PRINCESS ANNE, MD.

Dear Friends:

It sure is a great source of satisfaction for us to find the time to visit with some of our customers in different sections of the country and see the splendid success they have had with the varied types of stock which we have shipped them during the past years. It is not unusual to see large orchard plantings of several thousand trees with hardly a tree missing and producing abundantly or fields where thousands and thousands of our small berry plants have been set and hardly a plant missing and we hear of the great crops these plants have produced and the profits made, or homes that have been made a place of Beauty and Happiness with our Ornamentals. It makes us feel as though we are accomplishing something and helping many to build and accumulate for the future for after all we live for tomorrow and strive to better our position in life from day to day.

We are now approaching another planting season for all types of Nursery stock and because of the adverse weather conditions that existed over so wide an area last spring which prevented many from planting that which they wanted to plant and destroyed a great deal of plant life for others, you should try and anticipate your needs in nursery stock as early as possible and secure it for planting this fall where possible to do so. A severe drouth has visited many sections this past summer destroying millions of living plants of all types which, if the high standard of living for which this country is famous is to be maintained, should be replaced this fall or next spring. We must plant for TOMORROW.

Our location again proved its many advantages this year. We experienced one of the worst spring drouths this Country has ever known when we went for over two months not having sufficient rain to hardly lay the dust from early April 'till June, but in spite of this our stock kept growing and we experienced very little loss because our water table is near the surface and our methods of cultivation kept our stock going until we got rain and now we have some of the best stock to offer our customers that we have grown in many years. We wish it were possible for you to visit us here at Princess Anne and personally examine the plants or trees that you are interested in buying. As we took you about our nursery showing you field after field of the various types of trees and plants and explained to you some of our methods of producing this stock and preparing it for you to plant you could realize why it does so well for our thousands of customers after planting and continues to give satisfaction as it comes into production or develops to make your home a place of beauty, and why it is possible for us to maintain such a fair price on our products. We are trying to pass on to you the advantages given us by our favorable location for the production of a general line of Nursery Stock which coupled with our years of experience in the producing end enables us to deliver the best it is possible to secure at a fair price. It is our duty to you to secure new fruits of merit and which we feel will mean added profits for commercial producers and added satisfaction to the small planter. We ask that you consider carefully our new listings for this year and if there are any questions you wish to ask about them please feel at liberty to write to us regarding them. We are not listing them just to have something new to offer but because we feel it will be to your benefit to plant them.

We should be in a position to serve you in a very satisfactory manner this year from the standpoint of quality trees and plants which will be handled properly at digging and packing time to insure successful results when you plant them. You can depend on our cooperation to bring your plantings to a successful conclusion and we hope to have your continued patronage during the coming planting season. Those who have not yet dealt with us cannot realize the advantages we have to offer them by dealing direct with the producer of the stock they sell, by dealing direct with a nursery that has the personal supervision of the owners from the time the stock is planted until it is dug and packed ready for delivery to you, by dealing direct with a nursery that is backed with nearly fifty years of experience in producing stock and a nursery that is located geographically so as to produce the best, hardy, disease free stock it is possible for you to secure. We shall consider it a privilege to receive your orders this year and shall do our utmost to give you service and satisfaction on whatever you may buy from us, and in this way assist you in making your home a place of beauty and your fields a source of profit.

Very truly yours,
BOUNTIFUL RIDGE NURSERIES

OUR COMPLETE PRICE LIST FOR FALL 1936

GAGE ELBERTA A Disease Resistant Bud Sport of the Famous Elberta

(Excerpts from detailed description given March issue 1929 Journal of Heredity, written by H. W. Anderson and M. J. Dorsey, University of Illinois.)

This splendid peach originated in the orchards of Mr. John A. Gage near Texico, Ill. It has been tested now for a number of years under varied conditions on a commercial basis, and the many merits of the peach are becoming more pronounced each year. Possibly its greatest recommendation is the fact that up to the present time it has proven almost entirely immune to bacterium pruni or what is more commonly known as bacteriosis. The tree is very spreading in growth habits but in spite of the wide angles the limbs do not break with heavy loads of fruit because they are well buttressed at the union with the trunk and the wood is very tough. It is equally as thrifty a grower as the Elberta and looks very much like the typical Elberta tree except that the leaves are apparently thicker and darker in color. Gage Elberta blooms from two to four days after Elberta and apparently has a very strong blossom setting a crop of fruit under unfavorable conditions. The fruit is so near the Elberta that only an expert can distinguish the difference. It ripens from two to three days later than Elberta but may be picked at the same time if desired. It is creating a great deal of interest and proving very desirable in some test orchards in the South. The fact that it is Elberta type—Elberta season—AND PROVING ALMOST IMMUNE TO BACTERIUM PRUNI AND Arsenic injury are enough to recommend it to any planter.

Our supply is limited to about ten thousand trees, a part of which are yearling stock and balance June Bud, so do not hesitate in ordering whatever quantity you want at the earliest possible time. Prices given on inside of folder in general listing of Peach trees.

FRUIT TREES QUALITY - QUANTITY

We are really fortunate in having one of the finest lots of PEACH and APPLE trees that we have had for several years. Most planters are familiar with the general shortage which has existed for the past three years and while we have had a better supply of trees than most Nurseries in many cases we ran short. We have gradually built up our stock however and are now in a position to supply the very best and in considerable quantity. We do not hesitate in saying that we don't believe you can find another lot of trees that will equal them in any nursery in the East. The general supply of fruit trees however is far below normal and actually scarce in some sections and on certain items. This year there is a very poor stand of peach tree seedling for budding which means a shortage of peach trees for Fall of 1937 and Spring 1938. Knowing this we advise the orchardist or anyone figuring on making new plantings to try and do so this year when the trees are available and prices are comparatively low. We have made substantial reductions in the prices of our PEACH and APPLE trees this year. These reductions mean real savings to you.

We have for delivery to our customers this year over 350,000 fine one year peach trees of the various varieties and over 225,000 ONE and TWO year APPLE trees, along with a normal supply of pear, plum, cherry and other fruit trees and plants. There seems to be a shortage of both Sweet and Sour Cherry trees again this year so watch these items and order early on them. Our small berry plants, altho affected by the early spring drouth, are growing rapidly now and promise to give us several million excellent plants for delivery this fall and next spring. Having this fine supply of FRUIT TREES and BERRY plants means that if you are sent to BOUNTIFUL RIDGE NURSERIES you are assured of receiving selected stock which will give you results.

SERVICE - COOPERATION - DEPENDABILITY

5% DISCOUNT FOR CASH

With Order on All Orders Received Before January 1st, 1937

ALL ORDERS OF \$50.00 OR MORE SHIPPED PREPAID IF WITHIN 500 MILES OF OUR NURSERY

We are giving our Nursery personal supervision which is so very essential in order to deliver you good stock. We are GIVING PROMPT STOCK DELIVERY TO IMPROVE OUR SERVICE WHERE POSSIBLE AND PRACTICAL TO DO SO. This means delivery of the trees to your farm in less than 48 hours after they are dug from the ground. We are constantly trying to strengthen the weak links in our chain of SERVICE and you will find the Kemp boys have a deep personal interest in every patron of theirs and want to and will cooperate with you in every way possible to make your purchasing our stock a pleasant task and your plantings a success. Each of us are a tiny cog in Life's great plan; one is essential to the other. We need your patronage for our future success. YOU SHOULD HAVE OUR PRODUCTS TO MAKE YOUR HOME A PLACE OF BEAUTY AND PROFIT.

FALL PLANTING

Our years of experience in the Nursery and orchard business have taught us that every one should do their planting in the FALL, whenever it is possible for them to do so and their climatic conditions are not too severe and where they can secure well matured stock to plant. We do not recommend that plantings be made on land which is inclined to heave from the effects of frost unless the plants can be heavily mulched or are protected by drawing a mound of earth about them to help hold them. We do especially recommend the planting of fruit and shade trees and small berry plants except Strawberry plants. The roots will heal where cut when dug, the winter rains will settle the dirt well about the roots, the tree will be ready to start with the first movement of sap in the Spring and you will have 25% more growth and almost a perfect stand on the planting. Then too you will have more time to make the planting in the Fall after you have harvested your fruit and are awaiting pruning time. By Fall planting time we mean any time that the ground is not frozen during Fall and Winter months. If you get a cold snap and then it warms up, go ahead and do your planting but in late planting be sure and finish each tree as it is planted and draw a mound of earth about 12 inches high to protect it against swaying by Winter winds. In all cases where Fall planting is done do not trim your trees till Spring. Remember it is essential that the stock be well matured and if you are dealing with the right kind of a nursery they won't ship till the stock is right.

OUR STOCK SOLD TO ORCHARDISTS LAST FALL PROVED ITS HARDINESS IN NEARLY ALL SECTIONS OF THE COUNTRY WHERE IT WAS GIVEN PROPER CARE BY COMING THROUGH THE LOW TEMPERATURES OF LAST WINTER WITH NO MATERIAL DAMAGE. THIS PROVES THE VALUE OF RECEIVING WELL GROWN, AND WELL MATURED TREES SUCH AS WE GROW AND DELIVER.

These Splendid Fruits Typify the March of Progress in the Fruit Producing World

THEIR PRODUCTION MEANS BETTER SATISFACTION TO THE CONSUMING PUBLIC AND GREATER PROFITS TO THE GROWERS

We Strive to Propagate the Best For Our Patrons and We Do Not Hesitate to Secure New Varieties of Merit When They Are Obtainable. Follow Our New Listings Closely.

MILTON - KENDALL - MACOUN

The fulfillment of the fruit growers dream of real McIntosh types of apples ripening from mid-season until late fall. A combination hard to equal in any type of fruit giving you the hardness of the original McIntosh, the productiveness of the original McIntosh, the fine quality of the original McIntosh with a more handsome appearance and longer keeping qualities. For the first time we have a splendid lot of all three of these varieties to offer the planting public in both one and two year old trees. They are all products of the Geneva, New York Experiment Station and are proving their right to occupy a place among the most famous apples of the McIntosh type in production today.

MILTON: Typical McIntosh, coloring full red; very good quality, about equal to McIntosh, being same textured apple. Tree not as vigorous as Early McIntosh. Ripens three to four weeks before McIntosh or just before Wealthy.

KENDALL: A McIntosh seedling and a product of the Geneva, N. Y. Experiment station. Very attractive, being handsomely colored over the entire surface with dark red covered with a rich bloom. Season about same as McIntosh but seems to keep longer. The apples are large, trim in outline, and possess the whitish, fine grained flesh of McIntosh. Flavor slightly more sprightly than McIntosh and the fruit hangs better to the tree than McIntosh but not as well as Cortland.

MACOUN: Very highly colored, having no stripe. Same quality as McIntosh, same textured fruit, hangs to the tree better than McIntosh, and ripens two to three weeks after Cortland. Tree about equal to McIntosh, a regular bearer, and strongly recommended to lengthen the McIntosh season and give the Middle Atlantic and Southern growers a McIntosh type fruit they can grow successfully.

OTHER McINTOSH TYPES WORTHY OF PLANTING

EARLY McINTOSH: Typical McIntosh in appearance; not quite so good quality, ripening about DUCHESS season or six to eight weeks before regular McIntosh. Extremely thrifty and good cropper.

IMPROVED ALL RED McINTOSH: A special bud selected strain of the famous McIntosh apple, coloring a solid red without a trace of stripe. Without question this is the finest type of McIntosh that has come to our attention and will say that if you are not getting sufficient color on your present plantings of McIntosh you should make your new plantings of this Improved Type we are offering this year for the first time. We can supply these in both one and two year old trees in limited quantities.

LOBO: Same season as the McIntosh, larger apple, and colors a more full red than the regular McIntosh before dropping. Extra good quality. Tree equal to McIntosh. Comes recommended highly to replace the regular McIntosh for the Middle Atlantic and Southern growers.

CORTLAND: A cross between Ben Davis and McIntosh, ripening two to four weeks later than McIntosh. About equal in size, colors well, same textured fruit, but not quite as good quality. IT'S MAIN QUALITY IS THAT IT HANGS TO THE TREE TILL IT IS WELL COLORED AND WILL SELL AS McINTOSH ON THE MARKETS.

YELLOW DELICIOUS

This apple has received almost national publicity during the last few years and is famous for its unique quality, embracing a combination of flavors which is hard to equal. This, combined with the fine, firm textured flesh of the apple and the beautiful, golden yellow skin at once attracts the eye of the consuming public. The tree, while not a large growing type, is thrifty and extremely productive, coming into fruiting and giving an abundant crop while very young. We are offering this splendid apple for the first time to our customers at the same price as all other varieties listed in our General Price List. This apple should be picked at just the right period and placed in cold storage for late winter use.

IMPROVED ALL RED JONATHAN

A special bud selected strain of the famous Jonathan apple. We hunted a good while before we found what we considered the right type of improved Jonathan apple to offer our customers. We have a limited amount at this time to sell and if you are not getting enough color on your Jonathan plant this improved strain and you will be well satisfied with the results. Can supply in both one and two year old trees.

TURLEY WINESAP

The Turley is a Winesap seedling from the orchard of the Indiana State Horticulture Society. The tree is a vigorous grower resembling that of the Staymans Winesap. The apples are large, almost a solid red color, the texture of the fruit being almost identical to that of the Staymans. It is extremely productive. While not largely distributed this apple promises to become a favorite wherever the Winesap type of apple can be grown successfully. Can be supplied in one year trees only.

ANOKA

One of Prof. Hansen's hybrids and noteworthy for its beautiful red striped fruit and early bearing, often producing apples the second year after planting. This apple comes to us highly recommended. Fruit excellent dessert quality; ripening shortly after the Transparent. It is worthy of trial. We can supply this variety in one year trees only.

RED ROME BEAUTY

GALLIA BEAUTY RED ROME: This apple is fast becoming one of the most popular money making apples for the Central and Northern fruit growing districts. We are proud of the fact that we were one of the first nurseries to recommend this improved type of Rome Beauty to the planting public and have grown and distributed more trees of them than any other nursery in the United States. We have bred our trees from bearing orchards of selected strains of the Genuine Gallia Beauty which is considered by all authorities on fruit to be the best type of Red Rome being offered today. Wherever you buy your trees do not be satisfied with purchasing just a Red Rome Beauty type of apple because there are many inferior strains of Red Rome being offered today and the Gallia Beauty has proven its superiority over other types in productiveness, size of fruit, hardness of tree and the clear bright red color which the fruit obtains at maturity. We can offer this splendid variety to you in both one and two year old trees this year.

OHIO RED ROME: Among the first of the Red Rome types to be offered to the planting public and the nearest rival to the Gallia Beauty Red Rome type of apple. From observation it would be hard to distinguish this variety from the Gallia Beauty Red Rome. However, there may be some sections where possibly this type would be equally as satisfactory as the Gallia Beauty.

DARK RED ROME BEAUTY: This variety comes to us from Ohio and is being planted quite extensively in certain sections and is considered a mighty fine apple for the more elevated districts where a light and shaly type of soil are available. However, we feel that in many sections where the Rome Beauty type of apple is being produced this apple will obtain too dark a color for general planting.

THE "COLORA" RED YORK

Protected by Plant Patent No. 168

AT LAST THE FRUIT GROWERS OF THE GREAT YORK IMPERIAL PRODUCING AREAS CAN SECURE A REAL RED YORK IMPERIAL TYPE TO PLANT. IT IS SOMETHING THEY HAVE LOOKED FOR AND DREAMED OF FOR YEARS. IT WILL REVOLUTIONIZE THE PRODUCTION OF THE YORK TYPE OF APPLE. Think what these points of merit can mean to you as a producer. A TYPICAL YORK IMPERIAL IN QUALITY, HARDINESS OF TREE, PRODUCTION; COLORING TWO WEEKS BEFORE THE REGULAR YORK—COLORING A FULL, BRIGHT, CHERRY RED, WITHOUT STRIPE OVER THE ENTIRE TREE—PUTTING YOUR YORK APPLES INTO EXTRA FANCY AND FANCY GRADES.

The "COLORA" Red York originated in Cecil County, Maryland and THE TREES ARE GROWN AND FOR SALE EXCLUSIVELY BY THE BOUNTIFUL RIDGE NURSERIES. Its superior merits being recognized by eminent Horticulturists we were GRANTED PLANT PAT. No. 168 ON THE "COLORA" RED YORK MARCH 10, 1936. This is our protection so other Nurserymen and salesmen cannot sell trees of this type apple and your guarantee that it possesses superior merits. We have a limited amount of two year trees and a fine lot of one year trees that will be ideal for orchard planting this year. PLANT THE "COLORA" RED YORK THIS YEAR AND GROW YOUR IMPERIAL APPLES THAT WILL COMMAND ATTENTION ON OUR DOMESTIC AS WELL AS FOREIGN MARKETS.

THE FOLLOWING PRICES PREVAIL ON THE "COLORA" RED YORK IMPERIAL TREES. These prices are subject to our usual discount of 5% and free delivery of orders of \$50.00 or more. Prices are per tree.

TWO RECENT INTRODUCTIONS WHICH ARE PROVING REAL LEADERS

RICHARED

TRADE-MARK REG. U. S. PAT. OFF.

The DELICIOUS Supreme

The DELICIOUS APPLE is conceded to be the most popular variety in cultivation today and it leads in selling to the apple industry, new and improved bud variations. The RICHARED, in our estimation, is one of the best now being offered by the various nurseries in the U. S. The color may not be as dark as some others but the clear bright red completely covering the fruit before it actually matures should make it the favorite. It is past the experimental stage now and is fruiting generally in the U. S. and has proven itself to be just what we claim.

Think of the increased profits such an apple would give to you for you can grade out practically 100% extra fancy fruit with the RICHARED DELICIOUS. The tree characteristics are the same as the old Delicious but the apple is a clear bright red. You can pick it earlier; you can keep it longer; you can ship it to distant markets more successfully; you have no loss from drop apples and you have an apple that will sell more readily on any market. YOU HAVE AN APPLE THAT WILL SELL AT AN ADVANCED PRICE AT ALL TIMES OVER THE OLD DELICIOUS. Considering these points of merit we say without hesitation that anyone desiring the Delicious type of fruit should plant the RICHARED DELICIOUS.

Prices: RICHARED and BLAXTAYMAN

These Prices are for Fall 1936

ONE YEAR	1-11	12-24	25-49	50-99	100-499	TWO YEAR	1-11	12-24	25-49	50-99	100-499

For a more detailed description of the COLORA Red York, Richared and Blaxtayman please refer to our catalogue for Spring of 1936.

Golden Jubilee Peach

A Development of the New Jersey Experimental Station
The Outstanding Peach of All Recent Introductions

FIRST OFFERED BY US FALL SHIPPING SEASON 1928

PLANTED AND PRODUCING IN EVERY PEACH GROWING SECTION OF THE U. S.

It could be justly called the most popular peach of recent introduction for wherever it has fruited it is the pride of that grower. We have never known a new variety to prove so universally satisfactory.

The Golden Jubilee is a second generation seedling of the Elberta crossed with the Greensboro. The tree is unusually hardy. The buds resist winter freezes well and open after Elberta, which insures a regular crop. The blossoms are self-fertile. The peach is medium to large size and firm. It has proven a good shipper. WE RECOMMEND IT TO BE PLANTED ANY PLACE WHERE OTHER PEACHES CAN BE GROWN SUCCESSFULLY.

We offer this splendid variety at no advanced price. We were the first Nursery to offer it to the planting public generally. We have distributed more trees of it than all other Nurseries combined. We are growing more trees of them today than any other Nursery in the U. S. If you are wanting genuine Golden Jubilee Peach Trees come to the BOUNTIFUL RIDGE NURSERIES for them. This splendid variety will be reproduced in actual color in our 1937 catalogue.

LIZZIE PEACH

The origin of this peach is somewhat in doubt but it is being grown by quite a few of the larger commercial orchardists in the Northeastern section of the U. S. It is a distinct Elberta type peach, being a perfect freestone, fine yellow flesh of excellent flavor, ripening about two weeks later than the regular Elberta. Considered by some growers to be the best of our late Peaches.

PRICES, EXCEPT AS NOTED, GIVEN IN GENERAL LISTING OF APPLE AND PEACH TREES ON INSIDE OF FOLDER

Thrifty, Hardy, Dependable, Planting Stock, Selected Carefully and Purchased at a Fair Price

Is The Foundation For Increased Production, Greater Profits, More Beautiful Homes and Improved Living Conditions. These Are Some of The Planters' Dreams That May Be Realized When Purchasing From The Bountiful Ridge Nurseries.

AN ADDED SERVICE
Our Trees Inspected For Trueness To Name By
Dr. J. K. Shaw

STATEMENT OF INSPECTION
Oct. 3, 1935
To Whom It May Concern:
This is to state that I have examined all the saleable apple stock now growing in the nursery of Bountiful Ridge Nurseries near Princess Anne, Maryland, and as they now stand in the nursery row all varieties are, to the best of my knowledge and belief, true to name.
J. K. SHAW,
Research Professor of Pomology.

APPLE TREES

The demand goes on for Bountiful Ridge Growth Apple trees. Each year our sales increase and we are told of the superiority of our trees and the great results our apple trees give. We are proud of our record and this year come to you with one of the largest lots of apple trees to be found in the Eastern U. S. We have a fine supply in both one and two year stock for the first time in four years. Our one year stock is part budded trees and part whole root grafted and are making a wonderful growth. Many of our trees now over 6 ft. in height and are perfect specimens, the kind you will want to plant. Note the improved varieties we are listing this year. They denote progress. Our hardy, thrifty, true to name trees are an added guarantee to having a successful orchard. Order early while our assortment is complete.

Figure your order on apple trees at the following rates: (Prices listed are per tree.)

ONE YEAR TREES	1 to 9 trees	10 to 49 trees	50 to 299 trees	300 to 599 trees	600 to 1000 trees

YEARLING PEACH TREES

We have long specialized in the growing of PEACH TREES, selling each year to the planters in all sections of the U. S. and Canada about 300,000 of the various grades and varieties. The producing records of our trees and the fact that they are producing fruit is a source of satisfaction to us and should be a recommendation to you. The following grades which insure to you the best and highest quality are a source of satisfaction to us and should be a recommendation to you. They will be disease free. They are the type of tree every planter likes to plant. YOU GET THE VERY BEST AVAILABLE THIS YEAR AT—

GREATLY REDUCED PRICES

Figure your order for Peach Trees at the following rates: (Prices listed are per tree.)	1 to 9 trees	10 to 49 trees	50 to 299 trees	300 to 599 trees	600 to 1000 trees

New Canadian Varieties

Ripening from 10 to 20 days before Elberta. All are Elberta type peaches. Yellow, Free Stone, Large and good quality. Extremely hardy in bud. Offered this year at the same price as other peach varieties.

VALIANT VETERAN VEDETTE
COLORA: Our own introduction of a Yellow Freestone peach of the Hilcy Fall Season, good size and good quality. Introduced BECAUSE OF ITS HARDINESS AND ABILITY TO CROP WHEN ELBERTA AND OTHER STANDARD VARIETIES WERE FROZEN BY LOW WINTER TEMPERATURES.

THE COLORA PEACH 5c extra per tree all grades.
GAGE ELBERTA: Introduced because of its ability to resist Bacteriosis and Arsenic Injury. See full description elsewhere in this price list. 3c EXTRA PER TREE in all grades.

HALE HAVEN: Introduced by South Haven Experimental Station of Michigan. Ripens 10 to 15 days before Elberta. Yellow, Free Stone, Highly Colored, Good Quality. Considered very hardy. We have a good supply of them this year, selling at same price as other varieties.

Iron Mountain	Salway	Krimmels October	

SURE CROP NECTARINE

It has been difficult to find a dependable NECTARINE and for that reason we have not listed them previously. We have been so favorably impressed with the SURE CROP that we feel we can recommend it to our patrons. It was imported to this country from New Zealand and is one of the finest if not the finest of recent Nectarines tried in this country. The tree is vigorous and productive. The fruit is large, roundish, white, and overlaid with very attractive red. The flesh is firm, tender, free from stone, and very pleasing flavor. Late mid-season.

2-3 ft.	Each	10	50
3-4 ft.50	.30	.25
4-5 ft.60	.40	.30

Large size, 1 yr., 4-5 ft.	.60	4.50	35.00	
Medium size, 1 yr., 3-4 ft.	.50	4.00	30.00	

New Varieties

Introduced by the New York Fruit Testing Assn. The result of definite crosses to produce Bartlett type pears which were later and more Blight resistant and better keepers. Can supply in one year trees only; 5c extra per tree in all grades.

GORHAM: Ripens 2 weeks later than Bartlett, keeps longer. Fruit like Bartlett in size, color and shape. Flesh white and highly flavored. Very Blight resistant.

OVID: Ripens later than Gorham. A Bartlett type pear very large in size, good flavor, white fleshed. A very late keeping Bartlett type pear.

STRAWBERRY PLANTS

The Eastern Shore of Maryland again proved it was the dependable place to buy Strawberry Plants last year. Our plants are looking fine this year and we shall have several millions of as good plants as it is possible to grow. All of our plants are produced by the matted row system and will not be sufficiently rooted for shipment until September 1st. Our plants are ready to ship. Prices will be given on application when you are ready to plant. Strawberries sold this year and again prove every farm should have some Strawberries on it for market purposes. We will have to plant and our prices will be right so you fail to get in touch with us for your plantings next Spring and DON'T FAIL TO PLANT SOME DORSETT, FAIRFAX AND CATSKILL, OUR THREE OUTSTANDING NEW VARIETIES.

Early Varieties			
Dorsett (new)	Howard 17	Klondyke	
Blackmore	Fairfax (new)	Missionary
