anywhere except at the table—the members bow to the iron rule of the president, from whose rules there is absolutely no appeal. He assesses fines for "talking shop," regulates the conduct of those present, and in other ways so conducts himself as to raise the occasional question whether the club may not be more properly called a monarchy or an autocracy.

There has never been but one president of the Wishininne Club. His name is W. L. Wells, sometimes known as Billy Wells or Bill Wells. Mr. Wells was captain of the Minnesota camping party when the original Wishininne Club was organized. After that he announced himself as president of the club, and no one has since been able to oust him from that position. He says there cannot be any election, and that he intends to hold the job for the rest of his natural life. Yesterday evening, while in conversation with Mr. Wells, he engaged in certain reminiscences: "My brother used to be an awfully good man," said he. "That was Jim Wells. I remember one time he got into some sort of a personal difficulty with a fellow about six feet long down at Monmouth, Ill. It was out on the depot platform. The fellow said something to Jim he didn't like, and Jim hit him, kind of thoughtless. The bystanders said that the fellow's heels dragged on the boards for about five feet before he got through falling."

"Your brother must have been something of a man," said I, sympathetically.

"Yes," said Billy, "he was; and, you know, I could always lick Jim easy. He was about the poorest man in our family."

This would seem to be the reason that Mr. Wells continues in the high office of president of the Wishininne Club.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

My First Grouse.

Up in the hills of Ticonderoga there is a wild farm which is the summer home of a retired professional man. Little attention has been paid to the subject of fencing or tillage, but the number of birds and rabbits is always a fixed quantity there. I was then spending my first season of delight as an amateur farmer, and, of course, liked to see a gun hanging from the antlers in the old log kitchen. This piece formerly belonged to the famous fox hunter, Ben Cheeney, of Ti street. It was a muzzleloader and pretty rusty, but I managed to secure a number of squirrels during my early shooting days.

One morning with pail in left hand and gun on shoulder, I started to the cold spring along by the orchard and mountain side, hoping to see something on the way. The path led through green shrubs and long, graceful ferns, and made a sharp turn up the hill near the spring. Just at the bend a big cock partridge started off on a run up the steep rock. I had never dreamed of snap shooting, but somehow I dropped that pail, cocked the stiff right hammer and fired just as the bird had got to the top of the rock near the spring about on a level with my head. There was a deafening report, and, of course, a cloud of smoke, but no bird could I find, although feathers by the handful were lying about. I searched for half an hour to no avail, and had to go away sadly. In later days an old hunter asked me if there was not a pile of brush near. "If so," said he, "you'll find him there, or what's left of him." One day I went to work and lifted a quantity of tree limbs, throwing them upon the fence, and there at the bottom between two large stones lay the bones of my game.

PETER FLINT.

A Big Buck for Pennsylvania.

BEDFORD, Pa.—*Editor Forest and Stream:* A party of hunters from Bedford, Pa., went hunting on Raine's Hill in Fulton county on Nov. 13. On the 15th, while four of the men were "driving" and four were on crossings, a large buck was jumped by H. N. Fisher. The animal circled around a side hill and came to Clarence Akers and Benjamin Hanks, who both fired buckshot at it. The animal ran about twenty yards and fell dead. The buckshot had reached the heart, but whose is not known. When the animal was weighed after deviscerating, it tipped the beam at 266 pounds, probably the largest deer killed in this State for many years. No one at Bedford ever saw a larger one, or one so large. The party saw, but did not get, five other deer on the hunt, which ended on the 17th.

The buck's horns had five points on one branch and four on the other. They were large, but not in proportion to the body.

MR. AND MRS. BOB WHITE.

SUPPLEMENT TO FOREST AND STREAM, Dec. 7, 1901.

Islip Town Gunners' Association.

THE lease of certain flats in the Great South Bay, recently made, was to the Islip Town Gunners' Association. It includes all the shooting grounds between East Island Flat and Lone Hill, thus comprehends all the grounds lying in that part of the Great South Bay owned by the Smith heirs. The President of the Association is Mr. C. R. Purdy, well known as an indefatigable and skillful gunner; the Vice-President is Uriah Green; the Secretary and Treasurer, Regis H. Post, and the Recording Secretary, Chas. Suydam.

The lease covers about seven miles of the best gunning grounds in the Bay. It is held for the Association in the name of Regis H. Post. The number of batteries is limited to 18, which covers about all the rigs in the neighborhood.

Since the Association controls such large waters it will hereafter be necessary for sportsmen who desire to shoot in this part of the bay to secure the services of the gunner who is a member of the Association.

It was found necessary to form the Association and secure the lease to prevent outside parties from taking the lease in the interest of some club. As it is, all the native gunners retain their gunning privileges.

The town of Brookhaven charges a license fee of \$20 for all batteries. The Islip Gunners' Association only issues licenses to residents of Islip town, with this exception, that in case there are not eighteen applicants from Islip town, the remaining licenses to make up the eighteen can be taken up by any owner of a battery in Brookhaven town west of Smithpoint.

It is easily conceivable that such an association as this may do much for wildfowl protection.

The ducks were very late in getting in the Bay this season, but there are plenty of them now, and the shooting is fairly good when the weather permits.

Those Indian Territory Quail.

COTTONWOOD FALLS, Kan., Nov. 29.—Replying to Philip's criticism of the 2,000 quail shipped in six crates, will say crates were about 4 feet by 6 feet, with two floors, and each floor well filled, and Sergeant E. Walker and I examined them and we believed we made a very conservative estimate of the number of quail in that one shipment from Purcell, I. T., to Pittsburg, Pa., of quail "strictly for breeding purposes." The following clipping will show the interest the well-known citizens of the Indian Territory manifest in "the preservation of game."

W. F. RIGHTMIRE.

ARDMORE, I. T., Nov. 27.—Deputy Marshal J. A. Tucker has arrested A. S. Gray, a well-known citizen, charging him with violating the game laws. The game warden of Chicago has during the past few months seized several hundred pounds of game shipped to that city from this Territory. Gray brought suit against the officials before the Illinois court, and the Department of Justice officials at Washington ordered Gray's prosecution in Indian Territory.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in *FOREST AND STREAM*.

League of Salt-Water Fishermen.

Editor Forest and Stream:

Our boys are now overjoyed at the prospect of some good cod fishing this fall and winter, for the coast of the Atlantic is alive with sand lants, better known as sand eels. Reports from all along the beaches are plenty of cod, ling, hake and whiting. It is a well-known fact that more whiting have been caught off the old iron pier at Coney Island in the past two weeks than there has been in the last few years put together. I am not advertising any particular spot, but I do know this to be a fact. Any one wishing for a good evening's sport (I say evening, because they will not take the bait in daylight) will find green smelt the best bait, and clam for cod and ling. Use about a 5 or 6-0 hook. Following is an extract of the New York Press of to-day, which just fills the bill:

"When Izaak Walton wrote that God probably did not make any more peaceful pastime than angling, the London haberdasher and father of fishing did not have in mind angling for whiting. Angling for whiting is decidedly a bloody battle, and unless hooks with long shanks are used it is necessary to see the drug store man for a healing preparation after the combat. Whiting on the northern New Jersey coast is known as the winter weakfish, because he puts up a good fight and is not a log to pull up like the cod, although he is a member of that family.

"The whiting has sharp teeth, and those who fish from the Coney Island piers, off Norton's Point and in the outside waters, can testify to this fact by the cuts and bruises on their hands. The whiting is a beautiful fish when alive, the upper parts of the body and sides are rusty brown with golden reflections, becoming leaden after death, silvery white beneath, iris silvery, dorsals and caudal rusty, the lower jaw longer, with teeth long and sharp.

"Whiting caught in the outside waters and from the piers extending into the Atlantic from the beaches on the south shore of Long Island reach an average length of 20 inches and weigh from 2 to 4 pounds each. The fish is known as whiting, but in the New England waters, where the fish is plentiful, it is known as silver hake and Old England hake.

"Their flesh is pearly white, and their eyes so beautiful that a poet has remarked:

"And here's a chain of whittings' eyes for pearls;
A mussel-monger would have made no better."

At our last League meeting an entertainment committee composed of the following were appointed by President A. Baywood for the year 1901-2: Messrs. T. Biedinger, L. Berge, E. Fliedner, A. Michaels, B. Rightmire, A. Maillard, H. Kotzenberg. They are to report at

our next regular meeting of the League. Their report will be interesting to all members, and anglers are invited to attend. The meeting will be Dec. 18 (Wednesday evening), at 106 West Thirty-first street, New York city. We expect delegations from Newark, N. J., and Yonkers, N. Y., to attend.

T. BIEDINGER.

Membership in this League costs only one dollar a year. Salt-water fishermen in the vicinity of New York are invited to join and give us their support.

Unwise Stream Stocking.

Editor Forest and Stream:

The time will come when those of us who have had their share of sport must lay aside their fowling pieces and hang up their rods. I have had over fifty years of sport with the rod and gun, and it is sad to know that those who will follow me will never enjoy the pleasures which my companions and I have enjoyed in many of these years—and it is sad to know that this is largely for the reason that our streams and waters especially have been forever destroyed by those who should have protected them in their natural condition.

It is quite time that some one should speak—and speak plainly.

I am aware that our Fish Commissioners wrote to me some three or four years ago that I must concede that they, by reason of their superior position, must know more in regard to the waters of this State than any one else could in any way possible hope to know—but I have never seen the time when I did not in a general way know quite as much about the waters and fishes of this State as any one of our Commissioners, and in fact more than most of them.

It is very easy to make this assertion, and I should verify it.

A year or so before Seth Green engaged in the propagation of trout I had mastered the business with Thaddeus Norris, of New Jersey; after Mr. Green took up the matter I had considerable correspondence with him.

In the sixties I was attorney in an action which settled to some extent the rights of riparian owners, and have had other suits with like results. Some twenty years ago I had for three years charge of the stocking of the waters of this county.

About 1870 I met the Hon. Robert B. Roosevelt and Mr. Charles E. Whitehead at Albany, and a large portion of the fish and game law as then suggested by us has never been essentially changed.

In 1894 the Senate committee on fish and game was authorized to visit the entire State and take testimony as to its waters. This testimony, of nearly 700 pages, was turned over to me as their counsel, and I think that it may be assumed that I know something about the fish and fish industries of this State.

Not long before the death of Mr. A. N. Cheney, he wrote me a letter, in which he deplored the injury done to our waters by indiscriminate stocking, and stated that he hoped that he would be able to repair to some extent the damage already done—and it is a pleasure to know that our present Fish Commissioners are as anxious as Mr. Cheney was to prevent further injury to the waters of this State.

And now let me give some general facts which I could verify by a score of cases:

This State has paid out hundreds of thousands of dollars to our Fish and Game Commissioners, and what is there to show for it? Mr. Seth Green—and how far he was backed by the Commissioners no one will ever know—claimed that he knew better than the Maker of the Universe what fish were best adapted to its waters.

Fish were furnished indiscriminately on application, although Mr. Green knew or ought to have known that they would be put in waters in which the riparian owners had vested rights, and these waters would be ruined forever.

Many years ago the waters of this State were largely stocked by the State with large-mouthed black bass, and the fish then abounding in them have been practically destroyed by the bass; but there are some fish which have not been altogether destroyed, such as eels and suckers, which have always been regarded as food fishes, and now our fish law makes it a crime to take an eel with a bob or spear or to take a sucker with a snare or spear. In other words, our farmers and their sons have no right any longer to catch the fish which as riparian owners they are entitled to catch as a vested right.

I am not aware that our Fish Commissioners have ever recognized the rights of riparian owners, or that they have ever done anything to preserve or increase our food fishes. Perhaps the most notable instance of their neglect of duty is to be found in the case of Lake Ontario. Many years ago the commercial fishermen on this lake realized over \$200,000 a year from the whitefish industry, and to-day they have almost entirely disappeared. Do you ask why? Simply because they are not a game fish.

The waters of Lake Erie and Lake Michigan have been kept stocked with whitefish, and the commercial fishermen will realize not far from half a million dollars for each lake—and in Lake Ontario, nothing. Would it not be wise to spend some of the money under the control of our Commissioners toward restoring and protecting our food fishes, and not quite so much for the benefit of the owners of private fish preserves?

I have written with no pleasure, but with pain, and yet I am simply giving what has been the subject of common talk among our leading anglers for years.

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., Nov. 25.

Canadian Salmon Take the Fly.

A WRITER in the London Fishing Gazette says: "The old fable that the Canadian salmon will not take a fly has long since been exploded." Yes, it was exploded before that man's grandfather had a father.

All communications intended for *FOREST AND STREAM* should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

About Louisiana Crawfish.

From the New Orleans Times-Democrat.

THE crawfish is quietly resting on his oars, busying himself about his own little affairs, building mud chimneys above his nest to protect himself from the wily raccoon's reach, and awaiting with apparent composure the time when he is to stagger to the center of the stage, hind end foremost, as it were, and when he will play his usual engagement of sixty days with the epicures. The crawfish is peculiar in many respects, but this fact has robbed him of none of his sweetness of flavor, nor has it detracted one iota from his dietary value from the viewpoint of the epicurean caterer.

Measuring between the earliest appearance of the crawfish in the local market and the latest data on which he is found in the market, the season runs for six months. But fishermen and men who make money out of the crawfish industry count simply on two months, March and April. During these two months crawfish are plentiful in this section, and all through the valley above this point. They thrive in fresh water, in shallow lakes and bayous and along the edges of the smaller streams.

Millions of these creatures are marketed and consumed in New Orleans annually. They are a delicious food when properly prepared, and crawfish bisque has become one of the famed dishes of this city.

How many crawfish are marketed and consumed during the season in this city cannot be estimated definitely. Roughly speaking, it would be necessary to count them by the earload, for independent of the consumption in the hotels and restaurants, a great quantity is consumed by families who gather them for themselves.

At the fish market during the season they simply pour in from all sections. They are caught in nets. They are docile and clumsy, and it is easy enough to gather them by the dozens. They are always found in shallow water. Their reasoning power, if they have any at all, is at a low ebb. However, they have learned something about defensive methods, and one may be convinced of this by an examination of a crawfish nest at the edge of a lagoon, a creek or a bayou. The nest is simply a hole large enough to admit the body. It is burrowed below the water level, or is connected by a small tunnel with the main body of water, so that the crawfish may have access to the stream or lagoon for feeding purposes. Like other crustaceans, he is fond of vegetable juices, the smaller aquatic insects and things of that sort.

Above his nest he usually constructs a mud chimney, and it will stand sometimes eight or ten inches above the ground. This is probably a defensive institution. Raccoons are fond of crawfish, and they make nightly pilgrimages in quest of these crustaceans. They reach down into the nests wherever they find them, yank the clawed and tentacled fellows out and devour them on the spot. Mud chimneys make it harder for the raccoon to reach them, and at least puts the forest marauder to more trouble. The chimneys are not works of art. They are plain, awkward heaps of mud, but built in layers and hollowed out, very much after the fashion of the mud chimneys built by man in primitive sections of the world.

These nests are also used for a sort of place of refuge for the younger members when they begin to take on the form of their kind, and before they are able to measure strength with the other creatures which live under the same conditions.

The crawfish industry has been of slow growth. For more than 100 years persons living in this section have known how to use them for food purposes. But many changes have taken place in the way that crawfish are served. Crawfish bisque is probably the best known among the dishes made of these crustaceans. They are served the same way. They are thrown into a pot of boiling water, which has been highly seasoned with salt and hot peppers, and they are allowed to remain there for ten to fifteen minutes. They are then taken out and put through a soaking process for thirty minutes. They are then ready to be served. They are placed on dishes, covered with cracked ice and ushered out to the epicure who may order them. They are used in making soup, and they give a delightful flavor to the dish.

Frequently the heads of crawfish are stuffed with a highly flavored mixture of some sort, and they are served with a toast and in various other ways they are prepared for the persons who are fond of them.

The industry is not confined to New Orleans or Louisiana. It has spread all through the Mississippi valley, and up as high as St. Louis one may see the caterers serving crawfish in season. Here in Louisiana they are probably more plentiful because conditions are more favorable. The lowness of the land and the peculiar topography of the country give the crawfish a splendid chance to thrive. Here he is prosperous, fat and saucy. The marshes are filled with sizelikes of him. A season's growth is sufficient to make him a marketable size. In spite of the increased demand and consumption, the rapidity with which the crawfish multiplies has enabled him to keep ahead of humanity's appetite, and the indications are that he will hold his own as long as there is water enough in the land for him to wallow in.

Adirondack Tours.

At Lowville, on the Black River railroad, a genial party boarded the "Woods Express," drawn by a fair team, under the guidance of "Pap Burke," the old reliable wagoner who had been engaged to transfer ourselves and baggage over the eighteen miles of very fair road to Fenton's famous resort at "Number Four," situate near the pretty Beaver Lake on the Beaver River. Here we were most hospitably entertained, had good supper, lodging and breakfast, and in the morning, after a trip over the lake and a look at Grave's Lake, near by, we again took passage on the "Woods Express" en route for "Dunbars," where we were to meet our guides. We passed near Lake Francis, of which we took a view, and stopping for water at Sunday Creek continued over a then—1886—most miserable road, but enlivened by interesting forest scenery, through which we walked or rode, as the roughness or spirit seemed to move each individual. After nine miles were overcome—interspersed, however, with song, joke and repartee—we drew up at the hostelry and were received with open arms and a hearty welcome from big Joe Dunbar and our guides, Andrew and Chris. After one of the good dinners for which Mrs. D. was famous, we transferred our dunnage to the boats and pulled and paddled up the then sinuous windings of Beaver River until we reached Little Rapids, where we remained over night at Muncy's. The next morning we proceeded by stream and portage until we passed into Albany Lake, and on arriving at the narrows, where the old military road formerly crossed by a bridge, the sills of which were yet discernible, we stopped for a half-hour's fishing, and were rewarded with a very nice string of trout. Then we went on up the lake—the upper portion of which is quite attractive—and entering the inlet—Beaver River—proceeded up to the portage of three-fourths of a mile around the rapids, a good trouting water. Again embarking, after a pull of a little more than a mile, with charming river scenery, we entered what was then known as Smith's Lake, now Lake Lila, of Dr. Wood's preserve—Ne-ha-sa-ne Park—and were entranced by the panoramic views presented at every turn of the boats. This lake is one of the finest in the Adirondacks; it is studded with beautiful islands, tree covered and picturesque, and surrounded by a diversity of mountain scenery. The points and bays show to great advantage as seen from the top of Bald Mountain at the northwest portion of the lake, and it is well worth the climb of about 800 feet to get the view. From here one sees Silver Lake Mountain, Mt. Morris, Mt. Buck, Owlshhead, Moose, Catlin, Baldwin, Blue Mountain and others in the distance; and intervening forest-crowned mountains and foothills of lesser height, but giving effect to the charm of undulating forest scenery, and presenting a variety of shading from the diversity of trees, from the light of the white birches to the dark of the evergreens and the intervening beech, maples, etc., thus giving a picture of wondrous beauty to a lover of nature. With a good field glass and with map and compass at hand, many prominent peaks, including White Face at Lake Placid, may be accurately located. As we passed an island and came in sight of the then unique sportsman's log hotel, kept by La Mont, the writer unpacked a small Distin cornet and awoke the echoes among the hills by playing a few selections; and as we approached the landing were greeted by all of the inhabitants and welcomed most cordially. Our trout were served at supper; a pleasant evening spent at "California Jack's" with story-telling, and we were shown to our rooms in the "dormitory"—a building two stories high made entirely without a sawed board or timber, everything having been prepared by the ax, the clapboards split out and somewhat smoothed with a draw-shave, and the shingles the same. It was a case of necessity, for there was neither sawmill nor postoffice within fifty miles, nor any road over which to do the hauling. It is now a thing of the past, and Dr. Webb's summer home has been built upon or near the site of the modest hostelry that has given good fare and a welcome to many sportsmen who sought the wilds instead of the pleasure resorts of the Adirondacks.

The next day we were upon the lake sight-seeing and fishing—some for trout and others trolling for the so-called lake trout. We met with very good success, the larger fish being placed in the ice-house, and the smaller served at the table. The next day a trip was made by carry and through Harrington Pond to Clear Pond, and some very fine, large trout were taken, some of which would weigh $2\frac{1}{2}$ to $2\frac{3}{4}$ pounds. Dinner was prepared on the shore, and most heartily enjoyed, and on our way back while on the outlet of Harrington Pond, upon turning a curve we saw a large buck standing at the edge of the stream, in full relief against the background of balsam firs. Unfortunately, none of the party had a camera, but the picture was impressed upon our minds indelibly. La Mont always had a camp-fire burning in the evening during the entire season a few feet distant from the hotel porch, and it was very enjoyable, as the guests would gather to the front; and story and song, with cornet music, made the hours pass merrily.

The next trip was across the lake to South Bay, and by a three-quarter-mile carry into the famous trout stream known as "The Shingle Shanty," where each of the party secured a fine creel of fair sized trout to add to the supply to be taken home. Another night at the camp-fire, and then a trip up the main or Beaver River inlet and through Mud Pond and Little Salmon into Josephine or Salmon Lake, a very pretty sheet of water peopled by both trout and lakers, of which we secured a goodly share. We dined al fresco, and started back to headquarters in due time. Andy, with B. and myself, being the first, pushed ahead, and reached the river an hour before dark; found it rising and in places rushing like a torrent through confining banks; and on turning a bend we discovered a balsam tree uprooted and fallen directly across the channel. We hauled up and with our knives cut off branches so that we could pass the boat under by stooping, and went rapidly on, reaching Smith's Lake just before dark, and then across to the hotel, where a late supper awaited, of which we partook with keen appetites. When through supper we wondered why the others had not yet made their appearance. As it was now dark, the camp-fire had been lighted, which would serve as a bea-

con after they should reach the lake; but an hour passed before we heard anything of them. We were beginning to fear—which was the case—that some accident had befallen them, and we spoke of the fallen tree which we could not cut away as we had no ax. At last a shout far out on the lake, which we responded to, and then the announcement "Get something hot, we are wet and cold," brought us to a realizing sense that something had happened; and part went to meet them at the dock, and others prepared a hot and stiff whisky toddy, and replenished the fires, while the women got a hot supper in readiness, all of which was duly appreciated by the three half-drowned voyageurs. After they were warmed and fed we learned their tale of woe. It seems that S. and P., against the advice of Chris., stopped awhile at Little Salmon for "just a few more trout;" and by the time they reached that part of the river where the obstruction was, it was dark, and they did not see it until the man in the bow struck into the branches, and the boat swung around and upset as it was drawn under by the strong current, and the former occupants struggling in the water. Chris., hanging on to the paddle, soon came to where he could touch bottom, and fortunately regained the boat, and S. and P., by swimming, reached the banks in his near vicinity; but a gun and silver flask had gone to the bottom, and some fishing tackle was among the missing. They reentered the boat and hastened as best they could to their destination. Next morning Chris. and Andy went up to the scene of the disaster, cut out the tree, and recovered the gun and flask and some of the tackle, and after dinner all but myself started on their homeward trip with a fine lot of fish for their friends, and considerable experience.

I had engaged Andy for the entire season, except ten days that he had previously engaged himself to a New York party. On his return in a couple of days, we put up a pole and bark wigwam fourteen feet across and sixteen feet high, with two openings, either of which we could at will cover with a movable door made of the same material. We put in bough beds, built a stone fireplace and some camp chairs and stools, and swung a hammock upon the beautiful rock, tree and moss covered point about a half mile above the outlet, from which a charming view was ever present in every direction. It was known as Cincinnati Wigwam, and was our headquarters, where we welcomed and entertained our sportsmen friends from camps on Smith's Lake, Albany Lake, and Bog Lake, as well as casual tourists and others who passed or stopped at La Mont's. Many an enjoyable hour was spent at that lovely spot, and many friendships made that are pleasant memories of by-gone days. When we were away on our trips we left a birch bark legend in plain view, reading: "Cincinnati Wigwam. Use but don't Abuse," and frequently on our return would find that it had been occupied, but left clean and in good order, with sometimes a note stating who were the occupants.

One of our first trips was by way of the interesting hill and dale carry of $1\frac{1}{4}$ miles to Charley Pond, a neat bit of water, famous for trout and as a good deer hunting locality, which took its name from Charley Smith, an old-time hunter and trapper, whose cognomen was given to Smith's Lake, on the northern bank of which he lived and had a little clearing near Bald Mountain, then a one-half mile carry into Smith's Creek, the outlet of Charley Pond, and a two-mile paddle—passing the famous spring that bubbles volumes of cold water into a brook, and which is a noted trouting hole. Then we entered Little Tupper Lake, a beautiful body of water with some six or seven handsome islands, and shores forest-covered and attractive. On Sand Point we found the neatly kept camp of Mr. Gove, of Manchester, N. H., who was absent on a trip. Thence to the Sportsmen's Hotel, then kept by the tall, athletic and noted guide, Pliny Robbins, where we dined; and after a rest and smoke pursued our way through the outlet into and across Round Pond—large enough to bear the name of lake—thence by the well cut carry around the rapids to its junction with the Bog River, which is quite a stream—the outlet of a chain of numerous lakes and ponds. At the terminus of this carry, some time later, as we were en route the other way, occurred a rather pleasant episode. Coming up the river as we neared the carry I observed what I supposed was a woman with a red shawl thrown over her head, seated on a log, and I said to Andy: "That looks like calico up there by the carry." But on a nearer inspection we found it was a man with a red scarf about his head and the ends flowing back. As I left the boat and approached, I saw a bronzed, Spanish-looking face adorned with black mustaches and goatee, well waxed, and he was puffing the smoke from a pipe with perfect nonchalance. I thus addressed him, quoting from Othello: "Most potent, grave, and reverend seignor, my very noble and approved good master," etc.

He sat like a statue until I had concluded, and then quickly arose and commenced in tragic tones: "Down, down to hell, and tell them that I sent thee," etc., quoting aptly from Henry VI.

As he concluded, I extended my hand, saying: "Shake, spear, shake! My name is Whitaker, camping at Smith's Lake." As hands were clasped, he said: "And I am Gove, and just broke camp at Little Tupper—waiting for my man to come over the carry." I replied: "I have been at your camp, and have now some mail for you; glad to know you; join me in a bottle of Bass and have a cigar." Then we sat down and told who we were, and where from, and some experiences, and found we were brethren of the mystic tie—and were glad we had met. Gove said: "I have been camping in the Adirondacks for fourteen years, and love each river and lake, and every mountain, rock and tree, for it has brought life and health to me. I was nearly gone with consumption when I was brought here first, and weighed only 114 pounds, and now look at me." I could scarcely believe that the hearty, robust man of 165 pounds could have had such a record. Soon the guide came with the rest of the duffle, and after mutual promises to visit our respective camps the next year—which was done—we parted company.

Proceeding down the boulder-strewn Bog River—a good trout stream—we arrived presently at Tupper Lake, another fine body of water overshadowed by Mt. Morris, with its elevation of 1,545 feet, and stopped over night

with mine host Lem Corry, at the Tupper Lake House, near the head of the lake, where we met quite a number of genial sportsmen, and some interesting characters among the guides, and passed a pleasant evening. Next morning we went on down the lake, enjoying the varied scenery, and near the foot stopped at the renowned Mart Moody's, and were entertained as Mart alone can entertain with his famous stories of adventure; and after partaking of Mrs. Moody's good dinner went on and up the Raquette River; and stopped for the night at Waltham at the falls. The next morning we went up to Long Lake, passing Buck, Kempshall, and Owlshhead Mountains as we went through; and unpacking my cornet I played a number of selections that aroused both the echoes and the natives, for on stopping at Kellogg's we found the noted Captain Parker with several members of his brass band awaiting us at the dock. The Captain tried and became enthralled with the miniature Distin, and then nothing would do until I had given them a few choice melodies, "the best in the band-wagon," as the Captain remarked. After dinner we went up to the head of the lake, and carried into the inlet. Viewed Murray's Phantom Falls, and couldn't believe that a boat could pass over and live. We then had another carry to Hixie and then into Forked Lake, and stopped over night at the Forked Lake House, where we were well cared for. Next morning we started on a tour of inspection around the indented and beautiful forest-covered shores of both Forked and Little Forked Lakes, and left well repaid for the time spent. We also visited Plumley Pond—named after the old trapper, hunter and guide, John Plumley, who was a noted character. Returning to the hotel for dinner, we then went across the carry to the foot of Raquette Lake, a large and singularly shaped sheet, with various points and bays and islands, about which were located several camps and hotels. We passed along the north and then followed up near the western shore, noting as we passed the Brown Tract Inlet, thence along the southern shore past the South Inlet, and down the eastern shore until we reached Bennett's Hotel late in the evening, and were glad to have supper and a good bed in which to rest. Next day we went up the East Inlet or Marion River, and carried into Utowana Lake, and through its inlet to Eagle Lake, upon the shore of which the noted writer, "Ned Buntline," had a retreat known as "Eagle's Nest," and thence into Blue Mountain Lake, a beautiful sheet, island studded, and with handsome surroundings, with Blue Mountain rising 3,762 feet above its northeastern shore. We took a turn about the lake, noting the several fine hotels and cottages that are built about it, and finally stopped over night at the Blue Mountain Lake House. Here were many guests, and the buckboard stages that ran over the very fair mountain road from the terminus of the railroad at North Creek were well filled with others coming in, and matters were lively for both landlords and guides. Next day we took the trail and made the ascent of Blue Mountain, and from the top of the old signal station used by Colvin in making his survey of the wilderness, we obtained a fine view of mountains, lakes and streams, and I gave expression to my admiration by playing upon my cornet "My Country 'Tis of Thee," and a few other appropriate airs, such as "Ye Banks and Braes of Bonny Doon," etc. We had taken lunch, and so dined on the mountain and finally retraced our steps back to the hotel and remained until morning. Our route back to Raquette Lake was without special incident, except that at the outlet of Utowana we stopped and caught a sufficient number of trout to broil on forked sticks over the coals of a fire that we made, and which constituted the principal item in our al fresco dinner by the river side. It is a matter of wonder how many broiled trout a hungry man can eat, even when tired of trout fried or boiled. I have demonstrated this fact upon numerous occasions, and when I had a bit of salt pork to lay a strip inside of each trout as it was being broiled, more yet could be disposed of. From Bennett's, next day, we went on a side trip of exploration up the South Inlet, and by a carry of $1\frac{1}{2}$ miles to Shad Lake, and thence a carry of two miles to Lake Fonda, the head of the south branch of Moose River. We were well repaid for the trip—both were good trouting places. On our way back we caught some trout in the inlet and had them for supper at Bennett's. Next day we went up Brown's Tract Inlet to the carry, and thence $1\frac{1}{2}$ miles to the head of Eighth Lake of the Fulton Chain; it is a pretty lake of clear spring water, with sandy shores and tree embowered, and very attractive. I remarked to Andrew that if I was going into the hotel business in the wilderness this would be my choice of locations, midway and in the direct line of travel between the east and west portions of the Adirondacks. I am recently informed that a party named Norton, has now located there. There is one attractive island in Eighth Lake. Eagle and Bug Ponds are within easy portage westward, and good trout fishing afforded in all. A carry of a mile down the outlet and we entered Seventh Lake, and were hailed by a gentleman fishing near who recognized me and insisted on our going with him to the camp on the northern shore, where we were introduced to and welcomed by a party of traveling men who were well equipped and enjoying a two weeks' outing. My friend knew that I was a cornetist, and having ascertained that my instrument was in the pack basket, insisted on having it brought forth, and I entertained them to the best of my ability. Some familiar airs were given, to which the party added their vocal powers, and there was "music in the air" for considerable time, and I was easily induced to remain their guest until the following morning. Fishing was given the go by, and cards, story telling and music filled up the time very pleasantly. I regret having mislaid memoranda with names of these gentlemen. In the morning we moved on and ran through the outlet into Sixth Lake—small but pretty—and from its foot carried around the rapids into Fifth Lake—the smallest of the chain—thence into Fourth Lake, which is by far the largest and very fine, and an attractive resort. Having passed the pleasantly located Island House, we were on the broad bosom of the lake, and had the full benefit of the opposition to our progress made by a brisk westerly wind, and as the waves were rather heavy, it was only by hard work at oars and paddle that we finally reached Perrie's Hotel, at the foot of the lake, rather tired and

quite ready for the excellent dinner furnished us. In the afternoon we took the trail and ascended St. Louis Mountain near by, and enjoyed the prospect from the summit. Remaining over night, after a "stirrup cup" of Perrie's wild cherry bounce, home-made, we embarked and entered Third Lake, soon passing into Second, and having inspected its surroundings, pulled to the southern shore in search of the trail leading thence to Little Moose Lake, which we easily found, and a carry of three-fourths of a mile brought us to that beautiful lake which is now part of the Adirondack League's property, and is adjacent to Panther and Little Moose Mountains. Having made a trip of exploration, we returned to Second Lake, passed through it and its outlet into First Lake, and were soon quite at home as guests of mine host Barrett at the Forest Hotel. Here we met many noted guides, and quite a number of tourists, to whom the story of our wanderings seemed interesting; and then, after an hour spent musically down at the steamboat wharf, the echoes of which were wafted back from the mountains, and which seemed quite enjoyable to the audience assembled, we finally "broke ranks" and retired.

Next morning we replenished our supplies, and after many pleasant adieus and "bon voyage" wishes from our new made friends, we pulled away on our return trip to Fourth Lake, and stopping at the carry on the northern shore made our way to the small pond, thence a mile carry to Laudon's Lake—now, I think, called Bubs—a pretty bit of water on the north branch of Moose River; thence over to Moss Lake, which is one of a little chain of lakes, and having caught sufficient trout opened the stores from our pack basket, and having made coffee and broiled our fish dined royally with a hungry man's appetite amid picturesque surroundings. Then a smoke and a rest, and we tackled the carry over to Foster's, or Dart's Lake, then down its outlet to the carry by which we reached Big Moose Lake. We were so tired by our trip over the somewhat rough carries that we postponed any exploration about the lake, and proceeded to make a temporary bough camp with beds of balsam tips for our night's bivouac; then starting our camp-fire, we took our blankets and store of catables from the pack basket and prepared a supper of good coffee, sliced metwurst well smoked and dried, (by the way a most convenient and excellent addition, as a couple of pounds takes little room and will keep well; excepting, of course, the thin slices that give zest and are so much relished once or twice a day); also bread, butter and cheese, and cake chocolate. Having fared sumptuously, we sat by the shore enjoying the scene as twilight approached; then, after playing a few airs upon the cornet, we wrapped ourselves in our blankets and merited the rest obtained. In the morning we caught some trout at the inlet that enters the queerly shaped south bay, and having breakfasted, embarked on a tour of inspection, going entirely around the peculiarly indented shores, and enjoying the magnificent prospect afforded. We found some unoccupied camps, but were the sole "monarchs of all we surveyed." This is one of the most beautiful of lakes, and at that time seldom visited by tourists, and a grand place for trout and deer, having many small lakes and ponds in the vicinity, and we thought it an ideal location for the camper who loved the wilds of the forest. Since then hotels and camps have been put up, and the Adirondack railway built, so that it is now more accessible. It is well worth a visit by the tourist.

It was our intention to spend the entire day about the lake and return to our camp for the night and start next morning on the unknown route to Raquette Lake, except the knowledge afforded by our map and the aid of our pocket compass, but having made the grand rounds we sought the trail at the eastern end and went over to Russian Lake, a small but handsome sheet, and from it over the dim trail to Constable Pond, where we established quarters for the night. In the morning we crossed over and finding the trace to Chub Pond, went over and through it, and then over the divide and reached Queer Lake, quite an interesting spot, and from there had to make a carry of three miles to Shallow Lake, quite a body of water, and with fine surroundings, and were then quite ready for a rest and dinner. Queer Lake empties into Shallow, and the outlet runs thence 2½ miles into the northwest bay of Raquette Lake. In those days they were visited only infrequently, as the trails were almost indistinct, and required good woodcraft to follow. We were out for adventure and knew that when we couldn't go ahead we could always retrace our steps. After lunch we coasted about Shallow Lake and finally pushed on by outlet and carries until we finally reached the desired haven in Raquette Lake, and pulled up to Ten Eyck's on the northern shore, where we had supper, lodging and breakfast, and entertained our host with the story of our pilgrimage. Then we took the wagon road that led northwest, and after a tramp of four miles embarked at the foot of Brandreth's Lake and went up through this handsome Z-shaped lake until we reached the upper end where the handsome Durant Lodge and houses of the guides in charge are located. As we came ashore we were met by Carey, the man in charge, to whom we introduced ourselves, and informed him that we were on the tramp, our destination being to headquarters at Smith's Lake. He kindly invited us to remain as his guests until next morning, and gave us the privilege to take fish enough for supper from the lake, and we gladly accepted. After dinner, we went out and took a "laker" of about four pounds, and a couple of good sized trout on a trolling spoon, and enjoyed our exploration of the lake, returning in time to help get the supper, after which I produced some good cigars, and we engaged in a game of pinochle. After this the cornet interested our hosts for a time, and then to bed and rest. In the morning we went over the 1½-mile carry to Salmon Lake, and thence by the well known route through Little Salmon, Mud Pond and Beaver River to our old stamping ground at Smith's Lake, and pulled for Lamont's with colors flying and "music by the band," and as we reached the dock were gladly welcomed.

We had made the grand tour in seventeen days, having had good weather all the time, and worked hard nearly every day. We were tough and hearty, although it was no sinecure to go over some of the carries, one carrying a pack basket of from 50 to 60 pounds, and the other the

boat, with oars and paddles, weighing full 60 pounds. The distance traveled I never estimated. It was certainly a memorable trip, and one which I doubt whether any other person ever made in its full itinerary. It was entrancing throughout as the changes of scenery of land and water were successively presented, and we were glad and proud to think that we had passed through so much and without accident or injury to men or boat. We had passed through no less than 47 different lakes, ponds and rivers, and paddle and oars had done united service in each; and the numerous carries over which we had portaged were as varied and interesting as possible; while the panorama of views from the different bodies of water was something never to be forgotten. En route we saw many deer, and started up many ruffed grouse and ducks, but as it was not the season for game, we carried a rod case only, and often wished we had a camera, and were proficient in its use. In making portages we would go from one-half to three-quarters of a mile, depending on the character of the trail, ere we "unsling knapsacks" and took a rest. At the end of the trip our muscles were toughened and inured to the work, and we were strong and hearty as could be. Much of our route had been through primeval wilderness, far from the haunts of man.

Catching a Cat.

THE stock and cattle having been kept in the lots and pastures in obedience to the no-fence law, every ravine and creek bottom, not in cultivation, had become a veritable jungle of grass, weeds, briars, cane and bushes. These ravines and creek bottoms extending westward into the Delta of the Mississippi River, afforded ideal passage for the wildcat, so numerous in the Delta, to come up into the hill country; and from their almost impenetrable retreats they made frequent raids upon chickens, geese, ducks, turkeys and even pigs, of the near-by farms.

West of us about six miles was an immense thicket situated on Hurricane Creek. It was so large and dense that it had become the favorite haunt of many cats, and the negroes living near it having lost so many chickens and geese, requested Ol White and myself to come down "wid our dogs and ketch sum of dem dar wildcats." Leaving my dogs at home, one evening in September I went down to Ol's to stay all night and be ready the next morning at 3 o'clock to start for the thicket, which was about two miles from his house.

The hunter's intuition had us up by the hour, and in a few minutes we were mounted and blowing our horns for the dogs. Here came Barnum and Moscow, two large, dark-red fellows; Lep and Lee, of a lighter shade of red; Bass, an immense white and black beauty, and last, Old Ring, as blue-blooded a dog as ever scented a trail. Responding to the horn with their deep and musical voices, off down the road ahead of us they went, anxious for a chase. By spurring up our horses we soon overtook them, and kept them in the rear until we got to the hunting ground. There Jep Thomas was waiting for us with his three half-hounds, Rollo, Ring and Rowdy. Much fun was poked at his curs, but, like every man with the hunting instinct in him, he was loyal to his dogs, and was willing to bet his old white mule that "tho' nary one of 'em had ever smelt a cat, if they did once git a scint of one of them varmints, they'd never stop until they'd run the thing up a tree or clean out of them woods."

Though it was yet so dark we could not pick our way around the edges of the thicket, we harked the dogs in and off they went, each one like it knew just what we came for, and where to find it. Dismounting, we sat down on a log to smoke, chew and swap yarns until the dogs would strike.

Pretty soon the thicket was a medley of voices in every direction, just as if a whole bunch of cats had been run into, and as if each dog had a cat going in a different direction from every other dog. Listening intently, we tried to catch Old Ring's voice. She was the only test dog in the pack, and we were longing to hear her go to talking, for we knew that would mean a cat trail. Old Ring was saying nothing, so we had about concluded that the other dogs had run into a bunch of rabbits holding one of their nocturnal picnics, when here came two of Jep's making a rabbit fairly fly. Ol knocked one of them down with a stick, and Jep didn't like it a bit, saying, "Them dogs don't know no better, and if they had run into a wildcat they'd made him burn the wind jest the same way as they was makin' that rabbit do." We blew our horns to call the dogs off and to start them in further up the thicket. All came in except Old Ring, and we were wondering where she was, when to the north of us her voice rang out loud and clear like a bugle call. The dogs heard it, too, and they were off in an instant responding to her notice. Soon we could hear Boss' thundering voice, and then Lee's ringing bark chiming in with her, but above them all her voice rang out as clear and musical as the Tyrolean shepherd's clarion call from some mountain peak. Slowly they worked on to the north, barking less and less. We knew that the trail was growing colder and colder, and that the probability was it would soon be too cold to ever get a jump. So getting on our horses and mule, we whipped around to the front of the dogs and called them in.

Keeping back all the dogs except Old Ring, we made her cross the creek and try the thicket beyond. Just as the sun was rising and a million diamonds began to glow on every leaf and spear of grass, Old Ring gave mouth. There was no hesitation, no deliberation—she was talking loud and fast. She seemed to have cast aside the weight of thirteen years and was running with all the vigor and fire of her younger days, when she was the queenliest dog in looks and action that ever responded to a hunter's call. On, on she came, right toward us. We could hold the other dogs no longer, and off they went, pell-mell, splashing across the creek and then into the thicket where Old Ring was having all the fun by herself. Soon every dog was chiming in. The running was right in front of us across the creek. We see the cane and grass shaking as the cat passes along, and here out come the dogs with heads, tails and bristles up, expecting every moment to put their mouths upon his catship. Now they make a circle of about a hundred yards, and here comes the cat—we see the weeds shaking. The dogs are gaining on him, and almost blowing their breath upon his heels. He knows it, and turning, with a mighty spring he leaps high above the weeds and lights fifteen feet to the right of the dogs in plain view of us. The dogs in their hurry and fury overrun the scent. They discover their mistake, come bounding back, and making a short circle, catch up the scent and are off after the cat. He has quit that part of the thicket and gone where there is more cane.

We want to be right in the thick of the running, and as we gallop to the cane patch where the chase is on we agree not to halloo, not to say a word, so that the cat will not know we are close about, and will give us a sight of him. As we ride up close to the thicket we can see the cane shaking ten or fifteen feet in front of the dogs. Now the dogs run out of the thicket into the open right at us as if they thought the cat was taking to the open. They dart back, and Jep catches a sight of his three curs running like thoroughbreds. He can't restrain himself, so throwing himself back in his saddle he gives a whoop that would have put Stentor to shame. We laugh and join him in another and then another. This excites the dogs, and they go to running as if electrified. The cat can't stand the pace. He takes to a tree—we know from the barking of the dogs. We start in, the cat hears us, jumps far out and strikes right across the opening between two thickets. He sees us, starts back, sees the dogs, turns, and then with long leaps tries to make it to the thicket. The dogs, too, are now running by sight and are straining every nerve and sinew to catch him before he gets to the thicket. They are bunched and running like race horses. The cat is doing his best. We can see that he is not steady when he jumps. They are nearing the thicket, and into it the cat goes first. He lands in a briar patch and before he can extricate himself nine dogs are on him and have him stretched out like a string.

MACK BANKS, JR.

Duke on Partridge.

THE illustration is from a photo sent by Mr. Chas. H. Morse, of Auburn, Me., who writes: "Duke is a three-year-old, with a fine record. He was trained for me by D. G. Treat, of Moodus, Conn. In his first season with

DUKE ON PARTRIDGE.

me there were about 264 partridges and woodcock killed over him, and this season the score is close to 300 birds. I saw Mr. Treat's advertisement in the FOREST AND STREAM, and have that to thank for having put me into communication with a trainer of whom I can only speak in the highest praise."

Pictures from Forest and Stream.

EVERY "all-round" lover of outdoor sport will want "Pictures from Forest and Stream." Its sole contents are thirty-two half-tone plates, measuring about 10 by 14 in., from drawings and paintings of game animals and birds, handsome dogs, winning yachts, etc., as well as some field and waterside pictures. The artists' names are familiar to every one whose love of sport extends to pictorial representations thereof, and no one will regret that the bird-pictures are from Audubon's drawings. The printing is good, the paper irreproachable, and the binding tasteful, while the price is ridiculously small in comparison with the magnitude of the work.—The Era, Philadelphia.

Printed on plate paper, the drawings show to good advantage, and the result is a book to delight the sportsman.—Chicago Tribune.

Each of the pictures appeals to lovers of outdoor life, and to sportsmen particularly. They deal with all branches of sport, and are all excellent.—Indianapolis News.

TOLEDO, O.—We have received the copy of "Pictures from Forest and Stream." They are fine, and have been greatly admired. Please send me two more.

FRED A. BROWN.

Yachting.

Designing Competition.

IN view of the continued and increasing interest in yachting, a designing competition will be opened in the columns of FOREST AND STREAM. In America the yachting season is comparatively a short one, and such a competition as has been determined upon will serve to stimulate the interest in the subject during the winter months. The competition is open to both amateur and professional designers. Three prizes will be given for the best designs of a yacht conforming to the following conditions:

- I. A pole mast sloop.
- II. 25ft.. load waterline.
- III. Not over 4ft. draft (with centerboard hoisted).
- IV. At least 50 per cent. of ballast outside on keel.
- V. 5ft. headroom under cabin carlins.

All abnormal features must be studiously avoided in the design; and the construction, sail and cabin plans should be of the simplest character. It was our idea in laying out the conditions of the competition to make them simple as possible, so as not to hamper in any way the designer, and yet convey to all that we wished to produce a safe, comfortable cruiser on which two or three amateurs could live with comfort for a period of two or three months and cruise along our eastern seaboard from New York to Halifax with safety. A centerboard boat of moderate draft was decided upon, as so many more harbors would be accessible to a boat of that type.

DRAWINGS REQUIRED.

- I. Sheer plan, scale 1in. = 1ft.—showing center of buoyancy and lateral resistance.
- II. Half breadth, scale 1in. = 1ft.
- III. Body plan, scale 1in. = 1ft.
- IV. Cabin plan, scale 1in. = 1ft.
- V. Sail plan, 1/4in. = 1ft., showing center of effort.

The sails should consist of a jib, mainsail, spinnaker and balloon jib. No topasail will be carried.

A table of offsets and an outline specification must accompany each design. The drawings should be carefully drawn and lettered. All drawings should be made on white paper or tracing cloth in black ink (no colored inks or pigments should be used). The designs must bear a nom-de-plume only and no indication must be given of the author. In a sealed envelope, however, the designer should inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than February 28, 1902. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all the designs.

The prizes offered are as follows: 1st prize, \$25.00; 2d prize, \$15.00; 3d prize, \$10.00. Mr. Theodore C. Zerega offers an additional prize of \$10.00 for the best cabin plan. Honorable mention will also be made of meritorious designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has kindly consented to judge the designs and make the awards. Mr. Crane's professional standing is so high that he needs no introduction, and every confidence will be put in his ability and fairness.

Mr. THOMAS W. RATSEY, of the firm of Messrs. Ratsey & Laphorn, the well-known English sail makers, has decided to locate the American branch of his business at City Island. Mr. Ratsey has leased a piece of ground from Mr. Robert Jacob on which he will erect a building in which to carry on his business. While Mr. Ratsey's plant will adjoin Mr. Jacob's yard they will not be associated in a business way.

WORD has been received from abroad that the Denny Brothers, of Dunbarton, Scotland, the builders of Shamrock II., are constructing a yacht of their own design. The builders hope to secure the co-operation of some individual in issuing a challenge for the America's Cup should the boat prove fast.

CONSTITUTION has been hauled out at New London and arrangements have been made by which she will be protected from wind and weather. On Saturday last the work of hauling out Shamrock II. was completed, and she now lies high and dry at Erie Basin, South Brooklyn. The modern boat is an ugly thing to handle out of water, and a large gang of men has been nearly a week getting everything ready to land the boat. The yacht was first placed in the balance dock and a cradle built around her, the ends of the cradle resting on beams placed between the keel blocks. The structure was then raised some three feet from the bottom of the dock by hydraulic jacks. Two chain cables were made fast to the forward end of the steel plate and led to the drums of four steam winches. It took but a few minutes to haul the boat after the preparatory work had been completed.

A REPORT from the West states that it is more than probable that the Chicago Y. C. will be represented in the trial races to be held by the Bridgeport Y. C. for the selection of a challenger for the Seawanhaka Cup.

MR. JAMES BAIRD
NEW YORK

HUSSAR II.—DESIGNED AND BUILT BY THOMAS R. WEBBER, 1900.

CHARLES G. DAVIS - del
New York, N. Y.

Hussar II.

SINCE the days of the famous old sloop yacht Maria, nothing so near equalling her in radical departure of model from the conventional type has appeared in the yachting world as the new Hussar II., designed and built by Capt. Thomas R. Webber, of New Rochelle, for Mr. James Baird, former Vice-Commodore of the Larchmont Y. C.

Capt. Webber is one of the few designers who still believe in the old sloop model for speed, and he has demonstrated the correctness of his views in Dragoon and Surprise. That Hussar II. did not make as good a showing as was anticipated is due to various causes well known to those interested in her, but unknown to the majority of yachtsmen. Handicapped as she was at times, she showed her mettle and caused some little surprise at her bursts of speed. She won the spring regatta of the Riverside Y. C. in 1900 in a series of squalls, and was the only boat to complete the long course. In this race she beat Altair in her own class, Altair having lost her topmast. She also beat Uvira, with which boat a special match had been arranged. During race week at Larchmont the same year she won a second prize, with Syce and Altair as competitors. She also won a second prize on one of the squadron runs, while on a cruise with the Philadelphia Corinthian Y. C.

Her dimensions are as follows:

Length—	Over all	70ft. 6in.
	L.W.L.	42ft. 0in.
Beam—	Extreme	18ft. 0in.
	L.W.L.	17ft. 9in.
Overhang—	Bow	13ft. 6in.
	Stern	15ft. 0in.
Draft—	To rabbet	3ft. 0in.
	Extreme, C.B. hoisted	5ft. 3in.
Freeboard—	Bow	7ft. 0in.
	Stern	5ft. 0in.
	Least	4ft. 0in.
Sail Area When Rigged as Sloop—	Jib	840 sq. ft.
	Mainsail	2,516 sq. ft.
	Total	3,356 sq. ft.

The amount of accommodation under a flush deck on Hussar II. is remarkable in view of the fact that the boat is only 42ft. on the waterline, and there is full head-room throughout all her cabins. Her owner states that for weeks at a time there were six men in the forecabin and six men in the cabins aft. Hussar II. was purchased by Mr. Frank A. Wilmot, of Bridgeport, Conn., who changed her rig to that of a yawl and now uses her entirely for cruising.

A New Cruising Sloop.

THE pole-masted cruising sloop that is being built at Frank Wood's yard, City Island, from designs made by Messrs. Gardner & Cox, is all planked, and the boat is rapidly nearing completion. Mention of the boat has been made already in these columns, but as she is such a fine, wholesome type of boat a fuller description may be of interest. In design the boat is particularly sweet and well turned. While she is devoid of any extreme features, she is modern in every particular. The midship section gives indication of considerable power. The overhangs are long, but not excessive. The bow sections are sufficiently fine to prevent any pounding in a seaway, and still are full enough to pick the boat up and prevent diving and taking any solid water on board. The boat has a very handsome sheer, and her ample freeboard gives her a powerful appearance.

The principal dimensions are:

Length—	Over all	74ft. 0in.
	L.W.L.	47ft. 0in.
Overhang—	Forward	11ft. 0in.
	Aft	16ft. 0in.
Beam—	Extreme	15ft. 0in.
Freeboard—	Fore	6ft. 0in.
	Aft	4ft. 0in.
	Least	3ft. 6in.
Draft, with C.B. hoisted.....		6ft. 6in.

The cabin house, companionways, skylights and all the interior joiner work is finished. All this is of mahogany. The cabin house is 22ft. long and 9ft. wide, which gives a waterway 3ft. wide on each side. The cockpit is the same width as the cabin house, and is 9ft. long. The deck and cockpit flooring will be laid in narrow strips of white pine. Under the low cabin house (for it is only about 18in. high at the sides) the boat has a large amount of accommodation which is particularly well laid out, every bit of space having been utilized to the best possible advantage.

The companionway, which is placed on the port side of the house, leads into a steerage on the port side of which is a berth, together with chart and hanging lockers. Opening from the steerage on the starboard side is a large stateroom for the owner. This apartment contains a large double berth with transoms, bureaus, hanging lockers, wash basin, etc. Next forward is the main saloon, 9ft. long, and extending the full width of the boat. On each side are long transoms, and in each corner are located good-sized lockers, to be used for wines, silver, china, etc. There is also a mahogany writing desk in the saloon. There is a large skylight overhead, and this, together with the two portholes in the sides of the trunk, will give ample light and ventilation. Forward of the main saloon on the starboard side is a lavatory, which is fitted with a water closet and a set wash basin. In addition to these, there are lockers for linen, etc. Forward of the lavatory on the starboard side is the sailing master's room. The space on the port side opposite the lavatory and sailing master's room is the galley, which is unusually large and roomy. The galley is fitted with every modern convenience. The forecabin has four pipe berths.

The centerboard, which is 11ft. long, houses under the

HUSSAR II.—CABIN PLAN.

HUSSAR II.—ORIGINAL SAIL PLAN.

cabin floor and in no way interferes with the cabins. All the lockers in the cabins and staterooms are lined with zinc, so that the contents will be kept free from dampness at all times. Two boats will be carried on the davits.

The boat has been splendidly constructed under Mr. Wood's direct supervision. As soon as the boat is finished, her owner, Mr. George Bullock, of Cincinnati, will take her to Southern waters, where she will be used the balance of the winter.

Our Boston Letter.

Boston, Dec. 2.—This season, as was announced early in the spring, the Hull-Massachusetts Y. C. offered great inducements in the way of prizes and championships to yachts conforming to the restrictions of the Y. R. A. in the 25ft. and 21ft. classes, and also to yachts conforming to the restrictions of the Eighteen-foot Knockabout Association. The policy of offering great inducements proved a wise one, and, although there was not quite the filling in the 25ft. class that might have been wished for in all the races, the yachts which were the acknowledged leaders in that class attended nearly every race. There was an entire dearth of 21-footers, owing to the small number that signified their intentions of racing, for, although the club was willing to give generous prizes in addition to the championship of the class, it did not feel that it should offer them unless the yachtsmen were willing to send a number of entries that should warrant it. The attendance among the 18ft. knockabouts was all that could have been asked for. In this class there were only two boats that did not sail the required number of races to qualify for the championship.

As in the races of the Yacht Racing Association, the contest between the 25-footers for the championship of the Hull-Massachusetts Y. C. was mainly between Flirt and Calypso, and in this instance it was last year's keel boat which beat out the new centerboard. The championship series was hotly contested, and at the close of the season Flirt led Calypso on the average percentage by less than three-tenths of one per cent. Calypso won the greatest number of first places, but the work of Flirt seems to have been certainly steadier. Out of ten starts Flirt was either first or second nine times. Calypso showed the same peculiarities which were evinced in Y. R. A. races. In a very strong breeze or in a stiff whole-sail breeze she seemed to be invincible. In moderate breezes or in very light airs Flirt was the conqueror. For all-round work Flirt's record is commendable, and there is no doubt that she earned her championship. In this class the Regatta Committee required seven starts to qualify and the two leaders were the only ones which sailed the required number. Chewink, Early Dawn, Tarpon, Little Peter, Marion and Scud also competed, and it is to be lamented that they did not enter more races. Chewink entered but two races

and finished second in each, giving her an average of 65 per cent. Early Dawn entered in four races, her average for which was 61¼ per cent. Tarpon entered in three races, with an average of 56 2-3 per cent., and Little Peter entered in six races, with an average of 21 2-3 per cent. Marion and Scud only sailed one race each, and each received 15 per cent. for finishing.

In the 18-footers Malillian won the championship without any question. She was one of the original Duxbury 18-footers, which was turned out last year by Jansen from designs by Crowninshield. She did not make any great showing in Duxbury Bay last year, and so it was not surprising when she got no better than fifth place in her first race at Hull. But the surprise did come afterward, when she took four straight firsts and cinched the championship. She was extremely well handled by Capt. Frank James, and this, coupled with careful tuning up, made a combination that was hard to beat. Bonito, a new Crowninshield boat, which came second, looked very promising at the first of the season, and certainly proved a very even sailer, but she did not seem to be able to do anything with Malillian. Bacchante and Ayaya did not sail the required number of races to qualify, which in this class was six.

The percentages in both of these classes were figured out on the same basis as the Y. R. A. table, 100 for first, 65 for second, 35 for third and 15 for finishing. The records are as follows:

	Starts.	1sts.	25-footers.				Total.	Average.
			2ds.	3ds.	Fins.	Bks.		
Flirt	10	3	6	1	0	0	725	72 1-2
Calypso	9	5	1	2	1	0	650	72 2-9
18-footers.								
Malillian	8	5	1	1	1	0	615	76 7-8
Bonito	7	3	2	2	0	0	500	71 3-7
Aspinquid	7	1	2	1	3	0	310	44 2-7
Nethla	8	0	2	0	6	0	220	27 4-8
Oriana	7	0	0	4	3	0	185	26 2-7
Ayaya	9	0	1	1	7	0	205	22 7-9
Barbara	5	0	0	1	4	0	95	19
Bacchante	4	0	0	0	4	0	60	15

The good attendance in this class may be attributed to a new feature introduced by the Regatta Committee of giving attendance prizes. The committee is pleased with the experiment, and is of the opinion that it is a good thing for all classes. The committee set aside a sum of as many dollars as the total number of boats finishing during the entire series. This was divided into 50, 30 and 20 per cent., and awarded to the boats having the three highest average of attendance. The rule by which this average was obtained was one that favored the attendance of yachts which were not constantly at the head of the list, and was as follows: "A boat sailing in the championship series shall be given in each race a percentage equal to the number of her place at the finish of the race." That is, if a boat should finish sixth, she would receive six per cent. The other rules which governed the attendance prizes are as follows:

"At the end of the season her daily percentages shall be added together, and from the sum shall be subtracted the number of races in the series which she has missed. The remainder shall be divided by the total number of races in the series.

"If two or more boats are tied in the general result, then the boat having the better place at the finish of the last race of the series in which the tying boats shall have sailed, shall be considered as having the highest average."

At a recent meeting of the Corinthian Y. C. it was proposed to change its classification under the racing rules and adopt the 25ft. class and 21ft. class, as conforming to the restrictions of the Yacht Racing Association of Massachusetts, and the 18ft. knockabout class conforming to the restrictions of the Eighteen-foot Knockabout Association. This would at first look very favorable to the Association as an acknowledgment of its strength, and it could not logically be entertained in any other light; but it is not likely, from all that has been shown in recent years, that the adoption of the Y. R. A. classes would mean that the Corinthian Y. C. would co-operate with the Association. On the other hand, it is more than likely that the adoption of such classes would be for the purpose of competing more closely with the Association. If the Corinthian Y. C. should apply for membership to the Association, it would be a different thing, but it is understood that the Marblehead Club has no intention of doing this. The majority of the new 21-footers are for yachtsmen who are members of Marblehead clubs, and it looks as if there was an organized movement on foot to confine the bulk of the racing to those waters. This has been tried before, but as in all such cases it was not successful. The greatest development in yachting cannot possibly be attained by narrowing its field, any more than can any other enterprise. The amendment to the rules was not at once accepted, but was referred to a special committee, which will report at the next meeting.

The Boston Y. C. has purchased a location on the main shore at Marblehead for a station, and is to erect a club house which will cost upward of \$5,000. This will be a valuable addition to the main club house at City Point, and also at once presents a curious problem. The Boston Y. C. is a member of the Y. R. A., and the chairman of its Regatta Committee is one of the Executive Committee of the Association. If this club should decide to give a number of Y. R. A. races and to support the cause of the Association generally at Marblehead, there will be interesting developments in store for the season of 1902.

JOHN B. KILLEEN.

There is being built at Frank Weeks' yard at Amityville, L. I., a knockabout for Mr. Francis A. Williams, of New York City. The boat is 36ft. over all, 24ft. waterline, and 10ft. 6in. beam. A catboat for J. V. S. Oddie, Jr., to be 25ft. over all, 18ft. waterline, and also a racing catboat 29ft. over all for Mr. E. P. Foster,

The Theory of Measurement Rules.

Editor Forest and Stream:

The interesting article by Thalassa on Measurement Rules in FOREST AND STREAM of Nov. 30, contains the only attempt the writer has seen to offer a philosophical basis for the current type of rules.

He says: "Putting it broadly, there are three principal speed producers in the sailing yacht."

- "1. Sail area—the motor.
- "2. Length of hull—the wave minimizers.
- "3. Smallness of displacement—without infringing on the amount required for holding up the motor.

"This being so, is it not evident that any logical rating rule for yacht racing should tax these three speed producers?"

To this question it is pertinent to reply that "length of hull" and "smallness of displacement" are not speed producers; but are resistance reducers. In combination they make fine lines.

What elements are proper subjects of taxation in measurement rules depends upon the purpose of these rules.

If the purpose be to handicap fast yachts so as to en-

City, on Tuesday, December 10, 1901. The meeting will be called to order promptly at 6:30 o'clock, P. M., and the following ticket, selected by the Nominating Committee, voted upon; also amendments to the constitution and by-laws, as printed below. Commodore, Stephen W. Roach, steamer Emeline; Vice Commodore, M. Roosevelt Schuyler, cutter Jessica; Rear Commodore, Oswald Garrison Villard, sloop Hilgarda; Secretary, Edward M. MacLellan; Treasurer, Bart. Jacob; Measurer, Charles D. Mower; Trustees, class of 1904, Harry S. Fairchild and Horatio R. Harper. Amend Article II. of Constitution, to read: "The object of this club shall be to encourage and promote the sport of yachting, the art of yacht designing and construction, the science of seamanship and navigation, and to provide and maintain a suitable club house and anchorage for the use of its members." Change Section 4, Chapter I., of the By-Laws, to read: "Active members shall pay an initiation fee of twenty-five (25) dollars and annual dues of twenty-five (25) dollars." Amplify Chapter VI. of the By-Laws so that it will include a description of cap devices designated for all officers and for members. Prizes won in races by the club during the summer will be presented to winning owners, who will be the guests of the club for

ing Club's house was carried away. Besides washing away the big timbers, the waves rose into the yacht club house on Harrison Island and the lower floor was damaged and buckled. Everything on the lower floor was afloat. About a dozen members of the club were forced to spend the night in the half-wrecked building. The yawl Peggie, property of F. S. Hastings, was wrecked. She had been brought from Greenwich and was to have been taken out at Huntington's ship yards. She dragged her anchor and landed on the rocks at Hudson Park. Very little is left of her. She was valued at \$3,000, and was almost new. A small yacht owned by T. H. Davis went to pieces against the Potter sea wall.

The schooner yacht Fleur de Lys, Dr. Lewis A. Stenson, N. Y. Y. C., is receiving new skylights and joiner work, and having her decks recaulked at Tebo's, South Brooklyn.

Mr. Richard Stevens has sold his steam yacht Aileen to Mr. Edwin Gould.

The schooner Onward, formerly Intrepid, N. Y. Y. C., Mr. Edward Bell, has been thoroughly overhauled and repaired at Poillons' yard, South Brooklyn, and will be ready the first of next month to be turned over to her owner. On December 10 she will leave port for an extended cruise in southern waters.

The auxiliary yacht Alleta, formerly Algonquin, N. Y. Y. C., Mr. John H. Flagler, is being lengthened 35 feet amidships at Poillons', South Brooklyn.

Col. McCalmont, the well-known English yachtsman, has sold his steam yacht Banshee to the King of Portugal.

Rear Commodore C. L. F. Robinson, of the N. Y. Y. C., and Mrs. Robinson have completed arrangements for an extended cruise about the West Indies and in the Mediterranean in their yacht Wanderer, formerly the Kathailes. The yacht will leave New York on Dec. 7.

The new steam yacht building for Messrs. W. S. Spaulding and J. T. Spaulding, N. Y. Y. C., from designs by Mr. J. Beaver-Webb, of this city, will be named Isis, and launched from the yard of Messrs. T. S. Marvel & Co., Newburg, N. Y., on Tuesday, Dec. 10, at eleven o'clock in the morning. After the launching, the yacht will be taken to the W. & A. Fletcher Co.'s plant at Hoboken, N. J., where her engines and boilers will be fitted. Isis is built of steel and is 200ft. long, 24ft. beam, and 11ft. 6in. draft.

The John N. Robbins Co., of South Brooklyn, have been commissioned to build a steel steam yacht for Mr. F. M. Smith, N. Y. Y. C., from designs made by Mr. Henry J. Gielow. She will be 153ft. 7in. over all, 122ft. 9in. waterline, 17ft. 6in. beam, 9ft. 8in. depth of hold. The yacht will be schooner rigged. There will be a double bottom and four water-tight bulkheads. On deck there are two houses each 22ft. in length. The forward house will be used as a dining saloon and will have seating capacity for fourteen persons. There will be a buffet and the usual closets for china and silver. In the after end of this house is the butler's pantry, which is equipped with an ice box, dressers, lockers, etc.; a dumbwaiter leads to the galley, which is located directly underneath. In the forward end of the after house is a dressing room and a lavatory. The rest of the house is used as a sort of living room, and is furnished with a piano, music rack, lounges, etc. On the lower deck forward are quarters for the crew, which are roomy and well ventilated. Aft of the forecabin are the officers' staterooms and mess room. Next aft comes the galley, which is fitted with all modern conveniences. Aft of the galley comes the machinery and boiler space, which is divided at the forward and after end by a steel bulkhead, in order to reduce the noise and keep the heat from the living quarters of the vessel. The machinery of the vessel will consist of a four-cylinder triple-expansion engine and two water-tube boilers capable of supplying sufficient steam with natural draught to drive the vessel 17.5 miles per hour and with forced draught a speed of 20 miles per hour will be attained. The contract provides for a continuous run of six hours under forced draught. A complete electric lighting plant will be installed, with searchlight and storage battery. Aft of the machinery space are two large staterooms for the owner and his wife, each room containing a wide berth, bureau, hanging closet, lavatory. These rooms are 12 feet long. Following these staterooms will be two more staterooms on the port side, and on the starboard side will be a bathroom, another stateroom and a lavatory. Aft of these comes the main saloon extending the full width of the vessel and twelve feet in length. The trim will be of mahogany. The plumbing will be of the best and hot and cold, fresh and salt water baths are provided. The yacht will be ready for delivery on July 1, 1902.

Canoeing.

'Mid Reef and Rapid.—XXX.

BY F. R. WEBB.

"That's a rough place, Commodore, sure enough!" said I to myself, as I gave an extra touch to my hatches and adjusted my apron over my lap as high up around my breast as it would go, and tucked it well in at the aft corners, so as to keep as much water from dashing in at these exposed places as possible.

"Come on!" yelled George.

"All right!" I shouted in reply, as I dipped my paddle into the water with a gentle, forward stroke, and sent my light, easily managed canoe gliding toward the head of the shoot.

As I approached I got a good look down it. I have

HUSSAR II. RIGGED AS A YAWL.
Photo by N. L. Stebbins, Boston.

able slow yachts to contest against them with equal chances of success, then it is obvious that theoretically everything which produces speed either positively, as sail area, or negatively by reducing resistance, as fineness of lines, should be taxed in proportion to their several effect. But practically it is impossible to ascertain and to state numerically the relative effect on speed of these elements of design that reduce resistance. Therefore their use in measurement formulas is futile.

If, on the other hand, as the writer thinks it should be, the purpose of measurement rules is to reduce the varying speed of yachts of different size to a common basis for fair comparison; or, in other words, to test the excellence of design of competing yachts in respect to speed, then the motive power only, sail area, should be taxed. Fortunately it is possible to calculate approximately the comparative effect on speed of sails of different size.

This sort of rule puts a premium on skillful designing, and encourages the gradual evolution of the fastest form. The kind of rule first mentioned discourages the art of designing, and puts a premium on hindrances to speed.

The question of yacht measurement has long been encumbered with an entirely irrelevant matter, and has been immensely complicated thereby; viz., the control of design within reasonable limits. The speed test of yachts has fostered the designing and building of all sorts of undesirable freaks; and formula makers have endeavored to bar these monstrosities, and to direct design along wholesome lines by the same formula used for measuring speed. There is no good reason for trying to cover these diverse subjects by a single rule; and such attempts are sure to fail.

It is perfectly easy to state for any class of yachts the limits within which it is desired to confine the principal elements of design; and this should be done by separate regulations outside of the measurement formula.

SEXTANT.

Yacht Club Notes.

The third annual meeting, election and dinner of the Manhasset Bay Y. C. will be held at the Hotel Manhattan, Madison avenue and Forty-second street, New York

the evening. The following proposals for membership have been received: Henry W. Osborn, Henry L. Bogert, Russell Howland, Joseph H. Humphreys, Seymour L. Husted, Jr., and William G. Stewart.

YACHTING NEWS NOTES.

Mr. William H. Hand, of New Bedford, Mass., is at work on plans of a number of new boats. Among the orders already placed are the following: A 30-footer for Mr. George H. Chisholm, of Buffalo, N. Y., to race under the rules of the Y. R. Union of the Great Lakes, and a 21-footer for Mr. George E. Ireland, of Kingston, Ontario.

Messrs. Huntington & Seaman have made the following sales: The launch Eagle, owned by Messrs. Solomon Bros., of New York City, to Mr. E. W. Hanke, of Bridgeport, Conn.; the sloop Athla, owned by Dr. F. A. Gardner, of Washington, D. C., to Mr. Chas. W. Lee, of New York City.

The Pusey & Jones Company, of Wilmington, Del., have been awarded a contract to build a steel steam yacht for Mr. J. Roger Maxwell, of New York City, from designs made by Mr. Henry C. Winteringham. The yacht will be 170ft. over all, 23ft. 6in. beam, and 12ft. 5in. deep.

The cup defender Columbia had a narrow escape from injury in the gale a week ago Sunday. After hard work a gang of men shored her up with heavy timbers in such a manner that there was no fear of her toppling over. At Hansen's yard, at City Island, many boats were injured, and it is thought that there was more damage done here than at any other point. At Jacob's yard Amorita and Hester both had close calls, the water coming up so high that it nearly washed the props from under them. At Wood's yard, Cartoon, the famous 25ft. waterline boat designed by Messrs. Gardner & Cox, was entirely destroyed, the only thing left of her being the fin. In Echo Bay the new addition to the New Rochelle Row-

often noticed, in surveying rough water from the bank, especially from a little elevation, how much flatter the water looks than it really is, and I at once saw that we had really formed no conception of the tremendous violence of this shoot. However, we were in for it, and there was really no danger, except for a possible capsizing in the big waves, which tumbled from side to side across the shoot in a most threatening manner, so I let my boat drift steadily ahead into the channel.

With a huge dip my canoe slipped over the verge into the seething channel, and buried her nose to the hatches in the breast of the big wave tumbling in front of her. As her bow lifted the water rolled in a solid sheet a foot thick, clear over my canoe and passed off astern.

"Look out for the side w-a-a-ves!" George shouted at the top of his lungs as I shot past him, the spray streaming from my decks and apron. I had barely time to secure firm control of my canoe before, with a couple more headlong plunges, she was seized by the big surges and buffeted violently right and left, first on one side and then on the other, while the water rolled in heavy sheets over her decks and the spray fairly blinded me.

In less time than it takes to tell it, I was safely through the canal and into the turmoil of waters at the foot of the falls, and at the head of the rapid below; but I was not ready to run the rapid yet. George wanted to climb up the wall and get a vantage point about midway down, from which to take me with the kodak as I came tumbling down the rapids, so, by back paddling with all the strength I possessed, I managed to back out of the rapid into a little cove in the lee of a projecting point, where I lay rocking up and down on the restless surface of the little eddy, while I meantime wiped the water from my dripping face and streaming hair and wrung out my soaked sleeves.

Finally, a yell from George notified me that he was ready, so I pushed out of the sheltering cove, and my canoe was instantly seized by the remorseless rush and whirled away, and in two minutes more I had successfully run a quarter of a mile of about the heaviest and roughest rapids I ever experienced.

I landed alongside of the Clyde in the little basin agreed upon above the fish dam, and hastily scrambled ashore and set off up the railroad on a run to reach the falls in time to see George come through. I overtook him and Lacy just opposite the boat channel, where George climbed down the wall to reach his canoe, while Lacy seated himself on the verge of the wall at the head of the shoot with the kodak, to get a bird's eye shot at him as he went down, and I took a position near the lower end in order to see him get the benefit of the roughest water.

It was a beautiful sight to see his graceful canoe run the shoot, with the big waves buffeting it from side to side, and dashing in sheets of solid water and clouds of spray over his decks and hatches from stem to stern.

I ran along down the railroad after him to see him run the rapid below, and it took about all the running I was capable of getting up in order to keep up with him as he shot swiftly down, his canoe rising and falling like a duck on the rough water.

"Whew!" said George, as we joined him in the little basin where our canoes lay, "that's a corker!"

"Did you ever see a worse run?" exclaimed Lacy as he pulled up his canoe alongside of the bank and threw open his hatches.

"Worse!" exclaimed George, who is particularly fond of a good, stiff shoot. "It's the finest run I ever had. I only wish we could go back and do it over again."

"Well, I didn't exactly mean that it was objectionable," explained Lacy, with a laugh, as he began sponging the water out of his boat, "but it's certainly as rough a piece of water as ever I tackled. Did you ship any water, either of you? I took a bucketful."

"Bucketful! I got a tubful!" exclaimed George, as he stepped ashore and wrung himself out, and then proceeded to sponge out the two or three inches or so of water in the bottom of his boat.

"Why didn't you get a tight grip on the aft corners of your apron and hold them tightly down, as I did?" I exclaimed, seating myself in my canoe, as I spoke, and pushing off from shore into the still waters of the little basin, where my canoe drifted idly, while I waited for them to get the water out of their boats. "I didn't ship a pint of water in the falls and rapids combined. I just pointed my canoe straight ahead, with the flow of the water, and let her go, and, except an occasional stroke now and then, made no attempt to assist her with the paddle."

"I got knocked out of my course in the shoot by those big side surges, and had to use my paddle," said Lacy; "that's where I got wet."

"I took all my water in spite of my holding down my apron," said George, as he stepped aboard his canoe again and pushed off from the shore.

We slipped easily over the fish dam, having ascertained from the bank that there was nothing in sight that need cause us any trouble, and threaded our way through the reefs below, after which we had a smooth, easy run of half a mile, until we reached the head of the group of islands clustered in the bend below. Here we found a fine, new dam, nearly half a mile long, extending in a straight line from the right bank and sloping away a long distance down stream as it crossed, until it closed in on the river at the left bank, where nearly all the water in the stream was diverted, through a massive, timber head gate into a canal back of the railroad, which carried it to a wood-pulp mill, a mile or more further down.

"It wouldn't be a bad scheme to get through these gates into the canal and finish the trip inside," said George, as we paddled up into the sharp angle between the end of the dam and the bank.

We landed on the heading and made an inspection. "It won't work," I announced. "Those gates are just level with the surface of the water now, and won't come any higher."

"I doubt if the canal would be of much use to us, anyhow," said Lacy; "I don't believe it extends far enough down, for one thing, and, as you see, it is so blocked with wood in stock for the pulp mill that we couldn't get through it, even if it did."

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Nov. 17.—The Columbia Pistol and Rifle Club held its regular bi-monthly shoot to-day. Fine shooting was done by several. A. J. Brannagan borrowed Daiss' S. & W. pistol and tried his hand for the first time with that weapon, making 31, within two points of our club record, 29. The group was in a 3in. ring, and the best ever made in this club or any other, as far as we know. He is a phenomenon. At a recent shoot, with his .38 revolver, he had a group of 9 shots out of the 10 that were in a 2in. ring. Daiss asserted that his pistol was no good, but he is scratching his head now and thinking. Dorrell managed to get some fine work out of a very light .22-74 Winchester by wrapping a 2lb. piece of iron in cloth and then wrapping it on to the barrel. Young tried the same rifle, and got first place, with 17 and a run of 14 in 10 consecutive shots, using Peters cartridges. Dorrell's fine work to-day gave him the lead over Capt. Fred Kuhnle, our veteran, who is recuperating at the Springs now. Hovey got in some fine work with his .32-20 on Creedmoor match. He is now 476, or three points ahead of winning score last year, and 6 points away from record, 482, by Pape, made two years ago. Young gained 6 more points on all-round record, and is now 14 points ahead of Pape's record, 408, made two years ago. Daiss did the best average with the rifle to-day, getting second place in the 3-shot match. Young beat him for first honors in 10-shot rifle match. Twist and Hoadley made big gains on their pistol scores.

Scores on Columbia target, off-hand shooting:
Rifle, 200yds.: F. O. Young, 47, 61, 62; C. M. Daiss, 53, 61, 63, 66. Three shot: C. M. Daiss, 11, 14, 16, 17, 21, 21, 22, 26, 31.
Military and repeating rifle match, Creedmoor count: Ed. Hovey (.32-20 repeater), 48, 47, 46, 46, 46.

Pistol, 50yds.: A. J. Brannagan, 31; F. O. Young, 42, 52, 54; G. W. Hoadley, 43, 48, 52, 54, 54; Dr. J. F. Twist, 44, 47, 52, 62, 62, 65.

.22cal. rifle match, 50yds.: F. O. Young, 25, 17, 24, 27; A. B. Dorrell, 18, 18, 19, 20, 20, 20, 21; Dr. Twist, 27, 27; A. J. Brannagan, 28.

H. Kroeckel's coast record of 15 with the .22 rifle at 50yds., mentioned last month, was made with a .22 Marlin repeater, which makes the score very creditable indeed, as it was with ordinary trigger pull and sight. He informs me that they have handicapped him 18 points on a score, Columbia target count. Mr. C. A. Merrill was elected president, and Mr. Kroeckel vice-president of the Stockton Pistol and Rifle Club, and Mr. Kroeckel has been appointed rifle inspector by the State for his county.

Several members are preparing to slaughter turkeys at the annual turkey shoots held hereabouts.

F. O. YOUNG.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, Nov. 24. Conditions, 200yds., off-hand, at the standard target. Payne was declared champion for the day with the good score of 91. Weather, cloudy; thermometer, 50 degrees; wind, gusty, 4 to 8 o'clock:

Honor.	
Payne	91 87 86 84 82—430
Strickmeier	90 88 88 87 86—439
Nestler	86 85 85 82 81—419
Roberts	85 85 84 83 82—420
Bruns	84 83 80 78 77—402
Gindele	84 76 74 74 72—380
Lux	84 76 72 71 69—372
Drube	80 77 73 72 70—372
Odell, Jr.	80 72 72 75 69—368
Trounstein	75 69
Hoffman	71 64 62 61—321
Topf	68 66 66 64 63—327
Hofer	68 58

Mr. L. Odell, late of Toronto, Canada, and who, together with his father, visited this range on our last regular shoot, has now become a member of this Association, he having been duly elected an active member at a special meeting to-day. His father will soon follow, and we hope soon to hear the merry crack of their rifles, as they vie with each other for coveted honors. Payne raised his record one point to-day by making 91.

Trapshooting.

Fixtures.

Dec. 4.—Interstate Park.—Midweek shoot of the New Utrecht Gun Club. Silver cup to winner.

Dec. 4.—Holmesburg Junction, Philadelphia.—Competition in third target series of Keystone Shooting League.

Dec. 5.—Interstate Park.—Interstate Park Handicap, 25 targets, \$2; Metropolitan Individual Championship, 50 targets, \$2; Interclub match, three-man teams, open to all clubs, 50 targets per man, \$2 per man; Interclub Handicap, 25 targets, \$1.50.

Dec. 7.—Wellingtun, Mass.—All-day target tournament of the Boston Shooting Association.

Dec. 10.—Interstate Park.—Interstate trophy, 20 targets, \$1.40; Kings County Handicap, 25 targets, \$1.50; second shoot for December cup, 50 targets, \$2; sweepstakes.

Dec. 11.—Interstate Park, L. I.—Team contest, New Jersey vs. New York.

Dec. 12.—Interstate Park.—Interstate trophy, 15 targets, \$1.30; Richmond Handicap, 25 targets, \$1.50; Metropolitan Individual Championship, 50 targets, \$2; sweepstakes.

Dec. 18.—Holmesburg Junction, Philadelphia.—Competition in third target series of Keystone Shooting League.

Dec. 18.—Interstate Park.—Midweek shoot of the New Utrecht Gun Club. Silver cup to winner.

Dec. 18.—Kansas City, Mo.—Midwinter shoot and match contest for Sportsmen's Review cup between Messrs. J. A. R. Elliott, holder, and R. O. Heikes, challenger.

Dec. 19-21.—Kansas City, Mo.—Live birds and targets. Dec. 21, the Omaha-Kansas City ten-man team race will take place.

Dec. 25.—Tunkhannock, Pa.—All-day tournament of the Tunkhannock Gun Club. Spencer D. Reed, Sec'y.

Dec. 25.—Haverhill, Mass.—Haverhill Gun Club's all-day Christmas shoot. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Dec. 4.—Interstate Park, L. I.—Eastern championship, 25 live birds; \$10 sweep optional. Trophy. Entrance, price of birds.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

1902.

Jan. 14-17.—Hamilton, Ont.—Twelfth annual tournament of the Hamilton Gun Club. F. B. Vallance, Cor. Sec'y.

May 6-9.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.

May 7-10.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.

May 13-16.—Oil City, Pa.—Annual meeting of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. F. S. Bates, Cor. Sec'y.

May 30-31.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

June 3-5.—Cleveland, O.—Tournament of the Ohio Trapshooters' League, under the auspices of the Cleveland Gun Co.

June 9-13.—Rochester, N. Y.—Forty-fourth annual tournament of the New York State Association for the Protection of Fish and Game.

June 10-11.—Muncie, Ind.—Indiana Trapshooters' League's annual tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Under the caption "The Shooting of the 20-Bore," the Country Gentleman, London, presents the following: "Much has been written recently by prominent American sportsmen with regard to the general adoption of the 20-bore as a game gun in preference to the 12-bore. Even as the 12-bore was taken up and used as the standard gun when the 10-bore was discarded as being too destructive, so it is believed, in America, that the 16 or even the 20 bore will eventually succeed the 12-bore as the popular game weapon. In the hands of experts, the modern 12-bore, Americans think, is capable of great destruction; and, in fact, the chances of the bird getting safely away have been reduced within recent time to a very great extent. When we hear of such American performances as the consecutive breaking of 345 clay birds or the killing of 99 per cent. of live pigeons, it is not surprising that we should hear of a demand for the general usage of a less destructive arm. Shooting with a 20-bore, American sportsmen believe that a greater element of chance is introduced into the sport which the true sportsman should not be slow to appreciate. In considering the question in relation to the different style of game shooting which prevails in this country, it would seem that we have much more need to 'give the game a chance' even than the American, who has to find every bird he shoots, and who is content to consider a bag of, say, a dozen birds a good afternoon's sport." It might be of interest to our English brethren of the shotgun to know that some excellent shooting has been done with the 28-bore in this country on quail.

The Springfield Republican has made a discovery as follows: "The country is gradually awakening to the barbarity of live-pigeon shooting. So much opposition has been aroused in New York that the American handicap will not again be held in that city. Though prohibitory legislation has not yet been enacted in New York State, it is expected during the winter. The Chicago Tribune declines the honor of the handicap for that city, saying: 'Let the event go elsewhere. The hands of these prospective guests have shed innocent blood, and Chicago will not care to grasp them in her own. This pigeon shooting is not a hunt; it is an execution. It has few elements of sport in it. The birds are released from the traps only to be butchered.' The foregoing is one of the latest contributions to the subject, and in point of accuracy is of fair average merit. That the Grand American Handicap will not again be held in New York is certainly news, and as the Interstate Association will thereby learn for the several hundredth time how it will run its own business, it will feel grateful accordingly. The frenzy of the Chicago Tribune is rather gratuitous, when one considers that the Grand American Handicap was never offered to Chicago, nor even considered in that connection. Moreover, pigeon shooting is a sport, in which gentlemen engage voluntarily. If any one does not care to engage in it, he doesn't have to."

Under the caption "Harvard's Big Profit from Athletics," the New York Sun of Dec. 2 presents the following: "Cambridge, Dec. 1.—The annual report of the graduate manager of athletics at Harvard was given out by C. H. Schwapp last night. The report shows that in that time Harvard cleared on her athletics \$39,078.36. The total receipts were \$117,317, and the total expenditures \$78,238. As usual the largest amount was made on football, the figures for this year being \$36,122 on the right side of the ledger. Baseball came out \$959.56 ahead, but most of the other sports ran behind. The boat clubs ran behind over \$3,200, while the track team was short \$2,633.19. This, however, was largely due to the training during the summer for the international games. Fourteen thousand dollars was expended on improvements at Soldiers' Field, and \$6,206 on buildings. The accounts are far ahead of the report for 1899-1900." This will go to show that amateurism in A. A. U. sports is so far ahead of professionalism in trapshooting from a monetary viewpoint that there is really no comparison.

The target programme of the Interstate Park Association for this and next week is as follows: Dec. 3.—Interstate Park trophy, 15 targets, \$1.30; Long Island Handicap, 25 targets, \$1.50; December cup, 50 targets, \$2; two-man team race, 25 targets and \$1.50 per man. Dec. 5.—Interstate Park Handicap, 25 targets, \$1.50; Metropolitan Individual Championship, 50 targets, \$2; Interclub match, open to all gun clubs, 50 targets, and \$2 entrance per man; Interclub Handicap, 25 targets, \$1.50. Dec. 10.—Interstate trophy, 20 targets, \$1.40; Kings County Handicap, 25 targets, \$1.50; second shoot for December cup, 50 targets, \$2; 15 targets, entrance \$1.30. Dec. 12.—Interstate trophy, 15 targets, \$1.30; Richmond Handicap, 25 targets, \$1.50; Metropolitan Individual Championship, 50 targets, \$2; 20 targets, \$1.40.

The renowned trapshooter, Mr. Tom A. Marshall, of Keithsburg, Ill., writes us as follows, concerning Capt. A. W. du Bray's recent interesting article, "Measurements, Etc., of a Few Celebrated Guns," published in our issue of No. 23: "In looking over the summary of guns shot by the different shooters throughout the country, I note that you have credited me with the Webley-Scott. This is correct. But in noting the guns shot by the American team, I am also credited with having shot the Webley-Scott. On the trip abroad, I shot a Parker gun, as did most members of the team. As my attention has been called to this matter by a number of shooters, and as I have at all times stated that I had shot a Parker, I trust you will correct the notation as made."

On Dec. 11, at Interstate Park, commencing at 10 o'clock, there will be two 5-bird races; one class shooting, \$5 entrance, birds included; the other \$3, birds included, high guns. The great team race between New York and New Jersey, the third of the series, will begin at 12 M. sharp. In it there will be two optional sweeps for such members as care to participate, one of which will be \$10, class shooting, four moneys, and one sweep, \$5, high guns; number of moneys according to the number of entries. Should time allow, there will be miss-and-outs or other events, at the pleasure of the contestants.

A beautiful moose head was one of the prizes which the New Utrecht Gun Club put up for competition in the main event of its Thanksgiving Day shoot. Three of the contestants tied for it with straight scores, namely, Messrs. J. Gaughen, J. P. Kay and A. E. Hendrickson. In the shoot-off, the latter missed in the second round. Mr. Gaughen then bought out J. P. Kay's interest in the moose head and became the owner of it. Mr. Gaughen shot in fine form, and is now quite a class man in skill and steady performance.

Owing to the absence of Mr. R. A. Welch in the West on matters of business, it is possible that the team match, advertised recently in our columns, may not take place. Mr. Welch and Mr. T. W. Morley on the one side were to contest against Messrs. Edward Banks and G. H. Pierce on the other; 25 live birds per man. If it were not for Mr. Welch's conceded and well-known eminence as a trap shot, it would be common talk about New York that he had run away to evade the match.

The recent earnest effort toward a great sweepstake in the West, fifty men or more, at 100 live birds, \$100 per man, is proof positive of a high standard of competition in that section. We would suggest that a race under those conditions, with twenty-five or more competitors, would make an interesting competition.

The Haverhill Gun Club presents elsewhere in our columns an open-to-all programme for its Christmas shoot, which should appeal to all who are interested in obtaining a maximum of pleasure for a minimum of effort.

Capt. A. W. Money, of the E. C. & Schultze Gunpowder Company, arrived in New York from the West on Tuesday of this week. He deeply regrets that the great 100 live-bird race, for \$100 per man, did not fill.

Mississippi Valley Notes.

The St. Louis Tournament.

THE tournament of the St. Louis Shooting Association, given anent the final shoot-off for the Republic cup trophy, continued over Sunday, the 23d, which is the leading day for general work at Dupont Park.

Table with 2 columns: Name and Score. Includes entries for Kenyon, Spencer, and others.

Table with 2 columns: Name and Score. Includes entries for Rock, Orvis, Fanning, and others.

Table with 2 columns: Name and Score. Includes entries for Crosby, Rock, Fanning, and others.

The late afternoon was devoted to more short live-bird races and several target sweeps, in which Crosby gathered most of the honor and shekels.

Charlie Stevens came all the way from Moline, Friday, hoping at this meet to take enough additional entries to his big 100-bird Chicago sweep, and he did get a number of entries here, but, much to the general regret, he was still four short of his guarantee of fifty entries Saturday night, and therefore was compelled to give up his enterprising project.

Although it is yet very early in the game, it may be said with certainty that the Grand American Handicap of 1902, to be held in Kansas City, will be in all respects a record occasion.

As the quail season progresses some very fine bags are reported from various points, but it is generally found that the birds are very scarce on the flat prairies or broken ground.

State Game Commissioner Lovejoy, with his wardens and deputies, is doing excellent and most effective work in preventing illegal shooting and marketing of the birds.

Capt. A. W. Money, of the E. C. & Schultze Powder Company, is here spending a week with his son, Harold, of the Western Cartridge Company.

J. S. Boa arrived home for Thanksgiving, from a successful business trip in the South.

Richmond Gun Club.

SILVER LAKE, Staten Island, Nov. 28.—Target and live-bird shooting for prizes was the competition at the Thanksgiving shoot of the Richmond Gun Club. There were nine target events.

The next shoot will be held on Dec. 14.

The target scores follow:

Table with 2 columns: Name and Score. Lists target scores for various participants.

The following were all 5-bird sweeps. All stood at 28yds. The boundary was 30yds.:

Table with 2 columns: Name and Score. Lists 5-bird sweep scores.

Westmount Gun Club.

MONTREAL, Can., Nov. 30.—There was a small attendance at the regular Saturday practice shoot at the Westmount Gun Club grounds, though it was a most beautiful winter day.

Next Saturday it will be Hutcheson vs. Galbraith.

Several of our boys have not returned from their Thanksgiving day deer hunt.

Table with 2 columns: Name and Score. Lists scores for Westmount Gun Club.

Gen. Herkimer Gun Club.

LITTLE FALLS, N. Y., Nov. 28.—Live bird event, 10 birds:

Table with 2 columns: Name and Score. Lists live bird event scores.

A special match at 30 targets was shot between F. P. O'Leary, of Buffalo, N. Y., and F. Flanagan, of Little Falls, as follows:

After the shoot Mr. Kane treated the boys to a fine lunch, served in the club house, and all had a very enjoyable time.

WESTERN TRAPS.

Big Live-Bird Sweep is Abandoned.

The following communication from Mr. C. R. Stephens, of Moline, Ill., vice-president of the Illinois State Sportsmen's Association, announces the abandonment of the proposed big live-bird sweep, which was to have been held at Watson's Park, Chicago, during the month of December.

"The big shoot is off. I was unable to line up the agreed minimum number of entries, fifty, by Saturday, Nov. 23, which was the time limit set by John Watson, who was to pull off the game on his grounds. Was only able to get forty-six forfeits. Had innumerable promises, but couldn't cash them—the 'hot air banks' were not running.

"Thank you kindly for your effort to assist me in the game, and apologize for consuming your time for naught.

"As I write this I have fifty-one forfeits lying in front of me; five of them arrived this morning. Just thirty-six hours too late to be of any value in promoting the game. It seems really too bad to lose out on so close a margin.

"Maybe I will succeed better next time, for I surely will try again some day. I hope to be able to interest you then also.

"Thanking you again for your participation, I beg to remain sincerely (if sorrowfully) yours,

"C. R. STEPHENS."

Intercity of Minnesota.

The past week at the Intercity Shooting Park between Minneapolis and St. Paul was rather quiet, many of the shooters being absent in the field after quail. On Thanksgiving Day there will be a target shoot at 15 targets for turkey prizes, by the members of the Oak Grove Gun Club.

The St. Paul Review cup was shot for Nov. 24, and brought out the largest entry of the season. The following are the scores:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.

Large table of trap scores for various participants like Morrison, French, Mulligan, Brown, Wilkinson, Kribs, Bull, Hirschy, Bennett, etc.

Garfield Gun Club.

Chicago, Nov. 28.—The appended scores were made to-day on the occasion of our annual Thanksgiving pigeon (turkey) shoot. All events were 5 birds, and high guns drew for the turkey in each case.

The birds were the best lot I have seen trapped for a long time, only three sitters developing all day in almost 600 birds shot. Ten members of the club carried home each a fine turkey; and all went home satisfied, having had all the shooting they wanted, for once. The attendance was large and enthusiastic, and all went off pleasantly. Not a single particle of friction occurred to mar the pleasure of the occasion:

Table with 2 columns: Name and Score. Lists scores for Garfield Gun Club.

Nonpareil Gun Club.

Burnside Crossing, Chicago, Nov. 30.—There was a good attendance at the shoot of the Nonpareil Gun Club, at Watson's Park to-day. The conditions in the main event were 15 live birds, \$5 entrance, three moneys, high guns. There were three ties on 15, and the winners were in the following order: First, E. S. Graham; second, J. R. Graham; third, G. Roll. The scores:

Table with 2 columns: Name and Score. Lists scores for Nonpareil Gun Club.

Nonpareil Gun Club.

Burnside Crossing, Chicago, Nov. 30.—There was a good attendance at the shoot of the Nonpareil Gun Club, at Watson's Park to-day. The conditions in the main event were 15 live birds, \$5 entrance, three moneys, high guns. There were three ties on 15, and the winners were in the following order: First, E. S. Graham; second, J. R. Graham; third, G. Roll. The scores:

Haverhill Gun Club Programme.

HAVERHILL, Mass., Dec. 1.—I append the programme of our proposed Christmas shoot. Our club extends a cordial invitation to all lovers of the sport, and would like very much to see the "team contest turn out a great, big friendly scrap."

The distance handicap ought to make lots of company for the 16yd. shooters, and the "break 'em all" man feel lonesome at 23yds. We can throw as many birds as any set of expert traps in the land, so the boys will get all the shooting they want. We will spare no pains to make it a pleasant day for our out-of-town friends.

The programme is as follows: Event 1, 15 targets, unknown, entrance \$1. Event 2, 20 targets, regular, entrance \$1.50. Event 3, 15 targets, unknown, entrance \$1. Event 4, 20 targets, regular, entrance \$1.50. Event 5, 20 targets, unknown, entrance \$1.50. Event 6, 10 targets, reversed, entrance 75 cents. Event 7, 20 targets, regular, entrance \$1.50. Event 8, 20 targets, unknown, entrance \$1.50. Event 9, 10 targets, reversed, entrance 75 cents. Event 10, 25 targets, regular, entrance \$1.50.

Events 4, 5 and 6 are the team contests. Events 7, 8 and 9 are the individual handicaps. The team scoring the greatest number of targets in events 4, 5 and 6 will receive \$10. Teams to number five men, and any club may enter one or more teams. The shooter making the highest score in events 7, 8 and 9 will receive \$5; second highest, \$3, third highest, \$2. High guns will win; handicaps 16 to 23yds. Money divided by Rose system. Targets included in entrance at 1 1/2 cents each. Sweepstakes optional. Loaded shells for sale. Lunch served first. Take Main street cars to Dustin Square. Guns and ammunition sent by express delivered free of charge.

S. G. MILLER, Sec'y.

Trap Around Reading.

READING, Pa., Nov. 28.—The South End Gun Club's target shoot to-day was a success and was well attended. The high wind played havoc with the flights of the targets, making them very irregular and very hard to hit. The club's medal shoot was the principal event, each man shooting at 25 targets. Besides this event, there were eight sweepstake events, the scores of which follow:

Medal shoot, 25 targets, for Class A, B and C shooters: Class A: Gicker 20, Gerhard 20, Walters 18, Eshelman 17, Ball 16, Yost 15. Class B: Willson 18, H. Millerd 15, Miles 13, Farr 13, Schultz 2. Class C: Ernschaw 7. Sweepstake events:

Table with 2 columns: Name and Score. Lists scores for Trap Around Reading.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Nov. 30.—There was a light attendance at the league shoot to-day. The club event was at 10 live birds, \$5 entrance. Messrs. C. E. Geikler and Hood Waters were high with 9 kills each. The scores in the club handicap follow:

Table with 2 columns: Name and Score. Lists scores for Keystone Shooting League.

IN NEW JERSEY.

Carlstadt Gun Club.

Carlstadt, N. J., Nov. 23.—This new club had a most gratifying attendance at this Thanksgiving Day shoot. Competition began at 11 o'clock. The prizes were of a useful kind to the members, and the entrance was of the reasonable amount that gives a man pleasure without crippling his resources for a day or two. The prizes were eight turkeys, four ducks and seventeen chickens. The turkey events were at 10 targets, 15 cents entrance, targets extra. The duck and chicken events were 10 cents entrance, 5 targets, targets extra. Refreshments and segars enlivened the meeting. There was a large attendance of spectators. The weather was clear and cold, with a high wind.

Table with 11 columns (Events 1-11) and rows for participants: A Niederer, H Krug, T Gemp, N Tygart, G Frank, W Rasmus, A Roemer, H Krug, A Niederer, T Gemp, J de Pauw, M Rasmus, J Vohs, F Huebner, J Rasmus, C Steinhrenner, C Niederer, J Schreiber, H Cook, W Dean, H Linsel, W Johnson, F Victor, W Dern, E Hutchinson.

Boiling Springs Gun Club.

Rutherford, N. J., Nov. 23.—Find below summary of shoot held by the Boiling Springs Fishing and Gun Club to-day:

Table with 2 columns (No. 1, 5 live birds, for birds only; No. 2, 5 birds, for birds) and rows for participants: Huck, Paul, Matzen, Seeley.

Handicap shoot, at clay targets, for turkeys; three turkeys in each event, 15 targets, 75 cents entrance:

Table with 2 columns (Events 1-3) and rows for participants: Hatfield, Herrington, Dr Fredericks, Huck, Axford, Matzen, Jeannerett.

In No. 1 the turkeys were won by Huck, Axford and Herrington. In No. 2, by Matzen, Jeannerett and Hatfield. In No. 3, by Huck, Paul and Frank.

South Side Gun Club.

Newark, N. J., Nov. 27.—The main feature of the meeting was the contest between Mr. George H. Piercy, of Jersey City, and Dr. W. L. Gardiner, of Orange, N. J., for the E. C. cup, emblematic of the championship of New Jersey. The former was the challenger. This contest has been in abeyance for several weeks, owing to Dr. Gardiner's absence in the West on business. The weather conditions were not favorable for good scores, a stiff wind causing the targets to take unusual flights. A number of other contests were participated in by the shooters present, and as handicap allowances were quite liberally arranged, the competition was well sustained to the end. The scores:

Table with 2 columns (E. C. cup contest) and rows for participants: G H Piercy, Dr W L Gardiner.

Sweepstakes; the handicap allowances are given in parentheses: Trophy shoot, 15 targets; prize, a whisky flask; Peters (3) 15, Glover (0) 14, Terrill (3) 14, Super (3) 12, Gardiner (1) 11, Herrington (2) 11, Welles (1) 9.

Prize contest, 15 targets; prizes, a pipe and tobacco to first; second, pocket knife; Glover (3) 15, Herrington (4) 15, Terrill (5) 15, Welles (4) 15, Gardiner (3) 13, Piercy (2) 13, Super (4) 12, Peters (3) 12.

Ties, 10 targets: Glover (1) 10, Herrington (2) 10, Terrill (2) 8, Welles (2) 7.

Shoot for carving set, 25 targets: Welles (6) 25, Glover (3) 25, Super (8) 25, Herrington (7) 24, Piercy (4) 23, Gardiner (4) 20, Peters (7) 20.

Ties, same conditions: Welles (6)* 25, Glover (3) 24, Super (8) 23. Prize shoot for a watch and a pocket knife, 15 targets, high guns to win: Glover (2) 15, Terrill (6) 15, Herrington (5) 15, Super (6) 15, Koegel (5) 15, Peters (6) 15, Michlon (6) 15, Welles (5) 14, Piercy (4) 13, Gardiner (4) 12.

Shoot-off, 10 targets: Glover (1) 10, Terrill (2) 10, Herrington (2) 9, Super (2) 8, Koegel (2) 8, Peters (2) 7, Michlon (2) 7.

Prize shoot for watch and pocket knife, 15 targets, high guns to win: Piercy (4) 15, Michlon (6) 15, Gardiner (4) 15, Welles (5) 15, Terrill (6) 14, Super (6) 14, Koegel (5) 14, Glover (2) 13, Peters (6) 13.

Shoot-off, miss-and-out: Piercy (2) 10, Michlon (3) 9, Gardiner (2) 7, Welles (2) 6.

Contest for pair of field glasses, 15 targets, high gun to win: Gardiner (4) 15, Koegel (5) 15, Herrington (5) 15, Welles (5) 15, Super (6) 14, Terrill (5) 14, Michlon (6) 14, Piercy (4) 13, Peters (6) 13.

Shoot-off, same conditions: Gardiner (4) 15, Koegel (5) 15, Herrington (5) 15, Welles (5) 15.

As before, all scratch: Gardiner 13, Koegel 11, Herrington 10, Welles 9.

East Side Gun Club.

Newark, N. J., Nov. 28.—There was a stiff, high, 9 o'clock wind, which added greatly to the difficulties of stopping the birds within bounds. The birds were a good lot, though with an ordinary one btime. All the miss-and-outs were from the 28yd. mark, except No. 5, which was from 28 to 31yds.:

Table with 5 columns (No. 1, No. 2, No. 3, No. 4, No. 5) and rows for participants: Geoffroy, Prest, Erb, Knevels, King, Hassinger, Schorty.

Sweepstakes, 10 pigeons, handicap rise: Knevels, 29.....22222222-10 Prest, 28.....1210211*10-7 Koegel, 29.....2222222012-10 Geoffroy, 29.....0200200212-5 Hassinger, 29.....1222122020-8 Erb, 28.....0101020000-2 Schorty, 29.....211201*212-8

Club handicap, 10 birds, optional sweepstakes: Class A, 29yds.: Koegel, 1121122021-9 Schorty, 1102102222-8 Geoffroy, 2121211220-9 Hassinger, 2211*2*100-6 Knevels, 222012222-9

Class B, 27yds.: Erb, 1011222122-9 Dr Hudson, 0111001120-6 Perry, 2121202121-9 J Jones, 0112211212-9 Fischer, 2202001212-7 Hughes, 0200120122-6

Sweepstakes, 7 pigeons, 28yds.: Geoffroy, 2112111-7 King, 2101121-6 Hassinger, 2012212-6 Schorty, 0201121-5 Hughes, 1132022-6 Fischer, 010*222-4 Knevels, 2222202-6 Koegel, 2100200-3

Jackson Park Gun Club.

Paterson, N. J., Nov. 30.—The Thanksgiving open shoot of the Jackson Park Gun Club was a complete success, both financially and entertainingly. The handsome club house was taxed during the afternoon to its utmost capacity. Every one was well pleased with the way things were carried out, and especially the workings of the magautrap. The opening event on the programme for the day was at 5 live birds, \$2, to give the amateurs a chance. Ten o'clock seemed to be rather early for the people of Paterson, and there were only seven entries, five from Hackensack, one from Passaic and one from Paterson. But before the event was finished the rest of the shooters began to arrive, and when the second event, which was a match at 25 birds for \$25 and the price of the birds, between Count Lenone, of Passaic and Charles Fleischmann, of Hackensack, the club house was packed.

Everything being ready, the match was ordered to proceed. Count chose to go to the traps first. He got a corking left-quarterer driver, which he was compelled to use his second on. His fourth was hard hit with both barrels, but dropped out of bounds. He seemed to be a bit careless after his fifth bird, but nevertheless he made some grand kills, especially with one barrel. After that most of his misses should have been scored. His last two losses were from carelessness.

On the other hand, Fleischmann started off with a driver from No. 4 trap, which he hit lightly with his first and which escaped to the outside, to meet its fate. He settled right down to work after this bird, and did some nice work until his ninth, which was an incomer from No. 1 trap. He used poor judgment on this bird, letting it get too close before using his second barrel. His twelfth was a lightning right-quarterer, which was yards away before he got in action. His twentieth turned out of both shots. He should have had his last bird, but the match was won, and he didn't use the judgment he should have used. It was hit lightly with both barrels. The match ended 20 to 18. The scores:

Table with 2 columns (No. 1, No. 2) and rows for participants: Lenone, 28.....2211*2012201101101111011012-18 Fleischmann, 28.....02221222022022222222022220-20

There will be another match between Andrew Fletcher, of the home club, and Mr. Abbensinth, formerly of Hackensack, now the keeper of the City Hall Café at Paterson, on Dec. 21, for \$50 a side.

The birds in the match to-day were first class. But the birds used in the sweeps were only of the ordinary kind, arriving here in Paterson late at night. They were crated too full, so they could not move, and as it was too late to take them out to the grounds and let them out, they had to remain that way without food or water, which accounts a good deal for their slow rise. We will try and avoid this in our next shoot, which probably will be Christmas Day.

The third event, at 7 birds, \$5, had fifteen entries. Handicapping, 27 to 31yds., was done by the writer.

The fourth event was to have been at 7 birds, but had to be cut down to 5 on account of scarcity of birds. There were seventeen entries at \$5, with handicaps revised a little. After this event we brought the magautrap out, and after five minutes' delay they were firing away at clay birds, which shows how handy we have things arranged at our grounds at the present time.

The cold weather has set it and put us back a little with the plowing up and harrowing over of the grounds, but we did manage, after hard work, to get the ground inside of the boundaries in what you might call pretty good shape for the shoot to-day.

I have mailed a letter of instructions and a sketch to scale to some few gentlemen in Havana, Cuba, at their request. They have just organized a club. They noticed my article in FOREST AND STREAM of Nov. 9, about our club house and grounds.

There were four target events, and they were shot up to dark. Chris Wright refereed the match and Dutcher all other events, and did the scoring.

Table with 2 columns (No. 1, No. 2) and rows for participants: A Doty, Vermorell, Fletcher, Ed Morgan, Powers, Stalter, Demerest, Tracy, Probst, Abbensinth, Gar Hopper, Fleischmann, Lenone, Geo Hopper, Bunn, Pawelskic, J Doty, Mitchel, Wright.

Table with 2 columns (Target events) and rows for participants: Events, A Doty, Vermorell, Fletcher, Ed Morgan, Powers, Stalter, Tracy, Probst, Gar Hopper.

WM. DUTCHER.

ON LONG ISLAND.

Trap at Baldwins.

Baldwins, L. I.—The Thanksgiving Day shoot at Baldwins had a match race between Mr. Gus E. Greiff and Dr. Carman. The conditions were 25 live birds each. The weather was cold, the wind high, and the birds good. Capt. J. A. H. Dressel acted as referee.

In the match Dr. Carman won, with a score of 19 to 18. Match at 25 live birds, between Mr. Gus Greiff and Dr. Carman: Dr Carman.....2*2102002222202212212220-19 G Greiff.....22202*0020220*2222212212*18

Table with 2 columns (No. 1, No. 2) and rows for participants: Carman, Greiff, Butler, Mickle, Barker, Merritt, Denyse, Sauples.

New Utrecht Gun Club.

Interstate Park, L. I., Nov. 28.—There was a good attendance of the club members and their friends at the Thanksgiving Day shoot of the New Utrecht Gun Club, at Interstate Park. Messrs. J. H. Jack and T. W. Morfe shot a 25 live-bird match, which resulted in a tie on 23, a very creditable performance. A few miss-and-outs were shot, after which a club event at 7 birds was shot for a prize, as follows:

Table with 2 columns (No. 1, No. 2) and rows for participants: W F Sykes, F D Creamer, R W Haef, J H Jack, W J Lurgan, H Kryn, B Waters, C Brown.

Shoot-off: Waters 1, Haef 0. Match between Messrs. Morfe and Jack: J H Jack, 29.....2022212222221022222122-23 T W Morfe, 30.....222221*211212121*22121112-23

Miss-and-out, for club prize; Mr. Gaughen won in the 11th round: F D Creamer, 28.....22222122220 B Waters, 28.....212122111* R W Haef, 28.....222*112-6 J Gaughen, 29.....2111222122 J H Jack, 29.....0 D Bennett, 28.....22210 W J Lurgan, 28.....11121220 J P Kay, 28.....20 H Kryn, 28.....0 T W Morfe, 30.....221210

Ten birds, for moose head:

Table with 2 columns (No. 1, No. 2) and rows for participants: F D Creamer, J H Jack, B Waters, W J Lurgan, R W Haef, J Gaughen, J P Kay, A Hendrickson, H Kryn.

Shoot-off, miss-and-out: Gaughen.....22 Hendrickson.....20 J P Kay.....22 Gaughen purchased Kay's interest.

Table with 2 columns (No. 1, No. 2) and rows for participants: F D Creamer, J H Jack, T W Morfe, W J Lurgan, B Waters, R W Haef, J Gaughen, A Hendrickson, H Kryn, D C Bennett, W F Sykes, C Brown, P May.

Shoot-off, miss-and-out. As dark was near, the shooters in the tie, after the second round, no one having missed, arranged a division of the prizes. Creamer and Gaughen received a case of shells each, and Jack a bronze tiger.

Nov. 30.—Ten birds, for birds: G W Hagedorn, 30.....2221121120-9 Dr Wynne, 30.....2111222222-10

Brooklyn Gun Club.

Brooklyn, L. I., Nov. 30.—While the attendance was not large at the weekly shoot of the Brooklyn Gun Club, held to-day, the shooting was active. One of the main events was a match between Super and Wright at 30 singles and 10 pairs. Super won by a score of 35 to 28. The scores:

Table with 2 columns (Events 1-6) and rows for participants: Wright, Super, Welles.

No. 1 was the match at 30 singles and 10 pairs. No. 4 was an event at 10 pairs.

Ossining Gun Club.

OSSINING, N. Y.—Thirty shooters faced the traps at the Thanksgiving Day clay-bird shoot of the Ossining Gun Club, Nov. 28. The shoot was successful in every way, though a strong wind, which was laden with that which makes snow, pierced the thickest clothing and made the targets cut pigeon wings. Mr. J. T. Skelly, of the Laffin & Rand Company was the only trade representative present. He proved to be a good fellow, and a good shot at the same time. We hope Mr. Skelly will come this way again. Our Yonkers members turned out in good force, and ran up some good scores.

Betti, of Mount Kisco, must have been a little off his feet, as his scores were not up to his usual form.

High percentage, 82, was made by the "old reliable" Ike Tallman, of South Millbrook, with Blandford, of the home club, a close second, with 80 per cent.

Table with 2 columns (Events 1-13) and rows for participants: I Tallman, W P Hall, C G Blandford, A Bedell, J T Skelly, Dr E B Sherwood, A Rowland, J M Thompson, G Stengel, G H Thomas, J O'Rourke, T Hasbrook, C Barlow, K McAlpin, A Betti, W Smith, S McBeth, A Rohr, E Champion, H Bissing, W Burton, W Coleman, W W Ryder, B Haines, R Stellingwerf, B Ganun, J Willi, Jr., J Aitchison, W Fisher.

A few shooters who did not get enough of it on Thanksgiving Day attended the regular Saturday shoot, Nov. 30. A crate of forty-five live birds was brought in unexpectedly, with the following result:

Table with 2 columns (Events 1-4) and rows for participants: F D Garnsey, R Kromer, Jr., D Brandreth, C Blandford, W Coleman.

Clays: Events: 1 2 3 4 5 6 7 8 9 10 11 12 13 Targets: 10 10 10 10 10 10 10 10 10 10 10 10 10

On New Year's Day, Jan. 1, 1902, this club will give a live-bird shoot. First event, 7 birds, \$5, birds included, handicaps 27 to 32yds. Second event, 5 birds, \$3, birds extra, all at 30yds. Third event, \$2 miss-and-out, no re-entry. Fourth event, 10 birds, \$5, birds extra, handicaps 27 to 32yds., high guns. First event to start at 10 o'clock A. M., sharp.

PUBLISHERS' DEPARTMENT.

Inauguration of Additional Through Car Service to the South.

THE Southern Railway announces the inauguration of new Sleeping Car Lines to the South, effective: Nov. 24.—Pullman Drawing Room Sleeping Car, New York to Jacksonville, via Washington, Richmond and Danville; this in addition to the superb service via Washington, Lynchburg and Danville.

Nov. 30.—Special Sunset Limited, Annex Pullman Compartment and Sleeping Car, Tuesdays, Thursdays and Saturdays, New York to New Orleans, connecting with Sunset Limited for the Pacific Coast.

Dec. 1.—Pullman Drawing Room Sleeping Car, New York to Charleston, S. C., the route of the Exposition Flyer.

Dec. 2.—Pullman Drawing Room Sleeping Car, Washington to Pinelhurst, N. C., Mondays, Wednesdays and Fridays.

Jan. 1.—Pullman Drawing Room Sleeping Car, New York to Thomasville, Ga., once a week.

Jan. 14.—"The Southern's Palm Limited," between New York and St. Augustine, also carrying Pullman Drawing and State-room Sleeping Car, New York to Aiken and Augusta. This is the most magnificent and luxurious train in the world, composed exclusively of Compartment Drawing Room Sleeping Cars; Library, Observation, Dining and Club Cars. The Southern Railway operates Dining Car service on all through trains. For further information call on or address New York office, 271 and 1185 Broadway, Alex. S. Thweatt, Eastern Passenger Agent.—Adv.

Winter Tourist Rates, Season 1901-1902.

THE Southern Railway, the direct route to the winter resorts of Florida, Georgia, the Carolinas and the South and Southwest, announces excursion tickets will be placed on sale Oct. 15 to April 30, with final limit May 31, 1902. Perfect Dining and Pullman Service on all through trains. For full particulars regarding rate, descriptive matter, call on or address New York Office, 271 and 1185 Broadway, or Alex. S. Thweatt, Eastern Passenger Agent, 1185 Broadway.—Adv.

Don't delay another day, but send 3 cents in stamps to the Polk Miller Drug Co. for a revised copy of their book on "Dogs; Their Ailments; How To Treat Them," one of the most valuable books of its kind ever gotten out. Giving a thorough and most comprehensive description of the more frequent ailments with which dogs are afflicted, it will be found intensely interesting to every dog owner.—Adv.

Our Christmas Number

The Christmas Number of Forest and Stream for 1901 will be of the character of those of past years, a notable collection of sketches and stories. The following is a list of the titles and authors:

In Lusty Manhood.

Charles Hallock.

Selling the Bear's Hide.

Charles Stewart Davison.

A Man o' the Woods.

Fayette Durlin.

Sea Rack.

William Edward Aitken.

Casey's Wildcat.

Francis Moonan.

The Tale of the Laula Hunt.

Llewella Pierce Churchill.

** If you get the paper from a newsdealer you should take the precaution to order in advance.

A genuine sportsman must possess a combination of virtues, which will fill him so full that no sin can be left for him to squeeze in. He must be an early riser—to be which is the beginning of virtue—ambitious, temperate, prudent, patient, diligent, hardy, energetic, courageous, confident, cool, kind to his dog, civil to the girls, and courteous to his brother sportsmen.

J. Cypress, Jr.

THE EXPORT OF GAME.

A CORRESPONDENT writing on the general subject of non-export laws says, in a letter which will interest a considerable number of shooters:

I know of three cases in Michigan where large numbers of ducks, geese and sora have been fed to the hogs because they could not be taken out of the State as presents to friends. A few birds were brought home in trunks by the gunners who killed them, while the owners' clothing came in boxes and barrels. This season a land controller of large preserves, who for years has sent to friends presents of ducks, has been obliged to give it up owing to the law. In retaining a few of the best points for his own shooting, he invited his neighbors to occupy the rest of the preserve, with the result that between 4,000 and 4,500 ducks were slaughtered. Many of these were sold for a mere song, and a great many were thrown away.

It does seem to me that a person going to the expense of keeping large preserves should be permitted to fetch out at least what he has with him. And that some way might be suggested by which the game should be protected, and yet owners of preserves should have some rights to what they shoot, on the land which they protect.

There seems to be much reason in the complaint brought forward. The FOREST AND STREAM has long contended that, within reasonable limits, the sportsman should be permitted to carry from one State to another the game which he has killed, provided he accompanies it. The restriction of game by the visiting sportsmen to be taken with him is not an important matter, when compared with the game killed by market-hunters and shipped as freight or pressed from any State to centers of population. The pleasure enjoyed in Maine of bringing from the State the birds killed by sportsmen—while sometimes abused to

some extent—is not believed to have any effect on the game supply.

It is natural that after years of license in the free traffic of game, laws should be passed which are unnecessarily stringent, and that such laws should in some cases bear hardly on the individual. The obvious purpose of the game laws is to secure the greatest good to the greatest number, and these non-export laws have undoubtedly operated to considerable extent to reduce the wholesale slaughter of game. There appears to be no good reason, however, why the regulations should not to some extent be modified in favor of those visiting sportsmen who wish to bring out a limited quantity of the game they kill.

It is to be regretted that many States have not yet passed laws limiting the number of birds to be killed in a day and a season. Such limitations should everywhere prevail; and with this system the privilege of bringing out a certain quantity of game may safely be accorded to sportsmen from without the State.

Such a provision, however, should be carefully guarded, for it is open to abuse by unscrupulous persons. Cases of evasion of the non-export law, such as cited by our correspondent, are constantly occurring and being detected, and so long as laws remain on the statute book they must be strictly enforced, or else they will be respected by no one.

When a person goes on a long journey for game and is successful in the quest, he finds high satisfaction in bringing home something to show for it, and to share with his family and friends. That is part of the pleasure and the reward; and unless there are sound reasons for denying him the privilege, it should be granted to him. There are not such reasons. The very fact that in some States the export of game and fish in limited quantities accompanied by owner is the system in successful operation, indicates that it might be the system everywhere.

SENATOR PRITCHARD, of North Carolina, has introduced anew the bill to establish the Appalachian National Park, and a similar measure has been introduced into the House by a member from Tennessee. The latter bill provides that the park shall be named the McKinley National Park, in recognition of the friendly attitude of President McKinley toward the measure in the last Congress. What President Roosevelt thinks of the Appalachian Park plan may be inferred from the paragraphs of his Message which have to do with the forest reserves. We print these paragraphs in another column, and commend them to careful reading as a well-put statement of the principles upon which the American people must base their action respecting their great forest possessions. It is worth while to recall here, too, another declaration uttered by Mr. Roosevelt when he was Governor of New York. Speaking of national parks, he said:

This is doing for the common people what the rich are doing for themselves; it is an evil of our times and this nation, that rich men and rich men's clubs are buying up choice tracts of game and forest lands and shutting them up from the common people. In England the people are accustomed to that sort of thing, but in this country they are not, and should not be.

The note from Mr. C. M. Stark concerning the actions of the New Hampshire deer, furnishes additional confirmation—if any were needed—of the well-known fact that animals have a foreknowledge of the weather which is denied to most human beings. Persons who spend much of their time out of doors have frequent occasion to observe this. Often in winter before a spell of severe weather there is an unusual flight of migratory northern birds. Wildfowl, which love to linger as long as possible on northern waters, are apt to disappear just before the hard frost which closes the bays, lakes and streams. Previous to a heavy snowstorm the ruffed grouse will be found to have taken refuge among the branches of the evergreen trees. In the Western mountains the deer and elk start from their summer to their winter range shortly before the first heavy snowfall.

Nor is this knowledge confined to wild animals. Even the domestic birds and beasts of our farms often show by signs which are readily noticeable the approach of stormy weather; while in some mountains of the West—especially in New Mexico and Arizona—the wild range cattle, which during the summer spend their time far up the mountain side, may be seen in autumn stringing down in long lines

toward the hot plain, and the ranchman or cowboy who sees them knows that but a few days will elapse before the summer ranges will be buried deep in snow. What the barometer is which tells these creatures, which we call dumb, that the weather is about to change and that their own comfort requires them to provide against the storm, we do not know. It is one of the mysteries of nature which as yet no man has penetrated.

Capt. John Pitcher, the Acting Superintendent of the Yellowstone National Park, has been highly successful in conciliating public sentiment, promoting good feeling among the people living in the vicinity, and thus winning their sympathy and active support for the protection of the game. When the vast extent of the Park territory is considered, with the inadequate force available for its policing, we may readily understand how essential to the welfare of the Park game is the co-operation of the residents in the discouragement of poaching. There have been periods in the past when, by reason of antagonism existing between the Park administration and the people living on the outskirts, the game destroyers had practical immunity, because there was no public sentiment to denounce and expose them. The conditions are now changed. Public sentiment is strong in support of game protection, and powerful to suppress poaching. In thus having enlisted the co-operation of the people, Capt. Pitcher has accomplished more for the welfare of the Park than he could have done with a redoubled force of troops if the old feeling of antagonism had prevailed.

The stock of elk in the Park is largely in excess of the food supply available on the winter range. The consequence is that in the winter vast numbers of elk perish of starvation. In other words, the game is over-protected. Under these conditions a way might be devised for utilizing a portion of the over-supply for the restocking of elk ranges elsewhere which have been cleared of their native stock. Under proper official supervision numbers of Yellowstone Park elk might be transferred to other parts of the country, and thus the Park be utilized as a permanent source of supply. In the same way a system might be devised for the transfer of quail from the Indian Territory, under the supervision of duly constituted Government agents, to the several States where the stock has been destroyed. These great game-breeding preserves which belong to the people might well be thus exploited for the benefit of the people.

The only rule for everybody everywhere and always is: "Don't shoot until you see your game, and see that it is game." That forbids shooting at a patch of color that looks like deer; it forbids shooting at a moving object which has not absolutely and unmistakably beyond possibility of error been identified. No man in our time will level his gun on the last deer or the last moose in the woods; others will be left for him, even if over caution permits some to get away. It is far better to miss one or a score or a thousand by waiting to make sure, than to kill a fellow sportsman.

Here is a suggestive statement showing the comparative amounts of reading matter (exclusive of the advertising pages) given by the largest of the four-dollar monthly magazines and the four-dollar FOREST AND STREAM. The computation is based upon the type surface covered, but the actual difference in favor of the FOREST AND STREAM is much greater than is here shown, because of the difference in the sizes of type used.

The four-dollar magazine per year..... 77,280 square inches
The four-dollar FOREST AND STREAM per year..165,984 square inches

Thus it is seen that FOREST AND STREAM gives more than twice the amount of material contained in the magazine.

And, then, it is FOREST AND STREAM reading.

But suppose that after all the planning and traveling and tramping and trailing and watching, you get no deer—is the hunt a failure? It may be, and also it may not be. For one instance of empty-handed coming home from a fruitless deer quest, which yet gave abundant reward, read the story told by H. on the following page, and from it draw the moral that it is not all of hunting to kill game.

The Sportsman Tourist.

My Vacation for 1901.

I have been a constant reader of the FOREST AND STREAM from No. 1, Volume I., and have always been interested in everything written and said in that paper. I have read "How I Shot the Big Buck," "How I Killed My First Moose," and all those stories, until I made up my mind that I must go and try my hand. Must shoot a moose. Now, I am not as young as I used to be, was not in condition, and knew that it would require some effort on my part, at least to do the tramping in the woods, but thought if I could secure a suitable companion (and this was a sticker, after everything that had been written in FOREST AND STREAM for the last two or three months about finding a suitable companion), I would be all right. I knew a young doctor, D. D. S., who was a good shot, had been a good companion on little excursions, and was entirely reliable; did not think he would mistake me for a deer, or anything of that kind, but believing that writers in FOREST AND STREAM perhaps knew more about who would be a good companion than I, I hesitated some time before speaking to him about it. I ventured at last, however, to call on him one evening and said: "Doctor, how would you like to go up in Maine?" He is no novice at this, having been there on several occasions, and I concluded that he would be just the man for me. He said: "I will be pleased to go with you if you will promise me one thing, and that is, if we occupy the same camp that you will not snore as you did the last time we were at the lake together." This I could not do, as I knew my failing in that particular. After some persuasion, however, he decided to go. We then began getting together and packing our traps. I was anxious to take everything. I thought we ought to take a Saratoga trunk. The Doctor thought we could get all we needed in two pack baskets, and as he had had the experience, I acquiesced.

A few days before we were to leave home a Mr. L. called on us (we will call him Alex for short) and said he understood that we were going up in Maine, and if we had not decided upon a place he would like to have us go with him to Long Pond, as he was the owner of a log house there and would like to have us enjoy his camp with him. His wishes we acceded to at once, and as he had some business on the way, he left here on Oct. 16. I left on the morning of the 18th, spent the day with friends in Troy, and the Doctor joined me at 8 o'clock in the evening. We left Troy at 11:30 P. M., on the Boston & Maine, and as there were but few passengers in the car, did not take a sleeper, and also for the reason that I had had an experience in a sleeper where we were likely to have sportsmen get on. That time we left Boston at 9 P. M. All went well until we arrived at a station where several hunters got on. They came in, one singing, "We won't get there till morning." "There, by Jove, I have left my rifle!" "Say, George, where is my satchel?" "Dick, hand my pack basket over here, will you?" "Do you know, I believe I left my sleeping bag home!" "Say, Billy, did you get your shells?" "Ta-ra-ra-boom-de-ay!" By that time some one from a berth said, "Say, fellows, give us a rest." The reply was, "That's what we want—rest. Can't you give us a chance?" "Now, keep still, will you? We want to sleep." "Well, so do we." "I vow, I hope they won't forget to check that baggage." About that time they all began to whisper, "Say, do you think they will be there to meet us? I haven't had a letter from Lou in two weeks. Darn me if I believe he will be there! Never saw anything like it in all my life. Never answered my last letter, and I don't know if he has engaged a guide for me or not." Then another passenger from an upper berth said: "Gentlemen, will you please keep still?" They answered back from down below, "Well, who are you?" After a time they quieted down, and the most of us dropped off to sleep. I know I did, for I was awakened by some one giving me a gentle nudge in the ribs and saying, "Mister, will you please stop snoring?" I made up my mind to lie awake the rest of the night rather than disturb any one with my snoring, but there was no occasion for this. At the next station six more got on, all bound for the happy hunting ground. Two of these had left some of their duffie in the railroad station, and they talked over how to word a telegram when they got to the next stopping place, and this or something of the kind was repeated at every station until we arrived at Bangor at 5 o'clock in the morning.

Each of us had two seats to ourselves, and we arrived at 6 o'clock the morning. When we left Troy two young men with rifles got on the train, and seeing us with rifles, asked if we were going to Maine. We said we were, and found them very pleasant and agreeable. As this was their first hunting trip for deer, they made inquiries from the Doctor, and we learned that they were to accompany us until the next evening at 7 o'clock. We had breakfast at the station in Boston, and while strolling around there I think I never saw so many hunters together. Some were just going into the woods, some were just returning. Men with pointers and setters who were going out for the day for woodcock and grouse, men with beagles for rabbits, and others who were going to the shore for duck. They were a jolly, happy, good-natured set of men, and all with the glorious anticipation of a good time. You know this going gunning is not all in the game you get. The anticipation is quite as much, and often more, than the reality, but how can any man be disappointed after having a pleasant day afield.

We left Boston at 9 o'clock. The day was beautiful. Our friend Alex joined us in Waterville at 4 P. M. We arrived at Bangor about 6 o'clock, and left there at 6:30 for Greenville, which was to be the end of our trip for the day. Our young friends left us at Milo Junction about 7 o'clock, and in a letter just received from them they report having had a glorious time, and having shot a large buck and two does. We arrived at Greenville somewhat behind time, and were driven over to the Moose Head Inn, kept by Messrs. Walker & Wood, two well-known hotelmen who always make their guests more than welcome. After a good supper, and while seated around the big fireplace enjoying our cigars, we had pleasant talks with those who had just returned from the woods,

and some who were to start out the next week for deer.

In the morning we found that it had grown much colder, and the ground was frozen hard. Greenville is at the lower end of Moosehead Lake, and the view of the lake from the veranda was superb. The mountains in the distance and the foliage on the hills near by made it a picture long to be remembered. Two or three little steamers were loading at the docks with hay, grain and provisions for the lumber camps. There were some sportsmen among the passengers, but the most of them were lumbermen who will not come out of the woods until next spring. There were other hunters who were loading their canoes, and with their guides were going to paddle up to near-by points and go into camp.

After dinner we walked over to the station of the Canadian Pacific. The train was to leave at 1:30, but as is not an unusual thing, did not leave until 2:30. The road runs along Moosehead Lake for about fifteen miles. I sat with my face pressed to the window peering into the woods, and had worked myself up to such a pitch from the stories that I had heard of the shooting of moose and deer near by, that I would not have been the least surprised at any moment to have seen a deer run. At last we struck the lower end of Long Pond, and finally got a glimpse of our camp, which was located on the opposite shore. We arrived at the station about 4 o'clock and were met by Mr. A. D. Wilson, who is the owner of the big Church Hill Camp, and the Doctor's guide. Our baggage was immediately transferred to two canoes, but as the wind was blowing strong from the north, the guides concluded that it would be safer for us to walk down the railroad track to the narrows and embark there. Long Pond is a series of three lakes about nine miles in length, and the narrows, which is about a mile from the

DOWN IN MAINE.

station, is at the lower end of the Second Pond. Here we could take the canoes safely, and by keeping under the north shore were in comparatively smooth water. Words fail me to describe my first impression of this lake and its surroundings. After a paddle of about half an hour we arrived at camp. There was no familiar face to meet us as the canoe pushed up on the shore, but there was one who stood there, and as the canoe struck the beach he was there with a hearty welcome. Although an entire stranger to us, we felt when H. B. Cilley put out his hand with that grip of New Hampshire welcome, we were with a sportsman, and it was as if we had known him for years. Big Church Hill Camp is located at the outlet of Big Church Hill Stream into Long Pond. The camp is a series of log houses for the accommodation of guests and guides, with a large, commodious log house for dining room and kitchen. Alex and the Doctor having been there before, were well known to Mr. Wilson. Alex went to his camp and the Doctor and I were assigned to the log house next to him. A big wood stove was throwing out heat. We found everything in good order, comfortable beds with lots of blankets, and everything to make one feel, as Alex would say, "Aren't you glad you have come?" and jolly old boys are we. At 6 o'clock we were called to grub, and how I did enjoy it. George Wilson, the cook, is an artist in his profession. He has been a cook for lumber camps for more than twenty-three years, has been a guide, and knows just exactly how to cook venison and flipping flippers, and can make the best venison stew I ever ate. We spent the evening with Alex in his cosy little camp, and retired to our quarters about 9 o'clock.

In the morning Allen came in and built the fire for us, and said breakfast would be ready at 6 o'clock. I got up, looked out of the window, and there were about three inches of snow on the ground, and when I told this to the Doctor, he said, "This, old man, is a good morning for deer; I must get up." After breakfast Doctor and I started for the hardwood ridge. We tramped all the forenoon and back to camp without the sign of a deer. I had not engaged a guide, and Allen volunteered to paddle over to Long Pond Station and get a man by the name of Joe, who, while he was not a professional guide, was a good all-round man, and the Doctor thought he was good enough for me. When we returned to camp we found a Mr. Davis, of New Haven, who had just come in with his guide. Mr. Davis had been at the camp for some days, and taken side trips around to other localities for over night. He said he had been in the woods for a number of years trying to shoot a buck with a good head, but up to date had failed. He had had any number of shots at deer, but he was looking for a big buck or moose. This rather dampened my ardor for moose, and I began to make up my mind that I might be willing to shoot a buck. When Mr. Davis' canoe came up to the shore, out jumped a big dog named Drummer. I looked him over, and said to myself, what kind of dog can that be and what is he doing here? I learned that he

was owned at the camp, and Mr. Davis had found him at the camp down the lake, where he had been over night, and the dog had been left there by his owner some days before. He was not a hound, and as for his looks, I would as soon think he was a cross between a barb-wire fence and a hay rake. Still, he might be a first-class dog for some purposes. I asked his owner if he knew his breeding, and he told me that he thought he was one-half hound, the other half bird dog and the rest just plain "dorg," and I think he must have been used when taken out on these excursions to keep the butcher birds from carrying off the deer after they had been shot and hung up (or something else). Mr. Davis left immediately after dinner for Blair's Camp, where he was to remain all night and hunt for the big buck in the morning. In the afternoon Allen, the Doctor and I got in the canoe and went down to the birches. I walked back into the woods I think about half a mile, when they left me to watch for any stray deer or moose that might come my way, and they tramped on a mile or two further. The Doctor got a running shot at a doe. They came back, picked me up, and we walked back to the lake, and there found Joe waiting for me, and we paddled back to camp.

The next morning (Tuesday) Joe and I went up on the hardwood ridges again, but the snow being damp and having frozen in the night, made it impossible for us to go quietly, and we did not see a thing. Doctor and Allen had a distant view of a deer, and we all returned to camp at noon. In the meantime Mr. Davis had returned from Blair's Camp with a fine doe, and said there were many signs of deer there. After dinner Doctor and I talked it over, and decided to start for Blair's camp that afternoon. Our friend Alex is no shooter, and does not carry a gun when he goes in the woods, but for an all-round good sportsman (without a gun) and an all-day trumper, Alex is one of them, and he decided to go with us. Mr. Wilson filled two pack baskets with the necessary grub. We walked up to the dam, and there embarked in two canoes up the Church Hill Stream, and I was selfish enough to have Joe keep ahead, and as we rounded every point or bush I expected to get a shot at a moose, but did not see a sign of anything with life except a muskrat. Here we unloaded the canoes, pulled them up on the shore and started for a four-mile tramp over what seemed to me the worst walking that I had ever experienced—sloughs, bogs, roots, stumps, pieces of corduroy road—and when I got to the end of that four-mile tramp you may imagine something of how I felt. I was sixty years old when I started, and I felt as though I was at least a hundred and ten when I reached there. Blair's camp is a set of unoccupied buildings that had been used last year as a lumber camp. They were all in a good state of preservation, and the building that had been used as the home of the scaler was the one that we decided to occupy. There was a good cook stove, some beds and table implements, which, with the grub that we had toted in, made it very comfortable, and, as Mr. Davis had told us, we were in as good a deer country as could be found. He had left part of a deer at the camp, so there was no lack of provision, and with Joe and Allen as cooks, we were just all right.

After a comfortable night's rest we started out bright and early, I expecting to shoot a moose. Did not think for a minute of bothering with any small game like a deer, but came back to camp at noon, having hunted in about the same direction that the Doctor had, and did not see anything larger than a red squirrel. Doctor had seen two or three deer, but did not have a shot. On his way into camp that noon Allen tried to show him two, but the Doctor failed to see them. We left Alex at the camp, and when we returned at noon he had the kettle boiling, potatoes ready, and in a very short time we had a smoking hot dinner. I had made up my mind that there was no need of tramping, as the deer could hear us half a mile away. Joe and I went to the top of a hill and sat down on a big birch log to wait for the moose or deer to come around our way. We were not seated there more than five minutes when Joe thought he could get a better view of the surrounding woods by moving about three rods to my right. He had scarcely gone two rods from me when he fired his rifle, and I turned around to see what he was shooting at. He was on the opposite side of a big blown-down spruce, and when I found I could not see him I directed my attention to where I had been looking before he fired the shot, when within four rods of me I saw a flag, and that was all. I walked around to Joe and said: "What did you shoot at?" He said: "A deer; did you see the one in front of you?" I said: "No, I only saw a flag." He then said that there were two deer within five rods of us; the one that he shot at was standing up, and the one that I saw the flag of was lying down right in front of my eyes. But, alas for me, I only saw the flag. Now I am an admirer of the flag, but am free to confess that I like to see more of it than I did of this one, even if it is white. We hunted the rest of the afternoon without another sight of deer—not even a flag. When we returned to camp the Doctor had shot a deer, but had been unable to find him, as he had not struck him in a vital spot.

The evening was spent pleasantly, and we were out bright and early in the morning. Joe and I went up to the old birch log, the Doctor and Allen toward the hardwood ridge. We had not left camp more than ten minutes when we heard two shots from the Doctor's rifle. Joe and I hunted until noon without any luck, except that Joe reported having seen "two flags." On our way back to camp we found the Doctor's two deer hanging up by the side of the tote road, and Joe carried one into camp. The Doctor and Allen came in and reported having seen two other deer, which they did not get a shot at.

This being Thursday noon, and as we would be obliged to start for home on Saturday, we concluded to leave this camp after dinner to get back to the Big Church Hill Camp. Now, here was a query. Two deer, two pack baskets and rifles to get out over what seemed to me an impassable road for men with such a load. How could we do it? I volunteered to take a pack basket full of duffie and start. Joe and Allen with the larger deer on a pole, the Doctor and Alex with the smaller deer. I started about fifteen minutes ahead. The pack basket weighed perhaps about thirty or forty pounds when I started. The first eighth of a mile I struck about a forty clip, the second eighth about a ten-minute gait, and the rest of the way was a go-as-you-please race. They never

sighted me once after I left the camp, but I think it was not due to the clip I had struck, but was owing to the fact that more than half the time I was down in the mud behind the bogs and stumps, I on the pack basket part of the time, and part of the time the basket on me, so that they could not see me. However, I reached the canoes safely, and in about half an hour Joe put in appearance and said that they had left the deer on the road about two miles back, knowing that a team from a lumber camp would be down the next morning and bring them down. I expected that when I got back to camp, or, at least, the next morning, I would not be able to stir out of bed. It did seem to me that I was never so tired in all my life. I had torn my pants, cut a hole in my rubber boots and was sadly demoralized. I called at Mr. Cilley's little camp and told him I was in a sorry plight, and he remarked "Then your looks don't belie you." He gave me a needle and thread, and when he went into his little storehouse for the necessaries, I had to laugh. He had buttons, button hooks, needles and thread, sugar, lemons, witch hazel, rye extract and enough stuff to fill a small-sized drug store, and a corkscrew thrown in if necessary.

This was my last chance for moose. Doctor and Allen were ready to start. I called the Doctor aside and said, "If I don't kill a moose to-day I shall try and get a deer. Must take something home with me. Haven't had a shot at anything." The Doctor, in his very comforting way, said, "You might shoot some red squirrels." Joe wanted to take me up to the Parlin Stream and stay all night, but as the Doctor had to leave Long Pond on Saturday to be home on Monday without fail, I did not dare take the chances. I took my camera and got some pictures, and Joe said, "Get in the canoe." He paddled up to the narrows and when we rounded the point the wind was blowing a gale. He hugged the shore for half a mile and then gave up, took the canoe out of the water and we started through the woods. We had not gone far when Joe said, "You hear him snort? He gone now," and then within a few rods he showed me the place where the deer had rested all night. I looked it over, imagined the size of the deer, said to myself, "If I only could have gotten up here without his hearing or seeing me I might have gotten him," and I had the head all set up and the feet made into a gun rack, when Joe said, "Come, we go." I started again, and we tramped for half a mile, when we met the Doctor and Allen. They had seen another deer, at least Allen had, and while he was trying to point it out to the Doctor it had vanished.

We tramped on to an old lumber camp, where Joe left the pack basket and camera. We climbed for another hardwood ridge, saw a few signs of deer, and when we had gotten into the worst possible kind of a place we sat down to rest with the hope that some stray moose or deer might come that way. Joe worked off over the ridge out of sight, and then those saucy imps of red squirrels began to make fun of me. First, one said, "Can't you see a deer, deer, deer?" Then another said, "What are you doing here, here, here?" The third came up and laughed; then they all went through something of an acrobatic performance, and one said, "This is the way the old man goes through the woods." Now, if it had not been for frightening away some moose, I would have blown their deuced little heads off. I had not traveled all the way from home and spent my hard-earned money to get up in Maine to be laughed at by a lot of little red squirrels. I did not trust myself any longer for fear I might scare away some big game by shooting at the little rascals. I shook my fist at them and started on. Joe soon joined me, and he decided that we had better try and strike the lake and walk along the shore until we could strike the old lumber road that led to the camp where we had left the traps. This was much more easily said than done. Joe walked on ahead and every once in a while would look around and say, "You get on all right, mister?" After an hour we got to the lake, and from there had fairly good walking to the road. When we struck the road I asked how far it was to the lumber camp, and he said, "Half mile." I had begun to get used to Joe's "half mile," and it appeared to me about "two mile half." I sat down on a log, Joe built a fire, hung on the tea pot, fried some venison and bacon, and I thoroughly enjoyed my last meal in the woods. Joe told me of the lumbering, how it was done, all about this deserted camp, and how he expected to go as scaler for a lumber company on the following week. On the whole, I had a particularly interesting morning. I told Joe that I knew the way to the carry and I would start. It was a beautiful day, the sun was shining brightly, and as I tramped along I looked on all sides and peered in every old tree top for my moose, and made up my mind right then and there that I might shoot a buck—in fact, did not know but that I might shoot a deer without horns. Joe caught up with me where we had to leave the old lumber road to go down to the canoe, and as the sun was still high, we sat down with the last hope that we might see something. A writer in the FOREST AND STREAM once said, "You can't shoot a moose or deer around the camp-fire," and I had made up my mind that I couldn't even see them to shoot in the woods. tramp as much as I would. Joe sat below me about ten yards away, when I heard something walking toward us. Joe gave a low whistle and held up two fingers. Then was my time. "Here come two. One may be a moose. May be two bucks."

"I hope they are big ones."

I got all ready; they came nearer and nearer. At last up poked the heads of two Frenchmen. I laid the rifle down and just wished them further. When they came up to me I found one was Mr. Prince, a guide and the owner of a camp on Long Pond Station. He had brought a man across the lake and directed him to the lumber camp. After a pleasant little chat with him, Joe started for the canoe and I tramped on.

The leaves were very dry, and try as I could to tread softly I think I made as much noise as a thrashing machine. About 4 o'clock I stopped again, sat down and took another look through the trees, but did not see a thing. All at once, I think not more than eighty yards from me, as Joe would express it, "I saw tail," which appeared to be about a foot long. My hopes went up. Now if I can only get a little nearer. I peered through the trees, sneaked on, did not see a thing, when all at once, within two rods of where I saw the first, up went another tail. This was at least two feet long (and I will not take off an inch). The perspiration by this time was just rolling off my brow. I took off my glasses and

wiped them and started on. It appeared so strange that I could not see a deer, but up goes another tail, and you can believe it or not, this was as long as my rifle. Now here had been three deer within easy rifle shot, and all that I had seen was tail, and that only for a second. I have had disappointments in my life, have bought a few stocks and had them go down, down, down, sink clean out of sight, but that was nothing compared with this. I got up and for the first time noticed that it was getting quite dark and I must hurry. I struck the path leading to the lake, and as I came out from the dark shadows of the overhanging spruces and hemlocks into the glorious light of a full moon on the lake, I was awestruck by the grandeur and beauty of it all. Joe was not there. I sat down on a log, and while taking in all the beauties my thoughts were: This is my last night on Long Pond for 1901, and may be forever. I have not shot a moose or deer, haven't even fired a shot. Am I disappointed? Yes, if the shooting was all I came for, but it was not. The tramp through the woods has refreshed me both in body and mind, and the not shooting the moose is not to be compared with the benefits derived, and when I get home and am troubled with the cares of business, what a tonic will be the memory of that canoe trip up the Big Church Hill Stream, or the night at Blair's Camp; and an evening with friends when talking it over will be more than refreshing, and compensate for the lost moose or unemptied shell. These will be thoughts of days that go on.

Joe had paddled up so quietly that I did not know he was there until he said, "You tired of wait?" I got in the canoe, and as he paddled it noiselessly, not a word was spoken. I just sat in reverent thankfulness as I thought of the wonderful goodness of Him who covered the mountains and valleys with the green wood, who halloved the shimmering lake and hung this silver moon in the sky. How He has given to us all here in this little world of ours, whether we stop to look or not, a beauty which must reflect His great love for us as the lake reflected that wondrous full orb moon.

We paddled to camp in silence, and when the call for supper came I walked into the dining hall to find that we had had an addition to the camp family—four gentlemen from Philadelphia. They had been up at the upper camp for two weeks, each had a guide and appeared to have had a good time. Mr. Cilley introduced me to the gentlemen, and gave me his usual salutation whenever I came in, "What have you shot?" "Nothing." "What did you see?" "Tail, tail, tail." "How many?" "Three." Then he told me that he had been up on the hardwood ridge that afternoon, had started a buck, doe and a fawn, and that they ran directly toward the lake, and undoubtedly these were the three deer that I did not see. After supper Alex and I called on Mr. Cilley, and then the Doctor and I spent the rest of the evening with Alex in his cosy camp, and before retiring walked out and took our last look of the lake in this beautiful moonlight.

Saturday morning the Doctor and Allen took a short turn for deer in the burnt land, while I packed up, and when I got through there wasn't a soul in the camp to say good bye to except Uncle George, the cook. The gentlemen from Philadelphia and Mr. Cilley had gone for the day, or longer. The canoe was all loaded, and as the lake was so rough, Joe concluded to keep near the shore, as we had the deer and most of the luggage. I got out at the narrows, called on Mr. Prince, and he showed me his camp accommodations, which were neat and clean, and I took a snap shot of Mr. and Mrs. Prince and daughter. Joe poled the canoe up on the beach, and after carrying the baggage and deer up to the station, took me down to his home. He has a clearing of about fifty acres, comfortable house, a wife and three as handsome children as you could wish to see; and when they all got talking that Canadian French, well, I "wasn't in it." Joe is not a regular guide, is a good cook, can paddle a canoe and do it well, can find his way through the woods and get you out safely, if he has to take you on his back and carry you through the worst blow-downs. I took dinner with him, and after taking a picture of the family, walked up to the station just as the other canoe came over with Alex and the Doctor. The train was forty minutes late. We said good bye, boarded the train, and as we sat looking out to get the last glimpse of the camp, we saw the signal. Mr. Cilley had taken a looking-glass and threw the reflection across to us. This was New Hampshire's good bye. There were quite a number of sportsmen on the train, with eight or ten deer, one a very fine buck. When we arrived at Moosehead the Doctor got out and had his deer expressed home. The train was nearly an hour late, and it was quite a question if we could get to Greenville in time to get the train for Boston. When we pulled in, however, the train was waiting, and by a quick transfer we started. About half an hour's ride south of Greenville as the train winds around through the mountains you have one of the finest views of mountain scenery, and as the sun was just going down, it reminded me of the horseshoe on the Pennsylvania Railroad. There were no berths in the sleeper, and we sat up all the way to Boston. Alex left us at Waterville to come home later. We arrived at Boston at 6 A. M., and after breakfast took a stroll around the city and to the beach, and left for Troy at 1 P. M., via Boston & Maine. Arrived there at 6 P. M., and after a transfer of baggage to the N. Y. C. & H. R. R., arrived home at 7:30, fully satisfied with the vacation of 1901, even if I had not shot the moose or big buck.

In closing let me ask the readers of FOREST AND STREAM to turn back to Oct. 12, 1901, and read "In Condition and Out," and they may find that half of their disappointments come from the lack of condition. H.

Hudson, N. Y.

In Wyoming.

THE Saratoga Sun, of Saratoga, Wyo., of recent date, says: "A party of six Ute Indians from the White River agency have been in Rock Springs, where it is believed that they came north to escape from the game wardens, and that as soon as the war clouds blow over they will return to their hunting grounds in Routt county, Colo. Jesse Barkhurst, who was in the city this week, reports that he caught a fine gray wolf last Thursday in the big sagebrush flat above B. T. Ryan's ranch. The dogs picked him up only after a swift run of a mile and a half." EMERSON CARNEY.

Adventures in Tropical America.

VII.—A Race Against Adversities.

(Concluded from last week.)

WE did not make a very early start next morning, and the men were slow getting breakfast, but at last it was brought to me, biscuit and some tinned meat, with a choice piece of wild pig, apparently saved especially for my benefit. I ate heartily, and then we started on, the trail now leading us up a steep mountain.

Presently I began to feel sick, and then to grow dizzy, and after a time could only struggle along. The chief saw it, was indifferent and went on; then two other men followed him, and the two younger men, who were a little behind, came up and were passing on with the others. Apparently they were all leaving me alone in the woods. I ordered the two young men to stop, but they would not. I made a motion with my hand reaching for my pistol. This checked them, and we all sat down. Then I sent one of them for water, which he was a long time bringing, and after drinking a quantity I felt better. I do not think they intended to kill me with poison, but only gave me something that would make me sick, and then it would be an easy thing to let me lose my way.

I rested a while, and, having drunk a quantity of water, was ready to go on again. After a time we overtook the others sitting by the roadside, and the boys got a fine blowing up from the chief in words which I could not understand. I made poor progress that day, and it was hard work to keep up at all. We fell in with a flock of wild turkeys; I handed my rifle to the chief and he killed an unusually large one, which gave us plenty of fresh meat again. We did not go much further, and at night made camp in a beautiful ravine among the mountains, where there was a stream so cold that I could scarcely bathe in it. On one side was a high precipice and a sloping mountain on the other, with a little open place of fresh, green grass by the stream. It was an enchanting place, and I began to feel better at once.

Keeping my pistol ready at my side, I took no special notice of the Indians. They were holding a whispered conversation, and after a time seemed to agree on some point, and began preparing the camp for the night. Presently the chief came to me, and said in Spanish: "A bad place for tigers [jaguars] here; two men have been eaten, and we are afraid."

"Never mind," I said, "I have my rifle and pistol, and will kill them if they come."

"But you are under your mosquito net and in no danger." Which was true; a jaguar, or tiger, as they call them, will walk around a mosquito bar all night, often forming a beaten track about it, but they have never been known to make an attack. "Yes," the chief continued, "for you no danger, but for us, we have no guns; give me your rifle and I will take good care of you."

Not wishing to refuse at once, I said he could have it when I went to bed, and with a look of triumph and delight, he went back to tell the others.

Here was a predicament, and I began to consider earnestly how I was to get out of it. The Indians were now in another mysterious consultation, and presently they came to me, and the chief said, "The tigers are so bad here we are afraid with only the rifle; give this man your pistol, and we will sleep each side of you and keep you very safe; no harm will come, not anything."

I replied, "When I go to bed you can have it." They were delighted and went off together, but they soon came back, asking if I had anything else that would shoot. On being told that I had not, they asked if I would not let them have my big knife, because the tigers were so dangerous, and they would be afraid even with the pistol and the rifle. Evidently the plan was to disarm me entirely, and I told them to wait till I went to bed, and they could then have what they wanted. I kept my firearms carefully in my hand, and was glad to find that they did not demand them at once, and so I remained, considering.

The men were now in high spirits, and went to work getting supper, and making up a very comfortable bed for me.

As soon as the turkey was ready they all sat around, picking out choice pieces for me, and urging me to eat all that I could. Then they had their supper, and after that went down to the stream to clean up the dishes, chattering like a lot of children. The mosquito net was hanging conveniently, and lifting up one corner I slipped my rifle, pistol and hunting knife under it, crawled in myself, and with my pistol in my hand sat up waiting for developments.

I could see out very well, but as the net was made of unbleached muslin, no one could tell exactly where I was, and if there should be any attempt to cut through at me, I could shoot before the knife could find me out. The Indians seemed to know this. When they came back they walked around the net talked, considered, and finally gave it up, and each one went to bed. Then I felt relieved and was soon asleep, well assured that I was perfectly safe till the morning.

I was up early, and met a rather ugly crowd of Indians. No breakfast was prepared, and I had to get along with the remains of the turkey and some crackers. The men said very little, but shouldered their packs, and marched off, I following them. We had not gone far when the men put down their packs by a brook and stood talking together; their faces indicated trouble, and I thought to myself, "Now it is really coming." I took little notice of them, however, and pretended to be examining some rocks, and presently pretending that I was deeply interested, I climbed up on one, which kept me well out of the way of their knives. The men stood and watched me for a while, and then the chief came to the rock, and looking up at me said:

"We have been considering. You have given one of us a shirt, and that is good; and you have given one of us a coat, and that is very good; but now the three other boys are so discouraged they can't get over this high mountain unless you take out your money and give them each another dollar."

I replied that I was sorry, but I had no money; that the trader had paid them for me, as they knew, and then I went on examining the rock, I am sure not with great attention, except in appearance, because I have never been able to remember what kind of rock it was.

"We can't go on unless we see the money."

"Very well," I replied, "stay here. I have no money."

Then the chief went back to the men, and they talked a while longer. Then he came back again and said: "But you must have money. All Americans have money; only Indians are poor. The boys can't go on unless you show them your money and give them each another dollar."

"I have money," I said, "but not here; I must go to bring it, and you must take good care of me when I come back, because I will have a thousand dollars with me; more than you ever saw before, and I will sleep at your house so that you can take good care of me."

He opened his eyes and went back, and they talked some more. Then he came again, and was a little more threatening in his appearance: "We know you have got money," he said, "and we want to see it, and the boys won't go on."

"I have only a little," I said, showing a few loose dollars that I carried in my pocket; "but I will do this. When we get to the settlements let the people know that I have very little money, and that they must take me on cheap; then, if I have any money left I will give each of the boys another dollar." He went back, and in a few moments came to me again and said: "It is this way: we are thinking of the drink you promised us; perhaps we can go on. Will you surely give it to us?" and there was an anxious look in his face.

"Yes," I said, "you can depend on it."

"All we want?"

"Yes, all you want."

"But we can drink a lot."

"Never mind, go on; you shall have it."

"Señor," said the chief, "that will cost a lot of money. You have got money; we want to see it," and an ugly look came in his face, while the men crowded up to the rock. They certainly had me, but they saw that my pistol was ready, and I sat there facing them. Suddenly a thought came to me, and I said, hastily, "I have credit. I can get all the things I want; you shall have the rum, even though I have no money here to pay for it." Then I showed the chief my wallet, with passport, and some documents with big seals on them. He looked at it and said: "This credit?"

"Yes, but only when I sign the bill."

They traded on credit themselves, and after a moment the chief said: "He hasn't any money; let's go on."

"But he has lots of things," said one of the young men, looking at the packs.

I heard nothing more, and presently they took up their packs and marched on.

I had no more trouble with them for two or three days, but one morning we came to a Piyú village, and the men said that they must stop there for the night. I protested, and said I would not; that they must go on, but it was of no use, and my men went off with the Piyú men, and all talked together at the edge of the jungle.

I felt miserably. My men were evidently unwilling to kill me themselves, because they feared my friend the trader; but if the Piyú men killed me that was a different thing.

The wife of the chief in that village was part Spanish, and I began to talk to her, and presently asked if I was to be her guest. She replied that she supposed so.

"But will I be safe here to-night?" She made no answer.

"Had I better go on to the settlements?"

"Yes," she said, "you had better go on; there is plenty of time."

"But the men won't go."

"Make them," she said.

I went out, and angrily commanded the men to go on, but they would not even answer me. Here was fresh trouble—to get all through the wilderness on my wits and then to be killed by these miserable Piyú men. I was turning over various plans, and presently went back to the house and saw the woman again, and said to her, "The men won't go. Will I be safe here to-night?"

She made no answer.

"Am I your guest?"

"Yes."

"And will any harm come to a guest in your house?"

She looked away.

"A guest, and not safe in your house?" I protested.

She looked at me and then at my pistol. "Can you shoot?" she asked. "Then do this: hang your hammock across that corner; I will bring my mats and sleep just outside it. If I touch your foot in the night, be ready and shoot quickly."

We fixed the things, and then she said: "Now, you will be safe." She was evidently a determined woman. The Piyú chief objected to the arrangements, but that is all the good it did him, and when night came I was soon asleep, and had a thoroughly good night's rest. Next morning, grateful to my good hostess, I started on and reached Coulmé, the chief city of the civilized Piyú-Indians, about 3 in the afternoon.

It was a great relief. I had now reached the settlements and was on the main road to the capital, which I could reasonably hope to reach in three or four days. At Coulmé the civilized Piyú men did everything for me, so soon as they found I had not come from an infected district, and all they had was at my disposition. The chief of their village called a council, and he and the alcalde examined my papers, and with all the men of the place crowding about made polite speeches of welcome.

My men said I had no money as they had promised, and the alcalde asked me about it; but I said I had plenty, and a tired look came over the faces of my guides. They could not get any rum, because there was none to be had, but I was safe now, and did not care. I gave them each the extra dollar; they seemed to be content, and that was the last I ever saw of them. I have traveled very far since then, but I have never had guides that were so difficult to manage.

Urged by the necessity of my mission, I asked the Piyú Indians to send me on at once, though I would have gladly remained a few days with them. Two sturdy little men shouldered all my things, and in a short time delivered me safely to the regular authorities at the nearest Spanish town. Here arrangements were made for sending me to the capital. Nothing had been heard of my opponent, and I began to feel secure.

Without waiting for breakfast, I started on next morning riding a stout mule, a young Spanish-American peon for my attendant and every prospect of reaching the end

of my journey without further trouble. I had expected to buy something to eat on the road, but had not succeeded very well, which was inconvenient. About noon we came to a broad circular depression in the valley, surrounded by green grass-grown hills that looked like great waves just ready to break and sweep all before them; beyond were the mountains, looming up with startling effect, distant, yet seeming to hang, as it were, just over those picturesque green hills, like clouds hanging over the waves of the ocean. As we crossed this strange place I noticed what appeared to be fine mushrooms growing abundantly, and asked my guide what they were.

"Fruit of the earth," he replied.

"Are they good to eat?" I asked, feeling decidedly hungry.

"Yes," he said, after a moment's hesitation, and then added, eagerly, "Shall I get some for you?"

"Yes, I would like to try them."

He brought two almost as large as dessert plates, and then rode on with one in his hand. By all appearances they were the finest of mushrooms. I tasted cautiously, and then ate one and part of another; but just then I noticed that my man was not eating his, and I thought to myself, "Now you have been a fool." But on waiting a moment, and not feeling any ill effects except a sort of acid coppery taste in the mouth, I did not take any action, and rode on, my man watching me intently. It was an extremely hot day, and at about 3 P. M., some five hours later, while riding across a treeless plain, my stomach suddenly felt as if some one had stuck a knife into it, and then had poured hot oil in after the knife. I struggled to the ground, and by tickling the palate caused a period of vomiting, and relieved my stomach of a quantity of hard yellow matter, though I had eaten very little. For a moment or two I felt better, and then the pains came on again, and the burning, which now extended all up my throat and to my nose and mouth, was almost unendurable. I threw myself down in the shade and asked my man to get me water. He looked at me indifferently and said, "There is none nearer than a mile, and I have nothing to carry it in."

The pain increased, and still he sat watching, making no effort to help me. Now the burning had extended to all my body, my mouth seemed perfectly dry, and a sort of delirium was ever increasing in my brain, till, almost beside myself with pain, I got on my feet, clutched the mane of my mule, and guided him on, seeking the river, though it was some distance before me. I had taken only a few steps when further progress became impossible; I could scarcely see, and had lost all control over my legs. If anything was to be done, it must be quickly. I had all sorts of remedies for fevers and sickness, but had never thought of being poisoned. Suddenly I remembered a can of vaseline in my saddle bags. I got it out, I don't know how; the day was so hot it had turned to oil, but anything to drink would have been acceptable, and so I swallowed a quantity of the liquid vaseline. I will never forget the sensation of that swallowing; it seemed to touch every point in my burning throat and stomach, and to set them at rest. I saw again, and my first thought was for water. By keeping one hand on my mule I staggered on, followed by my indifferent peon, and just as the pains were coming on again I reached the river and fell to drinking water, and when I could drink no more I thrust my arms deep into the cool stream, and the very pores of the skin seemed to lick up water. At intervals I would drink all I could, stopping only when it was physically impossible to take more; yet in two or three minutes I would be drinking again as eagerly as ever. Where the water went to I have no idea; it seems as though the human body could not hold the amount I drank.

After a time there came a lull in the pain, and the desire for water left me, and then there was a delicious sensation of languor and rest all over my body. I lay there exhausted, and feeling a numbness and chill come over me, I believed that I was dying, and did not care. Then thoughts of my defeated mission, the triumph of my rival, the grief at my home far away in the North; all came vividly to my mind, and I determined that I would not die. I staggered to my feet, mounted after several attempts, and started on a wild ride for help to the little city of El Real, about three miles away. As I went I made the mule jounce and shake me on the saddle, which seemed to keep up the circulation. As I drew near the city I got a little boy, whom I overtook, to run ahead and buy some raw eggs. Presently he met me with them, and the whites of these gave considerable relief. Then I got a big gourd of water; there must have been about three quarts. It had a sweetish taste, but I drank it all, and in an instant I was vomiting with almost incredible violence, and was nearly suffocated by it. I relieved myself of more of the hard yellow matter and quantities of water, and was thoroughly satisfied that there was nothing more in my stomach. My servant now became all attention, took me to a good house and did for me everything that was possible. After resting a short time I took some rum and black coffee, went to bed and fell into a sort of stupor, in which I knew nothing, but was dimly conscious that at intervals all through the night my man came and rubbed my arms and legs vigorously.

The next morning I was better, and rode on to Jutigalpa, the capital of the Department of Olancho, the point toward which I had been struggling so long.

I inquired anxiously for my rival; nothing had been heard of him. I had arrived first.

Without losing any time I went to the Government offices and registered my titles, and then drew a long breath. My rival could come as soon as he wished; the registry was complete.

Later I went to visit the mines, only to find after all my efforts that they were little more than the dream of a drunkard, and not worth two cents. If a man expecting a ten-dollar gold piece should succeed in climbing a greased pole only to find on reaching the top that it was all a mistake, he would have a right to be mad, and I think my own anger was excusable, yet to succeed is always a satisfaction, and if I had failed to reach those mines I would have felt it always a cause for reproach.

A Walk Down South.—VIII.

I NOTICED at Hoy's that the seams covering of my heels on both shoes had begun to rip. Small as was the matter, it was worrying, for a walker must keep his attention upon his shoes at all times. They are the most important part of the whole outfit. A grain of sand at first not even noticed, at the end of a few hours seems to have the shape and size of a walnut. So, too, one's stockings require constant care. A tiny hole, the size of a ten-penny nail head on the side of the foot, is worse than a bruise two inches across on one's leg. I either stop and darn a hole in a stocking on the spot—do the work neatly, too, for a rough-darned place is as bad as a hole—or else I change the stockings until I have an opportunity to mend them properly. The neglect of a stitch in time has caused me hours of suffering.

On every possible occasion I wash my stockings, at least, and that is two or three times a week on an average, now that I know the importance of so doing.

I purchased a bottle of castor oil at Beech Creek for my shoes. It was while greasing them thoroughly that I discovered the ripped shoe at Hoy's. From Hoy's to Howard is three miles along a farm country road, and I entered the harness shop there, where the cobbler sewed up both heels in stout fashion with waxed ends. For an hour I sat talking with the comers and goers. They could tell me the distance to a village eight or ten miles away or less without hesitation. But beyond that they had to stop to think, oftentimes obliged to give it up at last. They knew the condition of the roads for a few miles, and that the Bald Eagle Valley narrowed near the upper end, and that for miles the wagon road was just over the fence from the railroad, but particular information in regard to local history, or localities on the direct routes to the region's trading centers could not be had.

While I was talking in the harness shop, a man drove by slowly on a hay wagon. Soon afterward I started on, sure only that my best route was a little south of west up the Bald Eagle Creek on the main road to Tyrone. Beyond that place I could hear of nothing certain.

It was cool, and a head breeze made my fingers tingle. A better day to walk on would be hard to imagine. I set off at a 2½-mile gait, and in twenty minutes was making a stern chase after the hay wagon, which I could see far ahead. I came within a couple of hundred yards of it, when the driver saw me and stopped to wait—an unimagined courtesy; but a look at the man from across the rack showed that it was "just like him" to do such a thing. He was bushy-faced with whiskers, and wrapped in a great overcoat, while a large hat covered his head. His eyes were the kind one suspects of seeing answers to unspoken questions.

The frying pan ringing on the rear of my pack, the rifle, the blanket rolled up and strapped on top of the basket, suggested that I was camping out. He judged from my expressions that I was a New Yorker, or, at least, a Northern man. But what was my object in traveling that way? I had to answer for myself then, and I told him that I was seeing the country. Who I was, where I lived and perhaps why I lived, were the next queries. Then he vaulted over the side of the wagon and went to look in a barn a few rods from the road, not stopping the team at all. His activity was surprising.

While he was gone I had a chance to see a great brick oven beside the house, suggestive of roast coon or roast pig, or any other dish requiring spacious cooking room. It was the first I had seen, but on his return the man told me that among the outbuildings for miles back I had seen many that covered ovens of the same sort.

After a while it was my turn, and I learned the name of Mr. George D. Johnston, fifty-nine years old, of Mountain Eagle Post Office, though living up in Kennedy's or Bullett's Run, nearly two miles away. In his youth he had taken lumber contracts, but was now satisfied to be a farmer on land that fronted the road for an even mile. He liked travelers, and often kept them nights, because they could tell him of things they had seen or tried to see with their own eyes. He reads a magazine or two every month, and takes two New York papers, besides local ones. He knew my family name, and I was doubly welcome to go home with him. I was glad to go up Kennedy's Run, out of my way, for the chance of talking with a man who could talk beyond his horses and his own affairs, and of matters general. One meets such men rarely along the public highways.

His wife is well read, and his daughters, of whom I saw two, talk as he did. They were all of the kind to put one perfectly at ease, and in such company it was a pleasure to listen or speak.

In the morning family devotions preceded breakfast in the sitting room—which was in keeping with all that I saw and heard there. It was one of the hardest moments on the whole trip to turn my back on this family home. Neither the haste nor the waste of some lives could be seen there.

About 10 A. M. on Nov. 7 I started down the road from Johnston's, and a couple of hundred yards away took the right-hand turn and headed for Milesburg, six miles away. Across the run, or brook, I climbed a grade through a growth of small pine. A red squirrel tempted me to try to shoot it, but I did not fire. A few moments later I started down grade again, and saw a fine buck rabbit off to the left. He ran into the brush frightened by the spectacle I made.

Here I saw a sign that became familiar before long. It was the "caution" of the Nittany Rod and Gun Club—for miles its preserves, consisting largely of land leased from farmers, extended along the roadway, and far back on the hills, on both sides of the valley from Milesburg eastward. I did not dare stop to cook my dinner beside the road, lest I bring a warden upon me. So I stopped at one of the leased farms and had bread and milk. I was told that the land was held "on the English system" in a tone very unlike that of most Pennsylvania voices. It quite dampened the pleasure which I had felt on learning that the tall trees I saw along the Bald Eagle a ways back were really the sycamore trees of the South. They are called buttonwoods in this valley usually.

Straight through Milesburg, past boys who were gathering shellbark hickory nuts, into the trail of a single-horse wagon far ahead, I traveled as fast as possible. After a while I overtook the wagon and got a ride, and, as it proved, two meals and a place to sleep. He was going

after a load of corn, and the way led past his "pap's." His "pap" might let me sleep in his barn. I got the permission, and left my pack at Mr. Erhard's, while I went on a mile and helped load sixteen bushels of corn in the ear. On my way back the driver cautioned me about his parents, who were "mighty strict." It wouldn't be wise, he said, to swear unnecessarily in their presence. I remembered the caution with a chuckle on the following morning.

I built a fire in a stove in the basement of Erhard's house to cook my supper over, but not understanding the stove, nearly smoked out the family overhead, so I had to give up and eat with them—a good square meal it was, too.

After supper Erhard told me how last fall he had found all the apples from his cider trees stolen by a bear, for which he laid a trap in a V-pen of split rails. He wired beef to a little sapling in the V. In the morning the pen was split lengthwise, and there was a bear trail leading for eighty rods or so into the woods. The 2-inch 8-foot long oak pole drag at last stopped the victim by hooking into a tree, and there the bear was killed.

I slept in the barn that night, and in the morning, after breakfast, went down to a neighbor's with Erhard and his visiting son-in-law to help drive a heifer back. The heifer started all right, but passing along a fenceless road she turned and circled back to the barn, in spite of our swiftest and longest strides. She did that three times. They were about to try again in the same fashion, but I took a piece of carpet and blindfolded the beast. She ran plump into a fence, and then stopped, after which she went right and gave no more trouble. When the heifer was where she belonged, Erhard said:

"That was a Yankee trick. You're a reg'lar down East Yankee."

The South seemed nearer than ever to me. He told me that there were no real wild turkeys in the Bald Eagle Valley—that they were all tame ones, which had gone wild. He said wild turkeys almost white in color had been seen. But he added it was comparatively easy to tell the tame ones from the wild, because the wild ones always begin to "scoot" when they see one, while the tame stand up to look. Nevertheless, every year sportsmen from Bellefonte and other places kill turkeys belonging to farmers along the valley. The town sportsman has to be reckoned among the dangers by turkey breeders, it was said. I wondered how many of the turkeys brought in by hunters, of which I read accounts in Pennsylvania papers, are really wild? He could not tell, but guessed about half.

As I was walking on about a mile from Erhard's I was overtaken by a butcher looking for beef cattle. He gave me a ride of several miles to Julian, near which we ate dinner together in a farmhouse, and then I went on up the road—not "down," as every one to whom I spoke about my route made haste to correct me. In spite of the up grade, it was hard for me to remember that I was going "up."

Along in the afternoon about 3:30 o'clock I saw a man unloading eared corn into a crib from a top box wagon. I asked him for a chance to sleep in his barn and for work that would earn a supper. The work was right there, and I got it, on condition though that only supper was to come. So I shoveled thirty or forty bushels of corn and helped load as much more before it was time to eat. Moreover, I went up to the pasture after the cows, the dog eyeing my efforts in that direction with distinct knowledge as to my deficiencies. A black and tan dog it was, and not a polite one, for I am perfectly sure that it laughed at me trying to drive the cattle straight to the barn instead of by way of the brook where they watered, according to their custom.

After supper the man and his wife prepared to go to hear a woman missionary at Port Matilda, otherwise I might have remained with them that night. I thought a good deal about missionaries for a few minutes, and then went on to the next neighbor's—"a big-hearted man named Williams" living there.

I explained the situation to Mr. Williams, and he demanded further information about me. Did I drink? meaning alcoholic beverages. No. Did I smoke? No. Did I chew tobacco? No. "From the city, eh?" "Partly." "Well, you know how to gamble, don't ye?" I denied it. "What?" he said, surprised. "Now, say, you can play cards, can't you?" I said I used to play euchre. "Oh-h!" with a falling inflexion. After talking a few minutes: "Now, you can gamble, can't you?" "No." "Well, what do you play?" I guessed I could beat him at checkers if we tried. We didn't. I switched him to politics as gently as possible, and he went that way flying, for he was the only one in a railroad gang of forty who held—but no matter. We were friends in a moment.

Mrs. Williams had a store of murder stories to tell—all the bloody crimes for years back in that section she could remember in lurid detail. I discovered that away back at Haneyville I had passed through a section noted over half of Pennsylvania for a crime of awful brutality a couple or three years ago. As she smoked her pipe the old lady recounted her acquaintance with the mother of the unfortunate child, and stated her belief that I had stopped at the very house where the child had lived and near which it died.

I slept that night in the parlor on the lounge, and after breakfast came away. I liked the place. Once I had allayed the suspicion as to gambling I was one of them—a friend as close as if it had been a year's long acquaintance. To go on into the unknown regions up the valley was particularly hard, for it was unlikely that I should find a better place for a long ways. As usual, I tried to look forward and see the dusk only a few hours away; but I could not see beyond the first bend in the road.

In a few hours I was hungry again, and a large farmhouse, built like a mansion, lured me up its broken board walk, round to the rear, and at the door I smelled cabbage. Inside, I sat down at a table where cabbage, potatoes, bread, molasses and butter comprised the eatables. I ate heartily of all but the cabbage, and churned the butter to pay for my keep. The tax on the farm came to over \$100 every year, I was told, and to raise this with the rent was a task that bowed the man's shoulders and lowered his voice to the hopeless tone most noticeable in the speech of the old-time negro, who was once a slave. The resemblance was so marked that I recalled the tone

of the white man when I listened to the first ex-slave I ever heard some days later.

It was a relief to leave the house of the driven share-worker, and start on, in spite of the rain beginning to fall. The rain came down so hard, however, that I sought a place to stay till it was clear again—until Monday, if necessary. It was cold and raw. The bite of dampness in chilly weather is hard to endure anywhere away from a warm stove. I have felt it under my blanket and three feet of straw. Fast as I go, even with the pack on my back, the wet wind of late autumn refuses to caress—it literally drives me to shelter. The first house was too crowded to shelter a traveler; the second I passed by, for there were many heads in the windows; but after a while I came to the house of White.

Mr. White is the foreman of the bricklayers on the new post office at Tyrone, seven miles from his home. It was a pleasant experience to find a man who could and did value a home in the country. Both he and his wife were city bred. Her father died, leaving a farm, and White purchased the shares of the other heirs, and two years ago went out on the farm to live. The son, William, was reared on the farm of an uncle. He went on a railroad for two years, but came back to more fully appreciate the kind of life he could get out of a farm.

Two weeks before I came, three bears were discovered in a corn patch on the place. It was a moonlight night. A couple of neighbors were stirred up, one of whom had a repeating rifle. The bears were surrounded, and as they climbed up on the railroad track, headed toward the Bald Eagle ridge, a bullet cut short the career of a yearling.

Three nights before I arrived the dog began to yelp and bark. It was a pup, and those of the house suspected it of hoaxing. It refused to be stilled, however, and William came down stairs to see what was the matter. He found a 'coon treed on the woodpile. He killed it, and memories of the bear were revived by a juicy roast.

It is one of the most remarkable things about Pennsylvania in the parts I have seen, to hear the hunting stories and note the interest in hunting. Women have picked up my rifle with knowing grace and asked questions about its shooting qualities. The boys have air guns and the men repeaters or shotguns. But they are not used to a variety of weapons. They try to cock the gun with the take-down lever, and to pull back the breech block before they cock the weapon. The gun they used to kill a squirrel this fall is the same that knocked over woodchucks last summer; and the one which, loaded with "buck and ball" quieted the efforts of a trapped bear last fall. The .44 repeater, the old muzzle-loading rifle and the double-barrel shotgun, which takes "wadding" of hornets' nest, are the weapons oftenest seen. But the new breech-loaders are creeping into the back districts, and the cross-roads stores are beginning to show a variety of ammunition. In towns of any size—of a thousand or so inhabitants—the weapons are as good and clean as one could wish to see. But, as before remarked, the "town chap" does kill the old farmer's turkey once in a while, and perhaps never knows the difference—and never wants to.

RAYMOND S. SPEARS.

Natural History

Capture of a Badger in Maine.

In the latter part of September, while traveling from Washington (Knox county) toward Waterville, as I stopped to speak with Mr. John Turner, near Razorville, he told me that his hired man had just killed an animal that none of the old hunters and trappers had ever seen before, or ever heard of anything like it. The animal lay across the road from the house, and when we came up to it, I saw it was still alive. Though not very lively, yet it was perceptibly breathing. I saw at once it was new to me, and alighting from my buggy I proceeded to examine it. From its structure and its resemblance to the badgers I had seen in parks and menageries, I told my companions that I believed it to be this animal. Mr. Turner called his man, Mr. Desmond Nash, who had killed the animal, and he stated that he had been working in the lower end of the field near the road, when, looking down toward the swamp, he saw this animal. He at once gave chase, but soon found the animal could run faster up hill than he could, but on the down-hill grade he gained on it. The animal headed for a gap in the stone wall, and cutting across, Mr. Nash was able to get there first and bang the animal over the head with a heavy club he had picked up. He stated he pounded him over the head enough to kill a seven-foot ox. I asked Nash what he proposed to do with him, and he said he did "not suppose the fur was much good, anyway." I told him I'd like to take the animal and look him up, and see if Commissioner Carleton, of the Fish and Game Commission, wanted him for the State Museum at Augusta. So putting the animal into a sack, I tied a string around the sack and put him into my buggy and hauled him to Waterville with me. The next morning he was still alive, and was still breathing when I carried him on the train to Gardiner and gave him to Mr. Homer Dill, State Taxidermist and Curator of the State Museum at Augusta, where he is being mounted for the State House.

I at once wrote to Mr. Manley Hardy, of Brewer, who is an authority on birds and animals. He replied that it did not seem probable it could be a badger, but it was more likely to be the wolverine, and that if it was a badger it might be an escaped specimen. A male badger (*Taxidea a. americanus*) he proved to be, and gave no evidence of being an escaped animal.

Mr. Turner's boys told me nearly a year ago of a strange animal that made strange growls, and was not like any animal they ever saw before. They feel certain this is the animal that has been around the swamp near by for more than a year. Mr. E. G. Turner, whose store is near by, said to me when I next called on him three weeks later that the men who cut his hay had seen this animal, a female and young near the place where this male was captured.

The animal weighed about 40 pounds, and had the appearance of being aged. The only escaped animal I am able to learn of was one that Mr. Amos Gerald, of Fair-

field, had in captivity in Merry Meeting Park, near Brunswick, Me. But this animal proves not to be the one that escaped from the park. It is an interesting capture, whether an escaped animal or not, as the animal was very fat, and seems to thrive well so far from their native habitat.

J. MERTON SWAIN.

PORTLAND, MAINE.

[The capture noted is certainly a most interesting one, and doubly so if, as hinted, a family of badgers exists in Maine. The eastward range of this species in the United States formerly included Ohio and Indiana, in which States, however, they are believed to have long extinct. Coues, in his "Fur-Bearing Animals," calls attention to the fact that the distribution of the badger is more or less closely coincident with that of some of the Spermophiles, and adds: "These animals, with the badger and kit fox, being highly characteristic species of the central treeless region of the United States, where they occur in countless multitudes." Mr. Swain will undoubtedly be on the watch for further information with regard to this specimen, and others, and we shall hope to hear from him again on the subject.]

Deer as Weather Prophets.

THE snowfall in the early part of November was quite heavy in the upper parts of New Hampshire. At the time deer were scattered about in the woods quite near the roads and open ground. They were frequently in the orchards of apple trees. When we reached our hunting grounds on Nov. 23 we found that nearly all the deer had gone back to the mountains. The weather day after day was clear, and no indications of more snow, yet on Dec. 1, just back of the village of Ashland, some twenty miles south of our hunting grounds, and where there was but a few inches of snow, the tracks of a band of nine deer were seen some two miles from the village, the tracks leading toward a high mountain. On the morning of Dec. 3 snow began to fall, and kept on falling all day and part of the night, and here in this part of the State, fifty miles or more south of Ashland, we have over 20 inches in the woods of fresh snow. It looks as though the deer knew just what was coming, and were hustling to find yarding places.

C. M. STARK.

DUNBARTON, N. H.

A Tragedy of the Merrimack.

ANOTHER one of the many of nature's tragedies happened at Nashua, N. H., very recently. A passenger on a morning train over the Nashua & Rochester Railroad saw a deer in the Merrimack River. On the arrival of the train at the junction a telephone message was sent to Roby & Swarts' Edgeville works, stating the fact. The bookkeeper and others went to the river and took a boat and broke the ice to the point where the deer was hanging by one of his horns to the ice. They pulled the dead body to the shore, then notified Commissioner Nathaniel Wentworth of the find. The buck was an elegant one, weighing 150 pounds, and had eight fine points. It seems that it had attempted to cross the river on the ice and had broken through. How long it had been in the water is not known, but he was alive when first seen. Marks show that a desperate struggle had taken place. It is supposed to be the master of the herd that has been seen in these parts during the summer.

EDWIN C. HOBSON.

The Wild Pigeons.

MACOMB, Ill.—Editor *Forest and Stream*: I was talking with a friend in regard to the disappearance of the wild pigeon. He told me he had read an article in some newspaper about fifteen or eighteen years ago reporting that some sea captain had stated that he had seen hundreds of thousands of dead pigeons floating on the water at sea. It looks like a "fairy tale," but I write this asking you or any one who may see this article if they ever saw or heard of it before.

W. O. BLAISDELL.

An Albino Quail.

THE New York Zoological Park has received from Kansas a pure albino quail, which is now on exhibition in the aquatic bird house.

Duck Shooting in Maryland.

BROOKLYN, N. Y., Dec. 5.—Ducks, geese and brant arrived in Chincoteague Bay earlier this season than for many years past. On Nov. 13 Mr. Young, of Pocomoke City, Md., shot eighty-nine bluebills from Mr. O. D. Foulks' battery, Stockton, Worcester county, Md. I spent a week at Mr. Foulks', beginning Nov. 18, and in spite of adverse northwest winds most of the time, had good sport. My bag consisted of redheads, broadbills, bluebills, ruddy ducks, geese and brant. I also had some sport with the quail, which are more abundant than for many years past, owing to exceedingly dry weather during the breeding season. I hear the same cheering reports from many sections of the South about quail.

When ducks, geese and brant are numerous in the bay, no better sport could be desired than is to be found in Stockton. I found a 16-gauge as efficient as a 10-gauge for battery shooting. The natives never use a heavier gun than a 12-bore.

A train leaves Jersey City over the Pennsylvania Railroad at 12:55 P. M., arriving at Hursley's at 8:55 P. M. Excursion ticket good for ten days costs \$10.40. There are two or three trains from Philadelphia and Wilmington, Del., daily for Hursley's. The station (Hursley's) and the post office (Stockton) are one and the same place, but tickets must be bought for the former and letters addressed to the latter place. As Mr. Foulks can only accommodate two or three sportsmen at one time, it will be absolutely necessary to write ahead and make arrangements.

In taking such a trip everything depends upon two things—the ducks and the weather. If the ducks are there and the wind blows from the right quarter, all the sport that the most exacting could desire is almost sure to be realized.

Game Bag and Gun.

Fixtures.

March 5-19, 1902.—Eighth Annual Show of the National Sportsmen's Association at Madison Square Garden, New York.

Stubble Rhymes—III.

PLAINSMEN praise the prairie chicken,
(In August he's delicious pickin')
The eastern Nimrods all declare
Ruffed grouse the game beyond compare:
Our southern brother without fail
Will laud the graces of the quail;
The marshman tunes his little pipe
And plays a pæan to the snipe.
Here's to Philohela minor,
Joy to sportsmen, likewise diner!

When Phœbus at the gates of dawn
Wreathes a smile, Major wreathes a yawn,
Asks of the day, or fair or foul,
To make a sportsman smile or growl?
The Colonel, rousing from embrace
Of Morpheus, just turns his face
To wall for answer, burrows deep
In downy couch for further sleep;
Counting the feathers in the bed
More worth than wings that ever sped
O'er fallow field or stubble brown
Within ten miles of Alma town.

As lightly as the summer rain
Falls pattering on the window pane,
Fair Lady B. taps at his door
And punctuates his maiden snore;
Then sings, "Awake! o'er moor and fe..
To wooded hill and darkling glen
The fields are smiling in the sun
And promise much to dog and gun."

As billows tossing in the storm
The blankets heave; the Colonel's form
Like Neptune rising from the sea,
Emerges in his robe de nuit,
And quickly dons his shooting tog.,
Orders horses, gun, lunch and dogs;
Then all the campaign of the day
Discuss with rolls, café au lait.

Stalwart Billie takes reins and whip
And westward drives at merry clip;
The Kodak fiend by him doth ride,

"The dog a statue; by his side
The man a moment petrified."

A David by Goliah's side:
A pointer and a setter fleet
Repose beneath the carriage seat
On which recline two ladies fair
Just going out to take the air.
The Major and the Colonel cinch
The back seat, filling every inch;
Four hundred pounds that end spring bore
And creaked as never creaked before,
But broke not. Then said Lady G.
"A dog on point I'd like to see,
And then to note the crack of gun,
The quarry fall, know how it's done."
"Here, too," chimed Lady B., "you know
What leagues we've come to see the show."

The whip draws rein at alder copse,
To terra firma the Major hops;
Colonel follows—with muffled sound
He cracks the springs and breaks the ground:
Cap leaps the rails and points in sight;
(The ladies mark him with delight.)
Over the fence the Colonel goes,
His movements indicate repose;
His martial dignity and state
(Or weight) make him deliberate.
"Whoa, Cap, steady!" the sportsman warns.
(Such dog as Cap such warning scorns.)
"Whoa, Cap, steady! A cock or two
May soon take wing and we will do
A thing or two to please the fair."

Indeed it was a picture rare—
Sky deepest blue, air crisp and clear,
The woodlands far, the coverts near,
And just between, the golden corn
In serried ranks the fields adorn:
The dog a statue, by his side
The man a moment petrified,

Head forward bent; the trusty gun
A line of light reflects the sun.
A breathless pause: the magic spell
Is broken by the quarry's knell:
The woodcock springs; up, tubes of steel!
The echoes wake, the strong wings reel;
The ladies chime "His race is run,
Knight of the trigger, bravely done."
Then Major's voice, blithe as a lark,
Rings from the covert, "Mark, there, mark!"
As o'er the copse on fitful wings
Another cock in full flight swings,
And as the bird sometimes will do,
Swerved in his course and dropped in view.
"Come this way" (voice soprano, clear),
"Come to the road, the woodcock's here."
Then down the dusty thoro'fare
The Major strode with eager air;
"Where's the bird? Did you mark him well?"
"Thought I hit him, but cannot tell."
"Yes, by the fence—bill outstretched, pressed
Close to the earth; he seems at rest,
So motionless, perhaps he's hurt,

"Cap leaps the fence and points on sight."

But that bright eye shows he's alert."
The ready gun then forward drew
(Touched safety bolt) a step or two:
Like arrow's flight the quarry sprang,
Flashed over the alders, when Bang!
The Greener gun staccato spoke
And all the forest echoes woke:
The bird pitched up, then downward came
Mid salvos of applause. The game
Of philohela and the man
Was fairly won, catch as catch can.
And slowly drifting on the breeze
Like rufous flecks on azure seas,
Downy feathers, gay little notes
Which oft the sportsman's triumph notes.
The bird retrieved, all rest their eyes
With satisfaction on the prize.

What game bird wings the frosty air
That with the woodcock can compare?
What music in those whistling wings
As from the fragrant ferns he springs
And darts athwart the light and shade
Of poplar hill and alder glade!
What lambent light lurks in his eye
So large and lustrous, dark and shy!
The sunset lingers on his breast,
The midnight slumbers on his crest,
The grey of dawn, the ruddy morn,
And shades of eve his back adorn;
And blending soft, gray, shade and flush
Touch with despair the artist's brush.
He takes in autumn garb bedight,
Through moonlit space his southern flight;
Where forests flame and coverts glow,
He charms the sportsman, high and low;
And when to dog and gun exposed
His weird career is quickly closed,
Larded, buttered, browned and basted,
Better morsel ne'er was tasted.
The epicure in glad surprise
Recites short grace with open eyes,
Lifts the cover—"Hail, palate lure!
From Lilliput a turkey, sure!"
Adds as each tidbit slides to rest
Down the red lane behind the vest,
"In covert or under cover
Never lack you ardent lover;
Sprite of woodlands, elf of the dell,
Joy of sportsmen, farewell, farewell!"

ALMA.

Fifty-Nine Ducks at a Shot.

WIDE publicity has been given to the report sent out from Richmond, Va., Dec. 3: "Mr. R. W. Jolly, of this city, killed fifty-nine mallard ducks at one shot Saturday at his marsh on Turkey Island, about thirty miles down the James River. Mr. Jolly came up from the island last night on the steamer Pocahontas. He has been on the island several weeks, and has made shipments to the city every week of several hundred. He uses an improved duck gun. A load for his gun is 15 drachms of powder and 6 ounces of No. 6 shot. He has a number of times brought down as many as thirty birds at one shot, but fifty-nine is the best he has ever made. These ducks retail here for about \$1 each." If the statement is true it is manifest that the gun is of a size forbidden by the statute, and its use should be suppressed by the authorities.

American Duck Shooting.*

It is a curious and interesting thing that, although wildfowl shooting has been practiced in this country for many years and by many people, no book has ever been published treating of the sport for the country as a whole. Long's little book and Leffingwell's more substantial volume were both excellent in their way, but each covered a limited field, and dealt chiefly or altogether with the shooting which the authors had had and with nothing beyond this. Lewis' "American Sportsman" touched only incidentally on wildfowl shooting, and what is said in other volumes is hardly worth speaking of. On the other hand, we have two or three admirable works treating of North American ducks or some of them. Such are Mr. D. G. Elliot's admirable work on "Wild Fowl of the United States and British Possessions." This volume deals with the habits and range of the wildfowl, and gives descriptions of the species and keys by which they may be identified. Incidentally it has something to say about sport, but sport is really beside the main purpose of the book. Then there is Mr. Gurdon Trumbull's charming and extremely valuable "Names and Portraits of Birds which Interest Gunners," but here again a special side of the duck group is treated, and the sport of wildfowl shooting is not considered.

"American Duck Shooting," by George Bird Grinnell, just issued by the Forest and Stream Publishing Company, is what its title implies, and in its more than 600 pages gives the fullest treatment of the fascinating sport that it has ever had. The volume is systematic in arrangement, full in treatment and beautiful in decoration and manufacture. Moreover, it covers the sport for the whole country, taking in the North American Continent from near the Arctic circle to the southern boundary line, and from the Atlantic to the Pacific. Thus, the American reader of the book will find in it not only the forms of duck and goose shooting with which he is familiar, but also all other forms wherever practiced in this country.

Before duck shooting can be discussed, however, the ducks must be considered, and in the present volume, after an interesting chapter on the duck family, are described in plain and simple language every species of swan, goose, and duck commonly found in North America. Besides these plain descriptions of the birds, there is a brief account of the range and habits of each species, and each is preceded by a carefully drawn portrait of the species in question. This section of the book, therefore, not only tells the gunner where each species is to be found, but also enables him, by means

"Then Major's voice, 'Mark, there! Mark!'"

of portraits and descriptions, to identify without trouble the birds that he kills.

This section of the volume comprises about one-third its bulk.

The second division of the book is devoted to Wild Fowl Shooting. Swan shooting is nowhere systematically practiced as a sport, and is therefore dismissed in a few pages, but the different forms of goose shooting are fully treated, while a special chapter is devoted to brant shooting. Naturally, duck shooting takes up the bulk of this section of the volume. Among the subjects treated are pass shooting, point shooting, river shooting, cornfield shooting, shooting in the overflow, in the wild rice fields, sea shooting on the Atlantic, and shooting from a houseboat. There are no less than 17 sub-chapters under the general head of duck shooting.

Mr. Grinnell has not confined himself to telling merely what he himself has seen of wildfowl shooting. In a paragraph of his preface, he says:

"The book covers—as it should—a wide range of territory; for a volume on wildfowl shooting, if limited to the experiences of a single individual, would furnish but an inadequate presentation of the subject for the whole continent. In the endeavor to make the volume justify its title, assistance has been asked from gunners whose experience has been longer than mine, or has extended over shooting grounds with which I am not familiar."

Following out this purpose, the author has quoted freely from some of our best writers on the sport, and has thus added much to the completeness of the volume. The different sketches are not dry directions as to how

*American Duck Shooting. By George Bird Grinnell. Author of Pawnee Hero Stories and Folk Tales, Blackfoot Lodge Tales, The Story of the Indian, The Indians of Today, etc. With fifty-eight Portraits of North American Swans, Geese and Ducks by Edwin Sheppard, and numerous vignettes in the text by Wilmot Townsend. New York: Forest and Stream Publishing Company. Price, \$2.50.

one should act under certain conditions, but are charming descriptions of shooting trips by competent and well equipped men in which the instructions are all given, but dressed in most attractive form. Here are two quotations, the first of which pictures the wild rice fields of the interior before the settlement, and when they were the feeding ground of vast numbers of ducks:

"Scattered over the northern country, between the Hudson River and the Missouri, are many thousands of reedy swamps and shallow lakes, and great stretches of wet meadow-land, where the wild rice grows. In the spring, so soon as the water is warmed by the genial rays of the advancing sun, the tiny pale green spears show themselves above its surface, and, all through the hot summer, grow taller and stouter, until, when August comes, the tasseled heads begin to bow with the weight of the flowers, and, a little later, the soft, milky grain appears in a waving crop. In the good old times, before the white man's foot had explored every recess of our land, or his plow furrowed every prairie, or his crooked gray fences disfigured each landscape, these rice fields were the homes of innumerable wild creatures.

"On their borders the herons built their nests, and in the open waters, among the stalks, they did their fishing. In and out among the stems the wild ducks and grebes swam in daily journeyings, while the rails and the coots ran, or waded or climbed, among the stalks, undisturbed. Here the muskrat had his home, living, in the summer, perhaps, in a hole on some higher piece of ground, and, in winter, building for himself, from the reeds and the stems of the rice, a house, substantial and impervious to the cold. Here, too, lived the mink, taking his daily toll of fish or frogs from the water; sometimes killing the muskrat, and now and then feasting greedily on the eggs or the young of some bird, whose nest he had despoiled.

"Among the rice or the reeds, the blackbirds built their hanging nests of grass, supported by three or four natural columns, and all through the heat of the June days the mother bird brooded her pale blue, black-streaked eggs, swinging easily to the movement of the rice stems, like the sailor in his hammock at sea. More solid and substantial were the houses built by the marsh wren; round balls of grass, deftly woven about a stalk of the rice, roofed over as well as floored, and with only a narrow hole for the passage in and out of the tiny owner. Sometimes a single pair built half a dozen of these nests, near one another, before making a habitation that pleased them, and those that they had left were taken by the bumblebees for homes in which to do their housekeeping."

Here is the other, which suggests the number of the fowl that in the old days resorted to these rice fields in multitudes not to be described, but only to be hinted at, as in Mr. Van Dyke's graphic words on the evening flight:

"The number of ducks increased by the minute. They came with swifter and steadier wing and with more of an air of business than they had shown before. Those hitherto flying were nearly all ducks that had been spending the day in and around Senachwine and its adjacent ponds and sloughs. But now the host that during the day had been feeding in the green corn fields of the prairie began to move in to roost, and the vast army of traveling wildfowl that the late sharp frost in the north had started on their southern tour began to get under way. Long lines now came streaming down the northern sky, widening out and descending in long inclines or long, sweeping curves. Dense bunches came rising out of the horizon, hanging for a moment on the glowing sky, then massing and bearing directly down upon us. No longer as single spies, but in battalions, they poured over the bluffs on the west, where the land sweeps away into the vast expanse of high prairie, and on wings swifter than the wind itself, came riding down the last beams of the sinking sun. Above them the air was dotted with long, wedge-shaped masses or converging strings, more slowly moving than the ducks, from which I could soon hear the deep, mellow honk of the goose and the clamorous cackle of the brant. And through all this were darting, here and there and everywhere, ducks, single in pairs, and small bunches. English snipe were pitching about in their erratic flight; plover drifted by with their tender whistle, little alarmed by the cannonade; blue herons, bitterns and snowy egrets, with long necks doubled up and legs outstretched behind, flapped solemnly across the stage, while yellowlegs and sand snipe, mud hens, divers—I know not what all—chinked in the vacant places."

The third division of the volume takes up the Art of Shooting, and treats of guns and loading, giving the author's views on how to hold, when to shoot, the flight of ducks, and the etiquette of the blind. The Chesapeake Bay dog—which may fairly be called the American retriever—is briefly described, and something is told of the good work that these dogs do. Then follows a consideration of decoys, including living ones, and something about the breeding of wildfowl in confinement, from the pen of the late Fred Mather. A chapter on blinds, batteries, and the boats used in duck shooting, concludes this section. The final chapter of the book tells of the decrease of wildfowl, gives some of its causes, and recommends the adoption of certain remedies, all of which look toward a lessened annual destruction of wildfowl, and the concluding words of the volume are: "Stop spring shooting; Limit the size of bags for the day and season; Stop the sale of game." An admirable index concludes the book.

Besides the fifty-eight portraits of North American ducks, geese and swan already referred to, the volume is copiously illustrated. Of the full page plates, four are reproductions of some of Audubon's magnificent pictures of ducks, but besides these many smaller half-tones are scattered through the volume. A very interesting one is the small engraving on page 11 showing a group of gulls occupied in fishing. Every gunner will be interested also in the more than fifty vignettes drawn by Mr. Wilmot Townsend which are found through the text. Though often slight and sketchy, these vignettes are full of real character, and not a few of them will remind the gunner of something that he has seen. Of line drawings, the more important are the plans of double and single batteries which are published with

their specifications, and the sketches of various types of ducking boats.

With its heavy paper, good large type, its rubricated title page, wealth of illustration, and quiet but effective cover, the volume may be commended to all gunners.

B. W.

New Hampshire Deer Hunting.

THREE of my neighbors and I have just returned from a trip after deer. Our location was the same as last year—Rocky Point Cottage, Stinson Lake, Rumney, N. H. Last year we did well, killing four bears and four deer in five days' hunting. We can leave here early in the morning and reach the cottage at 10 in the morning of the same day. From the hills near my house I can see the mountains where we hunted. We planned to be on the grounds when the first snow fell. Snow, however, came very unexpectedly and early—somewhere about Nov. 10. I was told by residents of Rumney and Ellsworth that it measured from 12 to 18 inches. When we arrived there was about 8 inches in the woods, with a little crust. The outlook for still-hunting was very discouraging.

We reached our cottage at 10 in the morning, and at noon we all started out to look over the near-by grounds. Before 1 o'clock one of us had killed a deer. We saw a good many tracks, but they were all a number of days old. Wherever there were beech trees the deer had pawed up the leaves in all directions looking for nuts. The third day one of our party killed a very large doe. This ended our killing of deer. We all worked hard for about a week, and hunted over a great deal of ground, going back seven or eight miles from our own house, hunting all over the mountains around the three ponds. It is a hard country to hunt on bare ground, and with 8 inches or more of very noisy snow it was very much harder. One day when I had tramped four miles to the lower pond and hunted up to the top of the mountain south of the pond, climbing over and under windfalls and over ledges, I thought it did not pay. Had I killed a good-sized deer in there I could not have dragged it out in a day. The snow was so noisy that one could not get anywhere near a deer, and those deer when once started ran as though they never meant to stop, and there was no chance to circle around and work up from the opposite side. I followed the track of a small deer which had been started by one of our party for two hours, and it never let up. Another member followed four deer fully ten miles and never saw where they showed any signs of stopping.

At our comfortable quarters at Rocky Point Cottage we talked over the prospects every night. We did not want to give up, but I could see no chances of improvement. It would take at least six or more inches of fresh snow to deaden the noise of the crust, and six inches more meant too hard traveling. Snowshoes would not work for still-hunting, so we gave it up, and perhaps it was well we did. The night after we got home it began to snow, and some 20 inches fell, and the wind blew a gale. Perhaps the deer up there can get around in it. I know that we could not.

It is only a few years since hounding of deer has been stopped in this State. When dogging was allowed nearly all the deer killed were driven by hounds. There are quite a number of rapid rocky streams and rivers in the upper part of New Hampshire, and they seldom freeze entirely. My experience in driving deer to such waters was very unsatisfactory. Take the East Branch of Pemigewasset River. You never could tell where a deer would go to the river, and the water made such a noise that a dog could not be heard 500 yards away.

I was up in Carroll one winter. There was quite a party of hunters, and we had six dogs. We started a deer the first morning, and we followed him four days and never saw him. There was some 6 inches of snow, with a crust that would hold a fox. It cut the dogs badly, and they could not run fast. At the end of the four days we had six dogs so footsore that they would not stand up, and the deer were apparently as lively as ever.

With the ending of hounding began the development of the still-hunter, and he has been increasing both in skill and numbers ever since. I think it is safe to say that three deer are now killed every season in that part of New Hampshire north of Plymouth where one was killed in hounding days. I do not make the above statement as an advocate of hounding. I never was and never expect to favor the dogging of deer. When the question of allowing hounding was brought up I did all I could against it, and I would do so again were there any chance of its being revived. It has been said that hounding of deer drove them out of the country. I never found it so. A deer, as I have found when followed by dogs, might run over the mountains, but when he got rid of the dogs he would come back within a few days. Still-hunting will make deer more wild and wary than any kind of hunting. Ordinarily a deer when he hears (and he is pretty sure to) the least sound, such as the packing or squeaking of the snow under the foot of the still-hunter (no matter what he may wear), will jump up and stop to see what is coming. When he has been still-hunted to any extent he does not wait to see; he knows, or thinks he does, all he wants to, and he jumps out of his bed and leaves at once.

There is always more or less uncertainty in all hunting. In still-hunting it is decidedly more (I am not referring to places where deer are so numerous that no tracking is needed, or where they try to crowd the sportsman out of his camp; I have heard of such places, and been to some of them, and always found things just about as others who went there have). To get really good still-hunting, where there are a fair number of deer, a good soft snow is needed. Even then a good many deer will be started without getting a good shot. How often will there be just the right snow? The man who lives on or very near the hunting grounds will be the one who gets such days. Perhaps he has made some arrangement with a sportsman living two or three hundred miles away. The snow falls, perhaps unexpectedly, during the night. The local hunter finds early in the morning that it is an ideal still-hunting day. The nearest point where he can wire his man is some distance away. He says, "I will go out to-day and perhaps kill a big buck, and to-night I will go and send for my man. If he does not kill anything I can sell him the buck I have." In the course of a day or two the sportsman arrives, only to find that there has

been a thaw or a little rain, and the snow is very noisy. He works hard and jumps every deer; he tries to follow, perhaps now and then getting a faint glimpse of a white flag in the distance. He takes home the buck his guide had ready for him. He knows that he did not kill it. He tries to make his friends believe he did. They may pretend to believe his story, but they do not.

Not all of the rural still-hunters, even if they live on the grounds, are successful. A certain local hunter in the vicinity of where we hunted called at our cottage now and then. After we had given him some refreshments he told us all (and perhaps more) than he knew. The weapon he used to exterminate deer was a single-barrel semi-hammerless shotgun. He said it was a good gun sometimes. Last year, on the first snow, he started out, found the tracks of three deer where they had been to some apple trees, followed back to the woods, saw a deer standing looking at him about thirty yards away, found that his hands were so cold that he could not cock his gun. The deer after a while ran off. A few minutes later he saw deer No. 2, with same result. He then cocked his gun, and soon saw deer No. 3. Forgetting that the gun was cocked, he almost broke off the lever trying to cock it, and deer No. 3 followed the others.

This year he tried a rifle; got two very easy shots at big bucks. The rifle went off and so did the deer. Not all local hunters are so unlucky. Three young fellows living some three miles from our cottage built a camp on a deserted farm back in the mountains. When the first snow began falling they went to their camp, and in a few days killed six deer. I saw where they had dragged four of them in.

Other hunters were lucky. Some of them knew very little about hunting, and just went out and poked around, and either met or ran across deer. One man, as I was told, was going along on open ground near a spruce thicket. He saw a large buck standing broadside looking at him. He shot at the buck and missed him; the deer still stood, and a second shot dropped him. When the shooter went up to his deer he found a doe on the other side, which had been shot through the neck by the same bullet. On my way home I met on the train a former member of the New Hampshire Fish and Game Commission. He had heard of this killing two deer at one shot, and I asked him as follows: "In case a man had killed one deer and then shot at a second and found his last shot had killed two, what would be done?" He said it would be a hard question to decide. The reliability of the man doing the shooting would be taken into account, otherwise some one who had killed one deer would run across two more and shoot both, and say he killed the two last at one shot. I find I am writing a great deal more than I intended when starting to tell of our unsuccessful trip. Well, to-day I am practically snowed in—roads blocked, no mail or anything; can't even go after a fox, hence the above.

C. M. STARK.

DUNBARTON, N. H., Dec. 8.

Wyoming Game Protection.

Editor *Forest and Stream*:

During the year there appeared in several sporting periodicals, under the heading of "Game Protection in Wyoming," articles elicited by the fact that the hunting license in that State for non-residents had been raised from \$20 to \$40, the same law compelling a guide to register and pay a license fee of \$10. And, since Wyoming is in many respects the greatest of our big-game States, it may be of interest to sportsmen to learn, from a personal experience, how well these game laws are enforced and with what efficient care elk, in particular, are protected. Non-residents hunting in Wyoming are compelled to pay a license fee of \$40 for the open hunting season of three months, from Sept. 1 to Dec. 1. Now, while the State itself guarantees nothing, it is certainly to be presumed that, in return for this sum, the non-resident is given all the protection that strict compliance with the law on his part entitles him to, nor does it seem unreasonable in him to expect a vigorous enforcement of the law at the hands of the Game Commission and the county authorities. The resident sportsman pays a county gun license of \$1.00 for the season, and he, like the non-resident, is limited in his killing to two elk, three antelope, two deer, one goat, and one sheep in each hunting season.

And now for our experience: While hunting in the Gros Ventre Mountains this autumn we were told by our guides, Nelson Yarnall, of Dubois, and his son, Silas, that on their way to join us at St. Anthony, Idaho, they had met two suspicious looking characters who claimed to be prospectors, but whose outfit and general appearance, together with the nature of the country, made it much more likely that they were market-hunters. As it happened, our party entered the locality through which these men had preceded us by about ten days (no one else had been there in the interim, and their footprints were unmistakable), so that when we began to find carcass after carcass of elk, from which only the teeth (tusks) had been removed, we were morally certain as to the slaughterers. In the course of our hunting, in a limited section, and without effort upon our part, we found six victims of their work, five bulls and one cow. Not a part of any of them had been taken for meat, though, as a blind, the heads of some had been removed and hidden in the bushes, where we found all but one; but from every elk, however, cow included, the teeth had been carefully cut, leaving the rest of the carcass prey for bear and coyote.

Now, this sounds atrocious, even in the reading, but for the man who has a drop of red blood in his veins, the sight of a huge bull elk with magnificent six or seven-point antlers, lying rotting on the ground, killed by a rascally scoundrel merely for a pair of teeth of the value of three or four dollars, is infuriating, and had we encountered the perpetrators of this crime we would most certainly have taken the law in our own hands, and, at the risk of curtailing our hunt, so acted that they would have received the full legal penalty. Our one desire was to have them brought to justice, for, in addition to their wanton destruction, they had seriously impaired our hunting, though, thanks to the skill of our guides, we both subsequently secured fine heads. Consequently, we delayed two days and sent Silas fifty miles

to notify the game wardens, Mr. Lloyd and Mr. Jones, who promised to set forth immediately, and who probably did their best, but a severe snow storm developed which must have hampered them considerably, and which drove us out of the mountains. Our guides were bent on arresting these teeth hunters, and as we parted from them, homeward bound, they promised us to go out immediately, which, of course, met with our hearty approval. The subsequent developments were written up.

With a small pack train, Nelson Yarnall, Silas and Jack McCabe, our efficient cook, started up the Wind River, and the first day, near the Rams Horn, met the teeth hunters. Passing by and giving the impression that they were hunting for a bunch of strayed horses, the Yarnalls and Jack back-tracked at night, held up the law-breakers at the rifle's muzzle, searched them and their camp, and found twenty-six pairs of elk teeth, representing, of course, twenty-six elks, mostly bulls.

The criminals were taken to the nearest justice of the peace, Richard Green, at Dubois, where one of them, Rudolph Rosencrans, pleaded guilty, and was fined \$25 and costs, the total being \$38.30. That is to say, this wholesale infraction of Wyoming's law protecting one of its most valuable possessions, its big game, was punished by the infliction of the minimum penalty—the maximum being a fine of \$100 and imprisonment for six months—and even this maximum, under the administration of a right-minded judge, would seem, in the present case, to err on the side of leniency.

Think of it, O ye game lovers, \$38.80 for twenty-six elk. Less than the sum you or I pay for the mere privilege of killing two, and less than our combined expenses for our guides and outfit in waiting over the two days to notify the game wardens.

As no defense was attempted, it is a fair presumption that the teeth hunters were glad enough to get off with the slaughter of only twenty-six elk charged against them; but how many these two men really killed will never be known, for they were in the mountains nearly all summer and made several trips to the nearest settlements, from which shipments of teeth were probably made.

Was there ever such a travesty upon justice as this? Was there ever such a reward for the honest endeavor of honest men who had done their duty so well as the Yarnalls and McCabe? They and we are filled with disgust and bitter disappointment at this mal-administration of the law, but in the hope that publicity may enhance its better application in the future, we have ventured to take so much of your space.

For the enlightenment of those not informed, be it known that what are referred to as "teeth" are the canine teeth chiefly of the bull elk. They are carried in the upper jaw, one on each side, and immediately back of the incisors. These tusks are only valuable for the reason that a secret society of the "Elks" has adopted them as its insignia or emblem. It is to be regretted that this is the case, as it is conducive to the destruction of one of our most noble of animals.

SHERBOURNE W. DOUGHERTY, M. D.

PHILADELPHIA, 1901.

The Forest Reserves.

From President Roosevelt's Message.

PUBLIC opinion throughout the United States has moved steadily toward a just appreciation of the value of forests, whether planted or of natural growth. The great part played by them in the creation and maintenance of the National wealth is now more fully realized than ever before.

Wise forest protection does not mean the withdrawal of forest resources, whether of wood, water, or grass, from contributing their full share to the welfare of the people, but, on the contrary, gives the assurance of larger and more certain supplies. The fundamental idea of forestry is the perpetuation of forests by use. Forest protection is not an end of itself; it is a means to increase and sustain the resources of our country and the industries which depend upon them. The preservation of our forests is an imperative business necessity. We have come to see clearly that whatever destroys the forest, except to make way for agriculture, threatens our well-being.

The practical usefulness of the National forest reserves to the mining, grazing, irrigation, and other interests of the regions in which the reserves lie has led to a widespread demand by the people of the West for their protection and extension. The forest reserves will inevitably be of still greater use in the future than in the past. Additions should be made to them whenever practicable, and their usefulness should be increased by a thoroughly businesslike management.

At present the protection of the forest reserves rests with the General Land Office, the mapping and description of their timber with the United States Geological Survey, and the preparation of plans for their conservative use with the Bureau of Forestry, which is also charged with the general advancement of practical forestry in the United States. These various functions should be united in the Bureau of Forestry, to which they properly belong. The present diffusion of responsibility is bad from every standpoint. It prevents that effective co-operation between the Government and the men who utilize the resources of the reserves, without which the interests of both must suffer. The scientific bureaus generally should be put under the Department of Agriculture. The President should have by law the power of transferring lands for use as forest reserves to the Department of Agriculture. He already has such power in the case of lands needed by the Departments of War and the Navy.

The wise administration of the forest reserves will be not less helpful to the interests which depend on water than to those which depend on wood and grass. The water supply itself depends upon the forest. In the arid region it is water, not land, which measures production. The western half of the United States would sustain a population greater than that of our whole country today if the waters that now run to waste were saved and used for irrigation. The forest and water problems are

perhaps the most vital internal questions of the United States.

Certain of the forest reserves should also be made preserves for the wild forest creatures. All of the reserves should be better protected from fires. Many of them need special protection because of the great injury done by live stock, above all by sheep. The increase in deer, elk, and other animals in the Yellowstone Park shows what may be expected when other mountain forests are properly protected by law and properly guarded. Some of these areas have been so denuded of surface vegetation by overgrazing that the ground-breeding birds, including grouse and quail, and many mammals, including deer, have been exterminated or driven away. At the same time the water-storing capacity of the surface has been decreased or destroyed, thus promoting floods in times of rain and diminishing the flow of streams between rains.

In cases where natural conditions have been restored for a few years vegetation has again carpeted the ground, birds and deer are coming back, and hundreds of persons, especially from the immediate neighborhood, come each summer to enjoy the privilege of camping. Some, at least, of the forest reserves should afford perpetual protection to the native fauna and flora, safe havens of refuge to our rapidly diminishing wild animals of the larger kinds, and free camping grounds for the ever-increasing numbers of men and women who have learned to find rest, health, and recreation in the splendid forests and flower-clad meadows of our mountains. The forest reserves should be set apart forever for the use and benefit of our people as a whole, and not sacrificed to the shortsighted greed of a few.

The forests are natural reservoirs. By restraining the streams in flood and replenishing them in drought, they make possible the use of waters otherwise wasted. They prevent the soil from washing, and so protect the storage reservoirs from filling up with silt. Forest conservation is therefore an essential condition of water conservation.

Some Maine Deer Hunters.

As a matter of fact, the term "deer hunters" applies to a pretty large percentage of the male population hereabouts this season, as not only has almost everybody generally classed as a sportsman directed his best efforts toward getting a shot at one of these wary fellows, but many who had thought their hunting days were over, as well as many more who hitherto had never thought of hunting at all, have had their sporting blood so roused by the popular craze that they have provided themselves with suitable arms and taken a zealous hand at the game. Naturally the result has been bad for the deer, as well as somewhat risky for the hunter, although, happily, no accidents have yet been reported in our immediate vicinity. The following, from the Oxford County Advertiser of Nov. 29, gives one an idea of the vigor of the campaign being conducted in that county:

"Last week's Advertiser announced the killing of 89 different deer in this county. One or more deer have been killed in nearly every town in this county this fall, including one moose. This shows conclusively that big game is on the increase."

In the issue containing the above were accounts of the killing of perhaps ten or twelve more deer, and thus the work will go on to the end of the season. A parallel state of affairs prevails in Cumberland county, which, after absolute protection for a period, has been open during October of the present year. One report states that sixteen deer were killed the first week on Standish Plains, a tract of 4,000 acres about ten miles east of us, on the Maine Central; but I am inclined to think the number overestimated, although it is certain the locality was literally thronged with hunters for a time.

Among those who went from this way was W. E. Blake, one of our best hunters and rifle shots, who spent three days there, after the rush was over, but sighting only one deer. This his hunting companion might have shot but for fear of hitting Blake, who stood exactly in line. Edward Spencer, a celebrated trapper of Baldwin, spent a week on the plains without getting a shot, to be met on his return by the remark from his wife that he was foolish to go away hunting, as she had seen several deer about the place during his absence. Thus warned, he kept his rifle handy, and soon got a shot at a fine buck that came into an orchard where he was at work. The fellow bounded away into the woods, though plainly hard hit, and the most persistent search by Spencer and his boy failed to disclose further trace of it, until, about a week later, the boy, in jumping a fence while out gunning, landed plump on its dead body—quite spoiled. Early in the season two other Baldwin sportsmen came upon five deer in a clearing, upon which they opened promiscuously with buck shot. The deer all got away, but two of them were found dead and spoiled later on. For a few of the lucky ones, the Ward boys, living near the Hiram and Baldwin line, have shot three deer; in Hiram, after the first snow, three were shot in one day by Chas. Osgood, Chas. Clark, and Calvin Clemens, respectively; while three have been hunted in our immediate vicinity, the first by Harry L. Huntress, a farmer's boy; the second by Elmer Wyman, and the third, shot Nov. 25, near his home, by a young man named Bert Warren, living only about half a mile inside the county line. Several have also been killed in Porter, and Edward Ridlon, of that town, who went to Sandwich, N. H., on a fox hunting trip, had the luck to bring down a big buck with buckshot near Squam Lake; as well as many more that I will not mention, and to which more will doubtless be added before the end of the season.

The only ones to go from here into the "big woods" were Murray Watkins and Daniel Chaplin, who provided themselves with Savage rifles and a full outfit, and in October paid a two weeks' visit to the region north of Moosehead. They reported a very pleasant trip, and brought back four fine deer, including a monster buck, shot by Chaplin, declared to be the biggest ever seen at that particular camp. Dan gives a graphic account of the killing of this big fellow. He was on the edge of a big burn, thickly sprung up to little maples, where he had

seen fresh signs of a deer the day before. Moving along a fallen tree trunk that extended out into the jungle, as he stepped cautiously down from the further end his eye caught a quick movement in the foliage, not far distant. It was the flicker of a deer's tail; he could brokenly make out its outline as it stood in a thick clump of maples calmly browsing. A portion of the neck was exposed through a slight opening, and at this Dan fired. The animal gave a single short bound, then stood like a statue, stretched to his full height, every sense on the alert. The movement had brought the fore shoulder in full view, and at this Dan directed his second shot. This time the old chap turned and dashed straight towards him; but the terrible "soft-nose" had done its work. A few frantic, aimless bounds and he collapsed and fell dead. He was a veritable monarch of the woods.

W. H. Hatch, of Fryeburg, who accompanied Watkins and Chaplin, and acted as guide for the camp, returned later on with two deer and a moose. It is probable that others from this way will visit that region next season.

CORNISH, Me.

TEMPLAR.

The Way We Used To Do.

PUERTO PRINCIPE, Cuba.—*Editor Forest and Stream:* On going through my effects a few days since I came upon the following notes of a march made in 1894 from Fort Meade, S. D., by E Troop, Eighth Cavalry, to which I then belonged as first lieutenant. Possibly they may interest my friends of the FOREST AND STREAM. You are welcome to make such use of them as you desire. In the days before the acquisition of Cuba and the Philippine Islands we made many such marches; they were made for military purposes, such as map-making, instruction, etc. As the military details would be of little interest, I have mainly omitted them in copying the notes, and send only such portions as pertain properly to the columns of FOREST AND STREAM.

On this occasion our command consisted of three officers—Capt. K., Second Lieut. K. and myself—and fifty mounted enlisted men—a party ample to readily consume all game that might fall to our shotguns. Behind the mounted column followed closely my hunting wagon drawn by two horses, and carrying Capt. K.'s bird dog Yacob, an Irish setter of considerable ability; our shotguns, ammunition, shooting coats, etc. This was in the days of black powder, at least on the plains, when every one loaded his own cartridges. I had a few days before, upon the recommendation of some friends, purchased a can of a new variety of powder which, previous to this trip, I had had no opportunity to test—this will explain my frequent reference to my ammunition. We set forth from the post on Sept. 8, and reached a stream called the Belle Fourche River about 1:30 that day, crossed it and went into camp. All that day's march had been through settlements with fenced country on both sides of us, with cultivated fields. Once across the Belle, however, all this was to change immediately to absolute cattle country—no fences, no roads, no evidences of civilization, nothing but an interminable sea of grass, intersected at intervals by feeble watercourses fringed to a greater or less extent with trees. As far as one could tell by appearances this country was exactly the same as it had been at any time for centuries back, differing only in having the buffalo replaced by cattle almost as wild, large and shaggy. Indeed the evidence left by the buffalo made them seem almost present—their bleaching skulls were numerous, not infrequently supplied with horns, the choicest of which were eagerly secured by some of the enlisted men, as they would yet take a polish. I say such was the appearance, although in reality there were a few isolated cattle ranches here and there, as will be seen, but they were in secluded hollows on some water course or other, and invisible until one was almost upon them. The annual round up was also in progress at this time, and on this account we now and then had our path crossed by a cowboy, from whom we obtained information, usually more or less erroneous, in regard to our route. With these explanatory remarks the notes commence with the camp just across the Belle.

WM. F. FLYNN.

We ate a little lunch after establishing our camp in a fine grove of cottonwoods near the water, and then at about half-past two Capt. K. and Lieut. K. took their fishing tackle and tried the stream for fish. I had omitted to bring my fishing tackle, so I followed with my shotgun, thinking a duck might fly over. After watching them awhile I crossed the river by wading, and with Yacob worked a small grove of cottonwood for prairie chicken (i. e., the sharp-tail grouse, the bird that is constantly referred to in this vicinity as the prairie chicken, and on that account so called in these notes). Yacob soon flushed a small bunch of about six, and afterward one or two single birds, all of them, however, out of range, so that I got no shots. Although frequently noticed by our party, it nevertheless always excites our remark that these birds never lie nearly as well to a dog when found far from the habitations of man as when found in fields where they must surely be hunted much more frequently. This might lead some to jump at the conclusion that birds have to be taught how to behave properly when hunted, as well as the dog to hunt them. We—that is, Capt. K. and myself, who have been hunting companions for many years—have always accounted for this peculiarity on the ground that in the wild state the chief enemy that these large birds know is the coyote, and as the dog bears more or less resemblance to the coyote, especially the red setter, the mere presence of the dog serves to make these wild birds wary and uneasy, while with the bird of civilization the coyote, and consequently the dog, is an insignificant factor. At all events, the dog flushed the birds out of range and I got no shots. I finally took a bath in the river and got back to camp in time for supper of bacon, cabbage and potatoes, with plenty of soldier coffee. At some time during that evening the sergeant came up and reported that one of the men named Stout, who had been out hunting that afternoon, had not yet returned to camp. When last seen he was about a half-mile down the river.

Sunday, Sept. 9.—As Stout was still missing in the morning, Capt. K. sent out a detail of two or three men to search for him, while the rest of the command pursued the march. At 7 o'clock we pulled out of camp, a fresh

cool breeze blowing and the morning pleasant and comfortable. About 11 o'clock we reached what is called Elm Creek. While this is geographically a water course beyond all question, it nevertheless bears so little resemblance to our ordinarily accepted ideas of a creek that unless one was well-informed in such matters he might, while looking for this particular stream, cross it and go on his way without knowing it—indeed, we did this ourselves on our return trip at another part of the stream. Elm Creek consists of a chain of disconnected water holes usually fringed with bushes, or at least having sedgy banks, which afford good cover to the approaching hunter; it appears also to abound in duck food, and altogether forms a stopping place for the ducks which they are loath to leave, as well as an ideal place for the sportsman to hunt them, as under the favoring screen of bush or sedge he can approach each pool quite boldly, and in most cases easily reach a position from which he can, as they take wing, use his right and left to advantage. At this creek I gave my horse to a trooper to lead along with the advancing column, and getting into the wagon drove up the stream on a prospecting tour. I approached quite a number of holes cautiously, dismounting from the wagon for this purpose, without seeing any duck, and becoming discouraged with the prospect, and concluding that it was still too early for them, I approached the next good pool without getting out of the wagon. As ill luck would have it, there was a large flock of widgeon on this pool. I fired at them from the wagon as they flew, but of course got none at that long range. I then resumed my previous caution, and soon came upon a small flock of teal, and gave them a right and left as they rose within what I considered easy range. To my surprise they all flew away. As teal in the act of rising from the water are a most difficult target, I concluded I had missed them clean, and thought no more about it. Soon a small flock of widgeon on the wing came within range, out of which I helped myself to one. I had now explored the creek sufficiently to enable me to report that the ducks had certainly come down from the north, or, at least, were on hand in good numbers. They may have bred there for all I know, so I turned back to overtake the column. As I followed down the creek I espied a small bunch of bluewing on a hole a little distance ahead, and, approaching cautiously, fired with each barrel as they rose. Each bird covered fell at the shot, but before I could cross the stream and pick them up one of them again rose and flew away. I was somewhat surprised at this, and began to suspect my new brand of powder of being weak. I then set out to overtake the column, which I soon succeeded in doing, for Capt. K., on hearing my first shot, had halted for a few minutes in order to enable me to explore further without getting too far behind. I also found on joining the column that the duck I had shot and which had again taken wing, had fallen a second time within sight of the command, and one of the enlisted men had ridden out on his horse while they were waiting for me and found it. It was a spoonbill.

About 2:30 P. M. we reached the ranch on Coyote Creek that we were in search of, and went into camp about a half-mile above the house. This ranch was inhabited only by two boys, aged about fourteen and sixteen respectively, sons of a ranchman by the name of Keffeler, whom we had seen on the further side of the Belle, and who had recommended us to come by the way of this place. They were good boys, and very glad to see us, insisted on furnishing us twice as much hay as our horses could consume, and refused to take any compensation whatever for it until we fully explained to them that it was the U. S. Government that was receiving this forage, and that favors of this kind were wasted on it, and in reply to our inquiries as to whether there were any chickens about there, replied that there were lots of them—that they had, indeed, just seen as many as fifty not far from the house. This was certainly encouraging. We were too old hands at bird shooting to believe that the boys had really seen that number of birds. To one unaccustomed to accuracy in such matters, a good-sized bunch of say fifteen appears like forty or fifty, but we realized that there were some, and that they were near at hand, and that was all that we wanted to know. Lieut. K. and I took our shotguns and Yacoub, and with one of the boys as a guide set forth. We soon came upon a fine bunch of chickens—i. e., sharp-tail—near a dense plum thicket—their ideal cover. As they flushed I got in both my right and left, and saw both birds fall, but before I could pick them up one of them rose and flew off, and I lost him. I was now beginning to lose all faith in my ammunition for long shots. This covey had succeeded in getting in such thick cover that we couldn't get it up again. Yacoub was also fresh and headstrong from his long ride, and managed to flush what birds he found at so long a range that we could do nothing with them, so as we were both exceedingly hungry we went back to camp and had dinner. After that Capt. K. and I again took Yacoub and went out. We failed to find our original covey, but by beating the ground faithfully we got up nine singles and bagged eight of them, he killing five, I two, and both of us firing at the eighth. We returned to camp about dark. Score for the day, three ducks and ten chickens.

Monday, Sept. 10.—Last night was frosty and sharp, and not having prepared ourselves for it before going to bed, neither Capt. K. nor myself slept warm. We were sleeping on folding cots, and the sharp air got at us all around. Not so Lieut. K., for he was sleeping in a sleeping bag on the ground, and did not know what it was to be cold at night on the entire trip. We had this morning our favorite camping breakfast of broiled duck, and from this on we had to eat but little bacon. Of course, being soldiers, we have all due respect for bacon, yet on a trip like this there is nothing that will appeal to a sportsman's gustatory taste as a bluewing split and broiled over the coals by means of a few green withes as a holder, and eaten sizzling hot from the embers on a sharp frosty morning—potatoes, bread and butter and coffee may help it out a little, but it is a delightful meal all by itself. We left camp about 7:15, and continued northeast. After about seven miles had been marched we came across a small flock of chickens. I called Lieut. K.'s attention to it, and thinking there might be a fair number about there, we dismounted and flushed them. There proved to be but three in the bunch, of which he got one and I one, while the third flew away. We

went into camp on Sulphur Creek about 11:15 A. M. This is a muddy, narrow creek, with high, steep banks covered with brush and trees, and gave little promise of sport with ducks as we approached it. Nevertheless, while we were seeking a place to water the horses, we scared up two good-sized flocks of widgeon, which served to encourage us greatly for the afternoon sport. As soon as we had watered the horses which we did by carrying water up the steep banks in buckets and pouring it into the wagon feed troughs, covered with a wagon sheet, we all got into the hunting wagon and set forth. We worked till nearly dark with but little success. There were no coveys of chickens, only here and there a scattered one, generally old ones, and quite difficult to manage. Lieut. K. killed four chickens and one duck, Capt. K. three chickens, and I none, having had but three shots that afternoon, and all long ones. Total score for the day, ten chickens and one duck. There was a kind of rude habitation near where we camped, but during the daytime it had appeared to be deserted, but after dark a man came into our camp, giving his name as Welsh, and said that he lived in the building near by. He spent the evening with us, and was quite entertaining, though the information he gave us about the country afterward proved so erroneous that it greatly shook our faith in what he told us about other things. He was generous, though; gave us all the hay we could use, and offered to kill a beef for us if we wanted it, and all without compensation. We were now almost on the edge of the great Cheyenne River Indian Reservation, and Mr. Welsh told us that he rarely saw any one in that vicinity but Indians, and that it was a great pleasure to him to see soldiers for a change. I may be mistaken, but I have always fancied that he was engaged in some illicit commerce with the Indians, and that he suspected that the object of our visit was to look into the matter.

Tuesday, Sept. 11.—We left camp at about 7 o'clock after an exceedingly sharp, cool night. I had slept with my clothes, shoes and legging all on to keep warm. Mr. Welsh accompanied us a few miles on his horse to put us on the right course, as there was no trail at all and the country was difficult. He told us that we must certainly find a particular pass in the hills about fifteen miles to the north, or else we would never get through with our wagons. He finally got us through some swampy bottoms near by and fairly headed for the pass and then took his departure. We made the pass without any great difficulty, and continued on our course in good spirits, noticing now and then a bunch of chickens along the way, but not stopping to shoot any, as we desired, if possible, to reach the Moreau River that night, and, as Welsh had told us that it was at least forty miles, and probably more, by the way that we would have to go, not knowing the short cuts, we deemed it best not to waste any time by shooting along the road. The day was exceedingly hot, notwithstanding the cold of the night before, and as we supposed we should have to march late to reach the river, we began to be on the lookout for an opportunity to water our animals. Welsh had told us that once we had gotten into the open country beyond the hills we would find an abundance of water. In point of fact, we found none at all, and were beginning to be quite uneasy on the subject, when about 2 o'clock I discovered a small habitation at some distance off the road, and hastened over there to make inquiries. I found a woman at the house, and on asking her how far it was to the Moreau, was pleasantly surprised to have her answer, "Only about four miles." We hastened on and reached it about 3 o'clock, having made not over twenty-eight miles that day, in place of the forty that Welsh assured us that we should have to make. Lieut. K. and I at once went out to shoot some chickens that we had seen near by on our march in. We soon found them, and got two apiece, I securing mine on such a beautiful double as to almost restore confidence in my powder. After we had been out some time, Capt. K. followed us out and also shot two, thus making a total of six for the day's score. I had walked so much in the last two days that my feet were becoming blistered on the soles, which tended to take away some of the pleasure of the sport, as well as to cause me to avoid long reaches on foot.

Wednesday, Sept. 12.—Last night was quite mild and comfortable, and this morning was fairly hot. Finding one of the wagon mules sick, Capt. K. decided to lie over one day in this camp and give him a chance to recover, if possible. About 8 o'clock we hitched up the hunting wagon and all three set forth, expecting to do great things, as ever since we had been in Dakota we had always heard the Moreau spoken of as the Mecca of chicken and duck hunters. The river was a disappointment in appearance as far as ducks were concerned. Instead of open pools with low sedgy banks, as we expected to find it, we found high, vertical banks with a rock bottom, and an utter absence of aquatic vegetation. We consequently abandoned the attempt to find ducks, and concluded to devote ourselves to the chickens. These we fancied might be found in abundance, and indeed we did find them fairly abundant, though quite disappointing, as instead of finding them in nice bunches of from eight to ten that would hide in the cover and lie to the dog, they were generally found in singles and twos and threes, walking about in plain view in the open country, and quickly taking to wing if the dog came anywhere near them. We could readily understand, though, why it was so famed as a chicken country, as all along in the river bottom there was a fringe of small cottonwood bushes a few feet high, in which the chickens stayed during the heat of the day. Here a pot-hunter could secrete himself, and by watching underneath these bushes could shoot quite a number of chickens as they walked about. Indeed, on our return to camp we found that the enlisted men with two single-barreled shotguns in addition to their carbines, had succeeded in securing some twenty-five or thirty in this manner, and were in high praise of the Moreau Valley as a chicken country. We hunted for about three hours, and as it was pretty hot, gave it up then, and returned to camp, Capt. K. having killed ten, I seven and Lieut. K. two. I should have had three or four more, but my powder was too weak to kill at any distance at all—that is, to kill clean—and with these particular birds all the shots were pretty long. I was also at considerable disadvantage in having no dog, for though the birds behaved badly as regards the dog, nevertheless he was occasionally a great assistance, and as Yacoub was Capt. K.'s dog, of course he naturally

devoted his efforts mainly to K. After dinner it was so hot and uncomfortable in the tent that Capt. K. and I went out and tried the fish in the stream. We caught three, one cat and two skipjacks, all small ones. We had brought our towels with us and finished the day by a refreshing bath, which greatly relieved our blistered feet. We returned to camp and had supper about dark.

Thursday, Sept. 13.—This morning we pulled out of camp at about 7 o'clock, and followed up the south bank of the Moreau; there was a kind of road or cattle trail leading in that direction. After journeying for two or three miles we came to a ranch called Norine's ranch, where we made inquiries concerning the country and route. We then came to the conclusion to head for Antelope Creek about twelve miles to the north, as this man assured us that there was plenty of water in it and good duck pools. There was no road whatever, and we found many deep ravines, but our wagoners had become quite skillful in avoiding them, so we got along pretty well. We saw a small herd of antelope on our way, and also one deer. This Capt. K. tried to kill, dismounting and creeping up toward it for awhile, but did not succeed in getting near enough, although he took a chance shot without effect. We reached the Antelope about 1 o'clock. It was an excellent stream for duck, to all appearances, and Capt. K. and I at once set out with our shotguns to reconnoitre it. We were gone about an hour and saw nothing except one small flock flying about high in the air. After dinner we all three set out and walked a long distance down the stream without seeing anything, till finally we discovered a large flock of teal on the water. I held back the dog, as my powder was so poor and the rest stole up and fired at the ducks on the water. As they rose I let go of the dog and rushing forward fired into the rising flock. We all reloaded as soon as possible, and as they swung around in the air they gave us another opportunity for a shot. We picked up our ducks and then, following up and down the stream, found quite a number of scattered ones which we usually got as they rose. We had a long walk back to camp at night, but the breeze was blowing fresh and cool so we didn't mind it; our feet were also much better to-day from our bath of the day before. We counted our ducks and found an even twenty-five (mostly greenwing) for the day's score.

Friday, Sept. 14.—This morning it was quite cool and cloudy. We left camp about 7 o'clock and moved about eight miles up the Antelope and again went into camp. I left my horse after a little and taking the wagon to follow after me, footed it up the stream in the hope of bagging some ducks. I found one lone teal and got him as he rose. I also scared up a good flock of mallard, but these were out of range. I got into a good flock of chickens, but owing partly to my poor ammunition, and more to my poorer shooting, I got but one where I should have had three. On this morning's march the men found a porcupine, and one of the troop dogs attacked it as he did everything else. On this occasion, however, he made a blunder, as he got his mouth and throat so filled with the quills that the men had to shoot him to relieve his misery.

Quite a number of antelope were seen on the day's march, and after dinner several of the enlisted men went out to hunt them. On reaching camp we three officers set out a-foot down stream, Capt. K. killing one duck—the only one we saw. We then left the stream and followed up a small wooded ravine toward camp and secured four chickens on it. We ate dinner and then set out up stream in the wagon. After driving for several miles, we all got out and sent the wagon back to camp, while we hunted along down on foot. We found no ducks, as there was scarcely any water in this part of the creek, but the chicken shooting was the best we had seen on the entire trip, almost every little clump of brush had one or two in it, and they all lay well; while the damp, cool atmosphere developed the scent and favored the dog. We killed twelve and got tired of it—'twas too easy. Score for the day: Capt. K. 7, I 9, Lieut. K. 4. We strolled leisurely back to camp, and had a delightful supper of broiled teal, plum jelly, potatoes, and hot biscuits. Taking it all around, it was doubtless the best day of the entire trip. As two of the enlisted men who went out after antelope were still out after dark we built a beacon light on a neighboring hill, and the trumpeter sounded calls on his trumpet. The harvest moon rose at its full to-night and made a magnificent spectacle in this broad and silent valley.

Saturday, Sept. 15.—This morning it was pretty cool. No news from the lost hunters. Capt. K. sent three parties out to seek for them, and provided each with a rude pencil sketch of the country in order that they might not get lost themselves, for we were now entirely beyond the reach of either roads or habitations, and in whatever direction one looked the country presented practically the same appearance, so it was not a difficult thing by any means to lose the camp. While waiting for these parties to search for the lost men, we three officers took our shotguns and strolled down the stream. We found one flock of bluewing that had evidently come in during the night, out of which we eventually succeeded in securing nine birds; we also shot one chicken. I contributed but little myself toward these results, as my poor ammunition had gotten me completely under hack as far as long shots were concerned, and I no longer attempted any over twenty-five yards or such a matter. To be limited to so narrow a field as this is pretty disheartening. We returned to camp about 10:30 that morning. The lost men had just gotten in. They had gone hunting to the north of the Antelope the day before, and in attempting to return to camp, had crossed the stream in some of its dry reaches without knowing it, and thus kept on in search of it till they struck the Moreau. They found the ranch on that stream and stayed all night there. We now had to wait to get back our searching parties. We scanned the distant horizon for glimpses of them, and finally succeeded in detecting them wending their several ways back to camp. They were observed at a much longer distance away from camp than persons in civil life would readily believe on being at first told of it. This was due to the fact that the Ordnance Department bedecks each horse's head with a pair of metallic mirrors in the form of brass bridle rosettes, and the Inspector General's Department

requires these mirrors to be kept constantly burnished. The result of all this is that, although the attending conditions, as well as all instruction for warfare, require an enemy to be approached with the utmost secrecy and caution, yet nevertheless, we were enabled by means of these useless brass ornaments to detect our men and to assure ourselves that they were soldiers at a distance which, as I have stated, was practically incredible. (I eventually made a report of this circumstance to the Lieut. General commanding the army, but up to the present writing we are still wearing the same unnecessary gewgaws and keeping them just as bright.) We pulled out of camp about 1 o'clock P. M., and headed for the same ranch as nearly as we could by the directions of our lost men who had stayed there. After considerable winding about to avoid ravines, etc., we reached it about 5 o'clock. This ranch is situated at the confluence of the North and South Moreau, and is a well-known station throughout all that country.

Sunday, Sept. 16.—This morning the mule previously referred to as having been sick was too weak to proceed further, so we left him with the keeper of the ranch to care for until he should improve. We set forth about 7 o'clock for the Sulphur on our return to the post. We reached the Flying "V" Ranch about 11 o'clock, and watered our animals at the stock-pump. An incident that came under our notice here served to impress us with the duplicity that seems inherent in the "genus homo." We had on one of our wagons an odometer for the purpose of taking measurements of the various distances passed over by us in our various wanderings, to be used eventually in making a map of this wild land. The keeper of this ranch espied this instrument and evinced the keenest interest in obtaining the accurate distances between the points of our journey. Lieut. K., who had charge of this division of the duty, went to some considerable pains to furnish this man the desired information. Capt. K. eventually told the man that these distances would do him no good as they were so different from those usually claimed by the residents of the country that no one would believe him when he showed them to people (the man had carefully recorded each one in a memorandum book). "Ah," said the fellow, "that isn't what I'm getting them for. I'm going to get up big bets with the cowboys when they are in money, and then when all the money is up we'll measure the distance, and I'm satisfied that'll fix them with that little wheel of yours." In other words, the knave was going to bet with the cowboys on the distance between points and use the knowledge he had thus obtained from us to rob them. Lieut. K. felt rather crestfallen over the use to which his scientific data was to be put. We reached the Sulphur at 2:30 o'clock. After dinner we all set out up stream with our shotguns. Capt. K. and Lieut. K. were both on the same side, while I was on the other. Capt. K. shot a chicken. At the report of his piece a fine flock of spoonbill rose from the creek just ahead. I shot one as they swerved my way—the only bird I got that day. The others got eight chickens and two ducks. The dog hunted solely on their side and I got no shots.

Monday, Sept. 17.—This morning it was cold. Ice had formed on our water bucket to quite an appreciable thickness, and we built a fire before our tent to eat our breakfast by. We set forth at about 7 o'clock, as usual, and went over the tops of many hills in search of Elm Creek, where we intended to camp that night. We chanced to pass a "round-up" camp, and as we knew nothing of the route I rode over and interrogated the cowboys concerning it. The information they gave us was so erroneous that we eventually crossed the Elm and had gotten several miles on the other side before we realized the fact. This stream had given such good promise of sport with ducks when I explored it on the way over that we were anxious to give it a fair trial by camping on it, and putting in our spare time in meandering its banks with our shotguns, so we concluded to turn back and return to it, which we promptly did, even though it added several miles to our march for the day—already considerable. We went into camp on the Elm about 2 P. M. Ducks were immediately discovered, and Capt. K., taking his gun, secured three while we were unloading. After eating rather of a hasty meal, we took the hunting wagon and set forth. We met with great sport with the ducks. They were sufficiently abundant to exactly suit us; that is, there were a few on every good pool that we came to, and no large flocks on any pool, and the majority were mallard. While these conditions perhaps might not contribute so large a bag of game as though there were larger flocks upon which an ardent meat hunter could crawl on his face, hands, and knees, for fifty or sixty yards, and then enfilade while on the water, yet it was sport rather than large bags of game that we were after, and we found far more of it in walking boldly up to the edge of the pool and taking fairly out of the air, as they were rising, what our skill and ammunition entitled us to, than in the other method. (Of course we were not always so liberal; human nature is weak, and when, after walking for miles without having seen a duck, as was the case on the Antelope, to come upon a flock of a hundred or such a matter, nicely bunched—well, as Mr. Hough says, the part of our early instruction that we need most to remember is, "Lead us not into temptation.") We killed twenty-four ducks that afternoon, mostly mallard, and mostly after the manner of a true sportsman. One little incident occurred that was rather amusing. I shot one mallard that fell on a sandy shore just below a cut-bank about five or six feet in height. We were busy in picking up some others, reloading, etc., so that when we came to pick him up he had disappeared. On glancing around, however, I soon discovered him crawling into a hole in the cut-bank a little further down. As Capt. K. was rather smaller and lighter in avoirdupois than myself, I held his hand and let him down from the edge of the bank while he thrust his hand into the hole nearly up to the elbow and pulled the mallard out again. We had scarcely started on again when a large rattlesnake was startled by us down at the foot of the same cut-bank and glided into a hole similar in most respects to that into which K. had just so obligingly thrust his arm. I looked at K.; his face was a study, but he said nothing, while Lieut. K. humorously congratulated him on his having

his rabbit's foot with him that afternoon. On this day's march we saw antelope in considerable numbers, and for the first time in my life I saw a badger in his native surroundings.

Tuesday, Sept. 18.—This morning, instead of setting forth in good season for our next camp, as was our usual practice, we concluded to remain a few hours and enjoy still further the fine field for sport that surrounded us. We started up stream a-foot, leaving word for the wagon to follow us in course of time to pick up our game and to eventually carry us back to camp. Capt. K. shot four fine mallard before I killed a bird, and I was beginning to be rather discouraged, especially as Yacoub had run in and flushed some ducks once or twice that might have given me a shot. My luck soon changed, and I shot three mallard and a widgeon drake, thus tying him. K. shot a single teal, and then, as we appeared to have struck a long, dry reach, we gave it up, and getting into the wagon drove back to camp, well pleased with our morning's sport. We ate dinner about 11 and at 12 pulled out with the troop for the Belle Fourche. As we passed a small chain of water-holes called the West Elm, I saw a few teal. I dismounted and, leaving my horse to be led along, got into the hunting wagon and started to hunt the stream. Lieut. K. joining me while Capt. K. marched on with the troop. In the course of an hour or less we succeeded in bagging six teal, making our grand total for the past ten days 156 birds (both duck and chicken). We reached the Belle about 4 P. M. After supper Capt. K. rigged his fishing tackle and set out to fish. I took my shotgun and joined him. He caught two fine skip-jack, a rather difficult fish to take, and lost several more after hooking them. It soon began to grow dark, so I went back to camp, leaving him fishing. I found Lieut. K. had also gone fishing. So leaving my gun and taking my lantern I went back to where I had left K. I found that he had now five nice fish, three skip-jack, one catfish, and one pike—as it is called here, though I suppose it is not properly a pike, though it evidently belongs to that family. We fished a spell longer, but got no more bites, and returned to camp at about 9 o'clock. We found Lieut. K. in bed. He had caught a fine channel cat and was very proud of it, as well he might be; it was twenty-two inches long.

Wednesday, Sept. 19.—This morning on getting up we packed up our sportsman's implements, donned our strictly military garb and set forth for the post, which we reached at about noon. We found that Stout, the soldier that we had lost on the first march out, had returned to the post that same day and reported to the Sergeant left in charge that he had been taken sick, and that the Captain had allowed him to return. He then got his traps together and at the first favorable opportunity had decamped. This removed from our minds all anxiety about our not having found him when he was first lost at the Belle. Had he deserted from that place without reporting back to the Sergeant, as he might readily have done, we would never have known but that he had met with some accident and perished there, and we should always have had a feeling of remorse at not having made a more vigorous search for him. As it was, he removed the only possible cause for regret connected with a trip which, without the aid of these notes, will always linger in my memory.

Not All of Hunting to Hunt.

BOSTON, Dec. 5.—*Editor Forest and Stream:* We have just returned from a hunting trip to Maine. We found indications of plenty of deer, but owing to dry conditions the game could not be approached very easily. If we only had had a slight amount of snow we could have gotten our limit without hard work.

My boy Ed. shot two nice bucks. He is only sixteen years of age, and never handled a rifle previous to this trip. I have to stand lots of chaffing from my friends, for I failed to shoot anything larger than a partridge. But the mere killing of harmless animals is not the only source of pleasure that one can derive from a trip to the woods. Almost every step that one takes along an old logging road reveals features of woods life that are highly interesting. Here on the left is a large beech tree with the bark all gnawed off about one foot from the earth. A hedgehog was evidently sampling its juices some time yesterday or day before. Going along a little further we found the cool green moss and dead leaves all pawed up by some night-prowling buck, evidently searching for a choice bite of something that Dame Nature planted there for such as he. We find the woodpecker family all busy pegging away just like so many cobblers. Listening to the pileated woodpecker, one sometimes thinks that a carpenter is working nigh to hand.

My attention was attracted to a large bird flying back and forth repeatedly. I crept up quite near, and found that the bird was tugging at something on the ground. I recognized it as a moose bird. It had found the spot where one of our party had killed a buck, and was replenishing its locker with the refuse. I sat there for an hour, and soon had a flock of moose birds about me, all busy filling up on the entrails of the deer. They were apparently flying to some hiding place and depositing the supply just as the squirrel puts in his food for the cold season. It was refreshing to me to be able to sit there in that deep woods and find bird life so tame that I could almost put my hand upon their beautiful heads.

We have traveled for days along beaten paths without seeing a deer. We wore moccasins, and were as silent as specters, not even breaking a twig. When we would find fresh signs, and were on the alert for a possible shot, we would be startled by a series of snorts from some watchful buck which was possibly watching us for minutes before he could get it through his head what we were. Thus the days went by.

We city toilers do not spend enough time in the woods. Let us go to the fields and streams and get nearer to nature. As Nessmuk put it:

And lungs are poisoned and shoulders bowed
In the smothering reek of mill and mine;
And Death stalks in on the struggling crowd—
But he shuns the shadow of oak and pine.

One of our party killed a buck about five miles from

our house. We went to assist him in carrying it out. It weighed 173 pounds, and it took us from 4 o'clock P. M. until 10:30 before we reached home. We made a torch from birch bark, placing a lot of the bark between a split stick. I never want to engage in such back-breaking work again. JAY PEE.

The Maine Season.

BOSTON, Dec. 7.—Hunting deer in two feet of snow in the Maine woods may be a pastime, but most of the hunters caught out under such conditions declare that they have had enough of it; that their trips will be earlier hereafter. Stories of hunters exhausted in the snow continue to come in. One Boston deer hunter tells of starting from camp in the morning, in the vicinity of North Twin Dam, over ground perfectly familiar. He shot his deer before noon, and turning for camp he attempted to drag the animal, since he wanted to leave for Boston next day. He dragged his venison till he could do so no longer. Then he began to struggle toward camp, for night was coming. On he plodded, till nearly unconscious he passed a lumber camp. The men called to him, and that is about the last he remembers till next morning. His rescuers say that he was staggering along in a manner that excited their suspicions, but that he made no answer when spoken to. They took him in charge, and got him into their camp and down by the fire. He was not frozen, but thoroughly exhausted, and soon fell into a sound sleep that lasted till morning. A little longer exposure would have caused him to fall in the snow, and death would have resulted.

At Moluncus, Me., last Friday morning the mercury indicated 4 degrees below zero, but the disagreeable wind that had been blowing from the northwest nearly a week had subsided. Warmly clad, we did not mind the cold, but spent the day in the woods. We did not attempt to break through the snow on the trail of deer. This method of hunting would have been useless, besides being exceedingly laborious and difficult. The deer had already taken to the swamps and deep woods, where every spruce and hemlock was loaded with snow. The hunter could see but a few feet under this load of snow, and attempting to penetrate it, he would get a little winter in his face and down his neck at every step. Our hunting had to be done by following the lumber roads and tote roads, where the horses and sleds had broken a track, or up and down the frozen streams on the ice, with a guide in the swamps, on snowshoes, to drive out the deer. If one imagines that the deer will stand to be shot at, under such circumstances, they are much mistaken. Only a flurry of snow and a fit of their tails could be seen, though sometimes they would bound along the frozen stream or logging road for a short distance. Snap shots were the best to be had, and in this way our deer were secured.

A great deal has been said about deer and the lumbermen and lumber camps. We were told that the deer were very plenty about some lumber works a few miles from Moluncus. We visited these works on Sunday, when the men were not there, being at their camp, two or three miles below. Here we were greatly surprised. The deer had been in in large numbers. Roadways led from every direction to the places where the trees were felled, and back to the roll-way or pile of logs. In these roadways the tracks of deer were surprisingly abundant; all made the night before or during the morning of that day. One could easily believe that a whole drove of them had been along. At the place where the horses were fed at noon every atom of cracked corn and grain of oats had been picked up, the deer boring down into the snow with their noses for the food. Every spear of hay had been eaten, although the lumbermen at the camps told us that considerable had been left. The men had built a fire and boiled their tea the day before. Here the deer had also been at work. The tea grounds had been thrown out on the snow, and this the deer had rooted over. They had even rooted in the ashes of the fire, doubtless cooled before the animals got there. The lumbermen and guides told us that the deer love to browse on the fallen evergreen tops about their works, keeping outside or back of the tops in the day time, but coming out into the sled roads in the night. The opportunity is great for the lumbermen to destroy deer, and in every camp there is a number of rifles and men who know how to use them. The camps all have venison during the open season, for every man claims the right to two deer, under the law. We were told that the deer are not troubled by these lumbermen after the close season begins, and I hope that it is true.

The deep snow of a week ago, in the Maine woods, has been followed by another storm of even greater proportions. This early coming of deep snows has doubtless saved thousands of deer to the New England States. Hunting has been rendered nearly or quite impossible, and the Maine season closes on Dec. 15; only a few days hence. At Moluncus camp keepers and guides were estimating that thousands of deer were saved for stock that would have been legally killed but for the remarkably early approach of winter and deep snows. Asked if the deep snows are not bad for the deer, they were inclined to laugh. They claim that deer are entirely masters of deep snows, unless covered with a crust that will not bear them, and will cut their legs, if they attempt to move about. These guides say that there were deer yards about that section last winter over three miles long. They declare that in the event of a fall of deep snow, every deer sets about treading down the same, in their paths or yards, and that by the end of the second or third day they are able to run about their paths with ease.

BOSTON, Dec. 9.—Since the last deep fall of snow last week, hunting has been covered with great difficulties. The season closes on Saturday next, and there is little possibility that any change of weather can render hunting better. So much the better for Maine and her stock of deer. Already the slaughter has been great enough. For the season 3,810 deer have passed through Bangor, with still another week to be accounted for. Shipments this week will include all the old deer in stock, and the Bangor number may possibly reach the 4,000 mark.

while already the number is in excess of any previous season. The moose season closed Dec. 1, with a record at Bangor of about 200, the greatest number yet noted at that point of shipment. Miss Lean Morrison, of Sherman, Aroostook county, is likely to carry off the championship as lady deer hunter for the season of 1901. On Tuesday she went out from home on a deer hunt, spite of the deep snow and zero weather. Within two hours she returned for assistance to drag home her game. She had shot two buck deer. The wardens at Bangor seized a handsome bull moose at that point last week, which they were suspicious was being shipped by a man who did not kill it. The tag was marked "B. H. Pond, Somerville, Mass." They arrested Mr. Pond, who allowed that he did not own the moose, but was taking it to Boston to sell for a guide by the name of Tracey. As Mr. Pond did not appear to be aware that he had committed any great offense, he was allowed to depart on a pledge that he will appear and testify against the guide when brought into court.

The Dr. Heber Bishop party came out of the woods on Monday. In the party, beside Dr. Bishop, were W. T. Farley, Dr. H. H. Hartung, Dr. W. A. Rolfe, and Mr. Bernard Hyneman. They found the snow remarkably deep near the Boundary Mountains, in the further Chain of Ponds region. Four or five feet they encountered, and snowshoes were a positive necessity. They secured ten deer, nine bucks and one doe; some of the bucks being remarkably large. The largest, shot by Dr. Bishop, is said to have tipped the scales at 240 pounds. This fine specimen he gave to D. J. Flanders, of the Boston & Maine, and that gentleman has shipped it to England, a present to a friend there. It is believed that the English gentleman will be surprised at the specimen of Maine deer, since the antlers spread nearly two feet, and are very symmetrical. The party went over to Moose River to try for moose. On snowshoes it took them eleven hours to make eight miles. They reached camp at 7 o'clock in the evening, nearly exhausted. Some of the party say that they will never attempt as much again. Mr. Warner Holt, of Boston, has been to Lakeview Camps, Alligator Lake, Me., with a party of Springfield friends, Messrs. C. E. Whipple, E. M. Wilkins and Fred Swan. The party brought out three deer and a bear. Mr. Whipple was the lucky bear hunter this time, though Mr. Holt secured one last year. Mr. Whipple's specimen was a fine one, over 200 pounds in weight. Mr. C. J. Bateman, of Boston, has returned from his usual fall hunting trip to Upper Dam. He brought out two fine deer. His idea is that there is no better place for hunting than at Upper Dam. Messrs. H. H. Randall and Z. Taylor, of Brooklyn, N. Y., have returned from a hunting trip to the Megantic Preserve. They were camped at Big Island, and each shot two deer. Two of the bucks had antlers of ten prongs, and one weighed over 200 pounds. The M. H. Gray party, of Boston, have returned from Dead River. They found terribly deep snows, but were able to secure eight deer. In the party, beside Mr. Gray, were H. H. Wheeler, Mr. Ronco and Mr. Damon.

Game Commissioner Carleton, of Maine, can score one for his registered guide law. I have it from reliable guides, and the newspapers are confirming the report, that in all the shooting accidents that have occurred in that State the past season not one has come under jurisdiction of a registered guide. No accidental shot has been fired by a registered guide, nor has an accident happened in a party under the control of registered guides.

Boston gunners were some of them made a little uneasy on Thursday. Wednesday night a flock of nearly 200 wild ducks settled down on the waters of Jamaica Pond, Roxbury. They were there on Thursday morning, and the gunners got a look at them. They were around for a couple of days, and most of the gunners have doubtless wished that the city ordinance and park rule forbidding shooting within the city limits could have been temporarily suspended.

A British Columbia Association.

CUMBERLAND, B. C.—An organization for the protection of game is to be formed in the town. The most important clauses in the constitution will be: The observance of the game laws. Rigid enforcement of the same, and prosecution of all offenders. Observance of the trespass act. Prosecution of persons found selling game without license, and shooting over their lawful number of head. A general doctrine of moderation in shooting and fishing will be inculcated, so that the stigma of game or fish hog shall not attach to any member. The farmers of the district have been asked to co-operate in this important movement, and it is understood that they will give the organization their hearty support, for they have many just complaints of shooters invading their farms, shooting pheasants and grouse at their very doors, tearing down fences, mutilating notices posted warning trespassers, and misbehaving in many other ways on their excursions to the valley. Arrangements will be made, as by similar organizations in the United States and other parts of Canada, to secure legal help in case of any prosecutions, should this be necessary, and the association intends to do all in their power to keep the shooting of the district up to the mark by uncompromisingly stamping out all illegal killing.

North Carolina Quail.

HICKORY, N. C., Dec. 4.—*Editor Forest and Stream:* This is by far the poorest season for quail I have seen in seventeen years. This is due to the spring floods first, then the long dry spell. It did not rain here for several weeks. On lands where I could find and shoot a dozen in four hours, I got two or three. It is not the dogs nor the man. I am well fixed, and then, too, the other men are making the same complaint. To all who intend coming South after the holidays, I suggest that they get positive information, based on this year's game, and not what has been here or there in other years. There are many places well advertised as having all kinds of shooting that will have next to nothing at all.

PINE EDGE.

Canvasbacks on Long Pond Bay.

THE wind which has blown a hurricane for the past two days appears to be lessening as the pot-hunters and shooters of Port Rowan emerge from boat house and dock on their daily campaign for canvasbacks. While it is barely light enough to see, these shooters, knowing the bay so thoroughly, row on until the first to arrive at the center of the bay, which is a matter of three miles from the town. His decoys he quickly and skillfully has arranged and set to suit the direction of the wind. Skillfully is here used advisedly. When it is known that each shooter carries 65 to 120 large, solid decoys, and they are set in from 10 to 20 minutes, this will show any shooter to what a science they have arrived. As it grows lighter and the sun peeps his head above the distant horizon, there is no sign of the deadly work soon to commence. Only a flock of decoys in appearance enough to tempt the wisest old drake, and back 200 or 300 yards an unsuspecting boat with no apparent tenant.

Presently in the distance a wavy line is seen, and as it approaches rapidly the shooter knows that it is time to inspect his gun and shells and see that all is well. This is, I consider, the highest delight, the anticipation as the flock approaches, perhaps to one side or another of you; and as you have given up hope, they suddenly swing around and like a hawk come down from their elevation to yours. A few alight; the rest swing round again and take another shy; and then again, when, unless they are in your decoys, they go to your opposition, who is further up the bay. Your anchor is dropped in an instant, your paddle is in the water, and as your boat gains momentum it takes you swiftly to your decoys. In a few seconds, apparently, you are in the midst of them, and as they jump you single them out, trying for two with the first, and bang, clik, clik, bang again; and so until they are out of range. The dead are picked up, the wounded are chased and killed, if possible; and your first game is in your boat.

So it goes on the whole day through on this large bay. It is twenty miles long by eight wide, fringed by Long Point, from which it gets its name, and with marsh on both sides. The inner bay, where most of the shooting is done, is nine miles long by eight wide, almost a square. It is the natural abiding place of nearly all ducks, but especially of the canvasback, which in the last few years have taken possession of the bay. There is a natural wild celery bottom, and the shores are fringed with wild rice, which gives them plenty of food. These ducks move around in immense flocks and look not unlike seagulls in the distance as the sun strikes their whitish plumage. The canvasback is a shy fellow, too, and gives a skiff a wide berth; but when they are among the decoys I have approached close enough almost to touch them with the paddle. When they jump, though, you have to be dead on or they get away, for they are very hard to kill, and carry shot a long way. Most shooters here use Nos. 3 and 4 chilled shot, Nos. 5 and 6, unless at close range, being useless. The ducks are very much like the ordinary sea duck in this respect. They are a noble-looking duck in the water; beside their large size, they have a very long neck, and their beautifully dark reddish head of the cock and the golden-greenish glitter of the hen make a pretty picture. But a duck shooter with a loaded gun has no romance in his soul. Some large bags have been shot this fall in one day; two shooters have killed sixty, beside forty brace of small ducks. Of course they were using the repeating gun, killing ten at one time, two with first, four with second, two with third and one with next two shots—remarkable work.

FADER HARRIS.

Two Weeks in the Maine Woods.

SEEING the note on front page of your paper, FOREST AND STREAM, "Report your luck," I send you the following account of a trip to Aroostook county, Me., the best big-game country in the Eastern United States.

I left Philadelphia, Pa., Oct. 28 at 8 P. M., reaching Boston next morning in time to get express for Bangor, where I stayed until the following day, to make connection by the B. & A. R. R. for Ashland, arriving there at 2 P. M. After reaching the Exchange Hotel I got my hunting togs in shape for an early start the next day for the woods.

Having previously made arrangements for guide with Leon A. Orcutt, who has a fine set of camps, both for hunting and fishing, a drive of fifteen miles took us to his Greenlow camp, situated in the best moose and deer country in Maine; it is good open woods, therefore easy traveling. My first week out was rather hard hunting on account of the leaves being so dry and noisy. We saw plenty of deer and signs of moose, but could not get close enough to make sure hit. On the tenth day it snowed, then the sport commenced, with not much noise and good walking. That day we returned to camp with a fine thirteen-point buck weighing fully 200 pounds dressed.

The next day we started on a two-day moose hunt, and had gone only two miles from camp when we started a large bull moose, but after trailing him for a mile or so, we lost his track. It being nearly noon, we lunched near a fine stream, then hunted for deer. About 3 P. M. we shot a large doe through the paunch, and followed her until dark, where we made camp, intending to take up the track next morning. After a good supper, our pipes were kept hot until bedtime.

Tuesday A. M. we broke camp at 5:30 and had followed the deer's track not more than a half-mile, when we came upon two bull moose, evidently playing, as they made quite a noise when their horns came together. Now the sport commenced for sure. They were about 400 yards off when we first heard them. This being a little too far for a sure shot, we worked up to possibly 200 yards, and then I opened up with my .30-40, and after the fourth shot had a fine bull moose down, struck through the paunch and shoulder. As the Maine law only allows one moose to the hunter, we did not follow the other bull, which made tracks to parts unknown at a 2:40 gait. After skinning and cutting up our moose we went to the main camp to get a horse to bring it out, and fortunately we only had three and a half miles to drag him to camp. The next day I left the woods for Ashland and home; then to think of another trip next fall.

To any one who enjoys or contemplates a hunting trip for big game, I can say from actual experience that if they will go to one of Leon A. Orcutt's camps, Ashland, Me., they will go home fully satisfied with their hunt. Dexter B. Orcutt, brother of Leon A. Orcutt, who owns the camps, was my guide. He is one of the best in Maine.

30-40.

The Ohio Game Season.

CLEVELAND, O., Dec. 2.—*Editor Forest and Stream:* The three weeks' hunting season in Ohio that has been made so brief by the statute of 1899, is at an end. Since Nov. 10 there have been twelve or fifteen good hunting days, about twice as many as there were last year during the open season, because of stormy weather. The quail have been more plentiful this fall than at any time during the past ten years. Reports from the outlying townships of Cuyahoga county, in which Cleveland is situated, indicate that the birds have been all but exterminated. A sufficient number may have been left over to produce a fair crop of quail next year. In Lake and Lorain counties, adjoining Cuyahoga on the east and west respectively, the conditions are much the same. Throughout the State generally the young birds were observed to be very numerous during the summer and early fall, and they are still plentiful. An hour's tramp over the corn and stubble fields in any locality at a reasonable distance from the large towns and cities would result in the finding of one or more coveys of quail. The birds as a rule lay very close, but constant pursuit and disturbance by hunters with their dogs has made them exceedingly wild. When flushed they invariably put for the tall timber, where the underbrush and brambles are the thickest. It has been therefore very difficult to find the scattered members of a covey after the birds have been raised. Two or three brought to bag from each lot of birds put up is a very respectable average.

Last week the writer went on a hunting trip to the bottoms of the Wabash River, not far from the State line between Ohio and Indiana. On Wednesday I found three coveys quite early in the morning, and shot nine quail. During the remainder of the day thirteen more birds were brought down out of five more coveys. The day previous I also found eight coveys and shot twelve quail.

Mr. Varner, of Dorninton, O., killed a ring-necked or Mongolian pheasant near his farm in Putnam county last month, and several more were seen. A large number of these splendid birds have been liberated by the State in a systematic effort to propagate the species artificially in the Ohio woods. The common pheasant or partridge has become very scarce in the northern and western part of Ohio, but the birds are said to be still numerous in the broken and hilly country of the southern and south-eastern counties.

The flight of wild ducks over the Sandusky and Ottawa marshes has been greater this season than for several years past. Great flocks were seen far out from shore on Lake Erie, and their numbers cannot be estimated. The shooting from blinds over decoys has been very fine, and sportsmen have brought back from the marshes from a score to a hundred ducks.

L. H. COWLES.

Adirondack Deer.

WATERTOWN, N. Y., Dec. 6.—*Editor Forest and Stream:* It may be possible that many readers will be in sympathy with inclosed article, which I published in the Watertown Times Nov. 18:

The past week has again furnished another proof of the folly of open dates to hunt deer in November.

It seems that no sooner is a good law obtained by much effort than another one springs up, increasing chances for slaughter. Deer were getting scarce from a too long open season to hunt them, and the use of hounds in the Adirondacks. The last year in which hounds were lawfully used, the total number of deer killed ran into the thousand figures, 300 being shipped from Beaver River Station alone. But true sportsmen, aided by persons of humane character, secured a law to stop the hounds. The next move was the reverse and bad, and it exists—namely, an open season to Nov. 15.

Last year the number of deer from the Adirondacks that were taken out by the express company, according to the books, was 1,204. A ratio of two or three must be used to compute total killed in the season to account for the number used at resort hotels, and in camps, which reaches a total, based on good opinion, greater than the increase.

Since hounds were stopped deer have increased until last year, when after the snowfall they were slaughtered. The writer was on a train that had thirty-five carcasses, and there were other trains and roads, making the 1,204 that the express company had in the season.

The cause is that the game law allows killing in November. The region of New York State forest is of such a location geographically as regards the St. Lawrence Valley, Mohawk Valley, Lake Ontario and the altitude of the forest, that snow always falls in November, and thereby allows man in his greed to take advantage of the deer, and the killing is too easy and too great.

This year will show another shameful record, as the past week since snow fell no less than forty-six deer were brought on the train to Watertown alone in two days. The forest is practically round, with very many highways leading from it, and the example here is enough to give idea of the total killing.

If deer are to be protected to the extent of keeping their numbers from decrease, not to mention extermination, then the deer killing must cease at Nov. 1 by a revision of the game law, for which all genuine sportsmen will strive and ask the support of the press of the State, so that humane ideas for the protection for the most noble game in the forest will be advanced to the public and lawmakers, that the slaughter and display of carloads of deer killed on snow in November will not again occur, but that Oct. 30 shall hereafter be the last open date.

STANTON.

Maine Non-Resident Tax.

AUGUSTA, Me., Dec. 2.—*Editor Forest and Stream:* The annual meeting of the Maine Sportsmen's Fish and Game Association will be held Tuesday, Jan. 7, 1902, at City Building, Bangor, at 2:30 P. M. Tuesday evening at 7:30 there will be a public meeting in City Hall, to which every one is invited, and at which the following questions will be open for discussion:

Would not the taxing of non-residents a reasonable fee for the hunting of large game be a just and wise policy to adopt?

Would it not be for the best interests of the State in its efforts to protect our large game to forbid the carrying of firearms into the unincorporated portions of the State in close time?

Why are these questions submitted for discussion and speakers invited to present views regarding them? For this reason, that we believe that upon the issue here presented the remedy of the inefficient protection of game and lack of increase in our fish supply mainly depends.

Game cannot be better protected, unless more money for warden service is secured. By taxing non-resident sportsmen this can be done, and we see no reason why Maine should furnish game for the world of sportsmen practically free. The adoption of such tax would allow the annual appropriation now made to be expended for the care and propagation of fish, which is absolutely necessary, if we keep the supply equal to the drain upon them. If firearms were forbidden in the wilds of the State in close time it would save thousands of our deer and many moose. A glance at the records of the past season shows that more fish have been taken and more game killed, legally and illegally, than ever before in our history. Something must be done, and that quickly. Will the business men of the State interest themselves in this question? The exhaustion of our fish and game is enormous.

On good authority it is asserted that \$15,000,000 are left here annually by the 250,000 visitors to Maine. Fishing and hunting is the main incentive which brings them here.

Railroad rates on the Bangor & Aroostook and Washington County Railroads will be one fare for round trip, tickets good to come Jan. 1 and return the 3d.

E. C. FARRINGTON, Secretary.

Ring-Necked Pheasants in Tennessee.

BOND, Tenn., Dec. 2.—The pheasants did fairly well last spring, and I have liberated about fifty, and hope that they will increase. After the laying season, when I was getting away for the summer, I moved some into a larger run, and one made her nest and hatched five, which she raised. I have heard that they would not breed in confinement; but this proves to the contrary. I have a nice lot in my runs, and shall continue my work. Have lost no old birds from sickness. EDMUND ORGILL.

The Missouri Season.

HANNIBAL, Mo.—Our past dry season has been very favorable for quail, some of which I believe have raised three broods; but this dryness has spoilt our fall duck hunting, as the ponds and sloughs have nearly all dried up.

The German carp has almost ruined our game fishing. S. E. W.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

New York League.

Editor Forest and Stream:

The New York State Fish, Game and Forest League held its annual convention, pursuant to call, at the Yates Hotel, Syracuse, Dec. 6. There was a fair attendance, and the fact that it was not larger is believed to have been due to the feeling of satisfaction which prevails among sportsmen concerning the condition of the game laws as they are at present, and the quite general understanding that there was no business of unusual importance to come before the meeting. A noteworthy feature of the convention was the unanimity of sentiment among the delegates present and the spirit of harmony which characterized the proceedings from first to last. Among the different clubs in the League which were represented at the meeting were the following:

New York Association for the Protection of Fish and Game, New York City—Robert B. Lawrence, Charles E. Whitehead.

Spencer's Sportsmen's Club, Lyons—W. S. Gavitt, Henry Killick.

Honest Fishermen's Club, Seneca Falls—Ernest G. Gould.

Anglers' Association of the St. Lawrence River—A. C. Cornwall, William H. Thompson, Alexandria Bay; R. P. Grant, Clayton.

Black River Fish and Game Protective Association, Utica—H. A. Pride, W. E. Wolcott.

Anglers' Association of Onondaga County, Syracuse—C. H. Mowry, George B. Wood, John Forey, R. V. Miller, J. E. Bierhardt.

Fish and Game Association of Mannsville—John J. Hinman.

Cleveland Anglers' Association, Cleveland—Geo. H. Travis.

Central New York Fish and Game Protective Association—Henry C. Carr.

North American Fish and Game Association—C. H. Wilson, Glens Falls.

Others present were Chief State Game Protector Maj. J. W. Pond, Assistant Chief John Leavette, Assistant Chief M. C. Woerts, Special Protector John Perry, James Lamphere and Aaron Mather, who is an honorary member of the League.

President Lawrence called the meeting to order about 10:30 A. M., and addressed the delegates briefly. He expressed regret that he was unable to report any great amount of success concerning the amendments to the game laws proposed by the League for adoption by the last Legislature. There is a crying need, he said, for more game protectors and for better pay for them. Our game laws are in better shape than they have been in years. There is little dissatisfaction with the laws. What is needed is their enforcement. President Lawrence spoke of the success of the prohibition of spring duck shooting in Jefferson county, and urged that the same prohibition be extended to include the entire State, excepting Long Island. He emphasized the need of fishways in certain streams and regretted the failure of the last Legislature to provide for them.

An important feature of the morning session was the report of Charles H. Mowry, of Syracuse, acting chairman of the Legislative and Law Committee in regard to bills approved by the League, which were introduced in the Legislature last winter. Bill No. 357, to amend the law in regard to the pollution of streams, as recommended by the Legislative and Law Committee of the League, and introduced in the Legislature by Hon. J. L. Burnett, was not reported by the Assembly Committee owing to the fact that some members of the Assembly Committee were representatives of those sections of the State where the streams were polluted by large industries whose benefit to the people were held to surpass the importance of fish protection. At the hearing given Mr. Mowry by the Assembly Committee, it was said by members of the Committee representing those sections that the people were endeavoring to correct the evils in their own way.

Bill No. 351, to amend the law in relation to compensation of game protectors, recommended and introduced as above, was not listened to by the Assembly Committee. Chairman Mowry thought that due to the policy of economy of Governor Odell.

Bill No. 356, to amend the law in regard to game protectors, was apparently accepted by the committee, and the proposition to increase the number of protectors by twelve was thought to be accepted, but was not reported, probably for the same reason.

Mr. Mowry reported that the committee was successful in killing the bill to allow spearing in Oswego River during the entire year. He saw Senator Elon R. Brown after the bill had passed the Assembly, and found it necessary to secure objection from Oswego county. This he secured, and the bill died in the Senate.

The Ways and Means Committee gave Mr. Mowry a special hearing on Bill No. 355, to amend the game law, to provide fishways in Oswego and Seneca rivers. The measure was opposed by Assemblyman Costello, of Oswego county. It did not come before the Assembly.

In regard to the measures introduced relative to spring shooting, Mr. Mowry reported that the members of the Assembly Committee from districts outside of New York and Long Island were in favor, and that the members from New York and Long Island were disposed to grant favorable legislation to the up-State sportsmen along any lines which would not affect Long Island. The measures as introduced did affect the metropolitan members, and the political influence from New York and vicinity was sufficient to kill the measures in the Assembly Committee.

Mr. Mowry was tendered a vote of thanks for the efficient manner in which he had represented the League's interests at Albany.

Charles H. Wilson, of Glens Falls, Vice-President of the North American Fish and Game Protective Association, congratulated the League upon the magnificent work which it has accomplished in the past, and the splendid prospects for the future. He did not believe in becoming discouraged because of an occasional knockout blow. He appealed to the League to protest to Governor Odell and the legislators against the netting of pike-perch in Lake Champlain. He told of the efforts of the North American Association with the governments of Quebec and Vermont, and said that Vermont had promised to legislate in accordance with New York, and that by so doing a large part of the fishing in the lake could be protected. He thought action should be taken by the States independent of Canada. He extended an invitation to the members of the League to attend the annual meeting of the North American Association in Bennington, Vt., Jan. 1.

President Lawrence spoke feelingly of the death of C. B. Lapham, of Canandaigua, and appointed C. H. Mowry, R. P. Grant and W. H. Thompson to draft resolutions on his death.

A nominating committee consisting of W. H. Thompson, G. B. Wood and John Forey was named by the chair.

At the opening of the afternoon session W. S. Gavitt addressed the convention on the desirability of having more clubs identified with the League, and moved that a committee be appointed to endeavor to increase the membership. Carried.

The chair appointed as such committee W. S. Gavitt, R. P. Grant and John Forey.

Appropriate resolutions on the death of Mr. Lapham were reported by the committee and adopted by a rising vote.

A resolution designating the sum of \$25 as a fixed charge for the annual salary of the Secretary was adopted.

Mr. Wood, in the absence of James Annin, Jr., chairman of the Biological Committee, made a brief report concerning the work performed by that committee.

The report of the Legislative and Law Committee was then taken up and acted upon. It was decided to recommend to the Legislature the same amendments to the game laws which were proposed last year, with one or two changes. Resolutions were adopted to recommend Bill No. 352, in relation to explosives; No. 353, in relation to the close season for wildfowl; No. 355, to provide fishways in Oswego and Seneca rivers; No. 356, in relation to an increase in the number of game protectors, and No. 357, in relation to the pollution of streams. The League also recommends Bill No. 354, after changing it so as to prohibit the sale of grouse throughout the State, instead of "woodcock, grouse and quail," as proposed last year. In regard to spring shooting, it is hardly expected that Long Island can be included in all the provisions made for the rest of the State. The League deemed it wise not to recommend at this time Bill No. 351, in

relation to an increase in the compensation of game protectors.

The Law Committee reported having received a recommendation that there be no closed season for foxes in Jefferson county.

Aaron Mather thought it was poor policy to have one law for one county and another for another. He believed the laws should be uniform throughout the State. The matter was tabled.

The Law Committee reported in favor of recommending that no one shall be allowed to net on certain shoals in Lake Ontario, the breeding grounds of bass, between the head of Stony and Galloup islands and the foot of Grenadier Island. Adopted.

Mr. Mowry moved that the League recommend a bill providing a bounty of \$1 on the snow and great horned owls and \$3 on foxes, the same to be a county charge.

President Lawrence thought that any one who had a chance to shoot the owls named would do so without a bounty, as any taxidermist would give more than a dollar for one. He was of the opinion, however, that these two kinds of owls should be included in the list of birds not protected by the game laws. It was decided to recommend that these birds should be specified among those not protected.

Mr. Mowry's motion concerning a bounty on foxes was carried.

The Committee on Nominations reported in favor of the following officers, and the same were duly elected: President, Robert B. Lawrence, New York; Vice-President, W. E. Wolcott, Utica; Secretary, Ernest G. Gould, Seneca Falls; Treasurer, A. C. Cornwall, Alexandria Bay. Legislative and Law Committee—Charles H. Mowry, Syracuse, chairman; W. S. MacGregor, New York; W. S. Gavitt, Lyons; R. P. Grant, Clayton; Robt. B. Lawrence, New York. Auditing Committee—Aaron Mather, Honeoye Falls; W. G. Babcock, Cleveland; James Carter, Lockport. Biological Committee—James Annin, Jr., Caledonia; George B. Wood, Syracuse; W. E. Wolcott, Utica. Adjourned. W. E. WOLCOTT.

UTICA, N. Y., Dec. 7.

Piscine Telepathy.

THAT many insects have modes of communication with each other by means of some, to us, unfamiliar sense, is well known to entomologists, the mysterious endowment being marked in moths, especially those of the family Bombycidae. The possession of this faculty of remote interlocation was the subject of an interesting experiment by the late C. V. Riley, U. S. Entomologist. Receiving in Chicago the eggs of a Japanese silkworm (*Samia cynthia*), then of recent introduction, and having every reason to believe that no others of the species were within hundreds of miles, he reared a number of the larvae, with the object of testing their power. Confining an adult female in a wicker cage in front of his house, he then took a male to a portion of the city fully a mile and a half away, and there released him at dusk, after tying a silk thread about his abdomen, to insure identification; but, despite the darkness, the distance, as well as the dust, smoke, turmoil and miscellaneous odors of a great city, the two moths were found together the next morning. In this instance, it is undeniable that the male moth at least was impressed with a knowledge of the existence, as well as the locality, of the insect in whose company he was found, and that, moreover, he speedily availed himself of his mysterious power of cognition.*

The possession of this mystic perception must largely serve a nocturnal insect, like the moth, in lieu of vision, and thus guided by an occult faculty akin to the Scottish "second sight," it flies in darkness, perceiving, yet unperceived. The denizens of the watery darkness, having equal need of a revelation of objects, animate or inanimate, may reasonably be presumed to be endowed with the same obscure sense; and of such possession the habits of the migratory salmon afford weighty evidence.

All familiar with the fluvial haunts of the king of game fishes are aware that the natives of each stream have special characteristics, the colonies differing from each other either in size or form, and occasionally in marking. Thus, the rivers York, St. John and Dartmouth falling into Gaspé Bay, Canada, have each a distinctive fish, and so obvious are these differences that upon catching a batch of ascending salmon, the fishermen of the St. Lawrence will designate the natives of the respective tributaries of the great river. In the north of Ireland there are five neighboring salmon rivers, each in time past the haunt of a distinct breed of fish. In Sutherlandshire, Scotland, the River Shin falls into the Oykel at Invershin, and the conjoined waters of these rivers, with the Carron and others, form an estuary. The salmon of the Shin will average from 17 to 18 pounds weight, and those of the Oykel barely half as much. Sixty years ago, from extended observation and experiment with the fish of the estuary alluded to, Andrew Young, of Invershin, was led to the conclusion that every salmon river has its own particular race, which year by year returns to its native stream.

It may reasonably be contended that each salmon colony inhabits a distinct ocean area that may be far removed from its fluvial haunts. The exceptional size of the Shin salmon—which are taken by scores of a weight of 20 pounds—cannot be due to the physical peculiarities of their natal stream, for it differs in no essential respect from others nurturing much smaller fish. It seems, therefore, probable that the larger races abide in a portion of the ocean affording a greater abundance of food than falls to the lot of the dwarf salmon, it being a recognized fact that an amply nourished fish may become twice as large as one whose fare is unduly stinted.

*For full report of this experiment, the result of which Mr. Riley unhesitatingly declared was, in his belief, due to the operation of a telepathic sense, see "Insect Life," Vol. VII, No. 1.

Many—perhaps all—flying moths possess this faculty, but seemingly in less degree. As the outcome of thirty-three experiments upon the gypsy moth, instituted by the Massachusetts State entomologists, and by them detailed in the Special State Report of 1896 upon the gypsy moth, it would appear that this insect's perception does not extend over half a mile. From further experiment it was inferred that the seat of the sense was in the antennae, and that the insect, in locating the female, was not in any way dependent upon the sense of sight.

It is difficult to conceive how such distinctive races of fish can be developed, unless maintaining an isolated existence, roaming the sea either in shoals, which with salmon is unlikely, or else in scattered distribution, but keeping touch with one another through the operation of some mysterious sense, and only assembling in closely massed ranks upon the occasion of their annual migration. Individual salmon have not infrequently been caught at sea, sometimes at great distances from their native streams; but except when gathered for the purpose mentioned, it is probable that they do not "school"† in the manner of herring and mackerel. Prior to their recurring annual pilgrimage, the presumably dispersed members of the colony must assemble at a given time, and that such approximation of individuals is readily accomplished may be inferred by the presumptively regular annual junction of the migrating fry with the parent stock in the shadowy deeps. For without such union it would seem that the perpetuation of the distinctive characteristics of the race could not be effected. It cannot reasonably be assumed that the product of each hatching maintains itself separate and apart from its fluvial associates, inasmuch as such isolation would preclude the uniform appearance of the individuals constituting the colony.

It is therefore a fair conclusion that the descending fry associate themselves and intermingle with the parent stock; but such meeting, it is evident, could not be readily effected save by the operation of some unusual faculty. The tiny pilgrims, leaderless and guideless, but certainly directed by an infallible perception, after holding an undeviating course through hundreds of miles of trackless obscurity, are enabled to recognize their particular kin; to unerringly detect them in the darkness of the great deep.

Salmon in the sea not unlikely band themselves as do, or perhaps it were better to say, as formerly did, the wild cattle of the South American pampas. Darwin, in his "Journey of a Naturalist, in the Beagle," chapter VIII., states that their habit of gathering in small bands or tropillas enabled the stock owners (estancieros) to keep count of herds, amounting to ten thousand or more, each of the tropillas being identified by the markings of the more notable animals, and so the absence of a single individual was readily detected. The tropillas numbered from 100 to 150 each, and received no accessions save from natural increase. If the immense herd was stampeded or mingled in a dark and stormy night, or if by any other means the tropillas became broken up and merged in a general mass, any one individual would pick out the members of its own particular flock from the thousands of strangers, and thus each tropilla would reconstitute itself. So, too, if driven to a distant market, and escaping, the eager brute would pass vast herds of alien cattle to rejoin its own particular community. Some other sense than smell, it is clear, must have been the guiding impulse. Moreover, the tropilla, like the salmon school, is not stationary; it probably wanders erratically; it is not therefore a perception of locality but of individuals that guides the stray to the bosom of his family. A generation later than Darwin, M. Couty visited the same region officially, his report being published in the "Revue Scientifique." He, too, was profoundly impressed by the utter absorption of the individual in the tropilla, each living out its life side by side with others of a vast multitude, but remaining entire strangers to all save its family. He corroborates Darwin as to separated individuals passing thousands of other animals without noticing them, in their efforts to rejoin their sundered kin.

The remarkable faculty of intuitively determining the relationship of an unknown fellow member that is possessed by the salmon, and which enables the infant to unite itself with the parent swarm is also a characteristic of bees and ants.

In a single hive there may be 50,000 bees, and a colony of some species of ants may number over half a million; yet any member is recognizable by another.‡ A stranger, though of the same species, is at once detected, but an associate is known as such even after months of absence. A power of discernment so assuredly exercised among such an extraordinary number would seem to indicate the possession of an emanation or radiation common to each member of the insect community, and recognized by means of a special sense. With ants this subtle perception does not, as with moths, appear to be remotely exercised; but with fish it may be fairly inferred that the scope of individual recognition is indefinite. Among the piscine structures of uncertain functions are the muciferous canals; the skin of fishes, indeed, contains a variety of mysterious organs. Some of these are probably the seat of the obscure perception that apparently enables fish to take cognizance of objects near and remote, and without which their extended and devious wanderings would be impossible.

A. H. GOURAUD.

†Except when migrating, young salmon show no tendency to congregate in schools. U. S. Fish Com. Rep., 1897.

‡So, too, cod appear to distribute themselves, except when migrating, and even then do not mass themselves as do herring, etc. Swordfish arrive and depart in loosely arranged schools.

§Lubbock's "Ants, Bees and Wasps," Chap. VI.

Items from Southern California.

THE past summer, preceded as it was by a wet winter, it did not supply a great amount of sport for the hot-weather sportsman, assuredly proved favorable for increasing game of all kinds, as forage has been plentiful, streams have flowed as not previously for three seasons, breeding deer have been enabled to range more widely, quail to escape with numerous progeny from their natural enemies, and the local trout to spawn the brooks with a multiplicity of small fry. All considered, because of a return to normal conditions in this part of the country, we may look ahead for agreeable pastime with rod or gun.

A prolonged visit to Ventura, a very cool sea coast town but fourteen miles from our present home, enabled me to become better acquainted with the salt-water life along these shores. To avoid the heated term likely to occur in the Ojai Valley during August and September, our family rented a cottage near the beach for that

period, and while there I spent nearly all of my time either on the water front or making observations from the pier. Seine hauling took place nearly every day. Angling seemed popular, though the fish taken were exceedingly small. Whatever his bait or contrivance, every one had unseemly words for the peridinium, or the red water, to which all attributed the poor run of luck.

Shortly before going to Ventura, while looking over back copies of FOREST AND STREAM, in the number dated Dec. 3, 1898, I read a description of the "red water" in Narragansett Bay during the preceding autumn, contributed to science by Mr. A. D. Mead, in which the violent coloring observed along that part of the New England coast was said to have been caused by the peridinium, or by animaculæ, such as had invaded the Nile during the plague, turning the water to blood. "And the fish that was in the river died; and the river stank, and the Egyptians could not drink the water of the river, and there was blood throughout all the land of Egypt." The effect along the New England coast, by the account in your paper, was manifest in dead fish and effluvia. The recent visitation to our Western coast, however, has had in it no such unsavory accompaniment.

At the appearance of the odd-looking water, which was first noticed near San Diego early in the summer, bathers took alarm, the women declaring that such a surf would destroy their hair, render them bald-headed, and the men, seeing no pleasure in a bath without comrades, were at a loss until some imaginative individual circulated a fable that "red water" produced hair, maybe red hair, thus bringing back to the sea an eager cohort of bare-headed plungers. In your paper no mention is made of the hair-restoring qualities belonging to the peridinium.

Another peculiarity of the "red water" observed along this coast recently, and not mentioned in your account or any other, so far as I know, has been the brilliancy which it gave to the ocean at night, a glow everywhere startling to behold. When the affected area had crept up the coast as far as Ventura, 'bus loads of our Ojai citizens went down there evenings to see the display. Local liverymen just jingled pocketfuls of coin and added to their yarns. Ventura people thanked Providence and hoped the water would stay. The ocean at night, though, was well worth seeing. I was familiar with the phosphorescence of the Gulf and the Atlantic, but neither compared with the flash to be observed on many nights along this coast. When the water happened to be particularly rough, bright gleams in groups occurred over an area that extended at least half a mile from shore; or, if the rollers approached smoothly to break in numerous lines of breakers, all the rough territory appeared to be continuously aglow, for miles of coast, from submerged lights. During our stay near the seashore we spent many evenings on the beach watching the phosphorescence, on several occasions to be greeted by the rising moon, which first appeared there directly down the surf line, and we felt all of it to be unusually superb.

The run of fish may have been influenced by the phenomenal conditions. Some of the rod men and net haulers held to this view. Others told me that the ocean directly off Ventura is never very productive in this line. Whether this is due to the cold temperature of water or to other cause, no one could inform me. The tackle in general use on the pier consisted of a fine line strung with innumerable small gangs, that reached from surface to sea bottom, and the common bait was either earth worms or cut shark meat. The fish taken seldom exceed eight inches in length. A small variety of pompano, which sold for thirty cents a pound in Ventura, at a dollar in San Francisco, seemed to be highly prized. Local net men, with seines scarcely 500 feet long, at times brought in as much as seventy dollars' worth of these at a single haul. They preferred the little ones to black groupers and great sea bass.

On one overcast morning in September, while I was fishing from the pier, several of us saw miles of ducks in continuous passage, the line consuming more than two hours in moving by, but much to our surprise the flight led up the coast, though likely a premonition of the hot wave that came later. By Oct. 1, or the opening of our hunting season, ducks, curlew and all the waterfowl were said to be more plentiful than for years. The vast preserves held along the coast by hunting clubs may have had a beneficial effect, as property thus controlled, besides being flooded the past season at considerable expense, and guarded, had been planted with celery and other forage.

The number of preserves of this sort has increased within recent years until the good shooting is nearly all pre-empted. Among other clubs to own water front within easy distance of Los Angeles are the Cerritos, which now owns the Bouton Lake; the Bolsa Chico, near Newport; the Recreation, at Ballona; the Pomona, near the Bolsa Chico; the Santa Monica, Alla, Centinella and various other like affairs. Ex-Governor Henry H. Markham, I believe, is a member of the Cerritos, while the rolls of all the clubs have on them the names of many individuals just as famous. With so much of the game country occupied by clubs, the obscure gun is seriously put to it for his hunting, and were it not that ducks really seem to increase in number, he might well question whether private concerns should be permitted to close out the public from so much good territory.

Several flights of band-tailed or collared pigeons have appeared in the Ojai this fall up to date, Nov. 15, and the acorn crop being unusually large, we may look for additional flocks. One of your contemporaries may still be unable to identify these birds, for only a few months ago his paper could not place them in ornithology, and the editor even asked if they might not be the passenger pigeon, at one time so plentiful throughout the Atlantic slope. Comment is unnecessary.

More useful papers in the same line have a nearly untouched field for their energies. With all the cant to the contrary, we must believe that the average hunter learns but little from coming into contact with nature. Apparently he goes abroad to kill, and for no other purpose. Count satisfies his interest. Though there be many notable exceptions, too great a number have an eye only for slaughter. As a lamentable instance, a short while ago a Santa Rosa sporting club held a hunt for destructive birds and animals, at which twenty hawks, many black-birds, squirrels and bluejays were killed, and over nine hundred larks, though the Western larks, in addition to being our sweetest singers afield, are so clearly useful,

Intelligence would cause a more just appreciation for feathered creatures.

Local deer hunters had scarcely any luck the past season. Abundance of water made exposure unnecessary for game. A number of grizzly trails were seen by our sportsmen, but no bear, perhaps through bashfulness of the human. Great bands of plumed quail, in numbers beyond my most extravagant dreams, frequently come down from the hills to our valley, where denser cover renders the shooting more of a sport than it has been in past seasons. One has such a fine time with these strong-winged coveys.

An item likely to be of interest to you came indirectly to my knowledge a short time since. No names were mentioned, or need be mentioned, as the incident concerns a State official, well known to a large number of Californians, and though meritorious in itself, is one that my informant might hesitate about giving too great publicity. Years ago, if not quite back to forty-nine, an ambitious young man, his fancy aflame with fabulous report, his will indomitable, left a quiet home in the East to identify himself with the restive big West, and after rough wandering through rough country he arrived on the coast. His experience gave him a story to tell—several of them—but want of education made him diffident about writing anything for publication. This unique character, though, imbued with a courage that had not been daunted by scalping knife or inhospitable country, at last unlimbered a pen, charged it with long-distance ink, then tracked an editor to his lair, and as contributions appeared in print, he gloated over them with greater interest than he had ever gloated over rare game, much as Dr. Coues would have gloated over a bird strange to science. Close attention to changes made by the editor, Brown's grammar, with an appreciative intelligence, soon made writing easier. The paper to which this contributor sent his articles was FOREST AND STREAM. H. R. STEIGER.

Fred Mather's Modern Fishculture.

PROVIDENCE, R. I., Dec. 9.—Forest and Stream Publishing Co.: I feel indebted to you for a treat from the perusal of Fred Mather's charming and witty little book on fishculture. I have been groping around in the dark myself the last two or three years, and finding out slowly the things that he describes as public errors, and am much amused to find that my mistakes are those of everybody else. Fred Mather was a fit disciple of the great Walton, and I for one have derived a lot of pleasure, as well as information, from reading his book. Every one of the opinions that he has expressed in opposition to generally accepted views I unhesitatingly endorse.

"Sport."

Under this heading, how many different divisions could be discussel, and how widely diversified would be the opinions were each man with sporting instincts called upon to give his own acceptance of the term. We have in this town several men who place at the head of the list in the category of sports—coon hunting. They hunt with one dog, one night each week, and always quit when they get one coon. And how they talk about the sport of it! Here is the account of their last coon hunt as related by them. I will say before beginning that I have never been coon hunting, so may possibly slur over the part wherein lies the keen pleasure of cornering Brer Coon, who is a doughty fighter as well as a skulking chicken thief. If this turns out to be the case, I shall expect to be "called down," from which the enlightenment will more than heal the lacerated feelings.

There were three in the party; they started off at 11 P. M. with a rope, a beagle, a lantern, package of grub, an ax and a single barreled shotgun. They walked three miles over a rough road before reaching the domains of his coonship. It then started to rain; they didn't mind that, though it was blowing cold out of the northwest.

After hunting for nearly an hour, the dog, which had been working along the opposite side of a small stream of water, treed a coon. Excitement then ran riot! They all had on hip boots, but unfortunately the river was swollen from recent rains, and there was nothing for them to do but wade across. True, they could have gotten across by walking down stream a quarter of a mile, but they were wet anyway and the dog was urging them to hurry, so in they went. It was waist-deep for two, but the fellow who carried the lantern made a beautiful back dive from a slippery bank. This was bad, but they found the tree in which the coon had taken refuge. It was a chestnut about 1½ feet in diameter. They couldn't shin up it in their wet clothes, so they started to chop it down. After an half hour of vigorous hacking they had it most through when it was decided that it would be necessary to get another lantern, for "Dipsic," the beagle, had been up against a coon before and consequently retained a wholesome respect for the whole family.

One of the boys went to a friend's house a mile away and got a lantern. He banged on the door, started the dog barking and brought the old man down to the door with a gun in one hand and a candle in the other. He was a coon hunter, too, and wasn't a bit mad at being routed out. He not only loaned them a lantern, but volunteered his assistance. In the meantime the other two sat down on a water-soaked log and ate some moist sandwiches. They were chilled through, and as they sat there in the dark woods listening to the dismal pit-

pat of the rain drops on the carpet of leaves they never once wished they were home in bed. After a while the welcome gleam of the lantern showed in the upper end of the woods; a few strokes of the ax and down came the tree. The coon, which was well up in the top of the tree, jumped before the tree struck, and, hotly pressed by the dog, took refuge on a large boulder nearby.

Old "Sol" held the lantern, from which reflected an answering gleam in the eyes of the coon on the rock. The man with the gun rested against a tree, took deliberate aim, and pulled the trigger. There was nothing doing. The gun was examined; it was found that the plunger had dropped out in some way and the coon was still holding the fort. The fellow with the sloppiest clothing volunteered to go back to "Sol's" for his gun. "Sol" said: "I came over here to see a scrap; let's knock the old devil off the rock; if the dog don't kill him I will." A well-aimed stone made the old coon capitulate. The beagle jumped in and nipped him, which made him turn. The dog went off to a respectful distance and looked on while "Sol" did the rest with the ax. This was all of it. The three trudged back to town soaked, chilled through, their feet sore from sloshing about in the heavy water-soaked boots. They just had time enough to change their duds, drink a cup of coffee and catch the 7:44 train for the city. There is no padding about this, but an actual experience of three inveterate coon hunters in pursuit of their chosen "sport." They have been out ten times and brought home nine coons, all of which they gave away. This was voted the best hunt of the lot. Wherein was it best—where was the sport of it? It is now up to some coon hunter.

CHAS. G. BLANDFORD.

OSSINING, N. Y.

[In matters of sport, there is essentially something of skill and something of competition. As between a man armed with an ax and assisted by a dog on the one hand, and a lone coon on the other, there is nothing of skill or competition.]

Yachting.

Designing Competition.

IN view of the continued and increasing interest in yachting, a designing competition will be opened in the columns of FOREST AND STREAM. In America the yachting season is comparatively a short one, and such a competition as has been determined upon will serve to stimulate the interest in the subject during the winter months. The competition is open to both amateur and professional designers. Three prizes will be given for the best designs of a yacht conforming to the following conditions:

- I. A pole mast sloop.
- II. 25ft. load waterline.
- III. Not over 4ft. draft (with centerboard hoisted).
- IV. At least 50 per cent. of ballast outside on keel.
- V. 5ft. headroom under cabin carlins.

All abnormal features must be studiously avoided in the design; and the construction, sail and cabin plans should be of the simplest character. It was our idea in laying out the conditions of the competition to make them simple as possible, so as not to hamper in any way the designer, and yet convey to all that we wished to produce a safe, comfortable cruiser on which two or three amateurs could live with comfort for a period of two or three months and cruise along our eastern seaboard from New York to Halifax with safety. A centerboard boat of moderate draft was decided upon, as so many more harbors would be accessible to a boat of that type.

DRAWINGS REQUIRED.

- I. Sheer plan, scale 1in. = 1ft.—showing center of buoyancy and lateral resistance.
- II. Half breadth, scale 1in. = 1ft.
- III. Body plan, scale 1in. = 1ft.
- IV. Cabin plan, scale 1in. = 1ft.
- V. Sail plan, 1/4in. = 1ft., showing center of effort.

The sails should consist of a jib, mainsail, spinnaker and balloon jib. No topasil will be carried. A table of offsets and an outline specification must accompany each design. The drawings should be carefully drawn and lettered. All drawings should be made on white paper or tracing cloth in black ink (no colored inks or pigments should be used). The designs must bear a nom-de-plume only and no indication must be given of the author. In a sealed envelope, however, the designer should inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than February 28, 1902. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all the designs.

The prizes offered are as follows: 1st prize, \$25.00; 2d prize, \$15.00; 3d prize, \$10.00. Mr. Theodore C. Zerega offers an additional prize of \$10.00 for the best cabin plan. Honorable mention will also be made of meritorious designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has kindly consented to judge the designs and make the awards. Mr. Crane's professional standing is so high that he needs no introduction, and every confidence will be put in his ability and fairness.

One-Design 18-Footer.

THROUGH the courtesy of the designer, Mr. W. Starling Burgess, we are able to reproduce in this issue the lines, construction, deck and sail plans of a one-design class of 18-footers now being built by Mr. J. E. Graves at Marblehead, Mass., for Mr. J. Hopkins Smith, Mr. S. F. Houston and two other gentlemen, there being four boats in all.

While intended primarily as a one-design class, the boats are designed to conform to the restrictions of the 18ft. Knockabout Association, and will sail in the knock-about class. Between the two, the owners of these boats should not lack for good racing next season.

The design shows a boat of long, low overhang that will be utilized for the greater part of its length when heeled. The underbody is well cut away, and the wetted surface has been reduced to a minimum. The midship section gives a good idea of the boat's shallow body and flat floor, with an easy bilge, and the whole gives evidence of speed and power. The freeboard is rather low, and the sheer quite straight. The wooden fin on which the lead is hung is very thin, and the lead is well bulbed out, putting the bulk of the weight at the bottom. The rudder is hung on the sternpost, and the boats steer with a tiller. The boats are lightly but strongly built. The planking is of mahogany 3/4in. thick.

The sail plan is high and short on the base. The total sail area is 450 sq. ft. The mast is placed in a slot that permits moving it either forward or aft, and by a little experimenting the boats can be made to balance perfectly. Lightness and simplicity, together with necessary strength, is shown in all the details of the rigging.

The principal dimensions are as follows:

Length—		
Over all	31ft.	6 in.
L.W.L.	18ft.	0 in.
Overhang—		
Fore	7ft.	0 in.
Aft	6ft.	6 in.
Beam—		
Extreme	6ft.	10 in.
L.W.L.	6ft.	5 in.
Draft—		
To rabbet	1ft.	2 1/4 in.
Total	4ft.	9 1/4 in.
Freeboard—		
Fore	2ft.	2 in.
Aft	1ft.	5 1/2 in.
Least	1ft.	4 in.
Displacement	4,077lbs.	
Lead ballast outside	1,250lbs.	
Sail area, total	450 sq. ft.	

Many New Yachts to be Built.

THE yacht designers throughout the country are all very busy on new work for both power and sail yachts. The prospects for an active winter have never been better. There are several orders for large steam yachts pending, and a number of yachtsmen who have held up their orders until the yacht measurement matter was settled will now place them.

Messrs. Tams, Lemoine & Crane have been commissioned to design many yachts, which vary in size from the 15ft. knockabout to the 250ft. steam yacht. This firm has designed a large steam yacht for Mr. Warner M. Leeds, which is being built by the Burlee Dry Dock Company on Staten Island. She will be 272ft. over all, 226ft. on the waterline, 29ft. beam and 14ft. draft. The yacht will have a speed of 18 1/2 knots, which is exceptional for a cruising vessel. A somewhat smaller yacht has been designed for Mr. D. G. Reid. This vessel is 215ft. over all, 183ft. on the waterline, 27ft. beam and 13ft. draft, with a speed of 17 knots. Both of the above-mentioned craft are fine examples of the American-designed and built steam yacht. Building at the yard of the Harlan & Hollingsworth Company, Wilmington, Del., from designs made by the same firm, is an auxiliary schooner similar in design to the famous schooner Endymion. Her dimensions are: 140ft. over all, 110ft. on the waterline, 26ft. beam and 14ft. draft. She will have compound engines of 100 horse-power, with cylinders 8 and 16 by 12in., and two Almy boilers, which will give her a speed of 8 knots. The coal bunkers have a capacity of 23 tons, and the water tanks will hold 3,500 gallons. The yacht is equipped with all modern conveniences, such as electric lights, evaporator, distilling plant and steam heat. The ice chests have a capacity of four tons. Below decks there is 7 1/2ft. headroom all through the cabins. There will be five staterooms and three bathrooms for the guests, beside the large main saloon. All the rooms are of good size, and special attention has been given to the lighting and ventilating of these apartments. Forward there are staterooms for the officers, together with a messroom, galley, etc. The fore-castle has accommodations for twelve men. The yacht will be schooner rigged. All deck fittings are to be of teak. The vessel is intended for off-shore work, and her owner will take an extended cruise in her as soon as she is completed.

Messrs. Tams, Lemoine & Crane have turned out a cruising schooner for Mr. T. W. Lawson, of Boston. She is 70ft. over all, 46ft. on the waterline, 14ft. beam and 10ft. draft. They have also gotten out plans for a cruising cutter for Mr. H. W. Morss. Her dimensions are: 50ft. over all, 35ft. on the waterline, 12ft. beam and 8ft. draft. Among the smaller orders are four boats to race in the 30ft. class. Three of them are to be used at Bar Harbor and the fourth will be raced on Long Island Sound. These are the first boats that have been designed under the new measurement rule that was recently adopted by the Y. R. A. of Long Island Sound. Two raceabouts have also been turned out, and they will be raced on the Sound. All the last-mentioned boats are double planked with mahogany.

In addition to the steam yacht he has designed for Mr. F. M. Smith, Mr. Henry G. Gielow has a number of other designs on the boards. Among the orders is a steel auxiliary cruising schooner for Mr. W. T. Rainey, Jr., who formerly owned the auxiliary schooner Seneca. The new yacht is 86ft. over all, 60ft. on the waterline, 19ft. beam and 7ft. draft with the centerboard hoisted, and 14ft. draft with the board lowered. She is equipped with

a 25-horse-power engine, which is expected to drive her at a speed of seven miles. The vessel has a number of novel features; among them is an arrangement laid out by Mr. Gielow by which the engine can be disconnected from the shaft, and by a system of bevel gears the power will be used on the windlass and the anchor and sails can be hoisted by means of it. The naphtha tanks are located in the ends of the yacht, and the fresh-water tanks are located amidships under the cabin floor. Under a flush deck the yacht has full headroom throughout. Coming down the companionway one reaches a steerage, from which there is access to a ladies' cabin aft, and to a lavatory on the port side, and to a large trunk room on the starboard side. Next forward is the main saloon, which is very roomy and is lighted by a skylight overhead. Wide transoms run along either side, and in each corner are located the usual sideboards, china, linen and silver lockers. Forward of the main cabin on the starboard side is the owner's room, which is fitted with a double berth, bureau, hanging locker, transom, etc. Opening from and connecting with the owner's room is a bathroom, which is fitted with a porcelain tub, water closet, set basin, etc. On the port side of the passage, which extends from the main saloon to the galley, are two staterooms, one of which is a guest room and the other is for the sailing master. Next forward is the galley, a large and roomy space extending the width of the vessel. The galley is equipped with lockers, dressers, sink, range and an unusually large ice box. The motor is located in the galley and is placed in the forward end near the bulkhead, which separates it from the galley. Next forward is the fore-castle with six gas-pipe berths. There are lockers for the men and a crew's water closet. The centerboard trunk is so arranged as not to affect the cabins in any way. The deck fittings and the trim below will be of mahogany. The rig will be of moderate size, as the boat is intended primarily for cruising. Mr. Gielow has designed a boat to race in the 30ft. class on Great South Bay. She is 25ft. 8in. on the waterline, 41ft. 6in. over all, 11ft. 8in. extreme beam and 2ft. 6in. draft with the board hoisted. Her actual sail area is 960 sq. ft. The boat has a summer cabin and a large cockpit. She is double planked, the inner skin being of cedar and the outer of mahogany.

Messrs. Gardner & Cox have some twenty new orders on hand.

Our Boston Letter.

BOSTON, Dec. 9.—In last week's letter I stated that Ayaya was one of the yachts which did not sail the required number of races to qualify for the championship of the Hull-Massachusetts Y. C. in the 18ft. knockabout class. This was not quite correct. Barbara and Bacchante were the two boats which failed to sail the required number of races. Ayaya was the only boat in the class which sailed in every race that was scheduled during the entire season.

Hanley's basin and shops have now been completed and there are many yachts stored there. The basin is on the Town River, and is absolutely landlocked. It has been dredged to a depth of 18ft. at mean low water. There are now stored there the steam yachts Idalia, Nerita, Viola, Uvira, Kasagi, Etta, Nethla, the steamer Cape Cod, of the Bay Line; Electra, of the Boston and Hough's Neck Line, and the steamer Eleanor May. The Cape Cod was on the marine railway until recently. It was thought that she had struck on one of her last trips and that there was something wrong with her, but a thorough examination failed to reveal that there was anything the matter. Hanley is building a 50ft. gasolene launch. He is also at work on a 25-footer and a 30-footer, while he has just admitted having an order for a Y. R. A. 21-footer, which he thinks is going to make them all get out and hustle next season.

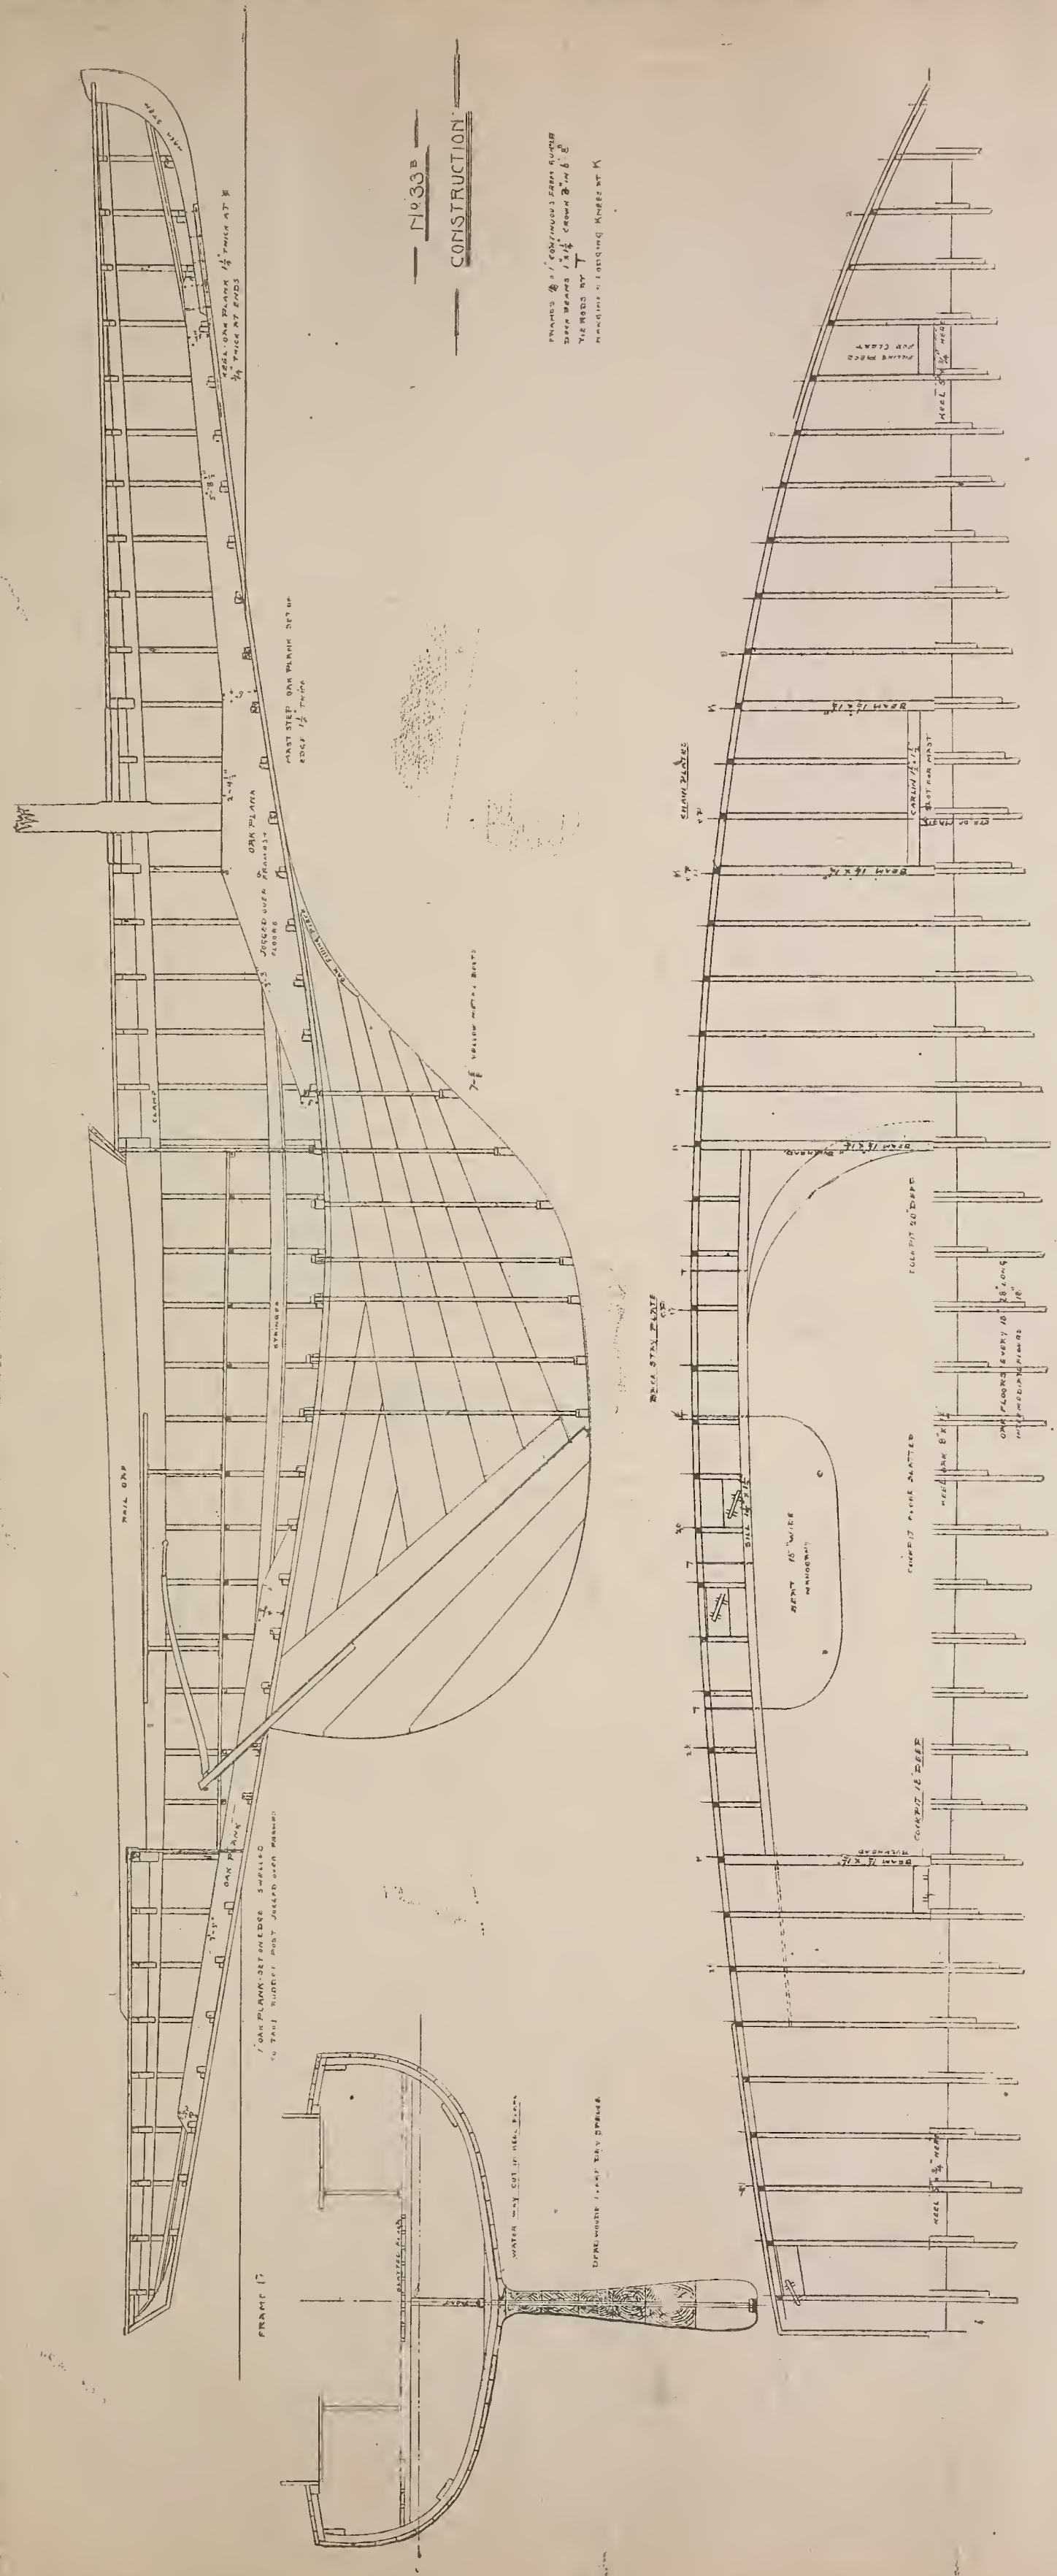

Capt. Sycamore has been in Boston during the past week and has been royally welcomed everywhere. Although he is no stranger to this city, he met a number of new faces on this trip. His constant good nature makes him popular everywhere, and his entire absence of egotism convinces those with whom he talks upon yachting matters. He left for New York Sunday afternoon.

The schooner Hildegard, which was purchased from Geo. W. Weld by E. R. Coleman, of the New York Y. C., has been fitting out at Lawley's. Last week she went into the dry dock to have her bottom cleaned. She came out of the dock to-day and was taken to the Commonwealth dock, where she will continue fitting out for her winter cruise to the West Indies. It is expected that she will leave port on Thursday.

That same old movement which was started last year to form a new yacht racing association in opposition to the one that is already firmly established, has again been revived, but it is not thought that any more success will attend the efforts of the organizers than they met with before. The present association has so thoroughly shown its strength that it would be hard, indeed, to form another association at the present time, even if the object was to better racing and to protect the yacht owners, but from all that can be learned the benefits from the new scheme would only be enjoyed by a few, and instead of going ahead, the result of the launching of such an association would be to put yachting back at least ten years in this district.

The present association's restricted classes have given it such strength that it has been suggested in the Corinthian Y. C. that these classes be adopted. It is not likely that any new association could receive any such acknowledgment in one or two seasons, and if it should be launched, it would bring about just the result that the larger clubs have been looking for. It might not undermine the present restricted classes, but the result would be that the contest for the majority of the races would be between the Marblehead Club and the Hull-Massachusetts Y. C. The club that offered the most money for its races would then get the greater number of boats, and the smaller clubs, that now enjoy the protection of the present association, would find it very difficult to get the racing classes to come to their open races. Thus yachting, being confined to one district, would be going backward instead of forward.

An 18-footer, a 21-footer and two 23-footers, designed by Small Bros., are being built by Pendleton, of Wiscasset, Me. The 21-footer, it was learned last week, is for W. F. Baché who owned Hanley, the fastest of the H. C.

CONSTRUCTION PLAN.—ONE-DESIGN 18-FOOTERS. DESIGNED BY W. STARLING BURGESS, 1901.

25-footers. An 18-footer, designed by Small, is being built by Higgins, of Cohasset.

Crowninshield has an order for five raceabouts of one design for S. Wainwright, Trenor L. Park, Oliver Harriman, Jr., Howard Willetts and William H. Browning, all of New York. They will be 20ft. 10in. waterline, 32ft. 10in. over all, 7ft. 7in. beam and 5ft. 6in. draft. They will have 3,400lbs. of outside lead and will carry 600ft. of sail. In all other respects they will conform to the restrictions of the Knockabout Association.

Burgess has an order for a 35ft. waterline yawl for F. S. Hastings, who formerly owned the 28ft. yawl Peggy, which was destroyed at New Rochelle in the storm of a few weeks ago. She will be built by Huntington.

At Lawley's the cabin work is being put in the Eaton 46ft. schooner. The Adams 21-footer has been laid down. The keels for a 104ft. waterline steam yacht and a 51ft. speed launch have been turned out. Plans have been received for the 46-footer for Arnold Lawson, designed by Tams, Lemoine & Crane. She will be laid down this week. Last week Geo. Lawley was in New York. He figured on a 60-rater, designed by Gardner & Cox. He received an order for a 112ft. steam yacht and a launch for the Yale crew. Fred Lawley is at work on the plans for an 18ft. knockabout for Alfred Douglas and a 15-footer for Detroit parties.

A special meeting of the Burgess Y. C. will be held Thursday evening at the club house to nominate officers for the coming year and also to consider a proposition from the Boston Y. C. The Boston Y. C. has just purchased a location for a station at Marblehead, and there has been talk of the Burgess Y. C. being absorbed by it.

Starling Burgess is now at work on the plans for a new gasoline engine. He expects to have it completed soon, and will install it in some of the launches which are now building from his designs at Stearns', Marblehead Yacht Yard. This is not his first departure from the line of hulls. He has already invented a rapid-fire gun, which is claimed to be a very fine machine, and it is said that it is to be used by the Government. With such versatility of talent, Burgess should in a short time rank high among the world's designers.

JOHN B. KILLEEN.

Victory of the Ann Eliza.

"I SEE," said Cap'n Silas Grindle, as he laid down the paper, "I see them rich critters is a-racin' of their yachts ag'in, an' it looks sorter foolish to me. Why? Well, 'cause they ain't nateral vessits to begin with, an' then ag'in, they ain't got no speed nohow. Yes, I've seen 'em off'n Marblehead an' outside o' Brenton's reef, switchin' 'round an' monkeyin' with balloon tops'ls 'n all kinds o' light kites, with enuff men on deck to eat 'em, an' I never yet seen one as 'd keep comp'ny with lots o' vessels castin' right outen Bangor—that 's s'posin' they's any wind. That old schooner o' Ben Butler's, the Ameriky, she was fit to go an' stay outdoors in, but she was built on nateral lines, an' was fit to kerry sail without any fins or sech fixin's like they have now to hold her up to it. Ever see one o' them fancy ones out on the railway? Look jest like a swordfish high an' dry. Ain't got no body to 'em, but draws much water's a man-o'-war."

"I come near gettin' hauled up oncet all along o' one o' them yacht races. Would have been, too, 'f I hadn't more speed than anything in the fleet. That was when I was in the old Ann Eliza, an' my brother Ed he was in one called the Mercury. Used to brag a good deal about that Mercury, an' she was a smart vessel, sure enuff. My youngest gal, that went to the seminary to Bucksport, she said that vessel had a right to be fast, bein' named after some critter way back in heathen times, as had wings on his heels. Curi's place for wings—hey? But the Mercury she was a brick scow 'longside o' the Ann Eliza, any p'int o' sailin'. Well, 't was 'long inter September one year a spell back when the two of us, Ed an' me, left Bangor in the same tow an' got a good slant to take us outer the bay. Ed he had bricks in the hold and fish barrils on deck, an' I was piled high with baled hay—both of us bound to Bost'n."

"Off Marblehead we come up with a slew o' fancy sloops an' little schooner-rigged boats, an' steamers with yaller stacks, all tricked out with buntin' an' a-blowin' of whistles and a-tootin' of horns fit to wake the dead. When we was clost up, Ed he hailed me, sayin':

"'It's a yacht race, Si. Let's stan' in an' see it.'"
 "I says, 'All right, an' bein' close-hauled on the starboard tack, with the wind southwest, I jibed her over, started her sheets an' run in. The Ann Eliza was a good vessil on the wind, but you jest give her a free sheet an' she was a race-hoss—she was, for sartin; that old critter 'd go like a ghost. She made consid'able fuss goin' through it, but she kivered lots o' water, she did, an' 't want no time till we was right in the thick o' them yachts. They seemed to be a-gittin' ready to start the race, for there was a steamboat a-histin' of signals an' a-tootin' of her whistle a-layin' to off 'n a booye, an' three or four skittish-lookin' sloops was see-sawin' up to wind'ard, ready to skip across the line."

"Wife an' two boys was with me, an' they all wanted to see the race, so I says, says I, 'All right—I'll try to keep along of 'em, an' all you got to do is use your eyes.' I see the yachts squared away for the start, an' I figgered that I'd come about jest as I come up with the stake steamboat an' run down along with 'em. Jest then a little coffee-pot of a steamer come hustlin' out to us an' a dude in white pants standin' for'ards he sings out:

"'Hey, there—you! Where you goin'?"
 "'Hey, you-self,' says I, 'I'm no farmer!'"

"'Keep out o' the way,' says he, an' I said I guessed I could keep away from anything 'round there. 'Ready, about!' says I to the feller at the wheel; 'hard-a-lee!' The jib slatted over, an' she filled away on the starboard tack ag'in as pretty as a pilot boat, an' down we run, right through a clear course they had, with all the yachts lined up on both sides to watch the racin' boats when they went through. They had the wind on the beam, so it was a straight run, an' there was lots o' room for them an' the Ann Eliza, too. Well, we hadn't much more 'n begun to gather way on her 'fore there was a great hollerin' right astarn of us, an' I looked 'round to see what was up. Well, sir, I'll be jiggered 'f all the yachts

SAIL AND DECK PLANS.—ONE-DESIGN 18-FOOTERS.— DESIGNED BY W. STARLING BURGESS, 1901.

that started hadn't turned back but one, an' the stake's eambo was a-comin' after us like mad.

"He's a-tryin' to ketch us," says my mate, Peter Dodge. "Let's give her a little more sheet an' shake out that t'gallants'." says he. The Ann Eliza, you know, was what we used to call a tops'l schooner, kerryin' square tops'l an' t'gallants', and that rig 'd go like blazes with the wind a p'int aft the beam. Well, we put the t'gallants' onto her, an' the way she picked up was wonderful. The steamboat she couldn't get near 'n four lengths—jest near enuff to hear what she had to say, an' pretty soon a feller I took to be sorter boss o' the race, he sings out:

"Ahoy, there! d—n it, get that hay waggin o' yourn out o' this—quick! Don't you see you're a-spiin' a race?" "Wot race?" says I, kinder innocent-like; an' then he got madder'n ever an' he yells out:

"You take that tub o' yourn an' git t' other side o' Cape Ann with her, quick's you can leg it, or I'll make trouble for ye!"

"I jest laffed at him, an' told him that I didn't see no race, an' that I wouldn't bother the yachts anyways, 'cause they couldn't never ketch up with me. Then he jest biled over like a coffee-pot, an' shook his fist at us. I could see him tryin' to make out the Ann Eliza's name through his glass, but she hadn't any name on her quarter, an' the boat to the davys kivered up her stern, so't he couldn't see nothin'.

"Well, sir, the one yacht that did start she come down on the wind smart, with enuff spread to swamp her, an' they was doin' their darndest to ketch up with us—but 't want no go. After a while when they see we kept a-droppin' of her some o' the fellers 'board o' her they waved a bottle at us an' cheered us. Then they wore ship an' skipped back home. That was the only time the Ann Eliza ever got any cheerin', 'cept, I s'pose, when she was launched.

"No, I don't know what they'd ha' done to me 'f they'd ketched me. Not much, I reckon. But that's neither here nor there—the yacht never wore canvas that'd overhaul the Ann Eliza, give her the wind abeam an' enuff of it. Don't know what they'd do with a deckload o' hay!"—Boston Transcript.

A Year in a Yawl.

THIS is a very interesting narrative of a 7,000-mile cruise made by four boys in a yawl, designed, built and rigged by one of the party. Mr. Russel Doubleday has taken the log of the cruise and put it in such shape as to make it interesting reading. The start was made from Lake Michigan, on the shores of which body of water the boat was built, and from there the crew sailed their craft down to the mouth of the Mississippi. Their route next took them along the Gulf coast to and around the Peninsula of Florida, up the Atlantic shore to Norfolk, thence up the Chesapeake to the Delaware & Raritan Canal.

The boat is splendidly illustrated with half-tones reproduced from photographs.—Doubleday, Page & Co., publishers, Union Square, New York city.

YACHTING NEWS NOTES.

At the Herreshoff shops, Bristol, R. I., there are five fine steam yachts in various stages of construction. The largest of these is for Mr. Frederick Grinnell, Providence, R. I. She is 150ft. long. The next in size is for Mr. August Belmont; this craft is to be 130ft. long, and is expected to develop a speed of 24 knots. The third largest is for Mr. N. G. Herreshoff, and is to be 100ft. long. The other two boats are both to be 80ft. long, and will be similar in design to the 70ft. launches Scout and Mirage, turned out last year by the same firm.

Capt. P. McGiehan, of Bayonne, N. J., the well-known builder of many fast catboats, died at the age of seventy-two years on Thursday, Dec. 5.

Mr. George W. Kidd, one of the oldest members of the New York Y. C., died in New York city on Tuesday, Dec. 3.

Mr. Seymour L. Husted has sold his schooner Crusader to a Philadelphia yachtsman.

Mr. Frank B. McQuesten, of Boston, has sold his steam yacht Valda to Mr. Charles W. Henry, of Philadelphia.

The yawl Lotus, which was built by Jacob at City Island this fall for Mr. Grier Hirsh, of York, Pa., left City Island on Thanksgiving Day for Palm Beach, Fla., in charge of Mr. Charles D. Mower, her designer. He was accompanied by Mr. J. S. Ker and a paid hand. On the run from City Island to the mouth of the Raritan River continuous snow squalls were encountered, and the boat was badly iced up. The river was full of large cakes of drift ice, and they were in constant danger of being stove in. The weather was very cold, and as it was necessary for all hands to be on deck most of the time, all suffered considerably from exposure. Just before reaching Trenton the ice cakes froze in solid about the boat, so that it was possible to get out and walk about. The gasoline engine, of which so much was expected, refused to work when most needed, and had it not been for a very friendly tow boat captain who broke up the ice and took them in tow there was a good prospect of the boat spending the winter on the banks of the canal. Lotus arrived at Philadelphia on Dec. 4, having been almost a week in making a run which, under ordinary circumstances, would have taken not over three days. Norfolk was reached on Sunday, Dec. 8, after a fine run down the Chesapeake with fair winds all the way. Saturday night the boat was anchored inside Old Point Comfort, and after a good rest the crew worked the boat up to Norfolk.

The steam turbine system of propulsion for yachts is gradually attracting the attention of steam yacht owners, says the Yachting World. The first order for a yacht propelled by turbine machinery has been given by Col. H.

B. McCalmont, who has instructed Cox & King to design for him a fast steam yacht of torpedo type for day cruising. The hull will be built at Yarrow, and Mr. Parsons, of Newcastle-on-Tyne, has a contract to fit the new vessel with turbine machinery. She will be about 150ft. in length, and is expected to attain a speed of upward of twenty-five knots.

The Larchmont Y. C. held a meeting on Saturday, Dec. 7 for the purpose of amending their constitution to allow of honorary members being elected. The amendment was passed, and Sir Thomas Lipton was the first on the list of honorary members to be elected.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading Road, Dec. 8. Conditions: 200yds., off-hand, at the standard target. Gindele was declared champion for the day with the fine score of 95. Weather, cloudy; thermometer, 50 degrees; wind, 2 to 4 o'clock:

Gindele	95	89	88	86	83	441	10	8	10	10	9	47
Roberts	89	89	83	81	80	421	6	9	10	10	8	43
Payne	89	86	86	83	83	427	9	8	9	8	7	41
Strickmeier	88	88	88	84	82	430	10	10	7	9	8	44
Nestler	84	82	82	80	80	408	9	5	9	10	8	41
Bruns	83	82	81	81	80	407	9	10	9	9	8	45
Hofer	81	80	76	74	69	380	5	8	5	7	32	
Lux	81	78	78	75	71	383	8	6	7	5	8	34
Speth	80	79	76	69		304						
Uckotter	78	75	69	68	359		9	8	5	5	9	36
Drube	78	73	72	66	350		8	7	10	5	9	39
Hoffman	81	71	68	55	275		5	9	6	6	6	32
Trounstein	72	72	69	69	282		8	5	7	8	5	33
Odell	72	70	68	65	339		9	5	6	10	8	38
Topf	71	69	66	65	337		6	8	7	3	6	30

Gindele shot his new Pope barrel to-day, and made the highest team score ever shot on the range, averaging 88. He holds the record to date.

In our business columns the Winchester Repeating Arms Company, of New Haven, Conn., call attention to their .32cal. Winchester Special, a new smokeless or black powder cartridge and rifle just perfected and designed to meet the demand of sportsmen for a larger caliber than the .30 Winchester and with less power than the .30 U. S. Army rifle. This rifle possesses the excellent quality of shooting black powder with satisfactory results. The special qualities of this very desirable rifle are set forth in the advertisement aforementioned.

We are informed that under the management of the Metropolitan Shooting Club a series of novice revolver matches, commencing on Dec. 23 and continuing till March next, will take place at Conklin's gallery, 513 Sixth avenue, New York. A gold medal is the trophy under consideration.

Trapshooting.

Fixtures.

Dec. 14.—Rutherford, N. J.—Live-bird shoot of the Boiling Springs Gun Club. C. B. Axford, Sec'y.

Dec. 18.—Holmesburg Junction, Philadelphia.—Competition in three target-series of Keystone Shooting League.

Dec. 18.—Kansas City, Mo.—Midwinter shoot and match contest for Sportsmen's Review cup between Messrs. J. A. R. Elliott, holder, and R. O. Heikes, challenger.

Dec. 18-21.—Kansas City, Mo.—Kansas City Midwinter shoot. On Dec. 19, ten 15-target events; targets thrown free; \$50 added.

Dec. 19-21.—Kansas City, Mo.—Live birds and targets. Dec. 21, the Omaha-Kansas City ten-man team race will take place.

Dec. 20.—Kansas City, Mo.—Contest for new live-bird championship challenge trophy, emblematic of the live-bird championship of the world, offered by the Hazard Powder Company, at the Kansas City midwinter shoot.

Dec. 21.—Kansas City, Mo.—Omaha-Kansas City ten-men team race.

Dec. 22.—Rockaway Park, L. I.—Shoot of the Oceanic Rod and Gun Club. J. H. W. Fleming, Sec'y.

Dec. 25.—Tunkhannock, Pa.—All-day tournament of the Tunkhannock Gun Club. Spencer D. Reed, Sec'y.

Dec. 25.—Haverhill, Mass.—Haverhill Gun Club's all-day Christmas shoot. S. G. Miller, Sec'y.

Dec. 25.—Mount Kisco, N. Y.—Christmas Day shoot of the Mount Kisco Gun Club. Mr. A. Betti, Capt.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Dec. 10.—Interstate Park.—Interstate trophy, 20 targets, \$1.40; Kings County Handicap, 25 targets, \$1.50; second shoot for December cup, 50 targets, \$2; sweepstakes.

Dec. 11.—Interstate Park, L. I.—Team contest, New Jersey vs. New York.

Dec. 12.—Interstate Park.—Interstate trophy, 15 targets, \$1.30; Richmond Handicap, 25 targets, \$1.50; Metropolitan Individual Championship, 50 targets, \$2; sweepstakes.

Dec. 18.—Interstate Park.—Midweek shoot of the New Utrecht Gun Club. Silver cup to winner.

Dec. 17.—Interstate Park.—Interstate trophy, 20 targets; New York Handicap, 25 targets; third shoot for December cup.

Dec. 19.—Interstate Park.—Interstate Park Handicap, 25 targets; Metropolitan Individual Championship, 50 targets.

Dec. 25.—Interstate Park.—Interstate Park trophy, 15 targets; Christmas Day Handicap, 25 targets; fourth shoot for December cup; Christmas Day Cup, 25 targets; Metropolitan Individual Championship; Continuous match.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

1902.

Jan. 1.—Ossining, N. Y.—New Year's Day Live-Bird Handicap shoot of the Ossining Gun Club. C. G. Blandford, Capt.

June 10-11.—Muncie, Ind.—Indiana Trapshooters' League's annual tournament.

Jan. 14-17.—Hamilton, Ont.—Twelfth annual tournament of the Hamilton Gun Club. F. B. Vallance, Cor. Sec'y.

March 3-April 5.—Blue River Park, Kansas City, Mo.—Grand American Handicap at live birds. Ed. Banks, Sec'y, 318 Broadway, New York.

May 6-9.—Interstate Park, L. I.—Interstate Association's Grand American Handicap at targets. Edward Banks, Sec'y; Elmer E. Shaner, Manager.

May 13-16.—Oil City, Pa.—Annual meeting of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. F. S. Bates, Cor. Sec'y.

May 30-31.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

June 3-5.—Cleveland, O.—Tournament of the Ohio Trapshooters' League, under the auspices of the Cleveland Gun Club.

June 9-13.—Rochester, N. Y.—Forty-fourth annual tournament of the New York State Association for the Protection of Fish and Game.

June 10-11.—Muncie, Ind.—Indiana Trapshooters' League's annual tournament.

DRIVERS AND TWISTERS.

Kansas City, Mo., trap matters are taking a lively turn, the shooters of that section having applied their skill and energy to pull off the Kansas City Midwinter Tournament on Dec. 18, 19, 20 and 21, both targets and live birds. In a very brief time they have secured some special attractions, in addition to the regular programme. The special events are: The Sportsmen's Review cup, a match at 100 live birds, between Messrs. J. A. R. Elliott, holder, and R. O. Heikes, challenger. On Dec. 20 the maiden contest for the new live-bird challenge championship trophy will take place. This trophy is emblematic of the live-bird championship of the world, and is offered by the Hazard Powder Company. The handicap committee engaged to officiate concerning it are Chas. J. Schmelzer, J. A. R. Elliott, Frank Parmelee, W. R. Crosby and Chris. Gottlieb. This contest will be a handicap from 27 to 32yds. In this connection we would respectfully call attention to the management that no trapshooting contest wherein a handicap obtains is considered a championship event. On Dec. 21 the ten-man team shoot, Omaha vs. Kansas City, 25 live birds per man, will take place. Dec. 19 is a target day; targets thrown free; \$50 added; handicaps 14 to 20yds. Handicap committee: Messrs. Tom A. Marshall, Rolla O. Heikes and Chas. W. Budd. Midland Hotel will be headquarters.

Mr. Frank Butler and wife (Miss Annie Oakley) returned to their home in the exclusive section, Nutley, N. J., early this week. Mr. Butler for several weeks has been staying at Interstate Park, where he has added greatly to the enjoyment of the shooters by introducing some innocent and inexpensive forms of amusement, the most popular of which is Cowboy pool, a game which ends the next or subsequent day after it is begun. Mrs. Butler has been visiting friends in Buffalo during some days past. We are pleased to state that this charming lady shooter is almost entirely recovered from the frightful accident, the wreck of the Wild West train at Linwood, N. C., recently. After seventeen years of starring with the Wild West show, Mr. and Mrs. Butler severed their connection with it, feeling that after wandering over nearly every part of the civilized world, they richly deserved a rest. While this is true beyond question, the Wild West show loses one of its greatest attractions. While the Wild West is a great institution, the skillful and modest Annie Oakley did much to make it known, and much to make it a success.

The conditions for challenge which will govern the new challenge live-bird trophy, offered by the Hazard Powder Company, which will be the main event on Dec. 20, at the Kansas City midwinter tournament, are not yet definitely completed, but will probably be much after the manner of the conditions governing similar trophies. For further information concerning this trophy and the tournament those interested may obtain information of Mr. Chris Gottlieb, one of Kansas City's eminent and popular shooters.

Each day at the Kansas City Midwinter tournament shooting will commence at 9:30. Moneys will be divided by the Rose system in the ratios 4, 3, 2 and 1. Lunch will be served on the grounds. All guns and shells shipped to R. S. Elliott & Co., will be delivered on the grounds free of charge. In the programme is a line worth heeding, as follows: "Come and get a line on the next American Handicap grounds."

Mr. Elmer E. Shaner, manager of the Interstate Association, arrived in New York on Tuesday of this week. He is the embodiment of energy and good health, and is enthusiastic over the pleasing prospects of the next Grand American Handicap at live birds, which is to be held at Kansas City.

We regret that the reports concerning Mr. C. M. Lincoln are that he continues seriously ill in the hospital in Atlanta, Ga. He is prostrated with a severe attack of typhoid fever. We learn that he has every attention and comfort. The fever has taken a severe turn for the worse.

The Eastern championship, an event at 25 live birds, was shot at Interstate Park, L. I., on Wednesday of last week. There were nineteen contestants, of which Messrs. H. H. Stevens, Sim Glover and T. W. Morley tied on 24. In the shoot-off Mr. Stevens won in the eleventh round.

The Ossining (N. Y.) Gun Club will hold a live-bird handicap on New Year's Day. This club's events are noted for their good-fellowship and equitable competition. Any information concerning the competition will be furnished by Mr. C. G. Blandford, the captain of the Ossining Gun Club.

The annual meeting of the subscribers to the Interstate Association takes place on Thursday of this week, at which meeting the annual election of officers takes place, and application for the next year's tournaments are considered.

The Hazard Powder Company, 44 Cedar street, New York, has issued a large folder, on which is an excellent portrait of Mr. J. A. R. Elliott, with the trophies which he has won, and a list of his contests from 1897 to the year 1901.

Mr. John Watson, the veteran manager, announces that after Dec. 14 Watson's Park, Burnside Crossing, Ill., will be open daily at 1 o'clock P. M., for practice or matches, and that plenty of birds will always be on hand.

Mr. Albert A. Schoverling, secretary of the Richmond Gun Club, of Silver Lake, Staten Island, informs us that shoots will be held by his club on Dec. 11, 18 and 25. The Christmas Day shoot will commence at 10 o'clock.

The Forester Gun Club, of Newark, N. J., announces a live-bird and target shoot on Jan. 1, on which day it will keep open house. The secretary is Mr. John J. Fleming, 489 Mulberry street.

The Mount Kisco (N. Y.) Gun Club announces an all-day Christmas shoot. Mr. A. Betti is the captain of the club, and will be pleased to give all further particulars to inquirers.

The Boiling Springs Gun Club announces that it will hold a live-bird shoot, open to all, on the club grounds, East Rutherford, N. J., on Saturday of this week.

Mr. W. P. Markle, of the Markle Lead Works, St. Louis, arrived in New York on Thursday of last week, to visit in that quiet hamlet for several days.

The Garden City Gun Club will hold a regular club shoot at Watson's Park, Burnside Crossing, Ill., on Dec. 14.

The next shoot of the Oceanic Rod and Gun Club (the Cuckoos) is announced to take place on Dec. 22.

BERNARD WATERS.

Catchpole Gun Club.

Wolcott, N. Y., Dec. 4.—For the first time since the game season opened, a few of our members went over to the traps. Following are the scores made in a heavy snowstorm. Our club will shoot every Wednesday afternoon during the balance of the season, and a trophy will be put up for competition. This will be a handicap, so as to give the weaker shots a good show for winning, and to create interest among several young shooters who have purchased new guns and are anxious to get at the blue rocks thrown from magautrap:

E. A. WADSWORTH, Sec'y.

IN NEW JERSEY.

Forester Gun Club.

Newark, N. J.—The Forester Gun Club had a good attendance at their Thanksgiving Day shoot. The weather was very raw and cold, with a northwest wind blowing across the traps.

Event No. 1, was a live-bird handicap, optional sweep, 7 birds, Interstate rules to govern.

The club has been making great changes on its grounds by filling in and having the new-style of distance handicap on targets. The shooting committee is at work on the club's programme for Christmas, which will be another live-bird handicap, optional sweep, starting at 10 A. M., and has got A1 birds for the occasion.

New Year's Day Shoot.—The members have decided to have an open house all day on Jan. 1, 1902, starting in the morning with a 10-bird handicap, optional sweep. The club will give prizes to the men making the highest scores in this event.

Ycomans, 28.....1111122-7 Belcher, 28.....2022112-6 J J Fleming, 28.....1112211-7 *D Fleming, 27.....1021111-6 Ferguson, 29.....1212222-7 Tigh, 28.....1202211-6 *Parker, 27.....2112222-7 *Winans, 28.....1211201-6 *Tarlton, 27.....2112221-7 C Smith, 28.....1111110-6 Hayes, 28.....21*2222-6 *Foster, 26.....2020111-5

*Shot for birds. The others divided the money, 60 and 40 per cent.

In the target events the percentages of the day were as follows: Yeomans 85 per cent., J. J. Fleming 85, Hayes 68, Whitehead 74, D. Fleming 59, Felger 63, Tigh 61, Belcher 64, Nagel 47, A. Jewell 40, Eams 79, James 40, Ed. Jewell 63, C. Smith 76, Larkins 65, David 27, Parkhurst 15, MacDonald 20.

Hudson Gun Club.

Jersey City, N. J., Dec. 4.—Following are the scores made at the last shoot of the Hudson Gun Club, of Jersey City:

Table with columns for Events, Targets, and names with scores. Includes names like Bock, Barker, Van Dyne, Wied, J L H, Duke, G Hughes, F Schoverling, Black, Brown, Pearsall, Hansman.

Nos. 5, 6, 7 and 8 were star sweeps. No. 9 was at 20yds., both barrels.

ON LONG ISLAND.

Eastern Championship.

Interstate Park, L. I., Dec. 4.—The Eastern Championship, held at Interstate Park to-day, had nineteen contestants, New Jersey being quite well represented, as well as New York.

It was a day, in respect to weather, fit to try out the most skillful shooter. The wind was boisterously active at times, and the temperature was decidedly cold. A light skimming of snow covered the ground in places.

The competition was close. Out of the nineteen contestants twelve killed 20 or better. Three tied on 24, namely, Messrs. H. H. Stevens, of New Brunswick; Tim Glover, of New York, and T. W. Morley, of Interstate Park. The ties between these three were shot off miss-and-out. Stevens won in the eleventh round, Glover missing in that round, and Morley missing in the second.

All stood at 28yds., which rates it as an inferior class of performance, from a championship viewpoint, as 30yds. is the recognized mark for a championship event of the first class. Nevertheless, it affords a good preliminary school to competition for first-class championship.

Table of scores for Eastern Championship. Includes names like G E Greiff, I McKane, J E Super, J B King, S M Van Allen, F D Creamer, H H Stevens, W H Sanders, Dr F E Carman, S Glover, E A Geoffroy, J E Applegate, T W Morley, F W Lurgan, G G Stephenson, Jr., G W Huff, J P McKay, C P Adams, G R Schneider.

Oceanic Rod and Gun Club.

Rockaway Park, L. I., Dec. 9.—The following scores were made at the shoot of the Oceanic Rod and Gun Club. Cronje, an old shooter with a new name, distinguished himself to a degree of skill worthy of admiration, as in two 25-target events he was straight, and was formidable at all times. The scores:

Table of scores for Oceanic Rod and Gun Club. Includes names like Cronje, Jones, Muench, Duke, Mertens, Valentine, Scott.

Crescent Athletic Club.

Bay Ridge, L. I., Dec. 7.—The first contest for the December cup was closely contested; yet of the fourteen contestants but one—Mr. W. W. Marshall—made the possible 50. The conditions were 25 targets, expert traps; 25 targets, magautrap; handicap allowances added:

Table of scores for Crescent Athletic Club. Includes names like W W Marshall, Dr J J Keyes, F E Mendes, H L Meyer, H M Brigham, L M Palmer, Jr., L C Hopkins, F B Stephenson, Jr., G G Stephenson, Jr., H A Bourne, H B Vandever, Capt Money, F A Bedford, C J McDermott.

Two-man team shoot for Sykes cup, 25 targets, expert traps; 25 targets, magautrap:

Table of scores for Sykes cup. Includes names like Bourne, Bedford, Brigham, Keyes, Marshall, Palmer, Money, McDermott, Hopkins, Chapman.

Consolation handicap, 25 targets, expert traps, handicap allowances added:

Table of scores for Sykes cup consolation. Includes names like E A Bedford, Mendes, Marshall, Money, Meyer, Hopkins, Geo Stephenson, Jr., Jack, McDermott.

Shoot-off, 15 targets, expert traps, handicap allowances added:

Table of scores for Sykes cup shoot-off. Includes names like Mendes, Bedford, Marshall, F B Stephenson, Brigham, G Stephenson, Jr.

Shoot for trophy, 10 pairs, magautrap; handicap allowances added:

Table of scores for Sykes cup trophy. Includes names like Marshall, F B Stephenson, Brigham, G Stephenson, Jr.

Sweepstake, 25 targets, magautrap: F. B. Stephenson 25, Brigham 22, Jack 17, Meyer 17.

Brooklyn Gun Club.

Brooklyn, L. I., Dec. 7.—The weekly shoot of the Brooklyn Gun Club was active in the way of competition, though not numerous in the way of attendance. Several matches were shot, the main one being between John Wright and Super, at 30 singles and 10 pairs, the former winning by a score of 41 to 34. The main event was the Prize Cup Handicap, at 25 targets. This event was won by King. The scores:

Table of scores for Brooklyn Gun Club. Includes names like Super, Capt Borland, Wright, Rider, King.

New Utrecht Gun Club.

Interstate Park, L. I., Dec. 7.—There was a light wind, about 9 o'clock in direction, hardly strong enough to affect the flights of the birds. The silver cup, the prize in event No. 3, was the one which was to have been shot for on the 4th inst. Mr. W. J. Lurgan won in No. 1 event. Mr. F. D. Creamer won in No. 2. Mr. G. W. Hagedorn won in No. 3.

Nos. 1 and 2 were at 7 birds, for prizes. All stood at 28yds.:

Table of scores for New Utrecht Gun Club. Includes names like F D Creamer, W J Lurgan, R W Huff, J Stevens, F Butler.

Shoot-off of No. 2, miss-and-out: Creamer11122 Huff0 Lurgan11110

No. 3 was at 15 birds, for silver cup. No. 4 was at 5 birds, for birds. No. 5 was at 5 birds, for birds, then miss-and-out:

Table of scores for New Utrecht Gun Club. Includes names like F D Creamer, R W Huff, W J Lurgan, T W Morley, G W Hagedorn, H Kryn, C M Meyer, J Stevens.

WESTERN TRAPS.

Garfield Gun Club.

Chicago, Dec. 7.—The appended scores were made on our grounds to-day, on the occasion of the fifth trophy shoot of the first series. T. W. Eaton won Class A trophy; A. D. Dorman won Class B trophy, both on scores of 11 out of 12, while C. J. Wolff extended his mortgage on Class C by killing his usual 9.

The day was an unpleasant one for trapshooting, the air being damp and very chilling. Quite a heavy fog hung over the grounds toward evening, making the shooting difficult.

The birds were a mixed lot, among them being some very fast ones, while most were good average birds, with an occasional duffer. The attendance was fair, considering the weather conditions.

At a meeting of the board of directors, held to-day, it was decided to divide our regular series of fourteen shoots into two series of seven shoots each; also to divide prize money in the middle, appropriating one-half of it to each series.

Members must shoot in four of the seven contests of a series to be eligible to win a trophy, and trophies awarded are the four best scores made during the series. We adopted the above plan on targets during the summer, and found it to give the most satisfaction and encouragement of any yet used. All members to be reclassified at the end of each series:

Table of scores for Garfield Gun Club. Includes names like C H Kehl, Dr Meeck, H N Delano, A D Dorman, J McDonald, W T Johnson, T W Eaton, Ed Eaton, A McGowan, A J Wolff, Dr Shaw, L Wolff, W A Jones, S E Young, F G Barnard.

Trap at Watson's Park.

Watson's Park, Burnside-Crossing, Ill., Dec. 3.—The following events took place at Watson's Park last week:

Table of scores for Watson's Park. Includes names like Howard, Wilkes, Walters, Wilson.

Table of scores for Watson's Park. Includes names like Howard, Wilkes, Walters, Leonard, Howard, Wilkes, Walters, Wilson.

Keystone Shooting League.

HOLMESBURG JUNCTION, Philadelphia, Dec. 7.—Mr. I. W. Budd took the honors in the cup event, with good birds to test the skill, and good competitors to force good effort.

The competition of the league has diminished somewhat recently, and to stimulate it, it is said that the board of governors are considering a series of twelve-man team matches with the Frankford Gun Club, for a trophy now held by the latter, and a twelve-man team contest at live birds with the Baltimore Shooting Association. Also a team match with Baltimore and New York at 15 birds per man, one match in each city. Also J. K. Starr is now preparing a programme for a live-bird tourney, which will be shot on the grounds of the Keystone League early next year. The tourney will run through two days, and the principal event will be a 50-bird handicap, open to all, \$50 entrance.

The challenge cup contest had ten contestants, of whom four tied. Mr. Fox withdrew, and in the shoot-off among the three interested, Mr. Budd won. The conditions were 10 birds, 28yds. rise, semi-monthly event; ties to be shot off at 3 birds. The scores:

Table of scores for Keystone Shooting League. Includes names like A H Fox, C Fitzgerald, I W Budd, J Leek, J Brewer, F Hobbs, C Busby, C Geikler, F W Van Loon, J Bower.

The club handicap, an event at 10 live birds, \$1 entrance to members, sweepstake, entrance \$2.50, resulted as follows:

Table of scores for Keystone Shooting League club handicap. Includes names like Leek, Winchester, Hobbs, Budd, Darby, Geikler, Brewer, Busby, Lecdom, Van Loon, Bower, Fitzgerald.

Sweepstake, 7 birds, 30yds. rise, \$3 entrance, Rose system: Budd0122212-6 Brewer0222222-6 Bower*102222-5 Leek222*112-6 Hobbs222222-7

Columbus Gun Club.

COLUMBUS, Wis., Dec. 2.—Following are the scores made by members of the Columbus Gun Club at live birds, on Nov. 28, the club disposing of over 600 first-class birds. The weather was good, with the exception of a high wind blowing directly across the traps, making it a difficult job to stop fast birds within bounds.

Our local club expects to hold a big live-bird shoot, after the holidays, open to the world:

Twenty-five live birds, \$5 entrance, 30yds.:

Table of scores for Columbus Gun Club. Includes names like G O Dering, H O Anderson, R F Topp vs. R. D. Rutledge, R F Topp.

Twenty-five birds, 30yds. rise, \$5 entrance, birds extra, high guns: G O Dering1*221220211222211111*22*-21 H O Anderson2121211122*210*2101202-19 R F Topp02*0200102212020*2111001-14 110200012*10*12112010111-16-30 1*221221021021021021010-19 12222220122102202211222-22-41

Boston Shooting Association.

WELLINGTON, Mass., Dec. 9.—Following are the scores made at shoot held on grounds of Boston Shooting Association, Dec. 7:

Table of scores for Boston Shooting Association. Includes names like Herbert, P H, Dennison, Coffin, Le Roy, Horace, Lane, Bond, Richards, Ellyson, Farmer, Puck, Rule, Frank, Philips, Everett, Williams, Colson, Barry, Killy, Hawkins, S Wood, Peabody, Daggett.

Westmount Gun Club.

MONTREAL, Que., Dec. 9.—There was an enthusiastic gathering of lovers of the gun at the Westmount Gun Club grounds, Montreal, Saturday afternoon, to witness the contests for the individual trophy between Messrs. Galbraith and Hutcheson, and the spoon shoot, open to the members of the club.

The day was clear, keen and sharp, with a head-on wind that made the swiftly thrown targets very uneven in their flight—either skyscrapers or skimmers—like a frightened grouse whirring for its covert.

Mr. Galbraith secured a win on the trophy with a score of 17 against Mr. Hutcheson's 16. Dr. Oliver captured the best spoon with a score of 19 out of 20. Elliott took second prize with 16 broken targets.

In the other events that followed, Mr. Nash smashed 24 out of 25, closely followed by N. P. L., Kennedy, Elliott and James.

Next Saturday Mr. Galbraith has to defend the trophy against Kennedy, and the winner then has to face N. P. L.; then comes Hutcheson, which event will wind up the trophy contests.

Every shooter present used Robin Hood powder, loaded and re-loaded in Robia Hood shells. STANSTEAD.

Woodlake Gun Club.

WOOD LAKE, Neb., Dec. 5.—The regular weekly shoot of the Wood Lake Gun Club took place on the club's grounds to-day, having been postponed from yesterday on account of a blizzard, which made it impossible to run off the shoot with any degree of comfort.

As usual with postponed shoots, the attendance was not up to standard. However, those who were present had a good time and were treated to some pretty good shooting for beginners, as also an exciting shoot-off for the medal between Le Roy, Leach and Chrysler, the former winning on 5 straight, his opponent accounting for only 3 of his 5. Mrs. W. A. Leach kept score, to the entire satisfaction of all, and Mr. W. A. Leach, in addition to running the traps, made the high score for the day, 22 out of 25, with a run of 14 straight.

Tuesday of each week will be regular shoot day hereafter. Following are the scores in the event at 25 targets: *W. A. Leach 22, Le Roy Leach 18, W. Chrysler 18, Frank Day 15, Brahmstrait 8.

*Not eligible for medal. LEACH.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

FOREST AND STREAM CHRISTMAS NUMBER

The Christmas Number of Forest and Stream will be the next one, December 28th.

As with the Christmas Numbers of other years, the one for 1901 will contain a real store of good reading. This is the list of sketches and stories:

In Lusty Manhood. *Charles Hallock.*

Selling the Bear's Hide. *Chas. S. Davison.*

A Man o' the Woods. *Fayette Durlin.*

Sea Rack. *William Edward Aitken.*

Casey's Wildcat. *Francis Moonan.*

The Tale of Lualu's Hunt.
Llewella Pierce Churchill.

Luck with a Meat Gun. *Ransacker.*

Faithful Fido. *M. W. Montgomery.*

* * If you get the paper from a newsdealer you should take the precaution to order in advance.

LONG-RANGE RIFLE SHOOTING.

IN our rifle columns to-day is the story of a most notable reunion. The victors of that series of rifle victories in '74-'77, which placed America as the champion of champions in the rifle world, gathered to talk over old times, rejoice once more in the throb of triumph, name with words of regret the few who had dropped from the ranks, and display with pride the medals which had meant so much in the getting. But there was a special reason which had led Col. Leslie C. Bruce to bestir himself in organizing the gathering. When these men parted company over two decades ago, rifle shooting of the highest type fell into desuetude, naturally perhaps, as there were no more victories to win, and the spur of competition was wanting to urge them to continue their effort. A new generation has come to the front, and the newcomers have failed to uphold the prestige of victory which Creedmoor had established. This was more than old-timers could quietly permit, and they met not only in sociable enjoyment, but to institute such measures as should redeem American rifle shooting from its present second-rate position.

The teams which went down before the Canadians and the Irishmen in the contest at Sea Girt during the past summer have much to excuse them. They met seasoned veterans of the butts, and they were handicapped in the way of arms to a degree which would have disheartened any contestant. The task now is to wipe out those defeats in still more signal victories, and it was to revive the old-time Amateur Rifle Club and its work that Col. Bruce had in mind when he took upon himself the task of organizing that reunion of Dec. 14, and acting as a very hospitable host.

The veterans can do no better service than to start those whose task it will be to redeem American shooting prestige in the exact groove followed in the 70's. The new club must be amateur, and it must be civilian. The man with the biggest title and its accompanying extra quantity of gold lace does not thereby and therefore have the most knowledge of rifle shooting or make the best rifle shot. He is more likely to be at a disadvantage because he is not free in his judgment to the merit of certain rifles. The old rule of the survival of the fittest must prevail, and the question of the fittest can only be determined by the proportion of bullseyes. Now, as

before, it will be the certain shot, utterly untrammled, who will work out results which the professional military workman must adopt. It was so when Creedmoor opened in 1873. The scores then made by amateur marksmen, who had not even taken on the dignity of privates, shamed the entire National Guard of the Union into a practical use of the arms which had before only done service in making parades a bit more glittering, and then the Regulars reluctantly followed suit and learned in the field before the butts, the limits to the efficiency of the old Springfield rifles.

So much for history, and to-day the situation is ripe for its repetition. Now, as then, the task is to fix the highest limits to the possibility of the current arm. Then it was the breechloader against the muzzleloader. Black powder and large calibers, with high trajectories and moderate ranges were the data to be worked upon. The rifle of to-day is of .30 caliber, and it must use a smokeless powder cartridge. This means a higher velocity with lower trajectory and much greater range. It is far from satisfactory now. Against all the claims of the makers of smokeless powder cartridges, the rifleman who undertakes to make high scores at 1,000 yards will find that "unaccountables" will creep into his score. This means that he gets misses where his holding and his trained judgment of wind tells him he should have a bullseye. It was the task of the old group of long-range men to eliminate the "unaccountable" from the arm then in use. It must be done again with the arm of to-day. It must not only be done at 1,000 yards, but at 2,000 yards, as the high-power weapon now assures us is entirely feasible. The material of to-day is different, but the successful method of the past will hold, and now as then, victory in a very pleasant and healthful sport will come, and in its train an impetus to our soldiers, both regular and volunteer, which is even more needful to-day than at any previous time.

Any organization which the old-time riflemen may form is sure to be one which any young rifleman may be proud to join, and there is no reason to doubt that the series of well-won victories of the closing quarter of the last century may be gloriously duplicated in the opening years of this.

Among the distinguished victims of shooting accidents was Wm. E. Gladstone, who in 1842 lost the forefinger of his left hand by an explosion of his gun. The fact has come to public attention anew because of a question as to realism in art, which has been raised by a critic of the new Gladstone statue at Manchester, in which the sculptor has restored the finger. The critic expresses the opinion that the artist should have been true to the fact, and that the bronze Gladstone represented as delivering a speech should be the maimed Gladstone without the forefinger. It is a delicate question of which much might be said on both sides. Where the maiming is so considerable as to become a characteristic associated with the personage in the popular mind, the true art unquestionably is to perpetuate the fact in statue or painting. Thus the several effigies of old Peter Stuyvesant which decorate, if they do not adorn, Manhattan Island, show the wooden leg which helped to make him such a picturesque figure in New Amsterdam. It is not so clear that the lesser maimings, so insignificant, for instance, as the loss of a finger, should be perpetuated in art. If the sculptural realists shall have their way, however, and insist upon showing us in bronze as the chance explosion of a gun in the field or the act of a fellow shooter may leave us maimed or dismembered, those of us who are elected to be cast in bronze by our grateful country would do well to forego the shotgun and the rifle.

Setting aside the well-worn and by this time deadly dull jokes, on antidotes for the bites of venomous snakes, the subject of poisoning by snakes has always been an interesting one, and a vast deal of serious work has been done to discover some remedy which should be a specific in the case of a wound from the fang of a venomous snake. Many remedies have been suggested by different investigators, but it may be questioned whether any of them have proved generally effective.

One of the latest of these remedies is antivenene, discovered by Dr. Calmette, and a recent issue of the London *Lancet* contains an extract from a report by a medical

officer on an Indian railway line, which gives strong testimony as to its value. The quotation is as follows:

"On the night of the 23d [of August] I was called to see a coolie woman who had been bitten by a large snake, supposed to be a cobra. She was said to have been bitten about 7 P. M., and I did not see her till two hours later. She was then practically moribund, the throat paralyzed and consciousness completely lost. All the symptoms of poisoning by colubrine venom were well marked. I injected a full dose of Dr. Calmette's antivenene, but was not sanguine as to the result, the patient's condition being apparently hopeless. The effect of the remedy was marvelous; consciousness returned in fifteen minutes, and I was so encouraged by the result of the first injection that I decided to give another dose of the serum. It acted like magic, and within three hours of the first injection the patient was well."

The protest of our correspondent prompted by the sight of long freight trains loaded with Christmas trees is well taken. Spruces, firs and other trees are cut down by the hundreds of thousands annually for use as Christmas trees. Vast tracts of young forest growth are wiped out, and the devastation of these areas is such as cannot be repaired for many years to come. The drain which this makes upon the rapidly lessening forestry resources of our country is most disastrous. The Christmas tree industry, too, is a foolish enterprise on the part of those who supply the trees at first hand, since the ridiculously small prices received can in no measure compensate for the loss of the revenues which would be derived from the same territory were the trees permitted to grow to the proper market size for lumber. There is so much of sentiment attaching to the Christmas tree that he who inveighs against the custom is likely to be as one crying in the wilderness. And yet it may be that with a more intelligent comprehension of what this annual destruction means, some substitute may be found for the wild evergreen, or the trees may be produced in plantations maintained for the purpose. The Christmas tree folly is of a piece with the heedless, thoughtless and improvident squandering of forestry resources in America, and like other abuses it will be corrected as one result of the growth of intelligence in forestry concerns.

He was getting ready for the gold mines, and one morning he appeared at the office with a gigantic six-shooter bulging out of his hip pocket. For the next week he practiced assiduously that part of the manual of arms known as getting the drop. At the most unexpected moments, in the midst of a conversation, or when greeting a friend, he would "pull his gun" and cover the astonished victim. If he ever had occasion at the mines to exercise his proficiency in time of stress we never heard of it, for mining in fact is not always the strenuous life the books make it. If he had been going deer hunting in Maine the case would have been different. To be able to get the drop on the other fellow is a very necessary qualification, without which no man who values his life should venture into the deer woods. The rule is to shoot the other man before he can shoot you. If that rule had been followed in Maine and Minnesota this year a number of hunters now dead would have been alive, and a corresponding number of hunters now alive would be dead.

Complaints are made that the Maine penalty for man-killing in the woods has not sufficed to prevent these casualties. Of course it has not, for no attempt has been made to enforce it by indicting and punishing the man-killers. Before drawing conclusions as to the good of the law, give it a fair test. The effect of punishing offenders would surely be salutary, because it would fasten upon the public intelligence the criminal character of the shooting, and this in some cases at least would insure more caution on the part of hunters.

Dr. Tarleton H. Bean, who is Chief of the Department of Fish and Game of the St. Louis World's Fair, expresses the opinion that the fair will be an epoch-making exposition, far surpassing anything of the kind of the past, and that the fish and game of this country and of the world will have a more adequate representation than they have been given at any previous exposition. That forestry also will be well represented is a foregone conclusion.

The Sportsman Tourist.

A Tennessee Outing.—I.

THE combined effect of being the proud possessor of a brand new gun and the recipient of a cordial invitation from a friend to take his dog out for him proved too much for the conscious knowledge that my business needed me, and I went hunting.

Among other good things in the section of Tennessee which is the writer's habitat, is an unvarying, beautiful spell of autumn weather, which this year even surpassed itself.

My destination, a small village in Hawkins county, near the marble quarry, from which comes the world-famous "Hawkins county red marble," was twelve miles from the railroad by the report of the most prejudiced and eighteen miles by those of the old inhabitant of the genus africanus, who vowed he spoke from an experience of many years of driving the road.

Jack was the name of my friend's dog, a big, slim, rangy setter, with all sorts of promising points and as kind and gentlemanly a specimen of the dog tribe as I have ever known. From the time I met him first and slapped his flanks until head and tail met in a paroxysm of joy and pulled his long, silky ears, until his kindly brown eyes grew soft with delight of being loved, we were friends.

Settled on the train for our forty-mile ride, I went forward to the baggage car to see that he was safely placed, and not worrying over the confusion incident to a baggage car. As I entered the door the baggage man was slamming down a tremendous trunk within a few inches of the dog's head, with a crash that would have disturbed a terra cotta image, with no other effect than to make Jack open his eyes in mild surprise. Then, finding that he needed the space occupied by the dog, the man, who was either a good reader of canine character or very reckless, coolly picked the big dog up and pitched him upon a pile of trunks four trunks high, where, after one look of wonder at the strong man, the old fellow curled down for a quiet time. Concluding that the dog was an experienced traveler. I returned to my seat in the smoking car with an easy mind.

At the end of our railroad journey we found that as it was mid-afternoon, night would overtake us before we could reach our destination, so settled down for the night in a hotel, I occupying No. 41 front, and Jack the furnace sawdust pile in the basement. I heard him complaining about something that did not entirely suit him at intervals of an hour or more, before "nature's sweet restorer" visited me, but as I had troubles of my own I left him to tell his troubles to the night watchman.

We started on our twelve or eighteen mile drive the next morning at 7:30, and I feel sure that the man who said it was the former distance must have had the same kind of weather to drive in that we had, a clear, bright, frosty day. The air was snappy, the horses full of go, the road firm and tolerably smooth, and the woods fairly riotous in autumn colors.

By 10:30 we were enjoying the hearty welcome that comes so freely and frankly from the native Tennessean, be his domicile a two-room cabin and his pseudonym Uncle Bill, or a two-story mansion and Colonel, sahl

My host, an M.D., was the owner of one of our many famous mineral springs that abound in the eastern part of the State, known as Wright's Epsom Spring, the waters of which had proved such a general specific for all the ills to which flesh is heir, especially those of the stomach and liver, that, discarding the orthodox saddlebags, he had concentrated his efforts to benefit the race by the dissemination of epsom water to the entire satisfaction of his patrons and increased profit to himself.

Greeting me warmly, he ushered me into the sitting room of his big, old-fashioned house, and at once I knew my visit would be a delight, even if the weather should change and birds prove scarce, for half across the end of that most cosy of all rooms, the "sitting" room of a country home, stretched a big, open fireplace, with a glorious wood fire snapping and purring its welcome.

I love poetry and pictures, but would willingly lay aside Shakespeare, Browning or Swinburne, and turn from Rembrandt, Van Dyke or Bonheur to look upon a glorious combination of poetry and picture such as is seen in the open wood fire—ever changing, always beautiful, fitting every mood known to man; a joy in happiness, a consolation in sorrow, literally "a thing of beauty and a joy forever."

The good lady of the house had, with the spirit of self-sacrifice incident to a devoted mother, left her pleasant home and gone to live in town for the school term, to be near and care for the young folks of the household while they pursued the devious way that now leads up to a diplomat; but she had left a most capable substitute, as fully demonstrated when the lady in charge of my friend's house invited us in to dinner shortly after I had gotten brushed up and thawed out.

During the dinner hour the Doctor told me, as I already knew, that he was not a sportsman, but that he had located the nearby coveys of birds, and secured me the necessary permission to shoot on adjoining lands, and when business permitted would go with me occasionally on short trips, as general factotum and appreciative audience. He also assured me that the best information he could obtain indicated that birds were very plentiful; but as there had been no heavy rains since frost had set in, the cover was very heavy and weed pollen almost too much for any dog to do good work, in both of which surmises I found him entirely correct.

Immediately after dinner I got into my shooting clothes, unchained Jack, and sallied forth, accompanied by the Doctor, who agreed to go far enough to give me the lay of the land for my first try at the birds. It was very necessary that I keep on the lands covered by the permits granted the Doctor for me, as the Legislature of Tennessee, unlike the legislative bodies of other States, which may be guilty of unwise or unnecessary acts, is never known to pass any act that can possibly be criticised, as witnessed by the act regulating the going on the lands of another for the purpose of hunting, which it

solemnly declares can only be lawfully done when the sportsman is armed, in addition to the usual equipment, with "the written permission of the owner of the lands."

Jack had a wire edge on that bid fair to make our first outing only a steam letting. Fences, ditches, fallen trees and everything that came in his way he jumped, or tried to, and ran himself at a gait and to a degree that in another dog would have speedily resulted in utter exhaustion; but Jack was not another dog; he was *the* dog. Many a good and true dog have I shot over, but none of them ever was wont to cover as much ground and so thoroughly as this same dear old, gentle, rangy Jack.

We were a pair, that first afternoon out, and though I could not keep the pace that the dog set, I was in perfect sympathy with him, and occasionally cut a bit of a caper.

We crossed a meadow where hay had been gathered, cut off the corner of a field sowed in wheat, and were working up a fence line, where the fence had been mostly removed, leaving the bushes and briars that had grown in the corners, when we first found game. It was a rabbit, ordinary in size, when it came bobbing down toward me from where Jack had jumped it, but a tremendous big fellow before I succeeded in bestowing it upon a grateful little son of Ham, after carrying it a mile or more. I rarely can resist a rabbit, and this one, crowding right down on me—with all my wire edge on and the good dog standing like the renowned idol of the Confederacy, only up on tiptoe, craning his neck to see over a slight elevation that was between us—quickly went the way of all his kind that fool around a tenderfoot from town when he has a gun.

Soon thereafter we worked into a field with occasional patches of sedge grass, and without any preliminary skirmishing down went old Jack to a steady point, and with a "Yea-up! Steady, boy!" I closed in on him, when, with a quick, apologetic glance around from under his right ear, he admitted that he had been a bit hasty, and though close on feathers, did not have the real thing. It was meadowlarks, and they rose nicely, and were a sore temptation to the new gun, but as I was off for several days, and had no excuse for getting in all possible shooting, even not considering that the lark is not only pretty but a sweet singer, I dropped the gun back on my shoulder, and bid the dog, "Try again."

We found our first covey in a cornfield, or, rather, in a dense thicket growing in and around a large sink hole in the middle of the field. The corn was thick and high, and grew right up to the edge of the thicket, and when the dog did not return to report for three or four minutes I knew he had found birds, and started off to hunt him. Round and round, back and forth, I tramped in that jungle for ten minutes, and finally walked into the covey of birds in the edge of the thicket without having seen the dog, which had become exhausted and lain down on his point. They were big, strong-flying birds, and dashed through the trees like pheasants, across to the other side of the thicket.

I should have been facetiously hilarious at the expense of a friend who stood where I did, and tried, with the right and then the left, to stop one of those brown rockets without disturbing a feather, and could have told him exactly wherein he had miscalculated; but, with the best of opportunities, I have as yet failed to figure out any cause or excuse for either the one or the other miss that I then scored, except the cold fact that I did not hold on the birds. Jack was disappointed, and plainly told me so, and almost caused an unpleasantness by insisting upon looking for a "dead bird" that was not to be found. He finally allowed himself to be persuaded to join me in a forward movement to try again, and with the thought that I had better arrange to borrow my next dog from a man who did not teach his dog that a bird was to be found dead every time he fired a shot, we resumed our hunt.

The first point the dog made, when we found the birds again, was a single, which flew straight down between the tall rows of corn, making the shot like rolling a ball down a tenpin alley; but the old fellow was not hypercritical, and when he gave up the bird and received his welcome pat on the head, his congratulatory antics were as sincere as though I had made a really difficult shot.

The next find was three birds, which flushed all together. The first one flew low and was lost in the thick corn before I could hold on it, turning half way round. I tried the second, with the same result; and wheeling entirely around I killed the third bird, that had risen above the corn—a long and difficult shot.

By the hardest kind of work we routed out three more birds from the corn jungle, one of which we only heard, one we only scared and one we only feathered; then, concluding that open country, with fewer birds, would give better average results, we made for the nearest fence.

The next field hunted was a level stretch, from which hay had been cut, and which had been left undisturbed in several places, where the weeds were in the majority. Several larks flushed as we got well out in the hay stubble, and at last the dog came down to a fine point off to my left.

Supposing it to be another lark, I walked down on him, directly in his face, not taking the trouble to properly round and come up from the rear, and just as I closed in on him, thinking that I would give the lark a start of 50 yards and then try a long shot, a fine covey of quail burst out of the grass immediately in front of the dog and between us, and flying directly in my face, divided over my shoulders, right and left, and flew straight as a gun barrel on over the open field. Of course even such an unexpected event could not disturb the equanimity of a veteran, and so of course I coolly turned on my heel, selected a bird, killed it with the right barrel, then quickly but coolly selected two that were in line and killed them both with the second barrel.

No, I can't say that it happened exactly that way, but it seemed to me that it might have, as I stood looking at that splendid covey of birds, holding my empty gun, both barrels of which I had fired in a fine frenzy of excitement before the birds had gone 50 feet past me and without ruffling a feather.

How many kinds of fools I called myself in the next few minutes I cannot now recall, but it was several.

But Jack, the kind, considerate, gentle old fellow, was

positively rude. He searched the ground over and over for dead birds, and then came and insisted on an explanation, refusing to allow me to pet him and change the subject. Finally after repeatedly and thoroughly hunting out the ground, and assuring himself beyond the shadow of a doubt that I had let the entire covey get away, he went to the extreme end of the field and absented himself longer from me than he had done at any one time since we started.

The birds had gone into a cornfield, but as the corn had been gathered it was a very fair field to shoot in so I concluded that there was yet a chance for me to redeem myself. Resting on the fence until Jack worked off his fit of indignation, I called him to me, and petted him until we mutually agreed to forget, and then at it we went again.

The field had a slight elevation about midway, and here the dog caught scent, and after a half dozen cautious steps, was down on a point by a shack of corn.

With the ground sloping away slightly in all directions, and the corn shacks low enough to be out of the way, it was an ideal place to shoot, and there was no excuse for any man who pretended to shoot missing more than an occasional bird, and I knew it. The first flush was a pair, and they fell within 20 feet of each other, clean killed. Then a single bird, which showed ragged at the first barrel and was fairly stopped with the second. Another pair offered next, only one of which was considerate enough to stop. Then a single was missed with both barrels, but before the smoke had cleared away another double was made that proved ample consolation. Three more birds were brought to bag with five more shots, and then, as the survivors were scattered, Jack and I shook hands and agreed to call it a day. A native asked me, "how many birds?" as I dropped from the fence into the road, and I had to admit that I did not know, but well I did know that, although my game pockets were not entirely filled, I had a full sense of entire satisfaction with my afternoon.

The wood fire shot a warm red welcome light from every window as I approached the house, and after a hearty supper and a pleasant evening with the genial Doctor, I turned in, with the fervent wish that the morning might be bright and clear.

LEWIS HOPKINS.

Lost in the Bush.

A GOOD many years ago I was on the station of Saltbush Park in Queensland, Australia, breaking wild horses to ride. When forty or fifty had been partially tamed and were somewhat used to being guided by an intelligence and a will stronger than their own, it was the practice of Mr. C. J. Harden, the manager, to drive them to Rockhampton, about 250 miles distant, where they met with a ready sale. He usually took me with him.

On one trip, of which I am to write, Harden was detained in town by some business, so he told me to return alone. Just as I was starting he said to me: "We have not seen the Diamond mare's mob [Australian for band] for some time. I wish you would hunt them up when you get back." When within three or four miles of Saltbush, I thought I could see a gray animal across Funnel Creek. This creek ran parallel to the road for about the last six miles, and was about a half-mile from it. Like all Australian creeks and rivers, in Queensland at any rate, it was dry except during the rainy season, when it became a foaming torrent. In places the water stood in holes, some small and shallow, and others from one-quarter to one-half mile in length, and several feet deep. All along the banks of these creeks grow mighty gum trees, with she-oak fig trees, etc., so that it is almost impossible at a short distance to distinguish anything on the other side.

Funnel Creek has very steep banks, so on arriving at the top of the bank next to me I carefully looked around on the other side. Our nearest neighbors lived thirty miles away, and sometimes we did not see a strange face for a month. Imagine, therefore, if you can, what a terrible start I gave when I heard a human groan from the bottom of the creek.

Thoroughly scared, I looked down, and there I saw a man lying extended on the sandy bottom, bare-headed and evidently in a bad way. Recovering my wits somewhat, I tied my horse to a bush and descended the steep bank. On reaching the bottom I walked up to the prostrate figure and said, "Hello, mate! What's the matter?" Not receiving any answer, I raised the limp body to a sitting position, and could then see that the unfortunate man was perishing of thirst, for his tongue protruded from his mouth, and resembled a piece of dried bologna sausage.

Dragging him gently to the side of the creek, I placed his back against the bank in a shady place, and then hastily climbed up to where I had left my horse to get a tin pannikin off my saddle. Having secured this, I hastened down the bank and went up the creek a few hundred yards to where I knew there was a water hole.

Turning the vessel bottom upward and baring my arm, I thrust it down under the water and then reversing it I brought it up quickly. Though young and inexperienced, I knew it would be fatal to allow him to drink much at one time, so I continually moistened his tongue, and wetting my handkerchief tied it round his head. At the end of a couple of hours the man was much revived, so with incredible difficulty I succeeded in getting him up the bank and placing him on my horse. I was a slightly built young fellow in those days, and I have never been able to understand how I was enabled to perform a feat requiring so much strength. Luckily, my horse was gentle, because all my strength was required to hold the man on the animal. After a walk of what seemed to be many hours, but probably was not much more than one, we reached Saltbush Station. I gave him food and milk in small quantities and at short intervals. Toward evening he was sufficiently recovered to talk, incoherently it is true, but little by little I gathered the following story: His name was Dick Turner, and he had been a shepherd at Grosvenor Downs for over two years. Wishing to go to Cardowan, which was eighty miles away by road, in an evil hour he had been persuaded to strike across the bush, having been told he could cut off thirty miles, with the inevitable result that by nightfall he had lost all bearings.

Dick Turner well knew what this meant in the Australian bush; indeed, when herding his sheep he had once found the bleached skeleton of an unfortunate man, who had evidently perished in this way. I have learned from experience that when you are lost you become so demoralized that you cannot recognize places with which you have been familiar for years. For some days—Turner never knew how many—he had wearily dragged himself along, frequently startled at coming across human tracks, which, however, on examination turned out to be his own, thus proving that he was moving in a circle. Finally, with the conviction that his case was hopeless, suffering from hunger and thirst, wandering aimlessly under a tropical sun, in his desperation he threw away first his swag, or bundle of clothes rolled in his blankets, and then from time to time he parted with everything but the clothes he wore, not even reserving his money or even his hat.

After this all was a blank until he recovered from the sunstroke he was suffering from when I found him. In about ten days he was well enough to resume his journey, so giving him one of my hats I put him in a cart and drove him to the crossing of the Connor's River, where many teams passed daily hauling copper ore from the Peak Downs to the seaport of Broudsound. Having arranged for his transfer to Broudsound, I parted from him, and I never saw or heard of him again.

Truth is stranger than fiction. Many a time when I have been musing alone on the strangeness of many things that are always happening around us, I have recalled upon what a very slender thread Dick Turner's chances of being rescued from a horrible death had hung.

If it had not been for the few chance words Harden had spoken about the Diamond mare, the man undoubtedly would have perished, and his bones might have been swept into oblivion by the next flood, thus adding one more victim to the many thousands who are continually being lost in the bush. E. CAVAN DANCE.

Ancient Pines.

I WAS greatly interested in Mr. Whitaker's tour through the Adirondacks, so well described in the current issue of FOREST AND STREAM. It certainly brought back to me many incidents in connection with my first trip through the Maine wilderness years ago, particularly my visit to Bald Mountain on the shores of Moixe Pond, above the forks of the Kennebec.

We were homeward bound, and as we came down Moxie we pulled our boat upon the beach and decided to tramp up the mountain and enjoy a view of the surrounding country, clothed in a garment of many colors dyed by the hand of Jack Frost.

Almost at the water's edge we encountered great pines, some of them three feet and over in diameter. Under our feet the moss was compressed until we almost sank knee deep in the vegetation. Climbing over great moss-covered windfalls, the dead and rotten wood crumbled under our weight. I never had a forest impress me with its "primevality," if I can so use the term, as did this particular spot. The smooth moss carpet and the gigantic moss-lined pines showed no sign that the man with an axe had been there before us. Those great trees stood tall and straight, until their meeting branches high up overhead gave one the idea of a succession of lofty cathedral aisles and arches.

Many of those trees no doubt could show rings, three hundred and over, were the cross-cut saw laid against them and their innermost recesses bared.

I talked with an old timber cruiser once on the age of pine trees and their reproduction, and he related an incident in connection with the age of the pine, which occurred up near Lake Itaska, in this State. He was passing through a growth of very old pine trees, when his attention was called to a moss-covered mound two feet high. Disturbing the surface with his axe, he found underneath the moss and mold a layer of pitch. Continuing his investigations he found what he called a prehistoric stump, the remnants of a pine tree that was fully three hundred years old when the standing giants around him were mere seedlings. And he argued in this way, that the stump of that particular windfall became covered with sap or pitch, and, thoroughly enveloped in this preserving material, it continued to hold its form long after the tree that had fallen had become food for worms and beetles, and when time had finally turned the great tree into mold and mother earth, yet was the stump there to tell the tale. The cruiser expressed himself unequivocally to the effect that the pitch-encased stump was the surviving link between the present and previous generation of pine trees, the last of the Mohicans. What caused that particular stump to become smothered in pitch he could not tell, but there the remains were pitch-preserved and moss-covered, although the roots had long since rotted away and severed their connection with the stump above ground.

From Itasca to Moxie is a big jump, but we must hurry back and finish our story. Before we had tramped a great while we began to get into a more sparse growth, especially as the slope of the mountain increased. In our path was a gigantic white birch, the bark on which had burst its fastenings and stood out in curly clusters to the very top of the tree.

Our guide, taking a match from his pocket, struck it and ignited the fluffy birch bark, when, with the roar of a hundred furnaces, the flames encircled the tree and mounted heavenward, I imagine, much like an oil well gusher afire. I thought it a very dangerous experiment at the time, but the guide laughed at our fears and scouted the idea of a forest fire starting from such a beginning. We finally reached the granite formation, and in due course reached the top of the mountain, which proved to be a great, flat, granite surface, acres in extent, covered with a thick mold, upon which the blueberry bushes thrived as I have seen them thrive nowhere else. It was seasonable for the berries, and without stepping out of one's tracks, after taking a favorable position, we could reach out and eat one's fill of the blue, sweet fruit. We saw bear tracks and realized that the black bears knew where the good things grew.

It was about noon when we reached the summit, and the view we enjoyed was something long to be remembered. The maples were abundantly in evidence, their

intense scarlet hues brightening up the entire woodland and contrasting with the deep, dark green of the pines. The landscape on all sides was dotted with little lakes, which glistened like so many jewels in the bright sunlight. It was scenery one hated to leave, and which failed to tire the eye.

It was many years ago, but those great, mossy, silent pine giants growing out of that moss-carpeted earth left an impress on my mind I never will forget. I can imagine the moose and deer wending their way at dusk through those silent sylvan avenues on their way to the lake to drink, and envy them their surroundings. I have often wondered if by this time the axe and saw had found my old friends and laid them low. Who of the readers of the FOREST AND STREAM having lately been over that particular ground can tell me? CHAS. CRISTADORO.

John Burroughs.

Editor Forest and Stream:

On the other side of the Hudson River, a few miles above this city, there lives in a little rustic house built by himself, a man whose name is a household word throughout this entire country. He is loved not only because his books have brought sweetness and sunshine to many households, but because of the infinite charm which he throws around everything in nature, in which he so delights to study and reveal.

Some few years ago it was my privilege and pleasure to have him join me on a trip for a few days to the lodge at Balsam Lake, situated some 2,500 feet above tide water in the Catskills, where we met a number of genial friends.

On the first day after our arrival we contented ourselves with fishing in the lake, but on the next day we followed a path which had been opened to the top of Balsam Mountain, nearly 4,000 feet high, and on this trip we were charmed by the wonderful knowledge of Mr. Burroughs.

There were flowers in our path and in the woods which we had never noticed, but he, with his wonderful knowledge of botany, discovered them and made them memorable forever; the sound of every insect was familiar to him, and he gave its name and he revealed to us their nature, and there was not a bird which he could not call by name—we never knew before the wealth of the flora and fauna in these mountains.

Just below the crest of the mountain there is a spring, from which flows a stream which empties into Balsam Lake, and which has a temperature of 44 degrees the year round.

On the crest of the mountain we had an observatory some 30 feet high, and from that Mr. Burroughs, with a field glass, could see toward the northwest the old farmhouse, some twenty-five miles distant, where he was born, and where he spent his boyhood days, and where he learned to know and love all that is beautiful in nature.

It is hardly necessary to say that there is no charm in a trip to the woods or mountains equal to that of delightful companionship, and this trip with Mr. Burroughs was one of the most delightful of my life.

It was my privilege a year or two ago to stand near the old farmhouse where he was born, and from there look up to the observatory where we had stood a few years before—and as I stood in the deep valley extending northerly from Roxbury, with mountains rising on either side, with their luxurious growth of trees and foliage, and learned how they had teemed with deer and birds and flowers when Mr. Burroughs was young, I learned whence came the mantle which he has worn so gracefully for many years, and which will never fall upon the shoulders of another. J. S. V. C.

DEC. 9.

A Walk Down South.—IX.

I LEFT the cheerful farmhouse of White, the foreman bricklayer, on Monday morning, Nov. 13. William White hoisted my pack to the top of a high load of corn fodder. I followed the basket to the top of the load, and on the crackling leaves and stalks ten or eleven feet above the road, settled for a ride almost to Tyrone. One of the streaks of luck which a pedestrian meets with had given me a ride of more than five miles.

It was a chilly morning, with a threatening sky. It seemed about to rain, but the ride was not rendered uncomfortable. One sinks into the load on a corn rack, and the wind does not find its way through the flying ribbons readily. In fact, the rounded top seemed to throw the breeze over one's body, it striking the face merely. The wind, it may be mentioned, does not chill a face on which the beard has been permitted to grow so much as it does a smooth-shaven face. The discomfort of a skin-tight shave on a cold morning, when every breath strikes the chin like the blast from a furnace, and the cold air comes like the wind from melting snow in the spring, is too great for the good appearance does.

The road past Bald Eagle (Olivia P. O.), to Vail and Tyrone along which I rode on the corn fodder looked to be as level and good as any that I had seen. In places a "regular railroad embankment" had been made, and on a wheel it must be delightful riding. On the corn it certainly was. The load swayed and tossed in a way that made me gasp at times, and I watched the driver to see if he was getting ready to jump from an upsetting load. He made no sign. It was the usual tilting and rolling of such wagons, apparently. That it was not at all severe I soon discovered by lining the pole with the tongue of the wagon. What seemed to be feet was only a sway of inches. What must it be on almost equally high loads of hemlock bark which have to go along rough hill roads, with mud holes hub deep and rocks axle high, with the swag of 4,500 pounds instead of that of a thousand?

Quail are spreading up and down the Bald Eagle Valley from the Nittany Club preserve, and some hunters say the pheasants and wild turkeys are increasing slowly. Rabbits are very plentiful everywhere that they can find shelter. They are stupid little beasts, and easily confused by things new to their experience.

At the east end of Tyrone I slid down from the load, caught my pack and succeeded in swingng it to my

shoulders, there being no convenient rest for it till the straps were adjusted. It began to sprinkle slightly as I waved good 'bye to White. Two boys down the road asked "What luck?" and I replied "Good," but it was not in the sense they meant, as I knew, so that was a sort of lie, and just the kind a hunter must often take refuge behind.

In Tyrone I heard of other pedestrians. A pair went through there a couple of years ago who had "wagered" that they could walk to Arizona from New York in sixty days. It was said that this couldn't be done; the walkers, however, winked, and said, in effect, that there was more than one way to skin a cat.

I searched Tyrone for maps of Maryland and West Virginia, but could find none. "Nobody would ask for them once in ten years," it was said. There was a hard shower that wet the store sidewalks, which I missed. There were five stores, in the windows of which guns were prominently displayed, that I noticed. Hunters are plentiful thereabouts.

From Tyrone to Bellwood is seven miles of picturesque roadway, but of the kind which must be seen. Two killdeer plover were in a marshy place half a mile short of the bridge over the creek. At the creek a Jew peddler with a horse and wagon pulled up his rig and demanded to know where I was going. I told him with meekness. "Where ye from?" he snapped. I told him I'd just come through Tyrone.

"What ye sellin'?" was his next burst.

"What ye take me for?" I ripped out, "a measly peddler—you ought to be able to tell I don't belong to that kind of a gang."

His round, dark face and heavy, flattish nose worked independently for a moment and then his manner was modified. We talked for some time good-naturedly about roads, distances and weathers.

"Ef I was going your way I would gif you a ride," he said, as he started away, and I told him I was just as much obliged.

At Bellwood I found my way to the trolley track and waited for the car to come. The trolley runs from Bellwood to Altoona, seven miles away. Then another line takes one into Hollidaysburg, seven miles further still. So far I had seen my route from Beech Creek, but beyond that there was a route to select, usually a task of some little trouble.

The ride into Hollidaysburg was not so pleasant as one might suppose. The car traveled too fast—I could not see where I was going. It was nearly dark, too, and there was nothing to be sure of while the car sped on across farms, over a stream, along line fences and past woods dimly seen. I was reminded at one place of the many lines that seek Coney Island from the City Hall, New York. A broad field suggested the flat marsh-like meadows near the sea. After dark lights here and there told of farmhouses or mere suburban residences. At Altoona I stood on a corner suggestive of Brooklyn streets to await the Hollidaysburg car. The rest of the ride I lost, save that I reached Hollidaysburg in no pleasant frame of mind. I was lonesome and homesick.

I rode to the end of the line and went to the hotel, arriving in time for supper. The food was messed on the table and everybody reached and grabbed for it. It was raining, and travel was out of question, so I stopped for the night. My room faced a foundry, and for hours I watched the stacks spouting flame—which cheered me up some. It rained and snowed all the next day. I had caught cold during the night, so I waited over, writing up the diary and letters while half a dozen youngsters or so stood around eating apples or bologna, and making grabs at the string which binds my writing materials. Failing in other amusement and pastime, I studied the hall signs:

Then I watched the snow come down till dark. At mail time I got some letters, and slept many hours that night, awakening in the morning with a chuckle. I was glad, too, of the general grab-off system at the table. I could and did eat a big meal.

It was a cold, raw morning when I got out of doors, with now and then a flake of driven snow in the air. As soon as I could I went to the post office, and then headed for Cumberland under the pack. The road I followed seemed to be bearing too nearly west, but I went half a mile or more before I met any one to ask as to the way. The man was a hunter, who carried a percussion-cap rifle, which was once a flintlock—a highly ornamented weapon. It was charged with shot and smokeless powder—a three-century-in-one arrangement. Back on the hills that morning he saw a couple of gray squirrels, but the "powder didn't work very well."

He pointed my true road to me. It was across a deep valley, but I went to it down a farmhouse lane, over a field and up another farm lane. The high ridge to the east was dusty with snow, and further on, where the road followed a side hill through thin woods, snow buntings joined me for a dozen rods or more, eight or nine of them keeping me company, showing how agile they were among the grape vines and on the underbrush. They answered my whistles and were almost as familiar as chickadees.

The road followed up the valley of Beaver Dam Creek. Above Freedom a farmer with the reddest whiskers I ever saw gave me a ride for four miles, and then his road turned off to the foothills of the Alleghany Mountains, ten miles away.

At King's Post Office, a shot up in the second growth on the right side told of game. A few moments later a large man, rather round and jolly in appearance, came over the fence as I was walking by. He had a single-barreled breachloading gun in one hand and a rabbit in the other. He was the district school teacher.

A couple of miles further on, night began to be felt, so I stopped for a bed in a barn. "Father was away" at the first house, but at the next one I was welcome, even though there was no work I could do for my supper and breakfast. In the morning, after a comfortable night in the hay, I took a picture as some recompense for the trouble I had made and the food I had eaten. About 9 o'clock I started on. It was snowing hard, with large damp flakes. Crows were flying westward overhead at intervals, but otherwise there was no life in sight—even the cows were hidden in the barns. For a couple of hours I met no one, traveling through a good tracking snow, with no tracks in it, save where red squirrels left the split-rail fences to cross the road, as two did. On a bush top there

Natural History

White Buffalo.

Editor Forest and Stream:

In conversation recently with George Bent, an educated half-breed, about sixty years old, who resides on the southern Cheyenne Indian reservation, I learned something interesting about white buffalo and white buffalo robes.

George Bent is a son of Col. William Bent, one of the historic characters of the early West, whose name suggests a host of recollections to any one familiar with the old West or old Western history. His mother was a Cheyenne woman, and he was born near Bent's old fort, which was built on the Arkansas River in the year 1831.

For many years George Bent traded with the Cheyennes and Arapahoes, and during these years he met as well many other tribes of Indians who dwelt on the Western prairie. He tells me that in his time he has had five white robes. The first was a robe in which the tips of the hair were white and the base black, giving the effect of a silver gray. This was a five-year-old cow, dressed and finely painted by Crazy Mule, who killed it. His wife dressed it, after having been prayed over and painted by him. Crazy Mule was a medicine man, who was able to remove the tabu which existed among the Cheyenne women against dressing a white robe.

The second robe was that of a three-year-old bull, obtained from Big Wolf. It was white.

He procured the third from Heap o' Birds, whose proper name, I believe, was Many Magpies. This was a three-year-old cow, described as claybank in color—a dark cream.

The fourth robe was that of a two-year-old heifer, dappled gray in color, and obtained from Wolf Man.

The fifth robe was a two-year-old bull, described as a yellowish fawn color, and obtained from Starving Elk.

The Cheyennes regard a white buffalo as something sacred, and it is said that in ancient times if a Cheyenne killed a white buffalo, he left it where it fell, taking nothing from it, and not even putting a knife into it.

They believe that the white buffalo belongs far to the north; that it comes from where—according to tradition—the buffalo originally came out of the ground; and they regard it as the chief of the buffalo.

A great many years ago a war party went up north against the Crows. One day they came to a hill, and when they looked over it they saw before them buffalo in great numbers lying down. Among the buffalo was a cow, perfectly white. When the buffalo got up and went to water, the white cow went too, and it was noticed that none of the other buffalo went very close to her. They were not afraid of her, but they gave her plenty of room, as if they respected her. This made the Cheyennes think more than ever that a white buffalo was a chief among the buffalo.

In recent times the hide of a white buffalo was commonly not made use of, but was sacrificed to the Sun or to the Great Spirit (He amma wihio). This has occurred within forty years; and a story of the sacrifice was told me by Bent, as he once witnessed it. He said, "In 1867 I happened to come into Eagle Chief's camp just after a white buffalo had been killed. The man who had killed it came in with the hide tied on his horse and rode into the center of the camp circle and stopped there and dismounted. He did not take the hide off his horse, but stood there in the center of the circle holding his horse. The Indians began to look through the camp for some one who could take the hide from the horse with the prescribed ceremony. This could be done only by a man who had counted a coup by pulling an enemy off his horse in battle. Presently Left Hand, an Arapaho, came up carrying a stick in his right hand. He stopped by the horse, pointed with the stick toward the direction of the place where he had counted the coup, then told how he had seen a Ute coming, had stepped behind a tree and waited until the Ute rode by him, and then had sprung upon him, pulled him from his horse and killed him with a knife. Then he struck the white buffalo hide with his stick and took it off the horse and placed it on the ground. The man had, of course, brought in no meat, for the carcass of a white buffalo may not be eaten, either by man or woman; it must be left on the ground. If the meat were to be eaten the buffalo might never return to that place again.

"The hide taken from the horse was left on the ground.

"The next day a pole was set in the ground and the white hide was wrapped about it. Before this was done a very large sweat-house was built, and many of the old men went in to take a sweat and pray. Before they went in, women came in crowds, bringing their children and various offerings—calico, beads, moccasins and other things, which were tied to the pole and given to the Sun. Before the hide was folded up to be tied to the pole it was painted on the hair side with indigo blue paint. The folded hide was tied to the pole by an old man who was quite naked, and was painted. While he was tying the hide to the pole he was constantly praying, and over each child brought to him with an offering he prayed, passing his hands over its head, arms and sides, and asking for good luck for it, for long life, health and abundance of everything. Other old men stood about the man who was tying the hide, praying fervently."

Unless they have been specially painted by a medicine man, and prayed over and so absolved from the consequences of a violation of the tabu, the Cheyenne women will not dress a white buffalo hide. The painting is done with red paint above both wrists, both ankles and on the face—a ring over the forehead, down the cheeks and across the chin below the mouth. Some of the hides obtained by Bent were dressed by women who were captives—for example, a Kiowa and a Pawnee woman—who were not bound by Cheyenne customs and Cheyenne fears.

GEO. BIRD GRINNELL.

Canvasback in Rhode Island.

WESTERLY, R. I., Dec. 16.—*Editor Forest and Stream:* A male canvasback duck was killed here a few days ago, and as such birds are rare visitors here, take pleasure in reporting the same to you.

EDWIN R. LEWIS, Com. of Birds.

Animals and Men.

Editor Forest and Stream:

I have read with interest Mr. George H. Christy's contribution with the caption, "Animals and Men."

Mr. Christy has built up a very elaborate theory concerning the relations of man to the inferior orders of animal life, upon what appears to the writer a very slender foundation.

It is not apparent from Mr. Christy's expressions that he accepts the Darwinian theory of evolution of man from a lower order, though it is not easy to understand how a writer of his evident ability and erudition should have failed to do so. The inference seems to be justified, however, that he rejects Darwinism, which makes it somewhat difficult for the writer to find common ground with Mr. Christy for a discussion of the questions treated by him.

Mr. Christy starts out with the postulate that hostility was the original normal attitude of "primitive man" toward the rest of the animal kingdom, from which status he evolves: "First, domestication; second, friendly relations; third, talkability; and that totemism comes in somewhere later in the evolutionary process."

The assumption of hostility as the normal relation between man and the lower animals is doubtless true. In fact, hostility is the normal relation between all races, classes, and even individuals of the same species, of all animals, including man, wherever interests clash, the one with another. The most magnanimous dog will refuse his bone to a weaker dog, if he wants it himself. Altruism is antipodal to the universal natural law of the survival of the fittest.

This general animal attribute has been subdued in man only to a very limited degree, as a result of ethical necessity, from which has grown what is called the higher moral culture. The thinness of this social veneering upon the man-animal becomes evident in contemplating the still surviving thirst for military glory, a passion that feeds solely upon the blood of fellow men.

The avidity with which stronger nations have always shed the blood of the weaker and helpless, encouraged by the plaudits of even the teachers par excellence of the "higher morality"—the multiplicity and enormous cost of the enginery of war—even the very presence of the elaborate machinery to compel justice between man and man—all attest the still vital principle of mutual hostility pervading all animal existences.

The "friendly relation" which Mr. Christy deduces from his former stage of "domestication," as between man and beast, is only the friendship that subsists between master and slave, between conqueror and victim.

In the earliest history of man, as such, he slowly emerged above the general plane of mere animalism by the power of superior intellectual development. The immediate agency by which he attained superiority was probably the power of speech, slowly acquired, which enabled him to co-operate with his fellows, and accumulate experience from generation to generation. This, with the aid of missiles and weapons, backed by a higher degree of intelligence, gave him the mastery over all other animals. He proceeded to subjugate those that suited his domestic purposes, and to destroy such of the others as would serve his various needs or threatened his security. This is my own theory.

Mr. Christy assumes that at some remote period in the past, there was a generally prevalent belief among men that beasts could talk in human language, the "talkability" of each being characteristic of the particular beast. I cannot see any warrant for such an assumption, which appears to be based upon such fables and folk-lore tales as have come down to modern times, including certain passages in the Bible.

To my own apprehension nothing seems clearer than that these fables and tales are merely the reflections of the human mind. The fables of Æsop, La Fontaine, and others, appear to be the idle whimsicalities of ingenious writers, the language put into the mouths of beasts and birds being evidently intended to point some moral having reference to human interests.

The African folk-lore, as exemplified in "Uncle Remus," invests every talking beast with the manifest negro characteristics—low cunning, shallow logic, and negro wit.

The citations from the Bible of the serpent talking to Eve, Balaam's ass, and the role assigned to the ravens that fed Elijah, are evidently specialized by miraculous intervention, and have no legitimate place in Mr. Christy's scheme.

Mr. C. seems able to establish all his propositions to his own satisfaction except the origin of "totemism" and the sacredness ascribed to certain animals by barbarous or semi-barbarous peoples.

This would appear to present but little difficulty, and may be accounted for by the belief in metempsychosis that was generally held among primitive tribes, and is still held by many barbarous races. According to this belief the souls of ancestors have transmigrated into certain beasts, birds, or even trees, from which has arisen the "totem" relation of certain tribes to particular animals, with the ascription of sacredness to the "totem" animal of the tribe or family. This is the view held by some authorities and seems a plausible one.

The theory of an early belief in the supernatural wisdom of animals and birds is sustained by Mr. Christy only by the miraculous examples cited from the Bible. But the idea is a very common one in fairy tales, where witches and fairies are represented as transforming themselves into beasts and birds. This idea of supernatural knowledge was probably always associated with such transformations.

I recall a story read somewhere, years ago, of an old negro who supposed himself bewitched or "conjured" by another negro. The "conjuror" had a white splotch on the side of his head. The conjured negro pursued about the fields with an old musket a crow that had a white mark on one of its wings. He identified the crow with the conjuror, in which notion he was confirmed by his inability to circumvent the crow by any means that he could bring to bear.

The serpent bore a high place for a mysterious kind of wisdom in the esteem of the ancients; though it seems to have been rather an abstract idea, as, leaving out the garden of Eden episode, I do not recall any occasion

was a slate-gray bird with black wing side lines. It was the size of a catbird, but did not look or act like one, being less buoyant and cheerful, with an eye to the serious side of life instead of the catbird's rather disdainful swagger and careless swing.

At a farmhouse I tried to get some bread and milk, but they used a separator there. Then I went on till I saw a large slab and tree wood pile. I applied for dinner, offering my services at an axe or buck saw in payment. It was the house of a lone widow, who usually cut her own wood.

"No," she said, but then, with a sigh, she recalled me and said, "Come in." I refused, going to the wood pile first, with a large one-man cross-cut saw. I cut up five rails and small oak tree trunks, and then split them with the widow's axe. The handle was a foot too short. No matter, we ate dinner together. Afterward I added a few days' more supply of wood to that already cut, and then I traveled on. As I came away the widow asked: "You don't chew tobacco, do you?"

"No, ma'am," I replied.

"I just wanted to know," she said, in explanation, putting the dinner dishes I had used into the dish pan with those she ate from.

Beyond Osterburg the road climbed a ridge and traveled along the back for miles. It was a pine-grown ridge, the farms lying far below in deep valleys. To the east and west other ridges and hills reared their wood-topped backs and heads, but these I could see only at intervals, for the snow squalls came frequently and displayed wintry characteristics, the wind rattling long pine cones butt-first to the ground.

At one place in the "dark forest" I was resting on a log when an old, whiskered man came up on horseback. He glanced at me and then lashed the beast with his whip. I think he was dreaming of David Lewis and other famous old-time Pennsylvania outlaws. I gazed about me with novel interest, trying to feel like a highwayman.

It was nearing night when I reached Cessna, coming into the hamlet over a covered bridge. When I thought I was out of the place I stopped at a farmhouse to get a night's lodging. A kindly old lady told me I would be welcome were there not three sick children in the house, but the next neighbor had had threshers, and they were gone now. I could go there. There, the family was too large already; I could see eight children, and more were audible. The next neighbor was an old man and his wife only. Perhaps—so I tried.

A little old, smooth-faced man with a calm face—the kind one sees in a gathering of army veterans—met me at the door. Could I stay there? I was willing to help or do anything there was to be done.

He opened his mouth to say something and then closed it.

"Nussir," came a thrusting voice from the rear end of a detached kitchen, "you can't get anything to eat here—no breakfast, no supper, no nothing. You're big, yessir, you're big enough to work without traspin' and chasing all over—"

"But I was just asking for work," I put in.

"Don't want you here; won't have you. Nothing for you to do—"

I came away. A couple of days later I went back past the same house and the man was on the porch. He saw me and recognized me, looked back at him, then nodded to me, then looked behind once more hastily.

As I said, I came away. I went on past all the houses in the row in which the old man lives, and got into a country of broad fields once more. At the top of the hill was a church with a parsonage a few rods nearer to me. I hadn't stopped at a parsonage heretofore, and the opportunity was excellent. The parson was chopping some wood gently in the yard, although it was almost dark.

"Will you let me sleep in your barn?" I asked, as a starter.

"Well—er—it's pretty cold there," he said.

"I'd like to earn my supper and breakfast here," I said. "You needn't worry about my being cold. I've a blanket and plenty of clothes in my pack."

"Well—er—it's a cold barn, but there are lots of big warm barns further down the road—lots and lots of them. I s'pose we could give yo usomething to eat."

I thanked him with genuine heartiness for his information, adding that I'd heard of the next door neighbor before. At the next house the father was away and the mother sick, and orders was not to let anybody sleep in the barn. The youth, however, said that I'd better skip the next house, that it wasn't any use to go there, but if I'd go to the house up the lane from the Grange Hall I could doubtless get a place to sleep, "for Zimmers is big-hearted." At the house up the lane I was questioned sharply, but I passed the examination and got a good supper, bed and breakfast.

At 11 o'clock A. M. on the following day I reached Bedford. I nearly passed through the town without stopping, but I stopped far longer than I expected.

RAYMOND S. SPEARS.

Christmas Trees.

OSSINING, N. Y.—*Editor Forest and Stream:* This is the season that the small evergreen trees, which were intended by nature for the use of future generations, are transplanted to the thousands of homes, to be gorgeously trimmed and illuminated to gladden the hearts of the little ones—a befitting end for this of God's handiwork if the forests could stand the drain.

On Friday of this week one train with sixteen flat cars loaded to their utmost with thousands of trees, and the next day another train with fourteen cars similarly loaded, went rushing by toward the city. These were only two freight trains I chanced to see. When we think of the dozen roads leading to the metropolis like threads to the center of a spider's web, and the dozens of trains running day and night over each road, we can, perchance, conceive of the extent of this traffic. As the game disappeared from our broad lands, so will this senseless custom deprive us sooner or later of building material which even now is double the price it was ten years ago, and like the game, we will neglect it till it is too late.

where he played a supernatural part in human affairs. The serpent was probably held in awe by primitive man, who was doubtless profoundly impressed with his insidious power of inflicting evil upon man, and the great difficulty of guarding against such injury. The embryonic religious idea in early man recognized the evil, not the beneficent powers, in the spirit world—investing with personality all agents of evil to human kind, and offering propitiatory service. The serpent came in for a large share of such service.

The theory of the evolution of all life from lower to higher states clears the field of inquiry concerning man's relations to mundane affairs, of a vast deal of mystification and difficulty that has befogged the minds of philosophers and teachers during the past ages.

COAHOMA.

About Some Neighbors.*

In this volume the author has undertaken to describe the habits of a number of birds and quadrupeds, and he has done this in an engaging way by endowing them with the faculty of human speech, and thus in a great part letting them tell the story for themselves. This, of course, is not a novel method, but Dr. Grinnell has been

building of the nests, the rearing of the young, their food habits, friends and enemies, and all the various vicissitudes of bird life are told by the story and by the birds acting in the story, so that Dr. Grinnell's book is a practical ornithology of the most delightful kind. It is stimulating. The work is intended primarily for young people, and no boy nor girl—nor older person, for that matter—can read these chapters without discovering that the wild neighbors of which they tell are an extremely interesting folk with whom a more intimate acquaintance is to be cultivated.

The scene is laid in Connecticut, where, despite the centuries of civilization and of continuous warfare waged upon them by mankind, the wild creatures are present in a variety and an abundance little suspected by those who have not sought them out in their haunts. Fox, lynx, raccoon, skunk, hare, otter, mink, weasel, woodchuck, muskrat and gray squirrel are comprised in Dr. Grinnell's list, and even the deer are coming back, and, having been given protection, are likely to increase and establish themselves once more. As Dr. Grinnell notes, most of the species named are classed as vermin, and are protected neither by law nor by sentiment; every man's hand is against them; that they have survived and exist at all is a testimony to the fact that they have learned to adapt

"EYES LIQUID AND BRIGHT, SO WISE AND JUDICIAL."
From "Neighbors of Field, Wood and Stream."

more successful than any other writer with whom we are familiar in preserving for his subjects their real animal character, so that there is throughout the book an air of fidelity to nature which is a quality as grateful as it is rare in such a work. Cooney the Fox, Ruffle the Partridge, Squirm the Blacksnake and the host of others are given speech, but talk as fox and bird and snake, not as human beings in disguise, and thus the book is one of actual natural history, not of sentimental fancies.

The author shows himself to have been a close observer;

themselves to the exacting conditions of living in proximity to human beings, and have succeeded in outwitting their enemy in the great game of man against every other animal. If the woodfolk are our neighbors we in turn are theirs, and Dr. Grinnell's animals and birds are all the more interesting because they are shown to be shrewd Yankees in feather and fur, who know a good deal about the other Yankees who wear clothes. There is abundant humor in the human element as it is introduced here and there. Dr. Grinnell's foxes are experts in

"DANDY STOPPED AT NETTLETON'S POND."
From "Neighbors of Field, Wood and Stream."

he has an intimate knowledge of the ways of the birds and animals he describes, and his treatment is both comprehensive in scope and minute in detail. The coming and going of the birds, the choosing of their nesting sites and

pillaging fox-proof hen-roosts, and his game birds have an amusing knowledge of the frailties of sportsmen. There is pathos, too, in the book, as there needs must be in a world where there are weasels and minks and hawks and butcher birds to snuff out the lives of the weaker species, and steel traps and setters and hounds, and men with guns, and lighthouses which lure the dazzled throngs to dash into their lanterns.

Camera Shots at Big Game.*

For many years Mr. A. G. Wallihan has been known to a very large public as by far the most successful of all photographers of American wild animals, and while a multitude of people have photographed our wild creatures, no one has ever approached Mr. Wallihan's success. He stands literally in a class by himself.

A good many years ago a number of his photographs were reproduced in a volume which had a considerable sale, but during Mr. Wallihan's absence in the field, the publisher padded the volume with a considerable number of photographs of stuffed animals. Of course the fraud was at once detected by sportsmen, and equally of course the blame for the attempted deception fell on the shoulders of the wholly innocent person whose name was on the title page and who was responsible for the legitimate photographs only. Thus Mr. Wallihan without the slightest fault of his own was blamed for getting out a book which was not what it purported to be.

It is gratifying now to announce the publication of a superb work which contains a very large number of Mr. Wallihan's best photographs; a volume so beautiful and in all respects so true to nature that every man who sees it will desire to possess it, even though the price may put it out of the reach of many people. This is "Camera Shots at Big Game," which contains more than sixty large and beautiful illustrations of wild animals and birds direct from life, an account by Mr. Wallihan of the way in which the pictures were taken, together with an introduction by President Theodore Roosevelt, which is by no means the least interesting feature of the book. President Roosevelt's remarks on big game, and especially on the mountain lion, derive a peculiar interest from his recent trip to Colorado, where he killed perhaps more lions than have ever fallen before any sportsman in the same length of time, several of which he put an end to with the knife.

The high quality of Mr. Roosevelt's sportsmanship is well known to all his brothers of the craft, and in the various high offices that he has filled he has never failed to do what was in his power to forward the cause of game and forest protection, and of good sportsmanship. We fancy that most sportsmen, except the very youngest, will agree with the closing words of his introduction to this volume, both where he pleads for protection of the game and the woodland, and where he speaks of the advantages to be derived from hunting with a camera as against hunting with a rifle. He says:

"Mr. Wallihan is not only a good photographer, but a lover of nature and of the wild life of the wilderness. His pictures and his descriptions are good in themselves as records of a fascinating form of life which is passing away. Moreover, they should act as spurs to all of us to try to see that this life does not wholly vanish. It will be a real misfortune if our wild animals disappear from the mountain, plain and forest, to be found only, if at all, in great game preserves. It is to the interest of all of us that there is ample and real protection for our game as for our woodlands. A true democracy really alive to its opportunities, will insist upon such game preservation, for it is to the interest of our people as a whole. More and more, as it becomes necessary to preserve the game, let us hope that the camera will largely supplant the rifle. It is an excellent thing to have a nation proficient in marksmanship, and it is highly undesirable that the rifle should be wholly laid by. But the shot is, after all, only a small part of the free life of the wilderness. The chief attractions lie in the physical hardihood for which the life calls, the sense of limitless freedom which it brings, and the remoteness and wild charm and beauty of primitive nature. All of this we get exactly as much in hunting with the camera as in hunting with the rifle; and of the two, the former is the kind of sport which calls for the higher degree of skill, patience, resolution and knowledge of the life history of the animal sought."

Mr. Wallihan's narrative of his experiences in photographing wild animals is told in a simple way, and with a directness of presentation that lends it an added charm. Most of his work was done in Colorado and Wyoming, and it is in these two States that he has taken the wonderful pictures of deer, elk, antelope, mountain sheep and cougars—the large animals which are here so beautifully shown. But while to the hunter these pictures are the most attractive of the volume, there are others which to the nature lover are quite as moving, even though they deal with creatures that under ordinary circumstances call for no expenditure of powder and lead. What, for example, could be more attractive than the beautiful photograph in Chapter IV., which shows a quiet reach of stream, down which a little group of ducks, rendered uneasy by the approach of the photographer, are pushing their way. On either side the quiet waters the willows rise high, and the clumps are mirrored in the stream, but as the alarmed ducks push forward to put a safe distance between themselves and the camera, their paddling breaks the placid surface of the water into wavelets which swing out toward either bank, while the birds turn their heads back to watch the object of their suspicion.

Almost as interesting as the picture of the leaping cougar is that of the great eagle, which the author photographed as it sailed down from its nest on a ledge just below the top of the high cliff on which Mr. Wallihan stood; or again, the picture of the single duck standing on the stream bank, whose shadow shows on the sand bar and its reflection in the water. To our mind these and very many other pictures equal in interest the marvellous one of the leaping cougar, and some of those thrilling groups of blacktail deer, elk, antelope and other game.

A long essay might be written on some of the suggestions which these extraordinary pictures give us. One of the most obvious of these is as to the protective coloring of the animals, which stand before the camera. If a group of some hundreds of elk is shown scattered over a partially snow-covered valley, it is by no means easy for an untrained eye always to discover the animals; or if a group of deer or a single animal appears standing out in the open—even in bright sunlight—against a background of bluff or of yellow grass or of sage brush, the colors of the animals blend so perfectly and so mysteriously into

*Camera Shots at Big Game, by A. G. Wallihan, with an introduction by Theodore Roosevelt, New York, 1901. Price \$10.

*Neighbors of Field, Wood and Stream; or, Through the Year With Nature's Children. By Morton Grinnell. With forty-five illustrations. New York: Frederick A. Stokes Company.

their background that often at first glance it is hard to see the animals. This, after all, is precisely what we see in nature, for most hunters of long experience will remember cases where, after having cautiously inspected a stretch of country before them for game without success, they have come up in plain view, and sitting down to rest and look over the distant landscape have, after a time, discovered deer or mountain sheep in plain sight and close to them. If occurrences like that happen frequently, as frequently they do, how very safe from detection must be the hiding fawn, such as is shown in the beautiful photogravure in the Preface of this work, or the half-tone which faces page 27.

Mr. Wallihan's book was an assured success before it was published. Now that it has been issued, and that the public can see for itself what the work is, its success is emphasized. The first edition of the book was practically exhausted as soon as published. However, we have a few copies left for our mail subscribers, and the plates will at once be put on the press and a new edition printed, so that early orders will be filled from the first copies received.

Armored Whales.

In an interesting paper recently published in London, Dr. R. Lydekker comments on the conclusions of Dr. O. Abel, a German writer who has been investigating a novel and comparatively recently detected fact in nature. It has been learned within the last few years that the ancient whales which swarmed the oceans of early geological times were protected from the attacks of their enemies by a bony armor, not unlike that with which the armadillo is provided, and vestiges of this ancient armor appear to be found in certain species now living upon the earth. One of these is a Japanese porpoise, another a South American species, while traces of it in the shape of bony tubercles imbedded in the skin have been found in the common porpoise of European waters.

It is obvious that the animals living the life of the modern whales and porpoises could not have been covered with a complete coat of plate mail. Such a protection would have interfered far too much with their movements, and its weight would have tended to impair their buoyancy, but it is altogether probable that their ancestors were covered with a dermal armor amply sufficient to protect them from their enemies. The ancestors of the whales and the dolphins were land animals, and it is probable that when such ancestral creatures began to take to an amphibious life on the seashore or at the mouth of a large river, they may have developed such an armor.

In a porpoise described by the late Dr. H. Burmeister from Argentina, there exist a number of spiny tubercles imbedded in the skin near the back fin, as well as on the fin itself. These are in three lines over the whole rounded front part of the fin, and further back their numbers increase until there are five lines of them.

Similar tubercles were described on the back fin of a porpoise taken in the Thames River in 1865, and much more recently such tubercles have been detected on the front edge of the fin of a foetal porpoise; while the Japanese porpoise already mentioned has several rows of plates, which answer to these tubercles.

Now, in a fossil porpoise from the tertiary deposits in Croatia, the tubercles are still more strongly developed and are found in regularly arranged and parallel rows, while, of course, we know that in the still more ancient whale known as Zeuglodon of the United States a part of the body was protected by bony plates.

Dr. Abel's summing up of this matter is substantially as follows: In the earlier stage of development the toothed whales were fully armored, the armor was a defense against their carnivorous enemies, and such an armor would also be very valuable to animals exposed to the force of a strong surf on rocky shores. As these creatures took more and more to an aquatic life, greater speed would become more and more important to them, and this greater speed would be secured by diminishing the specific gravity and friction of the body by shortening of the extremities and by the development of a caudal fin to serve as the sole instrument of locomotion. Accordingly the armor would very soon be lost by the deep-sea whale-like animals, but certain forms which took to a life in rivers or estuaries might retain vestiges of the armor.

The writer believes that in the Japanese porpoise above mentioned, which lacks the back fin, as well as in the closely allied true porpoises, we have the most primitive type of living toothed whale. This conclusion is confirmed by the nature of their teeth, and by other characters.

For Nearly Thirty Years.

SOUTH HAVEN, Mich., Dec. 13.—There are many questions being discussed in FOREST AND STREAM in which I am greatly interested, particularly a law to prevent so many accidents among hunters. I would suggest that a law be enacted making it a misdemeanor to kill any but buck deer, as this would necessitate the hunters seeing the deer fully to determine what it was.

And the question as to hunting and camping companions seems to be a hard thing to settle, as so many different things have a bearing. For cold weather a lady chum is hardly the thing, but in mild, lazy weather it is different. Myself and wife camped on the big Manistee River four weeks this fall, commencing Oct. 10. We had a fine time. For a part of our stay the weather was perfect for outdoor life. We found both partridges and quail quite plentiful, and had no trouble in bagging all we needed for our table, and could have secured many more if we had hunted more. No one knows the delights of such a trip until they try it.

I have been a constant subscriber of your most valuable paper for nearly thirty years, and its weekly visits are just as welcome as ever.

H. W. SWEET.

Game Bag and Gun.

Fixtures.

March 5-19, 1902.—Eighth Annual Show of the National Sportsmen's Association at Madison Square Garden, New York.

The Old Gobbler at Last.

As I sauntered down the street in Greenville, Miss., I met an old acquaintance, no other than Bill Fox—and, by the way, a good hunter. It was on April 10, warm and pleasant. The buds in the woods were swelling, and I knew what that old ducky was "gwine" to say, and he said it. "Gobblin' time, Mr. Ed."

"Yes, Bill; they ought to be gobbling, and what do you say to going out to Moorhead swamp in the morning and try the big gobbler at the head of Muddy Bayou. The one that Uncle Tommy Page has been trying to kill for so many years."

Bill agreed to meet me at the train at 2 A. M. I told him not to take a gun, and he looked disappointed. The fact was I did not want to take any chances, for fear he might beat me to him. We started on time, and got down at a little station called Blue Lake. After a brisk walk of some three miles, we arrived at the place, where I knew the turkeys roosted. It was a large cypress brake, and at that time of year was covered with water several feet deep in places, forming a large lake in the woods. We selected an open place on the bank, which was studded with huge oaks, and as daylight was fast approaching got everything in readiness for the expected game, well knowing that I had a task ahead that required the utmost caution.

I had heard a good deal about the old gobbler. Tommy Page said he would weigh 40 pounds, and nobody living could call him, for he had tried it five springs in succession, and in desperation had shot at him at long range, with a Winchester, missed him, and made matters worse. I knew the old fellow would be hard to fool, and why not? How he was ever hatched and reared in that great swamp was a mystery. But he had had a mother who was ever watchful. She placed her nest on a high, clay root to keep out of the water in case of a rise. She covered her eggs with leaves when she went to feed, and flew from it and back again, and left no trail. When the little turks were hatched she led them about very gently at first, for their little red feet were tender. When they were able to trot about pretty briskly, she took them to an old deadening, where grasshoppers and crickets were plenty and taught them to turn over chips and dig in the decayed logs for grubs. She would meet the little blue darter hawk half-way that tried to pick up the little ones; even the fierce-looking wildcat would sneak away when she ruffed her feathers and dashed at him. At her warning cry, put! put! the little fellows would scamper into the grass and hide until her soft call would tell them that all was well.

When the gobbler's wing feathers had grown, and he was able to fly up to roost, he was beset by owls at night, and many a close call did he have; but he learned to duck under the limb as the owl swooped at him. The sly wolf followed him foot by foot under cover of brush and trees as he fed on chinkapins, but he avoided the rush and rose straight in the air to avoid the high leap that brought so many of his brothers to an untimely end. There were no foxes in the swamp, or perhaps he would not have lived to gobble. Many a hunter tried to get a shot at him, but his wits improved with age, and his sight and hearing were perfect. He could detect the tread of a stealthy foe in the leaves amid the clamor of the swamp, and some said his sense of smell was of some consequence, which I do not doubt in the least.

From all accounts this was about the eighth or ninth year of the gobbler's existence, and I was very anxious to bag him. I wanted the turkey and I wanted to tease Tommy Page. When the first streaks of daylight appeared I took my seat on a chunk, with a large oak for a background and Bill did the same. It was not many minutes, when bur-r-r, that familiar sound came across the lake. I knew it was the big gobbler drumming on the limb. I took up my cedar box and piece of slate, and after adjusting it carefully scratched off four very good calls. It suited, for he came out with that shrill double gobble that made me get my gun ready. I didn't have long to wait, for he left the limb with a terrible hubbub, but to my disgust I saw him light in an open place fully 300 yards down the lake. There he strutted and wheeled. Round and round he went. There was a large log that hid him at times as he went the circle. I called him again. He only stopped and listened for perhaps a minute, and went at it again. I waited till he got behind the log, and skipped over to where Bill was, and whispered to him to try him. He had a cane caller in his pocket, and he made a very good imitation; but it was of no use. Something had to be done. "Bill," I whispered, "wait till he gets hid from view, and then get back, quick, and go around the cane, strike the lake away on the other side of him and come up slow. He won't leave the lake, and I do not think he will fly if you are careful."

I had to wait a long time, and the mosquitoes had a feast. Bill was so long getting around that I was afraid a wildcat or wolf would hear the turkey and run him off. But all at once as I was admiring the prize I so longed for, and thinking how big he was, there came a great change in his behavior. He slapped down his feathers, stretched his long neck and hopped up on the log. He had heard Bill, I was sure, and great Scott! he got down and came as straight toward me as a line in his ungainly trot, his breast still inflated and his long beard swaying from side to side. The sun shone on his glossy plumage, and I caught myself trying to push the safety slide off of my gun. There was a little hen with him that looked like a bantam in comparison. On they came. When the gobbler was about 35 yards away he stopped and turned sideways. My elbow rested on my knee, and it only took a movement of a couple of inches to put the sight on his neck; but he saw it and ducked his head to fly. He was too late. The load of No. 6 caught him. The little hen flew across the lake. The big gobbler fanned the leaves and broke down cane

stalks in his death struggles. Bill came and picked him up and grinned. He said he had seen two just like him back of the cane on an oak ridge strutting like sixty, and could have killed them both if he had had a gun. I knew he was lying. We took the train for home and as we stopped at Baird Station Tommy Page was on the platform. I held the turkey up in the door of the baggage car.

"Uncle Tommy," I said, "this is your gobbler from the head of Muddy Bayou."

"It's not big enough for mine," said he, "and you couldn't kill him no way."

"Big enough for me," I said, "twenty-four pounds and a half, and nothing in him but his gizzard."

As we neared Greenville Bill came to me and said, "I reckon, old man, Mistah Tommy Page will be right crabbid wid you now for a spell," and I said, "I reckon he will."

SOUTHERN.

Autumn Leaves.

THE grass down on the Hackensack meadows had begun to turn to a dirty brown. A hazy atmosphere spread over the flats. Thistle and cattail down were to be seen floating in the air, the sport of the shifting breeze. The frogs had long ceased their evening concerts, and twittering swallows in long lines covered the telegraphic wires; and later the blackbirds—crow and redwing—and others of minor class, were congregating in flocks and wisely debating their southern journeyings. And there would creep o'er us

A feeling of sadness and longing,
That is not akin to pain,
And resembles sorrow only
As the mist resembles the rain.

And when one morning we looked out of our window across the way our eye caught the soft maple and noted the ever-changing of autumn touch as it put on its coat of red and gold, we thought of

The fallen leaves,
Tawny, ruby-tinted, golden,
From the young trees to the olden;
Leaves drop down in abiding showers
On the grove of summer flowers.

The feeling did not abate. Longing? Oh! yes; but the chain prevented us from going forth pell mell to gather in nature as our heart desired. One day there rushed into our sanctum like a young cyclone George E., our shooting comrade of last year in Morris county. Now George is not only a good shot and an indefatigable tramp, but is very emphatic sometimes in his movements as well as language. He burst in with a shout, "Hurrah! Judge; get out o' here. Just had a letter from the folks. Lots o' game, and they expect us up on to-morrow's afternoon train, so as to be among the first in the field the following opening of the game season."

Well, that settled it; and after a satisfactory interview with the versatile Bob Sneider, and replenishing our shooting coat with some Walrode and 7½ chilled, we were at the train.

We were met at Boonton by young Dory and Harmon, the factotum of the Mills farm, in the absence of Mr. M. Young Dory, we found, was "fring" (as they call it) on the road, and only welcomed us as he remained for night duty. We were soon snugly ensconced in the one-horse lumber wagon, and as soon as the beast's (I speak advisedly) head had been turned toward home, like a streak of first-class electricity he, or she, was off. Whew! We had to turn around to catch our breath and cling tenaciously to the open sides of the seats. Hold on! For the Lord's sake go slower. The roads were in good order, but at every short turn we expected to be dumped out. They laughed at your humble servant. Said the bit was in the creature's teeth, and the harder they pulled the faster we went. The rascal did not move that way when going from home to the depot. We reached the house safely, but I tell you we don't want any more such foolishness of a dark night. We found Mrs. M. as jolly as ever, and the children bright-eyed and healthy. Later Mr. M. was home for an hour, and we discussed railroads, crops, etc., until he had to hasten back to his engine. What a life! But Mr. M. (and he is eminently a practical man) tells me he is getting his farm in such nice shape that he hopes to retire from railroading in another two years and live the life of (as he surely deserves) a successful farmer under "his own vine and fig tree"—cornfields and peach orchards, as it were.

After an early breakfast we were off for Mr. Walter Trelease. We found him ready with his "faithful hound"—are not all hounds faithful? The sun was hardly an hour high, but all creation and the rest of mankind seemed to be out in the fields and woods. Such a cannonading! Bombardment at the right of us, bombardment at the left of us, on ahead of us and following on behind us. Crack of smokeless and now and then the heavy boom of the old black powder. Well, we give fair warning that the undersigned does not propose to be one of them to open the game season. Not much. We prefer to let these young enthusiasts have their dash at the nimble cottontail or the whirring quail, and after a few days, say a week or so, and when the flurry is over, the Mollies have calmed down and the coveys have gathered together, after their mostly harmless fright, then we can go out and enjoy a shoot and be pretty sure of a fair bag.

After crossing a field we struck a low fence, along which were divers bushes and briars, and out jumped a Molly. It was so sudden and her movements were so quick, that none of us could get a shot. Of course Walter put his dog on the trail and himself on a stump, lit his pipe and quietly awaited developments. George and I arranged ourselves along the fence, gun shot apart. But instead of coming back along the fence, the game cut across lots over a clean field, and but for the sharp eyes of George would have got clean away. George's first barrel was a clean miss, two feet behind, as we could see by the cut grass from where we stood; but his second boyled the rabbit over beautifully. Why is it that a hare when shot always tumbles heels over head? We had some fair sport, George E. getting the most of the game, with Walter a good second. Yours obediently got tired about 2 P. M. (we generally "fall early in the action" on the first day's hunt), and when the hound went off for what we thought may be a long run, we

started for the house and a rest. After removing our heavy boots and shooting coat and lighting our pipe, we sauntered out toward the barn, where we heard sundry hammering, and we tried to superintend the architectural construction of a pig pen Harmon was building, and we guess we succeeded, for it looked like a good substantial porcine domicile when we passed our opinion on it.

The second day, first part, was pretty much a repetition of the first as far as rabbits (hares) were concerned. George killed a couple of quail and Jacobstaff shot a crow, and wanted to kill a hundred or two bluejays, but they are protected. Why? The screeching, thieving rascals may eat a few grubs and insects when they can't get anything else, but if there is a meaner, more dissolute feathered biped in all the world, we don't know it. Why, the scoundrel will watch for you from a great way off across fields, and when you are creeping noiselessly on a gray squirrel, off goes his confounded screech, and your squirrel is in his hole in a jiffy. How the deer hunters (I mean the genuine still-hunters) of Wisconsin hate him! Many a lordly buck owes his temporary life to this fiend of the woods.

And now comes the balcony of our ten days' shoot. We had approached a swale where we hoped we might find a bevy of quail, when we heard a shot from across, and over on the hillside we saw a couple of sportsmen, one of whom had just shot down into the swale. We heard him call out, "Go fetch him; that's a good dog," and as we got around we saw a fine-looking setter dog bringing carefully a hare, which it dropped at its master's feet. We were introduced by Mr. Trelease. The one with the bird dog was Mr. Al. Glass. "Glass, Glass; that name sounds familiar. We used to know a Frank Glass out Newark way; a famous shot, and we have stood by him many a day in years gone by at the traps." "Why, that is my brother." That was sufficient, and we shook again. After a short talk Mr. Glass was about to turn away, when I remarked, "You have left your rabbit." "Oh, I don't want him; you are welcome to him." Then, as he turned, he stepped back to me and said, "Are you not Jacobstaff of FOREST AND STREAM?" "Well, I guess yes." Then he stepped closer, and in a low voice said, "Can't you shake these rabbit fiends? I heard this morning of a flight of birds in a swale about half a mile from here, and if you will go around the swamp I will meet you on the other side and we may get a few good birds."

Well now, for a fall woodcock. All the hares in Christendom may go to thunder. We were soon hurrying across the pasture and cornfields to the low ground. Ah! the whistle of an October woodcock as he springs from the bog and essays to climb the treetops. What music it is to a hunter's ear, and as he gathers it in, lays it carefully on its back in the palm of his hand, smooths down its velvety, glassy feathers and mentally calculates its weight $6\frac{1}{2}$ or 7, or perhaps $7\frac{1}{2}$ or 8 ounces (perhaps but rarely more in these parts), with what pride andunction he places it in his shooting coat. We did find a nice flight, and Al did some good shooting. He has a good dog, and is one of the best brush shots, we are told, in the neighborhood. He had the dog and did most of the shooting, but, like his brother, he is big-hearted, and we got the birds—nine fine large fall birds, a bag anybody might be proud of. We parted with many expressions of good will and the hope that we might meet again next season and repeat the experience.

And that ended our trip to Missis county. We took the train home, well pleased with our visit. After election we were off to Sussex county with Doc Cummins, of Jersey City, who swears by FOREST AND STREAM. But, as Kipling would or did say, "That is another story."

We arrived before noon at our destination, Washingtonville, Sussex county—a decidedly one-horse, one-man (but he is a gentleman) and one-light station. We were met by Martin Couse, a very promising young stalwart, and "chip of the old block," youngest son of Mr. John Couse, Doc's friend, where we expected to stop. A drive of but a few minutes put us there, and we were met at the open door by Mr. Couse, a most courtly gentleman of the old school (we do not see so many of the kind nowadays) and his grand wife, Mrs. C., with her silver hair and mother grace—how she reminded us of our good old mother. They were extremely kind, and we were placed at our ease at once. Afterward we were introduced to the two charming daughters, Nellie and Mary. Mrs. C. is the sister-in-law of the Hon. Hugh McLaughlin, noted politician of Brooklyn. We should judge that he is held in high esteem throughout the neighborhood where he makes annual pilgrimages, and owns considerable property. Mr. Couse is a wealthy and substantial farmer and public-spirited citizen, having held offices of trust and being in high repute by his neighbors.

We were off betimes in the morning with the two dogs. One was a hound with a good nose, but wanting more experience. The other, a good old pointer of nearly a dozen years; he has seen good service, but reliable yet for not too long trips; he was one of celebrated pedigree sent up years ago to the farm by Mr. Bob McLaughlin, Hugh's nephew. Bob died several years ago. He was a noted all-round sportsman and well-known in the Fountain and other gun clubs.

There were supposed to be, so the legend said, two coveys of quail somewhere on the place, and we wanted to find them. But in vain. Field after field was scanned, line fences, brush heaps and hazel thickets. Hares there were, and Doc and Martin had their fun. Doc is an indefatigable trampler, and when he hunts he says he hunts, and I should rather say he does. Why, it came on to rain in sheets the second day, but out he must go. "Why," I said, "you will find no game. The quail will be huddled under a bush; so will the rabbits, or in woodchuck holes." But out he went, and he and Martin came back in a few hours wet as drowned rats; but as sure as eggs they got in all that rain three rabbits and three gray squirrels. Squirrels must have been hard put to lay up their winter stock to be out in such weather. Doc made one good shot at a gray running on a rail fence—a difficult shot—and another he knocked out of a nest, to his astonishment, I guess, as well as the squirrels.

It was 2 P. M., and we had not seen nor heard a quail. I got tired, as I often do early in a first day's shoot. The hound was off with Martin and Doc a mile or more away, running a rabbit or fox, for aught we knew. We had enough, and with gun crossways over both shoulders sauntered home along a line fence. Thinking of getting off the heavy boots and slipping down into the cheese

house and a long draft of that sweet cider, when whirr, whirr, up got a bevy of quail within less than a quarter of a mile of the house. A nice double shot rested one wonderfully, and when they were marked down on the open hillside, there was another double shot, and the rest dropped down by a line fence running up the hill. There they got up singly. One down, another a clean miss—guess I was flustered by that time, but I got the next. Well, six good large birds out of one covey in twenty minutes without a dog. Great Scott! how mad the Doc was when he came home half an hour afterward and wanted to know what in thunder I had been shooting at; said they had heard seven guns. All I said was "Go out and look in the kitchen. They are hanging up there." Then they were mad. "Why did you not wait for us to come with the dog? Might have got the whole flock," etc. "Wait nothing. You take the dog over there. There are two down that we could not find. There, don't you hear them whistle? If you go over now, you can locate them; but if you wait until they get together they may be a mile away." But no, Doc wanted his dinner first. In vain we protested, "Confound it, you can get dinner any time, but you can't find quail calling whenever you want to." But he must eat first, and after a half or three-quarters of an hour they sallied forth. They immediately found my two dead quail, but not the covey. Served them right. Some folks never will learn anyway.

The next day it poured all day, and it looked so much like a three days' rain that we started for home. As we reached the depot the sun was setting in red and gold, and we were half-inclined to go back. As it turned out, there were several days of clear, cold weather—ideal weather for shooting.

We left this happy home with feelings of regret, for all was so homelike, and their last words called out as we drove away, were a hearty "Come again."

We neglected to mention a rather singular episode in our hunt. Doc Cummins and us were reclining on a hillside overlooking a small swale just below us, taking a rest and a smoke, as it were. Martin and the dog had gone over the hill a half-mile away to try a swamp, when the Doctor called out, "What's that?" as an English snipe (*Scolopax wilsoni*) dropped in the bog almost at our feet not half a gunshot away. This was about noon. We kept quiet and watched until Martin came with the dog, and we pointed to the place where we had seen the long bill light, and the dog soon pointed him not 10 feet from where we had located him, and as he flushed we knocked him down, a nice, full-grown, full-feathered *Scolopax*. What was he doing there at that season and that time of day? We didn't see any more.

JACOBSTAFF.

Rabbits' Rest.

A FEW years ago, while living on a farm in southern Maryland, I was invited by one of my neighbors to join a rabbit hunt which he was giving. He had asked most of his friends in the community, and also two of his city acquaintances to join the sport. Beside his regular farm, he owned a small piece of land about twenty miles down the county, which he had several years before turned into a rabbit preserve. This land was mostly cleared ground covered with sage grass and brush piles with a thickly wooded knoll in the center. It was strongly fenced in and posted with the usual notices, "No gunning allowed under penalty of the law," and had, he claimed, been a safe retreat and uninterrupted breeding ground for rabbits for three years. Hence the name "Rabbits' Rest."

The day of the hunt we started out bright and early with two corn wagons loaded with men and dogs. Our host, Mr. Willis, having wrought himself up to a high state of excitement and good humor, probably by the aid of a little "red eye," and the anticipation of innumerable rabbits, had concluded to "loosen up" enough to offer a prize in the shape of a gallon of his best home-made wine to the hunter who bagged the most game.

It would take too much time to go into a full description of the whole party, but I beg to say a word in regard to the two city men. Walker, the lawyer, was an old experienced gunner, and no more may be said at present. Dr. Jones, however, deserves a little lengthier description, as he figured an important part in the day's history. He was a short, fat, bow-legged little man; wore glasses, and carried himself with military bearing. His suit consisted of the finest hunting coat, trousers and leggings that money could buy, while his belt contained the best variety of smokeless shells procurable. He carried (rather awkwardly, though) one of Parker's latest hammerless double barrels, loaned him by a friend especially for the occasion. It was, moreover, his first hunt, and many were the "knocks" passed at him as we bumped over the uneven country road on the way to the cover. It had been found out by some unknown means that the whole neighborhood in which he resided had learned of his intended trip, with the result that when he started for the station, accompanied by his wife, two sisters and maiden aunt, nearly every window within two squares of his home contained beaming faces and fluttering handkerchiefs, while the younger fry met on the pavement with numerous questions and begged to be allowed to examine his different articles of warfare.

We arrived at the grounds in about three hours' time, and eagerly piled into the sage. We formed into a long line, with instructions to be careful how we shot when we started anything.

It was half-past nine when we got out of the wagons, and we walked till 12 o'clock without so much as seeing a rabbit. We were all pretty well disgusted, and wanted to go home, but our host insisted that we try the other side of the Rest before giving up. So after going back to the wagon and refreshing ourselves with sandwiches and cider, we started out again.

This time we walked along carelessly in groups, as we simply went to please our host, having long ago made up our minds that there were no rabbits within five miles of us.

The Doctor and I were walking together, when one of the dogs started a cold trail right in front, and after nosing around for a little time, struck out in a bee line for the knoll. The rest of the dogs and the Doctor joined in and we had a lively chase for a few minutes. We saw them disappear into the bushes at the foot of the

knoll, and then suddenly stop. The Doctor then came to the edge of the clearing and began hollering and waving to us in such frantic manner that, although, owing to his excitement he was unable to make himself understood, we gathered from his wild gestures and bellowing that there must be something "doing" up on the hill.

Running on and dashing into the bushes, we found the dogs standing in front of a hole, which looked to be like that of a 'possum.

"He's there! He's there!" shouted breathlessly the little Doctor.

"What's there?"

"Don't know; but he's there all right," answered the Doctor.

"But what is it?" asked Willis, impatiently.

"Don't know, I tell you. It was sort of a gray thing."

"Well, that's not very definite," Willis said.

Finally it was decided to dig it up, whatever it was, and two negroes were sent to a neighboring house to get the tools. The darkies did not get back for nearly an hour, so it was fully 3 o'clock before we started digging. There were three picks and a shovel, and while four worked the others rested by the fire. The Doctor stood ready, however, gun in hand, ready to detain any animal that should wish to leave the premises.

The lawyer had produced a pack of cards and had induced a couple of farmers into a little nickle freeze-out. The rest were lounging around the fire.

I believe I had just gotten to sleep, when I was startled by a shout, and jumped up in time to see the Doctor let both barrels go at a fox which had just sprung from the hole. Either the Doctor was a pretty poor shot or it was a pretty fast fox, for he escaped without injury, other than the loss of the rear portion of his brush.

The Doctor was very much vexed that he did not get more fox, but reminding us that we hadn't gotten as much as he had, stuck what was left of the tail in his button hole and waited further developments.

Doc had just reloaded and "cleared for action" when another fox appeared. This time our worthy physician only fired one barrel at a time, as he wanted to take two chances. The first shot struck a log situated about six feet further above sea level than the hole. The next shot did considerable damage to the ground in the vicinity of the poker game, and came within about three inches of finding a resting place in the lower extremities of the lawyer.

We had now reached the end of the hole. Unlike most fox dens, it contained no other entrance, but terminated in a kind of vault about 12 feet by 6, and 2 feet high. This place contained quantities of bones and feathers, and rooting among the debris we found an old rusty steel trap with four toes between the jaws. A fox had probably been caught in a muskrat trap and had come all the way to the hole before gnawing itself out. Judging from the condition of the trap and also the condition of the toes, we thought that it had been there for almost any period over two years. When we got back home that night, we were the most ill-humored and tired bunch I ever had the misfortune of falling in with. The Doctor insisted on explaining how he would have gotten that last fox if a tree hadn't been in the way, and the lawyer insisted on reminding him that if he had been about three inches worse a marksman, he (the lawyer) would now be walking on his hands.

The only plausible explanation given in regard to the lack of rabbits was offered by one of the local nimrods, who claimed that the foxes had driven them all away, as in any locality where foxes are at all numerous, the rabbits are proportionally scarce.

The Doctor was awarded the gallon of wine for getting the most game. EDW. B. POWELL.

Adirondack Deer.

Editor Forest and Stream:

There is no doubt in the minds of most men who travel these woods that the deer are on the decrease. It is thought by many to be due to the fact that the law is not enforced.

Juvenal is about right when he says the lumbermen have plenty of trout and venison in camp when they want it. Some camps have their men whose business it is to supply the camp with meat. These men are paid for this by the head or by the month, and make their living in that way. The deer killed in season by the lumbermen is nothing compared with the number killed out of season, so I have been told.

When cold weather sets in, the camp hunter takes his gun and kills all he can. If he runs into a "flock" they all die, if the snow is deep enough to prevent them from getting away, for they will keep, and whenever the camp gets low in its supply of meat, the hunter drags in as many as the "boss" wants. Unless luck is against them, there is always some ready to be brought in. This manner of supplying meat is a source of much profit to the lumber jobber. To supply a lumber camp with provisions which have to be hauled over rough roads from a distance necessarily costs something.

It is not so much what the law is, it is the way it is enforced. The lumberman says: "They can make the laws to suit themselves, we'll have meat just the same." So they will, as long as a deer inhabits the woods within ten or fifteen miles of the camp, or as long as they know the game protector doesn't do anything.

While the lumber jobber, I think, is the main hindrance to the increase of deer he is not the only one. The natives and outsiders come in for their share. It is hard telling which of the two is the worse. Each says: "I might as well kill 'em as to let the other fellow," so the deer die.

The resident with a couple of neighbors goes crusting about February, and they kill all they can carry—say two or three. Comparatively few deer are killed in this way, and the men who do it are poor men with families, and need the meat.

The outsider comes in with a party in the fall, and if he is lucky he gets his two deer, but as a rule he goes out with his one anyway, even if his guide has to do the killing. It seems to be the point of such parties to go out with a "deer apiece to show what good hunters we are," and to "give John, Bill and Harry some venison because they are good fellows and never ate any." Of course the last reason deserves some praise, because it is being kind to man, but it is helping to clean out the

deer, and it would be doing a greater kindness to man if we would save them. The point is this: Too many deer are being killed just to take out of the woods. Eat your meat there where it will taste best.

Let a party of four or five take out one deer and a larger party two; that will give each man's family a good meal and a little more, so he can invite John, Bill and Harry over to dinner.

There is another thing that would be a protection to the deer. Cut off the last fifteen days of the season. It always snows during these days, and more deer are killed then than the rest of the season put together. This year it was very noisy before the snow came, consequently few deer were killed. I think it is generally wet, giving a man a fair chance. Anyway, it was a streak of luck for the deer this time, but they caught it when the snow fell.

The law, of course, cannot be made to please everybody. People are scarce who would like to see the deer go as the moose. The law made and enforced which will give the deer a chance to increase ought to please the majority. That law cannot be the law which will allow the deer killed in any manner. Killing deer by packing or hounding is not killing deer man fashion. Give the animal a chance; kill him still-hunting and you have something to be proud of. Lc.

Black River Association.

Editor *Forest and Stream*:

The annual meeting of the Black River Fish and Game Protective Association, which was called this year a little earlier than usual, in order that it might precede the New York State Fish, Game and Forest League convention, to which delegates were to be chosen, was held on Dec. 4. The report of Treasurer H. A. Pride showed the Association finances to be in a very satisfactory condition.

Secretary W. E. Wolcott presented his annual report, which was as follows:

The fishing season of 1901 was a fairly good one, and the hunting season has been about on a par with other years, but notwithstanding what may be said to the contrary by optimistic individuals, the majority of anglers and hunters have not had their efforts rewarded by a superabundance of fish or game, and there is no gainsaying the fact that neither are on the increase. In Oneida county and neighboring counties, including that portion of the Adirondacks most frequented by sportsmen from this part of the State, the speckled trout fishing was by no means as good as was anticipated at the opening of the season. Good catches were made in some of the lakes, but as a rule stream fishing was not good, and it has become evident that the West Canada Creek, Black River, Moose River and a number of other southern Adirondack streams need restocking with trout. The State has three fish hatcheries in the Adirondacks, and it is difficult to see how the output could be utilized to better advantage than by depositing every fish which is hatched there in the waters of that region. It does not look like good policy to breed trout there and ship them to remote parts of the State when the neighboring waters are becoming depleted. There is a splendid hatchery at Old Forge, on the Fulton Chain of Lakes, but during the summer season the most expert angler cannot be sure of catching enough speckled trout for a mess anywhere on the first seven lakes or their tributaries. These are natural trout waters, and it would seem to be wise for the State to keep them well stocked. This is only one example, but what has been said concerning the scarcity of trout in the Fulton Chain is true of many other lakes and streams in the wilderness region. The work of restocking the waters of Oneida county with trout, which the Black River Association has been engaged in during the past dozen years or more has been attended with such satisfactory results that we feel warranted in continuing it. Some of the streams are fished almost constantly during the open season, and this naturally tends to keep the trout from multiplying very rapidly, but if the waters were not restocked from year to year there would be no fish to catch. The anglers who spend the most time in taking trout from these streams are frequently persons who feel that they cannot afford to contribute toward defraying the expense incurred in restocking, or who, for some other reason, do not care to do so; but this fact does not seem to furnish sufficient grounds for abandoning the work at present. Last January our Association made application to the State authorities for 1,000 fingerling brook trout and 1,000 fingerling brown trout for restocking Shenandoah Creek in the southern part of Oneida county, and a like quantity to be placed in Oriskany Creek. We also applied for the same number of fingerlings to restock streams in the northern portion of the county. The Commissioners, in response, sent at different times large consignments of fish, all of which were in splendid condition. They were carefully distributed by committees from our Association, and good results may confidently be expected. One or two of the shipments consisted mainly of trout which were over a year old and 5 or 6 inches in length. Madison Lake was one of the bodies of water in which trout sent to our Association were placed this year.

Ruffed grouse and woodcock have been extremely scarce in central New York this season, and friends of game protection have become quite disheartened at the situation with which they are confronted. Some sportsmen believe that it would be wise to prohibit grouse shooting entirely in Oneida county for a term of years. In the Adirondack region the conditions are quite encouraging, as grouse have been reported more abundant this fall than they have been for several years previous.

The deer season in the Adirondacks was for the most part more propitious for the animals than for the hunters. Just prior to the opening of the shooting season considerable rain fell, and for some time after Sept. 1 water was so plentiful back in the woods that the deer did not find it necessary to come down to the lakes and ponds to quench their thirst. As a consequence, hunters who laid in wait for them at these points were often disappointed. Then, too, the foliage was very heavy, and the leaves remained on the bushes until well along in October, rendering it extremely difficult to see a deer

any distance away. By the time the leaves had fallen a prolonged dry spell was on, and although the conditions were wholly changed, they still favored the deer. The ground was carpeted to the depth of several inches with dry, crisp leaves, and as the noise made by a person walking in the woods could be heard nearly a quarter of a mile away, still-hunting was out of the question. It was not until the second week in November that there was snow enough on the ground to be of any assistance to the hunter, and then there was such a heavy and continuous fall that it made successful hunting very difficult in the closing days of the season. The deer sought the balsam and spruce thickets at this time, and moved around but very little. Whatever tracks were made were speedily filled up, and the trees were so laden with snow that it was next to impossible for the hunter to see a deer unless he chanced to stumble on it. In spite of the unfavorable conditions for still-hunting which prevailed during the season, there were a good many deer killed—probably not so many as last, but nevertheless a considerable number. This seems to be somewhat remarkable at first thought, but persons who are in a position to know, say that there have been frequent violations of the game laws this year, especially in the use of dogs for hunting deer, and this may partially account for the large number of dead deer which were shipped out of the woods. Reports of such violations have been received from various parts of the Adirondacks, and it is believed that a large proportion of the deer which were taken were killed illegally.

This brings us to a subject which was discussed at the annual convention of the New York State Fish, Game and Forest League in Syracuse last winter, at which your president and secretary were present as representatives of this Association. The latter offered a resolution that the Legislature be petitioned for an increase in the force of State game protectors and their salaries. Chief Protector Pond said that more protectors were badly needed. "There certainly are not enough. As it is now each man has two counties to oversee, more than he can handle." The resolution was adopted, but there has been no addition to the force of State protectors. If the State is to have laws for the protection of game they should be enforced, and it is believed that an efficient protector should be designated for every county in the Adirondack region.

During the last session of the Legislature your secretary had considerable correspondence in regard to measures pertaining to fish and game protection. One bill was introduced to permit the hounding of deer in three or four Adirondack counties, but the friends of protection entered a strong protest, and it failed to get out of the committee's hands. It is a matter of congratulation that Senator Malby's bill extending the anti-hounding law for a period of five years longer was passed and received the Governor's signature. The many friends of forest protection and preservation regretted to learn that the bill appropriating \$250,000 for the purchase of Adirondack lands had been vetoed. Last winter the Black River Association asked the State Forest, Fish and Game Commission to appoint George W. Nelson, of Oriskany, as special protector, and they promptly did so.

The reports of the treasurer and secretary were both adopted, and after some discussion of matters of interest, notably the deer question, officers for the ensuing year were elected as follows: President, Wm. L. Fowler, Holland Patent; Vice-President, S. R. Fuller, Holland Patent; Secretary, W. E. Wolcott, Utica; Treasurer, H. A. Pride, Holland Patent; Directors: John C. Thomas, Remsen; Fred W. Wasmuth, Augusta; Ed W. Robertson, Trenton; S. R. Fuller, H. A. Pride, George G. Chassell, Ira L. Park, Holland Patent; Delegates to State convention: H. A. Pride, W. E. Wolcott.

W. E. WOLCOTT.

UTICA, Dec. 9.

Moose Hunting and Small Bores.

I HAVE read with interest the article by Mr. Westover, "Some Thoughts Upon Moose Hunting." My experience exactly agrees with his. While sometimes moose are very shy and hard to approach, I have found them, as a general rule, to be most stupid and easiest to still-hunt of any kind of large game. For an animal which can see, hear and smell as well as a moose can, stupid seems to be the word which fits their case best. Only a few years ago I saw a large old bull which allowed two men, neither of whom had ever seen a moose, to walk up to within a few feet of him on dry leaves and fire into him fourteen times with small-bored rifles, and the bull never moved. I was once where an immense bull stood and took eleven shots from muzzleloaders and never tried to escape. I think it must have been fully half an hour from the time the first shot was fired till he fell, and yet in all that time he never moved over thirty yards.

While there are some cases, when a moose has been started, where he shows a great deal of cunning in eluding his pursuers, and it seems almost impossible to get near to him, yet in most cases he seems utterly indifferent about the approach of men. I have several times known of moose coming into the streets of well settled towns and walking for long distances close past the houses, and scores of instances where they came into fields with cattle, or close up to farm buildings. Nearly every fall one or more are killed in Maine by engines. They will stand on the track and allow themselves to be run over without attempting to get out of the way. I have known not only bulls but cows and calves to be killed in this way. I have paddled up to within sixty yards of an old bull which was walking along on a rocky shore. He was looking straight at me and walking toward me. He paid no attention to the canoe till shot. I have known hunters with whom I am acquainted to paddle up to moose feeding in the water till they struck them with a paddle. Is there any other as large animal on the face of the earth so stupid as this? And yet any of these moose perhaps in a few hours may be too shy to approach.

It is just so in calling moose. Sometimes it is next to impossible to call one out. If he comes at all he will creep quietly up till he gets one's scent, and then sneak off so quietly that till you see his tracks the next day, you do not know he has been near you. At other times

he will come crashing and smashing directly toward you. Often they do not have to be called, but will come to the noise of an ax. In 1859 my partner, while out on a sable line, stopped for the night in a "baker camp" made of bright, new cedar spits. After supper, when he was cutting up his night's wood by fire light, a moose came to the sound of his ax, and he was obliged to take shelter in the camp behind the fire. The moose came up to within a rod of the fire and walked back and forth, grunting, for a long time. My partner was a man of good courage and used to moose, but as he only had a small bored rifle pistol, he thought "prudence the better part of valor," and did not fire.

I never could see why it was thought such a feat to kill a moose. While of course there is a great deal in knowing the habits of the animal, there is also a great element of what is called luck in moose hunting. One may hunt for weeks and not get a shot, and he may find one in an hour after leaving camp. One of my partners shot three within half an hour from the time he took the track. Although it was bare ground and very dry, they allowed him to get within twenty yards, and stood without lifting a foot till all were shot. On another occasion my partner got close to five old bulls, tracking them on light snow. He stood till he shot four and wounded the fifth, with a muzzleloading smoothbore.

While a great deal of credit belongs to the guide who gets the sportsman up to a moose, I cannot see any reason why the sportsman should have any more credit than if he had shot a cow. In all cases the guide could do the work better alone, and the sportsman is only a hindrance instead of a help, and yet he usually takes all the credit to himself. If a man can go out alone and kill a moose then he may have some reason to congratulate himself on what he has done. The hard part of moose hunting is to find the moose.

I agree with Mr. Westover that in shooting a great deal depends on the man who shoots, as well as the size of bore. Still, I do not believe any one going into the woods to shoot moose should ever carry anything smaller than a .44, and I think a .45 much better than a .44. While it may be true that if a small bullet is placed exactly right it will kill as quickly as a large one, the fact is that no man living can always place a bullet just where he wishes when shooting in the woods. At least half the time the game stands so that he cannot see just the part he wishes to aim at. One may be sure that if a .45 does not kill, a .30-30 would not if placed the same. I would give more for Mr. Braithwaite's opinion than that of any dozen of so-called sports who have shot one or two moose each. A friend has just come in who before this season has always used a .45. This year he carried a .30-30. He can shoot a rifle and knows where to shoot an animal. He shot a large buck square through. With a .45 he would have been a dead deer, but as it was he was a lost deer. Next he shot another buck just where he wished to; this one ran a long way and never bled a drop, and as there was no snow was found almost by accident. Then after days of hunting he got a chance at a moose. He shot the moose twice, then the next cartridge snapped, and while getting another the moose went off. After following a long way and not finding blood, they came to where he had stopped and bled a good deal. As it was late and they were a good way from camp, they thought best to let him be till morning. In the morning there was a heavy snowstorm, which did not cease till nearly three feet fell, and so it was a lost moose. My friend says that if he had taken his old .45 he should have had a moose and two deer, instead of one deer, and that he will never take a .30-30 again.

The noted guide, Louis Ketchum, says: "I would just as soon shoot a porcupine quill through a moose as a .30-30." As Louis has probably shot more moose than any twenty sports who ever came into Maine, I think his opinion is entitled to more consideration than that of those whose only experience in shooting large game has been confined to a few shots. H. L. Leonard, who shot more moose by fair still-hunting than any man I ever knew in Maine, after trying small bores, used a rifle made by himself carrying a half ounce round ball, in all his last hunting; and a moose usually did not have far to go to get to the end of his journey when struck by a bullet of this size. Because one has shot a moose dead at a single shot with a small bullet, it is no sign that it can be relied upon to do it the next time. I once shot two moose in two successive days with a round ball of nearly 60 to the pound; but a few days after one took eleven bullets of this size and they were well placed, too.

I think that it makes a good deal of difference whether a moose is shot when standing quietly or when he is "fighting mad." I think that when an animal is excited it cannot be killed by a wound which will kill it instantly when quiet. Of course, it will die in time, but it will be some time.

I do not believe that any of the high-power, small-bore rifles should be allowed to be carried into the woods. There is no need of a rifle which will carry over 200 yards and rarely of one to kill at half that distance. I have known those who have killed hundreds of moose and thousands of deer, and according to their testimony and my own experience most moose are shot at twenty to thirty yards, and deer but a little further off. I have seen moose shot on bare ground at not over fifteen feet from the muzzle of the gun, and I never saw one shot at over 100 yards. The deer I have seen shot were usually further off than the moose. Occasionally both moose and deer are shot at long range, when across streams or on bogs, but very seldom at over 100 yards when in the woods. In most cases the distance is greatly overestimated. One of our guides once sent me a newspaper with an article about shooting a moose. The writer gave the distance as twenty-five rods. The guide wrote: "This is a nice man and he means to tell the truth, but it was not over ten rods." Usually the distance is not over one-half what men not used to the woods estimate. One reason why high power guns should not be used in the woods is that there is no need of them, and larger bored of shorter range do the work better; but the great reason is the danger to other people. Last year one man was killed here by someone so far off that no one could tell who did the shooting. This year two have been shot in this way, no one knowing where the bullet came from, and several others have had narrow escapes. I believe that, shot for shot, one carrying a .45 will get a

quarter more deer and twice as many moose as the same man could if using any high power small bore, and with much less danger to other people. M. HARDY.

BREWSTER, Maine.

The Maine Season.

BOSTON, Dec. 14.—Returning hunters cannot sell their deer in the Boston markets as readily as early in the season. Marketmen say that they are not wanted. Three as handsome bucks as were ever shot have been offered nearly all the week in Clinton market, and up to last evening only one had been sold. Two of them weighed almost 200 pounds each, and the other 203 pounds. All three had particularly fine heads; one most symmetrically beautiful and clear. But marketmen say that there is no call for deer heads. If cut off, they can scarcely give them away; left on, the heads are not an inducement to buyers of meat. The buck sold only brought 12½ cents per pound, against 25 and even 30 cents, paid for no better deer early in the season. The marketing of deer by returning sportsmen has become a regular feature here, and the marketmen all understand it. Is not this a strong argument in favor of limiting the number of deer a hunter can bring out of Maine to one?

It is a curious fact that a lot of sympathy runs with convictions for infractions of the game laws, in almost any State in the Union. Ira Arnold was fined \$700 in the local court at Berwick, Me., last week for snaring 140 partridges. He had pleaded guilty, and, since he was without means to pay his fine, if sentence were carried out, he must spend several years in jail. The judge suspended sentence, on condition that the prisoner cease snaring birds. Now, a gentleman discussing this case with me, and telling me about it, a most respectable doctor, with a good Boston practice, expressed the opinion that the judge did just right. "When a boy, I snared partridges myself," said the worthy doctor, "and sold them for 25 cents each. I did this to help myself along with my schooling. I fail to see how snaring partridges is any worse than shooting them. In both cases the birds are destroyed."

Duck shooting along the South Shore and down the Cape is not yet all done, although the sportsmen have generally given up for the season. The captain of a fishing vessel came up to Boston Friday from off Barnstable. He had about 40 ducks on his craft, some of them black ducks. He made his friends presents of pairs of them. Remarked that he had never seen better shooting off Barnstable than he had found this week. He allowed that he and his men had shotguns and good ones, and frequently engaged in shooting ducks, when the weather did not admit of fishing.

Dec. 16.—The Maine big game season is entirely closed. The legal open season on deer closed Dec. 15, and that on moose a month earlier. The season has been a most remarkable one, especially for the number of deer slain. The number of deer shipped through Bangor was not far from 4,000. Remembering that Bangor is only the largest one of four or five great outlets for game, and considering that a vast number of deer are killed by residents of the State and not shipped at all, it is not a wide estimate to put the total number killed for the season at 25,000. Some estimates are even larger, but counting only this number, and reckoning that every deer is worth on an average \$10 to the hunter or citizen who secures the prize, it seems that the deer crop is worth at least a quarter of a million dollars to the State of Maine. But such a reckoning is not wide enough. It costs sportsmen, reckoning all that it paid into the State in their pursuit of deer by both successful and unsuccessful hunters, at least \$100 for every deer taken by them. If sportsmen have taken one quarter of the deer slain, 6,250, they have paid into the State for the same \$625,000. Still we hear of the Maine farmers complaining of the loss of a few bushels of oats, eaten by the deer, and threatening to remove all protection from these animals at the next session of the Legislature. Of moose, 200 have been shipped through Bangor, and if this means one quarter of the number slain, and it costs sportsmen \$200 on the average to get their moose, the moose crop has been worth to Maine at least \$40,000.

In another way the season has been a most peculiar one. There have been at least 32 persons injured badly by the careless or accidental discharge of fire arms when hunting or about hunting camps. This number does not include the accidents from guns of minor importance, and it is estimated that during the season at least 100 persons were injured, more or less, by the accidental discharge of guns, or careless shooting. Of this number eight have died already, and a few others are in a bad condition. In the previous year only five persons were killed from the same cause, one lingering till midwinter before he died. What a travesty on legislation! It will be remembered that Maine made a law last winter putting a heavy fine and imprisonment, or both, on the shooting of a person by mistaking him for game. But, though grand juries have met in at least two of the counties where the accidental shooting has occurred, and the facts have been known to those juries, not an indictment has yet been found. I heard a sensible Maine guide comment on this matter the other day, a man who has been in the woods about all the time during each open season for several years. "The law is all foolishness," said he. "It can do no good. A fool who is crazy enough to shoot at a man for a deer will shoot anyway; no law can stop him. He does not think of the law. He is wild with excitement; buck fever. He does not know what he is about. I dread the whiskey sportsmen bring into camp more than anything else. When I am guiding parties who have it, I insist on their drinking at night. If I know of their drinking ever so little in the morning, before or after they go out, I keep watch of them. They don't get a chance to mistake me for a deer. My eyesight is pretty sharp in the woods, and I calculate to see them first. No," he remarked, as he drew a snow-white sweater over his shoulders, "the color of the clothing has nothing to do with a man who will shoot at a motion in the woods. He will shoot at a fire-red sweater or hat just as soon as anything. He is completely gone. He is crazy with hunting excitement. But I do believe in a white sweater to hunt deer in after the ground is covered with snow. In the fall, before the snow comes, I wear an

outside shooting coat and hat as near to the color of the autumn leaves as I can get. I have seen considerable that has been written about wearing red hats and red sweaters, and I am satisfied that the deer will see such clothes long before the hunter sees him, and the more startling the color the more likely he will be to skulk silently away. Hunters who go into the woods have got to take their chances of being shot by the fools without either brains or experience. Law won't help in the least, and startling colors in clothing are all wrong, if one expects to see the game he is in quest of."

The Maine game season has also been remarkable in another direction—the increase in women hunters and their success with big game. Three moose have been taken through Bangor by women who claimed to have shot the game. The successful moose slayers are Mrs. Elizabeth Sprague, of Boston; Mrs. S. W. Whilden, New York; Mrs. D. S. Adams, Manchester, N. H. Women hunters have taken 59 deer through Bangor for the season.

Now that the game season is over the sportsmen's shows are next in order. The Massachusetts Sportsmen's Association met recently and decided to prepare for a show and to open it in the Mechanics' Building Feb. 22. This is earlier than usual, but the feeling is that the weather chances are not as bad as in March. Greater attractions than ever before are promised, with game birds and animals on exhibition that have never before been seen in any show of this class. Greater exhibitions of fish and fish hatcheries are promised from the several New England States.

SPECIAL.

Funds for a Christmas Dinner.

THE Wyandanch Club, of Smithtown, is next to the Southside Club, the oldest sportsman's club on Long Island. It was founded in 1872 as the Roslyn Gun Club, and in 1882 the name was changed to the present style and the club moved to Smithtown, where it has a preserve of 15,000 acres devoted to quail. Working chiefly under the supervision of Mr. Gustave Walter, who was the club's founder and is now the oldest member, the Wyandanch members have imported large numbers of birds from other States, and first and last have put out 767 dozen quail, the overflow of which has helped to stock the surrounding territory. The Wyandanch territory is divided into seven districts, and the members are assigned to certain districts for the day's shooting, and that one gunning party may not encroach upon the particular district assigned to another one, club guides are employed to accompany the shooters. One of these guides the other day invited two sportsmen to Northport to shoot on the Wyandanch preserves; he did this without any authority, and got the shooters into trouble. The rest of the story is told in the subjoined letters, written by Gen. Wingate.

NEW YORK, Dec. 13.—Messrs. George W. Burr and C. E. Robinson, Northport, Long Island. Gentlemen: Your letter of the 11th inst. to the Wyandanch Club, tendering an apology to it for shooting upon its grounds on Nov. 23, and inclosing \$50, the amount of the fine to which you would have been subjected if legal proceedings had been instituted against you (as was contemplated by the club) has been referred to me as chairman of its Committee on the Enforcement of the Game Law.

I desire to assure you, on behalf of the members of the club, that they consider your action in the matter to be both frank and manly, and accept your apologies in the same spirit in which they are tendered. There is no disposition on the part of the club to persecute anybody. There has, however, been so much unauthorized shooting upon the grounds leased by the club that it has been compelled to decide to prosecute all violators of the law; otherwise, the rights for which it pays a very considerable sum annually to the farmers are thrown away. The matter in your case was one of principle, and as the principle has been fully established by the course you have taken, the club accepts your letter as settling the entire matter, and to meet it in the same spirit in which it was written, it has this day forwarded to the Overseer of the Poor of Smithtown the \$50 in question, to be devoted to a Christmas dinner and the general benefit of the poor in his charge.

Very truly yours,

GEO. W. WINGATE,
Chairman Law Committee.

NEW YORK, Dec. 13.—Overseer of the Poor, Smithtown, L. I. Dear Sir: The Wyandanch Club was about to institute proceedings for the prosecution of Messrs. George W. Burr and C. E. Robinson, of Northport, for shooting quail on its grounds on Nov. 23 in violation of the game law, and I was appointed chairman of a committee to conduct this prosecution and that of other persons who have trespassed upon the property of the club. Messrs. Burr and Robinson have in a very manly manner written to the club inclosing \$25 each, the amount of the fine to which they would have been subjected if the matter had been taken into court, and tendering their apologies for their conduct, and which letter has been accepted by the club as full reparation. The club proposed to institute these proceedings as a matter of principle, and not for the purpose of persecuting anybody. Neither do the members desire to use for their own benefit the money which these gentlemen have contributed.

It has therefore been decided to devote the \$50 in question for the benefit of the poor of Smithtown who are in your charge. I inclose check of the club for that amount and would ask that you will expend as much of it as you think proper to giving the town poor a good Christmas dinner, and the balance, if any, for their general benefit.

Yours truly,

GEO. W. WINGATE,
for Wyandanch Club.

Mr. Lanier's Game Preserve.

MR. CHAS. D. LANIER, of this city, has purchased the Fowler game preserve at Moodus, Conn. It consists of 2,000 acres, and includes a meadow with good duck shooting, and uplands stocked with pheasants, partridges and quail, and several trout streams and ponds.

The Maine Non-Resident Tax.

BOSTON, Mass., Dec. 15.—Editor Forest and Stream: The article in FOREST AND STREAM of Dec. 14 on the above subject cannot fail to be of interest to the sportsman who journeys to the Maine woods annually. As one who is no novice in big-game hunting in Maine, New Brunswick, Quebec and Nova Scotia, I respectfully beg to give FOREST AND STREAM my views on the subject. I do not hesitate to assert that the vast majority of fellow sportsmen view the matter in the same light.

At the meeting of the Maine Sportsmen's Fish and Game Association to be held at Bangor on Jan. 7, when the proposed non-resident tax will come up for consideration, it would seem advisable that in looking after the best interests of the State of Maine, the Association should not lose sight of the fact that the non-resident sportsmen, as directly interested parties, have a voice in the matter.

It is an undeniable fact that Maine's non-resident hunters pay dearly for their experience. This, without being obliged to pay the proposed non-resident tax.

"Would not the taxing of non-residents a reasonable fee for the hunting of large game be a just and wise policy to adopt?"

The game laws of Maine make it compulsory for the hunter to engage the services of a registered guide in order to hunt and camp. He is obliged to pay for guiding service double the rates obtainable in Quebec or Nova Scotia. In the majority of cases the hunter, in order to get game, will be compelled to pay extras and tips that put the Canadian license fees into shade.

In all probability the Maine Sportsmen's Fish and Game Association is not thoroughly familiar with the average expense incurred by the non-resident hunter.

It is clearly evident to those who foot the bills that the hunter is called upon to pay a good price for the value he receives, and in a great many cases is asked exorbitant figures.

Under these circumstances the proposed non-resident tax would seem unjust, unless offset by material reductions in other directions.

A tax on top of the expenses now connected with a trip to Maine is surely to have one effect, that of driving hunters to Canadian territories, or do the next best thing, read FOREST AND STREAM at home and thus deprive the State of Maine of a good share of the \$15,000,000 referred to by your correspondent.

Taking it all in all, there is something decidedly misleading in your correspondent's article. The raising of funds for warden service in order to protect fish and game would seem good policy, as would also be the passage of a law forbidding the carrying of firearms into the unincorporated portions of the State during close season.

Your correspondent does not tell us who is to blame for the state of affairs calling for these remedies. Those unfamiliar with the situation would infer that it is the non-resident hunter. We all know from home experience that a resident hunter can and is likely to do more harm in a day than a score of non-residents will do in a week.

Moreover, in view of the fact that the non-resident big-game hunter is not likely to spend his time and money in Maine during close season, and that, when he is to be found there during open season, he is always in charge of a resident registered guide, it would seem further proof that whatever violations of the law, if such are committed, are traceable directly to residents.

The Tracy incident related on folio 471, FOREST AND STREAM, is but one of a number of similar cases that have come under the writer's observation from time to time. A good remedy for decreasing game in Maine is to protect the game by passing a law forbidding Maine guides to carry firearms while guiding. It would be well to follow New Brunswick's example.

Considering that it is not just to tax non-residents for warden service, inasmuch as residents create the necessity for such; considering, furthermore, that if taxing the non-resident were desirable it would seem contrary to common sense to tax the big-game hunter and allow the fisherman to escape, when the care and propagation of fish is one of the chief issues, it would seem advisable that the Maine Sportsmen's Fish and Game Association leave "well enough alone" or devise other means.

F. J. SCHUSSELL.

Newfoundland Trophies.

IRVING C. TREAT, of Clapp & Treat, has at their store, says the Hartford Courant, two fine heads of caribou, trophies of a hunt in the wild parts of Newfoundland, where Mr. Treat and A. W. Comstock, treasurer of Comstock, Cheney & Co., of Ivoryton, spent some interesting days last September. They went by rail from here to Cape Breton Island, and then crossed by boat to Port aux Basques, on the southwestern end of Newfoundland, near Cape Ray, where the cable crosses. At Port aux Basques they went on toward the northeast by the Newfoundland Railroad. The map of this road is especially interesting from the fact that it is well sprinkled with stations whose names are printed in large black letters. Mr. Treat says that the only place to find these stations is the company's map. They are not to be found along the line of the road, and are not even marked by the presence of a shack that might be called a stopping place. It is just bushes and trees and a wilderness through which the train passes without a suggestion of stopping.

The sportsmen went on the railroad to Bay of Islands. At Bay of Islands they stopped off and secured guides and a dory, which was loaded on the cars and carried along to Deer Lake. From Deer Lake they went to Nicholasville. This flourishing community consists of the homes of Old Man Nicholas, Young Nicholas, his son, and one other settler. This third resident was irrepressibly happy this year in having raised 250 barrels of potatoes, which made him a rich man thereabouts. The younger Nicholas is a devoted hunter, and this year he succeeded in capturing alive a dozen caribou calves, which have since been shipped to the Bronx Zoological Gardens, belonging to New York. They are safe there from hunters or famine. Nicholasville is on the Humber River, and the hunters made their way up the river to the Big Falls.

The river was lower than ever known before at that

season, and the guides had often to pull the stones out of the way to make an adequate channel in the bed of the stream. But at the Falls the water lay in deep pools, and there Mr. Treat caught a three-pound trout and a river salmon of the same size, and he got them both on a six-ounce rod. The country in back of the river is a combination of hills and bogs and woods, and the caribou, which live in the far north region of the island, begin in the fall to move south from the Long Range Mountains. The hunters take position on some elevation and watch the edge of the woods. Here or there a single caribou or a group of them will merge and start across the open land. This, however, is all cut up with innumerable deer paths, and the hunter who thinks the animals are bound right for him often sees them suddenly turn away and finds they have followed a trodden path.

American Duck Shooting.

OF Mr. Grinnell's new book on duck shooting, Mr. Wm. Brewster, the eminent ornithologist and sportsman says:

"It may well serve as a model for works of its kind, combining as it evidently does scientific accuracy of statement with a simplicity and directness of treatment and graceful charm of style which cannot fail to make it at once useful and attractive to the great sportsman class for whom it is, of course, primarily intended. I like the book thoroughly, and do not see how it could have been made a better book than it is."

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Fish and Fishing.

A White Canadian Salmon.

COUNT HENRI DE PUYJALON, General Inspector of Fisheries and Game of the Province of Quebec, and author of a work on natural history, is of the opinion that he has found a new variety of salmon in some of the streams of Labrador, specimens of which he has brought back with him here, preserved in alcohol. Those which I have seen are about the size of herrings. Specimens of the adult fish were also brought, but not in alcohol, and as they had only been slightly preserved, they were found unfit for examination when unpacked in Quebec. So far as the external appearance of these young fish go, I see nothing by which to distinguish them from small grilse. Their colors are much the same as those of the young of the ordinary salmon. The small, silvery bright scales easily rub off when touched, and the tail is slightly forked. Mr. Puyjalon tells me, however, that these conditions—the slight caudal notch, and the looseness of the scales—are equally present in the adult specimens of the fish. Here is Mr. Puyjalon's description of a fish taken in the month of June at the foot of the Kecipwei River on the Labrador coast: "Weight, 3½ pounds; length from the extremity of the snout to the extremity of one of the lobes of the tail, 24½ inches; from the extremity of the snout to the extremity of the opercle, 5 inches; from the same point to the beginning of the dorsal fin, 9½ inches; width of the caudal fin from one lobe to the other, 4¾ inches. Body very slender, tail slightly forked, scales very shiny, very thin, adhering but slightly; head slender; back a dark blue metallic color; black spots in the form of a quincunx on the skin, showing but transparently through the scales; maxillary teeth very pointed." In the same waters with this fish the ordinary *Salmo salar* is found, so that there are excellent opportunities for comparative study. The residents of the coast call the ordinary fish "red salmon," and the specimens referred to by Mr. Puyjalon "white salmon." In the rivers in which they are found together, both fish run to about 15 pounds in weight. The so-called "white salmon" are also known to the inhabitants as "sling" or "slend," which Mr. Puyjalon thinks is a corruption of "slender" and applied to the fish on account of its shape. No matter what its size, its flesh is always creamy white, as distinct from the rich pink tint of that of the ordinary Atlantic salmon. It takes the fly equally as well as the more common salmon of the sea, and affords quite as good sport. The fish is clearly not a kelt, notwithstanding its slender form, and the question naturally arises, what is it? There is even less dissimilarity in external appearance between it and the common Atlantic salmon, than there is between the latter and the ouananiche. Mr. Puyjalon made a first brief reference to the sling or slend in the last published report of his department, but only this season did he succeed in bringing well-preserved specimens home with him. Before this last summer's trip to Labrador, from which he recently returned, he was under the impression that it was non-anadromous, never visiting salt water. His investigations during the present season prove the contrary to be the fact, and Mr. Puyjalon is now convinced that the "white salmon" possesses the same habits as the more familiar type of *Salmo salar*.

Marston's Charr in Labrador.

Some time ago Prof. Samuel Garman, of Cambridge, in writing to me of some specimens of a Canadian charr, very different in coloring from *Salvelinus fontinalis*, expressed the belief that some of the Alpine charrs would be found to occur in Labrador waters. I have often recalled his remark upon hearing the marvellous descriptions which missionaries, Hudson Bay men and others familiar with the interior of Labrador give of the highly colored trout (so called) that are found in some of its streams. A few days ago I came across a reference made forty years ago to the discovery of some such fish in a tributary of the Moisie.—Mr. Hind, the explorer of a part of Labrador in 1861, tells of the fish he found in Coldwater River in that year, and no better description than he gives them is required for the external appearance of the lovely *Salmo (Salvelinus) marstonii*, named by Mr. Cheney for the editor of the English Fishing

Gazette. He says: "Two deep crimson stripes ran down the whole length of the body from the pectoral fin to the tail. The throat and part of the body were silver white, the back dark green; the side of the fish was speckled with salmon-colored spots margined with white. Some of the spots were crimson, surrounded with a silver ring. The flesh of a few of them was quite white, but of the majority of a deep salmon color."

North American Association.

It is expected that the annual meeting of the North American Association for the Protection of Fish and Game will be held at the Van Ness House, Burlington, Vt., in the latter part of January, though the exact date has not yet been decided upon. It is understood that the members of the Association are to be tendered a banquet by the Vermont Fish and Game League. Mr. J. W. Titcomb, of St. Johnsbury, president of both the League and the Association, is busying himself in preparing an attractive programme for the annual meeting, and has invited each of the members of the Executive Committee to submit a report upon the legislation of the year affecting fish and game interests by the State or Province from which he hails. The inadvisability of introducing black bass into Canadian trout waters and the important questions of deforestation and forest fires are also suggested for consideration. Members of some of the Provincial governments are included in the membership of the Association, and it is much to be desired that it should have the benefit and the advice of members of State Legislatures also. It must be gratifying to members and friends of the Association to find that in one of the recently issued bulletins of the Division of Biological Survey of the U. S. Department of Agriculture, it is declared "the recent steps toward uniformity in the laws of the border States and Provinces are doubtless largely due to the efforts of the North American Fish and Game Protective Association. E. T. D. CHAMBERS.

Salmon as Leapers.

WHEN a strong rapid, or even a fall of ten or twelve feet occurs, the salmon surmounts the impediment with little difficulty; but when the stream is deep and full, and the fall considerable, the poor fish is obliged to stop, and appears sadly puzzled. It soon reconnoiters in all directions for a passage, and even leaps out of the water, apparently with no other object than to get a peep from a higher position, though it must be confessed from what naturalists tell us, the structure of the eye is rather against this supposition.

Salmon leaps are objects of great curiosity and interest. There are many more in Norway and in the British Islands of note than I believe are on this side of the Atlantic. There is a famous one at Leixlip, a short distance from Dublin, where I, with many scores of others, impelled with curiosity, like myself, have many a time stood for an hour or more to see the salmon leap the fall. The River Liffey runs right through the heart of that historic old city, and is walled on either side as a canal. Into this the whole sewers of the city empty. The tide enters from the Bay of Dublin and runs up a considerable distance, but from the color of the water, as one looks at it from the Quays, as they are called, thick as it is with mud and muck and filth, one would say no fish could live for two minutes in it. But they do. The salmon run this terrible blockade in their proper season and successfully reach the clear pure waters above. Poor fish, having undergone this suffocating experience and reached the more limpid element beyond, a further ordeal has to be undergone—the leaping of this fall of about 15 feet.

Two other most remarkable salmon leaps that I have seen are Ballyshannon and Coleraine in the north of Ireland. The former I am well acquainted with.

The large and beautiful lake, Loch Erne, fifty miles long by ten or twelve broad, pours its waters into the Atlantic by a short and very rapid river, which after an impetuous course from Belleek and a last fall of 15 or 16 feet at Ballyshannon, meets the tide at the bottom of a perpendicular limestone rock. The open sea is only three miles distant from the fall, and in early summer innumerable salmon run up the river and assemble in "the pool," as the abyss below the rock is called, checked in their career by this formidable barrier.

In the course of a week many thousands of salmon are here collected, waiting, as it would almost appear, for a spring tide to raise the water in "the pool" and make the leap easier. Here the fish are taken in nets in great numbers and sent to the London market, where, from their delightful flavor, for which the Ballyshannon fish are noted, they command high prices. Men, however, at this place, are not the only fishers. Seals follow the salmon from the sea and prey upon them in "the pool," pursuing them with greater speed and success than the unwieldy appearance of these amphibious creatures would lead one to expect. They are often seen emerging from the froth at the bottom of the fall with salmon wriggling in their mouths, and generally by the aid of sundry well directed bullets made to pay the penalty of their lives for thus intruding into the preserve of the lords of creation. I have myself shot several.

During spring tides, when the weather is fine, this salmon leap attracts a great number of spectators—just as the leap on the Liffey does, and a description of the scene will answer for both. At the latter place, however, the fish wait for a good "spate" before attempting to make the ascent; here they depend on the high tides.

It is very interesting to watch them. As the water rises the fish begin to leap; perhaps a couple of hundred in an hour. The young ones very often miscalculate the direction they should take, leaping perpendicularly out of the water, and of course falling back immediately. But the older and wiser salmon, many of which doubtless have been up before, and are better mathematicians, manage differently.

These dart to the crest of the cataract in a line with the curve of the falling mass of water, and there cling for some seconds, wriggling themselves into the torrent. In this very difficult position they can only work on the water with the pectoral and ventral fins; the force of their powerful tail, by which they had sprung from

the bottom, being now lost in beating the air. Many, notwithstanding, succeed, dip into the water at the top and shoot up the river; but the great majority fail and after a gallant struggle are tumbled back into the pool.

After the great leap up a fall the fish rest during several hours in the first gentle current they meet before proceeding further on their journey. It is plain that the distance they daily travel must depend upon the nature of the stream. If the river is rapid, the fish's stages must be short, and vice versa.

The salmon leaps on this side of the Atlantic are many, but they are interesting only to sportsmen, for they are, so to speak, outside the pale of civilization, while those I have mentioned in the Old Country are almost on the confines of big cities, and to the amusement seekers, especially on a Sunday afternoon, the exertions of the salmon to bound over the falls are always attractive.

There is a fine salmon leap on the Gold River in Nova Scotia, about 13 feet high, which only during a very heavy freshet can be surmounted by the fish. It has no equal in picturesqueness, but it is seldom visited because it is situated far in the wilds, and difficult of access. To see the fall when the water is low, one would almost swear salmon never went over such a place; but I have on two occasions after a continuance of very heavy rains, sat on the bank and watched them leaping, and positively enjoyed it. The successful jumpers, and those that fell short, seemed about equally divided the last time I was there, and afforded an opportunity for myself and my companion to back the "next salmon's leap" for small sums, which created a good deal of fun and excitement for us both.

Salmon leaps are also found on the Medway River, in the same Province, but they are not very high and are easily surmounted during floods.

There is a peculiarity in the instincts of salmon worthy of notice, viz., their invariable habit of returning from unknown distances and depths of ocean to the streams where they were bred. They may be forced by stress of weather or the pursuit of their natural enemies by a storm to a hostile port, but the vast majorities find their way back to their native waters, unattractive as they might seem on account of the difficulties they experience in surmounting these very leaps and other obstacles. Their local memory would appear to extend to food also, and probably the reason they take the fly so well on first leaving the sea, where they never meet with one, is a confused recollection of the habits of their youth.

But in conclusion, to revert for one moment more to their leaping, I have a letter by me from a friend who was last year in Norway, which states that a fall was measured there out of curiosity, where under it the water was sounded and found to be but 8 feet deep, and to the top of the fall from the surface of the water quite 17 feet; and yet several large salmon had been positively seen to make the leap, apparently easily, for they went on when they had dipped in the water at the summit. Is not this splendid leaping? NEPOS.

The Crater Lake Trout.

SARATOGA, Cal., Dec. 3.—*Editor Forest and Stream:* In the Aug. 3 number of this year you kindly published a full column "How the Parsons Put Trout in Crater Lake," Oct. 20, 1900. We did, and we worked hard to do it, riding two hundred miles, carrying a large milk pail of little trout for fifty miles of rough road, and climbing the high mountain and wallowing down the snowy sides of the Crater to the deep lake. We verily believed we were the first, and all whom we met and told of it believed with us. For the country was so full of stories of failure that the generous Southern Pacific R. R., who carried us and our outfit free and heartily, had small hopes we could do the task, especially so late in the year. Reports of trout, little and large, have come to us abundantly this year. Credible reports from officers of the Geological Survey from Washington say there are trout there 30 inches long. I feel in honor bound to tell you this, as it confirms the account of my friend, Mr. Steele, of Portland, Ore., that he put trout in Crater Lake many years ago. I think our party must have been the next successful one, for the only two lengths I hear described are 6 inches and 30 inches. I cannot now give Mr. Steele's first name, nor the year in which he planted the fish, but I will do so later when I hear from him. The great matter is to know that that wild, strange Oregon lake, twenty miles from a human habitation, six miles across and 2,000 feet deep, occupying the crater of an out-burst mountain, with water as richly colored as an Italian lake, is stocked with great trout. Now some one will build a little cabin hotel and launch boats, and famous fishermen will be as eager to go there as to the Nipigon. I had thought my little pailful would take so long to grow and multiply that I should have to leave the catching of them to posterity but, by my best spoon, which failed to hook me a Puget Sound salmon last summer, I will hope to catch a 30-inch trout from Crater Lake. They will be 32 next summer. Roosevelt may hear of them and drop a line to them, for there are mountain lions in the region, and he is mighty to slay them.

I know you will thank me to tell you that Bert Dennis, of Klamath Falls, who took us and first broke through the deep snowdrifts without spilling a fish, still has his good team, and has not forgotten the way. He is not at all a professional guide, nor is his home a regular hotel, but hunters are welcomed ranch fashion, and it has never been my hunter luck to get into warmer nests than are spread there or before a more bountiful table. The good Oregonians will blush if this gets to their eyes, but they deserve every word of unsolicited appreciation and praise. A stage runs daily, I think, in the summer, from Ashland to Klamath Falls, and Bert, for modest country charges, would take a party, not in style, but with hearty comfort. The fisherman who has not seen the huge trout of Klamath Lake, literally in shoals about the gushing springs at the bottom of the lake, has Oregon's greatest fish sight to see. I only began to lay down my claim, as an honest fisherman ought, to the credit of putting first fish in one of the deepest and most wonderful lakes in the world. The interesting subject has drawn me on, and that fascinating region will draw you again and again if

once you take a S. P. Pullman to Ashland and get into this hunter's and fisherman's paradise.

President David Starr Jordan had some fear my fish in a lake so large might not find each other in pairing time. Steele's fish have found each other, and the angling world may know that the rarest lake on the Pacific coast is stocked. Think of striking a 10-pounder where not a rock, a weed or log may bother your line if you play out 2,000 feet. Whew!

Death of Frank.

BARRE, Vt.—Three years ago I wrote an article to FOREST AND STREAM on "Foxes and Fox Hounds," and at that time I mentioned the difficulty my brother and I had in securing a desirable fox dog, and our final purchase of a rabbit hound that persisted in running foxes.

I am pained to report we lost by death this dog last week. The last fox shot ahead of him was on the day of his death—which no doubt was caused by poison. This was the forty-second fox killed ahead of him during the time we have owned him.

Old Drive, owned by Dr. E. H. Niles, of Danvers, Mass., will, on his return to his summer home, miss Frank, for they were steadfast friends and companions on many a hunt, and their musical voices up and down the Ompompanoosic Valley were familiarly known. I would not take this space to report the loss of an ordinary dog, but in this one it is the oft-told story of every old hunter, "we never again expect to own another like him." While reading the letter that brought the sad news, I could not withhold the moisture from gathering beneath the lids, and my mind wandered back to the last hunt we had together on that bright October morning, when my brother and I each shot our fox, and were at home in time for dinner. Some cannot understand how love lurks about a "cussed hound," but, dear reader, this was not the sneaking, raw-boned, thieving cur so often met with in the hound family, but instead was as trim as a pointer, with ears no longer, with a most wonderful intellect. I will not write on, suffice to say that the owners alone are not all that mourn, and when these lines are read by those that have had the pleasure of a hunt with Frank, will feel sad I am sure.

B. A. E.

The New England Kennel Club.

BOSTON, Dec. 14.—*Editor Forest and Stream:* I beg to announce the Dog Show Committee of the New England Kennel Club for 1902, viz: Messrs. Samuel Hammond, J. M. Grosvenor, Jr., David Crocker, Tyler Morse, Charles W. Keyes, Robert C. McQuillen, William B. Emery. Our eighteenth annual dog show will be held at Mechanics' Building, Huntington avenue, Boston, Mass., April 1, 2, 3 and 4, 1902.

The name of the superintendent, his office address, etc., will be published as soon as decided upon.

In the meantime all communications regarding the dog show may be addressed to William B. Emery, Secretary Dog Show Com., 260 Albany street, Boston, Mass.

Canoeing.

'Mid Reef and Rapid.—XXXI.

BY F. R. WEBB.

We accordingly gave it up, and, returning to our canoes paddled back close in shore up the river for a quarter of a mile or more, until we were about opposite the middle of the long, diagonal dam, when we dropped across and landed on it, and an easy portage was made by sliding the canoes over the crest on to the long, sloping apron, and thence down into the river below.

We paddled through the clustered islands in the bend and had an easy run of half a mile or more, when our progress was stopped by a long wall of reefs, extending like a dam, in a long, diagonal line from right to left clear across and down the river.

"Great Scott!" cried Lacy, as we landed on this reef and took a survey.

We looked down a long, down-hill slope of about a mile. Line after line of reefs or "saw-tooth" ledges crossed the river in long, parallel ridges, as though the very foundation sills of the mountains had been laid bare by the river, as, with unwearied patience through countless ages, it ate its way down to the level of the Potomac.

The pulp mill absorbs pretty much all the water in the river from the dam down, consequently the ledges were mostly above the water, which trickled over the low places, and slipped through the innumerable gaps and crevices in the reefs in countless, little, brook-like channels, until the bed of the river was so profusely studded with rocks that absolutely no water was visible 50yds. below us, and the entire range of river bed down the fall was, apparently, a perfectly bare wilderness of rocks.

"I tell you that would be a terrible rapid, with all that fall, if there was water enough to cover those rocks!" exclaimed Lacy, as he gazed with absorbed interest down the apparently dry bed of the river.

"Well, you would have thought so if you had come down over it as George and I did in our '86 cruise, when the water was up all over it," I replied. "It was most appallingly rough."

"I can easily believe it," he answered, as he prodded idly with his paddle into the frayed, coral-like surface of the reef. "Now the question is, how are we to get through? I see absolutely no thoroughfare. Isn't there any boat channel?"

"Not out here in the river," I responded, as I tossed away the stump of my cigar. "That pulp-mill canal above there is the old boat channel; the boats didn't run this part of the river. All there is to do is to find what water we can, which won't be much, and get through as best we can."

We accordingly re-embarked and paddled over to the head of the line of reefs next the right bank, from which point we felt our way along the long, diagonal, downstream face of the reef, clear across to the left bank, without finding a sufficiently promising opening, where we stopped and looked inquiringly at each other.

"Clearly this won't do!" I exclaimed; "we're no better off than we were before. We've got to get through some way. Let's paddle back and try it over. I think our best chance is to get out a little way from this bank and then work through across toward the other bank—in other words, to work as straight across the lines of reefs as possible."

There being nothing else in sight, we adopted this plan, and boldly attacked the reef at the first crevice which appeared at all promising, and, finally, after an hour's work, slipping through unpromising little notches here, many of which surprised us by floating us over where we least expected it, getting out and wading there, and lifting the canoes over when they stuck on a ledge, or where no suitable channel appeared; running a bold, open shoot somewhere else, or sliding in our canoes down the long, sloping, apron-like face of a reef, worn smooth by the water, sometimes with a face 10 or 15ft. long, or

"Bringing up with a terrific smash against the ledges."

even longer, and covered with only 2 or 3in. of water, much after the fashion of a small boy on a cellar door; in and out of the water, bumping up against the rocks, sometimes through a gap or over a fall stern first or sideways, and with many a narrow escape from a capsize, we finally managed to work through half the falls and reached a resting place on the old Government dam, where we landed for a breathing spell, and to reconnoitre the remaining half-mile or so of the rapid.

This dam is located about the middle of the fall. Beginning a few feet out from the right bank, it comes across the river in a long, graceful curve, its left end running for a long distance down stream, parallel with the left bank, forming a race for the old abandoned factory at the foot of the rapid, to which it formerly supplied power.

If it was bad above this dam it was infinitely worse below, for, with the same fall and same wilderness of rocks and reefs, a large part of the water from the pulp mill canal had now been returned to the river, through a break in the bank a little above the dam upon which we stood, evidently a souvenir of the recent flood, and while this dam diverted a considerable quantity of water through the raceway of the old factory below, at the foot of the falls, a large break in the left wing of the dam a hundred yards down the race from where we stood let the most of it back into the river again, and the water rushed wildly and furiously down among the rocks in the remainder of the falls, rendering the passage really dangerous, both to ourselves and to our light, frail canoes, and making the hoarse prophecy of our Watson's Falls friends, "Them light little boats 'll be smashed into kin'lin' wood" not unlikely to be realized.

"Well, how about it?" asked George, as we ruefully surveyed the not very promising outlook before us.

"Well, I think our best chance is to paddle over to the right bank, where, you will remember, the dam is open, and drop around the end of it, and work through over there the best way we can," I replied, as I pulled my canoe well up on the dam to secure it while I looked the situation over.

"Don't you think it would be better to drop down that lead to the left there, down the race, and run that break in the dam, and then work through on this side?" he continued.

"No, I think my plan best," I replied, "but there doesn't seem to be much choice, and my own opinion is that whichever way we go we'll wish we'd gone some other way. That break is very rough, and the tail of the outflow slashes up dangerously over that mass of rocks there at the foot. They will be hard to dodge."

"There is a clear little channel, there, just this side of the rocks," he persisted.

"Yes, but it's very narrow, and the chances are all against our being able to make it," I replied.

"It will be hard to make," added Lacy.

"Yes, but it must be made," returned George.

"I'll tell you," said Lacy, "in running the break swing your canoe in on the up-stream side, out of the tail into that little eddy just above it, up under the dam there, and then take a fresh start from there."

"That's it," exclaimed George, as he untied his painter from a projecting rock on the crest of the dam, and prepared to re-embark.

"All right," said I, as I followed his example. "Any way. There doesn't seem to be much choice, and they all look equally bad to me."

Lacy went first, while George and I watched him from the dam. He paddled down the race, along the wing of the dam, turned to the right and entered the shoot, and shot down the break. He turned the bow of his canoe in toward the eddy as soon as he was safely over the dam, but was carried far down toward the rocks, with his canoe sidewise across the tail. Finally, by desperate paddling, he succeeded in securing the eddy, where, helmet in hand and mopping his forehead, he awaited us.

"Lacy didn't manage that very well," said George, as he stepped aboard his canoe and pushed off from the dam. "Surely all that work was not necessary to get into that eddy."

He went down next, while I watched him. He made the shoot precisely as Lacy had done, and only by putting forth his utmost strength did he clear the rocks and drop into the eddy.

"George didn't manage well either, then," said I to myself, as I took my seat in my canoe, lit a cigar and pushed off into the strong flow setting down the race. "Perhaps I'd better look a little out."

When I reached the break I noticed that a reef, or more likely a course of the broken dam, lay across it, over which the water fell in a perpendicular cataract, a couple of feet or so in height, and it was necessary to go below around the end of the reef or course and paddle back clear across the break in order to gain the haven where George and Lacy quietly lay, watching me with interest and anxiety. As I approached both shouted something to me, but it was lost in the roar of the waters.

There seemed to be considerable lee close up to the fall over the obstruction, which was perpendicular, like a dam, and 2 or 3ft. high, and I at once saw that Lacy and George had gone too far down before attempting the crossing, so I held the nose of my canoe close up under the ledge—so close that the water from the fall fell on the bow of the boat and splattered over the forward deck and hatch—and started to paddle leisurely across. I would show those fellows that there was quite no occasion for so much superfluous exertion if they only knew how to do it properly—in short, in order to run a rapid or fall successfully, headwork was of more importance than mere muscle.

I had gotten a couple of boat lengths out when my canoe was seized by something underneath with a mighty grasp, thrown around, end for end, and hurled down that remorseless tail like a straw. My cigar flew overboard in a jiffy, while I grasped my paddle and worked it with the strength of desperation, but with no more effect than if it had been a twig. I missed the eddy entirely and was hurled bodily, almost broadside on, against the dangerous mass of rocks at the foot of the shoot, which loomed up ten times more threatening and dangerous at close quarters, but the water banked up against the rocks, like a cushion instead of breaking over them, and just as my canoe was within an inch of being reduced to a mere mass of rags and kindling wood, she held off and slipped easily and harmlessly around into the deep little channel we had noted from above, down which she shot like a race horse into the open water below, and I was safe.

I took off my helmet and smoothed down my hair, which was standing on end, and wiped my dripping forehead with my handkerchief, and looked around and smiled a feeble, idiotic little smile upon George and Lacy, who shot swiftly alongside of me as I drifted idly upon the rocking surface of a short little reach of still water below the dam—relief was written upon each countenance. They had, with one accord, darted out in alarm after me as soon as they saw that I had missed the eddy, and was going upon the rocks.

"What in the mischief did you go way down below the break for?" exclaimed George, as he grasped my gunwale, while Lacy at the same time yelled, "You should have jumped the break. That's the way we did. We hollered at you to jump it."

"Yes, I know it, now," I replied with a wilted little laugh, as I replaced my helmet on my head and took up my paddle. "It's a clear case where my hind sight is better than my foresight. I'll do it next time."

The remaining half mile of rapids below the dam now lay before us, with the augmented volume of water escaping through the break in the pulp mill canal, infinitely worse than above, and well calculated to tax our nerve, skill and address to the utmost. There was no way of avoiding it, however, except to abandon the cruise, and have our canoes ignominiously drayed in to the freight depot, an alternative easily within our reach, for we were now, and had been for some time, within the limits of Harper's Ferry, whose houses straggled up the steep bluff on our left, and crowned its summit, as well as lined the river front for a long distance up the river behind us. We, however, had no desire or intention to avoid it, and, selecting the most promising opening, we boldly let ourselves loose.

[TO BE CONCLUDED.]

Brooklyn C. C.

The annual meeting of the Brooklyn C. C. was held at the residence of Ex-Com. Percy F. Hogan, No. 202 Jefferson avenue, Brooklyn, N. Y., on the evening of Dec. 10. The reports of the officers and committees showed the club to be in excellent financial condition, and the prospects for the coming season very bright. The following were elected officers of the club for the ensuing year: Com., Joseph B. Taylor; Vice-Com., H. A. Reitzenstein; Purser, Ainslie W. Walter; Meas., F. Valdemar Henshaw; members of the Board of Trustees of the class of 1904, Robert J. Wilkin and Morton V. Brokaw. Mr. Wilkin was elected President of the Board of Trustees, and Mr. Hogan Secretary. The annual dinner of the club will be held at the Olde Tavern on Duane street, near West Broadway, New York, on the evening of Saturday, Jan. 11, 1902, at which time the committees for the ensuing year will be announced, and the prizes for the past season distributed.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

A. C. A. Dinner.

PHILADELPHIA, Dec. 16.—*Editor Forest and Stream:* On Saturday night, Dec. 14, a dinner was given to the members of the Atlantic Division of the A. C. A. at The Orchard, the country home of the Athletic Club of Philadelphia. The weather was fierce, with a howling wind and rain, nevertheless nearly forty canoeists assembled around the board, and one of the regular A. C. A. nights was passed.

Those present were: Louis A. Hall, Commodore, A. C. A., Boston, Mass.; M. D. Wilt, Vice-Commodore Atlantic Division, Philadelphia, Pa.; F. S. Thorne, ex-Commodore, Buffalo, N. Y.; T. L. Dunnell, ex-Commodore, Brooklyn, N. Y.; Harry C. Allen, ex-Vice-Commodore, Trenton, N. J.; Joseph Edward Murray, ex-Vice-Commodore, Philadelphia, Pa.; Henry C. Smythe, Librarian Custodian, New York, N. Y.; W. A. Furman, F. G. Furman, W. H. Heidweiler, H. P. Moorhead, H. C. Allen, W. S. Smith, M. S. West, W. C. Lawrence, R. G. Lucas and Harry Ott, Park Island Canoe Association, Trenton, N. J.; F. C. Moore, Wendell Andreas, H. L. Pollard and F. C. Moore, New York C. C.; D. B. Goodsell, Yonkers C. C.; M. D. Wilt, J. E. Murray, F. A. Hockey, A. S. Fenimore, H. W. Fleischmann, H. E. Blumner, E. D. Hemingway, Omar Shallcross, E. W. Crittenden, Wm. Overington, Jr., and Will K. Park, Red Dragon C. C., Philadelphia; T. Rice Davis, Lakanoo C. C., Burlington, N. J.; Dr. Pennington, E. H. Preston, Philadelphia, Pa.

The table was arranged in the form of the letter V, with Louis A. Hall and M. D. Wilt at the head, and J. E. Murray and H. W. Fleischmann at the ends. Speeches, songs and bright remarks followed like a continuous performance. Com. Hall gave an interesting talk on the coming meet, which will be held at Cape Cod next August. His remarks were well received, and he made himself heard without the aid of a megaphone. Ex-Com. Thorne spoke of the many pleasant times at past meets, and advised every one to be on hand at Chatham next August. W. K. P.

Red Dragon C. C.

PHILADELPHIA, Pa., Dec. 16.—The Red Dragon C. C. has been rather quiet since the boating season closed, even the trapshooting interest not receiving the attention of former seasons. Commencing the first Saturday in January, a series of weekly shoots will be held, which will last until the opening of the canoeing season. Many handsome prizes have been secured, and the competition promises to be spirited. A distance handicap will give the poorer shots an equal chance with the best.

Several of the Red Dragons distinguished themselves at the Sportsmen's Show which was held in Philadelphia recently. Although none of them were in training, a good showing was made in tilting tournaments, canoe races and other aquatic sports. To Com. Wilt much credit is given for his untiring efforts in having the Red Dragon C. C. represented at the Sportsmen's Show. He placed several of the members' canoes on exhibition, and devoted much time to the events. It was intended to have a Red Dragon camp, which would have been a very interesting exhibit, but owing to lack of space and time it was impossible to arrange it. W. K. P.

Yachting.

Designing Competition.

IN view of the continued and increasing interest in yachting, a designing competition will be opened in the columns of FOREST AND STREAM. In America the yachting season is comparatively a short one, and such a competition as has been determined upon will serve to stimulate the interest in the subject during the winter months. The competition is open to both amateur and professional designers. Three prizes will be given for the best designs of a yacht conforming to the following conditions:

- I. A pole mast sloop.
- II. 25ft. load waterline.
- III. Not over 4ft. draft (with centerboard hoisted).
- IV. At least 50 per cent. of ballast outside on keel.
- V. 5ft. headroom under cabin carlins.

All abnormal features must be studiously avoided in the design; and the construction, sail and cabin plans should be of the simplest character. It was our idea in laying out the conditions of the competition to make them simple as possible, so as not to hamper in any way the designer, and yet convey to all that we wished to produce a safe, comfortable cruiser on which two or three amateurs could live with comfort for a period of two or three months and cruise along our eastern seaboard from New York to Halifax with safety. A centerboard boat of moderate draft was decided upon, as so many more harbors would be accessible to a boat of that type.

DRAWINGS REQUIRED.

- I. Sheer plan, scale 1in. = 1ft.—showing center of buoyancy and lateral resistance.
- II. Half breadth, scale 1in. = 1ft.
- III. Body plan, scale 1in. = 1ft.
- IV. Cabin plan, scale 1in. = 1ft.
- V. Sail plan, 1/4in. = 1ft., showing center of effort.

The sails should consist of a jib, mainsail, spinnaker and balloon jib. No topsail will be carried.

A table of offsets and an outline specification must accompany each design. The drawings should be carefully drawn and lettered. All drawings should be made on white paper or tracing cloth in black ink (no colored inks or pigments should be used). The designs must

bear a nom-de-plume only and no indication must be given of the author. In a sealed envelope, however, the designer should inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than February 28, 1902. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all the designs.

The prizes offered are as follows: 1st prize, \$25.00; 2d prize, \$15.00; 3d prize, \$10.00. Mr. Theodore C. Zerega offers an additional prize of \$10.00 for the best cabin plan. Honorable mention will also be made of meritorious designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has kindly consented to judge the designs and make the awards. Mr. Crane's professional standing is so high that he needs no introduction, and every confidence will be put in his ability and fairness.

IN our issue of Nov. 23 we first announced a designing competition for a 25ft. waterline cruising sloop, offering as prizes, \$25, \$15 and \$10. In doing this we have followed a custom which has been most interesting and successful with our English and French contemporaries, the object being to stimulate and increase the interest of amateurs in yacht designing. We hope and expect that a large number of drawings will be submitted, and we ask our readers to call the attention of any of their friends who may be designers to enter the competition. When this idea was first thought of, we were somewhat in doubt as to the size and style of the craft to be selected, but finally concluded that a cruising boat would appeal to the largest number, and that 25ft. waterline length was the smallest craft in which living accommodation could be secured in a boat of modern design. This competition scheme is in a measure experimental, and we will gladly welcome any suggestions of our readers regarding it. Should this competition prove a success, as we firmly believe it will, it is our intention to continue it, and to offer prizes for boats of different sizes and types. But it is essential that this first trial shall have the cordial support of our readers, to whom we submit it with the hope that they will create a lively interest in it.

THE boiler shop of the John N. Robbins Company's Boston Dry Dock, South Brooklyn, was destroyed by fire on the night of Dec. 12. The boiler shop was a one-story building, which extended along the long dock on which Shamrock II. was laid up in winter quarters. The yacht was in close proximity to the shop, and although the hull was not damaged in the least, the wooden covering that protected the deck was in danger of catching fire. A careful examination made of the hull on Saturday last failed to show any material damage. There were one or two places where the rivets gave evidence of corrosion, otherwise the hull seemed to be in excellent condition. The yacht is being strongly shored up and the cradle in which she rests is a very substantial affair. Shamrock's tender and her sails were stored in the shed that was burned, and they were entirely destroyed.

Remarks on the [Rating] Rules for Yacht Racing.

IN studying the recent excellent article by Thalassa, in FOREST AND STREAM of Nov. 30, I was more than ever impressed with the conviction that between the framers of rules and the great body of untechnical yachtsmen there is a great gulf fixed. For the naval architects and mathematicians who wrestle with formulae I have the greatest respect, but at the same time I have a large sympathy for those plain yachtsmen, like myself, who have to apply these rules, and who think, not unreasonably, that existing complications are quite bad enough. Let it be granted—for it seems likely—that a rule using displacement as a minus quantity, or as a division, will produce a large-bodied yacht, but how is the factor of displacement to be obtained? Weighing machines suitable for boats up to five tons dead weight may be fairly plentiful in England, but they do not exist in many parts of the United States, and I do not know of one on the Great Lakes. A calculation or approximation of the weight of larger craft from the designer's drawings would require the services of a skilled specialist—something out of the question in many places—and besides will reputable designers cheerfully submit their plans, even to strictly disinterested confidential measurers? In any case, the result of the calculation would have to be made public, and to suggest a concrete example—would Mr. Watson care to have Mr. Herreshoff know the exact displacement of Shamrock? Again, what is the displacement of a yacht but the total weight including crew and stores; and how is it to be kept stationary for a season or even for two successive races? The rule would have to tolerate some margin of variation, and the substitution of a light spar for a heavy one might overstep the limit. Verily the troubles and anxieties of owners and race officers would be multiplied!

However excellent in theory a displacement rule might be, it would in practice be simply vile, and if it is the best solution that the men of figures have to offer, I hope I may have nothing to do with its application. Is there no better way, or is it possible that we are trying to force a passage where there is no channel? As a practical man, I would submit the following suggestions:

1. The prime function of a measurement rule is simply to measure the size of a yacht.
2. Restrictions on form or proportions are a separate and distinct consideration, and should not be embodied in the measurement formula unless it is entirely convenient to do so.
3. No one set of restrictions will answer for all classes of boats, as the requirements in the various sizes are entirely different.
4. Restrictions on construction should be kept separate

from measurement and other formulæ, although framed in harmony with them.

Here we have four distinct propositions; related, it is true, but requiring separate consideration, and yet we have been trying to provide for the first three, and even to indirectly influence the fourth by one simple formula; and hitherto failure has been the result. We can be in no worse position by attempting to deal with the various parts of the problem in detail—possibly we shall get part of the answer right—at present much that is right is obscured by that which is wrong, and so it appears to be all wrong. Now, first of all, we want to measure the size of a yacht, and fortunately this part of the problem has already been pretty well solved, if we would only accept the solution for what it really is, and not condemn it for failing to answer other requirements for which it was never intended. Beginning with the empirical fact that a large yacht outsails a small one, other things being equal, naval architects have deduced a strictly scientific formula for the principal factor—length—which is fortunately very simple: The possibilities of speed vary as the square root of the length; and as this factor is readily obtained, we are at once able to construct a scientific table of time allowances. For its most primitive form such a rule would require either that allowances should be made in distance according to the length of the course to be sailed, or that both course and allowances should be measured by time alone. Both of these methods being inconvenient, a fixed relation between time and distance is assumed, namely, that $V.L.$ (in feet) = speed in nautical miles per hour. On this basis allowances for a given number of miles are calculated in terms of time. One cannot fail to be struck with the roughly approximate, not to say loose, character of the assumed relation between time and distance, and it is remarkable that in all the controversies over the question this has never been attacked. Not only is the rule loose, but in practice only 40 or 50 per cent. of the theoretical allowances are used, the assumption being that strong winds are required to give larger yachts their full advantage over smaller, and the 40 or 50 per cent. is another rough approximation—a weather averager.

Lest the amateur investigator should become discouraged at this point, it is as well to say that no length rule, with its attendant table of time allowances, was ever intended to apply to yachts of considerable inequality of size. It was foreseen, even at the beginning, that serious racing demanded vessels closely matched, especially as regards length, and the constant and fairly successful endeavor has been to encourage definite classes, each built up to a certain limit, time allowance becoming trifling in any case, and in the latest practice disappearing altogether.

Certain refinements in the application of the rule must be noticed. At first length was measured between perpendiculars; but as this was unsatisfactory, owing to the different practices of builders, other methods were tried, leading up finally to a measurement of waterline length, which, although not quite perfect, is at least fair and workable. The necessity of taking into account other factors of size, besides length, led up to the measurement of sail area, which, while not itself a factor of size, necessarily varies with the power of a boat on a given length. Computing the sail area in square feet and extracting the square root of the result gives a fairly close coefficient of power. In narrow vessels of small power this coefficient is less than the waterline; in narrow tonnage cutters the two were about equal, and in modern racing craft the square root of the sail area is considerably in excess of the waterline. Combining the two, we get the well-known Seawanhaka rule, with the following formula:

$$\frac{L.W.L. + \sqrt{S.A.}}{2}$$

My object in explaining the theory of the above rule at such a length is to draw attention to the fact—too often overlooked—that it was designed as a measurement rule pure and simple, and not intended to restrict or control design. It is customary to blame the rule, either directly by charging it with producing a bad type of yacht, or indirectly by saying that it has failed to prevent undesirable development. Such criticism is illogical and unjust. Had the rule been specifically warranted by its makers to produce "good yachts," the case would be different. But an examination of the newspaper reports and discussion on the subject twenty years ago will show clearly that it was the opponents of the rule, the representatives of vested interests, who charged it with a tendency to influence design, and the sponsors of the rule were at some pains to warrant it harmless in this particular.

The problem at that time was how to measure a yacht, not how to restrict the designer, and the rule was especially recommended with a view to giving the designer free scope, of which he has taken a very free advantage, indeed. As a method of measuring mere size, the rule was a success, and is still a success; and this fact cannot be too strongly emphasized. The rule is a distinct advance in the science and art of yachting—a permanent asset.

We want improvements in other directions, but we know how to measure a yacht. What now concerns us is how to get the right sort of yacht to measure. Before dealing with this subject it may be noted that the British rating rule, $\frac{L \times S.A.}{6000}$ in force from 1887 to 1893, was the same in principle only worked out in another form; and it is a fact that under these rules we had the best yachts and the best racing that the present generation has seen.

Coming now to the question of restriction, it will be at once conceded that a good yacht or a wholesome boat is one that best answers the purposes for which she is designed and used. Varying local conditions of wind and water demand varying types, but there are some general requirements which apply to all yachts. They must be seaworthy and workable, and this almost in every case demands that the various factors of length, beam, draft, freeboard, overhangs and sail area, shall be moderate in proportion to each other. What constitutes moderation, however, is a matter that varies with type and size.

If for a certain locality it is found desirable to have

WESTWIND—33-FOOT HUNTING LAUNCH—SECTIONS.

say a centerboard boat of 25ft. waterline, it is perfectly possible to frame restrictions governing the minimum and maximum limits of beam, draft, freeboard, overhangs, sail area and perhaps the weight of centerboard and ballast, and the result is a fleet of good boats, which make good racing under the Seawanhaka rule. This is no mere theory; it has been tried in dozens of places and has succeeded. Of course, there are "restricted classes." Certainly—why not? What else do we want, and what else are the framers of the new rules aiming at? Only, we have got into the habit of thinking that restriction, gained by an elaborate formula, is proper, scientific and right, while the same end attained by plain figures is empirical and wrong, involving, I suppose, a sacrifice of principle which can only be maintained by adherence to intricate formulæ.

It will be said, of course, that this method requires the framing of elaborate special restrictions by every club for each class, and that it will lead to a chaos of types all over the yachting world, a result directly at variance with the desired results of an universal good rule. The objection would be valid if we had the good rule now and were proposing to abandon it. But at present we have only the chaos and the bad boats, and the good rule is not in sight.

It would not be worth while taking up space with examples of restrictions and limits for any given class, as such work is essentially suited for a special committee, and there are plenty of examples extant which may be studied in detail. Local opinions on the question vary, and so do local requirements, especially in the smaller classes. The old notion that even in yachts of less than 30ft. waterline it should be possible to have a cabin, may hold yet in a few places; but the whole question of accommodation is now regarded from a different standpoint than that of Kunhardt in "Small Yachts." It has been supposed that the small displacement and shallow hold of the modern racer have abolished the cabin, and that with say a displacement rule the cabin would come back, but it is by no means certain. Take a good, wholesome boat of 25 or 30ft. waterline, planked up and ready for the deck beams. The cruising man says, "Lots of room for a cabin; let me have a cabin trunk and as much head room as possible." The racing man, viewing the same craft, will look upon the hold as good stowage for sails and crew during a race, and will order a long hatch and no inside fittings beyond transoms. Both are right, and hardly any rule—certainly no mere formula—will induce either to order what he does not want. The modern small racer, with a long hatch and a clear hold, really affords better accommodation, more comfort and convenience, for crew and gear, either in racing or day sailing, than the old type of cabin-boat, with its heavily incumbered deck. Of the owners of such craft many have no time or inclination to cruise; others find enough racing and sailing at the home port; the multiplication of clubs has reduced the necessity for long passages to obtain racing, and even when a run of thirty or forty miles is necessary, it is readily made in racing trim, the crew living ashore as much as possible, because it is much less trouble and actually cheaper. The modern owner cares less and less for a bunk and a well-found galley. What he really needs is a shipshape, workable craft that will not require to be sailed within five degrees of a given angle, or pitch him out every time she goes about. All these are matters that require attention in detail, and it is to be hoped that when we fully realize how little is to be expected from any new formula we shall be more content to make use—under restrictions—of the good measurement rules now in existence.

WILLIAM Q. PHILLIPS.

Our Boston Letter.

BOSTON, Dec. 16.—The schooner Hildegarde, which was sold by Mr. Geo. W. Weld to Mr. E. R. Coleman this fall, started on a cruise to Florida and the West Indies Thursday. Since the close of the yachting season Hildegarde has been in Lawley's Basin being thoroughly overhauled and fitted out for her winter cruise. From Lawley's she went to Simpson's dry dock in East Boston to have her underbody cleaned and painted. When she came out of the dry dock she was taken to the Commonwealth docks, where she completed fitting out for her long cruise. She pulled out of the dock shortly after noon Thursday, and proceeded out of the harbor in tow. After passing through the Narrows sail was hoisted, and, after clearing Boston Light, she dropped her tow and proceeded under her own sail to New York. Mr. Coleman was not on board, but will board her in New York. He will not, however, take the southern voyage with her,

but will go by rail to Fernandina, Fla., where he will join her. She will then cruise about Florida and the West Indies, and is expected to return to Boston some time in May.

Hildegarde is a steel schooner, and was built in 1897 for Mr. Geo. W. Weld, of Boston, by Harlan & Hollingsworth, from designs by A. S. Cheesebrough. Mr. Weld has always been fond of long cruises, and his voyages in the schooner Gitana are remembered by most yachtsmen. Hildegarde was built to take the place of Gitana, and is an ideal cruiser in every respect, although there are many yachtsmen who fail to find anything beautiful in her appearance. But she was built for comfort, and one has not to go even beyond her deck to see that this object has been attained. She has a bluff, rounding bow and her sections are carried out very full. This, with a great freeboard, gives her quite a heavy appearance. Her deck area is immense, and, in spite of her bulky body, she has a very pretty sheer. She is 103ft. 4in. waterline, 135ft. over all, 26ft. beam and 16ft. draft. Although designed for cruising, she has sailed many races in the New York and Eastern yacht clubs, notably with Constellation, with varying success. She cruised winter and summer under her old ownership, and it looks as

pleasing appearance. On the east side of the second story an uncovered balcony extends outward, supported by shingled brackets. The whole structure is consistent and well proportioned. The interior is arranged for every convenience for cruising yachtsmen.

Coincident with the establishment of this station came a meeting of the Burgess Y. C. last Wednesday. While officers for the coming year were nominated, the most important business was the consideration of a proposition from the Boston Y. C. This proposition was in regard to the Boston Y. C. absorbing the Burgess Y. C. on terms which would be agreeable to both clubs. As there was some corporate irregularity about the call for the meeting, no definite action could be taken. It is understood, however, that the members of the Burgess Y. C. were much in favor of the move. A meeting will be called by the Burgess Y. C. in legal form, for Dec. 27, and it is more than likely that, in 1902, the club, which bears the name of Boston's illustrious designer, will be a thing of the past.

Starling Burgess has an order for a 25-footer for Eben D. Jordan. This young designer's latest and crowning success and one which widens his field, is an order for a six-masted schooner for a syndicate organized by Capt.

WESTWIND—33-FOOT HUNTING LAUNCH.

though Mr. Coleman is going to keep up the good work. She is commanded by Capt. S. M. Masters, who has very able assistants and a good crew.

Mr. Howard Denny, of the Savin Hill Y. C., is to start on a cruise to Charleston, Tuesday, in his 29ft. schooner Favorite, and will be accompanied only by Mr. Fred Packard, who is also a member of the Savin Hill Y. C. Mr. Denny intends to take in the exposition, and he thought the most sport could be gotten out of the entire trip by cruising there. This is not the first experience that he has had in this direction—in fact, he has a fondness for taking in exhibitions and employs novel methods of travel. Last year he attended the Pan-American Exposition and cruised there in a little yacht called Thora. He went to the Omaha Exposition, making the whole trip from his home in Dorchester and return on his wheel. He had five companions when he started, but only one stuck to him during the entire trip. He will take Favorite through the inside passage, and expects to use up about a month on the trip, but this will depend upon the time it takes to get through the canals. After leaving Beaufort, at the end of Core Sound, Favorite will have to sail 200 miles at sea before reaching Charleston, and it may be possible that the sailors will find that two is rather a small crew, even for a 29ft. schooner. It is expected that Favorite will remain in Charleston all winter, and in the spring Mr. Denny intends to go around to New Orleans and up the Mississippi, returning to the coast by way of the Erie Canal and the Hudson; or, if conditions are favorable, he will go through the Great Lakes and down the St. Lawrence.

Plans have been completed for the new station of the Boston Y. C. at Marblehead. They were drawn by Mr. A. C. Fernald, secretary of the club, and the building will be a good one. The perspective drawing shows a very pretty interior. The structure is to be built upon piling at the end of the wharf, and on both stories are wide verandas, with open casements, which give a very

A. C. Crandall. She will be 306ft. on the keel, 350ft. over all, 50ft. beam and about 30ft. depth of hold. She will draw 11ft. light and about 28ft. when loaded to her full capacity of 6,500 tons. Her masts will be 125ft. above the light waterline, and her topmasts will be 60ft. long, or 48ft. above 12ft. mastheads. Her booms will be 50ft. in length, with the exception of the spanker boom, which will be 75ft. She will be built by John M. Brooks, of East Boston.

The following officers were elected at the annual meeting of the Beverly Y. C. last Friday: Com., Geo. H. Richards; Vice-Com., Lewis S. Dabney; Sec'y and Treas., Lawrence Whitcomb; Meas., F. E. Cabot; Regatta Committee, David Rice (chairman), S. G. King, J. G. Palfrey, F. E. Cabot, E. M. Farnsworth, C. H. Jones and R. W. Emmons, 2d; House Committee, Dr. E. S. Wood, A. H. Hardy, W. E. C. Eustis, N. H. Emmons and Lawrence Whitcomb; Admission Committee, A. S. Hardy, E. M. Farnsworth, F. W. Sargent, F. F. Field and Lawrence Whitcomb; Council, Com. Richards, Vice-Com. Dabney, Lawrence Whitcomb, David Rice, John Parkinson, C. H. Jones and Dr. E. S. Wood. It was voted to adopt such rules as might be necessary for governing the new one-design class of 30-footers now building at Herreshoff's. It was also voted to limit the membership to 200, and to increase the initiation fee to \$15. The racing rules were amended, making it compulsory for the windward yacht to keep clear when two yachts are converging close hauled.

The following officers have been nominated by the Winthrop Y. C., and will be elected at the annual meeting: Com., Jas. R. Hodder; Vice-Com., Wm. D. Allen; Sec'y, Charles G. Bird; Treas., C. H. Whitney; Meas., A. S. Richards; Board of Directors, H. E. Blanchard, C. A. Sawyer, E. A. Cook and C. H. Whitney; Regatta Committee, M. C. Rogers, C. H. Kelley, John MacConnell, Jr., A. C. Stacey and H. B. Whittier; Membership Committee, Albert Partridge, C. A. Maynard, F. H.

Beckler, F. S. Mason, J. J. Devereux, F. H. Richardson, J. J. Nicholson, F. F. Rogers, Jr., and F. H. Byrne. This will be Sec'y Bird's fifteenth year in office, and, in point of service, he is the oldest secretary of a yacht club in New England.

Lawley has received the plans and model of the Tobin bronze 60-rater which he is to build from Gardner & Cox's design for Harry F. Lippitt. She will be 5ft. on the waterline, and 89ft. on top. Things are commencing to boom in the shop. Several boats have been started and more are to be set up within two weeks.

Last Friday Mr. B. B. Crowninshield delivered a lecture on yacht designing to the students of naval architecture at the Massachusetts Institute of Technology, which the students appreciated very much. JOHN B. KILLEEN.

Westwind, 33ft. Hunting Launch.

THE hunting launch Westwind, plans and illustration of which appear in this issue, was designed and built by Mr. V. D. Bacon, of Barnstable, Mass., for Mr. William Sanger. In designing the boat Mr. Bacon had to consider several requirements laid down by the owner. It was his wish that the boat should be high-sided, full-bodied and that the cabin and cockpit should be large and roomy. The result was very satisfactory, for she has proved to be an excellent sea boat, and of good speed for her length. It was thought that the boat might roll considerably in a heavy beam sea on account of her high sides and high weights, allowance was therefore made for some inside ballast should it be found necessary, but she has been found so steady that it was never required.

On the run from Barnstable, Mass., to Cos Cob, Conn., where the owner keeps the boat, she encountered some very nasty weather off Newport and Block Island, and behaved splendidly under most trying conditions. Nine miles an hour was averaged throughout the entire run. During the past summer she has been tried over a measured course repeatedly, and makes nine and one-eighth miles an hour, and will turn completely around in a circle 75ft. in diameter. The owner states that he has been from Cos Cob to New London ten times during the past season, and on these long runs the engine, which is a 10-horse-power Globe, has never failed to run perfectly. The boat is now laid up in the yard of the Electric Launch Co. at Bayonne, N. J., and in taking the boat to that place from Connecticut, the engine was run for ten hours without stopping.

Westwind is rather a departure in design from the average launch with her greater freeboard, beam power and speed, but gives more interior room and makes a far better heavy-weather boat than the average launch with low freeboard and high cabin house. Westwind has been tried purposely by her owner in the worst weather experienced during the summer and fall, and has shown herself to be a safe, dry, comfortable and fast boat under all conditions of wind and weather.

The cabin house is 13ft. long and there is 5ft. 8in. head-room under carlins. On the port side of the companion-way is the lavatory, which is fitted with a water closet and folding wash basin. There are also lockers for oilskins, linen, etc.

Opposite on the starboard side is a large ice chest and a space for a stove. Next forward is the cabin, on the port side of which is a buffet and clothes locker. On each side of the cabin are wide transoms, under which are lockers for general stowage. A cabin table hangs from the carlins, and in this way the cabin floor is unobstructed. A large skylight and four port holes keep the cabin well lighted and ventilated. The cockpit is 13ft. long. Under the cockpit seats are lockers. The motor is placed in the forward end of the cockpit and is well out of the way. When not in use, it is protected with a water-tight covering. Large water tanks are placed under the deck just of the cabin house. The principal dimensions are:

Length—	
Over all	33ft. 0 in.
L.W.L.	30ft. 0 in.
Overhang—	
Forward	2ft. 6 in.
Aft	0ft. 6 in.
Freeboard—	
Stem	4ft. 0 in.
Least	2ft. 6 in.
Taff rail	2ft. 8 in.
Beam—	
At deck	8ft. 7 in.
L.W.L.	8ft. 3 in.
Draft—	
To rabbet	1ft. 10½ in.
Extreme	3ft. 1 in.
Displacement	10,500lbs.

The frames are of oak, 1¾in. by 1¾in., spaced 12in. on centers. The planking is of ¾in. yellow pine. The general finish both on deck and in the cabin is of mahogany, oak and cypress varnished.

The 10-horse-power Globe gas engine makes 355 revolutions a minute. The propeller has three blades, 30in. diameter and 38in. pitch.

Whence Comes the Northeast Wind?

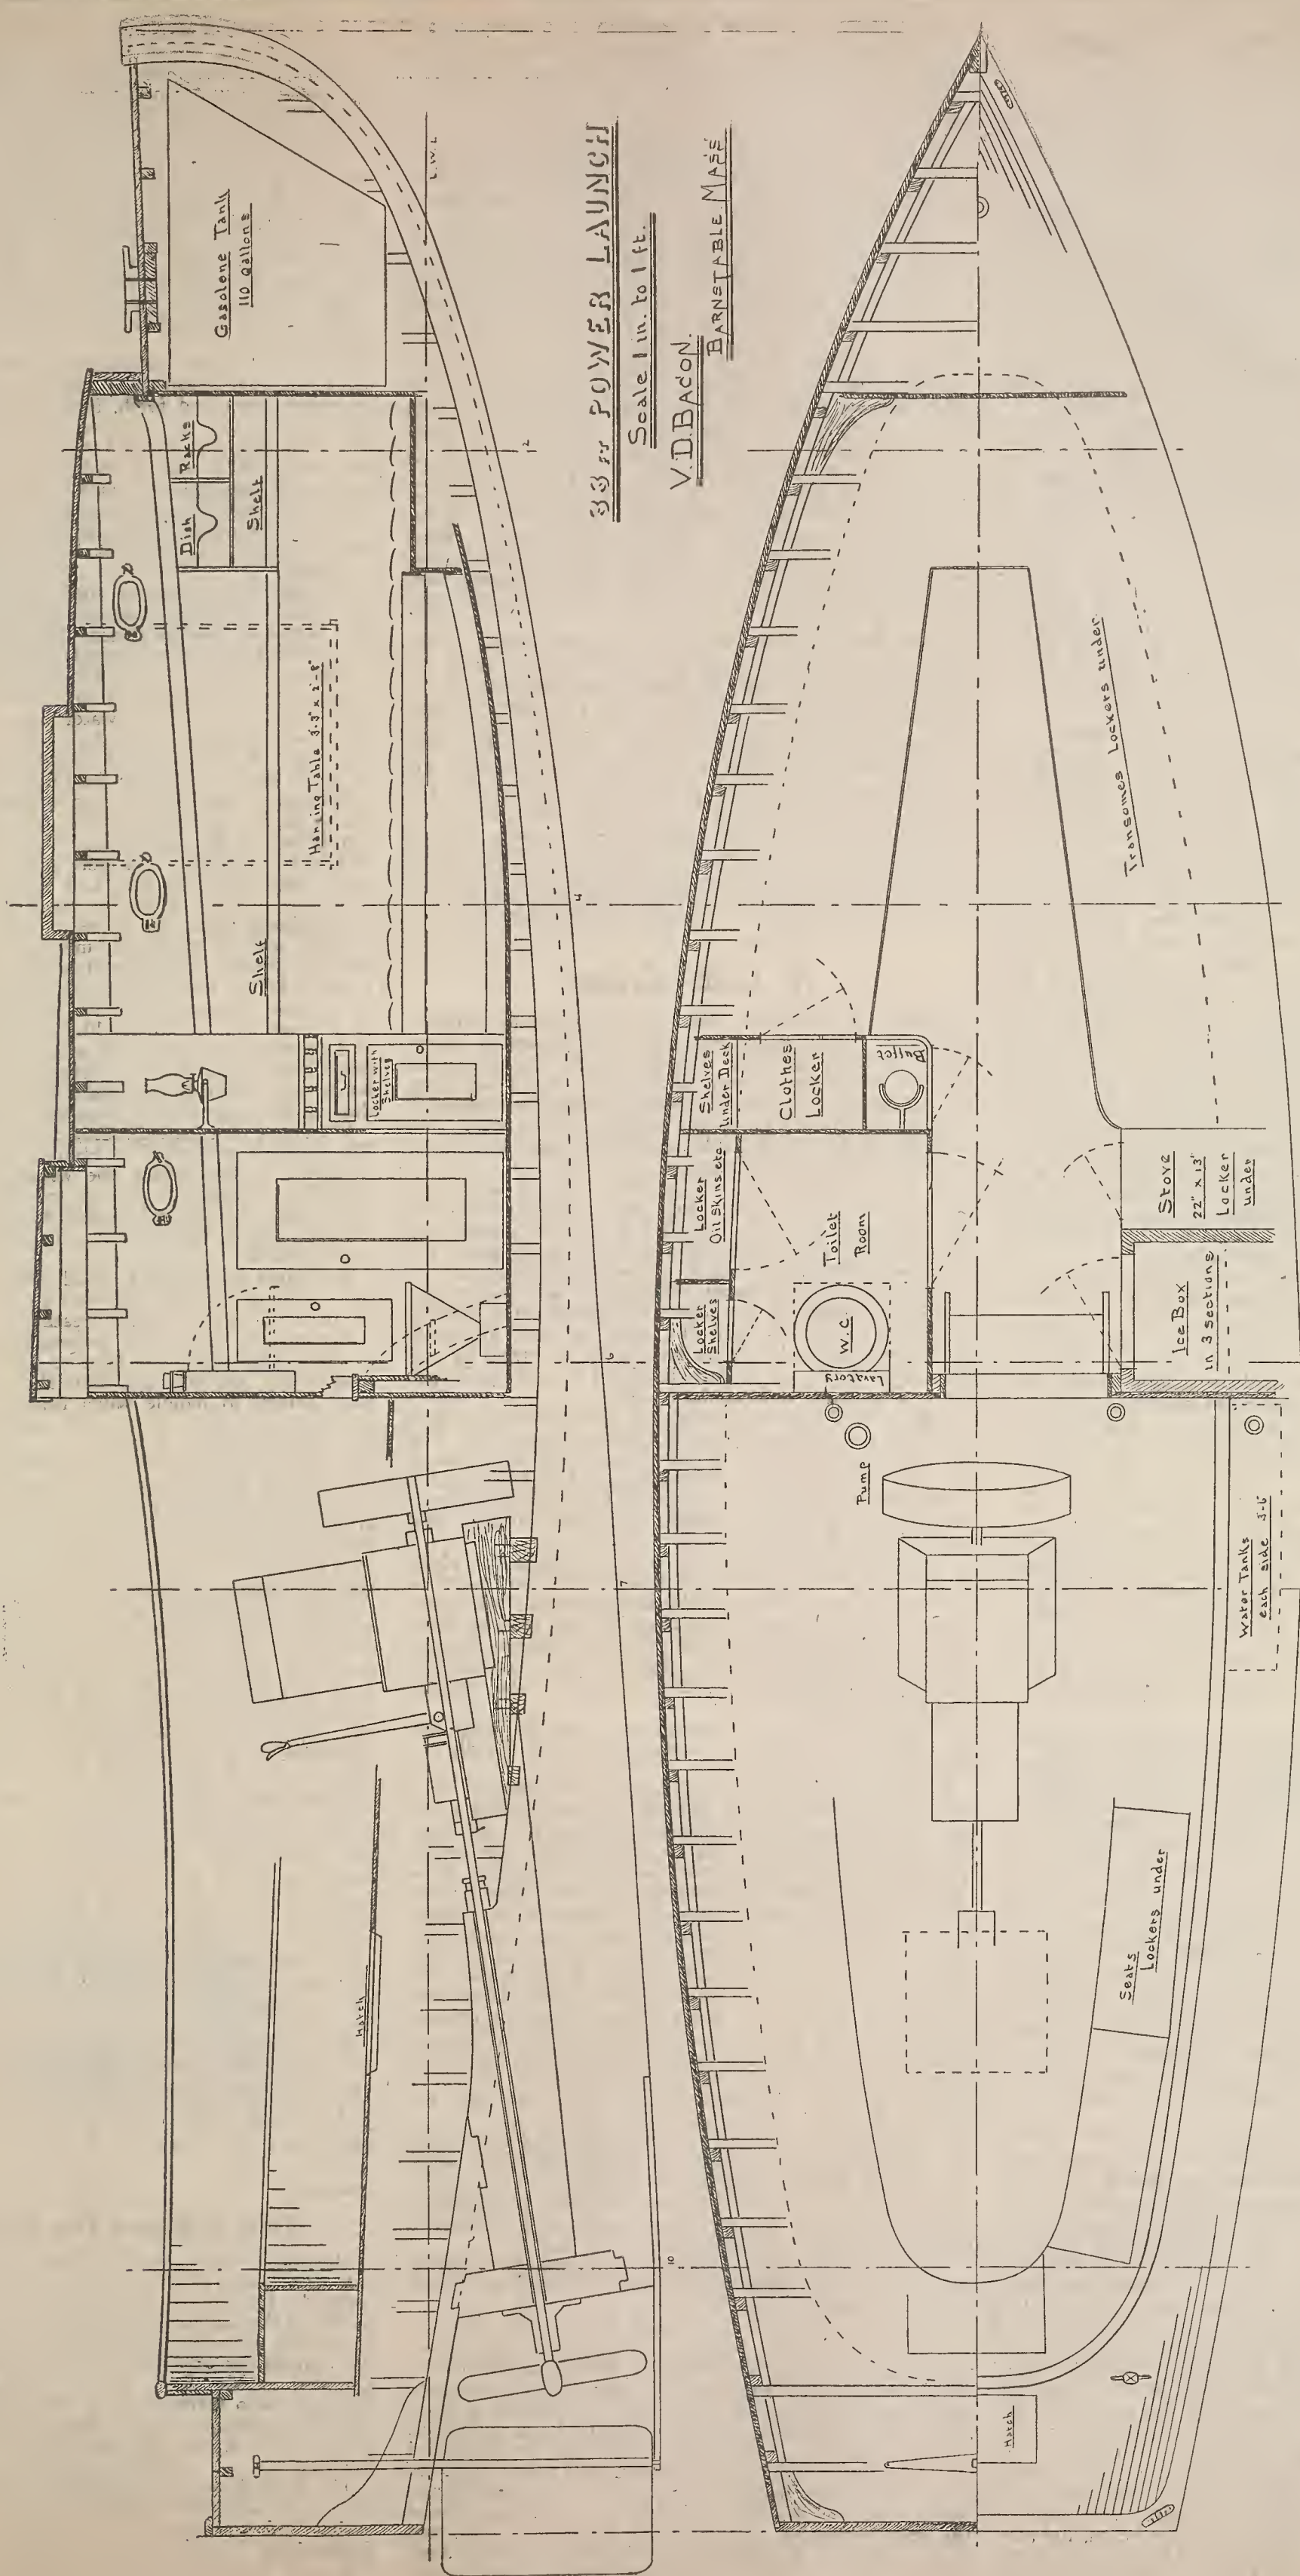

AN interesting letter with the above heading appeared in the Sun a few days since, and the writer of it has evidently given his subject much thought and study. He says in part:

"Why is it that a northeast wind is exactly the reverse in its character of every other wind that blows?"

"All other winds are generated in the quarter from which they blow. For instance, when we are having a gale of wind for several days from the northwest, we know it comes directly from out of the northwest, away off from the plains of the Dakotas; but not so with a northeaster, for that is made up in a direction directly opposite to itself. Its coming is announced from the West Indies and the Gulf of Mexico, and it backs up against itself as it advances up the Atlantic coast, until it finally passes off away to the northeast, ending where, if like other winds, it would have had its beginning."

If it is true that the northeast wind does not generate from that point of the compass, will not some of our readers tell us whence it cometh.

WESTWIND—33-FOOT HUNTING LAUNCH—CONSTRUCTION AND CABIN PLANS.

That Seven-Masted Schooner.

Ho, brothers! a bonanza, and I must share it.

Over in England dwells a man who surely is one of us, if the love of a canoe in a smashing breeze, and the joy-taking in the tug of a two-pound trout can make him! and he hath other attributes for the fraternity, as the following will show.

Which his name is Whistler—C. W., by designation; Rev. C. W. if you are very particular, and he is authority on things King Alfredish, as the boys who read his books will tell you. [N. B.—I wouldn't ask for better ones for myself, while the fire is crackling on a howling winter night, and the apples and cider are right handy.] Well, I happened to hit him in a "lucky spot" with a book of my own in the Viking line—never mind about that—and eventually sent him my amphibian advice to Dr. Erhardt [wonder if the Doctor followed it!] and incidentally mentioned seeing on my vacation a six-masted schooner or so, with the promise of a seven-master sometime. Now I have permission to quote his reply, "by all means if it will make anyone else laugh. It is a work of charity and full payment if one can raise so much as a grin to do a man good withal at this time of the year." So here goes, omitting some matters of no moment to the public eye, even that of brothers. If you can better the mythical report of the Penobscot Dog Vane let's see it!

"I have seen five-masted sailing ships, but never a seven-masted schooner. She is a 'lusus navigationis' for sure, and will come to a bad end trying to ride out a gale under foresail and mizzen, when she will break in two. Steering such a craft must feel like driving a tandem.

"I am concerned about the seven-masted schooner.

"On cross-examination the mate admitted that when he said the vessel was the quickest over a quarter mile course, on any wind which he had ever known, he meant that he calculated she was there already, her length between perpendiculars being 435 yards. Asked by the court to explain what he remembered of the catastrophe, he said that it was mighty little. He was steering, and the jibboom seemed to swing round and hit him, somehow. He could not remember more. The vessel was hove to at the time under easy sail, and he believed the foresail was took aback. Asked why the helm was not lashed under those circumstances, he explained that it was of no use. The schooner acted like an eel in a washtub under those conditions, and the only steady point about her was half way between No. 3 and No. 4 masts, which seemed to act as a center. Asked to account for the disappearance of the fore end of the vessel, including the first four masts, he said he believed the captain was trying to prove that he could sail a four-masted schooner by himself, and might turn up at any time. He did not see it sink. He allows he was unconscious, but that is what one would expect of the skipper. There were no bulkheads, but the cargo was basswood. He always had expected some such fracture amidships, but was willing to take chances.

"The leading seaman corroborated the account of the mate, tersely. He said the vessel shied at a breaker, tried to buck, and shut up like a jack knife. The skipper was forward. It was true that he and the mate had had words as to where the vessel would double up. He was preparing to lash each mast to the others ahead and astern of it at the time, in order to save parting company. He did not know which the mainmast of the vessel was. It was a usual point of debate among the crew. He had known men to come to blows on the question. It was recognized that Nos. 1 and 7 were the fore and mizzen masts, of course. Asked how the masts were distinguished when orders were given, he explained that they were known by the names of the men who tended the sails attached to each. The vessel was not undermanned. There was a man to each mast, and the boy tended the head sails. If a Penobscot man couldn't manage one set of fore and aft sails by himself he ought to be set to dig potatoes. His own mast was No. 5, but was known as 'Bill's mast.' He believed the boy was at the bottom of the whole trouble. He mostly was. (Called to order.)

"The boy, who was in tears, said that it was no fault of his, and that if it was he couldn't help it. He was told to keep the fore staysail aback till further orders, and he did it. He had two turns of the sheet round a cleat to windward, and was sitting on the running end. He had never known the sheet render under those circumstances, and it did not render in this case. He could not help it if the wind swung round and hit the sail from the lee bow. Asked which was the lee bow when the wind was blowing over the other, he turned sullen, and said that if the assessors didn't know what he meant they hadn't ought to set up to try a shipwreck case. (Removed in custody.) The mate, recalled to explain, said that when he said the sail was took aback he meant that it being aback already on one tack, namely the port, was suddenly filled from starboard. No further explanation was obtainable from him, and the court refrained from cross-examination, he showing a tendency toward profanity.

"The fisherman who picked up the boy and subsequently rescued the other members of the crew, said that he had observed the schooner for half an hour or more before the squall struck her. She was hove to on the port tack and the fore end of her was making bad weather of it all the time. Her stern seemed to have struck a patch of calm water. He had no doubt that the foresail filled suddenly with a shift of wind, and that the strain caused the calamity. The bows seemed to be whisked away from under the boy, who was flung violently toward the horizon, 'like as if he'd been shot out of a catapult.' Possibly he meant a catapult. Anyhow the boy flew. The schooner broke in two, same as he had often seen a topmast snap, and the bow's end of her went to leeward like smoke passing him at two fathoms distance. The captain spoke to him as he passed. Asked what the captain said, he replied that the remark which was most evident was, 'I told the mate so.' He would rather not repeat the rest. Pressed on this point, he said he would write what he heard, for the benefit of the president of the court. He having done so, the president read it, and blushed. The paper was cremated by an officer in the court room fire. Our

representative was not allowed to see it. Examined further, the fisherman said that if the wind held, the fore end of the schooner might fetch up against Bermuda in the course of the week. He believed there was a demand for wood in that island. The Boer prisoners wanted it to make toys of. It amused them. He did not consider schooners of that length healthy, if they were progressive. What he liked was a vessel with a solid keel which wouldn't buckle, nohows. He preferred being catastrophized solid and not in sections.

"The shipbuilder volunteered the statement that the vessel was built as strongly as he could make her. Indeed, she had been termed a mountain of wood. He was not certain if that term referred to her after loading or not. If the street had been a bit longer, he would have put one or two more masts into her. He was not stingy. Asked to explain his reference to the street, he said that he hired the right of way down Penobscot's main avenue, and used it as a shipyard. He guessed the folk went round easy enough. He had heard no complaints. The pesky street turned at right angles at the top, so that he could not lengthen the vessel further. It was easier to build one long vessel than three and a half short ones. There were only two ends to fill. He believed in putting all one's eggs into one basket. There seemed to him no reason why one basket should be upset than a dozen. If Capt. Hank Smith couldn't keep the ends of his vessel separate that was not his (the builder's) fault.

"The finding of the court was that the cause of the wreck was entirely due to the failure of the captain to estimate breaking strain, aided by the rashness of the boy. If the latter had not sat on the foresheet, it might have rendered and thus reduced the strain. They fully exonerated the boy, as he was only obeying orders. The captain was to come up for judgment when found. He would be reprimanded, on points to be considered. The Assessors added a rider to the effect that the State should limit the length of Penobscot schooners, or more progressive States might endeavor to see that district and go one, or even a dozen, masts better. They considered it sinful waste to stick masts into an Atlantic bridge."—Extract from "Penobscot Dog Vane."

A Cold Cruise.

EARLY in February, 1896, the four-masted schooner Stella B. Kaplan lay just above the Congress street bridge discharging coal. I came aboard one afternoon, chucked my baggage into the cozy stateroom adjoining Capt. "Joe's," and went on deck to watch operations.

A team drove down to the wharf with the crew, and they bundled over the side with their bags and boxes and disappeared in the fore-castle.

About 4 o'clock, after a severe squall of wind and snow, we cast off, took a tug, went through the draw and anchored off Castle Island. A wild nor'wester was blowing, and after the cold and wind-swept decks the genial warmth of the cabins felt wonderfully good.

Before daylight the next morning we got under way, stumbling around in the dark half awake and shaking with cold. Foresail and jibs crept up and the cable came slowly aboard, link by link, while we stood by and shivered. Steam is mighty handy, but you don't get warmed up when it does the heaving.

I went to the wheel, she slowly paid off, and with a moderate westerly we dropped down with the tide. The glass stood at 6 below. I had on about all the raiment I possessed; two suits of flannel, a red sweater, and a white one over that, an overcoat, a knit cap and a long, red toque over that, fur mittens and heavy rubbers, and could hardly move.

Boston channel is none too wide, and from the wheel of an 1100 ton vessel it looks like a ditch; you seem to be right on top of the islands, and think she will never have room to swing. I managed to foul the can buoy off Nix's mate in my care not to run her ashore, but got out of the harbor all right, they put the mainsail and spanker on her and we slid away before the rapidly freshening breeze.

The Kaplan was a big vessel, then, but alongside the five and six masters of to-day she would hardly be looked at.

I often wonder what some of the old skippers of a half or even a third of a century ago would think to be placed aboard one of the monster schooners of the present time. The tremendous length of deck, the multiplicity of masts, the improvements in rigging (how spidery the steel wire standing rigging looks after the old hemp), the great speed, and on board some of the largest vessels, capacious wheel houses, where the tediousness of a long two hours' trick is mitigated by comfortable shelter, would be a revelation; and on going below what would they say to steam heated double cabins, large, airy staterooms, bath rooms, chart rooms, pianos or organs, telephones and electric bells—and forward a donkey engine that handles the vessel while the crew stand by? Indeed, one of the big schooners of to-day would be helpless without the donkey; no crew could get the anchors by hand or even make sail.

One of the men came aft to the wheel, and with appetite sharpened by the keen air, I tumbled below when the steward hurried aft with his basket.

At noon we were off the cape, the wind was blowing a bitter gale and the mercury stood at 8. Nothing northbound passed Highland Light that day.

We met a pilot boat joggling along with close reefed foresail and somewhat iced up, but otherwise the ocean was swept bare of shipping.

Once through the slue we beat up over the shoals a few miles in the gale, hauling the jigger-boom to windward with the donkey each time we tacked (another modern wrinkle), and anchored off Bar Harbor, and the next night at Falmouth. Here we lay through a sharp southeaster, and then came two days of fierce westerlies. During a lull on the second day I took the yawl and two men and started for the shore, and a hard pull we had. We hauled the boat up on the ice-clad rocks and walked over to Woods Holl, and on our return found the gale increasing and a strong current running, and by the time we reached the vessel I was ready to stop.

There were twenty-one large schooners at anchor near us, rolling in the heavy swell, and when, at about 9

o'clock the next morning the wind suddenly struck in to the northward, ten of us, southbound, got under weigh together. It was quite exciting. One large four-master passed close under our bows as we filled away and we kept company with her, hardly altering our respective positions all the way to the capes of Virginia.

"That's B——," said Capt. Joe, "under charter for three trips." Seafaring men, as a rule, do not speak of a vessel by her name; they refer to the masters. I have heard a skipper, after a long look through the glasses at a sail, hull down, remark to the mate: "There's T——; guess he must have been laying to an anchor a couple of days. He sailed before we did." No craft so far away but they can give a pretty shrewd guess at her identity, and her full history follows from the day she was launched.

The cold weather continued, and when I came on deck at 5 the next morning, I found the mate, Mr. D——, swinging back and forth, forward of the wheel, muffled up in all kinds of garments, thrashing his arms and stamping his feet on the icy deck. Two long icy pendents, of a rich chocolate hue, hung from either mustache, upon which even the warmth of the breakfast table, an hour later, had no effect.

To my involuntary explanation, "Isn't this fine?" came the growl, "D—d fine, this is—I wouldn't miss this for anything."

He had been "pushing coal" up and down the coast for thirty years, and possibly the novelty of the thing had begun to lose its luster. The poor man was lost a few months later in the great November blizzard.

But to me it was a most interesting experience. When daylight came I looked at the glass—8 below! That is pretty cold at sea. The water was covered with vapor, which wreathed and whirled in the wind, at one moment opening out in long lanes ahead, and the next closing in, so we could hardly see the jib-boom end.

Our horn was tooting, and occasionally a faint echo from off the weather quarter told the whereabouts of our friend of the day before. The wind was northeast, and blowing a gale. We were split open, carrying three lower sails and two jibs, and making about 12 knots.

Toward noon it began to snow and a man was kept aft sweeping about the wheel.

Many times I sighed for my camera. The helmsman, bundled in rags, covered with snow, heaving at the wheel to meet her as she yawed in the sea; the length of deck swept bare of snow in spots; the lookout sounding his three toots on the horn—likewise clothed to the limit and snow-covered; the "old man" walking his short distance back and forth, are scenes which memory holds, but which a photograph would keep with every detail, so dear to the heart of an enthusiast.

We swept on in the blinding snow at a steamer's pace. The man at the wheel became a little careless—a sea slapped into the rudder, the wheel tore itself from his hands, and catching him in the clothing, tossed him neatly into the air and landed him on the lee rail. A narrow squeak that. To go overboard in that water meant death.

We could see nothing ahead, and assumed that there was nothing. It takes the nerviest kind of nerve to run on to a lee shore in thick weather.

Few people realize the responsibility that the masters of these large schooners have to bear. With their great length—say 300 feet, and draft about 25—they are awkward things to handle when running before a gale of wind, and I venture to say that, excepting the fishermen, who are strangers to fear, our coasting captains, as a rule, are as bold, fearless, and nery a set of men as you will find on land or sea. A steamer can stop and back and feel round when a schooner must keep on or course around. A steamer can lay her course, blow high or low; the schooner has to lie becalmed, and wait for the gale. And the deck of any coal schooner in the dock discharging her cargo, at which the spectator merely glances from the car window, has been the source of long hours of constant vigil and most careful reckoning and anxious thoughts, which would kill ordinary city men. Our mate, Mr. D——, was out in the great blizzard of '88 in a three-masted schooner, deep with coal, and for ninety-two hours never closed his eyes; and every gale that in the city means, perhaps, an extra wrap and wifely admonitions as to catching cold, off the coast, almost within sight of cities, means days and nights of sleepless toil and fights with wind and cold, and terrible lee shores.

Toward night the snow ceased to fall and we made the light-ship off Cape Charles, and anchored off Newport News at 11 P. M., thirty-two hours from the Vineyard. One of our consorts, the Yale, was not so fortunate, and in the thick snow ran into and sank an English steamer.

For two days we could not land on account of a terrific westerly, which lashed the water into foam and kept the mercury at 10 or 15, and Old Point Comfort right aboard!

But at length we were able to land. I waved adieu to the good Stella B., and in the Boston steamer came back over the same course to the Vineyard on a sea smooth as a floor, without a ripple to show that there was any wind, and in a sun as warm as May, where, four days before, our ship resembled a waif from Arctic seas.

F. L. ENO.

SWAMPSCOTT.

New 60-Rating One-Design Class.

MESSRS. GARDNER & COX have gotten out plans for a new one-design class, and two boats have already been ordered. One of the boats is for Mr. Henry F. Lippitt, owner of the schooner Quisetta, and the other is for Mr. George M. Pyncheon, who headed the syndicate that built the Canada cup trial boat Illinois. Mr. Lippitt has sold Quisetta to Mr. S. C. Davis, of St. Louis, Mo. Mr. Pyncheon, who formerly lived in Chicago, has now taken up his residence in New York, and both the new boats will be raced during the coming season on Long Island Sound.

The English boats Isolde, Senta and Eclin have proven to be such satisfactory craft, both from the standpoint of racing and cruising, that they have in a measure influenced the forming of this new 60ft. racing length class. The new boats are similar in design to Dorwina, the champion of the 43ft. class on Long Island Sound last

season. They will have a large amount of accommodation under a flush deck—in fact, the cabin arrangement will be very much the same as that of Isolde.

The boats will be about 53ft. on the load waterline, and will be built of Tobin bronze. Mr. Pynchon's boat will be built by Messrs. Townsend & Downey, at Shooter's Island, S. I.; she has been laid down and will be in frame in about two weeks. The Geo. Lawley & Son Corp., South Boston, Mass., will build Mr. Lippitt's boat, the contract for which was signed last week.

The boats have been designed right up to the limit of the 60ft. racing length class. Mr. Lippitt has been identified with yacht racing for many years, and is one of the cleverest and ablest amateur yachtsmen in America. Mr. Pynchon has secured for his sailing master a capable professional in the shape of Bob Dennis, who had the 51-footer Huguenot last year.

Manhasset Bay Y. C.

The annual meeting and dinner of the Manhasset Bay Y. C. were held at the Hotel Manhattan on Tuesday, Dec. 10. The following officers were unanimously elected: Com., Stephen W. Roach, steamer Emeline; Vice-Com., M. Roosevelt Schuyler, cutter Jessica; Rear-Com., Oswald Garrison Villard, sloop Hilgarda; Sec'y, Edward M. MacLellan; Treas., B. Jacob; Meas., Charles D. Mower; Trustees (Class of 1904), Harry S. Fairchild and Horatio R. Harper.

The following gentlemen were elected members: Mr. Henry W. Osborn, Mr. Henry L. Bogert, Mr. Russell Howland, Mr. Joseph H. Humphreys, Mr. Seymour L. Husted, Jr., and Mr. William G. Stewart.

A change in the by-laws fixes the initiation fee at \$25 and the annual dues the same.

The Secretary reports that there is a membership of 206, consisting of 7 honorary, 24 life, 166 active and 9 absent, and that the fleet consists of 125 vessels, divided as follows: Schooners, 11; sloops and cutter, 26; yawls, 10; raceabouts and knockabouts, 20; catboats, 17; steamers, 21; launches, 20.

Report of Building Committee showed that the option property at Port Washington had been purchased, plans for club house and stables completed and approved, and that work would be commenced this week. The architects of the new club house are Messrs. Hoppin & Koen. The new structure will cost about \$12,000. The entire improvements will cost in the neighborhood of \$30,000.

The Race Committee's report showed that owing to the death of President McKinley the fall regatta was not sailed, and that the Manhasset raceabout class had sailed a total of fifty-two races between April 25 and Oct. 6. The Standing and Jacob series cups were won by Arizona, G. A. Corry, who also won the Racing Association championship pennant for the class. Com. Roach's Lambkin made the next best showing, with G. Standing's Firefly in third place. The two illustrations that accompany this article were reproduced from sketches made by Mr. Guy Standing, and which appeared on the front and back covers of the dinner card. The sketches are most artistic and well executed. The first represents the Manhasset Bay raceabouts in a race, and the second shows the boats being towed home by Emeline, Com. Roach's steam yacht.

The dinner was a great success, and there were nearly one hundred members and their guests present. Mr. Clay M. Greene was an ideal toastmaster, and the following were among those who spoke: Ex-Com. Hazen M. Hoyt, Com. Stephen M. Roach, Com. F. T. Adams, Larchmont Y. C.; Mr. M. S. Verdery, Mr. T. F. Day, Mr. W. G. Stewart, Mr. Guy Standing and Mr. R. T. Burdett.

The club now has an assured future, and with its new club house, its already strong roster of members, it promises to become one of the strongest and best clubs on Long Island Sound.

Yacht Club Notes.

At the annual meeting of the Green Lake Y. C. the following officers were elected: Com., Edward Rosing; Vice-Com., Alexander H. Revell; Sec'y and Treas., W. E. Haseltine, Green Lake; Meas., Joseph S. De Moss, St. Louis. Executive and Regatta Committee: W. C. Pullman, John H. Wood, J. Fred Wilcox, Fred W. Upham, Walter H. Dupee, E. W. Heath, C. D. Peacock, Jr., W. F. Cornwall, William H. Colvin, Jr., and George J. Hamlin.

The Board of Governors of the Penataquit-Corinthian Y. C. have announced the appointment of the club's Regatta Committee for 1902 as follows: Harry M. Brewster, Chairman; Samuel Tileston Cushing, Regis H. Post, Robert H. Haff and Bryce Metcalf.

At the annual meeting of the Old Mill Y. C., held on Thursday night, Dec. 5, the following officers were

elected for the ensuing year: Com., Henry Lange; Vice-Com., William Ambruster; Rear-Com., Paul Zartmann; Rec. Sec'y, Joseph Buchler; Fin. Sec'y, A. Breitruick; Cor. Sec'y, John Stable; Treas., H. W. Walker; Meas., Albin Beyer. Board of Trustees: G. A. Cooper, E. A. Boyle, Thomas Bird, D. S. Van Wicklen, William Becker.

YACHTING NEWS NOTES.

The schooner yacht Orithya, owned by Mr. McFarland Anderson, of New York, went ashore on St. Johns Bar near Jacksonville, Florida, on Tuesday, Dec. 10, and is a total loss. The yacht was designed and built by Mr. Joshua Bedell at Glenwood, L. I., in 1890. She was 55ft. on the waterline, 63.2ft. over all, 16.3ft. beam, and 9.5ft. draft.

Six young men left Sea Gate at sunset on Dec. 11 on the old cutter Volante for a trip around the world in an endeavor to win a \$10,000 reward. The following are the names of the crew: Harry Langdon, C. R. Middleby, H. T. McGahan, Russell Millard, H. C. Dana, and W. C. McMichael. The Azores will be the first stop, and from there they will go to Gibraltar, thence through the Mediterranean. After passing through the Suez Canal, the Indian and South Seas will be crossed. The Isthmus of Panama will be reached by way of the Pacific Ocean. The yacht will be transported across the isthmus by rail, and then their course will take them through the Gulf up the Atlantic coast to New York. Volante was designed by the late Robert Center and built by J. F. Mumm at South Brooklyn in 1877. She is a keel cutter 48ft. over all, 40ft. on the waterline, 12ft. beam and 7ft. draft. The yacht's bowsprit has been removed and her topmast housed for the trip. Volante is one of the old-fashioned plumb stem cutters common enough in these waters only a few years ago. We wish the crew of Volante success in their rather hazardous undertaking.

The fleet of the Philadelphia Y. C. has been strengthened by the addition of two well-known schooners. Crusader has been purchased by Vice-Com. R. J. W. Koons from Mr. Seymour L. Husted, Jr., and Hildegard was bought by Mr. Edward R. Coleman from Mr. George W. Weld.

The steam yacht Juanita has been purchased by Mr. Frank B. McQuestion, of Boston, from Mr. David Lamar, of New York.

The yacht building firm of Wyckoff Brothers & Taylor, of Clinton, Conn., has been dissolved and reorganized under the name of Wyckoff Brothers, with a capital stock of \$30,000, one-half of which is paid in. Mr. L. K. Stevens is interested in the venture.

On Tuesday, Dec. 10, the steel steam yacht Isis was launched from the yard of Messrs. T. S. Marvel & Co., Newburg, N. Y. Isis was designed by Mr. J. Beaver Webb for Messrs. W. S. and J. T. Spaulding, of Boston. She is a twin-screw steamer 200ft. over all, 164ft. on the waterline, 24ft. 6in. beam, and 11ft. 6in. draft.

The following yachts have been sold through the agency of Mr. A. J. McIntosh: The auxiliary yawl Watauga, by Mr. Fred. Ames, N. Y. Y. C., to Mr. George C. Kirkham, of New York; the raceboat Don, by Mr. G. Reeves, to Mr. Oliver C. Macy, of the Penataquit Corinthian Y. C., of Bayshore, L. I., and the auxiliary yawl Ionta, by Mr. Loyal W. Raymond, to Mr. R. L. Leo, of New York; also the alco-vapor launch Pun, by Mr. E. G. Vaughn to Mr. H. Allen, of New Orleans.

Mr. Frank Bowne Jones has made the following sales through his agency: Schooner Uncas, purchased by Mr. James Weir, Jr., from Mr. Charles P. Buchanan. The 51-footer Kestrel, purchased by Mr. H. S. Wood from Mr. J. B. Mills.

Tebo's Yacht Basin at the foot of Twenty-third street, South Brooklyn, will shortly be turned over to C. S. Haviland and J. William Haviland, Jr. Since the death of William M. Tebo the property has been in the hands of the Nassau Trust Company. The Tebo estate was left to the four grandchildren of Mr. Tebo, but two of these children are minors and the two eldest have purchased the property, the consideration being \$250,000.

Messrs. Townsend & Downey, at Shooter's Island, S. I., are well along with their yacht work. The steel schooner building for Mr. Gibson Fainestock is nearly plated. The auxiliary schooner for Mr. Alexandro Fabri is in frame. Great pains are being taken on the schooner for the German Emperor, and in consequence the work progresses slowly. Her deck frames are all in, and the work of plating will soon begin. The new 60-rater of Messrs. Gardner & Cox design is laid down, and the frames will be out in a week or so.

Mr. Robert E. Todd's schooner Thistle is laid up at this yard for the winter.

Rifle Range and Gallery.

The Riflemen's Reunion.

TWENTY odd years ago the doings of the long-range rifle shooters of America filled a large share of public attention and newspaper space. Last Saturday evening the veterans filled one of the private dining rooms at the Murray Hill Hotel, in this city, as the guests of Leslie C. Bruce, and spent several very pleasant hours in recalling their old times and triumphs in their chosen sport. There was much merriment as each new-comer reached the reception room in trying to guess who he was. They were a bald-headed, gray-bearded bunch. That is the fact, yet each was greeted by the others with the mendacious bit of politeness that he had not changed a whit, or was looking even younger than he did a quarter-century past, when his clear eye and steady hand assisted in piling up scores which placed America in the front as a nation of riflemen. Col. Wingate, the father of rifle shooting in America, sat

beside Judge Gildersleeve, with R. C. Coleman at his left. Yale and Hepburn, a worthy couple, who knew how to make as well as shoot a rifle. Jewell and Allen were again together making good scores in riddling the menu. Canfield, Ballard and Clark made another notable group, while Hayes, of Newark, expert in many styles of marksmanship, sat near Frank Hyde, the portly champion, who showed what one of the old-timers could do in piling up the top score in the revival of international rifle shooting at the Sea Girt range during the past summer. W. B. Caughy and J. B. Holland dropped in while Geo. Crouch fitted about with reminiscences of the first days of Creedmoor, and before Capt. Zalinsky, who was one of the first and for a time almost the only representative of the regular army to recognize the value of the National Rifle Association, was an honored guest, while Conlin came from his gallery to assist in another red-letter event in the history of American marksmanship. John H. Bird and ex-Alderman Cole, well remembered in their visit of the American riflemen to Ireland, were at the board, looking most patriarchal and well preserved, with Secretary P. Schermerhorn and Fairbanks from the old-time Creedmoor working staff.

J. E. Whitley represented the group of newspaper men who at the time when Creedmoor was cleared up in the Long Island barren assisted in giving publicity to the important work then launched, urging the vital necessity for the movement and using the effective pen of sarcasm against men in uniform, regulars as well as militia, who called themselves soldiers, and even carried rifles to support the delusion, yet who carefully refrained from firing a shot from the nicely polished weapons.

There were representatives there of the present generation of riflemen. Gen. Bird Spencer, head of the Sea Girt range and president of the revived National Rifle Association, with Secretary Jones, sat with a number of those who are pushing the fine New Jersey coast shooting grounds into well deserved prominence. Mr. Gould, in the front rank of the writers on rifledom to-day, saw in the gathering a promise of the fulfillment of much that he has been striving for.

Col. Bruce opened the after-dinner speaking by explaining the why and wherefore of the gathering. When, during the past summer, he saw the Palma trophy, representing the long-range, any rifle championship, carried off by a Canadian team, and an Irish team win victory in a match with military rifles over the long ranges, he determined to do something to put American rifle honors where they had been for several decades—at the head of the column. He knew of no better advisory body than the old-time long-range victors, and he was more than gratified, he said, in the success of the reunion. There were vacancies in the ranks. Dakin and Weber—Rathbone, too—had gone, and within a few days after an enthusiastic assurance that he would come on from Colorado, to be present at the meeting, word came that Henry Fulton, probably the most painstaking and intelligent student of the art and science of rifle shooting in those historic days during the '70s, had been suddenly stricken in death.

Col. Bruce said he saw the need of just such a group as the old-time rifle enthusiasts of those days were—men who would give their time, their effort, their brains and their money to work out the problems of accurate marksmanship. The old arms had become obsolete, black powder and such calibers as .44 and .45 were things of the past. The high-power, low-caliber arms, with their pencil bullets, smokeless powders, were now to be studied, and the ranges could and should be extended beyond the then limit of 1,000 yards. While he did not expect the old 'uns to step into the breach at this time, they could do very much by acting as mentors to those who would rally, as in the past, when the supremacy of America was imperiled.

Gen. Bird Spencer, who is to-day the official head of rifle shooting in this country, placed the Sea Girt range at the disposal of any movement like that suggested. Judge Gildersleeve spoke, and Frank Hyde, too, in a reminiscent strain, while Coleman, Jewell and Canfield added some practical advice in the line of keeping the new departure on the same independent plane adopted by the long-range workers in the past.

Capt. Zalinsky urged that scientific study go along with the practical working out of the problems which now confront those who will excel in the long-range work. There was now more than ever necessity for such a movement; and the Spanish-American war against another and almost any other foe, might have shown up American rifle work in a very pitiable plight.

Col. Wingate shed light on the vicissitudes of trophies and ranges when those who have the interest of the sport at heart fail to continue in active supervision. The range at Creedmoor had been given the State of New York, which had so far shown herself a very ungrateful recipient of a rich gift.

Col. Bruce announced that from many who had not been able to attend the meeting he had many valuable suggestions in writing, and on motion he was made a committee to collate the views of all interested and take further steps toward the organization of the Long Range Riflemen of America, as the successor of the old Amateur Rifle Club, and Col. Wingate, as the present custodian of the Leech cup, was authorized to make it once more the basis for long-range competitions on the Sea Girt ranges.

After an exceptionally pleasant evening, the old fellows and the youngsters parted, with thanks to Col. Bruce for his happy inspiration of this agreeable method of once more putting the amateur riflemen in a position to repeat their instructive leadership of a quarter-century past.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Dec. 1.—At the Columbia Pistol and Rifle Club shoot A. H. Pape did some fine shooting to-day in the three-shot match. He shot about three hours—72 shots, 25 entries—and got a total of 99, or 3 3-10in. ring average in 10 best scores. Some idea of the improvement can be had by comparing the 10 best scores by A. Strecker in 1896, which was 90, or 3in. average; but it represents a year's shooting and hundreds of scores. Pape made one run of 8 shots in the 3in. ring, viz., 3, 2, 1, 3, 2, 2, 3, 2, and another of 6 consecutive in 3 ring. Hovey pressed him closely with 8 for best 3-shot score. Young made a good effort to win his gold bar (35 average) with pistol, and came within one point of it. His S. & W. pistol got loose; it always does. Why can't we have a pistol with solid frame?

Dorrell made fine average work with rifle, shooting 88 shots on 3-shot match, and only one out of black (12in.), but Pape got first place in this contest to-day. Dorrell averaged on the 6in. ring.

Dr. Twist wagered a dinner for four that he would win expert bronze bar (45 average), but he has only one more shot and could make no better than 49 to-day. P. A. Becker was high in the revolver match, and Hoffman in .22cal. rifle contest. Scores, Columbia target:

Rifle, 10 shots, 200yds.: F. O. Young, 56; A. H. Cady, 76, 93; E. A. Allen, 78, 132, 146, 133; Alex. Pape, 78, 104, 106, 107, 111, 114; F. Pape 140; F. Schmidt, 194, 217.

Rifle, 3-shot match, 200yds.: A. H. Pape, 6, 7, 6, 11, 11, 11, 12, 12, 12, 12, 15, 16, 16, 16, 18, 19, 19, 21, 22; Ed. Hovey, 8, 17, 18, 18, 19, 20, 21, 22, 22, 23; A. B. Dorrell, 10, 11, 11, 12, 13, 14, 14, 14, 14, 15, 15, 15, 17, 18, 18; C. M. Daiss, 10, 14, 15, 16, 18, 21, 21, 23; W. G. Hoffman, 16, 17, 19, 19, 24, 25, 26; F. O. Young, 18.

Pistol, 50yds.: F. O. Young, 34, 45, 48, 36, 48, 49, 39, 44, 47; C. M. Daiss, 40, 50, 57; Dr. J. F. Twist, 50, 52, 55, 60, 62, 62, 63, 63, 59; W. C. Prichard, 61; E. A. Allen, 85, 86; Mrs. C. F. Waltham 97.

Revolver: P. Becker, 57; J. R. Trego, 61, 76, 80, 92, 92; Dr. Twist, 72, 77, 82, 85.

.22cal. rifle, 50yds.: W. G. Hoffman, 23, 23, 24, 25; E. A. Allen, 37; C. Bachman, 51; G. Stevens, 51.

Final shoot for bars, medals and prizes on 10 best scores of year takes place Dec. 15.

FRED O. YOUNG, Sec'y.

Rifle at Shell Mound.

SAN FRANCISCO, Cal., Dec. 9.—There was lively shooting at Shell Mound range yesterday. The medal shoots of local clubs usually finish in December, and contestants who are close together do their prettiest in this month.

At the last shoot this month the Golden Gates will hold their usual reunion and banquet. The Germania Club's banquet will be held in January.

Scores yesterday:
Golden Gate Rifle and Pistol Club, semi-monthly medal shoot, handicap: M. F. Blasse 211, 206; A. B. Dorrell 221, 228; D. W. McLaughlin 218, 230, 224, 224; O. Bremer 216, 212, 210; L. Riemen Schneider 190, 183, 194, 186. Silver medal: William Ehrenpfort 185. Gold medal, J. F. Bridges 211. Pistol practice, 50yds., silver medal: J. Kullman 74, 67, 66. Handicap pistol: J. E. Gorman 93, 90; W. F. Blasse 87, 85, 84. Revolver, 50yds.: J. E. Gorman 92, 88, 87; P. A. Becker 91, 90, 88, 85; Major Tompkins 78, 78, 74, 73.

Germania Schuetzen Club, annual turkey shoot: Herman Huber 67, F. P. Schuster 66, Henry M. Wreden 65, C. M. Henderson 65, D. B. Faktor 64, J. D. Heise 64, F. E. Mason 63, L. Bendel 63, G. H. Bahrs 63, H. Meyer 62, F. Rust 62, A. Jungblut 62, L. Haake 60, C. Schraeder 58, William Goetze 59, S. Heino 57, J. Tiedemann 57, William Doell 57, J. F. Bridges 56, F. Pritchard 55, R. Stettin 55, George Alpers 55, H. Zacher 54, August Hagerdon 54, Edward Goetze 53, D. Salfeld 52, John Geiken 51, L. Ritzau 50, F. Brandt 49, J. Utsehig 47.

The Interstate Association Annual Meeting.

The Interstate Association held its annual meeting Thursday, December 12, every stockholder in the Association being represented in person or by proxy.

Representatives of four honorary members of the Association were also present.

After the regular routine of reading of the minutes, Mr. Elmer E. Shaner, manager of the Association, read his annual report, reviewing the past season's work and offering recommendations and suggestions as to the season of 1902.

Pittsburg, Pa., Dec. 11.—To the President, Officers and Members of the Interstate Association: Gentlemen—The work of the manager's office for the season of 1901 is respectfully submitted.

Grand American Handicap Tournament at Live Birds.

The opening event, which will probably long remain one of the principal events, if not exclusively the principal, was held at Interstate Park, April 1 to 5, both inclusive.

In the forenoon of the day scheduled for the commencing of the main event—the Grand American Handicap—the wind blew a gale, and rain fell in such torrents that it was necessary to postpone the tournament a day.

Inanimate Target Tournaments.

These contests have not declined in interest, as will be noted from what follows:

The first of the season was held at Jacksonville, Fla., April 17 and 18, under the auspices of the Jacksonville Gun Club.

The Cleveland (O.) tournament, held June 19, 20 and 21, was all that could be desired.

The attendance at the tournament given at Sherbrooke, Canada, was not what it should have been; but our work there on July 1 and 2 will bear fruit.

Notwithstanding other attractions, natural and artificial, the tournament at Jamestown, N. Y., July 10 and 11, was all that the most exacting could ask.

Our subscribers have no reason to complain of the manner in which all things worked together for their good.

The second Grand American Handicap target tournament, held at Interstate Park, July 16, 17, 18 and 19, was as well appreciated, both by amateurs and manufacturers' agents, as the initial event last year.

I am happy to be able to state that our second tournament at Providence, R. I., was as successful as the first.

The Auburn (Me.) tournament, Aug. 21 and 22, was well attended, many of the visitors being from outside the State.

The wind-up of the season was at Louisville, Ky., Oct. 2, 3 and 4, and the members of the Jefferson County Gun Club were justifiably proud of it.

Generally Speaking.

I take occasion to again say that our subscribers are to be congratulated on the results directly and indirectly achieved, and on the assurance that the efforts of the Association to give satisfaction, have been abundantly crowned with success.

The Future.

The appetite of an appreciative public still grows upon what it feeds; and there is yet no appreciable boundary to our efforts to serve it.

Tenth Annual Grand American Handicap Tournament at Live Birds.

This will be held at Blue River Shooting Park, Kansas City, Mo., the week beginning March 31, 1902, the first time since its inception in Western territory.

that section of the country, I anticipate the eclipse of all former records in the matter of entries. While personally I am not in favor of such large entry lists, it is in line with the settled policy of the Interstate Association, namely, "the encouragement of trapshooting," and the result will be looked for with unabated and in all probability with enhanced interest.

Third Annual Grand American Handicap Tournament at Targets.

This feature of our work gives promise of greater interest than ever before. It will be held at Interstate Park, the week beginning May 5, 1902. In view of results accomplished, which are more reliable data on which to reason than the most seductive hypothesis, I suggest that it would be wisdom to adhere to a programme similar to that of the last two years.

Inanimate Target Tournaments for 1902.

My observations in last year's report would about cover all to be said at present. We have applications for tournaments from all points of the compass, and it is simply a matter of discretion on our part as to how we can best serve the greatest number.

Conclusion.

In closing my report for 1901, allow me to repeat my former sentiments as to the uniform kindness and courtesy shown by the Association, which have made the labors of the position a pleasure.

To our subscribers, one and all, I can only reiterate the sentiment of esteem I have hitherto expressed. Very respectfully submitted, ELMER E. SHANER, Manager.

One of the most important pieces of business transacted at this meeting was the appointment of a committee to revise the shooting rules, at present in use by the Association.

The stockholders, before adjourning, elected the following Board of Directors for 1902: Messrs. J. A. H. Dressel, Irby Bennett, Edward Banks, A. W. Higgins, E. S. Lentillon.

A long list of applications from gun clubs for tournaments, to be held on their grounds under the auspices of the Association, was handed in by Mr. Shaner, and was referred to the Tournament Committee for action, with a recommendation that the interests of the Middle West be well looked after.

Immediately after the adjournment of the meeting of the stockholders of the Association the Board of Directors named above held their meeting, at which Mr. Dressel was re-elected President, Mr. Irby Bennett re-elected Vice-President, and Mr. Banks continued in his position as Secretary-Treasurer.

The Executive Committee was made up as follows: Mr. Higgins, Chairman; Messrs. Lentillon and Bennett.

The appointment of manager was very quickly disposed of, Mr. Shaner being unanimously reappointed to fill that office for another season.

The Tournament Committee was appointed as follows: Mr. Irby Bennett, Chairman, and Messrs. Chas. Tatham, Ed. Banks, W. F. Parker, John L. Lequin, Howard Marlin, A. W. Higgins, E. S. Lentillon.

The above concluding the business before the Board of Directors, the Board adjourned, and a meeting of the Tournament Committee was held, every member of that committee being present, with the exception of Mr. Chas. Tatham, who was absent from the city on business.

The chief business before the meeting was the consideration of points for the holding of inanimate target tournaments during the season of 1902. Only five places were selected at this meeting, the points chosen being Titusville, Pa.; Charleston, S. C.; Brunswick, Me.; Raleigh, N. C.; Memphis, Tenn.

It was also decided by the committee that four or more points be selected for inanimate target tournaments during the coming season, such points to be as far as possible located in what is geographically known as the Middle West.

The representatives of the sportsmen's journals were asked to call the attention of clubs located in the section named to the above wish of the Association, with a view to having applications from such clubs placed in the hands of the manager of the Association not later than Jan. 15 next.

ON LONG ISLAND.

New York vs. New Jersey.

Interstate Park, L. I., Dec. 11.—The third and conclusive match between teams of New York and New Jersey was shot at Interstate Park, to-day, Mr. Ed Banks, who had been actively working to bring out a large New York representation so as to meet all that New Jersey would bring forward to the scratch, had nineteen or twenty shooters on hand, and could have secured a few more had there been occasion for it.

The first match, shot at Interstate Park, was won by New York on the narrow margin of one bird.

The second match, shot on Smith Brothers' grounds, Newark, N. J., was won by New Jersey, on the same margin—that is, one bird.

The third match, the one under present consideration, resulted in a tie.

Each man shot at 25 birds. Each team scored 181 out of a possible 200, a fraction better than 90 per cent. This is an excellent performance for teams.

The birds were good, but the weather was in favor of the shooters. There was a bright sunshine and no wind of any importance. Still, the birds, being strong, they required careful shooting and hard hitting to stop them within bounds.

It is to be regretted that New Jersey did not have a nearer approximation to its full power. There are many more skillful live-bird shots in that section, and in their absence, this team shot could hardly be considered as truly representative of New Jersey in the vicinity of New York.

The tie was not shot off, so that the present status of the series is a win for each and one tie. The competition seems to indicate that in point of skill there is very little difference between the shooters of the two sections.

Some preliminary sweepstakes were shot. No. 1 was 5 birds, a handicap, class shooting. No. 2 was at 5 birds, a handicap, high guns. The scores of the events follow:

Table with columns for New York Team and individual names (S. Glover, J. M. Thompson, W. Hopkins, C. G. Blandford, C. F. Dudley, J. P. Kay) and their scores.

Table with columns for New Jersey Team and individual names (J. Gaughen, L. H. Schorty, G. E. Greiff, H. C. Kocgel, G. H. Piercy, E. A. Geoffroy, Capt. A. W. Money, J. R. Gladdin, C. Von Lengerke, N. Appar, C. R. Wise, J. E. Applegate) and their scores.

A sweepstake was arranged, and the following shot along in it: F. W. Cramer 21, J. E. Super 19, T. H. Keller 17, Ed Banks 23, G. W. Hagedorn 20, W. F. McConville 14.

Table for Sweepstakes—No. 1, listing names (Banks, Geoffroy, Piercy, Kay, Hagedorn, Gardner, Hopkins, Taliman, Glover, Capt Jack, Greiff, Blandford, Hagedorn, Wise, Taliman, Thompson, Waters) and scores.

Table for Sweepstakes—No. 2, listing names (Banks, Geoffroy, Piercy, Gardner, Hopkins, Taliman, Glover, Capt Jack, Greiff, Blandford, Hagedorn, Wise, Taliman, Thompson, Waters) and scores.

Match for birds, 28yds. Won by Mr. T. H. Keller: T. H. Keller 9, P. Money 8, Capt Jack 8.

Table for Miss-and-out, \$2 entrance, listing names (G. H. Piercy, Super, Geoffroy, Hopkins) and scores.

The following target events were shot, in addition to the live-bird events above mentioned:

Table for Events, listing names (G. G. Stephenson, I. Tallman, R. W. Hafl, J. S. Applegate, J. F. Kroeger) and scores.

Match, 10 targets, 25yds. rise: Tallman 8, G. Stephenson 7.

New Utrecht Gun Club.

Interstate Park, L. I., Dec. 14.—The weather was rainy, raw and sticky, and consequently the attendance was light. There was a right-quarterming, strong wind and good birds.

Five birds, for birds: T. W. Morley, 30, 11222-5 F. D. Creamer, 28, 1*022-3

Five birds, for birds: F. D. Creamer, 28, 1*001-2 C. A. Ramapo, 28, 1220-3 R. W. Hafl, 28, 21211-5

Ten birds for monthly average: T. W. Morley, 30, 012202222*-7 R. W. Hafl, 28, 1212221121-10 F. D. Creamer, 28, 222222212-9 *Magoun, 28, 022*22020*-5

Crescent Athletic Club.

Bay Ridge, L. I., Dec. 14.—The shooting for the December cup was the main feature of the competition. The entire 50 targets were shot over expert traps, the club now having two sets of these traps installed.

Table for Crescent Athletic Club, listing names (Dr. J. J. Keyes, F. E. Mendes, H. M. Brigham, W. W. Marshall, F. B. Stephenson, G. G. Stephenson, Jr., L. M. Palmer, Jr., F. A. Bedford, H. B. Vandever, L. C. Hopkins, H. A. Bourne) and scores.

Team shoot for Sykes cups, 25 targets, expert traps; handicap allowances added:

Table for Team shoot for Sykes cups, listing names (Brigham, Keyes, Bedford, Bourne, Hopkins, Chapman) and scores.

Shoot for trophy, 15 targets, expert traps; handicap allowances added:

Table for Shoot for trophy, listing names (Bedford, Chapman, Mendes, Marshall, Keyes, Bourne) and scores.

Shoot for trophy, same conditions:

Table for Shoot for trophy, same conditions, listing names (F. Stephenson, Mendes, Bedford, Brigham, Marshall) and scores.

Sweepstake, 10 targets: Brigham 8, F. B. Stephenson 7. Match, same conditions: Brigham 8, G. Stephenson, Jr., 8.

Brooklyn Gun Club.

Brooklyn, L. I., Dec. 14.—The weekly shoot of the Brooklyn Gun Club had an attendance of diligent shooters. The weather conditions were unfavorable, there being a heavily clouded sky, with rainfall betimes, and the temperature was raw and chilling.

Match, 15 singles and 5 pairs: J. E. Super 17, T. B. Rider 17, I. M. Williamson 17, J. S. Wright 12.

Match, same conditions, as foregoing: J. E. Super 21, I. M. Williamson 20, T. B. Rider 18, J. S. Wright 10.

Match, 25 targets: T. B. Rider 22, I. M. Williamson 22, J. E. Super 19.

Match, 25 targets: Marshall 14, Van Pelt 13. Sweepstake events follow:

Table for Sweepstake events, listing names (Events, Targets, Williamson, Super) and scores.

Richmond Gun Club.

SILVER LAKE, Staten Island, Dec. 14.—Both targets and live birds were shot to-day, the latter an event at 10 birds, which was won by Mr. A. A. Schoverling. The weather was very unpleasant and unfavorable for good scores.

Table for Richmond Gun Club, listing names (Events, Targets, A. A. Duke, G. Bechtel, Crystal, Herrmann, Riersen, Meurer) and scores.

Ten live birds, 23yds., 30yds. boundary: A. A. Schoverling, 2222022202-8 E. C. Meurer, 1001120010-8 M. Ryersen, 0102120012-6 A. A. SCHOVERLING, Sec'y.

Pigeon Shooting at Savannah.

Editor Forest and Stream:

"L'homme propose et Dieu dispose"—and so it happened that when, during the sultry summer months, a happy thought came to Dr. Francis Cheatham Wilson, of Savannah, prompting him to give a private social shooting affair in the Forest City, he simply went about it in that quiet, easy manner, so thoroughly characteristic of the man who says but little, yet accomplishes so much.

It had occurred to the Doctor that a nice little shooting match could be arranged without blast of trumpet, screeching fife or beating drum, so he politely invited a few of his friends to gather about him and try conclusions on Dec. 2 and 3, and sure enough some of them responded, only too glad to have the opportunity of obeying the gracious summons of so distinguished and amiable a host.

There was but one feature of the whole affair that in a measure marred, for a time at least, the sport, and as the Doctor could not control that, why, we bear him no grudge. On the first day the weather was gloomy and threatening from the very start. Great clouds hung low and forbidding, culminating in a nasty drizzling rain, diverted only by heavier showers. So, instead of shooting out the entire programme, one event had to go until next day.

On the third, instead of wet we had wind—lots of good, strong wind—the kind that carries many a pigeon out of even a 50yd. boundary, to say nothing of the ones we used here—a scant 30yds. But, as will be seen by the scores, every one held a pretty straight gun, and while the shooting was quite difficult, especially on the set of traps to the left, clean scores were of frequent occurrence.

To hold a pigeon match in Savannah means more, much more, of an undertaking that it would in many another place, because traps, boundaries and all the paraphernalia which go to make up a pigeon ground had to be furnished and put up by the host, so as there were two sets of traps, etc., it can easily be understood that some outlay of money and personal supervision had to be given to the undertaking; and here again is where those quiet, easy-going men, who say little, but do much, excel.

The two sets of traps were at right angles to each other, and the boundaries had been cut down to 30yds., and in handicap events rise was from 27 or 28 to 32yds; in all other matches, even distance at 30yds. prevailed. In the matter of prizes there were five in all—two beautiful silver loving cups, two extremely handsome pieces of plate and an exquisite oil painting of a wood duck, by the celebrated artist, sportsman and gentleman, Mr. Hal. Morrison, of Atlanta, who generously donated this prize. A small reddish spot on the breast of this beautiful duck told the tale but too well, and knowing the warm-hearted and kind man whose gentle hands executed this little red stain, it is easy to conceive that a pang went through his heart even at so mock a wound!

As is usually the case in cup competitions of this kind, the value thereof is deducted from the purse; this is the customary style. Some men abhor usual and customary ways, having ideas of their own. The Doctor is of this kind; so, in spite of traditions, modes and precepts, he simply announced that in this case a departure would be made from the beaten track and that it was his intention to put up these prizes himself, all of which was done in so off-hand and free-hearted a manner that the Doctor's face beamed with delight at having made the announcement. Indeed, an on-looker would have supposed he himself had been presented with an entire silversmith's stock!

Beware of these quiet, easy-going men; they do such original, unlooked for and unexpected things.

Another thing. Men who frequent tournaments, and whose misfortune it is to get hungry at about midday, know but too well what the prehistoric chestnut of "lunch served on the grounds" means. We have all been there, and so has the Doctor. So to keep things en tenue with the rest he had a regular course dinner served every day, which would have done credit to any hotel, besides which cigars and refreshments were spread during the whole time. This part of the programme was the Doctor's picnic, and along with prizes and trophies, went with Dr. Wilson's compliments. So we said, "How, Doctor," and thanks, and he was delighted; glad because we enjoyed ourselves, and glad because we were there.

Those quiet men you know do not say much. When a gun club or manufacturer of ammunition, etc., gives a tournament, there is always a string or a cable to it somewhere. It is either with a view of replenishing the treasury of the one or advertising the wares of the others. There is nothing reprehensible in this—not a bit of it. Only those who care to, need attend; but, nevertheless, it is business. It is ducats. Here, on the other hand, is a professional man in high standing, who, out of the goodness of his heart, goes to great labor and expense to simply entertain his friends, enjoy their company and hear their guns crack. Surely there is something noble in this and sportsmanlike; in other words it is an anomaly in pigeon shooting—i. e., one without a rake-off! So to in an infinitesimal manner show our appreciation and to bear witness of our gratitude, love and esteem for our worthy host, a silver waiter, bearing our names, was presented to him by our esteemed comrade, Col. Thomas, Martin, who in a very appropriate speech made the presentation. With three rousing cheers and a gurgling sensation in our throats we shook hands with the quiet man from the Forest City, the typical Southern gentleman who says so little, still does so much, and of whom we are all so proud.

Following are the scores:

First Day.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, H P Collins, H M Clapp.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, Collins, Clapp.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, Clapp, Du Bray, Dr Wilson, Desmond, Hood Waters.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billy, Col Martin, Collins.

Second Day.

Table with 2 columns: Name and Score. Includes Birmingham, Dr Billikins, Billy, Col Martin, Collins.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, Collins, Clapp.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, Collins.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, Collins, Clapp, Du Bray, Dr Wilson, Desmond, Waters.

Ties for Cup: Messrs. Clapp, Anthony, Du Bray and Dr. Wilson agreed to decide tie in following event: Ninth event, even distance, all at 30yds. 10 birds, \$10 entrance, 60 and 40 per cent.: Birmingham, 8, Billikins 8, Billie withdrew, Col. Martin 6, Collins withdrew, Clapp 8, Col. Anthony 8, Du Bray 9, Dr. Wilson 9, Waters 9, Sperry withdrew.

Table with 2 columns: Name and Score. Includes Birmingham, Billikins, Billie, Col Martin, Collins, Clapp, Du Bray, Dr Wilson, Sperry.

Extra event, handicap, 27 to 32yds., 10 birds, \$10 entrance, 60 and 40 per cent.: Birmingham, 28yds., 10; Billikins, 27yds., withdrew; Billie, 27yds., withdrew; Col. Martin, 31yds., 10; Clapp, 30yds., 8; Col. Anthony, 30yds., 9; Du Bray, 30yds., withdrew; Dr. Wilson, 31yds., 10; Waters, 30yds., 7.

A. W. du Bray highest average for both days, 114 out of 120, 95 per cent.

Col. J. T. Anthony, second highest average for both days, 113 out of 120, 94.1 per cent.

The scoring during both days was done on one blackboard by Mr. J. W. Ryalls, and the writer is bound to state that he has never seen that man's equal, calling up each contestant in his respective trap, scoring result of shot and not making an error in both days.

After the picnic was over on Dec. 4 Dr. Wilson shot a match with Mr. H. Mason Clapp, resulting in the Doctor's favor, as will be seen by examining the scores: Match at 100 pigeons, for \$100 a side and the birds, between Dr. F. C. Wilson and Mr. H. Mason Clapp, 30yds. rise, 30yds. boundary. A. W. du Bray referee; H. Lemcke scorer:

Table with 2 columns: Name and Score. Includes Wilson, Clapp.

Regarding the birds trapped in this match, the writer will say this: Anything above 90 would have been a very good score, even in a 50yd. boundary, and never in his life has he seen as high a score as the Doctor made, all things being considered. The entire lot of 250 pigeons were selected as being the very best birds out of the whole number of 2,300 provided for the tournament. There were not over half a dozen easy birds in all; besides, being a dark, gloomy day, these slate-colored and dark blue pigeons were hard to see and more difficult still to kill, going at the pace they did on so short a boundary.

Another match between these gentlemen is booked, and will come off toward the middle of this month. I venture to say that Mr. Clapp will make a much better showing, while I very much doubt any one's ability to do better than the Doctor did on that day. It was a grand performance. Dr. Wilson shot a Parker pigeon gun, Winchester factory-loaded Leader shells, and Dupont powder. Mr. Clapp shot a Francotte gun, hand-loaded shells and Ballistite.

St. Paul Review Cup.

MINNEAPOLIS, Minn., Dec. 8.—The shoot for the H. C. Hirschy live-bird championship of the Northwest, which occurs on these grounds next Friday, 13th inst., is causing unusual interest among the shooters of the Twin Cities. On account of the shortness of the time between settling the date and shooting the event, it is possible that the Eau Claire contingent (at which place Mr. Hirschy won the cup from Kid Moon on Nov. 30) will be nearly the only outside shooters in the event this time. The conditions under which the cup is shot for are \$15 entrance, birds included; money divided according to the number of shooters.

The St. Paul Review cup shoot to-day brought out a good crowd, sixty-five birds being shot at by ten shooters before one was missed. Herewith find the score, Mr. Morrison winning the cup again with 25 straight:

Table with 2 columns: Name and Score. Includes Hirschy, French, Perry, Morrison, Wilkinson.

Table with 2 columns: Name and Score. Includes Bull, McKay, Famachon, Brown, Kribs.

Table with 2 columns: Name and Score. Includes Bull, McKay, Famachon, Brown, Kribs.

Ossining Gun Club.

OSSINING, N. Y., Dec. 14.—These are the club scores of the Ossining Gun Club, made at the regular Saturday shoot, Dec. 14. Those of the brethren who have shot over a magtrap with a forty-mile straightaway wind blowing to the accompaniment of a drizzling rain, will appreciate the above scores. In event No. 4 J. Henry and C. Blandford changed guns, for luck; the luck was all with Henry:

Table with 2 columns: Name and Score. Includes Events, Targets, C Blandford, W Henry, D O'Connor.

Interstate Association Tournament.

NEW YORK, Dec. 13.—Will you kindly call attention in your columns to the fact that the Interstate Association is desirous of giving a few target tournaments in the Middle West, and wishes to hear from clubs situated in the above-named section of the United States who would like to give a tournament held under the auspices of the Interstate Association in the coming season of 1902. Applications for such tournaments should be made in writing to the manager of the Association, Mr. Elmer E. Shaner, No. 111 Fourth avenue, Pittsburg, Pa., and should be in his hands not later than Jan. 15 next.

EDWARD BANKS, Sec'y-Treas. the Interstate Association.

Cincinnati Gun Club.

CINCINNATI, O., Dec. 11.—The first contest for the Cincinnati Gun Club's live-bird trophy took place on the club's grounds.

The rules and conditions are as follows: Interstate rules, handicaps from 26 to 32yds., changed monthly, as deemed necessary. No allowance made for guns smaller than 12-gauge. Each contest at 25 birds, entrance \$5.50. Open to members only. As heretofore, there will be ten contests. Each contestant to select his seven best scores. To be eligible for any prize, you must participate in at least seven contests. All prizes class shooting, not high guns. First prize, \$100 grade gun to order; second prize, \$50 in gold; third prize, \$30 in gold; fourth prize, \$20 in gold.

There were twenty-one entries in this contest. Darkness set in before the race could be finished. It will be finished at the next regular contest. Contests held second Wednesday in each month. John Kohler at 27yds., and Ahlers, at 30, were the only straight men. The weather was cloudy; no wind. The birds were excellent. The contests bid fair to be the most popular ever given by the club. Du Bray donated a gun; Gambell solicited the \$100 by popular subscription. Four hundred and ten birds were shot in two hours and forty minutes. Rate of 153 per hour; retrieved from score.

New Year the club will start with a target field of cash; \$200 now subscribed; no prize less than \$10. First prize, \$60. Twenty-six contests in the year. Participants must take part in eighteen to be eligible for prize. All contests at 50 targets; handicap distance.

Table with 2 columns: Name and Score. Includes Du Bray, Gross, Harry, Gamble, Schuler, Nyc, Morris, Dick, Bauer, Kohler, Werk, Ahlers, Phil, Herman, Osterfeld, Heyl, Case, Sec, Boch, Rhoads, West.

Keystone Shooting League.

PHILADELPHIA, Pa., Dec. 14.—An exceedingly high wind took the birds out of bounds speedily when not quickly killed by the contestants. Six entered in the club handicap, and of these, Brewer was winner on a score of 9 out of 10. Fitzgerald and Smith were second with 8. Geikler, one of the three men to score 7, had his 3 lost birds dead out of bounds. The scores:

Table with 2 columns: Name and Score. Includes Brewer, Fitzgerald, Smith, Geikler, Van Loon, Hobbs.

Four miss-and-out and one 7-bird sweep were shot. In the miss-and-out events Geikler won the first and divided with Brewer for the second and third. Fitzgerald and Brewer divided the fourth. The 7-bird event was won by Brewer with a straight score, Hobbs winning second money with 6 kills. The scores follow:

Miss-and-outs, \$1 entrance. First event: Geikler 5, Hobbs 4, Fitzgerald 4, Brewer 2, Jones 1. Second event: Geikler 2, Brewer 2, Hobbs 1, Fitzgerald 0, Jones 0. Third event: Geikler 1, Brewer 1, Hobbs 0, Fitzgerald 0, Jones 0, Van Loon 0. Fourth event: Fitzgerald 2, Brewer 2, Hobbs 1, Geikler 1, Van Loon 1. Fifth event, 7 birds, \$2 entrance: Brewer 7, Hobbs 6, Van Loon 5, Fitzgerald 5, Geikler 5, Jones 5.

Gun Club Shoot at Woodlake, Neb.

WOODLAKE, Neb.—The fourth weekly shoot of the gun club was held Dec. 10 at 1 o'clock, and about twenty persons present seemed to hugely enjoy the contest for the gold championship medal. There were six shooters in to-day's line, and much enthusiasm was manifested.

A six-inch fall of "the beautiful" might have discouraged the members of many clubs, but in this case only caused a greater attendance. The day was exceedingly gloomy, and in consequence the usual scores were much varied. None of the contestants shot as well as formerly.

Mr. Walter Parker enjoyed his initial shoot. Before arriving on the club grounds he had announced his intention to powder all targets thrown, but after the first 10 had safely landed in a bank of "the beautiful" the contestants breathed easier, while the audience screamed and howled. Mr. John Day stated that he intended to wear the medal on a visit to a nearby town next day, but he failed to account for eleven of the mysterious flyers.

After the next shoot a Class B medal will be used by the club to add to the present great interest manifested. Following are the scores, each man shooting at 25 targets: Le Roi Leach 15, John Day 14, William Chrysler 11, Frank Day 10, Walter Parker 6, Cyrus Hagden 4. Leach, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications.

Information Wanted.

Will you kindly send me name and address of any parties you may know who manufacture hand-propelling machinery for small launches. By this I mean a device to drive the screw.—W. H. S. A number of years ago you had among your advertisements Allen's wire decoy duck frames for holding a duck after having been killed, in position of a live duck, to be used as a decoy. Can you or any of your readers inform me where I can procure them at the present time?—W. D. P.

PUBLISHERS' DEPARTMENT.

Winter Tourist Rates, Season 1901-1902.

THE Southern Railway, the direct route to the winter resorts of Florida, Georgia, the Carolinas and the South and Southwest, announces excursion tickets will be placed on sale Oct. 15 to April 30, with final limit May 31, 1902. Perfect Dining and Pullman Service on all through trains. For full particulars regarding rate, descriptive matter, call on or address New York Office: 271 and 1185 Broadway; or Alex. S. Thwait, Eastern Passenger Agent, 1185 Broadway.—Adv.

Washington.

HOLIDAY TOUR VIA PENNSYLVANIA RAILROAD.

Dec. 26 has been selected as the date for the Personally-Conducted Holiday Tour of the Pennsylvania Railroad to Washington. This tour will cover a period of three days, affording ample time to visit all the principal points of interest at the National Capital, including the Congressional Library and the new Corcoran Art Gallery. Round-trip rate, covering railroad transportation for the round trip, hotel accommodations and guides, \$14.50 from New York, \$13 from Trenton, and \$11.50 from Philadelphia. These rates cover accommodations for two days at the Arlington, Normandie, Riggs, or Ebbitt House. For accommodations at Regent, Metropolitan, or National Hotel, \$2.50 less. Special side trip to Mount Vernon.

All tickets good for ten days, with special hotel rates after expiration of hotel coupons. For itineraries and full information apply to Ticket Agents; Tourist Agent, 136 Broadway, New York; 4 Court street, Brooklyn; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, DECEMBER 28, 1901.

VOL. LVII.—No. 26.
No. 346 BROADWAY, NEW YORK

TERMS, \$4 A YEAR, 10 CTS. A COPY.
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

FOREST AND STREAM CHRISTMAS READING.

THIS is the Christmas issue of FOREST AND STREAM. And what a number it is in the wealth, variety and quality of its contents. There is here page after page of sketch and story, all together giving material for hours of entertainment. To the man or the woman, who in a tale well told likes the flavor of the wild wood fragrance, and for whom the printed page is the brighter if it reflects the glint of the sunlight on the water, the mail this holiday week can bring nothing more acceptable nor more to be enjoyed than this notable Christmas number, pervaded throughout with the characteristic qualities of FOREST AND STREAM. Here is the list of good things which are provided to-day, and with them from editors to readers go the good will and the good wishes of the season:

IN LUSTY MANHOOD.....Charles Hallock.
SELLING THE BEAR'S HIDE.....Chas. S. Davison.
A MAN O' THE WOODS.....Fayette Durlin.
SEA RACK.....William Edward Aitken.
CASEY'S WILDCAT.....Francis Moonan.
THE TALE OF LAULU'S HUNT.....Llewella Pierce Churchill.
LUCK WITH A MEAT GUN.....Ransacker.
FAITHFUL FIDO.....M. M.
CAPE HORN.....Paul Eve Stevenson.

J. S. VAN CLEEF.

THE news of the death of J. S. Van Cleef, who died at his home in Poughkeepsie, on Tuesday of last week, came to his friends with all the greater shock because the event was so entirely unlooked for. It had been only a few days before that Mr. Van Cleef had sent us the graceful little tribute to John Burroughs, which was printed in our last issue; and in his letter accompanying it there had been no intimation of anything to prepare us to look for the end which was so near. For more than twenty-five years Mr. Van Cleef contributed out of his rich experience and abundant knowledge of angling and anglers occasional papers for FOREST AND STREAM, and its readers had come to look for the articles with his signature or the familiar initials J. S. V. C. He was one of the first fishermen on Catskill Mountain streams, the Willewemoc and other waters which have since become famous; and his experience in fishing club affairs and the careful protection of fishing waters was perhaps unequalled. He was a man of fine instincts and in his sportsmanship of high ideals. His contributions to the work of securing or New York wise fish and game laws were of recognized value; it was his pen that wrote the game and fish code adopted by the legislative committee of 1896. Mr. Van Cleef's winning personal traits, his great fund of angling reminiscences and his broad culture made him a delightful companion; and his friendship was one which those who were privileged to enjoy it learned to value more and more as the years went by.

To record in these columns to-day the passing of our friend is to give to this Christmas number the note of sadness which with most of us as we grow older and the years of the past with their memories rush in upon us makes up more and more the real spirit of the Christmas week—not the joyousness and the festivities, but the tender memories, the unavailing regrets and the longings to see once again the vanished faces and to hear once more the voices that are still.

A WINTER MORNING.

THE morning is clear and cold, but a light gray mist—which is not a fog, but yet obscures the rising sun—hangs over the landscape. One may see a long way, yet distant objects, which in a clear air would be plainly visible, are hidden now. It is bitter cold, the mercury standing just above the zero point, but the air is still. From the borders of the ponds in front of the house a white sheet of snow-covered ice extends out a few feet from the shore, and beyond that is the intense black of still water—or possibly of smooth ice.

On such a morning one may well enough start out to see what is astir in the fields and woods. It is too cold for much movement in the animal world, yet now and then a distant crow may be seen fanning its slow way across the sky, or a faint echo of its voice may draw the eye to where the dark bird sits perched on the topmost bough of some giant chestnut.

The season for shooting has closed, yet from force of habit the observer will tuck his gun under his arm. Then he plows his way through the light snow across the fields, through the run, and after climbing two or three fences he enters the woods and reaches the great warm spring which never freezes. Here the water plants always grow fresh and succulent, and here always some black ducks may be found. This morning there are none; perhaps because the woodchoppers are working a hundred yards away, and shout to their patient oxen, which drag the creaking sled over the crisp snow; or the resounding blows of axes may have driven the birds from this favorite resting place.

The walker follows down the stream through the swamp, parting from before his face the interlacing twigs of birch and alder, for on a morning sharp like this, a cut from one of these snapping twigs leaves a sting which is long felt. For the most part the brook is open, but here and there little gravelly points run out from the banks over which the flowing water has frozen, and through the thin, gray ice, white air bubbles are seen passing down over the shallow in a continual procession, and the faint ringing of the ice shell is heard as these bubbles escape from beneath its edge. Progress through the swamp is noiseless, for the dead sticks are avoided and the snow muffles the footfall; yet now and then over some moist place the ice breaks with a loud hollow crash and the foot sinks through into the oozy mud beneath.

Here is the place where two partridges have crossed the swamp; their footprints are obscured by the lightness of the snow; but the long sweep of the dragging middle toe is shown. A little to one side of them is the track of the cunning red fox. Well he knows the hopelessness of trying to steal upon the ruffed grouse, yet he remembers that once in a hundred times this may be done, and he cannot resist the temptation to follow the grouse's trail. It would profit him more to turn aside and hunt for the field mice, whose tracks are numerous at the edges of the woods, unmistakable by their double row of footprints and the mark of the dragging tail between.

Until the ponds are reached no life is seen save now and then a belated trout which darts wildly up or down the stream, and a solitary bluejay standing in a lone cedar tree and looking almost white against his somber background. The ponds are frozen over, and what looked like open water is black ice three inches thick, but so clear that one may look through it as through a water glass, and detect each leaf and stone and bit of vegetation on the bottom of the ponds.

Crossing other fields, climbing other fences, he comes to another part of this same brook. Here are more trails of rabbits and partridges and foxes, and here while in the thickest of the alders and slowly making his way along the brook, a splashing in an unseen reach beyond causes him to stand at a ready, and presently, two hundred yards away, a great and glorious mallard duck swings by, his head shining green and gold in the morning sunshine that by this time has dissipated the gray mist. It is fine to see the great bird fly off on robust wing, and the disappointment of not getting a shot at him is not hard to bear. He disappears at last in the distance.

Though it is still cold enough, the continued exercise has warmed every part of the body, and the blood courses briskly to the tips of fingers and toes. The sky is clear, the sun bright, the air windless; absolute silence is all about and it is very pleasant to be abroad. At length a road is reached, the brook crossed, and followed up on

the other side. Other swamps are entered, some cold, dark and gloomy, others bright with sunlight, which plays on the brilliant snow beneath the naked branches of the tall forest trees. Here there are other signs of the life that was astir last night, or in the early morning, and at one place two black ducks startled by a neighbor's dog rise from the brook far ahead and swing about and go off unshot at.

And when a little later the house is reached, one feels that the hours spent in the swamp have not been wasted.

CORNELL'S ADIRONDACK FORESTRY.

THE Association of Residents on Upper Saranac Lake in the Adirondacks has, through counsel, petitioned the Attorney-General of New York to institute proceedings to prevent the further destruction of the timber on the tract of forest land in the Saranac region which was provided by the Legislature in 1898 for the use of the Cornell College of Forestry. This land was bought by the State specifically for the purpose of experimental scientific forestry by Cornell. It consists of 30,000 acres in Franklin county. In July of 1900 Cornell entered into a contract with a cooperage company for the sale of the timber on the land, the contract to extend for a period of not less than fifteen years, and the company has erected near Tupper Lake a stave and heading factory to utilize the logs, and a wood alcohol plant for the cordwood. A railroad has been constructed to transport the lumber, necessitating the clearing of a tract of over four miles long and 25 yards wide. Logging operations on the tract were begun in July of last year, and in his last report to the Legislature Director Fernow stated that 500 acres of land had been denuded and 75 acres had been planted.

In their petition the Adirondack protestants review what they claim to be the destruction of the trees and the destruction of the forests as a water reservoir; and they demand that the further work of the College of Forestry be prevented. They make the point that the acquirement of the land by the State for Cornell was unconstitutional, because the State Constitution provides that neither State credit nor funds shall be used in aid of corporations or private undertakings. It is urged further that inasmuch as the appropriation by the Legislature for the purchase of the land was made to continue "the acquisition of lands in the Adirondacks," the tract thus acquired must come within the provision of the Constitution which protects the wild lands owned by the State and forbids the cutting of any timber on them.

In reply to this petition of the Adirondack residents, the authorities of Cornell say that they are actually carrying out on the territory under consideration a scheme of scientific forestry, the benefits of which, while not to be reaped by the present generation, nor possibly by that which is to follow, will in time prove of the highest usefulness and practical good to the State by demonstrating the system of forestry best adapted to the Adirondack region. They contend that while it is true that they are selling the lumber, they are obliged to do this because the State has intrusted to them the task of this experiment in scientific forestry without having provided sufficient means for its operation, and that the cutting of timber has been done wisely and with a single view to the ultimate advantage of the region as a forest preserve. And they add that the constitutional points involved have already been determined in the courts in a way which sustains the Legislature in having devoted the lands to this purpose.

There are men whose only dissatisfaction with their lot is that they were born too late in history to have an opportunity to hunt buffalo. They got here after the buffalo had gone. There is a new ten-dollar bill which has on its face the buffalo pictured as he pranced on the plains of the past. To those who repine because they may not hunt the buffalo on the prairie might be recommended for alleviation of their discontent a pursuit of this buffalo on the bill, irrespective of seasons or limitations as to number taken in one season.

Next week we shall print what its contributor characterizes as "the most remarkable story that has ever come out of the Maine hunting woods"—an estimate in which the reader will concur.

For Christmas Reading.

Selling the Bear's Hide.

THERE is said to be a somewhat improvident aspect attributable to the vending of an ursine pelt while its putative owner still slouches through the underbrush, and ambles contentedly along the runways of his native plantations wearing it on his back. With this wise, ancient and but little known saying I have been led to agree by reason of certain occurrences some years since.

To put it succinctly, I sold for five dollars a live bear's hide really worth—as near as we could judge at forty yards—about twelve dollars and a half (less, of course, whatever one might estimate to be the value of the expense and trouble of taking it off the body and legs it was attached to).

I had gone into the woods with a couple of friends and some Indians. Gradually, as is usual in such cases, we had separated ourselves from one another until we had attained to the first half of that desideratum known as plain living and high thinking.

We had reached a region which seemed to promise fairly, and had gone into more or less permanent camp on the border of a sizeable lake. Two or three days failed to result in anything more than ordinary sport, and I determined to take one of the Indians and return a short distance on our trail to a locality which had attracted my attention on our way in. It was not more than a three or four hours' journey, and by starting at or about midnight opportunity would be afforded for the thorough exploitation of a theory which I entertained concerning it.

The natural conditions of the place had seemed promising. At about the middle of one of the four or five arms, each several miles long, of a star-shaped lake the shores approached each other, and the waterway was the more contracted by the presence of two little islands, rocky but well wooded which lay in a line, the one perhaps twenty yards beyond the other. The space between the islands and the shore on the northerly side had gradually filled in until a continuous meadow and marsh connected them with the forest which clothed the mountain sides and descended abruptly at that point. The waters of the lake still persisted, however, between the islands, indenting the front of the marsh with a little bay, and of course extended between them and the southerly shore, though a number of rocks stood high above the water, and the depth in one or two places was but a few inches.

It had seemed to me, from our being compelled to get out and lighten the heavy laden canoes for a few feet over the shallow, when coming past this place, that any reasonable and reasoning animal would prefer to cross here, almost dryshod, rather than to go round four or five miles or else to swim the lake, as he would otherwise be compelled to, and I felt fairly confident of finding one or more well-defined runways leading across the little islands.

We started shortly after midnight, making our way through the woods back to this lake by lantern light, and taking with us very little, a canoe, a twist of tea, a minute kettle, a couple of hard biscuits, a cake of chocolate, an ax, a rifle and a few cartridges. Reaching the head of one arm of the lake we took to the canoe, followed the arm down to the main body of water, crossed this with the moist, fresh, mysterious night wind in our faces, and the liquid voices of the night waves speaking to us from the bow of the canoe, and entered the long, narrow arm in which the islands lay.

Landing just before the first gray dawn at the extreme rear of the nearer islet, we hid the canoe, pushed our way through the brush and passed along the backbone of the island to gain its other end, from which the marsh, the little bay and the ford between the islands and the further shore could be most fully kept under survey.

It was as I had supposed. Before reaching the other end of the island, a scant fifty yards, we crossed one and stopped at the second of two narrow but palpable runways leading up from the marsh over the island and down to the ford. The second of these runways was just within the edge of the patch of woods which covered the island's top, and sitting down by it we had before us, through the thin brush, on our left the marsh, in front the little bay and the other island, on our right the two fords, one between the island in front of us and the shore of the lake, the other on our extreme right leading from the island on which we were.

As day came and I sat watching the twigs and leaves of the bushes, the needles of the spruce trees, and the other details of forest civilization grow distinct, I thought of the robber baron whose castle was so often perched on some convenient pinnacle above a ford, and how if one in this world sat oneself down by a ford and waited, either the merchant from Frankfort with his many bales of cured pelts, or the natural-history-museum-specimen with his solitary uncured pelt would come by sooner or later and pay toll.

The rule is substantially invariable. The lines of least resistance on the face of nature are the valleys and the fords, and even Ephraim and his cousins when they journey from one lair to another are apt to travel by the same road which the pesty burgher, the sleek cit and the wandering tinker have always found most suited to their respective deficiencies. Therefore were we justified in waiting with calm confidence that which must betide.

Nevertheless all signs fail in a dry time—which is more proverbial philosophy presented to the gentle reader free of charge.

The woods might, indeed, be full of fur running round looking for owners, but no personal property of that ambulatory nature seemed desirous on that day of going to Bagdad to see the king, or wherever else it was that the forest highways led to, and some hours of contempla-

tion passed none too quickly before the first victim walked into the trap.

Indians are supposed to be the most impassive of mortals. If the statement be true, then the event which occurred must have been out of the ordinary, for after absolute silence had prevailed for a long time, my companion gave a sudden start, uttered an exclamation of surprise, if not alarm, and rose to his feet. I turned toward him in considerable disgust which changed to astonishment when he somewhat deprecatingly said in his halting French:

"A man came from the forest and made gestures toward me with a cane."

"What man?" I said. "He could not see you."

"He came out and made gestures with a cane and went back in the woods," he said.

"Whereabouts?" I inquired.

"There," he said, pointing to the southern shore of the lake beyond our island.

"What did he look like?" was not unnaturally my next inquiry.

"An old man with a long beard," said the Indian.

Of course by this time it was apparent to me what had happened. The Wandering Jew was loose, and having exhausted the byways of civilization, was sauntering through the trackless forest. Or else Chamisse was right and "that very learned work of Tieckins" was in error and Peter Schlemihl's seven-leagued boots were not yet worn out. An old man with a long beard who came out of the woods and made gestures with a cane was a set of circumstances which admitted of no other rational deduction.

"There he is again," said the Indian, suddenly.

This time I saw him, too; he was nearer than before, an old man with a long gray beard and a staff, working his way with great difficulty along the shore of the lake. Now, I have no objection to old men or young men wandering through the forest, but the permanent inhabitants of the woods don't like them, and it was apparent to me that if any one with whom I could traffic and do business was to cross the ford that day, the quicker the Wandering Jew was sent on about his own affairs the better; so I said to my companion:

"Well, go back and get the canoe and go over for him and bring him here."

As we were now both standing up, our unexpected guest caught sight of us and renewed his obnoxious "gestures with his cane;" which greeting so alarmed my superstitious associate that he respectfully but firmly declined to play Charon to our unknown visitant. However, I hallooed across to the wanderer, and established the fact that he was looking for us and had letters, had left his camp companions only a few miles below, and thinking we were nearer than we actually were, had pushed on by himself. Not unnaturally he had gotten himself lost and was glad to see us. I then persuaded my attendant to go to him in the canoe and bring him over.

His statements proved to be accurate; he had a bundle of despatches and letters. Selecting such as were for me, I turned him over to the Indian with instructions to take him on to our camp, as he needed food and rest, to leave the canoe at the lake and immediately on arriving either to return himself or send some one back to bring the canoe to me, as even at that it would be after night fall before I reached camp.

They having departed, I made up my mind that it would be a long time now before anything came to the ford. Too much shouting and tramping around in the woods affects unfavorably the nerves of their denizens. Moreover, it was now near the middle of the morning, and I doubted if the highway would be much traveled until late afternoon. I therefore boiled the kettle, made a birch-bark dish full of tea, smoked a pipeful of tobacco and lay down to take a nap. A steady drizzle had set in, which, however, as it had been more than anticipated, did not trouble me, for I was in greased beef hide moccasins, and wore rubber overalls and a short rubber coat with a close-fitting hood.

After an hour or so I was awakened by a cheeping and twittering and found a queer little fat bird with a much perked up tail, presumably some variety of nuthatch, hopping about from twig to twig in my immediate vicinity, turning its head from side to side and inspecting me with critical care. I sat up quietly, whereupon he promptly flew away some ten or twelve feet, and then, emboldened to believe by my absolute stillness that I was not alive after all, he returned and resumed his research after more accurate knowledge concerning this new forest growth.

All the most exaggerated expressions for perfect quiet would fail to convey to your mind the unwinking rigidity with which I sat for the space of fifteen or twenty minutes while my small friend hopped about me, nearer and nearer, chirping every now and then, and attempting to elucidate to his own satisfaction the puzzle which was presented to his mind. Finally, incited by a curiosity which, had he been human, would have argued him of the female persuasion, he hopped on to my knee. Finding the experiment unattended with danger, the next step was to my shoulder, from which he attempted to peer round the rubber hood into my face. This being only partly satisfactory, a little flutter came next, and in an outburst of temerity he alighted for the thousandth part of a second on my nose. He was undoubtedly impressed with the conviction that he was dealing with some not only unknown and terrifying but dangerous object through my involuntarily winking and wrinkling my nose when he fluttered into my face, for that was the last I saw of my small friend. He was gone so absolutely and instantly that the disappearing lady at the magician's show would have expired with envy had she witnessed it.

This was bad business, for it left me only a squirrel for company, and he was very angry with me and regarded me as an intruder, as I doubtless was, and did not hesitate to sit upon a fallen tree trunk at a safe distance and express his views in what I judged to be no measured terms. Finding me deaf to all reason and argument, he also departed and the day wore quietly on till mid-afternoon.

Nature, in her bountiful care that all her creatures shall have a fair chance, had suspended the drizzle, in the midst of which I had fallen asleep, presumably for the express purpose of allowing the nuthatch and the squirrel to act their little parts in the day's play. These light interludes being complete, the quiet leaden clouds came down a little nearer the surrounding mountain tops and the business of replenishing the reservoirs of moss, that the streams might not run dry and the trout go without their perpetual baths or the beavers find the building of dams a useless art, was resumed. The great deluging thunder storms run off the face of the land to roar down the brooks and swell the streams to torrents. But the soft, quiet, drizzling rain seems to have the quality of soaking in and staying. A sort of special deposit to be drawn on from time to time as necessity arises, lest the caribou should miss the pleasant sight of the waterfall amid the rocks, or the otter go without the consolatory and gleeful splash at the end of his slide.

Perhaps another hour had passed when I heard over my left shoulder my returning Indian coming through the brush. I was amazed and indignant that he should make so much noise. In sulky silence I waited. On a sudden it flashed across my mind that it was impossible that anyone should have reached camp and returned by that time. Moreover, although some seconds had elapsed since I first heard him, the moving in the brush continued without apparently advancing. I turned my head cautiously round and looked to the north and a little behind me. The slight breeze had been easterly all day, which indeed had dictated the position I occupied; one from which, as much of the marsh and fords as was compatible with holding them under scrutiny would be up wind from me. But there, coming across the marsh, and though not actually down wind, still fairly quartering up wind toward me, nibbling at the grass, swishing their short tails from time to time in quiet contentment, and generally behaving as though they were the sole occupants of the universe, and dreaded neither hindrance nor opposition, was a young caribou bull with his cow and yearling calf. They were perhaps fifty yards away when I first saw them, and it was doubtless from the fact that I was cold, from having lain so still, and was clothed in wet rubber from head to foot, that they had not scented me. I presume, as indeed the facts show, that the conditions were such that there was very little scent and that my envelopment of rubber and water acted as a practical non-conductor. There was not a head among them which I wanted. Moreover, it approached uncomfortably near murder to open fire under the circumstances, while to break up an interesting and peaceful family, contented with its lot and pursuing its own avocations without interfering with the community at large, seemed hardly desirable. I remained, therefore, immovable, curious to see how near they would come, for they were palpably making for the narrow runway on one edge of which I sat. Loitering unconcerned they approached and paused at the steep little ascent for a last nibble at the marsh grass and the bushes. They were somewhat below me, and, as near as I could judge, you could have touched the nearest one with an ordinary trout rod. Gathering myself together, I sprang to my feet, waving my arms wildly in the air and uttering a succession of piercing and blood-curdling yells. Perhaps the effect on the little caribou family can be best judged from the depth of their last front tracks, which I afterward inspected. They drove their front feet deep into the marsh, whirled in the air and departed in three several directions. Across the marsh they fled, three grayish brown streaks of flying fear. I grabbed up the rifle and fired a shot into the marsh behind them. What they thought had happened to the island I do not know, but can well surmise. Doubtless in after years the young bull, become the patriarch of some herd on the Ungava barrens, leading his followers in a mad race from the mosquitoes up to some little eminence to stamp and shake themselves and let the wind blow their pestilential annoyances far down to leeward, would recount to his admiring catellites: "Speaking of haste, you know," how, "on one occasion a new volcano opened suddenly before his astonished eyes on a small island down in the lake district," and how he "had ever thereafter given one particular star-shaped lake as wide a berth as fate and his recollection of its exact whereabouts permitted."

In the meanwhile, however, there is one thing to be said to the credit of the young bull. Crossing the marsh his cow had veered to the left to skirt the mountain side rather than to face its sharp and rugged slope, and naturally her calf trailed after her. The bull, with his greater strength, mad with terror, had faced the mountain, and two gigantic bounds had carried him more yards up its slope than one would readily believe. In an instant it was evident, however, that he saw that his family had fled to the left. Although to change his course would keep him nearer the danger, his better instincts prevailed. He swerved sharp to the left, and slanting down the mountain side disappeared behind his vanished wife and son.

It was not until I had ceased laughing that it suddenly occurred to me that while I had been having fun with the caribou, I had spoiled the ford for a couple of hours. There was nothing in the woods that was within ear-shot and making for the ford but had suddenly become convinced that some other highway had superior attractions; and my brief amusement would doubtless cost me a further long period of waiting. Under the circumstances a pipeful of tobacco could do no harm, and for the next half hour or so I sat and smoked and concluded that the incidents of the day were probably closed.

Something like two hours afterward I tendered a silent apology to the North American savage at having imagined the approaching caribou to have been my returning Indian. The reason for my so doing was that a slight touch on my arm alone informed me that the Wandering Jew was safe in camp and the canoe was back at the end of the island. We sat in silence some further time, but the trap caught nothing more. The fords remained untraversed.

Just as day closed the hush of nature came on—the absolute quiet, the death of the wind, the ceasing of the

In Lusty Manhood.

Editor *Forest and Stream*:

The return of winter at this time, coupled with your courteous request for a contribution to your Christmas issue, recalls some seasonable reminiscences of those old-fashioned snowstorms which used to visit New England in the early half of the nineteenth century, and bury walls and fences and sometimes flocks of sheep clear out of sight, requiring every available ox team in the township to turn out next day to break roads. Frequently the falling snowflakes would turn to sleet, zero weather followed, and in the morning the risen sun would flash and scintillate over the pure white crust with a brightness that was blinding, unless one wore goggles, though some old mossbacks (like Russell Terrill, who is still living at the age of eighty-seven) used to rub tallow and charcoal over their noses and under their eyes as a preventive.

It was great fun to the boys with sleds and snowshoes to ignore farm lines and pass over frozen waterways and surface inequalities, regardless. It made them independent in a way, and self-reliant. Sometimes we would start from the crest of West Mountain, 2,000 feet high, and coast over the pasture intervals down its uneven sides with electric speed, and risks never contemplated at the start. The sleds would often slue on the unequal grades, and anon turn end for end when the steersman's foot lost all control, or failed to check untoward headway; and then the only chance for life or limb would be to roll off on the crust and let the craft run wild until it brought up with a splitting whack against a rock or some softer tree in the sugar bush. Even so, the tour, in corpore, had to continue until a dead level was reached, and the landing place was not always certain.

But such haphazard experiences were not a circumstance to one adventure we had on the Barber Hill post road, three-fourths of a mile long, straightaway, excepting an elbow at the watering trough, where the overflow froze to glare ice on zero days. There was very little travel in the winter season at that period (and less now, I ween), and my elder cousin and I used to do the hill regularly, the impetus of the down-grade sending the sled over a quarter of a mile level at the foot of it before it would come to a stop. One sunny day we were whizzing down this hill, bellygut, myself on top, when, just as we struck the glare ice at the turn, we spied a double team and a high-running fancy cutter coming leisurely up the ascent. We had just time to notice that there was a two-foot space under the body of the sleigh, when we shot like a streak between the horses as they instinctively widened on the spreader, both of us flat as two pancakes—and so on to the unobstructed roadway beyond. It was a very close call, but we never thought seriously enough of the incident to take chances on being forbidden the hill by telling of it.

Odds zooks! What inscrutable providences lie along the checkered pathway of all boyhood!

Now, to take the chill off this wintry experience, I recur to the *res gestæ* of more congenial summer time, and of the opening spring. What an elysium to a boy in his teens was that mountain home in western Massachusetts! Those were dulcet days indeed; the halo of whose phantasmagoria has not been dimmed by the lapse of half a century. In those secluded Hampshire Hills Charles Dudley Warner began to formulate bucolics; Wm. Cullen Bryant wrote his "Rivulet," the "Waterfowl," and his "Thanatopsis"; and the intrepid explorer, Marcus Whitman, learned that practical woodcraft which enabled him in a strenuous political exigency to make his memorable winter journey from Oregon to the District of Columbia over an unmapped wilderness in 1842.

Almost every year for twenty years I have revisited that forest kindergarten, whose physical aspects are hardly changed even now by lapse of time; the bucolic valleys, the hillside pastures where we salted sheep, the eminences from whose summits we looked into the purple of five States, the homely farmhouses all of one pattern built a century ago, the tall clocks still ticking, the high-back "settles" which the surviving housewife of four-score years drags into the shade of an added modern verandah, the old well sweep which dips its reach-pole into the unseen depths, the barns without locks, the broad chimney places glowing with hospitable warmth, the scraggy old orchards, and the inevitable sugar house in the maple woods. Here and there I find old potato fields reforested with thrifty timber; all along the famous Mill Stream are the ruins of cloth factories, saw mills and tanneries; the public thoroughfares are lined with unbragous elms and maples which were set out when I was a boy. Some of these I helped to set myself. I had early experiences in planting and harvesting, in fighting forest fires, in keeping cows out of the corn patch by the wood lot, in trapping woodchucks, in expelling skunks from the hen house and rats from the corn crib, and water snakes from the trout pond, in catching and taming crows and squirrels, in caring for live stock, in hunting fiddlehead brakes as an early spring substitute for asparagus, in squeezing fir balsam out of the bark capsules on the trees, in gathering plantain for sores and sprains, and catnip for the felines, and a hundred other old plantation and household odds and ends. That was long before the era of canned food, or even of desiccated soups, what time the French cook Soyer made himself famous and earned the gratitude of nations by making army rations eatable during the Crimean war.

All this kindergarten training, I say, had the effect to qualify me for roughing it later on in my long jaunts across the plains and over the mountains and waterways of Canada, and the Continental Divide, and up to the sub-arctic regions of Labrador (1860) and Alaska, which occurred chiefly in the twenty-five years which bridged the dates of 1854 and 1879. As I had been early taught to read the sybillene leaves off-hand, so I learned to provide for exigencies and vicissitudes and bodily comforts. And during all the years until I was fifty-four years old, I never carried a tent. Indeed, there were but few trips when I could have added its bulk and weight. Excepting on canoe voyages I have always traveled light; a canoe turned over and braced up by the paddles as a shelter in fair weather, and a hemlock bark

lean-to in wet or a pair of rubber blankets lashed together in letter A pattern as a tent d'arbrri for the field, or the unstepped mast and sail of a catboat placed against a ledge when cruising along shore. These and other makeshifts made a good camp, and with no dishes to wash except coffee pot and frying pan, saved lots of labor and more than compensated for needless luxuries during a tramp. Indeed, the true inwardness and success of a camp is the camp-fire, whether built with back-log or made round, Indian fashion; and when we traveled in trios, each had to cut wood, make camp or cook. There were no drones or loiterers permitted in camp, for it was a groundhog case all the time.

I have always carried a miniature kit of small tools and odds and ends, as a matter of habit and steady practice, and have one now, so that it has happened to be my lot on many an occasion to supply a strap, a bit of wire or a nail or a screw to a disabled army ambulance or cowboy contingent which the careless driver or mule skinner had neglected to include in his outfit. Once in the rapids above the Percefield Falls in the Adirondacks, I kept from going over the ledge or at least from an indefinite wait for help, by being able to splice a broken oar with wire and a gimlet while hung up on a rock in midchannel. To many a one who ought to have known these things, I have taught the simple device of lifting a stalled pack mule or wagon out of the mire; of swinging across an unfordable stream by climbing a sapling of proper length to bridge it; of starting a camp-fire when the whole woods were water-soaked; of finding forgotten articles in dense forest, where every spruce tree looked alike; by deciding by the signs at hand, which way the stream turned in the woods ahead, so as to save distance by a cut-off (a very risky proceeding if a mistake is made); of following a back trail over prairie in dry weather; of finding gum to pitch the canoe; of determining points of compass on a flat prairie in cloudy weather by direction of the wind and animal trails and the dirt thrown out of burrows; and of a dozen other labor-saving and comfort-procuring expedients acquired in the sylvan school of applied methods. One should never get lost on a rolling prairie or in a mountainous country if he understands hydrography and physical geography, because the fluvial systems and the striations, undulations and dip of rock are as unvarying as the Milky Way and the North Star which are infallible guides in fair weather. One ought to learn the chief constellations, too, as helps to direction. The worst place to get lost in is a tamarack or laurel swamp.

Of course, some few men have an intuitive gift of noting and interpreting natural signs, which is quickened by the habit of close and constant observation of what is ahead and around, as well as of frequent turning to see how the land looks behind. Landmarks should be always selected and located. Twigs may be broken and blazes scored for future reference. One should be able to return unerringly to a given spot or cache. A good backwoods man instinctively sees and takes account of all minutæ around him and along the route, just as a gunner takes snap shots at his game. Every movement and sound and cry and call of animal, bird or insect, frog or water fowl means a good deal to one who knows the habitat of these creatures, their "tricks and their manners," and what they feed on. The drift and contour of the clouds, the direction and varying tones of the wind, the tremors among the leaves, the souging of the pines, the disturbance among the fallen leaves, a scratched log, the tracks by the spring, the abraded bark, the paths through the woods, the tufts of hair or fur which cling to the thorn bushes, the body feathers dropped here and there in the woods or floating on the water, the lime spatters on the rocks or horizontal limb, the nipped twigs and cropped stems of lily-pads, the worn slides and holes and mounds on the river bank, even silence itself, all have their significance; so that he who runs may read. By these one makes his way in unfamiliar regions or gets subsistence. But no one will ever cultivate or practice these things, excepting that one, as I have remarked, who has a natural gift, and takes to signs like babes to mothers' milk. The forest-born red man himself may err, or fail in part, even though he should protest in his extremity: "Injun not lost. Wigwam lost!"

No writers but Thoreau, as far as I have read, unless Lieut. Ruxton and Bayard Taylor be named, have ever written familiarly of al fresco life as I learned it in my youth and early manhood—as though its very essence were ingrained into their composition. Those who know woodcraft best are seldom able to write intelligently of the subject, while educated sportsmen are apt to leave such common places to the guides. Some learn the forest runes by rote, and write correctly enough of what they see and do and hear; yet left to depend on themselves, they are practically helpless. Skeletons of unsophisticated sportsmen who have been lost in the Maine or Adirondack woods are found every year.

Harper's Magazine for Oct., 1857, contained a sketch of mine on prairie tactics and emergencies, entitled, "The Siege of Fort Atkinson," and the following year I attempted to illustrate by original drawings the difference between roughing it on the plains and tenting out with all the luxuries; and to just show what a crude conception the artist (of Harper's Weekly) had of situations, instead of representing in the one case a man rolled up in his blanket beside a flickering camp-fire, with his horse picketed near him and a few harmless coyotes nosing about for bones to gnaw, he depicted a dead horse stretched out by the fire and a lot of big timber wolves worrying the picketed horse! In the summer of 1859 I cast my maiden salmon fly under the falls of the Aroostook, and wrote my "Life Among the Loggers"—the year after Henry Thoreau's "Chesencook" sketch appeared in the Atlantic Monthly, and during seven of the subsequent ten years I was one of the pioneer hooks on Canadian salmon rivers from the Bay Chaleur to the Iviktuk Inlet on the Labrador coast. The frontispiece of my "Fishing Tourist" in 1873 represents a catamaran of five logs running the Restigouche, for so men navigated the river on occasions before the dilettanti sportsman came and a club membership was a bonanza at \$1,000 per head.

I take pleasure in cursorily reviewing this halcyon period of a lusty manhood, when a plank was always soft,

birds, the stillness that marches before the silent foot-falls of the night. I sat there idly glancing at the rifle, and thought of the careful preparation I had made for its efficient use from what point soever prey might come. The ford on the right leading to the further island was perhaps 200 yards away, while the marsh on the left, as also the ford beside the island on which I was, were all substantially within point blank range of the .45-90 I had with me. With a view to being promptly ready for either event I had therefore, on arriving, screwed up the peep-sight on the stock of the rifle to just short of the 200-yard mark, then turned it down and turned up the point-blank straight-edge leaf-sight half-way down the barrel, thus being "prepared for either fortune." If an animal came across the further ford it was but turning up the peep-sight. If one came across the marsh it must pass within fifty or sixty yards, while, if one crossed the nearer ford, it would be but a few yards from my right elbow.

Dusk had almost come. I glanced at the further ford, and then turned my eye to the patient Indian by my side, and simultaneously he glanced at me. Out of the forest, on the main shore, at the further ford there came slouching, with a loose, high-shouldered shamble, as fine a bear skin as one is at all apt to meet in ordinary society. My right hand stole to the rifle, but in an instant relinquished it. The scattered rocks lying in the ford kept hiding the bear so that he appeared and partly disappeared among them as he came across. It was palpable that he must cross the island, and evident, also, that when he crossed he would come out on the marsh, fair in the open and afford an easy shot. The situation was too plain to need discussion, and we sat silently watching him slosh through the twenty or thirty yards of shallow water among the rocks and disappear into the bushes that fringed the further island. Presently the rustling in the bushes ceased and a cracking twig on the top of the island told us that he had mounted to its crest and that we would be well hidden from him by the trees temporarily surrounding him, and might leave our shelter to approach nearer. Silently we rose, passed quickly down the narrow runway to the outer edge of the island on which we stood, and crouching below the cover of the island's bulk, trotted silently up to its very point where, with the little 20-yard bay in front of us and the marsh lying beyond it, we came to a halt. At the same time a rustling and scraping in the bushes on the further side of the island in front showed that the bear was coming down and about to come out on the marsh. In a moment he emerged, following a diagonal line across the marsh, which brought him steadily nearer, evidently with the intention of following round the side of the mountain along the line which the caribou had taken. Another example of the progress of all nature along the lines of least resistance, skirting the mountain being always preferable to facing its slope. We had paused behind a rock which lay on the shore and was perhaps a scant eighteen inches high, I put my left foot on it, rested my left elbow on my knee, laid the rifle in the palm of my hand, and mechanically turning up the peep-sight I turned to the simple savage and said:

"How much is his hide worth?"

"Vaut bien dix piastres," said the savage.

"I'll sell it to you for five," said I.

And sitting behind his unconscious left shoulder forty yards away, I slung 300 grains of lead, I presume, about a foot over his back. In the absolute stillness of the forest the report echoed and roared and bellowed, and seemed to fill the valley with a great deluge of sound. Unconscious of having used the peep-sight while it was still set for 200 yards I was for the thousandth part of a second astonished that he did not fall; but my astonishment was nothing to that of the bear's. He fairly jumped off all four feet a foot into the air, wheeling round to the left toward us as he did so.

There has been much discussion as to the portrayal of emotion by animals so far as facial expression is concerned. It may be the droop of the head rather than any change of the face that portrays misery in the pet monkey; and we may all be wrong in construing the bared teeth which accompany the bent body and the wagging tail of the dog long absent from its master into the smile of recognition; but there can be, so far as my individual conviction goes, no doubt that blank astonishment was portrayed on that bear's face. Out of the dead silence of the open woods in which he found no efficient foe, where undisturbed he wandered, had risen at his side this terrifying clap of thunder, and there, as he faced us, a few yards away stood two unknown creatures, and for the first time he heard that which exercises a terrifying influence on all unaccustomed animals, articulate speech (the latter, I regret to say, being in the tongue popularly known as "the profane"). The situation lasted but the briefest portion of time. I saw, as it seemed to me, if I have ever recognized the presence of any emotion, astonishment give way to rage accompanied by involuntary motion portending an attack, and then fear and change of intent followed each other almost instantly on the bear's face. As instantly he wheeled, as instantly but still all unconscious of the extra elevation of the peep-sight, I put the rifle again to my shoulder. My friend had now given up all intention of seeking the easy road around the mountain. Straight for the nearest trees he fled. Unfortunately it is but too true that a good sized bear can get over the ground, if in a hurry, at a more than respectable rate of speed. Twice again before he reached the forest and the mountain side the harmless but deafening roar of the Winchester echoed in his ears. It was all over; the bear was gone. We splashed across the little bay and hunted the marsh for any traces of blood. We peered through the darkening forest trees to see if by any chance he had sought refuge in any cranny of the rocks in his terror. Reluctantly we concluded that the probabilities were that he would not stop traveling for a week.

"C'est de valeur," said the Indian.

Silently I extracted from my pocket a \$5 bill; the difference between the patient savage's estimate of the value of the hide and the price at which I had sold it him. I handed him this balm for his wounded feelings, meekly screwed down the now detected peep-sight and made my way to the canoe! I had sold the bear's hide and the bear still ran in the woods.

CHAS. STEWART DAVISON.

hardtack appetizing, and dampness brought no twinge to the elastic muscles; when I could lie out o' nights in the solitude with my back to the sod and my face to the stars and apprehend no danger or discomfort. And although these experiences are never to be repeated, I have few regrets. It is true that clouds hover over the horizon which defines the boundary of earthly joys, but the stars are bright overhead, even now, the Milky Way spans the heavens like a pathway to glory, and a bow rests upon the clouds. So mote it be!

CHARLES HALLOCK.

Sea Rack.

In Two Parts.—Part One.

It is sweltering, dripping weather in New York. Arizona leans across the breakfast table with the morning paper in her hand and indicates an advertisement in one of its columns.

"Cruise down the Gulf," she reads. "The fine yacht-like twin-screw steamship Petrel will sail," etc., etc. "Steam heat in every stateroom."

"Well," I say, languidly, "excuse me from 'steam heat' under existing conditions. It is scarcely to be viewed as an inducement, is it?"

"Why, it's the principal inducement. Don't you see that steam heat implies cold weather?"

"Cold weather!" I exclaim, mopping my brow.

"Certainly. What's a twin-screw? But it doesn't matter. 'Yacht-like!'—I know what that means. Cabin upholstered in plush, with silk curtains and a duck of a mirror at one end where you can see every bit of yourself. And the stateroom! Just think of it! A darling love of a doll's house, not very big of course, but, oh, so sweet and snug!"

"I'd be seasick, I fancy," I remark casually.

"You needn't be horrid," Arizona retorts with dignity.

"Shall I telegraph and secure passage?" I hasten to say.

"Yes, do. And when you're gone to business I'll get out a lot of our woolen things and your winter overcoat."

"Not for me," I say loftily. "I know too much about lying advertisements to be taken in to that extent. I shall go just as I am."

By the end of the week we are in Montreal, and driving in a cab to the wharf where the Petrel lies. Presently the cab swings off the roadway and goes scrambling down a descending shelf in the revetment wall and then along through an acre or two of barrels of molasses, barrels of oil, barrels of fish, to a wharf. When the driver can get no further, he pulls up his horse and gets down.

"Why are you stopping?" Arizona demands. "It is the Petrel we want."

"That's her, ma'am," he answers, pointing to a ship with his whip.

"That?" Arizona exclaims. "That horrid, dirty old coal barge! You must be mistaken."

"She ain't a coal barge, ma'am. She's a trader that goes down the coast to the fishing villages."

"Yacht-like," I suggest mildly. "Plush and silk cabin with a duck of a mirror at one end. Shall I get out and inspect?"

"Please do," Arizona says, in an agitated whisper. "And please don't be any more horrid than you can help. I'll wait here."

I make my way through the huge disorder of the wharf, and mount to the ship's deck by an improvised gangplank. A man with a black smut on his nose stands by the entrance to the engine room.

"I'd like to speak with the captain," I say, addressing him.

"He's ashore, sir," he answers civilly. "But one of the owners is aboard. I'll find him for you in a moment."

He comes back in a few minutes, bringing a pleasant-faced gentleman with him.

"My wife and I are somewhat in doubt as to—" I begin.

"About the Petrel?" he says, breaking through my high air with a smile there is no resisting. "You'll never regret taking the trip. I took my family down last time, and they were delighted. She's a bit dirty now, and everything's at sixes and sevens; but when she gets away, she'll be as fit as anything."

"Anything like a yacht?" I inquire, with gentle sarcasm.

"More roomy, more comfortable, safer!" he says. And then he breaks into a laugh that wins me over completely. "Come along and look her over," he continues. "See, here's the dining saloon."

We look into a stuffy, dark little box of a place, with two fixed tables running lengthwise and fixed benches beside them.

"And this is the smoking room," he says, taking me forward and showing me a tiny closet with wooden benches fixed against the walls. "It's a nice place," he continues, cheerfully, "but the gentlemen usually prefer to smoke on the deck."

"I can understand that."

He looks at me a little doubtfully, and then laughs again, and in spite of myself, I join in the laugh.

"It's a delightful trip," he says, "and you're certain to enjoy it. Now, we'll go up on the hurricane deck and see the ladies' saloon."

Just back of the wheelhouse, on the hurricane deck, is a structure that looks like a large packing box with windows let into the sides. One end of the packing box is accounted for by a door; the other end and the two sides have a narrow wooden bench nailed against them. A little, spindly table holding a decayed copy of Blackwood's Magazine, stands in the middle.

"Do the ladies prefer the deck?" I ask.

"Not when it's raining. This is really uncommonly snug when the rain is coming down. They can shut the door, you know—and there they are!"

"Yes," I answer, "to be sure!"

"It's a delightful trip," he says again. "You'll remember it all your life."

"If you don't mind, I'll ask you to go out to the cab and tell my wife about it. You can do it much better than I. I'm lacking a little in imagination. You don't mind, do you? I want to have a heart-to-heart talk with the steward, if you have anything of the kind on board."

"Oh, dear, yes! The ship has an excellent steward and a fine cook. The meals are very superior."

He goes to the head of the companionway and shouts down, "Beatty! Beatty!" and in answer to this a neatly dressed, businesslike and cheerful-looking man appears who is presented to me as the steward.

Fifteen minutes later, when I make my way out to the cab, I find the part-owner talking volubly to Arizona.

"I think we'll go on board," Arizona announces. "The ship isn't quite what I fancied, but it'll be a lark."

"The ship certainly is a bird," I remark.

"You've given me quite a different idea of things," Arizona says to our pleasant friend.

"No doubt," I say, smiling largely. "I fancy he wrote the advertisement."

In due time we and our belongings are on board the Petrel, and we spend the rest of the time before the hour set for sailing in lying in wait for other passengers and prevailing upon them not to take flight—a by no means easy task in some cases. When the hour is past and there is no sign of the ship moving out, I go down to the dining saloon and question the genial steward.

"The two stokers engaged, sir," he says, "didn't show up, and the captain and the first mate are ashore looking for them. The first and second engineers have steam up, and everything's ready." He looks out upon the wharf, and adds, with a chuckle. "Well, here they are, sir—and much good they'll be to us for the next day or two!"

The captain and mate are seen leading two helplessly drunken and very dirty individuals toward the ship, who, being duly fetched over the gangplank, are unceremoniously tumbled into the forward hatchway and left to struggle back to the reality of things.

About 3 o'clock in the afternoon the captain appears on the wheelhouse deck. "Mr. Wrigley!" he shouts, "go aft and pay out the line, and watch them propellers now!"

A queer sea animal comes lumbering down the deck and takes a position near where we are sitting. His post does not seem a very responsible one, but nevertheless he is flustered. "Yes, sir; yes, sir!" he says constantly to the captain, "the propellers is clear, sir!" Then he leans over the rail and says to a man on the lower deck, "Be cool, Herbert; don't get excited. Slack the line a bit, now, Herbert, and watch your hand on that stanchion. All right, sir; we're slacking off. Yes, sir, the propellers is clear, sir!"

The captain comes across the deck and shouts down the skylight over the engine room, "Say, Mr. Gordon, didn't you hear them bells?" There is a subterranean answer, and then he says, "Oh, all right!" and goes back to his post by the wheelhouse.

"This is the funniest ship!" Arizona whispers.

"It is funny," I answer. "But we came for amusement, you know."

"Do you think it is safe?"

"The cook told me the hull was sound. I take that to be either a recommendation or an attempt to hedge on his cooking."

"Watch your hand, Herbert!" Mr. Wrigley says, warningly over the side. "Yes, sir, (to the captain), they're clear, sir!"

The Petrel gets clear of the tangle of small craft an' away from the wharf at last, and turns her nose down stream. At half past 5 the supper bell rings, and we go down to the saloon, seventeen hungry passengers who quite fill the two tables; and thereupon, while the two cabin boys are taking orders, we begin to nibble at each other to discover if, by good fortune, we be socially edible. Apparently we all are, each after his own manner, and very soon the ice is broken and conversation becomes general.

The ship, drawing too much water with her heavy cargo, does not venture to cross shallow Lake St. Peter in the dark, but anchors for the night and goes on at dawn of the next day. About eight miles an hour is our maximum speed. I crawl down into the engine room about 6 o'clock in the morning for a matutinal chat with the engineers.

"You're not getting nervous, sir?" Gordon (he of the erstwhile smutty nose) says, smiling, and making room for me on the bench.

"Not nervous" I answer, "but just curious. What manner of craft is she?"

Duncan, the second engineer, laughs outright. "Tell him," he says. "Tell him, and don't give him any blamed advertisements."

"Well, sir," Gordon says, cheerfully, "she's the rottenest, bmmest, meanest old harridan I ever sailed on. The company got her cheap, seeing nobody wanted her, and they've started this coastwise cruise as a speculation."

"The fine, yacht-like, twin-screw steamship Petrel," I murmur reflectively.

They both shout with such laughter as only healthy young men are capable of.

"Yacht-like!" Duncan shouts, wiping his eyes with the back of his hand.

"Twin-screw!" Gordon bellows, rocking in ecstasy on his seat. "O Lord!"

"Hasn't she got twin screws?" I ask.

"Yes, she's got 'em, and a couple of engines to match, as you can see for yourself. But the engines are too small for the hull, and we're burning coal that— Say, where do you think the company got the coal? It was sunk in a barge and lay at the bottom of the river for a year, and the company bought it, unsight unseen, you know, and raised it. It isn't worth a tinker's curse to get power out of."

"Well," I say, putting the best foot foremost, "there is one satisfaction, anyway. I like the looks of you two men, and of the captain."

"The captain's as capable a man as ever sailed a ship," Duncan says seriously. "And he knows every inch of

that coast—and a mean coast it is!—from the Island of Orleans to Cape Despair."

"Yes, sir," Gordon chimes in, "the ship is rotten, her engines ain't competent, she won't answer her helm; but with that man in command, she's as safe as a liner. Duncan and I and Beatty the steward, have sailed with him for years, and we know him. This is the first season for all of us on the Petrel, and I guess it'll be our last. We're not the kind of men, if I say it myself, that are going to risk our reputations on such an old tub. When you go up on deck, sir, go aft and look at the name on the rudder post. It don't read much like Petrel. That ain't her real name. She was built in Mobile Bay and has done a lot of nosing around South American ports. In the Spanish-American war, the Yankees used her as a blockade runner."

"Runner?" I say. "Nonsense!"

They both chuckle. "She might better be called the Snail," Duncan says. "Lord, but she's a disreputable old creature, with no more of a shred of character than a lady of Scotland Road. But, give her her due, she ain't bad in a sea."

"If she would only answer her helm," I suggest.

"Well, that's where the twin screws come in," Gordon says. "The captain can do a whole lot with the screws."

After breakfast, I leave Arizona engaged in transforming the stuffy little stateroom into the semblance of a home, and go forward to the smoking room. As I go along the main deck I pass an open stateroom door and see Gordon and one of the passengers with glasses in their hands.

"Will you join us?" the passenger calls to me.

I decline, thank him, and pass on. The rain is coming down in torrents, and the wind is so strong that I have to clutch at things to make my way. The smoking room is chill as the grave, and the rain leaks through the roof and window frame at will. Five passengers one of them a lady, are there before me, sitting on the dry edges of the benches and chatting amicably. My already good opinion of them is confirmed. People who can be cheerful under adverse circumstances are a good sort of folk to travel with. A gust of wind swings open one of the doors, and then slams it back again with such force that it breaks in pieces and falls to the deck. The wind and the rain sweep in now without anything to stay them, and send us huddling to the other side. A man in oilskins, hurrying along the port deck, is hailed and told of the trouble. He comes back presently with some tools and sets to work. In five minutes he has put the pieces together and stayed them with a couple of board nailed crosswise.

"Are you a carpenter?" I ask.

"No, sir," he answers, "I'm the first mate. A sailor's got to be all kinds of things on board ship. I may be a cook or a stoker before we get home."

Late in the afternoon of the following day, we reach Quebec. A combination of three elements makes our arrival a notable one. First, some uncertainty as to which really is the Petrel's wharf; second, an unfavorable tide, and third, a strong wind. We end by crashing into the stringpiece head on, with engines reversing and everybody shouting unintelligibly. After all, no damage is done to the ship, and we eventually slide to our place and make fast.

The evening and night are spent in loading on more cargo—as though we hadn't enough already!—flour, salt, molasses, a stove, a buggy, lifted from the wharf in slings—and lowered into the hold by a steam winch. Like other manual operations, it has a nomenclature of its own. "Go ahead," means to haul the line up, and "Come back," to lower it. The captain and I sit in the smoking room for an hour or two, watching the work.

"East of Montreal," he says, "and all the way down till you strike Nova Scotia and Newfoundland, you find men who have handled craft all their lives, and yet remain to their last days utterly incompetent sailors. They make river and gulf work dangerous to themselves and to everybody else. They get foul of your propellers, cut right across your bows or come slambang into your quarter. They're hades and all, these French-Canadians. Their legs are hollow and filled with words, and they jabber away at you all the time they're mixed with your gear, until there isn't another word left in them."

A moment later he puts his head out of the window and begins a low-toned conversation with some man on the deck, only bits of which come to me. I hear him say, "If I tell you to go below, you're under articles." Then a moment later, "Either get off this ship or go below."

Presently Gordon comes in, evidently from a continuance of a conversation with the same individual. It is quite apparent from his flushed face and unsteady gait that he has been drinking.

"I wish you'd let me put the darbies on him, sir," he says.

"No, no," the captain answers; "this is a passenger ship—I daren't do it. I'll settle him!"

He goes outside and I hear him say emphatically, "Now, my man, go below or get off this ship. If you stand there I'll knock the silly head off your shoulders!"

He comes back to the smoking room and sits down beside me.

"What's the trouble?" I ask.

"No trouble," he says, comfortably. "Just a stoker."

"I wish Gordon would—" I begin.

"Yes," he interrupts with an impatient movement of his big shoulders, "it's his one weakness. He's the best engineer I ever sailed with and a good fellow all round. But that's his weakness. Good Lord, wouldn't you think a passenger'd know better than to ask him! I'll talk to that man—I don't care who he is—if this thing goes on. I'm not going to have my officers made beasts of. I need every man the company has given me, and every faculty that God has given them, to handle this ship."

We leave Quebec before dawn. In the channel south of the Island of Orleans, just as the first streaks of dawn begin to lighten the sky, we meet a schooner under sail, her starboard light showing clearly. There is plenty of room for the ships to pass each other and not the remotest reason why either should alter its course; but suddenly the schooner throws her wheel over and tries

to cross our bows. Before our engines can be reversed, her bowsprit strikes our quarter and breaks off, and her liguehead and cutwater come crashing in. In a moment she has ripped us wide open for half our length. The rent is well above the waterline, fortunately; but the passengers cannot know this. Everybody is out on deck, some only half clad, and others scarcely clad at all.

"Are we sinking?" somebody cries; and then he adds: "O Lord, what is this?"

He has stepped into something which is flowing over the decks. Just then Wrigley, the second mate, comes running by, carrying a lantern; and the moment his feet touch the substance they fly up and he falls flat on his back, sprawling and helpless.

"Drat it!" he cries—and that is a considerable malediction for so mild a man—"it's molasses!"

Whereat everybody laughs. Wrigley has saved the situation. Then the captain's big voice makes itself heard booming orders. The Petrel's engines turn the ship about, and we pass the schooner on our way back to the wharf in Quebec.

"You greasy, moll-pated dancing-jack!" the captain roars, as we pass the bewildered Frenchman.

Then the crew of the schooner turn on the reserves of language which the captain credits them with storing in hollow legs, and scream after us until we are out of range.

"Are we sinking, captain?" somebody shouts.

"Not a bit of it!" he answers. "We've just lost a few yards of sheathing and will have to go back for repairs."

And Arizona sleeps through it all. When she looks out of the cabin window about seven o'clock she announces that we are still at Quebec.

"That remark," I answer, "illustrates the blessings of an easy conscience which allows of perfect sleep."

"What on earth do you mean?"

"We've been to sea and had a collision, and ought by rights to be lying at the bottom."

"Do you know," she says with a comfortable yawn, "I rather fancied I felt a kind of a—bump."

After breakfast we get a cab and set out to see something of the quaint town and of such as dwell therein. Chiefly we delight in the sleek, shaven, cassocked priests, and—oh, memories of youth!—the soldiers; the dear, familiar Tommies, as straight and trim and cheery as the Tommies of long ago. As a splendid officer passes us with clanking sword and jingling spurs, Arizona says, glancing at his feet reflectively, "Gracious!—he might so easily stick himself!"

"He wouldn't care much," I answer. "Godlike creatures like that are stuck on themselves the year round, and bear it—somehow."

We get back to the ship in time for dinner. A gang of ship-carpenters has been busily at work on the hull from early in the day; and by three o'clock in the afternoon the repairs are completed and the ship once more leaves the wharf.

As we steam outward, the river gradually widens, the north shore becoming a fainter and fainter line of blue. The south shore is dotted with constantly recurring clusters of white cottages with a big church in the center. They tell us that in such tiny communities the first man in importance is *Monsieur le Cure*, the second *Monsieur le Docteur* and the third *Monsieur le Notaire*. Farms run stripwise to the river—neat and prosperous looking. In the upper river we saw many "square-heads"—a curious barge-like craft with a single mast stepped well forward and carrying two huge square sails, capable only of running before the wind. Down here the square-heads have disappeared. We see steamers, schooners, stone-hookers, and now and again a full-rigged ship.

Two days out from Quebec and the dim, blue line to the north has faded into nothingness. We skirt close to the south bank, stopping at every little settlement, the people putting out in boats to meet us, with freight and stowage passengers to deliver and take off. The banks are towering bluffs of granite, sprinkled with spruce. Whenever a gorge comes in the mountains, a little plateau about level with the water is left; and here is a cluster of dwellings with a tiny fishing fleet dancing in the fore-scene. When the houses number only a half dozen or so, there will be no church. The banks are so huge that though we are a furlong off, we seem scarcely to move at all. When evening sets in, the herring play, flashing about the bows, and great white porpoises lift in the distance. Everywhere, from Quebec down, we have seen little evidences of an apparently undying, race-hated suspicion and contempt on the side of the English, and suspicion and heaven-knows-what beside on the part of the French. The people along the coast live entirely by fishing, the catch being mostly cod. Sometimes they raise a pig or two, though not often—and cows are rare. Now and again we see a little garden with cabbages, potatoes and mus-tard growing. The men are hardy-looking, lean, strong fellows—often handsome. They are enormously excitable, swinging their arms like flails and fairly screaming when they talk, with eyes hot as coals of fire.

The fishing boats that put off to us are great, unwieldy things of about the size of an ordinary life-boat, propelled by a couple of giant sweeps, the forward man sitting on a thwart and pulling, the next man standing and pushing, and a third standing upright on the decking by the helm. Usually they have a couple of sprit sails as well. Many of them come over the long and arduous course for some trifling errand—to deliver a letter or to take off a box or a package. Always they have cod to sell—a dozen big ones for fifty cents. The captain stands by the wheel-house shouting a strange jargon of English and *patois*, which they seem to understand readily.

A curious man this captain, the steward who loves him tells us—a man who will neither drink nor smoke, a bachelor nearing the middle time of life, cool, capable, sleepless, patient, but a devil to fight when once he begins—a dangerous man when roused. A big, raw-boned man, Scotch through and through, whose father served for forty odd years as a piper in a Highland regiment. His talk is always interesting—quiet, plain talk that shows a well-balanced and reflective mind—a reading man in a small, slow way, who keeps a lifelong grip upon what he reads and knows how to use it in argument. A humble-proud man whom it is a joy to meet—who definitely knows his trade and loves it. He has quite forsaken the dining-saloon since we left Quebec, living in and about

the wheel house, and sleeping not at all, so far as may be discovered. He has had it out at last with the passenger who beguiled poor Gordon—a plain, flat talk as uncompromising as the Decalogue—not rude or boisterous, nor lacking anything in respect, but sufficient. Gordon is sober now and looking a little sheep-faced when he passes us; and the passenger says the captain is all that it befits a man to be.

These poor fisherfolk, we are told, have their times of terror and misery when cod is scarce and starvation faces them; with winters sometimes beyond belief, the temperature lying below zero for months on end, and fuel grown poor and scant.

At sunset of the second day out from Quebec, we cast anchor off Pointe Seches to deliver 120 barrels of flour. Just as the ship swings round on her cable, we see the fishing fleet coming in, beating against a strong off-shore breeze. Before the fishermen will take their freight they are going to have their supper, it seems; and they pay no sort of heed to the angry appeals of our whistle. It is almost eight o'clock before the first boat puts off from the shore to where we lie rolling heavily from side to side. With a strong wind blowing and a good bit of sea up, it is slow work getting rid of these 120 barrels. In the half light it is very interesting to watch the boats at work. A boat-hook shoves the loaded boat clear of the ship, and then the sprit thrusts the sail up like a suddenly uplifted arm. Very cleverly do these fisherfolk handle their craft, and we pay tribute to the handiness of the spritsail rig. As night sets in, the waves become phosphorescent and the sky is streaked with the beautiful Northern Light. We do not get away until four in the morning.

Judging by some of the freight we have delivered so far, the coast must be in a fairly prosperous condition: Sewing machines, cases of whiskey and gin, a buggy, a horse-rake, lemons, bananas, candies. But the catch is good this year.

The captain grows talkative when there is freight to be handled. That is his time for relaxation. He waxed indignant over the Treaty of Utrecht by which France obtained the exclusive right to catch and dry fish on the western and northern sides of Newfoundland. "It is the finest fishing ground of the island," he says, "that is barred to Englishmen by a shortsighted arrangement entered into over 180 years ago. And the treaty gives France only the right to catch and dry fish; and she doesn't do either. She catches lobsters—and lobsters ain't fish. Now, when an Englishman, acting strictly within the letter of the treaty, ventures to set out his lobster-pots, the meanest kind of a thing happens to him: the Frenchies complain to the nearest British man-of-war, and the man-of-war must step in and confiscate the poor beggar's outfit. France compels England to do her dirty police work. It's an infernal outrage that is justified by nothing under heaven. France is doing nothing with the fisheries, and next to nothing with the lobster catch. She has a few lobster canneries that'd make a cat laugh. It's a dog-in-the-manger piece of business that should be ended."

We have seen an occasional seal, watching us warily and keeping at safe distance; and great numbers of sea-coots, cormorants and gannets.

Oh, the wonder and the beauty of Percé Rock! It lies here in the sea, looking like a piece of unpolished green onyx, and so huge that the ship seems like a tiny toy beside it. Looking at it through a glass, we can see quite plainly its densely-packed population of birds—herring-gull, gannet, albatross, cormorant, and heaven-knows-what other species beside—millions of them, and making a united crying that would be deafening if we were nearer. The ship, lying at anchor, is seemingly trying to roll her rails under; but we are all such good sailors by now that we discuss our dinner in the saloon in calm indifference to shifting angles and tumbling perspectives. When we go on deck nowadays, I wrap Arizona from head to foot in two heavy blankets, for the cold is keen and searching. One cannot read much, for the wind is so high that there is no controlling the fluttering leaves of a book. And, after all, there is so much to see to delight the senses, to talk about, that books seem superfluous. It is enough to be well clothed in woolens and overcoat and go stamping about the shifty deck with a pipe in one's mouth. And then there is the pleasure of thinking how hot it must be in New York! That reflection alone is sufficient to make shivering an unalloyed delight.

When we creep into the harbor of Gaspé that night and go ashore for a taste of terra firma, we experience a curious sensation of suffocation. There isn't enough air for us. It is too sheltered and quiet. We long for the open sea and its wide freedom. We have grown too big for the land. An hour of it leaves us prostrated with bodily fatigue.

They tell us, when we are in the open once more, a weird tale of one of the fishing villages—Grande Mou, I think—of a cluster of human beings left for years to grow up in complete isolation, without guides or teachers, without laws or principles, without marriage or family ties—becoming at last lower than the beasts of the field, until at last the news is told the good Bishop many miles away, and he sends a priest to rescue them. It is difficult for people living sheltered lives with all the unnoticed blessings of civilization about them, to realize the horror of such things.

We hear a genuine *habitant* chant at last; a queer wailing tune in a minor key, elusive in form and most pathetic. As we lie in our bunks on a Sunday morning, only half awake, it floats up to us from the steerage, reminding us in its sorrowful little graces and turns of the songs the Irish women of our childhood used to sing.

"Do you hear it, Arizona?" I say, softly, when the singer pauses.

"Hush!" she whispers, as one afraid of disturbing the mating-song of some shy bird, "he may sing again."

And he does. It is a song of many verses, and all the singer's heart seems wrapped in it. He makes an end of it at last, simply by wrapping no longer, for there is no finite close, but only a tremulous suspended note that is like an unanswered question. It is said to be a characteristic of all *habitant* songs, that whether sad or gay, they are innocent and childlike, with never a suggestion of license.

WILLIAM EDWARD AITKEN.

A Man o' the Woods.

Chapter I.

It was Sunday, and Sunday, although a day of rest, was never a day very highly esteemed by the men of the Little Thunder logging camp. These men thrived and grew fat on hard labor, whereas a day of enforced idleness had a most depressing effect upon their spirits and became a period of profound gloom. Their mental resources were so very limited that conversation, for the most part, was confined to a few stereotyped remarks, a few oft-repeated jokes or tales of adventure, to which no one, save the narrator himself, paid any particular attention. They lounged about their bunks, smoking and grumbling like so many school boys held after hours in durance vile.

The time of the year was in late November. A bleak, chilling wind howled dismally through the forest trees outside and moaned in low, complaining tones about the walls of the cabin. Only a few of the men had cared to venture forth in quest of game, and these, with the exception of Long Tom Bartlett and Bill White, had returned at midday empty handed. It was growing dusk when the two latter put in an appearance, bearing the carcass of a fat buck between them. Their arrival created a slight diversion, and was soon followed by an announcement from the cook that supper was ready.

Scarcely were the men seated at the table when the cabin door swung slowly open, admitting a gust of wind that caused the lanterns to flicker and smoke, and also called forth a chorus of profane vituperations from the lumbermen.

"Come in or stay out," shouted Long Tom Bartlett. "Only do one or t'other all-fired quick. This ain't no barn."

At this forceful injunction a bulky form entered the room hesitatingly, closed the door and stood leaning against it facing the cantankerous assemblage with one hand on the latch, ready at a moment's notice to beat a hasty retreat if necessity compelled. The newcomer met the many curious, scowling glances without flinching. He was a strange-looking figure, short and squat, but of wide girth and great breadth across the shoulders. He was clad in buckskin breeches, a gray flannel shirt, open at the throat and exposing his deep, hairy chest, and on his feet he wore Indian moccasins. The only covering on his head was a great mass of coarse black hair. A beard and a long, heavy moustache of the same color concealed the greater part of his features.

"The hairy man from Borneo," one of the men muttered in the ear of his neighbor.

"Waal, stranger, what can we do fer you?" Captain Jenkins inquired in hospitable tones.

"I'm lookin' fer work," the stranger replied in a low voice that seemed to fill every nook and cranny of the long room with its deep vibrations.

"So? What can you do?"

"Anything with these," and he spread out two huge hands in a simple but expressive gesture.

"Waal, don't stand thar like a Injun," one of the men called out. "Step up in the light an' let's have a look at you. They ain't nothin' t' be 'fraid on."

"I ain't afraid," the man answered in the same deep voice, advancing further into the room. "I ain't never afraid o' nuthin' or nobody."

As he stood there in the full glare of the lanterns it was very obvious that his statement required no more exact demonstration, for he looked the embodiment of physical strength. He glanced from one to the other of the men in turn, and as his clear, gray eyes met theirs the certain conviction was borne in upon them that here was a man it would be wise to treat with due respect.

"Better set down an' have some grub afore it's all eat up," Captain Jenkins suggested, at the same time moving along to make room for the stranger beside himself on the rude bench that took the place of table chairs. "What might be yer name?"

"Jim."

"Jim what?"

"Jest Jim—plain Jim."

"Jim's only a handle. Ain't you got no regular name what a feller gits married or buried under? What was yer dad's name?"

"Never seen him to speak to, so I dunno. Sometimes they used to call me Squatty Jim. Quinguish had a different name fer me."

"Who the devil's Quinguish?"

"A Injun I used to hunt an' trap with."

Here the Captain, happening to glance around, perceived that the food was rapidly disappearing from the table, so he immediately fell to with an avidity that made up for lost time, nor did he again venture a remark so long as there remained anything of an edible nature in sight. His gastronomic efforts duly consummated, Captain Jenkins heaved a complacent sigh, lit his pipe and turning himself about on the bench, leaned back with his elbows on the table and calmly surveyed the man called Jim.

"How old might you be?" he at length inquired.

"Dunno," the other replied. "Somewhars 'round 'bout twenty."

"You don't seem to know much consarnin' yerself."

"They ain't nuthin' wuth knowin', as I can see."

"Waal," the Captain observed after a brief pause, "dunno as it makes much diffrunce to any of us, only you must 'a' lived longer'n twenty years to find that out. I can always use a good man, an' ef you're as strong as you look, I reckon I can use you, Squatty Jim."

Squatty Jim's face lit up with pleasure.

"I'm dern glad you can," said he. "I'll earn my money."

"That goes without sayin' in this camp," the Captain rejoined. "These are the boys. Boys, this is Squatty Jim, who looks as ef he wouldn't stand a lot o' monkey-shines."

In this manner did this strange being cast in his lot with the loggers, and Captain Jenkins never had cause to regret his choice. Squatty Jim proved an invaluable worker, equal to any two ordinary men. There seemed scarcely any limit to his strength and endurance, and although reticent and uncommunicative at all times, still he became very popular with the entire crew. To this day they tell of his wonderful feats of strength and daring in that part of the world, for in time Squatty Jim became famous among the men of the woods. Some of the tales are hard to believe, but you must keep your

doubts to yourself if the story is being told by some old veteran of the Little Thunder band of woodcutters, unless you care to feel the weight of a hand still steady and firm in spite of its three score and ten years of hard labor.

To Long Tom Bartlett did Squatty Jim especially endear himself. Long Tom, or Old Tom, as he is now called, would tell you, should you happen to come across him, how Squatty Jim saved his life, what time the big bear all but had him in his clutches. It happened in the spring of the year, just before the "drive," when a light snow was still on the ground. The two men were out hunting together, and Long Tom stumbled upon the bear just awakened from his long winter's sleep, and cross and disposed to resent any interference in consequence. Without second thought Long Tom fired, and only succeeded in wounding the animal. The next instant the infuriated bear charged. Long Tom fired a second time and missed, and then tried to efface himself from the landscape. But he had not run ten yards before he slipped and fell heavily and lay half-stunned where he had fallen. At that moment Squatty Jim's rifle cracked, and the bear pitched forward in the snow, but before Squatty Jim could reach his side the huge beast was on his feet again. Squatty Jim aimed quickly and again pulled the trigger. The hollow snap of the hammer told him that he had fired the last shell in the chamber. Without a moment's hesitation he sprang forward in front of his friend and dealt the bear a blow across the head with his rifle. The next instant his rifle went sailing out of his hands, and nothing but his own marvelous agility prevented the swinging lunge of the creature's heavy paw from sending him in the wake of the rifle. And then, like David of old, Squatty Jim trusted the conflict to God and his own strong right arm, and darted forward with a sudden quick spring, and unmindful of the cruel wounds received from the long claws, caught the bear by the throat and with all his mighty strength swiftly brought down his huge fist between the bear's eyes. Four times the fist landed with lightning rapidity, like the blows of a trip-hammer, and the fourth time the bear, weakened by the loss of blood from his wounds and stunned by the crushing blows, sank to the ground, dragging Squatty Jim with him. By that time Long Tom had recovered himself and with a thrust of his long hunting knife he added the *coup de grace* before his friend had succumbed to the bear's deadly embrace.

That is the story, in part, which Old Tom—once Long Tom—Bartlett would tell you while sitting around the camp-fire of an evening; and should you, in your ignorance, feel inclined to smile the smile of the skeptic and the disbeliever, Long Tom would restrain you with his closing words:

"That's the yarn, an' it's the gospel truth, an' ef any man here don't believe it, he'd better keep his mouth shut 'bout it, 'cause lyin' ain't in my line, but fightin' is when I git some riled."

The adventure with the bear incapacitated Squatty Jim for work on the drive, and when the logs went down he was compelled to return to civilization with the teams. Long Tom exacted a promise from him that he would remain in Peshtigo until the crew disbanded, after which he was to accompany Long Tom to the latter's home, there to rest until he had entirely recovered from his wounds.

Long Tom had built a home for himself in the Peshtigo region several years before. Thither, when everything was in readiness, he had brought his wife and his two children, the elder a girl of eight, the other a boy three years her junior. For six years he had labored industriously in his new home, and had prospered, as prosperity went in that part of the world. His clearing furnished ample means of support to his small family, for their wants were few and easily supplied.

When Long Tom arrived home his wife's greeting was tempered with unavowed, but none the less sincere disapproval at sight of the strange-looking being that accompanied him. Long Tom took her aside at the first opportunity and explained matters.

"If that's the case," she replied when he had ended, "it can't be helped, though he's the humliest man I ever see in my whole life. You musn't ever leave me alone with him. He looks dangerous. It do beat all how you take up with sech queer lookin' folks, anyhow."

"I'd ruther leave you with him than any man I know, barrin' Bill White, mebber," he declared. "I tell you he's a reg'lar rough diamond."

Mrs. Bartlett refused to be convinced, however. She was capable of forming her own opinions, so she said, and in the present case her opinion of Squatty Jim was not of a flattering character. As for the cause of her needless perturbation he would gladly have escaped had his physical

condition permitted of such a means of deliverance from the unwelcome position in which he found himself. He divined Mrs. Bartlett's feeling of antipathy toward himself. It was nothing new. All women were a sealed book to him. His very appearance seemed to inspire them with that same feeling of antipathy, oft times amounting to aversion. By nature of a very kindly, sensitive disposition, he felt their unconcealed disapproval of his presence most keenly, and consequently foreswore their society on every and all occasions.

In time, however, Mrs. Bartlett grew to tolerate him. He was so unobtrusively considerate in little matters pertaining to the care of the household that had she not previously declared her disapprobation and distrust of him, she would doubtless have allowed herself to look upon him with favor. But to a woman like Sally Bartlett an opinion once expressed was not to be lightly cast aside, else of what avail were opinions at all. To the children, Selina and Little Tom, Squatty Jim was a hero, and he in turn repaid their admiration with an untiring devotion pathetic to look upon. Selina, at that time a well-grown girl of fourteen, tyrannized over him from the first, and Squatty Jim, who had never before known the feeling of love—save in his affection for his dog—yielded himself a willing slave to the youthful tyrant and lavished all his love upon the capricious maid.

When Long Tom informed his wife that Squatty Jim had bought a certain "forty" not far from the river and

"What brings Quinguish so far from home?" Squatty Jim inquired in the language of the Chippewas, the Indian's native tongue.

"Quinguish has no home," the latter replied. "The fire will soon burn up everything. White man stay behind and burn, too; Indian run away and save himself."

"Did the Indian warn the white man?"

"No. White man know it all. He would only laugh. All the woods are burning. Soon a big wind will come—in a little while, maybe—and there will be nothing left. Quinguish knows and came to warn his friends. The canoes are waiting at the river."

Squatty Jim pondered a moment.

"Quinguish is a good friend," said he at last, speaking in English. "But Long Tom left his kids alone yesterday and asked me to keep an eye on 'em till he got back from Peshtigo. He won't be back till to-night or to-morrow. How many canoes you got?"

"Three. Koshkish and Sottee waiting for us at the river."

"Good. Wall then, you leave me your canoe an' double up with Koshkish. I must go after the kids. The river'll be the only safe place."

"Too late, maybe. Better go before the fire comes."

"And leave S'lina? Not on yer life. What would Tom say? I must go after S'lina an' the boy."

"Then Quinguish go, too. Long Tom is a good man. Squaw can go with Koshkish. We take canoe."

Squatty Jim grasped his hand with a warm grip.

"Good. The same old Quinguish. Y' know whar the trail from Long Tom's place strikes the river?" he asked.

The Indian nodded.

"Meet me thar with the canoe then. I'll git a move on."

"Quinguish be there," the other quietly responded.

Squatty Jim waited to hear no more, but set out in a long, swinging trot in the direction of the Bartlett home, four miles away; and as he sped swiftly along the thought of Selina in danger lent wings to his feet. What if he should be too late to save her? Well, he could at least make the attempt and perish with her if he failed, and perhaps the Indian had over-estimated the immediate danger.

Quinguish looked after his friend until he disappeared from view. He then glanced up at the smoky sky and bent his head, listening intently. No sound greeted his ear—only a great stillness, the hush that always precedes one of nature's tragedies. He shook his head dubiously and with an expressive, "Huh," plunged into the forest on his way to the river.

* * * *

Selina had finished her morning labors and was seated in the doorway fanning herself and wondering if it would ever grow any cooler. Five years had wrought a great change in the little Selina who was wont to tyrannize over Squatty Jim. Although far from beautiful—save in the eyes of Squatty Jim—she was blessed with a neat, well-rounded figure, and a bright, vivacious disposition, charms by no means to be lightly overlooked. Squatty Jim thought her an angel and worshipped her accordingly, though he kept his secret buried deep in his heart.

As Selina sat there in the doorway sadly at variance with herself and the weather and the universe at large, she suddenly espied the ungainly form of Squatty Jim hastening swiftly toward the cabin. Selina gave a faint sigh of relief. Here at last was some one upon whom she could pour out the vials of her displeasure.

"Has yer dad got home yet, S'lina?" Squatty Jim called out, as he came panting up the garden path.

Selina was apparently oblivious of her surroundings and gazed absently at an old black hen scratching in the sand. Squatty Jim drew near and touched her on the shoulder.

"I say, S'lina, has yer dad got back yet?" he again questioned, impatiently.

"Was you speakin' to me?" Selina asked in well-feigned surprise. "I thought you was hollerin' at the cattle, Oh, for mercy sake! It's you, is it? Go away. It makes me hotter'n I was before jest to have you 'round."

"See here, S'lina," Squatty Jim interrupted, speaking in authoritative tones that surprised that young woman greatly, "this ain't no time fer foolin'. Look at me."

"You ain't much to look at," Selina began, glancing up indifferently. "For the land sakes! Whatever's the matter?" she exclaimed in the next breath, starting to her feet in alarm.

Squatty Jim's appearance was well calculated to produce a sensation. His face was begrimed with smoke and soot and his flannel shirt was burned in many places. As he stood there breathing heavily, he gave evidence of having passed through some trying ordeal.

"The woods are on fire," he panted. "Quinguish came

distant about four miles from their home, Mrs. Bartlett replied with an expressive shrug of her ample shoulders and an ambiguous:

"Hump! Waal, s'posin' he has? Free country, ain't it?" and Long Tom breathed a sigh of relief.

Squatty Jim had taken this step after careful deliberation. The idea of possessing a home of his own had never occurred to him; but having once made up his mind he set about the new undertaking with a will. Long Tom rendered what assistance he could spare from his own duties, and before the summer was over a neat log cabin adorned his friend's land, and the small clearing daily increased in size. All that he needed now to complete his happiness was a mate for his new nest; but Squatty Jim was young and could afford to wait.

Chapter II.

One morning in October, five years later, Squatty Jim stood in the doorway of his cabin and gazed up anxiously at the sky for any indication of the much-needed rain. It was stifling hot—as hot as a day in July. He had cast his eyes longingly in the same direction many a time before during the past months, for that year had brought an unbroken, unprecedented season of drought, and the world was burning up. The air was constantly filled with smoke and the odor of burning forests, and every day added to the danger that those distant fires might extend their destructive arms and envelop the entire northern wilderness.

"No chance of rain to-day," Squatty Jim muttered. "It gits hotter an' hotter every minute."

He was about to re-enter the cabin when he descried the figure of a man in the distance rapidly drawing near.

"Quinguish or I'm a liar," Squatty Jim exclaimed, and hurried forward to meet the approaching figure.

The newcomer was a full-blooded Indian. He was a fine-looking specimen of his race, tall and well-proportioned, with strong, though somewhat forbidding, features. He was breathing hard and the sweat streamed down his face and his neck; his whole manner, indeed, indicated great haste.

to warn me. He's waitin' at the river fer us. I struck a patch of fire 'bout a mile back. 'Tain't much yet, but she's spreadin', an' we'll have to dig out o' this in a hurry. Whar's Little Tom?"

In answer to Selina's repeated calls her brother finally appeared, coming from the barnyard. He was a well-grown boy for his age—a second edition of his father.

"What you want?" he demanded. "Hello, Jim. Gosh! but you look's ef you'd been havin' a hot time."

Squatty Jim explained the situation in a few words. "We'll have to make fer the river," he concluded. "They ain't no time to lose, neither. Git a couple o' blankets, Tom."

"I ain't goin'," Selina emphatically asserted. "The fire won't reach us here."

"Tom, git the blankets," Squatty Jim quietly commanded. "See here, S'lina," he continued, "this ain't no fool business. I tell you we'll burn up ef we stay here. You got to go."

"I ain't takin' no orders from you," Selina retorted. "You're 'fraid, that's what's the matter."

"I ain't givin' no orders, S'lina," Squatty Jim replied, "but you got to go 'long with me an' Tom ef I have to carry you."

"Don't be a fool," Little Tom urged with brotherly frankness, as he appeared at the door with the blankets over his arm. "Ef Jim sez go, we're goin', that's all there is 'bout it."

Selina only tossed her head contemptuously and turned her back upon both of them. Squatty Jim was ever a man of action. Without another word he took one of the blankets, wrapped it around her and stooping quickly lifted her in his strong arms.

"Sorry, but I'll have to carry you," he said in quiet tones. "Come on, Tom."

Selina struggled and screamed, but all in vain. Squatty Jim held her fast and pressed forward with long, swift strides. As they reached the edge of the clearing a strange, ominous sound—a deep, muffled roaring—was borne to their ears. Squatty Jim quickened his pace to a run. Selina ceased struggling.

"What is it?" she asked, involuntarily clutching Squatty Jim's arm.

"The fire," he panted. "Mebbe we'll be too late. Run fer it, Tom, an' save yerself ef you can."

"What do you take me fer?" was all that Little Tom deigned to reply.

"Let me down," Selina entreated. "I can run, an' we can make better time."

Squatty Jim released her, half-reluctantly, and the three started on a run for the river half a mile away, with Squatty Jim bringing up the rear. They had covered about half the distance when a sudden cloud of smoke and flying cinders seemed to descend on their heads from the sky overhead. Selina staggered back and would have fallen had not Squatty Jim caught her. He threw the blanket over her head and lifted her a second time in his arms, and bending low, with the lower part of his face buried in the folds of the blanket, dashed forward down the narrow trail. Little Tom bravely held his own, occasionally glancing back over his shoulder to see that all was well with his companions.

The smoke grew thicker, and the heat became more intense every moment, and the sound of the on-rushing flames grew ever louder and louder. They had but a short distance to go now, but Squatty Jim was half-blinded, and the terrible strain was beginning to tell on him. His tongue was parched, and with every breath it seemed to him that he was inhaling flame. Suddenly Little Tom stumbled and fell forward to the ground.

"Go on," he gasped as Squatty Jim half-paused beside him. "I'm done fer. Save S'lina ef you can."

Squatty Jim tightened his hold on the silent form in his arms and staggered on. At that instant a tall figure dashed by him.

"Quinguish take boy," a voice shouted in his ear.

And then Squatty felt himself slipping down a steep embankment, the smoke cleared away and he found himself standing up to his knees in the water of the river. He waded out until the water reached his waist. The blanket that enveloped Selina was scorched and smoking with the heat, and Squatty Jim carefully lowered his burden until Selina's head remained above the surface. Supporting her with one arm he dashed water in her face with his free hand. Selina gasped and opened her eyes.

"It's all right, little girl," Squatty Jim murmured over and over again. "Jest keep cool an' we'll save you yet."

He was brought to himself by the voice of Quinguish.

"The canoe, quick," the Indian commanded in his deep guttural. "Quinguish take squaw."

Squatty Jim yielded his charge into the arms of his friend, plunged his head in the cool water and drank a hasty draught and then followed the Indian ashore where the canoe was waiting for them. Little Tom sat huddled up in the canoe wrapped in his blanket. Quinguish placed Selina near her brother and tucked the other blanket about her. Squatty Jim was himself again and ready to renew the struggle. He took his place in the stern with paddle in hand and steadied the frail bark while Quinguish shoved off and stepped lightly in the bow.

"Steady, now, children," Squatty Jim called out. "Don't move or we'll upset. Tom, keep an eye on yer sister."

And then the race for life began. It was a nightmare journey. Squatty Jim could never remember all that happened. To him it seemed that they were sailing through a sea of flame. He bent low, plying his paddle with desperate energy, unmindful of the shower of flying embers that fell all around them in the water with a sharp, hissing sound unceasingly. The heat blistered his body, and occasionally a glowing cinder set fire to his clothing; but he smothered the fire with his hand, unmindful of the pain. His thoughts were centered on that silent form lying before him in the bottom of the canoe.

Little Tom became a hero. Strange to relate, his hat—an old felt one that had belonged to his father—had not been lost in the wild race through the forest, and several times when he saw that the canoe was in danger of catching fire, with a cry to the men to "steady the boat," he dipped the hat full of water and with cool deliberation extinguished the blazing fire brands. Quinguish rewarded him with a grim smile of approval, and Squatty Jim tried to shout words of praise, but only succeeded in

producing a hoarse cry from his parched throat.

Fortunately they were not in the direct path of the fearful cyclone of fire that swept through the forest on that day, devouring everything in its course. They were on the extreme outskirts of the fiery scourge and gradually left the overpowering heat behind them. Just before nightfall they had won a place of safety, and not until then would Quinguish consent to head the canoe for shore and turn his attention to their physical needs.

They were saved by a miracle, but not many miles away the vast sea of fire swept through the wilderness, leaving a black trail of smoking stumps and burning trunks of trees, and finally leaped forth from the forest, a solid wall of flame towering high in the air, upon a thriving town, and there was nothing left to mark the path of the destroyer at that point save a few smouldering ruins or a heap of charred bones in some spot where a few of the unfortunate victims had gathered for safety. There were not many survivors left to tell the tale of that great and woeful disaster. It went down to history as the "Peshtigo fire," but the awfulness of the visitation was overshadowed by a still more appalling calamity a few hundred miles away, where, on that very day, a whole city was laid in ruins by the same destructive agency.

Squatty Jim's first care was for Selina. The wet blanket had protected her from the worst of the heat, but she was well nigh overcome with exhaustion after her terrible experience. Little Tom suffered uncomplainingly. When they had refreshed themselves with a drink of water and had bathed their smarting faces, Quinguish stood on the bank of the river and sent a long-drawn, plaintive cry echoing through the forest. His second call was answered by a similar cry, coming from the distance, and before long two canoes appeared in sight around a bend in the river. There were four persons in the canoes, and as they drew near Squatty Jim recognized the faces of Koshkish and Sottee, old Indian friends. Two squaws were with them.

They beached their canoes alongside the other and stepped quickly ashore. A few words from Quinguish explained the situation and told the story of their escape from the fire. One of the squaws immediately took Selina in charge, and the other fetched some kind of an oil from the canoe, with which she dressed the burning wounds of the men. When their welcome ministrations were completed, they set about preparing the evening meal as though running a gauntlet of flames were an every-day occurrence.

The second day after the fire the long-wished-for rain came, bringing salvation to the northern wilderness. It extinguished the smouldering stumps and logs and quenched the fires in the marshes, where in places the ground itself burned to a depth of three or four feet.

When the rain came, Squatty Jim and Quinguish in one canoe, and Koshkish and Sottee in another, set out on a tour of investigation to ascertain what havoc the fire had wrought at their own homes. When they reached the trail that led to Long Tom's cabin the canoes separated, Quinguish remaining behind with Squatty Jim, while the other two Indians continued on up the river.

The fire had transformed the forest into a blackened waste of cinders and ashes. As Squatty Jim and his friend approached what had once been Long Tom's clearing, they involuntarily paused. There was nothing to distinguish the place from the surrounding desolation save a pile of ashes, where once had stood the cabin and other buildings. Suddenly Quinguish gave a sharp exclamation and pointed toward the ruins of the cabin. Squatty Jim looked, and the next instant ran forward with a loud shout, for a man appeared in the midst of the ruins, seeming to rise from the ground. The man was Long Tom Bartlett.

At the sound of Squatty Jim's voice Long Tom wheeled about and came running to meet his friend.

"The kids, Jim? The kids?" he cried, as he grasped Squatty Jim's hands and eagerly scanned his features.

"Safe and sound six or eight miles down the river. Whar's the wife? Safe, too?"

Long Tom shook his head.

"Gone whar the rest of 'em went," he said in dull, heavy tones. "The hull world seems to have burnt up. Peshtigo is jest like this here. Jim, it's simply awful."

"Gosh almighty! You don't say so. How in thunder did you git away an' git back here, then?"

"Don't know. It's jest like a horrible nightmare to me. I don't remember nothin' but a lot o' mixed up things too awful to think 'bout. People burnt to death—twenty or thirty in a place no bigger'n we're standin' on, much—burnt to a crisp, an' not ten feet away the dead body of a little baby, mebbe, without as much as a eyelash singed. I lost Sal afore the fire struck us, an' couldn't find her again. It come so sudden they wa'n't no chance to hunt fer a place to hide in. It come out o' the woods with an awful roar. The air seemed a-blazin' as high up as you could see, an' a great big curlin' stream of fire would come down all of a sudden with a swish an' lick up a hull buildin' an' everybody in reach, jest like some big fiery monster lickin' up his dinner. Ten minutes after it struck us they wa'n't no Peshtigo. The dead was everywhere, an' the livin', what they was left of 'em, was all out of their heads—gone plum crazy. I was as bad as the rest. They jest walked 'round an' 'round with wide, starin' eyes askin' each other, 'Have you seed Bill or Sam, or Mary, or—or Sal?' or else tryin' to find out whar their houses was afore the fire struck 'em. We all thought the end of the world had come. You remember the Simpkins family? They was six of 'em. They all got down into a well. The well was twenty foot deep, an' 'long come one o' them long tongues of flame an' bored down in the well an' licked up the hull family an' everythin', water an' all, clean as a rifle barrel. They was thirty people burnt to death not four rods from me. A man an' his wife tried to git away with their two little kids. They went crazy an' dropped the kids on a bit o' green grass near a spring 'long side a fence. The woman only run a little ways an' then she turned back alone fer the kids, but she couldn't find 'em. She wandered 'round all night long, an' in the mornin' she heard some cryin', an' she followed the sound an' thar was her two kids right whar she'd left 'em without a hair singed, an' the grass was jest as green an' the spring a-bubblin' jest like nothin' had happened. I drunk out the spring myself that

day, an' thar sat the woman sorter laffin' an' cryin', plum crazy. She asked me whar my kids was, an' then I remembered S'lina an' Little Tom, an' started fer hum. I could tell you a thousand sech stories. Some of 'em you wouldn't believe."

"It's worse than the Day of Judgment," Squatty Jim exclaimed, in horror-stricken tones. "We had a close call ourselves," and then he related in a few words his own experience with the fire. "We might's well go over an' see what's left of my place," he suggested when he had completed his narrative. "We'll go by way of the river. It'll be easier."

They made their way back to the canoe in silence. Squatty Jim longed to comfort his friend, but was at a loss for words in which to properly express his feelings, so he contented himself with an occasional "Brace up, old man. You've still got the kids." He was greatly relieved when they were once more afloat, and his attention occupied with his paddle. They sent the canoe through the water at a great speed, and were soon nearing Squatty Jim's home. As they approached the landing place they were astonished to see a few trees here and there that still showed unmistakable signs of life in the green of their foliage. And soon it became obvious that the fire had spent itself before extending far in the direction they were going, and for some reason had turned out of its own accord.

Hope rose high in Squatty Jim's breast as they left the canoe and started for his clearing. Standing singly or in small groups in this graveyard of the forest a few hemlocks or scattered pines still waved their seared branches aloft in triumph over their foe. Here the fire had turned aside, and beyond the forest gradually lost all traces of the visitation. The rain still fell unceasingly, as though the heavens wept at the havoc that was wrought, and the earth, refreshed by the bounteous showers, gave back many fragrant odors.

Squatty Jim's cabin stood just as its owner had left it, untouched and unharmed by the great scourge. The circle of forest trees surrounding the clearing showed green, and no trace of the fire was visible.

"It's one o' them what-do-you-call-'em things the parsons talk 'bout," Squatty Jim solemnly affirmed. "A parable, or somethin' like that. I'll go back arter the kids, Tom, you wait here. We'll be back afore dark. They won't be room fer all of us in the canoe."

"I'll wait," Long Tom replied, mechanically. "I'm some tired, an' so I'll wait."

"Better lay down an' git some sleep," said Squatty Jim.

"I ain't sleepy."

"Cheer up, Tom. Cheer up. Remember you still have the kids."

"Yes, I got the kids," Long Tom repeated the words slowly. "I got the kids, an' the kids ain't got no mother. Bring me my two kids. They're all I got left."

Squatty Jim nodded to Quinguish, and the two knights of the woods hurried away on their journey, and Squatty Jim thanked God in his heart that he still had a haven of refuge for the girl he loved.

Long Tom was waiting for them when they returned. So far he had borne his misfortunes with scarcely a murmur, suffering with that dumb sort of agony peculiar to strong men; but when Selina flew to his arms, and he heard her cry of "Daddy! Daddy! Here I am. You've still got me," the big fellow burst into tears, and great sobs shook his frame. And then Selina became the little mother and comforted him, and finally persuaded him to partake of some food—the first he had eaten for two days—and later on, when his head began to nod, she sent him to bed, where his heavy breathing soon announced that he had forgotten his sorrows for the time being.

Squatty Jim had curtained off half the room for Selina's special use. Before she went to rest she stepped to the door of the cabin where Squatty Jim stood gazing out into the night. The rain had ceased and a cool breeze had sprung up, making mournful music among the pines. Squatty Jim awoke from his reverie with a start as Selina took her place beside him. Neither spoke for some moments.

"How the wind moans," she at last said, half to herself. "It seems to be singing a fun'ral hymn fer all the people that the fire burnt up." And then the thought of her mother who had perished in the flames came to her, and she leaned her head against the door post and let the tears come unrestrained.

"Don't cry, little girl," Squatty Jim was suffering tortures at sight of her tears. "Mebbe yer ma ain't dead. Anyway, you still got yer dad, an' you can live here as long as you want to, an' I'll only be too glad ef you never move away. It might be worse, you know."

Selina looked up and smiled through her tears.

"You're the bravest man in the world," said she, taking one of his big hands in both of hers; "an' next to daddy the best. If it hadn't been for you we wouldn't be here now. I can't talk to-night, I'm so tired. Good night, dear old Jim."

"Don't talk like that, S'lina," Squatty Jim stammered. "You know they ain't nuthin' on earth I wouldn't do fer you, an' be happy a-doin' it. I ain't did nuthin' much so far."

"Yes you have," she answered. "I never stopped to think how good you've always been to me before. Praps some day I can pay you back a little of what we all owe you."

"Some day, S'lina, when we git all over this awful time—I mean the fire an' yer ma's death—some day I might git nerve 'nuff to ask you to pay it all back in one big lump. What would you say to that?" His hand tightened on both of hers, and his painful embarrassment made his meaning quite clear to Selina, and she turned away her head to hide her blushes.

"Guess I couldn't refuse," she murmured, with a little sigh.

"Not even ef I was—to ask you—to be my—to live here with me forever, an'—be my wife?"

"Not even ef you was to ask me that," she whispered.

"Good night." She snatched away her hand from his clasp, and, before he had recovered from his surprise, fled from him, leaving him alone with his new found happiness.

The Tale of LauLu's Hunt.

To some readers the suspicion may arise that this narrative lacks directness and continuity. But, bless you, this is the most simple, straight and plain sailing, compared with some of the tangles in which Samoan stories involve themselves. You just ought to try to follow out the thin and fragile thread of truth in a narrative which it is to the interest of a Samoan to make tortuous. This tale of LauLu's hunt is really very direct and straightforward. Its action is comprised entirely within one night at the full of the moon. It is like a well-written piece of music, for it ends on the very note with which it began, namely, a shirt. It was really hunting, for I was called out by the hunting shout in the early dawn to receive a bonito presented on a gleaming paddle. That it involves more than a slight suspicion of political ambition and jealousy is unavoidable and inherent in human nature.

There was one luxury in Samoa which we could insist upon as no more than a necessity, and that was to keep clean and to look clean. This involved several changes a day, and in the same proportion required a wardrobe of considerable magnitude, though of extreme simplicity. Having two adult male persons to look after—and no mere man knows how helpless he appears when he puts up the cry, "Where's a clean shirt for me?"—I had my sufficient task set out for me in keeping track of the shirt supply of the household. Samoan laundry methods of cleaning clothes in a stream by throwing jagged rocks at them as they lay spread out on one another and a flat stone were sufficiently mangling in their tendency to account for a certain large decrease in the shirt stock of the household. But the deficit was larger than could be accounted for on any principle of laundry mutilation. Then I discovered that the official head of the household was by way of providing shirts for a considerable group of Samoan chiefs. He solemnly swore that each shirt so expended would produce a tenfold crop of friendly alliances among the island politicians. Not being myself official, I made up a firm mind that it must stop. If the interests of the United States in that shabby kingdom demanded the exercise of bribery and corruption to the extent of one shirt for each proceeding of political infamy, there surely must be a shirt fund in the United States Treasury against which to draw. It certainly was not my intention to allow public services to be paid out of a purely private and personal collection of shirts. Just above the lower front hem on each and every shirt I wrote the name of the owner in nitrate of silver ink, in letters an inch high, and in Samoan, so that there might be no failure to comprehend the ownership of the garments thus marked. This indelible record of title did not interfere with the comfort of the real owners of the apparel, for it was out of sight when worn. But it put an effectual stop to the shirt as a corrupting agent and secret service fund for the payment of the price for small diplomatic secrets. No Samoan, chief or other, was supplied with the nerve to walk across his village green on Sunday mornings on his way to his "religion" clad in the spotless white of a wholly pure character with the in-criminating legend plain for all to see that he was wearing a shirt that he did not come by honestly. It could not be concealed, for the Samoans, you see, dress differently, in fact the shirt goes outside and quite over all.

Therefore, I was all the more surprised when LauLu came in one evening all dripping with a fresh dubbing of coconut oil and told me that his new boat was on the beach, and that he was going up the coast and would bring me something back. He was, I think, the tallest man I had ever seen; at least the tallest with whom I was acquainted. As he sat cross-legged on the floor he seemed almost to look down on me, who was sitting on a chair. This is that LauLu who made an American tour some years ago with Barnum. The surprising thing was that he wanted to borrow a shirt. The request was a specious one, for he knew very well that a request for a gift would be flatly denied, and he had more than a suspicion that a shirt received as a loan would not be reclaimed. And after a sufficient length of time Tonga could cut out the name and run up a new hem.

LauLu had many reasons why that shirt should be loaned him. For one thing, he was poor, too poor to buy shirts for himself. How well I remember the proud formula of these pleas, "We are an insignificant people on puny islands, set far away in the middle of the flat sea, and great is our poverty." Even with this form of humility on his lips, the Samoan makes you feel that he regards himself as the best there is, and that you are asked only for politeness, when he had the right to demand or to take without demand. It was merely a form of words, this poverty plea, in this instance, for I paid Tonga well for her work for me, and I was well aware that she would not see her big husband lacking anything that would show her pride in him. His better reason was that runners had come stealing in by night from the district in rebellion to tell him that in Faleapuna they were deliberating about calling him to be their ruling chief. There was nothing unusual in that circumstance, even when the rebellion was in far more acute stages there was never any difficulty about surreptitious correspond-

ence back and forth. I knew that both LauLu and Tonga were rebels at heart, and that their continuance so near the court of Malietoa was really that they might serve as hostages, and was tantamount to a mild imprisonment. I rather welcomed the chance to dabble in political intrigue, and I knew that the official member of the household, who was just then in the rebel country in the effort to prevent a threatened breach of the peace, would be sure to hear of LauLu's arrival at Faleapuna in time to stop any action if he were so minded. Accordingly I lent LauLu the shirt, and bade him go off bravely in his hunt for the rank and titles of a ruling chief, the town itself being one of the most important in Samoan political relations. It would take too long now to remember just what his title would be, but it would most certainly be something of the most magnificent description, and would entitle him to a large amount of rich and ripe flattery when speeches were made at him.

And all seemed to depend on the loan of a shirt. He was careful to say that he had shirts of his own, but he wanted one of these shirts with the name in front. That would show all the rebels that he was a man who had a pull with the administration, and politics is politics, whether it is played on a great continent or in a bunch of little islands.

TONGA AND LAULU.

From Mrs. Churchill's forthcoming volume, "Samoa Uma."

LauLu had been gone so short a time that I seemed yet to hear the thump of the loom of his oar in the rowlocks up the lagoon about the big shoal of the Vailoa. Then came Tonga with her maid. Being of an observing disposition and imitative way, my good Tonga had come to the conclusion that what was good for me was quite as good for her, and as she was my maid she had taken a maid for herself in the person of a sturdy young girl of the name of Evai. It being after Tonga's hours for work, she called socially as one lady upon another, and her maid sat dutifully in the background and made cigarettes for her mistress, and when Tonga interrupted her conversation with the interjected command, "Kusi mai le afi," the girl promptly "kused," that being the Samoan equivalent for strike a match. It took several cigarettes to bring Tonga around to the point which had been seen that evening.

Tonga and LauLu had been married in about all the ways possible in a community of so much divided jurisdiction, and there was not the slightest doubt that she was Mrs. LauLu with a firmness and fixity that would stand all the tests of the most rigidly civilized country. Therefore, I felt no little satisfaction in relating to her my assistance in furthering LauLu's ambition to become so important a chief.

"She is pig-faced and she stands upon the ground," was Tonga's sole comment.

Thereupon I saw a great light and promptly subsided, for after that it was clear that this being a big chief was not altogether politics.

Tonga was not at all the sort of woman to sit down

when she had a crisis to deal with and idly wait for it to crash. She was in the habit of dealing with an admirably prompt decision with all matters in which she was interested, and this case was no exception. She lost no time in going to the house of her nearest relation in our village and of taking a pair of paddles from their usual position in the rafters of the house. A canoe was soon chosen from the collection drawn up on the beach and carried down into the water. In this frail craft Tonga and her maid set out upon a trip that might extend to some sixteen miles. After the first few miles of still water in the lagoon there came a long stretch of open sea, where the shore reef was broken in but two places that would admit of the safe passage of even a canoe. As LauLu had had nearly an hour's start, and had two men to row his boat, it was altogether unlikely that Tonga could overtake him within the lagoon unless he should stop by the way to talk and drink kava. There was not much chance of this. LauLu was by birth entitled to be the chief of the next village, Matafangatele, and to bear the name of Asi. But the place had been usurped by another, and the present Asi spent a large amount of time in detailing just what he would do to LauLu should he ever catch him. It was, you will see, by no means likely that LauLu would stop for mere sociability anywhere in Asi's territory.

I was in a state of tremor about Tonga and her canoe when it should come to that long stretch of ocean voyage, which was bad enough in itself, and was made even worse by the sudden dangers of the hidden reef off the Solosolo shore, the Fale Aitu or "House of Devils." But I consoled myself with the thought that Tonga invariably knew what she was about. Indeed, I felt the same sort of fear when I passed out from the lagoon to the open ocean, even in our gig, with its four rowers and 22 feet of length. In time I grew accustomed to breasting the ocean seas in all weathers, and grew to look upon such sport as steepchase jumps over reefs and through the breakers on shores of absolute rock as nothing more than a half-dime ride on a swan-boat in the park. Tonga was safe enough in her little canoe. I watched the gleam of her paddles in the shimmering lagoon under the moonlight. I watched her course as she skirted the Vailoa sands and then vanished on her way around the point at Moota. I was now interested in two parties headed east over the moonlit ocean. In the lead was LauLu, with his two rowers, in a boat freighted with one shirt and a bundle of political ambition. Nearly an hour behind him came Tonga and her maid in a light canoe, both paddling like all-possessed, and determined to wipe out that handicap. The freight of the canoe was frankly a clever wife's determination that her husband should not make a fool of himself. I fancy that so efficient a woman as Tonga always showed herself was not altogether a peaceful citizen at home; but she never let that appear in public, and never failed to make it appear that she thought her big LauLu was everything that was right.

Having thus dabbled to the extent of one shirt, as a loan, in what might be high Samoan political intrigue or again might not be that sort, and having forwarded Tonga in pursuit, there was no more to be done but to await developments, wishing Tonga more power to her elbow.

Samoans are proverbially unable to keep a secret, and that is true without an exception as to the secrets of others; but in matters concerning which they do not wish to speak, there is no power can wring or cajole or buy the truth from them. The bare fact that Tonga in her canoe overhauled LauLu in his boat well this side of the Fale Aitu, and that he did not go on to Faleapuna, to be made a ruling chief, but went fishing instead, was about the sum of all I ever did learn of the domestico-politico-marine drama that was played out in the moonlight on the open sea. If Tonga's perspicacity was truly founded, and if indeed under the political pretense there was a woman, as Tonga more than implied by her ejaculation of "pig-faced and standing on the ground," which is about the limit of Samoan abuse, in such a case, if I had been LauLu I should have recognized that if I went further I should have been certain to fare much worse, and I think he showed himself a prudent man in that he went fishing instead.

Perhaps my opinion is not entirely unbiased, for I had a steak from that bonito for my breakfast. It appears that when the sea is just right and the tide is making a certain stream around the Fale Aitu, and when it is full moon in a certain quarter of the heavens, and the dawn is breaking with a rare green color at the horizon and fading out to a dainty fawn color toward the zenith, and if your boat is right, and if your fly-hook is tied rightly for luck, and if you are a fit person and will choicely troll in the last gasps of the night breeze offshore and carry your lure through the very center of the Fale Aitu, you will surely get a bonito. What a lot of conditions there always are before you can catch fish! At any rate, they seemed to be all fulfilled that morning in LauLu's case, for he caught a young bonito with all the marks that go to show that it is just at its best for eating.

Tonga returned the borrowed shirt, still in its wrapping of waterproof tapa cloth, and explained that it was all a misunderstanding, that LauLu did not need to bor-

row shirts, for he had plenty of his own, and silk ones. Furthermore, he had no wish to be chief at a small place like Faleapuna. In fact he had tried to communicate to me his purpose of going out on the bonito fishing, but as the bonito is himself a chief, and must only be mentioned in a special language of courtesy, I had failed to comprehend the exact purport of his remarks. Laulu sat by, looking as good as gold, while his loyal little wife put all the blame on me, and his only comment was to say yes and no, "Toe" and "Leai," at the proper intervals, and in the meanwhile to keep up a soft clucking as though calling chickens, which is a compliment of the higher Samoan courtesy, in which duties of the gentleman he was thoroughly posted.

Then Tonga's own maid rolled her mistress a cigarette, Tonga puffed it bright and passed it to Laulu. In the language of diplomacy, the incident was closed. But I'd give six bits to know what was taking Laulu toward the rebel country that night.

LLEWELLA PIERCE CHURCHILL.

Luck With a Meat Gun.

I BELIEVE it was Didymus who not long ago seemed to imply by a kind of an allusional intimation in *FOREST AND STREAM*, that inferentially I am possibly a back number. Let me protest that I will not permit myself to be tossed into antiquity by any man with the clear brain, the sentiments that "smell April and May" and whose words fly to their mark with snap shot accuracy and precision. While his sentences whirr with the whistling wings of autumn and ripple with the purl of June waters, eddying by mossy banks, is he going to tell us he has had his day, give way to a "younger generation" and try and take some of us with him?

The disciples of rod and gun—particularly of *FOREST AND STREAM* denomination, are never blasted with antiquity. Of what use are all the trophies we have garnered, the memories that enrich the soul, if we are going to turn turtle because of an ache or so more or less in our bones, a little dimness of an eye or an unsteady group of muscles or glands? Zounds! I will, like Jack Falstaff, have my brains taken out and buttered and give them to a dog for a New Year's gift before I will succumb to later comers.

I have never quite realized the virtues of a meat dog, but, know all men, that I carry a meat gun. I have an aspiring dog and a meat gun, and when the dog does not anticipate my operations and go groggy with excitement, scaring everything out of range, there is not a white flag in the mountains that can bounce in view at 300 yards with impunity twice.

My rifle, as I say, is a meat gun. My dog was intended by Providence for pastoral rather than hunting purposes, but he is nevertheless aspiring, and now and then a possibility. His most commendable attribute is his ubiquity, or perhaps it is faithfulness, particularly when a hunt is in prospect. When I go, Shep goes along. Whether I want him or not is outside his capacity or understanding. If his ambition was tempered with judgment, what a dog he would be! Ambition is sometimes a disease. Caesar was ambitious.

Shep has scared a hundred big deer directly out of range of my meat gun, has barked up many a wrong tree, bayed the moon with utter depravity, and done eccentric things generally. If he knows or hears tell of a skunk within four miles of us he looks it up immediately, barks at it until it is at the very zenith of its ability—then he kills it and brings the concentrated essence of its glory home with him. This triumphant spoil of his usually does not wither until his next expedition.

Notwithstanding these things, together with other uncreditable accomplishments, Shep's account is fully balanced, with enough to spare to warrant him the pension he requires to keep the little lamps of light in his eyes until time or fate extinguishes them. His welcome bark and his eternal readiness to go or come to or from any expedition are worth a scared deer or so.

The long dry summer ended with a good soaking shower in October. The dry leaves, pine needles and dead brush were soaked. In the evening the rain ceased, the sky partly cleared and it was just cold enough. Another day and the close season for deer began. There was no meat in the house.

I found myself that evening inspecting, cleaning and oiling the meat gun at the "ranch." My indomitable friend, Shep, was at the door with his usual symptoms of anticipation. There were but six cartridges, the gun was somewhat rusted and looked singularly unpromising. In all probability there was not a deer track within three miles. The mountainsides looked steeper than ever, and I went to bed undecided as to getting up early, or whether to go hunting or do without meat. Venison is dry meat anyhow.

As it happened, I was up early, the morning was a clear, bracing mountain affair in which it is impossible to feel lazy. To turn the scale of doubt, Shep had plainly not forgotten the incident of preparation the evening before, and now by stretching, prancing and other gymnastics signified his readiness and confidence. Putting up a lunch, and contemplating a long, hard climb up the mountain, we started out for meat.

The house is in the pine woods, and the mountains begin all around it. Selecting the most gradual slope, the zealous dog a rod in advance and excited to start, we set out. The rain had made the ground soft and yielding, and as it was covered deep with the pine needles in most places, our movements were silent. We (Shep and I) had gone but a short distance when I saw a small black animal with white stripes meandering in some bushes. It was the real thing—nothing under the sun in the golden West smells like it. It smells longer and louder and more insistently than a rotten mackerel by moonlight, or any notorious thing whatsoever.

Shep immediately detected the striped and impending disaster. He was full of ambition and desire to exhibit strenuousness, open battle and let come what might. I could hear his heart beat his ribs as he prepared to charge. In anxious anticipation he could already taste victory, and he began to slobber in his expectancy. With notable presence of mind, I succeeded in suppressing Shep, permitting the threatening calamity to saunter off

in the independent and leisurely insolence peculiar to its kind alone. Shep was grievously disappointed, and cast many a longing, lingering look behind, as I urged him away from there by the most direct course possible. After we had achieved safe distance we looked back and saw that the little bushy terror of the rocks was still there, waving his plumed tail complacently, if not regretfully.

Luck was with us. The escape was narrow, but any kind of an escape was satisfactory to me. Shep's regrets were soon forgotten, for he never broods over disappointments, owing either to an excess of enterprise or an unstable memory.

We had not gone far and were not yet a half mile from the house, when my infallible four-footed friend, with nose in air, feet lifted high and set down cautiously, intimated that he had wind of game. At first I thought he was bluffing, and then I wondered if whatever it was had stripes on its back. In all probability it was the mate to the little beauty we had passed a short distance down the hill. Shep was insistent, and looked alertly ahead, and now and then glanced back at me, with a very wise expression upon his face. With a hunter's instinct, I let my rifle slide from my shoulder to the hollow of my left arm, while my finger tested the set trigger.

We approached the top of a steep ravine, fairly in sight of the house, and as yet had not seen a deer track. Your true hunter is not often open to surprise in the woods, and as the ravine was thickly wooded with black oaks, with some underbrush, and as Shep was becoming more confident in his assumption of wiseness, I drew back the hammer of the rifle, letting the barrel slip to my left hand, while my right held the arm at a half ready.

The climbing was steep, and every step lifted me until I could see more and more of the little half circle of sheltered bench at the extreme head of the ravine, under the oaks. I succeeded in restraining Shep, so that at all times I could see further than he over the bank, because my head was the highest. As the rim of my hat rose above the last bit of the bank, letting me see the furthest nook, there was the sudden shake of a bush and a slight stir of leaves. Half blended with the background of blue brush, fully alert and ready for instant spring, stood in clear outline a splendid buck. Like the deer described by Walter Scott,

As Chief who hears his warder call,
"To arms! The foemen storm the wall,"
The antlered monarch of the waste
Sprung from his heathery couch in haste,
But ere his fleet career he took,
The dewdrops from his flanks he shook;
Like crested leader, proud and high,
Toss'd his beamed frontlet to the sky;
An instant gazed down the dale,
An instant snuff'd the tainted gale—

Then, as the headmost foe appear'd,
With one brave bound the copse he clear'd,
And, stretching forward—"

There the simile ends. In this case there was no troop of mounted huntsmen or pack of fleet hounds to outrun for his life. There was nothing but Ransacker and a shepherd dog, neither of whom was likely to give the monarch a long or a hard run. But the former of his foes bore in his hands an implement that rules the world. The deer but saw the top of a soft hat which he could make out. The next instant there was a burst of flame and smoke, with a sharp explosion, that caused him to make his frantic leap into the little ravine.

Almost as instantly Shep started forward and had whisked out of view in pursuit before the wreath of smoke from the meat gun had cleared. There was the unmistakable sound of a deer bounding down the rocky ravine, with the dog in full cry close upon him. Muttering my disappointment as I threw a fresh cartridge into the gun, I sprang around a point of brush just in time to see a single dip of the white flag as it went over a rocky knoll upon the ridge opposite, the bearer of it rapidly distancing Shep over the broken ground.

Marking with my eye the course of the deer, where he disappeared, I took the shortest way across the ravine, finding without difficulty his tracks in the soft ground where there were no rocks. Following the tracks to the top of the ridge, I could then hear Shep crying as he ran, now half a mile distant. Worse than this, a close search of the ground did not show a drop of blood, nor was the quickness of the deer's departure any evidence that he had been wounded. I followed on, thinking the hunt for the day spoiled, but as a matter of principle determined to track the deer as long as there was a remote chance of his having been hit. I had taken a fair shot at him standing, not 75 yards distant, and I still insist that I carry a meat gun. However, twigs, deflected light and the instant movements of deer will sometimes swindle the best of us.

For half an hour I followed on the track. Every eight or ten feet the sharp toes of the deer had torn the ground. Every toe was in its proper place, as shown by the punctured soil. My hat would cover them all where a regular intervals they struck. There was no sign of blood, and the course of the deer around, instead of down the mountain, as well as the now distant and defeated bark of the dog, all attested the deer was unhurt.

In a quandary as to whether to continue the hunt by changing my course, I sat down to await the return of Shep, examine the sights of the meat gun, and wonder if there had been a bullet in the cartridge I had fired. If I could not hit a deer like that at such a distance there seemed little use in making a longer climb up the mountain. About the time I had decided to go home and sulk, Shep came back. His tongue was extended after his hard run, but, contrary to his custom, instead of coming to me after driving the deer out of the region, he gave a sharp bark, wagged his tail and kept on along the back track. More than this, there was such a satisfied expression upon his face, I thought I would follow and see what he meant. I saw him pass over again to the ravine where I had shot at the deer, while several times he halted to see what I was doing. "Thinks he will find another to chase," I muttered.

After he had time to reach the ravine and did not return I concluded to go over and see what new wrinkle he was working this time. It was a steep, hard climb again, directly away from the easiest way home. Half an hour and I had reached the spot opposite where I had fired from. Shortly I heard the movements of my erratic dog in the brushy part of the gulch. "He is fooling around the water," I said to myself, but as I wanted a drink, I clambered down. Shep was lying contentedly upon the leaves wagging his bushy tail as though he had done everything necessary. Ten feet from him, with antlers braced against the bushes, as though he was sleeping peacefully, there lay the biggest and best deer in the woods. He was shot through the heart, and had only made about two jumps after the meat gun had spoken.

Ever see a deer lying that way when you least expected it? Well, this one was as sleek as a mole, a five-pointer, and the only mark upon him was a punctured brisket that could only be discovered upon close examination. As he lay he would weigh nearly 200 pounds. He was too fat to skin easily, the tallow being nearly an inch thick on his ribs.

I sat down and communed with Shep, and tried conscientiously to figure out whether he was entitled to credit or blame, and I am not yet clear upon the point in this case. I do not think I would have found the deer without him, but I might. If not, then I might have found others. What business had he to break and follow the deer I had not shot at? I would have got both, perhaps; at any rate, I would not have gone climbing the rocky hill on his tracks. On the other hand, Shep might have argued that he found the deer, that it was not his fault if I didn't know when the deer was killed. How was he to know that the second deer might not be stopped also if he tried? Anyhow, he seemed to say, "There's your deer; that's all the meat we want."

When a deer is killed on a mountain the excitement ends and the sport is over. The work then stares a fellow of a placid disposition not only in the face, but out of countenance. This deer when dressed would be all I could lift, more than I could carry over such ground. I therefore decided to get Jim's horse and pack the deer in. Taking the head and horns and my gun, I went the short distance to the house, where fortunately I found the horse just in from the hills.

Jim's horse is one that everybody else had no use for, and he came by him naturally. He has had horses of a similar description for years. This one he calls Baldy, for no apparent reason, but it would make no difference what he might be called. Nobody but Jim would ever call him. Not by the same name twice, certainly.

Baldy was lounging against a fence, dreaming of his coltish days, when he must have followed some emigrant wagon across the plains before the war. His off front leg is comparatively sound, but notwithstanding this disadvantage to the rest of his anatomy, he maintains a good digestion, and can get over the ground if he has all the time there is. He is supposed to pack anything that he can carry, and is as gentle as a lamb—even as a dead one.

I put a pack saddle upon Baldy, and eventually got him up to where the deer was. I led the horse into the ravine and dragged the deer to the bank above him. He stood like a saw-buck as I lifted the deer to his back and had it almost into the saddle. At about that time the deer and myself became intimately associated in the hazardous enterprise of sliding down the rocky bank, while in the confusion I believe that aged and docile steed stood on his sound leg and kicked with his other three. Together with the deer I got down into the gully, while the horse got out of it on to the bank. In the entertainment in which we participated the horse seemed to think he had done everything necessary, and he then assumed his customary attitude, resting upon his straight leg, awaiting further opportunity very patiently.

In our mix-up and rapid change of positions, the deer had been some protection, and I was not kicked by the talented old fraud, who I could see had, as he thought, every reason to congratulate himself. When he saw me emerge from the gully and regain a hold on his halter he had a startled expression upon his face. I fastened him to a tree, and he thereupon hung back and shut his eyes in anticipation of the laming he deserved. There was a surprise in store for him, for I never touched him. It would have been a waste of time and labor. I dressed and quartered the deer, put it in sacks and burlap brought along, and took the noble equine into the gully again, blindfolded him, and then fastened the deer to the saddle piece by piece. I then led him out of the ravine, and he leisurely made his way home without further attention than a pebble tossed at him now and then to keep him awake.

As a matter of course, my dog Shep was actively engaged at all times, as he never misses a trip. He hunted up the striped terror of the rocks, and had a strictly business interview with that creature. I did not see the result, nor hear the discussion, but there is no question about its having taken place.

RANSACKER.

SHASTA MOUNTAINS, Cal., November.

The Bitter and the Sweet.

SOME weeks ago the New York daily papers contained accounts of the killing of an eagle near Tremont. The slayer of the eagle—which is, of course, a protected bird—was duly located by Mr. J. E. Overton, the game and fish protector, and he recently came to the office of the Forest, Fish and Game Commission in New York and paid \$25 in settlement of his offense against the law.

The "eagle" proved to be a turkey buzzard (*Cathartes aura*), a species quite unusual in this vicinity, though occurring more frequently in New Jersey and to the southward. Turkey buzzards are commonly protected all over the country.

Frank W. Bruns, who was arrested last May by Mr. Overton for selling game out of season, has, it is understood, settled for his offense by paying to the Forest, Fish and Game Commission the sum of \$650. This must represent the profits made on quite a lot of illegal game,

Faithful Fido.

Two Englishmen were speaking with me quite recently about the supernatural, and in the course of conversation we referred to the number of English country houses that are said to be haunted. We agreed that the number of those so favored seems out of all proportion to the remnant to which no uncanny suspicion attaches. But my friends assured me that ghosts are rated at a premium "on the other side," so that, far from being a detriment, an active and well-attested apparition rather enhances the value of the mansion that chances to be the theater of his operations, and that the purchaser of an English country house is apt to pay for it in inverse ratio to his chances of sleeping unmolested under its roof.

It will be seen that we treated the subject in a jocular vein from a high plane of skepticism. I had had glimpses before, however, of the dregs of superstition that lurk at the bottom of every true skeptic's heart, so I determined to sift my Englishmen, each separate and away from his fellow, pan out his hidden faith and crow over him in my own esteem. A few artful questions drew from the elder man a confession of an uncomfortable night spent in a lonely wing of some great house, in company with most unaccountable rappings. He added that his account of the phenomenon, the next morning at breakfast, was received by his host with evident satisfaction and the airy assurance that everybody who slept in that wing heard the same rappings.

I now turned to the younger man. He began by saying that of course it was all rot, "but," he added with a jolly British laugh, "if I have not seen a ghost, my dog has. It happened this way, you know: My people took a house down in Surrey one season, while our place was being done over. I had not heard a word about its being haunted, but I found out afterward there was a spot in the hall, just in front of the big fireplace, that no animal could be induced to cross. They say a murder was committed there, and a body hidden under the flags. Well, the first morning I ran downstairs, with my white bull-terrier Grip at my heels and crossed the hall to go out at the side door. Grip was not beside me, so I whistled to him and looked back to see where he was. There he stood in the middle of the hall, staring at one spot, his hair on end and trembling all over. He would not pay the slightest attention to me, and seemed dazed. I caught him by the collar and tried to pull him along, but he pulled back, and fought me so that he slipped his collar, and making a wide circuit dashed out of the door, as if the devil was after him."

"Did he ever cross the spot?" I asked.

"Well, I don't think he ever did; but I was but a lad at the time, and too careless to pay much attention to such things—besides, it is all such awful rot, you know!"

I was about to agree with him, when a sudden recollection flashed across my mind, and I held my peace. It is easy to laugh at other people's ghosts, but when one has crossed our own path, or even strayed across that of a near relative, they somehow appear less grotesque. This is what the experience of the Englishman's dog had brought back to my mind.

A number of years before I had lived with my parents in Paris. Among their friends was a young American widow of great beauty and some wealth. She, with her parents, had just come to Paris, and while they knew many of the members of the English and American colonies, they had but slight acquaintance among the natives. A conspicuous exception was the Count de C., a middle-aged Frenchman, the head of an ancient but impoverished Breton house, of which he and a brother were the sole representatives. Both had been educated in England, where the younger had taken orders in the church and become incumbent of the English chapel in a Continental town.

The elder brother, being a cultivated and charming man, these qualities, together with his blood and title, made him an acceptable suitor for the widow's hand in the eyes of her parents. Whether the daughter shared her parents' views is left in doubt by the sequel, but at least she did not discourage the Count's attentions, which became more marked as the winter progressed. Toward spring the Americans accepted his urgent invitation to visit his ancestral chateau in Brittany. They found this to be a grim-looking pile, built of the native granite, and standing on a wild and storm-swept coast.

Inside, however, it was comfortable enough, and a certain air of faded grandeur was not without its effect upon their American susceptibilities. A retinue of more or less ancient retainers had aired, warmed and made habitable the vast salons and bedrooms for their master and his guests, so that after a good dinner, washed down with the contents of a couple of cobwebbed bottles (for the Count was, among other things, a gourmet of delicate discernment), the house party gathered in the drawing room, where a roaring fire of driftwood cast a cheerful glow over ponderous furniture, dim tapestries and numerous portraits of departed de C.'s. Music whiled away the hours till bedtime, for the young American, among her charms, numbered that of a sweet voice, while the Count could warble his share of a duet in a very decent baritone.

The Count's guests retired early, being tired from a long day's journey, and as they mounted the draughty stairs and threaded the echoing corridors in search of their rooms, the contrast between the cheerful apartment they had just left and the cheerless labyrinths of the upper floors of the house sent a chill to their hearts. The young American was conscious of a little shiver down the backbone, due, in part, to cold, but more to nervousness; but she followed the old Breton woman who carried her candle, along an endless corridor to the room that had been allotted to her. Here she found her maid, her boxes and her pet dog, and these familiar adjuncts dispelled the last traces of her vague alarm. Drawing the heavy bolts that secured her door, she bade her maid light every candle in the sconces and proceeded to examine her lodging for the night. It was an enormous room. Chests of carved black oak decorated the four corners, and furniture of a rigid and mediæval aspect was dotted sparsely in between. At the further end, some logs crackled in a monumental fireplace, and above it hung a portrait of a young woman dressed in the fashion of about twenty years back. The widow knew that the Count de C. was a widower, his wife having died about fifteen years before, and she felt sure that this must be her portrait, and that the room in which she stood had been that lady's

own. An uneasy feeling of intrusion crept over her, as the eyes of the portrait followed her about, and her own explored the cavernous depths of the four-posted edifice that occupied the center of the room. The aspect of this bed was not reassuring, and she doubted if the former occupant of its grandeur could ever have slept very lightly under the gloomy catafalque of crimson brocade surmounted by the arms of the de C.'s in tarnished gilt. It was the very largest bed she had ever seen, and she wondered whether she could ever find herself again in the morning if she ventured into its unknown depths. The thought even crossed her mind of not going to bed at all, but sitting up in a chair all night, and the absurdity of her imagined self nodding in a stiff-backed chair of most uncompromising angles, while a vast feather bed yawned to receive her, made her laugh aloud.

At the sound of her laugh her little Skye terrier, that had been moping in a corner, sprang upon her knees, pleading to be caressed. Why, there was Fido, her faithful little Fido! He should sleep on the counterpane at her feet, and guard her from the approach of all the ghosts and spooks, and "loups-garous" in Brittany! Besides, was not Marie, her maid, to sleep in the adjoining room? What a little fool she was to give way to nerves! So, with another laugh at her idle fears, and a good night curtsey to the portrait of the late Countess, she climbed into the grim four-poster, settled Fido at her feet, and bade Marie blow out the candles. The dying fire in the grate cast sheer shadows on the ceiling, so, to shut them out, she closed her eyes and was soon fast asleep. How long afterward it was she could not tell, that she was awakened by a low, unearthly wail. A startled glance about the room showed her that the fire was out, and all lay in darkness. The wail came again, and she ducked her head under the bedclothes to shut out the horrid sound. Again and again it came, each time more blood-curdling, till something familiarly canine in its notes disclosed to her that the ghostly sounds emanated from her own, her faithful Fido. The maid, meanwhile, awakened by the midnight solo, came hurriedly in, with a candle, and both women gazed helplessly at the melancholy little dog. The candle light brought him no comfort, for he jumped down off the bed, sat in the middle of the floor, and lifted his voice in renewed lamentation. His mistress, being resourceful little person in the presence of the actual, shook off her fears, gathered Fido in her arms and proceeded to rub his stomach, while she ordered her maid to fetch hot water for compresses.

"He has eaten too many bonbons, Marie, and he suffers a pain in his poor little stomach. I felt sure he would be made ill with petting, when he was brought down to dessert this evening!"

But neither rubbing nor compresses, nor even unlimited caressing availed to restore Fido's peace of mind, although the paroxysms of his howls grew less frequent as the night wore on.

Morning found his mistress and her maid still striving to soothe his pain, which appeared, however, to subside as breakfast time approached.

Both women were tired out, and Fido's mistress would gladly have turned in for a morning's nap, even on the scene of her late alarms. But courtesy to her host forbade a late appearance at breakfast, and more than a laughing allusion to Fido's indisposition brought on, presumably, by too many sweets. The day brought drives to points of interest in the neighborhood, another exquisite dinner, and an evening of renewed duets, during which the attentions and delicate flattery of her host chased from the fair widow's mind the anticipation of another night in the ill-omened bed of the deceased Countess. Bedtime came, however, and the old Breton serving woman and her candlestick. A vague oppression weighed on the spirits of the little widow as she contemplated another night with only Fido's unstable support. But she felt little apprehension of disturbance on his part, as he had passed the day in rigid fasting, only relieved by a saucer full of warm milk, and, her own eyes being heavy with lack of sleep, she trusted that she, the maid and the dog would sleep like tops till morning.

She reckoned without Fido. At the stroke of 12 that faithful animal sat up on his haunches and emitted a howl that caused his mistress to leap from her bed, and the maid to rush to the rescue. This time it was no plaintive wailing, but howls and yells that rent the welkin and froze the marrow in the bones of his two trembling auditors. Bonbons could not account for it, for he had not had one all day. No, it was not on his stomach, but on his mind, that the trouble lay. Fear is catching, and the panic that evidently oppressed the dog's soul infected the two women. They drew close together, and peered into the shadowy corners of the room. The little widow glanced furtively at the portrait over the mantle shelf, and it seemed to her excited imagination that a sinister smile played about the lips of the late Countess de C.

The weird howls of the dog continued at intervals through all the hours of darkness, till at dawn he fell, exhausted, into an uneasy sleep. At breakfast the haggard looks of his guest aroused the Count's attention, but, fearing to hurt his feelings by a true account of the events of the night, she pleaded a headache, which would serve to account for her languor and lack of response to his efforts to amuse her. For the thought of another night to pass under his roof weighed upon her like a nightmare.

When evening came she played and sang with desperate persistence, although her head ached in all sincerity, and even proposed a rubber at whist (a game she abhorred) that might postpone as long as possible the dreaded bedtime hour.

It came at last, as all things must, and with a heart like lead, the poor little woman retired to her room. Had pride permitted, she would have begged to be given another, but that would have necessitated an explanation from which she shrank. She had thought, though, of a way to mitigate the coming ordeal. Her maid should share her bed. Fear had broken down the barriers of caste, and besides, the dreadful bed was so wide, that from opposite sides their outstretched arms could scarcely meet and touch finger tips.

Faithful to his trust, as the hour of midnight struck, Fido sat up and howled. He howled with but slight intermission, until dawn streaked the east. Mistress and maid clung to each other, all considerations thrown to the winds but the craving for human companionship, alternately laughing and crying as the absurdity or the hor-

ror of the situation forced itself upon their minds.

At dawn the American awoke and told her maid to pack her boxes, as nothing could induce her to spend another night under the Count's roof.

The caprice of a pretty woman who longs for her dear Paris served as well as it might to cloak her evident desire to get away, and her parents, who were beginning to tire of drives to owl and bat haunted ruins, and even the Count himself, who, perhaps, felt the strain of separation from the boulevards, opposed no obstacles to the gratification of her whim.

Back again in Paris the Count continued his assiduities, and Fido might have howled in vain had not the noise of his lamentations, confided by the pretty widow to a bosom friend, reached, through her, the ears of the whole American colony.

There was at that time a little club, or rendezvous, in the office or reading rooms of Galignani's Messenger (if I remember rightly) frequented chiefly by English and Americans, who met to hear and discuss the latest news from home, as well as the latest gossip from anywhere. It happened that my father dropped in one day, as a fellow habitué was finishing an amusing account of the Count's ill-starred hospitality. My father, feeling some annoyance that his friend's affairs should be so discussed, growled out his mind and subsided behind his Messenger. A Frenchman whom he had noticed glancing at him over the top of his paper now approached, introduced himself and said that, as my father seemed to be a friend of the American family in question, he, as a lover of fair play, invited him to direct the attention of the lady's father or other male relative to the records of the Court of Assizes held at a certain town in Brittany on a certain date fifteen years back, where they would doubtless find something to interest them. He then saluted my father, turned on his heel and walked out.

My father was, at first, inclined to regard the mysterious warning as an effort at wit of a practical joker carrying the ghostly tale to a logical conclusion, but the longer he thought the odder the warning, and the Frenchman's manner of giving it appeared. The whole haunting business began to haunt him, and to lay the ghost he laid the matter before the American widow's father. The latter was impressed, and asked my father to accompany him to the town mentioned by the Frenchman. There they looked up the records at the date indicated, and found that in the year 18—, fifteen years before, the Count de C. had been indicted and tried for the murder of his wife through the administration of slow poison at his chateau in Brittany. The trial had ended in an acquittal. Further research showed that while every step in the accusation had been proved against him, almost beyond doubt, his acquittal had been effected through the pressure of his family's influence in that part of Brittany, at the cost of the greater part of his fortune. The pretty widow soon after found a more congenial mate, in a plain, untitled fellow countryman, while Fido lived and flourished to a green old age in the sunshine of their gratitude and affection.

M. M.

Casey's Wildcat.

BY FRANCIS MOONAN.

Thrice the brindled cat hath mewed.

—Shakespeare.

It was Christmas Eve. Jake Kümmelwasser sat in his favorite chair reading the paper, while Wirt Zaender sat over against him, chewing tobacco and immersed in thought, apparently, as usual. Jake's dog, Sausage (a dachshund imported from the Vaterland, and named by Tim Mulcahy), was cuddled up at his master's feet, the cat (between whom and Sausage a truce had long been declared) was cuddled up at the feet of Wirt, and the canary slept with its head under its wing. The kettle sang on the stove.

Inside in the kitchen Mrs. Kümmelwasser bustled about, preparing the supper, beefsteak and onions, no less, in honor of the day. On ordinary occasions "scrap-ple" or "panne haase" would have constituted the evening meal, and right thankful the boarders were for that, being usually hungry as wolves in winter.

As the odor of the beefsteak and onions (than which to the great mass of humanity there is nothing half so exciting to the nerves of appetite) began to float through the kitchen door, tears of joyous expectancy actually rose to Wirt's eyes, then he ground his teeth and pressed his hands together, as if trying to control himself. Jake showed his emotion by merely breathing more deeply and making occasional little gurgling noises in his throat.

But where was Tim Mulcahy? If echo did not answer Where? something akin to echo seemed to answer, Here! In fact, Tim was fast asleep on the settle bed, snoring blissfully after a laborious day cleaning his gun and smoking his pipe.

"Donner und blitz! how dot man schnores," said Jake, putting down his paper and removing his spectacles. "Tim—Tim, do you want to sour der milk? Wake up, man—wake up!"

For all answer to this appeal Tim emitted a snort that would have done credit to an untamed mustang. "I vunder if he schnored like dot when he mit der bear schlept?" continued Jake, recalling a story in which Tim averred that one bitter night he lay alongside of a bear on the mountains.

Wirt paid no attention. He seemed to be wholly absorbed in the subject of the beefsteak and onions. Presently the odor of these became so strong that even the sleeper was affected by it. He ceased snoring, smacked his lips several times and then threw up his hands with a yawn, accompanied by the exclamation: "Yow-yow-yow-ugh!" Sniffing the air he continued: "What's this I smell? Beefsteak and onions! Am I awake, or do I still dhrame?"

As if by answer to this question, Mrs. Kümmelwasser threw wide the kitchen door, which had been ajar, and exclaimed in a shrill voice: "Soo-per!"

With one bound Tim was off the settle bed and at the kitchen door, but quick as he was Wirt was quicker, and led the procession to the supper table. This was spread at one end of the kitchen and presented a sight well calculated to arouse the enthusiasm of Wirt and Tim.

At the head of the table sat an immense dish filled with beefsteak "smothered" in onions. At the foot sat another immense dish filled with "smoking murphies

with their jackets off," as Tim expressed it. In the center sat a great earthenware pitcher filled with flaming beer. Around the table, of course, were set plates, with knives and forks and glasses. Mrs. Kummelwasser presided with carving knife and fork in her hands. "Setzen sie sich. Sie sind willkommen," she observed with great affability, as if playing the hostess instead of the landlady, incited thereto no doubt by the unwonted character of the spread.

Wirt and Tim did not require to be told twice.

"Bedad, ma'am," said Tim, "this is a great thrate."

"Ya," assented the lady, with candor; "vat you call it, luxury-ness—ain'd it?"

"Looxuriance," corrected Tim, who among these "Pennsylvania Dootch," as he called them, prided himself not a little on his knowledge of English.

Wirt kept his eyes riveted on the dish at the head of the table, and had no time for idle remarks.

Jake now waddled in and took his seat at the foot of the table, with the exclamation:

"Ha! vat you say, Tim—vat you say, Wirt?"

"It's all right," answered Tim, "all right."

Wirt turned his head for one brief instant to smile beatifically at the speaker, and then resumed his jealous gaze upon the beefsteak and onions. He seemed to be in mortal fear that it would be spirited away or somehow escape him.

Once Mrs. Kummelwasser began to carve it did not take her long to put her guests in the way of doing business, so to speak.

After all plates had been filled, complete silence reigned for awhile—that is to say, there was no conversation, though there was a fearful clatter of knives and forks and other sounds incidental to feasting. At length Jake having taken the edge off his appetite, asked Tim: "Did you effer git beefsteaks in Ireland alretty, Tim?"

"Beefsteaks in Ireland, did you say? Why, man, they grow on the bushes in Ireland!"

"Dey must be pooty tough, Tim," said Jake, with a twinkle in his eye.

"Some av thim," answered Tim, "but we sind thim to Germany, where they fetch a high price."

With merry passages like this the supper proceeded. Wirt never joined in, devoting himself strictly to business. In the quantity of food he got away with, he surpassed himself, and that is saying much; yet it is doubtful whether he really enjoyed it, seeing that while his desire was boundless his capacity was limited. It may be questioned here by some epicurean philosopher whether a man can continue to desire food after he has filled himself; we know not how this may be generally, but we are quite sure that Wirt's desire was as insatiable as the sea.

Gradually the edibles melted away, till there were only a few potatoes left. It is needless to say also that the beer was not neglected. When the last of this had been consumed the convives lay back in their chairs in a state of perfect contentment—all, that is, except Wirt, who sat upright, regarding the empty dishes with a mournful expression.

At the suggestion of Mrs. Kummelwasser a move was made for the bar, where the three friends took their customary seats around the stove. The kettle was still steaming and singing, which caused Tim to remark: "Look at all that fine wather escapin' in shteam—ain't it a pity?"

Jake understood the hint, and in a surprisingly short time had mixed three smoking glasses of rum, finely flavored with cloves, and passed them round. Tim drained his glass without much ceremony, then filled his old clay pipe (the which he would swear he preferred to the best cigar in the world), lit it and took the cat on his knee.

"Did I ever tell yez the story of Casey's wildcat?" he said, regarding his companions.

Jake answered, "Neim—I don't recollection," while Wirt shook his head.

"Well, that's strange, bekase the story's a remarkable one. But better late than never. You must know, thim, that I had a frind av the name av Casey whin I boarded at the Widdy O'Rafferty's. He was marrit and lived a little ways out on the swamp road; a dacent, honest, simple crayture. One mornin' he comes to me in a great state of excitement and says, says he: 'Tim, there's wild geese in the swamp.' 'Well, and fwat av it?' says I. 'Ain't they got a right to be there?' 'To be sure,' says he, 'but I've been thinkin' that mebbe you might like to go gunnin' for them.' 'Casey,' says I, 'I've somethin' else to do besides goin' on a wild goose chase.' 'Fwat?' says he, 'are you goin' aither deer?' 'I'm not,' says I; 'I'm goin' to work.' 'Well, thim,' says he, 'mebbe you might be ather lindin' me your gun?' 'Fwat for?' says I. 'Fwhy, to shoot one av the geese, av course,' says he. 'Fwhin I heard him say this I thought I'h have died laughin'. 'Fwhat are you laughin' at?' says he. 'Oh, at a little reminbrance,' says I. 'Well,' says he, 'gettin' a bit hot, 'will you or won't you lind me the gun?' I didn't want to offend him, for he was my frind, as I said, and besides the humor av the thing took me. 'Casey,' says I, 'I'll lind you the gun on one condition.' 'Fwat's that?' says he—'that I'll give you one of the geese if I shoot two?' 'No,' says I, 'thryin' to keep myself from explodin' agin, 'it's not that, Casey, but it's this: That you won't hould me responsible for accidents.' 'Tim, do you mane to insult me?' says he; 'do you take me for a kid?'

"Wid that I gev him the gun, though my conscience troubled me. And all the mornin' as I wint about my work I couldn't keep out av me head the thought av Casey brought home on a litter. And I imagined I heard the lamintin's and upbraidin's av his widdy and the cries av his poor orphan childer. 'Tim,' says I to myself, 'you're little short av a murderer. You're sartinly a fool. Fwat business had you puttin' a deadly weapon in the hands of that overgrown child? His blood'll be upon your head.'

"I got so worked up that I quit in the athernoon and decided to go in sarch av Casey. I first called at his house. He wasn't there, and his wife knew nothin' av him. I thim wint down to the swamp and began whistlin' wid my fingers in my mouth, and hollerin' 'Casey!' but the only answer I got was the cawin' av an auld carr'on crow that was perched on a blasted pine. I whistled and hollered till I was black in the face, but no sign av Casey. Thim I had a thought that made me heart lep into me mouth. Fwat makes that auld carr'on

crow sit there? I thought: fwat ain't she scared? It's around there somewhere 'll be Casey's dead body! And agin I heard the lamintin's and upbraidin's av the widdy and the cries av the orphan childer. 'Tim,' says I, 'if you don't swing for your part in this day's doin's it won't be bekase you don't deserve it.' Wid a heavy heart, thim, I set out to explore, and left no part of the swamp unsarched. Several times I kem near bein' swallowed up in a hole, but me sure footin' (for as I often tould yez I was born in the bog av Willkinstown) saved me. I had me pains for me labor. Not a thrace av Casey high or low. This gev me a little hope, but thim agin I reflected that though I din't get swallowed up he might have. 'The miserable eejit,' says I; 'sure he hadn't sinse enough to know a bog hole from a mountain!' Though I said this I felt sore at heart for him, for he was me frind, and whin I thought av the widdy and orphans I was ready to wring me hands.

"By and by night began to come on—black and dismal, boys, like a funeral over the mountains—so I gev up me sarch and turned for home. There was a bare chance left that Casey wint into the woods, but I couldn't bring myself to believe it, for I knew that the poor man had a mortal fear av bears. I passed his house on me way back and saw the woman at the dure, nursin' her youngest child and lookin' anxious. 'Good evenin', Mrs. Casey,' says I, 'has Mike come home yet?' 'No,' says she, 'and I'm afear'd that some harm has come to him. Oh, Tim, Tim, fwat did you lind him that gun?' 'Don't be alarmed, ma'am,' says I, 'thryin' to give the crayture the courage I didn't feel. 'He'll turn up all right. I guess.' I couldn't bear to stand there watchin' her sufferin', so I left her, sayin' I was goin' down to the village to make inquiries. I met two or three min who'd been in the woods and asked thim if they'd seen anythin' av Casey, but they said no, so I wint home, feelin' that it was all over wid him.

"I couldn't ate any supper, and hung around the dure outside. The night was fine, wid a bright moon sailin' in and out among the clouds. I could hear an owl cryin' on the mountains, and it sounded like the banshee. Back'ards and for'ards I walked before the dure thryin' to console meself wid the pipe, but I felt too much like a murderer to dhraw consolation from anythin'. The widdy (Mrs. O'Rafferty, I mane), the kind sowl, kem out more than once to coax me in for a bite, but, 'No, ma'am,' says I, 'I don't deserve bite or sup. I don't deserve to live. It's ather murderin' me frind I am,' says I. Av course she knew all about it, so she only tould me to talk sinse and hope for the best.

"Along towards 9 o'clock just as the moon kem out from behind a cloud, I thought I seen a figure comin' up the road that looked like Casey, only it was half white. 'It's his ghost,' says I, and began to thrimble. In a minute the figure disappeared, as the moon wint behind a cloud. But whin the moon kem out agin I seen the figure not twinty yards away bearin' down on me. Me hair stood on ind, and I tried to cry out, but me vice failed me. Naythur could I stir from the spot where I was, but stood there like a man frozen stiff.

"Prisently up walks the figure and thim I knew it was Casey, sure enough. He had his coat off and carried me gun on his shoulder.

"'Good evenin', Tim,' says he, 'I've brought back your gun and thank you kindly. I had a grand day.'

"Whin I heard the sound av his vice I knew all was right, and me first impulse was to fling me arms around him, but I restrained meself, remimberin' the fright he gev me, and didn't show him any welkum.

"'Fwhy don't you spake?' says he.

"'I see no occasion,' says I, 'for a flow of language.'

"'You're mad,' says he, 'bekase I didn't bring you the goose?'

"'Fwat goose?' says I.

"'The wild goose,' says he.

"'Oh, the wild goose,' says I. 'To be sure. I suppose the gun missed fire, or didn't carry far enough.'

"'None av your jibes, Tim,' says he, kind of sassy. 'If I didn't shoot the goose I did somethin' that mebbe our cilibrated woodsmen mightn't be ather doin'.'

"'And, masha, fwat was that?' says I.

"'I got a wildcat,' says he. 'So there's for you, Tim Mulcahy.'

"'You got a wildcat,' says I. 'Shot her, you mane?'

"'No,' says he. 'I caught her!'

"'You caught her!' says I. 'Alive?'

"'Alive!' says he. 'But she tore the coat av me back.'

"'At this I thought the man had gone crazy.'

"'Casey,' says I, 'come into the light till I have a look at you.'

"We entered the house, where the widdy was sated at the fire wid a few av the boys. They all jumped up and shook hands wid Casey and congratulated him on his deliverance.

"'Fwat the divil sort av a joke is this?' says he.

"I thought it proper to explain the situation to him, but he only seemed the more offended.

"'Tim,' says he, 'you're always thratin' me as if I was a kid, and I won't have it. Mebbe,' says he, scornful as you plaze, 'a kid could go into the woods and ketch a wildcat!'

"'Casey, me poor man,' says I, frekkened for him, 'you need to go to bed and rest. You'll feel betther to-morrow.'

"'Fwat do you mane?' says he. 'Is it thryin' to guy you are?'

"Now, my idee was that he'd screwed up his courage and gone into the woods, where he seen a wildcat and got frekkened out av his sinses. So I detarmined to humor him.

"'Casey,' says I, thim, 'don't get excited. For fwat should we guy you? Sure we're all your frinds. Tell us about the wildcat. How did you ketch her?'

"'Well,' says he, wid a snap, 'I overpowered her, if you want to know.' And not another word could we get out av him, except that the cat was at home in the chicken coop, where any one that liked could see her.

"Wid that he started for home and us ather him—the widdy comin', too, to comfort the poor wife, for we all thought the man was ravin' mad.

"Whin we rached the house, 'Hould on,' says Casey, till I get the lantern.' 'Now, Casey,' says I, 'fwat's the use? We know the cat's there, so come along in like a good man and go to bed. In troth, you need a rest

after your hard day thrampin' in the woods, not to spake av your encounther wid the cat.' 'But,' says he, 'I want yez to see for yourselves. I don't want no jokes about this matter hereafter.' 'Oh, all right,' says I, beginnin' to be a bit puzzled, 'get the lantern.'

"Fwat could it all mane? It was ividint the man had caught somethin', but fwat? Curiosity sayzed on us all.

"In a little while Casey returned with the lantern, and led us round to the back av the house, where the chicken coop was. Whin I stood fornist it me heart began to bate, but I took a long breath and thried to contrhol meself.

"'Hould down the light,' says I.

"Casey held down the light and there in the corner av the coop was a cat sure enough—but such a cat—the misherablest lookin' object—mere skin and bone and all covered wid scratches and mud.

"'Oh, dear, oh, dear!' says I. 'The poor crayture!'

"'Let me look,' says the widdy, who'd hung back, afear'd.

"I made way for her, and took the light from Casey. As soon as the widdy put her face to the coop the cat jumped up and began to me-aw and rub her sides agin the wires.

"'The saints presarve us!' cried the widdy, claspin' her hands. Thim lookin' up at Casey, says she: 'Mr. Casey, did I undershtand you to say that you overpowered that cat?' 'Yis, ma'am,' says he. 'Thruly,' says she, 'you're a wonderful hunter.' 'Fwat do you mane, ma'am?' says he, misdoubtin' her accent. 'I mane,' says she, 'that you've overpowered me poor auld Tom that's been lost in the woods and is as tame—as tame as yourself, Mr. Casey,' says she.

"'You're mistaken, ma'am,' says he, but the bouldness had left his vice. 'Any cat that could fight like that must be wild!'

"'Fight like that!' cried the widdy, repatin' him. 'Gintlemin, look at the fighter! Mr. Casey,' says she, 'I'm tould you wint out gunnin' for wild geese. You're lucky that somebody didn't mistake you for one! Come, open the dure and let out me cat!'

"'Poor Casey! I was his frind, and I felt sorry for him. But, Lord, boys, how we did laugh!'

And as Tim said this he leaned back in his chair and laughed reminiscently.

"'I suspicion,' said Jake, 'der ket followed Casey home?'

"'I never could find out,' answered Tim. 'It was always a sore subject wid Casey. But me thary is, that Casey kem upon the cat ready to give up the ghost, as we say, and not doubtin' it was a wild one—for the man was as innocent as a child about everythin' pertainin' to the woods—not doubtin', I say, it was wild thought it a grand chance to redeem his reputation for havin' missed the geese, and so threw his coat over it and fetched it home. But it may be that you're right, Jake, and that Casey's a bigger liar than I thought. Anyhow, I'll freely admit that a gun, or a fishin' rod in the hands av a fool has a very demoralizin' effect.'

"'Ya, ya,' assented Jake, with several wags of the head. 'Dot remembers me, when I pelonged to der schuetzen verein—'

When Wirt, who had been all attention during Tim's story, heard his landlord beginning thus he promptly half filled his mouth with tobacco, stretched out his feet and leaned his head on the back of his chair.

Tim also got into a more restful position, with his hands joined across his stomach, but in his civil way he remarked, though a little wearily, "Go on, Jake—I'm listenin'."

Jake immediately, with great earnestness and volubility, and a world of gesture, began to tell one of his stories about the immortal schuetzen verein. For ten or fifteen minutes he kept on, every minute becoming more absorbed and energetic; then he suddenly stopped short and observed his audience. Both were sound asleep.

Jake gave a snort of disgust.

"Werfe nicht deine Perlen vor die Schweine (cast not your pearls before swine)," he said, sententiously, and getting up went behind the bar.

A Bull Moose in Camp.

PORTLAND, Me., Dec. 11.—I was called from my camp one afternoon during my Maine vacation in October last by my guide, who was calling, "Get your camera." On going out upon the piazza I saw a good sized spikehorn bull moose, standing contentedly about forty yards from the door, between us and the river, in the position shown in the photograph. I went back into the camp, got my camera, set it up on the tripod on the piazza, focussed it, and made a two-second exposure, all the time expecting to see the subject make a break, and spoil my "sitting." But he acted as if he wanted another trial, and seemed in no hurry to leave. After a few minutes he turned deliberately, went through the bushes and down the bank as though intending to cross the river. Instead of so doing he returned and deliberately walked up to within twenty-five yards of the piazza where we were standing, undisturbed by our movements or conversation, or the antics of a couple of pet cats in the door yard. Having satisfied his curiosity, he strolled slowly down the tote road, occasionally stopping to look back. As down river was in the direction of possible danger for even so young a moose as he, my guide circled around to get in front of him and drive him back over the ridge behind the camp. This was finally accomplished only by much waving of hats and throwing of clubs, much as one might drive a neighbor's cow out of one's garden.

His behavior would not have been unusual in August, or even in early September, but for late October, in a region where there was much hunting of an extremely noisy variety it seemed a curious freak.

Had I been sure of his apparent willingness to contribute to the success of amateur photography, I might have been tempted to try for a profile, but I have no reason to find fault with such opportunity as I had. The day was lowering, with occasional rain, and the time about half-past two in the afternoon.

Natural History

Wallihan's "Camera Shots" a Thing of Beauty.

I ARRIVED this Sunday morning from Chicago, and stopping at my office I found upon my desk a copy of Wallihan's "Camera Shots at Big Game," and took it home with me.

It is said of Stevenson's "Treasure Island" that the late Mr. Gladstone became so engrossed in its contents that he actually sat up the entire night until he had finished the book, refusing the entreaties of his family to "wait until to-morrow." And I'll wager it will so prove with every sportsman and lover of nature who peruses Wallihan's wonderful production. I certainly did my best to resist the alluring dinner signal and keep to my book, so engrossed was I in its pages, and I only laid down the work temporarily to keep peace in the family.

What the book cost the author in labor, patience and perseverance no one can ever know. The antlered halls of the mightiest of hunters can show no such trophies as Mr. Wallihan has brought down with his wonderful camera. The frontispiece may be called a masterpiece in wild animal photography. A cougar is photographed in mid air in the very act of springing from a tree at the man with the camera, actually landing within six feet of him! The gigantic cat, with tail standing straight up from the moving body, ears erect and front paws slightly extended, with claws set for a deadly embrace, gazes intently upon the object of its attack as it moves swiftly through the air.

What might have happened to "the artist on the spot" had not the pack of hounds given tongue the moment the animal left the tree to swiftly come upon the place where it alighted, I will not attempt to say, but certainly Mr. Wallihan's weapon of defense in the shape of a penknife would have availed him little. But the cougar feared the dogs and instantly forgot all about the man as it made tracks for the open, only to be overtaken by the hounds. Slipping in a new slide, Wallihan hurries to the fray, and got a snapshot when things were most interesting, and before the dogs had stretched their foe lifeless.

If a photographer ever succeeded in getting action and life upon a plate, Wallihan has in this photograph of a leaping cougar.

Theodore Roosevelt, who knows a thing or two about cougars, elk, bear, etc., writes the introduction. In speaking of hunting with the camera and in hunting with the rifle he says: "Of the two the former is the kind of sport which calls for the higher degree of skill, patience, resolution and knowledge of the life history of the animal sought." And when one sees the result of Mr. Wallihan's work he must admit that he possesses the above qualifications in almost unlimited quantities.

To attempt to describe the plates in the book seems almost sacrilegious. The eye and not words should be the medium.

"A surprised band" of deer in the open; another band of deer crossing the stream, "deer drinking," in fact, deer under any and every condition and surroundings are depicted upon these plates. "Deer crossing the river at night" makes one think of an etching by Rembrandt, with its deep shadows and faint reliefs.

Bucks in the velvet photographed in the cover, and bucks in all their antlered glory are shown.

"A hiding fawn" is depicted, and although every surrounding twig, branch and the tree trunk is photographed with most wonderful clearness, yet is the fawn far from being conspicuous. It takes a glance or two to locate the position of the strange object in the foreground, and then you can not swear that it is a fawn. When the mother doe warned it to go away back and lie down it certainly obeyed instructions.

When one considers that many exposures were made at a distance not exceeding twenty-five feet from the object, it is only natural to ask, "How did he do it?"

"A pair of elk" stand out so clearly upon the snow-covered incline 100 yards distant that one is tempted to try a shot at them. Another fawn has been caught by the camera hiding in the shallow growth. The timid animal lies there trembling, awaiting its fate, too frightened to run away.

Six hundred elk are shown upon the snow-covered plain. Then upon a hill several antelope stand out in bold relief against the sky line, and later on this same band of antelope seem to be curiously interested in the camera, for they are taken head on and not many yards away. A band of mountain sheep feeding upon the scanty growth upon the mountain side within easy shooting distance would seem to speak wonders in skill on Mr. Wallihan's part, when we appreciate the elusiveness of these animals. A mountain sheep, an old ram, not more than perhaps fifty yards away, again makes one marvel. I am skipping through the book, not attempting to notice every plate.

A cougar in a snow-clad tree is not found at first glance, but there he is, close up to the trunk of the tree and partly hidden by a protruding branch. And again we see Mr. Cougar perched in the topmost branches of a tree cying the hound that has climbed the tree and is but a few feet away. A cougar hound will follow its quarry even if it must climb a tree. Another cougar, surrounded by hounds, rests upon its haunches and yeowls and spits, and the dogs hesitate about closing in.

A wildcat at the very top of a blasted tree and the hound a close second—the dog barking and the cat returning the compliment with snarls and hisses. More treed cougars not twenty feet away—in fact almost too natural and close, even in the photograph, to make the beholder comfortable. Mr. Wallihan either believed he was never intended for cougar bait or carried his nerve with him, to "get next" to these brutes as often as he did. Certainly these cougar pictures, because of the dangerous nature of the beasts, are great. A cougar may run from a dog and refuse to follow a man, but when you face a cornered cougar in a tree but twenty feet away, with nothing more deadly in the way of arms than a camera, accidents are likely to happen. At least the average man unfamiliar with cougars might be pardoned for so thinking.

The last cougar plate makes one think of the Lion of Lucerne. In a recess upon a ledge in the rocky cliff reposes a monster cougar—he having taken refuge there after a long run in front of the hounds. If the camera did not portray so true to life, and did not so clearly delineate every curve and line of the live and breathing animal, one might imagine the animal had been carved, like the Lucerne example, out of the solid stone.

In writing this hurried sketch I feel that I have done almost an injustice to Mr. Wallihan's masterpieces, that should be seen and not described in words. But what is writ is wrote, and Mr. Wallihan must take the will for the deed and accept my best wishes and many thanks for the pleasure his work has given me.

March 5-19, 1902.—Eighth Annual Show of the National Sportsmen's Association at Madison Square Garden, New York.

The Last Day of the Season.

THE season is over, and as we sit chained to our desk many pleasant memories enliven the dreary hours—the last day of the season, when we were on some of our favorite ground with our grouse-shooting partner, with whom we have been afield for twenty-one consecutive falls. As we climb the steep hill among the laurels and hemlock we enjoy each other's companionship and the ever unfolding view as we go higher and higher. Across the hilltop and down into the woods of the next valley seems but a few moments, although it is nearly an hour's walk.

Separating, we lay out the hunt, and shortly the guns are popping, and in most instances the grouse are disappearing unharmed, and the little gray rabbit that "boused" out with such energy before the dog, is still running in spite of the charge of shot which tore up the ground behind his little white flag. Getting together at the top of the next ridge, our chum has a chance to see us miss a beautiful right-quartering shot on an old cock grouse, which was so startled by our presence that he cackled like a young bird as he rose. A long tramp through brush and old slashing demonstrated our already strong belief that the grouse were all in the beech woods. Crossing the valley and well up to the head of the draw a hill of beech and hemlock is sighted, for which we immediately start. As we approach the woods an old grouse slips off a log, makes a short flight into the woods and one of the dogs is not to be found; but after calling him some time, the old grouse flies back, and alights in the thicket from which he was originally started, and the wayward dog, shamefacedly, returns. We now think we have the old fellow, and while the chum goes on the outside I crawl into the hemlock thicket and boost him out; but as chum touches the trigger the grouse makes a sudden dart to the left and is safe for another season. The depression of an occurrence like this is only heightened by our missing a splendid chance as a grouse rose from the wood road and took it high above the timber.

It is now time for lunch, and as this is one of the features of our day afield, we begin preparations. The first requisites are the dead and dried lower limbs of a live hemlock. The finer twigs are easily lighted, and the larger branches burn down into beautiful coals, over which we toast the sandwich. If the weather is cold, get a big piece of hemlock bark and warm it well, and you will find that it makes a most delightful seat and far superior to a cold and damp log. The cheerful little fire, the perfect companionship and the soothing effect of the liberal sandwich, topped off by a small cigar, drive away the pang of the many misses of the forenoon, and after a half hour of pleasant chat, we again go forth to battle. The afternoon is only a repetition of the morning, a good number of birds and very bad shooting; but even this cannot destroy the pleasure of the woods, the delight in the work of the dogs and the never-ceasing charm of congenial companionship, so that the homeward ride with four grouse under the seat is not one of depression. One old cock grouse's crop was so much distended that we opened it and found fifty-seven beech-nuts, one checkerberry, two unknown seeds and a quantity of torn-up leaves of the bishop cap.

So the season has closed, and we have finished with thirty-four grouse, which brings us within the absurd legal limit. In all seriousness, what earthly good is a law of limit? It only restricts the law-abiding sportsmen from the full enjoyment of the grouse season and leaves more to be shot by the market-hunter, which seems to us is protection which does not protect. I am heartily in favor of the non sale of game, and would also like to see an open season of all small game from Sept. 15 to Dec. 15, and have no game in season outside of these dates.

UNCLE JOSH.

Adirondack Deer.

JAMESTOWN, N. Y., Dec. 16.—*Editor Forest and Stream:* I visited the Adirondack country again last fall as customary for the past twenty-five seasons. Since my return have noticed in FOREST AND STEAM two articles relating to the hunting of and preservation of deer in that section, the writers giving their ideas as to the proper laws to be enacted for the game's preservation.

The first article advocates that the open season should commence Aug. 15 and close Oct. 31; jacking to be allowed the latter half of August, hounding allowed from Sept. 25 to Oct. 15, only bucks to be killed before the hounds; and offers the following in support of above suggestions: "It would suit many who believe in hounding. Would give opportunity for selection of bucks and sparing of does; would suit the still-hunter by giving him the best of the season; would lessen the liability of the accidental shooting of men in the woods, etc." The

writer of the second article does not advocate the justice in jacking or hounding deer; he thinks the open season too long, and if deer are not to be exterminated the season must be closed on Oct. 31, as the principal slaughter occurs on snow in November.

Now, in relation to the first article, I do not believe jacking and hounding of deer would tend to their preservation. Nearly every State north of the fortieth degree of latitude has passed laws prohibiting the use of dogs in hunting deer, for the simple reason that venison killed before the hound is of a very inferior quality; that it is run and killed in warm weather, when a majority of it spoils, or must be disposed of so quickly as to be of little use to anyone. Up to date no State where the general dogging of deer has been allowed has a record of deer ever holding their own, and much less of their ever increasing in numbers. We cannot believe that the people's representatives of twenty odd States and Territories of the North have misunderstood the sad effects of hounding deer.

In relation to the second article, that the hunting on snow in November is sure to annihilate the deer in the Adirondacks, we may ask, if such is the case, why has it not had that effect in the State of Maine? The open season there extends to the 15th of December, one month later than in this State, notwithstanding its more northern latitude and earlier snows to hunt upon. I think the Maine game law a very just one, for the reason that the open season on deer commences Oct. 1 instead of Aug. 15.

Again, the does at that time are thin in flesh and not in suitable condition (aside from furnishing sustenance to the fawn) to be of much value, when, if left to be hunted in October or November, would have weaned their fawn and been in presentable shape for slaughter.

I am also convinced that summer hunting is at best attended with many lost deer that are not recovered by the hunter, for the reason that they frequently cannot be traced on dry leaves more than a few yards from where they were shot because of their not bleeding or by mixing their tracks with others. Page 407 of FOREST AND STEAM gives an account of hunters in New Brunswick shooting sixteen moose and failing to recover eleven of them. Who can doubt that had that party hunted on snow instead of bare ground they would have secured ten or twelve moose instead of five? The trails could easily have been traced; even taken and followed the next day.

The writer of the second letter also figures out that there were 1,200 and odd does killed and shipped out of the Adirondacks last season, which was in excess of the increase. Now, we have at least 12,000 square miles of timber lands suitable for deer lying within the eight northeast counties of this State. If we cut this tract up into townships of six miles square, we have 333 1-3 townships, and allowing only ten deer to the township, we have 3,333 deer, consisting of, say, 1,333 bucks and 2,000 does, which is a very low estimate. If such be the case, can there be a reasonable doubt that at the rate they are being killed the destruction will not deplete the yearly increase?
OLD SHEKARRY.

MANCHESTER, N. Y., Dec. 14.—*Editor Forest and Stream:* I hope that our lawmakers for this State will cut down the deer season. Make it the month of October for open season; law otherwise as it is now.

We had to go back further to find deer this season. Where they were plenty last year and year before, there was scarcely a deer this year. Anyway, the last two weeks should be cut out, if we hope to save deer for future hunters.
E. G. SMITH.

The Massachusetts Season.

WAKEFIELD, Mass., Dec. 16.—*Editor Forest and Stream:* All good gunners have their guns all cleaned and laid away, as it is now close season. There is one excuse for one to be found out now, and that is for the "rabbit" shooter. For the good legitimate rabbit hunter I have the highest respect, as that category many times takes in some of our old sportsmen who are too old to tramp for birds; but we have others who call themselves rabbit hunters who use a ferret, and another class which goes out in a party of six or eight Frenchmen and two hounds, one man armed with a single-barrel gun, the others carrying shovels, iron bars, an old bag and an axe, and perhaps a stick of dynamite, so that no rabbit escapes which takes to its burrow, whether it is in the earth or a ledge.

More or less game birds are shot by these off-season hunters, and the rabbit and squirrel law should conform with the game birds—that is up to Dec. 1.

For my part, I would rather have the law run up to Dec. 15 and commence two weeks earlier. Everybody was finding broods of little chipping quail on Oct. 1. I was chained to business this fall, so I only got out once, but had a good day then.

My Danvers friends all have had a great time shooting this fall, and they say there are many birds left over. I heard of one large flock of quail being seen on the last day of the open season. There are favorable reports on Mongolian pheasants. One man says "he would bet he started over fifteen one day."

Cold weather struck in early here and froze up all the lakes, and the ducks have gone. The black ducks are probably stopping along our coast, where thousands can be seen at dawn of day taking their flight to the open sea. They feed on the river flats and marshes during the night.

The boys are trapping many muskrats and minks in our brooks.

I was glad to see that O. D. Foulks, of Stockton, Md., had his "ad" in FOREST AND STREAM. I was down to his home last spring. He and his family are most agreeable people to be with; they have a good house, and it is situated in just the location for a shooter's delight, and the decoys and sink box and all the other traps to entertain the shooter were there. I saw more ducks and geese while there than I had ever seen before. There had been a big storm, and it drove them along. Of course you can't expect a flock of geese to alight in the door yard every morning, but from what I saw it is one of the best of places for ducks.

JOHN W. BARRITT.

Looking Back.

HERE is something from the Indianapolis News, which O. H. Hampton likes so much that he would like to see it in "Our Paper":

The charm of living is not what it used to be, sighed Assistant District Attorney J. J. M. LaFollette. When I was a boy there was not such an everlasting chase for money as there is now. In Jay county, where I was brought up, we had the big woods all about us; the tinkle of the cowbell was music to us; the bark of the squirrel was an invitation to tramp through the woods where the air was unsullied by the coal smoke; in those days, too the red fox, the priciest animal that we Hoosiers ever knew, ran for its life to the song of the baying hound.

I used to hunt for the cow that wore a tinkling bell, and I once saw my father stand in the woods and shoot nine squirrels out of trees before he picked any of them up. One of my neighbors was a man who had grown in size, but still retained his youthful heart. He used to come to our little country school-house at noon and play townball with us boys, and many a time have I tramped through the woods with this boyish man with guns on our shoulders and dogs at our heels.

This grownup playmate and I had located the lair of a red fox in the woods. It was in a large tree that had grown in a reclining position, instead of straight up in the air. Far up the trunk there was a cozy opening, large enough for the fox, and there the animal had taken up his abode. The neighbor and I went to the tree one day to rout out Mr. Fox. My neighbor had his dog at his heels and my dog followed me. We routed the fox out of his den.

My, but he was a beauty, and how he could run! As he bounded through the air to the earth we gave a shout to the dogs. Instead of starting for the fox, the dogs supposed we had "sicked" them on each other. One made a lunge for the other, and a genuine dog fight, instead of a fox hunt, began. We could see the red fox running for his life across the woods—running from the sheer joy of leaping through the air, as well as to save his richly-tinted coat of fur. The two animals that had been at our heels continued their battle at the foot of the tree, and from that day to this there has never been such a dog fight in Jay county.

The Quail Shoot of Gov. Durbin's Party.

FOUNTAIN CITY, Ind., Dec. 20.—*Editor Forest and Stream:* A few weeks ago Gov. Durbin, Attorney-Gen. Taylor and Ernest H. Tripp, who is the father of Indiana's excellent game law, went to Scottsburg, Ind., for a few days' sport with the quail. At that point they were joined by Postmaster John Martin and Mr. James Craig. They found the birds in fairly good numbers, and five guns managed to bag sixty-two quail the first day. On their return to town a reporter for the Indianapolis News asked after their luck, and was told that the party had bagged sixty-two quail. The paper contained a notice of the trip, and stated that the five men had bagged one hundred and sixty-two quail in one day. Owing to the prominence of the gentlemen composing the party and the extraordinary size of the bag reported, and which was considerably in excess of the legal limit of twenty-four birds in one day, the article was extensively copied by the newspapers of the State, and is being commented on quite freely by some of the sportsmen who have heard nothing but the newspaper version of the case, the general tendency of these comments being, that these gentlemen who are the heads of the executive and law-making departments of the State Government, are setting a mighty poor example to their fellow citizens.

The facts are that the party killed just sixty-two quail, and did extraordinary well to get so many as that. There is not a man of the party that is not too much of a good citizen and true sportsman to violate the game laws, and I feel that it would undo part of the mischief if the facts were laid before the readers of FOREST AND STREAM.

O. H. HAMPTON.

Springfield Men in Maine.

C. E. WHIPPLE, F. R. SWAN, C. H. MCKNIGHT and E. M. WILKINS, of this city, and Warner Holt, of Boston, have returned from an enjoyable stay of two and a half weeks at John F. Haynes' island camp in Alligator Lake, Hancock county, Me. They secured four deer and a black bear, and the latter (shot by Mr. Whipple), with their two smaller deer, is now displayed at A. S. Hendrick's market on South Main street. Snow fell soon after the party reached camp, and when they started for home there was from 15 to 18 inches of it on the ground. A trip to Alligator Lake involves a drive of thirty-five miles from either Bangor or Ellsworth, followed by a five-mile tramp from the little village of Great Pond, where the wagon road ends. Mr. Whipple has visited this camp nearly every year for the past seventeen years, and other Springfield men have been frequent guests there.—Springfield Republican, Nov. 28.

North American Association.

ST. JOHNSBURY, Vt., Dec. 20.—*Editor Forest and Stream:* The annual meeting of the North American Fish and Game Protective Association is hereby called, to be held at the Van Ness House, Burlington, Vt., Jan. 22, 1902, at 11 o'clock A. M. It is probable that the business of this meeting will require a two days' session.

JOHN W. TITCOMB, President.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

J. S. Van Cleef.

(From The Poughkeepsie Eagle, Dec. 20.)

ALTHOUGH in some measure prepared for such an ending by observing the increasing weakness of one whose unconquerable will kept him in active business as long as strength remained, yet the people of this city were startled when they learned that J. S. Van Cleef had passed suddenly away at his home on Thursday afternoon. Some two or three years ago he had a severe attack of influenza or grip, from the effects of which he never fully recovered. A second attack followed, which further shattered his health, and from that time there had been a general and gradual breaking down till the enfeebled heart ceased to beat. For several months past Mr. Van Cleef had been at his office only occasionally, and his last visit was just two weeks ago. Since then, however, he continued to attend to business, giving directions to his assistants at his house. On Thursday afternoon, Mr. John R. Keech, who has for several years been a clerk in the office, visited him for the purpose of consultation, and finding him in bed, went with Mrs. Van Cleef to his side. He failed to answer when she spoke to him, and they immediately perceived that he was in an alarming condition, and telephoned for Dr. R. K. Tuthill, who came in a very few minutes, but too late to render any assistance, as Mr. Van Cleef breathed his last before his arrival.

James Spencer Van Cleef was born at Athens, in this State, on the first of August, 1831, so that he was a little over seventy years of age. He was descended from one of the oldest Dutch families in America, and one whose lineage is traced far back in Holland and Germany. Jans Van Cleef, the first settler of the name in this country, came from Holland to New Utrecht, Long Island, in 1659, and was a delegate to the provincial assembly of New Amsterdam under the old Dutch Governor, Peter Stuyvesant, at the time when measures of defense against the English were under consideration. The descendants of Jans Van Cleef settled near New York, most of them in New Jersey, and there the late Rev. Cornelius Van Cleef, father of J. S. Van Cleef, spent his boyhood and was educated for the ministry. After completing his studies he became pastor of a church at Athens, removing thence to New Hackensack, in this county, in 1833. At New Hackensack he preached for thirty-three years, and then came to this city, where he spent the last years of his life.

J. S. Van Cleef, who came to this county with his father at a very early age, was educated in this city, fitted for college on College Hill, and completed his academic studies at Rutgers College. He studied law in New York, and was admitted to practice there, but came to this city in 1858 and has been for more than forty years one of our most active and successful lawyers. His partners have been Hon. Mark D. Wilber, now of Brooklyn; Samuel W. Buck, now principal of Lyndon Hall school, and his son, Henry H. Van Cleef, but for the greater part of his career here he has practiced his profession alone. Many important estates, and interests involving large amounts, were committed to his care, and he had a wide reputation as one of the most reliable and painstaking lawyers in the State.

The only public office he ever held was that of commissioner of schools, and at the time of his retirement from the board of education he was its oldest member, having a record of a longer service than any other. It is doubtful if any other man has in the history of our public school system contributed so much to its development and efficiency. Besides this, he was a man of active public spirit, one of the founders of the Young Men's Christian Association, a prominent member of the Second Reformed Church, and a hearty laborer for the welfare of the city. His chief amusements were fishing and music. He was a fine amateur organist, and for years played regularly in one of the Reformed churches. As an enthusiastic angler and an authority on fish he was known all over the country. Two or three of the angling clubs of the Catskill and Shawangunk region were founded by him, and he was a leading member in the State Association for the Protection of Fish and Game. He was also the author of the general State game and fish law passed in 1895, and with some modification still in operation.

Mr. Van Cleef married Harriet Mulford Howell, of Sag Harbor, L. I., in 1862, and had three children. His wife, his son, Henry Howell Van Cleef, of this city, and one daughter, Mrs. Walter M. Jones, of East Orange, N. J., survive him.

A Maine Freshet.

"WHEN the ice is out," finishes the statutory limit of the close time on trout, landlocked salmon, etc., in most Maine waters. Boston anglers watch anxiously for this event, but the great freshet in Maine and New Hampshire played them a surprise the other day. Many of the lakes and ponds cleared of ice—something almost unheard of in December. Word was jokingly passed around among the anglers Monday and Tuesday that "the ice is out." But no great enthusiasm was created, since the rods and reels must lie idle for four of five months longer. But an interesting question arises: Could one have legally fished in the Maine waters on such a going out of the ice? At the most it could have been but a day, for zero weather has closed the waters again, doubtless till springtime.

The freshet also had the pickerel fishermen at a disadvantage. The warm days, Saturday and Sunday—we don't like to say that the boys fished on Sunday, but they did—started the pickerel fishermen. They thought they would have their hooks set till Monday, and then visit them again. Alas! the ice was gone on Monday; and with it the tip-ups, the lines, the hooks and any fish that were caught over Sunday night. Some of the river fishermen had the satisfaction of seeing their whole rig-

ging floating down and out to sea, fast in big cakes of ice. Two of the Arlington boys, E. L. Rankin and W. H. Puffer, went fishing through the ice on the Concord River Saturday. They concluded to leave their hooks set over Sunday. Monday morning everything was gone down river—hooks, lines, flip-ups, fish and all. Some of the smelt fishermen on the Maine rivers, who have their little fish houses on the ice and catch smelt under cover, right through the bottom of the house, had their houses washed out to sea. Some young men, fishing for live bait in one of the streams running into Lake Pennessewascet, Norway, Me., the other day, caught a landlocked salmon 27 inches in length and weighing 7 or 8 pounds. As the law does not permit of salmon being taken at this time of the year, the young men put the fish into a tub of water and took it down to the lake, where it was liberated through a hole in the ice. It is evident that the fish had gone up the stream to spawn and could not get down again, for the ice and low water. It frequently happens that landlocked salmon go up the small streams to spawn, and are caught, if the stream freezes over; since they go up streams so shallow that their back fins can be seen out of water. I saw a salmon several years ago on Rogers Brook, with its back fin out of water. It was struggling to get downstream over a pebbly bottom. It was late in November, and all the pools of the narrow stream were frozen over, with considerable ice on the stones and obstructions in the swift water. We lifted the salmon carefully and measured it with a pocket rule. It was 24 inches in length, and must have weighed 6 or 7 pounds. Its back fin was badly torn, either by the teeth of mink or the beaks and claws of owls. We carried it down over some obstructions toward Long Lake, one of the Sebago chain, and started it in smooth water, though under the ice, toward the lake. It was badly exhausted, and I doubt if it ever reached the lake, at least a mile below.

SPECIAL.

League of Salt Water Fishermen.

NEW YORK, Dec. 19.—*Editor Forest and Stream:* At the regular monthly meeting of the Protective League of Salt Water Fishermen, held at Wall's Hotel, 106 West Thirty-first street, on Dec. 18, President Baywood in the chair, the reports of delegates were very favorable. The Entertainment Committee reported that after a very lengthy debate on the subject of either holding an entertainment and ball or a stag, it was unanimously decided to drop the subject of the holding of any entertainment this coming winter. The committee, instead, decided to bring before the members in meeting assembled that they recommend that an appeal be issued by the League to its members as to ways and means of having funds enough raised for getting and maintaining their own League rooms. The following members of the committee were present: Messrs. T. Biedinger, chairman; A. Michaels, H. Kotzenberg, E. Fliedner, A. E. Medard, L. Berge; B. Rightmire, absent. The committee was discharged with thanks for having rendered such a well-considered report.

A change was made in the by-laws. Instead of having a vacation—or, rather, having no meetings in the months of June, July and August, that was changed to provide that meetings shall be held every third Wednesday evening of each month at 8 o'clock. A committee of seven was appointed by the chair to issue an appeal to the members for the raising of funds to get and maintain our own League rooms, as recommended by the Entertainment Committee earlier in the evening. The committee consists of Messrs. T. Biedinger, H. Kotzenberg, F. Hochgraef, Sr., J. M. Wheeden, D. A. Nesbitt, J. Demand and G. Irish.

Then we had a great many fish stories. Seven new members were enrolled, among whom were the following: Messrs. John Harson Rhoades, president of the Greenwich Savings Bank; D. A. Glubit, M. D., and J. Schleuter. The attendance was not so great as it should have been, but then the holiday season is at hand. I wish all a merry Christmas and a happy New Year, and many happy returns. T. BIEDINGER.

Chicago Fly-Casting Club.

THE Chicago Fly-Casting Club held its first dinner for the present close season Dec. 10. Addresses, papers and stories by members and guests of the club gave additional pleasure to the event. Mr. Edwin L. Harpham addressed the club on "Sportsmanship in General," and an exceedingly interesting story on "Black Bass Fishing in Pine Creek, Indiana," written by H. Wheeler Perce, of the club, was received with enthusiasm.

Mr. A. C. Smith was presented with the club cup for the highest general average of all the events for the season—viz.: 95.05 per cent.—and also with a gold medal for the highest average score in the delicacy bait event—viz.: 96.63 per cent. N. C. HESTON, Secretary.

Portrait of Fred Mather.

WAKEFIELD, Mass.—*Editor Forest and Stream:* How I miss the writing of Fred Mather. I have several personal letters that were sprinkled with humor and merriment. He also sent me one of his photos. A few days since I hung it up and copied it with my camera and got a very good negative. If any of his old friends of the FOREST AND STREAM want one I will be pleased to print one gratis. I am only a sportsman camerist, and they may not be quite as fine as might be.

JOHN W. BABBITT.

The Kennel.

Many Asked About the Dog.

DANBURY, Conn., Dec. 9.—I have a great many letters coming concerning the dog I advertised in FOREST AND STREAM last week. CHARLES F. BROCKEL.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Official organ, FOREST AND STREAM.

'Mid Reef and Rapid.—XXXII.

BY F. R. WEBB.

With all our skill and address, we were most unmercifully knocked and banged about by the heavy, rough water among the reefs of this half mile, which we managed to work through, reef at a time, by making a shoot as it offered, and then lying by in some friendly lee to figure out the next shoot, now pitching head first over a 4ft. fall into the big, yeasty waves at the bottom; again making a long cellar-door slide down the long, sloping face of a reef, anon bringing up with a terrific smash against the ledges, in some unpromising shoot that we were obliged to take as the best that offered.

The water was over the floor boards in my canoe, and the others were no better off. Evidently the tough canvas skins of our poor, abused canoes were succumbing to the fatal rocks, but if the boats would only hold together fifteen minutes more, we would pass out of the Shenandoah into the Potomac, and the cruise would be ended. Several times I threw open my midship hatch to see if the whole bottom of my canoe was not smashed in, but the boat still seemed to be holding together, and I determined to stick to it as long as it would stick to me.

Finally, one last landing to reconnoiter, one last plunge over the crest and down the face of one of the largest and riskiest reefs of all, with desperate paddling to secure the proper sharp twist to the left at the bottom, to avoid a fatal smash on the rocks, a cellar-door slide of over 20ft. down a long, sloping ledge, a fierce, rough shoot at the bottom, with the big waves smashing into spray over our decks and drenching our faces and shoulders, and our keels crunching ominously on the hidden reefs, a dizzying swing around, bow up stream, in the eddy at the bottom, a sharp side thrust with the paddles (whose ends and edges were frayed into splinters) against a mass of rock as big as a town lot, which loomed up high above our heads, to keep the canoes from being crushed like egg shells in a sidewise collision against the saw-tooth-like edges of the rock, then a sharp pitch down a steep little shoot and the thing was done, and nothing lay between us and the Potomac but a couple of hundred yards of swift, deep water, free from rocks and reefs.

Just as the 6 o'clock whistles were blowing and the workmen at work on a steam hoisting scow, anchored in midstream of the Potomac, alongside of a pier of the new railroad bridge in course of construction by the Baltimore & Ohio Railroad people just above their great bridge over this stream, were knocking off work for the night, they were greatly surprised—and with one accord stopped to stare—at the quiet appearance of three small boats of novel and peculiar shape and build, each occupied by a disreputable looking man, who paddled up from under the middle of the railroad bridge, while, without a word, the three boats were laid alongside each other, a glass and a suspicious looking flask produced from somewhere and the trio solemnly proceeded to pledge each other.

That was us. We had finished the cruise and had arrived.

We were all thoroughly tired out with our afternoon's work; indeed, the day's run for the last six or seven miles being incomparably the most arduous and difficult part of the cruise; it took us from two o'clock until six to make the two and a half miles from Bull's Falls to the Potomac; and, although we had intended to paddle back up the Shenandoah one hundred yards or so, and camp under Loudoun Heights for the night, just across from Harper's Ferry, so that we could pack next morning and drop across the river to the freight depot, to which ignominious resting place the canoes were to be consigned, we were far too exhausted to think of stemming the strong tide that came rolling down that gorge. So we listlessly drifted back down under the railroad bridge, into the waters of the Shenandoah, which shot swiftly far out into the broad bosom of the Potomac, and leisurely paddled across, and finally made a landing on the flat, sun-baked reefs on the banks of the Potomac, under the shadow of the majestic mountain peak where the Blue Ridge breaks off to give passage to the river, a couple of hundred yards or so below the mouth of the Shenandoah. Here we drew up and unpacked our battered, leaking canoes; sponged the water out of them, and carried them into position for the night, and put the tents up over them; and after dry clothes and a good, substantial, hot supper, we felt much better.

Our location was a picturesque one, lying, as we did, fairly inside the portals of the world-famous gorge. To our left Loudoun Heights towered aloft in tree-clothed majesty 1,000 feet or so toward the clouds. Across the broad Potomac, whose flat, still waters were completely

obscured by gigantic masses of rock—the debris of the scooped out mountain chain—standing high above the surface, the bare cliffs of Maryland Heights reared their beetling frontlets nearly as high; while in front, in the angle formed by the two rivers, with the bridges stretching their steel lace-work gracefully across the foreground, Harper's Ferry nestled at the foot of Bolivar Heights, up whose mountainous side the houses and churches straggled.

Our camp was a singularly noisy one. Just opposite us the railroad company were boring a tunnel through a projecting angle of Maryland Heights, the better to approach their new bridge, also in course of construction, and the work was being prosecuted night and day. And the coughing engines, the clang of locomotive bells, the screech of steam whistles and the thunderous, earth-shaking blasts from the tunnel, were the last sounds that assailed our ears before we fell asleep and the first to greet us in the morning. We were too tired to take notice of such trifles as these, however, and our sleep was not particularly disturbed by the infernal din.

I was out next morning some little time ahead of the boys, and shaved, rearranged my clothes-bag, dressed for the trip home and packed my canoe while they were still enjoying their morning nap. There was no hurry—our train did not leave for home until one o'clock that afternoon—so I let them sleep.

While I was pottering around my canoe, putting things to rights, one of the waterside characters always to be found in river towns, pulled up alongside in his boat and disembarked; and after his curiosity had been satisfied concerning our boats and the trip, he told me that we could easily have avoided all of the last mile of falls and reefs if we had slipped under the head gates at the pulp mill dam, up below Bull's Falls, and had come down the canal to the pulp mill; and that by carrying around the mill—which is built directly over the canal—and launching the canoes in the canal again, below the mill, we would have had perfectly smooth sailing from Bull's Falls to the Potomac. Indeed, at a lower stage of water, no other course is practicable, for the pulp mill then absorbs all the water in the river, and the mile of reefs and falls is then almost entirely dry and bare of water; and not navigable for any sort of boat, however small and light.

After a farewell breakfast of bacon, eggs, potatoes and onions and coffee, the camp was photographed and struck, the canoes packed, and, in due time, hauled across the bridge over the Shenandoah (at a rate of toll sufficient to buy the bridge had we crossed a few times more), and deposited in the freight office.

From the exorbitant rates of carriage charged us, it is evident that the laboring population of Harper's Ferry do not often get a chance at unsuspecting strangers; and when they do, they feel in duty bound to make the most of the opportunity. At any rate, our experience here, in this respect, was such that we vowed, should we ever be unfortunate enough to end a cruise at Harper's Ferry again, we would camp on the Loudoun side of the Shenandoah, above the Potomac; and, after breaking camp, paddle across to the town and hire a couple of darkies at fifty cents apiece to carry the boats up to the freight depot for us, or carry them ourselves, rather than again fall into the hands of the Harper's Ferry wagoners.

Before packing our canoes we stowed away our worn and dingy canoeing habiliments, and attired ourselves in something more presentable, in which we looked a shade less disreputable; and after the boats were off our hands we took a stroll, in company with the kodak, around the quaint, picturesque environs of the village; and climbed up the shoulders of rugged old Bolivar Heights through the little, alley-like streets cut in terraces in the solid rock, until, climbing Jefferson's rock, we were rewarded with the sublime view which people have crossed the continent, and even the ocean, to gaze upon. Far away in front, and hundreds of feet below us, the whitened waters of the Potomac, dashing and surging among the obstructing rocks and ledges, flashed their foam-crests in the sun, as they made their way through the great rent in the solid mountain chain; while at our feet, and from far up the defile at our right, the "Beautiful Daughter of the Stars" came smiling and dancing down her mountain gorge to greet her lord and master in a glad embrace. The densely wooded heights of Loudoun smiled down upon us from their superior elevation on the other side, the while her trees and bushes gently swayed their branches to the caressing touch of the breeze, and the shimmering leaves displayed every conceivable shade of living green. Across the broad Potomac, on the other side of the marvellous gateway, the bare, perpendicular cliffs of Maryland shone warm and bright in the glare of the morning sun. At our feet the houses and spires of the village nestled; and from the principal business street, in whose center, hundreds of feet below us, a rock lightly tossed would have fallen, the hum of traffic, mingled with the ceaseless murmur of the waters, fell drowsily upon our ears.

We looked long and lingeringly upon the sublime prospect spread out before us, and then descended the steep mountain point, down the flights of irregular steps, cut out of the living rock and worn smooth and uneven by the tread of generation after generation of sight-seers, and regretfully took our seats in the train and were whirled swiftly and smoothly back up the valley, down which we had so deliberately and laboriously worked our way; and our long, adventurous, delightful cruise—the great cruise of '93—was a thing of the past.

I say delightful advisedly; for while it had its discomforts, trials, and actual perils, the pleasant memories of beautiful and imposing mountain and river scenery, glorified by the bright, golden, autumn sunshine, whose alterations of lights and shades on mountain spurs and mirror-like reaches were exquisite in effect. Of long, shady reaches of still water, mirroring the bluffs and headlands; of exhilarating, rushing rapids, where every nerve was thrilled and every resource brought into play; of imposing mountain views and lovely pastoral glimpses; of pleasant, companionable days and nights in camp; of the unrecorded, every-day enjoyable features which made up the greater part of the cruise, will linger in our minds with an ever-increasing fragrance long after the trials and perils and inevitable petty discomforts will have been forgotten.

Yachting.

Designing Competition.

IN view of the continued and increasing interest in yachting, a designing competition will be opened in the columns of FOREST AND STREAM. In America the yachting season is comparatively a short one, and such a competition as has been determined upon will serve to stimulate the interest in the subject during the winter months. The competition is open to both amateur and professional designers. Three prizes will be given for the best designs of a yacht conforming to the following conditions:

- I. A pole mast sloop.
- II. 25ft. load waterline.
- III. Not over 4ft. draft (with centerboard hoisted).
- IV. At least 50 per cent. of ballast outside on keel.
- V. 5ft. headroom under cabin carlins.

All abnormal features must be studiously avoided in the design; and the construction, sail and cabin plans should be of the simplest character. It was our idea in laying out the conditions of the competition to make them simple as possible, so as not to hamper in any way the designer, and yet convey to all that we wished to produce a safe, comfortable cruiser on which two or three amateurs could live with comfort for a period of two or three months and cruise along our eastern seaboard from New York to Halifax with safety. A centerboard boat of moderate draft was decided upon, as so many more harbors would be accessible to a boat of that type.

DRAWINGS REQUIRED.

- I. Sheer plan, scale 1in. = 1ft.—showing center of buoyancy and lateral resistance.
- II. Half breadth, scale 1in. = 1ft.
- III. Body plan, scale 1in. = 1ft.
- IV. Cabin plan, scale 1in. = 1ft.
- V. Sail plan, 1/4in. = 1ft., showing center of effort.

The sails should consist of a jib, mainsail, spinnaker and balloon jib. No top-sail will be carried.

A table of offsets and an outline specification must accompany each design. The drawings should be carefully drawn and lettered. All drawings should be made on white paper or tracing cloth in black ink (no colored inks or pigments should be used). The designs must bear a nom-de-plume only and no indication must be given of the author. In a sealed envelope, however, the designer should inclose his own name and address, together with his nom-de-plume. All designs must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, not later than February 28, 1902. All drawings will be returned, but postage should accompany each.

The FOREST AND STREAM reserves the right to publish any or all the designs.

The prizes offered are as follows: 1st prize, \$25.00; 2d prize, \$15.00; 3d prize, \$10.00. Mr. Theodore C. Zerega offers an additional prize of \$10.00 for the best cabin plan. Honorable mention will also be made of meritorious designs.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, has kindly consented to judge the designs and make the awards. Mr. Crane's professional standing is so high that he needs no introduction, and every confidence will be put in his ability and fairness.

1901 MARKS the fiftieth anniversary of the winning of the America's Cup, and the year was duly observed and commemorated by three international events. The races for the America's Cup between Sir Thomas Lipton and the New York Y. C.; the match for the Canada's cup between the Royal Canadian Y. C. and the Chicago Y. C.; and the match for the Seawanhaka cup between Mr. Lorne C. Currie, of the Island Y. C., Cowes, and the Royal St. Lawrence Y. C., of Montreal. On the other side there were two boats interested in the big race—Shamrock I, and Shamrock II. On this side there were three boats—Columbia, Constitution and Independence. It was no easy matter for Shamrock II. to beat the old Shamrock, and many considered the older craft the faster of the two. In the Clyde trials Shamrock I. had not been recently scrubbed, the water was smooth, and besides her unsatisfactory sails, she had much heavier fittings throughout than did the new boat. With all these handicaps Shamrock, and many considered the older craft the faster this side of the water the results were very great surprises. The two boats, Constitution and Independence, of which so much was expected, made but an indifferent showing, while Columbia, in peerless form, outclassed both the former. Constitution, while an improvement in design over Columbia, could not be gotten into shape, and with her imperfect sails was a most inconsistent performer. In Independence Crowninshield turned out a wonderful boat, considering that it was his first attempt at a go-footer. This boat proved, as had already been demonstrated in the smaller classes, that the scow type of boat does not show up to advantage in light airs. In a breeze over a triangular course Independence was a match for either of her competitors. Her erratic owner, however, and the exceedingly unwise management of the boat operated constantly against her, and the general feeling among the most expert yachtsmen is, that justice was never done her, and now that she has been broken up, her real qualities will never be known.

The results of the final races for the America's Cup

are too well known to need repetition, but it was a splendid victory for Barr, and to him alone is due the credit of defending the Cup. Shamrock showed wonderful speed, and had it not been that Barr was in charge of Columbia and for errors made on Shamrock, the English boat would have had at least one race to her credit. It was the first time that the Cup had really been in danger.

The races on the Great Lakes for the Canada's cup brought out a great deal of interest, and it served to show how strong a foothold yachting now has in that part of the country. The challenger was designed by Sibbeck, of Cowes, but was built in Canada on the shores of Lake Ontario. Seven boats were built to enter the races for the selection of a defender. Cadillac was selected, a boat designed and built by Hanley, of Quincy Point, Mass., who also designed and built Genesee, the successful challenger of two years before. The two boats were of widely different types, Invader being a keel boat, while Cadillac was a centerboard. The result of the races was due in a great measure to the skipper of Invader, Mr. Emilius Jarvis, who is perhaps the cleverest amateur in Canada, and the cup is now back in Toronto.

The crushing defeat of Grey Friar by Senneville in the matches for the Seawanhaka cup showed how far in the rear the English are in the designing of the extreme scow type of boat in the small classes. Mr. Duggan, the designer of Senneville, a designer and boat sailer of wide experience in small craft, had the English boat beaten at any and every stage of the game.

For some time past it has been realized that there was no possibility for a challenge for the America's Cup for 1902. Now that the races for the Canada's cup have been postponed until 1903, there is only one international race in view for next season—the races for the Seawanhaka cup. Last summer the trial races for the selection of a defender and the final races for the America's Cup monopolized the attention of yachtsmen in general, and in consequence the smaller boats were ignored. There is little prospect that any of the 90ft. cutters will be put in commission next season. The racing between Ailsa, Navahoe and Vigilant was so satisfactory that there is a prospect of all these boats being out. Now that Quissetta has been sold, it is not definitely known whether she will be withdrawn from the ranks of the 75ft. schooner class. Muriel and Elmina will perhaps have to fight it out alone. The English cutters Isolda, Eelin, Senta and Hester will all be in commission, and good racing will be seen in this class, as well as in the new 60-rating one-design boats that are now being built from designs made by Messrs. Gardner & Cox. As yet no new orders have been placed for boats in the 51ft. class. Humma and Altair will be alone in this class, unless Huguenot finds a new owner. Last year this boat was not hung right, and it would be interesting if some keen racing man would buy her, put her overboard early in the season and experiment a little, just to see if there is anything in the scow type of boat in the larger classes. In the 43ft. class Dorwina and Effort will have a new competitor with which to try conclusions. From the 36ft. foot class down to the smaller boats few new orders have been placed; perhaps the new measurement rule has frightened prospective builders.

The largest steam yachts that have ever been built either in England or America have been for Americans. When Lysistrata was built for Mr. James Gordon Bennett it was generally thought that a limit in size had been reached, but an order recently placed with Mr. George L. Watson by Mr. John R. Drexel proves that this was not the case. Mr. Watson has already designed two steam yachts for Mr. Drexel, namely, Margarita II. and Margarita III. The new yacht will be the largest and most sumptuous private vessel afloat. She will be 300ft. long on the waterline, 40ft. beam, with a tonnage of 2,500.

At the Herreshoff shops at Bristol, R. I., four of the Buzzard's Bay one-design 30-footers are finished and have been removed, and are now on the beach at Walker's Cove. The lead keel has been bolted on to the fifth boat. The sixth one is planked, and the seventh is in frame. The steam yacht building for Mr. Frederick Grinnell is all planked. She has long ends and low freeboard, and is expected to develop considerable speed.

Cape Horn.

BY PAUL EVE STEVENSON. AUTHOR OF A DEEP-WATER VOYAGE AND BY WAY OF CAPE HORN.

WITH the exception of a night passed within the Polar Circle, hardly any experience is so nerve-harassing as the westerly passage of Cape Horn in a sailing ship during the winter season. It is difficult to lay this fact to any one cause, for it is a combination of many perverse circumstances that actually unnerves the average person, be he shipmaster, seaman or mere passenger. Perhaps the principal reasons for this can be assigned to the absence of sunlight and to the intolerable humidity. At the 56th parallel of south latitude, the sun on June 21 has not a greater altitude than about 18 degrees; so that, even with the skies clear, the percentage of sun light during the twenty-four hours is exceedingly small. But the heavens in the vicinity of the Horn in winter are practically always obscured by thick clouds, which, during the advance of the snow squalls which roar up from the Antarctic, assume such a degree of obscurity as to turn midday to twilight. For weeks at a time the mariner must work his ship through these turbulent seas without aid from the celestial bodies, estimating the set of the powerful currents, which vary greatly with the violence and duration of the storms, and on a continual nervous tension lest during the night of nineteen hours he fall foul of the Diego Rameirez, a collection of crags which rises out of deep water fifty-six miles south-southwest of Horn Island. The excess of moisture in the atmosphere throughout the southern regions is the other great factor in the case, proving a powerful ally to the darkness in producing a peculiar debility which attacks the strongest constitutions. Indeed, so depressing is the result of the humidity and gloom south of the Antarctic Circle, that the effect upon the heart's action is most sinister, and death sometimes ensues from cardiac affection alone, vide "The Voyage of

the Belgica." This depression attacks every one on board a Cape Horn; and while of course not so severe as is experienced on a South Polar voyage, is such as to deplete the most able-bodied men, and continues until the ship reaches sunshine far to the northward of the celebrated cape.

Despite all of its vicissitudes, however, a Cape Horn voyage to the westward is pregnant with every factor that attracts the true lover of deep water, of which this world, though, contains but few examples. The very name of the promontory fills the heart with awe, and the memory unwittingly turns back to the ancient voyagers and to their extraordinary courage and endurance; to Magellan quelling the mutiny at Port St. Julian; to Anson's terrible voyage of storm and pestilence, and the struggles and privations of the immortal Cook. These are the men

"Who never see the ocean
But that they feel its hand
Clutch like a siren at the heart,
To drag it from the land."

There are yet some of the old breed left, a handful of men, so to speak, who still work their sturdy vessels around the stormy Cape, battered by the Southern Ocean's tempests; and there are also yet some in whom lies so ardent a fondness for blue water that they willingly abandon the continents for months at a time in order, as passengers, to witness nature's workings from the deck of a sailing ship. To such, no moment of a long passage is wearisome; every day contains some new joy or experience. First the northeast trades fair and fresh; then the majesty of the equatorial calms; the entrance into the Southern Hemisphere; the introduction to the Southern Cross; the fascination of the low latitudes. The sea lover all this time, though, has had before his mind the conquest of the Horn, with all its lore and tradition; and when the Magellan clouds begin to rise high in the sky, and the end of the southeast trades comes in a tempest blast from the River Plate, he experiences a sort of fierce satisfaction at the approach to the direful Horn. Down the bleak Patagonian coast the ship flies before the northerly winds that follow the southeast trades. The ship changes her garments from the dull gray clothes of the ancient fine-weather suit, to the glistening white of strong, brand-new canvas, to resist the icy gusts of the south; and by the time the grim Falklands are abeam, the skysail yards have been sent down and secured on top of the fore-castle house, relieving the ship of a ton's weight 160 feet from the fulcrum.

All unexpectedly one day the sweet northerly wind lets go, and for forty-eight hours the ship frequently lies quietly upon the surface of the ocean, the sails flap against the spars, and the skipper longs for his skysails. This is the moment, too, when the passenger asks the captain if this is what he calls Cape Horn weather, at which the crusty old fellow grows in his chest and mutters, and points to the long tube of mercury which has settled half an inch in half an hour. Then the nor'westers raise their song of wrath, and before long the dim coast of Tierra del Fuego heaves in sight, and for a couple of days the ship lies off and on under the lee of the land, for it is blowing a heavy sou' wester outside, the skipper says, and there would be no use in going out there to sag to leeward like a can buoy. So the big vessel head-reaches slowly along under the lower topsails in smooth water, though the puffs scream off the hills of Staten Sand, and the windward view is a square mile of lashing, snarling water. No one ever forgets the time he passes in the shadow of the mountains which constitute this iron-bound shore. How the gorges yawn inland, where the sea fumes against the ledges! How awful are the precipices which lean far out over the black boulders and fangs of rock, where the tide rips and whirlpools rage! And man holds his breath as the thick snow squalls, black and appalling, whelped far up in the mountains, come whooping down the slopes and burst over the ship in a suffocating storm. Pleasant it is to jump below out of one of these devil's gusts into the cheery glow of the cabin stove, where the skipper sits braced in a chair, looming dim in pipe smoke, absorbed in a newspaper, aged two months. The old man is taking it quietly now in the comparatively smooth water; only too well he knows what stretches before him.

Slowly the gale eases up, and the ship reaches across past the Le Maire Strait, that short but violent pass into the open water to the southward; and at length comes abreast of Cape St. John, and hauls up sharp on the wind, her bow pointing straight to the Antarctic. In another two hours the wild peaks of Staten Land sink into the mist; darkness seems to crawl up the heavens, and the voyagers float in solitude upon the ocean. Outside of the archipelago, exposed to the full strength of the swell, they first recognize the night of the Antarctic Drift. It is not always blowing hard in this region, but that wonderful procession of huge rollers never ceases its majestic march toward the east, for no obstacle presents itself to retard the eternal phalanx. All around the world swing these surges; now for a few hours in a glassy calm, now heaped up in those furious peaks, impelled by the power of a week-long westerly. After lying to behind the land until one of these "busters" exhausts itself, a ship on the open southern seas often encounters light winds for a couple of days or more, while just as the swell exhibits signs of weakness, the glass falls again with the alarming swiftness of the Southern Ocean regions, while lightning trembles on the crest of a storm cloud in the south. Woe to the skipper who, heedless of the electric warning, fails to shorten sail! It is an uncanny visitation, this shimmer of fire that borders the snow squall, and with the old Cape Horners it is a case of all hands aloft to get the canvas off her. Some gifted greenhorns scorn the weird caution and turn up in Port Stanley in a fortnight with a few tattered rags flapping from the stumps of their lower masts. But the prudent ship master has his vessel all snugged down ready to grapple the sou'wester.

Higher, toward the zenith, sweeps the squall cloud, the boom of the wind fills the air, and the ocean whitens to froth. Deep down to leeward she heels, in spite of the bare yards, fill the water flows over the lee rail dark and smooth. Further yet, in defiance of the four thou-

sand tons of cargo battered below, down lower and lower she cowers, while the sea rises to the hatch coamings, the lower yard arms seem to plunge vertically into the froth, and the weather side looms high overhead, an actual shelter for the moment from the clots of spume plucked from the ocean and dashed along with terrible energy. "Hard up your wheel! Weather crojick brace!" yells the skipper in the mate's ear, knowing that he'll lose what little sail he has on her if he doesn't get her before it. Grandly she pays off and heads away to the northward with wind and sea astern, till the first squall has whirled away, mocking, to leeward; then slowly she wears round, and finally comes up head to on the starboard tack with the wind at west-southwest, while the captain strips the canvas down to a lower maintop-sail to steady her a little, with the peak of the spanker to hold her head up. Nothing is left unguarded that wisdom and caution can discern. Ahead of them are the heavy winter gales and darkness and stinging cold, and many a tight ship has passed over the Divide in the death strife. Inflexibly, though, these stern men turn their faces to the south, and with the relieving tackle on the tiller, stand by for the month of the tempests that will be theirs. All hands note the dark haze in the southwest, and then the first real breath of the storm booms steadily up, following the lull in the wake of the squall.

The next morning it is blowing what sailors call a heavy gale. The waters of the earth afford no other such spectacle. Foul weather the North Atlantic certainly does breed—hurricanes of shocking fury; but in the Southern Ocean the mariner battles with a sea so enormous that, like the Himalayas, the mind can scarce grasp its magnitude. The Westerlies seem to have no beginning, and no end, for no land disputes their unbroken sovereignty; nothing impedes them. Splendidly the seas soar aloft in white and gleaming ridges, with vast deeps between, where all is sheltered for an instant from the wreck of the storm. Down into these calm hollows drops the ship, her single strip of canvas momentarily becalmed; then high the following sea flings her, up where the hurricane beats upon her and stuns her with the shock of giant waters. Over to leeward she falls as she nears the awful crest, presenting for a moment to the gale a bold rampart of drenched copper, while the crash of breaking water overpowers the rush of the wind and hanks of rosy spume whirl through the empty shrouds. Follows the terrific weather, heave down the windward flank of the great roller, while the gale yells aloft, and the watch on deck clutch the shearpoles as she fills to the rail and the main deck vanishes under three hundred tons of furious brine, while the deck ports belch their torrents. Out of the frigid south rush the squalls, frightful and dark, blinding the hardest seaman with javelins of sleet. More frantic than ever, the storm roars over the South Atlantic, and more stupendous rise the seas, till they seem to swing through space itself, and the long plummy ridges sweep on, august and inscrutable. Nature's most violent energies seem to have burst asunder and creation to hover on the brink of primal confusion.

For days the ship lies hove to in this monstrous sea. Occasionally for a few hours, the wind lights up a trifle, backing into the northward; the ship comes up to a west-southwest course, and the skipper sets his three lower topsails and lets drop the foresail. Beautifully the ship responds to the press of the canvas and fights her way through the combers with two men at the wheel and the seas making a clean sweep over the fore-castle house. Heeled at a terrifying slope, her lee scuppers sunk under two feet of solid water, the watch on deck huddled under the weather poop rail, for the main deck is a hell of awful water, the range fire killed by a big sea that crushed the weather galley door, the skipper is driving her, till she opens in the bends; and the carpenter, having by superhuman effort reached the pumps, cries out that three feet are slapping around below. Never mind, though. The ship is looking up to her course and doing fully three knots in the hour. Anyway the donkey engine can keep her free enough. All hands smile grimly when the word is whispered that she is making good a west by south course. The skipper leaves the deck for a pot of coffee that bubbles on the cabin stove, and the lank faces of the seamen relax their hopeless stare as a slight thinning out of the muck overhead sheds a little true daylight across the barren scene. Visions of lower latitudes swim before them, and they growl to one another that, come next Sunday, they'll be to the northward of Cape Pillar anyway. Poor wretches! Pallid with anæmia and ill-nourishment, their wrists and necks raw with salt-water boils, chattering in soaked slop clothes, turning into foul, steeping bunks after four or eight hours in a piercing gale, eating grub that a gutter-fed dog would reject, these Heroes of the Sail find a moment or two in which to swap their homely jokes. "Who'd sell a farm and go to sea?" shouts a young Nova Scotian, jabbing with a knife an ugly sea boil on his arm and paling for a second with the pain. "Every damned bloody one of us," yells a pair of legs parceled and served with gunnysacks, to keep out the frost, hanging over an upper bunk. "Got a fair wind anyhow," says a hoary old bear. "Douse that lamp," as a faint show of dawn filters into the noisome den, "and we'll get a wink in this 'ere spell o' fine weather." In another minute the ten men below have forgotten their dreary fate, and have slept perhaps half an hour, when the mate thunders at the fore-castle door, "All hands shorten sail; Git that foresail in afore we lose it!" And out into the terrific southerly "buster" the men stumble, up to their knees in the icy water, while hail beats into their faces as they man the buntlines with a feeble and puny show of strength. Thus for weeks they wage their pigmy warfare against Nature's might, till a favoring gale out of the southeast pushes them up into the South Pacific, until the sun rends the cloudy pall and beams once more upon the ocean's dark blue floor, and a sound of great joy pervades the ship, now that the rigors of the southern winter are at last astern, and the old windjammer points her jibboom for the tropic's balm.

Mr. Prescott Hall Butler, a member of the New York Y. C., died on Dec. 16 at the age of fifty-five years.

Our Boston Letter.

BOSTON, Dec. 23.—This has been rather an uneventful week among eastern yachtsmen. Work in the yards is going along evenly, but with no great rush, although there is plenty of work on hand. At Lawley's the first signs of a rush are becoming apparent. The 46ft. schooner for W. S. Eaton, Jr., is about completed. The 17-footer has been finished, and has been hauled out of the shop. With the 46-footer out of the shop, the whole space will be left for new orders. The 30ft. cruiser for Mr. Bancroft C. Davis has been started. The keel of the 104ft. steam yacht for Philadelphia parties has been set up, and most of the frames are set up. Arnold Lawson's 46ft. schooner has been laid down and the molds are being made. Lawley has an order for a 50ft. launch for Yale College. It is said that the order is from Mr. Cornelius Vanderbilt, and that he is going to present the launch to the Athletic Committee of the college. The English cutter *Senta* has been overhauled on the railway and some alterations have been made. Alterations are being made on the ketch *Mercedes*, owned by Com. Benjamin P. Cheney, of the Boston Y. C. This yacht was built for cruising in southern waters, and her underbody has been coppered ever since she was built. This copper is now being taken off and it is intended to replace any of the planking which may have become soaked, by new wood. The wood is, however, in a remarkably good state of preservation, and it is not expected that many planks will have to be ripped out.

I have been informed by a member of the Boston Y. C. that the proposed scheme of absorbing the membership of the Burgess Y. C. is going to materialize. Some time ago a committee was appointed by the Boston Y. C. to thoroughly consider the matter, and was given full power to act for the club. The consequence is that an invitation has been extended to the Burgess Y. C. to absorb the membership of that body in the Boston Y. C. At a meeting of the Burgess Y. C., to be held Friday evening, it is expected that the invitation will be accepted. It has been said that some objection to the scheme has been made by members of the Boston Y. C., but my informant tells me that the objectors are very few, and that the deal will certainly be put through. To the majority of the yachtsmen it seems that the absorbing of the Burgess Y. C. by the Boston Y. C. will be of advantage to both. In the first place, the Boston Y. C. is getting rid of a quantity of opposition and competition in its racing events which would certainly follow if two clubs were to be located on the same side of Marblehead harbor. The men who are now members of the Burgess Y. C. will be benefited in a like manner, for while it means the disbanding of the Burgess Y. C. its members will enjoy the greater protection and advantages possessed by the larger and more powerful club. The Boston Y. C. will be further benefited by the addition of several keen racing men to its membership, and also by the enrollment of several racing yachts.

Small Bros. have been commissioned to design rather a novel cruising schooner for Dr. W. E. Hibbard, of Providence. She will be 25ft. on the waterline, 40ft. over all, 11ft. beam and 4ft. 6in. draft. She will be of the centerboard type, and, as is the case with most modern cruising yachts, the centerboard will house under the cabin floor. She will carry 4,500 pounds of lead on her keel, and will have, in her lower working sails, about 1,000 square feet. She will have pole masts, upon each of which can be swung a fair sized topsail. Dr. Hibbard takes as much pleasure from setting and taking in light sails as he does in sailing his boat, and it is likely that many experiments will be made.

Dr. Hibbard is fond of experimenting with cruising yachts, and in the lay-out of this new one has made a radical departure from staid practice. Her lines are easy, and her sections are carried out very full, as is necessary in getting the room which is desired for cruising; but the accommodations below decks are greater than is usually seen in a 25-footer. It is not that there is so much space under the deck that this boat is different from others; but it is in the manner in which the space has been cut up. Through the companionway the main cabin is entered. This takes up the full beam of the boat. There is a berth on each side, running the full length of the cabin, and 3ft. 6in. wide, with space for stowing underneath. At the after part of the cabin there are two full-length hanging closets. Forward of the main cabin, on the starboard side, is the owner's stateroom, with a berth, clothes closet and bureau. The room is 6ft. long and 6ft. 3in. wide. The berth is 2ft. 9in. wide, but is arranged to extend out to full width. Opposite the stateroom, on the port side, is a toilet room, back of which is a good-sized water tank. A door leads into the galley, which is quite roomy and contains all conveniences for cruising. On the port side is a china closet and two smaller closets, a sink and a stove. On the starboard side is quite a roomy ice-chest. There is a swinging berth on the port side forward, while the remainder of the forward space is given up to the stowing of sails, anchor gear, etc. This seems truly to be a remarkable amount of accommodation for a 25-footer, but it is a feature that has been noticed on all of Small Brothers' cruising designs. They have a faculty of getting the greatest amount of accommodation on a given length.

I heard that much-talked-of Seawanhaka rating rule commended last week. Crowninshield is designing some 30-raters under the rule and it would certainly seem that the best means of ascertaining the value of any such measure is to go right up against it in turning out lines for a boat. Crowninshield says that in his opinion the rule is a good one and is calculated to prevent the construction of freak yachts.

Starling Burgess has had his mind full of large vessels for the past week or two. Since receiving his order for a six-master he has been looking about for comparisons. Last week he took a trip on the *Wells*.

It is expected that the work of construction will soon be commenced, at Lawley's, on the 60-rater designed by Gardner and Cox for Mr. Henry F. Lippitt. There is a model at the office, and those who have looked it over have been pleased with the lines.

JOHN B. KILLEEN.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Ailsa, Vigilant and Navahoe.

THE importation of *Ailsa* and the rigging of *Vigilant* and *Navahoe* as yawls brought three boats together in a class that proved to be one of the most interesting of the season, and splendid racing was the result. *Ailsa* with her heavy weights and comparative small rig did not show to very good advantage in light weather with *Vigilant* and *Navahoe*, but in a breeze and a sea she more than outclassed both these boats. In looks *Ailsa* is a typical Fife boat, and her beauty and shippy appearance was very generally commented upon, and won for her many admirers. When *Vigilant* and *Navahoe* ranged alongside *Ailsa* their ugliness was accentuated, and plainly showed how far ahead the Farlie designer is in the matter of beauty and form.

Navahoe made a very good showing in the racing—far better than was expected.

The annual regatta of the New York Y. C. brought *Vigilant* and *Ailsa* together for the first time. The race was sailed in a fresh breeze, and *Vigilant* was without her centerboard. *Ailsa* won by 5m. 10s. *Vigilant* beat *Ailsa* in a light breeze in the Glen Cove cup races by 3m. 5s. The next event in which these boats met was at Oyster Bay, where the Seawanhaka Corinthian Y. C. held three days' racing. *Vigilant* won all three. Light and fluky breezes prevailed on all three days. *Vigilant* beat *Ailsa* by 14m. 36s. at Larchmont on the Fourth of July. On July 20 at Larchmont *Ailsa* got in a flat spot and withdrew, and *Vigilant* finished alone.

Navahoe, *Vigilant* and *Ailsa* started in the race for the Commodore's cup on the first day of the New York Y. C.'s cruise, but they had to meet the other sloops and were beaten. In this race *Navahoe* beat *Vigilant* 2s. and *Ailsa* 2m. 31s. Running in light weather to Morris Cove, *Navahoe* beat *Ailsa* 3m. 56s. and *Vigilant* 10m. 40s. To New London *Navahoe* won again, beating *Ailsa* 2m. 22s. and *Vigilant* 2m. 59s. *Vigilant* won the run to Newport, beating *Navahoe* 1m. 50s. and the *Ailsa* 48m. 7s. From Vineyard Haven to Newport *Navahoe* and *Vigilant* both finished ahead of *Ailsa*, but were disqualified for fouling the committee boat at the start, and *Ailsa* won the race. *Navahoe* started in the Astor cup race, but was beaten by *Columbia* 39m. 5s. She won a special cup in this race offered for yawls to sail for.

In the races held under the auspices of the Newport Y. R. A., *Vigilant* won on Aug. 1, beating *Navahoe* and *Ailsa*. In the next match, which was sailed in a strong wind, *Ailsa* won, beating *Vigilant* 5m. 23s. On Aug. 10 all three boats again met in a fresh breeze. *Ailsa* was disabled and *Vigilant* beat *Navahoe* 1m. 19s. In a light breeze two days later *Navahoe* beat *Ailsa* 22m. 21s. and *Vigilant* 26m. 8s. Sixteen races were sailed by the yawls, and *Vigilant* and *Ailsa* met in each race. *Vigilant* won altogether nine first prizes and *Ailsa* only three. These two yachts met alone in seven races, and of these *Ailsa* won once. The three yawls met in nine races. *Navahoe* won four first and three seconds, *Vigilant* three firsts and two seconds, and *Ailsa* two firsts and three seconds. *Navahoe* got one sail over.

Canada Cup Races Postponed to 1903.

OWING to the chaotic state that the measurement rules on the Great Lakes are now in, the Royal Canadian Y. C. and the Rochester Y. C. have mutually agreed to postpone the races for the Canada's cup until 1903. By that time it is hoped that the measurement question will be definitely settled. This decision was arrived at when it was found that even if the measurement rules were adopted within a short time, it would be hardly possible for designers to get out plans and have boats built and gotten in shape in time for the races. The following are the letters that have passed between the Royal Canadian Y. C. and the Rochester Y. C.:

TORONTO, Dec. 18, 1901.—The Secretary, Rochester Y. C., Rochester, N. Y. Dear Sir: With reference to our letter of Sept. 12 ult., accepting a challenge of the Rochester Y. C. for a race to be sailed next summer for the Canada's Cup, I am directed by the Sailing Committee to respectfully request that the Rochester Y. C. agree to postpone this race until the year 1903; the reason for the request being that no decision has been arrived at by the Yacht Racing Union of the Great Lakes in the matter of sailing rules, and it may be inferred by the indications thus far shown that the rules will not be agreed on in time to permit of the building of new boats. I am also directed to request the favor of an early reply. Yours faithfully,

F. J. RICARDE-SEEVER, Hon. Sec'y.
ROCHESTER, N. Y., Dec. 21, 1901.—Mr. F. J. Ricarde-Seever, Honorary Secretary, Royal Canadian Y. C., Toronto, Canada. Dear Sir: I have the honor to acknowledge receipt of your letter of the 18th inst., requesting the postponement of the Canada's cup race until the year 1903. This matter was taken up at a meeting of the Rochester Y. C. held on the 19th day of this month, and a resolution was passed granting your request to postpone this race for the reasons mentioned in your letter. Very respectfully yours,
GEORGE P. CULP, Cor. Sec'y.

Yacht Club Notes.

At the annual meeting of the Morris Y. C., which was held at its winter quarters, East One Hundred and Sixty-fifth street, the following officers were elected: Com., George R. Moran; Vice-Com., George T. Isbell; Rear-Com., Aug. G. Miller; Sec'y, A. E. La Vergne; Treas., Louis Regal; Meas., C. Hyde; Directors (for three years), R. R. Kestlon and C. Meyer. The club has been strengthened during the past year by the addition of thirty-two new members, eight of whom were yacht owners.

The annual meeting of the Knickerbocker Y. C. was held at the Hotel Manhattan, New York City, on the evening of Dec. 18. The following officers were unanimously elected: Com., Edward F. Glover; Vice-Com., J. B. Palmer, M. D.; Rear-Com., Walter B. Beam; Treas., George H. Cooper; Sec'y, J. O. Sinkinson; Meas., John G. Honey; Fleet Surgeon, George D. Hamlen, M. D.; Board of Directors, F. E. Barnes, Rodman Sands, H. Stephenson, C. W. Schlessinger and Thomas Wilson. A motion was made to raise the annual dues from \$18 to \$24,

and after some discussion it was decided to lay the matter over until the regular monthly meeting, which will be held on the third Wednesday in January.

YACHTING NEWS NOTES.

Mr. Fred S. Nock, of West Mystic, Conn., has made the following sales: *Raceabout Flying Fish* for Mr. William H. Thurber, of Providence, R. I., to Mr. John R. Brophy, of Brooklyn, N. Y.; *knockabout Eitel* for Mr. O. P. Colloque, of New York city, to Mr. William H. Thurber, of Providence, R. I. Messrs. McCreery & Darrach, of Mystic, have contracted to build a 35ft. by 10ft. beam hunting launch for James F. Torrence, of Derby, Conn. The cabin will be 12ft. long and have full headroom, and will be fitted for comfort and convenience. The motive power will be two of the latest models of Lathrop's motors, and twin screws. The design was made by Mr. Fred S. Nock, who also has been commissioned to design a 45ft. speed launch for New York parties. She will be equipped with two motors of 12 horse-power each. Mr. Nock is at work on the design of a 55ft. cabin launch for Mr. W. W. Benson, of Chicago. Building from his own designs is a 35ft. open speed launch, a 30ft. open launch and ten one-design 22ft. launches.

The Gas Engine and Power Company and Charles L. Seabury & Co. are building from their own designs a knockabout for Mr. H. H. Rogers, Jr., whose father owns the steam yacht *Kanawha*. She will be a centerboard boat 24ft. on the waterline, 35ft. over all, 10ft. 6in. in beam. The boat is intended for day sailing only, and will have a flush deck.

Thomas Fearon, of Yonkers, has built from his own designs a speed launch for Com. David Banks, Atlantic Y. C. The boat is 22ft. long, 4ft. 8in. beam and 3ft. 9in. deep.

On Dec. 21 there was launched at Mr. Lewis Nixon's Crescent Shipyards at Elizabethport, N. J., a steam yacht for Mr. Andrew Carnegie. The yacht was named *Skibo*. She is 82ft. over all, 12ft. beam and 7ft. draft. The yacht is equipped with engine of 300 horse-power, and it is expected that she will develop a speed of sixteen knots.

Mr. L. D. Huntington, of New Rochelle, is building from his own designs a cruising yawl for Mr. Frank Maier. She will be 35ft. over all, 28ft. on the waterline, 11ft. 2in. beam and 4ft. 10in. draft. There will be 4,400lbs. of iron on the keel. The boat is intended solely for cruising in rough water. The overhangs are short and the midship section shows a boat of considerable bulk and power, with a very sharp floor. The cabin house is quite narrow, leaving ample deck room on either side. There is 5ft. 9in. headroom under the cabin trunk. On either side of the cabin there will be two 6ft. berths. Forward on the starboard side is the toilet room, and opposite on the port side is the galley. The keel and frames are of oak, and she will be planked with yellow pine. The finish on deck will be of mahogany. The cabin trim is of mahogany and cypress.

Messrs. Swasey, Raymond & Page, naval architects, have opened an office in the Colonial Building, Boston, Mass. These gentlemen are all graduates of the Institute of Technology in Boston, and have had wide experience in the designing and constructing of commercial vessels and yachts. The firm opened its first offices in Philadelphia, and for several years made a specialty of designing pleasure craft. Some time ago they secured control of the Taunton Yacht Works, where a number of vessels were built under their supervision.

MacConnell Bros., of Boston, have sold the following yachts: 21-footer *Harriet*, champion 1900, to Frank N. Neal, of Boston; Privateer, to Com. James R. Hodder, of the Winthrop Y. C.; the 21-footer *Starling* to Walter S. Schultz, of Hartford, Conn.; 40ft. launch, *Wild Duck*, to Woodbury & Leighton, of Boston; sloop *Rialto*, to Samuel E. Hathaway, of Boston; Neonym, to H. A. Andrews, of Dorchester; *Wasp*, to Boston parties; schooner *Nautilus* to D. Tyrrell, of Chelsea, and 35-footer *Bon Ami* to Z. B. Davis, of New Bedford.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Dec. 25.—Tunkhannock, Pa.—All-day tournament of the Tunkhannock Gun Club. Spencer D. Reed, Sec'y.
Dec. 25.—Haverhill, Mass.—Haverhill Gun Club's all-day Christmas shoot. S. C. Miller, Sec'y.
Dec. 25.—Mount Kisco, N. Y.—Christmas Day shoot of the Mount Kisco Gun Club. Mr. A. Betti, Capt.
Dec. 27.—Cincinnati, O.—Annual live-bird championship shoot of the Cincinnati Gun Club.
Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Dec. 25.—Interstate Park.—Interstate Park trophy, 15 targets; Christmas Day Handicap, 25 targets; fourth shoot for December cup; Christmas Day Cup, 25 targets; Metropolitan Individual Championship; Continuous match.
Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

1902.

Jan. 1.—Newark, N. J.—South Side Gun Club's New Year's shoot.
Jan. 1.—Towanda, Pa.—New Year's tournament of the Towanda Gun Club. Live birds and targets. W. F. Dittrich, Sec'y.
Jan. 1.—Sistersville, W. Va.—Sistersville Gun Club's shoot. Ed. O. Bower, Sec'y.

ON LONG ISLAND.

Sheepshead Bay Rod and Gun Club.

Sheepshead Bay, L. I., Dec. 19.—Mr. A. Bush was victor in the club event. He and Mr. G. Morris tied on straight scores. In the shoot-off Mr. Bush killed 9 straight and won. The conditions were unfavorable for good shooting. The scores follow:

Table with 2 columns of names and scores for Sheepshead Bay Rod and Gun Club. Includes names like McKane, Van Peit, Pillion, Voorhies, Lubcke, Brown, Heffner, Lundy, Koch, Theo Storm, Dr Wood, A Busch, R Smith, G Morris, H. Montanus, M Rauscher, J Tabor.

Shoot-off, miss-and-out:

Table with 2 columns of names and scores for shoot-off. Includes A Busch and G Morris.

New Utrecht Gun Club.

Interstate Park, L. I., Dec. 21.—The wind was right-quartering, stiff most of the time, so that a number of birds, hard hit, were carried out of bounds. The birds were a good, fast lot:

Event No. 1, 10 birds, for monthly average:

Table with 2 columns of names and scores for Event No. 1. Includes R W Haff and F D Creamer.

Event No. 2, 7 birds, for prize. J. H. Jack won first prize, a bronze buffalo; H. Edey second, a bronze bear:

Table with 2 columns of names and scores for Event No. 2. Includes J H Jack, F D Creamer, R W Haff, H Edey, W F Sykes, C A Ramapo, W L Losse, Magoun.

Shoot-off:

Table with 2 columns of names and scores for shoot-off. Includes F D Creamer and R W Haff.

Event No. 3, 7 birds, for prize. H. Edey won first, F. D. Creamer second. The ties in this event were shot off in No. 4:

Table with 2 columns of names and scores for Event No. 3. Includes J H Jack, R W Haff, F D Creamer, H Edey, C A Ramapo, W L Losse, Magoun.

Shoot-off:

Table with 2 columns of names and scores for shoot-off. Includes F D Creamer and H Edey.

Event No. 4, 7 birds, for prize. Ramapo won first, F. D. Creamer second. First prize, bamboo rod; second, shell case:

Table with 2 columns of names and scores for Event No. 4. Includes J H Jack, R W Haff, F D Creamer, H Edey, C A Ramapo.

Shoot-off:

Table with 2 columns of names and scores for shoot-off. Includes R W Haff and F D Creamer.

Crescent Athletic Club.

Bay Ridge, L. I., Dec. 21.—There was a lot of active competition at the shoot of the Crescent Athletic Club to-day. The December cup was practically decided, Dr. J. J. Keyes scoring the limit. His two previous scores were 50 and 49. Mr. F. E. Mendes also scored 50. On Christmas Day there will be an all-day shoot. The handicaps, scores and handicaps added thereto are given in the three columns of figures. The scores:

December cup, 50 targets, expert traps, handicap allowances added:

Table with 3 columns: Name, First 25, Second 25, Grand Total. Includes Dr Keyes, F E Mendes, L M Palmer, H M Brigham, W B Marshall, H B Vanderveer, M A Bedford, F Borland.

Team shoot for Sykes cup, 25 targets, expert traps, handicap allowances added:

Table with 2 columns of names and scores for Sykes cup. Includes F Stephenson, G Stephenson, W Marshall, L Palmer.

Shoot for trophy, 15 targets, handicap allowances added:

Table with 3 columns: Name, Hdcp. Broke. Total. Includes Marshall, McConville, Meyer, Keyes, Palmer, G Stephenson, F Stephenson.

Shoot-off, same conditions:

Table with 2 columns of names and scores for shoot-off. Includes Marshall and McConville.

Shoot-off, same conditions:

Table with 2 columns of names and scores for shoot-off. Includes Marshall and McConville.

Trophy, 15 targets, expert traps; handicap allowances added:

Table with 3 columns: Name, Hdcp. Broke. Total. Includes Mendes, G Stephenson, Marshall, McConville, Brigham.

Sweepstakes, 10 targets: Brigham 9, F. B. Stephenson 7, G. Stephenson, Jr., 7, Bedford 6.

Sweepstake, same conditions: G. Stephenson, Jr., 10, Brigham 9, Vanderveer 8, F. B. Stephenson 7, Marshall 7, Mendes 5, Hopkins 4, Bedford 2.

Sweepstake, 15 targets: Brigham 12, G. Stephenson, Jr., 11, F. B. Stephenson 10, Mendes 10, Bedford 8, Hopkins 7, Borland 5.

Match, 25 targets: Brigham 23, G. Stephenson, Jr., 22.

Sweepstake, 15 targets, F. B. Stephenson 9, G. Stephenson, Jr., 9, Hopkins 7.

Sweepstake, 25 targets: Brigham 22, G. Stephenson, Jr., 20, McConville 17, Meyer 13, Bedford 10, Chapman 10.

Jeannette Gun Club.

Interstate Park, L. I., Dec. 21.—There was a good attendance of members. The day was a fine wintry one, clear, cool and bracing. Some extra sweeps and matches were shot in addition to the club event, and these were won by Messrs. Pape, Thyssen, Lott and Steffens. Mr. W. P. Fessenden acted as referee. Job Lott won Class A, Schmidt Class B:

Table with 2 columns of names and scores for Jeannette Gun Club. Includes Ehlen, Meyer, Job Lott, W Rottman, H Pape, C Stephens, J H Kroeger, C Meyerdiercks, J Schmidt, J Mohrman, C Peters, F Kastens, G Greiff, W H Sanders, Chris Meyer, Wm Lohden, Hm Rohlis, C Thyssen, A Schumacher.

Miss-and-out, for Class A: Job Lott 15, C. Steffens 15, C. Meyer 2, H. Pape 1, G. Greiff 2.

Challenge medal, 15 birds:

Table with 2 columns of names and scores for challenge medal. Includes Wm Rohlis and C Meyerdiercks.

Team race, six men on a side:

Table with 2 columns of names and scores for team race. Includes Greiff, Kroeger, Meyerdiercks, Kastens, Ehlen, Schmidt, Steffens, Meyer, Mohrman, Pape, Peters, Sanders.

Oceanic Rod and Gun Club.

Rockaway Park, L. I., Dec. 23.—The scores made at the shoot of the Oceanic Rod and Gun Club are appended. The day was pleasant and enjoyable:

Table with 2 columns of names and scores for Oceanic Rod and Gun Club. Includes Westphal, Duke, Harris, Jones, Events, Targets.

H. C. Hirschy Blue Ribbon Live Bird Trophy.

MINNEAPOLIS, Minn., Dec. 14.—In spite of the extreme cold weather yesterday and to-day the scheduled events for yesterday and to-day took place as advertised. The H. C. Hirschy Blue Ribbon trophy, shot for yesterday at 30 below zero temperature, was won again by Mr. Hirschy. This makes three straight wins for Mr. Hirschy since a week ago to-day. He won the St. Paul Review cup last Sunday, the Hirschy cup Saturday, and the Review cup to-day. Mr. Hirschy is not only popular with his firm, the Hazard & Dupont Company, but with the shooters of the Northwest as well, who all are pleased to keep up his well-known reputation.

It was 20 below when the Review cup was shot for to-day. All stood at 30yds. The scores:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.

Table with 2 columns of names and scores for H. C. Hirschy Blue Ribbon Live Bird Trophy. Includes Hirschy, Kid, Bull, French, McKay, Morrison, Wilkinson, Kabo.

St. Paul Review cup:

Table with 2 columns of names and scores for St. Paul Review cup. Includes Hirschy, Bull, Morrison, Perry, Bill.

Shoot-off of tie:

Table with 2 columns of names and scores for shoot-off of tie. Includes Hirschy and Bull.

In Matter of Handicaps.

Editor Forest and Stream: As none of the schemes devised so far for handicapping trapshooters are perfect and satisfactory in all respects, we give you a new one, which, if properly carried out, would place the shooters of different degrees of skill on equal footing, and we trust that this article will be carefully read to the end without prejudice, then please form and express your opinions on its merits.

Have the events, say, 20 targets, and class the shooters from 12 to 20, the amateur novice who cannot break an average of 60 per cent. of his birds place in the 12 class, and the amateur who is a 60 per cent. man place in the 13 class, and so on up to the expert professional, who should be placed in the 20 class. All the shooters to stand at 16yds. scratch and shoot at 20 targets each, and rank as they break the percentage in their class. For instance, if a shooter in the 12 class breaks 12 targets or over, he would score 100 per cent. If he breaks only 11, dividing 11 by 12 would give him a score of .9166 per cent. If a person in the 20 class broke 20, he would score 100 per cent., but if he dropped a bird and got only 19, he would score 95 per cent., etc.

Dividing the number broken by his class number gives the shooter his score.

Make the division of moneys high guns; two moneys to every five entries.

To get the shooter's standing have a record of his scores for the past six months, obtained from the secretary of the club to which he belongs, kept with the secretary of the Interstate Association. It would greatly help on gun club matters to have, say, three gun club alliances formed, the Eastern Alliance taking in all the Eastern clubs, with head office in New York; the Western Alliance have a head center in Chicago, and a Southwestern one, with headquarters in St. Louis. Alliance rules, same as Interstate, to govern all trapshooting contests, and the executive committee of the Alliance to have the power to change any shooter's class standing, and also the power to punish any shooter convicted of violating its rules.

Below we give the scores made under this system. The names followed by the class that they are in, then the number of targets broken and their percentage:

Table with 4 columns: Name, Class, Broke, Percentage. Includes Heikes, Roy, Fan, Mine, Wells, Jones, Greenwood, Selby, Soule, Jack.

The winners are Heikes, Greenwood, Roy and Mine. If a shooter makes or breaks over his class number he cannot score but 100 per cent.

The shooters should be classed slightly above their general average. A good safe 70 per cent. man should be placed in the 15 class, etc. This system places all trap shots at the same distance from the traps, and gives professionals and amateurs alike an equal chance to get into the money, and gives the bookkeeper but little more work. There may be a little kicking in classing the shooters, but the committee, with the assistance of the secretaries of the different clubs, can easily place the shooters where they belong.

Do not fall into the error of imagining that this system gives the same results as in a handicap event, where broken birds are given

to the weaker shooter. In a handicap where broken birds are given, A, a 20 class man, competing against B, a 12 class shooter, B would get 8 broken targets, and if he broke 11 and A dropped one, they would tie on 19, while, if competing under my new system, A would win, as he should score 95, and B only .9166. In this system, unless where straight scores are made, ties rarely occur; for, excepting on a straight score, it is impossible for those in classes of odd numbers to tie, and in even and odd numbered classes, only the 18 and 12 can tie with the 15 class, and then in only three instances—in the 100, 666 and .333 per centages—and in those classes of even numbers, there will seldom be a tie, excepting, as we have before stated, where full scores of 100 are made.

N. P. LEACH.

WESTERN TRAPS.

Audubon Gun Club.

WATSON'S PARK, Burnside Crossing, Ill., Dec. 21.—The club medal shoot was the one of main interest. The day was clear and cold, with an incoming wind. The bright sunshine on the snow made difficult shooting. On Dec. 28 the Nonpareil Gun Club holds its monthly shoot on this ground:

Table with 2 columns of names and scores for Audubon Gun Club. Includes J H Amberg, Jim Crow, Col Felton.

Mr. Crow winning to-day left Amberg and Felton tied for the first and second money, each winning five times. In shoot-off Amberg won first and Felton second:

Table with 2 columns of names and scores for shoot-off. Includes Amberg and Felton.

IN NEW JERSEY.

Trap at Lake Denmark.

Lake Denmark, N. J., Dec. 17.—A team race was shot here to-day between Miss Annie Oakley and Mr. T. W. Morfey on one side, and Messrs. Frank Class and G. H. Cook on the other. The feature of the race was Miss Oakley's shooting. She scored 23 out of 25 from the 25yd. mark. Morfey, her partner, scored 22. Their joint total was 45 out of 50. Class and Cook scored 36. The birds were of an excellent character. Miss Oakley's load was 42grs. "New Schultze" in U. M. C. Smokeless shell, with 1 1/2oz. of No. 7 chilled. Her gun was a Parker, weighing 7 1/2 lbs. C. J. Als was referee. The official scorer was E. J. Ketrick. The scores follow:

Table with 2 columns of names and scores for trap at Lake Denmark. Includes Annie Oakley, T W Morfey, C H Cook, F Class.

Ossining Gun Club.

OSSINING, N. Y., Dec. 21.—The feature of the shooting on the grounds of the Ossining Gun Club to-day was a distance handicap three-man live-bird race between W. P. Hall, Danbury Brandreth and C. G. Blandford; the president of the club, Mr. Franklin Brandreth also shot along in the race, for birds only. Blandford was favored in drawing some easy birds, which enabled him to finish in first place. A strong northwest wind made many of the birds quarter to the right. The referee, Mr. A. Bedell, made some close decisions, which were sustained by the judgment of the crowd:

Table with 2 columns of names and scores for Ossining Gun Club. Includes D Brandreth, W P Hall, C Blandford, F Brandreth.

Clay target events:
